CONSULTANTS

WILLIAM FOXWELL ALBRIGHT
Professor Emeritus of Semitic Languages, Johns Hopkins University

DAVID NOEL FREEDMAN
Professor of Hebrew and Old Testament Literature, Pittsburgh Theological Seminary

GEORGE E. MENDENHALL
Professor of Near Eastern Languages and Literature, University of Michigan

BRUCE M. METZGER
Professor of New Testament Language and Literature, Princeton Theological Seminary

JAMES MUILENBURG
Professor of Hebrew and the Cognate Languages, Union Theological Seminary, New York

JOHN C. TREVER
Professor of Religion, Baldwin-Wallace College

CONTRIBUTORS

RAYMOND ABBA
Head of the Department of Divinity, Collegiate Faculty of the University of Wales School of Education, Swansea

ELIZABETH ACHTEMEIER
Visiting Lecturer on the Old Testament, Lancaster Theological Seminary

PAUL J. ACHTEMEIER
Professor of New Testament, Lancaster Theological Seminary

BERNHARD W. ANDERSON
Dean and Professor of Biblical Theology, The Theological School, Drew University

ELIAS ANDREWS
Principal and Professor of New Testament, Queen's Theological College, Kingston, Ontario

MICHAEL AVI-YONAH
Associate Professor of Archaeology, Hebrew University, Jerusalem

OTTO J. BAAB
Late Professor of Old Testament Interpretation, Garrett Theological Seminary

DENIS BALY
Chairman of the Department of Religion, Kenyon College

BERNARD J. BAMBERGER
Rabbi, Congregation Shaaray Tefila, New York

ALBERT E. BARNETT
Late Professor of New Testament, Candler School of Theology, Emory University

GEORGES AUGUSTIN BARROIS
Professor of the History and Theology of the Medieval Church, Princeton Theological Seminary

IRVIN W. BATDORF
Professor of New Testament Literature, United Theological Seminary, Dayton

WILLIAM A. BEARDSLEE
Professor of Bible, Emory University

FRANK W. BEARE
Professor of New Testament Studies, Trinity College, Toronto

DWIGHT MARION BECK
Professor Emeritus of Bible, Syracuse University

HARRELL F. BECK
Associate Professor of Old Testament, Boston University School of Theology

J. CHRISTIAAN BEKER
Associate Professor of New Testament Theology, Pacific School of Religion

LOUISA BELLINGER
Curator-Analyst, Textile Museum, Washington, D. C.

IMMANUEL BEN-DOR
Professor of Biblical Archaeology, Candler School of Theology, Emory University

OTTO BETZ
Associate Professor of New Testament, Chicago Theological Seminary

MATTHEW BLACK
Principal and Professor of Biblical Criticism, St. Mary's College, St. Andrews University

EDWIN CYRIL BLACKMAN
Professor of New Testament Literature and Exegesis, Emmanuel College, Victoria University, Toronto

EDWARD P. BLAIR
Professor of New Testament Interpretation, Garrett Theological Seminary

SHELDON H. BLANK
Professor of Bible, Hebrew Union College—Jewish Institute of Religion, Cincinnati

F. S. BODENHEIMER
Late Professor of Zoology, Hebrew University, Jerusalem

JOHN WICK BOWMAN
Professor of New Testament Interpretation, San Francisco Theological Seminary

RAYMOND A. BOWMAN
Professor of Oriental Languages and Literatures, Oriental Institute, University of Chicago

JAMES RODNEY BRANTON
Professor of New Testament Interpretation, Colgate Rochester Divinity School

JOHN BRIGHT
Professor of Hebrew and the Interpretation of the Old Testament, Union Theological Seminary, Richmond

WILLIAM H. BROWNLEE
Professor of Religion, Claremont Graduate School, Claremont University College

F. F. BRUCE
Professor of Biblical Criticism and Exegesis, University of Manchester

WALTER A. BRUEGGEMANN
Assistant Professor of Old Testament, Eden Theological Seminary

T. A. BURKILL
Professor of Christian Thought, Cornell University

MILLAR BURROWS
Professor Emeritus of Biblical Theology, The Divinity School, Yale University

HENRY J. CADBURY
Professor of Divinity, Emeritus, Harvard University

GEORGE B. CAIRD
Tutor, Mansfield College, Oxford

J. Y. CAMPBELL
Professor Emeritus of New Testament, Westminster College, Cambridge

SAMUEL A. CARTLEDGE
Professor of New Testament Language, Literature, and Exegesis, and Dean of the Graduate Department, Columbia Theological Seminary

BREVARD S. CHILDS
Associate Professor of Old Testament, The Divinity School, Yale University

KENNETH W. CLARK
Professor of New Testament, The Divinity School, Duke University

SIMON COHEN
Reference Librarian, Hebrew Union College—Jewish Institute of Religion, Cincinnati

ERNEST CADMAN COLWELL
President, Southern California School of Theology at Claremont

ELMER J. COOK
Late Professor of the Literature and Interpretation of the New Testament, Berkeley Divinity School, New Haven

GERALD B. COOKE
Assistant Professor of Religion, Oberlin College

RICHARD W. CORNEY
Instructor in Old Testament, General Theological Seminary

C. E. B. CRANFIELD
Lecturer in Theology, University of Durham

ABRAHAM CRONBACH
Professor Emeritus of Jewish Social Studies, Hebrew Union College—Jewish Institute of Religion, Cincinnati

OSCAR CULLMANN
Professor of New Testament and Early Christianity, University of Basel and The Sorbonne

BRUCE T. DAHLBERG
Assistant Professor of Religion and Biblical Literature, Smith College

EDWARD R. DALGLISH
Professor of Old Testament Interpretation and Hebrew, Eastern Baptist Theological Seminary

PAUL E. DAVIES
Professor of New Testament Greek and Exegesis, McCormick Theological Seminary

W. D. DAVIES
Professor of Biblical Theology, Union Theological Seminary, New York

ROBERT C. DENTAN
Professor of Old Testament Literature and Interpretation, General Theological Seminary

SIMON J. DE VRIES
Associate Professor of Religion and Bible, Hope College, and Instructor in Hebrew, Western Theological Seminary, Holland, Michigan

ERICH DINKLER
Professor of New Testament Literature, University of Bonn

GLANVILLE DOWNEY
Professor of Byzantine Literature, Dumbarton Oaks, Washington, D. C.

MARK J. DRESDEN
Professor of Iranian Studies, University of Pennsylvania

GEORGE S. DUNCAN
Former Principal and Professor of New Testament, St. Mary's College, St. Andrews University

OTTO EISSFELDT
Professor Emeritus of Old Testament and Semitic Religious History, University of Halle

KARL ELLIGER
Professor of Old Testament, University of Tübingen

WALTHER ELTESTER
Professor of Church History, University of Tübingen

DONALD M. C. ENGLERT
Professor of Hebrew and Old Testament Science, Lancaster Theological Seminary

MORTON SCOTT ENSLIN
Professor of Biblical Languages and Literature, The Theological School, St. Lawrence University

ISIDORE EPSTEIN
Principal, Jews' College, London

OWEN E. EVANS
Lecturer in New Testament, University of Manchester; Tutor, Hartley-Victoria College

WILLIAM R. FARMER
Associate Professor of New Testament, Perkins School of Theology, Southern Methodist University

S. VERNON FAWCETT
Professor of Old Testament, Union College of British Columbia

FLOYD V. FILSON
Dean and Professor of New Testament Literature and History, McCormick Theological Seminary

JACK FINEGAN
Professor of New Testament History and Archaeology, Pacific School of Religion

WILLIAM F. FLEMINGTON
Principal and Tutor in New Testament Language and Literature, Wesley House, Cambridge

JOHN W. FLIGHT
Professor Emeritus of Biblical Literature, Haverford College

DAVID NOEL FREEDMAN
Professor of Hebrew and Old Testament Literature, Pittsburgh Theological Seminary

WENDELL W. FRERICHS
Associate Professor of Old Testament, Luther Theological Seminary, St. Paul, Minnesota

CHARLES T. FRITSCH
Professor of Hebrew and Old Testament Literature, Princeton Theological Seminary

STANLEY B. FROST
Dean and Professor of Old Testament, Faculty of Divinity, McGill University

ROBERT W. FUNK
Associate Professor of New Testament, The Theological School, Drew University

KURT GALLING
Professor of Old Testament and the Archaeology of Palestine, University of Göttingen

PAUL LESLIE GARBER
Professor of Bible, Agnes Scott College

THEODOR H. GASTER
Professor of Ancient Civilizations, Fairleigh Dickinson University; Professor of Comparative Religion, Dropsie College

FRED D. GEALY
Professor of New Testament, The Methodist Theological School in Ohio

IGNACE J. GELB
Professor of Assyriology, Oriental Institute, University of Chicago

STANLEY GEVIRTZ
Assistant Professor of Palestinian History, University of Chicago

S. MacLean Gilmour
Professor of New Testament, Andover Newton Theological School

F. Wilbur Gingrich
Professor of Greek, Albright College

Victor Roland Gold
Professor of Old Testament, Pacific Lutheran Theological Seminary

Judah Goldin
Professor of Jewish Studies, Yale University

Edwin M. Good
Associate Professor of Religion and Hebrew, Stanford University

Erwin R. Goodenough
Professor Emeritus of Religion, Yale University

Cyrus H. Gordon
Professor of Near Eastern Studies, Brandeis University

Norman K. Gottwald
Professor of Old Testament, Andover Newton Theological School

Frederick C. Grant
Professor Emeritus of Biblical Theology, Union Theological Seminary, New York

Robert M. Grant
Professor of New Testament, The Divinity School, University of Chicago

John Gray
Lecturer in Hebrew and Biblical Criticism, University of Aberdeen

Kenneth Grayston
Professor of New Testament Language and Literature, Didsbury College

Moshe Greenberg
Professor of Biblical Studies, University of Pennsylvania

Jonas C. Greenfield
Associate Professor of Hebrew, University of California at Los Angeles

Kendrick Grobel
Professor of New Testament, The Divinity School, Vanderbilt University

Edward D. Grohman
Instructor in Old Testament, Pittsburgh Theological Seminary

Harvey H. Guthrie, Jr.
Associate Professor of Old Testament, Episcopal Theological School, Cambridge, Massachusetts

Moses Hadas
Professor of Greek, Columbia University

Alfred Haldar
Assistant Professor of Assyriology, University of Uppsala

Herbert Hamburger
Numismatist, Binyamina, Israel

R. W. Hamilton
Keeper of the Department of Antiquities, Ashmolean Museum, Oxford

E. John Hamlin
Principal, McGilvary Theological Seminary, Chiengmai, Thailand

Paul L. Hammer
Professor of New Testament Theology, United Theological Seminary of the Twin Cities

J. Penrose Harland
Professor of Archaeology, University of North Carolina

Walter J. Harrelson
Professor of Old Testament, The Divinity School, Vanderbilt University

R. K. Harrison
Professor of Hebrew, Wycliffe College, University of Toronto

Dorothea Ward Harvey
Assistant Professor of Religion and Philosophy, Milwaukee-Downer College

Johannes Hempel
Professor of Old Testament, University of Göttingen

GWYNNE HENTON DAVIES
Principal, Regent's Park College, Oxford University

R. LANSING HICKS
Professor of the Literature and Interpretation of the Old Testament, Berkeley Divinity School, New Haven

Professor of Bible, Hebrew Union College—Jewish Institute of Religion, New York

YAAQOV PALMONI
Director, A. D. Gordon Agriculture and Nature Study Institute, Deganya A, Israel

PIERSON PARKER
Professor of the Literature and Interpretation of the New Testament, General Theological Seminary

MERRILL M. PARVIS
Professor of New Testament, Candler School of Theology, Emory University

DAVID C. PELLETT
Professor of Old Testament, Christian Theological Seminary, Indianapolis

ANN PERKINS
Lecturer in Archaeology, Yale University

ROBERT H. PFEIFFER
Late Curator of the Semitic Museum, Harvard University

OTTO A. PIPER
Professor of New Testament Literature and Exegesis, Princeton Theological Seminary

HAROLD H. PLATZ
Professor of Biblical Literature, United Theological Seminary, Dayton

MARVIN H. POPE
Associate Professor of Northwest Semitic Languages, The Divinity School, Yale University

NORMAN W. PORTEOUS
Professor of Hebrew and Semitic Languages, New College, Edinburgh University

JAMES B. PRITCHARD
Professor of Old Testament Literature, Church Divinity School of the Pacific

ALEXANDER C. PURDY
Dean and Professor Emeritus of New Testament, Hartford Theological Seminary

WARREN A. QUANBECK
Professor of Systematic Theology, Luther Theological Seminary, St. Paul, Minnesota

ISAAC RABINOWITZ
Professor of Biblical and Hebrew Studies, Cornell University

GERHARD VON RAD
Professor of Old Testament Exegesis, University of Heidelberg

WILLIAM L. REED
Professor of Old Testament, The College of the Bible, Lexington, Kentucky

ALAN RICHARDSON
Professor of Christian Theology, University of Nottingham

CYRIL C. RICHARDSON
Professor of Church History, Union Theological Seminary, New York

H. NEIL RICHARDSON
Associate Professor of Old Testament, Boston University School of Theology

MARTIN RIST
Professor of New Testament and Christian History, The Iliff School of Theology

BLEDDYN J. ROBERTS
Professor of Hebrew, University College of North Wales

JAMES M. ROBINSON
Professor of Theology and New Testament, Southern California School of Theology at Claremont

J. A. T. ROBINSON
Bishop Suffragan of Woolwich

JAMES F. ROSS
Assistant Professor of Old Testament, The Theological School, Drew University

H. H. ROWLEY
Emeritus Professor of Hebrew Language and Literature, University of Manchester

DONALD T. ROWLINGSON
Professor of New Testament Literature, Boston University School of Theology

J. COERT RYLAARSDAM
Professor of Old Testament Theology, The Divinity School, University of Chicago

J. ALVIN SANDERS
Professor of Old Testament Interpretation, Colgate Rochester Divinity School

J. N. SANDERS
Late Lecturer in Divinity and Dean of Peterhouse, Cambridge University

SAMUEL SANDMEL
Provost and Professor of Bible and Hellenistic Literature, Hebrew Union College—Jewish Institute of Religion, Cincinnati

ERNEST W. SAUNDERS
Professor of New Testament Interpretation, Garrett Theological Seminary

RICHARD L. SCHEEF, JR.
Associate Professor of New Testament, Eden Theological Seminary

R. F. SCHNELL
Principal and Professor of Old Testament Language and Literature, St. Andrew's College, University of Saskatchewan

FREDERICK T. SCHUMACHER
Assistant Professor of Religion, Vassar College

R. B. Y. SCOTT
Professor of Religion, Princeton University

OSCAR J. F. SEITZ
Professor of New Testament, Bexley Hall, Kenyon College

OVID R. SELLERS
Professor Emeritus of Old Testament Language and Literature, McCormick Theological Seminary

MASSEY H. SHEPHERD, JR.
Professor of Liturgics, The Church Divinity School of the Pacific

MONTGOMERY J. SHROYER
Professor Emeritus of New Testament, Wesley Theological Seminary, Washington, D. C.

JAMES D. SMART
Professor of Biblical Interpretation, Union Theological Seminary, New York

CHARLES W. F. SMITH
Professor of the Literature and Interpretation of the New Testament, Episcopal Theological School, Cambridge, Massachusetts

MORTON SMITH
Associate Professor of Ancient History, Columbia University

ISAIAH SONNE
Late Research Librarian and Lecturer on Medieval Jewish History, Emeritus, Hebrew Union College—Jewish Institute of Religion, Cincinnati

E. A. SPEISER
Professor of Hebrew and Semitic Languages and Literatures and Chairman of the Department of Oriental Studies, University of Pennsylvania

W. E. STAPLES
Professor Emeritus of Near Eastern Studies, Victoria College, University of Toronto

KRISTER STENDAHL
Professor of New Testament Studies, The Divinity School, Harvard University

W. F. STINESPRING
Professor of Old Testament and Semitics, The Divinity School, Duke University

ALBERT C. SUNDBERG, JR.
Associate Professor of New Testament, Garrett Theological Seminary

J. CARTER SWAIM
Executive Director, Department of the English Bible, National Council of the Churches of Christ in the U. S. A.

STEPHEN SZIKSZAI
Professor of Old Testament Languages and Literature, Bangor Theological Seminary

VINCENT TAYLOR
Retired Principal and Professor of New Testament Language and Literature, Wesley College, Leeds

SIDNEY S. TEDESCHE
Retired Rabbi, Union Temple, Brooklyn, New York

SAMUEL TERRIEN
Professor of Old Testament, Union Theological Seminary, New York

JOHN ALEXANDER THOMPSON
Professor of Old Testament Language and Exegesis, Evangelical Theological Seminary, Cairo, Egypt

BURTON H. THROCKMORTON, JR.
Professor of New Testament Language and Literature, Bangor Theological Seminary

LAWRENCE E. TOOMBS
Professor of Old Testament, The Theological School, Drew University

JOHN C. TREVER
Professor of Religion, Baldwin-Wallace College

OLGA TUFNELL
Archaeologist, London

NIGEL TURNER
Rector, Milton Parish, Cambridge, England

W. C. VAN UNNIK
Professor of New Testament and Early Christian Literature, University of Utrecht

GUS W. VAN BEEK
Associate Curator of Old World Archaeology, Smithsonian Institution, Washington, D. C.

A. J. VROMAN
Director, Mapping Division, Israel Geological Survey

JAMES M. WARD
Assistant Professor of Old Testament, Perkins School of Theology, Southern Methodist University

LUTHER A. WEIGLE
Dean and Professor Emeritus of Religious Education, The Divinity School, Yale University; Chairman, Standard Bible Committee

ERIC WERNER
Professor of Liturgical Music, Hebrew Union College—Jewish Institute of Religion, New York

JOHN W. WEVERS
Associate Professor of Near Eastern Studies, University College, University of Toronto

JAMES A. WHARTON
Assistant Professor of Old Testament, Austin Presbyterian Theological Seminary

CHESTER L. WICKWIRE
Lecturer in Religion, Johns Hopkins University

ALLEN WIKGREN
Chairman of the Department of New Testament and Early Christian Literature, University of Chicago

RONALD J. WILLIAMS
Professor of Near Eastern Studies, University College, University of Toronto

WALTER G. WILLIAMS
Professor of Old Testament Literature, The Iliff School of Theology

HAROLD R. WILLOUGHBY
Late Professor Emeritus of Early Christian Origins, University of Chicago

JOHN A. WILSON
Professor of Egyptology, Oriental Institute, University of Chicago

FREDERICK V. WINNETT
Head of the Department of Near Eastern Studies, University College, University of Toronto

PAUL WINTER
Research Scholar, London

ORVAL S. WINTERMUTE
Lecturer on the Old Testament, The Divinity School, Duke University

C. UMHAU WOLF
Minister, St. Paul's Lutheran Church, Toledo, Ohio

G. ERNEST WRIGHT
Professor of Old Testament, The Divinity School, Harvard University

FRANKLIN W. YOUNG
Professor of New Testament, Princeton University

MICHAEL ZOHARY
Professor of Botany, Hebrew University, Jerusalem

GÜNTHER ZUNTZ
Reader in Hellenistic Greek, University of Manchester

EDITOR'S PREFACE

Few people would question the value of a dictionary. Those who seriously read, and still more those who seriously write, keep a dictionary at hand as an indispensable aid. Such games as crossword puzzles and scrabble have enlarged the vocabulary and *diction* of the players—through use of the *dictionary*. A comprehensive dictionary traces not only the meaning of a given word, but also its history, for words change in meaning through the generations. Let the reader thus discover why the word "cynic" meant originally both a philosopher dedicated to virtue and a snarling critic of contemporary mores; or why and when the English city of Pontefract received its name, or why the word "sincere" (*sine cera,* "without wax") came into legal and then into common use. For thoughtful people a dictionary is as necessary as hammer and chisel to a carpenter. There are deeper issues involved, for language is a vast and ever-changing symbolism which shapes a culture even while it is being shaped by its culture.

This obvious comment is enough to show the need for a dictionary of the Bible, not alone for theologians and preachers, but for anyone who would read the Bible with intelligence. Our Old Testament was not always ours: it was written originally in Hebrew, as our New Testament was originally written in Greek, which in its turn depended on an originally spoken Aramaic. Thus the first meaning of Bible words is discoverable only through a study of the language; and not of that alone, but of the language within the history and culture of the Bible people. Bible words, like words in any dictionary, are changed in their meaning through the years: our New Testament word "hypocrite" meant at first "play-actor" in no unworthy sense, and the New Testament word for "love" (*agape*) gathered a new and crucial importance through the coming of Jesus Christ. So the Bible is not well understood except by readers who trace the history, as well as the meaning, of Bible words. The deeper issues are again involved: a proper understanding and use of Bible words shapes our culture, which depends on biblical faith far more than it suspects or acknowledges.

It would hardly be true to say that no full-scale dictionary of the Bible has appeared in our language in the past fifty years—that is, since the publication of James Hastings' *Dictionary of the Bible* in five volumes between 1898 and 1904. Tempted to such a comment, I was quickly disabused when I began to canvass the extraordinary labor in this field in the last half century, in French, Hebrew, and German perhaps even more notably than in English. (For a partial list of such books, *see below.**) But it is perhaps true to say that no work as comprehensive as these present volumes has been published in English in that time period, and that no such work included writings from as many nations and fields of scholarship; and it is certainly true that new knowledge points the need for such a work. John Robinson prophesied our time:

* The Roman Catholic: F. Vigouroux, ed., *Dictionnaire de la Bible* (1895-1912), which maintains a supplement; the Protestant: A. Westphal, ed., *Dictionnaire Encyclopédique de la Bible* (1932). Several one-volume works, such as: M. W. Jacobus, E. C. Lane, and A. C. Zenos, eds., *New Standard Bible Dictionary* (1936); J. D. Davis, ed., *The Westminster Dictionary of the Bible* (1944; rev. H. G. Gehmann); H. Haag, ed., *Bibel-Lexikon* (1951); M. S. Miller and J. L. Miller, eds., *Harper's Bible Dictionary* (1952); *The Catholic Biblical Encyclopedia* (1956). Among multi-volumed works there is: J. Orr, ed., *The International Standard Bible Encyclopedia* (1930). There have been notable word studies, such as: G. Kittel, *Theologisches Wörterbuch zum Neuen Testament* (1932—); A. Richardson, *A Theological Word Book of the Bible* (1951); J. J. von Allmen, ed., *A Companion to the Bible* (1958).

"The Lord hath yet more truth and light to break forth from His Holy Word."

New Knowledge

This new knowledge is so vast a treasure that the following paragraphs hardly hint its worth. As for the text of the Bible, we now have better manuscripts, such as the Chester Beatty Papyri, purchased from dealers in Egypt in 1931, and the more recently discovered Dead Sea Scrolls. These latter show, for instance, that the Septuagint (Greek) version of the Old Testament may at some points be more trustworthy than the Masoretic (continuing Hebrew) text.

As for the language of the Bible, we now know that the New Testament was written in *koine* or vernacular Greek rather than in the classical form and diction—an advance in knowledge made possible by papyri found in Egypt; and further light on the Old Testament languages has come from the Ras Shamra Texts, from many Assyrian and Babylonian cuneiform tablets and other inscriptions in cognate languages, and from a careful study of the Dead Sea Scrolls.

As for the thought-forms of the Bible, these have been illuminated by a fuller knowledge of ancient history, such as that of the life of the Fertile Crescent with which the life of Israel was closely linked, or that of the Greco-Roman world into which the Christian faith made its initial thrust.

As for the flora and fauna of the Bible, to cite but an instance, studies in this subject have brought important clarification: perhaps Jesus did not intend by "lilies of the field" the white madonna lily, but flowers in general—the reference to the robe of Solomon would seem to argue in favor of the scarlet anemone, if Jesus had in mind any specific flower. Such items find chapter and verse within this dictionary.

"Higher criticism" is a misleading term which means simply the study of the date, authorship, sources, purpose, and plan of a Bible book. New knowledge has thrown light on all these items. Study of the text, as, for instance, Greek terms in the book of Daniel, has provided added internal evidence; and historical research has brought new external evidence; and though the name or names of Bible authors may not be known for lack of sufficiently clear witness (we say "names," as well as "name," because it now becomes clear that many Bible books have corporate authorship), the manner and outlook of Bible writers now appear in sharper outline.

Form criticism, the study of the literary forms in which the units of primitive biblical tradition are cast, has helped to illuminate and to emphasize the close relation between the tradition and its social environment, and has thus provided new understanding of both Testaments.

Meanwhile archaeology moves apace: the instances known to laymen, such as the outstanding discoveries at Qumran and Jericho, are but isolated examples; and it is hardly too much to claim that this branch of study, in its scrutiny of artifacts and literary texts, has vivified both the history and the geography of the Bible world.

Overarching all these new bestowals is the revival of biblical theology which the crisis of our times has quickened and required. The judgment implicit in our apocalyptic age has taught us anew that only Bible verities about the nature and destiny of man can withstand history's stern tests, and that only God's self-disclosure in Christ can bring the solving word in our dilemma. The crux of our century has newly revealed the Bible's sharp pertinence and unplumbed depth. Thus we have "more truth and light" almost blindingly, and would be renegade were we to try to close doors and windows against its coming. Thus we confront an almost clamant need for a new, comprehensive dictionary of the Bible.

Comprehensiveness

How comprehensive? These volumes have enlisted scholars not only from the United States, but also from Canada, Denmark, Egypt, England, France, Germany, Israel, Jordan, Norway, Scotland, Sweden, Switzerland, Thailand, and Wales. That France and Germany should appear together in this list, or Jordan and Israel, is a sign that biblical studies overleap national boundaries. Due care has been taken to choose for each assignment the gifts of a scholar peculiarly versed in that particular field. The Editorial Board has asked repeatedly: "Who are the men who have given years of labor to this area of Bible knowledge? Who can treat most effectively this particular subject?"

This dictionary has staked out a claim wider than the words of one version of scripture. The King James Version is in the blood and tissue of our race: it is a devotional classic which has helped beyond measure to shape biblical understanding. Therefore it has been near the center of our editorial concern. But new knowledge of Bible languages, the availability of new manuscripts, and the fact that the King James Version is written in an Elizabethan English and therefore in a vocabulary which has sharply changed in meaning in three centuries, made almost mandatory our use of the Revised Standard Version. Hence this new version has had a basic importance in our labors. So all significant terms (proper names, important objects, and theological terms, for example) from this new version have been included, and the Revised Standard Version word is given as the main entry. Moreover, the important words in the Pseudepigrapha (pseudonymous writings which purport to have been written by Bible characters, and which are not without value) and in the Apocrypha and the deuterocanonical books (writings, some of considerable worth in Bible study, outside the canon of the customary Old and New Testaments) have received due attention. There are articles on such topics as form criticism and the Dead Sea Scrolls; and on subjects which may seem remote to some readers, but which have direct bearing on the understanding of scripture, such as historical backgrounds (Sumer, Babylonia and Assyria, Egypt); and on peoples of the ancient Near East (Hittites, Philistines, Horites); and on such subjects as flora, fauna, arts, cities, crafts, the calendars, archaeology, pottery, and government. The interests of theological study have been widely served: there is an introduction to each Bible book, and a thoroughgoing study of such cardinal concepts as redemption, atonement, love, and resurrection. Our title is *The Interpreter's Dictionary of the Bible,* but these volumes travel far in the direction of a Bible encyclopedia.

Comprehensiveness is evident in other regards. Cross references have been liberally used. While each article seeks to give adequate understanding—as, for instance, the article on righteousness, which discusses this term in both its Old Testament and its New Testament use—cross references here as elsewhere enable the Bible reader to pursue studies in related fields. Each major article offers a bibliography, a help which standard volumes in this field have not always provided. Because it is based on two main versions, because it ranges beyond the canon and beyond a merely dictionary limitation, this work has a longer list of terms. Its major articles offer a valuable introduction to biblical and theological study, not to mention answers to inquiries in such fields as archaeology and history. Christian faith may thus be understood in clearer outline against the panorama of its world and age. These claims are made not in pride, but in gratitude: "Others have labored, and" we "are entered into their labor."

Illustrations and Maps

If it is true, as psychologists tell us, that more than ninety per cent of people have a centrally visual imagination, pictures should have important place in a Bible dictionary. The wide reading of illustrated magazines and newspapers, which in some instances provide hardly more reading than an extended comment on the illustrations, accents this requirement. So one tenth of the space in these volumes is given to illustrations. There are maps, some in color and some black-and-white, not alone of countries, but of neighborhoods and cities. In certain instances ground plans have been provided, the temple area in successive eras being a case in point. *Charts* appear in connection with such items as archaeological "ages" and the chronology of Bible books. There are photographs or sketches, many of them new, of flowers, trees, weapons, musical instruments, household utensils, and tools. While some of the pictures have been gathered from well-known collections, others have been made expressly for this dictionary, and some are the special work of contributors.

Of particular note are the pages in color. There are five of these groups of pictures, as follows: eight pages of flora and fauna, eight pages of landscapes, four pages depicting jewels, twenty-four pages of maps, and eight pages portraying scrolls or maps including pictures of the now-famous Dead Sea Scrolls. Though we have been obliged to set some limit on visual aids, we have tried to honor specific requests from our writers, and

to assure to each due occasion and each important instance its rightful illustration.

Format

These volumes are the same in size as those of *The Interpreter's Bible,* but in different binding and color. The two, the Commentary and the Dictionary, can thus stand side by side on the shelf, each in its own right, yet as friends and companions. We hope that the two works will become for many people trusted companion-aids. The binding is in stanch cloth to withstand both wear-and-tear and microscopic enemies. The paper is like that of the Commentary, fashioned to keep both color and texture, and so processed that the type will not show through to the next page. This is not the place for an itemizing of financial costs, but it is appropriate for us to remark that the publishers have spared no pains to make a worthy book.

As to the page format, type has been chosen from many samples for attractiveness and legibility. Page headings and page numbers have been selected so as to grant the reader quickness and ease as he seeks the place. Column width has been determined so as best to serve both eye and mind. The actual printing is by the "offset" method, and the typesetting was handled by a "Fotosetter." This dictionary has pages that are clear, readable, and inviting to the eye.

As to the format of the articles, the following plan is usually utilized: first comes the word or topic in boldface type; then a suggested pronunciation, in instances in which this is necessary or helpful, though pronunciation is frequently hard to determine; then the word's original language form; and then a proposal as to its etymology. When alternative forms occur, or when the King James Version differs from the Revised Standard Version, these extra forms are noted—after the information regarding the main entry. Departures from this method are in some instances required, as with theological articles, but an attempt has been made to keep some consistency of form. Many major articles are provided with an outline and are paragraphed or set with headings to trace the course of the discussion, and to enable the reader to find quickly the writer's comment on some particular aspect of the topic. Pictures or maps are provided as the article seems to dictate. Cross references, invaluable in serious study, are given to allied articles (assiduous care has been taken with the cross references), and finally a selected bibliography is offered. Thus a wealth of knowledge is compactly presented, with many an opening for further study.

Function and Availability

When this dictionary was first planned, the Editorial Board asked themselves what groups of people would use it; and they tried, in the light of such questionings and the likely answers, to provide a dictionary of wide advantage. The busy preacher was at the forefront of our concern. Whatever skill he may have to communicate with his generation, his gospel is not applied surgically and healingly to men's lives unless he knows the meaning of scripture in its historical and cultural context. The reading of an older version, however devotional in mood, is not enough for an honest and effective proclamation of the Word. What does such a phrase as "considering the end of their conversation" really mean? It is not a comment on our unworthy parleys and debates. Or is the preacher's topic "truth" as the Johannine Gospel often uses the word? Then he must know the intent and derivation of the word *aletheia:* "without a veil." Thus the Bible conviction as to the nature of truth can be set with challenge and purpose over against a generation which believes truth to be a nearby land of achievable information. Too much preaching has not been preaching: it has been a web of fugitive ideas spun from the preacher's random thoughts. Preaching, by the very meaning of the word, is heralding; and no preacher can be a herald unless he knows his commissioned word.

The scholar has also been kept in a primary editorial concern. It would be easy to assume that he does not need a dictionary of the Bible, but the supposition would be a mistake. The range of Bible knowledge is now so vast that no one mind can compass more than a province—or a county. Earlier dictionaries fortified the scholar's labor. They have served us invaluably as we have planned and processed these volumes. But again and again we have been confronted by whole areas of new knowledge, and have asked ourselves how this new terrain can be

fenced and cultivated. We hope this dictionary may serve the scholar well as a base from which he makes new ventures; and that here the linguist, the historian, the theologian, and the archaeologist may each be enriched by the others' labor.

The student in college and seminary has also been clearly in our mind. Seminary enrollments show a needed increase. Biblical studies in college and university spread in rapid contagion as men more and more doubt if a secular assumption is a sure base for education. We have been glad and grateful to observe that *The Interpreter's Bible* is now widely used in college studies in the biblical field, especially in its general articles and its introduction to the several Bible books. This dictionary may be, in its own way, an equally valuable resource. We hope that many a student will use it in biblical studies as readily as he turns in other studies to a competent encyclopedia.

We have been solicitous for the needs of the church-school teacher. The cruciality of his work is accented by the fact that many who espouse Christian faith are yet almost illiterate about the convictions set forth in the Bible. The church-school teacher does not wish to be spoon-fed. He craves a better help than the scanty *ad hoc* guidances which the teacher's book sometimes offers. We believe he will welcome the thoroughgoing and scholarly, yet quickly available, help offered in this dictionary.

We have not forgotten the general reader who is intent to understand the Bible. More and more people realize that the Scriptures, though a matchless book of devotion, are also a vast world of thought that speaks incisively and redeemingly to man's condition. The crisis of our age has brought mistrust of human powers. Modern man asks wistfully, skeptically, or urgently, "Is there any word from the Eternal?" Thus our age returns to the Bible, not in naïve acceptance or sentimental piety, but in resolve to know if it can give an answer to the predicament of modern man. In such a time a true understanding of scripture is of prime importance. To this end we have tried to avoid technical language in these volumes. Honesty has required reference to the original languages, but transliteration has often been used so that the general reader may not be waylaid; and the door has been barred against erudite references and exhaustive (and exhausting) footnotes. Here may be found both up-to-date information and trustworthy guidance. We shall be disappointed if this dictionary does not find its place in the library of every sizable city and college, and on the shelves of every alert minister and Bible scholar.

Procedures

Meetings of the Editorial Board began in February, 1955. The task, apart from final proofreading and correction, has occupied five years. Meetings were at first frequent: many decisions as to a ground plan were necessary before construction could begin. The scope of the work was first determined, then advisers were appointed, then a typographical format was chosen, and then a tentative plan was drawn for the main articles. These decisions were not easily made. The knotty problem of the pronunciation of Bible words took hours of discussion, and led finally to the appointment of expert help. The choice of contributors was concluded only after scores of names had been canvassed so that each topic in the Dictionary might be matched to the skill of the best-qualified scholar. 253 scholars have been enlisted in these volumes.

After some weeks members of the Board wrote sample articles, both of major and of minor length, which might serve our contributors as illustrations or examples of what the Board had in mind. These articles were submitted to rigorous criticism, then corrected, and then sent to our writers, not in any too stringent requirement, but for their guidance. Illustrations were from the first a main concern. The Board examined many sources of illustrative aid; and, when they were unable to find the desired resource, authorized new sketches and pictures. Hours were spent looking at projections on a screen, so that the best illustrations might be chosen.

Any omnibus task such as this, spread over a span of years, must meet the difficulties which sickness, sorrow, and death impose. There have been other besetments, and therefore new contributors have been sought and found in the midmost of the journey, though always with concern for their knowledge as scholars and their competence as writers. Our experience with *The Interpreter's Bible,* to

which this dictionary is a companion work, has been turned to account; for by that earlier endeavor we have seen more clearly the needs of readers, the locale of available scholarship, and many a practical involvement of the task. All in all, the hazards have been fewer than we might have feared, the joys have been many, and we have found in advisers, writers, and publishers a ready and gifted co-operation.

Acknowledgments

It is a glad and grateful task to make certain acknowledgments, and first to my fellow editors, even though against their will. Their toil has been both talented and assiduous, with a scholarship which I cannot claim. Thomas Kepler has been concerned with New Testament material, and has been responsible for all illustrative materials; and he has brought to both tasks the interest and labor of a lifetime. John Knox also has been responsible for New Testament articles, where his knowledge has long been proved; introduction and theology have been his particular charge. Herbert May has been one of the editors for Old Testament material, but in far more than routine fashion: his knowledge of languages and archaeology has been an invaluable resource. Samuel Terrien has served in the same capacity, in much the same way for the Old Testament articles as John Knox for the New: his gifts in exegesis, introduction, form criticism, and theology have been specially devoted to longer articles in the Old Testament field.

All five of us would feel renegade were this Preface to be empty of gratitude for help given by many members of the executive staff of Abingdon Press. Gifted far beyond the technical knowledge of their craft, they have established a modest custom which forbids mention by authors of co-operation given by the Press. But we cannot worthily be silent, for these volumes owe their inception, development, and completion as much to Abingdon Press as to the contributors and editors. The governing board of the Press early gave enthusiastic assent to the project, even though there was no sure prospect that the outlay of time and money could be quickly amortized. We remember with appreciation Pat Beaird, now Executive Vice-President of The Methodist Publishing House, who gave incentive and first direction to this task. Our thanks are offered also to fellow laborers at our Board meetings: to Cecil Jones, Manager of Abingdon Press, who has continued the same generous policy regarding this dictionary as was followed for *The Interpreter's Bible;* to Emory S. Bucke, Editor-in-Chief of Abingdon Press, who has brought gifts both of imagination and of fidelity; to Gordon B. Duncan for meticulous care in such items as typography, style, pronunciation, and format; to William Bosworth, especially for his knowledge and ingenuity in printing method; to Hermann Zimmermann for design and illustration; and not least to Miss Willine Hall, who has compassed with swift skill the hard day-by-day labor of preparing manuscript for the typesetter. There are also those who have been responsible for the printing and the advertising. We would have them, and the reader also, understand that we gratefully realize these volumes could not have appeared without their aid.

Thanks are offered to all our contributors. They have quickly sensed the Dictionary's purpose, and have discharged their task with scholarship and clarity of expression. To a surprising degree, in the burden of their many duties, they have met the deadline of their assignments.

We are grateful also to our gifted advisers: to Bruce M. Metzger for counsel on articles in the field of the Apocrypha; to D. Noel Freedman for similar counsel on Old Testament articles; and to George E. Mendenhall for advice in the field of archaeology and Near Eastern studies. It has been an assurance to know that we could turn to these scholars for confirmation and guidance. We are grateful also to translators, especially to Mrs. Anita C. Reichard (for German articles) and Mrs. Francisco Solinis-Herrero (for articles written in French). Our heartfelt appreciation is offered also to an unofficial consultant whose help nevertheless has been beyond compute: William Foxwell Albright. He has read many articles, and supervised others written by his students past and present, and has guided us in the selection of writers. Though no article appears under his own name, his informed mind has shaped and kindled much that others have written herein.

In Conclusion

The nature of the material in *The Interpreter's Bible* permitted its publication two volumes each year. The required plenitude of cross references in this work dictates that it be published *in toto* on one date. We believe that it will hold its place for more than a generation. Then "the Lord hath yet more truth and light to break forth from His Holy Word." We dare to hope that these volumes will serve our crucial time under God's increasing purpose. Ignorance is no ally of the gospel. Knowledge and faith are not at odds; faith carries knowledge on strong shoulders, knowledge thus having a higher reach. Scholarship and prayer are friends, not strangers; prayer is the light in which alone scholarship can fulfil its task, and scholarship is thus prayer's harvest. Insight and practicality alike require that men shall "rightly handle the word of truth." To that end these volumes are dedicated.

Some centuries seem to be skeptic in mood: the "sea of faith" is at the ebb. Others show a return to faith: the tide comes in again on our human shore. Perhaps this dictionary appears when the tide is at the tremulous turn. Science has its own worthy witness, for man's life in the natural order is of divine ordaining; yet the word of science, if ungirded by deeper words, is but a fractional comment, for man has a stance above the natural order. That stance is the fulcrum of his freedom, and the entering in of his redemption. The Bible honors human life in its wholeness. There is no disparagement of man's body or of his daily work or of the cosmos: "The earth is the LORD's and the fulness thereof." But there is recognition of a deeper and higher dimension from which man's daily life is seen and judged. So the Bible reveals our brokenness while bringing persuasions of grace. Generation by generation men find there a lamp for their feet and a light on their path. Otherwise they stumble in darkness. Therefore this dictionary. We pray that it may quicken faith in the earth, and bear its witness to that Kingdom which was and is and is to come.

GEORGE A. BUTTRICK

THE INTERPRETER'S DICTIONARY OF THE BIBLE
SUPPLEMENTARY VOLUME

PUBLISHED 1976

Updating and supplementing information in the four-volume set
Based on recent archaeological discoveries and contemporary biblical studies

***Cross references.** In these four volumes, an asterisk appears in front of certain entries. This indicates that a new article on this subject will be found in the supplementary volume—either under this exact title or closely related key words. For example, the cross reference from SHIPS AND SAILING, OT, and SHIPS AND SAILING, NT, will take you to a new, updated article on SHIPS AND SHIPPING. The asterisk at CITY leads to CITIES, GRECO-ROMAN.

Sometimes, in order to lead you to new information given under a totally different title, the asterisk in this four-volume set will lead to a cross reference in the supplementary volume. This, in turn, will direct you to the new article in the supplement where the information can be found.

To illustrate: the asterisk in front of CORINTHIANS, THIRD EPISTLE TO THE, leads to the same entry in the supplement, which is a dummy entry referring you to the new article on APOCRYPHA. The asterisk by QUMRAN, KHIRBET, will lead, by the way of a dummy entry in the supplement, to the definitive new article on the DEAD SEA SCROLLS.

The supplementary volume, in turn, will contain the same cross referencing system. An asterisk beside certain words refers you back to basic information in the original four-volume set.

This double system of cross referencing will provide you with the fullest and latest information on biblical themes, persons, archaeological sites, results of recent biblical studies, and the resource helps you need for better understanding of the Bible.

EXPLANATIONS AND INSTRUCTIONS

Range of Subjects

As indicated by the title and subtitle, this work is both a dictionary and an encyclopedia. As a dictionary it lists all the proper names and distinctive terms of the Bible, including the Apocrypha, and defines or identifies them. As an encyclopedia it presents articles summarizing the significant information known about the important names and terms and also about important subjects related to the Bible.

Terms judged distinctive enough for treatment include not merely the considerable number of words which have come into our language from the Bible—such as "apostle," "jubilee," "manna"—but all which as used in the Bible have any special meaning. Among these, e.g., are terms for plants and animals needing identification, for artifacts needing description, and for ideas needing clarification. In fact, it might be said that every biblical term has been chosen for treatment if the results of scholarly study can contribute to its understanding.

The range of subjects extends beyond terms used in the Bible to include concepts implicit therein. It extends further to cover the Bible's setting in the ancient Near East, its literary environment, its history, and the sources (including archaeology) of our knowledge about it. The latter two categories include the transmission, translation, interpretation, and study of the Bible up to the present time, but otherwise the focus is entirely within the biblical period.

So far as possible, this work is based on the Bible itself rather than any particular English version. But to the extent that versions differ in the spelling of names and in other details, a choice was made in order to avoid listing all the variants. The list of names and terms for this work, therefore, was compiled from the King James and Revised Standard Versions. The reader of either of these versions may expect to find herein every name or distinctive term that challenges his interest. Ordinarily similarities will enable the reader of any other version to readily locate a name or term. If not, he should consult one of the above versions in order to identify the entry under which his subject is treated.

Arrangement of Subjects

Entries appear in the customary alphabetical order, except that certain pairs and series of articles beginning with the same word are arranged according to the logic of their own relationship (e.g., "Chronology of the OT" precedes "Chronology of the NT"). If an entry has two or more meanings, the definitions are numbered with boldface arabic figures, and all but the first begin new paragraphs (e.g., see "Abijah" below).

A name or term is normally defined and discussed only once, in what comprises the main entry for that subject. It is entered also in any variant forms readers would have reason to look for, but these entries merely refer to the main entry. For a name the main entry is the form most commonly used in the Revised Standard Version. For other subjects the main entry takes the form judged most likely to be sought by readers.

Related subjects can often be most effectively presented in a comprehensive article which organizes the several biblical terms and their overlapping English translations into a clear structure (e.g., see "Dress and Ornaments"). Each term treated in such an article appears also as a separate entry, where it is accorded appropriate brief treatment and a reference to the comprehensive article. If the individual entry contains more than a mere definition, a cross reference to it is included at the proper point in the comprehensive article.

The reader is advised, therefore, to seek information under whatever heading seems to him most logical. If he does not find it there, he may at least expect to find a reference to the entry where he can find it.

Pattern of Presentation

As a typical example of the structure of the opening paragraph in the treatment of a name, observe in detail the following excerpt and comments:

ABIJAH ə bī′jə [אביהו, Y is (my) father]; ABIJAM —jəm [אבים, *see* 5 *below*] (I Kings 14:31; 15:1, 7-8); ABI ā′bī [אבי, my father] (II Kings 18:2); KJV alternately: ABIAH ə bī′ə (I Sam. 8:2; I Chr. 2:24; 6:28; 7:8); ABIA (I Chr. 3:10; Matt. 1:7; Luke 1:5).
1. Son of Becher, of the tribe of Benjamin (I Chr. 7:8).
2. The KJV translation of the MT אביה in I Chr. 2:24; the name of the wife of Hezron, of the tribe of Judah. Perhaps the correct reading is אביהו—i.e., "his

1. The entry itself is printed in boldface capital letters.

2. The name is followed immediately by its pronunciation. See the front endpaper of each volume for the key to the diacritical marks used to indicate pronunciations. For further details see the explanations below.

3. Within square brackets appear the Hebrew (or Aramaic or Greek) original and its root meaning if known (the abbreviation "Y" used in this example indicates any form of the divine name Yahweh). Textual variants, cognates in other ancient languages, or other significant information about the original word may be included within the brackets or, if discussion is needed, treated in the body of the article.

4. Variants distinguishable in the Revised Standard and King James Versions are printed in capital letters (not boldface), each accompanied by its pronunciation if different from the preceding, by its original and the etymology thereof if different, and by an indication of where the variant appears. If no version is indicated, the variant appears in the Revised Standard Version; the initials "KJV" indicate that one must turn to the King James Version to find the variant.

Derivative forms are usually presented in the same way as variants (e.g., Abiezer, Abiezrite) but may be treated separately if of sufficient importance (e.g., Aaronites).

5. Following the above data, the first sentence defines the person or place bearing the name. In the example above only the first two of the nine numbered identifications of the biblical persons named Abijah are quoted.

So far as similar information is significant for entries other than names, it is presented in an opening paragraph according to the same pattern.

In a lengthy article the discussion is organized into sections and subsections, each beginning with a numbered or lettered boldface heading. The several headings are listed in outline form as a table of contents following the opening paragraph. The reader seeking only a certain portion of such an article should ascertain the proper section from the table of contents and then locate it in the body of the article by means of the boldface heading.

Cross References

A particular value of this work is the opportunity it affords the reader to pursue many branching paths of study according to his individual needs and interests. The signposts of such paths are cross references, which are indicated by the printing of words in SMALL CAPITAL LETTERS. Every word or phrase so printed is to be understood as if followed by "which see."

Because all biblical names appear as entries, the reader may of course consider any mention of a name an invitation to seek information about it. The printing of a name or other subject in small capitals, however, should be taken as a definite recommendation and a promise that significant information will be found under the topic so signalized.

Quotations and Source References

Biblical quotations, unless otherwise indicated, are from the Revised Standard Version. Biblical references are punctuated as follows: a colon separates chapter from verse; a semicolon separates one reference from the next (e.g., Matt. 5:3-11; 6:9-13; 7:7-12). References to other ancient writings which are divided into chapters and verses follow the same form. The names of most such works are abbreviated in references. The

abbreviations and the names for which they stand are included in the list of abbreviations on the following pages. This list is repeated at the front of each volume. The names of the books of the Bible, Apocrypha, Pseudepigrapha, and Apostolic Fathers are also printed for convenient reference on the back endpaper of each volume.

Bibliographies

Each article on a subject to which biblical scholars have given critical study ends with a bibliography listing works where the interested reader may find further information. The bibliography also takes the place of footnotes in reporting sources of distinctive information and interpretation reported in the article. Works frequently cited in the bibliographies are abbreviated. To decode these references the reader should consult the list of abbreviations appearing at the front of each volume.

Illustrations and Maps

The many black-and-white illustrations scattered through these volumes are identified by a code consisting of the first three letters of the subject under which the illustration appears, followed by a number (e.g., ABE 1). A reference to an illustration is indicated by an asterisk (*) at the point of reference and the code identifying the illustration at the end of the paragraph.

The four series of full-color illustrations appear in special sections, one in each volume, and are identified by roman numbers.

The full-color maps reproduced as a section in this volume are also identified by roman numbers.

Black-and-white maps are located through the text to illustrate specific articles. References to these maps in other articles identify them by the subject under which they appear.

Pronunciations

The key to the diacritical marks used to indicate pronunciations is printed on the front endpaper of each volume. Most readers will rarely need to consult this key, however, because the marks are traditional and familiar. A possible exception is the symbol "ə"—known as "schwa." As noted in the key, this symbol may replace any of the vowels to indicate the neutral sound common in unaccented syllables of ordinary speech. The use of "schwa" or an equivalent for it has been adopted in practically all modern dictionaries as essential for accurate representation of spoken words.

Accented syllables are indicated by the usual marks following the syllables. If a word contains two or more accented syllables, a thinner mark is used to indicate lesser accent.

A dash appearing in a pronunciation indicates that the portion of the word which it replaces is the same as in the preceding pronunciation.

Proper pronunciation is determined by current usage. Certain names of the Bible are among the most frequently spoken of all names. Their pronunciation in English is well established and easy to ascertain. On the other hand, large numbers of biblical names are spoken only rarely, so that no established usage can be found for them. Most people who have needed to speak them have either guessed or consulted some authority—a Bible dictionary or "self-pronouncing" Bible. At present the pronunciations in all such authorities now available appear to be based on several lists of which the latest dates from more than half a century ago. Some of the pronunciations they show for familiar names are now clearly obsolescent. Nevertheless, as the only available guides, they must be assumed to exert considerable influence still over the pronunciation of the unfamiliar names.

To determine the pronunciations for this work, therefore, the several older lists were tabulated and compared. In addition, pronunciations were secured from the writers and editors. As a further factor, consideration was given to the likelihood that people guess at certain names because they appear to rhyme with familiar names (e.g., Asaiah and Isaiah). When all or nearly all of these are agreed, a pronunciation may perhaps be considered substantially established even though rarely confirmed in actual speech. When there is disagreement, however, one must distinguish between the situations where, on the one hand, two or more pronunciations are widely used (e.g., for Philistine) and where, on the other hand, different authorities have arbitrarily chosen pronunciations for a name

no one habitually pronounces. In the first situation the alternates need to be shown; in the second, a single choice from among the possibilities seems enough. From this reasoning, therefore, the reader may gather that a pronunciation he finds here is not necessarily the only pronunciation for the name. However, he may use it with confidence that it is an acceptable pronunciation.

A (ALEPH ä'lĭf) [א]. *See* SINAITICUS.

AALAR. KJV Apoc. form of IMMER 2.

***AARON** âr'ən [אהרן, אהרון]. The elder brother of Moses (Exod. 6:20; 7:7). The picture of Aaron differs in various accounts. In early literary materials the data concerning Aaron is of utmost importance, although sketchy. Late materials extensively set forth his activity and significance.

In P, Chronicles, and other postexilic material, Aaron was Moses' helper in freeing the Israelites from Egyptian bondage. He was the first high priest, the ancestor of all lawful priests (cf. Ezra 7:1-5, where the ancestry of EZRA [3] is traced to Aaron; Luke 1:5; Heb. 5:4-5; 7:11). Aaron served as Moses' spokesman to Pharaoh (Exod. 7:2). God commanded both Moses and Aaron what they should do to effect deliverance (7:8; 9:8), and Moses and Aaron appeared together in the encounters with Pharaoh. At Moses' instruction Aaron with his rod performed a sign before Pharaoh (7:8-12) and brought on the first three plagues (7:19-20; 8:5-6, 16-17). God revealed to both Moses and Aaron the prescriptions for the Passover (12:1). Aaron was beside Moses in leading and organizing the people (Num. 1:3; 2:1; 4:1) and with Moses presided in judgment (15:33). The murmuring of the people was directed against both Moses and Aaron (Exod. 16:2, 6; Num. 14:2, 26; 20:2). Through anointing by Moses (Exod. 29:7; Lev. 8:5-12) Aaron became "the priest" (Exod. 31:10; 35:19; 38:21; Lev. 13:2; Num. 18:28). God gave Moses directions for the making of glorious vestments which Aaron was to wear in the tent of meeting and in the holy place to signify the people of Israel before God (Exod. 28; Lev. 8:7-9). The tent of meeting and the ark within it were committed to Aaron's charge (Num. 4). Instructions concerning his office came to him directly from God (Num. 18). Aaron alone, once a year, entered the holy of holies (Lev. 16). Aaron was the first priest and the founder of the priesthood. His four sons, NADAB (1); ABIHU; ELEAZAR (1); ITHAMAR, were consecrated along with him (Exod. 6:23; 28–29; Num. 3:2-3; I Chr. 24:1).

Aaron was the Levite par excellence. In two stories which set forth the cultic prerogatives of the tribe of Levi, Aaron was a leading figure: (*a*) Led by KORAH, 250 leaders of the tribes in the wilderness protested that since "all the congregation are holy," there was no need for the Levites to be specially set apart to approach God; the charge was made to Moses and Aaron; the issue was decided by a trial by ordeal; fire destroyed the rebels; Aaron with his firepan filled with incense and fire from the altar stopped a plague (the P story in Num. 16:1*a*α, 2*b*-7*a*, 18-24, 35, 41-50). (*b*) When a rod from each of the twelve tribes was placed in the tent of meeting before the ark, the rod of Levi with Aaron's name on it blossomed; thenceforth Aaron's rod was to be kept in the tent of meeting as a sign against rebellion (Num. 17:1-11). The pre-eminence of Aaron as the divine choice for the priesthood, over against the demand of the Levites for status as priests, was set forth in the story of Korah's rebellion as told by a P redactor (Num. 16:1*a*β, 7*b*-11, 16-17, 35-40). Aaron and his descendants were of a higher order, full sacrificing priests; while the Levites, Aaron's brethren, were to perform subordinate duties (Num. 3–4; 18). The priesthood of Aaron and his descendants was "by a perpetual statute" (Exod. 29:9), an "everlasting covenant" (Ecclus. 45:6-22).

The priesthood of Nadab and Abihu, Aaron's first two sons, was rejected; the extant account gives little reason, but the effect of the story of this purge was that it removed any taint from the remaining Aaronites (Lev. 10:1-7; cf. Num. 3:4; I Chr. 24:2; *see* PRIESTS AND LEVITES). The priesthood is traced through Eleazar and Ithamar. Eleazar is the dominant line (Num. 25:7-13; I Chr. 6:1-15; 24:4), and ZADOK (1) is his descendant. When Aaron died on Mount Hor—like Moses, forbidden to enter the Promised Land—Moses invested Eleazar with Aaron's garments (Num. 20:23-28; 33:37-39; *see* HOR 1).

Ezekiel does not mention Aaron; the last nine chapters speak of the priests as sons of Zadok (40:46; 43:19; 44:15; 48:11). In Deuteronomy, Aaron appears in only three passages. Moses interceded for Aaron when the people had made the golden calf (Deut. 9:16, 20-21); Moses' plea for Aaron (unknown in Exod. 32; *see* JE and E *below*) indicates the stage reached in the harmonizing of the tradition concerning Moses and the tradition concerning Aaron at the time this text was written. In Deut. 10:6 (within an interpolated fragment of an old itinerary) Aaron died and was buried at MOSERAH; he was succeeded by Eleazar (a later addition). In 32:48-52 (probably a late, expanded duplicate of P in Num. 27:12-14) Yahweh's command to Moses to prepare for death retrospectively mentions the death of Aaron on Mount Hor.* Aaron appears in the books of preexilic prophets only in Mic. 6:4, where he is named with Moses and MIRIAM (1) as a leader out of bondage. Fig. HOR 31.

JE adds to J and E (*see below*). Aaron, the brother of Moses, identified as "the Levite," was the spokesman for Moses to the people (Exod. 4:14-16). Aaron

met Moses at the mountain of God and, instructed by Moses, returned with him and convinced the people by words and signs (vss. 27-31). Moses and Aaron went to Pharaoh to request permission for a feast in the wilderness, but the petition was denied (5:1, 4). In the JE narrative of the plagues Aaron, named only as summoned with Moses by Pharaoh to remove the plagues, is silent and subordinate (8:8, 25; 9:27; 10:16); Moses speaks, acts, and departs as though he were alone. Aaron accompanied Moses up the mountain (19:24). His name was added to the J story of Nadab, Abihu (here not cited as sons of Aaron, cf. P), and seventy elders ascending the mountain with Moses (24:1-2, 9-11). Joshua 24:5*aα* is an addition: secondary E, JE, or later (cf. I Sam. 12:6, 8). Only Eleazar is named as his son (Josh. 24: 33).

In E, Aaron was an elder, a leader and judge of the people. He does not appear as the partner of Moses; indeed, according to E, sometimes Aaron acted in opposition to Moses. He was the figure by whom Miriam was identified: she was the "sister of Aaron" (Exod. 15:20). Aaron with HUR held up Moses' hands while JOSHUA (SON OF NUN) defeated the Amalekites (17:10-12). "Aaron came with all the elders" to a sacred meal presided over by JETHRO (18:12). Aaron and Hur substituted for Moses and Joshua and served as judges over the people during their absence on the mountain with God (24: 13-14). In the E story of the golden calf (32:1-4*a* to "hand," 4*c* from "and made," 6, 15-24), Aaron was the passive agent of the people's irresistible desire to commit apostasy, and he bears no responsibility: when he forged the contributed gold, "there came out this calf" (vs. 24), and he is not mentioned in the punishing trial by ordeal (vs. 20). (Another view concerning E in Exod. 32 is that E, cautiously polemical against the cult of Bethel [*see below*], employed scorn to show Aaron's guilt.) Aaron and Miriam disputed Moses' pre-eminent position in Num. 12:2-12, 14(?), the only E story in which Aaron approached the tent of meeting. In E, Aaron was not a priest: in Exod. 33:11, it was Joshua who ministered with Moses at the tent of meeting. (It should be noted that some scholars assign the above references in Exod. 33; Num. 12 to J.)

Probably nowhere in J is the name Aaron original.

Concerning the original figure Aaron, two alternative suggestions may be made: (*a*) Behind the successively reworked narrative of the golden calf (Exod. 32) lies an ancient, independent, N Israelite saga laudatory of Aaron as the founder of the bull cult which was centered at BETHEL (*see* CALF, GOLDEN); Aaron became the eponym of the Ephraimite priesthood. (*b*) Some of the traditions cited in paragraphs above reflect the fact that originally Aaron was a cultic figure among the S tribes at KADESH, or among these tribes which moved northward during the conquest and formed an early cultic center at HEBRON (Josh. 21:9-19 P locates the descendants of Aaron at Hebron). If this be the case, the absence of Aaron in J may be related to the significance in J of David and to his shifting of the center of the S cult from Hebron to Jerusalem.

For the history of the sequence in which Aaron became the traditional ancestor of the priests of Yahweh in worship centered in Jerusalem, *see bibliography. See also* PRIESTS AND LEVITES § D1.

T. M. MAUCH

***AARONITES** âr'ə nīts [בני אהרן, sons of Aaron]. Alternately: HOUSE OF AARON (I Chr. 12:27; Ps. 115:10, 12; 118:3; 135:19); AARON (I Chr. 27: 17). A collective term for all the priests whose descent is traced from AARON as the founder and head of the priesthood. *See* PRIESTS AND LEVITES § D1.

T. M. MAUCH

AARON'S ROD. In two narratives late material sets forth the significance of AARON by speaking of Aaron's rod:

In the recital of the struggle between Pharaoh's power and Yahweh's purpose to accomplish deliverance, at Moses' instruction: (*a*) Aaron cast down his rod, and it became a serpent, which swallowed the serpents from the rods of the Egyptian magicians; (*b*) Aaron used his rod to bring about the first three plagues (Exod. 7:8-13, 19-20*a* [to "commanded"]; 8:5-7, 16-19). These passages are part of the P portrayal of Aaron as Moses' helper in effecting deliverance; elsewhere the rod is Moses' (cf. 4:2-14 J, 16 E; 17:5 E, 9 E). The element of magic here, drawn from the folklore of the ancient Near East, is not treated as extraordinary; it is subordinate, instrumental in the narrative of God's acts in history. Two further observations concerning 7:8-13 can be suggested for inquiry: In postexilic tradition Aaron was the Levite (*see* PRIESTS AND LEVITES) par excellence (cf. the etymology of LEVI). "Serpent" (תנין; cf. נחש [4:3]) also may be translated DRAGON.

In the P story of the confirmation of the tribe of Levi in the priesthood (Num. 17:1-11), vss. 3, 6*b*, 10-11, are late P amplification and accentuate Aaron. Among the representative tribal rods, the rod of Levi which blossomed had Aaron's name upon it. Moses was ordered to put back Aaron's rod "before the [ark of the?] testimony" (*see* the work of P. Wood in the *bibliography*). In Heb. 9:4 (cf. I Kings 8:9) its place was within the ark.

Bibliography. H. Gressmann, "Mose und seine Zeit," *FRLANT,* XLVIII (1913), 278-83; P. Wood, "Jeremiah's Figure of the Almond Rod," *JBL,* LXI (1942), 99-103; C. Simpson, *The Early Traditions of Israel* (1948), pp. 170, 242; J. Marsh, Exegesis of Numbers, *IB,* II (1953), 228.

T. M. MAUCH

AB ăb [אב]. The fifth Hebrew month (July-August). *See* CALENDAR.

ABACUC ăb′ə kək. KJV Apoc. form of HABAKKUK.

ABADDON ə băd′ən [אבדון (אבדה *in* Prov. 27:20), from אבד, perish, be lost; LXX ἀπώλεια (τῶν μέρων *in* Job 31:12, *through fanciful combination with* בד, portion); NT Ἀβαδδών; Vulg. *perditio*]. A poetic name for the nether world—viz., Perdition. In the OT (Job 26:6; 28:22; 31:12; Ps. 88:11—H 88:12; Prov. 15:11; 27:20), it denotes simply the common abode of the dead (*see* DEAD, ABODE OF THE). Similarly, in the Syr. (Peshitta) Version of Psalms the cognate אובדנא sometimes renders שחת, "the Pit"; and in Mandaean, אבחנא דחשוכה תיאתויה, "the nether Abaddon of darkness," is the grave pit. In the Dead Sea Hymns (3.19-20), the name is used figuratively to denote the "slough of despond," in contrast to the "crest of the world" (רום עולם), attained by inner vision.

In rabbinic literature, however, Abaddon comes to mean specifically the place of damnation and punishment and is regarded as a compartment of the infernal regions, situated in the third lowest stratum of the earth and reserved for the wicked. This nuance is reflected in the employment of the term (Ἀβαδδών) in the NT (Rev. 9:11) as a designation of the angel of the Pit. It is correctly glossed by the scriptural writer as Ἀπολλύων, "Destroyer."

T. H. GASTER

ABADIAS ăb′ə dī′əs. KJV Apoc. form of OBADIAH.

ABAGTHA ə băg′thə [אבגתא, *probably of* Middle Iranian *origin;* Syr. אגבותא]. One of the seven eunuchs sent by Ahasuerus, king of Persia (Xerxes I, 485-465 B.C.), to accompany the queen, Vashti, to the royal feast (Esth. 1:10). These chamberlains were guardians of the royal harem and ministered in the presence of the king. According to widespread custom, such eunuchs were usually foreigners, as in the case of Nehemiah. The derivation and meanings of this and the other names in the verse are uncertain; the names differ widely in the versions, and the correct text is problematical. *See also* EUNUCH.

Bibliography. I. Scheftelowitz, *Arisches im AT,* I (1901), 37; L. B. Paton, ICC (1916), 66-68, 147-48; J. Duchesne-Guillemin, "Les noms des Eunuques d'Assuérus," *Le Muséon,* LXVI (1953), 105-8.

H. F. BECK

ABANA ăb′ə nə [אבנה] (II Kings 5:12). A river flowing down from Anti-Lebanon through Damascus. Its modern name is Barada (*cf.* AMANA).

The river of Abana (Barada) provides the region with water, thanks to which the oasis of Damascus is famous for its fertility. The river disappears in the steppe E of Damascus, Bahr al-Aateibe. In II Kings 5:12 Abana and PHARPAR are said to be the rivers of Damascus, which are "better than all the waters of Israel" according to the view of Naaman, captain of the host of the Aramean king. Naaman came to Elisha to be cured of his leprosy, but when the prophet ordered him to step down into the Jordan, he went his way in anger. He returned and was cured by Elisha.

A. HALDAR

ABARIM ăb′ə rĭm [העברים, עברים, regions beyond]. A mountainous region at the W edge of the plateau of N Moab, overlooking the Dead Sea and the Jordan Valley. These mountains reach three hundred to six hundred feet above the plateau and stand over four thousand feet above the level of the Dead Sea. The Israelites encamped in the mountains of Abarim (Num. 33:47-48) after leaving Almon-diblathaim and before reaching the plains of Moab across the Jordan from Jericho. From the principal peak of the range, Mount Nebo (*see* NEBO, MOUNT), Moses viewed the land of Canaan (Num. 27:12; Deut. 32:49). Jeremiah (22:20) figuratively summoned Jerusalem to wail from Lebanon, Bashan, and Abarim (KJV PASSAGES).

E. D. GROHMAN

***ABBA** ăb′ə, ä′bə [ἀββά; Aram. אבא, *emphatic form of* אב, *see below*]. A term meaning properly "the father," but used as the equivalent of "my father" or "our Father" chiefly in prayer in the later rabbinic literature (*see bibliography*). Since it is found even in Hebrew contexts, the expression is assumed to have been a common colloquial one, doubtless derived from use in the family circle. In the NT it occurs three times, all in prayers and accompanied by the Greek equivalent (ἀββὰ ὁ πατήρ; Mark 14:36: of Jesus; Rom. 8:15; Gal. 4:6). But the Aramaic form may lie back of many uses of the Greek in similar contexts (e.g., Matt. 6:9; Luke 11:11; 23:46; John 12:27; etc.; cf. the LXX of Ps. 88:26—H 89:26; Isa. 63:16; 64:8; Jer. 3:19; Tob. 13:4; Wisd. Sol. 14:3; Ecclus. 23:1, 4). The Greek transliteration is not found in the LXX.

In Judaism the figurative use of "father" implies the thought of a close relationship between God and Israel or God and the righteous (*see* GOD, OT). But it is rarely found in the earlier literature. Examples, in addition to those cited above, occur in I Chr. 17:13; Ps. 68:5; Jer. 31:9; Mal. 1:6; 2:10 (cf. Deut. 14:1).

In the NT, Jesus' use of the word as a familiar name for God reflects his own emphasis on the beneficence of God as expressed in a symbolism drawn from filial relationships. Paul's usage seems also to imply a continued employment of the term as a particularly significant expression of religious faith, the double form doubtless being derived from liturgical usage and meaning "God, our Father." Those who have received "adoption as sons" and the "spirit of sonship" are able to cry "Abba! Father!" because they are spiritually the "children of God." *See* GOD, NT. *See also* RABBI.

A. WIKGREN

ABDA ăb′də [עבדא, servant of Yahu]. **1.** The father of Adoniram, who was in charge of forced labor under Solomon (I Kings 4:6).

2. A Levite who lived in Jerusalem after his return from the Exile (Neh. 11:17). He is called Obadiah in I Chr. 9:16.

F. T. SCHUMACHER

ABDEEL ăb′dĭ əl [עבדאל, servant of God] (Jer. 36:26). The father of Shelemiah, a courtier of Jehoiakim.

ABDENAGO ăb dĕn′ə gō. Douay Version form of Abednego. *See* SHADRACH.

ABDI ăb′dī [עַבְדִּי, servant of Yahu, *abbreviated form*]. **1.** A Levite; father of Kishi; grandfather of Ethan, one of David's temple musicians (I Chr. 6:44—H 6: 29).

2. The father of Kish, a Levite under Hezekiah (II Chr. 29:12); possibly identical with 1 *above*.

3. One of those who married foreign wives in the time of Ezra (Ezra 10:26=I Esd. 9:27).

F. T. SCHUMACHER

ABDIAS ăb dī′əs. Douay Version form of OBADIAH.

ABDIAS, APOSTOLIC HISTORY OF ăb′dĭ əs. The Latin form in which are conveniently assembled the several romances—more properly legends—purporting to describe the histories of the apostles and which in Greek circulated separately. It consists of ten books which treat respectively Peter (I), Paul (II), Andrew (III), James the Great (IV), John (V), James the Less (VI.1-6), Simon and Jude (VI.7 ff), Matthew (VII), Bartholomew (VIII), Thomas (IX), and Philip (X). The material, often widely divergent from the Greek form in which these Acts circulated, is a veritable mélange drawn from various sources, such as the canonical gospels and Acts; the Clementine literature; the earlier heretical Acts (especially the various Martyrdoms, which regularly circulated separately); the epitome of the miracles of Andrew, made by Gregory of Tours from the Greek Acts of Andrew (*see* ANDREW, ACTS OF); folklore; and wonder stories.

This collection, assembled perhaps in France, not earlier than the sixth or seventh century, became associated (with no historical warrant at all) with the name Abdias. In Book VI (Simon and Jude), after the mention of Abdias' ordination as bishop of Babylon, it is said: "For thirteen years they [Simon and Jude] traveled, and Craton his disciple recorded their acts in ten books which Africanus the historian translated into Latin, and from which we have made excerpts." In the preface to the work (purporting to be by Julius Africanus) it is said that Africanus took the material from books which Abdias had written in Hebrew about all the apostles and which his disciple Eutropius had translated into Greek. Africanus had in turn put it into Latin.

Bibliography. A convenient analysis of the contents of the ten books, with translation of the more interesting material not available in the other recensions, is given by M. R. James, *The Apocryphal NT* (1924), pp. 462-69. The Latin text of Abdias is printed by Fabricius, *Codex Apocryphus Novi Testamenti* (1743), II, 402-742. M. S. ENSLIN

ABDIEL ăb′dĭ əl [עַבְדִיאֵל, servant of God] (I Chr. 5:15). Son of Guni and father of Ahi in the genealogy of Gad.

ABDON ăb′dŏn [עַבְדוֹן, service(?), servile(?)]. **1.** Son of Hillel; one of the so-called minor judges (Judg. 12: 13-15). The formula description tells us nothing of his exploits, which presumably took place around his home town of Pirathon in Ephraim. He "judged Israel" eight years and apparently headed a family of some wealth and prominence.

2. One of the sons of Shashak in the genealogy of Benjamin (I Chr. 8:23).

3. The first-born son of Jeiel in the twice-repeated list of Saul's ancestors (I Chr. 8:30; 9:36).

4. A courtier of King Josiah; one of the commission sent to Hulda the prophetess (II Chr. 34:20). The account in II Kings 22:12, however, lists him as Achbor. F. T. SCHUMACHER

5. A Levitical town in the territory of Asher (Josh. 21:30; I Chr. 6:74—H 6:59). It is probably to be identified with Khirbet 'Abdeh, a site located *ca.* four miles E of Achzib. G. W. VAN BEEK

ABEDNEGO. *See* SHADRACH.

ABEL ā′bəl [הֶבֶל, *see* §1 *below;* אָבֵל, *see* § 2 *below;* Αβελ; Syr. הביל; Vulg. *Abel*]. **1.** The second son of Adam and Eve (Gen. 4:1-9).

The etymology of the name is uncertain. If originally Hebrew, הבל would most likely mean "vanity, breath, vapor," perhaps stressing the shortness of Abel's life or the weak, transitory nature of human life, similar to its use in Eccl. 2:16-17, 22-23; 3:19-21; 12:1-8. More probably it goes back to Akkadian *ablu/aplu,* "son." It could then be a generic term for "mankind," similar to ADAM and ENOSH.

A "keeper of sheep," Abel presented to Yahweh an offering "of the firstlings of his flock and of their fat portions" (Gen. 4:3-4). Because Yahweh had regard (שעה) for Abel and his offering but not for Cain, the latter plotted the murder of his innocent and unsuspecting younger brother. For discussion of this event, *see* CAIN.

Abel is memorialized as the first righteous (δίκαιος) martyr, whose death stands both as a witness to sin (Matt. 23:35; Luke 11:51; I John 3:12) and as a testimony to faith (Heb. 11:4). To this extent it is also a prototype of Christ's death (Heb. 12:24).

L. HICKS

2. In I Sam. 6:18 the MT reads "great Abel," and the KJV translators tried to make sense by interpolating "stone of." The LXX supports the view of later translators that אבן, "stone," should be read instead of, rather than in addition to, אבל.

3. *See* ABEL-BETH-MAACAH. G. W. VAN BEEK

ABEL-BETH-MAACAH ā′bəl bĕth mā′ə kə [אבל בית מעכה]. Alternately: ABEL OF BETH-MAACAH [אבל בית המעכה] (II Sam. 20:14-15); ABEL [אבל] (II Sam. 20:18); ABEL-MAIM ā′bəl mā′əm [אבל מים] (II Chr. 16:4); KJV ABEL . . . AND BETH MAACAH [אבלה ובית מעכה] (II Sam. 20:14). A fortified city in N Israel. It is to be identified with Tell Abil, a mound located approximately twelve miles N of Lake Huleh, overlooking the intersection of the route from Hazor northward and the E-W route from Tyre to Damascus.* The town is probably one of the Abels mentioned in the Thut-mose III list of conquered towns. Fig. ABE 1.

Abel-beth-maacah is the place where Sheba son of Bichri took refuge and was slain after his abortive rebellion against David (II Sam. 20:14-18). During the reign of Baasha (early ninth century), it was among the Israelite towns taken by Ben-hadad of Damascus (I Kings 15:20; II Chr. 16:4). Tiglath-pileser III also captured the city in the time of Pekah

From *Atlas of the Bible* (Thomas Nelson & Sons Limited)

1. In upper center, Tell Abil, site of Abel-beth-maacah

(*ca.* 733 B.C.), according to II Kings 15:29 and to an Assyrian text in which it is called "Abilakka." The name BALBAIM in Jth. 7:3 may possibly refer to the same place.

Bibliography. W. F. Albright, "The Jordan Valley in the Bronze Age," *AASOR,* VI (1926), 19; J. B. Pritchard, ed., *ANET* (2nd ed., 1955), p. 283. G. W. VAN BEEK

ABEL-KERAMIM ā'bəl kĕr'ə mĭm [אבל כרמים, watercourse of vineyards] (Judg. 11:33); KJV THE PLAIN OF THE VINEYARDS. The terminal point of Jephthah's military campaign against the Ammonites (Judg. 11:29-33; *see* AMMON). The geographical situation calls for a location W and S of Rabbath-ammon (modern Amman). Some would identify it with modern Na'ur, *ca.* nine miles from Amman; others with Khirbet es-Suq, *ca.* five miles S and slightly W of Rabbath-ammon. In Eusebius' *Onomastica* (32.15-16), Abel-keramim is apparently represented by Abela, which Eusebius locates six or seven Roman miles from Philadelphia (i.e., Rabbath-ammon), although he does not specify in which direction.

ABEL-MAIM. An alternate form of ABEL-BETH-MAACAH.

ABEL-MEHOLAH ā'bəl mĭ hō'lə [אבל מחלה, dance place by a perennial stream]. A city E of the Jordan; the residence of the prophet Elisha.

1. History. Abel-meholah is first mentioned in the time of the judges, when the Midianites, surprised in their camp in the Jezreel Valley by the night attack of Gideon, fled by way of ZERERAH and the edge of the plateau of Abel-meholah (Judg. 7:22). In the time of Solomon, Abel-meholah was at the E edge of the fifth governmental district, which stretched on both sides of the Jordan around Beth-shean (I Kings 4:12). Elijah at Horeb received the instruction to anoint Elisha of Abel-meholah as his successor; on his way back from Horeb he found Elisha and his servants plowing with twelve yoke of oxen. He cast his mantle over Elisha, who accepted this act as his call to prophecy (I Kings 19:16, 19-21).

2. Location. Eusebius identified Abel-meholah with Beth-maela, ten Roman miles S of Beth-shean, apparently on the basis of a vague similarity of names. This error has been followed by most Bible students and map makers, who locate the city W of the Jordan. A careful reading of the texts involved shows that this cannot be correct. The Midianites were fleeing southeastward, and Gideon was only able to come up to them in the mountains of Gilead. Elijah was heading for Damascus, as part of his instructions from God bade him do (I Kings 19:15), and Abel-meholah must have been near the road from Horeb. Elisha, too, though he traveled extensively over the land of Israel, was evidently buried E of the Jordan (II Kings 13:20-21). The site must also have

Courtesy of Nelson Glueck

2. Tell el-Maqlub, by the Wadi Yabis, which flows into the Jordan; identified with Abel-meholah, the home of the prophet Elisha

had a precipitous slope and a place broad enough for extensive plowing, and it must have been surrounded by vineyards the harvest of which was celebrated by a festal dance. All these specifications are met by Tell el-Maqlub on the Wadi el-Yabis, which was inhabited before and during the Israelite period. Fig. ABE 2.

Bibliography. N. Glueck, *The River Jordan* (1946), pp. 168-72; "Explorations in Eastern Palestine, IV," *AASOR,* XXV-XXVIII (1951), pt. I, 211-23. S. COHEN

ABEL-MIZRAIM ā'bəl mĭz'rĭ əm [אבל מצרים]. Alternate name of ATAD.

ABEL-SHITTIM ā'bəl shĭt'ĭm [אבל השטים, brook of the acacias] (Num. 33:49). Earlier name of SHITTIM.

ABEZ. KJV form of EBEZ.

ABGARUS, EPISTLES OF CHRIST AND ăb'gə rəs [Ἀβγαρος]. Two short letters, one purporting to be from Abgar (or Abgarus) Uchama, king of Edessa (7-4 B.C. and A.D. 13-50) to Jesus, and the other the latter's reply. These letters are a part of the story of the exploits of Thaddaeus, one of the

seventy, sent by Thomas to Edessa after the Ascension. Euseb. Hist. I.13 translates the two letters, which Eusebius claims to have found in the archives of Edessa, from Syriac into Greek, and with them the story of the mission of Thaddaeus.

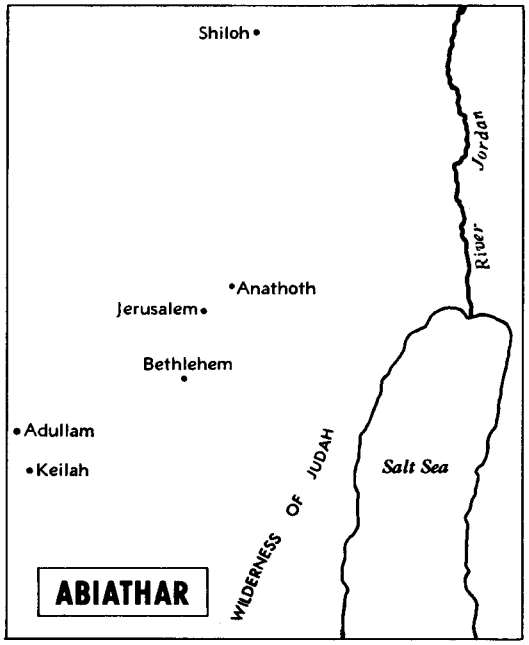
Abgar, suffering from a terrible disease and having heard of Jesus' miracles, sends a letter by a courtier Ananias to Jesus, asking Jesus to come and cure him and to share his kingdom, thus escaping the malice of the Jerusalem Jews. Jesus declines the invitation in striking Johannine phraseology, but promises after his ascension to send one of his disciples. After the Ascension, Eusebius continues, Thaddaeus arrives, heals Abgar, and converts the whole community.

A parallel, but somewhat altered, account is found in the so-called *Doctrina Addaei*. In this later version (*ca.* A.D. 400) Jesus' reply is oral—by this time the view that Jesus had written nothing was widespread. Instead of a letter, Ananias brings back a portrait of Jesus, which he himself had painted and which became the showpiece of Abgar's palace. The Greek Acts of Thaddaeus (*see* THADDAEUS, ACTS OF) repeats essentially the same legend, but with variations, notably the legend of the handkerchief given by Christ to Ananias and of the miraculous impression of his countenance.

Bibliography. A comprehensive bibliography of the large literature this writing has produced will be found in J. Quasten, *Patrology* (1950), I, 142-43. M. S. ENSLIN

ABI ā′bī [אבי, my father] (II Kings 18:2). Abbreviation of ABIJAH 7.

ABIA, ABIAH. KJV alternate forms of ABIJAH.



ABI-ALBON ā′bī ăl′bən [אבי־עלבון] (II Sam. 23:31). One of David's heroes known as the "Thirty," who probably came from BETH-ARABAH, a town on the frontier of Judah and Benjamin; called "Abi-albon the Arbathite." The name Abi-albon, however, may have suffered some corruption on account of a confusion with the name Shaalbon (II Sam. 23:32). Some propose the reading "Abiel," which has the support of the LXX (II Sam. 23:31) and the parallel passage in I Chr. 11:32 (*see* ABIEL 2); others read "Abibaal." E. R. DALGLISH

ABIASAPH ə bī′ə săf [אביאסף, father has gathered] (Exod. 6:24). Alternately: EBIASAPH [אביסף, Father has added *or* increased] (I Chr. 6:23, 37; 9:19). A division of the Levites descended from KORAH. In I Chr. 9:19; 26:1 (read "Ebiasaph" for "ASAPH"), a section of this division acted as doorkeepers (*see* DOORKEEPER). The name occurs only in the genealogies of P and Chronicles.

Bibliography. M. Noth, *Die israelitischen Personennamen* (1928), pp. 66-75, 141-42. T. M. MAUCH

ABIATHAR ə bī′ə thər [אביתר, the father (God) gives abundantly, *or* the father is abundant; Αβιάθαρ]. Son of Ahimelech and sole survivor of the slaughter of the priests of NOB. He fled to David and became his priest. He was exiled to ANATHOTH by Solomon for his support of Solomon's rival, Adonijah.

When Abiathar arrived at ADULLAM after his escape from the sword of Doeg the Edomite, whom Saul had commanded to slay the priests of Nob, he brought with him the ephod (I Sam. 23:6; omit "to Keilah"). Thus David was supplied with a sacred oracle (*see* EPHOD 2), which he consulted on various occasions (23:8-12; 30:7-8; possibly 23:2-4). It was as the interpreter of this oracle that Abiathar served David during his outlaw days.

After the capture of Jerusalem, we find Abiathar coupled with Zadok as chief priests to David. It has been suggested that Zadok had charge of the ark, while Abiathar retained control of the ephod. But the account of Absalom's rebellion portrays both priests as guardians of the ark (II Sam. 15:24-36).

In the struggle over the succession during the last days of David, Abiathar supported the claims of Adonijah, while his rival Zadok backed Solomon (I Kings 1). More than professional jealousy may have been involved (*see* ZADOK 1). The party which supported Solomon came into power, and Abiathar was exiled to Anathoth, escaping death only because of his earlier association with David (2:26). Zadok was appointed in his place (vs. 35). The reference to Zadok and Abiathar as co-priests of Solomon (4:4) is probably derived from the Davidic list of II Sam. 20:25. Perhaps Jeremiah, who was "of the priests who were in Anathoth," was a descendant of the exiled Abiathar (Jer. 1:1).

The exile of Abiathar is said to have fulfilled the "word of the LORD which he had spoken concerning the house of Eli in Shiloh" (I Kings 2:27; cf. I Sam. 2:27-36). This statement implies that the Nob priesthood was descended from ELI and was therefore the guardian of the central shrine of the Israelite amphictyony. If this were so, the presence of Abiathar, the last of Eli's family, in the court of David would have been an invaluable aid in the securing and maintaining of the allegiance of the N Israelite tribes. But his identification of the Nob and

Shiloh priesthoods may be the result of later editing. *See* ELI.

Abiathar has been suggested as the author of the early source of the books of Samuel. His association with the Nob priesthood and early allegiance to David, together with the fact that if II Sam. 17:17-21 is a record of actual happenings it must rest on the reminiscences of either Jonathan son of Abiathar or Ahimaaz son of Zadok, is the ground upon which this suggestion has been made.

The reference to Abiathar in Mark 2:26 is obviously a mistake for Ahimelech. Perhaps it is a gloss, for some MSS (D W) omit "when Abiathar was high priest," or perhaps it is based on the confusion between Abiathar and Ahimelech originating in II Sam. 8:17. *See* AHIMELECH 3.

Bibliography. M. Noth, *Die israelitischen Personennamen* (1928), p. 193; R. H. Pfeiffer, *Introduction to the OT* (1948), pp. 356-57; W. F. Albright, *Archaeology and the Religion of Israel* (1956), pp. 138-39. R. W. CORNEY

ABIB ā′bĭb [אביב, young head of grain]. The original (Canaanite) name of the first Hebrew month (March-April), later called NISAN. *See* CALENDAR.

ABIDA ə bī′də [אבידע, (my) father knows (took knowledge); *cf.* Minean *personal name Abiyadi'*, Sabean *Ya*d*i''il,* אביסף, אביתר]. The fourth son of Midian, from the line of Abraham and Keturah (Gen. 25:4 [KJV ABIDAH; LXX Αβιρα, Αβια]; I Chr. 1:33 [LXX Αβιδα, Αβειδα]. However, Gen. 25:1-4 may be a lost genealogy of Ishmaelites.

Bibliography. W. F. Albright, *BASOR,* 119 (1950), 15; 143 (1956), 10. L. HICKS

ABIDAN ə bī′dən [אבידן, the (divine) father judged(?), *or* my father judged(?)]. A leader of Benjamin; son of Gideoni (Num. 1:11; 2:22; 7:60, 65; 10:24). He was one of twelve tribal leaders or deputies who assisted Moses in taking a census of Israel and in other tasks in the wilderness. *See* PRINCE. R. F. JOHNSON

ABIEL ā′bĭ əl [אביאל, father is El]. **1.** A Benjaminite who appears prima facie to be the father of Kish and the grandfather of Saul, but who is more likely the father of NER, Saul's grandfather (I Sam. 9:1; 14:51). It is possible that Jeiel (KJV Jehiel), who appears in I Chr. 8:29 (=9:35) as the father of Ner, is to be identified with Abiel.

2. The Arbathite who appears in I Chr. 11:32 as a member of the company of heroes of David known as the "Thirty." In II Sam. 23:31 he is called ABI-ALBON. E. R. DALGLISH

ABIEZER ăb′ĭ ē′zər [אביעזר, father is help]; ABIEZRITE —ĕz′rīt [אבי העזרי]. Alternately: in Num. 26:30, IEZER ī ē′zər [איעזר]; IEZERITES —zə rīts [איעזרים]; KJV JEEZER jĭ ē′zər; —zə rīts. **1.** A family of Manasseh to whom some of the Manassite territory in Canaan was allotted (Josh. 17:2; I Chr. 7:18). In I Chr. 7:18 Abiezer appears as an individual in the Manassite genealogy and is probably to be considered the son of Gilead, although the text is obscure. "Iezer," evidently a contraction of "Abiezer," appears as a son of Gilead in Num. 26:30.

2. The family of Gideon (Judg. 6:11, 24, 34; 8:2, 32). Joash the Abiezrite was Gideon's father; and OPHRAH (2), the site of the theophany to Gideon and of the altar he thereafter erected, is described as belonging to the Abiezrites. It was also in Ophrah of the Abiezrites that Gideon was buried. Gideon's initial support in the campaign against the Midianites came from the Abiezrites (6:34), but when this fact aroused tribal jealousy among Ephraimites who had not been in the battle, Gideon knew how to reinstate their pride: "Is not the gleaning of the grapes of Ephraim better than the vintage of Abiezer?" (8:2).

3. A member of David's bodyguard; a Benjaminite from Anathoth (II Sam. 23:27; I Chr. 11:28; 27:12). According to the scheme of the Chronicler, David's army was divided into twelve divisions of 24,000 men each, and Abiezer was in charge of one of these divisions with special responsibilities in the ninth month.

Bibliography. M. Noth, *Die israelitischen Personennamen* (1928), pp. 16, 18, 68-71, 154. R. F. JOHNSON

ABIGAIL ăb′ə gāl [אביגיל, my father rejoices; אביגל (I Sam. 25:32; II Sam. 3:3 Kethibh; ABIGAL —găl *in* 17:25), אבוגיל (I Sam. 25:18), אבגיל (I Sam. 25:3)]. **1.** Wife of Nabal, and later of David. Nabal the Carmelite refused to invite David to his sheep-shearing. Abigail, a woman of beauty and good sense, then went to meet David and persuaded him not to take vengeance on her foolish husband (I Sam. 25). When Nabal died, Abigail became the wife of David, accompanied him to Philistia (27:3), and returned with him to Hebron. Here she bore David a son named Chileab (II Sam. 3:3), or Daniel (I Chr. 3:1), or possibly Daluiah (II Sam. 3:3 LXX).

Bibliography. H. Bauer, *ZAW,* XLVIII (1930), 75-76. D. HARVEY

2. A sister or half sister of David (I Chr. 2:16), and of Zeruiah, the mother of Joab (II Sam. 17:25); the mother of AMASA. According to the MT of II Sam. 17:25, Abigail's father was NAHASH, rather than Jesse. The words in II Sam. 17:25 which identify her as a daughter of Nahash (בת־נחש) are regarded by some critics as an intrusion from vs. 27 (בן־מחש, "son of Nahash").

According to I Chr. 2:16-17 Abigail married JETHER the Ishmaelite, by whom she bore Amasa; David appointed Amasa captain of his army in place of Joab (II Sam. 19:13; cf. Absalom's appointment of Amasa in 17:25). According to II Sam. 17:25, however, the father of Amasa was ITHRA the Israelite. Rabbi Kimchi suggested that the two descriptions of the father of Amasa might be reconciled by assuming that he lived among the Ishmaelites; he was known to them as an Israelite and to his own people as an Ishmaelite. H. F. BECK

ABIHAIL ăb′ə hāl [אביחיל, the Father (deity) is might; אביהיל (I Chr. 2:29; II Chr. 11:18), *probably an error for the foregoing, as attested by several MSS*]. **1.** A Levite, ancestor of the house of Merari (Num. 3:35).

2. Wife of Abishur, a Jerahmeelite (I Chr. 2:29).

3. A Gadite (I Chr. 5:14).

4. Apparently the wife of Jerimoth, as well as his cousin; the mother of Mahalath, wife of King Reho-

boam, according to II Chr. 11:18. The reading is obscure.

5. The father of Queen Esther and uncle of Mordecai (Esth. 2:15; 9:29).

Bibliography. M. Noth, *Die israelitischen Personennamen* (1928), pp. 18, 69-70. B. T. DAHLBERG

ABIHU ə bī′hū [אביהוא, father is he]. One of the sons of Aaron. NADAB and Abihu are always named together. In JE they are among the chief men of Israel: Moses and Aaron, Nadab and Abihu, and seventy elders ascended the mountain to Yahweh (Exod. 24:1, 9). In P and Chronicles they are cited as the first two sons of AARON (Exod. 6:23; 28:1; Num. 3:2; 26:60; I Chr. 6:3; 24:1), who with Aaron and their two brothers, ELEAZAR and ITHAMAR were consecrated to the priesthood (Exod. 28:1; Num. 3:2-3; I Chr. 24:1). Only one story primarily speaks of Nadab and Abihu: Lev. 10:1-5 obscurely narrates their priestly sin and destruction (referred to in Num. 3:4; 26:61). According to Num. 3:4; I Chr. 24:2, they had no children.

See also PRIESTS AND LEVITES.

Bibliography. M. Noth, *Die israelitischen Personennamen* (1928), pp. 18, 66-75, 141-44; K. Möhlenbrink, "Die levitischen Überlieferungen des ATs," *ZAW,* LII (1934), 214-15. T. M. MAUCH

ABIHUD ə bī′hŭd [אביהוד, father is majesty]. A Benjaminite who appears as the third son of Bela, son of Benjamin (I Chr. 8:3). However, it seems quite probable that the text should read "Gera the father of Ehud," with which Judg. 3:15 agrees. This Ehud was a Benjaminite judge. I Chr. 8:6-28 lists the descendants of Ehud.

Bibliography. W. Rudolph, "Chronikbücher," *HAT* (1955). Cf. J. W. Rothstein and J. Hänel, "Das erste Buch der Chronik," *KAT* (1927). E. R. DALGLISH

ABIJAH ə bī′jə [אביהו, Y is (my) father]; ABIJAM —jəm [אבים, *see* 5 *below*] (I Kings 14:31; 15:1, 7-8); ABI ā′bī [אבי, my father] (II Kings 18:2); KJV alternately: ABIAH ə bī′ə (I Sam. 8:2; I Chr. 2:24; 6:28; 7:8); ABIA (I Chr. 3:10; Matt. 1:7; Luke 1:5).

1. Son of Becher, of the tribe of Benjamin (I Chr. 7:8).

2. The KJV translation of the MT אביה in I Chr. 2:24; the name of the wife of Hezron, of the tribe of Judah. Perhaps the correct reading is אביהו—i.e., "his father" (RSV), rather than the name Abijah.

3. The younger son of Samuel. He was appointed by Samuel in his old age as a judge in Beer-sheba, along with his elder brother, Joel. But because of the wickedness and injustice of the two brothers, the people of Israel came to Samuel and demanded a king (I Sam. 8:1-9; I Chr. 6:28). This account of the founding of the monarchy comes from the later story.

4. A descendant of Aaron. David divided the priests, the sons of Aaron, into twenty-four divisions. These divisions were on duty in the temple, each in its turn. The order in which the divisions served was decided by lot. Abijah was head of the eighth division in the service of the temple (I Chr. 24:10).

Zechariah, father of John the Baptist, belonged to the division of Abijah (Luke 1:5).

5. King of Judah *ca.* 915-913 B.C.; son and successor of Rehoboam.

The spelling of the name varies in the MSS. The MT of Kings calls the king Abijam ('Αβιοὺ in the LXX), but certain MSS and the MT of Chronicles call him Abijah (אביהו). Four explanations of the double name may be suggested: (*a*) Abijah was his throne name, Abijam his personal or given name. The practice of giving the new king a throne name when he became king seems to be clearly borne out in the case of certain of the kings of the S kingdom. Parallels have also been found in Babylonian and Egyptian literature. (*b*) The two names arose from confusion between ה ("h") and final ם ("m"), as happened frequently. (*c*) "Yam" was the name of a pagan deity (the Canaanite sea-god), and was altered for obvious reasons to that of the national God, as more suitable for a king of Judah. (*d*) The name is a hypocoristic in *-ām* (cf. Ta'annak Aḥiyami). The second of these explanations is probably correct.

Abijah is said to have reigned three years (I Kings 15:2*a;* II Chr. 13:2*a*), but it is clear that he reigned only two full years (I Kings 15:1, 9). His mother was Maacah, daughter of Abishalom (I Kings 15:2*b*). This is also in line with the evidence of II Chr. 11:20 ff, but in all probability this whole section (II Chr. 11:18-23) does not come from the hand of the Chronicler. The evidence of Chronicles is not consistent at this point, for in 13:2 we are told that Abijah's mother was Micaiah, daughter of Uriel of Gibeah. The issue is further complicated by the statement that the name of the mother of Asa son of Abijah was also Maacah, daughter of Abishalom (I Kings 15:10). It is probable that the Chronicler has preserved the true tradition in 13:2. The alternatives are that Abijah and Asa were not father and son, but brothers; or that the name of Asa's mother was soon forgotten because of the dominant position of the queen mother.

The border warfare which had gone on between Jeroboam and Rehoboam was continued in Abijah's reign. The Chronicler gives details of a great battle near Mount Zemaraim in the hill country of Ephraim (II Chr. 13:3-19). That such a battle occurred is not to be doubted, though the numbers involved are greatly exaggerated and the details given represent the Chronicler's own point of view. They cannot, therefore, be accepted as historical. Abijah's victory, in which he captured certain towns in Israel—Bethel, Jeshanah, and Ephron, each with its villages (II Chr. 13:19)—had only temporary significance in view of the much greater potential of the N kingdom. It is, however, interesting from the point of view of giving a picture of the tension which existed along the border for several years.

Abijah had fourteen wives, who bore him twenty-two sons and sixteen daughters (II Chr. 13:21)—a clear indication, from the Chronicler's point of view, of the favor of God. For this reason the Chronicler omitted the negative judgment passed on the king by the writer of Kings.

As his source of information on Abijah's reign, "his ways and his sayings," the Chronicler refers to the "midrash" of the prophet Iddo (II Chr. 13:22). His main source, however, was our present book of Kings, but in an earlier recension.

Fifteenth Century B.C., *BASOR*, 94 (1944), 20, note 44; G. R. Driver, "Theological and Philological Problems in the OT," *JTS*, XLVII (1946), 156; A. M. Honeyman, "The Evidence for Regnal Names Among the Hebrews," *JBL*, LXVII (1948), 16, note 17; W. F. Albright, *Alexander Marx Jubilee Volume* (1950), p. 81, note 72; C. H. Gordon, *Introduction to OT Times* (1953), pp. 77, 182; S. Yeivin, "Social, Religious and Cultural Trends in Jerusalem under the Davidic Dynasty," *Vetus Testamentum* (1953), pp. 163 ff.

6. Son of Jeroboam I, king of Israel (I Kings 14:1-18). As a child Abijah fell sick. Jeroboam sent his wife, whose name is not given, in disguise to the prophet Ahijah at Shiloh to find out what would happen to the child. This was the same prophet who had symbolically foretold that Jeroboam would become king of the ten N tribes (I Kings 11:29-39). Ahijah was now old, and partially blind, but the Lord had revealed to him that Jeroboam's wife was coming to see him. Thus he saw through her disguise, and pronounced doom on the house of Jeroboam because of his apostasy. He further announced that Abijah would die immediately on her return home, and that he alone of the house of Jeroboam would receive honorable burial. And so it happened. In a casual reference we learn that Jeroboam had moved his capital to Tirzah (I Kings 14:17).

The Greek supplement also tells the story with variations and assigns it to the time prior to Jeroboam's being appointed king (I Kings 14 LXX). Here there is no mention of Ahijah's earlier prophecy. He is a prophet of doom from the beginning. The Hebrew version is to be preferred.

7. Mother of Hezekiah, king of Judah. In II Kings 18:2 she is called simply Abi. This is a caritative form of Abijah, the name given her in II Chr. 29:1, as here also in three MSS. She was the daughter of Zechariah.

8. One of the priests who, probably on behalf of a father's house, set his seal on the covenant made by Nehemiah and the people to serve the Lord (Neh. 10:7).

9. One of the chiefs of the priests who returned with Zerubbabel from Babylon to Jerusalem (Neh. 12:4).

In the next generation Zichri is mentioned as a priest, head of the father's house of Abijah (Neh. 12:17). H. B. MacLean

ABILENE ăb′ə lē′nĭ ['Αβιληνή TR with $\aleph^a$, or 'Αβειληνή W-H with A B; *other variations; apparently an adjectival form based on* Abila, *capital of the* "Abiline" *region*]. A small mountainous region high in the Antilebanons, NE of Mount Hermon and W of Damascus. The earliest reference to Abilene is Luke 3:1, the only occurrence in the Bible; it is referred to in literature as late as the sixth century.

Abilene had basically a Greco-Roman culture, as is shown by the ruins of Gentile temples, tombs, aqueducts, and roads. Its capital was on the highway between Damascus and the coast, E of the fork dividing for Sidon and Beirut. It was eighteen miles from Damascus, and halfway to the Roman town of Baalbek farther N. It lay on the SW bank of the upper Barada (Hebrew Amanah, Greek Chrysorrhoas, and biblical Abana) River, and the road in that vicinity passed through wild and scenic country of limestone gorge and cliff.

The tetrarchy of "Abila [Abyla] of Lysanias," as it is called by Josephus and Ptolemaeus, had been administered under Lebanon (of which it may have been a part previously) when first conquered by Pompey in 64 B.C., and continued to be governed from Chalcis by its ruler Ptolemy (often the ally of the Maccabean kings to the S). His son Lysanias ruled during successive Parthian and Roman invasions (40-38 B.C.) and was executed by Mark Antony, who gave Abilene to Cleopatra in 36 B.C. (until Actium, 31 B.C.). In turn it was included within the larger rule of his son Zenodorus until 20 B.C., but because the region became infested with robbers, Augustus assigned it to King Herod the Great. After his death in 4 B.C., Abilene was included in the province of Syria, and it is in this period that a younger Lysanias ruled as tetrarch (Luke 3:1), *ca.* A.D. 28; his existence is attested by a Greek inscription at Abila assigned to the time of Tiberius (CIG 4521). In A.D. 37 it was once again joined to Palestine under King Herod Agrippa I (37-44) and still later was made part of the northeasterly kingdom of his son Agrippa II (53-100). A Latin inscription at Abila records road-building at the expense of the Abilenians *ca.* 166. It is recorded that Abila became an episcopal seat within the Patriarchate of Antioch, that she sent Bishop Jordan to the Council of Chalcedon in 451, and Bishop Alexander to the Council in Jerusalem in 518.

Abila of Lysanias was identified *ca.* 1850 with the modern es-Suk, and should be distinguished from other Abilas located in Perea and the Decapolis region. Because the Decapolis extended from Damascus to Philadelphia (Amman), the several Abilas cited all lay within this area, but Abila of Lysanias was probably not one associated with the Decapolis. Another caution must be given, to disregard a local tradition that the tomb of Neby Habil contains the body of Cain's brother Abel, who thus gave his name to the town.

ABIMAEL ə bĭm′ĭ əl [אבימאל]. A son of Joktan, and hence the name of an Arabian people (Gen. 10:28; I Chr. 1:22).

ABIMELECH ə bĭm′ə lĕk [אבימלך, Melek is father, Canaanite (Phoen.) *theophorous name*]. **1.** An ancient king of Gerar about whom we have no information except as he appears in two patriarchal narratives, variously reported (Gen. 20–21; 26). The accounts are so similar that it is impossible to avoid the conclusion that they are doublets and that therefore there is only one King Abimelech.

He is the local ruler in two of the three versions of a folk story about a patriarch's trying to pretend that his wife was only his sister, lest he be put out of the way (the third account, Gen. 12:10-20, is placed in Egypt and makes the Pharaoh the victim). Isaac and Rebekah deceive him, but despite his anger he gives them protection (Gen. 26:6-11 J). Subsequently a more developed and sensitive version was told regarding Abraham and Sarah, her ap-

parently advanced age notwithstanding (Gen. 20 E; cf. Gen. 17:17).

The other doublet has Abimelech and his army commander, Phicol, involved in a dispute about wells with the patriarch (Isaac in Gen. 26:12-33 J; and Abraham in Gen. 21 E), but they settle it amicably and enter into a covenant together at Beer-sheba, and the patriarch prospers.

The J writer calls Abimelech "king of the Philistines" at Gerar (Gen. 26:1), which is an understandable anachronism, since the Philistines subsequently occupied the territory.

2. Son of Jerubbaal (GIDEON) by his Shechemite concubine (Judg. 8:31); he became king over Shechem for a brief period. The narrative (Judg. 9) seems to show the marks of antiquity, like some other stories of minor judges, and is relatively free of Deuteronomic redaction. It is a dramatic piece of ancient Israelite historiography.

Upon Gideon's death there was apparently a good deal of rivalry among his seventy sons for supremacy over their tribe of Manasseh. Abimelech won out against them all by enlisting the aid of relatives in his mother's home town of SHECHEM. Being mostly Canaanite, they naturally preferred a kinsman to achieve supremacy and therefore gave him seventy pieces of silver from the temple of BAAL-BERITH, with which he hired a band of opportunistic fellows. With this force he journeyed to his father's house at Ophrah and there slew his seventy half brothers upon one stone; only Jotham, the youngest, managed to hide himself and escape. Shechem and some surrounding territory made Abimelech "king."

JOTHAM(?), from the safety of nearby Mount Gerizim, cried out his biting parable calculated to cause dissension between Abimelech and his followers, and then fled into exile. The dissension came soon enough (vs. 22 says Abimelech ruled three years) and pitted Zebul, Abimelech's assistant, against Gaal ben Ebed (some believe he was Israelite, but he more likely became the leader of the Canaanite populace against the "half-breed" ruler; see commentaries on difficult vs. 28). Zebul called for the absent Abimelech, who, with a clever ambush, defeated the rebels. On the second day of battle (or a doublet account) he destroyed the city and sowed it with salt. Many people in the Tower of Shechem tried to hold out in the temple of El-berith, but he burned it over their heads. However, while assaulting the nearby town of Thebez, he had his skull crushed when a woman threw a millstone down on him. Rather than die so disgracefully by the hand of a woman, he asked his armor-bearer to dispatch him.

The story is significant for more than its dramatic appeal. It gives a vivid picture of the conflict between the Israelites and the resident Canaanite population during the period of the Conquest. Shechem was destroyed and subsequently became totally Israelite (cf. I Kings 12:1, 25). Despite vs. 22, Abimelech probably did not extend his control very far beyond the environs of Shechem, or at least not outside Manasseh. His "kingship" was hardly that of the subsequent hereditary monarchy, nor was he a charismatic chieftain like his father; the pattern is more like the petty ruler of a Canaanite city-state. Abimelech is a good example of the near absorption of Israel into Canaanite ways. He is, nevertheless, sharply remembered as a soldier's object lesson (II Sam. 11:21).

3. A name mentioned in the title of Ps. 34, but it is certainly a copyist's error for ACHISH, king of Gath (cf. I Sam. 21:10-15). The mistake has been variously explained as: (*a*) substitution of a better known name for a lesser known; (*b*) a title for Philistine kings, comparable to "Pharaoh"; (*c*) confusion with the name Ahimelech in the same chapter (I Sam. 21).

4. According to the MT-KJV, a priest who was the son of Abiathar (I Chr. 18:16). But II Sam. 8:17; I Chr. 24:6 show that the LXX has the correct reading here: "Ahimelech." *See* AHIMELECH 3.

F. T. SCHUMACHER

ABINADAB ə bĭn′ə dăb [אבינדב, father is noble]. **1.** The father of Eleazar, Ahio, and Uzzah. His residence, which was situated on a hill in Kiriath-jearim (=Baalah; cf. Josh. 15:9-10, 60; 18:14; I Chr. 13:6), sheltered the ark for some twenty years after the disaster at Beth-shemesh (I Sam. 6:19–7:2). His son Eleazar was consecrated by the men of Kiriath-jearim to have charge over the ark. Subsequently, when David sought to bring the ark to Jerusalem, the other sons of Abinadab, Uzzah and Ahio, accompanied the new cart which was conveying the ark. When they reached the threshing floor of Nacon, the oxen stumbled, and Uzzah, attempting to brace the ark, put his hand out to take hold of it and was smitten fatally (II Sam. 6:6-7).

2. The second of the sons of Jesse (I Sam. 16:8; I Chr. 2:13). He appears with his brothers Eliab and Shammah as a soldier in the army of Saul when Goliath championed the Philistine cause in Ephes-dammim (I Sam. 17:13).

3. One of the sons of Saul who perished in the Battle of Mount Gilboa (I Sam. 31:2; I Chr. 8:33; 9:39; 10:2).

4. For KJV "son of Abinadab" (I Kings 4:11), *see* BEN-ABINADAB.

E. R. DALGLISH

ABINOAM ə bĭn′ō əm [אבינעם, father is pleasantness]. A native of Kedesh in Naphtali whose son Barak, inspired by the prophetess Deborah, marshaled the N Hebrew forces and defeated the Canaanite army commanded by Sisera (Judg. 4:6, 12; 5:1, 12).

E. R. DALGLISH

ABIRAM ə bī′rəm [אבירם, my father is exalted; *same as* ABRAM]; KJV Apoc. ABIRON ə bī′rən. **1.** Son of Eliab from the tribe of Reuben. Together with his brother DATHAN, Abiram was one of the leaders of the rebellion of KORAH against the leadership of Moses (Num. 16). The rebels and their households were swallowed up by a crack in the earth—an event subsequently remembered as a warning (Num. 26:9; Deut. 11:6) and extolled among the mighty acts of God's judgment (Ps. 106).

2. The first-born son of Hiel of Bethel. He and his brother were killed when his father rebuilt Jericho in the days of Ahab (I Kings 16:34). Many scholars see here an example of the ancient Near Eastern

practice of the foundation sacrifice. The editor, in any case, attributes their deaths to a curse pronounced by Joshua when he originally destroyed the city (Josh. 6:26). F. T. SCHUMACHER

ABISEI. KJV Apoc. alternate form of ABISHUA 2.

ABISHAG ăb'ə shăg [אבישג, *possibly* אב *plus* שגג, my father is a wanderer, *or* Sumer. *ŠAG,* heart, interior]. A very beautiful Shunammite maiden, brought probably as a medical measure to restore David's warmth and vigor when he was old (I Kings 1:1-4, 15; cf. Jos. Antiq. VII.xiv.3). Solomon later chose to regard Abishag as David's wife, and executed Adonijah for treason when he requested her (I Kings 2:13-25).
D. HARVEY

ABISHAI ə bĭ'shī [אבישי, אבשי, father exists]. The eldest son of Zeruiah, sister of David; the brother of Joab and Asahel (I Chr. 2:16).

Abishai appears first in a daring exploit in the wilderness of Ziph, when he accompanied David into the camp of Saul by night. When the two invaded the royal tent, Abishai urged the summary dispatch of Saul, but David contented himself with the removal of the royal spear and water jar (I Sam. 26:6 ff).

Abishai was present also at the Pool of Gibeon when Abner challenged Joab to let the young men arise and play before them. Twelve warriors were chosen from each side for this agonistic trial. However, when all twenty-four combatants fell, a battle ensued in which Abner and his men suffered defeat. Asahel pursued unswervingly the fleeing Abner, who, despite his warning to Asahel to desist from following him, had no other recourse than to slay him. Immediately Joab and Abishai took up the chase and were dissuaded only by the pathetic entreaty of Abner (II Sam. 2:12 ff). Subsequently, however, Joab and Abishai avenged the blood of their brother Asahel by the treacherous murder of Abner in Hebron (II Sam. 3:26 ff).

In the first Ammonite war, which arose from the insult of King Hanun to the envoys of David, the Israelite army was apparently besieging Rabbath-ammon when the Syrian mercenaries attempted to join their confederates, the Ammonites. To prevent this union of the opposition, Joab divided his army, assigning to himself select troops which he marshaled against the Syrians, while the rest of the army he placed in charge of Abishai, who attacked the Ammonites. Both Ammonites and Syrians were routed in the conflict (II Sam. 10).

When the rebellion of Absalom forced David to flee from Jerusalem, he was met in his flight by Shimei, a member of the house of Saul. Going along the hill opposite the royal retinue, Shimei grievously cursed the king. Abishai, who had accompanied the fleeing monarch, proposed to silence with speedy death this gross impiety but was wisely restrained by David (II Sam. 16:5-14). When David returned victoriously, however, Shimei hastened to meet him at the ford of the Jordan and with profound apologies for his unworthy behavior—much to the disgust of Abishai—secured the royal pardon (II Sam. 19:16-23—H 19:17-24).

During the rebellion of Absalom, the opposing forces were preparing for battle near Transjordanic Mahanaim, with Abishai, Joab, and Ittai sharing the joint command of the Davidic troops. In the battle in the forest of Ephraim the rebellion of Absalom was effectively crushed, and the usurper was slain by Joab (II Sam. 18).

Abishai and Joab were in command also of the elite troops which successfully quelled the rebellion of Sheba the Benjaminite (II Sam. 20). It is interesting to note that when Amasa failed to return within the appointed three days, Abishai was placed in charge of the Judean troops, while Joab, the deposed commander, set out in the campaign apparently without his former military rank.

In I Chr. 18:12-13 Abishai is credited with the subjugation of Edom. However, this Edomite campaign is elsewhere attributed to David (II Sam. 8: 13-14) and to Joab (Ps. 60; cf. I Kings 11:15-16). If these various ascriptions are to be taken seriously, it appears likely that Abishai shared the leadership in this Edomite campaign with David and Joab.

Abishai never attained to the rare distinction of membership among the "Three," although his name was equally as famous. However, he did have the singular honor of being the commander of the Mighty Men of David known as the "Thirty" (II Sam. 23:18-19; I Chr. 11:20-21). Among his heroic deeds were the rescue of David at Nob (*see* ISHBI-BENOB), when he was threatened by a Philistine giant (II Sam. 21: 16-17), and the slaying of three hundred men (II Sam. 23:18; I Chr. 11:20-21). Abishai shared with Joab an impervious hardness, but none among the soldiers of David was ever more loyal or intrepid.
E. R. DALGLISH

ABISHALOM. Alternative form of ABSALOM 1.

ABISHUA ə bĭsh'ōō ə [אבישוע, the (divine) father is salvation(?)]; KJV Apoc. ABISEI ăb'ə sē'ī; ABISUM ə bī'səm. **1.** A Benjaminite, son of Bela, the first-born of Benjamin (I Chr. 8:4).

2. Great-grandson of Aaron and ancestor of Ezra the scribe (I Chr. 6:4-5—H 5:30-31; 6:50—H 6:35; Ezra 7:5). Included in the genealogy of Levi, Abishua is also named among the descendants of Aaron permitted to serve at the altar, to whom Chronicles calls particular attention.

Bibliography. M. Noth, *Die israelitischen Personennamen* (1928), pp. 18, 68-71, 154. R. F. JOHNSON

ABISHUR ə bī'shər [אבישור, my father is a wall]. One of the two sons of Shammai in the genealogy of Jerahmeel (I Chr. 2:28-29). His wife was named Abihail.

ABISUM. KJV Apoc. alternate form of ABISHUA 2.

ABITAL ə bī'təl [אבימל, Aram. *or* Heb. אב *plus* מל, my father is protection, *or* my father is dew]. A wife of David; the mother of Shephatiah (II Sam. 3:4; I Chr. 3:3).

ABITUB ə bī'tŭb [אבימוב, my father is good]. One of the two sons of Shaharaim, by his first wife,

Hushim; listed in the genealogy of Benjamin (I Chr. 8:11). The text is uncertain.

ABIUD ə bī′əd ['Αβιούδ, *see* ABIHUD]. An ancestor of Jesus (Matt. 1:13; also Luke 3:23 ff in MS D).

ABLUTIONS [βαπτισμοί]. Ceremonial washings. Ablutions are referred to three times in the NT. In Heb. 6:2 the writer bids Christians to whom he writes to progress beyond discussion of basic matters, among which he lists "teaching about ablutions." Perhaps he is alluding to the outgrown discussions about differences between Christian baptism and other ablutions. In 9:10 the author speaks scornfully of "various ablutions" (among other things) about which the Levitical code is concerned, but which are among the external rituals that have now been superseded. Cf. baptisms and lustrations in the Qumran community; *see* DEAD SEA SCROLLS.

Mark 7:4 notes that among the traditions observed by the Pharisees was the "washing" of cups and pots, etc. *See* BATHING; BAPTISM.

B. H. THROCKMORTON, JR.

ABNER ăb′nər [אבנר, father is Ner *or* lamp; אבינר (I Sam. 14:50)]. The commander of the Israelite army under Saul, his first cousin or, more likely, his uncle (on the problem of his genealogy, *see* NER); the dominant power in the house of Saul during the brief reign of ISH-BAAL.

The long military career of Abner in the service of Saul is passed over in comparative silence (cf. I Sam. 14:47). Abner was in charge of the Israelite army in the Philistine campaign and introduced David into the presence of the king (I Sam. 17:55-58). The importance of Abner is indicated by the protocol observed in seating him at the king's side at the banquet of the New Moon (I Sam. 20:25). Abner accompanied Saul in his frenzied persecution of David to the wilderness of Ziph and for his lack of vigilance in guarding the person of Saul was chided by David, who with Abishai had stealthily invaded the tent of the sleeping monarch (I Sam. 26:5 ff).

After the death of Saul, Abner placed Ish-baal, son of Saul, upon the throne and established the capital at Mahanaim. However, he failed to secure for the new king the allegiance of the tribe of Judah, which had defected to David (II Sam. 2:8-10). Of the prolonged warfare between the houses of Saul and David, an account of one of the skirmishes, the Battle of Gibeon, is preserved. Abner met Joab at the Pool of Gibeon and challenged him to select warriors for a trial by combat. When all the chosen twenty-four combatants fell, a battle immediately broke out in which Abner and his men were defeated. As he fled from the rout, Abner was resolutely pursued by the swift Asahel, who, heedless of Abner's warning to cease from following him, precipitated his own death. Joab and Abishai, the brothers of Asahel, took up the pursuit of Abner and were prevented from consummate blood revenge only by the pathetic pleading of Abner and by the less formidable deterrent of the reconsolidation of the Israelite forces at the hill of Ammah. Abner returned to Mahanaim with a loss of 360 men (vss. 12-31).

In the second year of Ish-baal a crisis occurred in the royal court which ultimately caused the eclipse of the house of Saul. It happened when Abner went in to Rizpah, one of the concubines of the royal harem, and was reprimanded by the king for his treasonable behavior. Greatly incensed at this censure, Abner rebuked the king for what, in view of his unquestioned loyalty to the house of Saul, he considered an unwarranted magnification of a "fault concerning a woman"; further, he boldly announced his intention of transferring the kingdom from the house of Saul to David (II Sam. 3:7-10). To effect this end, Abner immediately opened negotiation with David and complied with his prerequisite demand for the return of his wife Michal. Abner then communicated with the elders of Israel and fanned into flame their suppressed desire to have David as their king. The house of Benjamin was approached last, but even they were persuaded by this prince of Benjamin of the desirability of a united kingdom under David. Having secured the consent of Israel, Abner and his diplomatic corps arrived at Hebron to draw up final arrangements for the union of the two kingdoms. After he had been royally feted by the king, Abner set out on his mission to gather all Israel together for the purpose of making such a covenant (vss. 12-21).

Meanwhile, however, Joab, who had been absent from the capital on a foray, returned and discovered to his amazement that the king had received Abner favorably. This was too much for the stormy disposition of Joab to bear. He rebuked David for his failure to avenge the blood of his kinsman Asahel and for his credulity in receiving Abner, who, in Joab's eyes, had come for no other purpose than to spy. Secretly summoning Abner to return to Hebron, Joab—with the connivance of Abishai—foully murdered Abner (II Sam. 3:22-27).

When David learned of the tragedy, he disavowed publicly all complicity in the dastardly deed, laid a grievous curse upon Joab and his house, and proclaimed a public lamentation for Abner. In deep grief the king fasted and composed an appropriate dirge (partially preserved in II Sam. 3:33-34), which bewailed the strange fate, so unworthy of such a prince, that had befallen Abner (vss. 28-34).

In this politically crucial hour, which might easily have spelled disaster for the plan of consolidating the kingdoms, the behavior of the king convinced the people of his complete innocence and genuine regret for the unfortunate death of Abner (II Sam. 3:36-39). Abner was interred in his tomb at Hebron (vs. 32), and by a strange irony of fate the head of his murdered master, Ish-baal, was subsequently placed in his sepulchre (4:1-2, 12).

The Chronicler notices that Abner dedicated, from the spoils of war, gifts for the maintenance of the tabernacle of Yahweh (I Chr. 26:27-28) and names Abner's son Jaasiel as a leader of the house of Benjamin in the time of David (27:21).

E. R. DALGLISH

ABOMINATION [פגול, שקוץ, שקץ, תועבה, *see below;* βδέλυγμα (*alternately* DESOLATING SACRILEGE)]. Alternately: ABOMINABLE THING, PRACTICE, etc. Whatever is ritually or ethically loathsome and repugnant to God and men. The concept is expressed

in the OT by four separate words discussed below:

a) תועבה (from תעב, "be abhorred"). This is the most frequent, especially in Deuteronomy, Proverbs, and Ezekiel, designating: offensive violation of established custom (Gen. 43:32; 46:34; Exod. 8:26); foods prohibited as unclean (*see* CLEAN AND UNCLEAN); imperfect sacrifices (Deut. 17:1; 23:18; Prov. 15:8; 21:27; Isa. 1:13; 44:19); magic and divination (Deut. 18:12); sexual irregularities (Lev. 18:22, 26; 20:13; Deut. 24:4; I Kings 14:24; Ezek. 16:22, 43, 47, 51, 58; 22:11; 23:36; 33:26); moral and ethical faults (Deut. 25:14-16; Prov. 3:32; 6:16-19; 8:7; 11:1, 20; 12:22; 13:19; 15:9, 26; 16:5; 20:10, 23; 24:9; 26:25; 28:9; 29:27; Isa. 41:24; Jer. 6:15; 7:10; 8:12; Ezek. 18:13, 24); reversal of the natural (Deut. 22:5; Prov. 16:12; 17:15; 29:27); idolatrous practices (Lev. 18:27, 29-30; Deut. 12:31; 13:14; 17:4; 18:9; 20:18; 32:16; II Kings 16:3; 21:2, 11; II Chr. 28:3; 33:2; 34:33; 36:8, 14; Jer. 2:7; 32:35; 44:4, 22; Ezek. 5:9, 11; 6:11; 7:3-4, 8-9; 8:6, 9, 15, 17; 9:4; 11:18; 14:6; 16:2; 18:12; 20:4; 22:2; 36:31; 43:8; 44:6-7; Mal. 2:11); idols (Deut. 7:25-26; 27:15; II Kings 23:13; Jer. 16:18; Ezek. 14:6; 16:36). The nemesis of abominations is God's anger, judgment, and punishment without pity (Ezek. 7:3-4; 20:4).

b) שקץ, "detestation," the technical word for animal flesh which defiles if touched or eaten (Lev. 7:21; 11:10-13, 20, 23, 41-42; Isa. 66:17; Ezek. 8:10). This word is sometimes synonymous with תועבה. *See* CLEAN AND UNCLEAN.

c) שקוץ (allied with שקץ), "detestable thing." This is employed almost exclusively for objects associated with idolatry and heathen deities (Deut. 29:17; I Kings 11:5, 7; II Kings 23:13, 24; Isa. 66:3; Jer. 4:1; 7:30; 13:27; 32:34; Ezek. 5:11; 20:7-8, 30; Hos. 9:10; Zech. 9:7). *See* ABOMINATION THAT MAKES DESOLATE; IDOL.

d) פגול (from פגל, "foul thing"), a technical word describing putrid, three-day-old sacrificial flesh, unlawful to eat (Lev. 7:18; 19:7; Ezek. 4:14); also flesh, possibly retaining blood, eaten in broth by heathens (Isa. 65:4). *See* SACRIFICE AND OFFERINGS.

The LXX frequently translates these four words with βδέλυγμα, which is also the NT word (Matt. 24:15; Mark 13:14; Luke 16:15; Rev. 17:4-5; 21:27).

M. H. LOVELACE

ABOMINATION THAT MAKES DESOLATE; KJV ABOMINATION OF DESOLATION. An enigmatic phrase occurring in Daniel, I Maccabees (KJV), Matthew, and Mark.

1. In Daniel. In 9:27 we have שקוצים משמם; in 11:31 השקוץ משמם; in 12:11 שקוץ שמם; and in 8:13 הפשע שמם. These may for the moment be translated "desolating abominations," "the desolating abomination," "desolating abomination," and "desolating transgression." There are grammatical peculiarities, but first we must deal with the words themselves.

שקוץ, *shiqqûṣ*, is a term used almost exclusively for idolatrous objects and practices, and means "a detested thing" (*see* ABOMINATION). Biblical writers normally referred to idols and Gentile deities under some byname in order to avoid pronouncing some potentially dangerous name (cf. "Old Nick" for Satan), and while *bôsheth* ("a shameful thing") was usual, *shiqqûṣ* was also used. Thus in the phrase "abomination that makes desolate" the term probably indicates a foreign deity or some symbol connected with it. The root שמם, *sh-m-m*, has two distinct meanings: "to be appalled, overwhelmed with astonishment and dread," and "to be desolated, emptied of inhabitants." The latter two occurrences mentioned above would normally be reckoned *qal* participles, but if (as rarely happens) a preformative *mem* has dropped out, they can be taken as *po'el* participles—i.e., the same form as in the two former instances. Since an active sense is clearly required, it is presumed that the *po'el* has this force and should be translated "appalls" in the one sense and "desolates" in the other.

Before deciding between these two, we need to observe the grammatical peculiarities. Each instance exhibits a syntactical abnormality. In 9:27 we have a plural noun with a singular adjective (participle); in 11:31 the noun is definite, and the adjective, though used attributively, is indefinite, and this phenomenon reoccurs in 8:13 and so can hardly be accidental; and in both 8:13; 12:11 the participle lacks preformative *mem*. Such a string of abnormalities points to some definite cause. Nestlé's suggestion that both parts of the phrase constitute a byname has won widespread recognition. The Greek theonomic Zeus Olympios was translated into Semitic languages as *bá'al shāmēm*, as Phoenician inscriptions and the Syr. of II Macc. 6:2 testify. Literally this means "Lord of Heaven." In our phrase *shiqqûṣ* is substituted for the hated word *bá'al*, and *shōmēm* is a pun on *shāmēm*, the Phoenician style of *shāmâyim*. Thus for the Gentile title "Lord of Heaven" the Jew substituted "the detested thing which appalls."

But in Daniel the phrase refers to the altar of Zeus which Antiochus Epiphanes (*see* ANTIOCHUS 4) erected on Yahweh's own altar of burnt offering. This emptied the temple of true worshipers and (in Jewish thought) of Yahweh himself (cf. Ezek. 10:18; 11:22-23). Thus as used in Daniel, both senses of the root *sh-m-m* are implied: "the detested thing which appalls all good Jews and empties the temple of worshipers and Yahweh alike." Yet there is still another nuance to be glimpsed. Rowley has shown that *sh-m-m* had probably another sense of "to be mad." Antiochus called himself Epiphanes ("Divine Manifestation") and fancied he bore a facial resemblance to Zeus. But his subjects nicknamed him "Epimanes"—i.e., "Madman." Whether the altar to Zeus included (as is likely) an image of that god wearing the features of Antiochus, we do not certainly know (*see* § 2 *below*), but he was in any case the instigator of the blasphemy, so "the detested thing of the Madman" would be another implication of the phrase on which the Jews would seize. It was this desire for wordplay which caused them to be careless of grammatical niceties in its employment. Since "appall" is the primary sense of the root, Montgomery, Jeffery, and others translate thus, but tradition (*see* § 2 *below*) is on the side of "desolation" and should be respected.

We must note that in 9:27 the MT is faithfully reflected in the ASV-RSV, whereby *shiqqûṣîm* is separated syntactically from *shōmēm* and the translation given is: "Upon the wing of abominations [shall come] one who makes desolate"; this is ac-

cepted by Bentzen, who thinks that "the wing" refers either to the eagle or to the winged solar disk as emblems of Zeus, and draws attention to *b'l knp* in the Ugaritic literature. Others think a wing of the temple is indicated (cf. Matt. 4:5, where "wing" is the literal translation of πτερύγιον, rendered "pinnacle"), and they translate: "On the wing [of the temple] the appalling abomination [shall appear]." Others emend כנף to כנו and translate: "In its place [i.e., instead of the proper sacrifice just mentioned] [shall be] the appalling abomination." Jeffery offers: "The wing of an appalling abomination [shall rise up]," referring to the eagle as above. The plural *shiqqûṣîm* is probably due to dittography. The value of the last three suggestions as opposed to ASV-RSV-Bentzen, etc., is that the identity of the phrase "abomination of desolation" is preserved, which is antecedently desirable.

2. In I Maccabees. In 1:54 we are told that a "desolating sacrilege" (KJV "abomination of desolation") was built upon the altar, and in 1:59 that "they sacrificed upon the altar [βωμός] which was upon the altar [θυσιαστήριον]." This would suggest that the object so indicated was a small altar to Zeus, placed upon Yahweh's great altar of burnt offering, rather than an idol (on this point *see* the work of Danby in the *bibliography*). The translation of our phrase שקוץ שמם is βδέλυγμα ἐρημώσεως, which shows that "desolate" rather than "appall" was the current interpretation *ca.* 135, when I Maccabees was written.

3. In the NT. Mark 13:14 reads: ὅταν δὲ ἴδητε τὸ βδέλυγμα τῆς ἐρημώσεως ἑστηκότα ὅπου οὐ δεῖ, which may be translated: "when you see the Abomination of Desolation standing where he ought not." The chapter is popularly called the "Little Apocalypse" (*see* MARK, GOSPEL OF), but whether Mark composed it himself or took it over from another source is in dispute. Taylor observes that the language of vss. 14-23 points to distress occasioned by military attack rather than eschatological upheaval, and says that Luke's parallel phrase: "when you see Jerusalem surrounded by armies" (Luke 21:20), is not a secondary reinterpretation, but is probably closer to the original saying of Jesus, predicting the Roman attack on the city. He suggests that this saying has been apocalypticized by Mark or his source. "What Jesus had said is seen through an apocalyptic haze." Further, he reminds us that Mark may well have been writing at a time and place which made too clear a reference to the Roman power unadvisable. Hence he falls back upon a phrase which had become standard for the forces of evil and inserts the broad hint: "Let the reader understand."

Matthew, following Mark more closely than Luke, but mindful of the Danielic origin of the phrase, draws the reader's attention to that origin, and explicates the phrase "where he ought not" in accordance therewith as "in the holy place." The phrase is anarthrous and so is properly "a holy place," and is taken by some to mean the Holy Land in general.

There remains the masculine participle ἑστηκότα. Some have taken it to be the result of Caligula's attempt to have his statue erected in the temple (A.D. 40), and suggest that a saying of Jesus was recast about that time to have reference to that incident. This suggestion is combined (e.g., by Bacon) with the personalizing influence of Paul's teaching in II Thessalonians concerning the Man of Lawlessness (*see* ANTICHRIST). This concept was itself influenced by the Caligula incident and the Antiochus tradition, as well as by the general Pauline concept of the personal nature of evil (*see* PAUL; cf. Caird [*see bibliography*], pp. 15-16, 26-27). The incident of Caligula's threat to repeat the appalling blasphemy must have given fresh currency to Daniel's phrase, and its application to Caligula was indicated by the fact that the neuter noun was treated as masculine.

Thus, while the original saying probably referred to the coming destruction of Jerusalem by Roman armies, the fact that the event was seen by the early church as one more sign that the forces of evil were loose in the world caused the original prediction to be clothed in a phrase which drew out the theological and eschatological implications of that attack. It should, however, be noted that this treatment of the phrase does not deny that there were eschatological and predictive elements in the teaching of Jesus (cf. Taylor [*see bibliography*], p. 644) and that therefore the eschatological significance of the forthcoming attack may have been perceived by Jesus himself, in which case the first use of the phrase in this connection may go back to him rather than to Mark or his source.

ABRAHAM ā'brə hăm [אברהם, *see* § A *below;* Αβρααμ]; ABRAM ā'brəm [אברם; LXX Αβραμ] (Gen. 11:26–17:4). Son of Terah; husband of Sarah; and father of Isaac. Abraham was Israel's first great patriarch, and for Israel and Christianity he stands as the father of the faithful.

A. ***ETYMOLOGY.*** The OT knows two forms of the patriarch's name: "Abram" and "Abraham." The former occurs only in the Genesis narrative from 11:26 through 17:4. The latter is used elsewhere in the OT except at I Chr. 1:27; Neh. 9:7.

1. Abram. "Abram," perhaps a shorter form of "Abiram" (אבירם) just as "Abner" (אבנר) is of "Abiner" (אבינר), is composed of the two elements: אב, "father"; and רם (seen also in such proper names as Adoniram, Amram, Hiram/Ahiram, and Malchiram), from the verb רום, "to be high, exalted," and is best translated "exalted." It emphasizes the eminence, nobility, or loftiness of the person of whom it is predicated. Occasionally, רם has been taken as a divine name; but no support from the OT is given to this theory. It remains, rather, a descriptive adjective, stressing Yahweh's exaltation (Ps. 138: 8; Isa. 6:1; 57:15). Preferably, "Abram" would mean "the (my) father is exalted" (just as the parallel form Jehoram, יהורם, would be "Yahweh is exalted"), though the rendering "exalted father" is permissible.

2. Abraham. The etymology and translation of "Abraham" are uncertain. The traditional etymology is given at Gen. 17:4-5: in establishing his covenant with Abram, God changed the patriarch's name to Abraham as witness to the divine promise that he should be the "father of a multitude of nations." Accordingly, *'abhrāhām* is represented as being in some way similar to *'abh hᵃmôn* (*gôyīm*). But this explanation is philologically inadequate. *'Abhrāhām* cannot be derived from *'abh hᵃmôn* by any known lexicography. The biblical reference must be seen as a popular etymology (*Volksetymologie*), resting on assonance rather than sound philology—a phenomenon common in Genesis (e.g., 2:23*b;* 4:1*b,* 25*b;* 11:9*a*).

It is best to take *'abhrāhām* as an Aramaic expansion of *'abrām,* and basically identical with it in form and meaning. רהם would then be a longer, Aramaic form of the Hebrew רם, with the ה filling in the weakness in the "hollow root" רום, just as Aramaic רהט and בהת are the equivalents of Hebrew רוץ and בוש (cf. Aramaic and Syriac participles קאם from the root קום).

3. Extrabiblical forms. Although cuneiform parallels have occasionally been cited, neither "Abram" nor "Abraham" has yet been found in Akkadian texts. Since "Abram" is a regular Northwest Semitic formation, both by reason of its structure (as a nominal-sentence name) and of each of its components, Noth cautions against the attempt to link it with Akkadian names.

4. Interpretation of Gen. 17:5. Although philologically unsound, the traditional explanation of Abraham's name (17:5*b*) is nevertheless valuable; for Abraham was indeed the "father of a multitude." But the further definition "of nations" raises difficulties which can be adequately met only by viewing this element in the promise as pointing beyond Abraham to Israel's universal mission. Though most clearly articulated by the Priestly writer here and at 28:3; 35:11, this concept was also expressed earlier by the Yahwist at 12:3; 24:6; 28:14*b* (and cf. 27:29*b*). Through Abraham's seed salvation may reach the Gentiles (Isa. 42:1*b,* 4*b;* 49:6, 22-23; 60:3; Mic. 4:1-2; Zech. 8:20-22; cf. Luke 2:23; Acts 13:47; 26:23). This concept was indigenous in the Abrahamic traditions, and so formed part of Israel's heritage from the earliest days.

In the necessity of combining the two names of Israel's first patriarch, the Priestly writer found also a ready device for emphasizing this important theological affirmation. By changing Abram's name to Abraham, he has God underscore the universal mission of Israel. In accord with his covenant-centered view of Israel's history (*see* PENTATEUCH § A5), P linked this change of name with the Abrahamic covenant (Gen. 17) and editorially substituted "Abram" for all references to Abraham occurring before 17:5.

Since "Abraham" and "Sarah" are commonly preferred in the Bible, they will be used throughout this article, except in actual quotations.

B. ***THE GENESIS NARRATIVE AS A WHOLE.*** The story of Abraham (Gen. 11:27–25:11) is characterized by a wide range of movement, a dramatis personae listing many peoples of the ancient Near East, and a fine portrayal of personalities.

Starting from S Mesopotamia at UR, Abraham's family traveled up the ancient, rich Tigris-Euphrates Valley to Haran, a flourishing center in Anatolia,* where they settled. From there (*see* C1*a below*) Abraham, called by God, journeyed through Syria into Palestine. After an interlude in Egypt he returned to Palestine, the Land of Promise, and spent the rest of his life there. But before his death Abraham sent his major-domo to the city of Nahor to take a wife for Isaac. His life reached a symmetrical end, as it were, with this sweeping arc back into Upper Mesopotamia. Fig. HAR 6.

During his long life, Abraham came into contact with numerous peoples. Ur was a notable city of the Chaldeans (Babylonians); Haran, of the West Semitic Amorites and Arameans (*see also* the names of Abraham's ancestors: PELEG; SERUG; NAHOR; TERAH 1). In Palestine, Abraham moved among the Canaanites (Gen. 12:6) and Perizzites (13:7*b*) and entered into negotiations with the Hittites (ch. 23). Leaving Palestine, Abraham sojourned among the

Egyptians (12:10-20). In ch. 14 he met Amorites, Hurrians, Elamites, and Hittites, and five S kings from the Dead Sea and Transjordan area. Through Nahor's children (22:20-24) he was linked with tribes to the NE; through Keturah's children (25:1-4), to the SE. Finally, no fewer than ten groups are named in the description of the land which Yahweh promised to Abraham's descendants (15:18-21).

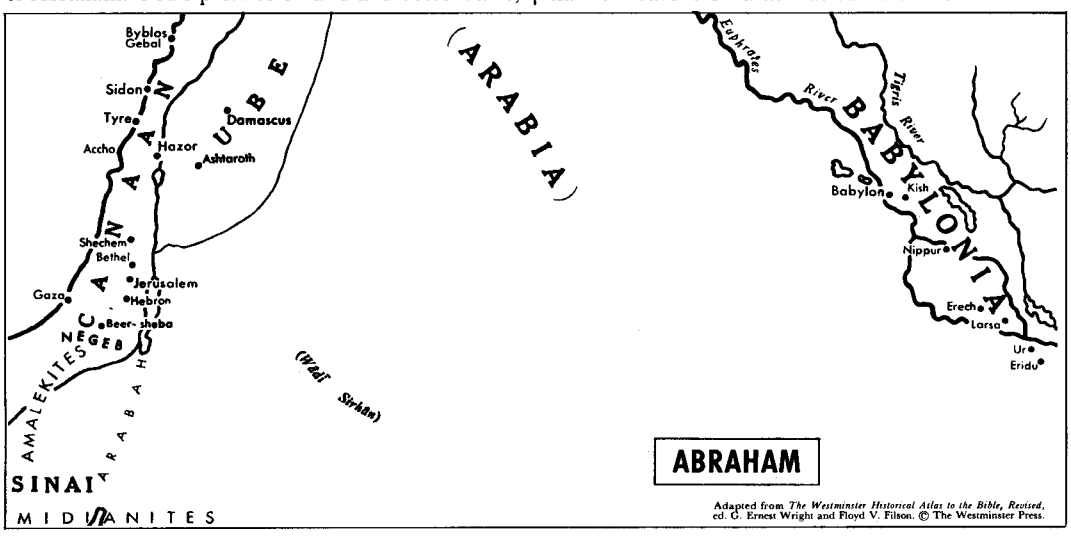
Circling around the central figure of Abraham is a whole galaxy of people whose keenly delineated characters cast a bright light upon the patriarch: selfish Lot (13:2-12), with the aberrated Sodomites (19:1-11), his scoffing sons-in-law (vss. 12-14), his recalcitrant wife (vs. 26), and his desperate daughters (vss. 30-38); barren, unbelieving Sarah (11:30; 16:1-2; 18:9-15); wronged Hagar (ch. 16; 21:1-21); and obedient Isaac (22:1-14). Other luminaries are the noble Pharaoh (12:10-20) and innocent Abimelech (ch. 20; cf. also 21:22-34); mysterious Melchizedek (14:17-20); formally courteous Ephron; and, in an exceptionally rich chapter (ch. 24), the trusted and faithful majordomo, avaricious Laban, and strong, lovable Rebekah.

C. *ABRAHAM ACCORDING TO THE INDIVIDUAL SOURCES.* Reading the story of Abraham as a unified narrative has distinct merit, as indicated above. Nevertheless, behind the present story are other and older stories which must be followed individually to appreciate the variety of Israel's thought about Abraham.

1. According to the Yahwist. The earliest written narrative of Abraham is also the fullest—that coming from the Yahwist (*see* PENTATEUCH § A3). His story is given in Gen. 11:28-30; 12:1-4*a*, 6-20; 13:1-5, 7-11*a*, 12*b*β, 13-18; 15:1*ab*β, 2*a*, 3*b*, 4, 6-12, 17-21; 16:1*b*, 2, 4-8, 11-14; 18-19; 20:1*a;* 21:1*a*, 2*a*, 7; 22:20-24; 24; 25:1-6, 11*b*.

Behind the Yahwist lay, in oral and perhaps even in written form, many older traditions, whose exact age, locus, and in some cases original purpose cannot be satisfactorily determined. But in his genius the Yahwist took the extant traditions, older and younger, and articulated them into Israel's first great theological epic. Two themes run through his story of Abraham: God's promise of land and descendants, and the patriarch's struggle for sure faith that the divine promise will be fulfilled. The resulting story must be read as neither straight biography nor pure allegory.

a. Abraham's family (11:28-30). Although the unified narrative, as edited by P, graphs a migration from Ur to Haran and then into Canaan (11:26-27, 31-32), the J tradition implies strongly that the original home of the Hebrews was the territory around Haran (e.g., 24:4, 7, 10; 27:43; 28:10; 29:4; *see* ISRAEL, HISTORY OF; ARAM-NAHARAIM). It seems best to consider "Ur of the Chaldeans" in 11:28; 15:7 as a harmonistic gloss and to place Abraham at home in Haran at the time of his call.



This preface ends with a terse item that serves also as an introduction to Abraham's call to faith: "Now Sarai was barren; she had no child" (11:30).

b. The call of Abraham (12:1-3). "Now Yahweh said to Abram, 'Go from your country and your kindred and your father's house to the land that I will show you.' " (vs. 1.) Through stringent demands Yahweh calls Abraham to forsake all, and to journey by faith (cf. Heb. 11:8).

But God's demand is completed in his promise. He will make of Abraham a great nation (גוי גדול) whose fidelity to him will be so renowned that it will be a blessing to others who have to do with him (Gen. 12:2; cf. 18:18; Isa. 51:2). All those blessing Abraham, Yahweh will bless; and the one making light of (קלל) him, Yahweh will lay under his curse (ארר; Gen. 12:3*a*).

Moreover, God's word of blessing is not restricted to Abraham's contemporaries. It extends to all men. Through Abraham, God reaches out to bless "all the families of the earth" (J: vs. 3*b;* 18:18; 28:14; E: 22:18; 26:4). The initiative lies with God, for Israel enjoys the favored position of an elect nation (Exod. 19:5-6*a;* cf. I Pet. 2:9; Rev. 1:6; 5:10), not because of merit (Deut. 7:6-8), but that through her God's saving grace might flow to all peoples. To this vocation Abraham—and Israel—must respond with faith.

c. Wandering in Canaan (12:4a, 6-9). "So Abram went, as Yahweh had told him." (vs. 4*a*α.) Abraham's measure of faith was sufficient for his whole

family, for he even took Lot with him (vs. 4*a*β). In response to the promise of land and seed, Abraham set out for a land not his own, with a wife who was barren. Journeying through this foreign land by stages, he moved each time nearer the South. *See* NEGEB.

J's reminder that "at that time the Canaanites were in the land" (vs. 6*b*) serves as more than a historical reference. For right at Shechem, Yahweh appeared to Abraham and rewarded his obedience with the explicit promise: "To your descendants I will give this land" (vs. 7*a*). Looking around him at this flourishing Canaanite sanctuary (*see* SHECHEM [CITY] § 3), Abraham could acknowledge Yahweh's ownership of the land only by an act of faith. Nor did his faith consist merely of inward affirmation. He established claim to "this land" by erecting there an altar to Yahweh. Moving southward, he camped between Bethel and Ai (*see* PALESTINE, GEOGRAPHY OF, § E2*d*) and claimed it also by worshiping his God there (also 13:18).

These notices about Abraham's building altars to Yahweh may originally have been old cultic etiologies, legitimizing Yahweh-worship at previously non-Israelite shrines. However, they also serve now to illustrate, not only Abraham's faith, but also his piety and habit of worship, which are characteristic of his life (13:3-4, 18; cf. 18:22*b;* 24:40). If this is a true biographical note in proper chronological order, Abraham probably took Lot into Egypt with him (cf. 13:1; *see* LOT § 1). But since basically the same story is given twice again (ch. 20 E; ch. 26 J [concerning Isaac]), it was originally probably not a firm element in the Abrahamic tradition. Nevertheless, as it stands, it tells a great deal about Abraham. First, Abraham exhibited a surprising lack of faith by his departure from Palestine. He no sooner proved himself the faithful believer (12:1-4*a*, 6-9) than he deserted the Promised Land (vss. 10-20) because he did not believe that Yahweh could fulfil his promise in the face of famine. Second, the noble patriarch here sunk to the low point in his morality by deceiving the innocent Pharaoh. Third, God acted to save and bless his chosen instrument in spite of Abraham's failure of faith and deliberate prevarication. Here is the climax of the incident, which accounts for its popularity.

***e. Separation of Lot from Abraham* (*13:1-5, 7-11*a, *12*bβ, *13*).** Abraham and Lot went up (עלה) from Egypt through the Negeb into the hill country of Bethel. Because strife developed between their herdsmen, Abraham invited his nephew to choose whichever section appealed to him. Lot selected the prodigiously fertile region of the Jordan Basin and settled at Sodom. *See* LOT § 1.

Abraham's magnanimity is here favorably contrasted with Lot's selfishness. But, of more significance, Abraham's faith stands in high contrast to his lack of it during the sojourn in Egypt. Here, as at 12:6*b*, the presence of the Canaanites created opposition to the fulfilment of Yahweh's promise. But this time Abraham exhibited firm trust by offering Lot first choice. He could deal so generously with the land because he knew that in faith it is already his.

***f. The promise repeated* (*13:14-18*).** Abraham, having acted in faith, now received the divine promise in a form which not only was expanded in reference to his descendants but also contained an earnest of its fulfilment in reference to the land. Previously God had promised to give the land to Abraham's descendants; now he commanded the patriarch himself to look out over the land and to walk about (vs. 17 [התהלך; Vulg. *perambula*]; cf. Josh. 18:4, 8) in it in its length and breadth so that he might know it as his own. He was no longer related to it merely as one to whose descendants it would be given but as one who received it personally.

Moreover, the "great nation" (Gen. 12:2*a*) to proceed from Abraham's loins would be as innumerable as the "dust of the earth" (13:16; so 28:14 [of Jacob]; and cf. 15:5; 22:17). God would perform his promise on a grand scale.

Again Abraham responded in faith to the divine word: he journeyed southward to the "oaks of Mamre, which are at Hebron"—the central sanctuary in the Abrahamic tradition—and built there also an altar to Yahweh. *See* MAMRE; HEBRON, (CITY) § 2. Figs HEB 12-13.

***g. The declaration of righteousness* (*15:1*abβ, *2*a, *3*b, *4, 6*).** When Abraham stood alone in the land promised to him, Yahweh assured him that he should be greatly rewarded (with countless children [for שבר, cf. Ps. 127:3; Isa. 40:10; 62:11; Jer. 31:16]) for his faithful obedience. Yet, even at this moment, Abraham could not believe it without further assurance, and he accused God of a continuing delay tantamount to impotence: "O Lord Yahweh, what wilt thou give me, for I continue childless, . . . and a slave born in my house [בן־ביתי] will be my heir" (Gen. 15:2*a*, 3*b*). Instead of a rebuke Abraham received the "word of Yahweh," which repeated the promise in its most explicit and unqualified form: "This man shall not be your heir; your own son shall be your heir" (vs. 4).

The "word" was effective. Abraham accepted it in silent faith. No further description of Abraham's response is given, and none is needed. Here, at the crucial point in his struggle between faith and doubt, Abraham believed Yahweh ("strengthened himself in, stood firm in belief in, Yahweh"; האמן ביהוה). This was enough. Yahweh reckoned this trust to him as righteousness (ויחשבה לו צדקה [vs. 6]; Rom. 4:3, 9, 22; Gal. 3:6; Jas. 2:23; cf. Exod. 14:31; Num. 14:11; 20:12; Ps. 106:31; I Macc. 2:52). God did not measure Abraham by legal prescription (as in the Priestly use of חשב; e.g., Lev. 7:18; 17:4) but counted him as worthy (cf. Gen. 18:18-19) and established between them a personal relationship of righteousness. This is the essence of Abraham's justification. *See* FAITH; RIGHTEOUSNESS IN THE OT; JUSTIFICATION.

***h. The covenant ceremony* (*15:7-12, 17-21*).** Now Yahweh gave Abraham specific proof of his power by referring to his concrete acts in the past leading to the accomplishment of his purpose (vs. 7). But, almost unbelievably, Abraham again asked for confirmation of the divine word: "O Lord Yahweh, how am I to know that I shall possess it?" (vs. 8.) Yahweh responded by cutting with Abraham a solemn covenant (כרת ברית), which concluded with an ex-

plicit promise of the land, even enumerating its farthest borders (vss. 18-21). The covenant bound both parties together, its pledge being, on Yahweh's part, the gift of the land, and on Abraham's part, faithfulness to Yahweh and to the land (cf. Lev. 20: 22-26; Deut. 30:15-20; *see* COVENANT §§ C2-3). To this extent, Abraham now experienced partial fulfilment of the promise of the land.

Abraham, according to the Yahwistic tradition, reaches his highest level in this chapter. The God who had called and led him now declared him faithful and in the clearest, most unambiguous terms assured him of his heir and inheritance—son and land. Then he bound the two together in solemn covenant to which he, its author and arbiter, willingly submitted himself in gracious condescension.

***i. Strife at home* (*16:1*b, *2, 4-8, 11-14*).** In spite of God's promise that Abraham would have a son of his own (Gen. 15:4), Sarah remained barren. Despairing of bearing a child herself and no longer being able to believe that God would indeed accomplish his word, she proposed that Abraham go in to her maid Hagar, reasoning: "It may be that I shall obtain children ['be built up,' אבנה] by her" (vs. 2*b*). Abraham acquiesced. When Hagar conceived, hostility arose between the two women, for which Sarah blamed her husband (vss. 4-5). Further, Abraham evaded his responsibility in the situation; and Sarah dealt so harshly with ("afflicted," ענה) her maid that Hagar fled into the wilderness (vss. 6 ff). *See* SARAH; HAGAR; ISHMAEL 1.

Here again the Abraham who showed commendable faith upon one occasion fell far short upon another. By acceding to Sarah's plan, Abraham too demonstrated a grave lack of trust, in that he doubted Yahweh's power and took the matter into his own hands. Therefore Ishmael could not be the child long promised, and the fulfilment was further delayed until the birth of Isaac (chs. 18; 21). It was not a question of Hagar's servant status, for according to the prevailing custom her child would legally be considered Sarah's own (cf. 30:3, 9; *see* ADOPTION § 1). It was, rather, that God's rich blessing stored up for Abraham and Sarah could not be carried through a child begotten in such faithless impatience.

***j. God's visitation at Mamre* (*18:1-15*).** While Abraham was sitting drowsily under the flap of his tent in the midday heat, Yahweh appeared to him, accompanied by two angels (cf. 18:22; 19:1, 13). Without recognizing their unusual nature or mission (reading *'adhōnî* for *'adhōnāy* in vs. 3, with the RSV; cf. Heb. 13:2), Abraham provided generous hospitality for his visitors. But the purpose of the divine mission was made known when Yahweh promised: "I will surely return to you in the spring, and Sarah your wife shall have a son" (vs. 10).

God tested Abraham's and Sarah's faith by coming, unexpected and unrecognized, at the time when they were past all expectation of normal procreation (vss. 12-13) and promising them a son of their own. Sarah laughed in derision, rejecting this possibility; and when confronted with the ultimate question of faith: "Is anything too hard [פלא] for Yahweh?" (vs. 14*a*), she attempted to deny her doubt.

***k. Abraham's intercession* (*18:16-33*).** By remaining faithful in the face of such an improbable promise, Abraham was awarded further approval. He was taken into God's counsel: "Shall I hide from Abraham what I am about to do . . . ? No, for I have chosen him, . . . so that Yahweh may bring to Abraham what he has promised him" (vss. 17-19). God then revealed to Abraham his intention to destroy Sodom. At this point the Abraham of J's narrative rises to a remarkable height. Standing on his faith in Yahweh's justice, he interceded for the possible righteous citizens (צדיקים; *see* RIGHTEOUSNESS IN THE OT) of Sodom. The primary value of this scene is not that Abraham almost won an argument with God but that he assumed the role of intercessor and enunciated the possibility of a vicarious salvation—i.e., the saving of an entire city, notorious for its evil, on behalf of a mere handful of righteous people. Interceding for non-Israelites, Abraham did indeed here become a blessing to other families of the earth (cf. 12:2-3).

***l. The birth of Isaac* (*21:1*a, *2*a, *7*).** "Yahweh visited Sarah as he had said, . . . and Sarah conceived, and bore Abraham a son in his old age" (vss. 1*a*, 2*a*). For Abraham and Sarah the promise of having their own son was now fulfilled in the birth of Isaac. God proved himself faithful. In his own good time he performed his word, as Sarah indirectly acknowledges in vs. 7.

***m. Abraham's last days* (*ch. 24; 25:1-6, 11*b).** Imposing a solemn oath upon his trusted servant (cf. the deathbed scenes with Isaac [ch. 27] and Jacob [chs. 48–49]), Abraham sent him back to the city of NAHOR to obtain a wife for Isaac. Prospered in his mission, the faithful steward found Rebekah and brought her back to Canaan. *See* REBEKAH; LABAN.

Two matters are of primary importance to Abraham: that the girl be from his own kindred (24:4), and that she be willing to come to Canaan (vss. 4-9, 38-41, 54-58). By the first, Abraham sought to guard Isaac, his son of promise, from the seduction of the heathen, Canaanite religion. Nahor's family shared in the "patriarchal god" tradition; thus Rebekah could herself most easily continue the worship of the "God of Abraham" (26:24-25; cf. 28:13; 31:53; *see* NAHOR; PATRIARCHS). By the second, Abraham guarded his son from the necessity or temptation of leaving the Promised Land; for it is in "this land" (12:7; 15:7, 18; 24:7) that Yahweh would make Abraham a great nation. Here at the end of his life Abraham showed himself faithful to his call by maintaining the integrity of these two elements—land and seed.

Abraham married KETURAH and through her became the father of many peoples (25:1-5). After rewarding the "sons of his concubines" (vs. 6), he sent them away. Isaac, the witness to God's faithfulness, was left secure in the Promised Land.

2. According to the Elohist. Other traditions concerning Abraham circulated in Palestine. Some that were unknown to the Yahwist, or at least unused by him, were collected by the Elohist (*see* PENTATEUCH § A3*b*). These stories were at home principally in the N. They are now found in Gen. 15:1*b*α, 3*a*, 5, 13-16; 20:1*b*-18; 21:6, 8-34; 22.

Taken alone, these sections give a picture of Abra-

ham which, though skeletal, is dominated by the question of his faithfulness to God's promise: God called him and promised the double inheritance of seed and land (ch. 15); Abraham showed lack of faith in the promise of the land by forsaking Canaan for Philistia (ch. 20), and in the promise of his own son's inheritance by driving out Ishmael (ch. 21); but Abraham finally triumphed in perfect obedience (ch. 22). If these stories represent the major portion of an independent tradition, they indicate that it also knew an Abraham who was revered as the "father of faith."

However, these stories do not now stand alone. They have been inserted in the earlier, fuller J narrative. Since they thereby acquired an even deeper dimension, they should be read as part of the larger story.

a. The divine promise (15:1bα, 3a, 5, 13-16). When God appeared to Abraham, he exhorted him not to be afraid, because "I am your shield" (vs. 1*bα* [מגן]; cf. Deut. 33:29; II Sam. 22:36; Ps. 115:9-11). If Gen. 15:2*a* (KJV "seeing I go childless") belongs to E, it would reflect a "call" of Abraham, probably from Mesopotamia, quite similar to J's (cf. Gen. 20:13; Josh. 24:3 E). Abraham, doubting and disappointed, charged God with failure to act (15:3*a*). Therefore, God brought him outside and repeated (cf. 13:14-17 J) majestically his promise of innumerable descendants (15:5) and then, after Abraham believed (vs. 6 J), his promise of the land (vss. 13-16).

b. The sojourn in Gerar (ch. 20). After having been assured that he would go to his fathers in peace and be buried in a good old age (15:15), Abraham nevertheless forsook the Promised Land and dwelt in GERAR. He betrayed an even greater lack of faith in God's providence by choosing to deceive ABIMELECH about Sarah. Yet the patriarch did not here appear in an unrelievedly harsh light, as in J's episode (*see* § C1*d above*); for when Abimelech was acknowledged as innocent, Abraham interceded for this heathen king and all his household. By this, Abraham appears in the role of a prophet (vs. 7; *see* PROPHET § C2), serving Israel's universal mission. *See* § A *above*.

c. The expulsion of Hagar and Ishmael (21:6, 8-21). Having just acknowledged God's faithfulness to his promise of a son (vs. 6), Sarah nevertheless disbelieved that he was able to maintain the child's inheritance. Fearing lest Ishmael should share along with Isaac, Sarah accosted Abraham: "Cast out this slave woman with her son; for [he] shall not be heir with my son Isaac" (vs. 10; cf. Gal. 4:30). Abraham acquiesced. This is not just another version of the earlier account (ch. 16), for here is a progression in disbelief. Isaac should have been a living testimony to God's trustworthiness, a spur to faith, for his parents. But instead, his presence made them so worried about his future that again, in total lack of trust, they took the matter into their own hands.

Yet here also Abraham was made to bear little guilt. In fact, in acquiescing he was really complying with the divine will. In clear terms God reaffirmed his promise concerning Isaac and then added that, because of Abraham, he would even make Ishmael into a nation (vss. 11-13 [גוי גדול in vs. 18]). Abraham was more than exonerated. It was on his behalf that God saved and blessed another nation. *See* ISHMAEL 1.

d. The treaty with Abimelech (21:22-34). That Abraham was blessed by God was evident even to the heathen (cf. 26:28-29). Acknowledging Abraham's favored position, Abimelech petitioned the favored patriarch for a treaty. When Abraham cut a covenant (כרת ברית; 21:27*b*, 32*a*) with him, he extended, as it were, his own blessing to the heathen king and his people.

By worshiping "Yahweh, the Everlasting God" (יהוה אל עולם; vs. 33; *see* GOD, NAMES OF, § B), at Beer-sheba, Abraham again established, by implication, his claim to the land.

e. The testing of Abraham (22:1-19). Abraham's struggle for faith now ended victoriously. Called by God to sacrifice his only, beloved son upon "one of the mountains" in the land of Moriah (*see* MORIAH; JERUSALEM § 3*c*), Abraham responded in perfect obedience. To Isaac's probing question he returned an answer calculated to inspire in his son a like measure of faith: "God will provide himself the lamb . . . , my son" (vs. 8; cf. vs. 14). In this excruciating test father and son exhibit a splendid faith, each in the other and both in God (cf. Wisd. Sol. 10:15; Ecclus. 44:20).

In the face of such obedience, God now solemnly reaffirmed his promise of innumerable descendants and possession of the land (Gen. 22:15-18); and his last word to the patriarch, bringing the whole Abrahamic tradition to its climax, roots Israel's universal mission in the faith of Abraham: "By your descendants shall all the nations of the earth bless themselves, because you have obeyed my voice" (vs. 18).

3. According to the Priestly tradition. The Abraham of the P narrative knows very little of a tension between faith and doubt. Seen in the P passages alone (Gen. 11:26-27, 31-32; 12:4*b*-5; 13:6, 11*b*, 12*abα*; 14; 16:1*a*, 3, 15-16; 17; 19:29; 21:1*b*, 2*b*-5; 23; 25:7-11*a*), Abraham is a towering figure, dominating the scene around him. Ample, though sometimes confusing, statistics help delineate the length of his life, yet without adding much to its breadth. Nevertheless, the theme of promise and fulfilment is present, tying these chapters closely to the JE story.

a. Abraham's journey to Canaan (11:26-27, 31-32; 12:4b-5; 13:6, 11b-12bα). According to P's chronology, Abraham left Haran for Canaan sixty years before his father's death. Although no explicit reason for Abraham's journey is given, P's concentration upon this one family is not at odds with J's story of Abraham's call and election (12:1-3). When Lot and his uncle separated from each other, Abraham was left alone in the land.

b. Abraham and Melchizedek (ch. 14). In this unique chapter, Abraham strode out onto a vast, rich scene. When he went forth to rescue Lot, he appeared as a military hero routing a coalition of powerful Eastern kings (*see* CHEDORLAOMER; AMRAPHEL; LOT § 1). When he returned home, he was met as the savior of his people and was blessed by MELCHIZEDEK, "priest of God Most High."

c. The birth of Ishmael (16:1a, 3, 15-16). Judged by the standards applied earlier (*see* §§ C1*i*, C2*c above*), Abraham was here guilty of unfaith in accept-

ing Hagar as his wife. P softens the situation considerably, however, by having Abraham agree only after having waited childless in Canaan for ten years.

d. The divine covenant (ch. 17). Yahweh appeared to Abraham as "God Almighty" (El Shaddai; *see* GOD, NAMES OF, § C2*a*), called him to a faultless life (תמים; cf. 6:9; Job 1:1), and promised him the blessings of his covenant for obedience (Gen. 17:1-2). The covenant entails the change of the patriarch's name, promise of multitudinous seed, possession of the land of Canaan, and a universal mission (vss. 3-8). Moreover, God promised to give a son by Sarah (vss. 15-16). Here Abraham lapsed into a moment of doubt, laughing derisively and interceding for Ishmael as his only hope (vss. 17-18); but, upon reassurance from God, hastened to indicate his obedience by observing the prescription of circumcision (vss. 9-14, 22-27). In P's story Abraham reaches both his lowest and his highest levels in this theophany.

e. The birth of Isaac (21:1b, 2b-5). God proved himself faithful; for in their old age Abraham and Sarah bore a son. Abraham responded in faith to the covenant by circumcising the child.

f. The purchase of Machpelah (ch. 23). Although the land of Canaan had been promised to Abraham from the beginning, during his life it remained the "land of [his] sojournings" (17:8; cf. 28:4; 37:1; Heb. 11:9). Now, in the purchase of MACHPELAH, he acquired a portion of it legally so that he was no longer an heir but an owner. Abraham hereby experienced partial fulfilment of this second element of the patriarchal promise of seed and land.

g. The death of Abraham (25:7-11a). Abraham died "in a good old age, an old man and full of years," and was buried on his own ground. At his death he —as the other fathers (35:29; 49:31; 50:13)—entered fully into the Land of Promise.

D. *ABRAHAM IN THE REST OF THE OT.* Two themes link all the early Abrahamic traditions: God's promise of innumerable seed and the land of Canaan, and Abraham's faithful response. These themes also dominate the other OT references to him. Thus, God repeated to Isaac (Gen. 26:3; cf. Ecclus. 44:22) and to Jacob (Gen. 28:13; 35:11-12) the promise made first to Abraham. Joseph expected these blessings to be shared by his brothers (50:24); and Moses was to exhort all Israel in this faith (Exod. 6:3-8; cf. Bar. 2:34).

The God who called Abraham and entered into covenant with him was the "God of Abraham" (Gen. 26:24*a; see* PATRIARCHS § 4). Israel was therefore the "people of the God of Abraham" (Ps. 47:9) or the "offspring of Abraham" (Ps. 105:6; Isa. 41:8), and Abraham was Israel's father (Isa. 51:2; 63:16). Because of Abraham's faithful obedience, he was known, not only as God's servant (Gen. 26:24*b;* Ps. 105:42), but also as his "friend" (II Chr. 20:7; Isa. 41:8).

Here the concept of Abraham as mediator and intercessor, latent in the earlier traditions (Gen. 12:3; 18:22-33), receives significant expansion. On the strength of Abraham's faith and his relationship of righteousness with God, Israel could both appeal to God to remember his holy covenant (Exod. 32:13; cf. II Macc. 1:2) and have confidence that he would hearken "for Abraham's sake" (cf. Lev. 26:42; Deut. 9:27; 29:13; II Kings 13:23; I Chr. 16:16; Ps. 105:9-11). Because of Abraham, God rescued Lot (Gen. 19:29), blessed Isaac (26:24), redeemed Israel from bondage (Exod. 2:24), and continued in faithfulness (אמן) and steadfast love (חסד; Mic. 7:20). Israel remembered Abraham as the faithful one for whose sake she was blessed.

E. *ABRAHAM IN THE NT.* The OT themes, though continued, receive significant expansion and reinterpretation in the NT. Thus, Abraham was the father of the Israelites "according to the flesh" (κατὰ σάρκα), and they are his sons and daughters. But he becomes the father of all who, after the Spirit, share in his faith (Matt. 3:9; Luke 13:16; 16:24; 19:9; Acts 13:26 [υἱοὶ γένους Ἀβραάμ]; Rom. 11:1; cf. Rom. 4:16; Gal. 3:29), while the sons themselves may be disinherited (Matt. 8:11-12; John 8:39*b*). God "swore an oath" with Abraham, sealed with promises (Luke 1:73; Acts 7:5-6), but Christians are the "children of promise" (Gal. 4:28) and its proper heirs (3:29). God is the "God of Abraham" (Mark 12:26; Acts 7:32); and Abraham, the "friend [φίλος] of God" (Jas. 2:23), lives with him in heaven (Luke 16:22; John 8:56, 58; *see* ABRAHAM'S BOSOM). But this same God "glorified his servant Jesus" and therefore acts also on behalf of Christians (Acts 3:13).

However, the strongest NT picture of Abraham portrays him as a monumental figure of faith. In his call, in his waiting upon the fulfilment of the promises, and pre-eminently in the sacrifice of Isaac, Abraham patiently endured all tests "by faith" (πίστει). This life of faith stands as a model for all Christians (Gal. 3:6-9), and, by implication, is prototypical of Christ's life of perfect obedience. *See* ALLEGORY.

F. *ABRAHAM AS THE FATHER OF THE FAITHFUL.* Abraham's faith in God is the dominant theme from the earliest OT tradition to the latest NT reference. But the fullest and most formative portrait—J's—does not show this faith as an abstract quality or easy attainment but as the hard-won result of a difficult human struggle over recurring doubt and unfaith, a victory gained through God's forgiving grace.

Abraham stands rightly, therefore, as the father of all the faithful—Jew or Gentile—who, sharing in his obedience, are blessed with him in Christ (Gal. 3:7-9, 14). Herein Abraham becomes also the "father of a multitude of nations," and Israel's universal mission is fulfilled (cf. Luke 13:28-29; John 8:56-58).

L. HICKS

ABRAHAM, APOCALYPSE OF. A Jewish apocryphon which has survived only in a Slavonic version, based on a Greek translation of the original Hebrew or Aramaic. For general discussion of this type of literature, *see* APOCRYPHA; APOCALYPSES, APOCRYPHAL.

The first eight chapters deal with Abraham's youth and tell how he became convinced that there is but one God and how he fought the idolatrous follies of his time. This narrative has a general resemblance to stories of Abraham's conversion and his campaign against image-worship, found in rabbinic literature. It is followed by the apocalypse proper, which begins as a sort of midrash on Gen. 15. Escorted by a great angel, Jaoel (Hebrew Jahoel), Abraham flies up to heaven and beholds the divine throne and the attendant angels. God shows him the inhabitants of the various heavens, then bids him look down on earth, where he sees events of the past (the temptation of Adam and Eve, the murder of Abel) and of the future (the destruction of the temple, the coming of the Messiah). Abraham boldly discusses with God the problem of evil, but the outcome of the conversation is uncertain (*see below*). The final chapters of the work are obscure and contain manifestly Christian insertions.

The explicit reference to the destroyed temple and the generally gloomy character of the work are sufficient to fix its date at the end of the first or the beginning of the second Christian century—i.e., at about the same time as the apocalypses of Esdras and Baruch. Like them, the book is deeply concerned with the problem of evil and of divine justice; unlike them, however, it experiments with an extreme dualism. The devil appears under the name of Azazel; but he is not the Azazel of I Enoch, one of the ringleaders in an angelic revolt. He is a radically evil being, whose existence is not accounted for, but whose reality is vividly felt—like Belial in the Testaments of the Twelve Patriarchs. He tries to dissuade Abraham from ascending on high; he is identified with the serpent of Eden, who has hands and feet and twelve wings, and who seduces Eve with the fruit of the vine; he incites Cain to murder Abel. In Abraham's conversations with God, it is implied that Azazel has certain rights within the total world economy (cf. the NT view of Satan as the prince of this world). In addition to this radical dualism, the work contains other quasi-Gnostic touches, such as the glorification of the angel Jahoel, who actually appears by this name in some medieval Hebrew mystical writings, but usually merges with the cosmic being called Metatron.

On the other hand, many passages, both in the introductory narrative and in the apocalypse proper, present a rationalistic and thoroughgoing monism. The angels hymn God in almost philosophical terms. During the same conversation in which Abraham inquires why God tolerates Azazel, God insists that the source of evil is in man's freedom of will. The shifts between dualism and monism, determinism and voluntarism, rationalism and quasi-Gnosticism, are perhaps due in part to the various sources on which the author drew; but even more, they seem to mirror the tragic uncertainty of the author himself, as he struggled to reconcile the massive tragedy that had befallen the nation with his faith in one righteous God.

B. J. BAMBERGER

ABRAHAM, TESTAMENT OF. A Jewish apocryphal writing, originally composed in Hebrew or Aramaic, which has survived only in a free Greek translation. (For discussion of this type of literature, *see* APOCRYPHA.) We possess a longer and a shorter version of the work; the shorter includes a few details not found in the longer.

The booklet deals chiefly with the circumstances of Abraham's death. The angel Michael is sent to take Abraham's soul; but the patriarch refuses to die, and the angel cannot summon the courage to insist. (Similar legends are found in rabbinic literature concerning the death of Moses.) Abraham pleads that he may see all created things before his death, and this request is granted. Michael takes him high in the air in a chariot. When Abraham sees men sinning with apparent impunity, he curses them, and they fall dead. A heavenly voice intervenes, and Abraham is brought up into the heavens, where he beholds the judgment of human souls. Though angels take part in their trial and punishment, it is the soul of Abel who acts as judge. When a soul whose faults and merits are equally balanced is put on trial, Abraham prays for a favorable verdict, and his prayer is efficacious. He now repents his former severity, but is reassured: the untimely death of those whom he cursed has made atonement for their sins.

Returning to earth, Abraham again refuses to yield up his soul. Death, disguised as a radiant angel, replaces Michael; but even when he reveals himself in all his terrors, so that seven thousand servants of Abraham expire (they are later revived), the patriarch will not surrender. At last, lying upon his couch, he is beguiled into giving his hand to Death, and straightway the angels bear his soul on high. (In the shorter version, God himself takes Abraham's soul as in a dream.)

The intent of the author seems to have been to create a moving story rather than to advance any particular theological interest. It is thought that the Greek texts contain some Hellenistic additions—in particular the elaborate description of the death angel—that were not in the original. This apocryphon is generally dated in the first century of the Christian era.

B. J. BAMBERGER

ABRAHAM'S BOSOM [κόλπος Ἀβραάμ]. The place where the good go at the moment of death, and where judgment is enacted as preliminary and

perhaps probationary to the Final Judgment at the end of the age. In the parable of the rich man and Lazarus, the beggar at death is carried by angels to Abraham's bosom, and is separated by a great chasm from the tormented rich man in Hades (Sheol; Luke 16:22-23). This view of a moral division among the dead who dwell in Sheol appeared in Jewish literature in the first century A.D.

1. Location. Older Jewish literature makes no mention of that part of Sheol reserved for the righteous dead, nor any localizing of Paradise in Sheol, though in II Esd. 7:36 the "pit of torment" and the "place of rest" are set over against each other at the Last Judgment. Interpreters are divided as to whether in this parable Hades includes both men (so Strack and Billerbeck, *Kommentar,* vol. IV, p. 1019) or only the rich man. Some believe that such figurative topographical details can be pressed no further here than in Enoch, where in ch. 22 (*ca.* 100 B.C.) the dead are separated into three groups in the underworld until the Day of Judgment. Enoch 22 bears many resemblances to Luke 16:19 ff, and may represent the popular view of Sheol in Jesus' day (cf. also Syr. Apocal. Bar. 30:2).

2. Abraham as an eschatological figure. Jewish literature of the NT period contains many references to Father Abraham, together with the patriarchs Isaac and Jacob, as eschatological figures. Rabbinic Judaism sometimes spoke of a rest in Abraham's bosom in relation to the meal of the blessed in the world to come, which was enjoyed by the righteous after death (Matt. 8:11; Midrash on Exod. 16:4; cf. John 13:23). But at times the rest in Abraham is unrelated to the meal and signifies the blissful fellowship enjoyed with the patriarch. In IV Macc. 13:17 the patriarchs welcome the seven martyr brothers. The bosom of Abraham as the dwelling place of the righteous is referred to in the Midrash on Lamentations and the Pesiḳ. R. 43, and in the T.B. Kid. 72 *a/b*. In the Lukan parable the metaphor probably indicates a blessed communion of the faithful, as of a parent and child (cf. John 1:18), apart from any reference to a heavenly banquet.

E. W. SAUNDERS

ABRAM ā′brəm [אברם, *see* ABRAHAM § A1; LXX Αβραμ]. The name used for ABRAHAM in Gen. 11:26–17:4.

ABRON āb′rən [άβρωνα (BA), χερβων (א); Vulg. *Mambre*] (Jth. 2:24); KJV ARBONAI är bō′nī. A brook (KJV "river") identified by some as the Chaboras; others conjecture a corruption of עבר הנהר.

J. C. SWAIM

ABRONAH ə brō′nə [עברנה, pass or passage] (Num. 33:34-35); KJV EBRONAH ĭ brō′nə. A place where the Israelites camped en route to Ezion-geber and the borders of Edom. Possibly 'Ain Defiyeh, a shallow water hole in a sandy flat *ca.* 7½ miles N of Ezion-geber.

V. R. GOLD

ABSALOM ăb′sə ləm [אבשלום, father in peace; Apoc. 'Αβεσσάλμος, 'Αψάλωμος, 'Αβεσσάλωμος, *in various MSS*]; ABISHALOM ə bĭsh′ə ləm [אבישלום] (I Kings 15:2, 10). **1.** The third son of David, whose regal ambitions precipitated a serious but short-lived revolt.

Absalom was born in Hebron* of Maacah the daughter of Talmai, king of Geshur in Aram (II Sam. 3:3; I Chr. 3:2). His recorded experiences commence with the pathetic story of the rape of his beautiful sister Tamar by Amnon, the first-born son of David. Absalom met the heartbroken maiden after she had been rudely ejected from the house of her abductor, and provided a sanctuary for her in his own home. After two years Absalom held a feast, as he sheared his sheep at Baal-hazar, and persuaded the somewhat reluctant king to permit the royal sons, including Amnon, to attend. During the feast the inebriated Amnon was slain by the servants of Absalom, who fled of necessity to the home of his maternal grandfather at Geshur, where he remained for three years (II Sam. 13; 15:8). Fig. HEB 12.

From this exile Absalom was finally recalled through the efforts of Joab, who, perceiving that the king's wrath had abated, was able through an astute stratagem, skilfully performed by a wise woman of Tekoa, to secure from the king permission for the prince to return to his house in Jerusalem, although he was debarred from the court. This intolerable situation continued for two years, until Absalom summoned Joab to intercede for him with the king, but for some reason—perhaps the imperiousness of Absalom—Joab refused twice to see the prince. In this virtual duress Absalom compelled Joab to put in an appearance when he set his barley field on fire. He then persuaded Joab to plead his inequitable case before David, who summoned Absalom and reinstated him in his favor (II Sam. 14).

Not long thereafter the ambitious prince began to assert publicly his prerogative as heir apparent by procuring for himself a chariot and a cortege of fifty runners. This claim was supported by the fact that at this juncture he was the eldest surviving son of David, since Amnon and presumably Chileab were now dead. This positive affirmation was complemented by a program of studied subversion, in which Absalom undermined the people's confidence in David by exaggerating the evils of the king's court and acquired for himself the allegiance of the disaffected by posing as the champion of the people. At the end of four years Absalom, abetted by the sagacious Ahithophel, planned the *coup d'état* by distributing his adherents throughout the land so that they could announce at the appointed hour his accession to the Davidic throne, while he himself, having secured permission of the king to go to Hebron, ostensibly to fulfil a vow, initiated the revolt from this erstwhile capital of David (cf. II Sam. 5:5). When the news of the conspiracy reached David, he was taken completely by surprise and had no other recourse than to flee at once from Jerusalem (II Sam. 15; cf. I Kings 2:7; Ps. 3).

While Absalom occupied Jerusalem without a struggle, the king was not devoid of loyal allies in the city. The priests Zadok and Abiathar acted as the contacts for Hushai, the friend of David who, having disarmed the suspicions of Absalom, was in

a favored position to carry on his espionage and subversion of the rebel movement.

At the instance of Ahithophel the relationship between Absalom and David was irreparably breached when Absalom violated publicly the royal harem (II Sam. 16:20-23). As the next move Ahithophel counseled Absalom to place at his disposal twelve thousand troops with which to attack David immediately and to make the principal objective of the clash the liquidation of the king, so that the nation would rally to the support of its new leader. This shrewd advice was superseded, however, by the opposing counsel of Hushai, who proposed that a complete mobilization of Israel be made and a concerted attack be launched personally by Absalom in order to ensure a certain victory. Informed of these secret plans of Absalom, David crossed the Jordan and encamped at Mahanaim, while somewhat later Absalom invaded Gilead, where he took up a position with his forces under the command of Amasa (II Sam. 17).

In the ensuing conflict in the forest of Ephraim the seasoned troops of David, marshaled by Joab, Abishai, and Ittai the Gittite, attacked and utterly routed the army of Absalom. As the rebel prince fled from the battle upon his mule, his long locks of hair became entangled in the thick branches of an oak, while his mount proceeded riderless, leaving him hanging helplessly in mid-air. When the plight of Absalom was communicated to Joab, he slew him forthwith, in direct violation of the specific orders of David, and raised over his corpse a great cairn. With the death of Absalom the rebellion crumbled immediately. Upon learning of the death of his son, David was inconsolable and broke out in unrestrained grief, lamenting again and again: "O my son Absalom, my son, my son Absalom! Would I had died instead of you, O Absalom, my son, my son!" (II Sam. 18—H 18-19:1).

The victory of the Davidic troops was completely overshadowed by the sorrow of the king. This awkward situation was promptly corrected by the stern rebuke of Joab, who pointed out to the king the embarrassing incongruity of his behavior and counseled him to express at once his appreciation for the heroic efforts of his followers (II Sam. 19:1-8—H 19:2-9).

Absalom is represented to be the father of three sons and a daughter Tamar, who possessed her father's comeliness (II Sam. 14:27; cf. vss. 25-26). However, an account is elsewhere given of the erection of a monument or pillar in the King's Valley to perpetuate his name because he had no male heir (II Sam. 18:18).* The discrepancy is usually accounted for by supposing that all his sons died in infancy. MAACAH (10), the wife of Rehoboam, is called the daughter of Absalom, but was more probably his granddaughter, unless another man of the same name is intended (II Sam. 14:27 LXX; I Kings 15:2, 10; II Chr. 11:20 ff; cf. 13:2). Fig. TOM 70.

E. R. DALGLISH

2. The father of Mattathias, captain in the army of Jonathan Maccabeus. Mattathias remained faithful to his grandson when most of the rest of the army had fled in a battle against the Syrians (I Macc. 11:70). He may also be the Absalom whose son Jonathan was sent by Simon Maccabeus on the errand mentioned in I Macc. 13:11. Probably we should read in both places (11:70; 13:11) either "father of Jonathan" or "father of Mattathias."

3. One of two envoys sent by the Jews to LYSIAS for negotiating a peace after his defeat at BETH-ZUR in 165 B.C. (II Macc. 11:17). He may be the same as 2 *above*, but there is nothing corresponding in I Maccabees, and the author of II Maccabees may be mistaken about the whole incident.

N. TURNER

ABSTINENCE. *See* FASTING.

ABUBUS ə bōō'bŭs [Ἀβουβος]. The father of Ptolemy, governor of Jericho and son-in-law and murderer of Simon the Hasmonean (I Macc. 16:15).

ABYSS [ἄβυσσος]; KJV and alternately RSV BOTTOMLESS PIT. The LXX rendering for תהום, "Deep" (Gen. 1:2, etc.); a bottomless, unfathomed, and unfathomable deep or underworld (Luke 8:31; Rom. 10:7; Rev. 9:1; etc.). *See* DEAD, ABODE OF THE.

S. TERRIEN

ACACIA ə kā'shə [שטה, *šiṭṭâ* (Isa. 41:19; KJV SHITTAH TREE shĭt'ə); *otherwise plural* שטים, *šiṭṭîm;* Arab. *sanṭ, probably from* Egyp. *šndt*]; KJV SHITTIM WOOD shĭt'ĭm. A tree and its wood. In all but one instance the reference is to the wood used in constructing the ARK OF THE COVENANT, the table of shewbread, altars, carrying poles, frames, and other wooden objects associated with the TABERNACLE, described in Exod. 25–27; 30; 35–38; Deut. 10:3. Ideally suited for cabinetmaking, the hard, orange-brown wood of the native *Acacia seyal* Del. (Arabic *sayyāl*) and the larger *Acacia tortilis* Hayne (same as *Acacia raddiana* Savi) is still common in the desert regions of the Negeb and Sinai. These acacias produce a very durable wood (cf. LXX ξύλυν ἄσηπτον, "non-decaying wood"). שטה in Isa. 41:19 disturbs the imagery; cf. the LXX πύξον, "BOX TREE," which fits the context.

The place names SHITTIM; ABEL-SHITTIM; and BETH-SHITTIM probably developed where the acacia grew in abundance. The symbolism in Joel 3:18—H 4:18 would be clearer with the translation "valley of acacias" (LXX "torrent of rushes"), rather than "valley of Shittim."

Some have identified the BURNING BUSH (Exod. 3:2-3) with the *Acacia nilotica* L., a smaller species, one of the chief sources of gum arabic today. The colorful *Acacia Farnesiana* L., common in hedges today, is not native, but a cultivated species.

ACATAN. KJV Apoc. form of HAKKATAN.

ACCAD ăk'ăd [אכד; Akkad. *akkadî;* Sumer. *agadē*]. A city of Shinar (Babylonia), listed along with Babel, Erech, and possibly Calneh (cf. KJV) as forming the original kingdom of Nimrod (Gen. 10:10); identified with Akkad, or Agade, of the cuneiform inscrip-

tions. Founded to be the capital of the Dynasty of SARGON (1) of Akkad (*ca.* twenty-third–twenty-first centuries B.C.), the city seems to have been destroyed with the fall of that Akkadian dynasty, and its site has never been located. However, its name lived on in the phrase "the land of Akkad and Sumer," the usual designation for Babylonia in the inscriptions, and in the term *akkadu* for the oldest Semitic invaders of Mesopotamia and their language, of which Assyrian and Babylonian were dialects.

See also ASSYRIA AND BABYLONIA § B; SUMER § 2*b*.

ACCARON. Apoc. form of EKRON.

ACCENT, GALILEAN. Jesus and his disciples spoke Aramaic; but being Galileans, they spoke a dialect of Aramaic which had its own Galilean peculiarities. After Jesus' arrest in Judea, when Peter was denying having had any association with him, Matthew records that some bystanders identified Peter by his accent as a Galilean (Matt. 26:73). He was therefore immediately suspected of being one of Jesus' disciples; his accent betrayed him.

The Greek word translated "accent," λαλιά, commonly means "speech" or "speaking." It is used also in John 4:42; 8:43*a*. In the latter passage ("what I say") a distinction is made between Jesus' audible speaking and his "word"—i.e., his message—or Jesus himself, who is the Word.

B. H. THROCKMORTON, JR.

ACCENTS, MUSICAL. *See* MASORETIC ACCENTS.

ACCEPTANCE [ἀποδοχή; *cf.* ἀποδέχομαι, receive, accept].

1. Men's acceptance of God or his word. Specially notable is the phrase "worthy of full acceptance," attached to two of the "sure sayings" (KJV "faithful sayings") in the Pastoral letters—I Tim. 1:15; 4:9 (with reference to vs. 10). Here we have a stereotyped kerygmatic expression, originating in a Hellenistic environment (similar expressions are found in Hellenistic authors from Polybius onward). By acceptance of the "sure saying" men inherit the blessings of the gospel.

2. God's acceptance of men, their worship and service. Cf. two further passages in the Pastorals—I Tim. 2:3; 5:4—where prayer for all men and care for one's natural dependents are "acceptable" (ἀπόδεκτος) in God's sight. So acts of charity like Cornelius' (Acts 10:35), contributions to God's work (II Cor. 8:12), gifts like the Philippians' to Paul (Phil. 4:18), Paul's priestly presentation of the "offering of the Gentiles" (Rom. 15:16), and other "spiritual sacrifices" which Christians offer to God as a "holy priesthood" (I Pet. 2:5) are "acceptable" (δεκτός, εὐπρόσδεκτος) to him. The language reflects OT sacrificial terminology. See Lev. 23:11; Isa. 60:7, where the Hebrew term is רצון.

3. Men's acceptance of one another. The acceptance of accredited messengers of God or Christ is tantamount to acceptance of God or Christ (Matt. 10:40; cf. Mark 9:37). F. F. BRUCE

ACCESS [προσαγωγή]. A term denoting the privilege of approach or of being introduced, especially to a divine or royal personage. It is used three times in the NT: in Eph. 2:18, where through Christ, Jewish and Gentile believers alike "have access in one Spirit to the Father"; in Eph. 3:12, where the sense is the same—in Christ "we have boldness and confidence of access [i.e., to God] through our faith in him"; in Rom. 5:2, where through Christ "we have obtained access to this grace in which we stand." In these places προσαγωγή probably reflects the transitive sense of the verb προσάγω, as used, e.g., in I Pet. 3:18: "Christ also died . . . that he might bring us to God." F. F. BRUCE

***ACCO** ăk′ō [עכו; Egyp. *'Aka;* Akkad. *Akku;* Amarna *Akka;* Ἄκη, *later* πτολεμαίς (Ptolemais); *present* Acre]; KJV ACCHO. Harbor and city-state in N Palestine, N of Carmel.

1. Location. Acco was founded on the small coastal plain N of the mountain of Carmel. The old town was a natural center, and the whole plain was named after it. In the N the plain is limited by Jebel el-Mushaqqah, which is the westernmost part of the N Galilean mountains. The mountain falls steeply into the sea and constitutes the N border of Palestine. The plain is *ca.* four miles wide where Acco was situated. Protected by the mountains is a natural bay, which was one of the few good harbors along the Palestinian coast. The modern Acco is only a small town, and the important harbor is now Haifa on the same plain a little farther S. Tell el-Fukhkhar, a mile E of Acre, near 'Ain es-Sitt, dug out in 1929 by Saarisalo, was supposed by some scholars to be the site of ancient Acco. It is more probable, however, that it was the citadel of Ptolemais which was once located there.

2. History. Acco is mentioned in an Egyptian execration, written on a figurine, from the nineteenth century B.C., and several times in the Amarna Letters from the fourteenth century B.C. The rivaling Canaanite princes accused one another of treachery in their letters to Pharaoh, and it can be seen that Egypt's domination of Acco was not very solidly founded. Acco was conquered by Thut-mose III early in the fifteenth century and by Seti I at the end of the fourteenth century. Ramses II is also reported to have "desolated Acre" in the thirteenth century. After his time new enemies came on the stage. The tribe of Asher pressed toward the coast, but as Judg. 1:31-32 notes: "Asher did not drive out the inhabitants of Acco, . . . but the Asherites dwelt among the Canaanites, the inhabitants of the land."

In 733 B.C., Acco was brought under Assyrian domination by Tiglath-pileser III. About a hundred years later Ashurbanipal deported many of the inhabitants and killed others. In Hellenistic times Acco was renamed Ptolemais, and played an important role as harbor for the Ptolemies and the Seleucids. According to the author of I Maccabees, Ptolemais was a center for the opponents of the Maccabees (I Macc. 5:15). Just after 150 B.C. the Maccabee Jonathan was ordered by Alexander Balas to meet him in Ptolemais; later Jonathan received the same order from Demetrius II (I Macc. 10:51-66; 11:21-74). A third time he was ordered to come by Trypho, and

then arrested and kept in the town as prisoner (12: 39-48).

In 65 B.C., Ptolemais came under Roman domination, and it was in the Roman town that Paul landed on his third voyage (Acts 21:7). In the Middle Ages the Crusaders held the town for nearly two hundred years. It was then called St. Jean d'Acre, which has given the town its present name, Acre.

A. S. KAPELRUD

ACCOS; KJV alternately ACCOZ. Apoc. forms of HAKKOZ.

ACCURSED. Under a curse. *See also* ANATHEMA; BLESSINGS AND CURSINGS; BLASPHEMY; DEVOTED; EXCOMMUNICATION. For its use in an oath or vow, the violation of which would bring a curse, *see also* OATH.

1. In the OT. The noun חרם, frequently translated "accursed" or "accursed thing" in the KJV (e.g., Josh. 6:17-18; 7:1, 11-13, 15; 22:20; I Chr. 2:7), is in the RSV usually rendered "devoted" or "devoted thing" (but cf. Deut. 7:26, where the RSV uses "accursed" and the KJV "a cursed thing"). Other words rendered "accursed" in the OT are forms of the roots קלל (Deut. 21:23; Isa. 65:20), ארר (Ps. 119: 21), and זעם (Mic. 6:10). M. H. POPE

2. In the NT. The words so translated in the NT are usually forms or derivatives of ἀρά, ἀράομαι, or ἀνάθεμα (originally a dialectical variation of ἀνάθημα, a "votive offering," but in late Judaism and the NT always meaning "accursed"; cf. Rom. 9:3; I Cor. 12: 3; 16:22; Gal. 1:8-9). The Greek ἀρά, ἀράομαι, originally meant "prayer" and "pray" respectively, but as early as Homer are found with a bad connotation—i.e., prayer for evil upon someone, hence an imprecation or curse. Compound forms with ἐπί and κατά particularly carry this force. The meaning "accursed" or "under a curse" is found for ἐπάρατος in John 7: 49, for κατάρατος twice in the LXX (II Macc. 12: 35; IV Macc. 4:5), for ἐπικατάρατος frequently in the LXX (e.g., in Num. 5; Deut. 27, where it usually translates a form of ארר) and twice in the NT (Gal. 3:10, 13; cf. Deut. 27:26; 21:23 respectively), and for the noun κατάρα (Hebrew usually קללה), frequently in the OT and in two of its six occurrences in the NT (Gal. 3:10: "under a curse"; II Pet. 2:14: "accursed children"). Verbal forms of καταράομαι occur in Matt. 24:31; Mark 11:21; Luke 6:28; Rom. 12:14; Jas. 3:9.

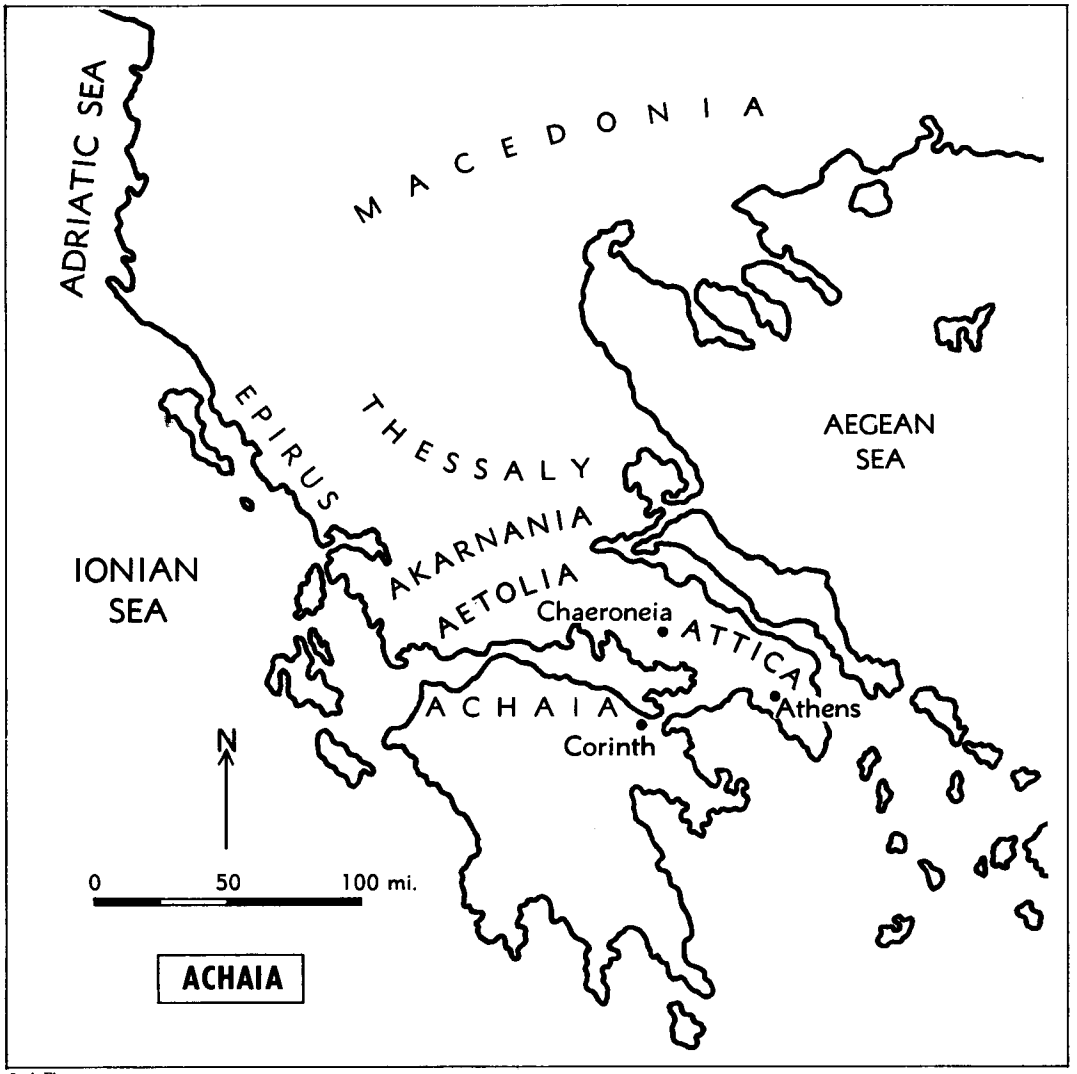
ACHAB ā'kăb. Douay Version form of AHAB.

ACHAIA ə kā'yə [ἡ Ἀχαΐα] (Acts 18:12, 27; 19:21; Rom. 15:26; I Cor. 16:15; II Cor. 1:1; 9:2; 11:10; I Thess. 1:7-8). The Roman province which comprised most of ancient Greece S of Macedonia.

See map on following page.



The Achaian land (ἡ Ἀχαΐς) appears in the Homeric poems (*Iliad* I.254; *Odyssey* XI.166; etc.) as the home of the Achaians (οἱ Ἀχαιοί). Herodotus speaks of Achaia as in the vicinity of Thessaly (VII. 173, 196-98), which may have been the oldest home of the Achaians, but he also says that "what is now called Achaia" is in the Peloponnesus (VII.94); and Strabo (VIII.383; cf. Pausanias II.5.6) likewise places the Achaians in the N coastlands of the Peloponnesus. The Achaian League was a confederation of the cities of Achaia, in which CORINTH took a leading part. In 146 B.C. the League was defeated in war by a Roman army under the consul L. Mummius. Pausanias (VII.16.9-10) speaks as if Achaia were made a Roman province at this time, and tells how Greece was assessed to pay tribute; but Plutarch (*Cimon* 2), narrating an event which took place probably in 87 B.C., states that a charge of murder against the city of Chaeronea was tried before the praetor (ὁ στρατηγός) of Macedonia, since "the Romans were not yet sending praetors to Greece." Therefore it is probable that in this period Achaia was largely under Roman control and that the supervision of its affairs was in the hands of the governor of Macedonia.

In the reorganization of the Empire by Augustus in 27 B.C., Achaia was made a senatorial province under a proconsul (ἀνθύπατος) of praetorian rank, appointed annually (Strabo XVII.840). In A.D. 15, Tiberius combined Achaia with Macedonia and Moesia in an imperial province governed by the legate of Moesia (Tac. Ann. I.76.4; 80.1; Dio LVIII. 25.5). In A.D. 44, Claudius made Achaia and Macedonia separate senatorial provinces again (Suetonius *Claudius* XXV.3; Dio LX.24.1). Upon the occasion of his visit to Achaia in A.D. 66 or 67, Nero gave freedom to the entire province (Suetonius *Nero* XXIV.2), but his successor Vespasian made Achaia once more a senatorial province (Suetonius *Vespasian* VIII.4; Pausanias VII.17.4), and it continued in this status until the time of Diocletian.

Although the text in Strabo (XVII.840) upon which our information is based is not entirely clear, the boundaries of the province of Achaia as established by Augustus seem to have extended as far as and to include (μέχρι) Thessaly, Aetolia, Akarnania, and Epirus. Within the province the land was divided into territories belonging to the various cities. The seat of administration was Corinth. At the time of Paul the proconsul of Achaia was GALLIO (Acts 18:12).

ACHAICUS ə kā'ə kəs [Ἀχαϊκός]. One of the first Christians at Corinth, mentioned in I Cor. 16:17 and, in some MSS, vs. 15, as being present with Paul in Ephesus when he wrote I Corinthians. STEPHANAS and FORTUNATUS were other Corinthians with him. It is natural to suppose that these three men brought the letter mentioned in I Cor. 7:1 to Paul, and that they were also the bearers of I Corinthians, which

Jack Finegan

answers the questions raised in it. That they did bear it is claimed for them by the subscription to I Corinthians in the Textus Receptus. It is evident that these men were on good terms with the apostle.

F. W. GINGRICH

ACHAN ā'kăn [עָכָן, *see below*]. Alternately: ACHAR ā'kär (I Chr. 2:7). A Judahite who stole forbidden spoil from Jericho and, together with his family, was stoned (Josh. 7:1, 18-20, 24; 22:20). The presence of very serious sin in the Israelite community was brought to light when Joshua inquired of God the reason for Israel's lack of military success against the men of Ai. The reason disclosed was that spoil from captured Jericho, which had been DEVOTED or reserved exclusively for God, had been stolen by an Israelite and concealed in the camp. The culpability of Achan was detected by lot. When accused, he confessed his guilt and, together with the "devoted things," his family, and his property, was stoned in the valley of Achor ("trouble").

This story stands as vivid evidence of the early Israelite conception of the solidarity of the community. The guilt of one threatened the security of all, and the requisite penalty for such guilt must be inflicted upon Achan's total sphere of family and possessions. Yet the account is concerned to allow Achan to make a quite personal confession of his guilt and of the hidden motivation behind it: "Of a truth I have sinned against Yahweh God of Israel, and this is what I did: when I saw . . . , then I coveted" (Josh. 7:20-21).

The name Achan may be a euphemistic alteration of ACHAR, "man of trouble." The LXX reading, Αχαρ (cf. I Chr. 2:7), and the name of the site of Achan's stoning, "valley of Achor," lend support to the suggestion.

ACHIACHARUS. *See* AHIKAR.

ACHIAS. KJV Apoc. form of AHIJAH.

ACHIM ā'kĭm ['Αχίμ] (Matt. 1:14). An ancestor of Jesus.

ACHIMELECH ə kĭm'ə lĕk. Douay Version form of AHIMELECH.

ACHIOR ā'kĭ ôr ['Αχιώρ=אחיאור, brother of light]. The Ammonite commander who warned Holofernes that God would defend the Israelites. When Judith showed him the head of Holofernes, Achior "believed firmly in God" (Jth. 14:10; cf. 5:5 ff; 6:1 ff; 14:6-9).

ACHISH ā'kĭsh [אָכִישׁ; Hurrian *akk sha(rur),* the king gives]. The king of Gath with whom David found refuge. Of the two accounts of David's arrival at Gath, I Sam. 21:10-15—H 21:11-16 is probably the work of a later writer who thought ch. 27 cast doubt on David's patriotism. In the earlier account David appears as the vassal of Achish. After he had proved himself loyal to the Philistines, Achish granted him the border town of Ziklag (placing I Sam. 27:5-6 after vs. 12) and appointed him chief of his bodyguard (28:2). So sure was Achish of David's loyalty that he took David and his troops with him when he marched against Saul at GILBOA (ch. 29). It was doubtless as vassal of Achish that David began his rule at Hebron.

The reference to Achish in I Kings 2:39-40 is probably a gloss (cf. I Sam. 27:2). If he were still ruler of Gath in the time of Solomon, his reign would have been abnormally long.

The title of Ps. 34 refers to the incident in I Sam. 21:10-15—H 21:11-16, though the name Abimelech appears rather than Achish.

ACHITOB. KJV Apoc. form of AHITUB.

ACHMETHA. KJV form of ECBATANA.

***ACHOR** ā'kôr [עָכוֹר, trouble]. A valley which formed a portion of the N boundary of Judah (Josh. 15:7); identified with the modern el-Buqe'ah ("the valley plain") SW of Jericho. Achor was the valley "up to" which Joshua took Achan, his family, and his goods to be judged and executed for transgressing the command to take no booty from Jericho (Josh. 7:24, 26).

"Achor" is also used figuratively in an eschatological sense in Isa. 65:10; Hos. 2:15. A dry desert valley will be fruitful and provide pasturage for flocks when Israel is restored.

ACHSAH ăk'sə [עַכְסָה, *from* עָכַס, bangle, ankle ornament]. The daughter of Caleb. Caleb awarded her to Othniel, his brother or nephew, for the feat of capturing Debir (Tell Beit Mirsim, formerly called Kiriath-sepher). A further gift of springs of water in the Negeb was later added, as her dowry (Josh. 15: 16-19=Judg. 1:12-13; I Chr. 2:49).

D. HARVEY

ACHSHAPH ăk'shăf [אַכְשָׁף]. A border town in the territory of Asher (Josh. 19:25), perhaps located at Tell Kisan, a Bronze Age site approximately six miles SE of Acco, or at et-Tell *ca.* six miles NE of Acco, though the former is more probable. Achshaph was an old town when the Israelites entered Palestine under Joshua. It is mentioned in the Egyptian Execration Texts (*ca.* nineteenth-eighteenth centuries B.C.), in the Karnak list of towns conquered by Thut-mose III (1490-1435 B.C.), in the Tell el-Amarna Letters (*ca.* fourteenth century B.C.), and in Papyrus Anastasi, an Egyptian letter of the late thirteenth century. The Canaanite town was destroyed after its king, who joined a confederacy against Joshua, suffered defeat (Josh. 11:1; 12:20).

Bibliography. J. Garstang, *The Foundations of Bible History* (1931), pp. 98-99, 354; W. F. Albright, *The Vocalization of the Egyptian Syllabic Orthography* (1934), IIIA:18; F.-M. Abel, *Géographie de la Palestine,* II (1938), 237.

G. W. VAN BEEK

***ACHZIB** ăk'zĭb [אַכְזִיב]. **1.** A town on the border of the Shephelah and central Judah, according to Josh. 15:44 near Mareshah, perhaps identical with CHEZIB (Gen. 38:5). Its name, which is formed from the root כזב, "to lie," is used as a pun in Mic. 1:14:

> The houses of Achzib ['*akhzîbh*] shall be a deceitful thing ['*akhzābh*]
> to the kings of Israel.

The place is mentioned by Eusebius (Onom. 172) as Χασβί, near Adullam, which corresponds to the now accepted identification with Tell el-Beida, three miles W of Adullam. A. Saarisalo found pottery fragments of the Israelite period on the tell (although he identifies the place with Moresheth-gath).

Bibliography. A. Saarisalo, *JPOS,* vol. XI (1931), no. 2, p. 98; K. Elliger, *ZDPV,* 57 (1934), 121-24; F.-M. Abel, *Géographie de la Palestine,* II (1938), 237.

2. A town in Galilee, on the seashore, near the border of Lebanon (ancient Phoenicia). The identification with modern ez-Zib, nine miles N of Acre, is quite certain.

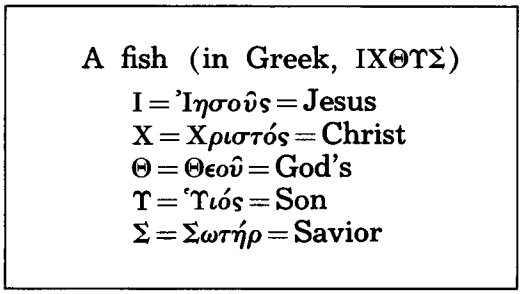
According to Josh. 19:29, the town bordered on the territory of Asher, while Judg. 1:31 implies that it was assigned to that tribe. Sennacherib of Assyria mentions the conquest of the walled city Akzibi. The name occurs both as Achzib and as Chezib in Tal-

mudic sources and as Ecdippa in Josephus and other Greek sources. In Crusader times it was known as Casal Imbert.

The ruins are at present covered by modern houses and thus cannot be excavated. Two extensive cemeteries consisting of over seventy tombs were excavated in 1941-42 by I. Ben-Dor and N. Makhouly of the Department of Antiquities of the Government of Palestine. The rock-cut tombs consist of a shaft with narrow stairs on one side and of one or more chambers. A quantity of pottery, mainly Phoenician, figurines, jewelry, and scarabs were recovered. They date mostly from the eighth-sixth centuries B.C. Also, four funerary inscriptions in Phoenicio-Hebrew characters, one reading לעבדשמש ("belonging to Ebed-shemesh") and another לעמא הנסך ("belonging to Ama, the metal founder"), were found. Some more tombs were excavated in 1958 by M. Praussnitz of the Department of Antiquities of the State of Israel.

Bibliography. D. D. Luckenbill, *Ancient Records of Assyria and Babylonia,* II (1927), 119; F.-M. Abel, *Géographie de la Palestine,* II (1938), 237. I. BEN-DOR

ACIPHA. KJV Apoc. form of HAKUPHA.



ACITHO. KJV Apoc. alternate form of AHITUB.

ACRA ăk′rə [ἄκρα, height *or* citadel]. *See* JERUSALEM.

ACRABA ăk′rə bə ['Ακραβήλ] (Jth. 7:18); KJV EKREBEL ĕk′rə bəl. A place "near CHUSI beside the brook MOCHMUR." It is probably the modern Akrabeh, some twenty-five miles N of Jerusalem in the hill country rising from the Jordan, within a few miles of Sychar's well. N. TURNER

ACRE. *See* WEIGHTS AND MEASURES § E3.

ACROSTIC ə krôs′tĭk, —krŏs—. Poetic composition in which the first letters of successive lines or strophes in the original language appear in alphabetic order. Fig. ACR 3.

3. The Greek acrostic for "fish," which means: "Jesus Christ, God's Son, Savior." The inscribed fish, with such a hidden meaning, was frequently found in the catacombs of the early Christians.

Complete or nearly complete acrostics are found in Pss. 9–10; 25; 34; 37; 111; 112; 119 (each letter appears eight times in successive lines); 145; Prov. 31:10-31; Lam. 1–4 (*see* LAMENTATIONS, BOOK OF, § 1). Nah. 1:2-8 is a mutilated acrostic. There are no NT specimens.

Possible reasons for use of the acrostic form were belief in the magical power of letters (*see* ALPHABET; MAGIC), pedagogic practice in spelling and style (*see* EDUCATION; SCRIBE), aid to memory in recitation, and completeness in the expression of an idea or emotion. The latter two theories best suit the biblical examples.

GOTTWALD

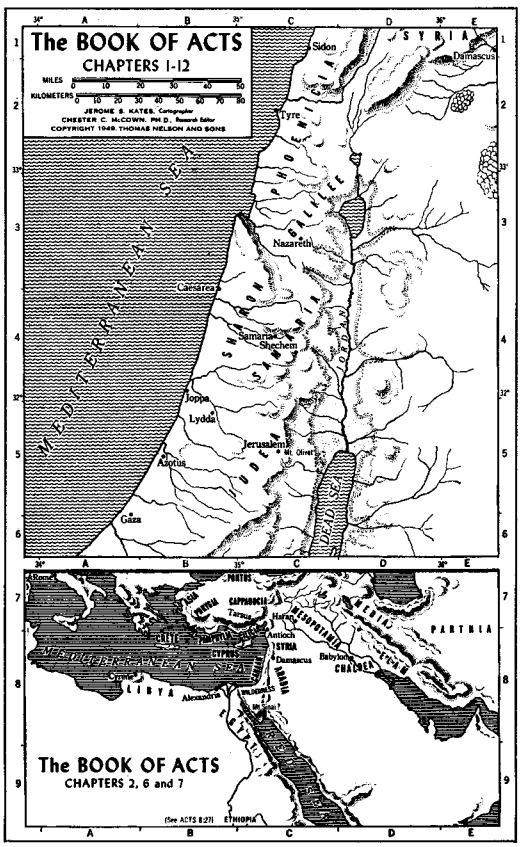
ACTS, APOCRYPHAL. A long series of romances which attempt to provide the information missing in the canonical book of Acts as to the subsequent doings of the several apostles. The emphasis upon doctrine (often regarded as heretical) in the earlier of these Acts becomes less conspicuous in the later imitations, which are frankly tales of adventure in foreign lands, wonder-working by the several heroes, and detailed records of their martyrdoms (often circulated separately). The five principal writings of this sort, in the probable order of composition, are: Acts of John, Acts of Paul, Acts of Peter, Acts of Andrew, and Acts of Thomas. For a list of these and other Acts treated in separate articles in this dictionary, *see* APOCRYPHA, NT. M. S. ENSLIN



***ACTS OF THE APOSTLES.** The fifth book in the NT. It appropriately follows the four gospels, for its narrative continues the story from where they end. Indeed, it was originally written as a sequel to one of the gospels, the Gospel "According to Luke," and refers to this "first book" in its opening words. It is a narrative, and it ends the group of five narratives —the type of literature with which the NT, like the OT, opens. Since it is unique in the period it covers —the generation following the resurrection of Jesus —it is an invaluable source for a knowledge of the apostolic age. The apocryphal Acts (*see* APOCRYPHA, NT) of individual apostles are of later date, and add little trustworthy information to the NT Acts, which, indeed, they seem to supplement rather than to parallel or to imitate.

Bibliography

1. Title. The traditional title of the book is sometimes in current English usage shortened to "Acts" or replaced by "book of Acts." The abbreviation occurs also in one of the older Greek MSS. The Greek word means "deeds," and was capable of sundry connotations, either favorable like the accomplishments of an emperor, or unfavorable like the magical tricks of charlatans. The word "apostles" is in the plural, perhaps to contrast this book with the apocryphal works about individuals—the Acts of Paul, the Acts of Peter, etc. But "the apostles" as a closed group are not all reported on, nor do they include all persons who figure in the story—e.g., Stephen and Philip (Acts 6–8), since the latter is to be distinguished from the apostle of that name (*see* PHILIP 7).

But the title of this book is no more primitive than are the titles of the other books in the NT, particularly since Acts is not an independent writing but, as already suggested, merely a second volume of a larger work. If that larger work had a name, it is now lost. The term "Luke-Acts" is a quite recent formulation. Even the traditional title of Acts, unlike the titles of other NT books, does not attempt to name an author. Both volumes mention in the text itself (Luke 1:3; Acts 1:1), in accordance with ancient practice, the person to whom they were dedicated—THEOPHILUS.

2. Scope. The narrative begins with an account of Jesus' intercourse with his disciples after his resurrection. This is partly parallel to and partly independent of the same writer's account in Luke 24. But in Acts the intercourse is definitely concluded after some forty days by the ascension of Jesus, while Pentecost almost at once fulfils the promise which Jesus had made of the endowment with the Holy Spirit (Acts 1:8; cf. Luke 24:49). These events mark the real outset of the story, and their influence continues throughout the volume.

The narratives follow in a roughly chronological sequence and close at what seems to the modern reader a somewhat strange juncture, though not accidental to the author. The last verses tell how Paul, who had passed through various vicissitudes of legal procedure as well as an eventful journey from Palestine to Rome, spent a two-year period in custody, but not incommunicado, at Rome. The interval of time covered by the whole book seems to represent about three decades.

It would be possible, and indeed it is customary, to divide this and other books of the NT into sections. Conscious organization of this sort may not have been in the ancient author's mind. He may have wished to give an impression of unity and continuity, and what natural divisions appear may be due merely to the nature of the material available to him. Paragraphing is not part of the original form of the writings; and the chapter divisions (like the verses), no matter how convenient for modern reference, are to be used only for this convenience and without implication that these or other divisions really divide. If we were to superimpose upon the book an analytical outline in the modern manner, it might run like this:

I. Early episodes in the Jerusalem church, 1:1–5:42
  A. Jesus' farewell and ascension, 1:1-11
  B. The first associates and the replacement for Judas, 1:12-26
  C. Pentecost and after, ch. 2
  D. A cure in Jesus' name and its sequel, 3:1–4:31
  E. The sharing of property, 4:32–5:11
  F. More cures and further arrest of the apostles, 5:12-42
II. An early martyr and some notable conversions, 6:1–9:31
  A. The committee of seven, 6:1-7
  B. Stephen's controversy and death, 6:8–8:1
  C. Philip with the Samaritans and with an Ethiopian, 8:1-40
  D. Saul converted, 9:1-31
III. Peter and the beginnings of Gentile conversions, 9:32–12:25
  A. Peter at Lydda and Joppa, 9:32–43
  B. Peter at Caesarea with Cornelius and reporting at Jerusalem, 10:1–11:18

C. Antioch, 11:19-30
D. Herod (Agrippa) as persecutor, 12:1-25

IV. Paul (Saul) and more Gentile conversions, 13:1–16:5
A. To Cyprus with Barnabas, 13:1-12
B. Antioch of Pisidia, 13:13-52
C. Iconium, Lystra, and Derbe, ch. 14
D. A council at Jerusalem, 15:1-29
E. Transmitting its decisions, 15:30–16:5

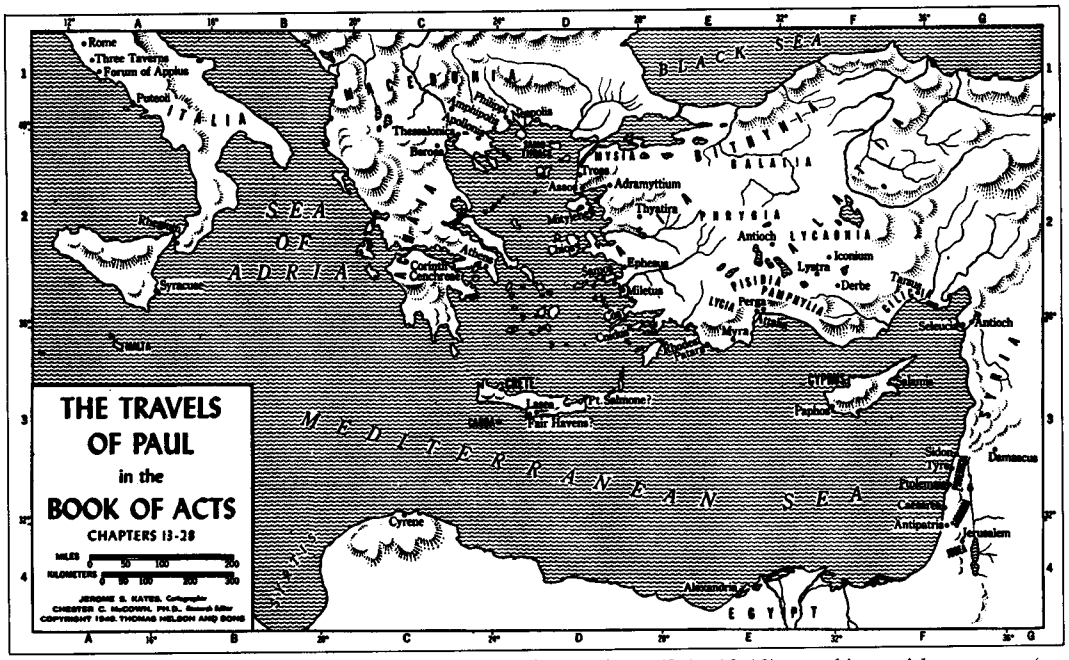
V. Paul's mission extended to Macedonia, Achaia, Asia, 16:6–19:41
A. To Philippi, 16:6-40
B. Thessalonica to Athens, ch. 17
C. Corinth, 18:1-17
D. Ephesus, 18:18–19:41

VI. Paul's return both W and E, 20:1–21:26
A. Macedonia and Achaia, 20:1-4
B. Journey to Jerusalem and welcome there, 20:5–21:26 (visit at Miletus with Ephesian elders, 20:17-38)

VII. Paul in custody of the Roman authorities, 21:27–28:31
A. Arrested in the temple, 21:27-36
B. Hearings in Jerusalem, 21:37–23:11
C. Transferred to Caesarea and hearings there, 23:12–26:32
D. Voyage and shipwreck, ch. 27
E. Malta, and on to Italy, 28:1-16
F. Rome, 28:17-31

3. The story. It may be more useful to summarize the story as it unfolds, or rather the impression it makes of the portion of history it chooses to relate.

It begins with the friends of Jesus who had come up with him from Galilee to Jerusalem. It was there (not in Galilee) that he appeared to them after he had risen from the dead, until forty days later at the Mount of Olives, one of their earlier places of rendezvous, he was lifted up to heaven out of their sight (*see* RESURRECTION; ASCENSION). Two promises were left to them: one, that he would return in like manner from heaven; the other, that he would send the Holy Spirit upon them. The latter was fulfilled within a very few days, upon the Jewish festival called PENTECOST. The group amounted to about 120 persons, including the Twelve, among whom was Matthias, a newly elected successor to Judas; the women, presumably those who had attended in his entourage before; and of his own family, his mother and brothers.



Though both the ascension of Jesus and his gift of the Spirit were thought of as preludes to his return, the latter is told with much more emphasis because the Spirit becomes at once thereafter the energizing force in the group. The Spirit attracts new accessions, enables the apostles to work miracles, and supplies wisdom, courage, and guidance to the spokesmen. The following scenes illustrate this powerful force. The expansion is not so much humanly premeditated as incidental, or thus divinely inspired. Peter did not plan to visit Cornelius, or Philip to intercept the Ethiopian. In spite of, or even because of, criticism or persecution, the leaders are given a good chance to defend or extend their propaganda. Only when we come to the missionary work of Paul have we basis for reading deliberate human planning between the lines. The spread geographically and the increase numerically are not so to be accounted for. Communities of Christians at Damascus and at Rome and at places in between are mentioned without the author's giving us any indication of how they came into existence. Casual and anonymous must have been many of the processes that fostered the movement. It was not that the leading Christians sought fields to conquer, but that the obscure membership were prepared to drop seed. So at least one must supplement the story actually given us.

The conversion of PAUL is one of the most dramatic events because he had been a vigorous persecutor, and one of the most important because he became such an effective and systematic promoter of the movement. The author is concerned to show thereafter both his vigorous advance and the persistence of his legal battle, once it was quite accidentally precipitated. It finally brought him to Rome, though not in the way that evangelistic campaigns usually achieve their climax.

Quite different is the story of his pioneer missionary work in Cyprus and Galatia (chs. 13–14), in Macedonia and Greece (chs. 16–18), and in the province of Asia (ch. 19). It was centered in major cities of these Roman provinces. He was accompanied by associates and/or assistants, like Barnabas and John Mark or Silas and Timothy, and he engaged in a handicraft for the support of himself and his companions (18:3; 20:34-35). He often made his first appeal at the local Jewish synagogue or place of prayer. Almost always the Jews rebuffed him, or incited hostile action against him. So he used other opportunities for public or private instruction by day or night (20:20, 31). His stay in a single city varied in length from a few weeks to years, according to circumstances. Nothing is said of touring the country around the cities. He planned to revisit old centers, including Jerusalem, and to reach new ones, including Rome itself (19:21-22).

These narratives disclose certain features of the movement. It does not acquire readily fixed names for itself, its teaching, and its members, like our modern terms "Christianity" and "Christian," though the latter is twice introduced in contexts that suggest that it was a nickname applied by others (11:26; 26:28; *see* CHRISTIAN, NAME OF). The message is "the word" of the Lord, only twice "the gospel" (15:7; 20:24), though the corresponding verb "evangelize" occurs more often, and once even the noun of agent, "evangelist" (21:8). For the rank and file are used "disciples" and "saints"—in the Pauline, not the modern, sense—or such phrases as "those who believed." Another noteworthy expression is found in "the way of the Lord [or of God]" (18:25, 26) or simply "the Way" (9:2; 19:9, 23; 24:22). "The church" is used in the wider collective sense, as well as of local groups of Christians.

Only in the most incipient and unsystematic manner does Acts disclose to us any organization and rules of the church. After all, it was a party (not a sect) in Judaism and need not have widely distinguished itself from the parent body. The author regarded it as the natural development out of Judaism in accordance with the distinctly Christian events which God had foretold and hence had made inevitable. It was not only a legitimate development but the fruition of

God's plan. Its leaders were the apostles and/or elders. Its spokesmen were prophets and teachers (13:1). But there was also the group of the rank and file whose voice was effective when choices or decisions had to be made (1:23-26; 6:5; 15:22—"the whole church"). There was a group of elders at Jerusalem, as well as (even after others were scattered —8:1) a group of apostles. To this center innovations elsewhere were referred (8:14; 9:26-27; 11:1; 15:2). Ultimately there emerged as a leader of that church James, presumably the brother of Jesus (12:17; 15:13; 21:18), though he in no instance exercised sole authority, any more than Paul did in his churches. His introduction is as abrupt as is the exit of Peter from the narrative. In some of the other churches elders are actually mentioned (14:23 in the cities of Galatia; 20:17 at Ephesus). Of the more spontaneous leadership, we have prophets and teachers, as well as apostles. Prophets at Antioch or Caesarea are mentioned several times (11:27 ff; 13:1; 15:32). They originate from Jerusalem, as did Philip, who had four unmarried daughters who prophesied (21:9).

Just as these references do not presuppose a rigid and uniform church organization, so the book gives us no impression of uniform standards or procedures about membership or worship. The adherents in Jerusalem assembled at the temple, or in their homes, while they attended the synagogues as well. Their meetings were evidently frequent, not merely weekly. Like the rest of the NT, Acts fails to supply early evidence that meetings were held especially on Sundays. Bread is broken, but not necessarily as anything other than the usual meal. There is prayer at the gatherings and presumably extempore speaking—i.e., "preaching or prophesying." Converts are expected to repent of their past offenses and to receive the Holy Spirit. Accompanying the latter is sometimes baptism with water and/or sometimes the laying on of hands, and on at least two epoch-making occasions (2:4; 10:46) speaking with tongues (*see* TONGUES, GIFT OF). There are puzzling references to the gospel contrast between baptism with water, like John's, and baptism with the Spirit (1:5; 11:16), and also evidence of the latter's accompanying as well as succeeding the former (18:25; 19:16), in the second case, associated with laying on of hands, speaking with tongues, and prophesying. Nothing is said of prior systematic instruction of converts nor of subsequent discipline, nor indeed of the private life of the convert, or of his ethical standards.

The chief exception is the group of passages suggesting mutual care and sharing, at least for those in need at Jerusalem. This took the form of the selling of pieces of real estate by those who had it to spare and of their entrusting the proceeds to the apostles to distribute to the needy (4:34–5:11; cf. 2:44-45; Luke 8:3). Evidently many of these were widows, to whom distribution was made daily (6:1), though whether in cash or in kind is not clear. Their care was transferred to a committee of seven (6:1-6). From farther afield, financial relief for the poor among the Judean believers was brought to their elders at the time of the famine under Claudius by Barnabas and Saul (Paul) from Antioch of Syria (11:27-30). But the still more elaborate and widespread collection for a like purpose, planned by Paul from Galatia, Macedonia, and Achaia, and perhaps Asia, according to accounts in his letters (Rom. 15:25-31; I Cor. 16:1-4; II Cor. 8–9; *see* OFFERING FOR THE SAINTS), is not separately reported in Acts (unless obscurely in 20:4; 24:17). We need scarcely doubt that Acts expects us to infer that reciprocal care and prayerful concern was felt generally by the believers for one another and especially for their leaders (4:23-31; 8:2; 9:25; 12:12-17; etc.).

From early in the book a wide geographical outlook is hinted (1:8: "end of the earth"; 2:5: "every nation under heaven"; 2:9-11), though the beginning is definitely at Jerusalem. Even Galilee is not the

scene of Christ's appearances, either in Luke or in Acts (contrast Mark, Matthew, John 21, and especially Luke 24:6 with Mark 16:7). It is scarcely mentioned in the story of the church (9:31). The nucleus at the beginning is not only at Jerusalem but is also, naturally enough, exclusively Jewish. Perhaps the book is more concerned to show how the latter limitation is overcome. This is particularly true in the case of the Samaritan converts, and of Cornelius the Roman centurion at Caesarea, of the Gentile converts at Antioch (11:20), and of the converts of Paul and Barnabas in Cyprus and Asia Minor. In each case the development is consciously reviewed and approved (8:14; 11:1-18, 22; 15:1-29). Whether sheer Gentiles, apart from Jews and proselytes, are included among the foreigners living in Jerusalem and present at Pentecost, or in the Ethiopian royal minister, a visitor to Jerusalem (8:27), or among the HELLENISTS (6:1), is not clear; at least the fact is not similarly underscored. Certainly outside Jerusalem there are frequent references in the book of Acts to "God fearers" or "God worshipers," who must be understood to be Gentiles already loosely attached to Judaism though not full proselytes. They were therefore more ripe for receiving the Christian message than either the strict Jews or the completely uninitiated Gentiles. They had existed in every city for some time (15:21). They attended the synagogue services, and had presumably been attracted by the monotheism, or the ethical idealism, of Judaism. The book of Acts is, compared with much ancient writing of history, quite modern in the author's awareness of transition or development, geographical, numerical, and perhaps linguistic; but at no point is he more self-conscious than in emphasizing the transition from Jewish to Gentile Christianity. The latter was an innovation, but it occurred according to scripture (15:16-17; 22:21; 26:16-18), under the guidance of God, and with the approval of the leadership of the church. Peter had anticipated in principle this characteristic of Paul's mission (chs. 10–11; 15:7, 14). It was further justified by the general rejection of the gospel by the Jews (28:25-28).

4. Chronology and arrangement. The author was little concerned with chronology. References to events that would be datable to his first readers or to us are not included usually for the purpose of recording chronology (contrast Luke 3:1-2 and the discussion of it in § 10*b below*)—e.g., to Jewish feasts and fasts, or to public or political events. He is aware of the political characters, Jewish or Roman, and of the imperial, regional, and municipal governments, but they are part of his background and local color. Some scattered events that he mentions we may attempt to date from secular history, though not always with assurance (*see* CHRONOLOGY OF THE NT). The difficulty and frequent uncertainty of dates in ancient history are scarcely appreciated by the layman in this field.

Here are some events mentioned in Acts: the famine in Palestine (11:28); the death of Herod—i.e., Herod Agrippa I (12:23); the proconsulship in Cyprus of Sergius Paulus (13:7); the expulsion of Jews from Rome under the Emperor Claudius (18:2); the proconsulship in Achaia of (L. Junius) Gallio (18:12); the end of the procuratorship of (Antonius) Felix and the beginning of that of Porcius Festus (24:27).

Another class of references in Acts is to the duration of certain situations. These are often brief and vague. Among the more definite are: "forty days" (1:3; but "many days" in 13:31); "a year and six months" (Corinth; 18:11); "three months" and "two years" (Ephesus; 19:8, 10; cf. "three years" in 20:31); "two years" (Caesarea; 24:27); "two whole years" (Rome; 28:30).

The author evidently was fully aware of sequence in the latter part of Acts, since he is pursuing the career of Paul, but in the earlier part he returns to events already mentioned—e.g., 8:1-2=11:19-20; 11:30=12:25. There is therefore less certainty of time sequence here.

In fact, the arrangement of Acts, like that of the gospels, suggests that other considerations than mere chronology have affected the grouping. Some of the grouping is about persons—e.g., the committee of seven and particularly Stephen and Philip (chs. 6–8), a later collection of episodes about Peter (9:32–11:18; 12:1-17), and finally, after earlier notices (at 7:58; 8:1, 3; 9:4-30), about Saul (Paul) in chs. 13–28. Peter assumes a leading place in much of the earlier part of the book, and it has been suggested that in several details the author is conscious of parallelism between Peter and Paul. Brief examples of topical arrangement also seem to occur.

There is a possibility, too, that the author is definitely proceeding along geographical lines. Acts 1:8 seems to propose an expanding program, which the sequel fully justifies. Paul's travels, providing as they do both time sequence and geographical sequence, are reported in such a way often as to pass lightly over his return to old scenes of his labors, or the problems arising in them (contrast the contents of many of his letters), and to move forward to new areas of conquest (an attitude also found occasionally in his own letters). The same writer's gospel also emphasizes the life of Jesus in a kind of progression (especially between chs. 9 and 18) and (to revert to the earlier point) indicates a parallelism of a kind between the birth of Jesus and that of John the Baptist and between events in the life of Jesus and some features in the lives of the characters in Acts.

5. Omissions. Quite as striking as what the author includes in the book is what he omits. He must have known that he was leaving much out, though not always what the events were. His omissions, like his inclusions, may be deliberate choices due to his interests, but they may also be due to the limited extent of his knowledge from the sources available to him when he wrote. The modern reader has few additional sources, and he may not share exactly the author's tastes. Hence he is unjustly critical of the author's omissions. They sometimes seem surprising. Why do we hear nothing individual about any of the TWELVE except Peter and to a slight extent John, James, and Judas? Or of any of the SEVEN except Philip and Stephen? Or of any of the five leaders at Antioch (13:1) except Barnabas and Saul? And why for the two principal characters in the book is the final reference so tantalizingly inconclusive (Peter, 12:17; 15:7 ff; Paul, 28:30-31)? Many minor persons and situations are left hanging, it seems.

In both contents and arrangement our main extant parallels are the biographical data found here and there in the letters of Paul. In spite of the relatively full outline of Paul's life given in Acts, the major part of the many vicissitudes listed in II Cor. 11:23-33 are unmentioned and unhinted in Acts up to the point when Paul was writing—the exceptions being his escape from Damascus and a stoning and one beating with rods. Many of the references to Paul's pre-Christian life in Acts are reminiscences in his speeches, just as in his letters.

The chronology of Paul's life parallel to that in Acts is deduced with difficulty from his letters. Such reminiscences as II Cor. 12:1-4; Gal. 1–2 (each of which has a reference to fourteen years), raise difficult problems of harmonizing with Acts (*see* CHRONOLOGY OF THE NT). If harmonizing is at any point impossible, Acts, in the nature of the case, will have to yield the preference to the firsthand words of Paul himself. Particularly in the matter of the four visits of Paul to Jerusalem after his conversion, in Acts 9:26-30; 11:30 (12:25); 15:1-29; 21:15 ff, some duplication or confusion may be suspected.

See map "The Letter to the Galatians and the Book of Acts" under GALATIANS, LETTER TO THE.

6. The materials. ***a. Episodes.*** The information offered in the early part of Acts consists of detached episodes. In this it resembles the episodes in the life of Jesus, such as healings, discussions with the authorities, parables and other teachings, interviews with individuals. The story of the Ascension and that of Pentecost are unique, though the former has some points of likeness to the gospel story of the Transfiguration. In general the narrative units are complete in themselves, and each has its own meaning. Running through them is the belief that God has revealed his power and guidance to the ongoing spread of Christianity. This he shows by the frustration of opposition and the punishment of opposers (even to death: 12:23), quite as much as by endowing adherents of the movement with the Holy Spirit, leading to miraculous power and courage (again even to death: 7:54-60). Thus the few estimates of numbers of Jewish believers in Palestine—120 (1:15); 3,000 (2:41); and 5,000 ("men"; 4:4); and more generally later, many thousands (21:20; lit. "many tens of thousands"), indicate numerical success quite as much as the geographical extension. Many of the separate stories were preserved for precisely this demonstration of the Spirit and of power.

This kind of material has had its history, much like some of the material in the gospels (*see* FORM CRITICISM), a history which has reduced the information to what was needed to make the episode clear. Dating is not attempted, but more than in the gospels the personal names of participants are at times retained. Thus the narrative passes on from item to item and gives a feeling of the march of events.

b. Summaries. The interstices between the episodes are sometimes filled with brief statements of a summary character. They indicate that single events of the type described were multiplied at other times and places—e.g., gifts of money from real estate sold (4:34-35; cf. 4:36–5:11); signs and wonders (5:12-16); preaching (5:42; 8:25); sufferings. Most frequently they indicate that the word of God increased and the converts were multiplied (e.g., 6:7; 9:31; 12:24), or something to that effect. They betray almost as consciously as the colophons in John 20:30; 21:25 the editor's awareness of omissions mentioned above, and they turn into a more flowing narrative what would otherwise be mere unconnected fragments. They are less necessary and, indeed, less frequent in the later part of the book, which derives its character from a continuous following of Paul on his travels, though even here a single episode is sometimes extended to a longer summary in similar fashion. But they acquire a more local or personal character—e.g., 19:8-10, 20; 28:30-31.

c. Speeches. Another feature of the contents of Acts, a more extensive and more important one, is the speeches addressed by the actors to a company of persons on a formal or impromptu occasion. These are to be distinguished from the dialogues incident to a narrative situation. They differ also from the longer collections of the sayings of Jesus, which in Matthew, and to a lesser extent in the other gospels, give an impression of continuous address. The discourses in John, though enlivened by interruption, offer perhaps the nearest parallel in composition.

These speeches occupy a substantial proportion of the book of Acts, between one third and one quarter. Among the most extended are those of Peter at Pentecost (2:14 ff); to the people in Solomon's Portico (3:12 ff); before the Sanhedrin (4:8 ff); at the house of Cornelius (10:34 ff); to the Jewish Christians at Jerusalem (11:5 ff). The speech of Stephen to his accusers (7:2 ff) is the longest of all. At a council in Jerusalem speeches are reported from both Peter (15:7-11) and James (15:13-21). The speeches of Paul are the most numerous and the most varied. At the end they are all defenses at various hearings; two of these are based on a rehearsal of his experience of conversion (22:3 ff; 26:2 ff), but there is also 24:10 ff. Earlier they include somewhat extended addresses to Jews at Antioch of Pisidia (13:16 ff); to Gentiles at Athens (17:22 ff); and to the Christian elders from Ephesus at Miletus (20:18 ff).

The above is not a complete list. Nor are we to suppose that the text as given is intended to represent more than part of what would be said on such an occasion. There is an effective injection of the speech into the narrative and often an equally effective suggestion of interruption just before the end of the speech. Sometimes we are surprised that the speech repeats what has already been said in narrative form, and sometimes we are equally surprised at items not already mentioned in the narrative but first disclosed in the course of the speech.

In any case, the speeches serve a useful purpose. They indicate the content of the movement—i.e., its ideas and claims. Without them the reader would have to depend on other writings; and except for his own first volume, there is no evidence that either the author or his readers relied on knowledge of other books, not even of the letters of Paul. The gospel that the apostles preached is different from what Jesus had emphasized. Hence the author of Luke-Acts needed to indicate the former here, as he had indi-

cated the latter in the preceding volume. The speeches interpret the narrative much as the chorus does in a Greek tragedy. They explain to the reader, quite as much as to any more immediate audience, what issues are involved, what ideas are challenged, what data need the emphasis of repetition. That they do repeat is quite evident to any careful reader. They repeat what the narratives have told, and they repeat what the Christian missionaries used as their message (*see* PREACHING). From the speeches alone in Acts the theologian finds matter for his interest. Otherwise the book belongs chiefly to the historian. Since in Christian history the theologian has tended to take precedence over the historian, the speeches in Acts have assumed a special familiarity and importance. Neither the personalities of the speakers nor the variation in their messages is the concern of the writer who reports them or, indeed, of the proper reader of them, but their total impact has been influential out of proportion to their actual scope in the book. This interest in them is shown by the fact that even the first Christians who quote much from Acts, quote most often and most extensively the speeches.

d. The message of the speeches. In view of the importance of the speeches the apostolic message as deduced from them may well be briefly summarized:

The preaching of repentance by Jesus following John's ministry, though interrupted by the Crucifixion, was vindicated by God's raising him from the dead. This RESURRECTION points as a divinely wrought miracle also to the future judgment for which Jesus is to return. Therefore, bearing witness to the Resurrection involves warning and a continued call to repentance. What has happened has been predicted in scripture, and also what will happen is predicted there. God has overruled the stubbornness of men, but will not sanction further disobedience.

The Jesus whom the disciples preach was designated by God as Lord and Christ (Messiah), or the prophet whose coming Moses and the prophets predicted. The Holy Spirit, who marks the experience of his messengers, also was anticipated. The God who thus vindicates himself for those who may by the Scriptures compare promise with fulfilment has "not left himself without witness" among others than Jews, but the witness is of a different kind—the inward witness of man's search for him and the outward evidence of God's provisions for mankind's welfare. But the evidence of the past and of the present throughout all the speaking in Acts is overshadowed by its futuristic appeal and warning. What their hearers may think about the past is of less importance than what it leads them to do now.

There are emphases and omissions in the context of the apostolic message in Acts which, by contrast with the gospels, with Paul, and with modern theological assumptions, deserve special attention. That Jesus was the Christ is the assertion to those who begin with a known Jesus and try to make out what to do with him. In Acts the role of a Messiah is the point of departure, at least in dealing with Jewish audiences, and the argument undertakes to prove that the expected Messiah was Jesus, rather than the reverse. In the gospels the teaching of Jesus makes explicit what acceptance of the message "Repent, for the kingdom of heaven is at hand" means in terms of ethical conduct; in Acts the ethical implications are not spelled out in the speeches at all, and are not more than occasionally implied in the behavior of the Christians (*see* § 3 *above*). Paul's letters are in places more like the gospels in this regard, but in their emphasis on the Holy Spirit, Paul's letters and both narrative and speeches in Acts are totally different from the gospels. This could be accounted for by the fact that during Jesus' lifetime the gift of the Spirit was not yet a datum of experience, any more than was the resurrection of Jesus. On the latter also both Paul and the speeches in Acts had reason to dwell as the teaching of Jesus himself had not. Paul's interest in the death of Jesus is well known, though more by the variety than by the uniformity of his interpretation. In Acts it has little significance. It is mentioned, not as a way of God's grace, but as evidence of human sin. With slight exception Acts does not share Paul's emphasis on faith in Christ's death and its benefits in contrast with reliance upon the Law. The OT is treated in Acts for its predictive, not its prescriptive, value. While the author is clear that obedience to its laws is not properly expected of Gentile Christians, he represents the Jewish Christians, including Paul himself, as loyal to its requirements. The author of Acts, both here and in the Third Gospel, is no antilegalist. His Gentile sympathies are not associated with any inherent objection to the Jewish law, or with the discovery, as in Paul, of a substitute for it.

7. Sources. ***a. Written or oral.*** In writing the Preface to Luke-Acts the author indicates that, like writers before him, he has used what could be learned from those who were "eyewitnesses and ministers of the word" (Luke 1:1-4). This probably applies to some or all of Acts, but what he does not tell us is whether his sources were oral or written. This is a question to be answered, if at all, from the character and contents of the final volumes. He mentions earlier writers, and he also mentions what is presumably the oral tradition handed down to him and them.

Now in his gospel large parts almost certainly depend on early writings in Greek (*see* LUKE, GOSPEL OF; SYNOPTIC PROBLEM). This is evidenced by the verbal parallelism in Greek with sections in the Gospel of Mark, and with other sections common not to Mark but to the Gospel of Matthew. It has been natural to conjecture that even where no parallel narrative is extant in other parts of the Gospel of Luke and in parts of Acts, the author followed the same procedure. Whether or not this is so depends on whether prior Greek narratives were available to him here too.

Scholars have naturally given attention to this question. Some have attempted, especially in the first half of Acts, to conjecture, chiefly from slight differences of viewpoint, not one but two or more written sources. Even if no agreement is reached, the probability of some such origin is great.

Two alternatives, or rather prior stages, may also be conjectured. One of these presupposes that, even when collected and written down, the stories in Acts had circulated orally. This is almost certainly true of the Gospel of Luke or of its written sources. Before any of these sections was written down for

the first time, it was part of an unwritten tradition. The sections show the marks of such currency, whether included in later collections or in earlier ones. Somewhere behind Luke or Acts the separate episodes existed in men's minds or memories, and when repeated had the earmarks of selection, of reduction, and of emphasis for some purpose. They were individually separate and self-contained. But we simply do not know which ones, as they come to us in Acts, were first arranged by its author and which ones had been gathered in writing by persons before him. In the latter case he may have simply edited, rearranged, and added to these written collections.

b. Greek or Aramaic. As with the gospels, so with certain parts of Acts, another question into the underlying wording of the present texts has to do with Aramaic, the language used along with Greek in Palestine at the period, and by some Jews or Christians used probably more than Greek. Paul himself wrote his letters in Greek, but he probably could write as well as speak in Aramaic (Acts 22:2: "Hebrew"). In the case of Peter and of Jesus the proportionate use of Aramaic over Greek may have been greater, and so perhaps in the case of the anonymous first reporters of their words and deeds. How about the first writings based on these reports? On the face of it, nothing prevents our supposing the written stage in the history, and certainly the oral stage, to have begun in Aramaic.

Opinions on this subject vary extensively. On the one side it has been argued that the whole first part of Acts is based upon a lost but coextensive Aramaic composition, which shows through the present Greek text by both overliteral translation and mistranslation. On the other hand, it is supposed that both the book of Acts and any written sources which it used were composed exclusively in Greek. If Semitisms appear, they then are to be attributed to the oral stage of transmission, and are echoes of the original speakers and narrators in Palestine. The last half of the book has fewer such evidences than the first part, and even in the first part some sections have more than others, perhaps owing to their different ancestry. It is, however, not to be forgotten that the final author of both volumes could vary his style and was not incapable of importing, under the influence of the Greek OT which he knew, "Septuagintisms" while composing himself in Greek.

Inconclusive as have been the scholarly debates on the lost sources of the book of Acts, they remind us that no uniform channel of information precedes the book as a whole. Its units have been somehow collected, edited, and combined to provide the present extensive writing. But this writing gives us no certain clues and few uncertain ones about the intervening process. As the author says in his Preface, it has been handed down, or, we should say, passed on. We can only conjecture what selection or alteration occurred in the process, since we have only the end product.

c. The itinerary and "we" passages. A degree of continuity, greater than elsewhere, appears in the part of Acts devoted to Paul. Here is detailed in sequence his travel as a missionary in Asia Minor and Europe, and then the course of his experience as a prisoner, beginning with his visit at Jerusalem leading to his arrest and continuing with his several hearings and with his transfer to Caesarea and thence to Rome. The conspicuousness of the geographical details in the former of these two sections has led to the rather inaccurate description of this material as "missionary journeys," though the original author is more aware of prolonged residence in some centers and less conscious of a home base (Antioch of Syria, or Jerusalem) than the term "missionary journeys" implies. In any case, the special nature of this section has suggested that the writer has had access to a continuous written source, which we may call the itinerary source. Though here, as in other parts of the book, there is much in the nature of separate episodes and the inclusion of speeches, one notes as well a great wealth of local detail, and an impression of eyewitness participation conveyed by the intermittent use of the first person plural.

These so-called "we" passages (16:10-17; 20:5-16; 21:1-18; 27:1–28:16) have become a famous crux of NT study. Their style and character do not differ from those of the adjacent sections, where "he" or "they" is employed. It is unlikely that they represent the exact limits of a separate, autobiographical writing; they are too closely associated with the verses that precede and follow them. They may represent the occasional lapses of the author of Acts himself into autobiographical style, in which case they would have precisely the effect of showing that here, and probably in the whole itinerary section, he was not embodying an alien written source. It is possible that in his Preface he had claimed that "for some time past" (RSV)—i.e., in the closing section of his two volumes—he had had firsthand contact (παρηκολουθηκότι) with the events, while elsewhere he had written from report. If, on the other hand, these passages and the whole surrounding material come from a written source, we shall have to assume that this source was autobiographical, written by a companion of Paul; though then too the exchange of pronouns is difficult to account for. The only distinctive trait of the passages is that they are in each case accounts of sea voyages and that the "we" disappears soon after the party has reached the land. They begin without explanation at the point of setting sail; they end in two or three instances with the separate mention of Paul and "us" (16:17; 21:18; 28:16). The peculiar and still-unexplained character of this phenomenon seems to warrant no inference as to either the presence or the absence of a written source.

8. The author's contribution. Whatever the form, the language, or the extent of the information that came to the author of Acts, its present form, language, and extent must have been in part his own personal contribution. To distinguish what was traditional and what is editorial is in some ways as difficult as to divide between lost sources.

a. Language. Most clearly attributable to the author or editor is the language in which he wrote. We fortunately have available, in the case of Mark and the substantial parts of Luke derived from Mark, evidence of how this same author revised a written source. Here the changes of factual detail are slight, but in wording the later writer has in part paraphrased his source into a less vernacular Greek

and with phrasing that we may identify as his own characteristic style. A whole series of terms or turns of phrase found in these parts of his gospel recur in other parts of the work and indicate that if there were sources oral or written, Aramaic or Greek, behind any parts of the book of Acts, they would have been overlaid by the editor's style. It is safe to say that if Luke alone of our gospels had survived, the extent and editorial process in its use of sources, as actually revealed by the parallels in Mark and Matthew, could never have been guessed by us. So in Acts, for which no similar parallels survive, one can be much surer of the editor's influence than of the nature, extent, or wording of the sources.

Alongside the features of the author's style which are widely characteristic and which constantly permeate both volumes must be mentioned what seems almost contradictory—his capacity to vary style. This variety might be attributed to the influence of the sources themselves, but quite possibly it is not due to them. In this case it too must be attributed to the final author and to a sensitiveness which he had for the appropriateness of different expressions for different occasions or different settings. The early chapters of Acts, with their Palestinian setting, differ to this slight degree from the later chapters in the Gentile world. The spelling, even of some proper names of persons and places, varies in accordance perhaps with an unconscious feeling; and the same kind of variation may be suspected in less conspicuous alterations of phrase or idiom. In contrast with the biblical style of the first two chapters of Luke stands the more secular and classical Greek of the scenes in Athens (Acts 17) or elsewhere; and in more general terms a similar contrast occurs, as already noted, between the earlier and the later half of Acts.

b. Summaries. Besides the style or wording of the book of Acts some of its substance also may with great probability be assigned to the editor. Here first may be mentioned again the summaries. Assuming that the oral or written tradition was made up most explicitly of individual facts and of separate episodes, these summaries have every appearance of editorial composition, though not necessarily at the last stage of editing. In Luke's Gospel somewhat similar summaries occur. Those in Luke 1:80; 2:40, 52, seem to echo the LXX birth stories of Samson and Samuel; those in Luke 4:14, 37; 7:17, to be due to Mark 1:28. The creation, and especially the repetition, of summaries is thus characteristic of the last stages of editing. Those in Acts have been already listed and their serviceableness noted (§ 6*b above*).

c. Speeches. The speeches reported from sundry individuals on certain occasions also have been noted (§ 6*c above*) as a significant component in Acts. These may possibly have come to the author through the same channels of information as the accompanying narrative. There is, however, an alternative view of them—namely, that they are the composition of the author himself. In either case the author is responsible for much of their style and wording, but the more extreme alternatives between imaginative composition by the author and mere revising of speeches made available to him are matters of considerable debate. If we look again for illustration at Luke's Gospel, we shall find evidence that the sayings attributed to Jesus have in many cases been taken over from the same sources as the narrative, and, indeed, with even less freedom of rewording. If, however, we look at the contemporary practice of Greek and Roman historians, we are met with the general agreement of scholars that the speeches are the dramatic elaborations of the writers and have little, if any, contact with words actually spoken on the occasion. Which analogue is applicable to the speeches in Acts?

There are aspects of the speeches which suit either alternative. Insofar as they seem to us, with our limited sources of independent judgment, to be suitable for the occasion, they can be equally well attributed to the author or to the original speakers. Insofar as they present a uniform point of view, and insofar as they show variety in expression, both the consistency and the variation can be in accord with historical facts but can also be due to the common authorship by the editor, whose ability to vary has been already noted. The concordance sometimes claimed between the speeches attributed to Peter, James, and Paul in Acts with the letters in our NT attributed to the same persons respectively is no greater than the concordance between the speech of one of the apostles and the letter of another.

The question cannot be answered by any such objective comparison. The improbability of faithful memory of what was actually said, along with the then recognized and accepted practice for historians to supply words for such occasions, has inclined many scholars to regard the speeches as a major contribution of the author himself. The traditional preservation of the sayings of Jesus may well have been due to unusual circumstances. The actual sayings of Peter or Paul may never have enjoyed like preservation. There is no unusual literary or moral irregularity if we think of the author of Acts as fashioning these speeches. Indeed, there is much about them which coincides with his practice of dramatic variation, of emphasis through repetition, and of indirect information to the reader. For it is the readers rather than the imagined audience to which the speeches seem often primarily addressed, introducing both what the reader has been told before and what he has not. It is quite as possible for such an author as for Paul himself to quote the words of scripture to Jewish audiences, the words of Greek poets to a Greek audience (17:28), and words of Jesus to a Christian audience (20:35). Like other historians, he made some effort to think through what would have been appropriate for the speakers to say.

Like other ancient writers, this author may have expended on his speeches more effort than elsewhere in his work. They were less ready-made for him than was the narrative, and sometimes he used the narrative over again in a speech. They required perhaps conscientious reconstruction of a viewpoint not necessarily quite his own, of a more primitive theology than that of his own time. They deserve our admiration, even though they are to be credited not to Peter or Paul but to their biographer.

d. Editing of narratives. The part played by the writer of Acts in other aspects of the book is difficult to determine, or even extensively to surmise. Certain recurrent features may be due to him, though they

may instead be due to his sources, or even to the objective, original reporting of the events themselves. It is safest merely to mention some of these features here, as we have done elsewhere, and leave open the possibility that some of them, rather than all of them, represent the personal viewpoint of the author. There is the book's emphasis upon the Holy Spirit, upon the joy and triumph of the ongoing Christian movement, the inveterate opposition of Jews, the repeated vindication of the movement by supernatural protection and even by tolerance or noninterference by Roman officials. The author is certainly conscious of such features as these.

Part of the author's role may have been in the mere selection of his materials. Unfortunately we do not know whether a much larger body of information was available to him. It is quite possible that it was not, but if it was, it would be interesting to know what that was known was omitted in compiling the book and to conjecture why. This would give us some clue as to what there was in the episodes which he retained that attracted him to do so. Undoubtedly there was much in them that inherently fitted his own interests.

Substantial editorial interpretation and quite extensive adjustment in the narratives are not incompatible with the retention of much trustworthy factual detail. Because so often the historical and local color, so far as we can test it, appears to be accurate, we are tempted to regard the whole content of a passage as fully objective. Such an assumption may be quite mistaken, and the author may have bent accurate traditions in special directions of his own. The unsolved problem of the book of Acts is the difficult discrimination, section by section, between tradition and composition. Only by such analysis can we recover the underlying historical facts or give full credit to the creative effort of the author. Single narratives may have been quite differently interpreted by this author from the form in which they came to him, or by the tradition which likewise had had opportunity to revise or heighten in the retelling the congenial features in the episodes. The stories would not have been recalled at all unless they had some elements fitting the motives of the author or of his predecessors.

9. Motive and purpose. In this element of motive, whether originating with the author or retained in his retelling from his predecessors, we should expect some variety. Only with this proviso should one refer to the purpose of the book as a single purpose, or should one assign it to the author. Perhaps more than one audience was in prospect as readers of the book. Certainly different readers have had different impressions from it. We should like, if we could, to identify the original audience intended and the purpose with respect to this audience.

Like the gospel, this book is addressed to THEOPHILUS (1:1), called in the gospel "most excellent Theophilus" (1:3). The name was a common one in the ancient world, and was borne by Jews or Gentiles, Romans or Christians. "Most excellent" is a formal designation and doubtless fits a person of some prestige. Just who this Theophilus was is completely unknown. It would suit the book itself if one thought of him as an influential person, partially informed or misinformed (Luke 1:4) about the early Christian movement, whom the author would like not so much to convert to Christianity as to influence to feel tolerant toward it. We must remember, however, that the addressee of an ancient book was not thought of as its sole or principal reader. The habit of writing as to an individual was really a mark of publication for a wider public of whom the addressee was not necessarily representative.

The book of Acts unmistakably is something of an apologia for the Christian movement, though if we include with it the gospel, as we should, its apologetic procedure follows rather indirect and generous lines. The gospel portrays convincingly the excellent character of the founder, as the book of Acts pursues the later movement step by step. In both volumes and perhaps particularly in the second it was possible to show that God's favor had blessed and sanctioned Christianity, whether under suspicion from Gentile authorities, or under attack from the Jews. It was a legitimate form of development in Judaism, attested by ancient Jewish prediction. For the author and his readers equally divine attestation would be found in the supernatural occurrences like the cures of the sick, the escapes of the apostles from imminent danger, or the destructive visitations on opposers (5:1-11; 12:20-23; 13:8-11).

The most immediate purpose of the volume may have been to counter possible hostility from the Roman government. If so, one can understand the emphasis on the innocence of Jesus in the opinion of Pilate (3:13; Luke 23:4, 14, 20, 22) and on the failure by later procurators or proconsuls (Acts 13:12; 18:14-15; 24:22, 26; 25:25) to convict Paul. The Herodian officials also sometimes concur (Luke 23:6-12, 15; Acts 26:32). Whenever the officials do take hostile action, it is because of Jewish pressure (Luke 23:23; Acts 12:2; 24:27). Paul was himself a Roman citizen and had been treated with respect accordingly (16:37-39; 22:25-29; 25:10-12). All this is appropriate and carries overtones of value insofar as the book first fell into the hands of a public or of individuals of influence who shared the kind of hostility that is reflected during the second half of the first century in such writings as I Peter or the Revelation to John (*see* REVELATION, BOOK OF) or I Clement, or in such hostile acts against Christianity as are attributed to NERO, VESPASIAN, or DOMITIAN.

It has sometimes been suggested that even with the Gentiles and their authorities, the same apologetic purpose would be served by the evidence in Acts that Christianity was the legitimate successor of Judaism. Most Gentiles were aloof from Judaism, if not positively hostile to it, but it was officially tolerated by the Roman government and was at least widely spread and well known in many of the cities. The book of Acts implies that Roman officials recognized that quarrels between Jews and Christians were family quarrels on matters not relevant to Roman jurisdiction (18:14-16; 25:19), and that Paul could claim that in preaching Christ he was using a doctrine of resurrection approved by the influential contemporary party of the Pharisees as well as promised in the Scriptures (23:6-9; 24:15; 26:6-8).

There can be no doubt that Acts presents Christianity as the legitimate fulfilment of Judaism, not only in its teaching about a general resurrection but

also in the resurrection of Jesus. This is, however, only part of the way in which Jesus fulfilled or will fulfil the Scriptures. He is the promised prophet like Moses, the heir of David, the Christ, the afflicted servant of Isa. 53. These credentials are accepted by the author and by those of whom or to whom he writes, but it is improbable that they are also intended to guarantee to Christians the slight official toleration which Judaism enjoyed at the time. Compared with other religions, Judaism was not particularly favored (cf. Acts 18:2). The term *religio licita,* often used in this connection, is of later vintage, if indeed it is a Roman term at all. The legitimacy of Christianity as the true Israel might appeal to the religious response of both Jews and Gentiles, but it was hardly relevant by civil law.

We must carefully distinguish those features of Christianity which appear in the book because they were inherent in the writer's knowledge and understanding of the movement from any matters that were part of his conscious purpose. It is not likely that many of the features listed in §§ 6*d above* and 10*b below* were included for such an ulterior purpose, even though they deal with matters which either in ancient times or in modern have been controversial. The writer was neither a partisan nor a conscious conciliator. He merely reflects the picture of events as they naturally appeared to him at his later time. He may seem to promote certain theological views, or standards of church organization, to gloss over historical controversy, or to defend the legitimacy of Paul's law-free Gentile Christianity, or to equate Paul with Peter as against later claims for Peter. But if the book gives this impression, the chances are that the author is merely assuming that these various positions are all true without either polemic or apologetic intentions of his own.

The narrative contents of the book suggest that, like other histories, it was written, at least in part, out of the sheer interest of the story. Completely disinterested historiography has perhaps always been rare. In this case the writer's strong allegiance to Christianity is not likely to be questioned. The story as it is known to him and reported by him satisfies his own Christian preference and is likely to have a favorable effect on the unprejudiced reader. It would, however, be as wrong to assign this motive in some subtle form or other to each detail, as it would be to assign to each detail mere historical or factual interest. We cannot tell whether the writer was concerned to put on record these events for the benefit of the future, or for the benefit of a wider circle of his contemporaries, or out of a desire for self-expression. These, as well as other motives, may well have played some part, without having been clear to his own mind or disclosed either in the Preface to the work or elsewhere in its text. This partial inscrutability of the writer's intent fits conveniently into the traditional view of all "inspired" scriptures—that they are not explicable on purely human lines.

10. The author. ***a. Unity of authorship.*** Our most certain information about the author of the book comes from a study of the book itself and of the companion book, the Third Gospel. That both books are by the same writer is not only a traditional opinion. It is implied by the common dedication to Theophilus and the cross reference to the gospel in Acts 1:1. It is confirmed by the general, and in some respects inimitable, similarity of style throughout, and of vocabulary. We have already noted that in different parts of Acts variations of style occur, but this is not to deny the over-all likeness of style. There may be slight variation between Acts as a whole and the gospel as a whole, but not of a kind to point to a different editor. When such a hypothesis has been proposed, re-examination of the evidence has usually disposed of it. Obviously the content of both works is not homogeneous and was not likely to be, insofar as both books were dealing with a variety of topics and rested upon different sources. This variety, however, affected contents rather than style, and could have led to contrasting motives or emphases, or even to inner contradiction. But the probability remains that a unified editorial process, a single personality and composer, is to be presumed for both books, and so at least for the second of them, with which we have to do here.

b. Interests of the writer. The interests of this writer have already been suggested, at least in part. In referring to them one need not assume either that they were not inherited or shared from the oral or written sources on which he depends, or that they misrepresent extensively the actual events as they would have been viewed by any sympathetic observer. Obviously the compiler is fully sympathetic with the Christian movement in its successes or its difficulties. He shares its religious positions. He admires the characters whose careers he reports.

But he may have emphasized certain things, may have glossed over others, and may have been unconcerned with some actual features of his sources or of the events they covered. If we had independent knowledge of these backgrounds, we could conjecture something of his own personal slant. We do have in Paul's letters an independent basis for judging one principal section of Acts, as in a quite different way we can compare parts of the Third Gospel with what we presume represents in Mark or Matthew its written sources. But in general any description of the author's special characteristics must be quite tentative. Some of those which are plausibly assumed from his works may be briefly given.

The writer shares the early Christian view that in its own history the predictions or unconscious hints of scripture are fulfilled. In fact, it is because they appeared in the inspired writings that they had to be fulfilled.

He freely interchanges the terms "God" and "the Lord" (and so do later scribes of Acts), using the latter not only, as does the OT, of Adonai (Yahweh), but also of Jesus. This usage occurs in his gospel also, though not in Matthew and Mark. Conspicuous too in Acts, though again not in Matthew or Mark, or even in Luke, is the Holy Spirit. Evidently "the Holy Spirit" is a theological term closely associated with God, and almost interchangeable in function. One notes the series of guidances in Acts 16:6-10 ("forbidden by the Holy Spirit. . . . The Spirit of Jesus did not allow them. . . . A vision. . . . God had called us"). But the mention of the Holy Spirit in this book is more than conventional. It is much more a part of the author's conscious view of the early church,

and is represented as quite definite and datable and perceptible in experience. Its role includes the common Jewish use of the term, as the inspirer of past scriptures, but it is much wider. In early Christianity it has become, for this writer as for Paul, a vivid contemporary experience. It is for him too a presage of "the last days" (2:17).

There is, indeed, some reason to think that the Holy Spirit is one of the factors which led this writer to "play down" the more urgent features of expectancy of the last days. The apocalyptic note is not absent in Acts, but the treatment of it especially in Luke's Gospel suggests that this author, less than some other people in NT times, viewed the Lord's return as imminent.

Nevertheless, the joy of the Christian message is a feature of Luke-Acts. This is shown by the author's abundant use of the words "joy," "rejoice," "gladly," etc., and is felt in the whole tone of the narrative. There is a sense of enthusiasm conveyed even to the modern reader.

In the gospel, at least, the emphasis seems to be on the blessings that are intended for those of low degree. In contrast, the privileged persons are dispossessed, or are condemned for their relatively unsatisfactory response. In the gospel Jesus is said to show partiality to the poor, the publicans, sinners, Samaritans, and other non-Jews, and to criticize in comparison the privileged or respectable persons. The book of Acts only partly shares this description. It is, of course, throughout a vindication of Gentile Christianity and a criticism of the Jews for their stubborn rejection or even opposition. A recurrent motif in the last chapters is plots of the Jews (9:23; 13:44, 50; 14:19; 17:5, 13; 18:12; 20:3, 19; 23:12 ff). The mention of the conversion of a great many of the priests (6:7) is exceptional. There is also in Acts (8:5-25) a favorable report of the response of Samaritans.

At least in Gentile circles, the wealthy or socially elite are represented as favorable to Christianity. The author is apparently pleased to note that this was so —e.g., 17:4, 12, 34; 19:31. There are references to the attention that local officials paid to the missionaries (8:27; 13:7, 12; 28:7), as well as to the protection, already mentioned, which they extended to them.

In fact, one feature of Acts is its abundance of reference to the governmental or other local data of the several places it refers to. It knows the names of civil and military Roman officers, from centurions (10:1; 27:1; in each case with the name of the regiment or "cohort") to a military tribune (23:26), to proconsuls in Cyprus and Achaia, and up to the emperors themselves (11:28; 18:2; cf. Luke 2:1; 3:1). In Palestine there were both procurators, like Pilate, Felix, and Festus, and also Herodian princes, several of whom are mentioned in Luke-Acts; and even persons only remotely associated with them are mentioned (Luke 8:3; Acts 13:1). The author refers to the tetrarchs of Palestine (Luke 3:1), the high-priestly clique in Jerusalem (Acts 4:6), the politarchs at Thessalonica (17:6, 8: "city authorities"), the Areopagus at Athens (17:19, 22), the Asiarchs and the town clerk at Ephesus (19:31, 35), the *primus* at Malta (28:7: "chief man"). Except where a large group of officials is involved, he gives the personal name. In fact, the general abundance of personal names is a noteworthy feature of Acts. There are nearly a hundred of them.

The allusions to officials are all involved in the story. They do not seem forced or artificially brought in. They are compatible with a substantial amount of intentional emphasis upon the author's underlying interpretive purposes. At the same time, they seem to reflect on the author's part the consciousness of the official situation. The data of secular life, the geography and local color, especially in some of the later parts of Acts, are much in evidence, as though the author or his sources of information were quite at home in places like Philippi, Athens, or Ephesus.

In another way the writer shows a secular approach, quite unlike that of the other evangelists. He is writing, not a private memorandum, nor a bit of folk literature, but a formal treatise. His dedication of his volumes to an individual, so far from making them personal, paradoxically indicates that they were to be published. His Preface accords with the customs of formal, rather than of informal, writing. He approximates, in fact, the ways of belles-lettres and of literary historians. The speeches in Acts have nearer parallels in Greek and Roman history than in biblical or other cultures, and once at least (Luke 3:1-2) he seems to announce indirectly his concern for fixing elaborately a chronological date for a key event in his narrative.

Along with these features should be mentioned certain elements of his style. Anyone expert in shades of Greek style will recognize that, without being stilted (unless possibly in the Preface of Luke 1:1-4), the style of these two volumes is more cultivated than that of most Greek biblical writings. Naturally, rather than consciously, he writes, often in accordance with the rules for correct Greek, changing the wording of his sources like Mark, both to his own personal idiom and to purer diction. This is again a sample of the evidence about the author which the books themselves give us.

None of these features, however, tells us his name or enables us to identify him. The four gospels, before they were collected and differentiated by the addition of headings, "according to . . . ," were, like Acts, anonymous. Luke and Acts go further than these writers in general by using the first person singular in the first sentence: "It seemed good to me also"; "In the first book, O Theophilus, I have dealt"; etc. The contents of these books and of others, like the Gospel of John, point to a distinctive personality behind them more creative than a mere compiler. But it is best today to rest content without expecting to identify them among the limited persons of the period known to us.

11. Date and place of writing. At what period were Luke and Acts written? If, as would be natural to suppose, they were written in that order, we have this much information of relative date: Mark was written before Luke, since it is used by Luke, and Acts was written after Luke, which it mentions, perhaps immediately afterward as part of the original plan rather than as an afterthought. Acts may not have known or used Paul's letters. The letters were separately written, probably in the decade before

A.D. 60. Acts relates events up to about the same year, but could have been written years later, perhaps as late as 80 or even later. Attempts to fix its date both earlier and later have been made. For example, it has been suggested that it ends with Paul's two years in Rome, so abruptly, for the simple reason that that was when it was written and there was not yet anything more to report. On the other hand, it has been argued that at Acts 5:36-37 a passage in Josephus on Theudas and Judas has been used—or, rather, misused. This is far from certain, but if it were the case, it would indicate that the author wrote later than Josephus' work (later than 93-95).

To infer dates from the record of predictions is always dangerous; it is as if the prediction were reported in such a way as to imply that the author knew already of its fulfilment. Otherwise one might venture to say that the references in Acts 20:25, 29-30, 38, show that the author knew that Paul had already died and that schism or defection had arisen in the church of Ephesus, or to say that the detailed prophecy in Luke 19:43-44 was only thus reported after the siege and destruction of Jerusalem in A.D. 70 had taken place.

It will be seen (§ 12 *below*) that our scanty knowledge of the later history of the book of Acts does not enable us to cite any use of it so soon after it was written as to limit the time of origin, as would be the case if it were known to have been used by writers like Ignatius early in the second century or by Polycarp or Papias or Justin Martyr or Marcion in the middle of that century. Some of these, and probably even the Gospel of John at an earlier date, show a knowledge of the Gospel of Luke, but not certainly of the book of Acts. Nor does the book itself give any indication of the place where it was written.

How very little we really know of the circumstances of the writing of Acts (or Luke-Acts) is shown by the number and variety of hypotheses which have been seriously proposed. One is the view that it was written at Rome as a brief for the trial of Paul before Caesar. Another is the view that Paul never was tried before Caesar but was automatically released and the case quashed because his accusers failed to appear in Rome before the statutory limit of two years (28:30) expired. Again, it has been proposed either that the author intended or even wrote a third volume to follow Acts or that he never quite finished Acts and that it was published posthumously. These hypotheses are due in part to the apparent abruptness of the end of Acts. Another view is that Acts was written prior to the writing of Luke. Again, it has been supposed that Acts was written before Paul's letters were first collected in the first century—indeed, led to that collection—and also that Luke-Acts, at least in the present form of Luke, was compiled in the second century to combat Marcionism.

12. Subsequent history of Acts. ***a. Use.*** The first clear references to the book of Acts occur *ca.* A.D. 180, and then in several different parts of Christendom. It is cited and referred to by name by Irenaeus at Lyons in Gaul (France), by an anonymous Latin fragment apparently from Rome dealing with the NT books (the Canon of Muratori), by Clement of Alexandria, by Tertullian of North Africa, and by later writers. Thus for a century, more or less, the book of Acts existed without leaving evidence in the scanty Christian literature that remains from that period. But obviously it was not forgotten or lost. Indeed, it had already been included in the select canon of the NT. It was copied and thus preserved. In fact, more than most NT books its copying was done with such freedom that by the end of the second century at least two forms of its text were in existence. By that time it had been detached from its companion, the Gospel of Luke, since that was now included in a group of four gospels in which it had acquired a distinguishing name, "According to Luke." Acts thus, left by itself, had acquired the title already mentioned and in the collection of the NT canon held a unique position, bridging in a way the two (later three) smaller collections—the four gospels, or rather the gospel according to four authorities, the letters of Paul to sundry churches and persons, and the letters supposedly of other apostles (Peter, John, James, Jude). The steps by which Acts became a part of the regular, basic NT can only be conjectured. Apparently Marcion, who one might think had reasons to like the book as well as he liked Luke and Paul's letters, did not include it in his early "canon," which consisted of merely Luke and the letters of Paul, both in a textual form different from that which the "orthodox" church has inherited (*see* MARCION, GOSPEL OF).

b. Attribution of authorship. By the time Luke and Acts had come to be included in the canon, while their common authorship was still properly recognized, the identification of the author had become for Christians a matter of more interest than previously. As he was one of several gospel writers, a distinctive name was needed for the author, as for each of the four, and names were forthcoming, whether from tradition going back to an earlier memory, or from inference from the data provided in the gospels or outside them. The name thus provided for Luke and Acts was LUKE. No other name is known to have been suggested in antiquity for this writer, and even today the best alternative to the view that such was his name is to let him revert to complete anonymity.

Since we cannot tell with how much authority the name Luke was assigned to this author, modern readers have sometimes tried to test its probability. If the "we" passages really belong to the author of the whole work, and if they show that a companion to Paul on various voyages, including that to Rome, wrote them, then he may be one of the many named companions mentioned in Paul's letters including letters supposed to have been written in Rome. If Colossians and Philemon were written in Rome and also II Timothy, "Luke" (Philem. 24), or "Luke the beloved physician" (Col. 4:14), is one of the candidates, and according to II Tim. 4:11—"Luke alone is with me"—the most obvious candidate. Along these lines the ancient Christians may have satisfied their curiosity about this author's name. Some modern calculations would find the same steps sound. But many scholars, noting the many if's involved, recognize that alternatives or confirmations should be considered.

One criterion would be to inquire whether the "we" passages (*see* §7*c above*) do definitely imply a

companion of Paul as writer. The "we" could be a curious literary convention used by ancient narrators in reporting voyages. Perhaps the "we" comes, not from the editor of the whole, but from his written source for some sections of it. This seems odd, since we know that the editor elsewhere shows no unnatural dependence on the wording of his sources. On this view Luke might be the author of the source of Acts, though it has also been suggested that he both wrote the source and wrote the whole book re-using the source, "we" and all, in the later parts of Acts. In favor of the "we" as referring to the author of the whole is the fact that the Preface of Luke can be understood to say in one clause in effect that the author had been in firsthand contact with the events toward the end of the story, "having followed all things closely for some time past," in distinction to having received other parts of his information secondhand from "those who from the beginning were eyewitnesses and ministers of the word."

Another criterion would be to inquire whether the two books are appropriate for a companion of Paul. Decisive answer to this question is perhaps impossible. One can point out that the author admired Paul, shared some of Paul's ideas, and knew some outward facts about him. On the other hand, Paul's behavior and some data recorded of him in Acts are hard to reconcile with parts of the Pauline letters. Trusted companions are not the only persons who in the later years could have agreed so much with Paul; and on the other hand, not all pupils exactly understand and correctly represent their master.

Still another criterion has proved indecisive. It was ingeniously suggested that if the author was a physician, his profession would show in his writings. This assumes that in his time doctors used a special vocabulary. But they did not; and the fact that many words in Luke-Acts were used also by medical writers, though laboriously proved, is made irrelevant by the fact that the same words were used by other writers who had no special medical training. The style of Luke-Acts is no more probable for a doctor than for men of other training or interests. The books could have been written by a doctor, but they need not have been.

These criteria, while not disproving that Luke wrote the books traditionally ascribed to him, do not prove it, or even confirm it. If we weigh the tradition, our judgment will depend on many quite subjective factors, especially on our understanding of the ways the Christians of the second century arrived at their views on matters not clearly disclosed by the books they inherited. An anonymous book, if popular, would be associated with an apostle. Indeed, it has been suggested that because Luke was not (like Matthew or John) one of the Twelve, his name is less likely to have been chosen without real knowledge that he was the author. But the Preface just as definitely seemed to the readers to exclude him from the Twelve, who certainly were "eyewitnesses and ministers of the word," as the "we" passages seemed to make him an associate of Paul. The kind of inference from the contents of the books themselves is the same in its procedure whether it determines which persons to include or which to exclude in considering possible authorship.

c. Transmission of text. During the period when the early church was developing the idea of a NT canon (*see* CANON OF THE NT) and including the book of Acts in it, the wording of the book was experiencing the variation incident to all books written and copied by hand (*see* TEXT, NT). In fact, no book of the NT gives evidence of so much verbal variation as does the Acts of the Apostles. Besides the text represented in the oldest uncial Greek MSS, beginning with Codex Vaticanus, often called the Neutral Text and dating back to the second century A.D., there is evidence either of a consistent alternative text equally old, or of a series of early miscellaneous variants, to which the name Western Text is traditionally applied. The ancient authorities for the Western Text of Acts include only one Greek (or rather bilingual Greek and Latin) uncial MS, Codex Bezae of the fifth or sixth century. But the variants often have striking content and strong early support from Latin writers and Latin NT MSS. It now appears that while both the Neutral and the Western texts were in early circulation, the former is the more likely of the two to represent the original. Actually judgment must be made between them at each individual passage. Often the two texts differ from each other simply as if one were a paraphrase of the other; at other times the variants are of the slight kind familiar in other books of the NT. Indeed, the Gospel of Luke, especially in its last chapters, has variants that suggest that the same treatment had occurred with both these books before they were separated. Thus in Luke the Western Text omits the words mentioned in the RSV margin as added by many (or some) ancient authorities in Luke 22:19-20; 24:6, 12, 40, 51-52, while the Neutral Text includes these words. Since the RSV and other English translations follow generally in Acts the Neutral Text, it will be appropriate here to mention for illustration a few of the Western readings in comparison with it. Thus at Acts 11:28 the Western Text introduces a "we" passage early at Antioch in referring to Agabus: "when we were gathered together"; at 12:8 Peter and the angel leaving the prison descend "the seven steps." Twice (15:20, 29; but not 21:25) the negative Golden Rule: "Whatever you wish that men should not do to you, do not do so to them," is added to the decree sent to Gentiles among the believers, and in all three passages (see notes in RSV) "what is strangled" is omitted from the prohibited things, reducing the list from four to three. Additions by the Western Text are indicated by the RSV margin at 15:34; 19:9; 21:1; 24:6-8.

The variety offered by the Western readings suggests that they are due to sundry causes, though some are sufficiently consistent to suggest that the Western Text is a definite recension. Until its much-debated and quite unexplained character finds a better interpretation, it remains rather an indication of the vicissitudes to which the text of Acts appears to have been especially exposed rather than as the repository of a number of substantial primitive readings. The Neutral Text is probably in most cases closer to what the author himself first wrote.

ACUB. KJV Apoc. form of BAKBUK.

ADADAH ăd'ə də [עדעדה]. A city in the SE part of Judah, near the border of Edom (Josh. 15:22). The form of the name is unusual, and the LXX reads Ἀρουήλ, so most scholars have preferred to read the name as ערערה (*'ar'ārâ*), another form for the Judean AROER, to which David sent part of his spoils from he Amalekites (I Sam. 30:28).

A possible site is Khirbet 'Ar'arah, *ca.* nine miles SE of Beer-sheba. S. COHEN

ADAH ā'də [עדה, ornament; *cf.* Minaean *feminine name* עדת *and* Hebrew *masculine names* עדיהו, עדא, עדו, עדיה, עדיאל, *and* אלעדה]. **1.** The first of two wives of LAMECH; the mother of Jabal and Jubal (Gen. 4:19-20, 23).

2. Wife of Esau; the mother of Eliphaz (Gen. 36:2, 4, 10, 12, 16). In Gen. 36:2 Adah is identified as the daughter of Elon the Hittite. However, her father is not named in the other passages. This notice seems to come from Gen. 26:34, where Elon is listed as the father of BASEMATH. Ethnologically the marriage between Adah and Esau points to the incorporation of Canaanite elements into Edom.

ADAIAH ə dā'yə [עדיה, עדיהו (II Chr. 23:1 *only*), Y has adorned himself]. **1.** The maternal grandfather of King Josiah (II Kings 22:1).

2. A Levite; an ancestor of Asaph in the temple singers' genealogy (I Chr. 6:41—H 6:26); called Iddo in vs. 21—H vs. 6.

3. One of the sons of Shimei in the genealogy of Benjamin (I Chr. 8:21).

4. One of the priests in the list of those who returned to Jerusalem after the Exile (I Chr. 9:12); also mentioned in the parallel list (Neh. 11:12), though the genealogies do not agree.

5. The father of Maaseiah, one of the army officers who aided in the overthrow of Athaliah (II Chr. 23:1).

6. Two men listed as having married foreign wives in the time of Ezra (Ezra 10:29=I Esd. 9:30; Ezra 10:39).

7. An ancestor of one of the Judahites living in Jerusalem (Neh. 11:5). F. T. SCHUMACHER

ADALIA ə dā'lĭ ə [אדליא, *possibly from* Pers. *ādārya*, honorable] (Esth. 9:8). The fifth son of Haman.

ADAM ăd'əm [אדם; Ἀδάμ; *see below*]. The first man, from whom all mankind is descended. He was driven from the Garden of Eden because of his disobedience. His life is greatly embellished in the later Jewish writings. The NT interprets Adam as the representative of humanity and relates all subsequent human sin to his first transgression. He appears in the NT as the antitype of Jesus Christ.

1. In the OT. ***a. Usage and etymology.*** The word אדם (*'ādhām*) occurs well over five hundred times in the OT with the meaning "man" or "mankind." This generic term is used only rarely as a proper name for the first man. Outside Gen. 1-5 the only unambiguous occurrence of the proper name in the OT is in I Chr. 1:1, where it appears at the head of a genealogy. There remains a difference of interpretation with several other passages (cf. Deut. 32:1; Job 31:33; Hos. 6:7).

The term אדם fluctuates between a generic usage and a proper name in Gen. 1-5. The Priestly writer (P) speaks clearly in 1:26-27 of the creation of "mankind," but in 5:1-5 the transition is made to the proper name. The Yahwist writer (J) of chs. 2-3 generally employs the generic term with the definite article. There are three exceptions to this in which the MT has pointed the word as a proper name (2:20; 3:17, 21). Most modern commentators feel that the evidence warrants the emendation of these passages to read uniformly "the man" up to 4:25. The absence of the article here shows that the writer has also made the shift to the proper name. The fluidity of the term is further indicated in the versions which frequently reflect an uncertainty in the translation.

The etymology of the root has not as yet been satisfactorily explained. The common words for "man" in the Semitic languages are not cognate with אדם. The traditional derivation of the word from the root אדם, "to be red," remains most uncertain. Various Sumerian, Akkadian, and Arabic roots have been suggested without settling the question (*see bibliography*). Gen. 2:7 presents a popular etymology in a wordplay: Yahweh God formed אדם (*'ādhām*), "man," from the אדמה (*'ᵃdhāmâh*), "earth." Adam is the "earth man." Recently some scholars have argued that this may be the scientific etymology.

b. In the Genesis narratives. The Priestly writer (P) of Gen. 1:1–2:4*a* describes the creation of man on the sixth day along with the animals, but set apart by a special decree of God (vss. 26-27). God does not resolve simply to make a man, but the species of man, in two sexes. The creation of a single pair is not explicit in vss. 26-27, but is implied later in the identification of Adam with the creation of the human species (5:1-3). Man is created in the "IMAGE OF GOD." He is blessed and given dominion over the earth with the command to multiply. The creation

of man, while not receiving a separate commendation, is included in the general statement: "God saw everything that he had made, and behold, it was very good" (1:31). According to 5:3, 5, Adam was 130 years old when he had a son, Seth, and he lived to the age of 930 years.

The Yahwist writer (J) of Gen. 2:4*b*–4:26 pictures Yahweh Elohim forming man while the earth is still in its unfruitful state. He molds him from the dust of the earth and makes him into an animated creature by breathing into him the breath of life. The man is placed in the Garden of Eden with full freedom of action except in respect to the forbidden trees (*see* TREE OF KNOWLEDGE, TREE OF LIFE). The man is given the task of naming the animals, but, in determining their role, he finds none suitable for his own mate. Yahweh forms Eve from the rib of the sleeping man. They live together unconscious of their nakedness until the woman is tempted by the serpent into eating from the tree (*see* FALL). The man follows suit, and immediately they become aware of their nakedness. Yahweh appears to punish the woman with the pain of childbirth, and to curse the ground upon which man must henceforth toil for a livelihood. The man is expelled from the garden because of the implications of his ill-won knowledge. He becomes the father of Cain, Abel, and Seth.

c. The theological significance. The choice of the generic term indicates the intention of the biblical writers to portray, not just the story of one man, but the universal history of mankind. The strong etiological elements in the J account reveal his basic concern to present a theological interpretation of man's plight in terms of Adam's disobedience. The shift from the generic to the proper name shows that reality finds expression in historical form for the biblical writer. His is not a philosophy about man, but the story of man's history in the light of God's revelation.

In both narratives the first man is sharply set apart from the other created beings. P indicates man's unique position with the solemn resolution preceding his creation. Only man is created in the image of God to rule the earth. J pictures Yahweh's infusing man with his spirit in a special act. In naming the animals he interprets and orders God's creation. Nevertheless, man is completely an earth-bound creature and not semidivine. He is created on the same day as the animals and likewise dependent upon the life-giving breath of God. In spite of the fresh, naïve language of J, his account offers a highly theological interpretation of God's purpose for mankind. It is a life sustained by his spirit, lived in fellowship with God, found in a created community which issues in obedient service.

2. In the noncanonical Jewish writings. In the Apoc. and the Pseudep. the role of Adam enters into a new and highly significant development. The hypothesis is plausible that Israel's search to understand the meaning of her political disaster in the Exile led to a rethinking of the traditions concerning man's sin and fall. Two tendencies in the expansion of the Adam tradition should be noticed especially. First, the glorification of Adam before the Fall has been greatly magnified. He enjoys a beauteous glory not shared by the rest of the human race (Ecclus. 49:16). II Enoch 30:8 ff describes the seven substances out of which Adam was formed. He was placed on the earth a "second angel, honorable, great and glorious." His name was constructed from the initials of the four quarters of the earth. The point is emphasized that the devil seduced Eve, but did not touch Adam (31:6). In the *Vita Adae* 12 ff Adam is created in the image of God to be worshiped by the angels. The climax of this development is represented in the pseudo-Clementine literature. This Jewish Christian writing rejects the idea of the Fall, and describes Adam as a heavenly figure who appears in successive incarnations.

Secondly, the malignant effect of Adam's sin on the human race receives a new emphasis which had previously never been made explicit. Apocal. Bar. 17:3 notes that Adam "brought death and cut off the years of those who were born from him." II Esd. 3:21 relates human evil directly to Adam's transgression (cf. 3:4 ff; 4:30; 7:11). The cosmological significance of Adam's sin also receives a new emphasis in the Apoc. and the Pseudep. (cf. Jub. 3:28-29).

Similarly, rabbinical literature is characterized by a tremendous growth of interest in Adam and the Fall. Adam transcended ordinary man in every way. He was created immortal with superhuman wisdom and indescribable glory which darkened the sun. His size was of such extent as to fill the entire earth. Consequently, his fall brought untold disaster. According to Rabbi Meir, his size was reduced to a hundred yards. He lost immortality and external beauty. The planetary movement was disrupted, fruit no longer ripened, and beasts became ferocious. Although the "first man" is contrasted with Abraham and the Messiah who will come to restore what Adam has lost, rabbinical Judaism did not develop the concept of the "second" or "last" Adam.

The speculation over Adam receives a most significant development in Philo, who is the best representative of Hellenistic Judaism (*see* PHILO JUDEUS). In commenting on the two creation accounts of Genesis (*Allegory of the Jewish Law* I.31-32), Philo distinguishes between two types of men. The first man of Gen. 1:27 is the "heavenly man," οὐράνιος ἄνθρωπος. He is not created, but formed after the image of God. He is the pure archetype of man, an idea in the mind of God. The second man of Gen. 2:7 is the "earthly man" (γήϊνος ἄνθρωπος). He is the historical Adam, who became the father of sinful mankind (cf. *On the Creation of the World* 134). Nevertheless, the earthly man receives the same glorification in Philo as was common in rabbinical Judaism.

3. In the NT. Adam as the first man appears twice in the NT in a historical connection. In Luke 3:38 the genealogy of Jesus is traced back to Adam, who is designated as "son of God." Jude 14 contains a reference to "Enoch in the seventh generation from Adam."

Adam appears again in I Tim. 2:13-14, in the section dealing with the proper behavior of women in the worship service. Women are to be subordinate to men on two accounts: (*a*) according to the creative order, Adam was formed before Eve (cf. I Cor. 11:12-16); (*b*) the woman was deceived into sinning,

not the man. This latter reference may reflect current Jewish exegesis of the Genesis passage.

By far the most important references appear in those passages in which Adam is made a type of Christ. Paul argues in Rom. 5:12-21 that death entered the world because of the sin of Adam: "Sin came into the world through one man and death through sin, and so death spread to all men" (vs. 12). Adam is a type of the "Coming One" (τύπος τοῦ μέλλοντος), because of the similarity in the total effect of one man's action on all of humanity. But here the continuity ends. The grace of God in Jesus Christ is far superior in being able to overcome the effect of sin. Moreover, Adam's act of disobedience brought condemnation and death, while Christ's obedience leads to justification and life.

Vs. 12 has been traditionally misinterpreted by supposing the phrase "in Adam" to be implicitly included in the last clause "because all men sinned" (ἐφ' ᾧ πάντες ἥμαρτον). Nowhere does Paul state the manner by which Adam's sin is transmitted to his posterity. The concept of biological inheritance is certainly foreign. Rather, Paul is thinking historically of the initial entrance of SIN as a power over the human race.

In I Cor. 15:22 the Adam-Christ typology is used to illustrate the certainty of the resurrection. "As in Adam all die, so also in Christ shall all be made alive." Undoubtedly, the two uses of "all" are to be interpreted alike. This raises a difficulty, since participation in the resurrection is not within the context of faith which is usually so central in Pauline thought (Rom. 6:5 ff; I Cor. 15:12 ff). However, the contrast between "in Adam" (ἐν τῷ Ἀδάμ) and "in Christ" (ἐν τῷ χριστῷ) brings out Paul's intent. Adam and Christ are the "heads" of the old and the new humanity. Adam is the source of death, while Christ is the source of life. Each type of humanity joins itself in an organic solidarity to its head and thus participates in either life or death.

Finally, the certainty of the spiritual resurrection body is stressed in I Cor. 15:45-47 through the contrast between Adam and Christ. Paul cites as scriptural proof Gen. 2:7, according to the LXX and in a form which has been expanded to include specific reference to the "first man Adam" (ὁ πρῶτος ἄνθρωπος Ἀδάμ). He characterizes the "first Adam" as a "living being" (ψυχὴ ζῶσα), "from the earth" (ἐκ γῆς), a "man of dust" (χοϊκός). He is contrasted with his antitype, the "last Adam" (ὁ ἔσχατος Ἀδάμ), who is a "life-giving spirit" (πνεῦμα ζωοποιοῦν), a "man from heaven" (ἐξ οὐρανοῦ). Christians resemble the "first Adam" in respect to their earthly nature, but the "last Adam" in respect to their resurrection bodies (vs. 48).

Paul found the language of the first and the last Adam useful in delineating his position in opposition to two current misunderstandings of the resurrection. First, he stressed the necessity for a resurrection body against certain Hellenistic circles which denied the soul's need for one. Secondly, in opposing the excesses of rabbinical materialism, he made it clear that the resurrection body was not flesh and blood, but a new, spiritual body. Paul's insistence that the "spiritual man" was second in order may be a conscious polemic against Philo's teaching.

The source of the Adam-Christ typology is much debated. It has been often suggested that it stems directly from the mythical traditions of the "heavenly man" which were current in the religions of the Orient. It is possible that this complex of tradition did affect the rabbinical speculation about the first man, as well as result in the Hellenistic distinction between an earthly and a heavenly Adam (*see* MYTH, MYTHOLOGY, NT). Recently some scholars have sought for a closer source of this typology in the rabbinical doctrine of the unity of mankind in Adam. According to this teaching the body of Adam was thought to incorporate the whole of mankind. It would be easily understandable for Paul to apply this figure to Jesus Christ, who as the "last Adam" now incorporates the new humanity.

Bibliography. N. Glueck, *AASOR*. XXV-XXVIII (1951), 329-34. S. COHEN

ADAM, BOOKS OF. A general name for extracanonical writings in which the biblical story of Adam and Eve is elaborated. The most important surviving documents of this genre are a Greek text misnamed by its first editor "The Apocalypse of Moses," and a Latin "Life of Adam and Eve." The two texts are related, though by no means identical; they are derived from Semitic originals. The theory that there was once a single Hebrew or Aramaic Adam book, the source of both these versions, can hardly be proved or disproved. For a discussion of this type of literature, *see* APOCRYPHA.

The Apocalypse of Moses begins with the expulsion from Eden, and tells of a dream in which Eve has a premonition of the murder of Abel. Following a brief account of the birth of Seth, it skips to the end of Adam's life, when, to the amazement of his children, he suffers sickness and pain for the first time. Seth and Eve return to Paradise in the hope of obtaining oil from the tree of life to relieve Adam's suffering. On the way, Seth is attacked by a beast which, since the Fall, no longer respects the "image of God." Michael notifies the suppliants that Adam cannot be healed and must die. They return; and

while Adam lies dying, Eve at his bidding tells how they yielded to the blandishments of Satan, who suborned the serpent to mislead them. Adam dies, and Eve and Seth see his soul taken into the third heaven after it has been purified. Only Seth, however, is permitted to watch the angels inter Adam's body and that of Abel, which the earth had previously refused to accept. After a week, Eve too dies; Michael instructs Seth how to bury her, and enjoins him not to mourn more than six days, for on the sabbath he must be cheerful.

The Latin version traverses most of this material except Eve's narrative of the Fall, for the most part more briefly than the Apocalypse of Moses; but it includes the following elements which are missing from the Greek version:

When first expelled from Paradise, Adam and Eve are so desperate that Eve, considering herself the cause of all his misfortunes, urges her husband to slay her. He proposes instead that as a penance they shall stand for many days in water, he in the Jordan, she in the Tigris. After eighteen days, Satan appears to Eve disguised as an angel of light, and bids her leave the water, since her penitence has been accepted. Adam, however, unmasks the old enemy. Now Satan explains why he is so hostile to them. When Adam was first created, the angels were bidden to "worship" him as the image of God; Satan in his pride refused to bow down to a younger and inferior creature, and out of this rebellion came his downfall. (This account of the devil's fall was adopted by Mohammed, Koran 7.11 ff.) This version also includes a touching account of the birth of Cain, and an apocalyptic vision related by Adam to Seth.

These writings imply the existence of the temple, and probably date from about the beginning of the Christian era. Such a date fits well with the rather developed concept of Satan, a fallen angel in rebellion against God, who is not, however, identified with the serpent of Eden. The books speak repeatedly of the final judgment and the resurrection, but do not mention the Messiah. Apart from a few Hellenistic touches, some of which may be due to the translators, the Adam books are well within the traditions of the Palestinian Haggada.

Our present texts contain a few manifestly Christian insertions, and there are other passages where the translators may have imparted a certain Christian coloring to the Jewish documents. We possess, however, a number of later Adam books, derived in part from those described here, in which the Christian elements, orthodox or Gnostic, are much more extensive. The Slavonic and Armenian versions, despite such additions, are still recognizably related to the Jewish sources; the older material, however, has been completely reworked in Syriac, Ethiopic, Arabic, and Armenian Christian writings, said to date from the fourth Christian century and later. These works express a strong preference for celibacy as against marriage.

Bibliography. Text, trans. and ed. L. S. Wells, in R. H. Charles, *Apoc. and Pseudep. of the OT* (1913), II, 123 ff. L. Ginzberg, "Adam, Book of," *JE* (1901-6), I, 179 ff; *The Legends of the Jews* (1909-38), I, 86-107; V, 114-35.

B. J. BAMBERGER

ADAM, SECOND. *See* SECOND ADAM.

ADAMAH ăd′ə mə [אדמה]. A fortified city in the territory of Naphtali (Josh. 19:36), not to be confused with ADAM (2) or ADAMI-NEKEB. Its location is unknown; however, its place in the list of fortified cities suggests that it was situated to the NW of the Sea of Galilee. The Palestine Survey identified Adamah with Khirbet Damiyeh, but this site is better suited to the topographical requirements of Adami-nekeb.

G. W. VAN BEEK

ADAMANT [שמיר, šāmîr; *cf.* Akkad. *ašmur*, emery] (Ezek. 3:9; Zech. 7:12). Alternately: DIAMOND (Jer. 17:1). An imaginary stone of impenetrable hardness; formerly, a diamond; now, a poetic expression for "hardness."

The rendering "diamond" is purely interpretive. The Lord makes the forehead of Ezekiel like שמיר, harder than flint (Ezek. 3:9). The Israelites make their hearts like שמיר so as not to listen to the law (Zech. 7:12). A stylus of שמיר was required to penetrate the hardness of Judah's heart (Jer. 17:1). *See* JEWELS § 2.

W. E. STAPLES

ADAMI-NEKEB ăd′ə mī nĕk′ĕb [אדמי הנקב] (Josh. 19:33); KJV ADAMI, NEKEB. A border town in Naphtali, not to be confused with ADAM (2) or ADAMAH. It is probably located at Khirbet Damiyeh, a large Bronze Age site *ca.* five miles SW of the Sea of Galilee, commanding a pass on a caravan route between Hauran and the Plain of Acco. It is not to be identified with *udm* of the Keret Epic from Ugarit, or *udumu* of the Tell el-Amarna Letters.

See also NEKEB.

Bibliography. F.-M. Abel, *Géographie de la Palestine,* II (1938), 16-17, 64, 238; W. F. Albright, "Two Little Understood Amarna Letters from the Middle Jordan Valley," *BASOR,* 89 (1943), 7-17.

G. W. VAN BEEK

ADAR ā′där [אדר; Ἀδάρ; Akkad. *adaru*]. **1.** The twelfth month in the Hebrew CALENDAR (February-March).

2. KJV alternate form of ADDAR 1.

ADASA ăd′ə sə [Ἀδασα]. A town on the road between Beth-horon and Jerusalem where Judas intercepted and defeated the Syrian army of Nicanor; this victory was celebrated annually thereafter on the thirteenth of Adar (I Macc. 7:40, 45; Jos. Antiq. XII.x.5). The town is probably the modern Khirbet 'Addâseh, *ca.* seven miles from Beth-horon.

Bibliography. F.-M. Abel, *Géographie de la Palestine,* II (1938), 238.

E. W. SAUNDERS

ADBEEL ăd′bĭ əl [אדבאל; Akkad. *Idibi'lu*]. The third son of Ishmael, and hence the name of an Arabian tribe (Gen. 25:13; I Chr. 1:20). The latter seem to be identical with the Idiba'ileans whom Tiglath-pileser III of Assyria conquered and then appointed as guards on the Egyptian frontier. They were located in NW Arabia, close by Kedar and Nebaioth.

S. COHEN

ADDAN ăd′ən [אדן, strong (place)] (Ezra 2:59); ADDON —ŏn [אדון] (Neh. 7:61). An unidentified

Babylonian place from which came—or a leader among (I Esd. 5:36; *cf.* CHERUB)—returning exiles unable to prove their ancestry. R. A. BOWMAN

ADDAR ăd'är. **1.** אדר (KJV ADAR ā'där except in I Chr. 8:3). A fortress city on the SW border of Judah, between Kadesh-barnea and Karka (Josh. 15:3). In the parallel passage in Num. 34:4, Addar and HEZRON, the next name in the Joshua list, are combined as "Hazar-addar." S. COHEN

2. Alternate translation of ארד. *See* ARD.

ADDER [פתן; צפע (KJV COCKATRICE); צפעוני (KJV COCKATRICE *in* Isa. 11:8; 59:5; Jer. 8:17); עכשוב (Ps. 140:3 KJV; RSV VIPER); שפיפן (Gen. 49:17 KJV; RSV VIPER)]. Alternately: ASP (Job 20:14, 16). Any of several poisonous and nonpoisonous snakes, especially the common viper, *vipera berus*, of Europe and Asia.

The identification of the Hebrew words with specific species of snakes is very dubious. Both צפע, *ṣepha'*, and צפעוני, *ṣiph'ônî*, which designate a dangerous snake, may be onomatopoeic—i.e., in imitation of the hissing made by the snake. In Prov. 23:32; Isa. 14:29; Jer. 8:17, they are associated with the Hebrew word for "snake," נחש. The reference to the eggs of the צפעוני in Isa. 59:5 does not help in identifying the species of snake, for most snakes lay eggs—the chief exceptions to this are the majority of the vipers and the aquatic snakes, which generally produce living young. Wine is said to sting like a צפעוני (Prov. 23:32). The specific species of snake meant by פתן, *pethen*, and שפיפן, *shᵉphîphôn*, are also unknown, while one scholar regards עכשוב, *'akhshôbh*, as a spider. *See* FAUNA § D. W. S. MCCULLOUGH

ADDI ăd'ī ['Αδδείν (B), Αδδι (A), Εδνα (Luc)]. **1.** Apparently an alternate form of the name ADNA (2). The sons of Addi in I Esd. 9:31 correspond to the sons of PAHATH-MOAB in Ezra 10:30.

2. An ancestor of Jesus (Luke 3:28). C. T. FRITSCH

ADDO. KJV Apoc. alternate form of IDDO.

ADDON. Alternate form of ADDAN.

ADDUS ăd'əs ['Αδδούς]. **1.** Head of a family of "sons of Solomon's servants" (I Esd. 5:34; omitted in Ezra 2:57; Neh. 7:59).

2. KJV form of JADDUS.

ADER. KJV form of EDER in I Chr. 8:15.

ADIDA ăd'ə də [Αδιδα]. A town (probably OT HADID) on the road from Jerusalem leading NW to the coast, situated on a hill above the plains of Judea four miles E of Lydda. It was fortified by Simon (I Macc. 12:38; 13:13; cf. Jos. Antiq. XIII.vi.5; Euseb. Onom. 24:23) and by Vespasian.

Bibliography. F.-M. Abel, *Géographie de la Palestine*, II (1938), 340-41. E. W. SAUNDERS

ADIEL ā'dī əl [עדיאל, an ornament is El]. **1.** One of the Simeonite princes who enlarged their pastoral lands in the region of Gedor in the time of Hezekiah (I Chr. 4:36-43).

2. A priest mentioned in I Chr. 9:12 (Azarel in Neh. 11:13) whose son Maasai (Amashsai in Neh. 11:13) returned from the Babylonian exile.

3. The father of Azmaveth, who was in charge of the royal treasuries in Jerusalem under David (I Chr. 27:25). E. R. DALGLISH

ADIN ā'dən [עדין, voluptuous] (Ezra 2:15; 8:6; Neh. 7:20; 10:16; I Esd. 5:14; 8:32). The father and ancestor of some Jewish exiles who returned to Jerusalem with Zerubbabel or with Ezra.

ADINA ăd'ə nə [עדינא]. The son of Shiza; a Reubenite leader listed among the Mighty Men of David (I Chr. 11:42).

ADINO ăd'ə nō. A name in a KJV transliteration of an unintelligible phrase (עדינו העצנו) in II Sam. 23:8 ("Adino the Eznite"). This transliteration interprets the expression as a second name of Josheb-basshebeth, the chief of the "Three" in David's high command. However, it seems better either to adopt with the RSV the reading of the parallel passage of I Chr. 11:11; "He wielded his spear" (עורר את־חניתו), or to emend העצנו to read מעצדו or חציו and render the whole phrase: "He brandished his axe."

Bibliography. S. R. Driver, *Notes on the Hebrew Text of the Books of Samuel* (2nd ed., 1913), p. 364. E. R. DALGLISH

ADINUS. KJV Apoc. form of JAMIN.

ADITHAIM ăd'ə thā'əm [עדיתים] (Josh. 15:36). A town in the Shephelah in the Zorah-Azekah district of the tribe of Judah. Its site is unknown.

ADLAI ăd'lā, —lī [עדלי] (I Chr. 27:29). The father of Shaphat, who was over the royal herds in the valleys in the time of David.

ADMAH ăd'mə [אדמה]. One of the "cities of the valley" which because of its wickedness was destroyed along with SODOM; GOMORRAH; and ZEBOIIM. Admah is mentioned in giving the boundaries of the Canaanites (Gen.10:19) and as one of the five cities which were attacked by the four eastern kings (14:1-17; *see also* CHEDORLAOMER). SHINAB was the king of Admah (vs. 2). Admah's destruction is implied in Gen. 19:24-29, and its overthrow is specifically recalled in Deut. 29:23. The fate of Admah and Zeboiim is held out by Hosea (11:8) as a warning to Israel.

Admah was situated in the Valley of Siddim (*see* SIDDIM, VALLEY OF); here it engaged in battle with the invading kings (Gen. 14:2-3, 8). Admah may be located in the area now under the water of the S embayment of the Dead Sea, on a stream, prolonged westward, between the streams Seil 'Esal and Seil en-Numeirah.

For detailed study of location, *see* SODOM. J. P. HARLAND

ADMATHA ăd mā'thə [אדמתא, *probably from* Pers. *admata*, untamed = Αδμητος]. One of the "seven princes of Persia and Media," members of the king's council under Ahasuerus (Esth. 1:14). It was on their

advice that Ahasuerus banished Queen Vashti (vs. 19). *See* ESTHER, BOOK OF. D. HARVEY

ADMIN ăd′mĭn ['Αδμίν] (Luke 3:33). An ancestor of Jesus.

ADNA ăd′nə [עַדְנָא, *perhaps from* Akkad.]. **1.** A priest who returned from exile with Zerubbabel (Neh. 12:15).

2. One of the Israelites with foreign wives (Ezra 10:30).

ADNAH ăd′nə [עַדְנָה; Akkad. *Adna*]. **1.** Judahite commander during the reign of Jehoshaphat (II Chr. 17:14).

2. Manassite deserter from Saul's to David's army (I Chr. 12:20).

ADONAI ə dō′nī [אֲדֹנָי, Lord]. A title of honor and majesty applied to God, and used in the late post-exilic period as a substitute for the sacred name Yahweh. *See* GOD, NAMES OF, § C6; LORD.

ADONI-BEZEK ə dō′nī bē′zĕk [אֲדֹנִי בֶזֶק, *see below*] (Judg. 1:5-7). Apparently a king of Jerusalem. He was defeated and mutilated during campaigns of the tribe of Judah to conquer territory in Canaan. The invading Judahites came upon the king in company with Canaanite forces at BEZEK, a settlement of unknown location. After pursuit and capture, Adoni-bezek was subjected to the fate which he had executed on his own royal captives—the amputation of thumbs and great toes. The incapacitated king was taken to Jerusalem, presumably by his own men, and there he died.

It is probable that Adoni-bezek is identical with ADONI-ZEDEK, king of Jerusalem at the time of the Conquest (Josh. 10:1, 3). The second part of such a name as Adoni-bezek should be a divine name or designation, which "zedek" is but "bezek" evidently is not.

Bibliography. M. Noth, *Die israelitischen Personennamen* (1928), p. 114; G. E. Wright, "The Literary and Historical Problem of Joshua 10 and Judges 1," *JNES*, V (1946), 105-14.
R. F. JOHNSON

ADONIJAH ăd′ə nī′jə [אֲדֹנִיָּה, אֲדֹנִיָּהוּ, Yahu is the Lord]. **1.** The fourth son of David (II Sam. 3:4; I Chr. 3:1-2); his mother was Haggith. Adonijah's regal aspirations involved him in his own destruction. The right of Adonijah to consider himself the heir apparent of the Davidic throne was not without cogency. In the senile days of David, Adonijah was the eldest living prince of the dynasty, since Amnon, Absalom, and presumably Chileab were dead (I Kings 2:22). David did not discourage this kingly ambition, not even when Adonijah asserted it incontestably by procuring for himself chariots and an entourage of knights and fifty runners (I Kings 1:5 ff). While David may have given assurance to Bathsheba, his favorite queen, that her son Solomon would succeed him—a fact that seems to find confirmation in the exclusion of Solomon from the feast of Adonijah (I Kings 1:10—this pledge does not appear to have been seriously considered, because the nomination of Solomon came as a decided surprise to the adherents of Adonijah, who himself could later represent the situation to Bathsheba thus: "You know that the kingdom was mine, and that all Israel fully expected me to reign" (I Kings 2:15). Moreover, the cause of the very personable Adonijah elicited the support of Abiathar the priest and Joab the commander of the army (I Kings 1:7; 2:22).

Hoping to climax his hope of becoming king before his aged father died, Adonijah prepared a sacrificial feast near En-rogel and invited the royal princes and the officials of Judah, excluding Solomon and his supporters. The intent of this festal gathering was unquestionably the proclamation of Adonijah as king. However, before the actual coronation could take place, Nathan and Bathsheba secured from the aged king the succession for Solomon, who was immediately anointed by Zadok the priest at Gihon, not far from En-rogel. When the resounding acclamations from the procession that accompanied Solomon were interpreted by Jonathan the son of Abiathar to mean the ruin of the hopes of Adonijah, the adherents of the rejected prince fled from his festal gathering. Adonijah himself took sanctuary by laying hold of the horns of the altar and was persuaded to leave this asylum only by the promise of Solomon to spare his life (I Kings 1:51-53).

However, Adonijah was subsequently judged guilty of treason when he asked Bathsheba to intercede with Solomon to give him in marriage the beautiful Abishag. This former nurse of David was apparently considered part of the royal harem, and the request of Adonijah constituted in the eyes of Solomon a capital crime, whereupon Benaiah was ordered to effect Adonijah's execution (I Kings 2:19-25).

2. One of the Levites who in company with princes and priests instructed the people in the law during an itinerant teaching mission in the cities of Judah in the third year of Jehoshaphat (II Chr. 17:8).

3. One of the chiefs of the people who set his seal to the covenant of reform in the time of Ezra (Neh. 10:16—H 10:17). E. R. DALGLISH

ADONIKAM ăd′ə nī′kəm [אֲדֹנִיקָם, my Lord has arisen]. The head of one of the families that returned to Jerusalem from Babylonia after the Exile (Ezra 2:13; 8:13; Neh. 7:18; I Esd. 5:14; 8:39). The name appears as Adonijah (אֲדֹנִיָּהוּ, "My Lord is Jahweh") in the list of those who set their seal to Ezra's covenant (Neh. 10:16—H 10:17). M. NEWMAN

ADONIRAM ăd′ə nī′rəm [אֲדֹנִירָם, the Lord is exalted] (I Kings 4:6; 5:14—H 5:28). Alternately: ADORAM ə dôr′əm [אֲדֹרָם] (II Sam. 20:24; I Kings 12:18); HADORAM hə dôr′əm [הֲדֹרָם] (II Chr. 10:18). The son of Abda; a high official in the courts of David, Solomon, and Rehoboam, with a long record of service in charge of the *corvée*, or forced labor (II Sam. 20:24; I Kings 4:6; 12:18; *see* SLAVERY). Adoniram was the overseer of thirty thousand laborers whom Solomon drafted from all Israel and sent in relays of ten thousand to secure in Lebanon the materials for his building projects (I Kings 5:13-14). When Rehoboam alienated the N tribes by the announcement of his tyrannical program, Adoniram,

who was sent by the king to enforce immediately upon them the *corvée,* was stoned to death (I Kings 12:18; II Chr. 10:18).

Bibliography. I. Mendelsohn, "State Slavery in Ancient Palestine," *BASOR,* 85 (1942), 14-17. E. R. DALGLISH

ADONIS ə dō′nĭs [Ἄδωνις, *from* אדון, lord]. The Syrian deity of vegetation which wilted with the summer sun. The death of the god was mourned by the women of PHOENICIA, particularly beside the River Adonis (modern Nahr Ibrahim), near Beirut. This cult was known also in Greece, where Plato mentions "Adonis gardens"—pots of herbs—which were used in rites of imitative magic during the seven-day ascendancy of the Dog Star. There is a conceivable reference to this rite in the "PLEASANT PLANTS" (נטעי נעמנים) mentioned in Isa. 17:10, the title of Adonis being "pleasant" (נעמן).

ADONI-ZEDEK ə dō′nī zē′dĕk [אדני־צדק, my lord is righteousness, *or* my lord is (the god) Zedek(?)]. King of Jerusalem, defeated by Joshua in battle at Gibeon (Josh. 10:1, 3), probably identical with ADONI-BEZEK. Adoni-zedek was the leader of a coalition of five Amorite kings from royal cities to the S and the W of Jerusalem. The defection of the city of Gibeon to the invading Israelites imperiled the position of Adoni-zedek and his confederates and led to their futile effort to penalize the city. A forced night march brought Joshua and his men to the aid of Gibeon, and the rout of the confederate forces became complete in a hailstorm as they fled along a descending route westward toward the coast. The famous poetic fragment from the book of JASHAR refers to this battle:

> Sun, stand thou still at Gibeon,
> and thou Moon in the valley of Aijalon
> (Josh. 10:12).

The five Amorite kings were captured in a cave at Makkedah, where they had taken shelter, and were put to death. Their bodies were hung on trees until sundown, when they were removed and sealed in the cave with large stones, visible in the author's day.

ADOPTION [υἱοθεσία]. The theological importance of this word is probably that it provides a means of describing the Christian status of sonship as a vivid reality, while at the same time pointing to its secondary and derived nature—not sonship but adoption—in contrast to the essential and inherent sonship of Christ himself. It is by God's ELECTION that Israel has been made God's son (Hos. 11:1, etc.); it is by baptism and the presence of the Holy Spirit that the Christian is enabled (Rom. 8:15; Gal. 4:6) to cry the "Abba! Father!" which first rose to the lips of Jesus (Mark 14:36) by reason of his unique status (Rom. 1:4). *See* CHRIST.

1. OT instances. No laws of adoption are found formulated in the OT. The Hebrews could transfer rights from one member of the family to another, a process for which the days of polygamy provided ample scope (see Gen. 48:5; 49:4, 26; Deut. 21:15-17 [correcting the practice so as to safeguard the first-born]; I Chr. 5:1-2). But adoption is much harder to illustrate from the OT. The allusion to Abraham's servant in Gen. 15:1 ff is perhaps important in this connection, since it appears to contemplate adoption. But it is not altogether clear, especially since the crucial vs. 2 seems to be corrupt (see commentators). However, Hammurabi's Code, sections 185 ff (*see* HAMMURABI), and the documents of the fifteenth century B.C. found at Nuzi (near Kirkuk, E of the Tigris) since 1925 show that adoption was legislated for in Semitic civilizations; and adoptions, at least in special circumstances, may be illustrated by a few biblical passages. Thus, in Exod. 2:10 Moses becomes son to Pharaoh's daughter—but this is in an Egyptian setting. (In Acts 7:21 the word ἀνείλατο, in the narrating of the same incident, is translated "adopted," with some support from nonbiblical literature and papyri; but it may merely refer to the taking of Moses out of the water.) Again, Ruth 4:16 is sometimes taken to mean that Naomi adopted the son of Boaz and Ruth; but the boy is already, by the levirate law (*see* MARRIAGE), her descendant. Once more, in Esth. 2:7, 15, Mordecai adopts Esther (the words לקחה־לו לבת are translated: "adopted her as his own daughter"); but again this is in a foreign milieu. Thus, while the practice is evidenced in ancient Semitic civilizations, it is seldom alluded to in the OT.

2. Meaning in the NT. In the NT the word υἱοθεσία occurs only at Rom. 8:15 ("sonship"), 23 ("adoption as sons"); 9:4 ("sonship"); Gal. 4:5 ("adoption as sons"); Eph. 1:5 ("to be his sons"). It may be remarked at once that in Rom. 9:4 there is applied to Israel in its relation to God precisely that technical term which, as has just been shown, Israel does not seem to have used of itself. The OT speaks of Israel as God's son (Hos. 11:1), his first-born son (Exod. 4:22; *see* CHILDREN [SONS] OF GOD); but it also shows that Israel is not such by any right of physical relationship, but only because of God's free choice (Deut. 14:2); and it is perhaps to emphasize this fact that Paul uses the word, as though to say that even the status of Israel was not something necessary and inherent, but the result of an act of graciousness on the part of God. Comparable to this (though without the actual word υἱοθεσία) is Philo's remark (*On Sobriety* 56) that one who, like Abraham, is called the friend of God has become nobly born, "for he has registered God as his father and become by adoption his only son."

It is true that the strictly contrasting word "sonship" (υἱότης) is not used of Christ, and, indeed, appears not to be extant (except just possibly in one papyrus, if it is there the correct reading) until the postbiblical Christian writers (e.g., Basil of Caesarea); and it might be argued that therefore "adoption" is not to be pressed in its distinctive sense, but is to be accepted as a slightly imprecise expression, used in default of υἱότης, for the status of a son. On the other hand, υἱοθεσία is never applied to Christ,

and his unique status is made very clear in other ways (see, e.g., Phil. 2:6 ff; Col. 1:15 ff), while the position of Christians in the family of God is equally clearly derivative and secondary. Moreover, the exact meaning of υἱοθεσία is certainly not "sonship" but the "making" or "adopting" of a son. It seems best, therefore, to take it in this strict sense.

The contexts, however, in which it occurs are not in themselves altogether clear. Thus, Gal. 4:5 is somewhat perplexing. If the context were a straight contrast between servitude and υἱοθεσία, it would be simple to interpret it to mean that, though *naturally* slaves, we are *adopted* (or possibly are destined to be adopted) into the status of sons by God's graciousness. But, in fact, the argument seems to be rather that, naturally sons, we are nevertheless like slaves unless and until we "come of age." (It is not clear whether ἡ προθεσμία τοῦ πατρός in 4:2 ["the date set by the father"] is an allusion to an actual law by which the father could determine in advance when his child was to come of age, or whether it is an artificial adaptation to the theological meaning of the full arrival of the time [vs. 4] when God brought his Son into the world.) It is noteworthy that the word for "receiving" the adoption (vs. 5) is ἀπολάβωμεν, which normally refers to receiving what is a due—"duly receiving"; and vs. 7: "You are no longer a slave but a son," might, in view of vss. 1-2, only mean: "You are no longer *like* a slave [i.e., without rights, as also is a minor] but are now able to enjoy the full rights belonging to you as a son."

In the same way, it is possible to interpret Rom. 8:12-17 either way, as far as the context goes: either "You need not revert to a servile attitude," or "You need not revert to servitude itself."

Finally, Eph. 1:5 ("destined us in love to be his sons") is also, in itself, inconclusive. But our adoption as sons is here a measure of the greatness of God's love, and is through Jesus Christ, and the strict meaning of an unmerited, genuine adoption therefore fits the context well. Besides, a comparable passage in John 8:31 ff (though without the actual word) dwells on the necessity for the Son (Jesus) to set free those who otherwise are slaves.

Thus, it is reasonable to accept the strict, etymological sense in all these passages, especially since it is borne out by a few passages from secular Greek literature and by plenty of inscriptions. An instance of the latter, well illustrating the strict sense, is: Ἀντισθένης Ἰσοκλεῦς, κατὰ δὲ υἱοθεσίαν Γρίννου (Boeckh Inscription 1, n. 2448, 3, 15)—i.e., "Antisthenes (the son) of Isocles, but by adoption (the son) of Grinnus"; and Hesychius says very explicitly: υἱοθετεῖ·υἱοποιεῖ, οὐ φύσει, ἀλλὰ θέσει—i.e., the verb corresponding to υἱοθεσία means "making" a son, not by nature but by decree. The contrasting term, in the inscriptions, is κατὰ γένεσιν, "by birth."

3. Relation with other NT ideas. If, then, the strict sense is accepted for the NT occurrences, it may be brought into line with Paul's thought about the INHERITANCE. A slave, if adopted as a son, inherited his master's property; and it may be that in the phrase addressed to slaves in Col. 3:24: "knowing that from the Lord you will receive the inheritance as your reward," Paul is alluding to this paradox—a slave's becoming possessed of property. If so, his use of the similar paradox of a slave's becoming a son by adoption is rendered the more probable (cf. Rom. 8:17; *see* HEIR).

Further, it has been suggested (though perhaps this is too farfetched) that in Rom. 8:16 ("It is the Spirit himself bearing witness with our spirit") there is actually a reference to the witnesses required in Roman law to the act of adoption. The Holy Spirit of God joins with the spirit of the Christian in giving evidence that an adoption has taken place. Man's spirit crying "Abba! Father!" is inspired by God's Spirit; and together they are witness to the reality of the new status. (As is well known, the word ἐπερώτημα, "appeal," in I Pet. 3:21 may be another instance of the contract language of Roman law, employed as a metaphor in Christian thinking.)

The idea of adoption, when thus linked to the idea of the Holy Spirit, carries in it the same combination of present and future tenses which is carried by the doctrine of the Spirit. Indeed, Rom. 8:23 ("We wait for adoption as sons, the redemption of our bodies") shows that, at least here if not elsewhere, adoption is regarded by Paul as a promise for the future not yet realized. Christians look forward to the future enjoyment of their inheritance, when (as appears in Rev. 21:7) "he who conquers shall have this heritage, and I will be his God and he shall be my son." That is to say, the victorious will be given the messianic status of sons of God (cf. the divine promise to David about his son: "I will be his father, and he shall be my son" [II Sam. 7:14]). In oriental law there was not, as in stricter systems, a clear, formal distinction between the proleptic guarantee of a property and the time when the recipient entered in actual fact into its enjoyment.

Thus, where the Fourth Gospel and I Peter use terms of REGENERATION, Paul uses this legal figure of adoption. Whether we may see reflected in this the dramatic suddenness of his conversion, as contrasted with terms borrowed from the natural course of things, is another matter (cf. I Cor. 15:8). After all, I John 3:1 comes near to describing adoption, even though the word is not used: "See what love the Father has given us, that we should be called children of God; and so we are." (It is a debatable question, however, whether "and so we are" is intended to describe a status even better than merely being "called," or adopted as, sons of God, or whether it is in contrast with "what we shall be" hereafter [vs. 2]). See also John 8:31 ff, cited above. *See* CHILDREN (SONS) OF GOD.

ADORAIM ăd′ə rā′əm [אדורים, two threshing floors(?)]; Apoc. ADORA ə dôr′ə ['Αδωρά; *cf.* Papyrus Zeno 76 (259 B.C.) 'Αδώρεος; Josephus Δωρά]. A city of Judah identified with modern Dura, five miles W-SW of Hebron. Adoraim was among the fifteen cities fortified by Rehoboam (*ca.* 922-915; II Chr. 11:9).

Adora (Adoraim) and Marisa (MARESHAH, Tell Sandahannah) were the two major cities of Idumea. At Adora, Simon Maccabeus stopped the advance of Trypho in 142 B.C. (I Macc. 13:20-21). After the death of Antiochus VII in 129, John Hyrcanus captured Adora, and it was still in Jewish hands at the time of Alexander Janneus, *ca.* 79 B.C. (Jos. Antiq. XIII.ix.1; XIII.xv.4; War I.ii).

In 59 B.C., Gabinius, the proconsul of Syria, ordered the rebuilding of Adora (Jos. War I.viii.4; cf. Antiq. XIV.v.3) and designated it as the center of one of his five administrative districts (War I.viii.5; cf. Antiq. XIV.v.4).

In the book of Jubilees (38:9 ff) Adûrâm (Adora) was the scene of an attack by Esau's forces against those of Jacob which held the fortress of Hebron. In the course of the attack, Esau was killed and was buried at Adûrâm.

2. A son of Sennacherib who, according to II Kings 19:37 (=Isa. 37:38), with Sharezer murdered his father in the temple of Nisroch. The name appears as Andromachos in Jos. Antiq. X.xxiii, and in the Greek sources as Adramelos and Ardumuzan. No Assyriological interpretation of the name can be offered. A. L. OPPENHEIM

ADRAMYTTIUM ăd′rə mĭt′ĭ əm [τὸ Ἀδραμύττιον] (Acts 27:2). A seaport in Mysia in the NW part of the Roman province of Asia.

Herodotus (VII.42) mentions the town of Adramyttium (Ἀδραμύττειον), and Strabo (XIII.613-14) states that it was founded by the Lydians but belonged later to the Mysians. The latter author calls it a notable city and the home of the famous orator Xenocles. The adjectival use of the name is found in Strabo (XIII.605) when he mentions the Adramyttian Gulf (ὁ Ἀδραμυττηνὸς κόλπος), and in Plutarch (*Cicero* 4) when he states that Cicero studied with Xenocles of Adramyttium (Ξενοκλεῖ τῷ Ἀδραμυττηνῷ). It is in the same form that the name occurs in Acts 27:2 when it is said that Paul embarked in an Adramyttian ship (πλοίῳ Ἀδραμυττηνῷ). The Vulg. has *navem Hadrumetinam,* and the reading of the name with a rough breathing is the basis for a theory that the place was originally colonized by traders from Hadhramaut in South Arabia. The modern name of the city is Edremit.

Bibliography. J. R. Harris, "Adramyttium," *The Contemporary Review*, CXXVIII (1925), 194-202. J. FINEGAN

ADRIA ā′drĭ ə [ὁ Ἀδρίας] (Acts 27:27). The sea between Italy and Greece and S of both; the Adriatic Sea.

Among towns around what is now the Gulf of Venice, Strabo (V.214) mentions Atria, a city which was at the mouth of the Po River. He says that it was once an illustrious city, and that the Adriatic Gulf got its name from it with only a slight change in spelling. Livy (V.xxxiii.8) provides the information that Hatria (as he spells the name) was an Etruscan colony, and agrees with Strabo in deriving the name of the Hadriatic or Adriatic Sea from this place. While this derivation would suggest that the name applied originally to the upper gulf, Livy also remarks that Italy was surrounded like an island by two seas—namely, those which the Italians called the Tuscan and the Hadriatic, which the Greeks knew as the Tyrrhenian and the Adriatic. Therefore, the name Adriatic belonged to the sea all the way to the S end of Italy, balancing the Tyrrhenian Sea on the W side. Strabo (II.123) also says that what was called the Adriatic Sea in his time included the Ionian Gulf, which was the sea W of Achaia; and the length of the Adriatic Sea, which he gives as six thousand stadia, or some seven hundred miles, extends this far. Ptolemy, moreover, states that Crete (*see* CAPHTOR) is surrounded on the W by the Adriatic Sea (Geography III.15), and Sicily on the E by the Adriatic Sea (Geography III.4); therefore, the Adriatic included the waters between these two islands. It must have been in this same region that Josephus suffered shipwreck on his journey to Rome in *ca.* A.D. 64, concerning which he writes (Life XV): "Our ship sank in the midst of the sea of Adria." The reference of Acts 27:27 to Paul's ship as being in the sea of Adria (ἐν τῷ Ἀδρίᾳ) when it was moving between Crete and MALTA is accordingly in harmony with contemporary usage. As for the danger of the passage across this sea, it is attested not only by the experience of Josephus at a time so close to that of Paul but also by literary references such as those of Horace, who speaks of the tempestuous waves and breakers of the roaring Adriatic, a sea which is restless and wanton (Odes I.xxxiii.15; II.xiv.14; III.iii.5; ix.23).

The tempestuous wind which drove Paul's ship from Crete to Melita was the Euraquilo (*see* NORTHEASTER; Acts 27:14—ὁ εὐρακύλων, Egyptian text; not εὐροκλύδων, Byzantine text), which means between the Eurus, the E wind, and the Aquilo, the NE wind. Thus it was E-NE, and this agrees with the direction the ship was driven at the outset from FAIR HAVENS to CAUDA. From Cauda on, it may be assumed that the ship was hove to on the starboard tack so that any headway would be away from the dangerous SYRTIS (Acts 27:17) off the African coast and on the course toward Italy, while the drift would be generally westward. The elapsed time from the departure from Cauda to landfall on Melita was thirteen days and a portion of the fourteenth (Acts

27:27). Under the conditions described, sea captains experienced on the run between Malta and Crete estimate a drift of one to two miles per hour. Allowing 36 miles in 24 hours for 13¼ days gives 477 miles and agrees exactly with the measured distance from Cauda to St. Paul's Bay, Malta.

J. FINEGAN

ADRIEL ā′drĭ əl [עַדְרִיאֵל]. Son of Barzillai; husband of Merab, the daughter of Saul (I Sam. 18:19); called "Adriel the Meholathite." He was the father of the five sons of Merab, all of whom David delivered to the Gibeonites for execution (II Sam. 21:8, where with RSV "Merab" is read for "Michal").

E. R. DALGLISH

ADUEL ə dōō′əl ['Αδουήλ=אדיאל] (Tob. 1:1). An ancestor of Tobit, listed among the "descendants of Asiel and the tribe of Naphtali." J. C. SWAIM

ADULLAM ə dŭl′əm [עֲדֻלָּם, retreat, refuge]; ADULLAMITE —ə mīt. A Canaanite royal city in the Shephelah first referred to in Gen. 38:1, 12-20, the account of the marriage to an Adullamite woman and subsequent activities of Judah, son of Jacob, in the region of Adullam.

The ancient name of Adullam is perhaps preserved in the place name Khirbet 'Id el-Ma (or -Miyeh), a site with extensive ruins in the Wadi es-Sur just below Tell Sheikh Madhkur, the site of ancient Adullam, *ca.* 9½ miles E-NE of Beit Jibrin (Eleutheropolis).

The king of Adullam was one of the thirty-one Canaanite kings listed as defeated by Joshua in the course of the Israelite occupation (Josh. 12:15). It was one of the cities assigned to the Judean district of Zorah-Azekah in the Shephelah (15:35).

David took refuge from Saul in a cave near Adullam, where he was joined by his family and other followers (I Sam. 22:1-2). The cave became David's headquarters for a time (II Sam. 23:13 ff; I Chr. 11:15 ff; cf. Jos. Antiq. VI.xii.3).

Adullam was fortified by Rehoboam prior to Shishak's invasion of Judah (*ca.* 918 B.C.; II Chr. 11:7). It was one of the series of fortress cities forming a line of defense against possible invasion from the W and the S.

Adullam may well have been one of the forty-six fortified cities Sennacherib captured during his campaign of 701 B.C. (cf. II Kings 18:13 ff; II Chr. 32: 1 ff). The lament of Micah over the cities of the Shephelah was probably in anticipation of this campaign—or possibly the campaign of Sargon II in 711, when, however, the cities of Judah were apparently spared attack (Mic. 1:8-16, especially vs. 15).

Jewish returnees from the Exile reoccupied Adullam along with other neighboring cities, including Azekah and Lachish (Neh. 11:30). In 164 Judas Maccabeus, in the course of his Idumean campaign, retired to Adullam after defeating Georgias, one of the commanders of Antiochus IV, Epiphanes (II Macc. 12:38 ff; cf. I Macc. 5:55 ff).

V. R. GOLD

ADULTERY [נאף, *possibly from* Egyp. *n h p;* μοιχεύω, commit adultery]. Because of the nature of marriage, adultery was not so much evidence of moral depravity as the violation of a husband's right to have sole sexual possession of his wife and to have the assurance that his children were his own. Adultery was strictly prohibited by law (Exod. 20:14; Lev. 18:20; Deut. 5:18; John 8:2-5 [RSV mg.]). Intercourse with a female slave who was betrothed to another was not a capital offense—only a guilt offering was needed (Lev. 19:22). In other cases, however, the death penalty was demanded (20:10). To determine that a woman had been adulterous, in the absence of any witnesses, she might be required to drink a special concoction (*see* JEALOUSY, ORDEAL OF). Both parties involved in adulterous intercourse were to be killed (Deut. 22:22; cf. 22:23-24; Ezek. 18:11-13; 22:11; Mal. 3:5). Job calls adultery a "heinous crime" (Job 31:11); the adulteress destroys a man (Prov. 6:26 ff). Her tactics are described in considerable detail in Prov. 7:6-23. To look lustfully at a woman is to commit adultery (Matt. 5:28); and marriage with a divorced woman is adultery (Matt. 5:32; Mark 10:11; Luke 16:18). While upholding the law against adultery, Jesus refused to condemn the woman taken in adultery (John 7:53–8:11 [RSV mg.]). Paul points out that marriage after the death of a husband is not adultery (Rom. 7:3).

"Adultery" is used of religious disloyalty and harlotry (Jer. 7:9; 23:10; cf. Ezek. 23:45; Rev. 2:22). Faithless Jews are called offspring of the adulteress and the harlot (Isa. 57:3).

For bibliography *see* MARRIAGE. O. J. BAAB

ADUMMIM ə dŭm′ĭm [אדמים, red rocks, in the phrase מעלה אדמים, ascent of Adummim (KJV going up to Adummim)]. A pass leading from the Jordan Valley into the hill country. A trade route probably used this pass at a very early date to go from Jericho to the city-state of Jerusalem. In all periods, including the present, this pass was apparently a part of the road between these two cities. It formed part of Judah's N boundary (Josh. 15:7) and is a reference point establishing the location of Geliloth on Benjamin's S border (18:17).

Eusebius notes that Maledomni (from *Ma'ᵃalê-ᵃdummîm;* Jerome, Adommim) was a fortress midway between Jericho and Jerusalem. Later, a Templar stronghold was built there. Though the incident of the Good Samaritan may not have occurred there, it is referred to today as the "Inn of the Good Samaritan," following Jerome's suggestion. While perhaps reminiscent of this ancient tradition, the modern Arabic name for this pass S of the Wadi Qelt, Tal'at ed-Damm (the "ascent of blood"), is probably descriptive of the red marl on each side of the pass. V. R. GOLD

ADVENT. A term often used to designate the coming or the second coming of the Christ. *See* PAROUSIA.

ADVENTURESS [נכרי]; KJV STRANGE WOMAN. A woman who lives by her wits, but

largely based upon sex. In Proverbs (23:27; cf. 6:24; etc.) the term is often parallel with HARLOT. Perhaps first the "harlots" were foreigners; thus the KJV translation, "strange woman," is more literal.

C. U. WOLF

ADVERSARY. A conventional, and literal, rendering of Hebrew SATAN.

ADVOCATE. The translation of παράκλητος in I John 2:1 (elsewhere COUNSELOR; COMFORTER). As the living "expiation for our sins," Christ is man's advocate with the Father. He is the representative of man to God, making intercession for man as advocate and helper. The same function is performed by the Spirit (John 14:16) as the mediator of the ascended Christ to his people.

AEDIAS. KJV Apoc. form of ELIJAH.

AENEAS ĭ nē′əs [Αἰνέας]. A man at Lydda whom Peter cured of the palsy (Acts 9:33-34). He is otherwise unknown. The name appears in Homer (Αἰνείας), Thucydides, Xenophon, Pindar, and Josephus (Antiq. XIV.x.22). H. H. PLATZ

AENON ē′nŏn [Αἰνών, *from* עינים, עינן, עינון, double spring; LXX Αἰνάν] (John 3:23). A site rich in water, where John the Baptist was active. It was near a place called SALIM. The mention of Judea in the preceding verse (and the connecting ἦν δὲ καὶ introducing 3:23) supports the tradition locating this Aenon in Perea beyond the Jordan, which was part of Judea in the wider sense. This identification appears first on the Madaba Map (1.6), where to the name Aenon are added the words ἔνθα νῦν ὁ Σαπσαθάς, "there now the Sapsaphas" or "willow." The localization of the spring where John baptized is supported by Antoninus, a sixth-century pilgrim guide. A cave of Saint John is mentioned by Cyrillus Scythopolitanus; it is located beyond the Jordan by Epiphanius Monachus (*ca.* A.D. 840) and John Phocas (1177). John Moschus (*Pratum Spirituale* 1-2) mentions a cave where a monk of Saint Eustorgius saw a vision of the Baptist and where the patriarch Elias of Jerusalem (494-518) built a church. It is localized in the Wadi Kharrar, near the Jordan ford opposite Jericho.

The other tradition places Aenon S of Scythopolis (Beth-shean) in the Jordan Valley W of the river, but outside Judea as it was understood in the time of Jesus. The earliest evidence for this tradition is Eusebius (Onom. 40.1-4), who refers to an "Aenon near Salim" shown eight miles S of Scythopolis, and calls it a "spot" (τόπος) near Salim and the Jordan. He is followed by the Madaba Map (1.1); and the pilgrim Aetheria describes the site as situated in a garden with a spring or pool, the latter possibly indicated by a bluish-green row of cubes in the Madaba Map. Jerome (*Epistle* 73) also supports this location. The indications of Eusebius point to a place near Tell er-Ridgha, eight miles S of Beth-shean, a region particularly rich in water. Some travelers have noted the local Arab name Sheikh Salim in the vicinity.

Bibliography. P. Thomsen, *Loca Sancta* (1907), pp. 18-19. F.-M. Abel, "Exploration de la vallée du Jourdain," *RB*, XXII (1913), 220-23; "La laure de Sapsaphas," *RB*, XLI (1932), 248-52. M. Avi-Yonah, *The Madaba Mosaic Map* (1954), pp. 35-38. M. AVI-YONAH

AEON ē′ən, —ŏn [αἰών; *related to* Lat. *aevum*, *ae(vi)ternus*]. The word used in the LXX and in the NT in the sense "long span of time," "eternity" (*see* TIME §§ 1*b-c*). After the first century B.C. it becomes, in the meaning of "world's age" and "world," the term for the apocalyptic doctrine of the present and the coming aeon (*see* APOCALYPTICISM; ESCHATOLOGY OF THE APOC. AND THE PSEUDEP.), which also plays a role in the NT (*see* ESCHATOLOGY OF THE NT) and in rabbinical Judaism. E. JENNI

AESORA ĭ sôr′ə [Αισωρα]; KJV ESORA. A city grouped with CHOBA and the valley of Salem (Jth. 4:4), identified by some scholars with the HAZOR of Josh. 11:1, 10; Judg. 4:2, 17, the modern Tell el-Qedah N of the Sea of Galilee in Naphtali. But if the writer is referring to N Transjordan opposite Choba, it is possible that he mistakenly located Aesora there, perhaps on the basis of such texts as II Kings 15:29; Jer. 49:28-33, which relate Hazor to this NE part of Palestine. Another hypothesis is Khirbet Hazzūr, the Hazor of Neh. 11:33.

AFFLICTION. *See* SUFFERING.

AGABA. KJV Apoc. form of HAGAB.

AGABUS ăg′ə bəs [Ἄγαβος, Ἀγαβος; חגב, locust, *and a proper name* HAGAB, *or* עגב, to love]. A Christian prophet from Judea who had a charism and spoke "by the Spirit."

In Acts 11:28 it is recorded that Agabus went with other prophets from Jerusalem to Antioch and foretold a famine "over all the world"—i.e., probably Judea. There was a famine in Judea under the Emperor Claudius, apparently *ca.* A.D. 46-47. In Acts 21:10-11 Agabus predicts, by a symbolic act, that Paul will be "bound" by the Jews at Jerusalem and handed over to Gentiles—a prophecy not precisely fulfilled. The Greek church, holding him a martyr, celebrates his festival on March 8.

Bibliography. Jos. Antiq. XX.ii.5; v.2. Tac. Ann. XII.43. Suetonius *Claudius* 18. K. Lake, *Beginnings of Christianity*, V (1933), 452-55. B. H. THROCKMORTON, JR.

AGADE ə gä′dĭ. *See* ACCAD.

AGAG ā′găg [אגג]. An Amalekite king, defeated by Saul, put to death by Samuel (Num. 24:7; I Sam. 15:8-9, 20, 32-33). Saul's battle against the Amalekites under Agag was the occasion for his decisive split with Samuel. Saul had disobeyed Samuel's directive that all the Amalekites and their property be destroyed (*see* DEVOTED); and when Samuel confronted him with this disobedience, he first offered a pious excuse and then attempted to shift the blame to his people. Samuel himself then executed Agag, whose "sword has made women childless" (I Sam. 15:33).

The theological description of Saul's disobedience and resultant loss of the kingship bears close resemblance to the story of man's disobedience in the Garden of Eden and his expulsion therefrom.

Bibliography. B. D. Napier, *From Faith to Faith* (1955), pp. 112-17. R. F. JOHNSON

AGAGITE ā'gə gīt [אגגי, *probably* descendant of Agag]. The designation of Haman (Esth. 3:1 ff). The reference is probably to Agag king of Amalek, ancient enemy of Israel (Deut. 25:17-19); for Mordecai, the adversary of Haman, is described as a descendant of Saul, the adversary of Agag (Esth. 2:5; cf. I Sam. 15:7 ff). The LXX understood the term as "enemy" (cf. Esth. 9:24). D. HARVEY

AGAPE ä gä'pā. The transliteration of αγάπη, one of the Greek words for "love." *See* LOVE. *See also* AGAPE, THE, for a special use of the term in the life of the early church.

AGAPE, THE ăg'ə pĭ [ἀγάπη, love]. The name commonly used to denote the "love feasts" of the early Christians, the meals provided by church members for religious fellowship and especially for charity to the poor and the widows of the Christian community. The custom derives from the earliest days of the church, and may well be rooted in the common meals of Jesus with his disciples, or in such instances of his ministry as the feeding of the multitude (Mark 6:34-44; 8:1-9, and parallels).

The evidence for these meals in Acts (2:42, 46; 6:1-2) is involved in the problem of distinguishing clearly between the agape and the Lord's Supper. The same ambiguity surrounds Paul's discussion of the Lord's Supper in I Cor. 11:20 ff, the breaking of bread at Paul's farewell visit to the church in Troas (Acts 20:11), and—for the early years of the second century—the directions for common meals in the Didache 9–10, the mention of the agape by Ignatius of Antioch (Smyr. 8:2), and the Christian meals reported by the pagan Pliny the Younger during his governorship of Bithynia in the year 112 (*Letters* X.97: "the custom . . . of gathering together for the taking of food—food of an innocent kind"). For a fuller discussion of the problem, *see* LORD'S SUPPER § 3.

By the middle of the second century, the agape meal for fellowship and charity, generally held in the afternoon or evening, had been definitely separated from association with the sacramental rite of the Lord's Supper or Eucharist. The only reference in the NT to the agape in this distinct sense is in Jude 12 (with which one should compare the variant reading ἀπάταις-ἀγάπαις in a parallel passage of II Pet. 2:13). The technical use of the term "agape" for these meals is attested by Clement of Alexandria (*The Instructor* II.1 ff) and in Tert. Apol. 39.16: "Our supper is called 'love' [*dilectio*] by the Greeks." Clement also applies to the agape the Pauline title "Lord's Supper" (*The Instructor* II.2.33); and the same designation for the agape occurs in the Latin and Coptic versions of Hippolytus' *Apostolic Tradition* 26.5.

The customs attending the Christian agapes stem originally from the table observances of Jewish families and associations, particularly the more formal suppers that inaugurated sabbaths and festivals. The Mishnaic and Talmudic tractates *Berakoth* ("Blessings") provide numerous details of these suppers; and despite the rabbinic disputes over the exact order of procedure at them, one may with a fair degree of accuracy reconstruct the customs obtaining in the first century A.D.

The family or group of friends would gather for supper, before sundown, at home or in a suitable house. After preliminary hors d'oeuvres, including wine when it was available, the company reclined or sat at table for the meal proper. The head of the group formally began the meal by pronouncing a benediction—i.e., a thanksgiving to God—over the bread, which was then broken and distributed. During the meal conversation, though festive and joyous, was devoted to religious topics. With the fall of night lamps were brought in and a benediction recited blessing God as the Creator of light. At the conclusion of the meal, the hands were washed, and a final benediction for food (grace after meals) was offered by the head of the company. On sabbaths and festivals, and other occasions of special solemnity, the grace after meals was said over a cup of wine mixed with water—the "cup of blessing" (cf. I Cor. 10:16) —with special remembrance before God of his providence and a prayer for the fulfilment of his purpose in the coming of his kingdom. At a later time, when these meals were observed after the conclusion of the synagogue service, and hence after sundown, the blessing over the cup was said at the beginning, rather than at the end, of the meal.

Jewish associations of a more highly organized and disciplined character made much of these meals in the promotion of their common life. They were a regular feature of the Essene communities, and are described in the Manual of Discipline discovered among the scrolls of their center at Khirbet Qumran near the Dead Sea (*see* DEAD SEA SCROLLS): "And when they prepare a table to eat, or wine to drink, the priest shall first stretch forth his hand to invoke a blessing upon the first portion of the bread and the wine." This regulation is placed in the context of rules for the gathering of the community for counsel, study of the Law, and worship. Candidates for admission to the community were not allowed to participate in these common meals until they had passed a two-year novitiate.

Similarly, Philo describes the evening assemblies of the Jewish sect of Therapeutae near Alexandria (*On the Contemplative Life* 10-11). After the exposition of the scriptures conducted by the "president" and the singing of psalms and hymns, "the younger members bring in the table, on which is set a very pure meal of leavened bread seasoned with salt mixed with hyssop." After supper, a vigil of antiphonal chanting and dancing continued until sunrise. Then; after prayer, the group dispersed.

Gatherings of early Christian disciples, as depicted in Acts and the letters of Paul, exhibit practices analogous to those of the Jewish sectaries. In conjunction with their common meals, time was devoted to the variously edifying ministries of spiritual gifts—preaching, prophesying, and speaking in tongues (cf. I Cor. 12; 14), teaching and exhortation, and the

singing of "psalms and hymns and spiritual songs" (Col. 3:16-17; cf. Eph. 5:19-20). This is the case whether or not one distinguishes the blessings over the bread and wine, as the "Lord's Supper" in the strictest sense, from the rest of the meal and devotional observances. For all these devotions were related to the act of "thanksgiving"—i.e., the Eucharist (cf. I Cor. 14:16; Col. 3:17). But a peculiarly Christian emphasis was given this table fellowship by its association with charitable gifts and provisions for widows (Acts 6:1) and the poor (I Cor. 11:21).

The regulations and forms for the church's common meals given in the DIDACHE, chs. 9-10, provide: a thanksgiving over the cup and bread before the meal—and this blessed food is called "Eucharist" and denied to the unbaptized—and a thanksgiving for food after the meal, with a petition for the coming of the kingdom. There is, however, in these forms no memorial of the Lord's passion and death. This fact, plus the circumstance that these regulations were made for the guidance of lay people in churches without a settled ministry but visited from time to time by inspired prophets and teachers, lends weight to the position of those critics who interpret the Didache forms as table blessings for an agape. For later, in chs. 14–15, charge is given regarding the Sunday Eucharist, with directions for obtaining a ministry of bishops and deacons. The thanksgiving forms of the Didache show an unmistakable lineage with Jewish table blessings. It is possible, however, that the Didache preserves a primitive combination of the Eucharist with a regular meal, such as may have survived in smaller Christian communities for some time in the second century.

The most detailed accounts of the agape, once it was separated from the Eucharist, come only from the end of the second century, in the *Apology* of Tertullian (39.16) and the *Apostolic Tradition* of Hippolytus. Their descriptions show the Jewish origins of the observance: the devotions before and after the meal, and the religious conversation during the repast; the washing of the hands and lighting of the lamps. An interesting Roman feature in Hippolytus' account is the mention of an *apophoretum,* the tasty morsels and tidbits that guests were allowed to take home with them from the table of their host. Hippolytus also lays particular stress upon the provision of agapes for the benefit of widows.

A special form of agape developed in the second century and derived from pagan custom was the funerary and anniversary banquets associated with the memory of departed Christians. Near the entrance to the oldest Christian cemeteries at Rome, the catacombs of Domitilla and of Priscilla, there are chambers with benches for the celebration of these memorial repasts. Some of the earliest Christian art preserved in the catacombs provides pictorial representations of these feasts. *See* ART. *See also* WORSHIP IN THE NT, CHRISTIAN, especially §§ 3-4.

M. H. SHEPHERD, JR.

AGAR ā'gär. Douay Version form of HAGAR.

AGATE. A chalcedony with more or less concentric bands, generally white and brown, frequent in Egypt. Three words are so translated:

a) שבו, *šebhô* (cf. Akkadian *šubu,* "a stone"; LXX and Vulg. "agate"). A stone in the breastpiece of judgment (Exod. 28:19; 39:12).

b) בדכד, *kadhkōdh.* In Isa. 54:12 this is the material of the pinnacles of Jerusalem; the LXX and the Vulg. read "jasper," a red, green, or brown silica. In Ezek. 27:16 it is an article of trade between Syria and Tyre; the LXX and the Vulg. transliterate.

c) Χαλκηδών (Rev. 21:19). The third jewel in the foundation of the walls of the New Jerusalem.

See also JEWELS § 2.

W. E. STAPLES

AGE. An expression, not always sharply defined, for a long period of time (limited or unlimited); in the NT often a translation of αἰών, "AEON" (*see also* TIME §§ 1*b-c*). For the expressions "close of the age," "age to come," etc., which presuppose the late Jewish doctrine of the two ages of the world, *cf.* APOCALYPTICISM; ESCHATOLOGY OF THE APOC. AND THE PSEUDEP.; ESCHATOLOGY OF THE NT.

E. JENNI

***AGE, OLD.** Old age in the Bible is a reward for the good life and a sign of wisdom, and the aged command respect.

1. Terms
2. Symptoms of age
3. Numerical age
4. Attitudes toward age
5. The elder
6. Old age in eschatology

1. Terms. Among the biblical Hebrew terms relative to old age the commonest is זקן, *zāqēn,* "old man," cognate to which are the less common abstract nouns *zō'qen, ziqnâ,* and *z^{e}qûnîm,* "old age." The word for "beard" (*zāqān*), general in Semitic languages, may be the primary form of which these other words are derivatives. Such nouns and phrases as שיבה ("age"—i.e., gray-headedness), ישיש ("aged"—i.e., decrepit), בא בימים ("old"—i.e., come into days), שבע ימים ("old," i.e., with fulness of days), occur as synonyms of *zāqēn.*

2. Symptoms of age. Allusions to the physical symptoms of age are frequent. The commonest terms for age, as above, allude to the beard and gray hair. Abraham and Sarah are beyond the age of begetting and bearing children, and the birth of Isaac is considered an act of providence (Gen. 18:11-14; cf. Luke 1:18). Isaac, as the end of his life approaches, and Eli the ancient priest are blind (Gen. 27:1; I Sam. 3:2; 4:15, 18). Barzillai complains of the failure of his other senses, of taste and hearing (II Sam. 19:35—H 19:36). David suffers chills, and a companion must comfort him with her warmth (I Kings 1:1-4). The classic description of the infirmities of old age is Eccl. 12:1-5; although its poetic symbols are in

part obscure, the passage is distinguished for its tenderness and beauty.

3. Numerical age. The sources suggest the numerical age at which one might be considered "old." Irrelevant are the fantastically long lives of the quasi-immortal mythological fathers of the human race in the early chapters of Genesis (especially 5; 11) and even the heroically long lives of the semihistorical Hebrew patriarchs (Abraham: 175 years—Gen. 25:7; Isaac: 180 years—35:28; Jacob: 147 years—47:28; Joseph: 110 years—50:22) and of Moses, who according to the tradition died at the age of 120 still possessed of youthful vigor (Deut. 34:7). Such figures are symbols—theology, not vital statistics (*see* GENEALOGY; LIFE; METHUSELAH; MYTH, MYTHOLOGY, OT). The more reasonable figures on the ages attained by the kings of Israel and Judah suggest that biblical man had what we might yet call a normal life expectancy. M. Ab. 5.21 calls sixty *ziqnâ* and seventy *śêbhâ*. The psalmist says:

> The years of our life are threescore and ten,
> or even by reason of strength fourscore
> (Ps. 90:10*a*).

Ben Sirach calls a hundred a ripe old age (Ecclus. 18:9).

If normally a man attained the age of seventy or eighty, it is probable that he showed signs of age at sixty. And it is not strange, then, that the legislation concerning vows in Lev. 27:1-8 makes sixty the dividing line between what appears to be the mature and the aged. At any rate, the redemption price for a man or a woman sixty years old and upward is less than the price for one between the ages of twenty and sixty—on the ground, no doubt, of presumed diminished usefulness after sixty.

4. Attitudes toward age. While the legislation in Lev. 27 suggests the number of years at which old age was thought to set in, it is somewhat misleading as concerns attitudes toward the aged in biblical society. The aged commanded and enjoyed respect. A precept in the Holiness Code directs: "You shall rise up before the hoary head, and honor the face of an old man" (Lev. 19:32*a*). This respect for the aged is like the honor shown to parents (Exod. 20:12), as indeed a NT passage recognizes (I Tim. 5:1-2; cf. also Ruth 4:15; Prov. 23:22). In his description of a chaotic society Isaiah includes as a symptom:

> The youth will be insolent to the elder,
> and the base fellow to the honorable
> (Isa. 3:5*b*);

cf. Deut. 28:50; Lam. 5:12; Isa. 47:6.

The elders were esteemed as men of experience and custodians of the tradition:

> Remember the days of old,
> consider the years of many generations;
> ask your father, and he will show you;
> your elders, and they will tell you
> (Deut. 32:7).

Elihu keeps his counsel until his elders among Job's friends have finished, expecting wisdom from them:

> I said, "Let days speak,
> and many years teach wisdom"
> (Job 32:7).

There is irony in Elihu's words, but it is an accepted view which he is challenging. Ben Sirach says: "Much experience is the crown of old men, and the fear of God is their glory" (Ecclus. 25:6 KJV), and it was considered axiomatic that

> Wisdom is with the aged,
> and understanding in length of days
> (Job 12:12; cf. 15:9-10),

although a proverb likewise rejects the generalization, saying instead: "Better is a poor and wise youth than an old and foolish king" (Eccl. 4:13).

It was, accordingly, an honor to attain advanced age, and a sign of God's favor: "The beauty of old men is their gray hair" (Prov. 20:29), and

> A hoary head is a crown of glory;
> it is gained in a righteous life
> (Prov. 16:31).

5. The elder. The old man is not necessarily to be equated with the ELDER, who occupied an official position in biblical society, though indeed the experience and wisdom of the older man would fit him for such judicial and administrative responsibilities as the elder discharged.

6. Old age in eschatology. Old age is a feature also of eschatology. Going beyond the deuteronomic expectation of long life for such as keep the commandments (Deut. 30:19-20, and often), biblical eschatology contemplates a return at the end of time to the state of quasi immortality characteristic of the beginning (*see* § 3 *above*); it even speaks of an end of dying: "He will swallow up death for ever" (Isa. 25:8). On the way to this ultimate, such thoughts appear as Zech. 8:4: "Old men and old women shall again sit in the streets of Jerusalem, each with staff in hand for very age," and Isa. 65:20 (translated as in *IB*, V, 755-56):

> No more shall there be in it
> an infant that lives but a few days
> or an old man who does not fill
> out his days,
> for the child shall die a hundred years old,
> and he who comes short of a
> hundred years shall be [counted]
> accursed.

S. H. BLANK

AGEE ā′gē [אגא]. The father of Shammah, who is named third among the "Three" of David's high command (II Sam. 23:11); called "Agee the Hararite." The various proposals to emend the name Agee (e.g., *l.c.* G^L אלא) appear unwarranted, since the reading of the MT is supported by IQSam.

E. R. DALGLISH

AGGEUS. KJV Apoc. form of HAGGAI.

AGIA ā′gĭə ['Αγιά]; KJV AUGIA ô′gĭə. Wife of JADDUS (I Esd. 5:38), who was the ancestor of a family of unregistered pretending priests at the return from Exile. She was a Gileadite and probably an heiress, because her husband took her father's name, BARZILLAI. N. TURNER

AGONY. For the general meaning, *see* SUFFERING AND EVIL. The term is used especially in connection with Jesus' suffering and struggle in GETHSEMANE.

AGORA ăg′ə rə [ἡ ἀγορά, *from* ἀγείρω, to bring together]. Originally, the assembly place or market place as in ATHENS and CORINTH. *See* MARKET PLACE.

AGRAPHA ăg′rə fə [ἄγραφα]. A term coined by J. G. Körner in the eighteenth century for sayings purporting to be by Jesus but not recorded in the canonical gospels. The use of the term, which literally means "unwritten things," is due to the view that some of these sayings are survivals of an unwritten tradition, preserved orally and essentially parallel to our written gospels.

Many collections have been made of this material, which ranges from short, aphoristic utterances to lengthy discourses and which dates from the earliest days to the present. Earlier scholars regarded many of them as genuine sayings of Jesus, and saw their source in an early oral gospel from which our canonical gospels drew heavily but not exhaustively. While far greater caution is shown today in such estimates, all judgments are bound to be subjective. Long discourses, often highly doctrinal, as in the PISTIS SOPHIA and in such romances as the Apocryphal Acts, Gnostic and Catholic alike, may be safely disregarded; but there are many terse and wholesome utterances, utterly unobjectionable and free from the bias of dubious theology or the tinsel of fantasy, which have appeared to many critics as not inappropriate to the Jesus of the canonical gospels. The fact that they are not in the canonical gospels is not in itself conclusive, but the parallel fact that so few of them are of a nature to appear to most investigators of an age and quality to make ascription to the Jesus of history probable, would suggest that the authors of the canonical gospels left very little primitive tradition out of their collections.

Many of the sayings are simply amplifications, variations, or combinations of words that are used in the canonical gospels and that appear in revised form in the later, apocryphal gospels, as in the story of the rich ruler, who scratched his head in perplexed displeasure and received a word of reproof. There are variant versions of the parable of the talents, and of Matt. 18:22—"If thy brother sin in word and give thee satisfaction, receive him seven times in the day. . . . Yea, I say unto thee, until seventy times seven; for with the prophets also, after they were anointed with the Holy Spirit, there was found sinful speech."

Several of these Agrapha occur in gospel MSS, notably the amplified parallel to Luke 14:8-11, which stands in Codex Bezae (D) at Matt. 20:28, or the famous rejoinder by Jesus to the man working on the sabbath: "Man, if thou knowest what thou art doing, blessed art thou; if thou knowest not, thou art accursed and a transgressor of the law," which is found at Luke 6:4 in the same MS. Here the problem is essentially one of textual criticism, for several of the words of Jesus, now printed in many texts of the Bible (e.g., Matt. 6:13; Mark 16:15-18; Luke 23:34) are textually of a nature to suggest that they are later additions and thus strictly as much Agrapha as some of the others regularly listed as such.

In addition to sayings that stand in individual gospel MSS are a few words attributed to Jesus in the NT but outside the gospels, notably the logion: "It is more blessed to give than to receive" (Acts 20:35), and the words quoted by Paul as Jesus' own at the institution of the Lord's Supper (I Cor. 11:24-25). As an indication of how these Agrapha grew, it may be observed that in the Apostolic Constitutions (VIII.12) Paul's next word has become a direct quotation: "For as often as ye eat this bread and drink this cup, ye do show *my* death until *I* come."

The great majority of the Agrapha come from apocryphal writings; the OXYRHYNCHUS SAYINGS OF JESUS; Christian fathers, both early and late; the so-called Gospel of Thomas, a Gnostic work discovered at Chenoboskion in 1946; the Talmud; and Mohammedan sources; with little or no certain indication, in the large majority, of their precise date or point of origin.

Bibliography. A fair sampling of the Agrapha is provided by M. R. James, *The Apocryphal NT* (1924), pp. 33-37, in addition to others included in other sections of the same work. The article "Agrapha" by J. H. Ropes, in the extra volume of *HDB* (pp. 343-52), may still be studied with profit, for in addition to the full bibliography of the earlier work in this field, there is there printed a lengthy and judiciously chosen list of passages (with Eng. trans.) of the various sorts, including the forty-eight Agrapha from Mohammedan sources published by D. S. Margoliouth. M. S. ENSLIN

***AGRICULTURE.** The art of arable farming, including the tools and methods used and the difficulties which the farmer faces. Agriculture is intimately related to the religion and literature of the Bible.

Bibliography

1. Introduction. From prehistoric times to the present day, the people of Palestine have been, in the main, agriculturists. Excavations in the Wadi el-Mughara on the W edge of the Mount Carmel range reveal clear evidence of agriculture in the Mesolithic period (*ca.* 8000-7000 B.C.). Agricultural implements, especially flint sickles, sickle edges together with curved bone handles with grooves into which the small flints were put, found in abundance at this site, suggest that the Natufian people were engaged in farming. An abundance of fragments of basalt

mortars and pestles also give rise to the inference that these people made flour of the wheat or millet which they harvested. At Tell es-Sultan an advanced culture as early as 7000 B.C. is now in evidence, and although not a large number of agricultural implements have been found, the few that have appeared, together with the nature of the community itself, strongly suggest that these people were likewise food producers. In Mesopotamia at Jarmo an abundance of agricultural implements clearly attests to a highly developed stage of agricultural activity in the fifth millennium B.C.

Industry and commerce have seldom constituted the basis of a large percentage of the income of the inhabitants of Palestine. Instead, they depend upon the produce which could be grown from the land for their life and livelihood. Food, clothing, and shelter have been, to a great extent, the results of the tilling of the soil and related activities such as the raising of domesticated animals. Hence the words:

> In toil you shall eat of it [i.e., the ground] all the days of your life;
> . . . . . .
> In the sweat of your face
> you shall eat bread (Gen. 3:17, 19)

have had real meaning for the people who have lived in this land through the centuries. It is not surprising that all facets of the life of these people have been greatly influenced by their sense of almost complete dependence upon the land and what could be produced by working it. Greatly affecting the nature and abundance of the crops were two elements over which the people had little or no control: the nature of the land itself and the climate. Thus it seemed not enough for them to plow, to sow, and to reap; they must, in addition, enter into some kind of relationship with the God who could guarantee an abundance of those things essential to life itself. Consequently, the religion of the people of Palestine was in ancient times directly related to their agricultural life.

The Israelite religious year revolved around the cultivation of the crops, so that the major fasts and feasts have both an agricultural and a religious significance. Whatever needed to be done to ensure an abundant harvest was done: fasting at the beginning and feasting at the end. In addition, many of the civil laws pertained directly to the agricultural life of the people. Hence it is important to have an appreciation of the fact that this was first and foremost an agricultural civilization, before it is possible to have an adequate understanding of the whole life of the people of the Bible.

2. Hardships faced by the Palestinian farmer. Nothing grows easily in Palestine. The entire year was one of unending toil, and it was literally in the sweat of his face not only that the farmer ate bread but that he was able to provide himself with most, if not all, of the basic necessities of life.

a. Nature of the land. Although the land was better in ancient times than it is now, with thicker layers of fertile soil overlaying the rock beneath, still there are abundant references to the stones which made the work of the farmer so difficult. "He digged it and cleared it of stones" (Isa. 5:2) is a sentence that tells of the first and constant activity of every farmer. It was only necessary to fill a land with stones to render it useless (II Kings 3:19, 25). Hence the poet expressed what every man knew to be the truth if he was to succeed, when he wrote: "You shall be in league with the stones of the field" (Job 5:23). An Arabic story expresses well what every Israelite farmer must have felt. When Allah was creating the world, he entrusted all the stones to two angels, each with one bag full. As the angels were flying over Palestine, one of the bags broke and spilled out on this tiny land half the stones intended for the whole world!

Not only is the land stony, but it is also very hilly and was so in ancient times (*see* PALESTINE, GEOGRAPHY OF). The number of fertile valleys is limited indeed, and a high percentage of the farming has to be done on hillsides. As early as the Middle Bronze Age terracing was used in order to give the farmer a larger cultivable area. On the other hand, the soil in many parts of both the hills and the plains is very suitable for agricultural purposes, and it was possible in some areas to grow two crops of grain in one year (Amos 7:1). Even today, after a great amount of erosion has taken place in the intervening centuries, the land in many parts of Palestine will yield richly if sufficient water is available.

b. Climate. The Palestinian farmer not only faced the problem of tilling a land difficult at best, but he likewise found himself at the mercy of a varied climate. Palestine is a land of climatic contrasts. One of the most striking aspects of the climate is the five-month summer season without a drop of rain (although there may be exceptions). The Israelite farmer could look forward to a hot, dry season from the middle of May to the middle of October, for which he would have to prepare during the rainy winter months. But if the summer drought was certain, the rainy season was unpredictable. If there were abundant rains, then the crops would be good; but if not, then there would be famine.

c. The problem of water. The only safeguard for the farmer was to furnish himself with adequate storage places for WATER; hence the large number of cisterns that have been found on every major site in Palestine (II Chr. 26:10; Neh. 9:25). Even then there might be too little rain to fill the cisterns. In the Nabatean, Roman, and Byzantine periods a strong, central government was able to draft men to build dams and reservoirs such as those at Umm el-Jemal, Kurnub, and in the Wadi Dhobai, which helped materially in raising the total productivity of the land. *See* ARCHAEOLOGY.

In the earlier periods in addition to the cisterns the farmer made use of springs and perennial streams such as the Kishon, the Jabbok, and the Wadi Kufrinjeh (as it is known today) for purposes of artificial irrigation. Such water would have to be carried or, when possible, run onto the fields by means of water canals. Unfortunately there is too little evidence to furnish a clear, detailed picture of the methods of artificial irrigation employed in ancient Israel, but the numerous irrigation ditches which divert the water from the Wadi Zerqa and the Wadi Kufrinjeh (to name just two in the Jordan Valley) suggest that the same thing might well have been done in ancient times. Whether the term דלי, "bucket"

(Num. 24:7; Isa. 40:15), refers to something used for irrigation purposes is not certain; but no doubt the Israelite farmer discovered, as has the modern Arab, that when he was able to get additional water onto his land, his crops were that much more abundant.

d. Other factors. In addition to the question of rainfall, other factors also materially affected the farmer and his crops. Numerous references to dew (טל) attest to the value it had for the production of good crops (Gen. 27:28; Deut. 33:28; Prov. 19:12; Hos. 14:5; Zech. 8:12). The lack of dew was taken as a sign of catastrophe or of God's disfavor (II Sam. 1:21; I Kings 17:1; Hag. 1:10). The heavy dew comes in late August and September, and the Arab farmer today eagerly awaits it. So valuable is the dew that he goes out in the light of the moon or in the early morning to hill his tomato plants or to turn the earth around his vines so as to preserve as much of the precious moisture as possible. Even in the dry summer a cool night may produce a heavy fall of dew and thus help to prevent the plants from being scorched by the next day's sun.

The hot winds from the E desert, the siroccos, could play havoc with any growing thing (Isa. 27:8; 40:6-8; Ezek. 17:10; Hos. 13:15; Luke 12:55). The siroccos occur from the middle of September to the end of October. They last from three days to a week, during which time the temperature rises as much as twenty degrees Fahrenheit above the average and the air is filled with a yellowish haze. The humidity drops sharply, and almost every drop of moisture seems to have been wrung out of the air. A prolonged sirocco is one of the farmer's most dreaded experiences.

Finally, insects and plant disease greatly increased the danger of crop failure. Of these, probably the LOCUST was the most dreaded (Deut. 28:42; I Kings 8:37; Joel 1:4). In a few days a plague of locusts could devour a whole countryside, leaving nothing but a few dry stalks. Against this disaster the ancient farmer had no protection; his only hope lay in the sudden rise of a strong, steady wind (Exod. 10:19). The Israelite farmer was also bothered by fungus growths, especially mildew (ירקון; *Puccinia graminis;* Deut. 28:22; I Kings 8:37; Amos 4:9; Hag. 2:17). It attacks the leaves of grass plants, finally destroying the plant altogether. Mildew is always mentioned along with שדפון, "blasting," "scorching," or "blight."

3. The crops. Three crops dominated the agricultural life of the country: the vine, the olive tree, and grain;

> wine to gladden the heart of man,
> oil to make his face shine,
> and bread to strengthen man's heart
> (Ps. 104:15);
>
> Behold, I am sending to you
> grain, wine, and oil
> (Joel 2:19).

These three products appear together in innumerable passages attesting both to their importance and to their widespread cultivation (Gen. 27:28; Deut. 7:13; II Kings 18:32; Neh. 5:11; Hos. 2:8; Joel 1:10; Hag. 1:11).

a. The vine. The grape VINE (גפן or גפן היין; Num. 6:4; Judg. 13:4) was no doubt very widely grown throughout the whole Mediterranean world. It grew well and, once planted, required a minimum amount of care: mainly loosening the ground occasionally and pruning in the spring when the first blossoms appeared. Just as today, so in ancient times there may have been a variety of kinds. The terms שרק (Isa. 5:2; Jer. 2:21), שרקה (Gen. 49:11), and שרק (Isa. 16:8 [translate 8*b*: "The lords of the nations have struck down its choice vines]) may refer to a special kind of blood-red grape (Arabic *sharigun* is used for anything with a beautiful red color). The fruit of the vine was no doubt eaten fresh, as well as dried into raisins. For the most part, however, the grapes were turned into wine by being trampled in the wine vat located either in the vineyard or nearby. Fig. WIN 24.

b. The olive tree. The OLIVE TREE (זית; ἐλαια) was particularly well suited to most areas of the land of Palestine, since it will grow in very shallow soil and is able to endure long periods of drought. It does not stand severe cold, however, and consequently does not do so well in S Judah. The olive HARVEST was the first in the year, but since the ripening process is slow, the farmer might pick his olives as his time permitted. Like the grapes, the olives could have been eaten fresh but were most valued for their oil, which served as a substitute for the scarcer animal fats. Figs. OLI 7-8.

c. Grains. The third crop which has been mentioned is grain. Of the grains WHEAT (חטה) was undoubtedly the most important. The variety *Triticum sativum,* it probably grew best in Galilee. It was planted in the fall when the winter rains had started, sometime in late October or early November, and harvested in May-June. BARLEY was also widely grown but may have been at times considered a second-class food. It is a product of a drier climate and was probably grown most extensively in the S and E. It may well have been grown in fields adjoining the wheat fields where the soil was not so good, since it does not require as good a soil as wheat. Barley was planted at about the same time as the wheat but harvested about a month earlier (Ruth 2:23). A third grain was SPELT (כסמת; *Triticum spelta*), translated in the KJV as "rye" (Exod. 9:32). It was an inferior kind of wheat and was planted around the borders of the wheat and barley fields (Isa. 28:25).

d. Flax. Another important crop was FLAX (פשת or פשתה; *Linum usitatissimum*), from which linen cloth and rope were made (Judg. 15:14; Hos. 2:5, 9—H 2: 7, 11). Flax was harvested a month before the barley, by being hoed off at the ground so as not to lose any of the stalk. After it was cut, it was laid out in the sun to dry (Josh. 2:6). Fig. HAR 7.

e. Dates. Although there is no explicit mention in the Bible of dates as food, numerous references to the palm tree (תמר) strongly suggest that its cultivation also played an important part in the life of the farmer. The date palm was known over a large part of the ancient Near East in the S latitudes and in Palestine flourished especially in the Jordan Valley N of the Dead Sea (Deut. 34:3; Judg. 1:16). It is referred to by such writers as Pliny, Strabo, and Josephus, who speaks of the syrup made from the dates (War IV.viii.3). The Mishna also speaks of date honey (דבש תמרים). Dates may also have been

made into cakes as were figs. The Talmud mentions date wine (יין תמרים), and some writers are of the opinion that the OT שכר may include wine made from dates.

f. ***Other crops.*** Other agricultural products included figs and pomegranates; lentils, coarse beans, chick-peas, and cucumbers; and onions, leeks, and garlic for flavoring. Of these the FIG was especially important, since it, along with the date, was the main source of sugar in the diet. Of special interest is the sycamore fig (שקמה; *Ficus sycomorus*); it was specially treated to make it grow larger and more edible (Amos 7:14). Fig. SYC 93.

Such passages as Num. 11:5; I Sam. 25:18 suggest the general nature of the diet of ancient Israel and hence the crops which were most commonly grown.

4. Implements and their use. Compared to the farmer today in most parts of the world, including modern Palestine, the work of the Israelite farmer was made doubly difficult by the primitive implements which he had at his disposal.

4. Stele of Esarhaddon, showing plow with seed drill, date palm, and hill or ear of grain

a. ***Plow.*** His PLOW (מחרשה or מחרשת) was hardly more than a wooden stick with a small metal point, drawn by oxen (I Kings 19:19). Until *ca.* the tenth century B.C. the points were made of copper or bronze, but after that they were made of iron. These were larger and harder but even then hardly more than scratched the surface, perhaps to a maximum depth of five inches. A few references to other operations, such as leveling and harrowing (Isa. 28:24-25; Hos. 10:11), suggest other processes which may have involved the use of a HOE (מעדר; Isa. 7:25). Figs. AGR 4; PLO 59-60.

b. ***Sickle.*** Reaping was done with a small hand SICKLE (חרמש [Deut. 16:9; 23:25]; מגל [Jer. 50:16; Joel 3:13—H 4:13]). The reaper held the stalks in his hand and cut them off close to the ground with the sickle;* this method is still commonly in use in Palestine. Until *ca.* the tenth century B.C. sickles were made of flints set in a haft; after the tenth century they were made of iron. In both cases they more or less resembled the modern sickle. Figs. EGY 7; SIC 56.

c. ***Threshing instruments.*** After the grain was cut, it was taken to the THRESHING place, where the kernels were separated from the stalks. This might be done in any one of several ways: by beating it out with a stick (חבט; Judg. 6:11; Ruth 2:17); by driving the cattle around on the piled-up stalks until their hoofs gradually trampled out the grain (דוש; Deut. 25:4); by dragging some kind of instrument over the grain (עגלה [Amos 2:13]; מורג [II Sam. 24:22]). Figs. SLE 67; THR 61.

d. ***Winnowing instruments.*** When the grain was threshed, the next operation was WINNOWING (זרה; Isa. 41:16). Two instruments were used: מזרה (Jer. 15:7) and רחת (Isa. 30:24). The former was probably a long-handled fork with several prongs. The latter may have been a shovellike instrument (cf. Arabic *raḥatun*, or *râḥatun* according to some authors). Fig. WIN 25.

In the afternoon the wind started to blow; at this time the winnowing process began. The grain was thrown up into the air, the wind blowing the lighter materials away while the heavier kernels fell to the ground (Ps. 1:4). This was continued until there was little left but a pile of kernels.

e. ***Sieve.*** Even then, however, one process remained: that of sifting, since in the winnowing process not all the foreign material would be carried away. The implement used for this purpose was the sieve (כברה [Amos 9:9]; נפה [Isa. 30:28]). Whether it is possible to distinguish between the two kinds of sieves, one having a fine mesh and the other a coarse mesh, is questionable. However, it is true that both kinds are in use in Palestine today. In one case the good wheat is retained in the sieve and the fine dust passes through, while in the other case the grain falls through while larger pieces remain either to be discarded or to be thrown back and rethreshed.

f. ***Seeder.*** It is doubtful that the Israelite farmer had an instrument for planting seed, although such a seeder, consisting of a tube attached to the plow, did exist in Mesopotamia. Probably the seed was scattered over the land by hand, as in Egypt.

5. Storage. With the processes of harvesting completed, the farmer had either to store or to dispose of his produce. At certain periods apparently enough was produced for export (I Kings 5:11; Ezek. 27:17), but for the most part it was necessary to store it for their own use. The ubiquitous storage jar found in nearly every archaeological excavation attests to the manner in which grain, oil, and wine were kept, especially in homes and shops. Larger quantities of grain might be kept in dry cisterns or silos built for this purpose. Luke 12:16-18 pictures a wealthy landowner who discovered that the barns he already had were not large enough for the produce he was in the process of accumulating. *See* GRANARY.

6. Workers. The Gezer Calendar serves to remind us that, month in and month out, many Israelites spent their time in the fields:

> His two months are (olive) harvest,
> His two months are planting (grain),
> His two months are late planting;
> His month is hoeing up of flax,
> His month is harvest of barley,

His month is harvest and feasting;
His two months are vine-tending,
His month is summer fruit

(J. B. Pritchard, ed., *Ancient Near Eastern Texts* [Princeton, N. J.: Princeton University Press, rev. 1955]).

One will quickly notice that all twelve months of the year are accounted for! We see clearly that the times and the seasons were marked by the harvests. No one in a farmer's family was exempt from the work. Owners and slaves, young men, women and children, can all be seen doing their part (Ruth 2; II Kings 4:18; Isa. 61:5). It was axiomatic that one who tilled his soil would not be in want (Prov. 12:11). During the day the villages would be empty, as nearly every able-bodied person went out into the fields. Even at night many would be absent from their homes guarding the ripening crop or the threshed grain. Also in the fields, vineyards, and olive groves were the gleaners following behind the workers to gather up anything that had been left behind. This was their right according to the law and constituted a means whereby the widow and orphan who had no means of support of their own could get their food (Deut. 24:19-21). But it was not all drudgery. At the close of the day's work there was a freedom of spirit (Ruth 3:7), and the harvest time was marked by unrestrained gaiety (Judg. 9:27; 21:19-23).

7. Agriculture and the religion of the Bible. So much a part of life were the agricultural pursuits that it seemed as though God had established them from the beginning as the superior way of life (Gen. 3–4, especially 3:23). The land was the gift of Yahweh and was under his care (Deut. 11:12). It was thought by some, not only that the farmer learned the techniques of good husbandry from God (Isa. 28:26), but also that Yahweh and only Yahweh had it in his power to order the natural forces in such a way as to assure the maximum results from man's labors. On the other hand, references to what dire calamities may and do befall the man or nation who sins permeate the prophetic utterances (Isa. 5:8-10; Amos 4:1-8; Hag. 1:4-11). Much of the Torah stems from and is directly related to the agricultural life.

The three major festivals which, according to the Deuteronomist, the Israelite was required to observe in Jerusalem were strictly agricultural in nature; they were connected with the products of the earth. These in turn were the gifts of Yahweh, and therefore due reverence must be paid to him. Aside from the origin of these laws, they marked the beginning of the grain harvest, the end of that harvest, and the final ingathering of all the fruits of the year's labors (*see* FEASTS AND FASTS). The SABBATH may also have had agricultural origins, as suggested by its appearance in the old ritual decalogue (embedded in Exod. 22:29-30; 23:12-19); but if not, it certainly came to have definite agricultural overtones at a later time.

Of the thirty-five sections of the D Code, eight deal in whole or in part with matters pertaining to the agricultural life of the people (Deut. 14:22 ff; 15:19–16:17; 19:14; 22:1-3, 9-10; 23:24-25; 25:4; 26:1-11). A tithe of the seed must be given. The firstborn of the flock must be given to the Lord. Landmarks might not be moved—this law appears earlier in the original form of the anathemas (Deut. 27:17). Grain could not be sown in a vineyard, nor was one permitted to plow with an ox and an ass yoked together (Deut. 22:9-10). It was permissible to eat of a man's grapes or grain on his property, but one was not permitted to take any with him (Deut. 23:24-25). These few illustrations—and there are many more—suffice to show that the legislation of ancient Israel was intended to regulate many aspects of the life of the people as it related to agricultural pursuits. Since all these laws were at one time or another viewed as emanating from Yahweh, it becomes clear that this facet of life, like many others, had a strong religious tone. *See* LAW IN THE OT.

8. Agriculture and the literature of the Bible. Figures of speech reflecting the agricultural life may be found throughout the Bible. The glorious future of a restored Israel is expressed in agricultural terminology. Vineyards and gardens will be replanted and will flourish (Amos 9:14; Zech. 8:12). So great was the joy of a good harvest that this became the mode of expressing any great joy, and contrarily any deep sorrow was like the sorrow brought on by a poor crop (Isa. 16:10). Likewise the poets and sages found the common agricultural vocabulary pregnant with meaning and used it when they wanted to express themselves with great force (Prov. 10:5; 20:26; 24:30-34; Job 5:26; 24:2, 6, 10-11, 18-19, 24; Pss. 65:9-13; 80:8-13; 128). Especially do the words of Jesus reflect meaning which agricultural figures could convey to the man in Palestine: the parable of the sower (Mark 4:1-20); the parable of the laborers in the vineyard (Matt. 20:1-16); "From the fig tree learn its lesson: as soon as its branch becomes tender and puts forth its leaves, you know that summer is near" (Matt. 24:32); "No good tree bears bad fruit, nor again does a bad tree bear good fruit; for each tree is known by its own fruit" (Luke 6:43-44). The seed, the vine, the tree, the fruit—all these were useful metaphors when a writer or speaker wished to express the truth about God and his ways with man.

H. N. RICHARDSON

AGRIPPA ə grĭp'ə. The name of two kings of Judea.

1. Agrippa I, or Herod Agrippa (10 B.C.-A.D.44), was king of Judea A.D. 41-44. He was a grandson of Herod the Great.

Agrippa I spent his childhood (from before his sixth birthday) and youth in Rome, where he indulged himself in extravagant living, made possible by friendships his mother won for him in imperial circles. Particularly after his mother's death, he ran into serious debt and was obliged to leave Rome to escape the hounding of creditors. At one point he even contemplated suicide, but thanks to the initiative of his wife, his brother-in-law HEROD ANTIPAS came to his assistance and appointed him agoranome (overseer of markets) in Tiberias. The appointment, however, provided only temporary relief, for the

brothers-in-law soon quarreled and Agrippa resigned his post. There was a similar outcome to his association with the Roman governor in Antioch who helped him. With considerable difficulty he eventually made his way back to Rome, once again establishing close relationships with members of the emperor's household. His lavish living continued to keep him in debt, and because of his unrestrained speech he was thrown into prison, from which he was freed after six months by the death of TIBERIUS (A.D. 37).

Agrippa's good fortune began when CALIGULA, his very close friend, succeeded Tiberius. Agrippa was not only freed immediately from prison, but also made king over the tetrarchies of Philip and Lysanias; and by the latter part of 39 he received also the territory ruled over by Herod Antipas. After the murder of Caligula in 41, Agrippa received from the new emperor, Claudius, the additional territories of Judea and Samaria. Agrippa thus became ruler of the territories which his grandfather had previously held, and in addition enjoyed a consular rank.

When he finally took over his kingdom in Palestine, either because of a genuine change in his habits or merely out of astute policy—it is impossible to determine which—his conduct was such as to win him favorable reactions from his Jewish subjects. He cultivated the good opinion of the PHARISEES; in Jewish territory he was careful to observe the laws and traditions of his countrymen; he was generous in gifts to the temple; he apparently made certain that his displays of piety were well noted. Though most scholars identify several Talmudic praises of Agrippa as references to him, it is argued, with reason, that these are not references to Agrippa I, but to his son, Agrippa II.

In those areas where there were large non-Jewish settlements Agrippa, like his grandfather, carried on a building and works program in an effort to win Gentile sympathies. According to the account in Acts 12 he persecuted some of the early Christians. The attitude of the Roman government toward his administration was a cautious one, for on two important occasions ambitious projects of his were abruptly interrupted at the instigation of the legate of Syria.

Agrippa died suddenly in Caesarea, there being two accounts of his death, one in Acts 12:19-23 and the other in Jos. Antiq. XIX.viii.2. He was survived by three daughters and one son, also named Agrippa (*see* 2 *below*).

Schürer, *Geschichte des Jüdischen Volkes im Zeitalter Jesu Christi* (4th ed., 1901-9), pp. 549-64; A. H. M. Jones, *The Herods of Judaea* (1938), pp. 184-216; J. N. Epstein, *Prolegomena ad Litteras Tannaiticas* (1957), pp. 44, 399.

2. Agrippa II, Marcus Julius Agrippa (born A.D. 28, died after 93, probably *ca.* 100), was the son of Agrippa I.

Like his father, Agrippa II received his education in Rome. He was seventeen when his father died; and though CLAUDIUS was ready to let him succeed his father, he was advised against this by his counselors; Judea therefore was placed under procurators.

In 48 Claudius gave Agrippa the small kingdom of Herod of Chalcis; somewhat later, in exchange for this, Agrippa received a much larger domain, and later still, from Nero, he had added to his territories parts of Galilee and Perea. For the most part, the population of his holdings was Gentile.

Though on a number of occasions he intervened in behalf of the Jews, principally those of the DIASPORA, his sympathies were with Roman rather than Jewish interests. He antagonized the priests of Jerusalem by some exercises of his authority in temple affairs. Throughout the great war against Rome (66-70) he was stanchly loyal to the Roman side: his conduct throughout the war and its aftermath, as well as the Thucydidean speeches put into his mouth by JOSEPHUS, reveal that Agrippa was totally subservient to the Roman powers.

His intimate relationships with his sister were a subject of widespread scandal. Despite some formal gestures, he was apparently devoid of any religious interest. He seems to have left no survivors, and after his death his kingdom was very likely made part of the province of Syria.

AGUE. Malarial FEVER characterized by stages of chill, fever, and perspiration.

AGUR ā'gər [אגור, *probably* hireling; Akkad. *agāru;* Aram. אגר; Arab. *'agara;* Ugar. *agr*]. An otherwise unknown author of maxims mentioned in Prov. 30:1 (*see* PROVERBS § 6); son of JAKEH. Varied witnesses suggest textual uncertainty: the Syr., the Targ., and the Greek Codex Venetus, with the MT, assume a personal name; the Vulg. translates *congregantis,* a descriptive appellative; the LXX renders φοβήθητι. Rabbinic tradition proposes an allegorical designation of Solomon. Various conjectures represent Agur as being: (*a*) the son of the Queen of Massa, and brother of LEMUEL; (*b*) from MASSA, variously placed in the Arabian Desert, Edom, Transjordan, or beyond Seir.

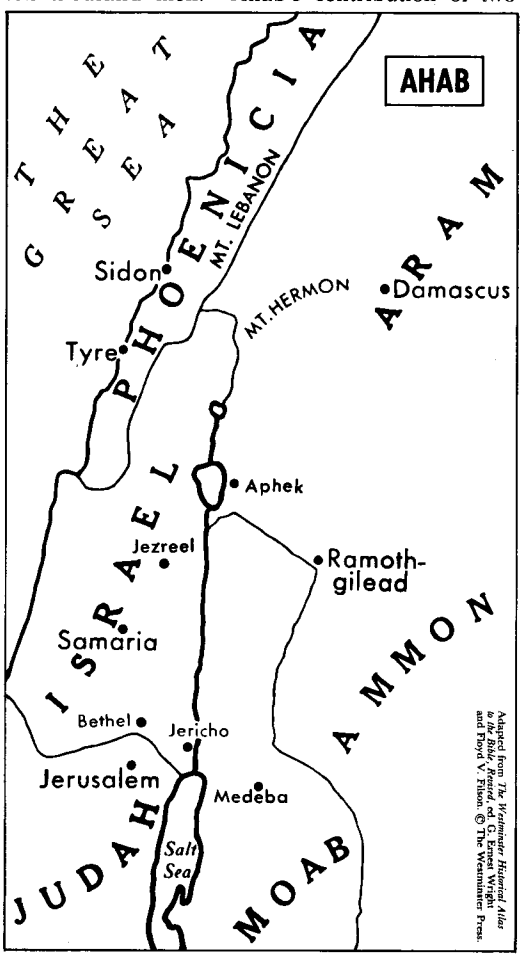
AHAB ā'hăb [אחאב, father's brother=quite the father]. 1. King of Israel *ca.* 869-850 B.C.; son and successor of Omri.

The name appears in Assyrian inscriptions as A-ḥa-ab-bu, in Akkadian as Aḥi-abi. אחיאב may therefore be the full form of the word (cf. the vocalization 'Αχιαβ in the LXX of Jer. 29:21 ff, and 'Αχίαβος, a nephew of Herod [Jos. Antiq. XV.vii.8]). The name was given to Ahab presumably because of his likeness to his father.

Despite the statement that "Ahab the son of Omri reigned over Israel in Samaria twenty-two years" (I Kings 16:29), the evidence of the synchronisms makes it clear that he reigned only twenty years (I Kings 16:29; cf. 15:10; 22:51). He began to reign in the

thirty-eighth year of Asa king of Judah, who reigned for forty-one years, and was succeeded by his son Ahaziah in the seventeenth year of Jehoshaphat king of Judah.



He entered into a political marriage with Jezebel, daughter of Ethbaal (Ittobaal) king of the Sidonians (I Kings 16:31) and priest of Astarte. This alliance no doubt was necessary in face of the growing power of Aram under its king, Ben-hadad. In addition, it seemed to offer other material advantages. It certainly resulted in increased trade between the two countries, with the acquisition of considerable wealth to both (cf. the notice of the "ivory house" which Ahab built [I Kings 22:39]). But this was a doubtful gain in some ways, as it produced a sharp cleavage between the new wealthy merchant class and the great mass of the people, who depended on the land for their livelihood. Further, it brought into Israel the worship of the gods of Tyre, and this finally led to the downfall of the Omride dynasty. For Jezebel was a strong-minded woman and a fanatical worshiper of the Tyrian deities Baal-Melcarth and Asherah. Her father's position as priest of Astarte may explain Jezebel's religious zeal. The cult of these deities was associated with immoral practices. Prophetic tradition remembered Jezebel as pushing her religion in Israel with ruthless vigor until finally a head-on clash occurred with the worship of the God of Israel. Probably through the influence of his wife, Ahab built a house for Baal in Samaria and erected an altar. He also made an Asherah (I Kings 16:32-33).

The summary of Ahab's reign (I Kings 22:39) makes mention of "all the cities that he built," but the only record of building in the biblical text is that of Jericho by Hiel of Bethel. Historically Jericho, which had been in ruins for centuries, was rebuilt at this time on Ahab's orders, probably as a base of operations against Moab. During the rebuilding some of the builder's children died. This seems a more likely interpretation than the suggestion that Hiel's sons were offered as foundation sacrifices. In the popular mind these deaths were regarded as the fulfilment of the curse pronounced by Joshua (Josh. 6:26).

The rest of the history of Ahab's reign consists of a series of prophet narratives (I Kings 17:1–22:38), emanating from northern circles, which center around the great figure of Elijah the Tishbite (*see* ELIJAH THE PROPHET).

Elijah as the champion of the religion of Yahweh was also the champion of the poor and the widow. This is brought out especially in the episode of Naboth's vineyard (I Kings 21).

It is certain that during Ahab's reign Israel and Aram were engaged in constant wars against each other. More often than not, Aram was the aggressor. I Kings 20; 22 furnishes background material for this period of history. Lack of evidence, however, prevents an adequate reconstruction of the historical sequence of events. The relationship between the events described in chs. 20; 22 and the Battle of Qarqar in 853 is not clear. But the reappearance of Assyria in the West was a factor of the greatest importance. It is most surprising, therefore, that the biblical record makes no mention of it. *Ca.* 970-870 Assyrian interests were confined to the area E of the Euphrates. But *ca.* 870 Asshur-nasir-apli engaged in a campaign against North Syria. The next Assyrian expedition took place in 854-853 and was a real test of strength. Shalmaneser III marched against the West and was met at Qarqar on the Orontes in the territory of Hamath by a confederacy consisting of the kings of Hamath, Aram, and Israel, together with contingents from other smaller sources, twelve in all. Shalmaneser's inscription records the presence of "Ahab the Israelite" with "two thousand chariots, ten thousand men." Ahab's contribution of two

thousand chariots represented the largest contingent of chariotry among the allies. The figure given for Aram is twelve hundred chariots. This is an indication of Israel's military power at the time. The name of the king of Aram is given as Hadad-ezer. This was probably his private name. His throne name was Ben-hadad. The result of the battle was apparently indecisive, as the Assyrians withdrew and did not reappear in the West until 848. In the meantime Ahab had been killed in battle with Aram (I Kings 22). Presumably, therefore, the events described in ch. 20 belong to the period prior to the Battle of Qarqar. In general, this account gives a picture of constant war during this period, involving Aram and the neighboring states.

It is clear that the power of Aram under its King Ben-hadad I (*ca.* 880-842) was steadily increasing. This was a source of constant concern to the Omride dynasty. The Ben-hadad here mentioned is almost certainly the same king who made an attack on Israel and captured Galilee in the time of Asa (I Kings 15:20). There were only two Syrian kings of this name—not three, as has often been maintained.

Ch. 20 records two attacks on Israel by Aram; both of them were successfully beaten back. In the first, Samaria, the capital city, was besieged and Ben-hadad made exorbitant demands on King Ahab, which Ahab refused. The Syrians were routed in the ensuing battle by a surprise attack led by Ahab himself. Ben-hadad escaped from the battle. The following year he again mustered his forces and marched against Ahab. The armies met at Aphek, and again the Syrians were completely routed, although the figures of the slain (I Kings 20:29) are not historically reliable. Ben-hadad escaped, but finally surrendered and was well treated by Ahab. The terms proposed by Ben-hadad and accepted by Ahab were that the cities captured by Ben-hadad's father from Israel should be restored and bazaar facilities should be granted to Israel in Damascus (I Kings 20:34). That a covenant was actually made between the two kings seems to be borne out by their fighting together as allies at Qarqar against Assyria. The terms of the agreement cannot be established historically. Doubtless the prophetic source had in mind the reference to Asa, but Baasha was not Ahab's "father," and the Ben-hadad mentioned there and here is almost certainly the same king. If the reference to Samaria is to the Israelite capital, as is implied, the king involved must have been Omri. It seems preferable to regard this account of the treaty terms as unhistorical, although the reference to trading facilities is probably a true historical reminiscence.

Ch. 22 opens with the statement that "for three years Syria and Israel continued without war." This clearly refers, in the mind of the writer, to ch. 20, but it may also refer to the period of three years after the Battle of Qarqar. Aram and Israel were again at war, and on this occasion Ahab was the aggressor. The noteworthy feature about this war is that Jehoshaphat, the king of Judah, was Ahab's ally (I Kings 22:2-4). The two kingdoms had clearly come together in face of a threatened attack at the hands of Aram. The alliance had been strengthened by the marriage of Ahab's daughter to Jehoshaphat's eldest son (II Kings 8:18). Ahab's objective was the recovery of Ramoth-gilead (in all probability the modern Tell Ramit) on the NE frontier of Israel. Jehoshaphat king of Judah was on a visit to Ahab at the time, and Ahab persuaded him to take part in the campaign. But Jehoshaphat insisted on a divine oracle before setting out, and refused to accept the assurance of victory chanted in unison by the four hundred prophets whom Ahab assembled. The figure four hundred is open to question. These were clearly Yahweh prophets, serving in the interests of the state religion. At his insistence Micaiah the son of Imlah (*see* MICAIAH 3) was summoned. This whole section (I Kings 22:5-28) may very well be an intrusion into the story from a prophetic source. It interrupts the sequence of vss. 1-4, 29 ff.

In the ensuing battle at Ramoth-gilead, Ahab was killed, and the Israelite forces routed. The king was brought back dead to Samaria, where he was buried. The story reveals the subordinate position Judah occupied and at the same time gives an indication of the strong position Israel had attained under the leadership of Ahab.

Ahab faced difficulties, not only from Aram, but also from Moab. Despite the statements of II Kings 1:1; 3:5, it seems clear from Mesha's inscription that Moab had revolted before the death of Ahab and had attained a large measure of independence. This may serve to explain the absence of Moab from the list of allies at Qarqar, whereas Ammon is mentioned among them. Mesha declares that Israel dwelt in Medeba in the time of Omri "and half the time of his son, forty years." But perhaps "son" is to be interpreted as "grandson."

The Elijah stories present a picture of the state of religion in Israel at this time (I Kings 17–19:21). They show the queen as the dominant figure and Ahab as weak and vacillating, but his military achievements and his great building enterprises help to correct this picture.

Archaeology has verified the record of Ahab's great building achievements in Samaria. He continued the construction of the city begun by his father, Omri. The fortifications, consisting of three walls, were immensely strong. The city stood more than one siege, and finally fell after a siege lasting three years (II Kings 17:5). The workmanship has been judged to be the best yet found in Palestine. Carved ivory pieces in great numbers were found among the ruins of the city.* I Kings 22:39 tells of the "ivory house" which Ahab built. This description of Ahab's palace has been shown to be accurate, and is an indication of the wealth of the kingdom at this time.* About a century later Amos condemned those who lay on beds of ivory (Amos 6:4; cf. 3:15). Figs. INL 8; IVO 22.

2. Son of Kolaiah; one of the two false prophets among the Babylonian exiles, condemned by Jeremiah. Their punishment of death by fire would provide a "curse formula" for their fellow exiles (Jer. 29:21-22). H. B. MACLEAN

AHARAH ə hâr'ə [אחרח]. The third son of Benjamin, according to I Chr. 8:1; probably identical with AHIRAM. *See also* ROSH 1.

AHARHEL ə här′hĕl [אחרחל; LXX ἀδελφοῦ Ρηχαβ *presupposes* אח(י)רחב] (I Chr. 4:8). Son of Harum, of the tribe of Judah.

AHASAI. KJV form of AHZAI.

AHASBAI ə hăz′bī [אחסבי]. The father of Eliphelet (Eliphal in I Chr. 11:35), a member of the company of the Mighty Men of David known as the "Thirty" (II Sam. 23:34). Described as the "son of the Maachathite" (II Sam. 23:34 KJV), or, more correctly, "of Maacah" (RSV; cf. "the Mecherathite" (?) of I Chr. 11:36), he would appear either to be a member of the S Judean family of Maacah (I Chr. 2:48; 4:19) or to be from the city of Beth-maacah (II Sam. 20:14) or from the Aramaic city of Maacah (II Sam. 10:6, 8). The name Ahasbai of II Sam. 23:34 is read by the chronicler as ". . . Ur, Hepher" (אור חפר—I Chr. 11:35*b*-36*a*). E. R. DALGLISH

AHASUERUS ə hăzh′o͝o ĕr′əs, —o͝o ĭr′— [Heb.-Aram. אחשורוש; ασυηρος (Tob. 14:15)]; KJV Apoc. ASUERUS ăzh′—. **1.** The Persian king who "reigned from India to Ethiopia over one hundred and twenty-seven provinces, . . . [and] sat on his royal throne in Susa the capital" (Esth. 1:1-2). He "laid tribute on the land and on the coastlands of the sea" (10:1). ESTHER became his wife. The LXX 'Αρταξερξης, Artaxerxes, has been accepted by some authorities as referring to Artaxerxes II. More likely the king referred to is XERXES (1). In Ezra 4:6 the reign of Ahasuerus is mentioned chronologically between Cyrus (vs. 5) and Artaxerxes (vs. 7). Fig. DAR 4.

2. The father of DARIUS THE MEDE (Dan. 9:1). *See also* ARTAXERXES; ESTHER, BOOK OF; XERXES. M. J. DRESDEN

3. According to Tob. 14:15, Nebuchadnezzar and Ahasuerus destroyed Nineveh. It was the Mede Cyaxares who was allied with Nebuchadnezzar (LXX Sinaiticus 'Αχιαχαρος; *see* AHIKAR).

AHAVA ə hā′və [אהוא]. A town in Babylonia located on a river or stream (to which the name Ahava was also applied; Ezra 8:15, 21, 31). It was there that Ezra assembled the Jews who were to return to Jerusalem with him.

AHAZ ā′hăz [אחז, he has grasped]; KJV NT ACHAZ ā′kăz. King of Judah *ca.* 735-715 B.C.; son and successor of Jotham. The name is a shortened form of יהואחז ("Y has grasped"). The full name Jehoahaz has been found in an Akkadian text under the form Yauḥazi. Cf. also the seal of "Ušna, minister of Ahaz." Fig. AHA 5.

Ahaz was twenty years old when he began to reign, and he reigned for sixteen years (II Kings 16:2; II Chr. 28:1*a*). This figure of sixteen years, however, can hardly be accurate. The evidence of the Assyrian inscriptions would seem to indicate that Ahaz was on the throne of Judah by *ca.* 734, and a terminal date for his reign would appear to be fixed by the year of Hezekiah's accession (*ca.* 715). Thus his reign must have lasted about twenty years. Confusion may have arisen because of his age when he became king, or perhaps on account of the sixteen years assigned to his father.

5. Seal with inscription "Belonging to Ušna (Ašna?) minister (servant) of Ahaz"

No mention is made of his mother's name. This may be deliberate in view of his evil reputation (II Kings 16:2*b*-4; II Chr. 28:1*b*-4). He was remembered for his idolatrous practices (Isa. 2:8; cf. also 2:20). Ahaz "even burned his son as an offering" (II Kings 16:3; II Chr. 28:3 reads: "He . . . burned his sons as an offering"; cf. II Kings 3:27). The occasion may possibly be found in the attack on Jerusalem by Rezin of Aram and Pekah of Israel mentioned immediately thereafter (II Kings 16:5 ff). If Ahaz resorted to this last desperate measure without success, as far as raising the siege of Jerusalem was concerned, perhaps his only alternative was to appeal for help to Assyria. The datum may, however, be general, without any specific reference (cf. II Kings 21:6; 23:10; Mic. 6:7).

Rezin and Pekah were determined to annex Judah in the event of Ahaz' refusal to join them, and to set up a dynasty favorable to their policy under the "son of Tabeel" (Isa. 7:6). If the "son of Tabeel" was a prince of the royal house of Judah, whose mother was a princess of *Ṭâbh'ēl,* fresh light is thrown on this whole episode (*see* PEKAH). From the political point of view the advice of ISAIAH was based on the long view of things. Judah's hope lay, not in entangling alliances, but in faith in the power of her God (Isa. 7:9). Ahaz, however, could not see beyond the immediate situation. Gathering together the treasures of the temple and the royal house, he sent a messenger to Tiglath-pileser, asking his intervention to rescue him. Tiglath-pileser responded promptly to the request. *Ca.* 734 he marched to the W, conquered Philistia, devastated N Israel and Transjordan, and completely subdued Aram. The appeal of Ahaz had far-reaching results—not only politically, but religiously as well.

The Chronicler reports the Syro-Ephraimitic War from his own theological viewpoint as divine punish-

ment for the idolatry of Ahaz (II Chr. 28:5-7). The details he gives are also different. It is not clear that Aram and Israel acted in conjunction as allies, nor was Jerusalem besieged, but in the invasion of her land Judah suffered considerably. The statement that "Zichri, a mighty man of Ephraim, slew Maaseiah the king's son and Azrikam the commander of the palace and Elkanah the next in authority to the king" (II Chr. 28:7) gives every appearance of historicity. Such details the Chronicler must have taken from his source. They fill in the background of the invasion. The same judgment is valid for the episode which the Chronicler relates in vss. 9-15 of the return by the Israelites of Judahite prisoners whom they had captured. The story is used to point up the faithlessness of Ahaz. Even the Israelites gave heed to a prophetic warning.

The evidence of the Chronicler enables us to see the Syro-Ephraimitic War in a wider perspective. Rezin and Pekah attacked Judah from the N. In close connection with this attack the Edomites again invaded and defeated Judah and carried away captives (II Chr. 28:17). Presumably they had already recovered Elath (II Kings 16:6). At the same time the Philistines made raids on the cities in the Shephelah and the Negeb of Judah, captured certain towns and villages in the Shephelah, and settled there (II Chr. 28:18). Uzziah had overrun certain parts of Philistia (II Chr. 26:6). Now Judah in turn was overrun by the Philistines.

In these circumstances Ahaz appealed to Tiglathpileser for assistance. It is clear that after Aram had been overthrown, Ahaz was summoned to Damascus (732) to appear before the Assyrian king. The contemporary Zenjirli inscription throws light on the occasion. N Ya'di also had pledged its allegiance to Assyria. Like Judah, it had won survival, but at the cost of independence.

Ahaz' visit to Damascus had other consequences as well (II Kings 16:10-16). While he was there, he saw the altar that was at Damascus, and sent details of its construction to Urijah the priest in Jerusalem. Confirmation of Urijah's position is found in Isa. 8:2. Against the king's return the priest constructed a similar altar according to the specifications sent him. Its grandeur must have made a great impression on the people. It seems more than likely that the altar was Assyrian, not Syrian, in accordance with the Assyrian practice of setting up the cult of Asshur in the conquered territories. When Ahaz returned to Jerusalem, the new altar was dedicated with royal sacrifices. It took the place of the bronze altar which had been used previously.

Vs. 15 provides an interesting contemporary picture of the ritual in the temple at this time. The old bronze altar was to be reserved for the king's use—"The bronze altar shall be for me to inquire by." The exact meaning of these words is not clear. It has been plausibly suggested that לבקר here refers to the examination of the sacrifice for omens. The following verses (17-18) present difficulties, and the details are obscure. It seems probable, however, that the sea which was set upon bronze oxen was removed and placed on a pediment of stone. The bronze was used to pay tribute to Assyria. Whatever the details of vs. 18 may be, it is probable that they refer again to changes which were made at this time in order to provide tribute. Politically and religiously Ahaz had surrendered to Assyrian domination.

The Chronicler gives a picture of complete religious chaos in the land (II Chr. 28:22-25). From the historical point of view this picture can scarcely be accurate in its details. It is clearly influenced by the Chronicler's theological viewpoint. He has taken the story in II Kings 16:10-18 and adapted it in his own way. He understood the new altar which Ahaz had caused to be erected as a Syrian altar, on which he sacrificed to the gods of Syria. Here the Chronicler followed the old belief that victory in war proved that the gods of the victors were stronger than the gods of the conquered. What he failed to see was that it was Yahweh himself who had brought destruction upon the land because of the king's apostasy. But why then did Ahaz not sacrifice to the gods of Assyria? Historically, this was what actually took place: Not only did Ahaz worship the Syrian gods. According to the Chronicler, he gathered together the vessels of the house of God and cut them in pieces so that they could no longer be used. In addition, he closed up the doors of the temple itself and made (heathen) altars in every corner of Jerusalem (vs. 24). This same policy he pursued in every city in Judah (vs. 25). From the historical point of view, it is most unlikely that this happened. The Chronicler has painted the reign of Ahaz in this way in order to provide a sharp contrast to the reforming zeal of his son Hezekiah.

As against the writer of Kings, who states that Ahaz "slept with his fathers, and was buried with

his fathers in the city of David" (II Kings 16:20), the Chronicler asserts that "they buried him in the city, in Jerusalem, for they did not bring him into the tombs of the kings of Israel" (II Chr. 28:27). The use of the expression "kings of Israel" here (cf. also II Chr. 28:19) seems to indicate that the Chronicler was relying on his special source. His information may very well have been based on a sound historical tradition.

AHAZIAH ā'ə zī'ə [אחזיה(ו), Yahu has grasped]. **1.** King of Israel *ca.* 850-849 B.C.; son and successor of Ahab.

Ahaziah reigned for two years (I Kings 22:51). He offered to help Jehoshaphat king of Judah man a fleet based on Ezion-geber—no doubt, in an attempt to revive maritime trade with Arabia. This offer Jehoshaphat refused, clearly because he was afraid of an encroachment by Israel on this territory (I Kings 22:47-49; cf. II Chr. 20:35-37).

II Kings 1:1 states that after Ahab had died, Moab rebelled against Israel (cf. 3:5). But the Israelite king who marched against the Moabites to quell the rebellion was Jehoram, brother of Ahaziah (3:6). Presumably the revolt broke out on Ahab's death, perhaps even before it (*see* Ahab 1); but no action was taken to suppress it until Jehoram came to the throne.

The rest of Ahaziah's reign consists of a prophetic narrative which involves Elijah (II Kings 1:2-17). The picture of Elijah given here is out of keeping with the representation of his character elsewhere. Ahaziah had fallen through a lattice in the upper chamber (עליה) of his palace and was seriously injured. The reference is probably to a roof chamber with open window spaces protected by lattice work (cf. Jer. 22:14). In his sickness he sent messengers to obtain an oracle from Baal-zebub, the god of Ekron. It appears certain that the correct name of this god is Baal-zebul (as the best texts of the NT also read), and an oracle was sought from him because he was the Syrian god of life. Elijah, whose description (II Kings 1:8) gives every indication of historicity, had previously been told by the angel of the Lord that the king would die. And so it happened (vs. 17). The rest of the story is unhistorical.

Ahaziah had no son (vs. 17), so the throne passed to his brother Jehoram.

2. King of Judah *ca.* 842 B.C.; son and successor of Jehoram, murdered by Jehu.

In II Chr. 21:16-17 the Chronicler reports an invasion of Judah by the Philistines and the Arabs in the reign of Jehoram. They carried off much booty, including the king's sons and his wives, "so that no son was left to him except Jehoahaz, his youngest son." In ch. 22 the new king is called Ahaziah. The two names are the same, the former having the divine names as a prefix to the verb, the latter as a suffix. The probable explanation of the two names is that the Chronicler in 21:17 is using another source than Kings. But in 22:1*b* he is relying on Kings, which used the name Ahaziah. Thus in 22:1*a* the same name was given to the king.

The Chronicler's statement that "the inhabitants of Jerusalem made Ahaziah his youngest son king in his stead" (II Chr. 22:1) seems to indicate that there was difficulty over the accession, but no details are given. Apparently, however, the initiative was taken by the inhabitants of Jerusalem. It is possible that Ahaziah was at first king only of Jerusalem, and later became king of Judah. It is also possible that because of Jehoram's illness he was incapacitated and a regent ruled for him.

Ahaziah is said to have reigned for one year (II Kings 8:26; II Chr. 22:2). He came to the throne in Joram's twelfth year (II Kings 8:25). But as both kings died at the same time at the hands of Jehu, it is clear that he could have reigned only part of a year. The alternative is to accept the statement of II Kings 9:29 that Ahaziah began to reign in the eleventh year of Joram son of Ahab. Ahaziah was twenty-two years old when he became king (II Kings 8:26). The Chronicler says he was forty-two years old (II Chr. 22:2). But this would have made him two years older than his father (II Chr. 21:5, 20). Other readings are twenty years and sixteen years. The latter number seems more reasonable for the youngest son.

His mother's name was Athaliah. She was a granddaughter of Omri king of Israel (II Kings 8:26; II Chr. 22:2). The MT reads in both cases בת ("daughter") of Omri. II Kings 8:18 makes the daughter of Ahab Ahaziah's mother. The usual explanation is to say that "daughter" is used in II Kings 8:26 in a general sense, but it is quite possible that Athaliah was not the daughter of Ahab, but his sister. She would thus be a daughter of Omri.

That Ahaziah took part in a campaign with Joram king of Israel against Hazael king of Syria at Ramoth-gilead is questionable (II Kings 8:28-29; II Chr. 22:5-6). When Joram was wounded and returned to Jezreel, nothing is said of Ahaziah. He appears later on a visit to Joram. Further, II Kings 9:14*b*, 15*a*, give a somewhat different picture. Joram and all Israel were defending Ramoth-gilead against Hazael of Syria when Joram was wounded. No mention is made of Ahaziah. He appears only in vs. 16 with the notice that he had come down to Jezreel to visit the wounded Joram. The use of the particular verb "had come down" is interesting. The implication is that he had come down from Jerusalem. These verses in ch. 9 give the impression of being original.

Meantime a revolt, under prophetic inspiration, had broken out in the army at Ramoth-gilead. Elisha gave instructions to one of the sons of the prophets to go to Ramoth-gilead; seek out Jehu son of Jehoshaphat, son of Nimshi, one of the army commanders;

and anoint him as king over Israel in the name of Yahweh. These instructions were carried out. Thereafter Jehu drove to Jezreel. Apparently Joram became suspicious when the messengers whom he had sent to meet Jehu did not return, and ordered his own chariot to be made ready. Then Joram and Ahaziah, each in his own chariot, went to meet Jehu. They met at the property of Naboth the Jezreelite. Joram turned to escape but was shot by an arrow from Jehu's bow. Ahaziah also fled, but was fatally wounded near Ibleam, S of Jezreel. He died at Megiddo. His servants brought him to Jerusalem, where he was buried with his fathers (II Kings 9:1-28).

The Chronicler clearly used here a different source from Kings (II Chr. 22:8-9). According to him, all the family of Ahaziah was killed at this time. But Ahaziah himself could not be found. He was hiding in Samaria. He was finally caught and put to death by Jehu. Then he was buried in Samaria. The Chronicler's account does not appear to be historical.

In II Chr. 22:6 the MT has "Azariah." This is clearly a scribal error for "Ahaziah."

Bibliography. F.-M. Abel, *Géographie de la Palestine,* II (1938), 317; M. Noth, *Geschichte Israels* (3rd ed., 1956), p. 216. Contrast J. Begrich, *ZAW,* 53 (1935), 78 ff.

H. B. MacLean

AHBAN ä′băn [אחבן, brother of intelligent one] (I Chr. 2:29). One of the sons of Abishur in the genealogy of Jerahmeel.

AHER ā′hər [אחר, another(?)]. Ostensibly a Benjaminite in the Chronicler's genealogy (I Chr. 7:12), but the text almost certainly needs revision on the basis of the LXX and of Gen. 46:23; Num. 26:42. *See* AHIRAM.

F. T. Schumacher

AHI ā′hī [אחי, brother]. A word mentioned twice in the Chronicler's genealogies; it seems abbreviated (*see* AHIJAH) and is in both cases textually suspect.

1. Son of Abdiel in the tribe of Gad (I Chr. 5:15).

2. One of the sons of Shamer in I Chr. 7:34 KJV, following the MT. The RSV "his brother" is more likely.

F. T. Schumacher

AHIAH ə hī′ə [אחיה, brother of Y]. English variant of the name AHIJAH. It occurs once in the RSV—in the list of the leaders under Nehemiah who set their seal to the covenant (Neh. 10:26—H 10:27).

AHIAM ə hī′əm [אחיאם]. The son of Sharar (II Sam. 23:33) or Sachar (I Chr. 11:35) the Hararite; a member of the company of the heroes of David known as the "Thirty."

AHIAN ə hī′ən [אחין, brotherly(?); *variants in Greek make form somewhat uncertain*] (I Chr. 7:19). The first son of Shemida in the genealogy of Manasseh.

AHIEZER ā′hī ē′zər [אחיעזר, my brother is help]. **1.** Son of Ammishaddai; the representative of the tribe of Dan who assisted Moses in the census (Num. 1:12; 2:25), in the tribe's offering at the dedication of the altar (Num. 7:66, 71), and was their captain as rear guard for the line of march (Num. 10:25).

2. Leader of the Benjaminite bowmen—from Saul's own tribe—who came to David's aid while he was hiding in Ziklag (I Chr. 12:3).

F. T. Schumacher

AHIHUD ə hī′hŭd [אחיהוד, the (divine) brother is glorious, *or* brother of majesty(?); *in* I Chr. 8:7 אחיחד, *perhaps* the (divine) brother has ruled]. **1.** An Asherite leader, son of Shelomi (Num. 34:27). He was one of those appointed, under the oversight of Eleazar and Joshua, to superintend the distribution of the W Jordanian territory among the ten tribes to be settled in that area of Canaan.

2. A Benjaminite listed in the tribal genealogy (I Chr. 8:7). The difficulties of the text make it possible to identify Ahihud as the son either of Heglam or of Gera.

Bibliography. M. Noth, *Die israelitischen Personennamen* (1928), pp. 18, 146, 192.

R. F. Johnson

AHIJAH ə hī′jə [אחיה, אחיהו, brother of Y; *cf.* Phoen. אחמלך, brother of Melek = Ahimelech]; KJV alternately AHIAH ə hī′ə (I Sam. 14:3, 18; I Kings 4:3; I Chr. 8:7); KJV Apoc. ACHIAS ə kī′əs. **1.** A priest in the time of Saul; son of AHITUB, grandson of Phinehas, and great-grandson of Eli (I Sam. 14:3). He was priest in Shiloh and served with Saul's army at Gibeah as the wearer of the EPHOD and the one responsible for the ARK OF THE COVENANT. Both these objects apparently were used as means of oracular consultation with God (I Sam. 14:18-19, 41-42), although the LXX reads "ephod" in vs. 18.

His name does not appear in the list of high priests in I Chr. 6:50-53; Ezra 7:2-5. Many scholars believe that his name originally was AHIMELECH and that he is to be identified with the priest at Nob who is also the son of Ahitub (I Sam. 21–22). That the Canaanite deity should have been removed in favor of Yahweh is more understandable than that two brothers should have had such clashing names.

2. A Pelonite who was one of David's Mighty Men (I Chr. 11:36).

3. Son of Shisha; a secretary or scribe under Solomon (I Kings 4:3).

* **4.** A prophet from Shiloh; proponent and opponent of JEROBOAM, first king of Israel (I Kings 11; 14; also 12:15; 15:29; II Chr. 10:15; five times אחיהו). Representing the prophetic opposition to the syncretistic religion and despotic injustice of Solomon's reign, Ahijah met Jeroboam, a foreman over forced labor from the northern tribes, and in a dramatic scene on the road outside Jerusalem acted out a prophetic word, proclaiming the division of the kingdom and Jeroboam's accession (I Kings 11:26-40). He ripped his new garment into twelve pieces, saying: "Take for yourself ten pieces; for thus says the LORD, the God of Israel, 'Behold, I am about to tear the kingdom from the hand of Solomon, and will give you ten tribes' " (vs. 31; actually, he got all except Judah). But the prophet understood the kingship in terms of a divine commission and made his promise of God's support and a sure dynasty conditional upon Jeroboam's fidelity (vs. 38).

The king's subsequent career proved to be deficient in Yahwistic zealousness, and an incident re-

flecting the now blind and aged prophet's opposition is preserved in ch. 14. Jeroboam sent his disguised wife to inquire from the mentor of his youth as to the outcome of their son's illness. The prophet perceived her identity and pronounced the imminent death of the child and a violent doom upon the house of Jeroboam.

The two passages have probably been subsequently reworked by a Deuteronomic editor, but they bespeak an authentic core by which the revolt of the North originates under prophetic instigation and is subject to continuing divine critique.

In II Chr. 9:29 the "prophecy of Ahijah" is listed as a source for the history of Solomon. This might conceivably indicate a noncanonical collection of oracles but more likely simply refers to the material now preserved in I Kings 11; 14.

5. The father of Baasha, king of Israel; a member of the tribe of Issachar (I Kings 15:27, 33; 21:22; II Kings 9:9).

6. Probably the correct name for AHOAH, son of Bela (I Chr. 8:4).

7. One of the sons of Ehud who were carried captive (I Chr. 8:7); but the text is very obscure, and the names may be simply a dittograph from vs. 4.

8. One of the sons of Jerahmeel; a member of the tribe of Judah (I Chr. 2:25). The verse seems to be corrupt, and the word may not be a proper name; B and A read ἀδελφὸς αὐτοῦ; Syr has "his brothers."

9. A Levite who was in charge of treasuries in the temple (I Chr. 26:20). But the LXX is probably correct in reading "Levites, their brothers" (אחיהם).

F. T. SCHUMACHER

AHIKAM ə hī'kəm [אחיקם, my brother has arisen]. Josiah's minister, member of the deputation to Huldah concerning the Book of the Law (II Kings 22:12, 14), and sole protector of Jeremiah from death under Jehoiakim (Jer. 26:24). Ahikam was the father of GEDALIAH (II Kings 25:22; Jer. 39:14).

J. M. WARD

AHIKAR ə hī'kär ['Αχιάχρος, 'Αχείχαρος; *perhaps* Aram. *Ah-y^{e}-qar,* precious brother]; KJV ACHIACHARUS ăk'ĭ ăk'ə rəs.

The nephew and benefactor of TOBIT (Tob. 1:21-22; 2:10). Ahikar himself was the subject of a romance much older than the book of Tobit. Though the Ahikar story had been in Western circulation through its presence in the Arabian *Thousand and One Nights,* its relationship to the book of Tobit remained unsuspected until the ELEPHANTINE PAPYRI were discovered, for among these were fragments of the Ahikar story.

The typical story (the variations are endless) relates that Ahikar was a trusted official (scribe or secretary) to Sennacherib, the king of Assyria. Childless, he had reared a nephew Nadan as his heir. The ungrateful youth composed letters, to which he forged Ahikar's signature, addressed to the kings of Egypt and Persia, and which proposed betraying Assyria's troops to them. Thereupon, the nephew had the reports of Ahikar's treason reach the king, who gullibly condemned Ahikar to death. However, the servant who was entrusted with Ahikar's execution replaced him with a condemned criminal, and let Ahikar secretly go home, to be cared for by Ahikar's wife. It was universally believed that the noble Ahikar was dead.

Thereafter the king of Egypt presented Sennacherib with the choice of paying tribute or of helping in a project—namely, that of building a castle in the air. Sennacherib, aware that Ahikar might have helped in the latter endeavor, bemoaned having slain him. Thereupon the servant produced Ahikar.

As for building a castle in the air, Ahikar employed an eagle to carry two boys into the air; the boys kept urging the Egyptians to bring up to them bricks and mortar so that they could commence the building. Since bricks and mortar were not delivered, no fault could attach to the builders.

In gratitude to Ahikar, Sennacherib restored him to a high place, and Nadan was punished.

The incidents in the book of Ahikar are interspersed with maxims and proverbs, these being widely different in content and form in the various versions, as is to be expected in a tale known widely in many folk literatures.

There have been occasional scholars who have believed that the Ahikar story is younger than Tobit; and, they suggest, it is an amplification designed to characterize Tobit's otherwise unknown benefactor. But most scholars hold, properly, that the Ahikar story is considerably older than Tobit. This is seen most readily in Tob. 14:10, where Nadan's perfidy and punishment are alluded to as well known. The dependency of some of Tobit's maxims on Ahikar is unmistakable.

The supposition in Tobit that Ahikar was Tobit's nephew (various versions of Tobit suggest other relationships) implies that the author of Tobit conceived of Ahikar as a Jew. Such is unquestionably the case. Not only has the author of Tobit Judaized Ahikar; he has made him quite a pious Jew.

Bibliography. On the legend of Ahikar, see: F. C. Conybeare, J. R. Harris, and A. S. Lewis, *The Story of Ahikar* (1898); and the reworking of this book in "The Story of Ahikar," in R. H. Charles, *The Apoc. and Pseudep. of the OT* (1913), I, 191-92; II, 715-84. Of the vast bibliography which could be listed, the following brief summaries are most useful: F. Nau, *Histoire et sagesse d'Ahikar l'Assyrien* (1909); B. Meissner, "Das Märchen vom Weisen Achiqar," *Der Alte Orient* (1917), Band XVI, Heft 2; I. Abraham, "The Story of Ahikar," *By-Paths in Hebraic Bookland* (1920).

S. SANDMEL

AHIKAR, BOOK OF. An oriental wisdom book composed of proverbs and fables, prefaced by a narrative introduction about the sage Ahikar, who supposedly had uttered them as instruction for his son. The book had come down in Syriac, Arabic, Armenian, and other languages, but the rediscovery of portions of an Old Aramaic version of the fifth century B.C. among the ELEPHANTINE PAPYRI proved a great surprise.

Ahikar was a high official of Assyria under Sennacherib. He had no son and hence adopted a sister's son named Nadan. After educating him with the wise counsel appended to the story, he brought him to King Esarhaddon. Nadan soon was appointed Ahikar's successor, and the sage was then able to re-

tire to his country estates. But the young man had evidently not learned all the lessons his foster father had sought to impress on him, for he defamed Ahikar as fomenting rebellion against his sovereign. The latter in anger dispatched Nabu-sum-iskun and two associates to go and execute Ahikar. They found him in his vineyard between two mountains. Apprised of their errand, Ahikar reminded Nabu-sum-iskun of how he had spared and harbored him from the wrath of Sennacherib when that ruler had ordered his execution, and how the king had been quite satisfied that he had done so when the innocence of Nabu-sum-iskun was established. Ahikar suggested a return favor of the same sort. The three executioners pledged one another to secrecy, and a slave was slain instead of Ahikar. We do not hear how the matter came out, but, no doubt, Ahikar was vindicated and the wicked Nadan punished.

There is reason to believe that the Aramaic book is derived from an Assyrian work. Some of the persons mentioned may even be historical. A high official named Nabu-sum-iskun is known to have served under Sennacherib. While the person of Ahikar has not been found as yet, his name is Assyrian (Ahi-yaqar, "the brother is precious"). The name Nadan (better, Nadin) is a short form of some name like Adad-*nadin*-shum. The supposed rebellious activity of Ahikar could well have a background in fact, for as we know from Assyrian sources, Esarhaddon's succession was achieved by a defeat of brothers who had a better claim to the throne.

It was through the Aramaic version, however, that the book of Ahikar obtained its vogue. In its present form it cannot be older than *ca.* 500 B.C., for it contains Old Persian loan words. Democritus (born *ca.* 470 B.C.) is said to have utilized the translation of a stela of Akikaros in his ethical writings. Theophrastus (born *ca.* 372 B.C.) is said to have written a book called *Akicharos*—evidently a Greek version of Ahikar. The fables of Aesop were drawn from Ahikar, and the story of Ahikar was adapted for the "life" of Aesop. The book of TOBIT, a work of the second century B.C., is familiar with the story of Ahikar (KJV Achiacharus; 1:21-22; 2:10; 11:18; 14:10-11); the name of Nadan appears in corrupted forms (KJV Aman). Strabo (born 63 B.C.) refers to Achaikaros as having been a lawgiver among the Bosporenes (no doubt, a misreading of some other word: Assyrians? Borsippenes or people of Borsippa?).

E. G. KRAELING

AHILUD ə hī′ləd [אחילוד, a brother is born]. The father of David's recorder Jehoshaphat (II Sam. 8:16; I Kings 4:3; I Chr. 18:15) and, probably, of Baana, a district officer under Solomon (I Kings 4:12).

AHIMAAZ ə hĭm′ī ăz [אחימעץ, brother is counselor (?)]. **1.** The father of Ahinoam, who was the wife of Saul (I Sam. 14:50).

2. A son of Zadok the high priest (II Sam. 15:27; I Chr. 6:8, 53—H 5:34; 6:38); the father of AZARIAH (I Chr. 6:9—H 5:35). Ahimaaz was in the priestly company that brought the ark to David when he had vacated Jerusalem. At the instance of the king, Zadok and Abiathar returned to the capital to await information from the spy Hushai concerning the plans of Absalom. Ahimaaz and Jonathan the son of Abiathar were stationed at En-rogel, whence they could bring David word (II Sam. 15:24 ff). In the first hours of the insurrection, when it appeared that the tactics suggested by Hushai were to be adopted, Abiathar and Zadok were so informed. These, in turn, relayed the message by an unsuspected maidservant to Ahimaaz and Jonathan, who quickly informed the king of the intentions of Absalom (II Sam. 17:1 ff). For a time this same system of espionage proved quite successful, but it was discovered. Ahimaaz and Jonathan fled for their lives and eluded the military detail of Absalom only by their effective concealment in a well at Bahurim. Subsequently, they joined the army of David at Mahanaim (II Sam. 17:17 ff).

After the battle in the forest of Ephraim in which Absalom was slain and his forces routed, Ahimaaz besought Joab to permit him to convey the news of the victory to David at Mahanaim. Joab refused at first to allow such a worthy man as Ahimaaz to undertake the unrewarding task of bearing to the king such dark tidings, for Joab knew that the death of Absalom would greatly distress the king and completely obscure the military victory. Accordingly, Joab dispatched a Cushite courier, who from a diplomatic point of view had nothing to lose, to convey the ominous news. When Ahimaaz insisted that he be allowed also to convey the news of the battle to the king, Joab finally acceded. Arriving at Mahanaim before the Cushite, Ahimaaz told the king of the military success, but when he was interrogated concerning the fate of Absalom, he professed an ignorance in the matter. However, with the arrival of the Cushite all doubt as to the fateful end of the usurper was dispelled (II Sam. 18:19-33).

Of the later career of Ahimaaz we know nothing, and there is no evidence that he succeeded his father, Zadok, in the high-priestly office.

3. One of the twelve officers appointed by Solomon and charged with the provision of the royal house from the revenues of his assigned district of Naphtali (I Kings 4:15). The prestige of his office is indicated by the fact that he married Basemath, a daughter of Solomon. However, some interpreters are of the opinion that Ahimaaz is the name of the father of the officer, whose own name has been accidentally destroyed like some others in the same list. In this case, it is not impossible that he may be the same as Ahimaaz the son of Zadok (2 *above*).

E. R. DALGLISH

AHIMAN ə hī′mən [אחימן, *see* 1 *below*]. **1.** One of the three sons of Anak or "giants" residing in Hebron when the Israelite spies reconnoitered the

land (Num. 13:22; Josh. 15:14; Judg. 1:10). The pre-Israelite inhabitants of Hebron, S of Jerusalem, were described in several slightly variant phrases as descendants of ANAK, probably meaning "sons of neck" or "tall people." Ahiman, an individual or tribal grouping among the Anakim, was defeated in Hebron, the defeat being ascribed in Judg. 1:10 to the men of Judah, in Josh. 15:14 to CALEB.

The names of the descendants of Anak, Ahiman, Sheshai, and Talmai, may point to an Aramean origin, although there are parallels to these names in other Semitic languages. The name Ahiman is probably compounded of אח, "the (divine) brother," plus an abbreviated form of an originally complete word, no longer recoverable with certainty.

2. A Levite, one of the four chief gatekeepers of Jerusalem in the postexilic period (I Chr. 9:17). The somewhat confusing account in I Chr. 9:17-34 of the situation and duties of the gatekeepers appears to combine features from Mosaic and Davidic times as well as from the period contemporary with the author.

Bibliography. M. Noth, *Die israelitischen Personennamen* (1928), p. 40; L. Koehler and W. Baumgartner, *Lexicon in VT Libros* (1953), pp. 30-31. R. F. JOHNSON

AHIMELECH ə hĭm'ə lĕk [אחימלך, the brother (God) rules, *or* my brother is king, *or* brother of the king]. **1.** Priest of Nob, son of Ahitub. His aid to the fugitive David caused Saul to have the Nob priesthood slaughtered (I Sam. 21:1-9—H 21:2-10; 22:9-20). He appears to have been consulted by Saul on previous occasions for the result of the divine oracle (I Sam. 22:15). He has been equated with Saul's chaplain Ahijah, the son of Ahitub (I Sam. 14:3, 18). The name Ahijah is taken as a variant of Ahimelech, "Yahweh" having been substituted for "king." But this is unlikely (*see* ELI). The title of Ps. 52 places the psalm in the context of Doeg's informing Saul about the aid Ahimelech had given to David.

2. A Hittite in the service of David (I Sam. 26:6).

3. Son of Abiathar (II Sam. 8:17; I Chr. 18:16 [KJV ABIMELECH, following the MT]; I Chr. 24:6). In II Sam. 8:17 "Ahimelech the son of Abiathar" is clearly a mistake for "Abiathar the son of Ahimelech." The other references are based on this error.

Bibliography. W. F. Albright, *Archaeology and the Religion of Israel* (1956), pp. 201-2. R. W. CORNEY

AHIMOTH ə hī'mŏth [אחימות, my brother is Mot, *or* Akkad. *aḫi-miti*, my brother is my support(?), *or a hypocoristicon for* Ahimelech]. A Levite of the family of Kohath (I Chr. 6:25—H 6:10). Perhaps we should read "Ahimahath" (cf. I Chr. 6:35—H 6:20).

R. W. CORNEY

AHINADAB ə hĭn'ə dăb [אחינדב, brother is noble]. Son of Iddo; one of the twelve officers appointed by Solomon charged with the provision of the royal house from the revenues of his assigned district in S Gilead, with headquarters at Mahanaim (I Kings 4:14). E. R. DALGLISH

AHINOAM ə hĭn'ō əm [אחינעם, *from* אח *plus* נעם, my brother is delight, joy (*cf.* Naomi, Naaman, *from the same root*)]. **1.** The wife of Saul, and daughter of Ahimaaz (I Sam. 14:50).

2. One of David's wives, a woman from Jezreel. She, with Abigail, accompanied David's flight to Philistia, survived capture by the Amalekites, was rescued, and returned with David to Hebron. Here she became the mother of David's first-born, Amnon (I Sam. 25:43; 27:3; 30:5; II Sam. 2:2; 3:2; I Chr. 3:1). D. HARVEY

AHIO ə hī'ō [אחיו]. **1.** Son of Abinadab. He preceded the cart which carried the ark from his father's house bound for the city of David (II Sam. 6:3-4; I Chr. 13:7). To construe Ahio in these instances as a proper name seems preferable to translating it "his brother" (RSV mg.) or "his brethren" (LXX).

2. Considered to be a proper name in I Chr. 8:14 according to the MT, and accordingly one of the sons of Elpaal, a Benjaminite. Many scholars prefer, however, on the basis of the LXX (A L) to render the emended text as "their brethren."

3. One of the sons of the Benjaminite Jeiel (=ABIEL [?]); a brother of Kish (I Chr. 8:31; 9:37).

E. R. DALGLISH

AHIRA ə hī'rə [אחירע; LXX Αχιρε, the (divine) brother is a friend, *or less probably* a brother is Ra]. A leader of Naphtali; son of Enan (Num. 1:15; 2:29; 7:78, 83; 10:27). He was one of twelve tribal leaders or deputies who assisted Moses in taking a census of Israel and in other tasks in the wilderness. *See* PRINCE.

Bibliography. Commentaries: G. B. Gray, ICC (1903), p. 9; J. Marsh, *IB*, II (1953), 144-45. See also M. Noth, *Die israelitischen Personennamen* (1928), p. 236.

R. F. JOHNSON

AHIRAM ə hī'rəm [אחירם, my brother is exalted]; AHIRAMITES —rə mīts (Num. 26:38). The third son of Benjamin; the head of the family called Ahiramites. The Chronicler's genealogy of Benjamin —a corrupt text—lists the third son as AHARAH (I Chr. 8:1), which most scholars believe should read "Ahiram." This change in reading should probably also be made for "Aher" in I Chr. 7:12. Still another Benjaminite genealogy lists among the sons: "Ehi, Rosh, Muppim, Huppim" (Gen. 46:21). This is probably erroneous and should read, in agreement with Num. 26: "Ahiram, and Shupham and Hupham" (change from: אחיוראשמפיסוחפים to: אחירם‌ושופם‌וחופם).

F. T. SCHUMACHER

AHISAMACH ə hĭs'ə măk [אחיסמן, the (divine) brother has supported]. A Danite; father of Oholiab, who was one of those appointed to make the tabernacle and its equipment (Exod. 31:6; 35:34; 38:23).

Bibliography. M. Noth, *Die israelitischen Personennamen* (1928), pp. 68-70, 176. R. F. JOHNSON

AHISHAHAR ə hĭsh'ə här [אחישחר, brother of the dawn]. One of the sons of Bilhan ben Jediael in a dubious genealogy of Benjamin (I Chr. 7:10). The names of Bilhan and Ahishahar do not appear in a more authentic list (I Chr. 8:1-40), and many be-

lieve they are in reality part of a genealogy of ZEBULUN. F. T. SCHUMACHER

AHISHAR ə hī′shär [אחישר]. The royal chamberlain in the cabinet of Solomon (I Kings 4:6).

AHITHOPHEL ə hĭth′ə fĕl [אחיתפל]. A native of Giloh in the highlands of Judah who served as the royal counselor to David. He committed suicide when his advice to Absalom was rejected in favor of the plan of Hushai (I Chr. 27:33-34). Ahithophel was proverbial for his sagacity, and in the judgment of his contemporaries his counsel was tantamount to an oracle of God (II Sam. 16:23).

When Absalom revolted against his father, David, and was crowned in Hebron, Ahithophel joined the rebel cause (II Sam. 15:12). Having taken Jerusalem without a fight, Absalom complied with the first stratagem suggested by Ahithophel by violating publicly the royal harem, part of which had been left behind by the departing king, and thus giving incontestable assurance to his followers that the die was cast for all concerned (16:20-22). Ahithophel then advised that he be given twelve thousand men with whom to pursue David immediately, before his forces were consolidated, and that he concentrate his total effort on the destruction of the king only. Were this one object realized, Ahithophel prophesied, the nation would joyously receive their new king (17:1-3). While this advice seemed good at the time it was given, it was rejected by the persuasive eloquence of Hushai, the spy of David, who cast doubt upon the wisdom of such an adroit action and advocated a delay until all Israel could be mustered for battle (17:5-14). Cognizant that the plan of Hushai would involve him and all the conspirators in a speedy retribution by David, Ahithophel departed from the capital to his own house and hanged himself (17:23).

Ahithophel was the father of Eliam (II Sam. 23:34) —a garbled form of this name appears in the name of Ahijah the Pelonite (I Chr. 11:36*b*), one of the members of the illustrious company of Davidic heroes known as the "Thirty." The daughter of Eliam (or Ammiel, which is the same name with components transposed—I Chr. 3:5) was Bathsheba the wife of Uriah (II Sam. 11:3). It is not improbable that the reason for the defection of the sagacious counselor of David had its roots in the infamous incident that involved his granddaughter Bathsheba.
E. R. DALGLISH

AHITUB ə hī′tŭb [אחיטוב; Akkad. *aḫu-ṭāb*, the brother (God) is good]; KJV Apoc. ACHITOB ăk′ə tŏb; ACITHO ăs′ə thō. **1.** The father of Ahimelech the priest (I Sam. 22:9, 11-12, 20). He is called the father of Saul's chaplain Ahijah in I Sam. 14:3 (probably a gloss—*see* ELI), also mistakenly the father of ZADOK THE PRIEST in II Sam. 8:17 (source of the error in I Chr. 6:8—H 5:34; 6:52-53—H 6:37-38; 18:16; Ezra 7:2; I Esd. 8:2; II Esd. 1:1).

2. The father (I Chr. 6:12—H 5:38) or grandfather (I Chr. 9:11; Neh. 11:11) of another priest named ZADOK (4).

3. An ancestor of Judith (Jth. 8:1).
R. W. CORNEY

AHLAB ä′lăb [אחלב]. A town in the territory of Asher, identical with MAHALAB. It is probably located at Khirbet el-Mahalib, a site near the coast *ca.* four miles NE of Tyre. According to Judg. 1:31, Asher was unable to drive out the Canaanite inhabitants of the town. G. W. VAN BEEK

AHLAI ä′lī [אחלי, O! would that! (*cf.* II Kings 5:3; Ps. 119:5)]. **1.** A descendant (ובני), probably a daughter (see vs. 34), of Sheshan in the genealogy of Jerahmeel (I Chr. 2:31).

2. The father of Zabad in the list of David's Mighty Men (I Chr. 11:41). Since the name Zabad appears among the descendants of Sheshan's daughter (I Chr. 2:36), it is possible, though not likely, that this Ahlai is rather Zabad's mother and identical with 1 *above*. F. T. SCHUMACHER

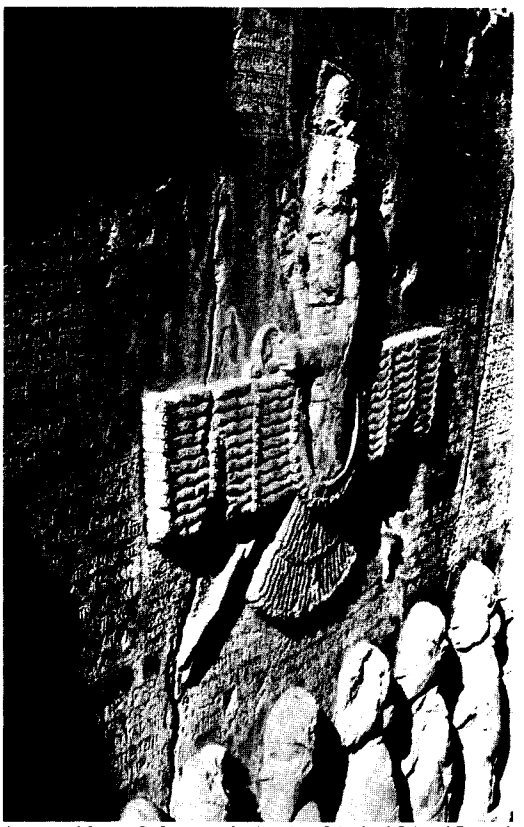
AHOAH ə hō′ə [אחוח, *error for* Ahijah]. A son of Bela in the genealogy of Benjamin (I Chr. 8:4). The LXX, B, and the Syr. have the regular form (אחוה), and the apparent dittograph in vs. 7 supports the view that "Ahoah," which appears only once, is an error for "Ahijah." F. T. SCHUMACHER

AHOHI ə hō′hī [אחוחי]. If the MT is correct, the father of Dodo and grandfather of Eleazar who was second among David's three Mighty Men (II Sam. 23:9). Ahohi is not elsewhere referred to, unless it be in a patronymic, the AHOHITE, used or conferred because of the military exploits of his offspring. However, many scholars believe the MT-RSV "son of Ahohi" (בן־אחחי) should be read, with the KJV, "the Ahohite" (האחוחי) on the basis of the parallel passage in I Chr. 11:12. If the above conjecture is correct, however, one would expect the Chronicler to use the patronymic. F. T. SCHUMACHER

AHOHITE, THE ə hō′hīt [האחוחי]. A patronymic or geographic designation of uncertain reference. The most frequent suggestion has been "son of AHOAH." But *see* AHOHI as another possibility, since the term is always applied to military heroes in the time of David: (*a*) Dodo, the father of Eleazer (I Chr. 11:12; and also in I Chr. 27:4, where Dodo is spelled "Dodai" and the name Eleazer is probably to be supplied); (*b*) Zalmon, one of the Thirty (II Sam. 23: 28); (*c*) Ilai, in the parallel list of David's Mighty Men (I Chr. 11:29), who should perhaps be identified with *b above*. F. T. SCHUMACHER

AHOLAH. KJV form of OHOLAH.

AHOLIAB. KJV form of OHOLIAB.



AHOLIBAH. KJV form of OHOLIBAH.

AHOLIBAMAH. KJV form of OHOLIBAMAH.

AHRIMAN ä′rĭ mən. The designation, in its Middle Persian form, of the spirit or principle of evil in Zoroastrianism; called *Angra Mainyu* (Evil Spirit) in the Avesta and Ἀρειμάνιος or Ἀριμάνης by the Greek authors. He is the counterpart and opponent of Ormuzd (Ahura-Mazda). *See* PERSIA, HISTORY AND RELIGION OF, §§ E2-3, 5. M. J. DRESDEN

AHUMAI ə hū′mī [אחומי] (I Chr. 4:2). One of the sons of Jahath in the genealogy of Judah. Some scholars follow the LXX and read "Ahimai" or "Ahiman." F. T. SCHUMACHER

AHURA-MAZDA ə hōōr′ə măz′də [Avestan *and* Old Pers. *A(h)ura-mazdā(h),* wise lord]. Alternately: ORMUZD ôr′mōōzd, ORMAZD ôr′məzd, OHRMAZD [Pahlavi *Ohrmazd; cf.* 'Ωρομάσδης, 'Ωρομάζης]. The highest divine entity in Zarathushtra's teachings. In the Old Persian inscriptions Ahuramazda is the greatest of the gods, the creator of the sky and the earth, of men, and of peaceful prosperity for men. The kings claim to rule "by the favor of

Courtesy of George C. Cameron, the American Schools of Oriental Research and the University of Michigan

6. Ahura-mazda, Darius' protecting deity, is sculptured above the king's enemies at Behistun.

Ahura-mazda," who gives them also victory over their enemies. In the Pahlavi books, where the name takes the form Ohrmazd, he appears as the opponent of the evil spirit Ahriman. *See* PERSIA, HISTORY AND RELIGION OF, §§ E2-3, 5. Figs. AHU 6; PER 40.

M. J. DRESDEN

AHUZZAM ə hŭz′əm [אחזם, possessor] (I Chr. 4:6); KJV AHUZAM ə hū′zəm. A son of Ashhur in the genealogy of Judah.

AHUZZATH ə hŭz′ăth [אחזת, seized, held fast (by God for protection and guidance?); *cf. personal names* אחז, אחזיה(ו), אחזי, אחזם, יאחז(ה)י]. The man who accompanied Abimelech from Gerar to make a covenant with Isaac at Beersheba (Gen. 26:26-31 [J]; but cf. 21:22-32 [E]). He seemed to hold an official position as the king's adviser (מרעהו; KJV one of his friends). *See* FRIEND OF THE KING. L. HICKS

AHZAI ä′zī [אחזי, *perhaps a corruption of* אחזיה (Ahaziah), Yahu has grasped] (Neh. 11:13); KJV AHASAI ə hā′zī. A priest in Ezra's time.

***AI** ī, ā′ī [העי, the ruin]. Alternately: AIATH ā′yăth [עית]; AIJA ā′jə [עיה]; KJV HAI hī, hā′ī in Gen. 12:8; 13:3. A city in Ephraim, E of Bethel.

1. Biblical data. Abraham is twice said to have pitched his tent between Ai and Bethel (Gen. 12:8; 13:3). According to the narrative in Josh. 7–8, Ai was the next city to be assailed by the Israelites after they had taken Jericho. Despising this city because it was small, the Israelites sent out only a few men to attack it and met with an unexpected defeat which threw them into despair. Joshua appealed to God and was told that this setback was due to someone's guilt in not destroying all the spoils of Jericho; lots were cast, and the offending individual was found to be ACHAN. As soon as justice was done, Joshua set about capturing Ai by the stratagem of a feigned retreat which would draw the defenders from the city and enable warriors set in ambuscade to walk over the deserted walls. (In Josh. 8:12, 16, "Ai," with the Qere, should probably be read instead of "the city.") The plan succeeded; Ai was taken and burned, and its remains were left as a "heap of ruins, as it is to this day" (Josh. 8:28).

While the old site remained abandoned, a new Israelite town arose nearby, with the same name. Isaiah mentions Aiath as the first of the towns occupied by the Assyrians in their march on Jerusalem (Isa. 10:28); its location was approximately the same as the ancient Ai. Among the returned exiles who came with Zerubbabel were 223 men of Bethel and Ai (Ezra 2:28; the parallel passage in Neh. 7:32 gives the number as 123). In the next century, Aija, near Bethel, is reported as having been settled by the people of Benjamin (Neh. 11:31).

2. Archaeological evidence. The site of ancient Ai is to be located at et-Tell, situated two miles E-SE of Bethel (modern Beitin). This mound was excavated by Judith Krause-Marquet in 1933-35 and by Samuel Yeivin in 1936. They found extensive remains of a city of the Early and Middle Bronze periods, with an elaborate defensive system, a shrine,* and numerous vessels, some of alabaster and ivory. This city apparently arose *ca.* 3000 B.C. and was destroyed not later than *ca.* 2000. Subsequently, in the Early Iron period (after 1200), a new and smaller settlement arose, which lasted for another century. The site, however, was not occupied at all at the time of the Israelite conquest (thirteenth century B.C.). Fig. TEM 21.

This evidence shows that the narrative in Joshua is not to be taken literally, but is an example of the process by which all the Israelite conquests of several centuries were referred to the time of Joshua. One

possibility is that the ancient city was taken by the HABIRU, whose name and achievements were taken over by the Israelites. Another suggestion is that the story originally referred to BETHEL, the conquest of which (by surprise) is recorded in Judg. 1:22-25 but omitted in Joshua. A third is that the story is a reminiscence of a conquest of the Early Iron city, which took place much later than the time of Joshua, but was later referred to that hero.

The latter settlements of the Israelites at Aiath and Aija are probably to be located at Khirbet Haiyan, *ca.* a mile S of et-Tell.

AIAH ā'yə [איה, falcon, hawk, *perhaps as a nickname*]; KJV AJAH ā'jə in Gen. 36:24. **1.** The first son of clan chief (of) Zibeon; ancestor of a Horite subclan in Edom (Gen. 36:24; I Chr. 1:40).

2. The father of Saul's concubine Rizpah (II Sam. 3:7; 21:8, 10-11). He is perhaps related to the clan in 1 *above.* L. HICKS

AIATH; AIJA. Alternate forms of AI.

AIJALON ā'jə lŏn [אילון, place of the deer; Amarna *Aialuna*]; KJV alternately AJALON ăj'ə lŏn. **1.** A valley which figures in the account of the defeat of the five Canaanite kings in Josh. 10 (especially vs. 12). Located on the Philistine border just below Bethhoron, it was an important pass into the mountains of Judah.

The city is identified with Yalo, near Emmaus ('Amwas), a sizable mound with remains of a fortified town of the Late Bronze, Iron I, and later periods.* Tell el-Qoqa', a small mound to the E, with Early Bronze remains, may have served first as a fortress and later as a high place for Aijalon. Fig. AIJ 7.

Aijalon was assigned to Dan on or near its border with Ephraim (Josh. 19:42). The Amorites remained, and though they resisted occupation by the Danites, Ephraim later dominated them (Judg. 1:35). Aijalon represented the W point of Jonathan's victorious pursuit of the Philistines after the Battle of Michmash (I Sam. 14:31).

In David's administrative reorganization, Aijalon became a Levitical city assigned to the Kohathites (Josh. 21:24) and was designated a city of refuge (I Chr. 6:69—H 6:54). Solomon put it in his second administrative district (read "Aijalon" for "Elon" in I Kings 4:9). After the division of the monarchy, it was included in Benjamin (I Chr. 8:13) and fortified by Rehoboam (*ca.* 922-915) against invasion from the W or the N (II Chr. 11:10). During the reign of Jehoahaz I (Ahaz; *ca.* 735-715), the Philistines captured the city (II Chr. 28:18).

AIJELETH SHAHAR ā'jə lĕth shā'här. *See* MUSIC § B1*c.*

AIN ān [עין, spring]. **1.** A city on the boundary of "greater Palestine," the location of which is uncertain (Num. 34:11; cf. Ezek. 47:15 ff). It may be near Riblah (modern Riblah) to the N, or it may be near the junction of the Yarmuk and the Jordan.

2. A city mentioned in Josh. 15:32; I Chr. 4:32 with another city, Rimmon. The two should probably be read as "Ain-rimmon." *See* EN-RIMMON.

3. The Levitical city assigned to the Aaronids (Josh. 21:16). "Ashan" should probably be read here (cf. the parallel lists in I Chr. 6:59—H 6:44 and the reading of Josh. 21:16 in the Codex Vaticanus).

V. R. GOLD

AIN (LETTER) ā'ən (Heb. ä'yĭn) [ע, *('Ayin)*]. The sixteenth letter of the Hebrew ALPHABET as placed in the KJV at the head of the sixteenth section of the acrostic psalm, Ps. 119, where each verse of this section of the psalm begins with this letter.

AIR, POWER OF. The author of Ephesians refers to the "prince of the power of the air" (2:2), whom the Christians at Ephesus had once followed and who was still at work in the "sons of disobedience" —i.e., among the Gentiles.

The "air" (ἀήρ) refers to the lower atmosphere, in contrast with the sky (αἰθήρ); and, according to the astrology and demonology of the time, the air was believed to be the place where evil spirits dwelt and from which they exerted power over men. The "prince" is probably Satan. (Cf. Pythagoras in *Diogenes Laertius* VIII.32; Test. Benj. 3:4.) *See* DEMON. B. H. THROCKMORTON, JR.

AIRUS. KJV Apoc. form of REAIAH 3.

AJAH. KJV form of AIAH 1 in Gen. 36:24.

AJALON. KJV alternate form of AIJALON.

AKAN ā'kăn [עקן (?)] (Gen. 36:27). A Horite. *See* JAAKAN.

AKELDAMA ə kĕl'də mə ['Ακελδαμάχ; Aram. חקל דמא; *see below*]; KJV ACELDAMA —sĕl'—. The name of a burial ground outside the Jerusalem

wall. The term is used only once in the Bible, by Luke in Acts 1:19.

The Greek term is spelled in several ways, giving rise to various possibilities of Aramaic derivation. Acts records the meaning as χωρίον αἵματος, "field of blood"; however, Klostermann and others suggest "field of sleeping."

Acts records that Judas purchased this field with the silver paid him for betraying Jesus, and implies that it was on this field that he fell and burst open —thus giving the name to the "field of blood." In a parallel account in Matt. 27:3-10, although the term Ἀκελδαμάχ is not used, there is a different explanation of how the field received its name. Here it is stated that the chief priests recognized that the silver flung back at them by a remorseful Judas, who then went out and hanged himself, was nevertheless the "price of blood" and could not be contributed to the temple treasury. So with it they bought the "potter's field" for a burial ground for foreigners, which has since been called the "field of blood" (fulfilling a prophecy of Jeremiah). It is obvious that this story also refers to the Acts' Ἀκελδαμάχ.

In these variant traditions there may be seen mingled allusions to Jer. 32:8-9, where Jeremiah bought a field from his cousin for seventeen silver shekels; to Jer. 18:2-3, where he visited the potter's house; and to Zech. 11:12-13, where the prophet was directed by the Lord to put his honest wages of thirty silver shekels into the treasury. The Hebrew term for "treasury" is easily confused with the term for "potter," which may explain the priests' alternative (in Matthew) between giving Judas' silver to the treasury or paying it for the potter's field. But in none of these OT allusions does the term "Akeldama" appear, and they throw no light upon this term.

It is probable that there existed even before the Christian era an area of caves used for burial and called by an Aramaic name similar to Akeldama. It seems more likely that this name meant "field of sleep." The meaning "field of blood" may date from the death of Judas, and the variant accounts explaining its connection with the burial area suggest that Judas' end was associated with this field, although it is not stated that it was here that he hanged himself. Luke does not describe the field as a cemetery nor offer any reason why Judas should buy it, nor does he offer information as to its future use.

In Matthew, the field becomes the place to bury "strangers"—i.e., foreigners—and it is so characterized by the pilgrim Antoninus Martyr (*ca.* A.D. 560). Since the fourth century its traditional site has been in the E end of the Valley of Hinnom, on the S slope, where deceased pilgrims have been interred at least up to the seventeenth century. In Matthew we read of the "potter's field," which may mean only that it is reported to be the potter's possession. There is no reason to conclude, as some have done, that this was where potters came (outside a "Potter's Gate") to get clay or to dump their refuse, or even where they worked. The record does not suggest that the "potter's field" was the poor man's cemetery, as a modern conception holds.

9. King Akh-en-Aton and his wife, Nefert-iti, make their offerings to the sun-god, Aton; limestone, from Tell el-Amarna

moter of a religious and cultural revolution. First named Amen-hotep (or Amenophis) IV, a name meaning "(The god) Amon is satisfied," he changed his name, thus disavowing the old imperial god AMON and promoting a new god, the Aton, the life-giving power of the sun. Fig. AKH 8.

By 1370 B.C. the Egyptian Empire in Asia was a century old. Egypt stood at the height of wealth and power, but Egyptian culture was changing under the influences of a more complex state and of foreign cultures. E.g., the concern for peoples of other lands altered the belief that the Egyptian gods were devoted only to the interests of Egypt.

The pharaoh Amen-hotep III (*ca.* 1398-61 B.C.) accepted new trends in government, religion, art, and literature. His son and coregent, Amen-hotep IV, chose to make a revolution to establish new power. Akh-en-Aton soon left the old capital Thebes and moved to a new site, which he called Akhetaton, near modern TELL EL-AMARNA. There he and his queen, Nefert-iti, gave themselves over to cultivating new trends in art and worshiping the new god. His preoccupation with the Aton has been called the world's earliest monotheism. Certainly it was a close approach to this type of worship. However, there is no evidence that Moses or any other Hebrew was directly influenced by this Egyptian concentration upon a single god. Fig. AKH 9.

Letters found at this capital show that Akh-en-Aton's preoccupation with internal reforms was disastrous to the Egyptian Empire in Syria and Palestine, which broke into independent states or fell away to the Hittites. Shortly after Akh-en-Aton's death, under his son-in-law, Tut-ankh-Amon, the "Amarna revolution" collapsed, and Egypt returned

11. The Ascent of the Akrabbim

the Arabah descends abruptly into the Wadi Murra. Another suggestion is Umm el-'Aqarab, on the W side of the Dead Sea, opposite the Lisan. In Hellenistic times the region was known as Akrabattene, where Judas Maccabeus defeated the Idumeans (I Macc. 5:3). Fig. AKR 11. S. COHEN

ALABASTER [שש, *šēš* (Song of S. 5:15; KJV MARBLE); Egyp. *šś*]; ALABASTER JAR, FLASK, KJV

BOX [ἀλάβαστρον]. Alternately: MARBLE (Esth. 1:6). A soft stone, of light creamy color, usually veined.

The stone is known to have been imported into Palestine from Egypt in antiquity, in the form of small objects. The most frequent use was for perfume flasks (cf. Pliny the Elder, XIII.4: "Perfumes are best kept [or 'keep best'] in alabaster vases"). Accordingly, the woman of Bethany brings an alabaster container with "very expensive ointment" (Matt. 26:7; Mark 14:3; Luke 7:37). The translation "alabaster flask" is preferable archaeologically, since thousands of small perfume flasks are found in excavations of all periods.

Besides the flasks of Egyptian alabaster, which is calcium carbonate, there was a limited industry of native alabaster or gypsum, calcium sulphate, in the Jordan Valley, from the Middle Canaanite to the beginning of the Israelite period. A few examples of Palestinian vases from the Greco-Roman period are known, too. The native flasks were made under the influence of Egyptian import ware, and produced a variety of new types, some of which are based

ALAMOTH ăl′ə mŏth. *See* Music § B1.

ALCIMUS ăl′sĭ məs [Ἀλκιμος, stout, brave= אליקים, God sets up; *cf.* Ἰάκειμος, Ἰάκιμος, *in* Jos. Antiq. XII.ix.5; XX.x.3]. A renegade Jew who, in Maccabean times, schemed with Demetrius to have himself restored to the high priesthood after he had been deprived of this office.

Shortly after Demetrius began to reign, Alcimus, aspiring to his old position (II Macc. 14:7), assembled a group of malcontents and made representations to the king that Judas Maccabeus had destroyed all the king's friends and brought ruin upon the land. Demetrius appointed Alcimus to the religious post he coveted, and sent troops under Bacchides to punish Judas. Alcimus accompanied the expedition, and some Jews sued for peace, confident that the presence of the high priest guaranteed their safety. Sixty of them, however, were treacherously slain.

Judas punished some of the deserters, but Alcimus again "brought wicked charges" (I Macc. 7:25), and Nicanor was sent with a large force, whom Judas met and overcame in battle at Capharsalama. Demetrius once more sent Bacchides and Alcimus against Judas. This time Judas was himself slain in the battle of Elasa. The author of I Macc. 7:23 considered that the evil wrought by Alcimus "was more than the Gentiles had done."

Carrying his wicked work even further, Alcimus, bent on tearing down the work of the prophets, "gave orders to tear down the wall of the inner court of the sanctuary" (I Macc. 9:54). This apparently was an attempt to Hellenize the temple by leveling the barrier that separated the Court of the Gentiles from the inner court to which the Jews alone were admitted. In words suggesting those of Acts 12:23, I Macc. 9:55-56 relates that Alcimus, shortly after initiating this project, "was stricken and his work was hindered; his mouth was stopped and he was paralyzed, so that he could no longer say a word . . . . And Alcimus died at that time in great agony."

Josephus (Antiq. XII.x.6) tells a similar story regarding the death of Alcimus but places it before the death of Judas. According to Josephus, the high priesthood was then conferred upon Judas. The books of the Maccabees do not mention the latter. Josephus relates also that, after the high priesthood was bestowed upon Alcimus, "who was not of the high priest stock," Onias sought the assistance of Ptolemy in building in Egypt a "temple like to that in Jerusalem" (Antiq. XII.ix.7). He reports that, on the basis of Isa. 29:19, this aid was granted (Antiq. XIII.vi.1).

Pss. 74; 79–80 are considered by some to reflect the attitude of pious Jews during the high priesthood of Alcimus. J. C. Swaim

ALEMA ăl′ə mə [Αλεμα]. One of six cities in Hellenistic Gilead, where Jews had been made prisoners by the Gentile inhabitants, as reported by Nabatean tribesmen to Judas Maccabeus (I Macc. 5:26). Other Jews had escaped and were besieged in the fortress of Dathema. The precise location of Alema is unknown, but it has been identified with the modern 'Alma, *ca.* 8½ miles SW of Busr el-Hariri (Bosor) on the plain of Hauran; possibly identical with the Helam of II Sam. 10:16.

Bibliography. F.-M. Abel, *Géographie de la Palestine*, II (1938), 103, 241, 347. E. W. Saunders

ALEMETH ăl′ə měth [עַלְמֹת]; KJV ALAMETH in I Chr. 7:8. **1.** A son of Becher and grandson of Benjamin (I Chr. 7:8).

2. A descendant of Saul in the sixth generation, through Jonathan and Meribaal (Mephibosheth). The name of his father is given as Jehoaddah in I Chr. 8:36 and as Jarah in 9:42.

3. A priestly city of Benjamin (I Chr. 6:60—H 6:45); same as ALMON. S. COHEN

ALEPH ä′lĭf (Heb. ä′lĕf) [א, *'(Āleph)*]. **1.** The first letter of the Hebrew ALPHABET as placed in the KJV at the head of the first section of the acrostic psalm, Ps. 119, where each verse of this section of the psalm begins with this letter.

2. *See* SINAITICUS.

ALEXANDER ăl′ĭg zăn′dər, —zän— ['Αλέξανδρος, man's defender]. A Greek name, given to two men in the Apoc. and to five in the NT.

1. Alexander III of Macedon, a hero of the ancient world; known as Alexander the Great. He was son of Philip II of Macedon. Born in 356 B.C., he was taught by Aristotle, and succeeded to Philip's throne in 336. Alexander was determined to put an end to the Persian menace to Greece, and in 334 he commenced the expeditions in the East for which he is so renowned, and from which he was destined never to return to Macedon. The victories over the Persian emperor at Granicus (334) and Issus (333) brought him as far as Asia Minor, and from there he went through Syria and Palestine and conquered Egypt (331). Subduing Darius at Gaugamela once and for all, he advanced victoriously through Mesopotamia and the Persian Empire as far as to the Indus (326), reading Homer all the while on his travels. Here he experienced trouble with his troops, who after eight years away were pining for home, and he was prevented from proceeding with the conquest of India as he had hoped. In 323, he died from fever in Babylon at the age of thirty-three. He did indeed defeat Darius and reign in his stead, as the author of I Macc. 1:1 observes!

The references to Alexander the Great in the Apoc. occur in I Macc. 1:1-8; 6:2; there is also a veiled reference in Dan. 7; and in Dan. 11:3-4 we read of the great king whose kingdom was broken up after his death. Some scholars have thought that there is also an allusion in Zech. 9:1-8 to Alexander's conquest of Palestine.

Alexander included Palestine in a province known as COELE-SYRIA under a governor, Andromachus, with headquarters at Samaria. According to Josephus, the Samaritans rose against Alexander because they resented the privileges which he had granted to the Jews; they set fire to the house of Andromachus and burned the governor to death. There is a persistent tradition that Alexander was always kindly disposed toward the Jews, and they certainly fought in his army; Josephus, supported by the Talmud (Yoma 69*a*), describes what happened when the great conquerer was besieging Tyre (Antiq. IX.viii.3-6). Alexander ordered the Jews to support him with troops and provisions. The high priest, Simon the Just, refused on the ground that he was bound in loyalty to Persia. But after Alexander had taken Tyre and Gaza, the high priest was fortunate enough to have a dream in which he was instructed to go out with the people and welcome the victor. He did this, and when they met, the king is said to have bowed before the divine name on the high priest's miter, because he said he had had a dream in which he saw something very like it and in which he had been promised success. Having entered Jerusalem and worshiped in the temple, he then granted certain privileges of autonomy to the Jews in his territories. The story, if not wholly true, may contain elements of fact; and no doubt Alexander would do much to cultivate the loyalty of the Jews before he ventured on the conquest of Egypt.

After this conquest, Alexander heard of the revolt of Samaria, which he subdued; and he proceeded to transport the population, settling his own Macedonians in the city. In Egypt he built the great city of Alexandria in 331, and he settled many Jews there, allowing them considerable privileges.

13. Part of a statue of Alexander the Great (in the Louvre)

In so short a life Alexander had changed the entire map and culture and language of the world—even the customs and dress of its peoples. Not least among the various kinds of influence which he exerted was the Hellenization of a great many Jews, and this had a profound effect on later Jewish and Christian thought and culture. The OT was translated into Greek in Alexander's Alexandria by Jewish scholars who were deeply involved in the new culture, and who were thus to wield an influence on all later versions of the Bible and on the Greek NT itself which is incalculable. *See* SEPTUAGINT.

Fig. ALE 13.

2. Alexander Balas, an upstart king of Syria during the Maccabean period. According to some authorities he was the son of Antiochus Epiphanes, but it is more likely that he was a lowborn Greek who made pretense of being son of Antiochus, and whose real name was Balas (meaning unknown). He assumed the name Alexander and the title Epiphanes, and with the help of the kings of Egypt, Pergamum, and Cappadocia, and encouraged by the Roman senate—which wished to weaken the Syrian state by promoting internal strife—he prepared to seize the throne from the unpopular Demetrius Soter in 153. He gained the assistance of Jonathan Maccabeus by nominating him high priest in Jerusalem in 152. Finally he defeated Demetrius in battle and married Ptolemy Philometor's daughter Cleopatra.

Having rewarded Jonathan for his help by receiving him in state at Ptolemais and granting him the governorship of Judea, Balas became the incompetent and self-indulgent ruler of the kingdom of Syria from 150 to 145 B.C. After Nicator, son of Demetrius Soter, had invaded Syria in 147, Balas was deserted by his own soldiers, though Jonathan still remained loyal. While Balas was endeavoring to crush a revolt, his father-in-law intervened from Egypt on behalf of Nicator. The authorities differ as to whether Balas was slain in battle or fled to Arabia and was there assassinated. The Jews, and particularly the historian of I Maccabees, regarded Balas with some favor, for the simple reason that under his negligent rule they achieved a measure of self-government and freedom. In the event, his reign did mark a distinct step forward on the road to Judean independence (I Macc. 10:1–11:19; Jos. Antiq. XIII.iv).

3. The son of Simon of Cyrene (*see* SIMON 8), and the brother of RUFUS. The brothers are referred to quite casually in Mark, in order to identify Simon, as if they were well known in the church for which Mark is writing (Mark 15:21); Matthew omits the reference to the brothers. They may have been converted Jews. Simon was probably in Jerusalem in order to keep the Feast of Passover, and the adjective "of Cyrene" does not necessarily mean that he was a Gentile. In the apocryphal Acts of Peter and Andrew, Alexander and his brother are companions and disciples of Andrew and Peter in missionary endeavor. They are also associated with Andrew and Peter in the Coptic Assumption of the Virgin by Evodius, who professes to be their kinsman, and who appears to suggest that Alexander and Rufus were among the Seventy whom Jesus sent out. After the Passion they apparently lived with the Virgin Mary, Salome, and Joanna.

4. A kinsman of the high priest Annas (Acts 4:6). Little is known of this Alexander. It has been conjectured by a few scholars that he was the "alabarch" (i.e., the governor of the Jews) of Alexandria, a brother of Philo (mentioned in Jos. Antiq. XVIII. viii.1). Another suggestion is that he was Eleasar, who we learn from Josephus was the third son of ANNAS (Antiq. XVIII.ii.2).

5. Alexander the Jew, of Ephesus (Acts 19:33). On the occasion of Paul's evangelistic work at Ephesus a riot was caused by Demetrius the silversmith, when the smiths of the city feared that their craft would suffer. The Ephesian Jews were unjustly blamed for the slight which was cast on Artemis, the city's patron, and this Alexander was put forward by them with the intention that he should address the mob in the theater and indicate the innocence of the Jews. Alexander beckoned with his hand, as if to speak, but the mob realized that he was a Jew and would not allow him to proceed. The Jews had often been accused of desecrating temples in their abhorrence of paganism. In the case of Alexander, he may have been one of the smiths themselves, and it may have been for this reason that he was put forward. If so, he may well be the same as Alexander the coppersmith described *below* (7). On the other hand, he would then be engaging in a trade which was unlawful for a Jew. He was apparently a figure known to the citizens—he does not receive the designation τις ("a certain Alexander"). Evidently it was hoped that he would convince the mob that the Jews had nothing whatever to do with Paul's activities. However, some writers have maintained that he was a Christian, endeavoring to speak on Paul's behalf, and that he was pulled down by the Jews. But there is hardly sufficient evidence for saying so much.

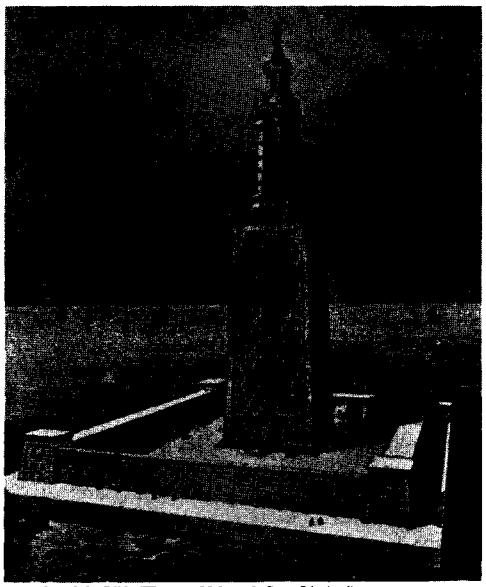
6. A false teacher in the church. He is coupled with HYMENAEUS in the Pastoral letters. He "made shipwreck" of his faith "by rejecting conscience," and Paul is said to have delivered him to Satan—i.e., probably excommunication (I Tim. 1:19-20). It has been conjectured by some that he was Alexander the coppersmith (*see* 7 *below*), because of the harm he did to the cause of Paul. But, far from being a personal adversary of Paul, like the coppersmith, it is probable that men like Alexander, with Hymenaeus and PHILETUS, were the earliest teachers—not necessarily as early as Paul's own day—of what became known as Gnosticism: they regarded the resurrection in a purely spiritual or intellectual way (II Tim. 2:18) and were guilty of the "disputing about words" and the "godless chatter" (2:14, 16) which seem to be part of the false gnosis—"what is falsely called knowledge" (I Tim. 6:20). If the Pastoral letters are not wholly Pauline as they stand, it would be precarious to accept the excommunicating of Alexander as having been actually carried out by Paul, rather than as a suggestion of the Paulinist as to what ought to be done with such teachers in his own day.

7. Alexander the coppersmith. He is said to have done Paul great harm (II Tim. 4:14) and to have strongly opposed his message (vs. 15). This may be a genuine Pauline fragment embodied in the Pastoral letters. The enmity against the apostle appears to be personal, and it may be that Alexander was a hostile witness at Paul's trial in Rome, as some think. Naturally, as he is described as a smith, and as Paul purports to be writing to Timothy in Ephesus, some have supposed that he was the same man as the Alexander (*see* 5 *above*) who tried to address the crowds in Ephesus when the smiths there caused a riot. But there is no real evidence for either of these views; nor for identifying him with the heretical teacher (*see* 6 *above*), although his name appears in the same group of letters. N. TURNER

ALEXANDRA ăl'ĭg zăn'drə, —zän— [Ἀλέξανδρα]. A Jewish queen. Salome Alexandra was wife of Aristobulus I (104-103 B.C.), who was the first of the

HASMONEANS to adopt the royal title. After his death, she married his brother JANNEUS. It has been thought that Ps. 2 was sung at the wedding; though this has not been proved, the psalm does express the ambition of Alexandra's husbands, to break the heathen and "dash them in pieces" (2:9) and to restore the throne of David. On the death of her second husband, Alexandra herself came to the throne (76-67 B.C.), and under her peaceful rule the Pharisees achieved considerable power, being admitted to the Sanhedrin for the first time. She was sister of the famous Pharisee, Simon ben Shetach. N. TURNER

ALEXANDRIA ăl'ĭg zăn'drĭ ə, —zän— ['Αλεξάνδρια, Alexander's city]. The capital city of Egypt through the Hellenistic and Roman periods; next to Rome itself, the most important metropolis in the Greco-Roman world.



1. Situation and city plan
2. Edifices and institutions
3. The school of Hellenistic culture
4. The Judeo-Alexandrian school
5. The Alexandrian Christian school
6. Intertestamental and NT allusions

Bibliography

1. Situation and city plan. Alexandria was founded by Alexander the Great in 331 B.C., while he was on his way to the oracular oasis of Ammon at Siwa. He chose as the site an Egyptian fishing village on a somewhat narrow strip of land between the Mediterranean Sea and Lake Mareotis, *ca.* fourteen miles from the westernmost mouth of the Nile. At his direction the new city was laid out by Deinocrates of the Artemisium on an oblong plan, with main streets intersecting at right angles. A swerving island, seven stadia offshore, was connected with the mainland by a viaduct, called literally the Heptastadion. This dike divided the bay back of the island into two distinct harbors, of which the W port continues to be very importantly useful today.

Thus situated at the W angle of the Egyptian delta, Alexandria was connected with the Occident by the Mediterranean Sea itself. It was to be connected with the Orient through canals and lakes and the Red Sea. From its foundation it was in a position to become the main emporium of the Hellenistic world, the transshipment center between the West and the East.

2. Edifices and institutions. One of the most vivid ways to get an impression of the teeming interests and activities and institutions concentrated in Alexandria is to take a bird's-eye view of the city in the Augustan period, from the vantage point of the wonderful Pharos, the towering lighthouse at the entrance of the Great or Eastern Harbor.* In the immediate foreground the port itself formed a stage around which the royal or governmental quarter of the city extended in theaterlike fashion. At the left from the Pharos, the ample palace area—already the Roman governorate—spread over Cape Lochias and the contiguous shoreland. At the center of the unevenly curving shore were the monumental theater and the gleaming Caesareum, fresh focus of the new imperial cult (*see* EMPEROR-WORSHIP). Matching and extending the palace precinct was the Museum with its Great Library and halls and gardens, the cultural capital of the Hellenistic world. Nearby, at almost the center of the city, was the famed Soma or Sema, where the relics of the founder himself were superbly enshrined. Towering over it all was a cone-shaped, parklike hill, the Paneum, consecrated to the god of natural life. Fig. ALE 14.

14. The lighthouse of Alexandria

The W and native quarter of Alexandria, locale of the original Egyptian village of Rhakotis, overlooked the Western or Eunostos Harbor. There stood the ancient acropolis, now the site of the widely revered Serapeum, with the adjunct Daughter Library. Because of its representative character, as the sanctuary of a synthetic Greco-Egyptian cult, the Serapeum continued late as a popular pilgrimage center for devout pagans. The so-called Pompey's Pillar—actually Diodetian's—signalizes the place today.

Directly back of the city, on Lake Mareotis, was the Egyptian port of Alexandria. Plain to see was the fact that this was a more busy and crowded harbor than were either of the two Mediterranean ports on the other side of the city. This was so because the Mareotis haven was also the oriental harbor, as well as specifically the Egyptian port. Thus canals had made it very important indeed.

Crowded closely together in Alexandria of the Augustan period were great institutions and buildings that monumentally represented controlling human and social concerns: Hellenistic culture, imperial government, polytheistic religion, world-wide commerce, and local industry. The spectacle could scarcely be matched in impressiveness elsewhere around the long ellipse of the Mediterranean Sea.

3. The school of Hellenistic culture. It is not at all strange, but altogether natural, that the ecumenical milieu of Alexandria gave rise to several religio-cul-

tural trends that turned out to be of pre-eminent significance in the history of thought and religion. These trends were severally so specifically integrated in interest and personnel and activity that, not ineptly, they have been designated as schools. Three of them are outstanding as of special interest to modern investigators and practitioners of biblical interpretation. These are the university of Hellenistic culture that flourished in the Museum and libraries of Alexandria; and the Hellenistic Jewish school of Torah interpretation in connection with the synagogues of the city; and finally the Christian catechetical school of Alexandria.

The earliest of the Ptolemies were greatly ambitious to make their capital the cultural focus of the Greco-oriental world (*see* HELLENISM). Through the agency of the Museum and the libraries, Mother and Daughter, they succeeded in the realization of this ambition to an extent that was astonishing. At the outset the community of scholars assembled under royal patronage at the Museum concentrated on textual and philological projects, aimed to establish dependable, critical texts of standard Greek works. In elaboration their methods included textual criticism and correction, syntactical study and interpretation, and finally literary criticism. As a special point it is worth noting that the Museum school included both imaginative exponents of the allegorical method of interpretation (*see* ALLEGORY) and vigorous opponents of this technique.

As the Hellenistic period progressed, however, the initial preoccupation of Museum scholars with textual and philological matters became extensively diversified by increasing attentiveness to scientific interests as well. Intellectually the great revolution of the period was the analytical breakup of generalized philosophy into a plurality of concrete and specialized sciences (*see* SCIENCE). The particular sciences that received a large share of attention at the Museum were mathematics, astronomy, geography, botany, zoology, anatomy, and physiology. Thus to the discipline of textual and literary criticism, the Gentile scholars at Alexandria added wide-ranging and inquisitive interest in all the areas of human knowledge, and exactitude in observation and record.

4. The Judeo-Alexandrian school. From the time of Ptolemy I the Jews formed a singular ethnic group in the population of Alexandria. However separate from their Gentile neighbors they continued to be in race and religion, they could not remain in isolation linguistically, economically, and culturally. Almost from the outset they adopted Koine Greek as their language for everyday conversation. They translated their sacred Hebrew scriptures into the Greek of their period and place.

Notably influential on the more talented among them were the multiform Greek and Hellenistic writings available in Ptolemaic Alexandria. In response to such literary and cultural stimuli, the Diaspora Jews of the city came in time to produce the most abundant Semitic-Hellenistic literature known.

The main purposes of this literature were dual and very closely interrelated: to defend Jews and Judaism against the sharp criticisms of Gentile contemporaries; and to commend their religion and their way of life to serious-minded Gentile God-fearers. To accomplish these objectives, full use was made of the resources of Koine diction, of Hellenistic literary patterns, and of Gentile thought-forms.

The very beginning of Judeo-Hellenistic literature was the SEPTUAGINT translation of the Hebrew Pentateuch, a most concentrated project in scriptural interpretation done in straight translation. There followed historiography as fictional as II or III Maccabees, or as factual as the firsthand historical memoranda of Philo, embodied in his work *Against Flaccus* or the *Embassy to Caligula*.

There are extant several apt pieces of pseudonymous propaganda such as the Jewish moralizations of Pseudo Phocylides, the ecstatic prophecies of Jewish Sibyllines, and the Letter of Aristeas, with its traditional account of the making of the LXX.

More inclusive in perspective and more basic in concern were the writings of religio-philosophical thinkers of Jewish loyalty. PHILO JUDEUS was the most knowledgeable and eloquent of this group. Certain he was that the monotheistic God of Israel was the one God of the philosophers also, and that the teachings of Hebrew scriptures equated with the ethics and ideologies of Hellenistic schools of philosophy. Drastic techniques of interpretation were required to make plausible such equations. Philo's favorite method for the purpose was allegory. It is only factual to add that paradoxically Philo freely mixed literal and allegorical renderings in his vast interpretative writings.

5. The Alexandrian Christian school. Quite as deservedly famed as its Gentile or Jewish precursors was the Christian catechetical school of Alexandria. Along with its Hellenistic and Judaistic antecedents, there should also be remembered the Christian Gnostic school of Alexandria, which by a half-century preceded the emergence of the catechetical school there. Basilides and his son Isidore were the local leaders of the Gnostic enterprise. *See* GNOSTICISM.

The catechetical school was more definitely institutionalized and more closely attached to the Christian church than the Gnostic school had been. It had a succession of heads who were truly great teachers: Pantaenus, Clement, Origen, and the rest. It had an organized curriculum of which we can get an impression from the triple treatises of Clement or the writings of Origen. Student fees were not charged, but were voluntarily offered and accepted. Wealthy patrons were encouraged to support outstanding teachers in their educational and literary pursuits.

To the forwarding of methodology in scripture interpretation the catechetical school made contribution for which it will always be credited. Clement and Origen agreed in affirming that scripture exhibited distinguishably a threefold nexus of meanings: first, the literal or historical sense; second, the moral implication; and third, the spiritual meaning. Correspondingly, three lines or methods of interpretation were valid; but of the three the greatest and the most fully sufficient was the spiritual method. Here was high preference for allegorical interpretation that excelled even the great appreciation of Philo, the Hellenistic Jew.

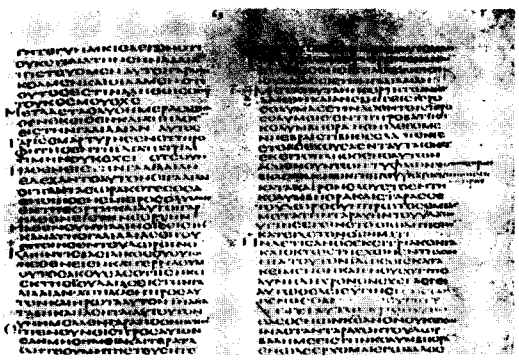
For two full centuries, from the second to the late fourth, the catechetical school continued its intellectual discipline of E Mediterranean Christianity. When it disappeared at last, in a chaos of theological controversy, it left behind an eminent continuator in the school of Caesarea, and a rigorous rival in the school of Antioch.

6. Intertestamental and NT allusions. Canonical literature, Jewish and Christian, paid remarkably little attention to the city of Alexandria. The determinative circumstance was that the blooming time of Alexandrian prosperity and productivity under the earlier Ptolemies was too tardy to get canonical Jewish attention; by the same sign, it was too early to capture very much canonical Christian notice.

Noncanonical Hellenistic Jewish writings, however, in large part produced in Alexandria itself, took ample notice of the city and its life in casual and normal ways. Altogether Philo shows multitudinous local and contemporary references of this sort. The action in the Letter of Aristeas alternates between the palace of the Ptolemies and a sea-front mansion on the island of Pharos, where the LXX translation was alleged to have been made. Similarly the chief action of the second part of the melodramatic III Maccabees is set in the immense Hippodrome of Alexandria, outside the Gate of the Sun, approximately where the Sporting Club of today carries on its sports.

Within the canonical NT, the Acts of the Apostles alludes to Alexandrian Jews and to Alexandrian ships, twice over in each case. At Acts 6:9, Stephen the protomartyr is vehemently debating the issue of messianism with members of the synagogue of Alexandrians (Ἀλεξανδρέων) and other Diaspora groups (*see* DISPERSION). The familiar inscription of Theodotus, found at Jerusalem, should be studied closely in reference to this passage. A cornerstone inscription, it describes in some detail just such a Jerusalem synagogue of Diaspora Jews as here mentioned.

The well-known APOLLOS, native to Alexandria (Ἀλεξανδρεύς), is characterized in Acts 18:24 as an "eloquent man, well versed in the scriptures." This could be said of Philo, and of very many other Alexandrian Jews!



In a "we section" account of Paul's stormy voyage to Italy, an Alexandrian (Ἀλεξανδρινόν) ship is noted at Myra in Lycia (Acts 27:6); and another Alexandrian ship, named the "Dioscuri," is indicated at Malta (28:11), as forwarding Paul and his companions on their winter-season voyage. Early in the imperial period, as through earlier centuries, Alexandrian shipping was notably conspicuous on trans-Mediterranean runs from the provincial capital of Egypt to the imperial capital in Italy. *See* SHIPS AND SAILING.

H. R. WILLOUGHBY

ALEXANDRINUS ăl'ĭg zăn drē'nəs, —zän—, —drī'—. An early-fifth-century Greek uncial codex MS of the Bible (symbol "A"). Originally the codex contained the whole Greek Bible plus I and II Clement and the Psalms of Solomon. It is an important witness to the text of both the LXX and the NT. *See* VERSIONS, ANCIENT; TEXT, NT.

The OT has suffered some mutilation, and the NT now lacks Matt. 1:1–25:6; John 6:50–8:52; I Cor. 4:13–12:6. The Psalms of Solomon also have been lost from the MS. The codex contains 773 vellum leaves (630 in the OT, perhaps written by two scribes; 143 in the NT, perhaps written by three scribes), each measuring 12¾ by 10¼ inches. The text is written in two columns to the page, with 46-52 lines per column. Fig. ALE 15.

Courtesy of the Trustees of the British Museum

15. Codex Alexandrinus (fifth century A.D.)

In 1624 the codex was given by Cyril Lucar, patriarch of Constantinople, to the British Ambassador to Turkey for presentation to James I. James died before the MS reached him, and the presentation was made to Charles I in 1627. The codex was deposited in the Royal Library. It is now housed in the British Museum, where it has been since the Royal Library was incorporated into that Museum in 1757.

Bibliography. A photographic reproduction of the MS was published by the trustees of the British Museum, in *Facsimile of the Codex Alexandrinus* (1879-83). See also: F. H. A. Adams; 1958), pp. 120-21, 198-202.

M. M. PARVIS

ALGUM ăl'gŭm [אלגומים, *'algûmîm*]. A valuable wood from Lebanon (II Chr. 2:8—H 2:7) or from Ophir (9:10-11). The word is probably an error of transposition for "ALMUG." *See* FLORA § A8*c*.

ALIAH. Alternate form of ALVAH.

ALIAN. Alternate form of ALVAN.

ALIEN [גר, sojourner; זר, stranger; נכרי, foreigner; πάροικος, sojourner]. *See* FOREIGNER; SOJOURNER.

ALLAMMELECH ə lăm'ə lĕk [אלמלך] (Josh. 19:26); KJV ALAMMELECH. A town in Asher. The site has not yet been found, but it is perhaps located in the S part of the Plain of Acco.

ALLEGORY. The treatment of an ancient tradition (generally narrative in form) whereby one ignores its literal meaning and discovers new, hidden meanings in each term of the tradition. A well-known illustration is Augustine's allegorical interpretation of the parable of the Good Samaritan. In the first phrase, "A certain man was going down from Jerusalem to Jericho," Augustine equates "a certain man" with Adam, "Jerusalem" with the heavenly city of peace from which Adam was expelled, and "Jericho" with the moon, the symbol of man's mortality. None of the OT authors was an allegorist. But in NT times allegory had become an accepted exegetical procedure in certain pagan and Jewish circles. While NT authors made little use of this type of interpretation (Paul in I Cor. 5:6-8; 9:8-10; 10:1-11; Gal. 4-21-31; and the first and second evangelists in Mark 4:10-20; Matt. 13:37-43), in the post-NT period allegory was prominent in the writings of Justin Martyr, Clement, Origen, etc.

Bibliography

1. Terminology of allegory in the Bible. The word "allegory" does not appear in any of the OT documents and appears only once in the NT—Gal. 4:24, where Paul uses the passive form of the verb ἀλληγορεῖν. The word and its underlying concept are Greek in origin rather than Semitic, and apparently it was used by the Cynic and Stoic philosophers as a synonym for the earlier Greek word ὑπόνοια to denote allegorical exposition of mythical legends.

2. Nonbiblical applications of allegorical interpretation. Allegorical interpretation resulted from the efforts of certain Greek thinkers to preserve the religious values of the Homeric stories of the gods. Similarly, Jewish thinkers, particularly those who had been influenced by the Hellenistic world of thought in Alexandria, attempted to explain and defend the authority of their tradition by means of allegorical interpretation.

a. In Hellenism. For centuries the poems of Homer and Hesiod had nurtured the piety of the Greeks and had assumed a significance comparable to the authority of scripture for the Jews. Developments in science and philosophy, however, outstripped the mythological explanations given by these ancients for the structure and order of the universe and created a tension between the earlier and the more recent world views. The pious, wishing to save the myths and the venerated tradition represented by them, were forced to make the capricious and frequently immoral deeds of the gods intellectually respectable for Greeks trained in new schools of thought. Allegorical interpretation had its origin in ingenious etymological explanations of the names given to the deities and began to resolve the tension between myth, on the one hand, and science and philosophy, on the other, and to protect the tradition against satirical attacks. It was argued that the name Zeus must have been derived from ζῆν (zēn) and signified the life-giving power or *logos* which orders all created things. Similar explanations were given for Ares (war), Hephaestus (fire), Kronos (stream), Rhea (earth), etc. While the philosopher Thales (*ca.* 640-546 B.C.[?]) was apparently the first to initiate a moral and metaphysical interpretation of myths, Theagenes of Rhegium in his "Apology" continued to apply allegorical methods of interpretation more thoroughly to the ancient tradition, and Crates of Mallus so explained the entire text of Homer. Allegorical interpretations of Homer and Hesiod were accepted and endorsed by the Cynics and the Stoics, who established a fixed system for explaining the names and actions of the gods. Even though Plato (*Republic* 378 D) and Aristotle fought against the excesses of the allegorical method, the writings of Plutarch and others testify to the impact made by the allegorists upon the Hellenistic world. Since Greek philosophers first gave the impetus to understand a tradition allegorically, the tendency is to associate with them the attempts to find a deeper significance of a primitive tradition in terms of hidden moral and philosophical truths.

b. In Hellenistic Judaism. In Alexandria, Jews of the Diaspora were influenced by Greek culture and thought in general and by allegorical interpretations of traditional materials in particular. Consequently some Jews had given up their own tradition for the Greek world view, while others had isolated themselves from it that they might remain loyal to the ancient religious standards of Israel. The first representative of Hellenistic Judaism who attempted to fuse the Greek and the Jewish world views by the allegorical method of interpretation apparently was Aristobulus, who lived in Alexandria around the middle of the second century B.C. By the time of Philo (died *ca.* A.D. 50), the most prolific Jewish author to use allegory for the interpretation of OT scripture, exegetical procedures of this type had become rather fixed.

While Philo always remained a devout Jew and insisted upon reverence for the biblical text as the sacred revelation of God's word to Israel, his philosophical allegorization of texts removed him from their original meaning. Under his expert hand he transfused the ancient Hebraic tradition with Greek views on cosmology, morality, epistemology, physiology, and psychology. He tried to reconcile and to fuse two divergent world views: Judaism, with its tradition of revealed scripture; and Hellenism, with its science and philosophy. Thus Philo sought to defend Judaism against pagan criticism and to prove to his fellow Jews that Moses had already comprehended all the learning of the Greeks. By allegorical

explanation of biblical texts the competent and qualified exegete could lift the veil from the riddles of scripture and enter the sacred mysteries of the hidden and more profound meaning of God's holy word. *See bibliography.*

c. In Palestinian Judaism. Exegetical exposition of scriptural texts among Palestinian Jews did not generally take the form of allegorization. The Mishna is a monumental work representing rabbinical skill in a juristic treatment of the Mosaic law for purposes of making specific laws applicable to contemporary situations. During the Tannaitic period Eleazer of Modiim and Akiba gave an allegorical interpretation of certain biblical texts. Palestinian Jewish allegorization and that of Hellenistic Judaism differ in that the former is less complex and adheres more closely to the literal meaning of the text.

The Dead Sea Scrolls reveal a second type of interpretation, which was used by the Qumran sect. This type stemmed from Daniel's explanation of Jeremiah's prophecy regarding the return of the Jews from Babylonian captivity. Since this type stressed the fulfilment of prophetic oracles, it can be distinguished from the juristic interpretations of the rabbis and the allegorical interpretations of the Alexandrian Jews by designating it as fulfilment exegesis of a text. This differentiation does not imply that the exegetical schools of the rabbis and of the Qumran sect did not use allegorical interpretation occasionally, but that they preferred their own types of exegesis.

3. Biblical application of allegorical interpretation. Of the biblical authors, Paul alone acknowledges the use of allegory (Gal. 4:24) as a means of interpreting OT texts. The preferred type of interpretation of OT passages for the authors of NT documents is fulfilment exegesis. However, in the NT it is significant that Christian authors have begun to interpret Jesus' parables allegorically (Mark 4:10-12)—a tendency apparent in their treatment of other parables (*see bibliography*)—and to allegorize parables created by them for that purpose. *See* PARABLE.

a. In Paul's letters. In his correspondence, Paul used allegory in four passages to bring out the force of his argument (I Cor. 5:6-8; 9:8-10; 10:1-11; Gal. 4:21-31). In his Letter to the Galatians, Paul's main theme concerns a declaration of religious independence and of freedom for all men. His development of the theme includes: a defense of his own right to be an apostle on the basis of Christ's and not of others' authorization; a repudiation of all authorities, institutions, customs, and laws which interfere with the direct access of the individual to God; and a statement setting forth the idea that true freedom can be found only in Christ. Paul explains this last affirmation by stating that true freedom gives release from fear, sin, wrath, and death. Since man cannot make himself righteous and thus escape these terrors, he must rely upon the grace of God, who has provided men with a means of acquiring a new nature of righteousness through his Son. Since God's forgiving love through Christ is the sole ground of salvation, the only access to God's eternal kingdom is by faith and by glad acceptance of his gift of grace. As a transition between this didactic section and the following hortatory section of his letter, Paul has tried rather clumsily to support the argument by an allegory concerning two covenants (Gal. 4:21-31). Abraham had two wives: Hagar, a slave who represents Mount Sinai, the law, and the present Jerusalem; and Sarah, who was free and a representative of the Jerusalem above. Hagar's son, Ishmael, was flesh-bound, while Isaac was the child of promise. Paul has blurred the meaning of this section of his letter by leaving the allegorical interpretation of Sarah's significance incomplete and by adding a rather inappropriate quotation from Isaiah concerning barrenness and fruitfulness.

In his Corinthian correspondence (I Cor. 5:6-8; 9:8-10; 10:1-11), Paul has allegorized passages of the OT for similar purposes. The nearness of the Feast of Pentecost (I Cor. 16:8) prompted him to introduce an allegorical digression on leaven in his discussion of an incestuous situation at Corinth (I Cor. 5:6-8). Since leaven (sin) ferments the whole lump of dough (the church), the old leaven should be removed to make the dough fresh or unleavened (the righteous living of converts) for the celebration of the festival (the Christian life). The Christ who demands this moral transformation and makes possible this renewal is the paschal lamb slain before the opening of the feast. In the allegory Paul mingles affirmation with exhortation by saying that, while on the one hand the church is the unleavened dough, yet on the other it is urged to become unleavened. In an autobiographical section on his overlooking of personal privileges in order to establish Gentile churches, Paul states that, contrary to normal procedures, he feels compelled to waive certain rights (I Cor. 9). The soldier, the planter of a vineyard, the plowman, the thresher, and the priest are given just payment for services rendered. By allegorizing the law concerning the rights of oxen, Paul introduces scriptural authority as further support of his argument (I Cor. 9:8-9; cf. Deut. 25:4; also cf. the rabbinic allegorization of this same law in Yeb. 4*a*).

In his discussion of Christian baptismal and Eucharistic rites Paul makes use of OT analogies to rescue the Christian rites from their discredited association with comparable pagan rites (I Cor. 10:1-11). The Christian institutions were prefigured in the OT accounts of Israel's passing through the Red Sea and the cloud, and of eating manna and drinking from the water of the rock. Since Paul did not wish to deny the sacramental validity (*ex opere operato*) of pagan rites and to return to the symbolic significance of Jewish rites, he was compelled to allegorize the OT accounts. Hence Israel was "baptized into Moses" and partook of the supernatural food and water which flowed from the supernatural Rock (Christ).

Since Paul did not use allegory for philosophical interpretation, he resembles the Palestinian rather than the Alexandrian allegorists. Furthermore, his use of allegorical interpretation of OT texts is both infrequent and incidental to the main development of an argument. In comparison with his use of fulfilment exegesis, which constituted the substructure of his theological outlook, allegory was not for Paul a significant means of understanding the OT.

b. In the Synoptic gospels. While the record of

Jesus' parables, as reported by the Synoptic evangelists, may imply an allegorical interpretation for a number of them, only one has been so treated; i.e., the parable of the sower (Mark 4:1-9). The parable of the tares, which has also been allegorized, is probably not one of Jesus' parables (*see bibliography*). The allegorization is introduced by an explanation of the purpose of Jesus' teaching by parables. Since their hidden meaning can be understood only by those initiated into the mystery of the significance of parables, the true understanding of parables serves as a means of distinguishing between those inside and those outside the enlightened group (Mark 4:10-12). With this introduction, the evangelist is prepared to make allegorical equations for the separate parts of the parable. In the process of allegorization, the sets of equations have become confused: the seed is both the preached word and the people who receive it; and the people are both the soil and the plants. Also the point of the original parable has been altered. The theme in this allegory is no longer a calm observation that misfortunes are unavoidable, but a warning to guard against that which brings misfortune.

Even though allegorical interpretation was rarely used in NT times, it had its origin in this period and became increasingly important, particularly for the Christian authors of the Alexandrian school.

ALLELUIA ăl′ə lo͞o′yə. Vulg. transliteration of the shout הללויה. *See* Hallelujah.

ALLIANCE [ברית; התחברות (Dan. 11:23; *cf.* Ps. 94:20; Dan. 11:6); התתן (I Kings 3:1; II Chr. 18:1); συμμαχία]. A union of interests. In the patriarchal period alliances among families, clans, and tribes were very frequent: e.g., Abraham with the Amorites (Gen. 14:13) and the Philistines; Isaac with the Philistines (Gen. 26:28); Jacob and Laban (Gen. 31:44); Judah's marriage to a Canaanite (Gen. 38:2). *See also* Covenant.

In the early period such alliances were undoubtedly commonplace; however, note Abraham's insistence that Isaac not marry a Canaanite (Gen. 24:3). Joshua made a pact with the Gibeonites (Josh. 9), and Israel frequently entered into mutual agreements with the Canaanites (Exod. 23:32; 34:12, 15; Deut. 7:2; Judg. 2:2; cf. I Sam. 11:1). Common dangers, however, began to draw the tribes together into a confederation or amphictyony (Judg. 4:10; 6:35), which became the foundation of the United Monarchy under Saul, David, and Solomon. Even then David entered into an alliance with Achish of Gath (I Sam. 27:2) by which he was prepared to fight Saul's own Benjaminites.

Under Solomon a formal treaty with the king of Tyre (I Kings 5:9) was established which was continued with the Phoenicians by Omri and Ahab (I Kings 16:31; cf. Amos 1:9). Solomon's many marriages undoubtedly involved political agreements, as with Pharaoh's daughter (I Kings 3:1; 9:16). Ahab entered an alliance with Ben-hadad of Syria (I Kings 20:34; cf. I Kings 15:19; II Chr. 16:3). Judah and Israel were allies during the reigns of Ahab and Jehoshaphat against Syria (I Kings 22; II Chr. 18). Israel and Syria joined in a common pact directed against Judah (II Kings 16:5; cf. Isa. 7:1-9).

Egypt was frequently a haven for those in Israel and Judah who sought political or legal refuge. Alliances were quite readily sought with foreign nations during the turbulent period of the rise of the Assyrian and Neo-Babylonian empires of the eighth and seventh centuries B.C. Menahem of Israel seems to have bribed Tiglath-pileser (Pul) of Assyria to aid him against his own subjects (II Kings 15:19). Hezekiah of Judah was the dependent party of an alliance with Egypt against Sennacherib of Assyria (II Kings 18:21, 24; cf. Isa. 31:1-3). The Egyptians were again relied on to combat the Babylonians in the last years of the kingdom of Judah under Jehoiakim, who was placed on the throne by Pharaoh Neco (II Kings 23:34), and under Zedekiah. Jehoiakim was forced to submit to Nebuchadnezzar and became his vassal. Though Egypt was decisively defeated at Carchemish in 605 B.C., there is ample evidence that Egypt offered support enough for a new alliance with Judah and was able to inflict sore losses on Nebuchadnezzar *ca.* 601 (*see* Exile). Jehoiakim courted Egypt's favor and was rewarded with a thorough defeat at the hand of the Babylonians in 597. Later when Zedekiah was put on the throne in Judah by Nebuchadnezzar, he too was induced to put off the Babylonian yoke and make an alliance with Egypt (cf. II Kings 24:20; Ezek. 17:1-21). Because of this, Nebuchadnezzar again laid siege to Jerusalem, destroying the city and temple, taking the people into exile.

The prophets inveighed against the practice of making foreign alliances (Isa. 20; 28:15, 18; 30:1-2; Jer. 2:18, 36; Hos. 8:9) solely for religious reasons. Israel and Judah were almost invariably the dependent members of such alliances and were thereby subject to influences of a cultic nature. Equally important to the prophets was the false sense of security which foreign alliances aroused in the people; it was a form of apostasy and idolatry in the sense of a mistaken trust and false commitment.

Ezra and Nehemiah vehemently opposed any alliance which would render insecure the identity of the small state of Judah as the people of God's revelation, especially marriage contracts with non-Jews (Ezra 9:1-3).

During the Second Commonwealth alliances were sought and secured by the Maccabean and Hasmonean leaders with both Seleucid and Roman powers in order to ensure gains made toward Jewish freedom and autonomy or to prosper their own personal ambitions (I Macc. 8:17; 9:70; 15:16; Jos. Antiq. XIII.i.6, vii.2, viii.3; XIV.ii.1). Antipater and Herod were particularly adept at making deals with the right Roman leader at the right time (Jos. War I.viii–II.ii; Antiq. XIV.ix-xvi). J. A. Sanders

ALLOGENES SUPREME ă lŏj′ə nēz [ἀλλογενής]. A Gnostic work in Coptic discovered at Chenoboskion in 1946 (*see* Apocrypha, NT). It appears to be one

of the five apocalypses which Plotinus is said by Porphyry to have combatted. It is apparently a Sethian document composed in the early third century.

M. S. ENSLIN

ALLOM. KJV Apoc. form of AMON 3.

ALLON ăl'ən [אלון, oak]. **1.** A prince in the tribe of Simeon (I Chr. 4:37).

2. KJV translation in Josh. 19:33 (cf. "plain" in Judg. 4:11 KJV). The word here should be interpreted as a part of "Elon-bezaanannim" or "oak in ZAANANNIM" (so RSV). G. W. VAN BEEK

ALLON-BACUTH ăl'ən băk'əth [אלון בכות, oak of weeping] (Gen. 35:8); KJV ALLON-BACHUTH. The site of the burial of Deborah, Rebekah's nurse, in the vicinity of Bethel. If Allon-bacuth is to be identified with the site of the palm tree of the prophetess Deborah, the place was located between Bethel and Ramah (Judg. 4:5). Worship at a sacred tree may be implied in both references. Some scholars have identified Allon-bacuth with the oak of Tabor (by reading "Deborah" for "Tabor") in I Sam. 10:3.

W. L. REED

ALLOTMENT. In the OT this is a concept of land right, which evidently had its origin in the law of the commune. The custom of having community holdings in landed property change owners at certain intervals of time and of having them be newly distributed by lot (cf. the regulations for the sabbatical year) is in the background when the psalmist (Ps. 16:5-6) rejoices that possession of good land has been allotted to him (even though in a figurative sense his גורל, "lot," and חלק, "portion," is here Yahweh), or when, on the other hand, the prophet (Isa. 57:6) reproves the folly of those whose absurd worship is aimed specifically at the "portion" and the "lot" which consists of the smooth stones of the stream valley. Then, too, as the communal land came to be privately owned to an increasing extent, situations resulted again and again—at the time of the dying out of a family, e.g.—which made necessary a new apportionment of this land, in the course of which the lot then played its old role. Micah hoped for such a reapportionment in the Judean communities which would be effected when the landed proprietors from the capital city, who had intruded themselves here and there in the country, had to get out after the punishment of Jerusalem:

> Therefore you will have none to cast the line by lot in the assembly of the LORD (Mic. 2:5).

Ezekiel foresees the time when there will no longer be such allotments in Jerusalem (Ezek. 24:6). That the lot plays such an important role in the apportionment of land is less astonishing if one considers that allotment was a sacral act, and the will of Yahweh in person was believed to be at work in the seemingly rather mechanical and random falling of the lots, according to Prov. 16:33, which seems to be of early date, judging by its inner structure:

> The lot is cast into [lit., "shaken in"] the lap, but the decision is wholly from the LORD.

The idea obtained from the administering of the communal land right was probably carried over very early into the conception of the process by which the tribes occupied their territory. According to this theory, which is displayed above all in Josh. 13–19, the twelve tribes came into possession of their territories for settlement by applying to the whole land of Canaan that method of allotting portions which was used on a small scale in the sphere of the rural community. In this sense—i.e., expanded almost to a sort of state law—the concept of allotment—more exactly, the word "lot" (גורל)—originally inherent in communal right, is exemplified most frequently in the OT. In both cases it is based on the theologoumenon of Yahweh as the sole possessor of the land, who now, by lot revealing his own will, assigns portions, first of all to the individual tribes, then within each tribe to the individual clans and, finally, within each clan to the individual families. It is not impossible that the basic theologoumenon was influenced from Egypt, where, up until Ptolemaic times, the Pharaoh was considered the actual lord of the land, from whom all others had their possession only in fee. Because it is determined by lot, the individual portion of land can also be designated itself as "lot" (e.g., Judg. 1:3); because it is given in hereditary tenure, as it were, it can be called "inheritance" (נחלה); the most colorless designation is "portion" (חלק). In Num. 26:52-56, where the three terms appear alongside one another in somewhat contradictory context, the command for allotment is given in connection with the organization of the tribes. In Num. 33:54; 34:13 (cf. 36:2-3) it is repeated, here restricted to 9½ tribes, the tradition of Num. 32 being taken into account, a tradition which reports without the use of the word "lot" on the bestowal of hereditary property on Reuben, Gad, and the half-tribe of Manasseh, who were already in the land E of the Jordan. Also in Josh. 13:6 the idea of allotment does not refer to the land E of the Jordan. It becomes dominant, on the other hand, in the report on the accomplishment of the distribution of the land W of the Jordan in chs. 14–19. Not only in Josh. 14:1-2; 19:51, which frame the report, is it expressly stated that these are the territories which were distributed by "lot" as "inheritance," but the key word "lot" appears again and again in Josh. 15:1; 16:1; 17:1, 14 (along with חבל, actually "measuring line"; cf. Mic. 2:5), 17; 18:6-10 (along with חלק, "portion"); 19:1, 10, 17, 24, 32, 40. In the fact that the act of allotment is undertaken with the assistance of priests at the central sanctuary of the amphictyony in Shiloh, its sacral character distinctly emerges.

The theory of allotment of the tribal portions experienced a late readoption in the so-called constitutional draft in the supplement to the book of Ezekiel (Ezek. 45:1; 48:29). It is an elaboration of the theory when Josh. 21:4-6, 8, 10, 20, 40 (=I Chr. 6:54, 61, 63, 65—H 6:39, 46, 48, 50) also considers the Levite cities to be drawn by lot; Levi received no definite tribal territory for settlement, because Yahweh was his portion (Num. 18:20; Deut. 10:9; Josh. 13:14), and within the various tribal territories received only places of residence with pasture, but no arable fields. Once (Ps. 125:3) the whole land of Canaan appears

as the "land allotted to the righteous." In Isa. 34:17, Yahweh assigns the territory of Edom to the wild beasts by lot and with the measuring line. Usually, however, in such contexts, which extend the idea of allotment beyond the scope of the individual community and the tribal assembly into the universal, the root גרל no longer appears, but rather נחל and ירש. No idea of space is bound up with the casting of lots for clothes (Ps. 22:18—H 22:19) and prisoners of war (Joel 3:3—H 4:3; Obad. 11; Nah. 3:10); or with the use of lots to resolve controversies (Prov. 18:18), or to decide in a case like that in Prov. 1:14, where also the religious significance can no longer be recognized in the proceedings, which manifests itself in the allotment of priority in executing the confederacy's decrees (Judg. 20:9), in determining the guilty (Jonah 1:7) and those who are to live in Jerusalem (Neh. 11:1) or in casting lots for the manifold cultic functions (I Chr. 24:5, 7, 31; 25:8; 26:13 ff; Neh. 10:35; also Lev. 16:8-10). It should be noted further that the word "lot" in the OT, beyond being the instrument of decision and the allotted portion of land, can also, as in modern languages, mean "fate" (in Isa. 17:14, the overthrow of the nations; in Jer. 13:25, Jerusalem's punishment; in Dan. 12:13, the salvation of the godly who are rising from the dead).

ALLOY. *See* Metallurgy.

ALMIGHTY [שדי, *originally* the Mountain One; NT παντοκράτωρ]. For the OT word this translation has become common, under the influence of the LXX, which frequently, especially in the book of Job, renders παντοκράτωρ. Originally the word referred to the El Shaddai, "god of the mountain(s)," who was worshiped in patriarchal times. In Exod. 6:2-3 (P), the writer correctly says that the worship of Yahweh (the Lord) began with Moses, and that in the period of "the fathers" God was known as El Shaddai (Gen. 17:1; 28:3; 35:11; 43:14; 48:3; 49:25). The name was eventually reinterpreted by the content of "Yahweh" (as in Ruth 1:20-21; Pss. 68:14—H 68:15; 91:1; Ezek. 1:24; 10:5), except in the book of Job, where it is used to emphasize the power and majesty of deity.

The NT occurrences of the word παντοκράτωρ are all in the book of Revelation (e.g., 1:8; 4:8; 21:22) with the exception of the OT quotation in II Cor. 6:18.

See also God, Names of, § C2*a*.

B. W. Anderson

ALMODAD ăl mō′dăd [אלמודד]. The first son of Joktan, and the presumed ancestor of a South Arabian people (Gen. 10:26; I Chr. 1:20). The name is probably to be read, with the LXX, as "Elmodad," meaning "God is a friend." Other suggestions are based on the Arabic word *'al,* "tribe," and identify the tribe either with the Gebanites or, by a change of one letter, with the tribe of Al-Murad.

S. Cohen

ALMON ăl′mən [עלמון]. A priestly city in Benjamin, located near Anathoth (Josh. 21:18); it is the same as Alemeth (I Chr. 6:60—H 6:45). Neither name is mentioned in the list of Benjaminite cities in Josh. 18:21-28.

On the basis of such twin forms as תחתון (*tahton*) and תחתית (*taḥtith*), meaning "lower," the consonants of עלמת should be vocalized as "Almit," which would be a later form of "Almon." The name and site are preserved in Khirbet Almit, a ruined village a mile NE of Anata, on the road to 'Ain Farah.

S. Cohen

ALMON-DIBLATHAIM ăl′mən dĭb′lə thā′əm [עלמון דבלתימה]. The stopping place of the Israelites following Dibon-gad and preceding the mountains of Abarim (Num. 33:46-47). A possible location is Deleilat el-Gharbiyeh, a town commanding three roads, 2½ miles NE of Libb; but no identification is generally accepted. It may be the same as Beth-diblathaim.

E. D. Grohman

ALMOND. The translation of the following words: *a*) לוז, *lûz* (Gen. 30:37; KJV HAZEL). As the Aramaic and Arabic cognates (לוזא; *lawz;* see also LXX ἀμυγδάλη) show, the reference is to the almond

From *Plants of the Bible* (London: Crosby Lockwood & Son, Ltd.)

16. Almond

tree, *Amygdalus communis* L., common in the Near East. *See* LUZ.

b) משקדים, *meshuqqādhîm* (from שקד, "to watch, wake"; *see below*), "like almonds" (Exod. 25:33-34; 37:19-20).

c) שקד, *shāqēdh*, apparently a symbolic name given the almond tree because it blossoms first among the fruit trees, the pink-white flowers appearing before the leaves. It is used in Jer. 1:11 as a play on the verb "to watch, wake." The almond was among the "choice fruits of the land" (Gen. 43:11), as it is today, and was sent as a gift to Egypt by Jacob. Aaron's rod blossomed and bore almonds overnight (Num. 17:8—H 17:23). The almond blossom was an artistic feature of the Menorah (seven-branched LAMPSTAND) of the tabernacle (Exod. 25:33-34; 37:19-20). In Eccl. 12:5 the figure of the almond tree is generally likened to the white hair of the aged (but cf. *IB*, V [1956], 83-86).

J. C. TREVER

ALMS [ἐλεημοσύνη, pity, relief of the poor; Lat. *eleemosyna;* Anglo-Saxon *aelmaesse,* almsgiving]. There is apparently no Hebrew word for "alms" or "almsgiving," though the practice is attested. It is very important to note that the LXX uses ἐλεημοσύνη, of God (e.g., Ps. 103:6; Isa. 1:27; 28:17) and frequently of men (Gen. 47:29; Prov. 19:22; 20:28; 21:21; etc.), not merely for חסד, but also for the *ṣ.d.k.*, "righteousness" (e.g., Deut. 6:25; 24:13; Ps. 24:5; Isa. 1:27; 28:17; 59:16; etc.). It is open to doubt whether ἐλεημοσύνη ever means "almsgiving" in the LXX. In Matthew, Luke, and Acts the word is used of the giving and of what is given (cf. Acts 3:2-3).

References in the OT to the poor and needy and to various institutions and methods of relieving them show the practice of almsgiving to have been more widespread than the meager terminology suggests. There are a number of references to charitable practices in both Testaments.

1. In the OT
2. In Jewish writings
3. In the NT
4. Bases of almsgiving
Bibliography

1. In the OT. There is little direct reference to the giving of alms in the OT. Indeed, the Deuteronomist envisages that in the Promised Land "there will be no poor among you (for the LORD will bless you in the land . . .)" (Deut. 15:4; but cf. vs. 11). On the other hand, the Israelite is enjoined to be generous. He is not to shut his hand, but is to open his hand and lend to his poor brother, and give to him freely (vss. 7-11). It is difficult to decide whether the context refers to lending only (cf. vss. 8, 10) or to lending (vs. 8) and almsgiving (vs. 10; cf. Pss. 37:26; 112:5).

There are, of course, references to the poor and destitute in all branches of the literature of the OT. The psalmist has not seen the children of the righteous begging bread (37:25); rather, the righteous is a liberal giver (112:9); and Job was famed for his charity (Job 29:12-17). The prophet claims that the religious fast acceptable to the Lord includes gifts of bread to the hungry, housing for the homeless, and clothing for the naked (Isa. 58:6-8). The wise commend kindness to the poor (Prov. 14:21, 31). Noteworthy is the frequent phrase "poor and needy." The occurrences of this phrase in law, prophecy, wisdom, and psalmody show that, like the modern phrase "down and out," "poor and needy" is a colloquial, almost technical, term for the unfortunates. Beggary is a terrible fate destined to fall upon the remnants of Eli's house (I Sam. 2:36), and a curse invoked upon the children of the persecutor (Ps. 109:10). Penury and privation are abundantly attested in the OT, and where these are present, we may also assume that almsgiving and succor were not absent.

Various practices point in the same direction. Much almsgiving is concealed in hospitality which is not merely the feasting of superiors and equals but the charitable provision for the hungry. This is specially true of that hospitality connected with religious occasions and sacrifices (cf. I Sam. 9:13; 25:8; II Sam. 6:19; 15:11; Neh. 8:10). The laws prescribe provision for the poor. Arable land, the vineyard, and the olive orchard are to be left fallow every seventh year, "that the poor of your people may eat" (Exod. 23:10-11). Similarly the Deuteronomist prescribes that a tithe of the produce every third year is to be given to the Levite, the resident alien, and the poor (Deut. 14:28). Every Israelite—thus especially the poor—was allowed to pick grapes and corn to eat as he passed by (Deut. 23:24-25), and the poor would glean corn and olives and grapes (24:19-22; cf. Lev. 19:9; 23:22). The manumitted slave is to be loaded with gifts, but here the idea of reward must also be present (Deut. 15:12-15).

It may be concluded that in ancient Israel almsgiving was widely practiced, even if there are a good deal of silence and disguise concerning its terminology.

2. In Jewish writings. In the Damascus Document all who enter the covenant must not rob the destitute, must love the brethren and "hold fast the hand of the poor and needy." Also, the wages of at least two days per month are to be given to a central fund for organized distribution to the "poor and needy." There is no doubt, in spite of the almost complete silence of the major Dead Sea Scrolls concerning almsgiving, that this was a practice widely enjoined and performed. Elsewhere examples of precept and practice are too numerous for mention here, but three points are important:

a) In Jewish writings, generally speaking, the word "righteousness" (צדק) came to mean "almsgiving" (so in Aramaic, Syriac, and the Koran).

b) The giving of alms gained merit for the donor. This is already probably evident in such passages as Dan. 4:27; and the same is claimed for Prov. 11:4, though it is less likely, in view of the context. "Alms make atonement for sins" (Ecclus. 3:30; cf. 29:12).

c) Widely attested Jewish almsgiving is the background for the rich NT teaching.

3. In the NT. Almsgiving figures prominently in the Sermon on the Mount (Matt. 6:1-6, where "righteousness" [vs. 1; RSV "piety"] and "almsgiv-

ing" [vs. 2] are synonymous). The recipients of the kingdom must sell their possessions and give alms (Matt. 19:21; Luke 12:33), for to succor the poor is to succor the Savior (Matt. 25:42-46). Liberal giving is commended (Matt. 5:42; Mark 12:41-44; Luke 6: 38; 14:13), as is spiritual giving (Luke 11:41). The first Christian officers were elected for almsgiving (Acts 6), and there is apostolic precept (Rom. 12:8, 13; 15:26; I Cor. 16:1-3; II Cor. 9:1; Jas. 2:16; I Tim. 5:9-16; 6:18), receipt (Phil. 4:18), and example (Acts 24:17). Hospitality is especially enjoined (e.g., Rom. 12:13; I Pet. 4:9).

4. Bases of almsgiving. It may be said that there is a threefold basis for almsgiving:

a) It is significant that in Jewish, Christian, and other writing "almsgiving" is the exercise of righteousness, and it is clear that here the original social implications of righteousness as what is fitting and normal between clan members has re-emerged. Righteousness is not merely a forensic conception but describes that loyalty between members of the same social group which has almsgiving for one of its expressions.

b) Thus almsgiving again is the recognition of blessedness. Israel is blessed to bless the nations (Gen. 12:3); the individual Israelite gives because he is blessed (Deut. 15:14). "You received without pay, give without pay" (Matt. 10:8), for "it is more blessed to give than to receive" (Acts 20:35).

c) Thirdly, almsgiving achieves rewards for those who exercise it. Daniel points out that if Nebuchadnezzar practices righteousness—i.e., almsgiving—he may be rewarded with a lengthening of tranquillity (Dan. 4:27). It is claimed that "righteousness" in Prov. 10:2; 11:4 means "almsgiving" and that it gives deliverance from (sudden) death. Though this is doubtful, nevertheless such passages (cf. Prov. 16:6; 21:3; Ecclus. 3:30; 29:12) are doubtless the basis for the later rabbinical conceptions of the atoning and sacrificial potency of almsgiving.

ALMUG ăl′mŭg [אלמוגים, *'almûghîm;* Ugar. *almg*]. A special kind of wood imported from Ophir by Hiram of Tyre and used in the construction of Solomon's temple and for lyres and harps (I Kings 10: 11-12; LXX ξύλα ἀπελέκητα, "unhewn [rough?] wood"). The parallels in II Chr. 9:10-11 have אלגומים (ALGUM; LXX πεύκινα, "pine"), probably by transposition of two letters. Josephus (Antiq. VIII.vii.1) calls it a special pine wood. The occurrence of *almg* in an Ugaritic document (120) implies that the spelling in Kings is correct but further complicates identification. It has commonly been identified with sandalwood, particularly *Pterocarpus santalinus* L., red sandalwood, indigenous to India and Ceylon. A hard, close-grained, reddish-brown wood, it was quite suitable for musical instruments. *Santalum album,* white sandalwood, from the same countries, is still highly prized for wooden objects. Identification of the biblical wood remains uncertain.

ALNATHAN. KJV Apoc. variant of ELNATHAN.

ALOES ăl′ōz [אהלים, *'ahālîm;* אהלות, *'ahālôth;* ἀλόη, *perhaps from* Sanskrit *aghil*]. An aromatic substance used for PERFUME and probably derived from a tree. In Num. 24:6 (KJV LIGN ALOES) the word refers poetically to a kind of tree growing by a stream.

Most botanists now identify the "aloes" of the Bible with the *Aquilaria agallocha* Roxb., commonly (but mistakenly) called the eaglewood because of the similarity of the Sanskrit name *aghil* to the Latin *aquila*, "eagle." The *Santalum album* L., white sandalwood (*see* ALMUG), however, could also be intended, since both trees, native of Southeast Asia, provide the highly valued aromatic woods from the inner core of their trunks and branches. Incense and perfumes were made from them. They were a part of the imports into Bible lands in ancient times; thus specific identification with the source is more difficult.

17. Aloes

The true aloe, *Aloë succotrina* Lam. and other species, is not a tree but a succulent plant, similar in appearance to the century plant, *Agave americana,* with which it is often confused. This aloe is the source of a bitter, malodorous, purgative medicine which some botanists claim was used with MYRRH for embalming and was therefore the aloes of John 19:39. Probably all the references, except Num. 24: 6, were to the eaglewood, or sandalwood. Cf. the Targ. of Job 9:30, where Aramaic *'ahālâ* is used for Hebrew *bōr,* "lye." The poetic reference in Balaam's oracle, *'ahālîm* (Num. 24:6), is very probably a textual error (cf. LXX "tents") for *'ēlîm,* "OAK" or "TEREBINTH," since aloes was known only as an aromatic substance and not as a tree in the Holy Land.

ALOTH. KJV form of BEALOTH 2.

ALPHA AND OMEGA ăl′fə, ō mĕg′ə, ō mē′gə [Α; Ω]. The first and last letters of the Greek alphabet. The basic meaning is indicated by two parallel constructions: "the first and the last, the beginning and the end" (Rev. 22:13). In the NT the two are always

used together and applied to God (Rev. 1:8) or to Christ (Rev. 22:13). Alternative ways of expressing the same thought are: "he who was and he who is to come"; "from whom and to whom are all things." In Jewish thought the whole extent of a process or period is indicated by reference to its beginning and its end. That the thought does not focus simply upon the distant beginning and the distant ending of a time line, is indicated by the threefold formulations "who *is* and who was and who is to come" (Rev. 1:8); "from him and *through* him and to him are all things" (Rom. 11:36). The basic formula, which appears in Isa. 44:6; 48:12, accents the uniqueness of the one God as creator and redeemer, as the ultimate source and ground of existence. "Besides me there is no god" (Isa. 44:6). Because he is the Alpha, he alone holds supreme power over the heaven and the earth. He alone can make all things new. Because he is the Omega, the end, he alone can "tell us what is yet to be" (Isa. 44:7). He is the Life, and therefore alone can give freely "from the fountain of the water of life" (Rev. 21:6). He can banish death and Hades. His reward is final.

The application to Jesus Christ of these formulas, so expressive of unique sovereignty, is explicit and important (Rev. 22:13). He is the "first and the last, and the living one" (Rev. 1:17; cf. 2:8). In its basic meaning, this image parallels other NT assertions of Christ's primacy in creation (John 1:1 ff; Col. 1:18 ff; Heb. 1:1-3; I John 1:1), and of his role as the Coming One, the eschatological Redeemer of all things. All these assert that Christ's life and work have neither a beginning nor an end (Heb. 7:3), because he *is* the one through whom, by whom, and for whom all things are made. His firstness and lastness are validated above all by the fact of his death and resurrection (Rev. 1:17; 2:8).

The use of the alphabet to designate these attributes of God has analogy in various forms of Hellenistic speculation, but the basic symbolism is drawn from the OT. The chief contrast between the Testaments lies in the full identification of Jesus Christ as the Alpha and Omega, and in tracing his primacy and ultimacy to the Resurrection. Later Mandaean, rabbinic, and mystical thinkers develop the thought along quite different lines.

***ALPHABET** [Lat. *alphabetum, from the* Greek (*originally* Semitic) *names of the first two letters,* ἄλφα *and* βῆτα]. A consonantal system of writing which was invented, probably during the first half of the second millennium B.C., by the Semitic peoples of Phoenicia or an adjacent area.

The alphabet as a system of writing is virtually unique in world history; with no certain exceptions, all comparable methods of reducing a language to written form are derived directly from, or are imitations of, the set of symbols and the system thereby represented which were first employed by the Northwestern Semites during the first half of the second millennium B.C. As originally developed, the alphabet represented only the consonant sounds of the language for which it was employed. If we assume, as is highly probable, that the names of the letters were associated with their forms from the first, it would appear that each letter originally depicted, or at least represented, a specific object whose name began with the particular sound in question. Thus ' (the glottal stop) was represented by the head of an ox (Northwest Semitic *'alpu*), *b* by the plan of a house (*bêtu*), and similarly through the whole set of characters. Such a relationship between symbol and sound is termed "acrophonic." The overwhelming importance of alphabetic writing in the transmission of Western culture, as well as the unique features of this system at its inception, have led a large number of scholars to a detailed investigation of its origins and subsequent development. A summary of the more reasonable of the many suggestions concerning the origin and spread of the alphabet is presented below. But because much concerning the proto-alphabet is a matter of conjecture, our discussion will begin with a survey of the earliest undisputed forms of the alphabet as attested by Northwest Semitic, Greek, and South Semitic inscriptional material, in order to establish a foundation for the more speculative paragraphs which follow.

A. Earliest undisputed forms of the alphabet
  1. North Semitic
    a. Phoenician
    b. Hebrew
    c. Aramaic
  2. Greek
  3. South Semitic
    a. South Arabic

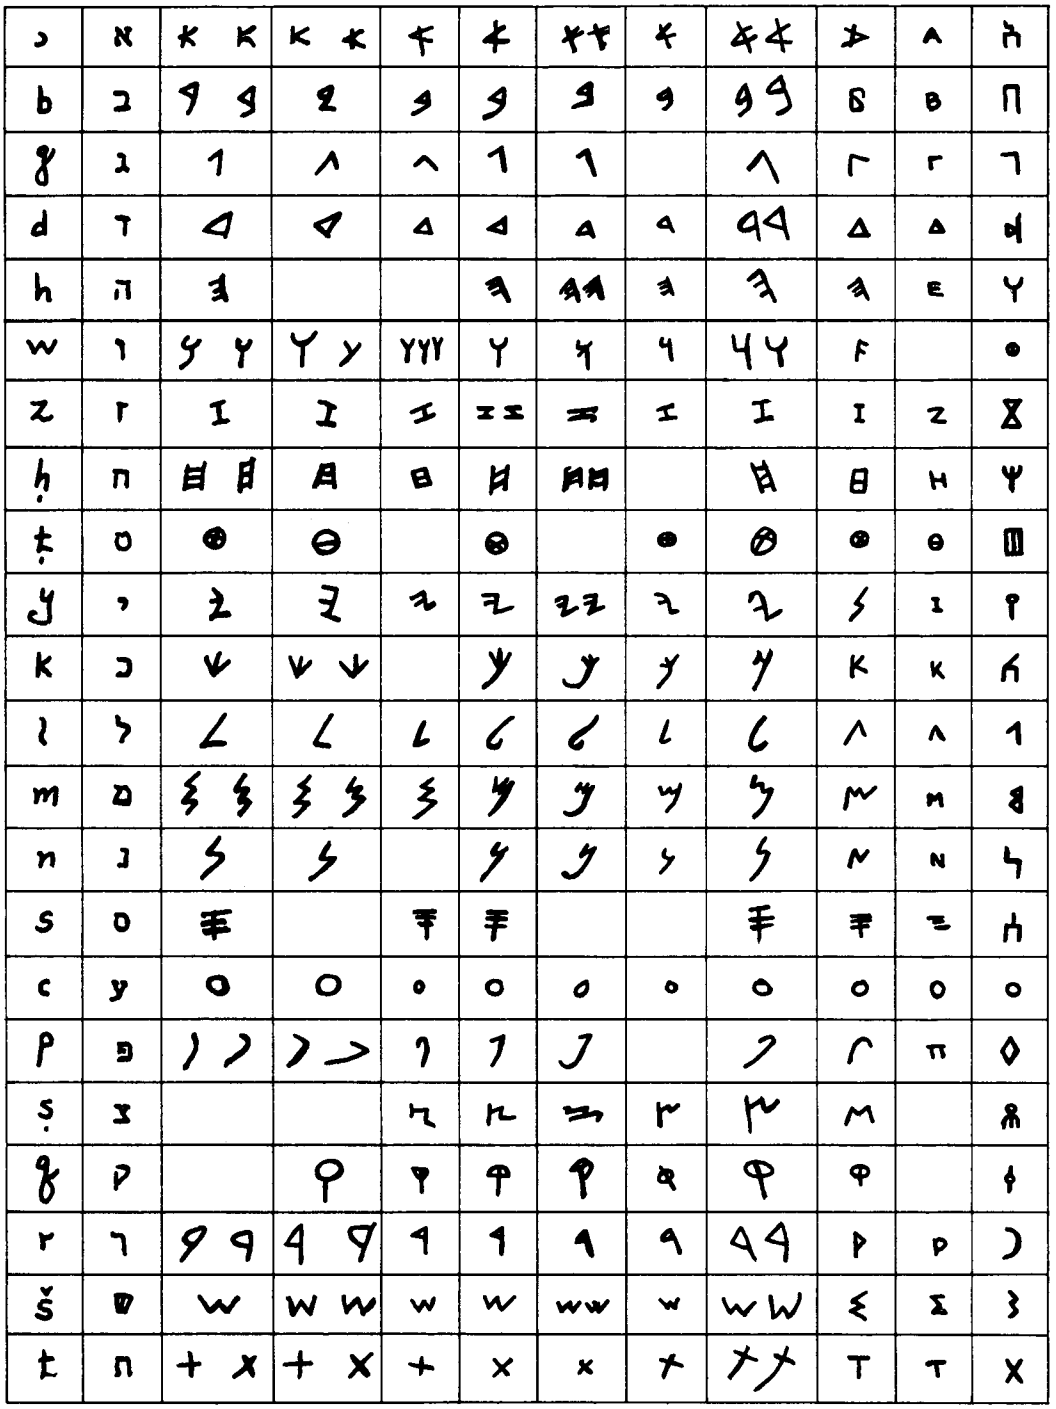
B. Earliest, but disputed, forms of alphabetic writing

C. The order of the letters and their names



D. The origin of the alphabet

E. Epigraphy

Bibliography

A. *EARLIEST UNDISPUTED FORMS OF THE ALPHABET.* 1. North Semitic. *a. Phoenician.* Though the number of inscriptions exhibiting early forms of the Phoenician alphabet is not enormous, it is far larger and of earlier date than that of the material available from elsewhere and is accordingly taken as the norm in discussing the other branches of the North Semitic alphabet. The inscriptions, which are listed below in approximate chronological sequence, consist, in addition to the well-known royal inscriptions from Byblos, of various short inscriptions on arrowheads, spatulas (or flattened spearheads), and pottery fragments. For further information on the more important of these, *see* INSCRIPTIONS; the listing here is for their significance in tracing the early history of the alphabet: (*a*) The Ruweisah arrowhead (eleventh century); (*b*) The el-Khadr arrowheads I, II, and III (*ca.* 1100 B.C.), discovered in 1953 at el-Khadr, a village *ca.* three miles W of Bethlehem; (*c*) the Byblian spatula of Hasdrubal ('Azarba'l, 'Izriba'l; late eleventh century); (*d*) the

1) Phonetic value; (2) modern Hebrew; (3) Ahiram (*ca.* 1000 B.C.); (4) Shapatbaal (*ca.* 900 B.C.); (5) Gezer Calendar (tenth century B.C.); (6) Mesha (*ca.* 840 B.C.); (7) Siloam (*ca.* 700 B.C.); (8) Bir-Hadad (*ca.* 850 B.C.); (9) Sefire III (*ca.* 750 B.C.); (10) old Greek (eighth century B.C.); (11) modern Greek; (12) old S Arabic (including only those letters with a known N Semitic counterpart)

Ahiram sarcophagus inscription (*ca.* 1000); (*e*) an inscribed arrowhead from Lebanon, first published in 1956 (early tenth century); (*f*) the inscription of Yehimilk (Byblos; *ca.* 950 B.C.); (*g*) the inscription of Abibaal (Byblos; *ca.* 925); (*h*) the inscription of Elibaal (Byblos; late tenth century); (*i*) the inscription of Shapatbaal (Byblos; *ca.* 900); (*j*) a sherd with a brief inscription containing the name of 'Abda' (*ca.* 900 or slightly later).

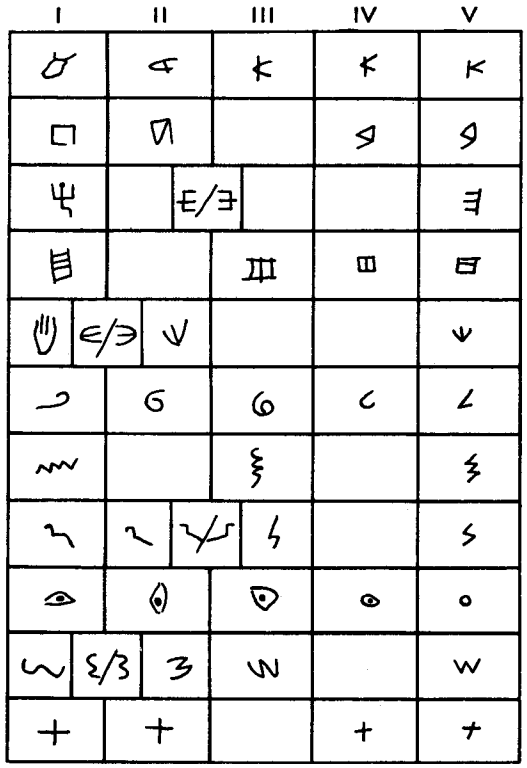

Table I illustrates, as examples, the alphabetic forms in the inscriptions of Ahiram and Shapatbaal. All the forms in these texts show a high degree of homogeneity, with only minor variations indicating the chronological differences involved. Key letters in this instance are *k, m, n,* and to a lesser extent *b*. Study of these letters shows clearly that (*a*) the final stroke of the *m* is extended in the later inscriptions—namely, those of Shapatbaal and 'Abda'—while in the earlier ones its length is not significantly greater than those in the rest of the letter; (*b*) the lower stroke of *n* is longer in relationship to the upper in the latter two inscriptions, but not so in the earlier; (*c*) *k* is uniform throughout, but its form puts the whole group before the Mesha script (*see below*), where the common later form with the extended stroke can be recognized. The curious shape of *b*, with the bottom horizontal stroke to the right instead of the left, is found only in the Shapatbaal and 'Abda' inscriptions and serves to confirm the essential contemporaneity of the two. These details are mentioned because the chronology and sequence given above are quite different from that held just a decade or so ago.

The tenth-century dating of the Byblian material is secured mainly by the fact that the Abibaal and Elibaal inscriptions are incised on statues of Shishak and Osorkon I respectively, the first and second kings of the Libyan Dynasty (*see* LIBYA), which began *ca.* 950. Further important aid in determining the sequence is given by the genealogy of Shapatbaal, who is named explicitly as the son of Elibaal and the grandson of Yehimilk. Selected letters from the Ruweisah arrowhead and the el-Khadr arrowheads are given in Table II, where their importance as a link with even earlier forms of the alphabet is indicated; note especially that the el-Khadr ' still preserves the pupil of the eye ('*ênu*), the presumed original of the character.

b. Hebrew. The earliest readable inscription from the S Canaanite area is the Gezer Calendar, a small limestone tablet containing an agricultural calendar in a very archaic script. The dating of this tablet to the tenth century is primarily on the basis of the script and not on archaeological criteria of any other sort. Although quite a few other inscriptions are now available from the Palestine region, few of these are early enough to be of import in the present discussion (*see* INSCRIPTIONS). Next in order to the Gezer Calendar,* whose script, as may be seen from the accompanying table, differs little from that of the contemporary Phoenician inscriptions, there are (*a*) the Shemaiah Seal (ninth century), an oval seal with a bull and a brief inscription bearing the names *Šm'yhw* and *'Zryhw,* dated to the ninth century because of the archaic form of *m;* (*b*) the Stele of

Mesha king of Moab (*ca.* 835 B.C.; *see* MOABITE STONE);* (*c*) an inscribed sherd from Beth-horon (early eighth century); (*d*) the Samarian Ostraca,* a collection of sixty-three ostraca discovered during the course of the Harvard excavations at Samaria in the fall of 1910, generally attributed to the reign of Jeroboam (*ca.* 786-746), and containing records of various business transactions; (*e*) the Siloam Tunnel Inscription (*ca.* 700), discovered accidentally by a student in 1880 in the tunnel dating from the time of Hezekiah at the SE corner of Jerusalem, but now in the Museum of the Ancient Orient in Istanbul. Figs. CAL 2; MOA 66; SAM 12; INS 14.

Shown in Table I are the Gezer, Mesha, and Siloam scripts. Later than these, but illustrating the continued use of this alphabet, are the Ophel Ostracon (seventh century), stamped jar handles from various sites (seventh-sixth centuries), and various stamps and coins dating down to the second century A.D. A later form of the Hebrew alphabet was employed for writing with ink on leather, as has been demonstrated by the Qumran finds.* In general, how-

ever, this script yielded place to the Aramaic MS hand (*see below*) and survives only, in a modified form, in the MSS of the Samaritan sect. Fig. DEA 20.

c. Aramaic. The earliest Aramaic inscriptions are roughly contemporary with those from Phoenicia and Palestine, and the forms of the alphabets employed are little different from these except for local variations of minor significance. In Table I are two samples from the early period—namely, the script of the Bir-Hadad Stele from *ca.* 850 B.C., a dedicatory inscription to the god Milqart; and that of the Sefire III Inscription, a copy of an Aramaic treaty from approximately a century later. Of greater interest than the lapidary script, however, is the cursive variety of the Aramaic alphabet, which was quite early adapted to the use of ink on papyrus. The oldest Aramaic papyrus, found in 1942 at Saqqarah, is a letter from the king of an Asiatic state, probably Ashkelon, to the pharaoh of Egypt, requesting aid against the advancing hordes of the king of Babylon; the letter is thus a contemporary of the Lachish Letters (*see* LACHISH)* and dates to the very end of the seventh or beginning of the sixth century. A fairly straight-line sequence in the use of the cursive script may be traced from this period down into the Christian era, including the famous Elephantine Papyri* of the fifth century B.C., the Edfu Papyrus, the NASH PAPYRUS, and the majority of the texts from Qumran. This script emerges ultimately as the Hebrew square character, which is still used in modern times as the standard script for writing Hebrew. Figs. INS 15; ELE 25.

2. Greek. Although it is universally acknowledged that the Greeks borrowed their alphabet from the Phoenicians, opinion differs widely on the date and circumstances of this borrowing. In view of our better understanding of the development and chronology of the Semitic forms, as given above, the problem of when the borrowing took place becomes relatively simple. The earliest Greek inscriptions are generally dated to the late eighth or early seventh century, and there is no concrete reason for supposing that the alphabet had any lengthy prehistory among the Greeks. Since the forms of the letters in these early inscriptions compare most favorably with Phoenician script of the late ninth and early eighth centuries, and cannot possibly be derived from alphabetic forms from before the ninth century, the date of the Greek borrowing may be assigned confidently to this same period, with a slight preference for the early-eighth-century date.

Already in the earliest Greek inscriptions we find a regular use of certain letters to indicate vowels. This is the most striking difference between contemporary Greek and Semitic use of the script; some regard the Greek adaptation as the first real alphabet, defined as a writing system in which each symbol represents a single sound of the language, and relegate the Semitic usage of the same script to the class of syllabic writing. Although minor variations in usage occur among the epichoric, or local, varieties of the early Greek script, this universal method of representing vowels suggests a single borrowing with adaptation, rather than a double or multiple borrowing, as has been proposed by many scholars.

The stages through which the Greek alphabet evolved into the form with which we are familiar from the later period are presumed to be the following:

a) Original ', *h*, *ḥ*, *w*, *y*, and ' were employed to represent the vowels *a*, *e*, *ē*, *u*, *i*, and *o* respectively. The use of *ḥ* is the least uniform and poses a special problem in Greek epigraphy.

b) Because original *w* was employed for *u*, a new sign was developed for *w* in those areas where this sound was still used. This letter, called *digamma* after its shape, took the place of the original *w* in the alphabet, and the latter was placed at the end after *t*.

c) Probably on the analogy of the symbol *ṭ*, which was used to represent Greek *t*+*h*, new symbols were devised to write *p*+*h* and *k*+*h*, later φ and χ.

d) Likewise, on the basis of *z*=*d*+*z* in Greek usage, new symbols were chosen for *k*+*s* and *p*+*s*, later ξ and ψ.

e) Separate symbols came to be used to designate *ē* and *ō*, in contrast to *e* and *o*.

The Greek alphabet was borrowed by the Etruscans in Italy, probably during the seventh century B.C., and from them passed to the Romans. Subsequent spread of the Roman and Greek alphabets to nearly all parts of the civilized world make this branch of the alphabet the most prolific, rivaled only by the Aramaic branch.

3. South Semitic. ***a. South Arabic.*** The S Arabic alphabet is represented in its early phases by a large number of inscriptions and graffiti emanating from the kingdoms of Ma'īn, Saba', Qataban, and Hadramaut in the S part of the Arabian Peninsula.* The inscriptions, mainly votive, are usually very carefully inscribed in an alphabetic form which is not rivaled elsewhere in the Semitic world for its elegance. The successive kingdoms of S Arabia span at least a millennium, with most of the inscriptions coming from the period from the seventh century B.C. to the third A.D. Table I, col. 12, shows the standard form of this alphabet during this most important period of its use. Fig. ALP 18.

Courtesy of the American Schools of Oriental Research

18. An archaic S Arabic rock inscription in vertical columns from Jebel Awrad

The earliest certain date in S Arabian epigraphy is that fixed by radiocarbon methods for a monograph incised on a sherd—namely, the eighth century. Older inscriptions, however, are known and may be dated on paleographical grounds to the ninth

or tenth century B.C. Even in its earliest form the South Semitic alphabet, as represented on these inscriptions, has diverged greatly from its N relatives, discussed above. In the first place, there are symbols for the sounds *ḏ, ḫ, ẓ, ǵ, ś,* and *ṯ,* which we did not encounter above in the North Semitic alphabets. Secondly, a recent find makes it rather certain that the order of the alphabet in the S was quite different from that in the N. The significance of these two facts will be discussed below in connection with the order and origin of the alphabet.

Sometime during the first millennium B.C., perhaps quite early, S Arabian traders and colonizers occupied the adjacent portion of Africa, including the area now known as Ethiopia. Epigraphic remains are found antedating the Christian era, but the most important adaptation of the S Arabic script is to be found in the Ethiopic syllabary, which was used for MS writing from the fourth century A.D. on—i.e., from the introduction of Christianity. This syllabary was created by using the simple alphabetic symbols, not as simple consonants, but as the given consonant plus *a*. Other vowels were then indicated by various modifications and adjuncts to the consonant symbol; thus, *ta, tā, tī, t(ə), tū,* and *tō* are represented by ት,ታ,ቲ,ት,ቶ, and ቷ respectively. A further modified form of this alphabet-based syllabary is employed for the writing of Amharic and various other Semitic and non-Semitic languages of Ethiopia today.

b. North Arabic. By ancient N Arabic is meant that corpus of inscriptions from NW Arabia, from Safa in the N to al-'Ula (ancient Dedan) in the S. Unlike the fully developed monumental style of the S Arabic inscriptions, these are for the most part graffiti, and accordingly present a wider variety of alphabetic forms. The dating of the several groups involved is under dispute, but the following estimates reflect current scholarly opinion:

a) Dedanite, *ca.* 650-450 B.C.

b) Early Lihyanite, fifth century B.C.; Late Lihyanite, fourth or third century B.C.

c) Thamudic A, fifth-fourth century B.C.; Thamudic B, third to first century B.C.; Thamudic C, first to second century A.D.

d) Safaitic, first to second or third century A.D.

The subdivisions given are based on differences in the script and locale (for details, *see* the works of F. V. Winnett in the *bibliography*). Even though these inscriptions form an unbroken sequence from the end of the seventh century B.C. onward, they cannot be considered as simple stages in the evolution of a single script. Nor is it possible to derive the various early forms such as Dedanite and Thamudic A from S Arabic, since the former contain forms which, in view of the presumed parent alphabet to the N (*see below*), are more primitive. While we must reject, therefore, previous theories deriving N and S Arabic scripts from one another, the close resemblance between the two remains, and it is perhaps best to posit a Proto-South Semitic script of which both N and S Arabic are subsequent representatives.

A separate branch of this same alphabet has turned up in Mesopotamia. W. F. Albright (*see bibliography*), who has made a special study of this script, earlier termed Dedanite but called by him Proto-Arabic, places the earliest of these inscriptions in the eighth or seventh century B.C. The material includes a cylinder seal of the above-mentioned date, three brief inscriptions from Ur dating from the early years of the sixth century at the latest, and possibly two graffiti from Hamath (before 720 B.C.). According to Albright, the only possible carriers of this script were the Chaldeans, who first appear in the inscriptions of Shalmaneser III (ninth century) and who pushed steadily into Babylonia from the S. The inscriptions are accordingly called Chaldean.

The inclusion of a single example for each letter in the accompanying table would obscure the great variety exhibited by the various N Arabic scripts.

For detailed tables, *see* the works of D. Diringer and F. V. Winnett in the *bibliography*.

B. *EARLIEST, BUT DISPUTED, FORMS OF ALPHABETIC WRITING.* The earliest inscriptions generally assumed to be alphabetic belong to the Middle and Late Bronze Ages and for purpose of description may be divided into the following main groups: (*a*) the Palestinian inscriptions, (*b*) the Sinaitic inscriptions, (*c*) an isolated cylinder-seal inscription, and (*d*) the so-called enigmatic inscription from Byblos.

The Palestinian group includes, among the more important finds, the following (dates given are suggested on the basis of archaeological context and represent the mean of limits given by various scholars): (*a*) an inscribed potsherd from Gezer, *ca.* 1650 B.C.;* (*b*) an inscribed plaque from Shechem *ca.* 1650 B.C.;* (*c*) an inscribed dagger from Lachish, *ca.* 1550 B.C.; (*d*) inscribed potsherds from Tell el-'Ajjul, Tell el-Hesi, and Beth-shemesh, all approximately of the fourteenth century or slightly later; (*e*) four pieces of inscribed pottery from Lachish, *ca.* 1250 B.C., the two most noteworthy pieces being known as the Lachish Ewer and the Lachish Bowl;* and (*f*) two sherds from Tell es-Sarem, *ca.* 1250 B.C. Figs. GEZ 26; INS 13; LAC 4.

It would be rash to assert that any of these inscriptions can be read with certainty, but the close resemblance of the signs on the Lachish Bowl and Ewer to the Sinaitic on the one hand and to the earliest Phoenician group on the other make it nearly certain that we are dealing with forms of the early alphabet. The inscriptions are generally too brief and too fragmentary to determine the accuracy of any proposed decipherment; the script is identified as alphabetic on the basis of the formal resemblance just mentioned and on the fact that the number of signs employed in any given inscription is sufficiently small to rule out the possibility of their belonging to either pictographic or syllabic systems of writing. It is quite possible, however, that some of these inscriptions belong to experimental forms of writing imitative of, but not strictly related to, the proto-alphabet. Table II, based on the research of F. M. Cross, Jr., illustrates the formal relationships which exist between several of these early scripts (including the earliest Phoenician), the main development of which is marked by a shift in the stance of various letters. This change is most probably to be attributed to the shift from vertical (columnar) writing, which is quite typical in the Sinaitic inscriptions (*see below*) and

used, interestingly enough, in the earliest S Arabic inscription (*see above*), to horizontal writing and the subsequent gradual dominance of right to left as the direction of writing.

The inscriptions now known as Sinaitic were discovered first in 1905 by Flinders Petrie during his excavation at Serabit el-Khadem in the Sinai Peninsula.* New inscriptions, bringing the total number of usable ones to some twenty-five, were recovered by the Finnish expedition of 1929 and the Harvard expeditions of 1930 and 1935. The most decisive step toward their decipherment was made by the English Egyptologist Alan Gardiner in 1917, who recognized in a certain frequently occurring collocation of signs the name Ba'alat, chief goddess of Canaanite Byblos. His identification of the consonants *b'lt* is supported, not only by the relation of their forms to those of the early known inscriptions discussed above, but also by the fact that Ba'alat is known to have been identified with the Egyptian goddess Hathor, patron deity of the turquoise mines at Sinai, with which the inscriptions are associated. Although these inscriptions have not been deciphered with complete success, some real progress has been made since Gardiner's initial step, notably by Sayce, Cowley, and Albright. To Albright is due the credit for recognizing that all previous decipherments had erred in their misunderstanding of the consonantal system of the Canaanite languages contemporary with the inscriptions, which, thanks to researches into Egyptian sources on the one hand and to the recent N Canaanite material from Ugarit on the other, can now be established with a high degree of certainty. This conclusion remains valid whether one accepts the early, and now highly improbable, dating of the inscriptions to the end of the Twelfth Dynasty (*ca.* 1800 B.C.) with Gardiner or a later date in the fifteenth century, as was proposed by Petrie and is championed by W. F. Albright. Thus, the (Proto-)Sinaitic inscriptions fall most probably between the Middle Bronze Age inscriptions from Lachish, Gezer, and Shechem noted above and the later material from the thirteenth century. Fig. WRI 33.

Closely related to the Sinaitic script, but perhaps a little later in date, is the script used on a cylinder seal of unknown provenance now in a private collection in the United States. Made of steatite and containing a brief, eight-letter inscription, the seal is dated to the fourteenth century B.C. on the basis of parallels to the stylistically peripheral scene depicted thereon. A. Goetze, who has studied and published the seal and its inscription, places it between the alphabet of the Sinai texts and that of the so-called enigmatic inscription from Byblos (*see below*). Because it is hardly likely that this seal comes from the region of Sinai, it is important for showing the use of a closely related script elsewhere and increases the likelihood of there having been even at this early period a standard alphabet, barring local variation, over a large part of Palestine and Phoenicia.

The so-called enigmatic inscription of Byblos, described by Dunand as a cursive variety of the Byblian syllabary, is taken by other scholars, notably Albright, as belonging to the early alphabet and has been dated *ca.* 1200 B.C. It is best to withhold judgment on this question, since the evidence is quite inconclusive. The formal objections which have been raised are certainly cogent but perhaps do not take sufficiently into consideration the possibility that this script is alphabetic, but stylistically under the influence of the pseudo-hieroglyphic forms which were possibly contemporary to some extent.

Perhaps the most important early alphabetic evidence of all comes from Ugarit. There, in 1929, French excavations turned up a quantity of tablets containing literary and other documents written in the local variety of Canaanite with a cuneiform alphabet. The possibility that this was a local invention, unrelated to the proto-alphabet, was dispelled with the publication in 1949 of an abecedary which, with the exclusion of those letters which subsequently fell into disuse in the dialects to the S, manifests the same order as we have from a much later period for the North Semitic alphabet.

C. *THE ORDER OF THE LETTERS AND THEIR NAMES.* Prior to the discovery in 1949 of the ABC from Ugarit, which shows clearly that the order of the alphabet as traditionally known from later sources was fixed as early as the fifteenth-fourteenth century B.C., our earliest material on this aspect of the system came from well into the first millennium B.C. and included (*a*) the traditional order of the Greek alphabet as reflected in the use of the alphabet for numbers and in various ABC's (including early Etruscan); (*b*) a brief inscription from Lachish, dating from the beginning of the eighth century B.C. and exhibiting in order the first five letters of the Hebrew alphabet, *' b g d h . . .* ; (*c*) the early, but not specifically datable ABC's represented in the acrostic poems of the OT, of which there are twelve in more or less complete form: Pss. 9–10; 25; 34; 37; 111; 112; 119; 145; Prov. 31:10-31; Lam. 1; 2-4; Nah. 1.

The ABC's from Ugarit, of which there are now several known, confirm the following order for the North Semitic alphabet at a stage even before we have direct evidence for the forms of some of the letters themselves:

' b g ḫ d h w z ḥ ṭ y k š l m ḏ n ẓ s
' p ṣ q r ṯ ġ t (+ 'i, 'u, and ś).

A comparison with the normal Hebrew order, as given in Table I, shows five intrusive signs in the alphabet from Ugarit in addition to the three at the end. These latter three are generally regarded as new creations in Ugaritic and are not taken as important for the original alphabet, which ended with *t*. There is common agreement among scholars that the five inserted letters are, in fact, part of the original Northwest Semitic alphabet and that through subsequent phonetic change in Northwest Semitic, where *ḫ* merged with *ḥ*, *ś* with *ṯ*, *ḏ* with *z*, *ẓ* with *ṣ*, and *ġ* with ', they gradually fell out of the alphabetic system.

The order of the South Semitic alphabet is known, in part, for the period *ca.* 300 B.C. from a discovery made at Hajar Kohlan in the Wadi Beihan, the site of ancient Timna, the capital of the Qatabanian kingdom of S Arabia. Here excavators found a stone gutter with rows of flat paving stones of Yemenite

limestone on both sides; some of the stones were incised with masons' marks exhibiting a series, apparently originally complete, of the Qatabanian alphabet as follows:

l ḥ m . . š r ǧ s h b k n ḫ ś p ' '

Comparison of this series with the Ethiopic alphabet, known only from the fourth century A.D. on as far as its order is concerned—namely:

h l ḥ m š r s q b t ḫ n ' k w ' z y d g
ṭ p ṣ ḍ f p—

shows a similarity too close for mere chance. Considering that Ethiopic no longer used the symbols for *ǧ* and *ś*, we can hardly regard the agreement as a product of coincidence. Two problems arise: (*a*) the relationship between the Qatabanian order and that of Northwest Semitic, and (*b*) the development of the Ethiopic order from the Qatabanian. A. M. Honeyman and J. Ryckmans (*see bibliography*) have offered hypotheses to cover *a;* the former scholar sees in the S Arabic order a completely independent arrangement based on the actual physical forms of the letters, a theory which is both reasonable as presented and harmonious with the fact that S Arabian inscriptions reflect in their careful execution a special preoccupation with the forms of the letters and their various symmetries. The hypothesis put forth by J. Ryckmans involves a considerable number of complex and unfounded transpositions, beginning with the Northwest Semitic and ending with the Qatabanian. Although the thesis of Honeyman is not without minor difficulties and uncertainties, it suits the data well; and the same process, taken together with known post-Qatabanian changes in the forms of the individual letters, will account for the emergence of the Ethiopic order.

The originality and importance of the names of the individual letters, as preserved in the Greek and post-Christian Jewish traditions, is disputed. There is no reason to suppose that the Greek forms of the names were not taken over with the alphabet itself in the late ninth or early eighth century; these names and those taken over by the Jews from the Aramaic show clear evidence of N Canaanite origin. Those who favor the acrophonic origin of the alphabet prefer to accept, with reservations as to the complete accuracy of the tradition, the names of the letters as reflecting the original situation, in which the name of the letter was the name of the object depicted. Others, however, rejecting the acrophonic hypothesis, regard the names of the letters as secondary, perhaps added at a later date for mnemonic purposes. Without more evidence, however, the problem cannot be settled. Below are given the traditional Aramaic-Hebrew names of the letters, the Greek counterparts, and the accepted meanings of the names; added in a few cases are recent scholarly suggestions on more original forms of the names.

'āleph (*alpha*), "ox"
bêth (*bēta*), "house"
gîmel (*gamma*), "camel"; perhaps originally **gamlu*, "throw-stick"
dāleth (*delta*), "door"; perhaps originally **dag*, "fish"
hē' (*e-psilon*), meaning uncertain
wāw (*u-psilon*), "hook"
zayin (*zēta*), "weapon" (?), "olive tree" (?)
ḥêth or *ḥeṭ* (*ēta*), "hedge, fence"
ṭêth (*thēta*), meaning uncertain
yōdh (*iōta*), "hand"
kaph (*kappa*), "palm of hand"
lāmedh (*lambda*), "ox-goad"
mêm (*mu*), "water"
nûn (*nu*), "fish"; cf. Ethiopian name *nahās*, "serpent"
sāmekh (*sigma*), "prop"
'ayin (*o-mikron*), "eye"
pēh (*pi*), "mouth"
ṣādhê (*san*), "fishhook"
qôph (*koppa*), "back of head" (?)
rêš (*rhō*), "head"; the Greek form apparently an abridgment of the more original Canaanite *rôš*
šîn(?), "tooth"; originally **ṯinnu*, "composite bow"
tāw (*tau*), "mark"

D. ***THE ORIGIN OF THE ALPHABET.*** There has certainly been no dearth of suggestions concerning the origin of the alphabet, whose supposed sources range through Sumerian and Babylonian cuneiform, the Cypriote syllabary, Hittite hieroglyphs, and Egyptian in all its written forms except post-Christian Coptic. If one accepts the fact that the Proto-Sinaitic script and its congeners are indeed forms of the alphabet, the origin of the system cannot be put later than *ca.* 1500 B.C., or perhaps several centuries earlier. This fact alone serves to rule out many of the theories which have been advanced.

Since it is also certain that many, if not all, of the original signs pictured a definite object, only comparisons with other hieroglyphic systems of writing are cogent to the present discussion. It is only natural, therefore, that Egypt, whose influence was present in the Syro-Palestinian area from the third millennium on, should be a prime suspect. During the first half of the second millennium two types of writing, hieroglyphic and its cursive variety hieratic, were in use in Egypt; either could have been a source of the alphabet, and there are many protagonists for each. Facts which oppose such a source, however, are the following: (*a*) Egyptian had no alphabet per se which could be used as a model for the Semitic system; (*b*) although correspondences in form do occur between hieroglyphic Egyptian and the pictorial stage of the alphabet, there are no correspondences in what these represent soundwise. As has often been pointed out, hieroglyphic and hieratic writing employs a combined total of well over a thousand symbols, so that unless there is a correspondence between more than mere form, the idea of direct borrowing is unprovable.

Much more plausible is the suggestion that the alphabet was invented under the stimulation of various scripts, notably Egyptian, in the immediate neighborhood. Three possibilities exist: (*a*) hieroglyphic Egyptian, (*b*) hieroglyphic Hittite, and (*c*) the still undeciphered hieroglyphic-syllabic script used at Byblos sometime during the period in question. Many problems arise from a comparison of the early alphabet with these scripts: the Sinaitic and still pictographic letter forms resemble Egyptian and Hittite hieroglyphs most closely, but the Byblian signs include almost exact correspondents, formally, to the later alphabetic forms discussed in § A *above*. But these again are comparisons in form alone; and without further evidence of systemic correspondence,

they are not too significant. The fact remains that nothing comparable to an alphabetic system of writing is known. We must accordingly see the alphabet as the invention of a single person or group of persons in Phoenicia or Palestine sometime during the first half of the second millennium B.C. The possibility of writing language by using a system of symbols corresponding to an arbitrary fragmentation of speech could have been suggested by any of the writing systems then in use, but the peculiar concept of partial representation—i.e., of consonants alone—is, so far as is known, common only to Egyptian writing, and it was perhaps from that quarter that the chief inspiration sprang. But due to the inventor's genius alone is the working out of a system, disencumbered of traditional extras, which has proved so flexible in subsequent world-wide adaptation.

E. *EPIGRAPHY.* Epigraphy is the study of written records which have survived from the ancient past. As such, epigraphy shares, and to a great extent subsumes, the data of other disciplines such as paleography and papyrology, but any narrower definition of the subject would not do justice to the divergent areas of study to which the term is currently applied.

While every facet of an inscription is of potential interest to the epigraphist, his attention is generally focused on the following categories of data, all of which are pertinent to the determination of the date and historical context of a given epigraph: (*a*) material on which the writing has survived, (*b*) tools and techniques employed in producing the original, (*c*) type of writing employed, (*d*) language in which the inscription is written, (*e*) relationship between language and writing (i.e., orthography), and (*f*) the type of inscription in regard to content and original purpose.

For further information on these subjects, *see,* in addition to the bibliography below, INSCRIPTIONS; WRITING AND WRITING MATERIALS.

ALPHAEUS ăl fē′əs [Ἀλφαῖος]. A purely Greek name, one of many such names used commonly by first-century Jews in Palestine. Westcott and Hort, accepting the supposition that it is a transliteration of the Aramaic חלפי, give this name a rough breathing. This is, however, only an assumption, and not a necessary one. The name does not occur in the OT, but it does occur five times in the NT. These divide readily into references to two separate individuals, both of whom are mentioned only indirectly.

1. The father of Levi (Mark 2:14). If, by comparison of Matt. 9:9; Mark 2:14; Luke 5:27, it is thought that Levi and Matthew are the same individual, then this Alphaeus cannot be identified with the father of James (2 *below*), because Matt. 10:3; Mark 3:18 show an Alphaeus who is father of James but not of Matthew. Even if Levi be identified with Matthew, it tells us nothing more about Alphaeus father of Levi. The NT offers no more data on this Alphaeus.

In Mark 2:14, D, Θ, and Φ read Ἰάκωβον ("James") for "Levi," but this is probably no more than scribal effort to harmonize this passage with Mark 3:18 and parallels. The preponderant weight of MS evidence supports the reading Λευείν ("Levi").

2. The father of James (Matt. 10:3; Mark 3:18; Luke 6:15; Acts 1:13). The first three of these passages are Synoptic parallels and indicate nothing more than that Alphaeus is the father of the James who in the Mark and Matthew passages is clearly distinguished from James son of Zebedee. The same distinction is made in Acts 1:13.

Past efforts to identify this Alphaeus with Clopas (John 19:25) and with Cleopas (Luke 24:18) are quite arbitrary and rest upon no firm evidence. Κλεόπας (Luke 24:18) is a contraction of Κλεόπατρος, a purely Greek name, and is not to be identified with Κλωπᾶς (John 19:25), which is of Aramaic origin. Κλωπᾶς cannot be reduced to the same Hebrew original as Alphaeus; hence they cannot be identified.

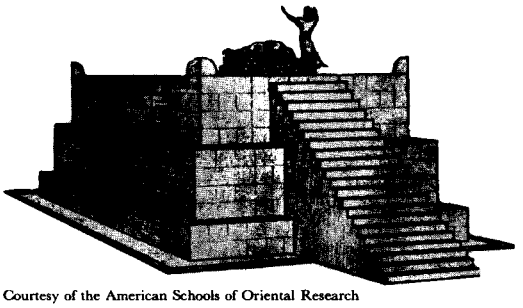
ALTANEUS. KJV Apoc. form of MATTENAI 2.

*ALTAR.

1. Terminology. The word מזבח, formed from the verb for "slaughter" (i.e., to cut up the animal killed according to Jewish ritual) is the most prevalent designation of the altar—independent of the sacrifices made on it. One might conclude from Gen. 22:9 that the animal to be sacrificed was given the killing blow after it had been laid down bound on the logs of the altar. But even if this may once have been a sacrificial rite (in the early days), it was soon given up, especially since the jerking victim might break down the stacked-up logs of wood. The killing of the animal in front of the altar became absolutely necessary if the blood was to be collected and sprinkled on the horns of the altar. This is assumed in Lev. 1–7 and

is also true of animal sacrifices on the altars without horns, as I Sam. 14:34-35; I Kings 18:23 indicate. Accordingly מזבח (with a מ location only indirectly applying) means the spot on which the pieces (and the fat) of the animal, which had already been cut up, were deposited and burned. The OT distinguishes between the following types of altars according to the material: the altar of earth (Exod. 20: 24), the altar of stone (vs. 25), the bronze altar (II Kings 16:15 and repeatedly). The altar intended for the burning of incense was called "altar of incense" (מזבח קטרת; Exod. 30:27; cf. II Chr. 30:14), which is treated, along with חמנים, under INCENSE ALTAR.

2. Descriptions in the OT. Particulars are lacking concerning the form of the altar of earth, which is assumed in Exod. 20:24 as the normal one (in the preroyal period in Palestine?). It should probably be thought of as a relatively low cube of clods of clay, not as one out of air-dried bricks, since otherwise the expression "brick altar" would appear. In any case, in Palestine, which was rich in stones, the altar of stone (מזבח אבנים) was probably more common, not only among the Israelites, but also among the Canaanites (cf. Deut. 12:3). The rites indicate which god the worship concerned (cf. I Kings 8:22 with 18:24); the altar of Gideon (Judg. 6:24) bore the name: "Yahweh is peace."



In addition to the colorless "make," the term "build" is most commonly used for the erection of an altar (in the case of destroying, "tear down"). These terms, also used of the construction of houses, indicate that in the case of a "built" altar—even where no more particulars are given—one should imagine an altar of stone (Num. 23:1; Deut. 27:5-6; Josh. 8:31; Isa. 27:9). Understandably they used for this purpose the natural (unhewn) stones lying around on the ground just as they were found. Such stone altars could be erected in a short time (Judg. 21:4; I Sam. 14:33) and also fell to pieces if they were not taken care of for constant use. The number of stones used was of no significance. It depended on the size of the stones collected and the desired dimensions of the altar. By way of exception, there is mention in I Kings 18:31-32 of twelve stones of the Elijah altar, but this secondary statement might have developed out of the Sinai tradition in Exod. 24:4, where there is mention of an altar erected by Moses and, in addition to this, of twelve stones set up to represent the tribes of Israel (cf. Josh. 4). That the stones are to be unhewn is expressly commanded in Exod. 20:25. This could be directed against the luxury of square stones; but the idea that stone used in worship should not lose its special numinous quality by damaging hewing is probably also the basis of this practice. The Deuteronomist in Deut. 27:5-6; Josh. 8:31 (cf. later I Macc. 4:46) refers to the restriction in Exod. 20:25. Without a doubt, this prohibition did not prevail permanently. The very fact that we know of the "horns" of the altar (cf. I Kings 1:50)—*Maṣṣēbôth*, "pillars," once originally set at the four corners?—proves that the stones were hewn. (The incense altars which are known archaeologically in Palestine from the time of the Israelites were also hewn!) The precise statements of dimensions of certain altars (i.e., in Jerusalem) also prove it. The protest (in vain) against steps in the case of monumental altars (Exod. 20:26) is based on the danger that the one who was making the sacrifice might expose his nakedness. This was prevented by a special law affecting dress (Lev. 6:10). The Jerusalem burnt-offering altar explains the fact that in Lev. 9:22 the "stepping down" of the priest is mentioned without hesitation.

Very much more infrequently than an altar built of several stones (stone heap), in the early period a large rock (in I Sam. 6:14 "a great stone") was used as an altar, for this was possible only if the stone had a sufficiently large supporting area. Of the examples mentioned for this, that of the altar of Manoah (Judg. 13:19) is pertinent. On the other hand, the rock (with holes for bowls) which bore the mealtime offerings in Judg. 6:19-21 is *not* designated as an altar (in contrast to the altar built later by Gideon in vs. 24).

We have further particulars about the burnt-offering altar in Jerusalem. It stood in front of the temple (and is not to be confused with the altar of David on the threshing floor of Ornan—in spite of I Chr. 22:1). The old archive note concerning Solomon's cycle of offerings in I Kings 9:25 designates the altar as one which Solomon had built; this indicates an altar of stones. When, in the Deuteronomic note in I Kings 8:64 (corresponding to II Kings 16:15), it is called a bronze altar, this appears to mean a grate of copper which was set on top of it (*see below*). The Deuteronomic statement of the consecration of the middle of the court before the temple by Solomon for the innumerable sacrifices (I Kings 8:63-64) does not signify that there were henceforth two altars. This statement is, on the contrary, connected with King Ahaz' regulations for worship; it was inconceivable to the Deuteronomist that the altar of Solomon, which was pushed aside by Ahaz because of its small size, could have been adequate in the beginning. The statement in II Kings 16:10 ff, taken from the original temple annals, says the following: King Ahaz, who was giving submission to Tiglath-pileser III, saw in Damascus (in the court of a temple of Ramman?) an altar which so impressed him that he passed a description on to Uriah the high priest with the command that it be copied. Uriah built this altar in Jerusalem. In order that this could take place, the bronze altar was moved aside and set up to one side. Since the dedicatory sacrifices of the king undoubtedly took place on the new (great) altar, the direction to make *all* sacrifices for the king and the people upon the great altar can only be interpreted to mean that the Ahaz altar displaced Solomon's. No matter what II Kings 16:15 has to say about the bronze altar (which still existed in 593; cf. Ezek. 9:2), it plays only a secondary role. In any case, Ahaz wanted to preserve tradition; on the other hand, he wanted to possess a modern "Yahweh" altar. The Deuteronomist sees no reason for complaint, perhaps, since the legitimate worship of Yahweh was continued. No particulars are given concerning the appearance of the (stone) altar accessible by steps. The (supplementary) use of bronze is therefore improbable, because the king saw himself forced—because of the tribute to the Assyrian king—to have the bronze portions of the existing vessels of worship melted.

Strangely enough, nothing is said in I Kings 6 ff about the bronze altar of Solomon, which was used in its proper place for approximately two hundred years. One would expect a note about it in connection with other bronze works, and it does appear in the "parallel account" of Chronicles (II Chr. 4:1). The form of the statement of its dimensions, which deviates from the usual wording of the Chronicles, corresponds to that of the building dimensions in I Kings 6, so that one may surmise that II Chr. 4:1 was borrowed from the account in the book of Kings —between I Kings 7:22 and 7:23—and (for reasons which cannot be explained with certainty) was omitted there (it is missing already in the LXX). Unfortunately II Chr. 4:1 is put very concisely. The bronze altar made by Solomon was said to be twenty cubits long, twenty cubits wide, and ten cubits high. What on this cube was of bronze? Scarcely the sides as plates; more likely a side (and top?) grating (cf. Exod. 27:4) and probably only a large grate standing on low feet and ornamented with corner horns. The height agrees, to be sure, with the altar described in Ezek. 43:13 ff, but not the length or the breadth; and there is no mention at all in II Chr. 4:1 of the fact that the bronze altar of Solomon was tapered from bottom to top in steps or sections. Probably, after the building of the new altar of Ahaz, interest in a detailed description of the old altar (which had been put aside) dwindled. If—and this is by no means certain—the plan for the altar in Ezek. 43:13 ff is based on an actual altar in Jerusalem, it may possibly have been that of Ahaz, but not that of Solomon.

The secondary passage (Ezek. 43:13-17), attached to the Ezekiel vision of the new temple in chs. 40 ff, reads as follows (orig. tr.): "These are the measurements [better, 'dimensions'] of the altar in cubits—the cubit reckoned as one cubit plus a handbreadth—its base [read חיקו] one cubit and one cubit its breadth, and its rim at the edge one span. And this is the height [instead of MT 'mound'] of the altar from the base on the ground to the small enclosure, two cubits and a breadth of one cubit, and from the small enclosure to the large enclosure four cubits and a breadth of one cubit [thus LXX]. And up to the sacrifice socle [stage] were four cubits, and from the sacrifice socle upward were four horns [addition from vs. 16] on its four sides. And the sacrifice socle was twelve cubits long by twelve cubits broad, a square, and the [supply 'large'] enclosure was fourteen cubits long by fourteen broad on its four sides, [supply as follows: 'and the small enclosure was sixteen (cubits) in length by sixteen in breadth on its four sides,'] and the rim around it was a half cubit and the base of it, one cubit round about. And its steps face to the east." Seen as a whole, the description is consistent and clear, so that one can sketch a picture of this altar (Fig. ALT 19).* First comes the "bosom of the earth," the foundation bed (a Babylonian term) as a depression into which the altar block is placed, so that all that remains of it is a gutter. Then follow the three socles (stages), which become smaller toward the top. The two lower ones are called "enclosures," or "incasings"; this recalls the Babylonian term "cover" for the burnt brick of the outer face of the tower of Babel. The uppermost socle is called אריאל

Courtesy of the American Schools of Oriental Research

19. Stevens-Wright reconstruction of the altar of burnt offering

("Ariel"), which one may associate with the Babylonian word *arallu* (underworld and mountain of the gods). Instead of "hearth," which is surely incorrect, we have paraphrased אריאל with "sacrifice socle." The steps of the altar might presumably have led up to the upper edge of the sacrifice socle, so that the sacrificing priest could move about on the upper surface of the socle (cf. Middoth III.1*a*). Since it is a question of the altar of the future in the vision, it must remain an open question as to whether the description is based on definite earlier data concerning the Ahaz altar (*see above*) or on the postexilic altar used in 515 B.C., or whether it was drawn up quite independently. The remarkable thing in the case of this altar design, indeed, is that its type is unique. To be sure, there are in the area of the ancient Orient and Egypt altar terraces reached by steps, and altars with an offset (also called stepped altars), but not square altars which taper upward uniformly in offsets like a stepped tower. On the other hand, the stepped tower (ziggurat—the best known example is that of Babylon*—*see* BABEL, TOWER OF) represents an elevated terrace (a mountain of the gods), at the very top of which is a temple (cella), and it was never—as a whole—regarded as a large altar. It is true that isolated sacrifices were made on top in front of the cella and on the roof of the chamber of the gods, also, in addition—according to the evidence of Assyrian seals—naturally, below *in front* of the tower; but the reinterpretation of a stepped tower as an altar, as it appears in Ezek. 43, is without precedent. One might reckon with the possibility of a stepped-tower altar on a late painting from Dura-Europos, though the offerings are missing in the picture. A description of the Jerusalem altar for burnt offerings, which in point of time follows the representation in the vision in Ezek. 43, stemming from the time of the Romans, differs from it. According to Josephus (War V.v.6), the altar of the Herodian temple was a block fifty by fifty by fifteen cubits, hence simpler and larger, and had a ramp approach. The Mishnah treatise Middoth (III.1 ff), which concerns the same altar, distinguishes three offsets (as Ezek. 43), but with the dimensions thirty-two by thirty-two by one cubit for the base and thirty by thirty by five cubits for the main block; the measurements of the third offset are not quite clear, but they are smaller than those of the main block, in any case. According to Middoth III, it is a matter of an extension of the pre-exilic (Solomonic) altar which had already taken

place at the time of the return of the exiles from Babylon (related to Ezra 3:2). Figs. TEM 27; BAB 10.

The showbread table (the table for the bread of the Presence), which I Kings 6:20; 7:48 mention and which (with horns) measured two by two by three cubits in Ezek. 41:22, is a presentation altar. The showbread table of the wilderness sanctuary was supposed to have been half as large, according to Exod. 25:23 ff.

3. Archaeological discoveries. If we disregard the rock altar found at Taanach and the rock altar in the outer area of Tell el-Mutesselim (=Megiddo; K. Galling, *Der Altar in den Kulturen des Alten Orients* [1925], plate 11, fig. 1), which are problematic in formation and also with regard to interpretation, there do, nevertheless, exist, thanks to the stratigraphic excavation in Megiddo, at other places in Palestine and in Syria, examples of altars secure enough in their dating, which can be used for comparison with the descriptions in the OT. They are arranged in chronological order below.

In stratum XIX of Megiddo (G. Loud, *Megiddo II* [1948], pp. 60-64) there was uncovered a broad-room temple (dimensions: *ca.* 5 by 8 meters), on the rear wall of which—exactly opposite the entrance—was unearthed a platform, which was enlarged in the second phase of its utilization to 1.6 by 4.1 by 0.92 meters, with a step (0.7 by 1.9 by 0.5 meters) before it.* This must probably be regarded as a table altar (deposit altar), also possibly intended for images of gods. According to Albright and Wright (cf. *ANEP* 729), the stratum, and along with it the temple, should be dated *ca.* 3000 B.C. The altar, built of stones and plastered, in an Early Bronze period shrine located close to the city wall in Ai (et-Tell), might be a scant half millennium newer. It measures 0.80 by 1.70 by 0.70 meters and should probably be regarded less as a deposit altar (table altar) than as a burnt-offering altar (Fig. TEM 42). In a temple area of stratum XV-XIII in Megiddo (G. Loud, *Megiddo II* [1948], pp. 73-84; cf. *ANEP* 734) which was constructed in the Middle Bronze period between *ca.* 2000 and 1700 B.C., and enlarged in the course of time, the oldest installation was an open courtyard. In it was erected an altar of stones and rubble—at first more elliptical, later almost round—which measured not less than 8 meters in diameter and was preserved to 1.40 meters high. At one spot four steps in a stairway cut into the stone led up to the level which was to be mounted by those making the sacrifices. One may assume that burnt offerings were also presented on this uncovered altar.* Of the (covered) temples in the immediate vicinity the main room of the W temple had at the back a flat mud-brick altar table, 4.00 by 5.00 by 0.50 meters in size. It is noteworthy that in the rebuilding of the main interior room (dated with stratum XIII) the altar of this N temple appears as the platform of a cella. This indicates that not only offerings but also images of gods were probably placed upon this altar even earlier. Figs. TEM 41; ALT 20; MEG 27.

In the temple area in Beth-shan (A. Rowe, *The Topography and History of Beth-shan* [1930], pp. 10-14; cf. *ANEP* 732), where the various strata are unclear and therefore difficult to date, in the area (fifteenth-

20. Burnt-offering altar at Megiddo as rebuilt in Stratum XVI; originally built in Stratum XVII and continued in use through Stratum XIV (i.e., from perhaps *ca.* 2500-1800 B.C.)

fourteenth century B.C.) usually designated the Mekal temple after an Egyptian stela which was found there, bearing the name of the god, there is in one corner of the main courtyard an irregular structure accessible by steps, which should probably be considered a (burnt-offering) altar. Within strata VII-VIIA at Megiddo, which should be dated between the fifteenth and the twelfth centuries, there has been uncovered a long-room temple (with tower bastions, the so-called Migdol-temple type) which had been repeatedly rebuilt. In the second and third phases it had on the rear wall a platform which was intended for *deposita* (and images of gods; G. Loud, *Megiddo II* [1948], pp. 102-5; cf. *ANEP* 735). No altar (for burnt offerings) was found in the excavated area in front of the temple, although one would assume that there was such a one on the basis of the analogous temple structure in Alalakh (Atchana) in Syria (*see below*). In a section of excavation area DD in stratum VIII of Megiddo (G. Loud, *Megiddo II* [1948], pp. 113-14) in what should be regarded as the court of the temple, a partially lime-plastered mud-brick table or altar (1.10 by 1.10 by 0.55 meters) was found. It suggests the fire hearth (altar?) of Tell 'Ajjul (F. Petrie, *Ancient Gaza I* [1931], plate 6) and corresponds to the low mud-brick platform in the axis in front of the great temple at Shechem (dimensions: 2.20 by 1.30 by 0.30 meters) which must certainly be regarded as an altar (E. Sellin, "Die Ausgrabung von Sichem," *ZDPV,* 49 [1926], 312).

In the moat of the city of Lachish a long-room temple which should be dated between 1450 and 1250 was found. In addition to deposit shelves and niches on the back wall, it had an elevated "holy of holies," and in the last phase there was in front of this shrine a mud-brick altar which was approached at the side by means of steps. The altar was 0.80 by 0.80 by 1.00 meters in size. Since the temple had a roof, burnt offerings can only have been presented at this altar if the roof had a sufficiently large vent (O. Tufnell *et al., Lachish II* [1940], plate 10; *cf. ANEP* 731). In stratum V (sixteenth to fifteenth century) L. Woolley discovered in Alalakh in Syria

(L. Woolley, *A Forgotten Kingdom* [1953], plate 10*a*) a temple in which there was a mud-brick altar (*ca.* 0.60 by 0.50 by 0.45 meters) next to a bench. It had a shallow depression on the top surface and was—to judge by the traces of burning—intended for burnt offerings. The stone altar in front of the Baal temple in Ugarit-Syria, which was approached by two steps, was indented on the top surface in a similar fashion (*Syria,* no. 16 [1935], plate 36). It was situated before the long-room temple, in its axis. This is also the position of the altar, which measured *ca.* 0.10 by 1.00 by 0.70 in front of the temple of stratum III (fourteenth century) in Alalakh (L. Woolley, *A Forgotten Kingdom* [1953], fig. 20).

The altar in Hazor (dimensions: *ca.* 40 by 90 by 40 inches), which consists of a single huge limestone block weighing *ca.* five tons, is unique; half of its top surface is hollowed out for solid offerings and burnt offerings; and besides that it had a rectangular basin carved out, which was probably intended to receive the blood or for liquid offerings (Fig. ALT 21). The altar block stood in a sanctuary area of the end of the Late Bronze Age.

21. Canaanite limestone altar from Hazor (fourteenth-thirteenth century B.C.)

In Sar'a, *ca.* 13.5 miles W of Jerusalem, there stands, even today, on the open terrain a stone block hewn from an outcropping of natural rock which was certainly used as an altar. The period when it was fashioned cannot be determined. It is probably correct to regard it as the altar on which Manoah, the father of Samson, offered a sacrifice, according to Judg. 13:19. The altar consists of an approximately rectangular block of 2.16 by 2.16 by 1.30 meters with a platform 0.27 meters high, but smaller. The unfilled gap in one corner of the platform was surely not the station of the priest, but was intended instead for the erection of an incense altar (K. Galling, *Der Altar in den Kulturen des Alten Orients* [1925], plate 12, fig. 15*f*).

In Hamath on the Orontes in open country between the castle gate and the two palaces a sharply hewn altar block (*ca.* 0.70 by 1.35 by 1.06 meters) was found (cf. H. Ingholt, *Rapport preliminaire sur sept campagnes de fouilles a Hama en Syrie* [1940], pp. 90, 108). Like a throne, it has a low "railing" on three sides. On the upper surface two low round pedestals have been left free. Whether bowls for sacrifices or the like were set on them or whether images of gods stood here (in which case it would not be an altar) cannot be determined with certainty. The basalt block, which is called an altar by the excavators, should probably be dated to the ninth or eighth century.

The numerous places of worship at Petra, most of which also have an altar hewn out of natural rock for the sacrifices presented, stem from a very much more recent period (the Greek or Roman era) which cannot, however, be established exactly.* A large, almost level courtyard, with benches for those taking part in the ceremony, occupies the center of the "high place" of Zibb'Atuf. On the W side there was an unevenly cut-out altar for liquid offerings (*Altorientalische Bilder zum AT,* fig. 447) and immediately beside it a stepped altar (1.83 by 2.72 by 0.95 meters). The depression in the middle (0.35 by 1.08 by 0.17 meters) was presumably intended for a stone pillar (*maṣṣēbâh*). The altar could be approached by those making sacrifices by means of a stairway of four steps hewn out of the rock, which led halfway up the altar. On the top of el-Me'esara next to the ceremonial place a stepped altar was hewn out; it measured 2.43 by 3.00 by 0.95 meters (three steps in front of it). In the middle there is a small hump, reduced in size by weathering, of *ca.* 1.10 meters in diameter and 0.25 meters in height. This might well be the remaining vestige of a formerly (rectangular?) higher stone pillar (*maṣṣēbâh;* K. Galling, *Altar* . . . [1925], plate 12, fig. 12: cf. H. Gressmann, *Altorientalische Bilder zum AT* [1927], fig. 449). A similar altar at the same place is shown in *Altorientalische Bilder zum AT,* fig. 453 (K. Galling, *Altar* . . . [1925], plate 11, fig. 5*f*); in this case the stone pillar is attached to the back, so to speak. In spite of the difference in time and place, the legitimate and the illegitimate (the true and the false) "holy high places" often mentioned in the OT may be thought of as similar to the places of worship at Petra. Fig. HIG 23.

AL TASCHITH ăl tăs'kĭth. *See* MUSIC § B1*c*.

ALUSH ā'lŭsh [אלוש] (Num. 33:13). A station of Israel in their journey through the wilderness, between Dophkah and Rephidim. It has not been identified.

ALVAH ăl'və [עלוה; LXX Γωλα] (Gen. 36:40). Alternately: ALIAH ăl'ī ə [עליה] (I Chr. 1:51). The second of eleven clan chiefs (אלופים; KJV "dukes")

of Esauites dwelling in Edom. Perhaps this name is the same as ALVAN (עלון in Gen. 36:23; עלין [Alian] in I Chr. 1:40; note the prevalence of nunnation in the proper names in Gen. 36:20-30). L. HICKS

ALVAN ăl′vən [עלון; LXX Γωλων] (Gen. 36:23). Alternately: ALIAN ăl′ĭ ən [עלין] (I Chr. 1:40). Ancestor of a Horite subclan in Edom; the first son of the clan chief SHOBAL.

AMAD ā′măd [עמעד] (Josh. 19:26). A town in the territory of Asher. Its location is unknown.

AMADATHA. KJV form of HAMMEDATHA.

AMAL ā′məl [עמל, trouble(?)] (I Chr. 7:35). A son of Heler in the genealogy of Asher.

AMALEK ăm′ə lĕk [עמלק; *relationship to* Arab. *'imlâqu, 'amâliqa, strictly secondary*]; AMALEKITES ə măl′ə kīts. A nomadic tribe, descendants of Esau.

Bibliography

1. Origin. Amalek is recorded as one of the grandsons of Esau, or, more specifically, the son of Eliphaz by his concubine Timna (Gen. 36:12; I Chr. 1:36). Amalek is also designated as one of the "clans" (אלוף; RSV "chiefs") of Eliphaz in the land of Edom (Gen. 36:16). Amalekite origins are thus traced back in biblical tradition into the early ancestry of the Edomites, and their aboriginal habitat to the land of Edom. Some scholars have identified the Amalekites with the inhabitants of the land of Melukhkha, whose name occurs in the cuneiform inscriptions of the late third millennium (*ca.* 2250-2000 B.C.). This identification is based on the false notion that Melukhkha was the Sinai Peninsula and W Arabia region, whereas it was probably located in NW India (*see bibliography*), as shown by discoveries in Babylonia, the Persian Gulf, and the W coast of India.

2. Territory. Throughout their entire known history, the Amalekites were primarily a nomadic desert tribe, ranging the desolate wastes from Sinai and the Negeb of S Canaan to the Arabah N of Ezion-geber and inner Arabia. The scope of Amalekite wanderings is summed up in I Sam. 15:7, which refers to the extent of Saul's conquest of this tribe as "from Havilah as far as Shur, which is east of Egypt"—i.e., from the desert interior of the N Arabian Nejd to the region N of modern Suez in Egypt. This appears to be the same territory which biblical tradition also attributed to the ISHMAELITES (cf. Gen. 25:18). On occasion the Amalekites penetrated into Palestine as far N as the hill country of Ephraim (Judg. 12:15) and as far W as the Philistine country around Ziklag (I Sam. 30:1-2).

3. Early history. The Amalekites were already active in the Negeb of Judah near Beer-sheba during the early second millennium B.C. (Gen. 14:7). In this vicinity, significantly called the "country of the Amalekites," the coalition of kings under the leadership of Chedorlaomer is said to have subdued Amalek on the way homeward through Palestine. Some scholars consider the mention of Amalekites in this early context anachronistic; but according to Num. 24:20, Amalek is described as the "first of the nations," obviously attesting to their antiquity as viewed from *ca.* the thirteenth century B.C. The essential historicity of the account preserved in Gen. 14 is becoming increasingly acknowledged by recent scholarship. The appearance of the Amalekites in the patriarchal period agrees with the genealogical origin posited by the lists in Gen. 36, which were certainly compiled not later than the tenth century B.C.

4. Amalek and Israel. ***a. During the Exodus.*** Hostilities between Amalek and Israel began during the thirteenth century when the Amalekites attacked the Israelites coming out from Egypt at Rephidim (Exod. 17:8-9). Probably they were seeking to defend Kadesh from Israelite occupation, in order to protect their caravan routes linking Arabia and Egypt. The Deuteronomist informs us that the Amalekites took advantage of the weariness of the Hebrews by ruthlessly cutting down those who lagged behind (Deut. 25:17-19). Because of Amalek's merciless behavior, a special enmity developed between the two peoples, resulting in the former's being made an exception to the law of holy war (Deut. 20:10-18; 25:19; *see* WAR, IDEAS OF). Nowhere in biblical tradition do we find Amalek and Israel on friendly terms, and throughout their history Israel preserved the memory of how Amalek had tried to oppose their entrance into Palestine (Judg. 10:12; I Sam. 15:2).

The defeat of the Amalekites gave Israel unmolested possession of Kadesh-barnea and its environs, but it by no means precluded future conflict with the same people. When the spies whom Moses sent out to survey the land of Canaan returned with their report, they expressed grave misgivings concerning the strength of the inhabitants, among whom they mentioned the Amalekites (Num. 13:29). Their formidable nature is acknowledged in a passage in which Yahweh commands the Israelites to change their direction of march from N to S because "the Amalekites and the Canaanites dwell in the valleys" (Num. 14:25). Some of the Hebrews rashly ignored the divine command and proceeded to invade the hill country of Judah, whereupon they were repulsed by both the Amalekites and the Canaanites, who pursued them as far as Hormah (Num. 14:41-45). A little later, some of the men of Judah fought successfully against the Canaanites (Judg. 1:9), and we are told that the descendants of Moses' father-in-law—i.e., the Kenites—went up with the people of Judah into the wilderness which lies in the Negeb near Arad and settled among the Amalekites (emending the text to read העמלקי instead of העם, "the people"), where they are still found in the time of Saul (I Sam. 15:6).

b. In the period of the judges. The first well-attested appearance of the Amalekites in Transjordan is during the early period of the judges, when they seem to assume a mercenary role in conjunction with the

semisedentary Moabites and Ammonites. Eglon king of Moab had organized a coalition against Israel which invaded W Palestine as far as the CITY OF PALMS (Judg. 3:13). During this period of Moabite harassment of Israel an Amalekite enclave may have become established in the land of Ephraim near Pirathon (12:15). The MT of Judg. 5:14 (cf. KJV) would seem to relate Amalek and Ephraim, but the text is so obscure that no definite conclusion can be drawn (cf. RSV).

The Amalekites appear at the beginning of the eleventh century B.C. in company with the Midianites in the first known camel-nomad razzia to invade and pillage the settled agricultural communities of W Palestine (Judg. 6:3, 33; 7:12; *see* CAMEL). Although Gideon was finally able to disperse this menace to Israelite sedentary life, the Amalekites remained a constant threat to Israelite security, even after stronger political authority had been established.

c. In the period of Saul and David. One of the first tasks confronting Saul after he had been anointed king over Israel was to wage war against Amalek (I Sam. 15). After passing his forces in review at TELAIM, Saul advanced to the "city of Amalek" (vs. 5; its name and situation are unknown, and this is the only instance in the biblical narrative where the Amalekites are apparently associated with a sedentary occupation, although the reference may be only to a fortified village or encampment), where, after warning the Kenites to depart from among the Amalekites, he attacked Amalek, smiting them from Havilah to Shur. The latter is probably a geographical hyperbole, although the expanse of territory indicated may actually have been traversed by the Amalekites in their various wanderings. After Saul defeated them, he is reported to have slain all survivors except the king, AGAG, whose name is the only Amalekite proper name so far known.

The failure of Saul to exterminate Amalek left the latter free to continue raids against the settled communities in S Judah. While David dwelt at Gath with Achish, he is said to have made raids against the Amalekites, leaving neither man nor woman alive, and carrying off much spoil (I Sam. 27:8-9). But the Amalekites were not easily defeated. Upon returning to Ziklag, David discovered that a party of them had taken advantage of the absence of fighting men to burn the city, leading women and children away captive (30:1-2). Among the former were David's two wives, Ahinoam and Abigail. Quickly David mustered a rescue expedition, and through the help of a young Egyptian lad (described as servant of an Amalekite whom the latter had left behind because of illness), David and his host were enabled to surprise the Amalekite camp, and slay all except four hundred young men, who mounted camels and fled. David then recovered all the spoil that had been taken, and rescued his two wives (vss. 17-18).

According to one biblical tradition, Saul, at his own request, was slain by an Amalekite, who subsequently went to David bearing tidings of the king's death, presumably in hope of some reward (II Sam. 1:1-10; but cf. I Sam. 31:1-6; II Sam. 4:9-10). However, David had the Amalekite killed (or killed him himself; cf. II Sam. 4:10), because he had dared to destroy the Lord's anointed (1:14). In all probability the Amalekite had been a mercenary in the Philistine army.

Further conflict with the Amalekites after David became king is attested in a summary of David's conquests preserved in II Sam. 8 (cf. vs. 12; I Chr. 18:11). With the firm establishment of the United Monarchy and the organization of a strong political system, it would appear that Israel effectively stopped Amalekite raids. Only once more do we hear of Amalekite hostility; Amalek is mentioned as a member of a conspiracy against Israel, although the historical context is not clear (Ps. 83:7—H 83:8). By the time of Hezekiah (late eighth century), only a "remnant of the Amalekites" remained, and they suffered defeat at the hands of five hundred Simeonites in Mount Seir—i.e., Edom (I Chr. 4:43). Thus, according to biblical tradition, Amalekite history ended where it seems to have begun: in the land of Edom.

No reliable accounts of the Amalekites are preserved outside the OT. Archaeological exploration and excavation have so far thrown no light upon them.

AMAM ā′măm [אמם] (Josh. 15:26). A city in SW Judah; the site is unknown.

AMAN ā′mən. Douay Version form of HAMAN.

AMANA ə mā′nə [אמנה] (Song of S. 4:8). A mountain peak in the Anti-lebanon range, probably S of the valley of the river of Amana (or Abana).

AMARIAH ăm′ə rī′ə [אמריה, אמריהו, Y has spoken, promised]; KJV Apoc. AMARIAS —əs, ZAMBIS zăm′bĭs. A frequent OT name, especially in postexilic priest lists.

1. One of the sons of Hebron, under the division of Kohath, in the Chronicler's listing of the Levitical houses in the time of David (I Chr. 23:19; 24:23).

2. Chief priest during the reign of Jehoshaphat (II Chr. 19:11). His father is not named.

3. Son of Hezekiah; great-grandfather of Zephaniah the prophet (Zeph. 1:1).

4. A subordinate Levite in the time of Hezekiah (II Chr. 31:15); one of six assistants appointed to help in the distribution of offerings.

5. The name appears twice in the Chronicler's list of Aaronic chief priests from Aaron to the Exile (I Chr. 6). Though a trio of names recurs as successive generations in two different places (vss. 7-8, 11-12), one hesitates to dismiss one Amariah as the mere offspring of dittography.

Amariah ben Meraioth is succeeded by Ahitub, Zadok, and Ahimaaz (I Chr. 6:7—H 5:33). This early portion of the list is repeated later in the same chapter and there stops with Ahimaaz (I Chr. 6:52

—H 6:37). This Amariah cannot be identical with 1 *above*.

Amariah ben Azariah was also chief priest—presumably during the middle monarchy—and was succeeded by Ahitub, Zadok, and Shallum (I Chr. 6:11—H 5:37). The parenthetical note (vs. 10) should probably be applied to the Azariah of vs. 9, making this Amariah approximately contemporary with Jehoshaphat and perhaps the same as 2 *above*. He appears again in the abbreviated version of this list in the Ezra genealogy (Ezra 7:3), which is in turn repeated in I Esd. 8:2; II Esd. 1:2; but each time his father or his son is different from both the Chronicles and the Ezra versions.

It would seem difficult to defend the exact accuracy of this high-priest list.

6. The name appears three times in closely related lists of priests in the book of Nehemiah. It is difficult to know whether they are separate individuals, priestly groups or families, or eponymous ancestors. The references are to: (*a*) one of the signers of the covenant (Neh. 10:3—H 10:4); (*b*) a priest who returned with Zerubbabel (Neh. 12:2); and (*c*) a priest group in the time of Joiakim (Neh. 12:13).

7. Son of Shephatiah of Judah; an ancestor of Athaiah, who volunteered to live in Jerusalem (Neh. 11:4).

8. One of the sons of Binnui (Hebrew adds "Bani") who had to put away a foreign wife in Ezra's reform (Ezra 10:42; cf. I Esd. 9:34).

F. T. SCHUMACHER

AMARNA. *See* TELL EL-AMARNA.

AMASA ə mā'sə [עמשא]. **1.** A nephew of David. He served for a brief period as the commander of the Davidic troops until his treacherous murder by Joab. Amasa was the son of an Ishmaelite by the name of Ithra or Jether, while his mother was Abigail the sister of Zeruiah (II Sam. 17:25; I Chr. 2:17). He may be plausibly identified with AMASAI, who made a moving assertion of loyalty in response to David's query concerning the fidelity of his followers (I Chr. 12:18—H 12:19).

When the initial success of the conspiracy of Absalom forced David to abandon the capital, Amasa was placed in command of the rebel forces (II Sam. 17:25), but in the crucial encounter in the forest of Ephraim with the seasoned troops of David, his army was ignominiously defeated. At this point history took a strange turn. Word came to the king beyond the Jordan that the northern tribes were anxious to recognize him again as sovereign (II Sam. 19:9-10—H 19:10-11). This information David forwarded to the hitherto reserved Judeans and encouraged them to effect his return to Jerusalem, significantly adding that Amasa, the defeated leader of the rebel forces, was to assume the command of the army as the replacement of Joab, who appears to have been deposed as a consequence of his disorderly conduct in the death of Absalom. This tacit amnesty to the politically culpable and the strong tribal loyalty to the royal house prompted the Judeans to invite the king to return. Without informing the northern tribes, they went down immediately to the Jordan to convey the royal company back to Jerusalem (II Sam. 19:11 ff). Outmaneuvered by this political move, the Israelites were indignant that they, who were the first to suggest the recall of the king, should have been so completely slighted (II Sam. 19:41 ff). The dissatisfaction crystallized into the rebellion of Sheba, a Benjaminite, who threatened the national unity by his intrigue (II Sam. 20).

This internecine strife, following in the wake of the plot of Absalom, foreboded national disaster and aroused David to direct Amasa to muster the Judean forces within the brief period of three days. When the commander failed to return in the appointed time, David placed Abishai at the head of the royal guards and charged him to quell the rebellion before the forces of Sheba could occupy the fortified cities. At Gibeon, Amasa joined his command. With calculated perfidy the redoubtable Joab murdered him, and then with Abishai continued the pursuit of Sheba while Amasa wallowed in his blood in the highway. The soldiers who paused to witness the tragic spectacle, as they hastened after the enemy, were challenged to demonstrate their loyalty to David by following Joab. The corpse was later removed from the roadway and covered with a garment when it proved a deterrent to the speedy progress of the troops who arrived at the scene. By this treachery in the removal of his rival and by the successful liquidation of the revolt by the death of its leader, Joab regained his former command of the army (II Sam. 20:23). However, the guilt involved in the assassination of Amasa and of Abner was deeply rued by the king, who subsequently instructed Solomon to render unto Joab his just desert (I Kings 2:5, 32).

2. Son of Hadlai. According to the Chronicler, Amasa was among the small group of Ephraimite chiefs that opposed, on moral principles, the entry into the city of Samaria of Judean captives, whom Pekah had taken in his war with Ahaz, and kindly assisted in their repatriation (II Chr. 28:12-15).

E. R. DALGLISH

AMASAI ə mā'sī [עמשי]. **1.** According to the Chronicler, chief of the "Thirty" among David's soldiers (I Chr. 12:18—H 12:19). However, he is not mentioned in the military lists in II Sam. 23; I Chr. 11. Attempts have been made to equate him with either Amasa or Abishai, though we do not know that either of them ever held that rank.

2. The name is used several times in the Levitical lists of the Chronicler: (*a*) Amasai ben Elkanah, a Kohathite in the genealogy of Levi (I Chr. 6:25—H 6:10) who also appears in the genealogy of Heman the singer (I Chr. 6:35—H 6:20); (*b*) a priest in the time of David; appointed to blow the trumpet before the ark of God (I Chr. 15:24); (*c*) the father of Mahath, a Kohathite in the time of Hezekiah (II Chr. 29:12). Since *a* also has a son named Mahath (see I Chr. 6:35), one would identify *a* and *c*, except for the fact that the former is centuries prior to the time of Hezekiah.

F. T. SCHUMACHER

AMASHSAI ə măsh'sī [עמשסי, *probably a corruption of* עמשי, AMASAI] (Neh. 11:13); KJV AMASHAI —ī. A

postexilic priest, apparently to be identified with MAASAI (I Chr. 9:12).

AMASIAH ăm'ə sī'ə [עמסיהו, Yahu has borne] (II Chr. 17:16). A Judahite, son of Zichri, one of the commanders in Jehoshaphat's army and a loyal servant of Yahweh.

AMATHEIS. KJV Apoc. form of ATHLAI.

AMATHIS. KJV Apoc. form of HAMATH 1.

AMAW ā'mô [עמו]. The land to which Balak king of Moab sent to call BALAAM (Num. 22:5). It included PETHOR, Balaam's city, "near the River" (i.e., the Euphrates). Pitru (Pethor) lay on the Sajur River, according to the Assyrian inscriptions. The KJV misunderstood the name and translated "the land of the children of his people."

According to the Idrimi Inscription, the king of Alalakh also ruled over the lands of Mukiskhe, Ni', and Amaw. If we date Balaam's contacts with Israel *ca.* 1250 B.C., Idrimi's account would be only *ca.* two hundred years earlier. Amaw lay W of the Euphrates. Its principle city was Emar, not over fifty miles S of Carchemish and less than that distance from Pethor.

Amaw is also mentioned in the tomb of Qen-amun, who served under Amenophis II of Egypt in the second half of the fifteenth century B.C. The land of Amaw had first been conquered by Thut-mose III, Amenophis' father, *ca.* 1450.

Bibliography. W. F. Albright, "Some Important Recent Discoveries: Alphabetic Origins and the Idrimi Statue," *BASOR*, 118 (1950), 15-20; A. Goetze, "The Syrian Town of Emar," *BASOR*, 147 (1957), 22-27. E. D. GROHMAN

AMAZEMENT. *See* ASTONISHMENT.

AMAZIAH ăm'ə zī'ə [(ו)אמציה, Yahu is strong].

1. A Simeonite (I Chr. 4:34).

2. A Levite of the family of Merari, one of those appointed by King David to have charge of the service of song before the tabernacle of the tent of meeting (I Chr. 6:45; cf. vss. 31-32).

3. King of Judah *ca.* 800-783 B.C.; son and successor of Joash.

Amaziah was twenty-five years old when he began to reign, and he is said to have reigned twenty-nine years. His mother was Jehoaddin of Jerusalem (II Kings 14:2; Jehoaddan in II Chr. 25:1).

The figure of twenty-nine years for Amaziah's reign is difficult, and many suggestions have been made to explain it. None of these, however, is satisfactory. The synchronism in II Kings 14:17, that Amaziah "lived fifteen years after the death of Jehoash son of Jehoahaz, king of Israel," if historical, would seem to indicate that he was not acting as king during that period. A reign of *ca.* eighteen or nineteen years seems the best solution to the problem.

Amaziah faced difficulties at the outset of his rule, for his father's murderers were apparently still among the servants of the king. When he gained control, however, he put to death those who had slain his father, but he spared their sons (II Kings 14:5-6; II Chr. 25:3-4).

His reign was marked by the reconquest of Edom, which had won its independence from Judah *ca.* fifty years previously (II Kings 8:20-22). The locations of the "Valley of Salt," where ten thousand Edomites were slain, and Sela (14:7), which Amaziah took by storm and changed its name to Joktheel, have not been certainly identified. The former name may be used generally for the valley S of the Dead Sea, and the suggestion that Sela (i.e., "the Rock") is one of the heights overlooking the valley in which Petra later lay is very plausible. The figure given for the number of Edomites slain is a round figure. The addition in Chronicles of another ten thousand Edomites, who were thrown down from the top of a rock, is manifestly unhistorical (II Chr. 25:12). The further details which the chronicler adds (vss. 5-10, 13-16) by way of introduction and conclusion are of questionable historicity.

No doubt elated by his victory over Edom, Amaziah issued a challenge to Joash of Israel. No motive is given, but it may have been envy that caused him to act as he did. The result was disastrous for Judah (II Kings 14:8-14; II Chr. 25:17-24), which was reduced to the status of a vassal state of Israel.

Like his father, Amaziah was the victim of a court conspiracy. He made his escape to Lachish, but was there murdered. His body was brought back to Jerusalem in a funeral procession, and buried in the City of David.

Albright, "Further Light on the History of Israel from Lachish and Megiddo," *BASOR*, 68 (1937), 22 ff; E. R. Thiele, *The Mysterious Numbers of the Hebrew Kings* (1951), pp. 68 ff; J. Simons, *Jerusalem in the OT* (1952), pp. 233 ff.

4. A priest of the royal sanctuary at Bethel in the time of Jeroboam II. He tried to prevent Amos from prophesying there (Amos 7:10-17).

H. B. MACLEAN

AMBASSADOR. The translation of the verb πρεσβεύω, "to be older, to act as an ambassador" (II Cor. 5:20; Eph. 6:20), and the noun πρεσβεία, "age, dignity, office of ambassador" (Luke 14:32; 19:14; KJV "AGED"); and the KJV translation of several Hebrew and Greek (Apoc.) words (*see* MESSENGER; INTERPRETER; the Hebrew word most frequently rendered "ambassador" by the KJV, מלאך, is traditionally translated "ANGEL" when referring to any supernatural messenger of God). In the Apoc., "ambassador" is the KJV translation of πρέσβυς, πρεσβύτης, and ἄγγελος. For ἄγγελος in I Macc. 1:46, *see* PRIESTS AND LEVITES. C. U. WOLF

AMBER. The KJV translation of חשמל in Ezek. 1:4, 27; 8:2 (RSV GLEAMING BRONZE; cf. Ugaritic *ḫrmṯ*; Akkadian *ešmaru*, "inlay" [?]). Amber is a yellowish to brownish translucent fossil resin. It takes a good polish. Many of the examples called amber in Egyptian antiquities are other resins, not amber. The word is used in the Bible as a motif in visions. The LXX and the Vulg. suggest electrum, an amalgam of gold and silver.

AMBUSH [מארב, *from* ארב; מסתרים (Ps. 64:4—H 64:5; KJV SECRET), hiding places (*cf.* Ps. 10:8); ἔνεδρον]. A means of warfare regularly employed in antiquity, often with great success (cf. Josh. 8; Judg. 20:29 ff). The enemies of Paul lay in ambush for him at Jerusalem (Acts 23:16, 21) and planned an ambush on a return to Jerusalem (25:3). *See* WAR, METHODS OF, § 5.

The Hebrew verb is usually translated "to lie in wait," and it was often used in the OT as a symbol for the wiles of the wicked (e.g., Pss. 10:8; 59:3—H 59:4; Prov. 1:11, 18; 24:15; Jer. 9:8). J. W. WEVERS

AMEN ā′mĕn′, ä′— [אמן, *from the verb* to take care, to support (*Qal*), to be firm, true, reliable (*Niph'al*), to trust (in), to believe (in, that; *Hiph'il*)]. An exclamation ("Truly," "Surely") by which listeners join in an oath, a blessing, a curse, a prayer, or a doxology they have heard, and affirm their readiness to bear the consequences of this acknowledgment. The LXX preserves Amen in I Chronicles and Nehemiah and renders it by ἀληθῶς in Jer. 28:6 and by γένοιτο in all other occurrences. The Vulg. uses *fiat* in Ps. 41:13; 72:19; 89:52; 106:48; Jth. 13:20, and elsewhere preserves the word untranslated. The only occurrence of the noun Amen as a name of God (Isa. 65:16; RSV "God of truth") is uncertain. Perhaps *'ōmēn* should be read.

1. In the OT. The responding Amen introduces the answer to the words of a previous speaker: of David ordering the enthronement of Solomon (I Kings 1:36), of Hananiah promising the return of the exiles (Jer. 28:6), of the town leader blessing Judith (Jth. 13:26), or even of God cursing the disobedient people (Jer. 11:5; or is it the aim of the prophet to confirm the conditioned blessings of the covenant?). By the responding Amen the speaker promises to do what the king commands and asks God to do what he has promised or what is prayed for.

The responding Amen is at times a part of the liturgy. The wife accused of adultery uses the priest's curse, so that her Amen comes near to an oath (Num. 5:22). At an unknown feast—perhaps at the beginning of the service—every member of the congregation, by answering Amen to the curses of the Levites (Deut. 27:15-26), calls ill fate upon himself in case he should be guilty, and so do the listeners when they hear the curses of Nehemiah against the hard-minded nobles (Neh. 5:13). "All who pass into the covenant" of the Qumran sect have to say Amen after the blessings uttered by the priests and the Levites on the "men of the lot of God" and after their curses on the "men of the lot of Belial" (1QS 1:20; 2:10, 18).

In private life a wife hearing her husband's prayer may join him by saying Amen with him (Tob. 8:8), and from this use of Amen with another speaker may derive the late custom of one's own ending prayer in the same way (Prayer Man. 15). On solemn occasions the responding Amen becomes double (Num. 5:22; Tob. 8:8, Sinaiticus).

A special form of the responding is the doxological Amen. In the worship in the synagogue—probably not in the Herodian temple—the benediction "Blessed be the Lord" of the leader in prayer—or of the choir—was answered by the congregation with the word Amen (I Chr. 16:36). When the book of Psalms was divided into five books separated by doxologies, a single (Ps. 106:48) or a double Amen (41:13; 72:19; 89:52) was inserted, and the same was done with III-IV Maccabees. In later times every petition of the Amida was answered by Amen, and this response was considered so important that when —as in Alexandria—the synagogue was so large that the voice of the leader in prayer could not be heard throughout, a flag was used to notify the congregation that the doxology was being recited.

In the same manner a single Jew had to say Amen when he heard another Jew blessing the Lord. But if the speaker was a Samaritan or a heathen, the Jew had to wait till the end of his benediction in order not to join in a prayer which was not orthodox.

2. In the NT. The use of Amen in the NT usually follows the OT lines. It is a response to the following: (*a*) a promise of the heavenly Christ (Rev. 22: 20), in whom "all the promises of God find their Yes. Amen" (II Cor. 1:20, reading H), or to a vision of the Last Judgment (Rev. 1:7); (*b*) a prayer which has to be spoken in words understandable by all listeners (I Cor. 14:16); (*c*) a doxology (Rev. 1:6; 5: 14), which it also may introduce (Rev. 7:12; 19:4).

It ends a prayer (Rom. 15:33; uncertain in Matt. 6:13; I Thess. 3:13), a doxology (Rom. 1:25; 9:5; 11: 36; 16:27; Gal. 1:5; Eph. 3:21; Phil. 4:20; I Tim. 1:17; 6:16; II Tim. 4:18; I Pet. 4:11; 5:11; Heb. 13: 21), or especially a blessing at the conclusion of a letter (Gal. 6:18; Jude 25). When the custom arose of reading from the books and the letters of the NT in the service, Amen was added at the end of this reading.

There are two specific NT uses of the word: (*a*) "The Amen" becomes one of the titles of Christ as "the faithful and true witness" (Rev. 3:14), perhaps under the influence of Isa. 65:16 (*see above*). (*b*) Jesus solemnly introduces his own sayings in the Synoptic gospels by "Amen I say to you" (e.g., Matt. 5:18, 26; 6:2) and in John by "Amen, amen, I say to you" (e.g., 1:51). This Amen comes near to an oath by which Jesus can proclaim his exegesis of the Law, his warnings, and his promises (Luke 23:43) to be the true will of his Father, but he avoids pronouncing the name of God. It may be that ἀληθώς in Luke 9:27; 12:44; 21:3 is a translation of an Amen in the older tradition underlining the solemnity of the word (cf. Luke 12:37; Matt. 24:47). This specific use of Amen by Jesus is not followed by any apostle or prophet of the early Christian church. In the service Amen is attested at the end of a prayer (but never in Acts!) or of a doxology looking forward to the Coming Age by Did. 10:6; I Clem. (e.g., 20:12); II Clem. 20:5; especially in the Lord's Supper by Justin (Apol. I.65.3-4) and Eusebius (Hist. VII.9.4).

AMETHYST [אחלמה; ἀμεθύστος]. A deep-purple variety of corundum known as oriental amethyst. אחלמה may be related to Egyptian *ḥnm*, red and brown jasper(?). It is a stone in the breastplate of the high priest (Exod. 28:19; 39:12). Ἀμεθύστος is the twelfth jewel in the foundation of the walls of the New Jerusalem (Rev. 21:20). Pliny notes its occurrence in Egypt.

W. E. STAPLES

'AM HA'AREZ ăm'hä är'ĕts [עם הארץ]. Literally, "the people of the land," and so literally rendered by the versions, both ancient and modern. The LXX, e.g., translates almost exclusively ὁ λαὸς τῆς γῆς, except in Lev. 20:2; Dan. 9:6, where it has τὸ ἔθνος τὸ ἐπὶ τῆς γῆς, and in Lev. 20:4, where it has οἱ αὐτόχθονες τῆς γῆς.

On the face of it, the term seems self-explanatory as a general designation of the population of an area. In postbiblical times, however, the expression was used as a term of opprobrium for the religious illiterate, and accordingly some scholars have explained the OT terms as designating the lower strata of society—plebeians, proletariat, or the like. Several detailed studies of the term have indicated that this is not the case and that the expression was actually a technical term for a specific social class or political body. An extreme view was that the term designated a representative parliament, with both executive and judicial powers, which participated in the government of Israel throughout the period of the monarchy and survived even into the postexilic period. A sociologist understood the term to refer to a sort of squirearchy of landed gentry, a rural militia, an oligarchical army similar to that of the Hellenic cities in predemocratic times (the connection with the militia is indicated in II Kings 25:19-20).

Basic to the understanding of the term is the fact that עם (*'am*), unlike the word גוי, with which it is sometimes parallel, does not properly designate the entire population, but in the strict sense includes only the responsible male citizenry, the married men who live on their own land and have full rights and duties, including the duty of serving in the army and of participating in judicial proceedings and cult festivals. They are thus the full citizens of a specific territory. Each land, accordingly, has its own *'am*, and the OT mentions that of the Egyptians (Gen. 42:6), the Canaanites (Num. 13:28), and the "Hittites" of Hebron (Gen. 23:7, 12-13). The expression may be made specific by replacing the general term "land" with the proper name of the land in question, as *'am yᵉhûdhâ* (עם יהודה), "the people of Judah" (II Kings 14:21 = II Chr. 26:1). The word *'am* may also be replaced by the word *'anšê*, "men of," as in *'anšê yᵉhûdhâ* (אנשי יהודה), "the men of Judah" (II Sam. 2:4). Both expressions designate the same entity—the effective, responsible (male) citizenry of Judah.

The social and political importance of the *'Am Ha'arez* of Judah is indicated by the fact that in most cases where they are mentioned some matter of historic significance is involved. They first appear in connection with the coronation of Joash (II Kings 11: 12, 18-20). In 21:24 it is they who avenge the murder of Amon and make his son Josiah king. Similarly, in 23:30, after the death of Josiah, they anoint Jehoahaz king. In 23:35 the *'Am Ha'arez* are assessed to pay the tribute to Egypt. In Jeremiah and Ezekiel the *'Am Ha'arez* are several times mentioned after the king, princes, and priests (Jer. 1:18; 34:19; 37:2; 44:21; Ezek. 7:27; 22:25-29). In Jer. 34 they are said to have participated, along with the princes, eunuchs, and priests, in a covenant to liberate their slaves in the sabbatical year. Ezekiel (22:29) accuses them of oppressing the poor and the sojourner. From all this, it is patent that the *'Am Ha'arez* played an important role in the political, economic, and social life of Judah and that they must have occupied the position just below that of the priests on the social ladder. The only evidence for the view that the term comprised or included the lower strata of society is found in the expression *dallath 'am hā'āreṣ* (דלת עם הארץ), "the poorest people of the land" (II Kings 24:14), describing the people left in Jerusalem by Nebuchadnezzar. This expression, however, is unique; elsewhere the same people are called either *dallath hā'am* (דלת העם), "the poorest of the people" (Jer. 52:15), or *dallath hā'āreṣ* (דלת הארץ), "the poorest of the land" (II Kings 25:12; Jer. 40:7; 52:16). The LXX in II Kings 24:14 reads οἱ πτωχοὶ τῆς γῆς, indicating that the original reading contained no reference to the *'Am Ha'arez*.

The prisoners captured in Jerusalem by Nebuchadnezzar's forces included sixty men of the *'Am Ha'arez*, mentioned along with the chief priest, the second priest, three keepers of the threshold, a military officer, five members of the royal council, and the secretary of the commander of the army who mustered the *'Am Ha'arez*. These were taken to Nebuchadnezzar at Riblah and there executed (II Kings 25:18-21). Certainly these sixty men of the *'Am Ha'arez* were persons of social, economic, or military importance, and not merely the lower strata of society.

In the postexilic period the term *'Am Ha'arez* retained its meaning with reference to the responsible citizenry, but the situation had changed drastically. The exiles of the second, third, or fourth generation could not return and take up affairs as if nothing had happened. They had to deal with the population they found in the land; these were now the *'Am Ha'arez*, and conflict very quickly developed between them and the returnees. In Ezra 4:4 the returnees and their partisans are called "the people [*'am*] of Judah," and the troublesome local gentry are the *'Am Ha'arez*. In Ezra 10:2, 11; Neh. 10:30-31 the plural of the word *'am* is used to indicate the heterogeneity of this half-heathen population with whom the returning Jews had intermarried. In Ezra 9:1-2, 11, both elements of the term are plural: *'ammê hā'ᵃrāṣôth* (עמי הארצות), "the peoples of the lands"; and these are specified as Canaanites, Hittites, Perizzites, Jebusites, Ammonites, Moabites, Egyptians, and Amorites, the ancestors of the mongrel heathen with whom the Israelites, even the priests and Levites, had continued to intermarry through the centuries. In II Chr. 13:9 the same expression is used in reference to the priesthoods of the heathen cults. The RSV superfluously adds "other" ("like the peoples of other lands"). The Chron-

icler, who is Ezra, in a speech put in the mouth of Abijah actually aims his invective at his contemporary opponents, the indigenous people, or peoples of the land, whose origins are diverse and mixed, whose worship is impure, and with whom he wishes to have no dealings.

In rabbinic literature the term *'Am Ha'arez* appears as a contemptuous designation of those whom the rabbis regarded as immoral, irreligious, and ignorant of the law. Accordingly the general view has been that the term refers to the masses, proletariat, the common people who were too burdened with making a living to be much concerned about ritual purity. The antipathy between the common people and the Pharisaic elite is well known. Jesus took the side of the common folk in his attacks on the Pharisees (Mark 7:1-5; Luke 6:1-5; 11:37-41). The feelings of the Pharisaic elite find expression in John 7:49, where the word ὄχλος, "crowd," is applied with contempt to the ignorant masses who do not know the law. But there is no real evidence that the term in postbiblical usage has reference to social status. It has been argued that in early Tanaaitic literature the term refers to farmers, plebeians, tillers of the land, as contrasted with the *Ḥabhērîm,* the privileged class, the patricians, who regarded the former as unclean. When many of the *'Am Ha'arez* went over to Christianity, the term supposedly became a designation of Jewish Christians and then a general term of reproach and contempt. Actually the term is applied to persons of differing social positions, and always the reference is to purely religious matters, either ignorance or laxity in regard to the law. It would seem that the best explanation for the development of this sense of the term is to be found in the animosities which developed between the returning exiles and the allegedly mongrel pagan population whom they rebuffed. As Ezra used the term, it carried disapproval of their mongrel ancestry as well as their paganism. The rabbinic use of the term shows no concern with genealogy, but only contempt for ignorance or indifference in regard to the law, which could be remedied. Rabbi Aqiba was an *'Am Ha'arez* till he was forty years old.

AMI. Alternate form of AMON 3.

AMINADAB. KJV NT form of AMMINADAB.

AMITTAI ə mīt'ī [אמתי, true] (II Kings 14:25; Jonah 1:1). The father of the prophet Jonah.

AMMAH ăm'ə [אמה, cubit] (II Sam. 2:24). A hill near GIAH in Benjamin, on the threshold of the wilderness descent into the Jordan Valley. Here, following the Battle of Gibeon, Abner made a stand against the pursuing forces of Joab. A truce was effected, and the opposing forces returned to their respective headquarters (II Sam. 2:24-32; Jos. Antiq. VII.i.2). W. H. MORTON

AMMI ăm'ī [עמי, my people]. The new name to be given to Israel in the day of redemption (Hos. 2:1), in contrast to LO-AMMI, "Not my people" (1:9), which signified God's decisive rejection.

AMMIDIANS ə mĭd'ĭ ənz [Ἀμμίδιοι] (I Esd. 5:20); KJV AMMIDOI ăm'ə doi. A family group among those returning from exile; they and the Chadiasans numbered 422. J. C. SWAIM

AMMIEL ăm'ĭ əl [עמיאל, my kinsman is God]. **1.** Son of Gemalli; representative of the tribe of Dan among the men Moses sent to spy out the land of Canaan (Num. 13:12).

2. The father of Machir, in whose house the son of Jonathan was hidden from David (II Sam. 9:4-5) and later befriended David (17:27).

3. The father of Bathshua (LXX Bathsheba), David's wife, according to I Chr. 3:5. In II Sam. 11:3 he is called ELIAM.

4. Sixth son of Obed-edom; one who served among the gatekeepers in the temple (I Chr. 26:5). F. T. SCHUMACHER

AMMIHUD ə mī'hŭd [עמיהוד, my kinsman is splendor]. **1.** The father of Elishama, leader of the half-tribe of Ephraim during the sojourn in the wilderness (Num. 1:10; 2:18; 7:48, 53; 10:22); great-grandfather of Joshua (I Chr. 7:26).

2. The father of Shemuel; a Simeonite in the time of Moses (Num. 34:20).

3. The father of Pedahel; a Naphtalite in the time of Moses (Num. 34:28).

4. The father of the king of Geshur to whom Absalom fled, according to *Qere* of II Sam. 13:37. The *Kethibh* of this verse reads "Ammihur" and is followed by some as the more difficult reading. But it appears nowhere else in the OT and could easily be a copyist's mistake (cf. Hebrew letters). The ancient versions all read "Ammihud," and both the KJV and the RSV accept it as the more likely.

5. Son of Omri; among the sons of Perez of Judah who returned after the Exile (I Chr. 9:4). F. T. SCHUMACHER

AMMINADAB ə mĭn'ə dăb [עמינדב, my kinsman is noble, generous; Ἀμιναδάβ]; KJV NT AMINADAB. **1.** The father of Nahshon, leader of the tribe of Judah (Num. 1:7; 2:3; 7:12, 17; 10:14); father of a daughter Elisheba, the wife of Aaron (Exod. 6:23). Through the son, his name appears as an ancestor of David (Ruth 4:19-20) and thence comes also into the genealogies of the NT as an ancestor of Jesus (Matt. 1:4; Luke 3:33).

2. Chief of what was probably a Levitical group, called the sons of Uzziel (I Chr. 15:10).

3. Son of Kohath and father of Korah in the chronicler's genealogy of the Levites (I Chr. 6:22—H 6:7). But here, as elsewhere in this chapter, there is difficulty. The almost parallel list later in the chapter has Izhar in his place (vss. 37-38—H 22-23), as does the original genealogy in Exod. 6:18, 21. Amminadab nowhere else appears as the son of Kohath, though every list includes Izhar (I Chr. 6:2—H 5:28; Num. 3:19; in addition to the above passages). Finally, in the verse in question (I Chr. 6:22) A and L of the LXX have "Izhar"—undoubtedly the correct reading.

4. The father of Esther, according to the LXX of Esth. 2:15; 9:29. There is, however, no strong case for correcting the MT, which has "Abihail."

F. T. SCHUMACHER

AMMINADIB ə mĭn′ə dĭb. KJV translation of עַמִּינָדִיב, wrongly understood as a personal name, in a passage of uncertain meaning (Song of S. 6:12). Conjectural translation is necessary, but little agreement has resulted. The RSV translates "my prince."

See SONG OF SONGS, with suggested Commentaries.

R. F. JOHNSON

AMMIZABAD ə mĭz′ə băd [עַמִּיזָבָד, kinsman hath bestowed]. Son of the renowned Benaiah, who was a member of the "Thirty" (II Sam. 23:20-23; I Chr. 11:22-25). According to the Chronicler, Ammizabad served David as the commander of the division for the third month (I Chr. 27:6). It is probable that when Benaiah was elevated to be head of the "Thirty," he turned over his division to his son Ammizabad.

1. Name. According to Gen. 19:38, the younger daughter of LOT gave birth to Ben-'ammi—the "father of the Ammonites to this day." At first glance, the name assigned the putative ancestor of the Ammonites appears to be merely a popular etymology to explain the origin and meaning of the common designation for the Ammonites—viz., *bᵉnê 'ammôn*, "sons of Ammon." In Hebrew, *Ben-'ammî* literally means "son of my people," or more originally, "son of my paternal clan," and thus possesses a meaning which agrees with the tradition suggesting an actual kindred relationship between Ammon and Israel. However, it is now known from guild lists of clan names preserved in Ugaritic (*see* UGARIT) that Ben-'ammi was a genuine name in the onomasticons of N Syria during the fifteenth century B.C. Moreover, among Alalakh and S Semitic personal names occurs what appears to be the same name. Our onomastic sources thus reveal the rather widespread use of this name in both West and South Semitic from the mid-second millennium B.C. on, and also attest to its occurrence in much the same characteristic forms. From a background study of the name in Ugaritic, one might expect the founder of the Ammonites to have been named 'Ammiya, and only his descendant(s) Ben-'ammi. It is not improbable, however, that in the oral tradition concerning the name of the original "father of the Ammonites," the patronym or clan name was remembered rather than the personal name, just as in the Ugaritic guild lists clan names, rather than personal names, were preserved for purposes of administrative record. Since the names *'my* and *bn 'myn*, in addition to being clan names, also stand for individual persons in the Ugaritic lists, it is not difficult to see how Ben-'ammi could be identified both with the clan name of the Ammonites and with their ancestral progenitor.

In the Assyrian inscriptions the Ammonites are most frequently referred to as the *Bêt Am-ma-na-aia*, although in one of the recently discovered Nimrud letters occurs the unusual (*mât*) *ba-an-am-ma-na-aia*, evidently for *banū Ammanaia*.

2. Origin. According to biblical tradition, Ammonite origins were in S Transjordan in the territory later known as the land of Moab. Both the Ammonites and the Moabites were of basically Semitic stock, although, like the Hebrews, somewhat mixed, since in all probability an element of their population was composed of the HABIRU. They spoke a language closely related to Hebrew. A study of Ammonite and Moabite personal names shows that many of the names have unique parallels in Proto-Arabic. This lends some support to the hypothesis, that, if the Ammonites and Moabites did not actually originate in the S, they at least received strong influences from that direction.

An early Ammonite tradition in Deut. 3:11 suggests something with regard to Ammonite origins: a bed of iron belonging to OG, king of Bashan, resided at RABBAH. Such a bed has virtually no parallel in ancient Near Eastern temple inventories, cultic liturgies, or reports of temple excavations. In a cuneiform tablet giving a detailed description of the complex of Esagila, the temple of MARDUK at Babylon, a "bed-house" (*bît irshi*) is cited containing a bed nine cubits in length by four cubits in width. The precise parallel to Og's bed is most striking. It is known that a bed played some definite role in the cultic worship of Marduk, as well as in the veneration of other deities in the Babylonian pantheon. Although the deity or cult with which the bed of Og was originally linked cannot be definitely known, there are at least two instances in which the name Marduk was connected with the territory of ancient Bashan. One of these is in the name Shulum-Marduk ("welfare of Marduk"), referring to an important clan or family which controlled Ashtaroth (*see* ASHTAROTH 2; cf. Amarna Letter no. 256, line 20). The other is in the name Marduk (presumably contracted from *Bêt-Marduk*, "shrine of Marduk"), applied to a town in ancient Bashan, occurring in some early Greek inscriptions. It is probable that the Babylonian Marduk was worshiped in Bashan, and that the bed of Og may indeed have derived its original cultic significance from Marduk worship. *See* ZAMZUMMIM.

Thus we must look N of the land of Ammon for certain influences which contributed (at least in part) to the formation of an early Ammonite tradition, and among which are perhaps also to be sought the forces which helped create a distinctive Ammonite people. The onomastic practice of designating persons and clans by a patronym seems to find its first expression in the N. However, the problem of Ammonite origins is exceedingly complex, and no easy solution is now available. On the basis of present evidence, the tribal movement (or movements) out of which was formed the specific ethnic entity of the Ammonites was apparently associated more with a great invasion stemming from the N than with a similar phenomenon coming from the S. Although evidence for such an invasion in the fourteenth-thirteenth centuries is almost totally lacking, one such movement was the coming of the Amorites into central Transjordan to form the kingdom of SIHON. That the Ammonites were in some way connected with this invasion now seems quite possible.

3. Ethnic affiliation. During their early history, the West Semitic nomads were generally known to the Eastern Semites as "Amorites"—i.e., "Westerners." In the West, however, distinctions of nomenclature emerged, based on ancestral origin, tribal affiliation, or environmental characteristics. Thus, with respect to language, ethnic relationship, and physical appearance, the Ammonites may at first have been hardly distinguishable from the Amorites, but because the former traced their origin back to a common tribal ancestor, they received or assumed a corresponding distinction in name. Not impossibly the Ammonites and Amorites of Transjordan were originally closely related, and both may have entered the land at approximately the same time. We find Amorites and Ammonites settled adjacent to each other at the very beginning of Ammonite history. JAZER became the border of the Ammonites (Num. 21:24), and Amorites dwelt in the land of Jazer until Moses dispossessed them (Num. 21:21). Moreover, when the Ammonites became strong enough to engage the Israelites in battle, their first objective was recovery of the land of Gilead, which was still known as the land of the Amorites (Judg. 10:8), and the territory which the Ammonite king claimed to be rightfully his was identical with the territorial ex-

panse once assigned to the kingdom of Sihon (Judg. 11:13, 22). The territory of Sihon definitely overlapped that known to have been Ammonite from an early period. Finally, the name Ammon itself preserves a most characteristic element in personal names of West Semitic nomadic peoples—i.e., Amorites. Thus some kind of ethnic affiliation between the Ammonites and the Amorites seems far more plausible than one between the Ammonites and the ARAMEANS, which is often suggested. The Arameans do not seem to have penetrated as far S as the land of Ammon at an early date.

4. Territorial definition of the land of Ammon. During the first half of the thirteenth century the Ammonites consisted of little more than a small tribal nucleus centered around their later capital, Rabbath-Ammon. Gradually, organized sedentary settlement spread, until by the eleventh century a fairly well-defined kingdom could be posited, stretching along the small, rather fertile strip of land by the S-N extension of the River Jabbok, and continuing eastward to the desert. Along this narrow strip have been discovered a number of Ammonite sites whose earliest beginnings can definitely be traced back to Iron I (1200-900). In general, the N and S extent of the original Ammonite kingdom can be judged from the N and S limits of this group of sites.

Actually, the boundaries of Ammon were never so clearly defined as those of Moab and Edom. According to biblical tradition, the main border of Ammon was on the W, formed by the E arm of the River Jabbok (Deut. 3:16; Josh. 12:2; 13:10). However, that Ammonites had settled farther W beyond the Jabbok even in the period of the early Ammonite state (i.e., before the tenth century) seems to be indicated by both archaeological and biblical evidence (cf. Num. 21:24; Deut. 2:37; Josh. 13:25).

5. The early Ammonite state: Ammon during Iron I (1200-900). ***a. Earliest political activity in Ammon (1200-1100).*** The formal organization of the Ammonite state seems to have taken place later than the kingdoms of the Amorites, Moabites, and Edomites. The earliest references to Ammon as an organized state occur in biblical literature (Judg. 3:13; 10:7). Although two biblical passages mention the presence of Ammonites when the Israelites passed through Transjordan on their way to the Promised Land (middle decades of the thirteenth century), Ammon does not appear to have reached the same level of organized sedentary life as her neighbors to the S, particularly Moab. Mention of Ammon in conjunction with Moab and Edom is significantly missing in the earliest Hebrew poems, such as the Song of Moses (Exod. 15) and the Oracles of Balaam (Num. 23-24). Unlike her S neighbors, Ammon remained in closer touch with the desert throughout her entire history, and even as late as the seventh century maintained a social organization of an essentially nomadic type.

The initial historical appearance of the Ammonites in an active military role finds them in coalition with Moabites and Amalekites (*see* AMALEK) in an effort to help Eglon, king of Moab, regain former Moabite territory in Transjordan (Judg. 3:13-14).

***b. Beginnings of Ammonite expansion: the war with Jephthah* (ca. *1100-1020*).** By the late eleventh century the Ammonites had strengthened themselves considerably, fortifying their borders with massive fortresses built in the "megalithic" style, and organizing an effective striking force. Soon they began to establish themselves in Gilead (Judg. 10:8). Even the tribes of Benjamin and Ephraim in W Palestine felt the effects of Ammonite aggression (Judg. 10:9). The "inhabitants of Gilead" proceeded to organize an opposition force under the command of their mighty warrior, Jephthah (Judg. 11:11), who mustered his army and defeated the Ammonites (Judg. 11:32-33). Jephthah apparently conducted no campaign in W Palestine. Josh. 18:24 records the name of a Benjaminite town, Chephar-ammoni (lit., "town of the Ammonites"), which conceivably was founded, or at least occupied, by the Ammonites during this period.

***c. Ammonites in the Jordan Valley: war with Saul at Jabesh-gilead* (ca. *1020-1000*).** The great Ammonite strongholds were largely untouched by Jephthah's victorious army; thus future expansion of Ammonite power was left unchecked. Sometime after the beginning of the last quarter of the eleventh century, there arose in Ammon a new king whose goal became the conquest of Israelite territory in Transjordan. This king, Nahash (*see* NAHASH 1), launched an ambitious campaign shortly after 1020, leading his army unopposed as far N as the town of JABESH-GILEAD (I Sam. 11:1-2). This military venture marked a high point in Ammon's advance to power, as may be detected in Nahash' refusal to negotiate a treaty with the men of Jabesh except upon the most humiliating terms (I Sam. 11:2). But the advent of Saul's army, which decisively defeated Ammon (I Sam. 11:8-11), preserved central Transjordan, and in particular the Jordan Valley, from Ammonite domination for several centuries. Saul apparently did not drive the Ammonites behind their original border or destroy their fortresses, for later in his reign he had to organize a punitive expedition against those Transjordan peoples who persisted in raiding and plundering the Israelite settlers (I Sam. 14:47-48).

***d. Israelite conquest of Ammon: Ammon as vassal state under David and Solomon* (ca. *1000-922*).** During the early years of the tenth century Israel's new king, David, became a good friend of Nahash (II Sam. 10:2). When Hanun, son of Nahash, succeeded his father on the Ammonite throne, conditions were soon created for renewed conflict between Ammon and Israel (II Sam. 10:3-5). The Ammonites sent for military assistance from the S Aramean states of Beth-rehob, Maacah, and Tob (II Sam. 10:6; I Chr. 19:6). The Aramean army quickly descended into S Gilead and encamped before the Reubenite town of Medaba. When Joab reached the vicinity of Rabbah, he discovered the Arameans already closing in (II Sam. 10:9; I Chr. 19:10). He was forced to divide his forces, sending the stronger and more capable troops against the Arameans, while leaving the rest to resist the Ammonites (II Sam. 10:9-10; I Chr. 19:10-11). Fortunately, the "picked men of Israel" were strong enough to beat back the Aramean attack, while troops under ABISHAI held the Ammonites at bay (II Sam. 10:13-14; I Chr. 19:14-15). But the victory was not decisive. David therefore launched a devastating expedition against Aram, making it a vassal (II Sam. 8:5-6; I Chr. 18:5-6). In the following year he con-

centrated on Ammon, sending another strong army under Joab's leadership, which ravaged the Ammonite countryside and besieged Rabbah (II Sam. 11:1, 22-24; 12:26; I Chr. 20:1). With the fall of Rabbah, Ammon became another Israelite vassal state.

Throughout the United Monarchy (*ca.* 961-922), Ammon remained subservient to Israel. It appears that David appointed a viceroy from the old Ammonite royal family to rule over the land, for when David fled to Mahanaim, among those who came to minister to him and his army was "Shobi the son of Nahash from Rabbah of the Ammonites" (II Sam. 17:27). Solomon probably continued David's policy of keeping the governorship of Ammon within the old royal family. Undoubtedly the Ammonites, while under Israelite suzerainty, shared in the wealth and prosperity of the Solomonic era. Even before their conquest by David, they must already have had a successful trading state. They were among the first of the Transjordan peoples to take full advantage of their position on the edge of the Syrian Desert to gain substantial control of the camel-caravan routes for their own profit. In such an ethnically diverse kingdom as Solomon's, it was inevitable that cultural and religious syncretism would develop, and we learn that among the foreign women Solomon loved were Ammonite women (I Kings 11:1), who eventually influenced him to build a sanctuary to their god Milcom (*see* MOLECH) on the mountain opposite Jerusalem (I Kings 11:7). The name of one of these Ammonite women, Naamah, mother of Rehoboam, is preserved by biblical tradition (I Kings 14:21, 31; II Chr. 12:13), which marks the first clear historical instance of Ammonite blood being introduced into the Israelite royal family.

6. The flowering, decline, and fall of the Ammonite state (*ca.* 900-580). After almost a century of subservient existence as a tributary state to Israel, political conditions again enabled the Ammonites to embark upon new conquest and expansion, initiating a period in which the fortunes of the Ammonite state were to reach their zenith.

***a. Ammon and Israel before the resurgence of Assyrian power* (ca. *922-742*).** The Ammonites probably took advantage of the opportunity to free themselves from Israelite control during the first half of the ninth century. Before 853 an independent king arose in Ammon whose name, Ba'sha' (Assyrian *Ba'sa*), the "son" of Ruhubi (i.e., Beth-rehob), appears in the Monolith Inscription of Shalmaneser III (col. II, line 95), in connection with an account of the famous Battle of Qarqar fought in the territory of Hamath in 853. Among the smaller contingents of troops are mentioned a thousand (or more) Ammonites, who probably joined the Aramean coalition against Assyria to protect their N commercial interests. Shortly after the successful repulsion of the Assyrian invaders, the Ammonites linked themselves with the Moabites and Meunim in a campaign presumably instigated by the Arameans to force Jehoshaphat to withdraw his army from the siege of Ramoth-gilead (II Chr. 20:1-2). This military venture was also probably directed against further expansion of Jehoshaphat's commercial enterprises (cf. I Kings 22:48), which threatened to cut off Ammonite control of the overland caravan trade. The Ammonites and their allies were frustrated in their attempt to defeat Jehoshaphat, and finally all their armies were completely destroyed (II Chr. 20:23).

But now the upsurging Arameans overran all of Transjordan as far S as Aroer on the Arnon River (II Kings 10:32-33), and in all probability the Ammonites were either their allies or their nominal vassals in depriving Israel of her Transjordan territory. Possibly they had already begun to take advantage of Israelite preoccupation with the Arameans to enlarge their borders in Gilead (Amos 1:13). Toward the end of the ninth century Aramean power began to decline, and when Assyria resumed an aggressive policy, the Aramean states were among the first to collapse before the Assyrian onslaught. Although Adad-nirari III, the Assyrian king, claimed to have imposed tribute upon some of Aram's dependencies, Ammon appears to have remained unmolested, retaining possession of S Gilead until the middle of the eighth century.

After Uzziah became sole ruler in Judah (*ca.* 770), he firmly established Judah's hold on S Transjordan, stretching from Edom to Ammon. But a short time after Uzziah died (*ca.* 742), Jotham had to face a rebellion by the "king of the Ammonites" (II Chr. 27:5), whom he was able to subdue and subject to large annual tribute.

***b. Ammon as a vassal of Assyria* (ca. *742-630*).** The resurgence of Assyrian power under Tiglath-pileser III (733) naturally affected the fortunes of Ammon. All the Transjordan states became vassals of Assyria. Each was permitted to retain its own native dynasty, which, in return for Assyrian protection, had to pay homage to the Assyrian monarch. From the Annals of Tiglath-pileser III we learn that Shanip (Assyrian *Sanipu*) was king of Ammon in 733, as he is listed among those who paid tribute to Assyria that year. He is possibly to be identified with the "king of the Ammonites" mentioned above in connection with Jotham's campaign against Ammon (II Chr. 27:5). During the remainder of the eighth century the Assyrians may have allowed the Ammonites to annex some of their former territory in the land of Gad, and this may be part of the general historical background of Ps. 83:8—H 83:9. Shortly after Sargon II died (*ca.* 705), a general rebellion forced his successor, Sennacherib, to carry out an extensive Palestine expedition (701), during which he received tribute from the Transjordan states, Ammon, Moab, and Edom. According to the Annals of Sennacherib, the king of Ammon in 701 was Bod'el (Assyrian *Bud'ilu*), who perhaps was the immediate successor of Shanip. We do not know how long Bod'el reigned in Ammon, but since his name appears again in the inscriptions of Esarhaddon (681-669) and Ashurbanipal (668-633), he probably ruled until at least 670. By *ca.* 667, he had either died or been deposed, for we have reference to a new Ammonite king in the later records of Ashurbanipal.

Throughout most of the seventh century Ammon remained a nominal Assyrian province, tributary to the Assyrian king, but still permitted to have their own native ruler. The Ammonite king Bod'el, whose name appears in a building inscription of Esarhaddon, is recorded as furnishing certain unspecified

materials for the royal palace at Nineveh. From a letter apparently written to Esarhaddon himself, we learn that the Ammonites paid a tribute of two minas of gold (i.e., one thirtieth of a talent), an amount significantly larger than that exacted from either Moab or Judah. The beneficent protection of the Assyrians evidently enabled the Ammonites to keep control of a substantial part of the desert caravan trade, which contributed immensely to their prosperity.

Ca. 667, Bod'el died and was succeeded by (his son?) 'Ammi-nadab (Assyrian *Ammi-nadbi*). 'Ammi-nadab's name appears in the so-called Cylinder C Inscription of Ashurbanipal in a list of "twenty-two kings of the seacoast" who paid tribute to Ashurbanipal in the course of his great Egyptian campaign of 667. It is also attested on two Ammonite seals, both of which bear a representation and script which point to a seventh-century date. The reigns of 'Ammi-nadab and his immediate successors marked the *floruit* of Ammonite culture and prosperity. The rich and varied nature of archaeological finds from this era suggests that the local Ammonite officials enjoyed a higher standard of living during the seventh century than their contemporaries in Israel and Judah.

***c. The decline and fall of Ammon* (ca. *630-580*).** The bloody civil war which broke out between Ashurbanipal and his brother in 652 also gave the signal for rebellion throughout the vast reaches of the Assyrian Empire. Among the peoples joining in revolt were the Arab tribes of the Syrian Desert, who now swept over the regions E of Antilibanus and Transjordan, threatening the security of the E Assyrian provinces as well as the vassal states of Ammon, Moab, and Edom. Although the Ammonites were undoubtedly affected by the razzias of the Arab hordes, it would appear that they were able to save themselves from total destruction at this time, probably because of their own stout defenses and timely Assyrian aid. However, Arab tribes continued to roam perilously close to Ammonite territory. By the beginning of the sixth century distinctive Arab influence on the Ammonites is reflected in several personal names found on Ammonite seals coming from this period, and by the special legal formula, "A maidservant of B," which was employed on certain seals to designate the relationship between a reigning prince (second name) and a particular official in his service (first name). The seals in question appear to have belonged to Ammonite officials who were women—this fact shows the superior position of women in the land of Ammon, and evidences strong influence by nomadic practice. On one Ammonite seal, however, appears the name Hananel, who probably was king of Ammon, either in the latter half of the seventh century or during the early sixth century, since his name is the same as that of the earlier Ammonite king Hanun. In the Bronze and Iron Age states of Syria, royal names tended to be repeated.

The impact of the fall of Assyria on the historical situation in Transjordan is not entirely clear, but it would appear from the biblical oracle against Ammon and Moab in Zeph. 2:8-11 and the prophecy against only Ammon in Jer. 49:1-6 (both of which seem to reflect events prior to the death of Josiah in 609/608) that the Ammonites had made boasts against the former territory of Israel (Zeph. 2:8, 10), and had actually occupied the land and settled in the cities which once belonged to the tribe of Gad (Jer. 49:1). Thus by the beginning of the last decade of the seventh century, the Ammonites had asserted their complete independence once again, expanding as far W as the Jordan Valley, and becoming what must have been the dominant state of S Transjordan.

However, the picture soon changed. According to information from recently published tablets of the Babylonian Chronicle, in 599 Nebuchadrezzar embarked on a hitherto unknown expedition to Syria in which he sent raiding parties into the neighboring desert to plunder the Arabs. It would seem that the Ammonites and Moabites were among those induced to co-operate with the Babylonian garrison troops making raids on those disloyal to Nebuchadrezzar, including Judah (cf. II Kings 24:2). Thus in return for help and protection against the ever-threatening Arabs, the Ammonites placed themselves under Babylonian suzerainty. In a very short time, however, they became restless under the Babylonian yoke. In 593 envoys from Ammon joined others from Edom, Moab, Tyre, and Sidon in a conspiracy at Jerusalem to foment rebellion against Babylon (Jer. 27:3). The promise of Egyptian support undoubtedly stimulated the convocation of the conference.

From this point on, Ammon's revolt against Babylon was open and permanent, as is suggested by the picture the prophet Ezekiel gives of Nebuchadrezzar standing at the parting of the ways, one leading to Rabbah, the other to Judah and Jerusalem (Ezek. 21:19-22—H 21:24-27). The catastrophe that struck Judah did not immediately affect Ammon. From ensuing events, it seems the Ammonites remained in open revolt, even to the point of daring to interfere in the internal affairs of the remnant of Judah.

Among those who had taken refuge in Ammon was Ishmael (Jer. 41:1). There he fell under the influence of Baalis (for *Baal-samak* or the like), the contemporary Ammonite king, who plotted with him to assassinate GEDALIAH (Jer. 40:14). The Judean collaborationist governor underestimated the zeal of Ishmael, for Ishmael slew Gedaliah (Jer. 41:2-3) and escaped to Ammon (Jer. 41:15). The Ammonite king was apparently trying to get control over the remnant of the royal house of Judah, probably in the hope of restoring the Davidic kingdom under Ammonite rule.

Political events in Transjordan during the next few years are obscure. It is not improbable that punitive measures were exerted against the Ammonites. Josephus (Antiq. X.ix.181) supports this; he records a campaign conducted by Nebuchadrezzar in Coele-Syria, after which Nebuchadrezzar made war on Ammon and Moab. The Chaldean attack set the stage for the collapse of the Ammonite state. Archaeological explorations have shown that Transjordan was largely depopulated before the middle of the sixth century B.C., and that sedentary occupation of Ammon ceased almost completely until the third century. Nebuchadrezzar may have ordered a deportation carried out for Ammon similar to that already executed for Judah. This would explain the sudden end to extensive sedentary civilization in Ammon, which created a vacuum into which poured the *Bᵉnê Qedem* (i.e., "sons of the east," the Arab invaders; *see*

EAST, PEOPLE OF THE), who destroyed all formally organized political activity in this area (cf. Ezek. 25: 4, 8-9), bringing to an end the autonomous Ammonite state.

7. Postexilic Ammon. Following the destruction of sedentary civilization in Transjordan, the Arab nomads became masters of the land, tenting in the ruins of what had once been thriving walled and unwalled settlements. Political order was not restored until the coming of the Persians, whose armies gained suzerainty over the Neo-Babylonian Empire (by 530), which included N Arabia and Transjordan. How soon the Persians were able to re-establish organized political activity in the land of Ammon is not known. By the time of Nehemiah (*ca.* 440), the province of Ammon extended as far W as the Jordan Valley, bordering immediately on Judah.

During this period there lived a certain Tobiah (*see* TOBIAH 2), described as "the servant, the Ammonite" (on this title, *see below*), who appears as the *de facto* head of a Jewish enclave in Ammon (Neh. 2:10, 19; 4:3, 7, etc.). Most scholars have considered Tobiah the contemporary Persian governor of Ammon (although Nehemiah never calls him such), but a recently published early Lihyanite inscription may force revision of this opinion. According to the inscription, a certain "'Abd the governor" is mentioned next to Gashmu bin Shahru (*see* GESHEM; cf. Neh. 2:19; 6:1-2). From the context it appears that 'Abd was the contemporary Persian governor of Ammon and Dedan. The twice-mentioned formula for Tobiah (Neh. 2:10, 19) may be in reality a corruption of an original "Tobiah, and 'Abd the Ammonite" (such successive haplographies and dittographies in the Hebrew text are not uncommon). The association between 'Abd the Ammonite and Tobiah the Jew would thus be quite parallel to that between Gashmu the Arab chieftain and 'Abd the Ammonite governor, although the precise nature of this association cannot be further defined. In any event, Nehemiah does not cease to emphasize the evil intention of Tobiah (2: 19; 4:3, 7; 6:1, 12, 14; 13:4-9), who apparently became the first Jewish ancestor of a long line of Tobiads who seem to have made their home at 'Araq el-Emir in S Gilead, where tombs have been discovered bearing the family name deeply carved into their external wall, and written in an archaic Aramaic script that need not date after 400 B.C.

Following the conquest of Alexander and the subsequent division of his empire (late fourth century), effective control of the land of Ammon passed to the Egyptian Ptolemies. *Ca.* 300, mention of Ammon occurs once in a list of hierodules (male and female slaves) from Ma'in (S Arabia), indicating that Ammon was still a well-recognized territory on the fringes of Arabia. Several decades later, we again hear of an Ammonite Tobiah, cited by the Zenon (or Gerza) Papyri (260-240). His name, dwelling place, and general description confirm his relationship to the Tobiah of Nehemiah's day. According to the Zenon archive, however, this later Tobiad functioned as head of the Egyptian military colony in Ammon. His principal duty was to levy taxes and imposts, and turn over the portion due the Egyptian minister of finances in the administration of Ptolemy II Philadelphus (285-246). Thus this Tobiah was a local Jewish notable of the well-known Tobiad family chosen by Philadelphus as responsible governor of the Ammonite province (*ca.* 265).

The prosperous reign of Philadelphus continued for twenty years after the annexation of Ammon, but no record has preserved the names of the potentates of Ammon throughout this period. I Maccabees mentions a considerable dissemination of Jews still living in Ammon "among the people [RSV in the land] of Tobiah" (ἐν τοῖς Τουβίου; I Macc. 5:13) at the time of the Maccabean restoration (*ca.* 165). Between the years 183-176 (according to Jos. Antiq. XII.iv.11), one of the last known Tobiads, HYRCANUS, left the Egyptian court and took refuge in the land of Ammon (the identification of his fortress or sanctuary with 'Araq el-Emir is doubtful), where he lived in retreat, fighting the Arabs and defying the enmity of his brothers who held high offices in Jerusalem.

Arab encroachment on Ammonite territory had been constantly on the increase since the seventh century, and by the first century Ammon had become a part of the Nabatean kingdom (*see* NABATEANS). Nabatean pottery has been found in several Ammonite tombs dating from this period. Roman conquests during the first century B.C. incorporated Ammon into the Roman Empire, but apparently had little effect on the ethnic character of the land. Roman influence can be seen in the beautiful architecture still evident at Amman, and a number of Greek and Latin inscriptions coming from the Amman area bear witness to Roman culture, although personal names appearing in these inscriptions tend to show the predominance of Arabs by the second century A.D. Around the middle of this same century, the Ammonites are referred to as a contemporary ethnic group by Justin Martyr, who indicates that they were still a numerous people. In the following century, however, Origen vaguely alludes to them, along with Moabites and Edomites, as Arab tribes. With this last allusion, the Ammonites disappear from history, to "be remembered no more among the nations" (Ezek. 25:10).

8. The culture of the Ammonites. Most of the tomb groups, statues, and seals which have been found in Ammon date from the seventh-sixth centuries, and precisely in this period must be placed the great material prosperity of the Ammonite state. Of special interest are two statues which are among the few complete examples of native sculpture so far found in either Transjordan or W Palestine for the early periods (i.e., Iron Age or earlier). The smaller of the two statues bears an inscription in Old Aramaic characters which may be translated: "Yarachazar, chief of the horse." The appellation "chief of the horse" (not absolutely certain) would seem to indicate that Yarachazar performed an important military function as chief of the cavalry. The Ammonites probably had a well-organized cavalry division in their army under Assyrian influence. In recently cleared Iron Age tombs near Amman three small pottery horse-and-rider figurines have been found, also suggesting Ammonite cavalry.

From the tombs near Amman have come large quantities of typical Ammonite pottery, chiefly from the seventh century. Most of the pottery belongs to a homogeneous group displaying specific Transjordan

types. A survey of all the pottery found shows that the ancient Ammonite potters were skilled both in design and in technique, and were not inferior to their Palestinian contemporaries.

In addition to pottery, the Ammonite tombs have yielded numerous seals, several of them inscribed. The largest group of nonpottery objects comes from the tombs at Sahab and Meqabelein, S of Amman, where iron, limestone, and alabaster utensils and glass or bead ornaments were unearthed.

The tombs have also contributed substantially to knowledge of Ammonite burial customs. At times the Ammonites buried their dead in coffins, three large specimens of which have been uncovered in the tomb of Adoni-nur at Amman. At Sahab the headpiece of a pottery anthropoid coffin was discovered, representing a crude adaptation of a type of clay coffin known from Egyptian models of the Eighteenth and Nineteenth Dynasties.

Most of the Ammonite tombs were cave tombs cut out of natural rock either below the ground surface or in the side of a hill. All tombs appear to have been of the bench variety. Unique features include cupboardlike recesses at the E end of tomb A at Amman, and a curious chimneylike construction in the middle of the SW side of a tomb at Sahab. The Iron Age Ammonite tombs disclose some of the diverse streams of cultural influence exerted on the Ammonites. As might be expected, Assyrian influence was predominant, manifest not only in pottery and seal motifs, but also in plastic art.

Architecturally, the Ammonites built in what is generally called the "megalithic" style, owing to the great size of stones used in construction. This style of building may have been adapted from the much older megalithic constructions of Neolithic Ammon, initiated by a people whom scholars sometimes refer to as the "dolmen builders" (*see* DOLMENS; PREHISTORY). Many dolmens have been found in the land of Ammon, especially around the ancient capital, Rabbah, and slightly to the W. Circular towers, fortresses, and other buildings the Ammonites constructed seem to have housed most of the population during the Iron Age.

Little is known about Ammonite higher culture, particularly religion. Not enough material is now available to clarify details concerning the controversial figure of the so-called national deity of Ammon, Milcom. Several individual finds from the archaeological survey of Transjordan show that many of the Iron Age settlers worshiped a pantheon of deities, including gods and goddesses of fertility. This would be expected, of course, in a largely agricultural type of civilization. Some of the Ammonites undoubtedly knew how to read and write in a dialect which must be classified as S Canaanite, which was closely related to biblical Hebrew, and in all probability could be read and understood by the Israelites. On the basis of the small amount of epigraphic material found in Ammon, it is rash to suggest that the Ammonites may have been literary artists as gifted as their contemporaries in W Palestine.

AMNON ăm′nŏn [אמנון, אמינן (II Sam. 13:20), faithful; LXX Αμνων]. **1.** David's eldest son, born of Ahinoam the Jezreelitess at Hebron (II Sam. 3:2). A single incident in his life is known—namely, his rape of TAMAR (2) his half sister, which her brother Absalom avenged by slaying Amnon (ch. 13). This was the first phase of the dissolution of David's family, following his adultery with Bathsheba and the murder of Uriah.

2. A son of Shimon, and a remote descendant of Judah (I Chr. 4:20). J. M. WARD

AMOK ā′mŏk [עמוק, deep, unsearchable]. A priest in the group that returned from exile with Zerubbabel (Neh. 12:7), and the ancestor of a priestly family (vs. 20).

AMON ăm′ən [אמון, אמן (I Kings 22:26), trustworthy, reliable, faithful; Egyp. *imn;* Babylonian *ămănă;* Assyrian *ămūnû;* Αμων]; KJV ALLOM ăl′əm in 3 *below.* Alternately: AMI ā′mī [אמי] (Ezra 2:57). **1.** Governor of the city of Samaria in the reign of Ahab.

After Micaiah ben Imlah had foretold the failure of Ahab's expedition against Ramoth-gilead, he was committed to the care of Amon and Joash the king's son, to be imprisoned and fed on bread and water till the king's return (I Kings 22:26-28; II Chr. 18:25-27).

2. King of Judah *ca.* 642-640 B.C.; son and successor of Manasseh.

Amon became king at the age of twenty-two and reigned for two years (II Kings 21:19; II Chr. 33:21). His mother was Meshullemeth daughter of Haruz of Jotbah. This town is probably to be located in Galilee (Assyrian Yatbatu, Greek Jotapata). The name is significant as indicating the close connection maintained with the North at this time (cf. also Rumah in II Kings 23:36). The relationship between Judah and the former kingdom is of great importance from

the point of view of understanding the whole history of Judah during this period.

Amon followed in the footsteps of his father, Manasseh, and presumably owed allegiance to Assyria, whose gods he continued to worship even as his father had done. This speaks against the historicity of the Chronicler's account of Manasseh's repentance, unless it is to be assumed that Amon made new "images" (II Chr. 33:22*b*).

Amon was murdered by his servants after a brief reign (II Kings 21:23; II Chr. 33:24). No reason is given, but it is clear that the murder did not have popular backing, as the "people of the land" put the murderers to death and placed Josiah, Amon's son, on the throne. The assassination was probably the result of a court plot.

3. One of the descendants of Solomon's servants who returned from the Babylonian exile (Neh. 7:59). In Ezra 2:57 he is called Ami. H. B. MacLean

4. Amon-Ra, the imperial god of Egypt, whose chief center of worship was at the temple of Karnak in Thebes (Jer. 46:25). *See* Egypt § 3*a*. Fig. EGY 19.

5. A component of the Hebrew name for Thebes.

***AMORITES** ăm'ə rīts [אמרי; Akkad. *amurrū, deriving from* Amurru (*in Akkad. sources the name of the land W of Mesopotamia*); LXX 'Αμορραῖος]. The inhabitants of the land called Amurru. Since the exact extent of the region is not known, it is not possible to mention the exact area where Amorites lived, but it may have been Syria and at least part of Palestine.

1. OT references. According to some passages, the Amorites are a Canaanite tribe (cf. Gen. 10:16; Exod. 3:8; I Chr. 1:14). Part of this tribe lived in the area which later was inhabited by the tribe of Judah, particularly in the mountains (Deut. 1:19 ff, 27, 44; Josh. 10:5 ff), and another part in the area E of Jordan, where two Amorite kingdoms, Heshbon and Bashan, are mentioned (Num. 21:13, etc.; Josh. 2:10; 9:10; 24:8; Judg. 10:8; 11:19 ff). In Gen. 15:16, the term "Amorite" refers to the pre-Israelite population of Palestine in general. Probably also Jerusalem was an Amorite town in pre-Israelite times (cf. Ezek. 16:3).

According to OT conceptions, the Amorites were people tall like giants (Amos 2:9). It is easy to understand that people who lived long ago, and of whom nothing was known but what popular tales had to tell, were conceived of as living in the world of myth and imagination. Myth and history were two aspects of the same thing.

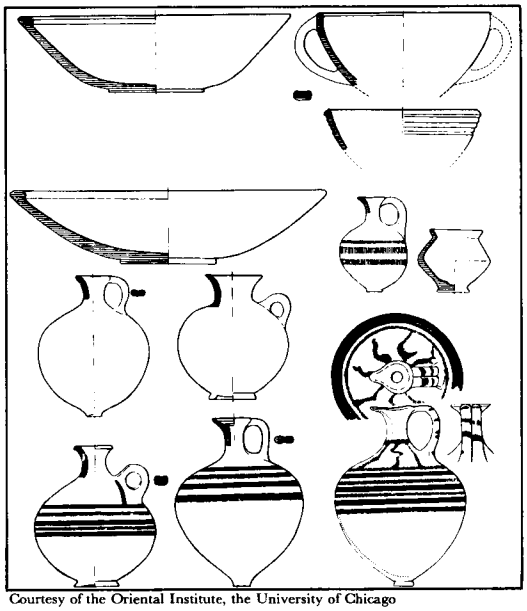
2. Extrabiblical sources. Our knowledge of the Amorites must be gathered from extrabiblical sources, and very rich material is now available. The country of Amurru is mentioned in early Cuneiform texts. As early a ruler as the Old Akkadian king Sargon (*ca.* 2400 B.C.) is said to have made an expedition to Amurru in the eleventh year of his reign in order to provide material for his buildings. Gudea, king of Lagash (*ca.* 2000 B.C.), fetched marble from Amurru, and so on. At that time Amurru seems to have been a powerful country, the center of which was Mari (modern Tell Hariri), at the place where the Euphrates River turns eastward.

From the region of Mari, some Amorites pushed eastward shortly after 2000; conquered the last Sumerian kingdom, the third dynasty of Ur; and founded local kingdoms, among which the first Babylonian dynasty was the most important. In Mesopotamia the Amorites merged with the people living there previously—i.e., the Sumerians and the Akkadians—but in a number of personal names it is still possible to trace them. The Amorites who remained in the W were mixed with other groups, also of Indo-European blood. Hammurabi of Babylon put an end to the Amorite Empire and conquered Mari. Because of the active policy of Hammurabi, various groups of people moved southward. Through wars with Egyptians, Hurrians, and Hittites, the Amorite world was still more divided up into small kingdoms, in which the population was of a mixed character.

In the period which is reflected in the Amarna Letters, a number of independent Amorite city-states existed. The center of one of these states was Kadesh on the Orontes, known also through Hittite sources from Boghazköy (1400-1200 B.C.). This place is known also because of the important battle between the Egyptians under Pharaoh Ramses II and the Hittites. The invasion of the Sea People and the Hittite wars made an end to the independent Amorite kingdoms in Syria.

The Amarna Letters throw light upon the Amorite kingdoms which collaborated with another ethnic group, the Habiru, the Hebrews of the OT (*see* Hebrew; cf. Gen. 14). Thus the Amorites were one of the groups which played an important role in the growth of the Israelite nation. The French excavations at Mari under the direction of A. Parrot have contributed in a very important way in elucidating the earlier periods of the history of the Amorites and their language and civilization.

3. Language and civilization. Linguistically the Amorites were closely related to the Canaanites (*see* Canaan), both being Northwest Semitic dialects. Canaanite may be said to be a branch of Amorite, if Amurru is taken to be the whole area of Syria and N Palestine. Also Aramean is to be classified as a language which developed from Amorite. The Aramean territory (Akkadian *Aḫlāmē*)—according to an inscription of Tiglath-pileser I (*ca.* 1110 B.C.)—was between Tadmar (Palmyre) in Amurru, 'Anat in Suḫi, and Rapiqu in Karduniash (Babylonia).



The Amorite language, as a consequence of what has been said, has a number of features in common with Canaanite, and Ugaritic may be regarded as one branch of Amorite, of which a number of local varieties undoubtedly existed during the second millennium. Its role in the growth of biblical Hebrew was very important. The latter fact is excellently illustrated by the occurrence of a number of words which so far occur only in the Mari Texts and in the OT.

The Mari Texts also throw light upon the civilization of the Amorites during the first half of the second millennium. In the kingdom of Mari an Amorite civilization of a high standard existed, and many fine examples of art have been unearthed at Mari. Characteristic of the cultural conditions at Mari is

the role played by seminomadic tribes besides the resident population. One such group is the Benjaminites, and if this element really is the same tribe as the tribe of Benjamin of the OT, their appearing in the Mari Texts is very important. In Gen. 49:27 Benjamin is described in the following way:

> Benjamin is a ravenous wolf,
> in the morning devouring the prey,
> and at even dividing the spoil.

The picture of the Benjaminites to be found in the Mari Texts is astonishingly similar, for they are described as a people who to a great extent live upon

1. A new epoch in prophecy. The book of Amos has a unique significance in the OT, being the first collection of prophetic oracles preserved in Israel as a separate book. There were prophets in Israel for centuries before the time of Amos, but the record of their activity is embodied in the general history of the nation, and we have only fragmentary specimens of their preaching. Men such as Moses and Elijah set their mark deeply upon the soul of Israel; and others such as Nathan and Micaiah, of whom we have only a glimpse, seem to have been of a stature comparable with any of the later prophets, yet no one took in hand the collection of their oracles. Amos' scornful words (7:14) in which he disassociates himself from the official guilds of the prophets have sometimes led to a wholesale depreciation of the significance of earlier prophets. The characteristics which they shared with other schools of diviners in the Near East, such as the use of music to induce a trance condition and the temptation to adjust their oracles at the pleasure of their customers, have made them seem to belong in a totally different category from the writing prophets. But when we find in their midst a Nathan and a Micaiah (*see* NATHAN 2; MICAIAH 1), we have to recognize that, in spite of all corruptions, a genuine prophetic tradition was kept alive in these guilds. Amos condemns, not the guilds, but their corruption; the order of prophets he recognized as a divine institution in Israel (2:11). He himself became a prophet only because those whose calling this was were failing to discharge their office. It is a mistake, therefore, to exaggerate the break between the earlier prophets and the succession of writing prophets that began with Amos, as though he were the inaugurator of a totally new tradition.

There has been considerable discussion (*see bibliography*) whether or not Amos ever acknowledged himself to be a prophet. Some scholars have insisted that the relevant passage in Amos 7:14 can be translated: "I *was* no prophet," etc., so that it is a denial, not of Amos' present status as a prophet, but only of any past connection with the official prophetic profession. This translation has the support of the LXX and the Peshitta Syr., and was followed by the ERV. Others, however, hold that the absence of a verb in this clause requires the present tense, and understand Amos as denying any connection with the traditional institution of the *Nabi* in Israel, so that this passage becomes the basis for breaking completely the continuity between Amos and the earlier prophets. One unusual theory is that Amos was a *Nabi* but outside the official order, earning his living by prophesying in Israel but not belonging to a guild. Another is that he was a *Nabi*, but with two stages in his career—in the first he delivered oracles of hope like any popular prophet, but as a consequence of his visions of judgment he was transformed into a prophet of doom. Whatever may be the tense of the statement, it seems clear that Amos regarded himself as performing the function of a *Nabi*, that he respected the institution

itself as a divine establishment in Israel, and that he was primarily concerned to deny any official connection between himself and the degenerate, mercenary prophets of his own day.

We must ask how the practice of collecting and preserving the oracles of a prophet in a separate book came to begin with Amos. It was to have far-reaching results, first in the raising of the prophetic office to a consistently high level, which it was to hold for two centuries, then in the consolidation and crystallization of Israel's faith in a series of prophetic books. To Amos his prophetic activity was in no way novel; he was merely doing what God had always intended a faithful prophet to do (2:11; 3:8). But it was the simplicity and thoroughness with which Amos discharged the office of prophet, combined with the swiftness with which his words were validated by disastrous historical events, that induced men to preserve his oracles and some slight record of his activity. Then, as men discovered the power of the written word to perpetuate the spirit and mission of the prophet and to inspire and train others to take up a similar mission, it became the practice for those under the influence of a prophet to record his utterances.

2. The man and his background. Amos, like Jesus, was, until the sudden beginning of his prophetic ministry, a layman with no professional training for a religious office. He was a shepherd and pincher of sycamore fruit (1:1; 7:14) in the region of Tekoa, some five miles S of Bethlehem and ten miles S of Jerusalem.* The sycamore fruit, which had to be pinched so that it would ripen to an edible state, was used only by the poor. The imagery of Amos' oracles reflects the shepherd life—the sound at night of the lion roaring over its prey, the plague of locusts that eat up the pasture, the seven stars and Orion that are witnesses to the creative power of God. But it is equally evident that the shepherd is familiar with the sights of the city—the overfed, callous plutocrats at ease in their expensive houses, thinking only of how to amuse themselves, the peasant burdened with debts and sold into slavery for the price of a pair of shoes, the sanctuaries crowded with confident worshipers exulting in their good fortune, prophets and priests with no word to speak to a swiftly decaying society. With eyes sharpened by the frugal, austere life of his desert regions, by the insights of faith that came to him from earlier prophets, and by his own intense consciousness of God's justice, Amos examines the life of urban Israel and can form no other conclusion than that it is ripe for judgment (8:2). Fig. TEK 7.

The fact that Amos, when he took up his prophetic task, went past the Judean city of Jerusalem and delivered his oracles at Bethel and Samaria in the N kingdom, has led to attempts to make him a northerner by origin. One theory is that Amos began as a shepherd and pincher of sycamore fruit in the N, took up his mission there, and removed to Tekoa only when the authorities expelled him from the N kingdom because of his harsh pronouncements of doom. Another is that there was a second Tekoa in the N kingdom where Amos lived, though no historic reference to such a place has been found. The absence of sycamores in the region of Tekoa, since they grow only at lower altitudes, and their presence at some points in the N, has reinforced these attempts. The sycamore may also have grown, however, in lower parts of Judea not too far from Tekoa, so that Amos could have discharged both occupations in that region. It must also be recognized that, for Amos, Israel and Judah were one people of God, and his concern as a prophet was for the whole nation. The most forceful leadership of the nation in his time was in Samaria rather than in Jerusalem, and it was urgent that he reach with his message those who would be most able to influence national policy.

It need occasion no surprise that a Judean shepherd should have a deep appreciation of the religious heritage of his people and an ability to express his convictions in poetic language of the first order. Rudeness of occupation does not necessitate rudeness of thought and speech. It was from such peasant homes that many of Israel's greatest leaders came. Robertson Smith points out that, not only in the earlier Hebrew but also in the later Arab society of the East, knowledge and oratory were quite consistent with the simplicity and poverty of pastoral life. From Amos we learn that it was in peasant homes such as his that the true culture and faith of Israel was preserved from generation to generation.

Nor is the wide knowledge of social and political conditions evident in the book inconsistent with the life of the shepherd. His occupation would take him to the markets in the larger centers, and he may well have journeyed as far N as Damascus. He was a keen observer of life; his concern about the fulfilment of God's purpose in the world made him alert to notice what was actually happening. Because his God is Lord of the whole earth, his vision embraces all the nations with which the Hebrews had any converse, and he could interpret the advance of the Assyrians toward the Palestinian and Syrian area as a judgment of God upon the sins of the states involved. Because it was an axiom of his faith that a holy and just God could be served only by a nation that reflected in its life the holiness and justice of God, he had eyes where others were blind to see the peril in which Israel was placed by the dishonesty of its courts, the maltreatment of its poor, and the profligacy of its upper classes.

It was the silence of the professional prophets, their failure to speak into the critical situation of the time the word from God which was most needed, that forced the layman Amos to become a prophet. In his own account of his call (7:14-15) he refuses to let his name be associated in any way with the prophetic guilds in which the office was passed down from father to son. They were blind to realities which were plain to his eyes. They let themselves be dissuaded by social pressures from speaking their true message (2:12). It was Amos' knowledge of God's will concerning Israel, his knowledge of God's mind concerning the kind of things that were happening in Israel, that compelled him to say what no one else had the vision or courage to say. God took him from following the flock and sent him as a prophet to his people.

3. The contemporary scene. The first half of the eighth century B.C. was singularly propitious for both Israel and Judah. In 805 B.C. the Assyrian, Adadnirari III, crushed Damascus, Israel's N neighbor, decisively. The dimensions of his booty—2,300 talents

of silver, 20 talents of gold, 3,000 talents of copper. 5,000 talents of iron, plus all manner of manufactured goods—tells the story of Damascus' impoverishment. The Palestinian states had little to fear from the Syrian for many years to come. King Jehoash of Israel was not slow to grasp his opportunity, quickly recapturing the border cities that Syria had seized in its days of power (II Kings 13:25). Then, in 782 B.C., upon the death of Adad-nirari III, Assyria had a series of weak kings who no longer attempted to assert their authority as far as the Mediterranean. Not until 745 B.C. and the accession of Tiglath-pileser III was the West to be troubled by the Assyrian again.

In this period Israel was free not only to extend her borders but also to control the trade routes of the ancient world that now passed through her territory. A rich merchant class developed, sharing the nation's prosperity with the nobility and building for themselves elaborate homes. But the common people had no share in this new wealth. Earlier wars had weighed heavily on them, and now they found themselves helpless before the rapacity of power- and land-hungry upper classes. Small farmers were dispossessed to make possible the development of large estates. Israel, whose strength had been in the mass of its solid, independent citizens, was quickly becoming divided into two classes—the dissolute rich and the embittered poor. The shrines at Bethel and Gilgal were crowded continually by the prosperous citizens who interpreted the nation's prosperity as a certain sign of God's favor and who looked for yet greater days to come. Priests and prophets at the sanctuaries benefited sufficiently from the lavish offerings that they were not inclined to do or to say anything that might dampen the mood of confidence and exultation.

4. The question of date. Into this scene came Amos with a message of doom. The date at which he began his ministry is disputed. For some, the popular mood of confidence in the nation and the freedom from any fear of invasion points to the period *ca.* 760 B.C. or shortly afterward. For others, notably R. S. Cripps, Amos' certainty that Israel is soon to be invaded indicates that he had knowledge of Tiglath-pileser III's westward movement, which began in 745 B.C. But Amos' prediction of doom was based, not on his knowledge of developments in Assyria, but rather upon his conviction that such corruption and unfaithfulness as he saw in Israel could not long remain unpunished by Israel's God. It is significant that he never once mentions from what quarter the doom is to come. The date of his activity may therefore be placed anywhere between 760 and 745 B.C. The editor of the book (1:1) locates it merely in the reign of Uzziah (786-744 B.C.) and the reign of Jeroboam, the son of Joash (788-747 B.C.). The mention of an earthquake that occurred two years after Amos' appearance is of no assistance to us in securing a more exact date. It was still remembered in the days of Zechariah (Zech. 14:5) as having taken place in the reign of Uzziah. It may well have been interpreted as the first installment of the judgment promised by Amos. The attempt to fix a date between 745 and 740 B.C. for the earthquake is unconvincing.

How long Amos' ministry continued is uncertain. It may have been only a few months or even less. There is no reason to assume that he did all his preaching at Bethel. In 2:9; 4:1; 6:1 he seems to be speaking to an audience in Samaria, but, of course, they could be people of Samaria worshiping in Bethel. The termination of his ministry took place in Bethel (7:10-17). Amos' sharp critique of the existing order in Israel and his announcement of an invader who would overrun the country and carry the populace into captivity had included a specific prophecy of the fall of the house of Jeroboam (7:9). This was interpreted as treason. Amos was accused to the king of conspiring against him and was ordered to return at once to Judah. The spokesman for the king was the priest of the royal sanctuary, Amaziah. His words to Amos were sharp with scorn. He assumed that all the prophet wanted to achieve was that people would be sufficiently disturbed to pay him well for a more cheerful oracle—a species of religious blackmail which apparently was not uncommon. What happened following Amos' expulsion from Bethel, we do not know.

5. The composition of the book. Whether or not Amos left behind him written documents containing his oracles cannot be established with certainty. At many points the freshness and force of the text suggest Amos' direct authorship. The Scandinavian traditio-historical school holds that the oracles of Amos, like those of all other prophets, were transmitted orally for a long period. The remarkably sound condition of the text, however, lends support to the view that either Amos or an amanuensis set down the oracles in writing.

The biographical passage in 7:10-17, which speaks of Amos in the third person, indicates an editor very early at work, one who was familiar with at least the closing period of Amos' mission. There is no reason why this should not be the same person who added the superscription in 1:1 and other editorial matter. The fact that the king of Judah is named before the king of Israel in 1:1 indicates that the editor was a Judean and that the work of editing was done in Judah. As might be expected after Amos' expulsion from Israel, the primary circulation of his oracles would be in Judah, and there are a number of editorial glosses which seem to have been intended to apply Amos' message more directly to Judah. Whether or not the pronouncement of doom on Judah in 2:4-5 is original to Amos may be debated. In every other instance in this extended oracle it is the inhumanity of each nation that is condemned, so that the climax is reached in the exposure of Israel's inhumanity. But the condemnation of Judah is for transgressions against the law and statutes of Yahweh. This seems to interrupt the sequence of the oracle and to show a more legalistic concern, such as one would expect from the Deuteronomic school in seventh-century Judah. On the other hand, it has been argued that for Amos to name all Israel's neighbors and leave Judah unmentioned would be strange. The denunciation of Edom in 1:11-12 has also been suspected as a Judean editorial intrusion because of the notoriousness of the enmity between Judah and Edom, particularly after Edom's ravaging of Judah in her time of helplessness in 586 B.C. But Edom may already in the eighth century have won itself a place in Amos' roster of Israel's enemies.

Another possible Judean addition may be 6:2. Calneh and Hamath are known to have fallen before the Assyrians later in the eighth century. Gath is thought by some to have been already destroyed in Amos' time, but it was taken by Sargon in 711 B.C. This verse, 6:2, in which the Israelites are asked if they think they are powerful enough to escape the fate of Calneh, Hamath, and Gath, is therefore to be interpreted as a Judean editorial addition, taking account of later events and pointing up the significance of Amos' words for Judah.

Many scholars have questioned the authenticity of the doxologies in 4:13; 5:8-9; 9:5-6 (*see bibliography*). The thesis that they were inserted at a much later date in connection with the public reading of the book has been based on the claim that they show the influence of Second Isaiah and Job. But they are not in any way inconsistent with the thought of Amos, and there seems to be no very convincing reason for denying them to him. In particular, the assumption that Amos did not yet conceive Yahweh as Creator is very questionable. In each instance the doxology breaks in as a reminder to those who are being addressed that it is the all-powerful creator of the heavens and the earth with whom they have to do, and no petty deity who can be enclosed in a man-made shrine or bound to the fortunes of Israel.

The optimistic conclusion of the book (9:8*b*-15) stands in such contrast to all that precedes that its attribution to Amos was questioned very early. It seems to have been written in a time when the cities of Palestine were in ruins (vss. 11, 14) and the Israelites were scattered among the nations (vss. 9, 15). The reference to the "booth of David that is fallen" (vs. 11) posits the end of the Davidic dynasty in Judah, and the anticipation of its restoration could hardly be dated earlier than the Exile. There are numerous instances of similar hopeful prophecies' being appended to oracles of doom in exilic times when it seemed impossible that any prophet should have failed to anticipate a day of restoration beyond the day of judgment. It is wrong to base the denial of these verses to Amos upon the assumption that his oracles contained only tidings of doom and had in them no hope for any future, for Amos leaves open a door to the future for a remnant. But there is in his oracles no elaboration of this hope. The commonest interpretation of the concluding verses is that a later editor who had experienced the judgment threatened by Amos provided that elaboration. Nevertheless, a vigorous defense has been made for the authenticity of the passage by a considerable number of scholars, some of whom sought to show that there was a pattern in Israelite prophecy from early times which combined oracles of blessing with oracles of doom.

R. Gordis (*see bibliography*) has tried to show that "barring minor additions, the book is the authentic work of Amos." He finds only two exceptions (7:10-17; 8:4-14) to the rule that the book manifests throughout a clear-cut organization which it received from the hand of Amos himself. He considers the epilogue to be genuine, on the ground that it is not sufficiently grandiose to be the product of later eschatology. According to Gordis there were two collections of oracles, 1:1-7:9; chs. 8-9, the former containing a hope of repentance and salvation, which was abandoned, however, when Amos was expelled by Amaziah. Thus in the second collection the anticipated ruin is to be complete in Israel, but Judah is to be saved and the Davidic dynasty restored (9:12).

Various views have been held of the relation to each other of the two sections of the book, which may roughly be termed the oracles and the visions. Artur Weiser holds that the visions belong to a period which preceded Amos' mission to Israel and originally formed a separate document composed at the time of the earthquake, which was interpreted as a validation of the prophet's visions of doom. To this document 8:4-14 was added at a later time. The oracles in chs. 1-6 were collected at the close of the N mission and ended originally with the biographical account, 7:10-17. The two documents were not united into one until exilic or postexilic times. The theory of two collections arises largely from the presence of parallel verses in the two sections of the book. The curious heading in 1:1: "The words of Amos, . . . which he saw," is interpreted as an elision of two original headings, "The words of Amos which he heard," and "The visions of Amos which he saw." This theory, supported by Fosbrooke (*IB*, vol. VI), rests upon a very slender basis. The division into oracles and visions may well derive from Amos himself. The early dating of the visions meets a serious obstacle in the intimate connection between Amos' vision of the overthrow of the royal house in 7:9 and the immediately following narrative of his expulsion from Israel for speaking against the royal house. The idea put forward by Fosbrooke that 7:1-9 contains an account of the experience in which Amos heard himself called to become a prophet conflicts, not only with the evident location of 7:9 late in Amos' ministry, but also with the fact that in the first of the three visions Amos is already exercising the intercessory function of a prophet in pleading for God's mercy upon the nation. Also a careful comparison of the content of the visions with the content of the oracles does not disclose any essential difference.

6. Style. The oracles of Amos are cast in a poetic form, which is eminently suited to their content. He shows himself skilled in the use of a variety of meters. Perhaps most effective of all is his employment of the dirgelike Kinah meter, which builds up the feeling of ominous expectation, the very music of the poetry proclaiming the message of relentless doom. The poetry itself is powerful in its simplicity and is rarely surpassed by any other prophet in the beauty of its form or the vividness of its images. Its perfectly turned phrases fall like hammer blows upon the mind and heart of the nation. Never is there any touch of self-conscious artificiality in the structure of the sentences; the style is simply the man himself speaking at white heat the truth that burdens him, in phrases that he hopes may cut through the callous hide of his hearers and find lodgment in their memories.

Amos shows genius in the organization of his oracles, making particularly effective use of the repetition of certain words as a refrain. In his opening sermon (chs. 1-2) each division begins: "For three transgressions . . . , and for four," and within this framework, which remains the same while the con-

tent changes, the audience sees episodes of judgment upon neighboring nations, each one coming closer to Israel than the last. The hearer is held as under a hypnotic spell, unable to flee the steadily approaching ruin. So also the fivefold repetition of the phrase "'Yet you did not return to me,' says the LORD," in 4:6, 8-11, and the beginning of successive oracles with "Woe" in chs. 5–6, have this same cumulative effect. We meet the same device again in the three visions of 7:1-9, where twice the prophet prevails upon God to withhold judgment, and then, the third and last time, is able to restrain the judgment no longer. Amos was a finished craftsman and no novice in his employment of poetic forms.

7. The theology of Amos. It is a superficial approach to the mind of Amos that makes him a prophet of God's wrath in contrast to Hosea as a prophet of God's love. Certainly in Amos the announcement of impending judgment never wavers. The unrepented sin of the nation is certain to bring doom. But in this certainty Amos and Hosea are at one. Hosea's day of hope has its beginning only on the far side of the day of doom. Amos is so engrossed in his message of doom that he has no word like Hosea's concerning the future beyond, and for this reason many scholars have concluded that he had no hope even for a remnant of Israel. This does not take account of the nature of Amos' God nor of all the words of Amos. It was the covenant of love between God and Israel that made God more severe in his dealings with Israel than with any other nation.

> You only have I known
> of all the families of the earth;
> therefore I will punish you.
> (3:2.)

God's desire was not the death of the sinful nation, but that it might turn from its sin and live.

> Seek me and live;
> . . . . . .
> Hate evil, and love good,
> and establish justice in the gate;
> it may be that the LORD, the God of hosts,
> will be gracious to the remnant of Joseph.
> (5:4, 15.)

The doctrine of the remnant was not fully developed by Amos, as it was later by Isaiah, but it is already present in nucleus, Amos did not close the door to repentance and restoration through repentance. He had no hope for the nation as a whole, but surely that which sent him N to brave the insults of priests and people was the hope that some might hear and live. He expected the nation to be decimated (5:3) but not to be totally destroyed.

Nowhere does Amos make mention of the covenant, but it is implicit in his conception of the relation between God and Israel. Amos rejected the popular conception which bound God to Israel by legal agreement and made the covenant relation the basis of a false security and of a self-righteousness in which Israel claimed for itself a privileged position among the nations. His sharp critique of this latter error in 9:7, where Israel is told that it has no more claim upon God than the Ethiopians, the Philistines, or the Syrians, has seemed to some scholars to constitute a rejection of the doctrine of Israel's special relation to God. But what Amos rejects is not the covenant itself but its perversion, whereby God's grace in delivering Israel from Egypt becomes an excuse for national pride and for extravagant claims upon God. Yahweh is the God of all nations. He has had a hand in all their histories, and he holds all equally responsible for their sins against their fellow men (chs. 1–2). In Israel he has made himself known in a special way, and this knowledge is the secret of Israel's unique destiny, but far from conferring special privileges, it creates rather special responsibility (3:1-2). Because of its covenant relation with God, Israel must reflect in its life the justice and truth and mercy of God, and the absence of these in the common life of the nation is evidence that the bond with God has been broken.

Amos' primary call to Israel, like that of John the Baptist and Jesus, is: "Repent and return to God." Sometimes his emphasis upon concrete changes in conduct:

> Seek good, and not evil,
> . . . . . .
> and so the LORD, the God of hosts, will be with you,

has seemed open to the interpretation that he was offering a way of salvation by moral reformation. But for Amos all reformation of conduct was dependent upon a radical repentance. Like Jesus he could say: "Do this, and you will live," without the possibility of being misunderstood, because the context of all "doing" was the restoration of man to his true relationship with God.

It is significant that Amos never speaks of God as "the God of Israel." This title implied too often a narrow nationalism which Amos was concerned to defeat. He speaks rather of the "Lord of hosts." Amos' God was the creator God of the J document, from whom all nations had their life, the Lord of history by whose hand the destinies of all peoples were determined. Before his dread power none could stand; he was a God who could destroy but who could also create. Let Israel persist in sin, and God will use such nations as Egypt or Assyria to punish the sinful nation. And because he is the God of the whole earth and of heaven and Sheol, there can be no place of escape from his wrath (9:2-6).

Popular expectation in Amos' time was fixed on a glorious "day of Yahweh" when Israel would triumph over all her foes. The promises of God to Israel that were recorded in the traditions of the past were expected soon to be fulfilled. The existing prosperity was interpreted as a sign of God's favor. But, where king, priests, prophets, and people saw only a culmination of national success in the near future, Amos saw only darkness and disaster. He proclaimed a day of Yahweh, but it was to be darkness and not light, fiery judgment and not deliverance (1:4, 7, 10, 12, 14; 2:2; 5:6, 18-20). Fire was to consume the filth of men not only in Israel but also among the nations.

It has sometimes been said that Amos' concern is more ethical than religious, focussed more upon righteousness of conduct than upon the issues of faith and worship. This does scant justice to the passages in which Amos directs his attention to the cult (2:7-8, 12; 3:14; 4:4-5; 5:21-27; 7:9; 8:3; 9:1). It is true

that Amos nowhere condemns the bull-worship of the N kingdom, but it is unfair to suppose on this basis that he condoned the use of idols. It is closer to the truth to say that Amos rejected the cult practices of Israel *in toto*. The removal of idols from the sanctuaries would not have placated him. The evil lay, not in the idols alone, but in the delusion that God could be kept favorable toward the nation by the offering of sacrifices and by the ritual of the cult.

Whether Amos rejected the cult entirely when, in God's name, he called for the cessation of its sacrifices, songs, and ritual (5:21-23), or merely expressed in this emphatic form God's disapproval of its present perversions, is a question on which scholars are widely divided. Some hold that he envisaged a nation without a cult, in which the service of God would consist simply of obedience to him in daily life. Others consider this unrealistic and argue that Amos would know the impossibility of sustaining faith without some form of worship. Wiener holds that the way in which Amos speaks of the religious festivals of new moon and sabbath in 8:5—H 8:4 indicates a sympathetic interest in them. The picture of the cult in 2:7-8, 12, shows it to have been so utterly corrupt that Amos may well have been as hopeless concerning it as he was concerning the nation as a whole. The fact that he had nothing to say concerning a future restoration of either nation or cult dare not be used to assert that he saw no future beyond the judgment for either of them.

The heart of Amos' faith was the conviction that only a nation in which the dealings of men with one another are just can be in any true sense a people in covenant with God. For him it was axiomatic that the whole future for Israel depended upon its relationship with God. Divorced from God, the nation must quickly perish. Therefore, the dishonesty of judges, the cruelty of rapacious businessmen and landowners, and the irresponsibility of prophets were not merely blemishes upon the national life, to be exposed and reformed; they were evidences of a deeper and more serious sickness, the repudiation of its God by the nation, and thus a betrayal of the nation that must bring its ruin. It is the justice, holiness, and purity of God that calls for justice, holiness, and purity in the common life of Israel.

Amos was the inheritor of a great tradition. In him the prophetic faith of Israel came to a new focus and found expression in a way that was to inaugurate a new era. All succeeding prophets built upon the solid foundations laid by him. The collection and recording of his oracles was the first step in the growth of a vast and richly varied prophetic literature.

J. D. SMART

AMOZ ā'mŏz [אמוץ, strong]. The father of Isaiah (Isa. 1:1, etc.). The name, which has been found on a Palestinian seal, should not be confused with Amos.

AMPHIPOLIS ăm fĭp'ə lĭs [ἡ Ἀμφίπολις] (Acts 17:1). The capital city of the first district of Macedonia.

Amphipolis was on the River Strymon, *ca.* three miles inland from the sea. In his invasion (480 B.C.) Xerxes crossed the river by bridges at this place, which was then known as Nine Ways (Ἐννέα ὁδοί) and was a town of the Edoni, who were a Thracian tribe (Herodotus VII.114; cf. 110). Both before and after this date, attempts were made by the Greeks to establish a colony here. In 497 B.C., Aristagoras of Miletus, fleeing from King Darius, undertook to settle at the place, but was driven away and slain. Thirty-two years later the Athenians sent ten thousand colonists, but they too were cut off by the Thracians. Finally, in 437 B.C., Hagnon, son of Nikias, brought another group of Athenians, expelled the Edoni, and founded a new town. Since the Strymon curved around the site on the N, W, and S, Hagnon named the city Amphipolis ("around-city") and also built a wall across the unprotected E side (Thucydides IV.102). When MACEDONIA was divided into four districts (μερίδες) by the Romans in 167 B.C., Amphipolis was chosen as the chief city of the first district, which included the area from the Strymon River to the Nestos (Livy XLV.17-18, 29-30). The city was on the Via Egnatia *ca.* thirty miles SW of Philippi. Excavation at Amphipolis has brought to light the foundations of an early Christian basilica.

AMPLIATUS ăm'plĭ ā'təs [Ἀμπλιᾶτος] (Rom. 16:8); KJV AMPLIAS ăm'plĭ əs [Ἀμπλιᾶς, *shortened form of* Ἀμπλιᾶτος]. A common name, frequently

given to slaves. Attempts to identify the man so named in Rom. 16 are probably futile. Paul greets Ampliatus as "my beloved in the Lord." The context indicates that Ampliatus lived in the community—probably Ephesus, according to the evidence available—to which Phoebe, a deaconess of the church at Cenchreae, was about to journey, carrying a letter of introduction from Paul. Since Ampliatus' name comes to Paul's mind early in the long list of persons greeted and since he is mentioned so warmly, it would appear that he bore some intimate and affectionate relation to Paul. J. M. NORRIS

AMRAM ăm'răm [עמרם, the people or kinsman is exalted(?)]; AMRAMITES ăm'rə mīts [עמרמי]. **1.** Son of Kohath. He married his father's sister, Jochebed, and their famous children were Aaron and Moses (Exod. 6:18, 20) and Miriam (Num. 26:58-59). He was a grandson of Levi, and his name appears frequently in genealogical and Levitical lists (Num. 3:19; I Chr. 6:2-3—H 5:28-29; 6:18—H 6:3; 23:12-13; 24:20). The Levitical family descended from him, the Amramites (Num. 3:27; I Chr. 26:23), were assigned duties in the wilderness sanctuary and possibly, at a later time, in the temple treasuries.

2. One of the sons of Bani who married foreign wives in the time of Ezra (Ezra 10:34=I Esd. 9:34).

3. KJV form (erroneous) of HAMRAN (MT-RSV) in I Chr. 1:41. The most likely reading is the well-supported LXX HEMDAN. F. T. SCHUMACHER

AMRAPHEL ăm'rə fĕl [אמרפל; LXX Αμαρφαλ; Syr. אמרפיל (Gen. 14:9)]. An ally of Chedorlaomer who joined a punitive campaign against five kings in S Palestine, routing them in the Valley of Siddim (Gen. 14:1, 9). Chedorlaomer's league was then defeated by "Abram the Hebrew" and his associates (vss. 13-16). *See* ABRAHAM.

Neither the man nor his territory has been identified with certainty. The MT, the Samar. (at vs. 1), the LXX, and the Syr. designate him as king of SHINAR, while the Samar. (at vs. 9), the Targ., and the Dead Sea Genesis Apocryphon specifically state BABEL. Although in the OT period "Shinar" generally referred to Mesopotamia, its exact location is still a question.

The identification of Amraphel with the Babylonian king HAMMURABI (Ḥammurapi) has often been supported. One argument sees the Hebrew אמרפל as a scribal error for עמרפי (Ammurapi; Ḥammurapi) or even עמרבי/ח (Ḥammurabi). Another sees it as a compressed transcription of *Ammurapi-ili* ("Ḥammurabi is my god"). One argument takes the final "l" as the Akkadian determinative *ilu*, "god" (though it should precede the name); another links it with the following מלך (thus *limlōkh*). However, none of these arguments is philologically convincing; and the proposed identification is best given up at this time. L. HICKS

AMRI ăm'rī. Douay Version form of OMRI.

AMULETS ăm'yə lĭts. Small objects of symbolical meaning, the purpose of which is to give protection or to ward off evil. They are nearly always pierced and worn around the neck.

1. In the OT period. Amulets as a general term are not mentioned in the Bible. It is, however, possible that the לחשים of Isa. 3:20 are of amuletic character, since the root denotes "to whisper, to pronounce an incantation"; the RSV consequently translates "amulets." The "crescents" worn by animals (Judg. 8:21) and by human beings (Isa. 3:20) symbolize the moon-deity. The "perfume boxes" (בתי הנפש; lit., "soul receptacles") of Isa. 3:20 are probably amulets too. And so are possibly many other ornaments listed in Isa. 3:18-23 and elsewhere. As amulets may be classified the phylacteries (Exod. 13:16; Matt. 23:5) and capsules fixed on doorposts (Deut. 6:9) both of which contained passages from the Bible. They developed in late biblical times and are used to the present day in Jewish ritual.

Although it is difficult to identify more amulets in the OT, their use must have been ubiquitous and the varieties quite numerous, to judge from the finds in all strata of excavated sites. They are made of various materials, particularly of semiprecious stones such as carnelian, of soft stones covered with glaze, or of faïence. The amulets found in Palestine are mostly of Egyptian style.* They represent figurines of Egyptian deities (Osiris, Isis, Bes, etc.), animals (as cats, baboons, and others), fruits (grapes, pomegranates [Exod. 28:34], lotus), Egyptian symbols (the sacred eye, life [*ankh*], etc.). Models of human legs and arms may solicit cure. A special type is the frequent club-shaped amulet of the Israelite period, the significance of which eludes us. Scarabs, which served primarily as seals, had an amuletic function also. *See* SEALS AND SCARABS. Fig. AMU 23.

Courtesy of the Oriental Institute, the University of Chicago

23. Amulets found at Megiddo: (1) leg amulet of clay; faïence amulets of (2) Ptah-Sokar, (3) ape, (4) Horus eye, (5) Bastet; (6) crescent amulet of gold

I. BEN-DOR

2. In the NT period. The OT background (*see* § 1 *above*), contemporary Jewish practices (*see* PHYLACTERIES; FRINGES), and widespread Greek and Roman customs support the use of amulets. It is striking that the NT gives so little attention to the

Courtesy of Hodder & Stoughton Ltd.

24. A charm used for "binding"; a leaden tablet from Attica (fourth century B.C.)

subject. It can be held that in the NT the effectiveness of amulets is tacitly assumed and not disapproved (Acts 19:12; *see* HANDKERCHIEF; APRON); but it is more likely, especially in light of Paul's strong confidence in the complete efficacy of the NAME and POWER of Jesus (Eph. 1:21; Phil. 2:9; 4:13), that amulets generally were regarded as among the "magic arts" (Acts 19:18-19) and that their use, along with all other MAGIC and magicians (Acts 8:9-24; 13:6-12; 19:13-16),* was opposed as sorcery (φαρμακεία) and covert idolatry (Gal. 5:20; cf. John 18:30; I Pet. 2:12; 4:15; Rev. 9:20-21). Fig. AMU 24.

Bibliography. E. Labatut, "Amuletum," in C. Daremberg and E. Saglio, *Dictionnaire des Antiquités Grecques et Romaines* (1877); W. M. Ramsay, *The Bearing of Recent Discovery on the Trustworthiness of the NT* (4th ed., 1920), p. 48; G. A. Deissmann, *Light From the Ancient East* (4th ed., 1927), pp. 48, 260, 284, 405. P. L. GARBER

AMZI ăm'zī [אמצי, my strong one, *or perhaps an abbreviation of* Amaziah]. **1.** An ancestor of Ethan, one of the temple singers representing the sons of Merari (I Chr. 6:46).

2. An ancestor of Adaiah, a postexilic priest in Jerusalem (Neh. 11:12). The parallel (I Chr. 9:12) traces a rather different genealogy, without Amzi.

F. T. SCHUMACHER

***ANAB** ā'năb [ענב, grape]. A city in the hill country of Judah, near Debir, from which the Anakim were expelled by Joshua (Josh. 11:21; 15:50). It is mentioned in Egyptian texts of the Nineteenth Dynasty as *Qrt 'nb*, which indicates that the original name of the city was Kiriath-anab.

The site must be either at the present village of 'Anab, about fifteen miles SW of Hebron, or at the nearby Khirbet 'Anab. S. COHEN

ANAEL ăn'ī əl ['Αναήλ] (Tob. 1:21). Brother of Tobit. Anael's son Ahikar served as Sennacherib's cupbearer, accountant, and chief administrator (Tob. 1:22). J. C. SWAIM

ANAH ā'nə [ענה; *cf.* Phoen. *bn'n*, Ugar. *bn.'n*, Byblian *b'nh*]. **1.** The father of Oholibamah and son of ZIBEON the Horite (Gen. 36:2, 14, 18, 24; I Chr. 1:40). Gen. 36:2, 14, read "daughter" (בת), although "son" (בן) is better (cf. RSV).

2. The fourth son of Seir; a clan chief (אלוף ענה) of native Horite inhabitants of Edom (Gen. 36:20, 25, 29; I Chr. 1:38, 41).

Textual and literary problems cloud the relation of 1 to 2. In Gen. 36:24 the LXX gives Ωναν, ὁ Ωνας, and in I Chr. 1:40 Σωναν and Ωναμ in place of its usual Ανα. Also, the Greek and Syr. versions differ about the Oholibamah in Gen. 36:25. The chapter is composed of variant family and tribal traditions which have not been harmonized.

The Anah of Gen. 36:24 is further identified as the one "who found the hot springs in the wilderness." (For "hot springs" the KJV reads "mules." The word ימם is obscure; perhaps it is an error for מים, "water." The RSV follows Vulg. *aquae calidae*.)

L. HICKS

ANAHARATH ə nā'ə răth [אנחרת] (Josh. 19:19). A town in Issachar, also mentioned in the list of towns captured by Thut-mose III. It is located at en-Na'urah, *ca.* two miles S of En-dor.

ANAIAH ə nā'yə [עניה, Yahweh has answered]. One of the men who stood at Ezra's right hand when he read the "book of the law of Moses" (Neh. 8:4), and who was among those who set their seal to the covenant (10:22—H 10:23).

ANAK ā'năk [ענק, neck, necklace]; ANAKIM ăn'ə kĭm [ענקים]; KJV ANAKIMS. A tribe of the pre-Israelite population of Palestine. The term was originally an appellative ("people of the neck," or "necklace") and gradually became a gentilic.

In Hebrew tradition the Anakim are described as a tall people, whose gigantic size struck terror into the hearts of the Hebrews (Num. 13:28; Deut. 2:21; 9:2). In Num. 13:33 they are described as descendants of the NEPHILIM, the offspring of the sons of God and the daughters of men (Gen. 6:4).

Most of the references connect the Anakim with the S of Palestine, especially Hebron.

According to one passage, however, the Anakim originally occupied a much wider area, and were exterminated by Joshua except for a small remnant in Gaza, Gath, and Ashdod (Josh. 11:21-22). This tradition is followed by the LXX of Jer. 47:5, the reading adopted by the RSV.

The presence in Palestine *ca.* 2000 B.C. of a tribe Anak, whose princes have Semitic names, is attested by the Egyptian Execration Texts. These are pottery fragments bearing the names of the enemies of the pharaoh, who were ritually cursed with the breaking of the jar on which the curses were inscribed.

Bibliography. W. F. Albright, "The Egyptian Empire in Asia in the Twenty-first Century B.C.," *JPOS*, VIII (1928), 223-56. R. F. SCHNELL

ANAMIM ăn′ə mĭm [ענמים; LXX Ενεμετιειμ]. A tribe or nation listed among the descendants of Egypt in the ethnographic lists of Gen. 10:13; I Chr. 1:11.

The Anamim cannot be identified specifically with any known ethnic group. Because they are mentioned with the LUDIM; the LEHABIM; the NAPHTUHIM; the PATHRUSIM; the CASLUHIM; and the CAPHTORIM, they may quite reasonably be the people of Cyrene or thereabouts, as suggested by Albright (*see bibliography*), who equates them with a cuneiform *A-na-mi* found in a geographical text from the time of Sargon II of Assyria and parallel to *Kaptara* (=Caphtorim).

Bibliography. W. F. Albright, "A Colony of Cretan Mercenaries on the Coast of the Negeb," *JPOS*, I (1921), 191-92. T. O. LAMBDIN

ANAMMELECH ə năm′ə lĕk [ענמלך, *probably* Anu is king]. One of the deities worshiped by the people from Sepharvaim (probably Sabraim in Syria), settled by the Assyrians in Samaria after 722 B.C. (II Kings 17:31). They are said to have burned offerings of their children to the god, but there is no specific reference to this feature of his cult in Mesopotamia. *See* MOLECH.

Bibliography. M. Jastrow, *The Religion of Babylonia and Assyria* (1898), pp. 88-90; E. Ebeling and B. Meissner, *Reallexikon der Assyriologie* I (1932), 115-17. On human sacrifice, *see* the bibliography under MOLECH. J. GRAY

ANAN ā′nən [ענן] (Neh. 10:26—H 10:27). A name included in the list of signers of the Nehemiah covenant.

ANANI ə nā′nī [ענני] (I Chr. 3:24). The seventh son of Elioenai, a descendant of Zerubbabel, in the list of Davidic offspring.

ANANIAH ăn′ə nī′ə [ענניה, Yahweh has manifested himself(?)]. **1.** The father of Ma-aseiah, whose son, Azariah, participated in the reconstruction of the walls of Jerusalem under Nehemiah (Neh. 3:23).

2. A village of Benjamin which appears in a list of places occupied by Jews after the Exile (Neh. 11:32). It is probably to be identified with modern el-'Azirîyeh (NT BETHANY), which is located some two miles from Jerusalem. It might have received its name from the fact that members of the family of Ananiah settled there, and this could explain the NT name (בית־ענניה, "house of Ananiah"=Βηθανία). M. NEWMAN

ANANIAS ăn′ə nī′əs [Ανανίας (WH Ανανίας); חנניה, Y is gracious]. **1.** The father of Azariah, the latter being a name assumed by the angel Raphael, who thus falsely identified himself to Tobit's father (Tob. 5:12).

2. One of the ancestors of Judith (Jth. 8:1).

3. A Christian of Jerusalem; husband of Sapphira (Acts 5:1, 3, 5). This man, noting the favorable attention bestowed upon those Christians who sold their property and brought the proceeds to the apostles for distribution among the believers (Acts 4:32-37), sold a property belonging to him and—with the connivance of his wife, Sapphira—held back a portion of the price, while pretending to give the entire amount to the apostles for distribution. When Peter faced each of them separately with their duplicity, which they reaffirmed, they fell down dead. Their death is one of the punitive miracles of Luke-Acts.

4. A Christian disciple (Acts 9:10, 12-13, 17; 22:12) living in Damascus at the time of Paul's arrival there after his conversion experience on the road to Damascus. Ananias was a Jew and is described as a "disciple" (μαθητής). However, this term is used in Acts more frequently to indicate new believers than to indicate original disciples of Jesus, so we cannot be certain of Ananias' status. It is probable that he was not a direct disciple of Jesus, but it is clear that he was a Christian before Paul was. It is not clear that he was a settled resident of Damascus, and it may be that he was there as a refugee from the persecution originating in Jerusalem and of which Paul was an instrument. If so, this would well explain his alarm when in a dream he was instructed by God to go to Paul and to receive him into the Christian fellowship. Putting aside his fears, Ananias went boldly to Paul, greeting him as a Christian brother and explaining to him (Acts 22:12-16) the meaning of his experience on the Damascus road. Paul was baptized immediately and entered upon his long ministry. Ananias is not mentioned in the third account of Paul's conversion (Acts 26).

We have no further solid data concerning this Ananias, and all traditions concerning him are of late origin and small value. Though we know nothing of Ananias' previous and subsequent actions, the action here recorded places us all in his debt.

5. A Jewish high priest before whom Paul was tried after his arrest in Jerusalem at the end of his third missionary journey (Acts 23:2). He appears again among those accusing Paul at his hearing before the Roman governor Felix (Acts 24:1 ff). A son of Nebedeus, he was high priest from A.D. 48, when he was nominated by Herod Agrippa II (Jos. Antiq. XX.v.2), until 58, when he was deposed. In 52 he was sent to Rome for trial in connection with a conflict between the Jews and the Samaritans but was acquitted by Claudius Caesar through the efforts of the younger Agrippa (Jos. Antiq. XX.vi.2-3).

Ananias' arbitrary command to those standing near Paul at the trial to strike him on the mouth accords well with other indications concerning his severity and cruelty. On account of his rapacity and his long collaboration with the Roman authorities, he was hunted down and murdered by the Jewish populace at the beginning of the Jewish war of 66-70 (Jos. War II.xvii.9).

6. KJV form of HANANI 3 in I Esd. 9:21.

7. KJV Apoc. form of HANANIAH.

8. KJV form of ANAIAH 1 in I Esd. 9:43.

9. KJV form of HANAN 7 in I Esd. 9:48. J. M. NORRIS

ANANIEL ə năn′ĭ əl [חנניאל; Ανανιήλ] (Tob. 1:1). Tobit's grandfather, listed among the "descendants of Asiel and the tribe of Naphtali." J. C. SWAIM

ANASIB ăn′ə sĭb [Σαναβείς(B), Ανασειβ(A)]; KJV SANASIB săn′—. The progenitor of a group of priests who returned from the Exile with Zerubbabel (I Esd. 5:24; omitted in the parallels Ezra 2:36; Neh. 7:39). The Vulg. may preserve the original form, Eliasib. C. T. FRITSCH

ANATH ā′năth [ענת; Ugar. *'nt*]. The father of Shamgar, one of the predynastic judges in Israel (Judg. 3:31; 5:6). Some scholars, however, consider that "Shamgar ben Anath" should read "Shamgar of Beth-anath"—i.e., from the Canaanite city of Galilee. Anath is the name of a well-known Semitic goddess of the ancient Near East. In the Ugaritic literature this goddess of war is the sister and consort of Baal.

Bibliography. W. F. Albright, "The Evolution of the West-Semitic Divinity 'An-'Anat-'Atta," *AJSL*, XLI (1925), 73-101; *Archaeology and the Religion of Israel* (1953), 74 ff, 111, 195, 219. E. R. DALGLISH

ANATHEMA ə năth′ə mə [ἀνάθεμα; חרם; cf. ἀνάθημα *and* κατάθεμα]. Something set up, placed; properly τὸ ἀνατιθέμενον, from ἀνατίθημι, "to set up, lay by." Ἀνάθεμα is Hellenistic Greek for the stronger classical form ἀνάθημα (e.g., Sophocles *Antigone* 286). Both words were originally used of something dedicated or consecrated to a divinity—i.e., a votive offering. The etymology of the term reflects the custom of setting up or suspending such offerings in a temple or of hanging them from a tree or pillar outside. The form ἀνάθεμα, however, developed the special meaning of "devoted to a divinity or to the lower world so as to be destroyed," therefore ACCURSED. While this usage is found in pagan inscriptions (*see bibliography*), it has been regarded as a possible Jewish Christian coinage. The two forms were often confused by scribes and by later writers—e.g., in II Macc. 2:13; 9:16; Luke 21:5, in all of which the meaning is "votive offering," but in which ἀνάθεμα is found in some MSS and critical texts.

In the LXX the term generally represents חרם, which has the double significance of "consecrated" (i.e., to God) and "accursed" (i.e., devoted to destruction; cf. Lev. 27:28-29; Num. 18:14). Divine possession apparently implied the right of destruction (see Deut. 7:26; 13:15-16; Josh. 6:17-18; etc.). With the OT usage one may compare Rev. 22:3 (κατάθεμα, "accursed thing"), a quotation from Zech. 14:11.

In its remaining NT occurrences the term means "cursed," but is moving away from the ritualistic force of the OT usage. Variant spelling is meaningless. It is found in a formula denoting the object of a curse: "Jesus be cursed" (I Cor. 12:3); "Let him be cursed" (I Cor. 16:22; Gal. 1:8-9). Cf. Rom. 9:3: "I could wish myself accursed and cut off from Christ" (ἀνάθεμα εἶναι . . . ἀπὸ τοῦ χριστοῦ). The idea of separation as a penalty expressed here suggests the specialized development which in late Judaism and the early church gave the term the technical meaning of EXCOMMUNICATION. Another special usage associates the curse with an oath or vow, implying that the curse would fall upon the violator (so in Acts 23:14: ἀναθέματι ἀναθεματίσαμεν). Cf. with the reflexive object in Acts 23:12, 21, the LXX of Deut. 20:17; Job 6:20; and the absolute force ("to curse") in Mark 14:71 = Matt. 26:74. In Tannaitic thought violation of such an oath was theoretically punishable by death (cf. CDC XX.5-6). *See* OATH.

Deissmann, *Light from the Ancient East* (2nd ed., 1927), pp. 65-66 (examples from pagan inscriptions); S. Belkin, *Philo and the Oral Law* (1940), ch. 6: "Oaths and Vows"; G. Bornkamm, "Das Anathema in der urchristliche Abendmals-liturgie," *TLZ*, 75 (1950), 227-30. A. WIKGREN

ANATHOTH ăn′ə thŏth [ענתות, ענתת]; ANATHOTHITE —īt [ענתותי, ענתתי]; KJV ANETHOTHITE (II Sam. 23:27); ANTOTHITE ăn′tə thīt (I Chr. 11:28; 12:3); ANETOTHITE —ə tŏth īt (I Chr. 27:12). A priestly city in Benjamin. "Anathoth" is probably a shortened form of "Beth-anathoth," meaning "house of the great Anath." This would indicate that the city was the shrine of the important Canaanite goddess Anath, and that it was transformed by the Israelites into a sacred city of their own. Two of David's heroes, Jehu and Abiezer, came from the place (II Sam. 23:27; I Chr. 11:28; 12:3). Abiathar, the last chief priest of the line of Eli, owned property in Anathoth and was bidden by Solomon to retire there after his deposition (I Kings 2:26). In Isa. 10:30, Anathoth is mentioned as one of the stages of the march of the Assyrian hosts upon Jerusalem; the word "answer" in this passage is a pun on the name Anathoth.

The city was the birthplace of the prophet Jeremiah (Jer. 1:1) and the scene of his first attempts at prophecy; these met with disapproval, as the prophet predicted an evil fate for his fellow citizens, who silenced him and even threatened his life (11:21-23). Nevertheless, Jeremiah retained his ties to his native city, and was willing to redeem a plot of land which had belonged to his cousin (32:7-9). Anathoth was devastated by the Babylonians, but after the Exile 128 men of the city returned with Zerubbabel (Ezra 2:23; Neh. 7:27; the parallel passage in I Esd. 5:18 gives the number as 158). In the time of Nehemiah the place was settled by Benjaminites (Neh. 11:32).

The name of Anathoth has been preserved in that of Anata, three miles N of Jerusalem. The original city, however, was located at the tell of Ras el-Kharrubeh, *ca.* half a mile to the SW. S. COHEN

ANCHOR [ἄγκυρα; *cf.* ἀγκάλη, bent arm]. A nautical device attached to a cable and sunk in water to hold a ship in a particular place.

The description of Paul's sea voyage to Rome informs us that the ship on which the apostle was sailing let down four anchors as it approached Malta (Acts 27:29-30, 40). The only other biblical reference to an anchor is in Heb. 6:19, where hope is described as a "sure and steadfast anchor of the soul." "They weighed anchor" (Acts 27:13) represents an idiomatic nautical use of a common Greek verb ἄιρω, "lift up, hoist" (cf. KJV "loosing").

The first anchors were heavy stones let down from the bow of a ship (cf. εὐναί, plural of εὐνή, "bed," in Homer *Iliad* I.436; *see ANEP* 42). By 650 B.C.

wooden anchors of hook form, exhibiting the "anchor stock," and weighted by metal or stone, were in use in the E Mediterranean. A little later, anchors made wholly of metal with the familiar anchor form appeared. Pliny, in the first century A.D., was familiar with two types of anchor, the ordinary one and the double-fluked one (*bidens*), the latter being credited to Anacharsis, presumably the Hellenized Scythian sage who flourished *ca.* 600 B.C. (Nat. Hist. VII.lvi. 209). *See* SHIPS AND SAILING. W. S. McCULLOUGH

ANCIENT OF DAYS. The phrase used to designate the judge in the eschatological scene in Dan. 7:9. The Aramaic עתיק יומין is literally translated παλαιὸς ἡμερῶν by the LXX, and *antiquus dierum* by the Vulg., and "ancient of days" by KJV-ASV-RSV. Other translations are: "a primeval Being" (Moffatt); "a Venerable One" (Amer. Trans.); "one . . . crowned with age" (Knox). The American Jewish Version retains "ancient of days."

עתיק means properly "removed, passed on," and hence "old" as in I Chr. 4:22, where it is held to be an Aramaism. The phrase "old of days" is good Semitic idiom, whereby an adjective may depend in the construct state upon its noun in the absolute. Thus "fair of form" means "having a fair form," and "old of days" means simply "aged." Ugaritic has supplied a close parallel: *mlk ab shnm*, "the king, father of years"—i.e., "the aged king." For other Semitic parallels *see* Montgomery (*bibliography*). The idiom has, however, been so Anglicized (cf. Shakespeare's Lady Macbeth: "Infirm of purpose! Give me the daggers") that "ancient of days" is an intelligible translation. The figure is probably intended to be that of God himself, and the attribute of age is ascribed to convey the ideas of dignity, wisdom, and primevality (cf. Job 36:26); but some (more particularly Jewish medieval) commentators have thought the description too anthropomorphic to be that of the deity, and have explained it as referring to the Angel of Yahweh (cf. Zech. 3:1; *see* ANGEL). Some have thought it necessary to look to Iranian sources and the concept of Ahura-Mazda for the genesis of the figure, especially in its juridical aspects, but in view of I Kings 22:19-20; Ps. 50:1-6; Joel 3:2; and Zechariah as cited, it is best regarded as developed from native ideas—a process encouraged, no doubt, by the Iranian parallels.

Bibliography. C. H. Gordon, *Ugaritic Handbook,* II (1947), text 49:8. Commentaries on Daniel by Montgomery, ICC (1927), and Bentzen, HAT (2nd ed., 1952). S. B. FROST

ANDREW ăn′drōō ['Ανδρέας, manly]. Son of Jonah (or John), brother of Simon Peter (*see* PETER), and one of the first disciples of Jesus.

Andrew is a Greek name. It was used by Jews as well (appearing, e.g., in the Talmud as אנדראי, אנדריי). Such use indicates the extent to which Jews had become Hellenized.

The family of Jonah (Matt. 16:17) or John (John 1:42; 21:15-17) lived in BETH-SAIDA (John 1:44), the capital city of Herod Philip (4 B.C.-A.D. 34), whose realm lay to the NE of the Sea of Galilee. Philip rebuilt Beth-saida and named it Beth-saida Julias, after Julia the daughter of Augustus. This city, on the NE side of the Sea of Galilee, was inhabited by both Jews and Gentiles. It maintained close business and cultural relationships with Galilee, the territory of Philip's brother Herod Antipas. Simon and Andrew probably spoke Greek, as well as Aramaic, and grew up in a culture more or less shaped by Gentile influences.

According to the Fourth Gospel, Andrew and an unnamed person, before meeting Jesus, were followers of John the Baptist (John 1:35-40). Because of the latter's witness concerning Jesus ("Behold, the Lamb of God!"), the two disciples of John followed Jesus to his place of residence and became convinced of his messiahship (vs. 41). Andrew then brought his brother Simon to Jesus. Shortly Philip, also from Beth-saida, and Nathanael became disciples (vss. 43-51).

From this Johannine story one would conclude that Andrew was a conscientious Jew, who had repented radically under the preaching of the Baptist, had been baptized by him, and was looking eagerly for the arrival of the messianic age. He was continually open to new light; he was pliable and teachable. When truth broke upon him, he accepted it enthusiastically and wished others to share in it. One might say that he was the first Christian evangelist.

According to the Synoptic gospels Simon, Andrew, Zebedee, and Zebedee's sons (James and John) were partners in a fishing business at the Sea of Galilee (Mark 1:16-20; Luke 5:10). Simon and Andrew at this time lived in Capernaum (Mark 1:29). Jesus' call of Zebedee's associates from their fishing operations appears psychologically inexplicable apart from the Johannine story concerning their association with Jesus at the Jordan, where John was baptizing, some time earlier (John 1:35-42). Though the Johannine narrative leaves no place for the "call" recorded in the Synoptics, the Synoptic narrative, if historical, can hardly do without the Johannine story. Andrew's wholehearted response, and that of his comrades, testifies to the depth of their attachment to Jesus and their concern about the good news of the kingdom of God.

Andrew apparently was among the first persons named by Jesus for a place in the apostolic band. All lists of the apostles (Matt. 10:2-4; Mark 3:16-19; Luke 6:14-16; Acts 1:13) record his name among the first four, two (Matthew and Luke) as one of the first two.

Twice in the Fourth Gospel, Andrew is associated with the only other apostle who bore a Greek name —PHILIP, also from Beth-saida (John 1:44). At the feeding of the five thousand the two converse with Jesus concerning the problem of caring for the needs of the multitude. Andrew calls attention to the lad's five barley loaves and two fish, a suggestion which he feels is hardly worth making (6:5-9). Later, the two confer over the request of certain Greeks to see Jesus and decide to bring the request to the attention of Jesus (12:20-22).

Andrew is once more mentioned in the gospels: in connection with an inquiry addressed to Jesus by the four Galilean associates (Peter, James, John, Andrew) concerning Last Things (Mark 13:3). After this (apart from the name in the list in Acts 1:13) Andrew drops out of sight in the NT.

He reappears in a rather rank growth of church

tradition. It is said in Euseb. Hist. III.1 that Scythia (the region N of the Black Sea) was allotted to Andrew as the field of his labor. He has understandably become the patron saint of Russia. The apocryphal Acts of Andrew represent him as evangelizing and suffering martyrdom by crucifixion in Achaia (Greece). Still later traditions hold that his body was carried to Constantinople and during the Crusades transferred to Amalfi, Italy. It is even claimed that his arm was transported by Regulus to Scotland, where he also became the patron saint.

***ANDREW, ACTS OF.** One of a long series of early romances, commonly styled apocryphal Acts (*see* ACTS, APOCRYPHAL), and perhaps the latest of the five commonly, but mistakenly, ascribed to Leucius, adopted by the Manicheans in place of the canonical Acts, and recounting the travels, wonder-working, discourses, and martyrdom of Andrew. We have it in a shortened Latin form edited by Gregory of Tours (A.D. 538-94) and in several fragments.

Unlike the four other principal apocryphal Acts, we have no early statement as to its original length, but it may be inferred from the prolixity of our principal fragment, now preserved in a tenth-eleventh-century Greek MS in the Vatican (Gk. 808), in conjunction with the references which Gregory of Tours made to its "excessive verbosity," which "bred weariness" and which he had omitted in his Latin epitome, that it may well have been the longest of the series.

This edited and abbreviated transcript by Gregory is a long series of tales of the miracles—especially frequent are those in which the dead are raised—wrought by Andrew in Pontus, Bithynia, Thrace, and Macedonia, as well as in the province of Achaia ("his own allotted district"). In this version there is nothing heretical or even strongly ascetic. But the several episodes, such as the interrupted wedding at Philippi (ch. 11), the episode with Lesbius and his erstwhile mistress Trophima (chs. 22–24), the tale of the converted libertine Nicolaus (ch. 28), and, chief of all, the concluding story of Maximilla, the converted wife of the proconsul Egeas, suggest that the tales have been drastically edited, either by Gregory or by some earlier reviser. To what extent Gregory's epitome gives a fair view of the original content of this early apocryphon is very uncertain; his careful pruning out of the sweeping ascetic disapproval of marriage and of the prolix and tedious speeches can scarcely fail to have greatly altered the essential nature of this book, styled by Eusebius, our first witness to its existence, as one of those "forgeries of heretics" which are "not to be reckoned even among the spurious books but shunned as altogether wicked and impious" (Hist. III.25.6-7). Epiphanius too refers to it as appealed to by the Encratites, the Apostolics, and the Origenians (Heresies 47)—a circumstance hardly likely if Gregory's version had been a literal transcription. Gregory's epitome, plus a concluding Latin martyrdom, which Gregory knew but omitted, because he "found it well done by someone else," forms the bulk of the Andrew section (Book III) of the Apostolic History of Abdias (*see* ABDIAS, APOSTOLIC HISTORY OF).

Remains of the original Greek writing, which may with probability be seen as written about the middle of the third century, perhaps in Greece or W Asia Minor, are very scanty. In the apocryphal Epistle of Titus (*see* TITUS, APOCRYPHAL EPISTLE OF) a short fragment is preserved, apparently an earlier version of the wedding at Philippi. But whereas in Gregory's version Andrew forbids the wedding because both couples are first cousins, in this certainly more original account the objection is clearly to marriage per se. So also in the fragments in the tract *De Fide*, commonly attributed to Evodius, bishop of Uzala (*ca.* A.D. 400), against the Manicheans, recounting Maximilla's attempt to escape from her husband. In the very lengthy excerpt preserved in the Vatican MS referred to above, not only are the prolixity and tedium of the earlier work clearly revealed, well meriting Gregory's strictures, but its strongly ascetic tone is constantly in evidence, as in Andrew's word to Maximilla: "I know, Maximilla, my child, that thou art moved to resist the whole attraction of nuptial union, desiring to be quit of a foul and polluted way of life."

As is true of most of the apocryphal Acts, the martyrdom circulated independently and in many forms. One form is that of a Latin letter, purporting to be from the presbyters and deacons of Achaia, containing a lengthy dialogue between Andrew and Aegeates (Egeas) and a briefer account of the actual martyrdom by crucifixion. The account is also preserved in two Greek translations. In addition are several other versions, some starting with the fatal episode of Egeas and Maximilla, others prefixing a brief account of the journeys. None of these appears to be the original conclusion of the apocryphon, but they provide the materials from which it may be conjecturally reassembled. All of them, though they differ in many details, and though some were originally written in Greek and others in Latin, agree in preserving a very prolix and stilted address by Andrew to the cross, immediately prior to his crucifixion. This is strongly reminiscent of Peter's similar oration in the Acts of Peter (*see* PETER, ACTS OF). The Acts of Andrew and Matthias (*see* ANDREW AND MATTHIAS, ACTS OF), although inserted by Gregory at the start of his version and accordingly long considered a part of the original Acts of Andrew, are now rightly considered a quite different work.

Bibliography. For a convenient abstract of Gregory's version and a full translation of the other principal fragments, together with a very convenient analysis of the several martyrdoms and of the work of M. Bonnet and J. Flamion in disentangling them, see M. R. James, *The Apocryphal NT* (1924), pp. 337-63. M. S. ENSLIN

ANDREW, ACTS OF PETER AND. *See* PETER AND ANDREW, ACTS OF.

ANDREW, FRAGMENTARY STORY OF. A fragment extant only in Coptic of a story from one of the Oriental Acts (*see* APOCRYPHA, NT) of the

apostles. A woman in the desert killed her illegitimate child, cut it in pieces, and fed it to a dog. When Andrew, with his companion Philemon, arrives at the spot, he is told by the dog what the woman has done. In answer to his prayer, in which he alludes to a miracle Christ wrought on Mount Gebal, the fragments of the murdered child are apparently disgorged and joined together, and the restored child both weeps and laughs. M. S. ENSLIN

ANDREW AND MATTHIAS (MATTHEW), ACTS OF. The most famous of the secondary apocryphal Acts (*see* ACTS, APOCRYPHAL; APOCRYPHA, NT) recounting the dramatic rescue by Andrew of Matthias, who had been taken prisoner by cannibals (*anthropophagi*), who blinded and tagged their captives, eating them on the thirtieth day. On the twenty-seventh day Jesus appears to Andrew and directs him to go to his colleague's rescue. Obediently he embarks on a vessel steered by Jesus himself. During the voyage Andrew, not knowing the identity of the pilot, recounts stories of the earlier exploits of Jesus, including his visit to the heathen temple, the talking sphinx, and the interview with Abraham, Isaac, and Jacob. Upon reaching land, Andrew rescues Matthias, performs many miracles in the wicked land, is tortured, restored by the Lord, and eventually, after nearly drowning the city by water miraculously evoked from a stone statue in the prison, restores the city in consequence of the inhabitants' repentance, draws a plan for a church, and baptizes the populace.

This tale, preserved in the Anglo-Saxon poem "Andreas," attributed to Cynewulf, is prefixed by Gregory of Tours to his Latin version of the Acts of Andrew (*see* ANDREW, ACTS OF), but is no real part of this latter. In addition to Gregory's version, the tale, probably stemming from Egypt, is extant in Greek and Syriac, and in part in Latin. To regard it as a revised or expurgated Gnostic tract is surely unwarranted; it is simply a garish congeries of wonder tales of the sort produced so lavishly in the monasteries of Egypt. The confusion of Matthias and Matthew in the several accounts may most plausibly be explained as due to the later tendency to substitute the better-known evangelist for the less-known Matthias.

Bibliography. A brief paraphrase is provided by M. R. James, *The Apocryphal NT* (1924), pp. 453-58.

M. S. ENSLIN

ANDREW AND PAUL, ACTS OF. The title commonly given to a wild tale of adventure, now extant only in Coptic, in which Andrew and Paul are joined; a fragmentary part of one of many of the lush writings commonly styled Oriental Acts (*see* APOCRYPHA, NT). Paul visits the underworld, which he has reached by diving into the sea. Upon his return, he tells Andrew of his visit with Judas, and repeats the latter's tragic story, replete with many details of his betrayal of Christ, his repentance, his seduction by Satan, a visit paid him by Christ, and his ultimate fate. The two apostles next visit some city; they cause the city's gates, which they find locked against them, to vanish into the earth, when struck by the piece of wood which Paul has brought back from the underworld; and they contest with the Jews whom they convict of fraud, and convert some twenty-seven thousand Jews. M. S. ENSLIN

ANDRONICUS ăn drŏn′ə kəs [Ἀνδρόνικος, conqueror of men]. **1.** An official (II Macc. 4:31-38) left in charge in Antioch by Antiochus Epiphanes while on a political mission to Cilicia. Bribed by Menelaus, a usurping high priest, Andronicus executed the deposed legitimate high priest, Onias. Antiochus, returning, executed Andronicus for his treachery.

2. An officer (II Macc. 5:23) left in command of Gerizim by Antiochus Epiphanes after Antiochus had quelled the disorders in Judea that resulted from the false report that Antiochus had been killed in his second invasion of Egypt.

3. A man (Rom. 16:7) whom the recipients of Rom. 16—probably a congregation in Ephesus—are requested by Paul to greet. Andronicus, along with Junias (Julias, P^{46}), is designated as a relative (συγγενής) of Paul. The plain etymological meaning of this term is "blood relative of the same generation," and this seems to be its meaning here, although some hold that Paul means only a "fellow Jew." It is possible that the second name is feminine, in which case "Junia" would be the wife or sister of Andronicus, but the context indicates that both these relatives of Paul were men. At some past time both these individuals had been fellow prisoners of Paul. Both were "of note among the apostles," a term probably meaning here no more than "authorized evangelists." Both had been Christians before Paul. J. M. NORRIS

ANEM ā′nəm [ענם]. A town in Issachar assigned to the sons of GERSHOM in I Chr. 6:73—H 6:58. The corresponding list (Josh. 21:29; cf. also 19:21) reads "En-gannim" (*see* EN-GANNIM 2). It is probably located at 'Olam, a site *ca.* eight miles E-SE of Mount Tabor, or perhaps at Khirbet 'Anim, *ca.* two miles NE of 'Olam.

Bibliography. W. F. Albright, "The Topography of the Tribe of Issachar," *ZAW* (1926), pp. 231-32; F.-M. Abel, *Géographie de la Palestine*, II (1938), 244. G. W. VAN BEEK

ANER ā′nər [ענר]. **1.** One of three Amorite brothers who were allies of Abram (Gen. 14:13, 24; LXX Αυναν; Samar. ענרם; Genesis Apocryphon ערנם). In the OT their relation to Abraham's contest with the four eastern kings is not clear, but the Genesis Apocryphon (XXII.6) states explicitly that they joined in the pursuit.

2. A city of refuge in Manasseh (I Chr. 6:70—H 6:55). If the text is correct, the location of Aner is unknown; but ענר here may be an error for the תענך (TAANACH) appearing in a similar list at Josh. 21:25.

ANGEL [מלאך; ἄγγελος]. In common parlance, the word "angel" is used today in the twofold sense of (*a*) a messenger from God, and (*b*) a spiritual being. In the earlier portions of the Bible, however, the two are nicely distinguished: while every divine mes-

senger is regarded as a spiritual being, not every spiritual being is a divine messenger. Only in the later, postexilic books of the OT, in the Pseudep., and in the NT does this distinction break down.

A. ***IN THE OT.*** **1. Angels as messengers.** The usual Hebrew word for "angel"—viz., מלאך—means simply "messenger, envoy" (cf. Ugaritic, Arabic, Ethiopic *l'k,* "send"). In the patriarchal and monarchic narratives the principal functions of such messengers are: (*a*) to convey the mandates of God to men; (*b*) to harbinger special events; (*c*) to protect the faithful, either individually or collectively, and execute condign punishment on their adversaries; and (*d*) to serve as instruments of the divine displeasure against sinners and recalcitrants within Israel itself.

It was an angel who ordered Abraham to refrain, at the last moment, from sacrificing his only son, Isaac (Gen. 22:11); who reassured Jacob against the attempts of Laban to cheat him of his wages (Gen. 31:11); and who indicated to Moses the special character of the burning bush (Exod. 3:2). An angel harbingered the birth of Ishmael (Gen. 16:11) and of Samson (Judg. 13:3-5). An angel protected Jacob from ill-hap (Gen. 48:16); escorted the Israelites through the wilderness (Exod. 23:20-23; 33:2); put a cloud between them and the Egyptians at the Red Sea (Exod. 14:19); invoked a curse on a city or village which denied them aid against the Philistines (Judg. 5:23); fed Elijah in the desert (I Kings 19:5); and inflicted disaster on the invaders of Jerusalem (II Kings 19:35; Isa. 37:36). As the later psalmists put it, angels are charged with the task of protecting the faithful in all their ways (Ps. 91:11) and of discomfiting and routing their enemies in battle (35:5-6).

Angels appear to men in human form. Abraham entertained them as guests without being aware of their true identity (Gen. 18); Joshua, at Jericho, saw the "commander of the army of Yahweh," an angelic being, in the guise of a man standing before him with a drawn sword (Josh. 5:13-14); and Manoah, the father of Samson, realized that his visitor had been an angel, only when the latter disappeared in the flame of a sacrifice (Judg. 13:20-21).

Angels possess extraordinary "goodliness" or beauty (I Sam. 29:9; II Sam. 14:17; 19:27) and know everything that happens on earth (II Sam. 14:20). They eat special food, identified as manna (Ps. 78: 24-25; cf. Wisd. Sol. 16:20; II Esd. 1:19).

a. Ancient and modern parallels. This conception of heavenly messengers has its roots in the earlier pagan religions of the Near East. Every major Mesopotamian and Hittite deity likewise possessed his subordinate minister (*sukkallu*) and throne-bearer (*guzalû*); while in the Canaanite mythological poems from Ras Shamra–Ugarit (fourteenth century B.C.) such prominent members of the pantheon as El, the supreme overlord; Baal, the controller of the rains; and Môt, the genius of death and aridity, communicate with one another by means of divine messengers (*ml'km*), and the goddess 'Anat has at her service a special courier and henchman (*mhr;* cf. Akkadian *mu-ár ili,* K. 3515, rev. 9). These figures are patterned after the personnel of an earthly court or administration. The *sukkallu* is mentioned as a kind of marshal or bailiff in secular documents from Mesopotamia, and the *guzalû* as a court officer in cuneiform tablets unearthed at Chagar Bazar (nos. 988, 999); while the *mhr,* or courier, has long been familiar from the famous Egyptian "satirical letter" of Ḥori (thirteenth century B.C.), where the term occurs (XVIII.3) as a Semitic loan word (*ANET* 477).

The particular characteristics with which angels are endowed in the earlier portions of the OT likewise derive from more ancient Near Eastern lore. Thus, the angel who interposed a cloud in order to screen the Israelites from their enemies at the Red Sea has his counterpart in the Hittite god Hasamilis, to whom a similar feat is ascribed; while the special guardian angel of Jacob echoes the common Mesopotamian belief in a "guardian of welfare" (*maṣṣar šulmi*) sent by major gods to protect their devotees.

Again, the notion that some angels are sent for good, and others for evil, finds an arresting parallel in a Hittite text which speaks of two groups of "fairies" who attend the mother-goddess. One group she dispatches to every household that is pleasing to her. They show solicitude for all its activities, assist in the cultivation of its land, weave garments for its female inmates, and get them married. The other group, however, is sent to every household with whom the goddess is displeased. They stir up quarrels, leave its female inmates to remain spinsters, and set them at odds "so that they break one another's heads." Finally, when angels are described, in Gen. 19:1, as traveling in pairs, this immediately recalls the fact that the same thing is said of the divine messengers in the Ras Shamra Texts—a notion based on an ancient practice of so dispatching couriers lest one alone meet with an accident en route.

Survivals in later Semitic folklore serve also to illustrate these more primitive concepts. Thus, the angel who accompanied the caravan of Israel on its journey through the wilderness has his counterpart in the deity Shi'a-alqum, "Accompanier (or Protector) of the people," mentioned in Nabatean inscrip-

tions; while the fact that angels appear especially at wells (Gen. 16:7), beside oaks (Gen. 18:1-2) or broom trees (I Kings 19:4-5), and in blazing thorn bushes (Exod. 3:2) is well illustrated by modern popular beliefs concerning the presence of *welis* and *jinns* at just such places.

Further illustration is afforded by comparative folklore. The notion, e.g., that angels can screen their protégés in battle occurs also in the *Iliad* (III.381; V.776; XVIII.205; etc.) and is likewise associated with the Serbian *vîly*. So too the idea of a personal guardian angel (or genius) may be readily paralleled from classical belief, from early Teutonic lore, and from many primitive cultures.

Again, the notion that angels, or heavenly beings, eat special food finds an arresting parallel in the Mesopotamian myth of Adapa, where Ea cunningly prevents the mortal hero from partaking of such fare by pretending that it is lethal (*ANET* 101-2). Similarly, according to the *Iliad* (V.341), the gods do not consume ordinary bread, but feed on ambrosia, which assures immortality (XIX.38, 347).

b. Stories about angels. Most of the stories told about angels in the earlier portions of the Bible belong to well-known *Märchen* types and play upon motifs familiar from the folklore of other peoples. Often, in fact, the angels take the place of such less exalted spiritual beings as demons, fairies, and even trolls in the sister versions.

Thus the story of how Abraham entertained three angels unawares and was rewarded by the promise of a son (Gen. 18:1-10) is simply a Hebrew version of the widespread tale of hospitality rewarded and has an exact parallel in the classical tale of Hyrieus of Tanagra, who entertained three gods unawares and was recompensed by the gift of a son, Orion (Ovid *Fasti* V.493-544).

To the same type, too, belongs the story of Lot's being rewarded for similar hospitality by the deliverance of himself and his family from the destruction of Sodom (Gen. 19). A good parallel to this is the tale in Grimm's collection (no. 45; *see bibliography*) relating how a couple was delivered from the general destruction of their city because, on the previous evening, they alone had given welcome to an itinerant dwarf; while a Buddhist legend tells of a man's being spared from a cataclysm which overwhelmed the city of Holaolokia because he had received an itinerant arhat whom all his neighbors had cold-shouldered.

So, too, the notion that angels "commute" between heaven and earth by means of a ladder (Gen. 28:12) finds an exact parallel both in Egyptian funerary texts and in early Greek poetry (e.g., Pindar, fragments 30, 162). Miniature ladders, it may be added, were often placed in Egyptian and Roman graves in order to facilitate the ascent of the soul to heaven, as they still are in those of the Mangars of Nepal; and the concept of the seven-runged ladder of souls played an important role in Mithraic doctrine. It survives also in medieval Christian hagiology and is introduced by Dante into his vision of the celestial realm (*Paradiso* XXI.7-10); while an Indian legend relates that Buddha once descended by ladder at Sankisa from the Trayastrinsas heavens.

Again, the troop of spiritual beings (מחנה אלהים; LXX παραβολή θεοῦ; Vulg. *castra Dei;* RSV "God's army"; but cf. Palestinian Targ. משרויין דמלאכיא קדישיא, "encampments of holy angels") which Jacob encountered at the spot subsequently named Mahanaim (Gen. 32:2) is simply a Hebrew version of the phantom host—i.e., a spectral band that rides about at night and appears occasionally to wayfarers. To be sure, in the folklore of Northern Europe this band is usually identified as a "wild hunt," but there is evidence that it was more anciently regarded as a celestial army; sometimes, indeed, it is known as the "ancient host" and thought to consist of old soldiers who "never die but simply fade away."

A familiar *Märchen* motif may be recognized also in the story (Gen. 32:24-25) of how Jacob wrestled all night, at the ford of Jabbok, with a spiritual being —variously described as a man (vs. 25); an *'elōhîm*, or "god" (vss. 28, 30; cf. Hos. 12:3—H 12:4); and a "messenger," or angel (Hos. 12:4—H 12:5)—whom he released only at daybreak, in exchange for a blessing. The motif in question is that of the traveler who has to grapple with the genius of a river or stream before he can cross it. With this, however, are combined two equally widespread secondary themes. The first is that a water spirit—like a wandering ghost, witch, fairy, or ogre—must be back in his proper abode before cockcrow. The second is that a hero who has vanquished a spirit or ogre exacts the boon of special knowledge or magical prowess as the price of the latter's release; this is familiar especially from the story of Menelaus and Proteus in the fourth book of the *Odyssey*.

Furthermore, when the angel that appeared to Manoah and his wife disappeared in the flame of a sacrifice (Judg. 13:20), it is not difficult to detect a Hebrew version of the familiar idea that a genie vanishes in smoke.

Lastly, the story of how Elijah, resting exhausted under a broom tree, was supplied by an angel with a single flask of water and a single cake of bread, which gave him strength to endure for forty days and nights (I Kings 19:5-8), connects at once with the common folk-tale motifs that languishing heroes are fed by spiritual beings or fays, and that food supplied by trolls gives mortals extraordinary strength, or that they can be sustained for a year by swallowing a single magical pill. The popular character of the biblical narrative is evident, of course, from the formulistic use of the number forty.

2. Angels as celestial beings. Besides messengers proper, the Hebrews recognized a wider class of celestial beings possessing the same essential nature. These are mentioned sporadically in the earlier portions of the OT, and frequent allusion is made to them also—albeit only by way of artistic conceit (like Cupid in English)—in the latter poetical books. They are called comprehensively: (*a*) "sons of God"—i.e., divine beings (בני אלהים [Gen. 6:2, 4; Job 38:7]; בני אל [Deut. 32:8; LXX, OL, and Qumran fragment in *Biblica,* XXXVI (1955), 265]; בני אלים [Pss. 29:1; 89:6]); (*b*) "holy ones" (קדושים [Deut. 33:2; Job 15:15; Ps. 89:5, 7; Zech. 14:5]; רבבת קדש, "holy myriads" [Deut. 33:2]); and (*c*) "sons of the Most High" (בני עליון [Ps. 82:6; cf. Luke 6:35]).

a. Ancient Near Eastern parallels. These beings are simply folkloristic survivals of the older, pagan deities, conveniently subordinated to the hegemony of Yahweh, in much the same way that the local *numina* of the "heathen" were transmogrified, in later ages, into respectable Christian saints. Their designations hark back to this remoter Semitic antiquity. Thus, "sons of God" (*bn ilm*) is the regular term for the members of the pantheon in the Ugaritic texts (e.g., 2:16, 23, 34; 51:2-3; II AB, iii.15) and recurs on a Canaanite magical plaque from Arslan Tash, dating from the eighth century B.C. "Holy ones" (קדשם) likewise bears this meaning, both in the latter document and in an inscription of Yeḥimilk of Byblus, of the tenth century B.C., and is, indeed, actually employed in the sense of "*pagan* gods" in various passages of the OT itself (e.g., Job 5:1; Ps. 16:3; Hos. 11:12). As for the term בני עליון, usually rendered "sons of the Most High," it may be suggested that, despite the occurrence of 'Elyon as the name of a specific Phoenician (Canaanite) deity, this meant originally no more than "upper gods," in contrast to those who were believed to dwell in the subterranean realm. Such an interpretation would lend added point to passages like Ps. 82:6-7; Isa. 14:14, and the designation would find its parallel in the Mesopotamian distinction between the supernal Igigi and the infernal Anunnaki, as well as in the Hittite "upper" and "lower" gods (*šarrazēš* and *katterēš*) and the familiar Greek and Roman θεοὶ ὕπατοι καὶ νέρτεροι and *Di superi et inferi*. The divine epithet *' l y* [*n m*], it may be added, has been recognized by some scholars in a Canaanite text from Ras Shamra-Ugarit (SS 3), and the word is also used in the same sense in the Talmud (Sanh. 20*b;* Keth. 104*a*).

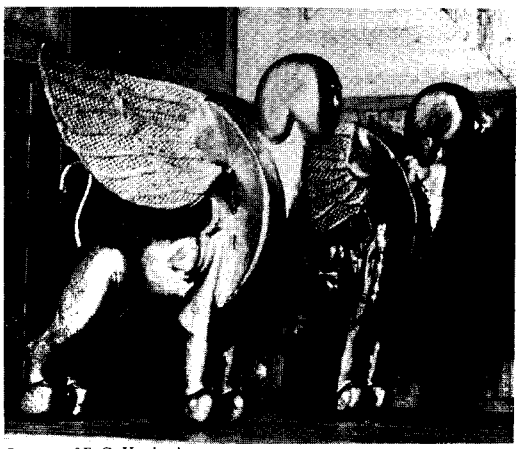
b. Stories about celestial beings. A legend concerning celestial beings may be pieced together from Gen. 6:1-4; Ps. 82:6-7. This relates that in primeval times the "sons of God" (בני האלהים) impiously consorted with human women; whereupon Yahweh, outraged at the thought that the divine spirit would thus be transmitted permanently to mankind, expelled the miscreants from heaven and limited the span of human life to a maximum of 120 years. The point of the story lies in the widespread primitive notion that any intimate contact between persons—especially, sexual intercourse—communicates the qualities of the one to the other—an idea which may be detected already in the Hittite myth of the slaying of the dragon Illuyankas (*Keilschrifttexte aus Boghazköi* III.7). Accordingly, what alarmed Yahweh was the two-pronged threat that, through the action of the "angels," their own divine quality would be transmitted to men, and they themselves rendered mortal. For precisely the same reason, in Greek myth, sexual intercourse with a divine being necessarily entails the penalty of death for the presumptuous mortal.

A further piece of ancient folklore about the celestial beings is preserved in Job 38:7, where the expression "sons of God" (בני אלהים) stands parallel to "morning stars." This equivalence, which might seem at first blush to be due to Iranian influence (*see* § B11 *below*), occurs already in an Ugaritic text of the fourteenth century B.C. (IV AB, i.3-4) and reflects a far older tendency, well attested in Mesopotamian literature, to associate gods and goddesses with heavenly bodies.

3. Cherubim and seraphim. In addition to anthropomorphic angels, the earlier portions of the OT recognize certain celestial beings who are described as winged. These are called cherubim and seraphim. Fig. TEM 24.

The cherubim (כרובים) stand sentinel over the way to the tree of life in Eden (Gen. 3:24; cf. Ezek. 28:14, 16) and also flank or support the throne of God (Pss. 80:1; 99:1; Isa. 37:16). Wooden images of them, overlaid with gold, and with wings outspread, were set over the ark of the covenant (Exod. 25:18-20; 37:6-9; Num. 7:89; I Sam. 4:4; I Kings 6:23-28; 8:6-7). Mounted on a cherub, Yahweh flies through the heavens (II Sam. 22:11; Ps. 18:10—H 18:11). An elaborate description of the cherubim, in which they are portrayed as four-winged and four-faced creatures, accompanied by whirling wheels (אופנים), is contained in the later visions of Ezekiel (1:4-28; 10:3-22); but this description, combining several different concepts, is idiosyncratic rather than typical.

The seraphim (שרפים) are mentioned only in Isa. 6:2-6, where nothing further is said of them than that they are six-winged, stand beside the throne of Yahweh in heaven, and intone his praises.



Both these concepts go back, once again, to more ancient Near Eastern lore. The cherub may be identified with the winged genius who is, indeed, called *karibu* (or *kuribu*), "intercessor," in Mesopotamian texts and who is commonly portrayed in art as a sphinx, griffin, or winged human creature.* Representations of such beings, dating mostly from the ninth century B.C., have been found, e.g., at Carchemish, Nimrud, on ivories from Samaria, at Aleppo, and at Tell Halaf (*ANEP* 649-55). Several

25. Cherubim guarding the "Tree of Life," drawn by E. D. Wright; probable reconstruction of cherubim and palm-tree decoration in the temple, based on representation in Phoenician ivories

different strands, however, are interwoven in the biblical tapestry. As the guardian of the tree of life, the cherub finds his counterpart in such familiar figures of folk tale and myth as the dragons who stand sentinel over magic trees and treasures and in the winged bulls and colossi customarily placed at the entrance of Babylonian and Assyrian palaces and temples. As the supporters of the divine throne and guardians of the sacred ark, the cherubim may be compared, on the one hand, with the winged figures which flank the throne of King Hiram of Byblus* and with similar creatures on incense altars discovered at Taanach and Megiddo; and, on the other, with the draconic monsters (ζῷα) which draw the thrones and chariots of emperors in later Sassanian and Byzantine iconography. Finally, as the winged steeds

of Yahweh they are perhaps to be regarded as personifications of the winds, more especially since the expression: "He rode upon a cherub and flew," stands parallel, in Ps. 18:10—H 18:11, to the words: "He came swiftly [lit., 'darted'] upon the wings of the wind." Figs. ANG 25-26; GEB 15.

Courtesy of E. G. Howland

26. The guardian cherubim, copied from a bas relief of cherubim supporting the throne of Hiram king of Byblos; from model by E. G. Howland

As for the seraphim, these may be plausibly identified with the six-winged demonic figure, holding a serpent in either hand, who is portrayed on a relief discovered at Tell Halaf. This comports especially with the fact that in Num. 21:6-8 the word "seraph" is used to describe the "fiery serpents" (cf. שרף, "burn") which assailed the Israelites in the wilderness, and the image which Moses set up as an apotropaic device against them (*see* NEHUSHTAN). Moreover, in Deut. 8:15; Isa. 30:6, the seraph is associated with the scorpion, and this suggests a further comparison, in point of general concept, with the demonic "scorpion-men" (*aqrab-amêlu*) who are described, in the Babylonian Epic of Gilgamesh (Tablet IX, col. ii) as standing sentinel at the mountains of sunrise and sunset.

Rabbinic and later exegetes have recognized a further class of angels in the "thousands of *šin'ān*" (אלפי שנאן; RSV "thousands upon thousands") mentioned in the MT of Ps. 68:17—H 68:18 as having accompanied Yahweh at Sinai. More probably, however, the word in question is to be connected with the *ṯnnm* of the Ugaritic texts (Krt A, ii 91) and the *šanannu* of documents from Alalaḫ (nos. 145, 183, 352, Wiseman), denoting a class of warriors—here, no doubt regarded as celestial (cf. Deut. 33:2), but not constituting a distinct order of beings. A class of angels has likewise been recognized by some in the obscure word אראלם of Isa. 33:7, but both text and interpretation are uncertain.

B. ***IN THE APOC. AND THE PSEUDEP.*** After the Babylonian exile, the conception of angels undergoes a profound change. This development, but faintly limned in the canonical scriptures, finds its most articulate expression in the Pseudep. and the Dead Sea Scrolls. Its principal features are:

1. Angels as spirits of phenomena. Angels now come to be regarded, not merely as messengers or as agents of particular situations and events, but as the controlling spirits of natural phenomena—e.g., of celestial bodies and winds (Enoch 19:1; 40:4-5; 60:12, 16-21; 61:10; 72:1; Jub. 2:2-3; 1QH 1.10-11; 47.7-13); of the four seasons (Enoch 82:13); of countries (Dan. 10:19-21); and of such abstractions as peace (Enoch 40:8; 52:5; Test. Dan 6:5; Test. Asher 6:6; Test. Benj. 6:1; cf. Isa. 33:7), healing (Tob. 3:17; Enoch 10:7; 40:9), and death (II Bar. 21:23; cf. Prov. 16:14). They are actually called "spirits" (רוחין) or "spirits of knowledge" (רוחות דעת; 1QH 3.23), and in one of the Dead Sea Hymns (1.10), it is said explicitly that it was only sometime after the creation of the world that these spirits were turned into angels. They are believed to be privy to the secrets of cosmos (called רזי פלא, "extraordinary mysteries," in the Dead Sea Scrolls; cf. Enoch 9:6), and are sometimes conjoined with cosmic "powers and principalities" (Enoch 41:9; 61:10)—a concept familiar especially from the NT. *See* § C *below*.

2. The angelic hierarchy. Angels are now pictured as a hierarchy, headed by seven (Tob. 12:15 G; Enoch 81:5; 90:21-22; II Esd. 5:20), four (Enoch 40; 87:2-3; 88:1), or three (Enoch 90:31) archangels, and including such distinct ranks as "angels of the presence" (Enoch 40:2; Jub. 1:27, 29; 2:1-2, 18; etc.; cf. Test. Levi 3:5; 13:5; 1QH 6.13; DS Order of Blessings; cf. Isa. 33:7; Ber. 51*a*: מלאכי פנים), and "angels of sanctification" (Jub. 2:18; 15:27; 1QH 1.11; fragment 1.1).

3. Angels as intercessors. Angels now serve not only as the messengers of God to man, but also of man to God. They carry men's prayers to the divine presence (Tob. 12:15; II Bar. 11 G; 1QH 6.13) and act as intercessors for them (Tobit; II Bar. 6:7; Enoch 9:10; 15:2; 40:9; 47:2; 99:3, 16; Test. Levi 3:5; 5:6-7; Dan. 6:2; 10:13, 21). In keeping with this, special emphasis is placed on their role as guardians of the righteous, both individually and collectively (Dan. 10:13, 20; 11:1; 12:1; II Macc. 11:6; III Macc. 6:18; Sus. 45; Bel 34-39; Enoch 20:5; Jub. 35:17; 1QH 5.21-22; 1QS 9.15; 1QM 9.16).

4. The angelic army. Angels are now conceived as an army (II Bar. 51:11; 70:7; Test. Levi 3:3), which will participate in the final war against the wicked (Zech. 14:13; 1QH 3.35-36; 10.34-35; 1QM 15.14). This idea is based partly on an interpretation of the scriptural phrase "the host of heaven" (צבא השמים), and partly on a mythopoeic projection into the celestial sphere of a common Hellenistic notion that the earthly congregation of the saints constitutes a kind of "salvation army."

5. Hostile angels. Under the increasing influence of Iranian dualism, a class of hostile angels, or "satans" (שטן, "obstruct"), emerges (Enoch 40:7; 54:6; 69:4, 6; 1QH fragments 4.6; 45.3; DS Order of Blessings 8). These are also called "destroyers" (משחית, 1QH; cf. II Sam. 24:16, המלאך המשחית). They are accommodated, however, to the basic premise of Judaism by being made subject to, rather than independent of, the supreme authority of Yahweh, exercising their demonic functions either as rebels defying his will or else explicitly as his agents.

In the former aspect, they are sometimes (e.g., Enoch 69:4) identified with the fallen angels of Gen. 6:1-4. In the latter, they serve as God's executioners at the Last Judgment, and are styled "angels of punishment" (Enoch 53:3; 56:1; 61:1; 62:11; 63:1; II Bar. 21:23), or "angels of destruction" (מלאכי חבל; CDC 4:12; Zadokite Document 2:6; 8:2; cf. Shab. 55*a;* P.T. Shebu. VI.73*a* [מלאכי חבלה]; and Samar. מלאכי רגזה, "angels of perturbation" [Marqeh 191*a*]).

6. Satan. SATAN himself now appears as a distinct figure, though in the OT the name is still used only as an appellative. In the book of Jubilees (49:2) and in the so-called Zadokite Document (4:3; 5:18; 6:5; 8:2), he is called by the cognate name Mastema (cf. Hos. 9:8; "hatred"), and elsewhere (e.g., Jub. 1:20; Sibylline Oracles 3:63, 73; 1QS 1.18, 23-24; Zadokite Document 4:13, 15; 5:18; 1QM, *passim*) by that of BELIAL.

7. Specific angels. Angels now tend to be designated by specific names—e.g., the archangels, Michael (Dan. 10:13; 12:1; Enoch 9:1; 10:11; etc.), Gabriel (Dan. 8:16; Enoch 9:1; 20:7; 40:9; 1QM 9.26), Raphael (Tob. 3:17; 12:15; Enoch 10:4; 40:9), and Uriel (Enoch 9:1; 19:1; 20:2; cf. 1QS 3.20: "the angel who is over the lights [אורים]"). In Enoch 6:7; 8:3-4; 69:2, a catalogue is given of the names of the fallen angels. Most of these are, to be sure, unintelligible in the Ethiopic and Greek texts; but with the aid of a parallel list in a medieval Hebrew version, they may be recognized as mere personifications of celestial phenomena—e.g., Baradiel, from ברד, "hail"; Ruḥiel, from רוח, "wind"; Ziqiel, from זיק, "meteor"; Kokbiel, from כוכב, "star." Similarly, in Enoch 82:13, the angels of the four seasons bear specific names—viz., Melkiel, Helemmelek, Melejal, and Narel—though the basis on which these are chosen remains obscure. Sometimes, too, the names are determined by the special functions of the angels who bear them—e.g., Raphael, the angel of healing, from רפא, "heal"; Raguel, "who takes vengeance on the world of the luminaries" (Enoch 20:4), from רעע, "disquiet." In the Talmud, names of angels are often evolved out of fanciful exegesis of a scriptural text—e.g., Lailah, the angel of conception (Nid. 16*b*), from Job 3:3:

> Let the day perish wherein I was born,
> and the night [ליל] which said,
> "A man-child is conceived."

The same process will probably account for at least some of the baffling names of angels in pseudepigraphic (and later magical) literature.

8. Angels and the sainted dead. There is a marked tendency to associate the angels with the spirits of the sainted dead—i.e., to conceive of both as forming a single congregation which stands forever in the presence of God (cf. 1QH 3.21; 6.14; 11.11-12; fragment 2.10; Enoch 104:6), and the name "holy ones" or "saints" (קדושים) comes to be applied to both.

9. Survivals of older concepts. Side by side with these innovations, however, the older ideas persist with remarkable tenacity. The celestial beings still bear the ancient designation "holy ones" (Dan. 4: 13, 17, 23; Ecclus. 42:17; Enoch 9:3; 71:1; Test. Levi 3:3-4; DS Genesis Apocryphon 2.1; 1QH fragments 5.3; 15.7; 24.2) and are still regarded, like the Mesopotamian gods and the Ugaritic "messenger of heaven" (RS 5.14), as clothed in light. Sometimes, too, elements of angelological folklore which are but casually introduced in the OT are elaborated in the pseudepigraphic literature in greater detail. Thus, the fall of the angels is expanded (Enoch 6:6; Jub. 4: 15) into the legend that they descended to earth in the days of the antediluvian patriarch Jared (cf. Gen. 5:15)—a legend based simply on the similarity of that name to the Hebrew word ירד, "descend"; and the miscreants are identified with the Watchers (*see* WATCHER) of Daniel (Enoch 1:5; 10:9, 15; 12:2, 4; etc.; DS Genesis Apocryphon 2.1). Again, on the strength of the idea that they encompass the Divine Glory in heaven, the angels are called "the glorified" (Test. Levi 18:5; 1QH 10.8; II Enoch 22:10; cf. Jude 8); while in Enoch 39:12, the scriptural verse (Isa. 6:3):

> Holy, holy, holy is the LORD of hosts [יהוה צבאות];
> the whole earth is full of his glory,

is paraphrased, significantly: "Holy, holy, holy, is the Lord *of Spirits*. He filleth the earth with *spirits*."

The cherubim and seraphim likewise survive (Enoch 61:10; 71:7), and in one passage (Enoch 20: 7) the latter are specifically identified as serpents. Moreover, the "whirling wheels" of Ezekiel's visions now become—as in later rabbinic literature—animate angelic beings.

10. Folklore about angels. This broad picture of the angels is tricked out by a number of extra touches derived from popular lore. They are said to be clothed in white garments (Dan. 10:5-6; Enoch 87:2; Test. Levi 8:1), and now for the first time appears the concept that even the anthropomorphic messengers of heaven are winged (Dan. 9:21; Enoch 61:1). The latter, however, appears still to have been something of an innovation, or not yet to have become standard and stereotyped, for in Enoch 61:1 it is said expressly that when the angels went off to measure Paradise, "they took to themselves wings," implying that they did not normally possess them. And it should be observed also that the crucial words מעף ביעף in Dan. 9:21, which mean literally, "borne in winged flight," are rendered by the LXX simply τάχει φερόμενος, "borne with speed."

Angels are said also to have their own special pathways in heaven (Enoch 18:5). This idea was probably influenced by the common Greco-Roman notion that the sainted dead ascended by a special "way of the blessed" (ὁδὸς μακάρων), often identified with the Milky Way.

Just as in the earlier scriptural narratives, so in those of the intertestamental literature, the treatment of angels draws also upon traditional folktales. The parade example of such indebtedness is to be found in the story of TOBIT, for this is simply a Jewish adaptation of the well-known motif of the grateful dead.

11. Iranian influences. Much of this later angelology may be attributed to the infiltration of Iranian ideas, for it runs parallel to a remarkable degree with what we find in the Gathas and other earlier portions of the Zend Avesta. Thus, the seven archangels

have their counterpart in the Amesha Spentas, who attend upon the supreme Lord of Wisdom, Ahuramazda (cleverly Judaized in the Dead Sea Scrolls [1QS 3.15; 1QH 1.26; fragment 4.15] as "God of knowledge" [אל דעות]—a title borrowed from I Sam. 2:3!). The identification of the angels with the controlling spirits of natural phenomena accords strikingly with the concept of the *fravashis* and the *yazatas*, the latter of whom are said explicitly to have traced out the courses of the waters, which were originally without motion; to have shown plants how to germinate; and to have plotted the orbits of sun, moon, and stars (Yasht 13.53-57). The notion that angels intercede for men and that they will join in the final battle against the Evil One echoes the role of these same spiritual beings in the Avesta (Yasht 19.95; Yasna 30.3; 44.15; etc.). Conversely, the "satans" or hostile "angels of destruction" reproduce to a nicety the Avestan *devas*. It is to be observed in particular that, according to the Dead Sea Manual of Discipline (4.13-14), these celestial adversaries will eventually cast the unrighteous into an eternal fire; while in one of the Hymns (3.29-32), the latter is described more vividly as a stream of molten granite —a concept which adroitly blends the dire prophecy of Isaiah (34:9) with the Avestan doctrine that the wicked will be plagued by the devas, who will ultimately be thrust along with them into the "ordeal of molten metal" (*ayah khšusta;* Yasna 30.7; 31.19; 32.7; 43.4; 47.6; cf. also Bundahish 30.19, 31). As for Satan, Mastema, or Belial, this figure has its parallel in Angra Mainyu, the evil spirit opposed to Spenta Mainyu, the good spirit (Yasht 3.13; 17.19; 19.97; etc.); or in Druj, the genius of falsehood and deceit, opposed to Asha, that of truth and normalcy (represented in the Dead Sea Scrolls as אמת!). Again, the assertion in the Dead Sea Hymns (11.14) that the angels constitute a celestial choir which the pious are destined eventually to join, at once recalls the Mazdean doctrine that the righteous will be given a place in the heavenly "mansion of song" (*garomana;* Yasna 22.15; 24.61; 45.8; 50.4; cf. Bundahish 31). Finally, the role of the archangel Michael as the deliverer of the faithful (Dan. 10:21; 12:1; 1QM 17. 6-7) accords with that of the Saoshyant, or Redeemer, in the Avesta.

C. *IN THE NT.* Broadly speaking, the NT adds nothing to the traditional conception of angels. Here too they appear as harbingers of special births: Gabriel presaged that of John the Baptist (Luke 1: 11-20), and an unidentified celestial messenger that of Jesus (2:8-14). Angels likewise intervene to give succor in moments of crisis: an angel warned Joseph to flee with Mary and the infant Jesus into Egypt (Matt. 2:13); an angel encouraged Jesus on the Mount of Olives (Luke 22:43); an angel rolled away the stone from Jesus' tomb (Matt. 28:2-3); and an angel released Peter from prison (Acts 12:7-10). Angels are robed in white garments (Matt. 28:3; Rev. 15:6; 19:14) and bathed in radiance (Matt. 28: 3; Luke 2:9; Rev. 18:1). In the wake of Ezekiel's visions and of Enoch 40:2; 90:21, the book of Revelation recognizes a special order of seven spirits—evidently archangels (Rev. 1:4; 4:5)—as well as four holy creatures who wait upon the throne of God (4:6); and to these are added, in agreement with the book of Enoch, four angels who preside over the four corners of the earth (Rev. 7:1). Moreover, in view of the parallel expression in Enoch (41:9; 61: 10), where the reference is clearly to spiritual beings, it may be regarded as virtually certain that the "powers" (δυνάμεις) to whom reference is made in Rom. 8:38; I Cor. 15:24; Eph. 3:10; I Pet. 3:22 are angels. Similarly, the "elemental spirits of the universe" (στοιχεῖα τοῦ κόσμου), which are mentioned in Gal. 4:3; Col. 2:8, are evidently angelic personifications of natural phenomena, since the corresponding Semitic term, יסוד, is used in precisely the same way both in the Dead Sea Scrolls and in Samaritan (Marqeh, 135*a*).

Angels surround the throne of God in heaven and chant his praises (Luke 2:13; Rev. 4:9; cf. Isa. 6:2-3; Enoch 39:12). They are identified as spirits (πνεύματα; Heb. 1:7), and in Jude 6 allusion is made to their primeval rebellion (cf. Enoch 6–9). They also play a major role in the eschatological picture painted in Revelation. The good angels assist Michael, and the evil angels Belial, in the final conflict (Rev. 12:7); and seven angels pour seven bowls of God's wrath on various elements of creation (ch. 16). There is, however, very little in this picture that is not to be found previously in Enoch and other apocalyptic scriptures.

In Luke 12:8-9, Jesus declares that "everyone who acknowledges me before men, the Son of man also will acknowledge before the angels of God; but he who denies me before men will be denied before the angels of God." Because in the parallel passage, Matt. 10:32-33, the words "before the angels of God" are replaced by "before my Father who is in heaven," it has been suggested that they are simply a pious circumlocution, like the Talmudic "before heaven" (קמי שמיא; Ḳid. 64*c*) for "before God." The fact is, however, that they refer rather to what is described explicitly in Enoch 99:3, where it is said that the prayers of the righteous will constitute a "testimony before the angels," whereas the latter will at the same time "rehearse the sin of the sinners before the Most High" (cf. 99:16; 100:10).

Lastly, it should be observed that, according to Acts 23:6-8, belief in angels, spirits, and resurrection, though acknowledged by the more plebeian Pharisees, was denied by the more aristocratic Sadducees.

ANGELS OF THE SEVEN CHURCHES [ἄγγελοι τῶν ἑπτὰ ἐκκλησιῶν] (Rev. 1:20). Interpreters have identified these variously with: (*a*) the messengers sent to John by the churches of Asia (vs. 4); (*b*) the churches' bishops; (*c*) their "guardian angels" (akin to those of nations and individuals; cf. Deut. 32:8 LXX; Dan. 10:13; 12:1; Ecclus. 17:17; Matt. 18:10;

Acts 12:15); (*d*) their heavenly replicas—akin to the Zoroastrian *fravashis;* and, as seems most appropriate; (*e*) the spiritual core or the ethically mature persons of the churches (cf. Paul's τέλειοι [I Cor. 2:6]), those held safe in the Lord's right hand (Rev. 1:16) and addressed in chs. 2–3, the true church of Christ in fact, to be distinguished from the "lampstands" or localized groups as a whole.

ANGER. In the biblical view there is a qualitative and theological difference between human anger on the one hand and divine anger on the other, even if the same words may often be used for either (*see* §§ 1*a*, 5, *below; see also* WRATH OF GOD). The following discussion is concerned with the concept of anger in the Bible as it relates to man. In general the notion comprehends those feelings and expressions of antipathy toward an object that have been aroused by a sense of injury or wrong and that take a variety of forms, ranging from simple resentment or pique to reactions of violence and destruction. Connoting an acute response to particular situations and acts of provocation, anger is to be distinguished from the related but relatively prolonged and lingering human affects such as HATE; JEALOUSY; and the like.

Bibliography

1. Terminology of anger in the Bible. The word "anger" and its synonyms ("wrath," "fury," "indignation," "rage," "vexation," etc.) render into English at least eight Hebrew words and their derivatives, while they stand predominantly for two Greek words and their derivatives and occasionally for other Greek expressions.

a. Anger in biblical Hebrew. The commonest Hebrew expression either for divine or for human anger is the noun אף (Gen. 27:45), which has the meaning also of "nostril" or "nose" (Num. 11:20). In ancient Hebrew psychology this organ was thought of as the seat of anger, and the phrase for "slow to anger" is literally "long of nose" (e.g., Prov. 14:29). It happens that the corresponding verb, אנף, "be angry," is used only of divine anger, not human, in the OT. The verb חרה, "burn," both by itself and in association with אף (Num. 22:27; Jonah 4:1), refers nearly always to the burning or kindling of anger. The derived combination חרי אף, "burning" of anger, usually refers to man (Isa. 7:4), but the cognate expression חרון or חרון אף always refers to divine wrath in the OT (Exod. 32:12). A frequently used synonym for אף is חמה, "rage" or "fury" (II Kings 5:12), used also on occasion to denote the sun's heat (Ps. 19:6), the effect of wine (Hos. 7:5), and the poison of serpents (Deut. 32:24). Synonyms only slightly less common are formed from other roots or their derivatives such as קצף, "be ill humored, enraged" (Esth. 1:12); עברה, "overflowing rage, fury" (Amos 1:11); זעם, "indignation" (Jer. 15:17); זעף, "be enraged, storm" (II Chr. 26:19); and כעס, "vexation" (I Sam. 1:6; in Job כעש—e.g., 5:2). The emotion of anger can be the subject where the express terminology may be absent, the idea being implied by the language of jealousy, cursing, revenge, violence, rebellion, etc., and by descriptions of accompanying physical reactions such as heavy breathing, snorting, trembling, shouting, raving, grinding the teeth, and the like. Divine wrath is often qualitatively distinguished from human anger by expressing the former through combinations of two or even three anger termini in succession—e.g., "wrath and fierce anger" (עברה וחרון אף; Isa. 13:9); "in anger and fury and great wrath" (באף ובחמה ובקצף גדול; Deut. 29:27; *see* WRATH OF GOD).

b. Anger in LXX Greek. The Greek translation of the OT renders the various Hebrew expressions for anger almost entirely into either of two Greek words or their derivatives—namely, ὀργή or θυμός. Originally θυμός stood in ancient Greek for the inner affect or emotion of anger; ὀργή, for the outward effect or manifestation. But in the LXX the two expressions appear to be interchangeable, and either or both together seem to be used indifferently for any of the Hebrew terms. Two other Greek words occur only rarely in the LXX for anger—χόλος, "bile, bitter anger" (Eccl. 5:17—H 5:16; μῆνις, "wrath" (Gen. 49:7). These refer almost exclusively to human anger in the LXX, whereas in earlier ancient Greek, by contrast, they are nearly always associated with deity. *See bibliography.*

c. Anger in NT Greek. The terminology of anger in the NT consists mainly of the synonyms ὀργή and θυμός with their derivatives. If there is any distinction between them in the NT with regard to the human emotion, it would appear that θυμός connotes better the unreflecting passion of anger (e.g., Luke 4:28); ὀργή, the relatively more considered moral indignation (Jas. 1:19). While ὀργή is translated as either "anger" or "wrath," θυμός is always translated as "wrath."

2. The biblical acknowledgment of anger. Antecedent to any judgmental pronouncements on the subject in either the OT or the NT, there is the recognition and, indeed, a certain dignification of man's capacity for and exercise of anger. In the first place, it is seen simply as one of the characteristic elements of human behavior that are to be taken seriously when encountered and to be coped with prudently. The story of Cain and the Song of Lamech posit human wrath already at the very beginning of history (Gen. 4:5, 23-24). Rebekah admonishes Jacob to flee until his "brother's fury turns away" (Gen. 27:43-45). The wisdom sages, at the same time that they looked askance at displays of human anger as being alien to the well-ordered life (Ps. 37:8; Prov. 14:29; 29:22; Job 18:4; 36:18; etc.), nevertheless taught a healthy respect for anger as it might be encountered among those in authority and advised the exercise of discretion in its presence (Prov. 16:14; 20:21; Eccl. 10:4). The king in Jesus' parable, whose invited guests uniformly decline invitations to the wedding feast, is hardly expected to react otherwise than with a typical rage (Matt. 22:1-10).

While anger is appreciated in the Bible as something inherent in man's personal and social existence, it is not viewed as a thing to be treated with indifference. Jacob's blessing expresses fear and abhorrence for the fierce anger and cruel wrath of Simeon and Levi (Gen. 49:5-7). David knows his life to be endangered by the pathological outbursts of Saul (I Sam. 18:8-9; 19:9-10; 20:30-31). The collective fury of an angered crowd is invariably sinister and terrifying in the NT (cf. Matt. 27:20-23; Luke 4:28-29; Acts 7:54-58).

But beyond the fact of its destructive possibilities, it remains true for the Bible that human wrath signifies a crisis in those events where it is manifested. Thus it helps to provoke a change or turning about in subsequent human relationships with one's fellows or with the deity. The displeasure of Samuel erupts concomitantly both with the selection and with the rejection of Saul as king (I Sam. 8:6; 15:11). The Israelite monarchy is divided as a consequence, in part, of the anger of Israel against Judah (I Kings 12:1-6). The anger of Jonah answers to a reversal of divine judgment in historical events (Jonah 3:10–4:1). Jesus' anger accompanies an act of healing (Mark 3:5). His indignant zeal in the temple sharpens the conflict between him and his antagonists (John 2:13-21; cf. Luke 19:45-46), while the fury of his opponents brings closer the hour of his passion (Mark 3:6; Luke 6:11; etc.). Therefore, because of its frequent association with emphatic and even violent self-disclosures of man's will and intent at critical junctures in the biblical story, anger in the Bible seems to fall under an ambivalent judgment with regard to questions of faith and conduct.

3. Anger and faith. In the OT one finds a qualified justification of anger insofar as it operates in the service of faith and piety, in the defense of justice generally, or in particular in the condemnation of violations of God's claims to sovereignty. David's anger as a judge convicts him in his own eyes as he is confronted with his crime by the prophet Nathan (II Sam. 12:5-7, 13). Moses becomes furious at the faithlessness of the Israelites (Exod. 16:20). The anger of the prophets, at the same time that it is a sign of the wrath of God, is also a thoroughly human indignation with injustice and immorality (cf. Isa. 7:13; Jer. 6:11; 15:17; Amos 4:1-3; etc.). Doubtless one of the most striking—certainly one of the most blood-chilling—examples in the Bible of human wrath in the service of the divine purpose is that of Samuel, who "hewed Agag in pieces before the LORD in Gilgal" (I Sam. 15:33).

Less often do the NT writers appear to concede to human anger a positive role; however, rulers are a "terror" to bad conduct and thus serve God's wrath for man's good (Rom. 13:3-4). Indignation over wrong can become an instrument of sanctification (II Cor. 7:11). On the other hand, the prophetic anger and indignation of Jesus which he displayed on a number of occasions would seem to leave open in the NT the possibility—certainly it leaves there the memory—of the redemptive use of this human passion, where it becomes a sign and the incarnation of God's wrath (Matt. 12:34; 15:7; 23:13-36; Mark 3:5; 9:42; 10:14; John 2:15; 8:44; etc.; *see* WRATH OF GOD § 5*a*).

4. Anger and sin. The profession of righteous anger, nevertheless, can turn into a premature identification of the interests of man with those of God—the ministry of Jesus being both the exception to and the judgment upon such self-corruption (*see* § 3 *above*). Thus Paul proceeds to Damascus, "breathing threats and murder against the disciples of the Lord" (Acts 9:1). Intense suffering by an individual or a people seems able also to lead men into this same false identification (cf. Job 7:11; 10:1 *et passim;* Ps. 137:7-9; Mal. 1:2-5), while anger can become a purely selfish matter and the expression of a merely peevish vexation at unexpected and unwelcome misfortune or frustration (cf. Gen. 30:2; II Kings 5:12; Esth. 1:12; etc.). The wisdom sages explicitly condemn anger as antithetical to חכמה in that it stirs up trouble and has harmful consequences (Prov. 6:34; 15:1; 16:14; 19:19; 27:4), and he who is long-suffering is the genuine wise man (Prov. 14:29; Eccl. 7:8; etc.), while the man of anger is the fool (Prov. 14:17, 29; *see* WISDOM; SELF-CONTROL).

Negative judgments on human anger are not confined to the wisdom literature. In the prophetic view, the destructiveness of man's fury infects all nature with a debilitating malaise (Hos. 4:2-3). Cain is warned that in his anger "sin is couching at the door," and ultimately it drives him "away from the ground" and from the divine presence (Gen. 4:6-7, 14). Doubtless the legend of Cain lies behind the warning of Jesus in the Sermon on the Mount that the angry man shares the divine judgment on him who kills (Matt. 5:21-22; cf. vss. 23-26).

In spite of some concessions in the NT regarding human anger (*see* § 3 *above*), it seems to be the general view there that "the anger of man does not work the righteousness of God" (Jas. 1:19-20). The admonition of the writer of Ephesians to "be angry but do not sin" (4:26; cf. Ps. 4:4), is scarcely a commendation of anger to man but a warning that anger provides exceptional opportunity for sinful self-elevation and overt trespasses; moreover, the reader is immediately exhorted in the same breath: "Do not let the sun go down on your anger" (cf. Eph. 4:31; 6:4; Col. 3:8; I Tim. 2:8; Tit. 1:7).

5. Anger and the wrath of God. This prophetic condemnation of human wrath in the OT and the NT is not based on a rejection of anger in principle, as with the wisdom writers (*see* § 4 *above*), nor is it necessarily an appeal in behalf of pacifism. Rather, on the one hand it represents a deference to the wrath of God in the firm belief that "vengeance is mine, I will repay, says the Lord" (Rom. 12:19; Heb. 10:30; cf. Lev. 19:18; Deut. 32:35). On the other hand, there is the keen realization that the anger of man has sought to usurp the wrath of God and has for this reason become the object of that wrath. It is significant that in both the OT and the NT human agents that serve as instruments of the divine anger become also its chief objects. Jehu's massacre of the house of Ahab at Jezreel is represented as divine vengeance for the blood of the LORD's prophets (II Kings 9:7; 10:11), but, paradoxically, the house of Jehu earns the divine condemnation for this very slaughter (Hos. 1:4-5). Assyria is described as the "rod" of God's anger and the "staff" of his fury against Israel (Isa. 10:5-6), but

in turn becomes the object of that wrath as "the ax vaunt[s] itself over him who hews with it" (Isa. 10:15; cf. vs. 12 etc.). The state that serves as the servant of God's wrath (Rom. 13:4) becomes nevertheless the embodiment of that against which God's wrath turns in the last judgment (Rev. 18:1–19:3 *et passim*).

Although the biblical view appreciates the possibility of righteous and perhaps even redemptive anger, it is nevertheless only a vanquished human anger of which the psalmist speaks when he declares:

> Surely the wrath of men shall praise thee;
> the residue of wrath thou wilt gird upon thee
> (Ps. 76:10).

Bibliography. A valuable study of human anger as well as its relation to divine anger in the biblical, apocryphal, and rabbinical literature is given in J. Fichtner *et al.*, "ὀργή," *TWNT*, V (1954), 382-448. On the subject of Jesus' anger see R. V. G. Tasker, *The Biblical Doctrine of the Wrath of God* (1951), pp. 29-34. Besides the various commentaries on relevant biblical passages see also Lactantius (*ca.* A.D. 312), *A Treatise on the Anger of God* (trans. Fletcher), ch. 12: "Of the Anger of God and Man," in *The Ante-Nicene Fathers* (1886); R. C. Trench, *Exposition of the Sermon on the Mount from the Writings of St. Augustine* (3rd ed., 1869), pp. 187-92 (on Matt. 5:21-22). B. T. DAHLBERG

ANGLE, THE [המקצוע]; KJV TURNING OF THE WALL. A portion of the ramparts of Jerusalem fortified by Uzziah (II Chr. 26:9) and restored under Nehemiah (Neh. 3:19-20, 24-25), in the vicinity of the palace. It is certainly not related to the CORNER GATE and probably not to "the corner" (הפנה) mentioned in Neh. 3:31.

See also CORNER, ASCENT OF; JERUSALEM § 7*b*.

ANGUISH. *See* SUFFERING.

ANIAM ə nī'əm [אניעם, people's mourning, *or* I am kinsman] (I Chr. 7:19). The fourth son of Shemida in the genealogy of Manasseh.

ANIM ā'nĭm [ענים, springs]. A city in the SW hill-country district of Judah with Kiriath-sepher (Debir) and Eshtemoa (Josh. 15:50). It appears in the Amarna correspondence as Hawini. Anim is identified with Khirbet Ghuwein et-Tahta, eleven miles S of Hebron, three miles S of es-Semu'a (Eshtemoa). Eusebius refers to it as Anaia ('Αναιά), nine (Roman) miles S of Hebron. Khirbet Ghuwein el-Foqa, just NE of et-Tahta, represents Christian Anaia, while et-Tahta represents the Jewish village of Eusebius' day.

V. R. GOLD

ANIMAL [*for* חיה, מבה, ζῶον, τετράπους, *see* BEAST; *for* בהמה, מקנה, κτῆνος, *see* CATTLE]; KJV BEAST; CATTLE; FOUR-FOOTED BEAST. For a full discussion of animals in the Bible, *see* FAUNA.

"Animal" seems generally to refer to quadrupeds; it designates all animals (in this restricted sense) in Jer. 27:5; II Pet. 2:12; Jude 10; clean and unclean creatures in Lev. 11:39; 27:11, 27; Deut. 14:4; wild animals in Gen. 3:14; wild and domesticated animals, excluding birds and reptiles, in Gen. 6:20; 8:17; Acts 10:12; Rom. 1:23; all animals, excluding birds, in Gen. 7:2; all animals, except birds and fish, in I Cor. 15:39; sheep in Gen. 29:7; oxen and sheep in Lev. 27:26; horses and mules in I Kings 18:5; sacrificial victims in Lev. 7:25; 27:9; Heb. 13:11; food animals in Gen. 43:16; Lev. 7:26 (excluding birds).

ANIMAL-WORSHIP. *See* TOTEMISM.

27. Anise

ANISE. KJV translation of ἄνηθον (RSV DILL) in Matt. 23:23. The Greek for the true anise (*Pimpinella anisum* L.) is ἄννησον. Fig. ANI 27.

See also MINT; CUMMIN; SPICES.

ANKLETS [עכסים] (Isa. 3:18); KJV TINKLING ORNAMENTS ABOUT THEIR FEET. Ornamental rings worn above the ankles. They appear in Isaiah's description of the luxury articles of the daughters of Zion. Numerous anklets or ankle bracelets have been recovered in archaeological excavations all over Palestine. They were found in position in graves at Lachish. Most of them were of heavy bronze, usually flattened on the inside and measuring somewhere between 2½ and 4½ inches in diameter and from 2/25 to 2/5 inches wide.

J. M. MYERS

ANNA ăn'ə [Ἄννα *or* Ἅννα; חנה, grace]. **1.** The wife of TOBIT. During his blindness she supported him. The picture of her watching for and welcoming her absent son is not unlike that of the father in the parable of the prodigal son.

2. An aged prophetess, long a widow, mentioned in Luke 2:36-38 as witnessing the presentation in the temple of the infant Jesus. She is apparently presented as a counterpart to Simeon; no record of her words of thanksgiving is offered.

3. The mother of Mary and the grandmother of Jesus. Unmentioned in the NT, she is prominent in the Protevangelium of James (*see* JAMES, PROTEVANGELIUM OF) and in subsequent legends of the birth of the Virgin. Anna and her husband, Joachim, have long been childless, and this fact has brought sorrow and humiliation to both. Angels appear to both parents independently, announcing that their prayers have been answered. In joy Anna promises to dedicate the child to lifelong service to God. Mary is born. Anna gives thanks, rears the child until she is three, then takes her to the temple. The story is strongly reminiscent of that of Hannah—even the name is the same—the mother of Samuel.

According to a late legend (quoted in Migne, *Dictionnaire des Légendes,* vol. II, col. 105, and found in one MS of the Gospel of Pseudo-Matthew [*see* PSEUDO-MATTHEW, GOSPEL OF]), after the death of Joachim she was married two more times, by angelic direction, first to Cleophas, to whom she bore a second Mary, subsequently the wife of Alphaeus; then to Salome (Salomas?), to whom she bore a third Mary, subsequently married to Zebedee. The legend may reflect the tendency in certain Coptic accounts to identify Mary the Virgin with all the Marys of the gospels. M. S. ENSLIN

4. Douay Version form of HANNAH.

ANNAAS. KJV Apoc. form of SENAAH.

ANNAN ăn′ən ['Αννάν] (I Esd. 9:32); KJV ANNAS. Same as HARIM 2.

ANNAS ăn′əs [חנגה, חנן; *in* 1 *below,* Ἄννας, *cf.* Josephus Ἄνανος; *in* 2 *below,* Ἀνάς]. **1.** A high priest as the result of his appointment by QUIRINIUS in A.D. 6/7, but deposed by Valerius Gratus in 15.

Josephus (Antiq. XVIII.ii.1) relates that Quirinius deprived Joezer of the high priesthood and appointed Annas son of Seth (*ca.* 6/7). Valerius Gratus removed Annas, first substituting for him one Ishmael son of Phabi, but shortly thereafter appointed Eleazar son of Annas. A year later Eleazar was removed in favor of Simon son of Camithus; less than a year later Joseph Caiaphas came to the office.

2. KJV form of ANNAN in I Esd. 9:32. *See* HARIM.

S. SANDMEL

ANNIAS ă nī′əs ['Αννείς (B), Ἄννιας (A)] (I Esd. 5:16; KJV ANANIAS ăn′ə nī′əs. Head of a family listed among those who returned to Jerusalem with Zerubbabel. They are omitted in the parallel passages Ezra 2:3 ff; Neh. 7:8 ff. C. T. FRITSCH

ANNIUTH ă nī′əth ['Αννιούθ] (I Esd. 9:48). Same as BANI 5*d*.

ANNUNCIATION. The announcement or declaration by the angel GABRIEL to the Virgin Mary that she would bear a son who would be called Jesus, Son of God (Luke 1:26-38). (*See* MARY, MOTHER OF JESUS; VIRGIN BIRTH.) This promise parallels one made to Zechariah about his coming son, John the Baptist (Luke 1:5-23). In Matt. 1:18-25 an angel appears to Joseph with the forecast of Jesus' birth (cf. S-B, II, 98-100). In the apocryphal second-century Book of James, or Protevangelium (chs. 10–11), the Annunciation is retold with many added details.

"Blessed art thou among women" (Luke 1:28 Vulg.-KJV) is properly omitted in more recent versions, since the words are lacking in codices Aleph and B. They are an interpolation from vs. 42. Gabriel's entire salutation forms the scriptural part of the eleventh-century prayer called *Ave Maria.* The feast of Annunciation (Incarnation) is celebrated March 25.

ANNUNUS ăn′yōō nəs ['Αννουνον (A), B *omits*] (I Esd. 8:48); KJV ANNUUS ăn′yōō əs. A priest. The name does not occur in Ezra 8:19; it may be a corruption of the Hebrew phrase ואתו, "and with him," in the Ezra text. C. T. FRITSCH

ANNUUS. KJV form of ANNUNUS.

ANOINT. To smear or pour oil or ointment on the head or body of a person or on an object. This custom, with secular or religious connotation, appears throughout the whole biblical period, both inside and outside Israel.

1. Terminology
   a. In biblical Hebrew
   b. In LXX Greek
   c. In NT Greek
2. Kinds of anointing
   a. Secular
   b. Cultic-religious

Bibliography

1. Terminology. The Bible uses several Hebrew and Greek words which are usually translated "anoint."

a. In biblical Hebrew. The OT has three words for this concept. דשן occurs only once (Ps. 23:5). Its literal meaning is "to make fat." סוך or סיך is "pour" (Deut. 28:40; Ruth 3:3; etc.) as an ointment, "anoint." משח originally meant "to smear," as a house with vermilion (Jer. 22:14), or "to spread with oil" in preparation of food, as was done with the unleavened wafers (Exod. 29:2). It also refers to cosmetics, as in Amos 6:6, or to the consecration for the office of a prophet (I Kings 19:16), a king (I Kings 1:39), or an Aaronic priest (Exod. 29:7). This verb also describes the consecration of cultic objects for exclusive use in the temple (Exod. 29:36).

b. In LXX Greek. The LXX renders the Hebrew דשן with λιπαίνειν (Ps. 23:5), meaning "to oil" or "to anoint." The word סוך is translated almost always with ἀλείφειν, "to anoint" (Mic. 6:15); משח is equated with χρίειν (Exod. 29:36) or ἀλείφειν (Gen. 31:13), both of which mean "to anoint."

c. In NT Greek. The NT Greek uses the word μυρίζειν once (Mark 14:8), but more often ἀλείφειν is used (e.g., Matt. 6:17). The verb χρίειν is used in a metaphorical sense when referring to the anointing

of Christ (Luke 4:18). However, its derivatives ἐπιχρίειν (John 9:11) and ἐγχρίειν (Rev. 3:18) do not present any messianic connotation.

2. Kinds of anointing. ***a. Secular anointing.*** In the ancient Near East the daily toilet of the rich was completed by the application of scented olive oil or other perfumed ointments (*see* OINTMENT). The Hebrews anointed themselves for a festive occasion, for a joyous celebration, and for an everyday cosmetic (Deut. 28:40; Ruth 3:3; Jth. 16:8). The anointing had a connotation of gladness (Ps. 45:7—H 45:8). The head of the guest was anointed (Luke 7:46), and therefore anointing was not practiced in time of fasting (II Sam. 12:20; Matt. 6:17) or mourning (II Sam. 14:2; Dan. 10:3; Jth. 10:3). The cosmetic practice of anointing is widely attested in ancient Near Eastern literature and also by the many ointment containers and jars found by archaeologists. The cooling and pain-soothing effect of ointments, oils, and unguents prompted their frequent application in medical treatment (Isa. 1:6; Ezek. 16:9; Mark 6:13; Rev. 3:18). Jesus even applied clay upon the eyes of a blind man, according to one report on the healing of the blind (John 9:6, 11).

b. Cultic-religious. In the ancient Near East, as well as in Israel, both objects and persons were consecrated to cultic service by the rite of anointment. *See* CONSECRATION.

Among the objects consecrated by anointment were the sacred stones and pillars whose erection echoes ages of antiquity. The tradition centered around Jacob speaks of the anointment of the pillar of BETHEL in commemoration of the patriarch's vision (Gen. 28:18; 31:13; 35:14). Other objects connected with cultic and sacrificial worship were also anointed. Thus the altar (Exod. 29:36; Num. 7:10; etc.) with its utensils (Exod. 40:10; Num. 7:1; etc.), the tabernacle (Lev. 8:10) with its furnishings (Num. 7:1), and the ark (Exod. 30:26) were anointed. By the rite of anointment these objects were consecrated to cultic service and separated from secular use (Exod. 30:26-29). The reference in Dan. 9:24 probably alludes to the anointment of the holy of holies. It is possible that in preparation for war, the shields of the warriors were consecrated (Isa. 21:5 KJV) by anointment. However, this might merely refer to the treatment with oil of a shield made of leather and have no cultic significance, as the RSV translation:

> Arise, O princes,
> oil the shield!

would seem to indicate.

Among the persons consecrated to the service of the Lord, first must be mentioned the priests (Exod. 28:41; Lev. 6:13; Num. 3:3). According to priestly tradition, Aaron was anointed (Exod. 29:7; Lev. 8:12), and so was the high priest (Lev. 21:10). It appears that prophets were also anointed, at least in some cases, for Elijah received the command to anoint Elisha (I Kings 19:16), and a prophet, probably in a metaphorical sense, spoke of his anointment for the prophetic commission (Isa. 61:1). Further, in a poetic recounting of the sacred history of Israel, the patriarchs were referred to as "anointed prophets" (I Chr. 16:22; Ps. 105:15).

The anointing of the king was of primary importance. One of the Amarna Letters (*see* TELL EL-AMARNA) attests to the anointment of a king in Syro-Palestine during the fourteenth century B.C. The so-called Jotham's fable, which most likely had its literary conception in the premonarchic period, alludes to the anointment of kings (Judg. 9:15). The anointment of the king was not merely a part of the ceremonial of enthronement; it was of decisive importance, for it conveyed the power for the exercise of royal authority. By strength of anointment, the king became a theocratic vassal of the Lord, as texts like I Sam. 9:16; 16:3 indicate. The anointment of Saul (I Sam. 10:1), David (I Sam. 16:3), Solomon (I Kings 1:39), Jehu (II Kings 9:6), and Joash of Judah (II Kings 11:12) is reported in considerable detail. The anointment of Absalom (II Sam. 19:10) is incidentally mentioned, as is the anointment of Jehoahaz (II Kings 23:30).

The rite of the anointment of the king was originally executed by a prophet (I Sam. 10:1; I Kings 19:16; II Kings 9:6). It appears that the prophet Nathan also had an active share in the anointment of Solomon (I Kings 1:45). Later, the right to anoint the king apparently became the exclusive privilege of the priests (I Kings 1:39; II Kings 11:12). Some scholars have assumed that ancient Israel practiced, beside the theocratic anointment of the king by a priest or prophet, a democratic anointment in which the people anointed the king through its representatives, the elders. These scholars have suggested that the Hebrews of the nomadic period anointed their chieftains by stroking the head of the elected individual in the same manner as the nomadic Arabs of pre-Islamic times, and that also the anointment of the Israelite king was similar, at least in the early monarchic period. However, the biblical evidence is not sufficient for the support of this theory (cf. II Sam. 2:4; 5:3).

The theocratic character of the anointment is also exemplified by the fact that the king was the Lord's anointed (I Sam. 24:6, 10—H 24:7, 11; 26:16), and a vassal of God who reigned in God's stead over his people (I Sam. 10:1 LXX; II Sam. 6:21). The title "the LORD's anointed" was later shortened to "anointed," in Hebrew-Aramaic form *māshîaḥ*, "Messiah" (*see* MESSIAH, JEWISH), and was translated into Greek as χρίστος, or "Christ." Jesus was also anointed by God "with the Holy Spirit and with power" (Acts 10:38; cf. 4:27).

In the biblical period it was customary to use perfumed oils and ointments for the anointing of the body of the dead (Mark 14:8; Luke 23:56). The anointing of the dead could hardly have been without some religious significance, since the underlying thoughts of funeral rites in general indicate this.

S. SZIKSZAI

ANOINTED, THE [משיח]. In the OT, the designation of the king of Israel and later of the high

priest as the high official consecrated by the anointing (*see* ANOINT); in post-OT times, the title of the ultimate king, for which, however, the untranslated Aramaic or Greek forms of the word משיחא/Μεσσίας, "Messiah," and Χριστός, "Christ," are better known. *See* MESSIAH (JEWISH), § 1; CHRIST. E. JENNI

ANOS. KJV Apoc. form of VANIAH.

ANT [נמלה; Akkad. *lamattu;* Amarna *namlu;* Arab. *naml* (*plural*)]. An insect of the order Hymenoptera, to which bees and wasps also belong, and, more specifically, of the superfamily Formicoidea. Ants are social insects with three highly developed phases (male, female, and worker), each with specific functions which contribute to the colony's existence. One queen may serve a community of from 20,000 to 500,000 workers and males. The formicaries (nests), which are usually constructed underground in Palestine to avoid excessive heat, contain special chambers serving as nurseries, granaries, or fungus gardens.

From Bodenheimer, *Animals of the Bible* (Tel Aviv: The Dvir Company Ltd.)

28. Different phases of the harvester ant (*Messor Semirufus*)

The ant is referred to only twice in scripture (Prov. 6:6; 30:25). In both cases reference is made to the wisdom, foresight, or industriousness exercised in summer by these creatures in storing up food for winter. This delineation aptly describes the *Messor semirufus,* a harvester ant, with nests near grain fields, threshing floors, or granaries.* Grain is collected from among the sown seed before it germinates, as well as from that available at harvest time. These ants are even known to bite off the radicles of kernels to prevent germination. On sunny days moist grain from their underground granaries is carried out and spread in the sun to dry. Fig. ANT 28.

Bibliography. F. S. Bodenheimer, *Animal Life in Palestine* (1935); W. F. Albright, *BASOR,* 89 (1943), 31; A. D. Imms, *A General Textbook of Entomology* (1957).

W. W. FRERICHS

ANTELOPE [תאו (Deut. 14:5; KJV WILD OX), תוא (Isa. 51:20; KJV WILD BULL)]. Among the hollow-horned ruminant mammals (Bovidae) are a large number of animals which cannot be assigned to the oxen, sheep, or goats. These are generally classified as antelopes, and like all the Bovidae, and unlike the deer, their horns (sometimes absent from the female) are not shed annually but are a permanent part of their anatomy. The numerous varieties of antelope display great differences in size, but on the whole they are of more graceful build than the oxen, and they carry the head considerably above the level of the back.

It is clear that the GAZELLE, a species of antelope, was found in biblical Palestine, but whether other antelopes also lived there is uncertain. The תאו of Deut. 14:5 was presumably a wild ruminant (taken in a net; Isa. 51:20), and it must have been either an antelope or a deer, but otherwise it cannot be identified (*cf.* FAUNA § A2*fv*). The LXX in Deut. 14:5 renders it as ὄρυξ, an antelope which Herodotus (IV.192) speaks of as in Libya; the identification with the oryx (perhaps *oryx beisa* or *oryx beatrix*) is favored by Tristram (*NHB* 56-57).

See also FAUNA § A2*fiv*, where דישון (RSV IBEX) is identified as an antelope. W. S. MCCULLOUGH

ANTHOTHIJAH ăn'thō thī'jə [ענתתיה] (I Chr. 8:24). KJV ANTOTHIJAH ăn'tō thī'jə. One of the sons of Shashak in the genealogy of Benjamin.

ANTHROPOLOGY. *See* MAN, ETHNIC DIVISIONS OF; MAN, NATURE OF.

ANTHROPOMORPHISM ăn'thrə pə môr'fĭz əm. Language of analogy that portrays the personal character of God by ascribing to him human characteristics, or human feelings (anthropopathism). *See* GOD, OT VIEW OF, § 3*c*.

ANTICHRIST ăn'tī krīst' [ἀντίχριστος]. Strictly defined, a mythical demonic or demonic-human adversary of Christ who will appear before the Second Advent as the last oppressor and persecutor of the Christians, only in turn to be defeated and overcome by Christ in his return to earth. The term has also been used for the opponent of a Jewish messiah, but in such cases "antimessiah" is preferable. More broadly, the term is also applied to a historical or mythical potentate who wages war against the faithful. Closely associated with the concept of the Antichrist, and at times assimilated to it, is that of a pseudo Christ, who will deceive and lead many astray by his pretensions to be the Christ, by his miracles, and by his false teachings.

Origins of the Christian concept of the Antichrist as the opponent of Christ in his second advent are somewhat obscure. It should be noted that usually the Antichrist appears in an apocalyptic context insofar as Christian sources are concerned. Also, he is not the adversary of the Jesus of history; on the contrary, he is to be the opponent of the apocalyptic Christ on his return to earth. Apparently, in connection with the dualism of apocalypticism, it was but natural that this concept of an Antichrist should arise. Just as Satan, his demons, and his wicked followers were considered to be adversaries of God, his angels, and the righteous Christians, the belief in an Antichrist as the evil counterpart of Christ developed. Since Christ was considered to be God incarnate, so the Antichrist may be a kind of incarnation of Satan. Furthermore, as previously noted, he may appear as a pseudo Christ, a demonic imitation of Christ. Conceivably an attempt to provide a counterpart for the Messiah was also in part responsible for the rise of the Jewish belief in an antimessiah.

Gunkel, followed by others, has proposed that the

roots of the idea are to be found in the Babylonian chaos myth according to which Tiamat, ruler of the waters and the deeps of darkness, rebelled against the gods above, but was overcome by Marduk, the son of the god Ea. Others have found its beginnings in the dualism of the opposing supernatural forces of good and evil in Iranian beliefs.

1. Jewish prototypes. However, there are some Jewish prototypes—if, indeed, not antecedents and models—for the Christian concept of the Antichrist. Among these is the account of Gog of Magog in Ezek. 38–39, where Gog, either an actual or mythical adversary of the Jews, was, with his people, to be destroyed by God. In the development of this theme Gog of Magog (or GOG AND MAGOG) becomes not only a tyrannical oppressor of the Jews but also an opponent of the Messiah, who will destroy him. At times the name is omitted, but the theme is the same. A late stage is found in the neo-Hebraic Apocalypse of Elijah (*see* ELIJAH, APOCALYPSE OF). After the forty-year reign of the Messiah Winon with the saints in Jerusalem, Gog and Magog will gather all of the peoples of the earth to make war against the holy city, but they will be utterly defeated and slain by God and the Messiah.

In Daniel, Antiochus IV, the cruel persecutor of the Jews, depicted as a little horn, appears almost a mythical person; he will magnify himself against God, but will be brought to an inglorious end, possibly by Michael, the guardian angel of the Jews. Strictly speaking, Antiochus is not an antimessiah, for there is no messiah in Daniel; however, with some modifications he became a prototype of the Antichrist.

A somewhat different tradition is provided by the TESTAMENTS OF THE TWELVE PATRIARCHS, with Beliar, a demonic figure from the tribe of Dan, causing Israel to turn aside from the worship of God. However, the Messiah, of the tribe of Levi, will bind him and cast him into everlasting fire (cf. Test. Dan 5:10-11; Test. Levi 18:12; Test. Judah 25:3). Belial plays a prominent role in the Qumran document known as the War of the Sons of Light with the Sons of Darkness, for he is the demonic opponent of God and the leader of the Sons of Darkness in the conflict with the Sons of Light. He will finally be humbled and abased, possibly by Michael, Israel's angelic guardian (cf. chs. 1; 13; 16). This nonmessianic nonapocalyptic work throws further light on the Belial tradition.

In IV Ezra 11–12 (from the end of the first century) the Roman oppressors of the Jews are symbolized by an eagle with three heads and twelve wings. A lion, symbolizing the Messiah, condemns the eagle for its tyranny and oppression, and predicts its destruction; while he prophesies, the eagle is destroyed by fire.

This same political motif is found in II Bar. 40, where a symbolic vision is explained to mean that the last kingdom to oppress the Jews, that of the Romans, will be defeated, and their leader will be taken captive to the Messiah on Mount Zion. The Messiah will convict him and put him to death, after which the messianic kingdom will be established.

Nero, the royal matricide who committed suicide by stabbing himself in the throat, came to be both an antimessiah and an antichrist. A rumor developed that Nero had not died but had escaped across the Euphrates; it was thought by some that he had indeed died, but that he would be restored to life. In either case it was predicted that he would invade and devastate the Empire, also that he would besiege Jerusalem. Elements of this Neronic saga are found in the Sibylline Oracles. In one of several Neronic passages (5:93-110) it is predicted that Nero (referred to as the Persian) will ravage the Empire and will attempt to sack Jerusalem. God, however, will send a king (the Messiah) against him to destroy him and the kings with him, saving the holy city. Thus a mythical Nero becomes an antimessiah.

In certain neo-Hebraic sources the antimessiah is named Armilus, possibly a corruption of Romulus, the legendary founder of Rome. According to the Secrets of Rabbi Simeon ben Yohai, the wicked King Armilus will besiege Jerusalem and slay the Messiah ben Joseph, but he himself will be killed by the breath of the Messiah ben David. In the neo-Hebraic Midrash of the Ten Kings, Armilus is Satanic, for he is the offspring of sexual intercourse between Satan and the statue of a woman.

These and similar patterns of Jewish thought concerning the oppressors of the Jews and the antimessiah provided prototypes and sources, even, for the Antichrist of Christian beliefs, despite certain differences between the Jewish and Christian concepts.

2. Early Christian examples. One of the earliest relevant Christian passages (if not the earliest) is the Little Apocalypse of Mark 13 (taken over, with modifications, by both Matthew and Luke). Jesus is represented as predicting that before his second advent there will be many false Christs (not only one), as well as false prophets. The false Christs will perform signs and wonders and will deceive and lead people astray. At the same time there will be wars, famines, tribulations, and persecutions. It is not clear, however, that the false Christs will be responsible for these tribulations. Furthermore, nothing is said concerning their fate. Following the final tribulations, the Son of man is to come in the clouds with power and glory, and he will send his angels out to gather the elect. This passage, as it stands, is a prediction of pseudo Christs rather than of an antichrist. That it actually was a prophecy made by Jesus is open to serious question.

A second early Christian passage—how early depends upon the question of authorship—is II Thess. 2:10 (*see* THESSALONIANS, SECOND LETTER TO THE). First, there is to be a falling away, a defection, of the Christians, prior to the Second Coming. Then the "man of lawlessness" will appear; this "son of perdition" will oppose every god or object of worship, taking his seat in the temple of God, saying that he himself is God. Empowered by Satan, he will perform signs and wonders, deceiving those who are about to perish. When the Lord Jesus arrives, he will slay the man of lawlessness with the breath of his mouth. The readers are assured, however, that for the present the man of lawlessness is being restrained.

Whether Pauline or pseudo Pauline, this prediction is possibly the earliest Christian belief in an antichrist combined with a pseudo Christ. Some sug-

gest that the man of lawlessness is one of the Roman emperors, and that the restraining power is the Roman Empire. The reference to the desecration of the temple may be a reflection of the desecration by Antiochus IV or the attempt by Caligula. But the man of lawlessness is more than a historical character; he is a mythical figure who is, it would seem, the embodiment of Satan; he is the adversary of Christ in his second advent. He may even be a Belial antichrist, for according to a rabbinic etymology Belial means "without a yoke" (Sanh. 111*b*)—i.e., without the yoke of the law, hence lawless.

The Testament of Hezekiah (3:13*b*–4:18 of the Ascension of Isaiah), from about the end of the first century, presents a more fully developed antichrist tradition. It is predicted that in the last days there will be a falling away and much disorder in the church. Shortly before the second advent of the Beloved (Christ), Beliar, the demonic ruler of this world, will descend from the firmament in the likeness of a man, of a lawless king who had killed his mother (Nero). He will persecute the church, putting one of the Twelve (possibly Peter is meant) to death. He will also speak and act like Christ, will call himself God, will perform wonders and miracles, and will set his image up in every city for people to worship. During his sway of 3½ years many will follow him, but others will faithfully await the Lord's return. When Christ does appear with his angels and armies of holy ones, he will drag Beliar and his armies into Gehenna. A messianic interim of indefinite duration will follow.

It is obvious that the Antichrist and the pseudo Christ are assimilated into one person in this form of the tradition. This person, moreover, is a mythical demonic-human character, for he is Beliar (the equivalent of Satan) incarnate in Nero redivivus. Symbolizing the Roman emperors, he claims to be a god; actually, the emperors are Satanic, not divine, and will soon be brought to an end by the Christ on his return in power.

The antichrist motif, it is needless to say, is present in Revelation, and in more than one form. According to Rev. 20:7-10, following his release after the millennium, Satan will cause Gog and Magog to gather the nations of the earth against Christ and the saints in Jerusalem. However, they are destroyed, not by the direct action of the Christ, but by fire from heaven, and Satan is cast into the lake of fire. Variations of this motif, but without the names Gog and Magog, are found elsewhere in Revelation (cf. 9:1-11, 13-19; 16:12-16; 17:13-14).

A theme later introduced into the antichrist pattern is that of the two witnesses from heaven (Elijah and Moses, apparently) who are slain by a beast that comes up from the abyss (Rev. 11:7 ff). They are revived and taken up into heaven. Nothing is said about the eventual fate of the beast. He is, to be sure, a persecutor, and may be a variant of the beasts in ch. 13; but in this passage he is not an antichrist.

The classical antichrist tradition in Revelation is that of the two beasts in Rev. 13; 16:12-16; 17; 19:19-21. The first beast, which is in part a combination of the four beasts of Daniel, has ten horns and seven heads, with a mortal wound that has been healed in one of the heads. He is given power and authority by the dragon (Satan), and men worship both the dragon and the beast. This first beast is Antichrist, and is Satan incarnate. As a whole, it symbolizes the Roman Empire; its heads are various emperors who are worshiped, with one, that with the healed wound, Nero redivivus.

The second beast has two horns like a lamb, but speaks like a dragon. It not only performs miracles and deceives people, but it also enforces the worship of the first beast under penalty of death. This beast, disguised in part by its lamb's horns as the Lamb of God but actually Satanic in character, is indeed a pseudo Christ. Also, it is a persecutor of the faithful. Its role is secondary to that of the first beast.

In ch. 17 the first beast is the consort of the scarlet woman—i.e., Roma, the divine personification of Rome. The two beasts make plans and raise armies for the final conflict, which is to occur when Christ returns to earth with his heavenly armies. The two beasts are captured and thrown into the lake of fire, and Christ slays their followers with the sharp sword that issues from his mouth (19:19-21).

This depiction of Antichrist and pseudo Christ in Revelation is mysterious; but when it is realized that it is a combination of various traditional views, much of the mystery is clarified. The antichrist tradition persisted for centuries in the Christian church in one form or another, as did its Jewish equivalent in Judaism. The belief even found its way into Mohammedanism, with Al Dajjal (the Liar) as a Jewish false messiah who would be slain by Jesus.

Although the antichrist tradition was popular among the early Christians, it was not universally accepted. Quite possibly this lack of general acceptance was due in part to the rejection of CHILIASM by many Christians.

3. Later developments. Among the early extracanonical references to Antichrist is the concluding chapter of the Didache, a church manual from the first part of the second century. It predicts that the deceiver will come as the Son of God, and that he will perform miracles and commit many iniquities, including persecutions. The account ends abruptly with the coming of the Lord on the clouds of heaven with his saints; we may perhaps infer that there is to be a conflict in which the Antichrist will be defeated by the Christ.

A fragmentary account is found in Barn. 4.5; the fourth kingdom of Dan. 7:7-8 is the Roman Empire, which apparently is identified with the Antichrist, who is to appear just before the last times. Polycarp, however, is in agreement with the Johannine letters that the Antichrist is the spirit of heresy, that everyone who denies the actual incarnation is, in fact, an antichrist, and that he who denies the resurrection and judgment is the first-born of Satan (Polyc. Phil. 7.1).

Irenaeus, by deciphering the Antichrist's mystical number, 666, identifies the Antichrist with Lateinos (the Roman Empire) or, preferably, with Teitan, partly because it is an ancient name of royal dignity belonging to a tyrant (Iren. Her. 5.30). His preference indicates a shift from the view of Revelation that the Empire was the Satanic Antichrist.

Hippolytus wrote an entire treatise on Christ and Antichrist, as well as a Commentary on Daniel. Vic-

torinus, a Diocletian martyr, dealt with the antichrist tradition in his Commentary on the Apocalypse, as did Lactantius in the seventh book of his Divine Institutes. The latter predicts two antichrists; this theme is more fully developed by Commodian (middle of the fifth century) in his Apologetic Poem against Jews and Gentiles. The Goths will conquer Rome and redeem the Christians. Then the first antichrist, Nero, will appear, reconquering Rome and persecuting the Christians for 3½ years. He, in turn, will be conquered by the second and Jewish antichrist from the East, who will then go to Judea, where he will be worshiped by the Jews. At last Christ himself will come; he will defeat the second antichrist and his host, will convert the nations, and establish his kingdom in Jerusalem.

Certain popular writings of this period, such as the Apocalypse of Pseudo-John, the Apocalypse of Zephaniah, and the Greek Revelation of Esdras, depict the Antichrist as a horrendous, monstrous giant, not as a beast or a dragon. Numerous antichrist treatises or works containing the antichrist legend continued to appear, and were attributed, at times incorrectly, to writers such as Ephrem, Bede, Methodius, Adso, Nerses, Cyril of Jerusalem, Chrysostom, and others. The widespread dissemination of the belief is indicated by its appearance, not only in Greek and Latin texts, but also in Syriac, Coptic, Ethiopic, Armenian, Persian, and Arabic as well.

Attempts were made to identify the Antichrist with historical or contemporary persons. "Mohammed" was transformed to "Maometis" to conform to the number of the beast, 666. From time to time the Mohammedans, Saracens, and Turks (as well as the Jews) were considered to be the Antichrist.

Joachim of Floris (died 1202) stimulated speculation concerning the identity of the Antichrist; he believed that the Antichrist would be a pseudo pope. Persecuted Christian groups, however, such as the Waldensians and the Spiritual Franciscans, believed that there was an even closer relationship between the Antichrist and the papacy. Ubertino, a leader of the Spirituals, specifically called Boniface VIII the beast from the sea, the seven heads being his seven vices and the ten horns the Ten Commandments, which he flouted. He identified Boniface' successor, Benedict XI, with the second, lamblike beast, for his pretensions to sanctity made him more acceptable, even though he was as wicked as Boniface.

The Emperor Frederick II (whose guardian had been Pope Innocent III) was excommunicated by Pope Gregory IX in 1239, following years of dissension and quarrels between the two. Gregory termed the Emperor the beast from the sea full of words of blasphemy; Frederick replied by calling the Pope the great dragon who deceives the whole world, the Antichrist. Just how much of this name calling was rhetoric and how much was to be taken literally, is difficult to determine, as is the case with later, similar invectives.

The pre-Reformation and Reformation period, during which the political and ecclesiastical power of the papacy and church were at issue, and the corruption and immorality of many of the higher clergy were evident, the charge that the Roman church was Babylon and the papacy the Antichrist was made with increasing frequency. Wyclif, Huss, Luther, Calvin, Zwingli, Knox, Cranmer (just before his death at the stake), and other Reformers were in general agreement in these identifications. On the other hand, the Reformers themselves were accused of being the antichrists.

These charges and countercharges have not been made so frequently in recent history. However, modern political leaders, considered by their opponents as despots and tyrants, have been called antichrists, with the wars they were engaged in being considered the final conflict. Among these may be listed Napoleon, Napoleon III, Kaiser Wilhelm, and Hitler.

The antichrist tradition has had a long and involved history. Its origins are somewhat obscure, but the use made of it through the centuries in the Christian church is fairly clear. For many Christians it is still an important belief, even if the Antichrist is not identified with any actual person, but is considered a supernatural embodiment of evil.

ANTI-LEBANON. The E mountain range parallel to LEBANON. In antiquity several names were probably used, referring to various peaks. There does not seem to exist a general name in Hebrew or in any other ancient language, or in Arabic, though sometimes Jebel el-Sharq is used. A. HALDAR

ANTILIBANUS ăn′tĭ lĭb′ə nəs ['Αντιλίβανος]. A Latinized form of the Greek name of Anti-lebanon as occurring in the LXX, Josephus, and other Greek sources. *See* LEBANON.

ANTIMONY ăn′tə mō′nĭ [פּוּךְ, כּחל; LXX στιμμί; Vulg. *stibium*]. An element (Sb) with the appearance of tin or lead: hard, brittle, almost as heavy as iron.

To the biblical writers both Hebrew terms seem to be general terms for eye paint (*see* COSMETICS). Eye paint appears in late OT passages (II Kings 9:30; Jer. 4:30; Ezek. 23:40), in reference to women of unworthy character. *See* EYE PAINT.

In Isa. 54:11 the word פּוּךְ seems to refer to some rare black jewelers' cement which by kohl-like outlining would make precious stones appear larger and more colorful. In I Chr. 29:2, כּחל appears in a list which includes precious stones. *See* JEWELS AND PRECIOUS STONES.

ANTINOMIANISM ăn′tĭ nō′mĭ ə nĭz əm [ἀντί, against, *plus* νόμος, law]. The doctrine that the moral law is made void through faith, and that faith alone is necessary to salvation. The term "antinomian" is not biblical, but was used by Luther to describe the views of Johannes Agricola. In the NT, however, the *idea* of antinomianism is attacked in the book of James. The author asks: "What does it profit . . . if a man says he has faith but has not works? Can his faith save him?" (2:14)—i.e., can his faith,

without works, save him? The implied answer is obviously, No. James appears to be attacking a misunderstanding of Paul's doctrine of justification by faith (cf. Rom. 3:23 ff; *see* JAMES, LETTER OF, § 2). For Paul, however, faith was impossible without works; for the justified man had received the Spirit, and where the Spirit was given, the fruits of the Spirit must appear. *See* PAUL § 8.

Antinomianism is never defended in the NT. It prevailed in some forms of Gnosticism, and has been defended periodically in the history of the church: by Johannes Agricola, in Germany, in the sixteenth century; by some Anabaptists in Germany and Holland; by Saltmarsh and some of the so-called "sectaries" during the protectorate of Cromwell in England; and later in England by some of Wesley's followers.

29. Ruins of aqueduct at Antioch in Pisidia

Antioch is located in the border zone between the ancient districts of Pisidia and Phrygia. It is sometimes called Pisidian Antioch (as in Acts 13:14). but Strabo refers to it as "near Pisidia" (XII.557). The ancient site has been identified some two miles to the E of modern Yalvaç (district of Isparta), SW of Aksehir. The city of Antioch lay on a plateau, its position commanding the plain of Yalvaç and well protected by natural defenses.

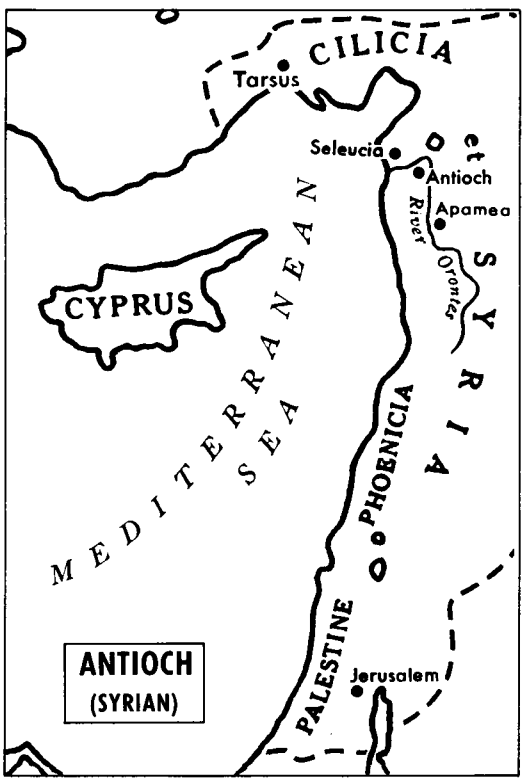
Although habitation in the vicinity of Antioch must date back to more ancient times, the city proper was a Hellenistic foundation of Seleucus I or Antiochus I, allegedly colonized by settlers from Magnesia on the Maeander (Strabo XII.577). Antioch served the Seleucids as a border fortress and a safeguard against the Pisidian mountaineers. After the defeat of Antiochus III by the Romans, the city was declared free (188 B.C.). In 36 B.C., Antony made it part of the domain of the Galatian king Amyntas,

after whose death the city was incorporated in the Roman province of Galatia (25 B.C.).

The Romans established Roman veterans in Antioch as colonists (*coloni*) among the natives (*incolae*). The official name of the city became Colonia Caesarea (as it appears on coins of Augustus), although the old name of Antioch was not abandoned (Antonine and later coins have "Col. Caes. Antiochea"). The Romanization of the city was undertaken seriously. The official inscription of Augustus' achievements was prominently displayed in Antioch (in Latin only as "Monumentum Antiochenum"). A cult of Augustus was established in the city during his lifetime. For practical and military purposes two new Roman roads were built, starting from Antioch, to establish communications in Pisidia around the lakes to the SW and SE (completed in 6 B.C.). Antioch was the center of enterprise in the process of the Romanization of Pisidia.

Apart from the Greek-speaking inhabitants and Roman colonists, Antioch must have contained a Phrygian element (bilingual by this time) and a large Jewish community, the latter settled in Seleucid days. Paul preached in the synagogue of Antioch (Acts 13:14-43) to a congregation of Jews and Greek-speaking Gentiles.

The ruins of Antioch were explored by many travelers and partially excavated. Some of the former magnificence of the city was reclaimed. The city walls are still prominent on three sides; the fourth (E) side is steep and overlooks the River Anthius. The main square of the city is the Augusta Platea. On its E side stood a richly decorated (tetrastyle prostyle) temple of Corinthian order, presumably the temple of Men and Augustus. Much of its sculptural elaboration is preserved. A monumental staircase of twelve steps and Propylaea with three archways connect the square of Augustus with the lower square of Tiberius (Tiberia Platea). Victory reliefs commemorating land and sea battles decorated the gate. The theater, which lies in the W part of the city, is in dilapidated condition. Farther W a triple city gate of the early third century A.D. displays pretentious decorations in a style inferior to that of the earlier buildings.



To the E of Antioch, overlooking the city from a spur of the mountains, lies the sanctuary of Men Askaios or Askaenos. An important pagan cult complex, which was active from Hellenistic into late Roman times, was identified here.

Antioch remained an important town in Byzantine times. A fourth-century basilica is noticeable for its mosaics and Byzantine graves. The city still existed as a fortress during the Crusades.

Bibliography

1. Location. Antioch, at the head of navigation on the Orontes River, was important throughout antiquity as a center of trade between the Mediterranean world, the Syrian hinterland, and the Eastern countries. Its seaport at the mouth of the Orontes was Seleucia Pieria, one of the principal harbors of the E Mediterranean. Antioch also lay on the best land route between Asia Minor, Syria, and Palestine. Its prominence as a cultural and commercial meeting point contributed to the unique role which Antioch played in early Christian missions.

2. History. The value of the site was early recognized, and it was occupied by traders from early historic times; and after the conquests of Alexander the Great had spread Hellenism through the Near East, the foundation of Antioch by Seleucus I (*see* SELEUCUS 1) in 300 B.C. played an important part in the establishment of the Greek and Macedonian control of Syria. From the first, the city had a mixed population of Macedonians, Greeks, and native Syrians, plus a colony of Jewish veterans of Seleucus' army who were given land around Antioch as a reward for their services. As the capital of the Seleucid dynasty in Syria, Antioch soon attained a political importance and a high degree of commercial prosperity which made it a wealthy and sophisticated metropolis in which Greek civilization flourished and came into close contact with oriental cultural and religious ideas. In this respect Antioch was more actively connected with both oriental and Greek interests than its sister Hellenistic capitals, ALEXANDRIA and PERGAMUM; and it was in closer touch with Rome and the W Mediterranean, as well as with Greek cities of Asia Minor and Greece. Enterprising Syrian traders from Antioch are attested everywhere throughout the Mediterranean, and the exports of Syria—wine, grain, dried fruit, and leather—passed through Antioch and were carried to Italy and Gaul.

When the development of Roman commercial and political interests in the E Mediterranean resulted in the occupation of Syria in 64 B.C., Antioch became the capital and the military headquarters of the new province of Syria, governed by a *legatus Augusti pro praetore*. The city was enlarged and beautified, along Roman lines, by a succession of benefactors, notably Julius Caesar, Augustus, and Tiberius, with the assistance of King Herod, who was anxious to show that he was a friend of the ruling power. The Romans, as was always their practice when occupy-

Glanville Downey

31. Map of Antioch (Syria) partially restored

ing a new province, improved the road system and developed the seaport, Seleucia Pieria, so that the communications of Antioch both with Syria and Palestine and with the W Mediterranean were made more rapid and more secure; and the city began to enjoy the Pax Romana which was in time to offer a needed measure of security and police protection to the Christian missionaries.

All this time the large and ancient Jewish colony enjoyed good standing in the community and attracted to its ceremonies and teaching (in the Greek-speaking synagogues) a number of Gentiles

who found Jewish monotheism and ethics more satisfying than the beliefs offered by the Greek and oriental philosophies and religions. Among the persons thus attracted to Judaism and familiar with its teaching may have been Nicolaus of Antioch, an early proselyte and one of the seven deacons of Jerusalem (Acts 6:5). We do not hear that the early Christian preachers at Antioch had to contend with Jewish fanatics as they did at Jerusalem, and in any case Antioch, as a large non-Jewish city and a major Roman administrative center, must have enjoyed a degree of public order which was not possible in a turbulent place like Jerusalem.

At the same time, the original mystery cults had made familiar in Antioch their doctrines of salvation and of death and regeneration, and their promises for the afterlife. As a result of all these developments, which had been maturing for many generations, the population of Antioch in the time of Christ was characterized by an eclectic intellectual spirit and an interest in religious inquiry which combined with the prosperous atmosphere of the city to produce an environment in which the Christian teaching, when it came, could be received in non-Jewish circles with sympathetic interest. In all these ways, Antioch differed fundamentally from the other cities outside Palestine in which the Christian mission might have found a start, and the whole history of the city, prior to the time of Christ, had given it a unique character as a place in which the followers of the Way could begin their expansion.

3. Antioch in the NT. When a persecution broke out in Jerusalem following the execution of STEPHEN, some followers of Jesus fled as far as Phoenicia, Cyprus, and Antioch, preaching the word only to Jews (Acts 11:19). In Antioch, however, some of the fugitives, who were Greek-speaking Jews from Cyprus and Cyrene, began to preach to "Greeks"—i.e., Greek-speaking Gentiles, not necessarily Greeks by birth (Acts 11:20). Some MSS of Acts, including the "Antiochene" textual tradition (*see* TEXT, NT), say that they preached to HELLENISTS—i.e., either Greek-speaking persons in general or Greek-speaking Jews; but in the case of Antioch, the writer clearly intends to distinguish between Jews and non-Jews (cf. Acts 14:1). Some of the Greeks to whom the word was preached were doubtless Gentiles who had attended the synagogues and were familiar with the background of the new teaching (cf. Acts 17:4).

Many were converted (Acts 11:21), and the missionaries had not to fear Jewish fanatics like those in Jerusalem. The Jerusalem elders sent BARNABAS—a native of Cyprus like some of the early missionaries in Antioch—to report on the novel undertaking (Acts 11:22). Seeing that the work prospered, Barnabas brought PAUL from Tarsus, and the two spent a year in Antioch teaching (Acts 11:24-26). Local tradition was that they preached in a street named Singon or Siagon ("Jawbone") near the Pantheon (Malalas 242).

It was in Antioch that the followers of Christ first came to bear the name "Christians" (Acts 11:26). The origin of the term is uncertain (*see* CHRISTIANS, NAME OF). It may have been a derogatory nickname invented by the Gentiles, or a title devised by the Christians themselves, or a term originated by the Roman police, who found it necessary to have an official designation for the new sect, which was becoming distinct from Judaism.

Concerning the size, composition, and administration of the Christian community, we have little evidence. It is said that "a great number . . . turned to the Lord" and that Barnabas and Paul "taught a large company of people" (Acts 11:21, 26), but we do not know what the basis of comparison was. There seem to have been no titles designating chiefs like those in Jerusalem (*see* MINISTRY). The only indication of how the community was led is the list of five men who, it is implied, were the most prominent and active in the local ecclesia—namely, Barnabas; Symeon NIGER; LUCIUS OF CYRENE (identified by some with the evangelist LUKE); MANAEN, "a member of the court of Herod the tetrarch"; and Paul. These are called "prophets and teachers" (Acts 13:1; *see* PROPHET IN NT). The ecclesia is simply the general group of the faithful in the city (Acts 11:26; 14:27), who are called the "brethren" (Acts 15:1, 32-33) and the "disciples" (Acts 11:26; 14:28).

The new converts doubtless met, as Jesus and his followers had done, in private houses for teaching and fellowship, and for prayers and breaking of bread. Jewish and Gentile Christians presumably met separately, at least insofar as orthodox Jews observed the law in the matter of eating with Gentiles. Later developments (*see* GNOSTICISM; NICOLAITANS) indicate that there must have been certain groups which followed their own interests in a blending of Christian teaching with other doctrines, especially the mystery cults; and different kinds of information concerning Jesus and his teaching must have been in circulation (cf. Luke 1:1).

According to Acts, when (as predicted in Antioch by AGABUS) a famine occurred *ca.* A.D. 46, the community at Antioch sent Barnabas and Paul to take financial aid to the brethren in Jerusalem (Acts 11:27-30). The conversion in Antioch of numbers of Gentiles had raised the question of the application of Jewish law to these converts, and it was apparently on this visit that the problem was discussed between Barnabas and Paul and the Jerusalem elders (Acts 15:1 ff; *see* COUNCIL OF JERUSALEM; GALATIANS, LETTER TO THE). Paul maintained that it was impracticable to apply the law to non-Jews, since, to a Gentile, CIRCUMCISION would mean that he was becoming a Jew. Some understanding seems to have been reached, to the effect that the mission to the Gentiles should not have to observe the law strictly (Acts 15:19-35; Gal. 2:1-10). This agreement is said to have been embodied in a letter addressed to the community in Antioch (Acts 15:23-29). Peter visited Antioch and ate with Gentile Christians (Gal. 2:11-12), but James sent JUDAS BARSABBAS and SILAS as emissaries who sought to win over the Jewish Christians to the view that the law must be enforced on Gentile converts (Acts 15:22-29; Gal. 2:12). Peter and Barnabas were impressed by these arguments, and, after a dispute, broke away from Paul (Gal. 2:11-13). In time, however, the Jewish Christian community in Antioch disappeared.

The date of the dispute is not known; and we do not have clear evidence as to the dates of the mis-

sionary journeys, based on Antioch, of Paul and others (*see* CHRONOLOGY OF THE NT; PAUL). According to Acts, on the first expedition Barnabas and Paul traveled together, with the blessing of the community, which presumably provided what financial aid it could (Acts 13:2-4). For the next journey (Acts 15:36-41), Paul and Barnabas, after a disagreement, separated, and Paul traveled with Silas, while Barnabas took with him JOHN MARK, who had been brought from Jerusalem. After his third journey Paul returned, not to Antioch, but to Jerusalem (Acts 18:22–21:18). This was the end of Paul's connection with the community at Antioch, where his work had been of vital importance for the future of Christianity. One problem of NT scholarship is to determine what happened in Antioch, after Paul's time, to produce the particular type of Christianity, different in certain respects from Paul's teaching, which is found in the letters of IGNATIUS, who was bishop of the city early in the second century.

In debates in post-apostolic times over Roman primacy and the rank of the "apostolic churches," Peter was sometimes spoken of as "founder" or "first bishop" of the church at Antioch. The problem of his episcopacy is obscure. However, Peter apparently was the first of the Twelve to visit Antioch (Gal. 2:11).

4. Archaeology. Modern Antakya is much smaller than classical Antioch, and not many ancient remains are preserved aboveground. Excavations were conducted in 1932-39, but could not be continued long enough to recover significant evidence of the apostolic period.* The "Chalice of Antioch," supposed to have been used at the Last Supper, and then taken to Antioch, dates from a later period, but is not a modern forgery, as some have claimed. Fig. ANT 31.

ANTIOCH, CHALICE OF. A much-discussed example of Christian art, said to have been found in 1910 at Antioch, or at least in Syria. It consists of three parts: a plain inner cup, an outer gilded openwork shell, and a solid base, all of silver. A circle of rosettes tops the openwork shell; the framework below, consisting of vines, contains birds, animals, and twelve seated figures, divided into two groups, each with one central figure and five other persons facing him. The body of the cup has been bent out of shape slightly, and this has caused the silver to crack a little. The chalice is now in the Cloisters, New York City.

Its date has been much disputed. Each of the first six centuries has been proposed (the extreme view that the chalice is a modern forgery has been adequately refuted). G. A. Eisen has argued that the inner cup was used at Jesus' Last Supper; he dated the outer shell in the second half of the first century

32. The Chalice of Antioch

A.D., perhaps in the sixties. The figures, he held, are the youthful Jesus with the four evangelists and John's brother James, and the risen Jesus with the NT letter writers Peter, Paul, James, and Jude, and Peter's brother Andrew. Almost all students of ancient art reject this view. It assumes an interest in portraiture which the NT never reflects. It assumes that each of the NT books was written by the traditional author, and the NT canon essentially completed by *ca.* 64. These assumptions are unfounded. The chalice dates from the fourth or fifth century, and the figures probably represent Christ and ten of the NT apostles or authors. The piece is a valuable example of ancient Near Eastern Christian art. Fig. ANT 32.

ANTIOCHIA ăn'tĭ ŏk'ĭ ə. KJV Apoc. form of ANTIOCH.

ANTIOCHIANS ăn'tĭ ŏk'ĭ ənz [Ἀντιοχεῖς]. "Citizens of Antioch," a title of honor and privilege requested for certain inhabitants of Jerusalem by the high priest Jason (*see* JASON 2), and held by his envoys to the games at Tyre (II Macc. 4:9, 19).

The privilege of registering some of the inhabitants of Jerusalem as citizens of Antioch was requested by Jason as part of his program of creating a Hellenistic community in Jerusalem (II Macc. 4:7-17; cf. I Macc. 1:11-15). Probably only a restricted number of Hellenized Jews were registered as citizens of Antioch; they formed a legal corporation which constituted the Hellenistic city of Jerusalem. It is possible, but doubtful, that Jason's program included changing the name of Jerusalem to Antioch.

Coins and inscriptions show that the inhabitants of other cities in the Seleucid Empire were given the privilege of being called citizens of ANTIOCH (e.g., Gerasa, Ptolemaïs). In many cases the legal privileges conferred included the important right to coin money; this may have been intended in Jason's request, but it is not mentioned.

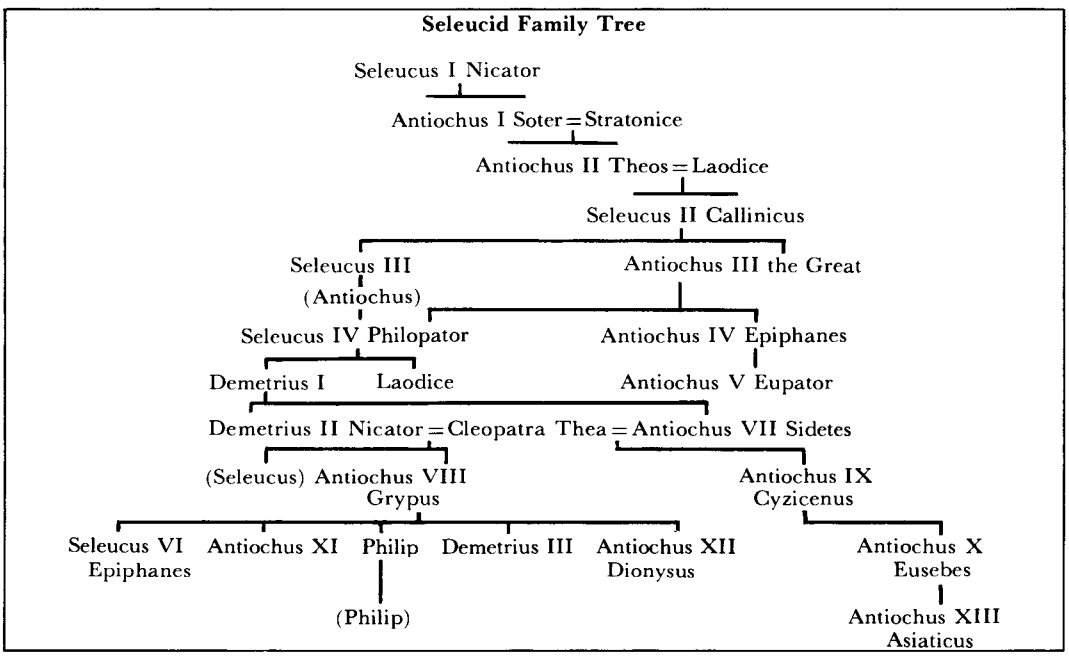
W. A. BEARDSLEE

ANTIOCHIS ăn tī'ə kĭs ['Αντιοχίς] (II Macc. 4:30). A concubine of Antiochus IV Epiphanes. Antiochus angered the inhabitants of Cilician Tarsus and Mallus by presenting their cities as a gift to his mistress.

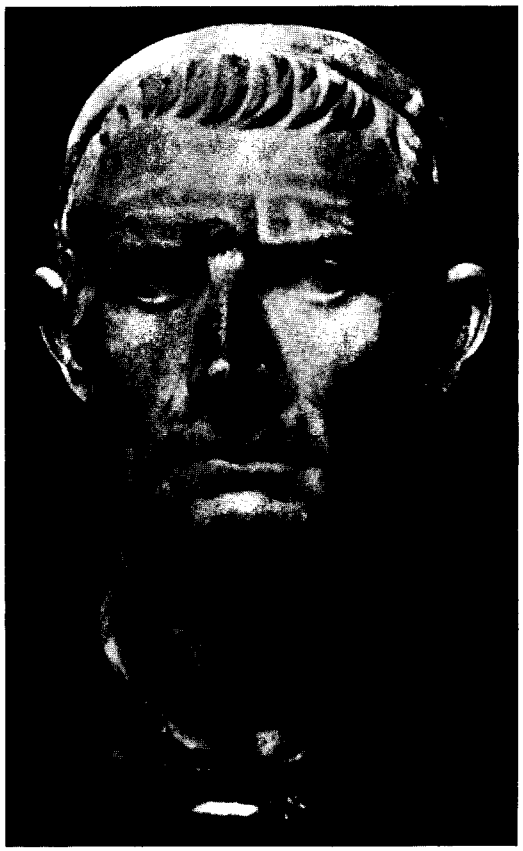
J. C. SWAIM



ANTIOCHUS ăn tī'ə kəs ['Αντίοχος, opposer]. A favorite name among the kings of the Seleucid dynasty of Syria (280 B.C. onward).

1. Antiochus I (280-261 B.C.), surnamed Soter ("deliverer") in accordance with the usual practice of the Seleucid kings of adding a second name. He was born in 324 B.C., the son of Seleucus Nicator (*see* SELEUCUS 1), one of the generals of Alexander the Great. The son succeeded his father in 280 B.C. and was slain in a battle against the Gauls of Asia Minor (Galatia) in 261. Much of his time had been spent in repressing them and the Celts, for which victories he acquired the name Soter, and in disputes concerning his claim to the throne of Macedon. As far as Coele-Syria (Palestine) was concerned, Antiochus was engaged in war with Ptolemy Philadelphus of Egypt, but he did not succeed in winning these territories (the First Syrian War). Otherwise little is known of this monarch.

2. Antiochus II (261-246 B.C.), surnamed Theos ("god"). Son of the foregoing, he married his half sister. Unlike his father, much has been said to his discredit: that he was immoral, drunken, and ruled by favorites. His second name or title was awarded by the Milesian people when he delivered them from their tyrant Timarchus; thereby the Jews of several cities of Asia Minor also received privileges of citizenship. Shortly after his accession he was attacked by Ptolemy Philadelphus (Second Syrian War) and lost some ports in Asia Minor. Little is known of this war, but it would appear that as a condition of peace in 250 B.C., Antiochus was compelled by Ptolemy to put away his wife Laodice and take in her place Ptolemy's daughter Berenice. Bitterly resenting the slight, Laodice is said to have poisoned her former husband when he tried to reconcile her, to have put to death the baby son born to him and Berenice, and to have secured the throne for her own son Seleucus II (*see* SELEUCUS 2). These reports may have been falsifications by Egyptians on behalf of Berenice. It is a fact, however, that Antiochus II was succeeded by his eldest son by Laodice, Seleucus II.



It is usual to interpret Dan. 11:6 of this king, for it is said that an alliance is made whereby the daughter of the king of the south comes to the king of the north, but that neither she nor her child nor he who obtained her should endure. These past events are recorded in Daniel as if they were still in the future.

3. Antiochus III (223-187 B.C.), surnamed the Great. The younger son of Seleucus II, he succeeded his brother Seleucus III. He was only twenty years old when he came to the throne, and was at first much under the influence of Hermeas, his minister. He lost no time in declaring war on Egypt, and led his army southward. During an ensuing truce with Egypt, he was engaged in putting down the rebellion of the pretender Molon in Media. Later he returned to the task against Ptolemy IV Philopator, and,

although in 218 he succeeded in establishing his position as far S as Ptolemaïs and eastward beyond Jordan, his success was short-lived, for, on emerging from winter quarters, he was severely defeated at Raphia near Gaza (217), and Egypt regained possession of Coele-Syria.

The next few years Antiochus spent in the East, as far as the Caspian Sea and India, where his successes gained for him the title "the Great." But Ptolemy Philopator died in 204, leaving behind an infant successor, and so Antiochus joined Philip V of Macedon in a scheme for partitioning Egypt

From *Atlas of the Bible* (Thomas Nelson & Sons Limited)

33. Antiochus III

between them, while he himself pressed on to the Sinaitic Peninsula with the assistance of certain elements in Judea. However, this territory was soon lost during the absence of Antiochus, who had to give his attention to an invasion from Pergamum, the ally of Rome, in the NW.

Retiring from this task, the indomitable Antiochus, endeavoring to emulate Alexander the Great, made another attempt to dislodge the Egyptian forces from Judea and actually defeated the Egyptian general Scopas at Panium in 198, thus finally placing himself in control of all Palestine. It was an important day for the Jews, and a sad one, for this severed completely their connection with the Ptolemies and Egypt, who had treated them with considerable tolerance. It meant the beginning of a regime which was destined to lead to fiercer persecution than the Jews had ever yet endured, and to utter tragedy. Military governors were appointed by Antiochus, taxes were imposed through tax farmers, but the temple was guaranteed inviolate and was subsidized. Josephus has much to say about these favors (Antiq. XII.iii).

In the treaty which Antiochus made with Ptolemy Epiphanes he gave the young Egyptian king the hand of his daughter Cleopatra in marriage, and he promised to grant the revenues of Coele-Syria with her. Whatever happened about this dowry, Antiochus retained sovereignty over all Palestine. His last years were busy with wars in Asia Minor and against Rome, which now virtually controlled the Mediterranean area; he was defeated by the Roman general Scipio Asiaticus at the Battle of Magnesia (190), and was killed in 187 in a rebellion.

Dan. 11:10-19 must refer to Antiochus III. The writer was contemporary with some of the events of this reign. III Macc. 1:1-7 gives what is probably a genuine account of the Battle of Raphia in 217.

Fig. ANT 33.

4. Antiochus IV (175-164 B.C.; or, according to some scholars, 175-163 B.C. [with an adjustment of one year in other dates listed below]), surnamed EPIPHANES ("the Manifest [God]"), which caused some of his enemies to nickname him "Epimanes" ("mad"). His coins* also include the titles νικηφόρος ("bringing victory") and θεός ("god"), and progressively represent his features as more and more like those of the Olympian Zeus. He was the younger son of Antiochus III the Great, and he followed his elder brother Seleucus Philopator (*see* SELEUCUS 4) on the throne, although Seleucus had a rightful heir, Demetrius. Antiochus had been a hostage in Rome for fourteen years after the Battle of Magnesia. Before he could take the kingdom, he had to rid himself of Heliodorus, his brother's murderer. He is known as one of the cruelest tyrants of all time, enterprising like his father, yet furious and precipitate almost to the degree of madness. His relations with Jerusalem and the Jews were particularly unfortunate. It was one of his major aims to obtain unity by spreading the movement of Hellenism throughout his dominions, and in this way he was brought into violent conflict with powerful Jewish elements. Fig. ANT 34.

34. Antiochus IV, called Antiochus Epiphanes; from a silver tetradrachma

At the beginning of his reign he was asked to intervene in a dispute between the high priest ONIAS (3) and his brother JASON (1) in Jerusalem. Of course,

Antiochus, who was an ardent devotee of the Olympian Zeus and of all things Greek, supported the Hellenizer Jason, and Onias had to flee. Jason became high priest after paying a large sum of money and promising Antiochus that he would vigorously pursue the policy of Hellenization among the Jews; and he extended a lavish welcome to the king in Jerusalem. He was soon supplanted by one MENELAUS, who promised Antiochus a much larger sum, according to the writer of II Maccabees. But Jason besieged Jerusalem on hearing a rumor that Antiochus was dead. The rumor was far from true, and the enraged king returned from his successful campaign in Egypt to attack Jerusalem with savagery and spoil the temple of its treasures, leaving behind an equally tyrannical governor named Philip. His relations with the Jews and their city reached a tragic climax in 168 B.C. when he was on his way to attack Egypt for the third time. Outside Alexandria he received peremptory command from the Roman consul Gaius Popilius Laenas to desist from his projects, evacuate Egypt, and restore all Egyptian territories. Antiochus was not in the best of tempers as he retired northward; he decided that Jerusalem should be wiped out and should be colonized with Greeks. He consigned this task to Apollonius with an army of over twenty thousand men. As Apollonius entered Jerusalem on the sabbath, he met with little opposition, and most of the male inhabitants were killed, the rest rallied to Judas Maccabeus away from the city, and the women and children were enslaved. Great damage was done to the city, and a garrison was built there and occupied by Syrian troops. Though Menelaus remained as high priest, religious practices were nonexistent.

Confident that his work was almost complete, Antiochus now issued his famous edict to the effect that throughout his kingdom all peoples should be at one in religion, law, and custom. Among the Jews was the one element which would not submit, and accordingly Antiochus proceeded to sterner measures. Regulations directed against the sabbath, circumcision, and the food laws, on pain of death, were followed by the appalling scandal of the altar of Zeus which he caused to be erected over the altar of burnt offering in the temple (probably the "abomination that makes desolate" of Dan. 11:31). The Jews were compelled to take part in heathen festivities and were put to death if found in possession of the Book of the Law. There were many martyrs among the more faithful of the Jews, and at last open rebellion broke out in 167 B.C. at the hill village of MODIN, near Jerusalem. The king's representative paid a visit to see whether the edict was being observed, and he was slain by MATTATHIAS, a priest of the family destined to be known later as the Hasmoneans, who then fled to the surrounding hill country. There was a great slaughter of Mattathias' followers, many of whom were too pious to break the sabbath by defending themselves. But they were prevailed on later to defend themselves at all costs, and Mattathias was joined by large numbers of the HASIDIM, who came to see that force must be used against the heathen tyrant until Jerusalem and the temple were cleansed. So there began a guerrilla warfare, with repeated attacks by the Hasmoneans upon the Syrian troops. Before long, however, Mattathias died (166), and his son JUDAS MACCABEUS succeeded to the leadership of the resistance movement and improved on the modest campaigns of his father. He went from one victory to another against the Syrian generals: Apollonius first, and then Seron.

Antiochus Epiphanes himself had, of course, heard of the Judean revolt and would no doubt have come in person to exterminate the Maccabeans, the followers of Judas, but he had more serious troubles elsewhere—revolts in Parthia and Armenia—which demanded his presence. He therefore left a regent named LYSIAS to be guardian of his son and at the same time to deal with the revolt of Judas Maccabeus. Lysias had orders to be quite ruthless—to depopulate the whole of Judea, make its people slaves, and lay it waste. The regent therefore dispatched three generals, PTOLEMY, NICANOR, and GORGIAS, with a large army for this task. Now the glories of Judas Maccabeus really begin. At Emmaus he routed Gorgias to such an extent that the whole Syrian army ignominiously fled from Judea. This involved the regent Lysias in a personal visit at the head of a still larger army in 165. Judas met the great man and inflicted upon him a severe defeat at Beth-zur. The only part of Judea which Judas did not now command was the Syrian citadel in Jerusalem. He restored the temple to its former glory and reintroduced the daily sacrifices on the twenty-fifth of Chislev, 165.

Judas' success served to drive the enraged Epiphanes to further madness, but he was powerless to restrain Judas. After an unsuccessful attempt to pillage the temple NANAEA in Elymais, Antiochus withdrew into the East, and it is said that he became really mad in Persia just before he died there. Josephus, I and II Maccabees (which do not agree on certain details), Polybius, and Appian are all authorities for the life of this king. The books of Maccabees and Daniel reflect the horror with which pious Jews regarded him. He is the king of fierce countenance—the little horn which challenges the host of heaven, a cunning and deceitful plotter, diabolical in the extreme.

5. Antiochus V (164-162 B.C.), surnamed Eupator ("born of a noble father"). While he was still a boy, he succeeded his father, Antiochus Epiphanes. Lysias had been appointed Eupator's guardian by his father, and with the boy-king he went up in 163 to relieve Jerusalem, which was besieged by Judas Maccabeus. Lysias was successful at Beth-zacharias, according to Josephus (but not II Macc. 13:16-17), and in turn besieged Jerusalem. He made peace, granting concessions of religious freedom to the Jews, the terms of which were soon broken when Antiochus destroyed the city's defenses and imprisoned the high priest. But he had to retire to Antioch in order to deal with Philip, who was a foster brother of the previous king, and a little later both he and Lysias were betrayed into the hands of a claimant to the throne, his cousin Demetrius Soter, who ought to have succeeded before Antiochus Epiphanes. Antiochus V and his regent were put to death in 162 B.C.

6. Antiochus VI (145-142 B.C.), surnamed on coins Epiphanes Dionysus. He was the son of Alex-

ander Balas (*see* ALEXANDER 2). He was set up as a claimant to the throne of Syria in 145, while still a boy, by TRYPHO during the reign of Demetrius Nicator.* The generals supported him, and so did

35. Antiochus VI; from a silver tetradrachma coin

Jonathan in Jerusalem. But Antiochus had not been long acknowledged king when Trypho secured his assassination and himself became king. Fig. TRY 79. Fig. ANT 35.

7. Antiochus VII (138-129 B.C.), surnamed Sidetes because he was brought up at Side. He took the place of his brother Demetrius and Trypho on the throne of Syria. He invaded Judea in 135 and, razing part of the walls of Jerusalem, was successful in making John Hyrcanus submit. Sidetes subdued the Parthians in 130, but the success was temporary, and he died while fighting.

8. Antiochus VIII (125-96 B.C.), nicknamed Grypus ("hook-nosed"). He was the second son of DEMETRIUS II. At first he reigned jointly with his mother, the notorious Cleopatra Thea. After a time his position was challenged by his half brother.

9. Antiochus IX (116-95 B.C.), surnamed Cyzicenus, but Philopator on his coins. He was the half brother of Antiochus Grypus; at first Grypus was victorious, when Cyzicenus challenged his power, but later the tide of fortune turned and Syria was partitioned between the half brothers. It was an opportunity for Rome to gain a footing here, and also for the Jews to make rapid progress toward complete independence under John Hyrcanus. *See* HASMONEANS § 3*b*.

10. Antiochus X (94-83 B.C.). The son of Cyzicenus; he expelled Seleucus VI, the son of Grypus. He was the third husband of the Egyptian princess Selene, who had married first Grypus and then Cyzicenus. Antiochus X had to meet opposition from other sons of Grypus, including Antiochus XI, and was finally expelled and killed in battle. The youngest son of Grypus was Antiochus XII, who also claimed the throne during this reign. Internal strife marked the end of the Seleucid dynasty, and in 83 Tigranes, king of Armenia, was able to master the whole of the kingdom of Syria and rule over it for fourteen years by means of a viceroy, until his own defeat by the Romans. Even then the royal house of Seleucus experienced one last spasm of life.

11. Antiochus XIII (69-65 B.C.), commonly called Asiaticus. The son of Antiochus X and Selene, he was permitted to reign by the Romans, until in 65 a representative of another branch of the family, Philip, staked a claim to the throne, but unsuccessfully. In 63 the Roman commander, Pompey, made Syria a Roman province and brought the Seleucid dynasty to its end.

12. The father of NUMENIUS; mentioned in I Macc. 12:16; 14:22. He is of no further importance.

TURNER

ANTIPAS ăn'tə pəs [Αντίπας, *probably a shortened* (Hebrew) *form of* Αντίπατρος]. **1.** An Idumean who, according to Josephus (Antiq. XIV.i.3), had been made "general of all Idumea" by "king Alexander and his wife"; father of 2 *below*.

2. An Idumean "who was very rich, in his nature an active and a seditious man" (Jos. Antiq. XIV.i.3). At enmity with Aristobulus, he sought in every way to calumniate him before Hyrcanus. As a result, "Hyrcanus, fearing for his life, fled to Aretas, of Arabia, who gave him refuge at Petra" (Jos. Antiq. XIV.i.4). Supported by Aretas, Antipas and Hyrcanus made an expedition against Aristobulus and gained a temporary victory. Scaurus, newly come from Pompey, however, sided with Aristobulus, and the army of Aretas and Hyrcanus was badly beaten at Papyron. This Antipas was the father of Herod the Great. *See* HEROD (FAMILY).

3. Son of Herod the Great by the Samaritan Malthace, one of the nine wives Herod had simultaneously. Antipas and his brother Archelaus were, according to Josephus (Antiq. XVII.i.3), "brought up with a certain private man at Rome." This Antipas was "Herod the tetrarch" of Galilee (Luke 3:1, 19), whose lust and sadism appear in his dealings with John the Baptizer and Jesus (Matt. 14:1-11; Mark 6:14; Luke 23:7-12). J. C. SWAIM

ANTIPATER ăn tĭp'ə tər ['Αντίπατρος]. Son of Jason, designated to accompany Numenius son of Antiochus to the Romans and the Lacedaemonians as envoys of the Jews for the purpose of renewing the "former friendship and alliance" (I Macc. 12:16; 14:22). J. C. SWAIM

ANTIPATRIS ăn tĭp'ə trĭs ['Αντιπατρίς]. A city *ca.* ten miles NE of Jaffa (Joppa) and ten miles N of Lydda (Ludd, Lod); named in honor of Antipater, procurator of Judea under Julius Caesar, when it was rebuilt by Antipater's son Herod the Great in 9 B.C. upon the site of Caphar Saba (S of modern Kefr Saba). Cf. Jos. Antiq. XVI.v.2.

Antipatris is mentioned only once in the Bible (Acts 23:31), as the destination of a night journey by 470 Roman soldiers conducting Paul as a prisoner from Jerusalem to Caesarea. Their mountainous descent from Jerusalem to Antipatris on the Plain of Sharon was *ca.* forty miles, while the second day's journey to the Roman capital was *ca.* twenty-five miles northward across the plain.

Antipatris served as a Roman military relay station (*mutatio*) and marked the border between Judea and Samaria. Josephus (War I.iv.7) recounts that Alexander Janneus (*ca.* 85 B.C.) constructed a moat and wall with a tower between Caphar Saba and

Joppa and that this was promptly destroyed by Antiochus of Syria.

It lay at the headwaters of the River Aujeh (the biblical Yarkon, the Greek Pegai, the medieval Nahr Abu Futrus, known also as the Jaffa River and the River of Antipatris) at Ras el-'Ain, well watered and fertile as Josephus reported. The Palestine Department of Antiquities excavated the ancient ruins in 1946, confirming the earlier identification of Alt and Albright that here was the site of OT APHEK, in existence as early as 2000 B.C., and of Hellenistic Pegai.

The Bordeaux Pilgrim *ca.* A.D. 333 made a "change" at Antipatris, and fifty years later the holy Paula is reported by Jerome to have stopped in this "small, half-ruined town." Antipatris was represented by Bishop Polychronius at the Council of Chalcedon in 451, and was then placed in the newly established Patriarchate of Jerusalem. It is mentioned as the location of massacres in 744, of Christians allied with the Ommiads. In the tenth century, Mukkadasi describes it as a "large place with a mosque, lying on the high road from Ar-Ramleh to Damascus." The ruins of the medieval Castle of Mirabel are still to be seen at Ras el-'Ain.

K. W. CLARK

ANTONIA, TOWER OF ăn tō′nĭ ə [Αντωνία]. The palatial guard tower rebuilt by Herod the Great at the NW corner of the temple court, which served as a royal residence as well as soldiers' quarters. The "Antonia" is not named in the Bible, but is referred to by the term παρεμβολή, "barracks" (KJV "castle"), only in Acts 21:34-37; 22:24; 23:10, 16, 32.

1. History. A tower on this site may go back to the time of Solomon, whose N wall probably made a turning at this point as it enclosed the temple mount. This point of turning is the highest rocky eminence in the neighborhood, an obvious selection for a tower (possibly the Millo, "solid tower," of David's fortifications). Such a tower must have shared the fortunes of the city walls in periodic destruction wrought by enemies, who usually attacked from the N. After the Exile, Nehemiah (2:8) speaks of rebuilding the *Birah* (Assyrian[?] "castle, fortress") on this site. Later rebuilt by Hyrcanus, it was known as the βᾶρις ("castle, tower") and was occupied by Maccabean rulers until the time of Herod the Great. When it was finally rebuilt by Herod in great splendor, it received the name Antonia to honor his friend and patron, Mark Antony. When in A.D. 6 Roman procurators began to rule in Jerusalem, the Antonia served as one of the official residences. The revolt of the Jews in 66 resulted in its destruction by Titus. Herodian masonry can still be seen in the lower courses of the modern barracks on the site.

2. Structure. The Antonia was strategically located on a rocky precipice seventy-five feet high, the rock being faced with smooth and slippery flagstones. This prominent position was more nearly impregnable because of the Tyropoeon Valley on the W and the deep trench on the N separating it from the hill Bezetha, with a wall and moat between. Above the rock the stone walls rose another sixty feet. There were four higher corner towers, each seventy-five feet except the SE tower, facing the temple court, which was a hundred feet high.

Courtesy of J. Gabalda et Cie., Paris

36. Pavement of the court in the Tower of Antonia

Josephus, our chief source, describes the spacious and palatial grandeur of the interior, with its many apartments, cloisters, baths, and large courtyards and barracks for the accommodation of troops. It served as both palace and fortress. Stairs gave access directly to the interior temple porticoes in the Court of the Gentiles, which ran along the N wall and the W (the latter broken by four entrances from the Upper City). There was also a subterranean passage to the Court of Israel, for emergency use. The Antonia was built square and probably had a central court. In such a court a procurator might deliver legal decisions. It is possible that this court survives in the pavement found under the Convent of Our Lady of Zion and the Convent of Flagellation. Indeed, it may be identified with GABBATHA, where Jesus appeared before Pilate (John 19:13). Fig. ANT 36.

3. Function. From David to Antigonus, last of the Maccabean rulers, this fortress on the rock faced outward against its northern enemies. But with Herod the Great and within the vast Roman state, the Antonia faced inward as guardian over the Jews. The highest tower faced the temple courts, and the chief activity of the garrison was to police the Court of the Gentiles, where crowds of worshipers gathered. Josephus reports that a Roman cohort (between five and six hundred men) was billeted in the Antonia, besides the larger forces in the Citadel of the Upper City to the W. Herod the Great held control over the high priest by requiring that the vestments be kept in the Antonia, a practice generally followed by the procurators thereafter. The scene of Jesus' hearing before Pilate may have been at this center of Roman control.

The Antonia was the scene also of Paul's dispute with the Jewish leaders (Acts 21:37-40). The military tribune granted Paul permission to address the Jews in the temple court, as he stood on the steps leading up to the Antonia. Here also his case was later investigated by the tribune (Acts 22:23-29), after which he was confined in the Antonia for pro-

tection until the tribune spirited him off to Caesarea for further trial (Acts 23:10, 16-24).

The Tower of Antonia at the last was taken by Titus and used as a command post from which to direct his assault upon the temple mount, ending in its capitulation and burning in A.D. 70. Josephus' final comment upon the Antonia (War VI.v.4) is the recollection of an oracle that when the temple should become foursquare, Jerusalem would be captured. The removal of the Antonia at last left the temple ideally square.

ANTOTHIJAH. KJV form of ANTHOTHIJAH.

ANTOTHITE. KJV form of Anathothite. *See* ANATHOTH.

ANUB ā'nŭb [ענוב] (I Chr. 4:8). A son of Koz in the genealogy of Judah.

ANUS ā'nəs. KJV form of ANNIUTH.

ANVIL. The translation of פעם in Isa. 41:7, where the context and the root meaning ("to strike") suggest such an instrument. An alternative translation, "mallet" (Amer. Trans.), or a similar instrument, is supported by the parallelism in this verse and by a related term in the Ugaritic texts designating Baal's club (*p'n*). P. L. GARBER

ANXIETY. In the background and the foreground of the Bible one encounters man's anxiety for his life. Anxiety is one element of the full range that extends from intent thought and interest through concern, care, worry, dread, to grief and inward pain. The biblical writers often treat anxiety as a natural part of man's existence, but anxiety also appears in its true theological context as heathenish, sinful, and a denial of God's PROVIDENCE and CARE. The opposite of anxiety is seen as the quiet, trustful mind in enjoyment of the peace of God.

1. Terminology of anxiety in the Bible
   a. In biblical Hebrew
   b. In LXX Greek
   c. In NT Greek
2. Anxiety in the OT
3. Anxiety in the NT
Bibliography

1. Terminology of anxiety in the Bible. The word "anxiety" occurs only seven times in the RSV, and other forms derived from it, "anxious" and "anxiously," appear only twenty-seven times. But the related terms such as "care," "carefulness," occur frequently and lay a broad base for the anxious mind of the man of the Bible. The review of some of these terms brings out something of the history of the English Bible, for the word "careful" in the KJV of Phil. 4:6: "Be careful for nothing," is misunderstood today, and it should read as in the RSV: "Have no anxiety about anything."

a. In biblical Hebrew. The Hebrew terms are דאג, "to melt (with fear), to be afraid for, anxious about" (I Sam. 9:5; 10:2; Isa. 57:11; Jer. 17:8); דאגה, "fear, dread, anxiety" (Prov. 12:25; Ezek. 4:16; 12:18-19); כעם, "to be irritated, troubled" (I Sam. 1:6); עצב, "to suffer, to be afflicted, to be grieved" (Ps. 127:2). In Dan. 7:15 the Aramaic word כרא, "to be pained, to grieve," is used. חרדה, "trembling, care, concern," occurs in II Kings 4:13, and the adjective form in I Sam. 4:13, חרד, "trembling for, fearful for." Note also דרש, "to seek out, to care for," in Deut. 11:12.

b. In LXX Greek. The usual term is μέριμνα, a translation of דאגה and יחב (Ps. 55:23—G 54:23; Prov. 17:12; I Macc. 6:10). The verbal form μεριμνάω, "to be anxious, to be grieved," is used, e.g., in Ps. 37:19—H 38:18 in the sense of deep concern, "sorry for my sins." The same verb is used in Exod. 5:9 in a weaker sense: "to think thereon." Neutral thought and concern are expressed by the term φρόντις, "reflective thought, concern" (Job 11:18, where it is used in conjunction with μέριμνα; Wisd. Sol. 5:15; 6:17).

c. In NT Greek. The words μέριμνα and μεριμνάω occur twenty-five times and carry the sense of anxiety and worry. Anxiety in anticipation is expressed by the verb προμεριμνάω (Mark 13:11), and freedom from anxiety by the adjective ἀμέριμνος (Matt. 28:14). Luke uses the unusual word μετεωρίζω (12:29) as a synonym for the usual μεριμνάω. Thoughtful concern is expressed by φρονέω (Phil. 4:10) and φροντίζω (Tit. 3:8). Earnest care and zeal are represented by σπουδή (II Cor. 7:11, 12; 8:16). Simple concern is the meaning of the impersonal verb μέλει, "it is a concern to" (Matt. 22:16; Mark 12:14; I Pet. 5:7).

2. Anxiety in the OT. The pressure of concern, anxiety, and fear in the varied conditions of man's life can be detected throughout these writings.

Drought would bring the threat of famine (cf. Jer. 17:8). Personal anxiety is reflected in Hannah's words (because of her childlessness): "I have been speaking out of my great anxiety and vexation" (I Sam. 1:16), or in Daniel's perplexity over his dream (Dan. 7:15). The dislocations incident to war and the threat of violence were deeply disturbing to all concerned (I Chr. 17:9).

The Psalms give verbal expression to these feelings of crushing anxiety and care. The sense of sin and distance from God is a terrible burden on the consciousness of the psalmist (51). He is also conscious of the wicked oppressor and the taunts of the enemy, and his troubles keep him awake at night (102:7). His tears mingle with his drink. The waters of his anxieties are ready to overwhelm him (69:1-2).

The psalmist calls on God to rescue him from the hand of the oppressor (71:4-6). In God's care he finds peace and the release from his dire condition; God cleanses and restores, God shepherds his soul (23). God, says the psalmist, "will hide me in his shelter in the day of trouble" (27:5).

> It is in vain that you rise up early, to go late to rest,
> eating the bread of anxious toil;
> for he gives to his beloved in sleep (127:2).

In the same vein are Ps. 55:22; Isa. 26:3.

3. Anxiety in the NT. The NT writings reflect many of the same concerns as have been noted in the OT.

In the NT there is seen the natural reaction to poverty, hunger, and the pressures of the common life, as in the Beatitudes. The "poor" here, as in the OT, are the righteous ones who are bereft and who must look to God for help and redress. It is interesting to note how the problems and concerns of the married state are echoed in Paul's counsels in I Cor. 7.

In the Christian life men voluntarily take over a concern for others. Paul enjoys the thoughtful provision of his friends. Paul himself is anxious about them (Phil. 2:28), and he carries on his mind the daily pressure of anxiety for all the churches.

The answer to the burdens of life is to be found in God and his care: "Cast all your anxieties on him, for he cares about you" (I Pet. 5:7). In the Beatitudes the poor and the oppressed are to find their ground of blessing in God's kingdom and its provision. Paul says that the answer to worry is prayer to God: "Have no anxiety about anything, but in everything by prayer and supplication with thanksgiving let your requests be made known to God" (Phil. 4:6).

Jesus' teaching on anxiety strikes a new and radical note, for he outlaws anxiety and brands it as pagan and worldly. He himself is deeply concerned for men, "harassed and helpless, like sheep without a shepherd" (Matt. 9:36); his disciples are as "sheep in the midst of wolves" (Matt. 10:16). The future before the city of Jerusalem brings Jesus to tears (Luke 19:41-44). But as for himself and his fortunes, he walks as one whose inward strength and peace cannot be undermined by men. He refuses to run away before Herod's threats (Luke 13:31-33). His critics detect this imperturbable quality: "Teacher, we know that you are true, and care for no man" (Mark 12:14).

Jesus' clearest teaching on anxiety is found in the Sermon on the Mount (Matt. 6:25-34; Luke 12:22-31). Jesus prohibits anxiety for the most elemental necessities, and so for all the extras that men deem necessities: "Do not be anxious about your life, what you shall eat or what you shall drink, nor about your body, what you shall put on." First of all, life properly understood is a greater thing than what sustains it, and man's concern should be centered on life's real purpose. Second, such anxiety for food and clothing ignores God's providential provision in the world. The birds are cared for, and man, made in the image of God, can count on God's provision. Third, God's sustaining providence proceeds in a way that is independent of man's anxiety. Can man by worrying add to his stature (or his span of life)? Fourth, God's care for the ephemeral flowers is perfect and complete in beauty. Man can surely depend on the minimum provision of clothing at God's hand. Fifth, such anxiety is pagan and is a direct contradiction of God's foreknowledge and care. Sixth, man's first concern should be for the cause of the kingdom of God (and treasure in heaven [Matt. 6:19], and service to one master, God [Matt. 6:24]), and this concern rules out anxiety for lesser objects.

Elsewhere Jesus couples the "cares of the world" with the "delight in riches" and the "desire for other things," and he says they choke the word (Mark 4:19). In Luke 21:34 he warns: "Take heed to yourselves lest your hearts be weighed down with dissipation and drunkenness and cares of this life." Jesus banishes all such as unfit for life in the kingdom.

The saying about anxiety for the morrow (Matt. 6:34) may be an addition from proverbial wisdom. If it comes from Jesus, he may be setting man's worried concern in a humorous, ironical light: You worry about what is yet to come. If you only knew—!

Did Jesus intend this teaching on anxiety to be taken literally, or as an interim ethic, or eschatologically? For Jesus the kingdom had broken in upon the world and was to come in full realization. The disciples who accept the rule of the kingdom have found a new orientation of life in which God's will controls all purposes and goals. Man is now to live, not in anxious self-centeredness, but in gratitude for God's great gift of the kingdom. In the kingdom all man's concerns and desires find their true place and proportion, for God's will and provision extend to the humblest needs as to the highest goals.

Bultmann's article in *TWNT* on μεριμνάω reflects his interest in the existential conception of man's position. P. E. DAVIES

APAME ə pā′mĭ [Απάμη] (I Esd. 4:29). A royal Persian concubine cited by the third page in the story of the three youths at the court of Darius (I Esd. 3:1-4:42), as evidence of the superior power of women over men. Scholars are not agreed whether she is a fictional character or the daughter of Artabazus III and wife of Ptolemy I Soter of Egypt (305-283 B.C.).

APE [קוף (*only in plural*), קפים (I Kings 10:22), קופים (II Chr. 9:21), *from* Egyp. *g'f* (*also gwf, g^{s}f*), *a type of* small ape, *hence* Akkad. *uqūpu;* Syr. *qûpâ*]. Any of the tailless manlike animals of the Primate order, of the family Simiidae, comprising the chimpanzee, the gorilla, the orangutan, and the gibbon. The Old World monkeys and baboons belong to another family, the Cercopithecidae.

It is impossible to identify with any exactness the "apes" which the Red Sea fleet of Hiram and Solomon brought to a port on the Gulf of Aqabah; it is probable, however, that they were not apes at all, but either monkeys or baboons. The baboon was well known in Egypt, where the god Thoth was often represented by it. The commonest baboon in this area is the Arabian baboon (*papio hamadryas*), found in Arabia, Abyssinia, and the Sudan.

See also FAUNA § A2*k*. W. S. MCCULLOUGH

APELLES ə pĕl′ĭz [Απελλῆς]. Someone designated in Rom. 16:10 as one "approved in Christ," but otherwise unknown. A variant reading of Codex Sinaiticus (Acts 18:12; 19:1) identifies him as APOLLOS, but without foundation.

The name itself occurs frequently in inscriptions and is mentioned by Philo, Josephus, and Horace. It was used by both Jews and Gentiles, among the latter of whom were a famous tragic actor in the reign of Gaius and a military tribune under Vespasian.

APHAIREMA ə fâr′ə mə [Αφαιρεμα]; KJV APHEREMA —fĕr′—. One of three districts of Samaria promised to the Jews by Demetrius I in an effort to secure the support of Jonathan (I Macc. 10: 38), and later confirmed by Demetrius II (11:34), who also granted Jonathan increased power and guaranteed the Jews immunity from the crown taxes. According to Josephus, Aphairema was situated near Bethel (War IV.ix.9), undoubtedly the town identified in John 11:54 as the scene of Jesus' retirement just before his final entrance into Jerusalem. The LXX name may be a modification of an earlier form preserved by Josephus (Antiq. XIII.iv.9), *Aphereima.* Both forms represent the Aramaic place name of EPHRAIM, the earlier OPHRAH, situated on a hill five miles NE of Bethel. It is called et-Taiyibeh today.

***APHEK** ā′fĕk [אפק, bed of a brook, fortress(?)]. Alternately: APHIK ā′fĭk [אפיק] (Judg. 1:31). **1.** A city-state in the Plain of Sharon whose king was slain by Joshua and the forces of Israel during the conquest of Canaan (Josh. 12:18). It was strategically located on the Sharon section of the great trunk road through the country and on a possible access route from the coastal plain into the Ephraimite hill country. Therefore, it was a natural rallying point for Philistine forces, both on the occasion of their first full-scale engagement with Israel near Ebenezer (I Sam. 4:1), at which time the ark of the covenant was captured (*ca.* 1050 B.C.), and again in preparation for the campaign which was to result in the defeat and death of Saul (I Sam. 29:1; cf. 31:1-7).

The ancient site is represented by modern Ras el-'Ain at the source of the Yarkon River. Here also stood the Herodian-Roman town of Antipatris (in the vicinity of which was a tower called Aphek as late as the first century A.D. [Jos. War II.xix.1]), built over the previous site of Pegae ("springs"). Middle and Late Bronze and Iron I (*ca.* 2000-900) sherds on the site testify to the presence of the earlier Canaanite settlement—its antiquity and importance being further attested by its appearance in the Memphis Stela of Amenhotep II as the first town captured during the course of his second Asiatic campaign (*ca.* 1440). It is possible, as well, that this is the Aphek which appears in the Egyptian Execration Texts of the nineteenth century B.C. It appears again (*ca.* 600) in the Aramaic letter of a Palestinian king, Adon, to his Egyptian overlord telling of the advance position of invading Babylonian forces.

2. A site near Canaan's N frontier with the Amorites which, though never possessed by Israel, was ideally regarded as part of her inheritance (Josh. 13:4). It is probably represented by modern Afqa (ancient Aphaca), some fifteen miles E of Jebeil (ancient Byblos) in Lebanon. Here was a shrine and center of the Astarte-Adonis cult, and its sacred spring is the source of the river now called Nahr Ibrahim but anciently known as Adonis.

3. One of the Canaanite cities in the inheritance apportioned to Asher (Josh. 19:30), whose inhabitants the tribe could neither expel nor render tributary. It is possibly to be identified with modern Tell Kerdanah, some six miles SE of Acco and three miles inland from the Bay of Haifa, which site was furnished with a strong spring and strategically situated on the coast road connecting Phoenicia and Egypt.

4. A city in the N Transjordan district of ancient Bashan and on the main highway connecting Damascus with Beth-shan and the Valley of Jezreel. On a nearby plain the Syrian Ben-hadad was defeated by the inferior forces of Ahab, and to the city itself the Syrian fled for refuge with the remnant of his routed forces, only to experience further disaster in the collapse of the city wall (I Kings 20:26-30). Here, also, Joash of Israel, according to the prophecy of Elisha, was to administer repeated defeat to the forces of Syria (II Kings 13:14-19, 25).

The ancient name survives in the modern village of Fiq (also called Afiq), overlooking the Sea of Galilee from a plateau three miles inland and a short distance to the E of Hellenistic and Roman Hippos.

*APHEKAH ə fē′kə [אפקה] (Josh. 15:53). A city assigned to the tribe of Judah. The location is still unknown.

APHEREMA. KJV form of APHAIREMA.

APHERRA ə fĕr′ə ['Αφερρά] (I Esd. 5:34). Head of a family of Solomon's servants. His name is omitted in the parallels Ezra 2:57; Neh. 7:59.

C. T. FRITSCH

APHIAH ə fī′ə [אפיח] (I Sam. 9:1). A Benjaminite who was one of the ancestors of King Saul.

APHIK. Alternate form of APHEK 3.

APHRAH. *See* BETH-LE-APHRAH.

APHSES. KJV form of HAPPIZZEZ.

APIS ā′pĭs. The translation of חפ in Jer. 46:15, resulting from a redivision of the Hebrew text, reading מדוע נס חפ, "Why has Apis fled?" (RSV), instead of מדוע נסחף, "Why are [they] swept away?" (KJV). The sacred bull known as Apis was worshiped in Memphis by the Egyptians from earliest historical times as a general god of fertility. Although he was primarily a manifestation of the god Ptah, his fertility function led to his being closely associated with OSIRIS in Greco-Roman times and to his being regarded as the reincarnation of that god, under the name Osiris-Apis or Serapis. The representative bull was chosen with great care by the priests of the cult, and during its lifetime it was accorded all the honors concomitant with divine adoration. At its death it was mummified and buried in one of the several places reserved in Egypt for that purpose.

Fig. API 37.

37. The bull Apis, its body decorated with a winged scarab, a vulture, and a fringed carpet; Saïte period (*ca.* 663-525 B.C.)

APOCALYPSE OF JOHN ə pŏk′ə lĭps. *See* REVELATION, BOOK OF.

APOCALYPSES, APOCRYPHAL. A comparatively small group of apocryphal writings attributed to NT characters (Peter, Paul, Thomas, Stephen, the Virgin, etc.) and purporting to provide visions of the next world and (occasionally) prophecies of the end of this world. *See* APOCRYPHA, NT, for a further statement and a list of those apocalypses to which separate articles are devoted herein.

M. S. ENSLIN

*APOCALYPTICISM ə pŏk′ə lĭp′tə sĭz əm. A type of religious thought which apparently originated in Zoroastrianism, the ancient Persian religion (*see* PERSIA, HISTORY AND RELIGION OF); taken over by Judaism in the exilic and postexilic periods; and mediated by Judaism to early Christianity. Taking firm roots there, it has continued as an important element in popular Christian belief down to the present. It may be defined as the dualistic, cosmic, and eschatological belief in two opposing cosmic powers, God and Satan (or his equivalent); and in two distinct ages—the present, temporal and irretrievably evil age under Satan, who now oppresses the righteous but whose power God will soon act to overthrow; and the future, perfect and eternal age under God's own rule, when the righteous will be blessed forever. *See* ESCHATOLOGY; DUALISM.

Literary works embodying this belief, of which there are many examples both in ancient Judaism and in early Christianity, are known as apocalypses (*see* DANIEL; REVELATION, BOOK OF; ENOCH, BOOK OF; BARUCH, APOCALYPSE OF; etc.; *see also* PSEUDEPIGRAPHA). Our term has often been defined so loosely and broadly as almost to lose any distinctiveness. Thus books or portions of them as divergent as Joel, Amos, Zechariah, Daniel, Isa. 24-27, Jubilees, I Enoch, the Testament of Abraham, the Shepherd of Hermas, the Apocalypse of Paul, II Esdras, Revelation, the Psalms of Solomon, Er's vision of the next world in Plato's *Republic,* and the Apocalypse of Peter have all been termed apocalyptic by one writer or another. (*See* JOEL, BOOK OF; AMOS; ZECHARIAH, BOOK OF; JUBILEES, BOOK OF; ABRAHAM, TESTAMENT OF; HERMAS, SHEPHERD OF; PAUL, APOCALYPSE OF; ESDRAS, BOOKS OF; SOLOMON, PSALMS OF; PETER, APOCALYPSE OF.) Such vagueness of definition is due to a failure to distinguish between elements in the basic pattern of apocalypticism and various secondary features often present in apocalypses but by no means normative or constitutive.

1. The basic pattern
   - *a.* Dualistic
   - *b.* Eschatological
2. Secondary features
   - *a.* Vision

   - *f.* Numerology
   - *g.* Predicted woes
   - *h.* Astral influences
3. The relevance of apocalyptic

Bibliography

1. The basic pattern. ***a. Dualistic.*** Apocalypticism is essentially dualistic. This is not a metaphysical DUALISM of spirit and matter; instead, it is the dualism of two opposing personified forces in the universe, a good god and an evil one, hence a cosmic dualism. In ancient Persian thinking the two opposing gods of good and evil, Ormazd and Ahriman, were coequal, but were as different as light from darkness. In Jewish thinking Yahweh, of course, was the good God, whereas SATAN (or his equivalent), no longer merely Yahweh's agent as the tempter of mankind, was both God's opponent and man's oppressor. Because of the traditional monotheism of Judaism the dualism was not so marked as it was in Persian thinking. Satan was clearly inferior to God, at times was considered to be just a fallen angel. In general, God is in over-all control, with Satan ruling merely at God's good pleasure. In IV Ezra the dualism is attenuated, so that, in the main, a person's wicked deeds are attributed to the evil Yetzer; however, in the Apocalypse of Abraham, which is almost contemporaneous with IV Ezra, the dualism is much more in evidence. In Christian thinking Satan (or the Devil) is quite active as both the opponent of God and the tempter and oppressor of mankind; even so, he is inferior to God, not his equal in power.

This type of thinking may be termed cosmic dualism, since the entire cosmos, the earth, the underworld, and heaven, along with their inhabitants, are all involved in the opposition between the powers of good and evil. In Persian thinking all living creatures, both men and supernatural beings, are divided according to their allegiance to Ormazd or Ahriman. This division is also evident in Jewish and Christian apocalypses; it is most apparent, perhaps, in Revelation, where the greater number of the human and supernatural followers of God have their counterparts among Satan's human and supernatural forces.

b. Eschatological. The eschatological element in the apocalyptic pattern is combined with the cosmic dualism. For both time and beyond-time are involved; there are two distinct and separate ages; the second is not the outgrowth of the first, but is a new creation. The first, this present age of human history, is under the dominion of the power of evil. Consequently, it is evil and corrupt, and many of the inhabitants of earth are the evil followers of Satan, the evil power. The righteous followers of God are oppressed and persecuted and may even be put to death by their wicked contemporaries. There is no hope for them in this present age, which not only is evil but is irretrievably so. Conditions will become worse rather than better. The righteous are helpless.

Their only hope, then, is that God will soon intervene with might and power, engaging Satan in a cosmic conflict that will involve the whole of creation. After his victory God will inaugurate a new age under his immediate control. The righteous followers of God will live under his rule in an eternity of blessedness as their reward for their loyalty and faithfulness to him. Thus, the apocalyptic hope is otherworldly—pessimistic concerning this present age of history, but optimistic concerning the age to come. Frequently, but not always, in apocalypticism, this earth, as well as this age, is brought to an end, to be replaced by a newly created, incorrupt earth, or by the descent of a heavenly city. This dualism of the two earths, however, seems to have been subordinate to, and dependent on, the dualism of the two ages.

Apocalypticism, then, provides both an explanation of the evil that is so evident in this present age and a solution of the concrete problem of the righteous. In some way or other, Satan, who is evil, has gained control of this present age, and he is responsible for its wickedness and corruption and for the evils and oppression suffered by the righteous. However, with the overthrow of Satan by God and with the end of his age, all evil disappears; and the new age, ruled over by God, will be perfectly good and righteous.

Apocalypticism, then, may readily be differentiated from prophetism, messianism, and the expectation of the kingdom of God; for these are not dualistic, cosmic in scope, and eschatological, as is the apocalyptic hope. Instead, they are based upon the belief that God is in control of this age, not Satan, and that this age will not come to an end, but is improvable. A hope of the resurrection was in time added to this belief, but even so the basic position of apocalypticism is quite different.

2. Secondary features. The secondary features of apocalypticism add color and interest to the basic pattern, by imparting mystery and an appearance of complexity. But they should not obscure the relatively uncomplicated and simple nature of the basic pattern; nor should they be mistaken for the primary, essential elements of the pattern.

a. Vision. Because the term "apocalypse" is from a Greek word meaning a disclosure, a revelation, a vision, it is often asserted that an apocalypse must be a purported vision or series of visions. True enough, apocalypses are often of this kind (e.g., Daniel, II Esdras, and Revelation). On the other hand, Isa. 24–27, an apocalyptic interpolation into the book of Isaiah, does not claim to be the report of a vision; neither do the little apocalypses in Did. 16; Asmp. Moses 10. Paul, although professing to be a visionary, does not state that his apocalyptic teachings (cf. I Cor. 15:20-28) are visionary in origin. Lactantius presents his lengthy apocalypse in book VII of his *Divine Institutes* without any suggestion that it came to him in a vision. Likewise, certain apocalyptic sources which are embedded in longer works proposing to be visionary, such as the Apocalypse of Weeks in Enoch 93; 91:12-17, may not originally have claimed to be visions.

Actually, instead of being primary characteristics of apocalypses, purported visions are but a vehicle of presentation, a literary technique to gain attention and authority for a writing. A careful study of these apocalyptic visions will reveal their artificial character; they are not records of actual experiences, but are literary productions, using sources and conforming to traditional patterns.

Since an apocalypse is usually considered to be a vision, a number of works that are not apocalypses, but profess to be records of visionary experiences, are at times considered to be apocalyptic. This term is applied to works like EZEKIEL; HERMAS; and JUBILEES, but it is even more frequently used in speaking of reputed visions of the next life or of the next world, such as are found in the Testament of Abraham, the Life of Adam and Eve, II Cor. 12:1-4, Er's

vision of the next world as related in Plato's *Republic*, the so-called Apocalypse of Paul, and Plutarch's account of the three-day visit by the soul of a certain Thespesius to the realm of the dead, where he saw the wicked being tortured. Some of these experiences are eschatological in character, but this does not necessarily make them apocalyptic, for apocalypticism involves a distinctive type of eschatology.

b. Pseudonymity. It is also stated quite frequently that pseudonymity (the literary device of ascribing a work to someone other than the actual author, usually to a person of importance, like Elijah, Enoch, Abraham, or Peter) is a basic characteristic of apocalypticism. Certainly it is characteristic of quite a number of apocalypses, among them I Enoch, Daniel, Peter, II Esdras, and the Ascension of Isaiah. But Paul uses his own name in writing I Cor. 15:20-28, as does Hippolytus in his *On Christ and Antichrist* and Lactantius in book VII of his *Divine Institutes*. It is quite possible that a certain Christian named John, but not John the apostle, wrote the book of Revelation. Isa. 24–27 apparently was originally anonymous, but it gains a certain aura of pseudonymity by being interpolated into the prophecy of Isaiah. Possibly still other apocalyptic sources now found in pseudonymous works were also originally anonymous. Pseudepigraphy, like purported visionary experiences, is an old but effective literary device for obtaining sanction and authority for an apocalyptic prediction. It is not a primary element in apocalypticism.

In this connection it should be noted that the pseudonymous nature of most of the extant apocalypses has a relationship to the visionary experiences reported in these writings. All too frequently when it is admitted that a given work is pseudonymous, it is also stated that the author was a true visionary, obtaining his knowledge through his visionary experiences. Daniel (from 7:2 on) is pseudonymous according to the great majority of scholars, written during the Maccabean period by someone unknown by name to us, who attributed his work to a much earlier person named Daniel. Yet it is stated at times that the author of Daniel was a visionary, relating his own personal experiences. If so, why did he attribute his visions to someone else—to Daniel—instead of claiming them for himself? The answer is rather obvious: the author of Daniel, whoever and whatever he was, was not a visionary—otherwise he would have claimed the marvelous visions in his book for himself (rather than attributing them to an ancient worthy). Thus there may be a relationship between pseudonymity and reputed apocalyptic visions in that both are literary devices to gain sanction for the author's message.

c. A messiah. Strangely enough, a messiah is also a secondary feature of apocalypticism, although, to be sure, the Christian apocalypses, perforce, have a messiah—namely, Jesus Christ (in his second advent, not his first). Jewish apocalypses may or may not have a messiah. None is presented in Isa. 24–27, and none in Daniel, for the Danielic Son of man is actually the personification of the righteous remnant of Israel. There is no messiah in the source known as the Apocalypse of Weeks in Enoch, nor in Asmp. Moses 10. The Elect One (Messiah) appears in a limited role in the final chapters of the Apocalypse of Abraham, but these chapters may be later additions to the book. On the other hand, the SON OF MAN, a glorious and powerful pre-existent heavenly messiah, plays an important part in the Similitudes of Enoch (cf. chs. 46; 48; 62–63; 69). A messiah of quite a different kind, a human being, symbolized as a bull with large horns, comes after the judgment in the dream-visions of Enoch (90:37), but he has no particular function. In II Esd. 7:28-29 the messiah appears without prior announcement, and dies after playing a rather vague role during the four-hundred-year messianic interval. The relatively unimportant role of the messiah in certain apocalyptic sources, together with his absence from others, indicates that he is an addition to the Jewish apocalyptic tradition and is not a primary element of the pattern. Christianity, as we have noted, of necessity introduced the heavenly Christ into its apocalypticism; but even in Revelation various angels perform functions that might more naturally be assigned to him in the cosmic drama that is taking place. This suggests that the Messiah was missing, perhaps, from a number of the sources used in Revelation.

With the introduction of a messiah of one kind or another into apocalypticism, it was in order to balance him with a Satanic counterpart, the antimessiah or ANTICHRIST. The Antichrist was introduced into Christian apocalyptic at an early period, and became increasingly significant. Even so, he is even more a secondary characteristic of apocalypticism than the messiah is.

Strictly speaking, without a messiah there can be no messianic kingdom between the present age ruled over by Satan and God's future age. An interim "week" between these two ages, but without a messiah, is predicted in the Apocalypse of Weeks in Enoch. As stated previously, II Esd. 7:28-29 provides a messianic interval with a messiah; however, nothing is said about this period save that the messiah and the righteous who survive the first age will rejoice during the four hundred years, and then will die. This messianic interim will be followed by the new age and the general resurrection. The neo-Hebraic Apocalypse of Elijah predicts a messianic interim of forty years, which are described as years of plenty. On the other hand, there is no messianic reign in such apocalyptic sources as Isa. 24–27, Daniel, the Assumption of Moses, and the Apocalypse of Abraham. Evidently it is an addition to the apocalyptic tradition, representing the merging of the apocalyptic hope with messianism; hence, it is a secondary feature, not a primary element of the basic apocalyptic pattern. Even in Christian sources like Mark 13 and parallels; II Thess. 2:1-12; II Pet. 3:1-12; Did. 16, the Second Coming is mentioned without any specific reference to an interim kingdom of Christ. Paul allows for such a reign, but its duration is not definite (I Cor. 15:24-26). Even in Revelation, Christ's interim kingdom of a thousand years is not accorded much significance insofar as space is concerned, for it is mentioned but briefly and all too vaguely in but three verses of a total of 404 verses for the entire book. This may indicate that the author did not attach much importance to this interim period, but introduced it into the pattern to

provide a special but indefinite role to Jesus Christ on his return, as well as a unique reward for the Christian martyrs. *See* MILLENNIUM.

d. Angelology and demonology. Apocalypticism is frequently marked by elaborate angelology and demonology, with archangels and other good angels on God's side in the cosmic drama, and fallen angels and evil spirits on the other side. There is a considerable amount of angelology, and in some cases demonology as well, in sources like Daniel, the Ascension of Isaiah, Revelation, and certain sections of Enoch. On the other hand, there is little or none in other sources, such as Isa. 24–27; the Apocalypse of Weeks; Did. 16; Asmp. Moses 10; or even in the much later book VII of Lactantius' *Divine Institutes.* Angelology and demonology were much more in evidence in Judaism following the Persian period than in earlier times, and are to be found in nonapocalyptic as well as in apocalyptic sources. Angels and evil spirits found their way into some apocalypses, but not into all. With God becoming a transcendent deity in the apocalypses, it was but natural that hosts of angels of one kind or another were assigned to do much of his work in the world. Accordingly, in Revelation the angels are very numerous and perform various functions. In order to maintain a cosmic balance, fallen angels and evil spirits were introduced as their Satanic counterparts. It need not be considered, however, that angels and demons are essential to apocalypticism; they are secondary, not primary, features.

e. Animal symbolism. A further secondary characteristic is that of animal and bird symbolism, at times bizarre in character, and in part mythological or astrological in origin. Such symbolism is not restricted to apocalypticism, but is provided by Ezekiel (the four living creatures); II Esd. 11 (the eagle vision, a messianic passage); II Bar. 29 (Behemoth and Leviathan); Pss. Sol. 2:29 (a dragon); and in other nonapocalyptic sources. On the other hand, this type of symbolism is present in certain apocalypses. The beasts of Daniel and Revelation are well known. Animal symbolism is also present in Isa. 24–27; in the dream-visions of Enoch 83–90; and in the Apocalypse of Abraham, e.g. But such symbolism is missing from the Similitudes and from the Apocalypse of Weeks in Enoch, from Asmp. Moses 10; from Did. 16; from the Ascension of Isaiah; and from the Apocalypse of Peter. Surely this type of symbolism, despite its frequent appearance in apocalypses, must be considered a secondary, not a primary, element of apocalypticism. Still other types of symbolism are used in apocalyptic writings, as is true of certain prophetic works as well. Indeed, some of the apocalyptic symbolism was borrowed from the prophetic books, as a comparison of Revelation, e.g., with certain of the OT prophets will readily show. On the other hand, there are other prophetic and apocalyptic writings that are practically devoid of colorful symbolism of any type.

f. Numerology. It is also averred that apocalypticism is characterized by numerology. This, in part, is true of Daniel, and to a considerable degree of Revelation, but the latter is by no means typical in this respect. Certainly ancient peoples, Jews and Christians among them, considered that numbers had some mystical significance. Consequently, numerology is to be found in both apocalyptic and nonapocalyptic writings. Furthermore, there are sources of both types in which no numerology is in evidence. Here, again, numerology is a popular belief that has been used in some apocalypses, disused in others.

g. Predicted woes. Another purportedly characteristic feature of apocalypticism is a list of stereotyped woes preceding the end of this present age. True enough, lists of this type, predicting terrestrial disasters and cosmic disturbances, are found in apocalypses, in Asmp. Moses 10, the Apocalypse of Abraham, and Revelation, e.g. But they are also present in prophetic books (as in Joel 3:14 ff) and in messianic sources (cf. II Bar. 70). There is no list of woes in Daniel, which merely states that before the end there will be a time of trouble such as there has never been before (12:1). This general statement may have been an occasion for the inclusion of specific woes in later apocalypses. However, there is an embryonic list in Isa. 24:18-20, an early source, which may have suggested later lists. Terrestrial disasters and cosmic disturbances involving irregularities in the heavenly bodies are not unrelated, for in keeping with astral thinking, what is to occur on earth has already been determined in heaven by the stars.

h. Astral influences. According to astral beliefs, the zodiac with its constellations was a heavenly tablet or book predetermining the deeds and fate of mankind. Judaism, and later, Christianity, appropriated this concept, so that in both apocalyptic and nonapocalyptic sources heavenly books of various types are mentioned—those that predict the future, and those that record the deeds which men have already committed. These heavenly books, when mentioned, are interesting additions to the apocalyptic tradition. In a sense, it might be noted, each apocalypse, or portion thereof, which predicts the future on the basis of a visit to heaven by the writer or a revelation made to him by an angel is a heavenly book (as are the Ten Commandments or the Koran).

The belief in a heavenly city, misnamed the New Jerusalem, which is the perfect heavenly pattern of its earthly counterpart, goes back, again, to astral thinking. Actually, the New Jerusalem is not "new," since it existed in heaven before the earthly one could come into being. Comparable to this belief in a heavenly city is that of a heavenly Garden of Eden, and a heavenly tree of life. These astral concepts appear in a few of the apocalypses, with the additional view that in the age to come the righteous would live in the heavenly Jerusalem or in the heavenly Garden of Eden, or in a combination of both (Enoch 90:29; II Esd. 7:26; 10:25-28; Apocalypse of Abraham 21; Apocalypse of Peter 15-16; Rev. 21–22; the neo-Hebraic Apocalypse of Elijah; *see* ELIJAH, APOCALYPSE OF). In some instances (e.g., Revelation and Elijah) the heavenly city and garden descend to earth.

As has been noted, determinism has been in evidence in apocalyptic thinking. In part this stems from astralism, in part from faith in the omnipotence of God. The end is predetermined; Satan is to be overcome and his age brought to an end; God's new age is to be established; those who are to be saved are predetermined; likewise, the time when

the end is to take place has been set. Marked though this aspect of determinism is, it is not in order to say that it was an original and indispensable part of the apocalyptic pattern. It is possible that apocalypticism itself is a development of astralism, with its concept of the perfect heavenly pattern and the imperfect earthly copy, which could have led to a dualism in space of heaven and earth and in time of this age and the next, the first related to the earth, the second to heaven. This, however, is a surmise for which adequate evidence is lacking.

3. The relevance of apocalyptic. Apocalypticism is hopelessly pessimistic concerning this present age of human history, which is evil and corrupt, with no prospect whatever of betterment or improvement. Since it is irredeemable, it must be brought to a calamitous end by divine intervention. Along with this pessimism there went the related conviction that there is nothing the righteous can do to make this age a better time in which to live. Everything awaits God's expected intervention. Thus mankind is relieved of responsibility for the evils of this age. The doctrine of the kingdom of God is quite different. According to it God has not abdicated this earth to Satan; furthermore, this present (and only) age is capable of improvement if men will only learn and do God's will. Consequently, the kingdom-of-God concept is optimistic insofar as this present age is concerned, and requires that men help to improve it. The defeatism of apocalypticism may well account for the almost complete absence of ethical and social teachings from the apocalypses (II Enoch 49 ff is indeed an exception). Righteousness, for the most part, consists of loyalty and devotion to God, and is related in the main to nation or to cultus. Wickedness, on the other hand, is marked by idolatry and by the oppression of the righteous, or it may consist of being a member of a nation other than Judaism or of a religion other than Christianity.

Even so, apocalypticism has had and will continue to have a great influence, and in the main the more difficult, dismal, arduous, and perplexing the times are, the greater the influence will be. In general, it has been most widely accepted among the have-nots, the poor, the dispossessed, the oppressed, and the persecuted; this, no doubt, partly accounts for the adoption of it by the early Christians. In fact, oppression and persecution seem to have been strong incentives for the writing of apocalypses.

The strong appeal of apocalypticism down through the centuries is also in part due to its uncomplicated explanation for the existence of evil and to its strikingly dramatic solution of this age-long problem. Moreover, as the cosmic drama of the conflict between the forces of good and evil is portrayed, the reader or listener may come to think of himself as being involved in a great cosmic process; as being, indeed, not merely an interested spectator, but more a personal participant in the triumph of the forces of good over the forces of evil.

Mistaken though apocalypticism has been in its world view and in its concept of a transcendent avenging deity, it has not been without significance in the history of both Judaism and Christianity. It strengthened both Jews and Christians in times of persecution, when the former were persecuted by the Syrians and when both were persecuted by the Romans. Although it assumes that for the time being God has removed himself from the world and his people, it teaches that before long he will assume his sovereignty so that finally right will triumph over wrong. If man should believe that he, unaided, can work out his own salvation and correct the ills of the world, apocalypticism may serve as a corrective to human pride, but not necessarily the best corrective. Its emphasis upon eternal rewards for the persecuted and eternal punishments for the persecutors marks a step in the development of Christian views concerning life after death, including the resurrection, the judgment, and rewards and punishments. Revelation in particular has made its imprint upon Christian art, music, and liturgy. Much of our present theological thinking has been influenced directly or indirectly by apocalypticism. Consequently, it is essential to have an understanding of its basic features.

M. RIST

APOCRYPHA ə pŏk′rə fə. The title applied, in ordinary Protestant usage, to a collection of fourteen or fifteen books, or parts of books, which at one time stood in our English Bibles between the OT and the NT. These books are, according to the RSV, the following: I and II Esdras; Tobit; Judith; the Additions to the Book of Esther; the Wisdom of Solomon; Ecclesiasticus, or the Wisdom of Jesus the Son of Sirach; Baruch, including the Letter of Jeremiah; the Prayer of Azariah and the Song of the Three Young Men; Susanna; Bel and the Dragon; the Prayer of Manasseh; I and II Maccabees. *See* the individual entries for the discussion of each of these works. (For discussion of the NT Apoc., *see* APOCRYPHA, NT.)

These books, with one or two exceptions, came to be included in the SEPTUAGINT, or Greek translation of the OT, but not in the Hebrew scriptures as finally "canonized" by the Council of Jamnia (*ca.* A.D. 90). They were all written during the last two centuries B.C. and the first century A.D. Among the Apocrypha may be found books of history, like I and II Maccabees; romantic tales, like Tobit and Judith; a beautiful liturgical psalm in the Prayer of Manasseh; two masterpieces of the wisdom school, Ecclesiasticus and the Wisdom of Solomon; and an apocalyptic work in II Esdras. There are also additions to the canonical books of Esther, Jeremiah, and Daniel. All these books were written originally in Hebrew or Aramaic, with the exception of the Wisdom of Solomon and II Maccabees, which were composed in Greek. The fact that the Hebrew and Aramaic works were translated into Greek, and, together with the Wisdom of Solomon and II Maccabees, were circulated with the Greek OT, shows how popular this literature was in the intertestamental period. Other Jewish writings from this time include the so-called PSEUDEPIGRAPHA, hitherto unknown works discovered in the library of MSS at Qumran (*see* DEAD SEA SCROLLS), and numerous books now lost, but

referred to in patristic literature. This extensive literature is not only important source material for our knowledge of the history, culture, and religion of Judaism, but it is also invaluable for our understanding of the background of the NT.

Bibliography

1. The term "apocrypha." The word "apocrypha" is a Greek plural neuter adjective meaning "hidden (books)." As a literary term it was first applied to books which were to be kept from the public because of the esoteric wisdom they contained. In this sense it was a title of honor, since it referred to books whose secret doctrines imparted to them special authority. Among the esoteric works which were thus highly regarded at first were the Greek Gnostic writings and the Jewish Christian apocalyptic works. After the destruction of Jerusalem, however, in A.D. 70, the apocalyptic works were outlawed in Judaism; this may have been one reason for the deterioration of the term "apocrypha."

At any rate, the word "apocrypha" came to mean "spurious," or "heretical," since those who were not initiated into the secret lore of this literature believed that these hidden books contained heretical teachings which were especially harmful. As a result, books of this nature were put under a ban and were forbidden to be read in public or for private edification. Athanasius (died 373) and Rufinus (died 410) used the term "apocrypha" in this way.

The present usage of the word to designate certain religious books which are not canonical goes back to the time of Jerome (died 420). He held that the books found in the Greek and Latin Bibles but not in the Hebrew canon should be put among the Apoc., and used only for edification, and not for confirming the dogmas of the church. Obviously, for Jerome, "apocryphal" meant noncanonical, and not heretical, and it is this meaning of the term that has persisted in Protestant circles today.

The reason for this identification of "hidden" books with books "outside the canon," or "outside books," as the Jews called them, is probably to be found in certain passages from the apocalyptic work of II Esdras, where a clear distinction is made between works that are to be published and read openly and those that are to be kept for the wise only.

In II Esd. 14:4-6 we read that Ezra heard the voice of the Most High say: "I led him [Moses] up on Mount Sinai, where I kept him with me many days; and I told him many wondrous things, and showed him the secrets of the times and declared to him the end of the times. Then I commanded him, saying, 'These words you shall publish openly, and these you shall keep secret.' " The writer here is obviously referring to the Torah of Moses, on the one hand, which was published for all to read, and to the apocalyptic tradition on the other, which was not for public perusal. This idea of sealing up the apocalyptic teaching in a book goes back to Dan. 12:4, 9, which may well be the fundamental passage for our conception of the word "apocrypha."

In II Esd. 12:37-38 Ezra himself is instructed to "write all these things that you have seen in a book, and put it in a hidden place; and you shall teach them to the wise among your people, whose hearts you know are able to comprehend and keep these secrets."

It is 14:42-46, however, which is particularly relevant to our problem. Here we read: "The Most High gave understanding to the five men, and by turns they wrote what was dictated, in characters which they did not know. They sat forty days, and wrote during the daytime, and ate their bread at night. As for me, I spoke in the daytime and was not silent at night. So during the forty days ninety-four books were written. And when the forty days were ended, the Most High spoke to me, saying, 'Make public the twenty-four books that you wrote first and let the worthy and the unworthy read them; but keep the seventy that were written last, in order to give them to the wise among your people.' " Here is evidently the origin of the term "apocrypha" in the sense of "noncanonical." The first twenty-four books, which were written and then published, were obviously the canonical books of the Hebrew OT; the last seventy were the "hidden" books—i.e., the Apoc. —which were to be set apart for the wise among the Jews.

Around the beginning of the twentieth century F. C. Porter, following an opinion ventured by Julius Wellhausen, suggested that the origin of many of the esoteric ideas found in these "outside books" was to be sought among the Essenes, since this sect possessed secret lore and hidden books, and even took oaths not to disclose any of their doctrines to others. Today this theory seems more probable than ever with the discovery of the Essene community center at Qumran and its enormous library of MSS, which includes numerous copies of these "outside books," as well as some MSS written in cryptic scripts.

2. The Apoc. in Judaism. As has already been noted, the Apoc. were but a small part of a vast number of "outside books" written by the Jews between 200 B.C. and A.D. 100. These works, described in Judaism as "writings which do not defile the hands," enjoyed great popularity at first, as we see by the large number of MSS of individual works discovered at Qumran, and by the fact that both Hebrew and Aramaic copies of many of these works circulated among the people. The problem of the formal canonization of these books probably never arose at this time. At least, there does not appear any attempt to settle it by drawing up a list of the "scriptures" as such. The Law and the Prophets had acquired their "sanctity" because of their contents, which were the basis of the authoritative religious instruction and belief of the Jewish people. The Writings, which enjoyed less prestige than either the Law or the Prophets, were in a fluid state during this period, although books like the Psalms, Proverbs, and Job must have received a more or less canonical status quite early. But what about the ever-increasing stream of "outside books" which were being written during this period and were being read side by side with the Hebrew scriptures? How were these works to be collected and arranged? Which were to be considered "canonical," and which were not?

That there were different orders of books, particularly in the Prophets and the Writings, and that the number of "canonical" books varied, are well-known facts. A newly discovered witness to this fluid condition of the "canon" in Palestine before the days of Jamnia is the library at Qumran, where many MSS of works later condemned or neglected by Judaism have come to light. So far, only two fragments of Ecclesiasticus in Hebrew and three fragmentary MSS of Tobit, one in Hebrew and two in Aramaic, have turned up at Qumran of the books of the Apoc. Many more pseudepigraphical works, known and unknown, are represented among the fragments from Qumran. It is to be hoped, by the way, that the term "apocrypha" (with C. C. Torrey) or "outside books" (Jewish) will henceforth be used for this body of intertestamental literature, and that the clumsy and misleading term PSEUDEPIGRAPHA will be discarded.

As Eissfeldt remarks in the second edition of his *Einleitung* (1956), these discoveries clearly show that the indigenous Jewish community at Qumran knew a collection of sacred writings similar in extent to the Greek canon. In other words, the Alexandrian "canon," which probably never existed as such, is simply the survival of a less rigid type of "canon" which was known in Palestine before the days of Jamnia (*ca.* A.D. 90).

After the fall of Jerusalem in A.D. 70, however, these "outside books" came upon hard times in Judaism. The tragic events of the First Jewish Revolt, culminating in the downfall of Jerusalem, dealt the deathblow to the hopes and dreams of the Jewish apocalyptists, whose writings now became banned. The apocalyptic tradition, which had played such an important role in the life of Judaism since the days of Daniel, was now repudiated, and the Torah became the main rallying point of the Jews. Besides this, a rapidly growing Christian Aramaic literature and the easy possibility of Christian interpolations in the Jewish "outside books" made it necessary for the rabbis to take drastic action against these works and set up a canon of legitimate books which could be read by the pious Jew without harm. This was done at the Council of Jamnia (A.D. 90).

Fortunately for us, two contemporary sources give us the principle of selection used by the rabbis at Jamnia to distinguish between canonical and noncanonical books. One of these sources, II Esd. 14:45-46, has already been discussed (*see* § 1 *above*) in another connection. Here Ezra is described as dictating, through divine inspiration, the twenty-four books of the Hebrew Bible, as well as seventy esoteric (apocalyptic) works, in forty days. The clear meaning of this passage is that the OT canon was completely and forever closed in the time of Ezra.

The other source is Josephus, who says: "For there are not with us myriads of books, discordant and discrepant, but only two and twenty, comprising the history of all time, which are justly accredited." He then goes on to describe these books, after which he makes the important statement: "From the time of Artaxerxes up to our own everything has been recorded, but the records have not been accounted equally worthy of credit with those written before them, because the exact succession of prophets ceased" (Apion I.8). Josephus is a little more explicit about the principle of canonicity than the author of II Esdras, for he says that the Lord no longer revealed himself to the prophets after the time of Artaxerxes—i.e., after the time of Ezra. According to this principle of selection, then, the rabbis of Jamnia automatically excluded I and II Maccabees, since they dealt with a later period of Jewish history; and Ecclesiasticus, whose author manifestly lived long after the time of Ezra. Other works were excluded on the basis of their having been written in Greek (e.g., the Wisdom of Solomon), and still others because they had ceased to be popular and so were no longer copied after their translation into Greek.

Thus the "outside books," including both the apocalypses and the Apoc., simply ceased to exist among the Jews or were systematically destroyed. The only one that seems to have escaped this fate was Ecclesiasticus, which is quoted as scripture three times in the Talmud and which survived in Hebrew until the twelfth century. According to later Jewish writings, all "outside books" were considered dangerous, as the following quotations indicate: "Whoever brings together in his house more than twenty-four books [the canonical Scriptures] brings confusion" (Midrash Qoheleth 12.12), and Rabbi Akiba's statement that among those who have no part in the world to come is "he who reads in the outside books" (J. T. Sanh. X.1, folio 28*a*). The survival, therefore, of this great body of literature is due entirely to the Christians who found these works especially interesting and edifying in their Greek dress, and who copied them often and translated them into other languages.

3. The Apoc. in Christianity. ***a. The early church.*** When the Christians, the "Israel of God" (Gal. 6:16), fell heir to the OT, they found in the Greek Bible which they used a number of works which were not in the Hebrew scriptures. These favored "extracanonical" books, which were a part of a vast number of Jewish writings, had been familiar to the early Jewish Christians from childhood. There was no reason in the early days of the Christian church, therefore, to ban the Apoc., or even to disparage them, and so the early Christians continued to read them for edification and enlightenment, and even to quote from them as holy scripture.

Another important factor which led the early church to place the Apoc. on the same level with the canonical books of the OT was the introduction of the book, or codex, in Christian circles. In contrast with the Jewish custom of using the scroll for their sacred books, the Christians copied and distributed their scriptures in books or codices, where the OT canonical books and the Apoc. were side by side between the same two covers. It thus was natural for the Christians, many of whom were unfamiliar with the extent of the Hebrew canon, to treat as inspired scripture whatever was found in their OT codices.

Although there are no direct quotations from the Apoc. in the NT, the influence of these books is felt in every part of the Christian scriptures. In fact, they serve as a kind of bridge between the OT and the NT. In these books, e.g., we read for the first time about the Pharisees and Sadducees, who figure so largely in the NT story. The strong belief in demons

and angels which we find in the NT can best be understood in the light of works like Tobit and II Maccabees. And above all, most of the ideas regarding the future life which are found in the NT writings had their origin in the apocalyptic writings, represented by II Esdras in the Apoc.

The NT writers, as well as their readers, were well acquainted with the Jewish "outside books." Direct quotations from the Pseudep., as well as references to unknown works, are scattered throughout the NT writings, and there are definite allusions and reminiscences which recall the phraseology of the Apoc. and the events described therein. Several sayings of Jesus are strikingly similar to certain passages from Ecclesiasticus (e.g., Matt. 11:28-30 and Ecclus. 51:23 ff; Matt. 9:16-17 and Ecclus. 9:10), and the parable of the rich fool, spoken by our Lord (Luke 12:16-20), is reminiscent of the description of the rich man in Ecclus. 11:18-19. The influence of the Wisdom of Solomon upon Paul has long been recognized in several of his letters, especially in his Letter to the Romans. Some of the significant expressions used in the sublime description of Christ found in Heb. 1:1-3 are drawn directly from Wisd. Sol. 7:25-27, where wisdom is described as a "reflection of eternal light, a spotless mirror of the working of God." Later on in the same letter (11:35-37), there is a clear reference to the terrible martyrdom of the seven brothers depicted in II Macc. 6–7. The Letter of James, commonly recognized as a "wisdom book" among the early Christian writings, contains many allusions to the wisdom literature of both the OT and the Apoc. An interesting reference to the Feast of Dedication, or Hanukkah, is found in John 10:22. This is the Maccabean celebration of the rededication of the temple in Jerusalem, referred to in I Macc. 4:59; II Macc. 10:8. These allusions, and many others not mentioned here, are convincing proof that the NT writers were well acquainted with the Apoc. and used them for religious instruction and example.

The early church fathers treated the canonical and noncanonical books much alike, for reasons already noted. They often quoted from the Apoc. in the same way as they quoted from the canonical books of scripture. I Clement, e.g., one of the earliest Christian writings outside the NT that has come down to us (*ca.* A.D. 95), includes quotations from the Wisdom of Solomon. Polycarp, bishop of Smyrna (died *ca.* 156), quotes from Tobit. The Letter of Barnabas, from the first half of the second century, quotes from the Wisdom of Solomon, Ecclesiasticus, and II Esdras. Tertullian of Carthage (died *ca.* 225) and Irenaeus of Lyons (died *ca.* 200) cite certain of the apocryphal books as part of scripture. Hippolytus of Rome (died *ca.* 236) included in his commentary on Daniel the apocryphal additions of Susanna and the Song of the Three Children. Clement and Origen of Alexandria (died *ca.* 220 and 250 respectively) and Cyprian of Carthage (died *ca.* 260) believed that the Apoc. were part of the Christian Bible. Also in the lists of "canonical books" drawn up from time to time in the various centers of Christianity the books of the Apoc. are found in varying numbers and order. In the earliest list we have of NT books, the Muratorian Fragment (*ca.* 200), the Wisdom of Solomon actually appears as a book of the NT. And finally, certain local synods, mainly in the West, confirmed the Apoc. as canonical.

All this evidence would seem to indicate that the early church accepted the Apoc. as scripture and included them in the Bible. But this was not actually the case. Origen, who, as we have noted, accepted the Apoc. as scripture, was enough of a Hebrew scholar to know that these books were not part of the Hebrew Bible. Therefore, as a churchman, Origen followed the practice of using the Apoc. for instruction and edification, but as a scholar he was compelled to limit the OT canon to the books of the Hebrew Bible. This same problem arose in the minds of Cyril of Jerusalem (died 386) and Jerome (died 420), who were more explicit in separating the Apoc. from the canonical books. In fact, it was these two scholars who used the term "Apocrypha" for the first time to designate the books in the Greek and Latin Bibles which were over and above the Hebrew OT. Jerome explicitly stated that the OT Apoc. might be read for edification, but not "for confirming the authority of Church dogmas" (Prologue to Books of Solomon). Yet, because of the practice of the church, he had to include the Apoc. in his Latin Bible, the Vulg., which became the official Roman Catholic Bible. Augustine (died 430) gave powerful support to the church view by accepting the Apoc. as canonical, although he too in his later works admitted that there was a distinct difference between the books of the Hebrew canon and the "outside books."

In the Greek Orthodox Church the Apoc., or certain books among the Apoc., have generally been recognized as canonical. In the Syriac-speaking church, which was at first under strong Jewish influence, the OT originally contained the books of the Hebrew canon (minus Chronicles, Ezra-Nehemiah, and Esther) and Ecclesiasticus. Eventually, however, the view of the Western Christian church prevailed, except among the Nestorians, and the Apoc. came to be regarded as canonical.

It is clear from this survey that there were two opposing views of the Apoc. in the early church: one which regarded these books as canonical, representing the traditional view of the church; and the other, which regarded them as uncanonical in view of the Hebrew scriptures. These two divergent attitudes, which were never resolved in the early church, continue today in the Roman Catholic Church, which accepts the Apoc. as canonical, and in the Protestant tradition, which has never regarded these "outside books" as sacred scripture.

b. The Reformation view. Throughout the Middle Ages, Augustine's view of the Apoc. prevailed, for the most part, over that of Jerome. For most Christians all the books in the OT of the Vulg. were on the same plane. Yet there were some scholars and theologians who never forgot the words of Jerome and claimed that the books of the Hebrew OT alone were divinely inspired. Nicholas of Lyra (died *ca.* 1340), e.g., who was a Christian of Jewish parentage, wrote a commentary on the canonical books of the Hebrew OT, and then another one on the "uncanonical" scriptures, which included the most important works of the Apoc. Later on, he published

"A Treatise on the Difference between our Version [the Vulg.] and the Hebrew Truth." This scholar had a marked influence on Luther, who was to set the Apoc. apart from the rest of the OT books in his German translation of the Bible. Wycliffe's Bible (1382) contained only the books of the Hebrew Bible, the Preface indicating on the basis of Jerome's words that those writings which stood outside the OT canon were "without authority of belief." Even Cardinal Cajetan, the foe of Luther, sensed the difference between the canonical works of the Hebrew scriptures and such works as Judith, Tobit, and I and II Maccabees, and appealed to no less an authority than Jerome himself for approval.

When the reformers broke loose from the authority of the church of Rome, they were naturally concerned with the question of the authority of the scriptures. Since the Bible now was the supreme authority in matters of faith and conduct, it became necessary and urgent to deal with the ever-present problem of the relation of the Apoc. to the canonical scriptures. With the original Hebrew text of the OT open before them, with the words of Jerome ringing in their ears, and with their dislike for some of the doctrines that the Roman church had derived from these Apoc., it did not take long for the reformers to make up their minds about the authenticity of the Apoc. Luther, following the German scholar Karlstadt, gathered the outside books together, which were scattered among the OT canonical writings in the Greek and Latin MSS, and placed them at the end of the OT in his German translation of the Bible (1534) under the following title: "Apocrypha. These books are not held equal to the sacred scriptures, and yet are useful and good for reading." This was the beginning of the end for the Apoc. in Protestant circles, for their inferior rank was now emphasized by their position between the testaments, and their being grouped together made it more easy to remove them in a body from the Bible, if and when desired.

The Roman church, not to be outdone by this vigorous reaction of Protestant leaders against the Apoc., declared in the Council of Trent (1546) that whoever did not recognize as sacred and canonical all the books contained in the Vulg. would be anathema. This decision was later confirmed by the Vatican Council of 1870. The three works, I and II Esdras and the Prayer of Manasseh, which were not included in the sacred catalogue of the Council of Trent, were later included in smaller type as an appendix to the NT in the standard Clementine edition of the Vulg. (1592). For convenience' sake, Roman Catholic scholars often refer to the Apoc. as "deuterocanonical" works—with no intention of implying, however, that they are of inferior rank or authority.

Luther's innovation of segregating the books of the Apoc. was followed in other translations of the Bible into French, the Scandinavian languages, English, etc. Most of the English editions of the Bible followed this arrangement of the books until 1626, when some copies of the KJV began to appear without the Apoc. included in them. The growing antagonism to these noncanonical books in Great Britain and on the Continent finally led the British and Foreign Bible Society, followed by the American Bible Society, to announce in 1827 that henceforth they would "exclude in their printed copies of the English Bible the circulation of those books, or parts of books, which are usually termed Apocryphal."

In Protestantism no denomination officially accepts the Apoc. as canonical scriptures, but there are various opinions regarding their value. The Anglican confession, on the one hand, recognizes that these books are instructive and edifying without being inspired. This position is best summarized in Article Six of the Thirty-nine Articles: "In the name of Holy Scripture we do understand those canonical books of the Old and New Testament, of whose authority there was never any doubt in the Church. . . . And the other Books (as Jerome saith) the Church doth read for example of life and instruction of manners; but yet doth it not apply them to establish any doctrine."

On the other hand, the Calvinistic view, followed by most Protestant churches today, is that these books should be rejected as of no authority in the church. This position is explicitly stated in the third article of the Westminster Confession (1647): "The books commonly called Apocrypha, not being of divine inspiration, are not part of the Canon of Scripture; and therefore are of no authority in the Church of God, nor to be in any otherwise approved, or made use of, than other human writings."

The long-standing controversy regarding the canonicity of the Apoc. has thus ended in a stalemate, with each side regarding its decision as final and irrevocable. The Roman church, holding that the church is authoritative in all matters of canon, has declared the Apoc. to be canonical; the Protestant view that the OT alone is canonical has led to the firm rejection of the Apoc. as divinely inspired scripture by all major Protestant bodies. There seems little hope of breaking this deadlock.

It should be added, however, that the attitude toward the Apoc. has changed considerably in recent history. All the outside books have come under the careful scrutiny of the biblical scholar, who must treat these works as part of the biblical tradition. Since the publication of R. H. Charles's *Apoc. and Pseudep.* in 1913, the scientific study of these writings has advanced rapidly. A translation of the Apoc. by E. J. Goodspeed from the best critical Greek text has been another milestone in the study of these writings; and another translation, under the auspices of the National Council of Churches, has now been published. The discovery of the MSS at Qumran has already given impetus to an even more intensive scientific investigation of the intertestamental period and its voluminous literature. Perhaps the best evaluation of the present status of the Apoc. is that found in the E. J. Goodspeed's Preface to *The Complete Bible:* "It has been truly said that no one can have the complete Bible, as a source book for the cultural study of art, literature, history, and religion, without the Apocrypha. From the earliest Christian times down to the age of the King James Version, they belonged to the Bible; and, while modern critical judgments and religious attitudes deny them a position of equality with the Old and New Testament scriptures, historically and culturally they are still an integral part of the Bible."

***APOCRYPHA, NT.** The NT Apoc. or, as it is often styled, the Apocryphal NT, consists of a host of books of all sorts, primarily gospels, acts, letters, and apocalypses—i.e., of books similar to, at least externally, the several kinds of writing in the canonical NT. These were composed, for the most part, to amplify and embroider matters touched on or suggested by the canonical writings, and, in part, to serve as substitutes for such among sects or groups in varying degrees remote from the main stream of catholic—i.e., orthodox—Christianity. The writings are of very different values and of very different dates, ranging from early in the second century to the present day.

The use of the term "apocrypha," meaning "hidden" or "secret," is far from happy for such writings. The word properly refers to secret or esoteric writings, regarded as having been written centuries before but supernaturally kept secret until the latter days. This was true of many writings, but hardly of these. In addition, the term suggests a parallel between these writings and those of the OT APOCRYPHA, which is quite unwarranted. The use of the term stems from the days when it had acquired the adverse meaning of "spurious" or "false." The confusion has been heightened by the publication of such volumes as William Hone's *The Apocryphal NT* (1820), which lifted bodily, and without acknowledgment, portions of nine of these writings from an earlier volume by Jeremiah Jones, and combined them with Archbishop Wake's version of the APOSTOLIC FATHERS, writings which are totally distinct and in no proper sense of the word apocryphal. The unfortunate impression, fostered by Hone's mischievous volume, that these books were suppressed by the same imaginary group who determined the Christian canon, has been heightened by the utterly unjustified claims made for other volumes of modern apocrypha, such as the so-called *Lost Books of the Bible*.

The writings properly designated by the now common term "NT Apoc." may all be styled, without the charge of oversimplification, religious. Many of them are trivial, some are highly theatrical, some are disgusting, even loathsome; nonetheless, they may properly be styled religious. Their purpose, with but few possible exceptions, was to enforce what to the particular writer seemed sound Christian beliefs. This at times takes the form of revealing new doctrines or new truths; of extolling or dilating upon some particular virtue or kind of life; of emphasizing or embroidering some spectacular doctrine, such as the virgin birth, the physical resurrection, the second coming of Christ, the future state, with especial attention to the torments and tortures of the damned; and, perhaps most conspicuous of all, of amplifying laconic and intriguing incidents and, on the authority of big names from the past, filling in certain "gaps" or "silences" or answering questions raised or at least suggested by the earlier writings.

Some of these writings were definitely the products of sects ranging all the way from reasonable orthodoxy to what was regarded the rankest and most reprehensible heresy. Many of them are scarcely more than copies—sometimes greatly expanded, sometimes drastically abridged—of earlier writings of a similar nature.

That any of them preserve authentic traditions of words or doings of their heroes—notably Jesus, the apostles, the Virgin, and other characters in the canonical NT books—is most unlikely. Occasionally it has been argued that material parallel with, but external to, that in the canonical gospels may well have stood in some of the earlier of apocryphal writings—notably the Gospel According to the Hebrews and the Gospel According to the Egyptians (*see* HEBREWS, GOSPEL ACCORDING TO THE; EGYPTIANS, GOSPEL ACCORDING TO THE), now known to us solely from occasional quotations and obscure references in the fathers; further, that were copies of these writings to be discovered, they would be found of equal, if not actually of superior, value to our canonical accounts. The nature of the quotations which are preserved and the inferences apparently to be drawn from them would not seem to warrant such conclusions, while the nature of those writings which have been preserved in whole or in sizable parts would certainly not tend to make such assumptions probable.

For the most part these writings may be styled a parasite growth—i.e., they are simply expansion, imaginative development, or dilation, of themes and incidents in the canonical writings, frequently in markedly biblical idiom and with constant irresponsible transfer of such materials (with rewriting) from one character to another. A striking example of this constant practice is to be found in the story of the birth of Mary and her upbringing in the temple, which is a greatly expanded and glamorized revision of the story of Samuel. This practice is especially conspicuous in the apocryphal Acts, notably the Acts of Thomas, but is characteristic of this whole type of writing. To deny the possibility of any historical fact or tradition's being preserved in these writings, simply because they are uncanonical, would obviously be totally unwarranted, but examination of the texts themselves fails to reveal the presence of any such fact or tradition.

This does not warrant, however, the easy assumption that they are worthless. Not only do they reveal the hopes, imaginations, likes, and dislikes of Chris-

tians of an earlier day and thus provide invaluable information to the church historian, but they also throw a light which is at times far from inconsiderable upon the canonical writings, notably the gospels. Again and again these subsequent writings do with a broad brush precisely what the later canonical gospels have done to the accounts in the earlier—e.g., the addition of the detail in John that it was *Peter* who struck off the *right* ear of *Malchus;* or Luke's adding that one of the thieves on the cross was repentant and received pardon (cf. Mark 15:32). This latter detail is illustrative of the trend of this whole style of writing: this incident in Luke, surely an expansion resulting from Christian curiosity, piqued by the terse mention in Mark of *two* thieves and the certainty that no detail was without profound significance, was in turn to result in a greatly expanded further development of the story of the two thieves, their meeting with Jesus in Egypt, his prophecy that they would be crucified with him thirty years later, and the subsequent tale of the arrival of the repentant thief (DYSMAS) in paradise to the consternation of Death and Hell. The third version of the parable of the entrusted funds (talents), now commonly ascribed to the Gospel According to the Hebrews, simply highlights the earlier development of the original parable from its version in Matthew to that in Luke, seemingly in no small part to remove from it the obvious difficulties in its earliest form.

Perhaps more important and less debatable is another sure value of these writings. They evidence unmistakably the absence of reliable historical information outside the Markan tradition. Their utter failure to provide any story having any semblance of historical probability outside the cycle of incidents included in Mark would seem to warrant the conclusion, borne out by the clear evidence that Matthean and Lukan incidents (as distinct from sayings), superficially different from Mark's, are in all probability developments and amplifications of the Markan core. In a word, the frequent assumption that Mark preserved but a portion of the stories then current about Jesus would seem in sharp contradiction to the apparent facts. Nor is it too much to say that not infrequently a thoughtful reading of an incident in one of the canonical gospels in the light of its subsequent expansion in a later apocryphon will suggest that, despite the lurid and pinchbeck rhetoric in which it is retold, the later writer occasionally saw more clearly the meaning of the earlier author than do we today. As an example of this, the treatment of the Lukan story of the twelve-year-old Jesus in the temple, by the author of the ARABIC GOSPEL OF THE INFANCY, is instructive.

As suggested in the outset, these writings superficially parallel the four types of writing in the canonical NT: gospels, acts, letters, and apocalypses. In addition to early gospels now known to us solely by occasional quotation, such as the Gospel According to the Hebrews or the Gospel According to the Egyptians, there are two special types, infancy gospels and passion gospels—i.e., accounts of purely legendary incidents, for the most part quite outside the scope of the canonical gospels, in the hidden years before the ministry and in events subsequent to the Crucifixion. Of the infancy gospels the Protevangelium of James and the Gospel of Thomas (*see* JAMES, PROTEVANGELIUM OF; THOMAS, GOSPEL OF) were the earliest and the sources for all subsequent treatment. The former gives a totally imaginary account of the birth and upbringing of the Virgin and the story of the subsequent birth of Jesus; the latter provides a tasteless congeries of miracles wrought by Jesus as a small boy. Their total effect is to send us back to the canonical gospels with fresh approval of their chaste restraint in failing to attempt to fill in the intriguing hidden years. Of passion gospels there are two of exceptional import, the fragment of the Gospel of Peter (*see* PETER, GOSPEL OF) discovered in a tomb in Egypt in 1884, and the Acts of Pilate (*see* PILATE, ACTS OF), often styled the Gospel of Nicodemus. With them is commonly grouped the Gospel (or Questions) of Bartholomew (*see* BARTHOLOMEW, GOSPEL OF), a series of questions propounded to Jesus after his resurrection, to Mary, and to Satan, by Bartholomew.

The canonical book of Acts early proved intriguing to Christian imagination, orthodox and heretical alike. In consequence we have a long string of romances attempting to provide information absent in Acts of the doings of the several worthies. A series of five such treatments, popularly ascribed now to Leucius, were produced under the titles Acts of John, of Paul, of Peter, of Andrew, and of Thomas (*see* JOHN, ACTS OF; PAUL, ACTS OF; PETER, ACTS OF; ANDREW, ACTS OF; THOMAS, ACTS OF). All five of them, varying though they do in seeming orthodoxy or departures therefrom, came to be prized by the Manicheans and apparently were substituted by them for the canonical Acts. As is indicated in the several articles, to which the interested reader is referred, they are long and flashy romances, based on little more than vivid and uncurbed imagination, and regularly ending with the passion (martyrdom) of the apostle, which latter sections also commonly circulated as independent books. These writings set the stage for a welter of others of the most grossly legendary nature. Some of these latter, conveniently styled "secondary Acts," are extant in Greek and/or Latin. In addition there is another cycle, a veritable olla-podrida, commonly referred to as "Oriental Acts," mainly in Coptic, Arabic, and Ethiopic, of which the Acts of Andrew and Paul (*see* ANDREW AND PAUL, ACTS OF) is a not unrepresentative example.

A few letters were produced, but this type of writing never flourished as lushly as did the other types. In addition to such writings as III Corinthians (*see* PAUL, ACTS OF), the obvious Epistle to the Laodiceans (*see* LAODICEANS, EPISTLE TO THE), the turgid correspondence between Paul and Seneca, are such other apocrypha as the letters between Jesus and Abgarus, the Epistle of Lentulus, the Epistle of Titus, and the Epistle of the Apostles (*see* ABGARUS, EPISTLES OF CHRIST AND; LENTULUS, EPISTLE OF; TITUS, APOCRYPHAL EPISTLE OF; APOSTLES, EPISTLE OF).

There are several apocalypses, headed by the famous Apocalypse of Peter (*see* PETER, APOCALYPSE OF), which set the fashion for accounts of personally conducted tours of heaven and hell by the several apostles. The Apocalypse of Paul (*see* PAUL, APOCALYPSE OF) was, of course, made inevitable by Paul's

intriguing reference to the experience of the "man in Christ who fourteen years ago was caught up to the third heaven" (II Cor. 12:2), which our subsequent author, understanding it, with far less hesitation than is shown by some modern commentators, to have been an experience of Paul himself, proceeded to recount at very great length. Other apocalypses followed, including those of JAMES; STEPHEN; THOMAS; and the VIRGIN herself. In addition to them are five Gnostic apocalypses, long known only by name from Porphyry's references to Plotinus' hostile opinion of them: ALLOGENES SUPREME; Apocalypse of Messos (*see* MESSOS, APOCALYPSE OF); Apocalypse of Zostrianus (*see* ZOSTRIANUS, APOCALYPSE OF); and the apocalypses of Nikotheos and Zoroaster. The first three of these have been tentatively identified among the many writings discovered at Chenoboskion, and mentioned below.

In addition to these four types of apocrypha are several having to do with the assumption of the Virgin, the Book of John the Evangelist (*see* JOHN THE EVANGELIST, BOOK OF), and stray sayings ascribed to Jesus found in places outside the four canonical gospels and commonly referred to by the scarcely appropriate title Agrapha. In 1946 a large collection of Gnostic writings was discovered in upper Egypt, about thirty miles N of Luxor at Chenoboskion. Thirteen codices, all in Coptic, and with some 794 pages reasonably intact, are said to contain forty-eight treatises, of which no fewer than forty-four are different. These have been provisionally dated as coming from the third and fourth centuries and are thought to be based upon Greek originals. They consist of cosmogonies, treatises of a dogmatic nature, prayers, gospels, letters, and apocalypses. (*See list below.*) In addition to this library, containing, as it does, so many Gnostic writings hitherto quite unknown, are several treatises, such as the PISTIS SOPHIA, the Apocryphon of John (*see* JOHN, APOCRYPHON OR SECRET BOOK OF), and the baffling Books of Jeu, long known to scholarship and contained in three hitherto quite unique MSS—Codex Askewianus (fourth century; British Museum), Codex Brucianus (fifth century; Bodleian Library), and Codex Berolinensis (fifth-sixth century; Berlin).

Brief mention must also be made of the long list of modern apocrypha, still appearing to perplex and excite the hopes of many uninformed readers that priceless discoveries have but recently been made available. Without exception they are worthless trash and the rankest forgeries, but a few of them—no list could be complete—may be listed as an indication that the wildfires of imagination are still burning, though with but a smoky flame: *The Unknown Life of Christ, The Aquarian Gospel, The Crucifixion of Jesus by an Eye-Witness, The Report of Pilate (Archko Volume), The Confessions of Pontius Pilate, The Letter of Benan, The Twenty-ninth Chapter of Acts, The Letter from Heaven, The Gospel of Josephus, The Book of Jasher, The Description of Christ, The Death Warrant of Jesus Christ, The Long-Lost Second Book of Acts, Oahspe, The Lost Books of the Bible,* and *The Nazarene Gospel.* None of these trivia is discussed in separate articles in this dictionary. *See bibliography.*

A list of the more important older apocrypha to which separate articles are devoted herein, including many in addition to those specifically named in the preceding paragraphs, is appended for the convenience of the reader.

Bibliography. The literature which these writings have produced is immense. M. R. James, *The Apocryphal NT* (1924; reprinted 1950), is by far the most convenient introductory guide, since it contains, in addition to brief but lucid introductions to the several writings, complete English translations of the more important texts and full summaries of most of the others, together with a judiciously selected bibliography of the more important volumes and special studies prior to 1924. In addition to the Selected Bibliography (pp. xxix-xxxi) are very valuable additional bibliographical items, introduced in the discussion of the particular writings. Additional bibliographical material, including that subsequent to 1924, will be found in B. Altaner, *Patrologie* (2nd ed., 1950); J. Quasten, *Patrology* (1950). In both these volumes very full bibliographies are conveniently grouped at the end of each special study. In addition to the studies listed by Quasten (vol. I, p. 277) for the recently discovered Chenoboskion library of Gnostic texts, *see* V. R. Gold, "The Gnostic Library of Chenoboskion," *BA*, vol. XV, no. 4 (Dec., 1952), pp. 70-88, for an excellent (provisional) description and bibliography.

An adequate discussion of the modern apocryphal writings may be found in E. J. Goodspeed, *Modern Apoc.* (1956); *Strange New Gospels* (1931). M. S. Enslin

APOLLONIA ăp′ə lō′nĭ ə ['Απολλωνία] (Acts 17:1). A Greek city in Macedonia, distinguished as Apollonia in Mygdonis from the many other cities of this name. Apollonia lay on the Via Egnatia, thirty miles from Amphipolis and thirty-eight miles from Thessalonica, S of Lake Bolbe. Paul and Silas passed it on the way to Thessalonica. M. J. Mellink

APOLLONIUS ăp′ə lō′nĭ əs ['Απολλώνιος, *from* Lat. of Apollo]. **1.** A native of Tarsus (or son of Thraseas) who was governor of Coelesyria and Phoenicia. He conspired with Seleucus IV to raid the temple treasury in Jerusalem. Heliodorus, sent to do the actual plundering, was, according to the story in II Macc. 3:7-40, thwarted by a heavenly warrior "of frightening mien" who appeared on a "magnificently caparisoned horse." This has been a favorite theme of artists.

2. Governor of Coelesyria under Alexander Balas. According to Josephus, this Apollonius bore also the name Daus (i.e., "one of the Dahai"[?]; Antiq. XIII.iv.3-4). Josephus considers this Apollonius to be the son of 1 *above*. Polyb. XXXI.21.2 identifies him as the foster brother (σύντροφος) of Demetrius I.

Without the approval of Alexander, Apollonius challenged Jonathan to battle. Jonathan took Joppa, which had been fortified by Apollonius. The latter then drew Jonathan's men into the plain and ambushed them, but Jonathan's men emerged victorious (I Macc. 10:69-85), pursuing the troops of Apollonius to Ashdod, which they burned.

3. General of the armies of Samaria who put together a large force of Gentiles "to fight against Israel" (I Macc. 3:10; cf. Jos. Antiq. XII.v.5); probably to be identified with the Apollonius whom Antiochus had previously sent to despoil Jerusalem (II Macc. 5:24-26; cf. I Macc. 1:29-35). He pretended to have come with peaceable intentions, but, finding the Jews not at work on the sabbath, "he ordered his men to parade under arms. He put to the sword all those who came out to see them" (II Macc. 5:25-26; cf. I Macc. 1:29-35). In the battle with Judas, Apollonius suffered the humiliation of losing his sword to the opposing commander, who "used it in battle the rest of his life" (I Macc. 3:12; cf. Jos. Antiq. XII.vii.1).

4. Son of Menesthius; perhaps the same as 3 *above*. He was sent by Antiochus Epiphanes to represent him at the coronation of Ptolemy Philometor (II Macc. 4:21).

5. Son of Gennaeus, and one of the district governors (στρατηγοί) in Palestine. He and his fellow governors "would not let [the citizens] live quietly and in peace" (II Macc. 12:2). J. C. Swaim

APOLLOPHANES ăp′ə lŏf′ə nēz ['Απολλοράνης] (II Macc. 10:37). One of three Syrians (the others being the brothers Timothy and Chaereas) slain at Gazara by "twenty young men" in the army of Judas Maccabeus. J. C. Swaim

APOLLOS ə pŏl′əs ['Απολλώς, *perhaps contracted from* 'Απολλώνιος (Acts 18:24 D)] (Acts 18:24; 19:1; I Cor. 1:12; 3:4-6, 22; 4:6; 16:12; Tit. 3:13). An influential member of the early Christian church.

I Corinthians is our primary source on Apollos, for it was written by Paul after significant personal association with Apollos. In I Cor. 1:12, Apollos appears as the focus of partisan loyalty in one of the four parties into which the Corinthian church had divided, those supported by the other parties being Paul, Cephas (Peter), and Christ. This indicates a great deal of prominence for Apollos, and demonstrates also the influence of Peter in the Corinthian church, although there is nothing to suggest that Peter himself had visited Corinth.

In I Cor. 3:3-10, Paul defines the relation of Apollos to himself. Paul's work in Corinth was prior to that of Apollos, for Paul compares himself to the one who planted and Apollos to one watering that which is already planted. Paul, however, deprecates the human pettiness of partisan activity in behalf of either Apollos or himself, in the light of the overwhelming fact that it is God who gives the increase. Nevertheless, in 3:10 ff, Paul states emphatically that he was the foundation layer, and that all others—in-

cluding, of course, Apollos—necessarily build on that foundation. It is probable that Paul's depreciation (I Cor. 2:1 ff; II Cor. 11:6) of the skilful use of philosophical eloquence and his bitter reference (II Cor. 11:5; 12:11) to "superlative apostles" esteemed by the Corinthian church are a reflection of adverse comparisons made by the Corinthian Christians between the eloquent Apollos and himself. Paul declares (I Cor. 4:15) to the Corinthians that, while they may well have many guides to Christ, they have but one father in Christ—namely, himself. This poignant remark seems to reflect a considerable sensitiveness concerning the Corinthian magnification of Apollos. Paul also observes (II Cor. 3:1) that he did not stand in need of letters of recommendation to them as some did, probably meaning Apollos (Acts 18:27). And although in I Cor. 3:22; 4:6 he places Apollos on a level with himself, Paul mentions himself first in each case. Nevertheless, I Cor. 16:12 shows that Apollos was with Paul and that Paul had urged him to revisit the Corinthian church. The passage implies that Apollos was declining to visit them just then, in order to avoid a resurgence of partisan tension.

All that Acts tells us about Apollos is closely interwoven with the Acts account of Paul's work in Corinth and Ephesus. Apollos in Acts seems, however, to be quite independent of Paul; and if we had no other source of information concerning Apollos, we should conclude that their paths never crossed. In Acts 18:18–19:7 it is noted that Paul, leaving Corinth with Priscilla and Aquila at the end of the second of the three missionary journeys related in Acts, proceeded to Ephesus, where, during his brief stay, he had a good reception in the synagogue. He left Priscilla and Aquila in Ephesus, and proceeded to Caesarea and Jerusalem, and then moved on to Antioch. After a brief stay there, Paul set out to revisit the churches established in Galatia and Phrygia —a journey which was to terminate in Ephesus. While Paul was thus engaged, Apollos arrived in Ephesus. Apollos was a Jew, a native of Alexandria, and the presumption is that he grew up there. He was fervent, eloquent, and well versed in the OT scriptures—certainly in the LXX Version and probably in Hebrew as well. He had been taught as a catechumen the "way of the Lord" (τὴν ὁδὸν τοῦ κυρίου; Acts 18:25) by some unnamed Christian teacher, and was accustomed already to teach accurately the "things concerning Jesus" (τὰ περὶ τοῦ Ἰησοῦ). The two expressions just cited indicate that Apollos knew not only data about Jesus but also some of Jesus' teaching. He knew, however, only the baptism of John. When Apollos arrived in Ephesus and began teaching thus in the synagogue, Prisca and Aquila took him—probably to their house (I Cor. 16:19)—and taught him "more accurately" the "way of God" (Acts 18:26), presumably instructing him in Christian baptism. When Apollos wished to move on to Greece, the brothers in Ephesus wrote letters of recommendation for him. Apollos was in Corinth vigorously refuting in public debate Jewish objections to Christian teaching, when Paul—having revisited the churches in Asia Minor—arrived in Ephesus to take up his long work there. The data already cited from I Corinthians tell all that is certainly known concerning Apollos from this point.

Tit. 3:13 tells us little, save that—to the extent that we may assume that Titus preserves fragments of a genuine letter to Titus—it accords with the general impression of Apollos derived from I Corinthians. Jerome, commenting on Tit. 3:13, says that Apollos, after a stay in Crete, returned to Corinth and was bishop there. Not much weight can be assigned to this tradition.

Luther suggests that Apollos was the writer of Hebrews (*see* HEBREWS, LETTER TO THE). This is an interesting possibility, because what we know concerning Apollos is consistent with the characteristics of the Letter to the Hebrews. It is, however, only a conjecture.

J. M. NORRIS

APOLLYON ə pŏl′yən [Ἀπολλύων, destroyer]. The Greek name of the angel of the bottomless pit (the underworld—ἄβυσσος), whose Hebrew name, according to Rev. 9:11, is ABADDON. As described in Rev. 9, when the fifth angel blows his trumpet, the shaft of the bottomless pit is opened and from it arises smoke, and from the smoke come locusts (cf. Joel 1:4 ff), who have power to harm those of mankind without the seal of God on their foreheads. The king of these locusts is this angel, who is mentioned nowhere else. In Enoch 20:2 the name of the angel who is "over Tartarus" is Uriel.

B. H. THROCKMORTON, JR.

APOSTASY ə pŏs′tə sĭ [ἡ ἀποστασία, desertion, abandonment, rebellion, *a late form of the classical Gr. noun* ἀπόστασις, *derived from the verb* ἀφίστημι, to put away, separate]. Originally a word with political meaning; ὁ ἀποστάτης referred to a rebel; this meaning is preserved in the LXX in I Esd. 2:23. The religious understanding of the term—namely, departure from the law of God or desertion of cause, worship, temple, or synagogue, or abandonment of obedience toward God in general—appears in the LXX (Josh. 22:22; II Chr. 29:19; 33:19; Jer. 2:19; cf. especially II Macc. 5:8).

The two passages of the NT take up the religious meaning. In Acts 21:21 we are told that Paul was accused of "apostasy": "You teach all the Jews . . . to forsake Moses"—i.e., to forsake the Torah, since the apostle demanded neither to circumcise nor to "observe the customs." In II Thess. 2:3 we encounter an eschatological setting, which is often repeated throughout the history of the Christian church. The passage takes up a Jewish apocalyptic tradition, that before the return of the Lord the apostasy (rebellion) must come. This theory reflects the idea of eschatological postponement, an idea typical for II Thessalonians and II Peter.

The English word "apostasy" in Heb. 6:6 is used in translating the Greek παραπέσοντας (lit., "falling back") and refers to a denial of faith in Christ under persecution.

E. DINKLER

APOSTLE ə pŏs′əl [ἀπόστολος, *adjectival noun from* ἀποστέλλειν, to send off or out]. A title denoting a commissioned messenger or ambassador. It occurs seventy-nine times in the NT, but with various

shades of meaning, both of a precise and of a general character. In Christian usage the term has two distinctive connotations: (*a*) it is limited to certain men of the first generation of the church's history; and (*b*) it marks the bearer of the title, among other qualifications, as a missionary of a gospel.

1. Greek usage
2. Jewish apostles
3. Jesus and apostleship
4. The Pauline conception
5. Later Christian literature

Bibliography

1. Greek usage. The term "apostle" is not common in classical Greek, where it occurs as either a noun or an adjective to describe a naval expedition or a group of colonists. Only in Herodotus I.21; V.38 is it used of a personal envoy. The papyri employ the term for a dispatch given to a ship or for an export license. The Alexandrian Jew Philo does not use the word at all, and Josephus employs it once (Antiq. XVII.xi.1) in the classical sense of an embassy. Epictetus (*Discourse* III.22) speaks of the ideal Cynic teacher as one "sent by Zeus" among men to be a messenger and herald of the gods and an "overseer" of men's affairs. He does not use the noun "apostle"; but his close association of the verb "to send" and the noun "overseer" (κατάσκοπος, cognate to ἐπίσκοπος, the Christian word for "bishop") provides an interesting parallel to NT and early Christian terminology.

2. Jewish apostles. Jerome (commentary on Galatians I.1) first noted the similarity of Jewish and Christian apostles; and his suggestion has been much debated by modern scholars seeking an "origin" for the NT use and meaning of the term. Other fourth-century evidence, in the church fathers, Jewish inscriptions (cf. CIL, IX, 648), and the Theodosian Code (XVI.viii.14) refers to ordained Jewish emissaries of the Jerusalem patriarchate called "apostles," sent out to visit the Diaspora, especially to collect taxes for the support of the rabbinate. Usually traveling in pairs, these men sometimes preached or taught in the synagogues, but their commission ended with their return to Jerusalem and was not transferable by them to others.

The rabbinic term for such agents was *shaliaḥ* (plural *shᵉluḥîm*, from the root שלח, "to send"). Such persons might represent individuals or corporate bodies such as courts and synagogues, their duties depending upon the terms of their commission—to serve legal documents, collect moneys, convey instructions, particularly with regard to the calendar or festivals. In the synagogues the *shaliaḥ* might be the leader of the congregation in prayer. The rabbinic principle that "a man's *shaliaḥ* is like to himself" (M. Ber. 5.5) states the obvious truth that a person who follows his instructions points the responsibility for his actions to his authorizing agent. It does not define the status of the *shaliaḥ* so much as it does his function.

In the OT, *shaliaḥ* is used of four eminent figures, Moses, Elijah, Elisha, and Ezekiel, in the sense of "God's agent" by reason of power committed to them to perform miracles on God's behalf. The LXX generally translates the verb שלח by ἀποστέλλειν, but the nominal form ἀπόστολος occurs only once—in I Kings 14:6, where the prophet Ahijah announces himself thus to Jeroboam's wife as a bearer of a message from God. Some scholars have pointed particularly to the governmental agents sent on both civil and religious missions, in the literature of the Persian period (especially Ezra 7:12 ff; Neh. 2:5; Elephantine papyri [2; ed. Cowley], pp. 62-63; cf. II Chr. 17:9; Esth. 9:20; II Macc. 1:1-2, 18). But in all these cases it should be noted that the *shaliaḥ*, unlike the later Christian apostle, has no institutional status or missionary responsibility. His authority is precisely defined and given for a limited term, and the character of his commission is more juridical than religious in quality.

3. Jesus and apostleship. Fundamental to Jesus' conception of his person and work is his sense of being "sent" by the Father. In turn, he "sends out" his disciples with his own authority to continue and extend his mission (for references, *see* MINISTRY, CHRISTIAN § 1). Such passages as Mark 9:37 (and parallels) and John 20:21 are characteristic of his outlook and have every claim to authenticity. The idea of apostleship in these sayings is obviously comparable to the rabbinic notion of the *shaliaḥ*, but with this difference: for Jesus, apostleship, whether of himself or of his disciples, is a purely religious commission to carry out the purpose of God for man's salvation, and it is a lifelong authorization, given once for all.

The Synoptic narrative of the choice, commissioning, and naming of the Twelve as apostles (Mark 3:14 ff; cf. Matt. 10:1 ff; Luke 6:13 ff), and of their subsequent report to Jesus (Mark 6:30; Luke 9:10), raises the complicated question as to the extent to which later ecclesiastical terminology may have colored the tradition. On the face of it, the Markan and Lukan accounts present no inherent contradiction to the Jewish custom of the *shaliaḥ;* and the Matthean account, with the Lukan narrative of the sending forth of the Seventy (10:1 ff), adds verisimilar details. The Twelve are given a precise commission for a limited sphere and time, and they go out two by two for the work. But the singular use by Matthew of the word "apostle" in this instance, plus the fairly common usage of Luke to speak of the Twelve as "apostles" (cf. 17:5; 22:14; 24:10; and frequently in Acts; *see* § 5 *below*), leave some doubt as to the reliability of the term "apostle" in this connection.

In any event, church tradition ascribed to the Twelve the title of apostle, not only on the basis of this narrative, but also by reason of the postresurrection commission given to them by Jesus (cf. Matt. 28:19-20; Luke 24:48-49; John 20:21-23; Acts 1:8; and the addition to Mark, 16:15 ff). Most modern critics would certainly distinguish the peculiar character of the Christian apostle from that of the Jewish *shaliaḥ*, by emphasis upon the unique nature of the resurrection experience and commissioning.

4. The Pauline conception. There can be no doubt that Paul associated his own claim to be an apostle with the fact that he had seen the risen Lord and received from him a direct commission to preach the gospel (Rom. 1:1; I Cor. 9:1-2; 15:9; II Cor. 11:4-5). Though Paul again and again stressed the point

that his particular commission was aimed at the conversion of the Gentiles (Rom. 11:13; Gal. 1:15-17; cf. Acts 22:15; 26:15-18; I Tim. 2:7), it is clear, both from his own testimony and from the narrative of Acts, that he did not confine his apostolic labors to the heathen, any more than Peter limited his to the Jews (cf. Gal. 2:7-8). With his claim to apostleship, Paul also insisted upon a special deference to his authority in the churches that he founded (I Cor. 4:9; 9:2). He considered apostles to be the chief and highest gift of ministry in the church (I Cor. 12:28; cf. Eph. 4:11), and its divinely given authority to be manifestly confirmed in the church by miraculous signs and wonders (II Cor. 12:12).

It is certain that Paul accounted others besides himself and the Twelve as apostles—among them James, the brother of the Lord (I Cor. 15:7; Gal. 1:19), and presumably Barnabas also (cf. I Cor. 9:6). A few critics, however, have sought an interpretation of the εἰ μή in Gal. 1:19 as excluding James from the company of apostles; but this does not seem to be the most natural reading of the text. In Rom. 16:7 Paul refers to "kinsmen and fellow prisoners" named Andronicus and Junias, who were "men of note among the apostles" and Christians of longer standing than he.

But Paul uses the word "apostle" in more than one sense. In the address of all his letters, except Philippians and Thessalonians (though note I Thess. 2:6), he describes himself as an apostle of Jesus Christ. And in the Galatian letter he makes a special point of noting that his title of apostle is "not from men nor through man, but through Jesus Christ and God the Father." There were undoubtedly opponents of Paul who contested his right to the title; but Paul, in turn, was ready to counter with his enemies by naming them "false apostles" (II Cor. 11:13; 12:11). Paul also uses the word "apostle," after the manner of the Jewish *sh'luḥîm*, to describe the emissaries of churches (II Cor. 8:23; Phil. 2:25).

5. Later Christian literature. In spite of the theory of "apostolic succession" that developed in the church's doctrine of the ministry (*see* MINISTRY, CHRISTIAN § 9), the title and office of apostle were not transferable and died out with the passing of the original bearers of the name. Whenever it is applied to individuals in later Christian literature, the use of the term is metaphorical. The church has never had apostles in the NT sense since the first century.

Moreover, there was apparent very early in the "post-apostolic age" a tendency to limit the title to the Twelve, though without deliberate intent, by any means, to exclude Paul, James, or even Barnabas. The trend to speak of "the twelve apostles" is already evident in Matt. 10:2; Rev. 21:14. The superscription of the DIDACHE is but another indication: "The Lord's teaching to the heathen by the twelve apostles." (The reference to apostles in Did. 11.4, 6, is without doubt a conscious archaism.) That certain individuals of the second generation continued to style themselves by the title is evident from Rev. 2:2, but their claim was attacked by "orthodox" leaders as fraudulent. For it was the rise of heresy, particularly, that impelled the church to limit the final authority for its doctrine and practice to the teaching and example of the founder-apostles (cf. Eph. 2:20; 3:5). So there developed by the middle of the second century an "Apostles' Creed," a NT canon of books ascribed to apostles or to their immediate disciples, and a hierarchical ministry claiming succession from the apostles.

This process is most clearly indicated in the NT in the book of Acts. With a single exception, the word "apostles" in this book refers to the Twelve, or at least to a specified group in the Jerusalem church, who with the elders govern the church and make authoritative decisions respecting the development of its mission and organization. In 14:4, 14, however, Paul and Barnabas are called apostles in the account of their so-called first missionary journey. This circumstance may be due to a special source used by the evangelist; or it may be a survival of an older usage—perhaps of Jewish outlook, which viewed the two men in this particular instance as *sh'luḥîm* of the church in Antioch (cf. their commissioning in Acts 13:1-3).

The author of Acts would not have denied to Paul, however, the title of an apostle; his attitude is implicit in the circumstance that he devoted half his volume to Paul's career. But the name of his book, "Acts of the Apostles," which goes back well into the second century, is testimony to the early establishment of the tradition that the apostles—mathematics notwithstanding—were twelve, but the number twelve does not exclude Paul or even a few others, such as James and Barnabas.

M. H. SHEPHERD, JR.

APOSTLES, EPISTLE OF THE. A second-century statement of beliefs and expectations in the form of a letter by the eleven apostles, summarizing a revelation to them by Jesus after his resurrection.

This very important apocryphon (*see* APOCRYPHA, NT) was utterly unknown until the discovery of a badly mutilated Coptic MS (fourth-fifth century) in Cairo. In addition, we now have a substantially complete text in Ethiopic and a fragment in Latin. No trace of the original Greek is known. A critical edition from the three available versions was produced by C. Schmidt in 1919. A translation into English was made by M. R. James, who had been the first to identify the Ethiopic "Testament of Our Lord in Galilee" as a version of the Coptic document. The epistle is commonly dated in the mid-second century. Occasional Gnostic touches have been detected by some, but its definitely non-Gnostic

nature is indicated, not alone by the sharp denunciation of Simon and Cerinthus in the opening paragraph but also in the insistence upon bodily resurrection. Many of the apocryphal writings employ the fiction of detailed revelations by the resurrected Jesus to his disciples, while compositions purporting to be from several or all of the apostles are far from uncommon. The sources of the present writing are the four canonical gospels, Acts, the Apocalypse of Peter, Barnabas, Hermas, and the famous story of the youthful Jesus sent to learn his letters.

The writing opens as a letter "to the churches of the east and west, of the north and south," by the eleven apostles (among whom are Nathaniel and Cephas, the latter being distinct from Peter), and rapidly recounts the supernatural birth, miracles, and resurrection of Jesus, who had been crucified by Pontius Pilate and Archelaus. Then the epistolary form is dropped, and the writing continues as a revelation by Jesus to them in answer to their questions as to the date and nature of the Parousia, the bodily resurrection of all faithful Christians who have been baptized and faithfully observe the Lord's commands, the final judgment, portents of the end, the fate of the lost, directions for their missionary activity, the prediction of the advent of Paul, and an identification of the wise and foolish virgins. At the end of the account the Lord ascends to heaven. An especially revealing touch is Jesus' statement that he himself had appeared to Mary in the form of the angel Gabriel and had formed himself and entered her body: "For I alone was a minister unto myself in that which concerned Mary." This appears to be no esoteric speculation, although it has been so regarded by some, but a logical, if grotesque, result of the growing unwillingness to allow anyone to minister to or aid him. No longer was he regarded as empowered by the Spirit; rather, he did what he did because he was what he was.

Bibliography. In M. R. James, *The Apocryphal NT* (1924), pp. 485-503, is printed the author's admirable English translation and careful comparison of the variations in the several versions.

M. S. ENSLIN

APOSTOLIC CONSTITUTIONS AND CANONS ăp'ə stŏl'ĭk. A collection of ecclesiastical regulations and liturgical materials in eight books, to the last of which are appended as a final chapter the eighty-five Apostolic Canons indicating the selection, ordination, and duties of the clergy. The collection is but one of several, although the longest and most pretentious, and is heavily dependent upon the DIDACHE, the Apostolic Tradition of Hippolyptus, and the Didascalia. It is now commonly dated in the latter part of the fourth century (*ca.* A.D. 380) and regarded as coming from Syria. It purports to have been composed by the apostles and to have been transmitted by "our fellow minister Clement." In Book VIII the several apostles, beginning with Peter and including Matthias, Paul, and James of Jerusalem, speak one by one as in apostolic council ("In the first place, therefore, I Peter say . . ."), instead of jointly as in the previous books, and conclude with a final decree that "every one is to remain in that rank which is appointed him." The first six books have as their principal source the Didascalia, which is substantially reproduced even in the smallest details, although with occasional purposeful alterations and modifications. Thus the original Greek of the latter influential third-century manual, which had absorbed and expanded the earlier Didache, and which is now for its complete text extant only in Syriac—about three eighths is preserved in Latin translation in a late fourth-century palimpsest—can be substantially reconstructed.

Book VII is an expansion or adaptation of the Didache, together with prayers and prescriptions for the instruction of catechumens and for the conduct of baptism. Book VIII draws heavily upon the Apostolic Tradition of Hippolytus and provides detailed instructions for the ordination of bishops and presbyters, and contains the so-called Clementine Liturgy (5-15); then it passes on to deaconesses, subdeacons, confessors, virgins, widows, and exorcists, and concludes with sundry rules for various church observances, fasts, and prayers, all in a most practical and matter-of-fact manner. The last chapter (57) contains the eighty-five so-called Apostolic Canons, as already mentioned. The last of these is of special interest, since it contains a list of the canonical scriptures. At the end of the list are "two Epistles of Clement," "the Constitutions dedicated to you the bishops by me Clement, in eight books," and "the Acts of us the Apostles"; there is no mention of the book of Revelation.

That one man assembled this whole congeries of earlier materials would seem indicated by the similarity of style and diction throughout those sections properly to be ascribed to the editor. He is often styled an Arian or semi-Arian, but there would seem little to demand such a label. A direct connection with the spurious "Epistles of Ignatius" (*see* IGNATIUS, EPISTLES OF)—i.e., with the so-called "long recension"—is certain. Whether these latter were produced by the compiler of the Constitutions himself or whether his work was speedily employed by another is uncertain.

Among other similar writings may be mentioned the so-called Apostolic Order, a short treatise in Greek, probably to be assigned to the beginning of the fourth century and coming from Egypt. It is addressed to the "sons and daughters" and purports to be written by the Twelve at the direct command of the Lord Jesus. The first half is moralistic, embodying the gist of the "Two Ways"; the latter half is concerned with regulations for the selection of bishops, presbyters, lectors, deacons, and widows. The Apostolic Tradition of Hippolytus gave rise to several other manuals, among which are: the Testament of Our Lord, in which is found, before the material common to such works, an account of the instructions which Jesus gave to the apostles prior to his ascension and his description of the signs which would prelude the end of the world; the Canons of Hippolytus, written originally in Greek but extant now only in Arabic and Ethiopic, and essentially a much reworked edition of the Apostolic Tradition; the so-called Constitutions Through Hippolytus, styled in some MSS the Epitome, and really not an epitome but a series of excerpts from Book VIII of the Apostolic Constitutions, in which at times the epitomizer

has substituted the text of Hippolytus for that of the dependent work. The work long styled the Egyptian Church Order, largely because it was first known to modern scholars in a Coptic translation, is now known to be the long lost Apostolic Tradition itself.

Bibliography. The literature dealing with these writings is immense. The articles "Apostolical Constitutions" and "Apostolical Canons" in Smith and Cheatham's *Dictionary of Christian Antiquities*, while old, may still be studied with profit. B. Altaner, *Patrologie* (2nd ed., 1950), pp. 35-45; and J. Quasten, *Patrology* (1953), II, 119-20, 147-52, 180-90, provide full bibliographies of more recent work, as well as succinct discussions. M. S. ENSLIN

***APOSTOLIC FATHERS.** The name commonly used since the seventeenth century to designate a group of writings contemporary with the later books of the NT, by authors reputed to have been associated either with the apostles or with their immediate disciples. Several of these works had a quasi-canonical authority in certain churches until the fourth or fifth century, and are preserved in ancient codices of the NT (e.g., the Epistle of Barnabas in ℵ, and the two Epistles of Clement in A).

Though these documents are intrinsically of a quite uneven merit and authority—and in many cases their precise authorship, date, and locale of writing are uncertain—they are, by virtue of their dating prior to the formation of the NT canon, indispensable sources for the history, theology, and institutional development of Christianity in the postapostolic age. They are important, too, for the study of the vocabulary of the NT, as for tracing the process by which much of the NT came to take on canonical authority. But they are of less help, though by no means of little interest, in the study of the text of the NT. In particular, the citations and allusions to the Gospels show such divergences from the received canonical texts, that it is difficult to determine in most cases whether the authors were dependent upon oral tradition or were harmonizing or loosely quoting from written sources. There are also unmistakable instances of the use of apocryphal writings.

Since these works do not form a homogeneous group, it is best to study them individually. The first editor of the collection, J. B. Cotelier, in 1672, included the pseudo-Epistle of Barnabas; the two epistles ascribed to Clement of Rome; the epistles of Ignatius of Antioch; the single epistle and the Martyrdom of Polycarp, bishop of Smyrna; and the Shepherd of Hermas, a prophet of the Roman church. Modern editors customarily add to these the Didache, an early Church Order discovered in 1873; the fragments extant from the writing of Papias, bishop of Hierapolis; a fragment of an Apology of Quadratus, an Athenian who flourished in the reign of Hadrian (preserved in Euseb. Hist. IV.3.1-2); and an anonymous apologetic work of unknown origin and date, the Epistle to Diognetus, first published in 1592, a writing of considerable distinction of style.

APPEAL TO CAESAR. After Paul's arrest in Jerusalem he was taken by Roman soldiers to Caesarea to foil a Jewish plot on his life. There he was imprisoned by Felix and awaited trial. When Festus replaced Felix as governor, he had Paul brought before him for a hearing. Jews from Jerusalem brought their charges against Paul. Festus asked him whether he wished to go to Jerusalem and be tried there on the Jews' charges, presumably by the Sanhedrin (Acts 25:9). Paul answered that he did not want to be delivered to the Jews for trial—knowing they would kill him—and he appealed to Caesar (vs. 11), believing that he had "done nothing deserving death" (vs. 25) under Roman law. As Festus had no charge against Paul to send to the emperor, he had Paul brought before Agrippa II. Agrippa said that Paul could have been released if he had not appealed to Caesar (26:32); but because he had done so, he must be taken to Rome. Acts closes with Paul in prison in Rome, and says nothing about the results of Paul's appeal. *See* PAUL.

It was probably Paul's Roman citizenship (22: 25 ff) which gave him the right to appeal his case to the emperor. Acts does not state this, but it appears that in cases of capital offense this right was customarily granted. In his famous *Letter to Trajan* (book X, letter 96), Pliny wrote that he had sent to Rome Christians accused of capital offenses, if they were Roman citizens. Pliny does not mention their appeals, but rather implies that he had sent them to Rome as a matter of course. On the other hand, Suetonius tells us (*Galba* IX) that Galba, while governor in Africa, ignored the claims of a Roman citizen who "invoked the law" and had him crucified in his province. The "law" which this citizen "invoked" was presumably a law allowing appeal; but, in this case, Galba did not honor it.

Paul, then, appealed to Caesar because, in the first place, he did not want to be tried under Jewish juris-

diction; and, furthermore, he apparently believed that the local Roman governors were prejudiced against him. Luke never indicates that the Romans were ever convinced that there was much to the Jews' charges against Paul; but this may reflect a Lukan coloring of the situation.

What was the result of Paul's appeal? We do not know. It is possible that the prosecuting Jews did not appear in Rome and that after two years of imprisonment there Paul was released.

APPHIA ăf'ĭ ə [Απφία]. One of the persons addressed in the salutation of the Letter to Philemon. She is designated by Paul, the writer of the letter, as "our sister." Because her name stands next to that of Philemon in the salutation, it has sometimes been assumed that she was his wife. Some have suggested that she may have been the wife of Archippus, whose name follows hers in the salutation. There is no evidence for either position. What can be assumed with certainty is that she was a Christian, a friend of the author of the letter, and a member of the Christian community in either Colossae or Laodicea. There is no other reference to this woman in the NT. *See also* PHILEMON; ARCHIPPUS. M. E. LYMAN

APPHUS ăf'əs ['Απφοῦς] (I Macc. 2:5). An epithet meaning "cunning," applied to Jonathan, one of the five sons of Mattathias. J. C. SWAIM

APPIAN WAY ăp'ĭ ən [ἡ 'Αππία; ἡ 'Αππία ὁδός; ἡ ὁδὸς ἡ 'Αππία; *Via Appia*]. The Roman road which ran from Rome through Capua to Brundisium.

From *Atlas of the Bible* (Thomas Nelson & Sons Limited)

38. The Appian Way

The Appian Way was built in 312 B.C. by the censor Appius Claudius Caecus (Livy IX.29.5-6). It reached at first only as far as Capua, but was extended by around the middle of the next century to Brundisium. Strabo mentions the Appian Way frequently, speaking of Brundisium as its lower terminus, and of Capua as situated on it (V.233.249). Statius (*Silvae* II.2.12) calls it "the worn and well-known track of Appia, queen of the long roads." Paul, who landed (Acts 28:13) at PUTEOLI on the Bay of Naples, must have reached the Appian Way at Capua, 20 miles distant, and then proceeded on it the 132 miles to Rome, passing en route through the FORUM OF APPIUS and the THREE TAVERNS.

APPII FORUM ăp'ĭ ī fôr'əm. KJV form—reproducing the original Latin name used in the Vulg. —of FORUM OF APPIUS.

APPLE [תפוח, *tappûaḥ;* Ugar. *tpḥ*(?)]. A tree (Song of S. 2:3; 8:5; Joel 1:12) and its fruit (Prov. 25:11; Song of S. 2:3, 5; 7:8—H 7:9), poetically referred to for shade, beauty, fragrance, and sweet fruit. In the Song of Songs the bride's lover is likened to this tree, which provides delightful shade and sweet fruit (2:3), its fruit is sought by the lovesick bride (vs. 5), and the breath of the bride is likened to the fragrance of its fruit (7:8—H 7:9). Prov. 25:11 implies a gold-colored fruit (unless תפוח is a textual error), perhaps ornamental but certainly beautiful; it is likened to apt or timely(?) speech (cf. 15:23). The tree appears in Joel 1:12 with the fig, pomegranate, and palm, trees important to the "tillers of the soil" but which wither away in the terrible "Day of the LORD."

The traditional rendering, "apple," though favored linguistically, has been challenged because of the absence of the tree from Bible lands except in remote places, where it occurs with only very poor-quality fruit. The apple (*Pyrus malus* L. or *Malus pumila* Mill.), therefore, does not fit the graphic poetic imagery of Bible times. The citron (*Citrus medica* L.—used only for preserves or candied), the golden orange (*Citrus sinensis* L., Osbeck—an important export item from the Holy Land today), the quince (*Cydonia oblonga* Mill.—the only one of the suggested fruits that is indigenous to Bible lands), and the apricot (*Prunus armeniaca* [L.]—an important fruit in Bible lands today) have been proposed. Botanists agree that the apricot best fits the biblical references (*see* FLORA § A2*b*), but the uncertainty of its origin has made biblical scholars hesitant. The apricot, apparently native to China, was brought to the Western world no earlier than the first century B.C. (Pliny tells of its introduction to Rome, apparently from Armenia, not long before his time.)

If *tpḥ* in Ugaritic tablet 121:II:11 refers to the fruit (the context is broken and uncertain), the tree was present in Syria in the fourteenth century B.C. *Tappûaḥ* in Hebrew city names (*see* BETH-TAPPUAH; TAPPUAH) in the Shephelah and the central highlands argues for the presence of these trees in these areas at least as early as the seventh century B.C. Here the apple seems most unlikely, but the apricot, citron, and orange are also botanically unsupported. Only the quince would then be left. The differing tastes of Orientals might answer the problem raised by the poetic descriptions. Similarities in appearance between the common apple and the quince could account for the linguistic confusion. The LXX use of μῆλον (any tree-borne fruit), is an indication of ancient uncertainty.

Association of the tree in the garden of Eden (Gen. 3:1-19) with the apple seems to stem from an early mistaken identification of the tree of Song of S. 8:5 with the story. The deceptive fruit described in Wisd. Sol. 10:7 (cf. Deut. 32:32; II Kings 4:39) and Josephus (War IV.viii.4) as growing near ancient Sodom is frequently called "apple of Sodom" (*see*

VINE OF SODOM). The expression "APPLE OF THE EYE" is not at all related to תפוח.

See also FRUIT (PRODUCTS).

Bibliography. I. Löw, *Die Flora der Juden*, III (1924), 155-59, 212-35, 240-44; A. L. and H. N. Moldenke, *Plants of the Bible* (1952), pp. 184-88. J. C. TREVER

APPLE OF THE EYE. English idiom denoting the pupil of the eye and therefore a very precious thing. "Apple" renders three Hebrew words. The first, אישון (Deut. 32:10), means literally "little man" and presumably refers to the reflected image of himself which the beholder sees in the eye of another person. The second, בת (Lam. 2:18 KJV), means "daughter," with possibly the same significance. The third is the word בבה, meaning literally "gate."

The phrase is used in its physiological meaning in Lam. 2:18 KJV. In the other passages it has a metaphorical sense, referring either to a person very dear to God (Ps. 17:8) or to a teacher's instructions (KJV "law") as very precious to his student (Prov. 7:2).

R. C. DENTAN

APRON [חגרה (Gen. 3:7; *elsewhere* GIRDLE); σιμικίνθιον]. Originally the inner girdle around the waist; in the NT, the girdle wrapped around the waist of the outer garment. In Gen. 3:7 aprons were made of fig leaves to cover the nakedness of Adam and Eve. In Acts 19:12 the aprons and handkerchiefs of Paul had healing powers. J. M. MYERS

AQUEDUCT ăk'wĭ dŭkt. *See* WATERWORKS § 4*c*.

AQUILA AND PRISCILLA ăk'wə lə, prĭ sĭl'ə ['Ακύλας, Πρίσκιλλα]; in Paul's letters PRISCA prĭs'kə [Πρίσκα]. Man and wife, companions of Paul in Corinth and Ephesus.

1. Early life. Aquila is described as a Jew, a native of the Asiatic province of Pontus (Acts 18:2) who migrated to Italy and was later expelled from Rome, along with his wife, under the act of Claudius. Since the race of Priscilla is not mentioned, it has been inferred that she was not Jewish, but Roman. However, both names are originally Latin, indicating Roman connections. Whether they were Christians at the time of expulsion, or became Christians in Corinth, is not clear. The date of their expulsion and going to Corinth has been set *ca.* A.D. 49/50, according to historical references and archaeological discoveries centering around the proconsul Gallio (Acts 18:12; *see* CHRONOLOGY, NT § B1*d*). By trade Aquila and Priscilla are described as tentmakers. This may indicate either the weaving of cloth or the making of tents from leather.

2. Association with Paul. Aquila and Priscilla were residents of Corinth when Paul arrived on his first visit to the city. Being of the same trade, Paul soon made contact with them. It is not unlikely that Aquila was the contractor under whom Paul worked. He had a house adequate for the accommodation of his fellow worker. The association was not only of fellow craftsmen, but Aquila and Priscilla also became partners with Paul in evangelism, possibly as "teachers" (I Cor. 12:28).

When Paul departed from Corinth after his hearing before Gallio (Acts 18:18-19), he took Aquila and Priscilla with him to Ephesus. It is possible that they also had business reasons for the change. When Paul went to Jerusalem, they were left in the city to carry on the work of evangelism. In Ephesus they came in contact with the Alexandrian Apollos, who was a brilliant man, yet uninstructed in the teaching on baptism. Priscilla and Aquila were instrumental in his enlightenment, presumably initiating him also into the meaning of such ideas as "into Christ" and the gift of the Spirit (Acts 18:25-26; 19:6). How long the two workers stayed in Ephesus is not known. They are not mentioned in the account of the riot in which Paul was involved (Acts 19:23-41). Yet there is a note in the appendix of Paul's Letter to the Romans saying that "Prisca and Aquila . . . risked their necks for my life" (Rom. 16:3-4). This note, probably not a part of the original letter, quite likely refers to an earlier persecution in Ephesus in which Aquila and Priscilla demonstrated their devotion to Paul. When Paul sent his first letter from Ephesus to the Corinthians, he included greetings from Aquila and Prisca (I Cor. 16:19). The salutation to Prisca and Aquila in II Tim. 4:19 throws no further light on the later residence of the two.

3. Later tradition. Since Priscilla is named first in the instruction of Apollos (Acts 18:26), the impression has grown that she was more active and more capable than her husband. Perhaps she had a cultural background both Roman and Hellenistic. Various authorities have nominated her as author of the Letter to the Hebrews.

AQUILA'S VERSION. A Jewish translation of the OT into Greek. Aquila was a connection of Hadrian, who brought him from his native Pontus to Jerusalem, where according to Epiphanius he was converted to Christianity but later excommunicated. Upon his excommunication he became a zealous proselyte to Judaism. According to Jerome (*Commentary on Isaiah* 7.14) he was a pupil of Rabbi Aqiba, whose exegetical principles he followed closely.

In A.D. 130 Aquila finished his new translation of the Hebrew OT, which immediately became popular with his coreligionists.

His translation was characterized by a fantastic literalism in which, in spite of his own excellence in Greek, most rules of Greek syntax were violated in order to remain as close to the Hebrew original as possible. *See* SEPTUAGINT §§ 3*a*, 4*a*.

AR är [ער, city]. A Moabite place located on the S bank of the Arnon River (Num. 21:28; cf. 22:36), on the N border of Moab at the time of the Israelite exodus (Num. 21:15; Deut. 2:18). It may refer to a city (in which case Deut. 2:36: "the city that is in

the valley," may refer to Ar), to a region, or both. Deut. 2:9 may use "Ar" as a synonym for "Moab." Deut. 2:29 speaks of the Moabites living in Ar and the sons of Esau in Seir. In Isa. 15:1, "Ar" is parallel to "KIR."

Ar may be the capital of Moab, although the capital would hardly be on a boundary. Ar has often been identified with a city later called Areopolis (the Greeks presumably connecting Ar with Ares, god of war) and Rabbath Moab, but this city is almost fourteen miles S of the Arnon, and so does not suit our information about Ar. E. D. GROHMAN

ARA ār'ə [ארא] (I Chr. 7:38). One of the sons of Jether in the genealogy of Asher.

ARAB ār'ăb [ארב, ambush] (Josh. 15:52). A village of Judah in the hill-country district of Hebron, identified with er-Rabiyeh, E of Dumah (Domeh), near Umm el-'Amad.

ARABAH ăr'ə bə [ערבה]. One of the main regions of the land of Israel, contrasted with the coastal plain, the Shephelah, the Negeb, and the mountain regions. It extends due S from the lower end of the Sea of Chinnereth (Sea of Galilee) on both sides of the Jordan, includes the Dead Sea, and then, veering slightly SW, continues to the head of the Gulf of Aqabah. The word is translated "plain" in most of the passages by the KJV, and once "champaign" (Deut. 11:30); but it is rather a depression between lines of higher ground and, in fact, for the greater part of its length is below sea level.

Bibliography

1. Terms. The simple term "Arabah," almost always with the article (*hā'ᵃrābhâ*), is used in the Bible to indicate any part of the depression. Thus, it refers sometimes to the part S of the Dead Sea (Deut. 2:8); and since this part was arid and sterile, the term is used by the Judean prophets and writers in the sense of "desert" or "steppe" (Job 24:5; Ps. 68:5; Isa. 33:19; Jer. 17:6). Elsewhere it is used to mean the portion E of the Jordan (Deut. 4:49), W of the Jordan (Josh. 11:16), or the entire Jordan Valley below the Sea of Chinnereth (II Sam. 4:7). The plural (ערבות) is used to indicate specific sections; thus the phrase rendered in the versions as the "plains of Moab" (ערבות מואב) means in reality the Moabite portions of the Arabah. The "plains of Jericho" (Josh. 4:13; 5:10) are that part of the Arabah which was near the city of Jericho. There is also a reference to the "plains of the wilderness" (II Sam. 15:28; 17:16 KJV), which would mean that part of the Arabah which merges into the wilderness of Judah; but the text is doubtful, and the RSV emends to read the "fords of the wilderness" (*see* FORD).

The term "sea of the Arabah," often qualified by the addition "the Salt Sea," is used in several places to indicate the Dead Sea; it was the boast of Jeroboam II of Israel that he had restored the boundary of his land "from the entrance of Hamath as far as the Sea of the Arabah" (II Kings 14:25)—i.e., the entire E boundary as far S as the whole of Moab. The term *naḥal hā'ᵃrābhâ* (Amos 6:14), rendered by the RSV as the "Brook of the Arabah" and by the KJV as the "river of the wilderness," is more difficult to locate. It may refer to some specific stream of water that flows into the Dead Sea, such as the Wadi Qelt or the brook Zered (Wadi el-Hesa), which elsewhere (Isa. 15:7) is called by the similar-sounding name *naḥal hā'ᵃrābhîm*, "Brook of the Willows." On the other hand, the term used by Amos is exactly paralleled by the Arabic expression Wadi el-'Arabah for the region between the S end of the Dead Sea and the Gulf of Aqabah, and it is possible that he had this in mind, with the S limit of the nation, in which he includes Judah, as the beginning of the wadi. The prophet seems to be deliberately parodying the boast of the king, as given above; for this reason it is impossible to accept the proposed emendation by some scholars to *naḥal miṣrayim* (Brook of Egypt, Wadi el-'Arish), for Amos throughout his prophesying makes it clear that he expects the affliction of the people to come from the direction of the E.

2. Description. The Arabah consists of three distinct parts: the Jordan Valley, the Dead Sea region, and the stretch from the Dead Sea to the Gulf of Aqabah.

a. The Jordan Valley. This portion of the Arabah extends approximately fifty miles and slopes to the S from 696 feet below sea level at the Sea of Chinnereth to 1,286 feet below sea level at the Dead Sea. For the first twenty-five miles its width is about twelve miles, and the region is watered by a number of streams: the Yarmuk, 'Arab, Taiyibeh, Ziqlab, Yabis, and several smaller streams from the E, and the Nahr Jalud from the W. Here the land is comparatively fertile and well watered, and the Jordan was easily fordable. Opposite Samaria the valley becomes narrow for about five miles and changes in nature from a fertile region to a sterile one. In the last twenty miles the Jabbok (Zerqa) and Shu'aib come in from the E and the Fari'a from the W, and the aspect of the region becomes a mixed one. The Jordan has cut down about 150 feet into the soft alluvial soil and winds its way through a dense jungle. On both sides of this are stretches of very fertile land in which, according to Pliny, more than forty-nine varieties of dates were grown besides other products. On either side of these are steep scarps that rise several hundred feet; they are twelve miles apart at Jericho, after which the valley narrows until it is only six miles wide when the Jordan empties into the Dead Sea.

Because of the nature of the Arabah above the Dead Sea, it never became a highway from N to S; the main roads in Canaan run along the hills above. It is crossed by a number of E-W roads, particularly in the N half, where the tribe of Manasseh was the only one of the twelve to possess a permanent territory on both sides of the Jordan.

b. The Dead Sea region. The greater part of this region, about fifty miles in length and about ten in

From *Atlas of the Bible* (Thomas Nelson & Sons Limited)

39. Looking toward the Arabah; filling the foreground are the limestone hills of the Negeb; in the background beyond the depression of the Arabah are the ridges of the hill country of the Edomites in the general area of Petra.

width, is occupied by the DEAD SEA. The hills on either side are steep and barren, though there is enough room at their bases on either side for narrow roads. On the W side are the traditional sites of the cities of Sodom (Jebel Usdum) and Gomorrah (Khirbet Qumran).

c. From the Dead Sea to the Gulf of Aqabah. This region, the modern Wadi el-'Arabah, extends for about one hundred miles in a direction slightly SW of S. Directly S of the Dead Sea is the Sebkha, a series of mud flats into which the Wadi el-Jeib and its tributaries lose their identities, for an extent of eight miles. At this point the valley begins to slope upward, passing above sea level after thirty miles and reaching its highest point near Jebel er-Rishe some eighteen miles farther on. During this part the valley widens out to as much as twenty-five miles in places. Beyond Jebel er-Rishe it slopes downward toward the Gulf of Aqabah, becoming narrower on the way and ending at Ezion-geber. The whole region is a desert, marked only by occasional oases, but in Nabatean times a careful use of irrigation from the scanty sources of water allowed for a certain amount of agriculture. The cliffs on the W are lower and consist of a series of terraces that lead up to the Negeb; those on the E form the escarpment of the biblical kingdom of Edom. Fig. ARA 39.

Despite the sterility of its soil, this part of the Arabah possessed important advantages, which made it an object of contention between Edom and Judah. Ezion-geber, at its S extremity, was the SE gate of Canaan, and the entering point of the trade from Arabia and even India and Africa. The trade route from Ezion-geber went N along the Arabah, from which side routes connected it with the main N and S highways of Canaan: to the E, through Edom, to the King's Highway; to the NW, by way of the ascent of Akrabbim, to Beer-sheba, where it met the water-parting route, and on to Gaza, where it met the coastal route. Still more important was the fact that the Arabah contained the only mines for copper and iron that are to be found in Canaan. A number of these were discovered by F. Frank and N. Glueck, notably at Punon (modern Feinan), Mene'iyeh, Khirbet en-Nahas, and Mrashrash. It was the Arabah that the biblical writer (Deut. 8:9) had in mind when he wrote of the land promised to Israel, "whose stones are iron, and out of whose hills you can dig copper."

3. History. The S Arabah was one of the ways traversed by the Israelites on their journey from Egypt to Canaan. According to Deut. 2:8 they seem to have journeyed down it from a point near Kadesh-barnea to Ezion-geber, leaving it to turn N through the Wadi Yitm to skirt the borders of Edom and Moab. In the meantime the Moabite part of the Arabah had been conquered by the Amorite kingdom of Sihon; when the latter was overcome by the Israelites, they occupied it in turn, and it was the site not only of the apostasy at Abel-shittim (Num. 25) but also of the final acts of Moses (Num. 32–36; Deut. 1:1). From there Joshua crossed over into the Jericho Arabah, where he established the sanctuary at GILGAL (1) and conquered JERICHO, opening the way to the subjugation of the territory W of the Jordan. The N Arabah is mentioned occasionally in the

later historical narratives. Abner fled through it after his defeat at Gibeon (II Sam. 2:29), the murderers of Ish-bosheth traversed it to bring his head to David at Hebron (II Sam. 4:7), and Zedekiah was fleeing toward it from Jerusalem when he was taken by the Babylonians (II Kings 25:4; Jer. 39:4). The S Arabah is not specifically mentioned, but it fell into the possession of Israel or Judah and was reoccupied by the Edomites in accordance with the fortunes of the wars between these countries (*see* EDOM; EZION-GEBER; ELATH). After the third century B.C. it was occupied by the NABATEANS.

4. The Arabah in later prophetic literature. According to the account in Gen. 13–19, the Dead Sea section of the Arabah, prior to the destruction of the five wicked cities, had been an unusually fertile plain, "like the garden of the Lord" (13:10). In the later prophetic literature, which verges on the apocalyptic, the restoration of this barren territory is one of the promises of the future restoration of Israel. Thus Ezekiel speaks of a stream that is to issue eastward from the threshold of the temple which will go down to the Arabah and make it and the Dead Sea fruitful and productive (Ezek. 47:1-12). The same promise appears in the late prophecies of Joel 3:18—H 4:18; Zech. 14:8. It is also possible that in such passages as Isa. 35:1; 51:3 the word *'arabah,* rendered as "desert," may refer to the actual Arabah.

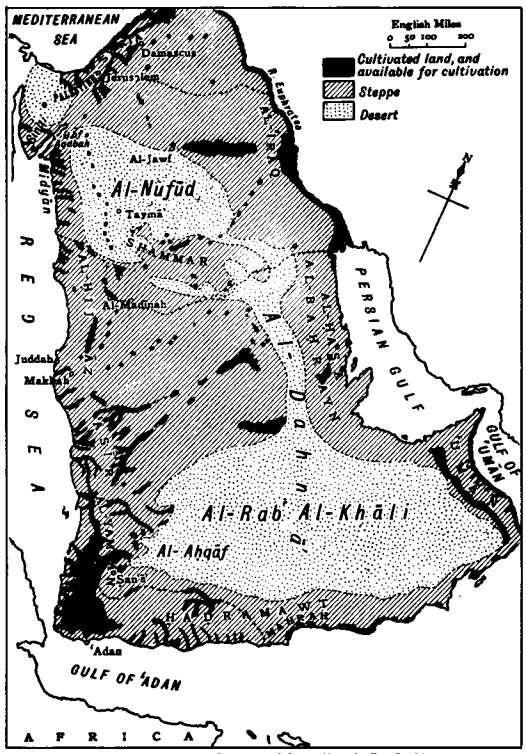
Bibliography

1. Scriptural references. ***a. In the OT.*** In Isa. 21:13, ערב (*'ereb*) refers to NW Arabia in the root sense of the name, "desert," or "steppe." ערב (*'arabh*) in Jer. 25:24 seems from the context to mean N Arabia, and in II Chr. 9:14; Ezek. 27:21 it includes both N and S Arabia. This latter word is really the collective name of the people, "Arabs," like Arabic *al-'arab,* and only by metonymy is translated "Arabia." Aq., Symm., Syr., Vulg., and most modern translations also have "Arabia" in I Kings 10:15, as do the same versions (with the exception of the Vulg. and the KJV, which follow the MT) in Ezek. 30:5, in both of which cases the MT has *'erebh,* "mingled people." In these two references the whole of Arabia is indicated by the context. Another designation for NW Arabia is ארץ קדם (*'ereṣ qedhem*), "EAST COUNTRY" (Gen. 25:6), E of Syria-Palestine.

b. In the Apoc. In Jth. 2:25, Arabia is shown by the context to be near Damascus. In I Macc. 11:16, Arabia is the Nabatean kingdom, E and S of Palestine. The apocalyptic dragons in II Esd. 15:29 are said to be from Arabia.

c. In the NT. "Arabia" in Gal. 1:17 has been taken to mean the Syrian Desert E of Damascus (so most moderns), or al-Balqā' in Transjordan (Arabic in Paris Polyglot), or Mount Sinai (but a more specific statement of this would be expected). Gal. 4:25 follows contemporary usage in including Mount Sinai in Arabia. In Matt. 12:42; Luke 11:31 "the South" is used for Sheba in S Arabia.

2. Location, size, and boundaries. Arabia is in Southwestern Asia. It is the largest peninsula in the world, covering almost 1,000,000 square miles—*ca.* one third the size of the continental U.S.A. The peninsula is roughly rectangular, the length of the W coast being 1,800 miles and the width from the Red Sea to the Persian Gulf *ca.* 600 miles. Arabia is bounded on the W by the Red Sea; on the S by the Gulf of 'Adan and the Indian Ocean; on the E by the Gulf of 'Uman and the Persian Gulf; and on the N, where there is no clear geographical boundary in the Syrian Desert, by modern Jordan, Syria, and Iraq. Since it is bounded on three sides by seas and on the N by the Euphrates, the Arabic name is Jazirat al-'arab, "Island of the Arabs."



3. Divisions of Arabia. ***a. Divisions of classical geographers.*** Classical geographers, following Ptolemy (second century A.D.), divided the country into three parts: Arabia Petrea, whose main city was Petra and which included Sinai, Edom, Moab, and E Trans-

jordan; Arabia Deserta, the Syrian Desert; and Arabia Felix, "Fortunate Arabia," the S portion.

b. Divisions of Arab geographers. Yāqūt in his *Mu'jam al-buldān* (under the heading *jazīrat al-'arab*) quotes a fivefold geographical division: Tihamah (the W coastal plain), al-Hijaz (the mountainous area E of Tihamah), Najd (the central plateau), al-'Arud (the lower areas to the E), and al-Yaman (the S region).

c. Modern political divisions. These are Saudi Arabia, the majority of the peninsula, especially the N and the W; al-Yaman in the SW corner; 'Adan Protectorate along the S coast; 'Uman and Trucial 'Uman in the SE corner; and Kuwayt, adjacent to Iraq on the NE.

4. Physical features.* ***a. Geology.*** The rocks of Arabia belong to three main types: the old, igneous and metamorphic rocks of the mountains along the W coast; the later, sedimentary rocks of the NE; and the recent lava beds. The sedimentary rocks of the

40. Arabia, showing land surface features

NE were laid down under ancient seas, whose organic matter produced the world's largest known accumulations of petroleum, exploited only since 1932. Arabia in general is often mentioned in the Bible as a source of gold (I Kings 10:2, 10, 15, 22; II Chr. 9:1, 9, 14, 21) and particularly OPHIR (I Kings 9:28; 10:11; 22:48; I Chr. 29:4; II Chr. 8:18; 9:10; Job 22:24; 28:16; Ps. 45:9; Isa. 13:12); HAVILAH (Gen. 2:11-12); SHEBA (Ps. 72:15; Isa. 60:6; with RAAMAH in Ezek. 27:22); and Parvaim, perhaps in Arabia (II Chr. 3:6). Other minerals from Arabia were silver (I Kings 10:22; II Chr. 9:14, 21) and precious stones (Ezek. 27:22), including onyx from Havilah (Gen. 2:12). According to one interpretation of Ezek. 27:19, iron came from UZAL. The Letter of Pseudo Aristeas 119 refers to copper and iron mines in Arabia, probably those in Edom. *See* ARABAH. Fig. ARA 40.

b. Coasts. The coasts of Arabia have been rising, and there are few good harbors, the best being 'Adan in the S. The most striking promontories are Ras Musandam in 'Uman and Qater projecting into the Persian Gulf. The W coast is fringed with coral reefs, and along the Persian Gulf are the Great Pearl Banks.

c. Islands. The most important islands off Arabia are: Suqutrā to the S, and Bahrayn (perhaps the Sumerian Dilmun) in the Persian Gulf.

d. Mountains. The rim of mountains along the W and much of the S coast intercepts moisture, leaving the interior dry. Most of al-Yaman is mountainous, the highest measured peak being 12,336 feet. The "hill country of the east" (Gen. 10:30) is somewhere in Arabia. Some of the mountains of NW Arabia are extinct volcanoes, and eruptions are recorded in medieval times. Some see in the smoke, fire, and earthquake of the theophany at Mount Sinai (Exod. 19:18) a description of an eruption, and wish to locate this mountain in NW Arabia.

e. Lava fields. In central and N Arabia are many fields of broken lava (Arabic *ḥarrah*). Some think that חררים (*ḥᵃrērîm*), "parched places" (Jer. 17:6), is the Hebrew for such lava fields.

f. Valleys. The mountains of Arabia are cut by many valleys (Arabic *wādi*, plural *awdiyah*), along which are the caravan routes. Many of the wadies drain into deserts, and evaporation has produced "salt land" (Job 39:6; Ps. 107:34; Jer. 17:6).

g. Plains and plateaus. Plains, usually narrow, are found along the coasts. The high central plateau is called Najd, and the stony N plateau is the Syrian Desert.

h. Sandy deserts. In S Arabia is al-Rab' al-Khali, "the empty quarter," the largest continuous sandy area in the world. To the N is another great sandy desert, al-Nufud. As rocks are decomposed and the wind blows the sand, the sandy areas are spreading.

i. Oases. There are oases, especially along the caravan routes in N Arabia, wherever a spring furnishes enough water to support vegetation.

j. Meteorology. The climate of most of Arabia is dry and hot. Some places in al-Rab' al-Khali are rainless for ten years. Only in 'Asir, al-Yaman, and 'Uman is there enough rain for extensive regular cultivation. The average temperature in Tihamah is almost 90° F. Some identify שרב (*shārābh*) in Isa. 35:7; 49:10 with Arabic *sarāb*, "mirage," but the reference seems to be to the burning heat of the desert.

k. Water. Because of the paucity and irregularity of rain, there are no large lakes and only one short perennial river, Wadi Hajar in 'Adan. After the occasional cloudbursts temporary freshets may rush down the valleys. These torrents soon disappear; and those who later seek water from them, like the Arab merchants of Job 6:15-20, will be misled. Water remains in the subsoil of some wadies, and Arabs dig

to it with sticks, just as did the Israelites in the wilderness of Moab (Num. 21:16-17). The theory of the dessication of Arabia within historical times has been disproved by evidence for the same paucity of rain in antiquity; but in Arabia, as in Palestine and Iraq, the methods of conserving water (e.g., dams) have decreased in efficiency since ancient times.

5. Plants connected with Arabia in the Bible. The most important products of Arabia for ancient commerce were FRANKINCENSE and other perfumes. Arabia and the Arabians are often associated with SPICES in the Bible: Havilah (Gen. 2:12), Ishmaelites (Gen. 37:25), Sheba (I Kings 10:2, 10; II Chr. 9:1, 9; Isa. 60:6). The wandering Israelites found date palms, the most important Arabian fruit tree, in the oasis of Elim in Sinai (Exod. 15:27). The MANNA which the children of Israel ate in the wilderness (Exod. 16) may be derived from the tamarisk tree, which is common in Arabia. Mallow, bushes, broom, nettles, are typical desert plants (Job 30:4, 7). "Thickets" (Isa. 21:13) are thought by some to be inappropriate for Arabia, but travelers report thick underbrush in the oases. An emendation in Ezek. 27:19 makes wine a product of Uzal, but the best wine in pre-Islamic Arabia was imported from Syria. ALMUG wood (I Kings 10:11-12) and EBONY (Ezek. 27:15) were imported by Arabian merchants from India or Africa.

6. Fauna connected with Arabia in the Bible. ***a. Domestic animals.*** The camel, the most important animal of Arabia, is often connected with Arabs in the Bible—e.g., Ishmaelites (Gen. 37:25; I Chr. 27:30), Midianites (Judg. 6:5; 7:12; 8:22, 26), Amalekites (I Sam. 15:3; 30:17), the Queen of Sheba (I Kings 10:2; II Chr. 9:1); Hagrites (I Chr. 5:21), Kedar (Jer. 49:29), and Hazor in the desert (Jer. 49:32). Next in importance in the Arabian economy were sheep and goats, which Arabians and the princes of Kedar brought to Tyre (Ezek. 27:21). Solomon's ships brought pet monkeys from Ophir (I Kings 10:22), perhaps imported from Africa or India. Asses are associated with the Midianites (Num. 31:28, 30, 34, 39) and with the Hagrites (I Chr. 5:21). Cattle were formerly more common in NW Arabia (Num. 31:33, 38). The horse is vividly pictured in Job 39:19-25, as in later Arabian poetry.

b. Wild animals. Some of the wild animals of NW Arabia are described in Job 38:39-39:12: the lion (38:39-40; found in Arabia in antiquity but not now), the mountain goat (39:1-4), the wild ass (39:5-8), and the wild ox (39:9-12; now extinct). Other Arabian desert animals are the jackal and the hyena (Isa. 34:13-14; in Edom), the wolf (which the LXX connects with Arabia in Hab. 1:8; Zeph. 3:3), the gazelle (Isa. 13:14), poisonous serpents (Num. 21:6), and flying serpents (Isa. 14:29; 30:6; cf. the Arabian *aym,* which springs into the air). Ivory from Ophir (I Kings 10:22; II Chr. 9:21) and from Dedan (Ezek. 27:15 MT) was imported from Africa or India.

c. Birds. Some birds of Arabia are listed in Job 38-39: the raven (38:41), the ostrich (39:13-18; extinct in Arabia since 1941), the hawk (39:26), and the eagle (39:27-30). Other birds associated with Arabia are: migratory quail (Num. 11:31; in Sinai), the owl, and the kite (Isa. 34:15; in Edom). The "peacocks" brought from Ophir (I Kings 10:22) may have been imported from India, but the word may mean "baboons" (RSV mg.). *See* FAUNA § A2*k*.

d. Insects. Arabia may have been the breeding ground for locusts which attacked neighboring areas like Egypt (Exod. 10:13; brought by E wind) and Palestine (Joel 1-2). *See* LOCUST.

e. Marine animals. The oysters of the Persian Gulf were one of the main sources of pearls in the ancient world.

7. Caravan routes. The caravan routes for transporting Arabian incense and products of Africa and India began in Sheba (I Kings 10:1-13), al-Yaman. The main route went N via valleys and oases through Makkah, al-Madinah, al-'Ula (biblical Dedan), Mada'in Salih, Tabuk, and Ma'an, whence one route went W to Gaza and Egypt and another N to Damascus. From this main line other routes branched eastward—e.g., one from Mada'in Salih through Tayma' (biblical Tema) to Iraq. Another route led N from al-Jawf (biblical Dumah) through Wadi Sirhan to Transjordan.

8. Biblical places in Arabia. Biblical places which can be located with more or less certainty in Arabia include: Buz, Dedan, Dumah, Ephah, Havilah, Hazarmaveth, Hazor (Jer. 49:28), Massa, Midian, Ophir, Parvaim, Raamah, Sabtah, Seba, Sheba, Tema, and Uz. The detailed knowledge of Arabian geography in the OT is noteworthy.

ARABIANS ə rā′bĭ ənz [ערב; ערבים; Αραβες]. People from Arabia, more particularly N Arabia, with whose peoples dwellers in Palestine would have been very early in contact. In ancient times there seems to have been no one name for this area, nor any single ethnic name for its peoples, who are referred to by group names associated with various areas. Thus in the OT these Arabian peoples are referred to as Ishmaelites, Midianites, Dedanites, Sabeans, etc., rather than by the later terms Arabs, Arabians of Arabia.

1. The name

4. Religion
Bibliography

1. The name. ערב properly means "nomad," and in II Macc. 12:10-12 the Arabians who attacked Judas are called νομάδες. It is doubtless connected with ערבה, the desert wilderness where the nomads wandered. It is the same word as the Egyptian *'emw,*

which denotes nomads to the W of Egypt as well as those from Asia. Similarly in cuneiform inscriptions *Arubu* and *Aribi* are used for the nomads of Media as well as for those of Arabia. It has this meaning in both S and N Arabic, for the king whose titles are inscribed at Mārib is "ruler of Saba, Dhū Raidan, Ḥaḍramaut, Yemen with their *a'rab*" (*CIS.* IV, nos. 540-41), and the Koran uses *a'rab* (plural of *'arab*) for the Beduin, as contrasted with settled folk. Thus ערבי in Isa. 13:20; Jer. 3:2 means "nomad," and in I Kings 10:15; Isa. 21:13; Jer. 25:24; Ezek. 30:5, though translated "Arabia," probably means the same thing. The "ravens" of the Elijah story (I Kings 17:4, 6) were probably the Beduin, and the "mixed tribes" of Jer. 25:24 may also mean "nomads."

In Old Persian inscriptions, however, *Arabāya* has both a geographical and an ethnic meaning—i.e., Arabia as an Achaemenid province and the Arabs as inhabitants thereof. In Ezek. 27:21 ערב seems to have this ethnic sense, as it has in the earliest occurrences in Greek. This is the sense it bears in II Chr. 21:16; Neh. 4:7—H 4:1; in Syriac, where *Beth 'Arbāyē* is "the dwelling place of the Arabs"; in Nabatean, where ערביו is the common word for "Arabs"; and in Arabic, where even in the Nemāra Inscription the ruler is "king of all the Arabs."

2. History. Just when these Arabian peoples first appear in history is uncertain. Paleolithic sites exist in both N and S Arabia, but the remains tell little about these earliest inhabitants of Arabia, though they suggest a definite distinction between northerners and southerners even in the Stone Age. Representations of Asiatic *'emw* being smitten by Pharaohs interested in the Sinai mining appear on early Egyptian monuments, and doubtless represent the local Arabians of that date; necessities of intercourse with them would explain the "interpreters" mentioned among the officials at Sinai in inscriptions from the early dynasties. The Serabit el-Khadim inscriptions, so much discussed in connection with the origins of the Semitic alphabet, were the work of these local Sinai people. If R. P. Dougherty's theory that the "sealand" of early Akkadian inscriptions is the N Arabian sea of sand, the tribute therefrom to early Mesopotamian rulers would have been brought by nomads from this region.

Genealogical tables in the OT include Arabian peoples among the children of Cush (Gen. 10:7), of Aram (Gen. 10:23), of Eber (Gen. 10:25-30), of Abraham by Keturah (Gen. 25:1-4) and by Hagar (Gen. 25:13-16). These lists are not mutually consistent, doubtless representing variant ancient traditions concerning tribal relationships, but many of the names can be plausibly related to peoples and places in Arabia.

In the patriarchal narratives Abraham is represented as in contact with the Benē Ḥēth. From them Abraham purchased a burial ground for his family (Gen. 23), and among them Esau found wives (Gen. 26:34; 27:46; 36:2). Possibly these Hittites have no connection with the later Hittites from the Orontes region, but are the same people as the Ḥatti whom Tiglath-pileser III lists among the N Arabian peoples who sent him tribute, and with whom the Assyrians had trouble near Ashdod *ca.* 710 B.C. The Ishmaelites appear in the Joseph story as camel people from Gilead engaged in caravan trade with Egypt. The description of Ishmael in Gen. 16:12 as a "wild ass of a man, [whose] hand [is] against every man and every man's hand against him," suits remarkably well the Beduin of N Arabia, whose raiding of settled folk has been a perennial factor in Near Eastern history. Gen. 21:20 speaks of him as dwelling in the desert country, while his "sons" belong to the desert area stretching from the land of Midian to the borders of Mesopotamia, which is precisely the area in which we find the Arab groups mentioned in the cuneiform inscriptions.

As early as 854 B.C. an inscription of Shalmaneser III mentions "Gindibu' the Arabian," who assembled a camel corps to oppose the Assyrians; and from Tiglath-pileser III (745-727) down to Nabonidus, the last Babylonian king, there is not infrequent reference to peoples of N Arabia and their rulers, among whom appear several "queens." These inscriptions mention the Masai (the Massa [משא] of Gen. 25:14 and the *Masei Arabes* of Pliny Nat. Hist. VI.30), the Temai (the Tema [תימא] of Gen. 25:15; Job 6:19; Jer. 25:23), the Sabai (the Sheba [שבא] of Gen. 25:3; Isa. 60:6; Jer. 6:20; Ezek. 27:22), the Ḥaiappa (the Ephah [עיפה] of Gen. 25:4; Isa. 60:6), the Ḥatti (the Benē Ḥēth of Gen. 25:10), the Idibaili (the Adbeel [אדבאל] of Gen. 25:13), the Qidri (the Kedar [קדר] of Gen. 25:13; Isa. 21:16; Jer. 2:10; Ezek. 27:21), the Nabaiti (the Nebaioth [נבית] of Gen. 25:13; 28:9; Isa. 60:7). Several Arabian place names mentioned in these inscriptions also have biblical correspondences—e.g., Taima is the Tema of Isa. 21:14; Adūma is the Dumah of Josh. 15:52; Isa. 21:11; Bāzu is the Buz of Jer. 25:23, the home of Job's friend Elihu (Job 32:2, 6) and the list of whose rulers given in Esarhaddon's Prism B inscription shows, for the most part, good Arabic names.

All these references are to N Arabia, for though the Sabai are by name connected with the Sabean kingdom in S Arabia, the references apparently are to S settlements in the N area. Throughout Arabian history there is a sense of a difference and even a certain antipathy between S and N Arabs which continued even under Islam. Perhaps as early as 1200 B.C. the S had developed a civilization the full greatness of which is only now beginning to be realized, and which survived till the advent of Islam. They were great builders of private and public works, great organizers of social and political life, great agriculturalists and traders. It was interest in the spice trade that led them to establish settlements on the trade routes in the N. They had learned an alphabet which they adapted and in which they have left numerous inscriptions, many of which have been found in their N settlements, where N Arabs in contact with them also learned to write a little in their N dialects. The Greeks knew four kingdoms in S Arabia—Minaean, Sabean, Qatabanian, and Hadramauti—but only recently has it become possible to understand more clearly their history. The Joctanid genealogical table in Gen. 10:26-30 contains several names with good S Arabian correspondences.

Possibly the distinction between Seba (סבא) and Sheba (שבא) in Gen. 10:7, preserved also in Ps. 72:10, is meant to distinguish the Sabeans of S Arabia

from those in the N settlements. All the references to Seba (cf. Isa. 43:3; 45:14) suit the S kingdoms, while those to Sheba suit better a N site. The Sabeans who attacked Job's herdsmen (Job 1:15, 19) were dwelling in the N, and though "It'amara the Sabean" of Sargon II's inscription has a good S Arabian name, it occurs also on a Lihyanite inscription from N Arabia. The question thus arises whether the Queen of Sheba who visited Solomon was really from the S and not rather from one of these N Arabian groups, for we know of no independent queens in the S.

The OT pictures these N Arabian groups as in contact with Palestine from the patriarchal age onward, in terms both of war and of peace. Ps. 83 lists the Ishmaelites and the Hagarenes as among the traditional enemies of Israel, and this, indeed, is part of the picture. In the Job story the Sabeans raid Job's lands; slay his herdsmen, and take his cattle as booty (Job 1:15). In the Gideon story (Judg. 6–7) the Midianites, Amalekites, and Bene Qedem (people of the East), raiding in from the E where they pitched their tents, plunder and retreat back into their deserts to escape pursuit. The tale of the capture of Ziklag by the Amalekites (I Sam. 30), and that of the raiders who carried away Jehoram's family and possessions (II Chr. 21:16-17; 22:1), are characteristic razzia stories. It was doubtless against such raiding that Uzziah needed the succor granted him (II Chr. 26:7). Raiding provokes retaliation, so that skill in eluding pursuit after a raid receives high praise among Arabs. It is such an escaping group to which the oracle in Isa. 21:13-17 is addressed. The Kedar (Qidri) are mentioned there, and Nebuchadrezzar's retaliation on these Qidri is the subject of Jer. 49: 28-33. In the days of Hezekiah (I Chr. 4:43) a band of Simeonites exterminated the Amalekites whose roving bands had harassed the Israelites during their desert march (Exod. 17:8-16; Deut. 25:17-19), and had been troublesome raiders in the days of the judges (Judg. 6–7) and of Saul and David (I Sam. 15; 30). Though the historicity of some of these events may be open to doubt, it is evident that the writers are setting down accurately memories of what these nomadic N Arabian groups had meant in the history of Israel.

On the other hand, the writers picture these same peoples as contributing in peaceful ways to Israel's life. The Midianites, in one version of the Joseph story, are traders who lead caravans to Egypt (Gen. 37:28, 36). A gloss in Judg. 8:24 identifies Midianites with Ishmaelites, and many of their names have good Arabic correspondences. In Isa. 60:10 they are caravan people supplying Israel with luxury goods of S Arabian trade, but in the Moses story (Exod. 2–3) they are a pastoral people among whom Moses found a wife, to whose land he led the Israelites from Egypt (Exod. 17), and who supplied the guide to lead them through Moab to the Promised Land (Num. 10:29-32). The head of David's camel keepers was an Ishmaelite, the chief herdsman over his flocks a Hagarene (I Chr. 27:30); and Solomon is regarded as having profited from the trade of these Arabians (I Kings 10:15). Their wealth is mentioned in Ezek. 38:10-13, their supplying Israel with gold, precious stones, and spices in II Chr. 9:14; Isa. 60:6; Jer. 6: 20; Ezek. 27:22, their furnishing small cattle in II Chr. 17:11; Isa. 60:7; Ezek. 27:21, and the Dedanites' furnishing of textiles in Ezek. 27:20.

The exiles who returned and commenced, under Nehemiah, rebuilding Jerusalem found Arabs, under a leader Gashmu (RSV "Geshem"), among those seeking to hinder them (Neh. 2:19; 4:7; 6:1-6). This name is known from inscriptions as in use among Dedanite and Kedar groups, but in form it is a good Nabatean name. These Nabateans were the only N Arabians who established a civilization comparable with that of S Arabia. Some, indeed, think they were S Arabians who had migrated northward. When we first meet them, they are a nomadic group, though by the fourth century B.C. they had already wrested Petra, the ancient Sela', from the Edomites, making it a center from which they built up a kingdom stretching from the Red Sea to beyond Damascus and penetrating deeply into Arabia. Some remained nomads to the end, but groups settled at Petra and other "caravan cities" along the trade routes, where they developed their characteristic civilization. Their proper names reveal them as an Arab people, but they adopted Aramaic as their literary language, developing in their own way the Aramaic script so that it became the source of the later Arabic script.

Their first recorded king is Ḥārethath I (Aretas) *ca.* 169 B.C., contemporary with Antiochus Epiphanes and the Jewish high priest Jason (II Macc. 5:8). The Maccabees were in friendly relations with them (I Macc. 5:25; 9:35), but the Hasmoneans quarreled with them, and Alexander Janneus was beaten in battle with Obodas I, *ca.* 90 B.C. (Jos. Antiq. XIII. xiii.5). Under Aretas III (87-62 B.C.) their kingdom reached its greatest expansion, their culture becoming seriously Hellenized, and the king taking the title Philhellene. He intervened in Jewish affairs, supporting Hyrcanus against Aristobulus, and was attacked by Pompey's general Scaurus, who blockaded him in Petra, from which he freed himself only by buying off the Romans (Jos. Antiq. XIV.v.1). When war broke out between the Romans and the Parthians, the Nabateans had great difficulty in keeping friendly with both sides. From Pompey's day they had had their rulers recognized by Rome, but Aretas IV (9 B.C.–A.D. 40) seized the power without Roman acknowledgment, taking the title of Philodemos (*Rāḥem 'Ammeh*), though later he secured Roman recognition. He was the Aretas of the time of Paul (II Cor. 11:32). His son Malichos II lost Damascus and was compelled to aid Vespasian and Titus in the war against the Jews (Jos. War III.vii.9). After him there were but two rulers, and then in 106 Cornelius Palma put an end to their kingdom, which Trajan incorporated into the Roman province of Arabia (Dio Cassius LXVIII.14).

The Arabs Timotheus hired against Judas Maccabeus (I Macc. 5:39; II Macc. 12:10) may have been nondescript Beduin, as likewise that Arab chieftain Zabdiel who sent the head of Alexander Balas to Ptolemy (I Macc. 11:17), and the Imalkue who brought up Alexander's son Antiochus (I Macc. 11:39), though these may all have been Nabateans. Sylleus, who brought disaster on the Roman expedition in Arabia under Aelius Gallus in 25 B.C. (Strabo XVI.4.22-24), was certainly a Nabatean, and the

Arabians present at Jerusalem on the Day of Pentecost (Acts 2:11) were apparently Jews from some Nabatean settlement.

3. Beduin life. From the earliest times these peoples of Arabia, though dominantly nomadic, have included seminomadic and fully settled groups. Organization of settled life developed mostly in the S, the characteristic N Arabian life having always been the life of the nomad, and Arabic literature is full of references to the contempt the nomads have for settled folk and the scorn of the settled peoples for the nomad. The nomad is the *badu* (plural *badawin*), and the *bādiya* is the wilderness where he roams. The nomads' social unit is the tribe (*qabīla*), whose members are theoretically blood brothers, led by the sheik and his council of elders. Commonly tribes are named from an eponymous ancestor and known as Banu Murra (sons of Murra), Banu Taghlib, etc., just as the Benē Ḥeth and Benē Qedem in the OT. Necessities of water and pasturage dominate their economy, for without these their flocks cannot survive. There is consequently much seasonal migration. On their herds they live, and from them they derive the small wealth they need to purchase necessities not provided by their deserts. Their traditional beast of burden is the camel, but before its effective domestication they employed asses, which are still commonly used. The horse is rather a luxury animal. Their flocks are of sheep and goats. Of necessity their home is the mobile tent. The women do the domestic work around the tent, one half of which is "women's quarters," tend the small cattle, and engage in weaving. The men tend camels and horses, hunt, and raid. Raiding has ever been the traditional sport of the Beduin. It is preferable to raid some hostile group, but as their poets say: " 'Tis better to raid one's brothers than not to raid at all." Care is taken not to shed blood while raiding, yet blood does get shed, whence arises the dread duty of blood revenge which, through the ages, has dominated Beduin life.

This life the nomad lives has bred in him those qualities of hardiness, frugality, graspingness, stubbornness, and truculence for which he is famed, and makes him prize the virtues of manliness, fortitude, and hospitality. His individualism keeps him impatient of order and discipline, and unamenable to restraint or authority. In curious contradiction to Beduin love of freedom, slaves have had a definite place in the social system both in the N and in the S. In S Arabia their artistic sense found expression in architecture, decoration, and plastic art, though we know nothing of their literature. Petra and the delicate Nabatean pottery show what could be accomplished by N sedentary groups, but among the nomads the sole forms of artistic expression were poetry and pithy gnomic wisdom. It is curious that in I Kings 4:30; 5:10, Solomon's wisdom is said to have surpassed that of the Benē Qedem, and that Job's wise friends came from N Arabian groups.

This nomad life is reflected accurately in the OT. That they were tent dwellers appears in Judg. 5:6; 8:11; Pss. 83:6; 120:5; Jer. 49:29, 31; Ezek. 38:11. Representations of their tents on Assyrian monuments show them much the same as they are today. Assyrian representations of Arabs fighting from their camels show them with that polling of the hair noted in Jer. 25:23; 49:32 and also by Herodotus (III.8). Their camels and flocks are often mentioned. Caravan routes are referred to in Judg. 8:11, while vss. 21-26 mention the amulets (RSV "collars") on the necks of camels and the men's earrings—customs which still survive. The nose ring and bracelets given to Rebekah (Gen. 24:22, 47) are still the ornaments given a Beduin girl. Joel 3:8 mentions their dealing in slaves.

4. Religion. From S Arabia we have material for a fair picture of the religious life in that civilization, but we are far from well informed about the religion of the N Arabian nomads, partly because Islam aroused an unfortunate enthusiasm for destroying all traces of the paganism of the "days of Ignorance." There were temples, some of them imposing structures, at the more important settlements in the N, but there were also numerous sanctuaries in the sparsely populated areas, forming centers to which the nomads went in pilgrimage, especially at festival times. At such centers there was generally a shrine with a sacred stone, and a sacred well with sacred trees near by. The stone represented deity, male or female. Sometimes they were but rough stones, sometimes rudely shaped, sometimes carved images. Sacred objects seem also to have been carried by the nomads during their wanderings. At shrines there were rites of circumambulation, animal and even human sacrifice, offerings, divinations, and festival rites. The territory for some distance around such shrines, being sacred to the divinity, seems to have offered sanctuary from the avenger of blood. Doubtless there were priesthoods, but they were of little significance. Theophorous names reveal the astral connections of many deities, as sun gods, moon gods, star gods. There were also deities with animal connections. Prominent among the goddesses was the ancient Mother Goddess, who would seem to have been the deity at the Meccan shrine. The old Arabian calendar had religious associations.

Lower in rank than deities were other angelic beings, and of still lower rank great numbers of spirits (*jinn*), sometimes benevolent, sometimes malevolent, whose influence on human affairs had to be guarded against by charms and conjurations. There was universal fear of the evil eye, and of soothsayers, and diviners flourished as mediators between this world and that of the spirits. There was a vague trend toward monotheism in both the S and the N.

A. JEFFERY

ARABIC GOSPEL OF THE INFANCY ăr'ə bĭk. A late compilation of wonder stories about the infant Jesus. Like all secondary infancy gospels (*see* APOCRYPHA, NT), it is heavily dependent upon the Protevangelium of James and the Gospel of Thomas (*see* JAMES, PROTEVANGELIUM OF; THOMAS, GOSPEL OF). These (together with highly imaginative expansions from hints in the canonical gospels) appear to have been respectively the chief sources for chs. 1–9; 36–55. The intervening chapters contain a long series of tasteless miracles wrought in Egypt through contact with the infant, his clothes, or his bath water (20–25), and in Nazareth (26–35). In all these tales Mary is the one who engineers the cures. The text, frequently reprinted, depends upon an Arabic MS first published by Henry Sike in 1697. That it was first published in Syriac has often been conjectured, but where and at what time it is impossible to determine, save that its highly oriental coloring suggests the East.

Bibliography. P. Peeters, *Évangiles apocryphes* (1914), vol. II. The text is summarized in M. R. James, *The Apocryphal NT* (1924), pp. 80-82, and given in full in *Ante-Nicene Christian Library*, XVI (Apocryphal Acts, Gospels, etc.), 100-124.

ARABIC VERSIONS. *See* VERSIONS, ANCIENT, § 10.

ARAD âr'ăd [ערד]. **1.** One of the sons of Beriah in the genealogy of Benjamin (I Chr. 8:15).

* **2.** A Canaanite city of the Negeb in the time of Moses and the conquest of Canaan. It is mentioned in Egyptian texts as *'rd*. According to Num. 21:1-3, the king of Arad made a surprise attack on the Israelites at the end of the wilderness period as they were marching from Kadesh-barnea to Mount Hor by way of Atharim. The Israelites vowed vengeance on the Canaanites and destroyed the city, and its site was occupied by the nomadic Kenites (Judg. 1:16). Arad is included in the enumeration of the city kings conquered by Joshua (Josh. 12:14), probably because this is a summation of all the conquests W of the Jordan.

The site of the city is at Tell 'Arad, *ca.* sixteen miles S of Hebron. S. COHEN

ARADUS ăr'ə dəs [Ἄραδος] (I Macc. 15:23). A place mentioned in a list of various places to which letters were sent about the conditions of the Jews. *See* ARVAD.

ARAH âr'ə [ארח, traveler, *or* ox(?), Ἀρές]; KJV Apoc. ARES âr'ēz. **1.** One of the sons of Ulla in the genealogy of Asher (I Chr. 7:39).

2. An ancestor of some of those who returned from Babylonian captivity (Ezra 2:5 = Neh. 7:10 = I Esd. 5:10). The number varies in the parallel passages and in the ancient versions. Shecaniah, an individual member of this family group, is mentioned in Neh. 6:18. F. T. SCHUMACHER

ARAM âr'əm [ארם; Akkad. *Aramu, or a variant thereof*]. Alternately: SYRIA sĭr'ĭ ə [Συρία; *English versions often use the* Greek *name, especially in* 4 *below, although it is rather too late and specific to serve as a precise equivalent*]. **1.** The fifth son of Shem; the father of Uz, Hul, Gether, and Mash in the conflate J and P genealogy of the sons of Noah (Gen. 10:22-23), which serves as a table of nations. The "sons of Aram" cannot with certainty be equated with known territories, though numerous suggestions have been made; in I Chr. 1:17 they are listed as his brothers. The sons of Shem indicate branches of the Semitic people, and thus the name is applied to a people, a language (*see* ARAMAIC LANGUAGE), and a land or area.

2. Son of Kemuel and grandson of Nahor, who was Abraham's brother (Gen. 22:21). The names mentioned here suggest the area of HARAN. This genealogical note suggests the close relationship between the people of Aram and the Israelite patriarchs.

3. The third son of Shemer in the genealogy of Asher (I Chr. 7:34).

4. Most frequently used as a singular collective for the ARAMEANS, an important Semitic people living throughout the Mesopotamian and Syrian areas in many scattered tribes and settlements (II Sam. 8:5-6; I Kings 20:20-21; I Chr. 2:23; 19:10, 12; plus sixty-four other times in Samuel, Kings, and Chronicles; Amos 1:5; 9:7; Isa. 7:2, 4-5, 8; 9:12; 17:3; Jer. 35:11; Ezek. 16:57; 27:16). Less frequently it is used in reference to the land of the Arameans (Num. 23:7; II Sam. 15:8; Hos. 12:12—H 12:13; probably Zech. 9:1) and often for land and people together, especially in phrases about kings or gods of Syria or Aram (Judg. 10:6; Isa. 7:1; and forty-three times in Kings and Chronicles).

The land of Aram is somewhat indefinite, since it is not a political or geographical unit but only indicates a concentration of Aramean population. Roughly for the OT, it covers the territory from beyond the Jordan and NE of Palestine around the Fertile Crescent into the upper Tigris-Euphrates Valley. Assyrian inscriptions, on the other hand, apparently limit it to areas E of the Euphrates, ascribing the W part to earlier powers such as HITTITES and AMORITES. The OT often uses the word as part of a compound to indicate particular subdivisions, thus indicating a more precise location (*see* ARAM-NAHARAIM; PADDAN-ARAM; ARAM MAACAH; ARAM-BETHREHOB; ZOBAH; DAMASCUS; *see also* GESHUR). In relation to patriarchal narratives the term usually refers to the Mesopotamian area. But simultaneous with the emergence of the monarchy in Israel, Damascus became the center of Aramean power and influence in the W. These two were neighbors and warring rivals through most of the period of the monarchy until Assyria destroyed first Damascus and then Israel and Judah. Consequently, in literature referring to the days of the monarchy, Aram means primarily Damascus and surrounding territory, even when no express indication is given.

5. KJV form (RSV mg.) of RAM 1 in Matt. 1:3 and of ARNI in Luke 3:33. F. T. SCHUMACHER

***ARAMAIC** ăr'ə mā'ĭk. A general term used to cover a group of Semitic dialects closely related to Hebrew, and even more closely related to one another, which have considerable interest for biblical studies. In the OT not only are Ezra 4:8–6:18; 7:12-26; Dan. 2:4*b*–7:28; and the gloss in Jer. 10:11 in Aramaic, but we

find elsewhere a number of isolated Aramaic words, and in certain books the biblical Hebrew has been somewhat Aramaicized. In the NT such phrases as *talitha cumi, Marana tha, ephphatha, Eloi, eloi, lama sabachthani,* are in contemporary Aramaic, which also shows as substratum under much that is there written in Greek. The Targums to the OT books, the Syriac versions of the OT and the NT, and the originals of certain apocryphal and pseudepigraphical writings are in Aramaic.

Aram (*see* ARAM 5) is mentioned as a place name, designating an area NE of Syria, as early as 2500 B.C., but the name seems non-Semitic, the later Semitic-speaking peoples being named ARAMEANS by Tiglath-pileser I (*ca.* 1100 B.C.) because he found them in that area. He knew them as encroaching nomads, but much earlier—as early even as the beginning of the third millennium B.C.—we have evidence of similar nomads called Suti, coming from the deserts of N Arabia and raiding both Mesopotamia and Egypt. The relationship of these to the Arami, Kaldi, Akhlami, Pakudi, all similar nomadic invaders of whom we read in Assyrian inscriptions from Tiglath-pileser I onward, is uncertain, but it would seem that in these groups we are to see the speakers of proto-Aramaic. It is of interest that the OT associates the patriarchs with these Arameans (Gen. 24:3-10; 25:20; 28:2-5), and in Deut. 26:5 each Israelite is made to confess: "A wandering Aramean was my father." In the twelfth century such groups were establishing more or less settled communities all along the Tigris and Euphrates from the Persian Gulf to N Syria and southward into both Palestine and N Arabia. By the eleventh century they had succeeded in establishing little kingdoms, some of which in N Syria learned from the earlier-settled Canaanites the art of alphabetic writing. At first they attempted to use Canaanitish in their inscriptions, but they betrayed themselves by such Aramaisms as the use of *bar* instead of *ben* for "son." Before long they dropped this Canaanitish and began to use their own language in their inscriptions, so that from the tenth and ninth centuries we have our earliest texts in the Aramaic language.

It has been customary to divide the Aramaic languages (or dialects) into an eastern and a western group. A more accurate and significant division, however, is that into four groups: (*a*) Old Aramaic; (*b*) Official Aramaic; (*c*) Levantine Aramaic; (*d*) Eastern Aramaic.

1. Old Aramaic
2. Official Aramaic
3. Levantine Aramaic
   - *a.* Palestinian Jewish Aramaic
   - *b.* Samaritan
   - *c.* Christian Palestinian Aramaic
   - *d.* Modern Western Aramaic
4. Eastern Aramaic
   - *a.* Babylonian Jewish Aramaic
   - *b.* Mandaean
   - *c.* Syriac
   - *d.* Modern Syriac

Bibliography

1. Old Aramaic. This is the language of the inscriptions from N Syria, dating from the tenth to the eighth century B.C. When they ceased using Canaanitish, what these Arameans employed in their inscriptions was doubtless their local dialect, which they were gradually shaping into a literary form. Though all that has survived to us is what was written on durable stone, it is highly probable that they wrote also on less durable materials which have perished. For lack of contemporary texts written by Arameans in areas other than N Syria, it is not possible to say whether this dialect was used by other early Aramean groups.

2. Official Aramaic. Already in the inscriptions from N Syria, in the later inscriptions of the ruler Bar Rekub, whose earlier inscriptions had been in the Old Aramaic, a new dialect appears. It is the same dialect that later appears in official documents from Assyria, and then in texts from various parts of the Assyrian Empire, not only during the Assyrian period but more commonly in the succeeding Persian period. It seems fairly clear that it was a form of Aramaic developed as a lingua franca in the governmental offices—i.e., in the chancelleries—and so may be fitly designated "Official Aramaic." Even in the Assyrian period (*ca.* 1100-605 B.C.) Aramaic would seem to have been coming more and more into use throughout the Empire, and officials in the chancelleries, aware that Aramaic was far better known than Akkadian in the distant parts of the Empire, commenced using a simple, standard form of Aramaic for correspondence with such areas. In the heart of the Empire itself we find that there had grown up a practice of attaching Aramaic "dockets" to cuneiform tablets. Such "dockets," giving a brief indication of names and dates and a summary of the contents, were particularly useful to merchants, and it may well have been a kind of "merchant's Aramaic," based on the dialect of Aramaic spoken in Mesopotamia, that provided the basis for this Official Aramaic.

Once this type of Aramaic was recognized as having official sanction, the Aramaic-speaking people in various parts of the Empire would quite naturally begin to use it themselves, in preference to their own local dialect, for literary purposes. In Akkadian tablets we find that certain scribes are designated as "scribes for Aramaic"—i.e., for this Official Aramaic. On Bar Rekub's statue at Zinjirli a scribe stands before him with pen and ink and tablet prepared, doubtless, to write for him in this Official Aramaic, for Bar Rekub was a loyal subject of the Assyrian monarch. That such scribes wrote not only with a pen but with a stylus is evident from the existence of clay tablets from Assyria with the text incised in Aramaic. This Aramaic also appears incised on numerous metal weights, on seals and vessels, and is painted or written on pottery. Though the script in the Old Aramaic inscriptions was very close to the Canaanitish script, it early began to develop in its own way till presently it has so far evolved as to be a definite Aramaic script easily distinguishable from the Canaanitish script.

How widespread the use of this Official Aramaic was in Assyrian times is indicated by a number of bits of evidence. In II Kings 18:13-37 we read that in the year 701 B.C., when officials of Sennacherib appeared before the walls of Jerusalem, and the Rab-

shakeh spoke in Hebrew to the officers of King Hezekiah, these latter begged him to speak rather in Aramaic, for they understood this official tongue and did not want the populace to hear the demand for submission made in Hebrew. Near Olympia in Greece a bronze bowl was found bearing a name incised in Aramaic characters, and it seems highly probable that the alphabetic signs the Greeks learned from the Semites in Asia Minor were of the Aramaic rather than the Phoenician type. From Egypt there are inscriptions in Aramaic from as early as the reign of Esarhaddon (681-669 B.C.), from Tarsus in Cilicia small inscriptions of perhaps an even earlier date, and it is clear that the use of the language had penetrated deeply into Arabia.

This Official Aramaic continued in use throughout the Neo-Babylonian period (605-538), and when the Persians succeeded as the dominant power, though the Persian monarchs used a system of cuneiform signs in which to carve royal inscriptions in their own Old Persian language, yet in their chancelleries Aramaic continued to be the official language. In fact, it is during this Persian period (538-330 B.C.) that we find the use of Aramaic at its widest spread. From Mesopotamia we have "dockets," ostraca, and seals with inscriptions in official Aramaic throughout this period. From Persia itself we have short inscriptions on stone and a number of clay documents. From Egypt have come funerary and dedicatory inscriptions on stone and graffiti scrawled on the rocks along the trade routes. From Palestine there are ostraca from Samaria and Eziongeber, inscriptions on stone, jar handles from a variety of sites. From N Arabia come inscriptions from both Hegra and Taima, and from Anatolia inscriptions from Cilicia, Lydia, Lycia, together with a multitude of coins from various cities with legends in Aramaic. As far N as the Ural Mountains, as well as in the Caucasus and the Zagros Mountains, have been found metal objects inscribed with Aramaic words and names, from as far E as Afghanistan and Kurdistan, and even at Taxila in Pakistan, have come inscriptions, and to the W an inscribed bronze vessel from Greece and some short texts of Aramaic in Latin transcription show how widely this Aramaic was used as a lingua franca during this period.

Fortunately we have evidence that it was also used at this time for writing on less durable materials. The letters which the intercepted messenger Artaphernes was carrying from the Persian king to the Lacedaemonians, and which Thucydides (IV.50. 2) says had to be translated ἐκ τῶν Ἀσσυρίων γραμμάτων, may have been written in the cuneiform characters but are much more likely to have been written in Aramaic on parchment. The existence of writing on parchment seems clear also from the clay sealings in napkin-ring shape from Persepolis, but whether the perishable documents to which they were attached were written in Old Persian or in Aramaic we cannot be certain, though the number of Aramaic inscriptions from Persepolis favors the theory that they were Aramaic parchments. From Egypt, however, where documents on perishable material had a better chance to survive, we have the Borchardt collection, now published by G. R. Driver, containing thirteen letters, with fragments of several others, addressed by high Persian officials to lesser officials in Egypt about administrative affairs. These are on leather, but numerous Aramaic papyri have been recovered from Edfu, Abydos, Abusir, Memphis, Hermopolis, and in particular the famous papyri from Elephantine and Assuan. Some mummy cases from the Persian-period necropolis near Alexandria bear names in Aramaic. The presence of the Ahiqar story and an Aramaic version of the Behistun inscription among these papyri from Egypt shows this Official Aramaic in use for literary as well as for practical purposes, so that it is not strange to find that the Aramaic portions of the OT, formerly set apart as biblical Aramaic or Chaldee, are really in this Official Aramaic. It is highly probable that the book of Daniel was originally written in Aramaic, for the Hebrew portions show in many places indications that they were translated from Aramaic. It has been suggested that the book of Ecclesiastes also was translated from an Aramaic original, but the arguments for this are far less cogent. It has long been held that several of the apocryphal and pseudepigraphical writings, which have survived to us only in versions in various languages, were originally composed in Aramaic, and now fragments from the Dead Sea Caves have actually presented portions of such texts copied from Aramaic originals.

This already brings us into the succeeding Hellenistic period. Official Aramaic continued in use throughout the Hellenistic period (330-30 B.C.). It is still found in use on "dockets" and on coins of this period, in papyri and ostraca from Egypt, in inscriptions from both Mesopotamia and Egypt, in a number of graffiti from Egypt, Herodian-age Palestine, and Nabatean Sinai, and particularly in several inscriptions, some of them bilingual, from Asia Minor, and the Parthian-period inscriptions from Hatra. One very curious phenomenon from this period is the existence of Aramaic texts in transliteration. From Egypt comes a papyrus written in the Demotic script, but Aramaic in language, dealing with some religious matter, and from Babylonia comes an Aramaic incantation text written in cuneiform syllabic signs. Greek was gradually ousting Aramaic during this period, but to compensate for losses in the more seriously Hellenized areas, Aramaic won an extension of influence in two areas—in Arabia where the Nabateans and Palmyrenes used Aramaic till well into the Christian era, and in Palestine, where the groups resistant to the penetration of Greek culture seem to have emphasized the use of Aramaic. To this we doubtless owe the Aramaic of Daniel and of *Meghillath Ta'anith,* as well as the Aramaic used in a number of inscriptions, and that of the Qumran documents from near the Dead Sea. It is known that Josephus wrote the first draft of his historical work in Aramaic. H. L. Ginsberg has noted that the Targum quotations and deed forms given in both the Babylonian and the Jerusalem Talmud are in Official Aramaic, as also certain rabbinic legal instruments of even later times. The Targums of Onkelos to the Pentateuch and of Jonathan to the Prophets, though redacted in Babylonia and somewhat influenced by the local Mesopotamian dialect, seem to have been composed with intent in a kind of general Aramaic, as perhaps the

last efforts at literary composition in Official Aramaic.

Since this Official Aramaic continued in use for a long period of time over a widely extended area, it was inevitable that it should develop local peculiarities. Thus in Persia it was influenced both in structure and in vocabulary by the surrounding Iranian speech, in Egypt and Anatolia both by the local languages and later by Greek, in Palmyra and the Nabatean area by the native Arabic of the people who used it as their language of literary expression. For this reason it is possible to speak of Parthian Aramaic, Egyptian Aramaic, biblical Aramaic, Nabatean, and Palmyrene as dialects of Official Aramaic.

3. Levantine Aramaic. While early Aramean nomads were pentrating the Tigris and Euphrates area, other groups of them were penetrating Syria and Palestine, where they settled and where their language was spoken alongside Canaanitish in certain areas. After the fall of Samaria in 721, when the Assyrians replaced the inhabitants whom they carried off by colonists from various parts of the Empire, Aramaic seems to have come increasingly into everyday use in Syria and Palestine till by the time the exiles returned, it, and not Hebrew, was the commonly understood language. When the adversaries of the returned exiles wrote to the Persian king in Aramaic (Ezra 4:7) and received his reply in Aramaic, this was probably in the Official Aramaic of the chancelleries; but when Ezra read them the Book of the Law, his interpreters, who "gave the sense, so that the people understood the reading" (Neh. 8:8), doubtless used the local dialect. In spite of the widespread use of Greek, Levantine Aramaic was still the popularly spoken language in NT times and was only driven out of use by Arabic after the Muslim conquest. It has never become extinct, for it is still spoken, though in greatly changed form, in a few villages in the Anti-Lebanon.

The prestige of Official Aramaic as the language of official intercourse and culture retarded the use of this vernacular for literary purposes, much as the prestige of Latin retarded the literary use of the spoken dialects in Italy. Yet some groups did at length begin to use their local dialect for writing rather than the Official Aramaic, and these are sufficiently close to one another to be classed as representatives of Levantine Aramaic.

a. Palestinian Jewish Aramaic. Possibly some of the latest Palestinian inscriptions mentioned under Official Aramaic might have been included here. Its earliest appearance in literary documents, however, is in the Aramaic words and phrases embedded in the Greek of the NT. The dialect daily spoken by Jesus and the disciples was Galilean Aramaic, which, as is noted in Matt. 26:73, was recognizably different from the S dialect spoken in and around Jerusalem. It was in this same Galilean dialect that the Aramaic of the Palestinian Talmud and the older Midrashim was written. The Targum of Pseudo-Jonathan, the Fragment Targum, the Targum to the Hagiographa (i.e., the Yerushalmi Targums), and in particular the fragments of the old Palestinian Targum published by Paul Kahle in his *Masoreten des Westens* from the Geniza material, are all in this dialect. The vocalization is, however, uncertain, for that employed in the rabbinic texts is only a late, artificial system.

b. Samaritan. Much of the Samaritan religious literature is in Hebrew and Arabic, but the Samaritans have a Targum to the Pentateuch in their own dialect, which is very close to the Galilean dialect. They have also some liturgical works, hymns and poems, and devotional works in this dialect. After the Muslim conquest it died out of common use before Arabic. The curious alphabet in which the Samaritans write their Aramaic is a local development of the old Canaanitish script.

c. Christian Palestinian Aramaic. The earliest Palestinian Christians doubtless continued to use the local dialect among themselves, but the official language of the new religion was Greek, and its early literature was in Greek. When an Aramaic gospel began to circulate, it was in Syriac, the version made at the intellectual center in Edessa, a version which rapidly came into use in all the Aramaic-speaking areas both East and West. During the christological controversies of the fourth and fifth centuries the Syr. Peshitta version of the Scriptures seemed too closely associated with the Jacobites and Nestorians, who were condemned as heretics, and so those Christian groups in Syria and Palestine who sided with Byzantium and came to be called Melkites felt the need for religious texts in their own dialect, and produced translations, mostly from the Greek, both of the Scriptures and of various liturgical and devotional works. This is commonly called Christian Palestinian Syriac but was used also by Aramaic-speaking Christians in Egypt. Evidence that the dialect was also used for secular purposes has come from the Dead Sea Caves, where among the fragments from Khirbet Mird was a document in this dialect. By the ninth century it had died out before the advance of Arabic.

d. Modern Western Aramaic. In Christian villages in the Anti-Lebanon, more particularly in Ma'lula, Bakh', and Jubb 'Adin, a dialect of Levantine Aramaic is still the house language of people who in public use the Arabic of their neighbors. It has undergone considerable phonetic change and has been much influenced both in vocabulary and in syntax by the dominant speech of the area, but seems to be a survival of the vernacular Aramaic formerly spoken over a much wider area in the Levant.

4. Eastern Aramaic. The nomadic Arameans who invaded the Tigris-Euphrates region had their own local dialects which would have differed from the later, Official Aramaic much as did the Levantine dialects. Certain of these eastern dialects also, in spite of the prestige of the Official Aramaic, came to be written and used as literary languages. As spoken dialects they seem to have spread up into the mountains of Armenia and Kurdistan, and eastward as far as the Indus, but for the most part they died out after the Muslim conquest, though some are still spoken by Christian communities in N Mesopotamia and Kurdistan. Belonging to this Eastern Aramaic are:

a. Babylonian Jewish Aramaic. This appears in the Gemara of the Babylonian Talmud and in a number of documents ranging in date between the second and the seventh centuries A.D. It is not a uniform dialect even in the Talmud, and some of the texts available seem to have been written by non-Jews,

but, as the Talmud is our chief witness to it, Babylonian Jewish Aramaic is a convenient name. As in the case of Palestinian Jewish Aramaic, the vocalization employed in the texts used by the rabbinic authorities follows an artificial system and is no sure guide to the pronunciation.

b. Mandaean. The religious literature of the Mandaeans of Iraq is written in a dialect of this Eastern Aramaic. Since these are original documents of an independent religion, written in a script indigenously developed from the Old Aramaic, they ought to show a pure form of Eastern Aramaic uninfluenced by Hebrew as the Jewish dialect is, or by Greek as is the case with Syriac. Unfortunately, however, all its documents come from a late period when the language has already undergone considerable phonetic change and been greatly influenced by the Arabic these people use in daily intercourse.

c. Syriac. This dialect, which became the Christian dialect of Eastern Aramaic, was perhaps already used as a literary language before the Christian era, but only a few scraps from the first century A.D. remain to illustrate its early form. As the language of the scholarly center at Edessa, particularly when a Christian school succeeded the pagan school there, it developed into a literary language of some importance. After the controversies over the decisions of the Council of Chalcedon in 451, it was accepted by most Aramaic-speaking Christians as their ecclesiastical and cultural language and one form of their defense against Byzantine influence. As such it was carried to Persia and Turkestan; to India and China in the E; to Asia Minor, Syria, and Palestine in the W; to Arabia and Egypt in the S. From Egypt we even have Greek texts in Syriac script. It greatly influenced the language of Armenia, the Middle Iranian dialects, and Arabic, and was used for religious purposes by pagans and Manicheans as well as by Christians. After the Muslim conquest it gradually gave way as a spoken language before Arabic, but was used for literary purposes till the fifteenth century, and is still in use as a liturgical language in the so-called Syrian churches.

d. Modern Syriac. Dialects of Eastern Aramaic still survive among Christian groups in the mountains of Kurdistan, on the E shores of Lake Urmia, in the hills of Tur 'Abdin and the Fellihi villages near Mosul in Mesopotamia. Like the still surviving dialects of Western Aramaic, they have suffered considerable phonetic change and have been much influenced both by the Arabic and Turkish spoken in daily intercourse and by the Syriac of their church. In the seventeenth century, under the influence of missionaries from the West, they began to use their dialect for literary purposes.

The Aramaic script already mentioned as a development from the Canaanitish script has had a quite extraordinary influence. One form of it, borrowed from some group in Asia Minor, was the source of the Greek alphabets and through them of the Latin, Gothic, and Cyrillic alphabets used in Europe and the Coptic scripts used in Egypt. Another form gave rise to the Pahlavi script of Middle Iranian, and through that to the Avestan, the Sogdian, and the Manichean alphabets, whence came the Uigur, Mongol, Manchu, Kalmuk, and Buriat scripts. Another form gave rise to the Kharoshthi and Brahmi scripts, and through them the Tibetan and the various scripts in use throughout India, Southeast Asia, and Indonesia. Another form gave rise to the Armenian script, whence came the Georgian and Caucasian scripts. From yet another form came the "square" Hebrew, Palmyrene, and Nabatean scripts, from the latter of which came the Arabic alphabet with its modifications for Persian, Turkish, Urdu, and Malay. From another came the curious Mandaean script.

7. Aramean culture
Bibliography

1. Origins. Arameans were a Semitic people, traditionally regarded as descendants of Shem (Gen. 10:22-23) or of the family of Nahor (22:20-21). The actual origin of the Arameans, like that of any other people, is obscure, but they seem to have formed part of the mass migration of nomads that moved northward through the W margins of the Syrian Desert toward Egypt, Canaan, and the lands along the Euphrates River. As early as the First Dynasty in Egypt (*ca.* 3100 B.C.) the nomads (*ṯṯyw*) appeared in Egypt, and they are mentioned as the *Sutîu* or *Sutû* in Akkadian records as early as *ca.* 2700. When the term appears as an archaism in Late Assyrian times, it means simply "nomads." The same name was used for Amorites and for Arameans, since there was no great break in the continuity between such nomadic Amorites as settled at Mari on the Euphrates and the early Arameans that followed them into the same region.

References to the Arameans have been found in the Amorite texts from Mari and in the tablets recovered at Ugarit.

From the Amarna Age (*ca.* 1400 B.C.) onward, the appellation *Aḫlame* ("confederates") is given to the nomads in the Akkadian records, and the use of the name *Sutîu* declines and finally ceases. Tiglath-pileser I (1114-1076) identifies the *Aḫlame* as Arameans as he tells of his victories over the *Aḫlame*, who by that time were flooding resistlessly into the W provinces of Assyria. Since there is no satisfactory Semitic etymology for the name Aram, it is doubtless a non-Semitic geographical term first applied by the Assyrians to a tribe or small group of the nomads found in the land of Arame, NE of Syria, in the foothills of Armenia; and then extended to the entire group of invaders.

2. Expansion. While still in the Syrian Desert, some of the nomads thrust toward Egypt; still others moved eastward, along routes still followed by

nomadic bedouins, toward Lower Babylonia. Among the latter were the Chesed, claimed as relatives by the Nahor Arameans (Gen. 22:22), who arrived in Babylonia, as the Chaldeans, *ca.* the time of David (*ca.* 1000 B.C.). These are the desert raiders mentioned in Job 1:17. In Babylonia they inhabited the swamps at the headwaters of the Persian Gulf, from whence they made incursions into Babylonia and in late Assyrian times became the allies of Elam against their Babylonian and Assyrian neighbors. Other E Arameans pushed up the Tigris River and settled in great numbers along its tributary, the Zab.

Most Arameans assaulted the Euphrates region from Rapiqu northwestward along the full course of the river, seeking entrance into Mesopotamia. From Rapiqu to Ḫindan they settled the land of Suḫu, the home of Bildad (Job 2:11; cf. Shuah in Gen. 25:2). Once across the Euphrates, they followed the great tributaries, the Ḫabur (Habor in II Kings 17:6) and, to the W, the Balih, to their sources and beyond. Many of their settlements were named in characteristic fashion, beginning with the word *Bît* ("House of") and followed by the name of the tribal dynast. N of the Euphrates and E of the Ḫabur, extending to Jebel Sinjar, lay Bit-Halupe. Small city-states lined the Ḫabur northward to Bît-Baḫianu in the vicinity of modern Tell Halaf and Ras-el-'Ain. In 808 B.C. the region became part of the Assyrian province of Guzâna, the Gozan to which some Israelites were exiled (II Kings 17:6; 18:11; cf. Isa. 37:12). Beyond, between the Kashiari Mountains and the E spurs of present Mount Karadja-Dagh, lay Shupria; and, to its NE, along the S bank of the upper reaches of the Tigris River, near Diyarbekir, was Bît-Zamâni, close to the land of Arame, which may have given the Arameans their name.

From Suḫu westward to Carchemish small Aramean groups settled along the Euphrates as early as the time of the Assyrian Ashurreshishi I (1132-1115), and Tiglath-pileser I (1114-1076) found great difficulty in expelling them and keeping them out of Mesopotamia. When Assyrian power broke in the early tenth century B.C., the Arameans seized their opportunity to invade, and by the time of the resurgence of Assyrian power in the ninth century B.C. their states were so firmly established that they could resist successfully and not be easily removed. The city Pitru (Pethor, the home of Balaam, in Aram-naharaim; Num. 22:5; Deut. 23:4), on the W bank of the Euphrates a few miles below Carchemish, at the confluence of the Sâjur River, fell to Assyria in the eleventh century B.C., after the decline of Hittite power in Syria; but it was taken by the Arameans in the time of Ashurrabi II (1012-972). It lay within the important Aramean state of Bît-Adini (Beth-eden in Amos 1:5; Eden in II Kings 19:12; Isa. 37:12; Ezek. 27:23). It lay within the great W bend of the Euphrates River and extended across it westward as far as the gates of Arpad. Through it ran the highway from Ḫarran to Syria. Bît-Adini formed the heart land of Aram-naharaim ("Aram of the Two Rivers"; Gen. 24:10; Deut. 23:5; Judg. 3:8; I Chr. 19:6), which originally extended from near Aleppo to almost as far E as the Ḫabur River. Its N border lay about in the line of present Edessa, Tell Halaf, and Nisibis. Most biblical references to it seem to refer particularly to its westward extension SW of the Euphrates. Bît-Adini blocked Assyria's rapid advance to the Mediterranean shore and very early became a leader of the W Arameans, uniting them to meet the Assyrian power.

3. Migrations in patriarchal times. Aramean nomads following the Baliḫ River to its source thickly populated the region around the great Assyrian commercial center Ḫarran, the Paddan-aram ("road of Aram," incorrectly rendered "field of Aram" in the MT of Hos. 12:12) of the Bible (Gen. 25:20; 28:2, 5-7; 31:18; etc. [all P]). Ḫarran, biblical Haran, was the ancestral home of Nahor and his descendants Abraham, Lot, Bethuel, and Laban (Gen. 22:20-24; 24:4, 7, 10; 25:20; 28:2 in the Hebrew text). From Ḫarran, Abraham migrated to

Syria (12:4-5) and the land of Canaan, but it was from his Aramean kinsmen that he drew the Aramean Rebekah as a wife for Isaac (Gen. 24), who later sent the "wandering Aramean" (Deut. 26:5) Jacob to the same vicinity for a wife (Gen. 28:2-5). Of the women that returned to Canaan with him, at least Leah and Rachel were Arameans, ancestors to the Hebrew people.

4. Aramean states. In moving westward, Abraham followed a common trend of Semitic migration. As the documents from Mari show, the Amorite settlements that preceded the Arameans along the Middle Euphrates were oriented toward the W. Later a strong Assyria (1326-1076) diverted the Aramean nomads to the NW, where they settled in isolated areas unoccupied by Hittites some decades before Arameans could be established in Mesopotamia nearer Assyria. At the W border of Bît-Adini the Aramean state of Yaḫan began. Its capital, Arpad (Tell Erfâd), was once ruled by Mati-ilu, whose treaty with Ashurnirari V (755-745) is preserved in both Akkadian and Aramaic forms. He rebelled against Tiglath-pileser IV (745-728 B.C.), with disastrous results (II Kings 18:34). Westward, Ḫattina developed in and about the plain of the Lake of Antioch, with its capital at Kunalua. Beyond, to the NW, at the foot of the Amanus Mountains, was the Aramean state of Ya'di or Sam'al, from which the oldest Aramaic inscriptions have come. Its capital, Zinjirli, commanded the Amanus pass to Que

41. Bar Rakab, king of Samal, on his throne before a scribe; Aramaic inscription above (from Zinjirli, last half of eighth century B.C.)

(Cilicia).* Judging from the names Gurgum and Marqasi (later Mar'ash), the Aramean population ranged still farther northward to Gurgum on one of the main highways from Mesopotamia to Cilicia. Ultimately Arameans pushed on into the Cilician Plain, which formed a natural extension of Syria. Fig. ARA 41.

S of Ḫattina, between Ḫalman (Aleppo) and Damascus, spread the important kingdom of Hamath, which once included nineteen districts. Hamath marked the boundary between Palestine and Syria (Num. 34:8; I Kings 8:65; II Kings 14:25; Ezek. 47:15; Amos 6:14). Its king, Toi, paid tribute to David (II Sam. 8:9-10; I Chr. 18:9-10). Later Zakir of Hamath called part of his kingdom La'ash. This district, between Aleppo and Hamath, contained the fortified city of Ḫazrak (Hadrach in Zech. 9:1). N of Damascus, in the metal-rich Anti-lebanon Mountains, was the powerful kingdom of Zobah, whose E frontier extended to the Euphrates (II Sam. 8:3), where Zobah probably took the Assyrian cities Pitru and Mutkinu from Ashurrabi II (1012-972). The tradition that Saul successfully fought Zobah (I Sam. 14:47) rather reflects David's spectacular successes among the Arameans and his invasion of their lands (II Sam. 8:5-8; 10:15-18). David's captain Igal came from Zobah (23:36).

Damascus, a fruitful oasis in the plain below the Anti-lebanon Mountains, was long an important "head of Syria" (Isa. 7:8). The terminus of caravan routes to Arabia, to Iraq, and, through Galilee and along the Mediterranean coast, to Egypt, Damascus was economically (Ezek. 27:18-19) and culturally (I Kings 16:10) rich and politically strategic. Tradition suggests that Abraham passed through it on his way to Hebron (Gen. 15:2). David conquered it and garrisoned it (II Sam. 8:5-6; I Chr. 18:5-6). When it was strong, it demanded commercial concessions from its neighbors (I Kings 20:34). Proximity to Israel often brought conflicts of interests, sometimes in competition for settlements E of the Jordan River (I Kings 20:34; II Kings 16:6), and sometimes actual warfare (I Kings 20:1-21, 23-33). Kings of Judah hired Damascus against the kingdom of Israel (I Kings 15:18-20), and kings of Israel made alliance with Damascus against Judah (II Kings 16:5). Assyrian records show that Israel was strongly represented as an ally of many Aramean states against Assyria at the Battle of Qarqar (853 B.C.). Afterward Elisha, while in Damascus, instigated the assassination of the Aramean king and the usurpation of the throne by a violent man (II Kings 8:7-15; cf. I Kings 19:15-18).

5. Arameans and Israelites. By the period of the judges (*ca.* 1225-1020) there was a strong concentration of Arameans about the sources of the Jordan River, and small Aramean states lined the N and NE borders of the land claimed by the Hebrews. E of the Sea of Galilee, contiguous to the regions claimed by Manasseh and Naphtali along the W border of the land of Bashan, were two small states, Geshur and Maacah, which the Hebrews could not conquer (Josh. 13:13). Geshur furnished for David's harem the daughter of its king Talmai, and she became the mother of Absalom (II Sam. 3:3; 13:37-38). Her granddaughter Maacah became the wife of Rehoboam (I Kings 15:2; II Chr. 11:20-22) and a queen mother to the time of King Asa (II Chr. 15:16). It was to his grandfather in Geshur that Absalom fled when he had killed his brothers (II Sam. 13:37-38). The Arameans of neighboring Maacah, closely associated with Geshur, are traditionally related to the Nahor Arameans of Ḫarran (Gen. 22:24), as are those of Tubiḫi (Tebah of Gen. 22:24) of Zobah (I Chr. 18:8 LXX). The capital of Maacah,

Abel-beth-maacah (Abil el Qamh), S of Dan, overlooking the marshes of Lake Huleh, temporarily protected Sheba after his unsuccessful rebellion against David (II Sam. 20:15). The tiny state of Tob, which sent troops against David (II Sam. 10:8), was located near Edrei in Transjordan, at Et-Tayyibe on the road from Bosra to Der'a; it was in Tob that Jephthah sought asylum (Judg. 11:3-5).

Associated with Zobah and Maacah against David were the Arameans of Aram-beth-rehob (II Sam. 10:8). This state, among the Arameans hired by Ammon against David, was situated near the border of Hamath (Num. 13:21) with the city Laish-dan in its valley (Judg. 18:28-29), near the source of the Jordan River. Tradition explains that the Ammonites, who hired the Arameans, as well as their neighbors the Moabites, were also Arameans, related to Abraham and the Nahor Arameans of Ḥarran through Lot, son of Haran (Gen. 11:26-27; 19:30-38).

Most of the Aramean groups were small city-states relatively weak by themselves. The inscription of Zakir of Hamath, as well as II Sam. 8:10, indicates that they fought with one another and could readily be hired as mercenaries when it was to their own advantage (II Chr. 16:1-4). The strength of the Arameans lay in their readiness and ability to enter into more or less temporary alliances to meet an existing threat. At Qarqar, a "royal city" of Hamath, a coalition of about eleven such small states in 853 B.C. under the leadership of Damascus fought the Assyrians under Shalmaneser III to a stalemate and frustrated his plans to subjugate all of Syria and Palestine.

6. Assyrian invasions. So long as large Aramean states remained to organize and lead coalitions, such tactics were successful. But a series of strong Assyrian kings with constant assaults against plotters in the W destroyed Aramean resistance and ultimately converted their states into parts of Assyrian provinces. Bît-Adini fell to Shalmaneser III in 856 B.C. and became part of the Assyrian province of Kar Shulman-asharidu. Arpad of Yamḥad capitulated to Tiglath-pileser III in 740 B.C.; Zobah and Damascus in 732; and Hamath was taken by Sargon II in 720, shortly after the fall of Israel (722; II Kings 17:5-6). Men of Israel were exiled to the Aramean lands along the Ḥabûr River and to the region of Gozân (II Kings 17:6), as well as to Hamath (Isa. 11:11). Arameans of Hamath were among those placed in Samaria to replace those exiled (II Kings 17:24, 30). Tiglath-pileser III (745-727) reports that more than 40,000 N Syrians were exiled to remote regions of his kingdom. To repopulate those areas, men were exiled from trouble spots in the E. In 739 B.C., 12,000 Aḫlame Arameans from the Zab River region E of the Tigris were sent to Syria, along with 600 Arameans of the Damunu tribe which were taken from the city Amlate and 5,400 captives from the heavily Aramean center about Der in Babylonia. When the Assyrian officer in 701 before besieged Jerusalem boastfully recalled the humiliation of mighty Hamath and Arpad by the Assyrian armies (II Kings 18:34), Aramean political power in the W was gone, never to be restored. The states were but a memory. Individuals, however, still identified themselves as Arameans sometimes in the Jewish Aramaic papyri from Egypt of the Persian period. Far to the E, in Babylonia, the Chaldeans and Aramean settlers combined with their neighbors to humble mighty Assyria (612 B.C.), and a Chaldean kingdom persisted rather vigorously until the Persians took over Babylon and the world of the Semites (538).

7. Aramean culture. The great contributions of the Arameans, cultural rather than political, survived their national existence. Like the sticky "cake not turned" (Hos. 7:8), the Arameans caught and held cultural elements of their neighbors. They assimilated them and adapted them to their own use and, in their constant shifting about in the ancient world, spread them everywhere they went. They borrowed the alphabet from the Phoenicians, developed their own peculiar forms of it, and transmitted it to others everywhere they went—to the Persians, the Hebrews, the Arabs, and others even more remote. The simplicity and efficiency of the ARAMAIC LANGUAGE and ALPHABET vanquished the more difficult, cumbersome cuneiform scripts of the Akkadians and the Persians. By Late Assyrian times a Babylonian soldier wrote his report from Babylon in Aramaic, and an Assyrian officer was expected to be able to converse in the language (II Kings 18:13-37; Isa. 36). In the W provinces the language was widely used, and things written in it are found sporadically in the very heart of Assyria and Babylonia. When the Persians came to power, they recognized the value of the Aramaic script and language and not only used them themselves but also spread them to the widest reaches of their empire. Most preserved Aramaic was not written by Arameans but by those who borrowed their valuable tools. Aramaic maintained its importance until the conquest of the Near East by Alexander. Then it survived locally as special dialects and the script became highly diversified (Jewish Aramaic, Syriac, Nabatean, Palmyrene, Mandaic, etc.), continuing until it was finally displaced by Arabic.

ARAMITESS ăr'ə mīt'əs [ארמית, Aramean woman]. A designation of the concubine of Manasseh; mother of Machir.

ARAM-MAACAH âr'əm mā'ə kə [ארם מעכה]. Alternate name of MAACAH 1.

ARAM-NAHARAIM âr'əm nā'ə rā'əm [ארם נהרים, Aram of the rivers] (superscription of Ps. 60; elsewhere translated MESOPOTAMIA). A N Mesopotamian area, especially important as the home of the Hebrew patriarchs. The superscription of Ps. 60—H 60:2 alludes to David's warring against Aram-naharaim; perhaps this is a reference to the incident in I Chr. 19:6, when the Ammonites hired Mesopotamian chariots and horsemen against David.

Bibliography. R. T. O'Callaghan, *Aram Naharaim* (1948);

A. Malamat, *The Aramaeans in Aram Naharaim and the Rise of Their States* (1952). C. H. GORDON

ARAM-ZOBAH âr'əm zō'bə [ארם צובה] (superscription of Ps. 60). An Aramean town and kingdom in the Biq'a. *See* ZOBAH.

ARAN âr'ăn [ארן]. The second son of the Horite clan chief DISHAN (Gen. 36:28; I Chr. 1:42). Cf. the Jerahmeelite OREN (I Chr. 2:25; also ארן).

ARARAT ăr'ə răt [אררט]. A country in the general district of Armenia. Its Assyrian name is *Urarṭu* and the country is best known from Assyrian historical references, although it has produced written records and archaeological data of its own. Its geographical center is Lake Van. Modern exploration of Urartu is conducted in three countries: Turkey, Russia, and Iran.

1. History. Urartu rose to importance as a political unit in the ninth century B.C. Ashurnasirpal II (884-859 B.C.) in his Nimrud Inscriptions refers to Urartu as the boundary of his conquests; but his successor Shalmaneser III (859-824) made several inroads in Urartian territory. Some of his campaigns are illustrated on the bronze gates of Balawat, where the capture of Urartian mountain fortresses is shown. Shalmaneser pursued an aggressive policy against Sarduri, an Urartian king also known from his own inscriptions, which are written in the Assyrian language.

During the period of Assyrian weakness after Shalmaneser, Urartian power expanded considerably. Under local kings by the names of Išpuini, Menua, Argišti, and Sarduri, new cities were built, citadels were ingeniously constructed out of a combination of masonry and rock cuttings, and aqueducts and irrigation systems were created. The sources for this period are partly local inscriptions in the Urartian language, an idiom probably related to Hurrian and written down in cuneiform. The geographical range of these inscriptions shows that Urartian influence began to expand to the W. It made itself felt as far as N Syria and seriously threatened Assyria, which lost several provinces to Urartu.

This situation changed radically under Tiglath-pileser III (745-727), who defeated the Urartian king Sarduri II or III when the latter wanted to come to the rescue of the city of Arpad in 743. The alliance of N Syria, SE Anatolia, and Urartu was broken up, and Assyria reconquered its ground on Urartu. Sarduri escaped to his capital Turushpa (Tushpa) on Lake Van, which Tiglath-pileser in 735 failed to capture, although much of the countryside was devastated by the Assyrian army.

The most famous campaign against Urartu was conducted by Sargon (722-705) in his eighth year. This expedition led to the capture of Musasir, a city which was ruled by a King Urzanu, a vassal of Rusa of Urartu. The inventory of this city as recorded in Sargon's inscriptions furnishes a literary description of Urartian material wealth.

The international situation in Asia Minor and Transcaucasia was complicated by the threat of Cimmerian (GOMER 1) invasions about this time. There are references to Cimmerian warfare with Urartu. Rusa's natural allies against Assyria, the country of Tabal (TUBAL) and Mita of Mushki (MESHECH 1) were equally subject to Cimmerian aggression. Attention was diverted from the Assyrian front; and the later history of Urartu is marked by the further threat of invasions. The Scythians (*see* ASHKENAZ) arrived as successors to the Cimmerians, who had moved W; and the Medes came in pressing from the E. Although the seventh-century kings of Urartu still were active in building new citadels, the final destruction was brought about by Median (Madai) attacks of the early sixth century, after which Urartu ceased to exist as an independent ethnic and political unit. The Armenians, an Indo-European people perhaps related to the Phrygians (Herodotus VII.73), became the leading inhabitants of the country.

2. Archaeology. The knowledge of Urartian architecture used to be restricted to incompletely recorded excavations on the E shores of Lake Van, where two citadels exist: the rock of Van and Toprakkale. Russian excavations near Erivan have added much information.

It becomes increasingly clear that the architectural style of Urartu is related to that of Asia Minor, showing affinities to the earlier Hittite and contemporary Phrygian-Mushki tradition. The temple of the god Haldi at Musasir had a pitched roof of pedimental appearance like the contemporary *megara* at Gordion, capital of Phrygia.

Urartu had an outstanding metal industry, a branch also famous in Mushki and Tabal. The theoretical knowledge derived from Sargon's inventory of the temple of Haldi at Musasir is borne out by excavation. Urartian caldrons with siren handles, tripods, bowls, candelabra, and shields were exported to the W, where they have been found in Phrygia, Greece, and Etruria. The influence of Urartian art on the West was strong, because its *floruit* coincided with the opening of oriental trade to Greece and Italy.

3. Biblical Ararat. The fame of Ararat is now mostly based on Gen. 8:4. The mountains of the N were conceived as the likeliest candidates for an early emergence from the flood, and were labeled with the most readily available geographical name of Urartu. Modern Mount Ararat is in the ancient territory of Urartu, but it preserves the name in a restricted sense.

The references in II Kings 19:37; Isa. 37:38 are historical. Sennacherib was murdered by his son (Babylonian Chronicle III.34-38) in 681 B.C. The circumstances surrounding his death are not clear, and Ararat is not mentioned in preserved Assyrian texts as the land of refuge for the murderer(s).

The association of Ararat, Minni, Ashkenaz, and Medes (Jer. 51:27-28) recalls the military situation of the early sixth century B.C., when Urartu, Manneans, Scythians, and Medes were all active preceding the fall of Babylon.

ARATUS ăr'ə təs [Ἄρατος]. A Stoic poet of Soli in Cilicia who flourished in the middle of the third century B.C. His astronomical poem "Phaenomena" (Φαινόμενα) is quoted in the Areopagus speech of Acts 17:28—"for we are indeed his offspring." *See* AREOPAGUS. B. H. THROCKMORTON, JR.

ARAUNAH ə rô'nə [ארונה (II Sam. 24:20-24, 18, *Qere*); *Kethibh* ארניה]. Alternately: ORNAN ôr'nən [ארנן] (Chronicles). The Jebusite whose threshing floor David purchased for the site of an altar to stay the ravaging plague by sacrifice (II Sam. 24:15-25; I Chr. 21:14 ff). When a severe epidemic broke out in Israel, with a mortality of some seventy thousand, it was considered to be a judgment of God because of the census of David (cf. I Chr. 21:12, 15, where the "destroying angel" or the "sword of the LORD" is equated with the "pestilence upon the land"; and the Plague Prayers of Mursilis in *ANET,* 394 ff). Although it appears that the disease reached the suburbs of Jerusalem, the capital itself was mercifully spared. Accordingly, the prophet Gad instructed the penitent king to purchase the threshing floor of Araunah, where the plague appeared to cease, as a fitting location for sacrifice. Although Araunah offered to give his property to the king as well as the provisions for the sacrifice, David insisted upon paying fifty shekels of silver for the purchase of the threshing floor. Here he offered sacrifices and supplications, and the plague was averted from Israel.

Araunah appears to have been the father of four sons, who isolated themselves during the epidemic (I Chr. 21:20). The threshing floor of Araunah was traditionally located on Mount Moriah, where the temple was subsequently erected (II Chr. 3:1).

The word האורנה (*Kethibh* האורנה) in II Sam. 24:16 should be rendered, according to some authorities (cf. A. Speiser, *AASOR,* XX, 98-99), not "Araunah" but *iwirne,* a Hurrian word meaning "chief, ruler."

ARBA är'bə [ארבע, four]. Presented as a prominent inhabitant of Hebron, or KIRIATH-ARBA, at the time of the Conquest, although improbably a personal name (Josh. 14:15; 15:13; 21:11). Arba is said to have been the ancestor of Anak and the greatest man among the Anakim, or "race of giants." It is unlikely that "Arba" is a personal name, although it is so construed in the three verses cited above. The LXX reading, "Kiriath-arba the metropolis of the Anakim," suggests that "Arba" is a corruption from "Kiriath-arba," the older name of Hebron, and that the Hebrew text originally referred to Kiriath-arba as the metropolis (mother city) of the Anakim rather than to Arba as its "greatest man."
R. F. JOHNSON

ARBATHITE är'bə thīt [ערבתי]. A resident of BETH-ARABAH, the home of Abialbon, one of David's Mighty Men (II Sam. 23:31; I Chr. 11:32).

ARBATTA är băt'ə [Αρβαττα] (I Macc. 5:23); KJV ARBATTIS —ĭs. According to some, the lowlands of the Jordan Valley; but more likely a toparchy W of Samaria, bordering upon Galilee. The district is called Ναρβατηνή by Josephus (War II. xiv.5; xviii.10), and this spelling is confirmed by the Syr. version of I Maccabees. In the Jewish War of A.D. 66-70 this area served as a refuge for Jews who fled from Caesarea.

In campaigns against Galilee and Arbatta, Simon defeated the Gentile forces and delivered the Jewish inhabitants, many of whom followed him back to Judea.

E. W. SAUNDERS

ARBELA är bē'lə [Ἄρβηλα] (I Macc. 9:2). A site along Bacchides' line of invasion from Syria, which may be identified with BETH-ARBEL in Gilead, but it is more likely to be the Galilean Khirbet Irbid overlooking the Wadi el-Hamam to the W of the Sea of Galilee. Josephus has described this famous district of caves which were connected by stairs cut in the rock, a favorite refuge for rebels and brigands (Antiq. XII.xi.1; War I.xvi.2-4; Life 37, 60, 188).

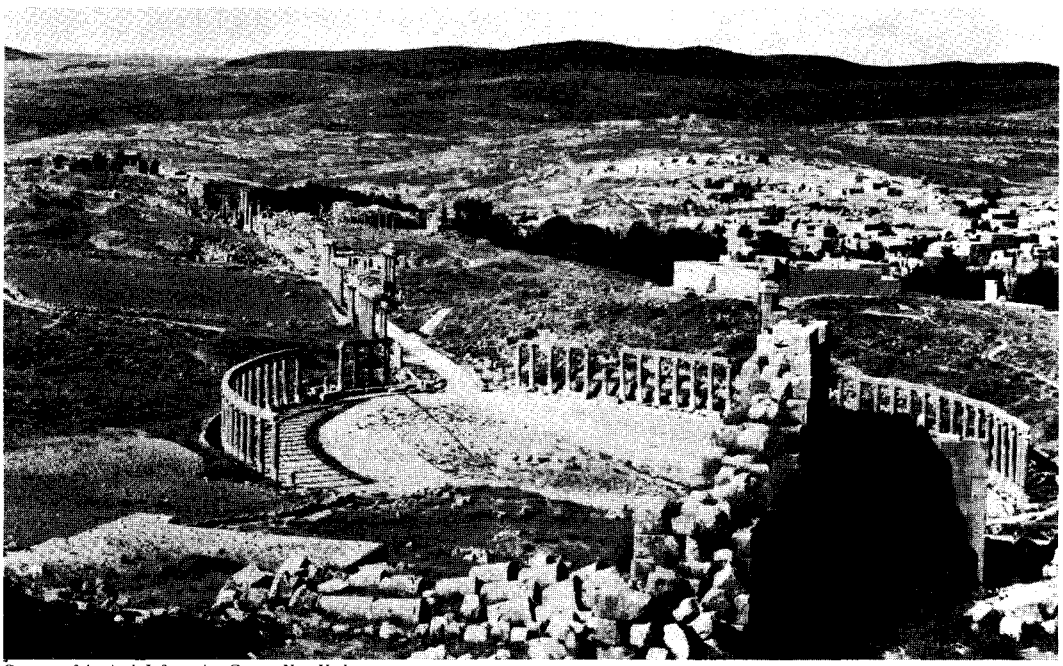
ARBITE är'bīt [ארבי]. A resident of ARAB, the home of Paarai, one of David's Mighty Men (II Sam. 23:35; in I Chr. 11:37, Naarai son of Ezbai).
V. R. GOLD

ARBONAI. KJV form of ABRON.

ARCH. KJV translation of אילמים and אלמות in Ezek. 40 (RSV VESTIBULE).

***ARCHAEOLOGY** är'kĭ ŏl'ə jĭ. The study of the material remains of man's past. "Material remains" include all tangible things made by man, and can be divided into two groups: written documents, including texts of ancient languages on stone, metal, clay, parchment, and papyrus; and unwritten documents, comprising all other objects—e.g., fortifications, buildings of various kinds, sculpture, household vessels, tools, weapons, and personal ornaments. These remains are generally recovered by means of excavation; when carefully studied and evaluated, they supply important data for political, economic, social, and cultural history. "Man's past" limits the coverage of archaeology to the period of man's occupation of the earth, from at least 200,000 years ago—the Pleistocene period—to the present. With reference to time, archaeology is divided into two major branches, prehistoric and historic. The former is concerned with the Stone Age; the latter is devoted to the pe-



riod between the end of the Stone Age—the date of which varies in different parts of the world—and the present; the interests of these two major divisions overlap in regions such as the Near East, where Neolithic deposits underlie historic remains in many sites.

Archaeology is world wide in scope, and there are special branches for every region from America to the Far East, and from South Africa to Scandinavia. This article deals with historic archaeology of the ancient Near East, with special emphasis on the archaeology of Palestine.

A. ***TYPES OF REMAINS.*** Some ancient remains have always been either partially or completely exposed, because of their location, size, or state of preservation—e.g., the Colosseum in Rome, the Parthenon in Athens, the pyramids and temples of Egypt, Baalbek in Lebanon, and Jerash in Jordan. At such sites archaeological work is largely devoted to the study of remains above ground level, but excavation is usually necessary to uncover floors, streets, architectural fragments, and evidence of occupation. Most ancient remains are buried beneath tons of debris or drifted sand, and are recovered by means of excavation. Near Eastern and particularly Palestinian sites are generally of this type. For the most part, these sites contain remains of ancient towns and tombs, although other kinds of remains—e.g., water distribution and conservation systems, isolated fortresses, temples, and palaces—are also found. Of these, towns and tombs will be considered here.

1. Towns. Ancient towns vary in size from a cluster of houses occupying as little as two to three acres, to planned cities covering as much as two hundred acres. Their locations were largely determined by natural features. Abundance of good water, and proximity to major trade routes, to a natural harbor, to economically important raw materials, and to tillable land were the principal factors which, singly or in combination, governed the selection. Barring nat-

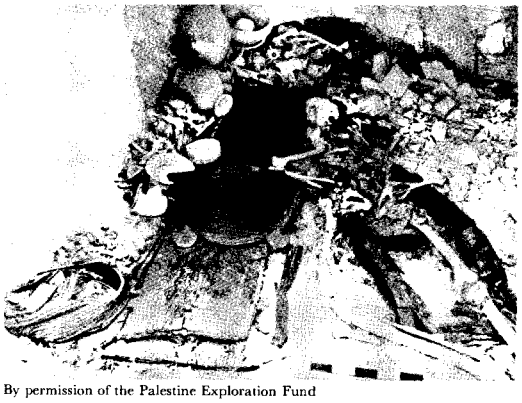
42. Ruins at Gerasa (Jerash), with forum in the foreground

ural catastrophes, these advantages remained the same generation after generation, and towns continued to occupy the same sites for centuries and often millenniums, though occasionally with gaps.



When the initial settlement of a site was destroyed, the next occupation was built on top of the remains and accumulated debris of the first town, so that the level of the second town was higher than that of the first. This process, repeated time and time again, resulted in the formation of mounds (tells) which often reach a height of seventy-five feet or more above the natural surface. Generally these mounds are shaped like truncated cones. This characteristic shape, together with the thousands of fragments of broken pottery (sherds) that litter the top and sides of the mound and the remains of walls that are sometimes visible, makes archaeological sites of this type easy to recognize. Figs. ARC 42; BET 32; LAC 3.

Thus a mound contains the remains of many occupations; the earliest is at the base of the mound and the latest is at the top. Each occupation or stratum is represented by one or more layers of debris. These layers are distinguished by differences in color and texture. They are neither absolutely level nor uniformly deep, but tend to slope, thin out, or deepen, depending on the natural configuration of the site and the surface of the debris on which they lie. Various kinds of holes—e.g., storage and rubbish pits, cisterns, and foundation and robber trenches—were often sunk into earlier layers, and contribute to the unevenness.

In the layers of debris that make up a stratum are found the remains of buildings and structures of ancient towns. Houses, shops, warehouses, temples, palaces, streets, and fortifications form the bulk of the architectural remains, although special structures such as stables and governmental buildings are occasionally found. They are built of either sun-dried mud brick or stone and sometimes both. In stone construction, rubble (undressed stone) was commonly used, but examples of well-dressed ashlar appear in a number of sites—e.g., Solomonic Megiddo and Samaria during the time of Omri and Ahab. Floors are made of flagstones, plaster, or packed earth. Various kinds of objects (for a partial list, *see* § B6 *below*) are also found in these layers. The most common class of object is pottery, and tens of thousands of sherds (fragments of broken pottery) are brought to light in a season of excavation on a Palestinian mound. Most of the objects recovered were broken in antiquity, either through normal everyday use or as a result of a catastrophe in which walls fell and crushed them. Generally the occupation layer, which is immediately above the floor, has the greatest concentration of objects.

2. Tombs. Many kinds of tombs were used in antiquity: natural or artificial caves in the side of a hill or cliff; pits or chambers sunk in fields and entered through shafts; individual graves dug in houses or open areas; mausoleums, either stone-built or cut out of rock, and either exposed to view or covered with earth; massive monuments such as the pyramids of Egypt; and a number of others.

Generally, ancient tombs contain skeletons in various stages of preservation, and many objects including vessels, weapons, jewelry, and occasionally furniture, intended to care for the needs and desires of the deceased in the afterlife.* Tombs of prominent persons were almost always plundered in antiquity by enterprising robbers, and aside from pottery, little is found in them. Stratification is rarely found in tombs, because once the tombs were closed, little debris accumulated over the remains. Frequently tombs were reused by succeeding generations, with the result that they contain many burials and hundreds of objects. In such instances, burials and funerary equipment are usually found in hopeless disorder, because of the common practice of pushing old bones and objects to one side, or out of the chamber altogether, in order to accommodate new burials. This practice, of course, largely destroyed whatever stratification there once was. As a rule, tombs yield a much higher percentage of whole and only slightly broken objects than mounds (*see* § A1 *above*). Since whole and restorable objects illustrate the incomplete forms found in mounds, the discovery and excavation of tombs is very important in archaeology. Fig. ARC 43.

B. *METHOD OF EXCAVATION.* To evaluate and interpret the results of archaeological excavations, one must understand archaeological method, including both the technique of excavation and the study of objects. This brief survey includes only the chief features of archaeological method. (For further discussions, *see bibliography.*)

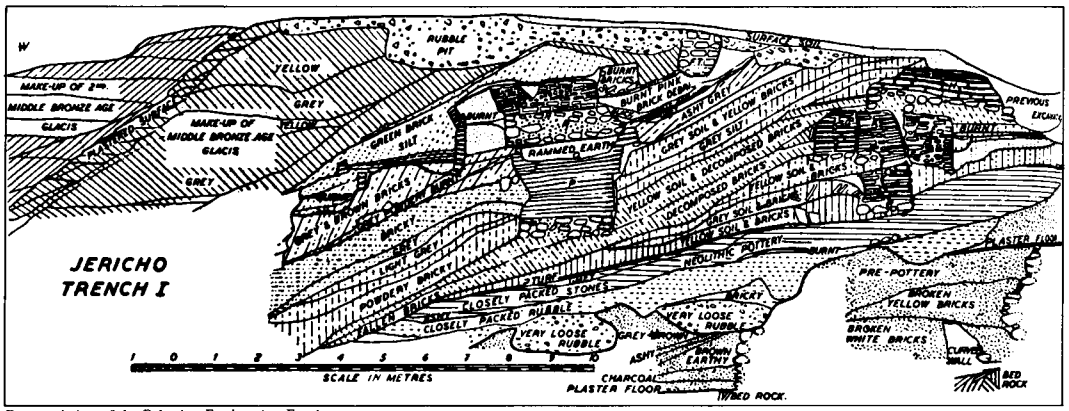
1. Where to dig. The choice of the site largely depends on the excavator's purpose in digging. He may want to excavate a particular mound because of its historical importance, or because previous excavations of the site have left many questions unanswered. Sometimes he has a definite cultural or chronological problem to solve, and from the hundreds of sites in the region, he selects a few that would be of value in solving it. Practical considerations such as accessibility to transportation and sources of supply, the availability of the mound for excavation, and the status of security usually make one site more attractive than the others.

After the site has been chosen, much preliminary work must be done before excavation can begin. A permit to excavate must be secured from the governmental department in charge of archaeological sites;

arrangements to purchase or rent the site must be made with the owner or owners; and the site and surrounding area must be surveyed. Using the plan of the site, the archaeologist selects the area he plans to excavate and determines the location of dumps. The choice of the area, like the selection of the site itself, depends largely on the particular problem or problems that the excavator is trying to solve. E.g., if he wishes to study the sequence of fortifications, he will dig one or more trenches at right angles to the line of the walls on the perimeter of the mound. Housing facilities and equipment for the staff must be arranged on or near the site. Sufficient tools, equipment, and supplies must be purchased for the staff and workmen. When everything is ready, laborers are hired and excavation begins.

2. How to dig. Good excavation technique is much the same the world over, but each region and, in fact, each site has its own stratigraphic problems, the solution of which demands special methods. The following is a description of basic technique for Palestine and much of the Near East, leaving aside all special procedures.

a. Mounds. Excavation of a mound begins with laying out and surveying the area selected by the archaeologist. If the area is large, it is divided into smaller units or sections; each section usually measures about five meters (*ca.* sixteen feet) square, a size which is small enough to control, yet large enough to provide ample work room and light as excavation progresses downward. The surface of the section is then cleared of plants and rubble, and all objects found are saved and recorded as surface finds. If the archaeologist is to gain a clear and true picture of each occupation in a site, it is imperative that he excavate stratigraphically; i.e., he must remove each layer of debris as a unit, being careful not to dig into the layer below; and he must also keep the objects of each layer separate from those of other layers. Fig. ARC 44.



Courtesy of the Israel Exploration Society

44. Pottery found in excavations at Tell Qasile

These layers are distinguished by differences in color and texture. Since it is difficult to see and feel such subtle differences when digging downward, the excavator always digs one or more small test trenches to a depth of two to three feet in the area, and smooths the sides with a mason's trowel. When seen from the side, the various layers and their relationship to one another become clear, and provide a preview of the stratification of the area. Using this test trench as a key, he excavates the remainder of the area layer by layer to the lowest layer of the test trench. The objects found in each layer are placed in baskets which are identified by tags giving the name of the site, area, layer, and part of the layer—i.e., the room, street, cistern, pit, etc.—in which the objects were found. A careful description of each layer, sketches with exact measurements of all building remains, and a rough description of the objects discovered are entered in the field notebook. This process is repeated time and time again until the exacavation of the area is complete.

When walls appear, the archaeologist immediately begins to look for floors. Since objects on the floor usually belong to the final occupation of the structure and those below the floor belong to an earlier period, the objects from above the floor must be kept separate from those below. For this reason, he guards against inadvertently cutting through the floor and mixing the objects from the two periods. To discover the floor, and to study the relationship of the floor, the layers of debris, and the wall, the archaeologist digs one or more small test trenches *at right angles* to the wall, similar to those described above. In this manner, he usually discovers the floor, and sees in advance the construction of the wall and the relative position of the various layers of debris. Removing the layers revealed in the test trenches, he excavates the remainder of the area within the building. Floors and walls are cleaned, drawn to scale, photographed, and are studied in detail for evidence of repairs. They are then dismantled, and excavation proceeds downward. When the excavation of the area is complete or the season closes, scale drawings of the sides of the section are made; these enable the archaeologist to reconstruct the relative position of all layers, building remains, and objects; such reconstruction is absolutely essential for an accurate record of the excavation. Fig. ARC 45.

If this procedure seems time-consuming and unnecessary, it must be remembered that all excavation is destruction; once a section is dug, it is gone forever and cannot be restored except in the excavator's notebook and drawings. There is no opportunity to

By permission of the Palestine Exploration Fund

45. Section drawing showing relationship of walls and layers of debris, Jericho Trench I

duplicate the experiment exactly; in this respect archaeology is unlike all other branches of science. All excavation, therefore, must be done with the best possible technique, and all records must be kept fully and carefully.

b. Tombs. Except for monumental tomb structures and those that come to light in the course of excavation on mounds, tombs are generally difficult to find, owing to the fact that they are covered over and their location is unmarked. Frequently they are found by accident, as when a peasant's plow breaks through the roof; often excavators strip promising hillsides and fields in their search. Once a tomb has

Courtesy of the Oriental Institute, the University of Chicago

46. Entrance to tomb 77 at Megiddo, Late Bronze I (*ca.* 1550-1400 B.C.)

been discovered, the excavation of it is a straightforward though difficult task. Most of the difficulty is inherent in the nature of tombs; space is small and cramped; the air is dust-filled, and ventilation is poor; some of the objects and bones are friable and tend to disintegrate when exposed to air. Figs. ARC 46-47.

Using small hand tools, the excavator clears the debris from the objects and bones without disturbing their position. Extremely delicate objects such as wooden utensils and furniture are treated with preservatives immediately. The debris is usually sifted to recover beads, tiny bits of jewelry, and seals. When all the objects and skeletons are exposed, they are then drawn and photographed in position. If several layers of undisturbed burials are found, each layer is cleaned, planned, and photographed as a unit before it is removed, so that the stratigraphic relationship of the burials can be established. When all objects have been removed, the entrance and chamber are drawn and photographed. *See* TOMBS, SEPULCHERS.

3. Recording. Accurate recording of all phases of excavation is absolutely essential for a correct interpretation of the site. The various layers of debris are described in the archaeologist's notebook as they are excavated.* At the end of the season, scale drawings and both black-and-white and color photographs are made of the sides of the sections, showing the exact position of each layer. Fig. SAM 13.

All features of the excavated area such as room deposits, walls, floors, and ovens are thoroughly cleaned, planned, and photographed. Since the play of light and shadow is important in photography, the archaeologist schedules his photography for the hour when the lighting of the area is optimum, and arranges the cleaning accordingly.

The objects recovered are brought from the mound daily in baskets which carry identifying tags (*see* § B2*a above*). These tags are the sole means of identifying the layer, room, or tomb where the objects were found, and are therefore kept with the contents of the baskets until the objects are finally recorded in the catalogue. All objects are then washed and dried, with the exception of delicate objects of metal, bone, and wood which usually require cleaning in an equipped laboratory. Since it is not feasible to keep the tens of thousands of sherds found in each campaign, they are sorted, and only characteristic types, new forms, and both whole and restorable vessels are saved; the remainder is described in the excavator's notebook and discarded.

The objects that are saved are recorded in the catalogue, which shows all relevant details, particularly the area, section, layer, room, or tomb, date found, and drawing and photograph numbers. In

Courtesy of the Oriental Institute, the University of Chicago

47. Interior of tomb 77 at Megiddo, Late Bronze I (*ca.* 1550-1400 B.C.)

addition to the catalogue, a pottery notebook is kept, in which the excavator enters the date, number of pieces, and his observations and impressions of the pottery of each layer or group as a whole before any is discarded. The over-all view obtained from the preliminary study often points up new problems in the section which can be solved during the season.

If the staff is sufficiently large, the restoration, drawing, and photography of objects are done in the field, since many or all of them may be kept by the department of antiquities of the country in which the excavation takes place.

4. Disposition of finds. Governments differ on regulations covering the disposition of finds. Some keep everything; others divide the finds on an agreed ratio; still others take only unique objects to round out collections in the national museum. The policy is known to the archaeologist before he excavates, and it affects the organization and operation of the expedition. If all objects must remain in the country, all drawing, photography, and much of the study must be done in the field; this requires more personnel, shorter digging seasons, or lengthy stays in the country after the close of the work. If the government divides the objects, representatives of the department of antiquities visit the site at the end of each campaign and divide the finds. Once this is completed, objects retained by the expedition are packed in bags and boxes, export licenses are obtained, and transportation is arranged.

5. Excavation report. At the end of each season, the excavator normally prepares several preliminary excavation reports which are published in various journals to give others a general view of the results of the dig. But he is not finished until a final, comprehensive report on the excavation is published. Having excavated and destroyed all or part of a site, he is morally responsible for making available to all a full and accurate record and interpretation of his excavation. In general, it is a task of reducing the excavated area to a printed text with illustrations. He carefully studies the stratification of the site as it is preserved in his notebook, drawings, and photographs, and determines the major strata or periods of occupation by correlating the layers of debris with building remains and with objects, particularly pottery. Representative pottery and other objects are selected for publication, and lists are prepared which show all layers and loci in which each type was found. The selected objects are then described in detail, and finished drawings and photographs of all objects, together with final drawings of plans and stratification, are prepared. Since no archaeologist is an expert in all branches of science, he secures specialists in other fields to prepare technical reports on those objects which are outside his field of competence (*see* § C6 *below*). When these reports are in and he has completed his own research, he is able to see the results of his excavation as a whole. He then fits the site into the political, economic, and cultural history of the area and, if possible, into the larger framework of the ancient Near East as a whole. This is the ultimate goal of the archaeologist; the measure of his success largely depends on his skill in excavating and his competence in analyzing and interpreting the material recovered.

While the aim of every archaeologist is to make his final report as perfect as possible, mistakes are inevitably made, problems are left unsolved, and errors creep into his interpretation of the history, chronology, and culture of the site. Moreover, every new excavation adds to our knowledge of material cultures, with the result that some of the earlier analyses and interpretations become obsolete. For these reasons, the study of an excavation goes on for years after the publication of the final report. Other archaeologists, linguists, and historians correct, refine, and reinterpret the published raw material, and frequently make enormous contributions to our knowledge of the site.

6. Uses of objects. In every excavation tens of thousands, and often hundreds of thousands, of objects are found. Few if any of these are of intrinsic value; they consist, for the most part, of potsherds; broken bits of stone, metal, and glass vessels; flint and metal tools; implements and weapons; clay figurines; bits of sculpture in stone or metal; architectural fragments; bones; rings; stone and metal beads; scarabs; seals; etc. Of course, exceptional finds, such as objects made of gold, are occasionally recovered in some regions, but are very rare in a poor country like Palestine. The lack of intrinsic worth, however, does not lessen their value to archaeology; they are extremely important because they enable the archaeologist (*a*) to date the occupation levels or strata in the site, and (*b*) to describe and compare material cultures. *See* POTTERY § 2. Fig. POT 63.

a. Dating sites. The use of objects for dating strata presupposes a knowledge of the principle of change. Change takes place in all classes of man-made objects. New styles appear and remain popular for undetermined periods, during which they are modified to suit changing tastes and needs. Ultimately they lose favor altogether and disappear, being replaced by still newer styles. The length of time that a style is manufactured and used, and the number and rate of changes, are variable; there is no fixed rule governing the operation of change in man-made objects.

But the simple fact that change takes place is of the greatest importance, because it enables archaeologists to trace the history of each class of object.

To this end, excavators carefully keep the objects from each layer of debris separate; if they become mixed with earlier or later material, the direction and date of changes that have occurred in the different classes of objects cannot be determined.

The procedure used in tracing change in objects varies with different archaeologists, but is essentially this: Upon completion of the excavation, all the examples of a single class from each layer of debris are picked out and arranged according to their place in the sequence of layers from the lowest (earliest) to the highest (latest). They are then carefully studied; all changes in manufacturing technique, form, and finish are noted. The layer in which the class first appears, each layer in which it undergoes change, and the layer in which it is last found are recorded. This process is repeated with each class of objects. The histories of the various classes are then correlated, so that for any period the classes that were being made can be listed, and the exact stage of development of each class can be described. This correlation is called a typological sequence or a relative chronology.

The various types of objects are assigned dates when they occur in strata that can be dated by other means (*see* § C *below*). Since objects in a stratum are virtually identical with objects in contemporary strata of other sites in the same cultural area, an absolute date for a stratum in one site equally applies to strata with similar objects in all other sites in the area. Absolute dates, of course, are not found for all strata in a site; frequently one or two can be established, and sometimes none at all. But as the number of excavated sites in an area increases, the number of absolute dates also increases, and a precise chronological framework for the cultural area is gradually developed. When dates are assigned to the classes of objects in this sequence, we have what is known as an absolute chronology. Once this framework is established, objects can be used to date the occupational periods in other sites where other kinds of chronological evidence is lacking.

At this stage, archaeologists can omit some of the steps in this procedure. The objects of each layer are compared with those found in other sites, and dated accordingly. This enables excavators to trace the history of sites adequately, and has the advantage of being faster than the procedure described above. It is desirable, however, to trace the typological development of each class of objects, so that subtle changes, which may have been overlooked by previous excavators, but which may fill gaps in our typology and render our chronology still more precise, can be detected.

b. Describing and comparing material cultures. The various objects from contemporary strata in neighboring sites are very much alike; there may be minor differences, but they are far outweighed by similarities. When all the sites in a region share similar objects, they can be said to belong to a material culture. Each region has its own characteristic objects which differ from those of other regions in technique of manufacture and style. By means of the intensive study of objects, archaeologists have been able to isolate and describe the major material cultural centers of the ancient Near East—Egypt, Mesopotamia, Anatolia, and Syro-Palestine. Much progress has already been made in distinguishing local differences within each of these larger cultural areas, and this, too, is accomplished through the careful analysis of material remains. E.g., in antiquity Palestine and Transjordan belonged to the same material culture, as shown by many common features, one of which is ceramics. Yet in certain periods there are minor variations in shapes and styles of decoration that enable archaeologists to separate Palestinian and Transjordanian pottery, even though they belong to the same basic categories.

When the characteristic objects of the various cultures are known, many important facts bearing on our over-all knowledge of antiquity can also be deduced. The discovery of foreign objects suggests that the site figured in trade and commerce, or was subject to a foreign power. Here the type of object usually indicates which is the case—e.g., foreign pottery points to trade, but a victory stele establishes subjugation. Most foreign objects, of course, came through trade, and much has been learned from them about commercial relations in the ancient world. By noting the quantity of imports from one region that are found in different strata of sites in another region, archaeologists can throw light on the fluctuations of trade and commerce between these regions. By observing both the number and the kinds of the objects imported, the level of economic prosperity of the country can also be roughly estimated.

In certain cases, archaeologists can demonstrate both the existence and the date of foreign contacts even though no imported objects are found. Occasionally objects are recovered which were made locally—as shown by the material and sometimes the technique used—but which imitated the shape and finish of objects from another region. In such cases, it must be assumed that the local craftsman had models or prototypes which he copied. If the homeland of the prototype is known and if the date of the prototype is fixed, the existence of the local imitation proves that there was contact with the land where the prototype was made at that time, in spite of the fact that the genuine imported object which served as a model may never be found.

Objects also throw light on immigration and colonization. It sometimes happens that classes of objects which have been common at a site for several centuries are suddenly replaced by new objects which are completely different typologically. This indicates that the site has been occupied by people from another cultural region. Archaeologists then compare the new objects with contemporary objects of other regions, in order to ascertain their source, and, in turn, the homeland of the new people. Such is the case with the Philistines. In the second quarter of the twelfth century B.C., a new kind of pottery, featuring different shapes and decorative styles, suddenly appears at sites on the coastal plain and the Shephelah (foothills) of W Palestine. Even though no Philistine site has been extensively excavated to date, the geographical distribution and date of this pottery, which was fixed by the discovery of many examples in Israelite sites and in contexts with pottery of known date, indicated that it was Philistine. (Fig. POT 63.) Analyses of its shapes and motifs,

and comparisons with other contemporary pottery of the ancient world, have shown that its ultimate source was Aegean pottery (specifically Mycenaean IIIC:1 pottery). The ancestral home of the Philistines was therefore in this general area, although it cannot be located more precisely as yet.

C. *DATING ARCHAEOLOGICAL EVIDENCE.* Dating the various strata in a site requires the careful sifting and study of many lines of evidence.

1. Literary references. References in ancient literature, including the Bible, texts in other Near Eastern languages, and Greco-Roman literary works, are the best sources for chronology. They sometimes supply information about cities, including names of founders and conquerors, with the result that dates of the establishment and destruction of various occupations can be fixed closely. E.g., we know from the Bible (I Kings 16:23-24) that the city of Samaria was founded by Omri in the seventh year of his reign (*ca.* 870 B.C.), and from both the Bible (II Kings 17:5-6) and the annals of the Assyrian king Sargon II that it was destroyed *ca.* 721 B.C. Unhappily, references of this type are not common for any period, and are especially rare for the second millennium B.C. and earlier.

2. Inscriptions and paleography. INSCRIPTIONS are occasionally found which contain names of persons or allude to events dated by other sources. These may be written on clay tablets, stone stele or seals, ostraca (sherds reused as writing material), parchment, or papyrus. At first sight it seems that this material should be extremely useful for purposes of dating. But these objects were often removed from their original contexts, and are found in strata dating hundreds of years later than the period in which they were made—e.g., stone inscriptions were frequently reused as building material in later periods, and seals were sometimes kept in families for generations. For these reasons, caution must be used in dating strata by the literary material found in them. On the other hand, if it is clear that the inscriptions are *in situ*—i.e., in the stratum to which they properly belong—they are useful for dating.

Paleography is also used for purposes of dating. Just as objects undergo change, the forms of signs or letters used in writing change in the course of time. Great progress has been made in dating these changes, and paleography now supplies approximate dates for strata in which written documents are found *in situ*. *See* ALPHABET, HEBREW AND GREEK; WRITING AND WRITING MATERIALS.

3. Local objects. Although virtually all objects are useful for dating, some are of greater value than others. They fall into two groups, those that were locally made, which includes the bulk of finds, and those that were manufactured in other countries. They can be further classified by kinds of objects.

a. Pottery. Because pottery is the most common and indestructible artifact made by man, and because it is an excellent medium for the expression of change, it is the most useful class of objects for determining dates. In Palestine, where many sites of all periods have been excavated and where there are a number of absolute dates, a pottery chronology has been perfected that is accurate within a maximum error of about two centuries, and for most periods within a century or less. With more and better stratigraphic excavation, it will become even more precise, and may enable us to date strata of most periods within surprisingly narrow limits, perhaps twenty-five to fifty years. (*See* POTTERY. *See also* Fig. POT 63.) At present, an archaeologist who has mastered Palestinian pottery can collect and study sherds that have eroded to the surface on the top and sides of a mound, and predict accurately the various periods of occupation of the site without digging at all. This technique is known as surface exploration.

b. Coins. Coins are also valuable chronological evidence when found in quantities sufficient to prove that they were contemporary with the stratum in which they were discovered. In the absence of other clear-cut chronological evidence, the discovery of one or two coins in a stratum only supplies an approximate date for the occupation, since (*a*) they may have been kept in a family for some time, and are therefore found in a deposit somewhat later than their period, and (*b*) they may work downward or upward in the debris, because of their small size. Of course, coinage is a relatively late invention (seventh century B.C.), and for this reason coins are only useful in dating relatively late strata. *See* MONEY, COINS.

c. Other objects. Metal and stone objects also undergo typological change—toggle pins, tools, weapons, metal containers and utensils, stone containers of all types, incense burners, beads, etc. While they are not so common, and hence not so valuable for purposes of chronology, as pottery in Palestinian sites, they can sometimes be used to fix the dates of strata when found *in situ*. But more excavation and study will be necessary before certain classes of objects can be confidently used for dating.

4. Imported objects. Frequently examples of the above-mentioned objects were imported from abroad. If the imported object is securely dated in the place of its origin, and if it is found *in situ*, it is extremely valuable for dating the stratum in which it is found. A time lag, determined by the distance and the amount and frequency of trade between the respective countries, must be reckoned. The date of the stratum is then computed by adding the length of this time lag to the known date of the import. Generally a time lag of no more than twenty-five to fifty years —and usually much less—is sufficient in the ancient Near East. Of course, an imported object may have become a family heirloom and survived for several generations. In such cases it will be found in a stratum dating somewhat later than the period in which it was manufactured and imported. Here the archaeologist weighs the known date of the object against other lines of dating evidence.

5. Stylistic development in art and architecture. Stylistic development in art as represented by sculpture, seals, scarabs, etc., is becoming increasingly useful for purposes of chronology as more is learned about ancient art forms and motifs. Unfortunately objects of this type, and particularly sculpture, are not plentiful in Palestine, largely because of the poverty of the country and because of Israelite religious prohibitions.

Architecture also contributes important chronological evidence. Plans and elevations of all types of buildings and structures, methods of construction,

styles of masonry, and architectural orders change in different periods, and the dates of many of these changes are now known. In the absence of other clear-cut chronological data, architectural material can be used to date strata approximately and, in some instances, exactly. Architectural styles are more difficult to recover in Palestine than in countries such as Egypt, Greece, and Italy, because of the widespread use of sun-dried mud-brick construction, which lacks permanence and was used for poorer, nondescript structures, and because of the practice of building over and over again on the same site, which tends to destroy structures below. But progress is being made in using architecture for purposes of chronology. *See* ARCHITECTURE.

6. Techniques of natural sciences. The natural sciences increasingly assist archaeology in the classification and analysis of artifacts. Every excavation brings to light many objects which require expert description, and archaeologists turn these over to specialists in other disciplines for study whenever possible. Botanists classify samples of wood and grain; zoologists and physical anthropologists classify animal and human bones. Their findings, together with information gleaned in the course of excavation, often reveal many details of the life of ancient man—e.g., the state of his health, his diet, aspects of his domestic economy. The classification of shells by conchologists is useful in determining sources of trade and probable trade routes. Geology is also making substantial contributions. If the region in which the site is located is geologically known, the quarries from which stone was taken to fashion building blocks, sculpture, beads, and other objects can often be found. Usually quarries are nearby, but occasionally they are located many miles away, and the discovery of objects made of stone from distant quarries points to ancient commerce.

A number of established scientific techniques of analysis are now being used on archaeological objects with excellent results. Among these are: (*a*) petrographic analysis, in which thin sections or slices of potsherds are studied under a petrographic microscope to determine the minerals present in the ware; (*b*) neutron activation, in which sherds are placed in a nuclear reactor and the chemical composition of the clay is determined from the induced radioactivity; (*c*) qualitative and quantitative chemical analyses, in which the identity and proportions of the constituents of clays and metals are determined; (*d*) spectrographic analysis, in which the compositions of metals and, to a lesser degree, clays are determined by measuring the spectrum of the material when burned in an arc. Each of these methods has its advantages and disadvantages; often two or more must be used on objects to obtain the desired information.

Taken as a group, they make two important contributions to archaeology: (*a*) They provide a means of describing objects exactly and objectively. In the case of pottery, the minerals native to the clay and those used as temper can be determined accurately; as for metal objects, the composition of ancient alloys can be described precisely. (*b*) They are also used to distinguish foreign from locally made objects and thus supply data on ancient trade. A good example of this is pottery. In the manufacture of ancient pottery, local clay and temper were almost always used. The composition of clays and the kinds of temper vary widely in different parts of the world, and even in the same region in different periods. Thus the discovery of pottery of similar shapes and finishes and made of similar clay and temper points to a common origin and date, regardless of where they were found. Until recently, however, pottery could be identified only by form and finish, both of which were successfully imitated by skilled ancient potters. For this reason it was often difficult to distinguish between an import and a good imitation. Now, with these analyses, it is usually possible to determine whether they were made locally or abroad.

The natural sciences also aid archaeology in fixing dates more precisely. A method of measuring time known as radiocarbon dating has recently been developed by nuclear physics. Since the intake of carbon^{14} by living things stops with death and thereafter disintegrates at a fixed rate, reasonably accurate measurements can be made of the amount remaining in organic matter, with the result that the approximate age of the material can be determined. For the late periods and for regions where chronology is already fixed by other means, it is of little value; but for the early periods of every ancient culture and in regions which have only recently been opened to archaeology, it is of the greatest value for confirming and correcting dates.

In sites which have not been excavated stratigraphically—and this includes most of the older excavations as well as a number of recent ones—the layers of debris cannot be dated precisely, because they were not systematically removed one by one, and their objects were hopelessly mixed. In such instances, the objects of each building or locus are dated by comparing them with objects from strata and loci of known date in other sites. At best, this method is not so accurate as dating layers which have been carefully peeled off and objects which have been kept from contamination with earlier or later material. But it is the only technique that can be used with poorly excavated sites, and it does permit us to use the results of these excavations, though of course with caution.

D. *CONTRIBUTIONS OF ARCHAEOLOGY TO THE BIBLE.* No one can understand the Bible without a knowledge of biblical history and culture, and no one can claim a knowledge of biblical history and culture without an understanding of the contributions of archaeology. Biblical events have been illustrated, obscure words defined, ideas explained, and chronology refined, by archaeological finds. To say that our knowledge of the Bible has been revolutionized by these discoveries is almost to understate the facts. The following discussion is limited to the major areas in which archaeology has contributed to our understanding of the Bible (for detailed discussions, *see bibliography*).

One of the most important contributions of archaeology is the recovery of a number of ancient Near Eastern languages. Even though many of these were discovered by chance or by non-archaeological exploration, and were deciphered by linguists rather than archaeologists, they can be classed as archaeological finds because the quantity of texts necessary

to make them intelligible was brought to light by means of excavation. Most of these languages are Semitic, including Akkadian (Assyrian and Babylonian), Ugaritic (Canaanite), and the pre-Islamic languages of South Arabia. Several non-Semitic languages, particularly Egyptian, Sumerian, and Hittite, have also been recovered by archaeology. A staggering volume of documents written in these and other previously known languages has been discovered. These documents range in time from man's earliest writings—in the Chalcolithic period—through the biblical and postbiblical periods, and include all literary genre: epics, historical narratives, annals of kings, law, poetry, wisdom literature, rituals, theological works, business documents, and correspondence.

The continuing study of ancient Near Eastern languages and literatures has made the Bible more intelligible. Many words and phrases in Hebrew which could not be accurately translated—because their meanings were unknown—can now be understood perfectly, because of the discovery of identical words and phrases in these texts. E.g., the word אד (Gen. 2:6), which is translated "mist" (RSV-KJV), actually means "river" in Sumerian and "river (god)" in Akkadian; the meaning "river" admirably fits this context.

In addition to rendering the biblical text more lucid, this literature illustrates and explains many laws, social customs, religious practices, and theological ideas of the Bible whose meanings are obscure. Many of the same ideas and customs are found in these documents, but in a fuller setting, which clarifies their significance in biblical times. E.g., the curious arrangement whereby a servant, Eliezer, was to become Abram's heir (Gen. 15:2-4) is explained in the NUZI tablets, where the same custom appears as a normal procedure among childless couples. The couple adopted a son and designated him heir to their estate; in return, the adopted son promised to provide both security and a fitting burial for them. Such agreements were nullified, or at least modified, if a son was born to the couple later. (For other examples, *see also* COVENANT; TERAPHIM; DEAD SEA SCROLLS.)

This literature, together with other archaeological discoveries, adds much to our knowledge of the history of Palestine. While the Bible is a veritable treasury of historical information, its whole approach to history is religiously rather than politically or economically oriented. Moreover, much of its historical material consists of summaries or sketches with references to more detailed sources which have not survived—e.g., the "book of Jashar," the "book of the chronicles of the Kings of Judah," and the "book of the chronicles of the Kings of Israel." For these reasons, important persons and periods are frequently given only brief notice. Here other literature and excavation fill in many details missing from the historical accounts of the Bible. E.g., I Kings 14:25-26; II Chr. 12:2-9 describe the Judean raid by the Egyptian king SHISHAK during the reign of Rehoboam in Judah. These brief accounts are supplemented by an inscription at Karnak, commemorating Shishak's victory, which preserves the names of captured towns in both Judah and Israel, showing that it was a more far-reaching campaign than the brief biblical account suggests. Furthermore, excavations at a number of Palestinian sites, including Tell Beit Mirsim (Debir), Tell er-Rumeileh (Beth-shemesh), and Megiddo, have uncovered evidence of destruction at precisely this time. Similarly, the reign of Ahab in Israel receives a great deal of attention in the Bible (I Kings 16:29–22:40), but most of the biblical account is devoted to the Elijah narratives and to Ahab's wars with Ben-hadad of Syria. Yet Ahab's alliance with Ben-hadad of Syria and Irhuleni of Hamath, and their war against Shalmaneser III of Assyria, are not mentioned at all in the Bible; the account of this important struggle is found in an Assyrian text, the Monolith-Inscription from Kurkh (*see* AHAB). Excavations at Samaria (*see* SAMARIA [TOWN]) have also furnished much new information about Israelite material culture during Ahab's reign.

Archaeology has also confirmed many details of biblical history. Various biblical events have been considered unauthentic by scholars, not because they contradicted known facts, but because they seemed implausible or did not fit preconceived patterns of historical or literary development. E.g., the historicity of the Exile has been questioned in some circles, but these doubts have vanished in the face of evidence discovered through excavation. Every Judean site excavated to date, which was inhabited at the end of the seventh century B.C., has been found to have been destroyed in this period and either reoccupied only after a gap of at least several decades or never inhabited again. The dearth of occupied sites in Judah during most of the sixth century B.C. indicates a depopulation of the country, which agrees perfectly with the biblical account of the Exile. Similarly the description of the power, fame, and wealth of Solomon (I Kings 2:12–11:43; II Chr. 1–9) has been considered legendary and grossly exaggerated by some scholars. But excavations at Megiddo, Ezion-geber, and virtually every site occupied in this period have illustrated aspects of an elaborate state organization, a high material culture, and a thriving economy in Israel; it is now clear that during Solomon's reign, Israel comprised the greatest and the most prosperous land empire in the ancient Near East and indeed enjoyed a Golden Age. In this instance, archaeology has shown that the Bible actually understates the facts. These examples can be multiplied to cover every period of Israelite history. *See* specific sites, such as MEGIDDO; SAMARIA; LACHISH; DEBIR.

It would be misleading to conclude that archaeology confirms all details of biblical history, because it does not. Most discrepancies are small and can be readily explained in one of several ways, but some are more serious and cannot be accounted for easily. In these cases, scholars do not arbitrarily hold that the biblical authors are wrong, although they may be. In view of the increasing confirmation of the Bible in recent years, they now approach major discrepancies with more caution than was previously used, and usually reserve final judgment until more evidence is forthcoming.

One of the most valuable contributions of archaeology is the feeling of intimacy with the past that it brings to biblical studies. Almost every biblical stu-

dent or scholar experiences a barrier of time and culture when he seeks to project himself into biblical times. Much of this barrier is broken by archaeology, and the student acquainted with the results of excavations finds that ancient man and ancient times become real to a degree that would be unattainable if he depended solely on the written word. All aspects of material culture brought to light by excavation contribute to this intimacy. While the field archaeologist is inevitably caught up in the life and times of ancient man during his excavation and his study of objects, the student can also share this intimacy—though to a lesser degree—if he studies excavation reports and becomes acquainted with objects through visits to museums.

These are the most important contributions made by archaeology to the Bible. Through excavation the world of the Bible is being resurrected, and as a result the Bible can be seen in its true background. Archaeology reveals both the similarities and the differences between the culture of Israel and the cultures of Israel's neighbors; it permits scholars to determine the common ground, which relates the Bible to other ancient literatures, and the areas of uniqueness, which set it apart from them. Archaeology does not and cannot prove the Bible. The Bible deals with man's relationship to God, and is, therefore, beyond the proof of archaeology or any other discipline. While archaeology confirms many details of history and lays bare the environment of the Bible, the history and environment with which it deals is human, not divine. It can neither confirm theology nor open the realm of faith.

E. *EXPLORATION AND EXCAVATION IN PALESTINE.* The history of exploration and excavation in Palestine is a long record of the labor of many individuals and organizations. A chronological summary of their work follows. In the section on excavation, only the more important sites dating between Chalcolithic and NT times are included. (For more detailed descriptions, *see* site entries and *bibliography*.) The modern place name of the site is given first, followed by the biblical name in parentheses, when known.

1. Exploration. Modern surface exploration of Palestine began in 1838 when Edward Robinson and Eli Smith traveled through the country studying topography and identifying many biblical places. From 1872 to 1878 a thorough survey of W Palestine was made by C. R. Conder and H. H. Kitchener under the auspices of the Palestine Exploration Fund. Beginning in 1884, G. Schumacher also undertook a systematic surface exploration of Hauran and N Transjordan. After a lapse of many years, exploration was resumed in 1933, when N. Glueck began his great archaeological survey of Transjordan from the Aqabah to Syria. This survey is especially significant because Glueck not only located hundreds of sites, but also determined their periods of occupation through the study of surface sherds. Since 1952, Glueck has been engaged in a similar systematic exploration of the Negeb. Important contributions to the identification of specific sites have also been made by a host of archaeologists, historians, and biblical scholars, including in particular C. Clermont-Ganneau, L. H. Vincent, W. F. Albright, G. Dalman, A. Alt, and F.-M. Abel.

2. Excavation to World War I. Scientific excavation in Palestine traces its origin to W. M. F. Petrie, who dug the mound of Tell el-Hesi (Eglon?) in 1890. There had been earlier excavations, notably F. de Saulcy's clearance of the "Tombs of the Kings" and C. Warren's work at Jerusalem, but results were meager and largely meaningless. Petrie's great contribution was the recognition of stratigraphy in Palestinian mounds and the discovery that common pottery undergoes typological changes which can be correlated with stratification. F. J. Bliss continued the work at Tell el-Hesi, and later collaborated with A. C. Dickie in excavating in Jerusalem (1894-97), and with R. A. S. Macalister (1898) in digging soundings at Tell ej-Judeideh (Moresheth-gath), Tell Sandahannah (Mareshah, Marisa), Tell es-Safi (Libnah), and Tell Zakariyeh (Azekah). Between 1902 and 1909 Macalister excavated Tell Jezer (Gezer). Meanwhile, a number of sites were excavated by German and Austrian scholars: Tell Ta'annak (Taanach) by E. Sellin from 1901 to 1904, Tell el-Mutesellim (Megiddo) by Schumacher from 1903 to 1905, and Tell es-Sultan (OT Jericho) by Sellin and C. Watzinger from 1907 to 1909. The first American excavations in Palestine were undertaken at Sebastiyeh (Samaria) by G. A. Reisner between 1908 and 1910. Reisner's great contribution was the development of good archaeological technique—i.e., careful analysis of stratigraphy, accurate surveying, thorough architectural study, and comprehensive recording. From 1911 to 1912, D. Mackenzie dug at Tell er-Rumeileh (Beth-shemesh); and in 1913 Sellin began the clearance of Balatah (Shechem), but was forced to postpone his work because of World War I.

This was the pioneering period in Palestinian archaeology. There were flashes of brilliance, notably Petrie's initial discoveries at Tell el-Hesi, and Reisner's introduction of new excavation methods at Samaria; unhappily the publication of the latter did not appear until 1924, and thus made no impression on pre-World War I archaeology. But as a whole, it was a disappointing and disillusioning period. Excavation technique was poor, and serious blunders were made in the interpretation of finds. By the outbreak of World War I, neither a systematic study of chronology nor a synthesis of finds could be made, so that chaos prevailed in the field.

3. Excavation between World Wars I and II. With the establishment of the British mandate in 1920, and the creation of a Department of Antiquities, excavation resumed in force. From 1920 to 1922 soundings were made at 'Asqalan (Ashkelon, Ascalon) by J. Garstang with W. J. Phythian-Adams. Beginning in 1921 and continuing until 1933, the great site Tell el-Husn (Beth-shan) was successively excavated by C. S. Fisher, A. Rowe, and G. M. FitzGerald. In 1922-23, Albright dug at Tell el-Ful (Gibeah of Saul). From 1923 to 1928 a series of campaigns at Ophel (City of David) in Jerusalem was directed by Macalister, J. G. Duncan, and J. W. Crowfoot. The largest excavation ever undertaken in Palestine was begun in 1925 and continued until 1939 at Tell el-Mutesellim (Megiddo), and was successively directed by Fisher, P. L. O. Guy, and G. Loud. From 1925 to 1934 G. Horsfield, Crowfoot, Fisher, and C. C. McCown undertook the clearance of Jerash (Gerasa). In 1926 H. Kjaer and

A. Schmidt began a series of limited excavations at Tell Seilun (Shiloh); and Sellin, followed by H. Welter and later by H. Steckeweh, resumed the excavation of Balatah (Shechem), which was carried on until 1934. Beginning also in 1926 and continuing until 1935, W. F. Badè excavated Tell en-Nasbeh, and Albright also undertook a series of campaigns at Tell Beit Mirsim (Kirjath-sepher, Debir) which lasted until 1932. In 1926-27 Petrie excavated at Tell Jemmeh (unidentified, but probably not Gerar as Petrie believed), and from 1928 to 1930 at Tell el-Far'ah (probably Sharuhen). E. Grant, assisted by Fisher, began a series of campaigns at Tell er-Rumeileh (Beth-shemesh) in 1928 which continued until 1933. From 1929 to 1936 Garstang excavated at Tell es-Sultan (OT Jericho), previously dug by the Germans before World War I. Father Mallon began clearance of the important Chalcolithic site Teleilat el-Ghassul in 1929; after his death, work was carried on by Fathers Koeppel, Mahan, and Murphey until 1938.* That year Horsfield, Agnes Conway, and Margaret Murray inaugurated a series of campaigns at the Nabatean capital, Petra. The Conway high place at this site was excavated by Albright in 1934. Fig. ART 62.

Upon completing his work at Tell el-Far'ah in 1930, Petrie conducted excavations at Tell el-'Ajjul (Beth-eglaim) until 1934. In 1931 O. R. Sellers and Albright dug at et-Tubeiqah (Beth-zur), and from 1931 to 1935 Crowfoot, Kathleen Kenyon, and E. L. Sukenik excavated Sebastiyeh (Samaria), and successfully solved many problems left by Reisner's earlier work. R. W. Hamilton excavated the small mound Tell Abu Hawam (Salmonah?) in 1932-33. Clearance was begun at the great site Tell ed-Duweir (Lachish) by J. L. Starkey in 1932 and was continued through a series of campaigns until his death in 1938. In 1933-34 Judith Marquet-Krause excavated at et-Tell (Ai), and in 1934 Albright and J. L. Kelso began work at the neighboring site, Beitin (Bethel). Minor excavations were also carried out by Petrie at Tell ez-Zuweyid (Anthedon) and at Petra in 1934-37. In 1937 Glueck cleared a Nabatean sanctuary at Khirbet et-Tannur, and from 1937 to 1940 he conducted several campaigns at Tell el-Kheleifeh (Ezion-geber), the site of a copper refinery going back to the time of Solomon.

The confusion that prevailed in Palestinian archaeology up to World War I was rapidly dispelled during these two decades. Although the technique of excavation left much to be desired in many instances, standards were generally much higher than those of pre-World War I excavations. Expeditions were better organized and more adequately staffed. Accurate surveying and careful recording of finds became the rule. The interpretation of the mass of material brought to light also proceeded rapidly. Pottery chronology was firmly established, especially by Albright's work at Tell el-Ful and Tell Beit Mirsim, and both architectural analysis and the study of other objects were immeasurably advanced. These developments vastly increased our knowledge of ancient Palestine, which in turn enlarged our understanding of the Bible. Great strides were also made in comparative archaeology, with the result that a clearer picture of the position and role of Palestine in the ancient Near East was formed.

4. Excavation since World War II. World War II and the Arab-Israeli conflict that followed two years later sharply curtailed excavation. But this period was not a total loss, since interpretation and synthesis of the material recovered between the world wars continued. Since 1944 work has been carried on at Khirbet Kerak (Beth-yerah) by a number of excavators, including B. Mazar (Maisler), M. Stekelis, M. Avi-Yonah, Guy, P. Bar-Adon, and Y. Yadin. In 1946 Père R. de Vaux began the excavation of Tell el-Far'ah (Tirzah) which continues, though with numerous interruptions.

With the end of Arab-Israeli hostilities and the partitioning of Palestine, excavation was resumed in both Israel and Jordan. Following the appearance of the first lot of Dead Sea Scrolls in 1948, clearance of numerous caves, and excavations at Khirbet Qumran and in Wadi Murabba'at have been carried on with few interruptions by De Vaux, G. L. Harding, Yusuf Sa'ad, Sellers, W. L. Reed, and a host of others. From 1948 to 1950 Mazar conducted important excavations at Tell Qasileh. In 1950 work was begun at Caesarea by Avi-Yonah, and at Jaffa by J. Bowman and B. S. J. Isserlin. During 1950-51 Tulul Abu el-'Alayiq (NT Jericho) was excavated by Kelso, A. H. Detweiler, F. V. Winnett, and J. B. Pritchard. A series of campaigns was also begun at Dhiban (Dibon) in 1951 under the successive direction of Winnett, Reed, A. D. Tushingham, and W. H. Morton. I. Ben-Dor and M. Dothan conducted small excavations at 'Affuleh (Epher) in 1951, and at Khirbet el-Bitar from 1952 to 1954. Work was resumed at Tell es-Sultan (OT Jericho) by Kathleen Kenyon, who inaugurated a series of campaigns in 1952 which have made numerous contributions to Palestinian prehistory and have revolutionized our knowledge of the history of the site. That same year J. Perrot undertook the excavation of Tell Abu Matar, and in 1953 J. P. Free began a series of campaigns at Tell Dotha (Dothan). During 1954 small excavations were started at Beitin (Bethel) by Kelso, at Ramath Rahel (Beth ha-Kerem?) by Y. Aharoni, at Nahariyeh by Dothan, and at Bir es-Safadi by J. Perrot and H. de Contenson. In 1955 Yadin undertook the excavation of the large and important site Tell el-Qedah (Hazor), and Avi-Yonah, N. Avigad, Aharoni, I. Dunayevsky, and S. Gutman began clearance of Herod's palace at Masada. During 1956 excavations at Balatah (Shechem) were resumed by G. E. Wright, and work was begun at el-Jib (Gibeon) by Pritchard, and at Tell Sheikh el-Areini (Gath) by S. Yeivin.

Since many of these excavations are still in progress, it would be premature to attempt a summary of developments and results at this time. Nevertheless, preliminary reports and the final publications which have already appeared clearly indicate that improvements are being made in excavation technique, recording, and interpretation. It is safe to predict that the rapidly accumulating mass of archaeological data will vastly enrich our knowledge of ancient Palestine and of biblical life and times.

ARCHANGEL ärk ān'jəl. *See* ANGEL.

ARCHELAUS är'kə lā'əs ['Αρχέλαος]. Son of HEROD the Great and Malthace. On the death of Herod in 4 B.C., a codicil of his will which distributed his territory named Herod Antipas and Philip as tetrarchs, but Archelaus as the principal successor.

Archelaus did not try to ascend the throne immediately. Conscious of the hostility of the Jews to his family, he tried through kindliness and forbearance to win their approval; moreover, he wanted his right to the throne to be confirmed by Rome.

Despite his efforts to win over the Jews, they showed such unbroken animosity and rebellion that force of arms was needed to put down disorders, within the first months after his father's death. The revolts were addressed not so much against Archelaus as against his deceased father, Herod; and while Archelaus initially practiced some restraint, a notable bloodshed took place at the temple on Passover, when Archelaus felt it necessary to loose his army on the milling throngs.

As to the crown, Archelaus encountered rather quickly the intrigues which characterized the Herodian dynasty. His brother Herod Antipas was his rival for the throne, able to buttress his claim on the basis of Herod's will, which had named Antipas king; Archelaus' claim rested on a codicil added to the will (Jos. War I.xxxii.7; xxxiii.7). Both brothers sailed to Rome to lay their claims before Augustus. The mother, Malthace, accompanied Archelaus to Rome, but she was won over to the party of Antipas.

Before the case could be decided, Malthace died. Meanwhile, word came from Judea of rebellious disorders there which were put down by Roman might, so the issue was unsettled. Then a third deputation appeared, petitioning Augustus to abstain from appointing any of the Herodian family as king, and instead to allow the Jews to live by their own laws. (Antipas goes unmentioned at this stage in Josephus' account. Possibly the death of the mother ended his effort; or possibly the opposition to the family by the Jewish deputation made the brother close ranks, for the third brother, Philip, is mentioned as present in Rome to support Archelaus.)

When Augustus heard the case, his decision was to award half of Herod's land (principally Judea) to Archelaus, and the other half was divided between Philip and Antipas. The title accorded to Archelaus was TETRARCH, but it was promised to him that if he governed virtuously, he would be given the title of king (Antiq. XVII.viii.3–xi.4; War II.vi.3). *See* HEROD (FAMILY).

When Archelaus returned to Judea, he interfered in the high priesthood, replacing a certain Joezer with Joezer's brother Eleazar. He further affronted Judean sensibilities by the circumstances of his second marriage. Archelaus, meeting and loving a certain Glaphyra, divorced his wife Mariamne in order to marry her. He was her third husband. Her first husband had been Archelaus' half brother Alexander; on being widowed, she had then married a Libyan king, Juba. Widowed again, she had returned to her royal father's home in Cappadocia. Josephus states (Antiq. XVII.xiii.1) that in marrying his brother's widow, Archelaus "transgressed the law of our fathers" (probably on the basis of Lev. 18:16; 20:21).

Eleazar, whom he had appointed as high priest, he now removed. He appointed Jesus son of Sie.

Josephus abstains from supplying details of the oppression by Archelaus of Samaritans and Jews; he summarizes that the brutal treatment of them prompted them to send deputations to Caesar to denounce Archelaus. In A.D. 6, Archelaus was banished to Gaul, to a city now known as Vienne. His territory was added to Syria; a PROCURATOR, Coponius, was sent to administer Judea.

Archelaus is mentioned only once in the NT (Matt. 2:22).

ARCHER [מורה בקשת, מורה, יורה, דרך קשת, בעל חצים, רמה קשת, רב, קשת(?), מחצץ; KJV מחצצים (*plural;* RSV MUSICIANS)]. A soldier equipped with bow and arrows for offensive warfare.

A noun of vocation for "archer" is not certainly attested in Hebrew, since the word קשת (*qashshāth*), occurring only at Gen. 21:20, is uncertain in meaning (ויהי רבה קשת). Since רב is attested in Job 16:13; Jer. 50:29 in the technical sense of "archer," it may be necessary to divide the text differently: ויהי רב הקשת, "and he became an archer among the bowmen"—i.e., an outstanding archer (RSV "and [he] became an expert with the bow").

מחצצים is a *hapax legomenon* in Judg. 5:11. The KJV "archers" constitutes an interpretation of the word as derived from a denominative חצץ, from חץ, "arrow," which is unlikely. The LXX interprets the word (Codex B) as ἀνα κρουομένων, "those starting up," to which the Minuscule K adds ἐν ὀργανοις; this is also reflected in the OL reading *percutientes organa*. Thus the RSV may be right in its rendering "musicians."

It is not certain whether the archer corps was a well-developed unit in the Hebrew ARMY, as it was among the Assyrians. Saul was wounded by Philistine archers on Mount Gilboa (I Sam. 31:3; I Chr. 10:3). Ammonite archers slew Uriah the Hittite (II Sam. 11:24). According to II Chr. 35:23, King Josiah

48. Assyrian soldiers attacking with siege-engine supported by archers, time of Tiglath-pileser III (745-727 B.C.)

was shot by the archers of the Egyptians. Jeremiah refers to the archers of Babylon and her enemies (50:29; 51:3). The fewness of the archers of Kedar indicates the loss of Kedar's glory (Isa. 21:17). The tribe Joseph is represented as an invincible archer attacked by archers (Gen. 39:23). In a most difficult passage in Proverbs (26:10) an archer (רב; KJV "the great God") who wounds indiscriminately is an analogy for one who hires a passing fool or drunkard. Job pictures the Lord attacking him, surrounding him with his archers (Job 16:13).

For the archer's weapons, *see* BOW AND ARROW; WAR, METHODS OF; WEAPONS AND IMPLEMENTS OF WAR. Fig. ARC 48.

ARCHEVITES är'kə vīts [Aram. ארכויא, *Kethibh* ארכוי; Akkad. *Uruk-a-a, A-ra-ka-a-a*]. Inhabitants of the city of ERECH (Uruk) in Babylonia (Ezra 4:9). With Persians, Babylonians, Elamites, and others, men from Erech were settled in the cities of Samaria and other parts of the province Beyond the River by Ashurbanipal, called OSNAPPAR in Ezra 4:10.

H. G. MAY

ARCHI. KJV form of ARCHITE in Josh. 16:2.

ARCHIPPUS är kĭp'əs [Αρχίππος]. One of the persons to whom Paul addressed the letter entitled in the NT "To Philemon." He is designated there as Paul's fellow soldier (vs. 2). He is also mentioned in the Letter to the Colossians, where the Colossian Christians are commanded to "say to Archippus, 'See that you fulfil the ministry which you have received in the Lord' " (4:17). On the interpretation of the word translated "ministry" hangs an important question in NT criticism.

It has often been held that Archippus was the son of PHILEMON and APPHIA. But there is no evidence for this assumption that a family was being addressed in the Letter to Philemon. A hypothesis advanced by John Knox suggests that the ministry (διακονία) which Archippus is being urged to fulfill is the freeing of the slave Onesimus, of whom he is the owner, not merely to be reinstated in his household, but to become an evangelist in the work of the Christian church.

This view has much to commend it. If Philemon lived at Laodicea, the largest and most important town in the Lycus Valley, he might well have been a sort of presiding elder for the churches in that region, and this fact would explain why the letter was addressed to him as well as to Archippus. The letter would have gone first to him and then to Colossae, where Archippus lived, and where Onesimus was "one of" the Christian group (Col. 4:9). Such a plan on Paul's part that the letter should go first to Laodicea would explain the otherwise strange wording of his request in Col. 4:16: "And when this letter has been read among you, have it read also in the church of the Laodiceans; and see that you read also the letter from Laodicea." This view is also helpful in accounting for the strange mixture of singular and plural pronouns which the letter uses toward the persons addressed (vss. 3, 5, 8, etc.).

If this ingenious reconstruction is accepted of the situation and relationships that the two letters of Colossians and Philemon presuppose, and we assume that Archippus is the chief recipient of the letter now entitled "To Philemon," then he is the owner of the slave. It is he who must fulfil the most urgent request made in the letter, that the slave be freed for evangelistic work, and it is he who needs the support of the group in Colossae in bringing this good result to pass. The letter entitled "To Philemon" was intended to go to him by way of Laodicea, and it may indeed be the letter referred to in Col. 4:16 as the "letter from Laodicea." The naming of the letter "To Philemon," when the collection of Paul's letters was made up, can be accounted for on the ground that he is named first among the recipients of the letter (Philem. 1:1). This order would be a natural

one if Philemon were a sort of overseer of the churches in the region.

Bibliography. For J. Knox's views on Archippus, see *Philemon Among the Letters of Paul* (rev. ed., 1959).

ARCHISYNAGOGOS är'kĭ sĭn'ə gŏg'əs. *See* RULER OF THE SYNAGOGUE.

ARCHITE är'kīt [ארכי]; KJV ARCHI —kī in Josh. 16:2. A clan of Benjamin, established in the territory SW of Bethel. Its most noteworthy member was HUSHAI, the counselor of David and later of Absalom (II Sam. 15:32; 16:16; 17:5, 14; I Chr. 27:33). According to the description of the boundary between Ephraim and Benjamin (Josh. 16:2, 5), with due correction of the corruption into which the Hebrew text has fallen, the border of the territory of the clan was at ATAROTH-ADDAR. S. COHEN

ARCHITECTURE. The art of building; herein confined to ancient Palestine from the Neolithic Age until the first century A.D. Modern knowledge of the subject is restricted both by the inattention of ancient writers to matters of architectural interest and by the scanty survival of the buildings themselves, most of which time and succeeding generations of builders have utterly destroyed. Of those buildings which remain among the ruined cities of Canaan and early Israel, we are lucky if one or two courses of masonry survive above their foundations.

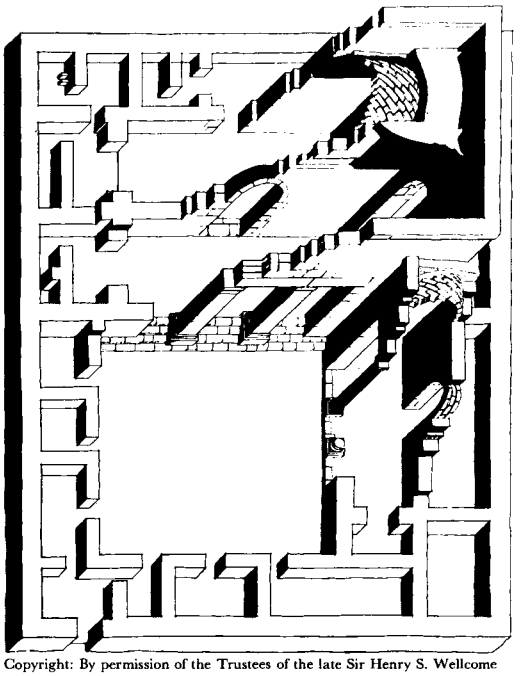
1. General characteristics
2. Materials
3. Construction and plans
4. Stylistic trends
Bibliography

1. General characteristics. Throughout most of the period men built their own houses; and the towns and villages in which they lived were the creation of their own unskilled communal labor. The vast majority of buildings that have survived, consequently, including town walls, gates, and temples, are "homemade" in character, dependent on the native, but unprofessional, skill in masonry of the common people. Only in periods of exceptional prosperity or political expansion do we find, in Israel and Judah, the traces of ambitious architecture, official, religious, or sepulchral in character, which display the hand of professional craftsmen and the sophistication of foreign styles or materials.

2. Materials. Native building in Palestine has always depended on the materials provided by the soil —limestone of varying qualities, and a few other rocks; wood; reeds; and mud. When rarely we can recognize the work of professionally skilled masons, it is in the fine shaping and carving of these materials, and in the use of exceptionally big structural members—large tree trunks for increased roof spans, and accurately dressed masonry, sometimes of great size, for aesthetic effect or special strength. Such marks of professional skill can hardly be found before the Late Bronze Age (1600-1200 B.C.), when true ashlar masonry is occasionally incorporated in late Canaanite buildings, like a city gate at Megiddo dated by its excavators between 1479 and 1350 B.C. Until that time the finest masonry structures were composed of stones shaped, indeed, and fitting together, but without squared corners or true plane surfaces.

Throughout the period mud was used, either raw as mortar for solidifying or rendering rubble walls, or dried in the sun as bricks. The first bricks were modeled singly by hand. They were oval or rounded in form and varied in shape and size as the centuries passed. Examples showing the varying forms have been recorded in early houses from Jericho, Beth-shan, Gezer, and Teleilat Ghassul. In the Early Bronze Age the manufacture of bricks was speeded up by the use of wooden molds, and this naturally brought in the square or rectangular forms that remained standard for all future ages. It also involved devising some way of preventing the glutinous clay from sticking to the molds; and for this the addition of chopped straw was found to be effective. It was the labor of having to fetch this straw, added to that of puddling the clay, which seemed so grievous to the Israelite laborers in Egypt (Exod. 5:7). *See* BRICK.

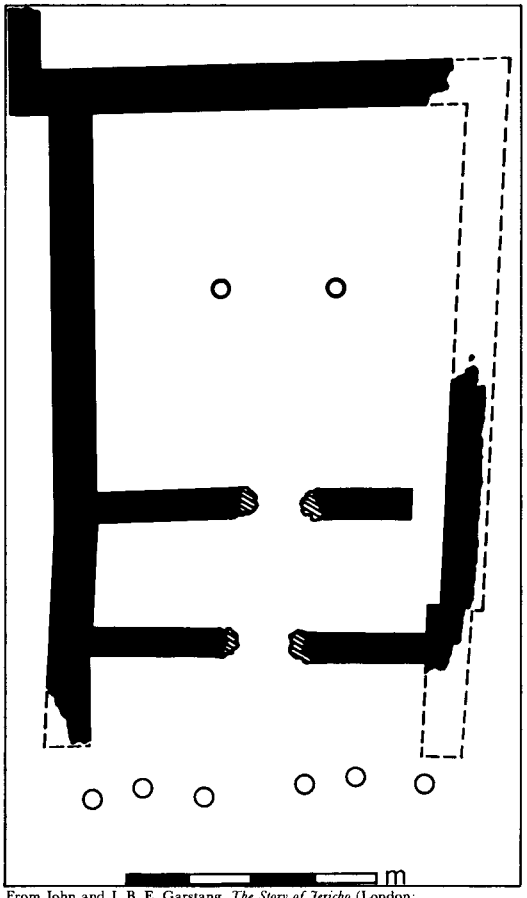
Archaeological technique cannot easily detect the use of reeds in building; but we can be sure that people living in the low-lying, marshy ground that occurs in the coastal plain, and round the upper reaches of the Jordan, built their houses, at least in part, of what was the easiest material at hand. And indeed, in the earliest Neolithic strata at Jericho there are traces of round or apsidal houses in which reeds were combined with ridge-backed bricks to produce, as we may infer, some kind of boothlike or possibly beehive dwelling (*see* JERICHO § 2). Further, there have been found, in Chalcolithic burials on the Plain of Sharon, clay ossuaries of rectangular form with ridged tops, which are most naturally interpreted as model houses copying a prototype of which the roof was formed by reeds drawn together at the top in a gable (*see* OSSUARIES; Fig. OSS 14). To this day, marsh reeds bound together and packed with mud form the most efficient and economical roofing material for houses in the Jordan Valley.



In the earliest town settlement of which we have knowledge, Neolithic Jericho, not only mud and reed, but also stone was used for building. Not only were the foundations of brick-built houses sometimes composed of stone, but as early as the seventh, or even the eighth, millennium, the town was enclosed in a protective rampart of boulders, some of them of enormous size, forming a compact revetment which confronted a rock-cut fosse and retained the higher ground within it. The stones were not dressed at all, but selected for shape and regularly arranged. The face of the wall showed the slight batter demanded for stability; and traces of mud or clay adhering to parts of the surface suggested that the whole structure had once been rendered in plaster.

Ancient as it is, the Neolithic wall of Jericho may truly be called the prototype of all succeeding native Palestinian stone building; for the essence of this has consisted at all times in the skilful selection and fitting together of large or small, but crude or only roughly shaped, boulders. Even the most monumental works of the Middle and Late Bronze Age, when megalithic construction reached its height, like the city rampart and a gate to be seen at Shechem, or a

Bronze Age rampart at Jericho, represent basically no more than that. Whether in civic or in common domestic building, the technique and the art are one; and from the earliest times until the end of the period the native house was a thing of rubble walls, reinforced on occasion by long stones used as coins or orthostats, and sealed on both faces with mud mortar.



The perpetuation of this style of masonry for so many centuries makes the more notable an exceptional building of the Early Bronze Age which was found at Ai (et Tell), composed of stones roughly dressed to a uniform size and laid in regular courses suggestive of brickwork (Fig. TEM 21). This building occupied a prominent position in the citadel of the town, and had all the appearance of an official residence. There is some reason to think that the upper parts of the walls were built of brick. But whether its peculiar style of masonry, which is not matched by any other building of the period, was due to foreign influence inspired by a brick tradition, or simply to a local mason of exceptional talent, is a matter for speculation. In any case we may regard the "residence" at Ai as the earliest example of the more ambitious planning and construction which periodically distinguished individual Palestinian buildings from the common run of village architecture. *See* AI; TEMPLES.

3. Construction and plans. For any builder the crucial problem is not how to raise his walls but how to roof the area between them. Until *ca.* the fifth century B.C. the Jewish or Canaanite builder had no other means of roofing an area than by laying wooden beams or long stones across it, resting their ends on walls at either side. He could increase the spans attainable by erecting pillars or posts as intermediate supports; or rarely, as in certain Bronze Age tomb chambers found at Megiddo, by corbeling out the walls. But basically he remained limited, in the size of the rooms he could roof, by the length and strength of the timbers or stones at his disposal and his capacity to lift them. It is not until the Persian period that we meet, in the governor's residence at Lachish, the earliest extant vault (Fig. ARC 49), embodying in stone a device long known in Egypt and Mesopotamia, whereby small, manageable units by mere resistance to compression could be made to span a gap far greater than the longest of them. The stones in the vaults at Lachish were laid in diagonal lines, following a practice devised by builders in timberless countries for eliminating the necessity of wooden centering to support the vault in building.

49. Plans of a fifth-century Persian residence at Lachish

From John and J. B. E. Garstang, *The Story of Jericho* (London: Marshall, Morgan and Scott, 1948)

50. Plan of early Neolithic building at Jericho

Vault and arch remained rare in Palestine until the late first century B.C., when the grandiose foundations of Herod the Great, in Jerusalem, Caesarea, Sebaste, and other cities, gave general currency to Roman architectural forms. Until that time, we may say, the principle roofing material was timber, of which the mountains and foothills of Galilee, Samaria, and Judea would have afforded an ample supply. Such roofs would have been laid flat across the wall tops, with a gentle slope to run off rain water. The traces of them are rare; but some evidence

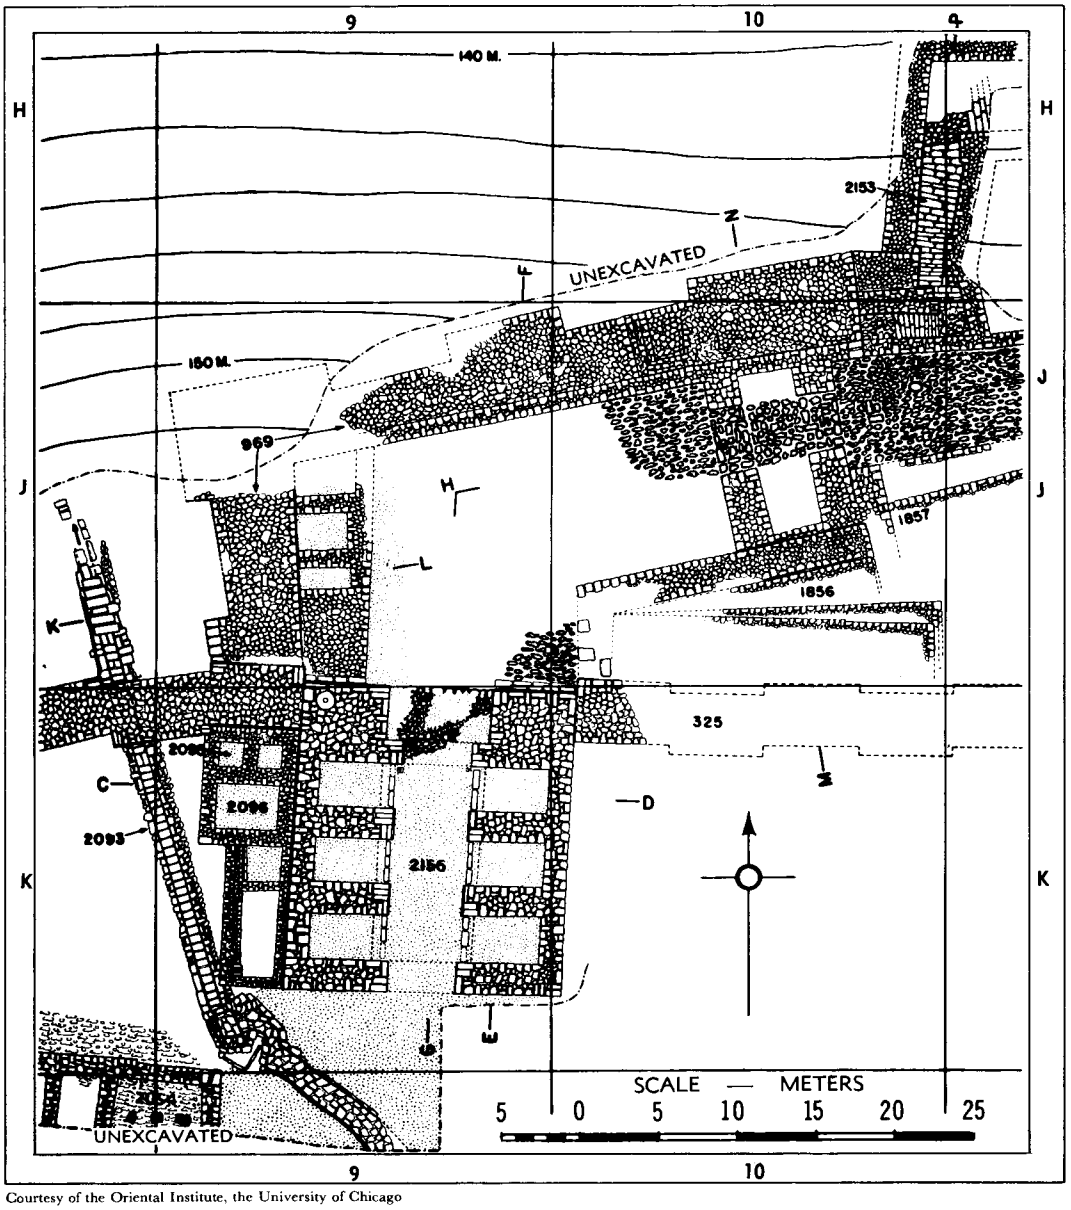
51. Isometric view of restored plan of three shrines and altar for burnt offerings (*ca.* 1900 B.C.), from Megiddo, Stratum XV

comes from the ruins of an early Bronze Age structure at Jericho, where the charred remains of parallel crossbeams were found fallen athwart a single longitudinal beam. These fairly heavy timbers may have been covered with a layer of flexible branches or reeds packed and surfaced with mud and chopped straw.

These simple materials, and the elementary methods of construction which they imply, gave rise, in the native architecture of Palestine, to no striking or complex building plans. The normal house throughout the Bronze and Iron Ages, as even today, was a loose agglomeration of small rectangular rooms, often grouped beside or around a little open-air yard, with a single door giving access from the outer world.

The only feature which survives to give an impression of architectural distinction to certain buildings in this long tradition of village masonry is the post or column. A building excavated in Neolithic Jericho consists of an inner and outer chamber, whose walls were composed of sun-dried bricks coated with a red-tinted and finely polished clay plaster; the roof, spanning a room seventeen feet wide, was supported by two wooden columns. Six more columns in front carried the roof forward to shelter an open porch (Fig. ARC 50). In the residence at Ai, again, four limestone plinths with neatly trimmed bearing surfaces had been aligned on the long axis of the main hall (*BA*, vol. VII, no. 4 [1944], fig. 3), to carry four wooden columns, of which the charred stump of one was still visible. The heavy columns implied by the size of these plinths, themselves resting on the rock, suggested the existence of an upper story; and the curious passage which surrounds the hall on three sides may perhaps be explained as the housing of a wooden staircase. Unfortunately all attempts to reconstruct this third-millennium two-storied house in elevation are doomed to remain pure guesswork.

The conjunction of wooden columns with rubble masonry is illustrated in three adjacent shrines discovered in Middle Bronze Age Megiddo (Fig. ARC 51). The columns stood on heavy limestone bases, and two of these on the long axis of each rectangular shrine betoken a roof supported by two transverse beams; while the remains of two similar supports between projecting side walls imply a colonnaded porch preceding each shrine. Columned porticoes similarly fronted some late Canaanite temples at Beth-shan.



"The cities are great and walled [RSV 'fortified'] up to heaven"—so the Hebrew spies are quoted as reporting; and nowhere did the native rough stone architecture of Palestine achieve a more monumental effect than in the gates and ramparts of the Bronze and Iron Age cities.

By the Middle Bronze Age most Palestinian cities were perched on considerable mounds of accumulation (*see* CITY § 2). Lines of defense would be chosen near the top of the slope, and the lower parts revetted with a compact glacis of rammed earth or marl, or of boulder masonry. This would be crowned with a vertical wall of smaller rubble set in mud mortar, or of bricks. In later centuries these great revetments were not maintained; but it was common to see the cities of the Iron Age defended by lines of vertical walling, which encircled the slopes at one or more levels, often strengthened by projecting towers or spaced offsets. A relief from Sennacherib's palace

53. The Solomonic gate plans at Megiddo: 325 = city wall; 969 = wall of outer court; 1856 = wall; 1857 = wall; 2054 = row of rooms; 2093 = drain; 2095, 2096 = rooms, later added; 2153 = stairway; 2156 = city gate

at Nineveh (Fig. ARC 52) represents the city of Lachish so protected, and the general accuracy of the picture has been remarkably confirmed by excavation.

The approach to these high embanked cities was necessarily up a sloping road, dangerously flanked by the walls, toward a gate at the top. At Lachish the axis of the gate was parallel to the line of the wall, the gate itself being set in the side of a great salient or bastion. It gave access to a sloping piazza in which the visitor must needs turn to the right to reach a second gateway piercing an inner wall. The entrance to Lachish was thus dog-legged in plan. It represents, on a large scale, one of two main types of protected entrance employed in the fortified cities of the Near East. A closely analogous dog-legged gateway led into the Solomonic city of Megiddo. Figs. ARC 53; MEG 36.

A somewhat similar entrance, set sideways to the main wall, was discovered in good preservation at MIZPAH, where the gate passed through a salient offset in the wall, protected by a massive external tower. Both the Megiddo and the Mizpah gates embodied a second defensive system: the former had three, the latter two, pairs of jambs, or projecting piers, within the length of the gate passage, which was thus in effect flanked by recesses or guard rooms on either side, from which intruders could be

harassed, or where citizens could transact their peaceful affairs. This was an ancient protective device found not only in Canaan but also throughout the ancient East. An earlier example from Megiddo, of the Middle Bronze Age, is illustrated by Fig. ARC 54; and a Late Bronze example of the dog-legged type by Fig. ARC 55.

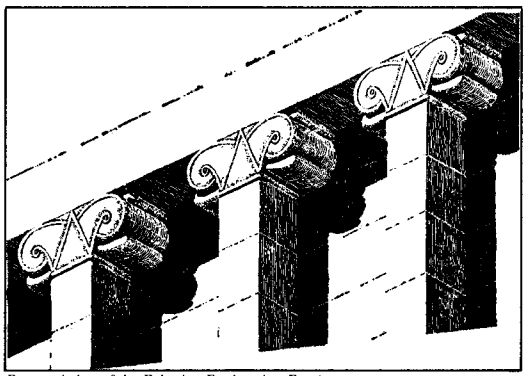
The appearance of architecturally refined buildings in Palestinian cities coincides with that of finely dressed masonry; and it is a reasonable inference that the builders who perfected the art of squaring stones were the same people who planned the monumental structures of which we have some knowledge from ruins and literary sources of the Iron Age. Of these the most famous was the temple at Jerusalem, built for King Solomon, and the earliest known masterpiece of a tradition of dressed stone and timber construction of which the great rebuilding under Herod the Great was the culminating achievement.

The book of Kings makes it clear that Phoenician masons and joiners, lent by King Hiram of Tyre *ca.* 950 B.C., were the effective creators of the temple. From I Kings 6, and from extant remains of nearly contemporary buildings at Megiddo and Samaria, we can recover a general idea of what the building was like. The temple was a structure of squared stones, with a timber roof, raised on a podium above the enclosure in which it stood. The floor, internal walls, and ceiling were lined throughout with boards of fir and cedar decorated with carvings in relief and heavily overlaid with gold leaf. The internal doors and their frames were of similarly carved wood —olive or fir. The ornament throughout represented stylized palm trees, floral motifs, and winged sphinxes (cherubim). *See* TEMPLE, JERUSALEM.

The only explicit statement of structural method refers, not to the temple proper, but to the enclosure wall, which was composed of three courses of cut stone surmounted by a row of cedar beams (I Kings 6:36). This is explained by the remains of the contemporary city gate at Megiddo, of which the substructure was found to consist of five courses of closely jointed limestone ashlar with a bond timber *ca.* four inches thick between the second and third. It is possible that the description of this enclosure wall refers only to the substructure, and that the upper part was of some lighter material, perhaps of brick; for so it was probably in the gate, and in some other buildings in a similar style at Megiddo. These buildings, of the Solomonic city, had brick and timber superstructures resting on foundations composed of narrow piers of finely dressed and bonded limestone ashlar set between lengths of rubble walling, with well-jointed and bonded masonry corners. At Samaria, built in the following century, the acropolis wall was composed of a varying number of ashlar courses whose level top suggests that there, too, the upper walls may have been of some different construction, possibly incorporating timber tie beams, of which the traces in some sections of the lower city wall still remain.

The jointed masonry at Samaria and Megiddo was laid with fine precision; whether the surface was chiseled smooth, or left with a rustic boss, the masons were careful to smooth meticulously as much of the front margins of each stone as was needed to ensure its perfect alignment and impenetrable jointing. We can safely ascribe to the temple at Jerusalem the same perfection of finish.

The Jerusalem temple consisted of two chambers preceded by a porch or vestibule, and was enclosed on three sides by a series of abutting rooms in three tiers (Figs. TEM 17; 31). The dimensions of the whole structure embodied simple arithmetical proportions,



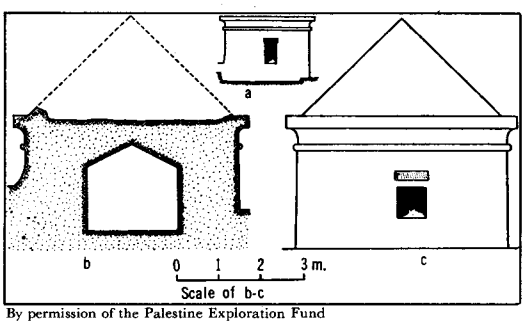
Courtesy of the Oriental Institute, the University of Chicago

55. Partial restoration of Middle Bronze Age gate at Megiddo, Stratum VIII

which demonstrate for the first time in Palestinian architecture the operation of a professional and probably hereditary craft. This we may confidently attribute to the masons of Phoenicia. For the more detailed architectural aspects of the Jerusalem temple, *see* TEMPLE, JERUSALEM. *See also* JACHIN AND BOAZ.

The temple was built to its full height in squared stone; and so also were the buildings of King Solomon's palace complex (I Kings 7:2-9; *see* HALL 2-4; PALACE). The account of these buildings, however, is far too brief to give any idea of their architecture beyond the facts that timber was freely used for roofs and columns, that windows and doors were aligned and opposed in calculated architectural relationships, and that columned porticoes were an important element in their design. Finally, we should probably be justified, by analogies to be observed throughout the Near East, in guessing that the plan of the palace incorporated a central courtyard, or a series of successive courtyards, giving access through columned porches to individual suites of rooms.

Of specifically architectural ornament at this period very little has survived; but both Samaria and Megiddo have yielded examples of a special form of pilaster capital decorated with volutes (Fig. ARC



By permission of the Palestine Exploration Fund

56. Pilaster capital with volutes at Samaria

56),* of which the design is derived from a palm-tree motif used in earlier Canaanite decorative art. Such capitals seem generally to have topped the jambs of doorways, or to have surmounted pilasters attached to walls. Fig. CAP 8.

4. Stylistic trends. The finely dressed and squared masonry, of which we may suppose the temple of Solomon to have been built, is nowhere better seen than in Samaria, a city built *ca.* 875 B.C. by Omri of Israel, a king allied, as Solomon was, with Tyre. It is significant that the fine masonry there is confined to buildings attributed to Omri or his son Ahab; all those erected after the Phoenician alliance had been broken were consistently inferior in quality. Of the palace occupied by the kings of Israel on the summit of the hill of Samaria nothing has been seen but the foundations of a few rooms, some lengths of its outer wall enclosing a courtyard of beaten earth, and some scraps of its ivory-encrusted furniture. It is impossible to guess the plan (*see* SAMARIA). Whenever foreign influences are withdrawn from Palestine, its architecture reverts to the "village" style described *above;* and so it was in Judah and Israel when Solomon, in the one, and Ahab, in the other, died. It is not until the destruction of both kingdoms, and the return of Judah from captivity under the Persians, that we meet the next actual building that displays the marks of deliberate architectural enterprise, beyond the limited capacity of village building. This is the fifth-century governor's residence at Lachish (Fig. ARC 49). The occurrence in this building of stone vaulting and arched doorways constructed by the characteristic method adopted by builders in brick, in timberless countries, points unmistakably to Persia or Mesopotamia as the source of its architecture. But the plan is a typical oriental house. It was enclosed by an outer wall pierced by one surviving external door. Its rooms were grouped round a central court, but not symmetrically. Beside single rooms the accommodation comprised two separate residential apartments, each approached up a few steps and through a colonnaded porch. In each apartment the main rooms were broader than deep, contrary to the temple at Jerusalem, but conforming to general practice elsewhere. The residence was built of rubble masonry, except for the columns supporting the porch of the W suite, which were made of cut-stone cylindrical drums and rested on cut-stone bases. These last consisted of a rounded pulvin superimposed on two diminishing square plinths. *See* LACHISH § 2.

Although the Lachish residence stands almost alone, among those recovered by excavation at this period, as a building of some distinction, we have some evidence in the rock-cut tombs of Jerusalem that foreign influences and architectural enterprise were never quite extinguished in the immediate vicinity of the Jewish royal court. When we read in Kings and Chronicles that this or that Jewish king was buried in his own sepulchre or in that of his fathers, we may reasonably imagine this to have been a rock-cut tomb distinguished by some sort of external monument. The appearance of such a monument may be inferred from one surviving example from the village of Silwan, of which Fig. ART 57 shows the present cross section and the restored elevation.

By permission of the Palestine Exploration Fund

57. The monolithic tomb at Silwan

The cemetery to which it belonged may be dated by inscriptions to the period of the Jewish Monarchy. The monument is entirely hewn in the rock; but it reflects a true architectural style, recognizably Egyptian. And we must infer that the Egyptian features, like the pyramidal form and heavy cavetto and

torus moldings, were derived from an Egyptianizing style in building acceptable to Jewish taste under the Monarchy.

After Alexander's conquest of the East, Greek motifs mingled with those derived from Egypt and Persia to produce a Syrian-Hellenistic style of architecture. An example of this at Jerusalem is the tomb of the Hezir family (Fig. ART 80), a monument entirely cut in rock, in which the Egyptian features of the older Silwan pyramid are poised on a Hellenizing Ionic colonnade. On historical and stylistic grounds this has been attributed to the third century B.C. Another, and perhaps rather later, example of the same mixed style is the so-called "Absalom's Tomb" (Fig. KID 6), of which the cylindrical and conical upper parts are built of finely dressed and jointed masonry, but rest on a rock-cut base. That the style of architecture exhibited in these Jerusalem monuments was widely fashionable in the half-Hellenized East, is proved by its reappearance in the famous rock-cut tombs of Nabatean Petra, which embody in their elegant façades the same mixture of Greek and oriental motifs. Fig. SEL 38.

The Hellenizing tendencies in Jewish architecture of the first centuries B.C. coincided with a revival of the art of finely jointed and squared masonry; and both received a great stimulus from the boundless wealth, architectural enterprise, and Western sympathies of Herod the Great (30-4 B.C.), who both founded numerous cities within his kingdom and endowed them with public buildings, temples, theaters, hippodromes, and baths, which were customary in Greek and Roman cities of the time. The greatest of these foundations was the reconstructed temple of Jerusalem, of which Josephus has left a long but not very precise description (War V.v). The temple stood within a system of enclosed courts surrounded, like the precincts of other Eastern Hellenistic temples (Palmyra, Baalbek, Gerasa), by porticoes. Of the outer court the porticoes were two aisles deep on the N, E, and W sides, and three aisles deep on the S. The roofs were of timber, with carved cedar ceilings, and were carried by monolithic marble columns with Corinthian capitals. The three-aisled S portico was basilical in form, its broad central nave rising above two narrower side aisles. The upper walls of the nave were relieved by engaged columns; and engaged columns, corresponding with the free-standing colonnades, were set along the S wall of the portico.

The temple itself followed the plan of the old Solomonic building, except that its porch was extended sideways and in height to present a façade *ca.* 150 feet square toward the E. In the center of this stood an open doorway of giant proportions, over 100 feet high. The inner door of the shrine was lower; for, as Josephus tells us, the height of the cella was divided inside into two floors, the lower flanked by side chambers in three tiers, the upper story rising above their roofs. *See* TEMPLE, JERUSALEM, § C.

Nothing of all this can be seen today, except parts of the gigantic enclosure wall of the precinct, built, like another Herodian wall, which enclosed the tombs of the patriarchs at Hebron, of squared and paneled blocks of impeccable jointing and prodigious size. Besides this characteristic masonry, the Herodian age in Palestine was distinguished by the widespread introduction of cut-stone vaulting, which made possible such daring enterprises as the harbor at CAESAREA (Jos. Antiq. XV.ix.6), the vast substructures of the Jerusalem temple, and a great viaduct, of which the springing is still visible, that spanned the central valley of the city.

Much of the building under Herod was cosmopolitan in character, and could be matched in any province of the Roman Empire. But from rare surviving buildings of the period, like the ruins of Herod's palace lately discovered at MASADA, and from rock-cut tomb façades near Jerusalem, we can infer that the prevailing Hellenistic forms were strongly infused, in structure and ornament, with native oriental motifs. The temple itself, for all its Corinthian colonnades, followed the lines of its Phoenician predecessor. Of its architectural detail we know little or nothing; but it is safe to assume that it was kin to the façades of contemporary tombs, like that of Queen Helena of Adiabene, the tombs (so called) of the Judges and Jehoshaphat at Jerusalem, and the amazing cliff sculptures of Petra. The entrance to the "Tomb of the Judges" was a broad recess enclosed in a molded rectangular frame, which was surmounted by a pediment of classical aspect but filled with an acanthus-scroll relief carved in a distinctive local style (Pl. XXVI*a*). Similarly Queen Helena's monument, surmounted by three pyramidal structures, was entered through an Ionic portico beneath an entablature combining Greek structural features with wreaths, grapes, and foliage of a symbolical and distinctly Jewish or Levantine character. We are reminded by these floral elements of the golden vine that overhung, in Josephus' account, the inner door of the temple.

Architectural history in Palestine repeats itself. Solomon's temple reflected the cosmopolitan brilliance of his reign; and just as Herod the Great, his subjects, and his neighbors were Orientals aspiring momentarily to partnership in a Western civilization, so the public buildings of Jerusalem and other great cities of the Levant were an adaptation of Grecian forms, disciplined and intellectually defined, to the brooding purposes, obsessed with antique symbolism, of the Semitic East.

W. HAMILTON

ARCHIVES, HOUSE OF THE [בית ספריא]. A place in which public records and historic documents or decrees are stored. These may be in the temple area or in the royal treasury (*see* TREASURE). It is probable that the king placed Jeremiah's scroll in such an archive (Jer. 36:20 ff). Such a temple archive was the place for the finding of the scroll of the law under Josiah (II Kings 22:8 ff). Solomon undoubtedly kept annals in such a house of archives. Some of these annals of the kings are referred to in

the historical books of the OT. In later days genealogical records may have been stored in the archives (Ezra 4:15). The Persian archives were searched for the royal decree pertaining to the end of the Exile (Ezra 5:17; 6:1). The Aramaic phrase literally means "house of books" (cf. KJV "house of the rolls" in Ezra 6:1). In still later times the Aramaic word GENIZA, used in Ezra 5:17, was applied to the storehouse for worn-out biblical scrolls. Archaeologists have certainly discovered archives or treasuries of tablets and scrolls at Persepolis, Nineveh, Ras Shamra, Elephantine, Cairo, etc. *See* WRITING AND WRITING MATERIALS. C. U. WOLF

ARCTURUS ärk tŏŏr′əs. The LXX-KJV rendering of עָשׁ, עַיִשׁ (RSV BEAR), the designation of a group of stars. The two variants of the form are likely of the same root, עיש. Elsewhere עָשׁ is "moth," which is obscure in a stellar context. The term is astral, but closer identification is uncertain.

The versions yield a variety of evidence, indicating that the translators knew nothing of the original term with which they were dealing. The Job 9:9 LXX rendering is disordered, but probably translates ἀρκτοῦρος, perhaps from ἄρκτος, "bear," and οὖρος, "guardian" (cf., e.g., Rev. 13:2). The Vulg. follows the LXX reading *Arcturum;* Aben Ezra also reads "Great Bear." In Job 38:32 the LXX, followed by the Vulg., has ἕσπερος, "evening (star)," which is no help in identification. The Syr. in both cases has *Iyutha.*

The term עיש has been related to the Arabic *na'š,* "bier," a portable litter. Supported by a myth, this has been applied to the constellation known as the "Great Bear" or "Wain." In popular form, this came to be simply *'aš.* The single clue from the OT is that the star has "children" (Job 38:32): The four central stars of the Great Bear have three lesser stars (children), which form the tail of the bear and the pole of the Wain.

Another conclusion is from the Syr. Possibly *Iyutha* is equivalent to αἴξ, or *Capella;* the small stars in this group are the children. More plausible is the proposal that *Iyutha* refers to the group Hyades, which in other Syriac literature is the case. On this basis, עיש is the brightest star of the group, Aldebaran, of which the lesser stars of Hyades are the children. This is supported by early classical writers who grouped Pleiades, Hyades, and Orion, as in Job, to mark the change of seasons. Evidence from the Syr., however, is confused by the use of *Iyutha* as a translation of כסיל (*see* ORION; Amos 5:8). This reflects the uncertainty of the translators. Nonetheless, Aldebaran is the most probable alternative to Arcturus, "Bear."

A third, less cogent proposal is that עיש refers to PLEIADES. This proposal is based on the Targ. reading "hen with her chickens." This is understood as the cluster of Pleiades. The weakness of this proposal is intensified by the greater problem it creates, since the identity of כימה in the same verses is generally held to be Pleiades.

The identification of Pleiades being rejected, the possible alternatives remain "Bear" (Arcturus) and Aldebaran. Though the latter is more probable, the identification is not certain.

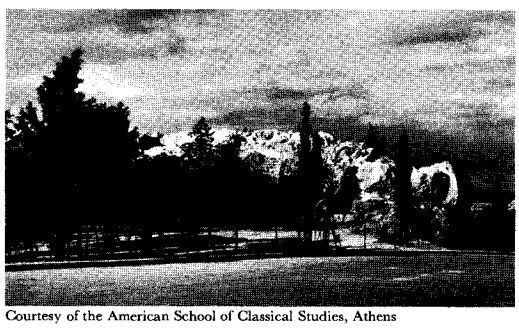
ARD ärd [ארד, humpbacked; *cf. personal names* ארדון, ארוד, Jewish Aram. ארדא]; ARDITES är′dīts [הארדי]. Alternately: ADDAR ăd′är [אדר] (I Chr. 8:3). A descendant of Benjamin, listed among the seventy "persons of the house of Jacob, that came into Egypt" (Gen. 46:27); ancestor of the "family of the Ardites" (Num. 26:40).

Both name and family relationship vary. The MT of Gen. 46:21; Num. 26:40 gives "Ard" (ארד), which is a prior form of "Addar" in I Chr. 8:3 (LXX Αρεδ [A], Αδερ [S], Αδαρ [L]). His relationship to BENJAMIN (1) appears as son (Gen. 46:21 MT), grandson (Num. 26:40; I Chr. 8:3), and great-grandson (Gen. 46:21 LXX). L. HICKS

ARDAT är′dăt [Lat. *Ardatte*] (II Esd. 9:26); KJV ARDATH —dăth. A field where Ezra received a vision. It may be related to ARAD 2.

ARDITES. Gentilic form of ARD.



ARDON är′dŏn [ארדון] (I Chr. 2:18). One of the sons of Caleb in the genealogy of Judah.

ARELI ə rē′lī [אראלי, *see* ARIEL]; ARELITES —līts. Son of Gad; ancestral head of the "family of the Arelites" (Gen. 46:16; Num. 26:17).

AREOPAGITE ăr′ī ŏp′ə jīt, —gīt ['Αρεοπαγίτης]. A member of the "most reverend council" of the Areopagus, so called because it met on the hill of the AREOPAGUS (Acts 17:19, 22) at Athens.

See also DIONYSIUS. F. W. BEARE

***AREOPAGUS** ăr′ī ŏp′ə gəs [ὁ Ἄρειος πάγος] (Acts 17:19, 22). A rocky hill at ATHENS; also, a council or court which originally met on it. Figs. ARE 58; ATH 112.

Courtesy of the American School of Classical Studies, Athens

58. The Areopagus at Athens

The Areopagus hill, 370 feet high, is between the Acropolis and the Pnyx and somewhat N of them. The Agora lies still farther to the N, and of the roads coming S across the Agora the Panathenaic Way ran between the Areopagus and the Acropolis, and another between the Areopagus and the Pnyx. The name may mean the "hill of Ares" (*see* MARS' HILL); and it is supposed by some that the Temple of Ares,

the ruins of which have been identified near the center of the Athenian Agora, once stood on the Areopagus. Another theory derives the name from the Arai ('Αραί), or "curses"—i.e., the goddesses of revenge and destruction whose shrine was in a cave at the NE foot of the hill.

The court which anciently met on this eminence was known as the "council in the Areopagus," or the "council of the Areopagites." The fact that in later times the usual expression for appearing before this tribunal was "to go up into the Areopagus" seems to reflect its early meeting place on an elevated point. A flight of some fifteen steps cut in the SE side of the rock, and the remains of rock-hewn benches on the top, may show where the assembly came together. Pausanias (I.xxviii.5) states that there were two stones on the Areopagus named the stone of Outrage and the stone of Ruthlessness, on which the accused and the accusers respectively stood. He also reports the tradition that Ares was the first to be tried on the Areopagus, for the slaying of Halirrhothius, and that Orestes was later tried there for the murder of his mother, Clytemnestra.

The functions of the court varied from time to time. At some periods its jurisdiction was limited chiefly to cases of capital crime; at others it had to do with wider areas of legal, political, educational, and religious affairs. The council also came to meet in other places than on the Areopagus hill. In 1952 a sculptured marble stele was found under the Stoa of Attalus with the text of a law against tyranny proposed by Eukrates in 337/336 B.C. and the statement that the law was to be inscribed on two steles of stone, one of which was to be set up "by the entrance into the Areopagus, the one as you enter the Bouleuterion." Whether the rather ambiguous language means that the entrance to the court of the Areopagus was near the entrance to the Bouleuterion, or that the same entrance gave access both to the court and to the Bouleuterion, it is evident that the council of the Areopagus was meeting at this time in a place in proximity to the Bouleuterion. In the late fifth century B.C. the New Bouleuterion was built to accommodate the Council of Five Hundred. If we look for a nearby building available in the fourth century for the Areopagus court, we think naturally of the Old Bouleuterion, which was close at hand and was not replaced by the Metroon until the late second century. At the same time, the following statement is found in a speech incorrectly attributed to Demosthenes (XXV.23) against Aristogeiton, a person who was tried and fined *ca.* 338-324 B.C.: "The council of the Areopagus, when it sits roped off in the Stoa Basileios, enjoys complete freedom from disturbance, and all men hold aloof." Pausanias (I. iii.1) describes the Stoa Basileios as the first building on the right upon entering the Agora when coming from the Dipylon gate, and it may be that it was identical with the Stoa of Zeus, a large colonnade with two projecting wings, which has been found in the NW corner of the area reached by the Athenian Agora excavations. It is also possible that the Stoa Basileius yet awaits discovery and identification in the still unexcavated region N of the Stoa of Zeus. Since the Old Bouleuterion gave way in the Hellenistic period to the Metroon and the latter was used to house the state archives, it is not likely that the Areopagus could meet there any longer. As far as present information goes, therefore, the Stoa Basileios or Royal Stoa, remains one of the attested meeting places of the Areopagus, in which it is likely that this council might have been meeting at the time Paul came before it, although it is also possible that sessions were still held on the hill itself.

ARES. KJV Apoc. form of ARAH.

ARETAS ăr'ə təs [Ἀρέτας; *cf.* ἀρετή, goodness, excellence]. The name borne by kings of Arabia at Petra and Damascus.

Gen. 25:13 (cf. I Chr. 1:29) lists Nebaioth as the "first-born of Ishmael." Nebaioth's sister, Mahalath, was one of Esau's wives (Gen. 28:9), although her name is elsewhere given as Basemath (36:3). Josephus identifies the Nabateans with the descendants of Nabaioth. The twelve sons of Ishmael, he says (Antiq. I.xii.4), "inhabited all the country from the Euphrates to the Red Sea, and called it Nabatene. They are an Arabian nation, and name their tribes from these, both because of their virtue—and because of the dignity of Abraham their father."

Their capital city and stronghold was Sela (סֶלַע, "the cliff"; Judg. 1:36; II Kings 14:7; Isa. 16:1; 42: 11). This term is represented in Greek by Πέτρα, and from this circumstance is derived the name by which their country is known, Ἀραβία ἡ πρὸς τῇ Πέτρᾳ. Though the inhabitants were of the Arab race, Aramaic was the language of their writings and inscriptions. They first appear as a formidable power in connection with the wars of Antigonus (312 B.C.).

The Aretas of II Macc. 5:8 is their first known ruler. He appears as king of the Arabians during the days of the Maccabees. The high priest Jason, having heard a false report of the death of Antiochus, undertook by violent measures to gain control of the government. When the conspiracy failed, he became a refugee, and was "imprisoned (ἐγκλεισθείς; the RSV here adopts the conjecture ἐγκληθείς, accused] before Aretas the ruler of the Arabs." Some versions list Aretas among the sovereigns to whom the consul Lucius sent assurance of Roman friendship for the Jews, but the preferred reading here is "Ariarthes" (I Macc. 15:22).

Other references indicate that the Nabateans were friendly to the Maccabean party. "Judas Maccabeus and Jonathan his brother crossed the Jordan and went three days' journey into the wilderness. They encountered the Nabateans, who met them peaceably" and related how their own brethren had been "shut up in Bozrah," which city Judas promptly liberated (I Macc. 5:24-28). When Bacchides pursued Jonathan and Simon across the Jordan, "Jonathan

sent his brother as leader of the multitude and begged the Nabateans, who were his friends, for permission to store with them the great amount of baggage which they had" (9:35).

At a somewhat later time Antipas father of Herod the Great was at enmity with Aristobulus because of good will shown by the latter to Hyrcanus. Through the machinations of Antipas, Hyrcanus became so frightened that he "fled to Aretas, of Arabia, who gave him refuge at Petra" (Jos. Antiq. XIV.i.3-4). Supported by Aretas, Antipas and Hyrcanus led an expedition against Aristobulus and gained a temporary victory. However, Scaurus, who had recently come from Pompey, sided with Aristobulus, and the army of Aretas and Hyrcanus was badly beaten at Papyron (Antiq. XIV.vii.3).

By 85 B.C., coins were made in Damascus, indicating that Aretas III had extended Nabatean control to that region. In NT times we find the Nabateans still exercising authority in Damascus. Paul tells how "at Damascus, the governor under King Aretas guarded the city of Damascus in order to seize me, but I was let down in a basket through a window in the wall, and escaped his hands" (II Cor. 11:32-33). Acts 9:24 relates that, before this escape, the gates were being watched day and night in order that Paul might be killed and his threat to the Jewish religion be brought to an end. The city of Damascus was at this time within the Roman province of Syria. That it should have been under the protection of an officer of King Aretas is difficult to explain. Rome displayed a large measure of tolerance in ruling her empire. If not actually a threat to Roman rule, political arrangements were often undisturbed, and considerable autonomy remained in the hands of local officials. However, in matters of final sovereignty Rome brooked no interference.

The Aretas who posed such a threat to Paul was Aretas IV (9 B.C.–A.D. 40), who before his accession was named Eneas (Jos. Antiq. XVI.ix.4). As already noted, Josephus described the Nabatean kingdom as extending from the Euphrates to the Red Sea (Antiq. I.xii.4). He attacked and defeated Herod Antipas, partly in revenge for the divorce of his daughter by the latter (Antiq. XVIII.v.1-2). The two of them also, says Josephus (Antiq. XVIII.v.2), had some quarrel "about their limits at the country of Gemalitis." J. C. SWAIM

AREUS. KJV form of ARIUS.

ARGOB är'gŏb [ארגב, mound]. **1.** A man mentioned with Arieh in II Kings 15:25 KJV, either as a victim, with Pekahiah, of Pekah's conspiracy, or as a fellow conspirator with the latter. This reference, omitted in the RSV, is generally taken as a textual gloss to vs. 29, perhaps referring to Argob and Havvoth-jair in Transjordan (cf. I Kings 4:13).

Bibliography. J. A. Montgomery, *Kings,* ICC (1951), p. 455.
J. M. WARD

2. A part of the kingdom of Og, situated in N Gilead. It was assigned by Moses to the tribe of Manasseh and was conquered by Jair the son of Manasseh (Deut. 3:4, 13-14; I Kings 4:13). It was said to contain sixty cities.

The location of the Argob district is extremely uncertain. The Targ. renders the word as *ṭarkônâ,* "stony region," which is equivalent to the Trachonitis of Hellenistic times and the modern el-Leja, a lava-covered region *ca.* twenty miles S of Damascus; but as this identification depends on a conjectural derivation of "Argob" from a root meaning "stony," most authorities are skeptical of it. S. COHEN

ARIARATHES ăr'ĭ ə rā'thēz ['Αριαράθης]; in RSV first ed. misspelled "Ariarthes." A Cappadocian king, fifth of the name; one of the sovereigns to whom the consul Lucius sent assurance of the friendship of the Romans for the Jews (I Macc. 15:15-24).
J. C. SWAIM

ARIDAI âr'ə dī [אריוי, *perhaps from* Pers. *haridayas,* delight of Hari] (Esth. 9:9). A son of Haman who was slain in the Jews' purge of their enemies.

ARIDATHA ăr'ə dā'thə [אריוֹתא, *perhaps from* Pers. *haridata,* given by Hari] (Esth. 9:8). A son of Haman who was slain in the Jews' purge of their enemies.

ARIEH âr'ĭ ə [אריה, lion]. *See* ARGOB 1.

ARIEL âr'ĭ əl [אריאל; LXX 'Αριὴλ]. **1.** One of the "chief men" summoned by Ezra (Ezra 8:16). The meaning here may be "lion of El." Areli (אלאלי; Gen. 46:16; Num. 26:17) is the name of a Gadite clan. In II Sam. 23:20=I Chr. 11:22 "the two *sons of* Ariel of Moab" follows the LXX. The MT has "the two ariel(s) of Moab" (cf. RSV). The meaning may be as in the Mesha Inscription (*cf.* 2 *below*), since the verb הכה can be used of striking an inanimate object (e.g., Exod. 8:12-13; 17:6).

2. A cryptic name for Jerusalem (Isa. 29:1-2, 7). For exegesis of Isa. 29 (in vss. 1-4 Yahweh is to bring distress on Ariel, and in vss. 5-8 he is to annihilate her enemies), see the Commentaries.

The name Ariel has been interpreted "the lion of God" or "the hearth of God." These meanings may go back to OT times. The word is used as a common noun in Ezek. 43:15-16 in the forms הראל ("mountain of God"[?]; אריאל in versions and five MSS) and אראיל ("hearth of God"[?]; אריאל in *Qere* and many MSS). The object described was a square altar hearth with "horns" at the four corners. It was superimposed upon the base of the altar and was presumably removable. This agrees with "the *'AR'L* [*'ar'ēl?*] of *DWDH'* which Mesha of Moab "dragged" before Chemosh (Moabite Stone, line 12). Since the word there is in the construct state, it could hardly be a compound noun. The original meaning was probably "altar hearth" (cf. Arabic *'iraᵗᵘⁿ,* "hearth"), from the root ארי, "burn," with affromative *lamedh,* similar to כרמל ("Carmel"), "garden land," from כרם, "vineyard" (cf. G-K § 85s). Targ. Isaiah has "altar." "Ariel" in Isa. 29:2*b* is probably to be taken as a common noun, and the meaning will be that Ariel/Jerusalem, where festal sacrifices are offered with such enthusiasm, will become an "altar hearth (indeed)," scene of fire and slaughter.

Bibliography. See Commentaries on Isaiah, especially those by Procksch and Duhm. C. R. NORTH

ARIMATHEA ăr'ə mə thē'ə ['Αριμαθαία *or* (W-H) 'Αριμαθαία; *from* הרמתים]; KJV ARIMATHAEA. A town. Although the site is uncertain, a consensus today locates it *ca.* ten miles NE of Lydda (Ludd, Lod), and *ca.* ten miles SE of Antipatris. It would have been *ca.* twenty miles E of Tel-abib or Jaffa (Joppa), nestling in the hills of the Shephelah area. Other forms of the name are Harmathaim Ramathem, Ramatha, Ramah, Rama, and er-Ram.

Arimathea is named but once in each gospel and always in the same context—the story of Joseph of Arimathea, who obtained the body of Jesus and interred it in his own unused rock tomb (Matt. 27:57; Mark 15:43; Luke 23:50; John 19:38). Luke describes it as a Jewish town, and Joseph himself was a Jewish official of some standing.

This town is not to be confused with RAMAH (Ramleh or er-Ram) in Benjamin, six miles N of Jerusalem. But Arimathea may be the same as Ramathaim-Zophim ("the two Ramahs" or "twin heights") in the "land of Zuph" within Ephraim, where the prophet Samuel lived (I Sam. 1). It is also mentioned in I Macc. 11:34 and Jos. Antiq. XIII.iv. 9 (Ramatha), where it is reported that the Syrian king Demetrius II Nicator delivered to the Jewish leader Jonathan three Samaritan toparchies, including Arimathea (145 B.C.).

In the late fourth century Jerome reported that the Holy Paula visited Arimathea (which C. W. Wilson identifies with Rantieh). In the same century Eusebius called the town Remphthis (modern Rentis). In the Middle Ages, this town was celebrated as the home of the prophet Samuel and also possessed a monastery of Joseph of Arimathea. It is less likely that modern Beit Rima should be identified with Arimathea.

Bibliography. E. Robinson, *Biblical Researches in Palestine,* II (1867), 239-41; F.-M. Abel, *Géographie de la Palestine,* II (1938), 428-29. K. W. CLARK

ARIOCH âr'ĭ ŏk [אריוך]. An ally of Chedorlaomer who joined a punitive campaign against five kings in S Palestine, routing them in the Valley of Siddim (Gen. 14:1, 9). Chedorlaomer's league was then defeated by "Abram the Hebrew" and his associates (vss. 13-16). *See* ABRAHAM § C3*b*.

The district over which Arioch ruled remains uncertain. The OT calls it "Ellasar," a name often identified formerly with Larsa in Babylonia (*see* ASSYRIA AND BABYLONIA § C2). However, the ancient versions vary; the Dead Sea Genesis Apocryphon gives כפתוך, which may have arisen from Caphtor (כפתור, pointing to Cappadocia?); and recent opinion favors Ilanzura, a city located between Carchemish and Haran, mentioned in the Mari texts. *See* ELLASAR.

The identification of the name Arioch is also uncertain. Earlier Arioch was compared with a king of Larsa whose name Warad-Sin might also be written Eri-aku. Recently, however, Arriwuk has turned up in the Mari correspondence (*ARM* II.63.3; 64.3) as the name of the fifth son of Zimri-Lim, king of Mari *ca.* 1750 B.C., and thus, regarding both form and date, offers a highly probable parallel to OT Arioch. Further, this obviously Hurrian name occurs in the form *Ar-ri-uk-ki* also in the Nuzi Documents from the fifteenth century B.C. Nevertheless, since little is known about these two men, the question of the relation of either to Arioch remains open, even if the names are parallel in form.

ARISAI âr'ə sī [אריסי] (Esth. 9:9). One of the ten sons of Haman put to death by the Jews.

ARISTARCHUS ăr'ĭs tär'kəs ['Αρίσταρχος, best ruler(?)] (Acts 19:29; 20:4; 27:2; Col. 4:10; Philem. 24). A Macedonian from Thessalonica (Acts 19:29; 20:4), a Gentile associate of Paul, who was arrested with Paul in Ephesus when the devotees of Diana threw the city into an uproar because of Paul's preaching of Christ. He was a traveling companion of Paul and seems to have accompanied him from the time of the work in Macedonia until the end (Acts 27:2). Tradition says that he was martyred in Rome under Nero.

An Aristarchus, evidently the same individual mentioned in Acts, is seen in Col. 4:10 as a fellow prisoner of Paul, probably in Rome. It is not necessary to suppose that this Aristarchus is a Jew, as are Mark and Jesus Justus, who are next named in this passage. But if he is understood to be a Jew, he cannot be identified with the Aristarchus mentioned in Acts. However, it is improbable that there were two men of this name intimately associated with Paul, for in that case there would have been some differentiation in references to them. Aristarchus, mentioned in Philem. 24, is to be identified with the individual named in Colossians. Both Acts and Paul's letters show Aristarchus as a valued and intimate associate of Paul. J. M. NORRIS

ARISTEAS ăr'ĭs tē'əs. The pretended author of a small Greek book (about the size of the Fourth Gospel) addressed to "his brother" Philocrates and hence widely, but wrongly, styled the "Letter of Aristeas." The author, presenting himself as a Greek courtier to Ptolemy II Philadelphus (283-247 B.C.), tells, as though an eyewitness and assistant, the series of events connected with the first Greek version of the Torah. Hence the "To Philocrates" has been studied, from antiquity to the present day, mainly and widely for its bearing upon the origin of the SEPTUAGINT.

5. Sources and literary connections
6. Value and afterlife

Bibliography

1. Contents.

I. Introductory address to Philocrates, vss. 1-8
II. The scheme, vss. 9-50: Demetrius of Phalerum proposes to Ptolemy to have the "Jewish laws" translated for incorporation in the Alexandrian library, of which he is the head

(9-11). Aristeas seizes the opportunity to obtain from the king the liberation of all Jewish slaves in his empire (12-27). Demetrius' detailed proposal (28-33) is accepted by Ptolemy, who requests the Jerusalem high priest Eleazar by letter to send seventy-two competent translators (34-40). Eleazar, in his reply, agrees cordially, subjoining the names of the translators (41-50).

III. The embassy, vss. 51-171; Aristeas, himself envoy to Jerusalem, describes the royal presents for Eleazar (51-82), Jerusalem and its vicinity (83-120), and Eleazar's high esteem for the translators (120-27), and reports his "philosophical" *apologia* for the Jewish law (128-71).

IV. The arrival of the translators, vss. 172-81: Carrying the Torah written with golden letters on parchment, they are received with profound respect and joy by Ptolemy.

V. The seven banquets, vss. 182-300: On seven successive nights the translators answer, to everyone's admiration, seventy-two questions put, one to each, by the king. He rewards them with presents (294); Aristeas stresses the truthfulness of his report (295-300).

VI. The translation, vss. 301-21: It is carried out on the island of Pharos in seventy-two days (301-7) and approved and hailed by the Alexandrian Jews (308-11) and the king (312-17), who dismisses the translators with thanks and further gifts (318-21).

VII. Epilogue, vs. 322

2. Authenticity. The book has for centuries been recognized to be a literary fiction. The writer's all-pervading concern to demonstrate Jewish superiority in every field and his use of the LXX (allegedly not yet existing), together with some Semitisms (vss. 81, 140) in his generally awkward Greek, prove the writer to have been a Jew (Alexandrian, as the whole story shows and his correctness in official Ptolemaic terminology confirms), and several factual slips refute his claim to have witnessed the events he describes. Aristeas looks back upon the age of Philadelphus as a romantic past (especially 28, 182); Demetrius of Phalerum, the philosopher and statesman, friend and adviser of the first Ptolemy, was dead at the time implied by the story (which is fixed to 276-270 by references to Queen Arsinoë II); and how could an eyewitness report that the Jordan flows around Jerusalem and, joined to another river, on into the Mediterranean (117)?

3. Date. Widely different datings (*ca.* 200 B.C.–*ca.* A.D. 50) have in the past been suggested on the basis of supposed historical implications. In view of the fantastic character of the whole book, this approach is today fairly generally abandoned. Arguments general and linguistic, and in particular the use of certain standard formulas, make a date near the end of the second century B.C. most probable. The prologue of ECCLESIASTICUS, often cited in this connection, may with as much reason be put before as after Aristeas. A definite *terminus ante quem,* at any rate, is given by Philo's use of the book. *See* § 5 *below.*

4. Analysis. From the summary of contents (§ 1 *above*) it will be evident that the story of the translation of the Law forms but a slender frame which serves to hold together a number of chapters by no means essential to it. This fact invites the suspicion that some sections may be later additions—a suspicion strengthened by the imperfect connection between some of them. Thus, e.g., Eleazar tells the king in his letter (46) that he has selected and dispatched the translators; in 121 he selects them again, and once more in 172 (when at last they actually travel to Alexandria); it would thus be easy to posit an original connection between, say, 50 and 172, and to describe all in between as interpolation. It would be similarly simple to jump from 186 to 301, omitting the "seven banquets" (Josephus does just about this in both these cases). In fact, the same procedure could be applied to every one of the sections in excess of the "frame" (see also, e.g., the duplication of 9-11 in 28-40)—and this is a counterindication against a surgery which, if applied consistently, would reduce Aristeas' book to about three pages. In fact, the features mentioned are merely indicative of Aristeas' clumsy literary technique; to substantiate a theory of interpolation, they would have to be reinforced by cogent literary or material considerations. Such have not so far been advanced (for the "biblical allegory" in 128-71, *see* § 5 *below*), and the identical style and method throughout the book are evidence of its unity.

5. Sources and literary connections. The translation story being used as a framework by the writer must have existed before it was thus used. Philo (*Life of Moses* 41) tells of an annual feast celebrated on Pharos in commemoration of the translation; this fact (and perhaps Aristeas 180) can be quoted in support of the inference that the frame story rests upon a popular tradition of Alexandrian Jewry. This inference is confirmed by some references in the Talmud and by the "Hellenist" ARISTOBULUS, writing *ca.* 170 B.C. (unless the theory be accepted which would make him a forger writing in the Roman age); for he gives (*apud* Euseb. *Praep. Ev.* XIII.12.2) in four lines the gist of the story, mentioning both Philadelphus and Demetrius. All the expansions are Aristeas' work, but not necessarily all of his invention. The turgid description of the royal gifts (51-82) —a rhetorical *ekphrasis,* utilizing Exod. 25:23 ff; 37: 10 ff—indeed is his own.

But the tale of the liberation of Jewish slaves (12-27) has a neat parallel in a papyrus document of 260 B.C., comparison with which will show how ruthlessly Aristeas could adapt historical data for his purpose. This purpose, the glorification of Jewish thought and tradition, is the one unifying bond of the diverse chapters; and the question of what written sources, if any, the author may have used in composing those not yet touched upon is far from settled. Suggestions, however, have not been wanting. In 31 he refers to Hecateus of Abdera in support of the "holy and solemn cogitations" contained in the Jewish law which prevented it—one wonders how—from becoming known among the Greeks. Following this cue, various sections (12-13, 22, 35-36, 83-120, 312-16; and at least part of the "Questions," 182-292) have been traced to various books ascribed to Hecateus (who wrote before 300 B.C.). This conjecture is open to devastating criticism. Eleazar's *apologia* (128-71) strikingly anticipates

Philo's allegorical expositions of the Torah and the questionable methods of later Jewish and Christian apologists; for this reason, to bracket it as a later insertion, dependent upon Philo, is to ignore the loss of almost all the literature on which Aristeas could draw.

6. Value and afterlife. Of this Hellenistic Jewish literature, Aristeas' book is, outside the Scriptures, the one extant complete representative (supplemented by the invaluable fragments preserved, mainly, by Eusebius). It illustrates the amalgamation of Greek and Jewish traditions in the Diaspora—on, it must be admitted, a distressingly low level of art and thought. The interest of posterity, however, has been focused, to this day, mainly on the framework of Aristeas' tale. The story of the seventy-two translators has been repeated, embroidered, and amplified by successive Jewish (Philo, Josephus) and Christian writers (Justin, Irenaeus, Tertullian, Clement, Epiphanius, etc.) and has helped to establish the canonical authority of the LXX. Eusebius, who included long excerpts in the *Praep. Ev.*, no doubt found the complete text in the Caesarean library; another user of the same library, Procopius of Gaza (in the sixth century A.D.) included it among the prolegomena of his huge variorum commentary on the Octateuch, and it is exclusively in MSS of this "catena" that the full text (though sadly corrupted) of Aristeas has survived.

Its legendary character, perceived by L. Vives (1522) and J. Scaliger (1606), was irrefutably demonstrated by H. Hody (1684; 1705). Therewith, though retaining its value as a document of its own age, it has lost the quality of a historical report. It is still permissible to inquire how much reality, if any, lies behind the legend which Aristeas elaborated. But the attempt, repeated at intervals, from his elaboration to extract particulars of the earliest history of the LXX rests precariously on an imperfect grasp of his general purpose and the misunderstanding of decisive passages.

ARISTOBULUS ăr'ĭs tŏb'yə ləs, ə rĭs'tə bū'ləs ['Αριστόβουλος]. **1.** A teacher of Ptolemy to whom Judas the Maccabee sent letters (II Macc. 1:10). He is often identified fancifully, even as early as the second Christian century, with a Greco-Jewish philosopher (possibly 170-150 B.C.), of whom two fragments are preserved by Eusebius (*Praep. Ev.* VII.10; XIII.12).

Bibliography. E. Schürer, *A History of the Jewish People in the Time of Jesus Christ* (1899), div. 2, vol. III, pp. 237-43. The identification is strongly urged in Kahana, *Sefarim Hitzonim*, I, 176-77, but is not to be accepted. See P. Wendland, "Aristobulus of Paneas," *Jewish Encyclopedia* (1903), II, 97-98.

2. Aristobulus I (יהודה), the oldest son of John Hyrcanus, and the first of the HASMONEAN line to claim the title of king. He reigned only one year—104-103 B.C.—dying apparently from some painful disease. There is good reason to suppose that Josephus (Antiq. XIII.xi.1-3; War I.iii.1-6) has confused incidents in the career of Aristobulus' brother and successor, Alexander Janneus, with those in the time of Aristobulus. According to Josephus, Aristobulus imprisoned his (step?)mother and (step?)-brothers (except for his brother Antigonus) after the death of Hyrcanus in 104. His mother starved to death in prison; Antigonus he slew in a fit of unjustified suspicion and jealousy.

Bibliography. E. Schürer, *A History of the Jewish People in the Time of Jesus Christ* (English trans., 1899), div. 2, vol. II, pp. 291-94; R. H. Pfeiffer, *History of NT Times* (1949), p. 21.

3. Aristobulus II, the younger son of Alexander Janneus and Salome Alexandra. The latter survived her husband, who died in 76 B.C. On her death, in 67, the throne properly belonged to the older brother, Hyrcanus II. Aristobulus attempted to seize the throne by force; he defeated Hyrcanus in battle and supplanted him as king after only three months. Hyrcanus retired to private life.

A foe of Aristobulus, Antipater, emerged as a counselor and gadfly to Hyrcanus. The latter, after elaborate preparations, fled to the Nabatean king Aretas, who thereupon waged war on Aristobulus and defeated him. Aristobulus fled to the temple, there to be besieged by Hyrcanus and Aretas.

Meanwhile the Roman general Scaurus had been sent to Syria by Pompey. Both Aristobulus and Hyrcanus offered generous gifts in return for support. Scaurus elected to support Aristobulus; and Aristobulus then defeated Hyrcanus and Aretas in battle.

When Pompey arrived in Syria, new deputations came to him, both on behalf of the rival brothers and on behalf of Jews opposed to both of them. Pompey deferred his decision; after a series of gambits Pompey seized Aristobulus, besieged Jerusalem, and captured it, thus ending Jewish independence (63 B.C.). Aristobulus was taken to Rome. In 57 his son Alexander nearly succeeded in overthrowing the Roman governor Gabinius, but met defeat; a year later (56) Aristobulus escaped from Rome and, like his son, was almost successful, but was finally defeated and was returned a prisoner to Rome a second time. After civil war broke out in Rome between Caesar and Pompey, Caesar liberated Aristobulus so as to send him to Syria against Pompey's forces. Partisans of Pompey in Rome poisoned Aristobulus in 49.

Bibliography. Jos. Antiq. XIV.i; l-lv.5; vii.4; War I.vi; l-ix.1. E. Schürer, *A History of the Jewish People in the Time of*

Jesus Christ (English trans., 1899), div. 2, vol. II, pp. 313-25, 376.

4. The last prominent male of the Hasmonean line; a grandson of Aristobulus II and a brother of Mariamne, wife of Herod the Great. Herod removed from the high priesthood a man named Ananelus and appointed Aristobulus in his place, although he was only seventeen or eighteen years old. Public acclaim of Aristobulus so displeased Herod that within a year Herod contrived to have the youth drowned (*ca.* 35 B.C.).

Bibliography. Jos. Antiq. XV.ii.5–iii.3.

5. The younger of two sons born to Herod by the Hasmonean Mariamne. With an older brother Alexander, Aristobulus was sent to Rome (23 B.C.) for education. Herod had executed Mariamne in 29. When the sons returned to Judea, Herod was torn between affection for them and fear that they would avenge their mother's death. Herod's sister and brother plotted against the youths, and Herod was moved to return to his court a son Antipater, whose mother, Doris, was Herod's first wife. Antipater contributed to the plot. In 12, Aristobulus and Alexander were charged with attempted panicide, but a reconciliation with their father saved them; five years later, however, the sons were condemned to death and strangled.

Aristobulus was married to Bernice, a granddaughter of Herod's sister Salome. They had four children, one a Herod, king of Chalcis; a second was Herod Agrippa I, king of Judea; a third was Aristobulus (*see* 6 *below*); and the fourth was Herodias, the wife of the tetrarch Herod Antipas. *See* HEROD (FAMILY).

Bibliography. Jos. Antiq. XVI.i; ii; iv.1-6; xi.1-7; War I.xxiii.1-5.

6. Son of 5 *above*. Little is known of him. He plotted against his brother Herod Agrippa (Jos. Antiq. XVIII.vi.3) and made a plea before the governor of Syria, Petronius, in A.D. 40, against the erection in the temple at Jerusalem of a statue of Caligula (Jos. Antiq. XVIII.viii.4).

7. A Christian whose family is mentioned in Rom. 16:10; he is otherwise unknown. It has been suggested that this was 6 *above*, and that the "family" were his slaves, but modern scholarship uniformly rejects this conjecture. S. SANDMEL

ARIUS âr'ĭ əs [Ἄρειος]; KJV AREUS. King of the Spartans (I Macc. 12:20). Jonathan addressed a message to the Spartans, reminding them that their former king, Arius, had sent a letter "to Onias the high priest . . . stating that you are our brethren" (I Macc. 12:7; for the contents of the letter see vss. 20-23). J. C. SWAIM

ARK (OF MOSES). KJV translation of תבה (RSV BASKET).

***ARK OF NOAH** [תבה; Egyp. *ḏbꜣ.t*]. A vessel described in Gen. 6:14-16, which Noah was ordered to build and in which he and his family floated about during the great Flood (Gen. 6:14–8:19). Commonly portrayed as a sailing vessel, the ark described in Genesis is nothing more than a floating house. Its function was simply to stay above water, not to sail or travel.

The biblical description is too meager to permit reconstruction. Built of GOPHER WOOD, the ark was a sizable vessel, measuring 300 cubits long (*ca.* 450 feet), 50 cubits wide (*ca.* 75 feet), and 30 cubits high (*ca.* 45 feet), and having three decks. Only one door is mentioned, and only one window (Gen. 8:6). The total deck space was approximately 100,000 square feet, and the cubic content *ca.* 1,500,000 cubic feet.

The Sumerian-Babylonian story of Utnapishtim bears marked resemblance to the Genesis account. The vessel built by the Babylonian hero for the same purpose as Noah's ark has a parallel description but with more detail concerning the inner structure. *See* FLOOD.

The purpose of the ark was to carry Noah's family of eight persons, and at least one pair of all living creatures. One source lists only one pair each of all creatures, but the other source indicates one pair each of unclean creatures and seven pairs each of clean animals and birds (7:2). This source omits all mention of "creeping things" (reptiles), and nothing is said about insects. W. G. WILLIAMS

ARK OF THE COVENANT.

1. Terminology and definition
2. Early traditions
3. The ark of the monarchy
4. Origin of the ark
5. Other references to the ark
Bibliography

1. Terminology and definition. "Ark" translates the Hebrew word ארון (Akkadian *ārānu*) through the Vulg. *arca*, "chest"; Greek κιβωτός.

There are some two hundred references to the ark in the OT, and these references include not fewer than twenty-two designations. These designations include the frequent "the ark," and, no doubt an old title, "ark of Yahweh" (cf. "ark of God"—i.e., "divine ark"); the D group of titles—e.g., "ark of the covenant," but more frequently "ark of the covenant of Yahweh"; and P's special title, "ark of the testimony." Nearly a third of the references, including seven designations to the ark, occur in I–II Samuel, and there are also some oblique references to the ark which will be noted below. The varying designations reflect several schools of thought in ancient Israel. There are references to the earthly (Heb. 9:4) and heavenly arks (Rev. 11:19) in the NT.

The tabernacle and the ark have been compared with nomad tent shrines—e.g., the *utfah* (*markab mahmal* and *qubbah*). But since these are tent shrines —i.e., portable shrines—the parallel is more accurately to the tabernacle than to the ark.

The simple wooden chest of the earlier narratives and the elaborate golden shrine of the P document are viewed from various points of view. There is no doubt that the ark was interpreted (*a*) as the extension or embodiment of the presence of Yahweh, a counterpart to the divine soul (cf. e.g., Num. 10:35-36; I Sam. 6:3, 5, 8, 20); (*b*) as a war palladium of Israel's amphictyony in the days before the monarchy (I Sam. 4); (*c*) as a container, whether of a fetish stone from a sacred place like Sinai, as some of the

older scholars thought, or of the two tables of the Decalogue (ברית, "covenant"="law" [I Kings 8: 21=II Chr. 6:11]; עדות, "testimony" [Exod. 25:16, 21]); (*d*) as a portable throne for the invisible presence of Yahweh. It should, however, be remembered that something of each interpretation is to be found in each of the major representations, for the container idea does not exclude the throne idea, and neither excludes the extension idea. It is accordingly a mistake to think that the I–II Samuel idea of the extension is succeeded by the correcting and "container" idea of D, and that this in turn is replaced by the elaborate P conception. Rather are we in the presence of several parallel ancient ideas which largely overlap, even though different aspects may be emphasized in different parts of the literature.

2. Early traditions. A survey of the references to the ark in the narratives shows that it first appears in the wilderness wanderings in the so-called Song of the Ark (Num. 10:35-36). In this song the ark is not only seen as the leader of Israel's host, but it is directly addressed as Yahweh. There is virtually an identification of Yahweh and ark, and it is only because this passage must be interpreted in the light of other passages on the nature of Yahweh, that we do not infer an actual identification of Yahweh and ark. Hence the term "extension" or "pervasion" to describe the relation between Yahweh and ark. The ark is conceived in terms of an extension of Yahweh's personality. In Num. 14:44 again in a military context the ark and Moses are most closely related. This is important for the origin of the ark, but it should also be noted that the fact that the ark remained in the camp and did not go forth with the people into the hill country of the Promised Land, is controlled by the statement in vs. 42 that "Yahweh is not among you" (cf. vs. 43). The Song of the Ark is an ancient military poem of Yahweh and the ark which could well belong to the desert period itself. In any event, the origin of the ark lies behind it.

The ark is said to lead Israel over Jordan into Canaan. The account of the crossing in Josh. 3–4 is, no doubt, the liturgical adaptation of the original tradition of the crossing. In turn it has been suggested, and probably with justice, that this liturgical adaptation was, in fact, used annually at a celebration of the anniversary of the crossing. Thus Josh. 3–4 would contain the original tradition adapted to a form of service which was the founding legend of the sanctuary at Gilgal, where the crossing took place. The ark figures prominently in the present form of the story of the capture of Jericho, and the same combination of the military and cultic use of the ark is again evident (chs. 6–7). The religious use of the ark is seen again in the Gerizim-Ebal story (8:30-35), which may be a confused part of the Gilgal tradition (cf. 9:6; 10:43).

The story of the ark becomes obscure until its reappearance at the Shiloh sanctuary. In the meantime it may have been at Bethel (cf. Judg. 2:1 ff [MT "Bochim"]; 20:27-28). A reference to the settlement of the ark at Shiloh may be implied in the P passage at Josh. 18:1, but at the end of the Judges period it is found at Shiloh in the care of Eli and his family and Samuel.* The legends of the ark preserved in I Sam. 4–7 are important for the understanding of the ark. The Israelites are defeated by the Philistines, but attribute their defeat to the absence of the ark. Whereupon they decide to fetch the ark from Shiloh and attempt a second battle with the ark in their midst. The Philistines greet the advent of the ark, with its attendant priests, with the words: "The gods have come into the camp. . . . Who can deliver us from the power of these mighty gods?" Nevertheless, the Philistines again defeat Israel, capture the ark, and remove it to Ashdod. Its departure from Israel is described as the exiling of glory from Israel (I Sam. 4:21). Fig. SHI 44.

Three conceptions are prominent in these stories. There is again the virtual association of Yahweh and ark; there is the military and cultic use of the ark; and, thirdly, the role of the ark as the rallying point of Israel suggests that it was an amphictyonic institution belonging to the amphictyonic cult at Shiloh.

The sojourn of the ark in the Philistine cities brought only disaster to them, though usually possession or care of the ark meant good fortune, even for non-Israelites (II Sam. 6:11). The bubonic plague (I Sam. 6:5), which ravaged Philistia at the time of the sojourn of the ark there, led the Philistines to arrange for the return of the ark to Israel. The newly calved cows which were to haul the new cart which carried the ark made no attempt to rejoin their calves, which had been removed from their mothers, but instead went directly to the village of Beth-shemesh. After some disaster there, possibly an outbreak of the plague, the ark was taken farther into the hill country, finally to rest in Abinadab's house. This man consecrated his son Eleazar to minister to the ark, and the ark remained in the care of Abinadab's household for twenty years—i.e., before, during, and after the reign of Saul—until, in fact, the eighth year of David's reign, when the latter removed the ark to his newly captured capital at Jerusalem (II Sam. 5–6).

It has been conjectured that the historical basis of these stories is as follows: The ark was taken to Philistia but remained there in Obed-edom's house at Gath until after the Battle of Gath (II Sam. 21:20), when David removed the ark first to Baal (cf. 6:2) and thence later to Jerusalem. This theory involves the neglect of the Beth-shemesh–Abinadab incidents and the view that most of II Sam. 6 is legendary, and it is a theory which is hardly possible in view of the new assessment of the value of Ps. 132 in this connection. Nevertheless, there may be a gleam of the truth in the theory which helps us to understand the present narratives. No doubt, the ark did journey to Kiriath-jearim via Beth-shemesh, but this may not mean that it passed beyond Philistine control. The fact that Israel lamented after the Lord after the deposit of the ark with Abinadab suggests that the ark, though nominally in Israel, was in effect still very much under the control of the Philistines. Whether this was so or not, it is clear that the ark was not present again in Israel, as it had been at Shiloh, for many a long day. From I Sam. 6 to II Sam. 6 we hear nothing of the ark. (In I Sam. 14:18, "ephod" should be read for "ark," as usage, language, and the LXX suggest.)

There seems no valid reason to doubt that for some time the ark remained in Philistia. It seems equally clear that the bare facts of the tradition have received

by way of interpretation a religious overlay. The meaning of this part of the legends of the ark is that Yahweh let the ark be captured in order to punish Israel and its chief priestly house, and in order to show that Yahweh could alone overcome the Philistines and compel them to return the ark to Israel. Even if secluded from Israel and supervised by Philistines at a safe distance, Yahweh has regained his liberty; he has saved himself, even if Israel was not to recognize this until the days when David led the ark in honor to Jerusalem. The religious interpretation of the facts thus includes consideration of II Sam. 6; Ps. 132.

3. The ark and the monarchy. II Sam. 6 contains a story remarkable not only for its features of individual bravery, but also because it is virtually a cult legend of the Jerusalem sanctuary from the Yahwistic point of view. In spite of textual disturbances the story, which should also be read in its Chronicles form (I Chr. 13; 15–16), is reasonably clear. By means of a religious procession David begins to bring the ark to his new capital. Abinadab's sons accompany the new cart on which the ark is borne, Ahio leading the oxen and Uzzah walking beside the cart. A sudden accident causes Uzzah's death. He inadvertently shoots out his hand to steady the ark, and the shock of realizing that he had done so in sacred procession and before everybody's eyes kills him. Now David makes a mistake, attributing the death to the anger of Yahweh and concluding that Yahweh does not desire the removal of the ark. The story continues: "So David . . . took it aside to the house of Obed-edom the Gittite," where it remained three months, to the Gittite's very great advantage. The last man to touch the ark fell dead, so when the decision was taken not to go to Jerusalem, it was none other than David who ventured to carry the ark aside. No wonder that the soldiers loved David. He would not ask them to do what he was not prepared to do himself.

No doubt, it was the report of Obed-edom's good fortune that made David question whether he had not made a mistake and induced the king to try once more to remove the ark to Jerusalem. Probably volunteers were called for, and they were instructed to lift the ark and to try to walk six paces in the direction of Jerusalem. No doubt, too, that if Yahweh was against the removal, he would show his hand before the bearers had gone six paces. But the six paces were safely accomplished, and David realized that now, at least, he was free to transfer the ark to Jerusalem. Thus with sacrifices, with a royal dance in a priestly garment, with shouting and with trumpet, David and all the house of Israel brought the ark to the city of David. Thus David put Israel's most treasured religious emblem at the heart of Israel's life. The ark and all it stood for, and David, Yahweh's elect and anointed one, were united in Israel's new capital at Jerusalem.

It is possible to infer certain things from this account of the ark in the books of Samuel. It was the cult object of the amphictyonic shrine of Shiloh. Apparently Saul made no effort to recover it from the Philistines (unless II Sam. 21:2 is such an attempt), or to rescue it from oblivion at Kiriath-jearim. Saul's neglect of the ark may well have been the historical reason for the estrangement between Samuel and Saul (besides the two reasons given in the text, cf. I Sam. 13:8-14; 15:10-35 for the rejection of Saul). In turn, David's resolve to seek the ark and remove it to Jerusalem reveals a religious spirit and an attitude toward Yahwism and the future of Yahwism in Israel, which are the foundation of the messianic idealization of David and his house. The different attitudes toward the ark shown by Saul and David appear to have been decisive features in the founding of the monarchy, and in the evaluation of these two kings.

Recent study, too, has shown the importance of considering the ark narratives in I–II Samuel in close connection with Ps. 132, which contains the only explicit reference to the ark in the Psalter, and with other psalms. The day is gone when, in particular, II Sam. 6 could be the history, and Ps. 132 a lyrical memorial of an ancient royal exploit. Indeed, there is a danger of going to the other extreme. The danger is that II Sam. 6 should be emptied of its history and considered merely as a cultic rubric subordinate to and supplementing such psalms as Ps. 132. II Sam. 6; Ps. 132 are very closely related; the former contains the historical tradition of the removal of the ark to Jerusalem, the psalm the rubric for the annual celebration of that removal, in the years that followed, in the royal festivals celebrated at the Jerusalem sanctuary. However much "myth" there is to be found in II Sam. 6, over against the ritual of Ps. 132, there is a solid historical basis to both. David did recover the ark, did thereby signalize the national liberation from the Philistine yoke; the sin of Israel in the days of Shiloh is atoned. Ark, Yahweh, royal house, and Israel exist in a new unity in Jerusalem, a unity virile enough to adopt and transform and be enriched by the existing El Elyon cult of old Jerusalem, a unity which was to break down through and after the reign of Solomon, but a unity which was to survive spiritually in the "messianic" prophecies of Isaiah, in the Servant Songs of Second Isaiah, etc.

At first in Jerusalem the ark remained in a tent (II Sam. 7:2). In II Sam. 11:11 we hear of the ark on a military expedition against the Ammonites. Later, during Absalom's revolt, David orders Abiathar and Zadok to carry the ark back to Jerusalem. David's decision is often interpreted as if it meant that David had now emancipated himself from any view that the ark was the guarantee of Yahweh's presence. Rather, David fatalistically concludes that if he is ever to enjoy his kingship again, it will be at Jerusalem. He therefore resigns himself completely to the will of God, and sends the ark back to Jerusalem. The story thus means: "Either Jerusalem or nowhere."

Lastly Solomon removes the ark from Zion to its place in the holy of holies, the inner sanctuary of the temple (I Kings 8). No further mention of the ark occurs in the historical books. Shishak may have removed it (14:26), Manasseh may have replaced it with his image of Astarte (II Chr. 33:7), and then Josiah restored it (35:3), though it is most likely that it was destroyed or stolen during Nebuchadnezzar's invasion. Jer. 3:16-17 may imply the existence of the ark, and the legend of II Macc. 2:4 is related to the passage in Jeremiah. The fate of the ark is a bigger mystery than its origin.

4. Origin of the ark. The question of the origin of the ark is difficult, though it is extremely likely that it goes back to Moses himself. The evidence suggests that it was not a Canaanite cult object adopted by Israel, or a cult object copied from the Canaanites after Israel's settlement in Palestine. Even if there were several arks, nevertheless there was only one of supreme importance, and this was the ark which was named with the name of Yahweh of hosts.

Deut. 10:1-5 tells how Moses made an ark and put the two stone tables of the Ten Commandments inside. It is therefore almost certain that the JE tradition in Exodus contained originally an account of the making of both the tent and the ark. Such an account, if it existed, would have occurred in Exod. 34:1-4—i.e., immediately before Moses' (third) ascent of the mountain to receive the second tables of stone. According to P, Moses instructs Bezalel to make the ark in 25:10-21, and Bezalel actually makes the ark in 37:1-9, so according to P the ark is made after Moses' descent from the mount. Thus P confirms the (JE) D tradition that the ark goes back to Moses, and confirms too that it was actually constructed after the golden-calf incident, though planned in P before this incident. The time of construction is important.

P's name for the ark is the "ark of the testimony" —the testimony being, of course, in this context the Decalogue. In P this title is used thirteen times, and it is exclusive to P. P's account of the character, function, and location of the ark vis-à-vis the camp, is a problem discussed in TABERNACLE, of which the ark is so much a part.

There are thus three facts which suggest the Mosaic origin of the ark: (*a*) the witness of the Pentateuchal traditions: (*b*) the close association of Moses and the ark in these traditions and in such a passage as Num. 14:44: (*c*) the testimony of the Philistine version of Israel's kerygma given in I Sam. 4:8 can only be described as garbled, but in the errors there is enough truth to suggest that it was common knowledge among the Philistines that the ark went back to the desert period. All in all, this is probably the wisest view, and the one that most nearly explains the traditions of the Pentateuch and those of the books of Samuel.

A comparison of the Pentateuchal traditions with those of the books of Samuel reveals no certain conclusions concerning the function of the ark. It is clear that D and P regard it as a container from the beginning, though there is little evidence of this in the Samuel stories. In these stories the ark is more an extension of or pervasion by Yahweh's personality than a container. Indeed, some have claimed that it stood for varying forms of the presence, except, of course, when it was temporarily eclipsed during the days when the Philistines captured it. But, as shown above, the sojourn in Philistia was one of the most triumphant periods of the ark. Others have seen in the Deuteronomic view of the ark a "demythologizing" of the ark, so that the ark ceases to be the throne of the invisibly present God and becomes a mere receptacle. Such a view involves setting aside the tradition that the ark, whatever else it was, was a container from the beginning. Again, it is likely that to oppose the container and the presence conceptions is to make a distinction not made by Israel itself.

5. Other references to the ark. Mention has already been made of the cultic significance and use of the ark, and big claims are current for the cultic interpretation of the Psalms and for the role of the ark in the royal New Year festivals celebrated in Israel. It is therefore strange that Ps. 132 is the only psalm which explicitly refers to the ark. Nevertheless, it is only necessary to read commentaries on the Psalms to find that the commentators point to passages where the ark is implied, even though the commentators often disagree on such passages. It is not possible to review all the evidence, but certain obvious clues may be mentioned.

a) Ps. 132:8 speaks of "thou and the ark of thy might," and thus affords a first clue. Following the Hebrew word for "might," here עֹז, it is impossible to avoid the conclusion that "power" in Ps. 78:61 means the ark, that "Seek Yahweh and his strength" means "Seek Yahweh and his ark" (Ps. 105:4=I Chr. 16:11). It does not follow that all references to עֹז in the Psalms mean the ark, but it is likely that such passages as Ps. 96:6=I Chr. 16:27; Pss. 21:2, 14; 63:3; 77:11-16; 81:1; etc., are best explained as either a reference to the ark or a description prompted by the thought of the ark.

b) In the Song of the Ark in Num. 10:35-36 the ark is addressed: "Arise, O Yahweh . . . . Return, O Yahweh." It is not unlikely then that some, at least, of the six repetitions of "Arise, O Yahweh," and of the three references to "Return, O Yahweh," in the Psalms also refer to the ark (3:7—H 3:8; 6:4—H 6:5; 7:6—H 7:7; 9:19—H 9:20; 10:12; 17:13; 90:13; 126:4; 132:8). The following passages in the Psalms should also be consulted: 21:13—H 21:14; 35:1—H 35:2; 44:26—H 44:27; 74:22; 80:14—H 80:15; 82:8.

c) Another clue is provided by the phrase "before Yahweh" in II Sam. 6:5, which is explained by the words "before the ark" in the previous verse. It is evident, then, that the words "before Yahweh" may often conceal a reference to the ark. "Before Yahweh" comes some 225 times in the OT, and in some of these passages, especially in cultic contexts, the ark may be presupposed. Likely passages include Num. 10:33 ff; 14:44; Joshua, *passim;* I Sam. 4:1-7:1; II Sam. 6; 11; 15; I Kings 8; and in the laws, Exod. 25:10-22=37:1-9; and in the "Enthronement" Psalms, 95:6; 96:13; 98:9; cf. 116:9. The only other occurrence of the phrase in the Psalms—viz., 102:1—is too vague for a decision. The seventeen occurrences in the OT of "before (the) God" likewise conceal some references to the ark (cf. especially Pss. 56:13—H 56:14; 61:7—H 61:8; 68:3—H 68:4).

d) תִּפְאֶרֶת, "glory," in Ps. 78:61 refers to the ark; the "Mighty One of Jacob" in Ps. 132:2, 5, also refers to the ark; so that these terms provide further clues. Likewise כָּבוֹד, "glory," in I Sam. 4:21-22 can only refer to the ark. Many commentators conclude that the "King of glory" in Ps. 24:8, 10, refers to the ark. Thus the "place where thy glory dwells" (26:8) suggests the temple with the ark, and the shout of "Glory!" in 29:9 may have been the congregation's welcome to the ark as it came into sight.

e) Another clue is provided for us by the identification afforded in such verses as II Sam. 6:2, 18 (cf. 7:27; I Sam. 4:4). Even if in II Sam. 6:2 we omit, with the LXX, one of the words for "name," the

sense is clear. The name of the ark was the name of Yahweh of hosts, who dwells between the cherubim. This could mean that the Hebrew words for "Yahweh of hosts" were actually inscribed upon the lid of the ark. Again, it is possible that other examples of the use of "Yahweh of hosts" really veils a reference to the ark, as is clearly the case in Ps. 24:10 (cf., e.g., Isa. 6:5).

It is clear, then, that the above titles and references pave the way for a new evaluation of the presence and the role of the ark in the Psalms. The question, of course, depends on whether the references are merely metaphorical or whether they contain precise cultic allusions. Cultic contexts of such references are therefore important. There is also the fact that II Sam. 6; Ps. 132 undoubtedly show the king and the ark in very close contact. Thus those references which appear in cultic contexts are further supported when these contexts are also royal contexts, as in the so-called Royal Psalms. It is a sufficient conclusion that the ark figures far more largely in the Psalms than has previously been supposed.

G. HENTON DAVIES

ARKITE är'kīt [ערקי]. A person living in or coming from the town of Arqa (Akkadian *Arqâ;* Amarna *Irqata;* Greek Ἄρκη). The town was situated some miles NW of Tripolis in Syria. It was in Roman times called Caesarea Libani, today Tell 'Arqa. In Roman times the town was famous for its Ashtart (Astarte) cult. In the genealogy of Noah the Arkites are mentioned as sons of Canaan (Gen. 10:17; I Chr. 1:15).

A. S. KAPELRUD

ARM [זרוע; βραχίων]. A word ordinarily used in a metaphorical sense in the Bible; only in rare instances, such as Judg. 15:14, used in its common literal meaning. As man's chief member for putting into effect the dictates of his will—for fighting and building—the arm provides a natural metaphor for "strength." Thus, to "break the arms" of an enemy is to destroy his capacity to fight (Ps. 10:15; Jer. 48:25; Ezek. 30:22). In Dan. 11:15, 22, 31, the KJV "arms" is exactly equivalent to "armies" or "forces," and is so rendered in the RSV.

Although the word "arm" must have been commonly used in ancient colloquial Hebrew to designate the strength of men, it is used in the overwhelming majority of instances in the Bible for the strength of God. The most vividly anthropomorphic picture of God's arm in action is in Isa. 30:30, which depicts the lightning as the "descending blow of his arm." There are many references also to God's arm as "outstretched" in a militant gesture (e.g., Exod. 6:6; Ps. 136:12; Jer. 27:5), but in most of these cases it is probable that the phrase has lost its original pictorial vividness and is merely a conventional expression for God's irresistible power, as is obviously the case in Jer. 32:17, where "outstretched arm" is synonymous with "great power." It is only rarely that God's arm is connected with help for individuals (e.g., II Chr. 6:32). Its normal associations are with his work in creation (Isa. 51:9, referring to the destruction of RAHAB, the dragon of chaos); with his deliverance of Israel from Egypt (Deut. 4:34; Ps. 77:15; Isa. 63:12; this is the most common context); with the direction and preservation of the people in the present (Ps. 89:13); and especially with his future, eschatological intervention on their behalf (Isa. 51:5). Although the "arms" of God are ordinarily pictured as engaged in militant action, two passages represent them as supporting or enfolding his people (Deut. 33:27; Isa. 40:11).

The word "arm" occurs only three times in the NT, each time with reference to God, but only in passages which are either a quotation from the OT (John 12:38) or deliberate imitations of OT style (Luke 1:51; Acts 13:17).

R. C. DENTAN

ARMAGEDDON är'mə gĕd'ən [Ἁρμαγεδών = הרמגדו, Mount Megiddo; *see also* מגדון (Zech. 12:11); LXX Μαγεδδω (A) or Μεγεδδω (B)] (Rev. 16:16). A word said by the Seer to be a "Hebrew" word, designating the scene of the last struggle of the forces of good and evil against each other. Unfortunately for our understanding of its meaning, the word (or phrase) does not occur anywhere in Hebrew, and some doubt even exists as to its proper spelling in Greek. The reading "Harmagedon" (alternately "Armagedon") is found in MSS א A, 1 al, in the Syr., Egyptian, Lat.$^{Vulg.}$, Ethiopic, and Armenian versions, with slight variations in the consonants ("k" for "g" and the like), and in the Greek commentary of Andreas (sixth century); whereas "Maged(d)on" (apparently following the LXX) occurs in MSS 046, 14, 92, in one Vulg. MS (Fuldensis) and one Syr. MS (Gwynn), and in Tyconius and Primasius. The latter reading may reflect the OT references to the city of Megiddo in Josh. 12:21; Judg. 1:27; 5:19; II Kings 9:27; etc.

Suggested interpretations include: (*a*) "city [Αρ, transliterating ער or עיר] of Megiddo"; (*b*) "land [Αρ for Aramaic ארע and Syriac *'ara'*] of Megiddo"; (*c*) "Mount Megiddo," as designating that portion of Mount Carmel upon or near which the city of Megiddo lay; (*d*) a corruption of Hebrew *har mo'edh* ("the mount of assembly"; Isa. 14:13, where the assembling of pagan gods is in question), or Hebrew *'ar himdah* ("the city of desire"—i.e., Jerusalem), or

again Hebrew *har migdo* ("his fruitful mountain"—i.e., Mount Zion).

The last suggestion appears the most likely, in view particularly of the fact that in the book of Revelation 9:13–11:14; 14:14-20; 16:12-16 are all coordinate passages taking much of their imagery from Joel and that here it is from Mount Zion that the power of God in his warfare against the forces of evil is to proceed (Joel 2:32; 3:16-17, 21; *see* REVELATION, BOOK OF). As no Mount Megiddo is known to either ancient or modern geographers, it appears the more likely that in a book abounding in symbolical language this term also should be meant to carry a symbolical meaning such as that suggested. It is to be noted, moreover, that the battle said to take place on this spot is clearly one of ideologies (the gospel versus the "badspell," God's truth opposed to Satan's error)—cf., e.g., the "prophesying" of the two witnesses in Rev. 11:4 ff; the fact that Satan fights by means of "demonic spirits" which issue from the mouths of dragon, beast, and false prophet in Rev. 16:12-16; and that in the co-ordinate passage at 19:11-16 the "Word of God," who leads the forces of righteousness, wields as his weapon a "sharp sword" issuing from his mouth (vs. 15).

Bibliography. See the Commentaries listed in the bibliography under REVELATION, BOOK OF, particularly that of R. H. Charles, II, 50-51.

J. W. BOWMAN

ARMENIA är mē′nĭ ə. KJV translation of ארמת (LXX 'Αρμενία) in II Kings 19:37; Isa. 37:38 (RSV ARARAT). This is a later name of Urartu-Ararat. The name Armenia (Armina) first occurs in the inscriptions of Darius at Behistun (section 6).

M. J. MELLINK

ARMENIAN GOSPEL OF THE INFANCY. A late and verbose infancy gospel, which, like all these secondary accounts (*see* APOCRYPHA, NT), is based largely upon the much more sober Protevangelium of James and the Gospel of Thomas (*see* JAMES, PROTEVANGELIUM OF; THOMAS, GOSPEL OF). The stories are very diffuse and contain interminable dialogues. There is little or nothing in this writing not found elsewhere in tradition in far earlier form. It is thought to have passed into Armenian from Syriac.

Bibliography. The complete text is available in P. Peeters, *Évangiles apocryphes* (1914), vol. II. It is briefly summarized in M. R. James, *The Apocryphal NT* (1924), pp. 83-84.

M. S. ENSLIN

ARMENIAN VERSION. *See* VERSIONS, ANCIENT, § 7.

ARMLET [אצעדה, צעדה (KJV ORNAMENT OF THE LEGS *in* Isa. 3:20; KJV BRACELET *in* Num. 31:50; II Sam. 1:10); כומז (Exod. 35:22; KJV TABLET)]. A ring or band worn on the upper arm, as distinct from a bracelet worn on the lower arm. Armlets were among the booty taken from the Midianites and offered to the Lord (Num. 31:50), and among the luxury articles of the daughters of Zion (Isa. 3:20). The armlet of Saul was brought as partial evidence to David after Saul's death (II Sam. 1:10).

Fig. ARM 59.

59. Armlets on a clay figurine of a goddess, from Gezer

ARMONI är mō′nī [ארמני]. One of the two sons of Rizpah, a concubine of Saul and the occasion of Abner's defection. David delivered Armoni and his brother, Mephibosheth, to the Gibeonites to be hanged in order to satisfy their vengeance for the bloodguiltiness of the house of Saul (II Sam. 21:8-9).

E. R. DALGLISH

ARMOR. *See* WEAPONS AND IMPLEMENTS OF WAR § 4*b*.

ARMOR OF GOD [πανοπλία τοῦ θεοῦ]. The word for "armor" is a fusion of two Greek words, πᾶν ("all") and ὅπλα ("weapons"). The phrase "armor of God" refers to the full combat equipment of a soldier, and is used figuratively to indicate the total resources which God makes available to those who enlist under his command. OT and NT writers alike use weapons metaphorically, comparing contemporary types of arms with spiritual weapons received from God. For this symbolic use of the verb "to arm," ὁπλίζω, cf. I Pet. 4:1. For weapons in general, ὅπλα, cf. Rom. 6:13; 13:2; II Cor. 6:7; 10:4. Sometimes a single instrument of defense or offense is mentioned: breastplate, θώραξ (I Thess. 5:8; Rev. 9:9); helmet, περικεφαλαία (I Thess. 5:8; Isa. 49:17 LXX); sword, μάχαιρα (Heb. 4:12).

The whole armor, πανοπλία, is mentioned in two writings. In a parable of Jesus, Luke 11:22 has in mind the total equipment with which Beelzebul, the devil, fights to protect his property from seizure. But when a stronger power enters the battle, the devil's *full armor* is seized and his possessions are despoiled.

In the second writing (Eph. 6:11, 13), it is God's armor which is discussed allegorically. Here the symbolic scope of the warfare is depicted more fully and clearly than elsewhere. The warfare rages between God and the devil. Because man's enemy is not human but superhuman, man can win the battle only by relying on God's strength. The armor of God includes: truth, righteousness, the gospel of peace, faith, salvation, and the Spirit. Praying in the Spirit, relying wholly on the word of God, ceaselessly alert for every attack, being devoted wholly to the triumph of God's cause, the army of Christ can overcome every subtlety and every onslaught of the devil. But the spiritual battle against the "spiritual hosts of wickedness" can be won only if soldiers utilize fully

these weapons. Although this armor is furnished by God, it must be put on by men if they are to conquer the immediate temptation and thereby the hidden source of every temptation, the "world rulers of this present darkness."

Paul relates this battle to the mystery of the gospel —i.e., through the prayer of total dependence, God's mighty power operates in human weakness, and his peace becomes a means of final conquest. The battle is not a matter of virtue's overcoming vice, nor is it a self-righteous crusade against human enemies, nor a way to gain mental and psychic poise, but a way of vindicating God's power over Satan in every situation (cf. 5:22–6:9) where the believer encounters (in his own heart) the craftiness of primal evil. The thought concerning what weapons are effective depends, not upon the part of the soldier's body to be protected, but upon the force of the enemy to be overcome. The devil's weapons, adequate though they are to defeat merely human opponents, fail to overcome God's power. God's weapons, when wielded by men (the Spirit, the Word, etc.), are sufficient to enable men to resist successfully the attacks of the devil.

ARMOR-BEARER [נשא כלים]. A personal attendant of a warrior chieftain.

The armor-bearer is attested only in early times, being mentioned in the OT as a servant of Abimelech (Judg. 9:54), Jonathan (I Sam. 14), Saul (I Sam. 31), and Joab (II Sam. 18:15; 23:37; I Chr. 11: 39). Jonathan's armor-bearer is said to have killed those who had been felled by his chief (I Sam. 14: 13). Both Abimelech and Saul ordered their armor-bearers to kill them in order to avoid capture by the enemy (Judg. 9:54; I Sam. 31:4; I Chr. 10:4-5). Such servants were often extremely devoted to their masters (I Sam. 31:5), and accompanied them on dangerous missions (14:6 ff). David is said to have been chosen by Saul as his armor-bearer for a period (16:21). Joab's armor-bearer, Naharai of Beeroth, was himself a mighty warrior, being one of the "Mighty Men" of David (II Sam. 23:37; I Chr. 11: 39). J. W. WEVERS

ARMORY [אוצר, בית כלים, נשק, תלפיות]. An official storehouse for military weapons.

Both אוצר and נשק are ellipses for phrases compounded with בית, "house of"; אוצר (Jer. 50:25), "treasure"; and נשק (Neh. 3:19), "arms." The meaning of תלפיות, a *hapax legomenon* in Song of S. 4: 4 ("arsenal"; KJV "armory"), is completely unknown, the renderings in the versions being based entirely on the context.

With the establishment of a standing ARMY came the necessity for storing arms. It is thought that the "House of the Forest of Lebanon" built by Solomon (I Kings 7:2; cf. 10:16-17) was such a storehouse (Isa. 22:8). The temple was also used as an armory during Athaliah's reign (II Kings 11:10). An armory existed in Jerusalem as late as the reign of Hezekiah (II Kings 20:13; Isa. 39:2), and the term "armory" still served as a landmark at the time of the rebuilding of Jerusalem's walls (Neh. 3:19). J. W. WEVERS

Bibliography

1. Linguistic usage. The common words for "army" in Hebrew are חיל and צבא, the former literally meaning "strength, force" (cf. "forces"), and the latter, "host, army." In Isa. 36:2 a number of MSS vocalize חיל as *ḥayil*, "army," rather than *ḥêl*, "fortress, rampart." The word גדוד refers to a "troop or band" (*cf. below*). For מחנה, *see* CAMP. The word מערכה means "arrangement, rank, battle line," and in the singular should be translated as "line of battle, battle." In the plural it means "ranks," hence "armies" (see I Sam. 17:26, 36; 23:3). מצבה (Zech. 9:8) may be an error for מצבא (מ + צבא; KJV "because of the army"; cf. Vulg.), but may also be taken as a noun meaning "guard" (so RSV). *See* GARRISON.

In the NT, παρεμβολή is rendered "army" (Heb. 11:34), "camp" (Heb. 13:11, 13; Rev. 20:9), and "barracks" (KJV "castle"; Acts 21:34, 37; 22:24; 23:10, 16, 32). Στρατόπεδον is "army" (Luke 21:20). Στράτευμα is "troops" (Matt. 22:7; KJV "armies"), "soldiers" (Luke 23:11 [KJV "men of war"]; Acts 23:10, 27).

2. Before the Monarchy. The establishment of the Monarchy marks the beginnings of an organized army in ancient Israel.

a. Patriarchal period. In patriarchal times a crisis would promote a levy on the male membership of a clan by its chieftain. When the Cities of the Plain had been raided by a coalition of kings, Abram led out his trained men and in typical Bedouin fashion pursued them by night, divided his 318 followers into three groups, and brought back his relatives and all the spoil (Gen. 14). Various clans would cooperate to meet a common danger (as in the battle with Amalek [Exod. 17:8-13]) or for common advantage (as in the raids of seminomads on settled areas [Judg. 1]).

b. The judges. The period of the judges saw irregular troops organized along tribal lines for defense and/or plunder. Such bands (גדודים) consisted of volunteers who served under some popular leader. These bands were usually small, allowing for pinpoint attacks and maneuverability in the hill country (Judg. 7:7-23). Many of these volunteers continued their allegiance in times of peace and formed bands

of freebooters, who received provisions from the countryside in return for "protection." In times of peace such groups might pillage the countryside (e.g., Jephthah [Judg. 11:3]), or go into the service of some alien power (e.g., David [I Sam. 27]). Such razzia training often made these freebooters men of the hour in times of crisis; in fact, it was David who eventually translated the peasant kingdom of Saul into an empire with a fully organized army.

3. Under the Monarchy. With the establishment of the Monarchy the need for a permanent military force became apparent.

a. Saul. Saul began as a charismatic leader (I Sam. 11:6-11), but after his victorious return from the battle with the Ammonites he became king in earnest, choosing three thousand men for a standing army (I Sam. 13:2; cf. 24:2; 26:2). In the early part of his reign the army stood under the direct command of the king and his son Jonathan alone, whereas later on, reference is made to Abner as being the "commander of the army" (I Sam. 17:55). The exact duties of Abner are not at all clear, since Saul personally led his troops to the end of his life.

b. David. David's military genius was apparent long before he became king. Up to this time the Israelites were actually organized only for defensive warfare. David appointed as commander in chief (שר הצבא) Joab, whose tactical brilliance revolutionized Israelite warfare. He taught the Israelites the art of siege warfare (II Sam. 20:15), and captured the Jebusite stronghold of Jerusalem, which David thereupon chose as capital city of his kingdom.

c. Mercenary troops. Saul had been unable to establish a dynasty. David, profiting by Saul's mistakes, set about to consolidate his own position by the creation of a bodyguard of mercenary troops composed partly of old comrades from his outlaw days and partly of aliens. Since they were paid out of the royal purse, their allegiance was to David alone. These troops served not only as personal bodyguard but also to hold up the central authority of the Davidic house—an authority regularly disputed by the various tribes—as well as for purposes of defense against external enemies. These foreign mercenaries were mainly Philistines, the CHERETHITES AND PELETHITES under the command of Benaiah (II Sam. 8:18), and the Gittites under Ittai's command (15:19-22; *see* GITTITE). When David was forced to flee because of a palace revolution sponsored by his son Absalom, their loyalty remained unquestioned, and it was they who eventually put down the revolt and rewon the crown for David.

Apparently such hired troops became a fixed institution with the Davidic dynasty, in contrast to the Northern Kingdom, where army rule and military revolution only too often characterized palace government.

d. Cavalry and chariot corps. In spite of the great advance made by David, the army essentially remained an army on foot. Infantry always remained the basic corps of the Israelite army throughout its history. Furthermore, cavalry was cumbersome and impractical in the hilly terrain of Palestine. With the establishment of an empire and the consequent occupation of the Aramean plains, however, cavalry and chariot corps became necessary. These were introduced by Solomon, who was influenced by grandiose ideas of royalty. Since the Philistines were masters of chariot warfare (I Sam. 13:5; II Sam. 1:6; as were the Syrians [cf. II Sam. 10:18]), David must have been well acquainted with this type of army, but he wisely avoided it. His son's introduction of these expensive and impractical elements into his army (cf. I Kings 10:26) certainly contributed to the eventual disruption of the kingdom. Later Davidic kings had to abandon chariots and cavalry; in fact, Hezekiah apparently had no horsemen at all at his disposal (II Kings 18:23).

In the Northern Kingdom chariot and cavalry corps were part of the army at least under the Omrids. Ahab, according to the Annals of Shalmanezer III, contributed two thousand chariots to the Syrian coalition, as well as ten thousand infantry for its revolt against the Assyrians at Karkar.

e. Maintenance of the army. Little is known about the maintenance of the standing army. Before the time of David, soldiers had to provide their own weapons as well as their food (I Sam. 17:17-18). Once foreign soil was reached, the army lived off the land, pillaging as it went. The ordinary Israelite was by nature antimilitaristic and ill-disposed to the discipline required in army life. This was but natural over against the privileges and pay accorded the mercenaries, who were normally foreigners as well. Solomon wisely excused Israelites from the *corvée;* citizens were to serve only as officers.

f. Organization of the army. Even less is certain about the organization and officer ranks in the Israelite army. The OT makes frequent reference to corps of thousands, hundreds, and fifties, along with their respective officers, but the numbers were more ideal than accurate. For the difficulties of determining officer classes and duties, *see* CAPTAIN.

4. During the postexilic period. After the dissolution of the Palestinian kingdoms (in 722/21 and 586 B.C. respectively), separate national existence, and with it the army, came to an abrupt end. The return from exile in 538 B.C. simply meant incorporation into a Persian province. Not until the wars of liberation under the Maccabees was a Jewish army again a reality. Originally this was not an organized army at all, but rather scattered guerrilla bands of volunteers. Under the later Hasmoneans, however, paid soldiers, both Jewish and Gentile, constituted a standing army. Josephus states that John Hyrcanus began the custom of hiring mercenaries (Wars I.ii.5), and that under Alexander Janneus these paid troops consisted specifically of Pisidians and Cicilians (I.iv.3).

When the Hasmonean state came to an end in 63 B.C., Palestine came under Roman rule. Herod the Great as a loyal vassal to Rome not only put his forces at Rome's disposal but also modeled his own troops on that of his sovereign. The presence of Thracians, Germans, and Gauls (Jos. War I.xxxiii.9) as foreign mercenaries undoubtedly helped to fan the hatred which the Jews felt for Herod.

For further information on the functions of the army, *see* WAR, METHODS OF.

Kriegswesen," *Babylonien und Assyrien*, vol. I (1920), ch. 4; A. von Pawlikowski-Cholewa, *Die Heere des Morgenlandes; militärische Beiträge zur Geschichte des nahen und fernen Orients* (1940); A. G. Barrois, "La Guerre," *Manuel d'archéologie biblique*, vol. II (1953), ch. 16. J. W. WEVERS

ARNA är'nə [Lat. *Arna*] (II Esd. 1:2). An ancestor of Ezra; apparently parallel to Zerahiah (Ezra 7:4). J. C. SWAIM

ARNAN är'nən [ארנן; Arab. quick] (I Chr. 3:21). A descendant of Zerubbabel in the extended genealogy of David; son of Rephaiah and father of Obadiah. The KJV speaks of the "sons of Arnan" (MT בני ארנן), but ancient versions are probably correct in reading "his son, Arnan" (בנו ארנן). F. T. SCHUMACHER

ARNI är'nī ['Αρνί; *variant* 'Αράμ] (Luke 3:33). An ancestor of Jesus. On the difficult problems concerning this and other names in the genealogy, *see* GENEALOGY (CHRIST). F. W. GINGRICH

ARNON är'nən [ארנון]. A perennial stream flowing from the plateau of Transjordan through a deep canyon into the Dead Sea, just N of the mid-point of its E shore. The Arnon divided the kingdom of SIHON from MOAB (Num. 21:13, 26), and later was the S boundary of the tribe of Reuben (Deut. 3:8, 16; Josh. 13:16), although Moab frequently expanded N of it. Mesha claimed to have made a highway in the Arnon Valley (*see* MOABITE STONE).

Courtesy of Denis Baly

60. Gorge of the Arnon River, cut in the Nubian sandstone

The source of the Arnon is in the area of Lejjun, whence it flows N-NW for *ca.* fifteen miles and then W about an equal distance to the Dead Sea. The canyon through which the Arnon flows is tremendous, being, e.g., 2½ miles wide in the area S of Dibon, with the river bed 1,650 feet below the top of the cliffs.* The Seil Heidan, the Arnon's most important tributary, enters it from the NE, *ca.* two miles from the Dead Sea. The modern name for the Arnon is the Wadi Mojib. Fig. ARN 60.

Bibliography. F.-M. Abel, *Géographie de la Palestine*, I (1933), 177, 487-89. E. D. GROHMAN

AROD âr'ŏd [ארוד, hunchbacked; *cf.* ארד, ארדון] (Num. 26:17); ARODI —ə dī [ארודי] (Gen. 46:16); ARODITES —dīts. Son of Gad; ancestral head of the "family of the Arodites."

***AROER** ə rō'ər [ערוער, juniper(?)]; AROERITE —īt [ערערי] (I Chr. 11:44). **1.** A well-known city situated on the N rim of the Arnon Gorge. It marked the S extremity of the Amorite kingdom of Sihon (Deut. 4:48; Josh. 12:2) and, consequently, of the territory captured by Israel E of the Jordan (Deut. 2:36; Josh. 13:9). It was fortified by the sons of Gad (Num. 32:34), though originally assigned to the tribe of Reuben, for whom it served as southernmost sentinel (Josh. 13:16). Because of its border position, it was the logical starting point for the taking of David's census (II Sam. 24:5). In the second half of the ninth century B.C., it is mentioned as marking the extent of Syrian occupation of Israel under Hazael (II Kings 10:33) and, on the MOABITE STONE as being fortified by Mesha after his defeat of Israel. When last mentioned in the OT, it was in Moabite possession (Jer. 48:19).

The ancient site is marked by the mound beside the modern village of *'Ara'ir ca.* three miles SE of Dhiban and a short distance E of the N-S route which, from earliest biblical times to the present, has traversed the Arnon. From its magnificent vantage point on the lip of the canyon, it commanded all crossings of the forbidding gorge. Among the ruins occupying the mound are the heavy walls of two strong buildings—possibly fortresses from the Iron and Nabatean periods.

2. A town of Gilead on the border of the inheritance of Gad, located near the Ammonite capital of Rabbah (modern 'Amman) and marking a part of Israel's frontier with Ammon (Josh. 13:25; cf. Judg. 11:33). The exact location is unknown, and its description as "opposite" or "before" Rabbah (Josh. 13:25) does not demand that it be sought to the E of that site. Geographically such a border would be difficult as long as Rabbah remained the capital and chief center of Ammonite strength. A site S of 'Amman, in the vicinity of es-Sweiwina, would seem more appropriate.

3. A town in the S country of Judah, to the elders of which David sent a share of the spoil recovered from an Amalekite band which had raided the Negeb (I Sam. 30:28). The site is to be identified

with modern 'Ar'arah, approximately twelve miles SE of Beer-sheba. "Adadah" of Josh. 15:22 is possibly a corruption of the same name. The Aroerite Hotham, father of two of David's Mighty Men (I Chr. 11:44), was probably a native of this town.

Bibliography. F.-M. Abel, *Géographie de la Palestine,* II (1938), 250; N. Glueck, *Explorations in Eastern Palestine,* I, *AASOR,* XIV (1934), 49-50; *Explorations in Eastern Palestine,* III, *AASOR,* XVIII-XIX (1939), 246-50. W. H. MORTON

AROM âr'əm ['Αρόμ] (I Esd. 5:16). Ancestor of a family who returned from exile with Zerubbabel. The name is omitted in the parallel lists of Ezra and Nehemiah. It may represent HASHUM (Ezra 2:19; Neh. 7:22). C. T. FRITSCH

AROMA. *See* ODOR.

AROMATIC CANE [קנה בשם; LXX κάλαμος] (Exod. 30:23; KJV CALAMUS). Alternately: SWEET CANE [קנה הטוב (KJV CALAMUS); LXX θυμίαμα *in* Isa. 43:24; κιννάμωμον *in* Jer. 6:20; *cf.* Akkad. *qanû ṭâbu*]; CALAMUS [קנה; LXX κάλαμος *in* Song of S. 4:14; LXX *omits in* Ezek. 27:19]. A species of fragrant reed used by the Israelites as a perfume (Song of S. 4:14; Isa. 43:24; Jer. 6:20) and as an ingredient of the sacerdotal "anointing oil" (Exod. 20:23 P). It is commonly identified as the sweetflag (*Calmamus odoratus*), the scented rootstock of which (*Acorus calamus* Linn.) is still employed in confectionery, distilling, and brewing. Described by Ezekiel (27:19) as an import from Uzal—i.e., San'a, the capital of Yemen—and by Jeremiah (6:20) as coming from a "distant land," sweetflag is said by Pliny (Nat. Hist. 12.248) to have been native to Arabia and India. (However, his subsequent statement that an even superior variety of it grows in Syria has not been confirmed.) T. H. GASTER

ARPACHSHAD är păk'shăd [ארפכשד; 'Αρφαξάδ]; NT and KJV ARPHAXAD är făk'săd. The third son of Shem (Gen. 10:22); and the grandfather of Eber (vs. 24), the ancestor of the Hebrews (cf. Gen. 11:10-13; I Chr. 1:17-18, 24). Many attempts at etymologizing this name have been published, but none has gained general acceptance. The first three letters may correspond to Hurrian *arip-;* the last three may represent *Kasd-,* the eponymous ancestor of the Kasdim (i.e., Chaldeans). The Hurrian name Ariphurra, occurring in the Nuzu (Nuzi) Tablets, would thus be an exact parallel, with the second element having ethnic affinities in both cases.

Bibliography. I. J. Gelb, P. M. Purves, and A. A. MacRae, *Nuzi Personal Names* (1943), p. 204. C. H. GORDON

***ARPAD** är'păd [ארפד; Akkad. *Arpadda*]; KJV ARPHAD är'făd in Isa. 36:19; 37:13. A city and a minor state in the N part of Syria. The ruin hill Tell Erfad, *ca.* twenty-five miles N of Aleppo, probably indicates the site. In the Bible the city is always mentioned with the city of Hamath (II Kings 18:34; 19:13; Isa. 10:9; 36:19; 37:13; Jer. 49:23), both being proverbial examples of places destroyed by the Assyrians. The destruction is supposed to have taken place in 738 and 720 B.C.

Bibliography. A. Alt, "Die syrische Staatenwelt vor dem Einbruch der Assyrer," *ZDMG,* N.F. 13 (1934), pp. 233-58. A. S. KAPELRUD

ARPHAXAD är făk'săd ['Αρφαξάδ]. **1.** A king of the Medes (Jth. 1:1-5, 13-15), otherwise unknown to history.

2. NT and KJV form of ARPACHSHAD.

ARRAY, BATTLE [ערך, מערכה, חמשים; *cf.* חלוץ, *as in* Josh. 6:7]. The arrangement of forces on a field of battle in readiness to launch or withstand attack. The expression or similar terminology is used descriptively of a battle (cf. Josh. 1:14; I Sam. 17:10; II Sam. 10:8-17), prophetically (e.g., Jer. 6:23), or figuratively (e.g., Job 6:4, where it is said that God's terrors are arrayed against Job). The quotation in Acts 4:26 of Ps. 2:2 follows the LXX. A figurative use (of ἑτοιμάζω) is found in Rev. 9:7, where it is said that locusts were arrayed like horses in battle.

J. A. SANDERS

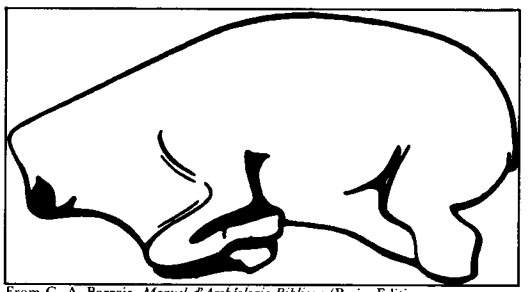
ARRAY, HOLY [הדרת קדש] (I Chr. 16:29; II Chr. 20:21; Pss. 29:2; 96:9); KJV BEAUTY OF HOLINESS. An expression indicating "proper attire" (cf. Egyptian *hʾdrt,* "neckband, necklace") or "proper form." All except one of the passages are poetic and are based on the very old Ps. 29. "Array" (הדרת) qualifying "king" in Prov. 14:28 obviously signifies royal splendor, majesty, or glory, one of whose aspects is a "multitude of people." The word occurs also in Ugaritic (I Krt. 155), where it is in parallelism with "dream." J. M. MYERS

ARROW. *See* BOW AND ARROW.

ARSACES är'sə sēz ['Αρσάκης]. The name or title assumed by the Parthian kings in honor of the founder (*ca.* 250 B.C.) of the dynasty of the Arsacidae. Among the approximately thirty who bore it were Tiridates, Mithridates I and II, and Phraates IV. Those whom Josephus, in the Greek manner, calls Parthians, the E nations referred to as Persians and Medes. I Macc. 14:1-3 relates that Demetrius, having invaded the territories of "Arsaces the king of Persia and Media," was captured and taken before "Arsaces, who put him under guard." Appian says this Arsaces was Phraates, but he appears rather to have been Mithridates I (171-138 B.C.). Josephus (Antiq. XIII.viii.4) relates that Antiochus "lost a great part of his army to Arsaces, and was himself slain." J. C. SWAIM

ARSARETH. KJV Apoc. form of ARZARETH.

ARSENAL [תלפיות] (Song of S. 4:4); KJV ARMORY. A store of battle weapons. The meaning of this Hebrew *hapax legomenon* is unknown; "arsenal" is a conjecture based on the context. "Weapons" and "courses of stone" are other conjectures, based on Arabic etymologies. The use is figurative and poetic. *See also* FORTRESS. J. A. SANDERS



***ART.** We are concerned here with the processes and realizations of painting, carving, engraving, etc., and

with the origin and evolution of decorative themes and patterns, rather than with the nature of the monuments and objects thus decorated. Hence sigillography (i.e., the description and classification of seals; *see* SEALS AND SCARABS); ARCHITECTURE; and iconography (i.e., the study of images, especially divine images; *see* IDOL; IDOLATRY) do not fall within the scope of this discussion. 1. Art in prehistoric Palestine. The earliest manifestations of artistic creativity thus far discovered in Palestine date from the Middle Stone Age (so-called Natufian culture; *ca.* 8000 B.C.), when the cave-dwellers of Mount Carmel and of the hilly country E of the Plain of Sharon carved and engraved their bone implements. Two objects may be singled out: the handle of a sickle haft representing a young fawn in full relief, and a slab of gray limestone with touches of red ocher, showing the profile of a gazelle (Fig. ART 61). There are attempts at representing the human figure, and the skulls of several individuals buried in a cave of the Carmel range were adorned with diadems of *Dentalium* shells. *See* PREHISTORY; MUGHARAH, WADI EL-.

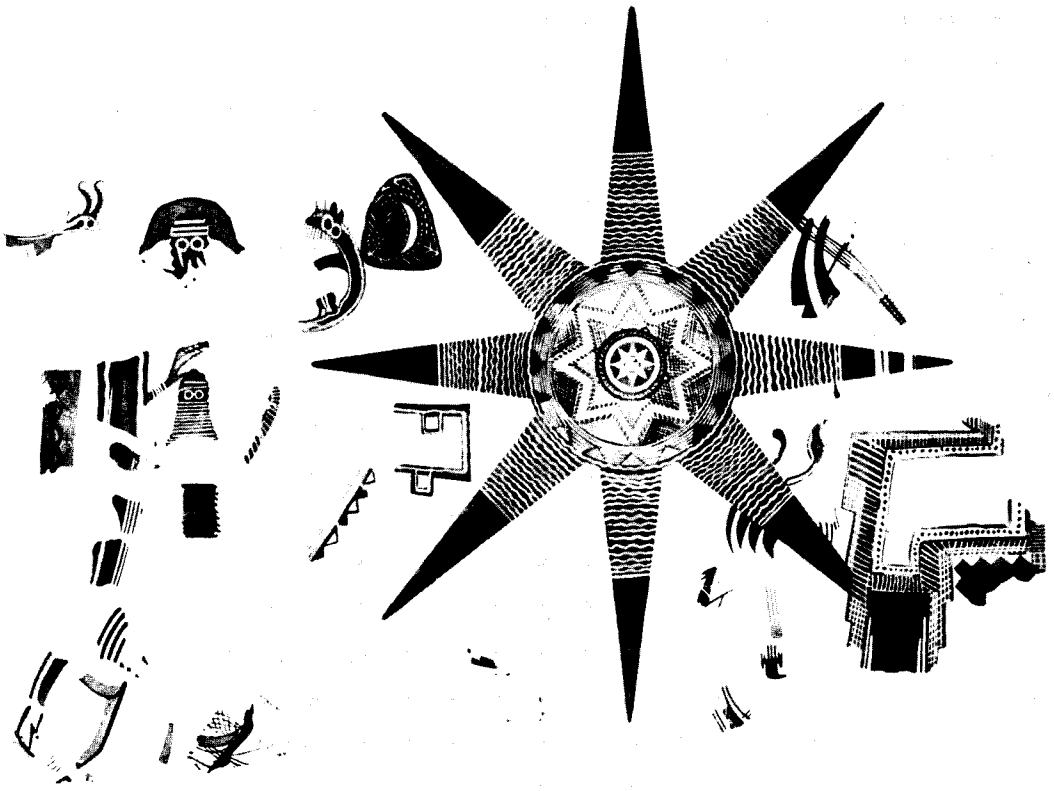
The pre-pottery levels of Neolithic Jericho, tentatively dated *ca.* 6000 B.C., have yielded a number of human masks modeled of lime marl and touched with red paint, the eye globes being represented by means of sea shells. A framework of reeds had been used as a skeleton to mount each piece. These masks occurred apparently in groups of three—man, woman, and child. They were found together with animal figurines (bovines, sheep and goats, pigs) and plastic representations of the human male organs.

From G. A. Barrois, *Manuel d'Archéologie Biblique* (Paris: Editions A. & J. Picard & Cie.), vol. I



61. Mesolithic sculpture of a gazelle from Wadi el-Mugharah

All these objects had possibly a ritual or magic significance, as also the human skulls discovered in a nearby area and in a similar archaeological context. They had been partly completed with fine clay in order to represent live human features. The eye sockets had been filled and inlaid with sea shells, and touches of paint had been applied to indicate eyebrows, eyelashes, etc. Figs. JER 14-15. *See also* JERICHO § 2.

The earliest, and outstanding, examples of wall paintings were found in the ruins of Teleilat Ghassul, a village of mud-brick houses of the Chalcolithic period (*ca.* 3500 B.C.), located in the lower tract of the Jordan Valley, on the E side. The artists, using a fresco technique, made use of mineral pigments, black, dark red, red and yellow ocher, and white. Geometrical patterns, as those used for the decoration of the unbaked earthenware of the same period, were combined with naturalistic motifs. One of the frescoes represents an eight-ray star around which geometrical designs, dragons(?), and masks somewhat similar to those worn by medicine men and sorcerers, were distributed irregularly (Fig. ART 62). On another panel, almost completely ruined, a bird, realistically painted, was seen together with masks like those of the star painting. There remained only the lower rim of a third painting, and the interpretation of what has been registered by archaeologists is rather hopeless. There was possibly a star in the left corner; a man, whose legs only are visible, turns his back to this emblem, and faces a series of figures, human or animal, whose feet are the only part still visible. It would be idle to attempt an interpretation of the scenes represented, because of the poor state of preservation of these frescoes.

2. Canaanite art. We use the ethnical term "Canaanite" for the populations of Palestine, predominantly Semitic but widely open to diversified cultural and artistic influences, prior to the definitive settlement of the Israelite tribes in the course of the thirteenth century B.C. Their artists drew their inspirations and techniques from Mesopotamian, Egyptian, Anatolian, and Aegean—i.e., pre-Hellenic—sources. Now the blending of these various elements was never a simple affair, but the result of complex interreactions. As a matter of fact, the art of ancient Asia Minor resulted from the modification of Mesopotamian themes in Hurrite, Mitannite, and Hittite workshops. The art of the eighteenth Egyptian dynasty is in itself a syncretism, and the cultural and artistic connections between the Aegean world and the E Mediterranean seaboard never ceased to work in either direction, from the Asiatic mainland to Cyprus and the isles, and from the isles to the Phoenician coast. For these reasons the process of fusion of the various strains was never completed, and did not result in anything organically unified or stable. The progress of Canaanite art, negligible during the Early Bronze Age (*ca.* 3000-2000 B.C.), when Anatolian influences were first felt along the Syro-Palestinian coast, flourished during the Late Bronze Age (*ca.* 1600-1200 B.C.), presumably because of an increased interchange with the fast-developing pre-Hellenic cultures.

a. Ugaritic art. Even though the classification of the people of Ras Shamra (Ugarit) on the Syrian coast as Canaanites may be challenged linguistically, yet their productions from the fifteenth to the fourteenth century B.C. are good illustrations of the com-

62. Chalcolithic-period fresco from Teleilat Ghassul

posite art which flourished in Canaan until the Israelite conquest. Nothing is more revealing, from this particular standpoint, than the images of the gods of UGARIT. An outstanding example is a limestone stele representing the thunder-god. The god is standing. In his right hand he holds a mace; his left hand strikes downward with a spear, most likely the symbol of lightning, as the flamelike appendages of the butt end are meant to show. The Egyptian influence is obvious if one considers the tight loincloth, and the left shoulder seen full-face, while the head, body, and legs appear in right profile. However, the helmet, the pigtails, and the curved dagger are definitely borrowed from the art of Asia Minor, while the little figure shown in front of the god, probably the dedicator, is dressed in long, fringed Syrian robes (Fig. UGA 6). The same mixture of Egyptian and Asian features appears, in varying proportions, in other reliefs and statues. In contrast with these, an ivory plaque representing a female deity seated on a mountaintop and holding ears of corn, while two wild goats stand on their rear legs right and left of the goddess, shows an unadulterated Mycenaean influence. Still, the symmetrical disposition of the animals facing each other ultimately originates in the early phases of Mesopotamian art. Fig. UGA 5.

Decorative patterns using naturalistic or mythological motifs also reveal the composite nature of Ugaritic art, as can be seen from a golden paten representing a charioteer hunting a herd of wild oxen with bow and arrow, while an antelope gallops by the side and a large mastiff follows the chariot. The well-balanced composition and the dynamic character of the animal representation are typically Aegean; the artificial combination of profile and full-face shoulder of the charioteer belongs to the Egyptian tradition, while the chariot, the harness, and the

From Schaeffer, *The Cuneiform Texts of Ras Shamra-Ugarit* (British Academy, Schweich Lectures, 1937)

63. Golden patera of king of Ugarit(?) hunting (fifteenth or first half of fourteenth century B.C.)

manner of hunting seem to originate in the art of Asia Minor rather than in Egyptian art.* The integration of disparate elements is complete in the decoration of a gold cup adorned with a frieze of sphinxes, winged figures, and stylized animals converging toward the emblem known as "tree of life." with its symmetrical volutes and palmated motifs. Fig. ART 63.

b. Sculpture in Canaanite Palestine. The few monuments which can be ascribed to the Canaanites, in contradistinction to foreign products such as Egyptian steles or reliefs found in Palestine, are generally uninspiring imitations of foreign models and patterns, the specific details of which were often misunderstood by the local artists. During the intermittent Egyptian occupation of Palestine under several Pharaohs of the eighteenth and nineteenth dynasties, stone carvers from Beth-shan had sculptured steles and votive plaques of limestone for the temple of the local god, Mekal, and his female consort, which were worshiped by the indigenous population as well as by the Egyptian commanders and the personnel of the garrison. One such stele dedicated to Mekal, as we learn from the crude hieroglyphic inscription, represents the god in right profile, seated on his throne, and receiving an offering of lotus flowers by two Egyptians. The sculptor did his best to give the "Egyptian look" to his god by conventionally representing the left shoulder full-face, and by placing in the left hand of the god the *was* scepter and in his right hand the *ankh* symbol of the Egyptian deities. But the full beard, the horns, the high pointed bonnet unwittingly substituted for the white crown of the Pharaohs, with a long streamer ending in a lotus flower, would never have been dreamed of on the banks of the Nile. (Fig. BET 36.) A small plaque representing the female deity of Beth-shan, with Egyptian emblems arbitrarily chosen and associated with fancy motifs, belongs in the same category as the stele of Mekal. Fig ASH 91.

The relief carved toward the twelfth century B.C. on a stele found at the Khirbet Balu'a in Transjordan shows a similar combination, by local craftsmen, of Canaanite and Egyptian elements: a male figure, dressed in flowing oriental garments, and wearing a headdress like that of the *Shasu*-Bedouins represented on Egyptian reliefs from Seti I to Rameses III, stands in left profile between two unidentified deities, male and female, whose emblems were borrowed at random from the current iconographic repertory of Egypt. Fig. MOA 61.

A bronze statuette from Megiddo, overlaid with gold foil, represents a Canaanite deity seated on a throne, dressed with a tight ankle-long garment, and wearing a conical tiara.* This statuette, dating from *ca.* the thirteenth century B.C., is reminiscent of similar figurines from Byblos and from Ras Shamra. The posture might suggest an Egyptian influence, except for the extended forearms; the features, however, recall Mesopotamian models. Figs. ART 64, UGA 7. *See also* MEGIDDO § 3*c*.

The legacy of the arts of Asia Minor and N Syria is undeniable in the case of a stone panel found in Beth-shan and tentatively dated from the fourteenth century. It consists of a heavy slab of basalt representing the fight of a lion and a mastiff (Fig. BET 37).

Courtesy of the Oriental Institute, the University of Chicago

64. Baal figurine of bronze, covered with gold; from the Megiddo Late Bronze temple

It is stylistically related to the massive statue of basalt and an orthostat of the same material, decorated with the figure of a roaring lion whose rear legs are disproportionately small, discovered in a thirteenth-century Canaanite temple at Hazor (Fig. ART 65). Affinities with the art of Asia Minor may be recognized also in the decoration of the so-called "altar" of Taanach, made of terra cotta, and which is in reality a stand for placing offerings and possibly for burning incense. Its side panels show the superposed profiles of winged four-footed animals, the heads of which were modeled in full relief. A floral ornament with multiple volutes, however, must be traced back to Aegean models. This object is not accurately dated. Fig. ART 66.

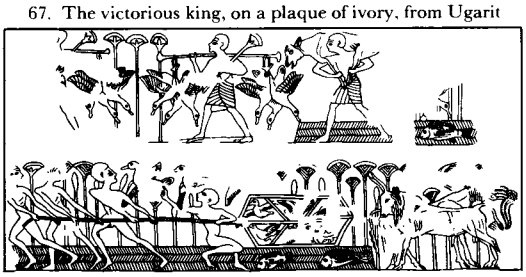
66. Incense altar, from Taanach



As for the countless clay figurines, the nature, typology, and even the chronology of which are far from being well defined, they can scarcely be considered as works of art, if by this are meant those productions in which the imagination and inventive genius of the craftsman play the major role. There is scarcely any justification for discussing here either these objects or the earthenware vessels modeled in the shape of grotesque (intentionally or not) human figures by local potters, and appropriately nicknamed "toby-jugs" by some archaeologists. Exceptionally, two goblets of high-glazed ware from Tell Abu Hawam near Haifa, representing respectively a woman's head with ear and nose rings, and a ram's head, may be listed as local artifacts showing a strong affinity with similar objects, artistically somewhat poorer, of Ras Shamra and Cyprus. The human masks decorating the lid of pottery sarcophagi found in various sites of the coastal plain, in the necropolis of Beth-shan, and one of them even in Transjordan, may also be mentioned, on account of a possible link with the art of the golden masks of the royal tombs of Mycenae. The crude Palestinian substitutes for the latter date from the end of the Late Bronze and Early Iron Age, a period which coincides with the greater expansion of the Philistines. Fig. BET 38.

*c. **Ivory carving.*** Whereas the artistic level of Canaanite sculpture is distressingly low, the ivory carvings are abundant and unusually attractive.* They reveal not only an able technique, but also a great ingenuity on the part of the artists in combining patterns and motifs drawn from heterogeneous sources. An ivory plaque from Lachish (thirteenth century B.C.) shows in a continuous frieze bulls and lions fighting, while an eagle or vulture hovers over the scene. This theme is common in the glyptic of Mesopotamia, where it has mythological connotations. A box of ivory from Tell el-Far'ah in the Negeb is adorned with scenes which point to Egyptian prototypes, a banquet scene and the capture of wild ducks

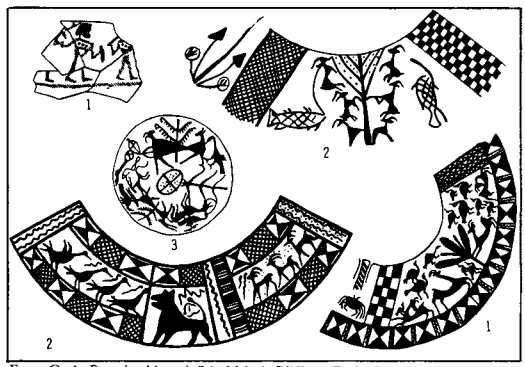
70. An ivory plaque from Megiddo, showing tribute-bearers and captives before the prince seated on a throne (*ca.* thirteenth century B.C.)

in the marshes.* Miscellaneous details betray non-Egyptian influences—viz., Syrian (the costumes in the banquet scene), Mesopotamian (the palm trees), and Aegean (the bullocks standing at the edge of the thicket). This object cannot be dated with absolute precision; it may not be older than the twelfth century B.C. Figs. ART 67; 68; 69.

Most important is a collection of sculptured and engraved ivory inlays from Megiddo, dating from the early twelfth century B.C. They show forth an amazing variety of decorative themes, ranging from geometrical patterns to the palmated ornaments and the volutes so common in the art of Cyprus and of the Phoenician coast, to figures from the religious iconography of Egypt, and to naturalistic animal figures and scenes. These inlays once decorated the palace and the furniture of one of the Canaanite chieftains who held the fortress of Megiddo prior to the centralized rule of the Hebrew kings. Two pieces of the collection deserve a special mention. The first one is a long, thin plate of ivory, on which a scene was engraved, which might be entitled "the king's triumph." The right half represents the king, standing on his chariot, ahead of which march a musician and a warrior, while two naked prisoners have their hands tied to the harness of the horses. On the left half of the ivory, the queen is shown presenting flowers to her lord, who sits on his throne and sips from a bowl a brew which stewards actually prepare behind the throne. Egyptian conventions and techniques are combined here with local and foreign elements, such as the long Syrian garments, and the winged solar disk, which is of the Asian, not Egyptian, variety. (Fig. ART 70.) The other outstanding piece of the treasure of Megiddo is an ivory casket decorated with sphinxes and lions carved in high relief. The sphinxes resemble more the prototypes from Asia Minor than Egyptian sphinxes, and the entire object reminds one of the massive bases on which stand the statues or emblems of Hittite deities. (Fig. ART 71.) Articles of daily use, such as combs, mirror and spoon handles, game boards, etc., were similarly enriched with engraved geometrical patterns and with animal figures, realistic and mythological. *See* IVORY.



d. Decorative themes of painted pottery. The purpose here is not to list the numerous varieties of painted pottery, for this task does not belong in art history, but rather in the history of the ceramic industry. The following is an attempt to analyze selected patterns used in the decoration of earthenware vessels, inasmuch as they cast some light on the sources, resources, and development of Canaanite art as a whole.

One class of painted pottery from the initial phase of the Late Bronze Age (*ca.* 1500 B.C.) is particularly instructive from this point of view. It consists in large vessels, pots, and craters found on various Palestinian sites such as Tell el-'Ajjul, Tell el-Far'ah, Lachish, and Megiddo. In contrast with the imitation of Aegean geometrical designs then fashionable in Palestine, they show forth a combination of stylized motifs with realistic animal representations, within panels separated by straight or wavy lines,

75. "Philistine" painted pottery: (1) from Beth-shemesh; (2) from Sharuhen (Tell el-Far'ah)

and rows of triangles, checkerboard designs, etc. Two colors are used, red and black or sepia.* Vessels similarly decorated have been found on the island of Cyprus, and this style of ceramic painting may accordingly be described as Mediterranean. The motifs inside the panels, which had obviously become the common good of the pottery painters of Cyprus and the Syro-Palestinian coast, go back partly to old Mesopotamian prototypes; this is certainly the case for the symmetrical group of the stylized tree, at times identifiable as a palm tree, and of the antelopes or wild goats; also for the theme of the cranes picking at each other or at a dead fish. These two themes are attested since the beginning of the second millennium in the art of lower Mesopotamia, a land of palm groves, channels, and lagoons, where cranes and gulls wade and catch fish on the shoals. Figs. ART 72-74.

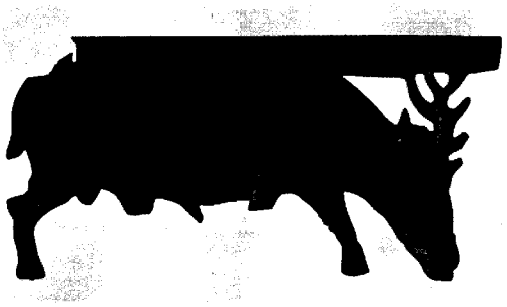
During the initial phase of the Early Iron Age, *ca.* 1200 B.C., another class of painted jugs and craters, with spiral decorative patterns and overstylized large birds turning their heads to smooth their feathers, has been attributed to the Philistines, on the grounds of their being found almost exclusively on sites of the coastal plain of Palestine.* Their style suggests a strong Mediterranean influence, as can be shown from analogies from the pottery of Ras Shamra (Ugarit), and from sub-Mycenaean wares found in the isles and on the Greek mainland. Figs. ART 75; PHI 50. *See also* PHILISTINES § 3*d*.

3. Hebrew art. When they established their rule in Palestine, the Hebrews had no artistic tradition of their own. This is quite natural on the part of tribes which had been forced to keep on wandering because of political circumstances, but it is also true of these clans or fractions of clans which had eventually managed to settle prior to the days of Joshua. At any rate, the troubled period which followed the Conquest, and which was brought to an end by the rise of the Davidic dynasty, was not favorable to artistic creativity. Not until the reign of Solomon did art flourish again in Palestine, and still the Israelites had to rely largely on foreign craftsmen, resources, and techniques, as can be inferred from such texts as I Kings 5:6, 18; 7:13-14; II Chr. 2:7, 14. The construction and the furnishing of the temple and of the palaces of the kings of Judah and Israel seem to have drained nearly all the artistic potential of the Hebrews. Household utensils, earthenware vessels, miscellaneous objects in the production of which the Canaanite craftsmen had exercised their artistic gifts, were now manufactured, not without a certain technical ability, but without much regard for aestheticism. *See* POTTER.

a. Decoration of the temple. The art of Solomon's temple is known to us through the descriptions given in I Kings and II Chronicles. Now these texts are not to be read as if they were the record of the architect's specifications, or a technical description of the building and the furnishings. They were compiled by scribes who were no art specialists, but whose chief concern was to convey in their writings some idea of the unique splendor of the "house of Yahweh." It is even probable that at least those responsible for the final redaction had not actually seen the monument.

In spite of the fact that nothing is left from the temple, and despite the lack of precision and incompleteness of the texts, often corrupted in the process of transmission, it is nevertheless possible to obtain some idea of the general disposition of the buildings and of their decoration. As the latter goes, the Bible records suggest that the inner walls of the sanctuary, doors, passages, etc., were covered with sculptured panels of wood brightened with gold inlays (or gold

foil). The Hebrew terms that are used in the description of the ornamental patterns and motifs of these panels, as well as of the furnishings of the temple, are obscure, and their translation in the various versions is only tentative and often inconsistent. The passages relative to the temple itself mention ornaments from the plant world geometrically arranged, and live figures coming under the name of cherubim (*singular* "cherub"; *see* CHERUB 2). Among the former, the RSV names gourds, open flowers, and palm trees (I Kings 6:18, 29, 31, 35, and parallels). The cherubim of the temple may be understood as composite creatures, with human faces and wings, akin to the winged figures guarding the doorsteps of the gods in the temples of Mesopotamia and Asia Minor, while the cherubim of the ark as described in Exod. 25:18-20 may be closer to the winged figures painted on the panels of the processional shrines of Egyptian deities, from the Eighteenth Dynasty onward. Analogies to both types abound in the art of the ivory carvers (*see* § 3*b below*). The capitals of the pillars JACHIN AND BOAZ, and the other utensils of the cult, were also decorated with ornaments from the plant world in geometrical patterns, identified in the RSV as pomegranates, lilies, palm trees, flowers, and gourds (I Kings 7:18, 22, 24, 26, 36, 42, 49, and parallels). Figures of oxen adorned the square basis of the huge vat known as the Molten Sea (*see* SEA, MOLTEN), arranged three on each side (I Kings 7:25; II Chr. 4:4. Fig. SEA 34). The analogy of N Syrian and Hittite pedestals of divine emblems and statues comes here to mind. Cherubim and animal figures, lions and oxen, on the side panels of the bronze wagons for carrying water (I Kings 7:27-37 and parallels), point to similar analogies. As a whole, all this ornamentation runs parallel to what we know of the syncretistic art of Syria and Palestine, so well exemplified in the ivory carvings. What is distinctive in the sacred art of the Hebrews is that it involves a certain "demythologization" of foreign symbols, or at least an adaptation of the same in view of Yahweh worship.



It is about pointless to attempt to define, even tentatively, the art of the TABERNACLE, on the basis of Exod. 25–27. As the description reads now, its primitive elements, scarce and not explicit, were combined with anachronistic details drawn from the description of the Jerusalem sanctuary and artificially transposed to suit the portable nature of the tabernacle and its furnishings.

b. Ivory carving. The art of the Canaanite ivory carvers (*see* § 2*c above*) revived with the rise of the various W Semitic monarchies, following the artistic vacuum caused by the troubled period in the course of which the Israelites conquered Palestine. Occasional references to the decoration of houses and furniture by means of ivory inlays are found in the Bible (I Kings 10:18; 22:39; Amos 3:15; 6:4). These references are adequately illustrated by two important collections of ivory plaques. The first one, discovered in the ruins of the Assyrian palace at Hadatu (Arslan Tash), can be dated with precision, since a thin plate of ivory engraved with a dedicatory inscription in Aramaic mentions the name of Hazael, king of Damascus, who was defeated by Shalmanezer III in 841 B.C., and whose palace was

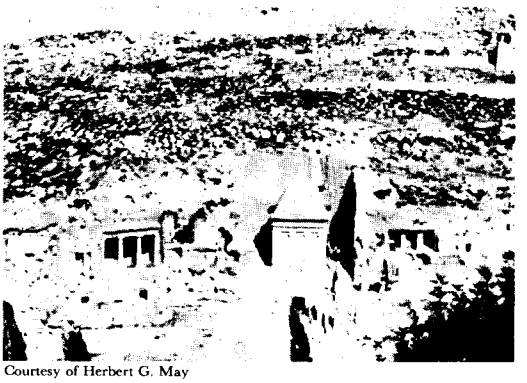
79. Ivories from Arslan Tash



plundered, his treasures being carried away as booty and placed by the conquerors in the palace of Hadatu. The ivories of Arslan Tash, occasionally brightened with gold foil, show a great variety of motifs such as sphinxes, female winged figures facing one another on each side of the familiar tree pattern with its volutes and palmated ornaments, and a woman's face appearing in a threefold window frame. These motifs are treated in the manner of the Egyptian art of the New Empire, which itself is a syncretism drawing at least in part from oriental and Mediterranean sources. The craftsmen who carved the Arslan Tash ivories copied the Egyptian themes quite freely, transforming emblems and symbols having a theological significance into mere ornaments. Some pieces show an affinity with Assyrian prototypes, especially a plaque representing a bearded man standing full face, wrapped in a fringed shawl. Animal motifs such as the cow turning her head to lick her suckling calf, and the stag grazing, are borrowed from the Aegean repertory, while lion heads in full relief bring us back to oriental traditions. Figs. ART 76-79; ARC 43.

Another collection of ivories comes from the excavation of the royal palace of SAMARIA. Some plaques, enriched with gold foil and inlays of blue stone and glass paste, show genuine Egyptian motifs, such as Harpocrates in the lotus flower, Isis and Nephthys adoring the *djed* pillar. Others reproduce some of the most conventional types of the collection of Arslan Tash—the sphinxes, the woman in the window, etc. Figs. INL 8; IVO 22; WIN 22.

These examples, as well as the much-dilapidated ivories of Nimrud, the biblical Calah in Mesopotamia, obviously the booty of some expedition in Syria or Palestine, give evidence of a most active industry of ivory carving in the Semitic West, toward the ninth-eighth century B.C.

4. Jewish art. This section will not deal with the productions of foreign art, Hellenistic or Roman, on Palestinian soil, but rather with specifically Jewish artistic achievements. These are understandably rare and poor in the postexilic period, when home-coming exiles struggled for existence, as well as during the long fight of the Jews for independence from the Seleucid kings. They are more numerous, while still at a mediocre artistic level, when the Jews obtained a limited autonomy under their own rulers, or political freedom within the framework of the Roman imperial administration. Jewish art, however, was never entirely original, influenced as it was by the cultural and artistic expansion of Hellenism in West Asia, which resulted in an all-pervading, vigorous Greco-oriental syncretism. Examples of it abound in Palestine and the neighboring countries—the painted tombs of the Hellenized Sidonian colony of Marissa in Idumea, with their mythological motifs, and the mixture of animal figures, local and exotic, with a fantastic fauna of chimeras, griffins, and phoenixes; Nabatean and Palmyrenian tombs and temples with their sculptured or painted decoration; the pseudo-classic Herodian buildings. Jewish art in the Hellenistic and Roman periods is a particular variety of this widespread artistic koine. The decoration of Herod's temple may have been the paramount achievement of this art, but nothing of it is left, and Josephus' descriptions are utterly insufficient, as far as style and technique go.

a. Decoration of funeral monuments. The richest Jewish rock-cut family sepulchres toward the end of the pre-Christian era were often adorned with columns imitated from the classical orders of architecture, Doric and Ionic, together with Egyptian and Asian elements, such as pyramidal structures, floral motifs, and deep concave moldings. The group of tombs located in the upper valley of the Kidron at

Courtesy of Herbert G. May

80. The tomb of the Hezir family in the Kidron Valley

the foot of the Mount of Olives offers good examples of this oriental syncretism; cf. the monuments commonly referred to as tombs of Absalom, Zechariah (Zacharias), and James (the lesser); also the tomb of Queen Helena (of Adiabene), erroneously labeled Sepulchre of the Kings, in the N suburb of Jerusalem (Pl. XXV*a*). The triangular gables of some monuments, such as the so-called tomb of Jehoshaphat in the Kidron Valley,* the tomb of Queen Helena, and the so-called tomb of the judges in the NW necropolis, are filled with intricate motifs from the plant world. Figs. ART 80-81.

81. Vestibule of the so-called "Tomb of the Judges," in the Sanhedrin area, Jerusalem (probably *ca.* 150 B.C.)

b. Decoration of the early synagogues. The façades of some Galilean synagogues—e.g., at Kefr Bir'im and Tell Hum (Capernaum)—none of which is anterior to the third Christian century, were lavishly decorated with sculptured vegetable ornaments similar to those seen on the gables of Jewish rock-cut tombs, with the addition of a few typical emblems

83. Frieze from the Roman-period synagogue at Capernaum

such as the seven-branch candlestick, the six-pointed "Star of David," the Torah-shrine, the wheeled chariot of I Chr. 28:18, and, quite unexpectedly, figures of Eros and sea horses. Figs. ART 82-83.

Human and animal figures are common on the mosaic pavements of Palestinian synagogues of the fourth-fifth century of our era. Originally pagan motifs from the mythology, such as the chariot of the sun-god, the figures of the zodiac and of the seasons, were borrowed without qualm by Jewish artists and combined with their own emblems, among which the candlestick and the Torah-shrine are favorites. An outstanding example is the pavement of the synagogue at Beth Alpha in the E portion of the Plain of Jezreel (Fig. SYN 100). Some iconoclasts, however, systematically destroyed the figures of the zodiac of the synagogue of 'Ain Duk near Jericho, and hammered the Eros and animal figures of Capernaum. The mosaic pavement of the synagogue of Djerash (Gerasa) featured the theme of animals seeking refuge in Noah's ark.

Wall frescoes, executed in a technique and style similar to those of Roman and Alexandrian paintings, decorated the synagogue of Dura-Europos on the Euphrates (third century). They represented miscellaneous episodes from the entire Bible—the child Moses rescued from the Nile, the well of Moses at Beer, the ark of the covenant causing havoc in the country of the Philistines, the anointing of David, Elijah's sacrifice on Mount Carmel, Mordecai honored by Ahasuerus, etc. Such an epitome of biblical history was, of course, best adapted to the very purpose of a SYNAGOGUE building, which is above all a place of instruction. ARTAXERXES är'tə zûrk'sēz [Heb.-Aram. ארתחשסתא, ארתחשסש (*Papyri*); Old Pers. *artaxšaça;* Elam. *ir-tak-ša-aš-ša;* Akkad. *ar-tak-šat-tu;* 'Αρταξέρξης]. **1.** Artaxerxes I (465-425 B.C.), son of Xerxes I; known as Macrocheir (Μακρόχειρ) or Longimanus. He overcame revolts in Egypt, where, with Athenian support, unrest started in 460 and lasted until 454, and in other parts of the Persian Empire. During that time some of the E possessions were lost. By the peace treaty of Callias (449), signed at Susa, the relations between Athens and Persia were stabilized on a *status quo ante bellum* basis. Artaxerxes was buried at Naqš-i Rustam next to the tombs of his father and grandfather.

85. Alabaster vase of Artaxerxes I with his name in Old Persian, Elamite, Babylonian, and Egyptian

Artaxerxes I authorized Ezra's mission to Jerusalem in 458 (Ezra 7:8, 11-26). He temporarily halted the reconstruction of Jerusalem (4:7-23). Nehemiah's two missions were under his reign and with his permission, the first in 445 (Neh. 2:1 ff; 13:6). *See* EZRA AND NEHEMIAH, BOOKS OF. Fig. ART 85.

2. Artaxerxes II (404-359 B.C.), son of Darius II and grandson of Artaxerxes I; known as Mnemon (Μνήμων). He crushed the rebellion of his brother Cyrus (Battle of Cunaxa, 401), as related by Xenophon in his *Anabasis*. He lost Egypt probably in 402 or 401, repelled the meddling of Sparta in the affairs of Asia Minor (Peace of Antalcidas, 386), and suppressed other rebellious movements led by local satraps. Several of his inscriptions refer to his building activities. The palace he built at Susa is considered by some authorities to be identical with the palace described in Esth. 1:5-6. *See*, however, AHASUERUS.

ARTEMAS är'tə məs ['Αρτεμᾶς, *short for* 'Αρτεμίδωρος (Artemidorus) given by ARTEMIS] (Tit. 3:12). An early Christian. Paul expected to send Artemas or Tychicus to Titus in Crete so that Titus could join Paul in Nicopolis. B. H. THROCKMORTON, JR.

ARTEMIS är'tə məs ['Αρτεμις]. A goddess of the most diverse characteristics, worshiped more widely than any other female deity in the communities of the Greek world and identified with the Latin Diana among the Romans. In classical mythology Artemis

is the sister of Apollo, daughter of Leto and Zeus; the virgin huntress, protector of the chastity of her nymphs and devotees; a moon-goddess; the patroness of maidens of marriageable age, the helper of women in childbirth, and the giver of a gentle death to women. But in the popular religion, the traits of tenderness are not so marked; even in later times she retains striking aspects of savagery. Her cult shows numerous traces of totemism. Several animals are sacred to her—the stag, the wild boar, the hare, the wolf, the bear, and in some cases birds and fishes; but it is noteworthy that none of these is a domestic animal. She is pre-eminently a goddess of wild nature, of the hunter and the fisherman rather than of the cultivator of the soil.

The Artemis of the Ephesians (Acts 19:23-40; KJV "Diana of the Ephesians") has little but the name in common with this Hellenic goddess and nothing at all in common with the Latin Diana. She is really a form of the Asian mother-goddess, and was worshiped in a primitive sanctuary near the mouth of the Caÿster for centuries before the first Greek settlers arrived to found the city of Ephesus (*ca.* 1100 B.C.). For a long period, she was the focal point of indigenous resistance to the Greek city, but toward 800 B.C. she had been adopted by the Greeks and a new temple had been laid out for her close to the city. Lydians and Persians contributed to its magnificence and introduced new elements into the cult, which was sensuous and orgiastic but not impure.

The Ephesian Artemis was not a virgin huntress, but a fecund mother; not a moon-goddess, but a goddess of fertility in man and beast and vegetation. Her temple was a huge landholding corporation served by eunuch-priests called *Megabuzoi* (a Persian title); by other attendants called Essenes, who were subject to rigid rules of purity and abstinence; and by thousands of female slaves, hierodules. It appears that the latter were not prostitutes, as was the case in nearly all the other cults of the Great Mother in Anatolia. Her worship was not confined to Ephesus, but was practiced in nearly all the cities of Asia, in many places on the Greek mainland, in the S of Gaul, in Syria, and in Rome itself; so that there is no exaggeration in the description of her magnificence as one "whom all Asia and the world worship" (Acts 19:27). It is probable that her primary image, which was preserved in the sanctuary of the temple at Ephesus, was a meteorite (Acts 19:35: "the sacred stone that fell from the sky"[?]); but she was usually represented in sculpture as a female figure with multiple breasts, with lions, bulls, and rams worked in relief upon her shoulders and legs, with a bee just above her feet, and her head surmounted by a turret-crown; the lower part of the body is not fully shaped to human form. The "silver shrines of Artemis" made by Demetrius (Acts 19:24) were not images, but were probably replicas of the primitive sanctuary which was replaced by the great temple of the later period. The title νεωκόρος ("temple keeper"—lit. "temple sweeper") was accorded officially by the Romans, usually in connection with the imperial cult, but there is evidence from coins and inscriptions that Ephesus was acknowledged as temple keeper both of the emperor and of Artemis. Figs. ART 87; SAR 26. *See also* GREEK RELIGION AND PHILOSOPHY § 4*b*.

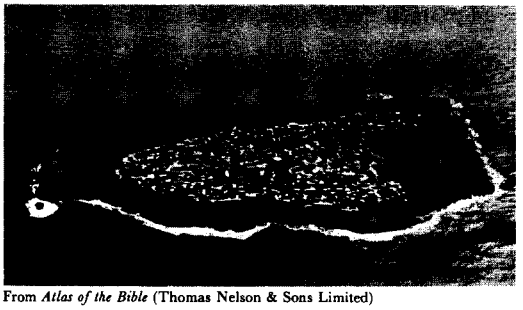
87. Coin showing the temple of Diana (Artemis)

Bibliography. W. M. Ramsay, *Cities and Bishoprics of Phrygia* (1895); L. R. Farnell, *Cults of the Greek States,* vol. II, c. XIII (1896); D. G. Hogarth, *British Museum Excavations in Ephesus: the Archaic Artemisia,* 2 vols. (1908). F. W. BEARE

ARTIFICER. KJV translation of חרש in Gen. 4:22 (RSV "forger"); I Chr. 29:5 (RSV "craftsman"); II Chr. 34:11 (RSV "carpenter"); Isa. 3:3 (RSV "magician"). *See* CARPENTER; MAGIC; METALLURGY.

ARTILLERY. KJV translation of כלי (RSV "weapons") in I Sam. 20:40. *See* WEAPONS AND IMPLEMENTS OF WAR.

ARTISANS. *See* CRAFTS.



ARUBBOTH ə rŭb′ŏth [ארבות] (I Kings 4:10); KJV ARUBOTH ə rōō′bŏth. A town in one of Solomon's twelve administrative districts, where Benhesed, an official of Solomon's court, was charged with the responsibility of collecting provisions. Recent studies favor a location in the territory of Manasseh, between Megiddo and Samaria. Though the administrative district may not have been identical with the territory of Manasseh, it is probable that Solomon did not ignore completely the old tribal lines when he set up his system of taxation. It has been proposed that modern 'Arrabeh, *ca.* nine miles N of Samaria, is the site of ancient Arubboth. ARBATTA (I Macc. 5:23) was perhaps the form of the name in the Maccabean period.

Bibliography. W. F. Albright, "The Administrative Divisions of Israel and Judah," *JPOS,* V (1925), 25-31.
W. L. REED

ARUMAH ə rōō′mə [ארומה] (Judg. 9:41). The place of residence of Abimelech after he had been driven from Shechem. In vs. 31 the RSV emends to read "Arumah" (תרמה, *tormâ;* KJV "privily"). The name Arumah should be read in vs. 31 as well as in vs. 41; Abimelech could have launched his attack upon Shechem from the same place to which he later retreated.

The exact location of the city is unknown. An Arumah is mentioned in an Assyrian inscription of Adad-nirari III, but without a specific location. It is not likely that the city is to be identified with RAMAH near Lydda, or with ARIMATHEA. Some scholars identify Arumah with El 'Ormeh, located *ca.* halfway between Shechem and Shiloh.
W. L. REED

ARVAD är′văd [ארוד; Akkad. *Armada, Aruda, Aruadi;* Amarna *Arvada*]; ARVADITE är′və dīt. A

From *Atlas of the Bible* (Thomas Nelson & Sons Limited)

88. The island of Arvad (modern Erwad)

city and a minor state in N Syria, on an island of the same name, near the coast. The island is found between Tripolis and Ladhigiyeh and is now called Ruad. The people of Arvad, the Arvadites (ארודי), are mentioned in the genealogy of Noah as sons of Canaan (Gen. 10:18; I Chr. 1:16). They were famous as sailors and warriors and served in the navy and the army of the rich city-state TYRE (Ezek. 27:8, 11). The city existed also in Greek and Roman times, and appears in I Macc. 15:23 under the name Aradus.

Fig. ARV 88. A. S. KAPELRUD

ARZA är'zə [ארצא, gracious(?)] (I Kings 16:9). Elah's chamberlain at Tirzah, in whose house the latter was assassinated, while drunk, by Zimri.

ARZARETH är'zə rĕth [ארצ אחרת, another land (*cf.* Deut. 29:28—H 29:27)] (II Esd. 13:45); KJV ARSARETH är'sə rĕth. A distant region beyond the Euphrates River where the ten tribes supposedly went after they were taken captive into Assyria, and from which they will return in the last days.

C. T. FRITSCH

ASA ā'sə [אסא, he has given, *with hypocoristic* א, *and root 'wš,* to give]. **1.** King of Judah *ca.* 913-873 B.C.; son and successor of Abijah.

The name is perhaps a contraction of אסאאל or אסאיה, "God (or Yahu) has given." The root, however, may be the Arabic *'asā,* "to heal," and the name may mean "healer" (cf. Aramaic אסיה, a "medical man"); thus perhaps the name means "God (or Yahu) has healed" and indicates a duty that was laid upon the king.

Asa reigned forty-one years. His mother's name is given as Maacah the daughter of Abishalom (I Kings 15:10). But this was also the name of his grandmother (vs. 2). The easiest correction is arbitrarily to change "his son" (I Kings 15:8; II Chr. 14:1—H 13:23) to "his brother," thus making Asa the younger brother of Abijah. The Chronicler actually gives King Abijah two mothers—Maacah the daughter of Absalom (II Chr. 11:20) and Micaiah (Greek Maacah) the daughter of Uriel of Gibeah (13:2). The probable explanation is that confusion arose in the traditions because of the similarity of the names. We may conjecture that Abijah's mother was Micaiah the daughter of Uriel of Gibeah and that Asa's mother was Maacah the daughter of Absalom. The whole section (II Chr. 11:18-23), which makes Rehoboam's favorite wife Maacah the daughter of Absalom, is an intrusion into the Chronicler's account from another source.

Asa was remembered by later tradition as a loyal supporter of Yahweh. In keeping with this character he instituted a series of reforms to rid the land of heathen deities and practices (I Kings 15:12). The Chronicler reports a more sweeping reformation in two stages, culminating in a great sacrifice in Jerusalem in the third month of the fifteenth year of Asa's reign (II Chr. 14:2-5—H 14:1-4; 15:8-15). These, however, are parallel passages. In addition, Asa removed Maacah from being queen mother because she had made an image for Asherah, the Canaanite goddess of fertility, and worshiped it. Because the climax of these reforms took place in the fifteenth year of Asa's reign, according to the Chronicler, it has been assumed that Maacah the queen mother acted as regent for the young king until this time. This assumption is unnecessary. The general picture is clear. Pagan worship and practices were to be found everywhere, even in court circles. Asa undertook to remove them and so restore the worship of Yahweh to its rightful place in Judah.

The border warfare with Israel continued. It seems clear (II Chr. 16:1) that Asa had been unable to hold the cities previously conquered by Abijah (II Chr. 13:19). According to Kings, war continued throughout the reigns of Asa and Baasha king of Israel (I Kings 15:16). Baasha moved against Judah and fortified Ramah in the territory of Benjamin. His purpose was twofold—to recover Benjamin, and to control the territory N of Jerusalem. It is clear that despite the Chronicler's statements about the fortified cities which Asa built, and the huge army at his command (II Chr. 14:6-8—H 14:5-7), he was unable to deal with the situation from his own resources. In this crisis he took what was left of the temple treasures and the royal treasures (cf. I Kings 14:26) and sent them to Ben-hadad king of Syria with the appeal that he should break his league with Baasha king of Israel, make an alliance with Judah, and attack Israel. To this appeal Ben-hadad responded. He invaded N Israel and captured several towns and some territory in Galilee, as well as all Naphtali (I Kings 15:17 ff; II Chr. 16:1 ff). This is the first report of Syria's contact with Israel. Ben-hadad was probably glad of the opportunity to open a trade route to the sea. On hearing of Syria's attack, Baasha withdrew from Ramah and returned to Tirzah. Thereupon Asa took the building material gathered by Baasha and fortified Geba (Gibeah with the Greek) of Benjamin and Mizpah (I Kings 15:22). If Mizpah is Tell en-Nasbeh, this story is confirmed from archaeological sources. The fortifications, which belong to this period, were very strong. Archaeology gives a similar date for the rebuilding of Saul's fortress at Gibeah, *ca.* 900. Asa's purpose was clearly to safeguard the approaches to Jerusalem from the N. Both towns are said to have been built by the conscripted labor of all Judah (I Kings 15:22).

The Chronicler records an undated invasion of Judah by Zerah the Ethiopian (II Chr. 14:9-14—H 14:8-13). The figures he gives are clearly unhistorical. The reference is probably to an attack made by Zerah, the Ethiopian commander of the Egyptian frontier city of Gerar. This attack may have been made on orders from Egypt. It was beaten back, and much booty was taken.

The Chronicler adds a further note in the form of a prophecy of Hanani the seer, condemning Asa for his reliance upon Syria. This enraged Asa so much that he put Hanani in prison and inflicted cruelties on others as well. Toward the end of his reign he contracted dropsy (II Chr. 16:12). The Chronicler saw in this the punishment of God. Asa was buried with royal honors in a tomb which he had built for himself in the city of David.

The unusual position in which the information about Asa's disease is placed, after the mention of the sources, may indicate that he was incapacitated and so was unable to perform his royal duties. In this event a regent may have ruled for him during the last years of his life.

A difficulty arises from the statement of the Chronicler that Asa "put away the abominable idols from all the land of Judah and Benjamin and from the cities which he had taken in the hill country of Ephraim" (II Chr. 15:8). No mention is made in our sources of these N cities captured by Asa. One of two explanations is possible: (*a*) The reference is to the cities captured by Abijah; (*b*) in the course of border warfare cities were likely to change hands several times.

The reference to Simeon (II Chr. 15:9) is puzzling. It is possible that since the death of Solomon, S Judah had been under the control of Edom.

2. A Levite, son of Elkanah, ancestor of Obadiah, who lived in one of the villages of the Netophathites (I Chr. 9:16). H. B. MacLean

ASADIAS. KJV Apoc. form of Hasadiah.

ASAEL. KJV Apoc. form of Asiel.

ASAHEL ăs′ə hĕl [עשׂהאל, God has made; Ασαηλ]; KJV Apoc. AZAEL ā′zĭ əl. **1.** The brother of Joab and Abishai, sons of Zeruiah, the sister of David; named among the "Thirty" (II Sam. 23:24; I Chr. 2:16; 11:26). After the Battle of Gibeon, when Abner and his forces were routed by Joab, Asahel, "swift of foot as a wild gazelle," pursued relentlessly the fleeing Abner. Having warned Asahel twice to turn aside, but to no avail, Abner mortally transfixed the youth with his spear (II Sam. 2:18-23). This action precipitated a blood feud with the sons of Zeruiah and resulted in their treacherous murder of Abner at Hebron (3:27-30). Asahel was buried in the tomb of his father in Bethlehem (2:32).

The inclusion of Asahel in the list of officers of the monthly militia of David, serving as the commander of a division of 24,000 for the fourth month, is an insoluble difficulty (I Chr. 27:7). Some contend that his name was placed upon this division posthumously to honor him. Others view the list as a production of the Chronicler and are skeptical of its historicity. However, it is possible that we may have here the prototype of the Davidic militia, organized early in the Judean rule of the king, and that this original list has been brought up to date by the inclusion of Zebadiah, son and successor of Asahel in this command (cf. I Chr. 12).

2. One of the Levites who, in company with the princes of Judah and priests, instructed the people in the law in an itinerant teaching mission in the cities of Judah in the third year of Jehoshaphat (II Chr. 17:8).

3. One of the subordinate overseers who assisted in the collection of contributions in the house of Yahweh in the time of Hezekiah (II Chr. 31:13).

4. The father of Jonathan, who opposed the formation of the Jerusalem commission to consider the cases of the Jews who had married foreign wives in the time of Ezra (Ezra 10:15; I Esd. 9:14).

E. R. Dalglish

ASAIAH ə zā′yə [עשׂיה, Y has made]; KJV ASAHIAH ăs′ə hī′ə in II Kings 22. **1.** An official ("king's servant") under Josiah; one of the delegation sent to Hulda the prophetess regarding the law book (II Kings 22:12, 14=II Chr. 34:20).

2. One of the "heads of families," or chieftains, in the tribe of Simeon; among those who dispossessed the Meunim (I Chr. 4:36-41).

3. Son of Haggiah; chief of the Levitical group called the sons of Merari and thus among those who helped David bring the ark to Jerusalem (I Chr. 6:30—H 6:15; 15:6, 11).

4. The first-born of the Shilonites, as listed among those who returned from the Babylonian captivity (I Chr. 9:5); but a similar list in Neh. 11:5 has the Shilonite named Maaseiah.

F. T. Schumacher

ASAIAS ə zā′yəs; KJV ASEAS ə sē′əs. *See* Isshijah.

ASANA ăs′ə nə. KJV Apoc. form of Asnah.

ASAPH ā′săf [אסף, *perhaps for* (Yahu) has gathered to himself; *in* 3 *below, possibly from some non-Hebrew root* (*see bibliography*)]. **1.** Apparently the father or ancestor of the Joah (4) who was King Hezekiah's recorder (II Kings 18:18, 37; cf. Isa. 36:3, 22). The precise signification of the phrase "son of" is, as often, uncertain; and this Asaph may relate to 2 *below*.

2. The eponymous ancestor or founder of one of the three chief families or guilds of Levite temple musicians, the "sons of Asaph" (e.g., I Chr. 25:1-2, 6, 9). Asaph himself, according to the Chronicler, was a Gershonite Levite, son of Berechiah, and, with Heman and Ethan (Jeduthun), was given by King David charge of the "service of song" in the tabernacle (I Chr. 6:39—H 6:24; cf. vss. 31-32—H 16-17). Whether or not Asaph himself was actually a Levite remains unknown, along with other details of his life; but his contemporaneity with David seems not improbable, even though mention of him is confined to the work of the Chronicler (cf. especially II Chr. 29:30; 35:15; Neh. 12:46). Pss. 50; 73–83 contain

ascriptions to Asaph in their titles, perhaps indicating a tradition of his authorship of them, or a style peculiar to them and originated by him, or again, perhaps referring simply to the Asaphite guild or to their hymnal.

In the Chronicler's history of Judah the sons of Asaph participated in nearly every major celebration relating to the temple, both before and after the Exile. Occasionally they are represented as striking the cymbals, but pre-eminently they were singers (I Chr. 15:17, 19; 16:5, 7, 37; II Chr. 5:12; 29:13; 35:15; Ezra 3:10; Neh. 12:35). In I Esd. 1:15 they are called the "temple singers." Because of their evident importance in the view of the chronicler it has been suggested that he himself was a member of this guild (*see bibliography*), but this remains a conjecture.

Their musical function was referred to in some instances as prophesying (I Chr. 25:1-2), and according to II Chr. 20:14-23 it was one Jahaziel, a "Levite of the sons of Asaph," who, inspired by the divine Spirit, aroused Judah to victory over the Edomite coalition by means of song and praise to God. II Chr. 29:30 speaks, moreover, of "Asaph the seer" (cf. 35:15).

The guild is prominent in the postexilic name lists (I Chr. 9:15; cf. Ezra 2:41; Neh. 7:44; 11:17, 22; I Esd. 5:27, 59).

See also CHRONICLES, I AND II; HEMAN; JEDUTHUN; MUSIC; PRIESTS AND LEVITES; PSALMS, BOOK OF.

Bibliography. M. Noth, *Die israelitischen Personennamen* (1928), pp. 22, 181-82; R. H. Pfeiffer, *Introduction to the OT* (1948), pp. 621, 623-24, 797; R. A. Bowman, Exegesis of Nehemiah, *IB*, III (1954), 801. On the Asaphite psalms, see especially, besides other Commentaries, A. F. Kirkpatrick, *Psalms* (1902), pp. 427-30.

3. Someone mentioned in I Chr. 26:1; some have thought him to be the eponymous ancestor of the musical guild (*see* 2 *above*), but this is doubtful. Instead of "Asaph," "ABIASAPH" should probably be read, with the LXX (cf. "Ebiasaph" in the parallel in I Chr. 9:19; note Exod. 6:24).

4. The "keeper of the king's forest," probably in Lebanon, to whom the Persian king Artaxerxes sent a letter by Nehemiah, ordering in the latter's behalf timber for the construction work in Jerusalem (Neh. 2:8).

Bibliography. M. Noth, *Die israelitischen Personnenamen* (1928), pp. 22, 181-82; R. A. Bowman, Exegesis of Nehemiah, *IB*, III (1954), 674-75. B. T. DAHLBERG

ASARAMEL ə săr′ə měl [ἀσαραμέλ (א V La)] (I Macc. 14:28); KJV SARAMEL săr′ə měl. A place name according to the Vulg. and KJV-RSV; but it has long been thought to rest upon a corruption of a Hebrew phrase, arising perhaps out of the reluctance of I Maccabees to mention the name of God. Some consider it to represent Jerusalem, others בחבר ישראל, "in the congregation of Israel." The RSV note states: "This word resembles the Hebrew words for *the court of the people of God* or *the prince of the people of God.*" If the former, it would be חצר עם אל—i.e., the great court of the temple (lit., the "court of the people of God"). If the latter, it would be שר עם אל, "prince of the people of God." This would make it, not a place name, but an honorific title. Simon the high priest would thus be referred to as "leader of the people of God" (cf. I Macc. 14:47; 15:1). J. C. SWAIM

ASAREL ăs′ə rĕl [אשראל] (I Chr. 4:16); KJV ASAREEL ə sâr′ĭ əl. One of four sons of Jehallelel in the genealogy of Judah. The LXX has ισεραηλ = Israel (אשראל).

ASARELAH. KJV form of ASHARELAH.

ASCALON. KJV Apoc. form of ASHKELON.

ASCENSION [עלה; ἀναβαίνειν, *also* ἀναλαμβάνεσθαι, ἐπαίρεσθαι, πορεύεσθαι (Acts 1); ὑπάγειν, ἀφιέναι (John); εἰσέρχεσθαι, διέρχεσθαι (Hebrews); ἁρπάξεσθαι (Rev. 12:5); χωρεῖν (Ign. Magn. 7.2)]. A voyage from the earth to heaven above; Christ's exaltation (following upon his humiliation), on which the transcendence of Christian existence is based.

1. In the religious environment. A divinity's ascension is a widespread mythological motif (e.g., Isa. 14:12-14). The ascension of an OT dignitary was an increasingly popular and detailed motif in Judaism: Enoch (Gen. 5:24; Jub. 4:23; Ecclus. 44:16; 49:14; Wisd. Sol. 4:10-11; I Enoch 39:3 ff; 70–71; II Enoch; Heb. 11:5; I Clem. 9.3); Elijah (II Kings 2:1-12; I Macc. 2:58; I Enoch 89:52; 93:8; Ecclus. 48:9; [Mark 9:2-8 and parallels; Rev. 11:3-12]); Levi (Test. Levi 2–5); Baruch (II Bar. 13:3; 25:1; 46:7; 76; III Baruch); Ezra (IV Ezra 14:9, 49); Moses (Jos. Antiq. IV.viii.49; Assumption of Moses [Mark 9:2-8 and parallels; Rev. 11:3-12; Jude 9]; Clement of Alexandria, Strom. VI.15); Zephaniah (Apocalypse of Zephaniah, in Clement of Alexandria, Strom. V.11); Abraham (Apocal. Abraham 15-29); Isaiah (Ascension of Isa. 6-11); Adam (Life of Adam and Eve 25-29); and even Raphael (Tob. 12:16-20). This tradition merged with that of the soul's ascent in ecstasy (see II Cor. 12:2-4) or at death, which developed in the Zoroastrian Avesta, Mithraism, Mandaeism, and Gnosticism into a detailed voyage (of Jesus: Ascension of Isa. 10-11) through the three or seven heavenly spheres with their gates, hostile spirits, and other obstacles (echoed in Eph. 2:14), to be passed by means of esoteric knowledge (e.g., Irenaeus I.xxi.5), passwords (e.g., Irenaeus I.xxiv.5-6), and the aid of friendly spirits (Jesus' aid: Acts of John 114; Acts of Thomas 148; Acts of Philip 144). Syncretistic theology developed the pattern of descent from heaven and ascent to heaven for describing the Gnostic "Redeemer," as well as the "divine men" of the Hellenistic age, such as Mani, Simon Magus, Apollonius of Tyana, and the Roman Caesar. Justin (Apol. I.54; Dial. 69) lists Dionysus, Bellerophon, Perseus, Heracles, all as mimicking Jesus.

2. In the NT. ***a. The meaning.*** When the earliest Christology identified Jesus with the Son of man, expected shortly from heaven, the theological necessity of the Ascension was apparent (see, e.g., Luke 22:69; Acts 7:56; Euseb. II.xxiii.13). This orientation can still be sensed when the ascension is for the purpose of installation in an office (Acts 2:36; 5:31; Phil. 2:9; etc.), or is associated with the title "Son of man" (John 3:13-14, etc.; cf. Mark 8:31, etc.), or with the Parousia (Luke 19:11 ff; Acts 1:11; 3:21; see also Phil. 3:20; Col. 3:1-4; I Thess. 1:10). Thus the Son of man's functions of dominion, glory, a

kingdom, the subservience of all (Dan. 7:14), amplified by Ps. 8 of the Son of man (Eph. 1:22; Heb. 2:6-9; etc.), Ps. 110 of the enthroned Lord (Mark 14:62; Acts 2:34-35; Eph. 1:20; Col. 3:1; Heb. 1:3, 13; etc.), and Ps. 2 of the adopted Son (Acts 13:33; Heb. 1:5; 5:5; Rev. 2:26-27; 12:5; etc.), pointed the direction in which the Ascension's significance (and terminology) grew. For as these functions were progressively transferred from the future (I Cor. 15:25-27; Heb. 10:13; cf. Matt. 19:28; etc.) to the present, the Ascension became Jesus' decisive subjugation of and revelation to the spirit world controlling the cosmos, at the culminating climax of confessional formulations (Eph. 1:21-23; Phil. 2:9-11; Col. 1:18*b*-20; 2:15; I Tim. 3:16; I Pet. 3:22; Ign. Eph. 19; *see* DESCENT INTO HADES § 2*b*). Hebrews builds upon this form of the confession (1:3; cf. 5:7-10), supported by the ascension psalms—2, 8, 110 (see Heb. 1-2; 5:5-6; 8:1)—and the cultic overtones of "ascend," to present a theology centering in the "great high priest who has passed through the heavens" (4:14; see also Rom. 8:34; I John 2:1-2).

The Ascension becomes the key to all the spiritual gifts—i.e., the religious experience—of the church, by a shifting of the reference of the Pentecost psalm (68:19) from Moses to Christ (Acts 2:33; Eph. 4:8 ff), with the help of Ps. 110:1 (Acts 2:33-36). This theme is further developed in John. Thus the Ascension tends to replace the Parousia as the beginning of Christ's kingdom (Matt. 13:41; Luke 23:42-43; Col. 1:13; Heb. 1:8), the doctrinal basis for the church (Ephesians) and the Christian mission (Matt. 28:18-20), the focus of ethical aspiration (Col. 3:1 ff), and the key to the believer's final destiny (John 14:1 ff; Heb. 6:20; 12:2; the Good Shepherd). When the Ascension is cast in the Hellenistic pattern of descent and ascent, it becomes the form in which Jesus finds a place within Gnostic systems, but also a central doctrine of anti-Gnostic polemic from Colossians on, and provides a central Johannine category for the Christian message: In the humiliated Christ's transcendence over the world resides man's hope of rising to true selfhood.

The perversion of the true Christian meaning of the Ascension by the heretics in Paul's congregations (especially Corinth and Philippi), as well as by subsequent Gnosticism, focuses attention upon the need to clarify the meaning of the Ascension also for our day. They took Christ's enthronement at his ascension for the finality of God's victory, and hence were naïvely ignorant of, or presumptuously ignored, the persisting ambiguities of human existence and the all-embracing extent of God's ultimate claim upon his creation, insights which had been kept alive by the futuristic eschatology they rejected in favor of the finality of Christ's work at the Ascension. Since baptism meant union with Christ, they interpreted their dying with Christ as the end of their finitude—i.e., as becoming immortal (deification)—and hence they identified their present status as that of having risen and ascended with Christ; they assumed they had moved beyond the historicity of human existence and were above suffering and service. Over against this false doctrine of the Ascension, Paul worked out his theology: His retention of a futuristic eschatology is not simply an inconsistent vestige of mythology or of Jewish thinking, but rather a position which in his situation was necessary to preserve a valid understanding of man's situation in the world and of God's total claim on the cosmos. Within this life, our union with Christ identifies us with his position in this life: on the way to the Cross. This is not to deny our identification with the Christ who has ascended, but rather to interpret correctly his ascension: His enthronement in heaven as Lord of the cosmos means that human existence is ultimately under the control of the Humiliated, the Crucified, whose obedience is the key to meaningful existence. Faith in Christ's ascension thus means not only that his service and suffering were his freedom and his victory, but that in his "obedience unto death" the path of transcendence within service and suffering is revealed as a reality for us and made accessible to us as authentic existence. It is this which comes to expression in Paul's position that our ascension has not already happened so as to remove us from historical involvement, but rather that our future ascension does await us, thus giving transcendent meaning to that involvement (Phil. 3).

b. The story. The description of the Ascension is for the NT of secondary importance to its theological meaning. It is rarely narrated explicitly: only Acts 1:9-11 in the NT; in the Apocalypse of Peter the transfiguration narrative becomes the Ascension; in the Letter of James (Jung Codex) Jesus ascends in a chariot of spirit, waving to his disciples. When opinions on such details as place (Luke 24:50: Bethany; Acts 1:12: Mount Olivet) or time are suggested, they often vary: at the time of the Crucifixion (perhaps in kerygmatic usage of ὑψοῦν, the flesh-Spirit contrast, and the suffering-glory combination; see also Luke 23:43, 46; Gospel of Peter V.19; Acts of John 102); at the Resurrection (evident from the association or interchangeability of resurrection and ascension terminology, and from presentations of appearances as from the beyond; see also Col. 3:1; Eph. 1:20; Rom. 8:34; Gospel of Peter X); between appearances (Matt. 28:18; John 20:22); at the end of the appearances on Easter Sunday (Luke 24:51; Epistola Apostolorum 62); on the eighth day—i.e., (Easter) Sunday (Barn. 15.9); after many days (Acts 13:31); after 40 days (Acts 1:3; next Tert. Apol. 21); after 50 days (in early Syrian liturgical observance); after 545 days (Ascension of Isa. 9.16), or 550 days (Letter of James, Jung Codex)—i.e., eighteen months (the Valentinians and Ophites: Irenaeus I.iii.2; I.xxx.14); after 12 years (Pistis Sophia; II Book of Jeu 44).

The particular crystallization of the ascension motif in Luke-Acts is primarily a reflection of theological considerations: The "ascent" is the climax of the kerygma about Jesus (Luke 9:51; Acts 1:22; see also Luke 19:12; 24:26), so that the gospel was brought to an end here (Acts 1:2), for even the shorter reading of Luke 24:51 alludes to the Ascension, and its conjectured elimination from Acts 1:2 multiplies, rather than reduces, difficulties. Acts opens with the Ascension (1:9-11) as involved in the definition of the apostle (1:22) and prerequisite to Pentecost (2:33; 1:4-8). Since the resurrected Jesus was available on earth for a period of time (Acts 1:3; 10:40-41; 13:31), a specific terminal date was needed. Since the period could not exceed fifty days, the

Ascension being prerequisite to the gift of the Spirit at "Pentecost"—i.e., the "fiftieth" (day after Passover)—the biblical number forty was chosen, just as in the cases of the ascensions of Ezra (IV Ezra 14:23, 49), Baruch (II Bar. 76), and Abraham (Apocalypse of Abraham 9, 12). The two white-robed men are familiar from resurrection narratives (Luke 24:4; John 20:12; Gospel of Peter IX–X; see also Luke 9:30), and the cloud of an epiphany is typical at ascensions (e.g., Luke 9:34; I Thess. 4:17; Rev. 11:12). Beholding Jesus ascend may reflect II Kings 2:9 ff, so as to point to Pentecost as the near goal of hope (Acts 1:4-5, 8) rather than to the Parousia (Acts 1:6-7; see also 3:21), whose final coming, however, is assured graphically by the form of the Ascension (1:11; e.g., on the Mount of Olives: Zech. 14:4; on a cloud: Luke 21:27; Rev. 1:7; etc.).

ASCENSION OF ISAIAH. *See* Isaiah, Ascension of.

ASCENT, DESCENT [מעלה, LXX ἀνάβασις, place of going up; מורד, LXX-NT κατάβασις, place of going down]. An ascending road or stairway; specifically, a mountain pass.

The terms "ascent" and "descent" apply in general to any roadway by which one goes up or down, the choice of words depending on the position of the observer or the direction in which he was going. Thus David left Jerusalem by the "ascent of the Mount of Olives" (II Sam. 15:30), and Jesus came toward the city by the "descent" of the same mountain (Luke 19:37). A stairway on the wall of Jerusalem (Neh. 12:37), the road to the armory within the city (Neh. 3:19), and the slope up to the royal tombs (II Chr. 32:33) are called "ascents." *See* Stair.

The principal Israelite occupation of Palestine was in the rugged mountains W of the Jordan, and the passes by which the roads entered the mountains were of great economic, geographic, and military importance. They were usually called "ascents," since they were thought of as entrances to the mountain range. On the W side of the highlands two such passes are named: the Ascent of Beth-horon, near Upper Beth-horon, where Joshua pursued a coalition of Amorite kings (Josh. 10:10-11), and the Ascent of Gur in the mountains of Samaria, where Jehu killed Ahaziah (II Kings 9:27). The rift valley of the Jordan, which bounds these highlands on the E, has steep cliffs on either side through which travel is possible only along secondary rifts that run into the valley roughly at right angles. Three of these rifts running into the Judean mountains are called "ascents." The Ascent of Akrabbim (Scorpions), beginning in the Wadi Arabah *ca.* sixteen miles S of the Dead Sea, slopes rather gradually upward in a northwesterly direction (Num. 34:4; Josh. 15:3; Judg. 1:36). From a point seven miles N of En-gedi the Ascent of Ziz leads westward through the high cliffs along the Dead Sea (II Chr. 20:16). Still farther N the Ascent of Adummim (Blood), so called because of the patches of red soil still to be seen near the Inn of the Good Samaritan, goes up from Jericho toward Jerusalem; it formed part of the N boundary of Judah (Josh. 15:7; 18:17). Named passes leading from the E side of the Jordan Valley are the Ascent of Luhith (Isa. 15:5; Jer. 48:5) and the Descent of Horonaim (Jer. 48:5), both in Moab, and the Ascent of Heres in Gilead (Judg. 8:13). A pass at Shebarim near Ai was the scene of one of Joshua's victories (Josh. 7:5), and in Josh. 8:14 the Hebrew text is usually emended to read "the descent toward the Arabah" (MT מועד, "appointed time").

ASCENT OF THE CORNER. *See* Corner, Ascent of the.

ASCENTS, SONG OF [שיר המעלות]; KJV Degrees, Song of. The title of the psalms forming the group 120–34 incorporated in the canonical psalter (*see* Psalms, Book of). The meaning of this title has not yet been explained beyond doubt. Probably they are songs for the procession of the New Year's Festival "ascending" to the temple or for the pilgrims "ascending" to Jerusalem.

ASEAS ə sē′əs. KJV Apoc. form of Isshijah.

ASEBEBIA. KJV Apoc. form of Sherebiah.

ASEBIA. KJV Apoc. form of Hashabiah.

ASENATH ăs′ə năth [אסנת; Egyp. *ns-nt or 'ws-n-n(j)t*, belonging to *or* the servant of (the goddess)

Neith]. Daughter of POTIPHERA priest of On. The pharaoh gave her to JOSEPH SON OF JACOB as a wife, and she became the mother of Ephraim and Manasseh (Gen. 41:45, 50-52; 46:20). Later Jewish legends attempted to explain the apparent heathen origin of Joseph's wife. In one recension she is pictured as a Hebrew (daughter of Shechem and Dinah) who was adopted by Potiphera; elsewhere it is claimed that although she was Egyptian, she was converted to Yahwism by Joseph.

Bibliography. W. Spiegelberg, *Ägyptologische Randglossen zum AT* (1904), pp. 18-19; on the name; L. Ginzberg, *Legends of the Jews*, II (1910), 38, 170-78; on the legends. J. F. ROSS

ASER ā'sər. KJV translation of Ἀσήρ in Tob. 1:2; Luke 2:36; Rev. 7:6. Whether the author of Tobit intended "HAZOR" (cf. II Kings 15:29) and misspelled the Greek word, or meant "Asher" in the mistaken opinion that the tribe of Asher was involved in the deportation, cannot be determined.
G. W. VAN BEEK

ASERER ăs'ə rər. KJV Apoc. form of SISERA.

ASH. KJV translation of אֹרֶן (*'ōren*) in Isa. 44:14 (RSV CEDAR). In a few MSS the word "cedar" (אֶרֶז, *'erez*) appears in this passage. There is no evidence to support the translation "ash" (*Fraxinus* L.). *See* PINE.
J. C. TREVER

ASHAMED. *See* SHAME.

ASHAN ā'shən [עָשָׁן, smoke]. Alternately: BOR-ASHAN bôr— [בּוֹר עָשָׁן, cistern *or* well of Ashan]; KJV CHORASHAN kôr—(*from a typographical error in a printed Hebrew text;* I Sam. 30:30). A city in the Shephelah originally assigned to Simeon (Josh. 19:7; I Chr. 4:32); designated a Levitical city of Judah in David's administrative reorganization (Josh. 21:16, where "Ain" should be read "Ashan" with the LXX B; cf. I Chr. 6:59—H 6:44); and later evidently a part of the administrative district of Hormah (Josh. 15:32, where, instead of vs. 42, comparison with the above lists indicates it must have appeared originally). It is mentioned as one of the places where David roamed with his men during his outlaw period (I Sam. 30:30). Ashan is identified with Khirbet 'Asan, *ca.* 1½ miles NW of Beer-sheba.
V. R. GOLD

ASHARELAH ăsh'ə rē'lə [אַשַׂרְאֵלָה *or* אַשְׁרְאֵלָה]; KJV ASARELAH ăs'ə rē'lə. One of the sons of ASAPH who prophesied with musical instruments in the temple under the direction of the king (I Chr. 25:2). Another, and perhaps preferred, tradition of the MT reads "Asarelah." He is called Jesharelah in vs. 14, where the singers cast lots for their duties.
F. T. SCHUMACHER

ASHBEA ăsh'bĭ ə [אַשְׁבֵּעַ]. KJV proper name applied to an otherwise unknown family of linen workers (I Chr. 4:21). The RSV is probably correct in translating the word as referring to their place of residence, BETH-ASHBEA, an otherwise unknown town, presumably in the Shephelah. F. T. SCHUMACHER

ASHBEL ăsh'bĕl [אַשְׁבֵּל, having a long upper lip]; ASHBELITES —bə līts [אַשְׁבֵּלִי]. Son of Benjamin, listed as either the second or the third son; ancestor of the family of the Ashbelites (Gen. 46:21; Num. 26:38; I Chr. 8:1). Ashbel would appear consistently as the third son of Benjamin if "BECHER," now misplaced in Num. 26:35 and apparently supplanted by בכרו, "his first-born," in I Chr. 8:1, were inserted into the Benjaminite genealogies in Num. 26; I Chr. 8.

Bibliography. M. Noth, *Die israelitischen Personennamen* (1928), p. 227. R. F. JOHNSON

ASHCHENAZ. KJV form of ASHKENAZ in I Chr. 1:6; Jer. 51:27.

***ASHDOD** ăsh'dŏd [אַשְׁדּוֹד, fortress(?); Akkad. *Asdudu*]; Apoc. and NT form AZOTUS ə zō'təs [Ἄζωτος]; ASHDODITES —īts; KJV once ASHDOTHITES ăsh'dŏth īts (Josh. 13:3). One of the five principal cities (pentapolis) of the Philistines (Josh. 13:3), the northernmost of the three on or near the coast. It lay inland *ca.* three miles, halfway between Gaza and Joppa, *ca.* ten miles N of Ashkelon.

Like its sister cities, it was reputed to be very old, having once been inhabited by the primitive Anakim (Josh. 11:22; *see* ANAK). It was assigned, along with surrounding territory, to the tribe of Judah (Josh. 15:46-47), but remained in the hands of the Philistines (Josh. 13:1-3). When the Philistines, warring with Israel, captured the Ark (*see* ARK OF THE COVENANT), they took the sacred object to the temple of their god DAGON in Ashdod; but ill omens ensued, and the Ark was hurried on to Gath (I Sam. 5:1-8; 6:17).

At the height of Judah's power in the time of Uzziah (*ca.* 783-742), Ashdod and the surrounding territory under its control were conquered by the Judean king (II Chr. 26:6). However, the city and its territory were soon again independent, to the extent of revolting against Sargon II shortly before 711. Sargon ordered Azuri, the local king, deposed and a younger brother, Ahimiti, installed in his place. Still the "Hittites" (as Sargon called those opposed to him; cf. Gen. 27:46) in the city continued their revolt under Iamani (a Greek or Cypriote, judging by his name; there seems to have been a mixed population by this time). Sargon was enraged, made a special campaign, conquering Ashdod, Gath, and "Asdudimmu" (Ashdod-by-the-Sea, a separate place on the seacoast, which later became more important than the parent city). Iamani fled to Ethiopia, whence he was extradited to Assyria, and the territory that had revolted was made an Assyrian province (cf. Amos 1:8; 3:9 should read "Assyria" with RSV). Isaiah warned Judah against becoming involved in this rebellion, pointing out that the Ethiopian rulers of Egypt would instigate plots but offer no real help (Isa. 20:1-6; some also connect Zech. 9:6 with these events).

In 701 Ashdod was still loyal to Assyria; it paid its tribute to Sennacherib and in return received some of Judah's territory. At that time the king was named Mitinti (not to be confused with earlier and later kings of Ashkelon by the same name). Both

Esarhaddon (680-669) and Ashurbanipal (668-633) collected tribute from Ahimilki, king of Ashdod, presumably Mitinti's successor, as they advanced against Egypt (671 and 667). After this arose a new and stronger king in Egypt, Psamtik I (663-610), who, according to Herodotus (II.157), took Ashdod after a siege of twenty-nine years, said by some to be the longest siege in history. The Scythians also probably took their toll at this time (Zeph. 2:4; Jer. 25:20—note the word "remnant"; Herod. I.105). Later, perhaps because of lingering Egyptian influence, the city was involved in rebellion against the Chaldeans, probably at the time of the fall of Jerusalem (587); for an inscription from the later years of Nebuchadnezzar mentions the king of Ashdod, along with many similar rulers, as a prisoner at the Chaldean court.

In spite of these vicissitudes, Ashdod seems to have been the strongest of the Philistine cities in the Persian period, controlling a considerable amount of territory and presenting a real threat to the Jews through cultural contacts (Neh. 4:7; 13:23-24; Zech. 9:6[?]; Jth. 2:28). During Maccabean times it was devastated successively by Judas (I Macc. 4:15; 5:68), Jonathan (after a great battle nearby: I Macc. 10:77-85; 11:4), and John Hyrcanus (I Macc. 16:10). In I Macc. 14:34 Gazara (Gezer) is located on the borders of Azotus (Ashdod), but the places are more than fifteen air miles apart, and the reference may be to the larger Ashdod territory as in the Persian period (cf. Neh. 13:23-24). During the time of Alexander Jannaeus it was under Jewish control (Jos. Antiq. XIII.xv.4). Pompey freed it (63 B.C.), making it a part of the province of Syria (Jos. Antiq. XIV. iv.4; War I.vii.7).

Under Gabinius (governor 57-55 B.C.), Ashdod, now called Azotus, was rebuilt and repopulated as a Roman town (Jos. Antiq. XIV.v.3; War I.viii.4). Herod controlled it, bequeathing it to his sister Salome (Jos. Antiq. XVII.viii.1; War II.vi.3). *Ca.* A.D. 38 Philip the Evangelist, after baptizing the Ethiopian eunuch near Gaza, passed through Azotus on his way to Caesarea, preaching as he went. Thus many in the former Philistine cities heard the gospel for the first time (Acts 8:40). During the revolt against the Romans of 66-70, there was apparently enough Jewish influence in Azotus (perhaps from the time of Herod) to make it necessary for Vespasian to march against the city and leave a garrison there (Jos. War IV.iii.2). Eusebius mentions it as still being an important town at the beginning of the fourth century. It had Christian bishops from the fourth to the sixth centuries. During the Middle Ages it declined, and remains today only a small village.

No significant archaeological work has been undertaken at the site, now called Esdud. The site of the former seaport town, three miles away, is now called Minet el-Qal'a.

ASHDOTH-PISGAH ăsh'dŏth pĭz'gə. KJV transliteration of אשדות הפסגה, אשדת הפסגה, in Deut. 3: 17; 4:49; Josh. 12:3; 13:20. In Deut. 4:19 the KJV translates "springs of Pisgah." The reference is to the slopes of Mount Pisgah. *See* PISGAH.

ASHER ăsh'ər [אשר, *from* to be a bearer of salvation; *an abbreviated form, actually the name of a god of fortune* (?); NT 'Ασήρ]; KJV NT ASER ā'sər. ASHERITE —ə rīt [אשרי]. The eighth son of Jacob and the eponymous ancestor of one of the twelve tribes. He was born of Leah's personal maid Zilpah (Gen. 30:12 ff) and was the younger full brother of Gad—therefore, always mentioned after him in the lists of descendants (Gen. 35:26; 46:17; Exod. 1:4; I Chr. 2:2).

The connection with the Leah group of tribes is clear; dwelling upon the W slopes of the Galilean highland (Josh. 19:24-31), the tribe of Asher had Zebulun and Naphtali as neighbors to the E. Because of its location it had close contact with the seacoast—i.e., with the maritime state of Tyre. This explains its half-caste nature. How little it was respected among the true Israelites is shown also by the references in the oldest literature. The passage in the Blessing of Moses (Deut. 33:24-25) starts with a special benediction:

> Blessed above sons be Asher;
> let him be the favorite of his brothers.

In reality, Asher was, apparently, just as little loved as its territory was safe from foreign influences, which is the reason the wish is also expressed:

> Your bars shall be iron and bronze.

The passage bears witness to the fertility of the territory of Asher:

> Let him dip [he dips] his foot in oil.

The short passage in the Blessing of Jacob alludes to the same thing:

> Asher's food shall [is] be rich,
> and he shall yield [yields] royal dainties
> (Gen. 49:20).

Since there is no reason to go into the period of the Israelite kings for the origin of the passage, the kings mentioned are certainly Canaanite-Phoenician city kings of the coastal plain, perhaps also of the Plain of Jezreel. It is not surprising that the Song of Deborah criticizes Asher for sitting still at the seacoast (Judg. 5:17) instead of taking part in the struggle for freedom against the coalition of the Canaanite kings. Asher was probably deterred by consideration for its customers, after the dream of possessing their cities had long since vanished in thin air (1:31 ff). In other cases, to be sure, Asher promptly fulfilled its obligation as a member of the Israelite amphictyony, as in the expulsion of the Midianites from the Plain of Jezreel by Gideon (6:35; 7:23). Later, too, as a result of its position apart, the tribe of Asher did not play a significant role. According to II Sam. 2:9 (read "Asherites"), Asher was the only one of the Galilean tribes to recognize the kingship of Ishbaal (Ish-bosheth) immediately. In I Kings 4:16 its territory is named as one of the districts of Solomon; to

it belonged the district of Cabul—which in all probability was itself already strongly populated by Canaanites—with the twenty cities which Solomon relinquished to Hiram of Tyre as payment for timber deliveries (I Kings 9:10-14). In II Chr. 30:10, Asher probably serves merely as an example (cf. vs. 18) of the inhabitants of the former N kingdom who complied with Hezekiah's invitation to come to the celebration of the Passover in Jerusalem; aside from this the story is not historical.

The later literature mentions Asher otherwise only in lists and in listlike material. In the Priestly Code, as a rule, Asher appears separated from Gad, but between the other two half-caste tribes, Dan and Naphtali, at the close of the enumeration (Num. 1: 40 ff; 2:27; 7:72; 10:26; 13:13; 26:44-47); only in the list of the heads of tribes is Gad still included (Num. 1:14) in this group, but as the second. In the commission to divide the land, Asher is between Issachar and Naphtali (34:27). In Deut. 27:13, Asher, along with Gad (in the same order as in Gen. 30!), belongs to those who are to pronounce the curse on Mount Ebal. In the case of the Levite cities Asher is again classified, from a geographical point of view, in the N group, between Issachar and Naphtali (Josh. 21:6, 30-31 = I Chr. 6:62, 74-75—H 6:47, 59-60). In Ezek. 48:34 the second W gate, directly next to Gad's (in the same order as in Gen. 30; Deut. 27:13), is named for Asher. One of the lists in Chronicles enumerates Asher last in the twelve-tribe series W of the Jordan (I Chr. 12:36); the other one (27:16 ff) strangely does not mention Asher (or Gad either). The genealogy in I Chr. 7:30-40, likewise at the end of the series of twelve, supplements Gen. 46:17 with material of unknown origin. The NT names Asher after Gad in the list of the sealed (Rev. 7:6) and ascribes the prophetess Anna to the tribe of Asher (Luke 2:36).

For the territory of Asher, *see* TRIBES, TERRITORIES OF, § 7.

ASHERAH ə shĭr'ə [אשרה, אשירה]; ASHERIM —ĭm [*masculine plural;* אשרים (KJV GROVES)]; ASHEROTH —ŏth [*feminine plural;* אשרות (KJV GROVES)]. A Semitic goddess, and the cult object by which she was represented. *See also* CANAAN.

1. The term. The variety of words used in the versions to translate the Hebrew אשרה indicates an uncertainty concerning its meaning, except that it was associated in some way with pagan worship. In each of the forty occurrences of אשרה (including forms singular, plural, and with suffixes) the LXX translates "groves" (ἄλσος, ἄλση), except in two instances (Isa. 17:8; 27:9) where it has δενδρα, "tree," and two others (II Chr. 15:16; 24:18) where it has "Astarte" ('Αστάρτη, 'Αστάρταις, a confusion of אשרה with עשתרות, Ashtaroth). The Vulg. follows the LXX by using "wood" or "grove" (*lucus, nemus*) and the proper name Ashtaroth. The KJV is based on these readings and is in error, as can be observed from the context of passages which refer to the Asherah as having been worshiped with Baal (Judg. 3:7) and having been removed from the Jerusalem temple (II Kings 23:6). It is possible that the LXX has not been correctly interpreted and that ἄλσος was used, not to refer to a grove of trees, but merely to indicate a sacred area or object.

The Peshitta translates אשרה as the name of a goddess, but in most instances uses such words as *dehlethâ* ("object of reverence, fearful thing"), *hešlāthâ* ("molten images"), *ṣalmê* ("image"), and *pethkerê* ("idols"). In Deut. 16:21; Mic. 5:14—H 5:13, where the Peshitta has *štlt'* ("trees"), the translators may have been misled by the Hebrew verbs נטע ("to plant") and נתש ("to root out"), which could apply to an image as well as to a tree.

The Targ. follows the practice of merely transliterating the Hebrew word. The authors of the Mishna explained the Asherah as a tree that was worshiped, including grapevines and pomegranate, walnut, myrtle, and willow trees, and therefore, the wood and fruit must not be used ('Or. 1.7-8; Suk. 3.1-3; 'A.Z. 3.7, 9-10; Me'il. 3.8). By the time of the Mishna, the meaning of אשרה in the Hebrew scriptures had been forgotten, although the word could be used of forbidden trees because it had cultic associations and had to do with that which had been condemned in earlier periods.

The English translations vary in their methods of attempting to correct the "groves" of the KJV. Most, with the exception of the RSV, render the proper name as "Asherah" or "Astarte" (the latter would be more appropriate for עשתרות, "Ashtaroth"), and the cult object as "sacred pole." The RSV makes no attempt to distinguish the name of the goddess from the name of the cult object, using "Asherah" for both. In two passages (II Chr. 19:3; 33:3) it uses "Asherahs," an English plural; and elsewhere a Hebrew plural transliteration ("Asheroth," "Asherim") is used.

2. The goddess. Early studies either rejected the idea that the Asherah was a goddess or proposed that the word in the Hebrew text was a confusion with "Astarte" (עשתרות). However, with the discovery that the word was used as the name of a goddess, distinct from Astarte, in the Ras Shamra Texts where she figures prominently as the mother-goddess, Athirat (*'trt, 'trt ym*), it became evident that אשרה was the Hebrew name for an Amorite or Canaanite goddess who was worshiped in various parts of the ancient Near East.

In early Babylonian god lists Ashratum is mentioned as one of the deities, a temple was dedicated to her, and at various times she was named as the consort of Ramaanum or Amurru. In the Tell el-Amarna Tablets her name appears in the name of one of the Amorite princes, Abdi-Ashirta ("Servant of Asherah"). In S Arabia, Athirat was worshiped as the consort of the moon-god. In N Arabia at Tema the Nabateans worshiped a triad of deities which included Salm, Shingala, and Asherah. Although there is some uncertainty concerning translation, it is probable that Asherah also appears in an Aramaean magical text from Arslan Tash in Syria as a goddess who was appealed to by women at the time of childbirth, and in a fragmentary inscription found at Tell Ta'anach (*see* TAANACH), where an

oracle of Asherah may have existed in early Canaanite times.

Many details concerning the place of Asherah in the pantheon have been supplied from the Ras Shamra Texts. At ancient Ugarit she was the mother-goddess, consort of El, mother of seventy gods including Baal, who is called *bn 'ṯrt* ("son of Athirat"). Animal sacrifices were offered to her, as to the other deities at Ugarit. The term "holiness" (*qdš*) was applied to her; she has been identified with the nude goddess of Egypt called Qudšu. The designation of the goddess as Athirat Yam suggests that she may also have had some connection with the sea. As mistress (*rbt*), creatress of the gods (*qnyt, 'ilm*), and counselor of the gods, Athirat always appears in a most favorable role in her relations with the other deities of Ugarit. As an important fertility deity of the Phoenicians and Canaanites, she would represent a formidable rival to Yahweh under the sponsorship of the Phoenician princess Jezebel (*see below*).

In the OT it is not always possible to distinguish between references to the Asherah as a goddess and as a cult object. This is true also for the word דגון; the image of Dagon is certainly intended in I Sam. 5:2-4, but in Judg. 16:23-24 it is the god Dagon who grants victory to the Philistines. It is apparent that the Hebrew writer did not always make a distinction between the deity and its image. In a similar way אשרה referred both to the goddess and to the cult object by which she was represented. It has been proposed that the goddess is appealed to in Gen. 30:13, where Leah cried: "With Asherah's help" (באשרי), at the birth of Asher (but see RSV).

According to Judg. 3:7, there was an association of worship between Baal and Asherah. The passage states that the Israelites were evil because they abandoned the Lord and served the Baals and the Asherahs (האשרות). The reference to these deities in the plural may indicate that each locality had its Baal and its Asherah, who were consorts worshiped at the same sanctuary. In the Gideon story (Judg. 6:26-30) the presence of the object called Asherah beside the altar of Baal may be explained by the fact that the people of Ophrah served Baal and Asherah as consorts at one shrine.

The goddess Asherah is intended by the statement that Maacah, mother of Asa, made an abominable image of her (מפלצת לאשרה; I Kings 15:13; II Chr. 15:16). In the time of Elijah there were four hundred prophets of Asherah who ate at Jezebel's table (I Kings 18:19). Manasseh is said to have put a graven image of Asherah (פסל האשרה) in the temple at Jerusalem (II Kings 21:7), and it is probable that in his day there were numerous shrines throughout the land where the goddess was worshiped. Josiah's reformation attempted, among other things, to stamp out the worship of this goddess for whom vessels (כלים; II Kings 23:4) and garments or shrines (בתים; vs. 7) had been made by the women in the Jerusalem temple. It will be noted that in every case where the OT mentions the goddess Asherah it was to speak in condemnation of her or in approval of men like Elijah, Asa, and Josiah, who attempted to destroy her cultus among the Israelites. The very fact that such reforms were required makes it likely that the worship of Asherah was popular in ancient Israel.

3. The cult object. The passages cited above contain the OT references to the Asherah as a goddess, but it is probable that in some instances where a cult object is mentioned the Hebrew writers did not distinguish between the numen and the representation of it. The following passages refer to the Asherah as a cult object, as can be judged by the association with images, altars, etc., and by the verbs used to indicate its construction and destruction: Deut. 16:21; Judg. 6:25-26, 28, 30; I Kings 16:33; II Kings 13:6; 17:16; 18:4; 21:3; 23:6, 15. The word appears in a plural form (אשרים, with and without suffixes) in Exod. 34:13; Deut. 7:5; 12:3; I Kings 14:15, 23; II Kings 17:10; 23:14; II Chr. 14:3—H 14:2; 17:6; 19:3; 24:18; 31:1; 33:3, 19; 34:3-4, 7; Isa. 17:8; 27:9; Jer. 17:2; Mic. 5:14.

The form of the cult object and its use in the worship of Asherah are not described in the OT. An investigation of claims that pieces of an Asherah had been found at Qatna and Megiddo reveals that only charred pieces of wood were discovered which as well might be identified as parts of wooden beams. No object has been found thus far in any excavation which could be called with certainty an Asherah. Since the OT shows it to have been constructed of wood, this is not surprising; only in rare instances have wooden objects in ancient Palestinian temples escaped decay.

The following symbols which are represented in Semitic art have been proposed by various scholars as illustrating the Asherah: a plain pole, a carved pole, a staff, a triangle on a staff, a cross, a double axe, a tree, a tree stump, a headdress for priests, and a wooden image. In each case the identification is made on an assumption concerning the meaning of אשרה in the Hebrew text. Several of the symbols might as well be identified the massebah (*see* PILLAR).

From a study of the verbs used in connection with the Asherah it is clear that it was an object which could be both constructed and destroyed by man; it was not a tree, but was made of wood or contained wood, and could be burned; it was an object that stood upright rather than lying flat, and it was employed in the worship of the goddess by the same name. As in the case of Dagon (*see* § 2 *above*), it is probable that the cult object, in this case a wooden one, was an image of the fertility goddess Asherah. This would explain the fact that there are only four references to the object in prophetic literature; by implication all prophetic condemnation of idolatry would include images of Asherah as well as images of other deities. The same conclusion would hold if the cult object were a staff or pole, but in such a case there would be the problem of explaining how the same word came to be applied both to the goddess and to the object with which she was represented.

With respect to the location of the Asherah, it can be observed that it existed in both the S and N kingdoms at such places as Samaria, Bethel, and Jerusalem. As evidence of widespread use of the cult object in ancient Palestine, attention may be called to the report that the people during Rehoboam's reign "built for themselves high places, and pillars, and Asherim on every high hill and under every green tree" (I Kings 14:23). Concerning the location of the Asherah within the sanctuary, it can be said

only that it stood with other cult objects beside the altar.

The chronology cannot be described in detail, but it appears that the cult object was not known, as was the massebah, to the patriarchs or to the kings of the United Monarchy. Taking account of the date of the laws which refer to it, the object appears to have been known in Palestine from the tenth to the beginning of the sixth centuries B.C. The Asherah was not the invention of the Hebrew people but was adopted from neighboring peoples, perhaps under the influence of such persons as Jezebel.

Scholars do not agree as to the etymology of the word. Until the discovery of the name in the Ras Shamra Texts it was proposed that the name was derived from the Hebrew אשר ("happiness, good fortune"), ישר ("to be upright"), or Akkadian *aširtu* ("temple, sanctuary"). Evidence from Ras Shamra makes it probable that the Hebrew "Asherah" goes back to the Ugaritic proper name *'aṯirat,* a nominal form of the verb *'ṯr* meaning "to walk," or "to tread." Athirat Ym would be the goddess who treads upon the sea.

The antipathy toward the Asherah on the part of the Hebrew leaders was due to the fact that the goddess and the cult object of the same name were associated with the fertility religion of a foreign people and as such involved a mythology and a cultus which were obnoxious to the champions of Yahweh.

ASHEROTH. *See* Asherah.

ASHES. The term frequently used in the Bible to designate the substances remaining after combustion has occurred, as after sacrifices. It is often mentioned in connection with Dust and Sackcloth as a sign of Mourning, grief, and humiliation; its application to the body at times of Fasting was a sign of penitence; figuratively, it had reference to worthless things or persons.

Three different Hebrew words are rendered "ashes":

a) אפר is used most often (Gen. 18:27; Num. 19:9; II Sam. 13:19; etc.) in referring to ashes, as a sign of mourning (Esth. 4:1, 3; Job 2:8; etc.) and penitence (Job 42:6; Dan. 9:3). The same word appears in I Kings 20:38, 41, where the KJV used "ashes"; more correctly, most English translations, including the RSV, use "bandage," as required by the context, which calls for an article of disguise such as a mask. A word with the same consonants but different vowels was used in referring to the ashes of the burnt offering having a purifying effect (Num. 19:17) and in designating the ashes produced by the burning of vessels used in pagan worship (II Kings 23:4). The term often designated merely ashes from a home, or the refuse from a city (Isa. 58:5; Jer. 6:26), and as a metaphor implied destruction (Ezek. 28:18; Mal. 4:3), worthless maxims (Job 13:12), or unworthy people (Gen. 18:27; Ecclus. 10:9; 17:32).

b) דשן was used to refer to the type of ashes formed by a mixture of burned fuel and fat resulting from sacrifice at altars (Lev. 1:16; 4:12; 6:10-11; I Kings 13:3, 5) and from burned corpses (Jer. 31:40).

c) פיח designated the ashes or carbon formed in a kiln (Exod. 9:8, 10), said to have been used by Moses to produce boils among the Egyptians.

The LXX regularly renders the Hebrew by σποδός, except for פיח, which is αἰθάλης, "smoky substance" or "soot." Σποδός appears in Matt. 11:21; Luke 10:13 in referring to ashes for mourning, and in Heb. 9:13 to recall the OT rite of purification with ashes. The use of ashes for ritual purposes was not peculiar to the Hebrews; it has been observed among primitive Arab tribes, and it may be implied among the Phoenicians by the representations on the famous Ahiram Sarcophagus of two women with hands touching their heads.

W. L. Reed

ASHHUR ăsh'ər [אשחור]; KJV ASHUR. According to the suspect MT, the posthumous son of Hezron (I Chr. 2:24 KJV); the reconstructed text (LXX, Vulg.) makes him the son of Caleb by Ephrathah (Ephrath in vs. 19). Perhaps vs. 19 and vs. 24 are duplicates, with "Hur" simply an abbreviation of "Ashhur." Ashhur's own children are listed in I Chr. 4:5-6. He was the settler or founder of the town of Tekoa.

F. T. Schumacher

ASHIMA ə shī'mə [אשימא] (II Kings 17:30); ASHIMAH (Amos 8:14). A deity worshiped by the colonists from Hamath whom the Assyrians settled in Samaria after 722 B.C. (II Kings 17:30). This is possibly a deliberate Hebrew corruption (אשם, *āshām,* "guilt") of "Ashera," the name of the Canaanite mother-goddess. Of similar significance may be אשמת שמרון, *'āshmāth shômᵉrôn,* by which the contemporaries of Amos swear (Amos 8:14). Greek sources from the Roman imperial period, however, attest a deity Σίμι, or Σειμίος, who may be named in the composite divine name Ashembethel in the Elephantine Papyri. Here, however, the first element may be a dialectic variation of the common Semitic word for "name."

ASHKELON ăsh'kə lən [אשקלון; Egyp. *'Asqanu, 'Asqaruna;* Akkad. *Ašqaluna, Asqaluna, Isqiluna*]; in I Macc. 10:86 ASKALON ăs'— ['Ασκαλών]; KJV variants ASKELON, ESHKALONITES ĕsh'kə lə nīts', ASCALON. One of the five principal cities (pentapolis) of the Philistines, the only one of the five located on the seacoast (Jer. 47:7). The site is *ca.* twelve miles N of Gaza and ten miles S of Ashdod. Fig. ASH 89.

Ashkelon has had a long and rich history. It is first mentioned in the Execration Texts of the Middle Kingdom in Egypt (*ca.* 1850 B.C.) as one of the rebellious elements in Egypt's empire (along with Jerusalem). In the Amarna Age (*see* Tell el-Amarna) the city, though affected by the rebellion, seems to have remained loyal to Egypt (Letters 287, 320; *ca.* 1375-1350 B.C.). However, it revolted against

Ramses II, who took it by storm and had inscribed on the temple wall at Karnak a dramatic representation of the battle.* The stele of Mer-ne-Ptah also speaks of Ashkelon's defeat (*ca.* 1220 B.C.). The Megiddo Ivories attest Egyptian religious influence in the city as late as *ca.* 1200 B.C. Fig. ASH 90. *See* IVORY.

Courtesy of the Pierpont Morgan Library

90. Ramses II's conquest of the fortress of Ashkelon (from Karnak)

At this point the Philistines came and the biblical record begins. Ashkelon and her sister cities were in territory not taken by Joshua (Josh. 13:3), though there is a tradition that Judah later took Gaza, Ashkelon, and Ekron (Judg. 1:18 MT; LXX says they were *not* taken). During the times of the Judges, Saul, and David, Ashkelon was definitely a Philistine city (Judg. 14:19; I Sam. 6:17; II Sam. 1:20).

Nothing more is heard of the city until the Assyrian period. Amos 1:8 predicts punishment on king and city (*ca.* 750 B.C. if from the prophet himself). This came to pass when "Mitinti of Ashkelon" revolted, after first paying tribute, against Tiglath-Pileser III. When Mitinti saw his desperate position, he became insane, and was succeeded by his son Rukibtu, who was more loyal to Assyria (733-732). Later we find one Sidqia, apparently a usurper, in control of Ashkelon and several nearby places. Sidqia, after refusing to yield to Sennacherib during the latter's campaign against Jerusalem, was deported with his whole family to Assyria, and Sharruludari, son of Rukibtu, was restored to the kingship as an Assyrian vassal (701). Still later, another king, again named Mitinti, paid tribute to Esarhaddon (680-669), the conqueror of Memphis, and to Ashurbanipal, on his first Egyptian campaign (*ca.* 667).

Herodotus (I.105) mentions Ashkelon as the seat of a temple of "heavenly Aphrodite" (Astarte?) plundered by the Scythians *ca.* 626 B.C. (or shortly thereafter). From this time or later comes the oracle of doom in Zeph. 2:4, with the added prediction that Judah will eventually occupy the city (vs. 7).

After the defeat of the Egyptians at the battle of Carchemish in 605, the Chaldeans and Nebuchadnezzar (more correctly Nebuchadrezzar) wished to insure control of the West. Nebuchadrezzar immediately demanded submission and tribute of all the Palestinian states. Jeremiah warned that all should submit (Jer. 25:1, 17, 20). Apparently Ashkelon alone refused on this occasion. Punishment came quickly. An Aramaic letter found in Egypt from one Adon, probably king of Ashkelon, presumably to Pharaoh Neco, states that the "king of Babylon" has reached Aphek (forty miles to the N), and pleads for help. No help was forthcoming; Nebuchadrezzar "turned the city into a mound and heap of ruins" (Dec. 604; cf. Jer. 47:5-7). Later documents inform us that in 592 Ashkelonite captives (skilled laborers and members of the royal family) were living in Babylon.

According to the Greek geographer Scylax (*Periplus* 104), the city was under the control of Tyre in the Persian period. The Jews continued to view it with hostility (Zech. 9:5). After the coming of Alexander the Great, Ashkelon (or Ascalon, as it was now called) passionately embraced Hellenism, becoming a center of literature and scholarship. When Joseph son of Tobias, a Jewish tax collector under Ptolemy V Epiphanes (203-181 B.C.), came to Ascalon and demanded tribute, he was refused; the city paid with the loss of the lives and property of twenty principal men (Jos. Antiq. XII.iv.5). Nevertheless, it was conciliatory toward the Maccabees, suffering no damage from them (I Macc. 10:86; 11:60; 12:33). There was a considerable Jewish population at this time, though Jth. 2:28 lists the city as non-Jewish. Later, upon appeal to the Romans, Ascalon was made a "free town" (*oppidum liberum,* on coins of *ca.* 104 B.C.). The tradition that Herod the Great (*ca.* 73-4 B.C.) was the descendant of an Ascalonite temple slave, or even a native of the city (Just. Dial. 52.3; Euseb. Hist. I.vi.2; I.vii.11), is thought by some to be only Jewish slander. At any rate, Herod, though he did not control the city, built baths and other costly structures there (Jos. War I.xxi.11), including apparently a palace which his sister Salome inherited (Jos. War II.vi.3). When the war against Rome broke out (A.D. 66), the Jews attacked and partially destroyed Ascalon (Jos. War II.xviii.1); but the city recovered and repulsed with great slaughter a later Jewish attack (Jos. War III.ii.1-2).

By the fourth century, Ascalon's enthusiastic

paganism had given way to Christianity, and the city had become a bishopric. To the conquering Moslems it became the "bride of Syria" or "Syria's summit" (seventh century A.D.). It held out against the Crusaders until 1153. Saladin regained it in 1187, after the battle of the Horns of Hattin, breaking down its walls in 1191 lest it serve as a base for the Christians. An attempted restoration by Richard I succeeded only in part. What remained was finally dismantled by order of Sultan Baibars in 1270, since which time it has been a largely uninhabited ruin.

During early Christian times there was a separate seaport several miles to the S called Maioumas of Ascalon, which in the sixth century had its own bishop (*see* GAZA for a similar place bearing the same name).

In 1815, Lady Hester Stanhope, an Englishwoman living in Syria, conducted an excavation at Ascalon seeking treasure. She found instead a headless Greco-Roman statue of good quality, which she ordered destroyed, lest she be suspected of seeking works of art for the pleasure of Europeans instead of treasure to be turned over to the sultan! Two similar statues were found by a Turkish official in 1887.

During the years 1920-22, the Palestine Exploration Fund excavated at the site of Ashkelon-Ascalon. The history of the city was traced as far back as *ca.* 1800 B.C. (Middle Bronze Age), the time from which comes our earliest literary reference (*see above*). Evidence of the coming of the Philistines was found. The most extensive finds, however, came from the Hellenistic and Roman periods, during which the city flourished so greatly. Noteworthy are "Herod's Cloisters," the statues of "Peace and Victory," and the "Statuette of a Kneeling Venus."

The scallion, a kind of onion, derives its name from this city.

ASHKENAZ ăsh'kə năz [אשכנז]; KJV ASHCHENAZ. Son of Gomer (Gen. 10:3; I Chr. 1:6), and a kingdom associated with Ararat and Minni (Jer. 51:27). The identification with Assyrian *Aš-gu-za-a* for the SCYTHIANS seems certain. The Scythians were the pushing force behind the Cimmerian invasions (Herodotus IV.11), which accounts for their being the son of GOMER. They fought the Assyrians in conjunction with the Manneans (MINNI), and they were instrumental in the fall of the ancient kingdoms of Urartu (*see* ARARAT) and Assyria (Esarhaddon *Nineveh Prism* A.III.59-61). M. J. MELLINK

ASHNAH ăsh'nə [אשנה]. The name of two cities in Judah, both in the Shephelah below the mountains of Judah (Josh. 15:33, 43). Their location is uncertain. The first of these may possibly be 'Aslin, a village at the edge of the coastal plain of Judah. The second has sometimes been identified with Idhna, between Hebron and Lachish. S. COHEN

ASHPENAZ ăsh'pə năz [אשפנז] (Dan. 1:3-4). The chief eunuch of Nebuchadnezzar. He was commanded to bring handsome and intelligent Jewish youths to the king's palace.

ASHRIEL. KJV form of ASRIEL in I Chr. 7:14.

ASHTAROTH ăsh'tə rŏth [עשתרות]; ASHTERATHITE ăsh'te răth ĭt' [עשתרתי] (I Chr. 11:44). **1.** The plural form of "ASHTORETH," the name of the Canaanite fertility-goddess. As such it probably denotes various local manifestations of Astarte, just as "Baalim" (RSV "Baals") denotes local varieties of the Canaanite BAAL. In the fertility cult of Ras Shamra, relative to the vicissitudes of Baal as a vegetation deity, the leading role during the eclipse of the god is played by the goddess Anat. This goddess is less conspicuous in Palestine than Astarte, who apparently assumed the role of Anat there, to judge from the close association of Ashtaroth and Baalim in the OT. *Cf.* ASHERAH.

In the Hebrew settlement it is said (Judg. 2:13; 10:6) that the Israelites practiced the cult of Baalim and Ashtaroth, though this might denote the observance of seasonal rituals of the fertility cult without the positive worship of Baal and Astarte. In any case, the references, being by nature of commentary in the Deuteronomic redaction of Judges, seem general references, which may not be emphasized in full detail. The same may be said of Samuel's injunction to Israel at the assembly of Mizpah at the election of Saul, to put away the Baalim and Ashtaroth (I Sam. 7:4) and of Israel's confession of apostasy to Baalim and Ashtaroth after the defeat at the hands of the Philistines (I Sam. 12:10).

In I Sam. 31:10 in the reference to the temple of the goddess, probably at Beth-shan, Ashtaroth of the MT should probably be emended to the singular Ashtoreth. Here there is no question of worship by the Hebrews, since Beth-shan was never occupied by the Hebrews, having been destroyed in the time of David. *See* ASHTORETH; BETH-SHAN § 4.

2. An abbreviated form of a place name compounded with the name of the goddess Ashtaroth. Ashtaroth is found as the name of a town in N Transjordan (Aštarti of the Amarna Tablets) associated with Edrei (modern Deraa) as the home of Og, king of Bashan (Deut. 1:4; 3:10; Josh. 12:4). Later settled by Machir (Josh. 13:12, 31), Ashtaroth was one of the Israelite cities of refuge (I Chr. 6:71; cf. Josh. 21:27). The same place is apparently denoted in Gen. 14:5 as a city of the Rephaim in the account of Chedorlaomer's raid. There it is termed ASHTEROTH-KARNAIM, "Ashtaroth of the Horns." This may refer either to the goddess Astarte, who is often represented with a horned headdress as the Egyptian cow-goddess Hathor, or to some topographical feature. The place was a notable cult center in Hasmonean times, when its sanctuary was destroyed by

Judas Maccabeus (I Macc. 5:44—"Carnaim"), which suggests that the former conjecture is the more probable.

3. A common noun meaning either "young" or "breeding stock," in passages referring to productivity of sheep (Deut. 7:13; 28:4, 18, 51)—עשתרות צאנך, *'ashtᵉrôth ṣônᵉkâ*, in parallelism with שגר אלפך, *sheghar 'ᵃlāphᵉkâ*. The possible connection with Ashtoreth, the fertility-goddess, suggests that the first phrase might designate ewes, but the parallel "young of thy cattle" suggests that the first phrase means "young of thy flock." The etymology of the term is obscure, though a connection between the fertility-goddess and breeding ewes or their offspring is natural. W. R. Smith suggests that Ashtaroth, "Ashtoreth," had the form of a sheep, but this is a pure conjecture unsupported by any known evidence.

For bibliography, *see* ASHTORETH. J. GRAY

ASHTERATHITE ăsh'tə răth īt' [עשתרתי] (I Chr. 11:44). A native of ASHTAROTH.

ASHTEROTH-KARNAIM ăsh'tə rōth kär nā'əm [עשתרות קרנים, twin peaks near Ashtaroth]. Alternately: KARNAIM [קרנים] (Amos 6:13); CARNAIM [Καρνάιν] (I Macc. 5:26, 43-44); CARNION kär'nĭ ən [Κάρνιον] (II Macc. 12:21, 26 KJV). An important fortress city in Gilead. It has been located at Sheikh Sa'ad, *ca.* twenty miles E of the Sea of Galilee and three miles N of Tell 'Ashtarah, the site of ASHTAROTH. Archaeological investigations have shown that the two cities seldom flourished simultaneously but rather alternately; thus the great stele of Ramses II, originally set up at Ashtaroth, was found at Karnaim, whither it had been removed. This makes impossible the attractive supposition that the two towns were united under the name of Astarte of the two horns (i.e., the lunar crescent). As a matter of fact, the patron goddess of Karnaim was not Astarte, but ATARGATIS, the Canaanite 'Attar-'Ate (II Macc. 12:26).

Ashteroth-karnaim was occupied by the Rephaim, or prehistoric inhabitants of Canaan, when it fell victim to the attack of Chedorlaomer and his confederate kings as they marched southward through the Transjordan (Gen. 14:5). It was so thoroughly destroyed that it was not occupied during the entire Late Bronze period (sixteenth–thirteenth centuries B.C.) and was rebuilt only after the Israelite conquest. Since it was a bone of contention between Syria (Aram) and Israel in the time of the kings, it may have been rebuilt by either of these nations. Jeroboam II of Israel (781-741 B.C.) captured it together with the nearby Lo-debar (Josh. 13:26). *See* DEBIR § 3. Amos later made a sarcastic pun on this exploit, in the sense of: "Have we not taken horns for ourselves?" (Amos 6:13; perhaps a reminiscence of the action of Zedekiah the son of Chenaanah as described in I Kings 22:11). Tiglath-pileser III of Assyria mentions the city under the name of Qarnen (Qarnini); he conquered the whole region in 732 and made the place the capital of the district.

In the postexilic period the city, known as Carnaim or Carnion, was settled both by Jews and by Greeks. At that time it was regarded as a very strong fortress, but it was captured and destroyed by Judas Maccabeus after the Jews there had appealed to him for rescue (I Macc. 5:26, 43-44; II Macc. 12:21, 26).

S. COHEN

ASHTORETH ăsh'tə rĕth [עשתרת]. The deliberate Hebrew misvocalization of the name of the Canaanite fertility-goddess called עתתרת (Athtarath) in the Ras Shamra Texts and עשתרת (probably pronounced Ashtarath or Ashtereth) in later Phoenician inscriptions; the Greek approximation is Ασταρτη. The Hebrew scribes, as usual in reproducing the name of a pagan deity, retained the consonants and substituted the vowels of בשת (*bŏsheth*), "shame," in the last two syllables. The name is so found in I Kings 11:5, 33; II Kings 23:13, the only instances in the OT of its use in the singular form. More commonly the plural ASHTAROTH is used in general statements about Canaanite paganism, the reference being to various local manifestations of the fertility-goddess. In I Sam. 31:10, where the reference is to a certain temple, probably at Beth-shan, where the Philistines deposited the armor of Saul after the Battle of Gilboa, the singular Ashtoreth should probably be read for Ashtaroth of the MT.

The passage in I Kings 11:5 refers to Solomon's patronage of the cult of Ashtoreth and II Kings 23:13 to the abolition of her cult place on the "Mount of Corruption," probably the Mount of Olives, in Josiah's reformation. In both cases the cult of the goddess is related to the Phoenicians, specifically the Sidonians. It is perhaps significant that in both passages her worship is mentioned together with that of Milcom, the god of Ammon (*see* MOLECH), and in the latter passage with the cult of CHEMOSH, the god of Moab. Since there is good reason to believe that Milcom and Chemosh were local forms of the one astral deity, the Venus Star, Athtar, this may indicate that Ashtoreth had also been an astral deity, the female counterpart of Athtar. In this connection it is noteworthy that her Mesopotamian counterpart, Ishtar (*see* ASSYRIA AND BABYLONIA), retained her character as an astral deity, though at the same time the goddess of love and fertility. Apart from the known astral character of Ishtar and the association of the cult of Ashtoreth with that of Milcom and Chemosh in the passages we have cited, there is no evidence from Canaan that she was an astral deity except that Athtar, of which "Ashtoreth" is the female form, had certainly this character.

In Canaan the goddess is first encountered in the Ras Shamra Texts in offering lists and in mythology, where she is apparently the ally of BAAL in his conflict with the turbulent Sea-and-River. Unfortunately this text is fragmentary, and we cannot tell precisely the role played by the goddess. There is a later version, however, preserved in an Egyptian papyrus from the Nineteenth Dynasty, wherein Athtarath is the bride claimed by the tyrant Sea. Here also the text is fragmentary, precluding further particularization. From a certain passage in the saga of King Keret among the Ras Shamra Texts, where the king invokes a curse in the name of "Athtarath-the-Name-of-Baal," we see that the goddess, at least in the heroic past, was associated with Baal as the giver of life or death. From the Ras Shamra Texts generally,

however, it would seem that the functions of Ashtoreth as the patroness of fertility were taken over by Anath, the sister of Baal, who is by far the most active deity in the pantheon of Ras Shamra. In Palestine and probably S Syria, however, on the evidence of Phoenician inscriptions of the first millennium and of the OT, Ashtoreth was much more prominent than Anath.

The goddess appears in Egyptian inscriptions and sculpture, particularly from the Nineteenth Dynasty, when a number of Semitic cults were introduced to Egypt. In an inscribed sculpture from the Ptolemaic period at Edfu, she is depicted with the head of a lion. The association with the lion suggests that Ashtoreth is the subject of the Nineteenth Dynasty sculptures where a naked goddess named Qodshu ("holiness"), holding a papyrus plant and a serpent, stands on a lion between Min, the virile Egyptian fertility-god, and RESHEPH, the Semitic god of destruction and death. Here the goddess wears her hair in the fashion of stylized horns characteristic of the Egyptian cow-goddess Hathor, and bronze figurines from Gezer actually depict a nude female with horns, which may well be representations of Ashtoreth. On

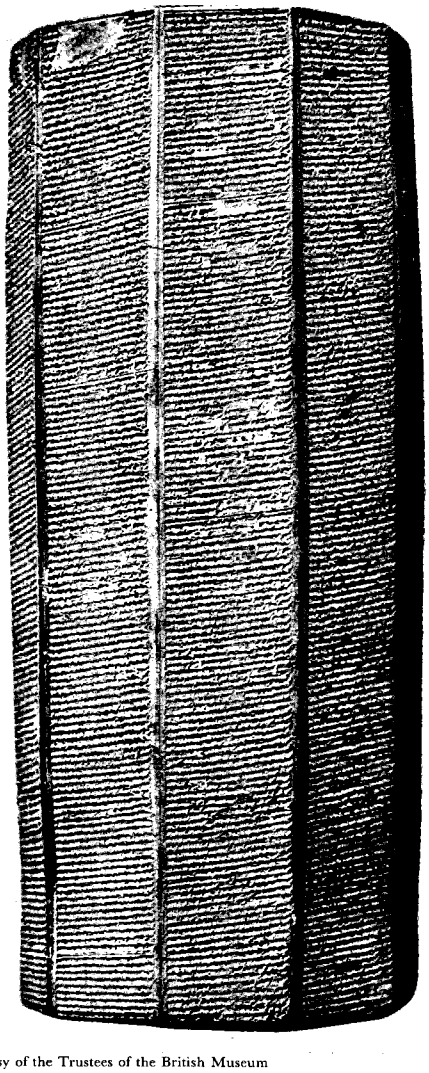
91. Stele of "Ashtoreth," from Beth-shan

such evidence of the identity of the goddess, her cult seems to have flourished at Beth-shan from the fifteenth to the thirteenth centuries,* and a votive inscription of a man of Ascalon at Delos in the second century B.C. naming "Astarte of Palestine" may indicate Ascalon as another of her cult centers. Coins of the Roman imperial period from Sidon and Beirut also depict Astarte, who is known by her association with the lion. Fig. ASH 91.

Generally related to the fertility cult in Palestine are figurines usually molded of clay representing nude females with breasts and pudenda emphasized. These are frequently termed "Astarte plaques," though it has been suggested that they are models, not of the goddess, but of concubines to be placed with the defunct in the tomb—a custom definitely attested in Egypt and Greece. The horned Hathor coiffure, however, suggests that these were figurines of the goddess, and the lotus flower and serpent which the figure occasionally holds certainly indicate Astarte, though the symbol of a dove clutched to the breasts indicates Ashera, the mother-goddess. The figurines, which from their great number appear to have been associated with the home rather than the sanctuary, may have been popularly used as symbols of prayers or vows to the goddess of fertility, or have been made and exposed on the principle of imitative magic, to influence the deity by autosuggestion and thus procure family.



The character of Ashtoreth as the giver of life is suggested further by her association with the Phoenician god of healing, Eshmun, in an undated inscription from Carthage (cf. the Assyrian name Ishtar-miti-uballiṭ—"Ishtar, make the dead to live").

ASHUR. KJV form of ASHHUR.

ASHURBANIPAL ăsh'ər băn'ə pəl [Akkad. *Aššur-bāni-apli*, Aššur is the creator of the heir]. King of Assyria (668–629[?] B.C.); son of ESARHADDON. Figs. ASH 92-93.

Ashurbanipal was the last of the great kings of Assyria. The main event of his reign was his long-drawn-out fight with the coalition which his brother Shamashshumukin king of Babylon had set afoot against him. In the first years of his reign, Ashurbanipal continued the policy of his father against Egypt. In 663 he even succeeded in penetrating beyond MEMPHIS and in destroying THEBES. The frontiers in Asia Minor, where Gyges of Lydia was threatened by the Cimmerians, and those toward the N, where the Manneans continued to exert pressure, remained rather stable in the first decade of Ashurbanipal's reign. In 652, Shamashshumukin apparently thought that the appropriate moment had come for a rebellion against his brother. It is difficult to see what caused the Babylonian king to rebel, surrounded as his capital was by strong Assyrian garrisons stationed under efficient commanders in all the major cities of Babylonia, which had always been genuinely loyal to Assyria. As an Assyrian he should also have known how unreliable Elamite assistance was and should not have been under any illusions as to the military value of the Chaldean tribes, his main allies, nor as to that of the Arabs, in a clash with the well-disciplined and efficiently led Assyrian troops. When the army of Shamashshumukin and his allies had failed to conquer such essential Assyrian-held cities as Ur and Uruk, and when the Elamite king was defeated by the Assyrians and internal unrest made Elam unable to participate further in the war, the Babylonian king was forced into a defensive fight, which, of course, sealed his doom. The year 650 saw Assyrian generals keeping Elam and

Courtesy of the Trustees of the British Museum

92. Baked clay prism with the annals of Ashurbanipal

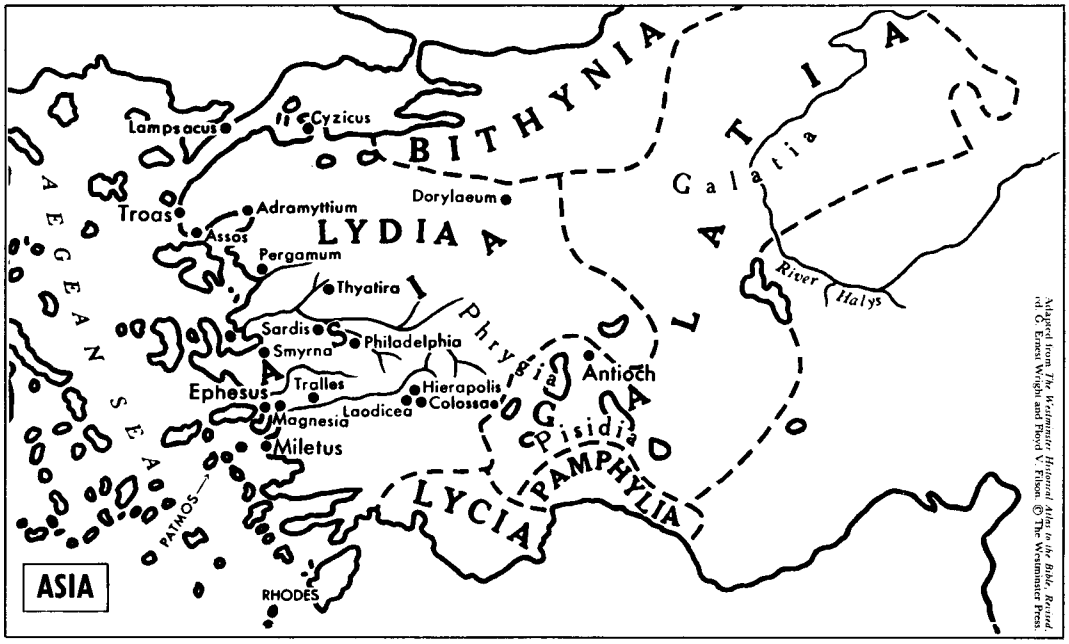
the Chaldean tribes in check. An expeditionary force of Arabs was defeated and driven into Babylon, and eventually siege was laid to the city. This siege lasted for two years, and it was famine that eventually led to the downfall of Babylon, which had been defended with courage and tenacity (648). Ashurbanipal then undertook punitive campaigns against the Arabs and Elam, the latter ending with the destruction of Susa. With the year 639, the sources for Assyrian history cease, although we know that Ashurbanipal ruled till 629(?). No explanation can be given for this curious blackout. With appalling suddenness, the Empire disintegrated, under his son Sinsharishkun (627-612), who succeeded him. Babylonia fell to Nabopolassar; the N and the W threw off Assyrian domination nearly immediately; and in 612 the capital itself, Nineveh, was destroyed by the Medes.

As befits the only Assyrian king who ever prided himself on his literacy, Ashurbanipal's library in Nineveh, now partly excavated and kept in the British Museum, will be his perennial monument.

Chr.," *Wiener Zeitschrift für die Kunde des Morgenlandes*, 55 (1948), 62 ff. A. L. OPPENHEIM

ASHURITES ăsh'ə rīts [אשורי]. A people in N Israel mentioned between Gilead and Jezreel as part of the kingdom of Ish-bosheth (II Sam. 2:9). The Syr. and Vulg. read "GESHURITES" (cf. Josh. 12:5), whose situation would suit the context; but Geshur was an independent kingdom (II Sam. 3:3; 13:37). The Targ. has "ASHERITES," which is preferred by some commentators. R. F. SCHNELL

ASHVATH ăsh'văth [עשות] (I Chr. 7:33). One of the sons of Japhlet in the genealogy of Asher.



ASIA ā'zhə, ā'shə ['Ασία]. A portion of the continent of Asia; in the NT normally a province in Asia Minor.

1. Extent. Differences as to the extent of the area meant by "Asia" are due to the fact that the word

Courtesy of the Trustees of the British Museum

93. Ashurbanipal before an offering table and incense stand, pouring a libation over dead lions

meant different things at different times and that the borders were often not defined with precision. Among Greek geographers the word was used to denote the continent of Asia or some major portion of it. This usage is not unknown in the writers of the Roman Empire (Jos. Antiq. XI.viii.3; II Esd. 15:46; 16:1).

In the Apoc. the word is used of the kingdom of the Seleucids, for their ruler is referred to as "king of Asia" (I Macc. 8:6; II Macc. 3:3; cf. I Macc. 11:13; 12:39; 13:32; Jos. Antiq. XII.iii.3). In the NT the word refers to the Roman province of Asia, with only a few possible exceptions (e.g., Acts 2:9; 19:10).

2. The Roman province. This portion of Asia Minor had been conquered by the Romans earlier in the second century B.C. in its war against Antiochus the Great, and had been given to their allies, the Attalids. When Attalus III died in 133 B.C., he willed his kingdom to Rome, but the province was not organized until after a revolt had been put down. The Romans knew the Attalids as "kings of Asia"; hence the new province was called Asia. The province included the W parts of Asia Minor, including Mysia, Lydia, and Caria, plus the coastal areas—i.e., Aeolia, Ionia, and the Troad—and many of the islands of the Aegean, including Rhodes and Patmos. The province was enlarged in 116 B.C. with the addition of Greater Phrygia. Asia could then be described as between Bithynia, Lycia, Galatia, and the Aegean Sea. It was not a solid territory, for within it were various free cities and temple states. *Ca.* A.D. 285 the province was greatly reduced in size and restricted to the coastal areas and the lower river valleys of the W.

The first capital of this Roman province was Pergamum, the capital of the former kingdom of the Attalids. By the time of Augustus the capital was changed to Ephesus, as that city grew in importance as a seaport and communications center for Rome. It became a requirement that the governor should land and take office there.

Asia was a senatorial province and as such was ruled by a governor with the title of proconsul, who was appointed by the Senate from the senior exconsuls. Although the appointment was usually for only one year, in exceptional cases it could be extended for a second or even a third year. Under the Republic the Roman provincial officials and the *publicani* had systematically exploited the wealth of Asia, and the short tenure of office encouraged their rapacity. Therefore Asia welcomed Augustus and the beginning of the Empire, for he brought relative peace and prosperity, a responsible and stable administration. Asia soon developed a strong sense of loyalty to the emperor.

Asia was regarded as the richest of the Roman provinces, as Cicero testifies: "In the richness of its soil, in the variety of its products, in the extent of its pastures, and in the number of its exports, it surpasses all other lands" (*De. Imp. Cn. Pomp.* 14). Other sources of wealth were minerals and timber.

This province possessed a high degree of culture and intellectual activity, which dated back to the early Greek cities along the coast. Long before Alexander the Great, such Greek cities as the two Magnesias, Miletus, and Tralles had become firmly established. After Alexander these Greek foundations multiplied, and the interior was rapidly Hellenized. Although Asia contained many diverse peoples, by the first century A.D. the culture and language had become predominantly Greek, as the province became the most thoroughly Hellenized portion of Asia Minor. The province was never dominated by a single city, like Alexandria or Antioch, but there were many medium-sized cities. Under the Empire the chief cities, which held the rank of metropolis, were Ephesus, Smyrna, Sardis, Pergamum, Lampsacus, and Cyzicus.

The religion of Asia included a great variety of cults and gods. There were native Anatolian rites, such as the worship of the Great Mother. There was the worship of Greek and Roman deities, such as Artemis or Diana at Ephesus (cf. Acts 19) and Asclepius at Pergamum. These Greco-Roman deities were often identified with the native gods. An important development for early Christianity was the rise of emperor-worship, which became both popular and powerful in Asia during the period of peace and prosperity inaugurated by Augustus. This province was one of the first to request permission to worship the living emperor. Augustus granted this request in 29 B.C. and then only to non-Romans. By the end of the first century A.D. emperor-worship in Asia had incited hostility toward the Christians, who refused to participate.

3. In the NT. With one or two possible exceptions, in the NT "Asia" refers to the Roman province (*see above*). At Pentecost there were Jews in Jerusalem who had come from Asia, although the inclusion of Phrygia in the list of places seems to indicate that only a portion of the province was meant, for Asia normally included Phrygia (Acts 2:9-10). The strength of the Jewish community in Asia is also indicated by the mention of Jews from there, who disputed with Stephen (6:9).

On Paul's second missionary journey he and Timothy were forbidden by the Spirit to preach in Asia, yet they apparently crossed the province to reach one of its cities, Troas (Acts 16:6-8). On Paul's return from Greece he stopped briefly at Ephesus (18:19-21). During his third journey Paul spent over two years in and around Ephesus, "so that all the residents of Asia heard the word of the Lord" (19:10; cf. vs. 22). This may be a reference to only that portion of Asia around Ephesus, and so possibly also in vss. 26-27. On Paul's final journey to Jerusalem he decided to pass by Asia and touched only at Miletus (20:16-17). Paul's extensive stay in Ephesus is reflected in references in his letters (Rom. 16:5; I Cor. 15:32; 16:8, 19; II Cor. 1:8).

Asia is the center of interest for the author of the book of Revelation. The seven churches which he addresses are all in the W portion of the province. His selection of only certain cities probably reflects his interest in the churches he knew best. It should be noticed that his list puts first the three chief cities of the province: Ephesus, Symrna, and Pergamum, and then adds Thyatira, Sardis, Philadelphia, and Laodicea (Rev. 1:11). Other cities of Asia mentioned in the NT are Colossae, Hierapolis, Adramyttium, and Assos.

ASIARCH ā′zhĭ ärk [Ἀσιάρχης] (Acts 19:31). As yet, the evidence is inadequate to permit a precise definition of the origin and meaning—perhaps a shifting one—of this term. Most of the notes in the commentaries on Acts 19:31 are more precise than the ambiguity of the evidence permits. The term occurs in Strabo 14.1.42; *Martyrdom of Polycarp* 12.2; in some late juridical sources (cf. *Digesta* 27.1.6.14); and in numerous inscriptions on coins and stones of the cities of Asia.

It may be stated with assurance that the Asiarchs were men of wealth and public influence in the cities they represented or served, and that some of them may have been of provincial importance. For the very reason that they were not technically a part of the structure of Roman provincial government, but offered themselves in the cities of the Asian League or commune and were accepted, appointed, or elected as protectors and promoters of the expanding imperial cult and the worship of the goddess Roma, they would rate as Romans of the most loyal kind. Such religio-patriotic functions further involved defraying the expenses of the cult festivals, including the games associated with them. On occasion, an Asiarch might repair at his own expense a public bath, or pay for minting an issue of bronze coins which would bear his name, or finance gladiatorial combats and wild-beast hunts in the arena. In the interesting account of the *Martyrdom of Polycarp*, bishop of Smyrna (12.2) it was an Asiarch who in defiance of the mob refused to let loose a lion on Polycarp, on the ground that he had already closed the sports. At times the connection of the Asiarch with the emperor cult brought him the appointment of high priest of the local temple, or even carried the grandiose title of "high priest of Asia." Although the term of office was one year, re-election or reappointment was possible, and the title might survive the term of office. In this sense a city like Ephesus might have several Asiarchs at any one time.

If we may suppose that Luke and his first readers were aware of the varied functions of the Asiarchs, the importance of the mention of them in Acts is clear. Among Paul's "friends" and protectors, Luke will say, are the most noble and loyal Roman provincials, even the religious patriots and civic benefactors. Luke introduces the Asiarchs as an elite supporting Paul against the Ephesian rabble.

Bibliography. L. R. Taylor, "The Asiarchs," note XXII, pp. 256-62, in F. J. Foakes-Jackson and K. Lake, eds., *The Beginnings of Christianity*, pt. I, vol. V (1933), is the most influential of recent discussions. D. Magie, *Roman Rule in Asia Minor* (1950), pp. 449-50, 1298-1301, 1526, is the most searching discussion of the term since Taylor's, and one which questions some of Taylor's conclusions. F. D. GEALY

ASIBIAS. Apoc. alternate form of HASHABIAH 8.

ASIEL ăs′ĭ əl [עשיאל; Ἀσιήλ]; KJV Apoc. ASAEL. **1.** Great-grandfather of Jehu in a list of Simeonite chieftains and their conquests in the time of Hezekiah (I Chr. 4:35).

2. A scribe who served Ezra (II Esd. 14:24).

3. Ancestor of Tobit (Tob. 1:1); a Naphtalite.

ASIPHA. KJV Apoc. form of HASUPHA.

ASKELON. KJV alternate form of ASHKELON.

ASMODEUS ăz′mō dē′əs [Ἀσμοδέυς, *probably from* שמד, *hence* the Destroyer (*cf.* ὁ ἀπολλύων Apollyon, *in* Rev. 9:11); *derived by some from the Zend Aesma Daēva,* demon of anger). An evil being described in

later Jewish tradition as "king of the demons"; sometimes identified with Beelzebul (cf. Mark 3:22); in the Talmud he often appears in the events concerning Solomon.

Asmodeus plays a leading role in the book of Tobit. Himself in love with Sarah, he slays her seven successive husbands on the wedding night (is Mark 12:20-22 an allusion to this?). With the help of Raphael, Tobias brews a potion which drives Asmodeus away, and so he is able to possess his bride.

In literature, Asmodeus has come to symbolize marital discord. J. C. SWAIM

ASNAH ăs'nə [אסנה, *probably an* Egyp. *theophorous name, with* נה *referring to a god:* he who belongs to Nah]. The head of a family of temple servants who returned to Palestine after the Exile (Ezra 2:50; I Esd. 5:31).

ASNAPPER. KJV form of OSNAPPAR.

ASOM. KJV Apoc. form of HASHUM.

ASP [פתן (ADDER *in* Pss. 58:4—H 58:5; 91:13); Ugar. *bṯn;* Akkad. *bašmu;* ἀσπίς] (Deut. 32:33; Job 20:14, 16; Isa. 11:8; Rom. 3:13). English term refers to one of several poisonous snakes, with special reference to the cobra, or may indicate the common European type of viper or adder. Bodenheimer (*see* FAUNA § C) believes the identification of פתן is unknown; many have suggested the cobra is intended, but without adequate basis.

"Asp" is used in figures of speech in poetry. The wine of the enemy is the "cruel venom of asps" (Deut. 32:33), the food of the wicked becomes in his stomach the gall of asps (Job 20:14), and the venom of asps is under the tongue of the unrighteous (Rom. 3:13). The wicked will suck the poison of asps (Job 20:16), and in the new age of peace the child will play safely on the hole of the asp (Isa. 11:8). H. G. MAY

ASPALATHUS ăs păl'ə thəs. KJV translation of ἀσπάλαθος (RSV CAMEL'S THORN).

ASPATHA ăs pā'thə [אספתא, *perhaps* Pers. *loan word*] (Esth. 9:7). One of the ten sons of HAMAN who were killed by the Jews in retaliation.

ASPHAR ăs'fär ['Ασφάρ] (I Macc. 9:33). A pool in the desert; the scene of a camp of Jonathan Maccabeus and Simon Maccabeus. N. TURNER

ASPHARASUS. KJV Apoc. form of MISPAR.

ASRIEL ăs'rĭ əl [אשריאל, God has filled with joy, *or* (the object of) joy is God(?)]; KJV ASHRIEL ăsh'rĭ əl in I Chr. 7:14; ASRIELITES ăs'rĭ ə līts. A descendant of Manasseh; a Gileadite enumerated in the list of the second census taken by Moses in the wilderness (Num. 26:31; Josh. 17:2; I Chr. 7:14, where "Asriel" should be deleted). He is the eponymous ancestor of the Asrielites, one of the families of Manasseh to whom land was allotted by Joshua.

ASS [אתון, she-ass, *cf.* Akkad. *atânu,* she-ass; חמור, *from* חמר, be red, *cf.* Akkad. *emêru,* ass; עיר, young, vigorous male ass (*alternately* FOAL; COLT; KJV ASS COLT; YOUNG ASS), *cf.* Arab. *'âra,* roam, rove, *and 'ayr,* ass, wild ass; ὄνος; ὀνάριον, *diminutive of* ὄνος; ὑποζύγιον, *lit.* under the yoke]. Centuries before Israel's patriarchal age, the ass had been domesticated and had become part of the civilized life of Western Asia. Tamed onagers appear in Mesopotamia in the third millennium B.C., and the domesticated Nubian wild ass is seen in Egypt in the same period. It is probable that the latter variety was the ass of ancient Palestine and the Bible. *See* WILD ASS; FAUNA § A1*a*ii. Fig. ASS 94.

94. Hunt for wild asses, from an alabaster relief of Ashurbanipal at Nineveh

For a summary of Roman ideas about the ass and the utility of ass's milk, current in the first century A.D., see Pliny Nat. Hist. VIII.68; XXVIII.50.

1. As a work animal
2. As a riding animal
3. As food
4. As an economic asset
5. In Israel's religious tradition

1. As a work animal. The ass was used for carrying burdens (Gen. 42:26; I Sam. 16:20; 25:18; Neh. 13:15; etc.), and also for agricultural operations (Isa. 30:24). The proverbial strength of the ass furnished an apt figure for Issachar (Gen. 49:14). The prohibition against plowing with an ox and an ass together (Deut. 22:10) may have arisen in part out of solicitude for the ass, but it also appears to reflect the conviction that different species of things must not be confused in any way (cf. M. Kil. 8.2, 4). In ancient Egypt asses were used on threshing floors, but they are not mentioned in this capacity, as the ox is, in Deut. 25:4. For later Jewish views, recorded in the Mishna, about hiring an ass, see B.M. 6.3, 5; on ass-drivers, see Kid. 4.14.

2. As a riding animal. The ass, controlled by a bridle (Prov. 26:3), was the animal ordinarily used for riding by men (Num. 22:21; II Sam. 17:23; etc.) and by women and children (Exod. 4:20; Josh. 15:18; II Kings 4:24; etc.). Even people of influence and position used the ass (Judg. 10:4; 12:14; I Sam. 25:20). Zion's future king's coming riding on an ass (not on a horse or in a chariot) emphasizes his essential peaceableness (Zech. 9:9; cf. Matt. 21:1-7; John 12:14).

3. As food. Both Xenophon (cf. *Anabasis* I.5) and Pliny (*see above*) speak of the flesh of the ass as food, and II Kings 6:25 implies that in the ninth century B.C. the Hebrews were familiar with the meat of the ass. But the dietary norms of Israel (Lev. 11:1-8; Deut. 14:3-8) treated animals like the ass, which neither part the hoof nor chew the cud, as unclean and therefore unacceptable as food, and these views eventually determined the established Jewish practice.

4. As an economic asset. Possession of an ass was almost the bare minimum for existence (Job 24:3); and wealth was indicated by the ownership of large numbers of animals, among which were commonly included asses (Gen. 12:16; 24:35; Job 1:3; etc.). Asses served as an acceptable gift (Gen. 32:13-15). In the summary of the resources of the early post-exilic Judean community the numbers of asses far exceed those of all the other animals (Ezra 2:66-67; Neh. 7:68-69). The death of an ass involved hasty disposal of the carcass, a circumstance which Jeremiah used to prefigure the burial of Jehoiakim (Jer. 22:19).

5. In Israel's religious tradition. The ass, like the ox, shared in the rest of the sabbath day (Deut. 5:14; on a later Jewish development of this principle, see M. Shab. 24.1). The ass on the sabbath received the care necessary for its survival (Luke 13:15; 14:5). It was subject to the law of firstlings (Exod. 13:13; cf. M. Hal. 4.9; Bek. 1.1-6). The Lord uses an ass to frustrate the purpose of the prophet Balaam (Num. 22–24; cf. II Pet. 2:16). On the later charge, voiced by the Egyptian Apion, that the Jews worshiped an ass's head, see Jos. Apion II.80-88, 114, 120.

ASSANIAS. KJV Apoc. alternate form of HASHABIAH.

ASSASSINS [σικάριοι; *loan word from* Lat. *sicarii*, dagger men, murderers, *from sica*, dagger]. In Palestine this term was used by the Romans with reference to those Jews who engaged in organized political killings in which the element of surprise was highly exploited (cf. Jos. War II.viii.3; xvii.6). From the point of view of the Roman authorities and their sympathizers (of whom Josephus was a paragon), such political killings were criminal.

Josephus uses the name to identify a particular revolutionary party in the war of 66-70. But it is doubtful whether this particular group was the only one which engaged in political killings, or that they were the only ones called *sicarii* by the Roman authorities in Palestine. Josephus calls them "brigands" (another depreciatory appellation) and declares that they were the first to set the example of lawless plundering (cf. Jos. War II.xiii.3; xvii.6; xxii.2; IV.ix.3; VII.viii.1). He traces their origins back as far as the national reaction against the Roman census under Quirinius: "In those days the Sicarii banded together against those who consented to submit to Rome and in every way treated them as enemies, plundering their property, rounding up their cattle, and setting fire to their habitations; protesting that such persons differed not at all from Gentiles, by betraying in so cowardly a manner the hard won liberty of the Jews and admitting their preference for the Roman yoke" (War VII.viii.1).

The sicarii of Josephus held out until the last against the Romans, who did not successfully breach their defenses at Masada in the wilderness of Judea until A.D. 73. When the Romans broke through, they found that the sicarii had systematically carried through a mass act of self-destruction (Jos. War VII.viii.6–IX.1). Even Josephus represents this deed as motivated by patriotism and devotion to God and his Law (Jos. War II.viii.6; VII). The sicarii are probably best understood as patriotic Jews living in that main stream of the Phineas-Maccabean tradition of zeal for the law which ran strong throughout the period of the Roman occupation of Palestine. In that tradition there was adequate motivation, and there were ample precedents for their behavior as "assassins" and "robbers," as well as "martyrs." *See* ZEALOT.

In Acts 21:38 there is a reference to four thousand Assassins who went out into the wilderness under the leadership of a man whom the tribune believed might have been Paul. W. R. FARMER

ASSAYER [בחון, *from* בחן, examine, test] (Jer. 6:27); KJV TOWER (בחן; cf. Isa. 32:14). One who tests ores for their gold or silver content. Jeremiah's prophetic task is to be an assayer of the people. He finds them entirely base metal.

ASSEMBLY. *See* CONGREGATION.

ASSHUR ăsh'ər [אשור]. Alternately: ASSYRIA ə sĭr'ĭ ə. KJV ASSUR ăs'ər. **1.** One of the sons of Shem; the eponymous ancestor of the Assyrians (Gen. 10:22; I Chr. 1:17).

2. The chief god of the Assyrian pantheon. In the Bible the name appears as a part of proper names, such as Esarhaddon ("Asshur has given brother[s]"). Fig. ASS 95.

3. A city in Assyria. The core of the land of Assyria (*see* ASSYRIA AND BABYLONIA) lies along the banks of the Tigris in N Iraq. Its capital cities were, at different periods, Asshur, Calah, Nineveh, and Dur-Sharrukin. The city of Asshur (modern Qal'at Sherqat) has been excavated by the Germans and has yielded important texts and monuments.

The city or the nation may be intended in Ezek. 27:23, although an alternative textual reading, "Aram" (Syria), may better fit the context. Asshur in Balaam's oracle (Num. 24:22, 24) is probably the nation Assyria, as the word is usually translated.

C. H. GORDON

ASSHURIM ăsh'ər ĭm [אשורים] (Gen. 25:3). An obscure tribe, probably N Arabian, living in the S of Palestine, traced back through Dedan to Abraham and Keturah. They are not to be confused with the Assyrians.

ASSIDEANS ăs'ə dē'ənz. KJV form of HASIDEANS.

From H. Gressmann, *Altorientalische Texte und Bilder zum AT* (Berlin: Walter de Gruyter & Co.)

95. Asshur is asked to free the people from the locust plague.

ASSIR ăs′ər [אסיר, prisoner, captive]. **1.** One of the sons of Korah (Exod. 6:24; I Chr. 6:22—H 6:7). However, in the Chronicler's genealogy of the Levites, Assir is called the son of Ebiasaph and the father of Tahath (I Chr. 6:23, 37—H 6:8, 22). One must either assume two persons by the name of Assir among the early Korahites or attribute the mistake to the artificiality of these lists.

2. According to the KJV, a son of King Jeconiah (I Chr. 3:17); perhaps he was born in captivity. But he is nowhere else mentioned, and the right of succession passed from Jeconiah to Shealtiel. Jeconiah was carried into captivity, and "Assir" is probably not a name but an adjective: "Jeconiah, the captive," as in the RSV. The definite article (ה) could easily have dropped out, since the previous word ends with this letter. F. T. SCHUMACHER

ASSOS ăs′ŏs [Ἄσσος]. A seaport of MYSIA in the Roman province of ASIA (Acts 20:13-14). It was on the Gulf of Adramyttium on the site of the present village of Behramköy. Originally an Aeolic colony of Lesbos, the city was refounded by the kings of Pergamum as Apollonia (Pliny Nat. Hist. V.123).

The city was ideally located on the terraces of a steep volcanic cone and with a beautiful view. *Ca.* half a mile from the sea, it was protected by the steep ascent. Its natural defenses were strengthened by a city wall two miles long and sixty-five feet high (Strabo XIII.i.58). The harbor, formed by a large artificial mole, was adequate for coastal shipping.

Limited archaeological exploration has discovered extensive remains, including a Doric temple to Athena, which contained important sculptures, a market place, a gymnasium, baths, and a theater. Assos was famous as the home of the Stoic philosopher Cleanthes. In a predominantly agricultural area, it was famous for the quality of the wheat which it exported (cf. Acts 27:2).

At Troas, Paul sent his companions by sailing vessel around cape Lectum, while he went by land to Assos, a journey of *ca.* twenty miles, requiring less time than the voyage around the promontory.

ASSUMPTION OF MOSES. *See* MOSES, ASSUMPTION OF.

ASSUMPTION OF THE VIRGIN. A legend widely circulated and variously elaborated, of the death and translation of the Virgin Mary; belonging to what is known as the Apoc. of the NT (*see* APOCRYPHA, NT). None of the many versions of the legend, which may have originated in Egypt, is earlier than the fourth century, although the nucleus of the story may go back to the third. Versions of it are extant in Coptic, Greek, Latin, and Syriac. There are two principal forms, one represented by the Coptic, the other by the Greek, Latin, and Syriac. In the Coptic versions Jesus himself appears to Mary, before the apostles depart on their missionary labors, and announces her coming death and translation —which events, both glowingly described, are separated by 206 days. In the other form an angel makes the announcement, Mary requests the presence of all the apostles, who are forthwith miraculously brought on the clouds from their several places of labor. Mary is transfigured; many healings result from contact with her dead body. She is transported to heaven by Jesus shortly after her death and burial.

The so-called Homily of Evodius and the Discourse of Theodosius are the chief sources for the Coptic version of the tale. The standard Greek form is the Discourse of St. John the Divine, and is found in five late (eleventh–fourteenth century) MSS. The standard Latin form is that wrongly attributed to Melito, with the Narrative by Joseph of Arimathaea a late Italian modification. This Narrative is totally distinct from the *Story of Joseph of Arimathaea,* which is a Greek appendix to the Acts of Pilate. The Syriac narratives are many and with distinct variations.

The legend itself took on a new interest and importance when in 1950 "the Assumption of the Blessed Virgin" was made a part of official Roman Catholic dogma.

Bibliography. M. R. James, *The Apocryphal NT* (1924), pp. 194-227, provides a convenient sampling of the various forms of this widely different and constantly elaborated theme. Additional bibliographical material is listed in J. Quasten *Patrology* (1950), I, 247-48. M. S. ENSLIN

ASSUR. KJV form of ASSHUR; ASUR.

ASSURBANIPAL. *See* ASHURBANIPAL.

***ASSYRIA AND BABYLONIA** ə sĭr′ĭ ə, băb′ə lō′nĭ ə. Designation of the two civilizations which

flourished in Mesopotamia from the middle of the third millennium B.C. up to the last centuries before the Christian era. They take their names from their capital cities, Asshur and BABYLON. Assyrian and Babylonian civilization rivaled in antiquity that of roughly contemporaneous Egypt but excelled it in respect to influence exercised upon surrounding civilizations.

A. ***THE COUNTRY.*** Both Assyria and Babylonia lay within the borders of today's Iraq. Babylonia proper occupied the alluvial region between the rivers EUPHRATES and TIGRIS, from Baghdad S to the Persian Gulf, and reaching at times into the flatlands between the Tigris—along its tributaries—and the foothills of the Zagros Range and, upstream, on the Euphrates as far as Hit. The homeland of Assyria originally occupied only the region to the E of the middle course of the Tigris as far as the piedmont region. Its holdings extended upstream in the course of its history, as well as across the land "between the rivers," as far as the large bend of the Euphrates.

1. Geographic conditions. Toward the S and the W, Mesopotamia is clearly separated from the deserts of Arabia and the Syrian Plateau by the course of the Euphrates. Toward the N and the NE, however, the political and cultural frontiers never became quite stabilized in the numerous parallel valleys of the piedmont or in the plains to the N and the E of the lower course of the Tigris. Two main types of landscape can be observed: First, there are the alluvial plains piled up by the two rivers, which push their accumulation of silt into the Persian Gulf and slowly raise the level of the land—a development that is, however, counteracted by a tectonic sinking movement. The higher-lying land is suitable for pasture, mainly in the spring, and also for agriculture (and date growing) when irrigated. The numerous swamps yield cane, which the first inhabitants used with great ingenuity, especially in combination with the abundant clay, for a semiaquatic way of living along the rivers and around the lakes and swamps. Second, there are the fertile valleys between the hills or along the tributaries of the Tigris, where rain is sufficient to grow barley and to raise sheep and goats. The region contains wood and stone for building purposes. The region around the sources of the Habur River, a tributary of the Euphrates in central Upper Mesopotamia, deserves special mention here because its volcanic soil makes it the most fertile of that between the two rivers.

As to the relationship of Mesopotamia with other geographical units, we have to the SE the Persian Gulf and its islands and coastal region, which were connected with S Babylonia by means of shipping lanes and which constituted a link between the "Fertile Crescent" and the East, through which plants, animals, and raw materials came intermittently into Mesopotamia from a very early period on, and were transmitted to the West, the countries around the Mediterranean Sea. To the S and the SW lies the Arabian Desert, from which occurred repeated infiltrations of Semite nomads, who, apart from their languages, brought few, if any, contributions to the culture of Mesopotamia. The most important line of cultural contact was in the Zagros Mountains and along the accesses to the Mediterranean via Upper Syria. Through the mountain passes came materials such as metals and precious stones, of the lack of which the early settlers had become increasingly conscious; also new techniques. However, relations with the mountain peoples were rarely peaceful; they exerted a continuous pressure that expressed itself in many ways, according to the resistance which the dwellers of the plain were able to mount. The mountain men entered as workmen or soldiers, or penetrated into the fertile regions to become bandits, mercenaries, or kings. Only Assyria attempted to colonize and thus pacify these tribes, and in the course of the history a series of hybrid civilizations arose here and there in the mountain valleys, to become ephemeral buffer states. The accesses to the "Upper Sea"—as Assyrian kings liked to call the Mediterranean—and to Anatolia permitted cultural contact by a process of continuous osmosis. This connection was, at times, intensified for commercial and political purposes.

The over-all settlement pattern of Mesopotamia shows a cluster of very old cities in S Babylonia, especially along the lower course of the Euphrates, and very few cities elsewhere. In the center of the

urbanized region, the southernmost group contained the cities of Eridu, Ur, Larsa, and Uruk; then there was a central group around Nippur—i.e., Isin, Adab, Shuruppak (Fara)—and more to the E of it, Umma and Lagash, and finally the N group Borsippa, Babylon, Kutha, Kish, and the northernmost Sippar. To the E of the Tigris (Der, Eshnunna) and along the Euphrates (Mari, Terqa), more or less ephemeral cities grew up when accidental political conditions or trade routes favored a specific region. In Assyria proper, Asshur's unique position could well have been based on the sacredness of its locale, while the origins of another sacred city, Arbela, remain hidden under the modern town. All other large urban sites in this region were cities founded by kings for political or military purposes.

2. Hydrographic conditions. The two rivers Euphrates and Tigris are fed by a number of mountain streams in Armenia whose sources are, at one place, only *ca.* fifteen miles apart. Their courses are, however, very much different. The Tigris, upon breaking through the last ranges, flows E and then SE in a swift course; it is navigable in its lower reaches only by means of keleks (reed floats supported by inflated skins). It flows past NINEVEH, Calah, and Asshur—all capitals of Assyria—to enter the plain near Samarra, touching Opis (Upi, old Akshak) and SELEUCIA. In the historical period the lower course underwent many changes which did not favor the growth of permanent settlements. It now joins the Euphrates at Shatt-el-'Arab but formerly fell independently into the Persian Gulf. All the tributaries of the Tigris rise in the Zagros: the Khoser River, which flows past Nineveh; the Upper or Greater Zab, which joins the Tigris near CALAH; the Lower or Lesser Zab; the Adhem (Akkadian *Radānu*); the Diyala (Akkadian [*Mê*]-*Turna*[*t*]); and eventually the Duweirig (Akkadian *Tupliaš*).

The Euphrates, after leaving the mountains, runs first SW to reach a point where it is but ninety miles from the Mediterranean Sea, then turns S and eventually E. Its sole tributaries are the Belikh and the Habur, which come from the W side. The Euphrates reaches the plain only twenty miles from the Tigris. Its course is *ca.* five hundred miles longer than that of the Tigris; it carries less water, but its current is much slower, permitting navigation farther upstream.

A characteristic feature of the two rivers is their annual flooding. Their behavior is as follows: A general swelling of the water is caused by the autumn rains and continues through winter and spring till the snow melts in the Armenian mountains and the flood wave reaches the plains in April and especially May. It subsides in June, and the rivers reach their lowest level in September and October. It should be stressed that the time of the inundation in Mesopotamia is not nearly so favorable for cereal agriculture as it is in Egypt. The flooding of the Tigris and Euphrates is late and requires special work—preparation of dikes, etc.—to prevent the fields from getting too much water, apart from the problem of storing and distributing it. An equally important drawback is the tendency of the soil toward salination caused by the late flooding, which, together with the silting up of the distribution canals, cuts down the yield of fields and necessitated the relocation of agricultural territory after relatively short periods of prosperity. The digging of new canal systems and the resettlement of the population therefore formed an essential part of the economic and political program of a good sovereign as much as the maintenance of existing dikes and canals.

3. Domesticated plants and animals. In Assyria agriculture could reasonably rely on the rain which falls normally in October and November and which made it possible to prepare the fields for the next harvest. In Babylonia, irrigation, if properly managed, could be expected to secure a good harvest every year. The main cereal grown was barley, and only second to this were emmer—a primitive type of wheat—and wheat. The crushed seeds of the sesame plant were the only source of vegetable oil, and the main supplier of sugar was the date palm, grown in Babylonia proper. Of vegetables, onions, garlic, and leek are most frequently mentioned. Mustard was grown for its seeds, which were used as a spice. Millet, flax, and legumens were relatively rare, and so were fruit trees. Vineyards were cultivated only in Upper Mesopotamia. Not much change in these crops can be observed throughout the known period, except for the addition of rice, which the Persians are said to have introduced into Babylonia.

While herds of goats and sheep provided a ready supply of fresh meat, the wool of the latter was of major importance as raw material for the production of textiles, exported from Babylonia as far as Anatolia. Cattle were essential for plowing but seem to have been kept in larger herds only by palaces or temples. The donkey was used as the main beast of burden. Horses, Bactrian camels and dromedaries, and even elephants were well known. The horses acquired military importance when used with the chariot, and especially when the Assyrians introduced cavalry into their army after the ninth century B.C.

B. *THE PEOPLE.* The inhabitants of Mesopotamia, from the time when their linguistic affinities become clear, are referred to successively as Sumerians, Babylonians, Hurrians, Assyrians, and Chaldeans. Apart from them a series of invaders are known, such as the Guti, the Amorites (speaking a West Semitic tongue), and the Kassites, who succeeded at one time or another in ruling over parts of Mesopotamia. Others, like the Hittites or Elamites, came in on short raids until, with the conquest of Nineveh by the Medes (612 B.C.) and of Babylon by the Persians (538 B.C.), the political independence of Mesopotamia came to an end. Alexander the Great conquered Babylonia, then a satrapy of the Persian Empire, but the Seleucids succeeded for a short time in making Babylonia again politically important before the rising tide of Iranian rulers (the Sassanids and Arsacids) sealed the doom of Mesopotamian civilization.

1. Ethnic background. With the first intelligible written documents (from Ur and Djemdet Nasr), we meet the SUMERIANS, by any standards the most interesting people of the ancient Near East. There are indications that they only adapted an already exist-

ing system of writing to their own language; but the civilization the Sumerians created, and led in an astonishingly short period to a flowering, left its imprint on all subsequent civilizations which rose in, and also around, Mesopotamia. Their ethnic affiliations remain obscure, but it should be stressed that they represent only one of several ethnic groups which inhabited Mesopotamia in the formative centuries of the protohistoric period. Uruk (*see* ERECH) in the S seems to have been the place where Sumerian civilization reached its peak. This is shown by references to this city in religious texts, and especially in myths, as well as by the historical tradition, etc.

At the time when the Sumerian rulers created an empire from Ur, they seem to have already been fused to a large extent with Semites speaking the Old Akkadian dialect, as the names of the last kings of Ur and the number of Akkadian loan words in the Sumerian of that period suggest. The first bid of the Semites for political power in Mesopotamia was highlighted by the appearance of King Sargon of Agade (*ca.* 2350), whose influence on the political concepts of Mesopotamia was not only reflected in the subsequent Sumerian empire of Ur III (2125-2035) but also remembered in far-off Assyria. *See* SARGON 1.

Akkadian began to supplant Sumerian, first outside the well-established and formalized literary forms (such as legal and administrative documents), mainly in letters, then in texts of the growing Akkadian literary tradition, and in royal inscriptions, which were often edited in Sumerian as well as in Akkadian. The rise of the dynasties of Isin, Larsa, and Babylon (1894-1592) saw Sumerian as a spoken language clearly on the decline, but interest in Sumerian literary works remained very much alive. The first interlinear translations of Sumerian texts appeared, and in the training of the scribes much stress was placed on the teaching of Sumerian grammar and a specialized Sumerian vocabulary, as the school texts of that period (grammatical tablets and dictionaries) indicate.

It should be noted that there are no signs of any stress which this change in language might have produced, although it reflects an important ethnic shift. Apparently a deep-rooted, truly Mesopotamian (i.e., Sumero-Akkadian) civilization had already developed and become stabilized before the Old Akkadian period, so that the change-over was only one in political outlook and aspiration, which made the linguistic and even the ethnic transition of secondary importance. The scribal tradition succeeded in keeping Sumerian, as a scholarly and, in certain instances, even a sacred language, from oblivion until the disappearance of the entire Mesopotamian civilization. It was even able to achieve a somewhat artificial and short-lived renaissance of Sumerian in the Kassite period.

The role of the Semites in Mesopotamia was, of course, paramount. Semitic-speaking ethnic groups infiltrated in repeated waves throughout the entire history of the region, and it must be assumed that this situation was no different in the preceding protohistoric periods. It will never be known to what degree these migrants contributed to the rise of civilization in that region, especially to the unique phenomenon of urbanization which materialized there so early.

According to their attitude toward urbanization, two sets of Semitic migrants have to be differentiated in Mesopotamia. There were those who preferred to drift between the existing cities or to settle in small villages, reluctant to pay with taxes, military service, and *corvée* work for the security granted them by some central authority; and there were those who moved into cities—and perhaps even helped to found them. Only the latter spoke Akkadian up to the disappearance of this language in the second half of the first millennium B.C.; the former used a number of Semitic dialects: first, that which is termed Eastern Canaanite or Amorite, up to that period in the second millennium B.C. which is termed the Dark Age (*ca.* 1600-1350); after that, Aramaic (in various subdialects); and eventually Arabic. These non-Akkadian-speaking Semites succeeded at times—before the Dark Age—in conquering one or another city and in establishing dynasties in them, which contributed essentially to the political development of the region. Only from Mari on the middle course of the Euphrates do we have texts to show us the process of urbanization and "Akkadianization" of an ethnic group rather than of a small ruling class. The situation which arose after the Dark Age, under similar circumstances—i.e., during the invasion and immigration of the Aramaic-speaking Semites—led, however, to rather different results. Most of the new Aramaic states preserved their native language, while others assimilated foreign languages and cultures and created, to the W of Mesopotamia, various hybrid civilizations using as systems of writing the Phoenician and the hieroglyphic Hittite. The Arameans failed to exert any political influence upon the already well-established Assyria and Babylonia of the first millennium. The impact of their language and especially of their alphabetic system of writing, however, began to sap the strength of the Akkadian tradition, reducing it eventually to the lore of a narrow class of specialists. Obviously this linguistic change again reflects a decided shift in the ethnic composition of the population. The nomadic background and specific outlook of all these non-Akkadian population movements, before and after the Dark Age, were favorable to the growth of intercity and international political and commercial relations, as contrasted with the sedentary and autarchic outlook of the city-state tradition. *See* PATRIARCHS.

Most important among the several foreign (i.e., non-Sumerian and non-Akkadian) ethnic groups which passed through or penetrated into Mesopotamia were the Hurrians (*see* HORITES), who are in evidence as early as the beginning of the second millennium in Babylonia. They rose to primary importance in the W even before the Dark Age, at the end of which we see their vestiges in personal names, technical terms, institutions, and in the arts, everywhere from the Zagros Mountains, across Assyria, and up to the Mediterranean coast. The extent of their influence on Assyrian civilization is still difficult to evaluate, because it is not yet possible to gauge how much Assyria owes to other contacts with the mountain peoples. The latter had always been pressing down into the fertile plains and their rich

settlements, and appear there under several names, such as Guti, Kassites, or Kurds—not to speak of similar movements which must have existed in the protohistoric period.

Contacts with the Arabs of the desert were always only slight and incidental to the continuous expansion policy of the Assyrian Empire. That there were commercial relations with them is likely, but they are not documented.

The existence of a number of completely undefined ethnic groups in Babylonia is revealed by such indications as the frequent occurrence up to the Old Babylonian period of personal names which cannot be assigned to any known language; by the oldest geographical names (for cities, rivers, and regions), which are, with very few exceptions, neither Sumerian nor Semitic; as well as by a body of words referring to essential materials, tools, plants, and animals, appearing as loan words in both Akkadian and Sumerian. Some of these ethnic groups have certainly to be considered among the first settlers.

2. Languages. The linguistic affinities of Sumerian have withstood so far any attempt of modern scholarship toward identification. The documentary evidence is very rich, ranging from the earliest economic texts (Uruk, Fara, Djemdet Nasr) to royal inscriptions (predominantly of the rulers of Lagash), poetic texts (such as hymns addressing gods and kings, and lamentations), myths of wide variety, proverbs, word lists, etc. There are interesting religious poetic texts and private letters, a unique type of legal document regarding procedures in court, and at least two law codes, all covering more than half a millennium. The language is now quite well understood, and many texts are translated.

For the Semitic language of Mesopotamia, the term "Akkadian" has come into use, replacing the earlier, clumsy designation "Assyrian and Babylonian," which refers to its main dialects. It should be noted, however, that the designation *akkadû*, "[language] of Agade," which has been adopted by modern Assyriologists, was in ancient times used when referring to the Semitic versus the Sumerian version of a text, while the Hittites referred to what we call Akkadian as "Babylonian," and the Assyrians themselves called their language "Assyrian" when contrasting it with Aramaic. Akkadian is the earliest recorded Semitic language and is commonly assigned to the E branch of this family of languages, of which it is the only representative. Probably because of its age and isolation, Akkadian shows a series of unique features in its phoneme inventory, its system of tenses, and its syntax. It shares certain morphological peculiarities with the old South Arabic dialects, but its vocabulary shows important links with the West. It is heavily influenced by foreign, mostly Sumerian, elements, but also contains words from roots which must have disappeared from the Semitic languages recorded at a later date.

As to the dialects of Akkadian, it is customary to set aside the oldest material coming from the Babylonia of the time of Sargon as Old Akkadian and then to posit a division into two main dialects, Babylonian and Assyrian, which in themselves fall easily into three stages according to periods.

The classical texts in Old Babylonian are the Code of Hammurabi and letters issued by the chancellery of this king, but an increasing number of literary and scholarly texts are becoming known, illustrating the wide range of written material in this dialect. Traces of local differences (N and S Babylonia, provincial peculiarities in the region beyond the Tigris and in the extreme S) as well as of period differences (early and late Old Babylonian) have been observed. Primary Middle Babylonian material is relatively rare. The letters of Middle Babylonian kings in the Amarna archive (*see* TELL EL-AMARNA) and the texts of Kassite NIPPUR, Ur, and Dur-Kurigalzu (1373-1160) are the most important representatives, apart from a few boundary stones, while secondary evidence is contained in a number of literary texts which seem to have been composed in that period but are preserved only in late copies. A much wider gap than that which separates the last Old Babylonian from the Middle Babylonian texts lies between the latter and those Neo-Babylonian texts that can be considered representative of the new dialect which came into evidence in the Babylonia of the seventh century B.C. While the Neo-Babylonian kings strove to imitate the paleography, the spelling, and even the wording of the Old Babylonian royal inscriptions, and the literary texts of the period maintain the standards of the Middle Babylonian period, the Neo-Babylonian legal documents, and especially the administrative letters, are written in a dialect which deviates in essential points such as spelling, morphology, and vocabulary from similar documents of the preceding period. The Akkadian of the royal inscriptions of the Persian period is usually called Late Babylonian.

In Assyria, the development of Assyrian—apart from Old Assyrian, which is almost exclusively attested in texts from Asia Minor (Cappadocia) and early royal inscriptions—took place under the shadow of Babylonian influence, in Middle Assyrian but especially in Neo-Assyrian times. The increasing and conscious Babylonization of Assyria expressed itself in the acceptance of a Babylonian dialect for the writing of royal inscriptions, royal letters, and other official documents. We call this dialect "Standard Babylonian." It is presumably a scholarly creation originating with the scribes of the Assyrian kings who had been trained by copying Babylonian literary texts. Whatever segment of Assyria's cultural life was not under the overpowering influence of Babylonian literary conventions and scribal customs expressed this fact by using Middle Assyrian or Neo-Assyrian dialect forms (and sometimes even paleographic features), doubtless as a demonstration of that nationalistic and anti-Babylonian attitude that was powerful enough to reach even to the throne and cause much bitter civil strife and wars.

The history of the Akkadian language, strangely enough, does not parallel the ups and downs of the political power of Mesopotamia. Before the Dark Age, Akkadian and the cuneiform system of writing spread into Anatolia, where it was adapted to write the Indo-European language of the newly rising Hittite Empire, and reached the Mediterranean

(Alalakh and Qatna). These writings show by certain peculiarities that they stem from the scribal tradition of the Ur III period via unknown intermediaries. A second period of expansion, derived from a later, Old Babylonian fountainhead, reached Mari, where, in a systematic process of the Babylonization of a non-Akkadian-speaking Semitic people, the scribal tradition of Babylonia was introduced. Earlier still, Sumerian and Akkadian had spread to Elam (where it is attested from the Old Akkadian to the Old Babylonian period), to Mari, and to some of the small hybrid states in the Zagros valleys (Lulubi, etc.).

After the Dark Age—an age which saw Babylonian political influence at a low ebb—Akkadian achieved its maximum extension, reaching Cyprus and Egypt to the W and the S, and Asia Minor to the N. The language was accepted as the diplomatic language in Palestine and Syria, and by the Hittites and the Hurrians. The system of writing was used to write texts in the Hurrian language and, some centuries later, royal inscriptions in Elamite (beginning with King Humban-ummena). Later still, the kings of Urartu wrote inscriptions in Assyrian as well as in their native tongue, using cuneiform. This last, however, constituted an exception, because with the increasing spread of the Assyrian Empire, at the beginning of the first millennium B.C., the influence of Akkadian (the language as well as the system of writing) was on the downgrade; Phoenician and Aramaic princes in Asia Minor and Upper Syria inscribed their stelae in their own languages, using an alphabetic script, or in Hieroglyphic Hittite. When Persian and Seleucid (Antiochus I, Soter; 280-262 B.C.) kings had inscriptions written in Akkadian, this is to be considered a political gesture rather than a means of communication, since at that time Aramaic had become the lingua franca in Babylonia.

The tracing of the internal development of Akkadian is greatly hampered by the traditionalism of the scribes, who painstakingly strove to preserve the wording and even the spelling of the originals which they copied. Secular documents only permit of observing changes in the vocabulary, the influx of foreign words, and traces of the everyday speech. Akkadian showed much resistance to the introduction of foreign words. Apart from the *Kulturwörter* of the earliest periods, we find foreign words nearly exclusively in texts written outside Mesopotamia (Nuzi, Qatna, Elam, Alalakh, Ras Shamra) and by foreign scribes (Mari). Even the influence of Aramaic and Persian in the Neo-Babylonian period did not produce more than a very small number of foreign words accepted by the well-trained scribes. On the other hand, quite a number of Akkadian words—mostly religious, legal, and technical terms—have penetrated the languages of the adjacent civilizations, either directly as loans or through a temporary adoption of the Akkadian language itself.

The eclipse of Akkadian by Aramaic toward the second half of the first millennium B.C. progresses from the fields marginal to literary and scholarly production. First the language of daily life must have changed, then that of records made for administrative and commercial purposes, and letters, and finally that of legal documents. The new language, Aramaic, was written in its own, alphabetical system; and, except for a few inscriptions on pottery and names scratched on clay tablets beside cuneiform writing, it was written on perishable materials. Special resistance to a change-over in language is shown in astronomical texts, written by specialists in very abbreviated and stereotyped forms, which could not be divorced from the cuneiform system of writing. These texts maintained the old language into the first century of our era. Whether any attempts were made to save the literary heritage of Akkadian by means of translation into Aramaic remains unknown, because, as already mentioned, the new material used for alphabetic writing did not withstand the ravages of time. It may, however, be noted that there exists an Aramaic text written down in the Seleucid period in the cuneiform system of writing, exactly as the demotic system of writing was used to write down an Aramaic text in Egypt.

As to the other languages written in non-Akkadian cuneiform characters, Hurrian and Elamite have already been mentioned. For Hurrian we have the so-called Mitanni letter written by King Tushratta (fourteenth century). Then there are, also in Hurrian, some glosses added to a Sumero-Akkadian vocabulary in Ras Shamra, a very early foundation inscription, and a small number of literary tablets found in Mari, together with a substantial number of Hurrian words occurring in Akkadian texts (mostly in Nuzi and Alalakh, but also in Mari and Ras Shamra and even in Asshur [Middle Assyrian]), in Hittite texts (from Boghazköy), and in personal names. The results of the investigation of Hurrian are, however, rather meager; and this is also the case with regard to Elamite, where we have texts from the Agade period to the Persian, without being able to cull much information from the type of material preserved. It is partly too repetitive and partly too much diversified and obscure in context for interpretation.

C. *HISTORICAL SURVEY.* It is the purpose of this survey to sketch an outline of the history, but not primarily the political history, with special consideration given to the limitations of our present knowledge. For the sake of convenience a median chronology has been accepted.

1. Source material. Mesopotamian historiography, in the stricter sense of the term, covers only the period from TIGLATH-PILESER III (745-727) and the contemporaneous Babylonian king, Nabû-nāṣir, to Antiochus I, Soter—to be exact, to the thirty-seventh year of the Seleucid era. Not very many years of this stretch of nearly half a millennium are represented in the Chronicles, which contain in annual records data concerning war and peace, the deaths of kings and of members of their families, etc. Their style is factual and terse, and they are of great importance, not only for the historian of Mesopotamia, but also for OT and even Greek history. Some of these texts record in similar style events before the Dark Age, thus attempting a *historia mundi*. Their content is necessarily more legendary but still an important source of information for the time from Sargon of Agade (and Ilushuma of Assyria) to Sumuabu of Babylonia and, overlapping partly, from Irra-Imitti

of Isin to a Kassite king, Agum, son of Kashtiliash. For contemporary records of historical events, often on a rather local scale and from day to day, one has to mention the Astronomical Diary texts of the Seleucid period.

Another expression of consciousness of history is the king lists which reach from that mythical moment "when kingship descended from heaven" to the Diadochi. They cover in a nearly uninterrupted sequence all of Babylonian and Assyrian history, bridging even the gaps of the several Dark Ages. They give the names of the kings and the lengths of their reigns, divide them into "dynasties," and at times enter more or less cryptic remarks of a historical nature which show the influence of political concepts. For the last centuries of Assyro-Babylonian history, there is one list that co-ordinates the reigns of the kings of the two lands. All these lists constitute an important historical source, although their reliability decreases quite naturally for the older dynasties. Awareness of history expresses itself in royal inscriptions also in occasional references to kings of the past, who are dated by means of the number of years that had passed since they ruled. For this information the scribes clearly relied on their king lists.

Of great value for the historian, but not conceived by the Mesopotamians themselves as historiographic texts, are the so-called date lists of the Old Babylonian period and the Assyrian lists of eponyms. Since in Babylonia, up to the Middle Babylonian period, every year was named after an event that had occurred in the preceding year, it was necessary, for practical purposes, to draw up lists of such year names. Their value as a source of historical information is somewhat restricted by the tendency to record in these formalized names only victories, pious acts of the king, dedications of votive offerings to the temples, and similar events. However, references to the death of foreign rulers occur at times, and a change of the year name in the middle of that year can be taken to reflect an actual event, usually a calamity. The Assyrian system of identifying the years of the reign of a king by means of a consistent sequence of names of high officials used as eponyms, beginning with the king himself, likewise necessitated the drawing up of lists of the eponyms; some of these lists are provided with short remarks referring to campaigns, pestilences, etc.

The main body of historical information, however, is contained in the so-called royal inscriptions which come to us from such early kings as Mesannepadda of Uruk and continue on to Antiochus I, Soter. They range from a few signs on votive offerings to the rock inscriptions of Behistun, from small clay cones to prisms containing many hundreds of lines. Very few of them were written primarily to inform us of the deeds and achievements of the king whose name they bear; they were buried as foundation deposits or, written on relief-decorated stone slabs, were placed in dark corridors or on inaccessible rocks. They sing the praise of the king, list his heroic deeds, and have in most cases the purpose of dedicating a temple or palace. In fact, in terms of their stylistic development, they grew out of dedicational inscriptions which listed the royal titles, embellished by numerous epithets recording specific victories, or which referred to such victories in connection with the dedication.

As essential as texts of this type are for the reconstruction of Mesopotamian history, it must be kept in mind that they are written in a highly stylized, sometimes poetic, language, in which only carefully selected happenings are recorded in a very conventional way. Events are arranged according to certain principles, sometimes geographical and sometimes chronological as annals. They are extended, embellished, reduced, or telescoped to fit the requirements of space or of the specific purpose of the inscription. Still, careful study is able to reveal in many instances something of the real nature of the recorded events. It is even possible to discover certain personal preferences and mannerisms of the kings, especially in the inscriptions of the Sargonides that form the largest body of material among these texts. While the Assyrian kings seem to have had a love of details and exact figures, and the text may even include episodic happenings, the Neo-Babylonian rulers preferred to avoid indications of a factual nature, and couched their reports in piously archaizing and vague terms.

Lastly, mention should be made of the fact that Hittite, OT, Egyptian, and Greek material can, at certain periods, be of great importance for the student of Mesopotamian history.

As to the much-discussed problems of chronology, one can state that absolute chronological certainty does not extend beyond the eighth century B.C. For anterior periods, the historian has to rely on an increasing amount of dead reckoning and more or less tenuous synchronisms, together with whatever accidental information archaeology or other sources can provide. All these have to be utilized and combined with the evidence offered by the texts to erect a chronological framework. It happens that the excavations in Alalakh have yielded reasons to believe that the reign of Hammurabi of Babylon must have fallen within a period of time that can be determined objectively. Then there is the fact that, quite by accident, astronomical observations concerning the passing of the planet Venus were recorded by the Babylonians at a time within the Hammurabi Dynasty which can be determined by modern astronomers. Since this astronomical event recurs in intervals of more than sixty years, three dates for the accession of Hammurabi can be proposed—1856, 1792, and 1728. Unfortunately, none of these dates can be selected as fitting all the requirements of the evidence known today. The chronology adopted here is based on the median date, 1792 B.C.

2. History of Babylonia. Babylonia experienced two climaxes of political power, one near the beginning of the two millenniums of its history and the other toward the end. The names of Sargon of Agade (*ca.* 2350) and NEBUCHADREZZAR II (605-562) characterize these two periods. Strangely enough, however, not much is known of these periods with regard to historical facts. The best-attested period of Babylonian history is that of Hammurabi (1792-1750) and his immediate predecessors and successors;

here only can one observe essential features of the economic and social life, details of relationships with foreign powers, etc.

With the downfall of Uruk, the very center of the classical stage of Sumerian civilization under Lugal-zaggisi, the Dynasty of Agade, founded by Sargon, achieved for the first time a type of unification of Mesopotamia which differed in kind from the hegemonic rule of one city-state over the others. It matters little whether Sargon was actually the first king of such stature, but legend and tradition made him the exponent of imperial aspirations. Sargon's military aggressiveness, reaching beyond the borders of Babylonia, was based upon the maintenance of a standing army supported by taxes which were levied and collected by a centralized bureaucracy. His and Narām-Sin's extremely long reigns (fifty-five and fifty-six years respectively) might well have stabilized the organization of the country if an invasion of the Guti mountaineers had not brought about its ruin. Fig. ASS 96.

When the rule of the Guti was broken by Utuhegal of Uruk, the Neo-Sumerian empire of Ur (2125-2025; called Ur III, the first ruler being Ur-Nammu, and the most important, Shulgi) seems to have taken up the Agade tradition. We witness in the abundant documentation, especially of the last years of this dynasty, the workings of an elaborate administration, with provincial governors residing from as far E as Elam and as far N as Asshur, and taxes flowing into the capital, which was being embellished on a large scale by the kings of this, the third dynasty, of Ur. For reasons undetermined—possibly the social unrest provoked by the pressure of newly infiltrating peoples—the empire collapsed with long-remembered spectacularity under an invasion of the Elamites. The center of gravity of political power shifted slowly to the N—successively to Isin, Larsa, and eventually Babylon—in all instances under the leadership of a new class of rulers with Semitic but non-Akkadian personal names.

96. Stele of victory of Narām-Sin

Babylon, the youngest of these cities, gained the upper hand under Hammurabi. He defeated Larsa to the S, Eshnunna to the E, and Mari to the N in a long-drawn-out series of wars, alliances, and political maneuvering. The political horizon of that era reached from Elam and Telmun in the Persian Gulf up to CARCHEMISH and Aleppo, and even to Hazor in Palestine. Kings, caravans in long-distance trade, and armies moved within this compass. Friends and foes among these newcomers bore the same non-Akkadian names. All were ready to change sides or to outmaneuver the enemy, bent on ensuring their hold over the city dwellers, who belonged to a different economic, cultural, and probably ethnic stratum. Only two of the rulers attempted a policy of integration, striving to organize a territorial state, Shamshi-Adad I (*ca.* 1812-1780) in Assyria and also Hammurabi in Babylonia on a different level.

We are fortunate enough to be able to observe Hammurabi's carefully and efficiently organized administration, and to see in some detail his social policies (Codex Hammurabi), which earned him fame within Mesopotamian civilization. The main political achievement of Hammurabi must be considered to be the successful change of his realm into a territorial state ruled from a capital, with all other cities on the provincial level, a political setup which was able to withstand the centuries of disorganization of the Dark Age. After Hammurabi there was hardly a question any more where political power was located in S Mesopotamia; it was from Babylon that Babylonia was to be ruled. Yet in spite of all the obvious prosperity and security of the middle period of Hammurabi's reign, we begin to encounter, from his thirtieth year on, an increasing number of year names that speak of victories won over the coalitions of the enemies of "Sumer and Akkad" reaching from Elam as far as Assyria, until the year names of his last years (forty-second and forty-third) show him clearly on the defensive, erecting fortifications where the Tigris and the Euphrates enter the Mesopotamian Plain.

The successors of Hammurabi seem to have been restricted to Babylonia proper, with the exception of the southernmost region, where the Sea Country arose protected by the inaccessibility of its marshes that enabled it to survive even the catastrophe which befell the entire Fertile Crescent and culminated in the conquest of Babylon (under

Samsuditana) by the Hittite king Murshili. Then the Dark Age set in, not only over Babylonia but also over nearly the entire Near East. We have no documents concerning the period of the last king of the Hammurabi Dynasty nor of any period up to Burnaburiash II (*ca.* 1370-1340), the nineteenth king of a new dynasty of foreign stock. This is the dynasty of the kings set up by the invading Kassites. Until Burnaburiash II we have neither royal inscriptions nor other documents, and even the following Kassite kings, whose dynasty ruled for nearly half a millennium, provide us with only meager and stereotyped inscriptions, mostly in Sumerian. We have, however, some of their letters sent to Egyptian kings and found in Amarna in Egypt. These and the letters and administrative texts excavated in Nippur (and others written three or four generations later in Ur) show a number of changes in language, writing, and, above all, scribal practices. The Nippur texts of the Kassite period (Burnaburiash II to Kashtiliash III, 1235-1228) indicate a royal palace well organized with regard to the administration of its estates, the handling of its personnel, etc.; but they have not been fully studied from this point of view, and they do not shed light on other cities of Babylonia. The letters of Kadashman-Harbe and Burnaburiash to Amenophis III and IV of Egypt show Babylonia as a minor political power exactly as does the letter of the contemporaneous Assyrian king Ashur-uballit. These rulers sent small presents to Egypt and expected gold and political favors in exchange. Still, one has the impression that the Babylonian kings did enjoy a certain prestige and were striving to maintain their dignity and their aspiration to make Babylonia an important state. Possibly, the preceding dark centuries hide certain political achievements of the rulers of Babylon. We may have also to deal here with trade relations on the royal level as they are attested elsewhere in the ancient Near East of that period.

During the rule of the last Kassite kings—who now shift from Kassite to Akkadian personal names—an increasing decline of royal authority is illustrated by the frequency of royal land grants to officials, inscribed on stone documents called *kudurru*, and carrying exemption from taxation and *corvée* duties. This fragmentation of the country, combined with the increasing infiltration of Arameans into the open country, which interrupted communication, further reduced the power of the kings of Babylon. A resurgence in the military potential of Elam led to the invasion of Shutruk-Nahhunte into Babylonia, in the course of which the Elamite king brought the stela with the laws of Hammurabi and other trophies back to Susa as booty. For Babylonia, already weakened by conflicts with Assyria, this event spelled the end of the Kassite Dynasty (*ca.* 1151).

The next centuries saw the slow comeback of Babylonia, heralded by the victory of Nebuchadrezzar I (1146-1123) over Elam and culminating, after many setbacks, in Nabopolassar (626-602), the first king of a new dynasty which was to become heir to Assyrian supremacy. This half millennium, from Nebuchadrezzar I to Nabopolassar, was in many important respects as dark for Babylonia as the Dark Age itself. Whatever light the Assyrian royal inscriptions reporting on the increasingly severe conflicts with Babylonia shed on this period, or whatever can be gleaned from occasional *kudurru* texts, royal inscriptions, and the extremely few administrative documents preserved, does not suffice to suggest any answer for the obvious query as to the nature of the cultural, social, and economic forces which kept Babylonia alive and even started it out on the road back to political power. Merodach-baladan's tenacious fight against Sargon II (721-705) of Assyria represents a strange but not unique phenomenon. The correspondence of the last Sargonides with their generals, political agents, spies, etc., shows that the stubbornness of Babylonian nationalism had its roots in the open country, mainly in the S, while the city dwellers, especially in the large cities, preferred Assyrian rule. This may be taken to indicate that large-scale commercial activities—i.e., long-distance trade—had, since Nebuchadrezzar I, been again moving through Babylonian cities and that this trade was protected and furthered by Assyria. This would also explain the emphasis placed by Esarhaddon of Assyria upon the fact that he again granted the inhabitants of Babylon the privilege of trading with all the regions of the world after his father, Sennacherib, had destroyed their city in one of those recurrent sudden shifts in Assyrian foreign policy toward Babylonia. *See* HEZEKIAH; ISAIAH; MERODACH-BALADAN; SARGON 3; ESARHADDON; SENNACHERIB.

Such trading—apart from booty taken—must have brought to Babylon the riches which become evident in the inscriptions of the rulers of the Chaldean Dynasty (such as Nebuchadrezzar II, 605-562), reporting on their rebuilding and sumptuously decorating the sanctuaries, and which are also amply illustrated in the thousands of administrative documents of the temples of Sippar, Babylon, and Uruk that are in our hands. As a matter of fact, Babylonia, when incorporated in the Persian Empire, was its richest satrapy. Only the kind of carrying trade on which the wealth of the caravan cities of Palmyra and Volegesia (in Babylonia) was later founded could have made such wealth come into Babylonia. Since this trade is not evidenced by any cuneiform document, one has to assume that it was in the hands of persons using another writing material, which indicates another language, necessarily Aramaic—and it is not without interest, in this context, to draw attention to the fact that Nebuchadrezzar had a "chief *tamkaru*" among his major court officials and that this man had the unmistakably Phoenician name of Hanno. *See* JEREMIAH; JEHOIAKIM; ZEDEKIAH.

The last ruler of Babylonia, NABONIDUS (555-539), provides a somewhat queer finis for a development of nearly two thousand years. He rose to power as a middle-aged general in the confusion created by the conflicts between the short-lived successors of Nebuchadrezzar II, although he seems to have been a native of Harran in Assyria. After a stay in Tyre to install a pro-Babylonian king there, he seems to have dedicated all his efforts to the rebuilding of the temple of Sin in Harran in Upper Mesopotamia. He tried to stress the worship of Sin, his favorite god, in Babylon; this led possibly to conflicts with the priests. It seems, however, that these preferences

and his archaeological pursuits reveal only one side of his character—though they gave him the world-wide reputation of being insane. From newly discovered inscriptions in Harran, it has become evident that he visited the large cities of Arabia during the years of his protracted absence from Babylon. From the Babylonian Chronicle we know already that he stayed away for years on end while his son and co-regent, BELSHAZZAR, acted as king in Babylon. It is possible that these strange overland journeys of a Babylonian king are connected in some way with overland trade, the control of which might well have been in his hand. At any rate, when Cyrus suddenly invaded Babylonia and moved, without encountering resistance, into Babylon, Nabonidus returned and was treated by Cyrus with his characteristic leniency toward defeated kings. This was the end of Babylonian sovereignty, but that the spirit was not yet quite dead is shown by the fact that two subsequent pretenders to the Babylonian throne took the name Nebuchadrezzar. *See* ISAIAH § B2.

3. History of Assyria. In the history of Assyria an essential difference can be observed between the periods before and after the Dark Age. Although little evidence is available for the former, it definitely lacks that spirit of military aggressiveness which characterizes the latter, but shows an efficiency in organizing trade relations and commercial activities that is not conspicuous after the Dark Age. In the centuries after the Amarna Age, with Asshur-uballit (*ca.* 1365-1330) the Assyrian kings succeeded, by means of institutionalized annual campaigns, in building up a series of more or less ephemeral empires which often suddenly collapsed but were quickly reconquered and even extended. The frequency of these sudden changes in the political and military potential of Assyria constitutes a very important problem. As startling as the collapses, which drastically reduced the sphere of Assyrian influence, is the ever-undiminished vigor with which its political aspirations make Assyria rebound. It is obvious that both the ability to recuperate and regain strength and the curious instability of this strength have to be considered characteristic qualities of the new Assyria. They may perhaps be understood when one investigates the entire assemblage of Assyrian culture traits with respect to its native and to its Babylonian components.

On the surface, Assyrian civilization was patently dependent upon its sister civilization for the bulk of its religious concepts, its literary tradition, etc., although there exist some obvious deviations, mainly in point of political organization and in the preferred styles in the realm of the representational arts. But hidden under the surface of conscious and intensive Babylonization, Assyrian civilization remains alien. The position of the Assyrian king is quite different from that of the Babylonian. His relationship to the high officials and feudal lords, the social structure of the country, and the policy of the royal administration bespeak an utterly different attitude and different goals. Then there are the cultural and intellectual differences which come sharply to the fore in the political relationship between Assyria and Babylonia, and many other distinctive contrasts which future research will have to trace and to identify if an understanding of the singularity of Assyrian history is to be obtained. It is certainly far too naïve to look for an explanation—as has been done in the past—in terms of economic determinism or racial and climatic differences.

Assyrian history begins with a governor (*ensi*) of the Ur III Empire (up to 2025) residing in Asshur. After the collapse of this empire, the city, ruled by a series of kings who often called themselves only *waklum,* "overseer," rose to be a center of commercial activity which reached deep into Asia Minor and also into the mountains to the N and the E of Asshur. Of this development we know only what can be deduced from letters and commercial documents found in Kültepe (on the bend of the Halys River) and in a few other places in Asia Minor, among them Boghazköy—the Cappadocian Texts. They record the dealings of Assyrian merchants residing in Asia Minor and traveling through that general region, partly concerned with exportation of textiles manufactured in or distributed from Asshur, partly investing Assyrian money in inner Anatolian trade.

The Assyrians bought and sold copper and also provided the coppersmiths of that region with the tin essential for the production of bronze, tin which Asshur seems to have imported from far in the Iranian Plateau and distributed (as Mari did somewhat later) in the tin-hungry West. Dealing with the numerous native rulers by means of treaties, the Assyrian merchants enjoyed freedom of movement and communication, and a social status on which was based a specific code of ethics which has no parallels in the history of the ancient Near East. We are completely in the dark as to the development and the circumstances which led to this state of affairs but know only that some catastrophe put an end to communications with the capital and that the merchant settlements withered away quickly thereafter, terminating a period of commercial dealings of roughly three generations.

Most important for the history of Assyria is the person of Shamshi-Adad I (*ca.* 1812-1780). He was, according to many indications, a foreign conquerer who seized Asshur soon after the above-mentioned period and strove to create a territorial state in Upper Mesopotamia. His concept of organizing such a state is clearly that of a foreign king who relies on his nomadic and energetic followers to rule a population of different social and ethnic composition by founding new cities, bringing in new agricultural methods, reorganizing the subjects in order to improve their low standard of living, and, above all, attempting to settle the seminomadic strata in order to provide, through their taxes and services, the economic basis for the administration of his empire. With the death of Shamshi-Adad I, his empire disintegrated quickly—this sequence of events was to be repeated over and over in Assyrian history. His son, Ishme-Dagan, could hold only Asshur, and even this city soon disappeared from the historical scene. This is the era of Hammurabi, of the warring Amorite and Hurrian rulers of caravans moving from Telmun on the Persian Gulf to Cyprus, the era of the growth of the Old Hittite kingdom which was soon

to engulf in one sweep the entire region and to usher in the Dark Age that brought the Hittite even to Babylonia and threw the entire Fertile Crescent into confusion.

During the Dark Age, Assyria proper was incorporated for quite some time into the Mitanni Empire of mottled and only partly known history. We have but a string of royal names with which the official king lists span this period—and it is worthy of note that the names of Shamshi-Adad and Ishme-Dagan each appear three times in the three centuries between the death of the first Shamshi-Adad and the ascendance of Ashur-uballit, the first king of stature after the Dark Age. This bespeaks a political tradition somehow kept alive in Asshur in spite of foreign domination and the loss of power. When the conflict between the rising New Hittite kingdom and the Mitanni Empire was eventually decided by the victory of the Hittite king Shuppiluliuma (*ca.* 1380-1340), Syria was brought under Hittite influence, and Assyria began the slow and difficult ascent toward becoming a major power among the nations of the post-Amarna age.

In these formative centuries Assyria developed a body of foreign-policy concepts which determined to a very large extent the history of the ancient Near East. There was first the vital front against the pressure of the mountain people—the trauma of the Hurrian experience made Assyria very much aware of this danger. Here, attack whenever possible and extermination, or forced urbanization combined with the building of strategic roads, were applied with varying success, to obtain not only security from invasion, but also soldiers and horses for the Assyrian army. Tragically enough, the battle on that front, which lasted for more than half a millennium, was eventually lost when the Sargonides succeeded in destroying the Urartean buffer state and thus broke the dike which perhaps could have held the Medes and other tribes in check.

A second front, that against Babylonia, proved equally difficult and eventually fatal. It is possible that the political situation which developed at the end of the Amarna period gave an especially bitter turn to the relations between Assyria and Babylonia. The Hittites at that time seem to have been well aware of the menace implied by the rise of an Assyrian kingdom and tried to find an ally in Babylonia, exactly as the Egyptians gave at least encouragement to Assyria to exercise pressure upon the Hittite enemy. Assyria's attitude toward Babylonia showed its characteristic aggressiveness and led to the first conquest of Babylon under Tukulti-Ninurta I (1244-1208), who triumphantly carried off the statue of Marduk. In the following centuries, however, Assyria experienced a cultural invasion from Babylonia which led to a slowly intensifying Babylonization of many essential aspects of her intellectual life, probably penetrating much deeper than we are able to see in documents. The effectiveness of this process is made clear by the violent reaction of Assyrian nationalism against it, and it created a dangerous ambivalence in the attitude of Assyria toward Babylonia. The sudden reversals in the Babylonian policy of the Sargonides (*see below*) show definitely that ideological conflicts dominated this relationship.

The third front, that toward the W and the "Upper Sea," influenced world history to a much greater extent than the other two. After the conquest of Carchemish (first by Asshur-uballit I and then by Tukulti-Ninurta I), and after Tiglath-pileser I (1115-1076) advanced as far W as Palmyra (Tadmor), Shalmaneser III (859-824) laid siege to Damascus and reached the Mediterranean Sea at Nahr-el-Kelb. From that moment on up to Sargon II (722-705), Assyria posed an immediate threat to the two small kingdoms of Judah and Israel (i.e., in the period from Omri [876-869] to Manasseh [687-642]) but, in fact, all the fluctuations of Assyrian military might, beginning with Tiglath-pileser II (966-935; a contemporary of Solomon), had their reflections in the political stability of Syria and Palestine. *See* SHALMANESER 3.

The first culmination point in Assyria's rise to power was attained when Ashur-uballit I and Tukulti-Ninurta I reached out to the W, toward the Euphrates, and toward the S, to Babylon. The so-called Synchronistic History reports the relations between Assyria and Babylonia from Ashur-uballit down to Adad-nirari III (810-783) in terms of treaties concluded by their kings. We read here of invasions and defeats, of marriages between the two dynasties, booty taken and boundaries determined, again and again. Tukulti-Ninurta's triumph was short-lived; the so-called Aramaic invasion again shattered the always precarious economic structure of Assyria and of its enemies alike, interrupting communications and scattering whatever the efforts of the Assyrian kings toward organization and urbanization may have achieved. Tiglath-pileser I, however, conquered Babylon and Babylonia and fought the Aramaeans along the Euphrates, and the Nairi coalition in the Armenian Mountains. He went as far as Palmyra and reached the Mediterranean. His successors again failed to maintain Assyrian power, and another eclipse engulfed the country until the time of Adad-nirari II (911-891).

With Tukulti-Ninurta II (890-884) and Ashurnasirpal II (884-860) a new spirit of aggressiveness and cruelty becomes evident in the royal inscriptions. Ashurnasirpal II* and his son Shalmaneser III (859-824) determinedly pushed into Syria and the entire Mediterranean coastal region, in spite of the fierce resistance of the Aramaic kings of that region (battle of Qarqar, 853), receiving tribute from Israel and the Phoenician cities. Both likewise battled the newly arisen and dangerous kingdom of Urartu to the N and repeatedly interfered in Babylonian rebellions; Shalmaneser fought there a new foe, the Chaldeans. Fig. ASS 97. *See* AHAB; ISRAEL, HISTORY OF, §§ 7-8.

Another outstanding conqueror among the Assyrian kings of this period was Tiglath-pileser III (745-727), the originator of large-scale deportations of conquered peoples, who made himself king of Babylon (under the name of Pulu) and received tribute from the kings of Asia Minor and Syria, and even from two queens of the Arabs. His son, Shalmaneser V (727-722), likewise king of Babylon (under the name of Ulūlaj), laid siege to Samaria for three years; but only his brother and successor, Sargon II, actually conquered the city. It took Sargon nearly his entire reign to reconquer the countries

which Assyria had lost at the death of his father. Egypt stirred up Palestine and Syria, Elam Babylonia, and Urartu the kings of the Taurus region. Sargon turned first against Urartu, which he conquered and destroyed, reporting this achievement to his god Asshur in a letter which represents one of the finest creations of cuneiform historiography; then against Merodach-baladan of Babylon, where he made himself king; and he finally fell in battle in a campaign in the mountains before he could enjoy the new city, Dur-Sharruken (Khorsabad), which he had built as his residence E of Nineveh.* His death again brought general defection and rebellion, showing that the resistance against Assyria was growing in determination throughout the entire ancient Near East. Figs. SAR 27-29. *See* AMOS; HOSEA; JEROBOAM 2; SHALMANESER 5.

Sargon's son Sennacherib (704-681) had to fight for his empire for a long time on all three fronts.* He attacked Elam with Phoenician ships brought down on the Tigris and destroyed Babylon after many battles; but, curiously enough, he made his son, Esarhaddon, who was patently pro-Babylonian, governor there. In the anti-Babylonian rebellion which this step caused, Sennacherib was killed, and Esarhaddon (680-669) had to take it upon himself to pacify Assyria.* He was the first Assyrian king to attack Egypt, which had kept stirring up revolts in Palestine, and above all had influenced the loyalty of Tyre and Sidon, apparently considered essential for Assyrian welfare. Sidon was destroyed, but the conquest of the Nile Delta was of no great consequence, since Esarhaddon was soon compelled to return to fight the Scythians and Cimmerians menacing his

mountain front. He died on the march to Egypt on another campaign. As a result of an unprecedented arrangement of Esarhaddon, the change of ruler occurred without trouble; he had made the attempt to solve the eternal "Babylonian question" by making his son Ashurbanipal king of the realm and another son, Shamashshumukin, king of Babylon. This gave ASHURBANIPAL (668-626?) some sixteen years of respite, interrupted by the usual but minor campaigns, until Shamashshumukin succeeded in 652 in forming a formidable alliance of all the enemies of the Assyrians from Elam to Israel. It took six years of civil war to subdue the rebels and to destroy Babylon once again. Figs. SEN 41; ASS 98-99. *See* ISAIAH; MANASSEH.

Whether this fight taxed the strength of Assyria too much or whether it was for other, unknown reasons, a strange period of silence blacks out the last twenty years of the reign of Ashurbanipal. From the prosperity and the apogee of Assyrian power and prestige—two topics on which the scribes of Ashurbanipal do not tire of elaborating in glowing terms—the country seems to have fallen with appalling suddenness into obscurity. Two sons followed him in quick succession; we know only their names. Nabopolassar, representing an aggressive Babylonia under a new dynasty, attacked the old cities in Babylonia which still kept their loyalty to Assyria, and they fell, one after the other; while Cyaxares the Median descended upon Assyria from the Iranian Plateau. Both kings succeeded, in a series of campaigns, in destroying Asshur, the old capital (614), and eventually Nineveh (612). There is still a strange and heroic epilogue. Parts of the Assyrian army held out for a time in Harran, waiting for Egyptian help, which failed to reach them in time. They even set up a king, but the history of Assyria had come to an end. Babylonia, under Nebuchadrezzar, was to take up Assyrian policy and to rule the Near East as far as Cilicia and Egypt, and even to conquer Jerusalem (586), which had miraculously escaped up to then.

D. ***THE DISCOVERY OF THE PAST.*** The memory of Egypt's grandeur has been kept alive through impressive remains, through the tales of Herodotus and his successors, and through the biblical record. Mesopotamia was not so fortunate; but when the first travelers with antiquarian interest in 1576 began to pass through, their curiosity was quite naturally stimulated by the Bible stories about the Tower of Babel and the destruction of Nineveh. They saw the Tower of Babel in the impressive ruins of Aqar Quf (Dur-Kurigalzu) or of Birs Nimrud (Borsippa), in spite of the fact that the fame of Babylon kept on clinging to the ruins near Hilleh through a millennium of complete oblivion. The far more spectacular ruins of Persepolis—outside Mesopotamia—have to be credited with attracting most of the attention, especially through their inscriptions on stone, which led to the decipherment of the cuneiform script. The interest in the ruins of Babylon, as well as the quest for the site of Nineveh, was sharpened by accidental finds of inscribed objects such as the Caillou Michaux (a *kudurru* found near Ctesiphon), the East India House inscription (a basalt slab with 621 lines, inscription of Nebuchadrezzar II), and the Bellino Cylinder (Sennacherib), and it led to more or less systematic searches for remaining ruins and monuments throughout Babylonia and in the neighborhood of Mosul.

French and English diplomatic personnel and interested amateurs vied with one another to send to their respective governments Assyrian reliefs and colossi, cylinder seals, etc. P. E. Botta started digging in 1842 in the ruins of Nineveh and later in Khorsabad with spectacular results; A. H. Layard excavated in Nimrud (Calah) and discovered the rock reliefs of Maltai and Bavian; H. Rawlinson copied the Behistun Inscription; W. K. Loftus began work in 1851 in the desolate and dangerous Babylonian plain and discovered the tells at Nuffar (Nippur), Warka (Uruk), Muqayyir (Ur), and Senkereh (Larsa).

In the last quarter of the nineteenth century began the era of the great expeditions, French, British,

American, and German. The French started in 1842 in Nineveh, in 1877 in Telloh, and in 1897 in Susa; the British in 1847 in Khorsabad, in 1854 in Uruk (Erech) and Ur; the Americans in 1889 at Nippur; the Germans in 1897 at Babylon and in 1903 at Qal'at-Shergat (Asshur). The results have been truly staggering, measured not so much in museum pieces (with the exception of Telloh and Susa) or in discoveries of ruins of large architectural structures, but primarily in epigraphic evidence, of which a vast amount was uncovered. Telloh, Nippur, and Asshur have yielded many tens of thousands of tablets which shed light on nearly every phase and aspect of Mesopotamian civilization from the earliest to the Persian period and which supplement in a very fortunate way the treasures found previously by the English in Ashurbanipal's library and archives at Quyunjiq. If the publication of the immense body of material has not been able to keep up with the number of texts found (the dignified apathy, petty jealousy, and sheer incompetence of many large museums is to be blamed for this state of affairs), it nevertheless forms the basis of modern Assyriology and Sumerology.

Before the First World War, the spade of the archaeologist turned to the region along the Upper Tigris and the Euphrates (Tell Halaf, Carchemish, etc.), not to speak of Boghazköy, the Hittite capital in Anatolia, and of the sites in Upper Syria.

After the First World War came the period when the main tells bearing upon Mesopotamian prehistory (El Obeid, Uruk, Djemdet Nasr, etc.) were explored and the deep S (Ur and Eridu) and the region beyond the Tigris (Eshnunna, etc.) began to yield their information. Accidental discoveries by natives of the region lent a helping hand to the archaeologist; Tell-Hariri (Mari) in Mesopotamia, and Ras Shamra (Ugarit) outside it, are typical examples.

After the Second World War the difficulty of financing large-scale expeditions and the changed political situation forced archaeologists toward the older sites with follow-up operations, and toward smaller tells that promised results in short periods. More than before, they depended on accidental surface finds which might open new vistas for them. The rising water table reduces the chances of obtaining information from the oldest period and, for such older material, restricts the scholar to the investigation of tells that were abandoned very early and thus not covered by subsequent layers. Moreover, archaeological methods have been so successfully refined that old-style spectacular expeditions have become impractical. Such an immense amount of data has been amassed so far that a period dedicated solely to a systematic digesting and co-ordinating of this material would be a blessing for both the philologist and the archaeologist.

When Pietro della Valle (1621) and Carsten Niebuhr (1761—) brought copies and, later on, actual cuneiform inscriptions (from Persepolis and Ur, respectively) to Europe, the curiosity of scholars was aroused. The increasing number of objects with such writings arriving from the Near East kept this interest alive and eventually led to the decipherment of the cuneiform script. The task was much more difficult than any of the participating scholars could possibly have imagined it to be, and it took more than fifty years.

These were years full of ingenious discoveries, of stubborn misunderstandings, errors, and bewildering confusion, because the pioneers were faced with three rather different systems of cuneiform writing: the Old Persian, the Elamite, and the Babylonian, in monolingual, bilingual, and trilingual texts. The German G. Grotefend tackled in 1802 the simplest system (Old Persian, on the first column of the trilingual Behistun Inscription) and made a decisive step forward by applying the vocabulary of the Zend Avesta, the newly discovered (Anquetil du Perron, 1771) Middle Persian religious book. He applied the correct words to the sign groups which he assumed to mean "king" and "king of kings" and came to identify in this way the names of the kings Darius and Xerxes. This resulted in the correct reading of ten signs. The Danish orientalist I. R. C. Rask (1823) added some readings, but definite progress was made only when the Englishman E. Burnouf discovered the value for decipherment of the list of geographical names in the trilingual Behistun Inscription (1836), and C. Lassen added new values in 1836 and 1844. A new impetus was given to this slow process when H. Rawlinson succeeded in reading seventeen signs, allegedly independently of Grotefend. He based his work on royal names and also on the Behistun Inscription (1836, 1838, 1846). His final publication was followed by J. Oppert's discovery (1847) that the Old Persian system of writing was syllabic in nature. This completed the decipherment of this type of cuneiform writing.

When N. L. Westergaard (1844) and E. Norris (1855) turned to the writing of the second column of the Behistun Inscription, the Elamite version, they were greatly hampered by the fact that it contained many more signs than the first and that the nature of the language could not be determined. It was the decipherment of the third, the Babylonian, column that shed decisive light on the second. In spite of the efforts of Westergaard and Oppert (1859), it was F. H. Weissbach who, as late as 1890, completed the decipherment of the column written in Elamite.

The decipherment of the third column proved to be the most difficult, because its system of writing was the most complicated, since it had signs for both syllables and words (logograms). Grotefend, however, discovered as early as 1814 the meaning of certain logograms and even the reading of the sign *ša*. An essential advance was made by I. Löwenstern, who established (1847) the principle of polyphony—i.e., that one and the same sign could represent different syllables. Botta's publication of texts in the same system of writing, found in Khorsabad, proved a great boon to Assyriology, because he carefully noted variant writings in parallel texts. E. Hincks's success (1847) in correctly identifying eighteen signs (and several logograms) out of the seventy-six readings he proposed was still based on an intensive analysis of the proper names in the Persepolis inscriptions and newly found texts from Armenia.

The third column of the Behistun Inscription furnished new material to Rawlinson (1850), who, as

Hincks had already done, identified the language of this column as Semitic and began to outline the structure of the verbal system. Oppert joined these efforts in 1855 and succeeded, in 1857, in giving the first translation of an Assyrian text without the help of an Old Persian version. In the same year a curious test was made by the Royal Asiatic Society, upon the suggestion of the Assyriologist Fox Talbot, who had just translated an inscription of Tiglath-pileser I. He sent it to the society in a sealed envelope to be compared with a translation of the same document by Rawlinson. The society thereupon invited Hincks and Oppert to participate in order to demonstrate the correctness of the decipherment. The successful outcome of the test, however, failed to stop such orientalists as J. A. de Gobineau, E. Renan, and H. Ewald from either declaring the readings impossible or remaining extremely skeptical. E. Schrader recognized the correctness of the results obtained, in spite of the peculiarities of the system of writing, defended opinions as to the Semitic nature of Assyrian (1869 and 1872), and did much to gain acceptance for Assyriology in Germany.

The so-called Sumerian problem created new complications and aroused much discussion. Hincks recognized as early as 1850 that the system of writing had been invented by a non-Semitic people, who Rawlinson had first thought were Egyptians, then Scythians (also Oppert), or Turanians; but to Oppert goes the credit of having called this civilization Sumerian (1869). F. Lenormant succeeded (1873) in giving the first outline of the language of this people, whose very existence J. Halévy stubbornly denied. This caused a complex and heated discussion which lasted until the end of the nineteenth century.

The Semitic character of "Assyrian"—as Akkadian was called, because the first well-understood texts were actually written in Assyrian—proved both a boon and a drawback. It offered vital help in the course of the decipherment, and stimulated interest in the newly discovered Semitic language on the part of those interested in comparative linguistics, and above all on the part of students of the OT, when the cuneiform texts started to reveal historical material bearing directly on the Bible and on concepts, customs, and literary patterns, which provoked comparison and evaluation. However, these attitudes thoroughly vitiated appreciation and investigation of Akkadian as a language with quite unique and distinct characteristics, and of Mesopotamian civilization as an integrated whole. Delitzsch's genius put order into the unsystematic ramblings of early Assyriology, and the school of B. Landsberger began to explore the morphology, vocabulary, and syntax of Akkadian in view of specific and individual features (*Eigenbegrifflichkeit*). This approach is still very much in its beginning, but it promises to lead to a better understanding of the language. The study of the numerous dialects is progressing slowly, because large bodies of material—such as the Old Assyrian texts from Kültepe, the Mari Texts, etc.—are difficult to handle for the few scholars interested in this type of research.

As important as the linguistic approach for Assyriology is that of cultural anthropology. Here very little understanding has been achieved so far, with the exception of a number of areas in family law (marriage and adoption). The vast field of social institutions has hardly been touched, the social structure remains obscure, and so do the economics of Mesopotamia, in spite of an overabundance of available data. Here lies a field of research that will reveal the links between Mesopotamia and the neighboring civilizations, not on the level of accidental similarities, but on that of institutional analysis. The main terra incognita, however, is the religion, which originally attracted much interest, especially on the part of OT scholars. Instead of dilettante oversimplification, the need here is for detailed studies of specific key words, of form patterns, and especially of diachronic and geographical differences.

E. ***LITERATURE.*** The written documents in cuneiform yield an unparalleled insight into nearly all the aspects of the complex civilization of Mesopotamia. The variety of the contents, and the coverage in time and space, as well as the ever-increasing number of tablets, creates a body of evidence which no other dead civilization can rival. The full exploitation of the information the cuneiform documents contain has only started, and new material is being unearthed and published every year.

1. System of writing. Better than in the writing system of any other civilization, we can see in the Sumerian the change from a logographic into a phonographic system of writing. The use of word signs (logograms) was essential for accounting and recording in a bureaucratic setup in which officials had periodically to render accounts on the movement of goods belonging to an authority. When the need arose to refer, for similar purposes, to proper names (geographical or personal) or to new objects and materials, the Sumerians made ingenious use of word signs (normally monosyllables stripped of their original meaning) to write the syllables of the names. It was, however, somewhat a drawback that their scribes still maintained the word signs and thus created a hybrid system which led to endless complications and in the long run caused the disappearance of the entire system of writing, when it had to compete with a far more efficient and easy alphabetic system.

The principle of logographic writing seems to have been invented by non-Sumerians; but it remains quite uncertain what relation, if any, exists between proto-Sumerian writing, the somewhat later and still undeciphered proto-Elamitic system of writing, and the script of the Indus Valley. Because the concept of writing spreads very easily at a certain level of social organization, it is tempting to link the mentioned systems in some way to that of Egypt, and it is customary to do so. More important than to inquire for the point of origin of the primary stimulus is to draw attention to the characteristic use made of it in the individual civilizations and to point out the achievement attained specifically by the Sumerians. The practice of using signs to express single syllables rather than entire words was well adapted to the polysynthetic character of Sumerian, and the use of class determinatives before nouns facilitated the transfer of homophonous word signs. The development was clearly toward simplification and standardization of sign forms, toward their reduction in

number, and toward rendering more and more of the spoken relators in writing—in short, toward phonetization. When the Akkadians took over the Sumerian system of writing, this promising development was interrupted. Apart from applying the Sumerian syllabic signs to render the syllables of their own language, the Akkadian scribes used a large number of Sumerian word signs to render corresponding Akkadian words (mostly nouns but also verbs), sometimes adding syllabic signs to indicate more fully what Akkadian word was meant and in which grammatical form it was to be read. This somewhat cumbersome use of word signs was never completely discarded wherever Akkadian was written in cuneiform. However, the use of word signs was subsequently (especially in the Old Babylonian period) greatly reduced and restricted to certain often-occurring nouns (such as "god," "king," "city," etc.). Only the learned scribes of the first millennium returned to the earlier, more extensive use of word signs, for reasons of style rather than for practical purposes.

The shift from Sumerian to Akkadian resulted in a number of ambiguous writings caused by the widely differing phoneme inventories of the two languages. Slowly a small number of new signs came into use, and practices were evolved, which served to render phonetic differences that were immaterial in Sumerian but significant in Akkadian. However, quite a number of signs remained phonetically ambiguous, with regard both to differentiation between voiced and voiceless consonants and to the so-called emphatic pronunciation. This and the polyvalence of certain signs added more complications to the system of writing—all of which made a long period of study necessary for the scribes, required the use of many reference works (*see* § E6*d below*) and thus put writing into the hands of a class of trained specialists. These specialists were by nature conservative and allowed only scant development during the two millenniums of their authority. Although certain complicated signs did become obsolete, and—in very technical texts—the most frequently used logograms appear in abbreviated forms, no meaningful changes occurred any more. Still, it should be said that the system was elastic enough to be used for foreign languages such as Hittite (with a few rarely used diacritical signs), Elamite, Hurrian, and Urartean.

Paleographically, certain periods and regions became quite distinct. Further, there was a definite development toward a differentiation between cursive and monumental writings and between an Assyrian and a Babylonian style. There are certain confusions between signs, conflations of two or more signs, artificial fusion and differentiation of forms, etc., that occur here and there. Schools of scribes developed locally (with regard to use, form, and selection of signs), such as the Ur III tradition, which spread to Asia Minor (Hittite and Boghazköy Akkadian), or the Old Akkadian tradition, which survived in the Old Assyrian from Kültepe in Anatolia but was supplanted in Babylonia by the Old Babylonian.

2. Writing material and technique. Clay, as used in Mesopotamia, can safely be called the best writing material ever used from the standpoint of the permanency of the record. It is also extremely cheap and present everywhere. Pressed into all kinds of shapes, clay offers a smooth and plastic surface in which impressions can be easily made with appropriate tools, and when the clay dries or is fired, these impressions become permanent. The clay surface is very sensitive and not only retains the finest lines of the stylus but also renders all the fine details of a seal rolled over it or impressed upon it.

Clay was used in Mesopotamia for writing purposes in three main forms: tags protecting the knots of strings safeguarding the contents of bags, baskets, or containers; tablets of many sizes and shapes; and larger, prismatic—sometimes, but rarely, barrel-shaped—forms that could hold many more lines in less space, more compactly, and with less danger of damage than could a breakable tablet. The wedges were impressed with a stylus, usually of reed but sometimes of wood or even bone. Sometimes the clay tablet was covered with a slip of finer clay, on which the marks were made. The stylus was also used to make rulings, while vertical lines for texts to be written in columns, or with special care, were made by means of a snapped-on thread.

In the earliest period individual words were written, always from left to right, in boxes arranged in vertical columns. Later on they were arranged in rows (lines) across the width of the tablet, filling first one side (the obverse), then, turning the tablet along its lower and shorter edge, on the second side (the reverse). Often the tablet was inscribed in carefully laid-out columns of equal width, arranged on the obverse from left to right, and on the reverse in the opposite direction.

Literary texts show at the end of the last column of the reverse the title of the composition (usually the first line of the text), the owner of the tablet, the name of the scribe, and the date, in a stereotyped sequence that often refers to the original which was copied, its provenience, etc. Sometimes curses are added against those who remove the tablet from its place without authorization, or the text may be marked as secret, etc. If a composition is too long to be contained in one tablet, the colophon refers to this fact and indicates the first line of the next tablet of the "series," as the scribes called such an opus.

In libraries the tablets seem to have been stored on shelves or clay banks in bundles secured by strings and tags. A few of these tags have been preserved. Archives, private or administrative, were kept in large clay jars.

The clay tablets used by the administration of temples and palaces, as well as for recording legal transactions, for writing letters, etc., have very characteristic shapes. Some are small, thin squares down to the size of a postage stamp; others, cushion-shaped with narrow or thick rims, longish or squat, most of them inscribed parallel to the short side but some to the long. Each period or region is characterized by its preference for a specific shape, and, moreover, the content of the tablet is very often directly connected with its form.

Quite frequently, tablets are imitated in stone or metal, especially when used for foundation deposits. It should be noted that the custom of inscribing

bricks for important buildings with the name of the building, the king, etc., led to the invention of brick stamps, some even with interchangeable sign units. Curiously enough, the scribes in Susa even resorted to the use of cylinders inscribed with curses, etc., and rolled them over the surface of legal documents instead of writing these formulas down.

In spite of the obvious advantages of their permanent writing material, the Mesopotamian scribes of the early first millennium sometimes wrote on wooden tablets with a thin layer of wax. A set of such tablets (made of ivory), to be hinged to one another so as to open up like a screen, has been found. This find was due only to a fortunate accident, which brings home the fact that we would have lost most of the literary texts in cuneiform if this practice had been adopted generally instead of only in luxury items for the king. Such "books" seem to have been used primarily for Aramaic texts, and they have perished in Mesopotamia, as have perished there all the Greek papyri of Hellenistic origin, while, on the other hand, the Egyptian soil preserved such documents very well.

3. Nonliterary texts. ***a. Administrative documents.*** Whenever a storage economy or a complex bureaucratic system is to be run by individually responsible officials of restricted office tenure, strict and written accounting is essential if one is not to resort to complex operational devices such as the quipus of Peru. Sumerian bureaucracy left an immense number of texts, from the modest beginnings in nearly pictographic writing from Uruk, to the archives of the Third Dynasty of Ur. These are records covering the movement of goods and animals into or out of the custody of an official, lists which sum up these dealings monthly or annually, records of rations given out, etc. All are extremely neatly written, often in several columns and with column headings, all dated, often sealed, indexed at their rims so as to be quickly found in the tablet boxes, of which we have a great number of identifying tags. In the Old Babylonian period, the style of these records changed somewhat; they refer mostly to the transactions of the palace administration, to tax collections, etc., as they likewise do in the Kassite period (Nippur). From the time of the Chaldean kings we have a large number of tablets dealing with the administration of the temple Eanna in Uruk, of the temple Ebabbar in Sippar, etc. Wherever Babylonian civilization and cuneiform writing penetrated outside Mesopotamia, we find the same bureaucratic techniques, invented by the Sumerians, as in, e.g., Elam, Mari, Chagar-Bazar, Nuzi, and Alalakh. These techniques were often adapted to special needs, and sometimes simplified.

b. Letters. The formula of the Sumerian letter represents an order given to the messenger instructing him to recite the message to the addressee. The message itself was originally in the form of an imperative and was solely concerned with administrative matters. Akkadian letters which imitated this pattern were primarily vehicles for administrative dispositions and only secondarily contain reports to higher authorities regarding executed orders or requesting instructions. Commercial activities overland likewise had to rely on letters in matters of disposition and execution. These letters, however, contain quite a bit of extraneous matter and thus are often of historical or cultural interest. Genuine private letters are an exception and appear, as a rule, only in the Old Babylonian period.

Another domain in which letters were amply used is that of international relations, and these are, of course, of great interest to the historian. Of these we have, first, the exchange of letters between Ibbi-Sin, the last king of the Ur III Dynasty, and Ishbi-Irra, the first king of the Dynasty of Isin, and other rulers, preserved in a Sumerian collection of historical source material bearing upon that important period; then the correspondence of Hammurabi with Zimrilim of Mari, found in Mari; and all the letters from the lesser kings sent to Iasmah—Addu, king of Mari, son of Shamshi-Adad I.

The diplomatic letters of the Mari period are far overshadowed in importance and general interest by those found in the ruins of the new capital of Akh-en-Aton in Egypt, the so-called Amarna Letters. The royal archive there contained not only letters addressed to various pharaohs by kings and rulers of Babylonia, Assyria, the Hittite Empire, Mitanni, and Cyprus, and—the vast majority—by the kings and kinglets and Egyptian officials of Upper Syria and Palestine, but also some copies of letters sent from Egypt. Apart from the letters, there are lists of royal gifts sent to or by the pharaoh, and a small group of literary texts and vocabularies which show that the Akkadian scribes in Egypt had been trained there. Moreover, the archive contained one letter in Hurrian and two in Hittite. The importance of this fortunate find can hardly be overestimated. It sheds light on a period of Near Eastern history which otherwise would have remained completely dark, and it gave the impetus for the discovery of the remains of the Hittite capital at Boghazköy.

Similar texts were discovered in Palestine—in Sichem and Lachish. A new source of historically important letters from this region is Ugarit, from where we now have many letters written in Akkadian. Here, too, the presence of lexical texts shows that the scribes were locally trained and not imported. In the archives of the Hittite capital, Boghazköy, letters of Ramses and the Babylonian kings Kadashman-Enlil and Kadashman-Turgu were found, as well as copies of letters sent to foreign kings. Smaller bodies of letters come from Nuzi (with some royal letters) and Asshur of the Middle Assyrian period, and from Tell Halaf (Neo-Assyrian; among them some royal letters).

Another find which deserves the designation "archive" has been made in Quyunjiq, consisting of more than 1,200 letters, of which only *ca.* 200 could be called royal correspondence. These letters cover the period from Sargon II to Ashurbanipal. Most of them were written by or to Ashurbanipal, many to Sargon and Esarhaddon, but none by or to Sennacherib, except six addressed to him while he was crown prince.

Formally, the Assyrian kings introduced a change of style in some of their own letters, inasmuch as they begin with the words *abat* (or *amat*) *sharri,* "order

of the king." Another innovation is the reports of scholars (*ca.* three hundred are known) concerned with the interpretation of ominous happenings to the king in answer to specific queries by the latter. As a rule, the scholar begins his letter by quoting a passage from an omen text dealing either with astrological omens or with those derived from other happenings (usually of the type contained in the series *šumma ālu* [*see* § E5 *below*]) which fit the circumstances or the event that had prompted the king to ask the scholar for information. At the end, he gives his name in an equally businesslike form, "from NN," but there are quite a number of cases where explanations—mainly to twist a bad omen into one of good portent—were added after the quotation, or personal requests of the scholar, and all sorts of accidentals.

The Neo-Babylonian letters show again a slightly different formula ("letter of NN to NN"). They are *ca.* one thousand in number. They are mostly concerned with administrative matters, with the exception of the political letters found in Kouyunjik, and represent the most valuable source material for the study of a new dialect of Babylonian.

Finally, mention should be made of a literary use made of the letter form. These are the letters addressed to various gods, of which we have examples from the Sumerian period on up to the Neo-Babylonian, with the inclusion of Mari and the library of Ashurbanipal. There are two types. First are those written by Assyrian kings to their god Asshur, to the other gods of the capital, and to its citizens to report on a victorious campaign. Of this type we have two examples, one of Sargon II and one of Esarhaddon, and it is remarkable how much more lively and realistic these reports are in comparison with the corresponding royal inscriptions. The second type of literary letter is written to gods by private persons as an expression of piety. There is only one example of a letter written by a god, and that is one in which Asshur apparently acknowledges the receipt of a report in letter form sent to him by Shamshi-Adad V.

The art of letter writing seems to have been greatly appreciated in the Sumerian scribal schools, as a number of practice letters, and even a letter writer, show. These letters are primarily congratulatory letters directed to kings, with all kinds of requests, and are couched in that language of learned and long-winded obscurity which court style has preferred at all times and everywhere.

c. Public legal documents. A number of law codes are extant—two Sumerian, one attributed to Ur-Nammu, king of Ur, and the other to Lipit-Ishtar, king of Isin; two Old Babylonian, one coming from Eshnunna, beyond the Tigris, mentioning king Dadusha, and the other the well-known stela of Hammurabi; then a Middle Assyrian law code of the eleventh century B.C.; and a small collection of Neo-Babylonian laws which could be taken to indicate the existence of a code at that period.

The code of Lipit-Ishtar may have contained *ca.* 1,200 lines and was discovered among the tablets excavated at Nippur (as was also the small code of Ur-Nammu) and is also preserved in a small group of excerpt tablets. Besides it we have a badly damaged tablet from Uruk of *ca.* 190 lines with nine sections of a law code readable. It is the last tablet of a series containing Sumerian laws. The larger Sumerian code and the two Old Babylonian codes are provided with an introduction. Lipit-Ishtar's laws and the Codex Hammurabi also have lengthy epilogues. The prologues extol the king who has promulgated the laws, and Hammurabi's is most explicit in this respect, adding in the epilogue the usual curses and blessings intended to preserve the basalt stela upon which the code is engraved.

The individual laws are in all instances (Sumerian and Akkadian) styled in a casuistic and very condensed way, each section beginning with "if." The earlier codes add minimal prices to be paid for essential staples and services. The Codex Hammurabi happens to be the largest of the extant codes, but the numerous fragments of the Middle Assyrian collection of laws suggest that the original series may well have rivaled it in size. In spite of its size, the Codex Hammurabi fails to cover essential fields of the law, such as murder and sales, so that one has to conclude that the text is intended to reformulate only those sections in which changes had been made by the lawgiver. More important, however, for the appreciation of these codes, are the facts that, first, there are practically no allusions in legal texts or in letters—or even in royal inscriptions—to these collections of laws; and, secondly, those legal texts which happen to deal with topics regulated by these laws do not show that they were ever actually in force. Still, the Codex Hammurabi and the slightly younger Eshnunna Code present us with a unique insight into the social concerns and interests of the Babylonian kings, the efforts of their legal advisers to free themselves from a number of primitive notions concerning guilt and responsibility, and their striving for more concise, clearer formulations. Detailed comparison of both collections and their relationship to the Hittite laws and to those of the OT will help us discern more of the motifs and trends of thought which are reflected in the interpolations contained in the texts of the Babylonian laws.

Contractual arrangements between kings or cities to terminate a state of war are known from the Sumerian period but are quite rare in Babylonia. In fact, apart from the Sumerian Stela of the Vultures, which proclaims the new boundaries between the city Lagash, victorious under Entemena, and the "people of Umma," we have no text of this type from the S. There exists, however, a treaty of Naram-Sin (of Agade) in the Elamite language, which is, unfortunately, hardly understandable, but still bespeaks the existence of the legal and political concept underlying such arrangements.

Allusions to international treaties occur, at times, in the diplomatic correspondence from Mari, as is to be expected, since the political situation there had many parallels with that of the Amarna and the post-Amarna ages. From Assyria we have a treaty between Ashurnirari VI (754-746) and an Aramaic ruler of Upper Syria (Mati'ilu), and one between Esarhaddon and a king of Tyre (Ba'lu), while treaties of this Assyrian king with petty Median rulers have been discovered in Calah (Nimrud). From

among the many treaties concluded between the warring kingdoms Assyria and Babylonia (a summary of such agreements is contained in the Synchronistic History) we happen to have only one, that between Shamshi-Adad V (824-810) and Mardukzakirshumi I (852-828), but in a rather fragmentary state.

Most of the treaties whose texts have been preserved were found in the Hittite capital and are written in Akkadian or Hittite. First should be mentioned the only international treaty in this archive, that between Hattushili III (*ca.* 1289) and Pharaoh Ramses II, of which we have the Egyptian version carved on the walls of one of the temples at Karnak and of the Ramesseum, as well as a badly preserved Akkadian copy. There were also found treaties between a number of Hittite kings and their vassals in Asia Minor and Upper Syria, some of which are in Akkadian, others in Hittite, and one attested in both languages. The treaties establishing vassalage very carefully circumscribe the duties and obligations of the vassal and what protection he could expect from the Hittite ruler. They end with an invocation to the gods of both parties to serve as witnesses to the treaty and provide the customary curses and blessings they are to inflict or bestow upon those who break or keep the agreement.

The Neo-Assyrian treaties of Ashurnirari VI and Esarhaddon are much more primitive with regard to appeals to supernatural sanctions relied on for the enforcement of the agreement. Both describe symbolic acts which illustrate in a very crude manner the fate of the offender, corresponding exactly to certain magic practices used for evil purposes and mentioned at length in certain religious texts in cuneiform. Obviously, the Assyrian kings had to accept the customs of the Western Semites (we also happen to have an Aramaic stela dealing with a treaty between Mati'ilu and his vassals couched in quite similar terms) as we know them from the OT and as they are alluded to in passages from Mari referring to the sacrificing of animals, etc., to sanctify the conclusion of such treaties.

In the general category of treaties also belong the so-called Charter of Asshur and the text of the oath of loyalty which the officials of the Neo-Assyrian Empire had to take. In the former, Sargon grants the inhabitants of Asshur, for political services rendered to him during his fight for the throne, those special tax exemptions which his predecessor had abolished. It may well be assumed that the free cities had to have their privileges renewed by every king who came to the throne, and such records, which happen not to be extant but for this one small tablet, should be interpreted as a treatylike arrangement between king and city. The oath of loyalty which the Assyrian high officials had to take is quite frequently mentioned in the letters of the Quyunjiq Collection, and there even exist some fragments which give us its wording. The main duty of a loyal official seems to have been to report everything to the king. It remains uncertain whether the text is legally to be interpreted as a contract between ruler and subject or as some sort of royal edict. No complete text of the oath is known.

Among the royal edicts, the official instructions addressed by the king to high officials are to be considered a text type which the Assyrians had in common with the Hittites, among whose documents they are, however, much more frequent. Up to a short time ago, only one text from Nuzi was known which determined the duties and responsibilities of the mayor of a city, but recently a collection of royal edicts has been published in which nine Assyrian kings of the post-Amarna period in great detail regulate the duties of the officials in charge of, or serving in, the royal harem. From the Old Babylonian period comes a unique royal edict—again an accidentally preserved representative of a category of texts that must not have been too rare. This is the decree of Ammizaduga, the last king but one of the Dynasty of Hammurabi, concerning the lifting of certain debts; this decree was issued during the first year of his reign. Although such social acts of the Old Babylonian kings are known from date formulas and other indications in texts, this decree shows for the first time the extent of the royal act, the details concerning exceptions granted, etc.

Royal grants found a specific documentary vehicle during the Middle and Neo-Babylonian periods in the boundary markers called *kudurru* stones. There exist over eighty monuments of this type, mostly oval or longish cylindrical stones, but also stone tablets, covering the period from Kadashman-Enlil (*ca.* 1380) to Shamashshumukin (668-648)—i.e., roughly one millennium—although only thirteen texts can be dated exactly. With very few exceptions, these stones record royal grants and privileges concerning fields or entire regions, and, sometimes, income grants to temples. Internal evidence shows that *kudurru* stones were set up on fields, while tablets were deposited in temples. In both instances, however, the purpose was to make the grant public.

An essential feature of these stones was the designs engraved upon them; they include or consist of divine symbols of all kinds corresponding to the major deities of the pantheon, and are sometimes even provided with identifying inscriptions. These symbols—the texts call them "gods," "standards," "weapons," "drawings," and "seats" because the symbols are placed on "seats" such as are often shown in representations of enthroned deities—obviously have the function of protecting the monuments. For the same purpose, we find reliefs carved upon them representing kings, either alone or with the grantee, or in worship before a deity. Another kind of protection is provided by the sometimes extremely elaborate curses and blessings inscribed on the *kudurru*. They invoke the gods represented there by means of symbols, etc., to prevent the removal of the document, the presence of which guarantees the validity of the grant. For a period as little documented as that in which these *kudurrus* originated, they represent a unique source of information as to language, legal practices, history, and onomasticon, not to speak of their value as monuments of Mesopotamian art.

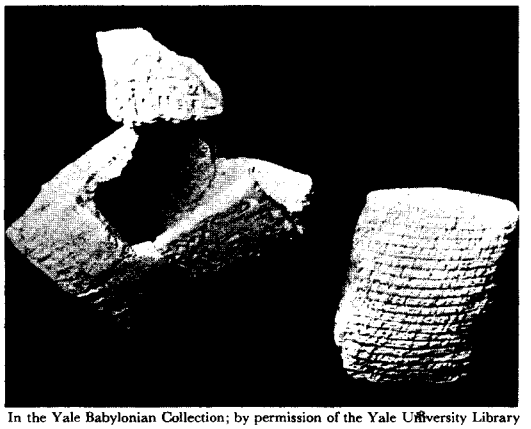
The use of stone for legal documents does not, however, begin with the Middle Babylonian period. We have a number of quite early stone tablets which record the acquisition of land by kings and are dated to the early Old Akkadian period.

d. Private legal documents. All private legal documents written in cuneiform, be they Sumerian or

In the Harvard Semitic Museum; by permission of Harvard University Press

100. Old Babylonian contract impressed with seven seals of the contracting parties and witnesses

Akkadian, show the same pattern. They first mention and identify in various ways the object of the transaction—a house to be rented, a field to be sold, a girl to be married, or a child to be adopted. Then they give the names of the persons who are concluding the transaction, taking care to establish the relationship of the object to the person who is disposing of it. The core of the text is formed by the verbal form which specifies the nature of the transaction: "he has bought," "he has hired," ". . . rented," etc. The subject of the verb is normally the person who acquires the rights or objects. To these minimal requirements of form may be added a number of clauses referring to details of payment, to declarations of the participants concerning secondary points, etc. These clauses are equally uniform and condensed in style.



This consistent formalism may make it necessary to divide a more complex transaction into several simple ones for which there existed established formulas. In fact, we not only have collections of such formulas—in Sumerian and in Akkadian—from the Old Babylonian period (the series called *ana ittišu*) but also Neo-Babylonian practice texts used by apprentice scribes to familiarize themselves with the strict stylistic requirements of legal documents.

There exist, of course, special developments in certain regions and certain periods. Suffice it to mention here a group of texts from Nuzi, which are drawn up in subjective instead of the customary objective form, inasmuch as the person who acts makes his dispositions in the first person (after a short objective introduction); and a group of Neo-Babylonian texts in which one party expresses his intention to buy or rent or marry in a formalized offer, to which the disposing party answers in an exactly corresponding wording and thus accepts the offer.

Every private legal text, whatever its formulation or content, lists the names of the witnesses present at the transaction. Sometimes these witnesses affixed their seals in order to demonstrate objectively that they had been present when the contract was drawn up.* Of the two parties to the contract, the one who assumed an obligation rolled his seal over the soft clay, or—at certain periods and in certain regions—made an impression with his fingernails or the edge of his garment, all this for the purpose of indicating his presence and not for identification. Nearly always the name of the scribe who wrote the tablet is given, but it should be stressed that he never had the function of a notary. The date and sometimes the place where the tablet was drawn up usually terminate the text of the document. Fig. ASS 100.

In the earlier periods—in Babylonia up to the Middle Babylonian period, in Assyria nearly throughout the entire development—the tablet was placed in a clay envelope (which we technically term a "case") on which the entire text was repeated to protect the original against fraudulent alterations.* In the Neo-Babylonian period this protection was achieved by making a copy of the original so that each of the two parties received a copy of the agreement. Fig. ASS 101.

The earliest known private legal documents deal with the sale of slaves (Ur III period). The sale of

In the Yale Babylonian Collection; by permission of the Yale University Library

101. Legal document and its envelope, from Cappadocia

houses and fields became common only beginning with the early Old Babylonian period. Texts recording the sale of children are extremely rare; such transactions occurred only in great emergencies. Sales of animals or boats were rarely written down, but sales of temple incomes which appear sporadically in the Old Babylonian period (mostly from Nippur) became quite frequent in Neo-Babylonian and Seleucid times.

Transactions styled as loans were often in reality of a different nature, being sales on credit, or obligations to deliver goods or services at a certain time, etc. The rigid formalism of the cuneiform legal document made these practices necessary. Loans of silver or barley are recorded from the Ur III period onward, with a variety of stipulations concerning interest and antichretic arrangements.

Rent of fields, houses, and boats, and the hire of persons are well attested throughout the entire period. This also holds true for marriage and adoption contracts, although they are rather rare in the Neo-Babylonian period. Here should also be mentioned divorce settlements, wills (i.e., division of property among survivors), and contracts dealing with the nursing and upbringing of small children (only Old Babylonian). Finally, apprenticeship contracts (only Neo-Babylonian), settlements in court, and warranty arrangements of all kinds are to be listed, not to speak of documents from peripheral regions (Susa, Nuzi, Ugarit, etc.) which recorded in Akkadian transactions that were an expression of alien social and economic situations.

Criminal proceedings were apparently not recorded on tablets; the strange Sumerian tablet dealing with the trial of a murderer and his execution, found in Nippur, seems to belong to a group of legal documents which were copied solely for their literary merit. Murder as such is extremely rarely mentioned —one Old Babylonian text refers to the strangling of a kidnaped slave—and even thefts and burglaries are recorded only in a very few documents up to the Neo-Babylonian period.

4. Religious texts. Under this subtitle should be passed in review some representative groups of the numerous cuneiform texts which deal more or less directly with the cult as enacted in sanctuaries of all kinds, or as utilized elsewhere for the benefit of a suffering individual with the assistance of priestly experts who relied upon established texts.

Paramount among the cultic texts in the strictest sense of the term is the Creation Epic (*Enūma eliš*). Its seven tablets, numbering each between 115 and 170 lines, were recited in Esagila, the temple of Marduk in Babylon, after the evening repast of the god on the fourth day of the New Year's Festival. Written in the solemn and hymnical style of the Old Babylonian period, the text tells the story of the theogony, the sequence of the generations of the primeval deities up to Ea, the first-born of Anu. Then the conflict of the *dei superi* with the powers of the abyss and the ensuing desperation of the gods are described in rather lively fashion. The text is replete with mythological allusions, prephilosophical concepts, and personifications, but the allusions were reduced to a minimum, so that we are offered only a tantalizing glance into the riches we have lost. The story, told with many cumbersome repetitions, follows the pattern, common in mythology, of the young god—in this case Marduk—who saves the elder gods from an emergency which even the wise elder god Ea could not handle. Marduk, after having secured from the assembly of the gods a promise of his full enjoyment of the fruits of his victory, defeats the evil powers; but for this battle it is obvious that the priestly poet could muster but little enthusiasm. With much more gusto and patent interest he describes the organization of the cosmos by its new ruler in tablets 5 and 6, which end with the assembled gods in their newly built heaven solemnly recognizing the superiority of Marduk. The last tablet enumerates the fifty honorific names bestowed by them upon their ruler, on which the author elaborates by means of playful though pious etymologies. *See* CREATION; GENESIS.

Directly concerned with the cult are the ritual texts, which prescribe in detail the activities of the priests in certain ceremonies. Not many of these texts are preserved. The earliest comes from Mari, and describes the ceremonial visit of the king to the temple of Ishtar and his presence during a complicated religious service. It belongs perhaps to the rituals which deal with religious acts performed by the king; this text type is so far known only as referring to Assyrian kings.

There is a group of rituals coming from Seleucid Uruk (with Assyrian parallels, however) and one from Babylon. The latter contains a description of the rituals for the second to the fifth day of the New Year's festival and belongs to a series encompassing at least twenty-three tablets. Hence, there may have existed in Esagila of Babylon a series of ritual texts that covered the entire cultic year. The description of the ritual is very elaborate; it gives the time and the place for every act of the priest, often quotes verbatim the prayers and benedictions to be said instead of giving them by title only. A quite important insight into the routine ritual activities of a Babylonian sanctuary is gained from a Seleucid tablet enumerating the repasts that were served to Anu and to the other deities of his temple in Uruk. The text is very explicit; it not only gives quantities and qualities but

also refers to the preparing of the divine repast.

The main body of religious texts for cultic use are the prayers, mainly those of the *šu-illa* type—i.e., prayers to be recited with lifted-up hands. These texts follow a few well-established patterns and were assembled after the Old Babylonian period in very large series. Each prayer begins with an invocation and the praise of the deity addressed; has as middle section the complaint of the worshiper, to which is joined his request; and ends with formulas expressing anticipatory thanks and blessings. The prayer itself is considered only one part of the cultic act—in Akkadian terms it is viewed as a "conjuration"—while the accompanying ritual (consisting of the offering of food or incense) forms the equally essential second part. Stylistically, the individual elements of the pattern are subject to more or less elaborate embellishment and enlargement, and certain of the *šu-illa* prayers are not for cultic use but serve rather as a literary vehicle for the expression of religious feeling. They are also used to impart magical effectiveness to the objects and paraphernalia employed in conjurations, etc. Apart from the prayers of this type, there are those of a different tenor, such as the *šigû*, mainly containing lamentatory complaints; the *ikribu*, with its blessings and benedictions; and others, of minor importance. According to the functions of the deities addressed, and also according to other, not so obvious criteria, "conjurations" could be used for a multitude of purposes, such as to ward off the evil consequences of eclipses, against diseases and evil spirits, etc.

Finally, we have texts which deal expressly with the cultic activities of special priestly experts; these are the manuals of their craft. Foremost among them are the tablets which inform us about the activities of the *kalû*-priest, whose function it was to appease the gods with special songs, whenever certain happenings were considered likely to arouse their wrath.

The suffering individual who had recourse to priests and their crafts found guidance and assistance in two important series called by the Akkadians *Šurpu* and *Maqlû*. These textbooks are designed for the incantation priest, whom they address in their directives, and for the patient who does not know either what evil influence on the part of somebody else or what mistake of his own has caused his suffering. In the series *Šurpu* the prayers are addressed to several deities of the pantheon but mainly to Marduk, whose exorcistic power is most appreciated. In all their repetitiousness and propensity toward rank growths, the texts of the conjurations proceed basically in three steps, the first to establish the cause of the suffering, the second to transfer it magically to a carrier, the third to destroy the carrier by burning it. Long-winded enumerations of all kinds of sins, misdemeanors, etc.—formerly misinterpreted as a confession of sins—purport to meet every possibility in order to counteract the influence which had brought about the suffering, and much room is given to description of the symptoms. There are also conjurations that address the torch, the fire, and the sulphur to ensure their effect in annihilating the sin; and, of course, Marduk is praised and besought in countless variations.

The sister series, *Maqlû*, is somewhat larger and exclusively concerned with alleviation of the sufferings caused by evil magic. Its main weapon is the burning of figurines made of various combustible materials representing the sorcerer or sorceress, under the accompaniment of conjurations that either address the figurines with harsh words and threats or invoke the fire-god to destroy them. The conjurations vary greatly in style and literary value, from the justly famous poetic "Prayer to the Gods of the Night" to hackneyed repetitions of the customary phrases. More often than elsewhere, allusions are made to mythological incidents, and even phrases of the abracadabra type are used at times. If the patient happened to be the king—that is, in all instances known, the Assyrian king—additional and apparently more appropriate means had to be used to avert any evil influence affecting his health and even life.

There exist a number of series dealing with specific lustration ceremonies to which the king was subjected, either periodically or under certain circumstances. Such are the *bīt rimki*, "House for Lustration"; *bīt salā' mê*, "House of Water Sprinkling"; and *bīt mēsiri*, "House of (Magic) Protection." In case of mortal danger, even a substitute king might have been installed under appropriate ceremonies to carry the brunt of the attack and to be put to death in order to spare the real king. Such an instance actually occurred, and this (*šar pūḫi*) ritual was enacted for Esarhaddon. It should be noted that written ceremonials seem to have existed for all the cultic activities of the Assyrian king. They include a description of his annual coronation in the temple of Asshur, detailed instructions for a royal repast of special, and most likely cultic, importance, and a complex but badly preserved ritual connected with the cult of Ishtar. Of special interest is the strange ceremony (*tākultu*) during which the king poured libations for Asshur and all the greater and lesser gods and goddesses of his empire, for which they severally bestowed upon him and his city elaborate blessings.

In the realm of theology proper belong the so-called god lists, of which we have many copies from early Sumerian and Old Babylonian times on, all overshadowed by one tablet from the library of Ashurbanipal that is the largest cuneiform tablet found there and compresses into its twelve columns, by means of its minute writing, approximately 1,500 names of deities. Beginning with Anu, the gods are arranged in elaborate groups, according to rank, with family, entourage, and court personnel down to lady hairdressers, gardeners, and the hunting dogs of Marduk.

Some of the peculiarities of this list used to attract the interest of OT scholars, inasmuch as the compiler made repeated attempts to link minor gods together by explaining their functions as the "Bel [or Ishtar] of the heaven" or "of the warriors," etc. In another passage Adad, the storm-god, is explained in a similar context as the "Marduk of rain" and the moon-god Sin as the "Marduk who illuminates the night," while still others group the various names of a major deity together, explaining each of them as referring to a specific function of the god, so that, e.g., U is the Adad of Lightning, but Ri-ḫa-mun is

the Adad of the Windstorm, etc., or Asaru-alim is the Marduk of Life, and Sha-zu the Marduk of Mercy.* All this was interpreted by modern scholars as an expression of henotheistic or even monotheistic speculations of Mesopotamian priests. Fig. MAR 9. *See* GOD, OT VIEW OF; ISAIAH § B2.

There exist a small number of texts dealing with theological speculations of similar nature, the implications of which are difficult to grasp. Suffice it to mention here tablets that describe in great detail the representation of a god in terms of plants, objects, and animals ("A kettledrum is his heart, a date palm his backbone"), or offer quite obscure symbolic and mythological interpretations for every phase and gesture of cultic actions, etc.

Cuneiform religious literature only exceptionally allows the subjective lyricism which Western tradition admits as an expression of personal piety. A few literary products are cast in the form of hymns which are distinguished by originality and style, such as the long hymn to the sun-god and some of the Old Babylonian hymns to Ishtar which—especially in comparison with the contrived stylization of their Sumerian prototypes—show a certain measure of forceful creativeness. Quite exceptional is the impressionistic subjectivity of the "Prayer to the Gods of the Night," which is attested in a number of copies from the Old Babylonian period onward and thus bears witness to the appreciation it met. Prayers written for the Assyrian kings—such as Ashurnasirpal I, Tiglath-pileser I, Esarhaddon, and Ashurbanipal—are somewhat above the level in literary quality, especially in respect to the "complaint" section. Here, the scribes could draw on a large vocabulary of terms and standardized imagery, upon which they loved to elaborate by means of variations and amplifications that allowed them to add a personal element to the compilation. This is especially true of the one literary opus which may deserve to be called an original work of Mesopotamian religious poetry, the text named after its *incipit:* "Let Me Praise the Lord of Wisdom" (*ludlul-bēl-nēmeqi*), sometimes misnomered the "Babylonian Job." Little more than half the text of the composition is preserved. It first describes (a princely sufferer is speaking in the first person) with considerable elaboration the affliction caused by divine wrath, then dwells upon the effects of the grace of the deity that was bestowed upon him after a series of three dreams, which are rendered with much interesting detail. The balance seems to have been dedicated to praise the savior Marduk in hymnical style. The composition is technically quite primitive; it is characterized by repetitions and paratactic sequences of situations without any attempt toward inner development or even transitional passages. The juxtaposition of contrasting descriptions of a state of suffering and misfortune on one hand and that of bliss and success on the other is a favorite topic in Mesopotamian literature. There are two other categories of texts which elaborate on this topic though on a public, rather than on a private, level. These are descriptions of calamities caused by war, famine, and pestilence, as well as of times of prosperity and abundance. Sometimes these topics are couched in the language of prophecy or cultic lamentation—a Sumerian legacy—and sometimes they are quoted in erudite letters and even in the predictions of omen texts.

5. Omen literature. The belief that whatever happens within the orbit of human perception—be it unusual actions of men or animals, unusual happenings in the sky, or unusual features of stones or plants—occurs not only through specific, if unknown, causes but also, at the same time, for the benefit of the observer as manifestations of a supernatural agent, is shared in varying degrees by many civilizations, past and present. In Mesopotamia, moreover, the Akkadians of the Old Babylonian period began more or less systematically to record such ominous events in a specific form and to assemble these observations in collections. With the transfer to the sphere of writing, divination moved from folklore to the level of scientific activity. The experiences of past generations were collected and filed for future reference. Thus we have collections of omen texts from the Old Babylonian period up into the Seleucid. They represent an important section of the scholarly literature in cuneiform, and, above all, they have to be considered an original product of the intellectual effort of the Semitic Akkadians, since no Sumerian omen text has yet been found, although Sumerian year names refer to the use of extispicy to appoint a high priest. All omen texts have a specific literary form: the protasis, which states the "case" (its form is that of a section of a law code), and the apodosis, which offers the prognostication. The individual omen items are arranged in topical lists of all kinds. Two observations should be made at this point: (*a*) only in exceptional instances is there any logical relation between portent and prediction; at best there are paranomastic associations, secondary computations, etc.; (*b*) the prediction contained in the apodosis is considered only as a warning, no matter how specific and detailed its wording. The application of appropriate apotropaic rituals was an effective means of obviating all evil consequences of the ominous event. From the point of view of literary history, it should be stressed that the originally purely practical purpose of omen collections was soon superseded by theoretical aspirations. Instead of expressing a general principle in abstract terms, the scribes attempted to cover the entire range of possibilities by means of systematic permutations in pairs or in long rows of casuistically styled individual items, each in one point differing from the preceding.

Most of the fields covered by the omen texts already appear in Old Babylonian texts, with the exception of specifically astrological omens, which have not yet been found in Old Babylonian, while others, such as omens derived from the form of movement of smoke from a censer, disappeared after the Old Babylonian period. First should be mentioned the teratological omens—i.e., those derived from the birth of monstrosities among animals. While the lone Old Babylonian tablet of this type refers only to lambs, the series that developed from this meager beginning appears in the library of Ashurbanipal (and in later texts) in twenty-four tablets, of which only the middle section (tablets 6-17) belongs strictly to the series *šumma izbu* (as these omen texts have been called by Mesopotamian scholars). To this core were added

tablets referring to the malformed offspring of gazelles, mares, sows, bitches, goats, and cows. On the first four tablets are collected omens dealing with women (even queens) giving birth to malformed children, strange beings, objects, and animals, and the occurrence of multiple births. Another example of how the series of omen texts grew by accretion and compilation is offered by the so-called physiognomic omens—i.e., those which derive predictions from certain characteristics of the human body, from the color of the hair, the length of the nails, the size of parts of the body, and the nature and location of moles and discolorations of the skin, to mention only a few of the many topics. The Old Babylonian texts of this type refer mainly to moles, but in the library of Ashurbanipal at least three series of this kind are represented, the most important with ten or more tablets. In them are listed not only bodily features but also personal peculiarities and mannerisms in speech and walk, and even moral qualities; and predictions are derived from them. Texts of this type do not seem to have been very popular, with the exception of those referring to the interpretation of moles; the others belong more in the realm of scholarly activity. *See* DIVINATION; PROPHETS.

Dream omens are not often represented. They must have existed in the Old Babylonian period, but most of the text material comes from Nineveh. In the series there are eleven tablets, of which the first and the last two contain conjurations and rituals for the purpose of warding off the consequences of bad dreams or, prophylactically, of protecting the sleeping person against them. Faced with the difficult task of writing a dream book which was to cover the unending and ever-changing variety of possible dream contents, the scribes resorted to organizing the individual tablets on the basis of certain definite activities of the dreaming person. Thus we have a tablet dealing with eating or drinking in one's dreams; covering normal eating habits, with the items systematically classified as meat, fish, fowl, vegetables, etc.; and mentioning cannibalism and coprophagy. Another tablet deals with traveling in one's dreams, and here again we meet this kind of pedantic systematizing. First are treated dreams of ascending to heaven and of descending into the nether world, and then the text enumerates temples, cities (beginning with Nippur), and countries the person may visit in his dreams, deriving very definite prognostics on the basis of associations which we are unable to understand. Dreams of flying are mentioned, dreams of losing one's teeth, incestuous dreams, etc.

The divination technique that made Mesopotamia famous up to the recent past is, of coursĕ, astrology. Strangely enough, there exists only one Old Babylonian tablet with omens that could be called astrological. Still, such omen collections must have existed at that period in Babylonia proper, because we have found quite a number of them in various sites outside Babylonia on tablets which are datable to the Middle Babylonian period and even somewhat earlier. These are texts from Elam, Mari, Qatna in Syria, Boghazköy, and Nuzi, and there is one from Middle Babylonian Nippur. The main mass of astrological omen tablets comes from the library in Nineveh; some from Asshur (many of them still unpublished) and Calah; others from the S, from late periods, especially from Uruk, Nippur, and Kish. We now know of at least seventy tablets of the main series, apart from shortened series, excerpt texts, tablets with commentary, etc. The Akkadians called the series *Enūma Anu Enlil* ("When Anu and Enlil") after the first words of its solemn (bilingual) introduction. There even exist a number of catalogs of this series—i.e., texts which list the beginnings of each tablet in their correct sequence. The series first treats the moon (twenty-three tablets), then the sun, then meteorological phenomena—also earthquakes—and eventually the planets (beginning with Ishtar, the planet Venus) and fixed stars. Omens are derived from the time and circumstances of the appearance of the new and the disappearance of the old moon, from the moon's relation to the sun, and especially from the dates of its eclipses; furthermore, from the circumstances (color, cloud formations) of the rising and setting of the sun and its eclipses, and from halos and similar phenomena; from the movements of the planets among the fixed stars, their color, luminosity, etc.; and the rising and setting of other stars and of constellations. Not astrological in our sense are the tablets concerned with such meteorological phenomena as the time and intensity of, and the circumstances surrounding, thunderclaps and lightning, the time of rainfalls and the color of the rain, cloud formations, and weather. Others refer to the time, the force, etc., of earthquakes.

There is a Seleucid text which contains astrological omens of an entirely different nature. One section of it predicts the future of a child born under certain astronomical conditions, such as the rising and movement of planets, eclipses, the rising of fixed stars, etc. With such lists have to be related the few extant horoscopes (all of the third and second centuries B.C.), which state the date on which the child was born (once, when it was conceived), the astronomical report, and the pertinent predictions. The dating of these horoscopes shows that we have to deal here with a late development of Mesopotamian astrology itself rather than with a phenomenon that developed in Mesopotamia under Greek influence, as has been assumed up to now.

Even for the physician there existed a collection of omen texts. This is the series called "If the exorcist goes to the house of a patient," which contains fifty tablets. The contents clearly show that the series presents a late compilation, although certain of its components have parallels in earlier texts, such as a Middle Babylonian tablet and a Hittite text that was translated from a lost Old Babylonian prototype. Only the first two tablets are strictly omen texts—i.e., they derive predictions as to the prospects of the sick person from ominous happenings occurring while the exorcist was on his way to him. The main section of the series (tablets 3-34) are instructions to the physician for diagnosis and general prognosis concerning the disease of his patient, presented in the form of omens based on the appearance of parts of the latter's body, which are mentioned beginning with the skull and ending with the ankles and toes. The

diagnoses do not refer to specific diseases in our sense but rather give the name of the god or demon who inflicted the symptoms upon the patient, while the prognostic omens tell in terse formulas whether the patient will survive or die, how long he will be ill, or when he will die; all this is expressed in a variety of ways and sometimes in rather specific terms. Only in a few instances is a treatment prescribed, but then it is always magical and not medical. Tablets 35-36 refer to pregnant women and 39-40 to newborn children. The sex of the child, its fate in general, the nature of the birth, etc., are predicted from a variety of physical features of the expectant mother, such as discoloration of the skin, the formation of her nipples, and a variety of other symptoms. The last two tablets deal with sick infants much in the same way as the main section of the series.

The largest omen series known is called *šumma ālu ina mēlê šakin* ("If a city is situated on a hill"). The tablets are numbered, and the highest number on a preserved colophon is 107. Exactly as the astrological series, *šumma ālu* must have originated as a systematic collection later than the Old Babylonian period, because only a very few and somewhat different omens of this type can be assigned to that period. The majority of the extant tablets come from Nineveh and Asshur and, in Babylonia, from Uruk. Since only one fourth of the 107 tablets are preserved —very poorly in many instances—it is difficult to form an exact idea as to the content of the series. It is, however, possible to fill some of the large gaps by means of excerpt tablets that cover more than one tablet, by means of a partly preserved commentary series, and by means of some fragments of a catalog, but it has to be kept in mind that of more than thirty-five tablets only the first line is known, and that nearly as many are completely unaccounted for. This series seems to have been compiled as a compendium to incorporate all the numerous smaller and larger groups of omen texts which, in the Old Babylonian period, existed by themselves, grew by accretion, or were fused with similar collections. The motley content of *šumma ālu*, as it is now known, shows the following larger grouping of topics: omens referring to cities (tablets 1-2), to houses and incidents in houses, etc. (tablets 3-21); omens dealing with the behavior of insects and animals such as snakes, scorpions, lizards, ants, and various still unidentified small animals, also cattle, donkeys, horses, pigs, and dogs (tablets 21-49). Then follow three tablets dealing with fire, one with political omens ("If the king respects the law," nothing more preserved), and a section dealing with agriculture (tablets 53-60). The balance is badly preserved; encounters with wild animals (tablets 66-79) and human relations (tablets 94 ff) take up most of it. As a particular feature of the omens assembled in *šumma ālu*, the text contains here and there short conjurations to ward off the evil portended or even prophylactic rituals, such as one against the sting of scorpions.

Once a connection between an ominous event or feature and a subsequent happening is discerned and expected, man wants to change this one-way communication between the deity and himself into a two-way system and to elicit divine responses to situations created for this very purpose. From accidental omens he progresses to provoked omens. There are, therefore, two kinds of omens to be differentiated, and consequently two types of omen texts: those dealing with signs that happen by themselves (*omina oblativa* in Roman terminology) and those that have to be provoked by an act of the diviner (*omina impetrativa*). Of the latter, it can be said that they are, with one important exception to be discussed presently, rather rare and unimportant in Mesopotamia. There are indications that birds were released for the purpose of observing their behavior and that dreams were expected and movements of animals were induced and omens derived from them, etc.; yet all this is not only late (Neo-Assyrian period) but also below the level of scholarly interest—i.e., no omen texts refer to such practices. In the Old Babylonian period there are tablets dealing with the movements and color of oil poured into water for divination purposes and others that refer to the motion of smoke rising from a censer (although it is not certain whether the smoke was produced for this purpose). Both divinatory practices, however, fell into desuetude after the Old Babylonian period.

The only exception is divination by means of extispicy, which the Mesopotamian priests considered as *omina impetrativa;* i.e., they assumed that the deity, in this case always Shamash, "wrote"—as they put it—his answer to the prayer of the diviner then and there upon the intestines of the sacrificial lamb, on which it could be "read" in the formations, deviations, etc., that the collections of omens interpret. This divination technique is well attested in all periods in Mesopotamia; it was used exclusively for divination performed for the king and the army. In fact, the *bārû*-priest, who we know accompanied the army on campaigns, must have had the function of establishing the will of the gods on the spot. This is also illustrated in letters from Mari.

The corpus of texts dealing with extispicy—this term (derived from the Latin *exta*) is more appropriate than hepatoscopy, since the liver was by no means the sole carrier of the divine message—surpasses in size all other omen texts. No serious attempt has been made so far to organize the individual tablets according to a main series or shortened excerpt series, commentary series, excerpts, etc., or to trace the development from the Old Babylonian period to the Seleucid, or to distinguish local traditions. As far as one can see, the individual tablets are organized according to the part of the *exta* to be investigated. Thus we have texts dealing at length with the lungs, the liver, the gall bladder, the spleen, the kidneys, the diaphragm, etc., as well as with the formation of the coils of the intestines.

There existed a very complicated and elaborate technical terminology which referred to specific features of the individual parts, with terms such as "door of the palace," "gate," "path," etc., and also to certain characteristic markings, such as "weapon," "spot," etc. We also have a number of clay models of livers and lungs; some are very elaborate, others rather crude. They seem to have served two main purposes: for instruction, such as a highly detailed

inscribed Old Babylonian model in the British Museum, or the models from Boghazköy, or models which illustrate the protasis of an omen written upon them; and for recording, such as those from Mari of the Old Akkadian period, which show how a liver looked when the historic event to which its inscription refers occurred. Such empirical cases must have been incorporated into the collections where we find, more frequently than in any other group of omen texts, references to historic rulers and their tragic fates. We also have, especially from the earlier periods, reports which list in a standardized arrangement all the ominous features observed at an extispicy; they are obviously intended for the expert who is to look up in the corresponding tablets the pertinent apodoses. If these apodoses show a majority of good predictions, the result is considered an affirmative answer of the god. If this is not the case, the extispicy can be repeated. At any rate, the predictions, whatever their specific content was, count solely as positive or negative items. Before the extispicy the diviner addressed a prayer to Shamash, asking for a reliable and positive answer, and even enumerated all the possible good features which he hoped to find in the *exta* he was to inspect. Moreover, there exists a small collection of omens which are derived from the movements and the behavior of the sacrificial lamb, from the moment it was brought in until its last convulsions; the god was assumed to communicate through everything that happened during the ceremony.

A special category of extispicy texts comes from the archives of the last Assyrian kings. They are queries addressed to the sun-god on matters of state, such as the appointment of officials, military decisions in a calamity, the reliability of generals, etc., accompanied by a prayer. At the end of the text are noted the results of the extispicy performed to obtain the answer of the god. This might have constituted material for scholars to check on the reliability of the collections of omens or a record made to protect the diviner. In fact, Nabonidus considered it necessary to add in an inscription an exact enumeration of all ominous features of an extispicy (with added apodoses) that was performed when he decided to change the tiara of the sun-god, as a proof of the god's consent.

6. Secular literature. Under this heading shall be united four groups of literary documents primarily characterized by the complete absence of any connection with cult and personal piety. These are: epical texts, royal inscriptions, the wide range of wisdom texts, and miscellaneous works.

a. Epical texts. The astonishing richness and variety of the Sumerian epical texts that are only now beginning to be known and investigated—with a prospect of still more to come—hampers any intensive literary study of the relatively few extant Akkadian texts of this type. They demonstrate that the Akkadian epic has its roots deep in Sumerian soil and that it will be a major problem to disentangle what is genuinely non-Sumerian, what is to be credited to that hybrid Sumero-Akkadian civilization which certainly flourished in what we call the Sumerian period, and what is of Sumerian extraction. Apart from all this, there is the problem of the internal development of epical literature in Akkadian. The existence of such a development is clearly indicated when one compares what is left of the Old Babylonian epical texts with the appallingly poor products of the later period, such as the Epic of Era.

Foremost among the epics—and not only in size—is the Epic of Gilgamesh, which the Akkadians called, after its *incipit: ša naqba īmuru.* Its twelve tablets, containing more than three thousand lines, were found in the library of Ashurbanipal, but much outside material is available, which shows the complex development undergone by this literary work. Apart from Sumerian sources and parallels, four Old Babylonian tablets containing parts of the Gilgamesh story are known; two copies have been found in the W, one in Boghazköy, and one in Megiddo; translations into Hittite and Hurrian come also from Boghazköy. The epic in its latest form shows a composite character. The story itself is told on tablets 1-11. Tablet 12 gives, as a kind of appendix, a description of the nether world. There are two parallel scenes, one at the beginning and the other at the end of the story. After a short preamble in which the poet expresses the intention and scope of his opus, the listener is invited to admire the walls of Uruk, built by Gilgamesh; from this point on, the story of the latter is told. Quite intentionally, the story ends with Gilgamesh showing these same walls (referring to them in identical words) to one of his partners in his adventures. Within this frame, the story of Gilgamesh proceeds with stately grace, elaborate descriptions, and lively dialogues alternate with episodes that are well told and integrated into the flow of happenings. Few other, if any, cuneiform literary works are distinguished by such features. The basic topic is the all-powerful and famous king who rebels against the idea that he must die, exactly as every other human being. This topic already appears in the Sumerian Gilgamesh stories, especially in the often-copied Huwawa episode, which shows that the expedition to the Cedar Mountain in the Nineveh version originally represented the first attempt of Gilgamesh to obtain immortality. The Akkadian poet, however, seems to have changed it into one of the several famous deeds of his hero (such as the rejection of Ishtar's love, the oppression of Uruk, the fight against the Bull of Heaven) because he preferred to have the quest for life motivated by the death of a friend rather than by selfish considerations.

In his quest for immortality, once he has arrived in the "Fortunate Isle," where he finds the only man who had succeeded in becoming immortal, Gilgamesh is three times given the opportunity to realize his goal, but every time he fails or is cheated of it. He fails to pass the test of keeping awake for six full days; he does not realize that he washed himself and his garments in the "Fountain of Youth" and yet did not drink of it; and, finally, he loses the "Plant of Life" to a snake. Defeated, he returns to Uruk. Into this story of the quest for life has been skilfully woven the story of Enkidu, here the friend of Gilgamesh, while in the Sumerian stories he is his servant. The Enkidu story brings its hero as a subhuman

being from the wilderness to civilization and lets him vie with Gilgamesh, become his friend, and accompany him to the Cedar Mountain. Here the text is very poorly preserved, but Enkidu may have been instrumental in bringing about the triumph of Gilgamesh over Huwawa, the guardian of the cedar, because here he commits an act for which he has to pay with his life later on, and it is precisely his death that starts Gilgamesh on his quest. All this, however, forms only the structural framework of the epic, which the poet has ornamented with a plethora of genre scenes, sophisticated fill work that reflects the main themes, and all the trappings of refined literary technique. There are two dreams which warn Gilgamesh of Enkidu's arrival, and presage with their symbolism the subsequent events; there is the description of how Enkidu was civilized—on both the mythic-symbolic and the social level; the warnings of the elders of Uruk of the dangers of the expedition against Huwawa; a description of a fairy-tale jewel garden, which may reflect some lost episode; the description of the nether world in Enkidu's dream, which brings up a topic that is connected with Gilgamesh' destiny—to become the judge of the nether world, etc. The poet uses dramatic developments as well as retarding digressions. Note the suddenness with which Enkidu has his death dream immediately after the celebration of the victory festival, and that the immortal Utnapishtim tells the story of how he achieved eternal life with deliberate ease. The wonders of the cedar forest are described with much love of nature and the apprehensions of the mother of Gilgamesh with interest in genrelike episodes. Of much appeal for the listener must have been the detailed descriptions of the marvels of the cosmos, such as the journey through the sunset mountains, the crossing of the waters of death, the diving for the "Plant of Life," etc. Yet, for all its sweep, from heaven to the nether world, and all its intense human appeal in the themes of friendship and the horror of death, the epic of Gilgamesh failed to appeal to the Akkadians. There are no copies extant from the scribal schools of Nippur and Uruk or other centers of learning in the S; none has been found in the large collections of Asshur; only two small fragments in Sultantepe attest that the text existed in that provincial collection. What is still more puzzling is that there are no allusions at all in cuneiform texts or in Mesopotamian iconography to the epic and its world of persons and scenes. Of course, there are quite a number of parallels with the OT and Greek mythology, and there is a reference in the Greek philosopher Aelian (second century A.D.) to Gilgamos, but within Mesopotamian literary tradition the epic had no place of importance. To speak of the work as a national epic is to use alien concepts. *See* EDEN, GARDEN OF.

The situation with regard to the other epical texts is likewise strange, inasmuch as there is only one Old Babylonian text of this nature—that which we call the Atrahasis story—coming from Babylonia proper. The Epic of Zû is preserved on two tablets from Susa, and the Adapa story, as well as that of Nergal and Ereshkigal, on tablets found at Amarna. Such an important text as the Descent of Ishtar has no Old Babylonian version, although the Sumerian prototype is well known. This might be accidental—only recently a Standard Babylonian version of the Nergal and Ereshkigal story was discovered in the collection of tablets found in Harran—but this circumstance could also illustrate the relative unimportance of this type of text in contrast with, e.g., omen texts.

The Epic of Zû—to begin with the best preserved of these stories—is contained on a number of tablets from the library of Ashurbanipal from Asshur, Sultantepe, and on two tablets from Susa—not to speak of the much larger Sumerian epics dealing with Zû. It deals with the heroic exploits of a junior god, Ninurta, who succeeded where all the other gods failed. He recaptures from the mythical Zu-bird the all-powerful charm of Enlil (called *ṭup-šīmāte*), which ensures the correct functioning of the universe, by making certain that all gods, human beings, and objects will act according to their natures and purposes. The story seems to be well told, with the usual peripateia and references to the wisdom of Ea. Far more interesting is the famous short text (*ca.* 150 lines; only Asshur and Nineveh text) called the Descent of Ishtar to the Nether World. Obviously patterned after the well-preserved Sumerian version, it sets the story forth at the slow pace of its prototype and describes the entrance and the exit of the goddess through the seven gates of the nether world, as well as Ea's ruse to save her from imprisonment there. The last thirteen lines seem to have been appended for unknown reasons and taken from the contexts of several myths of the same cycle. To the same cosmic locale as the Descent of Ishtar the story known as "Nergal and Ereshkigal" brings us. It tells how Nergal became king of the nether world.

Quite substantial again are the extant fragments of the Etana story. There are some Old Babylonian texts, some from Susa, Asshur, from a Middle Babylonian tablet, and from fragments in the library of Ashurbanipal. Etana appears, like Gilgamesh, in the Sumerian king list. His miraculous flight to heaven, however, is represented on seals and mentioned in cuneiform texts, in contradistinction to the exploits of Gilgamesh. Etana is king of Kish but without offspring, and is sent by Shamash, upon his prayer, to the eagle who is to show him the wondrous plant that will give him a son. Into this "dynastic" story the poet did skilfully weave the conflict between the eagle and a snake, who lives together with him in a tree. This is only a reflection on the fairy-tale level of a Sumerian myth; the eagle corresponds to a "cloud bird" nesting in the "world tree." The eagle of the Etana story breaks his oath of friendship and eats the young of the snake, which in turn overpowers him and imprisons him in a pit, upon the advice of Shamash. Etana frees the eagle and, riding upon his back, reaches the heaven of Anu. The story breaks off here, but one can safely assume that Etana obtained the "plant of birth," and that the precociously clever son of the eagle, who is always presented as warning his rash father with pious speeches, had his share in the adventures.

Adapa is a hero in the Greek sense of the word. Like Gilgamesh, he is of divine extraction but mortal;

as in the case of Gilgamesh, immortality escapes him narrowly. His story is told on a tablet found in Egypt and on some fragments in the library of Ashurbanipal. As a son of Ea and caretaker of the city of Eridu, Adapa breaks the wings of the S wind, which has overturned his fishing boat, and is called before Anu to answer for his deed. Upon the advice of his father, Ea, Adapa refuses to eat or drink what Anu offers him and thus forgoes immortality, which partaking of the food of the gods would have bestowed upon him. The end is damaged, but Anu seems to have compensated Adapa for his loss and to have granted the exorcists of Eridu magic power to fight demons and diseases; thus, the story is etiological in purpose. It is to be noted, however, that the ending, contained on a fragment from Quyunjiq, is quite abrupt. In fact, the phrase "and so forth" shows that we have here an abridgment of the epic. The lines following this phrase clearly show that the text was copied for apotropaic purposes.

This practice of writing epical texts on tablets that were to serve as charms is well attested for the Epic of Era, a late (probably from the end of the second millennium B.C.), rather wooden poetical concoction. A number of copies of this text are written on amulet-shaped tablets obviously to be hung up to protect a house against the rage of the dangerous god Era (Irra). The five tablets of the text are extant on a number of copies, from Sultantepe, Asshur, Nineveh, etc., but they give us only about two thirds of the original text. As a *novum,* the author asserts in an epilogue that the entire content was revealed to him in a dream and that he did not change a single line when he wrote it down. Then, Era himself bestows blessings on those who praise it, from king to scribe, and assures the house where the text is kept freedom from pestilence. The content of the epic is still rather obscure; its main purpose seems to have been to explain to the pious how it was possible that Babylon, beloved by Marduk, was destroyed—this refers possibly to the sack of the city by Shutruk-Nahhunte of Elam. In the first tablet the poet attempts to motivate the fateful decision of Marduk to leave Esagila and to descend into the nether world, entrusting the city to Era and his vizier Ishum, the fire-god. The evil consequences of this decision seem to be elaborated in the poorly preserved second and third tablets, while the fourth contains a long lament over the destruction of Babylon in the traditional pattern for this type of literature. The fifth and last tablet ends with the prospect of recovery and Babylon's future prosperity.

In the Old Babylonian epical text, which originally contained 1,245 lines on three tablets and was entitled *enūma ilū awēlum* ("When the gods and man"), and of which we have but one tenth of the lines and some smaller fragments from Nippur(?) and Nineveh, we seem to have at hand a larger collection of stories. Among them is preserved that of Atrahasis, the wise hero of the flood, a favorite of Ea. The text is too incomplete to be discussed here, and this also holds true for the various creation stories that happen to be extant and a number of fragments of myths, as well as quotations and allusions in incantations, etc.

b. Royal inscriptions. The inscriptions of the Assyrian and Babylonian kings are primarily considered source material for the historian, and their literary merits have hardly been investigated. Although the origin of the Assyrian and the Babylonian inscriptions is patently the same (*see* § C1 *above* for details), they developed formal and topical differences which should be pointed out in a presentation of Mesopotamian literary activities. In Assyria, Arik-den-ili (1319-1308) and Shalmaneser I (1272-1242) are the first kings to arrange their records in the form of annals. Tiglath-pileser I (1115-1076) introduces his main inscription with a long, solemn invocation, and presents himself with strings of titles and panegyric attributes; he also has short paeans between the descriptions of the individual campaigns, and ends the text with a triumphal hymn. Adad-nirari II also introduces his annals with an overlong and rather hymnical introduction full of pompous self-praise, but the subsequent kings tend to return to more modest prologues. Characteristic of royal inscriptions of the Babylonian kings—and clearly in accordance with the Sumerian prototype—is the initial self-presentation of the king with titulary epithets describing his piety and achievements and—in Neo-Babylonian—the final prayer to the deity to which the object or building was dedicated. The kings of the Hammurabi Dynasty started the Akkadian practice of enumerating in inscriptions blessings which they expected in return for their pious deeds, especially in answer to the dedication. Outside the traditional pattern for such inscriptions—a pattern which is kept up in Babylonia, from the earliest time to Nabonidus—there are always topics preferred by certain kings, and there are a small number of quite irregular texts. Thus, the kings of the First Dynasty of Babylon like to name their adversaries and refer in some detail to their victories, which the kings of the Chaldean Dynasty avoid, with the exception of Nabopolassar's reference to his victory over Assyria. Nabonidus loves to enliven his inscriptions with dialogues in which gods, priests, and workmen appear, for which there is only one parallel in an inscription of Samsuiluna. He even quotes verbatim, in quite scholarly fashion, the texts of foundation tablets which his workmen had excavated, and thus gives us the text of an inscription of a Kassite king that would otherwise have been lost. His preference for reporting his own dreams is another piece of evidence for his untraditional attitude with regard to these inscriptions.

Topically, the inscriptions of the Sargonides, which surpass in bulk all other Assyrian royal inscriptions, are far less diversified. Reports on hunting expeditions that begin with Tiglath-pileser I and references to the care given to botanical gardens and to rare and foreign animals either bought or captured and kept in game parks or menageries (by the same king) should be mentioned here, as well as Ashurbanipal's detailed descriptions of his training as a scholar and a warrior.* Sargon's preference for extremely poetical terms, Sennacherib's pride and interest in things technical, and Ashurbanipal's admittance of episodes and descriptions to the text show that these kings took personal interest in what the court scribes wrote under their names. 102. Killing of lions released from lair, from Nineveh (Quyunjiq)

Interest in royal inscriptions is further illustrated by the numerous copies of old inscriptions on statues, bricks, etc., made by later scribes who often even imitate the paleography. We owe to their interest in history much of what we know, e.g., of the Old Akkadian period. This interest began quite early. In the Old Babylonian period scribes from Nippur collected not only royal letters (*see* § E3*b above*) but also building inscriptions pertaining to a sanctuary (Tummal), and it can well be assumed that many of the references to special achievements or sins of the kings of old, as expressed in omen texts, in the Sumerian king list, and in proverbs, etc., were excerpted from such collections. Here belong the legends that attached themselves to famous rulers, either founders of a dynasty or the unfortunate kings whose empires were crushed by invasions. Sargon of Agade is the most famous representative of the former category, Ibbi-Sin of Ur of the latter. Among the legends concerning Sargon, that of his birth, his exposure in a basket floating down the river, his rescue and rise to power, is best known on account of its biblical associations, but the story of Sargon's adventure-filled campaigns to the W, as told in the epical text *šar tamhari*, was far more popular in the second millennium. Copies were found in Amarna and Boghazköy, where even Hittite and Hurrian translations were made of it. His son, Naram-Sin, rivaled him in military achievements, and the so-called Cuthean Legend tells about his desperate, but victorious, effort against an invasion of his empire, from Asia Minor to Telmun in the Persian Gulf, and even as far as Meluhha to the E of Telmun. Of this we have one Old Babylonian version, one from Boghazköy in Akkadian, and a number of fragments from Nineveh and Sultantepe. In the chronicles of the old period, as well as in omen texts, a number of episodes concerning famous rulers are mentioned. Among these rulers are Ku-Baba, a female innkeeper who founded the Third Dynasty of Kish; Utu-hegal, who drove out the Guti; Shulgi, the most famous king of the Third Dynasty of Ur; and Irra-imitti of the Dynasty of Isin, who died a strange death.

While such more or less historical personages belonged to the distant past when these texts were written, other literary documents refer to historical events and kings of the present or the still living past. Only extraordinary circumstances or extraordinary acts are reflected in this type of text. The destruction of Babylon by the Hittites (under Murshili), as well as by the Elamites (under Shutruk-Nahhunte), were such events, and the military triumphs of the Assyrian king Tukulti-Ninurta I, who conquered Babylon, and the spectacular (and very rare) successes of the Babylonians under Nebuchadrezzar I against Elam, likewise found literary expression. The scribes and poets take great pains to explain why Marduk abandoned his city to the enemy; in fact, one text has Marduk himself speaking like a king in a royal inscription, reporting on his journey westward (the Hittites obviously carried off his statue) and his return, while a more poetic version, preserved in the so-called Epic of Era, blames the calamity that befell Babylon on the fumblings of minor gods during an absence of Marduk (*see* § E6*a above*). It was much easier, of course, to extol the military achievements of the great king, Tukulti-Ninurta I, in a large epic that deals with his fight against Kashtiliash and is the only text in cuneiform which deserves the designation "historical epic." There are, however, a number of Babylonian fragments which may well come from similar literary productions written in the time of Nebuchadrezzar I. From the very end of the era of Babylonian political independence comes a strange text that should be mentioned, although it does not sing the praises of a king but, on the contrary, vilifies him. This is the poem directed against Nabonidus by the clergy of Babylon. It first describes the evil deeds of this last, but most interesting, Babylonian ruler and then turns to praise the arrival of the liberator and savior Cyrus, who delivered Babylon and returned its priests to importance and power. Among the sins of Nabonidus we find his building a temple which was to rival the venerable shrines Ekur and Esagila, and making a newfangled image of the moon-god; his departure for the W; and his taking up residence in the city of Tēma, which he rebuilt and turned into a fortress. The priestly author takes pains to point out that Nabonidus was not at all the scholar and inspired mantic he purported to be but, in fact, an ignoramus and a blasphemer. At the end of his diatribe he mentions by name some of the most hated officials of the king. Cyrus, however, is represented as loving Babylon, restoring the old cults, eradicating and abolishing whatever was instituted or changed by Nabonidus, and thus bringing happiness to all the inhabitants of the city. It is quite clear that the polemics against Nabonidus on the clay-barrel that purports to contain an inscription of Cyrus go back to the same source.

c. Wisdom texts. An important source for the study of the moral and social attitudes of Mesopotamian

man is to be found in the texts customarily called wisdom texts. This category is taken here not only to embrace proverbs, fables, and other didactic tales, but also to include a number of specifically Mesopotamian literary products which shed light on these attitudes. Many of these texts have prototypes in Sumerian, and it must be stressed that the historian of literature competent to deal with this material should be at home in both fields, Assyriology and Sumerology. *See* ECCLESIASTES; JOB; PROVERBS; WISDOM.

Large quantities of systematically organized collections containing Sumerian "proverbs" have begun to be studied. By their very nature they represent one of the most difficult text categories to be investigated linguistically, not to speak of the difficulties presented by the subject matter and the pithy style of such sayings. In Akkadian we likewise have a variety of smaller collections of proverbs, often in bilingual texts, but no over-all arrangement is discernible. A small Old Babylonian fragment and two more from Boghazköy connect the library texts from Nineveh with the bulk of Sumerian proverbs. Quite a number of proverbial sayings and colorful phrases can be found in letters, such as those from Mari and Amarna, and in the archives of Nineveh, etc. Since Ashurbanipal and especially Esarhaddon were fond of quoting proverbs in their letters, reference has to be made to the Aramaic collection of proverbs that appears in the story of the wise Ahiqar, said to have been the adviser of Sennacherib and Esarhaddon alike, because some of the proverbs in which Ahiqar hands down the sum of his wisdom to his nephew are actually cited by these kings. The imagery of these proverbs is mainly rooted in the context of the daily life and the daily worries of Mesopotamian man, and this happens to be just the most obscure section of the Mesopotamian world. This imagery loves pointed contrasts, rhetorical questions, and riddlelike statements, all of which are imbued with a healthy cynicism and quite devoid of sentimentality or sadness. These proverbs represent a *summa* of practical wisdom, which is nowhere contrasted with a pattern of ideal behavior or normative aspirations. Good advice is also the topic of a lengthy collection of precepts conveniently dubbed "Counsels of Wisdom," where the arrangement is more coherent than in the collections of proverbs, and a definite moralizing tendency is in evidence, as references to Shamash illustrate. There are also repeated references in these precepts to court life, to religious duties, etc.; the social level of the reader to whom they seem addressed must have been high. There is no folk character in the topics of these precepts. They are comparable with that type of Egyptian literature called "instructions" (of Ptah-hotep, Amen-em-Opet, etc.).

Like the proverbs, the Akkadian fables have to be related to Sumerian texts. This is especially true for the type of fable which sets forth so-called disputations between animals, plants, and even materials, etc., considered personified and presented as arguing with each other about their respective good qualities, usefulness for man, etc. This genre is very well represented in Sumerian, where we have such dialogues as between Winter and Summer, Silver and Bronze, the Pickax and the Plow, and others, while from Akkadian we have fragments of the Date Palm and the Tamarisk, the Bull and the Horse, etc. There also exist a number of short beast fables, or rather extended proverbs with animals as actors, that appear in a text type somewhat akin to the "Counsels of Wisdom" but more humorous in mood. These items are often arranged in groups according to the animals, and similar texts—especially one referring to the fox—are among the Sumerian proverb collections. Some fragments from the library of Ashurbanipal suggest the existence of a corresponding Akkadian version. Other fragments from Asshur and Nineveh seem to contain epical texts with animals (wolf and dog, mostly) as protagonists, but not enough is preserved to indicate the content of this type of text.

Four more texts should be discussed here, which, although quite different in tenor and style, could for one reason or another be termed didactic in purpose: the Theodicy, the *Speculum Principis* (*"Fürstenspiegel"*), the Dialogue Between Master and Servant, and the tale of the Poor Man of Nippur. While the first two reach, respectively, into the realms of philosophy and politics, the last two simply represent humorous folk tales, as is also shown by the fact that parallels to them are well known in other civilizations.

The Theodicy consists of a dialogue written as an acrostic poem (the acrostic gives the name of the poet) in stanzas of eleven lines each. The skeptic elaborates on the eternal topic of his misfortunes, which he contrasts with the success of the ungodly; on the worthlessness of all human endeavors; on the lack of social justice, etc.; while his pious adversary extols the virtues of devotion to the gods, whose wisdom in distributing success and failure remains beyond human understanding, and suggests that the skeptic resign himself to accepting good and evil as the gods have allotted them. The text is full of learned abstrusities and farfetched poetic expressions, so that the Akkadians themselves needed a commentary to understand it. Its tenor is ceremoniously polite, but the argumentation is completely devoid of vigor and cogency. There are Babylonian and Assyrian fragments (from Asshur and Nineveh) that show that this composition, which may date back to the turn of the first millennium, was widely appreciated.

Of the *Speculum Principis,* we have only one short (sixty lines) tablet, from the library of Ashurbanipal. It contains tersely styled political precepts for the king, each followed by a short phrase describing the punishment or reward which he is to expect. The pattern is that of the omen texts, and the intention is clearly to impress upon the ruler his obligation to act justly toward his subjects, by obeying the law of the country and heeding the advice of the chancellor. The main section of the text (fifty lines) is devoted to bringing it home to the king that the privileges of the free cities Sippar, Nippur, and Babylon are under divine protection and that the gods Shamash, Enlil, and Marduk will punish him direly for any infringement against the specifically enumerated rights of their cities. The text seems to be late, but it is possible that similar compositions were in circulation

early in the first millennium, when the free cities of Mesopotamia became powerful enough to assert their independence.

On a Seleucid tablet from Babylon and an Assyrian one from Asshur we have preserved a unique text, again in dialogue form. Master and servant are engaged in an obviously comical dialogue, the master giving an order, to which his servant reacts by quoting proverbial sayings which demonstrate the wisdom of the master's decision, whereupon the latter changes his mind and revokes his order. For this the servant supplies equally good reasons from the same source, thus showing, to the amusement of the listener, that even the wisdom of the proverbs gives no unequivocal guidance. The servant is everywhere shown as much brighter than his master, and he proves it with his last retort.

Equally on the folk level is the story of the Poor Man of Nippur, which was found in Sultantepe, and of which a fragment shows that it was also kept in Nineveh. Again a unique topic: the roguish pranks of a poor man who, having been mistreated by an official, takes his revenge. The story is set in Nippur and is replete with wonderful information about everyday speech, the mores of the lower classes, and workaday life. The style of the poem is extremely lively, although in some passages somewhat compressed, as if a well-known story were being told.

d. The education of the scribe. While Sumerian and Egyptian literatures have texts that extol the scribal craft and its importance, there is no Akkadian reference to this topic. We know very little about the social position of the scribes. Their importance for the administration of city and state is illustrated by the fact that in Middle and Neo-Assyrian texts the city scribe appears among the highest officials, and that in the court of Nebuchadrezzar II the "scribes" of the palace are mentioned. The craft was handed down in families, as shown by the names appearing at the end of legal texts and in the colophons of scholarly tablets. The patron deities were the goddess Nisaba and, later, Nabû. There are traces of specialization—such as in medical or astronomical texts—but in general the education of the scribe prepared him, as we know from the Sumerian series "e d u b b a," to write every kind of text.

From countless "school tablets"—mostly lentil-shaped—we learn that the teaching method consisted in the teacher's writing a sign or word or short sentence on one side of the tablet while the pupil copied it as best he could on the other. Progressing to sign lists, the student began to copy, and probably learned by rote, first lists of the simpler signs and then those of the more complex signs. When the junior scribe advanced to the copying of literary works, he probably followed a definite curriculum, as the large number of extant copies of certain texts seems to indicate. Of certain important series copied by student scribes for practice, we have dozens of copies of the first tablets, but their number decreases for the subsequent tablets, so that the last tablets are very meagerly, if at all, attested.

Motivated by personal scholarly interest, individual scribes could accumulate, by having their pupils copy them as part of their training, a large number of literary texts to build up a personal collection of tablets. Since the scribes were attached to temples as well as to palaces, leisure induced by economic security and devotion to specific subject matters could easily contribute to what we might call a library, such as those found in Asshur, Sultantepe, etc. It should, however, be stressed that a library in the Western sense of this term existed only in Nineveh, where it was collected at the instance of Ashurbanipal. We know from his letters that this king was very eager to assemble such a collection, and that he sent emissaries to Babylonia to hunt for specific tablets and even showed so much interest in the project that he decided which tablets should be incorporated and which omitted. These texts were copied and bear the name of Ashurbanipal in a series of elaborate but standardized subscriptions that pointedly bear witness to the literary interests of the king. It has been estimated that far more than a thousand literary texts were stored in that library, apart from texts which were deposited there as a royal archive. There are, however, indications that substantial parts of the collection came from Calah, where Tiglath-pileser I may earlier have brought Babylonian originals after his conquest of Babylon, and also from private collections of certain priests.

Indispensable for the teaching of the complex system of cuneiform writing, for reference purposes, and for the study of the Sumerian texts, and also as a vehicle for scholarly activities, a staggering number of texts usually called syllabaries or vocabularies have been left to us by the Akkadian scribes. All this grew out of the practice of the Sumerian scribes of drawing up lists of signs (sign forms) as well as lists of objects, and of gods, stars, canals, rivers, personal names, etc. While the former type may well have had primarily practical purposes, the lists of the latter type are difficult to evaluate. To impute to these scribes scientific interests in our sense should be considered an attempt to romanticize what may well have been a purely mnemotechnical device. However, when Sumerian became an object of scholarly research for the Akkadians, both types of lists underwent an important development. The lists of objects, etc., were provided, in the Middle Babylonian period, with Akkadian translations and organized in two large series that were strictly standardized. Thus we have the famous series ḪAR . ra = *ḫubullu,* with twenty-two tablets (tablets 3-24), dealing, in this sequence, with: trees, wooden objects, reed objects, earthenware, leather objects, metal objects, domestic animals, wild animals, parts of the human or animal body, stones, fish and birds, plants, wool and garments, localities of all kinds, beer, honey, oils, barley, and other foodstuffs. When many of the Akkadian designations became obsolete, a commentary series (HAR.GUD = *imrû* = *ballu*) was used that added terms which were to explain the older expressions. Another Akkadian vocabulary of this type is l ú = *ša,* the four tablets of which list designations of human beings (officials, craftsmen, social classes, etc.), from king to brickmaker.

More complicated is the development of the sign lists. In the early Old Babylonian period there were three types of arrangement of sign lists, one in which

the syllables followed each other according to the vowel sequence u-a-i, one which arranged the signs according to their form (called S^a and provided in the left column with the reading of the sign and in the right with its Akkadian name), and one which is termed Ea by Assyriologists. The first two were used in primary education outside Nippur and the third in Nippur. While the first type disappeared soon and the use of the second remained limited, the Ea arrangement proved very fertile. Originally it was an elementary sign list (Proto-Ea) containing all the Sumerian signs and their polyphonic values, information needed to read and write Sumerian. This was soon enlarged into an exhaustive series called á—A=*nâqu*, which comprised forty tablets and added to the signs a column with Akkadian translations, giving several Akkadian words for each Sumerian sign. In some recensions of this series a column with the names of the signs was placed between the column with the signs and that with the translations. Excerpts were made of this forty-tablet series, such as: ea—A=*nâqu*, with eight tablets, further excerpted on two tablets which we call S^b, containing only the most common signs and values, for elementary training. For advanced training, the scribes of Nippur used an acrophonic list of signs and their compounds (Proto-Izi) that likewise was later provided with Akkadian translations and enlarged into the series i z i=*išātu*, with at least sixteen tablets. They also had a bilingual series, diri-DIRI—siāku=*watru*, which gives in an acrographic arrangement only sign groups whose Sumerian reading differs from that of the individual components (seven tablets). In the Middle Babylonian period a new and different crop of bilingual lists appears: two that contain groups of synonyms (usually three), one called antagal=*šaqû* (more than ten tablets), and the other, erimḫuš=*anantu* (more than six tablets). Then we have one arranged according to topics, called alan=*lānu*, and one according to Akkadian meanings, sa_7.alan=*nabnītu*. The latter lists parts of the body and activities connected with them in a sequence running from the head to the feet, on more than thirty tablets. To this impressive body of material belong quite a number of less extensive syllabaries—besides a large number of still unassigned fragments presumably belonging to less widely used series—which attest to special traditions in different periods and localities.

Once the list as a form of scholarly presentation had become accepted, a number of works for the training of the scribe were cast in this mold. These are grammatical texts, used to teach Sumerian grammar to Akkadian scribes. They include the series dimmer=dingir=*ilu* (which illustrates dialectal differences in Sumerian), the series *ana ittišu*, an Old Babylonian book of legal formulas from Nippur (of which tablets 1-2 of ḪAR . ra=*ḫubullu* represent an excerpt), and uru.an.na=*maštakal*, a kind of pharmacopoeia, to mention only the most important representatives of this type of literature. We also have synonym lists, which explain rare and obsolete Akkadian words by more common terms, and thus have columns of Akkadian words only.

There can be no doubt that the traditionally enforced bilingualism of the scribal tradition kept interest in grammar and lexicography alive in Mesopotamia. From the Old Babylonian period onward, Sumerian religious texts—and, infrequently, Sumerian learned poetry, such as the poems l u g a l e u m e l a m b i Nergal and Andimdima—were provided with Akkadian translations, first written as glosses below the line and in the free spaces left in the line, then interlinearly, and, very rarely only, on the reverse of the tablet. The translations are not always reliable, but they do quite often shed light on both the Sumerian and the Akkadian. The largest of these texts is the series *utukkī lemnūti*, "the evil demons." In addition to scholarly bilingualism, there was another bilingualism caused by the accidents of history. In early times the kings of the Akkad Dynasty had Akkadian as well as Sumerian versions of their inscriptions made. Later on, Hammurabi had both versions written side by side in one inscription; interlinear royal inscriptions are rare and quite late. With the Persian conquest appeared trilingual inscriptions—in Old Persian, Late Babylonian, and Elamite—not to speak of the Aramaic version of the trilingual Behistun Inscription written on papyrus. Throughout its entire history, Mesopotamia was in contact with persons speaking foreign languages. We have the seal of a person (in Ur of the Third Dynasty) who was an interpreter for the language of Meluhha, and we have Greek transcriptions of Akkadian words written between the lines of Seleucid school tablets containing a text taken from the series ḪAR . ra=*ḫubullu*, and even an Akkadian text transcribed with Greek letters.

F. ***INSTITUTIONS.*** Since in every civilization social relations are articulated within established channels co-ordinated in a characteristic pattern, it is essential to deal, however cursorily, with these channels—institutions—in this survey of Assyro-Babylonian civilization. This framework is indispensable for the understanding of the innumerable data provided by the legal and administrative texts in cuneiform. Only three major institutions will be discussed here: kingship, city, and temple, after an introductory excursus on the social and economic background of the civilization.

1. Social and economic background. It is important for any understanding of Mesopotamian civilization to keep the Babylonian and the Assyrian social and economic backgrounds strictly apart and to realize that the Sumerian is to a large extent beyond our reach. Although Sumerian epical literature and mythological texts do reflect a society that flourished beyond the area illuminated by written documents, no co-ordination of the extant data from literary and nonliterary sources, in depth (time) and width (local range), is yet available.

The social structure of both Babylonia and Assyria is characterized first by the absence of any tribal organization of the free population, and second by the absence of status stratification above the level of slave. As a Sumerian heritage, there existed up to the Old Babylonian period a small number of groups whose freedom was restricted in various ways, but they disappeared in the course of time. The slave population—outside the large economic units of temple and palace—was at all times very small.

The basic cleavage within the population of As-

syria and Babylonia was that between city dwellers and those who lived in villages of semipermanent habitations between the cities. The latter were often crowded out into near-nomadic conditions or else compelled by powerful city kings to live in abandoned or newly built settlements to till the soil, pay taxes, or do *corvée* work or military service. They also worked as laborers for the city dwellers or joined temples and palaces as mercenaries or serfs. Their number was easily added to by infiltrating foreign groups. In times of economic stress their ranks swelled until a king pressured them into projects of forced urbanization, internal colonization, etc. This rather fluid and at times quite substantial element of the population could, under certain conditions, engulf the cities and attain political power. Such conditions could have been brought about by an increase in foreign elements, by depression and internal strife in the cities. These factors, either singly or in combination, may have caused political, economic, and even linguistic changes which, though they appear to us to have occurred suddenly, may have been gradual. This situation contributed greatly to the curious lack of stability of the political structure of all the Mesopotamian states, where the power of the central authority depended to a large extent upon its ability to overcome the resistance of a large section of the population.

In respect to economics, the country primarily relied on agriculture, supplementing it with animal husbandry, mostly keeping sheep and goats, with some large cattle used for traction (plow and wagon). The maintenance of the latter required pasture and transhumance, which made the keeping of cattle a virtual monopoly of temples and palaces. Industrial activity—which in the ancient Near East means the weaving of textiles—and such enterprises as large-scale fishing, for the preparation of dry or salted fish, required man power which, in a nontribal society, could be levied only on a village organization level or by a redistribution system, such as that of the temple or the palace.

Because cereal agriculture by means of irrigation can operate on a larger scale only under authoritarian guidance, villages were quite rare in Babylonia; their place, it seems, was taken by manorial settlements, and all social and economic life was concentrated in cities. It happens (*see* § A2 *above*) that the annual flooding of the rivers in Babylonia was not so favorable for cereal agriculture as was the case in Egypt. Its timing was not advantageous. Much protective work was required, and the flooding caused an increasing salination of the soil, which had to be counteracted by the digging of new canals that dislocated the boundaries of the arable territory and affected the distribution of the population. The consequences for Babylonia were rather far-reaching, for they materialized, as a rule, in a centrifugal movement which could break the economic prosperity of a city, move political power to marginal regions, and leave large segments of the country agriculturally exhausted and culturally stunted. Only when a city had become the seat of a dynasty and could live off the spoils of war or on tribute—or when it was integrated in trade routes—could it survive such changes.

In Assyria, the economic situation presents itself quite differently. There was little, if any, genuine urbanization; and agriculture, dependent here on rainfall, was primarily a village affair, if not run from manors. This holds true for the entire region from the piedmont of the Zagros to the Mediterranean. The population consisted basically of poor farmers living in village communities and of a thin layer of a ruling class of feudal lords or foreign conquerors. The village units showed a definite and tenacious resistance to urbanization but adapted themselves easily to a feudal organization that knitted them together into more or less ephemeral states. They were willing to pay with products and work for the support of a feudal lord, who might be replaced overnight or be permanently absent at court. These feudal lords demanded a kingship quite different in concept from that of Babylonia; with their king they went to war annually and made raids upon the enemy after the harvest. The king obtained wealth and power by conquest and internal colonization centered in newly built royal cities populated with displaced conquered peoples, prisoners of war, and whatever natives could be forced into them, to pay taxes, build temples and palaces, and serve in the army. All this was kept together and functioning by sheer force, and any political change caused immediate disintegration and collapse. The people forced into urbanization then scattered, but the village communities continued undisturbed, and the few big cities usually managed to survive until a new ruler or a new conqueror came along.

Foreign trade was an important economic factor in both Babylonia and Assyria. But in this respect, too, essential differences can be observed in certain periods.

The export of textiles produced by slaves and serfs in the self-contained redistribution systems of temple and palace created in Babylonia, up to the end of the Ur III period, the means of importing metals for essential and prestige purposes and stone for decoration. These activities could be combined with a carrying trade between barbarian peoples, who lacked the prestige, political power, and interest necessary for organizing trade relations by means of treaties, diplomacy, etc., as was the case in Asia Minor and probably also around the Persian Gulf. Up to the time of Shamshi-Adad I (*ca.* 1812-1780), in Asia Minor the Assyrian traders were active; in the Persian Gulf region, the seafaring merchants of Ur.

Before the Dark Age the following situation in the domain of international trade can be observed: The texts of the *tamkaru* (traders) of the period of Ur III tell us of the import of spices, perfumes, and precious woods, apart from timber, stone, and metals; the Old Assyrian documents (letters, accounts, etc., often termed "Cappadocian Texts") from the merchant settlement at Kanish in Anatolia and other localities in this general region show in detail how Assyrian traders transacted business; the letters of the merchants of Ur (Old Babylonian period) show that they trafficked in copper imported by ship from across the Persian Gulf; and the evidence from Mari tells of trade relations joining the Mediterranean coast to the islands of the Gulf.

After the Dark Age we find a somewhat different situation. The traders who formerly traveled the route along the Euphrates, through Syria, and to the Hittite capital had now become royal emissaries, carrying precious gifts from court to court and enjoying royal protection, as we know from the letters found in Amarna and Boghazköy. In Ugarit and also in Nuzi, we again find indications of growing trade relations based on treaties but intensified by private initiative. From then on, strangely enough, our texts remain quite silent with regard to trade and traders—for which silence (after the twelfth century B.C.) one could perhaps blame the so-called Aramaic invasions, the wars accompanying the expansion of Assyrian power, etc. There exists, however, especially for the first half of the first millennium B.C., circumstantial evidence that speaks for the continuous existence, if not the growth, of foreign trade in and around Mesopotamia. Such evidence is the ease with which the kings of the Chaldean Dynasty took over the political and commercial role of Assyria after its collapse, when we find Nebuchadrezzar II, Neriglissar, and Nabonidus fighting in Asia Minor, dealing with Phoenician cities, traveling deep into Arabia, and filling their temples with unheard-of amounts of precious metals and stones. Further evidence is the fact that Nebuchadrezzar lists a Phoenician, Hanno, as his court *tamkaru*. It is also to be noted that Sargon II of Assyria forced the Egyptians to allow a trading station at the Palestinian border and that Esarhaddon granted the rebuilt city of Babylon again the privilege of unrestricted trade relations with the entire world. While the lack of any written evidence for this trade may be explained by suggesting that it was in the hands of Aramaic merchants using papyrus for records, the question as to what the merchandise was is more difficult to answer. It may have been that Mesopotamian trade had changed from an export-import activity to the more profitable carrying trade linking the East—i.e., the Iranian Plateau and the countries beyond the Persian Gulf—with the countries around the Mediterranean Sea. Some words should finally be said concerning the accumulation of wealth in private hands. It is clear that the trader in royal service profited personally and may well have grown rich (this seems to have been the case in Old Babylonian Larsa); but without the freedom of disposition and assumption of financial responsibility on the part of the trader, we cannot speak of private initiative in long-distance trade. It remains obscure whether such a situation actually ever evolved in the ancient Near East. Only participation in profits, and sharing of responsibility and pooling of funds, as is illustrated in the case of the *karum* of the Old Assyrian period and of Old Babylonian Ur, seems to have occurred. As to the late period, exemplified by the banking house of Murashu in fifth-century Nippur, we have apparently a fusion of feudal status and private commercial enterprise, still impossible to disentangle.

2. King and palace. From the point of view of Mesopotamian civilization, there existed only one institution in our sense, and that was kingship. It was of divine origin and therefore sacred in nature. This essential divine quality of kingship was expressed in two ways. In Babylonia up to the Hammurabi period, the name of the king could be written with the determinative used for gods and objects of worship, or (as is attested only for Ur III) statues of kings could receive shares of the offerings in the temple. To speak here of "deification" is a gross rationalization. In Assyria, the sanctity of the royal person was said to be expressed by its supernatural and awe-inspiring radiance (*melammū*), which was also a characteristic of deities and all things divine. This sheen or halo terrified his foes but was taken away from the king when he lost divine support. The royal apparel underlines this aspect of kingship; the horned miter of Naram-Sin, the *kusītu* garment of Neo-Assyrian kings, were also worn by the images. The special relationship existing between the king and his god, which materialized in the successes of the ruler in war and the prosperity of his country in peace, was often couched in terms of family relations, and the scribes and artists at court loved to elaborate upon this topic in their hectic and adulatory style. *See* KING.

There are deep-seated differences between the Babylonian and Assyrian concepts of kingship, which can only be touched upon here. The Assyrian king was the high priest of the god Asshur, while the Babylonian king was admitted into the cella of Marduk only once a year, and then without royal insignia. The Assyrian king had to be crowned as king anew every year, whereas this was not necessary in Babylonia. The stress put on the annual crowning in Assyria and the custom of having the king act as eponym on a par with the officials of the realm suggest the explanation that he was originally only the *primus inter pares* of an amphictyonic union of sheiks (as we know it of the kings of Hana) living around the sacred city of Asshur. The person of the Assyrian king had to be carefully protected from disease and evil magic influences. A host of physicians and diviners surrounded him, and he had to undergo elaborate lustration ceremonies. Adjoining the throne room of each Assyrian palace there is a room for ritual ablutions. Access to the king was carefully regulated; even the crown prince could not freely approach him. The personnel of the Assyrian and Babylonian courts differed widely. The Assyrian king was surrounded by officials whose task it was to execute his orders; the Babylonian king was surrounded by the administrators of his palace. The Babylonian king after the Middle Babylonian period had a vizier—a development rare and late in Assyria. Since obedience to the proper authorities was considered by the Mesopotamians the main characteristic of civilized living, service to the king was put on the same level as service to the gods. However, the kings were anything but oriental despots. The Assyrian kings—of whom we know much more than we do of their Babylonian counterparts—were always careful not to offend their high officials, whose loyalty to the dynasty they had to secure by oaths and agreements to assure the succession of the crown prince.

The king's palace represented an organization of major economic importance for the city. Into it poured tribute, the yield of the royal estates, and the

products of the royal workshops. From its stores were fed and appareled according to status the royal family, the officials and personnel of the court, the administrators of the royal estates, the standing army, serfs, slaves, etc. A redistribution system of this magnitude quite naturally created conflicts when in contact with other systems of this type—such as, in Babylonia, that of the temple. Whether the palace organization developed from manorial roots or is to be considered an offshoot of the temple organization can hardly be determined now.

3. City. While the economic importance of the temple in Mesopotamia constantly declined, the conflict between the palace and the free city gained in importance. It resulted in royal attempts to restrict the freedoms and privileges of the old cities and also in the creation of new cities subject to the king's authority. A bevy of small cities—often actually in sight of one another—developed astonishingly early in S Mesopotamia. They were walled; divided into city quarters, each of which had a gate; and provided with a suburb, and with a harbor that had a specific political status connected with trade. Each contained a palace and at least one temple, that of the city god. Surrounded by fields and gardens which the river provided with the essential water, the cities housed a community of farmers, with a few craftsmen for immediate needs (potter, brickmaker, etc.). There was but little contact with other cities, and money was used for only a few purposes. The communal bond superseded all relations beyond that of the immediate family. The city acted as a legal person in our sense—e.g., when selling a vacant lot within its walls—and as a political body, through an assembly which could write or receive letters, etc. The growth or decay of such a city depended on the importance of the two institutions it harbored—temple and palace—and, of course, on its supply of irrigation water. The prestige and power of the king was paramount—the wealth of the palace attracted traders and mercenaries and enriched the city. However, the growth of a tradition of civil liberties—mostly exemptions from taxes, and other privileges—placed under divine sanction, created tension between the city and the king. This assumed increasing importance in the Neo-Assyrian period, where the Babylonian cities especially (apart from the capital) played a political role in the conflict between Babylonia and Assyria.

Each city had a definite individuality which is often reflected in its history. Nippur was a sacred town, particularly up to the Middle Babylonian period. Sippar occupied a unique position in the Old Babylonian period, with its commercial relations and as a link between N Babylonia and the seminomadic tribes of the Upper Euphrates region. Borsippa, a city without a king like Nippur and Sippar, has not yet been touched by the spade of the archaeologist. Uruk, of Sumerian fame, rose to new importance in the late period. The two millenniums of the history of Ur are best known, along with that of Nippur, while Eridu, Isin, and Larsa disappeared in and before the Old Babylonian period. Asshur in the N, deified as the god Asshur, has been well explored, but Arbela still lies under the modern city.

From the point of view of urbanism, the cities of the alluvial plains, in Babylonia, show a significant separation between the cultic focus and the palace, each being situated in a separate walled enclosure within the circumvallation, while the civic centers were in the city gates, where the inhabitants of the city quarters met in assembly. The urban pattern is definitely different in Assyria and the westward regions. There temple and palace moved together; one wall enclosed them and their essential dependencies, the treasury and the barracks of the royal guard. All this formed a city within the city. The compound containing the palace and the temple could be situated either in the center of the city—preferably upon an elevation, so that one could speak of citadel-cities—or at the periphery of the city. The latter arrangement is evident in all the new cities which the Assyrian kings built for themselves. There we find a high artificial terrace straddling the city wall and harboring the palace and the temples. Since these new cities represent royal city planning, another of their characteristic features should be mentioned, the rectangularity of the outlines of the walls though there is no over-all regularity in the distribution of the gates, so that no grid arrangement for the streets can be assumed. This is clearly a layout patterned after the military camps, which are often represented on Assyrian reliefs. The peripheral emplacement of the "inner city" and the fact that its buildings were placed on a terrace show the king as high priest separated in a sacred city by an enclosure.

At the turn of the second millennium the inhabitants of the oldest cities, such as Nippur, Babylon, and Sippar, in Babylonia, and Asshur and even Harran, in Assyria, began to acquire a special legal status with regard to the king. Apart from the exemptions from taxation, *corvée,* and military service, there were a number of privileges, some of which are mentioned in the text called *Speculum Principis,* while others are more or less accidentally brought to light by isolated references. E.g., Esarhaddon complained that his rebellious brothers "even drew the sword in the city of Nineveh, which is a godless thing to do"; the Babylonian king had to assure the high priest of Esagila at the New Year's Festival that he never had offended a citizen of Babylon by slapping his face; and there is a letter from the inhabitants of Babylon to Ashurbanipal that asserts, in the heat of an argument, that even a dog enjoys the privileges of a citizen of Babylon once it has entered that city.

4. Temple. The history of the Mesopotamian temple as an institution is very much in the dark, although there is an abundance of text material, especially for the Sumerian period (from Lagash) and the Neo-Babylonian period (from Sippar and Uruk). Economically, the temple was organized as a redistributive system, with its characteristic double aspect: incoming gifts and rents and outgoing rations and other payments. The numerous administrative documents illustrate this situation in detail. It seems that the *šangû*-priest headed the administrative side of the temple's activity, while the *en*-priest related the sanctuary to its deity in various ways. In relation to the community, the temple had specific functions,

such as that of administering oaths (only Old Babylonian), establishing the standards of weights and measures (only Old Babylonian) and the interest rate for loans, and granting small loans in hardship cases (mostly Old Babylonian). The building of sanctuaries and providing them with funds was a royal privilege at all times, and in the Neo-Babylonian period we even find a royal commissary as a member of the ruling board of the temple to see to it that a tax on pious gifts (consisting of small silver payments collected in boxes at the entrance of the temple) was correctly paid to the king. Later on, the internal affairs of the temples were handled by an assembly of priests, together with the citizens of the city, sitting as a court. No conflicts are known in Babylonia between temple and king, except for the attempts of Nabonidus to introduce cultic innovations, apparently imitating the practices of Assyrian kings.

G. ***RELIGION.*** The interest of Assyriologists in Mesopotamian religion has been on the wane for more than twenty years, thus patently expressing an acute disappointment in the numerous books and articles which dealt with this topic in the first decades of the twentieth century. The main reason for the glaring fruitlessness of these efforts is the fact that scholars either have wanted to handle the vast amount of material in terms of OT religion or have applied preconceived romantic patterns to the amorphous mass of data, philological and archaeological alike. The following presentation intends solely to introduce the reader into the typology of the teeming pantheon and to trace some of the more obvious characteristics of the god-man relation in Mesopotamia.

The extant sources offer an extremely complex picture of the Mesopotamian pantheon, as is to be expected, not only on account of its long history but also because it represents a fusion of Sumerian and Akkadian deities. This fusion created a number of hybrid figures in whose names were preserved the names of the gods who had merged, and thus were kept alive in a plethora of local and minor deities who would otherwise have been forgotten. However, many of them survived only in learned and theological texts. The result is perhaps best illustrated by the god list (Series A n = Anum), which originally contained more than 1,500 names and still fails to mention names well known from other sources. More names could be added from the countless theophoric personal names. There the ever-changing preferences in time and region mirror the fluctuations in the popularity of individual deities, their rise and their fall into oblivion, in accordance with political trends or changes in popular religion. These personal names throw much light on the religious history of Mesopotamia proper and of some of the adjacent regions under Mesopotamian influence. Far more difficult is the utilization of religious texts dealing with the cult of certain gods.

The formalization and standardization of religious expressions and the narrow range of the hymnical terminology favor an extensive interchange of epithets, thus blurring the individuality of all but the most outstanding and characteristic divine figures. Even among these, a typological classification is evident. They easily fall into old gods and young ones, astral deities, and a few, very rare, unique figures. Anu and Enlil, and, later on, even Marduk, belong to the category of old gods. In the theogony of the Epic of Creation, Anu, the "Heaven," is the oldest god, and his realm the remote heaven. Originally, Enlil was by no means the misanthropic "Old Man" of the pantheon; but when he developed from god of the sacred city of Nippur to ruler of the gods, he assumed much of the characteristic remoteness of Anu. Enlil's temple, the "Mountain House" in Nippur, stood in a very specific relation to the nether world and to the evil demons who lived there, so that the conjurations performed against them often necessarily refer to Enlil. Marduk was at first one of the "young" gods, but the political development of his city, Babylon, moved him into the rank of the rulers of the cosmos. Ea, in Sumerian E n . k i, although in certain respects the local deity of Eridu, shared, in late theological speculations, the rule of heaven and earth with Anu and Enlil inasmuch as his realm was the waters surrounding the earth and those below it. He was the patron deity of the essential profession of exorcism, but he developed into the god of all the arts and crafts, and his wisdom and cunning is extolled in many myths and stories. Since the Marduk theologians made him the father of their god, Ea must at an early period have been more important than a local deity, probably some kind of "culture hero," comparable to the Oannes of Berossos.

Either the young gods had no city or their cities were new. A typical young god is Enlil's son, Ninurta. He had no city of his own and is the central figure in a cycle of myths that describe his prowess and achievements. Nabu, however, though called the son of Marduk, does not quite fit the pattern, since he became the city god of Borsippa, an old city. He was the patron deity of the scribes, and his popularity increased in the late period.

The foremost astral deities were, of course, Shamash, the sun-god, and Sin, the moon-god. Each of them was worshiped in two important cities, Shamash (Sumerian Utu) in Larsa and Sippar—both his temples are called the "White House"—and Sin (Sumerian Nanna) in Ur and in far-off Harran. As the god of light, Shamash was the judge of heaven and earth and was concerned with the protection of the poor and the unjustly treated. He and the moon-god, Sin, maintained their popularity throughout the entire duration of Mesopotamian civilization. Apart stands the figure of the storm-god, who was without a city in the alluvial plain but was worshiped under many names, from Assyria to the Mediterranean and in all the adjacent regions, by Semites, Hittites, and Hurrians alike. In Mesopotamia he appears in the role of the oracle-giver, together with Shamash. Unique in many respects among the parochial gods of Mesopotamia is Asshur, the city god of the capital of Assyria. Asshur was provided by his theologians with all the trappings of a lord of the universe, creator and organizer of the cosmos, father of the gods, etc., when Assyria rose to be the foremost power in the region. He represents a phenomenon quite unique in his relation to his city, with which he shared his name. As befitted a deity of that region,

Asshur was connected with a mountain sacred to him (Mount Ebih), where he had a sanctuary. Among the lesser gods, Nergal should be mentioned, because he was not only the city god of Cutha but, with his spouse, Ereshkigal, the ruler of the realm of the dead; and Dumuzi (TAMMUZ), more important to the Sumerians than to the Akkadians, whose death is the topic of an important body of hymns and lamentations.

Among the goddesses of the pantheon, Ishtar (Sumerian Innin) stands out against the various figures of the mother-goddess type such as Mama, Baba, etc., and against the goddess Gula, the patron of physicians and probably originally a goddess of death. Characteristic of Ishtar is the essential dichotomy of her functions. On the one hand she is the battle-loving warrior-goddess who gives victory to the king she loves, while on the other she is connected with sexual life. She is furthermore linked with the planet Venus, and her Sumerian prototype is connected with the Tammuz cycle, while she appears in Uruk first as daughter, later as spouse, of Anu.

There is remarkably little foreign influence in the Babylonian or Assyrian pantheon apart from occasional references to such gods as Amurru, Dagan, Shimaliya, etc., brought in by conquerors. In the regions outside Mesopotamia where cuneiform writing was used, the logograms for the names of the Sumerian and Akkadian gods referred to the local deity of the corresponding type, such as Teshup (Adad), Shaushka (Ishtar), etc.

While the gods were thought to reside in various cosmic localities—if they were not present in their images—a varying amount of sanctity was considered inherent in a number of localities on earth, in certain trees and animals, even in man-made objects. As sacred, these participated in the nature of the divine and deserve more than cursory mention. The sacredness of mountains is well attested, especially in Assyria, where kings erected stelae in the mountains, and a number of individual mountains were connected with specific deities, not to mention representations of gods walking over or growing out of mountains. The two rivers Tigris and Euphrates were likewise considered sacred, especially their sources (also those of the Habur River). Such numinosity also attached to the seashores, where the kings erected stelae, washed their weapons, and sacrificed, and to the bitumen wells of Hit, "where the stelae of the great gods are erected." Myths and iconography deal very often with sacred trees, such as the cedar guarded by Huwawa, the *kiškannu* tree in Eridu, the m e s tree of Nergal, and the *huluppu* tree of the Sumerian Gilgamesh story. Nothing, however, is known, from the historical point of view, of the sacredness of actual trees, and this also holds true for animals.

As to man-made objects, attention should be drawn to the role of the so-called sacred "symbols," as far as they are meant to indicate a divine presence.* These either represent cosmic phenomena—such as the sun disk, the crescent, the star of Ishtar—or are weapons of specific forms (lion-headed clubs, ram-headed staffs, etc.) and implements such as the spade, lamp, and plow. Mythological animals are rare; the bull stands for Adad and the dog for Gula, while such composite monsters as the *mušhuššu* (lion-snake-eagle) or the *kusariqqu* (goat-fish) are linked respectively to Marduk and Ea. There are several still undetermined objects that served as symbols. The cultic function and importance of these objects remains largely unknown, but they seem to have represented the deity outside the sanctuary more often than the images did. Where, when, to what extent, and under what circumstances they replaced the images remains to be investigated. Fig. ASS 103.

103. Boundary stone of Marduknadinahhe (note sacred symbols)

Fundamentally, the deity was considered present in his image, living in the temple much in the same way as the king resided in his palace. Only a few images intended for cult purposes are preserved, but we know of them from iconography and from the pious custom of keeping cheap clay figurines representing images in private houses as objects of worship. Literary texts tell that most images were made of precious wood plated with gold (outside the areas decked out with garments), with staring eyes of precious stone, and were clad in sumptuous garments that were changed according to ritual requirements. It should be stressed that the image was always of

human shape and proportion. Exceptions are rare and occur only with minor deities (bull-shaped son of Shamash) or for special reasons (snake-god). Asshur seems to have been fashioned, at times, in the likeness of the king, as can be seen from seals and reliefs which represent him and the king in identical dress and pose, and from the description of the bronze reliefs mounted on the gate of the New Year's Chapel, which reads: "The figure of Asshur going to battle against Tiamat is that of Sennacherib." In Babylonia the conservatism with regard to images was far-reaching—Nabonidus' attempt merely to change the tiara of the sun-god ran into strong opposition on the part of the priests and the assembly of the city. Assyrian kings, however, state repeatedly that they had images made of important deities according to their own ideas.

These images were constructed or repaired in special workshops of the temple and had to undergo a complex ritual of consecration, during which they were endowed with "life," their eyes "opened" so that they could see, and their mouths washed to purify them. Attired in gold-decorated garments, crowned with characteristic headgear (horned miters or feather crowns) and hung with golden pectorals, they were placed on pedestals in their cellas.

In the morning, the statues of the minor gods were brought before them—exactly as the courtiers had to be present at the king's levee—and the morning repast was enacted, to be followed by noon and evening meals, each consisting of two courses. Platters and jars were "passed" before the image, but sometimes the food was set on a table and curtains drawn around it and the image, so that the process of partaking remained hidden. The "leftovers" were at times sent to the king, sometimes even by express messenger, to have him partake of the food blessed by contact with the deity. The food itself was to be ritually clean and prepared in prescribed ways to the accompaniment of blessings at each stage. After the meal, the image was shown a finger bowl, with the water of which afterward the king and others present were sprinkled on certain occasions.

The images were often carried in procession through the spacious yards of the temples to visit other images in elaborate ceremonials or—especially at the New Year's Festival—to out-of-town sanctuaries amid the jubilation of the citizenry. From a Neo-Assyrian letter we even learn that Nabû went hunting in the game park, thus following also in this detail the behavior of the Assyrian king. There were the sacred ceremonial marriage festivals in which the god met his spouse. Only exceptionally do we hear of an image confined within its cella, as when Ashurnasirpal II warns his successor never to allow the sun to shine upon the image of Ishtar.

The functions of the personnel of such a sanctuary followed the pattern of the palace. The god, like the king, had to have a staff to prepare and serve food and drink, to manufacture and keep in good repair the utensils and paraphernalia of the cult, quite apart from the apparatus needed to keep up the temple as an economic unit. There were priests concerned with the performance of cultic obligations—not only those who officiated, but also the exorcists and the singers and musicians, always according to the very diversified requirements of the cult of the god or goddess they served. It should not be forgotten that the importance and size of these temples differed greatly, from such world-famous temples as Esagila in Babylon, Eanna in Uruk, etc., down to dilapidated sanctuaries in decaying provincial cities. 104. Men bringing offerings, from Khorsabad

Thus the temple served to house the city's deity in a dignified way, so as to please him and keep him concerned with the city's well-being. It was the king's duty to keep the temple in good repair and provided with funds, preferably in a way that made the organization economically independent. Private piety may have contributed, but only in the Neo-Babylonian period do we know this was so. Since the image guaranteed the divine presence, victorious conquerors would want to carry it off in triumph, and we have many instances of such happenings, the last of which is mentioned in Herodotus' report that Xerxes brought the famous statue of Marduk from Babylon to Susa. With changing fortunes, many a Mesopotamian king succeeded in bringing back the image from its captivity. *See* TEMPLE, JERUSALEM.

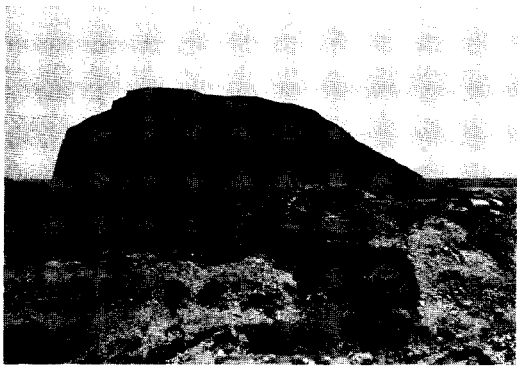
It is extremely difficult to establish what the temple meant for the private citizen in the frame of his personal religious life. In Babylonia the sanctuary itself (antecella and cella) was accessible only to priests, while it seems to have been different in Assyria. It could therefore be that the participation of the private person was restricted to the cycle of those annual cultic events when the image was moved outside the temple, such as the New Year's Festival or the festive day on which the consecration of the sanctuary (*isinnu bīti*, *"natalis templi"*) was cele-

brated by the city. There seem to have existed ritual mourning ceremonies, in which the city as a whole participated, and special occasions such as victories and great perils that may have compelled the priesthood to abandon its traditional isolation. The private person, however, was far removed from any intimate or personal contact with the cult of the gods. Within the eternal compass of health and sickness, success and failure, he was without expectation beyond death and devoid of the redeeming support of personal moral responsibility. *See* NEW YEAR.

Whatever comfort or help he can expect from charms, the efforts of exorcists, and the anxious observation of portents, man has to evolve in such a situation some kind of ideological structure in order to remain man. This seems to have been the case in Mesopotamia, as we know from sparse indications which are difficult to piece together. The concept of *šimtu* (commonly translated with the inadequate and misleading term "fate") was considered as applicable to the individual as it was, since Sumerian times and on a specific level of religious interpretation, to the cosmos. Each human being was considered endowed with a unique and personal "nature" (such a translation of *šimtu* helps us understand this alien concept), and this "nature" circumscribed his life in terms of luck or misfortune, survival or death, exactly as each stone or animal had its "nature," and parallel to the divinely ordained "nature" (here the term *parṣu*, Sumerian *m e*, is used) of cosmic phenomena and divine and human institutions and achievements. Although he was ever ready to turn to the unseen powers with prayers to change his "nature" for the better, a basic attitude of dignified resignation, which must have been part of the pre-Sumerian legacy, characterized the outlook of Mesopotamian man as individual.

H. ***THE ARTS.*** Mesopotamian art showed major achievements in only two mediums of artistic aspiration: monumental architecture (temple and palace) and small-scale engravings on precious stone (cylinder seals). In these widely differing fields it was able to express itself not only with great success but again and again with originality, in spite of the restricted functional and physical confines of these mediums.

The use of bricks and roof beams determined the range of technical possibilities in Mesopotamian architecture, and their application was further restricted by certain technological inhibitions. Thus bricks were joined with mud instead of mortar and hidden behind a mud facing, and the width of rooms was determined by the length of the beams, since columns, etc., were not used to remedy this restriction. The mud as mortar made the walls thick and continuous, whereas walls can be built much thinner and higher and can give the architect the freedom to curve them, open them up, etc., when the individual bricks are held in place with the adhesive power of real mortar.



Mesopotamian brick walls were, instead, articulated with rhythmically distributed stepped recesses and buttresses in strategic locations. Whatever the functional origin of this distinctive ornamentation was, it was restricted to nonsecular buildings and used skilfully to enliven the monotony of the endless blank walls.

A variety of techniques were invented to decorate the mud layer that hid the brickwork: white and colored plaster with painted designs was used, and such designs were often made more permanent by executing them in mosaics consisting of colored clay cones; while mural designs, at first painted on stucco, were transferred in Assyria to glazed brick panels and eventually to reliefed stone slabs. Only as a foreign import does the technique appear of imitating stone reliefs by means of premolded bricks, as in a temple in Uruk built by a Kassite king. Nebuchadrezzar improved upon this technique by providing the molded surface of the brick with polychromatic glazes, such as we see on the well-known Ishtar gate in Babylon.

Mesopotamian temple architecture not only used recesses in the walls to characterize a sanctuary but also differences in level. The entire building was often lifted above the plain by means of terraces, and at times the sanctuary (cella) itself was placed on a still higher level.

From the layouts of sanctuaries that were rather diversified at the beginning, we can observe an impressive development toward a well-organized setting up of a complex of rooms, corridors, and courtyards which made up the temple. The arrangement in smaller sanctuaries was often more harmonious and efficient than that of the far larger and more famous sanctuaries, which sometimes show a lack of "grand design." A major entrance provided with buttressed towers led more or less directly into a spacious paved yard surrounded on three sides by rows of auxiliary rooms, minor sanctuaries, etc., and containing, in eccentric position, an altar or well. In the fourth side was a buttressed or intricately recessed entrance that opened into the cella, which was often divided into one or more antecellas and the cella proper. The cella sheltered the god, whose image was placed on a slightly elevated podium before a recessed niche. There exist quite a number of variables in this general arrangement of Mesopotamian temples, among which two should be singled out here: (*a*) the appearance of a long and narrow, or a broad and shallow, cella; and (*b*) the position of the image in respect to the entrance into the cella —i.e., these two are sometimes coaxial, and at times they require the entering person to turn ninety degrees to face the god. In spite of a number of exceptions, the latter arrangement in both instances is the general rule in the S, the former in Assyria.

An essential feature of a Mesopotamian temple complex was, from the Ur III period on, the temple tower.* In fact, these garishly colored, staged, and crenelated towers rising high above the white-faced temples made Mesopotamia famous, as their mention in the Bible shows. With respect to the temple towers (Akkadian *ziqquratu*), there likewise existed a difference between Babylonia and Assyria. In the S these structures, made of an earthen core sheathed with bricks, were placed in separate enclosures apart from the temple and were accessible by monumental outside stairways in varying arrangements, while the Assyrian temple tower was within the temple, even so that the image's niche penetrated into the core of it, and it either had no means of access or held the stairways within its confines. Neither the purpose nor

105. Ziggurat at Ur

the function of these impressive structures is yet known. Fig. ASS 105.

There are a number of similarities between temple and palace architecture with regard to layout. The essential part of the palace was the throne room, where the king received ambassadors and tribute-bearing vassals. The placement of the throne in this room corresponded in Babylonia and Assyria respectively to the preferred position of the image in the cella. As important as the throne room was the large courtyard into which this room opened through a monumental gate, and a large hall, the purpose of which is not clear.

Assyrian palaces had a characteristic topic for their mural decoration—representations of the king as a protégé of the gods and as an ever-victorious warrior. Hence we see battle scenes, the bringing of tribute, and the slaughter of the defeated, all intended to impress and terrify the visitor. These representations, first on murals and later on shallow cut-stone orthostats, lined the courts, the throne rooms, and other important halls ever since Tukulti-Ninurta I (*ca.* 1244-1208). They show definite traces of artistic development, marked by the emergence of landscape and by the increasing attention given to anecdotal happenings, which endow the scenes with a convincing realism that often makes one forget the jarring pseudoperspective and the ingeniously hidden schematism of the numerous figures with which the battlefields are teeming.

Turning to the seal cylinders, we meet within the confines of their circumference a fairy-tale world of monsters and demons, with enthroned deities, numerous animals heraldically displayed, pious worshipers and battling heroes, and a host of ornaments to fill in any gaps. The iconographic inventory, as well as the styles of presentation—shifting from charming realism to geometrically accentuated abstractions—and also the engraving techniques employed, change from period to period, and from region to region. They act as a sensitive barometer of foreign influence and of the artistic creativity of an artist or a school of artists that otherwise could not have broken through the heavy crust of traditionalism in Mesopotamia that hampered artistic expression in other mediums. Without, e.g., a small body of Middle Assyrian seals and impressions, we would have missed the startling vitality and appealing immediacy of the art of that period, for they are not reflected in the few preserved monuments. This *élan* and the superb technique which was its vehicle live on in the animals that appear fighting and dying on the Neo-Assyrian wall reliefs, and evoke a comparison with Old Akkadian art, whose impact on the Babylonian representation of human beings the following millenniums of delicate refining and tired but polished conventionality could not quite efface. Figs. ASS 106-8.

108. Cylinder seal showing Shamash enthroned, from First Babylonian Dynasty period

Of the few preserved art objects from Mesopotamia outside the two mentioned fields, only a small number happen to appeal to Western aesthetic conventions, such as the marble face of a Sumerian goddess from Uruk that may have looked much less fascinating with naturalistic set-in eyes; the head of a king of the Akkad period, made of bronze and endowed with a sweep of forceful elegance found in hardly any other work of Mesopotamian art; and, finally, the various statues of Gudea of Lagash (*ca.* 2200).* The latter show under their smooth dignity much of that well-contained inner pressure that seems to characterize Sumerian statuary (after its crude beginnings) and of which Babylonian art could only maintain the external formalism. In this again it is in contrast with Neo-Assyrian human representa-

tions, whose gesticulations are all too mechanically contrived and without meaning. Of course, countless art objects have been lost, and the few carved stone bowls, the remnants of metal work riveted into shape or chased over bitumen cores, etc., make us feel this loss only more. Stelae and reliefs carved on walls would emanate solely the boredom of extreme traditionalism, were it not for the array of monstrous beings which Mesopotamian artists knew how to endow with startling persuasiveness. Fig. SUM 87.

I. ***SCIENCE AND TECHNOLOGY.*** **1. Astronomy.** In the domain of the exact sciences, Mesopotamia's achievements in mathematics and mathematical astronomy can well stand comparison with the accomplishments of other civilizations in these fields up to the time of Newton. As to mathematics, we have two types of texts: multiplication and division tables of all kinds, and problem texts. The latter are written either in Akkadian or in Sumerian and address the reader in the second person. Their presentation varies in explicitness. Some state only one problem and show in detail all the steps needed for its solution, while others list hundreds of problems in maximal condensation without giving their solutions. The sequence in which related problems are arranged takes the place of any abstract statement of a general nature. Babylonian mathematics never used such statements. Mathematically speaking, the problems are algebraic in nature, although normally formulated in geometric terms.

It is important to note that these mathematical problem texts appear in two bodies separated by a millennium of silence: the texts of the Hammurabi period and those of the Seleucid. There are no traces of any significant internal development between these groups, nor are texts known that would reveal any preliminary stage of development leading up to the Old Babylonian material. There exist lists specifically designed for the application of mathematical methods to practical problems, but there are no allusions to mathematics in the vast cuneiform text material, with the exception of a statement of King Ashurbanipal, who proudly reported that he knew how to make multiplications and divisions.

In contrast with the situation in the field of mathematics, we are able to establish the period in which the rise of Babylonian astronomy took place. Before the fifth century B.C. we have merely some observations of the appearance and disappearance of the planet Venus, dated from the end of the Old Babylonian period (for their relevance to chronology, *see* § C1 *above*); a short series of two tablets (called m u l . a p i n) that sum up the astronomical knowledge of the time, *ca.* 700 B.C. (the arrangement of the fixed stars in three "ways," their rising and setting, the planets, moon, seasons, etc.); and roughly contemporary reports to the Assyrian kings concerning eclipses, the movements of planets, etc., still on a par with reports of strange cloud formations, halos, the births of malformed animals, etc. Then, however, begins with amazing speed the development of mathematical astronomy in Mesopotamia—to be more exact in Babylonia—which started with the need of establishing a workable fixed lunar-solar calendar. For this purpose was created a zodiac to refer to the movements of the sun and the planets. Observations were made of the varying lengths of the days and nights during the year, and, above all, arithmetical progressions were used to express in mathematical terms the variations in the movements of heavenly bodies with regard to a fixed point. From description, the astronomers made the decisive step to prediction by ingeniously using these and more complex mathematical methods.

The astronomical texts, like the mathematical texts, fall into "procedure texts," which establish the rules for computing the positions of the moon and the planets from month to month or for other regular intervals, and the *"ephemerides,"* in which these computations are listed.

2. Medicine. It is customary to speak of Mesopotamian medicine under the heading of "science," but it should be stressed that, in comparison with Egyptian medicine, the Babylonian is as primitive and crude as are Egyptian mathematics and astronomy in comparison with Mesopotamian. The main characteristic of Mesopotamian medicine is that it is intrinsically connected and interwoven with exorcistic and other ritual practices. Its use of the pharmacopoeia seems rather confused, and the methods of applying medical treatment are quite unsophisticated.

There are relatively few medical texts extant, mostly organized according to the affected organs of the patient. Our understanding of them is greatly hampered by our inability to identify the numerous drugs, plants, and vegetable and mineral materials with sufficient certainty to establish a rationale between remedy and disease. The large "pharmaceutical" series (a r u a n n a = *maštakal*) is still too obscure, as to arrangement and purpose, to be of any help. The therapeutic texts follow the pattern of the omen texts, except that instead of the protasis they refer to the symptom or symptoms of the patient, while the apodosis is replaced by a prescription, in which the physician is addressed in the second person, or by a diagnosis of the disease, followed by advice to the physician to stay away. Apart from some obscure passages in these texts and an equally ununderstandable section of the Codex Hammurabi, there is no evidence available that the Mesopotamian physicians practiced surgery.

3. Technology. In point of technology, Mesopotamian civilization fails to impress us with its achievements. In fact, it was not even able to keep up the Sumerian heritage in this respect. The Mesopotamians themselves seem to have been fully aware of this state of affairs. They imported from Egypt wonderful thin-walled alabaster vases; they took as booty from the mountain tribes copper containers and other large metal objects; and, above all, their kings expressed unrestrained admiration for all the technical achievements of the Egyptians and the Urarteans, whom they defeated in battle. In none of the various fields of technology, such as agriculture, metallurgy, weaving, the applied arts, etc., can one observe any marked advance beyond the level at which we meet them at the time of the flowering of Sumerian civilization.

There are definite indications of a technological impoverishment in Babylonia: the beautifully shaped

and decorated pottery disappears with the Obeid period; the carved and polished stone vases, the containers, animal figures, etc., made of metal sheets go with the Akkad period; and the small metal objects made in cire-perdue technique vanish with the Old Babylonian period. After that, Babylonia resisted, nearly always with success, any outside stimulus.

Assyria was much more open to foreign influence: polychrome glazes came from Egypt via Syria, the stimulus to the advancement of metallurgic techniques from the mountains of Armenia, innovations in the building and decoration of palaces again from Syria, not to speak of the contributions of the steady influx of prisoners of war and foreign craftsmen, experts (dream interpreters and veterinarians from Egypt), and artists (singers from Syria).

In the basic techniques, the main achievements were handed down from the unknown civilizations of the past, achievements such as metallurgy, the domestication of the essential cereals and of the date palm, the use of the sheep as a wool-bearing animal, and the use of the plow—provided with a curious seeding apparatus that has a parallel only in China.

J. *CONTACTS WITH THE OUTSIDE WORLD.* From India in the E, in a wide arc to Egypt in the W, Mesopotamia maintained contacts with foreign civilizations in varying degrees of intensity over the three millenniums of its known history. Strangely enough, these contacts were far more effective in the earliest periods, up to the middle of the third millennium B.C., than they were later on. Only under Alexander the Great did they reach an intensity that can be compared with that of the earlier relations. As to the direction of the flow of outside contacts, it could be said that Mesopotamia, in respect to technology, received from the East and gave to the West. In respect to culture, Mesopotamia exercised influence upon its neighbors to the N, NW, and W by means of its language and system of writing. Only in its very last phase was a specific set of Mesopotamian achievements transmitted farther to the West.

As to the transmission of Mesopotamian civilization beyond the territory of the neighboring countries, we may mention the Bible as a vehicle for a number of religious and literary concepts of Mesopotamian origin; Hellenistic Egypt, which spread Babylonian (Chaldean) astrology and astronomy to the West; Assyrian art in certain of its late forms that reached the Greek world through Asia Minor; and finally, Assyrian court ceremonial that can be traced to Byzantium via Sassanian practices, and eventually to Europe.

From India, Mesopotamia received its various bovidae, the chicken, and eventually the peacock, and from Central Asia its equidae, to pass all these animals on to the West. From the islands and the coastal regions of the Persian Gulf came copper and precious stones, and eventually pearls, and from unknown regions came tin.

As to the immediate neighbors, Elam was the first of the civilizations that, although independent in origin, grew up under the shadow of Mesopotamia. Of Elam we still know very little. What has been unearthed in Susa, its capital, shows an independent and deeply alien civilization, where the Akkadian language was accepted for a time, but which turned later to the native idiom, using, however, the cuneiform system of writing. In its past (this should be stressed because it underlines the complexities of the development) the region had its own primitive and yet undeciphered system of writing. Although the Elamites for a long time had contacts with the Babylonians and the Assyrians, they left little if any vestige of their influence upon Mesopotamian civilization. In the valleys of the Zagros between Elam and Urartu may still be buried the remnants of cities in which, as in Nuzi, hybrid and short-lived civilizations flourished sometime during the second millennium B.C. and where Akkadian was used and—possibly but not likely—a native dialect was written with cuneiform signs.

In Armenia proper, around lakes Van and Urmia, at the beginning of the first millennium, grew the kingdom of Urartu, of which we have important archaeological evidence: its own inscriptions in Akkadian and in Urartean and, above all, a revealing description by Sargon II, who destroyed it.

On a much larger scale in time, space, and political and cultural importance, the same situation is repeated in Asia Minor, in the Hittite kingdom and its capital, Hattusha. Here, however, Mesopotamian civilization was accepted in a more than superficial way; large segments of Babylonian literature were copied and many texts translated into Hittite.

Much more complicated and far less well known are the relations between Mesopotamian civilization and that of the Hurrian kingdom of the Amarna period, whose capital was Wassukanni, near the sources of the Habur River. While the Hurrians accepted the Akkadian language and writing in much the same way as the Hittites, their influence on Assyria seems to have been rather important in the iconography of that region; it also expresses itself in certain religious practices peculiar to Assyria.

When we move to Upper Syria and the Levant, we meet the same traces of Mesopotamian influence but complicated, as it were, by the existence of, at least, one other center of diffusion, Ugarit.

Still farther to the S, we reach Palestine, where the same conflict is present but with a highly important additional factor: the development of a new civilization on which we happen to be exceedingly well informed by the Bible. Historical circumstances, especially the absolutely unique instance of the return of a deported nation to its homeland, make Mesopotamian-Hebrew cultural relations a most difficult and interesting problem.

As to Egypt, Mesopotamian influence reached it quite early and through still unknown intermediaries, to bring to that country the cylinder seal, the stimulus to develop a system of writing, and probably also certain features of monumental architecture.

Bibliography. The following works, which are suited to familiarize the reader with Mesopotamian civilization, are in each case the best or latest or only available study on a specific topic: B. Meissner, *Babylonien und Assyrien* (2 vols.;

1920, 1925); A. Goetze, *Hethiter, Churriter und Assyrer* (1936); E. Chiera, *They Wrote on Clay* (1938; paper ed., 1952); A. Parrot, *Archéologie mésopotamienne*, I (Les Etapes; 1946); E. Dhorme, *Les religions de Babylonie et d'Assyrie* (1949); A. Moortgat in Scharff and Moortgat, *Ägypten und Vorderasien im Altertum* (1950); O. Neugebauer, *The Exact Sciences in Antiquity* (1952); J. B. Pritchard, ed., *ANET* (2nd ed., 1955).

A. L. OPPENHEIM

ASTAROTH ăs′ tə rŏth. KJV form of ASHTAROTH in Deut. 1:4.

ASTARTE ăs tär′tĭ. Greek form of ASHTORETH.

ASTATH ăs′tăth. KJV Apoc. form of AZGAD.

ASTONISHMENT [שמה; ἔκστασις, θάμβος]. Astonishment in the Bible is a reaction of man to an act of God within history. In the OT it is always awakened by the judgment of God upon Israel or one of her neighbors. In the NT it is most often brought about by an act or saying of Jesus Christ. Only once is it attributed to inanimate objects—in Job 26:11, where the pillars of heaven are said to tremble and be astounded at the rebuke of the Lord.

In the OT, שמה (II Chr. 29:8), from the verb שמם, "to be astonished" (II Chr. 7:21 = I Kings 9:8; Lev. 26:32), is the Hebrew equivalent of "astonishment." Unlike the KJV, the RSV frequently translates שמה "horror" (Deut. 28:37; Jer. 25:9, etc.), "dismay" (Jer. 8:21), or "waste" (Jer. 25:11, 18; 44:22).

In the NT the nominal Greek equivalent is ἔκστασις, translated "amazement" (Mark 5:42), or θάμβος (Luke 5:9). The verbs are ἐκπλήσσομαι, "to be astonished" (Matt. 7:28); ἐζίστημι, "to be amazed" (Luke 2:47); or θαμβέομαι, "to be amazed" (Mark 10:24).

Astonishment in the OT combines a sense of wonder, surprise, dread, and horror. It is occasioned by the unexpected, such as Yahweh's judgment upon his own temple and people (I Kings 9:8 = II Chr. 7:21). It has within it both the element of wonder at the power and sovereignty of God (Job 26:11) and the element of dismay that such a God is chastising the people Israel, with whom he has covenanted (Jer. 8:21; Ezek. 4:16; 12:19). It is awakened by the "otherworldly," by an act of God which man cannot understand, and by a turn of divine purpose seemingly dissonant with the past. Thus astonishment in the OT contains also dread—dread of the unknown and the holy (*see* HOLINESS; FEAR). Further, he who has been visited by Yahweh in judgment becomes an object of horror (Jer. 25:9; 42:18; 51:37; Ezek. 5:15, etc.), a person cast out from the realm of the light and the living, a person unclean and defiling to all around him (Deut. 28:37; II Chr. 29:8; Jer. 29:18; 44:12; 51:41). In the OT, astonishment comes when man is confronted by a jealous God (*see* JEALOUSY).

In the NT, it is aroused by Jesus Christ. Here, too, it contains the element of surprise, of being met by the unexpected (Matt. 13:54; Mark 10:24-27; Luke 2:47; 4:32). And there is wonder before the authority of the Lord (Matt. 7:28; 22:33; Mark 7:37). But dread is here, too, present. Thus Peter in his astonishment at the miraculous catch of fish cries out: "Depart from me, for I am a sinful man, O Lord" (Luke 5:8-9), and Jesus' own people are "offended" by him (Matt. 13:53-58 = Mark 6:1-6). It is sinful man's dread before the holy.

Yet in the NT astonishment includes not only dread but also fascination and attraction. Jesus so astounds the multitude that the chief priest and the scribes seek his death, before he gains too much following (Mark 11:18). The Proconsul Sergius Paulus, astonished at the teaching of the Lord delivered by Paul, believes on Jesus Christ (Acts 13:12). The moment of dread before God is overcome in the love and submission of faith.

E. R. ACHTEMEIER

***ASTROLOGER** [חברי שמים, אשף]. The longing to ascertain what the future has in store for the individual or society gave rise to the pseudo science of astrology. The heavenly bodies were minutely observed by the Babylonian and Egyptian astrologers in the belief that the variations and conjunctions occurring in the sky foretell future events that will take place on earth. Astrology, to judge from the evidence of the OT, was unknown in ancient Israel, and the few passages that mention astrologers refer exclusively to the Babylonian practice. Isaiah (47:13) scornfully points to the Babylonian astrologers when he says:

> You are wearied with your many counsels;
> let them stand forth and save you,
> those who divide the heavens
> [חברי שמים; LXX ἀστρόλογοι],
> who gaze at the stars
> [החזים בכוכבים],
> who at the new moons predict
> what shall befall you.

Jeremiah (10:2) admonishes the people not to be terrified by the "signs of the heavens" [אתות השמים] because the other nations are dismayed at them (see also Dan. 2:27; 4:7—H 4:4; 5:7, 11).

I. MENDELSOHN

ASTRONOMY. *See* SCIENCE §§ A2, B2, C2.

ASTYAGES ăs tī′ə jēz ['Αστυάγης]. The last ruler of the Median Empire (585?-550); son of Cyaxares.

As part of the peace arrangements between Alyattes king of Lydia and his father, Cyaxares, Astyages married Aryenis, daughter of Alyattes (Herodotus I.74). His daughter Mandane married Cambyses I, and their son Cyrus II, after being exposed, grew up with a shepherd and his wife (Herodotus I.108-16).

Later Cyrus turned against his grandfather, and the fate of the Median Empire was decided in two battles between the Medes and the Persians. In the first the major part of the Median army under Harpagus, general of Astyages, whose son had been murdered by Astyages (Herodotus I.117-20), deserted and joined forces with the enemy (I.127); in the second, Astyages was made prisoner (I.128). Ecbatana, the Median capital, was captured in 550, and Cyrus "became king of all of Asia" (I.130). *See* CYRUS; MEDIA; PERSIA, HISTORY AND RELIGION OF, § D3.

M. J. DRESDEN

ASUERUS. KJV Apoc. form of AHASUERUS 3.

ASUPPIM ə sŭp′ĭm. KJV translation of אספים ("gatherings," "storehouse") in I Chr. 26:15, 17. The

word is correctly rendered, not as a proper name, but as the temple "storehouse" (so RSV; *see* TEMPLE, JERUSALEM; cf. אספי השערים, "storehouses of the gates," in Neh. 12:25). W. L. REED

ASUR ā'sər ['Ασούρ]; KJV ASSUR ăs'ər. Eponym of a family of temple servants listed among the returned exiles in I Esd. 5:31. The name is not included in the parallels in Ezra 2:51; Neh. 7:53.

ASYLUM. *See* REFUGE.

ASYNCRITUS ə sĭng'krĭ təs ['Ασύγκριτος, incomparable]. A Christian greeted by Paul in Rom. 16:14. The word appears in Ign. Smyr. 13:2, but not as a proper name. The name is found in papyri and inscriptions. F. W. GINGRICH

ATAD ā'tăd [אטד, thorn]. A place in Canaan mentioned in the account of the burial of Jacob. The funeral cortege, on its way to Hebron, halted at the threshing floor of Atad, where the Egyptians observed a special seven-days' mourning for the patriarch; as a result of this the place received the additional name Abel-mizraim, interpreted to mean "mourning of the Egyptians" (Gen. 50:10-11). Apparently the latter detail is an attempt to explain a place name which more likely means "meadow of Egypt."

The statement that Atad was "beyond" (i.e., E of) the Jordan is puzzling in view of the fact that the direct route from Egypt to Hebron would be entirely W of the Jordan. One possible explanation is that the cortege followed an old trade route via the Sinai peninsula; another, that the viewpoint is from Transjordan, and "beyond" in this case means "west of." The sixth-century A.D. mosaic map at Medeba indicates an Alon Atad (terebinth of Atad) by the side of Beth Agla (the biblical Beth-hoglah) and between Jericho and the Dead Sea. S. COHEN

ATARAH ăt'ə rə [עטרה, crown *or* wreath] (I Chr. 2:26). The second wife of Jerahmeel; the mother of Onam.

ATARGATIS ə tär'gə tĭs [Ατάργατις, *transliteration of* עתרעתה; *also found in shortened form* תרעתה, *whence* Δερκετώ, Derceto]. The great female deity of the Aramaeans, consort of HADAD; often called by the Greeks and Romans the "Syrian goddess," as in Lucian's *De Dea Syria*. Her name is compounded of two divine names—'Atar (philologically equivalent to Ishtar, Astarte, Ashtoreth), and 'Ate or 'Attah, the latter a male deity otherwise unknown, though sometimes the identification with Attis has been suggested. In origin, she is one of the mother-goddesses of Asia Minor; like Cybele, she had castrated priests, and her throne was mounted on lions; but after her adoption by the Syrians, she acquired many of the traits of the Babylonian Ishtar. Hierapolis (Bambyce) in Syria was the main center of her worship, but she had temples in many other places of the Near East, and in Hellenistic times her cult was carried into the Greek world and westward even as far as Britain. Her temple at Carnaim in Gilead is mentioned in II Macc. 12:26 (cf. I Macc. 5:43-44) as the scene of a slaughter by Judas Maccabeus of the inhabitants who had fled to it for refuge. F. W. BEARE

ATAROTH ăt'ə rŏth [עטרות, *plural of* עטרה, crown, wreath, fold]. **1.** Ataroth of Gad (Num. 32:3, 34), one of the towns requested by the tribes of Reuben and Gad for their possession. It is to be identified with Khirbet 'Attarus, *ca.* eight miles NW of Dibon (modern Dhiban) and *ca.* ten miles to the E of the Dead Sea. It is mentioned in the Mesha Inscription: "Now the men of Gad had always dwelt in the land of Ataroth, and the king of Israel had built Ataroth for them" (*ANET* 320).

2. One of the boundary towns of the tribe of Ephraim (Josh. 16:7), located on its E border, identified by Glueck with the prominent mound of Tell el-Mazar, which dominates the highway leading to the hill country of Palestine alone the Wadi el-Far'ah, and of Transjordan along the Wadi Zerqa (the River Jabbok).

Bibliography. K. Elliger, *ZDPV,* 53 (1930), 265-309. M. Noth, *ZDPV,* 58 (1935), 201-15; *Josua,* HAT, 7 (1953). These have been superseded by the detailed treatment of N. Glueck, *Explorations in Eastern Palestine,* vol. IV, pt. I; Text in *AASOR,* vols. XXV-XXVIII (1925-28).

3. A town mentioned in Josh. 16:2; same as ATAROTH-ADDAR in vs. 5.

4. KJV translation ("Ataroth, the house of Joab") in I Chr. 2:54 (RSV ATROTH-BETH-JOAB).

J. MUILENBURG

ATAROTH-ADDAR ăt'ə rŏth ăd'ər [עטרות אדר, glorious crown] (Josh. 16:5; 18:13). A town on the boundary between Ephraim and Benjamin. As Noth has shown, the description of the S boundary of Ephraim in Josh. 16:1-3 has as its basis the same series of boundary points given in the description of the boundary of Benjamin in 18:12-13; we are dealing then with a single source here. That the text has suffered some corruption is shown by the accidental omission of *addar* in 16:2, but more particularly by the confused state of the versions. At the foot of Tell en-Nasbeh (*see* MIZPAH 5) there is a small modern village known as Khirbet 'Attara, but it contains no remains of pre-Roman times. Moreover, it is unlikely that two towns would have been so close together as Ataroth-addar in this location and another town on the top of the hill. Some scholars believe that the original site of Ataroth was on Tell en-Nasbeh, and others have proposed Ataroth-addar as the name of the town before it was changed to Mizpah at the time of Asa's fortifications (I Kings 15:16-22). This is possible, although it is strange that it has left so small a trace in the OT records, especially in view of the strategic location on the great road and the unusual prominence of the mound.

Bibliography. The articles in *PJB, BASOR, ZDPV,* and *ZAW* may be consulted. The following are among the most important discussions: L. Heidet, *Dictionnaire de la Bible,* Supplement (1928), vol. I, cols. 664-66. H. W. Hertzberg, "Mizpa," *ZAW,* 47 (1929), 161-96. A. Jirku, "Wo lag Gibe'on?" *JPOS,* 8 (1928), 187 ff. J. Hempel, "Atrot-'Addar," *ZDPV,* 53 (1930), 233-36. W. F. Albright, a review of G. Dalman's *Jerusalem und sein Gelaende, JQR,* 22 (1932), 412-16; a review of Abel's *Géographie de la Palestine, JBL,* 58

(1939), 179-88. M. Noth, *ZDPV*, 58 (1935), 201-15; *Josua*, HAT (1953), p. 101. J. Muilenburg, "Ataroth Addar," in C. C. McCown, *Tell en-Naṣbeh*, I (1947), 38-39.

J. Muilenburg

ATBASH ăt'băsh. A variant spelling of Athbash.

ATER ā'tər [אטר, crippled one, left-handed one, *or possibly the common name* Etir]; KJV Apoc. ATEREZIAS ə tĕr'ə zī'əs (I Esd. 5:15); JATAL jā'təl (I Esd. 5:28). The head of a family which returned to Palestine after the Exile (Ezra 2:16; Neh. 7:21; I Esd. 5:15). Some of the family were gatekeepers (Ezra 2:42; Neh. 7:45; I Esd. 5:28), and Ater alone is mentioned as one who sealed Ezra's covenant (Neh. 10:17—H 10:18).

M. Newman

ATEREZIAS. KJV Apoc. alternate form of Ater.

ATHACH ā'thăk [עתך]. A city in the S Shephelah to which David sent gifts from the booty taken from the defeated Amalekites (I Sam. 30:30); probably a scribal error for Ether, כ (*k*) being read for ר (*r*). Cf. Josh. 15:42; 19:7. V. R. Gold

ATHAIAH ə thā'yə [עתיה]. A man of Judah; son of Uzziah; included in the list of postexilic inhabitants of Jerusalem (Neh. 11:4). Some identify him with Uthai in the parallel list (I Chr. 9:4); both are descendants of Perez, but the intervening generations diverge completely. F. T. Schumacher

ATHALIAH ăth'ə lī'ə [עתליה, עתליהו, Y is great, exalted, *based on* Akkad. *etellu*]. **1.** Wife of Jehoram, king of Judah; daughter of Ahab and Jezebel; granddaughter of Omri; mother of Ahaziah. She reigned over Judah for six years, *ca.* 842-837 B.C. (see II Kings 11; II Chr. 22-23). She represents a northern intrusion into the otherwise uninterrupted Davidic dynasty in Judah and the apogee of Baalistic influence in the Southern Kingdom.

Reared in Samaria, she became as zealous and capable a proponent of Baal-Melkart as her infamous mother and apparently exercised considerable influence, first as Jehoram's queen (II Kings 8:18= II Chr. 21:6; cf. II Chr. 21:11 ff), and then as queen mother "over" Ahaziah (II Kings 8:26-27; II Chr. 22:2-3). While visiting his uncle and wounded cowarrior against Aram—King Joram of Israel—Ahaziah was killed in the bloody usurpation by Jehu (1). If the Yahwistic-prophetic party seized the throne in the N, it was now the Baalists' turn in Judah. Athaliah determined to rule in her own right by destroying all surviving male heirs (II Kings 11: 1=II Chr. 22:10; but cf. II Kings 10:12 ff; II Chr. 22:17).

She managed to stay on the throne for six years—a tribute to her cold-blooded competence—though no information about her reign is preserved except that her partisans ("sons of Athaliah") vandalized the temple in favor of the house of Baal (II Kings 11:18; II Chr. 24:7). Her deposition, recorded in detail (II Kings 11; cf. II Chr. 23), was accomplished by Jehoiada the priest through mercenary soldiers and an infant son (Joash) of Ahaziah whom he and his wife had hidden and secretly reared (II Kings 11:2-3=II Chr. 22:11-12). Apparently in some secrecy, they crowned and anointed him king. In a climax of magnificent personal bravery Athaliah tried to stem the tide, but the soldiers were too much, and she was taken out of the temple and slain (II Kings 11:13-16=II Chr. 23:12-15).

The priest presided over a covenant between Yahweh, king, and people. The fact that a mob destroyed the Baal cult and yet soldiers must be posted over the temple (II Kings 11:18=II Chr. 23:17-18) indicates that the populace was badly split between the two parties (perhaps with the Yahweh party being more rural than urban). The Chronicler emphasizes the role of Levites from outside Jerusalem and generally strives for greater sanctity, though he does not disguise his joy over the outcome.

2. One of the sons of Jeroham, a Jerusalem family listed in the genealogy of Benjamin (I Chr. 8:26).

3. The father of Jeshaiah, head of the sons of Elam who returned with Ezra (Ezra 8:7). He is called Gotholiah (KJV Gotholias) in the parallel passage, I Esd. 8:33. F. T. Schumacher

ATHARIAS ăth'ə rī'əs. KJV translation of Ἀθαρίας (BA), Ατααρσθας (Luc.), an official title of the Persian Governor (so RSV mg.) of Judah (תרשתא). See I Esd. 5:40. C. T. Fritsch

ATHARIM ăth'ər ĭm [האתרים]; KJV SPIES. The way along which the Israelites under Moses were marching at the time they were attacked by the king of Arad (Num. 21:1). The word is obscure; the LXX, followed by the KJV, translates it "spies"; however, it may be a place name, or it may mean "tracks." The location has not been identified.

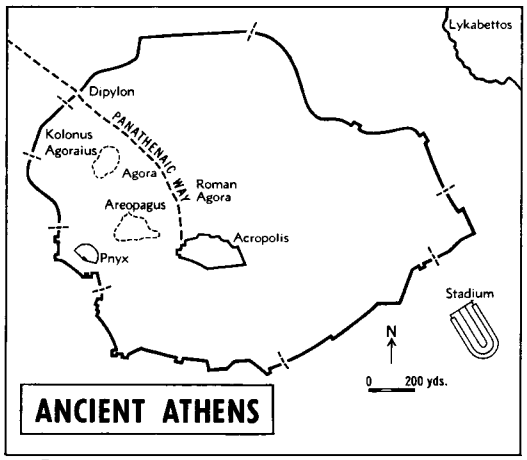
S. Cohen

ATHBASH ăth'băsh. A Hebrew cryptographic scheme in which the letters of the alphabet in reverse were substituted. The term *athbash* (אתבש) is manufactured from the first two pairs of substitutes—i.e., the first, last, second, and next to last letters of the alphabet.

There are three demonstrable instances of *athbash* in Jeremiah, though how and when they entered the text is an enigma. In 51:1 are found the letters לבקמי. The Masoretes divided and pointed these to give *lēbh qāmāy* (lit., "the heart of those who rise against me"; cf. KJV), and are supported by Aq. and Symm. However, the LXX (28:1) had Χαλδαίους, revealing the hidden word. By *athbash* the letters become כשדים, *kasdîm,* meaning "Chaldeans."

In 51:41 appears the word ששך, rendered "Sheshach" in the KJV, which is *athbash* for בבל, "Babylon" (LXX 28:41 Βαβυλών). It is used also in 25:26 but may be a gloss (the LXX omits the clause). Since ch. 51 is full of references to Babylon, so that there would appear to be no value in concealing one, there have been various attempts to explain the word otherwise; but none seems successful.

The use of *athbash* is recognized in the Talmud, Midrashim, and Kabbala. An attempt has been made to employ it as an aid to elucidating the Dead Sea Scrolls. *See* Text, OT.



Bibliography. W. Gesenius, *Thesaurus Linguae Hebraeae* (1833-53); lexicons of Briggs, Browne and Driver, Gesenius-Buhl; S. A. Horodezky, "Gematria," *Encyclopedia Judaica,* VII, 170-72. H. J. Schonfield, *Secrets of the Dead Sea Scrolls* (1956).

B. J. ROBERTS

ATHENOBIUS ăth'ə nō'bĭ əs [Ἀθηνόβιος] (I Macc. 15:32-36). Courtier of Antiochus VII Sidetes, from whom he had received the title ὁ φίλος τοῦ βασιλέως (cf. John 15:15; 19:12). Antiochus sent him as envoy to Simon the high priest.

J. C. SWAIM

***ATHENS** ăth'ĭnz [αἱ Ἀθῆναι] (Acts 17:15-16, 22; 18:1; I Thess. 3:1). The chief city of the ancient district of Attica, and the capital of modern Greece. The name of the city was probably derived from that of the goddess Athena (ἡ Ἀθήνη). Paul visited Athens and spoke in the synagogue and the market place, and in the Areopagus; but he established no church there (Acts 17:16-34). Fig. ATH 109.

Jack Finegan

Discovery of Neolithic pottery on the slopes of the Acropolis shows that there was settlement at this place in the Late Stone Age (before 3000 B.C.). By the Late Helladic period in the Late Bronze Age (*ca.* 1600–*ca.* 1100) the Acropolis* was a strongly fortified citadel, as evidenced by the remains of walls of this date. In the Geometric period in the Early Iron Age (*ca.* 1100–*ca.* 750) the numerous cemeteries contain much pottery painted in formal designs sharply contrasting with the free and spacious style previously prevailing. Pl. XXVI*b*.

At the beginning of the sixth century Solon the Lawgiver is credited with doing much to establish the democratic organization of Athens. At this time the Agora, or main city square, which may previously have been just outside the entrance to the Acropolis, was located farther to the NW beside the hill Kolonus Agoraius. In this area have been discovered

109. General air view of Athens; the Agora is in the foreground, and the Acropolis is in the background.

the foundations of the oldest known public buildings and sanctuaries, which include the predecessor of the Old Bouleuterion, and the archaic Temple of Apollo. *Ca.* the middle of the century the tyrant Pisistratus may have built the Heliaia, or law court, and the predecessor of the Tholos, both in the Agora; while some attribute to him also the Old Temple of Athena, the foundations of which have been found on the Acropolis between the Parthenon and the Erechtheion. At the end of the sixth century came the democratic reforms of Kleisthenes. The Boule (βουλή), or advisory council, which was probably as old as, or older than, the time of Solon, was increased to five hundred persons, fifty from each of the ten tribes into which Kleisthenes also divided the people of the state. In each of ten periods of the year, fifty councilors served as Prytanes, or presidents of the council, and met continuously as an executive committee. The Old Bouleuterion was probably built at this time as a meeting place for the enlarged Boule, and additions were made to the rooms, above which the Tholos was later built, where the Prytanes met.

At the beginning of the fifth century Athens was enclosed by a strong wall, which was constructed or repaired by Themistocles (*ca.* 525–*ca.* 460) in the

face of the threat of Persian invasion. By the time the Persians actually destroyed Athens in 480/479, the Older Parthenon and the Old Propylea had already been founded on the Acropolis. When the Persians were driven away, an extensive program of rebuilding and of new building was instituted. Under the administration of Pericles (461-429) the famous Parthenon* and Propylea were erected, and the Erechtheion was built soon afterward.* In the time of Pericles probably belong also the Temple of Hephaestus* on Kolonus Agoraius and the original

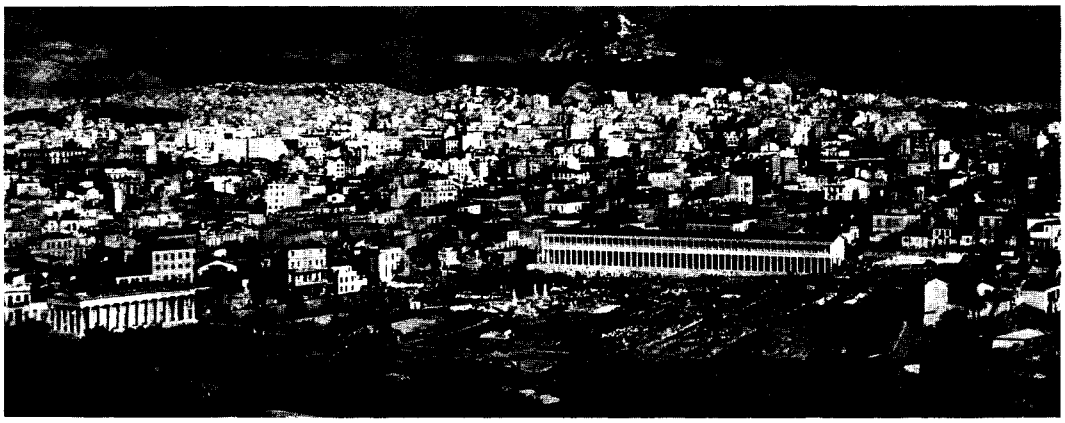
Temple of Ares. In the same century the circular Tholos, the Stoa Poikile, the New Bouleuterion, the Stoa of Zeus, and other structures were built in the Agora. Meanwhile the work of Pheidias (died *ca.* 432 B.C.) and his pupils further beautified the city with a wealth of friezes and a forest of statues. Athens had reached its most glorious age, and was saluted by Aristophanes (*Knights* 1329) in the exclamation:



> Oh thou, our Athens, violet-wreathed,
> brilliant, most enviable city!

114. Athens from the SW, showing the ruins of the Agora, with the restored Stoa of Attalus

In the fourth century the financial minister of Athens, Lycurgus (338-326), interested himself in many public buildings and was probably responsible for the construction of what was afterward known as the Dipylon Gate, the building of the earliest known Stadium at Athens, the reconstruction of the Theater of Dionysus, and the enlargement of the auditorium on the Pnyx Hill.

In the Hellenistic period the Syrian king Antiochus IV Epiphanes (175-164) rebuilt on a magnificent scale the Temple of Olympian Zeus, which had been begun by Pisistratus; King Attalus II of Pergamum (159-138 B.C.) gave the large Stoa of Attalus which stands on the E side of the Agora and has been restored to serve as the modern Agora Museum;* and other large stoas were built on the S side of the Agora. In the second half of the same century the Old Bouleuterion and the nearby Temple of the Mother of the Gods were replaced by the Metroon, a building which took its name from a sanctuary of the Mother of the Gods (μήτηρ θεῶν) it contained, in protective proximity to which it housed the archives of state. Fig. ATH 114.

The sack of Athens by the Roman general Sulla in 86 B.C. did damage chiefly to private quarters, and in the reign of Augustus (27 B.C.–A.D. 14) new public buildings were added. On the Acropolis a small circular Temple of Rome and Augustus was erected by the people. In the center of the Agora the concert hall known as the Odeum or Agrippeum was built by M. Vipsanius Agrippa, minister and son-in-law of Augustus; and nearby was placed the Temple of Ares, which was moved from whatever its original location may have been.

By the time of Augustus the old Agora was well filled with buildings, and accordingly a new Roman Agora was laid out a short distance to the E. While further excavation is awaited in this region, the ruins of a large structure just N of the Augustan Market have long been known and are identified as the Stoa and Library of Hadrian (A.D. 117-38). The latter emperor also did further work on the Temple of Olympian Zeus. *Ca.* A.D. 143 a wealthy Roman resident, Herodes Atticus, rebuilt in splendid marble the Stadium of Lycurgus, and later built an Odeum at the SW base of the Acropolis.

Between A.D. 143 and 159 the geographer Pausanias visited Athens, and the detailed account of the city which he gives in the first thirty chapters of his *Description of Greece* has been of great value in the identification of the ancient monuments. Except for some later Roman buildings, such as those mentioned in the preceding paragraph, the appearance of Athens in the time of Pausanias must have been much the same as in that of the apostle Paul a century earlier.

***ATONEMENT.** The English word "atone" is derived from the phrase "at one." To be "at one" with someone is to be in harmonious personal relationship with him. Similarly, "atonement" originally meant "at onement," or "reconciliation." In modern usage, however, "atonement" has taken on the more restricted meaning of the process by which the hindrances to reconciliation are removed, rather than the end achieved by their removal. "To atone for" a wrong is to take some action which cancels out the ill effects it has had.

Here the wider, more positive meaning sometimes given the word "atonement" will be largely ignored, since it will be dealt with under such headings as RECONCILIATION; SALVATION. The concern here will be to notice what is said in the Bible about the means by which obstacles to reconciliation between man and God may be removed.

In the OT the word "atonement" occurs frequently, even in the RSV. But it is not so in the NT. Even in the KJV the word occurs only once, and then to translate καταλλαγή at Rom. 5:11, and in the RSV this is replaced by "reconciliation," so that in the more modern versions of the NT there is no use of the word "atonement." Indeed, in all other contexts in the KJV, καταλλαγή is translated "reconciliation." Though, however, the word itself is absent from the NT, the idea which the word seeks to express is constantly present.

The Bible as a whole assumes the need for some "atoning action," if man is to be right with God. It is accepted as a fact beyond dispute that man is estranged from God, and is himself wholly to blame for this estrangement. His disobedience to the will of God—i.e., his sin—has alienated him from God, and this alienation must first be remedied if right relationships are to be restored. The barrier raised by man's past sins must be removed.

A. ***IN THE OT.*** The usual Hebrew word for "atone" is כפר. Probably its original meaning was "cover," though some have suggested that it was "wipe off." In its developed use, however, it is doubtful whether there was any awareness of its original meaning, since the word could be used of the effect, not only of sacrifices, but also of the scapegoat. Whereas a sacrifice may be thought of as "covering" sin, this metaphor does not fit the scapegoat, who "bore it away." The word therefore came to be used in a general sense of removing the effects of sin.

One purpose of the elaborate sacrificial system of OT religion was to provide such an "atonement," and the word כפר is frequently used in relation to sacrifice. In the ritual for the consecration of priests, e.g., it is required: "Every day you shall offer a bull as a sin offering for atonement" (Exod. 29:36). Similarly, the priests must make sacrifice for the sins of all the people that they may be forgiven (Lev. 4:20). So also in the ritual of the Day of Atonement the first of the two goats is slain (Lev. 16:9), but the second "shall be presented alive before the LORD to make atonement" (vs. 10). This live goat is driven out into the wilderness, laden with the sins of the people.

Atonement is therefore commonly associated with the death of a victim. It is not, however, exclusively so, for not only can the live scapegoat make atonement, but also the offering of money for the temple may be an offering "to make atonement for yourselves" (Exod. 30:16). Incense can be effective in making atonement (Num. 16:47), and Moses seeks to make atonement through prayer (Exod. 32:30).

Usually it is man who must make atonement to God, by offering something which will be thought adequate to make amends for the bad effects of his sin. But sometimes it is God who is said "to make atonement." In the RSV this is translated as "pardon" in II Chr. 30:18, and as "forgive" in Ezek. 16:63; Deut. 21:8; Ps. 78:38.

It has often been discussed how far these means of atonement were thought of as "propitiating" God, or alternatively as "expiating" the offense. The word "propitiation" suggests that God, alienated by man's sin, requires something to appease his anger before he will again show favor to the sinner. "Expiation" recognizes that a hindrance to right relationships has been created by the sin, and that this is removed by the means of atonement, but it does not locate the hindrance in God.

The word "propitiation," however, is not used at all in our English versions of the OT; and "expiation" occurs only rarely.

The fact that in some contexts it is God who "makes atonement" should make us hesitate to affirm that the hindrance to reconciliation lies in his reluctance to forgive, and his demand for some appeasement. Almost certainly this idea would be present in the early stages of religion, but the claim that it is not to be found in postexilic writings probably should be accepted. In these it is customary to speak of making atonement, not "to Jehovah," but "for the people." Sacrifice, therefore, should probably be interpreted as an endeavor to expiate sin (i.e., remove the barrier it has raised against God) rather than to appease the anger of God toward man. Certainly in the context of Isa. 6:7, where the prophet hears the assurance: "Your sin [is] forgiven" (כפר), the word unmistakably indicates the cancellation of sin and its consequences. So too in Prov. 16:6: "By loyalty and faithfulness iniquity is atoned for" (כפר), it is expiation and not propitiation which is meant.

On the other hand, in Gen. 32:20 the word "atonement" (כפר) is used to describe Jacob's offer of a gift to Esau to appease the resentment which Jacob so understandably expected to find. This, however, appears to be an isolated instance. Other uses of the word do not point clearly to the meaning "propitiate," and many favor "expiate."

Even if it be insisted that in sacrifice man was, indeed, aiming to make an offering to God which would change God's attitude toward him from one of hostility to one of friendliness, it must nevertheless be acknowledged that the sacrificial system itself is a means which God himself ordained and established for this very purpose. It is never a merely human device for overcoming God's reluctance to forgive. God was thought of as one who himself had provided the means by which his forgiveness could be obtained.

B. ***IN THE LXX.*** Before proceeding to the NT it is well to note the Greek words which are used in the LXX to translate the Hebrew words (כפר and its

derivatives) with which we have been dealing. The commonest are the verb ἐξιλάσκομαι (Exod. 30:15; Lev. 1:4; etc.) and the noun ἐξιλασμός (Lev. 23:27; Num. 5:8; etc.). The Hebrew word כפרת, which means the mercy seat, where God was believed to appear to declare forgiveness to his people, is translated by ἱλαστήριον (Lev. 16:2, etc.). Occasionally λύτρον is used (e.g., Exod. 21:30; 30:12).

In the NT, therefore, we must have before us such words as (ἐξ-)ἱλάσκομαι, (ἐξ-)ἱλασμός, ἱλαστήριον, and words derived from the same root. Also, attention must be given to λύτρον and words akin to it, such as λυτρόω, (ἀπο-)λύτρωσις, and ἀντίλυτρον.

Other words also, which have something of the same connotation, such as (ἐξ-)ἀγοράζω, must be borne in mind.

C. *IN THE NT.* Even though the word "atonement" does not occur in the NT, the meaning behind the word is constantly present. Here, however, it is no longer associated with the temple sacrifices, still less with payments of money, or incense, or even with prayers. It is related entirely to Jesus Christ and his coming to earth, and especially with his death upon the cross (*see* DEATH OF CHRIST). Words had to be found to declare that in Christ is that which overcomes the estrangement between man and God. It was inevitable that these words should largely be drawn from the familiar practice of sacrifice, partly because in this there was language all would understand, and partly because his death by crucifixion, with the actual shedding of blood, had so many unmistakable similarities to the actual practice of sacrifice.

The NT declares that in Christ and his death is all that man needs in order to find his sins forgiven and his life reconciled to God; in him is that which can cancel out the ill effects of sin, release man from the burden of its guilt, and grant him peace with God.

1. Man's need of atonement. The NT assumes man's need of being put right with God, and his own helplessness to put himself right. Man's life in its natural state is in a condition of estrangement from God. Men are "estranged and hostile in mind, doing evil deeds" (Col. 1:21), "without God in the world" (Eph. 2:12), and "alienated from the life of God" (Eph. 4:18). They are "enemies of God" (Rom. 5:10), and "hostile to God" (Rom. 8:7). This was obviously true of Gentiles, but it is affirmed that Jews, in spite of their great privileges, are in the same dire need (Rom. 3:23).

2. The cause of man's need. The cause of man's estrangement from God is the sin of man, his persistent disobedience to the will of God. God is a holy God. In spite of his great love and boundless mercy, he cannot treat sin as though it did not matter, for it corrupts and degrades human life, and thwarts all the purposes of God for man's good. God stands ready to forgive and to heal the penitent sinner, but where man continues deliberately and defiantly in his wrongdoing, God by his very nature cannot be complacent about it or indulgently indifferent to it. Dreadful penalties are ordained as a consequence of sin. "God is not mocked, for whatever a man sows, that he will also reap" (Gal. 6:7). This law of retribution is part of what is meant by the wrath of God which rests upon the unrepentant sinner (Rom. 1:18), and which finds expression in the solemn warning: "The wages of sin is death" (Rom. 6:23). Indeed, the sinner is already "dead through . . . trespasses and sins" (Eph. 2:1).

3. The means of atonement. The NT declares frankly and uncompromisingly God's unremitting antagonism to sin, and the terrible consequences which he has determined shall follow it. He does not, however, hold aloof in cold contempt from the sinner, or turn from him with implacable resentment. Rather, he comes again and again seeking to deliver man from this evil thing which is destroying him, and holding him apart from God. Especially he has come in a final gesture of love and mercy in his Son, Jesus. The purpose of his coming was to seek and to save the lost. In fulfilment of this purpose he became known as the "friend of sinners." Not only did he come to earth, and live humbly among men, going about doing good and healing all that were oppressed by evil; he died at the hands of sinful men for man's sake. And all this was done for men who were still sinners. "While we were yet sinners Christ died for us" (Rom. 5:8).

The atoning work of Christ is particularly associated with his death on the cross. "He came to give his life as a ransom for many" (Mark 10:45). "We were reconciled to God by the death of his Son" (Rom. 5:10). "We have been brought near in the blood of Christ" (Eph. 2:13). "He himself bore our sins in his body on the tree" (I Pet. 2:24). Christ was "offered once to bear the sins of many" (Heb. 9:28). On this subject the writers of the NT speak with one voice. As he himself declared, the New Covenant, the possibility of a new relationship between man and God, is in his blood—i.e., inaugurated and made effective in his self-giving on the cross (I Cor. 11:25).

This utter self-giving of Christ, even in death, is the means of man's return to God. He is the new and living way to God (Heb. 10:20). Through him we have access to the Father (Eph. 2:18).

This access, however, is ours only "through our faith in him" (Eph. 3:12). What God has provided must be appropriated by faith. "God put [Christ] forward as an expiation by his blood, *to be received by faith*" (Rom. 3:25).

4. Source of atonement. Even the OT sacrificial system, by means of which it was claimed that man could find forgiveness from God, was thought of as an ordinance instituted by God, in order to provide for man's need. Still more in the NT we find that the new means of atonement is proclaimed, unanimously and insistently, as the gift of God to man. Christ's coming to earth and his self-giving on the cross for man's sin are all God's doing. Nor is it merely that God conceived and initiated the plan; God was in Christ actually carrying it forward to completion.

The NT does not lend support to theories of the Atonement which put Christ in contrast to the Father, as though the merciful Christ had to induce the severe Father to some grudging act of forgiveness which of himself he would not have committed. What Christ did for man, God himself was doing in Christ. "God was in Christ reconciling the world to himself" (II Cor. 5:19). ". . . Jesus Christ, whom God put forward as an expiation by his blood" (Rom. 3:25). "He . . . did not spare his own Son, but gave him up for us all" (Rom. 8:32).

5. The consequences of atonement. The immediate consequence of atonement is that man's relationship with God is restored; he has peace with God. This finds various ways of expression. Since it is sin that disrupts this relationship, and sin represents the victory of Satan, "the Son of God appeared . . . to destroy the works of the devil" (I John 3:8). "Christ . . . died . . . that he might bring us to God" (I Pet. 3:18). The way to God has been opened (Heb. 10:20). We are "justified by his blood" (Rom. 5:9), and reconciled by his death (vs. 10). Christ "died . . . that . . . we might live with him" (I Thess. 5:10).

From this restored relationship with God come all kinds of other good things. The sinner's conscience is cleansed, and he is equipped with new moral power (I Pet. 1:18). Man is delivered from the tyranny of self and enabled to live for Christ, with Christ reigning as Lord in his life (II Cor. 5:15; Rom. 14:9). All these good effects of the atoning work of Christ are gathered up in the word "salvation."

6. The words and symbols used to interpret the Atonement. The NT does not explain how Christ is able to cancel out the effects of man's sin and reconcile him to God. It is content to affirm the truth of it in an abundance of vigorous metaphors. It is the problem of theologians, basing their arguments on the data of the NT, to seek an explanation, and to determine how far the picture language of the NT should be interpreted literally or only metaphorically.

a. Sacrificial terms. Not surprisingly, the atoning power of the death of Christ is frequently expressed in terms taken from the sacrificial practices of Judaism, where atonement was associated with the shedding of the blood of an animal victim and its consequent death. Christ's death is called a "sacrifice for sins" in Heb. 10:12 and a "sacrifice to God" in Eph. 5:2. The "blood" of Christ is often mentioned as of special significance. This cannot mean the physical blood, but rather the life of Christ as it is yielded up to God in complete obedience to his will. This is in accord with the OT belief that "the life . . . is in the blood" (Lev. 17:11; cf. Gen. 9:4).

The Letter to the Hebrews links the power of Christ's death quite precisely with his unfaltering obedience to his Father's will (Heb. 10:7-9; cf. Mark 14:36). Paul too makes special mention of this element in the Cross: Christ became "obedient unto death, even death on a cross" (Phil. 2:8). This utter yielding of himself in full surrender to God's purposes is one element in the complete effectiveness of his work.

It is the task of theologians to decide whether these sacrificial metaphors imply that Christ's death is best understood as itself a sacrifice to God, or whether they are merely vivid ways of declaring that what the Jews sought to achieve by sacrifice has, in fact, been fully accomplished by Christ.

b. Lamb of God. Another metaphor which is usually understood as "sacrificial" is the title ascribed to Jesus: "Lamb of God." Paul speaks of "Christ, our paschal lamb," who has been sacrificed (I Cor. 5:7); and in John 1:29, 36, Jesus is referred to as the "Lamb of God, who takes away the sin of the world."

The difficulty in John 1:29 is that the paschal lamb is not a sin offering. John therefore seems to be combining in his affirmation two separate truths: (*a*) Jesus may be thought of as the paschal lamb, because his death heralds our great deliverance from bondage, and a share in his blood delivers us from destruction and secures our salvation. (*b*) Jesus takes away sin (as the goat on the Day of Atonement was believed to do). It may be, however, that the paschal lamb is not in John's mind, but rather the lamb mentioned in Isa. 53:7-8. Indeed, the so-called "Servant passages" in the later chapters of Isaiah have very greatly influenced the NT understanding of the significance of the death of Jesus.

Other references to Christ as the Lamb are in Revelation (5:6, 12; 13:8; etc.). In the older versions, but not in the RSV, 13:8 was translated to refer to the "Lamb slain from the foundation of the world." This translation is open to dispute, but it did serve to declare the truth that the Atonement is not a single act on Calvary, but an eternal fact in the character of God himself. Christ on the cross is the incarnation of the eternal, suffering love of God for man. I Pet. 1:20 suggests this same truth when it speaks of Christ's death as "destined before the foundation of the world, but . . . made manifest at the end of the times for your sake." The basic fact of the Cross is not something new, but an eternal truth about God.

c. Ransom (λύτρον). Mark 10:45: "The Son of man . . . came not to be served but to serve, and to give his life as a ransom for many," is the saying which, understood literally, has given its name to a well-known theory of the Atonement, as though the life of Christ were actually an agreed price paid to secure for man freedom from bondage to Satan, although it is far from clear to whom the ransom is to be paid.

Not only the word "ransom" but also the Greek phrase "for many" (ἀντὶ πολλῶν) is claimed as strong support for a substitutionary theory of the Atonement. The accurate meaning of ἀντὶ is, indeed, "instead of." In Hellenistic Greek the preposition is, however, not always used precisely, and there are cases where it is merely a synonym for ὑπέρ, meaning "on behalf of" (e.g., Matt. 17:27). Almost certainly Isa. 53 is once again influential in this saying.

It may be argued, however, that the word "ransom" is merely a vivid metaphor by which our Lord is declaring it to be his purpose to set men free from their present bondage, as Paul declares in Gal. 5:1: "For freedom Christ has set us free."

I Tim. 2:6, with its use of ἀντίλυτρον, seems clearly to echo the above passage. Cf. also the use of λυτρόω in Tit. 2:14.

d. Redemption. The word ἀπολύτρωσις is normally translated "redemption." By derivation it is clearly linked with λύτρον, and should mean "deliverance by the payment of a ransom." Certainly the idea of "freedom from bondage" is prominent in the meaning of the word, but it is doubtful whether the payment of a price has remained an integral part of the word's meaning. At any rate, the meaning of the word in Eph. 1:7; Col. 1:14 is further explained as simply the "forgiveness of sins."

In these contexts this forgiveness (redemption) has been already bestowed. Elsewhere (e.g., Rom. 8:23) the redemption referred to still lies in the future.

e. Propitiation or expiation. ἱλάσκομαι (Luke 18:13; Heb. 2:17), ἱλαστήριον (Rom. 3:25), and ἱλασμός (I John 2:2; 4:10), all from the same verbal root, carry the meaning "propitiate," "appease," in classical Greek. Indeed, the last two are translated in the KJV by the word "propitiation," though the RSV in each case changes it to "expiation." Our guide to the real meaning of the word should be the LXX rather than pagan classical usage, and in the LXX these words can be used without any reference to "appeasement."

In Luke 18:13 the verb ἱλάσκομαι means "be merciful to," and is used of God's attitude toward a penitent sinner. In Heb. 2:17 the object of the verb is not "God," but the "sins of the people." So it must mean "expiation" rather than "propitiation."

The noun ἱλασμός may be used to mean "propitiation," but need not carry this significance. E.g., in the LXX version of Ps. 130:4: "There is forgiveness with thee," the word "forgiveness" (סליחה) is rendered by ἱλασμός. There is no implication of "propitiation" in the Hebrew original. Its normal Greek equivalent would be ἄφεσις. ἱλαστήριον (Rom. 3:25) *may* be regarded as a noun formation meaning "propitiation," but modern commentators prefer other explanations. Some take it, not as a noun, but as an adjective, applied to Christ, and meaning "with reconciling power." Others, as the RSV, use "expiation." Still others point out that the normal use of the word in the LXX is to mean "mercy seat," the canopy in the Holy of Holies where God was thought to appear to declare forgiveness to his people. This is the meaning of the word also in Heb. 9:5. Therefore, it is claimed, the probable meaning in Rom. 3:25 is that Christ is the new mercy seat, his cross being the appointed place to which men may come to gain assurance that their sins are forgiven them.

There is therefore no clear case for insisting that any of these words in its NT context implies that God's anger needs to be placated by the sacrifice of Christ on the cross.

f. "Bought." (ἐξ-)ἀγοράζω means "buy," implying the payment of a price. It occurs in I Cor. 6:20; 7:23; Gal. 3:13; 4:5. It belongs to the same context of thought as the payment of a ransom. But the metaphor may seek to declare, not so much the means by which an end is achieved, as the end which is attained. In this case it is the truth that man now belongs utterly to God ("you are not your own") which is being emphasized.

The fact that ἐξαγοράζομαι in Eph. 5:16; Col. 4:5 is used metaphorically of "redeeming the time" (KJV), to mean "making the most of the time" (RSV), is a pointed reminder that the literal meaning should not necessarily be stressed.

D. *CONCLUSION.* It is sin which has created the need for atonement, because sin, besides corrupting the heart and deadening the conscience and making man increasingly prone to sin again, causes man to be estranged from God, separated from God by an unseen barrier, a "dividing wall of hostility" (Eph. 2:14). This barrier of separation God in Christ has broken down. Christ reconciles man to God and gives him peace with God. It is one task of theologians to attempt to explain how Christ in his self-giving on the cross has achieved this end. No precise explanation, however, is offered in the NT, nor has the church officially sponsored any one of the theories of the Atonement which have been propounded. But both church and NT agree in declaring with full assurance the *fact* of the Atonement—that God has himself prepared the way by which man may be reconciled to him, and the means by which the evil consequences of past sin can be annulled. This Way is Christ. This Means is Christ. "He is our peace, who . . . has broken down the dividing wall of hostility, . . . that he might . . . reconcile us . . . to God" (Eph. 2:14-16).

***ATONEMENT, DAY OF** [יום (ה)כפרים, (the) day of coverings *or* propitiations (Lev. 23:27-28; 25:9); LXX ἡμέρα ἐξιλασμοῦ (Lev. 23:27-28), τῇ ἡμέρα τοῦ ἱλασμοῦ (Lev. 25:9)]. Alternately: ATONEMENT [הכפרים], with DAY implied (Exod. 30:10 [LXX τοῦ ἐξιλασμοῦ]; Num. 29:11 [LXX τῆς ἐξιλάσεως]). The great annual fast day of Judaism, the tenth day of Tishri, described in Lev. 16, on which, when the temple stood, the high priest entered the holy of holies to atone for the sins of all Israel; now known as Yom Kippur. In the NT, ἡ νηστεία, "the fast," is the title (Acts 27:9). Other titles are "the feast of the fast" (Philo); "the Day," or "the Great Day" (Mishna).

The annual Day of Atonement is the only fast day prescribed in the Mosaic law. Its rites are set forth in Lev. 16, and supplementary stipulations about its observance are found in Lev. 23:26-32; Num. 29:7-11. Though apparently developing late, it played a formative and influential role in the whole of Judaism, especially in the two or three centuries just before the rise of Christianity. The spirited account of it in the Tractate Yoma in the Mishna shows this, as do the exalted references to it in many other Jewish sources. Further, in the NT the passion narratives, the Letter to the Hebrews, and the writings of Paul are all in various ways under its impact. This vitality helps also to explain the fact that the Day of Atonement survived the destruction of the temple, even though its rites epitomized the sacrificial system.

The words "you shall afflict yourselves" (Lev. 16:29; 23:27, 29; Num. 29:7) designate the Day as a fast. But it was also a "sabbath of solemn rest" (Lev. 16:31; 23:32)—literally, a sabbath of sabbatical observance, on which all work ceased (Num. 29:7). Its complex series of rites, of diverse origin, were unified by a single purpose: to ward off the wrath and make available the protection of the holy God who dwelt in the temple in the midst of his people (Ezek. 43:7-9; 48:35). The function of the sprinkling of blood and of the dismissal of the scapegoat was the same: to cleanse Israel, its priesthood, and its temple from the pollution of sin.

The whole exilic and postexilic period of Judaism was increasingly troubled by the sinfulness of man and the holy justice of God. On the one hand, among Ezra and his rabbinic successors, this produced an intense mood of moral and legal obligation. But on

the other, in the priestly movement, it led to new developments in worship so that contrition, confession, and, especially, propitiation became increasingly prominent. The Day of Atonement embodies these motifs and brings this whole sacerdotal development to its climax. It has very appropriately been described as the "Good Friday of the OT."

1. Origin. The canonical references to the Day of Atonement are confined to the priestly writings. As is true of the cultus as a whole, we are told Moses instituted it. But this may have the same meaning as the common statement of Christians today that a given practice or teaching is "biblical." The death of Nadab and Abihu (Lev. 10:1 ff) serves as a warrant for the Day; and it stresses the sovereign holiness of God, which they had ignored. Jub. 34:17 associates the origin of the Day with the mourning of Jacob for Joseph (Gen. 37:29 ff). But this is the only attempt to reinterpret this symbolic cultic institution as a historical memorial.

Ezek. 40–48 provided the climate in which the Day of Atonement could develop. The architectural plans and the expiatory character of the guilt and sin offerings honor the holiness of God who dwells in Israel's midst. But the Day as described in Lev. 16 does not seem to exist. In Ezek. 45:19-20 two days a year are designated for the cleansing of the temple. According to the more probable LXX reading, they fell on the first day of the first and seventh months respectively. This atonement of the temple corresponds most closely to the rite for the high priest in Lev. 16:11-14. It raises the important question of the relation of the Day of Atonement to the New Year. The observances in Ezekiel are very probably to be thought of as New Year ceremonies, assuming that an ancient autumnal New Year had not been fully supplanted by the spring observance of the priestly legislation (Exod. 12:2). It is to be noted also that the Year of Jubilee began on the Day of Atonement (Lev. 25:9). It is not easy to explain, however, why an interval of ten days should later separate the two observances. Some, drawing on analogies of Babylonian practice, suppose the Day of Lev. 16 was the culmination of a continuous complex of New Year observances. Others, troubled by the fact of the unusual ten-day interval, have tried to explain the problem as an attempt to synchronize a lunar year with a solar one. In any case, the atonement in Ezekiel is less complete than in Leviticus. A propitiation for the people as a whole does not occur, either by sprinkling of blood or by scapegoat. We must conclude that while a day of atonement was emerging, the Day of Lev. 16 did not yet exist. Special fast days were becoming increasingly frequent (Ezra 8–9; Zech. 7:3-5; 8:19). In Neh. 9:1, following an account about the teaching of the law on the first day of the seventh month and about the celebration of Tabernacles, we hear of a fast on the twenty-fourth day. No reference to the tenth day occurs, and the observances on the twenty-fourth bear little resemblance to those of the Day of Atonement. Apparently, even at this late date the Day was not yet generally recognized, but only by the temple priesthood. For it seems probable that the Day began as a priestly rite of propitiation which, through the assimilation or development of other rituals, gradually became a day of penitence and atonement for all. The spattering of the blood of the sacrifice seems to stand at the core of this development, rather than the scapegoat.

The question of the development of the Day in Israel involves the issue of the history of Lev. 16. In view of its repetitiveness, the occurrence of a doublet such as in vss. 6, 11, and the different ways of describing the scapegoat (vss. 8, 21), it has long been recognized that the writ is composite. Until recently, vss. 6-10, which contain rubrics for all three main rites, including the scapegoat, were considered all or a part of the original nucleus. Recently, under the influence of form criticism, this has changed. Vss. 11, 14-16, 20*b*-21, exhibit a characteristic ritual style. In vss. 14-16, in the rite of the goat of expiation, there is no reference to the scapegoat, though the two are treated together in vss. 5-10. This has increasingly led to the conclusion that vss. 5-10 are probably secondary to 11-16 though perhaps antecedent to 20*b*-21. The incorporation of the rite of the scapegoat into the Day of Atonement ritual may represent a concession to popular taste.

2. The rites. In later Judaism, the New Year again fell in autumn. Perhaps even before this transfer, preparation for the Day of Atonement began on the first day of the month with a "blast of trumpets" and a "holy convocation" (Lev. 23:23), to usher in a period of repentance. The Day itself, with its fast, began on the evening of the ninth day, at sunset, and lasted until the evening of the next day (Lev. 23:32). The strict abstinence included eating, drinking, washing, anointing, putting on sandals, and marital intercourse (Yom. 8.1; cf. Heb. 9:10). Only children and the sick were exempt.

Since he was the central figure in all the ceremonies, the preparation of the high priest was intense. Seven days before the Fast he left his home to take up residence in his apartment in the temple (Yom. 1.1). During these days he officiated at the daily burnt offering and rehearsed the solemn rites he was to perform on the Great Day. On the eve of the Day he ate very lightly, for he was to maintain an all-night vigil. The elders admonished him to be correct in the ritual and to weep at his vigil. During the night younger priests kept him awake by reading. On the morning, having bathed (Lev. 16:4), and in his finest array, he offered the burnt offering, which was elaborate on this day (Num. 29:8-11). Then he changed to the white linen garb of a penitent (Lev. 16:4) and was ready to officiate at the atonement ceremonies.

While overlapping at many points and forming a continuous liturgical action, it seems that there are three distinct rites: (*a*) the sacrifice for the priests, (*b*) the sacrifice for the people, and (*c*) the scapegoat.

a. The sacrifice for the priests. The sacrifice for Aaron and his house (Lev. 16:6) was a young bull,

the same as a priest's private sin offering (Lev. 4:3-11). The priest came to the animal at the usual place of slaughter in the area of the temple court (Yom. 3.8; cf. Ezek. 40:35-43). Before slaying it he placed his hands on its head and confessed his sins and the sins of his house. A similar confession prefaces each of the rites. All end with the pronunciation of the sacred name, the utterance of which survived on the Day long after it had otherwise ceased. According to the Mishna the casting of lots over the two goats (16.8) took place at this point and was followed by a repetition of the priest's confession (Yom. 4.2), but this is probably due to the composite character of Lev. 16:6-11.

With incense and the blood of the slain bull the high priest enters the holy of holies (Lev. 16:12-14). According to the Mishna this was done in two stages. First, with live coals on a censer in his right hand and a container of incense in his left, he entered to cense the shrine so that he might be safe from the divine mystery (Exod. 33:20). He set the smoking censer on the poles in the ark (Exod. 25:13-14) and, later, after the ark was lost, on the *Šetiyah*, or Foundation stone (Yom. 5.2). Then he retired to the nave of the temple to pray, but briefly, lest the people become terrified. He then took the blood from an attendant, who had been stirring it, to prevent its congealing, and entered the holy of holies for the second time. He sprinkled blood on the mercy seat (*kapporeth*) once, and seven times he spattered the ark with blood in front, to "cover" the pollution of the sins of the priests. He returned to the nave, and, setting the vessel with the bull's blood on a stand, he went out to perform the next rite, the atonement of the people.

b. The sacrifice for the people. The sacrifice for the people's atonement was a goat chosen by lot from two identical specimens presented in the area of the temple court N of the altar. There was a special urn for the two lots, one marked "For the Lord," the other "For Azazel." Standing between the two goats and facing them, the high priest thrust both hands into the urn and brought up a lot in each hand. Then he brought down the lots in his hand on the heads of the rams as he stood before them and uttered the dedication: "To the Lord," pronouncing the name. To this, as in the case of all the confessions, the attendants responded: "Blessed be the name of the glory of his kingdom forever and ever" (Yom. 4.1). A red ribbon was tied to the goat for Azazel.

The priest slaughtered the other goat, and with its blood he entered the sanctuary for the third time to sprinkle the ark seven times with the sacrifice of the people. Then, returning to the nave, he exchanged the vessel of goat's blood for the one with the blood of the bull and sprinkled the veil facing the ark seven times. Then, once more taking the goat's blood, he did the same. He then combined the remainder of the blood in the two vessels and proceeded with the anointing of the horns of the golden altar of incense (Exod. 30:1-10), which stood before the veil and was a symbol for the prayers of all Israel. With his fingers he sprinkled it with blood to rid it of Israel's uncleanness. Thus the instruments of the cultus on which the relation between God and Israel depended were again "holy" and usable by God. We are told that the priest took the remainder of the blood and poured it out at the base of the altar of burnt offering and that an underground channel carried it thence to the Kidron (Yom. 5.6). There it was collected and sold to gardeners as manure—a startling statement which serves to remind us that the blood was sacred and effective, not by its intrinsic nature, but by the action of God through it in the divine priestly institution which was his gift to Israel.

c. The scapegoat. If the sacrifices of the bull and the goat effect the removal of Israel's pollution of its cult forms, the rite of the scapegoat serves to remove the guilt resting on the people themselves. Scholars have shown the wide prevalence of rites involving the transferral of contamination or guilt. Among the ancient Hittites we learn of a woman and a goat of multicolored wool driven through the camp toward the camp of the enemy as a sacrifice to their god, who had brought the plague. In Israel itself the rite for the cleansing of the leper (Lev. 14:6-7) employs the idea. It occurs also in Zechariah's vision of the expulsion of wickedness (5:5 ff) and has its most profound OT application in the Suffering Servant in the book of Isaiah (cf. 53:6, 11-12). In the NT it stands at the center of the atonement by Jesus Christ.

We have noted that in Israel the goat was dedicated to the Lord, rather than to an alien power. It was originally probably thought of as becoming a desert demon when sent into the wilderness (Lev. 16:22). Demons, sometimes of goatlike form, were thought to inhabit the desert (Isa. 13:21; 34:14; Tob. 8:3; Bar. 4:35; Matt. 12:43). The original etymology of "Azazel" is uncertain, and the term seems to have had a variety of meanings from time to time. In connection with the scapegoat it connoted a complete removal, beyond the inhabited world. In Enoch (6:7; 8:1; 13) "Azazel" was the term for the chief of the fallen angels, synonymous with "Satan."

After the confession of sins on behalf of the people, accompanied by the laying on of hands, the high priest turned the goat over to a man appointed to lead him away. Increasingly the people participated in the goat's departure, pulling out its wool, pricking it, spitting on it, and urging it to begone (Barn. 7.8; Yom. 6:4). The route led over Kidron into the Judean wilderness. Stations were set up along the way. At the end of the route, at the edge of a cliff, the attendant tied an end of the scarlet thread around the goat's neck to a rock and then pushed it over the cliff to its death. The announcement of this completion of the rite was relayed to the temple by the stations along the route. However, according to legend, a scarlet thread tied to the door of the sanctuary turned white at the very moment the goat was pushed over the precipice, as a sign that the people were cleansed of their sins (Yom. 6.8; cf. Isa. 1:18).

This ended the rites of the Day of Atonement. The high priest laid aside his penitent's garb and put on his magnificent cloth of gold costume to offer burnt offerings at the great altar, together with the fat of the bull of sacrifice and the goat (Lev. 16:24). A man was appointed to take the rest of the remains outside the camp to be burned. Both he and the attend-

ant of the scapegoat became unclean and had to bathe and wash their garments before rejoining the community. Having completed the burnt offering, the high priest once more changed to the sacred white garments to enter the holy of holies for the fourth and final time, to bring back the censer which had stood there throughout the rites. Then, at sunset, he returned to his home and entertained his friends. The people danced and rejoiced. This was the moment when the words of Ps. 103:12:

> As far as the east is from the west,
> so far does he remove our transgressions from us,

were applicable; and about it Rabbi Akiba said: "How fortunate you are, O Israel! Before whom are you pure and who purifies you? Your father who is in heaven." Tabernacles began five days later, and "the joy of Tabernacles was the fruit of Kippur."

3. Significance. From what has just been said, it is evident that the Day of Atonement was a tremendous moment of renewal that permeated all Israel and united it in a solemn joy. Philo describes it as a fast that was a feast, "the greatest of the feasts" and "a seven of seven, a holier than the holy" (*On the Special Laws* II.xxxii). Ben Sirach was filled with awe at the splendor of the high priest through whose ministry God mediated forgiveness (Ecclus. 50:5 ff). On this day, it was said, for three hours Satan does not accuse Israel before God. It was a moment when the covenant relationship was pure and God's intervention was anticipated. In his brief prayer in the temple following the censing of the holy of holies, the high priest asked for a year of abundance and for the coming of Messiah (Gemara 53*b*).

On a Jewish cemetery in Delos two monuments to murdered Jews were discovered. They date from *ca.* 100 B.C., and on both, except for a change of name, there was inscribed the same prayer: "I invoke and beseech the most high God, the Lord of Spirits, and of all flesh, against those who by stealth have slain or poisoned the young unfortunate, Heraclius (Martin), spilling his innocent blood: may it happen even so to his murderers and their children. Master, whose all is, and you, angels of God, to you before whom all flesh humbles itself on this day in supplication: avenge the innocent blood, avenge it speedily." This prayer, with its obvious reference to the Day of Atonement, points to the established universal observance of the Day, in the Diaspora as well as in the Holy Land, at a relatively early date. What is more important, it shows that Israel believed that the cleansing from its sins accomplished by the rites and the forgiveness of God which this represented was the ground for faith in the redeeming action of God in behalf of his covenanted people.

The Day of Atonement was the most solemn expression of faith and worship developed by the priestly movement in postexilic Judaism. In its basic outlook it was profoundly theocentric, and its central function was to mediate the grace of God in forgiveness and redeeming action. While the symbol of the rabbinic movement, with its emphasis upon human obligation, was the two tables of the law placed in the ark (Deut. 10:5), the focal symbol of the priestly atonement rites was the mercy seat on it, where the sins of Israel were "covered." According to the Mishna (Yom. 8.8-9) repentance was indispensable if one were to participate in the fruits of the Day of Atonement; on the other hand, not the repentance but the sacred Day and its ordinances effect atonement until the Day of Atonement; but only the action of God through and by the cultus he himself had instituted could wipe out man's sin. The interpreters of the Day guarded against "subjectivism."

Since the rites were elaborate and meticulously performed as part of an institutionalized cultus, there was a danger that they would be performed for their own sake and that the understanding of their effectiveness should become separated from the divine action. This danger was probably not fully avoided. The Letter to the Hebrews refers to the Day of Atonement mainly to stress the eschatological finality of the event of Christian faith: the high priest entered an earthly sanctuary, annually; Christ has entered the heavenly sanctuary, once for all. But beneath this dominant messianic theme one also detects a subsidiary polemic that hints that the rites of the Day were considered self-sufficient. Heb. 10:4 implies that the blood of the bull and the goat was held to be potent per se. If so, this was an aberration. No magical power was attributed to the blood as such; the disposal of the surplus and the account of what was done with it, noted above, makes this clear. Israel, indeed, shared the view of the nature mysticism all around her that "life is in the blood" (Lev. 17:11). This may even account for the use of blood in the ritual. But its effectiveness in mediating forgiveness did not depend on its natural vitality, but upon the faith that God had chosen to use it. Likewise, in the New Covenant, the blood of Christ avails, not because it is human blood, but because it is the blood of God's elect One (cf. Heb. 5:5).

Driver, "Three Technical Terms in the Pentateuch," *Journal of Semitic Studies,* I (1956), 97-105.

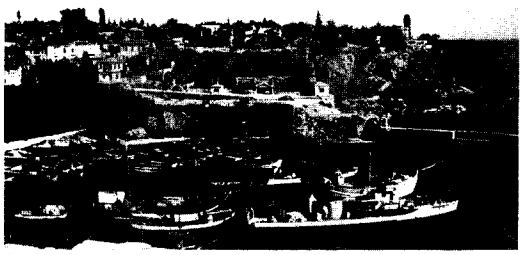
J. C. RYLAARSDAM

ATROTH ăt′rŏth. KJV translation of עטרת in Num. 32:35. *See* ATROTH-SHOPHAN.

ATROTH-BETH-JOAB ăt′rŏth bĕth jō′ăb [עטרות בית יאב, crowns (*or* sheepfolds?) of the house of Joab] (I Chr. 2:54); KJV ATAROTH ăt′ə—, THE HOUSE OF JOAB. A village near Bethlehem, listed as one of the "descendants" in the genealogy of Judah. The location is unknown. V. R. GOLD

ATROTH-SHOPHAN ăt′rŏth shō′făn [עטרת שופן] (Num. 32:35); KJV ATROTH, SHOPHAN. A city built by the Gadites in the territory conquered from Sihon. The name seems to be derived from that of the larger city of ATAROTH. It is probably Rujm 'Atarus, situated on a lofty hill *ca.* 1½ miles NE of the site of Ataroth, so located as to protect the latter.

Bibliography. N. Glueck, *AASOR,* XVIII-XIX (1939), 135-36.



S. COHEN

ATTAI ăt'ī [עתי, timely, *or perhaps an abbreviation of* Athaiah]. **1.** Son of Jarha, an Egyptian slave belonging to Sheshan; father of Nathan; mentioned in the genealogy of Jerahmeel (I Chr. 2:35-36).

2. Sixth in the list of warriors from Gad who went over to David at Ziklag (I Chr. 12:11).

3. One of the sons of Rehoboam by his favorite wife, Maacah (II Chr. 11:20). F. T. SCHUMACHER

ATTALIA ăt'ə lī'ə ['Ατταλεία]. A harbor city on the SW coast of Asia Minor. Attalia was founded by and named after Attalus II of Pergamum (159-138 B.C.) to be the chief outlet on the coast of Asia Minor W of Pamphylia. The city and port are mentioned in Acts 14:25. Fig. ATT 115.

115. The harbor of Attalia (modern Antalya)

Attalia (modern Antalya) still flourishes on a modest scale, and its port has preserved its picturesque ancient character. Fragments of the Hellenistic defenses can still be seen in the surviving medieval city walls. The most impressive ancient landmark is a triple gate built by Hadrian.

Bibliography. K. Lanckoronoski, *Städte Pamphyliens und Pisidiens* (1890), pp. 7-32, 153-63. M. J. MELLINK

ATTALUS ăt'ə ləs ['Ατταλος]. The name borne by three kings of Pergamum. Among those to whom the consul Lucius sent assurances of Roman friendship for the Jews (I Macc. 15:22) was Attalus II (*ca.* 200-138 B.C.), founder of Philadelphia, the city named for him in deference to the "brother-loving" loyalty he had shown toward his predecessor, Eumenes II.

J. C. SWAIM

ATTHARATES ăth'ə rā'tēz ['Ατταρατή (B), Αθαρατης (A), Αθαρασθας (Luc.)]. A corruption of the title TIRSHATHA (תרשתא; Neh. 8:9=I Esd. 9:49—G 9:50).

ATTHARIAS ăth'ə rī'əs ['Αθθάριας] (I Esd. 5:40); KJV ATHARIAS. An official, named with Nehemiah, as giving orders to the priests among the returning exiles. N. TURNER

AUGIA. KJV form of AGIA.

AUGURY [נחש]. A form of DIVINATION. The term "augury" properly refers to the practice of the Greeks and Romans to foretell future events by the flight, chattering, or singing of birds. This method was practically unknown in ancient Mesopotamia and Palestine (but see Eccl. 10:20 for a possible allusion to it). I. MENDELSOHN

AUGUSTAN COHORT ə gŭs'tən kō'hôrt [σπεῖρα Σεβαστή; Lat. *cohors Augusta*] (Acts 27:1). A term of disputed meaning. Inscriptions attest the presence of an Augustan cohort (*Cohors I Augusta*) in Syria after A.D. 6 and at Batanea in the time of Agrippa II (*ca.* 50-100). Acts 27:1 probably refers to this cohort. We may suppose (*a*) that Luke was aware of the fact that of five auxiliary cohorts stationed in Caesarea, one bore the honorary cognomen *Augusta;* (*b*) that Luke designates the name of the cohort less to define Julius than to promote the prestige of Paul by placing Paul in "Augustan" custody; and (*c*) that although, in general, auxiliary cohorts (*see* COHORT) in the Roman army were mustered from the localities in which they were stationed, and in particular, according to Jos. Antiq. XIX.ix.1-2; XX.viii.7 (see also War II.iii.4, with footnote, vol. II of Josephus, Loeb Classical Library, p. 343), the Roman troops stationed in Caesarea were for the most part local people from Caesarea and Samaria (Sebaste), nevertheless, it is quite gratuitous to suppose that Luke misunderstood *Sebastene* (="of Sebaste"=Samaria) for Sebaste (=Augustan) or that "Augustan Cohort" is a (wilful?) mistranslation of "Cohort of the Sebastenes." Although the troops may have come in the main from Sebaste (=Samaria), Luke is not the least concerned with their provenance; he is, rather, concerned with the prestige which falls upon Paul from the bright imperial name of Augustus.

Given Luke's intent, there appears to be no need to attempt to show that "Augustan cohort" was a popular name for the corps of officer-couriers (*frumentarii*) detailed for communication service between the emperor and his armies and responsible, among other things, for conducting prisoners to Rome. Nor is it necessary to question whether an important prisoner like Paul would be handed over to a centurion of a Syrian auxiliary troop. To Luke, Julius and Augustus were prestige-carrying Roman names. What rabble the cohort was composed of was not important; the weight falls wholly on the fact that Paul was put in charge of a (Roman) centurion, of the Augustan cohort, Julius by name.

AUGUSTUS ə gŭs'təs [Αὔγουστος, *from* Lat.]. The title given by the Roman Senate on Jan. 16, 27 B.C., to Gaius Julius Caesar Octavianus, founder of the Roman Empire and ruler of the Mediterranean world at the time of Jesus' birth (Luke 2:1). The title means "reverend," and when translated into Greek, it bore implications of divinity. It was borne by later Roman emperors and, with a feminine ending, by empresses; but when used as a name by itself, it refers to its most famous bearer. Figs. AUG 116-17.

Born on September 23, 63 B.C., into a family which had recently acquired senatorial rank, young Gaius met Julius Caesar (*see* CAESAR, JULIUS), his great-uncle by marriage, in 46. The next year the dictator adopted him in his will but did not make this fact

public, and it was only after Caesar's murder and the reading of the will in 44 that the young man changed his name from Gaius Octavius to that given above. He first broke with Mark Antony, who had been Caesar's chief aide, and appealed to Caesar's troops for support. Supported halfheartedly by the Senate, he soon decided to break with it, and in 43 he occupied the city of Rome, where he was elected consul. His next move was to join Antony and the latter's ally Lepidus, forming a "triumvirate" with them and putting to death three hundred senators (including the famous orator Cicero) and two thousand knights. They next moved against the forces of Brutus, Caesar's murderer, and defeated them; then Antony and Octavian sent Lepidus off to Africa (he ultimately died as Pontifex Maximus in 13 or 12 B.C.). Antony married Octavian's sister Octavia, and the two active leaders of the Triumvirate proceeded to defeat the forces of an old-fashioned republican general in Sicily.

In the years after 41, Antony was chiefly engaged in the East, preparing and finally waging a war against the Parthians which Caesar had planned. In 36, however, he was beaten back by the Parthians and retired to Alexandria, where he fell under the spell of Cleopatra VII, queen of Egypt and former mistress of Caesar. He was so infatuated, and so politically inept, that he promised to give her and her children (both Caesar's and his) territories in the East which belonged not only to foreign kings but also to Rome itself. After 35 he abandoned Octavia; in 33 he married Cleopatra; in 32 he divorced Octavia. The following year Octavian was able to persuade the Senate to declare war on Cleopatra. Antony and Cleopatra advanced as far as the bay of Actium (Greece). Attacked by Octavian's troops by land, they attempted to withdraw their fleets to Asia Minor, but almost all of Antony's fleet was captured, and in 30 Octavian invaded Egypt. Both Antony and Cleopatra committed suicide, and Egypt became a Roman province.

Octavian had promised in 36 that he would restore the republic, and there is no reason to believe that he was not sincere. It was evident, however, that to turn the seventy legions now under arms over to the Senate could lead only to further troubles, and he therefore retained control over the army and foreign affairs, while restoring the operation of civil government to the Senate (sharply reduced in numbers) and the equestrians. In 27 he offered to resign his various offices; the Senate refused his offer and instead voted him the title "Augustus" as a person commended to gods and men. The Senate recovered control over Rome, Italy, and those provinces which did not need to be guarded by legions. Augustus had proconsular authority over the others and directed the work of their governors, men responsible only to him. Over a period of time he came to make more use of the perpetual tribunitian power which had been voted him in 30; this meant that he convened the meetings of the Senate and was the supreme criminal judge of the state. And he carefully observed the forms of republican rule, consulting the Senate and avoiding the trappings of royalty. This observance was obviously formal, for he actually controlled the imperial provinces with their legions and had been given the right to make binding treaties with foreign powers. The fact that he summed up his position in the title *princeps* ("first citizen") is irrelevant when compared with his actual powers, though he himself was no despot.

Toward the end of his long life he arranged for his stepson and son-in-law, TIBERIUS, to become coregent; and when he died, Tiberius succeeded him. He also arranged for an inscription to be published in the provinces and at Rome; this has been recovered almost completely and describes the emperor's accomplishments (*res gestae divi Augusti*) in relation to honors given him, expenditures for public pur-

poses, and achievements in war and peace. Among his construction projects were many temples, since he was anxious to restore Roman religion, at a fairly low ebb in the first century B.C., and to provide the state with the protection of the gods. "In my sixth consulship [28 B.C.] I repaired eighty-two temples of the gods in the city." In the provinces he accepted and encouraged the building of temples, not to himself alone, but to "Rome and Augustus." He was unenthusiastic about foreign cults except those of the Greeks which were "ancient and well established" (Suetonius *Augustus* XCIII).

Among Romans of every class there was strong admiration for him as the bringer of peace and prosperity to the inhabited world. An inscription celebrating his birthday in 7 B.C. states that "it is hard to say whether the birthday of the most divine Caesar is more joyful or more advantageous; we may rightly regard it as like the beginning of all things, if not in the world of nature, yet in advantage; everything was deteriorating and changing into misfortune, but he set it right and gave the whole world another appearance. . . . The birthday of the god was the beginning of the good news [cf. Mark 1:1] to the world on his account." And in the last year of his life, as Suetonius tells us (*Augustus* XCVIII), "as he sailed by the gulf of Puteoli it happened that from an Alexandrian ship which had just arrived there the passengers and crew, clad in white, crowned with garlands, and burning incense, lavished upon him good wishes and the highest praises, saying that it was through him they lived, through him they sailed the seas, and through him they enjoyed their liberty and their fortunes." There is no reason not to regard this offering of divine honors as spontaneous. He died on August 19, A.D. 14, and was deified by the Senate a month later. *See* EMPEROR-WORSHIP.

Popular, determined, fortunate, and long-lived, Augustus left a deep impress on the empire which he founded, and it followed the general lines he had established for the succeeding three centuries. No later emperor was remembered so favorably.

AURANUS ô rā′nəs [Αυράνος] (II Macc. 4:40). Leader of an insurrection in Jerusalem in the time of the Maccabees. J. C. SWAIM

AUTEAS. KJV Apoc. form of HODIAH 2.

AUTHOR OF LIFE (Acts 3:15). An expression referring to Jesus. The word translated "author" (ἀρχηγός) is translated in Acts 5:31 as "leader"; and in Heb. 2:10; 12:2 as "pioneer." It refers in all cases to Jesus. The word is used by Plato (*Timaeus* 21.E) of an Egyptian goddess who is the "founder" of a city. In Acts 3:15 he who was crucified is recognized as the founder of a new life, which his followers now share with him. B. H. THROCKMORTON, JR.

AUTHORITY [שלט, to be master of, have dominion over; ἐξουσία; Lat. *auctoritas*]. In the Bible, as in modern usage, authority is closely connected with power, though usually, but not always, distinguished from it. Its meaning covers the actual possession or use of power, the legal or moral right to exercise it, the domain (dominion) within which it is exercised, and the person or precedent appealed to in support of action or opinion. The focus of biblical usage is in the authority which belongs to God alone, all other authority being subordinate and derivative. This same divine authority was exercised by Jesus and claimed by him for the church.

1. In the OT. The concrete Hebrew language has no word for the abstract notion of authority. The KJV uses the word "authority" only twice in the whole OT. The LXX translates a number of Hebrew words, the chief being שלט, by ἐξουσία, though always in a late text. But there is sufficient to indicate, nevertheless, that the chief ingredients of the biblical notion are present. It is used of the seizure or exercise of political power (Neh. 5:15; Esth. 9:1; Eccl. 8:9); it can be distinguished as the legal right rather than the power to do a thing; it can be used to indicate the realm governed rather than the authority exercised (II Kings 20:13; Ps. 114:2); it can be used of the absolute authority wielded by the king (Eccl. 8:4), or of the life-and-death authority by king and judge (Ecclus. 9:13). When these ideas are applied to God, it is seen that his authority is absolute—everlasting, universal, and unquestionable (Dan. 4:34-35). But in his steadfast love he has imparted some authority to the natural order (the sun "rules" the day, and the moon and stars the night; Ps. 136:7-9). The relationship of human authorities to the absolute divine authority is articulated, instead of in words, in the mutual relationships of king, priest, and prophet. Surrounding peoples regarded their kings as divine beings, or descendants from gods, and so provided some sort of theological basis for the despotism they exercised. But in Israel and Judah the power of the monarch, though great, was always recognized as part, and not the supreme part, of a manifold delegation of authority by God. King, prophet, priest, judge—these together exercised the divine provision of ordered government. Kings must rule in righteousness, judges deal justly, priests make due expiation for sin; the watchman over all was the prophet, bound to no earthly master, servant only of God, speaking with divine authority the judgments of the Lord on church and state alike. The theology of this multiform authority was never stated explicitly in the OT; but it forms the fruitful basis for the insights of the NT.

2. In the NT. In Jesus Christ there has been a new disclosure of what divine authority is like. As incarnate Son of God he taught with authority (Mark 1:22), not as the scribes, appealing elsewhere; not even, we may add, as the prophets, declaring: "Thus saith the Lord," but with authority: "I say to you . . ." (Matt. 5:22, 28, 32, 34, 39, 44). He forgave sins, deliberately accepting the scribes' point that to do so was God's prerogative (Mark 2:10). He exorcized demons, agreeing with his opponents that to do so was either a divine or a demonic activity (Luke 11:14-20). Even before his ministry began, he defeated Satan, to whom God had given authority on the earth (Luke 4:1-13, especially vs. 6; I John

5:19). He claimed to have the authority of life and death over himself, which rightly belonged to God alone (John 10:18). He claimed that all authority was his (Matt. 28:18; John 17:2), and he gave his followers the right they did not otherwise possess to become sons of God (John 1:12). His kingdom was universal and eternal (II Pet. 1:11), and even his trial showed that his sentence by human authorities was within the authority of God (John 19:10-11).

3. Subordinate authorities, human and superhuman. With this new conception of the range and power of God's authority, the NT claims all other authority as subordinate to him. "There is no authority except from God" (Rom. 13:1) appears in a political context, but it asserts the final truth about all authority other than God's. Because Christians are sure of God's authority, they can use the word to describe a human magistrate, though they can also realize that obedience to God must always take precedence over mere political obedience (Acts 4:19). But the greatest advance of NT thought was to claim that the whole world of supernatural beings and their authority were entirely subordinate to God. That Christ had been raised "far above all rule and authority and power and dominion" (Eph. 1:21) was their way of saying that no powers, human or superhuman, could undo what God had done in Christ. Most of all, Satan himself has authority in this world only within God's authority (Rev. 2:10, etc.), as has Antichrist (I John 4:1-6). So the Christian church can enunciate a conception of history where God's will is universally authoritative, and where the believer can gratefully accept all that God ordains. There is no possible basis for rebellion or complaint (Rom. 9:21). God can do as he will; his writ runs everywhere; his authority is absolute; and he has established his saving purpose in Christ.

Christ gave to his followers his own authority to forgive sins (Matt. 16:19; 18:18; John 20:23), to heal diseases (Luke 9:1), to expel demons (Mark 6:7), and to proclaim the coming of the kingdom (Matt. 10:7-8). J. MARSH

***AUTHORIZED VERSIONS.** The term used to denote ecclesiastically endorsed translations of the English Bible. The Great Bible (1539), prepared by Miles Coverdale at the request of Cromwell, was the first Authorized Version. Printing was started in Paris, but, being interrupted by the Inquisition, was transferred to London. This Bible was set up in massive pages, hence the name of "Great Bible." The text was essentially from TYNDALE'S VERSION and the Matthew Bible. The Bishops' Bible (1568), the second Authorized Version, was edited by Archbishop Parker, with the assistance of several bishops; hence the "Bishops' Bible." It was a revision of the Great Bible, but the Geneva Bible was also consulted. It was never endorsed by Queen Elizabeth, but was sanctioned by the bishops at the Convocation of 1571. The third Authorized Version, the King James Version (1611), was projected in 1604 by James I. Fifty-four able scholars and churchmen (only forty-seven actually worked) were appointed to the task. The Bishops' Bible provided the basis, but Tyndale, Coverdale, Matthew, and the Great Bible were used. Latin versions, Luther's translation, and the Rheims NT were also consulted. Chapter divisions of Stephen Langton and verse divisions of Robert Estienne were introduced. No record of its official authorization exists, but it obviously was so regarded.

The Revised Version (1881-85) and the American Standard Version (1901) were official revisions of the King James. The Revised Standard Version (1946-52) is the latest revision. *See* VERSIONS, ENGLISH.

J. R. BRANTON

AVA. KJV form of AVVA.

AVARAN ăv′ə răn [Αὐαράν, beast-sticker(?); Vulg. *Saura*] (I Macc. 6:43-46); KJV SAVARAN săv′ə răn. Epithet or surname of Eleazar, fourth son of Mattathias. He died heroically at BETH-ZECHARIAH.

J. C. SWAIM

AVE MARIA ä′vī mə rē′ə, ä′vā mä rē′ä [Lat., Hail Mary]. An anthem in praise of Mary, the Lord's mother, composed of the salutations addressed to her by the archangel Gabriel and by Elizabeth, in Luke 1:28 and 42 respectively. Its earliest liturgical use occurs in the fifth-century Liturgies of Saint James (Jerusalem) and Saint Mark (Alexandria), where it is placed immediately before the commemoration of the saints in the Eucharistic Prayer of Consecration. The Roman mass first used the Ave Maria as an Offertory anthem for the Annunciation, a feast introduced at Rome in the latter half of the seventh century, whence it passed to other masses in honor of the Virgin and the mass for the fourth Sunday in Advent. As a popular devotion, it did not come into general use until the end of the twelfth century. With the addition of a nonscriptural, petitionary clause, the Ave Maria was officially admitted to the breviary of Pius V in 1568.

Bibliography. H. Thurston, "Hail Mary," *The Catholic Encyclopedia* (1907-53), VII, 110-12; R. J. Hesbert, *Antiphonale missarum sextuplex* (1935), pp. xxxviii-xxxix; H. Leclercq, "Marie (je vous salue)," *Dictionnaire d'archéologie chrétienne et de liturgie,* X, 2043-62. M. H. SHEPHERD, JR.

AVEN ā′vən [אָוֶן, *'āwen,* wickedness]. **1.** A place mentioned in the phrase "high places of Aven" in Hos. 10:8. This phrase is probably a figure of speech referring to the pagan sanctuaries at Dan and Bethel, and perhaps others near Samaria. It has been taken as a specific reference to Bethel, called Beth-aven in Hos. 4:15; 5:8; 10:5. By his use of the term, Hosea was calling the high places wicked and implying a comparison with other well-known shrines where idolatry was practiced. W. L. REED

2. An element in certain compound names. In the circles opposing the Canaanizing cult, the Canaanite divine names—e.g., El and Baal—were replaced with "Aven." Accordingly, instead of "Bethel," "Beth-aven" was used (Josh. 7:2; 18:12; I Sam. 13:5; etc.). *Biq'ath 'ăwen,* "the Valley of Aven" (Amos 1:5), is perhaps another instance; but a number of scholars try to emend the text. A. HALDAR

3. KJV translation of a place mentioned only in Ezek. 30:17 (RSV ON). Because the LXX has ἡλίου πόλεως, which is the usual rendering of the Hebrew

'ôn, HELIOPOLIS, the reading *'āwen* is generally taken as a pun writing of *'ôn*, effected by a change in vocalization only, on the basis of the homonymous noun *'āwen*, "idolatry." It may, however, be a simple error in punctuation. T. O. LAMBDIN

AVENGER OF BLOOD [גואל הדם, redeemer of blood]. The kinsman (brother, son; *see below*) of a slain man who, as his redeemer (*see* REDEEM), was duty bound to claim back his life from the slayer by killing him. Cf. the LXX rendering, ὁ ἀγχιστεύων τὸ αἷμα (Num. 35:19): "he who performs the kinsman's office with regard to blood."

In societies that lack a strong central authority the defense of private property and life is the task of the kinship group. The kinship group is both a defensive and an offensive unit: all are obliged to defend the right of any member, and all are accountable for the delict of any member. If a person is slain, his kin take vengeance for him upon the slayer, or on one or more of the slayer's kinship group. This in turn may give rise to countervengeance, and a blood feud, terminating at times only with the extinction of a family, is set in motion.

In biblical Israel the sovereignty of the kinship group over matters affecting its private interest was just beginning to be superseded by communal authority. Biblical law still recognizes the kinsman as responsible for prosecuting homicide (Num. 35:19). However, it sanctions retribution only within the bounds of talion ("a life for a life"; Exod. 21:23) and only on the person of the culprit (Deut. 24:16; *cf.* CRIMES AND PUNISHMENTS §§ A2, D2). Moreover, the law seeks to control the redeemer through the agency of the asylum, which, by giving refuge to the homicide from the hand of the redeemer, makes it possible for the juridical organs of the community to interpose between them. Once the case has come before the public court, the redeemer has no more say in the matter. If the court finds the slayer guilty of murder, the law requires that he be put to death. To be sure, execution is still the prerogative of the kinsman (Deut. 19:12), but he is not free to pardon or accept a monetary composition instead (Num. 35: 31; *see* CRIMES AND PUNISHMENTS § C2*a*; CITY OF REFUGE; BLOODGUILT). Though biblical law never replaced the private prosecutor for homicide with a public one, under the monarchy it appears that the king had the power to intervene and grant immunity to a slayer from the avenger (II Sam. 14: 8-11); to this extent, at least, even prosecution of the homicide had come under state control. However, the characterization of this procedure as guilty (vs. 9) shows that the right of blood redemption was yet regarded as so sacred that no abridgment of it could be held guiltless.

The following instances of blood redemption occur: (*a*) Gideon slays the Midianite killers of his brothers (Judg. 8:18-21). Since the culprits are non-Israelite, this may not reflect normal practice, for (*b*) Joab's slaying of Abner for killing his brother in combat (II Sam. 3:27, 30) is not considered legitimate (I Kings 2:5), whence it is to be inferred that slaying in combat does not normally privilege blood redemption. (This will account for David's failure to hold Joab guilty for killing Absalom.) (*c*) The Gibeonites secure the death of Saul's sons for his massacre of them (II Sam. 21)—extraordinary for its being a vicarious punishment (on which *see* CRIMES AND PUNISHMENTS § B2; BLOODGUILT). (*d*) A scrupulous refraining from vicarious punishment marks Amaziah's execution of his father's assassins (II Kings 14:5-6). (*e*) Finally, there is the fictitious, but instructive, case of the Tekoite woman (II Sam. 14:6-7), showing that redemption of blood was (paradoxically) carried out within a family as well—an internecine practice that sheds light on the fear of Rebekah in Gen. 27:45.

The kinsman's duty of redeeming blood is not to be confused with the actions of persons in authority undertaken to remove an imputed bloodguilt: e.g., David's execution of Ish-bosheth's assassins (II Sam. 4:11-12), and Solomon's execution of Joab (I Kings 2:31-33; cf. vs. 5 [RSV follows Luc. and OL reading the suffix "my" rather than the less pointed Hebrew "his"]). God's avenging of innocent blood is expressed by נקם, "avenge" (Deut. 32:43; II Kings 9: 7); דרש or בקש, "require, exact vengeance (for)" (Gen. 9:5; Ps. 9:12; Ezek. 33:6), with דם as the object. גאל דם, which refers to the kinsman's duty of redeeming family blood, is never used with God.

AVESTA ə vĕs'tə. The corpus of preachings of ZARATHUSHTRA and teachings of the Zoroastrian religion, written in a language known as Avestan, which, along with Old Persian, the language of the Achaemenian inscriptions (*see* PERSIAN, OLD), represents the most ancient known stage of the Iranian language group. The name for the Avesta in Pahlavi (Middle Persian) is *'pst'k* (Syriac *'bstg;* Arabic *'bstq, 'bst'*, and other forms)—i.e., *Apastāk* or *Abastāg*—for which the meaning "injunction" (of Zarathushtra) has been suggested. *See bibliography.*

The Avesta became known to the Western world only at the end of the eighteenth century through the efforts of the Frenchman Anquetil Duperron. After having studied the sacred texts preserved by the Parsi communities in Bombay and other parts of NW India, where immigrant Zoroastrians from Persia settled from the eighth century onward after the collapse of the Sassanian Empire under the impact of the Arab invasion (*see* PERSIA, HISTORY AND RELIGION OF, § D6) and the conversion of most of the inhabitants of that country to Islam, he published his edition of the *Zend-Avesta* in 1771.

Within the Avesta several groups of writings are to be distinguished: (*a*) *Yasna*, formulas of prayer and liturgy, part of which is known under the name of *Gāthā* (lit., "chant"), traditionally attributed to Zarathushtra and written in a language slightly different from the rest of the Avesta; (*b*) *Vispered*, addition to *Yasna* and also containing prayers and formulas; (*c*) *Yasht*, sacrificial hymns addressed to

individual deities; (*d*) *Vidēvdāt* (less correctly *Vendīdād*), or "law [*dāt*] against [*vi*] the demons [*dēv*]"; (*e*) *Nīrangistān,* which deals with matters of ritual; (*f*) *Hadōxt Nask,* a fragmentary text on the fate of the soul after death.

There is reason to assume that none of the groups of texts is complete, as a result of the long lapse of time between the date of composition of, e.g., the *Gāthā,* which presumably contain Zarathushtra's own words (early sixth century B.C.), and the accession of Ardashīr, the founder of the Sassanian Dynasty, at whose initiative the first codification of the Avesta, in all probability, was made (first half of the third century A.D.). In addition, a considerable portion of it became lost in the troubled centuries following the conquest of Iran by the Arab armies. The codified text of the Avesta, written in an especially designed alphabet, was accompanied by the so-called *zand,* a translation and commentary in Pahlavi. This term was and is sometimes used, wrongly, for the Avestan text itself.

In addition to the pitfalls resulting from the incompleteness of the Avesta in its present form, the interpreter is faced with several other problems. As in some other, similar cases, the Avestan corpus of writings is not homogeneous. The commonly used linguistic distinction between *Gāthic,* the language of a presumably more ancient character in which the *Gāthās* are written, and "Younger Avestan," the language of all the rest of the Avesta, has come to be recognized as misleading, since the phonological, morphological, and other differences between the two types of language have to be viewed in local, rather than in chronological, terms. In other words, these two types are not two subsequent phases of one and the same language or dialect, but rather two different languages or dialects which, for that matter, may be even more or less contemporaneous. Whatever the result of further investigation of this question may be, the terms *Gāthic* and "Younger Avestan" do not apply to the contents of the texts.

If the lifetime of Zarathushtra falls in the second half of the seventh and the first half of the sixth century B.C., the *Gāthās,* his own preachings, were composed within that period. In the case of the other writings the situation is more complicated. The *Yashts* may be taken as an example. A considerable amount of the materials they contain clearly date from a time prior to Zarathushtra's lifetime. In both religious beliefs and social institutions these materials show affinity with the *Rig-Veda,* the collection of sacred texts of ancient India and the oldest known document in Sanskrit (twelfth-tenth centuries B.C.), to such an extent that the assumption of a common origin is clearly indicated. This kind of materials can be safely assigned to the period in which ancient Indians and ancient Iranians still formed one community. In some cases it is even likely that their origin goes back to the even more ancient period of Indo-European linguistic unity. In the hands of the Zoroastrian doctors these Indo-European and Indo-Iranian materials were, of course, covered with a layer of Zoroastrian orthodox theology. They were, in other words, adapted to the accepted beliefs and dogmas of the Zoroastrian priesthood. On another line of approach, which has to be further pursued, analysis of the contents of the *Yashts* has resulted in the discovery of internal evidence leading to a tentative chronology of their composition. *See bibliography.*

The history of the Avesta text offers many obscurities. From both traditional Zoroastrian and non-Zoroastrian evidence it appears that the text went more than once through the process of collection, destruction, and recollection. Tradition holds, e.g., that one of the Arsacid kings (*ca.* 250 B.C.–A.D. 226; *see* PERSIA, HISTORY AND RELIGION OF, § D5) ordered the collection of the books surviving at the time. The existence of a written text in Arsacid times seems to receive confirmation from a statement made by Mani, the founder of Manicheism, in the third century A.D. that Zarathushtra "did not write any books, but his disciples after his death remembered [his words] and wrote the books which they read today." Another collection which in this and in the previous case is possibly to be taken as "collection of the oral tradition" took place in Sassanian times, this time in the newly invented, complex script of forty-eight characters of the Vulg. text known today.

Bibliography. Edition of most of the extant texts in the original script: K. F. Geldner, *Avesta* (3 vols.; 1886-95). A facsimile of *Yasna, Vispered,* and *Vidēvdāt* is to be found in *Codices Avestici et Pahlavici Universitatis Havniensis,* vols. VII-XII (1937-44), with introductions by K. Barr. For a survey of Avestan literature, see K. F. Geldner, "Awestaliteratur," in *Grundriss der iranischen Altertumskunde,* II (1896-1904), 1-39. A monumental and very complete dictionary of Old Iranian (Avestan and Old Persian) was written by C. Bartholomae; based on this dictionary are H. Reichelt's grammar, *Awestisches Elementarbuch* (1909); and F. Wolff's translation, *Awesta, Die heiligen Bücher der Parsen* (1910; reprinted 1924). For elementary teaching and learning purposes, A. V. W. Jackson, *An Avesta Grammar* (1892); H. Reichelt's *Avesta Reader* (1911), the latter with notes and glossary, are useful. The *Yashts* are translated in H. Lommel, *Die Yäshts des Awesta* (1927); the *Gāthās* in M. W. Smith, *Studies in the Syntax of the Gāthās* (1929); and in J. Duchesne-Guillemin, *Zoroastre, étude critique avec une traduction nouvelle des Gāthā* (1948; English trans. by Mrs. H. Henning, *The Hymns of Zarathustra,* 1952).

The literature on the Avesta is very extensive. In addition to the bibliography under ZARATHUSHTRA, the following recent studies on philological, linguistic, and religious problems connected with the study of the Avesta deserve to be mentioned: A. Christensen, *Études sur le zoroastrisme de la Perse antique* (1928). E. Benveniste and L. Renou, *Vṛtra et Vṛθragna* (1934). E. Benveniste, *Les infinitifs avestiques* (1935). J. Duchesne-Guillemin, *Les composés de l'Avesta* (1936). H. S. Nyberg, *Die Religionen des alten Iran* (1938). G. Morgenstierne, "Orthography and Sound System of the Avesta." *Norsk Tidsskrift for Sprogvidenskap,* XII (1940), 30-82. W. B. Henning, "The Disintegration of the Avestic Studies," *Transactions of the Philological Society* (1942), pp. 40-56. A. Christensen, *Essai sur la démonologie iranienne* (1941); *Le premier chapitre du Vendīdād* (1943). H. W. Bailey, *Zoroastrian Problems in the Ninth-Century Books* (1943). P. Thieme, "Vorzarathustrisches bei den Zarathustriern und bei Zarathustra," *ZDMG,* 107 (1957), 67-104.

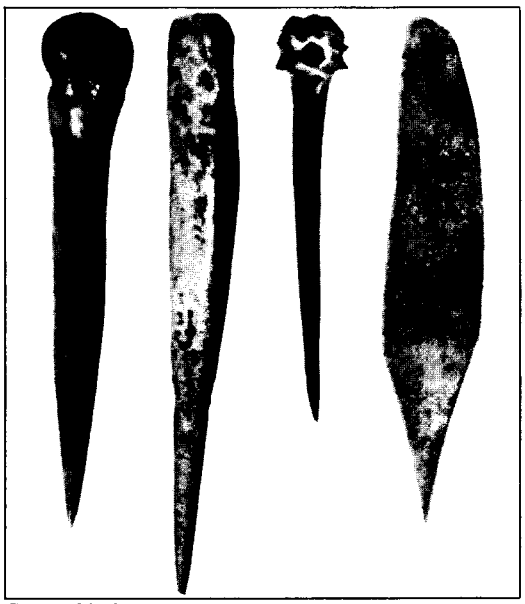
AVIM; AVIMS; AVITES. KJV forms of AVVIM.

AVITH ā′vĭth [עִוִּית, ruin]. The home of Hadad son of Bedad, a king of Edom (Gen. 36:35; I Chr. 1:46).

Hadad apparently became king as a result of his father's defeat of the Midianites in Moab (cf. Abimelech son of Gideon in Judg. 9). A suggested site for Avith is Khirbet el-Jiththeh, between Ma'an and Khirbet el-Bastah. V. R. GOLD



AVVA ăv'ə [עוא *or* עוה, *'awwā*] (II Kings 17:24); KJV AVA ā'və. One of the towns from which colonists were sent to Samaria to replace the Israelite natives deported after the capture of the town in 722 B.C. The other towns mentioned are Babylon, Cuthah, Hamath, and Sepharvaim. A. HALDAR

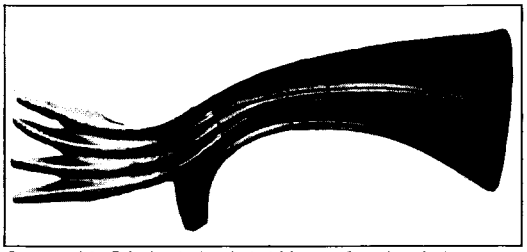
AVVIM ăv'ĭm [העוים]; AVVITES —īts; KJV AVIM ā'vĭm (Josh. 18:23); AVIMS ā'vĭms (Deut. 2:23); AVITES ā'vīts (Josh. 13:3; II Kings 17:31). **1.** An aboriginal people of the Canaanites, who lived in villages near Gaza and were destroyed by the Caphtorim (Philistines; Deut. 2:23; Josh. 13:3).

2. A city of Benjamin, located near Bethel (Josh. 18:23). S. COHEN

AWE. *See* FEAR.

AWL [מרצע; ὀπήτιον, *diminutive of* ὄπεας]; KJV AUL. An instrument mentioned in connection with piercing the ear lobe to mark one who voluntarily

Courtesy of the Oriental Institute, the University of Chicago



118. Bone awls, from Megiddo

took a vow of perpetual slavery (Exod. 21:6; Deut. 15:17). It was an exceedingly common tool beginning with the Stone Age (Upper Paleolithic), and abundant specimens are known from excavations. It might be made of wood, bone, flint, or metal. Fig. AWL 118. R. W. FUNK

AWNING [מכסה, *from* כסה, to cover, conceal, spread over] (Ezek. 27:7); KJV THAT WHICH COVERED. Literally, a covering (cf. Lev. 9:19; Isa. 14:11; "clothing" in Isa. 23:18); the parallel with מפרש ("that which is spread out," the sail) and נס ("signal," perhaps "ensign") suggests that the reference is to the deck awning to cover the ship's passengers from the sun. The mention of "fine embroidered linen" and of "blue and purple from the coasts [or islands] of Elishah" indicates woven material.

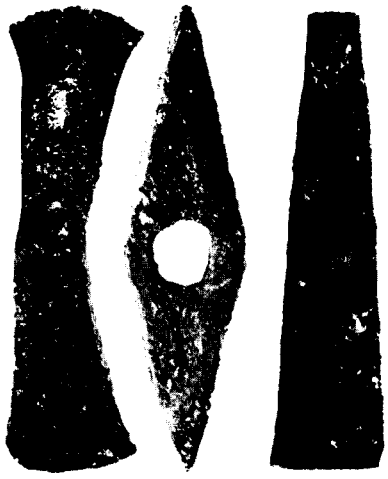
A number of scholars suggest that in Ezek. 27:7, מכסה (*mᵉkhassê*) should be repointed *mikhsê*, a word used of the covering of the ark in Gen. 8:13—perhaps a roof over the deck, if not a covering of cloth (*see* ARK OF NOAH), and of the skins or woven cloth which made up the tent of meeting (cf. Exod. 26:14; 35:11; 36:19; etc.). *See* TABERNACLE. E. M. GOOD

AXE [ברזל, גרזן, חכב (*see below*), כשיל, מגזרה, מגרה, קרדם, מעצד; ἀξίνη]; KJV AX. A hafted cutting tool, used (*a*) for work in both wood and stone (quarrying, tunneling, tomb preparation) and (*b*) as a weapon; characterized by the parallel arrangement of cutting

Courtesy of the Palestine Archaeological Museum, Jerusalem, Jordan

119. Bronze axe head, shaped like extended fingers of a hand, from Beth-shan, Stratum VII (thirteenth century B.C.)

edge and handle. Formally the axe is to be distinguished from the adze (cutting edge at right angles to the handle); MATTOCK (the head consists of a combination axe and adze); pick mattock (combination pick and mattock); pickaxe (combination pick and axe); hoe (*see* MATTOCK; an adze in form but used to work the ground); and HATCHET (the differentiation in this case is only in size and weight). The axe was one of the earliest tools invented by man, the head being made of bone, ivory, flint, or stone before the advent of metal. Figs. AXE 119-20.



The form and function of the axe and related implements cannot always be determined by reference to Hebrew and Greek terms found in the Bible and must, therefore, be conjectured from the context. The most common use of the axe was in cutting wood.

The function of the מגזרה of II Sam. 12:31 (=the מגרה of I Chr. 20:3) is not clear.

חרב, "sword," is translated by "axe" in Ezek. 26:9, but neither the Hebrew word nor its Greek counterpart, μάχαιρα, ever means "axe."

The גרזן of I Kings 6:7 was a tool used for working stone (the stone for the temple was prepared at the quarry to avoid the sound of hammer or axe or any tool of iron in the temple precinct). The same word is used three times in the Siloam Inscription (*see* SILOAM) of axes used to hew a tunnel out of rock from Gihon to the Pool of Siloam (cf. II Kings 20:20; II Chr. 32:30). It is probably safe to infer that the גרזן in these instances was a mattock or pickaxe.

The מעצד of Jer. 10:3 was a carpenter's hand tool,

Courtesy of the Oriental Institute, the University of Chicago

120. Bronze axe heads from Megiddo, Late Middle Bronze I (*ca.* 1800-1750 B.C.); Stratum XIII

probably in the form of an adze, used to smooth and work wood; a number of good specimens were found at Gezer.

The use of the axe as a weapon in the Bible may be inferred from Judg. 9:48, where Abimelech and his men cut brushwood to burn the stronghold of Shechem. It is probable that these axes served the double purpose of tool and weapon, since it is unlikely that an extra set of axes was carried solely for the purpose of cutting brush. For the axe as an implement of destruction and hence a weapon of war, cf. Ps. 74:5; Jer. 46:22. Also cf. Jer. 51:20 (*see* HAMMER); Ezek. 9:1-2.

The difficulty of binding the head securely to the handle is illustrated by the law on manslaughter (Deut. 19:5) and the story of Elisha's recovery of the axe head from the water (II Kings 6:5).

AXLE. *See* WHEEL.

'AYELETH HASHAḤAR. *See* MUSIC.

AYYAH ä'yə [עיה, *'ayyâ*] (I Chr. 7:28); KJV GAZA gā'zə [עזה]. One of the towns which were the possession of Ephraim. For the KJV "Gaza" there is evidence in a number of Hebrew MSS. In any case, however, this could not be the Philistine city of Gaza. The context and similarity of names suggest a connection with AI; several scholars have proposed as the location of Ayyah ancient Ai (et-Tell) or Khirbet Haiyan, less than one mile from Ai. Although archaeological evidence is lacking, it is probable that the reference in Neh. 11:31 to Aija (עיה, *'ayyâ*) is to be understood as "Ayyah" or "Ai" (cf. Ezra 2:28).

Bibliography. W. F. Albright, "Ai and Beth-Aven," *AASOR*, IV (1922-23), 141-49. W. L. REED

AZAEL ā'zĭ əl ['Αζάηλος (B), Αζαηλ (A), Εσριηλ (Luc.)]; KJV AZAELUS āz'ĭ ē'ləs in 1 *below.* **1.** An Israelite who put away his foreign wife and children (I Esd. 9:34). The name is omitted in the parallel Ezra 10:41.

2. KJV Apoc. form of ASAHEL 4.

C. T. FRITSCH

AZAL ā'zəl. KJV translation of אצל in Zech. 14:5. It was formerly considered an unidentified city. Now, after Symm., the word is generally read אצלו and translated "the side of it." Even then the verse is obscure.

AZALIAH ăz'ə lī'ə [אצליהו, Yahu has set apart; *perhaps related to* אצילי, chief men (Exod. 24:11), *and* Arab. *'asula,* to be distinguished]. The father of Shaphan, Josiah's secretary, who figured prominently in the publication of the celebrated Book of the Law (II Kings 22:3). J. M. WARD

AZANIAH ăz'ə nī'ə [אזניה, Yahu has heard] (Neh. 10:9). A Levite; the father of Jeshua, a witness to the covenant.

AZAPHION. KJV form of Hassophereth. *See* SOPHERETH.

AZARA. KJV form of HASRAH 2.

AZAREL ăz'ə rĕl [עזראל, God has helped]; KJV AZAREEL ăz'ə rēl usually; AZARAEL ăz'ə rā'əl in Neh. 12:36; ESRIL ĕz'rĭl in I Esd. 9:34. **1.** A Korahite warrior who came over to David at Ziklag (I Chr. 12:6—H 12:7).

2. A musician among the sons of Heman at the time of David (I Chr. 25:18); called Uzziel in vs. 4 (cf. Azariah = Uzziah).

3. Son of Jeroham; leader of the tribe of Dan under David (I Chr. 27:22).

4. One of the sons of Binnui (Hebrew adds "Bani") who married foreign wives (Ezra 10:41; I Esd. 9:34).

5. A priest; the father of Amashsai, who came to live in Jerusalem after the Exile (Neh. 11:13).

6. A priest; a trumpeter in the procession at the dedication of the wall of Jerusalem (Neh. 12:36).

F. T. SCHUMACHER

AZARIAH ăz'ə rī'ə [עזריה, עזריהו, Yahu has helped]. KJV Apoc. AZARIAS —əs; EZERIAS ĕz'—; AZIEI ə zī'yī. **1.** Alternate (probably personal) name of UZZIAH (3), king of Judah (II Kings 14:21; 15:1, 6-8, 17, 23, 27; I Chr. 3:12).

2. Son of Nathan; in charge of the officers over the twelve districts of the kingdom of Solomon (I Kings 4:5), probably responsible for ensuring their prompt delivery of provisions for the royal establishment; brother of Zabud. Scholars disagree as to whether he is the son of Nathan the prophet (II Sam. 12) or is Solomon's nephew (II Sam. 5:14).

3. The prophet who encouraged Asa, king of Judah, to undertake a religious reform (II Chr. 15:

1-8). He was the son of Oded, to whom the MT attributes the prophecy in vs. 8 (cf. II Chr. 28:9).

4. Son(s) of Jehoshaphat, king of Judah (II Chr. 21:2), who were slain when their elder brother, Jehoram, succeeded their father. The name appears twice in the list of six sons. This is probably an error resulting from the two alternative forms (*see* 1 *above*). It seems far-fetched to suppose that the name was used twice because the boys were only half brothers or because one had already died in infancy.

5. A high official under Solomon; son of Zadok and presumably brother of Ahimaaz (I Kings 4:2). The text is ambiguous: "the priest" could identify Zadok (KJV) or state the position of Azariah (RSV).

6. High priest under Uzziah (II Chr. 26:17, 20). He was the leader of the priests who opposed the king's exercise of the priestly office.

7. High priest under Hezekiah (II Chr. 31:10, 13) who, with the king, prepared storerooms in the temple for the contributions of the people. He was of the house of Zadok and was "chief officer of the house of God" (vs. 13; cf. I Chr. 9:11; Neh. 11:11; Jer. 20:1). It is conceivable, but not likely, that he is the same as 6 *above*.

8. A priest included in the list of those who lived in Jerusalem after the Exile; son of Hilkiah; probably also described as "chief officer of the house of God" (I Chr. 9:11). However, this list is parallel to one in Neh. 11:11, where this name is Seraiah, probably the more correct reading.

9. A name included three times in the Chronicler's list of high priests (I Chr. 6:4-15—H 5:30-41); they are probably to be identified with several of the priests above, but there is little general agreement as to the exact identifications. The references are to:

a) Son of Ahimaaz and grandson of Zadok (I Chr. 6:9—H 5:35). The parenthetical note of 6:10 is usually taken to be out of place and inapplicable here. Many therefore equate him with 5 *above*, despite the ambiguities.

b) Son of Johanan and grandson of *a* in I Chr. 6:10—H 5:36; Ezra 7:3; II Esd. 1:2. Posterior to Solomon, he can be related to 6 *above* or, by the parenthetical note, to 5 *above*.

c) Son of Hilkiah and father of Seraiah (I Chr. 6:13-14—H 5:39-40; Ezra 7:1; I Esd. 8:1; II Esd. 1:1), about two generations before the Exile. Some relate him to 7 *above*, who seems too early; others to 8 *above*, who seems a little late.

10. An ancestor of Heman the musician among the Kohathite Levites (I Chr. 6:36—H 6:21). His son was Joel. He is called Uzziah in I Chr. 6:24—H 6:9.

11. The father of a Kohathite Levite named Joel in the time of Hezekiah (II Chr. 29:12). Despite the duplication of names, he is probably not to be identified with 10 *above*.

12. A man of Judah; son of Ethan; listed in the genealogy of the sons of Zerah (I Chr. 2:8).

13. A man of Judah; son of Jehu and grandson of Obed; listed in the genealogy of the sons of Jerahmeel (I Chr. 2:38-39).

14. A Judahite army officer; son of Obed. He took an active part in the conspiracy to overthrow Athaliah and make Joash king (II Chr. 23:1). He is not to be identified with 13 *above*.

15. An officer who conspired to overthrow Athaliah; son of Jeroham (II Chr. 23:1). The name is probably not a mistaken repetition of 14 *above*, since they have different fathers.

16. A chieftain of Ephraim; son of Johanan; among those who persuaded the army of Pekah to release captives (II Chr. 28:12).

17. Son of Jehallelel; a Merarite Levite in the time of Hezekiah (II Chr. 29:12).

18. Son of Hoshaiah; one of the opponents of the prophet Jeremiah in Jer. 42:1 (according to the LXX); 43:2. The Hebrew in 42:1 has "Jezaniah."

19. A priest who put away his foreign wife in the time of Ezra (I Esd. 9:21; called Uzziah in the parallel list, Ezra 10:21).

20. A man who supported Ezra while reading the Law (I Esd. 9:43; missing in the parallel, Neh. 8:4).

21. A Levite (or an order) who instructed the people in their understanding of the Law in the time of Ezra (Neh. 8:7=I Esd. 9:48); the name is omitted in B, ℵ, A of the Greek.

22. A priest included among those who set their seal to the covenant in the time of Nehemiah (Neh. 10:2—H 10:3).

23. A man of Jerusalem who repaired the wall beside his house; son of Maaseiah (Neh. 3:23-24).

24. A leader or group in the postexilic period; listed among those who returned with Zerubbabel (Neh. 7:7). In the parallel list he is replaced by Seraiah (Ezra 2:2; cf. Neh. 12:1).

25. A prince or priest of Judah, included among those who marched at the dedication of the rebuilt wall of Jerusalem (Neh. 12:33).

26. The original name, in Hebrew, of Abednego (*see* SHADRACH), one of the companions of Daniel (Dan. 1:6-7, 11, 19; 2:17; I Macc. 2:59; Song Thr. Ch. 1:2, 66).

27. An officer in the army of Judas Maccabeus (I Macc. 5:18, 56, 60). He shared command during the absence of Judas and was badly defeated by Gorgias.

28. MT error for AHAZIAH 2 in II Chr. 22:6 KJV.

F. T. SCHUMACHER

AZARIAS ăz'ə rī'əs ['Αζαρίας]. **1.** The name used by the disguised angel Raphael (Tob. 5:12; 6:6, 13; 7:8; 9:2).

2. KJV Apoc. form of AZARIAH.

F. T. SCHUMACHER

AZARU ăz'ə rōō [ἄζουρος (A), ἄζαρος (B); Vulg. *Azoroc*]; KJV AZURAN ăzh'ə răn. Ancestor of some who returned from the Exile (I Esd. 5:15; cf. Azzur in Neh. 10:17-18). J. C. SWAIM

AZAZ ā'zăz [עַזּז] (I Chr. 5:8). The father of Bela in the genealogy of Reuben.

AZAZEL ə zā'zəl, ăz'ə zəl [עזאזל] (Lev. 16:8, 10, 26). The scapegoat dispatched on the Day of Atonement is described as being consigned "to/for Azazel." There are three principal interpretations of this term:

a) It characterizes the animal itself, and stands for עז אזל, "goat that departs"—i.e., (e)scape-goat. This is the view of the LXX (vss. 8, 10: τράγος ἀποπομπαῖος [cf. Pollux 5.26; Suidas]; vs. 26: τράγος

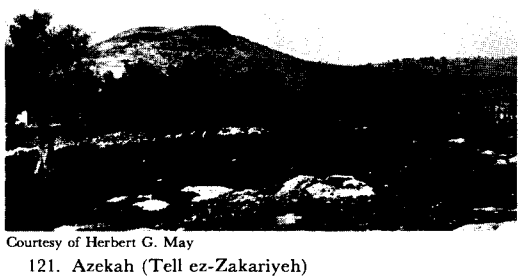
διεστάλμενος εἰς ἄφεσιν), Symm. (τράγος ἀπερχόμενος), and the Vulg. (*hircus emissarius*). A variation of it connects the word rather with Arabic *'azāla*, "banish, remove," though the formation would then be unusual.

b) It denotes the place to which the animal was dispatched. This is the view of most of the rabbinic exegetes (cf. Saadya's rendering, *jubl 'azaz*, "a rugged cliff"). Some have sought to support it by connecting the name with Arabic *'azza* in the sense of "be rugged," and thus identifying it with the Beth Ḥiddudo, "sharp place," named in M. Yom. 6.8 and Targ. Ps. Jon. on Lev. 16:21 as the destination of the scapegoat. This, in turn, is the Dudael "in the desert" to which Azazel is consigned in Enoch 10:4.

c) It is the name of a demon inhabiting the desert. This view is adopted by most modern commentators, and is anticipated in Enoch, where Azazel appears as a ringleader of the rebel angels, who seduces mankind. Against it, however, stands the fact (strangely overlooked) that in no other culture are scapegoats offered to demons. Indeed, in view of the very fact that sin and impurity are unloaded upon them, they can be (and are) used only as vehicles of elimination, but not of propitiation.

See also SACRIFICE AND OFFERINGS; EXPIATION; ATONEMENT, DAY OF. T. H. GASTER

AZAZIAH ăz'ə zī'ə [עזזיהו, Yahu is strong, *or* Yahu strengthens]. **1.** A Levitical musician in David's provision for the Jerusalem temple (I Chr. 15:21).



2. The father of Hoshea, the Ephraimite commander under David (I Chr. 27:20).

3. An officer of third rank in the temple during Hezekiah's time (II Chr. 31:13). J. M. WARD

AZBAZARETH ăz băz'ə rĕth. KJV translation of 'Ασβασαρέθ in I Esd. 5:69. The parallel passage, Ezra 4:2, indicates that ESARHADDON is meant (so RSV). J. C. SWAIM

AZBUK ăz'bŭk [עזבוק] (Neh. 3:16). The father of a certain Nehemiah who took part in rebuilding the wall of Jerusalem after the Exile.

AZEKAH ə zē'kə [עזקה, hoed ground(?)]. A fortress city to the S of the Valley of Aijalon, dominating the passage into the Valley of Elah (*see* ELAH, VALLEY OF). It is identified with Tell ez-Zakariyeh, *ca.* nine miles N of Beit Jibrin (Eleutheropolis) and fifteen miles NW of Hebron.* Ruins of the wall and towers can be seen on the small plateau on the top of the tell. To the E of the tell is Khirbet el-'Alami, which may be the site of Azekah during the Byzantine period. Fig. AZE 121.

Courtesy of Herbert G. May

121. Azekah (Tell ez-Zakariyeh)

Azekah was one of the points to which Joshua's forces chased remnants of the Canaanite coalition led by Adonizedek of Jerusalem after raising the Canaanite siege of Gibeon (Josh. 10:10-11). It was a city in the Shephelah district of Judah (15:35). It is noted as a location point in describing the battle lines of the Philistines in the engagement which was won by Israel after David's slaying of the Philistine champion, Goliath (I Sam. 17:1).

It was one of those cities whose fortifications were strengthened by Rehoboam (*ca.* 922-915) after the revolt of the N kingdom, and possibly after Shishak's invasion (*ca.* 918 B.C.; see II Chr. 11:9). The citadel was a heavily fortified enclosure on the highest point of the hill on which Azekah was built.

It was one of the last of Judah's fortified cities to fall to Nebuchadnezzar's forces before the attack on Jerusalem (*ca.* 588 B.C.; Jer. 34:7). In the fourth of the letters found at LACHISH, Hoshaiah, the commander of the garrison to the N of Lachish, tells his commanding officer, Yoash, whose headquarters are in Lachish, that he can no longer see the (fire or smoke) signals from Azekah, which lay to the N of his outpost, implying that Azekah had probably fallen to the invader and now only Lachish, and Jerusalem, remained to be captured by the Babylonians.

After the Exile, Azekah was reoccupied by Jewish returnees (Neh. 11:30). V. R. GOLD

AZEL ā'zəl [אצל]. Son of Eleasah, and one of the descendants of Jonathan son of Saul. He was the father of six sons (I Chr. 8:37-38; 9:43-44).

AZEM. KJV form of EZEM.

AZEPHURITH. KJV Apoc. form of JORAH.

AZETAS ə zē'təs ['Αζητάς] (I Esd. 5:15). An ancestor of some who returned from the Exile with Zerubbabel. The name is omitted in the parallels Ezra 2:16; Neh. 7:21. C. T. FRITSCH

AZGAD ăz'găd [עזגד, *a theophorous name with* Gad, *the god of fortune:* Gad is strong]. The head of one of the families that returned to Palestine after the Exile (Ezra 2:12; Neh. 7:17; I Esd. 5:13). Johanan son of Hakkatan and 110 other male members of this family returned with Ezra (Ezra 8:12; I Esd. 8:38). Azgad appears as one of those who signed Ezra's covenant (Neh. 10:15—H 10:16). M. NEWMAN

AZIAS. KJV Apoc. form of UZZA.

AZIEI. KJV Apoc. form of AZARIAH.

AZIEL ā'zī əl [עזיאל] (I Chr. 15:20). A minor Levite, among the harp players when the ark was brought to Jerusalem. His full name was JAAZIEL.

AZIZA ə zī'zə [עזיזא, the strong one] (Ezra 10:27). Alternately: ZERDAIAH zər dā'yə [Ζερδαιας] (I

Esd. 9:28); KJV SARDEUS sär dē'əs. One of those forced to put away their foreign wives in the time of Ezra.

AZMAVETH ăz'mə vĕth [עַזְמָוֶת]; BETH-AZMAVETH bĕth—[בֵּית עַזְמָוֶת] (Neh. 7:28). **1.** A member of the company of military heroes of David known as the "Thirty." He came from Bahurim (II Sam. 23:31; I Chr. 11:33).

2. The father of Jeziel and Pelet, two of the ambidextrous slingers and archers from the tribe of Benjamin who joined the outlaw band of David at Ziklag (I Chr. 12:3). He may plausibly be identified with 1 *above*.

3. Son of Jehoaddah; one of the descendants of the family of Saul (I Chr. 8:36; 9:42).

4. Son of Adiel. He was in charge of the royal treasuries under David in Jerusalem (I Chr. 27:25).
E. R. DALGLISH

5. A town identified with modern Hizmeh, five miles N-NE of Jerusalem, from the region of Geba. Forty-two men of Azmaveth came back from Babylon with Zerubbabel (Ezra 2:24). Singers from there participated in the dedication of the wall of Jerusalem (Neh. 12:29). O. R. SELLERS

AZMON ăz'mən [עַצְמוֹן]. A place on the S border of Judah, the last town to the W before the river of Egypt (Wadi el-'Arish; Num. 34:4-5; Josh. 15:4). It is possibly the same as EZEM. A location at 'Ain el-Qoseimeh near the ancient Kadesh-barnea, a place where prehistoric relics have been discovered, has been suggested. S. COHEN

AZNOTH-TABOR ăz'nŏth tā'bər [אַזְנוֹת תָּבוֹר] (Josh. 19:34). A point on the S border of Naphtali. It is perhaps located at Umm Jebeil, near Mount Tabor.

AZOR ā'zôr ['Αζώρ]. An ancestor of Jesus (Matt. 1:13-14; also Luke 3:23 ff in MS D).

AZOTUS. Apoc. and NT form of ASHDOD.

AZRIEL ăz'rĭ əl [עַזְרִיאֵל, God is my help]. **1.** One of the chieftains or heads of families in the half-tribe of Manasseh (I Chr. 5:24).

2. The father of Jeremoth, who was head of Naphtali under David (I Chr. 27:19).

3. The father of Seraiah at the time of Jehoiakim (Jer. 36:26). F. T. SCHUMACHER

AZRIKAM ăz'rə kăm [עַזְרִיקָם, my help has arisen]. **1.** Son of Azel; a descendant of Saul and Jonathan in the genealogy of Benjamin (I Chr. 8:38; 9:44).

2. "Commander of the palace" under King Ahaz; slain in battle by Zichri, an Ephraimite warrior (II Chr. 28:7); possibly the same as 1 *above*.

3. Grandfather of Shemaiah, a Merarite Levite dwelling in Jerusalem (I Chr. 9:14; Neh. 11:15).

4. Son of Neariah; a postexilic descendant of David through Zerubbabel (I Chr. 3:23).
F. T. SCHUMACHER

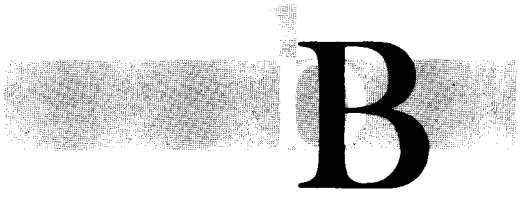
AZUBAH ə zōō'bə [עֲזוּבָה, forsaken, abandoned (*but later* bought, received?)]. **1.** The mother of Jehoshaphat; daughter of Shilhi (I Kings 22:42; II Chr. 20:31).

2. Wife of Caleb; mother of Jesher, Shobab, and Ardon (I Chr. 2:18-19).

AZUR. KJV form of AZZUR 1-2.

AZURAN. KJV form of AZARU.

AZZAH. KJV alternate form of GAZA.



AZZAN ăz'ən [עַזָּן, (the deity) has shown strength] (Num. 34:26). The father of the Issacharite leader Paltiel, who was selected to help superintend the distribution of W Jordanian Canaan among the tribes to occupy that territory.

Bibliography. M. Noth, *Die israelitischen Personennamen* (1928), pp. 38, 190. R. F. JOHNSON

AZZUR ăz'ər [עַזּוּר; עזר *in* 2 *below*, helped(?)]; KJV AZUR ā'zər in 1-2. **1.** The father of Hananiah, a false prophet from Gibeon (Jer. 28:1).

2. The father of Jaazaniah, an acquaintance of Ezekiel (Ezek. 11:1).

3. A "chief of the people"; one of those who set their seal to the covenant (Neh. 10:17—H 10:18).
F. T. SCHUMACHER

B. A symbol used to designate the biblical MS VATICANUS.

BAAL bā'əl, bāl [בעל, owner *or* lord]. **1.** The fourth son of Jeiel, a Gibeonite ancestor of Saul (I Chr. 8:30=9:36).

2. The father of Beerah, a Reubenite chieftain who was exiled by the Assyrians (I Chr. 5:5).

3. A scribal error for BAALATH-BEER in I Chr. 4:33.

***BAAL (DEITY)** [בעל, master]. The god Hadad, the fertility-god par excellence of Canaan.

The term בעל (*bá'al*), applied to men as well as to gods, signifies ownership and may denote locality—e.g., Baal-peor (Num. 25:3, 5; Deut. 4:3), Baal-hermon (Judg. 3:3), etc., or sphere of interest—e.g., BAAL-BERITH, the "god of the covenant" (Judg. 8:33; 9:4). Thus any local god might be so designated—e.g., Dagon is termed the *bá'al* of a devotee who set up a stele to him at Ras Shamra; this fact qualifies the statement of one scholar that *bá'al* does not indicate sovereignty over a person, but simply implies possession of a locality or attribute. Generally, however, a deity was entitled Baal only when he and his worshipers had taken possession of and settled in a given locality.

From the end of the third millennium probably, and certainly by the middle of the second millennium, the title was applied specifically to the Amorite god of winter rain and storm, whose name, known from texts from Mesopotamian and Ras Shamra, was Hadad (*see* HADADRIMMON). In support of the view that a god was termed Baal only after his worshipers had settled to sedentary life, it may be noted that in Egyptian execration texts published by G. Posener (date *ca.* 1800 B.C.) relating to Amorite chiefs, the plurality of whom in certain localities in Syria and Palestine probably indicates a tribal stage of social and political development, the god Hadad, often named in theophorics, is never termed Baal.

The Ras Shamra Texts, in redactions, certain—and probably all—of which date from the Late Bronze Age (*ca.* 1400 B.C.), contain a large complex of myths pertaining to Baal, who was the most active deity in the fertility cult of Canaan, though his activity was limited to nature; El, the senior god of the Canaanite pantheon, was supreme in the social or moral sphere.

Herein the contention is that in these Baal myths there are really two separate complexes, the myth of Baal and the Waters and that of Baal and Mot ("death, sterility"); this view is not generally held. In his conflict with the Waters, Baal champions the gods against the insults and tyranny of the unruly waters, Sea-and-River, and after a grim struggle overcomes him, disperses him (distributing the waters so that they are a good servant rather than a bad master), and is himself acclaimed "king"—his kingdom being an everlasting kingdom. This was apparently the Canaanite declaration of faith in Providence in nature, at once an assurance of faith and a means of influencing the course of nature by an articulate word and possibly an accompanying ritual with the force of sympathetic magic.

The main motifs of this myth are reproduced in the OT, notably in such psalms as assert or imply the kingship of God—e.g., Pss. 9; 29; 46; 88; 93; 96-98—and in passages in the Prophets on the theme of the kingship of God. The conception of the "day of the Lord," implying as it does conflict and victory over the powers of Chaos (e.g., Isa. 2), is also a development of the old Canaanite theme of Baal's conflict and victory over the waters and his assumption of kingship. In addition to the correspondence between such Hebrew passages and the Canaanite mythology in general features, there is occasionally a striking correspondence in details and imagery—e.g., Pss. 29; 93—Yahweh being depicted with the attributes of Baal. In this matter the influence of Canaan on Israel seems to have been at its strongest, with Israel appropriating, though adapting, Canaanite thought as well as external forms and imagery. The theme continued to be developed throughout the history of Hebrew literature in the Prophets and in apocalyptic, both Jewish (e.g., Dan. 7:7 ff) and Christian (e.g., Rev. 12). Apparently this Canaanite matter influenced Hebrew thought through the Hebrew adoption of the myth together with appropriate seasonal ritual, which was deemed by the Hebrew settlers as necessary as the new techniques of local agriculture. Jewish tradition and the passage Zech. 14:16-19 associate the kingship of God with the autumnal New Year (Feast of Tabernacles) on the eve of the "early rains," and it was probably this that was the occasion to which the myth of Baal's victory over the Waters was proper.

Baal's character as the storm-god is expressed at Ras Shamra in a sculptured stele of the god as a helmeted warrior in a short kilt, striding into action with a thunderbolt as spear and a mace uplifted. His power of fertility is expressed by his association with the bull as his cult animal, horns of which he wears on his helmet.* His stock epithet is "he who mounteth the clouds" (*rkb b'rpt*); cf. Yahweh as him "who maketh the clouds [his] chariot" (Deut. 33:26; Pss. 68:4—H 68:5; 104:3). The wavy line beneath the feet of the god possibly represents the waters in the clouds, or possibly the mountaintops; cf. Yahweh, "who treads on the heights of the earth" (Amos 4:13; Mic. 1:3). These essential features of Baal are

reproduced in the round in bronze figurines from Ras Shamra and its vicinity and from Megiddo and Lachish (Tell ed-Duweir) in Palestine, indicating the distribution of the cult of the god. Fig. UGA 6.

Baal was one of the Semitic deities whose cult penetrated to Egypt, possibly with the great numbers of Semites deported from Syria and Palestine in the Eighteenth and Nineteenth Dynasties. The Pharaoh Ramses II seems himself to have affected Syrian cults. The most notable cult center of Baal in Egypt was Baal Saphon near Pelusium, E of the Delta; this name reflects the proper domain of the god—Mount Sapon, modern Jebel el-Aqra, Mount Kasios of the Greek geographers, on the N horizon of Ras Shamra, which was a kind of Canaanite Olympus and the seat of Baal.

The bulk of the remainder of the Baal mythology at Ras Shamra concerns Baal's conflict with Mot, the power of drought and sterility; and here Baal is a dying and rising god, the spirit of vegetation which wilts and dies in the heat of summer but revives again with the winter rains; local variations of Baal in this character were TAMMUZ and ADONIS. There are certain indications that the texts in question are related to the seasonal ritual of the Syrian peasant. One long text, e.g., concerns the building of a house for Baal, the completion of which coincides with the rain, thunder, and lightning, which is a feature of the "early rains" of autumn and winter inaugurated by the Hebrew Feast of Tabernacles, of which the "house" of Baal is believed to have been the prototype. Again, after Baal has succumbed to Mot, this sinister god suffers the vengeance of the goddess Anat, the sister of Baal; she cuts him with a blade, winnows him with a shovel, parches him with fire, and grinds him in a millstone and scatters him in a field. Here obviously rites of desacralization of the first or last sheaf of corn underlie the myth—such a rite, in fact, as is described in Lev. 2:14, which refers to the offering of the first sheaf, "crushed new grain from fresh ears, parched with fire." Baal eventually revives, and with his revival there is the prospect of the heavens raining oil and the wadis running with honey, and finally "after seven years" he engages Mot in a great struggle and overcomes him. Here seven years, as regularly in Semitic folklore, may indicate an indefinite lapse of time, but the reference may be to the seven-year cycle of agriculture terminated among the Hebrews by a sabbatical year. The belief seemed to be that in all the vicissitudes of local agriculture, with the menace of drought, locusts, and the like, if a few years of plenty were experienced, disaster was overdue. It was wise, therefore, to anticipate this by allowing the power of sterility full scope, either in a year of artificial famine when the land was allowed to lie fallow, or in combat with Baal, the power of fertility, in order that the sinister forces might thereby be exhausted.

Certain features of the myth suggest rites indicated in the OT. On the death of Baal, e.g., his sister "the virgin Anat" ranges the mountains searching for him and makes the hills resound with her mourning. This suggests the mourning for Hadadrimmon mentioned in Zech. 12:11, or the weeping for Tammuz by the women of Jerusalem (Ezek. 8:14), and probably the mourning of the virgins of Israel traditionally associated with Jephthah's daughter (Judg. 11: 37-40). The theme of the vicissitudes of Baal as a dying and rising god, however, was not assimilated to Hebrew thought as was that of Baal's victory over Chaos, but the imagery of the myth of Baal and Mot was freely drawn upon in Hebrew poetry.

From the references in the book of Judges to repeated lapses to the cult of Baalim and Ashtaroth, we may infer that in the early days of the settlement the Hebrews tended to assimilate the Baal cult without adapting it, and at various crises in Hebrew history—e.g., under Ahab and Jezebel (I Kings 16:32)—there was a recrudescence of Baal-worship in its native form in Israel. The prophets, especially Hosea (ch. 2), inveigh against this materialistic nature cult and the licentious rites by which it was practiced as rites of imitative magic; and, though Hezekiah and Josiah suppressed it (II Kings 18:4; 23), it is mentioned as the cult of Tammuz in the early days of the Exile (Ezek. 8:14) and in the Persian period (Zech. 12:11).

BAALAH bā'ə lə [בעלה, wife, lady]. **1.** An earlier name of Kiriath-jearim (Josh. 15:9; I Chr. 13:6).

2. A mountain on Judah's N border (Josh. 15:11); probably the hill of Mughar, just N of the Valley of Sorek (*see* SOREK, VALLEY OF), and *ca.* five miles NW of Khirbet el-Muqanna (EKRON).

3. A village in the Shephelah district of Judah; formerly a part of Simeon (Josh. 15:29; see 19:3, where "Balah" is to be read "Baalah"; I Chr. 4:29, where "Bilhah" is to be read "Baalah" [*cf.* LXX Βαλαά]). The village is to be identified with Tulul el-Medhbah, near Khirbet el-Meshash, probably.

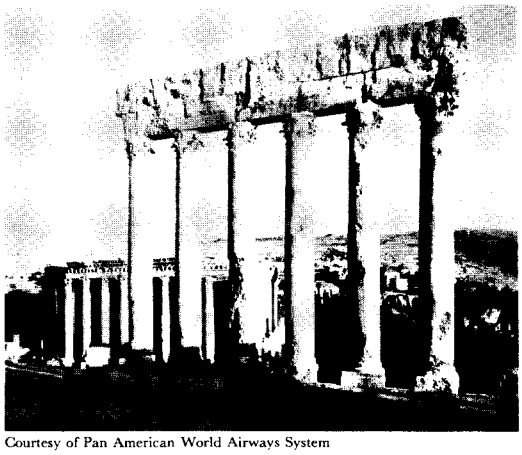
BAALATH bā'ə lăth [בעלת, mistress]. A town included in the original territorial allotment of Dan. It is listed between Gibbethon and Jehud (Josh. 19: 44-45) and in company with Gezer and Lower Bethhoron as one of the cities which Solomon fortified (I Kings 9:17-18; II Chr. 8:5-6). Though its exact site is unknown, Josephus (Antiq. VIII.vi.1) places it near Gezer. W. H. MORTON

BAALATH-BEER bā'ə lăth bē'ər, bĭr [בעלת באר, lady of the well]. A city of Simeon, apparently the shrine of a Canaanite goddess. In Josh. 19:8 it is identified with Ramah of the Negeb (*see* RAMAH 5),

and by some it has been identified with the BEALOTH of Josh. 15:24. The reading "Baal" (בעל) in the parallel passage in I Chr. 4:33 is a scribal error.

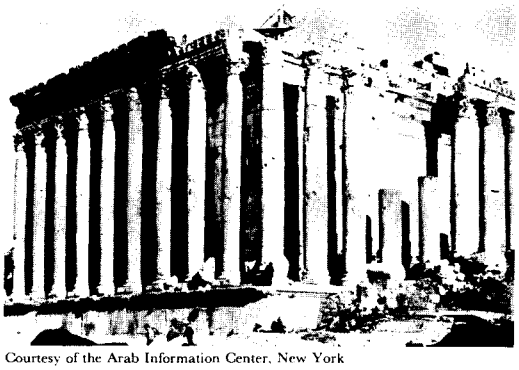
The site is unknown. S. COHEN



BAALBEK bāl'bĕk. A Lebanese town in the Beqa'a near the source of Nahr el-'Aṣi (Orontes). Fig. LEB 21.

The Semitic name Baalbek probably contains an allusion to the deity worshiped there, Baal of the Beqa'a. The Greek name was Heliopolis, "city of the sun," which came to be used in the Seleucid period, since Baal was identified with the sun-god. In the fourth or fifth century the ancient name was introduced again. At that time the importance of the town had receded because of the wars between the Romans and the Sassanid princes. Therefore, the prospering which began during the reign of Augustus prevailed for two or three centuries.

Today Baalbek is famous because of its temple ruins. The most ancient temple was originally built for the cult of the West Semitic storm-god Hadad. Later it was dedicated to the cult of the sun-god and afterward to Jupiter.* Macrobius, in his *Saturnalia*, explicitly says that the sun-god was identical with Jupiter. The ancient Phoenician sky-god Baalshamen also merged with Jupiter. Another important temple was that dedicated to Dionysus;* and finally there was a third important temple, the so-called round temple. The emperors Antoninus Pius (138-61) and Caracalla (211-17) were the most important builders, and in the reign of the latter the temples of Baalbek were generously completed, perhaps because his mother was a Syrian lady. Other deities worshiped at Baalbek were Venus and Mercurius. Together with Jupiter, these two formed a triad: the chief deity, the mother-goddess, and the young god. Figs. BAA 1; JUP 33; BAA 2.



In 637, Baalbek was captured by the Arabs, and it was devastated by the Mongols in 1401. Furthermore, the town has suffered from a number of earthquakes. In spite of this, there are valuable remains left, and in the years 1900-1904 Baalbek was excavated by German expeditions. Fig. BAA 3.

BAAL-BERITH bāl bĭr'ĭth [בעל ברית, lord of covenant]. A god whose shrine, according to Judg. 9:4, was at Shechem, and whose cult, according to a comment in the narrative of Gideon and its sequel (8:33), became popular in Israel together with the worship of the local manifestations of the Canaanite fertility-god Baal after the death of Gideon.

In the case of the cult of Baal-berith this probably applied only to the Israelites in the vicinity of Shechem, rather than to all Israelite elements in Palestine. Shechem was one of the strong cities of Palestine, with which the Israelites reckoned rather by agreement than by force of arms, and the sanctuary of a covenant-god here probably reflects these conditions. Because of lack of evidence the actual identity of the god must be a matter of speculation. The term "Baal" in the name Baal-berith need not necessarily signify the Canaanite fertility-god Hadad, for it is a neutral term which may, in fact, be used of men as well as of gods, signifying locality, sphere of interest, or a particular feature or attribute. In Judg. 9:46 the temple at Shechem is referred to as that of El-berith, "covenant-god," though the substitution of "El" for "Baal" here may be due to scribal orthodoxy. The association of the cult of Baal-berith with that of local Baals in Judg. 8:33, on the other hand, and the location of an actual shrine in Shechem imply that the god was of long standing in the land, so that we have probably to visualize him as the local manifestation of the Canaanite Baal, in whose temple an agreement had been made and was regularly ratified between the Israelites and the people of Shechem, the god thus becoming secondarily for the Shechemites and primarily for the Israelites the "covenant-lord." W. F. Albright conjectures that the covenant here refers to an Amorite confederacy.

BAALE bā'ə lĭ [בעלי, Baals (*or* lords) of]. KJV translation in II Sam. 6:2; the RSV combines with "Judah": BAALE-JUDAH. *See* KIRIATH-JEARIM.

BAALE-JUDAH bā'ə lĭ jōō'də [בעלי יהודה, Baals (*or* lords) of Judah] (II Sam. 6:2); KJV BAALE OF JUDAH. The same city as KIRIATH-JEARIM (I Chr. 13:6).

BAAL-GAD bāl găd' [בעל־גד, Baal of good fortune(?)]. A town near Mount Hermon marking the N limits of the conquest of Joshua (Josh. 11:17; 12:7; 13:5). It was situated in the valley between Mount Lebanon on the W and Mount Hermon on the E. The exact site is unknown, although modern Hasbeya has been suggested as a possible location.

Bibliography. F.-M. Abel, *Géographie de la Palestine*, II (1938), 258-59. G. W. VAN BEEK

BAAL-HAMON bāl hā'mən [בעל המון, Lord of abundance *or* of wealth]. A place where there was an especially fruitful vineyard of Solomon (Song of S. 8:11). The site is unknown; emended readings and suggested locations have not proved to be well founded. It is possible that the name is a locale of poetic imagination, created to convey the position of the "possessor of wealth."

Bibliography. R. Gordis, *The Song of Songs* (1954), p. 98. W. H. MORTON

BAAL-HANAN bāl hā'nən [בעל־חנן, Baal is gracious]. **1.** A king in Edom before the Israelite monarchy; son of Achbor. He succeeded Shaul, who came from the Euphrates, and was succeeded by Hadad (Gen. 36:38-39=I Chr. 1:49-50).

2. A Gederite official under David; he was in charge of olive and sycamore trees in the Shephelah (I Chr. 27:28). F. T. SCHUMACHER

BAAL-HAZOR bāl hā'zôr [בעל חצור, Baal of Hazor]. Possibly the mountain home of Absalom, near the town of Ephraim, the scene of a festival to which Absalom invited the other sons of David and where Amnon was slain by the servants of Absalom at Absalom's instigation (II Sam. 13:23).
