This place is not to be confused with the Hazor N of the Sea of Galilee. Hazor, listed in Neh. 11:33, is sometimes identified with Baal-hazor. The probable location is Jebel 'Asur, *ca.* six miles NE of Bethel. One of the Dead Sea Scrolls, the so-called Genesis Apocryphon, names Ramath-hazor as the place where the Lord appeared to Abram after his separation from Lot (Gen. 13:14). A late tradition, it suggests that another name for Baal-hazor was Ramath-hazor and that Absalom's mountain home may have been the site of an ancient Canaanite-Hebrew sanctuary. W. L. REED

BAAL-HERMON bāl hûr'mən [בעל חרמון, lord of Hermon]. A city of the Hivites on the border of Manasseh, which was untouched by the Israelite conquest (Judg. 3:3; I Chr. 5:23). It must have lain on the N border of Israel close to Mount Hermon. Tristram and Wetzstein suggest a place on top of the mountain; others think it is another name for BAAL-GAD. S. COHEN

BAALI bā'ə lī [בעלי, my lord, *or* my husband]. A title by which Hosea (2:16) depicts God as rejecting in favor of Ishi ("my husband"), thereby asserting the social, covenantal relationship between Israel and her God and rejecting all implications that God is for Israel what Baal was for the Canaanites, simply the power of Providence in nature.

Bibliography. W. R. Harper, *Commentary on Hosea*, ICC (1936), p. 234. For further bibliography, *see* BAAL (DEITY). J. GRAY

BAALIM bā'ə lĭm [בעלים, Baals *or* lords]. Plural of Baal, possibly a plural of majesty, but probably various local manifestations of BAAL (DEITY).

BAALIS bā'ə lĭs [בעליס]. A king of the Ammonites. He sent Ishmael to murder Gedaliah soon after the destruction of Jerusalem (Jer. 40:14—G 47:14). He probably hoped by this means to take over some of the devastated territory of Judah.

F. T. SCHUMACHER

BAAL-MEON bāl mē'ŏn [בעל מעון, *apparently* lord of habitation]. A town in N Moab, also called Beth-baal-meon, Beth-meon, and Beon (probably). It was assigned to the tribe of Reuben (Num. 32:3, 38; Josh. 13:17; I Chr. 5:8). *Ca.* 830 B.C. it was in Moabite possession, since Mesha "built Baal-meon, making a reservoir in it" (MOABITE STONE, line 9), and also built "Medeba, Beth-diblathen, and Beth-baal-meon" (line 30). Ostracon 27 from Samaria speaks of "Baala the Baalmeonite" (בעלא בעלמעני), showing Israelite possession *ca.* 772 B.C., if this is the same Baal-meon. Later it was once more in Moabite hands (Jer. 48:23; Ezek. 25:9).

The site has been identified with Ma'in, a large mound *ca.* four miles S of Medeba. No evidence of occupation from the OT period has been found, but the heavy subsequent occupation may well have destroyed it. E. D. GROHMAN

BAAL-PEOR bāl pē'ôr [בעל פעור, Baal of Peor]. Alternately: BAAL OF PEOR. The god of Mount Peor (*see* PEOR 1-2). While Israel was encamped at SHITTIM, the people entered into illicit relations with the Moabite women. Israel "yoked themselves to Baal of Peor" and indulged in licentious worship rites. In punishment, Israel was smitten with a plague. The Midianites were also involved in leading Israel astray. Cf. Num. 25:1-9; Deut. 4:3; Ps. 106:28; Hos. 9:10.

See also BETH-PEOR; BAAL (DEITY).

E. D. GROHMAN

BAAL-PERAZIM bāl pĭ rā'zĭm [בעל פרצים, Baal (lord) of breaking through (popular etymology)]; MOUNT PERAZIM [הת פרצים] (Isa. 28:21). A place near the Valley of Rephaim where David defeated the Philistines shortly after his being anointed king of Israel (II Sam. 5:20 ff; I Chr. 14:11 ff). In Isaiah's warning to Jerusalem, it is placed in parallelism with the Valley of Gibeon (Isa. 28:21). Probably it is modern Sheikh Bedr, on Ras en-Nadir, NW of Jerusalem, above Lifta (Nephtoah). V. R. GOLD

BAALSAMUS bāl sā'məs [Βαάλσαμος]; KJV BALASAMUS bə lăs'ə məs. Apoc. name of MAASEIAH 18.

BAAL-SHALISHAH bāl shăl'ə shə [בעל שלשה] (II Kings 4:42); KJV BAAL-SHALISHA. A city or region, the home of the man who came to Elisha at Gilgal bringing twenty loaves of barley and fresh ears of grain. This reference and the Talmudic statement (Sanh. 12*a*) that fruits ripened earlier there than elsewhere in Palestine may indicate that the place was in a fertile section of the country. Some scholars identify the site with SHALISHAH. The village of Kefr Thilth, SW of Shechem, preserves the name Shalishah and is a possible, though not certain, location. W. L. REED

BAAL-TAMAR bāl tā'mər [בעל תמר, lord of the palm] (Judg. 20:33). A place near Gibeah of Benjamin, where the Israelites assembled to fight in their last and successful assault upon the city. The site has not been identified; it may not have been a city at all, but a prominent landmark. S. COHEN

BAAL-ZEBUB bāl zē'bŭb [בעל זבוב]. A god of the Philistine city of Ekron, to whom King Ahaziah of Israel (*ca.* 845 B.C.) sent to inquire whether he would live after falling from an upper chamber (II Kings 1:2-18).

The Hebrew word זבוב (*zĕbūb*) means "fly," and the name is accordingly rendered "Baal of flies" by the LXX and Josephus (Antiq. IX.ii.1). Modern scholars have interpreted this as referring to a god who drove away infectious pests, and have compared the Greek Zeus Apomyios—i.e., "Averter-of-flies"—mentioned by Pausanias (V.14.2; cf. Clement of Alexandria *Protr.* II.38.4), and the demon Myagros, "Fly-driver," worshiped at Aliphera in Arcadia (Pausanias VIII.26.7). But (*a*) it is difficult to see why a god who averted pestilence should have been appealed to in the case of a fall; and (*b*) the Greek deities in question were not in fact averters of pests in general, but were simply propitiated before sacrifice, in accordance with a not uncommon practice (cf. Aelian *De natura animalium* II.8; V.17; Antiphanes III.134 Meineke) as a means of placating the flies who swarmed around the altar. If, therefore, the name is indeed to be associated with זבוב, it is more probable that Baal-zebub was a god who gave oracles by the flight or buzzing of a fly. A modern Scottish parallel, from the holy well at Kirkmichael, Banffshire, is adduced by R. A. S. Macalister (*see bibliography*), and others may be found in the *Handwörterbuch des deutschen Aberglaubens*. It is, however, equally possible that "Baal-zebub" is a deliberate, pejorative distortion of the god's true name. It has been suggested that this was the Zebul Baal ("Lord Baal") of the Ras Shamra Texts, but "Zebub" might more probably conceal a Philistine word. In short, the problem of identification must at present be left open.

BAAL-ZEPHON bāl zē'fŏn [בעל צפון, בעל צפן; LXX Βεελσεπφων, Βεελσεφων]. A station of the Exodus in NE Egypt.

The exact location of Baal-zephon is unknown. Because neither Pihahiroth nor Migdol, with which Baal-zephon is mentioned (Exod. 14:2, 9), can be identified with certainty, only a general location in NE Egypt can be suggested. Eissfeldt identifies the site with that of Greco-Roman Casium (=Kasion), which, following Clédat and Abel, should be placed at Ras Kasrun, *ca.* twenty-five miles E of Mohammediyeh. Albright argues, however, that because Kasion as a town does not appear before Hellenistic-Roman times and is furthermore in a location inappropriate to the nautical significance of the divinity Baal-zephon and to the best commercial interests, the site of Baal-zephon is more likely to be sought in N Egypt proper, on the Mediterranean or a reasonably deep body of water off it.

The divinity Baal-zephon, after whom the village was named, is becoming increasingly well known, as a result of modern research. The name is Northwest Semitic and means Lord of the North, although a more local association with Casius Mons, just N of Ugarit, called *Ṣpn* in North Canaanite, is suggested.

The earliest references to Baal-zephon occur in Ugaritic literature, where he is mentioned both in sacrificial lists and in the Keret Epic; it is in the latter that he is associated with a sacred bark and with the mythical *hol* bird (phoenix). An Egyptian source (Papyrus Sallier IV, *ca.* 1270-1250 B.C.) numbers him with the Semitic deities Qudshu and Baaltis, and in the curse formula of a treaty between Esarhaddon and Baal of Tyre (*ca.* 675 B.C.) he is listed with Baal-shamêm and Baal-malagê. The same formula affords us positive information on the god's role as a sea- and storm-god. A Phoenician papyrus letter from the sixth century tells us, further, that Baal-zephon was closely associated with the Egyptian port TAHPANHES. Eissfeldt has ably demonstrated the identity of Baal-zephon and Zeus Casius.

BAANA bā'ə nə [בענא]; KJV BAANAH in I Kings 4:16. **1.** Son of Ahilud; one of the twelve commissariat prefects of Solomon. His district was Taanach and Megiddo (probably his headquarters) as far as beyond Jokmeam, and all Beth-shean below Jezreel, from Beth-shean to Abel-meholah, which is near Zarethan (I Kings 4:12, corrected text of Albright).

2. Son of Hushai; one of the twelve commissariat prefects of Solomon. His district was Asher and Bealoth (I Kings 4:16).

3. The father of Zadok, who participated in the rebuilding of the walls of Jerusalem in the time of Nehemiah (Neh. 3:4); perhaps the same as BAANAH 4.

Bibliography. W. F. Albright, "The Administrative Divisions of Israel and Judah," *JPOS*, V (1925), 26 ff; F.-M. Abel, *Géographie de la Palestine*, II (1933), 80 ff; J. A. Montgomery and H. S. Gehman, *The Books of Kings*, ICC (1951), pp. 120 ff. E. R. DALGLISH

BAANAH bā'ə nə [בענה]. **1.** One of the sons of Rimmon, a Benjaminite from Beeroth. With his brother Rechab he shared in the regicide of Ish-bosheth (II Sam. 4:2-12). This violent deed appears to have been a frantic effort on the part of these two captains of Ish-bosheth to ensure the success of the plans of the deceased Abner for a united kingdom under David, by the elimination of its most dangerous opponent. Baanah and Rechab gained access to the royal chamber by eluding the dozing portress and slew Ish-bosheth as he was taking a siesta. Fleeing to the Judean court with the head of the monarch in their hands, they informed David of their accomplishment; but what seemed to them a most commendable political service was to David unmitigated murder. He ordered their summary execution and hanged their severed hands and feet beside the pool of Hebron as a public example.

2. A Netophathite; the father of Heled (preferable to Heleb—II Sam. 23:29), who was a member of the "Thirty" (II Sam. 23:29; I Chr. 11:30).

3. One of the Babylonian exiles who returned to Judah accompanying (KJV) or, more likely, sharing the leadership with (RSV) Zerubbabel (Ezra 2:2; Neh. 7:7; cf. I Esd. 5:8, where they are called "leaders").

4. One of those who set their seals to the covenant made in the time of Nehemiah (Neh. 10:27). He may perhaps be identified with BAANA 3.

5. KJV form of BAANA 2. E. R. DALGLISH

BAANIAS. KJV Apoc. form of BENAIAH.

BAARA bā'ə rə [בערא, *possibly hypocoristic for* Baal has seen] (I Chr. 8:8). Apparently a wife of Shaharaim, a Benjaminite. The text is corrupt.

Bibliography. E. L. Curtis, *Chronicles*, ICC (1910), pp. 159-60; M. Noth, *Die israelitischen Personennamen* (1928), pp. 40, 119. B. T. DAHLBERG

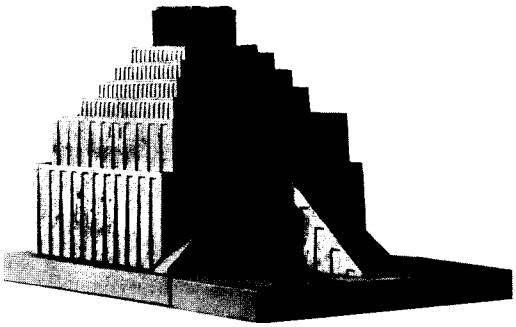
BAASEIAH bā'ə sē'yə [בעשיה] (I Chr. 6:40—H 6:25). A Levite of the family of Kohathites; ancestor of Asaph the musician. The name is probably to be read with several MSS "MAASEIAH" (מעשיה).

BAASHA bā'ə shə [בעשא]. King of Israel *ca.* 900-877 B.C.; successor of Nadab whom he murdered.

The name is perhaps a contraction of בעלשמע, "Baal hears." The first part of the name is בעל; the second has been shortened and now appears as a hypocoristicon. Or "Baasha" may be a contraction from בעלשמש, "The sun is Baal."

Baasha was a son of Ahijah and came from the tribe of Issachar (I Kings 15:27). He reigned for twenty-four years at Tirzah (vs. 33). This is the first occasion on which Tirzah is actually mentioned as the new capital of the N. That a change had been made from Shechem has been hinted at previously (14:17; 15:21). Tirzah continued as the capital city until Omri became king. It has now been identified almost certainly with the modern Tell el-Far'ah, nearly seven miles NE of Nablus. It had previously been a Canaanite royal city (Josh. 12:24), and was renowned for its beauty (Song of S. 6:4).

Baasha came to the throne as the result of a military revolt against King Nadab, whom he murdered while the Israelites were besieging Gibbethon (I Kings 15:27-28). The revolt was a clear indication of the unsettled conditions prevailing in the N and showed that the concept of charismatic leadership was still strong.



In the summary of his reign (I Kings 16:5) mention is made of "his might." Apart, however, from the incident recorded in connection with the fortifying of Ramah (15:17), no other details are given (*see* ASA). When Baasha attempted to fortify Ramah (the modern er-Ram), some five miles N of Jerusalem, Asa king of Judah reacted by buying the support of Ben-hadad king of Syria. Syrian raids into N Israel forced Baasha to withdraw (vss. 17-21). That this border warfare continued against Asa king of Judah throughout Baasha's reign is certain (vs. 16).

In I Kings 16:1-7 appears a prophetic denunciation of Baasha and his house for their sin and disobedience by Jehu the son of Hanani. The concluding phrase: "and also because he destroyed it," is difficult. The later writer apparently saw the murder of Nadab, with the end of Jeroboam's house, as a mistake.

BABEL bā′bəl [בבל]. The Hebrew form of the name BABYLON. In Gen. 11:1-9 it is told that mankind after the Flood came to the plain of SHINAR. There, to set themselves a lasting monument and to have a common purpose to unite them and prevent their scattering all over the earth, they decided to build a city and a tower that would reach to heaven. God, however, mixed up their language so that they no longer understood one another, and they had to disperse. The city and the tower were therefore—in a play on the Hebrew word *bālāl,* "to mix"—called Babel.

The story, as we have it, has such clear reference to Babylon that the tower which plays a central role in it can hardly be but the great ziggurat or stage tower of the Marduk temple in Babylon, Etemenanki, which consisted of six square stages one on top of the other, the last one crowned by a small chapel for the god. The ground plan of this tower was recovered by Koldewey in his excavations in Babylon, and an important cuneiform text which gives the measurements of the temple and its parts furnishes valuable evidence for a reconstruction. In addition we have a description of the tower as it looked in Hellenistic times, given by Herodotus. All questions about how the tower looked are, however, not solved. Various, in part quite different, reconstructions have been proposed (Fig. BAB 4), and

4. Model of the ziggurat of Babylon (Tower of Babel), after Unger

discussion of the questions involved has given rise to a considerable literature (*see bibliography*). The story in Genesis would seem to have been inspired by the tower at a period when that great monument was in ruins between two rebuildings.

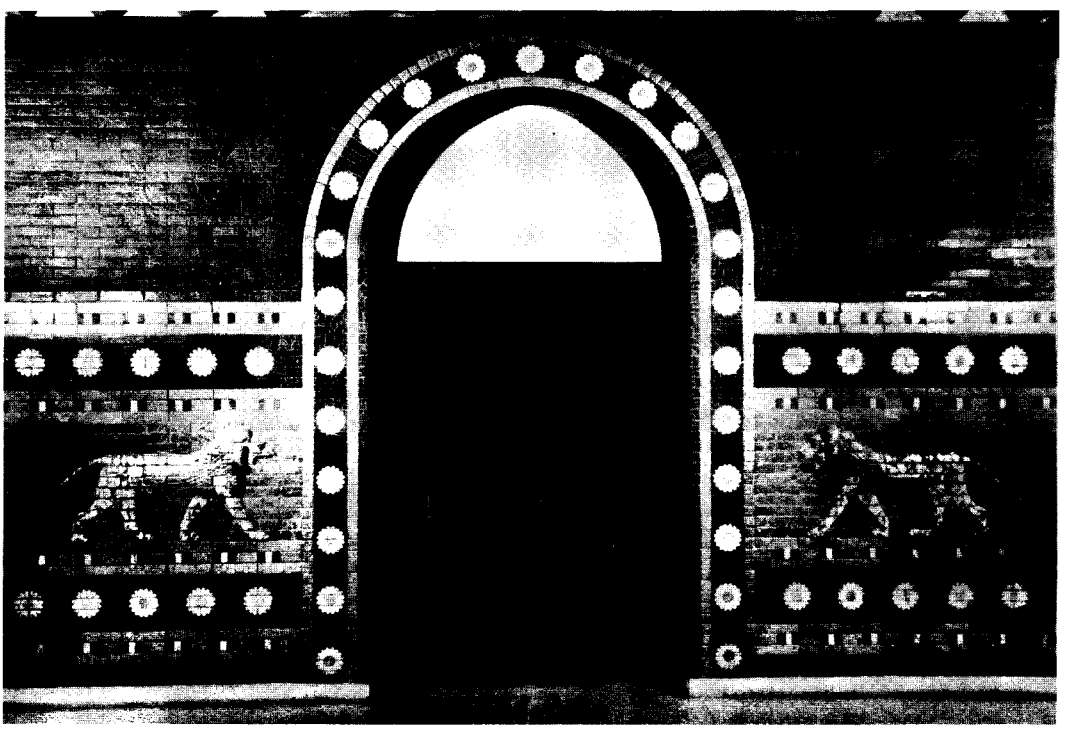
1. Excavations. The site of Babylon was visited by not a few early travelers and archaeological explorers, but no reliable and comprehensive picture of the city and its remains was obtained until systematic excavations at the site were undertaken by the Deutsche Orient Gesellschaft under the direction of Robert Koldewey from 1899 to 1918. Later work has been done on the site by Heinrich Lenzen. Because of the vast extent of the ruins, only selected areas could be investigated; and since the high water table makes penetration in depth difficult, the excavations have of a necessity concentrated on the later phases of the city, particularly on the remains of Neo-Babylonian and later times.

2. History. Since strata of the third millennium and earlier date could not be reached, the beginnings of Babylon as a city are not known. The earliest mention of it dates to the Akkad period (*ca.* 2500 B.C.) and occurs in a date formula of King Sharkali-sharri which commemorates the construction of temples to the goddess Anunitum and the god Aba in KÁ-DINGIR^{ki}. Because of the ambiguities of the older cuneiform writing, it is not possible to decide with certainty whether this writing renders the Sumerian name of the city (Ka-dingirak) or its Akkadian name (Bab-ilim). Both names mean "the gate of the god." The first certain occurrence of the name Bab-ilim is in texts of the period of the Third Dynasty of Ur—*ca.* twenty-second–twenty-first centuries—(e.g., YOS IV, no. 66: *ki ensik Bab-ilim-ma ^{ki}-ta,* "from the governor of Bab-ilim"). As shown by this and other references, Babylon served at the time of the Third Dynasty of Ur as provincial capital and seat of a governor. During the following Isin-Larsa period it became the capital of a small independent kingdom under a dynasty of Western (Amorite) descent, the founder of which was a certain Sumu-abum. Under Hammurabi, the best-known king of the dynasty, Babylon extended its sway over most of S Mesopotamia; but already under Hammurabi's son Samsu-iluna the S part of the kingdom was lost to the kings of the Sea-land. The end of the dynasty came shortly after 1600 B.C. with a Hittite raid on Babylon. In the following Cassite and Middle Babylonian periods Babylon maintained its position as capital of S Mesopotamia. It was captured and partially destroyed by the Assyrian ruler Tukulti-Ninurta I (1235-1198 B.C.), but was vigorous enough to recover from its misfortune. When the Assyrians under Tiglath-pileser III (746-727) and Sargon II (722-705) subdued S Mesopotamia, Babylon became a center of resistance, so that eventually Sennacherib (705-681) in 689 saw no other alternative than to completely destroy the city. Sennacherib's son Esarhaddon, however, rebuilt the city; and when after Esarhaddon's death Ashurbanipal became king of Assyria, his brother Shamashshumukin served as

regent of Babylon. A rebellion by Shamashshumukin led to a severe siege of Babylon, and when in 648 the Assyrians took the city, Shamashshumukin burned himself to death in his palace. In 608 B.C. the Assyrian Empire fell, and Babylon, which had been a prime mover, entered upon its most glorious period as capital of the Neo-Babylonian Empire. Under Nabopolassar and Nebuchadrezzar II (605-562) a vast program of public building and fortification was carried out. When the Neo-Babylonian Empire fell to the Persians, Babylon opened its gates to Cyrus in 539 B.C. without opposition. The city maintained its dominant position under the Persian rulers; and when the Persian Empire in its turn fell to Alexander the Great, Babylon again offered no resistance, but received the conqueror with open arms. It was a logical choice for capital of Alexander's new empire; but when Alexander's successor Seleucus I (Nicator) founded Seleucia on the Tigris a short distance away, Babylon found the new city a dangerous rival. Little by little the inhabitants of Babylon moved to Seleucia and Babylon itself became deserted, so that at the beginning of the Christian era only a small group of astronomers and mathematicians still continued to live in the ancient city.



3. Topography. Neo-Babylonian Babylon formed a slightly squeezed rectangle, with the long side oriented NE-SW, and covered an area of approximately a thousand acres. The Euphrates River entered this rectangle at the middle of its N side and left it again at a point a little to the W of the middle of the S side. The area E of the river constituted the older part of the city, with the royal palace and the main temples; the area W of the river was younger and was known as the "new" city. Fig. BAB 5.

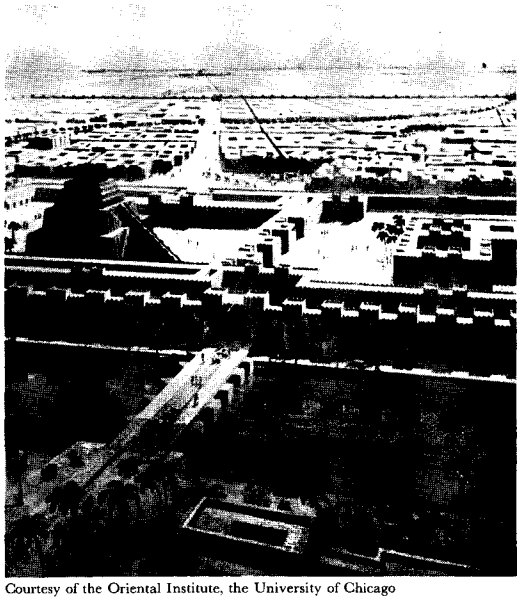
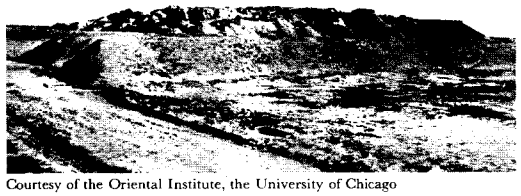
5. Plan of Babylon, *ca.* 600 B.C. (after Unger)



4. Fortifications. Two imposing walls enclosed the rectangle; the innermost of these, called Imgur-Enlil, measured *ca.* twenty-one feet in width, the

Courtesy of the Oriental Institute, the University of Chicago

6. Reproduction of the Ishtar Gate, from the time of Nebuchadnezzar



outermost, Nemetti-Enlil, *ca.* eleven feet. Outside the latter ran a water-filled defensive ditch. The walls were constructed of sun-baked bricks and had projected towers at *ca.* sixty–sixty-five–feet intervals. Access to the city was through ramps across the ditch and gates in the double walls. The best known of these gates, the Ishtar Gate,* was located in the E half of the N side of the rectangle. The system of fortification was further strengthened by Nebuchadnezzar II by the construction of a new double wall farther out in the terrain to the S and the E in order that "arrows of battle" should not be able to reach the inner wall. The outer wall of the new system was built of baked bricks and was *ca.* twenty-five feet wide; the width of the inner wall, which was of sun-baked bricks, was *ca.* twenty-three feet. For further security a system of artificial lakes and flooded areas was established to the N and the E outside these walls. Figs. BAB 6-7.

7. City of Babylon, showing the Tower of Babel (from a painting by Maurice Bardin of the reconstruction by Unger)

5. Palaces and Ishtar Gate. A visitor to Babylon, arriving from the N, would, before approaching the Ishtar Gate, have passed Nebuchadnezzar's outer fortification line and a palace just inside them, called the "Summer Palace," on the bank of the Euphrates. The mound covering this palace still preserves the name of the city in the form "Babil." * Proceeding toward the city, the visitor would, just before he reached the Ishtar Gate and the inner fortifications, have passed a second large palace outside the walls to his right and a similar structure, interpreted as an "armed camp," to his left. The walls of these buildings facing the street were decorated with processions of lions in colored relief made of enameled bricks.* Approaching the Ishtar Gate, the visitor saw an arched entry *ca.* fifteen feet wide and perhaps thirty feet high, flanked on each side by a massive square tower. * The towers and the gate were faced with

9. The Ishtar Gate at Babylon (from a painting by Maurice Bardin, after the reconstruction by Unger)

lapis-lazuli blue tiles and decorated with rows of bulls and dragons in colored relief.* Entering the Ishtar Gate, one crossed a broad gate room, in the W section of which was a dais for a divine statue or emblem; on leaving, one passed through the outer wall, Nemetti-Enlil, and faced a second larger gate leading through Imgur-Enlil. This gate was also flanked by lapis-lazuli blue towers, but these towers were higher, more massive, and without reliefs. Behind them stretched a long rectangular gate room, *ca.* one hundred feet deep, through which the visitor would finally emerge on the processional street Aibur-shabu, which led in a straight line S through the city. Standing at this point and looking toward the center of the city, the visitor would have immediately to his left a temple for the goddess Ninmakh, one of many such major temples within the city; immediately to his right he would see the largest of

10. Eastern towers of Ishtar Gate, showing reliefs of animals

the palaces he had so far passed, the main palace of the city. This palace consisted of three major units, each with one or more central square courts surrounded by rooms. The first such unit, the one nearest the street, contained the official reception suite of the king, with the throne room, a broad hall on the S side of a large court and accessible from it through three doors. In the long wall of the room opposite the middle and main doorway was a niche before which the throne and dais of the king were located. A section of this part of the palace with unusually solid and heavy walls has been interpreted as the foundations for the famous "Hanging Gardens" of Babylon, said to have been constructed to please a queen who longed for the mountainous scenery of her homeland in the E mountains. Continuing westward, one entered a unit of the palace which has been interpreted as the living quarters of the king, and still farther W there was a last unit interpreted as the harem, the part of the palace which accommodated the royal family. W of this, on the bank of the Euphrates, lay a massive bastion protecting the palace against attack across the river. Figs. BAB 8; LIO 31; BAB 9-10.

6. Private houses. Moving on from the Ishtar Gate past the palace and continuing southward through the town along Aibur-shabu, the visitor would pass on his left a section of private houses which has been excavated. It shows relatively straight, somewhat narrow streets crossing one another at right angles. The houses varied in size from some 60 by 60 feet to as much as 130 by 130 feet and had from eight to twenty-six rooms grouped around one or more courts. These houses were generally only one story high; and their walls toward the street, unbroken by windows, showed only a door opening. The roofs were flat. At street crossings large square daises with divine statues or emblems frequently stood.

7. Marduk temple. Continuing along Aibur-shabu, one reached on the right the pilastered walls of the complex Etemenanki with the ziggurat (temple tower) of Babylon (*see* BABEL, TOWER OF). The complex consisted essentially of a large, open square surrounded by building units interpreted as storehouses. Once along the E side, toward Aibur-shabu, and four times along the S side of the complex, the outer wall of the belt of storehouses formed a broad and deep recess, at the bottom of which stood a gate into the central open square. At the S side of this square the temple tower of Babylon was situated (Figs. BAB 4; 7). Turning right at the corner of Etemenanki on Aibur-shabu and following a street leading down to the river, the visitor would have on his right the S façade of the Etemenanki complex, while on his left, back from the street, stood the Marduk temple Esagila. The main gate to this temple was in its E wall. It led into a large, rectangular forecourt surrounded by rooms as yet unexcavated. To the left of this court was a smaller subsidiary court, also rectangular and surrounded by rooms and also unexcavated. A gate at the far, W end of the forecourt opened into the main unit of the temple. Through a gate room one entered a square court with double rows of rooms on the N and S sides. Opposite the entrance a monumental gate led into the antecella, and from there one passed into the cella proper, known as Ekua. The cella was rectangular in shape, entered through a door in the middle of the long side opposite which the dais with Marduk's image was placed. In the wall behind the dais was an ornamental niche. The decoration of the cella was lavish in the extreme. The roof beams were covered with gold and silver; the walls were covered with gold; and the colossal seated statue of Marduk on the dais was, according to Herodotus, fashioned of gold, as were also the throne on which it sat, the dais which carried the throne, and an offering table which stood before it. Altogether Herodotus estimates that some eight hundred talents of precious metal went into the furnishings.

8. The bridge. The street which ran from Aibur-shabu between Esagila and Etemenanki down to the river led to a bridge which connected the E and W parts of the city. The bridge was excavated by Koldewey and found to have rested on six boat-shaped pillars of baked bricks laid in bitumen. According to Herodotus, the covering of the bridge consisted of wooden planks which were taken up every evening so that the inhabitants of one part of the city could not cross over by night and steal from those of the other part.

9. Reputation of Babylon. Archaeological and contemporary written records fully confirm Babylon's reputation as a great and wealthy city of lavish splendor. They contain little which would allow a judgment of whether its reputation for moral laxity is equally well founded. All large cities tend to be vulnerable to moral judgment, as seen by the ease with which the epithet "Babylon" can be applied to them; and it may be remembered that the biblical tradition is of a necessity a hostile tradition, since neither religious conviction nor the harsh treatment of the Jews by the Babylonian rulers could endear the city to the biblical writers. The passage which has damaged the city's memory most severely: "Mys-

tery, Babylon the great, the mother of harlots and abominations of the earth" (Rev. 17:5), refers undoubtedly, not to Babylon at all, but to Rome.

Bibliography. See the various final excavation reports published in *Wissenschaftliche Veröffentlichungen der Deutschen Orient Gesellschaft.* See also: R. Koldewey, *Das wieder erstehende Babylon* (1925); E. Unger, *Babylon, die heilige Stadt* (1931); O. E. Ravn, *Herodots Beskrivelse af Babylon* (1939).

T. JACOBSEN

BABYLON (NT) [Βαβυλών]. **1.** The E city and kingdom into which the people of Israel and Judah had been taken captive. The memory of this captivity among early Christians kept alive two themes common to the exilic prophets: (*a*) The captivity was God's punishment upon his people for their sins of idolatry and disobedience (e.g., Jer. 25:8-11; Acts 7:43, adapted from Amos 5:27); (*b*) Babylon the haughty empire would itself be destroyed by God (Jer. 25:12-14; Isa. 13; 14; 47; 48) and his people redeemed from their exile. Babylon, in retrospect, represented both the place and the time of this exile, a pivotal epoch in Israel's history, second in importance only to the captivity in Egypt. In the Matthaean genealogy, for example, the generations are divided: Abraham, David, Babylon, Christ. The movement from King David to slavery is reversed by the movement from slavery to the son of David (Matt. 1:1-17).

2. The contemporary realm which, as the realm of the devil, contains all blasphemies and idolatries. The ancient Babylon is here understood as the archetypal head of all entrenched worldly resistance to God. Babylon is an agelong reality including idolatrous kingdoms as diverse as Sodom, Gomorrah, Egypt, Tyre, Nineveh, and Rome. She is a harlot, riding the beast, ruling many kingdoms, corrupting kings, drunk with the blood of saints and martyrs (Rev. 17; 18). Babylon, the mother of all harlots, is the great source and reservoir of enmity to God, as well as the objectified product of the "one mind" which gives power and authority to false gods. As such, she is the antithesis of the virgin bride of Christ, the holy city, the new Jerusalem, the kingdom of God. Yet, although she was the fountainhead of all earthly rebellion against God, Babylon was also God's tool in punishing Israel (Jer. 25:8-11). Her power over God's people was granted by God himself (Rev. 17:17).

This demonic kingdom is, however, subject to great and final desolation. Drawing from OT pictures of the fate of the city, the prophet depicts the utter destruction of this "haunt of every foul spirit" (Rev. 18). All the plagues that had fallen on Egypt, Sodom, Tyre, Nineveh, are seen as embodied in one transcendent cataclysm. Ancient dooms are absorbed into this total doom, which falls on the rulers, sailors, merchants, and citizens—all who had drunk the wine of her fornication. Her judgment at the hands of God "in one hour" parallels in reverse the vindication of the saints and the descent from heaven of the holy city.

In the prophet's vision, the name Babylon is a mystery, and an aspect of the ultimate mystery of God's victory over evil (Rev. 17:5, 7). The truth concerning the sin and doom of Babylon is revealed from heaven. It is due to prophetic disclosure that this apotheosis of evil can be detected in spite of its disguise in earthly prosperity, luxury, pride, and power. And only a disclosure like this can reveal the process of swift and final judgment.

If we must choose an empirical equivalent for Babylon, it would be Rome (city, empire, civilization), which to the prophet was a contemporary localization and embodiment of Babylon. In the events of his own day, through which the church was being tried and corrupted, he perceived both the idolatries and the sure doom of Babylon. In thinking of Rome in these terms, the prophet adopted an idiom which was current among Jewish seers (II Bar. 11:1; Sibylline Oracles 5:143, 158; IV Ezra 2) and Jewish rabbis. That it was current also among Christians is indicated by I Pet. 5:13. It is almost certain that the author of this letter was writing from Rome to churches in Asia Minor. Yet he speaks of writing from Babylon. He assumes that his readers will understand that the city which Romans call Rome is really a manifestation of the age-old domain of idolatry. As Tertullian wrote: "Babylon, in our own John, is a figure of the city Rome, as being equally great and proud of her sway, and triumphant over the saints" (*Against the Jews*). Yet it is not sufficient to identify Rome and Babylon. Babylon embraces more than one empire or culture. It is defined rather by dominant idolatries than by geographical or temporal boundaries. Babylon is coextensive with the kingdom of that beast which has corrupted and enslaved mankind, and whom the Lamb must conquer (Rev. 17:14) if mankind is to be freed. Babylon is an eschatological symbol of satanic deception and power; it is a heavenly mystery, which is to be comprehended prophetically, and which is never wholly reducible to empirical earthly institutions.

BABYLONIA. *See* ASSYRIA AND BABYLONIA.

BACA, VALLEY OF bā'kə [עמק הבכא, valley of the balsam trees(?)] (Ps. 84:6). A Palestinian valley the name of which was probably taken from a species of gum-exuding (weeping) tree—perhaps the BALSAM—which grew along its course. The word itself would seem to be a variant derivative from a root meaning "to weep." No valley of such a name has yet been identified, but a similar situation is perhaps suggested by the Valley of Rephaim, in which there were well-known balsam trees.

The valley was presumably a rather arid and inhospitable route along which ran a toilsome pathway to Zion (Jerusalem), which pathway was made to appear much less forbidding because of the joyous faith and mission of the pious pilgrim traveling it. In the same vein, it is quite possible that the valley was entirely symbolic.

W. H. MORTON

BACCHIDES băk'ə dēz [Βακχίδης]. Friend of King Demetrius I (*see* DEMETRIUS 2), and governor of the area W of the Euphrates (I Macc. 7:8 ff). He was sent with an army to suppress the revolt of Judas Maccabeus and to install Alcimus as high priest. His mission was partly successful. He sought to deceive Judas and his brothers with peaceful words but was disregarded. When a company of scribes (or Hasidim) appeared before Bacchides and Alcimus for justice, both leaders took an oath not to harm them. These Hasidim trusted Alcimus as a priest and relied upon the assurance of religious freedom from the Syrian government. Sixty of the Hasidim were treacherously massacred, because the leaders became suspicious of their loyalty (Antiq. XII.vi.2). Bacchides also arrested deserters from the Hasmonean army because of his distrust.

After handing the country over to Alcimus with an army, he returned to the king. When Nicanor, a second general, had fallen in battle with Judah, King Demetrius again sent Bacchides to Judea. He was victorious in Arbela (I Macc. 9:2). Later at Elasa, Judah fell in battle against Bacchides.

As a result of a famine and Judah's death, Bacchides was able to dominate Judea and torment the loyal Jewish adherents. He fought Jonathan on the sabbath day (I Macc. 9:46) on the banks of the Jordan. Though a thousand of his men were slain, Bacchides gained the upper hand. Returning to Jerusalem, he took the sons of the leading men as hostages. He also fortified many places around Jerusalem, placing his men in the citadel. Fearing no more the Hasidim, Bacchides returned to Syria. This return is recorded as occurring after the death of Alcimus, and the land of Judea was quiet for two years till 158 B.C.

Bacchides was induced to return to Judea a third time. He fought against Jonathan at Bethbasi but met with stubborn resistance. To cover up his unsuccessful attempt to destroy Jonathan, Bacchides put the blame on the Hellenized Jews who had sent for him, accusing them of deception and consequently slaying many of them. As a result Jonathan now proposed peace and sought the release of prisoners. Bacchides agreed and swore never again to seek evil against Jonathan as long as he lived. Returning to his own land, he never again returned to Judea. As a result of the peace with Bacchides, Jonathan became the recognized leader, now having no rival, because of the death of the high priest Alcimus.

S. B. HOENIG

BACCHURUS. KJV form of ZACCUR 6.

BACCHUS băk'əs. *See* DIONYSUS.

BACENOR bə sē'nôr [Βακήνωρ]. A name in the phrase "Bacenor's men" (KJV "Bacenor's company") in II Macc. 12:35. These persons seem to be identical with those called Toubiani in vs. 17 (*see* TOB; DOSITHEUS). The meaning of the name is obscure. S. B. HOENIG

BACHRITES. KJV form of BECHERITES. *See* BECHER.

BACKSLIDING [משובה, שובב]. A prophetic term, almost exclusive to Jeremiah and Hosea, describing Israel's infidelity to Yahweh, more properly "backturning," often translated "faithless" (Isa. 57:17; Jer. 8:5; cf. Jer. 3:14, 22; 31:22; 49:4; Hos. 11:7; 14:4). The word undoubtedly has covenantal associations. Israel, as the wife of Yahweh, has proved unfaithful and embraced paganism. But Israel's backsliding is not simply religious apostasy (a rejection of Yahweh for pagan deities, or the introduction of pagan rites into Yahweh-worship), but also moral apostasy—a forgetting, or rejection, of the ordinances of the Lord (Jer. 8:7); covetousness (Isa. 57:17); practicing deceit (Jer. 8:5); dealing falsely (Jer. 8:10). People, prophets, and priests together were guilty, refusing to respond to prophetic entreaty.

In the NT, Jesus predicts times of falling away (Matt. 24:10, 12), and Hebrews is replete with warnings against this tendency. *See also* APOSTASY.

BADGER. The translation of שפן in Ps. 104:18; Prov. 30:26 (KJV CONEY). *See* ROCK BADGER.

BAEAN bē'ən [Βαιαν; Vulg. *Bean; cf.* Beon (Num. 32:3)] (I Macc. 5:14); KJV BEAN. An otherwise unknown tribe destroyed by Judas Maccabeus because they had been "a trap and a snare to the people and ambushed them on the highways" (cf. II Macc. 10:18-23; Jos. Antiq. II.viii.1). J. C. SWAIM

BAG. 1. חרוט (II Kings 5:23). Alternately: HANDBAG (Isa. 3:22); KJV CRISPING PIN (hair curler). In II Kings 5:23 the reference is to money bags, each holding a talent of silver. In Isa. 3:22 the translation "handbag" is obviously right, since the context points to an article of luxurious feminine apparel.

2. כיס (Deut. 25:13; Prov. 16:11; Mic. 6:11). Alternately: PURSE (Prov. 1:14; Isa. 46:6). A small bag or pouch used for weights, and in the Proverbs and Isaiah passages for money.

3. צרור (Gen. 42:25 [KJV SACK]; Job 14:17; Prov. 7:20; Song of S. 1:13 [KJV BUNDLE]; Hag. 1:6). Alternately: BUNDLE (I Sam. 25:29). Something tied together, usually a bag or cloth drawn together to hold money (Proverbs, Haggai) or something loose such as myrrh (Song of Songs). The word is sometimes used figuratively (Job, Samuel) for "bag of transgressions" or BUNDLE OF THE LIVING.

4. צור (II Kings 12:10—H 12:11). A verb meaning "to tie up in bags." The reference is to the contributions collected in the Jehoiada chest.

5. כלי (Gen. 43:11 [KJV VESSEL]; Deut. 23:25; I Sam. 17:40, 49). Alternately: SACK (Gen. 42:25; I Sam. 9:7 [KJV VESSEL]). A grain bag, food sack, container for grapes, or bag for a shepherd's supplies. In I Sam. 17:40, ילקוט ("wallet"; KJV "scrip") is obviously meant to explain the shepherd's bag and so is practically synonymous with it.

6. Πήρα (Matt. 10:10; Mark 6:8; Luke 9:3; 10:4; 22:35-36); KJV SCRIP. A traveling bag, shepherd's bag, or beggar's bag. It was also part of the Cynic preacher's equipment.

7. Βαλλάντιον (Luke 10:4; 12:33; 22:35 ff). A purse.

8. KJV translation of γλωσσόκομον (RSV MONEY BOX). J. M. MYERS

BAGO bā′gō. KJV Apoc. form of BIGVAI.

BAGOAS bə gō′əs [Βαγώας (Pers. *for* εὐνοῦχος?); Vulg. *Vagao*]. A eunuch in "charge of all [the] personal affairs" of Holofernes (Jth. 12:11). He made the discovery that his master had been slain by Judith (14:14-18). J. C. SWAIM

BAGOI bā′goi. KJV Apoc. form of BIGVAI.

BAGPIPE. *See* MUSICAL INSTRUMENTS.

BAHARUM; KJV BAHARUMITE. Same as BAHURIM.

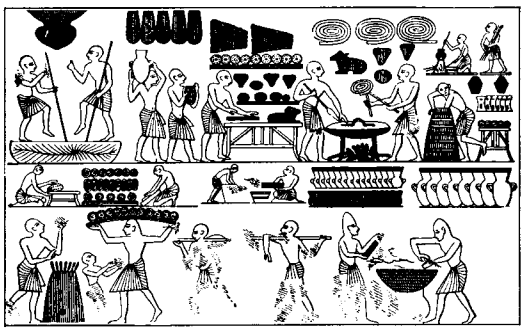
BAHURIM bə hyo͝or′ĭm [בחורים]; KJV BARHUMITE bär hū′mīt [ברחמי] in II Sam. 23:31. Alternately: BAHARUM bə hâr′əm (I Chr. 11:33); KJV BAHARUMITE —ə mīt [בחרומי]. A village at modern Ras et-Tmim, E of Mount Scopus near Jerusalem, where Paltiel and Michal parted as she was being returned to David (II Sam. 3:16). There Shimei cursed David, who was fleeing from Absalom (II Sam. 16:5; 19:16; I Kings 2:8). Jonathan and Ahimaaz, when they were spying for David, hid in the well of a man of Bahurim (II Sam. 17:18). It seems that David in his flight took a shorter and harder route to the Jordan than the one around the S side of the Mount of Olives.

Azmaveth, one of David's Mighty Men, was probably from Bahurim, as appears from comparison of the variants noted above in II Sam. 23:31; I Chr. 11:33. O. R. SELLERS

BAITERUS bā′tə rəs [Βαιτηροῦς (BA), Γαβαων (Luc.)] (I Esd. 5:17); KJV METERUS mə tĭr′əs. Ancestor of some exiles, 3,005 strong, who returned with Zerubbabel. The name is omitted in the parallels Ezra 2:3 ff; Neh. 7:8 ff. C. T. FRITSCH

BAJITH bā′jĭth [הבית, the house]. A word treated as a Moabite place name in the KJV (Isa. 15:2). The RSV slightly emends the Hebrew, translating "the daughter."

BAKBAKKAR băk băk′ər [בקבקר] (I Chr. 9:15). A Levite, of the sons of Asaph, in Jerusalem. His name is missing in the parallel list in Neh. 11:16, unless it be Bakbukiah.



BAKBUK băk′bŭk [בקבוק, flask]; KJV Apoc. ACUB ā′kŭb. Head of a family of postexilic temple servants of lower rank (Ezra 2:51; Neh. 7:53). *See* NETHINIM.

BAKBUKIAH băk′bə kī′ə [בקבקיה, Yahu's pitcher(?)]. A singer (Neh. 11:17; 12:9) and guard of the temple storehouse (12:25). Since Neh. 11:17 mentions "sons" of Asaph and Jeduthun, Bakbukiah may be a "son" of Heman, thus completing the representation of three classical groups of singers (cf. I Chr. 25:1-5; *see* BUKKIAH). J. M. WARD

BAKERS' STREET [חוץ האפים] (Jer. 37:21). It is natural for a group of small industrial establishments to develop in specific areas. So in ancient Jerusalem, as in other cities, a certain street would attract members of a particular craft. Jeremiah in prison had a daily ration of a piece of bread from the bakers' street. Bakers may have been among those for whom streets (RSV "bazaars") were provided in Dasmascus and Samaria (I Kings 20:34). Baking was recognized as a specialized trade (Gen. 40:1–41:13; I Sam. 8:13; Hos. 7:4). Today in Jerusalem there are numerous bakeries between the Damascus gate and the Church of the Holy Sepulchre. Probably the shop was part of the dwelling, so that the baker lived, worked, and sold on his premises.

See also ARCHITECTURE; BREAD; HOUSE; STREET. O. R. SELLERS

BAKING [אפה, to bake]. The Hebrew word and its derivatives refer specifically to the baking of BREAD and of cakes prepared with flour and oil, which formed a substantial portion of the daily food of the Canaanites and the Hebrews (Gen. 19:3; Exod. 12:39; Lev. 26:26; I Kings 17:12-13; Isa. 44:15); they refer also to the baking of the BREAD OF THE PRESENCE (Lev. 24:5) and of baked offerings (2:4 ff). The abstaining from leaven in the dough was prompted either by reasons of necessity, such as baking in a hurry (Exod. 12:39), or by rules of the ritual (Exod.

11. Royal bakery scenes, from the tomb of Ramses III (twelfth century B.C.)

Courtesy of the Metropolitan Museum of Art; Rogers Fund and contribution of Edward S. Harkness, 1920

12. Model of bakery and brewery, from Thebes

13:6-7; Lev. 2:5). The baking of bread was normally done in an OVEN. Travelers, however, baked flat cakes of coarse bread on pebbles upon which a fire had been built and the embers swept away (cf. I Kings 19:6). Modern Bedouins still use this method, unless they bake on a heated disk of iron (Arabic *sadj*). Pastries and baked offerings were baked either in special ovens or in pans or griddle irons (Lev. 2:4 ff). Figs. BAK 11-12; BRE 47.

Baking bread was normally a household chore performed by women. The feudal landlords in Canaanite Palestine used to draft maidens to serve as cooks and bakers, and the Israelites feared that their kings might do the same (I Sam. 8:13). In Egypt, the chief baker at the royal court seems to have been a personage of importance (Gen. 40:2). The development of city life under the Hebrew monarchies favored the creation of commercial bakeries in the larger towns. A street of Jerusalem was known as Bakers' Street (Jer. 37:21), presumably located toward what was at that time the NW angle of the city, which was protected by a fortress called the TOWER OF THE OVENS (Neh. 3:11; 12:38).

Hebrew אפה and its English equivalent, "to bake," are often synonymous with miscellaneous terms for "cooking," without reference to bread and cakes (cf. Exod. 16:23; *see* COOKING AND COOKING UTENSILS). Cooking, like breadmaking, was also a household affair, with the women in charge. Bible references to the art of cooking are few and not explicit. The specific Hebrew names for kitchen utensils, translated in the versions (which are not altogether consistent) by "cooking pot," "kettle," "caldron," "pan," and the like, cannot be applied with absolute certainty to the utensils of metal or the earthenware vessels discovered by the archaeologists (*see* VESSELS; POTTERY). The use of bronze or iron forks for the preparing and serving of meat is attested by I Sam. 2:13 and confirmed by archaeological discoveries.

The sacrificial meals, in the course of which the priests and certain categories of worshipers were partaking of the meats offered to Yahweh, made it necessary that kitchen facilities be provided for in the precincts of the temple. References to such kitchens appear in Ezek. 46:20, 23-24.

G. A. BARROIS

BALAAM bā'ləm [בלעם; Βαλαάμ, the clan brings forth(?)]. A seer summoned by Balak king of Moab to curse Israel prior to its entrance into Canaan (Num. 22:5–24:25; 31:8, 16; Deut. 23:4-5—H 23:5-6; Josh. 13:22; 24:9-10; Neh. 13:2; Mic. 6:5; II Pet. 2:15; Jude 11; Rev. 2:14).

The figure of Balaam is a singular one in the OT. He was a foreigner who was subject to the command of the God of Israel. Unlike Assyria, which is made to serve as the rod of Yahweh's anger (Isa. 10:5), Balaam is represented as consciously acknowledging the derivation of his powers from the Lord (Num. 24:13). Furthermore, the career of this seer, who was unable "to go beyond the word of the LORD, to do either good or bad," is an extraordinary example of the potency attributed by the OT to the spoken word (cf. Gen. 12:3; 27:33; Exod. 21:17; Isa. 55:11; *see* BLESSINGS AND CURSINGS). A diviner of sufficient renown to be sought by the king of Moab, Balaam was summoned to pronounce a destructive curse upon Israel, but instead he uttered a series of blessings affirming present and promising future pre-eminence to Israel. In addition to these notable features in the career of Balaam, there is the well-known tale of Balaam's ass, with the folkloristic motif of the talking animal, paralleled elsewhere in the OT only by the serpent in the Garden of Eden (Gen. 3).

The general features of Balaam's career as presented in Num. 22–24 are clear, but detailed reconstruction of the Balaam tradition is confronted with numerous obscurities. The theory that the biblical account has resulted from conflation of different traditions, possibly continuous with the J and E Pentateuchal sources, has been widely adopted to clarify some of these obscurities.

Thus, the apparent divine inconsistency in first authorizing Balaam's trip to Moab (Num. 22:20) and then obstructing it by blockading the road before his ass (vss. 22-35*a*) is explained as the result of source conflation. In the E source God acceded to the request of a second embassy from the king of Moab, and Balaam was allowed to return with the princes of Moab to their land, although, of course, no permission was granted to comply with their request that Israel be cursed (22:15-16, 19-21). In the J source, on the other hand, Yahweh's opposition to Balaam's journey was made known after Balaam and his two servants had set out on their way. The angel of Yahweh, obstructing the narrow path between walled vineyards (vs. 24), would not permit the ass carrying Balaam to pass. The reason for Yahweh's opposition to Balaam's journey is no longer clear in the J source, although one may suppose that Balaam set out without having consulted Yahweh. It has been suggested that Balaam's journey was undertaken in response to a personal visit from the king of Moab, after the royal embassy had twice failed to secure it. A trace of such a visit from Balak may be preserved in Num. 22:37, 39*a*, but such an attempted reconstruction can remain only a hypothesis.

Once Balaam arrived in Moab, preparations were made to secure from him the powerful spoken curse which would significantly diminish the threat Moab considered Israel to be. The first attempt misfired, producing praise of Israel instead of a curse. Successive attempts, undertaken from different heights overlooking part or all of the Israelite encampment, were unable to alter the first result. In all, Balaam delivered four such solemn utterances or "discourses" (the word משל suggests a saying which implies more than its apparent or surface meaning). It is probable that the four Balaam sayings have resulted from inclusion of materials originally preserved in separate traditions. The movement of Balaam from height to height seems a contrived device to permit incorporation of all four poems into the saga. The two poems in Num. 23, usually attributed to E, are obviously acquainted with the story of Balaam in the employ of the king of Moab, while the J poems in ch. 24

could have originated apart from this particular tradition about Balaam.

The Balaam poems exhibit similarities to the deathbed blessings attributed to Jacob (Gen. 49) and Moses (Deut. 33), although without the developed tribal allusions of the latter. The pre-eminence of Israel among the nations is extolled in imagery that suggests, on the one hand, the return of the Paradise with its peace and bounty (Num. 24:5-7*a*); and, on the other, the martial triumph of Israel over its foes (vss. 7*b*-8). These are motifs which are not lost in subsequent biblical eschatology (cf. Isa. 40:10; 42:13; 49:22-26 with 49:8-11; 52:7; and Rev. 5:5; 12:7-8; 17:14 with 7:15-17; 22:1-5), and suggest already in ancient Israel a concern to affirm simultaneously both the goodness and the power of God.

Reflection of King David's subjugation of Moab and Edom (II Sam. 8:2, 13-14) is often detected in Num. 24:17*c*-18 ("Sheth" is best identified with Shutu, probably the ancient name of Moab). If this supposition is correct, the *terminus a quo* for at least the present form of the Balaam poems and narrative would be the tenth century B.C., with the emergence of the final form of the tradition considerably later. Conviction as to the Davidic influence behind the references to Moab and Edom would normally lead to the conclusion that it is David who is described in Num. 24:17*b*:

> A star shall come forth out of Jacob,
> and a scepter shall rise out of Israel.

However, these words have been interpreted messianically both in Judaism (in the name of the messianic claimant Bar Cocheba, "son of the star," in the time of Hadrian) and in Christianity (Rev. 22:16; and possibly in the manifestation of the star to the Magi in Matt. 2:2, 9-10). It is possible that this and other regal references in the poems (Num. 23:21; 24:7) are but slight modifications of ancient Semitic poetry which attracted Israel's attention during its own monarchy. A date in the thirteenth or twelfth century B.C. has, accordingly, been suggested for the composition of the Balaam oracles, but there has been vigorous dissent from this attempt to place the genesis of these poems prior to the Davidic monarchy.

The figure of Balaam, the renowned seer, may have had a history not always associated with the oracles now attached to his name. The close similarity between Bela (בלע) king of Edom (Gen. 36:32) and Balaam (בלעם) suggests the possible identity of the two, especially since both are named the "son of Beor." The present form of the tradition, however, locates Balaam's home in the Euphrates Valley at Pethor, evidently ancient Pitru in the vicinity of Carchemish (Num. 22:5; 23:7; Deut. 23:4—H 23:5). The "land of Amaw" (Num. 22:5) designates this same region, NE of Syria, as attested by its use in the Egyptian story of Sinuhe. The distant journey from Mesopotamia to Moab would normally be undertaken with more of a retinue and with better transportation than the two servants and ass which figure in the J account of Balaam's journey. This may imply that J located Balaam's homeland within a day's journey or two from Moab, perhaps in Edom or in Ammon (Num. 22:5 Samar., LXX) but it is precarious to rest more than a supposition upon such an analysis.

With the exception of Mic. 6:5, subsequent biblical references to Balaam are unfavorable. His journey to Moab is considered motivated by base desire for gain (Deut. 23:4—H 23:5; II Pet. 2:15), and he is blamed as the instigator of Israel's defection to a Moabite Baal at Peor (Num. 25:1-3; 31:16 P; Rev. 2:14). Rabbinic sources generally make the same accusations of Balaam, although he is considered by some a prophet to the Gentiles.

The tradition of Israel's conquest of the Promised Land knows of no encounter between Israel and Moab such as is supposed in the Balaam narrative. Even if the latter reflects conditions of a later age, such as the Davidic or Omride monarchy (*see* OMRI), it is notable that a story set in the days of the Conquest could be so free of warfare and bloodshed.

Albright, "The Oracles of Balaam," *JBL,* LXIII (1944), 207-33; A. S. Yahuda, "The Name of Balaam's Homeland," *JBL,* LXIV (1945), 547-51.

R. F. JOHNSON

BALAC. KJV NT form of BALAK.

BALADAN bāl'ə dən [בלאדן] (II Kings 20:12). The father of Merodach-baladan king of Babylon.

BALAH bā'lə [בלה, old, worn out] (Josh. 19:3). A city of Simeon in the Judean Negeb. The same site is probably indicated by Bilhah in the Chronicler's parallel passage (I Chr. 4:29) and by Baalah in the Judean list of Josh. 15:29. The precise location is unknown, but the context suggests the region S and E of Beer-sheba. W. H. MORTON

BALAK bā'lăk [בלק, the devastator; Βαλάκ (KJV BALAC)]. Son of ZIPPOR; king of Moab. After the Israelites defeated the Amorites, he became fearful for his kingdom and urged the seer BALAAM to curse the invaders (Num. 22–24). Balaam's refusal and Israel's subsequent victory were later remembered as examples of Yahweh's saving acts (Josh. 24:9-10; Mic. 6:5; cf. Judg. 11:25; Rev. 2:14).

J. F. ROSS

BALAMON băl'ə mən [Βαλαμών] (Jth. 8:3); KJV BALAMO —mō. A town near Dothan, probably the same as BELMAIN.

BALANCES [מאזנים]. Early in the development of civilization the balance was used to measure weights. It consisted of two pans suspended by cords from a beam which was suspended by a cord in its center or, probably later, with its center on a standard.* So far as we know, all balances in the Near East before the coming of the Romans were equal-armed, and the principle of leverage, giving the graduated scale, was not used. At a fairly early time there was added a plummet extending downward, rather than upward as in modern balances. Such balances are shown in Egyptian reliefs or papyri, and some of them indi-

cate elaborate workmanship.* The metal pans were suspended by cords passing into the ends of a tubular beam.* The plummet was in front of the upright support, so that when the articles in the two pans were equal, the exact vertical position of the plummet would be evident. The Egyptians used balances in transactions, as is evidenced by many pictures showing the weighing of metals; and they also envisioned the use of balances by gods passing judgment on the deceased in the after life. There are scenes in which the heart of the one being judged before the gods is in the balance against the *ma'at* feather, the emblem of truth. In the Middle Kingdom story of the Eloquent Peasant the petitioner speaks repeatedly of balances in flattering or imploring the grand steward. "Thou art the balances. . . . Thy tongue is the plummet; thy heart is the weight, thy two lips the beam." In Mesopotamia balances were used, but apparently these were not so highly developed or esteemed as in Egypt. The simple hand balance there gave opportunity for fraudulent manipulation. Balances were well known in Canaan before the coming of the Israelites. In the "Nikkal and Kathirat" text from UGARIT the family is described as operating the balances, with the father attending the beam, the mother the pans, the brothers the ingots, and the sisters the weights. Frequently in the Bible just balances are prescribed and false or deceitful balances denounced. Figs. BAL 13-14; WEI 12-13; GOL 34.

From Schaeffer, *The Cuneiform Texts of Ras Shamra-Ugarit* (British Academy, Schweich Lectures, 1937)

13. A pair of scales with a set of weights, from Ras Shamra (fifteenth to fourteenth century B.C.)

In the Apoc. balances are mentioned in II Esd. 3:34. In Ecclus. 28:25 the cross bar (ζυγός) and the upright (σταθμός) evidently are parts of a pair of scales, and their exactness is recommended in Ecclus. 42:4; the σταθμός is the weight in vs. 7. In Rev. 6:5 ζυγός means a balance.

W. W. FRERICHS

BALDNESS. Complete loss of hair from the head from natural causes was probably not common among biblical peoples, as can be judged from the

Courtesy of the Trustees of the British Museum

14. The god Anubis leads the deceased toward the balance, where his heart is weighed against the goddess Maat (1550-1090 B.C.).

fact that it is mentioned infrequently in the OT, not at all in the NT, and that representations of the human figure in ancient Near Eastern art usually picture Semites or Asiatics with long hair and beards. *See* HAIR; MOURNING; NAZIRITE; SHAVING.

The term for "baldness of the forehead" (גבח, גבחת) occurs only in Lev. 13:41-43, where the law states that such baldness is unclean only if the signs of leprosy appear. The same is said to be true for "baldness of the head" (קרחה, קרחת).

Artificial baldness as a sign of mourning (Amos 8: 10) and possibly of enslavement (Isa. 3:24) was designated by קרחה, which is also the root of the proper name KORAH (Gen. 36:5; Exod. 6:21; Num. 16:1; etc.). "Baldhead" was a term of derision applied to Elisha (II Kings 2:23); the passage does not make clear whether natural baldness or the prophet's tonsure provoked the attack. The Hebrews were forbidden by law to make themselves bald by shaving (Deut. 14:1), doubtless because neighboring peoples did so (Jer. 9:26; 25:23). Tonsures were forbidden to the priests (Lev. 21:5; KJV "baldness"). Although it is not termed "baldness," the shaving of the head and the ceremonial burning of the hair at the termination of the Nazirite vow was a practice (Num. 6:19; cf. Acts 18:18; 21:24). Whereas priestly legislation forbids artificial baldness, the prophets mention it as a sign of mourning (Isa. 15:2; 22:12; Jer. 47:5; 48: 37; Ezek. 7:18; Mic. 1:16). It is doubtful that the prophets approved the rite, or that it was common among the Hebrews; the prophets' allusions to it were merely a figurative way of designating impending doom and enslavement (cf. Ezek. 29:18, where baldness is said to have been produced by slave labor, probably from the carrying of burdens on the head).

W. L. REED

BALL [דור] (Isa. 22:18). The single biblical reference to a ball occurs in the story of the deposition of SHEBNA, the royal steward of Hezekiah (Isa. 22:15-25). Isaiah addressed Shebna, perhaps near the rock tomb which Shebna was constructing for himself, and predicted his downfall: "He [the LORD] will seize firm hold on you, and whirl you round and round, and throw you like a ball into a wide land"—i.e., the Lord would send Shebna into exile in Assyria. In the translation the words "and throw you" (KJV "and toss thee"), not found in the Hebrew, are supplied to give the sense. There is no necessary reference here to the ball used in games or sport.

In Isa. 29:3 the word דור means "circle," and the literal "like a circle" is translated "round about."

H. F. BECK

BALLAD SINGERS [משלים] (Num. 21:27); KJV THEY THAT SPEAK IN PROVERBS. A phrase which literally refers to the makers or repeaters of proverbs (*see* PROVERB). The context of several songs suggests that this "ballad" is somewhat similar to the modern "historical" ballad or folk song. *See* MUSIC.

C. U. WOLF

BALM [צרי; LXX ῥητίνη]. Despite its widespread therapeutic usage in antiquity, the true identity of this aromatic resin or gum is not easily established. It is mentioned six times in the Bible, and from two references in Genesis (37:25; 43:11) it appears to have been a commodity of commercial value carried by Near Eastern trading caravans. Ezekiel (27:17) included balm among the early exports from Gilead to Tyre. Classical writers referred to it frequently under a variety of names, which renders proper identification difficult. Pliny regarded Jericho as the sole habitat of the shrub which yielded the balm resin, but Strabo maintained that it also flourished beside the Sea of Galilee. However, both writers were probably alluding to the species *Balsamodendron opobalsamum,* native to Arabia and Abyssinia.

Biblical references do not support the idea that balm trees grew in the rugged highland areas SE of the Sea of Galilee. Theophrastus recorded that spice caravans from the E passed through Gilead, which may account for the association of balm with that region. But there is no known tree in the area which would produce an aromatic resin with medicinal properties of the kind attributed to balm. The substance sent by Jacob to Joseph in Egypt (Gen. 43:11) was probably indigenous to Palestine, and therefore hardly *Balsamodendron opobalsamum* or "balm of Gilead" (*see* GILEAD, BALM OF). The balm mentioned in Jeremiah (46:11; 51:8) has been identified with *Balanites aegyptiaca* (L) Delile, a small shrub still found in North Africa, which produces an oil of reputed medicinal value. The ERV margin references in Genesis read "mastic," probably alluding to the resinous gum of the *Pistacia lentiscus* L. However, since healing virtues are not mentioned in this context, a different variety of balm may be meant. The ancients utilized the gum in cosmetic and EMBALMING techniques, as well as in medicine. It has dropped out of modern pharmacopoeias.

Bibliography. H. N. and A. L. Moldenke, *Plants of the Bible* (1952), pp. 84-85, 177 ff. *See also* bibliography under FLORA.

R. K. HARRISON

BALNUUS. KJV Apoc. form of BINNUI 3.

BALSAM; KJV MULBERRY. The translation of בכא, *bākhâ,* in II Sam. 5:23-24=I Chr. 14:14-15. The word apparently appears as a place name in Ps. 84:6 (*see* BACA, VALLEY OF). The true balsam (*Commiphora opobalsamum* [L.] Engl., also called *Balsamodendron opobalsamum* [L.] Engl.) trees, however, have never grown around Jerusalem, but are native to S Arabia.

The early rabbis translated the word "MULBERRY TREES," but these trees do not fit the context either. A type of aspen or POPLAR, such as the *Populus euphratica* Oliv. or *P. tremula* L., has been suggested on the basis of the context (but *cf.* FLORA § A2*e*). In North America the *Populus tacamahaca* is called the balsam poplar.

Others suggest the *Pistacia lentiscus* L. (*see* MASTIC), with no better support. It is possible that the Hebrew does not refer to a tree at all. *See also* BALM.

Bibliography. H. N. and A. L. Moldenke, *Plants of the Bible* (1952), pp. 183-84.

J. C. TREVER

BALTHASAR băl thăz'ər [Βαλτασάρ]. **1.** KJV form of BELSHAZZAR in Jth. 1:11.

2. In late tradition a king of Arabia, and one of the three Magi. *See* MELKON.

BAMAH bā'mə [במה (*plural* במות), *mainly rendered by* τὸ ὑψηλόν (*cf.* βωμός) *in the* LXX; ridge, of high rising ground (*cf.* going up *in* I Sam. 9:13, 19; Isa. 15:2; coming down *in* I Sam. 9:25; 10:5; *and parallel to* high hill *in* Ezek. 20:29)]. A word used:

a) Of Gilboa hill (II Sam. 1:19, 25) and of mountains above Arnon (Num. 21:28); also, in plural, of a town—high place—in Moab (Num. 21:19-20=22:41; Josh. 13:17); twice on the Moabite Stone (lines 3, 27).

b) In figurative phrases for dominion: of Israel (Deut. 32:13 [cf. El Elyon motif]; 33:29; Ps. 18:33=II Sam. 22:34; Hab. 3:19; and eschatologically in Isa. 58:14); of God (Job 9:8; Amos 4:13; Mic. 1:3; often with "tread"); of divine aspirations of the king of Babylon (Isa. 14:14).

c) Figuratively of devastation (Jer. 26:18; Ezek. 36:2[?]; Mic. 3:12).

d) In Ezek. 20:29 of an artificially constructed word *Ba* ("come") + *Mah* ("what") for contemptuous but obscure purpose.

e) Of places of worship on natural heights, artificial mounds, and once (Ezek. 16:16) of portable colored sanctuary tents. *See* HIGH PLACE.

G. HENTON DAVIES

BAMOTH bā'mŏth [במות, high places]. A stopping place of the Israelites in Transjordan between Nahaliel and the "valley lying in the region of Moab by the top of Pisgah which looks down upon the desert" (Num. 21:19-20). The name is probably a short form of BAMOTH-BAAL. E. D. GROHMAN

BAMOTH-BAAL bā'mŏth bāl' [במות בעל, high places of Baal]. A town of Moab. Balak took Balaam to the place, from which he saw the nearest of the Israelites (Num. 22:41; KJV: Balak took Balaam up "into the high places of Baal, that thence he might see the utmost part of the people"). The name of Bamoth-baal and the sacrifices of Balak and Balaam (Num. 23:1-12) would indicate that it was a sanctuary of Baal. Later, Bamoth was assigned to the tribe of Reuben, listed with the cities in the tableland of Heshbon: Dibon, Bamoth-baal, Beth-baal-meon, etc. (Josh. 13:17). Mesha says that he "built Bethbamoth, for it had been destroyed" (MOABITE STONE, line 27). Beth-bamoth is probably Bamoth-baal. It is certainly on a height on the W edge of the Transjordan Plateau in the area of Mount Nebo, but its precise location is uncertain. E. D. GROHMAN

BAN. KJV Apoc. form of TOBIAH 1.

BAN (VERB). In the RSV "ban" is used only in Ezra 10:8, to translate בדל. For the concept expressed in the OT by חרם *see* DEVOTED.

In the NT the idea of banning is present in references to (*a*) the proscription from the synagogues of those who confessed Christ and (*b*) the expelling of impenitent Christian sinners from the church.

Thrice the Fourth Gospel alludes to the fact that Christians were driven out from synagogues (John 9:22; 12:42; 16:2; cf. Luke 6:22). This practice, which was probably in use in John's days at the end of the first century, certainly does not go back to an earlier time (cf. Acts 28:16-22).

Deliberate offenders were banned from the church by virtue of the apostles' power of BINDING AND LOOSING. The NT offers two examples of the apostolic power of binding: First, a church member who committed some offense and refused to listen to two or three brethren and even to the community should be treated "as a Gentile and a tax collector" (Matt. 18:15-17)—i.e., as a man who was excluded from the fellowship of the church and to whom the gospel of salvation must be preached anew. Second, Paul writes to the Corinthians a summons to proscribe the incestuous man whose presence in the body of Christ had been too long tolerated, and the apostle expects that somehow this ban will bring about the final salvation of the guilty one (I Cor. 5:1-5). Thus, "to ban" does not simply mean "to condemn"; it was a measure taken in view of the final welfare of the banned person.

See also BANISHMENT; EXCOMMUNICATION.

P. H. MENOUD

BANAIAS. KJV Apoc. form of BENAIAH 9.

BAND. 1. Anything with which a person is bound, as a shackle. The only RSV use of this translation is for עבת in Hos. 11:4. This same Hebrew is translated "rope" (Job 39:10) and "cords" (Ezek. 3:25; 4:8; *see* CORD, ROPE). More frequently לוסר is changed from KJV "band" to "bond" in the RSV (Job 39:5; Pss. 2:3; 107:14; Isa. 28:22; Jer. 2:20). Prisoners are shackled with "fetters" (אסור in Eccl. 7:26; δεσμός in Luke 8:29; Acts 16:26). Metaphorically the oppression of an enemy is a restraint (לוטה; Lev. 26:13; Ezek. 34:27; RSV "bars of their yoke"). In the NT, the KJV uses "band" for anything that joins together; so συνδεσμός is a "ligament" (Col. 2:19). Ζευκτηρία is for the fastener holding rudder to a ship (Acts 27:40; RSV "ropes").

2. Anything which encompasses another thing or person; a flat strip or border. The EPHOD is to be edged with a "binding around the opening" (שפה; Exod. 39:23; "band" in 28:8). The swaddling band is noted in Job 38:9 (*see* SWADDLE). The stands in the temple have bands (borders) around the top a cubit high (I Kings 7:35). In Dan. 4:15 a similar metal band is around the stump of a tree, but this could also imply the use of אסור, "fetter," of 1 *above*.

3. An organization of persons brought together by common purpose or character. The band of men does not fit into the usual tribal structure of Israel (*see* TRIBE). These may be raiders (I Chr. 12:21; Job 1:17 KJV [RSV "company"]; Ezek. 38:6 KJV [RSV "horde"]), ruthless men (Pss. 59:3; 86:14), a group of drunkards (Hos. 4:18), a squad of soldiers (II Kings 6:23 KJV; Ezra 8:22; Prov. 30:27 KJV; Ezek. 12:14 KJV [RSV "troop"]; John 18:12; *see* ARMY). A horde of locusts (Gen. 32:7 KJV; RSV "company") and the REMNANT are a band (II Kings 19:31). C. U. WOLF

BANDAGE. 1. אפר (from Akkadian *apâru,* "head covering"; I Kings 20:38, 41*a;* KJV ASHES). A covering placed over the eyes to conceal one's identity.

2. חתול (from חתל, "to be swathed, wrapped up"; Ezek. 30:21; KJV ROLLER). A wrapping for a broken arm.

3. Κειρία (John 11:44; KJV GRAVECLOTHES). A swathing band. J. M. MYERS

BANDS, MAGIC [כִּסְתוֹת, *cf.* Akkad. *kasū*, to bind in a magic sense (*occurring frequently in the incantation texts, Maqlu and Shurpu*)] (Ezek. 13:18, 20); KJV PILLOWS. Objects connected with divination; just how they were to operate is obscure. Late Aramaic texts (fifth century A.D.) speak of persons' being bound with magic charms to ward off evil.

J. M. MYERS

BANI bā′nī [בָּנִי, build, *or abbreviation of* Benaiah]; KJV Apoc. BANID bā′nĭd; MANI mā′nī; MAANI mā′ə nī. A name similar to other names in postexilic priestly writings (*see also* BUNNI; BINNUI). They are easily confused, and it is difficult to distinguish individuals from family groups.

1. A man of Gad; a warrior among David's "Thirty" (II Sam. 23:36). He is missing in the parallel list (I Chr. 11:38), unless "son of Hagri" is a corruption of "Bani the Gadite."

2. An ancestor or family line of Ethan, a Merarite Levite at the time of David (I Chr. 6:46—H 6:31).

3. An ancestor or family line of Uthai, a Judahite in postexilic Jerusalem (I Chr. 9:4). The LXX follows *Kethibh* and reads instead "Benjamin" (בִּנְיָמִן), combining it with the next word.

4. A family group—or founder thereof—included in the great list of those who returned from the Exile (Ezra 2:10; I Esd. 5:12). The parallel list, however, reads "sons of Binnui" (Neh. 7:15). The Ezra list numbers them at 642, the Nehemiah list at 648. If Bani is to be omitted in Ezra 2:10, some scholars believe it should be restored later in the list (Ezra 2:40=Neh. 7:43), on the basis of I Esd. 5:26.

5. Probably a family group, rather than an individual, in some passages:

a) Several married foreigners (Ezra 10:29=I Esd. 9:30 [KJV Mani]; Ezra 10:34=I Esd. 9:34 [KJV Maani]; Ezra 10:38, where the MT has both Bani and Binnui; cf. I Esd. 9:34*b* [Binnui]).

b) Representatives probably accompanied Ezra from Babylonia (Ezra 8:10, where Bani should be restored on the basis of I Esd. 8:36 [KJV Banid]).

c) Representatives set their seal to the covenant: Levitical in Neh. 10:13—H 10:14 and "chiefs of the people" in Neh. 10:14—H 10:15.

d) A representative is included among those who assisted Ezra in instructing the people in the law (Neh. 8:7=I Esd. 9:48 Anniuth, KJV Anus).

6. The father (or possibly the family line) of Uzzi, who is described as overseer of the Levites in Jerusalem; of the order of Asaph (Neh. 11:22).

7. The father (or possibly the family line) of Rehum, a Levite who repaired an assigned section of the Jerusalem wall (Neh. 3:17) and may have been the representative in some of the cases listed under 5 *above*.

8. A Levite (individual or group) who took part in the celebration of the Feast of Tabernacles at the time of Ezra (Neh. 9:4-5). The list has Bani twice in vs. 4; one of these is probably an error.

F. T. SCHUMACHER

BANISHMENT. Condemnation to exile. Since, to the Israelite, exile from his land meant being cut off from Yahweh (Hos. 9:3-5; cf. Gen. 4:14; Ezek. 11:15) and, in the worst case, being forced to worship idols (Deut. 4:27-28; I Sam. 26:19; Jer. 16:13), biblical law never prescribes it as a legal penalty. In Ezra 7:26, שרשו is usually rendered "banishment" (cf. Vulg. *exilium*) or, better, "exclusion from the community" (cf. 10:8). But LXX παιδεία, in combination with Aramaic סרושיתא G. R. Driver, *Aramaic Documents of the Fifth Century B.C.*, no. iii, line 6, p. 13), suggests "whipping" (cf. LXX παιδεύω at Deut. 22:18 for Hebrew יסר, which tradition, as early as Jos. Antiq. IV.viii.23, renders "whip").

Voluntary exile was the last resort of hunted men: Jacob flees to Haran (Gen. 27:43), Moses to Midian (Exod. 2:15), David's parents to Moab (I Sam. 22:3-4), David to Gath (I Sam. 27:1-4), Absalom to Geshur (II Sam. 13:38), Jeroboam to Egypt (I Kings 11:40), Elijah to Phoenicia (I Kings 17:9), Uriah to Egypt (Jer. 26:21-23). Taking asylum in another country was commonly practiced by political refugees in the ancient Near East (cf. II Sam. 15:19; I Kings 11:14-25; Si-nuhe of Egypt; Idrimi of Alalakh); clauses dealing with the extradition of such fugitives are frequently found in Hittite treaties.

Since biblical law regards every homicide as guilty in some measure, the enforced stay of the accidental manslayer in the CITY OF REFUGE may be considered a form of banishment (Num. 35:32; it is so regarded by Philo *On the Special Laws* III.123; Jos. Antiq. IV vii.4; M. Mak. 2).

Roman law knew several forms of exile, from the severe *deportatio*, which was perpetual and involved confiscation of property and loss of citizenship, to the milder *relegatio*, by which a person was excluded from residence in a certain place, or confined to a particular place for a definite or indefinite period of time. A very common form was *relegatio in insulam*, which, according to early church tradition, was inflicted upon the author of Revelation (Rev. 1:9).

Bibliography. On flight for asylum, see: M. Löhr, *Das Asylwesen im AT* (1930), where the Hittite extradition texts are adduced as well; S. Smith, *The Statue of Idri-mi* (1949), pp. 14-15; J. Pritchard, ed., *ANET* (2nd ed., 1955), pp. 18 ff (Si-nuhe), 199 ff (Egyptian and Hittite treaties).

On שרשו, see F. Rundgren, "Zur Bedeutung von *šršw*, Ezra vii 25," *Vetus Testamentum*, VII (1957), 400-404.

M. GREENBERG

BANKING. The development of international trade in antiquity made it imperative that some methods of banking be devised to facilitate the transfer of funds and, after the invention of money, the circulation and exchange of coins. During the historical period covered by the writings of the OT, all banking operations were performed by landowners, merchants, and traders. The profession of banker as such does not seem to antedate the Hellenistic era. The Greek word for "banker" is τραπεζείτης, from τράπεζα, "table, counter," and, by extension, the "banking house," or "bank," itself (Matt. 25:27; Luke 19:23). The exchange of currencies was part of a banker's opera-

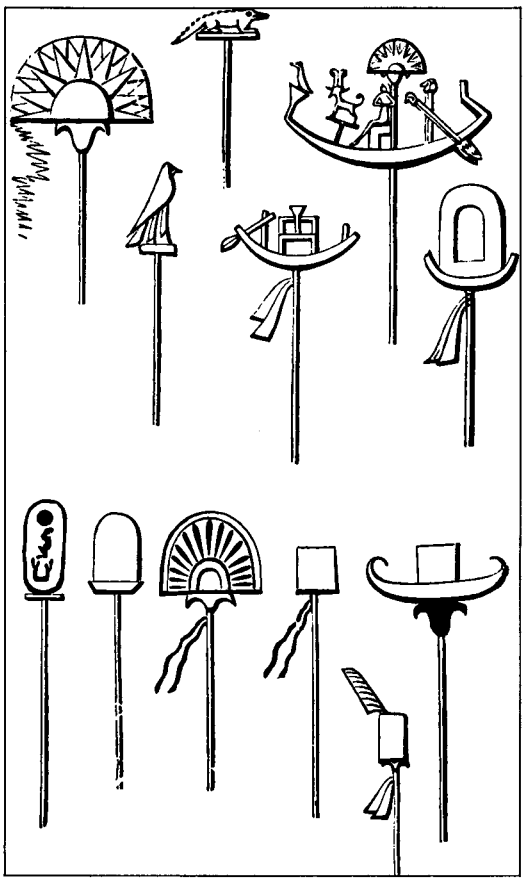
tions. There were, however, specialized money-changers.

See also DEBT; MONEY-CHANGER; TRADE AND COMMERCE.

G. A. BARROIS

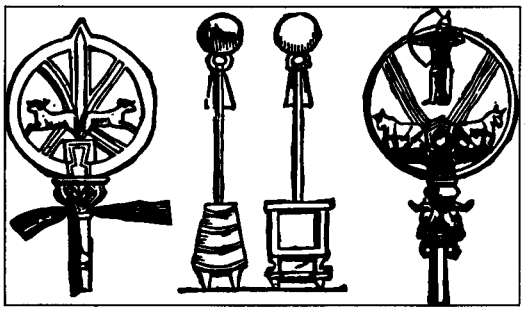
BANNAIA. KJV Apoc. form of ZABAD 5-7.

BANNAS bănʹəs [Βάννος] (I Esd. 5:26); KJV BANUAS bănʹyo͞oəs. A Levite, ancestor of some who returned from the Exile with Zerubbabel. The name is omitted in the parallel Ezra 2:40.



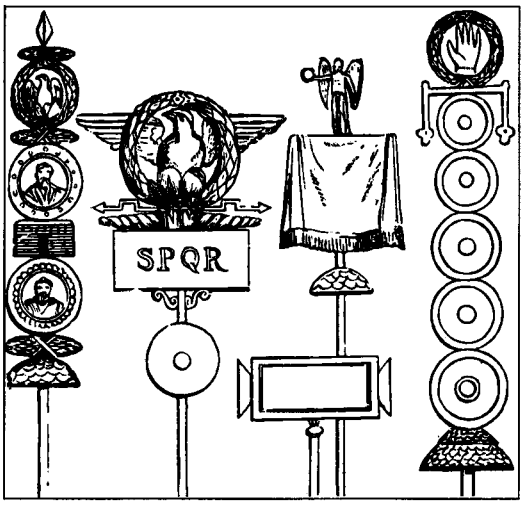
C. T. FRITSCH

BANNER [אות, דגל, משאת, נס]. Alternately: ENSIGN. Either a standard of a tribe or troops or a rallying or warning signal of some kind.



The word אות (LXX σημεῖον) simply means "sign," though in Num. 2:2 it is paralleled by דגל and specifically means a tribal standard. At Ps. 74:4 אתת occurs twice in the passage concerning the enemy: "They set up their own signs for signs"; the KJV interprets the first "signs" as "ensigns," probably on the basis of the Vulg.: *Posuerunt signa sua signa* (cf. the Roman *signa*).

The word דגל is principally employed to designate the various standards of the Israelite tribes in Num. 2; 10 (where it is incorrectly interpreted as τάγμα, "order, rank," in the LXX), whereas נס is broader in meaning—"sign, ensign, banner, or signal." The word משאת (lit., "a raising up") is used in Jer. 6:1 as a "signal" (KJV "sign of fire"); this usage is now exactly paralleled in the Lachish Ostraca at 4.10: "We are watching for the signals of Lachish." *See* LACHISH § 5.



Nothing is known concerning the nature of the tribal standards. On the analogy of other nations (Babylonian, Assyrian, Persian, and Roman*), it is quite possible that these may have been animal standards raised on a pole or spear. (It might be noted that Joshua's javelin is represented as a palladium in the account of the conquest of Ai in Josh. 8:26.) Such an animal standard as a divine symbol was the fiery serpent of bronze set on a pole (Num. 21:8-9). A divine standard is implied in the name Moses gave to an altar in Exod. 17:15-16, but its significance is still obscure. Figs. BAN 15-17.

15. Standards used in ancient Egypt

16. Assyrian standards

17. Roman standards

Banners were used as signals to rally an army (Isa. 5:26), and they would be set on a hill and accompanied (as in the Roman army) with the sounding of a trumpet (Isa. 13:2; 18:3; Jer. 4:21; 51:27). God's upraised hand is the raised "signal" for nations (Isa. 49:22; it might be added that the hand on a pole is thought to be the earliest form of the Roman *signum*).

Standards for army troops were common among the Egyptians, Babylonians, Assyrians, Hittites, Persians, and Romans. The eagle is attested as far

back as the third millennium B.C. Army standards were commonly animal figures such as stags, steers, wolves, unicorns, serpents, lions, horses. Common among the Assyrians was the moon sickle mounted on a spear. The Assyrian royal chariot also carried the divine standards, the common form being that of the national god Ashur drawing a bow, or two running steers. A combination of the two is also attested. The eagle became for imperial Rome the official standard of the legion; but the wolf, unicorn, horse, and boar were all early standards. Under the emperors they became cultic symbols bearing the image of the emperor, and were therefore detested by the Jews. Sacrifices were made in the presence of the standards, but whether the *cultus signae* was earlier than Titus (cf. Jos. War VI.vi.1) is not known.

For standards in spiritual warfare, *see* DEAD SEA SCROLLS.

BANNUS. KJV Apoc. form of BINNUI.

BANQUET [משתה, drinking]. The consumption of wine and rich foods was the chief feature of the banquet in biblical times. Amos provides a brilliant picture of the typical banquet: the guests lie on beds of ivory, eating lambs and calves; they drink wine and sing songs; they anoint themselves with oil (Amos 6:4-6; for more details on eating customs, *see* MEALS). Banquets were held on a variety of occasions: (*a*) at the arrival of a stranger (Gen. 19:3), (*b*) on a birthday (Gen. 40:20; Matt. 14:6), (*c*) when a child was weaned (Gen. 21:8), (*d*) after the sheepshearing (I Sam. 25:11; II Sam. 13:23), (*e*) at the grape harvest (Judg. 9:27), (*f*) after the completion of a public building (II Chr. 7:8), (*g*) when a treaty was ratified (Gen. 26:30; 31:54), and (*h*) at a wedding (Judg. 14:10). No fewer than five separate banquets are described in Esther. *See* FEASTS AND FASTS; FOOD; WINE. Figs. BAN 18-20. J. F. ROSS

***BAPTISM** [βάπτισμα, *less commonly* βαπτισμός, *connected with* βαπτίζω, *an iterative form of* βάπτω, dip *or* immerse]. A rite using water as a symbol of religious purification. (In many NT passages the use of βαπτίζω and its cognates clearly implies immersion, but Luke 11:38 shows that this meaning is not demanded.) The term "baptism" is employed in the NT mainly of the rite practiced by JOHN THE BAPTIST, and of the Christian rite which, from the day of Pentecost onward, was the regular means of initiation into the Christian community.

Bibliography

1. Origin of baptism. The antecedents of Christian baptism are to be found within Judaism, and a careful study of this Jewish background renders improbable and unnecessary any hypothesis of the derivation of the Christian rite from the mystery cults.

a. Proselyte baptism. In common with other nations the Jews were accustomed to use water for the purpose of religious purification. A specialized use is to be found in the practice of proselyte baptism, one of the ceremonies by which new converts were admitted to Judaism. There is no reference to proselyte baptism in the OT or the Apoc., nor in Josephus or Philo. Some have therefore disputed whether this rite was practiced early enough to have influenced the origin of Christian baptism. It is now generally agreed, however, that the references in Epictetus, the Sibylline Oracles, and the Mishnah enable us, with some confidence, to date the beginnings of the practice not later than the first century A.D. Some have maintained that the significance of proselyte baptism was purely ceremonial, but in view of the fact that commandments of the Law were read during the administration of the rite, it is probable that we should, with H. H. Rowley, see proselyte baptism as "not an act of ritual purification alone but an act of self-dedication to the God of Israel, involving spiritual

factors as well as physical with a fundamentally sacramental character."

b. John the Baptist. It was probably an extension of proselyte baptism when, "in the fifteenth year of the reign of Tiberius Caesar," John (who, in consequence, came to be known as the "baptizer" or the "baptist") went into all the region about the Jordan, preaching a baptism of repentance for the forgiveness of sins" (Luke 3:3). But there are striking differences between proselyte baptism and the baptism of John. John administered the rite to Jews as well as to Gentiles (Mark 1:5 and parallels). Further, for John the ethical significance of the rite became prominent. He bade the Pharisees and Sadducees "bear fruit that befits repentance." The most striking association of John's baptism is eschatological—he links the rite with his proclamation of the coming kingdom of God: "Repent, for the kingdom of heaven is at hand." John's baptism is thus a rite of moral purification designed to prepare those submitting to it for the approaching kingdom of God. In the gospel narratives John contrasts his own water baptism with a future baptism to be administered by the mightier one, "the thong of whose sandals I am not worthy to untie; he will baptize you with the Holy Spirit and with fire" (Luke 3:16).

Some scholars, arguing from an analysis of sources, have maintained that these references in the Baptist's teaching to the HOLY SPIRIT may not be authentic, and that John's original characterization of the future baptism spoke only of "fire"—i.e., "judgment" (cf. Matt. 3:10-12; Luke 3:9, 17). But, in view of the evidence furnished by the recently discovered DEAD SEA SCROLLS, there now seem less strong grounds than formerly appeared for denying the originality of these references by John to the Holy Spirit. The evidence of the Dead Sea Scrolls has (rather more questionably) been invoked to support the authenticity of such an utterance as John 1:29 on the lips of the Baptist. Further discussion would involve consideration of the alleged existence in NT times of a "Baptist" sect, the evidence for which shrinks on examination to very slender proportions. (The "disciples" at Ephesus [Acts 19:1] are probably to be understood, not as followers of John the Baptist, but as Christians whose instruction in the faith was incomplete.)

Fresh light has been thrown on the meaning of John's baptism by a comparison with the symbolic actions of the OT prophets. It has been suggested that these actions be understood not only as a vivid means of expressing the will of God, but also in some degree as helping to bring about its fulfilment. Seen in this light, John's baptism prepared those who submitted to it to face the coming Day of the Lord, confident that those who repented would be forgiven and granted a place in the future messianic community.

There is a brief account of John the Baptist in the Antiquities of Josephus (XVIII.v.2, § 117), the authenticity of which there seems no reason to doubt. Its representation, however, of John's mission as mainly ascetic seems historically less reliable than the Synoptic narrative, since the latter better accounts for the opposition John roused and the death he suffered at the hands of Herod.

c. The baptism of Jesus. The Synoptists record, and the Fourth Gospel implies, that Jesus accepted baptism at the hands of John (Mark 1:9-11 and parallels; John 1:32-34). The earliest account is told in such a way as to suggest that originally the record came from Jesus himself. Any attempt to regard the narrative as primarily invented by the early church founders on the evidence of Matt. 3:14-15, from which it is clear that the baptism of Jesus by John raised difficulties in the minds of the first Christians. That the ministry of Jesus was originally connected with the preaching and baptism of John is revealed by one of the most primitive passages in Acts (10:37-38). Recent study has stressed this connection. In the baptism of Jesus (historically speaking, a particular instance of John's baptism) a rite with water is intimately linked with a revelation of the Holy Spirit and a unique consciousness of divine sonship. It is noteworthy that these same two associations figure prominently in later NT teaching about the meaning of Christian baptism.

Further, the words of the voice heard by Jesus involve an allusion to Ps. 2 (vs. 7) and to one of the Servant Songs (Isa. 42:1). Admittedly the latter reference is not unmistakably to the *Suffering* Servant, but modern study of the OT in the NT has emphasized that sometimes the bare allusion to a word is meant to recall a far wider context. In view of this there is force in the theory that in the voice at the baptism of Jesus there is a foreshadowing of the Crucifixion. Greater point is thereby given to the passage in which, during his ministry, Jesus spoke of his death as a "baptism" (Luke 12:50). Though it has long been customary to treat this reference as purely metaphorical, there now seems good ground to make the reference to "baptism" more precise. Just as the baptism in Jordan inaugurated the ministry in Palestine, so the later "baptism" on Calvary inaugurated a wider ministry, unfettered by the limitations of the earthly mission. (*See also* § 3 *below* for the significance of the baptism of Jesus in a consideration of the authority behind Christian baptism.)

2. NT teaching about baptism. ***a. The primitive church.*** The rite of baptism with water as the symbol of entry into the Christian community was practiced from the day of Pentecost onward (Acts 2:38, 41). It was closely linked with repentance and with the reception of the Holy Spirit. From the frequency with which baptism follows upon "hearing" or "receiving the word" and "believing," the rite would seem, as it were, to embody the kerygma, and to represent the believer's response to, and acceptance of, the gospel message (Acts 2:37-38, 41; 8:12; 16:14-15, etc.). This continuance of water baptism is the more remarkable since both in the gospels and in the first chapter of Acts the contrast in the Baptist's teaching between his own baptism with water and the future baptism of the mightier one with Holy Spirit and with fire would suggest that in the new dispensation water baptism would have been superseded. (This has a bearing on the authority behind Christian baptism; *see* § 3 *below*.)

Sometimes the baptism is spoken of specifically as "in the name of Jesus Christ" (Acts 2:38; 10:48), or "in the name of the Lord Jesus" (8:16; 19:5). Ordinarily baptism preceded the reception of the Holy

Spirit, but in one instance—that of CORNELIUS—the gift of the Spirit was received before baptism; it is noteworthy that here, according to one account, Cornelius was subsequently baptized (10:48). In two passages the gift of the Holy Spirit is linked with another rite, the LAYING ON OF HANDS by an apostle (8:17; 19:6). It must be noticed, however, that there is no reference to the laying on of hands in the generally acknowledged Pauline letters.

The attempt has been made to dispute the view that baptism was practiced from the earliest days of the church, and instead to argue that the Christian rite originated in Hellenistic circles. Since, however, there are such close links between Christian baptism and the baptism of John, there is no need to discount the evidence of Acts, from which we infer that John's rite was continued and adapted by the apostles, some of whom we have reason to believe had themselves originally been followers of the Baptist. The precise nature of the impulse for this adaptation needs further elucidation (*see* § 3 *below*).

b. The Pauline teaching. The fullest NT exposition of the meaning of baptism is to be found in the Pauline letters. The most representative passages are:

I Cor. 12:12-13, where Paul teaches that baptism is the means of incorporation into the Christian community, which is the BODY OF CHRIST. Through baptism the Spirit is received, and the barriers that divide men, whether of race or of class, are thus overcome.

Gal. 3:26-29, where Paul draws out the connection of baptism with FAITH and sonship (*see* CHILDREN OF GOD). Baptism is described as a "putting on" of Christ. Again, it is stressed that this union with Christ overcomes all human divisions, whether of race, class, or sex.

Rom. 6:1-4. The vigorous exposition of the contrast between law and grace gives rise to the objection: "Are we to continue in sin that grace may abound?" Paul answers this objection by recalling his Roman readers to the significance of their baptism. When they underwent the rite (the imagery seems to imply baptism by immersion), they went down into the water, from which they subsequently emerged. This Paul sees as a symbolic representation of dying, being buried, and rising again with Christ. This "dying" is further explained as a death to sin, and this "rising again" as a resurrection to a new moral life. For those to whom these things have happened, the very thought of "continuing in sin" is patently absurd. This view of baptism as a moral death and resurrection has sometimes been unwittingly regarded as a form of personal teaching peculiar to Paul, but a careful reading of the context suggests that Paul must here rather be appealing to common Christian testimony (cf. "Do you not know . . . ?"); Paul himself had not visited Rome when he wrote this letter.

Col. 2:9-13. Paul is answering the false teaching at Colossae and asserting that Christ is all-sufficient for salvation. He strengthens his argument by an appeal to the significance of baptism, which he sees as the Christian counterpart of Jewish circumcision. Again he stresses that baptism means dying to sin and rising again to a new moral life. All things needful for salvation are given through our union with Christ in baptism; hence the Colossian insistence on ascetic rites is unnecessary.

Other references to baptism in the Pauline corpus elaborate these ideas further or guard against misunderstanding. Thus in Eph. 4:5 stress is laid on the relation of baptism to Christian unity; in I Cor. 10:2 Paul guards against a mechanical view of baptism which might suggest that salvation is thereby automatically assured. I Cor. 1:13-17 is not a belittlement of baptism but a protest against a misunderstanding at Corinth, whereby those baptized seem mistakenly to have thought that they had been baptized, not into the name of Christ, but into the name of the ministrant of the rite. In I Cor. 15:29 Paul alludes in passing to a local practice of baptism for the dead, according to which certain Corinthians would seem to have undergone the rite for the benefit of departed relatives. (Paul is not passing judgment on the practice but simply appealing to it as additional support for his argument about the resurrection of believers.)

The Pauline references to baptism all, in one way or another, bring out that close link between baptism and the preached message of the gospel which we have already observed in Acts. But by Paul the connection is far more fully explicated; and the whole Christian life is seen as the progressive laying hold on, and appropriation of, what was done once for all for a Christian at his baptism. It is in this that "faith" consists, and it is here that we see the full relevance of the Pauline teaching about baptism as a "dying and rising with Christ." It is improbable, as we have seen, that Paul himself was primarily responsible for this idea; indeed, it is far more likely that it stems from Jesus himself (*see* § 3 *below*). But Paul did much to set it in the forefront of normal Christian thinking. Just as the death of Christ and his resurrection from the dead took place once for all and yet had abiding consequences, so baptism, the application of that divine act to an individual, is administered once for all but has a continuing effect as it is increasingly appropriated and understood. Probably we come nearest to grasping the Pauline teaching when we view baptism as a sacrament of "realized eschatology." Divine sonship, the possession of the Spirit, the power to know God and to do his will, were all blessings connected, in the profoundest teaching of the OT, with the age to come. The Christian gospel consists in the fact that what in the OT was future expectation has now, because of what Christ was and did, become—at least in part—present realization. Baptism is the pledge to the Christian that here and now these blessings are his to be laid hold of; in a passage (Eph. 4:30) where the image of "sealing" involves an indirect reference to baptism, Paul reminds his readers that baptism also looks forward to a more complete redemption going beyond this present life.

c. Other NT references. The Fourth Gospel and the First Letter of John each contain a passage of considerable importance for the understanding of baptism. In the conversation with Nicodemus there is the saying attributed to Jesus (John 3:5): "Truly, truly, I say to you, unless one is born of water and the Spirit, he cannot enter the kingdom of God." Most scholars understand these words as containing

a reference to baptism, but have some hesitation in regarding the saying, as it stands, as consisting of the *ipsissima verba* of Jesus. Some think, however, that the words may contain the nucleus of a genuine saying (*see bibliography*). The Johannine conception of "birth from above" is probably to be understood in the light of other Johannine teaching about divine sonship. It is noteworthy that here again the connection is to be observed between baptism, sonship, and the Spirit, which appears in the Synoptic narratives of the baptism of Jesus. The Fourth Evangelist clearly links sonship with baptism, but guards against any mechanical understanding of the rite by an equal stress on the activity of the Spirit. The indirect nature of the reference to baptism may be compared with the similar Johannine reticence about the Lord's Supper. Johannine theology is thoroughly sacramental, but this author expresses his teaching less directly than some other NT writers, in view of what seemed to him at the close of the first century A.D. unethical tendencies in current religious thought and practice.

The other striking Johannine passage about baptism is that in the First Letter (5:6): "This is he who came by water and blood, Jesus Christ, not with the water only but with the water and the blood." Like so much in I John, this teaching is to be understood as an answer to the Docetic heresy prevalent in Asia Minor at the end of the first century. In opposition to the teaching of CERINTHUS, who maintained that Christ was baptized but not crucified, John asserts the historical reality both of his baptism in Jordan and of his death upon the cross. This may be seen as the necessary answer to those who by their Docetic teaching were cutting loose the Christian faith from its foundation in historical fact. There may also be a secondary and derivative reference in the verse to the Christian sacraments of baptism and the Lord's Supper, though an allusion to the latter under the symbolism of "blood" seems without parallel. The truth may rather be that in this passage, as elsewhere in the NT, the close connection is again being emphasized between Christian baptism and the death of Christ.

Other references to baptism in the NT include two passages in the Letter to the Hebrews (6:2; 10:22). The former suggests that teaching about baptism and its differentiation from other "ablutions," Jewish or pagan, formed part of the regular instruction of Christian catechumens; the latter passage brings out the moral significance of baptism and its connection with faith (cf. J. Denney's dictum, "Baptism and faith are but the outside and the inside of the same thing"). A similar purpose underlies the well-known passage in the First Letter of Peter (3:21), where the importance of the new moral life is stressed, and this transformation is seen as an outworking of the same divine power by which Jesus was raised from the dead. Christ can communicate the new life because he has entered into it.

The only reference to REGENERATION in connection with baptism occurs in a passage in one of the Pastoral Letters: "He saved us, not because of deeds done by us in righteousness, but in virtue of his own mercy, by the washing of regeneration and renewal in the Holy Spirit" (Tit. 3:5). Some have traced here the influence of ideas derived from contemporary mystery cults, but the evidence scarcely warrants such a conclusion. (The oft-quoted inscription, *taurobolio . . . renatus, Corp. Inscript. Lat.* 6.510, can be dated no earlier than A.D. 376.) It seems more probable that the language of this passage represents an extension of the concept of "birth from above," already linked in Johannine teaching with baptism and with the activity of the Holy Spirit.

3. Was baptism instituted by Jesus? Two Synoptic passages associate baptism with a command to preach the gospel throughout the world; of these, Mark 16:16 lacks original authority, since it occurs in the verses added in the second century A.D. to a gospel which (rightly or wrongly) was thought to be incomplete. The other passage, Matt. 28:19 ("Go . . . make disciples of all nations, baptizing them in the name of the Father and of the Son and of the Holy Spirit"), has also been disputed on textual grounds, but in the opinion of many scholars the words may still be regarded as part of the true text of Matthew. There is, however, grave doubt whether they may be regarded as *ipsissima verba* of Jesus. The evidence of Acts 2:38; 10:48 (cf. 8:16; 19:5), supported by Gal. 3:27; Rom. 6:3, suggests that baptism in early Christianity was administered, not in the threefold name, but "in the name of Jesus Christ" or "in the name of the Lord Jesus." This is difficult to reconcile with the specific instruction of the verse at the end of Matthew. At the same time, if it is part of the true text of Matthew, it provides evidence for a conviction in certain Christian circles toward the end of the first century that baptism rested upon the authority of Jesus. That such a conviction was well grounded is the more probable as we remember that the recorded teaching of John the Baptist would appear to suggest a supersession, rather than a continuance, of the practice of baptizing with water (cf. Mark 1:8 and parallels, and similar words attributed to Jesus in Acts 1:5). The fact that the basic rite of Christian initiation consisted of a baptism with water is more easily to be understood if the early Christians were justified in their conviction that the rite rested, in some sense, upon the authority of Jesus.

Such a dominical authority for baptism is to be found, not so much in the evidence of particular texts (which may be critically disputed), but rather in Jesus' life and ministry as a whole, with particular emphasis upon his baptism and death. Certain passages in Acts (cf. 1:21-22; 10:37; 13:24-25) make clear that in early Christian teaching the beginning of the mission of Jesus was traced back to the activity of John the Baptist. He was the forerunner of Jesus, and in his preaching and baptism the ministry of Jesus found its prelude. Further, the prominence given by the Synoptists to the narrative of Jesus' own baptism by John shows that the fact that Jesus submitted to John's baptism was regarded as highly significant. Recent study of the antecedents of Christian baptism has laid considerable stress on the importance in this connection of the baptism of Jesus. It is notable that both in the baptism of Jesus and in the Christian rite a baptism with water is linked with the descent of the Holy Spirit and with divine sonship. Further, in Acts baptism is frequently associated with, and re-

garded as expressive of, repentance. Some early Christians found it hard to understand how Jesus could submit to a "baptism of repentance for the forgiveness of sins." The difficulty is most satisfactorily resolved as we see Jesus corporately setting himself alongside those to whom he came to minister. He could not separate himself from the sinners whom he would save.

The other antecedent of Christian baptism in the ministry of Jesus is to be found in his death and resurrection. Notably in the Pauline letters, but also in the Johannine writings, Hebrews, and I Peter, baptism is connected with the death of Christ. To regard this association as a Pauline innovation breaks down on the evidence of Rom. 6:3 (*see* § 2*b above*). If Christian baptism is in some sense to be regarded as "the kerygma in action," the gospel of salvation dramatically brought to bear upon the life of a particular person, then it is scarcely surprising to find, when the full implication of the rite is being drawn out, that special stress is laid upon that divine act which is at the center of the gospel—the death and resurrection of Christ. The impulse for this linking of baptism with Christ's death and its sequel is to be sought in the utterances of Jesus which speak of his death under the figure of baptism—one of which suggests that it was only through his death that his wider ministry could be inaugurated: "I have a baptism to be baptized with; and how I am constrained until it is accomplished!" (Luke 12:50).

Thus the authority for Christian baptism in the ministry of Jesus is twofold, and corresponds with his own twofold baptism, that in Jordan and that on Calvary. Here the work of O. Cullmann is illuminating. He finds the link with the death of Jesus as far back as the baptism in Jordan, in virtue of the allusion in the voice from heaven to one of the Servant Songs in Deutero-Isaiah. Further, he sees the death of Jesus as what he terms a *Generaltaufe,* a universal baptism, which, lying as it does behind every individual act of Christian baptism, gives the rite its significance and potency. Such an understanding of the authority behind Christian baptism firmly grounds the origin of this gospel sacrament in the life and ministry of Jesus, and remains unaffected by critical reservations which may attach themselves to the interpretation of a particular text. *See* DEATH OF CHRIST.

4. Possible traces of infant baptism within the NT period. There is no direct evidence in the NT for the baptism of infants. Various lines of indirect evidence, however, converge—in the judgment of a number of scholars—to make the conclusion probable that in some quarters, at least, infant baptism was practiced in the early church during the NT period. Here a distinction should be drawn between the children of new converts and children born to parents already themselves baptized Christians. In regard to the former, the analogy of proselyte baptism would encourage the administration of Christian baptism to the children of new converts. But in regard to the latter, children of parents already Christian, the evidence from proselyte baptism would point the other way, since children born to a proselyte subsequent to his own reception were not baptized but only circumcised. It has been suggested that, as during the first century A.D. the early church increasingly diverged from Judaism, the need was felt for some Christian counterpart to match the Jewish rite of circumcising infants, and this would encourage the practice of baptizing also the children of parents already Christian.

J. Jeremias has argued that Paul may have been instrumental in thus putting forward baptism as the Christian equivalent of Jewish circumcision (cf. Col. 2:11-12; Acts 21:21). Paul addresses children as "in the Lord" (Eph. 6:1). He would scarcely have used this distinctive phrase except of those actually included in the body of Christ, to which, according to Pauline teaching, baptism is the rite of entry.

Some have questioned whether the references in Acts to the baptism of "households" (16:15, 33; 18:8) may be held to include young children; here the evidence cited by Jeremias from Stauffer is important as showing that in the contemporary use of the term "household" young children were specifically included.

This indirect evidence within the NT agrees with certain indications in early Christian writers which appear to require a date for the beginnings of infant baptism within, rather than later than, the NT period. Thus the words of Polycarp at his martyrdom, "Eighty-and-six years have I been his slave" (Martyrdom of Polycarp 9), imply his reception into the church, and consequently his baptism as an infant, *ca.* A.D. 69 or 70. Again, Justin Martyr, writing *ca.* 155, refers to men and women of sixty or seventy years of age who in childhood "were made disciples" (Apol. 1.15; cf. the aorist tense of the verb μαθητεύω, used in Matt. 28:18). Toward the end of the second century Polycrates says that he has lived sixty-five years "in the Lord." The earlier examples, Polycarp and those referred to by Justin, may have been the children of new converts, but this is scarcely probable of Polycrates, since he refers to seven of his family who had been bishops before him, "he himself being the eighth" (Euseb. Hist. V.xxiv. 6-7). Tertullian in a well-known passage (*On Baptism* XVIII) deplores infant baptism, but fails to use what would have been his strongest argument—namely, that the practice was not primitive. The knowledge that, in some quarters, at least, infant baptism began to be practiced during the first century A.D. may lie behind the statement of Origen that infant baptism had been handed down "from the apostles."

Those who on grounds of faith and conscience oppose pedobaptism would set against this indirect evidence the silence of the NT about the baptism of infants. The strength of this argument should be balanced by the recognition that the NT is equally silent about any postponement of the baptism of the children of Christian parents to riper years. There is no recorded instance in the NT of the baptism on profession of faith of any but new converts. If the practice of the early church was to postpone baptism in such cases until years of discretion, it is remarkable that it has left no trace in documents written over a period of at least three generations. The direct historical evidence of the NT is insufficient to settle the question either for or against infant baptism; the case must be argued on other grounds.

BAPTIST. *See* JOHN THE BAPTIST.

BAR [בד, בריח, מוט, מוטה, מטיל, מנעול; μοχλός]. Primarily, a piece of wood or metal used as a support, fastening, or barrier. Most of the biblical uses of the word are related to this general meaning—a bar of acacia wood used to join frames in the superstructure of the TABERNACLE; a bar of wood or metal used to secure a DOOR or GATE; an ingot of metal (*see* METALLURGY), particularly GOLD; the crosspiece of a YOKE; a verbal form meaning "to secure or lock" (Neh. 7:3); figurative uses (e.g., the "bars of Sheol" [Job 17:16]).

An interpretation of the bars (בריח) in the tabernacle (Exod. 26:26-29; 36:31-34; etc.) is difficult, but their function seems to have been to bond together the frames of the superstructure. The same Hebrew word often denotes bars used to secure gates or doors, to be distinguished from the bolt-and-LOCK combination, the latter being used on smaller buildings and houses. The second alone comes into consideration for the NT (e.g., Acts 5:23). The gate bar is used only with reference to city gates (Deut. 3:5; Judg. 16:3; I Sam. 23:7; I Kings 4:13; Jer. 51:30; Amos 1:5; etc.) and citadels (Prov. 18:19; Bar. 6:18; I Macc. 9:50) in the OT and the Apoc. They were made of wood (implied in Nah. 3:13; cf. Jer. 51:30; Lam. 2:9), bronze (I Kings 4:13), or iron (Ps. 107:16; Isa. 45:2). It is probable that gates which were barred as a defensive measure had more than one bar (cf. Neh. 3:3-15). At Tell en-Nasbeh the Iron Age city gate (*ca.* 900 B.C.) had a slot into which the bar could be thrust when the gate was open and a lock hole on the jamb opposite. Since the level was close to the ground, it is probable that other bars were placed higher up on the gate. The small, round lock hole indicates that the bar in this case was metal.

A city provided with high walls, gates, and bars was secure (Deut. 3:5; Ps. 147:13), but the breaking of the bars was the sign the city had fallen (Isa. 43:14; Amos 1:5; Nah. 3:13). A quiet and secure people felt no need of gates and bars (Jer. 49:31; Ezek. 38:11). Metaphorically, bars confine the sea (the abyss) in Job 38:10 and delimit Sheol (Job 17:16; cf. Jonah 2:6—H 2:7).

R. W. FUNK

BARABBAS bə răb'əs [Βαραββᾶς=בר־אבא, son of (the) father]. A man who, according to all the NT gospels, was held in prison by the Roman authorities at the time of Jesus' trial. Matthew calls him a "notable prisoner," but does not indicate what his crime was. The Fourth Gospel says that he was a robber, whereas Mark and Luke state that he had been arrested for insurrection and murder. The latter may indicate that he was of the party of ZEALOTS, who desired to throw off the Roman yoke by force. According to Jerome (*On Matthew*), the name in the apocryphal Gospel According to the Hebrews was *filius magistri eorum*—i.e., בררבן, "son of their teacher." Since "father" might be applied to a rabbi, both forms of the name may indicate that Barabbas' father held a position of leadership in the Jewish religious community.

According to three of the gospels (Matt. 27:15; Mark 15:6; John 18:39), Pilate the Roman governor used to placate the Jews at the time of a feast—John says specifically at the Passover—by releasing one prisoner of their choice. Luke, who may have been a more accurate historian, does not mention the custom (cf. Luke 23:18 ff), and nothing quite like it is referred to elsewhere in ancient literature. On the other hand, release of prisoners for various reasons was not unknown (cf. Jos. Antiq. XX.ix.3). The Roman historian Livy reported that prisoners were commonly relieved of their chains, though he does not actually say released from prison, at the Lectisternium.

All four gospels imply that the choice of a prisoner to be set free at this feast lay between Jesus and Barabbas. Urged on by the Jewish leaders, the populace clamored for Barabbas to be freed and for Jesus to be executed. Pilate gave in, and condemned Jesus to death (*see* TRIAL OF JESUS). Nothing is known of Barabbas' subsequent history. The Fourth Gospel does not actually say that he was let go.

Origen (*Commentary on Matthew*) said that the name appeared in some old MSS as "Jesus Barabbas" ('Ιησοῦς ὁ Βαραββᾶς), and this form appears also in the ninth-century Codex θ at Matt. 27:16. While the reading is not well attested, it is not impossible, from the historical standpoint. Jesus was a common enough name. Then Pilate's question would take the poignant form: "Whom do you want me to release for you, Jesus Barabbas or Jesus who is called Christ?"

P. PARKER

BARACHEL băr'ə kĕl [ברכאל, God blessed] (Job 32:2, 6). A Buzite; the father of Elihu, one of Job's three friends.

BARACHIAH băr'ə kī'ə [Βαραχίας] (Matt. 23:35); KJV BARACHIAS —əs. The father of Zechariah; same as OT BERECHIAH (5).

BARAK bâr'ək [ברק, lightning; Βαρακ]. Son of Abinoam. Barak shared with the prophetess DEBORAH in the leadership of a N Israelite militia in a victorious campaign against Sisera, the commander of the Canaanite forces of JABIN king of Hazor. The recital of the epic is preserved both in prose (Judg. 4) and in poetry (ch. 5), each of which contains its peculiarities. In the prose narrative Deborah summoned Barak from Kedesh in Naphtali to the seat of her juridical ministrations in Mount Ephraim and there divulged to him an oracle of Yahweh. It stipulated that Barak should bring about the overthrow of the Canaanite oppression by raising some ten

thousand men from Naphtali and Zebulun, and await an engagement with the enemy at Mount Tabor. Apprised of the Israelite uprising, Sisera left his quarters at Harosheth-ha-goiim with his force of men and nine hundred iron chariots to crush the rebellion, but the Israelites swept down from Mount Tabor, completely routing the Canaanites. Retreating toward Harosheth-ha-goiim, Sisera fled northward toward Zaanannim and was granted asylum by Jael, the wife of Heber the Kenite. She perfidiously slew Sisera while he slept, and when Barak arrived on the scene in pursuit of Sisera, Jael informed him of her deed. This defeat of the N Canaanites under the command of Sisera forecast the ultimate doom of the power of Jabin.

An editor represents Barak as joining Deborah in singing the epinician ode (5:1).

Barak is included among the judges who liberated Israel from her oppressors in the valedictorian address of Samuel (I Sam. 12:11, where "Barak" [LXX; Syr.] should be read for "Bedan" [MT]). He is also mentioned in the NT catalogue of ancient worthies whose faith was exemplary (Heb. 11:32).

E. R. Dalglish

BARBARIAN. The translation of βάρβαρος in Rom. 1:14; Col. 3:11; II Macc. 2:21. The word is elsewhere translated NATIVE (Acts 28:2, 4); FOREIGNER (I Cor. 14:11); SAVAGE WILD BEAST (II Macc. 4:25); BARBAROUS NATION (II Macc. 10:4); BARBAROUS FOE (III Macc. 3:24).

1. Origin
2. Derogatory connotation
3. Greeks and barbarians
4. NT usage

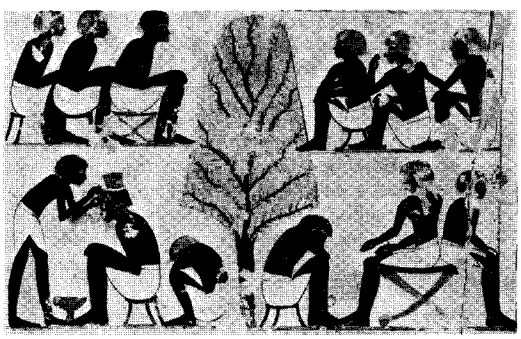
1. Origin. Βάρβαρος was originally an imitative word—like "dingdong," of bells; "twitter," of birds; "gibberish" or "yack-yack," of speech. In this sense a "barbarian" is a person who utters a sequence of sounds, but not sense. Or if the listener concedes that the barbarian speaks a real language, it remains nonsense if it is not understood. I Cor. 14:11 perfectly illustrates this meaning. Theoretically, at least, this use of the word need not carry pejorative meaning: a Greek might speak of a Hebrew as a "barbarian," a Hebrew might speak of a Greek as a "barbarian," and neither mean anything except that the other spoke a different language. In Herodotus, e.g., the word is not contemptuous but simply means "non-Greek." A barbarian is a "foreigner," and without further nuance of aversion or hostility. Thucydides could say: "I mean by the term Hellenes those who . . . had a common language" (I.3). Or Herodotus: "The Egyptians call by the name of barbarians all such as speak a language different from their own" (II.158). So the Jews may be barbarians to the Babylonians, Medes, and Romans; Egyptians or Greeks may be barbarians to the Jews (see II Macc. 2:21; 4:25; 15:2); and, of course, the term was applied by the Greeks to all non-Hellenic peoples. The Romans, too, followed suit, although they never called the Greeks barbarians. Indeed, one may generalize and say that all dominant peoples in antiquity called those who spoke a different language barbarians.

2. Derogatory connotation. In one stage of its development, then, "barbarian" had simply linguistic-ethnographical-geographical meaning, without nuance of aversion or hostility. E.g., in Herodotus the term means simply "non-Greek," and is used without contempt. And we can say that the phrase "Greeks and barbarians" was a Greek way of classifying the totality of mankind, corresponding to the Jewish division of mankind into "Israel and the nations [Gentiles, heathen]." Since, however, (*a*) language is so powerful a means to consolidating a community and to exalting it in its self-esteem above other, alien linguistic groups; and (*b*) since the Greek language was so rich, massive, and masterly an instrument of speech and thought, and the civilization which it verbalized was so superb; and (*c*) since all in-groups tend to define themselves in terms of contrast, even hostility, to out-groups, it was inevitable that "barbarian," like "foreigner" among us, should quickly assume an air of contempt. This came more easily when, as in Greece, there were elements of genuine superiority. The Greek was a proud man.

3. Greeks and barbarians. "Barbarian," then, like "outlandish," comes naturally to mean "foreign in mentality or character." The barbarian is now, by definition and by nature, ignorant and untrained, crude and unpolished; as uncivilized he is wild, savage, cruel—in a word, "barbarous." By definition he is hostile and an object of enmity.

It was the Persian Wars (fifth century B.C.) which made clear to the Greeks the superiority of their culture to that of barbarians—set out in Aeschylus, Pindar, and Herodotus—and made the word imply boorishness and brutality and the contempt which free men have for slaves. Plato will say that barbarians are "by nature enemies" (*Republic* 470); that in war Greeks should be humane to Greeks but not to barbarians; and that Greeks should not have Greek slaves, only barbarian ones. And as Aristotle said: "Hellenes do not like to call themselves slaves but confine the term to barbarians" (*Politics* I.6.6), he consequently defended the enslavement of his two classes of barbarians, those of Western Asia and the Scythians (tribes around the Black Sea), as natural on the ground that the Orientals possessed intelligence without courage and the Northerners courage without intelligence. Yet not all Greeks held so hardened a position. Strabo (*ca.* 63 B.C.–A.D. 21) makes a point of saying that Eratosthenes (*ca.* 275–194 B.C.) "withholds praise" from those who divide mankind into two groups, Greeks and barbarians, and from those who advised Alexander to treat Greeks as friends and barbarians as enemies. "Eratosthenes goes on to say that it would be better to make such divisions according to good qualities and bad qualities; for not only are many of the Greeks bad, but many of the barbarians are refined—Indians and Arians, for example, and further, Romans and Carthaginians, who carry on their governments so admirably" (I.4, 9).

4. NT usage. In Acts 28:2, 4, βάρβαροι ("natives") means simply "foreigners"—i.e., here neither Greeks nor Jews. A difference in language is probably implied, although, if so, Acts 28:1-10 is not aware of a problem of understanding. Everybody seems to know Greek. That the natives' kindness is described as "unusual" may reflect the Greek assumption that all



"barbarians" are inherently coarse, if not hostile. The context shows that the word carries no ill will.

In Rom. 1:14, Paul uses the two pairs: "Greeks"-"barbarians," "wise"-"foolish." Since the two pairs are probably to be taken as correlatives—i.e., the "Greeks" are the "wise" and the "barbarians" are the "foolish"—Paul will simply say that he is under obligation to preach the gospel to all mankind. The Greek stereotype "Greek"-"Barbarian" is here less geographical-ethnological than it is cultural in significance. In this sense, Romans, too, together with all who inhabit the important city-states of the Mediterranean, would be "Greeks." The "wise" would be the cultured peoples of the area, the well-Hellenized; the "foolish"—better, the uneducated (in the Greek sense)—would be those outside the Greco-Roman cultural orbit. The phrase on Paul's lips refers to the total non-Jewish humanity. J. B. Phillips' paraphrase: "from cultured Greek to ignorant savage," accurately reproduces the sense if one remembers that Paul would not have objected to the remark of Dionysius of Halicarnassus (born *ca.* 60 B.C.) *Roman Antiquities* I.89: "Let the reader . . . confidently affirm it [Rome] to be a Greek city."

In Col. 3:11, "barbarian" represents the non-Greek, non-Jewish population, but in close association with "Scythian" and "slave"—i.e., with human beings of the lowest and most degrading sort. Josephus describes the Scythians as those "who delight in murdering people and are little better than wild beasts" (Apion II.37; cf. II Macc. 4:47; III Macc. 7:5). Paul's use of "barbarian" is not different from that of Philo or Josephus; what is different is his insistence that in Christ "there cannot be Greek and Jew, circumcised and uncircumcised, barbarian, Scythian, slave, free man, but Christ is all, and in all."

BARBER [גלב]. One who shaves or trims the BEARD and cuts and dresses the HAIR. Barbers are

Courtesy of the Metropolitan Museum of Art

21. An Egyptian barber at work dressing the hair of a soldier, from a wall painting from the tomb of User-Het, a royal scribe (fifteenth century B.C.)

busy in all periods of the biblical story (Num. 6:5; Ezek. 5:1) and into Talmudic regulations. They usually worked in the open air, and the RAZOR was their main tool. There is no evidence in the Bible that the modern Eastern custom of shaving the head was religiously significant. Fig. BAR 21.

C. U. WOLF

BARHUMITE bär hū'mīt [ברחמי, *apparently a copyist's error*]. KJV translation in II Sam. 23:31; RSV "of BAHURIM."

BARIAH bə rī'ə [בריח, fugitive] (I Chr. 3:22). Son of Shemaiah in the Zerubbabel line of Davidic descendants.

BAR-JESUS bär jē'zəs [Βαριησοῦς; Aram. בר ישוע, son of Jesus] (Acts 13:6-11). A Jewish magician and false prophet at Paphos on Cyprus, who became blind when Paul denounced him. *See* MAGIC; ELYMAS.

BAR-JONA bär jō'nə [Βαριωνᾶς]. The patronymic of Simon Peter. *See* PETER.

BARKOS bär'kŏs [ברקוס; Akkad. *and* Aram. *inscriptions suggest a theophorous name, perhaps* son (Aram. בר?) of Kos (a god)]. Head of a family of temple servants (Ezra 2:53; Neh. 7:55). *See* NETHINIM.

BARLEY [שערה, *śe'ōrâ, usually plural,* שערים; Ugar. *śr;* Arab. *ša'îr;* κριθή]. An important grain in Bible times, barley is also mentioned frequently in the fourteenth-century-B.C. Ugaritic documents. The Semitic name was derived from the word for "hair," probably because of the long awns which project from the seeds to form the characteristic beardlike heads.

Barley ripened earlier than wheat (Exod. 9:31); the harvesting of wheat begins about two weeks later. Palestine was a "land of wheat and barley" (Deut. 8:8). Barley was cheaper than wheat (II Kings 7:1, 16, 18; Rev. 6:6). It was used as food for animals (I Kings 4:28—H 5:8). Its grain was an important part of human diet, especially for the poor (Lev. 23:22; Ruth 3:15, 17; II Sam. 17:28; II Kings 4:42; 7:1, 16, 18; II Chr. 2:10, 15—H 2:9, 14; 27:5; Jer. 41:8), baked in the form of coarse loaves (Judg. 7:13; Ezek. 4:12; John 6:9, 13). It was used as a cereal offering (Num. 5:15; Ezek. 45:13; and probably Lev. 23:10-14, since barley was harvested first) and as a medium of exchange (Ezek. 13:19 [bribes!]; Hos. 3:2). Its harvest was a feature of the ancient CALENDAR (Ruth 1:22; II Sam. 17:28), as indicated by the tenth-century-B.C. Gezer Calendar, which says (line 4): "His month is barley-harvest" (i.e., April-May).

Several species of barley are found in Bible lands, but *Hordeum vulgare* L. (spring barley) is most common. *Hordeum hexastichon* L. (winter barley) is quite common in the Jordan Valley and the E plateau.

J. C. TREVER

BARLEY HARVEST. The reaping of the cereal Hordeum. The barley harvest began as early as late April (especially in the lowlands; Josh. 3:15) or early May, preceding the wheat harvest by *ca.* two weeks (Ruth 2:23). The beginning of the barley harvest was marked by the bringing in of the FIRST FRUITS as a consecration of the harvest (Lev. 23:10).

H. N. RICHARDSON

BARN [מגורה; KJV גרן (Job 39:12; RSV THRESHING FLOOR); ἀποθήκη]. A storage place for seed (Hag. 2:19) or grain (Matt. 13:30). The full barn is a sign of prosperity (Deut. 28:8; Prov. 3:10; Luke 12:18); an empty barn indicates dearth (Joel 1:17 KJV).

See also STOREHOUSE; GRANARY; AGRICULTURE.

BARNABAS bär'nə bəs [Βαρνάβας; *understood by Luke to mean* בר נבואה, υἱὸς παρακλήσεως, son of encouragement (Acts 4:36)]. An apostle of the secondary group, companion of Paul on his mission to Cyprus and the Pisidian mainland. Originally named Joseph, he probably acquired the name Barnabas because of his ability as a preacher.

1. Jewish backgrounds
2. Mission work with Paul
3. Separation from Paul
4. Barnabas as a writer

Bibliography

1. Jewish backgrounds. Barnabas first appears in Luke's account of communal living in the Jerusalem church, as a man of some means who gave to the church the proceeds from the sale of a piece of land (Acts 4:36-37). He is also called a Levite and a native of the island of Cyprus (Acts 4:36). His priestly family had evidently separated from Jerusalem, and thus Barnabas had a career somewhat like that of John the Baptist. His birthplace makes him a Jew of the Diaspora, a fellow Hellenist of Saul of Tarsus in contrast to the Palestinian Jews like Peter, who are called "Hebrews" by Luke (Acts 6:1). Barnabas seems to be a part of the movement of Hellenists back to Jerusalem from Gentile lands, although Eusebius identified him with Luke's company of the Seventy (Luke 10:1). According to Acts, there was a large company of Hellenists in the city at the celebration of Pentecost just after the Crucifixion. The spiritual and cultural kinship of Barnabas and Saul is seen in the return of the latter to Jerusalem after conversion. The disciples in Jerusalem were suspicious of the convert, but Barnabas was there to introduce him favorably to them (Acts 9:27). Barnabas thus belongs to the company of first converts in Jerusalem who were won by the apostolic preaching, if not by Jesus himself.

2. Mission work with Paul. In the Christian Diaspora (Acts 8:1 ff), many Hellenists fled from Jerusalem and went to Antioch of Syria. That Barnabas did not flee is evidence of his good standing in Jerusalem, along with the "apostles." Though not a native, Barnabas had the confidence of the apostles. Later he was sent to join the company of workers at Antioch, to preach to Jews, Hellenists, and Greeks (Acts 11:19-22). As the work of the Antioch church expanded and more workers were needed, Barnabas went over to Tarsus and brought back with him Saul. It seems that Barnabas was the leader of the Antioch church, and the order which Luke gives, "Barnabas and Saul," indicates the pre-eminence. It was "Barnabas and Saul" who carried relief funds from Antioch to the famine-stricken Jerusalem (Acts 11:30).

Barnabas was commissioned by the Antioch church, along with Saul and John Mark, to undertake the missionary journey which led them to Cyprus and later to the provinces of the N mainland. It is not clear whether the church had Cyprus in mind in the selection of Barnabas and Mark, both natives, or whether it was the idea of Barnabas, who was the leader. But the Hellenistic character of all three workers is probably seen in their appointment to serve in Gentile lands. On the island of Cyprus, however, it seems that Saul, afterward called Paul, took over the leadership (Acts 13:9), and when they moved on to the mainland, they were known as "Paul and his company" (Acts 13:13). With exceptions to be noted, Paul is thenceforth named ahead of Barnabas. But in the city of Lystra there was a wave of enthusiasm on the part of the natives, and Barnabas was given the title "Zeus," while Paul was only "Hermes" the spokesman (Acts 14:12). The men of Lystra must have recognized a comparative dignity in Barnabas. Even Luke reverts to "Barnabas and Paul" (Acts 14:14). After the stoning in Lystra, Paul's leadership seems to have been temporarily suspended, and he "went on with Barnabas to Derbe" (Acts 14:20), since Barnabas does not seem to have been stoned.

Luke's account of the conference at Jerusalem (Acts 15) again places Barnabas at the front, indicating that Barnabas was in better standing than Paul in Jerusalem. "Barnabas and Paul" made the report in the conference relating to the work which had been done among the Gentiles (Acts 15:12). The document which was sent by the conference recommending "Barnabas and Paul" to the Syrian and Cilician churches again shows Luke's knowledge of the relative standing of the two men in Jerusalem.

3. Separation from Paul. The separation of Barnabas from Paul and their divergent missionary activity began in Antioch after the Jerusalem conference. The issue which Luke gives was the taking of John Mark on another journey (Acts 15:36 ff). Mark's defection at Cyprus (Acts 13:13) seemed to Paul to be sufficient grounds for dropping him from the party. But Barnabas was devoted to Mark as a cousin (Col. 4:10), and leaving Paul, Barnabas took Mark on a separate mission again to Cyprus. Luke's cryptic words "sailed away to Cyprus" (Acts 15:39) are his farewell to Barnabas.

The rift between Barnabas and Paul is further described by Paul himself in his Letter to the Galatians. At Antioch, Barnabas not only insisted on taking Mark on a second journey, but he had shown a wavering, along with Peter, on the issue of association with Gentiles, particularly eating with them at table (Gal. 2:11 ff). Peter was of Jerusalem, and the sympathies of Barnabas were there too. Neither Peter nor Barnabas measured up to the Pauline requirements for a mission to the Gentiles. The position of Barnabas seems to be fairly well defined. On the extreme left were Hellenists like Apollos, with Paul a little to the right of him. Barnabas was a Hellenist nearer center, or right of center, showing kinship with Peter and the Jerusalem group. On the extreme right were James and the Judaizers, sometimes referred to by Luke as "certain ones" who went out on tours of inspection in the country where the more liberal apostles were at work. Paul could later refer sympathetically to Barnabas as a "working" apostle, "working for a living" like himself (I Cor. 9:6). But

beyond that, the rift was final, as far as the record goes.

4. Barnabas as a writer. The testimony of the later church gives Barnabas a role as writer. Tertullian assigned to him the authorship of the Letter to the Hebrews. Both Clement of Alexandria and Origen gave him credit for the epistle which bears his name, and they gave it canonical standing because they rated its author as an apostle. However, the nature of both Hebrews and the Epistle of Barnabas is hard to reconcile with the conservative tendencies of Barnabas as indicated in Galatians, and the identification of Barnabas with Jerusalem in the book of Acts. Moreover, the Epistle of Barnabas seems to be dated *ca.* A.D. 130 on internal evidence, and too late for our Barnabas.

M. J. SHROYER

BARNABAS, ACTS OF. A late and short apocryphon, heavily dependent upon the canonical book of Acts and purporting to describe the travels of Barnabas with Paul, their subsequent quarrel over Mark, their separation, and Barnabas' later travels and death by martyrdom in Cyprus. The book purports to be written by Mark, who tells of the vision which led him to join Paul and Barnabas, and of his departure, after the death of Barnabas, to Alexandria. The writing, extant only in Greek, was probably composed in Cyprus not earlier than the fifth century. This is an example of the soberer apocryphal Acts, with few garish wonder tales, but in essence simply an imaginative expansion of the cogent sections of the canonical Acts. *See* APOCRYPHA, NT.

Bibliography. The Greek text is printed as an appendix in Lipsius-Bonnet, *Acta Apostolorum Apocrypha* (1903), vol. II, pt. 2, pp. 292-302.

M. S. ENSLIN

***BARNABAS, EPISTLE OF.** A pseudepigraphal writing in the Greek language from the time of the later portions of the NT. It belongs to the so-called APOSTOLIC FATHERS and treats, first of all, the theme: Was the OT revelation concerned with the Jews or the Christians? and, secondly, adds a moral catechism in the pattern of "the way of light and way of darkness."

Bibliography

1. Form and general character. This piece of writing purports to be a letter (1:5; 4:9; 17:2; 21:9), although it lacks the formalities of the LETTER of antiquity. It is, more correctly, a piece of didactic writing comparable to the Letter to the Hebrews (*see* HEBREWS, LETTER TO THE). Like the latter, it pursues a single, undivided subject, which is developed in the main part (chs. 1–17): namely, Judaism as the great deception concerning the will and the way of God. More emphatically than anywhere else in early Christianity, the relationship of the OT with Judaism is severed. The letter stresses that the OT was intended for the Christians from the very beginning, with its entire contents to be interpreted as prophecy of Christianity. The author defends this view, not as a polemic directed abroad, but as a way to keep his Christian readers from taking seriously the historical origin of the covenant (4:6). These readers have just been baptized. In its designation for those who have been newly baptized the letter, particularly in its outline, suggests the baptismal catechisms of a later period. Hence we have before us in the Epistle of Barnabas the written result of baptismal instruction. *See* CHURCH, LIFE AND ORGANIZATION OF THE.

2. Contents.

I. Introduction, with appreciation of baptismal grace, ch. 1
II. The didactic main part, concerning the error of the Jews and the superiority of the Christians, chs. 2–17
  A. On sacrificing, ch. 2
  B. On fasting, ch. 3
  C. On the impending end of time and its demands on the believers, 4:1-6*a*, 9*b*-14
  D. On the inheritance of the covenant, 4:6*b*-9*a*; chs. 13–14
  E. On the work of redemption by Christ, whose incarnation, suffering, and dying are explained on the basis of the OT, chs. 5–8; 11–12
  F. On circumcision, ch. 9
  G. On dietary prohibitions, ch. 10
  H. On the sabbath, ch. 15
  I. On the temple, ch. 16
  J. Conclusion, ch. 17
III. Practical moral instructions, chs. 18–20
  A. The doctrine of the two ways, ch. 18
  B. The way of the light, ch. 19
  C. The way of darkness, ch. 20
IV. Conclusion of the letter, ch. 21

The author is not capable of tying the individual items together and achieving a tidy arrangement. This inability explains the incoherence and lack of orderliness of the letter; the text is complex, coming from the traditional subject matter of oral instruction (*see* FORM CRITICISM; TRADITION, ORAL). Then, too, the two main parts, which are apparently so dissimilar, do not indicate different origins, since the author attempts to bring about a transition from the theoretical to the practical portion (ch. 17) and prepares for the latter in the former (4:10; 16:9).

3. Sources. As has been pointed out, the author uses materials which are available to him. For the first part the OT is his main source. This serves him for his christological statements. Definitely one may say that the author has no need for a Christian source, such as a gospel, in addition to the OT. Naturally the tradition concerning Jesus is known to him, for it is on this basis that he directs his questions to the OT. But the use of a definite gospel, possibly Matthew, cannot be proved. It appears that the author still relies entirely upon oral tradition (*see*

FORM CRITICISM). His quotations from the OT follow only in part the LXX and are often attributed to a collection of testimonials, since they appear again in similar selection in later church writers. The doctrine of the two ways (chs. 18–20) is also found in Did. 1–6. The originality of the Didache version, which was formerly generally supported, has recently been given up in favor of the originality of Barnabas. The possibility that the author of the Epistle of Barnabas composed the two-ways doctrine independently is completely improbable. The textual content in chs. 18–20, as compared with that in chs. 1–17; 21, proves that an unfamiliar source begins here, and thus speaks against his independence. Hence, the third possibility may be the most probable: namely, that the two versions are independent of each other but dependent on a common source. This prototype, transmitted by means of connecting links, was probably a Jewish moral catechism. The pattern of the two ways is at home in the moral instruction of late Judaism; it has also turned up again just recently (1QS III.13–IV.26) in the Manual of Discipline of the Qumran discovery (*see* DEAD SEA SCROLLS). Compared with the Didache version, the two-ways doctrine of the Epistle of Barnabas turns out to be much less ordered and is especially lacking of Christian admixtures.

4. Theology. The discussion of the sources has proved that the author was at home in a heathen proselyte community which in its initial stages developed from the Judaism of the DISPERSION and thus represents a type similar to the Christianity of the First Epistle of Clement (*see* CLEMENT, EPISTLE OF). Like the latter, the Epistle of Barnabas shows itself somewhat influenced by Paulinism (*see* PAUL § B). To be sure, there are no indisputable signs of an acquaintance with the letters of Paul, but the Paulinian triad of faith, love, and hope is found in 1:4, 6 (cf. 11:8); the justification of Abraham by faith is exhibited in its significance for the conversion of the heathen (13:7); the Stoic Pan formula (*see* STOICS), doubly striking in a milieu of tradition so saturated by the Jewish, is applied to Christ (12:7) as it is by Paul in I Cor. 8:6; Col. 1:16. Above all, the Christology of pre-existence (*see* CHRIST § 9) is quite fully developed (chs. 5 ff). The preference for the word "gnosis" and the anti-Judaism of the author should not, however, mislead one to connect him with Gnosticism. The word means simply the deeper insight into Christianity with the help of the allegoric exegesis of the OT; and, in contrast to Gnosticism, the author never thinks of giving up the OT and its divine Creator. The allegorical method (*see* ALLEGORY), which he prefers along with the occasional use of typology, puts the author alongside Alexandrian Judaism (*see* PHILO JUDEUS; ALEXANDRIA), but he uses it in the service of his main theme as an awkward weapon against Judaism. That the allegorical exegesis is not slow to do violence to the meaning of the word, and resolves historical events into playful fantasy, can be clearly discerned in his letter (e.g., in chs. 9–10).

5. Date and authorship. The allusion in 16:3 to the fulfilment of an Isaiah prophecy concerning the destruction and the rebuilding of the temple at Jerusalem by enemies was probably written in the time of Hadrian. The internal situation of the letter—the relative proximity to Deutero-Paulinism, the lack of reference to NT writings, the absence of the office of BISHOP (especially striking in 4:10*b*)—does not exclude an origin *ca.* A.D. 130, even though the letter suggests an earlier dating. In any case, composition by the apostle Barnabas is out of the question. The man (Gal. 2:13) who observed the Jewish regulations for cleanliness, and therefore separated himself from the heathen proselytes, cannot controvert the literally understood ritual law as being ungodly (Barn. 10:2, 12) and attribute the essence of the Jewish religion to the deceit of a bad angel (2:10; 3:6; 4:6; 9:4; *see* LAW IN FIRST-CENTURY JUDAISM). In addition to the title and the signature of the letter, which surely are secondary, ecclesiastical tradition after the time of Clement of Alexandria testifies to the name of Barnabas. In the letter itself, however, the author remains unnamed. He characterizes himself, with a modest defense against the title, as "teacher" (1:8; 4:6, 9; cf. 9:9; 21:1 ff). He might, according to the state of affairs in the letter, have been a representative of this early Christian office, who wanted by means of the letter to put into the hands of those whom he had just baptized a summary and continuation of his oral baptismal instruction.

6. Transmission of the text. Greek MSS are: (*a*) Codex Sinaiticus; (*b*) the Jerusalem MS (A.D. 1056) with the Didache; (*c*) Codex Vaticanus (Greek; 859), eleventh century (1–5:7*a* is missing). Another seven MSS with the same defective beginning are dependent on the Vaticanus or its prototype. An Old Latin translation is preserved in a Leningrad MS of the ninth-tenth century. There are quotations in Clement of Alexandria, who esteems the letter very highly; just as, after all, its inclusion in the Sinaiticus shows that in Egypt in ancient times it had almost canonical status.

BARODIS bə rō′dĭs [Βαρωδείς]. Head of a family of "sons of Solomon's servants" who returned with Zerubbabel (I Esd. 5:34). The name Barodis is omitted in the parallels Ezra 2:57; Neh. 7:59.

C. T. FRITSCH

BARREL. The KJV translation of כד in I Kings 17:12-16; 18:33. The RSV correctly translates "jar." It was used for the storage of flour and the carrying of water. *See* POTTERY § 3*b*. J. L. KELSO

BARRENNESS [עקר; στείρος, sterile]. Barrenness was believed to be a curse from God (Gen. 16:2; 20:18; I Sam. 1:5; cf. II Sam. 6:23). When Elizabeth conceived, she exclaimed: "Thus the Lord has done to me . . . , to take away my reproach among men" (Luke 1:25). In the time of the end, so severe will be God's judgment that people will call the barren woman blessed (Luke 23:29). Barrenness is removed by the mercy of God, often through the use of prayer (Gen. 25:21; I Sam. 1:12 ff). As God blesses his people, the curse of barrenness is completely removed (Deut. 7:14). God in his mercy gives the barren woman a home and children (Ps. 113:9); and the nation is considered to be a barren woman, who will sing because of the promise of children (Isa. 54:1). Women who were barren prayed in the temple to the god of fertility, Tammuz (Ezek. 8:14).

BARTACUS bär′tə kəs [Βάρτακος (BA), Βαζακος (Luc.)] (I Esd. 4:29). The father of Apame, a concubine of Darius. C. T. FRITSCH

BARTHOLOMEW bär thŏl′ə mū [Βαρθολομαῖος; Aram. בר תלמי, son of Talmai]. One of the twelve apostles, according to the four NT lists (Matt. 10:3; Mark 3:18; Luke 6:14; Acts 1:13).

Bartholomew may not have been this apostle's whole name. Names like Simon Bar-Jona (Matt. 16:17) indicate that a proper name along with a patronymic was common. Was it Nathanael Bartholomew, Jesus Bartholomew (as the thirteenth-century Syriac commentator Bar Hebraeus thought), or possibly Talmai Bar-Talmai? On the other hand, names like Barnabas or Barabbas, though they may technically have been patronymics, seem to have been used as independent proper names. This apostle may therefore have been known simply as Bartholomew.

The name appears in three of the lists (Matthew, Mark, Luke) immediately after Philip. The juxtaposition of the names has in part led to the view that the Nathanael of John 1:45-51; 21:2 and the Bartholomew of the lists are variant designations of the same person. According to the first Johannine passage, it was Philip who brought Nathanael to Jesus. In support of this identification it is also pointed out that Nathanael was called by Jesus to be a witness to the central role of the Son of Man in the salvation of men (John 1:50-51; *see* NATHANAEL)—surely an apostolic function; that Nathanael is named in connection with prominent apostles in John 1:35-51; 21:2; and that there is no mention of Nathanael in the Synoptics or of Bartholomew in the Fourth Gospel. It is argued that since Bartholomew is in form a patronymic, it is likely that its bearer would have another name as well.

Unfortunately these arguments fall short of proof of the identity of Nathanael and Bartholomew. The juxtaposition of Philip and Bartholomew in the lists may be quite fortuitous (in the Acts list they are not together). Jesus' comment concerning the greater things to be seen by Nathanael is not necessarily a formal call to apostleship. In view of the Fourth Evangelist's love of symbolism, Nathanael may be, not a historic personage, but a symbolic construction by which the writer depicts Judaism's incompleteness without Jesus Christ, even Judaism at its best. If Nathanael and Bartholomew are not the same, there is no problem in the mention of the former by the Fourth Evangelist and of the latter by the Synoptic writers. Many persons around Jesus appear in some but not all of the gospels. Bartholomew may quite well stand by itself in these lists as a proper name; it is not necessarily a patronymic. In fact, the patronymic is expressed in the lists by the Greek genitive, not by the Aramaic *bar*.

The uncertainties of the Nathanael-Bartholomew identification have led to other hypotheses: that Nathanael is Matthew, the apostle John, the unnamed companion of Cleopas on the road to Emmaus, James the son of Alphaeus, Matthias, or even Paul. If Nathanael and Bartholomew are not the same, we have no information about the latter in the NT beyond the meager amount to be gleaned from the four lists.

Church tradition makes Bartholomew a missionary to various countries and explains his death in divergent ways. Eusebius (Hist. V.x.3) reports that he preached the gospel in India and left behind the Gospel of Matthew "in the actual Hebrew characters." Armenia, Phrygia, Lycaonia, Mesopotamia, and Persia also have been claimed as the scenes of his labors. He is said to have evangelized with Philip and Thomas. Jerome, in the prologue to his Commentary on Matthew, mentions a number of apocryphal gospels, among them one by Bartholomew. Bartholomew figures in various apostolic romances of the Middle Ages.

BARTHOLOMEW, GOSPEL [QUESTIONS] OF. A work mentioned by Jerome, along with several other Gnostic gospels, in the prologue of his Commentary on Matthew, and in the list of apocryphal gospels condemned by the Gelasian Decree. There is no evidence, however, that Jerome himself knew the book, as it has been not unplausibly conjectured that his reference to it is due to a quite unwarranted conclusion drawn from the tradition preserved by Eusebius (Hist. V.x.3) that Pantaenus had discovered among the "Indians" a Gospel of Matthew written in Hebrew which had been earlier

brought there by Bartholomew. The mention of the book in the Gelasian Decree may well be a simple repetition of the word of Jerome. Two sentences are quoted from "the divine Bartholomew" in one of the writings traditionally ascribed to Dionysius the Areopagite (*de Myst. Theol.* 1). None of these references gives any indication of the nature of the writing or any real proof of its actual existence.

There is, however, a writing now extant in Greek, Latin, and Slavonic under the title *Questions of Bartholomew,* which in its present, far-from-original form is not earlier than the fifth century but appears to be based upon much earlier, very possibly Gnostic, materials. It is now commonly conceded that this writing may well represent—at least contain relics of—the otherwise unknown apocryphal gospel. Composed in Greek, it is now extant in two Greek MSS, one in Vienna, the other in Jerusalem; in two Latin versions represented by two distinctly different types of text, one consisting of two leaves of abstracts perhaps of the ninth century, the other a greatly amplified and corrupt form in an eleventh-century MS; and in Slavonic.

It consists of a series of questions propounded to Jesus after his resurrection, to Mary, and to Satan (Beliar), by Bartholomew, who had followed Jesus from afar at the time of the Crucifixion and had seen many marvels at that time. Both in this apocryphon and in the Coptic Book of the Resurrection of Christ by Bartholomew the Apostle (*see following article*) this special ability of Bartholomew, to see visions not granted to others, is the consequence of the promise made to him (or to Nathanael, for the two were easily identified) by Jesus at the time of his call (John 1:50-51).

The contents of this curious writing, in essence the highly imaginative development and embroidery of such themes as the descent into hell, the annunciation to Mary and subsequent miraculous birth of her child, may for convenience be listed as five topics: (*a*) Christ's account of his descent into hell; the consequent terror of Hades and Beliar; the rescue of the patriarchs, with especial attention to "Adam the first-formed, for whose sake I came down from heaven upon earth." This section concludes with a most confusing account of the number of souls daily saved and lost. Either the texts are hopelessly corrupt or the arithmetic employed is distinctly esoteric. (*b*) The interrogation of the Virgin, at Bartholomew's instance, by Peter because he was "the chief"; her reluctant description of the advent of the angel; her supernatural levitation and besprinkling with celestial dew; the miraculous production of a loaf of bread and a great cup of wine from the garment of the angel; their solemn eucharist, and his promise that after three years she will conceive a son. At this point in her narrative fire proceeded from Mary's mouth and would have destroyed the whole world had not Jesus appeared and placed his hand upon her mouth. (*c*) A very brief account of the vision of the bottomless pit, which the apostles were granted upon the mountaintop, after Jesus had promised to reveal to them what they most wanted to know, now that in seven days he was to ascend to heaven. (*d*) A very long and turgid account of the questions put by Bartholomew to Satan, after the latter had been brought heavily chained into the presence of the disciple and had been trampled upon by Bartholomew at Jesus' behest. This section is preluded by a discussion between Peter and Mary, in which the latter seeks to make clear in highly involved language how in her Jesus had been contained that she "might recover the strength of the female." (*e*) A brief colloquy regarding the deadly sins. Certainly in this section, at least in its present form, there is no hint of the ascetic disapproval of marriage. A single marriage "belongeth to sobriety" and is quite permissible, even though "virginity is best." The chief vices castigated are hypocrisy, backbiting, and speaking ill of a faithful Christian (which is actually "sin against the Holy Ghost").

Bibliography. A convenient English translation of this apocryphon is to be found in M. R. James, *The Apocryphal NT* (1924), pp. 166-81, together with references to critical studies. A more complete bibliography is given by J. Quasten, *Patrology* (1950), I, 127. M. S. ENSLIN

BARTHOLOMEW THE APOSTLE, BOOK OF THE RESURRECTION OF CHRIST BY. A Coptic writing whose manifest purpose is the glorification of Bartholomew. It is scarcely one narrative but rather a very loosely constructed rhapsody. The writing purports to have been produced by Bartholomew and given to his son Thaddaeus with the injunction not to let it fall into the hands of unbelievers or heretics. As in the Gospel [Questions] of Bartholomew (*see preceding article*), among the chief themes are the resurrection of Christ, his descent into Hades and redemption of the souls there, and the restoration of Adam. As in most of the apocrypha (*see* APOCRYPHA, NT), stories from the canonical gospels are the sources for these tales, but they are expanded, altered, and combined with utter unconcern for either tradition or consistency. Jesus is twice buried—once by Joseph of Arimathea; once by Philogenes, the father of the boy whom Jesus had healed when he descended from the Mount of Olives with his disciples.

Among such episodes as the visit of Death to the tomb of Jesus and their colloquy there, of the ascent of the apostles to heaven, and of the women at the tomb (with an expansion of their number and detailed identification of them), is a highly imaginative expansion of the story of doubting Thomas. Thomas had been absent because of the death of his son Siophanes in a far-off land. He raises the son to life, listens to his account of how his soul had been taken in the hand of Michael to heaven to view the twelve thrones of the apostles, baptizes twelve thousand of the natives, sets his son over them as bishop, returns on a cloud to the Mount of Olives, doubts that Jesus has been raised from the dead (despite his own successful performance of such a miracle earlier on the same day), is confronted with Jesus, and touches Jesus' wounds.

Together with these very loosely articulated stories is a series of eight hymns which were sung in exultation in heaven to welcome the redeemed souls, chief among whom was Adam, whom Christ had brought back with him from his successful spoliation of Hades.

The work is extant only in Coptic. Several MSS,

all fragmentary, are known, the chief of which is one of the twelfth century, now in the British Museum (Or. 6804). The original work is commonly dated in the fifth or sixth century, the time during which these Coptic fantasies are supposed to have been produced.

Bibliography. An English translation is available in E. A. W. Budge, *Coptic Apocrypha* (1913); a convenient summary of its contents in M. R. James, *The Apocryphal NT* (1924), pp. 181-86. M. S. ENSLIN

BARTIMAEUS bär'tə mē'əs [Βαρτιμαῖος, *possibly from* Aram. בר טמאי *or* בל טימי, son of Timai *or* son of the unclean]. A blind beggar of Jericho healed by Jesus (Mark 10:46-52).

Matthew's and Luke's accounts (Matt. 20:29-34; Luke 18:35-43), while differing at significant points, agree in substance. Mark's circumstantial details—place, time, form of salutation of Jesus, attitude of crowd, discarding of mantle, etc.—seem derived from recollections of an eyewitness. Bartimaeus' perseverance, faith, and thankfulness, and Jesus' sympathetic response are noteworthy.

BARUCH bâr'ək [ברוך, blessed]. Jeremiah's amanuensis; a member of a prominent Judean family. His brother Seraiah was first chamberlain to King Zedekiah (Jer. 51:59). Baruch wrote for Jeremiah the oracles of destruction (36:4 ff) which were first read publicly (vs. 10) and then to King Jehoiakim (vss. 21 ff). In angry contempt the king burned the scroll piece by piece as it was read to him (vs. 23). It has been surmised from this event that the prophetic oracles were written on papyrus, since the odor of burning parchment would have been prohibitive (*see* WRITING AND WRITING MATERIALS). Baruch was then commanded by Jeremiah to re-record the oracles (36:27-32).

Innumerable hypothetical reconstructions of Baruch's roll have been proposed in modern times, and the subject is the starting point for most discussions of the composition of the book of Jeremiah (*see* JEREMIAH THE PROPHET). The materials most frequently assigned to Baruch's roll are Jer. 19:1–20:6; 21:1-10; and large portions of chs. 26; 28; 29; 34; 36–45. The prophet's oracles of restoration are in any case excluded by the description of the roll given in ch. 36.

Baruch also witnessed Jeremiah's purchase of a field in Anathoth and preserved the deed of purchase in an earthen vessel (32:12-15). He was accused by the leaders of the Judean remnant of the destruction of Jerusalem of prompting Jeremiah to oppose their flight after the death of GEDALIAH (2), and he was taken by them, along with the prophet, into Egypt (43:2-7).

Something of this noble man's agony in pronouncing for Jeremiah the nation's doom is disclosed in Jer. 45, where Jeremiah counsels his scribe and friend to stake his life on loyalty to the Lord rather than the lost cause of the dying kingdom.

Nothing else is known of Baruch. His name was attached to the pseudepigraphical book of Baruch and the Apocalypse of Baruch (*see following articles*). Furthermore, a variety of conflicting traditions arose concerning his ultimate destiny. One, reported by Jerome, held that he died in Egypt simultaneously with Jeremiah. Others would have had him go from Egypt to Babylon *ca.* 583 B.C., either with or without Jeremiah.

Bibliography. S. Mowinckel, *Zur Komposition des Buches Jeremia* (1914); T. H. Robinson, "Baruch's Roll," *ZAW,* XLII (1924). J. M. WARD

BARUCH, APOCALYPSE OF. A Jewish pseudepigraph, also called, somewhat confusingly, the "Syriac Apocalypse of Baruch" because the only complete text of eighty-seven chapters is in a sixth-century Syriac MS, and "Second Baruch," so as to distinguish it from other works attributed to Jeremiah's scribe. As the Syriac MS states, the Syriac was translated from the Greek, a statement borne out by numerous Grecisms and by comparison with a fragment of the Greek text preserved on a leaf of a fifth- or sixth-century papyrus MS. The Greek, in turn, according to competent linguists, is from a Hebrew original, a conclusion that is in keeping with the thoroughly Jewish contents.

1. Contents. As is indicated by certain discrepancies, inconsistencies, and apparently unnecessary repetitions, this apocryphon is probably based upon a number of sources. However, the ingenious source analyses of scholars like Kabisch and Charles may be too complicated to gain complete acceptance.

Baruch relates that prior to the event itself the capture of Jerusalem by the Chaldeans was revealed to him. After this had come to pass, he grieved over Zion, but was assured that the fall of Jerusalem was a necessary prelude to the divine judgment (chs. 9–20). God also told Baruch, who was impatient for this to occur, that he must wait until all who had been destined to live should be born. Then, and only then, the Messiah would appear, Behemoth and Leviathan would become a feast for the righteous, the earth would become marvelously productive, yielding ten thousandfold, and manna would descend from heaven. Then, for no apparent reason, the Messiah would return to heaven, and the righteous dead would be resurrected; however, the souls of the wicked would waste away and be tormented (chs. 21–34).

In an allegorical vision Baruch saw a mighty fountain (the dominion of the Messiah) uproot a forest (the kingdoms of the world) save for a cedar tree (Rome); it, however, would be burned, whereas a vine (the Messiah) would continue to grow (chs. 35-46). A prayer by Baruch, in which he praises the law, precedes an account of the resurrection of the righteous, who are justified because they kept the law, and of the fate of the wicked, who failed to do so (chs. 47–52).

In another symbolic vision appeared six black waters (evil periods of history, the last the Roman) alternating with six bright waters (the good periods, the last the destruction of the Romans), all to be consummated in a messianic kingdom. Accordingly, Baruch warns the people to keep the law, and pre-

pares letters to send to the captive and dispersed Jews (chs. 53–77). In the letter to the 9½ tribes he exhorts them to be prepared by keeping the law, for the time of rewards for Israel and vengeance for the Gentiles is at hand (chs. 78–87).

2. Special problems. ***a. Date.*** The book was written sometime following the destruction of Jerusalem by the Romans (symbolically called Babylonians) in A.D. 70. Close similarities to II Esdras (*ca.* A.D. 100) are in keeping with this date. It may have been a source for the Last Words of Baruch (IV Baruch) of the second century.

b. Author. The work is quite Jewish, as the Talmudic parallels cited by Ginzberg show. The stress placed upon the law and the keeping of the law indicates that the author had much in common with the Pharisees.

c. Messianic kingdom and resurrection. Despite its title, there is no clear-cut apocalypticism in the work; instead, it is messianic in its expectations. First, there is no dualism between two opposing, supernatural world forces, Satan and God. Sin and corruption are evident, but they are due to Adam's fall, not to the activity of a Satan or Devil. Neither are there two distinct and different ages: the one evil and temporal, since it is under Satan's rule; the other good and eternal, since it is to be under God's rule. Instead, God is in direct control of this the present age, which will become better, culminating in a messianic kingdom (with or without a Messiah), to be accompanied by a resurrection. In an interesting passage (chs. 50–51) is described a physical resurrection in which the resurrected will be able to recognize one another. Then, following a judgment, the appearance of the resurrected will change. That of the wicked will become worse, and they will suffer torment; whereas the righteous will become exalted and glorified.

d. Other features. The law of God is to be observed. Adam's transgression introduced corruption and death into the world. His descendants are subject to sin and death; however, difficult though it is, each one has the freedom of will to live righteously and to have a blessed immortality, to be justified by his deeds, the works of the law, which are stored up in heavenly treasuries (whereas heavenly books record the sins of the breakers of the law). There is little angelology and no demonology. Considerable use is made of the OT, but there are few direct quotations. Much of the book, such as prayers, speeches, dirges, and a hymn, is in poetic form. The intermingling of prose and poetic passages is quite noticeable.

M. RIST

BARUCH, BOOK OF. A little book of five chapters, reputed to have been written by the son of Neraiah, secretary or disciple of Jeremiah. Sometimes the Letter of Jeremiah (*see* JEREMIAH, LETTER OF) is included as the sixth chapter. It is divided into three parts, the first of which is written in prose and the others in poetry. Largely a mosaic of verses drawn from canonical works such as Jeremiah, Daniel, Deutero-Isaiah, and Job, it is addressed to the Jews who had been deported to Babylon. It was read aloud to them before it was sent to Jerusalem, where it was to serve as part of the liturgy. It is generally held among scholars that the book had three different authors and that a skilful redactor united their anonymous parts into a more or less consistent whole and ascribed the result to Baruch.

1. Contents. Most of the first third of the work consists of a prayer quoted freely from the ninth chapter of Daniel, expanded to about fifty-four verses. It starts with a confession of sins (1:15–2:10), followed by a petition for forgiveness and mercy (2:11–3:8). Isaiah, Leviticus, Deuteronomy, and Jer. 2:21-25 lend an effective mosaic of verses.

The second third (3:9–4:4) begins with a homily in poetry called "The Fountain of Wisdom," based on Job 28–29. Israel has forsaken this fountain; therefore she is in exile and has "waxed old in a strange country." True Wisdom—i.e., the Torah—is hidden from the world; not even the sages of the earth have been able to find her. God gave this hypostatized Wisdom to Israel alone.

The third division of the poem begins at 4:5 and is a prayer for comfort and encouragement. The meter changes from that of the second part.

2. Original language. Baruch was used in Jewish worship by the Diaspora in Upper Syria. In 1:14 the book itself directs that it shall be used in the liturgy of the synagogue. This liturgical use of Baruch would make inconceivable that it was written in any other language than Hebrew. This is universally acknowledged as regards the prose part of Baruch, but some scholars have proved that this is true also of the poetical portions. The Greek is manifestly a translation from the Hebrew. Some mistranslations from the Hebrew can be found. The characteristic parallelism of Hebrew poetry is also found in both poems.

The Greek work is clearly dependent on Greek versions of Jeremiah and Daniel. It has been argued that the Greek rendering of the book was the work of a single translator. It was this same translator who rendered the second half of Jeremiah into the Greek of our LXX. Indeed, the book of Baruch is often treated as though it were a part of Jeremiah.

The prologue of Sirach (*see* ECCLESIASTICUS) attests the existence of the Greek version of Jeremiah in Egypt in 132 B.C. Ben Sirach's grandson points to evidence afforded by Greek renderings of "The Prophets and the Rest of the Books." The Greek translation of Baruch was evidently in existence at that date.

3. Date. The verbal coincidences in the Greek of 4:36–5:9 and the 11th Psalm of Solomon are quite evident. The generally accepted date of the Psalms of Solomon is the middle of the first century B.C. It was formerly believed that the original language of this portion of Baruch was in Greek and that it was composed after A.D. 70. Now the view prevails, how-

ever, that the entire book of Baruch was written in Hebrew and then translated into Greek, no earlier than the middle of the second century B.C. This means that Baruch is older than the eleventh Psalm of Solomon, which must have borrowed from Baruch.

The date of the first third of the book (1:1–3:8; note especially 1:15-20; 2:1-2, 7-14, 16-19) must have been later than 164 B.C., because of its dependence upon the book of Daniel. This dependence is evident because of the fifty-four verses based on Daniel (9:7-11, 12-13, 13-17, 18) but also because the book repeats the error of Daniel (Dan. 5:2, 13, 18, 22) in making Belshazzar the son of Nebuchadnezzar (605-651 B.C.) when he was in fact the son of Nabonidus (555-538 B.C.).

The poetic section (3:9–5:9) must be later than Job and also later than Daniel. Some place it as late as A.D. 70, but so late a date is highly unlikely. The shock of the Roman attack would have left a clearer mark. A more probable time for this work is in the late Maccabean era—say the time of Salome Alexandra in 76-67 B.C.—a time of uneasy peace, following a period of stress and internecine strife, between Pharisees and Sadducees. Israel was still threatened and menaced by past mistakes. It was a time for contemplative prayer and literary endeavor in the manner of Baruch, whose age had been under a similar urgent necessity to return to God.

BARZILLAI bär zĭl′ī [ברזלי]; KJV Apoc. BERZELUS bər zē′ləs. **1.** A Meholathite whose son Adriel married Merab, daughter of Saul (I Sam. 18:19; II Sam. 21:8, where "Merab" must be read for "Michal").

2. An influential Gileadite of Rogelim who, with two other wealthy Transjordanian patricians—Shobi, the Ammonite prince of Rabbah, and Machir the son of Ammiel from Lo-debar—brought generous supplies of food and equipment for David and his men at Mahanaim during the perilous days of the rebellion of Absalom (II Sam. 17:27-29). After the defeat of Absalom, Barzillai provided a *cortège d'honneur* to escort the monarch beyond the ford of the Jordan, but, because of his advanced years, he declined the invitation of David to become a member of the royal court at Jerusalem; he proposed to the king that his son Chimham be accepted in his stead (II Sam. 19:31-39). In his last charge David commended to Solomon the sons of Barzillai as worthy members of the royal court because of the singular kindness of Barzillai (I Kings 2:7).

3. A priest who married one of the daughters of Barzillai the Gileadite (no doubt identical with 2 *above*) and assumed his name. His descendants were removed from the sacerdotal office in the postexilic period because they were unable to establish in the genealogical register their priestly descent (Ezra 2:61; Neh. 7:63; cf. I Esd. 5:38, on which passage see Rudolph's Commentary). E. R. DALGLISH

BASALOTH. KJV Apoc. form of Bazluth. *See* BAZLITH.

BASEMATH băs′ə măth [בשמת, balsam, *or* fragrance]; KJV BASHEMATH băsh′— in 1-2, BASMATH băs′măth in 3. **1.** A daughter of Elon the Hittite, and a wife of Esau (Gen. 26:34 P).

2. A daughter of Ishmael; sister of Nebaioth; and a wife of Esau (Gen. 36:3-4, 10, 13, 17, P). She bore Esau one son, Reuel, who was the father of Nahath, Zerah, Shammah, and Mizzah (vss. 13, 17, P).

She is probably identical with 1 *above*, and the designation "daughter of Elon the Hittite" in 26:34 perhaps belonged originally only to Adah, another of Esau's wives (cf. 36:2). Basemath might also be identical with Mahalath, who is described in 28:9 (P) as a daughter of Ishmael, the sister of Nebaioth, and a wife of Esau. The Syr. consistently uses the name Mahalath for Basemath in Gen. 36.

Gen. 36:1 (P) indicates that ESAU was the eponymous ancestor of the Edomites (*see* EDOM), so it is probable that the genealogies of ch. 36 (all P) reflect Edomite tribal relations and history. Since the traditions in vss. 9-19 couple Basemath's four grandchildren (the eponymous ancestors of four tribes) with eight other legitimate descendants of Esau through two other wives, it is possible that the Basemath tribes belonged to a twelve-tribe amphictyony of Edom. That Basemath's father was Ishmael suggests the Ishmaelite origin of these tribes.

3. A daughter of Solomon; the wife of Ahimaaz, Solomon's administrative officer in Naphtali (I Kings 4:15). M. NEWMAN

BASHAN bā′shən, bā′shăn [הבשן, בשן, fruitful, stoneless plain]. The northernmost of the parts into which the region E of the Jordan was divided. Its exact dimensions are difficult to determine, since sometimes the Bible means by it only the wide, fertile plain, and in other cases includes all the territory that was in the kingdom of Og. In general, it may be said that Bashan was bounded by Mount Hermon on the N, Jebel Druze on the E, and the hills E of the Sea of Galilee on the W, and that it extended about six miles S of the Yarmuk. It included the districts of the Argob and Golan, and among its cities were Karnaim, Ashtaroth, Salcah, Kenath, and Edrei, and the later Greek cities of Hippos, Dion, and Abila.

The greater part of Bashan consisted of a tableland which ranges from 1,600 to 2,300 feet in height. It was well adapted for wheat growing and cattle raising, and was famous for its groves of oak trees. These natural features appear often in the poetry of the Bible. The strong bulls of Bashan typify the fierce enemies that beset the righteous man (Ps. 22:12); the luxurious, pleasure-seeking women of Samaria are "cows of Bashan" (Amos 4:1). The haughty and proud are described as tall cedars of Lebanon and spreading oaks of Bashan (Isa. 2:13); and a note is made in the description of the pride of Tyre that it made oars for its ships from Bashan

oak timber (Ezek. 27:6). The description of the tribe of Dan as

> . . . a lion's whelp,
> that leaps forth from Bashan (Deut. 33:22),

may refer either to the situation of the tribe as being not far from Mount Hermon or to the fierce lions which lurked in the wooded part of the district.

Archaeological exploration indicates that Bashan was continually occupied from the Early Bronze period (thirty-second–twenty-first centuries B.C.). It was taken by the Israelites from the Amorite Og, and sixty walled cities fell to the former with but little resistance; it was assigned, for the most part, to the tribe of Manasseh. In the period after the division of the kingdom it was a constant battleground between the forces of Israel and Aram; later on, it became more or less identified with the district of HAURAN. The old name, however, survived in the Batanea of Hellenistic and Roman times and the modern Arabic el-Bathaniyeh. Batanea was given to Herod by Augustus and was later part of Philip's tetrarchy (Jos. Antiq. XV.x.1; XVIII.iv.6).

S. COHEN

BASHAN-HAVOTH-JAIR. KJV translation of חות יאיר (RSV HAVVOTH-JAIR) in Deut. 3:14.

BASHEMATH. KJV form of BASEMATH 1-2.

BASHMURIC VERSION băsh mo͝or'ĭk. An obsolete designation of the Fayumic (Coptic) Version of the Bible. *See* VERSIONS, ANCIENT, § 5.

B. M. METZGER

BASILIDES, GOSPEL OF băs'ĭ lī'dēz [Βασιλείδης]. An apocryphal gospel mentioned by Origen ("Basilides dared to write a gospel 'According to Basilides' " —*Hom. in Luc.* 1) and subsequently by Jerome and Ambrose. Euseb. Hist. X.vii.6-7 refers to Agrippa Castor's refutation of Basilides, who "in expounding the mysteries compiled twenty-four books on the gospel." Clement of Alexandria (Misc. IV.7) cites a passage from the twenty-third book of the work, which he styled *Exegetica*. A fragment of this *Exegetica* (an exposition of the parable of Dives and Lazarus) is extant in the fourth-century *Acta disputationis Archelai et Manetis*. While the precise nature of this gospel is uncertain, the fact that Basilides wrote a commentary upon it would suggest that it was not an independent treatise of his own but an altered and revised form of one of the Christian gospels (not improbably, as in the case of Marcion, the Gospel of Luke), whereby he sought to establish his own views. *See* APOCRYPHA, NT.

M. S. ENSLIN

BASIN; KJV BASON. "Basin" and "bowl" are often interchangeable words in the Bible. For a detailed study of different basin forms *see* POTTERY § 3*a* for ceramicware, and VESSELS § 2 for metalware. Generally the largest basins were banquet bowls or mixing bowls for wine. The same size was used in the sacrificial system. These largest basins were beautiful works of art, whether ceramics or metalware. Smaller bowls were used at the table and also as wash basins. The water, however, was poured out of a pitcher over the hands, and a bowl collected the dirty water. The feet were washed the same way (John 13:5). The smallest bowls ultimately became cups. Among the ancients there were two cup shapes —one like ours and the other a shallow bowl which was used especially for wine. Each category of bowls ran in staggered sizes as today. Bowls were used for countless purposes, even to carrying coals and collecting ashes. They often served as lids for other vessels. The sacrificial service used a goodly variety of basins. *See* SACRIFICE AND OFFERINGS.

J. L. KELSO

BASKAMA băs'kə mə [Βασκαμα]; KJV BASCAMA. The scene of the murder and temporary burial of the Maccabean leader Jonathan by the Seleucid commander Trypho, who treacherously captured Jonathan when he accepted an invitation to accompany Trypho to Ptolemais in witness of their friendship (I Macc. 13:23; cf. 12:39-48). The place has not been identified definitely; it may be the modern Tell Bazuk in Gilead, NE of the Sea of Galilee. Josephus calls it simply Basca (Antiq. XIII.vi.5). The site has been identified with the nearby el-Gummeize, "the Sycamore," at the terminal point of the Wadi Djoummeizeh just above the NE edge of the lake, since the Syriac version of I Maccabees permits the reconstruction בית שקמא, "House of the Sycamore." Or it may refer to Tell es-Samak, the "Sycaminos" or "Sycaminon" of Strabo (*Geography* XIII.6.1) and Pliny (Nat. Hist. V.75).

E. W. SAUNDERS

BASKET. A vessel, usually plaited or woven, used to carry burdens. The precise distinctions among the various Hebrew and Greek words are not clear. Fig. BAS 22.

The most frequent term, סל, probably a cane basket (cf. LXX κανοῦν), occurs always as a container for foodstuffs: baked goods (Gen. 40:16-18), unleavened bread (Exod. 29:3, 23, 32; Lev. 8:2, 26, 31; Num. 6:15, 17, 19), or meat (Judg. 6:19). The מנא was used for bearing the first fruits of the ground to the priest (Deut. 26:2, 4; cf. 28:5, 17). The כלוב was likewise used for food (summer fruit in Amos 8:1-2), but may have been a net or net bag, such as a "cage" (KJV) for birds (Jer. 5:27; cf. Akkadian *kilubi*, "bird net"). The word דוד, properly referring to a cooking pot (*see* POTTERY § 3*a*), seems to mean also a similar large woven container, as used for figs (Jer. 24:1-2), for bricks or mortar or other heavy construction materials (parallel to "burden" in Ps. 81:6—H 81:7), and for the heads of seventy sons of Ahab delivered to Jehu (II Kings 10:7).

The תבה (perhaps from Egyptian *tbʾt*, "chest") in which the infant Moses was placed (Exod. 2:3, 5) was probably a small chest made of bulrushes or papyrus (cf. LXX θίβις), with a cover (vs. 6), waterproofed with tar so that it would float. Papyrus boats are mentioned in Isa. 18:2. The same word is used of Noah's vessel. *See* ARK.

In the gospel accounts of the feedings of the crowds κόφινος is always the word for the twelve baskets in which the leftovers of the five thousand were

Courtesy of the Oriental Institute, the University of Chicago

22. The plaited basket on the left dates from the New Kingdom in Egypt (1580-1085 B.C.); the open work basket dates from the Roman period (30 B.C.–A.D. 324).

gathered (Matt. 14:20; Mark 6:43; Luke 9:17; John 6:13), whereas σπυρίς (in some MSS σφυρίς) is used for the seven baskets of the four thousand (Matt. 15: 37; Mark 8:8). Since this distinction is observed even when the two stories are later mentioned together (Matt. 16:9-10; Mark 8:19-20), the two types of basket must have been noticeably different. Perhaps the σπυρίς was much larger, as indicated by its use to let Paul down over the wall of Damascus (Acts 9:25). However, Paul's own reminiscence of a σαργάνη, "rope hamper," as used on this occasion (II Cor. 11: 33) indicates that this word is doubtless to be preferred.

E. M. Good

BASMATH. KJV form of Basemath 3.

BASON. KJV form of Basin.

BASTAI. KJV Apoc. form of Besai.

***BASTARD** [ממזר (MONGREL PEOPLE *in* Zech. 9:6), *from* Aram. *loan word,* be foul, corrupt; KJV νόθος (Heb. 12:8; RSV ILLEGITIMATE CHILD)]. Bastards were not permitted to enter the Lord's assembly (Deut. 23:2). Ammon and Moab were hated as bastard peoples because of their incestuous origin (Gen. 19:30-38), according to the Talmud. "Bastards" (RSV "illegitimate children") in Heb. 12:8 are those who do not have the discipline of the Lord.

O. J. Baab

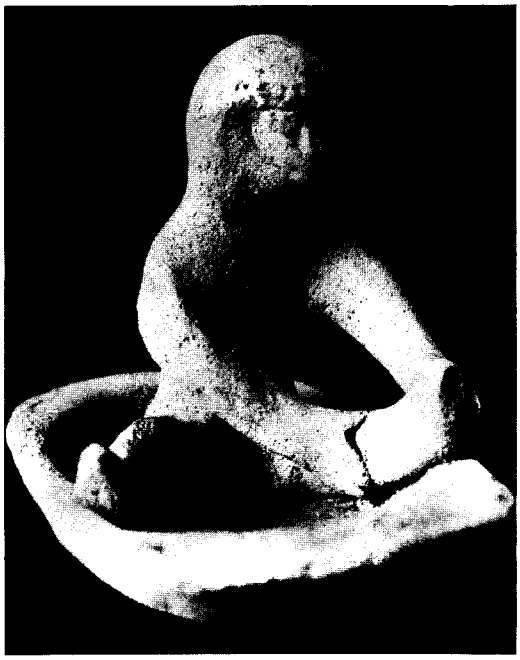
BAT [עטלף; νυκτερίς (Letter of Jeremiah 22—G 21), *from* νυκτερινός, by night, *from* νύξ, night]. Any of an order, Chiroptera, of nocturnal fruit-eating and insect-eating flying mammals, of which over four hundred species have been recognized. Eight varieties are specifically mentioned by Tristram, who also refers to others more generally, as being in Palestine in the nineteenth century.

In the OT bats are included in two lists of unclean birds (Lev. 11:19; Deut. 14:18), and in Isa. 2:20 as creatures to be found in dark caves. The Letter of Jeremiah 22—G 21 alludes to bats' lighting on the bodies and heads of idols, thus proving the latter's lifelessness.

W. S. McCullough

BATH [בת; βάτος]. A liquid measure equal to the dry measure ephah (Ezek. 45:11, 14). From estimates of the contents of two eighth-century jars, fragments of which have been found with the letters בת, *bt,* in archaic Hebrew characters, it is thought that the bath contained 21-23 liters, or *ca.* 5½ American gallons. Fig. WEI 19.

See also Weights and Measures § C4*e*.



O. R. Sellers

BATHING [רחץ, bathe, wash; *Pi'el of* כבס, wash (*of garments and poetically of persons*); שטף, wash off, rinse away; LXX *and* NT ἀπολούω, ἀπονίπτω, βαπτίζω, λούω, νίπτω = רחץ; πλύνω = *Pi'el of* כבס]. The biblical languages do not distinguish between bathing and washing, but between washing clothes and washing other objects, including the human body. The distinction is one of technique. Garments were pounded under water (כבס, "to trample"), and other objects were washed by pouring water or dipping them in water (root רחץ, "to overflow").

The dry climate of Palestine discouraged bathing except where a stream or pool was available (II Kings 5:10; John 9:7), but the ubiquitous dust made necessary frequent washing of the face, hands, and feet. Good grooming, especially for lovers, demanded washing of face, hands, or body, before anointing with oil (Gen. 43:31; II Sam. 12:20; Ruth 3:3; Ezek. 23:40; cf. Song of S. 5:3). During mourning or sorrow the face and garments were left unwashed (II Sam. 12:20; 19:24—H 19:25), a practice forbidden by Jesus during a fast (Matt. 6:17). A good host provided water for his guests' feet (Gen. 18:4; Judg. 19: 21); and to wash another's feet, the task of a servant, signified humility (I Sam. 25:41; I Tim. 5:10; especially John 13), a virtue ironically reversed in Ps. 58:10—H 58:11, where the righteous wash their feet in the blood of the wicked. Washing the hands, as Pilate did at the trial of Jesus, was symbolic of innocence (Deut. 21:6; Pss. 26:6; 73:13; Matt. 27:24), and semiritual washing of the hands before eating had become a requirement by NT times (Matt. 15: 2; Mark 7:3; Luke 11:38). Lambs were washed at shearing time (Song of S. 4:2), babies after birth (Ezek. 16:4), and bodies in preparation for burial

(Acts 9:37). Wine (Gen. 49:11) and milk (Song of S. 5:12) are mentioned as washing fluids in poetic passages.

References to ordinary washing are outnumbered by those to ritual cleansing with water (*see* CLEAN AND UNCLEAN). Priests and Levites washed clothes, hands, feet, or bodies before coming to the altar and on other ceremonial occasions (Exod. 30:20; Lev. 8:6; Num. 8:21; *see* LAVER), and cleansed the legs and entrails of burnt offerings (Lev. 8:21). Persons polluted with many kinds of uncleanness, and personnel involved in handling cleansing agents (*see* WATER FOR IMPURITY), had to wash the clothes (Num. 19:10), the body (Lev. 15:13), or both (Lev. 14:9; 15:5). Polluted garments were also washed (Lev. 6:27—H 6:20; 13:54).

Courtesy of James B. Pritchard

23. Pottery figurine of a woman bathing in a shallow bowl, from er-Ras cemetery, ez-Zib (*ca.* 800 B.C.)

Washing is an OT metaphor for cleansing from sin (Isa. 1:16; 4:4), a use continued in the NT (Acts 22:16; Heb. 10:22) with special reference to the water of baptism (Eph. 5:26; Tit. 3:5). Four times (Ps. 51:2, 7—H 51:4, 9; Jer. 2:22; 4:14) the word for "washing clothes" is used metaphorically of cleansing from sin—i.e., pounding it out of the sinner.

Fig. BAT 23. L. E. TOOMBS

BATH-RABBIM băth răb'ĭm [בת רבים, daughter of a multitude]. A gate of Heshbon, near which there were fish pools (RSV "pools"; Song of S. 7:4—H 7:5). The picture evoked is that of the forehead and cheeks framing the eyes of the beloved, and this probably recalled a well-known aspect of one approach to the city. S. COHEN

BATHSHEBA băth shē'bə [בתשבע, daughter of abundance, *from* בש *plus* שבע; *cf. bibliography*]. Alternately: BATH-SHUA—shōō'ə [בתשוע, *in error*(?)] (I Chr. 3:5). The wife of Uriah the Hittite, then of David. David saw her beauty, seduced her, and had Uriah killed in order to take her as his wife (II Sam. 11). Bathsheba later became the mother of Solomon (12:15-25). Still later, when Adonijah claimed succession to the throne, she and Nathan persuaded David to proclaim Solomon king (I Kings 1:5-40). She then carried Adonijah's request for Abishag to Solomon; this request resulted in the death of Adonijah (2:13-25).

Bibliography. E. Koehler, *ZAW*, LV (1937), 165-66.

D. HARVEY

BATH-SHUA băth shōō'ə [בת־שוע, daughter of Shua (*cf.* KJV *with* LXX Θυγάτηρ Σαύας *in* I Chr. 2:3); Ethio. *Betâsû'êl, Bêdsû'êl* (Jub. 34:20; 41:7; *see bibliography*)]. **1.** A Canaanitess; wife of Judah and mother of his sons Er, Onan, and Shelah (I Chr. 2:3; here probably, as in Gen. 38:2, 12, not a proper name). The marriage is treated with scorn by the writer of the TESTAMENTS OF THE TWELVE PATRIARCHS (Test. Judah 8:2; 10:6; 13:3; 16:4; 17:1; cf. Jub. 34:20; 41:7).

See also SHUA.

2. Alternate form of BATHSHEBA.

Bibliography. R. H. Charles, ed., *The Testaments of the Twelve Patriarchs* (1908), p. 78*n; Apoc. and Pseudep. of the OT* (1913), II, 65, 72, 318-21. B. T. DAHLBERG

BATHZACHARIAS. KJV form of BETH-ZECHARIAH.

BATTALION [σπεῖρα]. The word used to translate the Latin *cohors*, a tenth part of a legion; hence usually *ca.* six hundred men, but the number varied.

Matt. 27:27; Mark 15:16 speak of the "whole battalion" as gathered together before Jesus, after Pilate had delivered him over to be crucified. These soldiers would probably have been the Second Italian Cohort, stationed in Palestine, or perhaps a detachment from them. B. H. THROCKMORTON, JR.

BATTERING RAM [כר]. An engine of warfare used by besiegers of a city to break down its walls.

Its earliest known form comes from the Assyrians. It consisted of a heavy pole suspended at the middle from a framework which also served to protect the wielders from the stones and arrows hurled from the walls by the defenders. The entire framework was usually propelled by four to six wheels. Figs. ARC 48; WAR 3.

The use of the battering ram may be referred to in II Sam. 20:15; Joab and his men are portrayed as battering (משחיתים; lit., "ruining") the walls of Abel of Beth-maacah. In Ezek. 4:2 the prophet is told to make a model of Jerusalem in siege with battering rams planted against its walls. In 21:22 they are mentioned as part of the siege weapons of Babylon in the anticipated siege of Jerusalem. A similar fate is promised for Tyre in 26:9 (cf. also Isa. 22:5).

See also WAR, METHODS OF, § 8.

J. W. WEVERS

BATTLE. *See* WAR, METHODS OF.

BATTLE ARRAY. *See* ARRAY, BATTLE.

BATTLE-AX. KJV translation of מפץ (RSV HAMMER) in Jer. 15:20.

BATTLEMENT [חומה (Song of S. 8:9; KJV PALACE), row or course of stones; פנה (Zeph. 1:16; 3:6; KJV HIGH TOWERS, TOWERS), corner, tower; KJV מעקה (Deut. 22:8; RSV "parapet"), נמושות (Jer. 5:10; RSV *correctly* "branches")]. A crenelated parapet. The phrase "battlement of silver" is used symbolically in Song of S. 8:9. The battlements of fortified cities are referred to in Zeph. 1:16; 3:6. H. G. MAY

BAVVAI băv'ī [בוי] (Neh. 3:18). Son of Henadad; a Levite who helped rebuild the wall of Jerusalem. Several Hebrew MSS, the Syr., and certain Greek texts indicate that "Bavvai" is a corruption of "BINNUI" (cf. vs. 24).

BAY. The KJV translation of אמצים in Zech. 6:3, 7. The LXX omits reference to bay horses in these verses, and the RSV treats the term as a gloss in Zech. 6:3 and translates it as "steeds" in vs. 7. This word does not refer to color but signifies strength. C. L. WICKWIRE

BAY TREE. The KJV translation of אזרח (lit., "a native") in Ps. 37:35. The text may not intend any particular tree; but if so, we need not choose the bay tree (*Laurus nobilis* L., noted for its aromatic

From *Plants of the Bible* (London: Crosby Lockwood & Son, Ltd.)
24. Bay tree

leaves), even though native to the area (*cf.* FLORA § A9*b*). In FLORA § A9*i* the ארן of Isa. 44:14 is identified with this tree (*see* PINE). Most scholars read with the LXX: "like a CEDAR of Lebanon" (so RSV), which suits the context (cf. Ezek. 31:1-14).
Fig. BAY 24. J. C. TREVER

BAZAAR [חוץ, outside] (I Kings 20:34). A section of a street set apart for merchants. Ben-hadad of Damascus gave Ahab permission to establish bazaars in Damascus, as Ben-hadad's father had in Samaria.

BAZLITH băz'lĭth [בצליח]. Alternately: BAZLUTH băz'ləth (Ezra 2:52; I Esd. 5:31); KJV BASALOTH băs'ə lŏth (I Esd. 5:31). The founder of a family group included among the NETHINIM in the great list of those who returned from the Exile (*Kethibh* of Neh. 7:54). The correct reading of the name is difficult to determine. F. T. SCHUMACHER

BDELLIUM dĕl'ĭ əm [בדלח, *bᵉdhōlaḥ; cf.* Sanskrit *udukhala,* Akkad. *budulḫu,* Indian myrrh]. It is quite uncertain what this is. It has been defined as a gum or resin, a precious stone or a pearl. The cognates noted would seem to favor a gum. Its connection with gold and onyx as products of Havilah would point toward a stone (Gen. 2:12). In Num. 11:7 it is used to describe manna which was white like hoarfrost. This may give some basis for its being rendered "pearl" in the Syriac and Arabic versions. *See* JEWELS AND PRECIOUS STONES § 2.
W. E. STAPLES

BEADS [כומז] (Num. 31:50); KJV TABLETS. Alternately: ARMLETS (Exod. 35:22). Articles of gold jewelry. The meaning of the Hebrew word is uncertain, and "breastplates" and "necklace" have been suggested. *See* JEWELS AND PRECIOUS STONES § 2.

BEALIAH bē'ə lī'ə [בעליה, Yahu is lord] (I Chr. 12:5). One of the ambidextrous slingers and archers of the tribe of Benjamin who joined the outlaw band of David at Ziklag.

BEALOTH bē'ə lŏth [בעלות]; KJV IN ALOTH ā'lŏth in 2 *below.* **1.** A town in S Judah (Josh. 15:24); perhaps the same as BAALATH-BEER.

2. A town(?) in Solomon's eleventh administrative district (I Kings 4:16). Its location is unknown.

BEAM. The translation of a number of words.

The weaver's beam (מנור), the bar on which the warp was wound in the loom, evidently was large (I Sam. 17:7; II Sam. 21:19; I Chr. 11:23; 20:5). The word translated "beam" in Judg. 16:14 KJV (ארג; omitted in the RSV) is doubtful; it may mean "bobbin."

Words designating the beam used in building are: גב (I Kings 6:9); כפים (Hab. 2:11); כרתת (a plural; I Kings 6:36; 7:2, 12). The verb קרה means "lay beams" (Neh. 3:3, 6; Ps. 104:3). The corresponding noun, קורה, is translated "beam" in II Chr. 3:7; Song of S. 1:17 (where cedar beams are highly esteemed); but in the story of Elisha's making the iron axe float (II Kings 6:1-7) the RSV uses "log." צלע (I Kings 7:3), "beam" in the KJV, is "chamber" in the RSV; and עב (I Kings 7:6), "thick beam" in the KJV, is "canopy" in the RSV. The use of "beams" in I Kings 6:6 is conjectural, as indicated by the italics in the KJV. *See* ARCHITECTURE.

The KJV translates "mote" and "beam" (δοκός) in the parable in Matt. 7:3-5; Luke 6:41-42; but the RSV has "speck" and "log." O. R. SELLERS

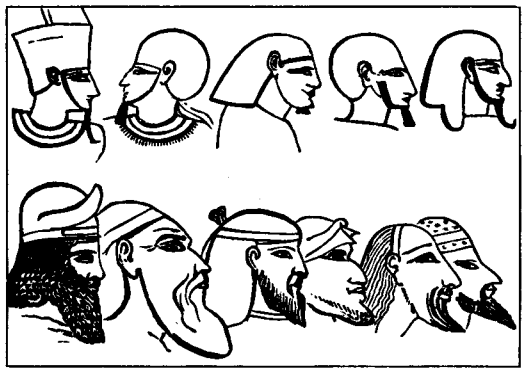
BEAN. KJV form of BAEAN.

BEANS [פּוֹל; Arab. *fûl;* Akkad. *pulilu*]. A leguminous plant, *Vicia faba* L., grown from very ancient times for its nutritious food. Beans were included with other foods and supplies brought to David in Mahanaim (II Sam. 17:28). They were combined with other grains to prepare a coarse bread symbolizing the siege of Jerusalem (Ezek. 4:9).

The dried bean is winnowed in a similar manner to wheat after the grain harvest. Also the green pod was cooked as a vegetable. *See also* AGRICULTURE; FLORA § A1*e;* FOOD.

J. C. TREVER

BEAR [דב, Aram. דב (Dan. 7:5), *cf.* דבב, to move gently; Arab. *dabba,* to creep, *dubb,* bear; ἄρκος (Rev. 13:2), *variant of* ἄρκτος]. A large, heavily built carnivorous mammal, with coarse and generally long hair, a short tail, and five-toed plantigrade feet (family Ursidae). The bear of Palestine, which was known in the N regions as late as the early twentieth century, was the Syrian variety of the brown bear (*ursus arctos syriacus*). Like most bears, it subsisted on a diet of vegetables, fruit, and insects to a greater extent than on flesh.



The OT references indicate that bears were common in ancient Israel. Although these animals are generally inoffensive, when annoyed or extremely hungry they can be dangerous, which explains the allusion in Amos 5:19 and the simile for a wicked ruler in Prov. 28:15 (cf. Wisd. Sol. 11:17). A bear lying in wait for prey serves as a figure for God in Lam. 3:10; its attack on the flock points to David's prowess in I Sam. 17:34, 36-37. Such references throw light on the picture in Isa. 11:7 of the cow and the bear feeding together in the future age of peace. One of the commonest causes of the irritation of bears was (and still is) interference with their young (a possible explanation of II Kings 2:24), and a she-bear robbed of her cubs supplies a simile for human anger in II Sam. 17:8 (cf. Isa. 59:11; Ecclus. 25:17), and for the divine anger in Hos. 13:8, although Prov. 17:12 avers that confronting such an enraged animal is to be preferred to meeting a human fool.

Bears play a minor role in apocalyptic imagery. In Dan. 7:5 the second of the four beasts coming up out of the sea is a bear, doubtless chosen for its size, strength, and supposed voracity, and seemingly typifying the kingdom of Media. In Rev. 13:2 the composite beast, representing the Roman Empire, probably was inspired by Dan. 7, though the bear of the latter vision has contributed only the feet to the Johannine creation; bears' feet, being large, may signalize the trampling down of all opposition.

W. S. MCCULLOUGH

BEARD [זקן, שפם]. Full beards were common among the Hebrews, who considered their removal a symbol of indignity (II Sam. 10:4-5), except in cases of leprosy (Lev. 14:9). Semites are often pictured wearing beards in ancient Near Eastern art. Egyptians and Romans preferred clean-shaven faces, although the rulers among the former wore artificial beards. Fig. BEA 25.

The regular Hebrew word for "beard" is זקן (Lev. 13:29-30, etc.), a cognate of the term for "old" which was applied variously to men (Judg. 19:16), slaves (Gen. 24:2), women (Zech. 8:4), and elders (Exod. 19:7). In II Sam. 19:24 only, the term שפם is usually rendered "beard," although it doubtless has reference to a "moustache" (so Moffatt, Amer. Trans.). The same word appears also in Lev. 13:45; Ezek. 24:17, 22; Mic. 3:7, where it is variously translated as "beard," "lip," and "moustache." Uncertainty as to the precise meaning of שפם in these passages is due to lack of information concerning the custom of covering lips or beard at times of distress or mourning.

25. Upper row: Egyptian beards; lower row: beards of other nations

The Hebrews were forbidden to mar the edges of their beards by cutting (Lev. 19:27); priests were enjoined against shaving off the edges of their beards (21:5), although Ezekiel was instructed to shave his head and beard to symbolize the coming destruction (Ezek. 5:1). David is said to have seized a lion or bear by its beard (I Sam. 17:35), and Joab took the beard of Amasa with his right hand to kiss him (II Sam. 20:9). Fearing Achish, and feigning madness, David let his spittle run down on his beard (I Sam. 21:13). The pulling of some of the hair from head and beard was a sign of mourning or anger (Ezra 9:3). The shaving of the beard was synonymous with impending doom (Isa. 7:20; 15:2; Jer. 41:5; 48:37). The practice of anointing the beard with precious oil is alluded to in a single reference to Aaron's beard (Ps. 133:2), but it is implied in Exod. 30:22-30; Lev. 8:30 as a priestly ritual associated with Aaron.

W. L. REED

BEAST [חיה (Aram. חיוא, חיוה *in* Dan. 4:12; 7:5; *etc.*), living creature, *from* חיה (Aram. חיא), to live; מטבח (Prov. 9:2; *cf.* Gen. 43:16), slaughtering; KJV זיז (RSV ALL THAT MOVE[S]), *cf.* Akkad. *zâzu,* abundance, luxuriant growth; *for* בהמה, בעיר, מריא (Isa. 1:11; Amos 5:22), *see* CATTLE; ζῷον, living being; θηρίον, wild animal, *diminutive of* θήρ, *and* LXX *translation of* חיה *and* Aram. חיוה; θηριομαχέω (I Cor. 15:32), to fight with wild beasts, *from* θηρίον *and* μάχομαι, to fight (*see* 2 *below*); κτῆνος, *see* CATTLE; KJV τετράπους (Acts 10:12; 11:6; Rom. 1:23; RSV ANIMALS), four-footed]; WILD BEASTS [ציים (Isa. 34:14; *etc.*), *probably* desert-dweller]; SLAIN BEASTS [σφάγιον (Acts 7:42), *from* σφάζω, to slay, slaughter]. In some contexts the precise meaning of the word can only be surmised.

1. Any animal (Gen. 6:7; Lev. 11:2; Deut. 4:17; Job 12:7; 35:11; Ps. 36:6—H 36:7; Eccl. 3:18-21; etc.). Animals are divided into clean and unclean (Gen. 7:2; Lev. 11:1-8); the former may be used as food, provided the blood is removed (Lev. 7:26; cf. Prov. 9:2). Some serve as sacrifices (Acts 7:42; Heb. 13:11), and among these are those specially fattened for the purpose (Isa. 1:11; Amos 5:22). It is recognized that the mind of a beast is inferior to that of a man (Dan. 4:16; 5:21), and the beast's irrationality serves as a simile in II Pet. 2:12; Jude 10.

2. A wild and sometimes carnivorous animal (Gen. 1:24; 7:21; 37:20; Exod. 23:11; Deut. 28:26; I Sam. 17:44, 46; Mark 1:13; Acts 11:6; 28:5; Rev. 6:8; etc.). The lair of such an animal, which gets its food from God (Ps. 147:9), is referred to in Job 37:8; Zeph. 2:15. Israel's enemies are likened to wild beasts (Ps. 74:19; Jer. 12:9), as are the Cretans (Tit. 1:12). In I Cor. 15:32 the verb "to fight with wild beasts" is probably a metaphor for Paul's troubles with his enemies.

3. A domesticated animal (Gen. 1:24; 2:20; Exod. 19:13; 22:10—H 22:9; Num. 3:13; 31:47; Judg. 20:48; Prov. 12:10; Jer. 21:6; Jas. 3:7; Rev. 18:13; etc.). "Beast" means "ass" in Gen. 45:17, and an unspecified riding animal in Neh. 2:12, 14; Luke 10:34; Acts 23:24 (RSV "mount"). "Cattle," "property," and "beasts" (בהמה) occur together in Gen. 34:23, where it is probable that the third term refers to riding and pack animals and possibly also to oxen (cf. Num. 31:9; 35:3). In II Kings 3:9 the "beasts" following the army are presumably draft or pack animals. Domesticated animals are subject to the law of firstlings (Num. 3:13; 8:17), as well as to the sabbath regulation (Deut. 5:14); all sodomy with them is strictly forbidden (Lev. 20:15-16). In Exod. 22:10-15—H 22:9-14; Lev. 24:18 there is provision for restitution for an injury caused to the beast of another person. W. S. McCULLOUGH

4. The beasts of the Revelation to John. Two beasts are mentioned in the Revelation to John: (*a*) one described as the "beast that ascends from the bottomless pit" (11:7; cf. 17:8), as a "beast rising out of the sea" (13:1), as a "scarlet beast" (17:3), as the "beast with seven heads and ten horns" (17:7), as the "beast that was and is not" (17:11), and as the "first beast" (13:12) or simply "the beast" (13:2 ff, 14 ff, *et passim*); and (*b*) a second designated either as "another beast which rose out of the earth" (13:11), or as the "false prophet" (16:13; 19:20; 20:10).

The first of these beasts combines in itself the joint characteristics of the four beasts of Daniel's vision (Dan. 7:3-7; cf. the terms "lion," "bear," "leopard," a "fourth beast, terrible and dreadful and exceedingly strong," "ten horns," "out of the sea," and the like). Accordingly, this first beast represents the combined forces of all political rule opposed to God in the world and is the earthly, demonic messiah of the DRAGON, whose "power" is granted to it (Rev. 13:2). This false messiah imitates God's true Messiah at every possible point, notably in that it "was, and is not, and is to ascend from the bottomless pit and go to perdition" (17:8), even as Jesus, the Messiah of God, came in the Incarnation, died in the Atonement, rose in the Resurrection, and went into heaven by the Ascension.

The second beast represents every pagan cultus which exists for the express purpose of granting its religious sanction to further the political designs of the world power extant in any culture, insofar as that power is opposed to God's sovereignty over his world. This beast, therefore, combines in its activities the functions of priest (13:14), prophet (vs. 15), and grand inquisitor (vss. 16-17). In John's day the world power arrayed against God and his kingdom was the Roman Empire, and the cult established to further its aims was that of emperor worship and its priestcraft. Hence, the immediate reference of the two beasts arising respectively from sea and earth is, for John, to the Roman Empire and the imperial cultus. Together with the Dragon, these two beasts combine to form a sort of unholy trinity, the opposite to the true one!

BEATEN GOLD [זהב שחוט]. Thin sheet gold, produced by hammering (רקע) and used for overlaying objects of baser metals. The term is used only of the golden shields of Solomon (I Kings 10:16-17; II Chr. 9:15-16), which were not of solid gold but had gold overlay. The lampstands of the tabernacle were made of hammered work of gold (זהב מקשה; KJV "beaten work of gold"; Exod. 25:18, 31, 36; 37:7, 22; Num. 8:4; 10:2). Figurines of idols, made of bronze and covered with beaten gold, as described in Isa. 40:19, were found at Tell Abu Hawam and Megiddo.

Bibliography. R. W. Hamilton, "Excavations at Tell Abu Hawam," *Quarterly of the Department of Antiquities of Palestine*, vol. IV (1935), p. 60, nos. 370, 372, and pls. XV.2, XXXIX.1. I. BEN-DOR

BEATEN OIL [שמן כתית]. The highest quality of oil, used for the lamp in the sanctuary (Exod. 27:20; Lev. 24:2) or with the daily sacrifices (Exod. 29:40; Num. 28:5); also one of Solomon's barter products with Hiram (I Kings 5:11—H 5:25). Beaten oil was made by crushing fully ripe olives in a mortar. The oil which was produced without pressing was regarded as the purest and best. That produced by pressing was second grade, and that derived from further grinding and pressing third grade. *See also* OIL TREE; OLIVE TREE. J. M. MYERS

BEATEN SILVER [כסף מרקע] (Jer. 10:9); KJV SILVER SPREAD INTO PLATES. Thin plates or leaves of hammered silver, used along with gold leaf to overlay the wooden core of an image. Fine metalwork was imported from the Phoenician colonies of the W Mediterranean (here Tarshish). *See* METALLURGY. L. E. TOOMBS

BEATING. *See* SCOURGING.

BEATITUDES. The beatitude is a literary form, which commences with the word "blessed," and constitutes a declaration of praise for an individual regarded as an unusual example of moral rectitude and piety, who, as a consequence, might anticipate some appropriate reward from God. As expressions of joy and hope, and occasionally even of sorrow, beati-

tudes reflect varying, yet general, aspirations of human life.

1. Formal characteristics of the beatitude
2. Beatitudes of the OT
3. Beatitudes of the Apoc.
4. Beatitudes of the NT
Bibliography

1. Formal characteristics of the beatitude. Although the authors of OT documents did not limit their formulation of beatitudes to a single pattern, they generally began the declaration with אשרי ("happy" or "blessed"), after which they referred to a type of individual worthy of praise (Pss. 1:1; 2:12; Prov. 8:34; Isa. 56:2; Dan. 12:12). Similarly authors of NT documents usually constructed a beatitude by using the adjective μακάριος ("blessed" or "happy") with a substantive, a substantive adjective, or a relative clause, to designate the types of persons considered blessed, and frequently included a clause beginning with ὅτι ("because") to state the reasons for their fortunate state (cf. especially Matt. 5:3-11).

2. Beatitudes of the OT. Beatitudes appear almost exclusively in the writings of the psalmists and the sages, who used the form with varying religious overtones. These beatitudes are pronounced upon the man who is righteous, who keeps his hand from doing evil and does not profane the sabbath—such a one may look forward with confidence to such earthly rewards as peace, prosperity, the satisfactions of family life, the joys of temple worship, and renewal of strength (cf. Pss. 41:1; 65:4; 84:5; 106:3; 112:1; 128:1; Prov. 8:32; Isa. 32:20; 56:1-2). Generally God's deliverance was not eschatologically conceived but was regarded as a favor realizable during one's earthly existence. Even the chastened individual might be called blessed, for suffering was a means of learning God's law and might become the ground of hope for God's nonabandonment of the sufferer (Ps. 94:12). Rewards for obedience to God's commands appear to make the pleasures of a full and happy life the goal of human existence. In actual fact, however, the purpose of the beatitudes was not to emphasize these good fortunes as having value in themselves but as signs of God's nearness to the righteous. Blessed are those who trust God, who hope in him, who wait upon him, who fear and love him, and whose sins have been forgiven by him (Pss. 2:12; 32:1-2; 40:4; 84:12; 112:1; etc.).

3. Beatitudes of the Apoc. In the apocryphal writings of the OT the beatitude continued to be a gnomic saying used for purposes similar to those noted above. Fortunate are those individuals who live with wives of understanding, who are discreet in speech, who are not enslaved to inferiors, and who pursue wisdom and fear God (Ecclus. 25:7-10). Also fortunate are the Hebrew people, for to them has been given the privilege of knowing God and his will and consequently for feeling assured of deliverance from all the exigencies of human life—from toil and struggle, and from sorrow and anxiety. Significant for a clearer understanding of the beatitudes in the Sermon on the Mount (Matt. 5:3-12) is the first appearance of a collection of beatitudes in this apocryphal literature. Earlier authors had used single beatitudes rather sparingly, but the author of Ecclesiasticus lists nine types of men whom he conceives as blessed in some sense (Ecclus. 25:7-10).

4. Beatitudes of the NT. Beatitudes appear with greatest frequency in two of the Synoptic gospels (Matthew and Luke), seven times in the book of Revelation (1:3; 14:13; 16:15; 19:9; 20:6; 22:7, 14), three times in Paul's Letter to the Romans (4:7-8; 14:22), and once in the Fourth Gospel (John 20:29). They resemble the beatitudes of the OT in their formal structure and in their praise of individuals or the parts of the body associated with life—e.g., the eyes (Matt. 13:16) or the womb (Luke 23:29). In content, however, the NT beatitudes differ from those of the OT in one important respect: The NT beatitudes stress the eschatological joy of participation in the kingdom of God, rather than rewards for this earthly life. This typically NT outlook is implied even in those beatitudes which have closest affinities with certain OT beatitudes (Rom. 4:7-8 [cf. Ps. 32:1-2]; Jas. 1:25 [cf. Ps. 1:1]) and is clearly apparent in the beatitudes of the Sermon on the Mount (Matt. 5:3-12) and of the book of Revelation. Important for an interpretation of the collection of nine beatitudes at the beginning of the Sermon is a recognition of this eschatological rather than sociological orientation. Difficulties will be resolved, not by initiating a program of social and moral improvement, but by the coming of God's kingdom. Similarly the author of the book of Revelation has given the ancient gnomic form of the beatitude an eschatological significance and heightened its importance by enclosing his apocalyptic work within two beatitudes (Rev. 1:3; 22:14).

Consequently in the NT beatitudes the element of paradox becomes prominent. Men who in no way appear to be fortunate in the present (e.g., martyrs who have suffered death, the poor, the distressed, and the barren) are those declared blessed. These individuals will escape condemnation on the day of judgment, because they have prepared themselves by watching for its coming (Matt. 24:46; Luke 12:37-38; Rev. 16:15), by their ready willingness to hear the word of God without a feeling of offense (Matt. 11:6) and to see the signs of his coming with the eyes of faith (Luke 1:45; 10:23; 12:43; John 20:29), and by the expression of their newly found faith in concrete deeds (Matt. 24:46; Jas. 1:12, 25; Rev. 14:13; 22:7).

The beatitudes which appear in the Sermon on the Mount (Matt. 5:3-12; cf. Luke 6:20-23) are the most familiar. Luke includes four beatitudes in his report of the Sermon, in contrast to the First Evangelist's list of nine (cf. the collection of nine beatitudes in Ecclus. 25:7-10). The significance given to these beatitudes by these two evangelists is apparent from their formulation of the beatitudes and from their contexts. By having Jesus direct his words "Blessed are *you*" to the multitude and by matching each beatitude with a corresponding woe, Luke wishes to stress the specific situation and the factor of social change. The First Evangelist, on the other hand, stresses the general situation in which Jesus' followers of every age find themselves, by having him say: "Blessed are *the poor*," etc. Thus this evangelist makes the beatitudes an appropriate introduction to his code for Christian discipleship (Matt. 5–7). Since collections of beatitudes are a literary rather than an oral device for communicating laudatory comments

about individuals, it hardly seems likely that Jesus spoke at one time as many as reported by the First Evangelist.

Analysis of the Matthean beatitudes suggests that three different types of beatitudes have been brought together to form the collection of nine. Reference is made in the first group to those individuals whose lot in life is evil. In this group are the poor, who have inherited the tradition of an elemental loyalty to God but have been disowned and oppressed by the observant Pharisees and the priestly Sadducees; the mourners, who bear the burden of grief for all men's sorrows; and the hungry, who yearn, according to the First Evangelist's interpretation, after righteousness. Release from the tensions of the present has a profound meaning for these individuals who in some way exhibit God's attitudes of mercifulness, of purity or singleness of heart, and of peacemaking. As God works to destroy evil and to create the good, so these individuals have learned from God's action what should be the character of their own activity. In the third group the ambassadors of Jesus, whose sufferings will be comparable to those of the prophets, are singled out as individuals who undertake the specific work of preaching the gospel. However difficult the present situation may be for men whom others would regard as most unfortunate, God will soon resolve the tensions of their present situation and grant them the gifts of his kingdom.

BEAUTIFUL GATE [ἡ θύρα ἡ ὡραία, ἡ ὡραία πύλη] (Acts 3:2, 10). The scene of the healing of a paralytic by Peter and John in the TEMPLE. Jewish sources make no mention of such a gate, though Josephus describes the beauty of an Eastern gate fashioned of Corinthian bronze which opened upon the Court of the Women (War V.v.3), perhaps the Nicanor Gate of the Mishnaic tractate Middoth. This is more likely the gate of Acts 3 than the Susa or Golden Gate identified by Christian tradition.

BEAUTY. The rich and diverse vocabulary for "beauty" in the Bible includes the root יפה, "be fair, beautiful," and derived words; צבי, "beauty, honor, gazelle"; the root פאר, "beautify, glorify," and especially the noun תפארה, "beauty, glory"; the roots אוה and חמד and derived forms suggesting "what is desirable to the eyes"; and the roots נוה "beautify"; נאה, "be comely, befitting"; נעם, "be pleasant, delightful, lovely," all with their derived forms. The adjective טוב, "good," also means "handsome, fair, beautiful, goodly." Other words are הדר, "beauty, splendor"; הוד, "splendor, beauty"; perhaps חסד, "faithful love, grace"; חן, "grace, beauty"; כבוד, "glory, splendor." There are also several infrequent terms such as the root שפר, "be beautiful, fair, comely," and the noun גזרה, "polishing" or "beauty." In the NT there are the terms καλός, "beautiful"; ὡραῖος, "charming, attractive"; ἀστεῖος, "handsome, well-pleasing"; εὐπρέπεια, "fine appearance, beauty"; τιμή, "honor,"; etc. The study of all these terms in the concordances will reveal the range of reference.

Neither the OT nor the NT has any theory of the beautiful. Instead, there is the description of many things as beautiful. There are thus several descriptions of the beauty of women, as in Prov. 11:22; Jer. 4:30; Ezek. 16:9-14. Such passages as Isa. 3:18-24; Ezek. 23:40 show what aids to beauty were used. Naturally many women of much beauty are mentioned, including Sarai (Gen. 12:11, 14); Rebekah (Gen. 24:16; 26:7), though she was not so beautiful when she was older; and especially Rachel, who had a fine figure in addition to being beautiful. Abigail (I Sam. 25:3), Abishag (I Kings 1:3-4), Bathsheba, and both Tamars—Absalom's sister (II Sam. 13:1) and his daughter (14:27)—were beautiful. Delilah's younger sister (Judg. 15:2) and Esther were likewise (Esth. 1:11; 2:7), and especially the beautiful bride of the Song of Songs (4:1-6).

The fair sex does not have matters all its own way, for Absalom (II Sam. 14:25), Adonijah (I Kings 1:6), Benaiah's Egyptian (II Sam. 23:21), Daniel (Dan. 1:4, 15), David (I Sam. 16:12), Joseph (Gen. 39:6), Saul (I Sam. 9:2), and Jonathan (II Sam. 1:23) all were handsome in varying degrees. The baby Moses was goodly (Exod. 2:2), and the bridal pairs of Ps. 45 and the Song of Songs were alike distinguished. Other groups are mentioned as beautiful, such as the women of Gen. 6:2, fair virgins (Amos 8:13), and Job's daughters (Job 42:15); and cf. Prov. 6:25.

Parts of the body are singled out for special mention especially in the Song of Songs (*passim*); and cf. the voice (Ezek. 33:32), Ephraim's neck (Hos. 10:11), the feet of the herald (Isa. 52:7; Rom. 10:15) by synecdoche for the messenger himself. Particularly striking is: "Your lips are like a scarlet thread" (Song of S. 4:3). Inevitably women's hair and men's beards figure prominently (for the former, cf. Song of S. 4:1; Isa. 3:24; Luke 7:38; John 11:2; 12:3; and the latter, II Sam. 10:5; 14:25-27; Prov. 20:29). But reference in the NT to different parts of the body serves an entirely different purpose (Rom. 9:21). Aaron's garments were for glory and beauty (Exod. 28:2, 40; Rev. 1:14); also mentioned are a beautiful mantle from Shinar (Josh. 7:21); one of fine linen (Gen. 41:42; Esth. 8:15; etc.); festal garments (Gen. 45:22; Judg. 14:12-13; II Kings 5:5; etc.); embroidered garments (Exod. 26:36; Judg. 5:30; Ezek. 16:18; 26:16; etc.); and white garments (Eccl. 9:8; Dan. 7:9; Matt. 17:2; Rev. 3:4-5; etc.). The phrases "fair garland" and "crown of beauty" or "beautiful crown" (Prov. 4:9; Isa. 62:3; Jer. 13:18; Ezek. 23:47) are used.

The natural scene in Palestine is described in terms of the beautiful. The land itself is a "heritage most beauteous" (Jer. 3:19; cf. Ps. 16:6). The beauty of Jerusalem, of Zion, of its temple, and of its houses is all described (cf., e.g., Ezra 7:27; Pss. 48:1 ff; 50:2; 93:5; Isa. 5:9; 64:11; Jer. 6:2; Lam. 2:15; Acts 3:2, 10). In Ps. 50:2; Lam. 2:15 the striking phrase "perfection of beauty" is used of Zion. "Beauty" in Pss. 27:4; 96:6, though represented by different Hebrew words, probably conceals references to the ark. Israel is the Lord's "beautiful flock" (Jer. 13:20; cf. Hos.

14:6). The beauty of the city of Samaria (Isa. 28:1-4), of Egypt and Pharaoh (Ezek. 31:1–32:21), and of Tyre and its princes (Ezek. 27–28) are all described. The beauty of Egypt is set forth under the figure of a cedar of Lebanon, and Tyre's beauty under precious stones (*see* DRESS AND ORNAMENTS; JEWELS AND PRECIOUS STONES; MANTLE). Jeremiah likens Egypt to a beautiful heifer (Jer. 46:20). Palestine's skies were bright and fair (Exod. 24:10; Job 26:13; Ps. 19:1; cf. Song of S. 6:10).

The OT in general shows a keen appreciation of the glory, and thus of the beauty, of God in nature. In God everything is beautiful in its time (Eccl. 3:11; such words as "clear, "bright," "shining," should be consulted in the concordance in this connection). Jesus himself crowns this attitude toward nature in his own famous words concerning "Solomon in all his glory" (Matt. 6:29 and parallels). The figure of beautiful or fair words is, of course, applied to flattering (Ps. 45:2) and false speech (Jer. 12:6; Rom. 16:18). But words of wisdom are beautiful (Prov. 1:9; 4:9). It is perhaps not amiss to mention here that while Israel's artistic genius expended itself in music, religious architecture and its decorations, and the dancing and processional activities connected with worship, the supreme expression of Israel's capacity for beauty is certainly in her gift of language, whether it be narrative description, the moving force of preaching, or the lyrical outpourings of psalmists and prophets in worship. At this point, too, Jesus' descriptive capacity in the parables reveals a sense of the beauty of diction never surpassed. The artistic principle is fully covered in Phil. 4:8.

Naturally, eschatological passages abound in references to what is beautiful. There is mention of the future beauty of Jerusalem (Isa. 52:1; 62:3; Zech. 9:17), and of the Messiah (Isa. 33:17; cf. 4:2), but the Servant of the Lord has no comeliness (Isa. 53:2). At the end God himself will become a beautiful diadem for his people (Isa. 28:5). Inevitably much beauty attaches to the persons, places, adornments, and general description of the book of Revelation.

The final word must be accorded to the beautiful deed of the woman who anointed Jesus in preparation for his burial (Matt. 26:6-13).

BEBAI bē′bī [Βηβαι] (Jth. 15:4). An unidentified Israelite city whose people joined in the destruction of the fleeing "Assyrian" forces after the death of Holofernes. It may be an early corruption of a name no longer recognizable. Some scholars identify it as BELMAIN.

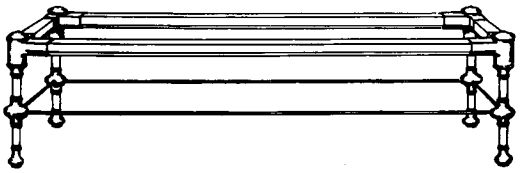
Bibliography. F. Stummer, *Geographie des Buches Judith* (1947), p. 28. E. W. SAUNDERS

BECHER bē′kər [בכר, young camel]; BECHERITES—īts; KJV BACHRITES băk′rīts. **1.** The second son of Benjamin (Gen. 46:21; I Chr. 7:6, 8). The genealogical list ascribed to Benjamin in I Chr. 7:6-12 must originally have belonged to Zebulun, now strangely missing from the Chronicler's genealogies. The Benjaminite list appears in its proper place beginning at I Chr. 8:1, and Zebulun, if restored to I Chr. 7:6, would follow Issachar, as it does in most other OT lists. The Benjaminite Becher must have been added to the list after it had been detached from Zebulun.

2. An Ephraimite, enumerated in the list of the second census taken by Moses in the wilderness (Num. 26:35). He is the eponymous ancestor of the "family of the Becherites" (KJV "Bachrites"). The names both of the ancestor and of the family are omitted in the LXX and in all probability do not belong in this verse. In the list of the sons of Ephraim in I Chr. 7:20, Bered is named in second place, the position occupied in Num. 26:35 by Becher. "Bered" may originally have been the reading of Num. 26:35.

Bibliography. M. Noth, *Die israelitischen Personennamen* (1928), p. 258. R. F. JOHNSON

BECORATH bĭ kôr′ăth [בכורת] (I Sam. 9:1); KJV BECHORATH. The father of Zeror; an ancestor of King Saul.



BECTILETH bĕk′tə lĕth [Βαικτειλαίθ, *from* Aram. house of the killing] (Jth. 2:21). An unidentified plain apparently situated in or near N Cilicia, reached by Holofernes and his army after a three-day march from Nineveh. Either this location or the time of the journey is impossible, for the distance between Nineveh and Cilicia is approximately three hundred miles. Some identify Bectileth with the *Bakataïlloi* of Ptolemy (*Geography* V.14) and locate it S of Antioch in Syria, or relate it to the Syrian *beqā*. Others propose that it is a symbolic name referring to the slaughter of the peoples named in Jth. 2:22-23.

Bibliography. F. Stummer, *Geographie des Buches Judith* (1947), p. 27. E. W. SAUNDERS

BED [יצוע, מצע (Isa. 28:20), what is spread out; ממה, place of reclining; משכב, place of lying down; ערוגה (*see* 2 *below*); ערש, *cf.* Arab. *'rš*, throne, arbor; κλινάριον (Acts 5:15), κλίνη, κλινίδιον (Luke 5:19, 24), *all from* κλίνω, incline, make recline; κοίτη (Luke 11:7; Heb. 13:4; *cf.* Rom. 9:10; 13:13), *from* κεῖμαι, lie outstretched; κράββατος]. Alternately: COUCH (Gen. 49:4; Job 7:13; Prov. 7:16; Ezek. 23:41; etc.); LITTER (Song of S. 3:7); MARRIAGE BED (Heb. 13:4). A place for reclining in sleep, sickness, or rest; often a movable article of furniture. Fig. BED 26.

1. Types. The various terms for bed cited above appear to be used loosely without any clear distinction in meaning. Most beds would be merely the place on the floor, sometimes a low ledge along a wall, where a person slept. The covering would commonly be one's garment (שמלה; Exod. 22:27—H 22:26). Such a sleeping place might be in an upper chamber (I Kings 17:19; *see* CHAMBER). Some beds, however, consisted of a wooden frame which could on occasion serve as a litter or stretcher (I Sam. 19:15; Matt. 9:2; Luke 5:18); this kind of bed

might be of sufficient value to pay a debt (Prov. 22:27). The beds of the well-to-do were undoubtedly articles of furniture in keeping with their standard of living, and these might often be in bedchambers (II Kings 11:2). "Beds of ivory"—i.e., inlaid with IVORY—are referred to in Amos 6:4, and they are also included in the list of Hezekiah's tribute to Sennacherib (*ANET* 288). The perfumed coverings of the bed of an adulteress are mentioned in Prov. 7:16-17, but

Courtesy of the Palestine Archaeological Museum, Jerusalem, Jordan

26. A bed with bronze fittings, from Tell el-Far'ah (Persian period; 550-330 B.C.)

the linen sheets and wooden headrests, so well known in connection with Egyptian beds, do not appear in the Bible (cf. "linen" in Prov. 7:16; Mark 15:46). Ten beds with silver feet are reported by Josephus to have been sent to Eleazar, high priest of Jerusalem, by Ptolemy (Antiq. XII.ii). The meaning of "BEDSTEAD of iron" (Deut. 3:11) is uncertain; the phrase may refer to a sarcophagus. Couches of gold and silver are said to have been in the palace of Xerxes at Susa (Esth. 1:6). The story of Judith (10:21) alludes to a canopied bed in the tent of Holofernes. *See also* COUCH; FURNITURE; HOUSE; LITTER.

2. Uses. Beds were used for sleeping at night (Job 7:13); for love-making (Gen. 49:4; Judg. 21:11; Song of S. 1:15-17; Ezek. 23:17); for a siesta (II Sam. 4:5-7; cf. the sluggard's bed of Prov. 26:14); for royal sulking (I Kings 21:4); for sitting on (I Sam. 28:23); for reclining on beside a table (Ezek. 23:41); for the sick (Gen. 48:1-2); for convalescence from a wound or injury (II Chr. 24:25; II Kings 1:4); for transporting the sick and the chronically ill (Mark 6:55; John 5:5-8); and for a bier (II Sam. 3:31; II Chr. 16:14; cf. Isa. 57:2).

3. Religious use. Beds were the scene of some acts of private devotion (Gen. 47:31; I Kings 1:47). The reference to beds in Isa. 57:7-8 is apparently to some non-Yahwistic sex cult. See also Hos. 7:14.

4. Proverbial use. Making one's bed in Sheol is a reference to the death of an individual (Job 17:13-14; cf. Ps. 139:8) or of a nation (Ezek. 32:24-25). A short bed appears in Isa. 28:20 as a figure for an intolerable situation. W. S. MCCULLOUGH

BED (GARDEN). A level piece of ground in a garden. The word עֲרוּגָה (perhaps "what is ascended"), found only in Song of S. 5:13; 6:2; Ezek. 17:7, 10, is always used figuratively.

BED CHAMBER. *See* CHAMBER.

BEDAD bē'dăd [בְּדַד; *cf. proper names* הֲדַד, בֶּן־הֲדַד, בִּלְדַּד, אֶלְדָּד] (Gen. 36:35; I Chr. 1:46). The father of Edomite king Hadad.

BEDAN bē'dăn. **1.** The translation of בְּדָן, the name of a Manassite, in I Chr. 7:17.

2. KJV-MT translation of בְּדָן in I Sam. 12:11. "Abdon" (עַבְדֹן) has been suggested as the correct reading (cf. Judg. 12:13-15), but he is too unimportant a figure for the context. Better is "BARAK" (RSV-LXX). The rabbis, equating בְּדָן with בָּן־דָּן, "Danite," read "Samson." R. W. CORNEY

BEDEIAH bĭ dē'yə [בְּדְיָה, *possibly* branch of Yahu, *or perhaps a shortened form of* עַבְדְיָה, servant of Yahu] (Ezra 10:35). One of those compelled to give up their foreign wives in the time of Ezra.

BEDSTEAD [עֶרֶשׂ, *'ereś*, bed; *cf.* Akkad. *eršu*, bed; Arab. *'arš*, throne, arbor, bier] (Deut. 3:11). The supporting framework of a bed.

עֶרֶשׂ, usually translated "bed" (e.g., Job 7:13; Amos 6:4), is rendered "bedstead" only in Deut. 3:11, where it refers to the "bedstead of iron" of Og, king of Bashan, which is said to have been nine cubits in length. While it is conceivable that in the Early Iron Age iron may have been available for such a purpose in the Jordan area, the size of this particular bed suggests that it may have been some other object, such as a basalt sarcophagus. Basalt, which is both dark and hard, is common in Transjordan, and Pliny has been quoted to support the identification of basalt with iron. It is, however, a moot point whether Pliny's "*basanites* which in color and hardness resembles iron" is in fact basalt (Nat. Hist. XXXVI.7.11; cf. *basanites* in Isidorus Etymologiae XVI.5.6). Possibly the text refers to a DOLMEN, popularly thought to be the bed of a giant. *See also* BED § 1*a*.

W. S. MCCULLOUGH

BEE [דְּבוֹרָה, *from* דָּבַר; Arab. *dibr*, a swarm of bees; Syr. *debōrīthā'*, wasp; μέλισσα]. The wild honeybee (*Apis mellifica*), a social insect, order Hymenoptera.

This bee was probably not domesticated until the Hellenistic period. Curiously, only one of the four occurrences of bees in the OT refers to the HONEY which they produced (Judg. 14:8). However, the fact that Canaan was so often referred to as the "land of milk and honey" suggests that bees were plentiful. The other occurrences (Deut. 1:44; Ps. 118:12; Isa. 7:18) all allude to their irritable, vindictive nature, and their painful sting, as symbols of Israel's enemies (see also IV Macc. 14:19). After praising the ant for her industriousness (Prov. 6:6-8), the LXX next extols the bee. Ben Sirach (Ecclus. 11:3), who appraises her appearance as nothing, considers her honey supreme. *See also* FAUNA § F4*c*.

Bibliography. *See* bibliography under BALD LOCUST.
W. W. FRERICHS

BEELIADA bē'ə lī'ə də [בְּעַלְיָדָע, Baal knows]. One of the sons of David who were born in Jerusalem (I Chr. 14:7; cf. II Sam. 5:16 LXX). The name was altered to Eliada ("God knows") in accordance with the later disinclination to use the term "Baal" because of its associative ideas (II Sam. 5:16; I Chr. 3:8).

Bibliography. S. R. Driver, *Notes on the Hebrew Text of the Books of Samuel* (2nd ed., 1913), pp. 253 ff. E. R. DALGLISH

BEELSARUS. KJV Apoc. form of BILSHAN.

BEELTETHMUS. KJV form of BELTETHMUS.

BEELZEBUL bē ĕl′zĭ bŭl [Βεελζεβουλ; Coptic *Beelzebouil*]; KJV BEELZEBUB bē ĕl′zĭ bŭb. A designation applied by both Jesus and his opponents to the "chief of the devils"—i.e., SATAN (Matt. 10:25; 12:24, 27; Mark 3:22; Luke 11:15, 18-19). The Vulg. reads *Beelzebub,* evidently equating with the Philistine idol BAALZEBUB mentioned in II Kings 1:2. The connection is, however, far from clear, and this reading was probably no more than a *pis aller,* designed to explain a term the true etymology and meaning of which are alike obscure and which does not recur in any earlier or contemporary source.

The following are the principal interpretations:

a) In Ugaritic, *zbl* means "prince," and *zbl B'l* indeed occurs (I AB iv.4; III AB,A 8) as a designation of the god Baal. "Beelzebul" might thus represent a later application of this heathen style to the prime antagonist of God.

b) In postbiblical Hebrew, as also in Syriac and Arabic, a homonymous *z-b-l* means "dung," and in the Talmud, *zibbūl* denotes "stercorization." The name Beelzebul—i.e., *Baal zibbūl*—might therefore mean *Defoecator* (not simply *dominus stercoris*), as an opprobrious designation of the Evil One. An arresting analogy is afforded by the name Belchira (or Belachora) given in the pseudepigraphic Ascension of Isaiah (chs. 2–3) to a Samaritan who accused the prophet, for this is simply בעל חרא, "Lord of Dung." Similar characterizations of the Devil appear later in German folklore.

c) A third homonym, *zəbūl,* is said to exist in Hebrew with the meaning of "dwelling, abode." "Beelzebul" would thus have denoted primarily "Lord of the Abode [i.e., shrine]" and have come subsequently to be used as a designation of Satan, the rival of Yahweh. The existence of a root *z-b-l,* "dwell," is, however, somewhat doubtful. True, it has been assumed by several scholars to underlie the blessing on Zebulun in Gen. 49:13: "*Zebul*un shall *dwell* at the shore of the sea" (זבולן לחוף ימים ישכן); while in Gen. 30:20 the Vulg. and the Targums understand the phrase "Now my husband יזבלני" to mean: "Now my husband *dwells* with me"; and in Ps. 49:14, the words "Their form shall be for Sheol to wear away מזבל לו" are often rendered: "that there be no *habitation* for it" (RSV "Sheol shall be their *home*"). Such a meaning, however, does not exist in any of the cognate languages, and both in the passages cited and wherever else the noun זבל occurs in the OT (viz., Deut. 26:15; I Kings 8:13; II Chr. 30: 27; Isa. 63:15; Jer. 25:30; Hab. 3:11), the meanings "exalt" and "height, zenith" (comporting with Akkadian *zabālu,* "lift up," and Ugaritic *zbl,* "exalted one, prince," and with LXX αἰρετιεῖ=יזבלני; Gen. 30:20), fit perfectly. Indeed, in Ps. 49:14, there may even be a pointed contrast between זבל, "eminence," and *Sheol.*

d) On the strength of OT usage, the Dead Sea Scrolls and early rabbinic literature employ the term זבל to denote one of the seven heavens. The name Beelzebul might therefore denote the Evil One (i.e., Satan, Belial, Samael) as lord of that region, in accordance with the express statement in Targ. Job 28:7 and with his designation as "prince of the power of the air" in Eph. 2:2.

A demon named Bizbath is mentioned in Mandean literature, and this name may conceivably be a corruption of "Beelzebul" (like "Bezebuth" in medieval *grimoires*), though an Iranian etymon has been claimed for it in an assumed *bazah-bat,* "lord of sin."

The Vulg. form, Beelzebub, becomes in later literature a not uncommon name for the Evil One. This tradition survives in Milton's *Paradise Lost;* while in the traditional English Mummers' Play, Beelzebub appears as a black-faced, clownish figure carrying a club.

BEER bē′ər, bĭr [באר, a well]. **1.** A station of the Israelites where the princes and nobles of the people dug a well (Num. 21:16-18). The site is probably in the Wadi eth-Themed, since it would seem to be the only place N of the Arnon (vs. 13) offering an adequate water supply, easily obtainable by digging. Beer-elim (Isa. 15:8) may be the same location.

Bibliography. N. Glueck, *Explorations in Eastern Palestine,* I, *AASOR,* XIV (1933-34), 13.

2. A place to which Jotham fled (Judg. 9:21) after telling his fable; perhaps identical with BEEROTH. Some connect Beer with el-Bireh, N of Beisan and SE of Mount Tabor. Eusebius located it *ca.* 7½ miles N of Eleutheropolis. E. D. GROHMAN

BEERA bē′ə rə [בארא, a well] (I Chr. 7:37). The eleventh son of Zophah in the genealogy of Asher.

BEERAH bē′ə rə [בארה, a well] (I Chr. 5:6). A Reubenite deported by Tiglath-pileser III in the eighth century B.C.

BEER-ELIM bĭr ē′lĭm [באר אילים, well of chiefs *or* terebinths] (Isa. 15:8). A Moabite city; probably the same as BEER 1.

BEERI bē′ə rī [בארי, well]. **1.** A Hittite; the father of Judith, a wife of Esau (Gen. 26:34; LXX Βεηρ). Here, as elsewhere with P (cf. ch. 23), "Hittite" may be only a general designation of the Canaanite natives. *See* HITTITES § 3.

2. The father of Hosea the prophet (Hos. 1:1; LXX Βεηρι).

Bibliography. M. Noth, *Die israelitischen Personennamen* (1928), pp. 38, 224. L. HICKS

BEER-LAHAI-ROI bĭr′lə hī′roi [באר לחי ראי]. A well situated between Kadesh-barnea and Bered. Gen. 16:7-14 interprets the name as "well of the living one who appeared to me" (RSV mg. "well of one who sees and lives"), a name given to it by Hagar after she met the angel of the Lord there and received a reassuring promise. This is probably folk

etymology of an older name meaning "well of the jawbone of a *r°'î* (perhaps some sort of antelope). The spot was a favorite encampment of Isaac (Gen. 24:62; 25:11, in which passages the KJV considers Lahai-roi the correct name—e.g., "the well Lahai-roi").

The location is uncertain; Arab tradition identifies it with 'Ain Muweileh, a caravan station *ca.* twelve miles W of Kadesh-barnea. S. COHEN

***BEEROTH** bē'ə rōth [באֵרוֹת, wells; Βηρωθ]; BEEROTHITE —īt; KJV BEROTH bĭr'ŏth (I Esd. 5:19); BEROTHITE —ə thīt (I Chr. 11:39). A city of Benjamin. It was one of the four cities of the HIVVITES and followed the lead of Gibeon in coming to terms with the Israelites (Josh. 9:17).

The location of Beeroth on the border between Benjamin and Ephraim is plainly indicated in II Sam. 4:2, which finds it necessary to state that the town was reckoned to Benjamin. In the same passage there is a reference to a flight of Beerothites to GITTAIM farther S, which was probably due to a Philistine foray after their victory at Mount Gilboa. Naharai of Beeroth was the armor-bearer of Joab (II Sam. 23:37; I Chr. 11:39). According to the story in II Sam. 4, two Beerothite brothers, Rechab and Baanah, were captains of Ishbosheth and assassinated the latter in the seventh year of his reign. The suggestion that this was an act of blood revenge for Saul's violation of the treaty with the Hivvites (cf. the case of Gibeon in 21:1-2) has no support in the text; it is far more probable that they perpetrated this act in the hope of currying favor with David—a hope in which they were grievously disappointed, as David had them killed for their deed (4:9-12).

The site of Beeroth has not been determined. Some authorities have favored el-Bireh, *ca.* a mile E of Ramallah, but the similarity of names is deceptive and the place hardly suitable. Albright has argued in favor of Tell en-Nasbeh, *ca.* a mile to the S, the site of an important city which was excavated by Badé and identified with MIZPAH. Another suggested location is Nebi Samwil, a mile S of el-Jib (ancient Gibeon).

Bibliography. W. F. Albright, *AASOR*, IV (1924), 102-11; J. Muilenburg in C. C. McCown, *Excavations at Tell en-Nasbeh* (1947), pp. 23-59. S. COHEN

BEEROTH BENE-JAAKAN bĭr'ŏth bĕn'ī jā'ə kən [באֵרֹת בְּנֵי יַעֲקָן, wells of the sons of Jaakan]; KJV BEEROTH OF THE SONS OF JAAKAN. A place where Israel camped near the border of Edom and near which Aaron died (Deut. 10:6; called Bene-jaakan in Num. 33:31 ff). Possibly the site is el-Birein, *ca.* 6¼ miles S of el-'Auja. The place is found as Jaakan in the genealogical table in I Chr. 1:42. V. R. GOLD

***BEER-SHEBA** bĭr shē'bə [בְּאֵר שֶׁבַע]. The principal city of the Negeb and a noted sanctuary from very early times. It was the outstanding limit of Israelite population, so that the phrase "from Dan to Beer-sheba" (Judg. 20:1 and often) and its converse, "from Beer-sheba to Dan" (I Chr. 21:2), meant the entire nation, while "from Geba to Beer-sheba" (II Kings 23:8) is used to denote the territory of the kingdom of Judah.

The exact meaning of the name Beer-sheba is uncertain. According to the story in Gen. 21:25-31, it is the "well of the seven," * from the seven lambs which Abraham gave to Abimelech, the king of Gerar, to seal their alliance; but in vs. 31 it is apparently the "well of the oath." According to Gen. 26:32-33, the name was given to the city by Isaac, since after making an oath to seal a compact with the same or another Abimelech of Gerar, he learned that his servants had found a well the very same day; he named this well Shibah, "the oath," from which the name Beer-sheba was derived. However, it is possible that Beer-sheba is an old Canaanite name, and it has been suggested by one scholar that it means "well of the seven demons." There is also the possibility that the city named by Abraham was SHEBA, that the well about which Abraham spoke was not one nearby, and that Beer-sheba means merely the "well of (the city of) Sheba," and in course of time the two were counted as one city. In that case, Beer-sheba was a twin city, the modern Bir es-Saba', twenty-eight miles SW of Hebron, and Tell es-Saba', about two miles to the E. Fig. WAT 5.

Beer-sheba lies in a gap in the hills of Judah, at the junction of the water-parting route, southward from Hebron toward Egypt, and the route that ran northeastward from the Arabah to the coast. Hence it must have been a stopping place for most of the caravans that traversed the region in any direction. The patriarchs Abraham and Isaac, with their large flocks and herds, spent considerable time in the city before proceeding on their journeys. After the conquest of Canaan, Beer-sheba fell to Judah and was assigned to Simeon. An indication of its importance as a center of population is the fact that two sons of Samuel, Joel and Abijah, were judges there (I Sam. 8:2). Elijah, fleeing from the Valley of Jezreel because of the wrath of Jezebel, followed the route down to Beer-sheba (I Kings 19:3), after which he continued to Horeb, the mount of God. Zibiah, the mother of King Joash of Judah, who was dramatically crowned to overthrow the usurper Athaliah, also came from Beer-sheba (II Kings 12:1). Little is known as to the fate of Beer-sheba during the latter period of the kingdom, but it was one of the cities reoccupied by the Judeans returning from the Babylonian exile (Neh. 11:27).

Beer-sheba was a religious sanctuary as early as the time of the patriarchs. Its tutelary deity was originally El Olam, who was worshiped by Abraham there under a tamarisk tree (Gen. 21:33); but his worship was later assimilated to that of Yahweh and the name was reinterpreted as an epithet, the Everlasting God. Jacob consulted its oracle before journeying to Egypt (Gen. 46:1-5). In the time of Amos, the shrine in Beer-sheba was one of the most famous in the land; he mentions it as equal to Dan and Bethel (the sanctuaries with the golden calves), Gilgal (the ancient sanctuary founded by Joshua), and Samaria (the capital of Israel). Amos records a curious oath that is used: "As the way of Beer-sheba lives" (8:14); this may mean either that some especially sacred ritual was performed there, or that, as the prophet speaks in another place of "crossing over"—i.e., making a journey—to Beer-sheba (5:5),

the city may have been a place to which pilgrimages were made. S. COHEN

BE-ESHTERAH bē ĕsh'tə rə [בעשתרה]. A Levitical city in Manasseh E of the Jordan (Josh. 21:27). It is a contraction or scribal error for Beth-ashtoreth ("place of Astarte"), and the same as ASHTAROTH, the city found in the parallel passage, I Chr. 6:71—H 6:56. S. COHEN

BEETLE. KJV translation of חרגל (RSV CRICKET).

BEGINNING AND END. *See* ALPHA AND OMEGA.

BEGOTTEN. *See* ONLY BEGOTTEN.

BEHEADING. *See* CRIMES AND PUNISHMENTS §§ D1, E3*a*.

BEHEMOTH bĭ hē'məth [בהמות, *intensive plural of* בהמה, dumb beast]. In the OT, a fanciful name for the hippopotamus, or some other mammoth living in marshes (Job 40:15-24). In the Apoc. and Pseudep., however, the name denotes a mythical beast, the male counterpart of Leviathan, which lives on land, while its mate lives in the sea (II Bar. 29:4; II Esd. 6:49, 52). In Enoch 60:7-8, Behemoth is located in the wilderness of Dendain, E of Eden; but in II Esdras he is said to dwell "where the thousand mountains are"—a fanciful interpretation of Ps. 50: 10 ("Behemoth [properly, 'beasts'!] on a thousand hills"). In rabbinic literature he is styled שור הבר, the "ox of the open field" (e.g., Targ. Ps. 50:10; Pir. R. El 11).

At the end of the present era, Behemoth, like Leviathan, will challenge God, but will suffer defeat. His carcass will then be served as food to the righteous (B.B. 74*a;* Palestinian Targ. Num. 9:26). This is probably a Jewish version of the Iranian myth concerning the ultimate defeat of the mythical ox Hudhayaos, for whom a similar fate is said to be reserved. But it was doubtless influenced also by a fanciful interpretation and extension of Ps. 74:14, taken to mean: "Thou it was that didst crush the heads of Leviathan; Thou wilt give it as food to the people, even to them that be parched."

Behemoth, like Leviathan, is said to have been one of the "great sea monsters" fashioned on the fifth day of creation (Gen. 1:21). T. H. GASTER

BEKA bē'kə [בקע] (Exod. 38:26); KJV BEKAH. A weight, called "half a shekel, by the shekel of the sanctuary." By calculation from the shekel weight of 11.424 grams, the beka should be 5.712 grams; but stones inscribed בקע indicate a weight of over 6 grams. Fig. WEI 18.

See also WEIGHTS AND MEASURES § B4*e*.

O. R. SELLERS

BEL bĕl [בל; Akkad. *belu*, he who possesses, subdues, rules]. The title of the state-god of Babylon, MARDUK,* upon whose discomfiture Jeremiah (50:2; 51:44) and Isaiah (46:1) animadvert in passages referring to the downfall of Babylon. Fig. MAR 9.

The title (Baal in Hebrew) denotes the supremacy of the god in a certain locality, or refers generally to the specific attributes or sphere of interest of gods or men. Specifically, and in the passages above cited from the OT, Marduk, the god of Babylon, is denoted. He, assuming En-lil's role of conqueror of the chaotic waters (*see* SUMER), is the Mesopotamian counterpart of the Cannanite BAAL. Like Baal he is also acclaimed king as a result of his victory. In the extant Canaanite texts there is no evidence that Baal, like Marduk, was regarded as a creator-god, but his title "king" implies the establishment of Cosmos.

Bibliography. W. Muss-Arnolt, *A Concise Dictionary of the Assyrian Language* (1902), pp. 155-59. For further bibliography, *see* MARDUK. J. GRAY

BEL AND THE DRAGON [Βήλ καὶ Δράκων]. An addition to the book of Daniel, illustrating his wisdom as "companion" to Cyrus. This accretion, generally following the Song of the Three Children and Susanna, contains two popular tales: that of Bel and that of the Dragon. Its primary purpose is to ridicule heathenism.

In the first story Bel is a great statue which nightly devours great amounts of food and drink and thus proves itself a living being. By means of a trick Daniel reveals that it is really the priests who are consuming the food and that Bel is inanimate. Thereupon Bel is destroyed by the king, and the priests are slain.

In the second story Daniel refuses to worship a monstrous dragon in Babylon. He offers to kill it and thus prove its falseness and impotence. He feeds it with a mixture of hair, pitch, and fat, and it bursts open. The people, angered by the death of this god, force the king to throw Daniel into the lions' den. Though they are starved, the lions do not devour Daniel. He is there for six days, and miraculously on the sixth day an angel transfers Habakkuk, the prophet, with food to Daniel. On the seventh day the king removes Daniel from the den and instead throws his enemies therein.

Many scholars believe that the original text of these tales was in Hebrew and composed in the first century B.C. This is because of the many Hebraisms in the text. Some scholars believe that it was written in Aramaic, as they find the story in the Chronicles of Jerahmeel, a fragment of the tenth century.

The text is generally assumed to have been written *ca.* 130 B.C., after the book of Daniel had been canonized. The value of the story is to stress the absurdity of idolatry and to uphold the notion of worshiping the one true God. No mention is made of Jewish practices or beliefs. The mention of angels may have been inserted later. The insertion of the Habakkuk element may be due to a gematria חבקוק = גור אריה, thus connecting the lion legends. This is found in a thirteenth-century record of R. Eleazar of Worms.

The association of Daniel with Habakkuk is indeed unique. The Codex Chisianus notes that the stories were taken from the prophecy of Habakkuk the son of Jeshua. Talmudically, Habakkuk is recognized as the Shunammite woman's son who was brought to life again by Elisha (II Kings 4:17-37).

The dragon perhaps may be a serpent, signifying snake-worship (although there is no other evidence

that such worship was practiced in Babylon). On the other hand, some scholars believe that the story originated in Egypt, where serpent-worship definitely was prevalent.

Scholars also have noted in the story a symbol of conflict with Marduk or another Babylonian deity, but this has not been proved. *See* MARDUK.

S. B. HOENIG

BELA bē'lə [בלע, swallowing up]; KJV BELAH in Gen. 46:21. **1.** The first king of Edom; son of Beor (Gen. 36:32-33 = I Chr. 1:43-44). His city was Dinhabah. Nothing certain is known of his origin (probably Mesopotamian, not native Edomite) or exactly where he lived. His name is similar to that of the seer Balaam (בלעם), who was also a son of Beor. In fact, the Targ. calls him BALAAM, but the LXX has Balak—the seer's Moabite king.

2. The first son of Benjamin (Gen. 46:21); also founder of a family group, the Belaites (Num. 26:38). His sons are listed three times, but each time they differ completely in both name and number (Num. 26:38, 40; I Chr. 7:6-7; 8:1, 3).

3. Son of Azaz and descendant of Joel in the genealogy of Reuben (I Chr. 5:8).

F. T. SCHUMACHER

4. Apparently another name of ZOAR, one of the "cities of the valley." The names of the kings of the other four cities are given (Gen. 14:2), but not in the case of Zoar; instead, a seeming variant of the name of the town is given: "and the king of Bela (that is, Zoar)."

Since Bela appears also as a personal name, it may be that the "king of Bela (that is, Zoar)" came from the phrase "Bela king of Zoar."

For location and bibliography, *see* SODOM.

J. P. HARLAND

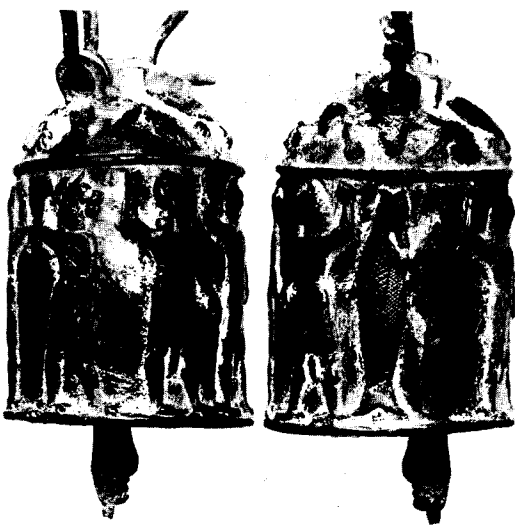
BELEMUS. KJV Apoc. form of BISHLAM.

BELIAL bē'lĭ əl [בליעל]. A word which, usually in such compound expressions as "sons of Belial" (e.g., Deut. 13:13; Judg. 19:22; I Sam. 2:12), "daughter of Belial" (I Sam. 1:16), or "man of Belial" (II Sam. 20:1; Prov. 16:27), but sometimes also by itself (II Sam. 23:6; Job 34:18), denotes reprobate, dissolute, or uncouth persons. Similarly, a "word of Belial" is a vicious canard (Deut. 15:9; Pss. 41:8; 101:3); a "witness of Belial," one who gives false testimony (Prov. 19:28); a "counselor of Belial," one who plots evil (Nah. 1:11); while "rivers of Belial" are currents of adversity, which bring neither benefit nor blessing and are likened to the streams of the nether world (II Sam. 22:5; Ps. 18:4).

In Nah. 1:15—H 2:1 the word is used absolutely to designate a malevolent power, either human or demonic.

The word means properly "worthless, useless," and is a compound of בל, "not," and יעל, "be of use" (cf. בלימה, "not-aught"—i.e., "nothingness"—in Job 26:7; Ugaritic *bl-mt*, "not-death"—i.e., "immortality"—in II AB, vi.26; *bl-mlk*, "not-king"—i.e., "commoner"—in II AB, vii.43; and the somewhat similar לוא־יועיל, "un-worth," in Jer. 2:11).

The LXX renders, according to context, by such terms as "lawless, lawlessness," "witless" (παράνομος, ἀνομία, ἄφρων); Aq. by "undisciplined, dissolute" (ἀνυποτάκτος), and the Vulg., frequently, by "impious," "iniquitous," and "useless" (*impius, iniquus, inutilis*). There was, however, a clear tradition that the word was really a proper name, for in eight passages (viz., Deut. 13:13; Judg. 19:22; I Sam. 1:16; 2:12; 10:27; 25:17; II Sam. 16:7; Nah. 1:15—H 2:1), the Vulg. simply transliterates it; and in a ninth (I Kings 21:13), it even ventures *diabolus*.



In the pseudepigraphic literature, Belial—often miswritten "Beliar"—is uniformly regarded as the proper name of that Prince of Evil (*alias* SATAN, "the Obstructor") who currently enslaves men by manipulating their instincts basely, but who will eventually be defeated by the Messiah, aided by God and his heavenly legions (cf. Test. Levi 3:3; 18:12; Test. Zeb. 9:8; Sibylline Oracles III.71-73; Ascension of Isaiah 4:2; cf. also Did. 16). This concept, in which Belial is the equivalent of the Iranian Druj, or Spirit of Deceit, and his human allies—the "men of Belial"—of the *dregvants*, is now well attested in the Dead Sea Scrolls (e.g., 1QS I.18; *Zadokite Document* IV.13 ff; 1QH III.27-39; VI.29-33), especially in the so-called War of the Sons of Light and the Sons of Darkness, which deals with the final conflict against him.

In the NT, the figure of Belial (Beliar) appears in II Cor. 6:15, where reference is made to the irreconcilability of the Messiah (Christ) with this opponent. A further allusion to him is recognized by some commentators in II Thess. 2:3, where the expression "man of lawlessness" is thought to represent the Hebraic "man of Belial."

BELIEF. The translation of πίστις in II Thess. 2:13. *See* FAITH.

Courtesy of Staatliche Museen, Berlin

27. Bronze bell, probably rung to drive out evil spirits (*ca.* 700 B.C., Mesopotamia). The clapper is in the form of a serpent's head; and the bell is decorated with lizards, lion-headed demons, and a priest wearing a fishskin.

BELL. 1. פַּעֲמֹן (lit., "clapper," "striker"). An object attached to the vestment of the high priest (Exod. 28:33-34; 39:25-26; Ecclus. 45:9). Bells for this purpose were made of gold and were affixed to the vestment alternately with pomegranates—"a golden bell and a pomegranate, a golden bell and a pomegranate, round about on the skirts of the robe" (Exod. 28:34). The specified purpose of the bell varies: "Its sound shall be heard when he goes into the holy place before the LORD, and when he comes out, lest he die" (Exod. 28:35);

> to send forth a sound as he walked,
> to make their ringing heard in the temple
> as a reminder to the sons of his people
> (Ecclus. 45:9).

Josephus (War V.v) writes: "The bells signified thunder, and the pomegranates lightning." They may have been a survival of some magic purpose or for some kind of signal in connection with the rite involved. Fig. BEL 27.

2. מְצִלָּה ("that which tinkles"). A decorative ornament for horses in Zech. 14:20. J. M. MYERS

BELLOWS [מַפָּח, *from* נפח, to breathe, blow; Ugar. *mpḥm*]. Although the noun appears only in Jer. 6:29, the idea is found elsewhere in the OT.

The development of the bellows may be traced in stages: (*a*) the use of human lung power to blow fires; (*b*) the utilization of the blowtube (first reed, then metal) to concentrate the draft; (*c*) the addition of a mechanical device attached to the end of the pipe to replace the human lung. The last two stages are well known from antiquity. Down to the time of the New Kingdom (*ca.* 1550 B.C.), the blowtube exclusively seems to have been used in Egypt. On a nineteenth-century tomb painting from Beni-hasan, however, two objects on the backs of donkeys have been tentatively identified as portable hand bellows very much like the modern type. This painting depicts a party of Asiatic Bedouin who presumably engage in smithery (Fig. JOS 29). In the New Kingdom foot-operated bellows were used in metallurgy: bags mounted on bases were attached to iron or reed pipes (the latter were clay-tipped) which conveyed the draft to the hearth; two of these were arranged so that a man standing on them could pump air by alternately raising and lowering his feet; in each hand he held a cord which was used to open the bag after it had been depressed. The custom seems to have been to attach two such pairs to a single hearth, thus requiring two men for operation (*see* METALLURGY). At Beth-shemesh numerous clay tubes were found in connection with a metalworking establishment, indicating the type of draft employed. Under unusual conditions a natural draft could be employed, as at Ezion-geber by Solomon (in post-Solomonic times the natural-draft arrangement was replaced by bellows; *cf.* FURNACE).

"Bellows" in Jer. 6:29 may indicate a mechanical device, but elsewhere it is not clear that such a device is indicated (Job 20:26; 41:21—H 41:13; Isa. 54:16; Ezek. 22:20-21; cf. Ecclus. 43:4 Amer. Trans.). The effect of a draft on a fire is also used metaphorically of the wrath of Yahweh (Ezek. 22:20-21; cf. Job 41:21—H 41:13).

BELMAIM. KJV form of BALBAIM.

BELMAIN bĕl'mān [Βελμαιν] (Jth. 4:4); KJV BELMEN bĕl'mən. An unidentified village in Samaria, apparently the same as Balbaim (7:3), Balamon (8:3), and possibly BEBAI (15:4). It has been conjectured that the place may be identified with BILEAM or IBLEAM; also that it may be the same as ABEL-BETH-MAACAH, which was near Dan, *ca.* twenty miles inland from Tyre. W. L. REED

BELNUUS bĕl'nōō əs [Βάλνουος (A), Βαλνοῦς (B)]; KJV BALNUUS băl'— (I Esd. 9:31). Apparently the same as BINNUI 3.

BELOVED. The translation of a number of words in the Bible. For discussion of various relationships underlying the use of "beloved" and "love," *see* LOVE IN THE OT; LOVE IN THE NT; CHRIST; SON OF GOD; CHURCH, IDEA OF; BROTHERHOOD; BROTHERLY LOVE.

1. In the OT. יָדִיד is applied to Benjamin (Deut. 33:12) and the chosen people (Pss. 60:5; 108:6; 127:2; Jer. 11:15; cf. יְדוּדוֹת in Jer. 12:7). דּוֹד is frequent in the Song of Solomon (sexual love) and appears in Isa. 5:1 (of God). Elsewhere a form of the verb אהב may be used (Deut. 21:15-16, of a wife; II Sam. 1:23, of Saul and Jonathan slain; Neh. 13:26, of Solomon beloved by God; Hos. 3:1, of sexual love). מחמד occurs in Hos. 9:16, of children. Daniel was "greatly beloved" (חֲמוּדוֹת; Dan. 9:23; 10:11, 19).

2. In the NT. Jesus, the Son and Servant of the Father, is ἀγαπητός, "beloved" (Mark 1:11; 9:7; and parallels; II Pet. 1:17; cf. Mark 12:6). At Eph. 1:6 "the Beloved" (ἠγαπημένος) seems to be a messianic title, combining the "elect servant" (Matt. 12:18, citing Isa. 42:1 with "beloved" substituted for "chosen") and the "only son" (cf. Gen. 22:2; Gal. 3:16; 4:4, 28-29, of Isaac, who is a type of Christ).

The church, successor to Israel and the body of Christ, is beloved (Rom. 1:7; 9:25 [cf. Hos. 2:1, 16 ff]; Col. 3:12; I Thess. 1:4 [cf. Deut. 33:12 LXX]; II Thess. 2:13). Congregations and their members are beloved, for Christ redeemed them and commanded them to love one another (John 13:34; Phil. 4:1, etc.; Heb. 6:9; I Pet. 2:11; II Pet. 3:1; I John 3:2, etc.; III John 1; Jude 1, 3, 17, 20). Christians form a spiritual brotherhood in love (I Cor. 15:58; Eph. 6:21; Col. 4:7-9; Jas. 1:16, 19; 2:5; of masters and slaves, note I Tim. 6:2; Philem. 16). The affectionate tone toward both women and men is remarkable, and not yet formal (Rom. 16:5-16; II Tim. 1:2; III John 1, 2, 5, 11; cf. Phil. 2:22 ff).

G. JOHNSTON

***BELOVED DISCIPLE.** A disciple of Jesus, referred to only in the closing chapters of the Gospel of John and never named. He cannot be identified with the rich man in Mark 10:21, for this man, the only one in the Synoptic gospels of whom it is said that Jesus loved him, did not become a disciple.

In John 13:23, at the Last Supper, "one of his disciples, whom Jesus loved, was lying close to the breast of Jesus"; and at a signaled request from Peter, he asked Jesus who would betray the Lord. At the Cross, Jesus committed his mother to the care of the "disciple whom he loved," who "from that hour . . . took her to his own home" (19:26-27). When Mary Magdalene found the tomb empty, she ran and told Peter and "the other disciple, the one whom Jesus loved." He outran Peter, but Peter first entered the tomb; then the "other disciple" entered and "saw and believed" (20:1-8). In John 21, the Appendix to the Gospel of John (*see* JOHN, GOSPEL OF), "that disciple whom Jesus loved" first recognized the risen Lord by the Sea of Tiberias (21:7). This chapter later reports a misunderstood saying of Jesus; he was supposed to have said that the "disciple whom Jesus loved" would not die. Apparently this disciple had died. It is explained that Jesus had only told Peter: "*If* it is my will that he remain until I come, what is that to you?" (21:20-23). Finally, 21:24 gives the testimony of certain Christians ("we know") that "this is the disciple who is bearing witness to these things," and "his testimony is true."

Three other verses are sometimes understood to refer to the same disciple. John 1:41, however, implies no such reference, unless the inferior reading πρῶτος is accepted. Only then would it mean that, like Andrew, the unnamed companion also went and found his brother and brought him to Jesus; then this might be John the son of Zebedee bringing his brother James. In 18:15 "another disciple," "known to the high priest," *could* be the beloved disciple. In 19:35 also "he who saw" blood and water come from the pierced side of Jesus could be the beloved disciple, but this is not certain, since in vs. 27 the beloved disciple seems to have left the scene.

Attempts to identify the beloved disciple follow one of two methods:

One method argues that so favored a disciple must have been one of the Twelve, and a prominent one. He cannot have been Peter, with whom he appears; James the son of Zebedee was martyred early (Acts 12:2); James's brother John, then, the other one of the trio closest to Jesus, must be the beloved disciple. In both Luke (22:8) and Acts (3:1; 8:14), Peter and John appear together, as Peter and the beloved disciple do in John. This implies that John is the beloved disciple. The ancient church tradition supports this identification; it repeatedly names the apostle John as the beloved disciple. John 21:2 says that the sons of Zebedee were present at the Sea of Tiberias, and vs. 7 says that the beloved disciple was there. External evidence thus presents a strong case for identifying this disciple as JOHN THE APOSTLE.

The other approach is to examine the Gospel of John to see whether it indicates the identity of the beloved disciple. Since this gospel never mentions by name the apostle John, it alone cannot lead the reader to identify the beloved disciple as John. Three views based on the internal evidence of this gospel may be noted:

a) The beloved disciple is an idealized figure. He represents the true and worthy disciple of Christ. It is wrong to try to identify him with any particular disciple among Jesus' followers.

b) The beloved disciple is a Jerusalem disciple of priestly family or connections (this view assumes that 18:15 refers to the beloved disciple). He appears only in Jerusalem, except for the postresurrection appendix. The gospel centers in Jerusalem; this is unexpected and hard to explain if a Galilean fisherman is its writer or basic witness. The disciple has access to the high priest, and a curious tradition, found in a letter of Polycrates bishop of Ephesus, who, writing *ca.* 191, says that John "was a priest wearing the sacerdotal plate" (Euseb. Hist. III.31.3; V.24.3), may rest on John 18:15 and reflect the view that the beloved disciple was of priestly origin.

c) The beloved disciple was Lazarus. If the Gospel of John was written to be intelligible when read by itself, Lazarus would seem to be meant. He is the one man in the gospel whom Jesus is said to love. This love is emphasized in 11:3, 5, 11, 36. In 12:2 Lazarus shares a meal with Jesus. Then in 13:23 the beloved disciple is said to share a meal with Jesus. The alert reader can hardly avoid identifying him with Lazarus unless he knows another answer from some other source. Lazarus, moreover, lived near Jerusalem, at Bethany; he could easily have taken Jesus' mother home from the Cross "from that hour"; his resurrection is the climax of Jesus' public ministry, and for a gospel resting on this disciple's witness to have life through Christ as its theme is entirely fitting; for the resurrected Lazarus to be the first to recognize the risen Lord is likewise fitting; to identify Lazarus as the beloved disciple gives the gospel a unity it lacks when Lazarus is considered to be outside the circle of important disciples; and of the resurrected Lazarus a rumor could most easily have arisen that since he had already died and risen, "he was not to die."

Internal evidence thus points to Lazarus as the beloved disciple. External evidence points rather to John the son of Zebedee. It is difficult to reconcile the two lines of evidence. To regard Lazarus as unhistorical and created only to present in parable form the point of Luke 16:31, or the resurrection Christ effects in the believer from the death of sin, does not do justice to indications of the gospel that Lazarus is a real person. Perhaps the original draft of the gospel, which does not actually name the beloved disciple, became in time associated with a leader named John and so with the apostle John. John 21:24 in the Appendix may reflect a stage in this process. A final decision is hardly possible.

Bibliography. F. V. Filson, "Who Was the Beloved Disciple?" *JBL*, 63 (1949), 83-88; W. F. Howard, *The Fourth Gospel in Recent Criticism and Interpretation* (4th ed., 1955), Index. *See also* bibliography under JOHN THE APOSTLE.

F. V. FILSON

BELSHAZZAR bĕl shăz′ ər [בלאצר; Akkad. *Bēl-šar-uṣur*, Bēl-protect-the king! Βαλτασάρ]. Son of, and coregent with, NABONIDUS. Belshazzar is, Assyriologically, of interest only as the unique example of a crown prince who was officially recognized as coregent. There exist two legal documents dated to the twelfth and thirteenth years of Nabonidus, which

record oaths sworn by the life of Nabonidus, the king, and of Bēl-šar-uṣur, the crown prince, for which there is no parallel in cuneiform literature. Equally unique is the fact that the crown prince is mentioned in the prayer section of some of the inscriptions of Nabonidus, although the Akkadian inscription of Antiochus I, Soter (280-262 B.C.), asks for divine blessings even for the queen and the crown prince. From Assyriological sources nothing is known about Belshazzar's death. A. L. OPPENHEIM

BELT. 1. אזור (Ezek. 23:15); KJV GIRDLE. Alternately: GIRDLE; WAISTCLOTH. A piece of the accouterment of Assyrian soldiers.

2. On חליצה, a belt worn by soldiers (Judg. 14:19; II Sam. 2:21), *see* SPOIL.

3. מזח (Ps. 109:19); KJV GIRDLE. A girdle worn next to bare skin.

4. מזיח (related to מזח; Job 12:21); KJV STRENGTH, mg. GIRDLE. A term used in the phrase "loosing the belt," which is figurative for rendering a soldier impotent.

5. On פתיל (Gen. 38:18, 25; "cord"; KJV BRACELETS), which has been interpreted as a wrestling belt, *see* WRESTLING.

6. Ζώνη (Matt. 10:9; Mark 6:8); KJV PURSE. Alternately: GIRDLE 5. A money belt, as the context indicates; confirmed by first-century A.D. papyri as an article used to carry money. This is a specialized use of ζώνη. J. M. MYERS

BELTESHAZZAR bĕl'tĭ shăz'ər [בלטשאצר, *from* Akkad. *balaṭsu-uṣur,* May he protect his life]. The Babylonian name given to Daniel by the chief of Nebuchadnezzar's eunuchs (Dan. 1:7; 2:26; 4:8-9, 19—A 4:5-6, 16; 5:12; 10:1). Dan. 4:8 relates the first syllable to Bel, the title of Marduk, the chief Babylonian god. But this is popular etymology, unless the name is a shortened form of *Bel-balaṭsu-uṣur,* "May Bel protect his life." M. NEWMAN

BELTETHMUS bĕl tĕth'məs [*corruption of* בעל־טעם; LXX Βααλταμ]; KJV BEELTETHMUS bē'əl—. A Persian officer in Palestine (I Esd. 2:16, etc.). It is not a proper name but seems to be the title for CHANCELLOR (cf. Ezra 4:8).

BEN bĕn [בן, son of]. Erroneously included among second-rank Levites in the MT of I Chr. 15:18 (KJV).

BEN-ABINADAB bĕn'ə bĭn'ə dăb [בן־אבינדב, father is noble]; KJV SON OF ABINADAB. A commissariat prefect (or his father) who was charged by Solomon with the district of Naphath-dor (on the coast between Phoenicia and Philistia) and who married the king's daughter Taphath (I Kings 4:11).

Bibliography. W. F. Albright, "The Administrative Divisions of Israel and Judah," *JPOS,* V (1925), 26 ff; J. A. Montgomery and H. S. Gehman, *The Books of Kings,* ICC (1951), pp. 120 ff. E. R. DALGLISH

BENAIAH bĭ nā'yə [בניהו, בניה, Y has built]; KJV Apoc. BAANIAS bā'ə nī'əs (I Esd. 9:26); BANAIAS bə nā'yəs (I Esd. 9:35). **1.** The son of Jehoiada the priest; a native of the S Judean town of Kabzeel whose years of loyal military service ultimately gained for him the rank of commander of the army in the reign of Solomon. Although he never achieved the coveted rank of membership among the "Three," his valiant deeds distinguished him as more honorable than the company of the Davidic Mighty Men known as the "Thirty." His valor is illustrated by three heroic exploits: the liquidation of two warriors (אראל) of Moab, the slaying of a lion in a pit amid the winter snow, and a victory over an Egyptian giant won at considerable disadvantage (II Sam. 23:20-23; I Chr. 11:22-25).

Benaiah served as captain of the Cherethites (Cretans) and Pelethites (Philistines), foreign mercenaries who served as the royal guard under David (II Sam. 8:18; 20:23; 23:23; I Chr. 18:17). Although he was named as the commander of the Davidic militia of 24,000 men, who served annually during the third month, the command appears to have been honorary, since his son Ammizabad was in charge of the division (I Chr. 27:5-6).

In the final days of David, when Joab lent his support to the abortive plot of Adonijah to seize the throne, Benaiah supported Solomon, the Davidic nominee, and shared in his coronation at Gihon by responding to the act and proclamation of the coronation with an affirmation of loyalty, so it would seem, as spokesman for the people (I Kings 1:38). As captain of the royal guard Benaiah had the invidious task of destroying the enemies of Solomon—Adonijah, Joab, and Shimei (I Kings 2:25, 34, 46). As a reward for his faithful service Benaiah was made commander of the army by Solomon (I Kings 2:35). His son Jehoiada appears to have succeeded Ahithophel as the royal counselor to David (I Chr. 27:34).

2. A warrior from Pirathon of the hill country of Ephraim who is included among the company of the Mighty Men of David known as the "Thirty" (II Sam. 23:30; I Chr. 11:31). He was the commander of the Davidic militia which served each year during the eleventh month (I Chr. 27:14).

3. One of the Simeonite princes who enlarged by conquest their pastoral lands in the region of Gedor in the time of Hezekiah (I Chr. 4:36).

4. A Levitical musician, named among those who played harps set to *'alāmôth* (*see* MUSIC) in the sacred orchestra in the time of David. This group is first mentioned in connection with the transport of the ark to Jerusalem (I Chr. 15:18, 20; 16:5).

5. One of the priests who were charged with blowing trumpets before the ark of Yahweh and are named among musicians that accompanied the ark to Jerusalem (I Chr. 15:24; 16:6).

6. An Asaphite whose grandson Jahaziel delivered a favorable oracle to Jehoshaphat when he was threatened by a military coalition of Moabites, Ammonites, and Edomites (II Chr. 20:14).

7. A Levite, one of the subordinate overseers, who assisted in the collection of contributions in the house of Yahweh in the days of Hezekiah (II Chr. 31:13).

8. The father of Pelatiah, one of the princes of the people during the Exile. Pelatiah's counsel to Jerusalem was opposed by Ezekiel, and his death ominously occurred while the prophet spoke (Ezek. 11:1, 13).

9. The name of four Israelites who banished their foreign wives with their children in the purist movement of Ezra the scribe (Ezra 10:25, 30, 35, 43). While they share the same name in the book of Ezra, their names are given as Benaiah, Naidus, Mamdai, and Benaiah in I Esd. 9:26, 31, 34, 35.

E. R. DALGLISH

BEN-AMMI bĕn ăm'ī [בן־עמי, son of my kinsman (*or* people); LXX *inserts* Αμμαν, Vulg. *Ammon, before* בן־עמי] (Gen. 19:38). Lot's son by his younger daughter; eponymous ancestor of the Ammonites. *See* AMMON; LOT.

BEN-DEKER bĕn dē'kər [בן־דקר] (I Kings 4:9); KJV SON OF DEKAR. A commissariat prefect (or his father) who was over the second administrative district of Solomon, which corresponded generally to S Dan.

BENE-BERAK bĕn'ī bĭr'ăk [בני ברק, sons of Barak (lightning)] (Josh. 19:45). A city of Dan, identified with modern Ibn Ibraq (Banai Baraq), one of the NW suburbs of Tel Aviv.

BENEDICTION. A prayer for God's blessing, or an affirmation that God's blessing is at hand. The Aaronic blessing (Num. 6:24-26) is the best known of the OT benedictions, while the blessings or prayers with which several of the NT letters conclude represent the most familiar benedictions of the NT (Rom. 15:13; II Cor. 13:14; Heb. 13:20-21; etc.). *See* BLESSINGS AND CURSINGS. W. HARRELSON

BENEDICTUS bĕn'ə dĭk'təs [Lat., blessed]. The Song of Zacharias, father of John the Baptist, in Luke 1:68-79; a psalm, like the MAGNIFICAT, emanating from the early Christian communities of Palestine, and constructed out of many reminiscences of OT poetry and prophecy. The Benedictus is more definitely messianic in character than the Magnificat, and celebrates the raising up of a leader ("horn"; vs. 69) out of the house of David. In line with early Christian tradition, John the Baptist is portrayed as the forerunner of Christ (the "prophet of the Most High" [vs. 76]; cf. Luke 1:32, of Jesus: "Son of the Most High"), who prepares the way for the time "when the day shall dawn upon us from on high" (vs. 78; cf. Mal. 4:2). In both the Eastern and the Western liturgies, the Benedictus is a canticle of the morning Office of Lauds.

See also HYMNS. M. H. SHEPHERD, JR.

BENEFACTORS [εὐεργέται, those who work well]. A title widely used of both gods and men from the fifth century B.C. on. Often assumed by kings, it was also bestowed upon them or upon outstanding men, generally to reward some conspicuous service or meritorious achievement (Add. Esth. 8:12*c*, 12*n*; Wisd. Sol. 19:14; II Macc. 4:2; III Macc. 3:19; 6:24). Εὐεργέτης occurs in the canonical books only in Luke 22:25, where Jesus forbids its use. Other forms of the same root usually refer the benefits they describe to God and not to men (Ps. 13:6—G 12:6; Acts 4:9; 10:38; I Tim. 6:2; Wisd. Sol. 16:2; II Macc. 6:13; 10:38).

I. W. BATDORF

BENE-JAAKAN bĕn'ī jā'ə kən [בני יעקן] (Num. 33:31-32). A place where Israel camped near the border of Edom. *See* BEEROTH-BENE-JAAKAN.

BEN-GEBER bĕn gē'bər [בן־גבר]; KJV SON OF GEBER. A commissariat prefect (or his father) who was over the sixth administrative district of Solomon, with its seat at Ramoth-gilead (I Kings 4:13). However, some scholars consider him identical to Geber the son of Uri (vs. 19), since the geographical descriptions of their respective districts coincide. By conflating the two texts and removing the later glosses, Albright renders the presumable text of the original catalogue thus: "Geber son of Uri (*or* Uri son of Geber) in Ramoth Gilead; he had the *ḥawwôt Ya'îr* and the region of Argob."

***BEN-HADAD** bĕn hā'dăd [בן־הדד (*by faulty reading,* הדר *for* הדד *in three* Heb. *MSS*), Aram. בר הדד, son of (the god) Hadad; Akkad. *^{md}Adad-id-ri, ^{md}Adad-'-id-ri, ^{m}BIR-^{d}da-ad-da, ^{m}a-pil ^{d}Adad;* LXX υἱον Αδερ].

1. Ben-hadad I (I Kings 15:18), son of Tabrimmon son of Hezion, whose throne name appears to have been Hadadezer (Akkadian Adad-'idri). He is first encountered as king of Damascus during the reign of King Baasha of Israel (909-885 B.C.), with whom he had an alliance which freed Baasha to attack King Asa of Judah (vs. 19). In 879 B.C., Asa bribed Ben-hadad I to break the treaty and invade Israel. By ravaging the N parts of Israel, Ben-hadad protected the caravan route through Galilee from Damascus to the Mediterranean coast, from whence Egyptian and Phoenician riches came to the bazaars of Damascus (I Kings 15:19-21; II Chr. 15:19–16:6). Later Omri of Israel (880-873) was forced to admit merchants of Damascus to the bazaars of Samaria (I Kings 20:34). At a critical moment, possibly shortly after the accession of Pygmalion in Tyre (*ca.* 860), Ben-hadad I seems to have made a treaty with Tyre, for he erected an Aramaic votive stele to his "lord," the Tyrian god Baal Melqart. Fig. BEN 28.

When newly enthroned King Shalmanezer III of Assyria (859-824) began to menace Syria with yearly campaigns (857-853), Ben-hadad I besieged Samaria and arrogantly demanded the utter submission of Israel (I Kings 20:1-22), evidently in an effort to compel King Ahab of Israel to join a Syrian alliance to resist Assyrian encroachment. Twice Damascus was defeated by Ahab and Ben-hadad I was captured (vss. 16-21, 26-33). Ahab spared his life and demanded only commercial advantages in Damascus bazaars (vs. 34) and the return of border cities that Damascus had taken from Omri. The treaty then made (856) instituted three years of peace between Israel and Damascus (I Kings 22:1).

In 853 B.C., Shalmaneser III faced a Syrian coalition led by Ben-hadad I, whom the Assyrians called

28. Stele of Ben-hadad, son of Tabrimmon, king of Damascus, from Aleppo, bearing Aramaic dedicatory inscription to the god Baal Melqart

Adad-'idri (Hadadezer), at Qarqar. The mighty conflict, in which Israel played an important part, resulted in a draw, as did later Assyrian assaults in 848 and 845. It was possibly in 853, after the Battle of Qarqar, that Ahab of Israel and his ally, Jehoshaphat of Judah, plotted to take Ramoth-gilead from Ben-hadad I of Damascus (I Kings 22:29). In the battle Damascus was victorious, and Ahab was slain.

Ben-hadad I may be the anonymous "king of Aram" mentioned in stories about Elisha's healing powers. The king sent his leprous officer Naaman to be healed by the prophet (II Kings 5:1-19), and later the aged, ailing Ben-hadad I himself sent his servant Hazael to consult with Elisha about his ailment (8:7-10). When the prophet announced that Hazael would be the next king of Damascus and presumably anointed him (cf. I Kings 19:15-16), the servant returned to Ben-hadad I, murdered him, and seized the throne of Damascus (II Kings 8:14-15). The annals of Shalmaneser III report the incident: "Adad-'idri forsook the land; Hazael, the son of nobody, seized the throne." Since "forsook the land" could mean abdication, it is possible that the sudden death of Ben-hadad I (*ca.* 842) was temporarily covered by a rumor of his abdication.

Many scholars distinguish between a Ben-hadad I of the time of King Asa of Judah and Baasha of Israel and a Ben-hadad II, who was contemporary with the dynasty of Omri of Israel. The son of Hazael, listed below as Ben-hadad II, would then become Ben-hadad III. Since it would at that time be unusual for a son to bear his father's name, Kraeling suggests that another king, possibly the Rezon of I Kings 11:23, intervened between the two kings named Ben-hadad. Because Assyrians called the king of Damascus contemporary with Ahab of Israel Adad-'idri (Hadadezer), Luckenbill regarded Adad-'idri as a usurper who succeeded Ben-hadad in 858, after the Battle of Aphek. With him Kraeling identifies the anonymous "king of Aram" (I Kings 22:3, 31; II Kings 5:1, 5; 6:8, 11). Since the Assyrians call the predecessor of Hazael Adad-'idri, Kraeling would omit the name Ben-hadad in II Kings 8:7 as an error or gloss. Albright, however, is perhaps right in insisting that the Ben-hadad of the Omride Dynasty was identical with that of the time of Baasha. The interval (*ca.* 880-842) is not too long for a single reign, especially since the time of the death of Tabrimmon is uncertain. The name Adad-'idri of the Assyrian records may well have been the throne name of Ben-hadad I, just as Pul was that of Tiglath-pileser III (II Kings 15:19) and Zedekiah was that of Mattaniah (24:17).

2. Ben-hadad II, son of HAZAEL, who followed his father (*ca.* 798 B.C.) on the throne of Damascus (II Kings 13:3, 24). Some would identify him with the king Mari' of Damascus, who paid tribute to Adad-nirāri III in 804. This is possible if the phrase "all the days of Jehoahaz" (813-798) is not to be taken literally (II Kings 13:22). Ben-hadad II must have been enthroned during the reign of Jehoash of Israel (798-781). He inherited a kingdom weakened by Assyrian assaults and could not retain all the territory that Hazael, his father, had taken. In three engagements with Jehoash (II Kings 13:14-19, 25), Ben-hadad II lost the cities taken from Israel (vss. 24-25). Jeroboam II of Israel (781-753) had additional successes against Damascus, expanding Israel to its ideal limits (II Kings 14:25-28; Amos 6:14), but the claim that Hamath and Damascus were taken by Israel (II Kings 14:28) is absurd.

When the Aramean state of Hamath began to expand, Ben-hadad II organized a coalition of Syrian kings to curb his neighbor Zakir king of Hamath. Although they besieged Zakir in his stronghold Hazrak (Hadrach in Zech. 9:1), Zakir withstood his enemies. Kraeling conjectures that when Shalmaneser IV besieged Damascus in 773, Ben-hadad II may have died and been succeeded by the Tabeel of Isa. 7:6.

As noted under 1 *above*, some would regard this Ben-hadad as Ben-hadad III.

BEN-HINNOM, VALLEY OF. *See* HINNOM, VALLEY OF.

BEN-HUR bĕn hûr′ [בן־חור] (I Kings 4:8). KJV SON OF HUR. A commissariat prefect (or his father) who was over the first administrative district of Solomon, which was generally coincident with Ephraim.

BENINU bĭ nī′nōō [בנינו, our son] (Neh. 10:13). A Levitical witness to the postexilic renewal of the covenant under Ezra. *See* NETHINIM.

***BENJAMIN** bĕn′jə mən [בנימין, *according to folk etymology,* child of fortune (Gen. 35:18); *in reality, originally the name of a tribe, with a geographical meaning; see below*]; BENJAMINITE—mə nīt′ [בן ימיני]. **1.** A son of Jacob by Rachel (Gen. 35:18), and the eponymous ancestor of one of the twelve tribes. As the youngest son, especially beloved by his father and also favored by Joseph, his only full brother, Benjamin plays a special role in the Joseph story (Gen. 42:4, 36; 43:14-16, 29, 34; 44:12; 45:12, 14, 22). In lists he is always named along with Joseph (Gen. 35:24; 46:19, 21; I Chr. 2:2), save, necessarily, in Exod. 1:3.

The name of the tribe of Benjamin is to be correctly interpreted historically as "the southerner" (lit., "son of the south [right]"). To be sure, this designation hardly came into use for the first time in Canaan, as though it were for a unit which split off once more in the S from the large Joseph group which had divided in central Palestine into Manasseh and Ephraim. It is scarcely conceivable that this small fragment could have attained the same amphictyonic rights as the great tribes. Moreover, it has, indeed, its own tradition of conquest (preserved in Josh. 2-9), which indicates that the Benjaminites crossed the Jordan as outriders of the Rachel group. The blood toll paid in their so doing decimated the tribe, to be sure, but secured for it for the future the rights of an autonomous tribe in the circle of the Israelite amphictyony. That the name (and along with it the bearer) may very well have stemmed from the desert period is shown by its appearance in an entirely different nonbiblical connection. In the Old Babylonian texts of the archives of King Zimri-Lim, a contemporary of Hammurabi (*ca.* 1700), which were brought to light in the excavation of MARI, there also appear Binu-Jamina, "southern people," a very rebellious Bedouin group, whose extensive pasture lands at that time began S of Haran and extended as far as the Terqa district. It is, indeed, not to be excluded that there is a historical connection between this group and the OT tribe.

The territory of the OT tribe is, according to the description of Josh. 18:11-21, a wedge, the small base of which lies in the mountains to the W and which stretches out lengthwise to the Jordan. The town list, which probably dates from the time of Josiah, names three ancient cities which by no means were settled by Benjaminites in the period before the kings: Jerusalem was conquered for the first time by David (II Sam. 5:6 ff); Bethel clearly lies to the N of the border, according to the description of the boundaries (Josh. 18:13); and Jericho was rebuilt first under Ahab (Josh. 6:26; I Kings 16:34). Moreover, in the W the territory of the towns of Gibeon, Beeroth, Chephirah, and Kiriath-jearim must be deducted; according to Josh. 9, this territory remained Canaanite—a situation which Saul first tried to change, with only partial success (II Sam. 4:2-3; 21:2). The Benjaminite settlement is thus rather scanty and is limited really to a few villages on the mountain ridge between Jerusalem and Bethel. For this very reason Benjamin is not to be regarded as having broken away from Joseph. On the contrary, because Benjamin found a place in the twelve-tribe scheme, it must be an old tribe; but in the course of taking possession of the land it was stunted like Simeon and others.

The smallness of Benjamin also shines through the rest of the tradition. Benjamin was the youngest son —i.e., the smallest tribe. This explains the fact that the Moabite king Eglon could make Benjamin pay tribute for almost two decades, until Ehud brought an end to the situation (Judg. 3:12-30). Also interesting in this connection is the very much touched-up account of the action which the federation took against Benjamin (chs. 19–21). At least the general conditions in it are historical. Also, Benjamin might have almost disappeared, had the men of the tribe not been permitted to kidnap wives. Six hundred men escaped (20:47); presumably this is the normal number of men in this tribe.

The oldest poetry adds some further features to the picture thus obtained. The Song of Deborah names Benjamin after Ephraim, evidently because of the geographical relationship, and as the second in the *Parallelismus membrorum,* since it is the smallest tribe; the Benjaminites remained true to their warlike tradition—their fame as slingers (Judg. 20:16) is probably also historical—and engaged in the fight for freedom (5:14). Something similar is evidenced in the short passage of Jacob's Blessing:

> Benjamin is a ravenous wolf,
> in the morning devouring the prey,
> and at even dividing the spoil
> (Gen. 49:27).

The passage is probably to be explained by the geographical situation with respect to trade and refers, as in the case of Dan (Deut. 33:22), to attacks on caravans. The passage about Benjamin in the Bless-

ing of Moses sounds considerably more peaceful and appears to be relatively late when it speaks of the beloved of Yahweh living in safety because Yahweh protects him always and dwells between his shoulders (vs. 12). A special holy place, having significance beyond Benjamin, must be meant, since it is the only topic of the passage: i.e., Gilgal (Josh. 4–5) or Gibeon (I Kings 3)?

Nothing in the preceding points to the fact that it was precisely Benjamin which would have been predestined to supply the first king. And yet, Saul, in whom, to be sure, the Ephraimite Samuel recognized the chosen man, evidently because of his personal capabilities, was Benjaminite (I Sam. 9:1, 4, 16, 21; 10:2, 20 ff; 22:7; II Sam. 21:14; Acts 13:21). The liberation of Israel from the Philistines had its beginning on Benjaminite ground when Jonathan killed the governor at Gibeah (Tell el-Ful) and when, following Jonathan's heroic deed at Geba (Jeba') and Michmash (Mukhmas), the first defeat was inflicted upon the Philistines (I Sam. 13:2, 15 ff; 14:16). After Saul's catastrophic end, Benjamin found itself among the few tribes which immediately recognized Ishbaal (Ish-bosheth) as his successor (II Sam. 2:9), even if participation of the Benjaminite levy in the historic battle of the mercenaries at the Pool of Gibeon belongs to legend (2:15, 25, 31). In any case, Abner soon succeeded in leading Benjamin over to David's side (3:19). However, the fact that David did not win the sympathy of all the Benjaminites is shown by the figure of Shimei (II Sam. 16:11; 19: 17 ff; I Kings 2:8) and is proved in a more dangerous fashion by the revolt of the Benjaminite Sheba (II Sam. 20:1). In Solomon's arrangement of districts Benjamin appears as a separate administrative district of the N kingdom (I Kings 4:18). After the breakdown of the personal union, the Judean kings succeeded in winning the territory of Benjamin as a glacis for their capital city; Asa was finally able to develop Mizpah (Tell en-Nasbeh) and Geba in Benjamin as frontier fortresses. Thus the historical basis was laid so that later writers could treat "Judah and Benjamin" as a unit (I Kings 12:21, 23; II Chr. 11:1, 3, 10, 12, 23; 14:7; 15:2, 8-9; 17:17 [cf. vs. 13]; 31: 1; 34:9; Ezra 1:5; 4:1; 10:9; Neh. 11:36). In Judg. 10:9 the Deuteronomic historian enlarges the same concept to include the "house of Ephraim." Ps. 68: 27—H 68:28 probably also fits in here, where "Benjamin, the least of them," is named with Judah in the parallel phrase, strangely enough, together with the Galilean tribes of Zebulun and Naphtali. In Ps. 80:2, Benjamin is probably an interpolation; but the psalm is native to the N kingdom, in any case. Perhaps it is a proof of the fact that the loss of the Benjaminite territory had not been forgotten there. This may perhaps also be true of Hos. 5:8 (cf. vs. 10); however, the prophet may recognize the status quo of that time and only refer to a repeated pushing out of the boundary toward the N by the Judeans.

In the later literature Benjamin usually appears in lists and similar material. The Deuteronomic historian places Benjamin after Joseph among the tribes who have to pronounce the blessing on Mount Gerizim (Deut. 27:12). In the Priestly Code, Benjamin's place is always immediately after Ephraim and Manasseh (Num. 1:11, 36 ff; 2:22; 7: 60; 10:24; 13:9; 26:38, 41), with the single exception of Num. 34:21, which is geographically conditioned. This combination is also popular in Chronicles, except that Benjamin usually stands first, in order to preserve, to some extent, the connection with Judah (I Chr. 12:29—H 12:30; also 6:60, 65—H 6:45, 50, as it was already in the source Josh. 21:17; cf. vs. 4); I Chr. 27:21 constitutes the only exception in both respects. Otherwise, the Chronicler adduces especially from Benjamin a lot of genealogical material (I Chr. 7:6-12, where Benjamin is in the eighth place in the whole series of tribes, between Issachar and Naphtali; 8; 9:3, 7-9), as well as several notes which cannot be checked (12:2-7, 16-18; 21:6). In Ezek. 48: 22-24, Benjamin receives the sector directly to the S of the central territory and thus the special relation to Judah, which receives the counterpart in the N, is once more preserved. On the other hand, the relationship to Joseph stands out in the case of the names of the gates. Benjamin is allotted the middle E gate next to Joseph, as Judah had already been allotted the middle gate on the N earlier. In Obad. 19, בנימין, Benjamin, is probably written erroneously for בני עמין, sons of Ammon. In the NT in the list of the sealed (Rev. 7:8) Benjamin ranks after Joseph at the end, in accordance with tradition.

Individuals who are expressly designated as Benjaminites include, in addition to those already mentioned, two of David's thirty heroes, Ittai from Gibeah (II Sam. 23:29=I Chr. 11:31) and Abiezer from Anathoth (I Chr. 27:12=II Sam. 23:27=I Chr. 11: 28). There is also Cush, who is named in the superscription of Ps. 7, and who is, perhaps, a combination of the unnamed messenger of I Sam. 4:14 and the other bearer of ill tidings in II Sam. 18:21 and is thus a literary figure like Mordecai, the hero of the book of Esther (Esth. 2:5). There are, in addition, two men of considerably more importance. One is the prophet Jeremiah from Anathoth (Jer. 1:1; 32:8, 44; 33:13; 37:12; cf. 17:26), who represents a conflict of the countryside with the capital city, as in the case of Micah (6:1; not, as many presume, the older N-S conflict!). The other one is the apostle Paul (Rom. 11:1; Phil. 3:5).

For the territory of Benjamin, *see* TRIBES, TERRITORIES OF, § 2.

See the bibliography under ASHER.

2. A great-grandson of Jacob, through Benjamin, Jediael, and Bilhan (I Chr. 7:10).

3. An Israelite of the time of Ezra, who pledged himself to dissolve his marriage with a foreign woman (Ezra 10:32).

4. A priest of the time of Nehemiah (Neh. 12:34); probably identical with the Benjamin who participated in the building of the wall (3:23).

K. ELLIGER

BENJAMIN GATE [שער בנימין]; KJV GATE OF BENJAMIN. A gate of Jerusalem, mentioned in Jer. 37:13; 38:7, perhaps to be identified with Nehemiah's SHEEP GATE or with the MUSTER GATE. *See* JERUSALEM § 6*e*.

G. A. BARROIS

BENO bē'nō [בנו, his son] (I Chr. 24:26-27). Son of Jaaziah, a Merarite Levite. Instead of a proper name

some ancient versions translate "his son," meaning the son of Jaaziah.

BEN-ONI bĕn ō'nī [בן־אוני, the son of my sorrow] (Gen. 35:18). The name given to her son by RACHEL as she died at his birth. He was renamed BENJAMIN (1) by his father, Jacob.

BEN-ZOHETH bĕn zō'hĕth [בן־זוחת, son of Zoheth] (I Chr. 4:20). Son of Ishi in the genealogy of Judah; but the word could be a description rather than a personal name.

BEON bē'ŏn [בעון] (Num. 32:3). A town in N Moab requested by the tribes of Reuben and Gad; probably the same as BAAL-MEON.

BEOR bē'ôr [בעור, בער, a burning(?); Βοσόρ]; KJV NT BOSOR bō'sôr. **1.** The father of Bela, who was an Edomite king prior to the introduction of the Israelite monarchy (Gen. 36:32; I Chr. 1:43).

2. The father of Balaam, the seer summoned to curse Israel (Num. 22:5; 24:3, 15; 31:8; Deut. 23:4—H 23:5; Josh. 13:22; 24:9; Mic. 6:5; II Pet. 2:15). It is possible that the names BALAAM and Bela, nearly alike in Hebrew, refer to the same person.

R. F. JOHNSON

BERA bĭr'ə [ברע; LXX Βαλλα]. King of Sodom, defeated after rebelling against Chedorlaomer (Gen. 14:2; cf. vss. 8, 10-11, 17, 22).

BERACAH bĕr'ə kə [ברכה, blessing] (I Chr. 12:3); KJV BERACHAH. One of the warriors from the brethren of Saul who joined the outlaw band of David at Ziklag.

BERACAH, VALLEY OF [ברכה עמק, valley of blessing]; KJV BERACHAH. A valley in the wilderness of Judah, S of Tekoa, identified with Wadi el-'Arrub, not far from Khirbet Bereikut (SW of Bethlehem), which seems to preserve the ancient name.

Jehoshaphat (*ca.* 873-849) reassembled his people in the Valley of Beracah after the defeat of the coalition of Edomites, Moabites, and Ammonites at the ascent of ZIZ (II Chr. 20:26).

It is possible that the apocalyptic Valley of Jehoshaphat in Joel 3:2, 12 ff, is an allusion to this valley.

V. R. GOLD

BERACHIAH. KJV form of BERECHIAH 1 in I Chr. 6:39.

BERAIAH bĭ rā'yə [בראיה, Yahweh has created]. A member of the tribe of Benjamin listed (I Chr. 8:21) as one of the sons of Shimei. It has been suggested that "BEDEIAH" in Ezra 10:35 ought also to be read "Beraiah," but this is not to imply that the two persons mentioned are one. Neither list can, with certainty, be dated before the Exile.

H. H. GUTHRIE, JR.

BEREA bĭ rē'ə [ἡ Βερέα] (I Macc. 9:4). **1.** A place in Judea, not certainly identified. While Codices Alexandrinus, Sinaiticus, and Venetus (eighth century), and many minuscules read Βερέαν in this passage, it is possible that the original was Βέρεθ, since Latin MSS have *berethin* and similar forms, and the Syriac of the London Polyglot of 1657 (SyIII) has *byrt*. The place might then be the present el-Bireh, ten miles N of Jerusalem. The ninth- to thirteenth-century minuscules 19 93 542, supported by the Syriac published by Lagarde in 1861 (SyI), however, read Βεηρζαθ, which is evidently the name found in Josephus (Antiq. XII.xi.1) in the form Βηρζηθώ and variants. This could be the present Bir ez-Zeit or Beerzeth, a village a little over four miles N-NW of el-Bireh.

J. FINEGAN

2. KJV form of BEROEA.

BERECHIAH bĕr'ə kī'ə [ברכיה, ברכיהו, *contractions of* יברכיהו, Yahweh blesses; *see* JEBERECHIAH] KJV BERACHIAH in I Chr. 6:39. **1.** The father of Asaph in the genealogies of the Levites (I Chr. 6:39; 15:17).

2. A Levite, one of the "gatekeepers for the ark," mentioned in the Chronicler's account of the bringing up of the ark to Zion (I Chr. 15:23). The identification, sometimes made, of this Berechiah and 7 *below* may not be justified. Though both occur in confused and elaborated passages, I Chr. 9:16 is part of a list of singers, while 15:23 has to do with gatekeepers. An identification of the two may be justified by the supposition that a family which originally served as gatekeepers rose in status, in postexilic times, to singers.

3. A chief of the Ephraimites mentioned in the Chronicler's fanciful account of Ahaz' defeat by Pekah of Israel (II Chr. 28:12).

4. A son of Zerubbabel listed among the descendants of David in a genealogy which has as its point the fact that Zerubbabel was of the Davidic line (I Chr. 3:20).

5. Son of Iddo, and the father of the prophet Zechariah (Zech. 1:1, 7; cf. Matt. 23:35). Elsewhere (Ezra 5:1; 6:14), Iddo is said to have been the father of Zechariah. It may be that Berechiah came to be inserted between Iddo and Zechariah in Zech. 1:1, 7, under the influence of Isa. 8:2, where a Zechariah the son of Jeberechiah (a longer form of "Berechiah") is mentioned. *See also* BARACHIAH.

6. The father of Meshullam, one of those who led, under Nehemiah, in the rebuilding of the wall of Jerusalem (Neh. 3:4, 30; 6:18).

7. A Levite listed as one of the inhabitants of Jerusalem in postexilic times (I Chr. 9:16). The name, as well as the contents of the verse in which it occurs, is not found in the apparently parallel list in Neh. 11. *See also* 2 *above*.

Bibliography. M. Noth, *Die israelitischen Personennamen* (1928), pp. 21, 35, 183.

H. H. GUTHRIE, JR.

BERED bĭr'ĕd [ברד]. **1.** A son of Ephraim (I Chr. 7:20). The name is undoubtedly an eponym, and,

on the basis of the parallel occurrence in Num. 26:35, probably should be read "BECHER."

2. A place on the road from Canaan to Egypt, beyond Beer-lahai-roi (Gen. 16:14). The site is unknown, but the name may be preserved in the Wadi Umm el-Bared.

BERI bĭr′ī [בְּרִי, *perhaps a shortened form of some kind (cf. Köhler), or possibly a corruption of* בְּנִי, sons of, *the first part of a name the latter part of which has fallen out (cf. Noth)*] (I Chr. 7:36). Mentioned in the genealogy of the tribe of Asher as a son of Zophah. The name, which is not mentioned in parallel genealogies in Gen. 46:17-18; Num. 26:44-47, is undoubtedly an eponym referring to a division of the Asherite clan of Zophah. It has no connection with the Beriites, since it does not come from the same Hebrew root. Neither is there any connection between this Beri and the Berites of II Sam. 20:14 KJV, since the RSV is undoubtedly correct in reading the latter as "Bichrites."

Bibliography. M. Noth, *Die israelitischen Personennamen* (1928), p. 240; L. Köhler and Walter Baumgartner, *Lexikon in Veteris Testamenti Libros* (1953), p. 149.

H. H. GUTHRIE, JR.

BERIAH bĭ rī′ə [בְּרִיעָה, prominent, excellent; *cf.* Arab. *barā'atun*, Lat. *excellentia*]. **1.** The fourth son of Asher; the father of Heber and Malchiel (Gen. 46:17; Num. 26:44-45; I Chr. 7:30-31); ancestral head of the "family of the Beriites" (Num. 26:44).

2. The fourth son of Elpaal, one of the "heads of fathers' houses" (*see* FATHER'S HOUSE), "who put to flight the inhabitants of Gath" (I Chr. 8:13, 16).

3. The fourth son of Shimei the Gershomite, of the tribe of Levi, who with his brother Jeush "had not many sons, therefore they became a father's house in one reckoning" (I Chr. 23:10-11).

4. Son of Ephraim, so called "because evil [בְּרָעָה] had befallen his house" (I Chr. 7:23). The etymology is only approximate; the name here is uncertain.

L. HICKS

BERIITES bĭ rī′ĭts [הַבְּרִיעִי]. Descendants of BERIAH 1.

BERITES bĭr′ĭts. KJV translation of בִּרִים (RSV Bichrites) in II Sam. 20:14, following the MT. *See* BICHRI.

BERITH bĭr′ĭth. KJV translation ("the god Berith") of EL-BERITH in Judg. 9:46.

BERNICE bər nēs′ [Βερνίκη]. A daughter of Agrippa I. She was probably born in A.D. 28. *See* HEROD (FAMILY) § H7.

Her first husband was a certain Marcus, whose father, Alexander, was a Jewish official ("alabarch") of Alexandria. On the death of Marcus, Agrippa betrothed her to his own brother Herod, for whom Agrippa obtained from the emperor Claudius the kingdom of Chalcis (Jos. Antiq. XIX.v.1). Two sons, Bernicianus and Hyrcanus, were born of this union (Antiq. XX.v.2; War II.xi.6); Herod died in 48.

In the ensuing years rumors of an incestuous relationship with her brother Agrippa II arose. Bernice prevailed, through her wealth, on Polemo the king of Cilicia, to marry her; she hoped thereby to disprove the reports. Shortly after her marriage she left Polemo (Jos. Antiq. XX.vii.3; see Juvenal *Satires* 6).

She returned to Jerusalem and was present in 66 when the PROCURATOR Florus pillaged the temple and massacred a large part of the populace. She appealed to Florus to desist, but he ignored her. Indeed, she almost lost her life at the hands of the soldiers (Jos. War II.xv.1-2). Her presence at Jerusalem, according to Josephus, was to fulfil a Nazirite vow (cf. Mi. Naz. III.6; Acts 21:23-26). She wrote to the proconsul Cestius against Florus (Jos. War II.xvi.1). When later the populace assembled before Agrippa, and he addressed them, urging them against any action which would provoke war, she stood by his side (II.xvi.3). When the war broke out later that same year (66), the Jewish populace set fire to the palaces of Bernice and Agrippa (II.xvii.6).

Josephus gives no further information about Bernice, but Roman historians do. Tacitus (Hist. II.2) relates that she and Agrippa took an oath of allegiance to the Roman Vespasian, and that Bernice became the mistress of Vespasian's son Titus, even expecting to marry him (Suetonius *Titus* VII).

Perhaps Titus was willing, but Roman hatred of Jews compelled him to separate from her (Dio Cassius LXVI.15). Bernice is mentioned in Acts 25:13, 23; 26:30, in the narrative of Paul's appearance before Agrippa II.

Bibliography. É. Schürer, *A History of the Jewish People in the Time of Jesus Christ*, div. 1, vol. II (1891), 195-203; U. Wilcken, "Berenice," in Pauly-Wissowa, *Real-Encyclopädie der klassischen Wissenschaft*, III (1897), 287. S. SANDMEL

BERODACH-BALADAN. KJV translation of בְּרֹדַךְ בִּלְאֶדָן (MT) in II Kings 20:12. *See* MERODACH-BALADAN.

BEROEA bĭ rē′ə [Βεροια] (II Macc. 13:4); KJV BEREA. **1.** The Hellenistic name of the Syrian city of Aleppo, where the renegade high priest Menelaus was put to death by being dropped into hot ashes at the order of the Seleucid king Antiochus Eupator at the instigation of Lysias. Josephus describes the execution in Antiq. XII.ix.7, but assigns it to the close of the war between Judas and Lysias.

Bibliography. F.-M. Abel, *Géographie de la Palestine*, II (1938), 264. E. W. SAUNDERS

2. A city of Macedonia (Acts 17:10, 13; cf. 20:4), located *ca.* fifty miles SW of Thessalonica at the foot of Mount Bermios (Strabo VII.330, fragment 26).

Bibliography. Oberhummer, "Beroia, 1," *Pauly-Wissowa*, vol. III (1899), cols. 304-6.

BEROTH. KJV Apoc. form of BEEROTH.

BEROTHAH bĭ rō′thə [בְּרוֹתָה]. A town listed by Ezekiel (47:16) as part of the N boundary of the restored inheritance of the tribes of Israel; probably identical with BEROTHAI.

BEROTHAI bĭ rō′thī [בְּרֹתַי]. A city in the Syrian (Aramean) kingdom of Zobah from which David took much booty of bronze in his campaign against Hadadezer (II Sam. 8:8). It is probably the same as

BEROTHAH, and is generally identified with modern Bereitan, *ca.* seven miles S of Baalbek in the W foothills of Anti-lebanon. Cun (Chun) in the parallel account in I Chr. 18:8 may be another name for the same place, but *see* CUN.

A. S. KAPELRUD

BEROTHITE. KJV alternate form of Beerothite. *See* BEEROTH.

BERRIES. The translation of גרגרים in Isa. 17:6 and of ἐλαία, "olive berries," in Jas. 3:12 KJV (RSV "olives"). In both instances the reference is to olives.

BERYL bĕr'əl. A silicate of beryllium and aluminum. The crystals are hexagonal prisms, usually green or bluish-green, but sometimes yellow, pink, or white. The emerald is a superior type of the same stone.

Three words are translated "beryl" in the Bible:

a) תרשיש, *taršiš*. The Hebrew gives us no clue to the qualities of the stone. The LXX χρυσόλιθος and the Vulg. *chrysolithus* suggest a yellowish stone, perhaps a yellow jasper. It is a stone in the breastpiece of judgment (Exod. 28:20; 39:13). In Dan. 10:6 the body of the man who appeared before the prophet near the Tigris River resembled beryl. The concept of brightness, rather than color, would seem to be implied here.

b) שהם, *šōham* (Ezek. 28:13; KJV ONYX). The Targ. agrees with the RSV in rendering this word as "beryl." In this passage תרשיש, which precedes שהם, is rendered "chrysolite." This agrees with the LXX and Vulg. renderings above. It is a stone in the covering of the king of Tyre.

c) Βήρυλλος (Rev. 21:20), the eighth jewel in the foundation of the walls of the New Jerusalem.

See also JEWELS AND PRECIOUS STONES § 2.

W. E. STAPLES

BERZELUS. KJV Apoc. form of BARZILLAI.

BESAI bē'zī [בסי]; KJV Apoc. BASTAI băs'tī. Head of a family of postexilic temple servants (Ezra 2:49; Neh. 7:52; I Esd. 5:31). *See* NETHINIM.

BESCASPASMYS bĕs'kəs păz'məs [Βεσκασπασμύς] (I Esd. 9:31). Alternate name of MATTANIAH.

BESODEIAH bĕz'ə dē'yə [בסודיה, in the secret council of Yahu] (Neh. 3:6). The father of a certain Meshullam who helped rebuild the walls of Jerusalem in the time of Nehemiah.

BESOM bē'zəm. KJV translation of ממאמא in Isa. 14:23 (RSV "broom").

BESOR, THE BROOK bē'zôr [נחל הבשור]. A stream which David crossed on his expedition from Ziklag in pursuit of the Amalekites who had sacked the city (I Sam. 30:9-10, 21). It is probably Wadi Ghazzeh-Shellaleh, the largest of the wadis in the region SW of Ziklag (Tell el-Khuweilfeh).

S. COHEN

***BESTIALITY.** Sexual intercourse between a man or a woman and an animal, for which criminal act. the various law codes of the OT provide the death penalty (Exod. 22:19; Lev. 20:15-16; cf. Lev. 18:23; Deut. 27:21). This practice may have been connected with the magical rituals of the pagan cultus. In a Babylonian myth Eabani (or Enkidu) had intercourse with a wild beast until enticed away by an agent of the goddess Ishtar.

Bibliography. For the text of the Gilgamesh Epic, see J. B. Pritchard, ed., *ANET* (2nd ed., 1955), pp. 73-99.

O. J. BAAB

BETAH bē'tə [בטח]. A town (II Sam. 8:8; cf. טבח in Gen. 22:24); probably the same town as Tubihi, mentioned in a Tell-el Amarna letter. *See* TIBHATH.

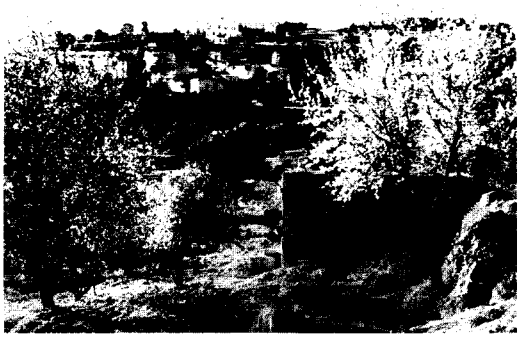
BETANE. KJV Apoc. form of BETHANY.

BETEN bē'tən [בטן, abdomen] (Josh. 19:25). A border town in Asher. It is perhaps located at Abtun, approximately eleven miles S of Acco.

BETH bĕth (Heb. bāth) [ב, *b* (*Bêth*)]. The second letter of the Hebrew ALPHABET as placed in the KJV at the head of the second section of the acrostic psalm, Ps. 119, where each verse of this section of the psalm begins with this letter.

BETHABARA bĕth ăb'ə rə. KJV translation of Βηθαβαρά (=בית עברה, "ford, crossing"), a place of uncertain location beyond the Jordan where John was baptizing, in John 1:28. The word occurs in inferior Greek MSS. The great uncials indicate that the best reading is "BETHANY" (so RSV). Origen (*ca.* A.D. 250) found no evidence of a Bethany beyond the Jordan and so insisted on the reading "Bethabara," although he admitted that few MSS read it (*Commentary on John* VI.140). The site of this Bethany may have been forgotten and this common word for "ford" used to indicate either the true site or one thought to be suitable.

Bibliography. G. Dalman, *Orte und Wege Jesu* (1919), pp. 83-84, 88. E. G. H. Kraeling, *Rand McNally Bible Atlas* (1956), p. 370.



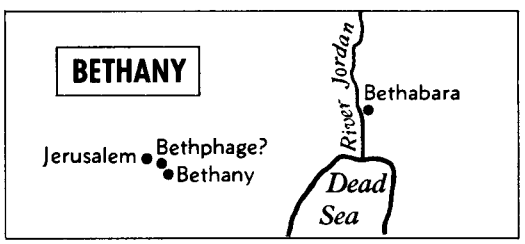
D. C. PELLETT

BETH-ANATH bĕth ā'năth [בית־ענת, house of Anath] (Josh. 19:38; Júdg. 1:33). A town in Naphtali. The earlier Canaanite town is mentioned in lists of several Egyptian rulers of the New Kingdom. It is perhaps located at el-Ba'neh, E of Acco.

BETH-ANOTH bĕth ā'nŏth [בית ענות, house (shrine) of the goddess Anath] (Josh. 15:59). A village of Judah in the district of Beth-zur; probably modern Khirbet Beit 'Ainun, 1½ miles SE of Halhul.

BETHANY bĕth'ə nĭ [Βηθανία; *Semitic derivation uncertain, but possibly* house of Ananiah *or* house of the poor, afflicted; *the Talmud has* בית חיני, *which may refer to the late-season green figs of Bethany and Bethphage;* Βαιτάνη *or* Βατάνη *in* Jth. 1:9]; KJV BETANE bĕt'ə nĭ in Jth. 1:9. **1.** A small village *ca.* 1⅝ miles E of Jerusalem and lying on the E slope of the Mount of Olives. Fig. BET 29.

Jesus and his disciples lodged in suburban Bethany when attending temple ceremonies at Passover



Copyright: The Matson Photo Service

29. Bethany, with almond trees in spring blossom

time (Matt. 21:17; cf. Luke 21:37; Mark 11:19). One approach to Jerusalem from the E was through Bethany and over the ridge of the Mount of Olives; this was the course followed by Jesus when he arrived for this festival and made his "triumphal entry" (Mark 11:1-11 and parallels). Bethany is the setting for the story about Simon the Leper (Mark 14:3; Matt. 26:6), and about Mary and Martha and Lazarus (John 11:1-44). It is also the site of Jesus' final "departure" from his disciples (Luke 24:50-51). Bethany and Bethphage are close to one another (note the joint reference in Mark 11:1; Luke 19:29).* Bethany is not named anywhere in the OT (unless one identifies it with ANANIAH in Neh. 11:32). Fig. JUD 32.

Today this village is called el-'Aziriyeh by its Muslim inhabitants, who hold Lazarus to be a saint and call the town after him. Both Muslims and Christians have marked many sacred sites in this little suburb. The traditional crypt of Lazarus was reported by the Bordeaux Pilgrim in A.D. 333. The "spot where Mary met the Lord" was enclosed in a church before 385. Another church was built over the crypt by that date (Jerome *Onomasticon*), and a monastery was added later (according to Arculf, *ca.* A.D. 670). In the eleventh century a basilica was erected to mark a site for the anointing of Jesus' feet by Mary, possibly the same structure later reported by the Abbot Daniel, E of the crypt. All these and other traditional sites reveal a confusing conflation of different gospel stories. Although an underground chamber is still honored as the crypt of Lazarus, all other ancient structures have suffered decay. Excavations of three successive churches on a site E of the crypt may possibly expose one of the churches reported by medieval pilgrims.

2. The locale of the activity of John the Baptist, according to John 1:28, where it is described as "beyond the Jordan" (i.e., E of the river). But such a locale or such a town remains unknown and unidentified. Because of this passage alone, some maps show a Bethany on the E side of the Jordan, a little N of the Dead Sea (i.e., near the traditional site of the baptism). Origen, who lived in Palestine in the third century, suggested that the correct place in John 1:28 was really Bethabara, to be found on the W side of the Jordan, whereas Bethany was near Jerusalem. Many later MSS carry on this suggestion, which accounts for this name in the KJV. Others have proposed the term BETH-ARABAH, in the same region. However, the MS testimony is overwhelmingly in favor of "Bethany" as the original reading of John 1:28, although this cannot be the well-known Bethany near Jerusalem.

A few maps identify or relate this baptismal Bethany to "Aenon near Salim," where, "because there was much water," John baptized (John 3:23). As a result, another questionable Bethany is sometimes located W of the Jordan *ca.* thirty miles below the Sea of Galilee.

Bibliography. E. Robinson, *Biblical Researches in Palestine,* I (1867), 431-33; F.-M. Abel, *Géographie de la Palestine,* II (1938), 266-67; Babylonian Talmud (Soncino Ed.), Pes. 53*a;* S. J. Saller, *Excavations at Bethany* (1957). K. W. CLARK

BETH-ARABAH bĕth ăr'ə bə [בית הערבה, house (shrine) of the Arabah]. A border point on Judah's N border (Josh. 15:6) and Benjamin's S boundary (18:18); perhaps to be identified with 'Ain el-Gharbah, SE of Jericho, on the N side of the Wadi el-Qelt. In the district list it appears as a town in the district of Jericho (Josh. 18:22) and the wilderness district (15:61). V. R. GOLD

BETH-ARAM. KJV form of BETH-HARAM.

BETH-ARBEL bĕth är'bəl [בית ארבאל]. A town destroyed by SHALMAN, according to Hos. 10:14. Although various conjectures regarding its location have been advanced, it is now generally identified with the mound of Irbid in Gilead, which is situated at an important crossroads. Archaeological surface explorations have shown that the site was occupied in Iron I–II (*ca.* 1200-600)—as well as in other periods—which agrees with the historical requirements of this passage.

Bibliography. N. Glueck, *Explorations in Eastern Palestine,* IV, *AASOR,* XXV-XXVIII (1951), 153-54.

G. W. VAN BEEK

BETH-ASHBEA bĕth ăsh'bĭ ə (I Chr. 4:21). *See* ASHBEA.

BETHASMOTH bə thăz'mŏth [Βαιτασμών]; KJV BETHSAMOS bĕth sā'məs (I Esd. 5:18). Alternate name of AZMAVETH 5 and Beth-azmaveth.

BETH-AVEN bĕth ā'vən [בית און, house of wickedness]. **1.** A town near Ai and E of Bethel to which Joshua sent men from Jericho (Josh. 7:2). It was on the border of Benjamin in the wilderness (18:12). I Sam. 13:5; 14:23 do not indicate a relationship to Bethel but locate it W of Michmash, as the scene of a battle between Saul and the Philistines. The exact

location is uncertain; some scholars take it as an older name for AI.

2. A condemnatory term for Bethel, place of idolatry (Hos. 10:5, where the "calf of Beth-aven" is mentioned; see also Hos. 4:15, 5:8). This would be comparable to the use of AVEN in 10:8.

W. L. REED

BETH-AZMAVETH bĕth ăz'mə vĕth [בית עזמות]. Alternate designation of AZMAVETH.

BETH-BAAL-MEON bĕth'bāl mē'ŏn [בית בעל מעון, *apparently* house of the lord of habitation] (Josh. 13:17). A town in N Moab assigned to the tribe of Reuben; more commonly called BAAL-MEON.

BETH-BARAH bĕth bâr'ə [בית ברה]. A town in or near the Jordan Valley. It was seized by the Ephraimites under the leadership of Gideon in the attack against the Midianites (Judg. 7:24). The context suggests a location W of the Jordan between the valley and the Plain of Esdraelon, perhaps in the Wadi Far'ah, NE of Shechem. Beth-barah is not to be confused with BETH-ARABAH, the Bethany E of the Jordan (John 1:28). W. L. REED

BETHBASI bĕth bā'sī [Βαιθβασι]. A village SE of Jerusalem fortified by Jonathan and Simon and besieged unsuccessfully by Bacchides (I Macc. 9:62, 64; cf. Jos. Antiq. XIII.i.5, which reads "Bethalaga"). It is probably the modern Khirbet Beit Bassa, in the wilderness of Judea, approximately three miles E of Tekoa.

Bibliography. F.-M. Abel, *Géographie de la Palestine,* II (1938), 269. E. W. SAUNDERS

BETH-BIRI bĕth bĭr'ī [בית תראי] (I Chr. 4:31); KJV BETH-BIREI —bĭr'ĭ ī. A city of Simeon in the S of Judah; the same as BETH-LEBAOTH, and apparently a postexilic form of this name.

BETH-CAR bĕth kär' [בית כר, house of a lamb, *or* house of pasture(?)] (I Sam. 7:11). An unknown site evidently between Mizpah and the Philistine country; possibly Beth-horon or 'Ain Karim. The Targ. has "Beth-sharon" and the Syr. "Beth-jashan."

BETH-DAGON bĕth dā'gən [בית דגון, בית דגון, house (shrine) of Dagon; Βηθδαγών, Βαγαδιήλ]. **1.** A village in the Shephelah district of Lachish in Judah (Josh. 15:41); possibly modern Khirbet Dajun.

2. A border point in Asher (Josh. 19:27). It is probably located near Mount Carmel, perhaps at Jelamet el-Atiqa.

Bibliography. F.-M. Abel, *Géographie de la Palestine,* II (1938), 67, 269.

3. A temple of the god Dagon in Azotus (Ashdod). Jonathan Maccabeus burned the temple and all who took refuge there (I Macc. 10:83-84).

BETH-DIBLATHAIM bĕth'dĭb lə thā'əm [בית דבלתים, house of two fig cakes(?)] (Jer. 48:22). A city of Moab. Preceding it in the list are Dibon and Nebo, and following are Kiriathaim and Beth-gamul. Beth-diblathaim may be the same as ALMON-DIBLATHAIM. Mesha (*see* MOABITE STONE) speaks of building Medeba, Beth-diblathen, and Beth-baal-meon.

E. D. GROHMAN

BETH-EDEN bĕth ē'dən [בית עדן]. An Aramaic city-state, between the Euphrates and the Balikh River; identified with Bit-adini in the Assyrian records. Amos 1:5 predicts that its population is to be exiled to Kir. The "people of Eden" (KJV "children of Eden") were conquered by Assyria, according to II Kings 19:12=Isa. 37:12. The place is called simply EDEN in Ezek. 27:23, where it is listed among the cities trading with Tyre.

Bibliography. A. Malamat, *The Aramaeans in Aram Naharaim and the Rise of Their States* (1952), pp. 39-47.

C. H. GORDON

BETH-EGLAIM bĕth ĕg'lĭ əm [בית עגלים, house (place) of the two calves; Βηθαγλαίμ]. The ancient name now applied by certain archaeologists to the site of modern Tell el-'Ajjul, four miles SW of GAZA, at the mouth of the Wadi Ghazzeh, near the seacoast. Excavation has shown the existence of an important town at the site from about the twenty-second to the tenth centuries B.C. This name does not occur in the Bible; the Hebrew has been inferred from the Greek form, Bethaglaim, found in the Onomasticon of Eusebius, and by analogy with EN-EGLAIM. It may refer to a temple of Baal (or Hadad) decorated with twin bullocks (cf. Jeroboam's "two calves of gold," in I Kings 12:28). The modern Arabic name means "mound of the little calf," preserving, as so often, a semblance of the ancient form and/or meaning.

The excavator, Sir Flinders Petrie, identified the site with ancient Gaza, alleging that the location of Gaza later shifted, as often happened (*see* JERICHO for an example of several such shifts). However, B. Maisler (now known as Mazar) and W. F. Albright have strongly denied the excavator's identification, and their claims for Beth-eglaim are now generally accepted, along with the view that the site of Gaza has *not* shifted. *See bibliography.*

The excavations, carried on in four campaigns from 1930 to 1934, were surprisingly fruitful. (A planned fifth campaign did not materialize.) The mound is not high or imposing, but it covers more than twenty-eight acres, being thus about six times the size of ancient Troy, three times the size of David's Jerusalem, twice the size of Megiddo. So abundant was the archaeological material in the small areas excavated that the excavator estimated fifty years would be required to investigate the whole site thoroughly.

From the excavation reports (as corrected by Albright) we see an important point on the trade route from Egypt to the N and the E, the last outpost on the way to Gaza, usually under control of Egypt. The earliest material came from a cemetery of what Petrie called the "Copper Age," but dated by Albright to the Tenth and Eleventh Dynasties (twenty-second to twenty-first centuries). This is the so-called First Intermediate period of Egyptian history, when Egypt was invaded by Asiatic peoples. The subsequently quickened pace of cultural interchange may have influenced the growth of the town.

The most important period began with the coming of the HYKSOS, as was also the case with Tell el-Far'ah, farther up the Wadi Ghazzeh (*see* SHARUHEN). The Hyksos built a great ditch or fosse about twenty feet deep, fifty feet wide, and nearly a mile long around the three unprotected sides of the town—the S was protected by a drop of fifty feet into the Wadi. The dirt from the fosse was thrown around the edge of the enclosed mound to a height of a hundred feet at an angle of thirty-five degrees. This glacis of so-called *terre pisée* is also characteristic of other Hyksos fortifications at various places in Palestine and Syria.

The chief architectural monument of the Hyksos was the so-called Palace I, made of sandstone quarried in the process of cutting the great fosse. The structure covered an area of more than six thousand square feet and had exterior walls more than six feet thick. This structure was destroyed, probably, by the Eighteenth Dynasty Egyptians, who invaded Palestine after expelling the Hyksos from Egypt. Its pottery and artifacts were of Middle Bronze II type (*see* BRONZE; POTTER).

Palace I was followed by Palace II, a very much smaller and more modest structure, built of yellow bricks according to Egyptian principles. Clearly Egypt was in control and Beth-eglaim had become less important, probably being now overshadowed by Gaza. Palace I and Palace II correspond to the two main levels of the town as a whole, which may be labeled, respectively, as Hyksos and post-Hyksos Egyptian. It has been suggested that Palace II was destroyed by Canaanite rebels just before the invasion of Thut-mose III. *See* EGYPT.

Palace III, so called, was not a residence at all, but rather a small Egyptian fortress surrounded by a cluster of houses, a station on the caravan route. This structure had two phases, A and B; it is to be dated in the latter part of the Eighteenth Dynasty (Late Bronze I).

Palace IV, a rebuilding of III B, was of Nineteenth Dynasty date (Late Bronze II). To this time belongs the horse burial interpreted by the excavator as evidence of the sacrificial use of horses. Since the Hyksos held horses in such high regard (and introduced them into Palestine and Egypt), Petrie dated this phase of the excavation to the time of the Hyksos. However, the pottery and stratigraphy are clearly against this dating. If this horse burial was due to Hyksos influence, it was left-over influence, for the Hyksos had disappeared long since. (There are also ass burials to complicate the problem!) Scholars have been too hasty in connecting every trace of horses with the Hyksos.

To this time also belongs the so-called Governor's Tomb, containing a gold ring of Tut-ankh-Amon and a scarab of Ramses II, along with much excellent pottery. Other interesting tombs of this period were found cut into the sides of the great fosse, which had gone out of use as the town became smaller and less important.

Palace V, also a fortress, represents the latest phase of the excavated area, marking the beginning of the Iron Age (*see* IRON [metal]) and the coming of the PHILISTINES. Egyptian influence waned. Gaza became more important, and apparently Beth-eglaim declined. However, in 1879 a large statue of Roman times was found at the site, and the name was known to Eusebius in the fourth century A.D., as noted above.

Bibliography. M. A. Meyer, *History of the City of Gaza* (1907), pp. 152-53, description of the Greco-Roman statue. F. Petrie, *Ancient Gaza*, vols. I-IV, Publications of the Egyptian Research Account and the British School of Archaeology in Egypt, LIII–LVI (1931-34), the original excavation reports. B. Maisler, "Der antike Name von *tel 'addschul*," *ZDVP*, LVI (1933), 186-88, suggested the identification with Beth-eglaim while the excavations were in progress. F. W. Freiherr von Bissing, "Das angebliche Weltreich der Hyksos," *Archiv für Orientforschung*, XI (1936-37), 333-34 and n. 61, warns against making a too easy connection between horses and the Hyksos. W. F. Albright, "The Chronology of a South Palestinian City, Tell el-'Ajjul," *AJSL*, LV (1938), 337-59, presents corrections and reinterpretations necessary for understanding the original excavation reports. W. F. STINESPRING

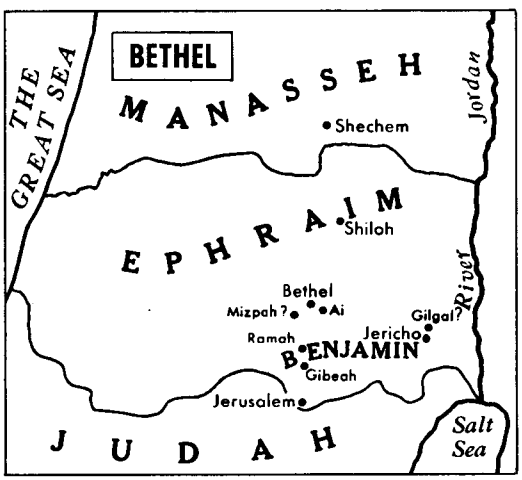
BETH-EKED bĕth ē'kĭd [בית עקד, house of shearing] (II Kings 10:12, 14); KJV SHEARING HOUSE. A place on the road from Jezreel to Samaria. At "Beth-eked of the Shepherds" Jehu met the kinsmen of Ahaziah king of Judah, and he slew them at the pit (rather, perhaps, "cistern") of Beth-eked. The place has been identified with Beit-Qad, three miles N of Jenin, where there are a number of cisterns. W. L. REED

BETHEL bĕth'əl [בית־אל, house of El (God)]. **1.** *See* BETHEL (SANCTUARY).

2. A city in the tribe of Simeon, called "Bethel" in I Sam. 30:27, "Bethul" in Josh. 19:4, and "Bethuel" in I Chr. 4:30. The site of this city is still unknown.

BETHEL (DEITY). A West Semitic deity, originally a deification of the temple of El. The earliest certain occurrence is in the seventh-century-B.C. treaty between Esarhaddon of Assyria and Ba'al of Tyre. It occurs as an element in personal names on Babylonian documents from Nebuchadnezzar to Darius II, such as *Bīt-ili-dalā*, *Bīt-ili-shēzib*, and *Bīt-ili-sharuṣur*. Some Jews of Elephantine (*see* ELEPHANTINE PAPYRI) bore names such as *Bethel-nāthan*, *Bethel-nûrî*, and *Bethel-'āqab*. Also found at Elephantine are the deities Eshem-Bethel, Ḥerem-Bethel, and 'Anat-Bethel. These are to be explained as deities having compound names, or—with W. F. Albright—as hypostatized aspects of Yahweh meaning respectively "Name of the House of God," "Sacredness of the House of God," and "Sign (of the Active Presence) of God" or "Will of God."

The deity possibly occurs twice at Ras Shamra: in a list of deities, and in the personal name *n'bt'il*. In the Phoenician theogony of Philo Byblius, *Baitylos* is a child of *Ouranos* ("Sky") and *Gē* ("Earth"). Thus the deity may have originated in Phoenicia in the second millennium B.C.; some scholars believe, however, that it is Aramean in origin.



In the OT, Bethel as a divine name occurs almost certainly in Jer. 48:13, possibly as a surrogate for Yahweh. Some scholars see the deity also in Gen. 31:13; Amos 5:5; and elsewhere. In Zech. 7:2 we should probably read a personal name, "Bethel-sar-ezer" (cf. Amer. Trans.).

Deity Bethel and the OT," *JAOS*, 59 (1939), 81-98. W. F. Albright, *Archaeology and the Religion of Israel* (1942), pp. 168-74. J. P. HYATT

BETHEL (SANCTUARY). A city located on the main N-S ridge road where the boundaries of Benjamin and Ephraim meet. In Joshua's distribution of tribal allotments the city was credited to Benjamin (Josh. 18:21), but that tribe lost it to the Canaanites in the days of the judges. Ephraim reconquered it and retained possession of it thereafter. To the Canaanites, Bethel was a sanctuary city dedicated to the god El, one of the older major deities of that people. To the Israelites "el" became simply one of several generic terms for God, and the Hebrew identification of this place name has its setting in Jacob's vision at Bethel (Gen. 28:10-22). An earlier name of this city was לוּז, LUZ (Gen. 28:19). Bethel is a site of major importance in the OT, being mentioned more often than any other city except Jerusalem.

a. Identification of the site. The identification of the city was made by Edward Robinson in his valuable geographical work early in the nineteenth century. He recognized Bethel in the Arabic place name Beitin—the last letters of the two words following a normal linguistic pattern. The site has been excavated in part, the work being done by joint expeditions of the American School of Oriental Research and the Pittsburgh-Xenia Theological Seminary with W. F. Albright and J. L. Kelso working in 1934 and Kelso alone in 1954 and again in 1957. The site afforded no military advantages, but the wealth of nearby springs on this high ridge made a city here inevitable. Indeed, cisterns were not needed here before NT times.

b. History of the OT city. The city first appears in the Abraham narratives. Abraham built an altar on the ridge E of Bethel (Gen. 12:8; 13:3-4). This was apparently already holy ground, as testified by tombs in the general neighborhood. The city itself was founded *ca.* 2000 B.C., at least a century before Abraham's time. A city wall on the N, about eleven feet thick and made of well-fitted stones, was faced with a wide clay revetment to keep battering rams away; it was built in the early Hyksos period (*ca.* 1750-1650). In the late Hyksos period (*ca.* 1650-1550) a garrison complex was built just inside this wall near the gate. A city wall found on the W seems to have been even earlier, its gate being replaced by a tower with a Hyksos revetment. Archaeology throws no special light on any details of the Abraham and Jacob narratives at this point, although the narratives fit well into the general picture of the Middle Bronze Age. It is Jacob's experience there that lays special emphasis upon the term "Bethel" (Gen. 28:19; 35:1-7). God speaks of himself as the God of Bethel (Gen. 31:13) and also commands Jacob to return there. While en route, Jacob significantly orders his household to put away all their foreign gods, and at Bethel, Jacob's name is changed to Israel and the Abrahamic covenant is renewed (Gen. 35:10-15). "Israel" and "Bethel" are inseparable terms from that time on.

The story of Joshua's campaign against Ai and Bethel contains several puzzling features: (*a*) "Ai" itself is a puzzling term, as it simply means "the ruins." (*b*) Et-Tell, which is the common identification of Ai, shows no occupation here in the thirteenth century, which is the date of Joshua's conquest. (*c*) At the same time, the destruction of the city of Bethel is not specifically mentioned in the Joshua narrative, although the excavations there show the most terrific burning yet seen in Palestine. It may be that the two names, Bethel-Ai, are blended into a common episode. A second alternative is to locate a nearby ruin which can answer to Ai, but this has not yet been done. A third solution is to assume that the Bethel army moved to Ai and tried to make a preliminary defense there. For the relationship of the Bethel-Ai episode to the entire military campaign of Joshua, *see* JERICHO § 1.

The city which followed the burning of Bethel was of the crudest construction and in striking contrast to the city which preceded it, which represented some of the finest homes in pre-Greek times. The finds in the houses of the two periods are in equal cultural contrast. Indeed, the Israelite invasion brought so significant a cultural change that it marks the transition from Late Bronze Age to Iron I on the archaeologist's calendar. *See* ARCHAEOLOGY § F.

The excavators found that Bethel was destroyed several times in the period of the judges. It is hard, however, definitely to equate these phases with the scanty historical data furnished by the book of Judges. According to our present archaeological knowledge the picture seems about as follows: Bethel was apparently recaptured by the Canaanites early in the period of the judges, after which it was recaptured by the house of Joseph (Judg. 1:22-26). If the attempted extermination of the tribe of Benjamin (Judg. 20) was early in the period of the judges, then the Canaanite reconquest of the city can be easily understood. With Benjamin's power depleted, it was the strong tribe of Ephraim just to the N which reconquered the city; and from that time on, it remained Ephraimite territory (I Chr. 7:28). The road from Jericho to Bethel marked the boundary between these tribes (Josh. 16:1; 18:11-13). At Bethel the road branched, one unit going via Aijalon to the Philistine coast and the other via Gophna to the plain of Sharon.

In the early phase of the judges the ark was located at Bethel (Judg. 20:18-28), although the

name Phinehas for the high priest does not of necessity imply that he was the same high priest identified with the Conquest. The Bethel-Shechem highway of Judg. 21:19 (cf. 20:31) locates Shiloh in terms of Bethel and not vice versa. The removal of the ark to Shiloh is later in the days of the judges. If one of the destructions of Bethel found by the excavators took place when the ark was at Bethel, then this would be a parallel military campaign to the later Philistine attack on Shiloh (at the time of the war in I Sam. 4–6?)—an attempt to destroy Israel's amphictyonic religious center.

Deborah's judgeship with its center "between Ramah and Bethel in the hill country of Ephraim" (Judg. 4:5) seems to come after Bethel's recapture by the Ephraimites. Her judgeship was somewhere *ca.* 1125. Although Bethel is not far from Saul's capital at Gibeah, and one of the Philistine campaigns took place all around Bethel (I Sam. 12–14), the excavators have not yet found any evidence of the capture of the city by the Philistines. Indeed, Bethel seems to have lived a charmed life, not only under the Philistines but for centuries thereafter, even up past the destruction of Jerusalem in 587.

After the fall of Shiloh, Samuel became the key figure of the judges; he worked a circuit of Bethel, Gilgal, and Mizpah (I Sam. 7:16). Bethel, however, soon lost power to Gibeah, Saul's new capital just to the S in Benjamin. Under David and Solomon the city saw still more fatal competition. Although the Bible is silent on the story of Bethel in the days of David and Solomon, archaeologists have found that the city grew and prospered as a result of new farming and commercial techniques introduced by the new dynasty.

It was Jeroboam I who lifted Bethel to new prominence, making it the Northern Kingdom's chief sanctuary and the rival of Judah's Jerusalem (I Kings 12:26-33; II Chr. 13:8-9). Jeroboam's revolt from the Jerusalem sanctuary was complete—new sites, new clergy, new calendar, new cult techniques (golden calves). Theoretically Jeroboam was still worshiping Yahweh, although the episode in I Kings 13:1-10 called down God's wrath on the king. The N sanctuary at Dan never seemed to be the equal of Bethel. Bethel was still the king's sanctuary as late as Amos. Three archaeological campaigns at Bethel have failed to locate the calf sanctuary, but much of the city has not yet been touched. An alternate location for the sanctuary is on a nearby hill to the SE. Here under Mamluk and Crusader remains at Burj Beitin there is a Byzantine church of about the sixth century, identifying Abraham's sanctuary. S of it there is a still earlier Byzantine ruin which is thought to commemorate the site of Jacob's vision.

The attitude of Elijah and Elisha toward this Bethel sanctuary is obscure, although there was a school of the prophets here (II Kings 2:2-3) when Elijah and Elisha were en route to Elijah's translation. On the return trip was the episode of Elisha and the boys who called him "you baldhead" (II Kings 2:23). Even as early as Jeroboam I an "old prophet" dwelt at Bethel (I Kings 13:11).

Upon Abijah's conquest of Bethel (II Chr. 13:19) he did not destroy the city but incorporated it into his own kingdom. We have no specific reference to the king who reconquered it for Israel. Jehu left the city untouched. Apparently Jezebel's influence had been concentrated in the capital at Samaria and had not yet seriously influenced the Bethel sanctuary. Indeed, only a very few female figurines have been dug up from the city. Bethel was the center for the prophetic message of Amos, and he was ordered out of town by the sanctuary's priest Amaziah (Amos 7:12-13).

Although the Bible does not specify the Assyrian destruction of Bethel, commentators have usually assumed that the city suffered the same fate as Samaria. To date, excavators have not found any sign of an Assyrian destruction. Apparently the city was spared for some yet unknown reason. Its fame also seems to have lived on, for a Bethel priest was called in to put down the plague of lions in the province following the Assyrian conquest (II Kings 17:26-28). With the decline of Assyria, Josiah moved N to fill in the political and religious vacuum in the N tribes. His first action was against the Bethel sanctuary, which he annihilated. By his time, however, the sanctuary had increased its Canaanite features by adding an Asherah. He also tried to exterminate her clergy (II Kings 23:15-20). The city, however, was spared. Nebuchadnezzar, like the Assyrians, spared the city, probably because of the Babylonian colonists whom the Assyrians had planted here (II Kings 17:24, 30). The next major world conflict, however, finally brought a tragic destruction to the city, at the hands of either Nabonidus or the Persians. The city came back after the Exile. The excellent water supply made this inevitable. In the census list of Ezra the population is listed as 223 (Ezra 2:28), but that of Nehemiah (7:32) lists only 123.

c. History of Bethel after OT times. The Hellenistic period showed rapid and solid growth. Bacchides fortified the city (I Macc. 9:50), and a ruin on the ridge to the E shows shards of that date. The city continued to grow under the Maccabees, and there is no archaeological evidence of destruction in 63 B.C. when the Romans took over Palestine.

The NT makes no reference to Bethel, although the city was larger in extent at that time than in OT days. The S wall of this period enclosed within the city area the best spring on the site. It was the last city captured by Vespasian before he became emperor of Rome. He put a Roman garrison here. (Jos. War IV.ix.9). Vespasian was probably responsible for the destruction of the N gate as revealed by the excavations. This gate was then filled in. In the Second Jewish Revolt, Hadrian also placed a garrison here (Midrash *Ekha* II.3). The Roman city grew so extensively that cisterns had to be used.

The city reached its population climax in the Byzantine period. The best Byzantine street and gateway in Palestine still show plainly at the NE corner of the present village. The town's mosque is built over a Byzantine church, so excavations cannot be carried on there, but some digging to the E unearthed a large building which may be a monastery. Nearby Byzantine churches commemorating the experiences of Abraham and Jacob have already been referred to. No signs of destruction or other clues have yet been found which can account for the city's

sudden death at just about the transition from the Byzantine period into the Arabic. The site lay in ruins until a little over a hundred years ago, when it was reoccupied by Arabs moving in from nearby Burka.

Bibliography. G. Sternberg, *ZDPV,* XXXVIII (1915), 1-40. W. F. Albright, *BASOR,* no. 55, pp. 24-25; no. 56, pp. 1-15. J. L. Kelso, *BASOR,* no. 137, pp. 5-9; no. 151, pp. 3-8.

J. L. KELSO

BETH-EMEK bĕth ē′mĭk [בית העמק, house of the valley] (Josh. 19:27). A border town in Asher. It is probably at Tell Mimas, *ca.* six miles E-NE of Acco.

BETHER bē′thər [בתר, *a contraction of* בית הר, house (shrine) of the mountain(?); LXX(A) βαιθής; Talmud ביתר]. A town in the Bethlehem district of Judah (Josh. 15:59 LXX; omitted by scribal error from the MT). The reference in Song of S. 2:17 KJV (RSV "rugged") may have some descriptive significance at present undetermined. The archaeological survey of Bether (Khirbet el-Yehud, just above modern Bittir, seven miles SW of Jerusalem) indicates almost continuous occupation from Early Iron I to the early Roman period.

Bether is best known as Bar Cocheba's capital after his designation by Akiba as a messiah in A.D. 132 (with attendant change of name from Simon bar-Kozeba to Bar Cocheba, "son of the star [of Jacob]"). Located atop an easily defended hill, Bether was the last Jewish stronghold to fall in 135. Its fall was accompanied by a massacre; according to Jerome, those not killed were sold as slaves by the victorious Romans. A Latin inscription on the site mentions the Roman Fifth (Macedonia) and Eleventh (Claudia) legions, known from other sources to have been in the region during the Second Revolt.

Bibliography. W. D. Carroll, "Bittîr and Its Archaeological Remains," *AASOR,* V (1924-25), 77-104.

V. R. GOLD

BETHESDA bə thĕz′də. KJV translation of Βηθεσδά in John 5:2 (from A C Π, etc.). A stronger MS testimony (א L 33, Euseb. Onom., etc.) favors Βηθζαθά as the original form (RSV BETH-ZATHA).

Bibliography. J. Jeremias, *Die Wiederentdeckung von Bethesda* (1949).

K. W. CLARK

BETH-EZEL bĕth ē′zəl [בית האצל, house, (shrine) of the noble(?)]. A place in S Judah mentioned among the wordplays of Micah (1:11); usually identified with modern Deir el-'Asal, two miles E of Debir (Tell Beit Mirsim).

BETH-GADER bĕth gā′dər [בית גדר, house (shrine) of the wall(?)] (I Chr. 2:51). A village in N(?) Judah; the location is unknown. It may be the same as GEDER.

BETH-GAMUL bĕth gā′məl [בית גמול, house of recompense] (Jer. 48:23). A town in the Moabite tableland; probably modern Khirbet el-Jemeil, the center of an area once intensively cultivated, *ca.* eight miles E of Dibon.

Bibliography. N. Glueck, *Explorations in Eastern Palestine,* I, *AASOR,* XIV (1933-34), 36-37.

E. D. GROHMAN

BETH-GILGAL bĕth gĭl′găl [בית הגלגל] (Neh. 12:29); KJV HOUSE OF GILGAL. A place the exact site of which is unknown, though it is sometimes identified with Gilgal near Jericho, sometimes also with the Gilgal of Josh. 15:7. *See* GILGAL 1-2.

***BETH-HACCHEREM** bĕth′hă kĭr′əm, —hăk′ə rĕm [בית הכרם, house (shrine) of the vineyard]; KJV BETH-HACCEREM —hăk′sə rĕm. A village of Judah mentioned in Jer. 6:1 as a fire signal point and in Neh. 3:14 as chief city of a district; identified with modern Ramet Rahel, 2.1 miles S of Jerusalem; probably also identical with KAREM.

Bibliography. Y. Aharoni, "Excavations at Ramet Raḥel, 1954," *IEJ,* 6 (1956), 102-11, 137-57.

V. R. GOLD

BETH-HAGGAN bĕth hăg′ən [בית הגן, the garden house] (II Kings 9:27); KJV GARDEN HOUSE. A town toward which Ahaziah fled in an attempt to escape Jehu. It is to be identified with EN-GANNIM 2 (Josh. 19:21; 21:29) and with the modern Jenin.

W. L. REED

BETH-HARAM bĕth hâr′əm [בית הרם] (Josh. 13:27); KJV BETH-ARAM —âr′əm. Alternately: BETH-HARAN —hâr′ən [בית הרן] (Num. 32:36). A fortified city of Gad, located S of Beth-nimrah in the Plains of Moab along the Jordan Valley. It was strengthened by the Gadites to serve as a place of security for their wives and children while they crossed the Jordan to aid in the conquest of W Canaan, so it must have been a place of unusual strength. Since Beth-nimrah is Tell el-Bleibil, Beth-haram is evidently Tell Iktanu, on the S side of the Wadi er-Rameh (Wadi Hesban), an imposing site which dominates the surrounding plain and contains sherds ranging from the Chalcolithic period to Iron Age II, before and during the Israelite settlement.

Bibliography. N. Glueck, *Explorations in Eastern Palestine,* IV, *AASOR,* vols. XXV-XXVIII (1951), pt. 1, pp. 389-95.

S. COHEN

BETH-HOGLAH bĕth hŏg′lə [בית חגלה, house of the partridge]; KJV BETH-HOGLA in Josh. 15:6. A town of Benjamin, located on its S border a little W of Jericho. The site is either 'Ain Hajla or Qasr Hajla. A mistake on the part of the church fathers, followed by the Medeba Map, identified Beth-hoglah with the threshing floor of ATAD, the place of the mourning for Jacob (Gen. 50:10).

S. COHEN

BETH-HORON bĕth hôr′ən [בית חרון; Βαιθωρων]; KJV Apoc. BETH-ORON —ôr′ən. The name of two adjacent towns of strategic importance, Upper and Lower Beth-horon, located on the road from Gibeon to the Valley of Aijalon and the Shephelah.

The etymology of the name is uncertain; the most common one, "place of caves," has been proposed because of the presence of caves in the area and the similarity of "Horon" to the Hebrew word for "cave" (חר, *ḥor*). Another theory is that the place was an old Canaanite shrine where a god by the name of Hauron was worshiped; his name is known from Egyptian and Ugaritic texts.

Upper Beth-horon is *ca.* five miles NW of Gibeon

and *ca.* 1,750 feet above sea level; Lower Beth-horon is *ca.* two miles away, toward the Mediterranean, and *ca.* 700 feet lower. The ancient names are preserved in modern Beit 'Ur el-Foqa ("the upper") and Beit 'Ur et-Tahta ("the lower"). Visitors to the sites have reported various types of sherds whose dates would indicate a long history for Beth-horon. Traces of stone walls and rocky terraces at lower Beth-horon may go back to pre-Christian times.

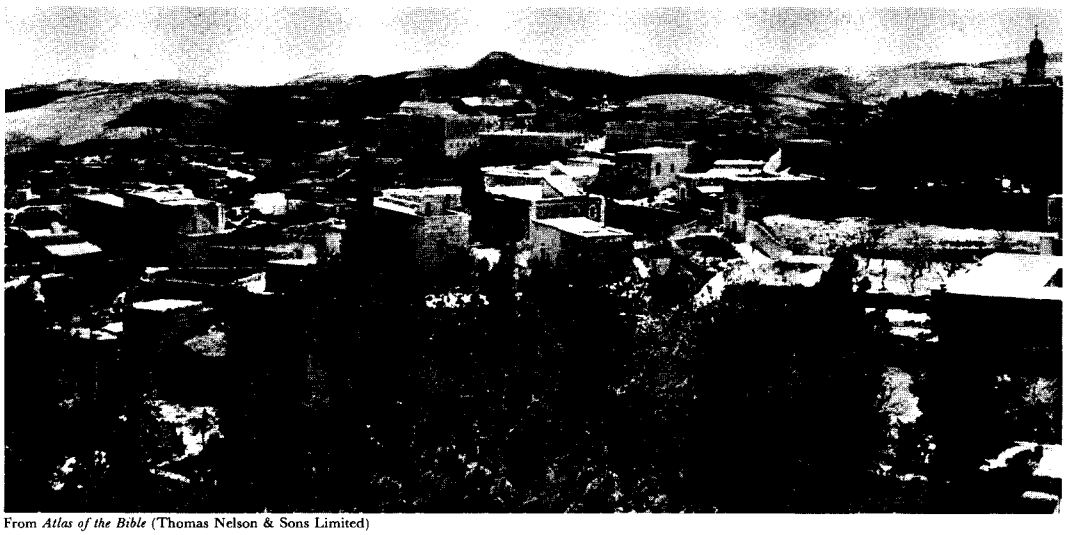
Beth-horon was frequently the scene of military conflicts, beginning in the time of Joshua. It is included among the LEVITICAL CITIES in Josh. 21:22; I Chr. 6:68—H 6:53. An ancestress of Joshua was the builder of both Lower and Upper Beth-horon (I Chr. 7:24). In Joshua's battle with the five kings (Josh. 10:10-11) hailstones caused a great destruction of the enemy at the "ascent of Beth-horon." Lower Beth-horon is said to be on the border of the descendants of Joseph (16:3)—i.e., the S border of Ephraim, which adjoined the territory of Benjamin (18:13-14). Upper Beth-horon was also on the S border of the territory of the Ephraimites (16:5). In the time of Saul the place was raided by a company of Philistines (I Sam. 13:18). Solomon caused it to be rebuilt following an Egyptian raid (I Kings 9:17 mentions only Lower Beth-horon; II Chr. 8:5 refers to Upper and Lower Beth-horon). In the time of Amaziah king of Judah, Beth-horon was the scene of an attack by Ephraimites who were displeased by his treatment of them (II Chr. 25:13).

A king of Beth-horon in the time of Jacob is mentioned in Jub. 34:4. It was among the villages held by the Jews against Holofernes (Jth. 4:4). During the Maccabean Wars, Beth-horon was the scene of two victories under the leadership of Judas (I Macc. 3:16, 24; 7:39), and it was fortified by Bacchides after a battle with Jonathan (I Macc. 9:50; Jos. Antiq. XIII.i.3). W. L. REED

BETH-JESHIMOTH bĕth jĕsh'ə mŏth [בית הישימות, בית הישימת, house of wastes]; KJV BETH-JESIMOTH—jĕs'ə mŏth in Num. 33:49. A town in the Plains of Moab, the S limit of Israel's encampment (Num. 33:49). It was assigned to the Reubenites (Josh. 13:20), but was later in Moabite possession (Ezek. 25:9). It is probably modern Tell el-'Azeimeh, *ca.* twelve miles SE of Jericho (Josh. 12:3).

Bibliography. N. Glueck, "Some Ancient Towns in the Plains of Moab," *BASOR*, no. 91 (1943), pp. 7-26, especially pp. 23-25. E. D. GROHMAN

BETH-LE-APHRAH bĕth'lĭ ăf'rə [בית לעפרה, house of dust] (Mic. 1:10); KJV HOUSE OF APHRAH. An unidentified city. Parallelism with Gath suggests a Philistine city, although an allusion to Ophrah or Bethel may be intended. A play on words is evident in the phrase



> In Beth-le-aphrah
> roll yourselves in the dust
> (עפר, *'āphār*).

W. L. REED

BETH-LEBAOTH bĕth'lĭ bā'ŏth [בית לבאות, place of lions] (Josh. 19:6). Alternately: LEBAOTH [לבאות] (Josh. 15:32). A city of Simeon in the S part of Judah; same as Beth-biri (I Chr. 4:31). The site is unknown, but it was evidently located near SHARUHEN. S. COHEN

***BETHLEHEM** bĕth'lĭ hĕm [בית לחם, house (place) of bread *or* food(?), *or* house (place) of fighting(?), *or* house of (the god) Laḥamu(?); Βηθλέεμ]; BETHLEHEMITE —īt; KJV Apoc. BETH-LOMON bĕth-lō'mən. **1.** A town in Judah; the home of David and the birthplace of Jesus; sometimes referred to in the KJV as Bethlehem-judah (Judg. 17:7-9; 19:1-2, 18; Ruth 1:1-2; I Sam. 17:12) to distinguish it from the town of the same name in Zebulun (*see* 2 *below*). It is located *ca.* six miles S-SW of Jerusalem near the chief N-S route linking Jerusalem with Hebron and the Negeb. Figs. BET 30-31.

The first historical mention of Bethlehem is found

From *Atlas of the Bible* (Thomas Nelson & Sons Limited)

30. Bethlehem. Between the bell towers in the center is the site of the basilica built by Constantine *ca.* A.D. 325 (but no longer there)

From *Atlas of the Bible* (Thomas Nelson & Sons Limited)

31. Bethlehem as viewed from the S

in one of the Amarna letters of the early fourteenth century B.C. in which 'Abdu-Heba, prince of Jerusalem, complains that *Bit-Lahmi* has gone over to the 'Apiru. In Gen. 35:19, the parenthetical phrase "(that is, Bethlehem)" following Ephrath is generally regarded as a gloss, since elsewhere (I Sam. 10:2) Rachel's tomb is located in Benjamin, not far from Ramah. Bethlehem was the home of the Levite who became the priest of Micah and later of the Danites (Judg. 17–18), and of the Ephraimite Levite's concubine whose death precipitated a war between Israel and Benjamin (ch. 19). Bethlehem was also the setting for most of the book of Ruth (Ruth 1:1-2, 19, 22; 2:4; 4:11). Its prominence in the OT, however, largely rests on its associations with David. It was his home (I Sam. 17:12, 15; 20:6, 28), the scene of his anointment by Samuel (16:1-13), the site of a Philistine garrison (II Sam. 23:14-16; I Chr. 11:16-18), and the home of Elhanan (II Sam. 23:24; I Chr. 11:26) and the burial place of Asahel (II Sam. 2:32). During the late tenth century the town was fortified by Rehoboam (II Chr. 11:6). Following the murder of Gedaliah, the fleeing Israelites stopped near Bethlehem en route to Egypt (Jer. 41:17). Its leading citizens participated in the Exile, and Ezra (2:21) and Nehemiah (7:26) record more than one hundred male Bethlehemite returnees (cf. I Esd. 5:17). It is also mentioned in Micah (5:2—H 5:1) as the home of the messianic ruler.

Bethlehem is best known as the birthplace of Jesus (Matt. 2:1-16; Luke 2:4-15; John 7:42). The site was venerated by early Christians, although no remains of the first three centuries A.D. have been found. The tradition that Jesus was born in a cave dates back to at least the middle of the second century, when it was mentioned by Justin Martyr. In 325, Constantine erected a basilica with an octagonal chapel over a series of caves. After this building was destroyed, Justinian I (527-65) built a new and larger church, extensively altering the plan. Further modifications were made in the Middle Ages, but the present structure is basically the one built by Justinian.

2. A town in the territory of Zebulun (Josh. 19:15); the home and burial place of Ibzan, one of the judges of Israel (Judg. 12:8, 10). It is generally identified with Beit Lahm, a town located approximately seven miles W-NW of Nazareth.

BETH-MAACAH bĕth mā'ə kə [בית מעכה, house of Maacah]. A clan, dynastic, or territorial name (II Sam. 20:14-15), which later became part of the town name Abel. *See* Abel-beth-maacah.

BETH-MARCABOTH bĕth mär'kə bŏth [בית המרכבות, בית מרכבות, place of chariots] (Josh. 19:5; I Chr. 4:31). A city of Simeon near Ziklag. As its name indicates, it was a place for the manufacture and storage of chariots, and, like the nearby Hazar-susah, was connected with Solomon's trade in munitions of war (I Kings 9:19; 10:29). Its older name may have been Madmannah. *See also* Solomon § 5. S. Cohen

BETH-MEON bĕth mē'ŏn [בית מעון, *apparently* house of habitation] (Jer. 48:23). A town in the tableland of Moab; more commonly called Baal-meon.

BETH-MILLO bĕth mĭl′ō [בית מלוא] (Judg. 9:6, 20); KJV MILLO. A quarter in the city of Shechem. *See* MILLO 2.

BETH-NIMRAH bĕth nĭm′rə [בית נמרה, place of the leopard]; NIMRAH [נמרה] (Num. 32:3). A city in the Plains of Moab along the Jordan Valley, fortified by the Gadites (Num. 32:36; Josh. 13:27). The name is preserved in Tell Nimrin on the S side of the Wadi Nimrin (*see* NIMRIM, THE WATERS OF); but as this site was not settled before the Roman period, Beth-nimrah must be located at the nearby Tell Bleibil on the N side of the Wadi Sha'ib, which was occupied all through the Israelite period and then abandoned.

Bibliography. W. F. Albright, *AASOR,* VI (1924-25), 48; N. Glueck, *AASOR,* vols. XXV–XXVIII (1951), pt. 1, pp. 367-71. S. COHEN

BETH-ORON. KJV Apoc. form of BETH-HORON.

BETH-PAZZEZ bĕth păz′ĭz [בית פצץ] (Josh. 19:21). A border town in Issachar. It was located in the vicinity of En-haddah and Mount Tabor.

BETH-PELET bĕth pē′lĭt [בית פלט, place of refuge]; KJV BETH-PALET —pā′lĭt; BETH-PHELET —fē′lĭt. A city of S Judah near Beer-sheba (Josh. 15: 27). It was one of the cities rebuilt by the Judeans after their return from the Babylonian exile (Neh. 11:26). Flinders Petrie believed that he had found its site at Tell el-Far'ah, eighteen miles S of Gaza, which he excavated in 1928. However, the resemblance between the names is slight, and *far'ah* is an Arabic word meaning "ridge"; Tell el-Far'ah is rather to be identified with Sharuhen, and the site of Beth-pelet remains unknown. S. COHEN

BETH-PEOR bĕth pē′ôr [בית פעור, house of Peor]. A city of Moab, allotted to the tribe of Reuben (Josh. 13:20). The Israelites encamped "in the valley opposite Beth-peor" (Deut. 3:29; 4:46). This was probably their encampment while fighting against Sihon and Og (cf. Num. 21:20; 33:47-49), in the mountains of ABARIM. It was here "in the valley in the land of Moab opposite Beth-peor" (Deut. 34:6) that Moses was buried after he had seen all the land from Mount Nebo. Eusebius says that Beth-peor lay six miles from Livias (*see* BETH-HARAM) on the way to Heshbon. This would be three or four miles NW of Mount Nebo, but the identification is not certain.

See also BAAL-PEOR; PEOR. E. D. GROHMAN

BETHPHAGE bĕth′fə jĭ [Βηθφαγή; Aram. בית־פגי, house of unripe figs; *some MSS* Βηθσφαγή; Talmud בית־פאגי]. A village near Jerusalem and Bethany, and probably E of the latter. The name refers to a species of late-season figs which never appear ripe, even when they are edible; they are ascribed to both Bethphage and Bethany. Fig. JUD 32.

Bethphage is mentioned only in the story of the "triumphal entry" (Mark 11:1; Matt. 21:1; Luke 19:29). In Mark and Luke it is joined with BETHANY and is named first. This suggests that as Jesus approached from the E, he came first to Bethphage, and that Bethany lies a little nearer Jerusalem. Today Bethphage is by many identified with the Moslem village of Abu Dis, which is situated SE of Bethany and lower on the SE slope of the Mount of Olives, separated from Bethany by a deep ravine. While this must be close to the true location, there is nothing about the modern village of Abu Dis to remind one of ancient Bethphage except the "Stone of Meeting" within the Greek church, believed to mark the spot where Martha met Jesus.

The gospels relate that in this vicinity Jesus sent ahead to the village two disciples to procure a young ass upon which to make the ascent of the Mount of Olives. Origen (third century) reflects these traditions when he calls Bethphage the house of triumph, of the meeting, of the mounting of the ass.

Medieval pilgrims (at least since the twelfth century) located Bethphage between Bethany and the summit of the Mount of Olives, although no evidence of an ancient village has been found in the area. The modern pilgrimages by monastic orders in Jerusalem recognize this westerly site.

Origen describes Bethphage also as the "house of the ravine" where priests dwell near the Mount of Olives (*see* NOB). This recalls the Talmudic idea (second-third century) of Bethphage as (literally or figuratively) a walled town which by a legal fiction was an extension of the holy city. It thus marked the farthest limit of Greater Jerusalem, for ritual purposes, and only from beyond it might one make a true pilgrimage to Jerusalem.

BETH-RAPHA bĕth rā′fə [בית רפא, house of a giant(?) *or* of Rapha(?)] (I Chr. 4:12). A name listed in the genealogy of Judah as a son of Eshton. Either a clan or a place name in Judah is suggested, but neither can be identified at present.

W. H. MORTON

BETH-REHOB bĕth rē′hŏb [בית רחוב]; REHOB [רחוב] (Num. 13:21). A town marking the N limits of Canaan (Num. 13:21) in the vicinity of LAISH; DAN, according to Judg. 18:28. During the reign of David, it was one of the Aramean strongholds that sent forces to aid Ammon (II Sam. 10:6). It is probably to be identified with the Rehob (no. 87) of the Thut-mose III list. The exact location of the site is unknown; archaeological surface exploration does not support identification with Banyas.

BETHSABEE bĕth sā′bə ē. Douay Version form of BATHSHEBA.

BETH-SAIDA bĕth sā′ə də [Βηθσαϊδά; Aram. בית ציידא, house of the fisher, *or* house of the hunter (*former preferable, because of its position; see below*)]. A city (πόλις; Luke 9:10; John 1:44; but cf. κώμη, "village," in D's version; so also Mark 8:26) mentioned

several times in the NT in connection with the ministry of Jesus.

The position of Beth-saida on the shore of Lake Gennesaret can be inferred from Mark 6:45; Jesus and the disciples took ship from the (unidentified) location of the multiplication of loaves and fishes (according to Luke 9:10, this event occurred in Beth-saida or a deserted place belonging to it). The villages in the territory of CAESAREA PHILIPPI could be reached from it (Mark 8:22). These data seem to correspond to the village of the same name, placed near the lake, which the tetrarch Herod Philip raised to the status of a city, because of its numerous inhabitants, and named Julias in honor of Julia the daughter of Augustus (Jos. Antiq. XVIII.ii.2; as Julia was banished in 2 B.C., the foundation must have been made before that date). Philip died there and was buried in a sepulchre prepared in advance (Antiq. XVIII.iv.6). According to Josephus (War II.ix.1), this Julias was situated in Lower Gaulanitis (*see* GAULANITIS). Subsequently Julias marked the westernmost point of the kingdom of Agrippa II (Jos. War III. iii.5). The Jordan entered the lake below this town (War III.x.7); a furlong away (Jos. Life 72); it could be reached by ship from Tarichaeol (Life 73); the mountains beyond the Jordan began there (War IV. viii.2).

On these data Bethsaida-Julias has been identified with a double site, situated E of the Jordan, near its entry into the Sea of Galilee. The site called et-Tell, situated two miles from the sea and *ca.* 295 feet above its level, has been identified with the city of Julias, while the remains called el-'Araj on the shore of the lake are understood as marking the fisher's settlement of Beth-saida. Traces of an aqueduct and a Roman road leading uphill join the two sites. El-'Araj has a natural harbor, used till recent times by the fishermen of Tiberias. At et-Tell remains of a town wall, well-cut stones, and an ancient mosaic have been noticed; a strong spring rises in the vicinity.

Beth-saida is called (John 1:44; 12:21) the city of origin of the apostles Philip, Andrew, and his brother Peter (the latter, however, lived in Capernaum, where he had a house; cf. Matt. 8:14). Yet, although it furnished a quarter of the number of apostles, Jesus' ministry seems to have failed there, wherefore it is included in the imprecation: "Woe to you, Chorazin! woe to you, Beth-saida!" (Matt. 11:21; Luke 10:13).

Some confusion has been created by the passage in John 12:21, in which Philip is called "from Beth-saida of Galilee," as, according to Josephus and most other sources, the Jordan formed the boundary of Galilee on the E, and Beth-saida-Julias was beyond it. In order to explain this inconsistency, some scholars have sought to extend Galilee beyond the Jordan, while others have assumed the existence of another Beth-saida. We need not, however, assume a complete geographical exactitude for this verse; the same assumption concerning Julias occurs in Ptolemy's *Geography* (V.16.4).

Another source of confusion has been the calling of the pool of Bethesda (KJV) in Jerusalem (John 5:2) "Beth-saida" in some MSS (B Ψ W); but here the RSV carries the translation as "Beth-zatha."

On the other hand, the healing of the blind man, situated at Beth-saida (Mark 8:22, where the MSS D Λ read "Bethany"), belongs in its proper context to the city on the Sea of Galilee.

BETHSAMOS. KJV form of BETHASMOTH. *See also* AZMAVETH 5.

***BETH-SHAN** bĕth'shăn, bĕth shăn' [בית שן] (I Sam. 31:10, 12; II Sam. 21:12); BETH-SHEAN —shē'ən [בית שאן] (Josh. 17:11, 16; Judg. 1:27; I Kings 4:12; etc.); BETHSHAN [Βαιθσάν] (I Macc. 5:52; cf. LXX, Josephus, etc.); KJV BETHSAN bĕth'săn, bĕth săn'. Apoc. alternately: SCYTHOPOLIS sĭth ŏp'ə lĭs [Σκυθῶν Πόλις; *cf.* Σκυθόπολις *in* Pliny, Josephus, Eusebius, *etc.*]. A city at the intersection of the valleys of Jezreel and the Jordan.

1. Name and identification
2. The site and its exploration
3. Prehistory
4. History
Bibliography

1. Name and identification. The name of Beth-shan occurs, with slight linguistic variations, in ancient Egyptian, Akkadian, and Hebrew texts from the fifteenth century B.C. onward. In the OT both *Byt-šn* and *Byt-š'n* are written. Egyptian texts show numerous variations, the first element appearing as either *Bt* or *Bit,* and the second as *šl, sil,* or *šn,* the

"l" sound being rendered either by *r* or by *nr*. Hieroglyphic renderings as a whole favor an "l" sound at the end of the name; some of them denote the final element as a "foreign deity" by including the "inverted legs" sign as a determinative. In Akkadian, *Bît-sâni* appears in one letter from TELL EL-AMARNA (no. 289). All the above variants are philologically interlinked and assuredly refer to the same place. We may call this by its shortest form, Beth-shan.

Where was Beth-shan? In Judg. 1:27 it is counted with Taanach, Dor, Ibleam, and Megiddo as one of the cities of Manasseh. In Josh. 17:16 it lies in the plain and is named in close sequence with the Valley of Jezreel. In I Sam. 31:10 it is a town of the Philistines near Mount Gilboa. And in the Egyptian didactic composition preserved in the Papyrus Anastasi I it occurs in a sentence which reads: "Tell me about Rehob; explain Beth-shan, Tirqa-el, and how the stream of Jordan is crossed." All these contexts point to a location at the E end of the Valley

32. Tell el-Husn, with the valley of the River Jalud to the left

of Jezreel. Just there stands the imposing ancient mound of Tell el-Husn (Fig. BET 32); and in Tell el-Husn the name of Beth-shan has been found inscribed on no fewer than two Egyptian texts: the first a dedication to a god Mekal,* called Lord of Beth-shan; the other inscribed on a royal stela of Seti I commemorating a victorious reinforcement of the town of Beth-shan. On any natural interpretation this would have been set up in Beth-shan itself. Its identity with Tell el-Husn is thus doubly established. From the ancient city the neighboring Arab town of Beisan inherited its name (already so written in the Mishna). Fig. HIG 22.

2. The site and its exploration. Beth-shan lies well in the trough of the Jordan Valley, five hundred feet and more below sea level, on the S bank of the perennial River Jalud. Beside it passed the easiest route by which the traveler from Egypt turning inland might join the great valley or desert routes which linked Damascus and Arabia. Thus the city had strategic importance. But it possessed, too, the natural resources most prized by ancient man: cultivable soil, perennial water, and a subtropical climate. Excavations by the University of Pennsylvania, directed successively by Clarence S. Fisher, Alan Rowe, and G. W. FitzGerald, between the years 1921 and 1933, have thrown light on the history of the town, which supplements and extends what is known from ancient sources.

3. Prehistory. Although conditions must have favored settlement in the earliest times, the site does not seem to have been occupied before the later Chalcolithic period, a few centuries before 3000 B.C. The inhabitants then lived in rough shelters partly dug in the ground and roofed over with light, perishable materials, probably reeds and mud. They used rough, handmade pottery, and flint tools. Before long they were improving their homes by making small, bun-shaped mud bricks to form solid bases to the low sides of their huts.

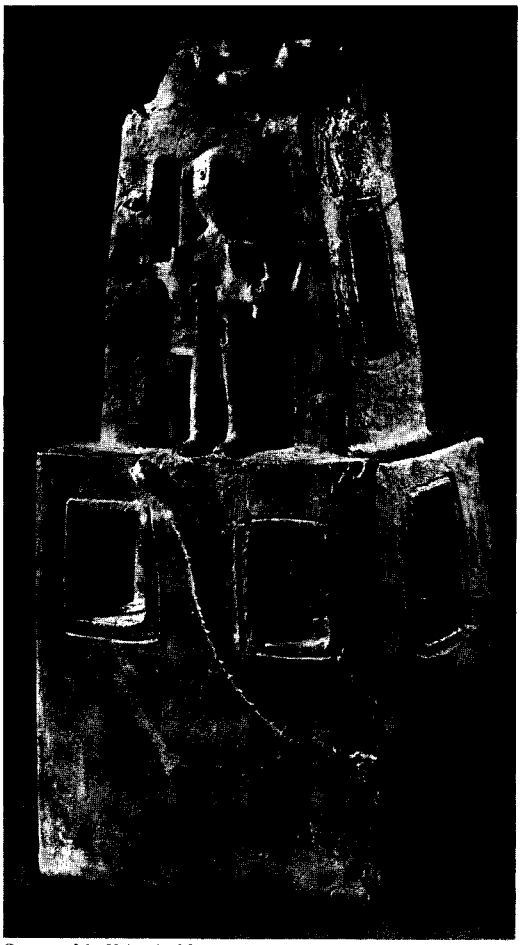
Of this society, during the first millennium and a half of its existence, little can be said; for the Early and Middle Bronze Age levels of the stratified mound were examined only in a restricted area. However, one significant fact emerged: the town was never defended with a wall. An unwarlike population must have accepted without resistance the waves of nomadic intruders from the E, who persistently invaded the lands of the Fertile Crescent. We may picture them through these centuries, with the slothful temperament induced by burning summers, quietly developing the arts of agriculture, cultivating their date palms and vines, and practicing without ambition the humble crafts of weaving, basketry, and pottery.

4. History. Beth-shan first emerges in history as one of the towns in Upper Retenu of which Thutmose III took possession after the battle at Megiddo (*ca.* 1468 B.C.).

This was the beginning of three centuries of close dependence on Egypt, entailing probably the posting of an Egyptian garrison or resident in the city. A letter to Amen-hotep from Abdu-Heba of Jerusalem (*EA* 289; *ANET* 489) reports that "men of Gath-carmel are as a garrison in Beth-shan" and

Courtesy of the University Museum of the University of Pennsylvania

33. Top part of stele of Seti I, dated the first year of his reign



makes them sound like intruders; but their leader Tagi was friendly to Egypt, and scholars have pictured the men of Gath-carmel as a contingent of mercenaries, perhaps Shardana or the like, posted to defend the city, and historically the importers of exotic burial furniture to be noted below.

So long as Egypt controlled the cities of Syria, Beth-shan was a vital base for protecting her communications with the N. No fewer than thirteen inscribed hieroglyphic monuments or carved reliefs in Egyptian style survive to show its importance. They include two monumental inscribed stelae of Seti I (1313-1292),* a stele of Ramses II (1292-1225), and a seated statue of Ramses III (1198-1167). These span the final period of Egyptian dominance in Beth-shan. The statue of Ramses III may well have been set up to commemorate the Pharaoh's second defeat of the "Sea Peoples" in Galilee *ca.* 1187 B.C. Of the two stelae of Seti I one, dated to the first year (Fig. BET 33), relates that the princelings of Hamath (on map, Hammat, Tell el-Hammeh) and Pahel (Pella) had raised a force to attack Beth-shan and Rehob (Tell es-Sarim), both loyal to Pharaoh. The king sent the first army of Amon, "Powerful Bows," to Hamath; the first army of Re, "Many Braves," to Beth-shan; and the first army of Sutekh, "Strong Bows," to Yano'am (Tell en-Na'am). "And in one day they were overthrown." In the second stele, undated, it was the '*Apiru* (a word most scholars would now identify with "Hebrews") of the mountain of Yarmuth and the people of Tirqa-el who were attacking the people of Raham (both places unidentified). A force of chariots and infantry, detached from the main army, defeated the enemy in two days and rejoined the king at Yano'am. Beth-shan received stelae to commemorate both victories. Fig. INS 9.

There is only vague evidence that the summit of the city mound was protected, from about the time of Amen-hotep III, with a brick wall, and that this was pierced by a city gate partly of stone construction. Rowe also found the base of what he described as a *migdôl,* or fortress tower, of the same period. In the same level was discovered a bronze shaft-hole axe with the "forked-lightning" points, behind the socket, which are a feature of the weapon in the hand of the famous warrior relief at Boghazköy.

As its name implies, Beth-shan was the seat of a deity whose nature the word *she'ān* should reveal. Noth suggested an affinity with the Semitic root *n-ḥ-sh,* meaning "serpent," or to the name of a Sumerian snake-deity *shakhan.* Albright compares with *she'ôl,* but reserves judgment. The discovery of clay figurines of snakes with female breasts, and of pottery shrines with plastic snakes attached to them,* is not enough to recommend the philologically precarious theory of a serpent-god; and most scholars have been content to leave the eponymous god of Beth-shan undefined. Fig. BET 34.

Digging in the S flank of the mound, the Pennsylvania expedition unearthed a succession of buildings which appeared to have been temples. The earliest and the latest, dated by Rowe respectively to Thutmose III * and Ramses III,* each comprised two adjacent shrines, apparently dedicated to a god and his consort. The two best-preserved architecturally,

Courtesy of the University Museum of the University of Pennsylvania

34. A pottery model shrine from Beth-shan with a rounded top which possibly was used as a support for an incense bowl

attributed to Amen-hotep III and Seti I, had antechambers or forecourts roofed on pairs of wooden columns with stone pedestals. Each temple contained an inner sanctum reached from the antechamber by a flight of steps. The antechambers were furnished

Courtesy of the Palestine Archaeological Museum, Jerusalem, Jordan

35. General view of the Mekal temple at Beth-shan; sacred pillar or *massebah* encircled

with side benches and offering tables; and the inner sanctums had built tables against the back wall for their cult objects. The latest shrine remained in use until *ca.* 1000 B.C. It could have been the "temple of Ashtaroth" of I Sam. 31:10. Figs. BET 35; TEM 47-48.

Courtesy of the University Museum of the University of Pennsylvania

36. Stele of "Mekal the lord of Beth-shan," from the earliest Late Bronze Age temple at Beth-shan

Whatever their nature, the chief deities of Beth-shan were represented during the Egyptian period in human form. The first among them, on present evidence, was the baal named Mekal, whose effigy appears on a votive stele found lying on a platform in the earliest of the shrines (Fig. BET 36). The god is bearded, wears a high conical hat with a tasseled streamer, and with a pair of small horns tied on by a long ribbon knotted and hanging down behind. He holds an *ankh* in his right hand and a *was* scepter in his left, and receives two worshipers standing before him. In a lower register, which is damaged, are the remains of a female deity seated before an offering table; presumably she is the consort of the god. The words "Mekal, the great god, lord of Beth-shan," are written in hieroglyphics above the male figure in the upper register. Two other goddesses of Beth-shan are represented in human form. One of them, wearing a high plumed crown, is identified by an inscription as 'Antit ('Anat); she holds an *ankh* and a *was* scepter. The other, in a long, diaphanous robe, wears a similar composite crown with a long pendant ribbon above a pair of sheep's horns. She resembles 'Anat closely, but might be called a horned 'Ashtart or Ashtaroth, as Rowe suggests. She was found in the main sanctum of the Amenophis III temple. Fig. ASH 91.

Courtesy of the University Museum of the University of Pennsylvania

37. Battle between the temple-guardian, in the form of a dog, and Nergal, represented by a lion; from a basalt panel of the Mekal temple at Beth-shan

The finest of the religious monuments of Beth-shan was a basalt relief, three feet high, which was found in the Mekal temple (Fig. BET 37). In two registers it shows a rampant lion and a dog in conflict, and a lion assailed by a dog. Presumably apotropaic in purpose, it is one of few extant examples of native Canaanite sculpture.

The Israelite tribe of Manasseh failed to drive out the inhabitants of Beth-shan and its villages (Judg. 1:27); for the Canaanites had chariots of iron (Josh. 17). This probably explains why excavations have revealed no violent destruction at Beth-shan between the Bronze Age and the Iron Age. The Canaanites were those whom Ramses III had rewarded with a statue; perhaps the chariots were his. That they were not pure Canaanites is suggested by the presence, among tombs of this date explored by the Pennsylvania expedition, of burials using a peculiar kind of clay coffin not normally found in Canaanite cemeteries. They are slipper-shaped, having half-lids modeled in relief with a crude effigy of the corpse. Such coffins have been found in some few other Palestinian sites, dated *ca.* the twelfth or eleventh century (Fig. BET 38). They appear to imitate Egyptian anthropoid coffins. At Tell Fara', Petrie found two of them associated with "Philistine" pottery; and Rowe and others have attributed these from Beth-shan, on somewhat slender grounds, to mercenaries employed by the Egyptians, linking them in turn with the Philistines who possessed Beth-shan in the time of Saul (I Sam. 31:10, 12).

It is not related how soon the Israelites were able to avenge the death of Saul and Jonathan and the outrage to their bodies on the walls of Beth-shan. By the mid-tenth century Beth-shan was fully integrated into Solomon's fiscal system, and was counted

Courtesy of the University Museum of the University of Pennsylvania

38. Pottery anthropoid sarcophagus from Beth-shan (*ca.* twelfth to eleventh century B.C.)

with Megiddo and Taanach in the district, covering the whole Valley of Jezreel and reaching into Transjordan, which was controlled by Baana son of Ahilud. Soon after this, Sheshonk I plundered the city (*ca.* 926 B.C.); and his record of the event, engraved on the walls of Karnak, marks the end of a period in the history of Beth-shan.

The city is not heard of again until Hellenistic times, when it is called Scythopolis in addition to its old name (*see above* and Jos. Antiq. V.i.22: "Beth-shan which is now called Scythopolis"). Syncellus explains this as a relic of the Scythians, whose invasion of Palestine in the seventh century B.C. is recorded by Herodotus (I.105). According to Pliny (Nat. Hist. V.18.74), it had previously borne the name of Nysa in supposed honor of Dionysus or one of the nymphs who nursed him; and in imperial coinage the city is styled Nysa-Scythopolis. In II Macc. 12:29 it had a mixed population of Jews and Gentiles, who lived amicably together. John Hyrcanus captured but spared the city in 107 B.C. It was liberated by Pompey and remained a free city under the Roman Empire until the Arab conquest, being a member—and according to Josephus (War III.ix.7) one of the largest—of the Decapolis League.

To this period belong the foundations and fragments of a Hellenistic or Roman temple on the summit of the "tell," a marble head of Dionysus of the third century B.C., and other fragments of statuary. Scythopolis expanded beyond the limits of Tell el-Husn. There are remains of a colonnaded street, a hippodrome, and a theater in the low ground S of the "tell," and of an extensive city wall which spans the River Jalud by a bridge. An inscription records the repair of this wall at the instance of a local magistrate, Pluvius Arsenius, under the emperors Anastasius and Leo (A.D. 508-10). The Pennsylvania expedition explored many Hellenistic and Roman tombs cut in the rock on the N side of the valley. One of these contained a stone sarcophagus inscribed with the name of Antiochus son of Phallion, possibly a cousin of Herod I.

In Christian times Scythopolis was the capital of Palestina Secunda and the see of a metropolitan bishop. It became the home, in the fourth century, of Count Joseph, one of the active promoters of early church-building, and was visited by Epiphanius and Eusebius. In the middle of the century, a notorious treason trial was held before Modestus, Count of the East; and numerous victims, accused of consulting oracles with disloyal intent, lost their lives.

Besides the restored city walls, the principal monuments of the period are the remains of an important circular church on the summit of Tell el-Husn, and the extensive mosaic floors, with many inscriptions, of a monastery founded in the sixth century A.D. by a pious Lady Mary on high ground N of the River Jalud.

Scythopolis-Beisan fell into the hands of the Arabs in 636, having witnessed in 635 the defeat of the Christian forces in the Battle of Pella.

R. W. HAMILTON

BETH-SHEMESH bĕth shĕm'ĭsh [בית שמש, house (shrine) of the sun (god)]. **1.** A city on the N border of Judah between Chesalon and Timnah (Josh. 15:

10); identified with Tell er-Rumeileh, in the Wadi es-Sarar (Valley of Sorek) below and just to the S of Sar'ah (ZORAH), fifteen miles N of Tell ed-Duweir (LACHISH), and *ca.* twenty-four miles W of Jerusalem on the main road to Ashdod and Ashkelon. Its name, "house of the sun (god)," suggests a possible ancient religious shrine. Fig. BET 39.

39. Beth-shemesh (Tell er-Rumeileh)

Beth-shemesh was assigned to Dan (Josh. 19:41; Ir-shemesh), though the Danites did not immediately occupy it (Judg. 1:35; Har-heres). Its absence from the district list in Josh. 15 is possibly because it was unoccupied at the time of the list's preparation, though it would have been in the Zorah-Azekah district (vss. 33-36). It was designated a Levitical city (21:16, where it is now attributed to Judah; cf. vs. 9; cf. also I Chr. 6:59—H 6:44).

Located in the Shephelah, Beth-shemesh was the only fortified city in the Valley of Sorek and was an important frontier post between Judah and the Philistines. When the Philistines decided to return the ark of the covenant, captured from Israel after the Battle of Ebenezer, the cows pulling the cart were set on the highway between Ekron and KIRIATH-JEARIM in the direction of Beth-shemesh (I Sam. 6:10—7:2; Jos. Antiq. VI.i.4).

Beth-shemesh belonged to Solomon's second administrative district (I Kings 4:9). It was the scene of a battle provoked by Amaziah of Judah (*ca.* 800-783) with Jehoash of Israel (*ca.* 801-786), in which Amaziah was defeated and taken prisoner (II Kings 14:11 ff; II Chr. 25:20 ff). During the unhappy reign of Ahaz (*ca.* 735-715) Beth-shemesh was captured by the Philistines (II Chr. 28:18). The biblical record contains no further references to Beth-shemesh.

The antiquity of Beth-shemesh was demonstrated by the excavations conducted by Duncan Mackenzie (1911-13) and C. S. Fisher and Elihu Grant (1928-31). It was first settled in Early Bronze IV (or IIIB, twenty-third to twenty-first centuries B.C.; Stratum VI).

Though it is not mentioned in any Egyptian texts, including the Amarna Letters, it seems to have been captured by the Hyksos in the mid-eighteenth century and was recaptured by the native Egyptian Eighteenth Dynasty, possibly by Amen-hotep I (Stratum V). The city was almost immediately reoccupied, the damage repaired, and it flourished from the fifteenth century on, to judge from the heavy fortifications and the S city gate, the well-built houses, granaries, and cisterns. Trade with other areas is indicated by a smelting furnace which used imported copper ore and a fourteenth-century tablet written in Canaanite cuneiform (Ugaritic; Stratum IV).

It was effectively controlled by the invading Israelites (Danites; cf. Josh. 19:41 *and above*) for a short time until the establishment of the Philistines in the coastal plain. The general cultural level during the period of the judges was much inferior to the preceding one. The construction was of poorer quality. However, there was evidence of extensive metalworking, chiefly bronze but some iron, supporting the view that iron was introduced in this area by the Philistines and that they monopolized its production and distribution for some time. While the biblical record never suggests actual Philistine possession of the city, strong Philistine influence is indicated by the great quantities of their typical pottery. The city was almost certainly under Philistine economic, if not political, control during this period (cf. I Sam. 6). Stratum III was destroyed by a terrific conflagration in the middle of the eleventh-century for reasons still unknown.

Beth-shemesh was incorporated into the Judahite administrative system by David. Stratum II*a*, whose Davidic date has now been firmly established, contained a governor's residence and adjacent to it a large, thick-walled building with three long, narrow rooms which probably served as a district storehouse for goods and produce (one of the *miskenôth*, "storehouse cities" or "granaries," which later belonged to Solomon; cf. I Kings 9:17). The palace, or citadel, was built on an earth-filled platform, comparable to the Millo ("filling") which David built in Jerusalem (cf. II Sam. 5:9; also the storehouse at Lachish). The city itself was protected by a casemate wall similar to the one at Tell Beit Mirsim (DEBIR) and typical for this period—perhaps built by David as a protection against Philistine invasion. A bit later, near the government buildings, a huge stone-lined silo, twenty-three feet across at the top and nineteen feet deep, was dug.

Discovery of numerous grape and olive presses shows that the chief industry of Beth-shemesh at this period was oil and wine production. Metalworking was continued to some degree (especially in Stratum II*a*). The city expanded in the course of the century (Stratum II*b*) with growth in the wine and oil industries, rebuilding of houses, etc. Its occupation came to an end toward the close of the tenth century, probably as a result of Shishak's invasion *ca.* 918 B.C. Instead of rebuilding Beth-shemesh, Rehoboam strengthened the fortifications of Zorah on the hill above (II Chr. 11:10).

Though the city was never again fortified as it had been in the tenth century, it was reoccupied late in the ninth century. It was a poorer city, but life continued along the lines of II*a* and II*b*. *Ca.* 790 B.C. the battle between Amaziah and Jehoash was fought nearby (II Kings 14:11).

After its loss to the Philistines during Ahaz' reign, the city presumably remained in their hands until Josiah's effort to restore the Israelite empire. That it was again in Judahite hands and remained

crown property until early in the sixth century is shown by the recovery of a stamped jar handle with the words "belonging to Eliakim, steward of Jaukin" (JEHOIACHIN; 598; now in exile), from 597.* It is possible that the reference to the Ashdodites in Neh. 4:7 implies a subsequent loss of the region of Beth-shemesh to Philistine control. Beth-shemesh itself was destroyed in the course of Nebuchadrezzar's campaign in 588-587. No further reference is made to the ancient city. In the fourth or fifth century A.D. a monastery was built on the site but was later destroyed. Fig. JEH 9.

The Roman-Byzantine city is located at the nearby site of 'Ain Shems. It belonged to the toparchy of Bethleptepha (modern Beit Nettif).

2. A city in Issachar, close to the Jordan River (Josh. 19:22). Though various sites have been suggested ('Ain esh-Shemsiyen, *ca.* seven miles S of Beth-shan; Khirbet Shemsin, *ca.* two miles NW of el-'Abeidiyeh), present scholarship favors el-'Abeidiyeh, on the Jordan, just S of the Sea of Galilee and E of Khirbet Shamsawi, which may preserve the ancient name, even though Josh. 17:11 attributes Beth-shan to Manasseh.

3. A Canaanite city assigned to Naphtali (Josh. 19:38) but not occupied by the tribe (Judg. 1:33). The village of Haris, S of Tibnin (Taphnis), S-SE of Tyre, may preserve the name in the form of a synonym (שמש, *šemeš*=חלס, *ḥeres*). This Beth-shemesh may be the same as 2 *above;* it must then be sought farther S.

4. The famous religious city of On in Egypt (Jer. 43:13 KJV), also known as HELIOPOLIS (the RSV uses "Heliopolis" in this passage), *ca.* five miles NE of Cairo, where there was a temple of the sun-god Ra (cf. Isa. 19:18).

Cross, Jr., "The Boundary and Province Lists of the Kingdom of Judah," *JBL,* 75 (1956), 215 ff; G. E. Wright, *Biblical Archaeology* (1957), *passim.* V. R. GOLD

BETH-SHITTAH bĕth shĭt'ə [בית השטה, house of the acacia] (Judg. 7:22). A place to which the Midianites fled after their defeat by Gideon and the Israelites. Its location is unknown—because of difficulties in the MT—but it must have been in the vicinity of Tell Sleihat, across the Jordan from ABEL-MEHOLAH.

Bibliography. W. F. Albright, "The Jordan Valley in the Bronze Age," *AASOR,* VI (1926), 47. G. W. VAN BEEK

BETHSURA. KJV Apoc. form of BETH-ZUR.

BETH-TAPPUAH bĕth tăp'yōō ə [בית תפוח, house of apricots(?)]. A town of Judah in the hill-country district of Hebron (Josh. 15:53); identified with modern Taffuh, 4½ miles W of Hebron. This district was settled by the clan of Kenaz (vs. 13) and lay in the territory of the earlier "city-state" of Hebron and Debir. It is not the same as Tappuah. V. R. GOLD

BETH-TOGARMAH bĕth'tō gär'mə [בית תוגרמה] (Ezek. 27:14; 38:6); KJV HOUSE OF TOGARMAH. Same as TOGARMAH.

BETHUEL bĭ thōō'əl [בתואל; *cf.* Canaanite *personal name Batti-ilu in the Tell el-Amarna Letters*]. Alternately: BETHUL bĕth'əl [בתול] (Josh. 19:4). **1.** The last son of Nahor and Milcah (Gen. 22:22); Abraham's nephew, and father of Laban and Rebekah (22:23; 24:15, 24, 47, 50 [J]). P calls him "the Aramean of Paddan-aram" (Gen. 25:20; cf. 28:2, 5).

L. HICKS

2. A town of Simeon near Hormah (I Chr. 4:30). The parallel passage in Josh. 15:30 gives it as Chesil, a scribal error. In I Sam. 30:27 David is recorded as having given some of the booty of the Amalekites to a city named Bethel; since this name never occurs in any of the lists of cities of Judah, it is undoubtedly a mistake for Bethuel. The site is unknown, but it was certainly not far from Beer-sheba.

S. COHEN

BETHULIA bĭ thōō'lĭ ə [Βαιτυλουα, Βετυλουα, Βαιτουλουα, Βαιτουλια]. A city in Samaria mentioned frequently in the book of Judith; the home of the heroine of the story. No place of this name is known; and despite the fulness of detail provided by the story, an exact identification has not been made. The fate of the nation is said to have fallen upon this hill-country fortress (Jth. 8:21, 24); it is furthermore described as opposite Esdraelon near the Plain of Dothan (4:6); located on a hilltop above the valley (10:10); surrounded by mountains (6:10-12); and near springs (6:11).

It is conjectured that the original name was altered by copyists of the book, or that it was conceived as a pseudonym to disguise the true identity. The variant readings of the Greek name (*see above*) suggest a faulty transmission, but many scholars believe that it was contrived as a pseudonym, as may be true of most of the localities mentioned in the story. The name may represent בית אלוה or בית אל, "house of God," a fitting title for a fictitious city that persevered in its faith in the true God despite every danger. C. C. Torrey (*see bibliography*), who rejects this theory as improbable, strongly urges an identification with Shechem. This famous old Israelite city would satisfy most of the descriptive details furnished by the story. The need for a pseudonym would be easily explainable in terms of the violent hostility existing between the Samaritans and the Jews in the time that Judith was written; this would be expressed in an aversion to the actual name of this Samaritan city. Torrey proposes to derive the Greek name from the Hebrew *Beth'liya,* meaning "lofty abode." Others identify the city with the modern Meselieh, Sanur, or el-Barid. One scholar held that traditionally Bethulia was localized in the immediate area of the volcanic hill known as Hattin, *ca.* four miles W of the Sea of Galilee. Others argue that the actual site was on the summit of Jebel el'assi, perhaps the OT Beth-eked of the Shepherds (II Kings 10:12), the modern village of Seih Sibel beyond Kefr Qud.

E. W. SAUNDERS

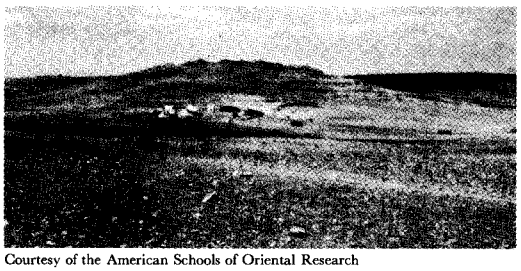
BETH-ZAITH bĕth zā'ĭth [Βηθζαίθ; *transliteration of* בית זית, house of the olive] (I Macc. 7:19); KJV BEZETH bē'zĕth [Βηζέθ]. The place where Bacchides, one of Demetrius' generals, camped, after his act of perfidy in Jerusalem (161 B.C.; cf. Jos. Antiq. XII.x.2); identified with modern Beit Zeita, *ca.* three miles N of Beth-zur, near Khirbet Kufin, a large cistern. V. R. GOLD

BETH-ZATHA bĕth zā'thə [Βηθζαθά, *indeclinable;* Aram.(?) בית זיתא, house of olives]; KJV BETHESDA bə thĕz'də. A pool in Jerusalem which had five porticoes.

The term appears only once in the Bible, in John 5:2, where the MSS offer variant forms, of which the best attested is Beth-zatha. There is also good support for "Bethsaida" (not to be confused with the town on the Sea of Galilee) and for "Bezetha" (*see below*). Poorly attested is the form "Bethesda."

The little that is known of the Pool of Beth-zatha is found in the episode of John 5:1-16. Tradition held that its waters were curative, and invalids lay about in its five porticoes. The story recounts that Jesus there spoke to a man who had been ill for thirty-eight years, and cured him through the spoken word rather than any use of the healing waters. The story implies that the power to cure lies in the waters only when they are "troubled." A second-century interpolation (vs. 4 in the KJV) explained that it was an angel's bathing in the pool that disturbed the water and imparted a healing power available to the first to follow.

The Pool of Beth-zatha has not been certainly identified, although several sites have been proposed. The story places it in Jerusalem, and near the Sheep Gate (although "gate" must be supplied). When postexilic Jerusalem was restored, the Sheep Gate was built by the priests; this indicates that it was an entrance to the temple area (Neh. 3:1). Mitchell (*JBL,* 1903) locates it in the N wall, then coinciding with the wall of the temple. Furthermore, such a gate would have faced the hill district of Bezetha (*see* BEZETH), which may have given its name to the pool. Most persuasive, therefore, are the excavations of Schick (1888), which have revealed twin pools with five porticoes, at the foot of Mount Bezetha. In the days of Jesus, this site lay N of the walled city, though today it lies inside and on the property of the "White Fathers," the Church of St. Anne. The two pools lie N and S, with a rock partition twenty feet thick; their total area may have been about 150 by 300 feet. Porticoes would have occupied the four sides and the partition.



The Madeba map (fifth century) located the Pool of Beth-zatha at Bezetha. Pilgrims in the fourth and fifth centuries attested to twin pools in this location, whose water turned ruddy upon periodic disturbance. The St. Anne excavations suit well the description by Origen, Eusebius, and Cyril of Jerusalem, except that there is now no spring of intermittent ruddy flow.

There are many rock cisterns about Jerusalem, and several have been proposed as the Pool of Beth-zatha. One such site is the double pool beneath the Convent of Our Lady of Zion. Others are the Fountain of the Virgin and the Pool of Siloam, whose intermittent waters are actually connected. But these and others have less claim today than the twin pools at St. Anne's.

Bibliography. K. Schick *et al.*, "Pool of Bethesda," *PEQ* (1888), pp. 115-34; E. W. G. Masterman, "The Pool of Bethesda," *PEQ* (1921), pp. 91-100; G. Dalman, *Sacred Sites and Ways* (1935), pp. 335-42. K. W. CLARK

BETH-ZECHARIAH bĕth'zĕk ə rī'ə [Βαιθζαχαρια; Vulg. *Bethzacharam*]; KJV BATHZACHARIAS băth'zăk ə rī'əs. A place located by Josephus (Antiq. XII.ix.4) seventy stadia N of BETH-ZUR. Here "where the passage was narrow," the Maccabean army was defeated by the troops of Antiochus. In the battle, Eleazar was slain, having, as Josephus says, done no more than "attempted great things, and showed that he preferred glory before life" (Jos. War I.i.5; cf. I Macc. 6:32-33). J. C. SWAIM

BETH-ZUR bĕth zûr' [בית צור, cliff house; Βαιθσούρα]; KJV Apoc. BETHSURA —sōō'rə. A town of Judah, originally occupied by the Calebites (I Chr. 2:45); identified with Khirbet et-Tubeiqah, *ca.* 4½ miles N of Hebron, just off the N-S road along

Courtesy of the American Schools of Oriental Research

40. Beth-zur (Khirbet et-Tubeiqah)

the top of the watershed ridge.* It is on a hill 3,325 feet above sea level, making Beth-zur the highest ruined town in Palestine. The modern town of Beit Sur is *ca.* ½ mile S of Khirbet et-Tubeiqah. Fig. BET 40.

Beth-zur became the capital of one of the hill-country provinces of Judah (Josh. 15:58). It was among the fifteen cities whose fortifications were strengthened by Rehoboam (II Chr. 11:7). During Nehemiah's administration, half its district was governed by a Nehemiah son of Azbuk, who was responsible for some of the repairs at Jerusalem (Neh. 3:16).

Beth-zur rose to its greatest importance during the Hellenistic period. It was a strategic frontier fortress between Judea and Idumea. In 165 B.C., Lysias, the Seleucid general, set up headquarters at Beth-zur in a campaign against the Jewish revolutionaries. In a spirited attack by Judas Maccabeus' smaller army, Lysias' forces suffered heavy casualties, so Lysias withdrew to Antioch to regroup and expand his army, while Judas (in 164 B.C.) occupied Beth-zur and fortified it (I Macc. 4:29, 61; 6:7, 26; II Macc. 11:5; Jos. Antiq. XII.vii.5).

In 162, Antiochus V, Eupator, and Lysias, his commander-in-chief, defeated Judas and his army. The Syrians recovered Beth-zur after a siege which the Jewish defenders could not sustain, since their food supply was low as a result of the sabbatical year.

Antiochus then stationed one of his own garrisons there (I Macc. 6:31, 49 ff; II Macc. 13:1-3, 18-26; Jos. War XII.ix.4-5). The Syrian general Bacchides, in behalf of Demetrius I, strengthened its fortifications (*ca.* 160; I Macc. 9:52). During Jonathan's administration it served as a refuge for Jewish collaborators with the Seleucids (10:12-14). While Jonathan engaged the army of Demetrius II in the Plain of Hazor, Simon Maccabeus finally recovered Beth-zur for the Jews and put a garrison in it (*ca.* 143; 11:65-66; 14:7). When Simon succeeded his brother Jonathan in 140 B.C., he ordered that the fortifications of Beth-zur be strengthened (14:33).

The partial excavation of Khirbet et-Tubeiqah has vividly illustrated the vicissitudes of the city. Apparently it was founded in the Middle Bronze II period (in the seventeenth century), though a few Early Bronze and Middle Bronze I sherds were found. Excavation has revealed massive fortifications similar in construction to those of the Hyksos period (*ca.* 1700-1550) at Bethel and Shechem. This prosperous city was destroyed in the fifteenth century, perhaps by Thut-mose III in one of his Syrian campaigns (after 1468). It remained unoccupied for the rest of the Late Bronze Age. In the late thirteenth or early twelfth century it was rebuilt by the Israelites, who reused the walls and buildings of the last MB city (cf. I Chr. 2:45). *Ca.* the mid-eleventh century the city was again burned, possibly by the Philistines. Thus far excavation has revealed nothing that one can definitely relate to Rehoboam's fortifying the city in the late tenth century (II Chr. 11:7). It may have been only a military post, for indications suggest an occupation gap during the tenth and ninth centuries. A great quantity of material from the eighth and seventh centuries has been recovered. This occupation also ended in a conflagration, this time perhaps in the course of the Babylonian invasion. Though it was a district capital in Nehemiah's day, little material from the Persian period was found. From this period may date the first phase of the central fortress.

The town prospered under the Ptolemies; coins from the first six Ptolemies (fourth to second centuries), as well as from most Seleucid rulers from Antiochus the Great until the coinage of John Hyrcanus (second century), were found. Repairing the old MB walls and adding a second outer wall (at least on the N and E sides) for added strength, Judas converted the city into a stronghold. He also rebuilt the central fortress. The third and strongest phase of this fortress was built by Bacchides (*ca.* 160), who used a Hellenistic plan in contrast to the earlier, oriental plan. This was destroyed by Simon (*ca.* 143). The period 140-100 seems to have been relatively peaceful. *Ca.* 100 B.C. the town was abandoned and not reoccupied, sometime between 120 and 100 B.C., perhaps as a result of the withdrawal of the military garrison after the annexation of Idumea by John Hyrcanus eliminating the need for a border fortress there.

V. R. GOLD

BETOLIUS bĭ tō′lĭ əs. KJV Apoc. form of BETHEL 1 (see Ezra 2:28) in I Esd. 5:21.

BETOMASTHAIM bĕt′ə məs thā′əm [Βαιτομασθαίμ]; KJV BETOMESTHAM —mĕs′thəm (Jth. 4:6); BETOMASTHEM —măs′thəm (Jth. 15:4). A locality mentioned in Jth. 4:6; 15:4; not known from the OT. The name is possibly derived from Beth-masthema ("house of the adversary," "house of Satan") and intended as an opprobrious term for SAMARIA. But the town's inhabitants appear to have joined the Jews in pursuing the fleeing pagan army.

P. WINTER

BETONIM bĕt′ə nĭm [בטנים, pistachios] (Josh. 13:26). A city in the N part of Gad, marking its border. Its site is Khirbet Batneh, six miles SW of es-Salt.

BETROTHAL. The first stage of the marriage transaction. *See* MARRIAGE § 2*a*.

BEULAH bū′lə [בעולה, married]. One of two symbolical names denoting the future prosperity of Jerusalem (Isa. 62:4; cf. 54:1-8). The other, Hephzibah, is a proper name in II Kings 21:1. In Isa. 62:4 the KJV places the names in the text and their meanings in the margin; the RSV transposes text and margin. (For Israel as the "bride" of Yahweh, see Jer. 2:2; Hos. 2:14-20—H 16-22.) This thought culminates in the NT in the conception of the church (Eph. 5:23-27) and the New Jerusalem (Rev. 21:2, 9 ff) as the bride of Christ.

C. R. NORTH

BEVELED WORK [מעשה מורד, *lit.*, work of descent] (I Kings 7:29); KJV **THIN WORK.** Wreathlike scrollwork, probably in low relief, around the bronze panels of the stands for the lavers in Solomon's temple. *See* LAVER; TEMPLE; JERUSALEM.

L. E. TOOMBS

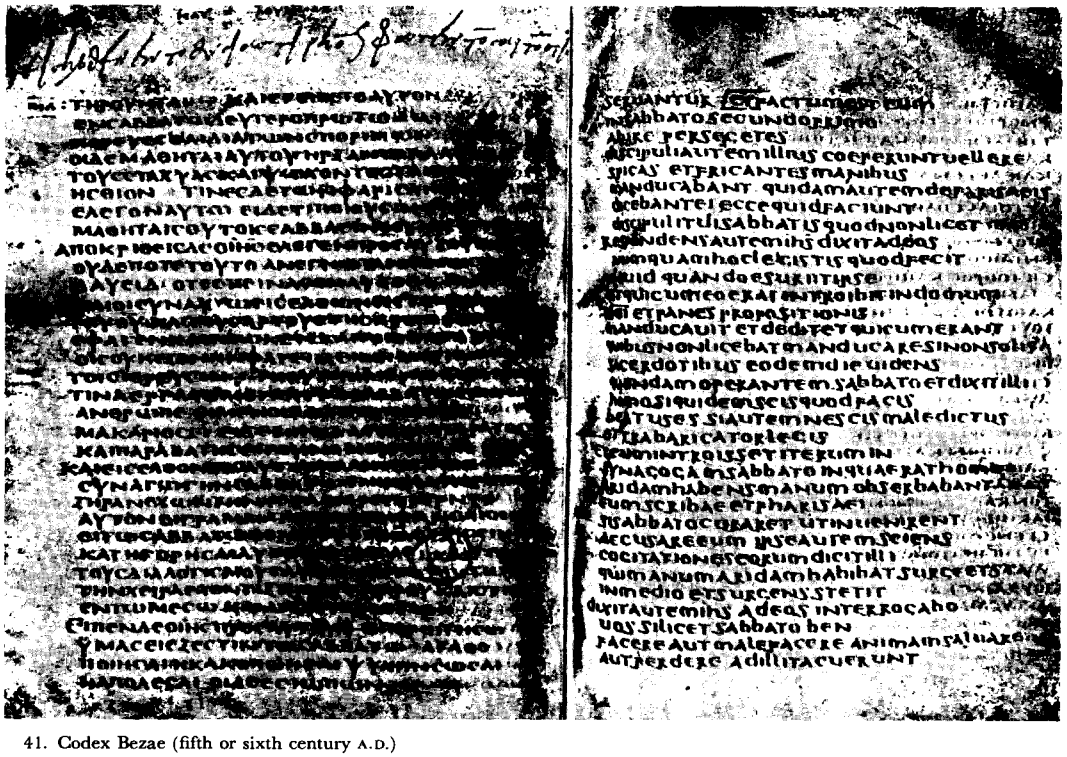
BEWITCH [βασκαίνω] (Gal. 3:1). Figuratively, "to charm" with arguments to a degree that the power of reasoning is lost.

BEYOND THE JORDAN [מעבר הירדן, עבר הירדן, מעבר לירדן, בעבר הירדן]. An expression indicating the territory either E or W of the Jordan, according to the viewpoint of the writer. Of the approximately thirty times it occurs, only five can be definitely thought of as meaning W of the Jordan: Gen. 50:10-11 (burial of Jacob); Deut. 3:20, 25; 11:30 (Moses speaking on the plains of Moab E of the Jordan). In all other passages the Transjordan region is indicated, and this became the standard usage in Talmudic sources and the NT (e.g., John 1:28).

S. COHEN

BEYOND THE RIVER [עבר הנהר; Aram. עבר נהרה]. On the other side of the Euphrates. To one living in Palestine-Syria, "beyond the River" meant E of the Euphrates (II Sam. 10:16; I Kings 14:15; I Chr. 19:16; in these instances the RSV translates "beyond the Euphrates"). In Josh. 24:3, 14-15 (KJV "on the other side of the flood") the expression refers to the homeland of the partiarchs near Haran. To

the Persians the same expression meant W of the Euphrates, and in the reorganization of the Persian Empire, Darius I named the fifth satrapy "Beyond the River" (Ebir-nari). Palestine-Syria was included in its bounds, and this official Persian usage is reflected in Ezra 4:10-20; 5:3, 6; 6:6, 8, 13; 7:21, 25; 8:36; Neh. 2:7, 9; 3:7 (KJV incorrectly "on this side the river"). L. E. TOOMBS



BEZAE, CODEX bē'zē. A fifth- or sixth-century uncial codex MS of the gospels and Acts in Greek and Latin (symbols: Greek text, "D"; Latin text, "*d*"). The gospels are arranged in the Western order: Matthew, John, Luke, Mark. The codex apparently originally also contained the Catholic letters, as the end of III John is preserved before the beginning of Acts. It is one of the primary witnesses to the text of the NT. *See* TEXT, NT; VERSIONS, ANCIENT.

The codex contains 406 vellum leaves (plus 9 leaves that have been added by later hands) measuring 10 by 8 inches. Originally it probably contained 510 leaves or more. The Greek and Latin texts face each other on opposite pages—the Greek text on the left and the Latin text on the right. Each page contains one column of text with 33 lines of varying length (sense lines) per column.

The place of origin of the MS is unknown. The fact that it contains a Latin text, however, seems to indicate that it was copied in the West. Wherever it was copied, independent Greek and Latin MSS were used as exemplars, and they were corrected or assimilated to each other to produce this bilingual codex. It is the only known Greek MS of any extent that witnesses to the Western text of the gospels and Acts. Von Soden identified it as an I^a MS which contained a large number of Old Syriac and African Latin readings. Westcott and Hort held that this codex gives a truer picture of the form in which the gospels and Acts were read in the third century and most of the second century than does any other extant Greek MS.

In the year 1546, Codex Bezae was taken to the Council of Trent by the bishop of Clermont, who probably had borrowed it from the Monastery of St. Irenaeus in Lyons. With this MS, the bishop tried to lay a biblical foundation for celibacy by using its reading in John 21:22: ἐὰν αὐτὸν θέλω μένειν οὕτως ἕως ἔρχομαι ("If I wish him to remain *thus* until I come"). It is the only known Greek MS which reads οὕτως ("thus") in this passage, although the reading is found in the Latin Vulg. After the council was over, the MS was returned to the monastery in Lyons. There it remained until the city was sacked by the Huguenots in 1562. In some way, it then came into the possession of Theodore Beza, who presented it to Cambridge University in 1581. Fig. BEZ 41.

Bibliography. For a photographic facsimile of the MS, see *Codex Bezae Cantabrigiensis. Quattuor Evangelia et Actus Apostolorum complectens Graece et Latine Sumptibus Academiae phototypice repraesentus* (1899). See also: F. H. A. Scrivener, *Plain Introduction to the Criticism of the NT* (4th ed., rev. E. Miller; 1894), I, 124-30; C. R. Gregory, *Canon and Text of the NT* (1907), pp. 350-53; W. H. P. Hatch, *Principal Uncial MSS of the NT* (1939), plate XXII; F. G. Kenyon, *Our Bible and the Ancient MSS* (5th ed., rev. A. W. Adams; 1958), pp. 207-12 and Appendix I (for some of the most interesting readings in Codex Bezae). M. M. PARVIS

41. Codex Bezae (fifth or sixth century A.D.)

BEZAI bē′zī [בצי, *shortened form of* בצלאל, *see* BEZALEL]. The head of a family that returned to Palestine after the Exile (Ezra 2:17; Neh. 7:23; I Esd. 5:16). According to Neh. 10:18—H 10:19, he set his seal to Ezra's covenant. M. NEWMAN

BEZALEL bĕz′ə lĕl [בצלאל, in the shadow (protection) of God]; KJV BEZALEEL bĭ zăl′ĭ əl. **1.** A Judahite in charge of making the wilderness TABERNACLE and its equipment; he was descended from Caleb (Exod. 31:2; 35:30; 36:1-2; 37:1; 38:22; I Chr. 2:20; II Chr. 1:5). Bezalel's skill as a versatile craftsman is attributed to his being filled with the Spirit of God. Assisted by Oholiab and unnamed workers, Bezalel devised designs for the adornment of the ancient sanctuary, executed them in various media, and constructed the ark, altars, and other items.

2. One of the sons of Pahath-moab who divorced their foreign wives at Ezra's instigation (Ezra 10:30).

Bibliography. M. Noth, *Die israelitischen Personennamen* (1928), pp. 32, 152. R. F. JOHNSON

BEZEK bē′zĕk [בזק]. **1.** A city where the tribes of Judah and Simeon inflicted a defeat upon the Canaanites and the Perizzites (Judg. 1:4-5). Adonibezek fled from Bezek, only to be captured and mutilated. Because Adoni-bezek was taken to Jerusalem, where he died, it is thought that Bezek is to be located in the vicinity of Jerusalem. Modern Bezqa, *ca.* two miles SE of Lydda, has been proposed as a probable site.

2. The rallying point for the men of Israel and Judah by Saul for the purpose of repulsing the attacking Ammonites under the leadership of Nahash (I Sam. 11:8). The distance from Bezek to JABESH could be covered in the course of one night (cf. vs. 9). Modern Khirbet Ibziq, thirteen miles NE of Shechem on the edge of the hill country overlooking the Jordan Valley, is a probable location.

Bibliography. N. Glueck, *Explorations in Eastern Palestine,* IV, *AASOR,* vols. XXV-XXVIII (1951), pt. 1, pp. 269-72. W. L. REED

BEZER bē′zər [בצר, precious ore(?), *or* fortress(?)] (I Chr. 7:37). **1.** A division of the Zophah clan of the tribe of Asher.

Bibliography. M. Noth, *Die israelitischen Personennamen* (1928), p. 223.

2. A city of Reuben, appointed a CITY OF REFUGE (Deut. 4:43; Josh. 20:8), allotted to the Merarites (Josh. 21:36; I Chr. 6:78—H 6:63; *see* MERARI), rebuilt by Mesha of Moab (*see* MOABITE STONE). It is perhaps modern Umm el-'Amad, eight miles NE of Medeba. E. D. GROHMAN

BEZETH. KJV form of BETH-ZAITH.

BIATAS. KJV Apoc. form of PELAIAH 2.

BIBLE [τὰ βιβλία, the books, *plural of* τὸ βιβλίον, *diminutive from* ἡ βίβλος (*specialized sense,* the sacred scriptures, *goes back to* ca. *A.D. 400*); Late Lat. *biblia, feminine singular for earlier neuter plural;* Old French *bible*]. The collection of writings to which the church attaches canonical authority. The limits of this collection have varied considerably at different periods, and there are profound differences within the church over the degree of authority which is to be attributed to the collection and to particular books within it. *See* CANON OF THE OT; CANON OF THE NT; INSPIRATION AND REVELATION.

1. The English Bible. The English Bible in its complete form contains eighty books—thirty-nine of the OT, twenty-seven of the NT, and fourteen of the Apoc. Since early in the nineteenth century, when the British and Foreign Bible Society decided against including the Apoc. in editions published under its sponsorship, it has become the general custom to publish Bibles of sixty-six books, containing only the "canonical" scriptures of OT and NT.

2. The Greek Bible. The Greek Bible includes the same twenty-seven books of the NT and a much more extensive OT—viz.: (*a*) Greek versions of all the books of the Hebrew OT, chiefly from the LXX but in part from the later translations of Theod. and Symm.; (*b*) additional works originally composed in Greek; (*c*) Greek versions of Hebrew works which are no longer extant in Hebrew; and (*d*) Greek supplements to the books of Esther and Daniel. *See* SEPTUAGINT.

3. The Hebrew Bible. The Hebrew Bible contains the thirty-nine books of the OT which the Christian churches, accepting in this the judgment of the rabbis of the age of the tannaim, have acknowledged as canonical. Jewish writers frequently refer to this collection alone as "the Bible."

4. The Latin Bible. The Latin Bible, according to the decision of the Council of Trent, contains seventy-two books—forty-five of the OT and twenty-seven of the NT. The forty-five OT books correspond with some difference of arrangement to the thirty-nine OT books in the English Bible with the Apoc. These are held to be "sacred and canonical," on the ground that "having been written by inspiration of the Holy Ghost, they have God for their author, and as such have been handed down by the church." *See* VULGATE.

The Bible has now been translated into more than a thousand languages, and the work of translation into other languages and dialects is still going on. No other literature has ever been rendered into any remotely comparable number of versions, and no book has ever approached the Bible in world-wide circulation.

In a more extended usage, the word "bible" is now sometimes applied to the sacred scriptures of other religions, and even to authoritative works on almost any subject. F. W. BEARE

***BIBLICAL CRITICISM.** All literature invites criticism; all important literature demands it, if the writing in question is to be used reliably (as for history or law) or worthily (as for artistic production) or in genuine reverence (as for religious or ethical guidance). For criticism in the widest sense is ἡ κριτικὴ τεχνή, the power of discernment, without which articulate thought is impossible. Everyday usage associates it too readily with mere disparagement. But art criticism, e.g., can be and often is the highest form of appreciation—not the gush of uninhibited first

response, but a founded, comparing, contrasting, analyzing response—in other words, discriminating appreciation. But biblical criticism is not primarily aesthetic. Scripture is addressed to man, the whole man, heart, soul, and mind—and ultimately to hands and feet, too—but, since it is language, it is primarily addressed through his eye or ear to his mind, which alone can deal with language. Biblical criticism is one mode of the mind's response to this address, for sooner or later the mind must answer certain questions: As what is this addressed to me? In what circumstances? From what time? By or through whom? With what intent?

All these questions have been asked since the beginning, not merely of biblical scholarship but of the use of the Bible. And most of them received answers at one time or another, usually from tradition but also by deduction, either valid or invalid; and some of these answers in turn became written traditions that were repeated from copy to copy of the Scriptures themselves (see the inscriptions of the Psalms and the inscriptions and subscriptions of most of the letters).

Bibliography

1. Beginnings. In the ancient church a science of biblical criticism first developed in connection with the text of the OT (*see* TEXT, OT), then of the NT (*see* TEXT, NT). The next area of this science to claim the attention of the ancient church was the history of the canon (*see* CANON OF THE NT; CANON OF THE OT). Here, however, we shall be limited to literary-historical criticism—the area somewhat misleadingly called "higher criticism" (to distinguish it from "lower" = textual criticism). The term is misleading because each area of criticism requires and uses the other. This kind of criticism lay beyond the horizon of the ancient and the medieval church, because it presupposes the possibility and right of free investigation, free both of a not-to-be-questioned tradition and of any institution that might claim to embody and guarantee such tradition. Only sporadically in this long period did questions arise which touched single details belonging to this discipline. Among these may be mentioned Julius Africanus' ingenious argument (*ca.* 325) that Susanna was originally written in Greek and hence cannot be a part of the Hebrew-Aramaic Daniel (Africanus *Ep. ad Originem*, MSG, XI, 41); Theodore of Mopsuestia's conclusions (*ca.* 400) that the Song of Solomon is to be understood literally as an erotic poem (MSG, LXVI, 699) and that the author of Job was not a Jew (MSG, LXVI, 698); and Hugo of St. Victor's insight (twelfth century) that the Wisdom of Solomon was not written by Solomon and that Dan. 11 is to be understood with the help of I and II Maccabees (*Praenotatiunculae*, MSL, CLXXV, 9-28). But none even of these exceptional scholars was interested in systematically asking and answering similar questions for all the books in or near the canon.

The Reformation, as such, did not introduce this branch of criticism. Nevertheless, Luther on theological grounds did give his critical faculties free rein to the extent that he in principle excluded four books of the NT from his canon: Hebrews, James, Jude, and Revelation. In his original translation of the NT (September, 1522) he numbered the books Matthew to III John as 1 to 23, then after a significant space continued with the above-mentioned four books, leaving them unnumbered as if an appendix (just as the 1590 and 1592 editions of the Vulg. relegated the Prayer of Manasseh and III and IV Esdras to an appendix). His intention in doing this is still clearer in his Preface to Hebrews in that same edition—referring to the preceding twenty-three books, he says: "These are the true [and] certain *hewbt bucher* of the NT"; this phrase may reasonably be translated "the canonical books," inasmuch as in his Preface to Jude he clearly uses *hewptschrifft* to mean "canon." This was initially a theological judgment, but, having made it, he undergirded it with critical arguments: Hebrews is neither by Paul nor by any other apostle, but by some pupil to whom the apostolic doctrine had come, perhaps long after the apostles' time; James is not apostolic, because it contradicts Paul and neglects the passion, resurrection, and spirit of Christ; Jude is a copy of II Peter (the reverse of the modern critical view); Revelation is too confused, commends itself too much, and does not teach Christ. "Therefore," he concludes, "I will stay by the books that offer me Christ bright and clear"; and neither Revelation nor the other three did this.

Calvin likewise foreshadows biblical criticism in regard to these four books. It is an eloquent fact that Revelation is the one book of the NT on which he never wrote a commentary. As to Jude, he is uncertain about its canonicity—"yet as the reading of it is useful, and it contains nothing inconsistent with the purity of apostolic doctrine, and was received as authentic formerly by some of the best, I willingly add it to the others." (Was it Luther's curtailed canon to which Calvin was here mentally "adding"?) He sees "no just cause" for rejecting James, but evidently is aware that some were doing so. Hebrews he accepts as apostolic (i.e., canonical) but is clear that Paul was not its author; and by insight into its style he quickly recognizes it as not translation-Greek and hence dismisses the ancient explanation that its Greek style is that of a translator of Paul's alleged Hebrew. In the OT, at least in the case of Joshua and the books of Samuel, he suspends judgment on authorship; it is clear to him that their

respective authors were not Joshua and Samuel. The germ of criticism is present in both reformers, but the conditions to cause it to bud and grow were not yet.

2. Pioneers of modern criticism. It was not until the eighteenth century that biblical criticism as a discipline within theological study first made its appearance. But from without it was anticipated by four nontheologians, the famous jurist Grotius (Huig de Groot, 1583-1645), the philosophers Hobbes (1588-1679) and Spinoza (1632-77), and the medical professor Jean Astruc (1684-1766). In the retrospect of four centuries it is easy enough to see that the ultra-orthodox church of the first post-Reformation century could not have given birth to biblical criticism, and also to understand why, by and large, the church of that and the succeeding century could regard these nonprofessional critics only as impertinent, derogatory, and blasphemous outsiders. But it was only outside the church professions that there was freedom to use one's eyes and powers of induction and deduction upon scripture without the necessity of arriving at foregone conclusions. Because these four men dared to seize this freedom, and by doing so ultimately paved the way for later professional theologians to do the same with better tools, their contributions must be described.

a. Grotius. During the busy decades of his diplomatic career Grotius was working on *Annotationes* to all the books of the Bible. Only those on the gospels (1641) and the OT (1644) were published during his life; two additional ones completing the NT were published posthumously (1646 and 1650). So far as he is a "critic," his criticism touches peripheral books of the canon. He expresses no doubt that Solomon is the author of the Song of Solomon and is one of the speakers in it; but it is simply a connubial dialogue between Solomon and a wife: "Here the secrets of marriage lie hidden under the modest wrappings of words." As a concession to tradition he goes on to pay noncommittal respect to the ancient Jewish and Christian allegories: "It is believed [he does not say "by me" or "by us"] that Solomon composed it with such art that without much distortion[!] allegories can be found in it which express God's love for the people of Israel. . . . Since this love was a type of Christ's love for the Church, Christians [not "I" or "we"] have exercised their wits toward applying the words of this song to that subject—with commendable zeal." To this ambiguous afterthought he prudently refrained from adding: "but questionable results." Nevertheless, his own annotations to the text are exclusively erotic, frequently more so than the Hebrew text, and never mention the Christ allegory. Koheleth, he thinks, should be called *Synathroistes* ("collector"), because he has here "collected" various opinions of wise men on *eudaimonia*, "happiness." And the collector was not Solomon—this judgment he backs up in a typical literary-critical manner: "As an argument for this view I have many words which are not to be found elsewhere except in Daniel, Ezra, and the Targums." Job, he decides, is not earlier than the Exile, and he has his doubts about the historicity of Esther. The Letter to the Hebrews, which he cannot attribute to Paul, he finally ascribes to Luke, not merely as its "translator" (Clement of Alexandria) but as its author. He recognizes the critical problem of the Thessalonian letters and proposes the ingenious solution of reversing their order.

But Grotius' true significance lies, not in occasional critical insights like the above, but in his quiet assumption of a right to study, analyze, and scrutinize the books of scripture exactly as one does any other book. In this he seems to be the pioneer among modern men. It is probably justified to assume that he deduced this right by generalizing the exceptional procedure of Arminius (Jacobus Harmans, 1560-1609), who on a single far-reaching point (predestination) had ventured to study scripture unhindered by any consideration for the reigning creed. After Arminius' death Grotius suffered prison and exile for the Arminian cause and became the chief literary light of the Remonstrant Church in its first decades.

b. Hobbes. Thomas Hobbes knew the legal writings of Grotius and presumably also the *Annotationes* —they had all been published before Hobbes's *Leviathan* appeared in 1651. Hobbes's real interest is neither in scripture nor in theology but in the theory of the state. Seeking a source of ultimate authority for the state, he turns his candid and rational eye to examine the Authority of authorities, the Christian scriptures. He does so with all the freedom of Grotius but with keener awareness of what he is doing, and now systematically inquiring after the authorship and date of each writing (of the OT, at any rate). Furthermore, the answers must be internal: "The light therefore that must guide us in this question [i.e., authorship of biblical books] must be that which is held out unto us from the books themselves: and this light, though it show us not the writer of every book, yet it is not unuseful to give us knowledge of the time wherein they were written." The second chapter of *Leviathan*, part III, reads like an embryonic introduction to the Bible such as our century knows. For Hobbes, titles of books are no reliable guide to their authorship, certainly not in the case of the Pentateuch. Moses, he notes, could not have written the last six verses of Deuteronomy or Gen. 12:6. In fact, the five books of Moses were written after Moses' time, though how long after is not manifest to him. From Josh. 4:9 he reasons that Joshua was written long after the time of the man Joshua, and from Judg. 18:30 that Judges was written after the Captivity. Samuel, Kings, Chronicles, are all later than the Exile, just as Ezra and Nehemiah obviously are. The Job of Ezek. 14:14; Jas. 5:11 is to him undoubtedly a historical person, but the book of Job, which he finds no way to date, is not a history but a moral tract on the paradoxical faring of the wicked and the upright. The Psalms are mostly by David, but Ps. 79, at least, is from the time of Antiochus Epiphanes. The Proverbs, though mostly by Solomon, include other authors, and the edited collection must be post-Solomonic. The titles or inscriptions (see KJV) of Ecclesiastes and the Song of Solomon are non-Solomonic, but he does not question the Solomonic origin of the body of either book. Hobbes recognizes that Jonah is not prophecy —all the "prophecy" it contains is: "Yet forty days, and Nineveh shall be overthrown!"—but is narrative, with Jonah's "frowardness" as its subject, so that there is small probability that he was also the

author of it. The Latin version of the *Leviathan* (Amsterdam, 1668; translated by Hobbes) suggests that while Amos, Jeremiah, Obadiah, Nahum, and Habakkuk record prophecies really made by these prophets, it is unknowable whether the recorders and publishers of them were the respective prophets themselves or others.

The canon of the OT, Hobbes thinks, is not older than the end of the Captivity nor younger than Ptolemy Philadelphus (here he relies, apologetically, upon II Esd. 14). Significantly, he did not interrogate each book of the NT in this way—no one ventured to do this for another century. He carefully refrains from criticizing the NT and says summarily: "The writers of the NT lived all in less than an age [= generation] after Christ's ascension, and had all of them seen our Saviour, or been his Disciples, except St. Paul and St. Luke." But the ultimate authority which he was seeking Hobbes did not find in scripture, for *who* authorizes *it?* He would say: the church; only the church is not (any longer) a person. Therefore, he concludes that the authority of the canon, as law, rests upon the sovereign. Because he does not raise the issue of divine authority mediated through human authors, he might just as well have spared himself his criticism of the OT, but in not sparing he had started more than he could guess.

c. Spinoza. Fourteen years after he had been banned from the synagogue, Baruch Spinoza published anonymously his *Tractatus Theologico-Politicus* (1670). Its subtitle reads: ". . . in which it is set forth that freedom to philosophize not only can be granted without harming religion or the welfare of the state, but cannot be taken away without also taking away the welfare of the state and religion itself." Here the Enlightenment is clearly speaking, but a phase of the Enlightenment peculiar to this lonely man who was neither Jew nor Christian nor atheist. In the course of trying to prove that the light of nature and the light of revelation are ultimately identical, he comes in ch. VII, "Interpretation of Scripture," to describe what he calls *historia Scripturae,* by which he means, very nearly, biblical science. One portion of this discipline, he says, "must describe for all the prophetic books [=the whole Christian Bible] the circumstances of which we have record—viz., the life, character, and aims of each book's author, who he was, what occasioned his writing, when he wrote, to whom, and in what language." This is just what a modern Introduction seeks to do. In chs. VIII–X Spinoza proceeds to give for the OT books such answers as he has found. Taking his departure from the dark hints which Abraham Ibn Ezra (Spain; died 1167) had planted five centuries earlier in his commentaries on the Pentateuch (e.g., on Gen. 12:6: "The Canaanites were in the land," Ibn Ezra says: "It would seem that Canaan [Noah's grandson] had taken possession of the land of Canaan from someone else. But if this was not the case, there is a secret here. But let him who understands keep it quiet") and adding many observations of his own, Spinoza concludes that the Pentateuch was not written by Moses or Joshua by Joshua. He "suspects" that all twelve of the books from Genesis to II Kings were written by one man and that this man was Ezra, though he admits that he cannot prove it. But he clearly sees that smaller works of earlier authors are here thrown together without harmonization (ch. IX). The books of Chronicles he thinks were written long after Ezra's time, perhaps even after Judas Maccabeus; he is surprised that they were admitted into the canon. He notices the chronological disorder in Jeremiah. Following Ibn Ezra, he thinks that Job was perhaps written by a Gentile in another language than Hebrew. Daniel, Ezra, Esther, and Nehemiah he supposes to have been written by one man, whose identity he refuses even to guess, at some time after the restoration of the temple service by Judas Maccabeus. He decides that there was no canon before the Maccabean period(!) and contends that the canon was established by the Pharisees.

Like Hobbes before him, whose work he certainly knew and used, Spinoza is much less free toward the NT. No more than Hobbes does he subject the books of the NT to the same detailed scrutiny as he did those of the OT, but contents himself with a brief chapter in which he arrives at the conclusion that the apostles, though they too were "prophets" in his sense, wrote mostly not as prophets but simply as teachers. But the OT was also a Christian book, and it was the Reformed Church of Holland which by 1674 succeeded in getting the high court of Holland to ban the *Tractatus* along with Hobbes's *Leviathan* and other books. It forbade "all and everyone the printing of these or similar writings, their distribution by auction, sale or other means, under pain of punishment." Spinoza had presumed too far upon Dutch freedom, but his critical insights, both right and wrong, had already become a sore and a stimulus that could not permanently be ignored.

d. Jean Astruc. Although Jean Astruc belongs to the eighteenth century, he is introduced here in order to keep together the four great nontheological pioneers. He was educated by his father, a Protestant clergyman of Jewish origin who shortly after his son's birth became Roman Catholic. Astruc became a professor of medicine, serving at various French universities, longest at Paris; in his own profession his fame rests mainly on his *De Morbis Veneriis libri sex* (1753). But when he was nearly seventy years old, he published, after long hesitation—and anonymously—*Conjectures on the Reminiscences Which Moses Appears to Have Used in Composing the Book of Genesis* (1753). It begins the epoch of modern source-criticism of the Pentateuch. Though others had noticed most of the phenomena, he was the first to put them together and offer the solution which for two centuries remained dominant. The phenomena which to him cry for explanation are chiefly three: (*a*) repeated narratives of the same event; (*b*) the strange distribution of Elohim and Jehovah (Astruc uses this mistaken medieval form of the Tetragrammaton); (*c*) chronological confusion. To demonstrate that all three of these perplexities are largely cleared up by his solution, he devotes half his book to a rearrangement of the text of Genesis (in the Genevan French translation of 1610) into four columns: A, C, D, and B (A and B occupy the outside places; C and D are printed between them). A is the Elohim source; B the Jehovah source; C only 7:20, 23-24, and perhaps ch. 34; D is non-Israelite matter and composite, falling into nine subsources, E-M. It does

not greatly detract from his work that he offers some naïve conjectures about authors for portions of A and B; he is at least aware that they are mere conjectures. While he finds a few remarks of a compiler and a few marginal notes that have slipped into the text, basically it was Moses who formed the text. Here Astruc was more orthodox and less acute critically than Spinoza, whom he quotes in order to refute him. More naïvely, he assumes that Moses actually wrote Genesis in the same four columns which he has used himself and that the columns were abandoned and intertwined only by indolent or uncomprehending copyists. The future of Astruc's book lay not in France but in Germany.

e. Richard Simon. Returning now to the professional theologians and the seventeenth century, we come upon the forerunner of modern "Introductions" to the Bible (or to its separate testaments): Richard Simon (1638-1712). The predominance of Protestant scholars in the biblical criticism of the eighteenth and nineteenth centuries would lead one to expect to find him a Protestant. Significantly, he was not: precisely the pre-eminence of scripture ("scripture only!") inhibited Protestant theologians from candid scrutiny of their highest authority, whereas the Roman scholar, with tradition as highest authority, could be relatively free toward scripture, particularly in times when there was polemic propriety in demonstrating the alleged need for an authority higher than scripture. Simon was a priest of the Oratory until the order expelled him in 1678 in consequence of his *Histoire Critique du Vieux Testament,* whereupon he became a parish priest.

Both Catholics and Protestants had produced "Introductions" before him, but they had been traditional, uncritical, medieval. Among them may be named Santes Pagninus (Roman Catholic), *Isagogae, etc.,* 1536; Petrus Palladius (Danish Protestant bishop), *Isagoge,* 1557; Sixtus of Siena (Roman Catholic convert from Judaism), *Bibliotheca sancta,* 1566; Andreas Rivetus (French Calvinist in Holland), *Isagoge,* 1627; Michael Walther (Lutheran), *Officina biblica, etc.,* 1636, based on Palladius. Simon goes over from textual criticism to literary criticism, "higher criticism." For the first time in a theologian's work, he dares to assert that "Moses cannot be the author of all the books attributed to him" (in later editions toned down to: ". . . of all that is in the books attributed to him"). The observations upon which he based this conclusion are already found in the nontheological pioneers, but in theology they were new. He proceeds to show that the other historical books of the OT cannot have been written in the times they describe but are the result of gradual compilation and a much later final redaction. His own theory of a guild of "public scribes" who kept the original records and handed them down is pure imagination, but his recognition of the long process of compiling and editing can never be completely lost. Although his work had been passed by the ecclesiastical censor, enemies within the church caused the edition to be confiscated and destroyed within a few months of its printing. On the NT a similar work from Simon's hand appeared in three parts (1689-93), but in matters of special introduction it is conventional except for a reservation that our Greek Matthew may not be identical with a hypothetical Hebrew Proto-Matthew and that Paul may not be directly responsible for Hebrews.

3. The eighteenth century. ***a. Eichhorn.*** Both at home and abroad, by both Roman Catholics and Protestants, Simon was forgotten until, nearly a century later, a Protestant theologian at Halle (Semler) revived his work by a translation into German at about the same time that the younger Astruc was also translated into German. It was the period when, late but virulently, the rationalism of the W countries of Europe penetrated German Protestantism. J. S. Semler (1725-91), of the more moderate wing of German rationalists, himself furnished footnotes to J. A. Cramer's translation which he had himself promoted (1776—). But the real innovator, Astruc, found his true successor in J. G. Eichhorn (1752-1827), professor of oriental languages at Jena since his twenty-fifth year. Before he was thirty, he began publishing his *Einleitung in das AT* (3 vols.; 1780-83), by which he began the long series of modern introductions to the OT. Of Astruc he says: "Finally Astruc, a famous physician, did that which no professional critic dared to attempt: dissected the whole of Genesis into separate fragments. . . . None of them all ever penetrated so far into this material with his gaze as did Astruc." Measured against many works of the nineteenth century, Eichhorn's critical results were decidedly conservative. He insisted, e.g., that Job is to be assigned to the time of Moses. But Eichhorn's enduring merit is that he, more than any other, naturalized within Protestant theological investigation the humanistic insight that the OT, like any other literature, may and must be freely scrutinized, free from tradition, dogma, and institutional authority. For the gradual spread of this view from the Pentateuch to all the books of the OT and for the varying fate of specific hypotheses, see the articles on each book of the OT.

b. Reimarus. Higher criticism of the NT, though far less prepared for by anticipatory works than that of the OT was, could not in the age of rationalism long be insulated from the work on its sister testament. But free investigation of the NT was still as dangerous as that of the OT had been in Spinoza's time. Spinoza and Astruc had been willing to publish anonymously, but we have now to mention a great and puzzling NT work of the eighteenth century which remained not merely anonymous but unpublished during the writer's lifetime; it circulated only as a secret MS among a select group of Hamburg intellectuals until, ten years after the writer's death, it was published by the famous dramatist Lessing (as the seventh in a series of fragments from the same writer) under the title *On the Purpose of Jesus and his Disciples—one more fragment by the anonymous writer of Wolfenbüttel* (1778). The violent reaction to this book, which really is offensive, proved the prudence of the author in withholding it. In its deistic polemic against all supranaturalism, all miracle, and its insistence upon casting down the halo worn by the conventional Jesus of that time, its conclusions may all be wrong, but the keenness of observation in it uncovered all the central problems of the life of Jesus: the eschatological message (political or transcendent?), the strange surprise of the

Resurrection if the passion predictions are historical, the possibility of creative additions in the oral tradition, the Messiah secret, the connection of both sacraments with the life of Jesus, the historical rivalry between the Synoptics and John. The author has long been known to have been Hermann Samuel Reimarus (1694-1768), not a theologian but a professor of oriental languages for forty years in the Hamburg Gymnasium. The "Fragments" were written over a period of twenty years, beginning *ca.* 1745, and this seventh one may well be contemporary with or even earlier than Astruc's published *Conjectures.*

c. Semler. The most important theological opponent of Reimarus' seventh Fragment was J. S. Semler (1725-91), theological professor at Halle. Though among the vanguard of biblical scholars of his time, he utterly failed to appreciate the greatness of the defiant little book. His criticism, with the weight of his name and position, devastated it; it had been written a century too soon. But Semler's books on the canon (*Abhandlung von der freien Untersuchung des Kanons,* 1771-75) and hermeneutics (*Apparatus ad liberalem Novi Testamenti interpretationem,* 1767) were a link in the development of the NT criticism, particularly as a stimulus upon J. D. Michaelis (1719-91), orientalist at Göttingen. Though Semler had recognized, e.g., that the Fourth Gospel and Revelation cannot have had the same author, he never wrote an Introduction to the NT; but under the influence of his ideas, Michaelis did. The first edition (1750) was very much in the wake of Richard Simon, but from the third edition (1777) on, Semler's influence increases. In the fourth edition (1788) he decides that the historical books and the books of non-apostles (including, apparently, Hebrews) are not inspired, and he finds the authenticity of Jude difficult to defend—as Luther also had.

4. Later developments. From then on, German Introductions to the NT came thick and fast, but the real advances were made in specific investigations of portions of the field. The long history of Pauline criticism was opened by Schleiermacher (1768-1834) with his demonstration that I Timothy was not written by Paul (1807); this denial was extended to all the Pastorals by Eichhorn in his Introduction (5 vols.; 1804-27). Still within the eighteenth century Lessing opened the modern discussion of the synoptic problem with his *New Hypothesis About the Evangelists as Merely Human Historians* (written 1778; published posthumously 1784): an Aramaic proto-gospel used independently by all three synoptists. The idea was taken up and expanded in Eichhorn's Introduction, but it was not the solution which many decades later was to win general support (*see* SYNOPTIC PROBLEM). The many problems surrounding the letters of Paul and the book of Acts were incisively opened up (and too radically solved, in the general opinion of later generations) by Ferdinand Christian Baur (1792-1860) in the middle of the century. (For the history of specific critical theories and present results, see the separate articles on each book of the NT.)

5. Principles and processes. There is no neat formula for the order in which the characteristic processes of biblical criticism have been, or ought to be, applied to a book under investigation. The nature and condition of the book itself set the order of the problems to be faced. But the tools from which the scholar will choose the most appropriate for his task —now one, now another—are fairly constant.

a. Philological insight. Since biblical criticism concerns a literature, competence in the languages of this literature is the foundation for all serious work in it. Although there are living forms of these languages, natural or artificial, the languages are themselves "dead"; therefore, deeper penetration into them, both for the individual and for the scholarly community, is a never-ended, never-ending task.

b. Textual criticism. While the "higher critic" always strives to use the approximately "best" text available to him, and thus presupposes all the previous labors of specialists in the field, he is also constantly involved in text-critical decisions. Conversely, the textual critic also very frequently presupposes insights won by higher criticism; the two fields must work in constant interaction.

c. Literary criticism. As with any literature, the critic must ask himself whether the writing before him is integral or composite. He may be led to conclude the latter if he encounters: (*a*) striking and undistributed alternation of vocabulary (Elohim, Jahweh); (*b*) change of style (Pentateuch, Acts I and II, Pastorals, Ephesians); (*c*) change of point of view (Isaiah I and II); (*d*) repetitions (Pentateuch, Synoptics, I and II Thessalonians); (*e*) logical hiatus (John 14:31); (*f*) logical digression (II Cor. 6:14–7:1); etc. If he concludes for compositeness, he must then decide whether this phenomenon is due to the main author—who is then a compiler of earlier sources or is at least quoting already formed material—or whether it was subsequent to the main author. (In a complicated case both kinds of compositeness may be present; cf. Pentateuch criticism or Bultmann's theory of the Fourth Gospel.) In the case of subsequent compositeness the critic may discover: (*a*) an editor at work with systematic insertions, deletions, substitutions; (*b*) censorship of offensive expressions (*tiqqûnê sopherîm;* Matt. 1:18 in von Soden's view); (*c*) tacit copyist's "improvements," often by contamination with parallel passages (here textual criticism and higher criticism run together); (*d*) physical accident to the original MS (end of Mark? order of Fourth Gospel?).

d. Historical criticism. Involving both literary and historical criticism is the question of authorship: Is the writing actually the work of the ostensible author or an author named by ecclesiastical tradition? Is it pseudonymous? Or is it irretrievably anonymous? As with all literature, the answer to such questions is necessarily largely subjective; hence the wide diversity of opinion in this field. The answer can be found only from what is most certainly known about the writer, his opinions and style, and his historical situation. In general, historical criticism investigates the consistency of data within the book, within the total writing of the author, and within the whole canon. Further, it studies the agreements and disagreements between the book and secular writers, where such are available; this often brings in the wide fields of comparative religion and archaeology where they are relevant. While historical certainty is no more possible here than in history in general, relative probability is usually attainable. Where har-

monization is impossible, a tentative theory to account for discrepancies is the best that can be hoped for.

e. Form criticism. Since Hermann Gunkel, attention has been increasingly directed to the various types of oral tradition and to the laws of modification in tradition. By it the investigator is often rescued from expecting of traditional material what it cannot yield and is given a new tool for estimating relative probabilities. *See* FORM CRITICISM.

f. Biblical theology. It is not always recognized that BIBLICAL THEOLOGY is itself a part of biblical criticism. The preceding methods can each be used as an end in itself, but they treat the Bible as what it incidentally is and not as what it essentially is. It is language but not a textbook on language. It is literature, and often superb, but it was not written for aesthetic ends. It is history but not history for history's sake. Essentially it is a book of faith. Biblical criticism within its sole proper framework—the totality of theological reflection—is all prolegomena to biblical theology. It clears the way to ask intelligently of each writer the questions which impelled him to write: What of God? What of man? What of the world? What of life and death and salvation? Biblical theology is the constructive and positive phase of biblical criticism, which, when it is responsible, justifies the description of it as "discriminating appreciation."

***BIBLICAL CRITICISM, HISTORY OF.** Biblical criticism as the scientific study of the Hebrew and Christian scriptures is a comparative newcomer on the scene of history. Apart from isolated instances in earlier periods, it did not arise until a few centuries ago. Because of its usual connection with rationalistic and antisupernaturalistic philosophies, its development was long opposed by Christian orthodoxy, but it has come to be widely accepted, even by many who are theologically conservative.

Bibliography

1. The beginnings of modern criticism. Medieval exegetes, with their love for mystical meanings, had done nothing to advance the historical understanding of the Scriptures. In their way the Reformers virtually rediscovered the Bible, insisting upon the simple grammatical meaning of its language, freeing it from the domination of hierarchical authority, and handing it back to the common people. Both Luther and Calvin were able exegetes and exhibited considerable freedom in some of their opinions, but neither they nor their co-workers concerned themselves with the literary and historical processes involved in the formation of this sacred book. *See* INTERPRETATION.

a. Interpretation in the post-Reformation age. If the originality and critical acumen of the great Reformers seemed to promise much for the unlocking of the Scriptures, this prospect was largely dissipated as both Protestantism and Catholicism hardened their lines of dogma. Post-Reformation divines became absorbed in dogmatic and ecclesiastical controversies, and for these they felt the urgent need of a Bible whose divine authority could settle all disputes. The Bible was God's book, infallibly and verbally inspired, and this was sufficient; they cared little that it had been mediated through man.

Nevertheless, potent forces were at work to reverse this trend. Intellectual and scientific interests awakened by the Renaissance were manifesting themselves widely. The observations of natural scientists and the explorations of geographers were challenging the traditional view of man's world based upon Bible cosmology. Philosophers like Bacon (1561-1626) and Descartes (1596-1650) were preparing the way for rationalism in their revolutionary epistemologies, upsetting the Thomistic synthesis long cherished by the church. The humanists were boldly investigating the composition and authorship of various ancient documents, making inevitable the application of a similar criticism to the Bible.

Unavoidably much of this new thought was condemned by ecclesiastical dogmatists, but there were some, especially in the Protestant churches, who were already cautiously welcoming it. In England, Hooker (1553-1600) was resisting the biblicism of Puritan rigorists. In Holland, Arminius (1560-1609) was challenging Calvinistic orthodoxy, while his supporter Grotius (1583-1645) was interpreting the Bible in an independent spirit, and Cocceius (1603-69) was emphasizing the progressive character of revelation in the Bible. In Germany, Calixtus (1586-1656) was protesting against Lutheran scholasticism, aided by Spener (1635-1705) and the Pietists.

Meanwhile, a significant beginning had been made in textual criticism. Elias Levita's discovery (1538) that the vowel points and accents in the Hebrew Bible were not original but dated from later than the sixth century A.D. aroused Christian scholars to a re-examination of their theory of inspiration. Johannes Piscator (1546-1625) and the elder Buxtorf (1564-1629) in vain attempted to maintain the high antiquity of the Masoretic points. Church opinion was strongly in their favor, but the arguments of Louis Cappel (1585-1658) proved the stronger. Cappel proved not only that the Masoretic apparatus was of late origin but that even the consonantal text was unreliable. His work became the basis for the literary criticism of subsequent generations.

Cherished views concerning the NT remained mainly undisturbed in this early period. New light came gently in the discovery of numerous variants to the accepted text. These were published in successive editions of the Greek NT, but scholarship settled generally upon a "Textus Receptus," which was taken as a norm. A new impulse was, however, provided by the publication of the great Alexandrian Codex (1628), and such textual scholars as John Mill (1645-1707) were working untiringly to recapture the wording of the original text.

b. The groundwork of OT criticism. Up until this time, church scholars had been unable to initiate the necessary work of literary and historical criticism. It was chiefly two independent political philosophers, Thomas Hobbes (1588-1679) and Baruch Spinoza (1632-77), who showed the way. In his *Leviathan* (1651) Hobbes denied that the Bible itself is God's revelation, and asserted that it merely contains the record of men who received this revelation. This implies that the Scriptures are subject to rationalistic interpretation. Hobbes outlined the method by which they should be studied, and through a penetrating exegesis of his own arrived at the conclusions that Moses did not write all of the Pentateuch and that much of the OT originated after the Exile. Spinoza in his *Tractatus Theologico-Politicus* (1670) likewise pleaded for the right of reason as judge of scripture, free from church tradition. Though not strictly a biblical scholar, some of his studies of the OT produced conclusions, among them the composite character of the Pentateuch and the postexilic date of the Psalter and Chronicles, which were prophetic of future trends.

These writings began to influence scholars in the church, such as the theologian Peyrerius, whose book *Praeadamitae* (1655) was burned by the Inquisition for teaching that the Pentateuch was by more than one author. Soon afterward a French priest named Richard Simon wrote a series of scholarly treatises on the Scriptures, applying the principles of Spinoza with a free scientific spirit, despite his own theological conservatism. In his first treatise, *Histoire critique du Vieux Testament* (1678), Simon laid the foundation for modern Pentateuchal criticism by bringing to light the archaeological remarks, diversities of style, contradictions, and repetitions which have ever since served as the staple of Pentateuchal analysis. Meanwhile, other scholars and exegetes were beginning to follow the techniques of literary criticism.

Another Frenchman, the court physician Jean Astruc, deserves the credit for providing the basis of the documentary theory of Pentateuchal composition. In an anonymous writing published in 1753, Astruc argued that the occurrence of the divine names Yahweh and Elohim is a distinctive mark of separate underlying documents. This is a theory which became an axiom in the later Wellhausen analysis.

In this same period there were some who were realizing the peculiar nature of Hebrew poetry. It was Bishop Robert Lowth in his *De Sacra Poesi Hebraeorum* (1753) who pioneered in this field by studying the parallelism and other technical features of Hebrew poetry. His book was followed by Von Herder's *Vom Geist der Ebräischen Poesie* (1782-83), which demonstrated not only that the OT is full of poetry, but also that the very genius of the Hebrew language is poetic. These scholars were influenced by the romantic movement of the time. Von Herder particularly was interested in the culture of the ancient Near East, and was a forerunner of the modern science of comparative religions.

As the eighteenth century drew to a close, OT scholarship was ripe for an attempt at a definitive statement of the results of criticism. Many scholars were active, especially in Germany, in preparing for such an attempt. Very prominent was a historian of great ability, Johann Semler (1725-91), but it was the task of Johann Eichhorn to write the first great "Introduction" to the OT. This was his three-volume *Einleitung*, published in 1780-83, in which he built upon all the research that had preceded his work, adopting what had been substantially Astruc's hypothesis of documents in the Pentateuch. Though many of Eichhorn's opinions did not differ radically from those held by tradition, the entire work was a demonstration of the results of independent historical investigation. Thus, as this century closed, it was already clear to scholarship that much could be expected from an open-minded criticism of the OT.

c. The rise of radical NT criticism. The eighteenth century similarly produced the beginnings of NT higher criticism. This was, however, very much under the dominance of rationalistic thought. Earlier, the English Deist Thomas Woolston (1670-1733) had expressed the antisupernaturalistic dictum that Jesus' miracles were mere superstitious wonder tales, and Deists generally were in agreement with this view. Gradually the center of rationalistic thought shifted to Germany, which thenceforth became renowned for its radical biblical criticism. The German universities became prominent seats of the Enlightenment because they were free from church control. At the same time Pietism was working within the church in Germany to effect a breakdown of orthodox dogmatism.

Rationalistic influence in German NT criticism showed its face very clearly when Hermann Samuel Reimarus wrote the notorious *Wolfenbüttel Fragments* (1774-78). These were published by the philosopher Lessing with the purpose of showing the full effect of rationalism on the biblical view of Jesus. Completely a child of the Enlightenment, Reimarus declared that faith is irreconcilable with reason and charged the disciples with deliberately falsifying the character and intent of Jesus.

During this period orthodox scholars were active in rebutting these extreme views, but the traditional pattern was slowly crumbling. Some conservatives were learning to respect the thinking habits, historical circumstances, and linguistic peculiarities of the writers of scripture, without accepting the antisupernaturalism of the rationalists. The devout Pietistic scholar J. A. Bengel employed in his *Gnomon Novi Testamenti* (1742) a painstaking philological skill, infused with fervent evangelical warmth. At this time NT textual criticism was making further progress, particularly in the work of Johann Wettstein (1693-1754).

2. A great century of progress, 1800-1900. The

nineteenth century was a period of rapid advances in the natural sciences. Traditional church dogma suffered severe shocks as it tried to adjust itself to such revolutionary views as Darwin's evolutionism. The dominant philosophy during the early decades of this century was the idealistic monism of Hegel (1770-1831). The most influential liberal theologian was undoubtedly Friedrich Schleiermacher (1768-1834), who subjected Christian doctrine and the Bible to a rationalistic interpretation. Schleiermacher did emphasize the centrality of Jesus Christ, but this Christ was little more than a symbol to him, since he interpreted the gospel narratives in much the same way as had Reimarus. Schleiermacher reflected the keen historical interest of this period in his *Leben Jesu* (published posthumously in 1865).

a. Liberalism's search for the historical Jesus. This attempt to produce a rationalistic reconstruction of the "historical" Jesus became very popular among NT scholars under Schleiermacher's and Hegel's influence. A biography of Jesus by Heinrich Paulus (1828) was one of them, but the most outstanding success was the *Leben Jesu* of David Friedrich Strauss (1835), which had tremendous influence while provoking storms of outraged opposition from conservatives. In Strauss's rationalistic oversimplification Jesus became nothing more than a Jewish wise man. This work failed to reconstruct the real Jesus, but it benefited subsequent Synoptic criticism in pointing out the principles by which the traditions appearing in our gospels had been preserved, paving the way for the formulation of the Markan hypothesis by Weisse in 1838, and subsequently of the long-dominant two-document theory by Holtzmann (1863) and Bernhard Weiss (1882).

The motifs of Hegelian philosophy were directly applied to NT criticism by Ferdinand Christian Baur (1792-1860). In his studies on the NT, Baur explained the rise of Christianity as a Catholic synthesis between a primitive Jewish thesis, in which Jesus was a purely human teacher, and the Pauline pagan antithesis, which had made of him the supernatural Christ. It was a consequence of this scheme that Baur denied most of the "Pauline" letters to that apostle.

Numerous "lives" of Jesus continued to appear during the course of the nineteenth century; most of them followed the lines of rationalistic interpretation previously laid down. Undoubtedly the most popular but perhaps the least serious of them was Ernest Renan's *La Vie de Jésus,* published in 1863. Even liberal critics agreed that Renan's sentimental reconstruction of the Man of Galilee was a caricature.

During this century rapid advances were made in various fields of NT study, particularly in textual criticism and in Synoptic analysis. It was the fashion among critics to reject the Johannine tradition as very late, and some, such as the radical Dutch school of Van Manen, tended to be overly skeptical toward the Pauline letters. Few, however, went so far as Bruno Bauer in his *Kritik der Evangelien* (1850-51), where he denied the very existence of a historical Jesus. In general, however, liberal critics continued to follow rationalistic principles in interpreting Jesus. Johannes Weiss's book *Die Predigt Jesu vom Reiche Gottes* (1892) called attention to the eschatological, transcendental nature of the kingdom proclaimed by Jesus; but his view was, to an extent, counteracted by that of Wilhelm Bousset, who equated Jesus' kingdom with the fatherhood of God and the brotherhood of man in his *Jesu Predigt in ihrem Gegensatz zum Judentum* of the same year. This was also the view of *Das Wesen des Christentums* (1899-1900), wherein the prince of liberal critics, Adolf von Harnack, reduced the religion of Jesus to mere harmony between God and man. Shortly after the nineteenth century ended, Wilhelm Wrede stated the liberal view in an extreme form by denying that Jesus ever thought of himself as the Messiah (*Das Messiasgeheimnis in den Evangelien,* 1901).

Thus the "historical" Jesus whom the nineteenth century produced was little more than the ideal moral man of modern liberalism in the guise of a Galilean peasant. It will be seen that much of the contribution of the liberal school was in the negative form of supplying a radical antithesis to the traditional view of Jesus held by the church. Thus what this century produced was not enough. It was to be the task of twentieth-century scholarship to attempt the necessary synthesis between the Jesus of history and the Christ of Christian faith.

It must not be thought that liberalism was the only force to contribute to NT criticism during the nineteenth century. Always there were conservative scholars who were not simply polemic but who were contributing positively to the advance of this field of study by balancing the one-sided emphasis of the radicals. There was a distinguished *Heilsgeschichtliche* school in Germany, the most prominent of whom was a man of broad learning, E. W. Hengstenberg (1802-69). Equally influential were the great Cambridge trio of B. F. Westcott (1825-1901), J. B. Lightfoot (1828-89), and F. J. A. Hort (1828-92). These men did much to prepare scholarship for a return to a new appreciation of the biblical tradition.

b. The success of Wellhausen's school of OT criticism. During the first half of the nineteenth century OT scholarship was not so plainly under the dominance of rationalism as NT study was, and it was only gradually prepared to adopt the revolutionally different viewpoint of the Wellhausen school in the seventies and eighties.

By 1850 the theory of an exilic Second Isaiah had been widely accepted, and many scholars agreed on the late date of most of the Psalter and of the second part of Zechariah, as well as on the Maccabean date of Daniel. However, a real break-through had not yet come in the analysis of the Hexateuch, and with this OT scholars were the most intensely active. Three theories had been propounded: the simple documentary theory of Eichhorn; the fragment theory of A. Geddes (1792); and Heinrich Ewald's supplementary theory (1831), which was improved upon by Hermann Hupfeld in *Die Quellen der Genesis* (1853). The basic fault with all these was their failure to recognize the lateness of the great Elohistic source, which they called the *Grundschrift.* E. Reuss of Strasbourg recognized this fault as early as 1833 but failed to publish his opinions until later. Wilhelm Vatke's book, *Die biblische Theologie* (1835),

plainly stated that this source was the latest and reconstructed Israel's history accordingly, but did not gain a sympathetic hearing because of the author's too obvious Hegelianism. The key to the solution had, however, already been provided early in the century by Wilhelm De Wette's *Dissertatio critica* (1805), in which he had forcefully argued that Deuteronomy dates from the time of Josiah.

With this clue a pupil of Reuss, Karl H. Graf, was able to demonstrate in *Die geschichtliche Bücher des Alten Testaments* (1866) that Vatke's theory had been substantially correct. The priestly laws contained in the *Grundschrift* he assigned to the postexilic era, because they appear to be of later origin than those of Deuteronomy. The Dutch scholar Abraham Kuenen helped Graf see that this document's narratives, as well as its laws, belonged after the Exile, and the theory was independently confirmed by August Kayser in 1874. The most brilliant and prolific exponent of this hypothesis was undoubtedly Julius Wellhausen, whose works *Die Composition des Hexateuchs* (1876-77) and *Prolegomena zur Geschichte Israels* (1883) were tremendously influential in winning the majority of scholars for the new theory.

At issue were not only such cherished traditions as the Mosaic authorship of the Pentateuch but also the entire structure of Hebrew history and religion. Wellhausen and his school did not stop at literary analysis but went on to apply to the sources a historical criticism based upon Hegelian evolutionism. Believing that Hebrew religion originated in primitive forms like other religions, this school traced in ascending order its rise to the highest stage. The effect was revolutionary. Neither the patriarchs nor Moses were monotheists as depicted in the Pentateuch. Moses only introduced the worship of Yahweh as the chief among the gods. Until the eighth century B.C., Yahwism struggled hard to maintain a dominant position, and it was the combined influence of the great prophets, the Deuteronomistic reform, and the Exile which established absolute monotheism in Israel. The Levitical laws, far from being from Moses, resulted from the reforms of the postexilic priesthood.

A great number of scholars labored in the closing decades of the nineteenth century and in the early decades of the twentieth to apply these principles to every part of the OT. There has been in recent years a reaction against their excessive analysis and against their too simple evolutionary scheme, but the major results of their studies are proving, even after much sifting, to have abiding value.

c. Forces preparing for change. As in NT studies, so here, the antithesis of Wellhausen's criticism to tradition was too extreme, and reaction was bound to come. Historical research in the nineteenth century was itself producing new knowledge about the world of the Bible. Archaeological exploration had not only revealed to scholars the great monuments and the geography of the Bible lands, but had also led to the decipherment of the Egyptian hieroglyphics and of the Mesopotamian cuneiform script. Thus a new flood of antique documents was becoming available, making possible a more scientific understanding of the history and religion of the Bible peoples while enriching Hebrew philology tremendously. The biblical text could now be established with greater exactitude, and its meaning could be better understood. Rabbinical studies, too, were beginning to lead to a clear picture of the relation between the Hebrew and Christian scriptures.

3. Biblical criticism in the twentieth century. Thus, as the twentieth century began, powerful forces were at work to correct the one-sidedness of a biblical criticism that had veered too far from the straight course of historical investigation, driven by the winds of rationalistic and evolutionistic thought. A new tack had to be taken if true progress was to continue.

a. New methods of interpretation. Realizing that literary criticism had passed its stage of greatest productivity, a group of German scholars associated with Hermann Gunkel (1862-1932) began to apply themselves to the study of comparative religions and of form criticism, with amazingly fruitful results for both OT and NT study. Gunkel laid stress on three methods of approach: (*a*) the determination of the oral tradition lying behind the written documents; (*b*) a comparison of the cultic and mythological motifs of the religions of Egypt and Mesopotamia with similar motifs in Hebrew religion, in order to show how Israel had both been attracted by and reacted against the cultures of her neighbors; (*c*) a sympathetic criticism of the literary forms in which the various tales, laws, and poems of the OT appeared. Gunkel employed all these techniques together, using the cultural situation (*Sitz im Leben*) to help understand literary forms, and vice versa. His most successful application of these methods was in his great commentary on the Psalms (1933).

Gunkel's methods have been widely applied by OT scholars everywhere, and they have also been used in NT criticism, though with less conspicuous success. Three pioneer works in which the literary forms of the gospel stories have been analyzed are M. Dibelius' *Die Formgeschichte des Evangeliums* (1919), K. L. Schmidt's *Die Rahmen der Geschichte Jesu* (1919), and R. Bultmann's *Die Erforschung der synoptischen Evangelien* (1925). These critics have, however, been unable to gain widespread assent to their results. Their work has been more successful in asking pertinent questions than in providing satisfying answers.

Some twentieth-century scholars have attempted to apply their knowledge of comparative religions to the NT. Under the leadership of Frazer and Reitzenstein, they have suggested that the mystery religions were dominant forces in producing Paul's version of Christianity, but their thesis has not gained wide acceptance.

Far more influential upon both OT and NT criticism during the past decades has been the revival of interest in a "theology of the Word of God," associated with Karl Barth and his school. That the Scriptures are the products of a living faith is now being taken seriously. Studies in the theology both of the OT and the NT are appearing in increasing numbers. This promises to be one of the most fruitful areas of future research.

b. Trends in OT study. As OT scholarship passed the mid-century mark, it could look back and observe a considerable distance between its present position and its position during the ascendancy of Wellhausen's school. It had rejected most of the too extreme views of that school, not because it had grown less critical but because it was proving itself capable of criticizing its own criticism in the light of advancing knowledge. Thus the relative conservatism of present scholarship is no retreat to traditionalism but a stirring vindication of the power of honest study to triumph over the subjective opinions of men. Without attempting to mention any but the most important names, the following summary of current trends may suffice to indicate where OT study stands:

In the study of almost all the OT books a growing sympathy for the writings and respect for their trustworthiness have been in evidence. Most present scholars still recognize the existence of the Pentateuchal documents outlined by the Wellhausen school, despite the attempt of some Scandinavian scholars to place oral tradition in the place of written documents. There is, however, an increasing interest in the individual narratives, stimulated by Gunkel's methods. It is now generally acknowledged that the Pentateuch and the Former Prophets contain many very old documents and record authentic traditions. The Alt-Noth school is skeptical about the oral traditions behind the stories of the settlement, but archaeological discoveries are often substantiating the biblical record in surprising ways.

Although the Priestly Code is still assigned in its completed form to Ezra's time, most present scholars agree that it, too, contains much old material. Moreover, it is now seen that the priests and the prophets worked in closer harmony than was formerly believed, and that the writings of a prophetic school may be as important as the original oracles of its leader.

Gunkel's form criticism on the Psalms has indicated their great liturgical importance, and it is being increasingly acknowledged that many of them are of pre-exilic origin. This has also been true with regard to the wisdom literature of Israel.

The development of Israel's religion and theology is being placed in a new light. It is no longer possible to arrange the OT writings according to a neat ascending scheme, because scholars realize that the age of a particular writing offers no indication of its underlying traditions and documents. Moreover, the study of the religions of the ancient Near East, particularly that of the Canaanites, the Hebrews' nearest neighbors, is making scholars less sure that Yahwism must be younger than the time of the patriarchs. At any rate, OT critics now generally acknowledge the uniqueness and grandeur of Yahwism, and they are ready to admit that the eighth-century prophets who so forcibly preached monotheism were heirs, and not simply originators, of a great religious tradition.

The Dead Sea Scrolls, which have been appearing since 1948, are illuminating a large blind spot in the later history of the Hebrews and promise to produce a rich harvest in various phases of OT research. To an extent, even NT study will be enriched by these finds.

c. Trends in NT study. Albert Schweitzer's book *The Quest of the Historical Jesus* (first published in German in 1906) signaled the end of the liberal Jesus. Far from being a mild Galilean teacher of morality and brotherhood, Jesus was a passionate eschatologist who died seeking to realize messiahhood, according to Schweitzer. This was an interpretation which NT scholarship has been long in accepting, but Schweitzer's book has had the effect of discouraging numerous attempts to write a history of Jesus. Some now despair altogether of finding the historical Jesus; others recognize that we must confess the Jesus of history to be the Jesus of the church which wrote the gospels.

Synoptic exegesis during the first half of the twentieth century avoided extremes of literary criticism on the one hand and of form criticism on the other. The four-document theory of B. H. Streeter (1924) has gained wide acceptance. The existence of an oral tradition preceding the documents appears more plainly than in previous periods. The Fourth Gospel is now often assigned a first-century date and is credited with a considerable historical trustworthiness. Similarly, much of the former skepticism concerning the authorship of Acts has disappeared, and this record is given wide credit as a historical source for the origin of Christianity. Paul's letters are no longer in doubt, except for Ephesians and the Pastorals, and this apostle himself is no longer looked upon as the archperverter of Jesus' religion but rather as a faithful follower and interpreter. A balanced conservatism similarly prevails in regard to the other NT writings.

While NT higher criticism's main effort since 1900 has been largely spent in reassessing the one-sided theories of the previous century, rapid forward progress has continued to be made in NT textual criticism and in linguistic studies. Discoveries such as that of the Chester Beatty Papyri and increasing understanding of the MS families have greatly aided the former, while new light from the papyri on the Koine of the NT, together with research into the Aramaic background of the gospels, has enriched the latter. A great monument of linguistic information, based upon the research of past generations, is Kittel's extensive *Theologisches Wörterbuch zum Neuen Testament.*

There has been increasing interest in the theology of the NT in recent years, paralleling a rising interest in OT theology. Present scholars are also being challenged to decide upon the merits of Bultmann's scheme of "demythologizing" the NT—i.e., of accepting its kerygma of a redeeming Christ without concern for the objective historicity of the gospel tradition. Thus biblical scholarship is once again facing the issue of judging the Scriptures on the basis of philosophical presuppositions. If some seem hesitant to be governed by an existentialist in the place of an idealistic philosophy, it may be because they are convinced that biblical criticism must remain primarily a theological discipline.

Bibliography. A classic definition of the meaning and method of historical criticism is A. Kuenen, "Critical Method," *The Modern Review,* I (1880), 461-88, 685-713.

On criticism of the Bible as a whole: A handy summary of modern criticism may be found in S. Terrien, "History of

the Interpretation of the Bible, Modern Period," *IB*, I (1951), 127-41. More extensive are: C. W. Dugmore, ed., *The Interpretation of the Bible* (1944); R. M. Grant, *The Bible in the Church* (1948). Covering a restricted area or period are: J. E. Carpenter, *The Bible in the Nineteenth Century* (1903); W. B. Glover, *Evangelical Nonconformists and Higher Criticism in the Nineteenth Century* (1954). Valuable and detailed symposiums on recent trends are: H. W. Robinson, ed., *Record and Revelation* (1938); H. R. Willoughby, ed., *The Study of the Bible Today and Tomorrow* (1947); H. H. Rowley, ed., *The OT and Modern Study* (1951).

On OT criticism: E. M. Gray, *OT Criticism: Its Rise and Progress* (1923); J. Coppens, *The OT and the Critics* (1942)—from a Roman Catholic viewpoint; H. F. Hahn, *The OT in Modern Research* (1954); E. G. Kraeling, *The OT Since the Reformation* (1955); H. J. Kraus, *Geschichte der historisch-kritischen Erforschung des AT's von der Reformation bis zur Gegenwart* (1956)—by far the most detailed.

On NT criticism: A. Schweitzer, *The Quest of the Historical Jesus* (1st English ed., 1910), details research on the gospels to his time; while A. M. Hunter, *Interpreting the NT 1900-1950* (1951), summarizes more recent study. S. J. De Vries

*BIBLICAL THEOLOGY, CONTEMPORARY.

A historical survey of major contributions to the field of biblical theology, such as in Biblical Theology, History of, makes it more than obvious that there is no one definition of this field on which biblical scholars can unanimously agree. It is true that a closer analysis of contemporary contributions to the field may well show that some of the older definitions are obsolete, as well as bring to light certain common tendencies in aim and method; but it will not eliminate the tensions between different conceptions of what a biblical theology is or should be. Such diversity was to be expected, since very different theological and philosophical presuppositions are necessarily involved.

And yet, in spite of these differences, recent biblical studies have gravitated with an unprecedented enthusiasm toward topics and problems which undoubtedly fall within the biblical theological field. This seems to be due to the fact that a new stage has been set for biblical theology, as a result of a new emphasis upon its descriptive task. Since consideration of this task has proved far more suggestive and creative than is often recognized, there is good reason to consider the nature of the new descriptive biblical theology and then to move toward its implications for other aspects of theology. This can be done only by way of hermeneutics. Thus we arrive at the following outline:

A. The descriptive task
   1. A new stage set for biblical theology
   2. What it meant and what it means
   3. Three approaches to NT theology
      a. Barth
      b. Bultmann
      c. Cullmann
      d. Conclusions
   4. Is a descriptive NT theology possible?
   5. The descriptive approach and the OT
   6. "Sacred history" and the unity of the Bible

B. The hermeneutic question
   1. As raised by a descriptive biblical theology
   2. Alternative answers to the hermeneutic question
   3. The significance of "canon" for biblical theology
   4. The preacher and biblical theology

Bibliography

A. *THE DESCRIPTIVE TASK.* 1. A new stage set for biblical theology. The alleged biblical basis for what has been called "liberal theology" in its classical form (the use of the term "liberal" in this sense, referring to the dominant theology *ca.* 1900, does not imply that many more recent types of theology are not just as "liberal" in their method and presuppositions)—i.e., the view that the OT is a witness to the evolution of a more and more ethical monotheism and that the gospels are biographies of Jesus as the even more refined teacher of the Golden Rule, the fatherhood of God, and the eternal value of the individual—the alleged biblical basis of this view was not shattered by the conservatives, but by the extreme radicals of the *religionsgeschichtliche Schule* ("history-of-religions school"; *see* Biblical Criticism). They could show, on the basis of the comparative material, that such a picture of Jesus or of the OT prophets was totally impossible from a historical point of view and that it told more about the ideals of bourgeois Christianity in the late nineteenth century than about the carpenter from Nazareth or the little man from Tekoa. What emerged out of the studies of the *religionsgeschichtliche Schule* was a new picture of the men, the ideas, and the institutions of biblical history. Those elements and traits, which did strike modern man as crude, primitive, cultic, and even magical, were now given equal and often greater emphasis than those which happened to appeal to enlightened Western taste. The "peril of modernizing Jesus"—to use Henry J. Cadbury's phrase—was fully recognized. Johannes Weiss and Albert Schweitzer made a forceful plea for a most abstruse and appalling eschatology as the actual setting for Jesus and his followers; H. Gunkel, H. Gressmann, and S. Mowinckel placed the OT back in the matrix of Near Eastern myth and cult. Johannes Pedersen applied V. Groenbech's studies of human self-understanding in old Nordic religion to an extensive study of OT anthropology, where cherished distinctions between soul and body, magic and religion, cult and ethics, individual and collective, were thoroughly intermingled and lost much of their meaning. It became a scholarly ideal to creep out of one's Western and twentieth-century skin and identify oneself with the feelings and thought-patterns of the past. The distance between biblical times and modern times was stressed, and the difference between biblical thought and systematic theology became much more than that of diversification over against systematization or of concrete exemplification over against abstract propositions.

What emerged was a descriptive study of biblical thought—empathetic in the sense that it was beyond sympathy or antipathy. This was actually a new phenomenon in biblical studies, and yet it came as a mature outgrowth of the historical and critical study of the Scriptures. It differed in three ways from earlier contributions of historical criticism:

a) The strait jacket of doctrinaire evolutionism—in Darwinistic as well as in Hegelian terms—was

considerably loosened. While development and stages were recognized and noticed, the later stages were not preconceived as progression (e.g., from priests to prophets) or regression (e.g., from Jesus to Paul). Each period and each ideology was given enough attention to be granted a careful description on its own terms.

b) The question of fact—i.e., whether, e.g., the march through the Red Sea or the resurrection of Jesus had actually taken place as described—was not any more the only one which absorbed the historian. Now there was more concern about what the function and the significance of such an item or of such a message as "He is risen" might have been to the writers and readers (or hearers) of the biblical records. Form criticism and *Sitz im Leben* became the catchwords for students of the documents of temple, synagogue, and church.

c) The question about relevance for present-day religion and faith was waived, or consciously kept out of sight. This statement will be, perhaps, the strongest reminder of how biblical theology was swallowed up or threatened by a history of biblical thought or a history of biblical religion. This historicism or antiquarianism, with its lack of interest in relevance, has been challenged on many scores by modern writers. And yet it remains a fact that modern biblical theology would be quite inexplicable were it not for the fact that the *religionsgeschichtliche Schule* had drastically widened the hiatus between our time and that of the Bible, between West and East, between the questions self-evidently raised in modern minds and those presupposed, raised, and answered in the Scriptures. Thereby a radically new stage was set for biblical interpretation. The question of meaning was split up in two tenses: "What *did* it mean?" and "What *does* it mean?" These questions were now kept apart long enough for the descriptive task to be considered in its own right.

2. What it meant and what it means. To liberals and conservatives alike, this distinction was not sharply in focus prior to the *religionsgeschichtliche Schule*. We may be justified in taking Harnack's *What Is Christianity?* as the most influential popular summary of liberal interpretation of the NT. It is not accidental that Harnack, as Bultmann points out in his Introduction to a reprint of the work (1950), "failed to realize the importance of the so-called *religionsgeschichtliche Schule* and never truly became sympathetic with it." Albert Schweitzer had brought this aspect of Harnack's interpretation to bear upon the problem now under consideration when he said in *The Quest of the Historical Jesus:* "Harnack, in his 'What Is Christianity?' almost entirely ignores the contemporary limitations of Jesus' teaching, and starts out with a Gospel which carries him down without difficulty to the year 1899."

The apologetic intentions of the "liberals" should not be forgotten. In the light of later development, "liberal" came to stand for the "leftists" in the theological assembly. By the turn of the century this was not so. The liberals understood themselves as the mediating party who, often with a deep concern for Christianity and its future role in our culture and with a genuine piety, refuted the radical assaults of D. F. Strauss and others. But the way in which they carried on their apologetic task made them poor historians of religion. Their methods were basically the same as those used by the conservatives. Both were convinced that the Bible contained revelation which could be grasped in the clean form of eternal truth unconditioned and uncontaminated by historical limitations. The difference was only one of degree. While the orthodox interpreters found this revelation in the whole of scripture and systematized it by harmonization and by interpreting the less easily fitting by those passages which were hand in glove with their own systems, the liberals arrived at the pure revelation by way of more or less drastic reductions. This reductionist approach was often carried out by literary criticism, but once the *ipsissima verba* ("very words") of the prophets or of Jesus were established, these words happened to square well with the ideals of the modern age. Thus the tension between the past and the present meaning had been overcome before it could create any problems for interpretation. And this happened because the liberals were convinced that the teachings of the Bible were meaningful for modern man—just as the orthodox claimed the same for a vastly more challenging amount of biblical teaching. For the liberals the nucleus of revelation had to be that which could be hailed as relevant and acceptable to modern man.

The resistance to the *religionsgeschichtliche Schule* was openly or unconsciously aimed against its disregard for theological meaning and relevance. By and large, Gunkel's *Schöpfung und Chaos in Urzeit und Endzeit,* Mowinckel's *Psalmenstudien,* and Schweitzer's *Quest* appeared on the scene with no immediate relation to the ongoing theological discussion. Schweitzer's work did actually contain an Epilogue in which the author made a cautious attempt to draw out the ramifications of the thoroughgoing eschatology of Jesus for theology as well as for the life of the believer, but the return is rather small. When facing the shocking distance back to the Jesus of the gospels, Schweitzer finally takes refuge in an expectant mysticism where the Christ of faith comes to us as "One unknown," yet One who in an ineffable mystery lets man experience who He is. In the German edition this final sentence of the whole volume symbolically ends with ellipsis dots.

This ellipsis formed, however, a challenge, the response to which is the vigorous interest in biblical theology starting in the 1920's and showing no slackening tendencies toward the end of the 1950's. Once freed from the anachronistic interpretations of their predecessors, and forced to accept the hiatus between the ideas and ideals in the biblical material, the theologically minded student of the Scriptures slowly found a new and deeper relevance in what the *religionsgeschichtliche Schule* described for him as the pre-Westernized meaning of sayings and events. In the broader context of cultural climate this tendency had its obvious similarities in the taste for the primitive, with its crude vigor in art, music, and literature. It was akin to Rudolf Otto's re-evaluation of religious phenomena in his study of holiness. It had striking parallels in the field of historical theology, where, e.g., Luther's own words

and intentions were sharply contrasted with the teaching of seventeenth-century Lutheranism, the sympathies of the scholars always siding with the former. But it was primarily the experience of the distance and the strangeness of biblical thought as a creative asset, rather than as a destructive and burdensome liability.

Without this new and nonmodernizing look at the Bible, Karl Barth's programmatic commentary on Romans or Rudolf Bultmann's *Theology of the NT*—or his book written in 1926 on Jesus—would be inexplicable. O. Cullmann's *Christ and Time,* as well as his more recent *NT Christology,* are the typical examples of a somewhat different result of the same ideal of historical distance. In OT studies, W. F. Albright's *From the Stone Age to Christianity* and G. E. Wright's *God Who Acts,* as well as W. Eichrodt's and G. von Rad's OT theologies, are all inspired by the same tension between the mind of a Semitic past and the thought of modern man. Yet most of these writers launch strong attacks on the "historicism" of the "historian of religion." By these terms they do, however, usually refer to other elements in the *religionsgeschichtliche Schule* than the one to which attention has been drawn here—viz., the descriptive element, and its awareness of the distinction between what it meant and what it means.

3. Three approaches to NT theology. This distinction between past and present meaning has its specific problems for OT theology, and we may consequently be wise in first trying to clarify the issue in relation to NT theology. We may for this purpose go to three contemporaries who exemplify three different types of NT theology: Karl Barth, Rudolf Bultmann, and Oscar Cullmann. They are all aware of what we have called the distance between the centuries. Especially Bultmann's relation to the radical tradition—over against the liberal—in biblical studies is obvious—e.g., in his references to D. F. Strauss. The question raised by the distance should thus be faced in its most radical form: Do these old documents have any meaning for us—except as sources for our knowledge of a small segment of first-century life and thought, or as means for a nostalgic visit to the first era of Christian history? If they have a meaning in the present tense and sense, on what ground do they have this meaning?

a. Barth. In the Preface to the second edition of his commentary on Romans, Barth argues for the exegesis of Luther and Calvin over against that of men like Jülicher and Lietzmann. The former are the only ones who really have tried to "understand" Paul, since, e.g., Calvin, "having first established what stands in the text, sets himself to re-think the whole material and to wrestle with it, till the walls which separate the sixteenth century from the first become transparent, i.e., till Paul *speaks* there and the man of the sixteenth century *hears* here, till the conversation between the document and the reader is totally concentrated on the subject-matter, which *cannot* be a different one in the first and sixteenth century." The concentration on the subject matter (God, Jesus, grace, etc.) bridges the gap between the centuries, and it does so since they cannot but be the same. This identity in the subject matter guarantees the meaningfulness of the Pauline writings. They must speak about what Calvin (or the modern interpreter) knows as the subject matter. This is apparently so since God, Christ, and all of revelation stand above history. Thereby the tension between the first century and ours is resolved, or rather transformed, into a theological category of "otherness."

It is also significant to note that Barth speaks as if it were a very simple thing to establish what Paul actually meant in his own terms. To say that the Reformers interpreted Paul by equating the problem of the Judaizers and the Torah in Paul with the problem of work-righteousness in late medieval piety and that this ingenious translation or application of Pauline theology may be 80 per cent correct but left 20 per cent of Paul inexplicable—and consequently distorted in a certain sense the true picture of Pauline thought—to say this is to call attention to a problem which could not be detected, let alone criticized, by Barth or any truly Barthian exegete. Thus biblical theology along this line is admittedly incapable of enough patience and enthusiasm for keeping alive the tension between what the text meant and what it means. There are no criteria by which they can be kept apart; what is intended as a commentary turns out to be a theological tractate, expanding in contemporary terms what Paul should have said about the subject matter as understood by the commentator.

When the term "biblical theology" is used of works where this method is applied, it does not designate anything basically different from systematic theology, except that its systematic task is so defined as to make the Bible central in its work. Thus it may be convenient for classification within the realm of systematic theology to speak of this theology as "biblical" rather than philosophical. But from the point of view of biblical studies such a theology is not automatically "more biblical" than other types of systematic theology.

b. Bultmann. On the last page of Bultmann's *Theology of the NT* we find a statement (in italics below), apparently made in passing, which is worth noting in relation to the question if or why the biblical documents have any meaning for the present. He places the reader before an alternative: "Either the writings of the NT can be interrogated as the 'sources' to reconstruct a picture of primitive Christianity as a phenomenon of the historical past, or the reconstruction stands in the service of the interpretation of the NT writings *under the presupposition that they have something to say for the present.*" Bultmann sides with the second alternative, and in so doing he takes for granted that the NT has such meaning. For Bultmann, as for Barth, the common denominator of meaning is the subject matter; but for Bultmann there is only one subject matter which is valid: the self-understanding as it expresses itself in the NT and as it is experienced through human history until the present time. This gives to his NT theology a strikingly uneven character. In dealing with the message of Jesus, the kerygma of the early church and its development into the second century, his method is by and large descriptive; but in the exposition of Pauline and Johannine material—and this is almost half the whole work—the tone and even the method are different, since these writings lend themselves so

much more easily to anthropological interpretation.

Yet nobody could blame Bultmann for not having given reasons for what he is doing. Most of his later writings have centered around his plea for demythologizing, and it has become more and more obvious that this to Bultmann also implies a dehistoricizing of the NT. His attack on the historicism of NT interpretation (i.e., the use of the NT as a "source" for our knowledge of a historical past, be it the historical Jesus or the life and teaching of early Christianity) is centered in his emphasis on the NT as a message, a kerygma. The intent of NT theological utterances is not to state a doctrine (as for orthodoxy) and not to give the material for a concept (as treated by the historians). It is to challenge man in his own self-understanding, and consequently "the act of thinking must not be divorced from the act of living." When the NT kerygma witnesses to historical events (as in I Cor. 15:3-8), these "events" are of little significance as events; what counts is to recreate their effect on man's self-understanding. Thus —in Bultmann's own view—his NT theology becomes "theology" explicitly only where it clarifies the "believing self-understanding in its reference to the kerygma." As such—and only as such—has the NT "something to say to the present." Only on such terms does Bultmann find it possible to do justice to the intent of the NT.

c. Cullmann. In Cullmann, perhaps the most productive contemporary writer in the field of NT theology, we find a very different approach to biblical theology. If history is mute to Bultmann for reasons of hermeneutics and philosophy—a view which colors Bultmann's exegesis to the extent that he interprets NT eschatology as implying the end of history in Christ—Cullmann finds the key to NT theology in its understanding of time. Most discussions of Cullmann's *Christ and Time* have centered around a criticism of his distinction of linear time (biblical) versus circular time (Greek) and his idea of Christ as the center of time, but if these interpretations were refuted, the thrust of Cullmann's argument is still unchallenged when it urges us to recognize how the categories of time and history, rather than essence, nature, and eternal or existential truth, are the ones within which the NT moves (cf. Cullmann's "Le mythe dans les écrits du NT," *Numen,* I (1954), 120-35). Cullmann has thereby recaptured the mood of thought of the NT writers and stays within it long enough to work out its implication for different aspects of NT thought. On the other hand, it is not quite clear how Cullmann understands the relation between such a descriptive biblical theology in its first- and second-century terms and its translation into our present age; his hermeneutic discussions have nothing of the radical penetration of Bultmann's. His work is basically confined to the descriptive task, and when Bultmann could say about Cullmann—as he does about E. Stauffer's NT theology—that he "transforms theology into a religious philosophy of history," Cullmann's answer would be that NT theology *is,* whether we like it or not, a religious philosophy of history, and that he finds it difficult to see how this historical dimension can be translated away in any presentation of the gospel to the present age.

Such a discussion between Cullmann, Stauffer, and Bultmann would, however, be totally fruitless, for the following reasons: (*a*) All three take for granted that the NT has "meaning," but while Bultmann discusses from the vantage point of his own motivation for such a meaning, Cullmann (and Stauffer) have not clarified their answer to why or how they consider the NT as meaningful for the present age. Because of this lack of clarification, their works are read by many—perhaps most—readers as being on the same level of present meaning as Bultmann's or Barth's highly "translated" interpretations; and there are indications that they do not mind such a use of their works. A close study of Stauffer's NT theology makes it quite clear, however, that its method remains strictly descriptive; this is the more obvious in his extensive and impressive use of noncanonical intertestamental material as equally significant to picture the mood of NT thought. Cullmann's Christology follows suit in this respect. (*b*) Consequently, Bultmann's critique of such an approach should be the opposite to what it actually is. He could charge his opponents with not having seen the need for transforming or translating the NT religious philosophy of history into a contemporary theology, a need which he himself has epitomized in his quest for demythologizing. This would force his opponents to clarify why they consider such a dehistoricizing translation unnecessary or arbitrary. (*c*) Bultmann's case for the end of history in Christ and Cullmann's for ongoing history as the essence of NT eschatology have to be tested on the descriptive level. On this level a meaningful discussion can be carried on. If Cullmann seems to be much closer to the truth, Bultmann's interpretation may remain valid as a demythologized translation. But the "validity" of such an interpretation hinges then on the validity of the hermeneutic principles of the interpreter, and is of no direct consequence to the descriptive task of biblical theology.

In the present state of biblical studies, Cullmann's (and Stauffer's) contribution reminds us of Schweitzer, who felt himself compelled to present as forceful an eschatological picture of Jesus as he found in the sources, in spite of the fact that he did not see too clearly what its theological ramifications might be. This is the same as saying that these works carry the signs of hope which belong to every vigorous contribution to descriptive biblical theology, in spite of its hermeneutic unclarity. The pitfall for both the scholars and the common reader is the ambiguity by which the descriptive method is allowed to transcend its own limitations. (Stauffer later moved on to a quite different methodology, by which he claims to have established a new basis for the "historical Jesus.")

d. Conclusions. It thus appears that the tension between "what it meant" and "what it means" is of a competitive nature, and that when the biblical theologian becomes primarily concerned with the present meaning, he implicitly (Barth) or explicitly (Bultmann) loses his enthusiasm or his ultimate respect for the descriptive task. And yet the history of the discipline indicates that all types of biblical theology depend on the progress of this descriptive biblical theology, to which the contribution of the theologi-

cally irrelevant representatives of the *religionsgeschichtliche Schule* is strikingly great.

From the very beginning of the use of the term "biblical theology" in the seventeenth century, there has been the tension between the contemporary (be it scholasticism, conservatism, liberalism, or existentialism) and the biblical, but it is in the light of historical criticism that this tension has become clarified as one between two centuries with drastically different modes of thought. Once this difference became great enough to place the Bible further away from us—to the liberal theology the historical Jesus was closer to modern man than was the Christ confessed in the dogma of the church—the need for "translation" became a real one. Bultmann's plea for demythologizing—regardless of the way in which he carries it out—is certainly here to stay. But this makes it the more imperative to have the "original" spelled out with the highest degree of perception in its own terms. This is the nucleus of all biblical theology, and the way from this descriptive task to an answer about the meaning in the present cannot be given in the same breath on an *ad hoc* basis. It presupposes an extensive and intensive competence in the field of hermeneutics. With the original in hand, and after due clarification of the hermeneutic principles involved, we may proceed toward tentative answers to the question of the meaning here and now. But where these three stages become intermingled, there is little hope for the Bible to exert the maximum of influence on theology, church life, and culture. How much of the two last stages should belong to the discipline of biblical studies or to what extent they call for teamwork with the disciplines of theology and philosophy is a practical question, a question which in itself indicates the nature of the problem. If the three stages are carelessly intermingled, the theology as well as the preaching in our churches becomes a mixed or even an inarticulate language.

4. Is a descriptive NT theology possible? Many are those who express serious doubts about the possibility of the descriptive task as pictured above. Every historian is subjective in the selection of his material, and it is often said that he does more harm when he thinks himself to be objective—i.e., when he does not recognize, not to say openly state, what his presuppositions and preconceived ideas are. We can smile when we see how an earlier generation of biblical scholars peddled Kantian, Hegelian, or Ritschlian ideas, all the time subjectively convinced that they were objective scholars who only stated "facts." All this naturally calls for caution; but the relativity of human objectivity does not give us an excuse to excel in bias, not even when we state our bias in an introductory chapter. What is more important, however, is that once we confine ourselves to the task of descriptive biblical theology as a field in its own right, the material itself gives us means to check whether our interpretation is correct or not. To be sure, the sources are not extensive enough to allow us certainty in all areas; and the right to use some comparative material, while disregarding other such material as irrelevant for our texts, gives further reason for uncertainty; but from the point of view of method it is clear that our only concern is to find out what these words meant when uttered or written by the prophet, the priest, the evangelist, or the apostle—and regardless of their meaning in later stages of religious history, our own included. Such a program is by and large a new feature in biblical studies, a mature fruit of the historical method. It does not necessarily disregard the intent of the biblical texts, but captures the implication of their kerygmatic nature when it lifts them out of the framework of "theological concepts" and places them back into their *Sitz im Leben* (the "life situation") of Israel or the church.

This descriptive task can be carried out by believer and agnostic alike. The believer has the advantage of automatic empathy with the believers in the text—but his faith constantly threatens to have him modernize the material, if he does not exercise the canons of descriptive scholarship rigorously. The agnostic has the advantage of feeling no such temptations, but his power of empathy must be considerable if he is to identify himself sufficiently with the believer of the first century. Yet both can work side by side, since no other tools are called for than those of description in the terms indicated by the texts themselves. The meaning for the present—in which the two interpreters are different—is not involved, and thus total co-operation is possible, and part of their mutual criticism is to watch whether concern for meaning or distaste for meaning colors the descriptions where it should not.

5. The descriptive approach and the OT. The tension between the meanings becomes further complicated when we turn to the nature of OT theology, and this for two main reasons: (*a*) The OT contains material from many centuries of Israelite life. This makes it obvious that there are different layers of meaning within the same account. The account of the sacrifice of Isaac may well once have functioned as God's own command of substituting an animal for human sacrifices, but in its present setting in Gen. 22 the meaning is clearly seen as a witness to Abraham's ultimate obedience. Jacob's dream at Bethel seems to be a tradition by which the validity of the cult of the N kingdom was upheld by reference to how the patriarch had found Yahweh at that place, but once the rivalry between the two kingdoms was a dead issue, the story took on—or returned to—the meaning of a more general epiphany. This problem of interpretation and hermeneutics is certainly not confined to the OT; it forms the crucial problem of gospel research when we try to push beyond the evangelists to the actual words and deeds of Jesus. But in the OT it is a more flagrant and paramount problem. Thus already the descriptive task is faced with the constant question of "layers of meaning" through the history and transmission of OT traditions. The history of interpretation is woven into the very fabric of the biblical texts themselves, and the canonization of Torah, Prophets, and Writings did not disrupt the ongoing reinterpretation in sectarian or normative Judaism, as we learn from the intertestamental and the rabbinic material. Thus any statement of a descriptive sort about what an OT passage meant has to be accompanied by an address: for whom and at what stage of Israelite or Jewish history? The track along which the biblical theologian pursues the meaning of the OT is thus that of the

ongoing religious life of Israel as the chosen people of God and as responding to the events in its history which they interpret as the acts of God.

b) Secondly, the church was born out of a dispute with Jewish interpreters of the OT regarding its meaning, and first-century Christian theology of the more verbalized sort, as that found in Paul, centers around the terms on which the church finds the OT meaningful—e.g., as promise now fulfilled or as law binding on the members of the church. The Christian claim to the OT rested on the conviction that Jesus as the risen Christ was the Messiah to whom the OT witnessed. The church thereby sided with those interpreters of the OT who, like, e.g., the Qumran community, saw the center of the OT in its prophecies and promises, including those found in the five books of the Law, while the Jewish exegesis which became normative more and more emphasized the law as the core of revelation and the precious token of Israel's chosen status (*see* LAW IN THE OT). Neither interpretation had any similarity with the one prevailing in the theologized form of the Wellhausen interpretation of Israelite history, where the significance of the OT was seen in the evolution of ethical monotheism. Here, again, it was the radicals of the *religionsgeschichtliche Schule* who caused the construction of this liberal interpretation to crumble, corrupted and weakened as it was by the apologetic interest in a meaning for the present.

Any writer in the field of OT theology must be aware of this double outcome of the ongoing interpretation of the OT material, each within the framework of a community of faith. For the descriptive task both outcomes appear as live options, and neither of them can claim to be the right one if judged by the potentialities of the OT material itself. The act of faith by which the interpretations parted ways does not add anything to the OT material as such. Thus a Christian and a Jewish OT theology differ only where the question of meaning is pursued beyond the material and the period of the OT texts themselves. Such a Christian OT theology may find its organizing principle in the NT understanding of the OT in first-century terms (another descriptive task being thus involved) or in any one principle of Christian hermeneutics from later centuries, our own included. Nobody could deny the validity or even the necessity for the church of such a task, especially since it is in the very tradition of the NT itself. Yet the same warning which emerged out of our study of the meanings in NT theology applies to such an enterprise. The distinction between the descriptive function as the core of all biblical theology on the one hand, and the hermeneutics and up-to-date translation on the other, must be upheld if there is to be any chance for the original to act creatively on the minds of theologians and believers of our time.

6. "Sacred history" and the unity of the Bible. In OT theology even more than in its NT counterpart, history presents itself as the loom of the theological fabric. In spite of its intentions to be historical, the liberal interpretation of the OT overlooked this fact, substituting its evolutionistic interest in the development of ethics and monotheism for the sacred history in which Israel experienced its existence. In more recent times an anthropological approach to OT theology—not much different from Bultmann's approach, but unaware of its implicit demythologizing and dehistoricizing—has been tried with some success. Its success is partly due to its superior descriptive power if compared with that of the liberals.

In sharp contrast to what is called—with a gross generalization—"the Greek," we find the Semitic or Hebrew or biblical anthropology spelled out, and sometimes this very anthropology is hailed as the essence of biblical theology. But in works like those of G. E. Wright and G. von Rad, OT theology seeks its center where the ongoing life of Israel—from a descriptive point of view—experienced it—i.e., in its own history as a peculiar people, chosen by God. Especially in Wright this approach is coupled with arguments for the uniqueness of Israel as compared with surrounding people and cultures, a claim which seems to be a carry-over from another methodology. Israel's uniqueness was hardly based on its ideas about God or man but in its ELECTION consciousness, which in turn has given its thinking distinctive features which we may well call unique. *See* COVENANT.

But the thrust of an OT theology which finds the center in the acts of God (Wright) or in Yahweh's revelation through words and deeds in history (von Rad), is ultimately to establish that HISTORY is not only a stage upon which God (*see* GOD, NT) displays his nature through his acts, but that the drama itself is one of history. The salvation which is promised is one within history, either in terms of return of the dispersed people from all the ends of the earth or as a New Jerusalem and a glorified Israel in a new age, which in spite of its otherworldly features comes in time and history at the end of this present age (*see* ESCHATOLOGY OF THE NT). This historical consciousness of Israel lives by the remembering of the past and the ever new interpretation of it as a promise for the future. The cultic festivals, with their roots in Near Eastern ritual and their manifestations in the sacred kingship of the Davidic dynasty, become projected toward the eschatological future of bliss, righteousness, and peace. In all this the common denominator—from a descriptive point of view—is neither certain concepts of God as One or as acting, nor an anthropology peculiar to the Bible, but the ongoing life of a people cultivating the traditions of its history in the light of its self-understanding. It is guided therein by its priests, prophets, and teachers of wisdom, and thus this people moves toward a sure but ever evasive *eschaton,* keeping the law, which is the token of their chosenness.

Such a framework for OT theology is the only one which takes the descriptive task seriously, since it does not borrow its categories from the NT or later Jewish or Christian interpretation but finds the organizing principle in the very life situations out of which the OT material emerges as meaningful to the life of the people. From such a layer of meaning we may move back into the meaning of the different elements which were placed in this framework of sacred history. This may lead us to patterns of thought and blocks of tradition originally quite unrelated to the historical consciousness of Israel; but only with a full recognition of this framework can we adequately go behind it and analyze what the

original elements of the tradition may have been and how they were modified by their setting in the religion of Israel. Only so can we know to what extent they retained their character as remnants—whether weak or vigorous and creative—of an earlier period within the total tradition. As such remnants they deserve the fullest descriptive treatment and should not be swallowed up by a generalizing sweep of sacred history as though that sweep constituted the entire content of the OT.

When the OT is treated in this fashion as the living and growing tradition of a people, it yields a theology which brings us up to the parting of the ways by Jews and Christians. The description thereof places us where the NT stands, and we face the issues of NT theology as once Jews and Christians faced them in the first century. It brings into the NT the dimension of time and history which is essential to our understanding of the NT in its own terms. The announcement by Jesus that the new age is impending, and the faith of the early church that the Messiah is enthroned in heaven since he is risen and since the Holy Spirit has been poured out, comes as a vigorous claim for fulfilment of the OT promises, not accepted by the majority of the Jews. Yet Paul is convinced that before the kingdom is established on earth as it is now in heaven, the Jews will accept Jesus as the Messiah (Rom. 9–11). Thereby the drama of this age will come to its glorious end; the new age will be ushered in. Jewish exegesis in the Christian era went rather in another direction, and the eschatology which had reached its peak in Christianity as well as in parts of Judaism became more and more toned down. The emphasis shifted from the hopes for the future to the obedience in the present under the law. Rabbinic Judaism established itself as the normative interpretation of the OT, but the common denominator remained the same: the ELECTION consciousness which accepts the law as the gracious token of God's special favor to his people.

The only question which is beyond reach for such a descriptive approach is: Who was right—the Jews or the Christians? Its answer remains what it always was, an act of faith. If we approached OT theology in terms of developing ethical monotheism, we could, at least theoretically, arrive at an answer. This is, at any rate, what the liberal theologians implied when they hailed Jesus as a teacher superior both to the best of the prophets and to the wisest of the rabbis. But once we have accepted history as the fabric of biblical theology, we are thrown back to the same choice of faith which faced the first century. History does not answer such questions; it only poses them.

This highly simplified sketch of biblical theology in the encounter between the testaments suggests also in what sense there can be a biblical theology where the OT and the NT are held together as a unity. The significance of the OT for the NT is thus shown to be inescapable, just as it was in the early church before there was a NT in our sense. On the basis of the OT and its fulfilment in Christ rests the Christian claim to be the chosen ones of God, the true Israel in Christ, and—if Gentile by birth—"honorary Jews," heirs to the promises given to Israel. The crucial question arises when we ask what impact the NT should have on the presentation of OT theology. When biblical theology allows for such impact, it goes beyond its descriptive task, unless what is being attempted is merely a description of how the early church understood the unity between the OT and its fulfilment in what came to be the NT. But if the biblical theologian should go on to say that this is consequently what the OT text meant, he would be making either a statement of his own faith or a statement about the faith of the NT. If he says that this is what the OT means for the present-day Christian, he has proceeded from description, via hermeneutics, to a contemporary interpretation.

Thus the treatment of the Bible as a unity in this sense is beyond the task of descriptive biblical theology. Indeed, such a biblical theology will tend to discourage and prevent too facile a unification. To cite one example: Paul's radical concentration on the OT promises and his view of the law as holy and yet obsolete, once Christ has come, led Marcion to do away with the OT. He was in a certain way faithful to Paul—far more so than some Jewish Christians—but since his conceptual framework did not allow for a God who dealt with mankind differently in different dispensations, he could not imagine God as the originator of a holy law which he later declared obsolete. In its defense against Marcion, the church by and large forgot Paul's dialectic of time, and leaned over backward placing the OT and the NT on an equal basis. A truly descriptive biblical theology would have prevented both extremes. Thus the historian, with his descriptive approach, may clarify the issue of the relation between the two testaments.

There is, however, one way in which descriptive biblical theology does consider the Bible as a unity. The "sacred history" continues into the NT. Israel's election consciousness is transferred and heightened by the Christians—Jews and Gentiles alike. History is still the matrix of theology. Jesus does not come with a new doctrine about forgiveness for sinners; when he comes, "it so happens" that sinners accept him and the righteous do not. The first shall be the last. He does not leave his disciples primarily as a group of pupils who have rehearsed the "teachings of Jesus" as a lesson to teach others, but he has promised them a place as princes in the new Israel and has urged them to watch for the signs of the times and the coming of the kingdom. They do so; and his RESURRECTION and the HOLY SPIRIT are indications to them that Jesus is now enthroned as the Christ on the right hand of God. The PAROUSIA must be close at hand, and the Spirit is the efficient and sufficient down payment of their share in the age to come. As Israel lives through its history as a chosen people, so are the Christians now gathered together as the chosen ones, the church enjoying a higher degree of anticipation of God's redeeming grace and power than did even the messianic sect at Qumran. God is still the God of a people with an ongoing history, however short it may be: the NT develops its ecclesiology.

It is in such a framework that NT theology can be properly described, and this framework is basically the same as that of OT theology. Here is the common denominator from a descriptive point of view. Within this framework, which gives us the *Sitz im*

Leben of NT thought as a message and a self-presentation, we may study different ideas and concepts. We may find out how they are related or how they conflict with one another. But none of these ideas exists as general and eternal truth apart from the self-understanding of the church as the chosen community.

Thus there is a unity of the Bible on a historical basis. And this is the basis on which the two testaments came together. If, on the other hand, we approach the unity of the Bible or one of the testaments from the point of view of concepts and ideas, we may still be able to discern a certain unity in its anthropology, in its concept of God, or in its attitude toward ethics. A descriptive study of, e.g., Paul's concept of justification would find the roots in the Song of Deborah, perhaps the oldest piece of tradition in the whole Bible (Judg. 5:11; צדקות="saving acts of God"). The Gospel of Mark could be seen in relation to the kerygma in Acts 10; I Cor. 15, as we have learned from C. H. Dodd's *Apostolic Preaching and Its Developments*. But we would look for a *type* of unity which was different from the organic unity to which the testaments themselves witness. And we would be faced with a diversity of views without the means to understand how they fell into a meaningful pattern for the biblical writers themselves. Paul's dialectic attitude toward the law—mentioned above in comparison with Marcion—is a case in point. We would be inclined to see a great—or merely contradictory—paradox in his statement about the holiness and the obsoleteness of the law, if we did not recognize that Paul thought in the pattern of dispensations. The tension between the teaching of Jesus and the early theology of the church would remain a total enigma were it not for the fact that the disciples interpreted what followed after his death as a drastic step forward in the timetable of God, leading toward the Parousia. Our description has to detect and clarify such a development. It could, however, hardly answer the question whether the disciples were right or wrong in their interpretation. We can only describe what they did and why they thought they were right while others thought they were wrong.

What has now been presented as the first and crucial task of biblical theology—i.e., its descriptive function—thus yields the original in its own terms, limiting the interpretation to what it meant in its own setting. An attempt has been made to show that such a task does not necessarily imply the disintegration of the biblical material into unrelated bits of antiquated information. It is quite capable of presenting the different elements as an organic unity *if that unity is the one which actually holds the material together in the Bible itself.* It has been indicated that any question of meaning beyond the one suggested by the sources themselves tends to lessen the challenge of the original to the present-day theologian and makes him unaware of the hermeneutic problem as a *sine qua non* for any such interpretation.

B. *THE HERMENEUTIC QUESTION.* 1. As raised by a descriptive biblical theology. A more thorough familiarity with the net result of such a descriptive approach as the one outlined above raises the hermeneutic question in a somewhat new form. No period of Christian theology has been as radically exposed to a consistent attempt to relive the theology of its first adherents. The ideal of an empathetic understanding of the first century without borrowing categories from later times has never been an ideal before, nor have the comparative sources for such an adventure been as close at hand and as well analyzed. There have always been bits and pieces of an appeal to the original meaning over against different later dogmas and practices of the church. The School of Antioch fought the School of Alexandria by such means; the Reformers argued with the papal theologians, and the Anabaptists with the Reformers, on such a basis; the pietists criticized the orthodox scholastics in the same fashion, and the liberal theologians claimed the same type of arguments against the evangelicals, etc. But never before was there a frontal nonpragmatic, nonapologetic attempt to describe OT or NT faith and practice from within its original presuppositions, and with due attention to its own organizing principles, regardless of its possible ramifications for those who live by the Bible as the Word of God.

The descriptive approach has led us far beyond a conglomeration of diverse ideas, the development of which we may be able to trace. We are now ushered right into a world of biblical thought which deserves the name "theology" just as much as do the thoughts of Augustine, Thomas, Calvin, and Schleiermacher. The translation of its content cannot any more be made piecemeal. The relation to the historical record is not any more one where systematic theology takes the raw material of nonsystematic data of revelation and gives to it systematic structure and theological stature. The relation is not one between a witness of a theologically innocent faith and a mature and sophisticated systematic theology. It is a relation between two highly developed types of theology. On the one hand, theologies of history, from which all statements about God, Christ, man, righteousness, and salvation derive their meaning and connotations, in terms of their function within the plan and on the plane of history; and on the other hand, theologies of an ontological sort, where Christianity is understood in terms of the nature of God, Christ, man, etc. *See* GOD, NT; CHRIST; MAN, NATURE OF (NT).

Within this pattern of nature or essence Christian theology has always tried to do justice to the historical element in the biblical material. But under the pressure of the thought-pattern inherent in the Western theological approach, biblical eschatology —i.e., the matrix of NT thought—was taken care of in a "last chapter" of systematic theology dealing with the "last things" (*see* ESCHATOLOGY OF THE NT). Thereby the very structure of biblical thought was transformed and its eschatology inactivated.

In more recent Protestant theology there have been serious attempts to do more justice to eschatology as the overarching category of systematic theology and the motif of the "two aeons," this age and the age to come, has been stressed—e.g., by the Lundensian theologians. But once again the outcome is a radical transformation, in that the aeons become internalized as levels of existence and experience in the mind and life of every Christian ac-

cording to the formula "At the same time justified and sinner." The life on the border between the two dispensations as Paul knew them is lifted out of its historical context and becomes a timeless description of an inner dialectic of the Christian existence.

The focal point for a theological preservation of the historical dimension in the biblical material was found quite naturally in the stern insistence on the INCARNATION in Jesus Christ. But in this process the Incarnation was more and more intensively developed in terms of its ramifications for the nature of Jesus Christ, while its original connotations were far more centered in the chronological pattern of the Johannine Prologue: God had *now* come to men in Jesus Christ to tabernacle among them in a glory which outshone that of Moses and the law.

The situation could perhaps be best analyzed in the realm of NT Christology (*see* CHRIST), where significant strands of tradition display what later on came to be branded and banned as adoptionism—i.e., the concept of Jesus, who was made the Christ in his BAPTISM, or in his RESURRECTION, or by his ASCENSION. In the light of later doctrinal development it is easy to see why such a Christology was deemed heretical. But there is no indication that there was any conscious tension or argument, within the NT and in its time, between an adoptionist position and one which spoke of Jesus Christ in terms of pre-existence or virgin birth. This was apparently not a matter of conflict. It became so only when the biblical witness was forced to yield the answer to the question about the nature of Jesus Christ, and when this very question became the shibboleth of true doctrine. As long as the question remains within the theology of history, it does not ask what Jesus Christ is or how human and divine nature go together in him. It centers around the question: Who is he? Is he the Messiah or isn't he? In such a context an adoptionist answer coincides for all practical purposes with that of the pre-existence type. But once this framework is lost, the answers come miles apart from one another as contradictory, and the kerygmatic statements in Acts 2:32-37 are a sheer liability to the orthodox theologian when they hail Jesus as the one whom God has made both Lord and Christ after his crucifixion, placing him on his right side as the enthroned Messiah in heaven, whence he now could and did pour out the promised Holy Spirit as a sizable down payment of the age to come.

It is perhaps even more striking when Acts 3:18-21 urges repentance in order that times of refreshment might come from God and that he might send the aforetime-appointed Messiah, namely Jesus, who is now retained in heaven. Here the Parousia is really not the Second Coming of later theology. There is only one coming of the Messiah, the one at the end of time. We are used to considering the First Coming—i.e., the earthly ministry of Jesus, as a clear, uncomplicated "coming" of the Messiah, but recognize how many complications arose out of the interpretation of the Second Coming. To the theology manifested in Acts 3, the problem seems to have been the opposite one. The Parousia—what we call the Second Coming—was no "problem"; it was part of the Jewish expectations concerning the age to come. The problem was rather in the opposite direction: To what extent was the First Coming, the earthly ministry of Jesus, a real coming? How much of an anticipation did it imply, and to what extent did Jesus exercise messianic power within it? Once he was hailed as the Messiah enthroned in heaven, it was clear to the gospel writers that Jesus was the Christ, but there are enough indications left in the Synoptic gospels to show that he was so by inference from what had happened after Calvary, and by references about what he was to become.

Thus the pattern of history in this type of NT theology sheds new light on the discussion about the messianic consciousness of Jesus. Those who deny such a consciousness and credit the church with having made Jesus their Messiah overlook the nature of this theology of history, for which there needed to be no distortion of facts in the belief that Jesus was made the Messiah in his ascension and enthronement. Those who claim a straight messianic consciousness in Jesus overlook the evidence that the messiahship in Jesus' earthly ministry has a strong futuristic note. But from the vantage point of post-Resurrection/Ascension the church confesses: Jesus is the Messiah now, and consequently he was the Messiah then—but he had not really become so by then, nor is he yet the Messiah here on earth as he is to be at the Parousia. Such an attempt to catch the theological meaning as found in Acts 2–3 gives no sense to one who inquires into the nature of Jesus Christ, and it sounds strange to a "yes-or-no" approach to the problem of the messianic consciousness of Jesus. But it was highly significant to those who were eager to understand where they were in the messianic timetable of Jewish and Christian eschatology. He who changes the question can only be misled or confused by using the biblical text as a direct answer to it.

Texts and problems have been chosen from some of the highly controversial areas of NT exegesis only as illustrations to clarify the problem before us. The exegesis involved may well require correction or refutation, but the thrust of the descriptive method would always be of the same nature. The hermeneutic problem of biblical theology therefore centers in the clash between two types of theology. Each type includes a wide variety of alternatives. On the biblical side there are the different types of OT theology, some contemporary with one another, some later developments of earlier strata. In the NT it is somewhat easier to discern a Matthean, Markan, Lukan, Johannine, or Pauline theology, etc. But they all live within the presupposition of their respective centuries, and they all answer questions which require a historical consciousness and an awareness of where in God's history they now stand.

On the systematic side there is perhaps an even greater diversity, but in our Western tradition we find the questions asked by the systematic theologian to be by their very nature above history and beyond change. Such a systematic approach has been considerably intensified by biblical criticism, with its conflicting answers to exegetical problems and its radical doubt or mild uncertainty about many events and data on which systematic theology would have to rest its case. Lessing's statement that eternal truth cannot be derived from historical data became the

more pertinent to systematic theology once the biblical basis for orthodox Christianity was summoned to constant trial before the courts of historical criticism. But in a certain sense Christian theology had freed itself from its historical matrix already in the time of the apologists of the second century when the case for Christianity was spelled out in the terms of Hellenistic philosophy. It would be unwise to exclude some elements within the OT and the NT from a similar tendency; thus the need for and the possibility of a translation of biblical theology into new categories of thought is taken for granted from the very outset. Orthodoxy never had repristination as its program in the periods of its strength. The possibility of translation was given—as it is for Barth—in the reality of the subject matter, apart from its intellectual manifestation in the thought-patterns of the original documents. God and Christ were not Semites in such a sense that the biblical pattern of thought was identified with revelation itself.

Consequently, theology through the centuries acted in great freedom and with good conscience and considerable creativity. The fathers and the Reformers alike had no idea of a biblical theology apart from other theological endeavors. They were convinced that they were biblical theologians in the only sense one could be a theologian; in this respect Barth is certainly right in claiming the authority of Calvin and Luther for his biblical approach. But once the concern for a biblical theology as distinguished from other types of systematic theology has made itself manifest, a new problem arises. By way of a wide variety of hybrids where systematic and biblical categories were hopelessly intermingled, this concern has now brought us to the point where we can make reasonably clear statements about the meanings of the original in its own terms. This is why we have the right to say that the result of descriptive biblical theology has raised the hermeneutic problem in a somewhat new form.

2. Alternative answers to the hermeneutic question. In the light of descriptive biblical theology, it becomes possible to pass tentative and relative judgments on the alternative ways in which systematic theologians have stated the meaning for the present day—or for all times, if that is their conscious aim—of the biblical material. Such judgments can be made on the basis of the degree to which systematic theology succeeds in communicating the intention implied in the biblical texts, an intention which only a precise and uncompromised study of the original could detect. But such a judgment would always remain tentative, since the task of systematic theology is by its very nature one of translation from one pattern of thought into another, and every true and great translation is a creative effort, not just a painstaking and nearsighted exchange of the precise words of one language with its lexicographical equivalents in another language. Aquila's Greek text stands as the horrifying example of such a senseless approach. On the linguistic level we hold the view—at least Protestants do—that there is no language into which the Bible could not be translated well enough to communicate its message; and the student of the Greek gospels is already once removed from the Aramaic vernacular of Jesus' teaching. If this analogy were one of considerable precision, it would imply that there could be few philosophies, epistemologies, anthropologies, etc., which could not furnish the framework for a systematic theology by which the meaning of the Christian scripture could be stated. The history of Christian theology gives us reason to accept the analogy to a considerable extent. And the fact that the original is available gives us the right and the audacity to encourage such translation activity.

The attempt of the so-called "liberal theology" to detect the meaning for today in the evolution of an ever more refined religious insight with a higher level of ethics could hardly be ruled out as one of the alternative answers to the quest for meaning. Its validity as a Christian theology would hinge upon its ability to live with a growing awareness that its categories of meaning are utterly alien to biblical thought. Such an awareness is harder for the liberals to take than for any other theologians, since they traditionally have rested their case on its historical truth, and claimed the historical Jesus as the first protagonist for their own views. In their attempt to grasp the intention of the biblical message, they were unusually handicapped.

In the wake of liberal theology in its academic form—in its popular form it is still very much with us—came the tendency to establish contact with the world of descriptive biblical theology by simply substituting its categories for those traditional to Western theology. Well aware of the peril of modernizing Jesus, one was less afraid of archaizing oneself. The achievements of the descriptive biblical theology were dumped right into the twentieth century. The fact that those results now displayed enough structure and religious intensity to give the impression of a real theology made it quite tempting to try such a return to the prelogical, the Semitic, the Hebraic, the first century. All these categories were now subsumed under the heading "biblical," and this in an evaluating fashion, so that the theological ideal became an ill-considered parallel to the well-considered descriptive ideal of divesting oneself of the twentieth century. The "biblical way of thinking" was spelled out over against "the Greek." Once more the descriptive and the contemporary became interwoven, this time on the terms of the result of the descriptive approach. From a theological point of view this meant that revelation was identified with patterns of thought and culture; the need or the possibility of creative translation—i.e., the very glory of systematic theology through the ages—was undercut. No serious attempts at a conscious translation were made.

Such a criticism could certainly not be directed against what we may call the thoroughgoing translations, where the tendency is ahistorical or even antihistorical. Paul Tillich and Rudolf Bultmann are two pronounced representatives of such answers to the hermeneutic problem. Neither of them finds anything normative in a theology of history as presented by the descriptive approach. To both of them history is utterly mute as far as theological meaning is concerned. Secondly, historical data are to them too shaky a foundation for the theological enterprise. Tillich thus approaches theology from an analysis of

Being, and he is consistent enough to claim no, or little, biblical support for such a category. Bultmann, on the other hand, finds his point of departure as well as arrival in human self-understanding, and for this he claims considerable biblical authority, since, according to him, the very intention of the kerygma (*see* PREACHING) is to challenge man's self-understanding. It appears, however, that Tillich, in spite of being perhaps the least "biblical"—in a conscious sense and by mode of language—of all contemporary theologians, is capable of communicating a wider range of biblical intention than does Bultmann with his highly anthropological concentration.

The most common response to the challenge of descriptive biblical theology is perhaps what may be called the semihistorical translation. Here the historical nature of revelation is taken seriously. The Bible is the record of the acts of God in history, and the kerygma is the powerful proclamation of these acts, a proclamation which shares in the creative power of the acts themselves. Thus the church is nurtured and renewed through the ages by this creative Word by which it rehearses the acts of God in sacred history. But somewhere along the line this sacred history has stopped, and there is only plain history left, with a more general PROVIDENCE at work. Thereby the God who acts becomes more and more the God who did act in biblical history. Consequently his acts appear as performed on the stage of history in order to demonstrate his nature. Theology reads his nature off the record of sacred history. The acts of God in history and the human response to them become calcified into a mold. This mold is then used by theology to make the true images or concepts of God as Him Who Acts. The difficulty with such a translation into nonpropositional and nonphilosophical concepts is that it accepts the historical framework of biblical thought for biblical times, since it yields the illustrations for our grasp of God's nature and will; but once the canon of the NT has drawn the line, there is a change of categories. Sacred history has come to an end, and what remains is a history where these deep-frozen images of God's acts are constantly brought to life in the remembrance of the church. The tension between a historical understanding of the Bible and a theologically void history of the church raises grave problems of inconsistency.

Such a problem would lead us to suggest that the only consistent alternatives would be either a radical, ahistorical translation as mentioned above, or—if the historical framework of biblical thought were to be retained—a systematic theology where the bridge between the centuries of biblical events and our own time was found in the actual history of the church as still ongoing sacred history of God's people. The blueprint for such a theology could be found in that self-understanding of Israel, both new and old, which descriptive biblical theology has laid bare as the common denominator of biblical thought. Such a theology would conceive of the Christian existence as a life by the fruits of God's acts in Jesus Christ, rather than as a faith according to concepts deduced from the teaching of the prophets, Jesus, and Paul regarding God's acts. It would exercise some of the same freedom which Paul's and the other NT letters do when they refrain from any nostalgic attempts to play Galilee into their theology by transforming the teaching of Jesus' earthly ministry into a system of theology and ethics. It would recognize that God is still the God who acts in history when he leads his church to new lands and new cultures and new areas of concern. A theology which retains history as a theologically charged category finds in its ecclesiology the overarching principles of interpretation and meaning. It does not permit its ecclesiology to be transferred to the second last chapter in its systematic works, followed by that on an equally inactivated eschatology. A theological awareness of sacred history seems to imply by inner necessity a growing recognition of the church as something far beyond an organization for the promotion of evangelism and theology. Through the ongoing sacred history, which is commonly labeled "church history," the fruits of God's acts in covenant and in the Christ are handed down to the present time. Within this history the task of preaching and theology under the guidance of the Holy Spirit is part of an ongoing sacred history. The chasm between the centuries is theologically as well as historically bridged by history itself, not only by a timeless kerygma which reaches the individual in an ever-repeated punctiliar action. The church lives, not only by the aorist of the Holy Spirit, but by the perfect tense as the Greeks understood it: an action which is completed and the effects of which are still with us.

3. The significance of "canon" for biblical theology. Such an approach would raise the question of the CANON (i.e., the limitation of the Bible to—usually—sixty-six books, thirty-nine in the OT and twenty-seven in the NT) in its sharpest form. As far as the descriptive approach goes, the canon can have no crucial significance. The church has a "Bible," but the descriptive approach knows it only as the "Bible of the church." In order to grasp the meaning of an OT or NT text in its own time, the comparative material—e.g., the intertestamental literature (Enoch, Testaments of the Twelve Patriarchs, Jubilees, etc.; *see* APOCRYPHA; PSEUDEPIGRAPHA) or the APOSTOLIC FATHERS, some of which clearly antedate some NT writings—is of equal or even greater significance than some canonical material. The revival of biblical theology in our own generation depends greatly on the way in which such material was brought to bear on the original meaning of biblical texts. But when the descriptive task is addressing itself to the interplay between different parts of the Bible, as, e.g., the NT understanding of the OT, it naturally takes cognizance of the limits of, as well as of the very idea of, canon. The descriptive approach also yields considerable insight into the nature and motivations for canonization itself and is capable of understanding the need as well as the rationalization connected with the long process of canonization. This in itself is one of the most puzzling and fascinating interplays of historical circumstances and theological concerns.

Once we go beyond the descriptive approach, the canon of scripture becomes crucial. To many of the modern types of biblical theology, the phenomenon of canonical scriptures seems to count little. To Barth it is INSPIRATION rather than canon that

matters, and the process of canonization is an external feature which neither adds to nor substracts from the power of the inspired writings to allow the Word to authenticate itself ever anew to him who hears. This is actually consistent with an ahistorical theology, since canonization so obviously is a historical process. It strikes the historian, nevertheless, that the concept of inspiration was of little or no avail in the first centuries of church history, when the church moved toward a closed canon. Apostolic origin, a doctrine in agreement with the succession of teaching, and wide usage and recognition in the churches were the chief criteria when the early church dealt with a wide range of writings, many of which were recognized as equally inspired with those finally received among the twenty-seven. But once the canon was closed, the doctrine of inspiration served well as an answer to the question: Why are these books different from all other books? To Bultmann, canon seems to be of little significance. The Christian self-understanding, to which the Bible caters, is found within it, but there are also parts of it which do not display it. Furthermore, its meaning for the present rests on the same basis as that on which any historical document has "meaning" beyond its value as a source for historical information. Finally, the understanding of the intention of the Bible as kerygmatic is not deduced from its canonical nature; on the contrary, it is the kerygmatic nature which gives the Bible its claim to authority.

To the radically historical alternative, as outlined above, much depends on the understanding of canon as a crucial category of any theological enterprise. This is certainly what we would expect if the historical nature of revelation is retained in a theologically potent framework of the sacred history of God's people. It is quite significant that, e.g., a biblical theologian like Cullmann, who has given such a strong impetus to the historical alternative, has also addressed himself extensively to the problem of tradition and canonization (see the chapters "The Plurality of the Gospels as a Theological Problem in Antiquity" and "The Tradition," in *The Early Church* [1956]), and that his discussion takes the form of a new attempt to clarify how Protestant and Roman Catholic theology differ in their understanding of the interplay between the continuous tradition and the line drawn around the Bible by canonization.

To the historical approach the question raised by Harnack's studies in the NT canon becomes theologically significant: Why is there a NT, not only a fourth part added to the three units of the OT (Law, Prophets, Writings)? The descriptive approach suggests a theological answer: The NT—as well as the church itself—rests on the return of the Spirit. Judaism in the time of Jesus lived under the conviction that the Spirit had ceased, and when the question of valid scriptures was discussed, this cessation was related to the last of the prophets (i.e., Malachi). They recognized themselves as living in a period when Israel depended on the scriptural interpretations of scribes whose authority rested on faithful transmission, not on the Spirit in which one could say, as the prophets had done, "Thus saith the Lord." But they cherished the hope and the promise of the return of the Spirit. This would be one of the crucial manifestations of the coming of the new age. Thus it is quite natural that the conviction of the church that this new age had arrived and manifested itself in the Holy Spirit also gave the basis and theological rationale for what came to be the NT.

It is worth noting, however, that the closing of the NT canon is not based on any argument similar to that of Judaism regarding the OT—viz., that the Spirit ceased again. Such a view would have undercut the very faith and life of the church and was never considered in the argumentation regarding the NT canon in the first centuries. The development from diversified oral and written traditions to the twenty-seven books of the NT was of a more historical nature, guided by the necessity to protect the original from more and more undependable elaborations and distortions, some "heretical" but quite a few properly orthodox in their intentions. The gift of prophetic and inspired teaching was still a recognized phenomenon, an ever-repeated "aorist" of God's dealing with his church. But the significance of Jesus Christ and his apostles as ἐφάπαξ ("once for all"), and as the very basis on which the church was built—i.e., the "perfect-tense" dimension of biblical thought, as referred to above—called for a distinction between this and what the church understood as original and as its magna charta. Thus Cullmann seems to be right when he suggests that early Christian tradition bore within it the element which served as a compelling cause for the process of canonization. This element may be defined as the "perfect-tense" element of Christian theology. As such it affirms the acts of God as unique in Christ and his apostles, but it also points toward an ongoing history of the theological existence of the church. God's acts are not punctiliar aorists, frozen and canned within the canon, nor do they belong to the timeless present tense of mysticism.

The question as to the meaning of the Bible in the present—as distinguished from the meaning in the past as stated by descriptive biblical theology—receives its theological answer from the canonical status of scripture. In its most radical form, the question was: Do these old writings have any meaning beyond their significance as sources for the past? On what basis could it be valid to translate them into new modes of thought? On what basis could such an original—and such a translation—have a normative function for the life of the church? Such questions can be answered only within the consciousness of the church. The answer rests on the act of faith by which Israel and its sister by adoption, the church, recognizes its history as sacred history, and finds in these writings the epitome of the acts of God. As such these writings are meaningful to the church in any age. It is as canon, and only as canon, that there is a Bible, an OT and a NT as well as the whole Bible of the church as a unity. The old question of whether the Bible rests on the church or the church on the Bible is a misleading question from the point of view of the historical alternative. To be sure, the church "chose" its canon. But it did so under the impact of the acts of God by which it itself came into existence. The process of canonization is one of recognition, not one of creation *ex nihilo* or *ex theologia*.

One could perhaps see the Protestant Reformation as a reaffirmation of the line drawn protectively around the canon. In a situation when the growth of tradition threatened to submerge the "original"—as had the traditions rejected as noncanonical in the second and third centuries—Luther and Calvin reinforce the distinctiveness of the original and its superior authority in the life of the church. There are many things which we would like to know, historically as well as theologically, beyond what the Scriptures tell us. In the Roman Catholic tradition such quite legitimate and pious curiosity has centered around Mary, the mother of Jesus. Against such and other elaborating traditions the Reformers take a firm stand on *sola scriptura* as sufficient, yea, more than sufficient, unto salvation. The canon is enforced, and such a return to the "original"—given the circumstances of the time—engenders one of the most spectacular renewals of theology and church life that history has seen.

This is in its own way a suggestive illustration of how an exposure to the "original" plays into the life of the church. It gives us theology in a new key and breaks through many cherished presuppositions. It is perhaps not too much to suggest that the highly developed descriptive biblical theology of our own period in the long run may have a slightly similar effect. This is not to hail our age as capable of a new Reformation. But it does suggest that all theological renewal and creativity has as one of its components a strong exposure to the "original" beyond the presuppositions and the inherited frame of thought of our immediate predecessors in the theological task. Otherwise the history of theology would be an uninterrupted chain reaction of a philosophical nature, with Augustine correcting the earlier fathers, Thomas Aquinas correcting Augustine, Luther refuting Thomas, Schleiermacher touching up Luther and Barth, and Tillich carrying the traditional discussion up to our own time. The exposure to the "original," as it is made accessible by descriptive biblical theology, could give an alternative to such a development. This alternative is not new in principle; it has been at work through the ages. What is new is the radical concern for the original *in its own terms*.

If we were to take an extreme example of what this could imply, we could return to the area of Christology. We saw how in the NT "adoptionism" stands as an equal, side by side with other types of Christology, and how the reasons for its downfall were found, not in the NT, but in the framework of later philosophical presuppositions. If the ontology which caused its downfall in the theology of the church were not any more a live option to the philosophical structure of a systematic theology of our time, it would be quite possible to speak meaningfully and in a most orthodox manner about Christ in "adoptionist" terms when witnessing to his function and his reality. There may be many and other reasons why this specific case should not be followed up; our only concern is to indicate in what way a descriptive biblical theology gives the systematic theologian a live option to attempt a direct translation of the biblical material, not a revision of a translation of a revision of a translation. . . . It is easy to see the great need for such a possibility in the theology on the mission field and in the young churches, and there are signs that Western Christianity could be well served by a similar approach, with its sharp distinction between past and present meaning.

4. The preacher and biblical theology. A sharp distinction between what the texts meant in their original setting and what they mean in the present has considerable ramification for the work of the preacher, if he in any sense sees it as his task to communicate the message of the Bible to the congregation whose shepherd he is, and to the world which is his mission field. If we may use once more the analogy of the original and the translation—and this should not be considered more than an approximate analogy—the preacher is called upon to function as the bilingual translator. He should through his training and his ongoing studies attain the marks of a truly bilingual person—i.e., one who is capable of thinking in two languages. (By "languages" are meant, not the Greek and Hebrew of the Bible—although these would become more and more indispensable if the "bilingual" approach were taken seriously—but the modes and patterns of thought in the Bible.) His familiarity with the biblical world and patterns of thought should, through his work in descriptive biblical theology, have reached the point where he is capable of moving around in his Bible with idiomatic ease. His familiarity with the "language" of the contemporary world should reach a similar degree of perception and genuine understanding. Only so could he avoid the rhetorical truisms of much homiletic activity, where the message is expressed in a strange—sometimes even beautiful—mixed tongue, a homiletical Yiddish which cannot be really understood outside the walls of the Christian ghetto.

The demand for such a bilingual function of the preaching ministry may seem quite exacting, and indeed it is. It is also as it should be that the work of biblical as well as systematic theology finds its functional focus in the pulpit of the church. But it would be unreasonable to demand of the preacher—if now we may press our analogy once more—to become an academic grammarian of these two "languages" or a master of philosophical semantics. His task and his competence would remain by and large on the level of the vernacular, which he should have overheard long enough to be able to use it naturally and easily, as he would also use the Bible.

A mere repetition and affirmation of the biblical language, or even a translation which mechanically substitutes contemporary terms—often with a psychological slant—for those of the original, has little chance to communicate the true intention of the biblical text. To use an example from Bultmann's demand for demythologizing, the mere statement "Jesus is risen" directs the mind of most listeners toward a unique phenomenon, glorious or impossible as the case may be. On the basis of this phenomenon the believer is invited to base his hope for eternal life. A closer descriptive study of the resurrection passages suggests, however, that to the first listeners to the kerygma the phenomenon of the Resurrection was not surprising in the same sense. All Jews—

except the Sadducees—expected the Resurrection as the climax of God's history; the phenomenon was nothing strange and new to them. The only new thing was that it had happened. The claim of the church that Jesus was risen thus meant to those who accepted it that the general resurrection, to which they looked forward, had started to happen; Paul consequently says that Christ has been raised as the "first fruits of those who have fallen asleep" (I Cor. 15:20). In the same chapter the argument runs partly in the opposite direction to what we are used to think: "If there is no general resurrection, then Christ has not been raised" (vs. 13; cf. vs. 16). Those who first heard and believed the news about the Resurrection were not absorbed in a consideration of the phenomenon as such, but received it as a message that the new age had started to manifest itself here and now. This certainly affirmed their hopes in sharing in Christ's resurrection in God's good time, but the center of the message was that the power of the new age was at work in their own world and their own time.

Bultmann suggests that the task of the preacher is to free this message from its biblical nucleus, the proclaimed fact of the Resurrection as a historical event. But even for a preacher, who finds reason to object to such a demythologizing or dehistoricizing of the gospel, the problem which Bultmann points up remains a real one. Can the preacher say that he has communicated the message of Easter by stating and by underscoring the physical nature of the phenomenon of the Resurrection as a stumbling block for unbelievers, but a rock of salvation for those who believe? His familiarity with the results of a descriptive biblical theology would urge him to place the emphasis where the texts themselves put it and to meditate, e.g., along the lines of how the power of the new age manifested itself in Jesus Christ, not only as a token of our resurrection, but as the enthronement of Christ and as the possibility for man to live by the powers of the new age here and now. There would be many other lines like this which opened up from the gospel of Easter if the preacher did not become paralyzed—in faith or in doubts—by the phenomenon of the Resurrection, deducing from it theological propositions, but let his familiarity with the biblical world guide him through the concrete and diversified way in which the early church recognized and rejoiced in the resurrection of Jesus Christ. His homiletic imagination would become enriched, and the message would have a chance to find its live and relevant translation.

If the task of the pulpit is—as suggested here—the true *Sitz im Leben,* "life situation," where the meaning of the original meets with the meaning for today, then it is once more clear that we cannot pursue the study of biblical theology adequately if the two tenses are not kept apart. For the descriptive biblical theologian this is a necessity implied in his own discipline; and whether he is a believer or an agnostic, he demands respect for the descriptive task as an enterprise valid in its own right and for its own sake. For the life of the church such a consistent descriptive approach is a great and promising asset which enables the church, its teaching and preaching ministry, to be exposed to the Bible in its original intention and intensity, as an ever new challenge to thought, faith, and response.

Bibliography. Biblical theologies (OT and NT): M. Burrows, *An Outline of Biblical Theology* (1946). G. Vos, *Biblical Theology* (1948).

OT theologies: L. Köhler, *Theologie des AT* (1936). O. J. Baab, *The Theology of the OT* (1949). A rich survey of major works in OT theology, with analysis and criticism, is given in R. C. Dentan, *Preface to OT Theology,* Yale Studies in Religion, vol. XIV (1950). G. E. Wright, *God Who Acts* (1952); cf. *IB,* I (1951), 349-89. G. von Rad, *Theologie des AT,* vol. I (1957). W. Eichrodt, *Theologie des AT,* vols. I-III (5th ed., 1957—). E. Jacob, *Theology of the OT* (English trans., 1958). Jewish OT theologies: K. Kohler, *Jewish Theology* (1918). E. Kaufmann, *Toledoth Ha-Emunah Ha-Yisraelith,* vols. I-VIII (1955-56). S. Blank, *Prophetic Faith in Isaiah* (1958).

NT theologies: A. Schlatter, *Die Geschichte des Christus* (1921); *Die Theologie des Apostel* (1921). E. W. Parsons, *The Religion of the NT* (1939). F. C. Grant, *An Introduction to NT Thought* (1950). R. Bultmann, *Theology of the NT,* vols. I-II (English trans., 1951-55); cf. especially N. A. Dahl's review article in *Theol. Rundschau,* XXII (1954), 21-49. E. Stauffer, *NT Theology* (English trans., 1955). Catholic works: M. Meinertz, *Theologie des NT,* vols. I-II (1950). J. Bonsirven, *Théologie du NT* (1951). By far the most significant contribution to NT theology—and, as background material, also to OT theology—is *TWNT;* a few of the articles have appeared in English translation—the articles "Love," "The Church," "Sin," "Righteousness," in one volume as *Bible Key Words* (1955); as separate monographs under respective main authors: K. H. Rengstorf, *Apostleship* (1952); R. Bultmann, *Gnosis* (1953); K. L. Schmidt, *et al., Basileia* (1957); W. Zimmerli and J. Jeremias, *The Servant of God* (1957); W. Foerster and G. Quell, *Lord* (1958). Cf. also A. Richardson, ed., *A Theological Word Book of the Bible* (1950). Indicative of and representative of the vigorous contemporary interest in biblical theology is the series *Studies in Biblical Theology.* Its monographs cover both the OT and the NT field.

K. STENDAHL

***BIBLICAL THEOLOGY, HISTORY OF.** Biblical theology is a scholarly presentation of the witness to faith, and of the theological views, of the biblical writers, in the context of the covenanted people, Israel and the early church. It avails itself of the three theological disciplines: (*a*) the exegetical, which discloses the text; (*b*) the historical, which uncovers the circumstances in which the men of the Bible act and think; (*c*) the systematical, which embraces expressions of faith in an ordered and unified statement. Biblical theology is therefore the crown of biblical scholarship.

Bibliography

1. The beginnings of biblical theology in the eighteenth century. It is the Protestant view that dogmatics should present the teaching of Holy Scripture. The theological works of the reformers conformed to it far more than the subsequent scholastic systems of teaching in orthodoxy. The design and content of Melanchthon's *Loci* (1521) followed that of Romans to a large extent. Even the theological insight of Calvin's *Institutes* (1536) was grounded in biblical exegesis. By decisive appeal to Holy Scripture the Reformation laid the ground for biblical theology, the basic principle of which is that scripture should interpret itself. In the later, post-Reformation time scholars were deflected from the newly won recourse to scripture in their attempt to secure the Reformation heritage with dogma. There was in part a return to the teaching of the Bible with the "Collegia Biblica"—i.e., collections of biblical texts in support of dogmatic statements (S. Schmidt, *Collegium Biblicum* [1671]; J. Hülsemann, *Vindiciae* [1679]). But since these texts were selected to subserve dogmatic positions, neither the theology of the Bible nor that of its individual authors stood out. From pietism, which turned to the Bible because dogmatic teaching did not edify, came the first biblical theology (C. Haymann; 1708).

However, scholarly exposition of the Bible presupposed that advance in the period of the Enlightenment which freed the mind from the authority of scholastic systems. For the Enlightenment, as in the Renaissance, which it resumed, man was the measure of all things—man whose horizon had been extended by far-reaching discoveries, whose conception of the universe had been radically altered, and who was now applying his reason to law and economics, science and art, history and philosophy. The Bible was also put to the test of reason. Two methods of inquiry evolved which have remained indispensable to biblical theology, with which it actually began: the literary-critical method, which seeks to distinguish the work of individual authors, the original form and setting of scripture; and closely related to it, the historical method, which looks into the factors out of which biblical events and views developed.

While the Englightenment in Germany engendered, above all, literary criticism (Reimarus, Lessing, Semler), English Deism concerned itself more with the historical development of Christianity (Toland, Tindal). At that time no one attempted to write biblical theology. Nonetheless, G. E. Lessing (1729-81), who stood at the threshold of a new era, went beyond purely critical reflection of the Bible to set forth a positive and constructive view. In his work *The Education of Mankind* (1780), he sketched a historical and systematic concept of biblical revelation. According to him, revelation served to educate mankind. God is the great Pedagogue, and the Bible his textbook. The OT, which contains the material for elementary teaching, shows how Israel, as a child, acquired the idea of one God and submitted itself to him. But its service lacked motive until the idea of resurrection, and the expectation of reward and punishment hereafter, emerged. Jesus not only taught this new idea, but also lived it out, and based his inner and outer action upon it. Man reaches the third stage when, on the basis of full insight, he does good for its own sake. This occurs in the time of the last gospel of reason.

Lessing's concept of biblical revelation is not theological, but philosophical. It revolves around mankind rather than God. For Lessing, revelation is simply the means to that end which mankind could have reached by natural progress. No trinity of divine persons is revealed, but instead the three central ideas of the Enlightenment: God, freedom, and immortality. At that, Lessing's view was pleasant.

In the second half of the eighteenth century biblical theology became increasingly independent of dogmatics. A. F. Büsching stated the *Advantage of Biblical Theology Over Scholasticism* (1758). Also J. S. Semler's critique aimed to make biblical theology a discipline of its own. The 1772 G. T. Zachariä wrote a biblical theology by which he examined the teaching of the church. But as he used biblical theology only as a criterion, it never acquired with him independent significance. Moreover, it left the teaching of the church intact, merely casting it in a new light.

J. P. Gabler took the step which was lacking. In his initial address as professor at Altdorf, "Oratio de justo discrimine theologiae biblicae et dogmaticae" (1787), he declared biblical theology to be a historical science. According to him, dogmatics should extract from the Bible that teaching with universal relevance, and leave to biblical theology those statements which were conditioned by time and place. While dogmatics needed philosophy, biblical theology must inquire into history. Gabler's distinction made a place at last for biblical theology, and gave rise to it, even though he himself did not pursue it further. G. L. Bauer took it up when he issued four volumes of biblical theology in 1800-1802, in which he set forth the religion of the Jews before Christ, the religion of Jesus, and that of the apostles. From the standpoint of the Enlightenment he criticized everything which conflicted with its concept of reason and morals, and explained it as a concession to the "erroneous ideas of common man."

The eras of romanticism and idealism which followed the Enlightenment contributed to the historical-philosophical basis of biblical theology. The Enlightenment had been unable to descend from its realm of pure reason to the plane of history. In contrast to it, romanticism brought in feeling, with which one could intelligently immerse himself in the spirit of other people. Then Hegel's philosophy imparted speculative imagination by which to order all the historical insights into one developing, spiritual process. J. G. Herder ("Vom Geist der hebräischen Poesie" [1782]) discovered literary beauty in the Bible, above all in the OT, regarding its stories and poems as expressions of the folk life in Israel. F. Schleiermacher (1768-1834) sought after the individual historical religions, in which alone religious consciousness becomes fruitful. As he did not grasp the significance of the OT, he was unable to write a biblical theology. W. M. L. de Wette succeeded with a *Biblische Dogmatik des AT und NT* (two volumes; 1813, 1816). He insisted on a purely historical approach; and using the available results of criticism, he undertook a thorough, exegetical investigation of the material. In the OT he distinguished two historically evident steps of revelation: the religion of Moses, and that of the Jews. Analogous to them he found two levels in the NT: the teaching of Jesus, and its interpretation in the message of the apostles. De Wette had a sharp eye for historical factors. He was the first who identified Deuteronomy with the law book which was found under Josiah. He evaluated historical facts in terms of religious-psychological conditions, and dogma was for him the expression of religious experience. The biblical theology of D. v. Coelln (1836) reflected the work of De Wette. B. Bauer (*Die Religion des AT* [1838-39]) cast aside criticism of sources and just followed the OT presentation. More significant was the historically oriented *Alttestamentliche Theologie* of H. Schultz (1869), which kept up with literary criticism in its several editions, offered many fine observations, and in its fourth edition comprised two parts, a historical and a dogmatic.

2. The dissolution of biblical theology in the religious history of Israel and of the early church in the nineteenth century. ***a. OT.*** A strong impulse emanated from the historical philosophy of Hegel. It was transmitted to OT study by W. Vatke and to the theology of the NT by F. C. Baur. W. Vatke's *Religion des AT* (1835) gave a brilliant treatment in the terminology of Hegel. He distinguished three periods of development in the OT: the preprophetic, the prophetic, and the postprophetic. He was the first to recognize that the Priestly Code was the latest source in the Pentateuch, and ascribed it to the postprophetic period. His hypothesis was rejected by the leading authority for OT study at that time, H. Ewald, so that not only his contemporaries disapproved, but even he himself finally lost confidence in it. It was later taken up by K. H. Graf and by A. Kuenen (*De Godsdienst van Israel* [1870]), and validated by J. Wellhausen (*Geschichte Israels* [1878; appeared in 1895 as Prolegomena]). By the end of the nineteenth century Wellhausen and his school, which had made tremendous strides in literary critical study of the OT scriptures, dominated the field of OT scholarship. Under their influence theological interest declined in favor of historical, and biblical theology of the OT was turned into the religious history of Israel. The *Alttestamentliche Religionsgeschichte* of R. Smend (1893) started a series of these treatments, which continued on in the twentieth century (A. Duff, 1892; F. Giesebrecht, 1904; M. Löhr, 1906; E. Kautzsch, 1911; K. Marti, 1907; K. Budde, 1910; E. König, 1915; R. Kittel, 1921; G. Hölscher, 1922; W. Oesterly-Robinson, second edition, 1937). The advantage of this type of analysis lay in the single line with which it moved toward its end in presenting the development of the Israelite religion. But it failed to evaluate the material theologically. The question of truth was overlooked; the claim of revelation by witnesses in the OT was disregarded. This deficiency was accentuated even more with discoveries which illuminated the religious world around Israel (Tell el-Amarna Tablets, 1887; Code of Hammurabi, 1910; *see* TELL EL-AMARNA; HAMMURABI). It was pointed out how much the faith of Israel had in common with the ideas of ancient, oriental religions. This seemed to put Israel on the same primitive, time-conditioned plane. Only a few scholars of the OT attempted to evaluate the theological significance. A. B. Davidson (*The Theology of the OT* [1904]) noted that the kingdom of God, which unfolds in the NT, did not announce itself alone in certain religious concepts of the OT, but was rooted in the life of the people, and made itself felt in their institutions. In the same year of G. Hölscher's *Geschichte der israelitischen und jüdischen Religion* (1922), which formed the apex of pure historical construction, there appeared E. König's *OT Theology,* in which he added a systematic part to his religious-historical treatment. He underscored the epoch-making character of Israel's faith, and as themes of "saving history" he discussed: God and his relation to the world and men, sin and the way to eliminate it.

b. NT. While the critical investigation of the gospels by D. F. Strauss implied the eclipse of NT theology, F. C. Baur (*Dogmengeschichte* [1847]; *Lectures on NT Theology* [posthumous]) broke fresh ground toward a constructive view of the NT. With a keen sense in evaluating historical sources, and

with a comprehensive intellect, he saw in the NT the unfolding of the human spirit as it becomes conscious of itself. Consequently he applied Hegel's dialectical scheme of thesis, antithesis, and synthesis to primitive Christianity. It gave him a perspective on the contrasts among persons and their viewpoints, by which he also arranged the books of the NT in temporal sequence. In his view the teaching of Jesus formed the basis of the NT. It was not yet theology, but strictly religion—the immediate expression of religious consciousness. Theological reflection started over the place of the law. Paul was the first theologian. He proclaimed that type of gospel which was free from the law. This put him in opposition to the Jewish Christians, who, as his antithesis, adhered to the law. Out of his struggle came a compromise which issued in the Old Catholic church. As the scriptures of the NT were written in the course of this controversy, they may be ordered according to their stand in it.

Baur's work was carried to absurd extremes by his pupils E. Zeller and A. Schwegler. However, the picture which he projected of primitive Christianity remained alive in NT discussion throughout the nineteenth century. Much work was concentrated on individual persons in the NT: Jesus (K. Hase, D. Schenkel, H. Wendt, W. Baldensperger), Paul (A. Hausrath, K. Holsten, H. Lüdemann). In 1863 H. J. Holtzmann delineated the figure of the "historical" Jesus, and therewith started that line of liberal research. The classical work on primitive Christianity was C. F. Weizsäcker's *Apostolisches Zeitalter der christlichen Kirche* (1886). H. J. Holtzmann's *NT Theology* (two volumes; 1886-99) was a thorough and comprehensive work which concluded this period. Conservative were the biblical theologies of the NT by B. Weiss (1868; 1903) and T. Zahn (1928).

3. The religion of biblicism. Concurrent with the stream of theology which flowed from the Enlightenment and romanticism was another of pietistic biblical scholarship. In it one turned to the Bible to substantiate the orthodox position, as regards theological truth, and discerned in the Bible the providence of God in "saving history." J. A. Bengel (1687-1752) combined his linguistic and text-critical study with a keen and deep religious exposition of the NT (Gnomon = Fingerzeig [1742]). F. C. Oetinger (1702-82), who was influenced by the mystic J. Böhme, issued a biblical dictionary (1749) in which he sought to show the realism of biblical concepts. For him God and the world, spirit and body, belong together inseparably. Over against the rationalism of his time he insisted that the activity of God extended into corporeal nature. Both Bengel and Oetinger saw in the Bible a living whole, a glorious and complete system of truth, which required unified interpretation. This organic grasp of "saving history" in the Bible was pursued by J. T. Beck in the nineteenth century, the colleague of F. C. Baur in Tübingen (*Die christliche Lehrwissenschaft nach den biblischen Urkunden* [1841]). While the Hegelians saw reflected in the testimonies of the Bible the unfolding of the human spirit, Beck was convinced of the ordering power of God's Holy Spirit. Less original was E. W. Hengstenberg (*Christologie des AT* [1829-35]), who from a reactionary standpoint contended for the identity of both testaments, laid the New back in the Old, and treated it on the same plane. J. C. K. von Hofmann (*Der Schriftbeweis* [1852-55]), on the contrary, the founder of the Erlangen School, held that the Bible documented the process of "saving history," which aims at the redemption of mankind. All revelation converges upon this end, and the Bible must be understood in this light, though the process will not be fully disclosed until the Eschaton arrives. History has a prophetic range, and all prophecy is embedded in history. Hofmann attempted to assign every book of the Bible its place in this scheme of redemption. Equally orthodox, and showing the revealing character of the Bible, were the treatments of OT theology by J. Steudel (1840), H. A. Hävernick (1848), G. F. Oehler (1873), W. L. Alexander (1888). H. Ewald, who defended the revelatory character of the Bible against oncoming liberalism (*Die Lehre der Bibel von Gott* [1871-76]), harmonized the OT and the NT in a peculiar and original way. Using his own religious experience with God, and life in the Christian church, as a norm to evaluate the Bible, he distinguished in it several levels of religious utterance. Other contributions to OT theology in line with this trend were those of F. Hitzig (1880), H. Schultz (fourth edition, 1889), E. Riehm (1889), A. Dillmann (1895), and A. C. Knudson (1918).

4. Cult and kerygma: history of religion and biblical theology in the twentieth century. ***a. OT.*** In the twentieth century the character of OT scholarship changed. Its one-sided historical approach was superseded by new methods of research and analysis. The religious picture was filled in by discoveries pertaining not only to the world around Israel but also to Palestine and its inhabitants. Systematic archaeological investigation penetrated far back into Palestine's past and provided a glimpse into the religious convictions of the people living then (W. G. Graham and H. G. May). Anthropology concerned itself with man's inner being (J. G. Frazer, R. Dussaud, W. Oesterly). M. Weber set sociological inquiry going. E. Guthe and G. Dalman applied themselves to geographical questions. All the data, together with the results of archaeology, presented a fully new picture of Israel's history and culture (A. Alt, W. F. Albright, M. Noth, K. Elliger).

H. Gunkel taught how from the form of biblical literature one can tell its setting in life (*Sitz im Leben*) among the people. Taking up the interest of Herder, he showed the attraction of OT stories, the beauty of Hebrew poetry, the impact of prophetic words. Along with the form criticism (*Formgeschichte*) of Gunkel, V. Grönbech's ideas about the soul of primitive man and his cult as creative drama were applied to the OT. J. Pedersen (*Israel*, I-IV [1934]; *ET* [1926-40]) considered Israel, apart from any theological norm, as a complete culture within itself. S. Mowinckel (*Psalmenstudien* [1922]) uncovered the strength and fullness of its religious life in the cult drama attending the ceremonies of ascension to the throne, which he found reflected in many psalms. These suggestions have been followed out by the cult-historical school among Scandinavian scholars (A. Bentzen, J. Engnell, H. Birkeland, S. Kapelrud).

Of especial importance for an understanding of the Hebrew religion were the cuneiform texts of Ras Shamra (1929; *see* UGARIT), which primarily described the Canaanite cult worship and threw into bold relief the previously shrouded being of the Canaanite religion. How great its influence upon the cult of Israel was, we learn from the OT itself. The Israelite prophets, who according to B. Duhm (*Die Theologie der Propheten* [1875]) stood upon a solitary ethical height and were opposed to Hebrew ceremonies, now appeared to be more closely connected with the cult.

At the same time, theological consideration of the OT recurred in the twentieth century. Ever since the eighteenth century OT scholarship had taken a line which increasingly detracted from the sublimity of the OT. From dialectical theology came a strong impulse to appraise anew the theological assertions of the OT. A front developed against liberalism in theology, wherein one rejected a descriptive, condescending attitude toward the Bible. Only a theocentric method, concentrating on the kerygma, and at the same time aware of its own inadequacy, was deemed appropriate for biblical statements. O. Eissfeldt (1926) urged both methods—historical investigation of the Hebrew religion and systematic presentation of the timeless truth of OT revelation. These methods are essentially different: the one resorts to reason to evaluate data, while the other relies on faith to perceive revelation. E. Sellin (1933) was the first to write a theology which corresponded to the conception of Eissfeldt. Its first part treats the Israelite religious history; the second, OT theology in its classical categories of God, man, eschatology, whereby the holiness of God is the central idea. On the other hand, O. Procksch and W. Eichrodt rejected this parallel approach and held that the presentation of OT theology is alone appropriate which proceeds from faith in Christ, to whom the OT points, rather than from historical philosophy. Likewise T. Lindblom (1936) and A. Weiser (1936) demanded theological treatment of the OT—the first in the form of a systematic presentation of the concepts of God contained therein, the latter on the basis of existential exegesis within the church. L. Köhler's *Theologie des AT* (1936) is constructed on a systematic framework, for which Köhler employs the same outline as Sellin. However, individual sections on historical development are inserted in the copious exegesis of concepts. W. Eichrodt's three-volume *Theologie des AT* (1933,1935, 1938; revised edition, 1957) takes its center—namely, the covenant of God—from the OT itself. The covenant idea implies a relationship in terms of which the theological assertions in the OT must be understood. According to Eichrodt the people as a unit, the world, and individual man are the three partners of God. The relation of the OT to the NT is also given in the covenant idea, for the New Covenant is based upon the Old, which it fulfils. Similarly O. Procksch sees in the OT the Bible of Christ, and therefore a book which is a source of revelation for Christianity. Procksch was influenced by von Hofmann so that his *Theologie des AT* (posthumous, 1956) is oriented to "saving history." The OT contains a history of prophetic witness which runs from the patriarchs to the prophets. In the first and larger part Procksch delineates this history, while a second part presents the thought-world of the OT in reference to those partnerships with God which Eichrodt distinguished. If for Procksch every theology is Christology, nonetheless by him the distinction between OT and NT was preserved, which W. Vischer (*Das Christuszeugnis des AT* [two volumes; 1934; English translation, 1949]) for the most part disregarded. By his exposition of the Pentateuch and the historical books Vischer sets OT statements in direct relation to those of the NT. On his view, taken from K. Barth, the OT shows what Christ is, the NT who Christ is. Vischer is fond of allegorical interpretation and adduces the exegesis of Luther, Augustine, and early Christian scholars. Thus he quite leaps over the channel of Enlightenment. The attempt to equate both testaments has not been pursued further, though T. C. Vriezen (*Theologie des AT in Grundzügen* [1956]) looks upon the OT as a book of revelation that converges on Jesus and finds its fulfilment in him. As with Procksch, God's guiding hand reveals itself to him in the history of Israel, in which the unique person of the prophet serves as his agent of communication.

The works of H. W. Robinson have contributed significantly to the development of OT theology: *Record and Revelation* (1938) and *Inspiration and Revelation in the OT* (1946), which contains the Prolegomena of an OT theology. Robinson sees the difficulties of OT theology lying in the fact that it does not appear systematically in the Bible, but is continually bound up with history. Eternal truth is embedded in time-conditioned state. Whoever will understand the truth must be gripped by it. Robinson's outline of theology provides for two systematic parts: the first makes clear the process of divine revelation in the categories of God-nature, God-man, and God-history; the second, in the figures of prophet and priest, in wisdom and psalms.

E. Jacob recognizes in *Théologie de l'AT* (1955) the historical character of OT theology over against the dogmatic approach. Of even later vintage is G. von Rad's *Alttestamentliche Theologie,* the first volume of which appeared in 1957. According to von Rad, theological thinking in the OT was not concerned with a *Weltanschauung,* but arose with the task of gathering, arranging, and interpreting different documents of traditions. Those documents gave details from the history of tribes, persons, and places, and had to be related to the whole of Israel, and its creed to Yaḥweh's mighty deeds and his will. The first period of Israel's history is told in the Hexateuch, whose theme is Yahweh's election of Israel and his gift of the Promised Land. The second period, covered by the Deuteronomist and the Chronicler, concentrates on God's covenant with David. Israel's response to God's revelation is given in the Psalms and in the wisdom literature.

The systematic approach prevails in the Roman Catholic treatments of recent times: P. Heinisch (1940); A. Gelin (1949); P. F. Ceuppens, J. Guillet, and P. von Imschoot (1954).

b. NT. By the end of the nineteenth century NT study was markedly enriched by religious-historical investigation, which has continued to occupy an im-

portant place in it. This material threw light on the Jewish (E. Schürer, G. Dalman, W. Bousset, J. Klausner, P. Billerbeck, J. Jeremias, W. D. Davies, D. Daube) and Hellenistic (W. Bousset, A. Deissmann, R. Reitzenstein, E. Norden) background of primitive Christianity, which was seen to assimilate in a unique way features from both patterns. It took its dominant ideas and eschatological urgency largely from apocalyptic Judaism, while Hellenism seemed to underlie the interpretation of the saving work of Christ and its representation in the cult.

When form criticism was applied to the NT scriptures, it set them in a new perspective, especially the gospels (M. Dibelius, *Formgeschichte* [1919; second edition, 1933]; R. Bultmann, *Die Geschichte der synoptischen Tradition* [1921; third edition, 1957]; V. Taylor; F. C. Grant; K. Grobel; K. Stendahl). Their content was seen to be shaped by the preaching and the cult of the primitive church, and in addition by the theological bent of the authors.

W. Wrede, in his pamphlet on the *Task and Method of So-called NT Theology* (1897), urged more concentration on the religious-historical method. He protested against the view that the writings of the Bible merely presented doctrinal teaching. For him primitive Christianity was a living religion whose essence could not be discerned from the canonical scriptures alone, but must be illuminated also from the material of the surrounding world. Wrede wanted to displace theology of the NT with the history of the religion of primitive Christianity. His thesis found expression in H. Weinel's *Biblische Theologie des NT* (1911) and J. Kaftan's *Neutestamentliche Theologie* (1927), both of which described the religion of Jesus as a moral redemptive religion. W. Bousset (*Kyrios Christos* [1927]) and W. Heitmüller regarded the cult as the center of primitive Christian piety. In contrast thereto, J. Weiss and A. Schweitzer pointed out that it was impelled by its expectation of the imminent end of the world.

It is understandable that the number of conservative scholars in the field of the NT was greater than in that of the OT. Of note was the *Theologie des NT* by P. Feine (1913; ninth edition, 1950), which followed the line of von Hofmann. E. Stauffer's vivid *NT Theologie* (1941) is likewise oriented to "saving history." This theme is less emphasized in the theologies of T. Zahn and F. Büchsel. A. Schlatter struck out on a line of his own (*Der Glaube im NT* [1885]; *Theologie des NT* [1909-18]), in which he objected to abstract contemplation. According to him the thinking of the NT witnesses is rooted concretely in their striving and acting. Schlatter was more receptive to Hebrew than to Greek thought, because he recognized that Judaism provided the background of primitive Christian religion.

R. Bultmann differs from Schlatter in that he stresses the Hellenistic influence in the formation of the Christian faith. Like Schlatter, he protests a rationalistic treatment of NT theology; his position, however, is derived from dialectical theology and existential philosophy (M. Heidegger). In the field of NT theology Bultmann (*Theologie des NT* [1948-53]) is the single, unqualified representative of this position. Since his work reflects the scholarly attainments of the twentieth century, and allows us to see the problem of every NT theology, we must look at it closer.

The outline is historical. Bultmann gives only scant attention to the preaching of Jesus in itself (pp. 1-33). The reason is partly because radical form criticism leaves only a modest remainder of genuine Jesus sayings, but also because, in his view, the message of Jesus is source rather than object of NT theology. Likewise little space is given to the primitive church in Jerusalem (pp. 33-64). On the contrary, Bultmann devotes a large section to the gospel of the Hellenistic church, crystallizing it for the most part out of the traditional material in the letters (pp. 64-182). The central portion is given over to the treatment of Paul (pp. 183-348) and of John (pp. 349-439). Therein the theological concern of Bultmann becomes clear. For him, as for Luther, the teaching of justification is the heart of theology, and John the true evangelist. Bultmann is united with Luther, furthermore, in his emphasis on the gospel, on the power of the word of the Cross. The gospel awakens in man a new self-understanding which transforms the determining factors in his life so that he is freed from sin and becomes fully sensitive to God and his neighbor. Not until the post-Paulinian era did Christianity tend to turn the gospel into doctrine. For this reason Hebrews and James are not less sharply criticized by Bultmann than by Luther.

Yet Bultmann diverges essentially from Luther. His criticism of the NT goes much farther than that of Luther. Bultmann's is the attitude of the modern man who has attained a scientific picture of the world and lives by it. Not enlightened, the man of the NT spoke of heaven and hell, of angels and spiritual powers, as objective realities. Apart from the fact that this way of speaking alienates modern man from the gospel, it turns the living existential truth into an objective doctrine. The mythological and cosmological way of speaking must therefore be demythologized and made to concur with the self-understanding of man: that is to say, it must be interpreted anthropologically. Bultmann goes still further by saying that faith should not rely upon objectively tangible reality and self-evident historical facts. He runs into the danger of dissolving the facts set forth as historic events in the NT into purely meaningful symbols. Moreover, his conception of NT theology—to be sure, coherent—does not allow for the historical diversity of views in the NT, particularly as he quite underestimates the influence of the OT and Judaism.

5. Conclusions. The difficulty with biblical theology lies in the fact that the Christian church has continually made a system out of theology, when the Bible does not contain such a system. It comprises rather a diversity of witness interrelated with history. Biblical theology proper should take its principle of exposition from the Bible itself. It is not possible to grasp the Hebrew way of thought in the Bible with the systematic principle which came from the Greek mind and wove itself into Christian dogma.

Because the revelation of God occurred in history —in the history of the people of Israel and in the history of Jesus and his apostles—biblical theology is interwoven in this history. Any consideration of the theology of this history should follow the course

of it. In this way one will get closer to the witness of the Bible, and be able to fit in better the knowledge which progressive research has gleaned from the surrounding religious world. The light which falls upon the thought and action of biblical persons from that source has made clearer the uniqueness of their witness as well as its historical conditions. Thus the task of OT scholarship today is to describe the covenant of Israel and the message of the prophets from the background of the Canaanite religion which has come to light through the Ras Shamra texts. For NT research the discovery of the Qumran writings (*see* DEAD SEA SCROLLS) has produced direct access to the features of a vital Jewish sect at the time of Jesus. The much-discussed questions in recent years of eschatology (as realized and awaited), and of Christology (the historical and the preached Christ) must therefore be re-examined. The hermeneutical question concerning the expression of biblical views in modern thought-forms is also affected.

But the historical approach is not without its pitfall. While the systematic method tends to dissect the thought of biblical authors and to subsume it under philosophical categories, a purely historical treatment may overly ascribe to biblical thought factors of the surrounding religious world, and assign it to a certain stage in the evolutionary development of religious consciousness. In either case the real thought is obscured. The question of truth does not fare better. In general, the systematic method overlooks the fact that the truth of the Bible is personal in character, resting upon the relation which God established between himself and men; while purely historical research seldom concerns itself with the existential truth of that which it describes. For this reason much of historical research is inadequate to biblical theology. The theology of the Bible cannot be understood as a type of view and teaching. It conveys a witness and an appeal. Whoever will present it cannot hold himself aloof from it, but must himself be gripped by it. If he wants to make it intelligible and believable to the people of today, he must put himself reverently back into the life and teaching of the Bible. He becomes truly scholarly and historical when he takes seriously what impelled the men of biblical times, when he looks at their attitude and activity from their own standpoint. He may avail himself of every method which modern scholarship offers insofar as it is applicable to the data of the Bible and to its presentation.

The ideal biblical theology in the Christian church must treat the witness and views of both OT and NT together. How much both testaments bear upon each other has become increasingly clear in the latest scholarship. We are now reaping the fruit of such unified research—e.g., in the articles in the *Theologisches Wörterbuch,* edited by G. Kittel and G. Friedrich.

O. BETZ

BICHRI bĭk'rī [בכרי, *gentilic name from* בכר]; BICHRITES —rīts (II Sam. 20:14); KJV BERITES bĭr'īts. Given as the father of Sheba the Benjaminite insurrectionist in II Sam. 20:1 ff; but since Bichri is a gentilic name, the phrase "the son of Bichri" may more correctly be understood to mean that Sheba was from the clan of Becher (Gen. 46:21; I Chr. 7:6, 8).

E. R. DALGLISH

BIDKAR bĭd'kär [בדקר, son of piercing(?)] (II Kings 9:25). Jehu's charioteer at the slaying of Joram.

BIER [מטה; σορός]. A litter or bed on which a body was placed prior to burial (*see* BURIAL; MOURNING). It is mentioned only in II Sam. 3:31; II Chr. 16:14 (KJV BED); Luke 7:14. In these passages the information that David followed the bier of Abner, and that Jesus touched the bier of the young man of Nain, whose body was being carried out of the city, makes clear that a bier was portable, probably like the wooden boards used in Muslim funerals today. The description of the burial of Asa suggests that his bier was a more elaborate type of burial couch which was placed in the tomb.

The term מטה was a regular word for "BED," designating a bier only when used in referring to burials.

W. L. REED

BIGAMY. *See* MARRIAGE § 1*c*.

BIGTHA bĭg'thə [בגתא, *possibly from* Pers. *bagadata and bagadana,* gift of God] (Esth. 1:10). One of seven eunuchs who served Ahasuerus as chamberlains and whom he sent for Queen Vashti.

He is possibly identical with BIGTHAN of Esth. 2:21; 6:2.

M. NEWMAN

BIGTHAN bĭg'thən [בגתן, *possibly from* Pers. *bagadana and bagadata,* gift of God] (Esth. 2:21); BIGTHANA —thə nə [בגתנא] (Esth. 6:2). One of two eunuchs of Ahasuerus who guarded his threshold. Their conspiracy against his life was discovered and revealed by Mordecai.

He is possibly identical with BIGTHA of Esth. 1:10.

M. NEWMAN

BIGVAI bĭg'vī [בגוי, *evidently a* Pers. *name with the initial syllable baga,* God; Elephantine Papyri בגוהי]. One of the Jewish leaders who returned to Palestine with Zerubbabel after the Exile (Ezra 2:14; Neh. 7:19; cf. I Esd. 5:8). The "sons of Bigvai" also returned in the postexilic period (Ezra 2:2; Neh. 7:7; I Esd. 5:14). Certain members of this family are specifically said to have come with Ezra (Ezra 8:14; I Esd. 8:40), and in Neh. 10:16—H 10:17 Bigvai appears as one who sealed Ezra's covenant.

M. NEWMAN

BILDAD bĭl'dăd [בלדד, beloved of the Lord(?), *or* the Lord has loved(?), *or* Dad (*proper name*) gives

increase; LXX Βαλδαδ; *see bibliography*]. One of the three friends of Job (Job 2:11; 8:1; 18:1; 25:1; 42:9). The identification of Bildad as "the Shuhite" presumably makes him a member of a tribe of Aramean nomads who roamed an area somewhere to the SE of Palestine (Gen. 25:2, 6). *See* SHUAH.

Bibliography. T. Noldeke, *ZDMG,* XLII (1888), 479; K. Tallqvist, *Assyrian Personal Names* (1914), pp. 67 ff; W. F. Albright, "The Name of Bildad the Shuhite," *AJSL,* XLIV (1927-28), 31 ff. H. H. GUTHRIE, JR.

BILEAM bĭl'ĭ əm [בלעם]. A city listed in I Chr. 6: 70—H 6:55 as one of the LEVITICAL CITIES in the territory of Manasseh; identified by most scholars with IBLEAM.

BILGAH bĭl'gə [בלגה, brightness]. **1.** A descendant of Aaron, and head of one of the divisions of priests in the time of David (I Chr. 24:14; cf. vss. 1, 4).

Bibliography. E. L. Curtis, *Chronicles,* ICC (1910), p. 271.

2. One of the chiefs of the priests listed as having returned from Babylon with Zerubbabel (Neh. 12: 5, 18). B. T. DAHLBERG

BILGAI bĭl'gī [בלגי, cheerfulness] (Neh. 10:8). A postexilic priest who witnessed the covenant renewal under Ezra; probably identical with BILGAH 2.

BILHAH bĭl'hə [בלהה, simplicity(?), modesty(?), *or perhaps* unconcern, *from* Arab. *balaha,* to be without concern]. **1.** The handmaid of Rachel. She was given by Rachel to Jacob and bore him Dan and Naphtali.

When the barren Rachel became jealous because Leah was fruitful, she gave her handmaid Bilhah to Jacob as a concubine (Gen. 29:31-35; 30:1-8)—a custom paralleled in the Nuzi Texts (*see* NUZI). Bilhah gave birth to Dan and Naphtali, both of whom Rachel named, thus indicating her claim to them. The tribes, Dan and Naphtali, of which Bilhah's sons were the eponyms, resided in the far N of Palestine (after Dan's migration; Judg. 18) and belonged to the premonarchical twelve-tribe amphictyony reflected in the grouping of Jacob-Israel's family.

M. NEWMAN

2. A village somewhere in S Judah (I Chr. 4:29); probably the same as BALAH (Josh. 19:3) and BAALAH 3 (15:29).

BILHAN bĭl'hăn [בלהן; *cf.* Heb. *personal name* בלהה; *note ending -ān in other names in* Gen. 36:26-28]. **1.** The first son of clan chief Ezer (*see* EZER 1); ancestor of a native Horite subclan in Edom (Gen. 36: 27; I Chr. 1:42).

2. Son of JEDIAEL (1), a Benjaminite (I Chr. 7:10). However, vss. 6-11 may possibly be a lost genealogy of ZEBULUN. L. HICKS

BILL [ספר, writing, document; ἀποστασίον]. The document a man executed when he wished to divorce his wife. If he found her undesirable, he must write a bill of divorce and put it in her hands before he could send her away (Deut. 24:1, 3). This requirement is cited by Jesus also (Matt. 5:31; 19:7; Mark 10:4) as the recognized law of Moses.

The word ספר is used figuratively in the book of Isaiah, where God asks, relative to the children of Zion:

> Where is your mother's bill of divorce,
> with which I put her away?
> (50:1).

Harlotrous Israel was sent away by her God with a "DECREE of divorce" (Jer. 3:8).

See also DIVORCE. O. J. BAAB

BILSHAN bĭl'shăn [בלשן, *from* Babylonian, *probably an abbreviation of bel-shunu,* their Lord]; KJV BEL-SARUS bē ĕl'sə rəs. One of the leaders of the Jews who returned to Palestine with Zerubbabel after the Exile (Ezra 2:2; Neh. 7:7; I Esd. 5:8).

M. NEWMAN

BIMHAL bĭm'hăl [במהל, *probably a shortened form of* בן־מהל, son of circumcision, *or* circumcised one] (I Chr. 7:33). A division of the clan of Japhlet in the tribe of Asher in the Chronicler's postexilic genealogy.

Bibliography. M. Noth, *Die israelitischen Personennamen* (1928), p. 239; F. V. Winnett, *A Study of the Lihyanite and Thamudic Inscriptions* (1937), p. 21. H. H. GUTHRIE, JR.

BINDING AND LOOSING. The power of binding and loosing was entrusted to Peter by Jesus: "I will give you the keys of the kingdom of heaven, and whatever you bind on earth shall be bound in heaven, and whatever you loose on earth shall be loosed in heaven" (Matt. 16:19). Later on (18:18), Jesus gave to all disciples the same promise in the same terms, but without the first sentence on the keys. The POWER OF KEYS was entrusted to Peter alone. A parallel to the saying on binding and loosing is found in the words addressed by Jesus to the apostles on the eve of the Resurrection: "If you forgive the sins of any, they are forgiven; if you retain the sins of any, they are retained" (John 20:23).

The terms "to bind" and "to loose" translate the Greek δεῖν and λύειν, which doubtless represent the Aramaic אסר and שרא (Hebrew אסר and התיר). In the rabbinic literature these verbs have two distinct senses. First, they mean "forbid" and "permit" and express the verdict of a teacher of the law who declares some action "bound" (forbidden) or "loosed" (permitted). Second, they are used in reference to the imposition or the removal of the ban, meaning "condemn" or "absolve" respectively.

Both meanings have been applied to the texts of Matthew. In fact, the second should be preferred. For the disciples were not scribes, but the messengers of the gospel, which brings forgiveness of sins and peace with God to those who receive it with faith and which delivers up the unbelievers to the judgment of God (cf. Matt. 10:13-14). This is also the meaning contained in the Johannine form of the saying. In short, "to loose" is the divine power to forgive sins and thus to admit new converts in the church and to restore to the fellowship of the church repentant sinners. "To bind" is to announce God's judgment to unbelievers and impenitent sinners.

The power to bind and to loose was entrusted first to Peter as the leader of the disciples, and then to the other disciples (Matt. 18:11)—i.e., to the Twelve

(John 20:23), and not to the church. Similarly, at the end of the apostolic age this power was transmitted to the ministry and not to the community (II Tim. 2:24-26; Tit. 3:10).

Another interpretation holds that the opposite verbs "to loose" and "to bind" express together the totality of the power entrusted to the apostles. As sometimes in the OT "good and bad" means everything (Gen. 24:50), here both verbs should say that the apostles have the power to do "everything."

BINEA bĭn'ĭ ə [בנעא]. One of the descendants of the house of Saul; in the Benjaminite genealogies described as the son of Moza and the father of Rephaiah (I Chr. 8:37; 9:43).

BINNUI bĭn'yōō ī [בנוי, *from* בנה, to build; *apparently confused with* BANI; BUNNI; BAVVAI, *all similar in Hebrew*]. Apoc. BELNUUS bĕl'nōō əs; KJV BALNUUS băl'— (I Esd. 9:31); BANNUS băn'əs (I Esd. 9:34); SABBAN săb'ən (I Esd. 8:63). **1.** Head of a family returning with Zerubbabel and Nehemiah (Neh. 7:15); probably the same as the Bani of Ezra 2:10 and possibly the Bani of Ezra 10:34.

2. A Levite of postexilic times (Ezra 8:33; Neh. 10:9; 12:8). Since the Binnui of Neh. 10:9 is designated as a son of Henadad, Binnui the son of Henadad who aided Nehemiah in repairing the walls of Jerusalem (Neh. 3:24), though not called a Levite, is probably the same person, and Bavvai the son of Henadad must also be the same person (Neh. 3:18). Bani (Neh. 8:7; 9:4) may also be the same person, since the names are confused. Binnui the Levite may also have appeared in the original text of Neh. 7:43 (duplicated in Ezra 2:40), where, in unpointed Hebrew, there would be little difference between "the sons of" and "Binnui." *Cf.* BANNAS (I Esd. 5:26).

3. A postexilic Jew, son of Pahath-moab (Ezra 10:30; I Esd. 9:31).

4. Head of a postexilic family (Ezra 10:38; probably same as in I Esd. 9:34).

BIRD [בל בעל כנף, any owner of a wing; עוף, flier (Aram. עוף; Dan. 2:38; 7:6), FOWL *in* Lev. 7:26; פרח(ו)ת, flying ones; צפור, chirper (Aram. צפר; Dan. 4:12—Aram. 4:9; etc.; *alternately* SPARROW); ὄρνεον, *variant of* ὄρνις; πετεινόν, flier (*mostly plural*); πτηνός, *from* πέτομαι, to fly]; KJV alternately FOWL. A class (Aves) of warm-blooded vertebrates, distinguished from other animals by the body's being more or less completely covered with feathers.

1. Classification. When Tristram was in Palestine in the nineteenth century, he identified 322 species of birds (to which, he thought, at least 30 others should be added), and of this number 260 appeared in European bird lists (*NHB* 167-68). It is likely that the same diversity of bird life existed in the Holy Land in the biblical period. Tristram also noted that what arrested his attention was the "number and variety of the larger birds of prey . . . which abound in every part of the . . . Land, and are at first sight its ornithological characteristic."

The OT distinguishes between clean and unclean birds. The unclean ones are specified in Lev. 11:13-19; Deut. 14:11-20: these, speaking generally, are birds of prey (*see* BIRD OF PREY). By implication the nonraptorial birds are clean, though the OT does not supply criteria for identifying them. They would appear to comprise passerines, pigeons, partridges, etc. The Mishna states: "Any bird that seizes food in its claws is unclean; and any that has an extra talon and a craw, and the skin of whose stomach can be stripped off, is clean" (Hullin 3.6).

The migratory habits of some birds are referred to (Song of S. 2:12; Jer. 8:7; Hos. 11:11); their nesting in trees (Ezek. 31:6) and in proximity to springs (Ps. 104:12); their singing (Ps. 104:12; Eccl. 12:4; Wisd. Sol. 17:18); their being tamed as pets (Job 41:5—H 40:29; Jas. 3:7). The survival of birds under the ordinary conditions of nature is cited by Jesus as illustrative of the Father's care for his creatures (Matt. 6:26; Luke 12:24).

We do not know how important edible birds (whose blood was not to be eaten; Lev. 7:26) were in the household economy of the biblical period. The numerous references to bird traps suggest that fowling was common (Lev. 17:13; Job 18:8-10; Ps. 124:7; Prov. 6:5; Jer. 5:27; Hos. 7:12; Amos 3:5; Ecclus. 11:30; 27:19; Bar. 3:17; etc.). Pigeons (*see* PIGEON), which served the poor as food and as religious offerings, were undoubtedly bred both in homes and in dovecots (Isa. 60:8; M. Shab. 24.3; Bez. 1.3). Small birds such as sparrows were also commonly eaten (Matt. 10:29). On domestic poultry, *see* FOWL.

2. In the OT. עוף (cf. כל עוף כנף, "every winged bird"; Gen. 1:21; cf. Ps. 78:27), which frequently appears in the phrase "birds of the air" (Gen. 1:26, etc.), is the most general term for all birds (Gen. 1:20, etc.), which are divided into species (Gen. 6:20) and into the categories of clean and unclean (Lev. 20:25). עוף is often associated with "beasts," "reptiles," and "fish," to make up the fauna known to ancient Israel (Gen. 1:26, etc.). It designates vultures and other carrion-eating birds (Gen. 40:19; Deut. 28:26; etc.), as well as game birds (Lev. 17:13; cf. Jer. 5:27) and the quail of the Exodus (Ps. 78:27). It is used of Noah's burnt offering (Gen. 8:20), and once of the burnt offering of doves and pigeons (Lev. 1:14). For the use of עוף in the phrase שרץ העוף ("winged insects"; Lev. 11:20-21; Deut. 14:19), *see* INSECTS.

צפור, while it may, like עוף, refer to birds of every sort (Gen. 7:14; Deut. 4:17; Ezek. 17:23; Dan. 4:12), including birds of prey (Ezek. 39:4, 17), usually designates the game birds (Ps. 124:7; Prov. 6:5; etc.) or the passerines (Ps. 102:7—H 102:8; Dan. 4:12). The allusion in Deut. 22:6-7 is to a nesting bird whose eggs are eaten, in Gen. 15:10 to doves and pigeons, in Lev. 14 to the birds used in the ritual for

cleansing the leper and the leprous house. In Neh. 5:18 ("fowls") the reference is to edible birds suitable for a governor's table. *See* FOWL; SPARROW.

3. In the NT. Ὄρνεον is used in Rev. 18:2 to emphasize the utter ruin to descend on Babylon, which is to become the "haunt of every foul and hateful bird." In 19:17, 21, the reference is to vultures.

Πετεῖνον is used (as πτηνός is in I Cor. 15:39) for birds in general (Matt. 6:26, etc.); in Acts 10:12-14 it includes unclean birds, and in Matt. 13:4, 32, it points to the passerines.

W. S. McCULLOUGH

BIRD OF PREY [עיט, screamer, *from* עיט, to scream, shriek; *cf.* Arab. *'ayyaṭa,* to yell, scream]; KJV FOWL (Gen. 15:11; etc.); BIRD (Jer. 12:9); RAVENOUS BIRD (Isa. 46:11; cf. Ezek. 39:4). Any bird which seizes another animal for food.

Biblical Palestine was familiar with a large number of birds of prey—eagles, vultures, hawks, falcons, etc. All the members of this group were unclean to the Hebrews, and many of them are specifically mentioned among the forbidden birds in Lev. 11; Deut. 14. The fact that עיט is not included in these lists supports the view that it is a general term to designate any bird of prey, as in Gen. 15:11. In Job 28:7 it appears in a parallel construction with איה, "falcon." It is used most commonly to emphasize a present or an anticipated desolation, as in Isa. 18:6; Jer. 12:9*b* (the text of vs. 9*a* may be corrupt; *see* SPECKLED BIRD); Ezek. 39:4. In Isa. 46:11 it apparently refers to Cyrus of Persia.

W. S. McCULLOUGH

BIRSHA bûr'shə [ברשע; LXX Βαρσα]. King of Gomorrah (Dead Sea Genesis Apocryphon XXI.24, 32: עומרם), defeated after rebelling against Chedorlaomer (Gen. 14:2; cf. also vss. 8, 10-11).

BIRTH [הולד, *infinitive construct Niph'al or Hoph'al,* act of being born; מולדת, birth, offspring; γένεσις, origin, source, manner of birth, nativity]. Many births were desired because of the importance of large families (*see* FAMILY). There was some understanding of the processes of conception and pregnancy, as well as birth, although there was a realization of the mystery of life as well (Eccl. 11:5). Although ovum was unknown to biblical writers, it was thought that only the seed of the male was determinative in conception and gestation, the woman providing in her womb a receptacle for its protection and growth (Wisd. Sol. 7:2-3). However, the famous Egyptian hymn to Aton refers to "seed" in woman and "fluid" in man. *See bibliography.*

The Bible reveals no evidence of attempts at birth control. Onan's deliberate wasting of his semen is condemned only because he refuses to raise an offspring to his brother's widow, thereby breaking the LEVIRATE LAW.

Two sources mention nine months' pregnancy (II Esd. 4:40; II Macc. 7:27; cf. ten months' pregnancy in Wisd. Sol. 7:2-3).

There are also allusions to the process of birth itself. The Hebrew women in Egypt were delivered quickly (Exod. 1:19), but usually birth was agonizing and so unforgettably painful that various writers use this experience figuratively. We note the trembling of kings (Ps. 48:6), pangs, agony, anguish when the Lord's day is near (Isa. 13:8), cries, gasping, and panting (Isa. 42:14; cf. Jer. 6:24; 13:21; 22:23; 30:6; 48:41; 49:24; 50:43; John 16:21; Rev. 12:2). A son was born literally to the father, who received him on his knees (Gen. 21:3; 50:23). The words "Upon thee was I cast from my birth" may suggest the father's act of receiving his child when it came from the mother's womb (Ps. 22:10). Rachel, on the other hand, hoped to bear a child upon her knees through her maid Bilhah (Gen. 30:3). The use of MANDRAKE plants may have had the effect of relaxing the womb and facilitating the birth process. Women were assisted in childbirth by the use of the BIRTHSTOOL (*see* MIDWIFE). After birth the infant's navel cord was cut; then the infant was washed, rubbed with salt, and swathed in bands (Ezek. 16:4). The mother must undergo a cleansing process after the birth of her child (Lev. 12:2-8).

Sometimes birth was premature, because of the shock of bad news (I Sam. 4:19); or a woman might lack strength to bring a child to birth (II Kings 19:3). The UNTIMELY BIRTH enters the darkness and finds rest (Eccl. 6:4-5); one who is born thus can lie down and sleep, avoiding the agony of life (Job 3:11-13). A miscarriage could be caused by accident or violence (Exod. 21:22-25). It may have been regarded as a divine judgment (Ps. 58:8; Hos. 9:14). Miscarriage because of assault is covered by the Babylonian, Assyrian, and Hittite codes. *See bibliography.*

A birth was the occasion for rejoicing and ceremonial activities, especially the birth of a son (Ruth 4:14; Jer. 20:15; Luke 1:14, 57-58; 2:13, John 16:21). Children were named at birth (Gen. 29:32, 35; 30:6 ff). The birthday became an occasion for festivities (Gen. 40:20; Matt. 14:6). The day of birth may be cursed when life is miserable (Job 3:3; Jer. 20:14). In a spiritual sense, one may be born a second time, of the water and the Spirit (John 3:3-7)—figuratively, the new birth.

BIRTH, VIRGIN. *See* VIRGIN BIRTH.

BIRTH OF MARY, GOSPEL OF. *See* MARY, GOSPEL OF THE BIRTH OF.

BIRTHRIGHT [בכרה, right of the first-born]. While all a man's sons had his protection and some benefits, the FIRST-BORN son had a special inheritance. His was the principal inheritance of property and name. Through him the FAMILY line was continued.

The stories of Jacob's appropriation of Esau's birthright as the first-born are important, for they show how Jacob, rather than his brother, continued the line of Abraham and Isaac (Gen. 25:29-34). Birthrights might be taken away from the eldest son. The birthright of Reuben was taken from him and given to the sons of Joseph (I Chr. 5:1; cf. Gen. 49:4). At a meal the sons were seated in order of their

ages, "the first-born according to his birthright" (Gen. 43:33). The kingdom was given to the first-born as his right (II Chr. 21:3; cf. Ps. 89:27). Israel received the protection of her God, who made her his first-born (Exod. 4:22-23; Jer. 31:9). Paul had the privileges of Roman citizenship as a birthright (Acts 22:28). O. J. BAAB

BIRTHSTOOL [אבן,*'óbhen,* wheel, disc; *variant reading, 'ébhen,* stone, *in the plural*]. An object upon which a woman sat during labor. It was possibly of Egyptian origin.

Bibliography. For the custom of labor on a stool, see H. H. Ploss, *Das Weib* (3rd ed., 1891), pp. 35, 179 ff. For a view as to the Egyptian custom, see W. Spiegelberg, *Aegypten Randglossen* (1904), pp. 19-25. O. J. BAAB

BIRZAITH bûr zā'əth [ברזית (*Qere*), well of the olive tree] (I Chr. 7:31); KJV BIRZAVITH —vĭth [ברזור (*Kethibh*)]. A name in a postexilic list of clans of the tribe of Asher. It does not appear in the parallel lists in Gen. 46:17; Num. 26:44-47, and seems, actually, to be the name of a place. It is probably to be identified with the modern village of Birzeit, which is located approximately 4.3 miles N of Ramalla, near ancient Tyre.

Bibliography. F.-M. Abel, "Une Mention Biblique du Birzeit," *RB,* XLVI (1937), 217 ff; *Géographie de la Palestine,* II (1938), 55. H. H. GUTHRIE, JR.

BISHLAM bĭsh'ləm [בשלם, *possibly a shortened form of* בן־שלם, son of peace]; KJV Apoc. BELEMUS bĕl'ə məs. One of three men who took the lead in writing a letter of complaint against the Jews in post-exilic Palestine to the Persian king Artaxerxes (Ezra 4:7; I Esd. 2:16). The LXX, however, translates ἐν εἰρήνῃ, which would be a literal rendering of the Aramaic and comparable to the Hebrew בשלום. If this is correct, it would be part of the salutation of the letter. It has also been suggested that בשלם is perhaps a corruption of an original בירושלם, "against Jerusalem," which the letter in actuality was.

M. NEWMAN

BISHOP [ἐπίσκοπος, overseer, guardian]. The title of the chief hierarchical order of ministry in the church, since post-apostolic times. In this sense the word occurs twice in the Pastoral letters (I Tim. 3:2; Tit. 1:7) in contexts describing the qualifications and duties of the office. It is used once (I Pet. 2:25 KJV) as a title of Christ. In the other two instances of the use of ἐπίσκοπος in the NT—in Phil. 1:1 by Paul, and in Acts 20:28 in a speech attributed to Paul—opinion has been divided as to whether the term has a technical sense. With these references should be associated Acts 1:20, where ἐπισκοπή is cited from Ps. 109:8 (LXX) with reference to the "overseership" forfeited by Judas' treachery and suicide. Also in I Pet. 5:2 some MSS insert the participial form of the verb ἐπισκοπεῖν to describe the pastoral oversight of elders (*see* ELDER IN NT).

The letters of Ignatius, martyr-bishop of Antioch (not later than A.D. 117), provide the earliest and most complete picture of the position and responsibilities of a bishop in the church. To the Christian community over which he was placed, he embodied the "authority of God the Father." No gathering of his church for baptism, Eucharist, or AGAPE was valid without his presence or authorization. He was the chief pastor of his flock, and the administrator and dispenser of its charity. The elders served him as a council of advice and acted as his deputies in his absence. The deacons were directly subordinate to him as assistants in worship and pastoral visitations. The bishop alone received the vows of virgins and enrolled widows (*see* WIDOW). He was the spokesman of his church in all correspondence with other churches and appointed ambassadors to other Christian communities as the need arose. He was responsible for all preaching and teaching, even though he himself might depute this function to others. He was also the guardian and representative of his people in its relations with the non-Christian community. In short, the bishop was chief priest, pastor, and ruler of his church.

In the light of these manifold responsibilities, the qualifications of character and ability for the episcopal office, as outlined in the Pastoral letters, is understandable. The DIDACHE (15:1-2) also enjoins that bishops (and deacons) should be ordained—men who are "humble, not avaricious, faithful, and well-tested," and who are to be honored in their ministry as the prophets and teachers.

The bishop was elected by the whole church that he was to serve, after being tested by the Spirit (or, as I Tim. 4:14 suggests, after being designated "by prophetic utterance"). He was ordained by prayer and the laying on of hands, but the ministers who acted in this ordination are not precisely noted in the earlier literature. I Tim. 4:14 has been taken by some critics to mean that the elders originally ordained the bishops. By the time of Hippolytus (*ca.* 200) it was considered an "apostolic tradition" that bishops of neighboring churches assembled for the ordination.

The major problem concerning the emergence in the church of the monarchical episcopate, as it is seen in Ignatius' letters, is not so much the cause of it, as the process by which it came about. With this problem is associated the question of "apostolic succession"—for from the middle of the second century, if not before, the bishops were viewed in the church as the direct heirs of the authority of the apostles, in an unbroken continuity of office, and the primary preservers for the church of the apostolic faith.

This viewpoint is presented for the first time *ca.* 95, in the Epistle of Clement (*see* CLEMENT, EPISTLE OF), written from Rome to the church in Corinth, in protest against the deposition by the Corinthians of their bishops and deacons. The apostles, said the writer, when they had preached in the villages and cities, "appointed their first converts, after testing them by the Spirit, as bishops and deacons of those who were to believe." This institution was foretold in scripture, according to Isa. 60:17. Knowing that there would be strife for the office, the apostles made arrangements that after their death other "tested men" should succeed to this office—namely, an office of "liturgy, . . . of offering the gifts" (chs. 42-44). *See* ELDER IN THE NT.

It is apparent from I Clement that the bishops' ministry was primarily a liturgical one of presidency

at the Eucharist, in which they were assisted by the deacons. The same emphasis upon liturgical ministration is evident in the directives of the Didache, as already noted; and later works, such as Hippolytus' *Apostolic Tradition* and the references of Tertullian and Cyprian, make clear the primary function of the bishop as chief "priest" in the sacramental rites of the church. It is reasonable to suppose, therefore, that the bishops were originally those ministers of the Christian communities who were ordained as "overseers" of the Eucharistic banquet, by virtue of their evident "spiritual gift" (*charisma*) for this service. That they were selected and ordained for this office by the apostles, as I Clement says, is certainly possible; and that they were also members of the local presbyteries of "elders" is probable. Thus the apparent identification of bishops and elders in Acts 20:28; Tit. 1:5-7; I Clem. 44.5 may be explained.

It is also likely that Paul's greeting in Phil. 1:1 to the "bishops and deacons" was used in a technical sense. This letter was a note of thanks to the Philippians for the material assistance sent the apostle during his imprisonment. It would be only natural that Paul would single out for special mention those ministers of the church who had been particularly responsible for the overseeing of this charity. Such men would be the ministers in charge of the Eucharist, who received and dispensed the offerings of the people at the common meeting for the breaking of bread.

It is possible that in the early days there was a bishop-overseer for each house-church congregation. But the crises of the post-apostolic age brought about the concentration of authority in the hands of a single—i.e., monarchical—bishop. For the bishop's overseership of the Eucharist placed him in a favorable position for assuming such control. As presiding minister at the chief service of worship, he could decide which preachers, teachers, and prophets would be faithful to the doctrine of the apostles, and therefore he would allow them to speak or not, depending upon their orthodoxy. As the administrator of the offerings of the people, the bishop would assume primary pastoral responsibilities, with powers of excommunicating those who for one reason or another, doctrinal or ethical, would not be "in good standing," either for participating in the common worship or for receiving from its sacramental and charitable gifts. It would also be the responsibility of the bishop, in view of the increasing danger of persecution by the state, to safeguard the community, as far as possible, in its assemblies for worship, from detection and menace by the police. The evolution of the episcopal office in the church, therefore, was a response to pressing needs for authoritative guardianship in the period after the passing of the apostle-founders. But the office itself was of apostolic origin and appointment, and in this sense the bishops could legitimately claim to be the successors of the apostles.

Many attempts have been made to find prototypes of the bishop in the Jewish and Gentile background of Christianity. Some have seen in the headship of James over the Jerusalem community the first example of a monarchical bishop. Others have derived the office from that of the ruler of the Jewish synagogue, who presided over the worship of the synagogue and selected those who took part in its services (*see* SYNAGOGUE). In the LXX (Job 20:29; Wisd. Sol. 1:6), the term ἐπίσκοπος is used of God (so also commonly in Philo), and in a number of instances of ordinary overseers; but it is never used of cultic ministers. Philo (*Who Is the Heir* 30) gives the title once to Moses. In I Macc. 1:51 (LXX) the word is used of the inspectors set over the Jews by Antiochus Epiphanes to carry out his religious policy.

The term is fairly common in Greek literature, papyri, and inscriptions, both in its general meaning of oversight and as a technical name for officials, civil and religious. From the time of Homer (*Iliad* XXII. 254) it is applied to the gods. The Cynic-Stoic philosophers were especially fond of the term to describe their own mission as messengers and heralds of the gods (though the form κατάσκοπος is more common than ἐπίσκοπος; cf. Epictetus *Discourses* III. 22, 38, 69, 72, 77, 97; Dio Chrysostom *Orat.* 9, 1). Many Syrian inscriptions note ἐπίσκοποι as overseers of buildings, provisions, coins, etc.; and cult associations of Greece and the Aegean isles record the term in reference to directors and cashiers. Until recently, it was a common view of scholars that the title of bishop was of Gentile origin in the church, first coming into usage in the mission churches founded outside Palestine, to denote those "elders" of the churches who were charged with the oversight of the common meals and the offerings of the faithful.

The recent discoveries of MSS of the Qumran community near the Dead Sea, however, have raised once more the question as to the possible Jewish origin of the title "overseer" (*see* DEAD SEA SCROLLS). The Damascus Document, published by Schechter in 1910, described an overseer or inspector of the camp (מבקר, *mebaqqer*), who taught the covenanters the "works of God," looked after them "as does a shepherd his flock," and, in particular, supervised the admission of new members, the disciplining of offenders, and all financial transactions. This same officer now appears in the Manual of Discipline from Qumran (VI.12-20; cf. CDC IX.18-22; XIII.7-19; XIV.11-13; XV.8, 14), and appears to be comparable to the "steward" of the Essenes (ἐπιμελητής) noted by Josephus (War II.viii.3; cf. Philo in Euseb. *Preparation* VIII.11). Whether or not there is any direct relationship between the overseer of these covenanters and the office of bishop in the church cannot be securely determined until research is more advanced in the larger question of the impact of the Qumran and similar communities upon the development of primitive Christianity. *See also* APOSTLE; MINISTRY, CHRISTIAN.

42. A bronze horse's bit, from Tell el-'Ajjul (second millennium B.C.)

Early metal bits were a bar with a loop at each end for the reins. Just inside the loops were plates, or spiked wheels, which caused the animal pain and so made him tractable. A jointed bit is also known *ca.* the end of the second millennium B.C.

The words translated "bit" and "bridle" sometimes refer metaphorically to any form of control.

C. U. WOLF

BITHIAH bĭ thī'ə [בתיה, daughter (*i.e.*, worshiper) of Yahu] (I Chr. 4:17—H 4:18; cf. KJV). A daughter of Pharaoh and wife of Mered of Judah.

Bibliography. E. L. Curtis, *Chronicles*, ICC (1910), pp. 111-12.

B. T. DAHLBERG

BITHRON bĭth'rŏn [הבתרון, the ravine]. KJV translation in II Sam. 2:29; the way by which Abner and his warriors returned to Mahanaim after their defeat near Gibeon. It was apparently not a wadi but a short cut through the mountains, well known at the time but now unknown. On the other hand, W. R. Arnold, pointing out the parallel between "all the night" and "all the Bithron," has suggested that the word means "forenoon," the translation adopted by the RSV (*AJSV*, XXVIII [1911-12], 274-83).

S. COHEN

BITHYNIA bĭ thĭn'ĭ ə [Βιθυνία]. A region in NW Asia Minor, named after a Thracian tribe. Its E neighbor was Paphlagonia; its S borders were formed by the Sangarius or Tembris valleys and Mysia. The Sangarius flows through Bithynia, and its lower valley forms the richest agricultural area of the country. The other fertile district is the plain near Mount Olympus. Large forests still exist in the inland areas.

Bithynia, like many other districts in Asia Minor, had some Greek cities along its coasts—e.g., Chalcedon and Heraclea Pontica—but the main body of its population consisted of Bithynians, Thracian (Indo-European) immigrants who moved into Asia Minor sometime in the dark ages after the fall of Troy (1200-800 B.C.). The region of Bithynia was only peripherally affected by Phrygian and Persian rule. In Hellenistic times a local dynasty increased the importance of the district (297-74 B.C.). Nicomedes I (279-250) was the founder of its capital Nicomedia, modern Izmit, on the Propontis. He invited the Gauls to come to his aid from Thrace, thereby fostering the dangerous movement of barbarians into Asia Minor. His grandson Prusias I (*ca.* 230-183) was an ally of Macedon against Pergamum, but his power was curtailed by Rome. Prusias was the founder of the city of Prusa ad Olympum, which as modern Bursa continues to be one of the leading cities of the district. Its prosperity is based on agriculture and the abundance of hot medicinal springs. The kingdom of Bithynia was bequeathed to Rome in 74 B.C.

Pompey organized Pontus and Bithynia into a single province in 65-63 B.C. Our best source of information about conditions in this district are the letters of Pliny the Younger, who was special commissioner of Bithynia and Pontus in A.D. 111-13. The number of Bithynian Christians was high in his days. Pliny wrote to Trajan that Christianity had spread even to the villages and rural districts (Letter 96), which implies that even the least Hellenized areas were reached by evangelization.

Paul apparently had planned to go into Bithynia from the S (Acts 16:7), approximately from the region of Dorylaeum in N Phrygia, from which Nicaea and Nicomedia could be reached. Dissuaded by the Spirit of Jesus from entering Bithynia, he traveled W to the Troad.

Of the two major cities of Bithynia, Nicomedia-Izmit has preserved some of the Hellenistic and Roman fortifications of its citadel. Nicaea-Iznik has a more impressive set of ancient walls, which, however, date from Roman to Seljuk times.

M. J. MELLINK

BITTER, BITTERNESS. Unpleasant experiences were described in the Scriptures in terms of the sense of taste, just as in English literature. In the Bible bitterness is symbolic of affliction, misery, slavery, and wickedness. All ten Hebrew words translated "bitter," "bitterness," are variants of the verb מרר, "to be bitter." Cf. the variants of Greek πικρός, "bitter" (Jas. 3:11, 14; cf. πικρία [Acts 8:23; Rom. 3:14; Eph. 4:31; Heb. 12:15]; πικρῶς [Matt. 26:75; Luke 22:62]; πικπαίνω [Col. 3:19; Rev. 8:11; 10:9-10]). English expressions such as: "He made a bilious attack upon him," "It was a galling experience," and "She was tastefully dressed," have parallel derivation. Bitter taste was associated with the gall bladder and the acrid juices of upset digestion.

Experiences of bitterness may be classified for convenience under four headings:

a) Emotion. Subdivision may be made here of

active and passive emotion: cruel, biting words may be uttered (Gen. 27:34; Job 13:26; Ps. 106:33), or other manifestation of disposition (Rom. 3:14); or more subjective emotions may be experienced (Hos. 12:14; Jas. 3:14).

b) Living conditions, vividly described (Gen. 26:35; Exod. 1:14; II Sam. 2:26; II Kings 14:26).

c) Food: bitter fruit (Deut. 29:18; 32:32); bitter herbs (Exod. 12:8; Num. 9:11); as opposed to food of pleasant taste (Isa. 5:20; Prov. 5:4 uses the contrast as a simile).

d) Water or other beverage (cf. Exod. 15:23; Isa. 24:9). Special reference is made to BITTER WATER, a concoction thought to reveal erring women of the community.

Figurative use was made of each of these types of experience. Particular attention was given to illustration of ethical values (Deut. 29:18; 32:32). The symbolism passed into major festivals. BITTER HERBS were used to make quick salads. Use of the bitter herb in the Passover meal took on increasing significance. The symbolism at first signified the haste with which the meal was prepared and eaten, but eventually it was used as a reminder of the bitterness of the experience of the Egyptian bondage.

W. G. WILLIAMS

BITTER HERBS [מררים]. Herbs eaten with the pascal lamb during the PASSOVER (Exod. 12:8; Num. 9:11), symbolically referring to the bitter experiences of the Hebrews in Egypt prior to the Exodus (M. Pes. 10.5). Many botanists have attempted to identify a specific herb intended by the injunction, including endives (*Cichorium endivia* L., native to India and unlikely in Bible times), common chicory (*Cichorium intybus* L., also called succory), lettuce (*Lactuca sativa* L.), water cress (*Nasturtium officinale* R. Br.), and several other bitter-tasting herbs. The selection of the *Centaurea* family of herbs ("star thistles"; *see* FLORA §§ A12*c*, 14*c*; THISTLES) is based on a desert (Exodus) setting for the origin of the custom, but the Pentateuch passages more likely suggest a postexilic Palestinian background (P source). The Hebrew word and its Greek equivalent, πίκρις, intend a general meaning which could include many different herbs, as shown by the Mishnaic reference to five kinds of herbs (Pes. 2.6), the exact identification of which is not entirely certain. Horse-radish (*Armoracia lapathifolia* Gilib.) is commonly used in Europe and America today as "bitter herbs" with the pascal lamb, but it was not known in Bible times.

מרירים in Lam. 3:15 ("bitterness") might be translated "bitter herbs," in parallelism with לענה, WORMWOOD.

> He has filled me with bitterness [or bitter herbs],
> he has sated me with wormwood.

In Heb. 12:15 ῥίζα πικρίας (cf. Deut. 29:18—H 29:17), "root of bitterness," may have the symbolic meaning of "bitter herbs." *See* GALL.

BITTER WATER. KJV form of WATER OF BITTERNESS. *See also* MEDICINE.

BITTERN. KJV translation of קפוד, קפד. *See* HEDGEHOG.

BITUMEN bĭ tōō'mən, —tū'— [חמר]; KJV SLIME. Originally, mineral pitch or asphalt. Today the term includes numerous hydrocarbons.

The Hebrew word, from its derivation, may denote a "foaming up"; hence the word is used in regard to wells or pits in Gen. 14:10. It may also contain a concept of "covering"; hence it was used by Moses' mother to calk the ark of bulrushes (Exod. 2:3). Josephus (Antiq. I.ix) calls the Dead Sea "Lacus Asphaltitis" because of the presence of asphalt on its surface at the S end.

It has been suggested that bitumen was used by the Egyptians in their embalming, but this is doubtful. Bitumen was used as mortar in the Plain of Shinar (Gen. 11:3). Pits of bitumen were found near Kirkuk in Assyria, and at Hit on the Euphrates, whence it was shipped to Sumer. Bitumen was used as mortar in setting the burnt brick which formed the outer layers of the ziggurat of Ur. It was also used as calking for the rafts and basket boats on the Euphrates. It was used as a material for monuments. In some statuary it was used to simulate the pupils of eyes. *See also* PITCH. W. E. STAPLES

BIZIOTHIAH bĭz'ĭ ō thī'ə [בזיותיה] (Josh. 15:28); KJV BIZJOTHJAH bĭz jŏth'jə. A place in the Negeb district of Judah. The present text is probably corrupt, and one should read: ובזותיה, "and her daughters" (i.e., outlying villages; cf. LXX and the parallel list in Neh. 11:27). V. R. GOLD

BIZTHA bĭz'thə [בזתא, *perhaps* eunuch, *from* Pers. *besteh*, bound] (Esth. 1:10). One of seven eunuchs who served Ahasuerus as chamberlains and whom he sent for Queen Vashti.

BLACK. A word describing mainly natural objects and phenomena, calamity, gloom, and mourning. In the OT, שחר, חום, and קדר or their derivatives express varying degrees of darkness and are the Hebrew words most frequently translated "black." The word שחר, "to be black," is used of hair (Lev. 13:31, 37; Song of S. 5:11), skin (Job 30:30; Song of S. 1:5-6), the human face (Lam. 4:8), and horses (Zech. 6:2, 6). The black (KJV "brown") color of lambs (Gen. 30) is implied by חום, that which is "warm," "hot," or "burned."

Black in the heavens, as the sign of rain (I Kings 18:45), a symbol of cosmic mourning (Jer. 4:28), or desolation (Isa. 50:3), is expressed by קדר, This word, meaning "to be dirty, dark, or gloomy," also is employed to picture a visionless day (Mic. 3:6), treachery of Job's brethren (Job 6:16), and the mourning of individuals (Job 30:28; Jer. 8:21) and of Judah (Jer. 14:2).

The Greek word γέλας in the NT signifies "black" and is utilized in the description of hair (Matt. 5:36), apocalyptic horses (Rev. 6:5), and the darkened sun (Rev. 6:12). "Blackness" or "darkness" is intended by γνόφῳ (Heb. 12:18), and the "nether gloom or blackness of darkness" by ζόφος in Jude 13.

BLAINS. KJV form of SORES.

BLASPHEMY [נאצה (Neh. 9:18, 26), βλασφημία (Matt. 12:31, etc.)]; BLASPHEME [נאץ (Lev. 24:11, 16), גדף (Ezek. 20:27), חרף (Isa. 65:7 KJV), קלל (I Sam. 3:13), βλασφημέω (Matt. 26:65; etc.)]. Slandering, reproaching, cursing, or showing contempt. In English the word "blasphemy" is specifically applied to dishonoring and reviling of the name, being, or work of God by word or action. This can occur through a deliberate and flagrant sin (Num. 15:30) and through speaking insultingly against (Isa. 37:6) or cursing (Lev. 24:11, 16; I Sam. 3:13 LXX-RSV; Rev. 16:9, 11, 21) God (cf. I Sam. 2:17; Neh. 9:18; Tob. 1:18 [LXX S]; II Macc. 10:34-36; 12:14; Acts 19:37).

Archetypal enemies of God are characteristically full of blasphemies (II Macc. 9:28; Rev. 13:1 ff; 17:3). The Jews accused Stephen (Acts 6:11) and Jesus of this crime, the latter because he presumed to forgive sins (Matt. 9:3; Mark 2:7; Luke 5:21) and claimed to be Christ the Son of God (Matt. 26:63-65; Mark 14:61-64; John 10:33, 36). On the other hand, the NT calls it blasphemy to revile Christ (Matt. 27:39; Mark 15:29; Luke 22:65; 23:39). Those who oppose the gospel (I Tim. 1:13; cf. Acts 26:11) and bring discredit to Christianity (Rom. 2:24; I Tim. 6:1; Tit. 2:5; Jas. 2:7; II Pet. 2:2) are blaspheming God by their actions.

As in classical Greek, βλασφημία in the NT also appears in a weaker sense as "mockery," "reviling," or "slander" directed against a human person (cf. Mark 7:22; I Cor. 4:13; Col. 3:8; I Pet. 4:4; Rev. 2:9; etc.). When directed against spiritual authorities (as against Christ; *see above*), it approximates blasphemy against God (Acts 13:45; 18:6; II Pet. 2:10-12; Jude 8-10).

The "unforgivable sin," blasphemy against the Holy Spirit (Matt. 12:31-32; Mark 3:28-30; Luke 12:10), must be understood as the deliberate and perverse repudiation of God's saving work, whereby one consciously hardens himself against repentance and the possibility of forgiveness (cf. I Tim. 1:20).

S. J. DE VRIES

BLASTING. Translation of שדפון in the KJV and in Deut. 28:22 RSV. *See* BLIGHT.

BLASTUS blăs'təs [Βλάστος] (Acts 12:20). Chamberlain of Herod Agrippa I. This name, similar to the common noun meaning "bud" or "sprout," appears in both pagan and Christian writings. Nothing is known of Blastus beyond the information in Acts 12:20. The people of Tyre and Sidon, under sharp disfavor of Agrippa and fearful about their food supply, persuaded Blastus to aid them in making peace with Agrippa. Blastus, whose intimate position in charge of the royal bedchambers provided him with influence with Agrippa, was probably persuaded (cf. Matt. 28:14) with a royal bribe. D. M. BECK

BLEACH [λευκαίνω] (Mark 9:3). To make white; used in describing the appearance of the garments of Jesus at the Transfiguration. The same Greek word occurs in the LXX in Lev. 13:19; Ps. 51:9—G 50:9; Isa. 1:18; Joel 1:7 (all from the root לבן, "to be white"). J. M. MYERS

BLEMISH. *See* SACRIFICE AND OFFERINGS § D.

BLESSEDNESS. KJV translation of μακαρισμός in Rom. 4:6, 9 (RSV "blessing"); Gal. 4:15 (RSV "satisfaction"). In the RSV the word "blessedness" does not occur at all. But the word "blessed" occurs frequently, in two different senses, as applied (*a*) to God and (*b*) to men.

In English the verb "bless" was taken into Christian usage originally to represent the Latin *benedicere*, which is used in the Latin (Vulg.) version of the Bible to translate, very literally, εὐλογεῖν, the usual (but far from literal) rendering in the Greek version of the OT (LXX) of the Hebrew verb ברך. The primary meaning of ברך is "to bend the knees" (cf. II Chr. 6:13), but it is most often used in the secondary sense, "to worship, adore, praise." So "blessed" came to be, through Latin *benedictus* and Greek εὐλογητός, the English rendering of the passive participle ברוך, which in its proper sense of "worshiped, adored," can be used only of God. But, rather surprisingly, the same verb, ברך, is also used in a very different sense, of God's "blessing" of men by manifesting his favor and goodness toward them (cf., e.g., Deut. 7:12-16). Then by a further development of meaning, men are said to "bless" other men, when they invoke upon them the blessing of God (cf., e.g., Gen. 14:19—here the verb "bless" is used three times, once in each of the three meanings mentioned). But in English "blessed" (as an adjective) was used also for *beatus*, which in the Vulg. corresponds to אשרי and μακάριος. The Hebrew word is used only of men, never of God. In secular Greek μακάριος could be used equally well of the gods and of men, but in the NT there are only two instances in which it is used of God (I Tim. 1:11; 6:15).

When "blessed" is used of God (ברוך; εὐλογητός) in such an exclamation as: "Blessed be the LORD," the meaning is primarily: "Let God be worshiped, adored." Yet it is clearly implied that God is worthy of adoration; and when the reason God should be adored is stated, it is because of his goodness shown to the worshiper (cf., e.g., Ps. 28:6). There is no thought of any abstract blessedness which can be ascribed to God in himself.

When "blessed" is used of men (אשרי; μακάριος), the meaning is very different: men are "fortunate," "happy" (in the original sense of the latter word in English), because they are assured of the blessing of God. In the OT, whenever the nature of the blessing is clearly indicated, it consists in material prosperity (cf., e.g., Pss. 1; 128; 144, especially vss. 12-15; Prov. 3:13-35). It is the pious and good man who is blessed, but his blessedness does not consist in his piety and goodness, but in the material well-being with which God rewards his faithful servants. Usually this reward is regarded as still a thing of the future (cf., e.g., Pss. 128; 144:12-15).

In the NT, it is, of course, usually faithful Christians who are said to be blessed, and especially those who suffer because of their faithfulness (cf., e.g., Matt. 5:11; Luke 6:22-23). There is seldom any clear indication of the nature of the blessedness; but when it is in some sense a reward (μισθός) for faithfulness in suffering, it is, plainly, still in the future. The fact that this reward is "in heaven" does not necessarily

mean that it is purely spiritual in quality. There seems, however, to be a progressive tendency toward a more spiritual conception of blessedness (cf., e.g., Jas. 1:12; and *see* BEATITUDES). In a few passages the blessedness is already present (e.g., Matt. 13:16; 16:17), and in these cases it is not clear that it is in any way a reward for anything which the "blessed" have done—it is a free, undeserved gift from God.

Both in the OT and in the NT, therefore, the only constant connotation of "blessed" is well-being, prosperity, which is the gift of God to men; the nature of this well-being is very variously conceived, and can be determined only from the context.

J. Y. CAMPBELL

BLESSINGS AND CURSINGS. Power-laden words, spoken on cultic or other occasions and often accompanied by gestures or symbolic actions, through which the wholeness of the religious community was understood to be safeguarded or strengthened, and evil forces controlled or destroyed. In the ancient Near Eastern world, as in most religious communities past and present, blessings and cursings were a fixed part of the cultus and had a prominent place in everyday life as well. It is very difficult to distinguish in many cases between blessings and cursings which belong to the realm of magic—in which the words and actions of the one who blesses or curses are entirely in his control and accomplish his purposes at his bidding—and those which are strictly religious in their understanding and use—where the blessings and cursings are conceived to have their origin and effect in the power and purpose of the deity (or of divine or demonic beings). In the OT there are clear traces of a magical understanding of blessings and cursings (Gen. 48:14-15; I Sam. 14:24; cf. I Cor. 12:1-3; Gal. 1:8), although most of the blessing and curse formulas, in their present form, attribute the power expressed through the formulas to the God of Israel.

1. Terminology
2. Forms of blessing and cursing
3. Blessings and cursings in the cultus
4. Blessings and cursings in Judaism and in the NT

Bibliography

1. Terminology. The most common Hebrew noun for "blessing" is ברכה. The term may refer at once to the power inherent in the spoken words, to the words themselves, and to their effect. The verb ברך in its active form designates the act by which a blessing is pronounced upon the community or an individual, either in the name of Yahweh or without reference to the deity. The passive form of the verb, ברוך, which occurs very frequently, has a somewhat ambiguous meaning in certain passages. The expression "Blessed be Yahweh" (ברוך יהוה) may mean, in its more primitive uses, that the power of Yahweh is itself increased through the pronouncement of words of blessing and the accompanying cultic acts. More frequently, however, the term is to be understood as an ascription of praise and gratitude for blessing received or as a prayer that Yahweh may show himself to be gracious in providing blessing.

In later Hebrew usage the term אשר, "happy," "blessed," appears as a synonym or a substitute for the term ברוך, particularly in reference to man as the object of divine blessing. In the NT the term μακάριος is the equivalent of the Hebrew אשרי (Matt. 5:3-11, etc.; cf. Ps. 1:1 and the LXX usage), while the verb εὐλογέω probably stands for the Hebrew and Aramaic verb ברך. The LXX generally renders the Hebrew noun ברכה by εὐλογία; the latter term is the common one for "blessing" in the NT (Rom. 15:29; I Cor. 10:16; Gal. 3:14; etc.).

The Hebrew nouns most widely used for "curse" in the OT are אלה and קללה. These may also refer to the power of the curse, to the words spoken, and to the effect of the words. The verb ארר is perhaps the earliest OT verb used to designate the act of cursing (Gen. 3:14, 17). It appears frequently in the passive form ארור, as the opposite of ברוך (Jer. 17:5-8). The verb קלל may originally have been a weaker term for the act of cursing ("to treat lightly, or with contempt"), but it appears to have become a synonym for ארר in early Israelite times (Exod. 22:28—H 22:27). Other terms for "curse" are considerably less common: מארה (Deut. 28:20); מגערת (Deut. 28:20); and תאלה (Lam. 3:65). In the NT the nouns used for "curse" are κατανάθεμα (Rev. 22:3), κατάρα (Gal. 3:10, 13; Heb. 6:8; Jas. 3:10; II Pet. 2:14), ἀνάθεμα (Acts 23:14; Rom. 9:3; I Cor. 12:3; Gal. 1:8-9), and ἀρά (Rom. 3:14). The chief verbal forms are ἀναθεματίζω (Mark 14:71; Acts 23:12, 14), καταναθεματίζω (Matt. 26:74), καταράομαι (Matt. 5:44; 25:41; Mark 11:21; Luke 6:28; Rom. 12:14; Jas. 3:9), and κακολογέω (Matt. 15:4; Mark 7:10).

2. Forms of blessing and cursing. Two major types of blessings appear in the OT: pronouncements of blessing and petitions for blessing. The first type is found in imperative (Gen. 1:28; 24:60) and in indicative (Gen. 27:29; I Sam. 25:33) forms, both of which reveal the Israelite conception of the power which is inherent in the spoken word of blessing. The second type has become more prominent in the later Israelite cultus and indicates how the power of blessing has become inseparably connected with the purpose of the deity.

An ancient blessing formula, probably used in connection with the ceremony of COVENANT renewal, is found in Deut. 28:3-6. Each of the blessings is introduced by the term ברוך. The objects of blessing are either the Israelite himself (אתה) or the basic sources upon which Israelite life was dependent: children, the soil, animals, and the produce of the soil ("basket and kneading-trough"; vs. 5). In other instances the name of the individual receiving the blessing is named: "Blessed be Abram by El Elyon . . . ; blessed be El Elyon" (Gen. 14:19-20). The expression "Blessed be Yahweh" (or "Blessed be God") is the most common form of Israelite blessing, often followed by an active participle indicating that action of the deity for which he is being praised. "Blessed is the man who . . ." is also a frequent form of blessing (Pss. 1:1; 84:12—H 84:13; Jer. 17:7). The term אשרי is probably more widely used by the laity, ברוך being reserved, in later Israelite times, for the priests.

The most complete curse formula of the OT appears in Deut. 27:15-26 (see also 28:16-19). Here the form is that of the passive participle ארור, followed by an active participle indicating the perpetrator of

actions which fall under the curse: "he who dishonors his father or his mother," "he who removes his neighbor's landmark," etc. The expression "Cursed be the man who . . ." also appears (Deut. 27:15; Jer. 17:5).

Curses in the OT are often connected with oaths (I Sam. 14:24); with ordeals (Num. 5:16-28); or with the *ḥérem*, the devotion of a city or a people to the ban (Josh. 6:26). Such curses are seldom attributed directly to God. The curse upon the snake (Gen. 3:14) and upon the ground because of man's sin (vs. 17) is attributed to God himself; on two occasions curses are uttered "before Yahweh" (Josh. 6:26; I Sam. 26:19). God does, however, threaten to send curses upon a faithless people, should they not keep the covenant (Deut. 28–29).

The cursing of the deity is strictly prohibited (Exod. 22:27; Lev. 24:23; Job 2:9). In fact, such a crime is so serious that the standard verbs for "cursing" are never found with "Yahweh" as their object (Exod. 22:27 [אלהים]; I Sam. 3:13, where the scribes have altered the original reading; Job 2:9 [ברך]). The prohibition against the use of the divine name in vain (Exod. 20:7; Deut. 5:11) probably indicates that the name of the deity must not be used in pronouncing maledictions upon one's enemies or otherwise wielding the power contained in the name.

3. Blessings and cursings in the cultus. Blessings and cursings had their primary place within the Israelite cultus. In the patriarchal period, the blessing of a dying father was transmitted to his heir (Gen. 27:1-45; 49; cf. Deut. 33), a rite by which all the powers which made for peace (שלום)—health, progeny, prosperity, victory in battle, wisdom—were continued, or even enhanced, after the death of the tribal leader. Such blessings, once pronounced, could not be revoked (Gen. 27:30-38). Within the confederacy of the twelve tribes of Israel prior to the establishment of the monarchy, blessings and cursings were probably a regular part of the festival of covenant renewal (Josh. 24; cf. Deut. 11:26-32; 27–29). After the establishment of the Jerusalem cultus (II Sam. 6), the powers of blessing and cursing were centered in the king, the priesthood of the royal cult, and the cult prophets. Baalam's assignment to curse Israel in behalf of Balak king of Moab (Num. 22–24) had its parallels in the royal cult of the kings of Israel (I Kings 22) and Judah (Jer. 23).

It was in the Israelite cult that the basic understanding of blessing was developed. Yahweh was understood to be the source of all blessing. He bestowed blessing as he saw fit, but his people were instructed to seek his blessing, to "pray for the peace of Jerusalem" (Ps. 122:6). In the Aaronic benediction (Num. 6:24-26) both the pronouncement of blessing and the petition for blessing were united in a single formula. The priest was enabled to declare blessing upon Israel, but only in the name of Yahweh. He was also the chief intercessor with the deity in behalf of blessing. The most distinctive aspect of blessing in the OT is the connection between blessing and historical experience. Yahweh's blessing found primary expression in his historical dealings with his people. Yahweh was blessed for all his gracious deeds in the past, and his continuing favor was sought (Pss. 34; 103).

Similarly, the cursings were drawn into the official cultic practices. The old demonic powers continued to be threatening and had to be averted. It was not a matter any longer, however, of finding the right curse formulas to avert or destroy their power. Rather, Yahweh's intervention was sought to break the hold of such powers upon the individual or the community (Pss. 41; 58–59; 91; 141; etc.). The "workers of iniquity" (פעלי און) included those in whom evil powers were active to destroy the righteous. Such powers are occasionally spoken of as independent realities: קטב, "destruction," and דבר, "plague," along with death and Sheol (Hos. 13:14; cf. Ps. 91:6). None of these powers, however, could stand before the power of Yahweh's protection and blessing. Furthermore, the basic curse which befell Israel was the curse of sin and disobedience. Israel was set continually before two realities: life and death; blessing and curse. The call of Yahweh to his people was that they choose life (Deut. 30:19).

4. Blessings and cursings in Judaism and in the NT. In Judaism, the power to pronounce the Aaronic blessing (Num. 6:24-26) was reserved to the priest. Other blessings, however, such as the Eighteen Benedictions, were a regular part of the synagogue services. Blessings to God were pronounced both before and after meals; no food was to be eaten until it had been blessed. Curses were much less prominent and were forbidden (already in Job 31:30).

Blessing formulas are found in the NT as well. The BEATITUDES (Matt. 5:3-12) may have been intended as the new set of blessings accompanying the establishment of the New Covenant of the latter days (Jer. 31:31-34; note that Luke 6:20-26 contains both blessings and woes). The benedictions found in the introductory and concluding portions of the Pauline letters, plus the doxologies, benedictions, and woes of the book of Revelation (1:3; 4:8, 11; 5:9-10, 13-14; 8:13; 11:17-18; 14:13; 18:2-8; 19:9; 22:7, 14, 18-19), contain the major additional material bearing on blessings and cursing in the NT. Curses appear only seldom (Mark 11:12-14, 20-25); when pronounced upon Jesus' followers, they are to be met with blessings (Luke 6:28; Rom. 12:14; Jas. 3:8-10). In this manner Jesus is reported to have faced the curse of the Cross: "Father, forgive them; for they know not what they do" (Luke 23:34). The curse of sin and death is seen to have been abrogated, once for all, in the death and resurrection of Jesus (Rom. 5–8; Gal. 3:14), and the blessing of God is viewed as having come upon circumcised and uncircumcised alike (Rom. 4:6-9). For the NT, the definitive blessing has been bestowed upon mankind in Jesus Christ.

BLIGHT [שִׁדָּפוֹן, *from* שָׁדַף, scorch]; KJV and once RSV BLASTING (Deut. 28:22). The destruction of standing crops by the scorching EAST WIND.

The E wind, coming dry and hot from the Arabian Desert, is one of the most destructive natural forces in Palestine, withering grass and flowers in a day, and ruining fruit crops and standing grain. Its effect, blight, is listed along with mildew, hail, and pestilence among great natural catastrophes (I Kings 8:37=II Chr. 6:28), and among the punishments visited by God on his people (Deut. 28:22; Amos 4:9; Hag. 2:17).

L. E. TOOMBS

BLINDNESS. OT writings use the word עִוֵּר predominantly to express loss of sight, whether of the purely physical variety or in allusion to metaphorical blindness. The NT most frequently employs the noun τυφλός and its corresponding verb in this connection. The prevalence of this affliction in Bible times is indicated by the frequency with which references to it occur in the Scriptures.

While it is not always either advisable or desirable to argue from the present state of specific diseases in oriental countries to their relative incidence in antiquity, there can be little question as to the widespread and serious nature of blindness in the ancient Near East. In Mesopotamia, the Sumerians and Akkadians employed a substance called kohl as an ointment for the eyes, partly as a cosmetic technique and partly out of hygienic considerations, since kohl was antiseptic and astringent in nature.

The Code of Hammurabi (*ca.* 1700 B.C.) included ophthalmic afflictions among the conditions which Babylonian medical men were permitted to treat. According to this legislation (*see* HAMMURABI), established fees appropriate to the social status of the patient could be charged for the treatment of ocular disorders. The mention of a bronze lancet as one of the instruments employed in the operation indicates the advanced nature of contemporary surgical procedures.

In ancient Egypt the predynastic Badarian culture (*ca.* 5000 B.C.) employed pulverized malachite and stibium in addition to kohl as an unguent preparation for the eyes; this usage still survives in parts of North Africa. The Ebers Papyrus (*ca.* 1550 B.C.) described the incidence of granular conjunctivitis, and recommended the use of forceps for extracting inverted eyelashes adjacent to the surface of the eye (trichiasis).

To the biblical writers blindness was the consequence either of frank ophthalmic disease or of physical degeneration. Of the former, the most widespread condition was ophthalmia, a severe form of conjunctivitis often involving the internal structures of the eye. This highly contagious disease was frequently transmitted by flies, aggravated by the glare of the sun, and irritated by dust-laden winds. Granular ophthalmia (trachoma), a chronic inflamed condition of the conjunctiva accompanied by enlargement and granulation of the eyelids, was particularly disabling. Blindness in infancy not infrequently resulted from *ophthalmia neonatorum,* an acute purulent conjunctivitis consequent upon gonorrheal or septic infection of the conjunctiva at birth by the mother. Ophthalmic diseases resulting from physical degeneration, such as glaucoma, cataract, and optic atrophy constituted other forms of blindness in Bible lands.

This dread affliction was frequently attributed to sin (Exod. 4:11; John 9:2), and as such could be cured by God alone. Particularly serious was a curse which invoked blindness as a punishment for misconduct (Gen. 19:11; II Kings 6:18; Acts 13:11). The nature of the Mosaic enactments on behalf of the blind (Lev. 19:14; Deut. 27:18) indicates that already blindness was a serious social problem which needed to be dealt with by means of appropriate legislation. While this humanitarian act doubtless did much to mitigate the sufferings of those afflicted by blindness, the nature of society in biblical times was such that under ordinary conditions, poverty and hardship formed the inevitable lot of the blind. In Lev. 21:20, impaired vision was included in the list of physical disabilities which disqualified a man from the priesthood, and presumably embraced both congenital and acquired blindness.

Several instances of blindness incident to senility are mentioned in the OT. The Genesis narrative indicates that the deception which Jacob perpetrated on his father (Gen. 27:1 ff) succeeded mainly because of the blindness of Isaac. In old age Eli the priest of Shiloh was blind, while Ahijah the prophet was similarly incapacitated (I Kings 14:4), though the latter was nevertheless able to penetrate the disguise adopted by the wife of Jeroboam. Isaac, Eli, and Ahijah were most probably afflicted with gray atrophy of the optic disc. This is a degenerative condition in which the optic disc, a whitish spot on the retina of the eye which marks the entrance of the optic nerve, becomes gray or blue-gray in color. A notable exception to the incidence of blindness in old age was Moses, who maintained vigorous eyesight until his death at an advanced age (Deut. 34:7). Leah (Gen. 29:17) was apparently afflicted with a mild form of ophthalmia, perhaps blepharitis, an inflamed condition of the eyelid.

One of the professed functions of Jesus' ministry was the "recovering of sight to the blind" (Luke 4:18). He used blindness and ocular deficiencies to illustrate spiritual truths (Luke 6:39 ff), and many of his healing miracles involved blind people. Of especial interest are the man who was blind from birth (John 9:1 ff), whose healing led Jesus to declare himself as the light of the world, and the man whose recovery of sight was gradual (Mark 8:22 ff). Jesus frequently employed different methods in his therapeutic acts (*see* HEALING), and in the above cases he anointed the eyes of the sufferers with saliva. While ancient folklore recommended applications of saliva,

preferably the more alkaline variety from a fasting subject (cf. Pliny *Nat. Hist.* 28.7), Jesus related this symbolic act to the faith of the person concerned. In the second of these healings he exercised particular care in developing the visual accommodation of the patient to counteract the shock which might well have resulted from the sudden exposure of eyes totally unaccustomed to the strain of bright sunlight. The man who washed in Siloam (John 9:7) would have the advantage of the shade provided by adjacent buildings. Other recorded instances of Jesus' healing the blind, while not well documented clinically, indicate the use of a miraculous power which both restored the body and stimulated the soul (Matt. 20:34; Mark 10:52).

The blindness which overtook PAUL outside Damascus (Acts 9:3 ff) may be accounted for by reference to psychosomatic relationships. The fundamental reorientation of his spiritual values involved in his conversion produced a state of profound psychic conflict within his personality, and was expressed in somatic terms. Intense emotional strain of this sort can often produce amaurosis, in which blindness occurs without any concomitant lesion of the eye or optic nerve. Because this phenomenon is invariably emotional in nature, dramatic cures can result from suggestion and general psychotherapy; such was actually the case with Paul (Acts 8:17-18). Elymas (Acts 13:10-12) was similarly afflicted with temporary amaurosis. *See* DISEASE.

R. K. HARRISON

***BLOOD.** *See* SACRIFICE AND OFFERINGS § A2*a*, 3.

BLOOD, AVENGER OF. *See* AVENGER OF BLOOD.

BLOOD, FIELD OF. A term which appears only in Acts 1:19 as the translation of χωρίον αἵματος, which in turn is the author's translation of the Semitic name for the place. The Semitic name, AKELDAMA, is, however, transcribed variously into Greek, and therefore the correct original is uncertain.

K. W. CLARK

BLOOD, FLOW OF [ῥύσις αἵμσίος] (Luke 8:43); KJV **ISSUE OF BLOOD.** Hemorrhage, perhaps menorrhagia. The term used by Luke occurs frequently in the medical treatises of Hippocrates, Dioscorides, and Galen. *See* CLEAN AND UNCLEAN; HEMORRHAGE.

BLOODGUILT [דם, דמים] (Exod. 22:2-3—H 22:1-2; cf. Num. 35:27). Guilt—not always liable to a legal penalty—incurred through bloodshed.

The most ancient view would appear to be exemplified by the Greek concept of the miasma (stain, pollution) of homicide, an automatic, objective state. Every bloodshed—even that committed in self-defense—pollutes and requires a purification. When criminal and non-criminal homicide were distinguished, this miasma nonetheless persisted. Plato still recognizes the need for purification even from the miasma caught inadvertently from a murderer (*Laws* 916). It was not the killer alone, however, who was affected; until the wrath of the slain man's ghost was appeased, his family as well lay under a pollution which could be cast off only by exacting vengeance.

In Israel, too, bloodguilt was defiling (Num. 35:33-34), but it was incurred only through slaying a man who did not deserve to die (דם נקי, "innocent blood"; Deut. 19:10; Jer. 26:15; Jonah 1:14). Killing in self-defense and the judicial execution of criminals are explicitly exempted (Exod. 22:2—H 22:1; Lev. 20:9; etc.). On the other hand, where there is "innocent blood," there is always bloodguilt: for (*a*) intentional killing—including judicial murder (Judg. 9:24; I Sam. 25:26, 33; II Kings 9:26; Jer. 26:15)—as well as for (*b*) unintentional (*see below*); for (*c*) being an indirect cause of death (Gen. 42:22), even if only through negligence or dereliction of duty (Deut. 19:10*b*; 22:8; Josh. 2:19). Finally, (*d*) persons in authority incur bloodguilt for murder committed by those for whom they are responsible (I Kings 2:5, 31-33).

While the law does not privilege the AVENGER OF BLOOD to take action against persons bloodguilty under *c* and *d*, it does so in the case of murder and unintentional homicide. (Even a homicidal beast is considered bloodguilty: he must be stoned and his carcass treated as taboo [Gen. 9:5; Exod. 21:28-32].) The avenger may slay the accidental homicide outside the asylum without incurring bloodguilt (Num. 35:27), whence it may be inferred that the latter is not considered guiltless (this is borne out further by the character of the CITY OF REFUGE). Yet insofar as the accidental manslayer is not deserving of death, the community is held bloodguilty if it fails to provide him with an asylum (Deut. 19:10).

Since the bloodguilt of homicide lies on the entire community (Num. 35:33; Deut. 21:8-9), the communal interest and that of the avenger coincide insofar as both aim at eradicating the guilty party. When the criminal is known, his bloodguilt is expiable solely and entirely by his paying the legal penalty. No pecuniary composition or ritual expiation may be substituted for, or need be added to, this penalty: the murderer must die; the accidental homicide must serve out his term in the city of refuge (Num. 35:31-32; Deut. 19:13). However, if there occurs an untraceable murder in open country, the elders and priests of the town nearest to the corpse must perform a sacrificial purification—vicariously expiating life by life—accompanied by an avowal of innocence (Deut. 21:1-9).

Unexpiated bloodguilt is punished by God, the ultimate avenger (Gen. 9:5; II Sam. 4:11; II Kings 9:7; Ps. 9:12—H 9:13; Hos. 1:4). Unavenged blood cries to heaven for vindication—there is no trace of the idea that of itself it perils men (Gen. 4:10; Job 16:18; Isa. 26:21; Ezek. 24:7-9). As when God punishes idolatry (cf. Exod. 20:5; Deut. 5:9), here too he may exact retribution from the descendants of the bloodguilty person (II Sam. 3:28-29; 21:1; I Kings 21:29; cf. II Kings 9:25-26; Matt. 27:25). The writer of Kings reckons the bloodshed of Manasseh as a cause of Judah's fall three generations later (II Kings 24:4).

A peculiar extension of the idea is found in Lev.

17:4: bloodguilt is imputed to one who slaughters a sacrificial beast at an unauthorized altar—as if to say that not even a brute's life might be taken except for divinely sanctioned purposes. The penalty for such bloodshed is "excising" (a divine punishment; *see* CRIMES AND PUNISHMENTS § A2).

M. GREENBERG

BLUE [תכלת; Sumer. *SIG-ZA-GIN;* Akkad. *takiltu;* LXX ὑάκινθος *or* ὑακίνθινος, *see* HYACINTH]. Alternately: VIOLET; PURPLE. A biblical color of uncertain hue, probably purple-blue, obtained from Mediterranean mollusks of the class Gastropoda and utilized for dyeing. Although "blue" has been associated with חלזון (cf. Targ. pseudo-Jonathan to Deut. 33:19), usually identified as the violet-producing *Helix-ianthina,* it is more likely that the desired color was obtained by varying the dyeing process and using different mollusks (*cf.* PURPLE). As a color of the clothing of idols it is rendered by "violet" in Jer. 10:9, and by "purple" in Ezek. 23:6, referring to the color of garments of young Assyrian nobles.

Tyre long enjoyed a monopoly in the "blue" and "purple" industry (II Chr. 2:7, 14), although both colors were available and obtained elsewhere (Ezek. 27:7, 24). While considered inferior to royal purple in antiquity, "blue" or "blue-purple" was a popular color. Materials dyed blue were widely employed alone and with scarlet and purple yarns and linen in the tabernacle (Exod. 25:4; 26:1, 4; Num. 4:6-7, 9; etc.), the clothing of the priests (Exod. 28:5-6, 8, 15; 39:1; etc.), and in Solomon's temple (II Chr. 2:7, 14; 3:14). Mention is also made of blue hangings in the palace of Ahasuerus (Esth. 1:6), and royal robes of blue and white (Esth. 8:15).

In Ecclesiasticus bonds of wisdom are compared to a cord of blue (6:30), and both blue and purple are identified in the clothing of Moses (45:10). Judas Maccabeus seized cloth dyed blue as plunder (I Macc. 4:23); and blue, with scarlet and purple, is prominent in the dress of the Qumran priests on the occasion of battle (1QM 7.10; cf. Exod. 39:28-29).

The word "blue" does not appear in the RSV or KJV of the NT; however, ὑακινθίνους as a breastplate color is rendered by "sapphire" (KJV "jacinth") in Rev. 9:17; and as a precious stone ὑάκινθος is translated "jacinth" in Rev. 21:20. *See also* VIOLET; COLORS.

C. L. WICKWIRE

BOANERGES bō′ə nûr′jēz [Βοανηργές, Βοανεργές, Βανηρεγές; *of* Aram. *origin, possibly related to* בני רגש *or* בני רגז] (Mark 3:17). A name of uncertain meaning given by Jesus to James and John, the sons of Zebedee.

Βοανη appears to be a corrupt Greek form of a word meaning "sons of" (בני). Ργες has been variously explained: from roots meaning "tumult" (רגש), "wrath" (רגז), "thunder" (רעם), "full brothers" (רחם).

Mark translates "sons of thunder," without indicating why the term was appropriate. Were the brothers stormy in temperament (Mark 9:38; Luke 9:54)? Were they once zealots or revolutionary agitators (Mark 10:37)? Were they perhaps twins, and this epithet a reflection of ancient mythology concerning the Dioscuri (Heavenly Twins)?

There is some textual evidence that the term originally may have characterized all the apostles, not just the sons of Zebedee.

E. P. BLAIR

BOAR [חזיר, *usually* SWINE]. A wild pig (*sus scrofa* in Europe and Western Asia), thought to be the ancestor of the domestic swine. חזיר, like the Greek word ὗς (or σῦς), can refer to both wild and domestic swine.

There is only one unambiguous reference to a boar in the Bible: the "boar from the forest" ravages the vine, Israel (Ps. 80:13—H 80:14). Such a danger to crops and orchards must have been ever present in the biblical period (cf. II Esd. 15:30; Enoch 89:72). The word חזיר, which appears as an unclean animal in Lev. 11:7; Deut. 14:8, and which is commonly translated "swine," probably designates both the wild and the domesticated pig, for the lists in which these references appear include both wild and tame animals.

Hullin 9.2; for Roman ideas about the wild boar, see Pliny Nat. Hist. VIII.78; for boars in Palestine in the nineteenth century, see Tristram, *NHB* (1867), pp. 54-56.

W. S. MCCULLOUGH

BOARD. *See* PLANK.

BOAT [πλοιάριον (KJV SMALL SHIP *in* Mark 3:9; LITTLE SHIP *in* Mark 4:36; John 21:8), πλοῖον (KJV *and alternately* RSV SHIP), *from* πλέω, to sail; σκάφη, something scooped out, *from* σκάπτω, to dig, scoop out]; FERRY BOAT [עברה] (II Sam. 19:18—H 19:19 KJV; RSV *correctly* FORD). In the NT, πλοῖον sometimes means a vessel capable of sailing in the Mediterranean Sea (Acts 20:13, etc.), and in these cases the RSV uses "ship"; but oftener the word refers, like πλοιάριον (Mark 3:9, etc.), to a smaller craft used for fishing on the Sea of Galilee (Matt. 4:21, etc.). Σκάφη is a skiff, and in Acts 27:16, 30, 32, it refers to a ship's boat.

W. S. MCCULLOUGH

BOAZ bō′ăz [בעז; Βόος, Βόοζ]; KJV BOOZ bō′ŏz (transliteration of LXX form) in Matt. 1:5; Luke

3:32. A wealthy and virtuous Bethlehemite, related to the family of Elimelech, whose inheritance he redeemed and whose daughter-in-law, Ruth the Moabitess, he married. It was in one of the fields of Boaz that the widowed Ruth chanced to glean when she had returned with Naomi, her mother-in-law, to Bethlehem. When Boaz met Ruth, he insisted that she glean exclusively in his fields and gave evidence of his deep appreciation for her noble character by showing her every consideration (Ruth 2).

These studied kindnesses, no doubt, prompted Naomi to suggest to her daughter-in-law that she ask Boaz to perform the duty of the next of kin (גאל). Accordingly, as Boaz guarded the grain at his threshing floor during the night, Ruth arrived there in festal garb and lay down at his feet while he slept. When Boaz awakened, he solemnly declared that if the one who was nearer of kin to Elimelech than he should refuse, he would gladly assume the right of redeeming the inheritance of the deceased (Ruth 3).

The next day Boaz had publicly transferred to him the right of redemption, which had been refused by the nearer kinsman because it involved a levirate marriage with Ruth. This marriage Boaz joyfully contracted, and in due time a son named Obed was born of the union (Ruth 4).

The genealogy of Boaz represents him to be of the family of Hezron of the tribe of Judah, and the great-grandfather of King David (Ruth 4:18-22; I Chr. 2:9-15; Matt. 1:3-6; Luke 3:31-33).

BOAZ AND JACHIN. *See* JACHIN AND BOAZ.

BOCCAS. KJV Apoc. form of BUKKI 2.

BOCHERU bō′kə rōō [בכרו; LXX *and* Syr. *bə kō′rō* (*same consonants as* Heb.), his first-born] (I Chr. 8:38; 9:44). A Benjaminite, descendant of Saul and Jonathan.

Bibliography. M. Noth, *Die israelitischen Personennamen* (1928), p. 239.

BOCHIM bō′kĭm [בכים, weepers] (Judg. 2:1-5). A place between Gilgal and Bethel, where the angel of the Lord rebuked the people, and which received its name from their weeping. The site is unknown.

***BODY** [בשר, flesh; σάρξ, flesh; σῶμα]. Usually an object with physical properties, such as extension, weight, solidity, and substance; but the word has also acquired social, spiritual, and metaphysical meanings.

A. Ordinary meanings in the OT and the NT
B. Religious meanings
1. Primitive traditions of the Lord's Supper
2. Paul's theology
a. The body of sin
b. The redeemed body
c. The church as the body
d. The immortal body
Bibliography

A. ***ORDINARY MEANINGS IN THE OT AND THE NT.*** Early Hebrew apparently had no term to designate the body as a whole in our sense of the word. It preferred to speak of various parts and organs individually. The nearest term to "body" is בשר, "flesh," which is used 127 times indicating the flesh of animals and men. But this word also has other meanings, such as kinship and as a metonym for man, or for all living beings, as over against God. The late Aramaic of Dan. 3:27; 4:30; 5:21 introduces the word גשם for "body"; and 7:15 uses גדנה. But none of these Semitic words acquired any important theological meanings.

In the NT the word σάρξ, "flesh," is closely parallel to בשר, but it acquired in addition profound psychological and theological meanings, especially in Paul. Σῶμα is the common word for "body" in the NT. It is applied to bodies of men or animals, living or dead. Σῶμα is also at times used as a synonym for σάρξ, and it came to have even more metaphorical meanings, as we shall see.

B. ***RELIGIOUS MEANINGS.*** **1. Primitive traditions of the Lord's Supper.** Although Paul's letters are the oldest Christian documents that have survived, it is evident that some traditions are older. The first and most obvious of these is the tradition about the LAST SUPPER in I Cor. 11:23-29. The way in which Paul introduces this passage shows that it is something he has received from an earlier time. In vs. 24 it is reported that Jesus took bread and broke it and said, "This is my body which is for you" (τοῦτό μού ἐστιν τὸ σῶμα τὸ ὑπὲρ ὑμῶν). This saying introduces the idea that the loaf of bread which is broken in the communion ritual is the σῶμα or "body" of the Lord. In vs. 25 Jesus continues with reference to the wine: "This cup is the new covenant in my blood."

This tradition in almost the same form is preserved also in the Synoptic gospels (Mark 14:22; Matt. 26:26; Luke 22:19). They all say: "This is my body" (τοῦτό ἐστιν τὸ σῶμά μου). In all three of these gospels there is also the drinking of wine, which in Mark 14:24; Matt. 26:28 Jesus calls "my blood of the covenant."

In both the above accounts of the Supper there is a possible ambiguity. Σῶμα may designate a body with all its elements, including blood. But the tradition continues and refers to drinking the blood separately. There is no ambiguity in fact. The rite is done in memory of the death of Jesus, and it is assumed that when he died, the blood flowed out of his body. Sacrificial rites of the OT need to be kept in mind as the background of this ritual. Both the sin offering and the covenant sacrifice (*see* SACRIFICE AND OFFERINGS) are involved.

A third form of the ancient tradition occurs in John 6:31-58. The exposition is based on the miracle of the loaves and fish, which precedes in 6:5-13. But the passage is nevertheless only a thinly veiled exposition of the Lord's Supper. Here instead of σῶμα we find σάρξ. Those who eat the flesh (σάρξ) of the Son of man and drink his blood achieve present union with him, life, eternal life, and will be raised up at the last day (vss. 52-58). Σάρξ evidently means the same thing in this passage that σῶμα does in the earlier ones.

2. Paul's theology. ***a. The body of sin.*** In Rom. 6:6 Paul refers to the "sinful body," and in 7:24, to "this body of death." It is more characteristic of him,

notably in Rom. 7:4-25; Gal. 5:16-24, to regard the FLESH as the seat of sinful desires. But as the above passages indicate, he also uses σῶμα in the same way. Body and flesh are thus equated.

b. The redeemed body. One of the paradoxes of Paul's theology is that the body of sin may be also at the same time the redeemed body. But he does not hold that it ever becomes a sinless body. As this idea involves the full range of Paul's doctrine of the Atonement, there is danger of oversimplification, yet the symbols are not too difficult. Paul makes much use of the spatial concept of being "in Christ" (Rom. 6:11; 8:2; Eph. 1:7; 2:13; 4:32; Col. 1:21; 2:11; etc.). It is baptism that brings one into the body of Christ (Gal. 3:27; Col. 2:12).

The union with Christ is expressed in I Cor. 6:13-20 by the figure of marriage. The individual Christian is the wife of Christ, the idea being that the husband and his wife are one body. So Paul argues in vs. 13 that the body is "not meant for immorality, but for the Lord, and the Lord for the body."

But vs. 19 changes to the figure of a temple in which a deity dwells: "Do you not know that your body is a temple of the Holy Spirit within you?" As the Lord is identified with the Spirit (II Cor. 3:18), this means that Christ resides in the body of the individual Christian; this reverses the imagery. I am no longer in Christ, but Christ is in me.

Paul's most startling image of identification with Christ is death. So he is able to say in Gal. 2:20: "I have been crucified with Christ; it is no longer I who live, but Christ who lives in me." With daring imagination, Paul grasps for one physical symbol after another in an effort to express his sense of the mystery of spiritual fellowship with Christ, which belongs to the redeemed.

c. The church as the body. One of Paul's most sublime concepts is that the church is the body of Christ; this idea appears in many places. He explains in Rom. 12:5 that "we, though many, are one body in Christ, and individually members one of another." The imagery for the idea varies. With an allusion to the communion in which only one loaf is used, in I Cor. 10:17, he explains that "we who are many are one body." Also he comes back to the idea of the body of Christ as a building (I Cor. 14:12; Eph. 4:12). Col. 1:18 presents Christ as only the head of the body, which is the church. In Eph. 5:23-32 he is the husband of the church, which he loves as his own flesh. But regardless of his figures, Paul's basic idea is that there is only one body, that this body is the church, and that it is the body of Christ (Eph. 4:4; 5:23).

d. The immortal body. Paul works out this view in I Cor. 15, which is his most sustained effort to present the Christian doctrine of immortality. The issue arose from the fact that Greek Christians believed in a spiritual life hereafter, but had an aversion to physical resurrection, regarding the body as a handicap of the soul. But Paul, with his Hebrew idea of man (*see* MAN, NATURE OF, IN THE NT), felt that as a human being is incomplete without a body, a resurrection is required for a future life. Some of his arguments, such as that based on the change of the planted seed into a living plant and the different kinds of bodies, do not prove his point, but they are vivid allegories of his faith. He concludes that as there are heavenly (ἐπουράνια) and earthly (ἐπίγεια) bodies, so the human body which is buried is mortal (ψυχικόν), but that which is raised is immortal (πνευματικόν). The basis of his conviction, of course, is the personal testimony of those, including himself, who saw the Lord after his resurrection (vss. 1-8).

BODY OF CHRIST. *See* CHRIST, BODY OF.

BODYGUARD [משמעת; מבחים (Aram. מבחיא); מטרה; שמר לראש]. A person armed to protect another person, usually a sovereign, and responsible directly to him. David was captain of Saul's bodyguard, as well as personal bodyguard to Achish, king of Gath (I Sam. 22:14 [KJV "bidding"]; 28:2 [KJV "keeper of mine head"]). Benaiah ben Jehoiada was one of David's thirty veteran warriors and head of his bodyguard (II Sam. 23:23; I Chr. 11:25). Potiphar was captain of Pharaoh's bodyguard (Gen. 37:36; 39:1; etc.), and NEBUZARADAN and Arioch are called captains of Nebuchadnezzar's bodyguard (II Kings 25:8; Jer. 39:9 ff; 52:12 ff; Dan. 2:14). Zedekiah seems to have had a special body- or palace-guard, in whose quarters Jeremiah was imprisoned for a while (Jer. 32:2; cf. Neh. 3:25; 12:39). *See also* GUARD.

BOHAIRIC VERSION bō hī'rĭk. Among the several translations of the Bible into various Coptic dialects, the Bohairic Version gained the ascendancy throughout Egypt and is still today the authorized version used in the Coptic church. *See* VERSIONS, ANCIENT, § 5.

B. M. METZGER

BOHAN, STONE OF bō'hăn [אבן בהן, stone of the thumb]. A boundary marker between Judah and Benjamin, known as the stone of Bohan the son of Reuben (Josh. 15:6; 18:17). The stone is located SE of Jericho on the edge of the hilly country in the NE corner of Judah. The descriptive name, "stone of the thumb [בהן]," was evidently misunderstood as containing a personal name, Bohan the son of Reuben. This development suggests that some elements of the Reubenite tribe were at one time settled in the NE corner of Judah.

Bibliography. M. Noth, *Die Welt des ATs* (3rd ed., 1957), p. 60.

R. F. JOHNSON

BOIL [שחין; LXX ἕλκη]. A general term used to describe inflamed cutaneous swellings, whether of a staphylococcal nature or not. In Job 2:7 smallpox may be indicated, although the boils might be a secondary manifestation of *treponematosis*. The boils of the Egyptian plague (Exod. 9:9) were associated with BLAINS, and apparently described the small red papules encircled by white vesicles characteristic of cutaneous anthrax. The boil (furuncle) which afflicted Hezekiah (II Kings 20:7; Isa. 38:21) was probably a staphylococcal infection causing inflammation around a cutaneous follicle, with consequent suppuration and necrosis of the core. Isaiah pre-

scribed a fig poultice, popular in contemporary therapeutics, which proved an adequate remedy for the infection. R. K. HARRISON

***BOLDNESS** [τολμάω; παρρησία; παρρησιάζομαι; θαρρέω]. The first of the Greek words that have been translated in terms of boldness and confidence, τολμάω, is used of action that rises above fear. The second and third by origin suggest free, unhindered speech, and carry the old Athenian tradition of free, democratic speech. In the LXX they are used in the sense of bold standing and action as well as boldness in speech (Wisd. Sol. 5:1; I Macc. 4:18).

"Boldness" in the NT becomes almost a stock term to describe the standing, the manner, and the spirit of those who proclaim the gospel. Jesus set the pattern, as in the straightforward preaching of his passion (Mark 8:32). Peter and John excite wonder by their courageous defense (Acts 4:13; cf. 4:31). Paul and Barnabas exhibit the same outspoken courage at Antioch in Pisidia (Acts 13:46). This spirit of confidence infects Paul's relations with the Corinthians: "I have great confidence [παρρησία] in you" (II Cor. 7:4).

The new Christian approach to God is marked by confidence and faith (II Cor. 3:4-5, 12, 18; Heb. 4:16; 10:19). There is a new assurance in prayer (I John 3:21-22; 5:14-15). Even before the dread Judge in the eschatological event the man of faith need not shrink back in shame, but he can stand confident and unafraid (I John 2:28; 4:17).

This bold, new spirit does not rest in self-confidence. Christian faith for living stands sure in the promises of God; the presence of the Spirit (or the Lord) brings inspiration and guidance; in Christ life has been undergirded with new insight and confident assurance both toward God and toward men. *See also* COURAGE. P. E. DAVIES

BOLLED. KJV translation of גבעל in Exod. 9:31. The word is a KJV archaism meaning "having bolls"—i.e., pods—and so "in seed," as it is used of flax. The Hebrew may refer to the flower bud or the seed pod. The RSV translates "in bud."

BOLSTER. The KJV translation of ראשות (I Sam. 26:12) and מראשות (I Sam. 19:13, 16; 26:7, 11, 16). The Hebrew denotes simply the place where the head is while sleeping, and the RSV translates "at his head."

BOLT. *See* LOCK.

BOND. The translation of several Hebrew and Greek terms, used both literally and figuratively to mean "obligation," "dependence," or "restraint."

1. In the OT. The meaning is literal in such a phrase as "bond [עצור] and free" (I Kings 14:10), and in speaking of Samson's bonds (אסורים; Judg. 15:14) or those of prisoners (מוסר; Ps. 107:14) and slaves (Ps. 116:16; cf. Job 39:5).

The meaning is frequently figurative. The hands of an evil woman are like "fetters" or bonds (אסורים; Eccl. 7:26). There are the bonds of wickedness (חרצבות; Isa. 58:6), of affliction and judgment (מוסר; Isa. 28:22; 52:2; Jer. 30:8; Nah. 1:13), the bonds or authority of kings (Job 12:18; Ps. 2:3), and the bonds of covenant obligation (Jer. 2:20; 5:5; cf. Ezek. 20: 37) or of an oath (אסר; Num. 30:3 *et passim*).

2. In the NT. The meaning of δεσμός and σύνδεσμος may also be literal (Luke 8:29; Philem. 13 KJV), meaning the bonds of imprisonment or the very sinews of the body (Col. 2:19); or figurative, meaning either the bonds of sin (Luke 13:16; Acts 8:23) or of peace and love (Eph. 4:3; Col. 3:14; cf. I Clem. 49:2). The "bond of legal demands" (χειρόγραφον; Col. 2:14) means a document or instrument of the law. J. A. SANDERS

BONDAGE, BONDMAN. *See* SLAVERY.

BONES [גרם, עצם; LXX ὀστέον]. Despite the paucity of biblical anatomical references, the more familiar skeletal components are frequently mentioned. The most commonly found OT word for "bones," עצם, was derived from a Hebrew root "to be powerful," thus indicating the stability and firmness of bony tissue. The phrase "bone and flesh" signified the totality of an individual, which may account for the bones' being regarded as the seat of sensations (Job 4:14; 20:11; Jer. 20:9). גרם was also used in a wider sense to denote character or personality (Prov. 17:22; 25:15).

In the creation narrative (Gen. 2:21) the word translated "rib" (צלע) elsewhere means "boards" (I Kings 6:15-16), "leaves" of a door (I Kings 6:34), or "side" (II Sam. 16:13).

After death the bones were usually accorded careful burial (I Sam. 31:13). *See* DISEASE.

BONNET. KJV translation of מגבעה and פאר. *See* CAP; HEADDRESS.

BOOK [ספר, ספרה; βίβλος, βιβλίον, βιβλαρίδιον, βιβλιδάριον]; often SCROLL. A document written on a strip of leather or papyrus and then rolled up (cf. Isa. 34:4) and often sealed (Rev. 5:1). The term may refer merely to a letter (I Kings 21:8) or to a longer literary work (Dan. 9:2; *see* WRITING AND WRITING MATERIALS). Certain books are referred to by name in the OT—e.g., the Book of the Covenant (Exod. 24:7), the Book of the Law (II Kings 22:8), the Book of the Wars of the Lord (Num. 21:4), and the Book of Jashar (Josh. 10:13). *See* BOOKS REFERRED TO. R. J. WILLIAMS

BOOK OF LIFE. *See* LIFE, BOOK OF.

BOOKS REFERRED TO. The various written documents to which reference is made in the Bible are of three types: source books used by authors or editors of our present OT and NT books; books mentioned as composed by Moses, the prophets, or other ancient worthies; and books presented as divinely authored.

The authentic written literary collections mentioned as used by OT writers as source materials include the following:

a) The "book of the Wars of the LORD" (Num. 21: 14), probably an anthology of old war poems on the

fights of the invading Israelites with the original inhabitants of Canaan. *See* WARS OF THE LORD, BOOK OF THE.

b) The "Book of Jashar," a similar poetic anthology, containing both war poems (e.g., Josh. 10:12-13) and such authentic literary masterpieces as David's lament over Saul and Jonathan (II Sam. 1:17-27). *See* JASHAR, BOOK OF.

c) The "book of the acts of Solomon" (I Kings 11:41), probably a primarily biographical document, perhaps compiled from royal annals and emphasizing King Solomon's wisdom. It may have included such examples of his justice and magnificence as the story of his judgment between the two harlots (3:16-28), the lists of his administrative arrangements (4:1-19), and the account of the Queen of Sheba's visit (10:1-10, 13). *See* KINGS, BOOK OF.

d) The "Book of the Chronicles of the Kings of Israel," which may have been a continuous journal compiled by scribes from royal records. It is mentioned eighteen times as containing further information about Jeroboam I, his wars and his reign (I Kings 14:19), Nadab (15:31), Baasha and his might (16:5), Elah (16:14), Zimri and his conspiracy (16:20), Omri and his might (16:27), Ahab, his ivory house and the cities he built (22:39), Ahaziah (II Kings 1:18), Jehu and his might (10:34), Jehoahaz and his might (13:8), Joash and Jehoash and the might with which each fought against Amaziah of Judah (13:12; 14:15), Jeroboam II, his might and how he recovered Damascus and Hamath from the power of Judah (14:28), Zechariah (15:11), Shallum and his conspiracy (15:15), Menahem (15:21), Pekahiah (15:26), and Pekah (15:31). Jehoram and Hoshea are the only two Israelite kings for whom this source is not cited.

e) The "Book of the Chronicles of the Kings of Judah," containing the "rest of the acts of" Rehoboam (I Kings 14:29), Abijam (15:7), Asa, his might and the cities he built (15:23), Jehoshaphat, his might and how he warred (22:45), Joram (II Kings 8:23), Joash (12:19), Amaziah (14:18), Azariah (15:6), Jotham (15:36), Ahaz (16:19), Hezekiah, his might and how he made the pool and the conduit and brought water into the city (20:20), Manasseh and his sin (21:17), Amon (21:25), Josiah (23:28), and Jehoiakim (24:5). This book, mentioned fifteen times, was for the S kingdom similar to *d above*. Before Josiah only Ahaziah and the usurper Athaliah are not mentioned as referred to in this source; after him only one of the four remaining kings—viz., Jehoiakim—is mentioned.

I and II Chronicles refer to several presumably authentic historians' source books: the "Book of the Kings of Israel" (I Chr. 9:1; II Chr. 20:34); the "Book of the Kings of Israel and Judah" (II Chr. 27:7; 35:27; 36:8); the "Book of the Kings of Judah and Israel" (II Chr. 16:11; 25:26; 28:26; 32:32); and the "Commentary [or Midrash] on the Book of the Kings" (II Chr. 24:27). These were obviously not our canonical I and II Kings, but whether they were the same as or similar to *d* and *e above* used by the editors of I and II Kings, or whether they were authentic documents based on court record, is not known. *See* CHRONICLES.

The "Book of the Chronicles" mentioned in Nehemiah (12:23; cf. 7:5), not our canonical I and II Chronicles, may have been the official temple chronicle for the postexilic period containing historical data and lists of clerical personnel. Books of Persian kings' annals are mentioned (Ezra 4:15; cf. Esth. 2:23; 6:1; 10:2).

That the NT writers made frequent references to OT books as sources is, of course, well known, even though specific reference to the particular OT book is fairly infrequent (Mark 12:26; Luke 3:4; 4:17-20; 20:42; Acts 1:20; 7:42; Gal. 3:10; Heb. 9:19).

Of all the biblical persons who are credited with the writing of books, the one who receives greatest acclaim is Moses. Earliest traditions refer to him as having written down Amalek's fate in a book (Exod. 17:14). At Yahweh's dictation he was said to have inscribed the words of the "book of the covenant" (24:3-7; *see* COVENANT, BOOK OF THE). Most frequent reference, of course, is to the "book of the law of Moses," which was carefully prepared (Deut. 17:18; 28:58, 61; 30:10; 31:24, 26) and contained explicit curses (29:20-21, 27). This book was cherished by Joshua (Josh. 1:8; 8:31, 34; 23:6), was neglected in the failures of King Amaziah of Judah (II Kings 14:6; II Chr. 25:4), stimulated the reforms of King Josiah (II Kings 22:8–23:24; II Chr. 34:14–35:12) and King Jehoshaphat of Judah (II Chr. 17:9), and was central in the career of Ezra (Ezra 6:18; Neh. 8:1–9:3; cf. 13:1).

Joshua is said to have written two books, one setting forth the allotment of Canaan to the Israelites (Josh. 18:9), the other containing the renewal of the covenant (24:26).

Various prophets are recorded as having been told to inscribe the words of Yahweh in a book (e.g., Isa. 30:8). Jeremiah's dictated book is particularly well known (Jer. 25:13; 30:2; 36; 45:1; 51:60, 63). The notation that "Samuel told the people the rights and duties of the kingship; and he wrote them in a book and laid it up before Yahweh" (I Sam. 10:25) probably inspired the Chronicler's frequent references to prophetic works as source materials, although these alleged sources are never termed "books" (I Chr. 29:29; II Chr. 9:29; 12:15; 13:22; 26:22; 33:19).

The oldest book presented as divinely authored is probably the "book of remembrance" (Mal. 3:16), out of which Moses was willing to have his name removed (Exod. 32:32-33), and with which a number of psalmists were concerned (Pss. 40:7 [cf. Heb. 10:7]; 69:28; 87:6; 139:16). Identical with this book or related to it was the book of truth and of life of prophetic and apocalyptic writers (Isa. 4:3; 34:16; Dan. 10:2; 12:1, 4). It takes its most dramatic form in the NT "book of life" (Phil. 4:3; Rev. 3:5; 13:8; 17:8; 20:12, 15; 21:27). *See* LIFE, BOOK OF.

Bibliography. On historical source books used by OT writers, see, e.g.: J. A. Montgomery, *Kings*, ICC (1951), pp. 24-38; E. Nielsen, *Oral Tradition* (1954), ch. 3; N. H. Snaith, Introduction to I Kings, *IB*, III (1954), 4-6. C. F. KRAFT

BOOT [סאון, *from* Akkad. *šênu*, shoe; Egyp. Aram. שאן] (Isa. 9:5—H 9:4, in the phrase סאון סאן, "boot of the booted warrior"; RSV "boot of the tramping warrior"; KJV "BATTLE of the warrior"). The booted warrior is an Assyrian figure depicted in the Lachish reliefs from the period of Sennacherib (705-

681 B.C.). The boots appear as high leather boots laced up to the knees and thus in contrast to the sandals of the Israelite soldier. The Beni-hasan painting (nineteenth century B.C.) depicts Asiatic women wearing a low type of boot extending just above the ankle. J. M. MYERS

BOOTH [סכה; שך (Lam. 2:6)]. A temporary shelter for cattle (Gen. 33:17), for men (Jonah 4:5), and especially on the battlefield (II Sam. 11:11; I Kings 20:12, 16). The booths used at the Feast of Booths

From *Atlas of the Bible* (Thomas Nelson & Sons Limited)

43. Booth in a Palestinian field

(*see* BOOTHS, FEAST OF) were to be made of branches, probably woven together (Lev. 23:40; Neh. 8:15). Fig. BOO 43.

"Booth" is also a figure of that which is flimsy (Job 27:18) and desolated (Isa. 1:8; KJV COTTAGE). *See also* PAVILION; TABERNACLE. E. M. GOOD

BOOTHS, FEAST OF [חג הסכות, *from verb* to weave together, *referring to plaited branches with which booths were covered;* LXX ἑορτή (τῶν)σκηνῶν (σκηνοπηγία)] (Lev. 23:34; Deut. 16:13, 16; Ezra 3:4; Zech. 14:16, 18-19; cf. II Macc. 10:6; Jos. Antiq. XIII.xiii.5). One of Israel's three great annual festivals, celebrated with great joy in autumn, at the completion of the agricultural year, to recall Israel's wilderness pilgrimage and, apparently, as a renewal of the covenant; commonly known as Tabernacles (cf. II Chr. 8:13). Other names for this festival in the Bible are: "the feast of ingathering" (חג האכרף; Exod. 23:16 [LXX ἑορτή συντελείας]; 34:22 [LXX ἑορτή συναγωγῆς]); "the feast of the Lord" (חג יהוה; Lev. 23:39; Judg. 21:19); "the feast" (החג; I Kings 8:2, 65; II Chr. 7:8; Neh. 8:14; Isa. 30:29; Ezek. 45:23, 25).

Though Deut. 16:16 prescribes that all male Israelites must "appear before the LORD" three times a year, it seems that the Feast of Booths ranks as the original pilgrimage festival. Elkanah, father of Samuel, made an annual journey to Shiloh (I Sam. 1:3, 21) to make the "yearly sacrifice"; and the occasion of his pilgrimage probably was the "yearly feast of the LORD at Shiloh" (Judg. 21:19). This feast featured a vintage dance (Judg. 21:16 ff), indicating that it had close association with Canaanite agricultural celebrations. But it was an Israelite feast that is best understood as an early form of the Feast of Booths. The booths, later used to commemorate the wandering of Israel, are also derived from an agricultural practice: to protect the olive orchards in the month of harvest (September), their owners used to guard them by night, standing in shelters constructed of branches and vines. As will appear below, it is not clear when the booth was first reinterpreted as a symbol of Israel's wilderness experience. This is one aspect of the larger question whether, in pre-exilic times, the Feast of Booths was simply an agricultural festival borrowed from Canaan and celebrated in the name of Israel's God, or whether, from the beginning, it served as a vehicle for distinctive aspects of Israel's covenant faith. Until recently, under the influence of Wellhausen, preference was given to the former alternative; currently there is a strong shift toward the latter.

Booths became an extremely popular festival in postexilic Judaism. It was utilized especially as an occasion on which Jews from the Diaspora made pilgrimage to Jerusalem. Pilgrim parties came from Babylonia and from more distant places, bringing with them the accumulated offerings for the temple and the city. The plundering of such parties by highwaymen and the problem of their protection are sometimes alluded to (Jos. Antiq. XVII.ii.2; XVIII. ix.1). The eschatological visions which speak of the coming of all nations to worship at Jerusalem refer to the Feast of Booths as the occasion for their pilgrimage (Zech. 14:16 ff; cf. Isa. 2:2-4; 56:6-8). The season for the presentation of first fruits, which began with the Feast of Pentecost, concluded with the Feast of Booths (Bik. 1.10). The feast seems to have reached its most elaborate form shortly before the destruction of the temple.

3. Antecedents

Bibliography

1. Analysis of the feast. The feast began on the fifteenth day of the seventh month (Tishri). The first day of this month was a special holy day (Lev. 23:23-25), and the Day of Atonement (*see* ATONEMENT, DAY OF) fell on the tenth. The three events seem to signify a differentiation in what was originally a single observance. The sacred character of the first of the seventh month was probably a sign of the memory that Israel's year once began in autumn. But the original Feast of Booths was celebrated at the end of the year (Exod. 23:16; 34:22). All three festal calendars (Exod. 23:14-17; Lev. 23; Deut. 16) place Booths last in the series, intimating that it came at the end of the year, before the beginning of the new. Again, while we are told that the dedication of Solomon's temple took place at the feast in the seventh month (I Kings 8:2), it is also noted that he finished it in the eighth month (I Kings 6:38). And in the Mishna we learn that normally a booth was too old for use at the feast if it had been constructed thirty days before it; however, if it had been built intentionally for this ritual purpose, "even at the beginning of the year," it was acceptable (Suk. 1.1). Thus, originally, the feast seems to have come just before, rather than just after, the end of the year. The feast proper lasted seven days; to this two days of special observance were added.

Certain duties were incumbent upon every celebrant. He had to provide himself with a סכה or booth in which he slept and ate all his meals for

seven days. This was a ritual requirement the proper fulfilment of which is specified in great detail in the Mishna. Further, every pilgrim had to collect twigs of myrtle, willow, and palm in the environs of Jerusalem. Originally these were used in the construction of the booths (Neh. 8:13-18); later some of them, at least, were bound together into a sort of festal plume, called the lulab, to which a citron was also attached. The lulab was a symbol of rejoicing and was carried ceremonially during the daily singing of the Hallel (Pss. 113–118), being waved aloft at the opening phrase of Ps. 118: "O give thanks to the LORD," and, especially, at the cry for salvation in vs. 25.

The water libation ceremony was the first common rite for each day of the feast. On the morning of the first day a procession of priests led down to the Pool of Siloam to bring up a container of water, which was to suffice for the seven days. The water was brought up in solemn fashion with the blowing of the שופר at the city gate (cf. Isa. 12:3). The pilgrims, singing the Hallel and carrying their lulabs, witnessed the circumambulation of the altar by the priestly procession and, waving their lulabs, joined in the great cry: "Save us, we beseech thee, O LORD." It was from this cry that the rite was given the title *"Hoshianah (Hoshono) Rabbah."* Having completed the circumambulation, the priest acting as celebrant ascended the ramp of the altar to perform the libation, using two silver bowls, one for water and one for wine. The people called out: "Lift up thy hand," so that they could verify the performance of the rite, for Sadducees denied the legitimacy of the rite, on the ground that there was no basis for it in the Pentateuch, and they had refused to perform it properly. On the seventh day the circumambulation of the altar was repeated seven times. As on the other days, the priests in the procession carried willows, but this time, instead of waving them aloft, they beat the earth with them at the conclusion of the ceremony.

The second great common rite occurred at night. It sought to give expression to the rejoicing of the feast. Four huge Menorahs fitted out with wicks made from the worn-out garments of the priests, illumined the entire temple area. Under them the celebrants danced a torch dance to the accompaniment of flute playing, and the Levites chanted the Psalms of Ascent (120–134), one each on the fifteen steps that led down from the court of Israelites to the Court of the Women. This, very probably, was the "holy feast" in the night mentioned in Isa. 30:29. It lasted most of the night for each of the seven days.

Each day at dawn there was a more solemn rite carried out by priests. At cockcrow they proceeded to the E gate of the temple area. Then, at the moment of sunrise, they turned W to face the temple and recited: "Our fathers when they were in this place turned with their faces toward the east, and they worshiped the sun toward the east; but as for us, our eyes are turned toward the LORD" (Suk. 5.4; cf. Ezek. 8:16).

The three common rites were performed on each of the seven days of the feast proper. The Hallel was also sung on the solemn assembly held on the eighth day. The ninth day is called *Simhath Torah* ("the Joy of the Law") and is a sign of the tendency to transfer the focus of the feast from nature to the law. It is an interesting fact, perhaps also bearing on the relationship of the feast to New Year, that the cycle of Torah readings began at this time. While in its postexilic development the feast is entirely Jewish in spirit, many of the forms in its three great rites seem to echo the nature mysticism of Canaan, from which they had been assimilated. The complex of observances had grown in bulk over the centuries, and the forms came from different sources; Israel's covenant with the Lord gave unity to the feast.

2. Early stages of its development. The Covenant Code, Deuteronomy, and the Priestly Law all contain provisions relating to Booths. In Exod. 23:16, representing the first of these, and in the related reference in Exod. 34:22, it is called חג־האסיף, "the feast of ingathering." The observance is associated with the completion of agricultural work: "when you gather in from the field the fruit of your labor." There is no reference to booths; no memorial role is specified; nor is the manner or duration of the observance indicated. In the opinion of many, vs. 17, viewed as a pilgrimage requirement, represents a later addition to vss. 14-16; and, with the aid of I Sam. 1:21, the Feast of Ingathering in the Covenant Code is designated as the single pilgrimage festival in early Israel. The occasion at Shiloh at which Elkanah offered his sacrifice must have been the same as the "feast of the LORD" at Shiloh mentioned in Judg. 21:19 ff. The Feast of Ingathering appears, therefore, to have been an occasion of great rejoicing with features of carnival-like indulgence; it was supremely the time of sacrifices (in Num. 29 the quantity of sacrifices specified for Booths is greater than for any other feast); and this meant the eating of meat and the drinking of wine (cf. I Sam. 1:3-9); Eli's suspicion that Hannah was drunk (I Sam. 1:14) can be understood as reflecting the nature of the feast; and the dance of the maidens in the vineyards, apparently with seduction as an aim, hints strongly at traditional Canaanite vintage revelry. Yet it is a "feast of the LORD," and the rubric in Exod. 23:16 is the result of an early stage in the process by which Israel came to terms with Canaanite culture.

In Deut. 16:13-15 the Feast of Ingathering has become the Feast of Booths (to be celebrated at a place God "will choose"). No function or significance is specified for the booths, however. The feast is to last for seven days and is to celebrate the harvest of both threshing floor and wine press. There is a special admonition to rejoice in "your feast" (vs. 14), God's blessing of the agricultural enterprise being the warrant for joy. There is no overt connection between the feast and Israel's communal history. However, in Deut. 31:9-13 there is a supplement which introduces the reading of the law. Every seventh year, the year of release, at the Feast of Booths the law of the covenant is to be read out in the hearing of "all Israel." This not only gives us a relatively early basis for the development of the Joy-of-the-Law observance on the ninth day, but also hints at a connection between the Feast of Booths and a formal covenant ceremony at which the reading of the laws of the covenant was a standard feature (cf. Exod.

24:7 ff; Deut. 27; Josh. 24:22 ff). Alt, followed by Noth, holds that the year of release is an ancient institution in Israel that may date back to the era of Joshua. The seven-year interval, at which the land lay fallow, seems to owe something to the fertility theme of Canaanite religion; but in the release of slaves and the cancellation of debts this is combined with the communal character of Israel's faith.

In the priestly legislation (Lev. 23) the first day and the eighth, first mentioned here, are designated as days for a "holy convocation," a feature hinted in the LXX reading for Exod. 34:22. Sabbath rest is to be observed. However, the eighth day is not treated as one of the days of Booths proper (Lev. 23:36). In Lev. 23:39-43, in what appears to be a supplementary addition, we learn for the first time that the ritual residence in booths is to commemorate that God made Israel "dwell in booths" when he brought them "out of the land of Egypt" (vs. 43). The supplement is also first to mention the gathering of branches for the feast, implying (vs. 40) that they are to be used to make the lulab rather than for the construction of the booths (cf. Neh. 8:13-18), a fact which leads Auerbach to conclude that the supplement was added after the celebration described in the book of Nehemiah. As noted, the dedication of Solomon's temple took place on the occasion of "the feast" (I Kings 8:2). In the Hebrew text for I Kings 8:65 we read that he kept the feast "seven days and seven days, fourteen days" (RSV mg.). It is tempting to accept Auerbach's explanation that this error was due to the attempt of an editor of Kings who wanted to synchronize the account with Lev. 23, but who read the supplement as an additional prescription rather than as an amplification of Lev. 23:34-36.

3. Antecedents. The analysis just completed makes it clear that phenomenologically the associations of Booths with the agricultural life of Palestine were very close throughout. The nature mysticism implicit in the vintage dance recorded for the early period is more than matched by the fertility motifs exhibited by such late developments as the libation ceremony and the lulab. It is also difficult to escape the conclusion that Lev. 23:39-43 is supplementary even to the late Priestly Code; thus the only reference formally relating Booths to Israel's *Heilsgeschichte* is very late. This raises two different, though related, questions: namely, when did the Feast of Booths begin to function as a historical memorial for Israel, and what were the forces that operated to give it this role?

With respect to the former question it is well to remember that the rubrics governing a practice are always later, and often much later, than the observance they regulate. Consequently, it is not advisable in this connection to make the probable date of Lev. 23:39-43 determinative. But this only introduces the real problem. E.g., Auerbach suggests that the booths of the feast were first given a cultic-historical significance in Babylon, because in captivity there were no olive orchards to guard. I.e., following Wellhausen's thesis of *Denaturierung*, he assumed that "the feast" was fundamentally a nature feast of Canaanite origin and that the course of its development in Israel was determined by historical factors in Israel's history extraneous to it.

There is the alternative view that there was from the first in Israel a tent festival, whose function served the purposes of a ceremony of "covenant renewal," and that the Feast of Booths is the outcome of the assimilation of the autumn agricultural observances of Canaan to this basically Israelite cultic institution. This view assumes that the "tribes" of Israel constituted a sacral amphictyony held together in covenant with Yahweh. The central cultic act of this community consists in the establishment and renewal of the covenant. The sealing of the covenant at Sinai (Exod. 24), the renewal of the covenant at Shechem (Josh. 24), and the reformation of Josiah (II Kings 22–23), as well as lesser instances of cult purification in the monarchic era, all seem to bear the marks of a covenant ceremony in which the reading of the law was a feature. In the opinion of Kraus, the covenant-renewal ceremony, in which the bases of communal life were purified and revitalized, played a role in Israel analogous to the role of the New Year's festival in Babylon. The action of God at the founding of the covenant is re-presented in a cultic action so that past meets present in a cultic "today" (Deut. 29:10 ff). The fact that in Deut. 31: 9-13 the reading of the law is enjoined in connection with the seven-year cycle of the year of release may indicate that the times of Israel's covenant-renewal ceremonies were under the influence of the periodicity of the nature mysticism of Canaan. The underlying identity between the autumnal harvest feast of Canaan and Israel's observance of covenant renewal would consist in the revitalizing significance attached to both.

In the view of Kraus the Israelite covenant feast was at the same time a tent festival. In support of this he cites the frequency of tent feasts among nomads; but, even more, he appeals to the priestly reconstruction of the Israelite camp of the wilderness era with the "tent of meeting" at the center. And in Hos. 12:9—H 12:10, where the prophet announces Israel's return to the wilderness for judgment and regeneration (cf. Hos. 2:14), he notes that Israel's actual dwelling in tents is brought into relation with its days of appointment or meeting with God (RSV somewhat daringly renders the Hebrew "appointed feast"). It is to be noted in this connection that the "booths" of the feast are quite anachronistic as a "reminder" of the tents of the wilderness period. In contrast to the Wellhausen tradition, the booths did not suggest the idea of tents, Kraus holds, but the "booths" were an adaptation of an actual tent feast that preceded. He feels that this change began at Shiloh; it was there that the tent of the Lord was first displaced by a temple, and the tents of Israel's pilgrimage feast by agricultural booths. Many of the details in Kraus's reconstruction may have to be reconsidered. But a central thesis stands out: Israel had a cult-feast tradition rooted in its own history by means of which it could assimilate Canaan's vintage feast and develop the Feast of Booths. Though considerable tension exists between this thesis and an extreme emphasis placed upon universal cultic patterns by some scholars, it seems to merit general acceptance.

J. C. RYLAARSDAM

BOOTY [בז, מלקוח, משסה]. Spoils taken in battle.

It was a general custom in antiquity for victorious raiders or troops to despoil the conquered territory of everything of value. A certain portion was often dedicated to the deity or to his sanctuary (cf. Num. 31:26 ff). Muḥammad decreed that one fifth of all booty was to be set aside for Allah (*Quran* VIII.41). For "spoil" as opposed to "booty" among the Hebrews, *see* SPOIL.

J. W. WEVERS

BOOZ. KJV form of BOAZ in Matt. 1:5; Luke 3:32.

BORASHAN bôr ā'shən [בור עשן, cistern *or* well of Ashan]; KJV CHOR-ASHAN kôr— [כור עשן, *reading of the sixteenth-century printed Rabbinic Bible of Jacob ben Chayyim,* editio Bombergiana; כ is an error for ב]. Same as ASHAN.

BORITH. Apoc. alternate name of BUKKI 2.

BORROW, LEND. To take on security a thing given for its safe return, or to take on credit with the expectation of the return of it or its equivalent. The borrower obtains temporary use of the item from the lender. Sometimes a DEPOSIT was required of the borrower (Deut. 24:11, 13; cf. Exod. 22:7 ff). Money was frequently borrowed. Interest was not to be taken from fellow Israelites (Exod. 22:25; Lev. 25:35) but was allowed from Gentiles (Deut. 23:20). Usury was either exacting interest from an Israelite or taking exhorbitant interest from any creditor. Both lending and repayment were considered charitable actions (Ecclus. 29:1-14). Jesus also urges such a trust of one's neighbor (Matt. 5:42), even if repayment is questionable (Luke 6:34-35; 7:41 ff; cf. Prov. 19:17). Nevertheless, the debtor was not the happiest of persons (Prov. 22:7; Matt. 18:23 ff). *See also* DEBT.

C. U. WOLF

BOSCATH. KJV form of BOZKATH in II Kings 22:1.

BOSOR bō'sôr [Βοσορ]. **1.** One of the Gileadite cities where Gentile citizens persecuted the Jewish residents after the rededication of the temple in 165 B.C. (I Macc. 5:26, 36). It is identified with the modern Busr el-Hariri on the border of the Trachons, probably the BEZER of Deut. 4:43; Josh. 20:8.

2. KJV NT form of BEOR.

BOSORA. KJV form of BOZRAH 3.

BOSSED, BOSSES [גב, *gabh; cf.* Arab. *jabba,* cut, cut off; *jawb,* shield]. Bosses are knobs or protuberances, often ornamental, which stand out from a flat surface. Bosses on early shields strengthened the shield itself, which was often of leather stretched over a wooden frame. Later, on metal shields, bosses came to be largely decorative. *See* WEAPONS AND IMPLEMENTS OF WAR.

In Job 15:26 the wicked man is said to run against God "with a thick-bossed shield" (RSV; lit., "with the thickness of the bosses of his shields"); this is a figure for his insolent defiance of the Almighty.

W. S. MCCULLOUGH

BOTCH. KJV translation of שחין (RSV BOIL) in Deut. 28:27, 35.

BOTTLE [נאד (Ps. 56:8—H 56:9); נד, *nōdh* (Ps. 33:7; KJV HEAP, *with* MT *nēdh*); KJV אוב (RSV "wineskin"), בקבק (RSV "flask"), חמת (RSV "skin"; "cup"; "heat"), נבל (RSV "skin"; "jar"), ἀσκός (RSV "wineskin"; "skin")]. Translation is difficult, but the reference in Pss. 33:7; 56:8—H 56:9 seems to be to a waterskin (cf. Josh. 9:4, 13; Judg. 4:19; I Sam. 16:20, where the same word is used for "wineskin" and "milkskin"). Other words translated "bottle" by the KJV are designated more exactly by the RSV.

J. L. KELSO

BOTTOMLESS PIT. The (literal) translation of ἄβυσσος in Rev. 9:1-2, 11; 11:7; 17:8; 20:1, 3. *See* ABYSS.

BOUGAEAN bōō gē'ən [βουγαῖος] (Add. Esth. 12:6); KJV AGAGITE. A designation of HAMAN. It appears in the LXX for the original אגגי, "Agagite," in Esth. 3:1; 9:10. This epithet, however, the LXX elsewhere replaces with "Macedonian" (Esth. 9:24; cf. Add. Esth. 12:6) or omits entirely (Esth. 3:10; 8:3, 5). Some have identified "Bougaean" with the Homeric term of reproach "bully" or "braggart" (*Iliad* XIII.824; *Odyssey* XVIII.79). More probably it is the corruption of an original ἀγαγαῖος, "Agagite."

M. NEWMAN

BOUNDARIES, TRIBAL. *See* TRIBES, TERRITORIES OF.

BOUNDARY STONES. *See* LANDMARK.

BOW AND ARROW. The words translated "bow" are קשת and τόξον. "Arrow" is used for חצי, חץ, and רשף. The phrase רשפי קשת (lit., "flashes of the bow") in Ps. 76:3—H 76:4 is translated "flashing arrows" (KJV "arrows of the bow").

The back of the Mesopotamian bow was made of wood, horn, or bones; decked with bark or leather; and then lacquered. In earlier times such costly weapons were carried only by princes and leaders. In the Assyrian assault bowmen, as well as lancers, were used effectively to protect those who scaled the walls of a besieged city. Fig. WAR 3.

In Thut-mose III's account of the spoils taken at the Battle of Megiddo, only 502 bows are listed, although almost 1,000 chariots and over 2,000 horses are included (*ANET* 237).

The arrow consisted of a shaft made of reed or light wood notched at one end, and a head or tip, either socketed or, as more commonly, equipped with

Courtesy of Editions des Musées Nationaux, Paris

44. Huntsmen shooting birds, from Khorsabad (eighth century B.C.)

a tang. Such tips were made of flint, bone, or bronze. Since metal was expensive, flint tips remained in common usage until the Late Bronze Age. Such tips were often equipped with barbs or dipped in poison (Job 6:4) in order to render them more effective.

The bow and arrow was the normal weapon in use by the nomad (Gen. 21:20) and the hunter (Gen. 27:3; Isa. 7:24); it was also used by the raider (Gen. 48:22; Josh. 24:12) and the warrior (Isa. 13:18; Ezek. 39:9; Hos. 1:7). Figs. BOW 44; ARC 48; HUN 34-35; WEA 11.

Arrows were sometimes used for divination (Ezek. 21:21—H 21:26), in accordance with Mesopotamian custom, and also for magical purposes (II Kings 13:15-19). "Arrow" is often used symbolically to represent violence (Pss. 11:2; 57:4—H 57:5) or divine judgment (especially in the Psalms; cf. 7:13—H 7:14; 38:2—H 38:3; 64:7—H 64:8).

See also WAR, METHODS OF; QUIVER; ARCHER.

J. W. WEVERS

BOWELS [מעים; σπλάγχνα]. The word "bowels" is used in the RSV only in the literal sense of "intestines," but the KJV uses it more loosely—e.g., in II Sam. 16:11 (for internal genitalia; cf. RSV); Ps. 71:6 (RSV "womb")—and metaphorically to refer to strong emotion (Job 30:27; RSV "heart"), especially love (Song of S. 5:4; RSV "heart") and compassion ("bowels of mercy" in Col. 3:12; RSV "compassion").

R. C. DENTAN

BOWL. In the Bible "bowl" and "basin" are often interchangeable terms, although usage has given certain priorities to each word. For the various uses of bowls and basins, *see* POTTERY § 3*a;* for metal bowls, *see* VESSELS § 2.

See Fig. POT 63 for pottery bowls of various periods.

J. L. KELSO

BOX [ארגז; KJV פך (RSV "flask"); KJV ἀλάβαστρον (RSV "jar"; "flask")]. A container. *See also* FLASK; MONEY BOX; PERFUME § 3; POTTERY; VESSELS.

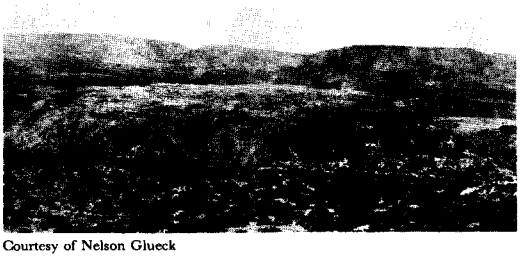
BOX TREE. KJV translation of תאשור (Isa. 41:19; 60:13; RSV PINE) and πύξος (II Esd. 14:24; RSV "tablet"). The box tree is not found in the Holy Land (a box shrub, *Buxus longifolia* Boiss., has been found). Zohary (*see* FLORA § A9*e*) and others identify תאשור with the cypress.

The original Greek of II Esd. 14:24 was apparently πυξίον, "tablet"—probably a reference to boxwood, from which the tablets for writing were made in Greco-Roman times.

J. C. TREVER

BOZEZ bō′zĭz [בצץ] (I Sam. 14:4). One of two rocks in the mountain pass between Michmash and Geba. It was apparently located on the N side of the Wadi Sweinit, but the exact spot has not been identified.

BOZKATH bŏz′kăth [בצקת, elevated ground]; KJV BOSCATH bŏs′— in II Kings 22:1. A village of Judah in the Shephelah district of Lachish (Josh. 15:39); its location remains unknown. Jedidah, the mother of Josiah (*ca.* 640-609 B.C.), was the daughter of Adaiah of Bozkath (II Kings 22:1).



V. R. GOLD

***BOZRAH** bŏz′rə [בצרה, fortified place; sheepfold; Βοσόρρα]; KJV Apoc. BOSORA bŏs′ə rə. **1.** An important Edomite fortress city, home of King Jobab (Gen. 36:33; I Chr. 1:44); identified with modern Buseira *ca.* twenty miles S-SE of the Dead Sea and thirty-five miles N of Petra. Built on a flat spur, surrounded by deep wadis, and connected to the headland by a ridge protected by a fort, Bozrah was practically impregnable.* Probably the strongest city in N Edom, it guarded the road along the W edge of the Jebel esh-Shera' and controlled the approaches to the copper mines in the Arabah. Fig. BOZ 45.

In the prophets' oracles against Edom, Bozrah is a symbol of Edom's strength, and its destruction signifies the destruction of all Edom (Isa. 34:6; 63:1; Jer. 49:13, 22; Amos 1:12). Bozrah in Mic. 2:12 KJV is better translated "(sheep)fold" (cf. RSV).

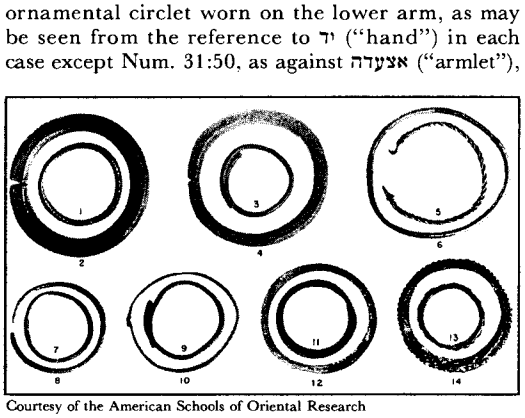
2. A city in Moab which will share in the impending destruction of the land (Jer. 48:24); probably the same as BEZER (cf. LXX B Βοσός, Bosor).

3. A city captured by Judas Maccabeus (165-160

Courtesy of Nelson Glueck

45. The spur on which Bozrah (Buseira) is situated

B.C.) in the course of his campaign in Gilead. Some Ammonite detachments, allies of the Seleucid Greeks, had taken refuge there (I Macc. 5:26, 28). It is identified with modern Busra eski Sham (Buṣruna of the Amarna Letters), *ca.* sixty-one miles S of Damascus and twenty-five miles E-SE of Dera'a. Located at the foot of the Jebel ed-Druz in SE Hauran, Bozrah was an important junction point during the Greco-Roman period for ancient roads leading to Mediterranean ports, Damascus, Aila (on the Gulf of Aqabah), and ports on the Persian Gulf.



After the invasion of Pompey (64 B.C.), Bozrah became the northernmost city of the Nabatean Empire, though from time to time the Nabateans' authority extended to Damascus (II Cor. 11:32-33). After Trajan's conquest of the Nabateans, Bostra (ἡ or τὰ Βόστρα; Bozrah) became the capital of the Roman province of Arabia, and general headquarters for the Legion III Cyrenaica. Alexander Severus (222-35) raised it to the status of a colony. Philip the Arab (Marcus Julius Philippus, 244-49), a native of Bostra, made it a metropolis.

Traditionally evangelized by one of the Seventy (Luke 10:1-20), Bostra was long the ecclesiastical center of the Hauran. In 244, Origen presided at an important church council convened to discipline the Monarchian, Beryllus. Later it became a Nestorian center. In the early seventh century, Muhammed, with his caravans from Mecca, visited Bostra. It is perhaps here that he learned much of what he knew about Christianity. In 634, Bostra fell to the Muslims in the course of their northward expansion. In 1113 and 1119 it was visited by invading Crusader forces.

BRACELET [צמיד; שירות (Isa. 3:19; Aram. שירא; *cf.* Akkad. *še'eru, šemēru*); KJV אצעדה (RSV ARMLET), חח (RSV BROOCH), פתיל (RSV CORD)]. An ornamental circlet worn on the lower arm, as may be seen from the reference to יד ("hand") in each case except Num. 31:50, as against אצעדה ("armlet"),

Courtesy of the American Schools of Oriental Research

46. Bracelets and anklets from Mizpeh (Tell el-Nasbeh): nos. 1-10, bronze; nos. 11-14, glass

used with זרוע ("arm") in II Sam. 1:10. Bracelets were common all over Palestine, the archaeological remains show, and were worn by both men and women. Sometimes they were worn on one arm only, sometimes on both arms. They were mostly of bronze, though there are examples of iron, silver, and glass bracelets, rarely of gold. Those mentioned in the biblical passages are, for the most part, said to have been of gold, notably those given to Rebekah. The שירות were perhaps especially luxurious bracelets (Isa. 3:19). Fig. BRA 46.

J. M. MYERS

BRAIDING [ἐμπλοκή] (I Pet. 3:3; KJV PLAITING); BRAIDED [πλέγμα] (I Tim. 2:9). An elaborate dressing of the hair in knots, or entwining a wreath in the hair. The term occurs also in Isa. 28:5 Aq. and Theod.

BRAMBLE [אטד, *'āṭādh* (Judg. 14:7-15; THORN *in* Ps. 50:9—H 50:10); βάτος (Luke 6:44; *elsewhere* BUSH)]. A shrub with sharp spines and runners, usually forming tangled masses of vegetation. "Bramble" is an apt translation for אטד in Jotham's fable (Judg. 9:8-15) and Jesus' parable (Luke 6:44).

About twenty biblical words seem to imply thorny flora (*see* THISTLES). The contexts give no hints for botanical identification, but often *Lycium europaeum* L. (European boxthorn), *Rubus sanctus* Schreb. (Palestine blackberry), and *Rhamnus palaestina* Boiss. (Palestine buckthorn) are mentioned as likely.

See also FLORA § A12; ATAD.

J. C. TREVER

BRANCH. The translation of a great variety of words in the Bible. General terms for "branch" in the OT are: ענף (Ezek. 17:6; 31:3); דליות (Jer. 11:16; Ezek. 17:6; 31:7); פארה (Ezek. 17:6; 31:5—here perhaps a pun on the title פרעה, "Pharaoh"); קציר (Job 14:9). נער (Isa. 11:1) and יונקת (Job 8:16 KJV) mean "shoot." צמח (Jer. 23:5; cf. Akkadian *šamāḫu*) has the meaning "luxuriant sprout," referring to the royal descendant of David (*see below*). Other OT terms are: זמורה (Num. 13:23), the "tendril" of a vine; כפה (Isa. 9:14; 19:15), the "frond" of a palm tree—figuratively used of nobles, contrasted with "reeds," the common people; and קמה (Exod. 25; 37), the "branch" of a lampstand (elsewhere REED). In the NT four words are translated "branch": βαΐον (John 12:13), a palm branch; κλάδος (Rom. 11:16-21), a figure for membership in Israel; κλῆμα (John 15:1-8), the branch of the "true VINE"; and στοιβας (Mark 11:8), leafy branches.

The spreading branches of a tree or vine can symbolize the fruitfulness and prosperity of a man (Gen. 49:22; Job 8:16) or a nation (Ps. 80:11—H 80:12). Withered (Job 18:16), burnt (Jer. 11:16; Ezek. 15:2), or cut branches (Isa. 9:14) are used as figures for destruction.

"Branch" or "shoot" is employed as a designation of the present or future king of Israel. It has been suggested that this usage stems from an identification of the king with the TREE OF KNOWLEDGE; TREE OF LIFE, associated with the dying and rising god Tammuz (cf. Job 14:7, where the resurrection of a tree is contrasted with man, who "lies down and rises not again"; Isa. 17:10, where reference is made to "slips of an alien god").

The most important of the texts in question are:

a) Isa. 11:1, though here we may have no more than a poetic metaphor; the offspring of Jesse can be

considered a "shoot," even as the branch can be called the "daughter" of the tree (Gen. 49:22).

b) Jer. 23:5; 33:15, where the phrase "a righteous Branch" occurs. The same phrase is used in Phoenician to indicate the rightful heir to the throne. The second of these passages is generally thought to be a later addition to the book; the first may be from the hand of Jeremiah, in which case we have a contrast between a king righteous by name (Zedekiah) but not by nature, and a future ruler who will be in fact what his name implies. But possibly both passages are late, and depend on the third text (*below*).

c) Zech. 3:8; 6:12, where the reference is to Zerubbabel. In this instance the allusion to "branch" may have been suggested by the name of the king in question (*Zêr-Bâbili*, "shoot of Babylon"). Hence it is quite possible that in these texts we have poetic imagery rather than an actual identification of the king and the tree of life.

However, the vine branch put to the nose (Ezek. 8:17) probably does belong in the context of worship of the dying and rising god; it has also been suggested that the gesture is one of contempt, or that the phrase is a metaphor indicating the provocation of Yahweh (reading "my nose" for "their nose").

Bibliography. G. A. Cooke, *North Semitic Inscriptions* (1903), no. 29:11; R. Gordis, " 'The Branch to the Nose,' a Note on Ezek. VIII 17," *JTS*, XXXVII (1936), 284-88; A. E. Rüthy, *Die Pflanze und ihre Teile* (1942), pp. 52-62; G. Widengren, *The King and the Tree of Life in Ancient Near Eastern Religion* (1951), pp. 49-58; S. BRASS [נחשת]. In Tudor English (i.e., KJV), "brass" was any copper alloy—e.g., copper-tin or copper-zinc. The RSV retains "brass" when נחשת is a metaphor for hardness or for obstinacy in sin (Lev. 26:19; Deut. 28:23; Isa. 48:4), but elsewhere the translation is "BRONZE." P. L. GARBER

BRAZEN SEA. *See* SEA, MOLTEN.

BRAZEN SERPENT. KJV form for BRONZE SERPENT. *See* SERPENT, BRONZE.

BRAZIER brā′zhər [אח, *perhaps loan word from* Egyp. *ḫ*] (Jer. 36:22-23); KJV HEARTH. Probably a portable firepan for the heating of a room in cold weather.

BREACH [פרץ, שבר, בקיע, *see* 1 *below;* KJV בדק, מפרץ, *see* 1 *below;* פשע, *see* 2 *below*]. **1.** The act of breaking, or the state of being broken.

The common Hebrew word for "breach," פרץ, is used of a breach made in a city wall by the enemy (I Kings 11:27; Amos 9:11; etc.) and a breach among tribes (Judg. 21:15). In Gen. 38:29 it is used of a perineal rupture.

The word שבר literally means a "breaking in pieces" and is occasionally rendered "breach" in the KJV (Ps. 60:2—H 60:4 is the only RSV occurrence). It is often used as a colorful symbol for "wounds." At Lev. 24:20 it is better rendered as the RSV "FRACTURE."

The word בדק (cf. Akkadian *batâqu*, "cleave"; Ugaritic *bdqt*, "rift" [in the clouds]) occurs in connection with the state of disrepair of the temple during the reigns of Joash and Josiah. The RSV renders the Hebrew idiom "strengthen the breach of" as "repair" (II Kings 12:5, 8, 12—H 12:6, 9, 13; 22:5). The same Hebrew idiom appears in Ezek. 27:9, 27, alluding to "caulking the seam" of a ship.

The word מפרץ occurs only in Judg. 5:17; it is probably not derived from the root פרץ, "to break through," but is better rendered by the RSV "LANDINGS."

2. A betrayal of trust. Legislation for a breach of trust (KJV "transgression") is found in Exod. 22:9—H 22:8 and concerns failure in trusteeship and false claims. Legislation regarding "committing a breach of faith" (מעל מעל; KJV "commit a trespass") in matters of gifts due the sanctuary, deposits, robbery, and fraud occurs in Lev. 5:15; 6:2—H 5:21.

J. W. WEVERS

BREAD [לחם, *see* § 2*a below;* ἄρτος]. The baking and eating of bread are characteristic of the agricultural life. Bread is relatively scarce in the nomadic diet, since only a small quantity of grain can be transported. Thus Jesus' disciples protested: "Where are we to get bread enough in the desert to feed so great a crowd?" (Matt. 15:33; cf. Mark 8:4). Nevertheless bread was one of the staples of the diet. Ben Sirach points out:

> The essentials for life are water and bread
> and clothing and a house to cover one's nakedness
> (Ecclus. 29:21).

For more details on the importance of bread, *see* § 2*a below*.

1. Making of bread. In the wealthier households bread was, of course, prepared by slaves; thus Samuel warns that the king demanded by the Israelites "will take your daughters to be perfumers and cooks and bakers" (I Sam. 8:13). And in the later history of Israel the making of bread became a profession; when he was in prison, Jeremiah was given a loaf each day "from the bakers' street" (Jer. 37:21; cf. the "Tower of the Ovens" in Neh. 3:11; cf. also Hos. 7:4, where the baker is probably a professional). In the average family, however, bread was prepared in the home. This was women's work, either that of the wife (Gen. 18:6), or of a daughter (II Sam. 13:8), or of some other female relative (Jer. 7:18; 44:19; cf. I Sam. 28:24). Usually the bread was made from three measures of meal at a time (Gen. 18:6; Judg. 6:19; Matt. 13:33; Luke 13:21), and only enough for the day was baked.

a. Ingredients. Usually bread was made from either wheat flour or barley meal in biblical times. But since FLOUR was more expensive than MEAL, wheat bread was preferred by the wealthier people, whereas the poorer classes had to be content with barley bread. The latter is specifically mentioned in Judg. 7:13; II Kings 4:42; John 6:9, 13 (the feeding of the multitude); cf. Ezek. 4:9. In times of need, however, other cereals and even leguminous seeds were mixed with the flour to increase the yield of bread. Thus as a symbol of the coming exile Ezekiel is ordered to bake a cake of bread made from "wheat and barley, beans and lentils, millet and spelt" (Ezek. 4:9).

b. Preparation of dough. The dough (בצק, from the root meaning "to swell") was prepared simply by mixing the flour or meal with water. In the nomadic period of Israel's history no leaven was added before kneading (cf. Gen. 18:6); the modern Beduin still eat UNLEAVENED BREAD generally. After the settlement in Canaan, however, it became customary to keep a small piece of the previous day's batch of dough and to crumble it into the water before mixing in the flour. Then the mixture was kneaded (*see* KNEAD) and allowed to stand "till it was all leavened" (Matt. 13:33; Luke 13:21; cf. Gal. 5:9). *See* LEAVEN. Figs. BRE 47-48.

c. Baking. In biblical times three main methods of baking were used. The simplest way was to build a fire over a large, flat stone, remove the ashes, place a flat piece of dough on the heated stone, and cover the whole with the ashes. Of course, the ashes had to be removed and replaced when the cake was turned. This method is probably referred to in the idol maker's remark that he "baked bread on [half of the idol's] coals" (Isa. 44:19); similarly Elijah is provided with a "cake baked on hot stones" (I Kings 19:6).

A more advanced method is to bake the cake on a griddle (מחבת; Lev. 2:5; 6:21—H 6:14; 7:9; I Chr. 23:29 KJV; cf. Ezek. 4:3) or in a pan (מרחשת; Lev. 2:7; 7:9). Throughout the Bronze and Iron I ages (*see* ARCHAEOLOGY § F) these were probably made

48. Disc platter used for forming cakes of bread, from Tell ed-Duweir shrine

out of clay (several were found at Gezer), but in Iron II they were iron (in Ezek. 4:3 מחבת is qualified by the adjective ברזל, "iron"). In either case a fire was laid in a pit, and the dough was baked directly on the griddle. Cakes made in this way were called חבתים (I Chr. 9:31: "flat cakes").

The most common method of baking, however, was in an oven. On the basis of modern Arabic parallels it may be assumed that the oven generally took the shape of a large inverted earthenware jar (Arabic *ṭabûn*). A fire was kindled the night before (cf. Hos. 7:6), and in the morning the ashes were raked out and the cakes were baked on the stones lining the bottom of the oven. Another type of oven presumably used in ancient times is the Arabic *tânnûr*. This consists of a tall earthenware cylinder in which a fire is again kindled; the dough is applied to the hot walls, either inside or outside. *See* BAKING; OVEN.

d. Form of loaves. Given these methods of baking, most bread was in the form of flat disks, probably with a diameter of approximately eighteen inches. Indeed, one of the Hebrew words rendered "cake" (עגה) comes from a root meaning "to be round." Furthermore, one of Gideon's soldiers has a dream in which a cake of barley bread rolls into the Midianite camp (Judg. 7:13); a circular form may be assumed. Another Hebrew term for "cake" is חלה, from the root meaning "to perforate"; such cakes were probably pricked either before or after baking.

Still others were apparently in the shape of a heart, since they are termed לְבִבוֹת, related to the term for "heart." Not all cakes or loaves were flat, however. The arrangement of the BREAD OF THE PRESENCE in rows of cakes suggests the modern-day form. Indeed, long, thick loaves of (burnt) bread were discovered at Gezer. In addition special shapes may have been made by professional bakers; more than thirty different forms of bread are mentioned in an Egyptian papyrus document. *See* WAFER; CRACKNELS.

2. Use of bread. Since bread was one of the most important items in the diet, it was used not only at ordinary meals but also in cultic offerings.

a. Everyday life. Bread was of such importance that the expression "eat bread and drink water" could be used to signify eating and drinking as a whole (I Kings 13:8-9, 16-19; cf. Ecclus. 29:21, quoted above). Bread could thus be called a "staff" on which a man supported himself; when God comes in judgment, he breaks this "staff" (Lev. 26:26; Ps. 105:16; Ezek. 4:16; 5:16; 14:13; cf. Isa. 3:1; Ezek. 12:19). Indeed, the word לֶחֶם (lit., "bread") is often translated "food" in both the RSV and the KJV (sixty-four times in the former). Not to have bread is thus a mark of the most extreme poverty or distress; such was the situation during the final siege of Jerusalem (II Kings 25:3 KJV; cf. Job 15:23). Accordingly the psalmist praises Yahweh for providing

> wine to gladden the heart of man,
> oil to make his face shine,
> and bread to strengthen man's heart (Ps. 104:15).

Specifically bread is mentioned as a gift to strangers. Melchizedek brings out bread and wine for Abram (Gen. 14:18), and the wandering Levite is careful to offer bread to his host's servants (Judg. 19:19). It was, of course, a common food of soldiers in the field (Jesse sends Saul a gift of bread and wine and a kid [I Sam. 16:20]) and harvesters (Ruth 2:14). Naturally it was taken along on a journey; Abraham provides Hagar with bread and a skin of water when he sends her away (Gen. 21:14), and Joseph presents his father and brothers with the "good things of Egypt," grain, and bread when they are on the point of returning to Canaan (Gen. 45:23).

Three loaves were sufficient for the average person at each meal (cf. Luke 11:5-6). But a prisoner was allowed only one loaf per day (Jer. 37:21), and a single loaf was all that was necessary as a gift (I Sam. 2:36). At the meal itself it was used as a spoon, its shape (*see* § 1*d above*) being appropriate for this function. It was thus natural for Jacob to give Esau bread with the pottage (Gen. 25:34) and for Rebekah to send along bread with the "savory food" which she had prepared for Isaac (Gen. 27:17). Bread therefore served as an eating utensil as well as a food in its own right.

b. Offerings. Bread was one of the most common elements of the cultic offerings of the ancient Near East. It is quite frequent in Babylonian and Mesopotamian ritual, and it may be assumed that bread offerings were made in Ras Shamra, since Keret sacrifices bread, wine, honey, a lamb, and a bird to El and Baal (*see bibliography*). Hebrew religion was no exception. The CEREAL OFFERING could consist of flour alone, but also of various kinds of cakes. They could be "unleavened cakes of fine flour mixed with oil" or "unleavened wafers spread with oil" (Lev. 2:4); the bread could be baked on a griddle or in a pan (vss. 5, 7; *see* § 1*c above*). The only absolute requirements were that the bread be unleavened and seasoned with salt (vss. 11, 13). Part of the offering was to be burned on the altar, and the remainder was left for Aaron and his sons.

3. Bread in biblical imagery. Naturally a food as important as bread is often used in metaphorical expressions, both in the OT and in the NT.

a. In the OT. As something consumed, bread can be used as a metaphor for the enemy; Joshua and Caleb urge the Israelites not to fear the people of Canaan, "for they are bread for us"—i.e., they can be conquered easily (Num. 14:9). Various actions are also prefixed with "bread." The good wife does not eat the "bread of idleness" (Prov. 31:27); however, the ungodly

> eat the bread of wickedness
> and drink the wine of violence (Prov. 4:17).

Falsehood is called "bread of deceit"; its taste is sweet, but later the mouth is "full of gravel" (Prov. 20:17). And when Yahweh is angry with his people, he sends them the "bread of adversity and the water of affliction" (Isa. 30:20) or the "bread of tears" (Ps. 80:5—H 80:6). On the positive side, bread and wine represent the qualities of wisdom (Prov. 9:5) and the true word of God (cf. Isa. 55:2).

b. In the NT. Since the earliest form of the EUCHARIST (*see also* LORD'S SUPPER) involved the "breaking of bread," worship in general came to be called by the same phrase (Acts 2:42, 46; 20:7). Elsewhere in the NT, however, bread is used metaphorically only in reference to the coming kingdom of God or to Jesus himself. One of Jesus' dinner companions refers to the messianic banquet when he says: "Blessed is he who shall eat bread in the kingdom of God" (Luke 14:15; *see* MEALS § 4*b*). And the Christian proclaims the Lord's death until he comes, whenever he partakes of the bread and cup of the Eucharist (I Cor. 11:26). More significant than these, however, is Jesus' designation of himself as "true bread." The disciples had referred to manna as "bread from heaven" given by God (cf. Exod. 16:4; Neh. 9:15; etc.). Jesus then calls himself the "true bread from heaven" sent by his Father to give life to the world; the disciples ask that they be given this bread always (John 6:31-33). Thereupon Jesus strengthens his claim; he is the "bread of life," and those who follow him will never hunger or thirst (John 6:35). Finally, after a protest from the Jews, Jesus declares that those who "eat of this bread" will live forever, and that this bread is his own flesh (John 6:48-51; cf. 4:13-15). There are unmistakable references to the coming Last Supper in the narrative; the following verses (6:52-57) make this clear. But Jesus is also referring to his sacrificial death, particularly in 6:51. The mention of manna as an ordinary food is intended to show the superiority of Jesus to the law.

For the expression "daily bread," *see* LORD'S PRAYER § 3*e*.

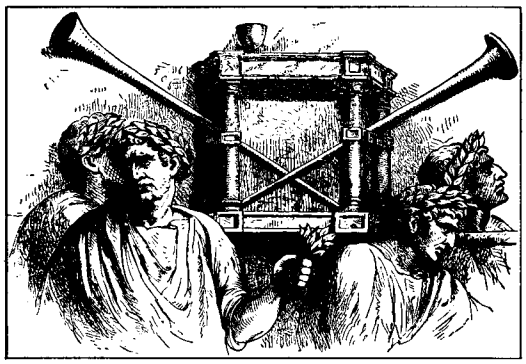
J. F. Ross

BREAD OF THE PRESENCE [לחם (ה)פנים, bread of the face (KJV SHEWBREAD); לחם התמיד, the continual bread; ἄρτοι τῆς προθέσεως, loaves to set before (God); πρόθεσις τῶν ἄρτῶν, a setting forth of the loaves]; SHOWBREAD [מערכת תמיד, the continual offering of (the bread of) the arrangement; לחם המערכת, the bread of the arrangement *or* row]. Twelve loaves, with two tenths of an ephah in each, baked of fine flour, like that used for the royal table and honored guests (Gen. 18:6; I Kings 4:22).



1. Arrangement. The loaves were arranged in two rows or piles on the table which stood before the Lord in the holy place—i.e., before the Holy of Holies (see Heb. 9:2 ff). This offering was required to be continually in the presence of the Lord (Exod. 25:30). Fresh loaves were brought into the sanctuary each sabbath, and the old loaves were then eaten by the priests in the holy place (Lev. 24:5-9). The Kohathites were responsible for baking and arranging the loaves (I Chr. 9:32).

Pure FRANKINCENSE was also placed on the table, probably in golden cups on top of the bread (Jos. Antiq. III.vi.6). This frankincense was regarded as a memorial and was later burned on the altar as an offering (Lev. 24:7). References are also made to an accompanying drink offering (Exod. 25:29; Num. 4:7).

Arrangements were made for the continual exhibition of the holy bread in the temple of Solomon, where there were probably ten tables for the bread of the Presence, though only one was in use at a time (I Kings 7:48; I Chr. 28:16; II Chr. 4:8, 19; 13:11; 29:18; for the dimensions, decoration, etc., of the table, see also Exod. 25:23-30; 40:22-23; Num. 4:7-8). Presumably the bread was unleavened (*see* UNLEAVENED BREAD), though we have no explicit biblical regulation in this matter. Josephus states that it was unleavened and that the loaves, which were baked the day before the sabbath, were brought into the TEMPLE the morning of the sabbath and heaped in two rows of six, one loaf leaning against another. The supply of frankincense was changed as a part of this ceremony (Antiq. III.vi.6; x.17).

2. Origins and early significance. The earliest mention of the bread of the Presence is probably I Sam. 21. After David's entrance into Nob, he requested that the priest Ahimelech give him the holy bread which had been removed from the table in the holy place. David requested the bread in order to feed his hungry men (I Sam. 21:4-6; cf. Matt. 12:1-4; Mark 2:23-26; Luke 6:1-4). The passage suggests the antiquity of the practice in Israel. Ahimelech's concern lest David's men be in a state of impurity further suggests that the rite was regarded as an offering in the form of a meal partaken of by the deity and his devotees, who must be in a state of purity as they approach him (Exod. 19:10-15). The fact that all Pentateuchal passages referring to the bread of the Presence belong to the Priestly Code hardly supports the conclusion that the Hebrew rite was a late innovation reflecting Babylonian influences. It is possible that the Hebrew practice developed independently, though very similar practices in Babylon, Egypt, and elsewhere (Isa. 65:11; Jer. 7:18; 44:15-19) are expressions of the same root idea. Among the constituent parts of a Babylonian sacrifice was the laying of unleavened loaves before deity in sets of twelve or multiples of twelve. The Hebrew name לחם הפנים has its counterpart in the Assyrian *akal pānû*.

3. The bread as a thank offering. There is no evidence, however, that the bread of the Presence was ever understood technically as a sacrifice, even in early Israel. Originally thought of as an offering in the form of a meal for the deity, the bread would seem, in postexilic Israel, to have been offered as a thank offering. Whatever the original, possibly zodiacal, meaning of the twelve loaves, in later times the number suggested the twelve tribes of Israel (Exod. 24:4; 28:9-12; Lev. 24:5-9; etc.).

49. Table of the Bread of the Presence of Herod's temple, from the Arch of Titus

The table of the bread of the Presence which was in the second temple was taken away by Antiochus Epiphanes (I Macc. 1:22). A new one was brought to the temple and consecrated by Judas Maccabeus (I Macc. 4:49-51). Presumably it was this table which was carried to Rome by Titus (Jos. War VII. v.5). Fig. BRE 49.

See also SACRIFICE AND OFFERINGS; WORSHIP IN THE OT.

H. F. Beck

BREAKFAST. The noun used in John 21:12, 15 RSV to translate ἀριστάω. The KJV translates "dine" in these passages, though the context shows that it was an early morning meal. In later Greek the word could be used of the noon meal; so both KJV and RSV translate it "dine" in Luke 11:37. The noun ἄριστον is translated "dinner" by KJV and RSV in all its NT occurrences: Matt. 22:4; Luke 11:38; 14:12.

S. A. Cartledge

BREASTPIECE (OF THE HIGH PRIEST) [חשן; LXX περιστήθιον *in* Exod. 28:4, *but mainly* λόγιον (λογεῖον) τῆς κρίσεως]; KJV BREASTPLATE. Literally, either a pouch or a beautiful thing such as an ornament, a garment. The breastpiece of the high priest was made of the best of fabrics, multicolored (Exod. 28:15). When folded, it made a double square *ca.* nine inches each way. By means of four golden rings it was attached to the EPHOD. On the outer

squares were four rows of three jewels set in gold, each jewel bearing the name of one of Israel's tribes.

The breastpiece had a double purpose. It provided a receptacle for the sacred lot, the URIM AND THUMMIM (hence חשם המשפט, "breastpiece of judgment"; Exod. 28:15, 29-30). Thus God's judgments were conveyed to men. But, more important, it marked out the high priest as the representative, focus, and bearer of all Israel; and, in this capacity and by showing the breastpiece as a memorial before Yahweh, the high priest brought Israel into Yahweh's holy PRESENCE (Exod. 28:29). G. HENTON DAVIES

BREASTPLATE [שריון, *cf.* Akkad. *siriam,* cuirass, armor; KJV חשן, *see* BREASTPIECE (OF THE HIGH PRIEST); θώραξ]. A piece of armor for the breast, often the front part of a corselet or cuirass. On the meaning of שריון *see* HABERGEON 1.

A breastplate (of scales, of chains, of solid metal) would be attached to, or worn over, a leather jerkin or tunic, and the latter would doubtless carry some additional armor for the back and other areas not protected by the central breastplate (cf. I Kings 22: 34; II Chr. 18:33). Iron breastplates, as well as multicolored ones, form part of the apocalyptic imagery of Rev. 9:9, 17.

The breastplate also serves as a figure of speech. In Isa. 59:17 the Lord, as a warrior, puts on righteousness as a breastplate. This symbolism is carried over into the NT: the Christian is to put on the "whole armor" (panoply) of God, which includes the breastplate of righteousness (Eph. 6:14) and of faith and love (I Thess. 5:8).

W. S. MCCULLOUGH

BREATH. The narrow, physical sense of this word is ordinarily conveyed by נשמה = πνοή. נפש is used of Leviathan's breath in Job 41:21—H 41:13. The word רוח is broadly translated as "breath," "wind," and, in the psychological and theological sense, "SPIRIT."

R. C. DENTAN

BREECHES [מכנסים] (Exod. 28:42; 39:28; Lev. 6: 3; 16:4; Ezek. 44:18; Ecclus. 45:8). Part of the garb of priests. Linen breeches are specified (linen garments were customary for Egyptian, as well as Israelite, priests). The breeches served as a cover for the priest's body from the loins to the thighs, so that he would not be exposed when ministering at the altar. It was probably a kind of double-apron affair, rather than drawers, as frequently supposed, and could be put on or off easily when the ritual required change of garment. Sewn breeches come from the Persian and Scythian milieux. J. M. MYERS

BRETHREN. *See* BROTHERHOOD.

BRETHREN OF THE LORD. *See* BROTHERS OF THE LORD.

BRIBERY; BRIBE [שלמנים, שלום, שחד, מתנה, כפר]. Bribery is the giving or receiving of a bribe—i.e., anything of value intended to influence one in the discharge of a legal duty. The gist of the offense is the resultant tendency to pervert justice (cf. I Sam. 8:3; Prov. 17:23). Taking bribes is prohibited in the laws (Exod. 23:8; Deut. 16:19), though no fixed penalty is prescribed for the offense. Bribes were offered not merely to acquit the guilty and condemn (Ps. 15:5; Isa. 5:23), or even slay (Deut. 27: 25; Ezek. 22:12), the innocent; they were equally necessary at times to get justice done (Job 6:22). The practice of gift-giving to judges, denounced by the prophets (Isa. 1:23; Mic. 3:11; 7:3), meant that the poor, when they were not actively wronged in judgment, had difficulty in obtaining a hearing for their case (Isa. 1:23*b*). Against this, Deut. 1:17 exhorts: "You shall not be partial in judgment; you shall hear the small and the great alike."

Since giving gifts was viewed as a perfectly legitimate means of getting ahead (Prov. 18:16), and was even recommended to pacify antagonists (21:14), the distinction between gifts and bribes must sometimes have been extremely subtle. *See* GIFT.

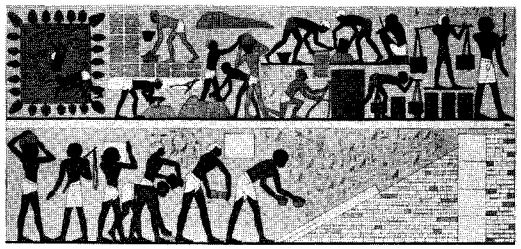
M. GREENBERG

BRICK [לבנה, *lebhēnâ, from* לבן, white; Akkad. *libittu;* Ugar. *lbnt;* Arab. *libn*]. In the ancient Middle East a most common building material was sun-dried brick; but, especially in Babylonia, kiln-burned brick was widely used. In the story of the Tower of Babel the people who migrated to the land of Shinar after the Flood said: "Come, let us make bricks, and burn them thoroughly." It is intimated that these bricks were hard, for "they had brick for stone" (Gen. 11:3).



Courtesy of Lee Ellenberger

50. Fallen brick walls at Shechem: above, Late Bronze Period; below: Middle Bronze Period

In the hills of Palestine, though stone was abundant and easily cut, brick was used extensively in some city walls, as in the Middle Bronze wall at Tell Beit Mirsim and in the Middle Bronze, Late Bronze, and Hellenistic walls at Shechem (Fig. BRI 50). In the lowlands, as at Jericho and Ezion-geber, sun-dried brick was used both for city walls and for houses. The Neolithic, pre-pottery houses in the lower levels at Jericho had first what Miss Kenyon calls "hog-back" bricks, hand shaped with thumb impressions in herringbone pattern,* followed by "bun" bricks, then in the Early Bronze Age rectangular bricks made in molds. Fig. JER 13.

In the Nile Valley, from prehistoric times to the present day, the making of bricks was an extensive occupation. From the Egyptian word for "brick," *ḏb-t,* comes through Arabic and Spanish our word "adobe." The clay was thoroughly soaked, generally mixed with straw or other vegetable matter, and brought in baskets to the artisan, who shaped the bricks by hand or a wooden mold. Such ancient molds and the pictures of brickmaking have been found.* A few of the great monuments of ancient Egypt were made of sun-dried brick and still are standing. Some Egyptian bricks and many Babylonian bricks were stamped with the names of the kings for whose edifices they were intended. Near Babylon in peasants' houses today are bricks with Nebuchadnezzar's stamp. Fig. BRI 51.

From *Atlas of the Bible* (Thomas Nelson & Sons Limited)

51. Making of bricks in ancient Egypt (*ca.* 1460 B.C.), from the tomb of Thut-mose III

Mortar in Egypt and Palestine was of the same mud as the bricks; in Mesopotamia bitumen was used (Gen. 11:3). If the wall was to be plastered, it was allowed to stand for several months before the coating was applied.

Those who burn incense on bricks (instead of stone?) are denounced in Isa. 65:3. David made captives from Rabbah toil at the brickkilns (II Sam. 12:31). The best-known biblical story of bricks is in Exod. 5, in which the command of Pharaoh popularly is misunderstood as prescribing hardship on the Hebrews by compelling them to make bricks without straw. The hardship on the brickmakers was compelling them to find the straw, which previously had been furnished, and to keep up the quota of production. *See* ARCHITECTURE.

BRICKKILN [מלבן, *from* לבן, to make bricks; *Kethibh* מלכן; Akkad. *nalbanu*] (II Sam. 12:31; Jer. 43:9 KJV; Nah. 3:14 KJV). Alternately: PAVEMENT (Jer. 43:9); BRICK MOLD (Nah. 3:14). Probably a mold of rectangular shape; the word came to be used metaphorically of any rectangle (in Jer. 43:9 a terrace of bricks, or mastaba, has been suggested as the meaning). The interpretation "brick mold" is supported by the ancient versions (e.g., πλινθεῖον, "brick works") and the fact that bricks made in Palestine were seldom kiln fired (but contrast Gen. 11:3; *also see* BRICK). There was apparently no distinction between the kiln used to fire brick and other types of furnaces (*see* FURNACE). It is more probable that David set his captives to work at brick molds than at brickkilns.

BRIDE. The translation of כלה (also "daughter-in-law"). The words אשה and γυνή, "woman," are also translated "bride" when they refer to a betrothed girl or a recently married wife. *See also* MARRIAGE; CHURCH.

BRIDE (OF CHRIST) [νύμφη, γυνή, παρθένος] (II Cor. 11:2; Rev. 19:7; 21:2, 9; 22:17; cf. Eph. 5:25-26); KJV alternately VIRGIN; WIFE. A metaphor for the church, with Christ as the bridegroom. The marriage of God to Israel is referred to in the OT (Ps. 45, often interpreted messianically; Isa. 54:6; Ezek. 16:8 ff; Hos. 2:19-20). *See* CHURCH, IDEA OF.

B. H. THROCKMORTON, JR.

BRIDLE. *See* BIT.

BRIER. The translation of various Hebrew words denoting thorny plants. It is used figuratively of the enemies of Israel (Ezek. 28:24), and of that which is worthless (Mic. 7:4), especially land (Isa. 5:6; 7:23-25; 55:13).

BRIGANDINE. KJV translation of סריון (RSV COAT OF MAIL).

BRIMSTONE [גפרית, *cf.* Akkad. *kuprîtu,* brimstone, *and perhaps related to* כפר *or* גפר, pitch (*and other combustibles*); θεῖον, *cf.* θεῖος, divine]. Sulphur. It is said to be a means of divine retribution against Sodom and Gomorrah (Gen. 19:24; Luke 17:29), the apostate and the wicked (Deut. 29:23; Job 18:15; Ps. 11:6), the king of Assyria (Isa. 30:33), Edom (Isa. 34:9), Gog (Ezek. 38:22), idolators (Rev. 14:10), the beast and false prophet (19:20), the devil (20:10), and sinners in general (21:8). W. E. STAPLES

BROAD PLACE. 1. The translation of רחב (Job. 36:16) and מרחב (II Sam. 22:20; Pss. 18:19—H 18:20; 31:8—H 31:9), both used in figurative expressions. To set in a broad place may mean to deliver from danger, anxiety, want, or distress.

2. For רחוב, which the KJV translates "broad place" in Jer. 5:1, *see* SQUARE. *See also* CITY.

O. R. SELLERS

BROAD WALL, THE [החומה הרחבה] (Neh. 3:8; 12:38). A section of the rampart of Jerusalem restored

by Nehemiah. The context suggests a location on the NW side of the city. The Hebrew is perhaps to be emended into חומת הרחוב, the "Wall of the Square" (cf. LXX τείχος τοῦ πλατέως). *See* map under NEHEMIAH. *See also* JERUSALEM § 7*b*.

G. A. BARROIS

BROIDERED. *See* EMBROIDERY.

BRONZE [נחשת, נחוש, נחושה; חשמל]; KJV BRASS; STEEL; AMBER. An alloy of copper and tin. Copper ore sometimes contains a small amount of tin, but the presence of two per cent or more of tin is to be regarded as the result of a deliberate attempt to produce an alloy, and such an object is to be classed as a bronze. Chemical analyses of ancient bronzes show from two to sixteen per cent of tin.

1. The terms. After the invention of bronze the word נחשת was used to denote the new alloy, as well as COPPER. This may have been due to the fact that it is frequently difficult to tell from the appearance of an object whether it is made of copper or of bronze. Where, however, נחשת is said to have been used for casting, it is safe to assume that "bronze" is meant, for bronze makes a much cleaner cast than does copper. For objects which could be hammered cold into shape, doubtless copper was used. For the KJV rendering of נחשת by "steel" in four passages (II Sam. 22:35; Job 20:24; Ps. 18:34; Jer. 15:12), *see* STEEL. For חשמל in Ezek. 1:4; etc., *see* AMBER.

2. The origin of bronze. It is as yet uncertain where the discovery was made that the addition of a small amount of tin, up to four per cent, increases the strength and hardness of copper and at the same time lowers its melting point. The most probable location is one where copper and tin ores occur in close association. Such areas are to be found in Syria (the Kasrwan district behind Byblos), Armenia, the Caucasus, and NE Iran. Wainwright (*see bibliography*) favors Syria, but the earliest bronzes found in Syria, at Ras Shamra, date only from *ca.* 2050-1850 B.C., whereas bronzes have been found at Ur dating from *ca.* 2500 B.C. On the other hand, the absence of metal ores of any kind in Sumer makes it highly improbable that the art of making bronze was discovered there. Schaeffer (*see bibliography*) favors Armenia and Anatolia and believes that immigrant bronze-workers from this area, who had as the badge of their profession a bronze torque or neck ring, introduced bronze-working to Byblos, whence it spread to other areas, including Europe. A few bronze objects have been found in Egypt which seem to date from before 2000 B.C. Even if their dating be correct (which is by no means certain), they are probably to be regarded as the results of an accidental mixture of copper and tin, for there is no other evidence that the art of making bronze was understood in Egypt before the Middle Kingdom.

3. Bronze in Palestine. Because of the failure of the early archaeologists to subject their metal finds to chemical analysis, it is impossible to tell whether the "bronzes" mentioned in their reports are of bronze or of copper. However, the adoption of more scientific methods has shown that bronze made its first appearance in Palestine at the beginning of the Middle Bronze Age, or just before it. A few bronze studs found at Jericho are dated to the period 2300-1900 B.C. and associated with invaders from the N, probably Amorites from Syria. Many MB tombs at Jericho contained bronze rings set with scarabs of local manufacture. Lachish yielded a bronze toggle pin, a figurine, and a pin of Eighteenth Dynasty date (sixteenth-fourteenth centuries B.C.). A larger number of bronze objects was found at Megiddo. But, to judge from archaeological finds, bronze was by no means common in Palestine even during the Middle Bronze Age.

Metals were one of the chief spoils of war, as lists of booty taken by various conquerors show. When David defeated Hadadezer of Damascus, he is said to have carried off from two of the Syrian cities, Betah and Berothai, "very much bronze" (II Sam. 8:8). Similarly when the Chaldeans captured Jerusalem in 586 B.C., they carried away all the copper and bronze they could find (II Kings 25:13-17=Jer. 52: 17-23).

Solomon is said to have employed נחשת (copper and bronze) on a lavish scale in the adornment and furnishing of the temple (cf. I Kings 7:13 ff; II Chr. 3:15–4:1 ff). Since Israel had no long tradition of metalworking and, therefore, no highly skilled smiths, Solomon was obliged to import an expert from Tyre (*see* HIRAM) to supervise the work. The casting of the bronze objects was done in the Jordan Valley, between Succoth (probably to be identified with Tell Deir'allah) and Zarethan (site unknown; I Kings 7:46; II Chr. 4:17, where read צרתן [Zarethan] for צרדתה [Zeredah]). The reason for the choice of this location is not certain. Possibly smelters may already have existed here on the edge of Gilead. *See* IRON.

52. Brooches, from Tell el-Nasbeh

BROOD [νοσσίον, *diminutive* of νεοσσός, nestling, *from* νέος, young; νοσσιά, *later form of* νεοσσιά, nest or brood of young birds; *cf.* νεοσσεύω, to hatch, build a nest]; KJV CHICKENS in Matt. 23:37. Young birds, especially of the domestic fowl. *See also* COCK.

W. S. McCULLOUGH

BROOK. A small stream and its bed, called in Arabic a *wadi,* which may be perennial when fed by springs, or completely dry and a raging torrent, depending on the amount of rainfall. *See* RIVER.

The Hebrew נחל is usually translated "brook" (Lev. 23:40; Deut. 9:21; I Sam. 17:40; I Kings 17:7; etc.). The same word may refer to a river or valley, depending on the context of the passage and the geography of the area involved—e.g., "river Jabbok" (נחל יבק; Deut. 2:37); "valley of the Arnon" (נחל ארנן; Deut. 2:36). The Hebrew text usually makes a distinction among "brook," "river" (נהר), and "valley" (עמק), although it was not always possible to do so, because of the tendency of the brooks to assume the proportions of rivers during the rainy seasons.

The brooks of ancient Palestine and the E Jordan area were numerous. They flowed into the coastal plain, the Sea of Galilee, the Jordan Valley, and the Dead Sea. Brooks were considered a pleasant feature of the land and important as sources of water for the villages often located near them (Deut. 8:7; II Chr. 32:4; Ps. 110:7; Jer. 31:9; etc.), although their treacherous nature in the rainy seasons was recognized (Job 6:15). They were often mentioned by name for the purpose of indicating important national or tribal boundaries, or other locations. *See* ARABAH, BROOK OF; BESOR; CHERITH, BROOK; EGYPT, BROOK OF; KANAH 2; KIDRON, BROOK; KISHON; WILLOWS, BROOK OF; ZERED, BROOK.

BROOK OF THE ARABAH. *See* ARABAH, BROOK OF.

BROOK OF EGYPT. *See* EGYPT, BROOK OF.

BROOM [רתם, *rōthem;* Arab. *ratam*]. A desert shrub or bush which frequently grows quite large, offering a bit of shade. Elijah, on his way to Mount Horeb (I Kings 19:4-5), took refuge in its shade. Its roots and foliage were used for fuel (Job 30:4; Ps. 120:4). A place along the route of the Exodus, Rithmah, carried the name of this shrub (Num. 33:18-19). The figurative "broom" of Isa. 14:23 (KJV BESOM) could refer to a hand broom made from this shrub.

The KJV uses JUNIPER rather than "broom," but almost all scholars maintain now that it was the leguminous *Retama raetam* (Forsk.) Webb. (also called *Genista monosperma* L.), commonly known as the "broom tree," so abundant in the desert regions of S Palestine and Sinai. In Job 30:4 KJV לחמם is translated "their meat"; but the roots of the broom are nauseous, even poisonous, thus leading many botanists to assume that another plant is meant here (Moldenke: *Cynomorium coccineum* L., a parasitic plant). The RSV takes the word as an infinitive of the root חמם, "to become warm" (cf. Isa. 47:14), leaving no need to change the identification. *See also* FLORA § A9*h*.

J. C. TREVER

BROTH [מרק, פרק]. The water in which meat has been boiled. Since it retained many of the nutrients, it was not poured out, but eaten along with the meat. Gideon served the angel unleavened cakes, a kid, and broth (Judg. 6:19-20; cf. Isa. 65:4; Ezek. 24:10). *See also* MEALS § 3*b;* FOOD.

J. F. ROSS

BROTHERHOOD. Scripture has no interest in brotherhood as such. Indeed, אחוה occurs only at Zech. 11:14 of union between Judah and Israel. The RSV "brotherhood" in Amos 1:9 translates an original "brethren." Similarly, the unusual Greek word ἀδελφότης is found only at I Pet. 2:17; 5:9, referring to the Christian community (cf. I Pet. 1:22: φιλαδελφία [*philadelphia*]; 3:8: φιλάδελφοι). To discover what the Bible has to say about brotherhood, it is essential to study its message about actual brothers.

1. The OT teaching. The OT teaches that God set mankind in families (Ps. 68:6; cf. Isa. 19:2, Egyptians; Deut. 2:4, Edomites and Israelites; Gen. 13:8, Abraham and Lot). Stories and genealogies exhibit interest in the history of some nations, chiefly Semitic (Gen. 1–11; I Chr. 1–9).

Quite apart from blood relationship, "brother" may be used of friends, allies, colleagues, and fellow citizens: II Sam. 1:26 (David and Jonathan); I Kings 9:13 (Hiram of Tyre and Solomon); Gen. 49:5 (within the sons of Jacob, Simeon and Levi were united in infamy; cf. Gen. 34:25-31); Lev. 21; Num. 8:23-26; II Chr. 29:34 (the brotherhood of priests and Levites); Amos 1:9 (Tyre broke an alliance by allowing slave raids); I Sam. 30:23 (David addressing his soldiers). Naturally, different degrees of affection were implied in such usage, but there was a proverb about a "friend who sticks closer than a brother" (Prov. 18:24). Brethren should be friends (Gen. 13:8; Ps. 133:1; Prov. 17:17), yet the OT candidly depicts disruption, war, and death caused by greed, cruelty, spoiled self-centeredness, injustice, and other forms of sin (cf. Ps. 50:20; Neh. 5:7; Jer. 9:4-6; Ezek. 18:10 ff; Zech. 7:9-10). We note especially Cain and Abel (Gen. 4:9), Esau and Jacob (Gen. 27:41), Joseph and his half brothers (Gen. 37:20), Moses and the quarreling Hebrews (Exod. 2:13), and Joab's vengeance on Abner for the death of Asahel (II Sam. 3:20 ff); and we contrast the love displayed in the intercession of Abraham for Lot (Gen. 18:23 ff), Judah for Benjamin (Gen. 44:18 ff), and Moses for the entire nation (Exod. 32:11-14, 31-32). *See* LOVE IN THE OT; BROTHERLY LOVE.

As the seed of Abraham and God's elect people (Exod. 19:5-6; Deut. 7:6 ff; Jer. 31:1; Amos 3:2), Israel was a family and her people brethren: "Have we not all one father? Has not one God created us?" (Mal. 2:10; cf. Lev. 25:46; Deut. 17:15; 18:18; Ps. 22:22; Hos. 11:1). It must be kept racially pure (Deut. 7:3-4; Ezra 9–10; Neh. 13:23-27), and a man might have to marry his deceased brother's widow to maintain a name and a line (Deut. 25:5 ff; Ruth 3:6 ff; cf. Matt. 22:23 ff). Hence too the rule: "You

shall not hate your brother in your heart. . . . You shall love your neighbor as yourself" (Lev. 19:17-18; 19:34 extends this rule to the resident alien; cf. Deut. 15:2, and, for a practical application regarding usury, Deut. 23:19). Thus the OT teaches that, within the nation, a man is his brother's keeper—a truth that has bearing on matters of social welfare, trade, and religious customs. The OT also holds out hope that in Abraham "all the families of the earth will bless themselves" (Gen. 12:3; cf. Isa. 49:6).

2. In the NT. When we turn to the NT, we find genealogies of Jesus the Messiah in Matt. 1; Luke 3, and mention of his brothers and sisters in Mark 3: 31; 6:3; John 7:3; Acts 1:14; Gal. 1:19. There were brothers among the Twelve (Mark 1:16, 19; cf. Luke 6:16, variant reading). The NT writers were well aware of the different nations: Jews and Gentiles; Greeks, Romans, Scythians, Egyptians, Cypriotes (all represented in Jerusalem on the Day of Pentecost! Acts 2:9-11). But little is made positively of natural kinship; rather, such kinship may conflict with, and must yield to, the claims of God's kingdom (Matt. 10:37; Luke 9:61-62; 14:26). The ultimate goal is the city of God and the healing of the nations (Rev. 21: 24; 22:2).

Jesus probed the deepest meaning of the OT commandment to love one's neighbor (Mark 12:31; Luke 10:29 ff) and extended it to enemies (Matt. 5:44). Covetousness is excluded (Luke 12:13-15), and the censorious attitude (Matt. 5:22-24; 7:1-5). Invite the poor who cannot invite you back! (Luke 14:12-14). Kindness might be shown beyond Israel's borders (Mark 7:24 ff; cf. Matt. 5:41 of forced levies); and careless neglect of a fellow Jew might lead to the desolations of hell (the rich man and Lazarus [Luke 16:19 ff]; note the teaching on wealth [Mark 10: 23 ff], and Mammon [Luke 16:13]). The sons of God must abandon a narrow, selfish, harsh spirit (Matt. 5:43-48; 18:23 ff; Mark 11:25; Luke 15:25 ff [the elder "brother"!]; 17:3-4; cf. Col. 3:13). This ethic of Jesus derived from knowledge of God as Father, gracious and loving (Mark 14:36; Luke 11:2; Matt. 7: 11; John 14:2; 17:9 ff). For the apostolic church, too, God is Father, the Father of the Lord Jesus Christ (e.g., Acts 1:4; Gal. 4:6; Eph. 2:18; 3:15: "from whom every family in heaven and on earth is named"; I John 3:1). *See* GOD, NT; TEACHING OF JESUS.

The men and women who responded to Jesus with a measure of faith in his mission are his pupils or apprentices, but also his "brethren," for they seek to do God's will (Mark 3:34; Luke 11:27-28); he and they are the true Israel (John 15:1-17; Mark 8:29; cf. references to seed of Abraham: Luke 13:16, a woman; 19:9, a man; John 8:37 ff); the Twelve may anticipate the banquet of the messianic kingdom (Luke 12:32; 13:29; 22:29-30; cf. the Rule of the Congregation from Qumran, 1QSa), and their rewards will include "brothers and sisters and mothers and children and lands" (Mark 10:30). Christ's identification with his people and his disciples is notable (at baptism; in mission, Luke 10:16 and parallels; John 20:17; Matt. 25:40, the Judgment, where "brethren" need not be confined to disciples; Mark 9:41). Service and unity are keynotes of the brotherhood of disciples (especially Matt. 23:8-10; John 13: 12 ff).

Ideas of the church formulated after Pentecost gather up similar thoughts. In it the promise to Abraham is being fulfilled (Gen. 12:3; Gal. 3:8 ff; Acts 3:25; Heb. 2:16; 11:12, 18-19), so that it is a "first fruits" of a redeemed mankind (Gal. 3:28; Eph. 2:14; 3:9; 4:22-23; cf. Heb. 12:22-23; Rev. 14: 4, of the redeemed in heaven). It is the brotherhood of the new Israel (Gal. 6:16; Eph. 2:12; I Pet. 2:5, 9; Rev. 21:2, 7); the family of God through its jointheirship with Christ, the true "Elder Brother" (I John 2:10; 3:1 ff; Gal. 4:6; Rom. 8:17-29; Heb. 1:6; 2:10-11; Eph. 1:5; 5:1; *see* ADOPTION). For Paul it is the "body of Christ," agent of the Holy Spirit, intended to be one, universal, and Christlike (I Cor. 12, etc.; cf. Eph. 1:22-23; *see* CHURCH, IDEA OF).

Brotherly love, therefore, should be typical of congregations as close-knit corporations of believers (I Pet. 3:8-9; Rom. 12:9 ff; 13:8-10). Such a love is redemptive (Jas. 5:20; I Pet. 4:8; cf. Luke 7:47); impartial (Jas. 2:1 ff); practical (Jas. 2:14-17; I John 3: 17-18), and so on (cf. Jas. 4:11-12; I John 3:12; III John 11; II Pet. 1:7). This love is commanded, and obedience to it alone attests love for God (John 13: 34; I John 4:20-21; *see* LOVE IN THE NT; BROTHERLY LOVE). Even in the first flush of the apostolic age, however, Ananias and Sapphira were defaulters (Acts 5), and "false brethren" bitterly opposed Paul (Gal. 2:4; II Cor. 11:26).

Nonetheless, "brethren" was the regular and perfectly genuine mode of address (Acts 1:16; Rom. 1: 13; I Tim. 4:6, etc.). Christians were "holy brethren" (Heb. 3:1; I Thess. 5:27 [variant reading], "beloved brethren" (I Cor. 15:58; Phil. 4:1; Jas. 1:16; cf. Acts 15:25; II Pet. 3:15). They constituted a spiritual brotherhood, distinct from the "world" as were the Qumran covenanters, and paradoxically exclusive because they made such high claims for themselves as the elect of God through Jesus Christ. Without sincere love like that of Christ himself, the brotherhood might easily degenerate into a self-righteous coterie; without wisdom its members might become lazy eschatologists or idealist revolutionaries (I Thess. 4:9-12; I Pet. 4:15-16). The wonder of the NT age was how slaves and masters became brothers beloved in the church of the living God, and how "from every tribe and tongue and people and nation" (Rev. 5:9) Christ was calling men and women into a redemptive society for which the word "brotherhood" was no unfitting title.

G. JOHNSTON

BROTHERLY LOVE [φιλαδελφία]. A biblical concept given this name in the NT only.

The OT has the reality though not the word, for "neighbor" in Lev. 19:17-18 means "brother Israelite," and the rule of neighborly love is extended in Lev. 19:34 to the resident alien (cf. Deut. 10:19). The unity of a family is praised (Ps. 133:1; cf. Gen. 13:8, and the example of a clan rescue in Gen. 14:14-16). True friendship is a lasting and peculiarly close bond of love, often closer than that of blood brothers, as the immortal story of David and Jonathan shows

(I Sam. 18–II Sam. 1; Prov. 17:9, 17). Very moving is Joseph's affectionate reconciliation with his brothers (Gen. 43:30; 44:14 ff). Intercession expresses brotherly love: Abraham for Lot; Judah for Benjamin; and Moses for Israel (Gen. 18:23 ff; 19:29; 44:33; Exod. 32:11 ff). *See* LOVE IN THE OT; BROTHERHOOD.

In the NT φιλαδελφία occurs only at Rom. 12:10; I Thess. 4:9; Heb. 13:1; I Pet. 1:22 (cf. 2:17; 3:8 [φιλάδελφοι, "love of the brethren"]; 5:9); II Pet. 1:7. With these cf. 1QS 1.9; 2.24; 5.4; 10.26.

Christians are a family, a brotherhood in the service of Christ (Matt. 23:8), commanded to love one another in imitation of him (John 13:34; 15:12-13; Rom. 12:3; 13:8, 10; 16:5 ff; Gal. 5:13; 6:10; Eph. 4:2; Col. 1:4; 2:2-3; I Thess. 3:12; Tit. 1:8 [hospitality became distinctive]; Philem. 5, 16; I John *passim*). For them brotherly love is intense, because of their common covenant, faith, and hope; but it is comprised within that perfect love, *agape*, which is universal in its range. Since it is inspired by Jesus and his Spirit, it is gentle, kind, patient, pardoning, self-effacing, and sacrificial. *See* LOVE IN THE NT.

G. JOHNSTON

BROTHERS OF THE LORD [ἀδελφοὶ τοῦ κυρίου]. The men commonly thought of as brothers of Jesus. The phrase occurs in I Cor. 9:5, and Gal. 1:19 refers to "James the Lord's brother."

1. NT evidence
2. Three main views
   a. Helvidian
   b. Epiphanian
   c. Hieronymian
3. Critical evaluation of these views
4. Conclusion

Bibliography

1. NT evidence. Mark 6:3 lists them as James, Joses, Judas, and Simon; Matt. 13:55 names James, Joseph, Simon, and Judas; Joses and Joseph seem alternate forms of the same name.

The gospels of Matthew and Mark describe these four as children of Mary (Matthew mentions that his father was a carpenter) and as brothers of Jesus. They go on to mention that "his sisters" were living in Nazareth. Since Jesus is clearly said to be the first child of Mary (Matt. 1:18; Luke 2:7), any other children of Mary must have been younger than Jesus, and the two verses just noted would normally imply that Joseph and Mary had other children in the years following Jesus' birth. The people of Nazareth (Matt. 13:54-56; Mark 6:2-3) describe the four men as children of Mary and brothers of Jesus.

These brothers did not approve of Jesus' ministry. This is clear in the Synoptic gospels. Jesus himself, in the Nazareth incident mentioned above, said that a prophet is without honor "in his own house" (Matt. 13:57; Mark 6:4). This clearly implies opposition within his own family. On another occasion his family are so far from approving his zealous ministry that they think him to be "beside himself" (οἱ παρ' αὐτοῦ in Mark 3:21 does not mean "his friends," but lit. "the ones from beside him," his family; and when they reach Jesus in Mark 3:31, they are identified as his mother and brothers). The Gospel of John agrees that "even his brothers did not believe in him" (7:5). In view of these facts, none of the four brothers could have been numbered among the twelve apostles.

It is clear, however, that James saw the risen Lord (I Cor. 15:7). The brothers thus became members of the Jerusalem church from the earliest days —a fact attested by Acts 1:14, which explicitly distinguishes the brothers from the eleven apostles, who are named in the preceding verse. I Cor. 9:5 goes well with this distinction between the Twelve and the brothers of the Lord. James became the recognized leader of the church at Jerusalem (Acts 12:17; 15:13; 21:18). Paul reflects this leading role of James in Gal. 1:19. On Paul's first trip to Jerusalem after his conversion, he visited Cephas and also saw James. It is disputed whether Paul here ranks James as an apostle; the Greek words εἰ μή may mean that apart from Cephas, he saw no other apostle "except" James, which would class James as an apostle, or they may mean that he saw no other apostle, "but only" James. Either translation is possible, but it must be remembered that the word "APOSTLE" was not limited to the Twelve, since Paul, Barnabas, Andronicus, Junias, and others were included in the wider sense of the word as a designation of special pioneer missionary preachers. So even if, as seems likely, James was considered an apostle by Paul, this does not mean that Paul considered him one of the Twelve.

The NT thus regards the brothers of the Lord as sons of Joseph and Mary, younger than Jesus, unresponsive to his preaching during his earthly ministry, but active and leading members of the church from the beginning of the apostolic age.

2. Three main views. This NT view was challenged, however, by the middle of the second century. The debate became particularly fierce in the latter part of the fourth century, when each of three rival positions found a vigorous advocate whose name is now used to designate the view he championed. The three views are called (*a*) the Helvidian, after Helvidius, whose tract on the subject survives only in the citations and denunciation of it by Jerome; (*b*) the Epiphanian, after Epiphanius, whose discussion of his view survives in his tract *Against the Antidicomarianites,* included in his work *Against Heresies;* and (*c*) the Hieronymian, so named after Jerome (Latin *Hieronymus*), who wrote in opposition to Helvidius a work called *The Perpetual Virginity of the Blessed Mary.*

a. Helvidian. Unfortunately we do not possess the full argument of Helvidius, but from the quotations and hostile comments of Jerome, Helvidius clearly held the brothers of the Lord to be sons of Joseph and Mary and younger than Jesus. In this view he claimed to follow Tertullian and Victorinus of Pettau, but Jerome claims that Victorinus supported the Hieronymian view. The main argument of Helvidius evidently was that the NT, correctly interpreted, supports his position. Bonosus and, as it appears, Jovivianus held the same view.

b. Epiphanian. According to this view, Jesus' brothers were sons of Joseph but not of Mary. It claims secondary support in certain NT passages. E.g., it is argued that the attempt of the brothers to exercise control over Jesus, as in Mark 3:31; John

7:3-4, shows that they were older than Jesus and so not sons of Mary, whose first-born son was Jesus; and it is alleged that Jesus would not have committed his mother to the Beloved Disciple if the brothers had really been sons of Mary (John 19:26-27).

The main content of the Epiphanian view, however, is not found in the NT. The claim is that Joseph had been married previously, that the "brothers of the Lord" were Joseph's sons by this former marriage, that Joseph was over eighty years old when he took Mary as his wife and gave her the protection of his home, that he never had normal marital relations with Mary, and that Mary thus remained forever a virgin. The essential content of this view has no NT support, but it appears in apocryphal gospels from the middle of the second century, the earliest example being the Protevangelium of James. It found wide acceptance in the third and fourth centuries and in all later times. It is the view of the Greek Orthodox and other Eastern churches, and has been held by many Protestants.

c. Hieronymian. As far as can be learned, this view was first proposed by Jerome, but it at once won followers and is the Roman Catholic view. Jerome argues that James the brother of the Lord was an apostle (Gal. 1:19); he is to be identified with James the son of Alphaeus (Mark 3:18) and also with James "the younger" (Mark 15:40), the brother of Joses. Now James and Joses are called "brothers" of Jesus (Mark 6:3). Their mother, called Mary in Matt. 27:56; Mark 15:40, was "Mary of Clopas"; she was the sister of Mary the mother of Jesus (John 19:25). This makes James and Joses cousins of Jesus. Jerome points out that the word "brother" has a wide variety of meaning in the Bible. It can mean "kinsman," and is so used in this case. Thus, in effect, "brother" here means "cousin," and Mary never had marital relations with Joseph; Jesus was her only son.

Later writers identify two others of the Twelve, "Judas (not Iscariot)" (John 14:22) and Simon the Zealot (Luke 6:15; Acts 1:13), as brothers of the Lord (Mark 6:3); this view holds that three of the four brothers were among the Twelve. Another later addition to the theory is the assertion that the names Alphaeus and Clopas are identical, since both derive from the Aramaic *Ḥalphay* (חלפי). It has even been suggested that Matthew was one of the "brothers," since he seems to be named also Levi the son of Alphaeus (cf. Matt. 9:9 with Mark 2:14).

3. Critical evaluation of these views. The Helvidian view rests upon the natural meaning of the relevant NT passages. Against it one might urge that in John 2:12 the brothers seem favorable to Jesus' ministry; but their presence with Jesus, if conceded, is not definitely equivalent to approval of his work, and John 7:5 is unquestionable evidence that they were not then his disciples. It may also be urged that since the brothers were active in the church from the earliest days, they must have been favorable to Jesus during his ministry. To say this, however, would be to substitute an indecisive a priori assumption for the specific evidence of the gospels that the brothers were not his followers and apostles during his ministry. But even if both these criticisms were accepted, they would leave untouched the basic fact that the NT thinks of the brothers as sons of Joseph and Mary, and younger than Jesus.

Jerome tried hard to establish his view by the NT evidence, but the boldness of his attempt is clear from the fact that before he wrote, toward the end of the fourth century, no one had proposed such a theory. His argument that James must have been one of the Twelve because he is called an apostle in Gal. 1:19 may interpret this verse correctly, but as seen above, there is in the NT a wider definition of the word "apostle," so that James (and Paul and others) could be an apostle without being one of the Twelve. The idea that "brother" (ἀδελφός) here means in effect "cousin" is rather startling. The second-century Hegesippus calls James and Jude "brothers" of the Lord but uses "cousin" when referring to another kinsman; this gives no support to Jerome's attempt to identify the "brothers" as cousins. Moreover, these brothers are always found in company with Mary the mother of Jesus, in a way that does not suggest that they are only cousins. Jerome's interpretation of John 19:25 is extremely unlikely, since it holds that two sisters both had the same given name, Mary. The linguistic equation of Alphaeus with Clopas is unconvincing, if not impossible. Jerome's argument that besides James the son of Zebedee there was only one other James among the early leaders, since "James the younger" implies there were only two Jameses to compare in rank, is a blunder; the Greek reads, not "James the younger," but "James the Little." No comparison is implied; the title may mean he was short of stature. In general, James, Joses, Judas, and Simon were four of the most common Jewish names at that time, and the appearance of such names among both the apostles and the brothers of the Lord is no proof that the two groups overlap. The real concern of Jerome, as the title of his tract shows, is not to define the relation of the brothers of the Lord to Jesus; it is rather to ward off the conclusion that Mary ever had normal marital relations with her husband or bore other children after the birth of Jesus. The argument he makes, that "knew her not until she had borne a son" (Matt. 1:25) and "gave birth to her first-born son" (Luke 2:7) do not necessarily imply that Mary later had other children, points to a possible but not natural interpretation of these passages; these passages, however, taken together with the later gospel passages concerning brothers of Jesus living in the home of Mary, point away from the interpretation that they are "cousins."

The Epiphanian view has one distinct advantage over the Hieronymian: it rests on a tradition that clearly runs back to the middle of the second century. But its crucial weakness is its lack of support in the NT. It, with Jerome's view, depends upon a doubtful interpretation of Matt. 1:25; Luke 2:7. Its assumption of a former marriage of Joseph is without NT basis. The idea sometimes proposed, that in Luke 1:34 Mary means that while about to establish the outward form of a marriage she intends to maintain permanently her virginity, reads too much into the words. The argument that the brothers of Jesus assume authority in a way which only older brothers would do, and so show that they must be sons of Joseph by a former marriage, is subjective and un-

convincing; younger brothers could be critical and demanding if they agreed with a community conviction that Jesus was disgracing his family and home town by his zealous activity. The claim that Jesus would not have asked the Beloved Disciple to care for his mother if the brothers had been her children neglects the fact that his brothers did not yet believe in him; Jesus himself gives the answer to this objection, for he explicitly ranks spiritual kinship above family relationship (Mark 3:31-35).

The Protevangelium of James (*see* JAMES, PROTEVANGELIUM OF), which J. B. Lightfoot (*see bibliography*) justifiably characterizes as "purely fictitious," is our earliest witness to the Epiphanian view. Of the later apocryphal gospels which tell the same story, Lightfoot rightly says: "Doubtless these accounts, so far as they step beyond the incidents narrated in the canonical Gospels, are pure fabrications." It may be added that the arguments of Epiphanius are neither substantial nor convincing, except when supported by the conscious or unconscious assumption that it would have been incongruous, or even unthinkable, for Mary to have given birth to other children. This widespread attitude includes two aspects: It finds it unbelievable that God would permit the mother of the sinless Christ, the Lord, to have at a later time other children who would share the sinful state of mankind. It also is convinced that Mary remained a virgin; she who experienced the miracle of being the mother of Jesus Christ never entered into normal marital relations with her husband.

4. Conclusion. Those who find these feelings justified may follow the Epiphanian view and accept its early church tradition, as Lightfoot did, in spite of the fact that its earliest traceable expression occurs in fictitious apocryphal narratives. Those who settle the question by NT evidence usually favor the Helvidian view, which seems to be the one view which is exegetically justified. The view of Jerome lacks clear support in the NT or in early church tradition.

F. V. FILSON

BROWN. KJV form of BLACK in Gen. 30:32-33, 35, 40.

BUCKET [דלי]. A leather bucket was used for drawing water from a well or cistern (Isa. 40:15; Num. 24:7). The mouth of the bucket was kept open by a stick made in the form of a Greek cross. A similar bucket is used in parts of Palestine today. Fig. BUC 53.

J. L. KELSO

BUCKLE [πόρπη]. A clasp for fastening an outer cloak or robe, the χλαμύς or *pallium,* worn over a tunic undergarment and pinned at the shoulder (*see* DRESS AND ORNAMENTS). In general use in the Mediterranean world of the Greco-Roman period, brooches were sometimes given as rewards for valor and were emblems of rank. In the Eastern section of the Roman world the golden clasp and the wearing of purple, restricted to very distinguished persons or subject rulers, designated them as "friends and kinsmen" of the king (cf. I Macc. 10:89; 11:58; 14:44).

53. Man watering a garden with a bucket well, from a tomb painting of Thebes

BUCKLER [מגן, *māghēn, from* גנן, defend, cover; סחרה, *sōḥērâ* (Ps. 91:4), *cf.* Akkad. *seḥertu,* enclosure, circuit; צנה, *ṣinnâ, cf.* Arab. *ṣāna,* preserve, keep]. Alternately: SHIELD (*see below*). A small, usually round, shield carried in the hand or worn on the arm.

Ancient shields fall into two main classes, a large one affording protection to the whole world of the body, and a small one carried usually on the left arm. This distinction is recognized in the OT in I Kings 10:16-17, where צנה is a "large shield" and מגן is a "shield." The latter term could therefore often better be translated "buckler," and this is sometimes the case (Song of S. 4:4; Jer. 46:3; etc.). In this respect the KJV is often to be preferred to the RSV (Job 15:26; Ps. 18:2, 30—H 18:3, 31; etc.). But more commonly מגן is rendered "shield" by both KJV and RSV (e.g., Judg. 5:8), and in II Chr. 23:9 the RSV translates it "large shield." Conversely, צנה is wrongly rendered "buckler" in Ps. 35:2; Ezek. 23:24; 38:4; etc. The KJV is also in error in I Chr. 12:8—H 12:9 when it renders רמח, "spear," as "buckler." From all this it is evident that the English translators have not been too exact in their treatment of these terms. It is also probably true that the OT writers felt free to use these words rather loosely.

In the OT "buckler" is used both literally and figuratively. The literal usage calls for no comment here except to note that to it belongs I Kings 10:16-17, which describes Solomon's ceremonial bucklers

and shields, decorated with gold. They were of no military value, although on occasion they may have been carried into battle (cf. II Sam. 8:7). Later, when these objects were looted, they were replaced by bronze ones (I Kings 14:25-28). The figurative use of "buckler" is illustrated by such passages as II Sam. 22:31 KJV; Ps. 18:2, 30—H 18:3, 31 KJV; Prov. 2:7 KJV; etc. In Job 15:26 KJV the resistance of the wicked man to God is described under the figure of a "buckler." *See* SHIELD; WEAPONS AND IMPLEMENTS OF WAR.

BUKKIAH bə kī'ə [בקיהו, *possibly* vessel of Y (*see bibliography*)]. A Levite, son of Heman; one of those appointed by David to prophesy with musical instruments in the temple (I Chr. 25:4, 13; cf. vs. 1; on this passage *see also* GIDDALTI).

Bibliography. H. B. Gray, *Studies in Hebrew Proper Names* (1896), p. 205; M. Noth, *Die israelitischen Personennamen* (1928), p. 226; W. A. L. Elmslie, Exegesis of I Chronicles, *IB,* III (1954), 426-27.

B. T. DAHLBERG

BUL bo͝ol [בול]. The old (Canaanite) name of the eighth Hebrew month (October-November), later called MARCHESHVAN. *See* CALENDAR.

BULL, BULLOCK [אביר (*alternately* STRONG BULL, MIGHTY BULL, STALLION; KJV *alternately* VALIANT MAN, STRONG ONE, STRONG HORSE), mighty one; *cf.* Akkad. *abâru,* be strong; Ugar. *ibr,* bull; *for the meaning* stallion, *see* Gordon 232; *for* בקר *and* שור (Aram. תור), *see* Ox; KJV עגל (RSV CALF)]; YOUNG BULL [פר בן בקר] (Lev. 4:3, etc.; KJV YOUNG BULLOCK). In English "bullock" meant originally "young bull"; it has been avoided in the RSV.

Bulls were part of a gift of cattle for Esau (Gen. 32:15—H 32:16). Successful breeding by a bull is referred to in Job 21:10.

"Bull" has various figurative meanings: the aggressive vigor of Joseph (Deut. 33:17); the pride and strength of Assyria (Isa. 10:13); the psalmist's enemies (Ps. 22:12—H 22:13); the kings of Gentile nations (Ps. 68:30—H 68:31); the leaders of Edom (Isa. 34:7) and of Babylon (Jer. 50:27). Probably the reference in Ezek. 39:18 is to be included in this category.

By far the commonest use of "bull" in the Bible is as a sacrificial animal. Such an animal would be uncastrated (Lev. 22:24); and since the English word "ox" has more specific reference to a castrated male bovine, "bull" would be a better rendering in Lev. 4:10; 7:23 and similar contexts (*see* Ox). Its age is not usually specified, except that it must be at least eight days old (Lev. 22:27); the references are to a calf (Lev. 9:2), a three-year-old (I Sam. 1:24), and a seven-year-old (Judg. 6:25; cf. M. Par. 1.2).

The bull is mentioned as a sacrificial animal without reference to the particular occasion or purpose of the sacrifice in Lev. 22:23; Num. 23:1; Ezra 6:9; Pss. 50:13; 51:19—H 51:21; Isa. 1:11; Hos. 12:11. It is a sacrifice offering by individuals under certain special circumstances in Judg. 6:25 (Gideon); (I Sam. 1:24 (Hannah); I Kings 18:23 (Elijah); Ezra 8:35 (the returning exiles); Job 42:8 (Eliphaz, Bildad, and Zophar).

Most of the OT references to the bull are in the priestly narratives, and are connected either with the inauguration of the sacrificial system or with sacrifices on various sacred days. The more important of these occasions are: the consecration of priests (Exod. 29:1-37); the dedication of the altar of the tabernacle (Num. 7; cf. Ezek. 43:18-27); the purification of the Levites (Num. 8:5-22); various sin offerings Lev. 4; 16; cf. Heb. 9:13; 10:4); the New Moon Day (Num. 28:11-15); the Passover (Num. 28: 16-25; cf. Ezek. 45:21-25); the Feast of Weeks (Num. 28:26-31); the first of the seventh month (Num. 29: 1-6); the Feast of Booths (Num. 29:12-40). The latter has the distinction of exacting the largest number of bulls (seventy-one) for burnt offerings of all the annual feasts. We may compare the one hundred bulls of Ezra 6:17 and the one thousand bulls of I Chr. 29:21.

The use of bulls in Israel's cultus was a part of the religious tradition of Western Asia.* The sacrifice of bulls (and other animals) was an accepted way of satisfying the gods. Further, the bull was a widespread symbol of fecundity, and this may have made it a popular offering. The Canaanite recognition of El, head of the Ugaritic pantheon, as "father bull El" enhanced the cultic value of bulls along the Mediterranean littoral. Whether the Canaanite tradition of El as a bull or the association of the bull with BAAL

54. Copper bull from a First Dynasty temple at al-'Ubaid, near Ur

had anything directly to do with the golden bulls ("calves") which Jeroboam set up at Bethel and Dan (I Kings 12:28) is speculative (*see* CALF, GOLDEN). There were twelve bronze bulls supporting the bronze sea at the Jerusalem temple ("oxen" in I Kings 7:25; II Kings 16:17, but more properly "bulls," as in Jer. 52:20). *See* SEA, MOLTEN. Fig. BUL 54.

55. Bulrushes in the Lake Huleh swamp

BULWARK [אגם (Jer. 51:32; KJV REED); אשיה (Jer. 50:15), *from* Akkad. *asaittu, asîtu,* pillar, projection; חל, חיל, *cf.* Arab. *ḥawl,* strength, around, about; עז (Ps. 8:2; KJV STRENGTH), *from* עזז, be strong; KJV מצור (Eccl. 9:14; RSV SIEGEWORK), from צור, hunt (*but many emend to* מצור, *from* צור, besiege); KJV פנה (RSV CORNER *in* II Chr. 26:15; RAMPART *in* Ps. 48:13—H 48:14), *cf.* פנה, turn; ἐδραίωμα (KJV GROUND), *from* ἕδρα, seat, bench, base]. A barrier or wall constructed for defense.

1. Literal usage. In Ps. 48:13—H 48:14 (reading *ḥêlāh,* with the LXX and many Hebrew MSS, instead of *ḥêlâ*) the bulwarks (RSV "ramparts") of Zion are referred to, as also in II Chr. 26:15 (RSV "corners" of wall). In Jer. 50:15 the defenses of Babylon are meant. In 51:32 there is a curious reference to the "reedy pools" of Babylon: the word אגם, *'agam* (cf. Akkad. *agammu,* "swamp," "pond"), is translated "bulwarks" (KJV "reeds"). In Deut. 20:20; Eccl. 9:14, the allusions are to military works thrown up by besiegers, and in these passages the KJV "bulwarks" is therefore incorrect. *See* WEAPONS AND IMPLEMENTS OF WAR.

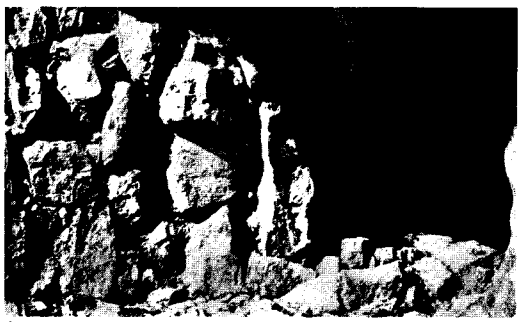
2. Figurative usage. In the difficult passage in Ps. 8:2 the RSV takes עז as "bulwark." In Isa. 26:1 God's salvation is described as "walls and bulwarks" (חל) for his people. In I Tim. 3:15 the church is said to be the "pillar and bulwark of the truth," though ἐδραίωμα would be better translated "foundation" (cf. KJV GROUND). W. S. MCCULLOUGH

BUNAH bū'nə [בוּנה] (I Chr. 2:25). Head of a family of the clan of Jerahmeel of the tribe of Judah.

BUNDLE OF THE LIVING [צרור החיים] (I Sam. 25:29). A figure of speech expressing the state of being preserved among the living. The expression conveys the idea that, just as the owner of precious articles carries them in a bundle or pouch close to the body, so does the Lord keep in a bundle close to him those persons decreed to live. This figure of speech is apparently an ancient variant of the concept of the "book of the living" (Ps. 69:28; cf. Exod. 32:32-33; Dan. 12:1). S. SZIKSZAI

BUNNI bŭn'ī [בוּני]. **1.** A postexilic Levite who attended Ezra's public reading of the law (Neh. 9:4).

2. A Levite, the father of Hashabiah (Neh. 11:15), and perhaps identical with 1 *above.*



3. A chief of the people (Neh. 10:15).

BURDEN [משא, *from* נשא, to lift, carry; סבלה, *from* סבל, to bear a heavy load; βάρος, weight, burden; φορτίον, *from* φέρω, to bear, *hence* something borne]. Alternately: ORACLE. In addition to its literal usage, this term, as a translation of משא, is often used in a figurative sense—e.g., of the people of Israel (Num. 11:11, 17; Deut. 1:12) and of the individual (Job 7:20). The KJV uses "burden" in the prophetic writings for the "oracle" of guilt pronounced by the Lord upon a nation (e.g., Isa. 15:1; 17:1; 19:1) or the revelation of God to the prophet (e.g., Heb. 1:1), but the RSV always translates "oracle" in these instances. B. D. NAPIER

BURGLARY. *See* CRIMES AND PUNISHMENTS § C2*d*.

BURIAL. The proper interment of the dead was a matter of great importance to the peoples of the ancient Near East. It is attested by frequent references to burial in the Bible and other ancient writings, and by the presence of thousands of tombs which modern archaeologists have excavated in Bible lands. For further discussion of places of burial, *see* DOLMENS; MACH-PELAH; OSSUARIES; TOMB; and on its rituals and significance, *see* BIER; EMBALMING; IMMORTALITY; MOURNING; RESURRECTION; SHEOL.

It is not easy to determine whether קבורה,

Courtesy of William L. Reed

56. Tomb entrance, Dibon (ninth century B.C.)

"burial," refers to the act or to the place. The custom of burying the dead may be implied in such passages as Eccl. 6:3; Isa. 14:20; Jer. 22:19, where no specific place of burial is mentioned. However, קבורה frequently denotes a tomb, and is variously rendered as "burying place" (Gen. 47:30), "sepulchre" (Deut. 34:6 KJV; RSV "place of burial"), "tomb" (II Kings 9:28; 21:26; 23:30; KJV "sepulchre"), and "grave" (Ezek. 32:23-24). The term מקברים designates the persons who bury the dead and is rendered "buriers" (Ezek. 39:15; Moffatt, Amer. Trans., "burial parties"). The Greek ἐνταφιάζω and ἐνταφιασμὸς designate the preparation of the body for burial (Matt. 26:12; Mark 14:8; John 12:7; 19:40), and θάπτω denotes the act of burying or entombment (Matt. 8:21-22; Acts 2:29; I Cor. 15:14). The latter, in the form συνθάπτω, is used figuratively in Rom. 6:4; Col. 2:12 in referring to being buried with Christ in baptism.

The antiquity of burial customs in Palestine is attested in the traditions concerning the cave of Machpelah, where Sarah was buried (Gen. 23:19) and also Abraham (25:9), Isaac, Rebekah, Leah (49:31), and Jacob (50:13). The position of skeletons found in the caves of Wadi el-Mugharah at Mount Carmel, and in tombs at ancient Jericho and Teleilat Ghassul near the N end of the Dead Sea, suggests that as early as the Stone, Chalcolithic, and Early Bronze ages care was taken in burying the dead. Figs. MUG 75-76.

57. Cemetery at Khirbet Qumran with burials in rows. Graves of about 1,200 members were found in this burial place.

Various places of burial, in addition to natural caves, are mentioned in the Scriptures. Frequently only the name of the city or region is mentioned; thus Aaron was buried at Moserah (Deut. 10:6; cf. Num. 33:38, where Mount Hor is named as his burial place); Moses in the valley in the land of Moab opposite Beth-peor (Deut. 34:6); Joshua in his own inheritance at Timnath-serah (Josh. 24:30; cf. Judg. 2:9); Jephthah in his city in Gilead (Judg. 12:7); Samson between Zorah and Eshtaol in the tomb of his father (Judg. 16:31); Saul and Jonathan, after cremation by the Philistines, under the tamarisk tree in Jabesh (I Sam. 31:13), their bones later being buried in the land of Benjamin in Zela, in the tomb of Kish (II Sam. 21:14); David and Solomon in the city of David (I Kings 2:10; 11:43). The various kings of Israel and Judah are said to have been buried in the city of David (I Kings 15:8, 24; II Kings 8:24; 12:21; etc.), Tirzah (I Kings 16:6), Samaria (I Kings 16:28; 22:37), and Jerusalem (II Kings 14:20).

The precise location of the burial places is not described in these passages, but it is improbable that tombs were in the inhabited sections of the cities named. Although burials have been found beneath the floors of Neolithic homes at ancient Jericho and in the courtyards of Early Bronze Age homes at Gebal (Byblos), in later periods burials were usually made in natural or artificial caves outside the city walls in such places as Jericho, Lachish, Megiddo, Gezer, Tell en-Nasbeh (MIZPAH), Tell el-Far'ah (TIRZAH), Dibon,* Jerusalem, etc. Excavations reveal that tombs were often reused, and the bones from former burials were pushed to one side. Individual burials in single graves were not common, although a cemetery containing more than one thousand such graves has been discovered near the monastery of Qumran. *See* DEAD SEA SCROLLS. Figs. BUR 56-57.

Among the burial places for which a specific location is given may be mentioned: under an oak below Bethel (Gen. 35:8), in gardens (II Kings 21:18, 26; John 19:41—describing the burial place of Jesus as "in the garden a new tomb where no one had ever been laid"), and in a house (I Sam. 25:1; I Kings 2:34; II Chr. 33:20). The latter, named in connection with Samuel, Joab, and Manasseh, is unusual, and may indicate the revival of an ancient practice, or may merely be a euphemistic way of referring to a tomb (Ezek. 43:7 may mean that tombs were in the Jerusalem palace; the LXX of II Chr. 33:20 and the parallel in II Kings 21:18 locate Manasseh's burial in the garden of his house).

Coffins were not common among the Hebrews; the only reference to one is in connection with the body of Joseph in Egypt (Gen. 50:26; ארון, a portable box or chest). Elaborate wooden coffins, shaped in the likeness of human figures and ornately decorated, were often used in Egypt.* Terra-cotta coffins having on the lids designs of human features have been discovered in tombs at Beth-shean and Dibon.* Ossuaries containing the bones of the dead were used as early as the third century B.C. Figs. BUR 58-59; BET 38.

Ceremonies at the time of burial doubtless varied from generation to generation. The embalming of Joseph was unusual among Hebrews but was common among the Egyptians whose families could afford it. Likewise, cremation was not practiced by Jews or early Christians, as it was on occasion by Greeks and Romans. When bodies were burned, it was as a sign of vengeance (I Sam. 31:12), unrighteousness (Amos 6:10), or punishment of criminals (Lev. 20:14; 21:9; Josh. 7:25). The Mishna forbids cremation as idolatry ('A.Z. I.3).

Burial usually took place on the day of death (Deut. 21:23), as is still the case in the Near East, probably

59. Terra cotta Moabite coffin, from Dibon (ninth century B.C.)

for reasons of sanitation and fear of defilement (Num. 19:11-14). Relatives prepared the body for burial and mourned the death (*see* MOURNING). Lack of burial was considered a great tragedy; to provide burial for another was a virtuous act (Tob. 1:17-18). Bodies were carried to the tombs on litters or stretchers (*see* BIER), doubtless accompanied, as in modern times, by a procession of mourners. Possessions of the deceased were often buried with the body; Canaanite and Moabite tombs have been found to contain weapons, finger rings, earrings, bracelets, lamps, scarabs, food, and wooden furniture such as trays. The presence of the last item may account for the Hebrew law forbidding the offering of food to the dead (Deut. 26:14).

The full theological significance of biblical burial practices is not known, but it seems clear that they indicate an early belief in some type of survival after death, and the necessity of providing in a material way for such existence. W. L. REED

BURNING [בער; שרף (*see* HEIFER; SERAPHIM); יקד, מוקד, תוקד; KJV צרב (RSV SCORCHING); πύρωσις]. The act of consuming combustible materials by fire is mentioned frequently in the Bible, usually in describing an actual burning, but sometimes figuratively in referring to emotions of anger, lust, pain, etc. Among the materials described as burning are: BUSH, BURNING (Exod. 3:2); FIRE of the ALTAR (Lev. 6:9—H 6:2); LAMP (Lev. 24:2; Luke 12:35; John 5:35); MOUNTAIN (Deut. 5:23); INCENSE (I Kings 9:25; Jer. 11:17); RUSH (Job 41:20); COAL (Isa. 6:6; Rom. 12:20); PITCH (Isa. 34:9); sand (Isa. 35:7); wick (Isa. 42:3); TORCH (Isa. 62:1); fiery FURNACE (Dan. 3:6, 11, 15-26); CITY (Rev. 18:18). Figurative uses of "burning" include: ANGER of Yahweh (Josh. 7:26; Ps. 69:24—H 69:25); pain (Job 30:30; Ps. 38:7—H 38:8); LUST (Isa. 57:5).

BURNING BUSH. *See* BUSH, BURNING.

BURNT OFFERING. *See* SACRIFICE AND OFFERINGS § C2; FIRE.

BUSH, BURNING. The flaming bush through which Moses became aware of the presence of Yahweh at Mount Horeb (Exod. 3:2-4). The Hebrew word for "bush" used here, סנה, is used only in this instance and in a parallel reference to it in Deut. 33:16.

Attempts have been made to identify the species of bush, but to no avail. It is assumed from early tradition that it was a thorn bush, and there is a possibility that the name of the bush is derived from a root meaning "thorny" or "sharp." Some have suggested thorn bushes of brilliant hue, or types of bushes that reflect the sunlight. The monks at Saint Catherine's monastery, Mount Sinai, have cultivated a species known as *rubus collinus*, assuming that this species (found only in Syria) was the bush seen by Moses. Objection has been made that no specimen of this species has ever been found growing wild in the Sinai region. It is better to assume an unidentified thorn bush.

It is to be noted that whereas Exod. 3:2 tells of the angel of the Lord appearing to Moses in the bush, Moses holds conversation directly with Yahweh in vs. 4. In this early period the term "angel," meaning "messenger," is thought perhaps to cover situations

where there is manifestation of deity, rather than the appearance of a superhuman messenger of God.

The significance of the account is Moses' awareness of the presence of Yahweh. Modern attempts to rationalize or to find some natural explanation for such an account overlook two important aspects of early Semitic life: (*a*) the Semites used dramatic and picturesque language to portray spiritual and mental experiences; and (*b*) miracle and the supernatural were accepted facts of life, not subject to rational explanation. Modern rationale would have destroyed the spiritual value for the ancient Semite.

W. G. WILLIAMS

BUSHEL. The translation in Matt. 5:15; Mark 4:21; Luke 11:33 of μόδιος, a measure of 0.245 American bushel, here referring to a vessel which could cover a light; and in Bel 3, "bushels" (KJV "measures") in the translation of ἀρταβαι, a Persian measure of *ca.* 1 4/5 bushels, here used to designate amounts of flour presented as food to the idol Bel.

See also WEIGHTS AND MEASURES §§ C4*n-o*.

O. R. SELLERS

BUTLER [משקה, *from* שקה, to give drink, to irrigate]. An OFFICER who originally had charge of the wine for the royal table; hence one of high rank close to the person of the king and only nominally connected with the supply of wine. The term is used only of one of the fellow prisoners of JOSEPH (Gen. 40:1 ff). He is the chief butler, but his dream seems to indicate he is still the royal taster and keeper of the royal wine (vss. 11, 13, 21). The fact that the baker is also in prison suggests that the two were household servants and that only minor political influence belonged to them. However, because this butler speaks a good word to Pharaoh, Joseph is released to become an overseer in the land (Gen. 41:9, 40-41).

See also CUPBEARER. C. U. WOLF

BUTTER. 1. The translation of מחמאת in Ps. 55:21—H 55:22, as a figure for the smoothness of a traitor's speech.

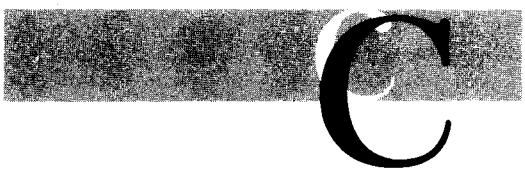
2. KJV form of CURDS; KJV form of MILK in Job 29:6.

BUZ bŭz [בוז, contempt, *verb* to despise]. **1.** The second son of Milcah and Nahor, Abraham's brother (Gen. 22:21).

2. A man from the tribe of Gad (I Chr. 5:14).

3. A place (Jer. 25:23). *See* BUZITE.

BUZI bū'zī [בוזי, *a gentilic from* BUZ]. The father of Ezekiel (Ezek. 1:3).



BUZITE bū'zīt [בוזי]. An inhabitant or native of Buz (mentioned in Jer. 25:23 along with DEDAN and TEMA), probably an Arabian tribe or territory, the location of which is uncertain. Elihu's father (Job 32:2, 6) is called Barachel the Buzite.

BUZZARD [ראה (Deut. 14:13), *connection with* ראה, to see, *doubtful*]; KJV GLEDE. A medium-sized bird of prey of the family Accipitridae, of the genus Buteo, of which *ca.* twenty species are known. Tristram testifies that three varieties lived in Palestine in the nineteenth century.

The text of Deut. 14:13 is suspect, partly because ראה is not found in the parallel passage in Lev. 11:14 (which has דאה), and partly because the Samar., LXX, and ten Hebrew MSS support the reading דאה (*see* KITE). Even if the MT is retained, the meaning of ראה remains unknown. W. S. MCCULLOUGH

BYBLOS bĭb'lŏs [Βύβλος]. The Greek name of the ancient Phoenician town GEBAL.

BYWORD [משל, proverb; שנינה, sharp saying (*always in context with* משל)]. This word appears only in its negative sense in the Bible (e.g., "to become a byword, an object of derision among other people"), with minor exceptions always in the context of God's wrath against Israel or an Israelite. For the word in its wider usage, both negative and positive, *see* PROVERB. J. A. WHARTON

C. The symbol used to designate both the OT and the NT sections of Codex Ephraemi-syri. *See* EPHRAEMI-SYRI, CODEX. M. M. PARVIS

CAB căb. KJV form of KAB. *See* WEIGHTS AND MEASURES § C4*j*.

CABBON kăb'ən [כבון; *cf.* Aram. *kəban*, wrap around, surround]. A village of Judah in the Shephelah district of Lachish (Josh 15:40); perhaps to be identified with Hebra, E of Lachish; sometimes identified with Machbenah (I Chr. 2:49).

CABIN. A KJV archaism meaning "prison cell," used to translate חנות in Jer. 37:16. *See* DUNGEON.

CABUL kā'bəl [כבול]. **1.** A border town in the territory of Asher (Josh. 19:27). It is generally identified with modern Kabul, a village *ca.* nine miles E-SE of Acre, overlooking one of the routes which descend from the Galilean hills to the maritime plain. The commonly held identification of Cabul with *kabura* in the Ramses III list (no. 23) is incorrect, since it and the towns mentioned with it are located farther N.

2. A district in Galilee. According to I Kings 9:13, Hiram of Tyre named a group of twenty towns, which Solomon had given him, Cabul. The parallel passage in II Chronicles (8:2) states that Solomon, rather than Hiram, was the recipient of the gift, but commentators generally agree that the fuller account in Kings is correct.

In all probability the administrative center of this district was the town of Cabul (*see* 1 *above*), but the location of the district cannot be determined, because of insufficient evidence. It has been plausibly suggested, however, that the towns were situated, not in the Plain of Acco, but in the hill country to the E, and that the comparative barrenness of the latter occasioned Hiram's displeasure.

CAESAR sē'zər [Καῖσαρ]. The family name of Julius Caesar (*see* CAESAR, JULIUS), taken by his adopted son AUGUSTUS, the first Roman emperor (27 B.C.–A.D. 14), and in turn by each of his successors so that it became a title (*cf.* EMPEROR). The name Caesar Augustus appears in Luke 2:1, and the title is found in some twenty-seven additional places in the NT. TIBERIUS CAESAR (A.D. 14-37) is specified in Luke 3:1 as reigning when Jesus began his ministry, and is the Caesar of the other references in the gospels (Mark 12:14-17 and parallels; Luke 23:2; John 19:12-15). In the book of Acts, CLAUDIUS (41-54), mentioned without the title in 11:28; 18:2, is the Caesar of 17:7; but the later references (25:8 ff; 26:32; 27:24; 28:19) probably mean NERO (54-68). Identification of the Caesar of Phil. 4:22, whether Claudius or Nero, depends on how the letter is dated (*see* PHILIPPIANS, LETTER TO THE). Other first-century Caesars, not mentioned in the NT, were: CALIGULA (37-41); Galba (68-69); Otho (69); Vitellius (69); VESPASIAN (69-79); TITUS (79-81); DOMITIAN (81-96); Nerva (96-98); Trajan (98-117). J. KNOX

CAESAR, JULIUS jōōl'yəs, —ĭ əs. Gaius Julius Caesar, father of the Roman Empire. He was born, sometime between 102 and 100 B.C., into a patrician but uninfluential family. In his youth he witnessed the Civil War and the dictatorship of Cornelius Sulla; he was surprised when Sulla restored the power of the Senate and resigned (79 B.C.). He was also aware of the interminable struggles for power among various generals, and like others took advantage of the chaotic situation to seek office with borrowed money. In 63 he was able to become pontifex maximus and praetor; in 61, after the conspiracy of Catiline had been put down, he became governor of Further Spain. Two years later he formed a coalition with Pompey and Crassus, both powerful generals, and was elected consul. He also obtained the governorship of those parts of Gaul which lay just to the N and the W of Italy, first for one period of five years, then for another. During his two terms of office he subjugated all the territory W of the Rhine.

Meanwhile Crassus had been killed in battle, and Pompey gradually became hostile toward Caesar. In spite of various efforts to reach compromises, the Senate finally (January, 49) voted to recall Caesar, who instead invaded Italy by crossing the River Rubicon. The result was a series of civil wars waged all around the Mediterranean—in Spain, Macedonia (Battle of Pharsalus, 48), Alexandria (where Caesar was helped by Antipater the Idumean, sent by HYRCANUS from Jerusalem), and Africa. In 46, Caesar was made dictator for ten years; he proceeded to the reform of the state, settling his veterans in Italy and elsewhere by founding colonies (*see*

COLONY). He reduced the number of persons on relief from 320,000 to 150,000; he expanded the Senate to 900 members; but, unlike Sulla, he followed a policy of clemency toward his former opponents. He also reformed the calendar and took time to write "commentaries" on the Gallic War from 58 to 52, and on the Civil War as well.

From experience and observation Caesar was well aware that the republican form of government was finished. It is said that he called it a "mere name without a substance." Indeed, since the end of the Carthaginian Wars (*see* ROMAN EMPIRE) the Republic had been going to pieces. This process has been explained in various ways, but at least three causes seem fundamental:

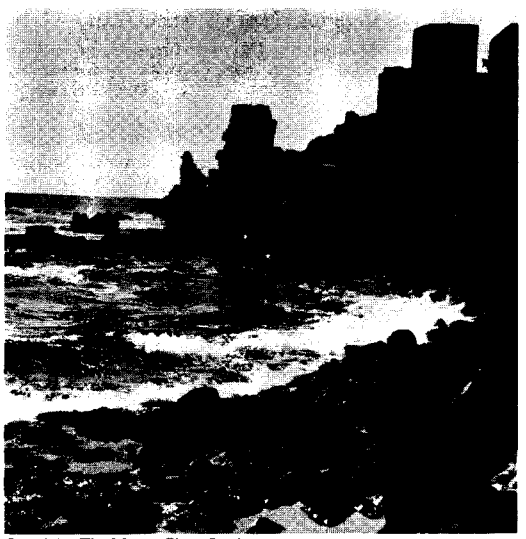
a) The most important was probably the rise of an urban debtor class, whose condition the Senate did almost nothing to improve. The gulf between rich and poor, instead of being narrowed by government policy, was actually widened when the new provinces were exploited. The equestrian class, ostensibly hostile toward the Senate, took advantage even of reform measures in order to acquire greater wealth. In Caesar's time class conflict produced near-anarchy.

b) The republican form of government possessed an inherent weakness because the Senate could only give advice to the consuls but could not compel them to follow it; the consuls could appeal to the popular assembly rather than to the Senate, if they so desired. This situation made for greater flexibility; it also meant that the power of the Senate was, or could be, severely limited. The foreign wars in which the late Republic was almost constantly engaged meant that the veterans were loyal, not to the Senate, but to their victorious generals, in whom they saw the power of Rome manifest.

c) The increasing contact between Rome and Hellenistic culture resulted in widespread acceptance, from the nobility downward, of Greek learning, including skeptical philosophy; and this acceptance resulted in the lessening of the authority of tradition. A world culture had come to overthrow the old Roman way of life, including Roman religion. These three forces (socio-economic, political, and cultural) were expressed in a series of crises which the machinery of government, designed for a small city-state, was unable to meet.

Caesar assumed absolute power. In his calendar the month of July now bore his name, and he issued coins with his own image on them. To be sure, he regularly informed the Senate of his decisions, but its function was purely consultative. On February 14, 44 B.C., he entered upon a perpetual dictatorship, issuing coins to celebrate the occasion; wearing a purple robe like that of the early kings, he sat on a throne. When hailed (not unnaturally) as king, he gave the ambiguous reply: "I am not a king but Caesar." A few senators, along with others determined to restore the Republic, therefore banded together to kill "the tyrant" (as Cicero described him), and at a Senate meeting on the Ides of March (March 15) they stabbed him to death with daggers (which appear on some coins of Marcus Brutus, nominal head of the conspiracy).

Power passed, however, not into their hands but into those of Caesar's former assistants, Marcus Antonius (Mark Antony) and Lepidus, and his heir Octavius (*see* AUGUSTUS). When a comet appeared in July, Octavius stated that it was an epiphany of Caesar, but Antonius refused to allow Caesar-worship. By 43, however, the three men had formed a "triumvirate," and in the following year a temple was erected to the "divine Julius" by vote of the subservient Senate. This event marked the beginning of Roman EMPEROR-WORSHIP, as well as the termination of the Republic.



Caesar himself can hardly be called a statesman but was a brilliant general who possessed remarkable political ability, used chiefly to advance himself. Believing in Fortune rather than in the gods, he took advantage of the weakness of the Republic to provide himself with supreme power. He had seen little but anarchy produced by senatorial rule, and it was not only his ambition but also the requirements of the situation which compelled him to take action. He intended to make the Danube a Roman frontier and to attack the Parthian Empire. The first project was achieved only by Augustus, the second by his successors.

R. M. GRANT

***CAESAREA** sĕs'ə rē'ə [Καισάρεια, Καισαρία]. A city on the coast of Palestine *ca.* twenty-three miles S of Mount Carmel.

It first appears as a Phoenician city or fortification called Straton or Strato's Tower and apparently built by a king of Sidon of that name in the fourth century B.C. (Jos. Antiq. XIII.xv.4). In the Maccabean period it was captured from the tyrant Zoilus by Alexander Janneus (*ca.* 96 B.C.; Jos. Antiq. XIII.xii.4; xv.4). After the city was freed by Pompey in 63 B.C., it was given to Herod the Great by Augustus (Jos Antiq.

Copyright: The Matson Photo Service

1. Ruins of the ancient sea front at Caesarea

XV.vii.3). In honor of Caesar Augustus, Herod then named the city Caesarea and its seaport Sebastos (Augustus). His ambitious rebuilding of Caesarea required twelve years and was not finally completed until 10 B.C., when it was dedicated with magnificent games. Herod may have selected this site because he desired to have a seaport worthy of his kingdom and near Sebaste (Samaria). The location has excellent communications with the rest of Palestine. Figs. CAE 1; PAL 3.

Under the procurators Caesarea became their official seat and the capital of Palestine. Though predominantly pagan, the city contained a substantial Jewish minority. Riots between Jews and Gentiles in A.D. 66 marked the beginning of the Jewish war against Rome (Jos. Antiq. XX.viii.7-9; War II.xiii.7; xiv.4-5). In the later Roman Empire, Caesarea continued to be important, and especially as a seat of bishops and a center of learning under Origen (185-254), Pamphilius (240-309), and Eusebius (260-340).

Since there was no natural harbor, Herod constructed a mole 200 feet wide. The huge stones can still be seen extending 160 yards from the shore. The harbor included elaborate buildings and statues of Roma and Augustus at the entrance. The city included buildings typical of a Hellenistic city, such as a theater, amphitheater, hippodrome, aqueduct, colonnaded street, and an impressive temple dedicated to the divine Caesar (Jos. Antiq. XV.ix.6; War I.xxi.5-8). Only partial excavations have been attempted, but these have revealed a synagogue dating from the fourth or fifth century A.D.

In the NT, Caesarea first appears as a place where Philip preached (Acts 8:40). Peter converted the centurion who was stationed there (10:1, 24; 11:11). Herod (Agrippa I) had his residence at Caesarea, and there he died (12:19-23). Paul passed through the city on his way to Tarsus (9:30) and later when he returned from his missionary journeys (18:22; 21:8). After his arrest Paul was taken to Caesarea, where he was held prisoner and appeared before Felix and Festus (23:23; 25:12). After appearing before Agrippa II, Paul sailed from Caesarea for Rome (25:13–27:2).

D. C. PELLETT

CAESAREA PHILIPPI sĕs'ə rē'ə fĭl'ə pī [Καισάρεια ἡ Φιλίππου]. A city on the SW lower slope of Mount Hermon; mentioned in the Bible only in Matt. 16:13; Mark 8:27.

1. Location and description. The setting of this city is one of the most beautiful and luxuriant in Palestine, for it is on a terrace 1,150 feet above sea level overlooking the fertile N end of the Jordan Valley. To the NE towers Mount Hermon, 9,100 feet high. The terrace is well watered by one of the sources of the Jordan which springs from a cave nearby. The site was also selected for its strategic importance, because it guards the fertile plains to the W. The importance of the location was also assured by the presence of a shrine in the cave mentioned above. This shrine was, no doubt, already ancient when the Greeks arrived and dedicated it "to Pan and the Nymphs," as an inscription testifies. This natural place of worship had probably been dedicated to various Semitic deities and was possibly the location of Baal-gad or Baal-hermon of the OT (Josh. 11:17 ff; Judg. 3:3; I Chr. 5:23). In NT times the name of the cave and its fountain was Paneion (τὸ Πανεῖον), and the city or district was called Paneas (ἡ Πανεάς; Jos Antiq. XV.x.3; XVII.viii.1; War I.xxi.3; III.x.7).

2. History. Paneas appears as the scene of an important battle (*ca.* 200 B.C.), in which Antiochus the Great defeated Egypt (Polybius XVI.18). In the first century B.C. it formed part of the territory of Zenodorus, but on his death in 20 B.C. it was given by Augustus to Herod the Great. He erected a temple of white marble and dedicated it to Augustus (Jos. Antiq. XV.x.3; War I.xxi.3). After Herod's death, in 4 B.C., it was included in the tetrarchy of his son Philip, who ruled until A.D. 34. Philip enlarged and beautified the city, giving it the name of Caesarea Philippi in honor of Tiberius Caesar and himself (Jos. Antiq. XVIII.ii.1; War II.ix.1). Later the city formed part of the kingdom of Agrippa II (*ca.* 50), who named it Neronias in honor of Nero (Jos. Antiq. XX.ix.4). It is mentioned as a stopping place for the Roman armies under Titus and Vespasian during the Jewish war of 66-70 (Jos. War III.ix.7; VII.ii.1). The city continued to be a place of importance in the later Roman and Byzantine periods and during the Crusades. The ancient name of Paneas survives in the name of the village Banyas on the same site. There are only a few remains of the ancient city.

In NT times Caesarea Philippi was an important city and a center of Greco-Roman civilization. The population was largely pagan (Jos. Life XIII). The city controlled a large area around it, which is indicated by "the district" (Matt. 16:13) or "the villages" (Mark 8:27) "of Caesarea Philippi." It was here that Jesus questioned his disciples about his messiahship and that Peter replied that Jesus was the Christ, the Son of God.

D. C. PELLETT

CAESAR'S HOUSEHOLD [Καίσαρος οἰκία]. A collective term referring primarily to the imperial servants, including both slaves and freemen, usually at Rome but also in the rest of Italy and the provinces. It is used in reference to affairs at Alexandria by Philo (*Against Flaccus* 35): "If Agrippa had been not a king but one of Caesar's household, should he not have had some privilege and honor?" To "corrupt Caesar's household" (Jos. Antiq. XVII.v.8) means to seduce a slave belonging to Julia, wife of Tiberius Caesar. Paul mentions "Caesar's household" in Phil. 4:22 as that to which some Christians, sending greetings with him, belong (cf. Phil. 1:13: "throughout the whole praetorian guard"). The term also appears, presumably from Philippians, in the second-century(?) *Martyrdom of Paul* (pp. 104, 106; Lipsius), where on Paul's arrival at Rome he is greeted by a great crowd from "Caesar's household."

Scholars who claim that PHILIPPIANS was written from Ephesus or Caesarea have pointed out that the

term can be used of persons outside Rome. It does not conclusively prove that Philippians was written from Rome itself.

Bibliography. J. B. Lightfoot, *Saint Paul's Epistle to the Philippians* (1903); G. S. Duncan, *St. Paul's Ephesian Ministry* (1929). R. M. GRANT

CAGE [סוגר (Ezek. 19:9), *probably from* סגר, to shut, close; *cf.* Akkad. *šigâru*, cage, *and see below*]. Alternately: BASKET (Jer. 5:27; KJV "cage"); HAUNT (Rev. 18:2*d*; KJV "cage"). An enclosure, usually barred, for confining birds and other animals.

In the lament in Ezek. 19:2-9 a young lion (clearly Jehoiachin) is said to have been taken, put in a cage (vs. 9), and brought to the king of Babylon. While Ezekiel's language appears to be figurative (cf. II Kings 24:12-15; 25:27-30), the barbarous treatment of prisoners of war was common enough in the ancient world. We know, e.g., that Ashurbanipal, following an established practice, had earlier put a *šigâru* on the neck of a captured Arab prince Uate' (*ANET* 298). *See also* STOCKS.

Bibliography. On the probability that *šigâru* means a ladder-like wooden neck stock, in which as many as six men could be put at one time, see *Sumer*, X (1954), 116-19; XII (1956), 80-84. W. S. MCCULLOUGH

CAIAPHAS kā'ə fəs [Καιάφας, Καιαφᾶς, *probably from* קייפא]. The high priest in the TRIAL OF JESUS. *See also* ANNAS 1.

Caiaphas is mentioned twice in Josephus (Antiq. XVIII.ii.1; iv.3). The first reference contains little more than a mention of his appointment as high priest by Valerius Gratus; the second reference adds that the name was Joseph, but he was also called Caiaphas, and that he was removed from his office by the Procurator Vitellius (*ca.* A.D. 36 or 37) and replaced by Jonathan son of Ananus (probably the same name, and person, as Annas). The date of Caiaphas' appointment is uncertain; the first reference in Josephus would indicate that it took place *ca.* 18, so that Caiaphas served as high priest *ca.* eighteen years.

Apart from the NT, there is no additional information of substance about Annas and Caiaphas, though legends based on the NT arose (e.g., that Caiaphas became a Christian).

The gospels bring Annas and Caiaphas into relation with Jesus, but in a manner which creates problems for the interpreter. The problem, if at all solvable, needs to be seen clearly, prior to any attempt to solve it.

Mark 14:53 relates that Jesus, after his arrest, was led to the high priest; Mark abstains from naming him. The parallel, Matt. 26:57, names the high priest as Caiaphas. Earlier (vs. 3) Caiaphas is named as among those who gathered to plan "to arrest Jesus by stealth and kill him."

The parallel in Luke 22:54 omits the name of the high priest. But Acts 4:6, ensuing on the arrest of Peter and John, speaks of a gathering of Jewish leaders "with Annas the high priest and Caiaphas and John and Alexander." Since the account in Josephus clearly makes Annas precede Caiaphas, and Annas' tenure ended *ca.* 14 or 15, to speak of Annas as the high priest in the period of the 30's is surprising and perplexing. Moreover, Luke 3:2, a sixfold chronological statement, provides the statement, whose puzzling character is clearer in Greek than in the usual English rendering, that the events took place in the priesthood (ἀρχερέως—singular, not plural) of Annas and Caiaphas.

At this point the following questions may initially focus on the problem: (*a*) Did Annas precede Caiaphas? (*b*) If so, when did Annas cease to be high priest, and when did Caiaphas begin? (*c*) Does the suggestion in Luke 3:2 that both were priests at the same time conform to what is known of Jewish practice? (*d*) If Caiaphas was high priest simultaneously with Annas, or after Annas, why does Acts 4:6 list Annas as the high priest and Caiaphas as not a high priest?

In John the problems become more acute. John 11 relates that after the raising of Lazarus the SANHEDRIN gathered to discuss what to do about Jesus. Vss. 49-50 read: "But one of them, Caiaphas, who was high priest that year, said to them, '. . . It is expedient for you that one man should die for the people . . . .' " But 18:13 relates, after the arrest of Jesus, that "they led him to Annas; for he was the father-in-law of Caiaphas, who was high priest that year." 18:22 tells that "one of the officers standing by struck Jesus with his hand, saying, 'Is that how you answer the high priest?' " This verse makes it plain that Annas was regarded as the high priest. But vs. 24 tells that "Annas then sent him bound to Caiaphas the high priest."

Again, to resume, with questions which may focus on the problem: (*e*) Did the high priest ("that year") serve only one year? (*f*) Could there have been two, equal high priests at one and the same time? (*g*) Why do Luke and Matthew abstain from relating that Annas was the father-in-law of Caiaphas?

Considerable ingenuity has been expended in solving the problem, especially in conservative commentators (e.g., Godet, *Commentary on the Gospel of John*, II, 354-57), where the discordances are arbitrarily made to harmonize. Some commentators (e.g., Spitta, *Zur Geschichte und Literatur des Urchristentums*, I, 158 ff) tried to escape from the problems in John 18 by citing a different order of verses found in the Syrus Sinaiticus as proof of a disarrangement: Caiaphas was the high priest, but two examinations took place, one in the home of Annas and the second in the palace of Caiaphas; but see against this improbability Wendt, *The Gospel According to St. John*, p. 164, note 1, and the contention that the Syrus Sinaiticus is a harmonizing rearrangement.

Bultmann (*Das Evangelium des Johannes*, 12th ed., pp. 496-97) supposes that a non-Synoptic source has been utilized, which the evangelist has reworked but without thoroughness. In the source the high priest was listed as Annas; the evangelist blended with this source a quasi-Synoptic tradition naming the high priest as Caiaphas, and hence the confusion in John. Bultmann names (p. 497, note 4) the many commentators who want to omit "and Caiaphas" from both Luke 3:2 and Acts 4:6 as an interpolation, designed to correct the "error" in chronology. Moreover, a slight emendation of the Greek of Acts 5:17 would change the rendering from "But the high

priest rose up," etc., into "But Annas the high priest," etc. (changing 'Αναστὰς into "Αννας). This would bear out that Luke knew only Annas' name as the high priest, and that the careless blending of separate, discordant sources has produced the confusion.

A solution to the problem, especially in its various facets, is not available. Mark, we saw, did not name the high priest. It may be suggested that when the tradition after the time of Mark began to name the high priest, in some way the chronologically impossible Annas came to be the name, at least in one body of tradition. The tradition which names the priest Caiaphas is an effort to correct the chronological difficulties. But a by-product of the existence of the two names in a composite tradition was the association of Annas and Caiaphas, quite against Jewish practice, as dual high priests, as in Luke 3:2.

The interpretation found frequently that Annas remained influential in high-priestly matters long after his deposition is not supported by any evidence; it is a conclusion reached in any effort to escape the difficulties inherent in the problem.

Perhaps another by-product was the error of suggesting that the high priest served one single year; such appears to have been a pagan procedure (see Bultmann *Das Evangelium des Johannes*, p. 314, note 2), unknown to Jews.

Since the trial scenes in the gospels are scarcely accurate history, the details are scarcely apt to be accurate.

While in the usual growth of tradition a character nameless at an early stage acquires a name at a later stage, what we encounter in the present problem is that the initial naming of the man proved to be erroneous, so that a corrective name was added; and once there were the two names, they needed to be brought into an artificial chronological proximity—and even to be made father-in-law and son-in-law. It is to be doubted that the evangelists were concerned to be punctiliously accurate in a matter as minor as the name of the high priest; and surely they did not envisage that almost two thousand years later scholars would investigate such minor details with major scientific curiosity. S. SANDMEL

***CAIN** kān [קין, *see below;* Καιν; Vulg. *Cain*]. **1.** Eldest son of ADAM and Eve (Gen. 4:1).

Gen. 4:1 connects קין with קנה. But philologically *qáyin* points to the "hollow" root קין. If קנה, "to get, acquire, buy," is the true root, the relation of both its form and its meaning to the Genesis story remains unclear.

If the proper root is קין, the word may mean "spear" (II Sam. 21:16 [but corrupt; cf. I Sam. 17:38]); but it is best to consider it as an ancient personal name, from a word meaning "smith" or "worker in metal," cognate with Arabic *qayn* and Aramaic *qainâyâ*.

Both brothers brought to Yahweh an offering of their produce; but for Cain and his offering Yahweh had no regard. Therefore Cain became angry and, though exhorted to master sin, murdered his brother (Gen. 4:2-8).

Cain's punishment alienated him from his land, his family, and his God. When Cain protested his banishment to the land of Wandering as being tantamount to death, Yahweh graciously mitigated it by placing his mark upon Cain (vss. 9-16).

Why Yahweh preferred Abel's sacrifice and by what means the preference was indicated, are not given in Genesis. The explanations found in the NT and postbiblical traditions, Jewish and Christian, are of necessity later retrojections (cf. Wisd. Sol. 10:3-4).

Form-critically, Gen. 4:17-24 must be separated from the Cain and Abel story. But *see* KENITES; TUBAL-CAIN.

Because he was "of the evil one" (ἐκ τοῦ πονηροῦ), Cain stands as a prototype of wicked men who "walk in the way of Cain" (Jude 11). Christians are exhorted not to be like him (I John 3:12) but rather to emulate the faithful Abel (Heb. 11:4).

L. HICKS

2. KJV form of KAIN.

CAINAN kā'nən [Καιναμ] (Luke 3:36; from LXX of Gen. 10:24; 11:12). Son of Arphaxad.

CAKE. *See* BREAD, particularly § 1*d*.

***CALAH** kā'lə [כלח; Akkad. *Kalḫu*] (Gen. 10:11-12). One of the Assyrian capital cities. The site, now called Nimrud, is located at the NE angle of the confluence of the Tigris and Upper Zab rivers.

Bibliography. M. E. L. Mallowan, *Twenty-five Years of Mesopotamian Discovery* (1956). C. H. GORDON

CALAMOLALUS kăl'ə mŏl'ə ləs [Καλαμωλάλος (A); Καλαμωκάλος (B)]. Probably a corrupt combination of "LOD and HADID," names in the canonical parallel to I Esd. 5:22, where this is found. The RSV places this word in the mg. N. TURNER

CALAMUS kăl'ə məs [קנה, *qānê;* κάλαμους] (Exod. 30:23 KJV [RSV AROMATIC CANE]; Song of S. 4:14; Ezek. 27:19). A product of trade made from an aromatic REED (or grass) probably imported from India. *See* FLORA § A7*e;* SWEET CANE.

CALCOL kăl'kŏl [כלכל]; KJV CHALCOL in I Kings 4:31. One of the sons of Zerah, whom Tamar bore to her father-in-law, Judah (I Chr. 2:6). Calcol was celebrated for his wisdom, which was surpassed only by Solomon's, and is described as one of the "sons of Mahol"—i.e., "members of the orchestral guild" (I Kings 4:31—H 5:11).

CALDRON. An English translation representing several varieties of Hebrew cooking pots, both ceramic and metalware. For exact terms, *see* POTTERY § 3*a*.

CALEB kā'ləb [כלב, dog (*i.e.*, slave) of, *or* snappish(?)]; CALEBITE —lə bīt; CHELUBAI kĭ lōō'bī [כלובי, *probably a variant of* כלב] (I Chr. 2:9). One of the spies sent by Moses to reconnoiter the land of Canaan; subsequently conqueror of Hebron.

Within the band of spies sent from Israel's wilder-

ness encampment Caleb represented the tribe of Judah. Caleb championed the view, upon the spies' return, that an immediate assault on Canaan should be made. This distinctly minority viewpoint was supported by Joshua but was rejected by the people, intimidated by the other spies' report of fortified cities and formidable opponents. This timidity was branded as rebellion against Yahweh and denial of his presence with his people (Num. 14:9); and because of it the adult wilderness generation, with the exception of Caleb and Joshua, was excluded from entering the Promised Land. Caleb particularly was lauded as Yahweh's servant, one who "has a different spirit and has followed [Yahweh] fully" (Num. 14:24; cf. Deut. 1:36).

Aside from his role as spy, Caleb is associated in the OT with the region around HEBRON. This territory was given to him as a divinely bestowed inheritance, but one from which Caleb himself must eject its former inhabitants, the Anakim, or "giants" (*see* ANAK). The conquest of nearby Debir, SW of Hebron, is also connected with the exploits of Caleb, although it was Othniel who actually took the town and so won Caleb's daughter Achsah as wife (Josh. 15:16-17; Judg. 1:12-13). The development of Hebron as a Levitical city of refuge is responsible for the explanation that Caleb controlled, not the city itself, but its outlying fields and villages (Josh. 21:12; I Chr. 6:56—H 6:41). Further indication of Caleb's association with territory in the S of Judah is afforded by the designation "Negeb of Caleb" (I Sam. 30:14), which applies to a section of the area in which David operated as an outlaw.

Behind the OT references to Caleb's career in the conquest of Judah lies fairly involved ethnological history. It is evident that the figure of Caleb represents the incorporation of a foreign strain into the tribe of Judah. While the priestly source (Num. 13:6; 34:19) and the Chronicler (I Chr. 2:18; cf. vss. 4-5) trace Caleb's ancestry back to Judah, older sources which know him as the son of Jephunneh the Kenizzite (Num. 32:12) or as the older brother of Kenaz, Othniel's father (Josh. 15:17; Judg. 1:13), point to the extra-Israelite origin of the Calebites. Kenaz was an Edomite clan or chief (Gen. 36:11; I Chr. 1:53), and the Kenizzites resided in (presumably S) Palestine in the patriarchal period (Gen. 15:19). It has been argued that both Caleb and Kenaz are Hurrian names (*see* HORITES), and Hur appears as a personal name in the Chronicler's Calebite genealogy (I Chr. 2:19, 50), although it is probable that Hur should be reckoned as the son of Hezron, not of Caleb (cf. I Chr. 2:24, 50*a*β, with 2:19, which on stylistic grounds seems an intrusion into the Chronicler's genealogical tables).

The intricate Calebite genealogies in I Chr. 2; 4 apparently imply varying degrees of penetration by Calebite tribes into Judah and subsequent intermingling with that tribe. Caleb's several marriages and their respective progeny suggest such tribal history (cf. I Chr. 2:18-19, 24, 42-50; 4:15). Ephrathah as Caleb's wife symbolizes Calebite occupation of the Bethlehem countryside (I Chr. 2:24; cf. 2:50*a*β-51; Mic. 5:2—H 5:1), as the names Ziph and Hebron (I Chr. 2:42) point to Calebite settlement farther S. The troublesome reference to Caleb as the son of Hezron (I Chr. 2:18, 24; cf. vs. 9) can hardly suggest another person than Caleb son of Jephunneh, whom the Chronicler also knows (I Chr. 4:15), since Achsah is named as Caleb's daughter in both instances (cf. Josh. 15:16; I Chr. 2:49). The association of Caleb with Hezron, as also with Jerahmeel (I Chr. 2:42), is probably the Chronicler's strategy for affirming Caleb's lineal descent from Judah.

In the figure of Caleb the poignancy of OT particularism comes to expression. Possessing alien ties that were never quite completely concealed, Caleb nevertheless became the exponent of a fearless faith in the God who had promised Israel land.

CALENDAR. The Hebrews and early Christians did not possess a published and widely authoritative calendar similar to those in general use today. The present Jewish calendar is the crystallization of a long process of calculation and controversy carried on, not only in the centuries since the first published Jewish calendar (fourth century A.D.), but during the ages preceding it as well. Thus modern students of the Bible should realize that it is not possible to speak of *a* biblical calendar. A widely accepted pattern of time-reckoning there certainly was, but in the biblical period this was in process of continual change and experimentation.

Although we may assume that Gentile Christians in the NT era made a wide use of the Greco-Roman calendars, it may be understood that Jews and Jewish Christians, even when far from Palestine, continued to employ the official calendar of Jewish orthodoxy, particularly for observing the religious festivals (cf. Acts 20:6, 16). From extensive discussions of calendrical matters in the Mishna and the Talmud, we may be fairly certain of the main features of this calendar during NT times. However, the further we regress in Hebrew history, the greater our uncertainty becomes. Although it is obvious from numerous OT passages that the ancient Hebrews possessed at least a roughly calculated calendar (or calendars), they have nowhere given us a complete account of their system. The precise determination of this system remains one of the major problems of biblical research.

The need for a uniform schedule of time-reckoning, even for seminomadic people like the ancient Hebrews, is apparent. The complexities of their economic and political intercourse depended upon it more and more as they emerged from a tribal to a monarchical organization, and as they broadened their relations with other nations. It was also imperative for the orderly regulation of their religious festivals.

Sufficient as these motivations for calendar-making apparently were, the early Hebrews did not have the

means for the accurate determination of a calendar. The criteria at hand either were unreliable or led to unavoidable conflicts in calculation. Thus the agricultural year fluctuated according to the weather and the region. It was difficult to determine the annual course of the sun and the stars—roughly 365¼ days—because methods of astronomical observation were inadequate; besides, the solar year failed to tally with the lunar year—one lunation lasted *ca.* 29½ days, and twelve lunations lasted roughly 354¼ days. It was the highly developed astronomical and calendrical science of the Babylonians which opened the way for a more accurate and refined calendar among the Hebrews. *See* SUN; MOON; ASTRONOMY.

1. The lunar-solar calendar. In all likelihood the early Israelites followed a Canaanite calendar, which may at one time have been entirely solar like a later calendar used in Tyre (*see* YEAR). Calendars combining both solar and lunar reckoning were, however, widely used throughout the Near East even in very ancient times, and the Hebrews probably always had a lunar-solar calendar. The prestige of the Babylonian system certainly must have had effects even in pre-exilic Israel.

A lunar-solar calendar was adopted by the first Babylonian dynasty (*ca.* 1830-1550 B.C.), and became effective in Assyria during the first millennium B.C. The Babylonians gave Semitic names to the months, but in most other respects this calendar was substantially the Sumerian calendar of Nippur as observed in the third dynasty of Ur (*ca.* 2180-1960). This calendar reckoned the year from one vernal equinox to the next, while counting months from new moon to new moon, with an added month when this was needed to make up the discrepancy. These lunar months were of thirty days' length except when a new moon occurred on the thirtieth day, in which case this would become the first day of the new month. Until the Persian era astronomical observation was the primary means of determining calendrical periods, but thereafter mathematical calculation became a sufficiently dependable method of determination.

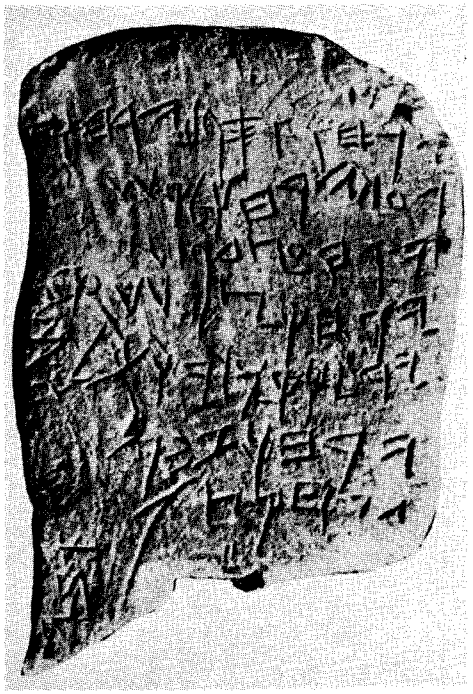
2. The year. It is fairly certain that in historical times the Israelites determined their year, not by the fluctuating agricultural and pastoral cycles, even though these natural phenomena must have influenced them deeply, but by observing the annual circuit of the stars and the sun. We have little evidence concerning the method they might have used for determining the completion of this circuit, but we do know that the new year began at one of the equinoxes, at the dividing point between winter and summer or between summer and winter. The Babylonians chose the vernal equinox as the beginning of their year, since spring is the time of new growth. The Hebrews, however, appear to have observed at different periods two new-year dates, one at the spring and another at the autumn equinox. The problem of the interrelation of these two systems, when each was employed and in which areas and for which particular purposes, is one that continues to vex OT scholars.

There is a hint of a primitive spring new year among the Hebrews in Exod. 12:2, 18, where the Passover month (Abib-Nisan) is solemnly established as the beginning of the year. Many scholars have considered this passage to be of postexilic origin and hence of little evidential value, but the importance of Abib as the "month to remember" persists in several passages of admittedly earlier date (Exod. 13:3-4; 23:15; 34:18; Deut. 16:1). It is striking that wherever the Hebrew months are mentioned by number—and this is the predominant method used in the OT (*see* § 3*d below*)—they are always counted from a first month in the spring. This is true even when the new year is observed in the fall, and certainly preceded the introduction of the Babylonian spring calendar at about the time of the Exile. Unless the month numbers have been corrected by a postexilic scribe, it is difficult to explain this persistent method of counting the months except on the supposition that far back, perhaps in patriarchal times, the Hebrews had observed a spring new year, and that this continued to affect the numbering of the months even when Israel adopted a fall new year.

There is, at any rate, abundant indication that a new year in the fall was standard during the monarchical period and probably for a long while before it. The Canaanites and the Northwest Semites in general seem to have had a fall new year, and probably the Hebrews took this as their own new year after their settlement in Palestine in the time of the Judges.

Thus both Exod. 23:16; 34:22 mention the end (or beginning) of the religious year after the fall Feast of Ingathering (cf. Lev. 23:24; Num. 29:1-6; Deut. 16:16). The SABBATICAL YEAR and the Year of Jubilee (*see* JUBILEE, YEAR OF) were agricultural years beginning in the fall and progressing through the cycle of sowing, pruning, reaping, and vintage (Exod. 23:10-11; Lev. 25:1-22). This agricultural year beginning in the fall is also the basis of the Gezer Calendar (*see* § 3*b below*), which probably dates from the last quarter of the tenth century B.C. Further evidence that a fall new year persisted at least until the time of Josiah and perhaps even after the Exile (though perhaps for restricted purposes) may be found in such passages as I Kings 6:1, 37-38; II Kings 22:3 (cf. 23:23); Neh. 1:1 (cf. 2:1). The fall new year may have been observed only in Judah after the time of Solomon, however. Recent chronological studies of the period of the Divided Kingdom indicate that Jeroboam's realm probably introduced (or reintroduced) a new year in the spring, at least for the purpose of counting reigns. *See* CHRONOLOGY OF THE OT.

Shortly before the Exile the Babylonian spring



new year began to come into vogue in the Judean kingdom, although it did not entirely supplant the fall new year. Jer. 36:22 speaks of the ninth month (called Chislev in Zech. 7:1) as falling in the winter; this may simply reflect ancient Hebrew practice, but likely it also resulted from increasing Akkadian influence. Chronological references in Jeremiah, as in 25:1-3; 46:2, depend upon a reckoning of the reigns of Judean as well as Babylonian kings from a new year in the spring, and Ezek. 33:21; 40:1 likewise presuppose a spring new year. (References in II Sam. 11:1; I Kings 20:22, 26; I Chr. 20:1; II Chr. 36:10 to the spring—lit., the "turning of the year"—as the "time when kings go forth to battle" may indicate a spring new year at an even earlier date.) The books of Kings generally maintain the fall reckoning, however, and long after the Exile we find Nehemiah reckoning the reign of his Persian monarch (who used a spring calendar) on the basis of a fall new year (1:1; 2:1). In the postexilic period the religious festivals were placed on a schedule beginning with Passover in the spring (Lev. 23). After the biblical period Judaism settled upon a religious new year in the month Tishri, while preserving reminiscences of other new-year days (M. R.H. I.1). *See* NEW YEAR.

3. The months. The primitive Hebrew word for "month" (*yéraḥ*), like cognates in other Semitic languages, was related to the word for "moon" (*yārēaḥ*; *see* MOON). Significantly employed with the old Canaanite month names in I Kings 6:37-38; 8:2 (Abib is a consistent exception [Exod. 13:4, etc.]), this word continued to be used mainly in poetic (e.g., Job 3:6; 7:3) and archaizing (e.g., Zech. 11:8) texts. Perhaps because of polytheistic associations (cf. Ugaritic *yariḥ*, the moon-god), it was gradually supplanted by the word *ḥôdhesh* (lit., "new"—i.e., "new moon"), particularly in texts where reference is made to the religious year, in which the new moon played so important a role.

a. The lunar month. There is no direct evidence that the ancient Hebrews ever observed any but a lunar month—i.e., a month of 29½ days, requiring alternation of 30-day months with 29-day months for practical purposes. Speculations concerning a purely solar reckoning, according to which the year was mathematically divided into twelve 30-day months without reference to the lunar phases, fail to explain why there should be months at all and do not take into sufficient account the widespread popularity of lunar calendars in very ancient times. It is true that 30 days are generally reckoned as a month's length (Gen. 7:11; 8:3-4; Num. 20:29; Deut. 21:13; 34:8; Esth. 4:11; Dan. 6:7, 12—A 6:8, 13) and that the year contained twelve months (I Kings 4:7; I Chr. 27:1-15) apart from intercalation. This formula is, however, only a practical way of reckoning and leaves undecided the precise calculation of the calendar. Arguments for a year of seven 50-day periods (the so-called pentecontad calendar) are even more precarious.

Very important in this connection is the fact that both the Hebrew words for "month" are associated with the moon (*see above*). The NEW MOON was an occasion requiring solemn religious observances even in early periods (cf. I Sam. 20:5, 18, 24; II Kings 4:23; Isa. 1:13-14; Ezek. 46:3; Hos. 2:11; Amos 8:5; etc.). It marked the beginning of the new month, which continued for 29 or 30 days until another new moon was observed.

b. The Gezer Calendar. The months were, of course, closely associated with the seasons. This appears from such an old month name as Abib, which refers to the green heads of grain appearing in this month. The same agricultural interest is plainly the basis of the so-called Gezer Calendar, which was

Courtesy of Felice Le Monnier, Florence

2. The Gezer agricultural calendar; an inscription, possibly a school exercise tablet, on soft limestone

discovered by Macalister in 1908. Dating from the time of the early Divided Monarchy, this "calendar" appears to be a school exercise in which the months are mnemonically listed, not by the names current in that period, but by the chief agricultural activities of the year. Roughly inscribed on a limestone tablet are the words:

His two months are (olive) harvest,
His two months are planting (grain),
His two months are late planting;
His month is hoeing up of flax,
His month is harvest of barley,
His month is harvest and feasting;
His two months are vine-tending,
His month is summer fruit
(trans. W. F. Albright, *BASOR*, 92 [Dec., 1943], 16-26).[1]

Fig. CAL 2.

c. The Canaanite names. During the biblical period three different systems were successively followed for naming the months. First, there was a series of Canaanite names used during part of the pre-exilic period. Four of these names are to be found

[1] From James B. Pritchard, *Ancient Near Eastern Texts* (Princeton University Press; rev. ed., 1955).

in the OT—the first of them, Abib, always in connection with the Passover (Exod. 13:4; 23:15; 34:18; Deut. 16:1), and the other three, Ziv, Ethanim, and Bul, in connection with the dedication of Solomon's temple (I Kings 6:1, 37-38; 8:2). In these passages these names are explained in terms of the later system of numbering the months. Abib is the first month (March-April), Ziv the second (April-May), Ethanim the seventh (September-October), and Bul the eighth (October-November). It should be noted that these four surviving names are associated with the two equinoxes.

That the agricultural year was still very influential in this period appears from the meaning of these names. Each refers to the most striking natural phenomenon of its season. Abib has already been mentioned. Ziv probably means "splendor" or "brightness," a reference to the brilliant colors of springtime. Ethanim refers to the perpetual streams which alone contained water in the fall. Bul may mean "produce" or "cattle"—another obvious agricultural reference. Two of these names, Ethanim and Bul, appear in Phoenician inscriptions. While not containing references to Abib and Ziv, these inscriptions do mention still other names which may have been originally employed by the Hebrews.

d. The numbering system. Probably already in the early monarchical period these Canaanite names fell into disuse. As commerce and the crafts grew more important, the Hebrews came to prefer a system of naming the months by number, and this system continued till late in the postexilic period. By far the largest number of biblical references to the various months are according to this method. As might be expected, there are almost as many references to the first and seventh months, when the great equinoctial feasts were held, as there are to all the others combined.

e. The Babylonian names. The third system of names did not arise until after the Exile, and did not find complete acceptance until rabbinical times. These names were those of the Babylonian months, which the Hebrews had certainly encountered long before the Exile through contact with the Assyrians.

There has been considerable uncertainty about the etymology of the Babylonian month names. It seems quite likely, however, that the Babylonians simply translated the general or explicit idea contained in the Sumerian names for the various months, which names had been closely associated with their mythology. The following list would, accordingly, indicate the order of the Babylonian months, beginning at the spring of the year, with their probable etymologies:

1. *Nisānu* (March-April), first month or month of sacrifice
2. *Ayāru* (April-May), procession month
3. *Simānu* (May-June), fixed season or time of brickmaking
4. *Du-uzu* (June-July), month of Tammuz the god of fertility
5. *Abu* (July-August), month of torches
6. *Elulu* or *Ululu* (August-September), month of purification
7. *Teshritu* (September-October), month of beginning
8. *Araḥ-samna* (October-November), eighth month
9. *Kislīmu* (November-December), of uncertain meaning
10. *Ṭebītu* (December-January), month of plunging (into water)
11. *Shabāṭu* (January-February), month of storms and rain
12. *Adaru* (February-March), month of the threshing floor

Taking these over by transliteration, and probably without a full understanding of their original mythological associations, the Hebrews gave this new series of names to their months. With the passages where they occur in the OT and the Apoc., and with their LXX equivalents for the latter, these Babylonian names appear in the following form in Hebrew:

1. Nisan (ניסן [Neh. 2:1; Esth. 3:7]; Νισα[ν] [I Esd. 5:6; Add. Esth. 1:1]; II Macc. 11:30, 33, 38, have the Macedonian equivalent, Xanthicus)
2. Iyyar (איר; not mentioned)
3. Sivan (סיון; Esth. 8:9)
4. Tammuz (תמוז; not mentioned)
5. Ab (אב; not mentioned)
6. Elul (אלול [Neh. 6:15]; Ελουλ [I Macc. 14:27])
7. Tishri (תשרי; not mentioned)
8. Marcheshvan (מרחשון; not mentioned)
9. Chislev (כסלו [Neh. 1:1; Zech. 7:1]; Χασελευ [I Macc. 1:54])
10. Tebeth (טבת; Esth. 2:16)
11. Shebat (שבט; [Zech. 1:7]; Σαβάτ [I Macc. 16:14])
12. Adar (אדר [Ezra 6:15; Esth. 3:7, 13; 8:12; 9:1, 15, 17, 19, 21]; Αδαρ [I Esd. 7:5; Add. Esth. 10:13; 13:6; 16:20; I Macc. 7:43, 49; II Macc. 15:36])

Thus seven of these Babylonian names are mentioned in the Bible, but all occur in late books. The five that do not appear are found in the Elephantine Papyri of the late fifth century B.C. All twelve of the names are listed in a tract probably dating from the pre-Christian era, *Megillath Ta'anith*. At first the use of these names was restricted to civil and historical records, but eventually they came to be employed in religious documents as well. Josephus makes frequent mention of them, as do also the Mishna and the Talmud.

f. Intercalation. As has been mentioned above, a cycle of twelve lunar months (354¼ days) falls short of the solar year (365¼ days). It is obvious, therefore, that in any lunar-solar calendar there has to be a system of intercalation by which the shortage of more than eleven days can be adjusted. The Babylonians inserted an extra month every two or three years, whenever observation showed it to be needed, and this also became the method used by the Hebrews.

Direct evidence of intercalation in the Bible is scarce, even though we may be quite positive that the Hebrews did employ it. Num. 9:11; II Chr. 30:2-3 seem to imply intercalation, and I Kings 12:32-33 can be best explained as referring to a unilateral act on the part of Jeroboam in decreeing an extra month after the first autumnal equinox of his reign. This is an indication that in early periods intercalation was generally made whenever the authorities thought it to be needed.

There is evidence that originally an extra month, when required, was inserted after Nisan (cf. II Chr.

30:2 ff), but eventually it was Adar, the twelfth month, that was duplicated. Because the spring Passover-Mazzoth festival, beginning the cycle of agricultural feasts, needed to be kept at a set time in the year, it can be understood why the intercalary month came to be inserted after Adar, the last month before the beginning of spring. M. Ned. VIII.5 gives the name of the intercalary month as *WeAdar* ("and-Adar").

In the rabbinical period precise calculation came to be employed to give seven out of every nineteen years an extra month, but this method was rejected by such a sectarian group as the Qaraites, and it long remained the source of numerous disputes.

4. The religious festivals. Briefly it must be noted that the entire Hebrew calendar was constructed upon the pattern of the religious feasts, which after the Exile came to assume a fairly rigid form. As observed in the postexilic cultus, the important feasts were: (*a*) the combined Passover and Mazzoth (Unleavened Bread) festivals on 14-21 Nisan; (*b*) the Feast of Weeks or First-fruits seven weeks later, on a Sunday in Sivan; (*c*) the Feast of Trumpets (the ancient New Year's Day) on the first of Tishri; (*d*) the Day of Atonement on the tenth of Tishri; and (*e*) the Feast of Booths (Ingathering) on 15-22 Tishri. (For further details about these and other festival days, *see* FEASTS AND FASTS.) One can hardly overemphasize the importance of the desire to maintain these festivals on a regular schedule throughout the successive years as a constant motive for calendrical study among the pious leaders of the Jews.

5. Survey of historical development. The majority of scholars are able to agree on the general characteristics of the calendar in successive periods of Hebrew history, even though data are lacking for a definitive description in all details, and the remote beginnings are especially obscure. Briefly summarized, the calendar's development can be stated as follows:

Although in patriarchal times the Hebrews may have observed a spring new year, it is clear that by the time the monarchy had become established they were beginning both their civil and their religious year at the fall equinox, probably as the result of Canaanite influence. It is likely, however, that a spring new year continued to be used in certain areas and for special purposes (apparently in the N kingdom for counting reigns). The old Canaanite names for the months began to disappear in favor of a system of naming the months by number. Intercalation was still experimental and erratic. We cannot be certain that any other than the Passover-Mazzoth Feast, the Feast of Weeks, and the Feast of Ingathering were in general observance (cf. Exod. 23:14-17).

After the return from Babylonian exile the Hebrews continued to use a solar-lunar calendar, but now the spring new year became more prominent. The months continued to be named by number, but gradually Babylonian names came into general use. The exact methods of astronomical observation developed by the Babylonians, together with their system of mathematical prognostication, enabled the Hebrews to define more exactly a schedule of intercalation, although this knowledge doubtless remained the professional secret of a select group of authorities. The priesthood meanwhile elaborated in increasing detail prescriptions for observing the religious festivals, many of which came into being during the postexilic era. Postbiblical Judaism worked out many of these features to minute detail, but it also saw many of them fall into disuse and eventual oblivion.

6. Sectarian calendars. There is evidence that the authority of the normative calendar was never universally accepted, but that always there were individuals or groups who were promoting their own special calendars. Living in an age of uncertainty, the prophet Ezekiel envisaged a calendar which deviated from the official calendar of the priesthood in setting aside the first day of the first and the seventh months as days of cleansing and atonement (Ezek. 45:18-20 LXX). It seems likely, however, that Ezekiel's calendar, like his temple, was largely visionary and utopian.

A purely solar reckoning is employed in the calendar promoted by the sectarian book of Jubilees (*ca.* 105 B.C.). Throughout this remarkable book, but especially in 6:22-38, and also in I Enoch 72–82 ("The Book of Heavenly Luminaries," *ca.* 110 B.C.), a year of 364 days is prescribed, to be divided into four quarters, each of which contains thirteen weeks and three months of thirty or thirty-one days. It has been argued that this calendar was designed to begin each successive year on Wednesday, the day of the sun's creation, and to keep all the great religious festivals from falling on the sabbath. No provision for intercalating the necessary extra day at the year's end is mentioned in these books, and every arrangement is patently stylized and artificial. It is unlikely that this calendar was ever put into effect by any major segment of the Jewish populace. *See* ENOCH, BOOK OF; JUBILEES, BOOK OF.

There is evidence that the Qumran community who wrote the Dead Sea Scrolls followed the Jubilees calendar or one similar to it. As the study of these documents proceeds, the calendrical ideology of this sect as related to the normative calendar of orthodox Judaism and to other sectarian calendars will become increasingly clear.

CALF [בן בקר, *lit.*, a son of the herd, *see* Bull; בן (I Sam. 6:7, 10); עגל (עגול *in* I Kings 10:19), עגלה; μόσχος, young shoot, *hence* calf; σιτιστός (Matt. 22:4), fattened; *see also* Heifer]. The calf of a milch cow is referred to in I Sam. 6:7, 10 (cf. Job 21:10); its gamboling in Ps. 29:6 (cf. the "untrained calf" of Jer. 31:18); Mal. 4:2—H 3:20; its grazing in Isa. 27:10; its peaceful co-existence with other tame and wild animals in the future age in Isa. 11:6. Calves typify the Gentile peoples (as distinct from their leaders) in Ps. 68:30—H 68:31, and Egypt's mercenary soldiers in Jer. 46:21. A replica of a calf's head decorated the back of Solomon's throne (I Kings 10:19). In Ezek. 1:7 the feet of the cherubim are likened to those of a calf, and in Rev. 4:7 the second of the four living creatures who surround the heavenly throne is said to be like a calf (RSV "ox").

Calves, sometimes fattened in the stall, supplied veal for special occasions (Gen. 18:7-8; I Sam. 28:24; Luke 15:23, 27, 30). Amos suggests that it was usually the wealthy who enjoyed such a delicacy (Amos 6:4), though in I Sam. 14:32 calves were slaughtered for a large feast after Israel had defeated the Philistines. In Matt. 22:4 "fattened ones" (RSV "fat calves") can refer to calves, lambs, or kids.

The calf is much less frequently referred to as a sacrificial animal than the bull. A year-old calf serves as a burnt offering in Lev. 9:3 (cf. Mic. 6:6), and a calf of no specified age as a sin offering for Aaron in Lev. 9:2, 8 (cf. Heb. 9:12, 19). In a covenant-making rite the Israelites passed between the parts of a slaughtered calf (Jer. 34:18; cf. Gen. 15:9-10).

For the golden (or gold-plated) calves made by Aaron (Exod. 32) and Jeroboam (I Kings 12:28, 32), *see* Calf, Golden.

W. S. McCullough

***CALF, GOLDEN** [עגל מסכה (Exod. 32:4), molten calf; עגלי זהב (I Kings 12:28), golden calves]. A representation of a young bull (the translation "calf" is misleading; see Ps. 106:19-20), perhaps made of wood and overlaid with gold, serving either as an image of Yahweh or as his pedestal or throne. Living bulls had a prominent place in the cultic practices of various regions of ancient Egypt. The bull appears in the art and the religious texts of Mesopotamia, Asia Minor, Phoenicia, and Syria. The gods of Syria in particular are frequently represented standing upon a bull.

In the OT, the golden calf appears primarily in connection with the calf made by Aaron in the wilderness period (Exod. 32) and the two calves made by Jeroboam I (*ca.* 922-901), one of which was placed in Bethel and the other in Dan. All references to golden calves in the OT (and in the NT [Acts 7:41]) have in view either the calf of the wilderness or those made by Jeroboam (Deut. 9:16, 21; II Kings 10:29; 17:16; II Chr. 11:15; 13:8; Neh. 9:18; Ps. 106:19). The denunciations of calf-worship by the prophet Hosea are directed against the worship of the bull of Bethel and (possibly) of the city of Samaria (Hos. 8:5-6; 10:5; 13:2).

The account of Aaron's making of the golden calf in Exod. 32 presents complex literary and historical problems. The earliest elements of the tradition are probably to be found in vss. 1-6, 15-16, 19-20, 35. The people, having waited for days for Moses to return from the holy mountain, summon Aaron to make a god who will go before them (the term אלהים sometimes takes a plural verb even when it refers to a god or to God). Aaron accedes to their wishes, but as soon as the bull has been fashioned, the people worship the god or gods represented by the bull in a way which this earliest tradition obviously condemns (vs. 6). Upon Moses' return from the mountain, he breaks the stone tablets, destroys the bull, and causes the people to submit to an ordeal (cf. Num. 5:11-28), and Yahweh then sends a plague upon the people for their sin.

Not even this early form of the tradition is free of difficulty. The connection of the bull with Yahweh

3. Bearded storm-god with a three-pronged thunderbolt in his hand; from Aleppo

is unmistakable: "These are your gods, O Israel, who brought you up out of the land of Egypt!" (vs. 4; note also that Aaron proclaims a feast to Yahweh [vs. 5]). Yet how can one understand the reference to gods? (The demonstrative pronoun as well as the verb is in the plural in the Received Text.)

The difficulty is solved if Exod. 32 is brought into relationship with I Kings 12. In the latter chapter, Jeroboam I (*see* JEROBOAM 1) is reported to have made two golden calves, one of which was placed in BETHEL and the other in DAN. He did so for the specific purpose of preventing the people of Israel from continuing to worship Yahweh in Jerusalem (I Kings 12:26). The entire undertaking of Jeroboam appears to have been motivated by the desire to restore certain ancient and traditional features of Israelite life which had been suppressed under Solomon and Rehoboam: restoration of tribal integrity; concern for the poor and the oppressed; and perhaps the reform of Israelite worship—although this matter is obscured by the polemical attitude of the later tradition against Jeroboam (vss. 28-33; cf. II Kings 10:29, etc.). Jeroboam's effort could hardly have succeeded if the bulls erected at Bethel and Dan had been understood to be images of Yahweh; the effort would have been absurd if Jeroboam had introduced the worship of Hadad-Rimmon, the Syrian deity, in the form of a bull.

If, however, the bulls of Bethel and Dan represented pedestals or thrones upon which the invisible Yahweh was understood to be enthroned, then these bulls had virtually the same meaning as did the ARK OF THE COVENANT. On this hypothesis, the tradition of the golden calf made in the wilderness is illuminated. Just as the ark was most probably a portable throne-seat for the invisible Yahweh, representing his active presence and power particularly in time of battle (Num. 10:35-36), so also the young bull may have been. Exod. 32 would contain, on this view, a rival tradition of those of the ark and of the tent of meeting (*see* TABERNACLE), traditions which were originally associated with particular tribes or tribal groups, perhaps for centuries.

It is clear, however, that the bull was entirely too apt a symbol of fertility long to remain unrelated to Canaanite cult practices and religious understandings. The ark and the tent of meeting had no such associations. It was almost inevitable, therefore, that the bulls of Bethel and Dan should quickly have become marks of the apostasy of Israel to foreign gods (II Kings 10:29; 17:16; etc.; Hos. 8:5-6; 10:5; 13:2). Furthermore, the bull could not long remain as a representative merely of Yahweh's pedestal or throne; it would become identified with Yahweh himself in popular religious understanding.

The incident of the making of the golden calf in the wilderness has developed through tradition into one of the most magnificent depictions of Israelite faith contained in the OT. It relates, in two scenes enacted simultaneously, that Israel was bent upon breaking the covenant stipulations at the very time in which they were being promulgated by Yahweh upon the holy mountain (Exod. 32:1-14). The Levites appear as the zealous defenders of the faith even against son and brother (vss. 26-29). And Moses is portrayed as the intercessor before Yahweh in behalf of a sinful people, ready to lay down his own life for them (vss. 31-32). Thus around a detested religious symbol, originally perhaps quite harmless, the community of Israel has gathered traditions of fundamental theological significance.* No one "makes" gods. Yahweh is the sovereign Lord, who tolerates no representations of himself or of other gods. No one establishes a priesthood, ordains sacred days and seasons, consecrates an altar (I Kings 12:31-33). Yahweh himself is the ordainer and upholder of cult; he and he alone decrees where and how and why he is to be worshiped. Fig. CAL 3.

W. J. HARRELSON

CALIGULA kə lĭg′yə lə. A nickname given the young Gaius Julius Caesar Germanicus, son of Germanicus and great-grandson of AUGUSTUS, who was Roman emperor A.D. 37-41. The name means "little boot" and refers to his upbringing in army camps. Enthusiastically hailed by the Roman people at his accession, when he was only twenty-four years old, he suffered first from a nearly fatal illness and, in mid-38, from the death of his favorite sister and

4. Emperor Caligula

heir Drusilla, who was deified by the Senate and given the title Panthea. During the next year he discovered the extent to which the Senate had intrigued against Tiberius, and began a series of investigations which led both to executions and ultimately to his own downfall. In September, 39, he went N to direct the field training of the legions in Germany and to prepare for an invasion of Britain, which was prevented either by a change of plans or by mutiny among the troops. By the summer of 40 he had become convinced of his own deity (some Alexandrians had earlier tried to set up statues of him in Jewish synagogues) and gave orders for a statue of himself as Zeus Epiphanios Neos Gaios to be prepared for erection in the temple at Jerusalem. At Rome he ordered a temple built for his own divinity, required oaths to be taken by his Genius, and had courtiers observe the practice of abasement (προσκύνησις). Delays by Roman officials in Syria, and the Emperor's own change of mind, prevented the desecration of the Jewish temple. During the winter of 40-41 a conspiracy was undertaken against him, and he was murdered on January 24. Only the influence of his uncle and successor, CLAUDIUS, prevented the Senate from condemning his memory.

It remains a question whether he was not quite

sane or whether he merely cultivated certain unpleasant traits in his character. Many of his contemporaries preferred to accept the former view.

CALITAS. KJV Apoc. form of KELITA.

CALKERS. KJV form of CAULKERS.

CALL, CALLING [קרא; καλέω, κλῆσις]. A summons issued by one in authority, especially God, to perform a particular function, or to occupy a particular status (*see* APOSTLE; PROPHET). Since Deutero-Isaiah, the religious concept has become almost synonymous with ELECTION. G. E. MENDENHALL

CALLISTHENES kə lĭs'thə nēz [Καλλισθένης] (II Macc. 8:33). A Syrian who came with the Syrian general NICANOR against the Jewish leader JUDAS MACCABEUS. After the defeat of Nicanor, the Jews burned Callisthenes to death because he had helped set fire to the temple gates. N. TURNER

***CALNEH** kăl'nə [כלנה; Akkad. *kullanî, kulnia*]. Alternately: CALNO —nō [כלנו] (Isa. 10:9); CANNEH kăn'ə [כנה] (Ezek. 27:33). A Babylonian city, classed with Erech and Accad in Gen. 10:10 KJV (RSV "all of them," with a different vocalization of the consonantal text; *see bibliography*). So far, the site of Calneh has not been identified. In Amos 6:2, Calneh appears in the sequence Calneh, Hamath, Gath, suggesting that Calneh lies to the N. The discrepancy between the locations reflected in Genesis and Amos may be due to the N city's being a commercial colony named after the mother city in the S. This is substantiated by the mention of Canneh (usually regarded as assimilated from "Calneh," with *-ln-* becoming *-nn-*) between Haran and Eden in Ezek. 27:23. Similarly, Ur the birthplace of Abraham (which can only be located in the N) was a commercial colony named after the mother city of Ur in Babylonia.

The association of Calno (Isa. 10:9) with Carchemish points to the N location.

Bibliography

1. Terminology. The words translated simply "camel" are גמל (e.g., Gen. 12:16) and κάμηλος (Matt. 3:4; 19:24; 23:24; Mark 1:6; 10:25; Luke 18:25). בכר (Isa. 60:6) is rendered "young camel" (KJV "dromedary"); the feminine, בכרה (Jer. 2:23), is also "young camel" (KJV "swift dromedary"). A related term is כרכרת (Isa. 66:20; "dromedary"; KJV "swift beast").

In addition, the KJV mistakenly finds "camel" or "dromedary" in the following words: אחשתרנים (Esth. 8:10, 14; RSV "in the king's service"; KJV "camels"); בני הרמכים (Esth. 8:10; RSV "bred from the royal stud"; lit., "offspring of swift mares"; KJV "young dromedaries").

2. Species. Most of the biblical references are to the one-humped *Camelus dromedarius,* or Arabian camel. This species has two main types: the slow, burden-bearing camel (e.g., Gen. 37:25), and the swift dromedary (e.g., I Sam. 30:17). The two-humped *Camelus bactrianus,* or Bactrian camel of Central Asia, is doubtless intended in Isa. 21:7 (from Media and Persia), in Tob. 9:2 (in Media), and perhaps in Jth. 2:17 (supposedly from Assyria).* The Bactrian camel has the longer hair, and the Arabian dromedary is the faster of the two species. *See* FAUNA § A1*c.* Fig. OX 18.

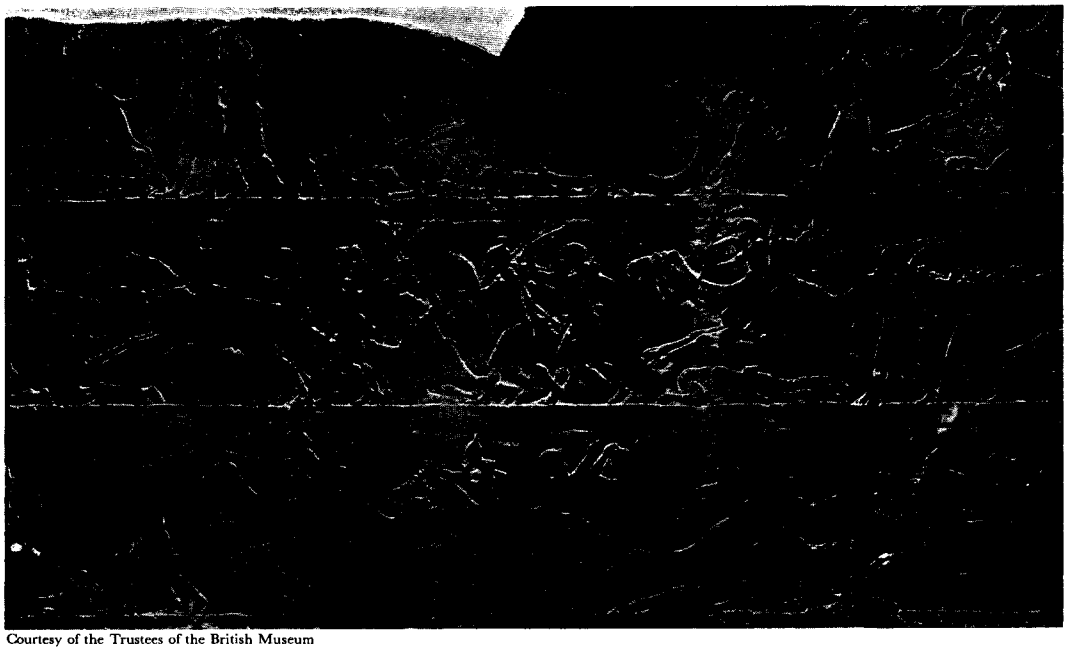
5. A relief from Tiglath-pileser III (744-727 B.C.), showing a woman leading four camels; from Nimrud



3. Date of domestication. According to several references in Genesis, the Hebrew patriarchs in the early second millennium B.C. had camels (*see* § 4*a below*), but extrabiblical evidence for their domestication is mostly later. The camel is practically absent from Egyptian art and literature until Ptolemaic times. The first reference to domestic camels in Assyrian records is from the time of Tiglath-pileser I (*ca.* 1100 B.C.). The earliest known undisputed representation of a rider on a camel is from Tell el-Halaf in Mesopotamia in the tenth century B.C. On the other hand, bones of camels have been found in houses at Mari in the eighteenth century B.C. and

possibly also in Palestine of the Bronze Age. The evidence seems to indicate that large-scale camel nomadism, as carried on by the Midianites (Judg. 6:5), did not appear before the late second millennium B.C. But for some time before such mass movements, individuals and families must have used camels as recorded in Gen. 24, which has seventeen circumstantial references to them. Some scholars have suggested that instances of camels in the patriarchal narratives are anachronisms. *See bibliography.*

4. OT possessors of camels. ***a. Hebrew patriarchs.*** Abraham is said to have had camels in Egypt (Gen. 12:16), and from Canaan he sent his servant to Paddan-aram with ten camels (24:10). Jacob had camels in Paddan-aram (30:43), and he traveled by camel back to Canaan (31:17) and sent camels as gifts to Esau (32:15—H 32:16).

b. Arabs and other nomads. The Ishmaelites who bought Joseph were carrying spices by camel caravan to Egypt (Gen. 37:25). The Midianites used many camels in their raids of Israel (Judg. 6:5; cf. the Arab *ghazw*). A prophet (Isa. 60:6) foresees camels of Midian and Ephah bringing gifts to Zion in the messianic age. The Amalekites were associated with the Midianites in the raids of Judg. 6:3, and they used camels in the Negeb in the days of Saul (I Sam. 15:3) and of David (27:8; 30:17). During the reign of Saul the Reubenites captured thirty thousand camels of the Hagarites (Arabs) in Transjordan (I Chr. 5:21). Various other tribes in S Palestine also used camels: the Geshurites, the Girzites (I Sam. 27:8-9), and those near Gerar (II Chr. 14:15). The Queen of Sheba brought her gifts to Solomon by camel (I Kings 10:2). Many camels were included in the herds of the Transjordanian tribes of Kedar and Hazor (Jer. 49:29, 32). The caravans of Tema (Job 6:19) and of the Dedanites (Isa. 21:13) were presumably of camels. Ezekiel predicts that Rabbah, the capital of Ammon, will become a pasture for camels (Ezek. 25:5). Job, whose chronology is difficult to fix, is pictured as an Arab sheik who had three thousand camels before his affliction (1:3) and six thousand after his restoration (42:12).

c. Israelites. Israelites from different parts of Palestine brought gifts by camel to David in Hebron (I Chr. 12:40). David had camels, but their chief caretaker was an Arab (I Chr. 27:30). The Judeans used camels to carry their gifts to Egypt to secure her support (Isa. 30:6). Sennacherib records that he took many camels from the cities of Judah, and a loaded camel is pictured among the spoils from Lachish in an Assyrian relief. According to the prediction in Isa. 66:20, the exiles employed camels in returning to Jerusalem (Ezra 2:67; Neh. 7:69). The writer of Tobit supposes that Israelite exiles in Media traveled by camel (9:2).

6. Camels and horses carrying soldiers, as Arabs flee from Assyrian forces of Ashurbanipal

d. Other peoples. Ben-hadad, king of Syria, sent forty camels with gifts to Elisha (II Kings 8:9). In a vision a prophet (Isa. 21:7) sees camel-riding Elamites and Medes attacking Babylon. The writer of Judith imagines that the "Assyrian" army used camels (2:17).* Zech. 14:15 assumes that camels will be used by the enemies of Israel in the end times. Figs. CAM 5-6.

5. NT references. John the Baptist (Matt. 3:4; Mark 1:6) wore clothes of CAMEL'S HAIR.

Three gospels (Matt. 19:24; Mark 10:25; Luke 18:25) record Jesus' statement: "It is easier for a camel to go through the eye of a needle than for a rich man to enter the kingdom of God." The camel was the largest animal common in Palestine, and the eye of the NEEDLE was the smallest known opening. So the phrase is a hyperbolic, and therefore memorable, statement of the general truth stated immediately

before: "It will be hard for a rich man to enter the kingdom" (Matt. 19:23; cf. Mark 10:23; Luke 18:24). A similar saying is found in the Babylonian Talmud: "Raba [died A.D. 352] said . . . 'A man is not shown (in a dream) a golden palmtree or an elephant passing through the eye of a needle' " (Ber. 55*b*; cf. B.M. 38*b*). Also Muhammad said of those who rejected his message: "And they shall not enter Paradise until a camel passes through the eye of a needle" (*Koran* VII.38, or 40). Such proverbs belie attempts to take the edge off Jesus' statement by substituting for κάμηλος the doubtful Greek word κάμιλος, "rope," in a few late MSS of Matt. 19:24; Luke 18:25.

In another vivid hyperbole Jesus condemns the Pharisees for "straining out a gnat and swallowing a camel" (Matt. 23:24). The reference to the camel and the lack of a sense of relative values here condemned are both illustrated by a saying of Rabbi Eliezer (*ca.* A.D. 90): "He who kills a louse on the Sabbath, it is as if he killed a camel" (T.B. Shab. 12*a*).

The NT does not mention what animals the wise men from the East rode (Matt. 2:1), but tradition is probably correct in making their mounts camels.

6. Uses. ***a. Travel.*** Some of the peaceful journeys by camel recorded in the Bible are: from Canaan to Paddan-aram by Eliezer and the return accompanied by Rebekah (Gen. 24); from Paddan-aram to Canaan by Jacob and his family (Gen. 31:17); from Ecbatana to Rages by Raphael (Tob. 9:2). The camel also was used as a mount in times of war: in the Midianites' attack from Transjordan into W Palestine and return (Judg. 6:5; 7:12; 8:21, 26), in the Amalekites' flight into the Negeb (I Sam. 30:17), and in the attack from Elam and Media against Babylon (Isa. 21:7). A riding camel can cover between sixty and seventy-five miles in a day.

b. Bearing burdens. In peacetime camels were used to carry merchandise, especially spices (Gen. 37:25). The desert caravans of Job 6:18-19; Isa. 21:13 probably consisted of camels carrying goods for trade. Gifts were also carried by camel: jewelry and clothes from Abraham to the family of Laban (Gen. 24:53); food from Israelites to David (I Chr. 12:40); spices, gold, and precious stones from the Queen of Sheba to Solomon (I Kings 10:2); products of Damascus from Ben-hadad to Elisha (II Kings 8:9); treasures from Judah to Egypt (Isa. 30:6); gold and frankincense from the Midianites to Zion (Isa. 60:6). In war camels are said to carry supplies for the "Assyrian" army (Jth. 2:17) and to accompany the armies attacking Israel in the end times (Zech. 14:15). A camel can carry from 450 to 550 pounds on good terrain.

c. Wool. *See* CAMEL'S HAIR.

d. Food. The Mosaic law forbade the eating of camel's meat (Lev. 11:4; Deut. 14:7), but it is eaten by the Arabs. Camel's milk is also drunk by the Arabs, and some see an indirect reference to this practice in the milch camels which Jacob gave to Esau (Gen. 32:15—H 32:16).

7. Equipment and care. The camel's saddle in which Rachel hid the teraphim probably had two bags or baskets, one on each side of the hump (Gen. 31:34). The saddle or pack was held on with a girth (Gen. 24:32). The Midianites decorated their camels with collars around their necks, from which hung crescent-shaped ornaments of gold (Judg. 8:21, 26). The Arabs today use similar decorations on their camels.

Several details about the care of camels are found in Gen. 24: making the camels kneel at the end of the day (vs. 11); watering them (vss. 14, 19-20); providing a place for them to spend the night, perhaps in an open court (vss. 25, 31); unloading them (vs. 32); provision of straw and provender (perhaps beans or barley, as today; vss. 25, 32). Since Arabs are the most experienced in the care of camels, it is natural that David chose an Ishmaelite, Obil, to be over his camels (I Chr. 27:30).

8. Characteristics. The large size of the camel gives point to Jesus' references to it (*see* § 5 *above*). The hump on which the load is placed is mentioned in Isa. 30:6. The Mosaic law notes that it chews the cud and that it has an undivided hoof (Lev. 11:4; Deut. 14:7). This flat foot of the camel fits it to walk on the sand without sinking. It will be noted that the camel is chiefly used in desert or semidesert areas (*see* §§ 4, 6*a-b*, *above*), for which it is admirably suited because of its ability to eat desert plants and to go for several days (as long as twenty in the winter) without water.

9. Figurative references. Israel in her following of foreign gods is compared to a restless she-camel in heat (Jer. 2:23). In Matt. 19:24 the camel is a metaphor for something important which the Pharisees overlook.

J. A. THOMPSON

CAMEL'S HAIR [τρίχες καμήλου; D *reads* δέρριν καμήλου, skin of a camel] (Matt. 3:4; Mark 1:6). The material of the outer garment of John the Baptist. A rough cloak, in Arabic '*abâ*', sometimes of camel's hair, is worn by the Bedouin of the desert today. Such a garment was suited to the austere life and message of John. Jesus contrasts John's dress with the "soft raiment" of courtiers (Matt. 11:8; cf. a similar contrast in Jos. War I.xxiv.3).

A "hairy mantle" (Zech. 13:4) was a sign of the prophetic office. Elijah, the prototype of John, wore

a mantle of "haircloth" (II Kings 1:8), possibly of camel's hair, though some refer this description to Elijah's own hair.

Bibliography. G. Dalman, *Arbeit und Sitte*, V (1937), 5, 18, 163, 241. J. A. THOMPSON

CAMEL'S THORN [ἀσπάλαθος]; KJV ASPALATHUS ăs păl'ə thəs. A low, thorny shrub (*alhagi maurorum*) which yields a kind of manna; its root, according to Pliny (Nat. Hist. XII.24), was used for making a fragrant ointment. The word occurs in Ecclus. 24:15, and the Latin reading is *balsamum*. The passage says that Wisdom, like cassia and camel's thorn, has blessed Israel with the scent of perfumes.

B. H. THROCKMORTON, JR.

CAMON. KJV form of KAMON.

CAMP [טירה, מחנה, תחנה; παρεμβολή]. A temporary protective enclosure for a tribe or army.

The common Hebrew word for "camp," מחנה ("encampment" in Josh. 8:13) derives from חנה, "to bend, curve"; hence it is thought that the Hebrew camp was originally circular in character. Such a circular camp—i.e., tents erected in a protective circle around the cattle—may derive from Israel's seminomadic days, since this form of tribal encampment is still common among Bedouin groups in the Near East. תחנה, found only in II Kings 6:8, is probably a scribal error (by metathesis) for תנחתו, "you shall go down" (instead of תחנתי, "my camp"). טירה is an encampment protected by stone walls. It is once rendered "camp" (Ps. 69:25—H 69:26; KJV "habitation"), once "settlement" (I Chr. 6:54—H 6:39; KJV "castle"), and elsewhere as "encampment" (Gen. 25:16 [KJV "castle"]; Num. 31:10 [KJV "castle"]; Ezek. 25:4 [KJV "palaces"]), with special reference to encampments of nomadic peoples, the Ishmaelites, Midianites, and people of the East. In Num. 24:5, משכנות, "dwellings," is properly rendered "encampments" (KJV "tabernacles"), as the context shows.

Israel is portrayed as a "camp" during its pre-Canaanite days, though a clear picture of its organization does not emerge. At Exod. 33:7, Moses pitched the tent of meeting far outside the camp, but according to the idealized account in Num. 2–4 (cf. especially 2:2) the tribes were to take their stations around the tent of meeting on every side. Furthermore, the Levites according to their families were to encamp in an inner circle about the tabernacle (1:53). So dominant did this tradition become that the temple is called the "camp of the Levites" in I Chr. 9:18.

The word "camp" usually denotes a military camp outside the Pentateuch. A camp site would be chosen with two factors in mind: the availability of water (Josh. 11:5; Judg. 7:1; I Macc. 9:33), and lines of natural defense such as a hillside (I Sam. 14:4 ff; 17:3; 26:3). A camp pitched to await battle was fortified against attack, but it is doubtful whether anything as elaborate as the Assyrian camps, with their earthen walls, towers, and moats, ever obtained in Palestine. At best, the Palestinian camp may have been protected by a barricade of wagons. (The word מעגל ["encampment"; KJV "trench"] in I Sam. 17:20; 26:5, 7, may well refer to this. The Hexaplaric recension of the LXX renders מעגל in 17:20 by στρογγύλωσιν, "a rounding," as does Aq. in 26:5, whereas the Lucianic recension has παρεμβολήν, from which the notion of a circular line of defense is taken.

The Greek word παρεμβολή is the regular rendering of מחנה in the LXX. It also occurs in the NT, where it refers to the stationary "barracks" of the Roman army in the Tower of Antonia (Acts 21:34, 37, *et passim*); in Rev. 20:9 the word is used figuratively of the militant Christian church.

J. W. WEVERS

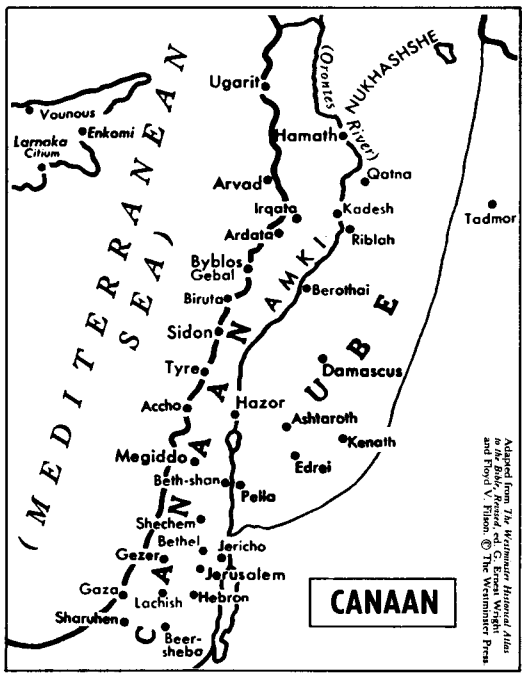
CAMPHIRE kăm'fīr. KJV translation of כפר (RSV correctly HENNA). *See* FLORA § A7*d*.

CANA kā'nə [Κανά, *probably from* קנה, reed]. A village of Galilee of uncertain location; mentioned in the Bible only in the gospels. The full name was Cana of Galilee (e.g., John 2:1; 21:2), to distinguish it from other places of the same name (cf. Kanah in Josh. 16:8; 19:28; cf. also Jos. Antiq. XV.v.1).

1. Location. There is little basis for the identification of the site except etymology and tradition. Only two locations are likely for the Cana of the gospels. The less likely site is Kefr Kenna, even though it has the support of ancient and medieval tradition and both Greek and Roman churches. There is reason to believe that this identification was influenced by the accessibility of the site for pilgrims, for it is only *ca.* four miles from Nazareth and on the road to Capernaum and Bethsaida. The doubling of the middle "n" is difficult to explain if "Kenna" is derived from "Cana."

The more likely site and the one which has the support of most scholars is Khirbet Qana, the ruins of an ancient village *ca.* nine miles N of Nazareth. Various pilgrims, beginning with the twelfth century A.D., reported that they visited this site as the Cana of the gospels. The Arabic name Qana is much closer to the word "Cana" than is Kenna, and in the full form of Qana el-Jelil the Arabic has preserved the equivalent of the full expression "Cana of Galilee." The name, which means "place of reeds" (*see above*), is appropriate, for it overlooks a marshy plain where reeds are still plentiful. The site is at the N edge of the plain called el-Battuf, the ancient Plain of Asochis. This identification is supported by Josephus, who states: "My abode was in a village of Galilee, which is named Cana" (Life XVI). At this time he was apparently in the Plain of Asochis (Life XLI). Further support for this identification may be found in Eusebius as quoted by Jerome, for he places Cana in Asher near Sidon, which could be said of Khirbet Qana but not of Khirbet Kenna (*De Situ et Nom. Loc. Hebr.* 186). The ruins are on the top of a hill and have not been excavated, but there are cisterns and the remains of buildings. Nearby are tombs cut in the rock. It has been reported that sherds and coins of the first century A.D. have been found on the site.

2. In the gospels. Cana was the home of Nathanael, one of the Twelve (John 21:2). Although some have claimed that Simon was from Cana, this is not likely. In Matt. 10:4; Mark 3:18, in the KJV and in inferior Greek MSS, this Simon is called "the Canaanite" (ὁ Κανανίτης), but the preferred reading,



as found in the RSV and in the better MSS, is "the Cananaean" (ὁ Καναναῖος), meaning "the Zealot" (cf. Luke 6:15).

Only two gospel incidents have their setting at Cana. One is the wedding feast at which Jesus turned the water to wine (John 2:1-11). The other is Jesus' being approached by an official from Capernaum who wished to have his son healed (4:46-54).

D. C. PELLETT

***CANAAN** kā'nən [כְּנַעַן; Χανάαν]; KJV NT CHANAAN. **1.** The ancestor of the CANAANITES (Gen. 10:15-19; I Chr. 1:13-16), said in Gen. 9:18; 10:6; I Chr. 1:8 to be the son of Ham and therefore grandson of Noah. However, in Gen. 9:24-27 Canaan himself appears to be the "youngest son" of Noah and the brother of Shem and Japheth. *See* NOAH § 2.

2. The country occupied by the CANAANITES in pre-Israelite times, consisting of PALESTINE W of the Jordan and part of Syria, or a limited portion of it, particularly the region along the coast, which was called PHOENICIA (Φοινίκη) by the Greeks.

A. HALDAR

CANAANITES kā'nə nīts [כְּנַעֲנִים; *see* § 1 *below*]; CANAANITESS (I Chr. 2:3); CANAANITISH (Gen. 46:10). The people occupying Palestine W of the Jordan at the time of the Israelite invasion, and their descendants and successors. The word is also used as an appellative with the meaning of "merchants" (*see* § 1 *below*). For KJV "Canaanite" as a cognomen of one of Jesus' disciples, *see* CANANAEAN.

2. The people and the country
3. The Canaanite language
4. History
5. Social structure
6. Literature and religion

Bibliography

1. The name. The actual form of the name of Canaan cannot be explained etymologically as a Semitic word. Since the final "n" has been taken to be a Hurrian grammatical element, the name has been considered to be a Hurrian word form (*see* HORITES), and this is perhaps the most plausible explanation.

The earliest document in which the Canaanites are mentioned is an inscription of Amenophis II (fifteenth century B.C.) reporting two campaigns in Asia. The inscription contains a list of war captives from Syria; 550 *maryana,* 640 *kyn'n.w,* are mentioned. The form *kyn'n.w* corresponds to Akkadian *kinaḫni/a, kinnaḫḫu,* which is found in the Amarna Letters. These equations make no difficulties, since the West-Semitic-Egyptian laryngeal ' often corresponds to *ḫ* in Cuneiform languages. The form *kinaḫḫu* consists of an element **kina-* and the Hurrian suffix *-(ḫ)ḫi,* "belonging to." The meaning of **kina-* cannot be decided with certainty—it may have the meaning "reed" or "red purple" or something else. Accordingly, "Canaan" may have the meaning "(Land) of Reeds [papyrus?]." Cf. Byblos, the place where the Greeks first were acquainted with papyrus; from the name of the place the Greek word for "book" derives. Red purple was another important product of the region, and in the Nuzi Texts we find *kinaḫḫu* with the meaning "red purple." With these semantic conditions we may compare the Greek name of the country, Φοινίκη, connected with *phoinix,* "red purple."

In the Amenophis II inscription *kyn'n.w* is in all probability a designation of a social or ethnic group, as it would seem closely connected with *maryana,* the Hurrian military aristocracy. If *kyn'n.w* is the designation of a social group, it would most likely be the class of merchants. For this opinion there is evidence in a number of OT passages as well (Isa. 23:8: according to this passage the Canaanites—i.e., the traders—were the aristocracy of Tyre in the days of Isaiah; Ezek. 17:4; Hos. 12:8; Zeph. 1:11; Zech. 11:7, 11, should perhaps be read כנעני הצאן, "sheep merchants"). If, in the fifteenth century and earlier, *kn'ni* was a term denoting the Hurrian merchants, it may have developed into an ethnic term denoting the inhabitants of the Phoenician coast, because the most important part of the population of that region was the class of merchants. If the basic meaning is "merchant," the use of Akkadian *kinaḫḫu* in the sense of "red purple" is easily understood, since the region of the Phoenician coast was particularly known for this commodity. Cf. the use of the name of Byblos as a designation of papyrus, referred to above.

2. The people and the country. The genealogies in which the name of Canaan appears are of a certain interest, in spite of the fact that they must not be taken too literally, since they are not based on ethnographical facts but contain allusions to cultural and geographical affinities. In Gen. 9:18; 10:6 Canaan is said to be a son of Ham. This would imply

that the Canaanites were believed to be a branch of the Hamitic group. In Gen. 10:15 ff the sons of Canaan are mentioned: Sidon, his first-born, Heth, the Jebusite, the Amorite, the Girgasite, the Hivite, the Arkite, the Sinite, the Arvadite, the Zemarite, and the Hamathite. This list of various subdivisions of the Canaanites seems to reflect a certain geographical order from the S to the N. Of special interest is the association of the Amorites, one of the most important Semitic groups at the beginning of the second millennium, with the Canaanites (*see below; cf.* AMORITES). Another interesting detail is the fact that Ham is said to be the father of Canaan, and Heth a son of Canaan. This clearly indicates that the genealogy is not to be taken as a source for our knowledge of ethnographic relations, for it is not very likely that the Hittites were descendants of the Hamites, even if the Hittites of the OT tradition are not the same people as the Hittites of Asia Minor in the second millennium. When Ham is said to be the father of Canaan, it is a reminiscence of the Egyptian political domination of Canaan, which was exercised as early as during the Old Kingdom. In a similar way the relation maintained between Heth and Canaan may reflect traditions of migrations of the Hittites in the course of the second millennium and at the beginning of the first. The conditions at Ras Shamra at the middle of the second millennium give a good illustration of the mixed character of the population of Canaan during this period. According to Num. 13:29 (cf. Josh. 1:2-4), Hittites lived in the Judean hills. The fact that they came to live in such isolated places may find its explanation in the assumption that they had been pressed back by later migrations. According to the OT itself, the Hittites played an important role in the growth of the Israelitic people (cf., e.g., Ezek. 16:45). So did the Hurrians, from whom even the name of the Canaanites may derive (*see above*). At the time of Amenophis II they were in the country, and probably they had appeared there shortly after 2000 B.C. In any case, the Amarna Letters contain evidence for the opinion that non-Semitic ethnic elements settled in Palestine and Syria at a rather early date, for a number of these letters show a remarkable influence of non-Semitic tongues. As is evident particularly in one list from Ras Shamra, however, the Semites were the main part of the population at the middle of the second millennium, and gradually the Semitic element became still more dominating, and the Canaanites may be regarded as a Semitic people, even if they were never of pure Semitic blood.

In the OT, "Canaan" is used as a designation of the whole of the territory W of Jordan (Gen. 12:5; Num. 33:51), and the Canaanites are accordingly the inhabitants of this territory (cf., e.g., Gen. 12:6; 50:11; Josh. 7:9). But according to other passages (e.g., Num. 13:29; 14:25; Josh. 11:3) the Canaanites are the inhabitants of a limited area at the coast and in the plain. A few times the word is also used of the Phoenicians (Neh. 9:8; Isa. 23:11; Obad. 20; etc.). Accordingly, in the OT the country of Canaan may refer to a limited area, or to a wide area, which includes the whole of the district W of Jordan. In modern scholarly literature, "Canaan" is used as a designation of the whole area of Palestine W of Jordan and Syria, and the Canaanites are accordingly the inhabitants of this territory in pre-Israelitic times. It has been suggested that the Canaanites and the Amorites may be regarded as in reality identical (*cf.* AMORITES; *cf. also* § 3 *below*).

3. The Canaanite language. The Canaanite language belongs to the NW group of the Semitic languages. Since, however, Canaanitic was spoken in a vast area, local varieties and dialects must be assumed and can also be proved. Also the linguistic development of Canaanitic during the time from which the earliest Canaanite texts derive and up to the time when, e.g., the language of the OT obtained its final linguistic form, resulted in significant linguistic differences between various branches of the Canaanite language. In spite of this, the Canaanite language is rather homogeneous, and through a number of criteria it can be distinguished from other Semitic tongues. The question of the relation between Canaanitic and Amoritic has been of great importance, particularly after the Ugaritic language became known. Some scholars have contrasted these two languages, and as for Ugaritic put the question whether it is a Canaanite or an Amorite dialect. When dealing with such questions, it may be of importance to remember that "Amorite" is a term deriving from Akkadian. From the horizon of Mesopotamia all the territory W of its borders was called *Amurru*, "the western country." Hence Amoritic cannot be assumed to have been a homogeneous language, and because of this what we call Canaanite may be part of what the ancient Babylonians called Amorite. The theory has also been ousted that Canaanite and Amorite once were one and the same language.

Like all other Semitic tongues, Canaanite shows the distinguishing triconsonantism in the majority of the words, but a number of biconsonantal and quadriliteral roots exist. As is the case in other Semitic languages, the consonants are responsible for the basic meaning of the root, and through the vowels the meaning is modified. Because of this, the systems of writing in several Semitic languages are in the main consonantal; thus also in early Canaanite. The nouns were in the early periods inflected with case endings (cf. Akkadian and Arabic), and the case vowel was followed by the mimmation (cf. Akkadian). When the noun appeared before a genitive, the case elements were dropped. Later the case inflection was given up (cf. Akkadian). The tenses of the verb are the so-called perfect and the imperfect. The perfect shows conditions very similar to the corresponding form of the Akkadian verb, the so-called permansive, with regard to its formation, inflection, and syntax. The imperfect was used to describe actions in the present or future but was also used about actions in the past, in the sense of a preterit. Or, according to another opinion, there were two forms, corresponding to the Akkadian preterit and present-future respectively, of which the former was used to describe a completed action and the latter an action not completed.

A feature typical of Canaanite dialects was the occurrence of an initial "y" in all word stems which

have an initial "w" in Akkadian and Arabic, an important criterion which distinguishes the Northwest Semitic from all other Semitic languages. Accordingly, Canaanite, Amorite, Hebrew, and Aramaic have this and other features in common. Other linguistic details, such as the definite article *ha-*, the mergence of certain sounds—e.g., the laryngeals *ḥ* and *ḫ*, etc.—appear relatively late. The fact that they do not appear in early dialects (Ugaritic) is, of course, no argument for separating them from dialects which show a number of later features (e.g., Hebrew).

Before 2000 B.C. a Canaanite script was in use containing about eighty characters. This early script was to some extent related to the Egyptian hieroglyphic system. A number of inscriptions on stone and copper have been found at Byblos. At Ras Shamra another Canaanite system of writing was used which derives from the Cuneiform writing. The alphabet which was used by the Phoenicians is a third Canaanite system of writing.

4. History. The countries of Syria and Palestine were inhabited since Paleolithic times. The Stone Age civilization discovered by A. Rust in caves in the vicinity of Negeb N of Damascus may be mentioned as one instance. Since several layers were found in the caves, that civilization was probably of a rather long duration. From the Mesolithic period, the Natufians of Mount Carmel discovered by Miss Garrod may be mentioned. Finally, the Chalcolithic men of Byblos found by Dunand are important evidence of early inhabitants in the region. The anthropological and linguistic types of these early men will, of course, never be known. But Semites undoubtedly settled in the region at an early date, and as early as 3000 B.C. a Semitic-speaking population most likely lived there. This may be concluded from the existence of towns with Semitic names, perhaps of a linguistic type related to Canaanite. One of the most ancient towns is Jericho; others are Beth-shean and Megiddo; at the coast in S Canaan, Byblos; and in the N, Ugarit. On the other hand, there are also place names of a non-Semitic type.

The period of Canaanite history which is best known is the Bronze Age. Through a number of excavations archaeological material has come to light through which the material culture of the Canaanites has become known. During the period of the Old Kingdom (2600-2200 B.C.), the Egyptians exercised political dominance in Palestine and Syria, and during the Fifth and Sixth Dynasties they undertook military invasions into the territory. During the Twelfth Dynasty (1990-1790 B.C.) the Egyptians dominated Palestine and part of Syria, as is evident from the finds at Byblos, Ras Shamra, and Qatna in Syria and a number of discoveries in Palestine, of which those at Megiddo may be the most important. Of Egyptian documents the so-called Execration Texts are important for this period. After the decline of the Egyptian power at the beginning of the eighteenth century, the Canaanites got free from the Egyptian domination. At the end of the nineteenth century, the Egyptian civilization was imitated, at least at Byblos, but this probably has regard only to the material culture.

A strong influence came also from the East, particularly during the centuries from *ca.* 2000 B.C. During these centuries there were intimate connections between the region in the W and Mesopotamia. The Amorites from the region of Mari invaded Mesopotamia and created local kingdoms, of which the first Babylonian dynasty was the most important. The Mari Letters make it possible for us to see how people came from the E to the region of Mari and continued down into Palestine (*see* HABIRU). Through these contacts an exchange of cultural elements took place, but, as, e.g., the texts from Ras Shamra show, the Canaanites tried to develop an independent culture. A homogeneous Canaanite civilization, however, could never be created, because the whole area of the Canaanites was divided in a number of local kingdoms with traditions of their own. Furthermore, new ethnic movements in the course of the second millennium gave new impulses.

The most important events are the Hyksos invasion into Egypt and the entering of the Hurrians and the Hittites into the domain of the Canaanites. The Hyksos were to some extent Semites, as appears from the Hyksos names which are known, such as ʿAnat-har, Yaʿqob-har, Abd Nahmān. These are Semitic like many others, whereas there are also non-Semitic names. Accordingly, there were several ethnic elements among the Hyksos. The cultural influence of the Hittites was strong, particularly in the N part of Syria. Because of all these complications Canaanite culture shows a rather heterogeneous character, and only in the region which is usually called Phoenicia—i.e., the region at the coast—did the civilization have a more unmixed structure. There was probably the real center of Canaanite civilization, whereas in the E part of Syria, Mesopotamian influence was stronger. As examples illustrating this, Mari and the region of Damascus may be mentioned, where the Amorites adopted many cultural elements from Babylonia. This holds true particularly with regard to the so-called Old Babylonian period, but as late as in the ninth century we know that Assyrian cults were practiced in Syria (e.g., Hama), and presumably this was the case also later. Even in the Damascene a strong Babylonian influence prevailed during the Old Babylonian period with regard to glyptic (e.g., cylinder seals), while the Amorites seem to have been more independent in the field of ceramics, as appears from finds of pottery in several places in that region, probably of an Amorite type (*see* AMORITES). But there are examples of art which might have developed into an independent Canaanite type if the development had not been broken by foreign influence—e.g., a picture of Jarimlim, king of Jamhad, contemporary of Hammurabi of Babylon; figurines of bronze; cylinder seals; etc.

After the expulsion of the Hyksos (sixteenth century), the Egyptians dominated politically. The text quoted above from the reign of Amenophis II (fifteenth century), listing war captives, is a witness of the military expansion of the Egyptians during this period. Later the power of the Egyptians declined, and the Amarna Letters inform us about the conditions prevailing during the first half of the fourteenth century. We see that the king of Byblos was almost

the last ruler who co-operated with the Egyptians. He cries for help from the Pharaoh, but the latter is unable to support him. During this period a number of local kingdoms existed in Palestine and Syria fighting against one another. From that time on, the Israelite nation took its birth, and so the Canaanites merged with the Israelites, who became the political and cultural heirs of the Canaanites. Another branch were the Phoenicians, who for a short period played an important role as merchants and seafarers and extended their commerce in North Africa, where they founded a number of colonies, and as far westward as to S France.

5. Social structure. Canaanite social structure was, in the main, of the same type as that prevailing in the other Near Eastern countries. Three social groups existed: freemen, clients, and slaves. A great part of the slaves were war captives and foreign slaves, but most were natives—e.g., defaulting debtors and unemployed men and women, who sold themselves into slavery to obtain their livelihood; furthermore, children were often sold by their parents or exposed, and then they could sustain themselves only by slavery. The position of the slaves was of various character: there were state slaves, temple slaves, slaves working as farmers but without possessing their own land, and finally, a number of unfree men who worked in crafts. The clients were a class only half free.

Canaanite society and economy were based on agriculture. Part of the land was in the possession of the state and the temples, but there were also a number of private landlords. Also the tenant farmers, the *ḫupši*, possessed small pieces of land. King Rib-Addi of Byblos mentions that they, because of circumstances, were forced to sell the "wood of their houses, and their sons and daughters in order to procure food for themselves" (see the letters of Rib-Addi from Tell el-Amarna). The farmers were apparently a class of industrious people, and their work was the real basis of the economy and the prosperity of the nation. Generally the property of the farmer was not very large, and his household was, as a rule, the main help in his work. On the other hand, the tenants of land worked as dispossessed farmers under the owners of the large estates, to whom a great part of the land belonged. The top of the agricultural organization was the king, who possessed a large property. The royal lands were divided up among his subordinate supervisors, who in their turn leased pieces of land to free tenant farmers. Likewise the temples possessed large properties. This meant that an important part of the temple staff was responsible for their managing.

For long periods, ancient Near Eastern society was organized according to the principles of the feudal system. The king was the head of the society. He was the owner of the largest properties; he was the head of the military organization and of the religious organization; and he was likewise the most important industrialist and merchant. But under him there were guilds, the members of which took care of the special duties—guilds of priests, of warriors, of merchants, of craftsmen, etc.

The social conditions prevailing in the Canaanite feudal or semifeudal society are reflected in texts from Alalakh and from Ugarit, dating from the eighteenth to the thirteenth century B.C. To judge from certain texts, a great influence, deriving from Hurrian social conditions, can be observed in certain areas. The class of professional warriors was, e.g., called *maryannu*. The *maryannus* possessed a high position in society. Only the king could grant this rank, which was hereditary. The *maryannus* had superior military equipment, particularly their horse-drawn chariots. In texts from Alalakh and Ugarit cases of the king's granting this rank to citizens is mentioned. In return a *maryannu* had a special obligation to the king, and for the services he rendered the king he received areas of land. From these lands he derived the means of obtaining and maintaining his war equipment.

Akkadian documents from Ugarit throw light on the management of the royal lands and the revenues from them. Pieces of royal land were granted to members of the royal family, to state officials, and to other persons. For such grants of land, the receiver had to do services or pay taxes to the king, and he was often called the servant of the king. Such royal lands were fields, vineyards, orchards, and olive yards, including movable property, such as sheep, oxen, asses, and slaves.

For the expenses of the government, taxes were imposed on the citizens, and several kinds of taxes are mentioned in the texts from Ras Shamra. Also toll and fines are referred to in these texts. The king, furthermore, made people subject to labor for his constructions—e.g., of roads, of fortresses, of temples, and for work on royal lands. This semifeudal system prevailed in Palestine and Syria during the second millennium, as in other parts of the Near East. Also in the OT, where in so many ways we may observe reflections of the ancient Canaanite civilization, reference may be found to feudalism. As has been pointed out by an American scholar, this is undoubtedly the case in I Sam. 8:4-17.

6. Literature and religion. Until two or three decades ago, Canaanite literature and religion were almost unknown but for the scanty knowledge about them which may have been derived from late sources. But thanks to French excavations, directed by Claude Schaeffer, at Ras Shamra, ancient Ugarit, situated on the coast of N Syria, very important material has been discovered. The excavations at Byblos, directed by Maurice Dunand, are also of very great significance, but the finds of texts there have not been so rich. The excavations at Ras Shamra started in 1929 and were continued until the Second World War put a stop to them. Since that war they have been taken up again. Through the discoveries at Ras Shamra, a great part of the ancient Canaanite literature has been found, and through them we have for the first time obtained contemporary documents for our knowledge of Canaanite religion in the second millennium B.C. The texts, which date from the early fourteenth century, are written on clay tablets with a script invented by the Canaanites on the basis of the Cuneiform system of writing. The alphabet of Ras Shamra is an almost consistent consonantal system of writing. Only one letter, *alef*, appears in

three forms, one for each of the three vowels "a," "i," and "u," the only survival of the syllabic system of Cuneiform. On these texts *see* UGARIT. Fig. UGA 3.

The question of the Ugaritic parallels to the Bible is a subject which has given rise to an enormous literature. Here only a few hints of some main points can be given. The chief deity of the Ugaritic pantheon is 'Il. He is a sky god. He is father of the other gods and is the supreme lord over the gods and ruler over the assembly of the gods on the mountain in the N—i.e., Mount Cassius. Baal is another important deity, previously well known from the OT. His wife was Anat. Roughly these two deities may be compared with the two Mesopotamian deities Tammuz and Ishtar. Like the latter, Baal and Anat are vegetation deities. The annual cycle of vegetation, its vanishing and its renaissance, is dramatically expounded in the cult of Baal and Anat, particularly in connection with the great New Year Festival. The texts for our knowledge of all this are included in the Baal and Anat cycle, which is found in an excellent English translation in C. H. Gordon, *Ugaritic literature* (1949), pp. 11 ff. Undoubtedly, Baal is a dying and reviving deity, and through the cult which is performed for him, life and prosperity are granted to his worshipers through the king, who represents Baal in the cult performances.

Bibliography. Since the literature on the Canaanites is very extensive, only a few of the most important works and special articles will be listed. There further references will easily be found. F. A. HALDAR

CANALS [יְאֹרִים, *yᵉ'ōrîm,* the Nile, *or* the Nile arms, Nile canals; *plural of* יְאֹר, the Nile] (Exod. 7:19; 8:5—H 8:1; Isa. 19:6); KJV RIVERS. A word referring to the Delta arms of the NILE and the network of connecting waterways in the Delta of Egypt.

T. O. LAMBDIN

CANANAEAN kā'nə nē'ən [κανανᾶιος, *from* Aram. קַנְאנָא, jealous one, zealot, *from* Heb. *root* קנא] (Matt. 10:4; Mark 3:18). A cognomen for a certain Simon, a disciple of Jesus, to distinguish him from Simon Peter. The ending -ᾶιος probably denotes a party (cf. Φαρισᾶιος, "Pharisee"; Σαδδουκᾶιος, "Sadducee"; Ἐσσᾶιος, "Essene").

In Luke 6:15; Acts 1:13 the same disciple has the name Simon the Zealot, the Greek ζηλωτής being the equivalent of the Semitic original. *See* ZEALOT.

W. R. FARMER

CANDACE kăn'də sĭ [Κανδάκη] (Acts 8:27). A queen of ETHIOPIA. PHILIP (7) baptized her treasurer. "Candace" was a title (roughly, "queen"; exact meaning uncertain), not a personal name. It was used by a number of queens of the Ethiopian kingdom of Meroe, on the Nile in modern Sudan. The Candace of Acts 8:27 (not long after A.D. 30) cannot be certainly identified with any queen known elsewhere, though the title, apparently applied to the reigning queen-mother, was well known to ancient historians, and was used by queens at the times of Augustus (*ca.* 25 B.C.) and Nero (*ca.* A.D. 61).

***CANNEH.** An alternate form of CALNEH.

***CANON OF THE OT.** The great religions of the world have collections of writings which the faithful consider to be God's word and therefore to contain for all future time the ultimate standard of faith and practice. This is particularly true of Judaism, Christianity, and Islam; but Confucianism, Taoism, Buddhism, Hinduism, Zoroastrianism, have also bodies of sacred writings—whether or not inspired in the opinion of the believers—which carry the highest religious authority. Such a collection of books constitutes a "canon." But no book was ever regarded as God's Word before 621 B.C. (II Kings 22–23).

The Greek word "canon" (κανών) is derived from a Semitic root (Assyrian *qanû,* Ugaritic *qn,* Hebrew קָנֶה, etc.) which is a loan word from Sumerian (GI, GI-NA) and originally meant "reed" (I Kings 14:15; Job 40:21; etc.). The word passed into Greek (κάννα) and Latin (*canna;* cf. English "cane") and gave rise in various languages to words literally meaning something made of reeds or straight like reeds ("cannon"), or figuratively something firm and direct like a reed (English "canon"). In Greek, e.g., "canon" means the stave of a shield, a weaver's rod, a ruler for drawing or measuring, a curtain rod, a bedpost (Jth. 13:6); and metaphorically a rule, a standard, a model, a paradigm, a chronological table, a boundary, a tax assessment, a tariff. The Greek and Latin church fathers used "canon" for the biblical law, an ideal man, articles of faith, doctrines of the church, contributions to the church, a catalogue, a table of contents, a list of clergymen or of saints

("canonized"). In the NT, "canon" means "rule," "standard" (Phil. 3:16—textus receptus; Gal. 6:16), "limit" (II Cor. 10:13, 15-16). Origen (died 254) may have used "canon" in the sense of the list of the divinely inspired books, although Athanasius (died 373) is the first of the church fathers known to have done so.

Before Origen the OT and its parts were called ἡ γραφή, "the scripture" (John 2:22; Acts 8:32; II Tim. 3:16; etc.); αἱ γραφαί, "the scriptures" (Mark 12:24; I Cor. 15:3-4; etc.); αἱ ἱεραὶ γραφαί, "the holy scriptures" (Philo *On Flight and Finding* 1.4 [546]; *On the Special Laws* 39, § 214 [243]; I Clem. 45.2; 53.1); ἅγιαι γραφαί, "holy scriptures" (Rom. 1:2); τὰ γράμματα, "writings" (John 5:47); τὰ ἱερὰ γράμματα, "the sacred scriptures" (II Tim. 3:15; Philo *Life of Moses* 2.51, §§ 290, 292 [179]; Jos. Antiq. I.iii.13; X.iv.210; etc.); τὸ βίβλιον, "the book" (Gal. 3:10; Luke 4:17; etc.); ἡ βίβλος, "the book" (Mark 12:26; Luke 3:4; 20:42; Acts 7:42; etc.); αἱ ἱεραὶ βίβλοι, "the sacred books" (I Clem. 43.1); כתבי הקדש, "the holy scriptures" (M. Yadaim 3.2, 5; 4.6; Shab. 16.1; 'Er. 10.3; etc.). Later the Jews called their Bible מקרא, "what is read" (cf. Koran); הכתוב, "what is written"; הספר, "the book"; עשרים וערב ספרים, "twenty-four books."

The OT was, and remained, the official collection of the holy scriptures of the Jews before becoming the first half of the Christian Bible. We must place ourselves several centuries before the rise of Christianity in order to understand how this collection began, grew, and was preserved; and we must deal with the Hebrew Bible rather than with the OT. This distinction is essential, although the contents are identical (except for the addition of the Apoc. in Roman Catholic Bibles), because the arrangement of the books in Jewish and Christian Bibles is quite different.

The Hebrew Bible counts twenty-four books and arranges them in three divisions: the Law, the Prophets, and the Writings (*see* § 8 *below*).

Christian Bibles, following the topical arrangement of the Greek and Latin Bibles, arrange the thirty-nine books (counting each of Samuel, Kings, Chronicles, and Ezra-Nehemiah as two books, and the minor prophets as twelve books) as follows:

a) The Pentateuch: Genesis, Exodus, Leviticus, Numbers, Deuteronomy
b) Historical books: Joshua, Judges, Ruth, I–II Samuel, I–II Kings, I–II Chronicles, Ezra, Nehemiah, Esther
c) Poetical books: Job, Psalms, Proverbs, Ecclesiastes, Song of Solomon
d) Prophetical books: Isaiah, Jeremiah, Lamentations, Ezekiel, Daniel, Hosea, Joel, Amos, Obadiah, Jonah, Micah, Nahum, Habakkuk, Zephaniah, Haggai, Zechariah, Malachi

The translators of the Hebrew Bible into Greek, working at Alexandria during the last two and a half centuries before Christ, did not know the reasons for the threefold division of the Hebrew Bible. Since they were trained in the Greek schools of rhetoric, they rearranged the books in a clear topical and chronological manner. They therefore ignored completely the boundary between the second and the third divisions of the Hebrew canon. But this older arrangement, exhibiting clearly the three basic stages in the canonization of the Hebrew Bible, is basic for our study. It is first recorded in the Prologue to the Greek translation of Ecclesiasticus: "The law and the prophets and the other books of our fathers." When this was written in 132 B.C., the third division was not yet fixed for all time. There is here a true recollection of the gradual canonization of the OT. We must clearly distinguish the gradual process of canonization (which lasted almost five centuries) and the doctrine of canonicity which, regarding God as the real author of the books which he dictated to inspired writers, regards the chronological sequence as immaterial. Canonization, by stressing historical facts, does not exclude canonicity, which stresses divine written revelation.

The main part of this article will deal with the history of the canonization (§§ 1-8), and the final part with canonicity (§ 9).

   e. Protestant doctrines
Bibliography

1. Precanonical Hebrew literature. Every sentence in the OT was profane literature before it became canonical sacred scripture. The only Hebrew author that expected his book to be canonized was Sirach (Ecclus. 24:32-33), and his writings failed to be canonized in the Hebrew Bible—although they were included in the Greek and Latin Bibles. Before the canonization of a book in 621 B.C., Israel possessed already a great national literature, including the early stories of Adam and the patriarchs, of Moses, of the judges; the early editions of the books of Amos, Hosea, Isaiah, Micah; the lives of Saul and David; some ancient poems and laws; accounts of kings of Judah and Israel; and other writings. Some of these ancient writings are literary masterpieces, but none of their authors expected to have his book canonized as scripture, any more than Homer, Vergil, Dante, and Milton expected to have their works either canonized for their religious teaching or declared "classic" for their literary greatness; on the contrary, Horace dreaded the thought that his books might become (as they did soon; see Juvenal *Satires* VII.226 ff) a textbook for the schools (Epistles I.20), although he regarded his verses as inspired by Apollo (*Odes* IV.vi.29 ff).

A sharp distinction was made between prophets' spoken words, which could be divinely inspired (Amos 3:8; Isa. 6:9-10; Jer. 1:7, 9), and their written words, which for centuries were not regarded as canonical even though they had been inspired (Deut.

18:18) when delivered orally—the words that God had spoken to Jeremiah (Jer. 36:2-4) were not considered canonical, when written in a book, for four centuries.

From time to time some parts of the existing literature were collected in bodies of canonical literature. It is only an accident in transmission that only this canonical literature (except for those apocrypha which had been written in Hebrew) has come down to us. This is only a small portion of the Hebrew literature which is mentioned in the Bible: the history of the kings of Israel, the history of the kings of Judah (I Kings 14:19, 29, etc.), and poetic anthologies (Josh. 10:13; II Sam. 1:18; Num. 21:14). Many other compositions have been lost without being mentioned, as happened in all ancient literatures. Some unknown Hebrew and Aramaic writings dating from the years about the beginning of our era have been discovered in caves near the Dead Sea.

We must therefore distinguish three stages in the process through which the writings contained in the OT have come down to us—the labors of the original authors (Jer. 36:4); the editing, arranging, and collecting of these writings; and their final canonization. The actual writing of parts of the OT took place from *ca.* 1150 (the Song of Deborah, Judg. 5) or a little earlier (some poems and laws), to *ca.* 125 (the book of Esther) or a little later (Ps. 2 seems to have been written on the accession and marriage of Alexander Jannaeus in 104 B.C.).

The span of a millennium, during which the OT was written, may be compared to the span from Beowulf to Tennyson in English literature, and from Homer to the NT in Greek literature. Even though the changes in culture and religion may not have been as radical in Israel as they were in England and in Greece, there is a world of difference between Deborah and Esther. In 1200 B.C. the Israelites were a group of tribes from the desert who were invading Canaan. After the wars of the judges, David established a short-lived empire, and eventually N Israel was absorbed by the Assyrian Empire and Judah by the Neo-Babylonian. The Judeans passed under the Persian and Hellenistic rule before attaining independence under the Hasmoneans from 141 to 63 B.C., when Roman rule began.

The literature and the religion of the OT reflect these political vicissitudes. The golden period corresponds to the years in which Israel conquered Canaan and was independent (1200-586). The silver age corresponds to the Judean subjection to the Babylonians (586-538), to the Persians (538-332), to Alexander and the Ptolemies (332-198), and to the Seleucids (198-142).

Out of a vast body of national Hebrew literature the books of the OT were selected because of their literary beauty or their nationalistic appeal, because they contributed to keep alive the nation and the worship of Jehovah. The men responsible for collecting and canonizing the Law, the Prophets, and the Writings were convinced that every word in them was divinely inspired by God. In reality, of course, only the prophets (including Moses, according to Deut. 18:18; cf. Hos. 12:13—H 12:14; Num. 11:24-30), in moments of ecstatic trance, experienced divine inspiration, feeling themselves filled by the divine spirit and uttering God's words; in normal conditions, if they were sincere, they could not utter divine oracles (Jer. 28:10-14). The whole OT was regarded as scripture because it was supposed to have been written by prophets. We may therefore seriously question the assertion of Otto Eissfeldt that "in Israel there are . . . six kinds of words that are regarded as God's words"—namely, the judgment of a lawgiver or of a judge, the word of command or prohibition of a man announcing God's will, the instruction of a priest, the oracle of a prophet, the song of a singer, and the proverb of a wise man. Only the oracle of the prophet (and occasionally the response of a priest) were truly inspired when uttered. The other utterances were those of experts, and not of inspired men; they found their place in the Scriptures because their authors were regarded as inspired prophets.

The earliest literature of the Israelites, dating from the time of Moses or earlier, consists of poems (Gen. 4:23-24; Exod. 15:21; Num. 21:17-18) and of laws of the desert (Exod. 21:12, 15-17; 22:19; Lev. 20:10-13) or of Canaan (the Covenant Code: Exod. 21:2-11, 18-22; 21:26–22:17; and the ritual decalogue: Exod. 23:12, 15-17; 22:29-30, 18-19).

Between Moses and Solomon the Song of Deborah (Judg. 5) and other poems, such as David's two elegies (II Sam. 1:18-27; 3:33-34), were composed; and the stories of Adam, the patriarchs, and the judges were circulating orally. Prose writing at its best began in the time of Solomon (*ca.* 975-935 B.C.) and reached from fiction (the stories about Samson in Judg. 13–16) to brilliant historical writing (the biography of David, written probably by Ahimaaz son of Zadok). The best poems from this time are Gen. 49; Ps. 24:7-10. The best literature of the Northern Kingdom (935-722) is scantily preserved in some poems (Num. 23:7-10, 18-24; Deut. 33; Ps. 45), in remnants of the History of the Kings of Israel, in the stories of Elijah and Elisha, in the E Document of the Pentateuch, in the late source of Joshua and Judges, and in the prophetic oracles of Hosea. At the time, with the exception of the J Document and some superb prophetic oracles (Amos, Isaiah, Micah), the literature of the Southern Kingdom was not equally brilliant. The classical period came to an end in Judah with the fall of Jerusalem in 586 B.C., but it still includes a poetic masterpiece (Nah. 1: 10 ff) and the earliest and wittiest part of Proverbs (chs. 25–27).

After Jeremiah, prophecy began to decline (Zephaniah, Habakkuk), but inspired the Book of the Law (Deut. 5–26; 28), found in the temple in 621 B.C. The parts of the Pentateuch and of the historical books written at this time are likewise inferior to the earlier prose.

With the exception of Job and the Second Isaiah (Isa. 40–55), the sixth century lacks outstanding works: some psalms, proverbs, and the book of Lamentations illustrate the prolix and pretentious poetry of the times; Ezekiel, Haggai, and Zechariah illustrate the decline of prophecy; the Holiness Code (Lev. 17–26) illustrates the law of this period.

The two following centuries lack literary masterpieces—the best prose is found in Nehemiah, Ruth, and Jonah; the Priestly Code (*ca.* 450) and the final edition of the Pentateuch (*ca.* 400) were epoch-mak-

ing, and proved fatal to prophecy (Isa. 56–66; Obadiah; Malachi; Joel; and additions to the prophetic books), which at the end of this period became apocalypse. The poetry (Deut. 32; Exod. 15:1-8; Nah. 1: 1-9; Hab. 3; I Sam. 2:1-10; many psalms and proverbs) is more and more elaborate and pompous.

In the third and second centuries the best poetry is in the Song of Solomon, Ecclesiasticus, Ecclesiastes, and late psalms; the best prose is in Chronicles and Esther; Daniel is the outstanding apocalypse (besides Isa. 24–27; Zech. 9–14); the final edition of the prophetic books (Isaiah, Jeremiah, Ezekiel, and the minor prophets) *ca.* 200 B.C. marks the death of prophecy.

2. The canonization of the Law. Since none of the literature preserved in the OT was written for the purpose of being included in a canon of inspired scriptures, we must ask ourselves how there arose in Judaism, and nowhere else, the notion that God wrote or dictated one or more books for the guidance of men. According to Jewish doctrine, God revealed himself to an unbroken series of inspired men going from Moses to Ezra. There may have been inspired prophets before Moses, but they wrote no inspired books; and no prophets arose in Israel after Ezra and Nehemiah (Jos. Apion I.viii; II Esd. 14:44-46; cf. Ps. 74:9; I Macc. 4:46; 9:27; 14:41), so that no Jewish apocalypse was attributed to an author later than Ezra.

No ancient religion doubted that the gods could reveal themselves and make known their will to human beings. They did so spontaneously, either appearing visibly, "face to face" (Exod. 33:11; *Iliad* I. 193-218, and often; *Gilgamesh Epic,* bk. VI; etc.) or in visions (I Kings 22:19-22; Isa. 6; Job 4:12-17; etc.) and dreams (Gen. 28:12-15; *Iliad* I.63; II.5-15; Gudea, Cylinder A, cols. I-VII). The deity could, on the other hand, speak to men through the mouth of prophets into whom its spirit had entered (Amos 3:8; 7:15-17; Vergil *Aeneid* VI.45-97; etc.). But the ancients had also the possibility of obtaining a divine oracle from the deity in answer to an inquiry; as Cicero said (*On Divination* II.26), there are two methods of divining the will of the gods—the artificial one, consisting in the interpretation of omens, and the natural, consisting of divine inspiration. Among the ancient Israelites both methods were used: according to I Sam. 28:6, God could answer human inquiries by dreams, by Urim (the priestly oracle), and by prophets. It may be safely asserted that in Israel priests and prophets were the only recognized recipients of divine oracles. For the stories of the visible appearances of Jehovah or of his angel to ancient heroes (from Adam to Samuel) are told only of men long dead, and never of contemporaries; and the same applies to a unique reference to "tables of stone, written with the finger of God" (Exod. 31:18). And the utterances of a seer endowed with telepathy (identified with a prophet in the misleading gloss in I Sam. 9:9), of a gazer who interpreted omens, or of the magical practitioners denounced in Deut. 18:9-12, were never, as far as we know, regarded as oracles of Jehovah. We can therefore assert that canonical scripture had its origin either in the priestly or in the prophetic oracle, since dreams and visions belong mainly to prophecy.

The priestly oracle could not possibly have produced a canonical volume of sacred scripture and, of course, never did. When an inquirer asked a question of Jehovah, the priest bore a sacred box (the ark) containing lots, requested an answer from the deity, and after drawing the lots interpreted them and gave an answer, which of necessity could only be "yes" or "no," "A" or "B," and eventually "no answer" (I Sam. 14:37). Saul, David, and Solomon regularly inquired of Jehovah through a priest by this more or less mechanical method. It was in use since the early days of the settlement in Canaan, but it became obsolete at least in the reign of Ahab, a century after Solomon, when kings consulted prophets and not priests. It was still employed, apparently, in the more primitive regions of N Israel in the days of Jeremiah and had become a memory when Ezra 2: 63 = Neh. 7:65 was written; cf. Jos. Antiq. III.viii.9; M. Sot. 9.12 ("When the first prophets [living before Haggai, Zecharaiah, and Malachi] died, urim and thummim ceased"). Such oracular responses as could be obtained from the lots were limited to two alternatives, or to a simple "yes or no" answer to a special question asked on a definite occasion. They could therefore contain nothing having a permanent validity, worthy of preservation in a book.

The questions asked of Jehovah through a priest usually regarded military matters: Who committed a sin (I Sam. 14:40-42)? Will the men of Keilah deliver David into Saul's hand (I Sam. 23:12)? Should David pursue the Amalekite raiders (I Sam. 30:8)? Should David attack the Philistines (II Sam. 5:19)? The answers to these and other questions were vital to Saul, David, and other inquirers at a given moment, to help them choose between two alternatives, but had merely a historical interest to later generations, who could derive no guidance from these divine responses and who might consult the priestly oracle any time while it was still in use. There is nothing to indicate that the priestly law (Torah) and any of its articles were ever obtained through the manipulation and interpretation of the sacred lots.

The priestly oracle could not have given origin to the notion of canonical scripture; this notion could only have been derived from prophecy. The Hebrew prophets, like the Greek and Roman sibyls who face the prophets in Michelangelo's paintings in the Sistine Chapel, felt themselves to be physically invaded by the spirit of the deity at the moment of inspiration. The Hebrew word for "prophet," נביא, possibly means "entered" (from בוא, "to enter"). By entering into a man the deity could actually speak through the vocal organs of the prophet, even if he was reluctant to utter an unpopular message (Jer. 20:7-9); often when the prophet says "I," he means Jehovah (Amos 4:6-11; 5:21-24; etc.). But it was only in this overwhelming experience that the words of the prophet in the moment of their being uttered were regarded as divinely inspired; the inspiration of his book was an afterthought, and in the case of the earliest literary prophet (Amos, 750 B.C.), the idea of his having been inspired came more than five centuries after his time. In reality, of course, if one admits that the prophetic books contain actual oracles revealed to the prophets and uttered by them, one assumes that to this extent the books are inspired. Whether

the individual books were written by the prophet or by a disciple does not matter in the least, provided the oracles are recorded faithfully.

It is probable that Jeremiah, who dictated the book of his oracles to Baruch during the seven years when he was in hiding and unable to preach, was the first prophet to write his book. In principle the first scripture was the written record of the inspired utterances of the eighth-century prophets, in spite of the fact that other writings attained canonical status much earlier. When Josiah came to the throne in 638, there were in circulation MSS containing prophetic utterances which their authors and their readers regarded as containing God's inspired words. Jeremiah (26:18) quoted Mic. 3:12, presumably from the book of Micah; and later Zechariah (1:4; 7:7, 12) must have read some of the prophetic books, for in 3:8; 6:12 he refers to Jer. 23:5; 33:15. Officially, the book found in the temple was the first writing to be canonized—through a solemn covenant in 621 (II Kings 22:8–23:3)—but for one century there were in circulation in Judah the books of the earlier prophets, and they were deemed by many readers to contain the word of God. In principle, therefore, the canon of the prophets was already in existence, although it was not closed until *ca.* 200 B.C.

It is generally admitted that the book found in the temple in 621 B.C. was the bulk of Deuteronomy (4:44–8:20; 10:12–11:25; 12–26; 28:1-24, 43-46; 29:1). It is certain that the reforms of Josiah (II Kings 23:4-24) were based on Deut. 5; 12; 16–18; 23 (the consternation of Josiah in II Kings 22:11 is explained by Deut. 28). No other part of the Pentateuch contains prescriptions for all the reforms; moreover, the one injunction of Deuteronomy which Josiah could not enforce (Deut. 18:6-8) is specifically mentioned in II Kings 23:9.

The Deuteronomic (D) Code was found in the collection box of the temple (II Chr. 34:14) in 621 and must have been written by a priest of Jerusalem a few years before. He had been deeply influenced by the teaching of the reforming prophets since Amos (750 B.C.), whose teaching had been extremely unpopular with nearly all Israelites (Amos 7:10-13) and Judeans. He made sure by two means that his book would not be consigned to the flames, as later Jeremiah's oracles (Jer. 36:22-23) were, but would reform the religion of the Judeans—first, by timing the finding of the book when Assyria, whose cults were introduced into the temple by Manasseh (692-639), was in a state of collapse after the death of Ashurbanipal in 625; and secondly, by combining the two religions contrasted in Mic. 6:7-8 by means of the doctrine of a divine covenant with Israel. Through this revelation to Moses, Jehovah made a covenant with Israel: if they obeyed God's commandments, he would bless them, as the current religion asserted; if they transgressed them, they would be wiped off the face of the earth (Deut. 28), as Amos (9:8*a*) had declared.

This divine covenant between Jehovah and Israel is first mentioned in Deut. 5:1-4; 29:1; etc. The author did not substantially modify the ancient religion of Israel, which had been denounced by the prophets as offensive to God (Amos 5:21-24, etc.), but he gave to it a prophetic interpretation. He stressed with Amos the justice of God in punishing Israel for its sins (Deut. 28:15-24, 43-46), without going so far as Amos (9:8*a*) in announcing a total destruction of the nation. With Hosea (2:19; cf. 6:6) he regarded loyalty (Deut. 5:10) as the keynote of the relation between God and Israel, a relation which is one of great love (Hos. 3:1; 11:1-4; Jer. 2:2; 31:3; Deut. 5:10; 6:5; 7:13). New, however, was the notion that love for God is expressed in keeping his commandments (Deut. 7:9; 10:12-13; 11:1, 13, 22; etc.); and that festivals and sacrifices, which the prophets had regarded as religiously indifferent or offensive to God if presented as gifts, tributes, or bribes, were to be regarded as expressions of gratitude to God and joy in his presence (Deut. 5:15; 12:11-12, 18; 14:26; 16:1-15; 26:10-11).

In form and contents the book found in the temple was inspired by the written prophetic oracles of Amos and his followers. Of course, this book (Deut. 5–26; 28, in part) was not written by Moses, as it purports to be, but by a priest of Jerusalem more than five centuries after the death of Moses. To say that the author was therefore a forger, a counterfeiter, means to show lack of historical sense (by accusing the author of violating literary conventions unknown at his time) and of understanding of human nature (by ascribing to the author disreputable motives rather than the highest ideals). The Deuteronomic author was absolutely honest—what he says about the history of the time of Moses he derived from the immensely popular national epics (J and E) reporting Israel's achievements under the guidance of Jehovah, from Abraham to the invasion of Canaan; the law contained in D is actual law (except for the closing of the provincial sanctuaries of Jehovah in ch. 12 and the celebration of the Passover at Jerusalem in connection with the Feast of Unleavened Bread [Deut. 16:1-8; cf. II Kings 23:21-23]); and as for religion, the forms are still those of the cult of Israel after the settlement in Canaan, and the spirit is that of the prophetic teaching. The author assumed, as did all his contemporaries, that truth is unchangeable—since Moses was divinely inspired, he knew and taught the true religion and the genuine law. Moses did not leave to future generations a book containing his inspired oracles, as Amos and his successors did; but if he had, it was generally believed in 621 B.C. that a book of his would have agreed with the teaching of the D Code.

Josiah and his contemporaries erred in attributing the book to Moses, in accordance with explicit statements of its author (Deut. 4:44-45; 5:1; 29:1). Only the authority of the great founder of the religion and nation of Israel could induce king and people to reform their faith and practice. As a result, Moses was regarded as the unique legislator of Israel, and no law which was not deemed to have been explicitly or implicitly revealed to him by God was thereafter considered to be valid.

No less epoch-making was a second error: the scroll found in the temple was regarded as the "book of the law" (II Kings 22:8, 11; cf. 23:24-25; Deut. 4:44; etc.), as a book of priestly torah, and not as a transcript of an oral prophetic oracle. In reality Deuteronomy is neither in form nor in substance a code of laws, but a sermon in three parts (4:44–11:25;

12–26; 28). Moses in this book is a prophet (18:18), not a lawgiver (Exod. 15:25*b*) nor a priest of Levitical descent (Exod. 2:1 ff) who purified the people (Exod. 19:14) and gave oracular responses (Exod. 18:15). After Moses, Jehovah will raise up a prophet like Moses to transmit to the people the divine words (Deut. 18:18-22)—the author knows of no other method by which God communicates with man. But the misconception of Deuteronomy as the legal code of Moses has left a permanent impression on Judaism: the divine revelation consists primarily of law, not of prophetic exhortation; and faith, hope, and charity are less important than unquestioned obedience to every article of the law.

And yet the book is not a codification of the law (in spite of chs. 12–26), but a sermon, an appeal to the nation to do God's will as specifically set forth in it. Throughout the book the style is not that of a jurist, but discloses the eloquent diction of a pulpit orator (contrast, e.g., Exod. 21:2 and Deut. 15:12-15). The preacher pleads and warns, with the deep emotion and tender concern utterly lacking in an objective and serene legislator (see, e.g., Deut. 19). Philanthropic appeals are added to the civil-law articles, selected because they had some moral aspect; purely commercial law is omitted; and a pious and humane aura pervades the old civil laws as well as the philanthropic and religious exhortations. The influence of the prophets is pervasive: the doctrine of God (see, e.g., 10:12-18), the polemic against the worship of the Baals at the high places (see ch. 12), religion conceived as love for God expressed in doing his will (7:9; 11:1; etc.), and the stress on humane and moral obligations toward the weaker members of the community, all illustrate how deeply the noble religion of the prophets had modified the priestly point of view of the author.

In conclusion, it is clear that the writing of the D Code was inspired by the existing books of the prophets—the author provided a similar book for Moses, since the greatest of the prophets lacked a written record of his inspired speeches. Thus the book found in 621 was regarded as God's word (II Kings 22:19). However, it was not regarded by Josiah as a prophetic book, but as the "book of the law." In principle there was only one class of sacred scriptures—namely, the transcript of the inspired words of the prophets—and in principle the whole OT is in Judaism a collection of prophetic writings. But in reality, "the law" and "the prophets" were eventually distinguished. The initial basic revelation to Moses, growing gradually from Deuteronomy to the whole Pentateuch, was called torah (law) even though Deuteronomy was prophecy and the rest of the Pentateuch partly law and partly history. All subsequent revelations to prophets were secondary and in principle merely confirmed and explained the original, basic revelation. As often, the historical facts—prophecy precedes the law as inspired scripture—and the tenets of faith and dogma cannot be equated or even reconciled.

The publication of Deuteronomy in 621 B.C. marks substantially the end of the old religion of Israel and the beginning of Judaism, the death of a national religion and the birth of an ethical religion of salvation for all men. The immediate effect of the teaching of this book was the reformation of Josiah (II Kings 23:4-23)—Canaanite and Assyrian cult objects were removed from the temple; all shrines of Jehovah, with the sole exception of the temple in Jerusalem, were destroyed; all sanctuaries dedicated to foreign gods were annihilated. In spite of the obvious hardships which these measures imposed on the Judeans outside Jerusalem, the reforms of Josiah proved to be providential in their future effects. They preserved the nation after the state ceased to exist. Judah, when the monarchy ended and Jerusalem was destroyed in 586 B.C.—thirty-five years after the reforms—would have lost its national existence, as the Northern Kingdom had in 722 (the "ten lost tribes"). The reforms were the first step in the transformation of the state into a congregation, of the passage from monarchy to Sanhedrin, from temple to synagogue; thenceforth mankind was divided into Jews and Gentiles. The enactment of the proscriptions of Deuteronomy made it possible to abolish the most objectionable heathen practices in the worship, although many ancient harmless institutions of Canaan (like the three annual agricultural festivals) were preserved without recognition of their alien origin. Local shrines eventually disappeared, sacrifice was now distinguished from butchery (Deut. 12:15, 21-22), festivals became national events (even the family feast of the Passover, which was now combined with Unleavened Bread [Deut. 16:1-8]), the royal chapel and its worship in Jerusalem became unique and acquired a national character, while individual sacrifices eventually lost their importance; personal religion, eventually centered in the synagogue, suffered no loss with the destruction of the temple in A.D. 70. Another consequence of having a prophetic oracle of Moses as the constitution of the kingdom was that the state tended to become a theocracy, a religious institution that persisted after the monarchy came to an end thirty-five years later. The Jews became a divinely chosen people, a kingdom of God on earth, and they dreamed that eventually, when their condition became intolerable, God would intervene and place them at the head of his kingdom embracing all countries of the earth (Dan. 7:13-14, 27).

Aside from the reforms of Josiah, the book found in the temple in 621 had a lasting influence. It marked the beginning of the canonization of the Bible; nowhere before had a book been officially recognized as God's word. Judah now possessed a permanently valid revelation of God's will and mind, regulating religion and morals. This tended to make occasional and sporadic oral revelation through the prophets more and more superfluous. Since the priestly and prophetic instruction could not contradict any explicit statements of the book that God had revealed, and since there could only be one supreme authority, the priests henceforth became primarily interpreters and supplementers of the written law ("The law perishes from the priest" [Ezek. 7:26]), and the prophets either did the same (Ezek. 40–48; Haggai; Malachi) or disappeared as God's envoys to the people (Ps. 74:9; I Macc. 4:46; etc.). This result was not anticipated, much less desired, by the author (Deut. 18:15-19), although an addition to his book (13:1-5, in part; cf. Zech. 13:2-6) regards

certain prophets as quacks who deserve to be put to death. Jeremiah, after preaching in favor of the reforms of Josiah (Jer. 11, in part), was sorely disappointed when the people refused to listen to the prophets because they had the "law of the LORD," and he declared the book to be the work of the false pen of the scribes (Jer. 8:8-10). In a sense, Jeremiah was the last of the prophets.

After 621 B.C. it was necessary to rewrite the history of Israel in the spirit and style of Deuteronomy. The existing stories from Abraham to the death of David were national epics, not religious tracts with historical illustrations in which the prophetic denunciation of sin was pervasive. The first edition of Kings, published *ca.* 600 B.C., denounces the pre-Deuteronomic years (with rare exceptions) as culpable defections of the law of Moses, particularly because the "high places" (village shrines of Jehovah) were not removed according to Deut. 12. Half a century later the books from Genesis to Kings were submitted to a Deuteronomistic retouching, which is pervasive in Joshua and supplies introductions and conclusions to the stories of Judges; the philosophy of history of these editors is plainly described in Judg. 2:6-3:6.

The book of the law revealed to Moses was canonized in 621 B.C., but it marks the beginning, rather than the end, of a process. Although the first edition of Deuteronomy was regarded as sacred scripture, it did not preclude future revelations of God in written form, nor did it diminish in the least the popularity of existing historical and prophetic writings, on which it was based: from the historical books it derived the national pride of the Judeans—a nationalism unknown before the Greeks and the Romans—and from the prophets, conversely, a sense of national shame in the presence of Jehovah. The finding of the book of the law seems to have stimulated literary activity—beginning with Jeremiah and Ezekiel, prophets began writing books, and were soon imitated by the author of Isa. 40–55, who was not a prophet; the homiletic edition of selected laws in Deut. 12–26 suggested within a century the publication of the Holiness Code (Lev. 17–26), which is likewise a "sermon of Moses."

Gradually Deuteronomy grew to the size of the whole Pentateuch. *Ca.* 550 the Deuteronomistic editor inserted the book found in the temple into the national epics (J and E) which had been amalgamated into one book a century before, placing it immediately before the account of the death of Moses (Deut. 34:1-6, in part). Deut. 11:26-30; 27 had been added shortly before 550, as had also the historical introduction and conclusion (9:1–10:11; 30:15-20; 31:1-13). This editor inserted into Exod. 34 his edition of the ancient ritual decalogue, extant in a much earlier text in Exod. 22:29*b*-30; 23:12, 15-19. The Holiness Code (Lev. 17–26) is an edition of the code of one of the sanctuaries closed by Josiah in 621; it was inserted into the Pentateuch as part of the Priestly Code, codified *ca.* 450 and included in the incomplete Pentateuch (JED) *ca.* twenty years later. The Priestly Code spans, with full genealogies, meager narrative, and exact artificial chronology, the period from the creation of the world to the occupation of Canaan under Joshua. It was not brought by Ezra from Babylonia in 458 (Ezra 7:14, 25-25), but reflects in its legislation the ritual practices of the second temple (finished in 516 B.C.) during the first half of the fifth century. Its real significance was, however, its validity as the charter of the new Jewish congregation which arose between Haggai (520) and Nehemiah (444) and proved to be imperishable. After the Priestly Code was added, only small additions were made to the incipient Pentateuch—the Covenant Code (Exod. 20:22–23:19); a copy of those laws in an ancient civil code (1200 B.C.?) which had not been included in the book found in the temple in 621; an ancient document (Gen. 2:5–11:9; 14; 19; 34–36; 38, in part) depicting the mythical origin and early history of mankind and of nations around the Dead Sea; and miscellaneous poems (Gen. 49; Deut. 32; 33; etc.).

The Pentateuch embodies literary compositions dating from 1200 to 400 B.C., and is the edition of all the literature existing in 400 B.C. which could be regarded as composed by Moses *ca.* 1200 B.C. But it was only gradually that Moses was regarded as the author, not only of the laws, but also of the narratives which frame the legislation. The dates of the publication and canonization of the Pentateuch (which cannot be far apart) are unknown, but may be fixed a considerable time after the restoration of the temple (516 B.C.) and before the Samaritan schism (432, according to Neh. 13:28-29, but more probably a century later, according to Jos. Antiq. XI.viii.2, 4). The reading of the Law in 444 (Neh. 8) refers to the Pentateuch rather than to the Priestly Code—unfortunately the story is too unreliable to help us fix the date of the canonization of the Law. Nevertheless, a date *ca.* 400 B.C. cannot be seriously questioned; at that time the final editions of the five books ascribed to the inspired pen of Moses were issued substantially as we have them, and were adopted by the Jews as part of God's Word. Although the final editors of the Pentateuch aimed to include everything Mosaic or pre-Mosaic, they were not striving to embrace everything that was then holy scripture, such as the books of the prophets in circulation at the time. This edition was merely a stage in the process of codifying the law. In reality, this turned out to be, not a passing phase as the canonization of Deuteronomy, but the final edition of the canonical law of Moses. Why? Because it was widely circulated among the Jews all over the world. Synagogues were established wherever there were Jews, for the primary purpose of reading and interpreting the law of Moses; and the sect of the Samaritans, when it detached itself from Judaism, treasured the same text of the Torah, except for minor differences. The Pentateuch does not reflect the practice of the synagogue, but of the Jerusalem temple.

No single event in the religious history of the Judeans and of the early Jews, with the possible exception of the publication of Deuteronomy in 621 B.C., was as significant for the future as the publication of the Pentateuch, and its prompt canonization. An important factor was that manifestly measures were taken to circulate this book in a degree unknown for any other work. It was not kept in the temple, where the priests did not need it, but was taught assiduously to every Jew. It was compiled for this

very purpose, and it enabled every Jew to know the details of his religion and what God expected from him. The need of acquainting every Jew with the contents of the Pentateuch brought into existence the synagogue, the most original and most vital institution of Judaism, before which the temple gradually lost significance until it ceased to exist in A.D. 70. Judaism is consciously based directly on the Pentateuch, and not on the teachings of the prophets. From the time of its publication, the Pentateuch was the supreme authority in Judaism, unequaled by any other part of the OT. The prophetic theology was received and accepted through Deuteronomy and other parts of the Pentateuch, rather than through the prophetic writings, which were considered confirmations of the teaching of Moses in times of ignorance. If Moses had actually written every word of his five books, the attitude toward them would not be more filled with veneration in the slightest degree. It makes no difference that historically Moses wrote practically nothing in his law, because its origin was regarded as a miracle without any relation to the mere facts of reality, and besides, nothing was known at the time about the development of religion. The attribution to Moses of later ideas and institutions raised accordingly no difficulties whatsoever. We know that the Pentateuch is the result of a development that continued for at least eight centuries after the death of Moses, but dogmatically it is the divine revelation to Moses.

In addition to the institution of the synagogue, other epoch-making effects of the codification of the Pentateuch were the stress on universal education among the Jews, so that each one might read the law; the emphasis in Judaism on conduct rather than faith; and the legal development, required to supplement the enactments of the Pentateuch or to interpret them for Jews living in later centuries, which was primarily accomplished in the Mishnah (*ca.* A.D. 200) and the Talmud (*ca.* A.D. 500). Judaism, to be followed by Christianity and Islam, became, through the canonization of the Pentateuch, a religion of the book, wholly and exclusively founded on a divine revelation fixed for all time in written documents: "You shall not add to the word which I command you, nor take from it" (Deut. 4:2). But the scripture was not sufficient in the field of ritual, civil, criminal, and moral law; many of its prescriptions, as the laws on divorce and on sabbath rest, require detailed elucidation. Thus around the Pentateuch there grew up the unwritten law, applying the revealed words to particular cases and to new circumstances. The rabbis believed that God had revealed the unwritten law to Moses at Sinai, but had forbidden him to put it into writing. But the law (written and unwritten) was transmitted faithfully, according to the *Sayings of the Fathers* (Pirke Aboth I.1). Jesus called the unwritten law the "tradition of the elders" (Mark 7:1-13; Matt. 15:1-6; cf. Gal. 1:14)—by observing it the Pharisees laid aside the written law. The oral law was finally committed to writing in the Mishnah and in the Talmud, and preserved the central and supreme position of the Pentateuch in inspired scripture.

The fact that the first book to be canonized (the bulk of Deuteronomy in 621 B.C.) was considered to be the "book of the Torah" (II Kings 22:8, 11), instead of the prophecy of Moses, tended to stress in religion the fulfilment of all the commandments of God, even the least ones. "Legalism" is often criticized for condemning violations of the divine law whether unconscious or deliberate, morally evil and harmful or indifferent, and for assuming that they could be atoned by ritual purifications and expiations. But this legalistic tendency in Judaism never silenced a more spiritual tendency, first stressed by Amos and the prophets who followed him.

Nevertheless the Torah became central in Judaism and has remained the supreme standard and norm of the Jewish religion. It was therefore natural that all revealed literature was identified with Torah, Law. Before the Pentateuch was canonized *ca.* 400 B.C., wisdom had been identified with Torah (Deut. 4:5-6; cf. Jer. 8:8; Ezra 7:14, 25-26). Earlier, wisdom had no connections with religion—in fact, was denounced by some prophets as objectionable to God (Isa. 5:21; 29:14; 33:6; 44:25; 47:10; Jer. 8:9; 9:23).

Since the Lord created wisdom before he made the world (Prov. 8:22-31), the Law, which is identified with wisdom, was said to have been made before heaven and earth. Lest there be any doubt about this eternal Law, which like wisdom is personified and could be something ideal, Ecclesiasticus emphatically states that it is

> the book of the covenant of the Most High God,
> the law which Moses commanded us
> as an inheritance for the congregations of Jacob
> (24:23; cf. 1:26; 6:37; 9:15; 19:20; 21:11;
> Bar. 4:1; IV Macc. 1:17).

The Law revealed to Moses not only existed before the creation of the world, but will last unchanged for all eternity (Ecclus. 24:9, 23; Bar. 4:1; Tob. 1:6; Enoch 99:2, 14; Matt. 5:18; Luke 16:17). After Ecclesiasticus (with the exception of Ecclesiastes if it is later) there is no wisdom literature which does not place the Law in a central position; see, e.g., Ecclus. 1:26; 6:37; etc.; Tob. 4:5; 14:9; Bar. 3:9; Aristeas 31, 168, 228, 279; Wisd. Sol. 2:12; 6:18; 16:6; 18:4; IV Macc. 1:17, 34; 2:6, 8-10; 5:16-36; 6:21, 27, 30; 8:25; 9:2; 11:5, 12; 13:9, 13; 15:9-10, 29; 16:16; 18:1, 4. As synonymous with wisdom, the law of Moses is said to teach the four cardinal virtues of Plato and the Stoics (IV Macc. 5:23-24; cf. 1:2-4, 18; Wisd. Sol. 8:7): temperance, courage, justice, and piety (prudence); and wisdom, according to the Stoic definition (Cicero *Tusculan Disputations* IV.26, 57; *On Duty* I.43, 153; II.2, 5), is a "knowledge of divine and human things, and of their causes" which is acquired through "education in the Law" (IV Macc. 1:16-17).

In addition to the supernatural origin and eternity of the Law, its identification with wisdom had other far-reaching and lasting effects. "The Law is a species of wisdom come down from wisdom on high" (Genesis Rabbah 17.5). It is a divine revelation, but, like wisdom (philosophy), it must be taught and learned (Deut. 4:1, 5, 9-10, 14, etc.; Prov. 4:1-11; Isa. 2:3; Ezra 7:25)—note that in Deut. 4; Ezra 7, where the Law is identified with wisdom, instruction is stressed. The immense prestige and authority of the Pentateuch gave rise to the synagogues by the side of the temple and of the scribes by the side of

the priests. After the destruction of the temple in A.D. 70, synagogues, established originally for the reading of the Law, and scribes (biblical scholars and teachers; see Ecclus. 38:24–39:11; cf. Ezra 7:10-11), later called rabbis (masters, teachers), remained as the exclusive religious institutions of Judaism. The chronicler, who tends to date the institutions of Judaism too early, believes that general instruction in the Law (II Chr. 17:7-9) began in the third year of Jehoshaphat (872 B.C.), and he considers Ezra the first scribe (Ezra 7:10-11); he obviously reflects here conditions in his own time (300-250 B.C.). Synagogues and scribes, furthering the knowledge of the Law, presuppose the canonization of the Pentateuch (not before 400 B.C.), and are not mentioned in our sources before 300-250 B.C.; the sole possible mention of synagogues in the Bible and in the Apoc. is in Ps. 74:8, if "meeting places of God" actually means "synagogues." Philo and Josephus, of course, say that Moses established the synagogues. The first mention of a Jewish school is in Ecclus. 51:23, where the text reads "lodge in my school" (*beth midrashi* in the Hebrew; in the LXX, incorrectly, "in the house of learning"). "Rabbi Abdimi of Haifa said, From the day whereon the Temple was laid waste, prophecy was taken from the prophets and given to the scribes" (B.B. 12*a*). At the end of the second century of the Christian era, *The Sayings of the Fathers* (Pirke Aboth; ch. 6 is later) is full of references to the Torah and its study. Here Torah is both the written text of the Pentateuch and the inexhaustible divine teaching that may be derived from it through study and interpretation. R. Travers Herford compares the text of the Pentateuch to the mouth of a well, and the Torah to the water without limit, which may be drawn from it, exceeding in volume the capacity of the well. The study of the Torah was the contemplation of divine revelation, and through it such a hedge was made around the Torah (Ab. I.1) that it remained the peculiar treasure of Israel. Simeon the Just said that the world stood upon Torah, worship, and showing kindness (I.2). "Study of Torah [*talmud torah*] along with 'the way of the earth' [a worldly occupation or good behavior] is seemly" (II.2). "Be alert to learn Torah, and know what answer to an *Epicuros* [a freethinker, an atheist]" (II.19). "Whoever receives on himself the yoke [cf. Matt. 11:29-30] of Torah, they remove from him the yoke of the kingdom and the yoke of worldly occupation" (III.6). The study of the Law should be incessant, without distractions (III.9; cf. Deut. 6:7-9; Ps. 1:2), and without forgetting a single word (III.10). God's love was shown to Israel in his giving them the Torah, and even more in his making them aware of this supreme gift (Akiba, in III.18; cf. Prov. 4:2). The least important precepts of Torah are more essential than astronomy and geometry (III.23). Learning the Torah in order to practice it is better than learning it in order to teach it (IV.6).

It is not necessary to quote further passages in the rabbinical literature (Mishnah, Midrash, Talmud, etc.) to illustrate what the Torah meant to scribes, Pharisees, and rabbis. "Torah," which had originally meant the Sermon of Moses in Deuteronomy, found in 621, and then the whole Pentateuch *ca.* 400, came to mean the whole divine revelation, both written (the Hebrew Bible) and unwritten—the "tradition of the elders," put into writing *ca.* A.D. 200, after the collections of juristic opinions made by Akiba (died A.D. 134) and his pupil Meir (died *ca.* 175), by Jehuda ha-Nasi (called "Rabbi"; 135-219), and expanded into the Talmud (*ca.* 500).

The Torah absorbed all forms of literature—not only wisdom, but also prophecy (Ezra 9:10-11), history, psalms, the Song of Solomon, etc. Religion thus became inextricably related to books, the Jews became the first people of the book, and prophetic inspiration became subservient to scripture and eventually disappeared. "The Bible became the primer, the congregation a school, religion a thing to be taught and learned. Piety and education belong together: the illiterate was not a perfect Jew" (J. Wellhausen).

The date of the canonization of the Pentateuch was probably close to 400 B.C. It was certainly later than 621 (Deuteronomy), than Ezekiel's visionary program of temple restoration in chs. 40–48 (dated in 573—40:1), later than the worship in the second temple (rebuilt in 520-516 B.C.; see Hag. 1:1, 15*a*; Ezra 6:15) reflected in the Priestly Code's description of the ritual ceremonies in the tabernacle of Moses written in the period 500-450. If Ezra's reading of the Law in Jerusalem (444; Neh. 8–10) is historical—and some scholars doubt that it is, or date it either before or after 444—the Pentateuch would have become canonical at that time or later. In any case, the Pentateuch cannot have been canonized long before 400. On the other hand, it cannot have become sacred scripture after the Samaritan schism, which seems to be dated by the chronicler in 432 (Neh. 13:28-29); but Josephus (Antiq. XI.viii.2, 4) dates it a century later, during the invasion of Alexander. The schism may have started politically in the days of Nehemiah and may have been made final religiously in the days of Alexander through the building of the Samaritan temple on Mount Gerizim (cf. John 4:20). At the time of the schism the Samaritans retained the Pentateuch, which had previously been canonized as their Bible. In conclusion, we may say that *ca.* 400 B.C. the Pentateuch was separated from Joshua-Kings and canonized for all time as the law of Moses.

Circulated among Jewish communities as no other book before or after, this edition could not be revised and enlarged, although minor textual changes and errors crept in through the accidents of MS transmission. This wide circulation and the regular reading in the synagogues erected for this purpose soon after 400—the LXX translation was made *ca.* 250 B.C. for the synagogues in Alexandria—precluded the addition of new legislation, which was confined to the "tradition of the elders" or oral law, said to have likewise been revealed to Moses on Sinai. Both the written and the unwritten law were transmitted by Moses to posterity through Joshua, the elders, the prophets, and the men of the Great Synagogue (in the time of Ezra [Ab. I.1]). After Simeon the Just, "one of the survivors of the Great Synagogue" (Ab. I.2), and Antigonos of Socho came the "Pairs" (*zugoth*) of learned scholars (last two centuries B.C.), ending with Shammai and Hillel during the reign of Herod (died 4 B.C.), followed by the tannaim (tradi-

tioners or teachers) in the first two centuries of the Christian era, and the amoraim (expositors), who expounded the Mishnah of the tannaim (*ca.* A.D. 200) in the Jerusalem (*ca.* 400) and the Babylonian (*ca.* 500) Talmuds.

3. The canonization of the Prophets. The fixation of the five books of the Pentateuch as the sacred canon of the Torah marks the second stage of the process which began in 621 B.C. with the recognition that the book of the law of Moses had been divinely inspired. In 400 the Jews had other ancient books which enjoyed considerable popularity but were not yet considered divinely revealed, notably four historical books (the Former Prophets: Joshua, Judges, Samuel, and Kings) and several volumes of prophetic oracles (eventually published, with additions, in the four volumes of the Latter Prophets: Isaiah, Jeremiah, Ezekiel, and the minor prophets). Growing public interest in these volumes and their value for enhancing the national pride and the hopes for a better future eventually resulted in their canonization as God's Word.

a. The Former Prophets. When the Pentateuch in 400 B.C. was separated from the four other volumes of the great corpus going from the creation of the world to the deliverance of Jehoiachin from Babylonian captivity in 561 B.C. (II Kings 25:27-29), the books of Joshua, Judges, Samuel, and Kings were left for almost two centuries in the realm of secular literature. In 550 B.C. this work had been edited by the Deuteronomists to inculcate the lesson that obedience to the Deuteronomic law was divinely blessed and violations of this divinely inspired law were punished by Jehovah. Eventually the history of the events following the death of Moses, where the cut was made, were supplemented with the Priestly Code account of the division of Canaan among the tribes of Israel (Josh. 13–21, in part), with ancient histories which had been omitted from the Deuteronomic edition (Judg. 1:1–2:5; 5; 9; 10:1-5; 12:8-15; 16–21; II Sam. 9–24; I Kings 1; 2:13-46*a;* 17–19; II Kings 1:2-17; 2–8; 13:14-21; 18:14-16; 19:9*b*-35; 20:1-19), and with numerous brief marginal annotations.

These marginal annotations (400-200 B.C.) are a valuable clue to the public interest in these books, which eventually led to their canonization and to the rewriting of Samuel and Kings in I–II Chronicles in 300-250 B.C. The correction of Esh-Baal and Merib-Baal (in Chronicles) to Ish-bosheth and Mephibosheth in Samuel was made later than the publication of Chronicles, to avoid the pronunciation of "Baal."

The glorification of David, entirely absent in the old source (see II Sam. 9–20, e.g.), inspired many additions both in Chronicles and in the glosses in Samuel. The chronicler calmly states that David set aside more than three billion gold dollars for the building of the temple (I Chr. 22:14; 29:3-4, 7-8). To bring the ark to Jerusalem, David called out, according to II Sam. 6:1, 30,000 picked soldiers (70,000 according to LXX [B]). David slew "the men of seven hundred chariots, and forty thousand horsemen" (II Sam. 10:18; 7,000 chariots according to I Chr. 19:18). David's army numbered 800,000 men of Israel and 500,000 men of Judah (II Sam. 24:9; in I Chr. 21:5 the figures become 1,100,000 men of Israel and 470,000 men of Judah). In the plague which followed the census, 70,000 men are said to have died (II Sam. 24:15; I Chr. 21:14). The following statements are demonstrably unhistorical: (*a*) David took the head of Goliath to Jerusalem (I Sam. 17:54); (*b*) he had been crowned by Samuel in his childhood (I Sam. 16:1-13; his brothers were present, but knew nothing about it—17:28); (*c*) the hundred Philistines he killed (I Sam. 18:25; II Sam. 3:14) are doubled in I Sam. 18:27; (*d*) Joab's victory against the Arameans (II Sam. 10:13) is attributed to David (10:15-19).

This exaltation of David was due, first of all, to patriotic pride, and secondly to his genuine success in war and peace, which was interpreted (cf. Deut. 28) as evidence of divine favor for exemplary piety; similarly Samuel was raised from the humble position of an obscure village seer (I Sam. 9:6-8) to that of a judge over all Israel (I Sam. 7:3-17), a prophet (I Sam. 3:20-21; 9:9); he anointed Saul as king three times, according to the later legends (I Sam. 9:26–10:1; 10:17-24; 11:15); and he deposed him twice (13:14; 15:26-29; cf. 28:17-18), although no one seems to have known it. Hophni and Phinehas, who like Saul died heroically in battle, were regarded as scoundrels (I Sam. 2:22*b*). The theory that the pious prosper and the wicked suffer is pervasive in the books of Kings, in the verdicts of each reign, but is unknown in the sources earlier than 621 B.C.

These retouches helped to change historical accounts which were objective into lessons from history distorted according to the theory of divine retribution on earth. The publication of the Pentateuch in 400 B.C. involved other revisions. The allusions to the Pentateuch, wholly absent in the early sources, are numerous: the tent of meeting (I Sam. 2:22*b*); Aaron (2:27-28); the Egyptian plagues "in the wilderness" (4:8); the exodus from Egypt (6:6; 10:18; 12:8). Prophecy is extinct and is confused with clairvoyance (I Sam. 9:9), prognostication (II Sam. 24:11), and mere prediction (late prophetic oracles predict what has already happened—I Sam. 2:27-36; II Sam. 7; 12:7*b*-12). The Levites are mentioned three times in late texts (I Sam. 6:15; II Sam. 15:24; I Kings 8:4) as bearers of the ark in Samuel-Kings, but ninety-seven times in Chronicles and fifty-nine times in Ezra-Nehemiah, and in the vein of the chronicler the performance of orchestral music is added in II Sam. 6:5, 15.

In other ways, as well, the late annotations increased the popularity of the historical books by bringing (or by trying to bring) the ancient record "up to date" with the patriotic and religious feelings of the masses, proud of the past glories of David and Solomon, of the first temple, so much more imposing than the second (Hag. 2:3), and certain that the sole God (I Sam. 2:2; II Sam. 7:22; 22:32), the creator of heaven and earth (Gen. 1), is—or should be—the only ruler over Israel (I Sam. 8:7-8; 10:17-19; 12:12), instead of a king. After the publication of the Pentateuch the rituals described in Leviticus and elsewhere became standard for Israel, and the old texts were revised accordingly. It did not matter that these annotations, like Chronicles, utterly distorted the true picture of the past given in the old historical

sources, and surrounded historical characters either by a glorious light or by a deceptive fog—the misunderstanding of the past by dating back the Law to a revelation to Moses on Sinai attained the dignity of a dogma, and the late annotations in this vein helped to give the four historical books the status of sacred scripture. Moreover, the connection of these books with prophecy, either by regarding their authors as prophets (I Chr. 29:29; II Chr. 9:29; 12:15; 13:22; 20:34; 26:22; 32:32), or because they contained stories about prophets (Samuel, Gad, Nathan, Ahijah, Jehu, Elijah, Elisha, Isaiah, etc.), strongly favored their canonization. Their growing popularity, their patriotic and religious significance, and their supposed prophetic authorship brought about their canonization *ca.* 200 B.C.—after Chronicles (300-250 B.C.) but before Ecclesiasticus (*ca.* 180 B.C.). The Chronicler quoted Samuel and Kings with great freedom—a proof that they were not at the time canonical—even making important corrections to the text: Satan (I Chr. 21:1), not God (II Sam. 24:1), tempted David to take the census; Elhanan did not kill Goliath (II Sam. 21:19), but Lahmi, the brother of Goliath (I Chr. 20:5). Ben Sirach, in Ecclus. 44-49, refers to the following books: the Pentateuch (44:16-45:26; 49:14-16); Joshua (46:1-10); Judges (46:11-12); Samuel (46:13-47:11); Kings (47:12-49:3); Isaiah (48:22-25); Jeremiah (49:4-7); Ezekiel (49:8-9); and the twelve minor prophets (49:10). We know from the preface of Ben Sirach's grandson to his Greek translation of Ecclesiasticus that the "Law and the Prophets" were not only canonical, but had already been translated into Greek (132 B.C.). A date *ca.* 200 B.C. for the canonization of the Former and Latter Prophets cannot be far wrong.

b. The Latter Prophets. Popular interest in the oracles of the eighth- and seventh-century prophets seems to have remained faint after the canonization of the D Code in 621. That book was ascribed to the pen of the greatest of the prophets, Moses, and contained so much of the noble religion of the prophets that they appeared to be mere plagiarists, repeating what had been said so eloquently by Moses. Moreover, the prophetic message had been a most unpopular threat of doom for the nation; and the ruin of Judah had been realized in 586 B.C. with Nebuchadnezzar's destruction of Jerusalem and the Exile. The career of Jeremiah illustrates vividly the violent hostility toward the prophets. After the prophetic warnings had been vindicated, their gloomy and menacing words were ill-suited to the prevailing pessimism and despair; and their aversion for the priestly rituals antagonized the growing importance of the temple services.

But already in the sixth century such prophets as Jeremiah and Ezekiel, who had been most bitter in their denunciation of Judah before 586, tried to comfort their people by picturing a better future. Ezekiel, by announcing the restoration of the temple and its services, and Second Isaiah (Isa. 40–55), by declaring to the exiles that Jehovah would bring them back to their country, lifted the eyes of the people from the pitiful present to a magnificent future. Then came Haggai and Zechariah with their prediction that a messianic king would restore peace and independence to the Jews. Such alluring, Utopian visions proved immensely popular (until A.D. 200) and contributed to create an unprecedented interest in the prophetic volumes. It was believed that

> Surely the Lord GOD does nothing,
> Without revealing his secret
> to his servants the prophets
> (Amos 3:7, an obvious interpolation);

and Ezekiel (38:17) and the Second Isaiah (Isa. 40:21; 41:26; 42:9; 44:7; 45:19; etc.) were certain that God had made known to the prophets his plans before carrying them out. Zechariah says that God had revealed through the "former" prophets his law and had punished his people for disregarding their inspired words (1:6; 7:12); at the time when Jerusalem and Judah were inhabited and prosperous, God spoke through the prophets (7:7), and the implication is obvious that if their words were obeyed, then prosperity might return.

The canonization of the Pentateuch (400 B.C.) tended to make the Jews a people of the book. Just as the historical books were revised and annotated to magnify past glories, so were the prophetic books to magnify future glories. The annotations in the prophetic books, especially the earliest (Isaiah and the minor prophets), by expressing the two conspicuous trends of the time—hostility toward foreign nations and assurance of a future triumph of Israel led by Jehovah or by his Messiah (anointed)—enhanced the popularity of the prophetic books. These dreams appeared in Ezekiel and Second Isaiah in the sixth century, but became dominant after Haggai and Zechariah in the fifth century, together with the glorification of the Law in the fourth century. Denunciations against foreign nations are found in Isa. 13–24; Jer. 46–51; Ezek. 25–32; 38–39; some of them are later additions, just as the first such series (Amos 1–2) has been supplemented with the oracles against Tyre, Edom, Judah, and possibly Gaza. In passages later than 400 B.C., Jehovah is said to pour down his wrath on the heathen (Isa. 34; Joel 3; Obad. 15 ff; Zeph. 2:4-15; Zech. 14; etc.).

The counterpart of the decimation of the heathen is the glorification of the Jews, although the two are not always contrasted as in Isa. 34–35. After Jeremiah (23:5; 33:15; cf. Isa. 4:2; Zech. 3:8; 6:12), a messianic king descended from David was expected to restore the independence and the prosperity of the Jews (Isa. 9:6-7; 11:10; Ezek. 34:23-24; 37:24-25; Hos. 3:5; Amos 9:11-15; Mic. 5:2-5; Zech. 9:5-6). According to other prophecies, however, the Jewish restoration would be accomplished by God without a Davidic Messiah, as in the Second Isaiah and much later in Daniel (Isa. 2:2-4 = Mic. 4:1-4; Hos. 1:7; Joel 3:13-21; Zech. 14:9).

When prophecy had become silent in the late fourth century, one or more scholars made a diligent search for prophetic books and prepared the present edition of the prophetic books in four volumes. The inclusion of such brief books as Obadiah, of a prophetic biography (Jonah), and of Nahum's triumphant ode, shows that the search was thorough, even though probably many valuable MSS failed to be found. The late-third-century annotations prove that, like the Former Prophets, the Latter Prophets

were edited not long before 200 B.C. and not later than 180, when our edition was known to Ben Sirach, who read the poems of the Second Isaiah as part of the book of Isaiah (Ecclus. 48:24) and the twelve minor prophets as one volume (49:10)—a characteristic of this edition. Daniel, written in 164 B.C., could not be included; it quotes Jer. 25:11-12; 29:10 as scripture in 9:2. So in *ca.* 200 B.C. the Bible consisted of the "Law and the Prophets" (as known to Ben Sirach in 180; see Ecclus. 44-49), and is so called in IV Macc. 18:10; Tosef. B.M. 11, 23 (396); Midrash Ps. 90, § 4 (194*b*); Matt. 5:17; 7:12; 11:13; 22:40; Luke 16:16; John 1:45; Rom. 3:21.

The Law was read for instructions about the present, the Former Prophets with a sense of national pride for Israel's past glories, and the Latter Prophets for a glimpse of a better future. Sometime between 200 B.C. and A.D. 30 a reading from the prophetic canon (*haphṭārâ*) was part of the synagogue worship on certain days (Meg. 4.1-2); the earliest evidence is in Luke 4:16-19; Acts 13:15. The selection was fixed only on certain sabbaths, and we do not know whether Jesus selected Isa. 61:1-2 himself or whether it was prescribed; in early times the reading of Ezek. 1 was forbidden on account of its theosophical interpretation. The canonization of the Law and the Prophets allowed the future inclusion of other books in the sacred scriptures—Ben Sirach refers to Psalms, Proverbs, Ezra-Nehemiah, and perhaps to Job; and he even hopes that his own book will be regarded as inspired (Ecclus. 24:33).

4. The canonization of the Writings. The third division of the Hebrew Bible is simply called *Ketûbhîm* (כתובים), "Writings" (lit., "written [things]"), or in Greek, *Hagiographa* ("sacred writings"). No more precise title was possible, since it consists of a miscellaneous collection of widely different works. The Torah is a single work in five volumes; the Prophets includes two works of four volumes each; but the third canon consists of ten separate works (counting Chronicles-Ezra-Nehemiah as one work in two volumes), grouped as follows in the Hebrew Bible: (*a*) poetry (Psalms, Proverbs, Job); (*b*) the Five Scrolls (Song of Solomon, Ruth, Lamentations, Ecclesiastes, Esther), each one of which was read on an annual festival (Passover, Pentecost, the Ninth of Ab [when Jerusalem was destroyed in 586 B.C.], Tabernacles, and Purim); (*c*) prophecy (Daniel); (*d*) history (Ezra, Nehemiah, and Chronicles, in this order).

While the canonization of the Law and the Prophets consisted of the final, complete editions of certain types of literature, the Writings were a collection of separate works, each of which circulated independently until it was attracted like a satellite into the orbit of sacred scripture.

Two conditions had to be fulfilled before each book was canonized separately. The first was survival. When books had to be copied laboriously and expensively on papyrus or parchment, no work could survive for a few centuries unless it attracted readers. The Dead Sea Scrolls and the papyri found in Egyptian sands, without circulation among readers, disappeared in antiquity. Except for these documents, almost all Hebrew and Aramaic writings from the centuries before the Christian era have been lost; the most important survival in Egyptian sands is a good portion of the Hebrew text of Ecclesiasticus and the Elephantine documents. As is well known, public taste is capricious—in Hebrew, Esther survived and Judith was lost; Ecclesiastes survived and Ecclesiasticus survived in part, by accident; Chronicles is extant, I Maccabees perished. Similarly some important Greek classics have come down to us in fragmentary copies found in Egypt, notably some fragments of Sappho and Menander; and *The Republic* of Cicero was discovered in part on a palimpsest in the Vatican, written below the commentary of Augustine on the Psalms, and published in 1822 by Cardinal Angelo Mai. Among the Jews, a book had to possess a strong appeal of some kind to survive; it must have attracted readers for its religious, nationalistic, or literary value.

The second condition for the canonization of a book after 200 B.C. was anonymous authorship. Only Nehemiah (and perhaps Ezra), who wrote his own memoirs, and the prophets whose public addresses were collected by them or by a disciple, have the genuine author's name attached to the book—it would be absurd to hide the name of the writer of an autobiography or of a public speaker well known to the audience. Other OT writers, not feeling the pride of authorship like Greek and modern writers, published their books as anonymously as telephone directories or railroad timetables. The first author who of necessity used a nom de plume to lend authority to his book was the author of the address of Moses in Deuteronomy; under his own name the book would not have transformed the religion of Judah after 621 B.C.

All the Writings are attributed to an imaginary author (David, Solomon, Daniel) or are anonymous (Job, Lamentations, Esther, Chronicles), except Nehemiah and perhap Ezra. We saw that prophecy ceased shortly before 200 B.C., and no inspired book could be written except by a prophet. It was, however, generally believed that prophecy came to an end soon after the death of Ezra when the men of the Great Synagogue collected the scriptures: no book known to have been written later than Ezra or Alexander the Great (in Jewish chronology this is practically equivalent; cf. Seder Olam Rabba 30) could be deemed inspired. The earliest statements of this doctrine date from *ca.* A.D. 90, and are found in II (IV) Esd. 14 (the twenty-four books of the OT were dictated, together with seventy esoteric apocalypses, to five scribes by Ezra in forty days) and in Jos. Apion I.viii.41, which says: "From the time of Artaxerxes [465-424 B.C.] to our own time, each event was recorded, but these writings are not deemed equally trustworthy with those written before them because the exact succession of prophets no longer existed." The Talmud (B.B. 14*b*-15*a*) likewise regards all canonical scriptures to have been written not later than Ezra (*ca.* 444 B.C.). The canonization of the Law is identified with that of the whole Hebrew Bible. We may fix the closing of the canon by the canonization of the Writings, *ca.* A.D. 90.

Ecclus. 39:1 (law, wisdom, and prophecies); II Macc. 2:13-14 (books about kings and prophets, books of David, and letters of kings about sacred

gifts); and Luke 24:44 (Law, Prophets, and Psalms) allude to the gradual process leading to the final canonization of the Writings. Our earliest evidence is in the Prologue to the Greek translation of Ecclesiasticus, dated in 132: the Law, the Prophets, "and the others that followed them," or "and the other books of our fathers," or "and the rest of the books." What these "other books" which had been translated into Greek by 132 were, we have no way of knowing, but they probably included Psalms, Proverbs, and Job. As for Psalms, Ecclus. 47:8-10 in 180 B.C. knows a Davidic Psalter, and I Macc. 7:17 *ca.* 100 B.C. quotes Ps. 79:2-3 as scripture. Daniel may also have been regarded as inspired in 100 B.C. (I Macc. 2:59-60; and perhaps 1:54).

The interest in the rebuilding of the temple and the return of the exiles resulted in the separation of Ezra-Nehemiah from I–II Chronicles and their earlier canonization, for they incongruously precede Chronicles in the Hebrew Bible. The two earliest of the five scrolls (Ruth and Lamentations) reached canonical status before the other three (Song of Solomon, Ecclesiastes, Esther), the canonization of which was opposed by some rabbis, but (especially for Esther) was supported by popular demand. The discussions of the rabbis about Ezekiel were purely academic. We do not know whether the omission of references to Ezekiel, the five scrolls, Daniel, and Chronicles in Philo's writings, and the omission of Song of Solomon, Ecclesiastes, Esther, and Ezra in the NT are significant or merely accidental.

In any case, the destruction of Jerusalem and the temple in A.D. 70 and the propaganda of the Christians, quoting the gospel narratives (cf. I Cor. 11:23-26; 15:1-7, written before the gospels), forced the Jews to fix the canon of inspired scriptures for all time. Under the leadership of Johanan ben Zakkai, the Council of Jamnia (*ca.* A.D. 90) closed the third canon. The Hebrew Bible of twenty-four books is first mentioned at that time in II (IV) Esd. 14:44-46 —it included five books of the Law, eight in the Prophets, and eleven in the Writings (counting Ezra-Nehemiah and I–II Chronicles as only two books). Josephus (Apion I.viii), followed by Origen, Epiphanius, and Jerome, counted only twenty-two books, like the letters of the Hebrew alphabet; Josephus probably united Ruth with Judges, and Lamentations with Jeremiah. Jerome also knew of the total of twenty-four books, and also of twenty-seven books, adding to twenty-two the additional five "final letters" (דמנפץ). Josephus disregarded the three Hebrew canons (as the LXX did) and counted: five for the Law, thirteen for the Prophets (Joshua, Judges with Ruth, Samuel, Kings, Chronicles, Ezra-Nehemiah, Esther, Job, Isaiah, Jeremiah with Lamentations, Ezekiel, the twelve minor prophets, Daniel), and four for hymns to God and practical precepts to men (Psalms, Song of Solomon, Proverbs, Ecclesiastes). Possibly we should place Job in the third category and the Song of Solomon in the second. H. Graetz omits from this list Song of Solomon and Ecclesiastes; and S. Zeitlin likewise obtains the Bible of twenty-two books in Josephus by stating that the Song of Solomon and Ecclesiastes were added later to the canon of the Writings (which he dates from A.D. 65). But in view of the statements of II (IV) Esdras and in view of the OT books quoted in Josephus and the NT, it is probable that the Hebrew Bible attained its present form, consisting of the Law, the Prophets, and the Writings, at the Council of Jamnia (Jabne) *ca.* A.D. 90.

The Pentateuch retained for the Jews its central position after the whole Hebrew Bible was canonized. It is natural to ignore religious progress through the centuries if the Law was revealed to Moses, together with the "tradition of the elders" or oral law (Mark 7:3-13; Jos. Antiq. XIII.x.6; cf. G. F. Moore, *Judaism,* I, 251-62), which was redacted in writing in the Mishnah (*ca.* 200) after having been transmitted orally. Revelation can hardly be improved or corrected, and consequently the Prophets and the Writings are considered *qabbalah* (tradition) which expounds the Law. Of course, as late as the Talmud the canon of twenty-four books was not always accepted blindly without suppressions or additions by the learned and by sectarians in Palestine, but eventually it was recognized as the sole revelation of God in written form.

The Dead Sea Covenanters at Qumran (usually identified with the Essenes) differed apparently from normative Judaism in 50 B.C.-A.D. 50 in recognizing some sacred books unknown or rejected by the rabbis. The Essenes, according to Josephus (War II.viii. 6; II.viii.7), studied ancient books, particularly medical or magical ones, and swore "to preserve carefully the books of the sect and the names of the angels." The so-called Zadokite Sect of Damascus (the Sect of the New Covenant) possessed the Book of the Hago (*sefer ha-hago*), containing regulations for the guidance of civil and religious leaders, and presumably also some noncanonical writings. The Apoc. and the Pseudep. preserved by the Christians illustrate the type of books that some Jews recognized as canonical.

5. The Alexandrian Jewish canon. Several circumstances contributed to make the Alexandrian canon (or the Hellenistic one in general) more hospitable to Jewish writings than the Palestinian official Bible. Since the discovery of the law of Moses in 621 (the D Code), Palestinian Jews made a sharp distinction between inspired scripture and human writings; canonization was a solemn recognition on the part of the leaders and the people that certain books were divinely revealed to prophets. Traditionally the final canonization of the whole Bible was accomplished by the men of the Great Synagogue (Assembly) in the time of Ezra and Nehemiah. Orthodox Judaism in Palestine after 400 B.C. always knew what was scripture and what was not.

In Alexandria, on the contrary, the Jews tended to accept as scripture any writing in Hebrew or Aramaic which came from Palestine. The Jews in the Dispersion spoke Greek, and their profane literature was in Greek, and after the translation of the Pentateuch into Greek (*ca.* 250 B.C.) they tended to regard all books translated into Greek from the Hebrew (as distinguished from those written in Greek) as divinely inspired. Moreover, they apparently did not believe, like the Palestinian Jews, that prophecy had ceased with Ezra and Nehemiah and the canon had been closed by the Great Synagogue. According to Philo of Alexandria (died *ca.* A.D. 50), inspiration has not ceased, but every wise and virtuous man is

enabled, through the Spirit of God, to announce what is hidden to the human eye. Of course, for Philo and the Letter to Aristeas (*ca.* 100 B.C.), as in Palestine, the Pentateuch was unsurpassed in authority, but though subordinate to the law of Moses, other books were deemed inspired. There is evidence proving that the Bible of the Alexandrian Jews was not confined to the law of Moses (as some have claimed)—Philo quotes Psalms, Proverbs, Job, Ezra-Nehemiah, as scriptures; and in *On the Contemplative Life* § 25 (the authenticity of which has been questioned without decisive evidence) Philo says of the monastic Therapeutae that in their cells "they increase their knowledge and piety, and bring them to perfection, by studying the laws, and the sacred oracles revealed through the prophets, and hymns, and the other writings" (cf. Luke 24:44).

The Greek OT (incorrectly called the "Septuagint") is usually regarded as the Alexandrian Jewish Bible. In reality, except for a few papyrus fragments found in Egypt, all known copies of the LXX are Christian. Most MSS contain the books of the Hebrew Bible and the Apoc., but the Codex Alexandrinus (A) contains in addition III and IV Maccabees, the Odes (*cantica*) at the end of the Psalter (Exod. 15:1-19; Deut. 32:1-43; I Sam. 2:1-10; Jonah 2:3-10; Hab. 3; Isa. 38:10-20; Prayer of Manasseh; Dan. 3: 26-45 [Prayer of Azariah]; Dan. 3:52-90 [The Song of the Three Children]; Luke 1:46-55 [*Magnificat*]; Luke 2:29-32 [*Nunc dimittis*]; Luke 1:68-79 [*Benedictus*]; Luke 2:14 and selections [*Hymnus matutinus*]), and the Psalms of Solomon.

Strictly speaking, we therefore do not know what was the canon of the Alexandrian and Diaspora Jews before the time when the LXX was condemned in A.D. 130, under the leadership of Rabbi Akiba, and Aquila's literal translation of the Hebrew Bible was substituted for it. But we may surmise that this earlier Greek Bible disregarded the arrangement of the Hebrew Bible and added the Apoc. (without II or IV Esdras).

In this Greek Bible the distinction between the Prophets and the Writings was completely disregarded, and after the Pentateuch the books were arranged according to literary types: (*a*) history: Joshua, Judges, Ruth, Samuel, Kings, Chronicles, I Esdras (Greek Ezra), II Esdras (Ezra-Nehemiah); (*b*) poetical and didactic books: Psalms, Proverbs, Ecclesiastes, Song of Solomon, Job, *Wisdom of Solomon, Ecclesiasticus;* (*c*) stories: Esther (with *additions*), *Judith, Tobit;* (*d*) Prophets: the twelve minor prophets, Isaiah, Jeremiah, Baruch, Lamentations, *Epistle of Jeremiah,* Ezekiel, Daniel (with *additions*); (*e*) *I and II Maccabees.* The apocryphal books are *italicized* in this list, which gives the contents of the great Vatican MS (Vaticanus Greek 1209, Codex B, *ca.* A.D. 350) with the addition of I and II Maccabees, which it lacks.

The earliest attestation for the threefold division of the Hebrew Bible (Law, Prophets, and Writings) is in the Prologue to the Greek translation of Ecclesiasticus (132 B.C.), and for the rearrangement of the books in the Greek Bible at Alexandria, Jos. Apion I.viii (*ca.* A.D. 95): five books of Moses, thirteen books of the prophets, four books containing hymns to God and precepts for men (Psalms, Proverbs, Song of Solomon, Ecclesiastes). Although Josephus uses the books of the Apoc. as sources for his histories, in accordance with Palestinian usage he does not regard them as scripture, any more than Philo did. But in view of their inclusion in the LXX, it seems that most of the Jews in Alexandria regarded them as sacred writings. Both Philo and Josephus quoted the LXX in their writings, although Josephus was acquainted with the Hebrew Bible from childhood and claims (in most cases falsely) to have made his own translations from the Hebrew (Antiq. I. proem. 1-2). But Philo, who paraphrases in *The Life of Moses* II. 5-7, §§ 26-44 (cf. Jos. Antiq. I. proem. 1, 3; XII.ii.1-15) the story of the origin of the Greek translation of the Pentateuch given in the Letter of Aristeas, regarded the translation as literal and divinely inspired —it was his Bible just as the King James Version is the Bible for many English-speaking persons.

6. The Christian canon. The Bible of Jesus and of his disciples was the Hebrew Bible, but the Bible of Paul and his converts was the Greek LXX (including the Apoc., except II [IV] Esdras, which is found in the Vulg.). By far the great majority of Christians in the first century and later were Greek-speaking Gentile proselytes or pagans. The insignificant number of the Nazarenes and other Palestinian Jewish Christians who spoke Aramaic, first attested in Acts 15:5, the spiritual ancestors of the sect of the Ebionites, fled to Pella in Perea in A.D. 67 or shortly before. On Judeo-Christians, see H. J. Schoeps, *Theologie und Geschichte des Judenchristentums* (1949).

So the LXX became through Paul the official Christian Bible in the early centuries. The Christians followed Philo in claiming for the LXX the same inspiration as the original (Irenaeus III.ii.3-4; Cyril of Jerusalem *Catecheses* IV.33-34; Augustine *On Christian Doctrine* 22; *City of God* VIII.44). The differences between the LXX and the current Hebrew text were explained as textual errors in the transmission of the LXX, divine modifications for the use of the future church, or even Jewish corrections in the Hebrew text (Just. Dial. 71-73; Jerome on Gal. 3:13). The inspiration of the OT, presumably in the Greek version, is taken for granted in Heb. 1:1, and for the early church fathers the LXX was the only OT authorized by the church; even Origen, who was familiar with the Hebrew text and compared it with the LXX and other Greek versions in his Hexapla, preached on the LXX text and commented on it. Jerome was attacked for basing his Latin version on the Hebrew text; Augustine resented his change of "cucumber" to "ivy" in Jonah 4:6-10.

The citations and allusions to the OT in the NT are mostly (80 per cent) taken from the LXX, and every NT author is familiar with it; a detailed conspectus will be found in W. Dittmar, *Vetus Testamentum in Novo* (1903). The only quotations in Hebrew or Aramaic are the words on the cross (Matt. 27: 46 = Mark 15:34 [Ps. 22:1—H 22:2]). Rarely do we find a new translation from the Hebrew, unless, as in other cases, the changes in the LXX are due to faulty memory: Matt. 12:18-21 (Isa. 42:1-4); Luke 1:17 (Mal. 4:5-6—H 3:23-24); 2:23 (Exod. 13:2); John 19:37 (Zech. 12:10); Rom. 9:17 (Exod. 9:16); 11:4 (I Kings 19:18); 12:19 (Deut. 32:35). At times the OT is quoted in a new version influenced by an

Aramaic interpretation: I Cor. 2:9 (Isa. 64:3-4); 15: 54 (Isa. 25:8). In very few other cases the LXX is improved through an examination of the Hebrew: Matt. 11:10=Mark 1:2=Luke 7:27 (Mal. 3:1); Matt. 26:31=Mark 14:27 (Zech. 13:7); Matt. 22:24 corrects Mark 12:19 and Luke 20:28 according to Deut. 25:5. But in general the LXX is quoted with minor variants. Revelation, however, generally prefers Theod.'s Greek text of Daniel, which became standard in the Christian church; Heb. 11:33 alludes to Dan. 6:23 in Theod.'s recension although it is faithful to the LXX elsewhere; Mark 14:62 ("*with* the clouds") quotes Dan. 7:13 according to Theod., but Matt. 24:30; 26:64 according to the LXX ("*on* the clouds"). The most important use of the LXX instead of the Hebrew is, of course, in Matt. 1:23, which quotes Isa. 7:14 (LXX "virgin"; Hebrew and Greek Aq. "young woman"). Another striking case is Acts 15:17, which quotes Amos 9:12 according to the LXX ("the rest of men may seek" instead of the Hebrew "may possess the remnant of Edom," reading אדם as *'ādhām* instead of *'edhôm,* and the verb דרש, "seek," instead of ירש, "possess").

The following OT books are cited or formally quoted as scripture in the NT: Genesis, Exodus, Leviticus, Numbers (II Tim. 2:19), Deuteronomy, II Samuel (II Cor. 6:18; Heb. 1:5), I Kings (Rom. 11: 3-4), Psalms, Proverbs, Job (I Cor. 3:19), Hosea, Amos, Micah (Matt. 2:6), Joel, Jonah, Habakkuk, Zechariah, Malachi, Isaiah, Jeremiah, Daniel. There are some echoes from some other books of the OT but apparently no allusions to Song of Solomon, Ruth, Lamentations, Ecclesiastes, Esther, and Ezra. Conversely there are allusions to some of the Apoc. and Pseudep., notably: Ecclus. 5:11 (Jas. 1:9); II Macc. 6–7 (Heb. 11:35-36); Wisd. Sol. 2:13, 18 (Matt. 27:43); 5:17 (Eph. 6:11, 13); 7:26 (Heb. 1:3); 9:15 (II Cor. 5:4); 13:1-9; 14:22-31 (Rom. 1:20-32). Even more direct are references to some of the books of the Pseudep., some of which are quoted as scripture: the quotation in Matt. 27:9, according to Jerome, was taken from a Jeremiah apocryphon; an Apocalypse of Elijah is quoted in I Cor. 2:9, according to Origen, and in Eph. 5:9 according to Epiphanius; Jude 14-16 quotes Enoch 1:9, and in vs. 9, according to Origen, refers to the Assumption of Moses; Origen also says that II Timothy alludes to the lost book of Jannes and Jambres; "sawn in two" in Heb. 11:37 probably cites the Martyrdom of Isaiah; Luke 11:49-51*a* (cf. Matt. 23:34-35) quotes a lost work apparently called Ἡ σοφία τοῦ θεοῦ (The Wisdom of God); the "scripture" quoted in John 7:38 is unknown (according to C. C. Torrey it is a mistranslated allusion to Ps. 46:4—H 46:3); the source of the quotation in Eph. 5:14 is unknown, unless it is a paraphrase of Isa. 26:19; 60:1; likewise unknown is the source of Jas. 4:5. For comprehensive lists of allusions to the Apoc. and Pseudep. in the NT, see F. Bleek in *TSK,* 26 (1853), 268-354; W. Dittmar, *Vetus Testamentum in Novo* (1903).

After Paul had said that the law of Moses was less important than the promises to Abraham (Gal. 3:16-20), was only an "old testament" to be supplemented by a "new testament" (II Cor. 3:6, 14), was merely a guide leading men to Christ (Gal. 3:24), the early Christians searched the Prophets and the Psalms for promises that had been fulfilled in the birth, life, and particularly the crucifixion and resurrection of Jesus Christ (Acts 2:22-36; 3:12:36; 4:8-12; and *passim* in the four gospels). Paul claimed that the divine promises to Abraham were made to the children of Abraham according to the spirit, whether Jews or Gentiles (Rom. 9–11), for Abraham was the "father of all who believe without being circumcised" (Rom. 4: 11). The church is the "Israel of God" (Gal. 6:16).

Paul thus claimed for the Christians the OT promises; the Letter to the Hebrews claimed for them the Levitical law. Moses was a servant, but Christ a "son over his own house" (Heb. 3:5-6), and the great ritual institutions of Judaism became mere images of spiritual, heavenly realities: the sabbath (4:1-11), the priesthood (5–8), the sanctuary (9:1-5), the sacrifices (9:6-14; 10:1-13), are but the "copy and shadow of the heavenly sanctuary" (8:5).

Conversely John sees no possible harmony between the law given by Moses and grace and truth, which came through Jesus Christ (John 1:17): the OT bears witness to Christ (5:39); but the Jews did not believe in Moses and the Scriptures, and how can they therefore believe in the words of Christ (5: 46-47)? Consequently they do not believe in God (7:28; 8:19); they hate him (15:23-25). The ritual institutions of the OT are futile and useless (5:16-17; 7:22-24), including the temple (4:20-21).

In conclusion, although the various writers of the NT differ in their attitude, they agree that the OT (without the Apoc.) is divinely inspired (cf. II Tim. 3:16) and predicts salvation through Jesus Christ; but some writers assume that the gospel has superseded the OT.

Although the total rejection of the OT by Marcion (second century) was declared heretical by most Christians, the Christian church never reached a complete agreement about the canonicity of the books called Apoc. ("hidden, spurious" books): I (III) and II (IV) Esdras, Tobit, Judith, Additions to Esther, Wisdom of Solomon, Ecclesiasticus, Baruch, Susanna, Song of the Three Children, Bel and the Dragon, Prayer of Manasseh, I and II Maccabees. All of them, with the exception of II (IV) Esdras, preserved in Latin in the Vulg., are extant in Greek in MSS of the LXX, but the canonicity of some was questioned.

After the NT, the Apostolic Fathers allude to the Apoc. or quote them as scripture: the Didache or Teaching of the Twelve Apostles (Ecclesiasticus), Barnabas (The Wisdom of Solomon, Ecclesiasticus, II Esdras), I Clement (The Wisdom of Solomon), etc. The popularity of the Apoc. increased in the church: Tertullian, Irenaeus, Hippolytus, Clement of Alexandria, Origen, Cyprian, regarded at least some specific books of the Apoc. as scripture.

But beginning with Origen, the church fathers who knew Hebrew realized that the books of the Apoc. were missing from the Hebrew Bible. As a scholar Origen limited the Bible to the twenty-two books, but as a churchman he defended their canonicity: in 238 Julius Africanus of Emmaus criticized Origen for quoting Susanna as scripture; Origen could merely appeal to the authority of the church and quoted Prov. 22:28 ("Remove not the ancient landmark"). For each book of the Apoc. and

Pseudep. E. Schürer (*Geschichte des jüdischen Volkes* [4th ed., 1909], III; *A History of the Jewish People* [1886-90]) gives the patristic quotations. Cyril of Jerusalem (died 386) in theory distinguished likewise books of unquestioned and of doubtful canonicity, but in practice followed the general usage. Jerome likewise made a distinction between the *libri canonici* (the *hebraica veritas* [Hebrew truth] confined to the Hebrew Bible) and the *libri ecclesiastici*—books outside the Hebrew Bible should be relegated among the apocryphal writings (*inter apocrypha*). Nevertheless, as a Christian believer he recognized the books of the Apoc. (including II [IV] Esdras) as scripture and included them in his Latin translation, the Vulg., which became the official Bible of the Roman Catholic Church. This divergent attitude toward the Apoc. has prevailed through the centuries in Christianity.

The authority of some or all of the Apoc. was recognized in the early councils. At Hippo in Africa (393), and at the third and sixteenth councils of Carthage (397, 419), all the books of the Apoc., as it seems, were regarded as scripture; and at the Council of Trent (1546), confirmed by the Vatican Council (1870), the anathema was pronounced against whosoever did not regard the whole Vulg. Bible "sacred and canonical." In the standard Clementine edition (1592) it contained I–II (III–IV) Esdras, omitted in the Sistine edition (1590); but these books were printed at the end of the OT in smaller type with a statement that they were not recognized as canonical at the Council of Trent.

In spite of some objections, the books of the Apoc. were regarded as scripture at the Trullan (692) and later councils; but the Council of Jerusalem limited the Bible to the Hebrew books and to Tobit, Judith, Ecclesiasticus, Wisdom of Solomon, and tacitly to I Esdras and the additions to Esther and Daniel.

At first the Syriac church read in the Peshitta version only the books in the Hebrew Bible, omitting Chronicles-Ezra-Nehemiah and Esther, but adding Ecclesiasticus. Eventually, except among the Nestorians, the influence of the LXX prevailed over the Hebrew Bible, and the Syro-Hexaplaric version of Paul of Tella (based on the LXX in Origen's Hexapla) contained also Wisdom of Solomon, Ecclesiasticus, Baruch, the Epistle of Jeremiah, and the Additions to Daniel. The most important MS of the Peshitta (Codex Ambrosianus, sixth century, A. M. Ceriani, ed., 1879-83) contains, in addition to the Apoc. (without I [III] Esdras, Prayer of Manasseh, Tobit, and Additions to Esther) III–IV Maccabees, II (IV) Esdras, and Jos. War VII.

In addition to the Syriac, other oriental churches used translations of books not included in the LXX. The Syriac versions of II (IV) Esdras and notably of II Baruch (the Syriac Apocalypse of Baruch) are important. G. Steindorff has published a Coptic (Fayumic or Middle Egyptian) version of the Apocalypse of Elias (1899). The Ethiopic versions of Jubilees, Enoch, and the Martyrdom of Isaiah are the most complete witnesses for these books. The Armenian versions of the Life of Adam and Eve and of the Testaments of the Twelve Patriarchs are valuable. The Greek versions of such books are mostly lost, and the Latin versions (except for II [IV] Esdras, Apocalypse of Baruch, and Martyrdom of Isaiah) are not in existence.

It is clear that the Apoc. enjoyed a canonical status that was almost unchallenged, except by scholars, in the Roman and Greek churches during the Middle Ages. The situation changed with the Reformation. In their polemic against some Roman Catholic doctrines unknown to Jesus and Paul (justification by good works, the merits of the saints, etc.) the Reformers noticed that they were confirmed in some texts of the Apoc. Martin Luther said that II Maccabees and Esther Judaized too much and contained too much heathenism, so that he wished they did not exist; he denied that one could derive the doctrine of purgatory from II Macc. 12:43, "for the same book is not one of the books of Holy Writ." Another reason for rejecting the Apoc. was the revival of the study of Hebrew. Nicolaus of Lyra, a Christian of Jewish parentage, published in 1333 a pamphlet in Latin with the title "Treatise on the difference between our translation [the Vulg.] and the Hebrew truth." In 1520 A. R. B. Karlstadt (or Carlstadt) divided the scriptures into three classes: the Hebrew canon, the *libri hagiographi* or almost canonical (Wisdom of Solomon, Ecclesiasticus, Judith, Tobit, I–II Maccabees), and books worthless for Christians.

Since the Reformers, rejecting the authority of the Papacy, saw in the Scriptures their supreme guide, it was vital for them to fix the canon of Holy Writ, and to publish authentic translations from the inspired Hebrew, Aramaic, and Greek OT and NT. Accordingly Luther, in his epoch-making German translation of the Bible (1534), relegated the books of Wisdom of Solomon, Ecclesiasticus, Judith, Tobit, I–II Maccabees (the *hagiographi* of Karlstadt), together with Additions to Esther, Additions to Daniel, and Prayer of Manasseh (omitting I–II Esdras), to the end of the OT with this superscription: "Apocrypha, these are books which are not held equal to the sacred Scriptures, and yet are useful and good for reading." John Wycliffe's English translation of the Bible, made from the Vulg. (1380-82) and revised after his death (1384) by John Purvey (1388), included the Apoc.; it was printed in 1850. Miles Coverdale in his English Bible (1535) followed the example of Luther, placing the Apoc. at the end of the OT (adding, however, I–II Esdras and omitting the Prayer of Manasseh). The Prayer of Manasseh was added in the "Thomas Matthew" Bible (1537), which is an edition of the versions of William Tyndale (Genesis–II Chronicles) and Coverdale. The books of the Apoc. were included in later English Bibles—the Great Bible (1539), the Geneva Bible (1560, in which some of the Apoc. books were translated from the Greek), the Bishop's Bible (1568), and the KJV (made from the Hebrew and Greek, with the Apoc. scattered among the OT books; 1611). But beginning with 1629, some editions of the Bible appeared without the books of the Apoc. and, following some bitter controversies, since 1927 they have been omitted from most copies of the KJV and from most Protestant Bibles in other languages. So, while Roman Catholics regard the Apoc. as no less canonical than the books in the Hebrew Bible, the books of the Apoc. are placed outside holy writ by Calvinistic and other Protestant churches, but are

read by the church "for example of life and instruction in manners; and yet doth it not apply them to establish doctrine" (*42 and 39 Articles of Religion* [1553, 1563]) according to the practice in the Lutheran, Anglican, and Zurich Reformed churches.

7. The closing of the Jewish canon. After the Writings were canonized in A.D. 90, the Jewish canon was closed for all time. The notion of sacred scripture was derived from that of prophecy—God himself speaking through an inspired man. At first, revelation was purely oral, but with Deuteronomy (621 B.C.) revelation became the written utterance of a prophet, and eventually a prophetic writing which had never been delivered orally. Oral prophecy declined after Ezekiel and gradually ceased after Malachi and Joel; Zechariah (13:1-6) has a very low opinion of the prophets of his day, and public opinion regards them as charlatans or agitators worthy of death. So genuine prophecy had ceased in the days of the Maccabees (164-142 B.C.; see I Macc. 4:46; 14:41; 9:27). According to Jos. Apion I.viii and the rabbis, the last prophets had been Haggai, Zechariah, and Malachi; accordingly no Jewish apocalypse was attributed to an author later than Ezra.

The conviction that prophetic inspiration, the source of inspired scripture, had ceased—and presumably had ceased forever—set aside the Law, the Prophets, and the Writings as a closed body of holy scripture, set apart from all other literature by its unique inspiration. The inclusion of the Apoc. in the LXX Bible of the Alexandrian Jews, which had been adopted by the Christians together with the gospel, made it imperative to close the sacred canon. This was not done without serious controversy, particularly about the Song of Solomon and Ecclesiastes, but also about Esther (see G. F. Moore, *Judaism* I, 242-47). Finally it was decided that these books were inspired and that the gospel, the books of the heretics, Ecclesiasticus, and the books written since "are not sacred scripture." So the Hebrew canon of scripture was closed forever shortly before or after A.D. 100.

8. The arrangement of the OT books. In the Hebrew Bible the books are divided into the successive canons as follows, in the printed editions:

a) The Law (*tôrâ*): Genesis, Exodus, Leviticus, Numbers, Deuteronomy
b) The Prophets (*nebhî'îm*)
Former Prophets: Joshua, Judges, Samuel, Kings
Latter Prophets: Isaiah, Jeremiah, Ezekiel, the twelve minor prophets
c) The Writings (*kethûbhîm*)
Poetry: Psalms, Proverbs, Job
The Five Scrolls: Song of Solomon, Ruth, Lamentations, Ecclesiastes, Esther
Prophecy: Daniel
History: Ezra-Nehemiah, I-II Chronicles

In the Talmud (Baraita B.B. 14*b*) the order is as follows: the Pentateuch, the Prophets (Joshua, Judges, Samuel, Kings, Jeremiah, Ezekiel, Isaiah, the minor prophets), the Writings (Ruth, Psalms, Job, Proverbs, Ecclesiastes, Song of Solomon, Lamentations, Daniel, Esther, Ezra [plus Nehemiah], Chronicles). For divergent orders in books and MSS, see S. Singer, ed., *The Jewish Encyclopedia*, III, 144. For the order in the LXX see H. B. Swete, *Introduction to the OT in Greek* (1914), pp. 201-14.

9. Canonicity. Up to this point we have been concerned with historical problems—how, why, and when certain Hebrew and Aramaic writings came to be regarded divinely inspired and included in a canon of sacred scriptures. Here we are concerned with theological problems—namely, the Jewish and Christian doctrines concerning the origin, sacredness, authority, and inspiration of the scriptures.

a. Jewish doctrines. The Jews believed firmly that the books of the OT had been inspired by God, and they called the OT the "oracles of God" (θεοῦ λόγια; Aristeas 177), "divinely revealed oracles" (θεόχρηστα λόγια; Philo *Legation to Caius* 31 [II, 577, Mangey]); the OT contains "decrees of God" (θεοῦ δόγματα; Jos. Apion I.viii); Moses wrote the Pentateuch under divine inspiration (Philo *Life of Moses* II.2 [II, 136, Mangey]; III.23 [II, 163, Mangey]). God revealed the books of the OT to prophets; the beginning of the Letter to the Hebrews expressed the Jewish doctrine: "In many and various ways God spoke of old to our fathers by the prophets." This is, of course, repeatedly stated in the OT: "The words of Jeremiah, . . . to whom the word of the LORD came" (Jer. 1:1-2); "The word of the LORD came to Ezekiel" (Ezek. 1:3); etc. In the Pentateuch, God revealed his laws unto Moses (Exod. 20:1, 22; 21:1; 25:1; Lev. 1:1; 4:1; 6:1; 8:1; etc.).

The prophets also decided whether a book was divinely inspired or not (II Kings 22:14-16). But generally books were declared canonical by king and people (II Kings 23:2-3) or by clergy and people (Neh. 10:28-29); tradition attributed important roles in the canonization of the Scriptures to "Hezekiah and his college," who put into writing Isaiah, Proverbs (cf. Prov. 25:1), the Song of Solomon, and Ecclesiastes (B. B. 14*b*-15*a*); to the men of the Great Synagogue who put into writing Ezekiel, the Twelve (Minor Prophets), Daniel, and Esther; Nehemiah, who completed the OT (cf. II Macc. 2:13), a task also attributed to Judas Maccabeus (II Macc. 2:14) and to Ezra (II Esdr. 14). It is assumed in these passages that the whole OT was completed and canonized in the time of Ezra and Nehemiah, or of Artaxerxes I (465-424), according to Jos. Apion I.viii, or of Alexander the Great (Seder Olam Rabba 30). Consequently the last prophets were Haggai, Zechariah, Malachi, or, if we regard every biblical author as a prophet, Ezra and Nehemiah. After their death the Holy Spirit departed from Israel, and no inspired scriptures could be written. This doctrine, according to which the OT was completed and canonized in the time of Ezra or soon after, was accepted by the early church fathers (e.g., Tertullian, Irenaeus, and Clement of Alexandria) and by later Christian scholars until in 1877 A. Kuenen showed it to be historically incorrect.

On the other hand, the rabbis assert that the Law, together with repentance, paradise (Eden), Gehenna, the throne of glory, the (heavenly) temple, and the name of the Messiah were created before the world; the proof text is Prov. 8:22, on the assumption that Wisdom is identical with the Law (Baraita Pesakhim 54*a*). Some said the Law was created 2,000 years before the world, others said 974 generations. The pre-existence of the Torah implied that it was superior to the rest of the OT—for God alone was its

creator and put it into writing, while human beings participated in the redaction of the other scriptures. The eleven psalms (90–100) which Moses wrote are not in the Torah because they are not words of the Torah (i.e., exclusively divine), but words of prophecy (Midrash Tehillin 90, § 4 [194*b*]). Those who deny the resurrection or the divine origin of the Torah, and the freethinkers ("Epicureans"), have no portion in the future world (Sanh. 10.1). The preexistence of the Torah and its descent into the tabernacle and in Zion are already emphasized in Ecclus. 24:8-23. How did the Torah come to Israel? The Ten Commandments were proclaimed by the Lord with a loud voice to Israel at Sinai; they were engraved by him or by themselves on the two first tables of stone after angels (cf. Gal. 3:19) had passed around each one to every Israelite for acceptance. The rest of the Pentateuch, according to Rabbi Akiba, came to Moses through divine revelation, but it was generally certain that Moses did not contribute a single thought to the Torah; God revealed it either by word of mouth, as a teacher, or in writing, or by dictation, or through angels (Deut. 33:2 LXX; cf. Gal. 3:19; Acts 7:53; Heb. 2:2).

Ludwig Blan, in *The Jewish Encyclopedia*, writes: "The Torah is one of the seven things that existed before the Creation. According to Simeon ben Lakish, it is 2,000 years older. . . . Even Abraham obeyed all its laws [contrast Rom. 4; Gal. 3:8-12, 17-18]. . . . When Moses ascended to heaven, he found God with the Torah in His hand and reading the passage about the Red Heifer [Num. 19:1-10]. . . . It was given to Israel unconditionally . . . by Moses, who made one copy each for every tribe and corrected them all from the copy of Levi. . . . Before him who denies its divine origin the doors of hell shall never close, and he shall be condemned to stay therein eternally. . . . The Law will endure forever. . . . Any prophet who attempts to annul one of its laws will be punished by death. . . . Though all mankind should combine, they could not abolish one yod (the smallest letter) of it (compare Matt. 5: 18). When Solomon took unto himself many wives, the yod of ירב ('he shall multiply'; Deut. 17:17) cast himself down before God, and denounced the king. . . . Then spake God: 'Solomon and hundreds like him shall be destroyed, but not one of your letters shall ever be annihilated.' . . . The whole world is but a thirty-two-hundredth part of the Torah. . . . When a copy of the Law was burned, people rent their clothes as though one of their dearest relatives had died, and such rents were never to be sewed up. . . . But a copy written by a heretic (מין) might be burned, and one written by a non-Jew had to be buried. . . . Before the Torah the people had to stand up in the synagogue; and while it lay unrolled on the reader's desk, speaking . . . and leaving the synagogue were forbidden. . . . Before birth each one is taught the Torah; but when he sees the light of day an angel touches his mouth, and makes him forget it all." Many scholars were able to write the Torah from memory. Instruction in it was gratuitous.

The rest of the OT (the Prophets and the Hagiographa) is a supplement to the Torah. There is nothing in them which is not suggested in the Law. In other words, the Pentateuch is an inner zone, the Holy of Holies. The other scriptures are simply explanatory; they are Kabbala (tradition), and no legal decisions could be derived from them unless they were authenticated in the Torah. These books were given for instruction to the people in times of ignorance. Their divine origin was, of course, generally recognized, but three explanations of their origin were given: (*a*) God revealed the contents of these books to their human authors by inspiration; (*b*) God revealed these scriptures to Moses on Sinai, and the prophets received them by tradition; and finally (*c*) God revealed them to the pre-existent souls of their authors at Sinai.

The first theory is the most common. Divine inspiration of the Law and the Prophets is called by Josephus (Apion I.vii) ἐπίπνοια, "breathing upon," "inspiration." Esdras prays that God might send "the Holy Spirit into me"; God promises that he will light a candle of understanding in his heart; after he drank a cup of a liquid the color of fire, he dictated the twenty-four biblical books and seventy apocalyptic books to five secretaries in forty days (II Esd. 14:22, 25, 39-44). The rabbinical literature says the deity or the Holy Spirit (meaning the spirit of prophecy, or inspiration) rested over the authors of the canonical books so that they did not utter their own thoughts and wisdom, but spoke and wrote what God's mouth spoke.

The second theory, according to which the Prophets and the Hagiographa were revealed to Moses on Sinai and transmitted by him, was presented by Simeon ben Lakish (*ca.* A.D. 250). It assumed, as was generally thought, that these books added nothing new to the Torah—forty-eight prophets and seven prophetesses prophesied in Israel without adding or detracting what is written in the Torah, except the reading of the Esther scroll (on Purim; Baraita Meg. 14*a*). Others asserted that the book of Esther had also been revealed to Moses and had been transmitted orally until it was finally put in writing.

b. The NT. The OT is generally regarded as the inspired Word of God (Mark 7:13; Rom. 3:2; Heb. 1:1; II Tim. 3:16; II Pet. 1:19-21), which is given for life (Rom. 7:10; 10:5; Gal. 3:12), for guidance unto Christ (Gal. 3:24), for promising God's gospel (Rom. 1:2), for making one wise unto salvation (II Tim. 3:15).

Jesus did not come to abrogate the Law and the Prophets, but to fulfil them (Matt. 5:17-19); he saw in obedience to the summary of the Law (Deut. 6:5; Lev. 19:18) a condition for eternal life (Luke 10:25-28), and he declared that the Law is eternal (Matt. 5:18). But he considered the Law merely the first stage in progress, for it was given at times to correspond to human weakness (Mark 10:2-12) and was far below the requirements of the kingdom of God (Matt. 5:48).

Paul went a step further: although he recognized the divine origin of the Law, he regarded it merely as an "old testament" to be supplemented by a "new testament" (II Cor. 3:6, 13), incapable of producing life and righteousness (Gal. 3:21). Faith has delivered us from bondage under the Law (Gal. 3:23-26), as Paul tries to prove from the OT, which furnishes him and later Luther with the central motto of their religion: "The righteous shall live by his faith" (Hab. 2:4; Rom. 1:17; Gal. 3:11).

The prophetic books and the Psalms were more valuable than the Law for the early Christians, for they found in them promises fulfilled in the birth, life, death, and resurrection of Jesus Christ. The Jews had interpreted the whole OT as law, but the Christians found prophecies, if not predictions, on many pages (Luke 24:27, 44; John 5:39, 46; Acts 3:18).

c. The Koran. Through contacts with Jews and Christians, Mohammed became familiar with parts of the OT and retold, with legendary embellishments, some of its stories in the Koran. He recognized the divine origin of both the OT and the NT: "For he had sent down the Law and the Gospel aforetime; and now He has sent down the 'Illumination' " (Koran 3.2).

d. Roman Catholic doctrines. The NT contained echoes from the Apoc. and Pseudep. (Jas. 1:19; cf. Ecclus. 5:11; Heb. 11:35-36; cf. II Macc. 6–7; Jude 9; cf. Asmp. Moses), according to Origen (*De Principiis* 3.2.1) and the Book of Jannes and Jambres (II Tim. 3:8; cf. Origen on Matt. 23:37; 27:9; Heb. 11:37; cf. the Martyrdom of Isaiah), and even quoted uncanonical writings as scripture (Matt. 27:9; cf. a lost apocryphon of Jeremiah, according to Jerome; cf. I Cor. 2:9; Eph. 5:14 with the Apocalypse of Elijah; cf. Jude 14-16 with Enoch 1:9). Since the LXX was the Bible of the early church, the Apoc. was known and quoted by the church fathers, who also referred to some books of the Pseudep., most of which were regarded as canonical in the oriental churches (Syriac, Coptic, Ethiopic, Georgian) and, in some cases, Greek (Psalms of Solomon, Enoch, III and IV Maccabees) and Latin (II Esdras). Clemens Romanus (I, chs. 8 and 17) quotes an Ezekiel apocryphon known to Josephus (Antiq. X.v.1) and the Assumption of Moses I.xvii, which is also quoted by Clement of Alexandria (*Stromata* VI.xv.132). The book of Enoch is regarded as canonical by Barnabas and Tertullian, and many fathers cited it until Jerome and Augustine declared it apocryphal. II Esdras is used by the Apocalypse of Baruch and by some Christian apocalypses; it is quoted by Clement of Alexandria, saying: "Esdras the prophet says"; it is utilized by Hermas and the Apostolic Constitutions, and it is cited as scripture by Ambrose of Milan, but Jerome spoke of its visions as "dreams." Its popularity surpassed greatly that of the Apocalypse of Baruch (cited by Papias in Irenaeus V.33.3). The Sibylline Oracles were highly regarded by Justin Martyr (Apol. I.44) and other fathers. IV Maccabees was included in a famous uncial MS of the LXX (Alexandrinus), but does not seem to have been generally regarded as canonical by the Christians. Slavic Enoch is cited by Origen (*De Principiis* I.iii.2).

The books of the Hebrew Bible were thus recognized as holy and canonical by all orthodox Christians from the beginning; for a while opinions varied about the books of the Apoc., but the Catholic church finally recognized their full canonicity. Only heretics rejected the twenty-two (or twenty-four) books of the Hebrew Bible—notably Marcion and the Gnostics in the second century, who were concerned only in developing Paul's teachings. They believed that the God of the OT, the creator of the material world and the revealer of the law of Leviticol ceremonies, was distinct from the God of salvation and love. Marcion rejected the OT *in toto*, and adopted a canon consisting only of an expurgated edition of Luke and Paul's letters (without Timothy and Titus). In 144 he separated himself from the church and founded his own congregations, whose remnants continued as late as the seventh century (Paulicians) and lasted until the ninth century in the Byzantine church, and even later in Armenia; this tendency may have influenced the Albigenses.

The Catholic church fought these heresies with all its power, and defended the canonicity of the OT (including the Apoc.) with the utmost vigor.

There is a certain parallel in the Jewish canonization of the OT (*ca.* 400 B.C. to A.D. 100) and the Christian closing of its canon by *ca.* 200. Judaism was in danger of yielding to Hellenistic influence and Christianity to emperor-worship and other Roman practices, when they suffered cruel persecutions under Antiochus IV Epiphanes (168-165 B.C.) and under Domitian, who ruled from 81 to 96. The death of the faithful and the safety of the apostates, which seemed to question the power and the justice of God, moved noble dreamers to promise an imminent intervention of God to reward the martyrs and punish sinners after their death. Two brilliant authors wrote two superb apocalypses—the book of Daniel (164 B.C.) and the Revelation to John (*ca.* A.D. 90). Both were accepted as inspired scripture, but soon numerous apocalyptic writings appeared and threatened to change radically the nature of Judaism and Christianity, just as Hellenism had earlier (unorthodox Hellenistic Judaism and Christian Gnosticism). To counteract the insidious dangers of apocalyptic dreams (Jewish apocalypses, Shepherd of Hermas, Apocalypse of Peter, Apocalypse of Paul, Montanist writings, etc.), Jews and Christians used the same remedy: both groups drew up an official list of inspired books and excluded from this list writings declared uncanonical. The rabbis closed the canon at the first (A.D. 90) and second (A.D. 118) councils at Jamnia, in which it was decided that only the twenty-four books in the Hebrew Bible were canonical, and that "the gospel and the books of the heretics *are not sacred Scripture* [lit. "do not make the hands unclean"]. The books of Ben Sira [Ecclesiasticus], and whatever books have been written since his time, are not sacred Scripture" (Tosef. Yadaim 2.13). The Christian church did not deny that the Holy Spirit departed from Israel in the days of Ezra, but was certain that it had returned again and rested on the Christian apostles and prophets (Mark 1:10-12; Acts 2:1-4; 4:31; I Cor. 14:1-6, 29-32), and consequently God had now revealed a number of Christian scriptures. Just as the rabbis regarded only the writings of the prophets, from Moses to Ezra, to be inspired and therefore canonical, so the Christians after the second century refused to accept in their scriptures any book which was not apostolic. And just as the Hebrew scriptures had been transmitted by an unbroken succession of prophets (Jos. Apion I.viii), so the Christian scriptures had been transmitted by the apostles. "Moses received the Law from Sinai and delivered it to Joshua, and Joshua to the elders, and the elders to the prophets, and the prophets to the men of the Great Synagogue" (Sayings of the Fathers

I.1). "After they had proclaimed the Gospel, the apostles transmitted it to us by the will of God in the Scriptures that it might be the foundation and the pillar of our faith. In fact, clothed with the power of the Holy Ghost which had come down upon them, they received the gift of a perfect intelligence and went even to the ends of the earth, announcing to men the heavenly peace" (Irenaeus III.i.1).

Just as there were some doubts about the prophetic origin of some books of the OT among the Jews, so the church fathers took special pains to prove the apostolic origin of every book in the NT. Simeon ben Menasya (*ca.* A.D. 180) said: "The Song of Songs is sacred Scripture because it was spoken through the Holy Ghost; Ecclesiastes is not sacred Scripture because it originated from Solomon's own wisdom" (Tosef. Yadaim 2.14). Irenaeus (III.i.1) knew that only two of the gospels (Matthew and John) had been written by apostles, but says that Mark put in writing the preaching of Peter, and Luke the gospel preached by Paul; thus all four are "apostolic"; cf. Tertullian (Marcion IV.2), who speaks of the two testaments as "the Prophets and the Apostles" (Presc. Her. XLV), or "the ancient Law and the Apostles" (*On Modesty* XII). Some doubts were expressed on the apostolic origin of Hebrews and Revelation, but they were overcome. The prophetic and the apostolic origin of the sacred books excluded *ipso facto* books written after the disappearance of prophets and apostles, and also books the teaching of which contradicted the words of the prophets and apostles—late and heretical works were thus relegated outside the canon.

The spoken word of the prophets and of the apostles was recognized as the word of God as they uttered it (I Kings 22:19-23: "Hear the word of the LORD"; etc.; I Thess. 2:13: "When you received the word of God which you heard from us"), but many years elapsed before these inspired words attained canonical status when they were fixed in writing. The divine revelation was normally oral before becoming sacred scripture, although both testaments contain sacred books that were never delivered orally. Both the prophets and the apostles distinguished sharply between their own utterances and the inspired words that God spoke through their lips. On one occasion Jeremiah was silent until the divine revelation came to him (Jer. 28:10-14); and Paul distinguishes sharply between his own advice and an ordinance of the Lord (I Cor. 7:10-12); he gives an opinion, the Lord a commandment (7:25). Only the apocalypses (Daniel, Revelation, etc.) claimed to be divine revelation from the moment they were committed to writing; and only Jesus contrasted his own teaching to the Scriptures, and regarded it as superior (Matt. 5:21-22, 27-28, 33-34, 38-39, 43-44; cf. 19:8-9). The books of the OT were recognized as canonical through the authority of the prophets and, after them, of the men of the Great Synagogue; the books of the NT were recognized as apostolic through the authority of the apostles (II Pet. 3:15-16) and later through the authority of the church, guided by tradition (Serapion of Antioch, *ca.* 190, in Euseb. Hist. VI.12.3; Irenaeus III.1.1; IV.33.2; Augustine *Contra adv. legis et proph.* I.xx.39).

The Christians derived their understanding of the Scriptures, as well as their notions about canonicity, from the Jews. Like a man, the Bible has a body and a spirit, a literal meaning and a spiritual sense; it can be understood *litteraliter vel carnaliter*—according to the letter or the flesh—but also according to the spirit, allegorically—a distinction already familiar to Paul (Rom. 7:6; II Cor. 3:6). Beginning with Theagenes of Rhegium (*ca.* 525 B.C.), by means of allegory a philosophical meaning had been discovered in Greece in the writings of Homer and Hesiod. This allegorical method was applied to the OT by Philo of Alexandria and passed from him to Paul (I Cor. 9:9; 10:1-4; II Cor. 3:13-16; Gal. 4:22-30) and to the author of the Letter to the Hebrews, according to whom the great religious institutions revealed in the OT are the "copy and shadow of the heavenly sanctuary" (Heb. 8:5). This allegorical method was used by Barnabas, Justin Martyr, and the School of Alexandria (Clement of Alexandria and Origen). Conversely the literal interpretation flourished in the School of Antioch (Lucian, Diodorus, Theodore of Mopsuestia, etc.). Like Philo, Clement of Alexandria and Origen believed that the whole OT, not merely certain passages, had a meaning deeper than the literal, to be explained through allegorical interpretation. In fact, Origen believed that the Scriptures had a body, soul, and spirit—a literal, moral, and allegorical sense (*de Principiis* IV.ii.18)—and, like Philo, he was so fascinated by the spirit that like Paul (I Cor. 9:9-10) he denied at times the validity of the literal sense (*Homilia in Numeros* XVI.9, where he interprets Num. 23:24 as eating the flesh and drinking the blood of the Son of man). The literal sense denies the hope of immortality, for two texts (Lev. 17:11; Deut. 12:23) imply that the soul (נפש) is in the blood—how then can it survive the death of the body? The blood mentioned in these texts must belong to spiritual man, as in Gen. 9:5 ("the blood of your souls"). But at the same time Origen founded the scientific study of the literal sense of the OT, and left us invaluable works on the geography of Palestine, sacred history, textual criticism, and exegesis. Through the Latin fathers and through the Latin translation by Rufinus of some of Origen's homilies, the allegorical exegesis became familiar to the medieval church. On the contrary, the literal exegesis of the school of Antioch (Theodore of Mopsuestia), except for Jerome and some learned Irish monks, was virtually forgotten, in spite of the works of Junilius Africanus (*Instituta regularia divinae legis*, based on the teaching of Paul the Persian, a learned teacher in the school of Nisibis), and of Cassiodorus (*De institutione divinarum literarum*), both dated shortly after 550.

Augustine's *On Christian Doctrine* places the spiritual (allegorical) sense of scripture above the literal; the spirit transcends the letter. But the narratives of the OT are regarded as historical truth, even more literally than by Jerome; before the spiritual meaning is sought, the facts are to be accepted.

Jerome (died 420) regards the spiritual sense as founded on the letter, but when the literal meaning is unedifying, he substitutes the allegorical for the literal. God did not dictate every word to the prophets, but, merely supplying the thought, left to the writer the choice of language, so that the style of the biblical authors varies.

Finally in the Middle Ages, Catholic scholars distinguished four senses in scripture: the letter teaches historical events; allegory, what you should believe; the moral sense, what you should do; and the mystical sense, what you should hope. One example will illustrate these four meanings: Jerusalem literally means the capital of Judea, allegorically it means the church, morally a well-ordered commonwealth, mystically the heavenly abode of the saved.

It is probable that this list of the four senses of scripture influenced Jewish exegesis. The Zohar (*ca.* 1300), possibly familiar with similar statements by Ibn Ezra (died 1167) and Bahya ben Asher (died 1291), distinguished *peshat* (פשט), the literal sense; *remez* (רמז), typological or allegorical sense; *derash* (דרש), expository or homiletical sense; and *sod* (סוד), secret or mystical sense. The initial letters of these words, forming the word *pardes* (פרדס), of Persian origin, meaning "park"; cf. "paradise"), designated these four meanings of scripture.

By these four manners of interpretation the church could force the OT to say whatever seemed desirable, and since the days of Paul its authority was imposed on it, in spite of Duns Scotus (died 1308) and Occam (or Ockam; died 1349).

e. Protestant doctrines. Soon after Martin Luther's disputation with Eck in 1519, Luther set aside the authority of the church and of the tradition, and regarded the Word of God as the supreme authority (Mark 7:13-14). This made the break between Protestants and Roman Catholics inevitable. Humanism shortly before had likewise reacted against the subordination of the Bible to the church—against the Catholic tendency to regard the Latin Vulg. as the Scriptures, it stressed the importance of the Hebrew and Greek original texts, and their literal (grammatical, stylistic, historical, and logical) interpretation. This exegesis was adopted in principle by the Protestant Reformation, in spite of the fact that it still retained the doctrine of the unity of scripture and the OT prediction of the coming of Jesus Christ. In place of the Catholic doctrine according to which the tradition of the church was the criterion by which the Scriptures were recognized to be the Word of God, the Reformation regarded the inner witness of the Holy Spirit as the final proof of scriptural inspiration. For Roman Catholics this is a purely subjective and individual test.

Luther does not ascribe equal authority to all parts of the Bible: the supreme message is not the "letter that killeth" but Paul's message of salvation through Jesus Christ (Rom. 3:21-26). The whole OT is to be interpreted in the light of the gospel: "All the stories of Holy Writ, if they are rightly regarded, refer to Christ." Unaware of the contradiction, which goes back to Paul, Luther could on the one hand regard the OT as a guide to Christ (Gal. 3:4), and on the other as the law of the Jews: "Leave Moses and his people together. . . . We have the Gospel." In the OT Luther valued Genesis for Paul's use of it, found little of value in the historical books, regarding Esther and Ezra-Nehemiah as Judaizing books, but prized the Prophets for their messianic prophecies (notably Isa. 53), the Psalms, and Job far above Proverbs, Ecclesiastes, and Song of Solomon. In conclusion, except for the quotations of the OT in the NT and for its alleged witness to Christ, Luther would have tended to regard it as a purely human book.

Conversely, other Reformers, who did not stress like Luther merely individual salvation, but social righteousness and a community ruled by divine principles, esteemed highly the OT. For Zwingli at Zurich, Christ is not, as for Luther, the center of scripture, but one of the ancient men revealing God to man; Zwingli regarded some sayings of Plato and Seneca as the work of the Holy Spirit; of course, the difference is that the Scriptures are inspired throughout. Zwingli recognizes the validity of the literal meaning of each passage but questions its allegorical meaning, although he permits it; the Bible is consistent with itself. In his *Refutation of the Wiles of the Anabaptists* (1527), Zwingli denounced their rejection of the OT in favor of the Sermon on the Mount, but admitted the superiority of the NT over the OT. But Martin Bucer denied that the OT was inferior to the NT, for it contained the same Christology and doctrine of the Atonement—a view developed by John Calvin in his *Institutes* (1536).

Calvin, in controverting Augustine's words, "I would not believe the Gospel if the authority of the Catholic Church had not impressed me," cites the inner illumination by the Holy Spirit; elsewhere he quotes Eph. 2:20 to prove that the church is founded on the "apostles and prophets" (misinterpreting this to mean their inspired writings), and refers to the power of the Scriptures to prove their divine origin. He does not, like Luther, discriminate between biblical writings, but regards them equal in inspiration and authority. On the assumption of man's insignificance (Ps. 8:4) and God's primary concern with his glory, he developed an absolute determinism; Deuteronomy's idea of God's chosen people is transferred to God's elect, who belong to God's church. His exegesis is based on the letter and is remarkably historical. However, in successive editions of the *Institutes* he increasingly Christianized the OT and at times corrected the NT on the basis of the OT (the oath is commanded by Deut. 6:13; in Matt. 5:34 Jesus merely forbids the misuse of the oath). He maintained that God made only one covenant and that there is therefore only one people of God; he minimized Paul's contrast between the law and the gospel, and followed the Letter to the Hebrews in regarding the OT institutions as the shadow of NT reality.

Origen and Jerome, as well as Luther, Melanchthon, and Calvin, were devoted churchmen, eager to defend orthodox doctrine, and at the same time eminent biblical scholars searching for historical truth. Inevitably the contrast between faith and reason, between what Paul called the wisdom of God and the wisdom of the world (I Cor. 1:17–2:16), was bound to create a growing gap between doctrine and science. The great humanist Erasmus of Rotterdam, for instance, on the one hand reached critical conclusions still valid in denying the traditional authorship of Hebrews, James, II Peter, II and III John, and Revelation; but in 1527, when the theological faculty of Paris attacked his views, he admitted the supernatural character of the biblical books (without, however, repudiating his critical conclusions) and repeat-

edly submitted himself to the authority of the Roman Catholic Church.

In the sixteenth and seventeenth centuries the influence of the OT became pervasive in England—especially through the influence of Calvin—on the Free Churches, as is illustrated by the sabbath observance and the OT personal names among the Pilgrim fathers and Puritans in New England. The verbal inspiration of the Scriptures became a dogma: through the Holy Ghost, God had dictated to the individual authors every word, so that they were actually only scribes putting God's work into writing. Thus four characteristics were ascribed to the Bible: *auctoritas* (final authority in matters of faith), *perspicuitas* (transparent clearness, so that scripture explains itself), *perfectio* or *sufficientia* (scripture is so complete that it suffices to teach salvation), and *efficacia* (God, through scripture, accomplishes a man's conversion).

But historical and critical research on the OT began, after some rudimentary results achieved by pioneers through the centuries, in the seventeenth century with the textual criticism of Cappellus (1624 and 1650) and Morinus (1633); with the higher criticism of Hobbes (1651), Spinoza (1670), Simon (1678, 1685); with the discovery that the OT revelation is not instantaneous and uniform but progressive (Cocceius, 1648; Clericus, 1697); by the lay thinking emancipated from ecclesiastical control (Grotius, 1627; 1641-47) and reliance on reason (Descartes, died 1650; Bayle, 1645-47; Hobbes; Spinoza; the English Deists).

In the eighteenth century the critical analysis of the Pentateuch into separate sources began with Witter (1711), Astruc (1753), and Eichhorn (1780-83). Morgan (1737-40) influenced Reimarus (*ca.* 1747) and Lessing (died 1781) to submit the Scriptures to the test of "sense and reason" to see whether they are coherent with other knowledge; Kant (1781, 1793) denied divine revelation and identified true religion with the moral law written in the human heart; and Von Schelling (died 1854) began to use comparative mythology in explaining Gen. 3; Ernesti (1761) advocated the use of grammatical-historical exegesis; Semler (1771-75) regarded the sacred canon merely as a collection of books made by men for public reading, without normative authority unless they serve man's moral improvement (Song of Solomon, Ezra-Nehemiah, and Chronicles are thus rejected); Zachariae (1772-86), Eichhorn (1780-83), Gabler (1787), and Bauer (1796) pioneered in the historical study of biblical theology; and Bishop Lowth (1753) and Von Herder (1782) discovered in the OT the literature of an ancient nation rich in aesthetic values. In contrast with such secular attitudes toward the OT in the eighteenth century, we must not forget the deeply religious attitude of the Methodists (Wesley, died 1791) in England, of the Pietists in Germany (Spener, died 1705, and Francke, died 1727).

The nineteenth century witnessed incredible progress in the methods and results of the scholarly research on the OT, and a reaction against it on the part of orthodox Jews and Christians, whose "fundamentalist" views clung firmly to the traditional doctrines of the synagogue and various churches.

All attitudes mentioned were still present in the first half of the twentieth century, with or without some modifications. In whole or in part, the OT is regarded as God's Word, inspired literally or (following Jerome) merely in the thought; the OT is not divinely inspired and should be studied and read like the *Iliad,* or even (according to Marcion; Adolf von Harnack, died 1930; Friedrich Delitzsch, 1920-21) it is a liability to Christianity; besides the scholars that adopt one of these views, or at least keep them separate in their research (Otto Eissfeldt, 1926), others believe that the scholarly, objective study of the OT implies the recognition that it bears witness to Jesus Christ (Wilhelm Vischer, 1927, 1934, 1941), as the NT states, and as Augustine formulated when he said that Christ is latent in the OT and patent in the NT. In a less extreme form this latter tendency is obvious in the "biblical theologies," including both testaments, rather than in the histories of the religion of the OT and of the NT, in which the point of view of faith and the point of view of objective historical research are not kept distinct because they are regarded (in the investigation of divinely revealed scriptures) as inseparable: man's search for God and God's reaching out to man are two sides of a single process (H. H. Rowley, 1942).

***CANON OF THE NT.** The collection of early Christian writings venerated as sacred scripture by the church, read in the liturgy, and recognized as the authoritative expression of the apostolic faith; or, the list of the books so recognized.

The history of the canon of the NT is a chapter of cardinal importance in the history of Christian literature. Its task is to investigate why and how the church came to attribute to a limited number of books written by Christian authors during the first century of her history an authority equal and ultimately superior to that of the venerable scriptures she inherited from Judaism. But this task belongs only in part to the history of the literature. It involves also the history of doctrine, the conflict with heresies and schisms, the development of Christian institutions, and, indeed, the entire scope of the manifold movement toward unity which issued in the ancient Catholic church. The importance of the creation of such a canon of Christian scriptures cannot be too highly estimated, for in this one area the church achieved a unity which proved able to endure through the schisms which rent her in the fifth century, the division of the Greek from the Western church in the ninth century, and even the breakup of the Western church through the Reformation movements of the sixteenth century. In our own time, hopes of reunion could hardly be entertained, and the ecumenical movement would be all but inconceivable, were it not that all the churches concerned are in substantial agreement in recognizing the unique authority of the same twenty-seven books as constituting the canon of the NT, in employing them constantly in public and private devotions, and in appealing to them for guidance in faith and order.

This agreement was attained in substance by the end of the second century; for by that time the four gospels, the book of Acts, the Pauline letters (including the Pastorals but usually not Hebrews), and two or more of the Catholic letters (I John, I Peter, and sometimes others) were acknowledged as Holy Scripture in every part of the church. There remained on the margin a number of books whose canonicity was still in dispute. Hebrews, James, II and III John, II Peter, Jude, and Revelation were destined eventually to win general acceptance; and a somewhat larger number of other Christian writings enjoyed a temporary or regional canonicity but proved unable to maintain their high position. By the end of the fourth century, the limits of the collection were irrevocably fixed in the Greek and Latin churches of the Roman Empire.

The canon of the Syrian church still exhibited some major differences, but these were largely surmounted in the Peshitta (early fifth century), and entirely in the Philoxenian (508) and the Harkleian (616) revisions of the Syriac NT (*see* VERSIONS, ANCIENT, § 4). It must be said that these revisions did not supplant the Peshitta in the major part of the Syrian church, which therefore still limits its canon of the NT to twenty-two books, rejecting Revelation and the four minor Catholic letters (II and III John, II Peter, and Jude). The Ethiopic canon, on the other hand, was enlarged to include eight additional books; and the Gothic NT never included Revelation. But these three churches were separated from the general body of Catholic Christendom by differences far more profound than marginal disagreements over the limits of the canon.

Bibliography

A. *THE APOSTOLIC AGE (TO A.D. 70).* 1. The sacred scriptures of the primitive church: the inheritance from Judaism. Christianity from its very inception possessed an extensive and precious sacred literature inherited from Judaism—the books of the OT. From the mother faith Christianity also inherited the conception that these books were the very "oracles of God" (Rom. 3:2), and her teachers appealed to them constantly to validate their own message. Jesus himself had accepted the Jewish scriptures as the vehicle of a true, though not final, revelation of God, and explicitly disavowed any intention of repudiating them: "Think not that I have come to abolish the law and the prophets; I have come not to abolish them but to fulfil them" (Matt. 5:17). The apostle Paul likewise affirms that the gospel of God concerning his Son Jesus Christ was "promised beforehand through his prophets in the holy scriptures" (Rom. 1:2), and though it manifests God's righteousness apart from law, nevertheless the law and the prophets bear witness to it (Rom. 3:21). Other early Christian writers cite the ancient scriptures as the words of God himself, or of the Holy Spirit, or under such rubrics as "it is written," or "it stands in scripture."

The scriptures which the men of the early church held in such honor formed a much more extensive body of literature than that with which we are familiar in the OT and Apoc. of our own versions. They included an indeterminate number of other books, mainly apocalyptic writings, composed during the first two centuries before Christ or shortly afterward, and published under the names of ancient heroes of history and legend—Enoch, Ezra, Moses, Elijah, the Twelve Patriarchs. Several of these are actually cited as scripture in NT documents, but their influence is far more pervasive than the handful of citations would indicate. It is their understanding of history that determines the general world view of the early church and of the NT writers, and it is largely their reinterpretation of the ancient revelation that is inherited by the early church and is reflected in the apostolic writings. In them, far more than in the canonical books, we find the background of central themes of the NT such as the kingdom of God and the Son of man, the resurrection of the dead, and the doctrine of angels and demons. And once the mission moved into Greek territories, under the leadership of converts from the Diaspora (Paul, Barnabas, Philip the Evangelist, and others), it inevitably made use of the whole wide range of books available in the SEPTUAGINT, including a number which were originally composed in Greek. Almost all the OT quotations in the NT are taken directly from the LXX without concern for the meaning of the Hebrew text, which often enough would have no bearing upon the point at issue. Broadly speaking, the LXX is the Bible of the early church and of all the NT writers, though not of Jesus and the Twelve.

2. Modifying factors in the Christian attitude toward the sacred books. In a sense, then, Christianity was a book religion from its inception, heir to a revelation committed to writing in days gone by. Yet there were three factors in the new faith which made profound modifications in its attitude toward the ancient scriptures and in the role which they filled in its developing life, as compared with the dominance of the book in Judaism.

a. The presence of the Spirit. First of all, the Christians were persuaded that a new age of revelation had dawned: the Spirit of revelation was again active among them, the gift of God to every believer. Their ministers were "ministers of a new covenant, not in a written code but in the Spirit; for the written code kills, but the Spirit gives life" (II Cor. 3:6). The Spirit of Jesus, imparted through baptism, was identified with the Spirit who moved holy men of old to speak the oracles which were committed to writing and preserved in the books of the old covenant; and all Christians were inspired in different ways by one and the same Spirit, who apportioned his gifts to each one individually as he willed (I Cor. 12:4-11). Men so inspired, conscious of such inspiration, could not be in bondage to books, however highly revered.

b. The rejection of scribal tradition. Secondly, the oral tradition of the scribes was explicitly discarded, as "making void the word of God" (Mark 7:13). This left the field free for interpretations that owed nothing to the accumulated results of scribal labors. Still more broadly, the Christians no longer regarded the content of the OT as centering in the "law of commandments and ordinances" (Eph. 2:15), which occupied almost the entire attention of the scribes. They were not under law but under grace (Rom. 6:14), and they were not concerned with elaborate systems of casuistry. What they sought in the ancient scriptures was not a code of commandments to regulate daily living, but a testimony to Christ and his gospel; and their whole interpretation was governed by the conviction that in him the scriptures were fulfilled. To them, the burden of the scriptural message, given beforehand by the Spirit, was the "sufferings of Christ and the subsequent glory" (I Pet. 1:11; cf. Luke 24:25-27). They were convinced that a veil was over the minds of Jewish interpreters when they read the OT, and that only when a man turned to the Lord was the veil taken away (II Cor. 3:14-16).

c. The authority of the words of Jesus. Thirdly, alongside the ancient scriptures, the Christians had from the outset another authority, not as yet committed to writing, but transmitted by word of mouth

—the sayings of Jesus. "Remembering the words of the Lord Jesus, how he said . . ." (Acts 20:35)—this was the final court of appeal from the beginning. The words of Jesus were the words of eternal life. Treasured in the first instance by his disciples, in the same manner as the sayings of every rabbi were taken up and committed to memory by the students who followed him, they became in the developing church the words of the Master who still lived in their midst and governed all their life. Under the guidance of his Spirit, the words that he had spoken provided for his people instruction and comfort, challenge, appeal and counsel, answers to the criticisms of opponents, and above all that penetrating insight into the nature and will of God which still compels the confession: "No man ever spoke like this man!" (John 7:46). Before the gospels were written—and, indeed, for a good while longer—these words of Jesus, treasured in the memory of his followers and transmitted by word of mouth, carried final authority for the Christian believer and actually determined for him the sense in which he would understand the ancient scriptures. Here the church had in germ the essential canon of the new testament, long before she had any literature to canonize. And when the gospels came to be written and passed gradually into general use in the churches, the authority they acquired was accorded to them, not in the first instance as holy books, but as books containing the holy words of Jesus. The authority of the words was primary; that of the books was secondary and derivative.

B. *PREPARATIONS FOR THE CANON: THE PROVISION OF THE DOCUMENTS (70-150).*

1. Collection and publication of the Pauline letters. Jesus himself left nothing in writing, and the gospels which preserve for us the record of his teachings were not composed until the second Christian generation or later. The earliest Christian writings, the only documents of the apostolic age which have survived, are the letters of Paul. These were in the first instance occasional writings, addressed by the apostle to particular churches to deal with specific local problems and needs. With the possible exception of Romans, they were not intended for general circulation in the church, and it certainly never occurred to Paul himself that a letter which he wrote for the Christians of Thessalonica or of Philippi would ever be read in Antioch or in Jerusalem, let alone treasured by the whole church and given a place alongside the Law and the Prophets in worship and in study. There is no evidence to show that any of his letters were circulated in his lifetime beyond the region to which they were first directed. Only after they had been gathered into a collection did they obtain a wider circulation and become known throughout the church. The formation and publication of such a collection and even its general circulation could not forthwith raise these occasional writings to canonical status, but they established the conditions which alone made possible the later treatment of the letters as holy scripture.

Edgar J. Goodspeed has shown that there are good reasons for holding that the author of EPHESIANS was also the collector and publisher of the Pauline letters, and that he wrote Ephesians under Paul's name as a general introduction to the whole collection. He was probably himself a man of Colossae; it has even been suggested that he was none other than Onesimus, once a fugitive slave, but won for Christ by Paul and sent home to his owner—perhaps the same Onesimus whom Ignatius knew as bishop of Antioch about fifty years afterward (*see* PHILEMON, LETTER TO). Whoever he may have been, he is the first Christian writer to make literary use of Paul's letters, and it is significant that he shows evidence of acquaintance with all of them, though he makes most use of Colossians, which provides him with the groundwork of his own distinctive thought. And from his time on, every single Christian writer known to us makes use of the letters in a manner which shows that he knows the whole collection. This appears sometimes in references to one letter or another in general terms (Clem. Rom. 47.1; Polyc. 3.2; 11.3), occasionally in direct citation (Polyc. 11.2), more often in the borrowing of characteristic words and phrases, and at least once in the composition of a letter collection to introduce a work of a totally different character. For the device of introducing an apocalypse by a sequence of letters addressed severally to seven churches but issued together under cover of a general letter (Rev. 1:4–3:22) is without parallel in apocalyptic, and can only be explained as indicating that the author had before him a corpus of Pauline letters similarly constructed. It is beyond dispute, then, that the collection of Paul's letters had been formed and published before the end of the first century, and that it quickly came into general use among Christians.

This earliest collection consisted of nine letters addressed to particular churches (Philemon, which seems to be an exception, is itself addressed to the "church [that meets] in your house"), with Ephesians as a covering letter addressed to all Christians everywhere. For, as the earliest MSS show, Ephesians was not addressed to any local church, but "to the saints who are also faithful in Christ Jesus." The Pastoral letters were added to the collection many years later; and Hebrews, under the influence of the Alexandrian church, won a peculiar place for itself later still. But even as a collection in general use, the letters were not yet regarded as holy scripture, despite the growing veneration of the apostles. Clement of Rome and the other apostolic fathers use them extensively, but never cite them in the terms they use to introduce passages from the OT scriptures. There is nothing to indicate that in the first half of the second century they were set upon a fundamentally different plane from the letters of the martyr-bishop Ignatius of Antioch, which were collected and published *ca.* 117. The earliest writer to mention them explicitly as included among the scriptures was the author of II Peter (3:15-16; *ca.* 150); and after that time, their canonical authority was taken for granted in all parts of the church.

2. The making of the gospels. ***a. The one gospel and the many gospels.*** The acknowledgment of the gospels was not in the least dependent upon the making of a gospel collection. On the contrary, each gospel must have first obtained a wide measure of acceptance, extending well beyond the community in which it was produced, before it was made part

of a collection of such writings. All of them, indeed, with the partial exception of the Gospel According to John, were made not only in and for the community, but in a sense by the community as much as by the individual author. The materials they employed were, in the main, the common possession of the church, the store of traditions concerning Jesus as they had been accumulated and shaped through a generation or more of oral transmission in response to the needs and interests of the developing community. These traditional materials, especially insofar as they consisted of sayings of Jesus, carried his own authority from the outset, and contributed it in large measure to the books which contained them. The primary question here is how the church came to acknowledge four gospels instead of one; and secondary to that, how she came to acknowledge only four out of the many that were composed during the second and third generation of Christian believers. For not one of the gospels—not even John—was composed as a supplement to others, or with any thought that it would ever be read in conjunction with others. It is not too difficult to see why the church rejected most of those that came into existence at this time and were cherished in one circle or another; the extraordinary thing is that she did not settle upon a single authoritative account of the story of salvation and of the Lord's teaching. Each of the four—and the same is true of nearly all the uncanonical gospels as well—sought to provide such a unified manual for the church; and even after the four were established in a position of unassailable authority, there was at least one notable and partly successful attempt to weave out of them a single, harmonized account—the Diatessaron of Tatian (*see* VERSIONS, ANCIENT, § 4). But somehow by the end of the second century the fourfold gospel collection was accepted as a settled possession everywhere except in Syria (where the Diatessaron reigned supreme), though there is evidence for the occasional use of other gospels by Christian writers.

b. Problems of early use of the gospels: the books and the oral tradition. The history of the use of the gospels in the earliest period is very difficult to determine, because it is seldom possible to be sure that sayings or stories of Jesus which we find in writings of the post-apostolic age are taken from one of the great four, or from some uncanonical gospel, or even from oral tradition. As late as 135 or 140 the words of Papias, bishop of Hierapolis, make it quite clear that in some circles, perhaps even to the average Christian of the time, greater weight was still attached to an oral tradition resting on a living chain of testimony than to anything that was to be found in any book. Papias certainly had Mark, Matthew, and John at his disposal, if not also Luke, and quite possibly other gospels as well; yet he tells us: "If I met with a disciple of the elders, I questioned him about the words of the elders—what Andrew or Peter said, or what was said by Philip or by Thomas or by James . . . or by any other of the disciples of the Lord, and what things Aristion and the elder John, the disciples of the Lord, say. For I did not think that what was to be gotten from the books would profit me as much as what came from the living and abiding voice" (Euseb. Hist. III.xxxix.4). The maxim "Spoken words vanish; written words abide" is here turned exactly in reverse! Yet only a few years later, the evidence of Justin Martyr shows that passages from the "memoirs of the apostles, which are called gospels," were being read liturgically in church, along with, or even in place of, readings from the Prophets; and this would certainly indicate that the gospels were being consciously or unconsciously regarded as holy scripture. But there were still wide varieties of attitude and practice with respect to them, nor is it certain which gospels or how many of them were in use at any given locality.

c. Emergence of the great four. The four canonical gospels are works of the second Christian generation (*ca.* 70-100). Mark, the earliest of them, appears to have been produced at Rome not many years after the outbreak of persecution under Nero (64), and may be taken to represent the deposit of the traditions concerning Jesus as they were known in the Roman church at the end of the apostolic age. Not many years later (*ca.* 80) it was incorporated almost *in toto* into a gospel composed in Palestine in a Jewish-Christian environment, being used as one of the principal sources of our Gospel According to Matthew. A like use of Mark, though less extensive, is found again in the Gospel According to Luke, which was published together with its sequel, the Acts of the Apostles, in some region of the E Mediterranean toward the close of the century or even somewhat later. In his Preface, Luke tells us explicitly that "many have undertaken to compile a narrative of the things which have been accomplished among us, just as they were delivered to us by those who from the beginning were eyewitnesses and ministers of the word" (1:1-2). His words make it evident that by the time he wrote, there were numerous gospels in circulation in the churches, and none of them enjoyed such an established position as to bar another writer from adding to the number. Neither for them nor for himself does he claim any special inspiration; he writes simply as one who has "followed all things closely for some time past" (1:3), to whom "it seemed good . . . to write an orderly account." Moreover, the way in which both he and Matthew treat the materials derived from Mark shows clearly that neither of them regarded the earliest gospel as inspired scripture. Both of them feel perfectly free, not only to add to Mark, but also to subtract, to abbreviate, to alter words and phrases, and even on occasion to alter the order of incidents. The author of the Fourth Gospel makes bold to treat the whole tradition with infinitely greater freedom, not holding himself bound to follow the general outline of events that underlies the Synoptic narrative, nor even to reproduce substantially the same teaching as the utterances of Jesus. And it cannot be doubted that the many other gospels which came into circulation during the same period and later, claimed for themselves at least an equal freedom. In short, the church of the early second century had at its disposal a large number of gospels, but accorded to none of them anything like canonical authority; and it still possessed a considerable mass of oral tradition, not committed to writing anywhere, which was by many valued more highly than any written record. The authority still

rested in the words of the Lord, not in any of the books containing his words.

d. Uncanonical gospels. It should be said that none of the uncanonical gospels, insofar as they have become known to us, adds anything significant to our knowledge of Jesus. The materials used in their construction are either quarried out of our four or are invented or distorted to support the religious views of some sect—usually a Gnostic school with Docetic conceptions of Jesus (regarding the human life of Jesus as phantasmal, or making a radical separation between the heavenly aeon Christ and the earthly body which he inhabited). Some are merely fictitious tales of the infancy and childhood of Jesus, attempts of the pious imagination to supply the information which was lacking about the years between the Nativity and the beginning of the public ministry. These are not by any means negligible to the historian, for they reflect aspects of the development of Christian thought, and some of them contributed themes to the Christian artist and so perpetuated themselves in painting, sculpture, and the minor arts, enduring in this way for centuries after their literary and theological influence had vanished. None of them ever attained the widespread circulation of any of the great quartet. *See* APOCRYPHA, NT.

3. Other Christian writings of the period. ***a. Writings which became canonical.*** The period that saw the publication of all these gospels and of the collected letters of Paul (say A.D. 70 to 140) witnessed also the production of a large number of other Christian writings—letters, apocalypses, apologies, homilies, manuals of teaching, "acts" of apostles. Several of these were destined to win a place in the canon along with the four gospels and the Pauline letters. The book of Acts, separated quite early from its companion volume, the Gospel According to Luke, seems always to have shared the fortunes of the latter in the esteem of the churches; and our earliest MS of the four gospels (P^{45}) also includes Acts. The three Pastoral letters (I and II Timothy, Titus), issued under the name of Paul to combat the heresies of the time, are generally dated around the beginning of the second century but may be as late as 150. Their acceptance as scripture depended upon their incorporation into the collection of Pauline letters, which cannot have taken place until late in the century; Marcion's canon did not contain them (*see* § C3 *below*), and they are not included in our earliest MS of the letters of Paul (P^{46} —*ca.* 200).

The seven Catholic letters made their way individually, and were formed into a group relatively late. The Letter of James, a "diatribe" constructed after the model employed by Stoic teachers, is probably the work of a Jewish Christian steeped in Hellenistic literature and philosophy, and may be dated fairly early in the second century. Despite the apostolic name attached to it, it was slow to attain recognition or even to come into use; there is no trace of it in Christian literature until the third century. I Peter is a pseudonymous work published in Asia Minor, though perhaps emanating from Rome, early in the second century. It is used by Polycarp and other Eastern churchmen of the second century, but did not find recognition in Rome and the West (except for Irenaeus and Tertullian) until much later. I John is closely related to the Fourth Gospel and may be by the same author; aided by this association, it won early and broad recognition. The four minor letters (Jude, II Peter, II and III John) were never widely used, and their canonicity remained in dispute in the Greek churches as late as the fourth century.

Hebrews is now held by some critics to be the work of a contemporary of Paul, but it seems to show such evidences of Pauline influence as to require us to place it in the generation after his death. In the Alexandrian schools it was given a place among the Pauline letters before the end of the second century, and in the Beatty papyrus P^{46} it stands in the second place, immediately after Romans; but in the West, despite its extensive use in I Clement (*ca.* 95) and the strong advocacy of Tertullian, who attributed it to Barnabas, it did not attain general acknowledgment as canonical until late in the fourth century. Revelation, probably composed toward the end of the first century, quickly achieved a widespread popularity; but its authorship was disputed by Alexandrian critics, it was handicapped for a long time by the reaction against chiliasm, and its canonicity was still in dispute in the East in the fourth century.

b. Marginal writings which were eventually rejected. Of other Christian writings which have survived, the group known as the APOSTOLIC FATHERS come from the same period as these later NT documents, and some of them enjoyed for a time a comparable prestige and popularity. I Clement, a letter written by the Roman church to the church of Corinth *ca.* 95, is never cited as scripture, but it was read in public worship at Corinth *ca.* 170, and is included in the Codex Alexandrinus (fifth century); and the extensive literature to which the name of Clement was later attached (II Clement, Clementine Recognitions, etc.) would indicate that it must have enjoyed something close to canonical authority in some circles at least. II Clement, really an anonymous homily of *ca.* 150, is also found in Codex A. The Epistle of Barnabas, a pseudonymous pamphlet of the early second century, probably of Alexandrian provenance, is found in the great Codex Sinaiticus (fourth century) and is treated as scripture by Clement of Alexandria and his renowned successor Origen, but it was never acknowledged in other parts of the church or by the later Alexandrians.

The little manual known as the Didache—"The Teaching of Jesus Christ Through the Twelve Apostles"—is of uncertain date, but is probably to be placed early in the second century. It was used by the early Alexandrians as holy scripture and continued to be so used in the Egyptian churches throughout the third century. There is evidence for its use in Syria as late as *ca.* 400 (in the Apostolic Constitutions), and it is included in some Greek lists of the fourth century. The fact that it was translated into Latin and into Georgian would indicate that it enjoyed for some centuries wide use and considerable prestige. The Shepherd of Hermas was highly regarded and immensely popular for two or three generations after its publication. Such great figures as Irenaeus and (for a time) Tertullian treated it as scripture, and even Origen regarded it as apostolic;

and it is included (incomplete) in the Codex Sinaiticus. According to the Muratorian Canon it was composed *ca.* 150 by Hermas, a brother of the Roman bishop of that time; but many investigators date it some decades earlier. The letters of Ignatius (*ca.* 115) and the Epistle to Diognetus (150 or later) were never cited as scripture.

At least five books attributed to Peter were composed during these years, but only the two letters were ultimately recognized. The Gospel of Peter, the Preaching of Peter, and the Apocalypse of Peter (*see* PETER, GOSPEL OF; PETER, PREACHING OF; PETER, APOCALYPSE OF) all enjoyed a period of use; the Apocalypse especially had distinguished sponsorship —Clement of Alexandria, the Muratorian Canon (which means the Roman church of the time), and Methodius (*ca.* 300). The Acts of Peter and the Acts of John (*see* PETER, ACTS OF; JOHN, ACTS OF) are works of a follower of the Gnostic Valentinus. The Acts of Paul (*see* PAUL, ACTS OF), composed by an Asian presbyter about the middle of the second century, was alone among the apocryphal Acts in obtaining some measure of ecclesiastical recognition. Its author was induced to confess his forgery and was deposed from office, despite his plea that he had written his book out of love for Paul. Nevertheless, it is cited by the great Alexandrians, and seems to have continued in wide use well into the third century.

C. ***THE EMERGENCE OF THE CANON OF THE NT: APOLOGISTS, HERETICS, AND OLD CATHOLIC FATHERS (A.D. 150-200).*** **1. Growing veneration of the apostles.** Toward the middle of the second century, then, the church was provided with a rich store of documents of her own creation —gospels, letters, "acts" of apostles, apocalypses, homilies, apologies, manuals of teaching. Some of these were coming into general use; others were more restricted in their circulation; none of them was yet being treated as holy scripture, on a level with the sacred scripture inherited from Judaism. Only the words of Jesus, whether recorded in books or transmitted by oral tradition, carried the fullest authority. At the same time, the apostles were gradually acquiring in the Christian mind a collateral, though subordinate, authority. Even before the end of the first century, a Christian writer could speak of the church as "built upon the foundation of the apostles and [Christian] prophets" (Eph. 2:20), and an inspired seer could picture the Bride of the Lamb as the "holy city Jerusalem coming down out of heaven from God," having under its walls "twelve foundations, and on them the twelve names of the twelve apostles of the Lamb" (Rev. 21:9-14).

The two-volume history of Luke is itself a striking manifestation of how the ministry of Jesus and the ministry of the apostles could be coupled in a single account of the origins of the Christian society; in the work of the apostles it is Jesus himself who is still acting through his Holy Spirit. Now this collective authority of the apostles was not exercised solely or even primarily through books—most of them, like their Lord, had left nothing in writing—but through the tradition of sound teaching which they had received from Christ and transmitted to their successors, the bishops. So in the Pastorals we have the repeated injunctions: "Guard the deposit [RSV 'what has been entrusted to you']" (I Tim. 6:20); "Follow the pattern of the sound words which you have heard from me" (II Tim. 1:13); "What you have *heard* from me . . . entrust to faithful men who will be able to teach others also" (II Tim. 2:2). There is no thought here of apostolic *writings,* although the author is well acquainted with the letters of Paul; the only "sacred writings" are those with which "Timothy" has been acquainted from childhood (II Tim. 3:15). The apostolic "deposit" is guarded by and transmitted through qualified teachers, by word of mouth. But just as the authority of Jesus was to be transferred from the words which he spoke to the books which contained them, so the authority of the apostolic deposit, still and always safeguarded by the bishops, was to be shared and verified by the books in which they themselves, or men closely connected with them, had committed it to writing.

The decisive development takes place during the second half of the century, and the evidence becomes increasingly abundant. First the gospels are treated as holy scripture in the citations of ecclesiastical writers and in the liturgy. Very soon afterward the letters of Paul are associated with them in similar usage; and before the end of the century a variable number of other writings gather around the nucleus of "the gospel" and "the apostle." The canon of the NT has emerged in essentials; it only remains to determine its limits by the exclusion of such writings as cannot secure and maintain a title of apostolicity. What is apostolic is canonical; whatever cannot be recognized as stemming from the apostles is not canonical.

2. Earliest witnesses to the canonical use of the gospels: II Clement and Justin Martyr. II Clement (*ca.* 150) is the earliest Christian document to cite passages from the gospels as holy scripture. After quoting some words from Isaiah, the writer proceeds: "And again another scripture says, 'I came not to call the righteous, but sinners' " (II Clem. 2:4; Matt. 9:13). About the same time, Justin Martyr tells us that in the services of Christian worship which he is describing with some fullness, "the memoirs of the Apostles or the writings of the Prophets are read, as long as time permits" (Apol. I.67). He is using the word "memoirs" (ἀπομνημονεύματα) for the benefit of pagan readers; elsewhere, he speaks of the apostles as "those who have written memoirs of all things concerning our Saviour Jesus Christ"; and again, specifically identifying them, of the "memoirs made by (the apostles), which are called gospels" (Apol. I.33, 66). Thus he makes it clear, not only that books —the gospels—are the source of his knowledge of Jesus, but also that these same books are being read in the liturgy interchangeably with "the Prophets"—the ancient Hebrew scriptures. It is not clear which gospels he uses, or how many, or whether he restricts himself to those of our canon; but regardless of this, the decisive step has been taken. One group of Christian writings—the gospels—has been established in ecclesiastical usage in the place hitherto reserved to the inspired scriptures of Judaism.

3. Marcion's canon: the gospel and the apostle. The second step, of coupling letters with gospels as sacred scriptures of the new faith, was taken first by

the heretic Marcion, who came to Rome from Pontus sometime before 150. Reared in orthodox circles (his father was bishop of Sinope), this remarkable man came under Gnostic influence, and became persuaded that the God of the Hebrew scriptures, the Creator, the God of justice, was an inferior deity; and that Jesus had revealed the supreme God, the God of love, who had been previously unknown. He rejected the OT scriptures outright, and made a collection of Christian books the sole foundation of his teaching. He was persuaded that the Twelve had utterly corrupted the pure doctrine of Christ. For him, there was only one true apostle—Paul—who alone had stood faithful to the gospel of Jesus. He therefore took as his canon the ten letters of Paul known to him, those which, as we have seen, constituted the original collection; and he set beside them the one gospel of Luke, accepting it as the work of an associate of Paul. The text of the gospel suffered severe mutilation at his hands, as he sought to purge out anything which was incompatible with his basic doctrine; and his opponents charge that he altered the text of the Pauline letters also, though the evidence they offer points in most cases to nothing more than variant readings in the MSS which he had at his disposal; he did, however, excise some few paragraphs, chiefly in Galatians and Romans. Nevertheless, to him belongs the honor of making the first canon of the NT known to us. Limited as it is by his doctrinal predilections, it yet presents that combination of "the gospel" with "the apostle" which forms the heart of all subsequent canons.

It is probable, indeed, that the shape and scope of the canon as it finally emerged in Catholic usage was determined in large part by the reaction to Marcion. First, his coupling of "the apostle" with "the gospel" as a new corpus of sacred scripture, distinct from the Jewish scriptures, may well have had a direct effect in leading the church to think in terms of a canon of books of the NT, rather than of a series of additions to the one body of sacred writings. Next, his exaltation of Paul could hardly fail to stimulate the whole church to accord him equal honor, but as one wholly in accord with the other apostles, not as the lone bearer of truth amid the perversions of a horde of false apostles. It is significant that it is only after his time that we begin to have evidence for the ecclesiastical usage of the book of Acts, which represents Paul's ministry as flowing out of, validated by, and in a measure subordinate to, the ministry of the Twelve. It is even possible, as has been argued, that both Luke and Acts were edited in their present form in the course of the controversy with Marcion, and were only then associated to make a twofold work, again "gospel" and "apostle," to counteract Marcion's erroneous picture of conflict between Paul and the Twelve. The Pastorals, again, if not actually composed as anti-Marcionite tracts, at least found a ready acceptance into the Pauline collection when they were seen to range him solidly against Marcionite doctrine. Again, letters attributed to other apostles would be eagerly received and set alongside the Pauline collection, to give wider testimony to the apostolic faith which he shared; the way is opened for the canonizing of the Catholic letters. And finally, Marcion's rejection of all gospels except Luke would lead the church not only to maintain her own prior rights in that gospel but also to insist on according equal honor to other gospels for which she could claim an apostolic or quasi-apostolic origin. The publication of the fourfold gospel, the enlargement of the Pauline collection by the admission of the Pastorals, and the association with them of Acts and some of the Catholic letters, all appear to be significantly related to the struggle against Marcion.

4. Effects of conflict with Gnosticism. Though excommunicated by the church, repudiated by his father, and denounced by Polycarp as the "first-born of Satan," Marcion achieved an extraordinary success, in organization as in the propagation of his teachings. There were at one time some hundreds of churches in several provinces of the Empire, both in the East and in the West, which looked to him as their founder, and which were governed by bishops who traced their succession through him. Gnostic schools in general made no such efforts at organization and existed rather as groups on the margin of the great church or even within it; but in the aggregate, they represented a substantial influence, particularly as their doctrines, fantastic as they now seem, accorded with the mind of the age. Now all these sects required a sacred literature; and as they discarded the OT scriptures, they were obliged, like Marcion, to use Christian writings as their primary authorities. In part they made use of existing documents—gospels, acts, letters (they had little use for apocalyptic); and in part they created new documents, based on the existing models—gospels of Peter, of Thomas, of Philip, of "Truth" (recently discovered in a Coptic version; *see* APOCRYPHA, NT); acts of Peter, of Thomas, of John; etc. But they had no difficulty in applying the canonical gospels to the support of their doctrines, by the limitless freedom of allegorical interpretation; and the Pauline letters with their notorious difficulties offered them plenty of scope (cf. II Pet. 3:16).

Of necessity, this Gnostic use of Christian literature as sacred and authoritative had a twofold effect upon the conservative center of the church. On the one hand, it reinforced the existing tendency to glorify the legacy of the primitive church, the writings of the apostles; and on the other, it forced a process of discrimination between documents, of more and more exact delimitation of the writings that the church could recognize as canonical. The words of Serapion, bishop of Antioch, in a letter to the church of Rhossus, illustrate both aspects at once. On a visit to the town, he had been shown for the first time the Gospel of Peter, and as he had no reason to suspect heresy, he gave permission for it to be read. Since that time, it had been pointed out to him that the gospel in question was in fact heretical, and he now warned the church at Rhossus against it. "We receive both Peter and the other apostles as Christ," he writes, "but we reject the writings falsely attributed to them, for we know that such were not handed down to us" (Euseb. Hist. VI.12.3). It was, of course, a multitude of episcopal decisions such as this that gradually determined the usages of the churches; and it is amazing to see the degree of uniformity that was attained in this fashion.

5. Apologists and martyrs, 165-80: Melito, Theophilus, Athenagoras, Tatian, the Scillitan Martyrs. In orthodox circles the elevation of the Pauline letters occurred more slowly and less clearly. *Ca.* 180, Melito of Sardis made a list of the "old books," which he named the "books of the Old Testament"—a phrase which implies that there was something in the way of an aggregation of "new books" or "books of the New Testament"; but he did not himself coin the latter phrase, nor does he indicate at all clearly what books he would have included under such a description. Theophilus of Antioch, his contemporary, quotes from Matthew and John, and mentions the latter as one of the "Spirit-bearers" (πνευματοφόροι); but while he makes free use of the Pauline letters, the Pastorals, Hebrews, and I Peter, he does not appear to treat them quite as holy scripture. Athenagoras, an Athenian apologist of the time, appeals to the gospels under the same formula (φησίν) as to the Prophets, and cites sentences from Paul in such a way as to suggest that the words of the apostle carry the same divine authority as the Hebrew books. Tatian, in preparing his harmony of the gospels, the Diatessaron (*ca.* 170), appears to have employed our four gospels and no other—an indication that in the few years that had elapsed since the time of Justin, the four had acquired an undisputed pre-eminence. The influence of the Pauline letters upon him is quite marked, but it is not possible to determine exactly how highly he regarded them. Jerome (*ca.* 390) tells us that Tatian rejected some of them (possibly I and II Timothy?) but that he accepted Titus. The martyrs of Scilla in North Africa tell the examining magistrate that they keep in their cabinet "our books, and the epistles of the holy man Paul." These "books" would appear to include rolls of the OT scriptures and of the gospels, which are thus grouped together; the epistles are not counted among the "books," but are accorded a place in the same cabinet. There can be no great chasm to be bridged before they too will be reckoned among the "books."

6. The Old Catholic Canon: the Muratorian Fragment, Clement of Alexandria, Irenaeus, Tertullian. In the closing years of the century, evidence from a variety of sources shows clearly, a canon of Christian writings with only marginal variations was recognized and used in all quarters of the church. We now encounter the earliest Roman list—the Muratorian Canon. Irenaeus, a native of Asia, sat in his youth at the feet of Polycarp of Smyrna, came in middle life to Rome, and spent his last years as bishop of Lyons in Gaul; he may be said to represent in his single person almost half the Christian world. From Clement, the head of a great school of theological studies at Alexandria, we learn the doctrine of the church in Egypt; and Tertullian, a Carthaginian lawyer and presbyter, the first great representative of Latin Christianity, though in his later life a Montanist sectary, testifies to the views of the churches of North Africa and also of Rome. All four lines of testimony are in remarkable accord and take it for granted that the views they express are held by the catholic church everywhere.

The Muratorian Canon is a list of the books of the NT with brief remarks about their origin and authenticity, found in a MS written at Bobbio in the eighth century but preserved in the Ambrosian library at Milan and published by Ludovico Antonio Muratori in 1740. It is a translation into barbarous Latin of a Greek original, which was drawn up at Rome some years before the end of the second century. The beginning is lost, but even the most perverse skepticism could hardly doubt that it dealt with the gospels of Matthew and Mark; Luke and John are listed as the third and fourth among the gospels. On the unity of the four it has this to say: "Although various fundamentals [*principia*] are taught in the several books of the gospels, nevertheless this makes no difference to the faith of believers; for in all of them all things are declared by the one guiding Spirit concerning the Nativity, the Passion, the Resurrection, the converse with his disciples, and his twofold coming." The divine inspiration and the essential unity of the four gospels could not be more explicitly affirmed. After this, the list mentions Acts; then thirteen letters of Paul, the three Pastorals being mentioned along with Philemon as written *pro affectu et dilectione*—"out of personal affection and love"—yet "held sacred in the esteem of the catholic church in the ordering of ecclesiastical discipline." Reference is then made to certain letters forged under the name of Paul by the Marcionites, and "several others which cannot be received into the catholic church, for gall ought not to be mixed with honey." It then affirms that "the epistle of Jude and two epistles bearing the name of John [probably I and II John; all three are actually anonymous] are received in the catholic [church], and Wisdom, written by friends of Solomon in his honor." Two apocalypses—that of John and that of Peter—complete the list of recognized books. The Shepherd of Hermas may be read privately, but cannot be read aloud in church to the people, either among the prophets or among the apostles; for Hermas wrote it "quite recently, in our own times, in the city of Rome, during the episcopate of his brother Pius."

This fragment, with its authoritative ring, is most revealing. Of the twenty-seven books included in our own canon, it recognizes no fewer than twenty-two—the four gospels, Acts, thirteen letters of Paul, three of the Catholic letters, and Revelation; and it includes only two which were ultimately judged apocryphal—the Wisdom of Solomon and the Apocalypse of Peter; and of the latter it admits that "some of our own [bishops?] will not allow it to be read in church." The remarks about Wisdom indicate that pseudonymity, even when recognized, is no bar to canonical recognition. The *age* of the writing is, however, decisive; it is implied that the Shepherd is not lacking in merit, but it is to be rejected for no other reason than that it was written too recently.

Clement of Alexandria lays down no such clear-cut judgments, yet his writings show broad agreement with the Muratorian fragment in the general view of the Christian scriptures. He speaks of the documents generally as the "scriptures of the Lord," and employs the formula "the Gospel and the Apostle command." He distinguishes explicitly between the "four gospels that have been handed down to us" and the Gospel According to the Egyptians (Strom. III.93.1), but he does not hesitate to quote words of

the Lord from other sources. His collection of Pauline letters has been enlarged to include fourteen, for he reckons Hebrews among them, following in this his revered master, Pantaenus. He never quotes Paul formally as "scripture," but he adduces the words of his letters in argument together with words of the Lord and citations from the OT, with no suggestion that they carry any lesser degree of authority. He makes use also of Acts; of at least four of the Catholic letters—I Peter, I and II John, and Jude—and according to Eusebius he commented on all of them; and of the book of Revelation. But he appears to show an equally high regard for a considerable number of other writings—the Apocalypse of Peter, the Shepherd, the Preaching of Peter, Barnabas, and I Clement. Clearly enough, the four gospels and the corpus of Pauline letters constitute for him also the substance of the canon; but he is still generous in his acceptance of other writings attributed to apostles and feels under no compulsion to make distinctions among them, except with regard to the gospels.

The Gnostic schools, as we have seen, discarded the OT entirely and as a consequence were obliged to use Christian writings as their holy scriptures and even to create new gospels, letters, and "acts" of apostles for the purpose. Their great Catholic opponent Irenaeus meets them by making a more extensive use of the NT documents than any earlier writer of orthodox views, and by discriminating more carefully between authentic and unauthorized books. He makes use of OT and NT writings without distinction: the gospels, acts, letters, and apocalypses (of John and of Hermas) are not in any sense secondary authorities with him. In fact, he shows greater precision in identifying the writers when he is dealing with the NT. He quotes freely from the four gospels, from Acts, from twelve Pauline letters (Philemon is omitted, no doubt from mere chance), from three Catholic letters (I Peter, I and II John—the omission of III John, again, is not significant), and from Revelation. He knows and values the Letter to the Hebrews, but does not seem to treat it quite as scripture. On the other hand, he fully accepts the Shepherd. His canon, accordingly, coincides with our own except for the addition of the Shepherd, the omission of James, Jude, and II Peter, and the lower place given to Hebrews. "The Scriptures are perfect," he tells us, "inasmuch as they were uttered by the word of God and his Spirit" (Iren. Her. II.28.2); and "the Scriptures" in this sense unquestionably include the NT books which he uses so freely. But the most striking feature of his evidence is the absolute and exclusive honor he accords to the four gospels as a God-given unity. "As there are four quarters of the world in which we are, and four universal winds, and as the Church is scattered over all the earth, and the Gospel is the pillar and bulwark of the church and the breath of life, it is seemly that it should have four pillars, breathing immortality from all sides and kindling men to new life. From this it is evident that the Word, the Fashioner of all things, . . . having been manifested to mankind, gave us the gospel in a fourfold shape held together by one Spirit" (III.11.8). And it is he who first suggests that the fourfold visages of the cherubim are "symbols of the economy of the Son of God"—the man symbolizing Matthew, the calf Luke, the eagle Mark, and the lion John (later writers assign the symbols differently).

Tertullian, a lawyer of Carthage, converted to Christianity in middle life, is the first great exponent of Latin Christianity and the creator of its theological vocabulary. In later life he lapsed into Montanism and assailed with vigor what he regarded as the moral laxity of the church at large; but for twenty years or more he was the doughty champion of the faith against pagans, Jews, heretics, and the persecuting Empire. He is a little later than Irenaeus; his writings carry us into the early years of the third century.

Like Irenaeus, he confines himself rigidly to the four canonical gospels, and treats them as a unity. Together they form the "evangelic instrument" (a legal term which he employs alternately with *testamentum* to translate the Greek διαθήκη). They were written by apostles (John and Matthew) or by apostolic men (Luke and Mark); and the authority of the latter rests upon the authority of their masters, "which means that of Christ, for it was that which made the apostles their masters" (Tert. Marcion IV.2). A single gospel would not be authoritative in itself, certainly not that chosen by Marcion, for "Luke was not an apostle, but only an apostolic man; not a master, but a disciple and so inferior to a master. . . . Indeed, had Marcion published his gospel in the name of Paul himself, the single authority of the document, lacking all support from preceding authorities, would not be a sufficient basis for our faith." The authority of all the apostolic churches—those which can show an unbroken line of bishops descending by succession from the apostles—guarantees equally the authenticity of all four.

Tertullian is at one with Irenaeus in treating the four gospels as a unity; the "fourfold gospel" of the one is the "evangelic instrument" of the other. And he goes beyond Irenaeus or any previous writer in asserting the unity of all the apostolic writings. Together they form the "New Testament" (*Novum Testamentum*) alongside the Old. In bidding heretics to heed the apostolic churches, and especially that of Rome, "on which the apostles poured forth all their doctrine along with their blood," he affirms that Rome "mingles the law and the prophets in one volume with the writings of evangelists and apostles, from which she imbibes her faith" (Tert. Presc. Her. XXXVI). So he can write: "If I fail to settle this article of our faith by passages . . . out of the Old Testament, I will take out of the New Testament a confirmation of our view. . . . Behold, then, I find both in the gospels and in the apostles a visible and invisible God" (Adv. Prax. XV). With this he introduces testimonies from the Fourth Gospel, from Paul (including verses from the Pastorals), and from I John. He is the first writer to use the term "New Testament" in the sense of a collection of books, and he leaves no doubt that for him it possesses exactly the same authority as the ancient scriptures. In it he includes the four gospels, the thirteen letters of the Pauline collection, Acts, Revelation, and three of the Catholic letters—I John, I Peter, and Jude. Before he went over to the Montanists, he included the Shepherd in the list; but afterward he dismissed it with scorn as "that apocryphal Shepherd of the

adulterers"; he indicates, however, that it was generally accepted and read in the churches. Hebrews is on the margin; ascribing it to Barnabas, whom he calls "a companion of apostles, . . . a person of sufficient authority," he still does not regard it as quite canonical. Thus for Tertullian the NT includes twenty-two books of our twenty-seven, and none that was rejected in the final establishment of the canon.

7. Effects of the introduction of the codex. The growing sense of the unity of the scriptures must have been fostered in some degree by a revolutionary change in the form of the book which took place during this period. In the second century, Christian scribes began to use the codex instead of the roll for new copies of their sacred books. To make the roll, sheets of papyrus were glued end to end to form a narrow strip which could then be rolled up from either end. For practical purposes, it was not convenient to make a roll much more than thirty feet long; and this was about sufficient to contain a single gospel, or one book like Acts or Revelation; the collected Pauline letters would require two such rolls. To make the codex, the sheets were folded, either one by one or in quires of two, three, or four sheets each, and were then sewed together quire upon quire, as in a modern book. It thus became possible to put the contents of any number of rolls into a single book of the codex form; and there is no reason to doubt that Irenaeus and Tertullian had before them the "fourfold gospel" in a single codex. All the Pauline letters could likewise be included in a single codex; and the day was to come when the entire NT and even the whole of the LXX would be brought within the covers of a single book. The oldest MSS of the NT known to us are all codices or fragments of codices; one of them contains the four gospels with Acts, and another originally contained the ten letters of the first Pauline collection. In such a form, it was obviously easier to think of the collection as a unity than when it lay before the reader in a number of rolls of different shapes and sizes. At the same time, it was always possible for a church to alter its collection of sacred books by adding or discarding one or two rolls; but the contents of the codex had to be decided in advance; and once made, it would remain fixed until the pages wore out. Thus the invention of the codex helped to hasten the fixing of the limits of the canon, as well as to promote the sense of its unity.

D. *THE FIXING OF THE CANON IN THE GREEK AND LATIN CHURCHES (A.D. 200-400).*

1. Origen. At the beginning of the third century the canon of the NT had unquestionably come into being, and there is wide agreement about its constituent parts. Minor areas of disagreement, however, still remained. They did not affect the four gospels, the thirteen letters of the Pauline collection, or the book of Acts, which were all beyond dispute. Revelation appears to have been equally well established, but its authority was to be challenged in the course of the third century. Hebrews was still not secure, except in Alexandria; and of the Catholic letters, only I John was everywhere known and recognized, although I Peter had almost equally wide recognition. Several other letters and apocalyptic writings were able to claim a measure of ecclesiastical sanction. The fixing of precise limits was to be the work of the third and fourth centuries in the Greek and Latin churches; in the Syrian church it had to await the reforming bishops of the fifth and sixth centuries.

The situation in the early third century is analyzed by Origen, greatest of biblical scholars, who succeeded Clement as head of the school in Alexandria in 203 and for fifty years contributed his unrivaled learning and his great theological powers to the service of the church, at first in Alexandria, and in his later years, after a dispute with his bishop, at Caesarea in Palestine. He deals with OT and NT scriptures in exactly the same way, attributing to them the same authority and employing the same methods of interpretation. They are the "divine scriptures that have been entrusted to us"; and the same Spirit, the Spirit of the one God, has dealt in the same way with the gospels and the apostles as with the scriptures which were composed before the coming of Christ. In all of them there is a twofold or a threefold sense. Often enough, the literal sense of the narratives is neither true nor useful—he takes illustrations from the gospels as from the book of Genesis —and there are matters which cannot be admitted historically, which are meant to lead us on to inquire into a further sense, a spiritual significance, that we may "ascertain a meaning worthy of God in those scriptures which we believe to be inspired of him" (*On First Principles* IV.15-16).

Origen had traveled widely—to Rome, and in Greece and Asia Minor as well as in Egypt and Palestine—and had observed both the agreements and the differences among churches of different regions in their attitude toward the several NT writings; he was well aware that the views of his own church were not identical with those of other churches everywhere. Without attempting to lay down a judgment of his own, he makes note of the practice of the church, classifying the books as "acknowledged" or "disputed"; besides these, there are a number which are simply "false." Among the "acknowledged" he includes the four gospels, the Pauline letters (fourteen, including Hebrews, even though he knows that it is not by Paul and is not accepted everywhere), Acts, I John, I Peter, and Revelation. Among the "disputed" he includes James, Jude, II Peter, II and III John, and apparently also the Shepherd of Hermas, which he himself treats as apostolic and authoritative. He justifies the inclusion of Hebrews in the Pauline collection on the ground that the thoughts are the apostle's, though the style and diction show that the actual composition was done by one of his associates.

He is the first ecclesiastical writer to mention (and then it is done with some hesitation) "the epistle which is current [φερομένη] under the name of James." He has no doubt that Jude is the work of the Lord's brother, but he adduces its testimony with some hesitation, as if knowing that some will question its validity. He raises no objection of his own to II Peter and II and III John, but he does not cite them and remarks that they are in dispute. Revelation he accepts without question as the work of John the son of Zebedee, but he seems to suggest that it ought never to have been written; John "wrote the Apocalypse, though he had been commanded to be

silent and not to write the utterances of the seven thunders." This appears to be the first faint note of disapproval of this book at Alexandria, where it was to come under heavy fire not long afterward. The Didache and the Epistle of Barnabas are not specifically classified, but are used by Origen as documents of high authority, even if not quite canonical. The books which he most rigorously excludes are the numerous uncanonical gospels, which he adjudges heretical; in this area he finds no disagreement among the churches. "The church has four gospels; the heretics have many [here he gives the titles of some of them]. . . . Four gospels only are approved, out of which we must bring forth points of teaching under the person of our Lord and Savior. . . . We approve nothing else but that which the Church approves, that is, four gospels only as proper to be received" (*Hom. in Luc.* 1). And again he speaks of "the four gospels which alone are uncontroverted in the church of God which is spread under heaven" (Euseb. Hist. VI.xxv.4).

2. Dionysius of Alexandria and the questioning of Revelation. Dionysius, who became head of the Alexandrian school *ca.* 231 and was afterward consecrated bishop, called in question the Johannine authorship of Revelation without denying its right to a place in the canon. He knew of others who rejected it outright and attributed it to the heretic Cerinthus, accusing him of portraying the glories of heaven in terms of sensual delights and material enjoyments. Dionysius would not deny that it was written by a man named John, or that he saw visions and received prophetic oracles; and though he admitted that he could make almost nothing of the meaning of the book, he laid the trouble to his own weakness of comprehension. He would not reject it, for it was held in esteem by many whose judgment he was bound to respect. But a comparison of its style and diction and of its central ideas with those of the gospel and letters of John showed that it had nothing in common with them and could not be by the same author.

Most of the other disciples of Origen, including many of the most influential bishops of the time, rejected the book entirely. In the later third century the great school founded by Lucian at Antioch, another nursery of bishops, joined the Origenists in rejecting it, while Methodius of Olympus upheld it strongly. In the Latin West, the book remained unchallenged, but in the East it never succeeded in regaining its former status. Even though the Greek churches were led to include it formally in their canon, they gave it no place in their liturgy, their scholars seldom commented on it, and their scribes did not often copy it—only a third of the extant Greek MSS of the whole NT contain it. In the Syrian churches it was never admitted to the canon at all, except among the Monophysites.

3. The persecution under Diocletian. In the year 303, after more than fifty years of religious toleration, the Emperor Diocletian launched against the church the most systematic, widespread, and determined persecution that she had yet faced. Besides the imprisonment, torture, and death of countless leaders and the wholesale destruction of church buildings, measures were taken to seek out the sacred scriptures and to consign them to the flames. Under these circumstances, Christians were compelled to decide which scriptures they might be justified in surrendering to the persecutors, and which they must guard from destruction at the risk of their own lives. A rigorous party in the church, indeed, regarded the surrender of any Christian books as an act of apostasy, and their hostility to those whom they stigmatized as *traditores* led to the long and bitter Donatist schism. But the church at large adopted the more sensible view that only the writings which were regarded as sacred in the highest sense need be safeguarded at the cost of life itself. The persecution thus provided the ultimate test of the esteem in which various books were held.

4. Eusebius of Caesarea. Nevertheless, even the pressure of persecution could not bring universal agreement in all particulars. The testimony of Eusebius, given in the great *Ecclesiastical History,* which he completed *ca.* 325, still reflects much the same differences as Origen had noted. For the first time we find mention of the "seven so-called Catholic epistles" as forming a distinct group, but Eusebius remarks that James and Jude are disputed (II.xxiii. 25), and in another passage he classes James, Jude, II Peter, and II and III John among the "disputed writings which are none the less known to most" (III.xxv.3). He is not always consistent in his statements, especially about Revelation. In his most nearly complete classification of the books, he lists it among the "acknowledged" with the qualifying phrase "if perchance it seem correct" (εἴ γε φανείη); yet a few lines later he includes it "among the spurious books" (ἐν τοῖς νόθοις), along with the Acts of Paul, the Shepherd, the Apocalypse of Peter, and the Didache, again with the qualifying phrase "if it seem correct," and the remark that some reject it while others include it in the list of accepted books. Those he lists without qualification of any kind are the "holy quaternion of the gospels," Acts, the letters of Paul (fourteen, with a note that some take objection to Hebrews on the ground that the church of Rome does not accept it as Paul's), I John, and I Peter. As Eusebius was charged by Constantine with the preparation of fifty copies of the Scriptures on vellum to be sent to him at Constantinople, his views on the canon had considerable practical importance, and it would be interesting to know what books he decided to include in the NT section; unfortunately, not one of these fifty copies has survived.

5. Other Greek lists of the fourth century. In the second half of the fourth century a number of bishops in different regions of the Greek church were moved to issue formal lists of the canonical books for the guidance of their people. Cyril of Jerusalem lists twenty-six of our twenty-seven, excluding Revelation; his contemporary Epiphanius of Constantia in Cyprus includes it with the others. Gregory of Nazianzus gives the same list as Cyril. In his thirty-ninth Festal Letter, written in 367, the great Athanasius of Alexandria gives a list of the "books that are canonized [κανονιζόμενα] and handed down to us and believed to be divine"; in this, after the books of the OT, he lists without hesitation the twenty-seven books of our own NT canon. All of these mention all seven of the Catholic letters,

usually as a formally constituted group; they differ only over the acceptance of Revelation. There is no longer any mention of the doubts about the Pauline authorship of Hebrews, but the earlier hesitation is reflected in the fact that it is listed out of the order to which its length would otherwise entitle it, appearing sometimes in the tenth place and sometimes last of all. Bishops of the school of Antioch—John Chrysostom of Constantinople, Theodoret of Cyrrhus—make no use either of Revelation or of the four minor Catholic letters—i.e., II and III John, II Peter, and Jude. At the end of the fourth century, therefore, a considerable part of the Greek church acknowledged a canon of only twenty-two books. A section of the Apostolic Constitutions, however, published in Syria *ca.* 400, lists all our twenty-seven books except Revelation and adds to them I and II Clement. This canon was actually ratified by the Quinisextine Council, which met at Constantinople in 692.

6. Latin writers of the third and fourth centuries. In the Latin West, no writer between Tertullian and Jerome attempts to give a catalogue of the acknowledged books, but some idea of their general views on the canon may be gathered from their usage. The four gospels, Acts, the thirteen letters of the Pauline collection, I John and I Peter of the Catholic letters, and Revelation are consistently used by them (Cyprian, Lactantius, *et al.*) as holy scripture. The five other Catholic letters are not cited; and the Letter to the Hebrews, not being included among the Paulines, either is not mentioned at all or is explicitly rejected. No Latin writer of the period makes any use of the apocryphal gospels, acts, or apocalypses; they are seldom even mentioned, and then only to be condemned as heretical.

In the second half of the fourth century, however, the influence of Alexandria makes itself felt in the admission of Hebrews to the collection of Pauline letters and in the introduction of the minor Catholic letters. Hilary, bishop of Poitiers, sent into exile to the East (357-61) for his resolute opposition to Arianism, is the earliest Latin churchman to quote Hebrews as Paul's. Jerome, the great glory of Latin biblical scholarship, included in his famous translation of the Bible, which became the Vulg. of the Western church, the twenty-seven books of our canon; and his letter to Paulinus (Epistle 53; *ca.* 385) is the first Latin recognition of the corpus of seven Catholic letters. He remarks that the letters of James and Jude had been in dispute, but had acquired authority by the lapse of time and the usage of the church; that I and II Peter differ in style, character, and structure so much that we must believe the apostle to have made use of different "interpreters" in composing them; and that I John was approved by all "ecclesiastical and erudite men," while II and III John were said to be from the hand of the presbyter John. He is aware that the Pauline authorship of Hebrews has been disputed, and that the Greek churches do not fully accept Revelation; but he holds that the ancient and widespread testimony to these two books justifies their use as canonical and ecclesiastical.

The encouragement and support of Pope Damasus gave a quasi-official character to Jerome's work on the scriptures; but the effects of immediate recognition by authority were in the long run far outweighed by the silent influence of his version with its complete NT on the minds of men who were using it every day. There was, in any case, no conflicting opinion. Rufinus of Aquileia and Augustine of Hippo show, without dependence on Jerome, that they recognized precisely the same canon; Ambrose of Milan and Hilary of Poitiers are in essential agreement, except that they do not appear to have been acquainted with all the Catholic letters. This same list of twenty-seven books was given the sanction of conciliar authority in North Africa, first at a council held in Hippo in 393 and again at the Third Council of Carthage held in 397, with Augustine present at both of them. Canon 39 of the latter council decrees that "apart from the canonical scriptures, nothing may be read in the Church under the name of divine scriptures." After a list of the books of the OT, the canon goes on as follows: "Of the New Testament: of the gospels, four books; of the Acts of the Apostles, one book; epistles of Paul the apostle, thirteen; of the same, to the Hebrews, one; of Peter the apostle, two; of John, three; of James, one; of Jude, one; the Apocalypse of John, one book." These were the first conciliar pronouncements to be made anywhere on the limits of the NT canon; and it is to be noted that they did not come until the end of the fourth century, and were the decisions of provincial synods, not of an ecumenical council. The canon was determined by usage, by the common consent of the Christian community, testing the books in its daily life over centuries; not by formal authority.

E. *THE GROWTH OF THE CANON IN THE SYRIAN CHURCH (TO A.D. 616).* The history of the canon in the Syriac-speaking churches remains obscure until the beginning of the fifth century and the making of the Peshitta. Until that time, they used Tatian's Diatessaron almost exclusively in place of the four-gospel collection which had so early become dominant in the Greek and Latin churches; an Old Syriac version of the four gospels, made about the end of the second century, survives in two MSS, but there is no trace of its use by Syrian churchmen. It is not known when the book of Acts and the Pauline letters were first translated into Syriac, but it must have been before the end of the third century and may even have been done in the late second century, by Tatian. At all events, it is clear that in the fourth century the Syriac canon consisted of the Diatessaron, Acts, and the Pauline letters. A curious feature is that in Syria the Pauline collection was enlarged to fifteen letters by the inclusion of the spurious Third Epistle to the Corinthians, extant only in Armenian, Coptic, and Latin versions (*see also* PAUL, ACTS OF). This canon of seventeen books is used by Ephraem, the great scholar of the church of Edessa (*ca.* 320-73), and by his contemporary Afraates; and is given as authoritative in the Doctrine of Addai, a document composed *ca.* 370 at Edessa. However, a Syriac list of *ca.* 400 puts the four gospels in place of the Diatessaron and omits III Corinthians; this may be taken as an indication that the Syrian churches were now moving toward conformity with their Greek neighbors, probably under the influence of the school of Antioch.

The Peshitta, by far the most enduring and influential of oriental versions, was made under the direction of Bishop Rabbula of Edessa in the first quarter of the fifth century. It adopted the canon of Antioch: the four "separated" gospels, Acts, fourteen Pauline letters, and three Catholic letters—James, I Peter, and I John. The Syrian episcopate now made a determined and successful effort to end the use of the Diatessaron. Theodoret of Cyrrhus alone collected and destroyed more than two hundred copies of the Diatessaron in the churches under his government and replaced them with the four gospels of the Peshitta. The Diatessaron was so thoroughly suppressed that no copy of it has ever been discovered, apart from a single leaf of vellum containing a fragment of the Greek text of it.

The christological controversies of the fifth century destroyed the unity of the Syrian church and separated it from the catholic church of the West. From Edessa eastward through Mesopotamia and Persia it became Nestorian; in the W parts of Syria, it became Monophysite. The Nestorian churches continued to hold to the original canon of the Peshitta, which was the base also of the oldest Persian and Arabic versions. For the Monophysites, a revision of the Peshitta was prepared in 508 at the instance of a bishop called Philoxenus. This work was based on good Greek MSS and included the seven Catholic letters and Revelation. Thus the Syrian Monophysites, or Jacobites, as they are called, adopted the canon that had become established in the West. In 616, the Philoxenian edition was further revised by Thomas of Harkel, who retained the same canon. But these revisions never attained the authority of the Peshitta, and the Syrian churches generally have held fast to the shorter canon of twenty-two books, lacking the four minor Catholic letters and Revelation.

Except for occasional oddities, no further developments took place in the canon. The Ethiopic church added eight books to the established twenty-seven—a collection of decrees called the Synodus, and a series of "Clementines." In the Latin church of the Middle Ages, a number of important churchmen acknowledged fifteen Pauline letters, including in the collection a spurious Latin composition which first came to light in the sixth century under the title of the "Epistle to the Laodiceans." John of Damascus (*ca.* 730) reckoned the Apostolic Constitutions, which he attributed to Clement, among the books of the NT. In the sixteenth century some of the Reformers—Erasmus, Luther, Carlstadt, Zwingli, and Calvin—and even some Romanist divines raised again the problem of the "disputed" books, but without affecting the practice of any of the churches.

Bibliography. F. C. Burkitt, *Evangelion da-Mepharreshe* (1904)—the fundamental work on the history of the Diatessaron, the Old Syriac versions of the separate gospels, and the origins of the Peshitta. E. J. Goodspeed, *The Meaning of Ephesians* (1933), supplemented by J. Knox, *Philemon Among the Letters of Paul* (1935; 1959), deals with the origins of the Pauline letter collection. On Marcion's canon, see especially A. von Harnack, *Marcion* (2nd ed., 1924), and J. Knox, *Marcion and the NT* (1942). The standard Introductions to the literature of the NT generally give a sketch of the early history of the canon; among the best of these available in English are A. Jülicher (2nd ed., trans. J. P. Ward, 1904); A. H. McNeile (2nd ed., rev. C. S. C. Williams. 1953). In German, see R. Knopf, *Einführung in das NT* (5th ed., rev. H. Lietzmann and H. Weinel, 1949).

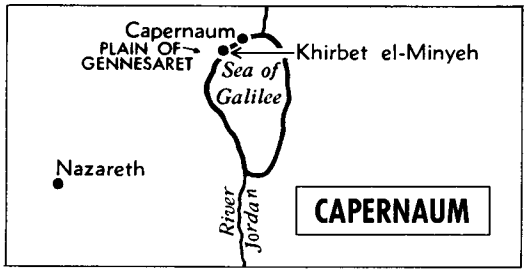
General treatises: B. F. Westcott, *A General Survey of the History of the Canon of the NT* (7th ed., 1896); T. Zahn, *Grundriss der Geschichte des ntlichen Kanons* (2nd ed., 1904); C. R. Gregory, *The Canon and Text of the NT* (1907); J. Leipoldt, *Geschichte des ntlichen Kanons* (1907-8); E. J. Goodspeed, *The Formation of the NT* (1927); A. Souter, *The Text and Canon of the NT* (2nd ed., rev. C. S. C. Williams, 1953). Westcott's book, though marred to some extent by obsolete views of the Peshitta and the Old Latin versions, is still valuable for its weighty scholarship and sobriety of judgment, and is especially useful for its appendixes, which give the texts of the most important passages from early writers and from conciliar deliverances bearing upon the subject. Zahn brings his immense learning to the impossible task of proving that the canon of the NT was to all intents and purposes established before the end of the first century; he fails to distinguish between the circulation and use of writings and canonical recognition. F. W. BEARE

CANOPY [סכה, booth, thicket (II Sam. 22:12=Ps. 18:11—H 18:12; KJV PAVILION), *from* סכך, to screen, weave together; חפה, chamber (Isa. 4:5; KJV DEFENSE), *from* חפף, to enclose, cover, surround; עב (I Kings 7:6; Ezek. 41:25, *perhaps in plural* 4:26 [*cf.* RSV *mg.*]; KJV THICK BEAM/PLANK)]; ROYAL CANOPY [*Kethibh* שפרור, *Qere* שפרור (Jer. 43:10; KJV ROYAL PAVILION), *from* Akkad. *šuparruru*, spread out; *cf. šipirri*, scepter]. A cover of some sort. There is a canopy over an outside vestibule on the Hall of Pillars of Solomon's House of the Forest of Lebanon (I Kings 7:6) and Ezekiel's temple (Ezek. 41:25). In Ezekiel it is specified as being of wood and may have been a cornice or roof (עב; *see* TEMPLE, JERUSALEM; HALL).

Figurative use of the idea of a canopy occurs in Isa. 4:5, where חפה signifies a protective canopy over the restored Jerusalem; and in II Sam. 22:12=Ps. 18:11—H 18:12, where darkness is the concealing cover (סכה) for the theophanic presence of Yahweh. *See* BOOTH; PAVILION; THEOPHANY.

The "royal canopy" is the symbol of royal power which Nebuchadnezzar will establish over the court of the Egyptian Pharaoh, as a sign of Yahweh's sovereignty (Jer. 43:10). The Hebrew word for "royal canopy," שפרור, may mean a brightly colored pavilion or carpet, which is spread on the ground. "Statetent" and "scepter" have also been suggested as the translation of this word. E. M. GOOD

CANTICLES. *See* SONG OF SONGS.



CAP [מגבעה] (Exod. 28:40; 29:9; 39:28; Lev. 8:13); KJV BONNET. A conical-shaped object of finely woven white linen tied on the head of the priest, as a sign of his investiture. The cap was a distinctive item of the priestly vestments. Fig. SYN 105.

***CAPERNAUM** kə pûr'nĭ əm [Καφαρναούμ (great uncials), Καπερναούμ (TR)=כפר נחום, village of Nahum]. A city on the NW shore of the Sea of Galilee.

1. Location. Although Capernaum was named for some person called Nahum (*see above*), there is no proof of any relation to the prophet of that name in the OT. The evidence of the gospels and Josephus

is not conclusive as to its location. There are also references to it in the rabbinic literature (e.g., Midrash Rabbah Koh. I.8; VII.26), but these do not indicate the location of the site.

Only two sites have been seriously considered. It was once thought to be the ruins now known as Khirbet (or Khan) Minyeh along the NW coast of the Sea of Galilee at the NE edge of the Plain of Gennesaret. This is perhaps supported by Josephus,

who refers to Capernaum as the name of a copious fountain in Gennesaret (War III.x.8; cf. Life LXXII). This spring may be the one now called 'Ain et-Tin or perhaps 'Ain et-Tabgha farther to the NE; both of these are near Minyeh. Although travelers as early as Arculf (A.D. 670) speak of this site as Capernaum, excavations in 1931 demonstrated that it is an Arab site, the ruins of an Umayyad palace.

It is now certain that Capernaum is Tell Hum, *ca.* 2½ miles farther NE than Khirbet Minyeh. The Arabic "Tell Hum" is probably a corruption of "Tanhum," a variant of the word "Nahum" (cf. Midrash Rabbah Shir. III.10; J.T. Ther. XI.7). There has been a strong Christian tradition since Theodosius (530) that this was Capernaum.

Tell Hum lies along the coast on a narrow plain. Its importance is indicated by the fact that it is regularly called a "city" (πόλις) in the gospels and that its ruins cover a strip a mile long. The prosperity of the city was promoted by its proximity to the major E-W highway and trade route which crossed the Jordan to the N of Capernaum. The neglect of the site and the pillaging of the ruins for building stones were ended when the site was acquired by the Franciscans in 1894. To preserve the ruins, they covered them with earth until they could be properly excavated.

2. Antiquities. Among the ruins of Tell Hum an octagonal-shaped building is shown as Peter's house, but it is more likely the remains of a church, perhaps the one mentioned by Etheria (385) as on the site of the home of the apostle Peter.

The most striking ruins are those of one of the best preserved synagogues in Palestine. The initial excavation was by Charles Wilson (1865-66), who thought it was the building mentioned in the gospels (e.g., Luke 7:5). Later excavations by Heinrich Kohl and Carl Watzinger in 1905 demonstrated that it could be no earlier than the third century A.D., although the site may well be that of the synagogue of Jesus' day. Further excavations and a partial restoration were made in 1922 under the direction of Gaudence Orfali.

The synagogue was an imposing building, sixty-five feet long and two stories high. It was built out

Courtesy of the Israel Office of Information, New York

7. Ruins of the Capernaum synagogue

of white limestone instead of the local black basalt. The building was a basilica with a gable roof. There were galleries on three sides for women; these galleries were supported on a single row of columns and were reached by two stairs in an annex on the NW corner. At the S end, toward Jerusalem, there was the ark of the law built of stone. Benches were built into the side walls. On the E there was an open court with a portico on three sides. Here there was a fountain for ceremonial washings. Figs. CAP 7; SYN 97-98.

The ornamentation of this synagogue was unusual in its use of figures not in accord with a strict interpretation of Jewish law. The remains reveal a surprising variety of animal, mythological, and geometric figures. Some of these, especially the geometric figures, may have been magical symbols. There is a unique likeness of what looks like a small temple on wheels, but it is probably the representation of a carriage and not of the ark. The unorthodox ornamentation may reflect the character of the Jewish community, for rabbinic literature speaks of Capernaum as a seat of the Minim (מינים) or sectaries (Midrash Rabbah Koh. I.8). On one of the pillars there was found an interesting Aramaic inscription which reads, "Alphaeus, son of Zebedee, son of John, made this column; on him be blessing."

3. In the gospels. Capernaum is one of the most important cities in the gospels, especially in Jesus' Galilean ministry. It is not explained why Jesus, early in his ministry, left his native Nazareth for the much larger city, "Capernaum by the sea" (Matt. 4:13). This is the only place in the gospels of which it is said that Jesus was "at home" (Mark 2:1). In the Fourth Gospel it is following the cleansing of the temple that Jesus, his family, and his disciples go to Capernaum and stay "for a few days" (John 2:12). The home of Peter and Andrew was apparently there (Matt. 8:14; Mark 1:29; Luke 4:38).

Capernaum is named specifically as the setting of many incidents and is implied in others. In its synagogue Jesus healed a man with an unclean spirit (Mark 1:21-28; Luke 4:31-38). The synagogue is also referred to, in the story of the healing of the servant of the centurion, as the one built by this centurion (Matt. 8:5-13). The synagogue is also the setting of the incidents and the sermon which follow the feeding of the five thousand (John 6:16-59).

In Capernaum, Jesus healed the paralytic (Mark 2:1-12) and held the discussions on true greatness (9:33-37) and on paying the half-shekel tax (Matt. 17:24-27). Here he healed an official's son who was ill (John 4:46-54). The city was well known as the center of Jesus' ministry and where he had healed many people (Luke 4:23). Although it was his home, Capernaum shared in Jesus' condemnation of those cities which had seen his mighty works and yet had not repented (Matt. 11:23; Luke 10:15).

CAPHENATHA. KJV form of CHAPHENATHA.

CAPHIRA. KJV Apoc. form of CHEPHIRAH.

CAPHTOR kăf′tôr [כפתר]; CAPHTORIM —tə rĭm. According to biblical tradition, Caphtor was the place of origin of the Philistines.

The place name Caphtor first occurs in the form "Kaptara" in Akkadian texts. The oldest occurrence is in a geographic text available in a later copy, describing Kaptara as beyond the Upper Sea and within the sphere of influence of Sargon of Akkad. References to Kaptara are found in the economic archives of Mari (eighteenth century) and in texts in both Akkadian and Ugaritic (as *kptr*) from Ugarit.

In Egyptian sources a place name Keftiu (*kftyw* or *kftiw*) is found in texts from 2200 to 1200 B.C. It it commonly accepted among Egyptologists that *keftiu* is the Egyptian form of Kaptara/Caphtor. On the basis of geographical, historical, and literary considerations it is clear that the island of Crete, with which Egypt had commercial relations after *ca.* 2200, is meant by this term. Emissaries in Cretan dress bearing gifts of Cretan origin are depicted in Egyptian tombs.

In biblical tradition, the PHILISTINES came from Caphtor (Jer. 47:4; Amos 9:7). The archaizing historical account in Deut. 2:23 uses the term "Caphtorim" rather than "Philistines" for those who displaced the AVVIM, the autochthonous inhabitants of the coastal area. Undoubtedly, the phrase "whence came the Philistines" in Gen. 10:14 is a misplaced learned gloss belonging after "Caphtorim" rather than after "Casluhim." The tradition itself is problematic, since there is no evidence for a Philistine occupation of Crete, nor do the facts about the Philistines, known from archaeological and literary sources, betray any relationship between them and Crete. Some scholars have favored equating Caphtor with a coastal area of Asia Minor (based on the LXX "Cappadocia" for "Caphtor") or with the island of Carpathos, but there is nothing in favor of this view. It is quite possible that the Philistines adopted the traditions of a colony of Cretan mercenaries—the biblical CHERETHITES, already resident in S Palestine. More likely is the possibility that by the thirteenth century the term "Caphtor" was used broadly for the Aegean area from which the Philistines as one of the "People of the Sea" emerged.

Vercoutter, *L'Egypte et le monde égeen préhellénique* (1956), contains a full bibliography and discusses in detail the various views on Caphtor. J. C. GREENFIELD

CAPITAL [כתרת (CROWN *in* I Kings 7:31; KJV CHAPITER), צפת (KJV CHAPITER), ראש (KJV CHAPITER), כפתור (KJV KNOP *in* Exod. 25:31-36; 37:17-22; LINTEL *in* Amos 9:1; Zeph. 2:14)]. An ornament on top of a pillar. Figs. ARC 56; CAP 8.

Courtesy of the Oriental Institute, the University of Chicago

8. A "Proto-Ionic" capital found in Megiddo (tenth century B.C.)

The כתרת was a bronze sphere five cubits high on each of the bronze pillars Jachin and Boaz (I Kings 7:16-42; II Chr. 4:12; Jer. 52:22; in II Kings 25:17 the height is given as three cubits). In I Kings 7:31 the RSV interprets the word to mean "crown" (cf. כתר; Esth. 1:11, etc.). צפת appears only in II Chr. 3:15, where the reference clearly is to the same capitals.

ראש (lit., "head") is used to designate capitals on pillars of the tabernacle (Exod. 36:38; 38:17, 19, 28).

CAPPADOCIA kăp′ə dō′shə [Καππαδοκία] (Acts 2:9; I Pet. 1:1). In NT times, a large Roman province in E Asia Minor.

The limits of Cappadocia varied greatly at different times, but in general it was the territory S of PONTUS and the mountains along the upper Halys

River, E of GALATIA and LYCAONIA, N of CILICIA and the Taurus Mountains, and W of Armenia and the EUPHRATES River (Pliny Nat. Hist. VI.3; Strabo XII.1).

Under the Persians, Asia Minor was divided into satrapies ruled by satraps. Later the Seleucids of Syria permitted these satraps to continue as client kings. After the Roman conquest this system continued, and Cappadocia was ruled by a king; but the last king, Archelaus, was accused of treason by Tiberius and summoned to Rome. When he died there in A.D. 17, Cappadocia was made an imperial province and placed under the direct rule of a procurator (Tac. Ann. II.42; Dio Cassius LVII.17). Its size at this time was *ca.* 33,000 square miles. Under the later emperors its size increased as it became more important as a frontier province.

Cappadocia was a wild, mountainous country with few large cities. The leading cities were Tyana and Mazaca (Caesareia). It had little timber, but was valued for its crops, especially wheat. It was noted for its cattle and famous for its horses. It exported some minerals, chiefly ocher, alabaster, mica, silver, and lead. Some sections produced excellent wine. Its position was strategic because of the roads which crossed it, such as the one from the Cilician Gates across to Pontus.

Cappadocia possessed a significant Jewish community as early as the second century B.C., indicated in a letter to Ariarthes, king of Cappadocia (I Macc. 15:22; cf. *Philo Legation to Caius* 36). Jews from Cappadocia were in Jerusalem at Pentecost (Acts 2:9). Christianity spread along the road N from Tarsus into Cappadocia and on to Pontus before the end of the first century A.D. (I Pet. 1:1). The new religion seems to have flourished, for by the fourth century Cappadocia was producing great leaders of the church.

Bibliography. T. Mommsen, *The Provinces of the Roman Empire* (1886), pp. 323-25, 332-33; D. Magie, *Roman Rule in Asia Minor* (1950), pp. 200-201, 491-96. D. C. PELLETT

CAPTAIN. An officer of some kind. The word "captain" is used by English versions to render various Hebrew and Greek words mainly because little is known of army ranks in biblical times. "Captain" has been used to translate the following:

a) ראש (lit., "head"; by extension, the "one at the head" of a group).

b) רב (lit., "one who is great," thus "chief"), used mainly of Assyrian and Babylonian officers in such titles as רב טבחים, "captain of the guard" (II Kings 25:8-20; Jer. 39:9-52:30); רב שקה, RABSHAKEH (II Kings 18:17 ff; 19:4, 8; Isa. 36:2 ff; 37:4, 8); and רב סריס, RABSARIS (II Kings 18:17; Jer. 39:3, 13) and "chief eunuch" (Dan. 1:3; KJV "master of his eunuchs").

c) שר, the most common word to be rendered by "captain."

d) פחה (II Kings 18:24; Isa. 36:9; usually "governor"; "commander" in I Kings 20:24). This word is an Akkadian loan word, *pāḫatu,* an "administrative district"—hence, by extension, *bēl pāḫati,* the "ruler of a district."

e) שליט (Dan. 2:15), derived from שלט, "to rule."

f) שליש (alternately "officer"; "aide"), a word of uncertain meaning. Since שלש means "to be three," it is thought that the word may refer to the third man in the CHARIOT.

g) Στρατηγός, in the phrase "captain of the temple" (Luke 22:4, 52; Acts 4:1; 5:24, 26; "general" [KJV "duke"] in I Macc. 10:65)—i.e., an officer of the temple police.

h) Χιλίαρχος (lit., "ruler of a thousand"), the regular NT designation for a military chieftain.

In addition, the KJV uses "captain" to translate the following:

a) אלוף (Jer. 13:21; RSV "friend"). There are two words identical in form: "tribal chieftain," possibly a denominative word from אלף, "thousand," hence originally a "leader of a thousand"; and a word from אלף, "to learn," hence "one who is well known, an intimate."

b) בעל, only in the phrase "captain of the ward" (Jer. 37:13; RSV "sentry"; lit., "one who has the oversight").

c) מפסר (RSV "marshal" in Jer. 51:27; "scribe" in Nah. 3:17). This is a Sumerian word borrowed through Akkadian. Sumerian *dub,* "tablet," and *sar,* "writer," were borrowed by Akkadian as *ṭupšarru,* and by Hebrew in turn as מפסר. Whether the Akkadian meaning of "tabletwriter" (hence "scribe") is germane for Hebrew is not clear.

d) כר (Ezek. 21:22; the RSV omits the phrase לשום כרים, lit. "to set battering rams"; LXX τοῦ βαλεῖν χάρακα; *cf.* BATTERING RAM). This KJV rendering is based on an invalid Jewish tradition (cf. Qimchi).

e) כרי (II Kings 11:4, 19; RSV "Carites"; *see* CHERETHITES). This KJV rendering derives from an early Jewish tradition (cf. Targ. Jonathan: גבריא).

f) נגיד (RSV "prince"; lit., "leader"), a charismatic ruler.

g) נשיא (Num. 2; RSV more literally "leader"), derived from נשא, "to lift up," hence "chieftain, leader."

h) קצין (RSV better "chief" in Josh. 10:24; "leader" in Judg. 11:6, 11).

i) Ἀρχηγός (Heb. 2:10; RSV "pioneer"). This word can mean either "leader" or "founder" and appears in both senses throughout the LXX.

J. W. WEVERS

CAPTAIN OF THE TEMPLE [ὁ στρατηγὸς τοῦ ἱεροῦ (Acts 4:1; 5:24, 26; *plural in* Luke 22:4, 52); ὁ πγοτάτης (one who stands over) τοῦ ἱεροῦ (II Macc. 3:4)]. The officer second in authority only to the high priest in the temple. He is mentioned in Jer. 20:1 LXX as ἡγούμενος (lit., "leader") and in Neh. 11:11 as ἀπενάντι τοῦ οἴκοῦ τοῦ θεοῦ ("ruler of the house of God") = Vulg. *princeps domus Dei.* Josephus (Antiq. XX.vi.2; War VI.v.3) uses the simple στρατηγός. In the Mishna the chief officer is called סגן הכהנים ("captain of the priesthood") or simply סגן (*Sagan,* "captain").

The chief authority in the temple area was the high priest. The captain of the temple (translated "commander" by Moffatt, Goodspeed, Weymouth, Rieu; "officer in charge" by *The Twentieth Century NT*) was also a priest, having supervision over the cultus and the officiating priesthood, as the high priest's adjutant, as well as over the groups of Levites, themselves organized under "captains" into corps of guards functioning as police. The subordinate "cap-

tains" would be in direct charge of the watchmen who opened and closed the gates, of the sentries, and of the guards who protected the valuable treasures often stored in the temple, and would probably have more direct and frequent contacts with the people.

If the references in Acts suggest the chief "captain," the plural in Luke 22:4, 52, suggests the subordinate "captains." However, differentiation of function between the chief captain and the subordinate captains is not Luke's concern. Either he was uninformed as to the difference in status and function or he was indifferent to it. He may well have used the plurals in 22:4 ("chief priests and captains"), 52 ("chief priests and captains of the temple and elders"), to be impressive, and without entertaining the possibility of confusion between the captain and his subordinate captains. In Acts 4:1; 5:24, 26, since it was a question of arrest, it is the chief captain who is properly, even impressively, involved. Yet in neither case is it now possible to determine which sort of "captain" was actually involved. If the sober historian of the present day is inclined to decide for the officer with less prestige, Luke certainly was not. F. D. GEALY

CAPTIVITY [שבי; αἰχμαλωσία]. *See* EXILE; DISPERSION.

CARABASION kăr'ə bā'zhĭ ən [Καραβασειών (B), Καραβασιων (A)] (I Esd. 9:34). One of the Israelites who put away their foreign wives and children. His name is omitted in the parallel Ezra 10:34-37.
C. T. FRITSCH

CARAVAN [ארחה, *from* ארח, to journey]; KJV COMPANY in Gen. 37:25, TRAVELLING COMPANIES in Isa. 21:13. A company of people, often merchants with pack animals, traveling together, especially through dangerous territory. The RSV repoints the MT ארחות ("paths") to obtain "caravans" in Judg 5:6*a* (KJV "highways"); Job 6:18 (KJV "paths"); Job 6:19 (KJV "troops"). In Job 6:19 הליכת (from הלך, "to walk"), which can mean "caravans," is translated "travelers" (KJV "companies").

Local caravans in Israel transported goods from one district to another, using mostly the ass; the camel, which came into use *ca.* 1100 B.C., was less common. Such trade might be interfered with by unsettled political conditions (Judg. 5:6). Most of the caravans mentioned in the OT are, however, related to Transjordan and Arabia. These Arab caravans of camels were engaged primarily in the lucrative spice and incense trade, whose products came largely from Hadhramaut in S Arabia. Such traders would come N via Timna and Marib through the Hijaz to Gaza or Damascus, or at a later date to Petra and Bostra. The rulers of Saba (Sheba) would be involved in this enterprise (I Kings 10:2), and Transjordanians might easily do business with Egypt (Gen. 37:25). Herodotus tells us that the Arabians rendered to Achaemenid Persia annually one thousand talents weight of frankincense (III.97). Pliny, who has much to say about the incense trade, notes that it takes sixty-five days to come by camel to Gaza from S Arabia (Nat. Hist. XII.32).

Bibliography. For a description of a caravan leaving Damascus in 1876 (the Haj or Meccan pilgrimage), traveling 2½ miles per hour, see C. M. Doughty, *Travels in Arabia Deserta* (1888), vol. I, ch. 1; for a caravan to Mecca with one hundred and seventy camels bearing thirty tons of butter (*samn*), see *op. cit.*, vol. II, ch. 16. For ancient and modern caravans in Hadhramaut, see W. Phillips, *Qataban and Sheba* (1955), pp. 4-6, 34, 76-78. W. S. MCCULLOUGH

CARBUNCLE. A red stone such as ruby or garnet. In Exod. 28:17; 39:10 ברקת, a stone on the breastpiece of judgment, is incorrectly translated "carbuncle" (cf. Sanskrit *markata,* μάραδος=σμάραδος, "emerald"; Akkadian *barâqtu;* LXX and Vulg. "emerald"). Dark green beryl has also been suggested. In Ezek. 28:13, where it is one of the precious stones forming the covering of the king of Tyre, the RSV translates "emerald," but renders as "carbuncle" נפך ("turquoise"?), which in Exod. 28:18; 39:11 appears as "emerald."

CARCAS. KJV form of CARKAS.

CARCHEMISH kär'kə mĭsh [כרכמיש]; KJV once CHARCHEMISH (II Chr. 35:20); KJV Apoc. CARCHAMIS —mĭs. An important Syro-Hittite capital on the Upper Euphrates. The site, which has been excavated, is now called Jerablus. Fig. CAR 9.

Courtesy of the Trustees of the British Museum

9. Citadel mound of Carchemish, from the NW, the Euphrates River in the background

Isa. 10:9 alludes to the capture of Carchemish by the Assyrians. II Chr. 35:20 tells of Pharaoh Neco II's heading for Carchemish to wage war in the thirty-first year of Josiah; and it was there that Nebuchadrezzar defeated Pharaoh Neco II in the fourth year of Jehoiakim son of Josiah, according to Jer. 46:2 (see also I Esd. 1:25). The Battle of Carchemish is documented in the Nebuchadrezzar Chronicles, which describe Nebuchadrezzar's defeat of the Egyptian army and pursuit of them "so that not a single man escaped to his own country."

Carchemish is also well attested in Egyptian, and especially in cuneiform records. Fig. JEH 10.

The importance of Carchemish during and just after the Amarna Age is becoming clarified by the royal Hittite archives found at Ugarit. These texts show that for many administrational purposes, vassal kingdoms in Syria (such as Ugarit) were subject to Carchemish within the Hittite imperial system.

CARE, CAREFULNESS. The clear understanding of these terms in biblical usage is complicated by the number of words in Hebrew and Greek so rendered, by the history of "care" and "carefulness" in English usage, and by the range of meanings served by these words. In the Hebrew and Greek Bible the noun "care" translates at least ten words, and the verbs "care," "care for," "take care lest," translate at least thirteen words with some variety of meanings. In early English usage "care" meant "mental suffering," "anxiety"; and the word "careful" had a similar sense of overanxiety. The KJV illustrates the change of meaning in Phil. 4:6: "Be careful for nothing." Today the word "care" expresses concern, solicitude, responsible attention in one direction, and concern, regard, liking, even love, in another direction.

The OT terms frequently carry active and concrete connotations. In Gen. 39:22 the prisoners are committed to Joseph's hand (יד, ביד, "to Joseph's care"). In Deut. 11:12 God seeks out the land (דרש, "cares for"). In Jer. 23:2 the shepherds are to visit God's people (פקד, "care for, look after"). Note also Jer. 23:4, where other shepherds feed the flock (רעה, "care for, lead").

For the NT sense of care as anxiety, *see* ANXIETY. The word "careful" carries the meaning of being alive to obligation as in the commandments, or to risks in the sense of taking heed.

The whole Hebrew-Christian tradition opens up the channels of human awareness to the call of God and the claims of his law, to the risks of disobedience, to the presence and needs of other men. Over all are the care of God for his people and his attentiveness to their condition: "Cast all your anxieties [μέριμνα] on him, for he cares [μέλει] about you."

P. E. DAVIES

CAREAH. KJV form of KAREAH in II Kings 25:23.

CARIA kâr'ĭ ə [Καρία]. In early ancient times the name of the SW portion of Asia Minor. It was bounded on the N, in the Maeander River area, by Lydia, on the E by Phrygia, on the SE by LYCIA, and on the SW and the W by the Mediterranean and Aegean seas. The Ionian and Dorian Greeks established cities on the coast which maintained a rather independent status. Thus when *ca.* 139 B.C. the Romans sent a letter on behalf of the Jews to Caria (I Macc. 15:23), it probably went to the Carian confederacy which met at the temple of Zeus Chrysaoreus at Stratonicea, but the Romans sent separate letters to the cities of Myndos, Halicarnassus, and Cnidus. These letters imply a Jewish population in Caria and especially in these cities. *Ca.* 129 B.C., Caria was made part of the Roman province of Asia.

Bibliography. A. H. M. Jones, *The Cities of the Eastern Roman Provinces* (1937), ch. 2; D. Magie, *Roman Rule in Asia Minor* (1950), pp. 35-38, 50-52, 144-46, 155. F. V. FILSON

CARITES. *See* CHERETHITES.

CARKAS kär'kəs [כרכס, *perhaps* vulture, *from* Pers. *karkasa*] (Esth. 1:10); KJV CARCAS. One of seven eunuchs who served Ahasuerus as chamberlains and whom he sent for Queen Vashti.

CARMANIANS. KJV Apoc. form of CARMONIANS.

CARME. KJV Apoc. form of HARIM 1.

CARMEL (CITY) kär'məl [כרמל, vineyard]; CARMELITE —mə līt [כרמלי, of Carmel]; CARMELITESS —līt'is [כרמלית]. A village in the Maon district of Judah (Josh. 15:55); identified with modern el-Kirmil, seven miles S-SE of Hebron. Saul erected a monument at Carmel after defeating the Amalekites (I Sam. 15:12). Carmel was the scene of the incident between David and Nabal as a result of which David took Nabal's widow for a wife (I Sam. 25:2-40; 27:3; 30:5; II Sam. 2:2; 3:3; I Chr. 3:1). Hezro, one of David's Mighty Men, came from Carmel (II Sam. 23:35; I Chr. 11:37). V. R. GOLD

***CARMEL, MOUNT** [הכרמל, the garden *or* orchard; כרמל (Josh. 19:26; Jer. 46:18; Nah. 1:4)]. A prominent mountain on the coast of Palestine. It has significant associations with Elijah and Elisha.

Mount Carmel juts into the Mediterranean Sea at the head of a range of mountains to which it has given its name and of which it is geologically and geographically a part. The mountain itself, which is formed of hard, porous Cenomanian limestone, extends SE for a distance of *ca.* thirteen miles; it reaches a height of 470 feet at the promontory and a maximum elevation of 1,742 feet near 'Esfia. Its NE slopes are steep and precipitous, while those on the SW give way more gradually to the coast. A luxuriant growth of plants, for which it was famous in antiquity (*see below*), still covers its slopes.

Geographically, Mount Carmel is a wedge-shaped barrier, which splits the Palestinian coastal plain into two parts, the Plain of Acco to the N, and the plains of Sharon and Philistia to the S. Between the foot of the promontory and the sea is a narrow beach road which joins these plains, but throughout antiquity most commercial and military traffic crossed the Carmel Range inland by means of passes leading to IBLEAM; TAANACH; MEGIDDO; and perhaps JOKNEAM.

Courtesy of Herbert G. May

12. Mount Carmel from the Galilee foothills

As a result of its isolation, Mount Carmel has been sparsely occupied in historical times, though during the Stone Age, caves in its W slopes were inhabited by early man (*see* MUGHARAH, WADI EL). The first historical mentions of the mountain are found in lists of Thut-mose III, Ramses II, and Ramses III of Egypt, if the identification of *Rosh Qidshu* in these lists with Mount Carmel is correct, as seems probable. If *Rosh Qidshu*—which means "holy cape"—is an earlier name for Mount Carmel, it strongly suggests that the mountain was an early holy place or sanctuary. That special religious significance was attached to it during biblical times is indicated by I Kings 18:19-40, where it was the scene of the contest between the prophets of Baal and Elijah; and by II Kings 2:25; 4:25, where it seems to have served as Elisha's spiritual retreat. The beauty (Song of S. 7:5) and fertility of Mount Carmel greatly impressed biblical writers, who frequently mention it in parallelism with the Plain of Sharon, Lebanon, Bashan, and Gilead (Isa. 35:2; Jer. 50:19; Mic. 7:14), or conversely employ the desiccation of Mount Carmel as a figure of great desolation (Isa. 33:9; Amos 1:2; Nah. 1:4).

Fig. CAR 12.

Bibliography. C. R. Conder and H. H. Kitchener, *SWP*, I (1889), 264-65; D. Baly, *The Geography of the Bible* (1957), *passim.* G. W. VAN BEEK

CARMI kär'mī [כרמי, vineyard owner(?)]; CARMITES —mīts. **1.** A son of Reuben, listed as the last of four sons of Reuben in the tribal genealogies (Gen. 46:9; Exod. 6:14; Num. 26:6; I Chr. 5:3). Carmi is the eponymous ancestor of the "family of the Carmites."

2. A Judahite, the father of Achan (Achar in I Chr. 2:7), who violated the ban laid on Jericho (Josh. 7:1, 18; I Chr. 2:7; 4:1, where "Caleb" should probably be read instead of "Carmi").

R. F. JOHNSON

CARMONIANS kär mō'nĭ ənz [Lat. *Carmonii*]; KJV CARMANIANS —mā'—. A people from Carmania, a province of ancient Persia which was situated on the N shore of the Persian Gulf, to the W of Gedrosia. Its name survives in the modern Kerman. In II Esd. 15:30 the Carmonians—more accurately, the Carmanians—are described as devastating a "portion of the land of the Assyrians with their teeth." They joined battle with the "nations of the dragons of Arabia," who gained the upper hand, only to be defeated in their turn by an "enemy in ambush" from Assyria.

These events, described in veiled, apocalyptic language, probably refer to the time of the Sassanidae, especially Shapur or Sapor I (A.D. 240-73), who overran the Roman province of Syria—a "portion of the land of the Assyrians"—and destroyed Antioch. These Persian successes soon came to an end, however, when Odenathus and his brave wife, Zenobia, Queen of Palmyra—the "dragons of Arabia"—drove Sapor and his forces back beyond the Euphrates. Zenobia's defeat later at the hands of Aurelian (A.D. 273) is probably referred to in vs. 33.

C. T. FRITSCH

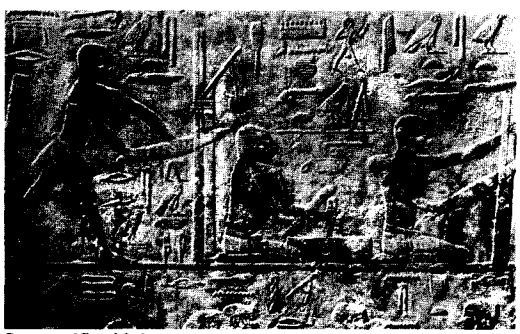
CARNAIM; KJV CARNION. Apoc. form of Karnaim (II Macc. 12:21, 26). "Carnion" is either a Grecized form of "Carnaim" or the name of a sanctuary at Carnaim. *See* ASHTEROTH-KARNAIM.

CARNAL [σαρκικός (Rom. 7:14); KJV σάρξ, *see below*]; CARNALLY [זרע; KJV σάρξ (Rom. 8:6), *see below*]. "Carnal" is either equivalent to the English word "material" (cf. II Cor. 10:4 KJV) or describes human nature when under the domination of its lower, unregenerate impulses (cf. I Cor. 3:3 KJV). The adverb "carnally," meaning "sexually," is used in the OT to translate the modifying noun in the phrase שכבת זרע (Lev. 19:20) or לזרע (18:20), lit., "a lying of (or for) seed." Without sexual connotations, the adverb is used once in the KJV to trans-

late (τὸ . . . φρόνημα) τῆς σαρκὸς (Rom. 8:6), a phrase more adequately rendered in the RSV "(to set the mind) on the flesh." *See also* FLESH IN THE OT; FLESH IN THE NT. R. C. DENTAN

CARNELIAN [אדם (*cf. verbal cognate*, to be red); LXX *and* NT σάρδιον; Vulg. *sardius*]; KJV SARDIUS (mg. RUBY). A variety of chalcedony of a clear deep-red, flesh, or reddish-white color. Sardius is a darker variety of chalcedony. It is one of the few stones noted in the Bible which are found in any quantity in Palestine archaeological sites. אדם is a stone in the covering of the king of Tyre (Ezek. 28: 13). Σάρδιον occurs in the description of the one seated on the throne (Rev. 4:3), and it is the sixth jewel in the foundation wall of the New Jerusalem (21:20). *See* SARDIUS.

See also JEWELS AND PRECIOUS STONES § 2.

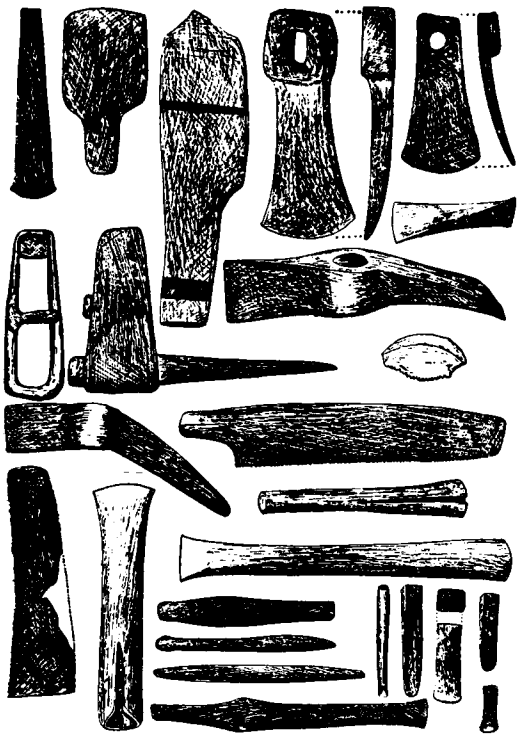


W. E. STAPLES

CARNION. KJV Apoc. form of Karnaim. *See* ASHTEROTH-KARNAIM.

CARPENTER [חרש, *from* חרש, to scratch, engrave, *see below;* τέκτων, *see below*]. A craftsman who built yokes, plows, threshing boards, benches, beds, boxes, coffins, boats, and houses, and worked on temple and synagogue.

Frequently the Hebrew חרש is connected with wood, as in II Sam. 5:11; II Kings 12:11; I Chr. 14: 1; 22:15; II Chr. 34:11; Isa. 44:13; etc. The same word used with various metals is translated "smith."



The Greek τέκτων is used in the NT only for Joseph (Matt. 13:55) and Jesus (Mark 6:3). Justin Martyr suggests Jesus made plows and yokes (*Trypho* 88). Perhaps the Greek has the wider meaning of "builder."

Courtesy of Foto Marburg

13. A carpenter scene from the tomb of Ti at Saqqarah. The workman in the center is using a chisel and mallet; the other two are sawing boards.

The carpenter built the upper story on stone houses and made repairs on gates. Many a householder did the task of a carpenter in the days before there were specialists. Isa. 44:13 lists some of the carpenter's tools. His tools were the compass, pencil, plane, saw, hammer, axe, adz, chisel, plumb line, drill, file, square, etc. Many of these were made of stone and in the later periods bronze and iron. Both dowels and nails, as well as mortised, dovetail, and mitered joints, were used to join wood together.

By permission of the Palestine Exploration Fund

14. Carpenter's tools, from Gezer

The early Israelites were probably backward in this skill because of their nomadic origin. David and Solomon both imported Tyrian carpenters to work on the palace and the temple (II Sam. 5:11; I Kings 5–7). Later, native carpenters were skilled enough to repair the temple (II Kings 12:11; 22:6). They were carried along with the wealthy into captivity (Jer. 24: 1; "craftsmen"). Phoenicians were again imported by Ezra (Ezra 3:7). In the latest OT times there were guilds of carpenters (I Chr. 4:14; "craftsmen"), and this is verified in the Oxyrhynthus Papyri. Less skilled workers in wood were the timber cutters. The most skilled carftsmen were engaged in carving and practiced inlay. Figs. CAR 13-14.

In Christian symbolism the carpenter's square is used for Jude and Thomas, and a saw is the symbol of James the Less. C. U. WOLF

CARPET [גנז (Ezek. 27:24; KJV CHEST; *alternately* TREASURY)]; RICH CARPETS [מדין (Judg. 5:10; KJV JUDGMENT)]. The meaning of both these terms is in doubt.

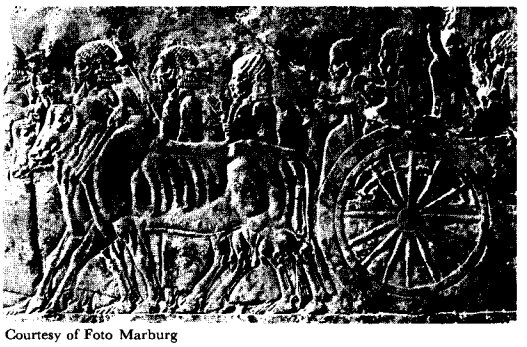
The word used in Ezek. 27:24 is translated "treasury" in Esth. 3:9; 4:7. Its place in a list of types of merchandise imported by Tyre and the fact that it is described as being "of colored stuff" have given it the meaning "carpet." But that the objects are "bound with cords and made secure" may suggest that they are chests covered with beautifully woven material; this would fit the doubtfully presumed cognate, מדה, מד, "garment."

The word used in Judg. 5:10 refers to something on which people sit. Those who "ride on tawny asses," those who walk on the highways, and those who sit on מדין may be various types of professional

storytellers or bards, who might well have had such informal soapboxes. E. M. GOOD

CARPUS kär'pəs [Κάρπος, *perhaps from* καρπός, fruit]. A resident of Troas with whom Paul had left a cloak, according to II Tim. 4:13. Paul asked Timothy to bring him this cloak from Troas.

According to one tradition, Carpus became bishop of Berytus in Thrace. He was also thought to have been martyred in Pergamum.



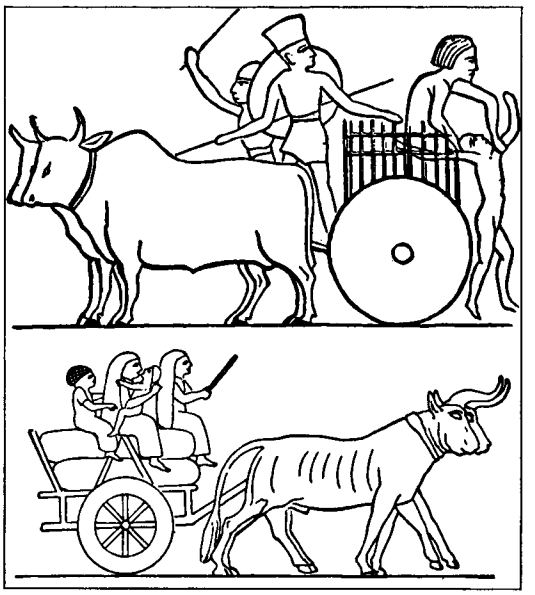
B. H. THROCKMORTON, JR.

CARRIAGE. The KJV translation of the following terms: כלי (I Sam. 17:22 [twice]; Isa. 10:28; RSV "baggage"); נשאה (Isa. 46:1; RSV "burden"); כבודה (Judg. 18:21; RSV "goods"); ἐπισκευασάμενοι (Acts 21:15; the RSV translates "made ready" instead of "took up our carriages"). In each instance the reference is to the object carried, not to a means of conveyance. The Greek term has to do with assembling the necessary baggage for a journey.

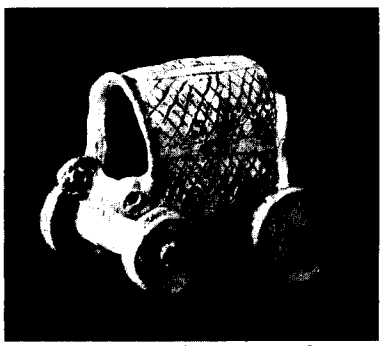
W. G. WILLIAMS

CARSHENA kär shē'nə [כרשנא, *possibly from* Pers. *keresna,* black] (Esth. 1:14). One of the seven princes and wise men of King Ahasuerus.

CART [גלגל, wheel; עגלה, *from* עגל, roll; צב, *from* Akkad. *ṣumbu,* wagon; ἅμαξα (Jth. 15:11), *from* ἅμα, with, *and* ἄγω, carry]. Alternately: WAGON. In English a "cart" is usually a light, two-wheeled vehicle and a wagon a heavier, four-wheeled one, but such distinctions for the biblical terms must be drawn principally from their context.



Courtesy of Foto Marburg



15. Assyrian soldiers leading away prisoners of war, the women being transported in a cart; from the palace of Ashurbanipal (629-626 B.C.) at Nineveh

In Num. 7:3-8; II Sam. 6:3 עגלה appears to be a wagon pulled by two oxen (in I Sam. 6:7 by two milch cows). This would be used for transporting both persons and things (Gen. 45:19, 21, 27; 46:5; Jth. 15:11). Such a four-wheeled vehicle is meant by ῥέδη in Rev. 18:13—not, with the RSV, "chariot" (cf. Amer. Trans. "carriage"). The meaning of עגלות צב (lit., "wagons of wagon"; Num. 7:3) is uncertain (KJV-RSV "covered wagons"; *see* LITTER). In Ezek. 23:24; 26:10 גלגל ("wagons") seems to refer to the transport wagons of an army. עגלות in Ps. 46:9—H 46:10 (lit., "wagons") may also mean military transport, though "chariots" (RSV) is not impossible. A wheeled vehicle, עגלה, was used in threshing operations (Isa. 28:27-28), possibly before the threshing sledge; but this is not to be confused with the "cart full of sheaves" in Amos 2:13.

17. Clay model of wagon; from Tepe Gawra, in Mesopotamia (*ca.* 2500 B.C.)

CARVING [חרשת, *from* חרש, cut in, engrave; מקלעת, *from* קלע, carve]; CARVED FIGURES [פתוחי מקלעות, engravings of carvings]; CARVED WOOD [פתוח, *from* פתח, engrave; *cf.* Akkad. *patāḫu,* bore a hole]; CARVED WORK [מחקה, *participle from* חקה, *variant of* חקק, cut in, inscribe]. Something cut, especially in an artistic manner. Cf. also משכית (probably "showpiece"), "figured stone" or "picture" (cf. Num. 33:52; Ezek. 8:12); אבן משכית, "figured stone" (Lev. 26:1; KJV "image of stone").

While the references in Exod. 31:5; 35:33 to the carving of stone and wood suggest that these skills were known to Israel in the Exodus days, the statement in II Sam. 5:11 that David was indebted to carpenters and masons from Tyre in his building operations supports the view that such craftsmen

were developed in Israel only under the monarchy. This conclusion is strengthened by the account in I Kings 5:1-18—H 5:15-32 of Solomon's dependence upon the men of Phoenicia. As Israel's cultural life grew stronger, so, we may assume, did skill in carving, though the latter must have continued to be influenced by the older artistic traditions of Phoenicia and Egypt, and later of Mesopotamia.

Apart from the allusions, often satiric, to carved idols and their manufacture (Lev. 26:1; Num. 33:52; Deut. 4:28; Isa. 40:18-20; 44:9-20; Jer. 2:27; 10:1-10; Ezek. 8:10, 12; 23:14; Wisd. Sol. 13:13; 14:16), all the OT references to the carving of wood, stone, and metal pertain to the tent of meeting (Exod. 31:5; 35:33), or to its successor the Jerusalem temple. In addition to the carving on the bronze stands of the temple lavers (I Kings 7:31, 36; *see* ENGRAVING), what is particularly recorded about the temple is the decoration of the olivewood and cypress doors and the cedar wainscoting with carvings (מקלעות) of "cherubim and palm trees and open flowers" (I Kings 6:18, 29, 32, 35; cf. Ezek. 41:17-20; Ps. 74:6). Moreover, while the text does not use "carve" with respect to the cherubim of the inner sanctuary, it is obvious that these large creatures made from olivewood, each fifteen feet high, represent a good deal of joinery and carving (I Kings 6:23-28).

Carving skills were exercised on various materials other than wood. *See also* IVORY; GRAVEN IMAGE; SCULPTURED STONES.

Bibliography. For carving of ivory, see J. W. and G. M. Crowfoot, *Early Ivories from Samaria* (1938); many of the motifs of these objects are clearly Egyptian, doubtless mediated through a Phoenician tradition. For carved work in ivory, bone, and marble, found in biblical Hazor, see *BA,* XIX (1956), 1-11; XX (1957), 34-41. W. S. MCCULLOUGH

CASEMENT. KJV translation of אשנב (RSV LATTICE) in Prov. 7:6.

CASIPHIA kə sĭf'ĭ ə [כספא, place of silversmiths(?); LXX AB ἐν ἀργυρίῳ τοῦ τόποῦ, in silver of the place; ἐν τῷ τόπῳ τοῦ γαζοφυλακίου (I Esd. 8:44), in the place of the treasury; Vulg. *in chasphiae loco*]. A "place" from which Ezra obtained Levites for temple service in Jerusalem (Ezra 8:17). It could be a city or a district. Not certainly identified, it is assumed to have been in Babylonia, perhaps close to the route of Ezra's movement to Judah. Jewish tradition (Leviticus Rabbah 5; Rashi on Isa. 22:18) regards it as the "wide land" (Isa. 22:18) to which Hezekiah's officer Shebna was to be exiled. Winckler (*see bibliography*) proposed identification with Ctesiphon.

Bibliography. H. Winckler, "Kasiphja-Ktesiphon," *Altorientalische Forschungen,* Reihe 2, Band III, pp. 509-30.
R. A. BOWMAN

CASLEU kăz'lōō. KJV Apoc. form of Chislev. *See* CALENDAR.

CASLUHIM kăs'lə hĭm [כסלחים; LXX Χασμωνιειμ]. A term of unknown origin which occurs in the ethnographic lists of Gen. 10:14; I Chr. 1:12 as the name of an offspring of Mizraim (Egypt) and as the source of the Philistines. It is preceded by the Lydians; the ANAMIM; the LEHABIM; the NAPHTUHIM; and the PATHRUSIM; and it is followed by the CAPHTORIM. T. O. LAMBDIN

CASPHOR. KJV form of CHASPHO.

CASPIN kăs'pən [Κασπιν] (II Macc. 12:13). A strongly fortified town of mixed population taken by Judas, who massacred a great number of the people. It is probably the CHASPHO of I Macc. 5:26, 36, which has been identified with the modern Khisfin, nine miles E of the Sea of Galilee, and also with el-Muzeirib in the Hauran Plain.

Bibliography. G. Schumacher, *Across the Jordan* (1889), pp. 157-66; F.-M. Abel, *Les livres des Maccabées* (1949), pp. 435-36.
E. W. SAUNDERS

CASSIA kăsh'ə [קדה, *qiddâ;* קציעות, *qᵉṣî'ôth;* κασία; κιννάμωμον (Ecclus. 24:15; KJV CINNAMON)]. The aromatic bark of an oriental tree. Some scholars claim the two Hebrew words refer to different aromatic substances, but the evidence for identification is very meager and inconclusive.

In Exod. 30:24, *qiddâ* refers to an ingredient of the holy anointing oil, and in Ezek. 27:19 it is a product of trade with Tyre. In Ps. 45:8—H 45:9, *qᵉṣî'ôth* is mentioned along with MYRRH and ALOES in describing the fragrance of the royal robes. The latter word is used for one of Job's fair daughters, KEZIAH (Job 42:14). The copper scroll from Qumran Cave 3 by the Dead Sea mentions a "vessel of incense in cassia wood" (XI.1-4).

CASTANETS. *See* MUSICAL INSTRUMENTS.

CASTLE. The translation of two words in the RSV and of several others in the KJV. In Neh. 7:2 the title "governor of the castle" (בירה; KJV PALACE) may be parallel to "ruler/governor of the city" in Judg. 9:30; I Kings 22:26; II Kings 23:8, although some have seen here a reference to the temple, since בירה is used of the temple complex in I Chr. 29:1, 19, and the Vulg. reads "house." Hananiah (=Hanani, brother of Nehemiah?) was "governor of the castle." In Prov. 18:19 quarreling is likened to the bars of a castle (ארמון; but "castle" is uncertain here, and the RSV elsewhere often translates the word "palace" but most often "stronghold" and twice "citadel"). "Castle" occurs in the KJV nine times in the OT, translating six different words, and six times in the NT for παρεμβολή (RSV "barracks").

Castles and strongholds of many kinds existed, "from watch tower to fortified city" (II Kings 17:9; 18:8). *See* CITY § B2*b*.

An archaeological example of a "castle" is the little fortress of Saul, rude but strong for its time and place, excavated at Gibeah (Tell el-Ful). The Herodian "castle of ANTONIA" (παρεμβολή; Acts 21:34, etc.; RSV BARRACKS) is another. Dating from the beginning of the Hellenistic period, the ruins of the barbarous but picturesque Hyrcanium of 'Araq el-Emir in Transjordan, the *Bîrtâ* of the Tobiad fam-

ily and the Zenon Papyri, still survives on its lonely mountain. C. C. McCown

CAT [ἄιλουρος; *postbiblical* Heb. חתול, שונרא; *cf.* Arab. *sinnaur;* Syr. *šnartâ*]. A domesticated carnivorous mammal, *felis domesticus,* belonging to the family Felidae.

Courtesy of the University Museum of the University of Pennsylvania

18. Bronze statue of a cat, from the Twenty-second Dynasty or later

Relevé de Robichon. From *Histoire générale des Religions,* Quillet éd., Paris

19. A cat kills the serpent Apophis with a knife, from a Theban painting.

The absence of references to the cat in both the OT and the NT doubtless reflects the fact that the cat was not commonly known or kept as a pet in Western Asia in the biblical period. The Apoc. (Letter of Jeremiah 22—G 21) gives us the earliest Jewish reference to this animal. The cat, which was known to Greek zoologists (e.g., Aristotle *History of Animals* V.2; VI.35; IX.6), was probably first domesticated in Egypt, where, like certain other animals, it had a place in the religious practices of that country; e.g., Bastet, a cat-goddess, was the tutelary deity of Bubastis, and cats were sacred to her.* The cat was also closely associated with the sun-god Rē' (Fig. CAT 19). This Egyptian reverence for cats, which was recognized by Herodotus (II.66-67), Strabo (XVII.1.40), and Cicero (Tusc. Disp. V.27), may have been a factor in retarding the acceptance of these animals as pets by the non-Egyptian world. Fig. CAT 18. W. S. McCullough

CATARACT [צנור] (Ps. 42:7—H 42:8); KJV WATERSPOUT. Alternately: WATER SHAFT (II Sam. 5:8); KJV GUTTER. Possibly an allusion to the waterfalls at et-Tannur on the most westerly source of the Jordan; or to Nahr Banias, the most easterly source of the Jordan, which bursts noisily forth from a cave at the foot of Mount Hermon. On the other hand, the context might also suggest an allusion to the waters of the underworld.

H. G. May

CATERPILLAR [חסיל; *cf.* Jew. Aram. חסל, *Pael, Aphel,* to peel off, finish; KJV ילק, *see* Cankerworm]; KJV CATERPILLER. Alternately: DESTROYING LOCUST (Joel 1:4); DESTROYER (Joel 2:25). The wormlike larva of a butterfly, moth, and sometimes of other insects.

Although the LXX generally takes חסיל, *ḥāsîl,* as ἐρυσίβη ("rust on grain"), Ps. 78:46; Joel 1:4; 2:25 favor a locust, probably in an immature state. Koehler (*Lexicon,* p. 319) suggests "cockroach," but there is no evidence that cockroaches were ever a destructive pest, as the biblical references demand. *See also* Locust; Fauna § F2. W. S. McCullough

CATHOLIC LETTERS. The traditional designation of the group of documents in the NT which is composed of James; I and II Peter; I, II, and III John; and Jude (*see also* Canon, NT).

"Catholic" in English is derived from the Greek word *katholikos,* meaning "general." Church writers during the first four centuries used this term to designate the church throughout the world in distinction from churches in local communities. Cyril of Jerusalem (*ca.* A.D. 348) explicitly so defined it. Speaking of the church (Catechetical Lectures XVIII.23), he wrote: "It is called Catholic because it extends over all the world . . . and because it teaches universally and completely one and all the doctrines which ought to come to men's knowledge . . . and because it brings into subjection to godliness the whole race of mankind . . . and because it universally treats and heals the whole class of sins which are committed by soul or body." The church is, in other words, called "Catholic" by Cyril because it is world wide, because of the universality and completeness of its doctrinal

teaching, because its evangelism encompasses the needs of all men, and because its remedies are effective for all the sins men commit.

Cyril's understanding of the term as meaning simply "universal" was generally accepted throughout the East during the first four centuries. Applied to certain non-Pauline letters, it described them as encyclical in character. Such letters were intended for the attention of Christendom in distinction from Paul's letters, each of which had a local address. So used, the term carried no suggestion of church-wide recognition of the letters.

In the West, especially in the usage of Augustine, "catholic" developed a theological meaning (*Letters of Petilian, the Donatist,* II.37.89; II.38.90; *City of God* XVIII.51). It distinguished the church in its unity from dissident, splinter groups, and the orthodoxy of the church's teaching from the heresy of dissenters. Applied to the letters under discussion, it designated them as worthy of inclusion in the canon of the NT because of their doctrinal soundness. Since the Middle Ages, "catholic" has generally been used in the sense of universal or general in distinction from local.

As early as the second century, "catholic" was used to describe individual letters. It was so used by Apollonius, Dionysius of Alexandria, and Origen. The earliest known instance of such use is by Apollonius (*ca.* 197), who says that the Montanist heretic Themiso, "aping the Apostle, dared to compose a 'Catholic epistle,' and therein to instruct those whose faith surpassed his" (Euseb. Hist. V.18.5). Similarly, Dionysius (*ca.* 200) is quoted as having described I John as "catholic" in distinguishing it from II and III John, apparently regarded as personal and local (Euseb. Hist. VII.25.7-10). Origen (*ca.* 250) also used "catholic" to designate I Peter (Commentary on John VI.18).

In the fourth century Eusebius applied "catholic" to the group of seven non-Pauline letters in the NT, noting that most of them were "disputed" (Euseb. Hist. II.23; III.25.1-3). He says, further, that Clement of Alexandria, in the *Hypotyposes,* gave "concise explanations of all the canonical scriptures, not passing over even the disputed writings," by which he meant "the Epistle of Jude and the remaining Catholic Epistles, and the Epistle of Barnabas and the Apocalypse known as Peter's" (VI.14.1; cf. II.23).

The gradual and relatively late acceptance of the seven letters in the church indicates rather clearly that they belonged to a time subsequent to Paul's career and to the publication of his letters as a corpus. Paul's letters, e.g., were approaching recognition as scripture when II Peter was written (cf. 3:15-16).

The Muratorian Canon, representing opinion at Rome *ca.* A.D. 200, includes, of the seven, only Jude and I and II John. Reflecting opinion in the East (*ca.* 250), Origen lists among the universally accepted writings I Peter and I John, noting that II Peter, II and III John, James, and Jude were strongly opposed by many, though he himself valued them highly and regarded them as canonical. The "Cheltenham List," believed to represent opinion in North Africa *ca.* 360, omits any mention of James and Jude, and indicates that only I John and I Peter of the remaining five enjoyed full recognition. The Teaching of Addai (*ca.* 350) and the Sinaitic Syriac list of *ca.* 400, reflecting opinion in Syria, make no mention of the seven Catholics. The Peshitta Version of *ca.* 425, however, lists James, I Peter, and I John.

The seven letters were included in the canon list of Codex Claromontanus, reflecting usage in Egypt *ca.* 300; in codices Sinaiticus and Vaticanus, representing the middle of the fourth century; in Athanasius' thirty-ninth Festal Letter (367), the list of Jerome (fifty-third Letter, *ca.* 394), the Codex Alexandrinus (fifth century), and the list of Augustine, who died in 430 (*On Christian Doctrine* II.8.13).

Location of the Catholic letters varies in the MSS and versions. Sometimes, with Acts, they follow Paul's letters, sometimes standing between Acts and Paul's letters. In the canon list of Codex Claromontanus they follow Paul's letters, with Acts coming after Revelation. In Eusebius' list, the order is Acts, letters of Paul, I John and I Peter, with the remaining Catholics listed after Revelation with the "disputed" books. They follow Paul's letters in the list of Gregory of Nazianzus, the PESHITTA, and the list of Augustine (Acts following the letters). They appear immediately after Acts in Codex Sinaiticus, the list of Jerome (where Acts and the Catholics follow Paul's letters), Athanasius, and Codex Alexandrinus.

A. E. BARNETT

CATHUA kə thōō'ə [Κουά (B), Καθουα (A)] (I Esd. 5:30). Head of a family of temple servants who returned with Zerubbabel. His name is omitted in the parallels Ezra 2:47; Neh. 7:49.

C. T. FRITSCH

CATTLE [אלוף (Ps. 144:14), *cf.* אלפים, oxen, *and see* Ox; בהמה, *cf.* Arab. *bahîmah*, beast, quadruped, *and bahmah,* young animal; בעיר, *cf.* Arab. *ba'r,* dung, *and ba'îr,* camel; בקר, *see* Ox; מלאכה (Gen. 33:14; *cf.* I Sam. 15:9), occupation, work, *cf.* Phoen. מלאכת, work; מקנה, *from* קנה, get, acquire, *cf.* Akkad. *qanû,* gain, obtain, *and* Phoen. מקנא, property in cattle; שור (Isa. 7:25), *see* Ox; KJV צאן (Gen. 30:39–31:43; Eccl. 2:7; RSV "flocks"), flock(s) of sheep and/or goats, *cf.* Akkad. *ṣêni,* small cattle, *and* Ugar. *ṣin,* sheep and goats; שה (Gen. 30:32, etc.; RSV "sheep"), sheep, *cf.* Akkad. *šu'u,* sheep, *and* Phoen. ש, sheep; θρέμμα (John 4:12), nursling, creature, *from* τρέφω, bring up, rear; κτῆνος (Rev. 18:13), a domestic animal, *mostly plural, from* κτάομαι, get, acquire]; FATLINGS [מריא (I Kings 1:9, 19, 25; KJV FAT CATTLE), fat one, *cf.* Akkad. *marā'u* III, 1, make fat, *and marû* (*adjective*), fat]. Domesticated bovine animals; in biblical usage often including sheep and goats and sometimes other animals.

"Cattle" may designate both wild and domesticated animals (Gen. 7:23 KJV; RSV "animals"); it seems sometimes to mean larger animals (oxen, asses), as distinct from flocks of sheep and goats (Num. 31:9), and it frequently means members of the ox family (Num. 31:9, 33, 44; I Kings 1:9, 19, 25; Ps. 144:14; Isa. 7:25; etc.). More commonly it refers to all the domesticated animals (Gen. 1:24; 2:20; 33:14; Num. 20:4, 8, 11; Ps. 50:10; John 4:12; etc.), specifically to oxen, sheep, and goats (Gen. 13:2-7; 46:32; Num. 7:87-88); to horses, sheep, goats, oxen, and asses (Gen.

47:16-17; to camels, as well, in Exod. 9:3; cf. I Chr. 5:21). On the other hand, it may mean only sheep and goats (Gen. 30:39–31:43; Eccl. 2:7 KJV). The KJV translates שה as "cattle" or "lesser [or 'small'] cattle" in Gen. 30:32; Isa. 7:25; 43:23; Ezek. 34:17, 20, 22, but the RSV uses "sheep."

Cattle, whose lowing is mentioned in Jer. 9:10, ordinarily eat the grass of the field (Deut. 11:15; Josh. 21:2; I Kings 4:23—H 5:3; Ps. 104:14; Isa. 30:23), but some are kept in stalls (II Chr. 32:28). The temptation of bestiality is warned against in Exod. 22:19—H 22:18. The view that all cattle are rather stupid is reflected in Bildad's question in Job 18:3. Different species of cattle must not interbreed (Lev. 19:19). All of them are subject to the law of firstlings (Exod. 13:12), and they are to enjoy the benefit of the sabbath rest (Exod. 20:10). Like all the other animals, cattle are divided into clean and unclean, and only the former can serve as food and as sacrificial victims (Lev. 5:2; 11:1-8). The possession of much livestock is the mark of position and wealth (Gen. 13:2; I Sam. 25:2; Job 1:3; etc.). Cattle are liable to taxation or even to confiscation by a foreign overlord (Neh. 9:37), and may become part of the booty of war (Josh. 8:2; Jer. 49:32).

See also FAUNA § A1*d*i. W. S. McCULLOUGH

CAUDA kô′də [Καῦδα]; KJV CLAUDA klô′— (Acts 27:16). A small island S of Crete; the modern Gaudos or Gozzo. It was skirted by Paul's ship en route to Rome. Sailing along the S coast of Crete in search of a proper wintering place, perhaps after rounding Cape Matala, and being driven S below Cauda, Paul and his companions, struck by a NE wind, were forced to jettison their cargo (tackle?) and prepare the ship for the tempest.

The oldest MSS divide between two spellings of the island's name; א joins B and the Vulg. by altering Κλαῦδα to Καῦδα. Latin writers appear to prefer *Gaudus* (cf. Pliny Nat. Hist. IV.12), while Greek authors use the form Κλαῦδα.

Bibliography. R. Richard, "Navigations de S. Paul," *Études Religieuses,* LXIV (1927), 448-65; F. J. Foakes-Jackson and K. Lake, *The Beginnings of Christianity,* IV (1933), 322.

E. W. SAUNDERS

CAUL. KJV translation of יתרת (RSV "appendage") in Exod. 29:13, denoting the fatty mass which surrounds the liver; and סגור (*see* KIDNEY) in Hos. 13:8 (cf. RSV), referring to the pericardium.

CAULKERS [מחזיקי בדקך, RSV caulking your seams (Ezek. 27:9), your caulkers (Ezek. 27:27)]; KJV CALKERS. Those who drive some suitable substance (such as oakum) into the seams of a ship's planking to render them watertight.

The Hebrew phrase means "those who make strong (or repair) your (i.e., Tyre's) fissure (or rent)," and as the context is a nautical one, the reference could be to ships' carpenters or to shipwrights. It is usually assumed, however, that the allusion is specifically to caulkers.

Prior to the Hellenistic age the material generally used for caulking ships in the Near East appears to have been bitumen, which was usually mixed for this purpose with other substances to form a mastic (to be distinguished from gum mastic). The bitumen would likely have come from Mesopotamia, where it was obtained from open seepages, the most important being near the town of Hit, NW of Babylon (cf. כפר, *kōpher,* "pitch," in Gen. 6:14, probably from Akkadian *kupru,* "asphalt"). *See also* SHIPS AND SAILING.

Bibliography. C. Singer, E. J. Holmyard, A. R. Hall, eds., *A History of Technology* (1954), I, 250-56.

W. S. McCULLOUGH

CAVALRY [ἱππικός]. A term occurring only in Rev. 9:16, where it refers to troops, "twice ten thousand times ten thousand" in number, which appeared when the four angels bound at the Euphrates River were released. They are part of the apocalyptic vision of destruction which the seer describes. The number rests ultimately on Ps. 68:17. Their number was "heard," frightening in its enormity; and a third of mankind was killed.

Demonic steeds occur prominently in chs. 6; 9 of Revelation as the bearers of destruction; and in ch. 19 white horses appear on which the armies of heaven ride, and especially the Messiah, who is called "Faithful and True."

B. H. THROCKMORTON, JR.

CAVE. Natural and artificial caves are numerous in the limestone and sandstone hills of Palestine and the E Jordan area and are frequently mentioned in the Bible as places of residence, refuge, and burial. *See* PALESTINE, GEOLOGY OF; ADULLAM; MACHPELAH; MAKKEDAH.

The Hebrew word most commonly translated "cave" is מערה (Gen. 19:30; 23:9; Josh. 10:16; Judg. 6:2; I Sam. 13:6; etc.). Less frequently the following words are used and have reference to various types or sizes of caves: חרים (KJV "caves"; RSV "holes"; Job 30:6), מחלות (KJV "caves"; RSV "holes"; Isa. 2:19), נקרות (KJV "clefts"; RSV "caverns"; Isa. 2:21), חגוים ("clefts"; Song of S. 2:14; Jer. 49:16; Obad. 3), ארב (KJV "dens"; RSV "lairs"; Job 37:8), מעונות ("dens"; Job 38:40; Ps. 104:22; Song of S. 4:8; Nah. 2:12), סכה (KJV "den"; RSV "covert"; Ps. 10:9). Because robbers often used caves in the mountains as their headquarters, the figure of speech "den of robbers" (מערת פרצים, σπήλαιον ληστων), when applied to the Jerusalem temple, is to be understood as implying a cave where evil deeds are planned (Jer. 7:11; cf. Matt. 21:13; Mark 11:17; Luke 19:46). The den of lions (גב ארותא) in the sixth chapter of Daniel may have been a type of artificial cave, although the Jewish writer seems to have thought of it as a cistern or pit. A cave was often used as a CISTERN or PIT and as a place of confinement and for the storage of water.

Three references in the NT to caves allude to them as a place of burial (σπήλαιον, the tomb of Lazarus [John 11:38]) and as places of refuge in times of persecution and distress (σπήλαιον, ὀπή [Heb. 11:38]; σπήλαιον [Rev. 6:15]).

Caves are mentioned most frequently in the OT in connection with the early settlement of the land of Canaan. According to Gen. 19:30, Lot dwelt in a cave with his two daughters because he was afraid to live in Zoar. The famous cave of Mach-pelah, which is usually identified with the grotto beneath the

mosque at Hebron, was purchased by Abraham (Gen. 23:11-16) for use as a sepulchre for Sarah (vs. 19). Tradition identifies the same cave as his tomb (Gen. 25:9), as well as that of Isaac, Rebekah and Leah (Gen. 49:30-31), and Jacob (Gen. 50:13). The cave at Makkedah was used as a place of refuge by the five Canaanite kings following their defeat at the hands of Joshua, and it became their tomb when their bodies were placed inside and great stones were set against the entrance (Josh. 10:17-27).

The Israelites were forced to use caves as places of refuge during times of oppression by the Midianites (Judg. 6:2) and by the Philistines (I Sam. 13:6). David escaped from the wrath of Saul by fleeing to the cave of Adullam (I Sam. 22:1), and Elijah fled to a cave in Mount Horeb when his life was threatened by Jezebel (I Kings 19:9). Caves in the Mount Carmel region were used by Obadiah to conceal one hundred prophets who would otherwise have been put to death by Jezebel (I Kings 18:4, 13).

Thousands of caves have been discovered as a result of archaeological exploration, and the excavation of many that were occupied in ancient times has supplied much valuable information concerning their use as places of residence, worship, and burial. The excavation of large caves, such as those located between Bethlehem and the Dead Sea, and on Mount Carmel, has demonstrated that occupation in some cases extended from the Stone Age to the present, when they are used by shepherds and their flocks. Natural and artificial caves used as tombs have been found in the vicinity of many biblical cities such as Gezer, Beth-shemesh, Jerusalem, Beth-shean, Megiddo, and Dibon.* The culture of prehistoric man in Palestine has become increasingly clear as a result of the excavations of caves at Mugharet ez-Zuttiyeh, home of the "Galilee man," NW of the Sea of Galilee; at Wadi en-Natuf, NW of Jerusalem; at Wadi Khareitun, E of Bethlehem; at Wadi el-Mugharah (*see* MUGHARAH, WADI EL), S of Haifa on the Mount Carmel range; and at Tell Abu Matar, near Beer-sheba. Fig. BUR 56.

20. Two caves at Al Murabba'at

Among the caves which date from later periods are those at Wadi Murabba'at, W of the Dead Sea, occupied as early as the Chalcolithic period but also as a refuge for Jewish soldiers in the time of Bar Cocheba,* and those in the vicinity of Khirbet Qumran near the NW shore of the Dead Sea, where the famous DEAD SEA SCROLLS were stored. The Edomites (*see* EDOM) and the NABATEANS made use of the caves at Petra in Mount Seir, where the biblical Horites (Gen. 14:6) and the descendants of Esau (Deut. 2:12) once lived. Fig. CAV 20.

Muslim and Christian shrines have been erected over ancient caves in such places as Jerusalem, Bethlehem, Hebron, and Nazareth, although their identification with biblical sites remains uncertain because of the absence of archaeological data.

CEDAR [אֶרֶז, *'erez;* Ugar. *arz;* κέδρος]. The mountains of Lebanon provided the major source of cedar in Bible times; thus David and Solomon imported huge quantities (II Sam. 5:11; 7:2, 7; I Kings 5-7; I Chr. 14:1; 17:1, 6; 22:4; II Chr. 2). The logs were floated down from the coast of Lebanon to Joppa as large rafts. One of Solomon's buildings was called the HOUSE OF THE FOREST OF LEBANON because of its three rows of fifteen cedar pillars (I Kings 7:2-5). In addition to pillars, cedar was used for roofing (vs. 7), supporting beams (vs. 2), ceilings (6:9), paneling 6:15), and even for carved work (vs. 18). Solomon "made cedar as plentiful as the sycamore of the Shephelah" (I Kings 10:27). Ship masts were made from it (Ezek. 27:5).

The cedar is frequently used as a symbol of strength (Ps. 29:5; 37:35; Isa. 2:13; 9:10; Zech. 11:2; etc.), of splendor (Song of S. 1:17; Jer. 22:14; etc.), and of glory (Ps. 80:10; Jer. 22:7; Zech. 11:1; etc.), often with a reference to Lebanon. The figure of the cedar in Ezek. 31 probably has mythological significance (cf. *IB,* VI, 233-38).

The reference in the oracle of Balaam (Num. 24: 6) is difficult, since cedars do not grow by water. The poetic imagery here would not seem to demand ecological accuracy, but a transposition of this word with *'ahālîm* (ALOES?) in the previous stichos may account for the inconsistency. Cedar wood, together with HYSSOP and "SCARLET stuff," was used in the LEPROSY purification rite (Lev. 14:4-6, 49-52), and was associated with the RED HEIFER rite (Num. 19: 6). Many botanists claim these references must be to a different cedar wood, such as *Sabina phoenicia* (L.) Antoine, since the context involves the Sinai Desert during the wilderness wanderings. More likely, it is a priestly anachronism representing post-Solomonic cultic practices in which Lebanon cedar was used as a symbol of longevity (cf. *IB,* II, 235).

CEDARS OF LEBANON lĕb'ə nən. *See* CEDAR.

CEDRON. KJV form of KEDRON; KIDRON.

CEILAN. KJV form of KILAN.

CEILING [סְפִן; *verbal form means* cover *or* panel]; KJV CIELING. Used only in the description of Solomon's temple (I Kings 6:9, 15). *See* HOUSE; PANEL; ARCHITECTURE.

CELESTIAL BODIES [σώματα ἐπουράνια] (I Cor. 15:40). Paul refers to "celestial," or "heavenly," bodies as different from "terrestrial," or "earthly," bodies. By "celestial bodies" he refers to the sun, moon, and stars, which, like his Hellenistic contemporaries, he understands as beings clothed in bodies of light—different from the matter, or substance, of which earthly bodies are made.

See also TERRESTRIAL BODIES; RESURRECTION IN THE NT. B. H. THROCKMORTON, JR.

CELIBACY. Votive abstention from marriage—unknown in the Bible unless alluded to in Matt. 19:12; I Cor. 7:8. *See* MARRIAGE § 5; *also* ESSENES § 4*b*.

CELLAR [אוֹצָר, *from* אצר, store up; Aram. אוצרא; κρυπτή, *from* κρυπτώ, conceal (Luke 11:33; KJV SECRET PLACE)]. The Hebrew word, generally translated TREASURE, TREASURY, is translated "cellar" in only one passage, where it refers to stores of wine or oil (I Chr. 27:27-28). The cellar, or room below the ground level, was not common in Palestine. *See* HOUSE. O. R. SELLERS

CELOSYRIA. KJV Apoc. form of COELE-SYRIA.

***CENCHREAE** sĕng'krə ē [αἱ Κεγχρεαί, αἱ Κενχρεαί] (Acts 18:18; Rom. 16:1); KJV CENCHREA —krī ə. The seaport seven miles E of Corinth on the Saronic Gulf or Gulf of Aegina.

The place is first mentioned by Thucydides (IV. 42) in connection with the attack of the Athenians under Nicias upon CORINTH in 425 B.C. It is described by Strabo (VIII.369, 380) as a village and a harbor *ca.* seventy stadia from Corinth, the easterly naval station of the Corinthians, and the port used for trade from Asia. Pausanias (II.ii.3) says it was named from Cenchreas, son of Poseidon and Peirene. In the time of Pausanias (second century A.D.) there was a temple of Aphrodite at one side of the harbor, sanctuaries of Asklepios and Isis at the other, and a bronze image of Poseidon on a mole which ran out into the sea. Ancient ruins at the site include buildings and moles. The present village in the vicinity is called Kechriais.

Bibliography. Bölte, "Kenchreai," *Pauly-Wissowa,* vol. XI, pt. i (1921), cols. 167-70. J. FINEGAN

CENDEBEUS sĕn'də bē'əs [Κενδεβαῖος]. Chief commander of the coastal country, appointed by King Antiochus to battle against Judea. The name may be derived from the city of Kanduba in Lycia. Cendebeus came to Jamnia and made incursions into Judea. He also built up Kedron (Gederoth in Josh. 15:41; Katra) to conduct raids against Judea. John Hyrcanus reported to Simon, his father, who sent him and his brother Judas to battle against Cendebeus.

John spent the night in Modin and then crossed into the plain where he saw Cendebeus' army. He crossed the mountain brook that separated them and with his army put Cendebeus to flight. He then pursued them to Kedron and burned the towers of Ashdod, whither some had fled. After this victory John Hyrcanus returned to Judea in peace (I Macc. 15:38; 16:1).

Bibliography. S. Tedesche and S. Zeitlin, *I Maccabees* (1950), p. 238. S. B. HOENIG

CENSER [מחתה, *from* חתה, to carry (rake) fire; מקטרת, *from* קטר, to smoke (II Chr. 26:19; Ezek. 8:11); מחלף (KJV KNIFE; Ezra 1:9); λιβανωτός (Rev. 8:3); KJV θυμιατήριον (RSV "incense altar"; Heb. 9:4)]. A portable ladle or shovel-like device for carrying live coals, etc., and for burning INCENSE. The word מחתה is variously translated "FIREPAN," "tray" (KJV "snuffdish"; *see* SNUFFERS), or "censer."

The implements of temple and tabernacle included shallow, open-topped pans of bronze (Exod. 27:3) or gold (I Kings 7:50) used for carrying live coals from the altar. They were somewhat similar to the dishes for incense (*see* INCENSE, DISHES FOR). When incense was placed on the sacred fire in these pans, they functioned as censers (Lev. 10:1; Num. 16:6). The double function appears also in Rev. 8:3, 5, where the angel uses his censer both to burn frankincense and to cast fire on the earth. The accounts of Korah's rebellion against Moses (Num. 16), Uzziah's affliction with leprosy (II Chr. 26:19), and Ezekiel's vision

of abominations in the temple (Ezek. 8:11) show that the right to use the censer in the temple worship was a zealously guarded prerogative of the Aaronic priesthood. The censer appears as a necessary implement in the purification ritual of the Day of Atonement. *See* ATONEMENT. L. E. TOOMBS

CENSUS. The enumeration or enrollment of a people, among the Hebrews according to tribe, family, and lineage (Num. 1:18; Luke 2:4), for various purposes, including taxation (Exod. 30:13-16; Num. 3: 40-51; Luke 2:1-5; cf. Jos. Antiq. XVIII.i.1), determining man power for war (Num. 1:3; 26:2; II Sam. 24:9), and allotting the work of Levites in cultic service (Num. 3:4).

In Hebrew the nouns most frequently used to mean "census" are פקדים (Exod. 30:14; Num. 1:21; 26:9) and מספר (Num. 1:22; 26:53; II Sam. 24:2; I Chr. 21:2). מפקד also appears (II Sam. 24:9; I Chr. 21:5). The verbs used include פקד, ספר, and מנה (II Sam. 24:1; I Chr. 21:1). The use of the periphrastic idiom (שאו את ראש, "lift up each head") seems to be limited to the initial divine command to take the census (Exod. 30:12; Num. 1:2, 49; 26:2).

In Greek the noun used is ἀπογραφή (Luke 2:1-5; Acts 5:37), meaning "enrollment" or "taxation."

An official census of all Israelites of military age was taken on three occasions, according to biblical tradition:

a) The first was effected at Mount Sinai in the second month during the second year after the exodus from Egypt. Of males twenty years old and over, able to bear arms, there were 603,550 (Num. 1:46; 11:21), not counting the Levites (Num. 1:47-54). The Levites one month old and over were counted separately and numbered 22,000 (Num. 3: 15, 39). The Levites were then to be the Lord's in the place of all the first-born males of all Israel, who at the time numbered 22,273 (Num. 3:43). A further numbering took place of all males from thirty years of age to fifty, of the sons of Korab, Gershom, and Merari, who "could enter the service, for work in the tent of meeting." These totaled 8,580 (Num. 4:34-49).

b) At Shittim in Moab, according to biblical tradition, another census was taken at the close of the forty years of wandering. Of men twenty years of age and over, able to bear arms, there were 601,730 (Num. 26:2, 51). The Levites were again counted separately. Of male Levites one month old and over, there were 23,000 (Num. 26:62).

c) Near the end of David's reign another census was taken. David commanded Joab and the military commanders to number all Israel from Dan to Beersheba. The report of Joab, according to II Sam. 24:9, was 800,000 men of military availability in Israel and 500,000 in Judah. According to I Chr. 21:5, the report was 1,100,000 in Israel and in Judah 470,000. In both accounts Joab vainly tries to dissuade David from his intention, and in both the Lord sends a pestilence upon Israel as punishment for the folly and sin of counting heads. Josephus indicates that David's mistake was in disregarding the method for census taking prescribed in Exod. 30:11-16, which was that of levying a half-shekel tax from each person of age (Antiq. VII.xiii.1). Such a method had the advantage of evading the ancient taboo of counting heads. While the account in II Samuel does not specify, the Chronicler suggests that the Levites were again counted separately, those thirty years of age and over numbering 38,000 (I Chr. 23:3).

Interesting in a comparison of these two accounts are two major discrepancies. In II Sam. 24 it is said both that the Lord incited David to take the census and that he subsequently punished him for having done so. In I Chr. 21 it is said that Satan enticed David. (For the history of the name Satan and its meaning here, *see* SATAN.) The second discrepancy, that of the variance in Joab's report, is nothing short of intriguing.

The suggestion has been made that the figures used in Num. 1; 26 are basically the same as those appearing in conjunction with the Davidic census. That these figures, 603,550 (Num. 1) and 601,730 (Num. 26), reflect the Davidic census but were placed by the priestly editors back in the time of Moses, is not difficult to understand. II Sam. 24:9 gives a total of 1,300,000, and I Chr. 21:5 gives a total of 1,570,000 for both Israel and Judah. The same basic and original figures were used in each case, approximately what is given in Num. 1; 26, but through the confusion of whether Israel meant all the tribes or the N ones only, and through the normal tendency of later scribes to be victims of their own point of view, unwarranted mathematical additions and sums were compounded. Thus, the figures largely accurate for the Davidic census were relegated to the desert period (Num. 1; 26), and the larger figures, approximately double the original, were assumed for the time of David.

Another suggestion is that gematria was used to arrive at the figure in Num. 1:46, for the numerical value of the letters in בני ישראל ("sons of Israel") is 603, giving rise to the 603,550 recorded. Be this as it may, it may still be close to the original figure of the Davidic census as noted above.

A more recent suggestion (*see bibliography*) envisages the census report of Num. 1; 26 as reflecting the strength of the tribes of Israel early in the period of the judges.

An enumeration of the exiles who returned to Jerusalem with Zerubbabel is recorded in Ezra 2.

In the NT the enrollment under Augustus during the governorship of QUIRINIUS in Syria is noted in Luke 2:1-5 (cf. Acts 5:37). This census is related in Luke to the date and place of Jesus' birth.

CENTURION sĕn tyo͝or′ĭ ən, —to͝or′— [κεντυρίων (Mark 15:39, 44-55), *also* κεντορίων, κεντουρίων; ἑκατόνταρχος; Lat. *centurio*]. The commanding officer of a "century," nominally a hundred foot soldiers, in the Roman army. There were ten centurions in a cohort and sixty in a legion. The number of centurions in the legion seems to have remained the same, even when the number of legionary soldiers increased or decreased beyond the usual six thousand. Fig. CEN 22.

Although theoretically the centurions were sub-

ordinate to the six legionary tribunes, and often deferred to them (Acts 22:26), yet the centurions were the actual working officers, the backbone of the army. The discipline and efficiency of the legion as a fighting unit depended on them. Polybius well describes the type: "Centurions are required not to be bold and adventurous so much as good leaders, of steady and prudent mind, not prone to take the offensive or start fighting wantonly, but able when overwhelmed and hard-pressed to stand fast and die at their post" (*History* VI.24).

22. A Roman centurion, from the Arch of Titus

Career men, the centurions were often the most experienced and best-informed men in the army. The office was the highest to which the ordinary soldier might aspire. Frequently chosen from the ranks, he may also have been a member of the equestrian order who, through insufficiency of means or failure to advance, was resigned to accept a centurion's commission, or from a class whose property qualification was below that of the equestrian order, or from town magistrates who in this way secured full Roman citizenship, or from veterans recalled to the service.

The centurion might be promoted, slowly or rapidly, as the case might be, in an ascending scale of responsibility, from cohort to cohort, even from legion to legion, until he might become the senior centurion, the *primus pilus,* of the first of the ten cohorts in the legion, thus occupying a position of very high importance. This system of promotion by transfer, in addition to facilitating the impress of the Roman stamp on the troops (even when the troops were recruited locally, the officers would most frequently be Romans) and preventing undue fraternization with their men, provided varied experience and wide acquaintance with the Empire, and must have made for an intelligent corps of officers.

The duties of the centurion were various. First, he was responsible for discipline; hence, his vine-staff (*vitis*) emblem, which he knew how to use on the backs of his men. This would include supervision of scourging and the execution of capital penalties (Tac. Ann. 1.6; 16.9; etc.; Matt. 27:54; Mark 15:39, 44-45; Luke 23:47). Then there was responsibility for drill, inspection of arms, quartermaster's duties, and command in camp and field. He assigned detail to his men, and might be bribed to the point of exacting tribute and thus greatly augmenting his already considerable pay.

He himself might be detailed for command of the auxiliaries, or for a variety of special tasks, such as those assigned to Cornelius and Julius in Acts—tasks which would seem to have separated them temporarily from their legions or from the main body of troops to which they were attached.

In addition to the prestige associated with the office, the high pay and generous bonus granted on discharge made the prospect of becoming *primus pilus* very attractive to the ambitious soldier. Often such officers remained in the army much longer than the required twenty years.

Usually after discharge, the centurion went back into private life; yet some became legionary tribunes, prefects of a cohort, or procurators, even the prefect of the praetorian guard.

The importance of centurions in the Roman army and in the life of the Empire is accurately reflected in the fact that they figure more frequently in the NT than does any other army officer. Likewise, the respect which accrues to their office is reflected in the fact that in Matthew (8:5 ff) and Luke (7:2 ff) the first Gentile to confront Jesus is a centurion. He is carefully described as a person of note: he has slaves; he is wealthy; he "loves" the Jewish "nation," and built the synagogue; and although he has soldiers under him who are abjectly obedient, yet he humbles himself before Jesus, declaring himself unworthy to have Jesus come "under his roof." Further, the centurion in charge of the Crucifixion is the first Gentile to make the Christian witness that Jesus is Son of God (Matt. 27:54; Mark 15:39). In Acts the conversion of the centurion CORNELIUS (second in importance only to Paul's conversion) is important enough in the plan of Acts to be called the Gentile Pentecost. And finally, Paul is "delivered . . . to a centurion" for safe conduct to Rome (Acts 27:1).

Bibliography. M. P. Nilsson, *Imperial Rome* (1926), pp. 302-4; H. M. D. Parker, *The Roman Legions* (1928), pp. 30-32, 196-205, 235-36; *Oxford Classical Dictionary* (1949), p. 180.

CEPHAS sē'fəs [Κηφᾶς]. *See* PETER.

CEREAL OFFERING. *See* SACRIFICE AND OFFERINGS § A2*b*.

CEREALS. *See* SACRIFICE AND OFFERINGS § A2*b;* FLORA § A1; GRAIN.

CEREMONIAL LAW. Law concerned primarily with the festivals and cultic practices of Israel. *See* LAW IN THE OT; PRIESTS AND LEVITES; WORSHIP IN THE OT; SACRIFICE AND OFFERINGS; FEASTS AND FASTS.

CERINTHUS sə rĭn'thəs [Κήρινθος]. An early Gnostic active in W Asia Minor *ca.* A.D. 100. With Simon Magus he is listed in the Epistle of the Apostles (*see* APOSTLES, EPISTLE OF) as one of the two "false apostles, concerning whom it is written that no man shall cleave unto them." Irenaeus (Her. I.26) states that Cerinthus was educated in the wisdom of the Egyptians; that he taught that the world was not made by the primary God but by a certain power far separated from him; that Jesus was the natural son of Joseph and Mary, though more righteous, prudent, and wise than other men; that at his baptism there descended upon him the Christ in the likeness of a dove, endowing him with miraculous power; that at his death the Christ departed from him, and that then Jesus suffered and rose again, while the Christ remained impassible, since he was a spiritual being.

Epiphanius (Her. XXXVIII) turns him—Gnostic views and all—into a Jewish Christian heretic, at first the archopponent of Paul, later of John. This would appear his own irresponsible fabrication, due in no small part to the fact that in Irenaeus (his chief source of information) the brief account of Cerinthus is followed by that of "those who are called Ebionites . . . whose opinions with respect to the Lord are similar to those of Cerinthus and Carpocrates," and because in this account Cerinthus' reported views of Jesus' origin were definitely adoptionist.

Nothing from the pen of Cerinthus is known. Epiphanius' unsupported statements that he wrote a gospel (Her. LI.7) and that the Alogi considered him the author of all the Johannine writings (L.4) are not impressive. M. S. ENSLIN

CERTIFICATE OF DIVORCE [ספר כריתת; βιβλίον ἀποστασίου]. Alternately: BILL OF DIVORCE; DECREE OF DIVORCE; KJV BILL OF DIVORCEMENT. A document which a man under Jewish law was obligated to give his wife if he divorced her (Deut. 24:1; cf. Isa. 50:1). A woman was not permitted under any circumstances to divorce her husband. Divorce was possible if the husband found "some unseemly thing" (RSV "some indecency") in his wife. The rabbis differed in interpreting the meaning of "some unseemly thing": Rabbi Shammai took it to mean adultery; Rabbi Hillel, almost anything, even the act of scorching food. Jesus said (Matt. 5:31; 19:7; Mark 10:4) that Moses permitted divorce only as a concession to sin; and he (Jesus) appealed to Gen. 1:27; 2:24, stating that what God had joined in marriage the husband was not to put asunder. *See also* MARRIAGE.

B. H. THROCKMORTON, JR.

CETAB. KJV form of KETAB.

CHABRIS kăb'rĭs [Χαβρίς] (Jth. 6:15; 8:10; 10:6). Son of Gothoniel, and one of the elders of Bethulia to whom Judith sent her request for help.

CHADIASANS kā'dĭ ā'sənz [οἱ Χαδιάσαι (B); Χαδάσαι (A)] (I Esd. 5:20); KJV THEY OF CHADIAS kā'dĭ əs. A clan of exiles who returned with Zerubbabel. Their origin may be connected with the cities of Kedesh or Hadashah or Adasa.

N. TURNER

CHAEREAS kĭr'ĭ əs [Χαιρέας] (II Macc. 10:32-38). KJV CHEREAS. An Ammonite commander during the Maccabean period. When Gazara, which he held, fell to the Jews, he was slain by Judas Maccabeus. N. TURNER

CHAFF [מֹץ; *sometimes* חשש (Isa. 5:24 KJV; 33:11); עור (Dan. 2:35); קש (Job 13:25; Ps. 83:13; Jer. 13:24), *see also* STUBBLE; KJV תבן (Jer. 23:28; RSV STRAW); NT ἄχυρον (Matt. 3:12; Luke 3:17)]. The fine dry material blown away by the wind in the process of WINNOWING. All the biblical references to chaff are figures of speech denoting the worthless or evil that is about to be destroyed (Job 21:18; Pss. 1:4; 35:5; Isa. 17:13; 29:5; 41:15; Hos. 13:3; Zeph. 2:2). H. N. RICHARDSON

CHAIN(S). The translation of several words in the Bible:

a) אזק (Jer. 40:1, 4), apparently a manacle.

b) זק (Isa. 45:14), properly a FETTER.

c) מעדנה (Job 38:31), chains which appear to hold together the six stars of the constellation Pleiades.

d) שרשרה, רתוקה, ornamental chains. They were employed in the decoration of the Jerusalem temple (I Kings 7:17; II Chr. 3:5, 16) and were also used on the priestly garment (Exod. 28:14; *see* EPHOD 2). Isa. 40:19 mentions silver chains which were attached to idols.

e) רביד (Aramaic המנוך), a necklace. In Gen. 41:42; Dan. 5:29 the gift of such a necklace is a sign of royal favor (cf. Xenophon *Anabasis* I.2.27). In Ezek. 16:11 the word is used figuratively of Yahweh's care for Jerusalem.

f) Ἅλυσις (Mark 5:3-4; Acts 28:20; Rev. 20:1), chains of bondage. The Roman method of securing captives was to attach one end of a chain to the prisoner and the other to his guard (Acts 12:6-7).

g) Δεσμός (Acts 26:29; Heb. 11:36; Jude 6; KJV BONDS in the two former passages), a general term meaning anything used to tie or fasten.

R. W. CORNEY

CHAIR [כסא (II Kings 4:10)]; KJV STOOL. *See* SEAT 3.

CHALCEDONY kăl sĕd'ə nĭ, kăl'sə dō'nĭ. KJV translation of χαλκηδών (RSV AGATE) in Rev. 21:19. A translucent form of silica. *See* JEWELS AND PRECIOUS STONES § 2.

CHALCOL. KJV form of CALCOL in I Kings 4:31 —H 5:11.

CHALDEA kăl dē'ə; CHALDEANS —ənz. A region in S Babylonia. "Chaldeans," the designation of its inhabitants, is also a term referring to the last dynasty of Babylon (626-539 B.C.).

1. The country. From the ninth century B.C. on-

ward, we read in the royal inscriptions of the Assyrian kings about a country called Kaldu, and its inhabitants, the Kaldai, situated along the Euphrates and the Tigris between the Persian Gulf and the southernmost cities of Babylonia. There were few, if any, urban settlements in this region of swamps, canebrakes, and lakes; and its inhabitants, of whom we know very little, seem to have relied on fishing, hunting, small-scale agriculture, and some cattle-breeding for their scant livelihood. The region was divided into tribal areas, called "houses," of more or less definable geographical distribution, under the leadership of tribal chieftains sometimes called kings. The largest among these tribes were the Bīt Dakkuri, S of Borsippa, with a subtribe called the Bīt Adini; and the Bīt Amukkāni, still farther to the S. Smaller tribes were the Bīt Sa'alli and the Bīt Šilāni. Along the Tigris were the Bīt Yakin, of great importance because of their proximity to the Elamite frontier. In their geographical isolation, these people did not seek contact with surrounding regions but kept to themselves. Thus a tradition of independence grew up and was maintained.

There is no indication that the Chaldeans spoke anything but the contemporary Akkadian dialects of the city people, although they certainly shifted to Aramaic earlier and more easily than those. The Chaldean tribes should, however, be clearly separated from the Aramean tribes of similar social and economic structure settled in the higher territory upstream along the two rivers.

Cuneiform and Greek sources speak without exception of Chaldea and the Chaldeans. while the Hebrew and the Aramaic of the books of Ezra and Daniel speak of כשדים and כשדיא, referring to the country, its inhabitants, and their crafts. No linguistically satisfactory explanation of this difference is known.

2. History. Apart from the historical texts, we have only a number of letters, found in the royal archive at Nineveh, referring to the dealings of the Assyrians with the Chaldeans at the time of the Neo-Assyrian kings. Although very little evidence is available for a study of Chaldean history in what may be called the first period, ending with the collapse of the Assyrian Empire, certain characteristics do become clear. What separates the Chaldeans from the city-dwellers is not a difference in cultural tradition —both worshiped the same gods, used cuneiform writing, etc.—but a difference in the social setup. The Chaldeans lived in loosely organized tribal groups, shifting allegiances according to the momentary distribution of wealth and power. They were unwilling to pay taxes or to render services, refused to recognize any loyalty beyond that of the clan, and were ready to plunder the riches of the city and to waylay its caravans. In short, they were the natural enemies of all urbanized society. The equilibrium between Babylonian city-dwellers and Chaldean tribes was upset when the Assyrian kings moved into their region. For obvious reasons they placed garrisons in the cities and attempted to police the tribal land. This made the Chaldeans, by necessity the leaders and carriers of any anti-Assyrian movement, the champions of national independence, while the city-dwellers, as far as they lived on interurban trade under the security established by Assyrian armed might, became largely pro-Assyrian. The situation was further complicated by the fact that Babylon was not just a city among other cities, but a symbol of political aspiration and cultural power; the fight for supremacy in the land of Chaldea was therefore a three-cornered contest.

The Chaldean rulers were perfectly prepared for the type of warfare brought about by such a situation. Intertribal intrigues, guerrilla warfare, sudden attacks and flights, and complete disregard for treaties concluded with the enemy made these tenacious and crafty chieftains a dangerous enemy. After nearly two centuries of victories and defeats they came to be undisputed rulers of a Babylonian empire that stretched as far as Egypt and Cilicia.

The career of MERODACH-BALADAN, who fought with TIGLATH-PILESER III, Sargon II, and SENNACHERIB, but died in exile in Elam, can be taken as typical of those of Chaldean rulers. The political situation of the period had been mastered by him and other leaders of his type with great skill. There was Elam, more often than not, ready to send expeditionary forces in support of the Chaldeans against the cities and the Assyrian armies; there were diplomatic intrigues with far-off vassals of the Assyrians (such as, e.g., HEZEKIAH) to cause diversionary attacks; and there were always anti-Assyrian parties in the cities. Above all, when Assyrian military power and strategic know-how proved too menacing, Elam was always ready to grant asylum to the leaders of a rebellion. On other occasions, it was more advantageous to submit to the foreign invader, to take the oath of allegiance and to remain for a time a vassal of an Assyrian king, who was only too glad to concur with such an arrangement.

After the breakdown of the Assyrian Empire at the death of ASHURBANIPAL, the second phase of Chaldean history starts with NABOPOLASSAR, the founder of the so-called Chaldean Dynasty, and his conquest of Babylonia. He made an alliance with the Medes, with whom he conquered Nineveh (614) and who apparently gave him a free hand within the limits of the Assyrian Empire to collect tribute, etc. Nabopolassar's great son, Nebuchadrezzar II, was powerful enough to throw the Egyptians out of Syria and Palestine and to keep up the territory ruled by Assyria to its maximum extent (with the exception of the mountain regions). In fact, "Chaldea" then began to replace the term "Babylonia." Nebuchadrezzar brought unheard-of booty into Babylon, whose splendor only then became proverbial in the ancient world. With him, however, the Chaldean Dynasty as such came to an end. His son (EVIL-MERODACH) and his son-in-law (Nergal-sharezer) ruled for only a short time. Nabonidus, usually assigned to this dynasty, represents an entirely different world.

The history of the Chaldeans went into its final phase when numerous Babylonians, then called Chaldeans, went into the outside world as magicians, astrologers, and diviners of all sorts. In these capacities they acquired great fame in Hellenistic Egypt, in Greece and Rome, and eventually in the Western world. In these places they gave their gentilic name to the arts they practiced. A. L. OPPENHEIM

CHALDEE VERSIONS kăl dē′. An obsolete designation of the Aramaic Targums. *See* VERSIONS, ANCIENT, § 1. B. M. METZGER

CHALKSTONES [אבני גר, *literally* stones of chalk, lime]. The Senonian chalk outcropping, a stratum of Palestinian rock, which predominates to the E and is found to a lesser extent W and N of the Judean hills, is soft, easily eroded, and nearly infertile. Its qualities are aptly utilized in Isa. 27:9 of the destruction of pagan altars:

> when he [Jacob] makes all the stones of the altars
> like chalkstones crushed to pieces.

See also PALESTINE, GEOLOGY OF. R. W. FUNK

CHALPHI kăl′fī [Χαλφεί, *cf.* Ἀλφαίος (Matt. 10:3); *from* חלף, *the designation given to a child thought of as a substitute for one lost*]; KJV CALPHI. The father of JUDAS 8; one of the commanders in Jonathan's army (I Macc. 11:70; Jos. Antiq. XIII.v.7). J. C. SWAIM

CHAM kăm. Douay Version form of HAM.

CHAMBER. The translation of several words:

a) חדר, the regular word for a chamber or room.

b) לשכה, which is associated with the sanctuary in various ways—i.e., as a room where the sacrificial meal was eaten (I Sam. 9:22; "hall"), or as a room in the courts of the temple used for various purposes (II Kings 23:11; I Chr. 9:26, 33; Ezra 10:6; Neh. 10:38-39; 13:4-9; Jer. 35:4; 36:10 ff; Ezek. 40:17 ff; 42:1 ff; etc.).

c) נשכה, etymologically related to לשכה and also used of rooms of the temple courts (Neh. 3:30; 12:44; 13:7).

d) עליה ("upper chamber" in I Kings 17:19, 23; II Chr. 3:9; "roof chamber" in Judg. 3:23 ff; II Kings 4:10-11; "upper room" in I Chr. 28:11). In Ps. 104:3 this word is used of the Lord's heavenly abode (cf. vs. 13).

e) צלע, which has specific reference to the "side chambers" (so KJV-RSV) around the TEMPLE in Jerusalem (I Kings 6:5; Ezek. 41:5 ff).

f) KJV חא, "little chamber," "guard chamber" (Akkadian *ta'u*, "room"; RSV "guardroom," "side room"), used of the recessed chambers in the gateway, three on each side, such as are also illustrated in the excavations at Megiddo, Gezer, and Hazor (I Kings 14:28; II Chr. 12:11; Ezek. 40:7 ff).

g) KJV יציע (*Kethibh* יצוע; I Kings 6:5-6, 10; RSV "structure"), the side wings or storied side chambers of the temple.

h) Ὑπερῷον ("upper chamber" in Acts 20:8; "upper room " in 9:37, 39).

i) KJV ταμεῖον, "secret chamber" (Matt. 24:26; RSV "inner room"—i.e., a possible hiding place); alternately translated "room," "private room," "storehouse" (KJV "closet") in Matt. 6:6; Luke 12:3, 24. H. G. MAY

CHAMBERLAIN [סריס (II Kings 23:11; Esth. 1:10; *alternately* EUNUCH); κοιτών (Acts 12:20), *from* κοίτη, couch, bed; KJV οἰκονόμος (Rom. 16:23; RSV "city treasurer")]. One of the officers in charge of the private quarters of a king or noble. Like the cupbearer, he was able to be close to his sovereign by winning his confidence. NATHANMELECH was chamberlain at the time of Josiah (II Kings 23:11). Since these officials had access to the bedrooms of the women of the palace, they were frequently eunuchs. C. U. WOLF

CHAMBERS OF THE SOUTH [חדרי תימן; LXX ταμιεῖα νότου; Vulg. *interiora Austri*]. A group of stars mentioned in Job 9:9 beside the Great Bear(?), Orion, and the Pleiades. It is identified by G. Schiaparelli (*see bibliography*) with certain stars distributed over the constellations of Argo, Centaurus, and the Southern Cross; whereas G. R. Driver (*see bibliography*), reading *ḥôdhᵉrê* and deriving the word from an alleged verb חדר, "encircle," would see in it the *circulus austrinus*. Another explanation is, however, that the expression refers, not to stars, but to the vacant stretches of the S sky, portrayed as the rear alcove of a tent (cf. Arabic *ḥidr;* and cf. Isa. 40:22); and that it is identical with the "chamber" (*ḥeder*) from which, in Job 37:9, the whirlwind is said to issue.

Bibliography. G. Schiaparelli, *Die Astronomie im AT* (1904), pp. 58-59; G. R. Driver, *JTS,* VII (1956), 9-11. T. H. GASTER

CHAMELEON kə mē′lĭ ən [כח (Lev. 11:30 KJV), *see* LAND CROCODILE; תנשמת (Lev. 11:30; KJV MOLE), *cf.* נשם, to breathe, pant (*see below*)]. A small, arboreal, lizardlike animal, of the suborder Rhiptoglossa, notable for the way in which it changes the color of its skin as the occasion demands.

תנשמת (*tinshemeth*) cannot be identified, except that the context in Leviticus favors a reptile; possibly its appearance at the end of the list (11:29-30) points to some peculiarity that sets it apart from the preceding creatures (cf. the position of "bat" in vss. 13-19). The ancient versions indicate some uncertainty about this word (LXX "blind-rat"; Targ.-Vulg. "mole"; Syr. "hoopoe"); doubtless this confusion was furthered by another תנשמת among the unclean birds (Lev. 11:18; Deut. 14:16; *see* WATER HEN). In support of "chameleon" the possible derivation from נשם (*nāsham*) is cited. The chameleon makes a hissing or squeaking sound when disturbed, though it is doubtful if the verb "to pant" would describe this. It has also been supposed that the same derivation reflects the view, recorded in Pliny Nat. Hist. VIII. 51, that chameleons live on air; its breathing, therefore, may have been thought to be excessive.

See also FAUNA § C.

Bibliography. On chameleons in Palestine, see Tristram, *NHB* (1867), pp. 262-63. W. S. MCCULLOUGH

CHAMOIS shăm′ĭ. KJV translation of זמר (Deut. 14:5; RSV "mountain-sheep"). The chamois (*rupicapra*) is a small, goatlike antelope, strongly built and very surefooted, but inelegant in form, *ca.* two feet high at the withers. It is found mostly in mountainous regions and also in forests adjacent to mountains. W. S. MCCULLOUGH

CHAMPAIGN shăm pān′. KJV archaism which translates חבקע (RSV VALLEY) in Ezek. 37:2 mg.;

ערבה (RSV ARABAH) in Deut. 11:30. Πεδία in Jth. 5:1 (RSV "plains") is translated "champaign countries" by the KJV. The word is from Middle English *champayne,* "open, unenclosed land, plain."

G. M. LANDES

CHAMPION [איש הבנים (I Sam. 17:4, 23), man of the space between (*i.e.,* who fights the battle against a single opponent in the space between two armies), cf. μεταίχμιον; גבור (I Sam. 17:51), mighty one, warrior]. A term applied to Goliath. He stood for his army in the no man's land between the camps of the Israelites and the Philistines. *See* MIGHTY MEN.

J. A. SANDERS

CHANAAN. KJV translation of Χανάάν (RSV CANAAN).

CHANCELLOR. KJV translation of the Aramaic word בעל־טעם (for Persian "commander"), an officer in the Persian court, in Ezra 4:8-9, 17 (RSV "commander").

CHANGE OF RAIMENT (GARMENTS). KJV translation of חלפות שמלת in Gen. 45:22; חליפות בגדים in Judg. 14:12-13; II Kings 5:5, 22-23; and חליפות in Judg. 14:19. RSV FESTAL GARMENT.

CHANNELS OF THE SEA [אפקי ים, the stream beds of the sea; *cf.* Ugar. *apq thmtm,* the streams of the two deeps] (II Sam. 22:16; Ps. 18:15—H 18:16); KJV CHANNELS OF WATERS in Ps. 18:15—H 18:16. The channels, normally hidden, which control and direct the flow of the primeval sea that surrounds the earth and overlies the underworld.

See also SEA; SHEOL; WATER. L. E. TOOMBS

CHANNUNEUS. KJV Apoc. form of HANANIAH.

CHANT. *See* MUSIC.

***CHAOS** [אפל (Job 10:22; KJV DARKNESS), תהו (KJV CONFUSION *in* Isa. 24:10; 34:11; KJV IN VAIN *in* Isa. 45:18-19)]. Properly, a trackless waste (cf. Gen. 1:2; Deut. 32:10; Job 12:24; Ps. 107:40). The translation "chaos" must therefore be understood in the original Greek sense of "void, empty space" (χάος), rather than as a synonym of "confusion."

In Isa. 24:10 the meaning is that the city is reduced to a "ghost town"; in 34:11, that it will become a limbo which can be neither spanned nor plumbed. In the latter passage the term stands parallel to the assonantal בהו with which it is in turn conjoined for emphasis in Gen. 1:2; Jer. 4:23. The effect of the combination *tōhû wā-bhōhû* may perhaps best be conveyed by Ogden Nash's striking expression "limbo a-kimbo." T. H. GASTER

CHAPHENATHA kə fēn′ə thə [Χαφεναθά]; KJV CAPHENATHA (I Macc. 12:37). A place unknown today, just outside Jerusalem. Here the walls of the city had fallen down, and Judas Maccabeus built them up. N. TURNER

CHAPITER chăp′ĭ tər. KJV translation of כתרת, צפת, ראש. RSV CAPITAL.

CHAPMAN. KJV archaism translating תור (RSV TRADER) in II Chr. 9:14.

CHARAATHALAR kăr′ĭ ăth′ə lär. KJV Apoc. form arising from the fusion of CHERUB and ADDAN.

CHARACA. KJV form of CHARAX.

CHARACTERS, COMMON. The translation of חרט in Isa. 8:1 (KJV MAN'S PEN). "Common character" is used for a symbol or letter used in writing that is recognized by the majority of literate persons as belonging to their system of notation; the letters of the alphabet written in the ordinary style of the period.

See also ALPHABET; WRITING AND WRITING MATERIALS. C. U. WOLF

CHARASHIM, VALLEY OF. KJV translation of גיא חרשים (RSV GE-HARASHIM) in I Chr. 4:14.

CHARAX kâr′ăks [τὸν Χάρακα] (II Macc. 12:17); KJV CHARACA kăr′ə kə. A place unknown today, E of Jordan, with a colony of Jews. It existed during the period of Judas Maccabeus. *See* TOB.

N. TURNER

CHARCHAMIS; CHARCHEMISH. KJV forms of CARCHEMISH.

CHARCOAL [פחם (Prov. 26:21); ἀνθρακιά (John 18:18)] (KJV COAL). True mineral coal was not known in biblical times; charcoal, made from wood, was the common article of fuel. *See* COAL.

CHARCUS kär′kəs. KJV Apoc. form of BARKOS.

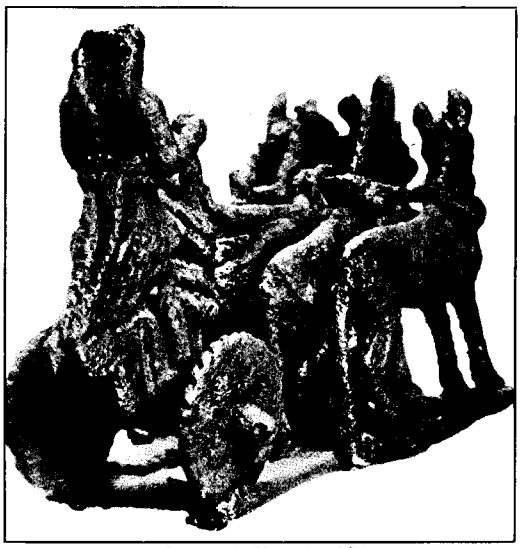
CHAREA. KJV Apoc. form of HARSHA.

CHARGER. The KJV translation of קערה (RSV PLATE) in Num. 7:13-85 and of πίναξ (RSV PLATTER) in Matt. 14:11. A large, flat metal serving dish.

CHARGERS [פרשים, *with emendation, for* ברשים] (Nah 2:3—H 2:4); KJV FIR TREES. Spirited horses used in battle to charge or attack enemy forces or positions. Cf. Isa. 31:1, 3; Jer. 8:6; Rev. 6:2, for horses used in battle.

See HORSE. J. A. SANDERS

CHARIOT [רכוב; רכבה, רכב, עגלה, מרכבה, מרכב, הצן; ἅρμα, ῥὲδα]. A wheeled vehicle drawn by onagers, oxen, or horses, and used for transport of war.



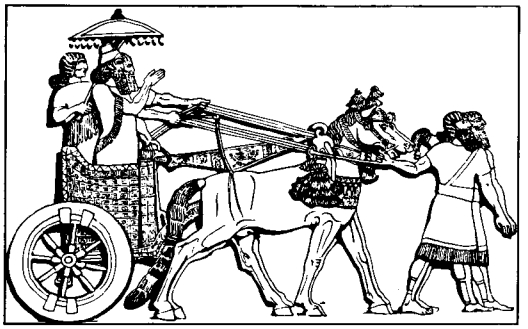
1. Terminology
2. Origin and development
3. History of its use in the Near East
4. OT usage
5. NT usage

Bibliography

1. Terminology. The common Hebrew words for "chariot" are רכב (collective) and מרכבה. The word מרכב (I Kings 4:26—H 5:1) literally means "place of riding," and may properly be used of "seat" or "saddle." At Ezek. 27:20 the KJV incorrectly translates רכבה by "chariot," whereas the RSV correctly

uses "riding." The word עגלה is rendered at Ps. 46:9—H 46:10 by "chariots." It normally means "carts used for transport" and in this passage probably refers to "supply wagons" used for military purposes (*see* CART). Ezek. 23:24 contains the only occurrence of the word הצן in the OT. The RSV adopts the common emendation מצפון ("from the north") on the basis of the LXX ἀπὸ βορρά. A less complicated emendation is the transposed word צנה, "shield."

2. Origin and development. Wheeled vehicles drawn by asses are attested in Mesopotamia as early as the end of the fourth millennium. A copper model of a chariot drawn by four asses found at Tell Aqrab (third millennium) has a single rider with two disk-wheels on which is mounted a body consisting of a simple board continuing the line of the heavy pole astride which stood the driver (Fig. CHA 23). The earliest spoked wheels are attested in the time of Hammurabi (cf. the Cappadocian cylinder seals). Wheels contained four or six spokes, the latter predominating,



Courtesy of the Oriental Institute, the University of Chicago

23. Small copper war chariot drawn by four asses; from Shara temple, Tell Aqrab, Early Dynastic (first half of third millennium)

Courtesy of the Trustees of the British Museum

24. Upper part of bas relief on bronze band shows the war chariots of Shalmaneser III. Lower bas relief depicts the storming of the town of Hazor.

25. Assyrian relief of a royal chariot, with the king being shielded by an umbrella held by a servant

until the time of Shalmaneser III.* Under Ashurnasirpal II eight-spoked chariot wheels appear (also Syrian?), and were taken over by the Assyrians, where they remain characteristic until the Persian period.* Unusual was the twelve-spoked wheel, found only in Elamite chariots. Figs. CHA 24-25.

The body of the chariot was probably made of light wickerwork, open at the back, with a very high dashboard, to which was attached a case for spears, battle-ax, and whip. The earliest chariot box was four-cornered. In the Cassite period the chariot became lighter, with a rounded dashboard with two crossed quivers near it. After Tiglath-pileser III (746/5-728/7 B.C.) the four-cornered box type with a simple vertical quiver near the front became normal. The axle was usually under the rear of the box, though in its oldest known form it was directly under the middle. The chariot was normally low slung, but Sennacherib introduced the high chariot, of which the wheel was easily a man's height. Fig. CAR 15.

The chariot was manned by two men in the Egyptian and early Assyrian forms (coachman and warrior). The Hittite chariot was manned by a third (a shield bearer) as well, and this form was adopted in Assyria by the end of the second millennium. The three-man chariot was used by the Syrians and probably by the Hebrews, since the military official called שלישׁ is probably to be identified as this third man (Exod. 14:7; 15:4; I Kings 9:22; II Kings 9:25; etc.). After Ashurbanipal chariots sometimes carried four men.

"Charioteer" (רכב, *rôkhēbh*) is used once for the rider in a chariot (Jer. 51:21; cf. Hag. 2:22). For the driver (רכב, *rakkābh*) of a royal chariot, see I Kings 22:34; II Chr. 18:33.

A chariot was normally drawn by two horses, though occasionally a third is shown on the monuments. The latter was, however, not yoked to the chariot, but was a spare.

3. History of its use in the Near East. It was the popularization of the use of the HORSE, instead of onagers and oxen, by the Hyksos that revolutionized ancient warfare (*see* WAR, METHODS OF). This speedier weapon for warfare enabled the Hyksos to conquer most of Syria and Egypt from *ca.* 1800 to 1600 B.C. Their influence in Egypt is attested by the adoption of such Semitic words as *ssmj.t* ("horses") and *mrkb.t* ("chariot") into their language. The use of the horse-drawn chariot permitted for the first time

such large empires to be built as the New Kingdom, the Hittite Empire, and the later Assyrian Empire.

The chariot was not only used for warfare, but in ordinary life for the pomp and pleasure of kings and their principal officers as well. Such chariots were often preceded by runners (Gen. 41:43; Esth. 6:11) who heralded the approach of a dignitary. The use of chariots for processions and feasts became especially popular during the Hellenistic and Roman periods.

The importance of the chariot for warfare is demonstrated in numerous inscriptions. The inclusion of chariots in tribute lists may be seen in a number of inscriptions from the New Kingdom (Egypt). E.g., the Karnak Annals of Thut-mose III list 924 chariots as part of the booty from Megiddo, whereas the Memphis stele of Amen-hotep II lists 60 chariots of silver and gold and 1,032 painted wood chariots as part of the plunder from one of his Asiatic campaigns. The Annals of Shalmaneser III refer to the plunder of Hazael's army as including 1,121 chariots and 470 cavalry horses. In the Aramean coalition against Shalmaneser contributions from members are listed in the above-mentioned Annals as consisting in the main of chariots, cavalry, and infantry; that of Ahab the Israelite was 2,000 chariots and 10,000 infantry.

4. OT usage. The first mention of "chariot" in the OT is of Egyptian chariots. Joseph occupies a royal chariot (Gen. 41:43), uses it to meet his father (46:29) and for Jacob's funeral (50:9). The destruction of Egyptian war chariots at the Red Sea (Exod. 14–15, *passim*) became a favored symbol for God's deliverance of his people (Josh. 24:6). Egyptian chariots are also mentioned as taking part in Shishak's invasion (II Chr. 12:3; cf. II Kings 18:24).

Chariots were introduced into Canaan by the Hyksos, as the number of horse skeletons found in the Tell el-'Ajjūl necropolis and the bronze (later iron) bridles in the Negeb attest. When the Israelite nomads invaded Canaan, they found the Canaanite iron chariotry too formidable to permit conquest of the plains (Judg. 1:19). Joshua defeated Jabin of Hazor and his coalition, which used chariotry, when they met at the "waters of Merom" (Josh. 11:4-9), burning their chariots and hamstringing their horses. Because chariotry was of no use in the hill country, the Israelites were gradually able to conquer it, but the plains remained for a long time held by the Canaanites. Judg. 4–5 relates the defeat of Sisera and his nine hundred chariots (4:3) by the N tribes of Naphtali and Zebulun.

The Philistines were able to dominate the Israelites because of their chariotry during the time of Samuel and Saul (cf. I Sam. 13:5, where, however, the number thirty thousand is almost certainly exaggerated). David's victories over the Philistines were doubtlessly due to his introduction of chariotry (II Sam. 8:4; I Chr. 18:4). Chariots were also used in the dynastic struggles of Absalom (II Sam. 15:1) and Adonijah (I Kings 1:5). It was Solomon, however, who developed an army of chariots in order to put his army on a par with, or on a higher level than, those of his neighbors. Chariot cities were established at Megiddo and Hazor to protect the NE frontier against the Syrians; at Lower Beth-Horon, Gezer, and Baalath, overlooking the districts of the plain, against the Philistines; and at Tamar in the Arabah, against the Edomites (I Kings 9:15-19; *see* MEGIDDO § C4). Chariots were purchased from Egypt, the Hittites, and the Arameans (10:29), and after the division of the kingdom were prominent in the army of the N kingdom; in fact, under Elah there were two divisions of chariot forces (16:9), though later under Jehoahaz the chariot forces were almost completely destroyed by the Syrians (II Kings 13:7). In Judah chariotry was less developed, as the Assyrian invasions show, doubtlessly in large part because of the hilly terrain. As a result Judah was forced to depend on Egypt for help in chariot warfare (Isa. 31:1).

Chariots played a large part in Seleucid warfare (Dan. 11:40; I Macc. 1:17; 8:6). Seleucid war chariots were armed with scythes (II Macc. 13:2).

Chariots are often mentioned as symbolic of royal dignity (Gen. 41:43; I Sam. 8:11; II Sam. 15:1; I Kings 1:5; Jer. 17:25; 22:4). Elijah and Elisha are both called the "chariots of Israel and its horsemen" (II Kings 2:12; 13:14), as being equal in effectiveness, through their prophetic potency, to Israel's cavalry. Occasional mention is made of God's chariots as indicating divine power at the time of the Exodus (Hab. 3:8), or from Sinai (Ps. 68:17—H 68:18, where the KJV "chariots of God" is idiomatically rendered "mighty chariotry" in the RSV), or as symbols of divine fury in judgment (Isa. 66:15).

In the last of Zechariah's night visions (Zech. 6:1-8) four heavenly chariots are sent out in four directions as messengers of God to the Dispersion. The notion of chariots and charioteers of the deity was a widespread one in the Near East. Such sacred chariots were used in the cult of the sun in the time of Josiah (II Kings 23:11); in fact, the notion may well have originated in solar worship. The "chariot of fire and horses of fire" (II Kings 2:11) which transported Elijah toward heaven probably reflect an ancient solar legend (cf. also 6:17, where fiery chariots and horses are the invisible protectors of Elisha the man of God).

5. NT usage. The chariot of the Ethiopian eunuch (Acts 8:28-29, 38) was probably not a war chariot but a transport. Chariots and horses are mentioned among a merchant's cargo in Rev. 18:13, and the noise of a locust plague is compared to that made by horses and chariots rushing into battle in Rev. 9:9 (cf. Joel 2:4-5).

Salonen, *Die Landfahrzeuge der alten Mesopotamier* (1951); A. G. Barrois, *Manuel d'Archéologie Biblique,* II (1953), 98 ff; V. G. Childe, "Wheeled Vehicles," in Singer, Holmyard, and Hall, *History of Technology,* I (1954), 716 ff. J. W. WEVERS

CHARIOTEER [רכב, *rakkābh*] (Jer. 51:21); KJV RIDER. The driver of a chariot. The same Hebrew word is used of King Ahab's driver (I Kings 22:34; II Chr. 18:33), and generally of a horseman (II Kings 9:17). Bidkar, Jehu's aide (II Kings 9:25), may have been his personal charioteer. *See also* CHARIOT; HORSEMAN. J. A. SANDERS

CHARISMATA kə rĭz'mə tə [χαρίσματα, *plural of* χάρισμα, free gift]. Basically, favors, endowments,

graces, offices, all bestowed by God's grace without claim of merit whatsoever on man's part. *See* SPIRITUAL GIFTS.
E. ANDREWS

CHARITY. A KJV translation of ἀγάπη (RSV more correctly LOVE).

CHARM. *See* AMULETS.

CHARMER חבר חבר (Deut. 18:11), מלחש (Ps. 58:5), בעל הלשון (Eccl. 10:11; KJV BABBLER); KJV אטים (Isa. 19:3; RSV SORCERER)]. A conjurer who uses spells or charms to achieve magic effects. *See* ENCHANTER; DIVINATION.

CHARMER, SNAKE. *See* SNAKE CHARMER.

CHARMIS kär'mĭs [Χαρμεις (B א), Χαλμεις (A)] (Jth. 6:15; 8:10; 10:6). Son of Melchiel; one of the three city magistrates of Bethulia to whom Judith made appeal for aid.
J. C. SWAIM

CHARRAN. KJV NT form of HARAN.

CHASEBA. KJV Apoc. form of CHEZIB 2.

CHASM [χάσμα]. A cleft or pit which separates two places. The word occurs in the NT only in Luke 16:26, where a valley separates the post-mortem abode of the rich man in Hades from that of Lazarus in Abraham's bosom. Used thus in a parable, the word does not encourage the effort to map the abode of the dead. The context makes clear, however, the emphasis on a final division, because the chasm cannot be crossed. Other uses in descriptions of final judgment may be found in I Enoch 18:11; Diogenes Laertius 8:31; Plato *Republic* X.614.
P. S. MINEAR

CHASPHO kăs'fō [Χασφω] (I Macc. 5:26, 36); KJV CASPHOR —fôr in I Macc. 5:26; CASPHON —fŏn in I Macc. 5:36. A city in Gilead stormed and taken by Judas, who released the Jews held captive there by the Syrians. It is probably the same place as CASPIN, and it has been identified with Khisfin, E of the Sea of Galilee, and with el-Muzeirib on the Yarmuk River.

CHASTENING. *See* DISCIPLINE.

CHASTITY. *See* SEX; VIRGIN.

CHEBAR kē'bär [כבר; Akkad. *naru Kabari*] (Ezek. 1:3; 3:15, 23; 10:15, 20, 22; 43:3). A river. The exiles among whom Ezekiel the prophet lived were located at the village of Tel-abib on the River Chebar, and it was here that the prophetic vision came.
C. G. HOWIE

CHECKER WORK. 1. שבכה (I Kings 7:17), part of the ornamentation of the temple pillars. This word elsewhere denotes a LATTICE (II Kings 1:2) or NET (Job 18:8), and probably here indicates a criss-crossed design. For detailed discussion of the temple pillars, *see* JACHIN AND BOAZ. Fig. CHE 26.

By permission of the Palestine Exploration Fund

26. Checker work ornamenting the capital of the pillars of the porch in Solomon's temple

2. כתנת תשבץ ("coat of checker work"; KJV "broidered coat"; Exod. 28:4, 39), a kind of weaving employed in making the high priest's tunic. It was probably a checked design, with different colors in warp and woof, or a raised honeycomb design in one color. *See* CLOTH.
S. V. FAWCETT

CHEDORLAOMER kĕd'ər lā ō'mər [כדרלעמר, כדר־לעמר; LXX Χοδολλογομορ]. King of ELAM who led a punitive campaign against five kings in S Palestine and routed them in the Valley of Siddim (Gen. 14:1-12). His league was then defeated by "Abram the Hebrew" and associates (vss. 13-17). The Dead Sea Genesis Apocryphon agrees with Jubilees against the MT in naming Chedorlaomer at the head of the coalition (cf. vss. 5, 9, 17). The campaign may well have had economic motivation. *See* ABRAHAM.

The structure of the name Chedorlaomer is clear. *Kutir* (sometimes *Kudur*), meaning "servant," is a common Elamite word occurring regularly in Elamite proper names—e.g., *Kutir-Naḫḫunte. Lagamar* appears in several Elamite texts as a divine name. *Kutir-Lagamar* would therefore be a genuine Elamite construction meaning "servant of (the deity) Lagamar" and could quite properly be borne by a ruler. However, no one bearing this specific name has been found in any extrabiblical records, Elamite or otherwise. The name of a deity Lagamal—a Semitic form often identified with Elamite Lagamar—was used in Old Babylonian personal names during the age of Hammurabi; and this deity is called "king of Mari." The identification, if sound, could indicate the presence of Elamite officials on the political scene at MARI. But the name Lagamar is undeniably Elamite and must not be given a Semitic etymology.

Böhl, "Das Zeitalter Abrahams," *Opera Minora* (1953), pp. 46-47, 478; "King Ḥammurabi of Babylon," *Opera Minora* (1953), pp. 354, 514.
L. HICKS

CHEESE [גבנה (Job 10:10), חריצי החלב (I Sam. 17:18), שפה (II Sam. 17:29)]. On two occasions cheese appears in a list of provisions: (*a*) those brought by David to his brothers (I Sam. 17:18), and (*b*) those received by David at Mahanaim (II Sam. 17:29). In biblical times cheese was prepared by salting the strained curds, shaping them into small disks, and

drying them in the open air. Thus Job asks Yahweh: "Didst thou not . . . curdle [lit., 'congeal'] me like cheese?" (Job 10:10). J. F. Ross

CHELAL kē'lăl [כלל, perfection] (Ezra 10:30). One of the sons of Pahath-moab who were forced by Ezra to give up their foreign wives.

CHELCIAS. KJV form of HILKIAH 9-10.

CHELLEANS kĕl'ĭ ənz [Χελεοι] (Jth. 2:23); KJV CHELLIANS. A people who lived N of the home of the Ishmaelites (*see* CHELOUS). They have been identified with the ancient Cholle between Palmyra and the Euphrates River, the modern el-Khalle. Because of the broad, inclusive meaning of the term "Ishmaelite," other scholars are content to localize them somewhere to the N of these tribes, who lived in E Palestine beside the Arabian Desert.

Bibliography. F. Stummer, *Geographie des Buches Judith* (1947), pp. 24-25. E. W. SAUNDERS

CHELLUH. KJV form of CHELUHI.

CHELOD kē'lŏd. KJV translation of Χελεούδ (RSV "Chaldeans") in Jth. 1:6. Conjectures have been that Calneh is meant, or "sons of the weasel" (חלד). J. C. SWAIM

CHELOUS kĕl'əs [Χελους]; KJV CHELLUS. One of three cities in S Palestine named in Jth. 1:9; probably the modern Khalasa, identified with the ancient Alusa in Idumea and mentioned in the Palestinian Targums on Gen. 16:4, 7; Exod. 15:22 under the name חלוצה. It lay on one of the roads leading S from Jerusalem toward Egypt and on a caravan route between Gaza and Edom. Arab writers distinguish between an el-Khalus and an el-Khalasa, though it is not certain that Khalasa satisfies the description of the CHELLEANS in Jth. 2:23.

Bibliography. F.-M. Abel, *Géographie de la Palestine,* II (1938), 298, 313; F. Stummer, *Geographie des Buches Judith* (1947), pp. 12-13. E. W. SAUNDERS

CHELUB kē'lŭb [כלוב, basket, *or* cage; *but in* I Chr. 4:11 (cf. LXX Χαλεβ) *perhaps variant of* CALEB]. **1.** A descendant of Judah (I Chr. 4:11). But it may be that "Caleb" should be read here and for "Carmi" in I Chr. 4:1.

2. The father of Ezri, one of David's officials (I Chr. 27:26).

Bibliography. M. Noth, *Die israelitischen Personennamen* (1928), p. 226. H. H. GUTHRIE, JR.

CHELUBAI. *See* CALEB.

CHELUHI kĕl'ə hī [*Kethibh* כלהי, *Qere* כלוהו, *probably corrupted, but* LXX χελια *suggests an original* כליה, Yahu is perfect] ; KJV CHELLUH kĕl'ə. One of those Ezra compelled to give up their foreign wives (Ezra 10:35; omitted in I Esd. 9:34).

CHEMARIM kĕm'ə rĭm. KJV transliteration of כמרים (RSV "idolatrous priests") in Zeph. 1:4. *See* PRIESTS AND LEVITES.

CHEMOSH kē'mŏsh [כמוש]. The name or title of the god of the Moabites, who are called the "people of Chemosh" (Num. 21:29; Jer. 48:46); cf. theophoric names of Moabite kings, Chemosh —, the father of Mesha, and Kammusunadbi, contemporary with Hezekiah in Sennacherib's records. A sanctuary of Chemosh was built by Solomon "on the mountain east of Jerusalem" (I Kings 11:7) and was abolished by Josiah (II Kings 23:13). In Mesha's inscription, Chemosh is compounded with Athtar, the Venus Star; hence we suppose that Chemosh was the Moabite manifestation of this astral deity. The identity of Chemosh and Milcom (*see* MOLECH) of Ammon is indicated by Judg. 11:24.

Bibliography. G. A. Cooke, *A Textbook of North Semitic Inscriptions* (1903), pp. 1-14 (Mesha's Inscription); J. Gray, "The Desert God Aṯtr in the Literature and Religion of Canaan," *JNES,* VIII (1949), 72-83; W. F. Albright, *Archaeology and the Religion of Israel* (1953), pp. 117-18. J. GRAY

CHENAANAH kĭ nā'ə nə [כנענה, *from* כנען, CANAAN(?)]. **1.** The father of Zedekiah the false prophet (I Kings 22:11, 24; II Chr. 18:10, 23).

2. Listed as part of the tribe of Benjamin (I Chr. 7:10)—probably incorrectly, since the list in I Chr. 7:6-12 is more likely one of the tribe of Zebulun.

Bibliography. M. Noth, *Die israelitischen Personennamen* (1928), p. 248. H. H. GUTHRIE, JR.

CHENANI kĭ nā'nī [כנני] (Neh. 9:4). A postexilic Levite who was present at Ezra's public reading of the law.

CHENANIAH kĕn'ə nī'ə [כנניהו, כנניה, Y strengthens]. **1.** A leader of the Levites in "lifting up" (משא) when David brought the ark to Jerusalem (I Chr. 15:22, 27). The understood object of משא may be the voice in song, as the context implies (LXX; KJV-RSV), or the ark. A third possibility is that משא means "prophetic oracle" (Vulg.), making Chenaniah a temple prophet.

2. An Izharite appointed for official duties outside the temple (I Chr. 26:29; cf. Neh. 11:16).

Bibliography. S. Mowinckel, *Psalmenstudien,* III (1923), 17-18. R. W. CORNEY

CHEPHAR-AMMONI kē'fər ăm'ə nī [כפר העמוני, Ammonite village] (Josh. 18:24); KJV CHEPHAR-HAAMONAI —hā—. A town in Benjamin, apparently so called because it was settled by Ammonites. The site is unknown.

CHEPHIRAH kĭ fī'rə [הכפירה, כפירה]; KJV Apoc. CAPHIRA kə—. A Hivvite city which followed the lead of Gibeon in making terms with the Israelites (Josh. 9:17). It was resettled after the Babylonian exile (Ezra 2:25; Neh. 7:29; I Esd. 5:19). Its site is Khirbet Kefireh, SW of el-Jib (Gibeon). S. COHEN

CHERAN kĭr'ən [כרן]. The fourth son of clan chief Dishon; ancestor of a native Horite subclan in Edom (Gen. 36:26; I Chr. 1:41).

CHEREAS. KJV Apoc. form of CHAEREAS.

CHERETHITES AND PELETHITES kĕr′ə thīts, pĕl′ə thīts [כרתי; פלתי]. Groups which constituted a section of David's personal army. They joined him after he defeated the Philistines and were part of his retinue after he was established in Jerusalem. Their leader, Benaiah son of Jehoiada, is listed as a member of David's administrative corps (II Sam. 8:18; 20:23). Their loyalty to David was absolute and was proved by their remaining steadfast with him by accompanying him on his flight from Jerusalem because of Absalom (15:18). They also participated in the punitive action against Sheba son of Bichri (20:7) and proved faithful once again in supporting the selection of Solomon as king (I Kings 1:38-44).

The name Cherethite most probably meant Cretans and alluded to the Aegean origin of part of the Sea Peoples who settled along the S coast of Palestine with the Philistines or to a band of Cretan mercenaries settled there by the Egyptians. They probably dwelt in the area to the SE of Philistia proper, which is once alluded to as the Negeb of the Cherethites (I Sam. 30:14). The Pelethites were, in all likelihood, recruited from the ranks of the Philistines with whom David had come in close contact during his sojourn in Ziklag. The form "Pelethite" (*pəlethi*) for "Philistine" (*pəlishti*) is explicable as an analogous formation modeled on "Cherethite" (*kərethi*), with which it always occurs. In the two passages in which the Cherethites are condemned by the prophets in parallelism with the Philistines, it is not clear from the context whether the terms are synonymous, or if separate peoples are meant (Ezek. 25:16; Zeph. 2:5).

The CARITES kâr′īts [כרי], who were loyal to the royal house in the story of Joash (II Kings 11:4, 19), have been considered by many scholars as a later development of the Cherethites; others have seen in them the Carians, an Asianic people who often served as mercenaries in antiquity. The variant reading "Carites" preserved in the *Kethibh* of II Sam. 20:23 strengthens the former view.

Bibliography. W. F. Albright, "A Colony of Cretan Mercenaries on the Coast of the Negeb," *JPOS*, I (1920-21), pp. 187-94.

J. C. GREENFIELD

CHERITH, BROOK kĕr′ĭth [נחל כרית]. A stream where Elijah was told to hide; he remained there until the stream dried up because of the unprecedented drought (I Kings 17:2-7). Since the spot was E of the Jordan (vs. 3) and Elijah was a Gileadite, Cherith must have been one of the wadies in Gilead where there were many caves in the hills. The identification of the brook with Wadi Qelt, on the W side of the Jordan near Jericho, arose in the Middle Ages and is inconsistent with the text.

S. COHEN

CHERUB (ANGEL) chĕr′əb [כרוב; Akkad. *karubu*]. Plural CHERUBIM —ə bĭm; KJV CHERUBIMS —bĭmz. A winged bull, or similar mythological beast, adopted by the Israelites from earlier Mesopotamian and Canaanite mythology. On its functions and significance, *see* ANGEL § A4.

CHERUB (TOWN) kĕr′əb [כרוב, cabbage (village?) *or* (place of the) cherub(?)]; KJV Apoc. CHARATHALAR kăr′ĭ ăth′ə lär [Χαραααθαλάν, *fusion of* Cherub *and* Addan]. Babylonian place, still unidentified, from which Jewish exiles, who could not prove their ancestry with genealogical records, returned to Palestine (Ezra 2:59; Neh. 7:61). The parallel in I Esd. 5:36 applies the name to a leader among the group.

CHESALON kĕs′ə lŏn [כסלון, back(?)] (Josh. 15:10). A city along the N section of Judah's boundary, bordering on Dan; usually identified with modern Kesla, *ca.* nine miles W of Jerusalem, in a region once noted for its oak forests.

CHESED kē′sĕd [כשד] (Gen. 22:22). The fourth son of Nahor and Milcah; probably the assumed ancestor of an Aramean tribe from which came the Chaldeans.

CHESIL kē′səl [כסיל] (Josh. 15:30). A city of Judah in the Negeb district of Hormah; present location unknown. Chesil seems to correspond with BETHUL (Josh. 19:4); BETHUEL (I Chr. 4:30); and BETHEL (I Sam. 30:27).

CHESNUT. KJV translation of ערמון (RSV more correctly PLANE; *see* PLANE TREE) in Gen. 30:37; Ezek. 31:8. The common chestnut (*Castanea sativa* Mill.) is rare in Bible lands.

CHEST [ארון, chest, ark; KJV גנז (Ezek. 27:24; RSV CARPET), treasure chest]. The box, probably of considerable size, which was placed beside the altar of the Jerusalem temple (II Kings 12:9—H 12:10) or outside the temple gate (II Chr. 24:8) to receive the offerings toward the repair of the temple under Joash.

E. M. GOOD

CHESULLOTH kĭ sŭl′ŏth [כסולות] (Josh. 19:18). A border town in Issachar; same as CHISLOTH-TABOR. It is generally identified with modern Iksal, a town *ca.* three miles SE of Nazareth.

CHETH kĕth (Heb. KHĀTH) [ח, *ḥ* (*Hêth*)]. The eighth letter of the Hebrew ALPHABET as placed in the KJV at the head of the eighth section of the acrostic psalm, Ps. 119, where each verse of this section of the psalm begins with this letter.

CHETTIIM. KJV Apoc. form of KITTIM.

CHEZIB kē′zĭb [כזיב; Χασεβά]; KJV Apoc. CHASEBA kăs′ə bə. **1.** Head of a family of temple servants at the return of the exiles, according to I Esd. 5:31. The name is not mentioned in the corresponding canonical list.

2. A place (Gen. 38:5). *See* ACHZIB.

CHIDON kĭ′dən [כידון]. According to I Chr. 13:9, the name of the threshing floor where Uzzah was struck dead for touching the ark. Whether Chidon was the place or the owner is not indicated. The parallel passage, II Sam. 6:6, has the "threshing floor of Nacon."

O. R. SELLERS

CHIEF [אלוף, נסיך]. A term preferred by the RSV to KJV "duke," which designates the leader of a

FAMILY; CLAN; or TRIBE, such as the Edomites (Gen. 36:15; Exod. 15:15; I Chr. 1:51) or the "clans of Judah" (Zech. 12:5). In I Macc. 10:65 the military chief (στρατηγός) is called a GENERAL (KJV "duke"). *See* also PRINCE; CAPTAIN. C. U. WOLF

CHIEF PRIEST [הכהן הראש; ἀρχιερεύς (*alternately* HIGH PRIEST)]; HIGH PRIEST [הכהן הגדול]. In addition to the actual use of the term, certain references to Aaron (e.g., Exod. 27–31) veil a reference to the chief priest. *See* PRIESTS AND LEVITES.

G. HENTON DAVIES

CHILD [טף, ילד; τέκνον]. The importance of children in the Bible is attested by the numerous allusions to them. The child in relation to the family was the recipient of love and care.

1. The child in relation to the family
2. The child as a descendant or posterity in the general sense
3. "Child" as a form of familiar address
4. Children of the covenant community and those hostile to it
5. "Child" as the designation of an inhabitant of a particular city
Bibliography

1. The child in relation to the family. Only by bearing children could a woman achieve her true purpose in life. She could properly look with disdain upon a barren woman (Gen. 16:4). A man was required to "raise up offspring" for his deceased brother by marrying the widow (38:8; *see* MARRIAGE § 1*g*). The children of the faithful are "like olive shoots" around a man's table and a sure sign of the favor of God (Ps. 128:3; cf. 127:5); and grandchildren are the "crown of the aged" (Prov. 17:6). It is impossible to suppose that a woman could "forget her sucking child" or "have no compassion on the son of her womb" (Isa. 49:15). The period of lactation is suggested in a late book (II Macc. 7:27) as being three years. The day of weaning was a time of celebration (Gen. 21:8); after weaning, children were taught bit by bit, line upon line (Isa. 28:10).

Children were named to express some aspect of God's relation to the father or to the entire family group at times (Gen. 4:1; 25:25-26; 29:32, 35; 30:6, 8, 11, 13, 18, 24; 41:51-52; etc.; note the naming of the prophet's children in Isa. 8:3; Hos. 1:2-9). They were dedicated to the God of their people at an early age. Prior to such a dedication, all male children were circumcised as the initial act of entrance into the community of the covenant (Luke 2:21; cf. Exod. 12:48). Children were the recipients of gifts; fathers know how to give good gifts to their children (Matt. 7:11). The child was expected to grow and become strong, full of wisdom and blessed by God's favor (Luke 2:40). It was the task of the parents to teach him diligently in the ways of the Lord and the traditions of his people through which these ways were made known (Deut. 4:9-10; 6:7, 21; 11:19; 31:12-13; Josh. 4:6-7; Ps. 78:4). *See* EDUCATION.

2. The child as a descendant or posterity in the general sense. The covenant community, represented by its founders, will have an abundance of children (descendants) as a sign of God's favor (Gen. 16:10; 17:2, 4-5, 20; Exod. 1:7). The children's children will know the wonder of God's steadfast love (Ps. 103:17) if they keep his covenant. In Pss. 11:4; 14:2 "children" signifies mankind (cf. 90:3). If the Israelites are truly penitent, God's words will never depart from the mouths of the children's children (Isa. 59:21; cf. 29:23).

3. "Child" as a form of familiar address. This word appears as a term of address by a teacher to his pupil or pupils in the wisdom writings of the Bible, or by a person with authority in the Christian community (II Tim. 1:2; Philem. 10). In a comparison of the usage of the books of Proverbs and Ecclesiasticus, we note that the former has "son" to symbolize his pupils and the latter makes considerable use of "child," τέκνον (Ecclus. 3:1, 17; 4:1; etc.). Jesus used the term in addressing individuals and crowds (Matt. 9:2; Mark 2:5; 10:24).

4. Children of the covenant community and those hostile to it. The term "children" (בנים; lit., "sons") occurs in a context that singles out Israel, the Christian people, individual members of either group, or nonbelievers. The "children of Israel" are members of the covenant community (Exod. 20:10; Isa. 17:3, 9; 29:22-23; 30:1; Ezek. 37:16; Hos. 4:6*e*). Similarly, the people who belong to the Christian community of faith are named as children of the "elect lady"—i.e., the church to which the letter is being written (II John 1, 4, 13; cf. Gal. 4:31). "Children of Abraham" are those who claim spiritual descent from him and thus membership in the covenant community (Matt. 3:9; Luke 3:8; John 8:39; Rom. 9:7; I Pet. 3:6). Negatively, Israel is called "rebellious children," "children of transgression" (Isa. 30:1; 57:4). Sinful Israel is denounced as being like "stupid children" (Jer. 4:22), and the scribes and Pharisees receive the appellative "child of hell" (Matt. 23:15). The "children of God" are set over against the "children of the devil" (I John 3:10). "Little children" (τεκνίον) is an intimate term for Christian people (John 13:33; Gal. 4:19; I John 2:12, 28; Test. Reuben 1:3).

5. "Child" as the designation of an inhabitant of a particular city. Jerusalem is personified as a mother and her inhabitants as children (Lam. 1:5). Jesus cried out over the plight of his beloved city and referred to her children (Matt. 23:37; Luke 13:34; 19:44; cf. Gal. 4:25). Translating the Hebrew word for "son" as "child," the LXX adds to the evidence of the usage here under discussion (Joel 2:23; Zech. 9:13; cf. Bar. 4:19, 21, etc.; I Macc. 1:38).

O. J. BAAB

CHILDREN, SONG OF THE THREE. *See* SONG OF THE THREE YOUNG MEN.

CHILDREN OF GOD. For the (mainly OT) use of the phrase "sons of God" for supernatural beings, *see* SONS OF GOD. The singular, "SON OF GOD," is

applied mainly to Christ or, in the OT, to the royal representative of the chosen people, or collectively to the people.

There is little to be gained by pressing a distinction between "children" and "sons" of God. In either case, the phrase, in both OT and NT, mostly connotes a moral or spiritual relationship to God. Even when it means "Israelites," it carries more than a quasi-physical idea of relationship. In the NT this becomes all the clearer, in that the believing Gentiles are expressly included and nonbelieving Israelites are excluded. The phrase is not, with only very few exceptions, applied to mankind as such, as though they were actually God's children, even if they are such potentially. Rather, it is in and through Christ that men are adopted or reborn into this relationship. And the glorious plan of God for mankind is to be achieved by his "bringing many sons to glory" through Christ—i.e., by the transmission of Christ's filial obedience to others. Thus, and not by any mere automatic evolution, will come the "glorious liberty of the children of God"; thus will be attained "mature manhood, . . . the measure of the stature of the fulness of Christ."

1. Terminology of children (sons) of God
2. OT usage
3. NT usage
   a. Moral content
   b. The sayings of Jesus
   c. Limited application of the term
   d. Children by God's favor
   e. Sonship and the future

Bibliography

1. Terminology of children (sons) of God. The difference (if any) between "children" and "sons" might represent a difference of emphasis as between nature or origin and status or relationship respectively. But if such a distinction may be faintly traced in the NT, as between τέκνα and υἱοί (*see* § 3*c below*), it does not seem possible in English to mark a distinction in the OT. It is worth noting, however, that in the Hebrew the regular word in our phrase is בֵּן (*ben*), not יֶלֶד (*yeled*); Jer. 31:20 (RSV "child"; LXX [38:20] παιδίον) is an exception. For the Greek of the OT, all that can be said is:

a) Τέκνον has, for whatever reason, a more limited range than υἱός. It is, in fact, seldom used in the LXX in our phrase. Among the few exceptions may be reckoned Deut. 32:5 (but in a negative form [contrast Phil. 2:15]: "They are no longer his children because of their blemish"; and in any case the text of the passage is uncertain); Jer. 3:19 (by implication: τάξω δε εἰς τέκνα, "I thought how I would set you among my sons"). In Hos. 11:1 the Greek has altered the sense of the original (τὰ τέκνα αὐτοῦ, "his children," for "my son").

b) Υἱός, by contrast, does duty not only in this connotation of relationship with God but also in a wide range of other meanings. (Strangely enough, in Deut. 32:43, υἱοὶ αὐτοῦ actually stands for עַבְדָיו, "his servants.")

c) Παῖς, which can mean both "servant" and "child," occurs (in our phrase) in Wisd. Sol. 9:4; 12:7, 20 (RSV "servants," mg. "children"); 19:6 (RSV "children," mg. "servants"); and in II Macc. 7:34 οἱ οὐράνιοι παῖδες may mean the same ("the children of heaven"). In the NT this word is never found in the plural coupled with a genitive of the divine name.

2. OT usage. The OT makes it clear that Hebrew thought—at any rate, as represented by the final editings of the books of the Bible—had little or no use for the pagan idea of God as, in some physical sense, the father and begetter of his children, the tribe springing from him. If this is the meaning of Deut. 32:6:

> Do you thus requite the LORD,
> you foolish and senseless people?
> Is not he your father, who created you,
> who made you and established you?

and of Mal. 2:10: "Have we not all one father? Has not one God created us?" and, in the singular, of such phrases as Pss. 2:7: "You are my son, today I have begotten you"; 110:3:

> From the womb of the morning
> like dew your youth will come to you (?),

then these are exceptions to the general rule that when God is thought of as "Father," the relationship is a moral, not a physical, one.

In Isa. 1:2 the reference is clearly to a father's care and education of his children:

> Sons have I reared and brought up,
> but they have rebelled against me

(cf. Mal. 1:6); and it is probably in this sense, rather than in a quasi-physical one, that we are to understand Exod. 4:22: "Israel is my first-born son"; Deut. 14:1: "You are the sons of the LORD your God"; Hos. 11:1: "Out of Egypt I called my son." Indeed, it is in Hosea that the moral content of the term is made particularly clear. In Hos. 1:10 it is only in the future, when the punishment for apostasy and unfaithfulness is conceived of as over and done with, that Israel will be called "sons of the living God." This is the hoped-for future reversal of the doom contained in the phrase "not my people" (Hos. 1:9). So, in the vision of a future restoration, God is heard to say (Jer. 31:9):

> I am a father to Israel,
> and Ephraim is my first-born;

and in Isa. 43:6 (perhaps alluded to in II Cor. 6:18) the exiles, chastened, purified, and at last returning, are designated God's sons and daughters (cf. Isa. 30:1, 9; Jer. 3:4, 19, 22). Equally clearly it is a religious relationship in Isa. 63:16, in the moving address to God by persons who (perhaps) had been "unchurched" by orthodox Jews, but who claim that God is their Father, even if Abraham and Israel will not own them (cf. the words of John the Baptist in Matt. 3:8-9 [=Luke 3:8]: "Bear fruit that befits repentance, and do not presume to say to yourselves, 'We have Abraham as our father'; for I tell you, God is able from these stones to raise up children to Abraham").

In the writings of the Apoc. the following uses may be cited: In Wisd. Sol. 2:18 the upright, godly man is taunted by his enemies as they prepare to torture him. Let us see, they say, whether God will rescue him and vindicate his claim to be the son of God

(*see* SON OF GOD; and cf. the taunts leveled at Jesus on the cross [Matt. 27:40 ff and parallels]). In 5:5 they utter a recantation (reminiscent of the change of mind in Isa. 53:4): We thought his life was madness; we mocked him; how comes it that, after all, he has been reckoned among the sons of God? In other passages God's sons are the Israelites as distinguished from the heathen nations (note that in Num. 21:29 the Moabites are sons and daughters of Chemosh; cf. Mal. 2:11)—e.g., Jth. 9:4, 13; Add. to Esth. 16:16; Wisd. Sol. 9:7; 12:19, 21; Ecclus. 36:12 (πρωτόγονος, "first-born son"); III Macc. 6:28; cf. Pss. Sol. 17:27.

3. NT usage. ***a. Moral content.*** In the NT the moral content of the term (whether with "children" or with "sons"—for any distinction there may be, *see* § 3*c below*) becomes even more firmly established in proportion as its limitation to Israel in the narrower sense is abandoned and its application to the "Israel of God" (cf., perhaps, Isa. 63:16, cited above) is accepted. Very pointedly this occurs in Rom. 9:7-8, 25-26, where Hos. 1:10 is cited but applied to the acceptance of the Gentiles (cf. Gal. 3:7 ff: "It is men of faith who are the sons of Abraham"). Conversely, the merely nationalist claim (divorced from a deeply religious attitude) is sharply repudiated in John 8:41-42, 44: " 'We have one Father, even God.' Jesus said to them, 'If God were your Father, you would love me. . . . You are of your father the devil' " (for the latter phrase, cf. Matt. 13:38: "the sons of the evil one"; Acts 13:10: "You son of the devil"). With this may be compared the Baptist's words quoted above (Matt. 3:8-9 and parallel).

b. The sayings of Jesus. In certain passages to be adduced shortly from the Pauline letters, it is natural to see the reflection of the controversies, subsequent to the death and resurrection of Christ, over the admission of Gentiles into the Christian church; and it is possible that the passage already alluded to in John 8 bears a similar stamp. Its context contains words strikingly similar to the Pauline thought: "The slave does not continue in the house for ever; the son continues for ever. So if the Son makes you free, you will be free indeed" (John 8:35-36). But if in such passages the thinking and conflicts of the post-resurrection church may find an echo, there are sayings in the Synoptic gospels, simply carrying on and deepening the OT line of thought, which seem to fit quite naturally into the actual setting of the ministry of Jesus himself. Such are, e.g., Matt. 5:9: "Blessed are the peacemakers, for they shall be called sons [υἱοί] of God" (it is hardly plausible to interpret this as in Luke 20:36, as though it meant that they are destined to become angels); and again, Matt. 5:44-45: "I say to you, Love your enemies and pray for those who persecute you, so that you may be sons [υἱοί] of your Father who is in heaven; for he makes his sun rise on the evil and on the good." It is the impartially good, those who are deeply concerned for their fellow men, who are, by character, allied with God himself. Cf. Luke 6:35 ("sons of the Most High").

One might set side by side with this, as similarly "pre-christological" in outlook, the words in Heb. 12:5-8, where a measure of suffering is described as a sign that the Christians are truly sons (υἱοί) of God —not bastards about whom a father does not care, but under the careful discipline of the heavenly Father. There is another saying of Jesus which, while in no way anachronous with his ministry on earth, anticipates in a striking manner the "christocentric" note of the idea of sonship in the letters—namely, Matt. 12:48-50 (cf. Mark 3:33-35; Luke 8:21): " 'Who is my mother, and who are my brothers?' And stretching out his hand toward his disciples, he said, 'Here are my mother and my brothers! For whoever does the will of my Father in heaven is my brother, and sister, and mother.' " Here are the Pauline ideas of filial obedience and of Jesus as the first-born among many brethren, but in a plausibly pre-resurrection form. Yet again the famous saying in Matt. 11:25 ff = Luke 10:21-22 (though this is primarily relevant under SON OF GOD), is reminiscent of the same thought; for here Christ as Son, in a unique sense, is able to make known the fatherhood of God to others, who are thus (it may be deduced) to become sons by adoption.

c. Limited application of the term. The NT does not seem to present a doctrine of all men as such being children of God, any more than the OT sees others than the chosen people (or those who, in some special sense, have become their counterpart, as possibly in Isa. 63:16, cited above) in this status. Adam, it is true, is the son of God in Luke's genealogy (3:38), and all men are God's offspring in Acts 17:28. But these passages are far from typical. Even the strange application of Ps. 82:6 in John 10:35 ("You are gods," which in the psalm is continued by "sons of the Most High") is confined to those "to whom the word of God came" (*see* SONS OF GOD for the original meaning of the psalm). Thus, while all men are potentially the children of God, those alone are normally described as actually such who have been adopted (Paul) or begotten or born anew (John 3:3; I Pet. 1:3; 2:2) or given birth to by God (Jas. 1:18: "He brought us forth," which seems to be more easily interpretable of Christians than of the human race; strangely, the verb is appropriate to a mother's giving birth rather than to a father's begetting). *See* GOD, NT, § 5*c*.

The variety of metaphors just alluded to—adoption, begetting, birth—lends some color to the possibility (*see* § 1 *above*) that there is sometimes a just discernible distinction between "children" (τέκνα) and "sons" (υἱοί)—the former more appropriate to the metaphor of birth or begetting, the latter to that of adoption and the giving of status. But it is unprofitable to press the distinction, and the fact that υἱοί and τέκνα are both used by Paul in this connection, but only τέκνα in the Johannines (except in references to Christ, and once, by implication, in John 8:35), may be merely a matter of style.

d. Children by God's favor. Allusion to the limited application of the term calls for closer inspection of the most characteristic aspect of the NT conception of the sons of God—namely, that the status of son, belonging essentially and inherently to Christ, is mediated by him to men and only in Christ can belong to men. Thus, John 1:11-12: "He came to his own home, and his own people received him not. But to all who received him, who believed in his name, he gave power [better, 'the right'] to become children [τέκνα] of God"; or, in Pauline terms (Rom. 8:29): "Those whom he foreknew he also predestined to be

conformed to the image of his Son, in order that he might be the first-born among many brethren" (cf. Heb. 2:10).

Putting the same thing in another way, Paul (though not very frequently) uses the analogy of ADOPTION, and, contrasting slave status with sonship, says that to be able to utter the same cry of filial obedience which Jesus himself uttered is a gift of the "spirit of sonship" (or, better, the Spirit who brings about adoption): "You have received the spirit of sonship [better, the 'Spirit who brings about adoption']. When we cry, 'Abba! Father!' it is the Spirit himself bearing witness with our spirit that we are children [τέκνα] of God" (Rom. 8:15-16). In Gal. 3:23–4:7 the thought is worked out in fuller detail, showing that this filial attitude goes together with the conscious response of faith (*see* HOLY SPIRIT). So in Phil. 2:15 it is the Christians, in sharp contrast to the rest, who are described (evidently with an allusion to the "blemished" children of God, his unworthy representatives, in Deut. 32:5; *see* § 1*a above*) as "blameless and innocent, children [τέκνα] of God without blemish in the midst of a crooked and perverse generation."

"Baptismal regeneration" is the sacramental expression of this relationship; and the association of water and Spirit with the theme of rebirth in John 3:5 makes it natural to see there an allusion to it. But otherwise, the nearest that the NT comes to the phrase is in Tit. 3:5: "by the washing of regeneration and renewal in the Holy Spirit." Possibly I Pet. 3:21 ought to be added to this, if it contains an allusion to some aspect of ADOPTION in a baptismal context. *See also* BAPTISM; FAMILY; FATHER; GOD, NT.

It should be added that in I John 3:1 some commentators see a reference to some distinction between mere "adoption" and a more essential relationship: "See what love the Father has given us, that we should be called children of God; and so we are." Others, however, would treat "and so we are" as a contrast, less with our merely being "called" children than with the future condition to which reference is made in the next verse (*see* ADOPTION § 3).

e. Sonship and the future. Taking up I John 3:1 ff again, we find the affirmation that, while Christians are already sons (τέκνα) of God, there is yet to come some fuller manifestation of the meaning of this condition (or its confirmation is awaited in some fuller manifestation of Christ). This is to be when Christ "appears"; and the outlook thus expressed is in keeping with the NT doctrine that sonship to God is fraught with a high destiny which is ultimately to be revealed. This is described in Rom. 8:21 as the "glorious liberty of the children [τέκνα] of God." In its context this appears to mean the liberation of all creation (not only of humanity) from servitude to frustration and decay and mortality, a liberation which is to be divulged as soon as the glory of true sonship is achieved. Heb. 2:10 describes the same destiny as the "bringing of sons to glory." Christ, the absolutely obedient and perfect Son of God, having pioneered the way (cf. Heb. 2:10-18; 5:8-9), it remains for the rest, in him, to be brought to the full realization of God's plan for them. Expressing the hope individually, Rev. 21:7 promises to anyone who "conquers" that he shall be God's son (υἱός). This is the messianic promise (II Sam. 7:14) transferred to the Christian (*see* SON OF GOD). But in Eph. 4:13 the hope takes shape as the noble expectation of full-grown maturity: "until we all attain to the unity of the faith and of the knowledge of the Son of God, to mature manhood, to the measure of the stature of the fulness of Christ." This will be the coming of age of mankind. *See* PLEROMA.

C. F. D. MOULE

CHILDREN OF THE EAST. KJV alternate translation of בני קדם (RSV EAST, PEOPLE OF THE).

CHILEAB kĭl'ĭ ăb [כלאב; LXX Δαλουιά] (II Sam. 3:3). The second son of David; born in Hebron, of Abigail the widow of Nabal. In I Chr. 3:1 he is called Daniel (דניאל; LXX Δαμνιήλ [B], Δαλουιά [A]).

CHILIASM kĭl'ĭ ăz'əm [χιλιάσμος, *from* χίλιοι, thousand]. A synonym of "millennialism." More specifically, "chiliasm" denotes an early Christian concept, which came into disrepute, of a MILLENNIUM characterized by materialistic and sensuous enjoyments.

M. RIST

CHILION kĭl'ĭ ən [כליון]. One of the two sons of Elimelech and Naomi, who migrated to Moab. Chilion married the Moabitess Orpah (Ruth 1:2 ff; 4:9).

***CHILMAD** kĭl'măd [כלמד]. A place name listed in juxtaposition with Asshur (Ezek. 27:23); located near modern Baghdad.

CHIMHAM kĭm'hăm [כמהם (II Sam. 19:37-38—H 19:38-39); כמהן (II Sam. 19:40—H 19:41); כמוהם (Jer. 41:17 Kt.)]. Son of Barzillai the Gileadite. He returned with David in lieu—and at the instance—of his father (II Sam. 19:37-40—H 19:38-41). In appreciation for the generous aid Barzillai had provided the king at Mahanaim, Chimham appears to have received a royal pension (I Kings 2:7) and a grant of land near Bethlehem, known in later times as Geruth Chimham (lit. "the lodging place of Chimham"), where Johanan ben Kareah and his band encamped as they prepared to go to Egypt (Jer. 41:17).

E. R. DALGLISH

CHIMNEY. 1. KJV translation of ארבה (RSV WINDOW) in Hos. 13:3.

2. KJV translation of Latin *caminus* (RSV, with Syr., FOOTSTOOL) in II Esd. 6:4.

CHINNEROTH kĭn'ə rŏth [כנרות] (Josh. 11:2; 12:3; I Kings 15:20); CHINNERETH kĭn'ə rĕth [כנרת] (Num. 34:11; Deut. 3:17; Josh. 13:27; 19:35); KJV CINNEROTH sĭn'ə rŏth in I Kings 15:20. **1.** Early name of the Sea of Galilee. *See* GALILEE, SEA OF.

2. A district in Naphtali taken by Ben-hadad during the reign of Baasha in the early ninth century (I Kings 15:20).

3. A fortified city in Naphtali (Josh. 19:35), also mentioned in the list of towns conquered by Thut-

mose III. It is located at Tell el-'Oreimeh, situated on a hill dominating the fertile spring-fed plain along the NW side of the Sea of Galilee. Minor excavations have shown that the mound was occupied from MB to Iron I (i.e., *ca.* 2000-900 B.C.). On the hill itself, Paleolithic and Mesolithic artifacts have been found.

G. W. VAN BEEK

CHIOS kī'ŏs [ἡ Χίος] (Acts 20:15). A rocky and rather mountainous island in the E central region of the Aegean Sea. It measures thirty-two miles from N to S and eight to eighteen miles from E to W. A strait five or more miles wide and dotted with small islands separates it from the mainland of Asia Minor. Chios was famous for its wines, figs, and gum mastic, and was one of seven places which claimed to be the birthplace of Homer. Its chief city was Chios (now Scio).

Josephus (Antiq. XVI.ii.2) tells that King Herod, sailing N from Cos and trying to reach Lesbos, was driven back by a N wind to Chios, and gave the city funds to rebuild its colonnades.

In Paul's day Chios was a free city in the Roman province of Asia. Paul, on his final journey to Jerusalem, sailed S from Mitylene, anchored overnight "opposite Chios" under protection of the mainland, and the next day crossed more open sea to Samos.

F. V. FILSON

CHISLEV kĭz'lĕv [כִּסְלֵו; Χασελευ]; KJV CHISLEU —lōō. The ninth month in the Hebrew CALENDAR; the Akkadian *kislīmu* (November-December).

CHISLON kĭs'lŏn [כִּסְלוֹן, slow] (Num. 34:21). The father of Elidad, who was selected from Benjamin to help superintend the distribution of W Jordanian Canaan among the ten tribes to occupy that territory.

Bibliography. M. Noth, *Die israelitischen Personennamen* (1928), p. 227.

R. F. JOHNSON

CHISLOTH-TABOR kĭs'lŏth tā'bər [כִּסְלֹת תָּבֹר] (Josh. 19:12). A town in lower Galilee on the border between the territories of Zebulun and Issachar; the same as Chesulloth in Josh. 19:18. It is identified with Iksal, a village located *ca.* three miles SE of Nazareth and four miles W of Mount Tabor at the N edge of the Valley of Jezreel.

Bibliography. C. R. Conder and H. H. Kitchener, *SWP,* I (1881), 363, 366, 385-87; F.-M. Abel, *Géographie de la Palestine,* II (1938), 299.

G. W. VAN BEEK

CHITLISH kĭt'lĭsh [כִּתְלִישׁ] (Josh. 15:40); KJV KITHLISH kĭth'—. A city of Judah in the Shephelah district of Lachish. It is possibly to be identified with Kentisha in the Palestinian list of Thut-mose III (*ca.* 1490-1436); the name (*k-n-ti-sa*) is also found on an ostracon from the reign of Mer-ne-ptah (*ca.* 1224-1216) found at Lachish.

V. R. GOLD

CHITTIM. KJV form of KITTIM.

CHIUN. KJV form of Kaiwan. *See* SAKKUTH.

CHLOE klō'ĭ [Χλόη, the Verdant] (I Cor. 1:11). A woman whose slaves or the members of whose household informed Paul—working in Ephesus—that there were partisan divisions among the Corinthian Christians. Whether she was herself a Christian, and whether she lived in Ephesus or Corinth, are matters impossible to determine with the evidence available. However, she was well enough known to Paul and to the Corinthian congregation to establish the standing of Paul's informants.

J. M. NORRIS

CHOBA kō'bə [Χωβα]. One of the N villages of Palestine which rallied to the fortification of the mountain passes against the invasion of the "Assyrian" forces under Holofernes (Jth. 4:4). In the rout of the enemy after the murder of their commander by Judith, the Jews of all Palestine pursued and slaughtered them to Choba (15:4-5) and beyond Damascus.

The exact location is unknown, but many identify it with el-Mekhubbi between Besan and Tubass on an important road leading from Besan into the Samaritan hill country. Abel (*see bibliography*) thinks it is borrowed from the HOBAH of Gen. 14:15, N of Damascus.

Bibliography. F.-M. Abel, *Géographie de la Palestine,* II (1938) 299; F. Stummer, *Geographie des Buches Judith* (1947), p. 16.

E. W. SAUNDERS

CHOIR. *See* MUSIC.

CHOR-ASHAN kôr ā'shən. KJV form of Borashan. *See* ASHAN.

CHORAZIN kō rā'zĭn [Χοραζίν, Χοραζείν]. A city of Galilee reproached by Jesus (Matt. 11:21; Luke 10:13). Fig. CHO 27.

There is general agreement that the Chorazin of the NT should be identified with the ruins now known as Khirbet Kerazeh, which is two miles N of Capernaum, the modern Tell Hum. This agrees with Jerome (*ca.* A.D. 400), who places it two miles distant from Capernaum (*De Situ et Nom. Loc. Hebr.* 194).

Chorazin was built on the basalt hills above Capernaum. The extensive ruins indicate that it was a city of some importance. Typical of the buildings are the remains of a synagogue built out of the black

Courtesy of the Hebrew University, Jerusalem, Israel

27. Chorazin, the modern town of Khirbet Kerazeh

volcanic rock *ca.* the fourth century A.D. Among the ruins there was found a carved seat with an inscription, an example of "Moses' seat" (cf. Matt. 23:2). The city is mentioned in the Talmud in the Hebrew form "Chorazim" (כרזים) as a place famous for its wheat (T.B. Men. 85*a*).

Both Chorazin and Bethsaida were reproved by Jesus for their unbelief, and both were near the third city included in his censure, Capernaum, which was the center of his Galilean ministry.

Bibliography. G. Dalman, *Orte und Wege Jesu* (1919), pp. 149-51, 157; F.-M. Abel, *Géographie de la Palestine,* II (1938), 154, 299-300. D. C. PELLETT

CHORBE kôr'bĭ [Χορβέ] (I Esd. 5:32); KJV CORBE. Alternate name of ZACCAI.

CHOSAMAEUS kŏs'ə mē'əs [Χοσάμαος (B), Χοσομαιος (A)]. A name attached to, or following, Simon in I Esd. 9:32, which is difficult to account for. While "Simon" represents "Shimeon" in Ezra 10:31, the following three names of Ezra 10:32 are wanting in I Esdras. The name Chosamaeus probably arose as the result of a scribal error in copying the three Greek proper names following Shimeon in the Ezra text. C. T. FRITSCH

CHOSEN ONE [בחור, ἐκλεχτός]. In the OT, a name of honor, among others, of the SERVANT OF THE LORD (*see also* ELECTION); in the Ethiopian book of Enoch, the title of the SON OF MAN.

CHOSEN PEOPLE. *See* ELECTION.

CHOZEBA. KJV form of COZEBA.

***CHRIST** krīst [Χριστός, ὁ Χριστός; משח; Aram. משחא, anointed; the Anointed One, the Messiah]. A title applied to the coming king expected by the Jews (*see* MESSIAH, JEWISH), and in the NT the most common title of Jesus. Usually in the NT the word is translated into Greek, but twice (in John 1:41; 4:25) it is transliterated as Μεσσίας. In the gospels it usually retains its force as an adjectival epithet—e.g., "You are the Christ" (Mark 8:29); "the Lord's Christ" (Luke 2:26); "Jesus as the Christ" (Acts 5:42). But it soon became practically a name or surname for Jesus —e.g., "the gospel of Jesus Christ, the Son of God" (Mark 1:1); "While we were yet sinners Christ died for us" (Rom. 5:8); "baptized into Christ Jesus" (Rom. 6:3). "Christology" means properly the department of theology which deals with Jesus' messiahship; but since the word "Christ" in the NT is related to every aspect of Jesus' nature, it is the theology of his person, attributes, and mission.

1. The OT background. Christology developed on the basis of the OT and Jewish hopes of the coming king and the future time of salvation. The Hebrew king (I Sam. 10:1; 16:13) and the high priest (Num. 35:25) were anointed on accession to office; hence the king was often called the "Lord's anointed" (I Sam. 16:6; cf. Luke 2:26). The later parts of the OT expect an ideal ruler, descended from David, in whose time God will establish a perfect and permanent reign on earth, characterized by peace and prosperity, righteousness, justice, and the knowledge and true worship of God. There are, however, books of the OT and noncanonical Jewish literature in which the future age is brought directly by God and no mention is made of any messianic figure. *See* ESCHATOLOGY OF THE OT.

It is not certain whether messianism first arises out of prophecies of the future destiny of Israel (e.g., Gen. 12:1-3; 49:10; Num. 24:17-19) or from the hope that David's dynasty will be permanent. Perhaps the earliest Davidic prophecy is Ps. 18 (= II Sam. 22:2-51). Hos. 1:11 prophesies that Judah and Israel will be united under a single head. Ezekiel, in the time of the Exile, includes in his picture of the future the permanent rule of a Davidic prince who will be a true shepherd of the people (37:24). The last clearly datable form of the Davidic hope in the OT is in Hag. 2:21-23; Zech. 4:6-10; both prophets apparently expect the restoration of the throne under Zerubbabel. This is not to occur by revolt against the Persian Empire: "Not by might, nor by power, but by my Spirit, says the LORD of hosts" (Zech. 4:6).

Ps. 132 does not appear to go beyond the preexilic hope for a permanent monarchy (cf. Pss. 78: 65-72; 89:19-37). Amos 9:11-12 is probably a postexilic oracle:

> In that day I will raise up
> the booth of David *that is fallen*
> . . . . . .
> and rebuild it as in the days of old.

The oracles in Isa. 9–11 mark the highest point of the Davidic concept in the OT. There will be a "Prince of Peace," whose government on the throne of David will be established in justice and righteousness and will have no end (Isa. 9:6-7). A shoot will spring from the stump of Jesse; the spirit of the Lord will rest upon him, he will judge with justice and vindicate the poor of the land, and even brute nature will live at peace,

> for the earth shall be full of the knowledge of the LORD
> as the waters cover the sea (Isa. 11:1-9).

In Second Isaiah, however, the Davidic king retires into the background. God's "steadfast, sure love for David" will not fail, and God will make an ever-

lasting covenant (Isa. 55:3), but there is no explicit promise of the re-establishment of the monarchy. The people as a whole are the object of expectation. The servant of the Lord, who suffers, bears the sins of many, and makes intercession for the transgressors, is often described as an individual (Isa. 52:13-53:12), but he appears to be a symbol of Israel itself (Isa. 49:3). This idea was to be of great importance in the later development of messianism and Christology. *See* SERVANT OF THE LORD.

In Joel, Nahum, and Zephaniah, God himself will act directly, and no ideal king is mentioned. The same is true of Malachi, except that God will send Elijah the prophet before the coming of the day of the Lord (Mal. 4:5-6). In Daniel, God likewise will bring a new age, when "one like a son of man," representing the "saints of the most high," will take the place of the beast kingdoms and exercise an everlasting dominion (Dan. 7:13-14, 26-27; *see* SON OF MAN § 1).

2. The Apoc. and Pseudep. Thus the hope which was to become messianic appears only sporadically after the Exile. The small state of Judah was ruled by high priests in the Persian and Ptolemaic periods, and Davidic speculation retired into the background. Ecclesiasticus, or Ben Sirach, written just before the Maccabean Revolt, exalts the Davidic monarchy (Ecclus. 47:22) but says that all the kings except David, Hezekiah, and Josiah were sinners (Ecclus. 49:4); the high priest Simon son of Onias is Ben Sirach's great hero (Ecclus. 50:1-21). The Wisdom of Solomon has no concept of a Davidic Messiah.

The rise of a Maccabean dynasty of high priests turned the Jewish hope in a different direction. The Testaments of the Twelve Patriarchs celebrate the raising up of a new priest, whose star will rise in heaven like that of a king (Test. Levi 18:1-3). He will bring peace on earth, knowledge will come to the Gentiles, and sin will have an end (18:9); he will open the gates of paradise and give the saints to eat from the tree of life (18:11). The Lord has chosen Levi to be king over all the nation, and his reign will be eternal (Test. Reuben 6:10-12). The messianic reign has now become more miraculous and approaches the ideas of the book of Enoch, which perhaps was written about this time, and in which the messianic figure is the Elect One or Son of man. *See* SON OF MAN § 2; ENOCH, BOOK OF.

The cruelties of the later Maccabees and Pompey's capture of Jerusalem in 63 B.C. led to a revival of Davidic messianism. Not long after 63, the Psalms of Solomon denounce the Maccabees (1:8; 2:3) and pray that the Lord will raise up the true king, the son of David, who will destroy the godless nations with the word of his mouth, gather a holy people, and lead them in righteousness. Heathen nations will serve under his yoke. He will not trust in horse or rider or bow nor multiply gold and silver for war, for the Lord himself will be king (17:5-8, 23-28). This king is called the "Lord's anointed" (18:6-8).

The sectarians of Qumran, who wrote the Dead Sea Scrolls and were probably Essenes, rejected the Maccabean priests but not the priestly ideal. They expected a Messiah of Israel, presumably a civil ruler, and also a priest, who takes precedence over him in the sacred banquet (fragment of the Manual of Discipline, 1QSa 2.19-20). Yet it is not absolutely certain that both of these are messiahs in the strict sense of the word, for some of the writings speak of a "messiah from Aaron and Israel"—i.e., from the holy community—and others of "messiahs from Aaron and Israel" (1QS 9.11). One fragmentary collection of scriptural quotations combines Deut. 5:28-29; 18:18-19; Num. 24:15-17 (the prophecy of the star); and Deut. 33:8-11, and concludes with an excerpt from an apocryphal book. This is a close parallel to NT ideas and methods.

The first non-Christian book to use the phrase "the Messiah" in the absolute sense is the Syriac Apocalypse of Baruch, written perhaps at the time of the Jewish War (A.D. 66-70). When sin and misery have reached their climax, the Messiah will begin to be revealed; the monsters Behemoth and Leviathan will be given as food (29:3-4). Then follows a prophecy of miraculous plenty which Papias of Hierapolis attributed to Jesus (29:5). The treasury of manna will descend from on high (29:8). When the Messiah's time is finished, he will return in glory, and all who have fallen asleep in hope of him will rise again (30:1-2). The ideas of the messianic banquet and the manna are reminiscent of the gospels (e.g., Luke 14:15; 22:28-30; John 6:27-35).

The central portion of II Esdras is still later in date but related to the Apocalypse of Baruch. Here it is said that the Messiah will be revealed and will remain for four hundred years, after which he and all other living things will die, and the world will return to its primeval silence for seven days. Then follow the new world, the resurrection, and the judgment (II Esd. 7:28-35; the references in the present text to "my son" and "my son Jesus" are probably Christian interpolations).

Messianic expectation remained vivid until the end of the Second Jewish Revolt in A.D. 135. The numerous revolutionists mentioned by Josephus and by Acts (5:36-37; 21:38) may have been messianic pretenders like Simeon bar Cocheba, whom Rabbi Akiba hailed as Messiah. On the other hand, the Assumption of Moses, a document of the first century A.D., has no Messiah, and God brings in his kingdom directly. *See* ESCHATOLOGY OF APOC. AND PSEUDEP.

3. Rabbinic Judaism. The Messiah is not particularly prominent in the rabbinic writings, but enough traditions remain to show that in the first two centuries there were messianic speculations in Pharisaic circles. The rabbis taught that the Messiah would come at a time known only to God himself and would remain hidden until he revealed himself and proved his identity by messianic deeds and miracles (cf. Just. Dial. 8.4). Attempts to calculate the time of his coming were generally discouraged by the rabbis. It is occasionally said that the sins of Israel delay his advent. Several rabbinic ideas furnish interesting parallels to the NT, even though they may have arisen at a later time. E.g., the Messiah is the intermediary between God and the people; he intercedes for them and obtains their forgiveness. The Targums identify him with the Servant of Second Isaiah; however, the latter is turned into a conqueror, and his sufferings are minimized. The rabbis also emphasize the righteousness and wisdom of the

Messiah; he has God's holy spirit and will teach the right understanding of the law (cf. John 4:25). He is called "redeemer" and "comforter."

Along with the son of David, rabbinic literature mentions a Messiah known as the son of Joseph or son of Ephraim, who dies in battle. That Messiah should die and have a temporary kingdom was not unknown in first-century Judaism. The son-of-Joseph idea may have arisen from the defeat of Simeon bar Cocheba in the Second Revolt or from the failures of Hezekiah and Judas the Galilean. Deut. 33:17, which speaks of Joseph as a bull with horns like a wild ox, perhaps suggested the concept. Attempts have been made to find the dying Messiah in Zech. 12:10-14, where the tribes mourn for him whom they have pierced, but there is no clear evidence for the Joseph Messiah as early as the first century A.D. He does not suffer vicariously for the sins of the people, and he is primarily a warrior.

4. Moses and the Logos in Philo. It cannot be proved that the concept of the Logos or Word of God held by the Alexandrian Jewish philosopher Philo (first century A.D.) influenced NT Christology, but Philo illustrates a current trend of thought. He explains the relation between God and the world by means of the Logos doctrine. The Logos is called the ἀρχή (beginning) of the world, God's eldest son, his first-born son, and "second God." God created the Logos and the ideas, which in turn are the archetypes of all things modeled after them. Philo declares that the God who appeared to Jacob at Bethel (Gen. 31:13) was the Logos (*On Dreams* I. 229-30). The Logos is suppliant on behalf of the race of mankind and the ambassador of God to man (*Who Is the Heir of Divine Things* 205-6). He is once called the eldest of the angels.

Philo regards the high priest as symbolizing the Logos (e.g., *Life of Moses* II. 24, 117-26), but there is a particularly close relation between the Logos and Moses. Moses was not only a lawgiver, but also the prophet who saw with the soul's eye the immaterial forms of the material objects about to be made for the tabernacle so that the shape of the model was stamped on his mind. Philo also calls Moses a propitiatory priest and king, and quotes Deut. 5:5: "I stood between the LORD and you," as spoken by the Logos, thus nearly identifying Moses as the embodiment of the Logos. From such conceptions it is only a step to Christology, though it must be borne in mind that in Philo the Logos is not quite an independent person. *See* LOGOS; PHILO JUDEUS.

5. The Gospel of Mark. In the earliest of the gospels, Christology has already developed considerably. Mark's most characteristic title for Jesus is SON OF GOD. Jesus is at the same time the suffering, dying, rising, and returning SON OF MAN and is occasionally called the Messiah (8:29; 14:61-62), the Lord (11:3), and God's beloved (1:11; 9:7). The title Son of David is given him by others (10:47-49), but he rejects it as not applicable to the one who is David's Lord (12:35-37). While the Jewish background is important for understanding the precise reference of these terms, their content is actually defined by Mark's picture of the earthly Jesus, for Jesus is greater than any of the titles applied to him. He is herald of the KINGDOM OF GOD and its good news (1:14-15) and the inaugurator of a new age (2:19). He is a prophet (6:4) and an apocalyptic teacher with supernatural knowledge (ch. 13), but, more than this, he teaches with absolute authority (11:33), and calls his disciples with authority (1:16-20; 2:14), so that to receive him is to receive God (9:37) and to do the will of God is to be kin to him (3:35). He heals, forgives sins (2:10), and has power over nature (4:35-41; 6:34-44, 45-52). His disciples feel a sense of awe, for they are in the presence of the numinous (4:41; 6:51; 10:32). Once they see him transfigured (9:2-8), so that they share the experience Jesus himself had at his baptism (1:9-11). At the Cross even a Roman centurion can say: "Truly this man was a son of God!" (15:39).

Through most of Jesus' ministry his nature remains a mystery to his disciples, and they do not even understand the suffering of the Son of man (6:52; 8:17-21, 32-33). Even his teaching cannot be understood without special revelation (4:10-13, 33-34). He refuses to explain his authority to his enemies (11:27-33). But the demons, being spirits, recognize him immediately (1:34) and address him as the "Holy One of God" (1:24), "Son of God" (3:11), and "Son of the Most High God" (5:7; a title appropriate on pagan lips). Mark has to some extent imposed on his sources the "messianic secret" theory which helped early Christians explain why Jesus had been rejected. *See* SECRET, MESSIANIC.

In Mark, Jesus is human as well as divine. Behind the story of the baptism there may be the thought that on this occasion Jesus was adopted as Son of God, for the Spirit descends into him (1:10). Subsequently he is tested by Satan (1:13; *see* TEMPTATION OF JESUS). He asserts that no one is good but God alone (10:18); he cannot appoint disciples to sit at his right hand and left (10:40); the mark of his vocation is humble service (10:45); and he does not know all the details of the future (13:32). In Gethsemane he prays the Father that the cup may pass from him but leaves the decision to the will of God (14:35), and on the cross cries out: "My God, my God, why hast thou forsaken me?" (15:34). *See* PASSION, THE.

6. Q. The non-Markan passages of Matthew and Luke, usually known by the symbol Q, exhibit some variations in their interpretation of Jesus' mission and person.

In Q, Jesus appears as an authoritative ethical teacher, though his role as prophetic bringer of the kingdom is much more prominent. When addressed as κύριε ("Lord" or "Sir," perhaps "Rabbi"), he says that it is more important for his disciples to do his (or God's) will than to give him this title. The fact that they have eaten and drunk in his presence and he has taught in their streets will not save them when they confront him in the judgment (Luke 13:26-27).

In many passages which have christological importance there is no direct teaching about Jesus' person. The parable of the lost sheep (Matt. 18:12-14 = Luke 15:3-7) expresses Jesus' concern, as well as that of God, for the sinner, and implicitly justifies bringing the good news of the kingdom of God to outcasts. In the parable of the great supper (Matt. 22:1-10 = Luke 14:15-24) the defense of Jesus' mis-

sion becomes more explicit (cf. Matthew's parable of the laborers in the vineyard [20:1-15]). The parable of the talents or pounds (Matt. 25:14-30=Luke 19:11-27) may or may not have been specially applied to the disciples' responsibility to spread the gospel.

A whole group of passages contrasts the new age, inaugurated by Jesus' work, with the old. Jesus calls the attention of John the Baptist to his mighty deeds (Matt. 11:4-6=Luke 7:22-23). He who is least in the kingdom of God is greater than John (Matt. 11:11=Luke 7:28). The law and the prophets were until John, but the age of the kingdom of God is proclaimed, perhaps has dawned (Matt. 11:12=Luke 16:16; cf. Matt. 12:28=Luke 11:20; Matt. 13:16-17=Luke 10:23-24).

The Q passage, in which Jesus sends his disciples to herald the kingdom of God (Luke 10:1-16=Matt. 9:37-38; 10:7-16, 21-23, 40), teaches that he who receives the ones sent receives Jesus, and he who receives Jesus receives the one who sent him; Jesus is thus the emissary of God who is decisive for man's salvation. Connected with this in Q are numerous passages that reflect rejection of Jesus and his disciples, the conflict aroused by the new mission, and the sacrifices that must be borne by the faithful (e.g., Matt. 10:34-38=Luke 12:51-53; 14:26-27; Matt. 12:30=Luke 11:23).

Certain passages dealing with the new age (Luke 11:29-32=Matt. 12:38-42), with the rejection of Jesus (Matt. 8:20=Luke 9:58; Matt. 11:19=Luke 7:34), and with discipleship (Matt. 10:26-33=Luke 12:2-12; Matt. 24:43-51=Luke 12:35-46) also identify Jesus as the Son of man. The collector of Q probably thought that Jesus would return as the celestial judge known by this title. *See* SON OF MAN § 3*a*.

All of the foregoing makes a reasonably consistent picture. But a new element is introduced in those passages where Jesus is identified as the Son of God and possibly also as the Wisdom of God. Jesus is addressed as Son of God in the temptation story, which is closely related to that of the baptism. Here the Son of God has superhuman powers. For him to possess the kingdoms of the world is a real possibility and temptation. "Son of God" in Q therefore describes a type of messiahship. In Matt. 11:25-30=Luke 10:21-22, Jesus is the Son, but the emphasis is not now on his messianic office; it is on the hidden wisdom, revealed only to babes, delivered wholly to the Son, who alone knows the Father and alone is known by him. The idea that only the Son knows the Father is foreign to Judaism, and the whole passage introduces a new element into messiahship. Since it is based on Ecclus. 51:23-30, the discourse may identify Jesus with the heavenly WISDOM who figures so strongly in Proverbs, Wisdom of Solomon, and Ecclesiasticus. The oracle ascribed to the "Wisdom of God" in Luke 11:49-51 (=Matt. 23:34-36) may have been delivered by a prophet speaking in the name of the risen Christ. The lament over Jerusalem (Matt. 23:37-39=Luke 13:34-35) likewise suggests Wisdom brooding like a dove over her children.

7. Matthew. The Christology of Q, like that of Mark, was highly developed. Matthew added little to the ideas of his sources. He gave increased emphasis to the interpretations of Jesus as Son of God, Messiah, and lawgiver. His principal contribution to the first is the story of the virgin birth (Matt. 1:18-25). As Messiah, however, Jesus inherited the royal dignity through his legal father, Joseph (1:1-17; *see* GENEALOGY OF CHRIST). The evangelist found it necessary to reconcile the known fact that Jesus' childhood home was Nazareth with the conviction that the Messiah must come from Bethlehem; hence both he and Luke emphasize Jesus' birth in that city. Matthew saw in the OT predictions of Jesus' messianic dignity and many incidents of his life (e.g., 1:23; 2:6, 15, 18; 4:15-16; 8:17; 12:18-21; 13:35). His special materials in the Sermon on the Mount are remarkable for the formula in which Jesus' teaching is contrasted with that of the ancients: "You have heard that it was said to the men of old . . . . But I say to you" (e.g., 5:21-22).

8. Luke-Acts. Though it is difficult to distinguish between the ideas of the evangelist and those of his special sources, Luke appears to have access to traditions dominated by the idea of the Messiah as son of David. Jesus was born in Bethlehem (Luke 2:4) and by a wondrous birth announced by the angel Gabriel (1:26-38). The virginity of Mary at the time of Jesus' birth is not specially emphasized, being suggested only in 1:34; 2:5. The language of 1:11, 32-33, 35; 2:26, 38, is the purest Jewish messianism, except that Jesus is also called Son of God. In 9:20, Peter hails Jesus as the "Christ of God," and in 23:35 Jesus is referred to as the "Christ of God, his Chosen One" (cf. 9:35: "my Son, my Chosen"). The hope that Jesus would restore the kingdom to Israel, or redeem it, is expressed in Luke 24:21; Acts 1:6 (cf. Luke 19:11). Like Matthew, Luke emphasizes the fulfilment of scripture in the life of Jesus (e.g., Luke 24:25-27, 44-46, and frequently in Acts).

As Son of God, the boy Jesus thinks it only natural to be in his Father's house (Luke 2:49); on the other hand, he grew in wisdom and stature and in favor with God and man, and an important variant reading in 3:22, attested by the Western text, reads: "Thou art my Son, today I have begotten thee." The Spirit descends in *bodily form* at the time of his baptism, and afterward Jesus is filled with the Holy Spirit (4:1; cf. Acts 10:38, where Peter says that God anointed Jesus with the Holy Spirit and power). Luke's genealogy (3:23-38) traces Jesus' descent through Joseph to Adam, the son of God. Elsewhere in the special material Jesus speaks of God as his Father (22:28-30; 23:46; cf. 23:34, omitted by some MSS).

Luke's special material reflects an early interpretation of Jesus as prophet (7:16), and Jesus speaks of himself as a prophet (13:33). The same idea is expressed in 24:19: "a prophet mighty in deed and word before God and all the people"; and in Acts, Jesus is the prophet like Moses whom Moses promised (Acts 3:22-23). Several sayings of Jesus in the special material are prophetic in character (e.g., Luke 11:27-28; 12:14, 54-56; 13:1-9; cf. 16:19-31).

Other passages contain a larger miraculous element. Simon Peter, frightened by the wondrous catch of fish, asks Jesus to depart from him (Luke 5:8); Jesus sees Satan as fallen from heaven (10:17-20); on the cross he promises that the penitent thief that day will be with him in Paradise (23:43).

Luke differs from other synoptists in referring to Jesus as "the Lord," apparently in an absolute sense (e.g., 10:1; 11:39; 12:42; 17:5-6; 18:6; 19:8; 22:61; 24:34). The word κύριος (*see* LORD) has a wide range of reference in the NT, running all the way from "Sir" to a title or name of God. In his lifetime Jesus was frequently addressed as "Rabbi" or "Rabboni" (e.g., Mark 9:5; 11:21; 14:45), and the evangelists often render this as διδάσκαλος, "teacher" (e.g., Matt. 23:8; Mark 4:38; 13:1; Luke 7:40). Matthew twice in 23:10 uses the term καθηγητής, "instructor" or "teacher," and Luke several times ἐπιστάτης, "master" (e.g., 8:24; 9:33, 49). "Lord" is often used by the evangelists as a substitute for διδάσκαλος or "rabbi"—e.g., Matt. 7:21-22; 17:4, 15; Luke 7:6; 11:1; 18:41. But when Luke calls Jesus ὁ κύριος absolutely, he probably has in mind his heavenly dignity as Lord of all his people. Acts bears witness to the primitive idea that God raised Jesus up and made him both Lord and Messiah (2:36; cf. 3:13; 10:40-42; 13:32-35).

Other titles and predicates applied to Jesus in Acts are interesting as reflecting a rich tradition of preaching and teaching. He is called "savior" (5:31; 13:23), as in Luke 2:11, a term not very frequent in the NT (*see* SALVATION, SAVIOR); παῖς, "servant" or "child" (3:13, 26; 4:27, 30), a liturgical title that may refer to the Servant of Second Isaiah (*see* SERVANT OF THE LORD); ἀρχηγὸς τῆς ζωῆς, "prince," "pioneer or founder of life" (3:15; 5:31); the "Holy and Righteous One" (3:14; 7:52; 22:14); the "one who was to come" (19:4); etc. Some of these terms are nontechnical.

9. Paul. The letters of PAUL show that within a few years after the Crucifixion a very high Christology had developed. Paul has little interest in christological theory as such; what he has to say about the nature of Christ is incidental to his teaching about the work of Christ and the importance of faith in him as a saving person—and, coupled with faith, commitment and obedience. Yet his doctrine of Christ approaches that of the Fourth Gospel.

In all Paul's correspondence "Christ" is used as a name, either as a surname for "Jesus" or prefixed to it, or as a substitute for it. "Christ" also in a wider sense refers to the relationships of the risen Jesus. To be "in Christ" or "in Christ Jesus" means to be a Christian, with all that this implies (Paul does not use the word "Christian"). Furthermore, he uses a number of metaphors to express what has happened to the follower of Jesus. He has been justified or acquitted (Rom. 3:24); his defilement has been expiated (Rom. 3:25); he has been bought out of slavery to be Christ's slave and therefore free (Rom. 3:24; Gal. 3:13); by means of Christ's triumph over the forces of evil, the indenture which held him in slavery has now been canceled (Col. 2:14-15); though once an enemy, he is now reconciled to God (II Cor. 5:18-20); he has been adopted as God's son (Rom. 8:15-16) or has attained his majority (Gal. 4:1-5). All this depends on the life, death, and resurrection of Jesus and is made available by man's faith in Christ and identification with him. Thus, for Paul, Christ is the one who can do all this.

The Thessalonian letters, which are apparently the earliest, are concerned with the Parousia of Christ (I Thess. 1:10; 3:13; 4:13-17; II Thess. 1:7-8; 2:8) and portray him in terms that suggest the "Son of man" figure of Enoch and the gospels. Over against him stands an antichrist, the "man of lawlessness," whom he will slay with the breath of his mouth (II Thess. 2:3-12). All these elements can be derived from Jewish apocalyptic (*see* ESCHATOLOGY OF NT; PAROUSIA). Jesus is, however, called Lord also (I Thess. 1:1).

Much is added to this in I Corinthians. As Christ or Messiah, he overturns the ordinary definition of messiahship; he is crucified, but nevertheless he is the power and wisdom of God (I Cor. 1:24). This wisdom is the foundation of all true knowledge and teaching (3:10) and is revealed through the Spirit (2:10); it is a mystery which the rulers of the world did not know (2:8). The Christian Messiah was active in the saving events of the OT; he was the rock, which according to Jewish midrash followed Moses and from whom the Israelites derived water; perhaps, too, he was the manna (10:1-4). Believers belong to his body, which is represented by the one loaf of the LORD'S SUPPER, and they share in his body and blood (10:16-17); the church, with its several members, is also his body (12:13-31). The Messiah is the heavenly man who is first to rise from the dead (15:20-23; *see* SON OF MAN; SECOND ADAM), and he will reign until he vanquishes all enemies, including death. But his rule ends when he hands the kingdom to God the Father, and God is all in all (15:24-27).

For Paul, Christ is in some sense subordinate to God; God is the head of Christ, as man is the head of woman (11:3). The term "Lord," used frequently in I Corinthians, suggests this also. There are many so-called gods and lords in the world, but in truth there is only one God, the Father, and one Lord, Jesus Christ (8:5-6). "Lord" suggests at one and the same time the Yahweh or Adonai of the OT; the term *Mar,* by which Aramaic-speaking Christians addressed Jesus (16:22); and the Gentile κύριοι, who were gods or heroes to their believers but demons to the Christians. One cannot share in the table of the (true) Lord and the tables of demons (10:21); on the other hand, the knowledge of Christ as Lord is, like the knowledge of his crucified messiahship, a gift of the Holy Spirit (12:3).

II Corinthians emphasizes the identification of the believer with Christ and adds three principal points: (*a*) The Lord Jesus Christ, who had been rich—i.e., possessed of divine wealth and power—became poor so that his followers might become rich (8:9; *see* INCARNATION). (*b*) His is the new covenant, as contrasted with the Mosaic covenant of condemnation, with its transient glory. Believers who gaze with unveiled face behold and reflect the glory of the Lord, who is the Spirit (3:4-18). But this is also the glory of Christ, who is the image (εἰκών) of God, and the glory of God in the face of Christ shines in the hearts (i.e., minds) of the apostles (4:4-6). Christ is therefore related as closely as possible to God and so closely related to the Spirit that the distinction is not clear (*see* HOLY SPIRIT); yet in 13:13 Paul speaks of the grace of the Lord Jesus Christ, the love of God, and the fellowship of (or sharing in) the Holy Spirit (*see* TRINITY). He emphasizes Jesus' humanity by saying that he was crucified in weakness (13:4).

Galatians and Romans express the creatureliness of Jesus and his subordination to God in another way. God sent his Son, made (γενόμενον) of a woman, made under the law (Gal. 4:4); Christ, in order to redeem man from the curse of the law, became a curse (Gal. 3:13; cf. II Cor. 5:21). God sent his Son in flesh like sinful flesh (lit., "in likeness [ὁμοίωμα] of flesh of sin"; Rom. 8:3) and planned that he should be the first-born of many brothers (Rom. 8:29). Jesus was an Israelite according to the flesh (Rom. 9:5). A careful distinction is drawn in Rom. 1:3-4: with respect to his flesh, Christ descended from David; with respect to the Spirit of holiness, he was declared Son of God in power by the resurrection from the dead.

Philippians and Colossians, like the other letters, still teach the future parousia (Phil. 1:6; 3:20; 4:5; Col. 3:4). The great christological passage, Phil. 2:5-11, does not add materially to what the other letters say except to fill out the picture of the condescension of the heavenly Christ. He was originally in the μορφή ("form") of God but willingly "emptied" himself and took the μορφή of a slave, which is also described as the ὁμοίωμα and σχῆμα ("form" or "fashion") of a man. As he had been obedient to death, God exalted him and gave him the highest of all names, Lord Jesus Christ. The terms are not clear. Probably Paul thought that Christ, in having the "form" of God in the Greek sense, also shared his nature. "Likeness" and "fashion" could mean that Christ only appeared to be human, but in view of what is said elsewhere, Paul must affirm the genuine humanity of Jesus. *See* HUMANITY OF CHRIST; INCARNATION, THE.

That Paul believed in Christ's divine nature seems clear from Col. 2:9, where he says that all the fulness (πλήρωμα) of divinity dwells in Christ bodily. The passage Col. 1:13-22 describes the Son of God in terms that suggest Philo's Logos and the heavenly man. Everything was created through him and for him; he is prior to all, and all holds together in him. Thus he is pre-eminent in creation, providence, and redemption.

It seems clear, then, that in Paul's thought the various approaches to the understanding of Jesus' nature—his human activity as teacher and loving friend of his disciples, and the categories of Messiah, heavenly man, Lord, inaugurator of the new covenant, and wisdom of God—are all combined in a harmonious and intelligible synthesis. A tremendous activity of thinking and teaching has gone into this, and all the materials used in later Christology are already present. In contrast to the gospel tradition, however, Paul says nothing of any miraculous activity in Jesus' ministry. He knows the earthly Jesus primarily as the crucified teacher, occasionally referring specifically to words of the Lord (I Cor. 7:10, 25) but more often reflecting teachings existing in the gospel tradition without identifying the source (e.g., Rom. 12:14, 19; 13:8).

10. Later NT books. Toward the end of the first century the Pauline letters gained considerable popularity, probably because they were collected and circulated in the churches (*see* CANON OF THE NT), and other literature was modeled on them.

a. Ephesians. The first writing of this sort, Ephesians, adds very little to the Christology of Colossians except to suggest the descent of Christ into the lower parts of the earth (4:9-10), thus paving the way for the doctrine that he preached to the dead (I Pet. 3:18-22). *See* DESCENT INTO HADES.

b. Hebrews. This homily, written when persecution was impending, seeks to strengthen Christian faith by pointing to the unique importance of Christ's person and work. Its idea of the Son of God as the agent of creation (1:1-12) may be a development of the doctrine in Colossians. It is God's purpose that the age to come shall be subjected to the Son; not everything is yet subject to him, but meanwhile he is crowned with glory and honor (2:5-9). More than most of the later NT books, Hebrews emphasizes the humanity of Jesus. As ἀρχηγός of salvation (cf. Acts 3:15) he leads many (other) sons to glory, and it is fitting that he should have been perfected by suffering (2:10). He tasted death for every man (2:9); thus Jesus is the representative of all humanity. In the days of his flesh he uttered cries and prayers to God and learned obedience through what he suffered (5:7-8). Having been tempted as other men, yet without sin, he has compassion on human weaknesses (4:15). Although he was God's unique apostle, or emissary, and high priest (3:1), he nevertheless did not glorify himself; it was God who glorified him (5:5). His high priesthood is perfect and permanent, as compared with the temporary and imperfect Aaronic system, and is typified by Melchizedek (5:6, 10; 6:13–7:17). It represents a new law and a new covenant (7:18-28). Jesus offers himself in the direct presence of God as a sacrifice that needs not to be repeated (9:11-12); he lives eternally to make intercession for his people (7:25).

c. Revelation. This prophecy stands apart from the main christological development in that its view of Messiah is almost entirely that of late Jewish apocalyptic, combining as it does the thousand-year messianic age and the resurrection of the saints (Rev. 20:2-5) with the last onslaught of Satan (20:7-10), the general resurrection and judgment, and the age to come (20:11–22:5). Its picture of Messiah fits this pattern. He is the lion of the tribe of Judah, the root of David (5:5; 22:16), and the morning star (22:16), but he is also the Son of man, first-born from the dead, who comes with the clouds and is completely supernatural (1:5-7, 13-16; 14:14). Now is the first certain appearance in literature of the son-of-Joseph type of Messiah, for here Jesus is the warrior Messiah (6:16; 19:11) and the prophecy of Zech. 12:10-14 is applied to him (cf. Matt. 24:30; *see* §§ 2-3 *above*). But he does not die in battle, for he has already died and is alive again. The woman from whom he is born (12:1-15) is evidently the true and glorified Israel. The Messiah is not a bull, as in the Jewish tradition; he is the slain lamb (5:6) who has loved his people and loosed them from their sins by his blood (1:6).

In other respects the picture is Christianized. As the faithful witness (1:5) he is the pattern for Christian martyrs. He is the Son of God (14:1). His name is the Word of God (19:13), but here the reference is probably to the prophetic word which he gives (1:16) rather than the Logos idea. The new Jerusalem, described in Jewish apocalyptic terms, is his bride (21:9-10), and the messianic banquet has become the

marriage supper of the Lamb (19:9). Perhaps this supper is consciously connected with the eucharistic rite (3:20). *See* ESCHATOLOGY OF OT; ESCHATOLOGY OF APOC. AND PSEUDEP.; ESCHATOLOGY OF NT.

d. I Peter. By contrast, I Peter, written also in time of persecution, emphasizes the gentleness and lack of revenge on the part of the lamb without blemish or spot (1:19; 2:21-24). The new idea in this document is the descent of Christ into Hades to bring life to those who were there (3:18-22; 4:6). *See* DESCENT INTO HADES.

e. The Pastoral letters. The letters addressed to Timothy and Titus have a predilection for "Savior" as a title for Jesus (I Tim. 1:1; II Tim. 1:10; Tit. 1: 4; 2:13; 3:6); this word was originally secular and without very precise reference, though there are occasional earlier occurrences—e.g., Phil. 3:20. His humanity and his role in salvation are both emphasized; he is the "one mediator between God and men, the man Christ Jesus" (I Tim. 2:5; cf. 6:13-14; II Tim. 2:8; 4:1; Tit. 2:11-14). The little rhythmical formula in I Tim. 3:16 shows that something like a creed is beginning to develop.

f. Other documents. In II Peter the Transfiguration is regarded as a foreshadowing of the Parousia (1:16-18). This late document uses the term "Savior" several times (1:11; 2:20; 3:2, 18). James speaks of the parousia of the Lord (5:7) and of Jesus as the Lord of glory (2:1). For the Johannine letters, *see* SON OF GOD § 12.

11. The Gospel of John. Although the Fourth Gospel is not the latest book of the NT, it marks the highest point of its Christology. The evangelist develops earlier ideas found in the Synoptics, the Pauline letters, and Hebrews. Thus Jesus is Messiah (usually translated as Χριστός—e.g., 9:22; 11:27; 20: 31—but also transliterated Μεσσίας—e.g., 1:41; cf. 1:49) and Lord (13:13-14; 20:18, 28; 21:12). He is also SON OF GOD, but in the full sense that he has come out from God, returns to God (13:1-3), is not of human origin (1:12-14, 18; 8:58), does his Father's will and work in the world (2:16; 5:17, 19-29), and is restored to his original glory (11:4; 12:27; 14: 13, 28; 17:1; cf. Phil. 2:5-11). The doctrine of the hiddenness of Messiah is also worked out in connection with the Son of God (6:42; 8:19; 19:9). Passages in which Jesus is called SON OF MAN are related to these concepts (1:51; 3:13-14; 6:27, 53; 8: 28; 12:34). Jesus is also called Savior (e.g., 4:42) without the term's being defined, and the prophet (7:40; cf. 6:14: the "prophet who is to come into the world"). The latter term is used by those who do not have full faith and knowledge. Jesus is the Lamb of God who "takes away" or "bears" the sins of the world (1:29), and it may be significant that in this gospel he suffers before Passover, at the time when the paschal lambs are slain, though the Passover sacrifice is more a sign of rescue from death than of removal of sin. Another possibility is that the "lamb" is the conquering ram of apocalyptic who represents the victorious Messiah. This Messiah does not "bear" sin or its consequences but puts a decisive end to it. He is supreme over the law of Moses (5:16-18; 7:22-24), but the only law which he gives is the new commandment of love (13:34). Nothing is said about the baptism of Jesus; instead, the function of John the Baptist is to witness to one greater than himself (1:19-34; 3:22-30). The idea of the messianic secret is worked out elaborately in this gospel, where only a few disciples believe—and at that imperfectly —while Jesus' enemies are baffled and misunderstand him even when he speaks plainly. The discourse on the blinding of Israel concludes the public ministry.

In contrast to the other gospels, practically all of Jesus' teaching in John concerns faith and unbelief in himself. Not only is it true that to receive him is to receive God (13:20), but faith in Christ is absolutely essential to salvation (3:14-18, 36).

The gospel begins with a hymnic prologue (1:1-18) on Christ as the LOGOS. Since the word "Logos" in this technical sense does not appear again in the gospel, it is sometimes thought that the Prologue is an earlier hymn adapted by the evangelist. Its themes are used again, however, so that it has the character of an overture. E.g., Christ is always the life (1:4; 11:25; cf. 6:35, 51; 7:37-38) and the light (1:4, 9; 8:12; 9:5) of the world. The Prologue carries on the idea of Colossians and Hebrews that Christ was agent of creation (cf. Philo's idea of the Logos and the Jewish idea of Wisdom as creator). The emphasis is not, however, on Christ's role in creation but on redemption (1:11-13) and revelation (1:9, 14, 17-18). John goes beyond Paul in identifying the Logos as God, though he is "with" (πρός) God (1:2) and "only begotten God" in the bosom of the Father (1:18, MSS ℵ, B).

This last idea is also worked out in the body of the gospel. For the Son is equal with God (3:35; 5: 18; 10:18-30; 16:32; 17:10) and can appropriately be called God (10:34-36; 20:28). Christology thus reaches its climax in the full deity of Christ.

Some of the ideas and words used to describe Christ have striking parallels in Gnosticism, particularly the Mandaean literature (*see* GNOSTICISM). Thus Christ is the bread of life and the water of life (6:35; 7:37-38), life and truth (14:6), the way and the one who first treads out the way (13:36; 14:2-6), the true vine (15:1-10), the good shepherd (10:11) and the door or gate (10:7), and the helper or PARACLETE who sends another helper (14:16-17, 26; 16:13-15). Here and in the Logos prologue the difference between John and the Gnostics is that John does not separate the Creator from the revealer and the redeemer. They are one, and that one is God; thus creation was not a mistake or a tragic fall, and however sinful the world is, it is in a true sense the object of God's love (3:16).

Another and basic difference is connected with John's biblical-Christian idea of the world as God's creation. No Gnostic redeemer could ever assume full humanity, but only a semblance of it; nor could he redeem the whole personalities of his followers, but only the nonmaterial divine spark in them. But John believes that the Logos became flesh and tabernacled among his people (for the idea of the body as a tent, see II Cor. 5:1-5; II Pet. 1:13), for he was weary (John 4:6) and thirsted (4:7; 19:28) and died on the cross (19:30).

It cannot be denied, however, that the evangelist's story of Jesus' deeds and words is affected more by the doctrine of his divinity than by the record or the

conviction of his humanity. As in Byzantine mosaics and paintings of Christ the Omnipotent (παντοκράτωρ), the humanity is only a vehicle of the divine, and the Fourth Gospel is a dramatic-theological representation of the meaning of Christ, a creed in gospel form. That which in Paul's view belongs to the risen and glorified Christ now shines out in the earthly ministry. The event which in the Synoptics is the baptism of Jesus now becomes the witness of John. There are no parables, but only allegories; no specific teachings about the law, but only the sovereignty of Christ over the law and the new law of love; no healings out of ordinary human compassion, but instead some great signs showing the divine compassion of the Omnipotent and Savior. The doctrines of eternal life, faith in Christ, and abiding in him reinterpret the idea of the kingdom of God. Jesus' mission is now explicitly to Samaritans and Greeks as well as to "his own" among the Jews.

His actions and style of speech are those which the evangelist deemed appropriate to divinity. Jesus' knowledge is supernatural (e.g., 1:47-51; 2:25; 4:17-19, 29; 13:21-27). He is sometimes enigmatic and rejects suggestions made to him, not because he is unresponsive but because the ways and thoughts of God are not those of man (e.g., 2:4-5). His prayers to the Father are those of complete communion and mutual understanding (11:41-42; 12:27-28; ch. 17). In the presence of Pilate he speaks as a witness to the truth, like a Christian martyr, and as a king whose realm is not of this world (18:19-21, 33-37; 19:10-11). It is of his own volition that he lays down his life and takes it again (10:17-18; 15:13), and therefore he cannot be arrested until he himself permits it (7:44-46; 18:5-8). His last word from the cross is: "It is finished"—i.e., complete—and he yields up his spirit (19:30). *See* DEATH OF CHRIST.

12. The Apostolic Fathers. A number of older christological ideas reappear in the Apostolic Fathers, a group of second-century Christian writings. E.g., God chose out Christ (I Clem. 64.1) and raised him from the dead (I Clem. 24.1). He is Lord, Savior, and high priest, and is typified by the Suffering Servant and the serpent in the wilderness. Certain ideas receive a fuller development. There is further evidence of the trinitarian formula (I Clem. 58.2; Did. 7.1, 3; *see* TRINITY), and of the beginnings of a creed, particularly the article "judge of the living and the dead" (II Clem. 1.1; Polyc. Phil. 2.1; Barn. 7.2). Ignatius affirms the VIRGIN BIRTH (Ign. Eph. 7.1; 18.2; 19.1); and against the Docetic error that Christ only seemed to be human, he insists that Christ came in the flesh (Ign. Trall. 9.1-2; 10.1; cf. Polyc. Phil. 7.1; Barn. 5.10). His nature is twofold: having originally been spirit, he became flesh (Ign. Eph. 7.1; 20.1; cf. II Clem. 9.5).

Occasionally the Apostolic Fathers emphasize the humility and condescension of Christ in becoming man (I Clem. 16.2; Diogn. 7.2-4). Ignatius develops the idea of Christ as the representative of all humanity. There has now appeared the dispensation of the new man (Ign. Eph. 20.1-2); Christians are the fruit of the tree on which Christ was crucified (Ign. Smyr. 1.1-2); Jesus received the ointment (μύρον) that he might breathe immortality on the church (Ign. Eph. 17.1) and was baptized that he might purify the water (Ign. Eph. 18.2).

It is not surprising then that one writer says the church was manifested in Jesus (II Clem. 14.3) and another that Jesus is shepherd of the catholic church (Mart. Polyc. 19.2). Ignatius teaches that the church is united with Christ as Christ is in union with the Father (Ign. Eph. 5.1; Magn. 1.2; 7.1). As the door of the Father, he is the way of entrance for the patriarchs and the prophets, the apostles and the church (Ign. Phila. 9.1). Some of these ideas are reminiscent of the Gospel of John. When Ignatius calls Jesus the Word of God, however, he thinks of him as God's (uttered) word "proceeding from silence" (Ign. Magn. 8.2), and the usage in Diogn. 11.2-3 appears to be similar.

The term παῖς, "servant" or "child," used in Acts, reappears in prayers and solemn passages (I Clem. 59.2; Did. 9.1-3; 10.2-3; Diogn. 8.9-10; 9.1); in the Martyrdom of Polycarp it almost certainly means "child" and is a synonym for "Son" (Mart. Polyc. 14.1, 3; 20.2).

Some other new ideas appear. Ignatius describes Jesus as the "will of the Father" (Ign. Eph. 3.2) and "born and yet not born . . . , first capable of suffering and then incapable of suffering" (Ign. Eph. 7.1), and he sees the star that announced his birth as destroying magic, wickedness, and ignorance (Ign. Eph. 19.3).

13. The genesis of Christology. One cannot trace with complete certainty the process by which Jewish messianism was transformed into Christology. Certainly Jesus' sense of his own mission and person must have been the largest single factor (*see* JESUS). The parables display him as a prophet announcing the kingdom of God, and to be a prophet was the highest category in which the Jews could place any human being. Even the rank of Messiah was partly based on the fact that he was a prophet. Jesus spoke with an absolute certainty of the truth of his message and his commission to proclaim it. Apparently he did not use the phrase "thus saith the Lord"; in fact, "the law and the prophets were until John," while Jesus stood on the threshold of a new age and saw in the events which accompanied his work the dawning of this age. Furthermore, the fate of Israel and the lives of individuals depended on their response to the message. Coupled with this authority is the absence from our sources of anything to suggest that Jesus had any consciousness of personal sin or alienation from God. On the contrary, he seems to have had a deep sense of filial relation to him. Other men were not excluded from this—indeed, Jesus sought to awake it in them—but with him it seems to have been so powerful and direct that the gospel tradition almost immediately described him as Son of God. He also very probably spoke of himself as Son of man.

He made his final trip to Jerusalem to arouse what can only be called a religious revolution, and he went fully conscious of the danger to himself and his disciples. His entry into Jerusalem had features that suggested to his followers that he had come as a peaceful messianic king, and an enthusiastic woman anointed him in Bethany. He cleansed the temple, perhaps as a sign that God would come with a more severe judgment unless men repented. At the Last Supper, certain that his body would be broken and his blood poured out, he gave the bread and wine to

his disciples as signs that this death would be for their benefit, and he promised to meet them again in the banquet of the kingdom of God.

The Romans crucified him on the charge that he was or claimed to be the "king of the Jews." Within three days his disciples experienced him as risen. During his ministry he had received unusual allegiance from them, and now they no doubt concluded that God had made him both Lord and Messiah. It must have been almost immediately that they began to search the OT scriptures, which seemed clearly to prefigure the recent events. How natural and inevitable this was can be seen from the Qumran literature or Dead Sea Scrolls, which already employed an identical method. The growing faith was heightened and enriched by the experience of the Spirit which occurred at baptisms and on other occasions, and perhaps also by a sense of the presence of the risen Christ at the Lord's Supper. The word "Messiah" came now to mean for the disciples the prophet, the new lawgiver, the Son of God, and the Son of man, and in fact to denote everything that they knew and believed about Jesus. From this the rest of NT Christology developed without difficulty.

CHRIST, BODY OF [τὸ σῶμα τοῦ Χριστοῦ]. A phrase which connotes the many-faceted relations between JESUS CHRIST and those who belong to him, their relations to him as members (μέλη), and their relations to one another in him (*see* BODY). It expresses the bonds of mutuality and solidarity accomplished in his death (Rom. 7:4; II Cor. 4:10-12; Gal. 6:17; Col. 1:24), and the intimate and strong bonds created in his resurrection (Rom. 7:4-6; I Cor. 15:42-50; Eph. 1:20-23; *see* DEATH OF CHRIST; RESURRECTION IN THE NT). The corporate life of those who are in him is embodied in both this dying and this rising (Rom. 8:9-11; II Cor. 4:7-12; Phil. 3:10-11; Col. 2:9-15). Oneness with him is made real by the one baptism (Rom. 6:1-11; I Cor. 12:12-13; Eph. 4:4-5; Col. 2:9-19) and by the one Eucharist (Mark 14:22 and parallels; John 6:50-52; I Cor. 10:16-17; 11:23-32). Oneness in him is inseparable from the work of the one Spirit which supplies power, hope, peace, and love throughout the whole body (Rom. 8:9-11; I Cor. 6:17; 12:1-13; Eph. 2:14; 4:3-4, 16; Col. 3:19). As the body's head, Christ rules over it, loves and nourishes it, sanctifies and dies for it, and fills it with the fulness of God's glory (Eph. 1:23; 5:25-29; Col. 1:19; 2:9). The members of his body consider their own bodies as united to him (I Cor. 6:12-17; Phil. 1:20) and carry about in those bodies the death of Jesus (II Cor. 4:10-12; Gal. 6:17; Col. 1:24). As members of his "spiritual body," men share in the power of the resurrection and in the promised redemption of all things (I Cor. 15; Eph. 1:17-2:10; Phil. 3:10). Within the one body, the gifts of the Spirit are apportioned in such interdependence that each gift nourishes and is nourished by the whole, love being the "bond of perfection" (Rom. 12:4-8; I Cor. 12–14; Eph. 4:10-12; *see* SPIRITUAL GIFTS; HOLY SPIRIT). Within this body the division of mankind into Jews and Gentiles is overcome (I Cor. 12–13; Eph. 2:11-18; Col. 3:11). Participation in this body means freedom from the body of sin and death (Rom. 5–8). Through his body Christ struggles with the rulers of this age, overcomes them, and shares with his people the fruits of victory (Col. 1:16-20; 2:9-15). In the Pauline letters, where this pattern of thought is most highly developed, Christ's body is explicitly linked to the church (Eph. 1:22; 5:23; Col. 1:18, 24), to the one new man, the last Adam and those who bear his image (I Cor. 15:42-50; Eph. 4:12-13), to the household of God (Eph. 2:19), to the temple (Eph. 2:21), and to the commonwealth of Israel (Eph. 2:12). *See* CHURCH, IDEA OF.

CHRISTIAN [χριστιανός]. A name referring to the followers of the gospel of Christ; used only in Acts 11:26; 26:28; I Pet. 4:16.

Variant spellings of the word occur in the NT texts, and generally. In Acts 11:26, ℵ 81 attest χρηστιανός; B D, χρειστανός. Tac. Ann. XV.44 (see also Suetonius *Claudius* 25; *Nero* 16) presupposes that in Rome in the sixties the people called the disciples *Chrestianoi*. Sometimes the fathers preferred *Chrestians*, even when knowing both spellings. The "e," indeed, is still retained in the French *Chrétien*. Leclerq affirms: "It is absolutely beyond doubt that *Christus* and *Chrestus*, *Christiani* and *Chrestiani* were used indifferently by the profane and Christian authors of the first two centuries of our era" (see Cabrol, *Dictionnaire d'archéologie chrétienne et de liturgie*, III [1948], 1464-78).

Since in Greek "e" and "i" were similarly pronounced and often confused, the original spelling of the word could be determined only if we could fix its provenance. If the name was coined by Christians themselves (so E. J. Bickerman), it could only have been spelled *Christianoi*. If the name was coined by pagans (Greeks or Romans), its original spelling could have been with an "e" or an "i." Pagans who were aware that the cult lord of the disciples was *Christos* could have formed the word as we now have it. Those to whom the word *Christos*, meaning "Messiah" or "Anointed One," was unintelligible might easily have confused it with the common Greek proper (slave) name *Chrestos*, meaning "good," "useful," "worthy." Having heard *Christos*, they might

have thought *Chrestos,* and from the latter coined the name. In this latter case, the "e" would have been corrected to "i" when the Christians accepted the title.

The problem is further complicated by the fact that the word *Christianos* is a Latinism. The expected Greek ending would be ειος. Since there were only exceptional Greek formations in ιανος, a Syrian origin of the title, although possible, is brought into question.

Formed, then, like Herodiani or Caesariani, Christians were Christ's men or party members of a person named Christ.

Since χριστιανός is a Latinism and was contributed neither by Jews (who, not accepting Jesus as Messiah, would not have so entitled his followers) nor by the Christians themselves (they had other preferred designations like "disciples," "brothers," "saints," "believers," etc., nor did they make common use of the title until the second century), it has been maintained that the designation was coined by (*a*) the Roman police (in Antioch; so Leclerq), or by Roman officials (in Antioch) to designate the Christian movement as hostile to Herod Agrippa (*see* the work of Erik Peterson in the *bibliography*) for his collaboration with Rome (Harnack, H. Karpp); or (*b*) by the Roman populace (in Rome) in the sixties (F. C. Baur); or (*c*) that the term was of unspecified pagan provenance not earlier than 79 (Schmiedel) or from Asia Minor, *ca.* 90 (Lipsius).

It still remains possible that Luke's information is correct. The three occurrences of "Christian" in the NT suggest that the term was at this time primarily used as a pagan designation. Its infrequent use in the NT indicates not so much lateness of origin as pagan provenance. If current in Nero's time, its origin must have been fairly early. Also, if the term was first used in jest or scorn (this is not necessarily so), it is easily understood why the Christians should have avoided it. In any case it is clear that by the time of Ignatius (himself an Antiochene) the term was fully accepted in the church. As in I Peter, the name is one to suffer for.

It may well be, then, that the disciples were first called Christians in Antioch. I.e., the church which first accepted in its membership uncircumcised Gentiles was the locale where pagans first saw that this "synagogue" was organized on a new principle and center—which was "Christ," its cult lord. Mattingly (*see bibliography*) proposes that the *Christiani* were deliberately named after the *Augustiani,* Nero's claque of "handsome, tough youths," whose devotion to the rhythmic praise of Nero was really an act of worship. It was this group at Antioch which inspired the nickname *Christiani.* In disdain the populace heard the disciples sing hymns to Christ: "Were they not ludicrously like Nero's *Augustiani?* Christ had *his* claque at Antioch!"

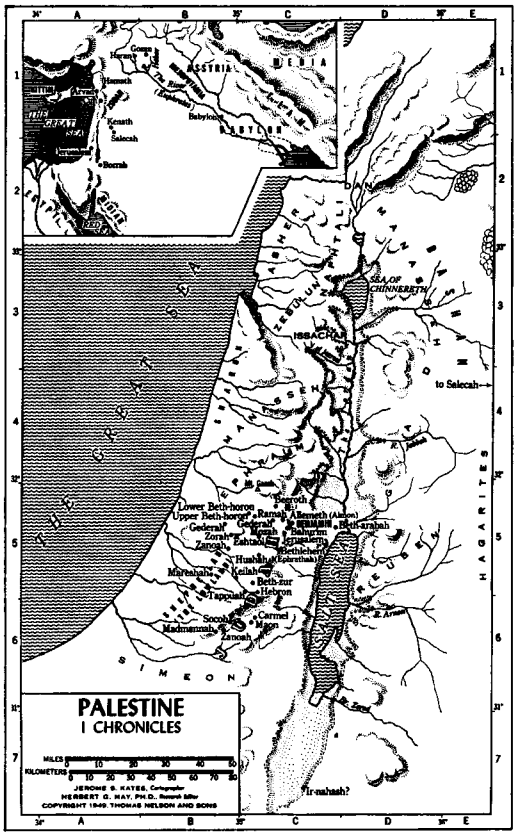
CHRISTOLOGY. *See* CHRIST.

CHRONICLES (OF KINGS, ETC.). *See* BOOKS REFERRED TO.



***CHRONICLES, I AND II.** A history from Adam (I Chr. 1:1) to Cyrus king of Persia (II Chr. 36:22-23), running parallel to Genesis–II Kings, concluded with Ezra-Nehemiah. I-II Chronicles and Ezra-Nehemiah (like I–II Samuel and I–II Kings) were single volumes in the MT, and were divided into two scrolls each in the LXX (and all later versions) because the Greek needed almost twice as much space as the Hebrew, which wrote no vowels. In the MT, Chronicles is the last book of the OT, incongruously following Ezra-Nehemiah, because it deals with events narrated elsewhere; in the LXX and in modern versions Chronicles-Ezra-Nehemiah follows II Kings, being grouped among the historical books, but in the MT it comes at the end of the Hagiographa (*Kᵉthûbhîm,* "Writings"). The Hebrew title of Chronicles is דברי הימים ("things of the days," meaning "events of [past] time," "history"); the Greek title is *Paraleipomena,* "omitted things," referring to the events added to Samuel and Kings; and it was adopted in the Vulg. Jerome suggested as a title "Chronicle of the Whole of Sacred History" and is thus responsible for the title in English and other modern languages.

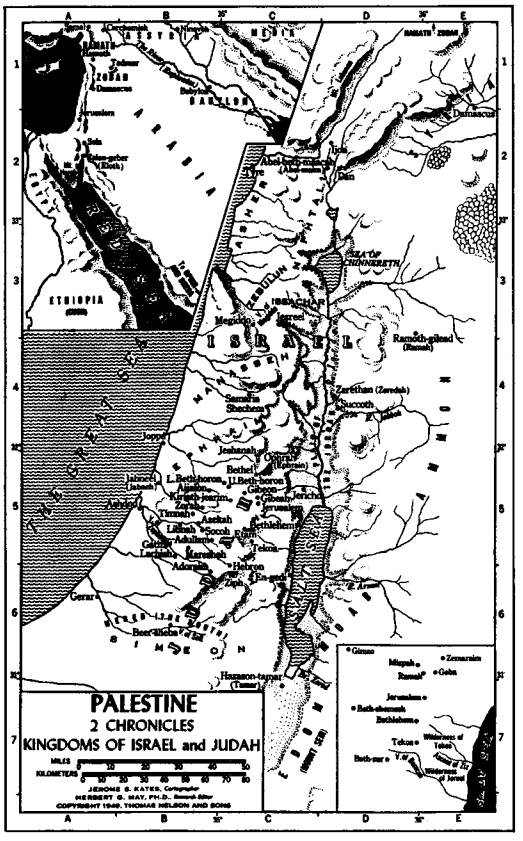
Bibliography

1. Contents. I Chronicles summarizes the period from Adam to David (chs. 1–9) and deals extensively with David's reign (chs. 10–29); II Chronicles deals with Solomon's reign (chs. 1–9) and with the kings of Judah, ending with Cyrus, king of Persia (chs. 10–36). The contents of the two books may be outlined as follows:

I Chr. 1–9 (from Adam to David). Genealogies: from Adam to Jacob (1:1-34); the sons of Esau (1:35-54); the sons of Jacob (2:1-2)—namely, Judah and his descendants (2:3–4:23), Simeon (4:24-43), Reuben (5:1-10), Gad and the war with the Hagrites (5:11-22), and E Manasseh (5:23-26); Levi (ch. 6—H 5:27–6:66), Issachar (7:1-5), Benjamin (to be read "Zebulon" [cf. Gen. 46:14]; 7:6-11), Dan (7:12, to be revised according to Gen. 46:23), Naphtali (7:13), W Manasseh (7:14-19), Ephraim (7:20-29), Asher (7:30-40), and Benjamin (8:1-5; Ehud, 8:6-28; Saul,

8:29-38, 39-40; the citizens of Jerusalem, 9:1-34; Saul, 9:35-44 = 8:29-38).

I Chr. 10–29 (David). (*a*) David's reign (10–20): Saul's death (10); David is appointed king of Israel (11:1-3) and conquers Jerusalem (11:4-9); the exploits of David's soldiers (11:10–12:40—H 11:10–12:41); the ark is brought to the house of Obed-edom (13); transaction of David's temporal affairs (14); solemn transportation of the ark to Jerusalem (15–16); Nathan's oracle (17); David's victories (18–20). (*b*) David's arrangements for the building of the temple (21–29): God reveals to David the site of the future temple, after Satan has induced David to take a census (21); David's provision of materials and workers for Solomon's building of the temple (22); David's organization of the clergy: Levites (23), priests, (24:1-19), Levites (24:20-31), temple singers (25), gatekeepers (26:1-19), treasurers (26:20-28), and administrators (26:29-32); organization of government officials: army generals (27:1-15), tribal chiefs (27:16-24), administrators of the king's property (27:25-31), and royal counselors (27:32-34); David's final instructions to the last assembly in his reign, concerning Solomon's succession and the building of the temple (28–29).



II Chr. 1–9 (Solomon). Revelation to Solomon at Gibeon (1:1-13); his riches (1:14-17); the building of the temple: negotiations with Hiram (ch. 2—H 1:18–2:17), description of the temple (3:1-13) and its furnishings (3:14–5:1), dedication of the temple (5:2–7:10), and God's answer to Solomon's prayer (7:11-22); various activities of Solomon: Hiram of Tyre gives twenty cities to Solomon (8:1-2; contrast I Kings 9:10-11), Solomon rebuilds various cities (8:3-11), inaugurates the temple worship (8:12-13), and appoints the clergy (8:14-16); his commerce, wisdom, and wealth (8:17–9:28); concluding summary (9:29-31).

II Chr. 10–36 (the kings of Judah). Rehoboam and the division of the kingdom (10–12): secession of N Israel (10:1–11:4), Rehoboam's prosperity (11:5-23) and punishment through the invasion of Shishak (12:1-12), and concluding summary (12:13-16); Abijah defeats Jeroboam (13); Asa's victory over a million Ethiopians (14–16); Jehoshaphat's judicial reorganization and victory (17–20); Jehoram's crimes and punishment (21); Ahaziah (22:1-9); Athaliah (22:10–23:21); Joash (24); Amaziah (25); Uzziah's prosperity and pride (26); Jotham (27); Ahaz and his unsurpassed wickedness (28); Hezekiah's measures in behalf of the temple worship (29–32); Manasseh's captivity and repentance (33:1-20); Amon (33:21-25); Josiah's reforms (34–35); Jehoahaz (36:1-4); Jehoiakim (36:5-8); Jehoiachin (36:9-10); Zedekiah (36:11-21); Cyrus king of Persia (36:22-23 = Ezra 1:1-3*a*).

2. Religious point of view. ***a. Theological doctrines.*** The author of Chronicles, *ca.* two centuries later, wrote a sequel to the Priestly Code in the Pentateuch and Joshua, continuing the history from the death of Joshua to the edict of Cyrus (538 B.C.), adopting the juridical and ecclesiastical religion of that charter of Judaism—with some slight modifications due to later conditions. On a cosmic back-

ground, the priestly author had shown how the Creator of heaven and earth had become the sovereign of the Jews, and in his omnipotence had directed the course of events for the benefit of his people; for Israel yet unborn he had made a covenant with Abraham, revealed his law to Moses on Sinai, and distributed to the children of Israel the Holy Land through Moses, Eleazar, and Joshua. The apocalypses dreamed of a kingdom of God in the age to come, but the Priestly Code, with more practical sense, imagined that it had been established by God in the distant past, in the days of Moses and Joshua, and described it in such terms that it furnished the concrete pattern for the organization of the Jewish congregation.

On a more modest scale the Chronicler wrote a history of this kingdom of God after its establishment in the time of Moses and Joshua. The period from Adam to Joshua (treated by the Priestly Code) was briefly evoked by mere genealogies (as P had used generally from Adam to Abraham); the same applies to the time from Joshua to David (I Chr. 1–9), because Judah played then an insignificant role, and the period of the judges was (according to the Deuteronomists) a period of intermittent apostasy and war, irreconcilable with the establishment of God's kingdom in Canaan. The Chronicler followed P in regarding the tabernacle of Moses as the only sanctuary of the Israelites until Solomon built the temple. So the period before David is merely introductory, and only the period from David to Cyrus is treated in detail.

The general plan of the Chronicler is patterned after P: the four divisions of P (beginning with Adam, Noah, Abraham, and Moses), followed by an appendix dealing with the settlement in Canaan (Joshua), correspond to the periods beginning with Adam, David, Solomon, and Rehoboam, with an appendix dealing with renewed proclamation of the law and the settlement of the exiles in Canaan (Ezra and Nehemiah). In both the main events are the building of God's house (the tabernacle and the temple) and the organization of the clergy. In both histories God intervenes miraculously in the course of events and accomplishes his ends without needing human agencies.

Both authors lived in times of peace and had neither knowledge nor liking for battles, which they usually eliminated from their sources; when this was impossible for the Chronicler (in view of the accounts in Samuel and Kings), the outcome of battles was settled in advance by the Lord, who usually won the victory for the Jews in spite of all odds (II Chr. 13:8-15; 14:9-13; 15:14; 16:7-9; etc.), except when their wickedness was punished with defeat (II Chr. 12:1-5; 21:10, 16-17; 24:23-24; 25:20; 28:1-5; etc.). The enormous armies of Judah, reaching such fantastic totals as 400,000 (II Chr. 13:3), 580,000 (14:8), 1,160,000 (17:14-19), 307,500 (26:13), are considered useless in battle (20:12; cf. 17:14-19); but through divine help victory is won—not by fighting, but by singing a psalm (20:14-30) or by a priestly fanfare (13:14-15). The late accounts of the crossing of the Red Sea and of the capture of Jericho in P and elsewhere are familiar parallels to these supernatural events.

Such reports of miraculous interventions of God in the course of history were freely invented by P and the Chronicler in rewriting their sources, in order to illustrate God's omnipotence and his requirements —chiefly blind obedience to his orders or to his law, and complete trust in him. The pious Josiah, e.g., "did not listen to the words of Neco from the mouth of God" (II Chr. 35:22) and was killed in battle; Hanani said to Asa: "Because you relied on the king of Syria, and did not rely on the LORD your God, the army of the king of Syria has escaped you" (II Chr. 16:7; see also I Chr. 10:13-14; II Chr. 28:19; 33:10-11; etc.). Far from repentant, in an acute attack of gout, Asa "did not seek the LORD, but sought help from physicians" (II Chr. 16:12).

The Chronicler not only teaches the proper faith in God, after the manner of the Priestly Code, by such graphic fictitious stories, but also (with scarcely any previous model in P) uses sermons, oracles, and prayers after the manner of the Deuteronomists in Kings. The emphasis on faith (I Chr. 29:11-19; II Chr. 14:11; 16:8-9; 20:12) is derived from the prophets rather than from P, and so is the homiletic tone (influenced by Deuteronomy) which characterizes the numerous edifying utterances added to the sources (see, e.g., II Chr. 13:8-12; 15:1-7; 20:15-17; 29:5-11; 30:6-9; 32:7-8). It is not to be excluded that the Chronicler echoes here the homilies and the prayers which he heard in the synagogues; he is likewise familiar with the psalms sung in the temple.

The Chronicler was not a very original thinker, and made no contributions to the theology of the

Priestly Code. The notion that the sole universal Creator was the god of the Jews only—which the Priestly Code and the Second Isaiah explained in two opposite manners—did not trouble him in the least. His God was the "God of Israel our father, for ever and ever"; to him belonged the "greatness, and the power, and the glory, and the victory, and the majesty"; his is "all that is in the heavens and in the earth; thine is the kingdom, O LORD, and thou art exalted as head above all" (I Chr. 29:10-11). Although God rules over all kingdoms (II Chr. 20:6), over all (I Chr. 29:12), inconsistently he is king of and god of the Jews only (I Chr. 17:14; 28:4; 29:23), and "is not with Israel, with all these Ephraimites" (II Chr. 25:7). This universal God is so partial to the Jews, the "LORD's people" (II Chr. 23:16), that to fight against them is to fight against God himself (II Chr. 13:12). The N Israelites, who until Solomon (according to Chronicles) worshiped the LORD, are later "the wicked" and "those who hate the LORD" (II Chr. 19:2).

Thus the kingdom of God is, on the one hand, the kingdom of Judah (I Chr. 28:4-7; II Chr. 13:5); but on the other, as in the Priestly Code, it is not a state but a holy congregation, a church. Racial purity is neither necessary nor sufficient for citizenship in this sacred commonwealth: the subjects of the divine King are those—and only those—who worship the Lord exclusively and obey blindly the law which he revealed to Moses. Consequently, even the Ephraimites (i.e., the Samaritans) may join the Jewish congregation (II Chr. 10–22; cf. 11:16), and even heathen may pray in the temple (II Chr. 6:32-33, based on I Kings 8:41-43). Conversely, native Judeans may be excluded from God's kingdom: "The LORD is with you, while you are with him. If you seek him, he will be found by you, but if you forsake him, he will forsake you" (II Chr. 15:2). "For the eyes of the LORD run to and fro throughout the whole earth, to show his might in behalf of those whose heart is blameless toward him" (II Chr. 16:9).

In general, however, the kingdom of Judah was the holy congregation (II Chr. 30:12), eager to fulfil the law and particularly the temple rituals (I Chr. 29:6-9, 20-22; II Chr. 7:3-10; 13:8-12; 15:8-15; 24:8-11; 29:31-36; 31:2-8; 34:32-33; etc.). Even the worship on the high places was offered only to the Lord (II Chr. 33:17). In theory apostates were condemned to death (II Chr. 15:13), according to Deut. 12:29–13:18—H 12:29–13:19, but usually the Lord forgave repentant sinners (II Chr. 7:14): "For the LORD your God is gracious and merciful, and will not turn away his face from you, if you return to him" (II Chr. 30:9). Accordingly, Rehoboam (II Chr. 12:5-8) and Manasseh (33:10-13) were forgiven after their repentance.

After the apostasy of Jeroboam I (II Chr. 13:9), the holy congregation consists of Judah, some N Israelites, and the proselytes (II Chr. 30:25); its sovereign is the Lord, its law is the Pentateuch, the book revealed to Moses (II Chr. 23:18; 30:16; 35:12), found in the temple in the eighteenth year of Josiah; actually this book was part of Deuteronomy, and it was read at least twice in one day (II Kings 22:8, 10), but in II Chr. 34:14-15, 18, they read "in it" only once, for the Pentateuch could not be read twice in a day. The Chronicler is thus the first author to attribute the whole Pentateuch to Moses; all the ritual practices which he attributes to Moses belong to the Priestly Code (I Chr. 6:48-49—H 6:33-34; 15:15; II Chr. 8:13; 24:6, 9; cf. I Chr. 16:40; II Chr. 2:4; 31:3).

b. The clergy. It is chiefly in matters concerning the status of the clergy that the Chronicler differs from the Pentateuch and discloses later developments.

Early in the Persian period (538-333) the high priest began to exert some civil authority, and the Priestly Code assigns to him some of the marks of royalty (Exod. 29:5-7), even mentioning Eleazar before Joshua (Josh. 14:1). This growth of temporal authority resembles that of the bishop of Rome. During the monarchy (before 586) it would have been inconceivable for a high priest to drive King Uzziah out of the temple for attempting to burn incense, violating the later prescriptions of the Priestly Code (Exod. 30:1-10; Num. 16:40; 18:1-7), as the Chronicler fancifully relates (II Chr. 26:16-21)—adding for good measure that the Lord made him a leper in punishment of his sin (contrast II Kings 15:5, where nothing is said of this ritual offense). Even greater is said to have been the authority of the high priest Jehoiada (II Chr. 23–24).

The high priest presides over a supreme court when it deals with sacred matters (II Chr. 19:8-11); this is presumably the earliest known allusion to the Sanhedrin.

Some rules practiced by the priests and Levites in the time of the Chronicler were still unknown in the Pentateuch, and could not be ascribed to Moses; the Chronicler attributes them to David or to a later king. The division of the priests into twenty-four courses, well known before the beginning of the Christian era (some of the courses are named in I Macc. 2:1; 14:29; Luke 1:5), is ascribed to David, "according to the procedure established for them by Aaron their father" (I Chr. 24:1-19).

The Chronicler was probably a Levite, and is far less concerned with the priests than with the Levites. The distinction of these two ranks in the priesthood began in 621, when the priests of the provincial sanctuaries ("high places") ceased to officiate (Deut. 18:6-8*a;* II Kings 23:9), and only the sons of Zadok at Jerusalem functioned as priests. This distinction was formulated by Ezekiel, for whom the Levites were temple servants (44:9-16), and was attributed to Aaron by the Priestly Code (Num. 18), with the difference that not only the sons of Zadok (descended from Eleazar, son of Aaron), but also the descendants of Ithamar, son of Aaron, or all the sons of Aaron, officiate as priests. This plan was approved by the Chronicler (I Chr. 24:1-3); but some protested that only the Zadokites should be priests (Num. 25:12-13, where God's covenant is made with the line of Phinehas, son of Eleazar; cf. also Ecclus. 45:23-24).

The Chronicler, after the manner of a modern labor leader, championed the improvement of the situation of the Levites against the "sons of Aaron," who wished to retain the Levites in their subordinate position (such anti-Levite tracts are found in Num. 3; 4; 8; 16; 17); conversely, supporters of the Levites

wrote Num. 35:1-8; Deut. 33:8-11; Josh. 21 (cf. I Chr. 6:54-81—H 6:36-66); Mal. 2:4-8.

The Chronicler goes so far as to hint that the "hewers of wood and drawers of water" in the temple might go on strike when he reports that only 74 Levites, 128 singers, 139 porters, and 392 temple servants—in contrast with 4,289 priests—were willing to return from Babylonian exile with Zerubbabel in 538 (Ezra 2:36-58); and until Ezra persuaded 38 Levites and 220 temple servants to join his caravan of returning exiles, no Levite had appeared among the 1,500 men going back to Jerusalem (Ezra 8:15-20). Such figures imply the threat of a future strike, if we compare them with the Chronicler's large number of Levites in comparison with the priests (II Chr. 29:34); he would have us believe that David assigned tasks to 38,000 Levites (I Chr. 23:3-5).

The Chronicler's picture of the status of the Levites is far superior to that fixed in the Priestly Code. They are in charge of the holy objects (I Chr. 9:28; 23:28), which in the Priestly Code they could not even see lest they die (Num. 4:15-20; 18:3). The Levites left N Israel and came to Rehoboam (II Chr. 11:13-17; cf. 13:9-10); eventually they became teachers (II Chr. 17:7-9) and judges (19:8-11); they played a decisive role in the coronation of Joash and in the overthrow of Athaliah (II Chr. 23:2-20), but disobeyed Joash (24:4-7); they co-operated, however, with Hezekiah (29:4-19); 30:13-27; 31:11-19) and with Josiah (34:9-13; 35:3-18). Individual Levites are said to have been scribes (I Chr. 24:6; II Chr. 34:13) and prophets (II Chr. 20:14-17). The Chronicler's enthusiasm for the Levites was unlimited: "for the Levites were more upright in heart than the priests in sanctifying themselves" (II Chr. 29:34). He ascribes to them ritual functions belonging to the priests (I Chr. 9:32; 23:29-31; II Chr. 29:34 [contrast 29:22, 24]), and even the teaching of the law (II Chr. 17:8-9; 35:3) and the celebration of the Passover (II Chr. 30:13-22; 35:1-19); their ritual holiness is stressed twice (II Chr. 23:6; 35:3; cf. 29:34).

Singing in a temple choir was for the Chronicler (who probably sang with the guild of Asaph) the most important function of Levites (II Chr. 8:14). He is familiar with the choral parts of the temple services and is convinced that since David the Levites sang hymns on every important occasion, including war (I Chr. 15:16-24; 16:4-42; II Chr. 5:12-13; 20:19-22; 23:13, 18; 29:25-30; 35:15). The Chronicler occasionally gives the text of the hymns (I Chr. 16:8-36, a compilation from parts of Pss. 105; 96; 106) and of the doxologies which were sung (II Chr. 5:13; 20:21). He is more interested in choral than in orchestral temple music, but there is no compelling reason for attributing the allusions to the latter (I Chr. 15:19-24*a*, 28; II Chr. 5:11*b*-13*a*; etc.) to another author.

Music in the temple services is unknown in the Pentateuch and could not be attributed to Moses, so the Chronicler ascribed it to David (I Chr. 15:16-24; ch. 25; II Chr. 7:6; 8:14; 23:18; 29:25-30). David was advised by Samuel (I Chr. 9:22)—who was dead when David became king—Gad, and Nathan (II Chr. 29:25); both David and Solomon left written records about the organization of temple music (II Chr. 35:4).

Besides Levites and singers, the lower clergy included gatekeepers (I Chr. 26:12-18; cf. 9:17-27), the Nethinim ("given" [men]) or temple servants (I Chr. 9:2; often in Ezra-Nehemiah), and the descendants of Solomon's servants (Ezra 2:55, 58; Neh. 7:57, 60; 11:3), who seem to have been eventually united with the Nethinim (I Chr. 9:2; contrast Neh. 11:3). Even the humblest of these menials were exempted (or should have been exempted?), according to the Chronicler, from taxation (Ezra 7:24).

The Chronicler traces the ancestry of all priests to Aaron, and of all priests and Levites back to Levi son of Jacob (I Chr. 6:1-53—H 5:27-6:38). "Levi" has here no real genealogical reality, but is the supposed ancestor of all those concerned with the temple, with the exception of the Nethinim and the descendants of Solomon's servants. The doctrine that all clergymen are descended from Levi originated apparently with the Priestly Code, but has no historical basis. The Chronicler transforms the Ephraimite Samuel (I Sam. 1:1) and the Gittite Obed-edom (II Sam. 6:10-13) into Levites (I Chr. 6:22-28, 33-38—H 6:7-13, 18-23; 16:38; 26:4). An Ezrahite sage, Ethan (probably also called Jeduthum; I Kings 4:31—H 5:11), to whom Ps. 89 is attributed, became both a grandson of Judah (I Chr. 2:6) and a descendant of Levi through Gershom (I Chr. 6:42-43—H 6:27-28) and also through Merari (I Chr. 6:44—H 6:29; 15:17, 19)—unless there are two singers with the same name. No less bewildering are the genealogical transformations of Asaph and Korah.

The most probable explanation of this bewildering disregard for the facts in the genealogies and other data for the lower clergy is that the Chronicler is more eager to improve its status than to give us a true picture of the facts in his own day—and much less in the time of David or Jehoshaphat. It seems certain that the Levitical status of the singers and gatekeepers was not recognized in his day, and had never been recognized before, but he took it for granted and generally idealized their situation in order to improve their position as best he could. Some of the aspirations of the singers were eventually realized: shortly before A.D. 70, Agrippa II and the Sanhedrin granted them the right to wear linen garments like the priests (Jos. Antiq. XX.ix.6 [§ 216]).

3. Purpose. The main purpose of the Chronicler, variously pursued from several directions, is to glorify the Jews in Jerusalem and Judea in a period of utter political and economic insignificance, between the two vigorous revivals with Nehemiah and Judas Maccabeus. To raise the low morale at such times, the Chronicler exaggerated the splendor of the Jewish kingdom in the past, just as Daniel (2:44; 7:11) predicted the approaching world dominion of the Jews—when all seemed lost. Both authors contributed to the survival of the Jewish congregation and presumably had several imitators whose writings are not extant; both were greatly influenced by Ezekiel in stressing the cosmic importance of the Jews and of the temple worship, and the unique concern of the sole true God in their behalf. Both Chronicles and Daniel describe the past and the future, not according to realities or even possibilities, but on the assumption that the Creator of the world invariably intervened miraculously in behalf of the Jews. Both are dominated by this faith, and neither

one ever allows facts to limit in the least the realm of faith.

Unless the Chronicler quotes reliable accounts from Samuel and Kings, it is useless to expect from him genuine historical information. Like the priestly author for the days from Adam to Joshua, the Chronicler is manifestly devoid of any desire to know any historical facts remote from the imaginary ideals and perfections of Utopia. Chronicles describes, not the epic struggles, ending in failure, of the Israelites to establish and maintain their independence in Canaan, but God's triumphant establishment of his imperishable kingdom on earth. Just as the Priestly Code had used the ceremonies of the second temple to describe those of the tabernacle of Moses, so the Chronicler transfers the institutions of his own day to the time of David.

To regard Chronicles as genuine history, as orthodox Jews and Christians have done, is to misunderstand the work, and fail to realize its nature and significance. The Chronicler set out to prove that the insignificant Judean community in the midst of the empires that arose after the death of Alexander was the glorious kingdom whose sovereign was the sole God in existence; his only earthly abode was the temple in Jerusalem. Mere historical facts could never prove the validity of this first apology for Judaism. Faith in such supreme claims could never be supported by actual occurrences—in fact, faith needs no proof and has no rational proof. The two arguments used by the Chronicler, as later by Josephus, are the antiquity of Judaism and the marvelous achievements of the Jews.

Like the Priestly Code, the Chronicler believed that the Jewish rites originated through divine revelation to Adam (the sabbath), Noah (Gen. 9:3-7), Abraham (circumcision), and Moses (the temple rituals and other sacred institutions). The temple music, unknown in the law of Moses, was ascribed to David, the Sanhedrin and general education to Jehoshaphat (II Chr. 17:7-9; 19:8-11), and missionary work among the Samaritans (a failure) and in Galilee (a partial success) to Hezekiah (II Chr. 30:1-12).

But the Chronicler did not regard the Jews as merely a holy congregation, as the Priestly Code had done following Ezekiel; he stressed at the same time the national achievements and royal glories of Judah. David not only reorganized the numerous clergy, and made extensive preparations for the building of Solomon's temple (I Chr. 22–29), but his fame "went out into all lands, and the LORD brought the fear of him upon all nations" (I Chr. 14:17; cf. II Chr. 17:10). This was inevitable if *ca.* 350,000 warriors came to crown David (I Chr. 12:23-40) and if later he commanded an army of more than 1,500,000, exclusive of Levi and Benjamin (I Chr. 21:5-6; 1,300,000 in II Sam. 24:9); for the construction of the temple, David set aside a sum about equal to three billion gold dollars (I Chr. 22:14; 29:3-4, 7-8)—a sum that at Solomon's incredible annual revenue of 666 gold talents (I Kings 10:14) David could have accumulated in *ca.* 150 years, if he had spent nothing.

In glorifying Judaism and the Jews through the centuries beyond all possibilities, the Chronicler necessarily rewrote the history from David to Cyrus: he freely omitted from his sources, added to them, modified them, being blissfully unaware of anachronisms and impossibilities.

Whatever cast discredit on David and Solomon in the ancient sources is glibly forgotten: David's willingness to fight Saul at Gilboa in the ranks of the Philistines, his adultery with Bathsheba, the murder of her husband, Absalom's rebellion, and Solomon's sins (I Kings 11). Only David's taking of the census (I Chr. 21:1–22:1; cf. I Sam. 24) was necessarily recorded, for it resulted in the revelation of the site of the temple, but the Chronicler ascribed its suggestion to Satan, and not to the LORD. David and Solomon become saints.

Later, Levites from N Israel came to strengthen Judah (II Chr. 11:13-17). Judah in the fourth year of Rehoboam lapsed momentarily into paganism (II Chr. 12:1), but it immediately came to its senses through the invasion of Shishak (see II Chr. 12, which omits the apostasy of I Kings 14:22-24).

According to the Chronicler, all pious monarchs before Josiah removed the "high places," while all the wicked kings of Judah and Israel practiced paganism and persecuted the worshipers of Jehovah. Ahaz went so far as to close the temple (II Chr. 28: 23-24). Like the Deuteronomist in Judges, the Chronicler believed that the people alternated regularly between true and false worship: the true religion had been revealed to Moses on Sinai, but the people at times forgot it and worshiped the heathen gods. It was much later that scholars discovered that it was only slowly, through the teaching of the prophets, that the people eventually attained the noble level of the religion of the Pentateuch.

The utter exclusion from God's kingdom of N Israel would not be conceivable before the Samaritan schism, dated either in 432 (by Neh. 13:28-29) or about a century later (Jos. Antiq. XI.viii.2). If we accept the date of Josephus as the most probable (*ca.* 332) and of necessity date the Priestly Code before this (for the Samaritans had the complete Pentateuch), it seems incredible that, as some have argued, the books of Chronicles could have been written before the Priestly Code and the Samaritan schism, or in 450-350 B.C.—which, of course, would presuppose that the Chronicler had nothing to do with the edition of the books of Ezra and Nehemiah. The argument adduced is that after the publication of the Pentateuch the Chronicler would not have dared to attempt to elevate the Levites above their low status decreed by the Priestly Code. But this did actually happen (Jos. Antiq. XX.ix.6) when the Levitical singers were allowed to wear linen garments like the priests shortly before A.D. 70.

It seems highly improbable that the purpose of the Chronicler could have been to oppose the cruel, narrow-minded attitude of the priesthood in Jerusalem during the sixth and fifth centuries which was asserting its superiority over the "occasional" Levites, especially from Israelitish territory (but see *IB*, III, 344-46). As a matter of fact, the temple of Jerusalem was in ruins until 520-516, and for nearly a century after that was in a most depressing state, as shown by the books of Malachi and Nehemiah. Moreover, Levites from N Israel went to the temple only in the vivid imagination of the Chronicler (after the Samaritan schism); it would have been like Protestant pas-

tors' begging to become priests in St. Peter's in Rome after 1517.

The rituals described in Chronicles are ordained in the Priestly Code or later, with the sole exception of II Chr. 35:6, 12, where the Levites (instead of the laymen, as in Exod. 12:3-8) slay the paschal lambs; this may have been done in the time of the Chronicler for pilgrims celebrating the Passover in Jerusalem or may have been done because of the large multitudes (II Chr. 29:34; 35:11), unless this is another instance in which the Chronicler enhances, as elsewhere, the position of the Levites for propaganda purposes. In any case, in two other instances of considerable importance, the Chronicler assumes the current practice of two basic religious institutions still unknown to the Priestly Code and the Pentateuch: temple choral and orchestral music, and the temporal authority of the high priest (II Chr. 24:15-24; 26:16-21). The Chronicler attributes to David the division of the priests in twenty-four courses (I Chr. 24:1-19); the organization of the Sanhedrin under the presidency of the high priest was begun by David (I Chr. 23:4; 26:29-32) and completed by Jehoshaphat (II Chr. 19:5-11). If the Chronicler wrote before the Pentateuch was canonized (*ca.* 400 B.C.), his books were abundantly interpolated by a later writer.

Every medal has two sides, and every apology needs a polemic as its counterpart. The Chronicler, in glorifying Judaism and the Jews, of necessity despised the heathen, and the Samaritans—most objectionable of all non-Jews. If Judaism is the only true religion, all others are false, and eventually all men must be converted to Judaism.

The Chronicler never doubted that the correct worship of the Lord, the only God in existence, as revealed in the Pentateuch, was the true religion, but he did not pour sarcasm on other religions and refrained from all polemic against them. In this respect he resembles Francis of Assisi, who, in the words of Paul Sabatier, "systematically avoided polemics, which are always more or less a form of spiritual pride; they merely dig the chasms which they claim to fill. Truth has no need to be proved: it prevails." The Chronicler never indulged in the viciously unfair caricature of Gentile religions beginning with the Second Isaiah (Isa. 44:9-17), according to which an imbecile hewed down a tree and with part of the wood warmed himself and cooked his meal, and with the rest carved a divine image and worshiped it. He probably felt that after the publication of the Pentateuch, heathen religions were no longer attractive to the Jewish congregation, and its occasional idolaters were immediately expelled or put to death. Moreover, the Chronicler hoped that the heathen would soon be converted to the true religion. Heathen had been converted before his time (Isa. 56:6-8), and allegedly there were proselytes in the time of Asa (II Chr. 15:9); missionary activity is said to have been begun by Hezekiah (II Chr. 30:1-12, 25), who failed dismally in his effort to convert the N Israelites (Samaritans), except for some Galileans (30:11); less than a century later the Jews were still a minority in Galilee (I Macc. 5:14-17, 20-23).

The obdurate Samaritans taxed the patience of the Chronicler beyond endurance: of course, he could usually ignore the Northern Kingdom as outside the pale of God's kingdom and regard the Samaritans as a half-heathen (II Chr. 13:4-12), godless (II Chr. 19:2; 25:7-10), and guilty mob (II Chr. 28:10-11). The heresies of the Samaritans are summarized in the sermon of Abijah (II Chr. 13:4-12); and, according to the Chronicler, are rejected by the Samaritans who repented and came to Jerusalem to worship (II Chr. 11:16; 15:9; cf. 28:12-15). On the whole, however, the Chronicler did not express in plain words his full contempt for the misguided heathen and for the apostate Samaritans, hoping for their future conversion.

4. Sources. Unquestionably the Chronicler drew his information on the history of Judah and Israel from the Pentateuch and the books of Joshua, Samuel, and Kings. From them he often quotes verbatim or draws information which he supplements or modifies according to his purpose. To show that the theocracy founded by Moses (according to the Priestly Code) continued without a break until Nehemiah, he did not hesitate to give both the text of his biblical sources and his own opinion, since the text of the Pentateuch was already canonical and that of the other books was soon to be canonized. In I Chr. 15:27, e.g., he says that David wore a robe of fine linen (according to his own view) and a linen ephod (according to II Sam. 6:14).

In general the Chronicler modified our canonical sources with complete freedom to suit his ideas. He simply omitted from Samuel and Kings what did not agree with his notions of the Jewish theocracy (the adultery of David with Bathsheba, the rebellion of Absalom, the accession of Solomon, etc.), and modified what did not agree with his religious views (contrast II Sam. 24:1 with I Chr. 21:1) or his notion of the facts of history (contrast II Sam. 21:19 with I Chr. 20:5). After reporting how the N tribes of Israel made David king (according to II Sam. 5:1-3), he adds: "according to the word of the LORD by Samuel" (I Chr. 11:3). To glorify Judah, the Chronicler does not hesitate to say without support in Samuel that David set aside for Solomon's building of the temple more than the equivalent of three billion gold dollars (I Chr. 22:14; 29:3-4, 7-8); 350,000 Israelites came to crown David at Hebron (I Chr. 12:23-40—H 12:24-41), and in Jerusalem he commanded an army of more than 1,500,000, exclusive of Levi and Benjamin (I Chr. 21:5-6; cf. II Sam. 24:9, where the much exaggerated total amounts to 1,300,000 men). Likewise he never hesitates to change his sources to cast aspersion on N Israel—in his day, the Samaritan community—as when he said that Abijah with 400,000 men defeated twice as many of Jeroboam's men, killing 500,000 (II Chr. 13:3-20; unknown in I Kings 15:1-5).

But in spite of his views that differed considerably from those of the authors of Samuel and Kings, the Chronicler preferred to reproduce his sources verbatim: I Sam. 31 and II Sam. 5:1-3, 6-10; 23:8-39 (in I Chr. 10–11, in part); II Sam. 7; 8; 10 (in I Chr. 17–20); etc. Any variations between the text of Chronicles and that of Samuel-Kings is due either to the better preservation of the text of Chronicles or to his own improvement of the diction (as in I Chr. 17:3-15; cf. II Sam. 7:4-17).

Elsewhere the Chronicler rewrote the narratives of

Samuel and Kings in order to express his own views, which often differed from those of his source: new details are added to the account of David's bringing the ark to Jerusalem (I Chr. 15:25-28; cf. II Sam. 6: 12*b*-15), to the taking of the census (I Chr. 21; cf. II Sam. 24), to the reign of Athaliah (II Chr. 22:10–23:21; cf. II Kings 11), to the repairs to the temple under Joash (II Chr. 24:4-14; cf. II Kings 12:4-16), etc. The Levites are mentioned only three times in the books of Samuel and Kings (I Sam. 6:15; II Sam. 15:24; I Kings 8:4, in late passages dealing with the transportation of the ark), but thirty-five times in I Chronicles and sixty-four in II Chronicles.

When detailed stories in II Kings could neither be omitted nor be reproduced in full, the Chronicler summarized them, stressing his own views (II Chr. 22:7-9 [cf. II Kings 9:1-28; 10:11-14]; II Chr. 32:1-23 [cf. II Kings 18:13–19:37]; II Chr. 34:4-7 [cf. II Kings 23:4-20]). Conversely the Chronicler expanded the brief account of the celebration of the Passover by Josiah (II Kings 23:21-23) and of his death (II Kings 23:29-30) into a detailed story (II Chr. 35:1-19, 20-25).

These examples suffice to illustrate the various methods by which the Chronicler rewrote, edited, shortened, expanded, and arbitrarily changed the passages in Samuel and Kings which suited his purposes, omitting the rest. The contrast between Chronicles and the earlier books brings out clearly the disregard of the Chronicler for historical accuracy or even likelihood, and his concern with the ritual worship, the importance of the Levites, and temple music. Only half of I–II Chronicles is even remotely inspired by biblical sources; in the other half the Chronicler, unless he had access to sources unknown to us, was able to display his vivid imagination by composing freely, without any guidance. Here we face the most difficult critical problem: did he use sources no longer accessible to us or write freely as he wished?

After the manner of Kings, the Chronicler refers the reader to other writings for further information on the subject. The historical works referred to—never our canonical Samuel and Kings, which are so frequently excerpted—are: the Book of the Kings of Israel and Judah (I Chr. 9:1; II Chr. 27:7; 35:27; 36:8); the Book of the Kings of Judah and Israel (II Chr. 25:26; 28:26; 32:32); the Royal Book of Judah and Israel (II Chr. 16:11); the Book of the Kings of Israel (II Chr. 20:34; in I Chr. 9:1, where this title appears, we should read the "Book of the Kings of Israel and Judah"); the Acts of the Kings of Israel (II Chr. 33:18); the Midrash (teaching) of the Book of Kings (II Chr. 24:27).

Another group of writings is attributed to various prophets and seers: the Acts of Samuel the Clairvoyant (I Chr. 29:29); the Acts of Nathan the Prophet (I Chr. 29:29; II Chr. 9:29); the Acts of Gad the Prognosticator (I Chr. 29:29); the Prophecy of Ahijah the Shilonite (II Chr. 9:29); the Visions of Iddo (*sic*) the Prognosticator Concerning Jeroboam Son of Nebat (II Chr. 9:29); the Acts of Shemaiah the Prophet and Iddo the Prognosticator (II Chr. 12: 15); the Midrash of the Prophet Iddo (II Chr. 13: 22); the Acts of Jehu Son of Hanani "which are recorded in the Book of the Kings of Israel" (II Chr. 20:34); a book by the prophet Isaiah the son of Amoz, containing the history of Uzziah (II Chr. 26: 22); the Vision of Isaiah, the son of Amoz (cf. Isa. 1:1), the Prophet (II Chr. 32:32, and "in [*sic*] the Book of the Kings of Judah and Israel"); the Acts of the Prognosticators (II Chr. 33:19).

The following miscellaneous works are also mentioned in Chronicles: a genealogical register of Gad (I Chr. 5:17); the Chronicles of King David (I Chr. 27:24); the LORD's architectural plan of the temple (I Chr. 28:19); the plan for the organization of the Levites written by King David and the one written by Solomon (II Chr. 35:4); the Lamentations for Josiah written by Jeremiah and others (II Chr. 35: 25; the same as the book of Lamentations? cf. Jos. Antiq. X.v.1).

The first five books mentioned by the Chronicler, the histories of the kings of Judah and Israel, are manifestly a single work mentioned under different names. It is now often called the "Midrash of the Kings" (II Chr. 24:27), omitting "of the Book" with the LXX, and it is clearly *not* identical with our canonical books of Samuel and Kings, for it contained the Prayer of Manasseh (II Chr. 33:18). With the possible exception of the Acts of the Prognosticators (II Chr. 33:19), which is also said to have contained the Prayer of Manasseh, the prophetic books were part of the Midrash of the Kings. This historical work included also echoes from I–II Samuel (cf. I Chr. 29:29) and is said to have contained a parallel in the Vision of Isaiah (II Chr. 32:32; cf. II Kings 18:13–20:19; Isa. 36–39); moreover, the prophecy of Jehu son of Hanani (cf. I Kings 16:1-7, 12; II Chr. 19:1-3) was written in a book inserted into the Book of the Kings of Israel (II Chr. 20:34). It is significant that the information on a king is given either in a historical or in a prophetic book (except in II Chr. 20:34; 32:32; 33:18-19).

The Chronicler apparently quotes the same work under sixteen different titles, either as a Midrash of the Kings (five titles referring to historical books) or according to the ancient practice of referring to a passage by name, as Paul in Rom. 11:2-3 refers to I Kings 19:10, 14, as follows: "Do you not know what the scripture says 'in Elias'?"

If this Midrash actually existed—which is open to question—it was a work much more detailed than Chronicles, where it is referred to for information which was not reproduced from it. It began, to judge from the allusions to it, with David in I Chr. 11 and continued to Manasseh in II Chr. 33; we do not know if it contained a history of the kings of N Israel. The actual existence of the other writings listed by the Chronicler is extremely doubtful.

Two opposite conclusions as to the Chronicler's use of Samuel and Kings have been drawn: (*a*) that all the information parallel with the accounts in Samuel and Kings, as well as that not to be found there (e.g., II Chr. 24:27; 27:7; 33:18), was derived by the Chronicler from the Midrash of the Kings, without his ever using our canonical books of Samuel and Kings; and conversely, (*b*) that "the material of I and II Chronicles not derived from our canonical books . . . was all freely composed by the Chronicler himself, in pursuit of his apologetic aim"—in other words, that the Chronicler used exclusively our canonical books.

No objective final verdict on these two opposite opinions is possible, but the evidence slightly favors the second. What is not in the books of Samuel and Kings generally agrees closely with the contributions of the Chronicler in Ezra-Nehemiah. J. Wellhausen, who believed that the Chronicler used this Midrash, admitted that "whether one says Chronicles or Midrash . . . is more or less equivalent; they are children of the same womb, and can in no way be distinguished according to spirit and language, while conversely the sections preserved verbatim from the canonical Book of Kings are striking in both respects." In some cases Chronicles reproduces at the same time both the text of the canonical books and the later correction of it: Saul committed suicide (I Chr. 10:4; cf. I Sam. 31:4-5), and at the same time the Lord slew him because he consulted a ghost at Endor (I Chr. 10:13-14). Obed-edom was at the same time a Philistine from Gath (I Chr. 13:13-14; cf. II Sam. 6: 10-12), the ancestor of a Levitical guild of gatekeepers (I Chr. 15:18, 24; 16:38*b*, etc.), a Levitical temple musician (I Chr. 15:21; 16:5, 38*a*). Likewise Samuel was transformed from an Ephraimite (I Sam. 1:20) into a Levite (I Chr. 6:28) because he was also directly concerned with the ark of Shiloh (I Sam. 3:3), which was in the sole charge of the Levites according to the Priestly Code (Num. 3:31; cf. Deut. 10:8; etc.). Moreover, when the Chronicler did not reproduce his canonical sources without change, he often added his own contributions to the story such as references to the Levites, and freely invented personal names. In I Chr. 25:4, beginning with Hananiah, the names mean: "Have mercy, O Jehovah, have mercy on me!" "Thou art my God!" "I have magnified and extolled the help for the one sitting in hardship"; "I have made oracles overflow abundantly." At times he added many new details in place of some omissions (I Chr. 13:1-5; 15-16 [cf. II Sam. 6]; II Chr. 22:10-23:21 [cf. II Kings 11]; II Chr. 34 [cf. II Kings 22-23]). At times a brief notice in Kings is expanded, as the story of the death of Josiah (II Kings 23:29-30*a*) in II Chr. 35:20-25 (cf. II Chr. 18:28-34); the correspondence between Solomon and Hiram, of which there was no trace previously, is created by the Chronicler in II Chr. 2:2-16. In conclusion, "there is no internal evidence, anywhere, of an intermediate source between our Old Testament books and the Chronicler" (C. C. Torrey, *Ezra Studies*, p. 223).

5. Date. The date of the Chronicler cannot be fixed by definite clues between 400 and 200 B.C., for it is later than the Pentateuch (canonized *ca.* 400 B.C.) and earlier than Ecclesiasticus in 180 (I Chr. 23–29 is echoed in Ecclus. 47:8-10). A date *ca.* 250 B.C. or a little earlier is far more probable than 400-350 B.C., which W. F. Albright assigns to the work, by assuming that the Chronicler was Ezra and that Ezra came to Jerusalem after Nehemiah.

6. Style. Aramaic was for the Chronicler the spoken vernacular, and his Hebrew is somewhat artificial and postclassical, abounding in Aramaic expressions and late words; for details see E. L. Curtis and A. A. Madsen, *The Books of Chronicles*, ICC (1910), pp. 27-36. Nevertheless, when he writes freely without quoting a source, he delights in giving details taken from life (I Chr. 12:39; 28:2; II Chr. 16:14; 20:5, 16, etc.) and using vivid comparisons (I Chr. 11:23; 12:8, etc.). His imagination is picturesque and colorful, but in spite of its apparent realism it lacks connection with real facts and never reaches the level of truly great literature.

1. From the Creation to the Exodus. ***a. The early patriarchs.*** Many generations of Bible readers have been led by the computations of Archbishop James Ussher, first published in his *Annales Veteris et Novi Testamenti* (1650-54) and printed in the margin of some editions of the KJV, to believe that the world was created *ca.* the year 4000 B.C. Ussher's chronology took at face value the years of the patriarchs as listed in the MT of Gen. 5; 7:11; 9:28-29; 11:10-32. However, the figures of the Hebrew Bible do not agree in many items with the Samar. and LXX ver-

sions, and these disagreements lead to differing totals. In Table 1 *below* a list is given of the age of each patriarch at the birth of his successor, of their remaining years, and of the total length of their lives, as these appear in the MT, Samar., and LXX respectively.

There have been three distinct ways of understanding this genealogy. The first interpretation is that of Ussher, which takes the list to indicate successive generations from father to son; the second interpretation is the same except that it assumes that many links have dropped out of the genealogy, as in the case of Kainan (retained by the LXX in Gen. 11:13); the third is to understand the names as dynasties or peoples instead of as individuals. With the latter two methods no estimate of the age of the world can be obtained.

The conventional and schematic structure of this list of patriarchs should be apparent. It contains two units of ten names each, the first extending from Adam to Noah and the second, counting Kainan, from Shem to Terah. This is analogous to the genealogy of Matt. 1, which artificially compresses all the generations from Abraham to Jesus into three equal units of fourteen. It will be observed that the MT places the death of Methuselah in the year of the Flood, as if to emphasize the radical break produced by that cataclysm in human life. The LXX overlooks this point, making Methuselah live fourteen years too long.

When the three lists of figures are compared, there can be little doubt that the Hebrew text is original. It will be seen that the LXX adds a century to the age of the early antediluvians at the time of their successor's birth, evidently through consideration of their extremely long lives. The Samar. does just the opposite with Jared, Methuselah, and Lamech in order to bring their deaths to the year of the Flood. While the LXX balances its additions to the first part of the patriarchs' lives by subtractions from the latter part, the Samar. simply shortens the whole life.

By adding a hundred years to most of the figures, the Samar. and the LXX avoid the abrupt drop in the ages of the postdiluvians at the birth of their successors, as compared with the corresponding ages of the antediluvians according to the MT. By making the year of each of Abraham's ancestors (except Terah [LXX]) to fall before Abraham's departure for Canaan at the age of seventy-five, the Samar. and the LXX emphasize this as a new beginning in human history. According to the MT, on the other hand, all these ancestors were still living at the time of Abraham's departure.

The great longevity of the Genesis antediluvians

Table 1
Genealogy of the Early Patriarchs

	Age at Successor's Birth			Remaining Years			Total Years		
Patriarch	MT	Samar.	LXX	MT	Samar.	LXX	MT	Samar.	LXX
Adam	130	130	230	800	800	700	930	930	930
Seth	105	105	205	807	807	707	912	912	912
Enosh	90	90	190	815	815	715	905	905	905
Kenan	70	70	170	840	840	740	910	910	910
Mahalalel	65	65	165	830	830	730	895	895	895
Jared	162	62	162	800	785	800	962	847	962
Enoch	65	65	165	300	300	200	365	365	365
Methuselah	187	67	167	782	653	802	969	720	969
Lamech	182	53	188	595	600	565	777	653	753
Noah	500	500	500	450	450	450	950	950	950
Shem	100	100	100	500	500	500		600	
Total years at the Flood	1656	1307	2242						
Arpachshad	35	135	135	403	303	430		438	
Kainan			130			330			
Shelah	30	130	130	403	303	330		433	
Eber	34	134	134	430	270	370		404	
Peleg	30	130	130	209	109	209		239	
Reu	32	132	132	207	107	207		239	
Serug	30	130	130	200	100	200		230	
Nahor	29	79	79	119	69	129		148	
Terah	70	70	70				205	145	205
Total years at Abraham's birth	1946	2247	3312						
Plus the 2 years of Gen. 11:10	1948	2249	3314						

finds a striking analogy in the fantastically long life spans of the antediluvian kings in the Sumerian King List. According to this list, one of the kings ruled as long as 43,200 years, and all eight ruled for a total of 241,000 years.

b. From Abraham to the Exodus. For the period before Abraham there is no event in secular history which may be used as a check point for establishing absolute dates. Many exegetes have believed, however, that Gen. 14 provides a basis for comparative chronology. This chapter records Abraham's contact with four invading kings, among them a certain Amraphel. Most attempts to identify these kings with personages in secular records have been highly hypothetical, but many scholars have confidently equated Amraphel with the famous HAMMURABI of the first Babylonian dynasty. A Babylonian chronology formerly accepted by most scholars dated this king 2123-2081 B.C. This agreed very well with a date for Abraham in the twenty-first century B.C., as required by a fifteenth-century exodus (*see below*). However, Hammurabi's dates have been radically revised by subsequent evidence that he was a contemporary of Shamshi-Adad I of Assyria and by new information from the Mari documents, from excavations at Alalakh in Syria, and from the Khorsabad King List. Many scholars now agree that Hammurabi reigned between 1728 and 1686 B.C.

Although the identification of Amraphel with Hammurabi remains problematical, there are some who feel that this identification should still be maintained, even on the basis of the low chronology, which would place Abraham in the seventeenth or eighteenth century. Nevertheless, it ought to be recognized that some of the figures in the OT definitely demand the early date for Abraham if their schematic character is not recognized (*see* Table 2). These are the 100 years of Abraham at Isaac's birth, Isaac's 60 years at the birth of Jacob, Jacob's 130 years at his descent to Egypt, the 430 years of Israel's bondage in Egypt (Exod. 12:40-41 MT), and the 480 years from the Exodus to the founding of the temple in Solomon's fourth year, *ca.* 967 (I Kings 6:1 MT). These figures add up to a total of 720 years from Abraham's birth to the Exodus and of 1,200 years to Solomon, placing Abraham's birth at 2167 and the Exodus at 1447.

It is true that both the LXX and the Samar. make the 430 years of Exod. 12:40 apply to the sojourn in Canaan, as well as to the bondage in Egypt (cf. Gal. 3:17), thus reducing the latter by the 215 years elapsed between Abraham's entry into Canaan in his 75th year and the descent to Egypt in Jacob's 130th year. They make the sojourn in Canaan and the bondage in Egypt of equal length. It is to be doubted, however, that the additional words, "in the land of Canaan," can be considered as part of the original text, since in these two versions they occur in opposite order with relation to "in Egypt." Moreover, the term "people of Israel" would scarcely apply to the patriarchs before Jacob.

Table 2
Years from Abraham's Birth to the Exodus

Period	Years
From Abraham's birth to his entry into Canaan (Gen. 12:4)	75
From Abraham's entry into Canaan to the birth of Isaac (Gen. 21:5)	25
From Isaac's birth to the birth of Jacob (Gen. 25:26)	60
From Jacob's birth to his descent into Egypt (Gen. 47:9)	130
From the descent into Egypt to the Exodus (Exod. 12:40-41)	
MT	430
LXX and Samar.	215
Total duration	
MT	720
LXX and Samar.	505

As a matter of fact, the genealogical lists of this period make a 430-year residence in Egypt impossible and even a 215-year residence very unlikely. There is record of no more than four generations from Jacob to Moses—viz., Levi, Kohath, Amram, Moses (Exod. 6:16-20; cf. Num. 3:17-19; 26:58-59; I Chr. 6:1-3). That this genealogy is intended to be complete is plainly implied in Gen. 15:16, where return from bondage is promised Abraham's descendants "in the fourth generation." Yet Kohath, who was one of those who went down to Egypt (Gen. 46:11), lived 133 years, his son Amram lived 137 years (Exod. 6:18, 20), and Moses was 80 years old at the time of the Exodus (7:7). Although we have no statement as to Jacob's age at the birth of Levi, or of Levi's age at the birth of Kohath, the likelihood is that the latter was a grown man at the descent to Egypt in Jacob's 130th year. Likewise it is probable that Amram was born within 40 or 50 years after his father's birth. But if we should go so far as to assume that Kohath was born the year before the descent; that his eldest son, Amram, was born 132 years afterward in the year before Kohath's death; and that Moses was born 137 years after this in the year of his father's death, the sojourn in Egypt would stretch to more than 349 years. A far more likely figure would be between 140 and 210 years, allowing 40 or 50 years for each generation. It has often been observed that most of the genealogical notices in the Pentateuch agree with this calculation. An early-seventeenth-century date for Abraham is made possible by this figure, depending on the date assigned for the Exodus.

2. From the Exodus to Solomon's temple. The statement in I Kings 6:1 that Solomon began to build his temple in his 4th year, which was the 480th year since the Exodus, has already been mentioned. To-

gether with a statement ascribed to Jephthah in Judg. 11:26 that Israel had already occupied Heshbon and surrounding areas for 300 years, this calculation leads to a date for the Exodus in the middle of the fifteenth century, during the reign of Thutmose III (1490-1436) of the Eighteenth Dynasty. This Pharaoh, an ambitious builder, might fit very well the characteristics of the biblical king who set the Hebrews to building store cities (Exod. 1:11), were it not for the fact that the latter are said to have lived and worked in the Delta area, while the kings of the Eighteenth Dynasty had their residence far up the Nile at Thebes.

Further evidence for a fifteenth-century exodus has been found, however, in the Amarna Letters (*see* TELL EL-AMARNA). On the chronology under consideration, the Hebrews would have been conquering Palestine under Joshua in the years near and soon after 1400. According to the Amarna Letters, which were sent from Palestine to Amen-hotep III (1413-1377) and Amen-hotep IV Akh-en-Aton (1377-1360), a group of marauders called HABIRU (probably to be associated with the Hebrews) were invading the central highlands at precisely this period. When J. Garstang, the excavator of Jericho, announced that that city had been destroyed before 1400 B.C., a fifteenth-century date for the Exodus seemed to many to be certain.

There are serious objections to this date, however. For one thing, archaeologists of competence have challenged Garstang's evidence as inconclusive and have pointed to the numerous contrary indications that various cities in the path of Joshua's conquest, such as Lachish, Debir, and Bethel, were destroyed in the second half of the thirteenth century. As a matter of fact, a date for the Exodus in this century fits the circumstances of contemporary history far better than does the earlier date. Counting 480 years

Table 3
Years from the Exodus to the Founding of Solomon's Temple, According to Biblical Data

Intervals Associated With	Years
The wilderness wandering (Num. 32:13)	40
Period of Joshua and the elders (Judg. 2:7; duration not stated)	*x*
Oppression of Cushan-rishathaim (Judg. 3:8)	8

Solomon (to building of temple; I Kings 6:1)	4
Total duration	
MT	554 plus *x* plus *y*
LXX	544 plus *x* plus *y*
Remaining years of Solomon (total reign, 40 years; I Kings 11:42)	36

for the sojourn in Egypt, it makes possible an entry of the Hebrews into Egypt near the beginning of the semi-Semitic Hyksos Dynasty (*ca.* 1700-1565 B.C.). It also accounts for the fact that no mention is made of Egyptian inroads into Palestine in the books of Joshua and Judges, as very likely would have been the case had the Exodus occurred before the great Asiatic campaigns of Seti I (1319-1301) and Ramses II (1301-1234). Archaeological evidence from the Transjordan similarly favors a thirteenth-century exodus.

A date for the Exodus *ca.* 1290 or 1280, during the reign of Ramses II, has found wide favor (*see* RAMSES 2). In addition to the items of evidence just mentioned, a major argument for this date is based upon the statement of Exod. 1:11 that the Hebrews built Pithom and Ra-amses. The latter can hardly be any other than Per-Ramesese, almost certainly the same as Avaris-Zoan, the Delta capital of the Hyksos and the new capital of Ramses II, which he claims in his inscriptions to have built. That the name Ra-amses is not merely an anachronism, as some have claimed, is indicated by the fact that this city was apparently not occupied from the expulsion of the Hyksos (*ca.* 1565) until the accession of Ramses II.

As for the Habiru, there are several considerations which argue against their identification with Joshua's army. One is that further references to this people have been found in Babylonian and Hittite sources, in the NUZI texts, and in a text from Ras Shamra (*see* UGARIT), plainly indicating that the Habiru movement was far broader than the conquest of Canaan by the biblical Hebrews. Another major consideration is that when the Habiru raids in the Amarna Letters are compared with the report of Joshua's conquest, there are actually more differences than resemblances. A theory of a double entry into Canaan, appearing in several variations, attempts to reconcile an early fall of Jericho with this late date for the Exodus, and to account for an association of the Hebrew tribes with the fourteenth-century activities of the Habiru in Palestine. *See* ISRAEL, HISTORY OF, § 2.

In any case, most scholars agree that the Exodus must have occurred before 1229 B.C., the fifth year of MER-NE-PTAH, in which year this Pharaoh claims to have defeated "Israel" in the land of Palestine. There will continue to be uncertainty, however, concerning the exact time of the descent into Egypt and the duration of the Hebrews' sojourn there.

On the evidence for an exodus *ca.* 1290, it is apparent that the intervening period until Solomon is far shorter than the 480 years required by I Kings 6:1. Certain genealogies of this period demand a shorter interval, however. Thus Gen. 36:31-39 lists only eight Edomite kings reigning, according to the obvious intent of the passage, in the period culminating with the reign of Saul. Since a king was already ruling in Edom in Moses' time (Num. 20:14), these eight (or fewer) kings would have to fill a gap of approximately four hundred years if the Genesis passage is to agree with I Kings 6:1. Even worse, the six generations from Nahshon the contemporary of Moses (Exod. 6:23) to Solomon (Ruth 4:20-22) would have to stretch over this same period, unless long gaps in this genealogy are to be assumed.

It should be pointed out, moreover, that the chronology demanded by the books of Judges and Samuel actually far exceeds the figure of 480 years. As will be seen from Table 3, a total of 554 years plus two periods of unknown length occupy the interval from the Exodus to the founding of Solomon's temple. Josephus evidently based his estimate of 592 (Antiq. VIII.iii.1) or 612 (Apion II.ii) years for this period upon this observation (cf. Acts 13:18-21).

Unfortunately, there are no references to contemporary events in the records of this period sufficiently clear to be of use to us. The victory of Sisera (Judg. 4–5) is variously dated from 1200 to 1100 B.C., and references to the Philistines, who came to Palestine *ca.* 1175, offer little chronological help. Judg. 11:26, which might indicate a fifteenth-century exodus if this could be substantiated on other evidence, is perhaps the result of later calculation.

It is doubtless necessary to recognize that in many cases the judges were contemporaries of one another, exercising authority over limited tribal areas. This is certainly the case with Abimelech, who was regarded as an illegitimate ruler, and is very probable with regard to Samson and various others. *See* JUDGE; JUDGES, BOOK OF.

In any case, the figures of Table 3 indicate a tendency to schematization, with the employment of units, multiples, and fractions of 40 years. The schematic character of I Kings 6:1 itself has often been emphasized. Its 480 years, composed of 12 units of 40, was very likely obtained by subtracting all the years of oppression and the years of Abimelech, reducing the total of 554 years to 440, which would allow 20 years to Joshua and the Elders and 20 to Saul. Following a similar calculation, the LXX of I Kings 6:1 reduces its 544-year total to 430, the exact equivalent of the Hebrews' sojourn in Canaan and in Egypt according to its version of Exod. 12:40.

3. From Solomon's temple to the Exile. ***a. Problems and methods.*** When they come to the period of the Divided Monarchy, students of biblical chronology are at first sight delighted with the wealth of data available to them. First, there is a complete list of kings for both Judah and Israel, with the lengths of their respective reigns; second, synchronisms are provided for the accession of each king in terms of his contemporary's reign; third, the age of the kings of Judah at the time of their accession is stated; further, certain important events are dated either to a certain year or by the interval elapsed since another significant event; still further, certain biblical events are co-ordinated with contemporary occurrences in secular history. With so much information on hand, it would seem that the reconstruction of the chronology of this period should be a simple matter.

Nonetheless, various scholars who have worked with these data have found the chronology of this period almost beyond solution. They have discovered, to their dismay, that many of the above details seem to contradict one another. E.g., the total of years for Judah does not agree with the total for Israel; besides, the totals of either kingdom do not seem to fit the synchronisms. But worst of all is that the chronologies which many have attempted to construct from the biblical data fail to agree with historical information now available from a considerable variety of Assyrian and Babylonian documents.

Before discussing the problems connected with the biblical figures for this period, a statement of the high reliability of Assyrian chronology is in order. As contrasted, e.g., with the notorious ambiguity of many Egyptian historical records, the dependability of the Assyrian documents is outstanding. We know, for one thing, that the Assyrians (and Babylonians) kept their calendar year in precise accord with the solar year (*see* CALENDAR § 1). We also find in the Assyrian documents the employment of a method of dating which has proved to be of invaluable assistance for establishing absolute dates. Although the Assyrians did not date events by any given era, they did assign to each year the name of an eponym or limmu, as he was called, an official (sometimes the king himself) especially designated for this purpose. Assyriologists have been able to compile a complete list of these eponyms from 892 to 648 B.C.

Besides the name of the eponym for each year, this list mentions the years when the Assyrian kings began their reigns and gives the most notable political event of almost every year; but the most valuable of all its data is the mention of an eclipse of the sun in the month Simanu in the year of Bur-Sagale, which astronomers have calculated to have occurred on June 15, 763 B.C. Upon the basis of this calculation every other year in the eponym list can be fixed.

The dates of this list have been absolutely confirmed by other ancient chronological documents, the most important of which are the Khorsabad King List and the Canon of Ptolemy. The former is dated by the scribe who prepared it in the second eponymy of Adad-bel-ukin, the same as the eighth year of Tiglath-pileser III, 738 B.C. In the body of the Khorsabad List a complete succession of Assyrian kings is given from the beginning down to 745 B.C., in many cases with the length of reign, and the data of this list are in perfect agreement with the Eponym List. The Canon of Ptolemy, though coming from the second century A.D., records the reigns of Babylonian kings back to Nabonassar in 747 B.C., as well as the reigns of later Persian, Ptolemaic, and Roman rulers. Its accuracy has been established by Ptolemy's mention in another writing of numerous solar, lunar, and planetary positions, including eclipses, all dated in the reigns of the various kings mentioned in his canon. In every case astronomers have confirmed these data exactly.

With the aid of this fixed chronology for the Assyrian and Babylonian kings, some of their contacts with biblical kings mentioned in cuneiform records can be given an absolute date. The most important are the following:

a) The battle of Shalmaneser III (859-824) in his sixth year with Ahab and the Syrian allies at Qarqar, 853 B.C. (Monolith Inscription, *ANET* 278).

b) Shalmaneser III receives the tribute of Jehu in his eighteenth year, 841 (Annals and Black Obelisk, *ANET* 280, *ANEP* 122).

c) Tiglath-pileser III (745-727) receives tribute from Azariah and Menahem between 743 and 738, and is in contact with Jehoahaz (Ahaz), Pekah, and Hoshea in unstated years (Building Inscription, Annals, *ANET* 282-84).

d) Sargon II (722-705) captures Samaria in his accession year, 722/21 (Khorsabad Inscriptions, *ANET* 284 f); but cf. the Eponym List and Babylonian Chronicle 1:28, which put this event in the last year of Shalmaneser V (727-722), 723/22.

e) Sennacherib (705-681) besieges Hezekiah in his fourth year, 701 (Oriental Institute and Taylor Prisms, *ANET* 287-88).

f) Neco at the siege of Harran, Tammuz to Elul in the seventeenth year of Nabopolassar (626-605), 609 (Gadd Chronicle, *ANET* 305).

g) The Battle of Carchemish in Nabopolassar's twenty-first year, 605 (B.M. 21946; cf. Jer. 25:1; 46:2).

h) Nebuchadrezzar II (605-562) captures Jerusalem on 2 Adar of his seventh year, March 16, 597 (D. J. Wiseman, *Chronicles of Chaldean Kings,* pp. 33, 73).

It is certain that most Assyrian and Babylonian chronological records deserve great confidence. Much of modern scholarship has denied this confidence to the biblical records, however, on the ground that these do not seem to agree with Assyrian chronology. There are still some, it is true, who prefer to ignore the demands of contemporary history for the sake of what they imagine to be a biblical chronology, explaining the discrepancies in the biblical figures as best they can, mainly by assuming several periods of interregnum in the lists of kings. This is a course, however, which enlightened scholarship refuses to follow. Convinced of the basic reliability of the cuneiform records, one is certain that something is wrong with the biblical data or with current methods of interpreting these data. Despite the fact that in recent decades more respect has been shown for the synchronisms and other figures than was usual during the ascendancy of the Wellhausen school, almost all chronologies of the Divided Monarchy are still forced to emend many of the biblical figures in order to bring them into a harmonious pattern and to make them agree with the Assyrian data.

Since scholarship in general has been passing through a period of profound doubt concerning the trustworthiness of the entire biblical tradition, it is small wonder that the Hebrew scribes have been easily accused of inaccuracy in recording chronological materials. Now, however, that the biblical tradition and the MT are being strikingly confirmed in countless ways, it is certainly in order that scholarship should again approach these chronological records with a mind open to the possibility, or even the likelihood, that they are, after all, substantially correct. A priori, the Hebrew scribes ought to deserve as much confidence, unless proved absolutely wrong, as the scribes of other peoples.

Happily, knowledge is at present available which makes it unnecessary to yield either the testimony of secular records or of the biblical text. It is possible to fit almost all the biblical data, unrevised, into a perfectly harmonious pattern while at the same time bringing this pattern into agreement with Assyrian and Babylonian records. One can do this by understanding thoroughly the methods and devices employed by the Hebrew scribes in recording their data.

It must be said that ancient attempts to improve the chronological statements of the MT, as in the LXX and in the writings of Josephus, have been demonstrated to be nothing more than that—attempts

to emend what was not understood. They have no independent evidential value for the correct chronology of the Divided Monarchy, and modern systems based upon them are badly in error.

What then were the chronological methods of the Hebrew scribes? We must discover these through close study of the text and through careful experimentation. Several alternatives must be faced. First, it must be decided whether the scribes of Judah and Israel dated their kings by the accession-year or by the nonaccession-year method; then, which new-year day each kingdom employed, whether spring (Nisan) or fall (Tishri); further, how the scribes of each realm reckoned the reigns of their neighbors' kings, and whether each group of scribes was consistent in following a particular method throughout the whole period of the Divided Monarchy. Finally, the existence of any interregna or coregencies must be discovered. It will be apparent that possible combinations of these factors are numerous enough to lead to great complexity. Of the many combinations which have been tried by biblical chronologists, only the one here described, which is essentially that first proposed by Edwin R. Thiele (*see bibliography*), seems to give satisfactory results.

First of all, then, the method of counting reigns must be determined. The nonaccession-year system, in vogue in Egypt in ancient times, allowed a king to count the year of his accession as his first official year, while the same year also counted as the last official year of his predecessor. Also called the antedating system, this method resulted in counting one year too many in each reign. On the other hand, the accession-year or postdating system, which was the basis for reckoning in much of the Near East and in Mesopotamia, did not count a king's reign until the first new year after his predecessor's death. The portion of a year remaining between the predecessor's death and the new year was counted as the new king's accession year, and reigns which were too short to reach a new year were not counted. Under this system the true length of each reign was recorded.

A close examination of the early reigns of the Divided Monarchy reveals that Judah followed the postdating system, while Israel employed antedating, although later each kingdom changed its method. Thus the years of the kings of Judah till Omri's death (I Kings 14:21; 15:2; 16:29) total fifty-eight, while the years of the kings of Israel during the same period (14:20; 15:25, 33; 16:8, 23) total sixty-two, despite the fact that both kingdoms began in the same year. The only explanation of this phenomenon is that Israel's kings were antedated, resulting in excess years, while Judah's kings were postdated according to actual years of reign. The interesting fact that for this period Israel has only four excess years with five kings provides a vital clue to another of the chronological problems mentioned above—viz., the method of reckoning employed by Hebrew scribes for kings of the neighboring realm. Evidently the synchronism of I Kings 16:29, giving Asa thirty-eight years at Omri's death, is reckoned in terms of Israel's method of antedating. Omri actually died in Asa's thirty-seventh year, and the true length of the period in question was fifty-seven years. We have here then an illustration of the fact that the scribes of each realm applied the methods of their own kingdom to the kings of the other realm, and this is a practice which proves to have been consistently followed.

A further problem concerns the beginning of the new year for each kingdom. For Judah we have direct evidence that the year was counted from the first of Tishri (September-October). I Kings 6:1, 37-38; II Kings 22:3; 23:23, together with the archaeological evidence of the Gezer Calendar, plainly demand such a reckoning. (For details, *see* CALENDAR § 2.) Moreover, a Tishri new year for Judah is demanded by the chronological data now under consideration.

The opposite is required for Israel. Although we have no direct statement that Israel reckoned the years of her kings from a new year in Nisan (March-April), a close scrutiny of certain synchronisms and lengths of reign makes it apparent that this was the case. Thus Rehoboam is said to have reigned seventeen years (I Kings 14:21), evidently from a new year in Tishri. During his seventeenth year he died, and his son Abijam reigned in his stead. This, Abijam's accession year, is said to have been Jeroboam's eighteenth year (15:1), even though it is a Judahite scribe who made the notation (*see above*). Since Rehoboam and Jeroboam began their reigns in the same year (ch. 12), it is evident that the latter reckoned his rule from a Nisan new year, and thus that Abijam must have begun his reign between the months of Nisan and Tishri. If it be supposed that, despite the fact that a Judahite scribe recorded this synchronism, the eighteenth year of Jeroboam was calculated by the antedating method (hence one year too high), then one must reckon with the synchronism given for Asa's accession after Abijam's three-year reign (I Kings 15:2, 8), which is the twentieth year of Jeroboam (vs. 9). If the scribe had been figuring Jeroboam's reign by Tishri years and by the antedating system, this would have had to be Jeroboam's twenty-first year. As it is, Asa began to reign between Tishri and Nisan—i.e., during the six months after the beginning of his father's third year and before the end of Jeroboam's twentieth.

Further examples could be given. Some will be noted in the discussion to follow, but at this point it must suffice to say that on the basis of Nisan years for Israel and Tishri years for Judah, many perplexing difficulties disappear and a pattern of harmony results. A Nisan new year was observed from ancient times in Babylonia and Assyria. The traveling new year of the calendar in Egypt, where Jeroboam found refuge from Rehoboam before the beginning of his reign (I Kings 11:40; 12:2), was celebrated in the springtime at this period. Since Jeroboam is known to have been an innovator with calendrical reckoning (cf. 12:32-33), it is easy to believe that he might have introduced the Nisan new year in his realm.

A further question which must be dealt with concerns the existence of interregna or coregencies. As has been mentioned, the totals of years for Judah and for Israel do not agree, and this discrepancy cannot be accounted for solely on an understanding of the modes of reckoning employed by the ancient scribes. From the disruption of the realm at Solomon's death to Jehu, Judah's years total 95, while

Israel's years total 98 plus 7 days. From Jehu to the fall of Samaria, Judah's years total 166, and Israel's total 143 plus 7 months. These discrepancies might be accounted for, at least in some instances, by the supposition of interregna (apart from the very unlikelihood of such a supposition), were it not for the fact that for the latter period Assyria's chronology allows no more than 120 years, indicating that both Judah's and Israel's totals must be shortened rather than lengthened. The only way in which a shorter total may be obtained is on the theory that coregencies existed at certain times in this period.

What is the evidence for the existence of coregencies in the Divided Kingdom? First of all, II Kings 8:16 (MT) plainly states that Jehoram of Judah began his reign while his father, Jehoshaphat, was still king. Another item of evidence for this coregency is found in 1:17; 3:1, where Joram of Israel is said to have begun his rule both in the second year of Jehoram and in the eighteenth year of Jehoshaphat. The only way to resolve these seeming inconsistencies is to posit a coregency for Jehoram beginning in his father's seventeenth year. The further statement of 8:16 that Jehoram began to reign in the fifth year of Joram of Israel must be understood to refer to the beginning of his independent reign.

There is good evidence, besides, for five additional coreigns during the period of the Divided Kingdom, plus one other in Judah after the fall of Samaria. Of these coreigns, the one for which there is the most direct statement is that of Jotham with Azariah (II Kings 15:5); others which may be legitimately deduced from chronological and similar indications are those of Jehoshaphat with Asa, Jeroboam II with Jehoash, Azariah with Amaziah, Ahaz with Jotham, and Manasseh with Hezekiah. Six of these coregencies pertained to the Judahite realm, while only one was in the N kingdom. Undoubtedly the wisdom of the kings of Judah in providing for the certain succession of their proper heirs through appointing them to coregencies before their own deaths, as was the case in most instances, accounts to a great extent for the remarkable stability of their dynasty.

On the basis of the above discussion we are now in a position to compare the biblical figures with known dates in contemporary secular records. If a pattern of harmony results, we have strong presumptive evidence that our interpretation is correct.

To recapitulate, then, one may say that the methods of the Hebrew scribes were the following: Judah's scribes dated their kings from a Tishri new year by the postdating method (changed, as we shall see, to the antedating method in Jehoram's reign and back again to postdating in the reign of Amaziah); Israel's scribes conversely dated from Nisan on the antedating basis (changed to postdating in the reign of Jehoash); both groups of scribes were consistent in figuring the reigns of the neighboring kingdom by their own methods; both took account of coregencies, sometimes expressing the length of a given reign from the beginning of a coregency and sometimes from the beginning of independent rule.

Since Ahab's son Ahaziah reigned two years (I Kings 22:51), and another son Joram (or Jehoram) reigned twelve years (II Kings 3:1), both figures being reckoned by antedating for a total of twelve actual years; and since, as we have seen, this twelve-year period is the precise interval provided by the Assyrian records for the period between Shalmaneser III's contact with Ahab (853) and his contact with Jehu (841), we are forced to the conclusion that 853 was Ahab's last year, while 841 was the first year of Jehu. Thus we have two firm points for dating the various reigns of the Divided Monarchy. We also have a valuable confirmation that the antedating method was indeed in use in the N kingdom at this period.

Dating back from Ahab's death by the antedating method and subtracting a total of seventy-eight years and seven days, we arrive at 931 B.C. as the year of the beginning of Jeroboam's reign. This was also the year of Rehoboam's accession and of Solomon's death.

It will now be necessary to outline the chronology of the kingdoms of Israel and Judah from the Disruption to the Babylonian exile, using the dates already established as a firm basis for others and applying to the biblical figures the precise methods of the Hebrew scribes as described above. In Tables 4 and 5 all the reigns and coregencies of Israel and Judah are placed in graphic relationship with one another, along with the scripture references, lengths of reign and synchronisms, important events, dates, and contacts with foreign kings.

b. From Solomon's temple to Jehu. We have established the year 931 as the beginning of the reigns of both Rehoboam and Jeroboam. Thirty-six years previous to this, in Solomon's fourth year, the foundation of the temple had been laid. This was the year 967, the date furnished in our discussion above.

Although most scholars have favored a date for the Disruption close to 931, some recent chronologies have placed it as late as 922. Arguments for 922 have been based mainly on a Tyrian king list presumably cited by Josephus, and on the supposition that Shishak's raid in Rehoboam's fifth year (I Kings 14:25) must be dated too late to agree with 931 as the date of the Disruption. Such arguments are, however, too speculative in nature to weigh against the strong evidence for a 931 date.

The SHISHAK of I Kings 11:40; 14:25 was the vigorous Sheshonk or Shoshenq I, founder of the Twenty-Second Dynasty in Egypt. Recent dates assigned to him are 935-914, although the evidence for this is not altogether certain. This king has left in an undated inscription a record of the Palestinian cities captured by him on his campaign of 926/25.

After Jeroboam's reign of twenty-one actual years, his son Nadab came to the throne. In the statements that Nadab began to rule in Asa's second year (I Kings 15:25) and that Baasha slew Nadab in Asa's third year, after Nadab had reigned for two years (vss. 28, 33), we have another indication that in this period Israel reckoned by the antedating method, while Judah reckoned by postdating.

When we come to the reign of Baasha, an interesting chronological problem arises. I Kings 16:8 records that this king ruled for only twenty-four years (twenty-three by actual reckoning), after which he was succeeded by his son Elah. Confirmation for this figure is found in the further statement that Elah began to rule in Asa's twenty-sixth year. Yet we read

in II Chr. 16:1 that Baasha built Ramah and began to wage war with Judah in Asa's thirty-sixth year. This is not the only point in which Kings and Chronicles seem to disagree about the details of Asa's and Baasha's reigns. I Kings 15:16, 32, states that there was war between these two kings all their days; yet II Chr. 14:1, 6, informs us that Judah enjoyed peace for the first ten years of Asa's reign, and in 15:19 we read the strange statement that "there was no more war until the thirty-fifth year of the reign of Asa."

Now if the thirty-sixth year of II Chr. 16:1 were correct, it is apparent that Rehoboam's reign would have to be substantially shortened, perhaps bringing his accession, with adjustments in the lengths of some

of the other reigns, to the late date mentioned above, 922 B.C. This procedure would have the severe additional disadvantage, it should be realized, of reducing to meaninglessness a whole series of synchronisms (I Kings 15:1, 9, 25, 33; 16:8, 10, 15, 23, 29). Nevertheless, support for the superiority of II Chr. 16:1 has been sought in the references to Ben-hadad, king of Syria, as Asa's ally in I Kings 15:18-20; II Chr. 16:4. An inscription of Ben-hadad I has been dated by orthographic evidence between 875 and 825. However, the length of this king's reign is not known. There exists no argument which would make it impossible for him to have been Asa's ally shortly after the beginning of the ninth century B.C. *See* BEN-HADAD 1.

Actually, II Chr. 15:19 according to the Hebrew text does not contain the word "more." It simply states that there was no war in Asa's reign until his "thirty-fifth year." And then in the "thirty-sixth year" the conflict began with Baasha. I Kings 15:16, 32, can easily be understood to mean that continual enmity existed between these kings, although without open warfare until the hostilities under consideration. The clue to an understanding of the "thirty-sixth year of Asa" is doubtless to be found in the preceding reference to the "thirty-fifth year." What the conflict was that occurred in Asa's "thirty-fifth year" is not stated in II Chr. 15:19, but the context does contain reference to warfare—viz., the invasion of Zerah (*see* ZERAH 4) and Asa's triumph (14:9-14), culminated by a great victory celebration and covenant reratification in Asa's fifteenth year (15:10). Is it not altogether likely that II Chr. 15:19 is a misplaced reference to this conflict? And, since many people from Ephraim and Manasseh were defecting to Asa's apparently victorious cause (15:9), should we not seek here the motive for Baasha's building Ramah and closing the border (16:1)? Baasha certainly would not wait for twenty years to take such action.

There are two possible explanations for the "thirty-fifth" and "thirty-sixth" years of II Chr. 15:19; 16:1. If the figures are correct, they could originally have referred to the beginning of the Divided Monarchy; if the reference to Asa's reign is correct, they could represent a very understandable scribal error for "fifteenth" and "sixteenth." The latter alternative would seem the most likely, since there are no other examples of dating from the Disruption, while the books of Chronicles do contain instances of scribal slips in the recording of numbers. Besides, the first alternative would place the war with Zerah, thirty-five years after the Disruption, in Asa's fourteenth year, 897/96, while the victory celebration is dated in his fifteenth year, 896/95. The text does not seem to make very likely an interval of a year between these events. It is better, therefore, to date the war with Zerah and victory celebration in Asa's fifteenth year, 896/95, and the war with Baasha in Asa's sixteenth year, 895/94.

The figures provided in I Kings 16:23 for Omri's reign have caused considerable confusion. It is best to take this verse as a conflation of chronological data from various sources. According to the record Omri actually began to reign in Asa's twenty-seventh year, since Zimri reigned before him for only seven days (vss. 10, 15); but Omri's capital remained in Tirzah while he struggled against his rival Tibni (vss. 21-22), whom he killed in Asa's thirty-first year. With Tibni out of the way, Omri proceeded to build a new capital in Samaria (vs. 24). Omri's total reign was twelve years (by antedating), the first six of which had been spent in Tirzah.

We have good evidence that there were two coregencies in Judah in this period. The coregency of Jehoram with his father, Jehoshaphat, has been explained above. The other coregency was that of Jehoshaphat with his father, Asa. The evidence for this coreign is as follows: Ahab's reign began in Asa's thirty-eighth year (I Kings 16:29). Asa's forty-one-year reign (15:10) ended, therefore, in Ahab's fourth year, which is given as the beginning of Jehoshaphat's rule in 22:42. Yet this same verse states that Jehoshaphat ruled for twenty-five years, after which he was succeeded by Jehoram. Jehoshaphat's reign must count from the beginning of a coregency with Asa three years before the latter's death, because Joram of Israel became king in Jehoshaphat's eighteenth year (II Kings 3:1) and Jehoram began his sole reign in the fifth year of Joram (8:16). II Chr. 16:12 furnishes the valuable information that Asa became seriously ill in his thirty-ninth year, which would be sufficient reason for the establishment of a coregency at that time.

Ahab was included among the Syrian allies who fought against Shalmaneser III of Assyria at Qarqar on the Euphrates in the year 853. As has been indicated above, 853 was Ahab's last year. We know, however, that Ahab was not killed at Qarqar but lived long enough to turn against his erstwhile ally Ben-hadad (called Hadad-Ezer in the Assyrian record) with the help of Jehoshaphat. Since his army had suffered less severely at Qarqar than had the army of Ben-hadad, Ahab may have considered this an ideal time to throw off the Syrian hegemony. He was, of course, mistaken. As I Kings 22:29-38 informs us, Ahab died in battle at Ramoth-gilead, probably shortly before the month Tishri in his twenty-second year, in the seventeenth year of King Jehoshaphat (16:29; 22:51).

As has been mentioned, Jehoram of Judah began his sole reign in his brother-in-law Joram's fifth year (cf. II Kings 8:18). Since this is a synchronism for Judah, this ought to be the actual fifth year, calculated by postdating, and would fall in the year 847. However, if we assume postdating for Judah in this period, the one-year reign of Ahaziah (II Kings 8:26) plus the preceding eight-year reign of Jehoram (vs. 17), dating back from the beginning of Jehu's reign in 841, would demand 850 instead of 847 as the year of Jehoram's accession. It should be obvious that the Judean court, so much under the influence of the house of Ahab at this period, had changed to Israel's method of antedating. Thus Jehoram began his rule in Joram's actual fourth year, 848, and reigned only seven years, while his son Ahaziah reigned only part of one year. The double synchronism for Ahaziah's accession found in II Kings 8:25; 9:29 confirms this fact. A scribe who was obedient to the court's demands recorded this as occurring in Joram's twelfth year, while another scribe, perhaps in defiance of the court or else living in a later pe-

riod, recorded it as Joram's eleventh year. Incidentally, these synchronisms are added confirmation that Judah was using a Tishri year, while Israel was observing a new year in Nisan, since only by this arrangement could Jehoram's eight-year reign, followed by the accredited year of Ahaziah, fall in Joram's twelfth and last year.

The house of Ahab came to a bloody end with the revolt of Jehu in 841, which was also the year that Jehu paid tribute to Shalmaneser III, according to the Black Obelisk. Not only did Joram of Israel die, but Jehu killed Ahaziah of Judah as well (II Kings 9:24, 27), taking the throne of Israel for himself and leaving the S kingdom to Athaliah (11:1). Thus the year 841 is of utmost importance for the chronology of the Divided Monarchy, marking as it does the end of two parallel reigns and the beginning of two others.

It must be stressed at this point that the figures in the MT for lengths of reign and synchronisms have so far proved to be in perfect harmony with one another and with the Assyrian dates, the only exception being II Chr. 15:19; 16:1. Difficulties arise, not so much from the figures as from erroneous ways of interpreting them. There is a strong presumption, therefore, that the figures for the following reigns can similarly lead to reliable results if they are properly interpreted.

c. From Jehu to the fall of Samaria. Although the length of Athaliah's rule is not stated in the Bible, we are informed that the boy Joash took her throne and that she was put to death in her seventh year (II Kings 11:4). Since it is also stated that Joash began to reign in Jehu's seventh year (12:1), it is apparent that both kingdoms were counting by the antedating method. Thus Athaliah actually reigned for only six years, and Joash' forty official years (12:1) actually amounted to only thirty-nine.

We may also be certain that antedating was in vogue in both kingdoms when Jehoahaz succeeded Jehu after the latter's twenty-eight-year reign (II Kings 10:36), since this is stated as taking place in the twenty-third year of Joash (13:1), and Athaliah's seven-year reign had preceded that of Joash. A change in method of reckoning was introduced in the next reign, however. After Jehoahaz had reigned seventeen official years, his son Jehoash came to the throne in Joash' thirty-seventh year (13:10). Since Israel was following a Nisan and Judah a Tishri year, this synchronism can fit the period between Nisan and Tishri of Joash' thirty-seventh year, but only if this year is counted by postdating. Thus we see that Jehoash of Israel changed to the method of postdating, the practice formerly in vogue in Judah and now apparently becoming increasingly prevalent throughout the Near East with the spread of Assyrian influence. That Amaziah the son of Joash soon followed suit is certain from the synchronism for his accession in the second year of Jehoash (14:2). Even though the latter had already adopted the postdating method, Amaziah would have counted his own accession year as the third year of Jehoash, had he not himself made the change to postdating. Until the end both kingdoms adhered to this method without further change.

Jehoash reigned sixteen years (II Kings 13:10), after which he was succeeded by his son Jeroboam in the fifteenth year of Amaziah (14:23). Amaziah reigned twenty-nine years (14:2)—i.e., until Jeroboam's fifteenth year. However, we are informed that Azariah (or Uzziah) succeeded to the throne of Judah in Jeroboam's twenty-seventh year (15:1). We have here an excess of twelve years for Jeroboam. This excess of twelve years at Azariah's accession is plain indication of a coregency of Jeroboam with his father beginning in the latter's fifth year, 793/92, and it appears that we should count Jeroboam's forty-one-year reign (14:23) from this date. Since Jeroboam's coregency began in Amaziah's third year, 793/92, his above-mentioned accession in Amaziah's fifteenth year must be understood to refer to the beginning of his sole reign at the death of his father. As a matter of fact, II Kings 14:17 reports the unusual but significant item that Amaziah lived fifteen years after Jehoash' death (and the beginning of Jeroboam's sole reign), thus filling out his twenty-nine years.

There was, however, a second coreign involved in these reigns which further complicates our chronology, that of Azariah with Amaziah. II Kings 15:1 provides the synchronism for the beginning of Azariah's sole reign. This was in the twenty-seventh year of Jeroboam's coregency, as we have seen, yet the synchronism for Zechariah at the end of Jeroboam's forty-one years (fourteen years later) is the thirty-eighth year of Azariah (vs. 8). This indicates that Azariah shared his father's throne twenty-four years—i.e., from Amaziah's sixth year, 791/90.

There is doubtless great significance in the fact that Jeroboam II began his coregency in 793/92 and Azariah came to the throne so soon afterward, in 791/90. II Kings 14:7-14; II Chr. 25:6-25 tell of a war between Amaziah and Jehoash, provoked by the former after a successful campaign against Edom. In this war Jehoash defeated Amaziah at Beth-shemesh, destroyed part of the wall of Jerusalem, and took Amaziah captive, apparently at least until his own death in 782/81. In all likelihood Jehoash took the precaution of appointing Jeroboam as his coregent shortly before the beginning of this conflict, so that 792 is the probable date of Beth-shemesh and of Amaziah's capture. Although it is likely that Jeroboam released the latter after the death of his father, Jehoash (this being then the significance of II Kings 14:17), it is apparent that the people of Judah would place another king on the throne in Amaziah's absence. This would be Azariah, whose first (official) year was 791/90. But very likely Azariah was actually enthroned a year earlier, in 792/91, and counted this as his accession year, not expecting his father's release. It is doubtful, therefore, whether we should speak of a coregency in the usual sense. When Amaziah did return and attempted to reassert authority, a conspiracy arose to have him assassinated—the incident is recorded in the misplaced notice of II Kings 14:19-21.

The date of Azariah's accession is extremely important for the years to follow, because no fewer than five kings of Israel are dated by it. Zechariah took the throne at the end of Jeroboam's forty-one-year reign, in Azariah's thirty-eighth year, which would be between Nisan and Tishri, 753. Six months later,

in Azariah's thirty-ninth year, 753/52, Shallum slew Zechariah, but reigned only one month (II Kings 15:13), after which he was himself assassinated by Menahem, this being also in the thirty-ninth year of Azariah (vs. 17). Since we are not told exactly in which months the short reigns of Zechariah and Shallum fell, we must determine the beginning of Menahem's reign on the basis of Pekahiah's accession in Azariah's fiftieth year (vs. 23). This was the year 742/41. Sometime after Tishri, 742, and before Nisan, 741, Menahem's ten-year reign came to an end; hence his accession year was 752/51. This means that Shallum's one-month reign straddled the Nisan new year of 752, and that Zechariah's reign was from Elul, 753, to Adar, 752.

The reign of Menahem provides another contact with a king of Assyria, in this case Tiglath-pileser III, who came to the throne in 745 B.C. II Kings 15:19-20 speaks of Menahem's paying tribute to Pul of Assyria, whom we know from cuneiform sources to be the same as TIGLATH-PILESER (cf. I Chr. 5:26). In the "Annals" of this king both Menahem of Israel and Azariah of Judah are mentioned as among those who showed subjection to him in his first W campaign, which began in his third actual year of reign, 743. A problem arises because Menahem and Azariah are mentioned in the section appearing immediately before the record of Tiglath-pileser's ninth year. The assumption has therefore been that these kings were still alive in 738, too late for the chronology with which we are working. The "Annals" have revealed upon further careful study, however, that the entire six-year campaign of Tiglath-pileser III in the W is described in terms of a geographical unit and not by separate years. As a matter of fact, there is no mention of separate years between the third and the ninth. There are, on the other hand, indications which show that the events connected with Menahem and Azariah actually occurred toward the beginning of the campaign, perhaps in Menahem's last year, 742/41.

In an undated tablet of Tiglath-pileser, Ahaz of Judah is also mentioned as tributary to him; and in still another tablet of uncertain date this Assyrian king claims to have put Menahem under tribute, to have caused Pekah's overthrow, and to have placed Hoshea in Pekah's place. Since, as we shall see, Pekah died in 732/31, several years after Menahem's death by any reckoning, we have confirmation that Tiglath-pileser did not mention his contacts with the Hebrew kings in strict annalistic order.

After Pekahiah's two-year reign, Pekah seized the throne. This was in the fifty-second and last year of Azariah, 740/39 (II Kings 15:23-27). Pekah is said to have reigned twenty years, thus until 720/19; but in addition to creating complete confusion in the chronology of this period, this reckoning makes impossible the above synchronism with Tiglath-pileser III, who died in 727. The Assyrian Eponym List helps us at this point, listing the years 734-732 as "against Philistia" and "against the land of Damascus." Unfortunately we do not know in which year of this last W campaign of Tiglath-pileser Pekah was overthrown, but, as we shall see, the whole pattern of the period makes 732/31 the most probable.

Now, if 732/31 was the year of Pekah's death, it is apparent that II Kings 15:27 credits his reign with twelve years too many. A likely explanation for this is that Pekah usurped the reigns of Menahem and his son Pekahiah, reckoning his own reign from the death of Shallum in 752. Pekah is said to have been a high officer at the royal court (vs. 25). Having undertaken to wipe out the house of Menahem, which he may have secretly regarded as illegitimate even while working in its service, he sought to efface from the record the years that it had held the throne by claiming them as his own.

It has been noted that Pekah began to reign in Azariah's fifty-second year, 740/39. Presumably this would also be the year of Jotham's accession; however, II Kings 15:32 states that the latter began to reign in Pekah's second year, implying an interregnum. The truth is that, far from an interregnum existing between Azariah's and Jotham's reigns, we have a definite statement that Jotham ruled for a period as coregent when his father became a leper (vs. 5). Besides, Hoshea's accession in the year 732/31 is spoken of as occurring in Jotham's twentieth year (vs. 30), bringing the time when Jotham began to reign, evidently as coregent, to the year 751/50. The synchronism of Jotham's accession for Pekah's second year thus refers to the beginning of his coregency in terms of Pekah's accredited reign thrown back to 752/51. The conclusion is that Jotham became coregent between Nisan and Tishri, 750. Another synchronism in terms of Pekah's usurped reign is that of Ahaz, whose accession is dated in the latter's seventeenth year (II Kings 16:1), which was 735/34. There were evidently scribes in the Judean court who sympathized with Pekah's attitude toward the house of Menahem.

Jotham is credited with a sixteen-year reign (II Kings 15:33). That these years were counted from the beginning of his coregency in 750, and not from his father's death in 740/39, is certain for the reason that Ahaz began his sixteen-year reign in 732/31, reckoning back from the beginning of the reign of his son Hezekiah, whose fourteenth year (18:13) was the year of Sennacherib's invasion of Judah, 701. But if Jotham reigned sixteen years from 751/50, Ahaz must have ascended the throne in 736/35 (counting no accession year for Jotham, since he came to the throne as coregent). This points to the same date that we have obtained on the basis of II Kings 16:1. Ahaz began to reign with his father (or instead of his father) between Nisan and Tishri, 735. Vss. 5-10 and parallel references in Chronicles and Isaiah inform us of Ahaz' collaboration with Tiglath-pileser III in that king's campaign against Philistia and Damascus (dated by the Eponym List in 734-732, as we have seen), and it was doubtless a pro-Assyrian party that forced Jotham to yield the throne at this time and considered this to be the end of his reign. The total length of Ahaz' reign was, however, counted from the beginning of his sole rule, beginning in the year of Jotham's death, 732/31; this reckoning was doubtless the work of anti-Assyrian scribes in Hezekiah's reign.

Hoshea, the last king of Israel, seized the throne in 732/31 and reigned nine years (II Kings 17:1). The beginning of Shalmaneser V's three-year siege of Samaria is dated in Hoshea's seventh year (18:9),

and Samaria's fall is dated in his ninth year (17:6; 18:10). According to this reckoning Samaria fell in 723/22, Shalmaneser's last year.

The biblical text asserts that Shalmaneser captured Samaria (II Kings 18:9-10). However, the Khorsabad texts of his successor, Sargon II, definitely claim the fall of Samaria for Sargon's accession year, 722/21, and this is the date that has been generally accepted for this momentous event. If Samaria fell in 722/21, it is obvious that there are errors in the biblical text. There are reasons, however, to doubt Sargon's claim. The first is that this king does not mention the capture of Samaria in his early annals; he boasts of this success only in the inscriptions in his palace at Khorsabad, which he completed shortly before his death. Moreover, the Babylonian Chronicle 1.28 (a more disinterested witness) claims the capture of Samaria for Shalmaneser. Even more important, the Eponym List mentions the repair of a temple as the memorable event of Sargon's accession year, 722/21, while listing a campaign against a city whose name is unfortunately lost for the last three years of Shalmaneser's reign, 725-723. There can be little doubt that the city in question was Samaria, and that therefore this city actually fell in 723/22. It is, of course, possible that Sargon took part in the Samaria campaign as a leading general, and this would be sufficient justification in his own mind for claiming it as an achievement of his own reign, which began so soon afterward.

All the biblical and Assyrian dates for the period of the Divided Monarchy have now been fitted into a harmonious pattern, with the exception of the following four: Hoshea's accession in the twelfth year of Ahaz (II Kings 17:1); Hezekiah's accession in the third year of Hoshea (18:1); Hezekiah's fourth year equivalent to Hoshea's seventh (18:9); Hezekiah's sixth year equivalent to Hoshea's ninth (18:10). It is obvious that these synchronisms threaten to upset the chronology which has here been worked out. As a matter of fact, they have caused endless trouble for generations of biblical chronologists. There is, however, a significant consistency about these four figures: they all pertain to Hoshea's reign; the figure for Hoshea is twelve years too low; the figures for Ahaz and Hezekiah are thirteen years too high. They are therefore best explained as a late and mistaken calculation by an editor who did not understand the correct method of figuring the twenty accredited years of Pekah (15:27). This editor failed to realize that Pekah had usurped the twelve years of Menahem and Pekahiah, and hence he placed the events of Hoshea's reign twelve years too late. He evidently did have reliable data indicating when Ahaz and Hezekiah began their reigns, but since these Judean kings followed a Tishri rather than a Nisan year, he placed their reigns thirteen years too high in relation to the reign of Hoshea.

d. From the fall of Samaria to the Babylonian exile. The campaign of SENNACHERIB against Hezekiah in the year 701 has already been mentioned. Since this took place in Hezekiah's fourteenth year (II Kings 18:13), we see that this king began to reign in 716/15. This accords with the description in II Chr. 29 of a Passover celebration in his first year, which implies that Samaria had already fallen. It is further attested by other figures concerning Hezekiah's reign. II Kings 18:2 states that he ruled twenty-nine years, thus for fifteen years after his contact with Sennacherib in 701. This is the exact length of time that was promised to him after he became sick during the siege of Jerusalem (20:6).

There has been considerable discussion of whether Sennacherib made one or two campaigns against Judah, because of the mention of the Ethiopian king TIRHAKAH in II Kings 19:9. Recent research has dated the beginning of Tirhakah's reign in 690/89, so that if Sennacherib came into conflict with him during Hezekiah's reign, this must have been *ca.* 688.

Between Hezekiah's accession in 716/15 and Jehoiachin's captivity in the 8th year of Nebuchadrezzar, 597 (II Kings 24:12), there are recorded seven reigns with a total of 128 years and 6 months. This is almost 11 years too long. Once again we face the alternative of errors in the record or of a coregency. In the face of the amazing accuracy of the chronological figures so far examined, it is not easy to assume an error. But if a coregency existed, who was it that shared his father's throne? Because there are no direct hints in the record, we must arrive at an answer by elimination. It was not Amon, Jehoahaz, or Jehoiachin, because their three reigns were too short, nor could it have been Josiah or Jehoiakim, whose reigns came between these three.

We have, as a matter of fact, definite dates for the accession of Josiah and of Jehoiakim. Both dates can be deduced from Jer. 25:1-3, which states that the fourth year of Jehoiakim was the first year of Nebuchadrezzar, and that Jehoiakim's fourth year came twenty-three years after Jeremiah's call in the thirteenth year of Josiah. These two synchronisms appear to have come from different hands, because they have been calculated by different methods. Since Nebuchadrezzar's first official year began in Nisan, 604, this would synchronize with part of Jehoiakim's fourth year, which began, however, in Tishri, 605, according to the established method for Judean kings. We may conclude from this that Jehoiakim's accession occurred in 609/08. Jeremiah's twenty-third year was apparently reckoned on a Nisan basis, beginning in 605. Thus his first year was in 627/26, Josiah's thirteenth year was in 628/27, and Josiah's accession was in 641/40. Amon's two-year reign began in 643/42.

We have now narrowed down the period of uncertainty to two reigns. Hezekiah came to the throne in 716/15, and Manasseh died in 643/42. In this period of seventy-three actual years the eighty-four accredited years must lie. Unless the figures are in error, there is no escape from the conclusion that Manasseh shared his father's throne eleven years, beginning in 697/96. A likely reason for this would be Hezekiah's probably chronic sickness and his knowledge of impending death. Even though his son was only twelve years old when Hezekiah placed him beside him (II Kings 21:1), we can readily understand this doomed man's taking such a precaution to ensure the continuation of his line.

For the chronology of Judah's last years there are three important Babylonian dates. The first is the siege of Harran from Tammuz to Elul, 609, Nabopolassar's seventeenth year. A cuneiform document

Jer. 32:1	Jerusalem under siege during 10 Zedekiah, 18 Nebuchadrezzar	587	
II Kings 25:3-4; Jer. 39:2; 52:6-7	The wall is breached, 9 Tammuz of 11 Zedekiah	July 19, 586	
II Kings 25:8; Jer. 52:12; cf. 52:29	The city and temple are burned on 7 (10) Ab, 11 Zedekiah, 19 (18) Nebuchadrezzar Second deportation	Aug. 15, 586	
Jer. 41:1 ff	Gedaliah's murder in 7th month	Sept.-Oct. 586	
Ezek. 33:21	News of the fall of Jerusalem reaches the exiles on 5 Tebeth of 12th year of Jehoiachin's captivity (Nisan reckoning)	Jan. 8, 585	
Jer. 52:30	Third deportation in 23 Nebuchadrezzar	582/81	
Ezek. 40:1	Vision of new temple, 10 Nisan of 25th year of Jehoiachin's captivity, 14th of the destruction of the temple (Nisan reckoning)	Apr. 18, 573	
II Kings 25:27; Jer. 52:31	Jehoiachin released from prison on 27 Adar of the 37th year of his captivity, in accession year of Amel-Marduk (Evil-merodach)	Mar. 21, 561	

mentions that an Egyptian army joined with the Assyrians in this attack upon the Babylonian garrison. The king of the Egyptians was no other than the NECO who killed Josiah at Megiddo while marching to the Euphrates (II Kings 23:29), and who was back in Palestine three months later to set Jehoahaz off the throne of Judah (vss. 31-34). Since Tammuz to Elul is exactly three months, it is almost certain that Josiah's death occurred shortly before the siege of Harran in 609.

A second date is that of Nebuchadrezzar's victory over Neco at Carchemish. This is now definitely known to be 605, in Nabopolassar's twenty-first year, which was also the accession year of Nebuchadrezzar. Jer. 46:2, which speaks of this battle, evidently reckoned Jehoiakim's fourth year, with which it is synchronized, upon the Nisan basis used by Jeremiah in the passage mentioned above.

A third date is that of Nebuchadrezzar's first capture of Jerusalem and deportation of Jehoiachin. We now know definitely that this occurred on the second of Adar in Nebuchadrezzar's seventh year, March 16, 597. It is true that II Kings 24:12 speaks of Jehoiachin's captivity beginning in Nebuchadrezzar's eighth year; but since Adar is the last month of the year, the actual deportation, which probably did not take place for several weeks, may have occurred after the new year. Ezek. 40:1 indicates that Jehoiachin's captivity began on the tenth of Nisan, 597.

The important features of the period from Josiah's death to the Exile are accordingly as follows: Josiah died probably in Tammuz, 609, and was succeeded by Jehoahaz, who reigned until after Tishri of the same year. Thus the remaining months of 609 and 608 until the next Tishri counted as Jehoiakim's accession year. In 605 Nebuchadrezzar defeated Jehoiakim's ally Neco at Carchemish, and perhaps it was then that Nebuchadrezzar put Jehoiakim under tribute for three years (II Kings 24:1; cf. also Dan. 1:1). Shortly after the beginning of his eleventh year, in December, 598, Jehoiakim died and was succeeded by his son Jehoiachin (II Kings 24:6), who surrendered to Nebuchadrezzar, after ruling for only three months (vs. 8), on March 16, 597. Zedekiah then took the throne for eleven years (vs. 18). When he revolted, the Babylonian army again put Jerusalem under siege. This was on the tenth day of the tenth month in Zedekiah's ninth year, January 15, 588 (25:1). The wall was broken through on the ninth day of the fourth month of his eleventh year (vss. 3-4), and on the seventh day of the following month the temple was burned (vss. 8-9). A great deportation followed, as also the events recorded in chs. 39–42 of Jeremiah. After Jehoiachin had been a captive in Babylon thirty-seven years, during the latter part of which he was held in prison, he was released on the twenty-seventh of Adar in Amel-Marduk's accession year—i.e., shortly before the Nisan new year marking the official beginning of this new king's reign (II Kings 25:27).

There remains but one question more: in which year was Jerusalem destroyed? Formerly 586 was widely accepted as the year, because II Kings 25:8 places Jerusalem's fall in the nineteenth year of Nebuchadrezzar (cf. Jer. 32:1). But when 609 was shown to be the likely date of Josiah's death, Jehoiachin's captivity was most readily set in 598 and the fall of Jerusalem in 587. The three deportations mentioned in Jer. 52:28-30, synchronized for Nebuchadrezzar's seventh, eighteenth, and twenty-

Table 6

Chronology of Postexilic Judaism, 539-4 B.C.

Scripture References	Dated Events and Native Rulers	Dates B.C.	Foreign Rulers
Ezra 1:1; II Chr. 36:22	Edict for return of exiles in 1st official year of Cyrus as ruler of Babylon	*ca.* 538	Cyrus (ruler of Babylon) 539-530

third years, were taken as confirmation for these dates. Now, however, that Jehoiachin's surrender is definitely dated in Adar, 597, a 587 date for Jerusalem's destruction can be defended only on the unlikely supposition that II Kings (and parallel sources) dated Zedekiah's reign by Nisan years.

Actually there remains very little support for this supposition. It is true that we find Jeremiah reckoning by a Nisan new year (25:1; 46:2). This is also true of Ezekiel, but this fact cannot be adduced as support for 587, because if 587 were the year of Jerusalem's fall, Ezekiel's chronology would have to be based on Tishri years (this being the only likely explanation of Ezek. 33:21). The only data which still definitely favor the 587 date are the deportations mentioned in Jer. 52:28-30.

There is no sufficient reason to suppose that the writer or writers of the books of Kings, who had so long and consistently stuck to a Tishri reckoning for Judah, and who continued to reckon on this basis even for the date of Jehoiachin's release from prison long after the destruction of Jerusalem (II Kings 25:27), would at this one point in the records change to Nisan reckoning. There is then no reasonable escape from a 586 date for Jerusalem's fall. This is demanded by Ezek. 33:21, which employs Nisan reckoning to date the arrival of a messenger in Babylon with the tragic news of Jerusalem's fall, presumably only a few months after this event, in the twelfth year of Jehoiachin's captivity. It is also demanded by Nisan reckoning in Ezek. 40:1, which dates the fourteenth year of Jerusalem's fall in the twenty-fifth year of Jehoiachin's captivity.

It will be admitted that problems still remain in connection with the deportations of Jer. 52:28-30. It is very strange that this passage mentions so few captives, if these deportations are intended to represent those of Jehoiachin and of Zedekiah (cf. II Kings 24:14, 16; 25:11-12). Perhaps the captivity of the seventh year can be equated with that of 597, since we now know that Jehoiachin did surrender in Nebuchadrezzar's seventh year. But then we still have no adequate explanation for the deportation of Nebuchadrezzar's eighteenth year. Perhaps these three deportations have been reckoned by antedating, a method which had been earlier used in Israel and Judah and which continued to be used at various times in parts of the ancient Near East.

4. After the return. For the chronology of the postexilic period it is not necessary to go into any detailed explanations. Although much of the OT was put into final form during this period, historical records pertaining to it are exceedingly few. The period between 515 and 445 and the period between 428 and *ca.* 175 are almost completely blank. Nonetheless, the general chronology of the period is well established from many reliable historical sources. The beginning of the Seleucid era in 312 B.C. was particularly important. For the few chronological details concerning postexilic times that have come down to us in the OT and the Apoc., *see* Table 6.

A vexed problem has long been the date of Ezra's

return. If Ezra returned in the seventh year of Artaxerxes I (Ezra 7:7), the date would be 458, and he would have preceded Nehemiah. But there are indications that the latter came to Jerusalem before Ezra; hence the seventh year of Artaxerxes II (397) has been proposed. This, however, separates Ezra completely from Nehemiah. Perhaps the best solution is to adopt the suggested reading that Ezra's return was in the thirty-seventh year of Artaxerxes I, 428. *See* EZRA-NEHEMIAH.

Bibliography. H. H. Rowley, *From Joseph to Joshua* (1948), covers problems of early chronology and provides an extensive bibliography.

For the chronology of the Hebrew kings the most important studies are: A. Kamphausen, *Die Chronologie der hebräischen Könige* (1883). M. Thilo, *Die Chronologie des ATs* (1917). F. X. Kugler, *Von Moses bis Paulus* (1922). J. Lewy, *Die Chronologie der Könige von Israel und Juda* (1927). V. Coucke, "Chronologie biblique," in F. Vigouroux, ed., *Dictionnaire de la Bible,* vol. I (1928). J. Begrich, *Die Chronologie der Könige von Israel und Juda* (1929). S. Mowinckel, "Die Chronologie der israelitischen und jüdischen Könige," *Acta Orientalia,* IX (1931), 161-277. W. F. Albright, "The Chronology of the Divided Monarchy of Israel," *BASOR,* 100 (1945), 16-22. By far the most valuable is E. R. Thiele, *The Mysterious Numbers of the Hebrew Kings* (1951), which he has followed by "A Comparison of the Chronological Data of Israel and Judah," *Vetus Testamentum,* IV (1954), 185-95; "The Question of Coregencies Among the Hebrew Kings," *A Stubborn Faith* (1956), pp. 39-52; "New Evidence on the Chronology of the Last Kings of Judah," *BASOR,* 143 (1956), 22-27. Other important articles by Albright are: "A Votive Stele Erected by Ben-Hadad I," *BASOR,* 87 (1942), 23-29; "New Light From Egypt on the Chronology and History of Israel and Judah," *BASOR,* 130 (1953), 4-11; "Further Light on Synchronisms Between Egypt and Asia in the Period 935-685 B.C.," *BASOR,* 141 (1956), 23-27; "The Nebuchadnezzar and Neriglissar Chronicles," *BASOR,* 143 (1956), 28-33.

Important for Assyro-Babylonian chronology as related to the OT are: F. K. Ginzel, *Handbuch der mathematischen und technischen Chronologie* (1906). R. A. Parker and W. H. Dubberstein, *Babylonian Chronology 626 B.C.–A.D. 75* (1956). D. J. Wiseman, *Chronicles of Chaldean Kings* (1956).

S. J. DE VRIES

CHRONOLOGY OF THE NT, THE. The dating of the events narrated in the NT is a frustrating task, partly because of the paucity of available information and partly because of the complications of the ancient CALENDAR.

Early Christian history was beneath the notice of the secular historians, the only exception being when Tacitus, describing the fire of Rome and the persecution which followed, remarks that the Christians derived their name from Christ, who was executed in the reign of Tiberius by the procurator Pontius Pilate (Ann. XV.44). Among the NT writers only Luke had any interest in relating Christian history to world history, and even the facts which he supplies cannot always be successfully translated into dates. The other writers occasionally make statements from which chronological inferences can be drawn, but in almost every case there is room for doubt or divergence of opinion.

From the time of Julius Caesar the Romans used a solar calendar with the year beginning on January 1, but they had no single system of regularly numbered years. The Roman numerals made the use of the era *ab urbe condita* too cumbersome for general use, and years were commonly identified either by the names of the consuls or by the regnal years of the emperor, which were reckoned from the day of his accession and therefore did not coincide with the calendar year. The Jews used a lunar calendar, and a complicated series of calendar changes in the past had left them with two New Year's days, six months apart (R.H. I.1). The ecclesiastical year, which was used for reckoning festivals and the reigns of Jewish kings, began on Nisan 1 (which could fall anywhere from early March to early April). The civil year, which was used for other purposes including the reigns of foreign kings, began on Tishri 1. The lunar year of approximately 354 days was kept in line with the seasons of the solar year by the periodic intercalation of a thirteenth month (Veadar) between Adar and Nisan.

These two reasons together mean that it is rarely possible to date any NT event with precision and certainty; we must be content, for the most part, with probabilities and approximations.

A. The life of Jesus
1. The Nativity
a. The death of Herod
b. The census
2. The age of Jesus
3. The beginning of the ministry
a. John the Baptist
b. The building of the temple
4. The duration of the ministry
5. The Crucifixion

1. Absolute dating
a. The death of Herod Agrippa I
b. The famine
c. The edict of Claudius
d. The proconsulship of Gallio
e. The procuratorship of Festus
2. Relative dating, A.D. 30-50
3. Relative dating, A.D. 50-70
Bibliography

A. *THE LIFE OF JESUS.* The gospels provide a small amount of chronological data for the life, ministry, and crucifixion of Jesus. For each period or event the evidence can be variously interpreted, and all the possibilities must be set out in full in the hope that the combined results will indicate which way the balance of probability lies.

1. The Nativity. *a. The death of Herod.* According to Matt. 2:1, Jesus was born during the reign of Herod the Great, and the stories of the wise men and the flight into Egypt seem to imply that he was at least two years old at the time of Herod's death. Luke is less definite on this point, but he does say that John the Baptist was less than six months older than Jesus and that the annunciation of his birth to Zechariah came in Herod's reign (1:5).

Now Josephus tells us that Herod died in the thirty-seventh year after the decree of the Roman Senate which declared him king of Judea (40. B.C.), and in the thirty-fourth year after his actual assumption of power; that his last illness was immediately preceded by an eclipse of the moon; and that his death was closely followed by the Passover (Antiq.

XVII.viii.1; XVII.vi.4; XVII.ix.3). In an earlier passage (XIV.xvi.4) Josephus has explained that Herod became king *de facto* in the consulship of M. Agrippa and Canidius Gallus (37 B.C.) by capturing Jerusalem on the Day of Atonement—the same day on which, twenty-seven years earlier, Pompey had entered the city. This statement is important, not merely because it fixes the beginning of Herod's reign, but because it discloses Josephus' method of computation. Pompey came to Jerusalem on Tishri 10, 63 B.C.; and Tishri 10, 37 B.C., could be said to have fallen in the twenty-seventh year only if Josephus was using the inclusive system of dating whereby the first year was reckoned from the New Year immediately preceding. In that case the twenty-seventh year would begin either on Nisan 1 or on Tishri 1, 37 B.C. This conclusion is confirmed by Josephus' dating of the battle of Actium in the seventh year of Herod (Antiq. XV.v.2). The battle was fought on September 2, 31 B.C., less than six years after Herod's accession, and could be placed in his seventh year only if Josephus considered Herod's regnal years to have begun on Nisan 1, 37 B.C. This means that the thirty-fourth year of Herod's reign began on Nisan 1, 4 B.C. An eclipse of the moon which was visible in Palestine occurred on March 12 of that year. Herod's death, shortly before the Passover, must have happened during the first two weeks of the month of Nisan.

b. The census. According to Luke, Jesus was born at the time of a census when Quirinius was governor of Syria (2:2). Some scholars hold this to be an egregious blunder, on the grounds that no such census is recorded by Roman authorities; that P. Sulpicius Quirinius is known to have conducted a census and property assessment in A.D. 6-7, when he was governor of Syria; and that the governors of Syria during the last years of Herod's reign were C. Sentius Saturninus (9-6 B.C.) and P. Quintilius Varus (6-4 B.C.). Other scholars are more ready to believe that Luke knew what he was talking about and that, if he was wrong, he was at least not far wrong. They point out that the argument from silence, always notoriously weak, is particularly weak in connection with the ill-documented reign of Augustus; that Luke was well aware of the census of A.D. 6-7, which he mentions in Acts 5:37, and is not likely to have been guilty of the confusion so often ascribed to him; and that he was, in fact, at pains to distinguish the nativity census from others known to him. What Luke tells us is that Augustus issued a decree inaugurating a system of periodic enrollment throughout the Empire (this is the implication of the present tense, ἀπογράφεσθαι—if Luke had thought that the decree ordered only one particular world-wide census, he would have written ἀπογράψασθαι), and that the first census of the series was held in Palestine when Quirinius was holding office in Syria as imperial legate.

Our knowledge of the Roman census system is fragmentary, but such as it is, it gives a limited support to Luke's nativity story. Clement of Alexandria informs us (Strom. I.21) that Christ was born "when they first began to make enrollments," and, though he may have drawn his information from Luke, the form of his statement suggests that he was familiar with a regular and long-standing system of census-taking which was not confined to Egypt. Tertullian (Marcion IV.19) places the nativity census in the governorship of Saturninus, and since Tertullian did not get this name from Luke, he must have had access to an independent, perhaps official, record. Census papers discovered in Egypt show that a census was held there at fourteen-year intervals from A.D. 90 to 258 and also in 62 and probably in 20. In each case, as with modern tax returns, the actual enrollment was carried out in the following year. The prefect issued an order requiring all persons absent from home to return for enrollment. There is every reason to suppose that this Egyptian system was initiated by Augustus. It was his organizing ability that laid the foundations of the whole imperial administration, and none of his successors before Vespasian had the statesmanship to originate such a scheme. If, then, we trace the fourteen-year cycle back to its point of origin, we shall conclude that the first census year was 23 B.C., 9 B.C., or A.D. 6, with the actual enrollment carried out in each case in the following year.

It is tempting to assume that the Egyptian system was followed in other parts of the Empire. The census which Quirinius is known to have conducted in 6-7 would fall into the same pattern. But as this enrollment was undertaken primarily for the purpose of tax assessment at the beginning of procuratorial rule in Judea, it is dubious how much weight can be allowed to this coincidence. A similar census and property assessment was carried out by Germanicus in Gaul in 14, which lies quite outside the series (Tac. Ann. I.31).

The only other evidence has to do with the census of Roman citizens. According to the *Monumentum Ancyranum* (ch. 8), Augustus held the censorship three times, once with Agrippa in 28 B.C., once alone in 8 B.C., and once with Tiberius in A.D. 14. Another census was held by Claudius in A.D. 48 (Tac. Ann. XI.25; Suetonius *Claudius* 16; Pliny Nat. Hist. VII. 48), and in this connection Pliny records a story of a man from Bologna who gave his age as 150, so that the officials felt it necessary to consult earlier census records to see whether his entries had been consistent.

It is too much to claim on the basis of this evidence that Augustus inaugurated a single, uniform system of census-taking for the whole Empire. But Luke, after all, does not claim this. All he says is that Augustus issued a decree that there should be regular enrollments of provincials, just as there had always been regular enrollments of Roman citizens. If we accept Luke's testimony, it would seem to be a reasonable hypothesis that this decree had some connection with the census of citizens held by Augustus as sole censor in 8 B.C. and also with the beginning of the Egyptian fourteen-year cycle in the same year. This would give us a *terminus a quo* for the Nativity, but we should have to allow for the possibility of delay on the first occasion of enrollment, particularly in a turbulent area under the jurisdiction of a native king.

There remains the problem of QUIRINIUS. The simplest solution is to say that Luke was right about the census but wrong about the name of the governor, and that his error was corrected by Tertullian.

But it is possible that even this would be an injustice to Luke. A damaged inscription in the Lateran Museum records the career of a nameless Roman who was twice governor of Syria, and since the time of Mommsen it has been generally agreed that the man in question was Quirinius. Sir William Ramsay, protesting hotly against the attitude which assumes Luke to be in error unless he can be proved to be right, has reconstructed the career of Quirinius so as to show that the probable time of his first term of office in Syria was in the latter years of Herod's reign, and has pointed out that there were other occasions when two men with the rank of *legatus Caesaris* were appointed to one province because one of them was expected to be fully occupied with the command of the army.

In view of all these difficulties, it cannot be said that the date of the birth of Jesus is securely established, but, taking the combined evidence of Matthew and Luke, we shall not be very far astray if we assign it to the year 7 B.C., with the understanding that it may be a year earlier or later.

2. The age of Jesus. Luke tells us that Jesus was about thirty years of age when he began his ministry (3:23). The sentence bristles with exegetical difficulties, and there is no agreement about its meaning. As Luke claims to know the exact date of the Nativity and the exact date of the public appearance of John the Baptist, it would seem that he was in a position to calculate the exact interval between them. But if we add thirty to the date we have proposed for the Nativity, we get the years 23-25 as the possible period for the beginning of the ministry, and this falls entirely outside the term of Pontius Pilate's rule as procurator of Judea (26-36). If, on the other hand, we take the expression "about thirty years of age" to be an elastic one, how far should we allow it to stretch? Could Jesus have been thirty-two or thirty-three or even thirty-four? Or did Luke simply mean to indicate that he had arrived at years of maturity? The last interpretation has a great deal to be said in its favor, for we know that members of the Qumran community had to be thirty years old before they were eligible for positions of religious leadership (CD XVII.5.6.)

3. The beginning of the ministry. ***a. John the Baptist.*** Luke begins his account of John the Baptist with an elaborate sixfold date (3:1-2), five parts of which serve only to fix the broadest of limits. Pilate was procurator from 26 to 36, Herod Antipas was deposed in 39, Philip died in 34, nothing is known of Lysanias, and Caiaphas was deposed at a Passover festival which cannot have been later than 36. The one precise date is the fifteenth year of Tiberius, and even this can be interpreted in three different ways. Augustus died on August 19, A.D. 14, and by the usual Roman reckoning the fifteenth year of Tiberius would run from August 19, A.D. 28, to August 18, A.D. 29. This normal system of dating puts the baptism of Jesus so late that many scholars have adopted the suggestion, originally made by Ussher, that Luke was counting from the decree by which Augustus took Tiberius into partnership as co-emperor. Mommsen, on the authority of Velleius Paterculus (II.121), assigned this decree to the year 11. This would make 25/26 the fifteenth year of Tiberius, so that the ministry of Jesus could have begun late in 26 or early in 27. But there is no evidence, either from coinage or elsewhere, that the regnal years of Tiberius were ever reckoned in this fashion. There remains the possibility that Luke was using the Jewish system for dating the reigns of foreign kings, according to which the first year of Tiberius would begin on Tishri 1, A.D. 13, and his fifteenth year on Tishri 1, A.D. 27.

b. The building of the temple. John places the cleansing of the temple at the beginning of Jesus' ministry, associates it with a Passover, and records a discussion between Jesus and the Jews in the course of which the Jews say: "It has taken forty-six years to build this temple" (2:20). Mark places the same incident at the end of the ministry, and it might seem that John's contribution to chronology was invalidated by the discrepancy. This is part of a larger question —whether the arrangement of the Fourth Gospel is theological or chronological. But it is not necessary for our present purpose to settle this dispute. For the more independence we attribute to John in the handling of his sources, the more likely it becomes that he did not find the figure forty-six in the tradition but worked it out for himself from adequate evidence, independently of the story to which he attached it; and it is hard to see why he should have mentioned the figure at all unless he had good reason to believe that it was accurate.

Now according to Josephus (Antiq. XV.xi.1), Herod embarked in his eighteenth year (20/19 B.C.) on a plan for the complete rebuilding of the temple of Zerubbabel, and it must be this project to which John's figure refers. The earlier part of Herod's eighteenth year was occupied with a visit of Augustus to Syria, so that the rebuilding program probably did not begin until at least the autumn of 20 B.C. This means that the Passover, when it could be said that the temple had been forty-six years in process of building, is the Passover of 28, and this would synchronize with the third, or Jewish, interpretation of the fifteenth year of Tiberius. But the Passover of 27 would have fallen in the forty-sixth year, and this must remain as a second possibility.

4. The duration of the ministry. In early patristic times the belief sprang up that the ministry of Jesus occupied only one year. This theory seems to have originated in Gnostic circles, but was adopted by Clement of Alexandria (*Miscellanies* I.21) and Origen (*On First Principles* IV.5), among others. Clement makes it fairly plain that the belief was founded largely on the assumption that the "acceptable year of the Lord" (Luke 4:19) was to be taken literally as a description of the whole ministry. In favor of this theory was the paucity of biographical material provided by the gospels, since all four together do not supply enough incident to fill one year, let alone two or three. Mark's gospel, too, seemed to be susceptible of this interpretation. The grainfields episode of 2:23-28 belongs to early summer, the feeding of the five thousand when the grass was green to early spring, and the Crucifixion to the Passover season. It was found possible to compress even John's Gospel into the same small compass. The ministry here begins and ends with a Passover, and in between are a number of other feasts mentioned in their proper

order—Pentecost in ch. 5, Tabernacles in ch. 7, and Dedication in ch. 10. It is true that 6:4 mentions another Passover, but Origen at least (*Commentary on St. John* 4.35) seems to have used a text from which the words τὸ πάσχα were missing, so that the feast mentioned in 6:4 could be identified with the Feast of Tabernacles described in the following chapter.

This one-year theory has had its modern supporters, but it is subject to the gravest disabilities. Every MS of John 6:4 contains the words τὸ πάσχα, and, even if the words were not in the text, the mention of "much grass" later in the story would compel us to assign the episode to the spring and not to the autumn. We could hardly claim, in any case, that Mark and John were agreed on a one-year ministry, if that agreement required that one of them should date the miraculous feeding in the spring and the other in the autumn. The natural interpretation of both gospels is that the miracle occurred in March or April and that at least another year elapsed before the final Passover.

But if the ministry of Jesus lasted for more than one year, how many years did it last? Matthew and Luke provide no evidence on this point, and Mark's three indications of season—the ripe grain (2:23), the green grass (6:39), and the final Passover—though they would fit admirably into a two-year ministry, cannot be said to exclude other possibilities. Almost all theories of a two- or three-year ministry have been based on the fuller chronological data of the Fourth Gospel.

There are seven passages which have been used to support one or another of these theories: "The Passover of the Jews was at hand" (2:13). "Do you not say, 'There are yet four months, then comes the harvest'? I tell you, lift up your eyes, and see how the fields are already white for harvest" (4:35). "After this there was a feast [A B D W Θ, etc.; "the feast": ℵ C E L Δ λ 33, etc.] of the Jews" (5:1). "Now the Passover, the feast of the Jews, was at hand" (6:4). "Now the Jews' feast of Tabernacles was at hand" (7:2). "It was the feast of the Dedication at Jerusalem" (10:22). "Now the Passover of the Jews was at hand" (11:55). The last four passages clearly constitute a single ecclesiastical year; but do the other three passages imply one or two additional years? If the saying about the harvest is to be taken at its face value, it must have been spoken in midwinter; and if in 5:1 we accept the second reading—"the feast of the Jews"—we are bound to say that the only feast which could be so designated is Tabernacles. Granted these two suppositions, we should have to allot two years to the period between the cleansing of the temple and the feeding of the five thousand. On the other hand, it does not look as if the evangelist himself regarded the saying about the harvest in this light, for he tells us that when Jesus arrived in Galilee two or three days later, "the Galileans welcomed him, having seen all that he had done in Jerusalem at the feast [i.e., the Passover]." If there is any chronological inference to be drawn, it is that the events of ch. 4 follow fairly closely on those of ch. 2. This being so, the identity of the feast mentioned in 5:1 is of less consequence, and it should be added that in any case the reading without the article has the more impressive weight of MS authority behind it. We may conclude then that according to the Fourth Gospel the ministry of Jesus lasted just over two years or just over three years, with the balance of probability heavily in favor of the former.

But is even this conclusion justifiable? Is there really any chronology in the Fourth Gospel? Are not the feasts mentioned for theological reasons? The first Passover is mentioned in connection with the cleansing of the temple, which John, probably for theological reasons, places at the outset of the ministry. The second Passover is mentioned in order to set the scene for the teaching that follows, on the bread of life. The Feast of Tabernacles is mentioned because its double ceremony of the water and the lights formed the background to the two great sayings of Jesus (7:37-38; 8:12). How then can we have any confidence that the events of the gospel story are given in chronological order? To all this we may reply that an interest in theology does not necessarily preclude an interest in history; indeed, John's whole thesis is that the earthly is the vehicle of the heavenly, that history reveals the divine. Because he had a theological reason for mentioning that the feeding of the five thousand was associated with a Passover, we have no right to assume that he invented the association. Yet, if even this one point is allowed, we shall return to our previous conclusion that the ministry of Jesus cannot be compressed into less than two years, and that there is no compelling reason for extending it to three years.

5. The Crucifixion. ***a. Patristic evidence.*** Almost all that the early fathers have to say on this subject can be shown to be deductions from the biblical data. The one possible exception is the tradition that the Crucifixion occurred in the consulship of the two Gemini (A.D. 29, when L. Rubellius Geminus and C. Fufius Geminus were consuls). This tradition is found in a work attributed to Tertullian (*Against the Jews* 8), in Hippolytus' Commentary on Daniel, in the prologue to the Acts of Pilate, in Lactantius (*Institutions* IV.10.18; *De Mortibus Persecutorium* 2), and in Augustine (*City of God* XVIII.54). But one of the earliest of these works, *Against the Jews*, gives as an alternative date the fifteenth year of Tiberius, which suggests that the whole Gemini tradition may have been based on a combination of Luke 3:1; 4:19.

b. The evidence of astronomy. The only other way of determining the date of the Crucifixion is by astronomical calculations based on the biblical data. All the gospels agree that Jesus died on a Friday during the Passover season. Mark and John disagree about the day of the month. The Jewish day began at 6 P.M., and the Passover was eaten in the early (evening) hours of Nisan 15. According to Mark 14:12, the Last Supper was the Passover meal, and this means that the arrest, the trial, the death, and the burial of Jesus also took place on Nisan 15. According to John 18:28; 19:14, the Passover was eaten that year on the Friday evening after the Crucifixion, which therefore occurred on Nisan 14 (*see* LAST SUPPER, THE). We have then to ask the astronomers in which years within the possible limits Nisan 14 or 15 could have fallen on a Friday.

In the time of Jesus the first day of the month was fixed not by calculation but by observation. A com-

mittee of priests met after the close of the twenty-ninth day and waited for two witnesses to testify that they had seen the sickle of the new moon. If the witnesses arrived before sunset, that day was declared to be the first of the new month; if not, that day became the thirtieth of the old month, and the new month began on the following day. It is possible to calculate for any given month the time at which the new moon first became visible, but there are two pieces of information which astronomy cannot give us. Even if the new moon was theoretically visible on a certain day, this does not necessarily mean that it was actually observed, since it may have been obscured by atmospheric conditions. And there are some years for which we cannot say with complete confidence which new moon was the new moon of Nisan.

It has usually been assumed, without adequate authority, that the paschal full moon was invariably that immediately following the spring equinox, and that the calendar committee inserted the intercalary month to prevent the Passover from coming before the equinox. This system may have been in force, in order to enable Jews of the Diaspora to attend the festivals. But if any such system had been adopted, intercalation would have been predictable and automatic, and the references to it in the Mishna strongly suggest that this was not so. The proclamation of the extra month might be made after the feast of Purim (Meg. 1.4; 'Eduy. 7.7), it had to be proclaimed by messengers (Yeb. 16.7), it could be proclaimed by a quorum of three (Sanh. 1.2), and legal provision is made for its unpredictable incidence (Ned. 8.5; B. M. 8.8). Moreover, on Nisan 16 the first sheaf of the barley harvest was waved in the temple, so that clearly the state of the harvest was more important than the equinox in determining intercalation, at least as long as the temple stood.

Taking these considerations into account, we can say that there are, astronomically, four possibilities: (*a*) In A.D. 27 Friday, April 11, was either Nisan 14 or Nisan 15. (*b*) In A.D. 29 Friday, March 18, may have been Nisan 14 (if there was no intercalation). (*c*) In A.D. 30 Friday, April 7, was either Nisan 14 or Nisan 15. (*d*) In A.D. 33 Friday, April 3, may have been Nisan 14. Of these four possible dates for the Crucifixion the third is by far the most probable. The first is by all accounts too early, and has never been seriously advocated by anyone. The second coincides with the Gemini dating, but involves an unusually early date for the Passover. The fourth would commit us to a three-year theory of the ministry and would also aggravate the already serious difficulty of dating the apostolic period. Nevertheless, none of the last three dates can be dismissed from our final reckoning.

When we come to survey the evidence which has been set forth under the last three headings, it is apparent that it can be combined in no fewer than six different ways. If the reign of Tiberius is reckoned, Roman fashion, from the death of Augustus, so that his fifteenth year is 28/29, we have to choose between a one-year ministry ending in 30 and a three- or four-year ministry ending in 33. If the reign of Tiberius is reckoned from his co-imperium, so that his fifteenth year is 25/26, we have to choose between a two- or three-year ministry ending in 29 and a three- or four-year ministry ending in 30. If the reign of Tiberius is reckoned, Jewish fashion, from Tishri 1, A.D. 13, so that his fifteenth year is 27/28, we have to choose between a one-year ministry ending in 29 and a two-year ministry ending in 30. We have seen that the Jewish reckoning of the reign of Tiberius agrees best with the Johannine saying about the building of the temple, that two years is the most likely duration of the ministry, and that 30 is the most probable date for the Crucifixion. Thus, while none of the six combinations listed above can be entirely ruled out, there is a threefold probability in favor of the sixth.

The evidence we have at our disposal, then, points to the tentative conclusion that Jesus was born in 8-6 B.C., baptized late in A.D. 27 or early in A.D. 28, and crucified on April 7, A.D. 30.

B. *THE APOSTOLIC AGE.* 1. Absolute dating. The few indications of time which occur in the letters serve only to date events relatively to other events. For an absolute chronology we are totally dependent on Acts, and of the events mentioned in this book only five can be assigned even an approximate date from Jewish or Roman sources. There is as yet no evidence to provide a date for the proconsulship of Sergius Paulus in Cyprus.

a. The death of Herod Agrippa I (Acts 12:23). According to Josephus (Antiq. XVIII.vi.10; XVIII.vii. 2; XIX.v.1; XIX.viii.2), Agrippa succeeded to the tetrarchy of Philip shortly after the accession of Caligula (March 16, A.D. 37) and to that of Antipas in 39, became king also of Judea, Samaria, and Abilene on the accession of Claudius (January 24, A.D. 41), and died at a festival in Caesarea after completing three years as king of all Judea and in the seventh year of his total reign. On the basis of this evidence alone we should unhesitatingly place the death of Agrippa in the early months of 44. There have been listed among the coinage of Agrippa, however, two coins which purported to come from the eighth and ninth years of his reign. If these coins were accepted as genuine, Josephus' evidence would have to be set aside. The doubt raised by the coins is to some extent offset by the plausible theory that the festival which was in progress at the time of Agrippa's death was the quadrennial games instituted by Herod the Great at Caesarea in 9 B.C. in honor of the emperor and in commemoration of the founding of the city, since these games must have been held in A.D. 44.

On the whole, it seems safest to ignore the questionable numismatic evidence and to trust to Josephus, and this is the course adopted by the majority of scholars. This does not mean, however, as is often supposed, that the death of James and the imprisonment of Peter, which are described in Acts immediately before the death of Herod, are to be assigned to A.D. 44. At this point in Acts, Luke is compressing into a few paragraphs the events of many years, so that Agrippa's persecution of the apostles may have happened at any time during his reign over Judea; and since Agrippa's purpose was to win favor with the Jews, his action is more intelligible at the beginning of his reign than at the end of it, when his popularity was fully assured. Tentatively, then,

we may say that the death of James took place just before the Passover of 41.

b. The famine (Acts 11:28). After the death of Agrippa, Claudius sent out Cuspius Fadus as procurator of Judea, and he was succeeded in turn by Tiberius Alexander and Ventidius Cumanus. Josephus gives us no information about the duration of their terms of office, except that Cumanus was procurator when Agrippa's brother Herod of Chalcis died in the eighth year of Claudius (48). It seems reasonable, however, to suppose that Alexander was procurator during 46 and probably for part, at least, of 47. It was during his administration that the great famine occurred which prompted the Christians of Antioch to send a relief fund to the church in Jerusalem.

c. The edict of Claudius (Acts 18:2). The edict by which Claudius expelled the Jews from Rome is mentioned by Suetonius (*Claudius* 25), though without any indication of date. Dio Cassius (LX.6.6) refers to it along with events which belong to A.D. 41, but it would be an exaggeration to say that he actually dates it in that year. The only writer to give a precise date is the fifth-century historian Orosius (VII.6.15), who places it in the ninth year of Claudius (49). As his authority he gives Josephus, though no mention of the decree appears in any of Josephus' extant works. Orosius' date fits perfectly with the next date we have to establish, and so is generally accepted. It has been argued, to be sure, that Orosius was usually a year off in his dates for the reign of Claudius, but it is dubious whether Orosius was so consistent, even in his errors.

d. The proconsulship of Gallio (Acts 18:12). The proconsular governors of senatorial provinces held office normally for one year only, and entered office on July 1. The year when Gallio was governor of Achaia has been determined by an inscription at Delphi. The inscription is badly mutilated, but enough of it remains to show that it was a copy of a letter from Claudius, called forth by a report from Gallio, and that at the time of writing Claudius had been acclaimed Imperator twenty-six times. These acclamations occurred at frequent but irregular intervals and by themselves do not establish a precise date. But other inscriptions have been preserved elsewhere which enable us to set fairly narrow limits for the Gallio inscription. There are two inscriptions (*C.I.L.* III.476, 1977) which show that the twenty-second and twenty-fourth acclamations belong to the eleventh year of Claudius' reign (January 25, A.D. 51, to January 24, A.D. 52). There is another inscription on a monumental arch of an aqueduct at Rome, dedicated on August 1, A.D. 52, which shows that by that date Claudius had celebrated his twenty-seventh acclamation. In the unlikely event that Claudius was acclaimed Imperator five times in one year, his twenty-sixth acclamation would have occurred at the end of his eleventh year, but it is much more likely that it belongs to the first half of his twelfth year.

It is theoretically possible that Gallio entered on his proconsulship on July 1, A.D. 52, and sent an immediate report to Claudius by courier about affairs at Delphi, which arrived in time for Claudius to write a reply and then to celebrate his twenty-seventh acclamation before August 1. But this possibility is so vastly improbable that it is better to disregard it altogether. There is an almost equally remote possibility that Gallio served for two years, beginning in July, 50. But the obvious interpretation of the Delphi inscription is that Gallio's term of office in Achaia extended from July, 51, to June, 52.

e. The procuratorship of Festus (Acts 24:27). Josephus and Tacitus agree that Cumanus was succeeded as procurator in A.D. 52 by Felix, who after a number of years was succeeded by Festus, but neither historian provides any satisfactory means of dating Felix' recall. Josephus tells us that when he was recalled by Nero, the Jews of Caesarea prosecuted him before the emperor, and that he would certainly have been convicted of maladministration had he not been the brother of Pallas, "whom Nero at that time held in special esteem" (Antiq. XX.viii.9). Some scholars have felt that Pallas could hardly have exercised such influence after his dismissal from office, and have therefore dated the recall of Felix very early in Nero's reign. Nero became emperor on October 14, A.D. 54. Pallas was dismissed before the poisoning of Britannicus, who at the time of his death had almost reached his fourteenth birthday (February 13, A.D. 55).

There are three serious objections to this early date for the recall of Felix. Josephus records a long list of events which occurred in Palestine while Felix was procurator and places them after his reference to the accession of Nero, which he would hardly have done if Felix' whole term of office had belonged to the reign of Claudius. Acts tells us that Paul had already been two full years in prison at Caesarea when Festus took up office, and even if Festus' arrival had been delayed until July, 55, there would be less than two years left between Paul's appearance before Gallio in the summer of 51 and his arrest in Jerusalem at Pentecost in 53. Moreover, it is plain that Nero had always disliked Pallas and intended to dismiss him from the moment he became emperor, so that it is hard to see why Pallas' influence with Nero should have been greater before his dismissal than after it. For Pallas was not disgraced; he was able to make his own terms with Nero, was exempt from the scrutiny normally undergone by retiring Roman officials, and was allowed to keep the vast fortune he had accumulated as secretary of the treasury under Claudius.

We are thrown back, therefore, on the evidence of Eusebius, which at first sight is unpromising. For in his Chronological Tables, Eusebius puts the arrival of Festus in the fourteenth year of Claudius and the tenth of Agrippa II. The first of these figures must be a mistake, since Eusebius was well aware that Felix was recalled by Nero; but it is a mistake which becomes intelligible if we assume that the second figure was the only one that stood in Eusebius' source. Knowing that Agrippa I had died in 44, Eusebius assumed that 45 was the first year of his son, Agrippa II, and therefore identified the tenth year of Agrippa II with 54, the fourteenth of Claudius. Actually, as we know from Josephus (War II.xiv.4), the beginning of Agrippa's reign was reckoned from Nisan 1, A.D. 50, so that his tenth year began on Nisan 1, A.D. 59. There is thus good reason for be-

lieving that, according to Eusebius' source, Festus became procurator in the summer of 59.

So we arrive at the dates in Table 1.

Table 1	
The death of Herod Agrippa I	44 (early)
The famine	46
The edict of Claudius	49 (or 50)
The arrival of Gallio in Corinth	51 (summer)
The arrival of Festus in Caesarea	59 (summer)

2. Relative dating, A.D. 30-50. Of the dates listed above, the date of Gallio's proconsulship is the one which commands our most complete confidence. It may therefore be taken as the fixed point from which we can work both backward and forward.

We are told in Acts 18 that Paul spent eighteen months in Corinth, that he was prosecuted by the Jews soon after Gallio's arrival, and that he then remained in the city a good while. This means that Paul arrived in Corinth either in January, A.D. 50, or, if we take the eighteen months to be the total period of his residence there, sometime during the spring of that year. In either case his departure from Antioch with Silas cannot have been later than the previous spring. Immediately before this, Acts recounts the story of the apostolic conference and compels us to face the intricate problem of Paul's visits to Jerusalem. The evidence is found in Gal. 1–2 and Acts, and each source raises difficulties of its own which become doubly perplexing when we attempt to put the two accounts together.

In Galatians, Paul is defending himself against a charge of being a secondary authority, dependent for all his knowledge of the gospel on the older apostles, and under oath he gives a description of all the occasions between his conversion and his Galatian mission when he visited Jerusalem or had other contact with the apostles. Three years after his conversion he spent two weeks in Jerusalem, during which he met Peter and James. After fourteen years he went up again with Barnabas for a conference with James, Peter, and John about the admission of Gentiles to the church. Then finally he met Peter in Antioch and had a disagreement with him about table fellowship between Jewish and Gentile Christians. Since Paul is arguing that he had no opportunity to receive from the other apostles the gospel he preached in Galatia, we can assume that all these meetings occurred before the Galatian mission. But when did the Galatian mission take place? Was the letter addressed to N Galatians or to S Galatians? (*See* GALATIANS, LETTER TO THE.) Did Paul's second visit to Jerusalem come fourteen years after his conversion or fourteen years after his first visit? And at what point in his career did he write the letter?

In Acts, Paul visits Jerusalem five times in all, and the third occasion is the apostolic conference of ch. 15. The account of this conference appears straightforward enough, but it has some curious features. The reason for the conference was the rapid growth of Gentile Christianity through the successful missionary work of Paul and Barnabas, yet these successes are passed over in a single verse, and the main discussion has to do with the reception of Cornelius into the church by Peter. The chapter opens with a demand made by some former Pharisees that circumcision be made a condition of church membership and ends with the sending of a letter requesting the Gentile Christians to observe certain regulations, which cannot conceivably be regarded as conditions of church membership but are rather the terms on which Jewish Christians could eat with Gentile Christians without disloyalty to their national law. This letter is specifically addressed to the churches of Syria and Cilicia, but we are told that Paul delivered it also to the churches of S Galatia. These and similar anomalies have prompted some scholars to wonder whether the course of events was really as simple as Luke's account suggests.

The problem of combining the evidence of our two sources in a single, coherent chronology has produced a proliferation of theories, none of which can be said to command the support of a majority of scholars. The main varieties of theory can be quite simply classified if we tabulate the Jerusalem visits as in Table 2.

Table 2	
A1 Acts 9:26-30	G1 Gal. 1:18-24
A2 Acts 11:30; 12:25	G2 Gal. 2:1-10
A3 Acts 15	
A4 Acts 18:22	
A5 Acts 21:17 ff	

G1 is, by common consent, the same as A1. But which visit in Acts corresponds to G2? This is the question which has produced such a bewildering assortment of answers.

The simplest, and perhaps the most widely accepted, view is that G2=A3. There is enough superficial resemblance to make this equation attractive. In each case Paul and Barnabas travel from Antioch to Jerusalem to discuss with James and Peter the status of Gentiles in the church. But over against these similarities there are formidable differences. In G2 Paul roundly asserts that he insisted on keeping the discussion a private one between himself and Barnabas on the one side and the three Jerusalem apostles on the other, whereas A3 describes a public meeting of the whole church. G2 is concerned with the admission of Gentiles to the church, but A3 leads to a resolution about intercommunion of Jewish and Gentile Christians. In G2 Paul assures his readers that the other apostles made no demands of him except that he remember the material needs of the Jerusalem church, whereas the letter of A3 requires of the Gentile Christians that they observe certain regulations from the Jewish food laws. Paul, writing on oath, omits all mention of A2, which on this theory must have given him a further contact with the Jerusalem church. Besides all this, it is very difficult to understand how the controversy at Antioch about table fellowship (Gal. 2:11 ff), which happened after G2, could have arisen after the matter had been settled to everybody's satisfaction at A3. There is also the further consideration that this view commits its exponents to the N Galatian theory, since no opponent of Paul's could have argued that A3 was the occasion when he received from the other apostles the gospel which he preached in S Galatia.

One of the objections to the first theory is elimi-

nated if we add to it a further equation: G2=A2=A3. Paul and Barnabas, we must suppose, carried the famine-relief fund to Jerusalem and seized the opportunity of consulting the other apostles about the problems of the Gentile mission. Luke, deriving his information about this period from various sources, including an Antioch source which told him about the famine fund and a Jerusalem source which told him about the conference, failed to recognize that he was dealing with two accounts of the same visit, and he separated them by approximately three years. This theory explains why Paul swears he has been only twice in Jerusalem, but it is questionable whether this small gain justifies the elaborate hypothesis by which it is achieved. For all the other objections to the first theory still apply.

A theory which has been popular among British scholars is that G2=A2. On this hypothesis the course of events runs something like this: Paul and Barnabas are sent by the church of Antioch to carry the famine fund and, while in Jerusalem, are able to have a private conference with the three Jerusalem apostles about the admission of Gentiles to the church. Full agreement is reached, but shortly afterward James realizes that the free social intercourse between Jewish and Gentile Christians at Antioch is going to be an embarrassment to him in his attempts to evangelize the Jews of Jerusalem. He therefore sends to Antioch a proposal that Jewish Christians celebrate the Lord's Supper separately from the Gentile Christians, and this precipitates the crisis of Gal. 2:11 ff. The matter is left without a permanent settlement while Paul and Barnabas embark on their missionary tour through Cyprus and Galatia, but is finally settled at the conference of A3.

This theory creates one serious problem. The famine visit cannot well be dated later than the autumn of 46. The first visit (G1=A1), fourteen years earlier—even if we use the ancient method of computation whereby each part of a year counts as a full year—cannot have been later than the spring of 33. Paul's conversion three years earlier would then come in the autumn of 31 at the very latest. This leaves only a year and a half between the Crucifixion of Jesus and the conversion of Paul. Some scholars, feeling that this is too small an interval, have suggested that Paul dated both his Jerusalem visits from his conversion, so that the fourteen years included the three. But it is safe to say that this interpretation of the dates in Galatians would not have occurred to anyone if the more natural interpretation had not created a chronological problem.

The critics have reasonably wanted to ask why Paul, writing to the Galatians about his visits to Jerusalem, failed to mention the conference of A3. The reply has commonly been that Paul did not mention the conference because it had not yet taken place, that Galatians was written in 48 or 49 shortly after Paul's return from the S Galatian mission. But this rider has done more to discredit than to commend the theory to which it has been attached. For there are very adequate reasons of language, style, and theology for assigning Galatians to the same period of Paul's life as II Corinthians and Romans. There is, however, a very simple alternative to this early dating of Galatians. Paul may have omitted mention of the conference of A3 in writing to the Galatians because it had no bearing on his argument. For his sole reason for mentioning his visits to Jerusalem was to demonstrate that he had never sat at the feet of the "pillars" and could not have derived from them the gospel which he had preached in Galatia.

A critical analysis of Acts 15 led Johannes Weiss to the conclusion that the chapter was an amalgamation of two conferences. A3*a* (vss. 1-4, 12) dealt with the proposal to make circumcision a condition of church membership, and A3*b* (vss. 5-11, 13-33) dealt with the question of table fellowship between Jewish and Gentile Christians. It follows that G2=A3*a*. Paul was not present at A3*b*, for in Acts 21:25 he has to be informed about the contents of the apostolic letter. Silas, on the other hand, must have been there, since he had a part in drafting the letter. A3*b* therefore must have taken place after Silas had parted from Paul.

The merit of this theory is that it explains Paul's silence about the apostolic letter. Its chief disadvantage is that the analysis of Acts 15 is purely speculative and, with the dubious exception of Acts 21:25, has not a jot of real evidence to support it.

In despair of ever untying this Pauline knot, John Knox has cut it by deciding to ignore Luke's chronological framework altogether, on the assumption that it was not drawn from his sources but was his own editorial contribution, and to construct a new framework entirely from the letters. He believes that the collection mentioned in I and II Corinthians and in Romans was Paul's response to the appeal of the Jerusalem apostles recorded in Gal. 2:10, and that therefore G2=A4. A2 and A3 are unhistorical. Paul visited Jerusalem for the first time after spending three years in Arabia and Damascus, for the second time after eleven (or fourteen) years' missionary work with Barnabas in Asia Minor and Greece, and for the third and last time after a further period in the same territory. Into this framework selected episodes from Acts are fitted. The edict of Claudius, placed on the evidence of Dio Cassius in A.D. 41, marks Paul's first arrival in Corinth. The trial before Gallio, transferred to Paul's final stay in Corinth, marks the end of his missionary activity.

This theory naturally avoids all the difficulties which beset those who take Acts more seriously, but it raises some very awkward problems of its own. If Barnabas accompanied Paul to Greece, how are

Table 3

	I	II	III	IV	V
Conversion of Paul	33	33	31 or 33	33	34 or 37
First visit to Jerusalem	36	36	33 or 36	36	37 or 40
Famine visit	46	—	46	46	—
First missionary journey	47-48	47-48	47-48	47-48	37-51 or 40-51
Apostolic conference	49	49	49	49	51
Paul's arrival in Corinth	50	50	50	50	41

we to explain the presence of Silas-Silvanus there as his principal colleague, and how can we account for Barnabas' behavior at Antioch (Gal. 2:11 ff) after he had spent eleven years in the company of Paul? On what principle are the episodes from Acts to be selected and rearranged, and what justification is there for the assumption that the letters mention all the salient events of his career?

Each of these theories yields a different chronology for the initial period of Christian history, and the results may be tabulated as in Table 3.

3. Relative dating, A.D. 50-70. When we come to work forward from Gallio's proconsulship, we are dependent entirely on Acts. Paul was acquitted by Gallio sometime during the late summer or autumn of 51 and stayed on in Corinth many days before setting out for Jerusalem. He would not have sailed during the winter, so that his departure must be placed either in the autumn of 51 or in the spring of 52. There follows an undefined period during which he journeyed to Jerusalem, spent some time in Antioch, carried out an extensive tour of Asia Minor, and finally arrived in Ephesus. His stay in Ephesus lasted between two and three years and was followed by another tour of unspecified length through Macedonia to Corinth. He must have arrived in Corinth at the end of the year, for three months later he was celebrating the Passover in Philippi. From there he traveled quickly in order to reach Jerusalem in time for Pentecost, and very soon after his arrival he was arrested and taken to prison at Caesarea. He had been two years in prison when Festus arrived.

We have seen that the probable date for Festus' arrival is the summer of 59. From this we deduce that Paul was arrested in the summer of 57 and arrived in Corinth toward the end of 56. At this point in his life Paul was in a hurry to complete the collection he had organized for the Jerusalem church, and it is therefore unlikely that more than six months had elapsed since his departure from Ephesus. It had been his intention to leave Ephesus at Pentecost, and this must have been the Pentecost of 56 (I Cor. 16:8). His arrival in Ephesus then can be placed in the autumn of 53. Thus we arrive at the dates in Table 4.

Table 4

Paul leaves Corinth	Autumn, 51, or Spring, 52
Paul reaches Ephesus	Autumn, 53
Paul leaves Ephesus	Summer, 56
Paul reaches Corinth	End of 56
Paul at Philippi	Passover, 57
Paul reaches Jerusalem	Pentecost, 57
Paul before Festus	Summer, 59
Paul reaches Rome	Spring, 60

The only other event in this period which we can date with any confidence is the death of James, the Lord's brother, in 61. Festus died at some time during the year 60/61; and before the arrival of his successor, Albinus, James fell victim to mob violence. Not long after this the church in Jerusalem left the city, and was therefore not involved in the Jewish revolt of 66, which ended in the destruction of the city by Titus four years later.

CHRYSOLITE krĭs'ə līt [תַּרְשִׁישׁ (*alternately* BERYL 1; "jewels"), *cf.* LXX *and* NT χρυσόλιθος, Vulg. *chrysolithus;* LXX λίθου ἄνθρακος, carbuncle, *in* Ezek. 10:9]. A magnesium iron silicate, usually olive-green. It is used in the description of wheels in the vision of Ezekiel (1:16; 10:9). It is a stone in the covering of the king of Tyre (Ezek. 28:13). It is used metaphorically in the description of the youth in Song of S. 5:14 and of Gabriel in Dan. 10:6. The use of χρυσόλιθος in Rev. 21:20, for the seventh jewel in the foundation of the walls of the New Jerusalem, would indicate a yellowish, rather than a green, stone.

CHRYSOPRASE krĭs'ə prāz [χρυσόπρασος] (Rev. 21:20); KJV CHRYSOPRASUS krĭs'ə prā'zəs. An apple-green variety of chalcedony, used as a gem in Egypt; the tenth jewel in the foundation of the wall of the New Jerusalem. *See* JEWELS AND PRECIOUS STONES § 2. W. E. STAPLES

CHUB. KJV form of CUB (Ezek. 30:5).

CHUN. KJV form of CUN.

CHURCH, IDEA OF. For that reality which is designated in English most commonly by the word "church," there are in the NT many diverse terms, each with its own etymological and theological history. Each term conveys in varying contexts a large cluster of shifting connotations and associations. In contemporary English usage, "church" as a word dominates the ecclesiological vocabulary. It comes through German and Latin from the Greek κυριακόν, which means "that which belongs to the Lord." In NT Greek, ἐκκλησία (almost always translated in English by "church") is by no means so dominating or central a term. Of the 112 appearances of *ecclesia* in the NT, 90 per cent are found in Paul's letters, the book of Acts, and Revelation. From ten books (Mark, Luke, John, II Timothy, Titus, I–II Peter, I–II John, Jude) this word is absent. *Ecclesia* was used primarily to designate a particular communal reality, not to describe its qualitative aspects. Where the distinctive qualities and dimensions of community life were intended, other terms proved more flexible and evocative. In comparison with these other terms, *ecclesia* was relatively neutral and colorless, conveying by itself little theological meaning. It was open to use, without basic shift in meaning, by unbelievers as well as by believers. Even among those writers who made wide use of *ecclesia,* other terms were more expressive of the reality at hand. We turn first to the basic meanings of *ecclesia* as used in the NT and thereafter to the many cognate ways of expressing the idea of the church. Because the pictures and images are

more frequent and forceful, and because they so effectively suggest the qualitative constituents of the church idea, the greater proportion of space here will be devoted to them. Throughout, "church" will be used as the more inclusive category (in line with modern English) and *ecclesia* in the more limited way in which NT writers employ the Greek word.

A. Basic meanings of *ecclesia*
1. In the OT
2. In the NT
a. An assembly
b. A community of believers

Bibliography

A. *BASIC MEANINGS OF "ECCLESIA."* 1. In the OT. The LXX uses *ecclesia* almost a hundred times as the translation for *qâhâl* (קהל). The basic meaning of both words is a meeting or gathering. People gather together or are summoned for any and every purpose. It is the people and the purpose which give significance to the *qâhâl*. *Qâhâl* may be a gathering of men called up for military duty (Gen. 49:6; Num. 22:4; Ezek. 16:40) or for civic action. Those who assemble may be prophets (I Sam. 19:20) or princes (Num. 16:3; I Chr. 28:8), or a disorderly mob (Ecclus. 26:6). *Qâhâl* is used as readily of those who gather to work evil (Ps. 26:5) as of those who worship God (II Chr. 30:13; Ecclus. 50:13, 20). Probably the most significant *qâhâl* in the OT is the assembling of Israel before God on Horeb (Deut. 4:10; 9:10; 10:4; 18:16), when God sealed his covenant with them. This served to define the significance of the ecclesia of Israel, but it did not give to the terms *qâhâl* or *ecclesia* a fixed, technical meaning.

Qâhâl was frequently rendered by other Greek words in the LXX. Of these the most noteworthy was συναγωγή, which also was a general term, applicable to meetings of all sorts. *Synagogue* was also used to translate the Hebrew *'ēdhâh* (עדה), which had one meaning not associated with *qâhâl*. It could be applied to a congregation apart from its act of meeting together. *Ecclesia,* however, never appears as a LXX rendering for *'ēdhâh*. And the Greek term συναγωγή is limited in NT usage to Jewish congregations, with rare exceptions (Jas. 2:2). The distinctive meanings of *ecclesia,* therefore, develop within Christian history and are due more to religious associations than to philological origins.

2. In the NT. ***a. An assembly of persons which has been summoned for a particular purpose.*** The purpose may be secular or religious. The meeting may be regularly constituted (Acts 19:39) or more spontaneous in origin (vss. 32, 40). In the NT *ecclesia* often refers to the occasion when a specific congregation gathers for prayer, instruction, and deliberation (Acts 11:26; 12:5; I Cor. 11:18; 14:4-5, 19, 28, 34-35; Col. 4:16).

b. A community of believers which has been gathered from the inhabitants of a specific area. The community meets in assembly, to be sure, but it is constituted as ecclesia prior to and apart from such assemblies. The area from which the community has been gathered may be a single household (Rom. 16:5; Col. 4:15; Philem. 2); a single city (Jerusalem [Acts 8:1; 11:22]; Cenchreae [Rom. 16:1]; Corinth [I Cor. 1:2; II Cor. 1:1]; Thessalonica [I Thess. 1:1; II Thess. 1:1]; Ephesus [Rev. 2:1, etc.]); or a province (Galatia [Gal. 1:2]; Judea [Gal. 1:22; I Thess. 2:14]); Macedonia [II Cor. 8:1]; Asia [I Cor. 16:19; Rev. 1:4, 11; etc.]). The multiple number of congregations in a province may be represented by the noun in the plural (I Cor. 16:1, 19; Gal. 1:2), but just as easily by the singular (Acts 9:31). The unity of many congregations is symbolized in Revelation by the number seven (Rev. 1–3). A group of congregations may be designated by reference to a common racial and cultural origin—e.g., the churches of the Gentiles (Rom. 16:4). In all these cases, the basic function of the word is to identify, without qualifying adjectives, a particular congregation or group of congregations (e.g., frequently in salutations: I Thess. 1:1; II Thess. 1:1). The idea of "having been gathered" persists in virtually all these contexts.

c. A community gathered by God through Christ. The nature of this community is therefore continually qualified by the One who summons or gathers it. This accent is made explicit in many cases: the ecclesia (or ecclesiai) of God (Acts 20:28; I Cor. 1:2; 10:32; 11:16, 22; 15:9; II Cor. 1:1; Gal. 1:13; I Thess. 2:14; II Thess. 1:4; I Tim. 3:5, 15). Often this qualification is implicit, but the contexts usually make clear the intention. The ecclesia belongs to God because he has called it into being, dwells within it, rules over it, and realizes his purpose through it. Whether referred to in the singular or the plural, the entire covenant community is considered a single unity because it has been gathered or summoned by the one God.

On occasion *ecclesia* is qualified by the phrase "the churches of Christ" (Rom. 16:16; Gal. 1:22), or by the double phrase "the church . . . in God the Father and the Lord Jesus Christ" (I Thess. 1:1; II Thess. 1:1). Even where the prepositional phrase is lacking, the context often assumes recognition that God in Christ is the power which has constituted this particular ecclesia. Because the ecclesiai belong to Christ, and to God, they constitute together a single reality—a world-wide covenant community, which is embodied in localized form wherever a congregation exists (Col. 4:15-16; I Thess. 1:1; etc.).

d. The eschatological people of God. The Christ who is the living foundation of the ecclesia is the Messiah promised to Israel. Because this Messiah is now gathering his people, *ecclesia* comes to include a strong sense of decisive finality. In later NT writings, *ecclesia* connotes the eschatological people of God, gathered from among the nations through the redeeming work of the Messiah, to participate in the

new age which he inaugurates. Here the gathering of God's people spans all generations and all places, and fulfils all the covenants which have served as the ground of created community. As such it is a recipient and channel of God's glory, a participant in God's warfare with Satan, the heir of the promises, and the earnest of eternal life (Eph. 1:23-2:10; 3:8-12; Col. 1:21-27; Heb. 12:22-24; Rev. 1:20). Here we are farthest from the basic and initial reference of *ecclesia*, and it is only by absorption of meanings from other images that it develops this range of associations.

B. *COGNATE WAYS OF EXPRESSING THE CHURCH IDEA.* More than one hundred cognate expressions may be distinguished, but most of these can be grouped—somewhat arbitrarily, to be sure—under ten categories. In the case of each category it is recommended that the reader supplement the material in this article with that of related articles.

1. The saints and sanctified. *Ecclesia* may be viewed from the standpoint of God's action toward and upon men. In this case *ecclesia* becomes equivalent to those whom God has called, chosen, gathered, foreknown, justified, glorified, sanctified. Often these descriptions involve active verbs or participles, expressive of the dynamic character of divine action among men. To take as one example the designation of the church as "the saints" (*see* SAINT), even when the noun is used (οἱ ἅγιοι), the verbal action is to be assumed. Those who are "called saints" are men who have been "sanctified in Christ Jesus" (I Cor. 1:2). (For the virtual identification of saints and church, see John 17:17-19; Acts 9:31-32; Rom. 15:16-31; I Cor. 14:33; II Cor. 1:1; Eph. 2:19; 5:26; Heb. 13:12; I Pet. 2:5-9; Rev. 20:9). The use of the term "saints" accents the work of the HOLY SPIRIT (πνεῦμα ἅγιον) in the integumentation of community, for saints are those who have received the Holy Spirit (ἡγιασμένοι) by rebirth in baptism. The Son who sanctifies is one with those who are sanctified (Heb. 2:11). Therefore, to be saints is to share in Christ, who is "our sanctification" (ἁγιασμός) from God (I Cor. 1:30). Thus the term "saints" illustrates clearly the dependence of the church on the activity of the Father (Luke 11:13; John 10:36; I Thess. 4:7), the Son (John 17:19; I Cor. 1:2; 6:11; Eph. 5:26; Heb. 10:10 ff), and the Spirit (Acts 10:44 ff; 11:15 ff; 15:8; Rom. 8). (For the rich significance of SANCTIFICATION in relation to community, *see* John 10:36; 17:15-20; Acts 10:44-47; 19:1-6; Rom. 8; I Cor. 3:17; 6:1-19; 12:1-7; Eph. 1:13; 5:26; Col. 1:21-27; Heb. 6:4-10; 10:10-29). The use of the cognate expressions "saints," "the holy ones," "the sanctified," is as common as the use of *ecclesia* and also as widespread.

Less frequent and less widely scattered, but of genuine significance, is the use of the verb "to choose" (ἐκλέγεσθαι) and the noun "the chosen," "the elect" (οἱ ἐκλεκτοί), to designate the church. Jesus Christ is God's Elect, God's Chosen One; through him men are elect and chosen (Luke 9:35; John 15:6 ff; Acts 13:17; 15:7; I Cor. 1:27; Eph. 1:4; I Thess. 1:4; Jas. 2:5). To be described as "the elect" (*see* ELECTION) is to be designated as the covenant community which inherits the new age (Matt. 24:22, 24, 31; Luke 18:7; Rom. 8:33; Col. 3:12; II Tim. 2:10; I Pet. 2:9, Rev. 17:14). This category accents the priority of God's action in establishing the church, the continuity between Israel and the church, and the continuing dependence of the community on God's election (Rom. 9:11; 11:5, 7, 28; II Pet. 1:10).

A parallel expression is that which describes the ecclesia as those whom God justifies (οἱ δικαιούμενοι), and consequently as those who are justified or righteous (οἱ δίκαιοι). The interdependence of church and the justified is indicated in such sayings as this: "We are justified by faith" (Rom. 5:1; cf. Matt. 10:41; 25:37, 46; Rom. 1:17; 5:9, 19; 8:30; I Cor. 6:11; Heb. 12:23). He who justifies, he who is the Just One, is God (John 17:25; Rom. 3:26; Rev. 16:5). But he justifies men through Christ (Matt. 27:19, 24; Acts 3:14; 7:52; 22:14; I Pet. 3:18; I John 1:9; 2:1, 29). And this JUSTIFICATION proceeds through the active power of the Holy Spirit (Rom. 8:4-30). In being justified, men are related to Jesus Christ, who is the true measure and ground of righteousness (Rom. 3:26; Tit. 3:7; Heb. 12:23; I John 3:7). They are simultaneously related to all "just" men, from the beginning to the end (Matt. 13:17, 43, 49; 23:35; Rom. 4; Heb. 11:4; 12:23).

2. Believers and faithful. *Ecclesia* may be viewed from the standpoint of personal, communal response to God's action through Christ, a response which is empowered by the Holy Spirit. God calls men; in response they call upon the name of the Lord. Those who thus call constitute the ecclesia (I Cor. 1:2). Christ calls men to follow him, to be his disciples (*see* DISCIPLES), to be with him, and to be sent by him (Mark 3:14; 6:7); those who respond constitute the ecclesia. Consequently the terms "disciples" (μαθηταί) and "those who follow" (οἱ ἀκολούθεντες) become virtual equivalents to the term *ecclesia* (Matt. 28:19; John 10:4; Acts 11:26; 14:22, 28; 18:23; Rev. 14:4). In Christ, God justifies men, and pronounces them righteous before him; in response men commit themselves in confidence, in trust, in faith. Those who believe in God and in his Son constitute the ecclesia. The church is the company of believers (οἱ πιστεύοντες). Here again the same noun (ὁ πιστός) is applied to God (I Cor. 1:9; 10:13; II Cor. 1:18; I Thess. 5:24; II Thess. 3:3; Heb. 10:23; I Pet. 4:19); to Christ (II Tim. 2:13; Heb. 2:17; 3:2; I John 1:9; Rev. 1:5; 3:14; 19:11); to the individual believers (Acts 16:1, 15; Rev. 2:13); and to the company of the faithful (John 1:12; 3:15; 5:24; 17:20-21; Acts 2:44; 4:4, 32; 5:14; 10:45; 14:23; Rom. 3:22; I Cor. 14:22; Eph. 1:1; Col. 1:2; Heb. 4:3; I Pet. 2:7). Constitutive of the church is this divinely imparted FAITH and faithfulness, justification and righteousness (*see* RIGHTEOUSNESS [IN THE NT]). In more than seventy-five passages, scattered through at least fifteen NT books, there are abundant data to support the thought of the church as the community of believers. Men who believe in the faithful God and his faithful Son are men in whom the faithfulness of God in Christ operates. By this faithfulness they are justified, sanctified, and glorified. In their confident commitment to the gospel, they are made alive and are united in the work of divine reconciliation (John 3; 17; Acts 4; 10; Rom. 4; Gal. 3; Eph. 1; Heb. 4; I John 5).

3. Slaves and servants. *Ecclesia* may be viewed

from the standpoint of the basic duties which this response of faith entails. The church is the company of those who through faith have accepted enlistment as slaves, servants, stewards, ministers, witnesses, confessors, ambassadors, soldiers, and friends. Of these terms as qualifying the nature of *ecclesia,* the two most frequently employed in the NT are at the same time the most menial in connotation ("slaves" and "servants") and therefore the most effective in stressing the paradoxical interdependence of humiliation and glory, of slavery and freedom. We should therefore review the basic reference of the term "slaves" (δοῦλοι). As in the case of faith and faithfulness, the ultimate lord to whom service is rendered is God revealed in Christ, who is in turn viewed as both lord and slave, both master and servant. Therefore, the status as a slave immediately involves a corresponding relationship to fellow slaves within the ecclesia. Because Christ became a slave (Phil. 2:7), those who belong to him become slaves of one another for his sake (II Cor. 4:5; Gal. 5:13). They are also bound in obligation to all the men to whom Christ came as a slave. The basic demand of obedience which Christ lays on the church thus becomes an inescapable obligation to the world (I Cor. 9:19).

The slave image, applied positively to the church, bears multiple connotations where it appears in the fifty passages in some eighteen writings. That every believer was considered a slave of God and of Christ is clearly indicated in such passages as I Thess. 1:9; Rom. 6:18, 22. That this description was grounded in the teaching of Jesus is made evident in all four gospels (Matt. 6:24; 10:24; 20:27; Mark 10:44; Luke 17:10; John 13:16). Furthermore, the parables of Jesus which center in a master's dealings with his servants were construed by early Christians to apply with special force to them (Matt. 13; 18; 22; 24; Mark 12; Luke 14; 15; 20).

It thus became the early custom of NT authors to introduce themselves as slaves of God (Tit. 1:1) and of Christ (Rom. 1:1; Phil. 1:1; Jas. 1:1; II Pet. 1:1; Jude 1:1; Rev. 1:1). They thus grounded their authority in this status (Acts 16:17; 20:19). Moreover, they often refer to the community as slaves of God (Acts 2:18; 4:29; Rom. 6:22; I Thess. 1:9; I Pet. 2:16; Rev. 7:3; 11:18) and of Christ (Rom. 14:18; I Cor. 7:22; Eph. 6:6-9). Fellowship in this company was a matter of motivation, a matter of obedience, a matter of the heart's allegiance.

They viewed this slavery as the opposite of slavery to FEAR, to the law, the flesh, the world, and Satan (Rom. 6:18; 8:12-15; Gal. 4:3, 24-25; 5:1; Heb. 2:15). In fact, SLAVERY to Christ was taken as ruling out the desire for the favor of men (Gal. 1:10; Eph. 6:6) or the security and prosperity of the self (Matt. 6:24; Rom. 16:18). Slaves now obey their earthly master because of their allegiance to their new Master. Slaves of Christ are free men in relation to their masters in the flesh (I Cor. 7:22; Eph. 6:6; Col. 3:24; I Pet. 2:16). Slaves of Christ are his friends and not like chattels who do not know what their Lord does (John 15:15-20). Thus to be slaves of Christ is not incompatible with being friends and brothers (Gal. 4:1-7). For to be slaves of Christ is to imitate his lowliness, humiliation, suffering (Matt. 10:24; Mark 10:44-45; John 13:16; 15:20). To be slaves of Christ is to be witnesses (*see* WITNESS), confessors to him (Rev. 19:2) as apostles and prophets. To be slaves of Christ is to proclaim his gospel and his kingdom (Acts 2:18; 4:29; 16:17; Rev. 1:1; 22:6), and to worship the one true God (Rev. 19:5; 22:30).

The connotations of *diakonia* as descriptive of the ecclesia form a similar pattern. All believers are *ipso facto* servants (διάκονοι), and the same Spirit energizes all forms of service (I Cor. 12:5). God supplies the strength and varied grace (I Pet. 4:10), with Jesus Christ serving as the great exemplar as well as the master whose commands all servants obey (Luke 22:26-28). There are many varieties of service—e.g., of the word and of tables (Acts 6:1, 4; II Cor. 8–9); but all forms of service in and to the church serve to strengthen it and to build it up. Although a special office of deacons appears (Phil. 1:1; I Tim. 3; *see* MINISTRY), their work does not diminish the truth that the whole church is a *diakonia* (II Cor. 3:1-11; 5:18; Eph. 4:12; Rev. 2:19). Christ serves his church, his church serves him—the mutuality constitutes the church as *diakonia* (Matt. 20:28; Luke 12:37; 22:26-27; Rom. 15:8; I Cor. 3:5-9).

4. The people of God. The Christian ecclesia is viewed throughout the NT as the people of God and therefore in many various ways as the continuation and consummation of his covenant community. The church understands itself in terms of the living scriptures, and interprets these scriptures, in turn, in the light of its own experience of community in Christ. Almost all the descriptions of ecclesia in the NT utilize concepts and images which in the LXX had been applied to God's people, and thus suggest a recognition of solidarity with Israel. But this kinship is often made entirely explicit. E.g., the church is identified as the Israel of God (Gal. 6:16), and God is known as the God of Israel (Matt. 2:6; Luke 1:54, 68; 2:32; Acts 13:17; Rom. 11:1). The Shema is accepted by the church as addressed to them: "Hear, O Israel" (Mark 12:29); the new COVENANT is sealed with the house of Israel (Heb. 8:8-10); Gentiles are incorporated within this commonwealth (Rom. 11:17; Eph. 2:12) and inherit the hope of Israel (Acts 28:20). Jesus is the shepherd-king sent to Israel for its glory and salvation, demonstrating God's faithfulness to the oath given to the patriarchs (Matt. 2:6; 15:24; Luke 1:68; 2:32; 24:21; John 1:49; 12:13; Acts 5:31; 13:23). Consequently the church may be appropriately addressed as the twelve tribes of Israel (Matt. 19:28; Luke 22:30; Jas. 1:1; Rev. 7:4; 21:12), as the true circumcision (Phil. 3:3; Col. 2:11-14), and as the sons of Abraham by repentance and faith (Matt. 3:9; John 8:39; Rom. 4:1-16; Gal. 3:7-29; Heb. 11). True circumcision is a matter of the heart (Rom. 2:29). Participation in circumcision is therefore inseparable from participation in Christ's death by baptism (Col. 2:11-14). Sonship to Abraham is dependent upon God's promises appropriated by faith (Rom. 4). "If you are Christ's, then you are Abraham's offspring" (Gal. 3:29). Those who rely on biological descent or on cultural and national heritage may be called Israel according to the flesh, but what constitutes men as the Israel of God is that qualitative communal relationship to God which is produced by God's promise and corporate hope, by God's election and man's faith, by

Christ's dying life and man's acceptance of that life as his own. The Israel of God is an eschatological community which relies on the coming salvation rather than on superiorities handed down from the past. Therefore, this community includes all those who from the beginning have lived by faith in God's covenant promises (Matt. 8:11; Luke 13:28-30; Heb. 11).

All these aspects are included, with others, in the NT description of the ecclesia as "the people of God" (ὁ λαὸς τοῦ θεοῦ). The use of this term in the NT is more frequent, more ubiquitous, more evocative of the sense of identity and mission, than the use of the term *ecclesia*. It is distinctive and yet dependent throughout upon the LXX perspectives. To avoid misunderstanding, the definite article should be preserved—"the people." Also the presence of the qualifying phrase "of God" should almost always be inferred. The nuances of this title are many-dimensioned and varied. In addition to those already specified (e.g., ISRAEL, HISTORY OF; CIRCUMCISION; etc.) the following are noteworthy: "the people of God" designates that society which God has chosen for his own possession (II Cor. 6:16; I Pet. 2:9; Rev. 21:3), and which he has created and brought into existence (Acts 13:17; 15:14; Rom. 9:25; I Pet. 2:10), by his grace in the forgiveness of sins (Heb. 2:17; 8:10; I Pet. 2:9). It is a community which is held together by its remembrance of deliverance (Tit. 2:14) and its hope of promised inheritance (Rom. 4:13-25). It is bound to God in a covenant written on hearts, a covenant which God will never repudiate (Acts 3:25; Gal. 4:24; Heb. 8:10-12). It is a realm pervaded by personal FAMILY relationships to God, for he lives in them and moves among them, acting toward them as a father toward his children (II Cor. 6:18). Corporate cohesion springs from the gift of the Holy Spirit and from the saving activity of Jesus Christ. The extension of the community comes through God's continued calling of men to be his people (Acts 18:9-10). The life of God's people involves essentially the praise and glorification of God among the nations, and the extension of the bounds of the covenant community to include men from every nation, tribe, tongue, and people (Rev. 5:9-10). Its distinctiveness, its separation from other peoples, is designed for the redemption of all peoples. Linked thus to the beginning and to the end of God's creative and fulfilling purpose, his people encompasses all generations. From beginning to end, Jesus Christ is the anointed king and shepherd of this people, his rule inseparable from his redemption of them through his death (Matt. 1:21; 2:6; 4:16; Luke 1:68, 77; 2:31-32; 7:16; Tit. 2:14).

All these positive qualifications of the true people of God are kept in constant tension with the actualities of a history filled with the treacheries of a people which rejects its God and repudiates its rightful King. The threat of the old covenant is repeated in various forms: "Every soul that does not listen to that prophet shall be destroyed from the people" (Acts 3:23; cf. Deut. 18:19; Rom. 10:21; Heb. 10:30). The Lord who owns the people is their sole judge. His judgment is the final criterion of their belongingness.

5. Kingdom and temple. The church, considered as the gathering of God's people, is viewed also in terms of those institutions which had long been central in the life of Israel—the kingdom and the temple. Believers are spoken of as kings and priests (Rev. 1:6; 5:10). Their society is called a holy nation and a royal priesthood (I Pet. 2:9). Usually each term—"kingdom" and "temple"—attracts a congeries of supporting images:

a) Although never completely identified with the KINGDOM OF GOD, the church includes those who have been transferred into the kingdom of his Son (Col. 1:13), who is King and Son of David. The church receives the keys of the kingdom (Matt. 16:18-19; 18:16 ff; *see* KEY). Believers are sons and heirs of the kingdom (Matt. 5:3, 10; 5:19; 8:12; 10:11; 18:1, 4; Jas. 2:5). Through Christ they "reign in life" (Rom. 5:17), and are related to a kingdom which cannot be shaken (Heb. 12:28). Their strongest desire is to enter the kingdom (or to enter life—Matt. 19:13-30; Acts 14:22; Gal. 5:21), and they work together for the kingdom (Col. 4:11; I Thess. 2:12). The way into the kingdom is narrow and steep, requiring total renunciation and humiliation. As servants of the King, they follow his road to power and glory. To those who conquer, crowns and thrones of GLORY are bestowed, emblem of royal grace and authority.

b) The center of Israel's kingdom was the City of David, the Holy City, JERUSALEM. This provided analogies for the idea of the church (Heb. 12; Rev. 2–3; 21–22). Here again the promises of God to Israel were fulfilled in the coming of Jesus as Messiah to Israel. The Messiah and the messianic people—always inseparable in biblical thought—were described as heirs and inhabitants of God's city, Jerusalem. This new city from above is a realm of freedom, in final conflict with the city from below, the realm of bondage. For the prophet John (Rev. 17–22), the Holy City which comes down from heaven is arrayed against its demonic counterpart BABYLON, Bride against Harlot, Christ against Satan. The two foes are both represented by the city of Jerusalem, which is both the scene of great apostasy—Sodom and Egypt, where the Lord was crucified—and also the scene of the redemption, where the Lord gathers his people in victory (Rev. 11:8). Each congregation is set at the juncture where the conflict between these two communities is maximal and where, therefore, the final victory of the messianic Jerusalem is to be revealed. Against this background, the gospels picture Jesus going up to Jerusalem to complete his work of salvation. It is there that simultaneously the Messiah's love for God's city and his rejection by his people are demonstrated.

c) Central to the mission and destiny of Jerusalem was the TEMPLE. In fact, it was the presence of the temple which made Jerusalem the Holy City. Early Christians, therefore, in thinking of their community as the new Jerusalem, also thought of it as the temple. In doing this, they rarely had in mind the visible structures on Mount Zion (ἱερόν). With them it was a fixed axiom that God does not dwell in a temple made by hands (Acts 17:24). Rather, God erects his people as a sanctuary (ναός) by choosing to dwell among men (II Cor. 6:16). Because his presence is the decisive element, Jesus' body is called a temple (John 2:19-21); so, too, is the whole church (Eph.

2:21; Rev. 21), the congregation (I Cor. 3:16-17), and each believer (I Cor. 6:19). The church is made a temple by the presence of God, the Holy Spirit, and Jesus Christ (John 1:14; I Cor. 3:16; 6:19; II Cor. 6:16; Rev. 7:15). And this temple is viewed as a single structure which is *growing into* a "dwelling place of God in the Spirit" (Eph. 2:20-22). The basic image suggests varying subimages of the cornerstone and the foundation and living stones (I Pet. 2:4-8). In every case, men are the substance of the temple—men who are "on earth"—but there is a close interdependence between this visible community and the temple in heaven in which God is glorified by all his creatures (Heb. 12:22-24; Rev. 3:12; 7:15; 12:12; 13:6; 21:3).

d) Because God's presence creates this temple, and because the fundamental function of the temple is to serve God day and night, there is no incongruity in thinking of Jesus as both CORNERSTONE and high priest, or of believers as both living stones and priests (*see* PRIESTS [IN THE NT]). In I Peter the whole church is described as both a royal and a holy priesthood (I Pet. 2:5, 9) whose corporate duty is the offering of spiritual sacrifices, or, in alternate expression, the proclamation of the gospel of mercy. In Revelation, likewise, the church is a community of priests (ἱερεῖς; 1:6; 5:10; 20:6) which appears as a fruit of the emancipating love, the atoning death, of God's Son and therefore as a witnessing and worshiping unit. By their participation in Christ's love they participate in his reign and life (5:10; 20:6). Here the conception is neither that of a separate order of priests within the church nor that of the individual priesthood of each believer, but that of the shared priesthood of a community which has received life and power through their dying Lord. In Hebrews, it is this Lord in whom the priesthood, or rather the eternal high priesthood, is vested. Through his perfect obedience and perfect sacrifice he became the "source of eternal salvation to all who obey him" (5:6-10; 7:16). He is the "surety of a better covenant" (7:22; ch. 8) by which the church lives; he is the access into the Holy of Holies, providing through his self-offering a way by which the community enters the sanctuary (9:11–10:25).

e) Because his priesthood is accomplished through his "sacrifice" of himself, so too the community of priests is created and sustained by self-sacrifice. Those who serve as priests present themselves, their bodies, as a living sacrifice (Rom. 12:1). Thus there is a close affinity among the images of temple, stones, priesthood, and sacrifices. Jesus Christ serves as "our altar" (Heb. 13:10-16); defined as worthy sacrifices, therefore, are such things as the praise of God, good deeds, and mutual sharing. The church continues as liturgical community, but the character of its λειτουργία is transformed. The self-sacrificing work of the apostle in his ministry of God's grace to the Gentiles is his priestly service (Rom. 15:16); likewise their contribution of financial aid to Jewish Christians is token of their priestly sacrifice (Rom. 15:27; II Cor. 9:12). Mutual sharing in suffering and in ministering to corporate needs is a genuine expression of both priesthood and sacrifice (Phil. 2:17, 25, 30). Faith itself is channeled through the sacrifice on the altar, the libation on the sacrifice, and the aroma of the sacrifice. All these images suggest the priestly character of the Christian community, which recognizes that mercy and love are greater than all burnt offerings (Matt. 9:13; 12:6-7; Mark 12:33; I Cor. 5:7-8). This priesthood is a royal priesthood because the source of its liturgical holiness is identical with the source of its kingly power, for its Lord revealed in his death and resurrection the meaning of both kingship and priesthood.

6. Household and family. The church is understood to be the eschatological gathering of God's people into his household, to become his "house" (οἶκος, οἰκία) and his FAMILY. A fluctuating configuration of images centering in the family suggests a wide complex of relationships as the structure of the church. Only a few of these relations can be suggested here.

Many of the OT concepts enter into new vitality in Christian thinking. As in the OT Israel is spoken of as a house, so too in the NT is the church described as the house of Israel or of Jacob, of Moses, of David, but also as the house of God (Matt. 10:6; Luke 1:33, 69; Acts 2:36; 7:42; Heb. 3:2-6; I Pet. 4:17). "House" and "household" are in some contexts virtually synonymous with "kingdom," "nation," "city," and "temple," with all their associations (Matt. 21:13; John 2:16-17; Heb. 8:8-10; 10:21; I Pet. 2:5). The church is this house, and in slightly varied form this building (I Tim. 3:15). The work of construction (οἰκοδομεῖν) and the task of stewards and householders (οἰκονόμοι, οἰκονομία) are related concepts (Luke 12:42; Acts 7:47-49; 9:31; Rom. 15:20; I Cor. 3:9; 4:1-2; Eph. 2:21; I Pet. 4:10). God is related to his house in terms of owning, ruling, and dwelling within it. To him the household is related in terms of dependence, obedience, of stewardship, of watchful waiting, and of patient boldness (Heb. 5-6). In this family terminology as applied explicitly to the church, two related modes of thought receive major accent:

a) The church is thought of as the SONS (υἱοί) OF GOD (Rom. 9:26; II Cor. 6:16-18; Heb. 2:10). "You have one Father, who is in heaven" (Matt. 23:9). Existence as sons stems from God's act: "God sent forth his Son, . . . so that we might receive adoption as sons. . . . God has sent the Spirit of his Son into our hearts, crying, 'Abba! Father!' " (Gal. 4:4-6). The component elements of sonship vary in different writings, but there is assumed throughout a central, constant dependence on the Father's act. Among these elements may be detailed: peacemaking (Matt. 5:9); loving the brothers (I John 3:10-11); loving enemies (Matt. 5:41-45); acceptance of discipline (Heb. 12:5 ff); hope and purity (I John 3:3); conquering temptation (Rev. 21:7); freedom from fear of death (Heb. 2:15); freedom from the law (Gal. 4:5); direction by the Spirit (Rom. 8:14); redemption of the body (Rom. 8:23); humble obedience (Matt. 23:8-12); holiness and sanctification (Heb. 2:11). Sonship represents such fruits as these. All these are corporate, as well as personal, tokens of membership among God's people.

b) Corollary to the above is the conception of the church as a BROTHERHOOD (I Pet. 2:17; 5:9). Often the church is spoken of as a company of brothers (I Cor. 6:5; I John 3:10-17). In fact, the church is addressed as brothers (ἀδελφοί) no fewer than thirty times in the book of Acts alone (e.g., 15:22-23). "You

have one teacher, and you are all brethren" (Matt. 23:8). Status as brethren is wholly dependent upon the work of God in Christ (Heb. 2:10-18). Jesus as the FIRSTBORN of many brethren provides the image to which they are predestined to be conformed (Rom. 8:29). This means that sonship and brotherhood are inseparably related to sharing in his sufferings (Rom. 8:17; Phil. 3:7-17), to counting everything else as loss for his sake, to becoming like him in his death. To be his brother in these terms is to be a fellow heir with him of God's life and kingdom. Thus the determining picture of sonship and brotherhood, and therefore of the being of the church, is provided by Jesus Christ himself. In him men see and imitate the personal embodiment of those constituents of sonship listed above. The character of the church thus depends upon the interdependence of the life of the elder son and his many brethren, and upon their common obedience to the Father's will.

c) This very interdependence is the core of another analogy from familial relationships—the church as the bride (νύμφη) of Christ. The incongruity of metaphors—the church as both the bride and the brothers —is due to reliance on separate idioms in OT thought, where similar incongruity appears. Israel had been visualized as the chosen bride of God in spite of her repeated adulteries (Jer. 2:1; Ezek. 16:23; Hos. 3:1-3). In the NT, Jesus is presented as the bridegroom; his disciples are his friends or sons (Matt. 9:15); his coming is symbolized as a wedding feast (Matt. 22:10; 25:1-13). To him the bride belongs (John 3:29). The faithful obedience of his church is viewed as preparation for the marriage (Rev. 19:7-9), which, in turn, signalizes the dwelling of God with men in the Holy City, Jerusalem (Rev. 21:2-27). Because of this conception, idolatry and adultery become vivid descriptions of sin, and the harlotry of the devil's bride, Babylon, becomes the final great antithesis to the faithfulness demanded of the church (Rev. 17-18). The worship of God's people is fittingly summarized by the prayer of the Bride: "Come" (Rev. 22:17). Paul speaks of having betrothed his Corinthian congregation to Christ as a pure bride, and of this bride as having been deceived by the serpent like Eve, when she preferred "a different gospel" (II Cor. 11:2-4). On Christ's side, the church becomes bride through his sacrificial love for it, his activity in nourishing, cherishing, and sanctifying it (Eph. 5:25-26, 29). On the church's side, life as his bride is expressed by reverence and obedience, by renouncing every other husband, and by seeking holiness (Eph. 5:21, 24, 27, 31). As various modes of expressing the existential relationship of the church to Christ, there is virtual equivalence in these images of the church as sons, brothers, bride; as citizens in the Holy City; and as members of Christ's body (*see* § 9 *below*).

7. The new exodus. The NT often thinks of the church in terms of typological comparison with key epochs in the scriptural history of Israel. Some of these typological references are incidental and indirect; some of them are central and decisive. Among the more incidental is the reference to baptism as comparable to salvation from the Flood at the time of Noah, suggesting the function of the church as the ark (I Pet. 3:18-22). More frequent and significant is the conception of the church as exiles of the Dispersion, engaged in a continuing struggle with the tyrannical captivity of Babylon (Jas. 1:1; I Pet. 1:1; Rev. 16:12–18:24). Still more frequent and significant are the analogical references to the stories of creation with central interest in Adam (*cf. below*). Most pervasive and subtle are the associations of the church with Israel in Egypt: the sojourn; the conflict between Moses and Pharaoh; the plagues and the Exodus; the crossing of the Red Sea; the covenant of Mount Sinai; the wanderings in the wilderness, where the emigrants are guided by the pillars and nourished by the manna; the tabernacle, with the ark and the Aaronic priesthood; the succession from Moses to Joshua; and the Jordan crossing. Each of these items became a nucleus of living, corporate apperceptions in which memories, constantly fed from scripture, coalesced with contemporary experience, and gave shape to expectations. Different NT writers on different occasions focused their thought on different episodes in this saga. In Matthew, the relations between Jesus and the people of God are conceived to parallel in various ways the relations between Moses and Israel at Mount Sinai. In I Peter and Hebrews, the church is described as the community of strangers and pilgrims in sojourn in Egypt and as patient travelers toward the Land of Promise (Heb. 10:26 12:29; I Pet. 1:17; 2:11). Hebrews gives an elaborate comparison between Moses and Jesus, between the "day of testing" in the wilderness and the life of the church as it seeks the promised rest (chs. 3–4), and between the worship in the earthly sanctuary and the new and eternal Holy Place to which the people of God have access (chs. 9–10). For the prophet John, the plagues in Egypt have become analogies to God's final judgment in which Christians participate (Rev. 8; 15–16). The Supper of the church is a continuation and renewal of the feasts of PASSOVER and Unleavened Bread, a connection which is developed in various ways by Paul (I Cor. 10) and by the gospels (Mark 6:30-44; 8:1-21; Luke 22:1-30; John 6). It is by this long story of Israel as God's son that the thought of the church as God's sons is qualitatively conditioned throughout the NT. To recapture their sense of community, a thorough knowledge of the Pentateuch is required, in which is found the basic saga of God's dealings with his people. It is this knowledge which permeates the Psalms, the Prophets, and the intertestamental writings. Through them this saga conditioned the corporate sense of origins and destiny which the church claimed as its own. The story as a whole informs most of the agricultural images which had become in the OT customary descriptions of Israel and which were adopted as equally germane to the church.

8. Vineyard and flock. The church is described by a wide range of agricultural analogies, all evocative of the church's dependence on God, of the qualitative necessity of producing fruit, and of the imminent processes of judgment. E.g., the church is explicitly compared to God's plantation or field (I Cor. 3:5-9). The cycle from seedtime to harvest suggests many possible links to the life of the community: plowing, sowing, germination, growth, cultivation, harvest (Mark 4:14-29; Matt. 13:24-43; Jas. 5:7).

The image of FIRST FRUITS, with its association with the temple sacrifices and festivals, is freely employed and pictures the present moment in the life of the community as lying between the beginning of the harvest and its full reaping (Rom. 16:5; I Cor. 15:20; II Thess. 2:13; Jas. 1:18; Rev. 14:4).

The comparison of God's people to the vineyard (ἀμπελών) is also familiar. God rents his vineyard to tenants (Mark 12:1-12; Matt. 20:1-16; 21:33-43) and demands an accounting from them. The Gospel of John develops the symbol of Jesus as the vine, with his branches dependent upon him and with God treating various branches by pruning and purging in order to produce greater fruitfulness (John 15:1-6).

The OT conception of Israel as a FIG TREE informs the gospel parables concerning the fruitless tree (Luke 13:6-9; Matt. 21:18-22). Likewise the picture of Israel as the OLIVE TREE receives in the NT two notable supplements. To Paul the root of the tree is holy; therefore the branches also are holy. Fruitless and disobedient branches (unbelieving Jews) may be cut off, and branches of the wild olive (the believing Gentiles) are grafted into the trunk. The trunk remains the support of every branch, and God is able to save or to destroy branches as he wills (Rom. 11:16-24). To John the two witnesses and the two lampstands are two olive trees, which as prophets share in the mission of Jesus, a mission of prophesying, of dying, and of rising again in judgment on the world (Rev. 11:1-13). In Revelation, a related tree, the TREE OF LIFE, links the church as new Jerusalem to the Garden of Eden (Rev. 2:7; 22:2; Gen. 3).

The most pervasive agricultural analogy, however, visualizes the church as God's flock (ποίμνιον), thereby appropriating a mode of thinking which had often been used of Israel (*see* SHEEP). "Take heed to yourselves and to all the flock [of God]," is a typical injunction to leaders of the church (Luke 12:32; John 10:1-16; Acts 20:28; I Pet. 5:2). At times this suggests a contrast between sheep and goats (Matt. 25:31-33), between sheep and wolves (Matt. 7:15; 10:16), between sheep lost and found (Matt. 18:10-14), between sheep without and with a shepherd (Mark 6:34). And there are different shepherds (ποιμένες)—strangers, hirelings, wolves, as well as good shepherds. A major accent falls upon those who serve as legitimate shepherds. God, of course, is owner of the flock who rejoices over each lost sheep which is recovered (Luke 15:3-7; Matt. 10:16; 15:24). Jesus Christ is the "great shepherd of the sheep" (Heb. 13:20) who gives his life for the sheep (John 10:1-16) and who commands his apostles and elders to feed his sheep (John 21:16; I Pet. 5:2). The ruling of Jesus over his people as well as over the nations is described in terms of shepherding (Matt. 2:6; I Pet. 2:25; Rev. 2:27; 7:17; 12:5; the Greek verb "to shepherd" [ποιμαίνειν] is sometimes rendered in the RSV as "to rule").

Jesus Christ, however, is often described as LAMB as well as Shepherd (John 1:29, 36; Acts 8:32; I Pet. 1:19; and twenty-seven times in Revelation). Here in the imagery of the flock is found the central paradox of the Cross, for it is in giving his life as a lamb (ἀρνίον, ἀμνός) that Jesus becomes qualified to shepherd the sheep (John 10:15; Acts 8:32; I Pet. 1:19; Rev. 5:6-13; 7:17). His sacrificial death becomes the source and standard for the care which his representatives should give to his flock, the church (John 21; Acts 20:28 ff; I Pet. 5:2-4). More than this, it becomes the living example for all the sheep in his flock (Rom. 8:35-39; I Pet. 2:21-25; Rev. 7:14-17; 12:11). He is the Passover lamb, sacrificed for the church (I Cor. 5:7). He thereby both serves the church as host and feeds the church with his body (Mark 14; Matt. 26; Luke 22; I Cor. 10:14-21; 11:23-32). "There shall be one flock, one shepherd" (John 10:16). In sharpest contrast to this Lamb-Shepherd is the deceitful dragon Satan, and the sharpest contrast among human societies falls between those who worship the dragon and those who follow the Lamb (Rev. 12–13).

9. One body in Christ. The ecclesia is described in the Pauline letters as "one body in Christ" (Rom. 12:5) and as the BODY OF CHRIST (Eph. 1:23). We should first note the antithetical expressions. Set over against the one body in Christ is the one body in sin (*see* SIN, SINNERS), both bodies being considered as solidarities in which all mankind participates. Over one realm, over one body, sin rules. The "old self" is representative of this body of sin; it is a member of a body which is in slavery to sin (Rom. 6:6). Consequently the whole man has become a weapon of wickedness (Rom. 6:12). This body of sin makes all men captives to the body of DEATH (Rom. 7:24; 8:10). From this captivity men can be freed only by divine help, help which will transform the whole creation, for the bondage to corruption has become universal (Rom. 8:23).

a) It is this tyranny of sin and death over mankind as a whole which Christ has destroyed in his body by his incarnation, death, and resurrection. The church refers to those who are united in him and through him. They become one body in him, and this oneness is described in many varying ways. E.g., they are baptized into his death (Rom. 6:1-5; I Cor. 12:13). Or they are crucified with him to the self, to the world, to the law of sin and death (Rom. 6:6-14; Gal. 2:19-21; 6:14-17). Or they participate in his body in the Eucharist. Having a partnership in the dying body of Christ (I Cor. 10:16-18), their bodies become members of him (I Cor. 6:15). They now glorify God in their bodies by carrying about the dying of Jesus, and by manifesting thus the life of Jesus in their mortal body (II Cor. 4:10-12; Phil. 1:20). Seeking to share his sufferings, they enter into the power of his resurrection. This power enables him "to subject all things to himself" by transforming humanity's body of humiliation into the form of the body of his glory (Phil. 3:10-21).

This body binds men together in a *koinonia* or COMMUNION of life and righteousness, over which Christ rules (Rom. 5:15-21), and through which a new creation emerges, a new humanity in Christ. This reality of communal life was often described prepositionally. Christ's members are "in him" and he is "in them" (Gal. 2:20); they are baptized "into him" (I Cor. 12:13); their deeds are done "to him" and "for him" (I Cor. 6:13); they belong "to him" because they have died "through his body" (Rom. 7:4). They suffer and are glorified "with him" (Rom. 8:17). The interaction represented by these prepositions can be described in terms of the presence in the

church of the Holy Spirit (Rom. 8:9-11; I Cor. 6:19; 12:4-11) or in terms of being knit together and of being built into one another by the power of love. All these elements of interpenetration and interdependence are caught up in the description of the church as the body of Christ (τὸ σῶμα τοῦ χριστοῦ).

b) As used by Paul, the thought of the church as Christ's body conveys many nuances, not all of which can or should be systematically co-ordinated in a single pattern. We should not assume that all these nuances are present in every appearance of the concept, nor should we ignore the variations in the various letters. In particular we should recognize that the treatment is most highly developed in Colossians and EPHESIANS. In these letters we may be in touch with tradition which is only secondarily Pauline. But among the dominant accents are these:

Correlative to the idea of the body is the conception of believers as members (μέλη). In the church every person is a member of Christ's body and should so regard himself. He is no longer his own, but is bound in most intimate and significant ways to Another. His own body has become a member of Christ, and this must determine what he does with it (Rom. 12:4; I Cor. 6:13-19; II Cor. 5:10; Col. 2:16-23). In the new body all are members one of another, and this requires the recognition of mutual dependence, of a shared suffering, and of the power of love to knit together all parts of the body (Rom. 12:5; I Cor. 12:14-26; II Cor. 4:7-12; Eph. 4:16; Phil. 3:10-21; Col. 1:24). Each member, however unspectacular his role in the body, shares fully in the common glory and life; each, however prominent his gift, must know the humility of receiving this gift from Christ for the sake of the whole body (Rom. 12:3 ff; I Cor. 12:27-31; Eph. 4:11-16). All spiritual gifts are mediated through the body to its members, and through its members to the body. The same truth applies when the concept of members applies, not to individual believers, but to types of ministry and to the various races and classes which in Christ are reconciled (I Cor. 12:13; Eph. 2:14-22). There are many members, but there can be but one body (Rom. 12:4-5; I Cor. 10:17; 12:12; Eph. 4:4).

c) Also correlative to the idea of body is participation by all in the death and resurrection of Jesus. In participating in baptism and in the Eucharist, the community participates in the dying body of Jesus and in his risen body. By dying and rising Jesus establishes a lordship over both the dead and the living, and establishes a community among both (Rom. 14:7-9). Participation in his death conveys to those who constitute his body freedom from law, sin, and death (Rom. 6-8; Eph. 2:1-10; Col. 2:16-23). Through his death they receive the promise of cosmic redemption, for he overcame the rulers of this age, took captivity captive, defeated Satan, and subjugated all principalities and powers. His body is the realm where this redemptive power operates (I Cor. 10:18-22; Eph. 1:21-23; 4:12-16; Col. 1:20; 2:8-19). "In Christ shall all be made alive." His "spiritual body" is the image of mankind in the kingdom of God (I Cor. 15:20-28, 35-50).

d) Finally, related to the concept of body is the concept of Christ, not as the body, but as the head (only in Colossians and Ephesians). Herein is expressed the conviction that the head is the source and locus of authority, which the whole body must honor and obey (Col. 2:10). The head is the channel through which divine life and glory flow into the body (Eph. 1:22 ff). As its head, Christ loves, sanctifies, and saves the body (Eph. 5:25). "Bodily growth in love" springs from and moves toward the head (Eph. 4:15; Col. 2:19). The supremacy of Christ as head, however, is by no means limited to the church. Both Ephesians and Colossians present him as head over all things. We therefore must include in the thought of his body a reference to God's whole work of creation and redemption.

Although Paul alone of NT writers develops this theme explicitly, there are enough echoes in other writings to suggest that he was not alone among early Christians in employing this vocabulary. Like Paul, I Peter speaks of Christ's crucified body as the means of corporate death to sin and birth to righteousness (2:24). Hebrews speaks of Christ's body as the instrument of obedience and sanctification (10:5, 10; 13:11-12), and of the body as a realm of Christian solidarity in suffering (13:3). In John the body of Jesus is referred to as the temple, which is to be destroyed and built again (2:19-21). In all the Synoptics, the new covenant is sealed by the bread of the Passover, of which Jesus says: "This is *my body*" (Mark 14:22; Matt. 26:26; Luke 22:19).

Central and important as this description of the church is, it was seldom used alone, but rather in conjunction with associated images. In his thought about the body of Christ, Paul habitually fused many patterns and pictures—a fact which suggests the fruitfulness of synoptic flexibility in describing the church. His thoughts concerning the body constantly shift to the other pictures of the church which we have already surveyed: as the elect, the saints, the slaves and freemen, the commonwealth of Israel, circumcision, the temple and its sacrifices, the kingdom of Christ, the strangers who are made citizens, the city, the bride, the kingdom and household of God, the building and its stones. One other pattern of ideas is constantly fused into Paul's thought concerning the body—i.e., the community as a new humanity in Christ.

10. The new humanity. The church is viewed as the beginning of a new creation, a new humanity, in which Jesus Christ is the last Adam, whose image all are destined to bear. The foil for this concept is the existence of all men in the first Adam. In him all men are one through the fact of a shared creatureliness, a shared sin (Rom. 5:12), and a shared death (Rom. 5:14-15, 18-20). Jesus Christ entered into this bondage and died for the sake of all who in Adam are enslaved to sin and death (Rom. 5:6-11). As the last Adam he "became a life-giving spirit" (I Cor. 15:45), the first fruits of the dead (I Cor. 15:20). He is the "image of the man of heaven" (I Cor. 15:49), the image which all will bear. Those who belong to him are being transformed into this image, from one degree of glory to another (II Cor. 3:18). Born again as sons of God and as brothers of Christ, they receive as a free gift the grace of life and righteousness. This one man's "act of righteousness leads to acquittal and life for all men" (Rom. 5:18; I Cor. 15:22). Those who receive this gift are the first fruits of his crea-

tures (Jas. 1:18; Rev. 14:4). They are each a new creation and should so consider themselves and one another. That which unites them to Christ unites them to one another in the ministry of reconciliation, a ministry which conveys the message that in Christ, God reconciles the whole world to himself (II Cor. 5:16-21). The individual is incorporated into the one new MAN, and this signalizes the transformation of his inward nature and his solidarity with all men. Whenever this transformation takes place, vicarious suffering produces life, and the wasting away of the "outer nature" produces daily renewal of the "inner nature" (II Cor. 4:7-15). The community participates in the fulness of God, a fulness of glory that is embodied in cosmic reconciliation (Col. 1:17-20). In this one new man it is impossible for hostilities to remain between Jew and Greek or between slave and master (Col. 3:5-15). The life of *this* man is characterized by peace, by love, by access "in one Spirit to the Father," and by growth toward the final purification and unification of all things (Eph. 2:11-22). As the body of Christ, as one body in Christ, the life of the church is the life of this Representative Man. Although this type of thought is most fully formulated by Paul, there are links to it elsewhere in the NT. E.g., the manhood of Jesus is viewed in Hebrews as inseparable from the manhood that is subjected to him and saved by him (ch. 2). The same kind of corporate singularity may be assumed wherever the person of Jesus is interpreted in the light of the Suffering Servant of Second Isaiah. And the gospel use of the term SON OF MAN, stemming as it does in part from Daniel, conveys the sense of one who represents the saints of the Most High (Dan. 7). And it probably conveys also the ancient oriental idea of the primal, archetypal man from whom true humanity is alone inherited.

C. ***ESSENTIAL TRAITS IN THE CHURCH IDEA.*** The foregoing summary of cognate ways of expressing the church idea is far from complete. An adequate survey would require not only more precise and thorough analysis of the above images but also a treatment of others, such as the pictures of the church as an army of soldiers and conquerors, as the realm of light, as sons of the Day, as salt, as leaven, as a fish net with its catch, as the "woman clothed with the sun," as a pillar of the truth, as a company coming from God and going to God, and finally as the Way. No list can exhaust the vivid imaginative power of the NT writers or do justice to the fluidity, vitality, and subtlety of their conceptions.

None of the separate titles or pictures can be taken as comprehending the total range of thought. None of them can be reduced to objective, qualifying definitions. These words and pictures are channels of thought rather than receptacles of ideas with fixed meanings. This is due, not alone to the character of the thinking, but also to the qualitative, relational character of the reality being described. Each thought-form was utilized with great freedom (and often with conceptual inconsistency) to point to the life-giving connections between the actual, visible people and its God.

Every pattern of thought described the church's dependence on the triune God in such a way as to accent the interdependence of all members of the community, past, present, and future. The cohesion was such as to encompass the whole existence of every person, and to indicate his relationship through Christ to the whole of mankind. Fellowship in the church was known to bridge those chasms which were viewed as impassable by the mind of this world —the chasm between heaven and earth, between the beginning and the end, between all races and nations, sexes and classes. Yet oneness in Christ also served to evoke new and radical lines of conflict, participation in which was requisite for understanding the character of the community ("We are not contending against flesh and blood, but against the principalities" [Eph. 6:12]). Participation in the life of the church was considered necessary for comprehending the implications of the pictures; e.g., participation in the shared allegiance to Christ was necessary for understanding how the community could be conceived simultaneously as a body, a city, and a bride. Moreover, whatever description be adopted as central (e.g., the people of God), the associations of this term need to be corrected and supplemented by the connotations of the other images. If we would fully understand the idea of the church in the NT, we should consider all the cognate expressions at once.

What are the motifs which appear in almost all these expressions? Multiple answers may be given, all of which may have substantial supporting evidence. But among these answers the following traits should not be overlooked:

The church is thought of as a profoundly theocentric reality, whose origins and destiny rest in the powerful initiative of God and whose life is comprised by God's call and man's response. It is a Christocentric community because Christ's work qualifies the existence of the community at every point. In history the church moves from the beginning in Christ of a new age toward the consummation in Christ of this age. Memory and hope are essential to its movement, and come to a focus in personal and corporate participation in the death and resurrection of Christ. The church is a charismatic reality, for the Holy Spirit knits together its life, and the gifts of the Spirit empower its work and determine its duties. The coherence of men in this community is characterized by the recognition of such gift-demands as love and mercy, obedience and freedom, humility and courage, holiness and sin-bearing, mutual suffering and mutual joy. There is participation, at a deep level, in common work, in daily tasks, and in an embassy to the world, wherein all members are summoned to share in worshiping and witnessing, in reconciling service and in vicarious suffering. The church is a new creation, a growing organism, a bearer of promise for the whole creation. It is localized and embodied in particular temporal events, in empirical social relationships, yet it points beyond these to a reality which is ontologically ultimate and eschatologically final. God's judgment begins with this household, but his presence in this household is the earnest and first fruit of final judgment and redemption for all things. The warfare between God and Satan cuts through the life of this community, whose every choice registers a divided loyalty, yet it remains God's chosen instrument of

action in the world, his love for the church being the sign and the channel of his love for the world. Integral to its grounding in the fulness of God's glory is the oneness and the wholeness of the church. This oneness is enriched rather than destroyed by the diversities of his many gifts; the freedom of the many members; the scattered location of the many congregations; the gathering of men from many races, tongues, tribes, and peoples; and the inclusion at one table of men from all generations. The NT idea of the church is not so much a technical doctrine as a gallery of pictures. In this shifting panorama of thought we can detect recurrent themes which exhibit their vitality in the variety and flexibility with which they are voiced.

CHURCH, LIFE AND ORGANIZATION OF.

During the time between his resurrection and his second coming, Jesus Christ continues his ministry in and through the church. The church makes known the living presence of its Lord by the diverse manifestations of its own life. When the first group of brethren gathered around the apostles had increased as a consequence of missionary activity, new ministries had appeared, and at the end of the apostolic age the first lines of church organization are visible.

A. ***THE LIFE OF THE CHURCH.*** From Jerusalem the church spread rapidly over the E Mediterranean area. The Spirit, without whom the church would not have existed, was also the director of its religious, moral, and material life, and its guide in its relations to the society of antiquity.

1. Extent of the church. Every living body must grow. Its harmonious development is the clearest outward evidence that it is alive. From the day of Pentecost the church manifested the vital force given by the HOLY SPIRIT, by beginning to expand. The plan of its extension had been given it in advance by its Lord: the apostles were to preach the gospel "in Jerusalem and in all Judea and Samaria and to the end of the earth" (Acts 1:8).

The point of departure was Jerusalem, the holy city of the Old Covenant which had now become the holy city of the new. Indeed, it was there that Christ died for the salvation of the world; there "he presented himself alive after his passion . . . and . . . was lifted up" (Acts 1:3, 9). It was there that the Spirit descended on the believers, that Christ was preached for the first time, and that the church appeared as a great religious and social upheaval. It was from there that every Christian mission began, including that of the apostle Paul. It is striking to see that the Apostle to the Gentiles also counts as the factual starting point of his missionary journeys, neither Damascus nor Antioch, e.g., but Jerusalem (Rom. 15:19).

The three stages Judea, Samaria, the end of the world, are at the same time geographical and religious stages. The preaching must reach all men where they live; it must also reach all men, whatever may be their position as regards God, whether they are Jews, Samaritans, or Gentiles.

Peter preached first at Jerusalem, but very soon his activity was exercised in the towns around the holy city (Acts 5:16). Then the preaching of the apostles, of the evangelists Stephen and Philip, of Barnabas, and of Paul was heard in remote parts of Judea, in Samaria, Damascus, Phoenicia, Cyprus, Cilicia, Syrian Antioch, and in the regions situated in the S of what is now called Asia Minor (Acts 8–14). In short, thanks to this missionary work which extended from the year 30 to *ca.* the year 47, the church extended over almost all the E basin of the Mediterranean. Then, in the years 49-60 approximately, the apostle Paul, the Lord's "chosen instrument" (Acts 9:15), the new "witness" (Acts 22:15; 26:16) added to the Twelve, founded churches on all the shores of the Aegean Sea; he introduced the gospel into Europe and arrived at Rome, the capital of the empire and of the then civilized world (Acts 16–28).

The book of Acts, in its second half, speaks only of Paul's missionary journeys. But during this period the chief missionary was certainly not alone in this work. This is proved by two statements by Paul himself. First, he implies that the other apostles and brethren of the Lord are traveling, like himself, to announce the gospel (I Cor. 9:5). Further, when Paul has finished his activity in the East and in Greece, he writes to the Romans that, according to his "ambition to preach the gospel, not where Christ has already been named," he will go to Spain (Rom. 15:20-24). We conclude that at the time Paul was writing to the Romans, between the years 55 and 58, the gospel had been preached, or at least was being

preached, in Egypt, on the coast of Africa, in Italy, and perhaps even in the S of France.

There is nothing surprising in this rapid extension of the church. The apostles were full of zeal, tireless in their desire to go farther afield, as we see from the example of Paul. On the other hand, the apostles and their immediate collaborators, such as Silas, Timothy, Titus, Apollos, were not alone in their work. Beside them were a great number of unnamed missionaries. Among the merchants, imperial officials, soldiers, and, last but not least, tourists—there was a lot of traveling in the Roman Empire—many were doubtless won over to the gospel and became active propagandists for the salvation they had found. Everything leads us to suppose that it was these unknown evangelists, nameless in church history, who were the first to carry Christianity to Italy and to Rome.

It must also be recalled that the apostolic mission was essentially a mission in towns. The apostles, and Paul in particular, made contact first with towns and preferably the provincial capitals, feeling that it was these vital centers which must first be gained for the faith. From these the gospel radiated into the villages and the country districts.

Along with this geographical expansion went extension on the religious or theological plane. The gospel, preached in the first place to the Jews alone, was soon preached also to the Samaritans, that despised race separated from the people of Jerusalem. In this way the preaching of Christ began re-establishing the unity of the people of God of the Old Covenant. Afterward the same gospel was preached to the proselytes and Gentiles—i.e., to men whom the Jews considered to be excluded even more than the Samaritans from the grace of God reserved for the chosen people of Israel. Thus by the gospel God "has broken down the dividing wall of hostility," as Paul says (Eph. 2:14). The book of Acts, moreover, points out on two occasions that to the Gentiles also God has opened a door of the faith (11:18; 14:27). Toward the middle of the first century at the COUNCIL OF JERUSALEM the Spirit bore witness, once again, to the fact that the gospel was also destined to the Gentiles, and the apostles, guided by the Spirit, established the few rules which were to allow the converts from Judaism and the converts from paganism to live in peace and harmony in the one church which gathers them all together (Acts 15). At this time, scarcely twenty years after the passion of Jesus, the church had already attained its full greatness on the religious plane. In fact, the human race does not consist of any men other than Jews and non-Jews, and both groups were admitted on an equal footing into the one and only church of Christ. Certainly the church was to increase further on geographical lines, but this extension of the church over the whole surface of the globe did not modify its structure; it was now and forevermore the church of the Jews and the Gentiles, united in the faith in one Savior.

There was not constituted, from the middle of the first century, one church for the Jews and a separate one for the Gentiles. The church remained one, and one only. This is accounted for by the living faith of the apostles and the believers and by their faithful attachment to the teaching of the Lord.

2. The age of the Spirit. It has been said, with reason, that the chief personage in Acts is neither Peter nor Paul, but the Spirit. The Spirit is the exalted Christ, present and active in and through his own, from the Ascension until the Parousia. This action of the Spirit in the church has three aspects:

First, the Spirit given at Pentecost (Acts 2:1-11) intervenes constantly to guide the missionaries in their journeys by which the church grows (Acts 8:26, 39; 9:10; 13:2; 16:6-7; 20:22). The Spirit makes it known to the church that it is part of the divine plan that the Gentiles too should share in the salvation in Christ (Acts 10:3, 13, 47; 15:8, 17, 28). The Spirit also intervenes in order to strengthen the apostles and to enable them to face the hostility which their preaching provokes (Acts 4:31; 18:9-10).

Second, the Spirit is the instigator of the unity of the church. The church is a body where racial and social differences are abolished (Gal. 3:28). The believers are "all one in Christ Jesus," because they all "were baptized into Christ" (vs. 27). "There is one body and one Spirit," just as there is one hope, one Lord, one faith, one baptism, one God (Eph. 4:4). This unity created by the Spirit is manifested in the communion which unites the Twelve to Paul and Barnabas (Gal. 2:9). At Jerusalem the first believers are "of one heart and soul" (Acts 4:32). Paul reminds the Philippians that by "participation in the Spirit" they are "of the same mind, having the same love, being in full accord and of one mind" (Phil. 2:1-2). Always and everywhere the Spirit makes the believers live with a new life, of which the sign is unity and brotherly communion.

Third, the Spirit teaches all things to the disciples and brings to their remembrance all that Jesus has said to them (John 14:26; cf. 15:26; 16:13-14). In other words, the Spirit gives to the believers the true meaning and understanding of Jesus' person and message and, accordingly, the true interpretation of OT scriptures in which the coming of Christ has been prophesied (cf. John 2:22). This explains two most decisive facts in the life of the primitive church: the formation of the gospel tradition and the adoption by the church of the OT as Christian scriptures.

The four canonical GOSPELS were written in the years 65-100 approximately. But before their publication the elements which compose them were transmitted orally, from the time of the first apostolic preaching. In the discourses by Peter we already find a sketch of gospel narrative (Acts 2:22-24; 3:13-21; 10:36-43). The apostle Paul himself also recalls the teaching of Jesus (Acts 20:35; I Cor. 7:10-11). Since the first days the believers knew that they were saved by the holy life, death, and resurrection of Christ; since the first days also, these facts were told them. The gospels were preached and thought long before they were written. Right from the start the church found in the tradition concerning Jesus its spiritual nourishment.

It is worthy of note that there exists, as compared with the four gospels, only one book of the Acts of the Apostles. We further observe that the richness of the gospel tradition in memories of Jesus is in striking contrast with the poverty of the book of Acts regarding details of the life of the church before the time of the apostle Paul. Only a few factual happen-

ings illustrate the concrete life of the Palestinian communities. The reason for this is that the church lives neither by its own memories nor by the memories of the apostles, but by the person of Christ who always occupied the first place in the apostolic preaching and teaching and in the devotion of the believers.

On the other hand, it was the deepest conviction of the church since the beginning that in Jesus the OT promises had been fulfilled. In almost every NT book such terms as "according to the scriptures" are to be found (cf. Acts 8:35; Luke 24:44-46; I Cor. 15: 3-4). These terms mean that the Christ of the church's faith is the Messiah of Israel and fulfils the prophecies. The redeeming power of God, which has been at work since the beginning of Israel's history, when God brought his people out of the land of Egypt, was at work again in the resurrection of Christ to bring to the believers the forgiveness of sins and a new life by the Spirit. The same redeeming power will work again at the end of this world, when Christ shall return with glory and the kingdom of God shall be established. Thus the gospel is a fulfilment rather than a novelty. The gospel reveals the continuity of God's design of salvation in and through history.

Thence, we have two consequences. On one side, the OT scriptures, where Christ was announced, are, just as much as the writings which speak of the Christ who has come, the books where the church finds its edification. On the other hand, as the hope of the past has actually been fulfilled by the life, death, and resurrection of Christ, so the Christian hope in the consummation must also find its realization. The church's essential assurance that God's design is carried out according to the Scriptures explains this fact: the expectation of the first believers of the sudden end of history at a time when they themselves would still be alive (Mark 9:1; I Thess. 4:17) did not come true. The time between Christ's first and second coming soon appeared to be much longer. Yet the delay in the date of the final events destroyed neither the faith nor the hope of the church. The church lives in the age of the Spirit, and this age has its proper place in God's design. Whatever may be the duration of this age, the church always has the same task before her: to preach the gospel to the world and to maintain the spiritual life of the believers. *See* PREACHING.

3. Religious life. The life of the church is a life of communion with Christ. For all believers this life is a new life. All men, former Jews and former Gentiles, have access to it through repentance (Acts 20: 21; 26:20), for all have to detach themselves from their past in order to become Christians. But the two groups which are united in the church have a different religious past. Before Christ the Jews lived under the law, and the Gentiles in idolatry. This is why the repentance by which all must pass has not the same significance for the Jews as for the Gentiles.

In the missionary discourses of Peter, the Jews are called upon to repent from their sins (Acts 2:38; 3: 19; 5:31). As is indicated by the context, their sin does not consist of moral faults. It is, on the contrary, a religious and theological error. Their sin is their unbelief in Jesus of Nazareth, in whom they see a man rightly condemned by the leaders of Israel, whereas he is the Christ and the Lord (Acts 2:23; 3: 13, 17; 5:30). Paul's experience is the typical example of the Jewish conversion to the gospel. Paul was not converted in order to turn from a worldly man into a religious one, or from a troubled spirit into a soul in peace with God and his own self. He was "as to righteousness under the law blameless" (Phil. 3:6), "extremely zealous" in his Jewish life (Gal. 1:14). God himself stopped him on the Damascus Road in order to reveal to him that Jesus, whom he was persecuting in the form of his believers, was in reality the Lord of glory, just as his worshipers said he was. Now as a believer in Christ, Paul lives in the same passionate zeal for the glory of God as he did in his recent past. Only he knows now that salvation is not to be gained by man's efforts but is given to him in the fellowship of the living Christ. Likewise for the Jews who passed over to the gospel, conversion did not mean a total change of life. As Christians they adore the same God they were worshiping as Jews; they continue to live in obedience to the will of God. Yet it is now expressed no longer in the law but in Christ. Consequently Christ is now the norm of their religious life and ethical practice. Fellowship with Christ takes the place of observance of the law. Nothing is more significant in this connection than the description of the life of the early Christians at Jerusalem. "They devoted themselves to the apostles' teaching and fellowship, to the breaking of bread and the prayers" (Acts 2:42). In other words, what inspires the religious and moral life of the believers is no longer the law recited at the service in the synagogue, but the living person of Christ, with whom they enter into communion through the gospel tradition transmitted in the apostolic teaching, through the Eucharistic meal or "breaking of bread," and through prayer. *See* GOSPEL; PREACHING.

For the Gentiles, on the other hand, conversion to the gospel meant a radical change of the religious and ethical life. They had to turn away from idols and "to serve a living and true God" (I Thess. 1:9; cf. Acts 17:23, 30). Like the former Jews, they must believe in Jesus as the Son of God. But, in addition, they must give up the idolatrous polytheism and specifically pagan customs, which were incompatible with life in Christ. The passage from paganism to Christianity required a greater step than the passage from Judaism to Christianity. It is for this reason that the Apostle to the Gentiles writes to his readers: "Do not be conformed to this world but be transformed by the renewal of your mind" (Rom. 12:2). He exhorts them to "live in Christ" (cf. Rom. 6:11), in "obedience to the faith" (Rom. 1:5), to "walk by the Spirit" and not by the flesh (Gal. 5:16), to renounce the "works of the flesh," and to bear the "fruit of the Spirit" (Gal. 5:19-23).

Among the works of the flesh Paul names first, and with some insistence, the sexual faults. These were typical pagan vices. The Gentiles were much more free than the Jews as regards sexual life. The monogamous marriage was not held, in the pagan world, in the same respect as in Judaism, where it was considered a divine institution. Moreover, the Gentiles looked with indulgence on unnatural vices, which were an abomination in Israel. This is why the Apostle to the Gentiles gives in his letters so many exhortations to lead a pure life and to respect

marriage (I Cor. 6–7; I Thess. 4:3-7). He recalls in particular that the body of the believers belongs to the Lord, that it is the temple of the Holy Spirit, and that it must not be polluted (I Cor. 6:13-20). Every sexual misconduct of the believer is much more than an ethical defect; it is an offense against Christ. For the believers "are the body of Christ and individually members of it" (I Cor. 12:27). It is therefore for a religious reason, even more than for a moral one, that the believer must turn away from the works of the flesh to bear the fruit of the Spirit.

To the "works of the flesh" in the plural, Paul opposes the "fruit of the Spirit" in the singular. This is a precious indication that Christ's spirit does create a unity of mind in the believer. This fruit is love and its connected consequences. In fact, all behavior and all sentiment on the part of the believer are grounded in his love for Christ and for his fellows. "For the love of Christ controls us" (II Cor. 5:14), so that the believers, loved by Christ, must "live no longer for themselves but for him who for their sake died and was raised" (II Cor. 5:15), and consequently must "love one another with brotherly affection" (Rom. 12:10). Thus, in the church, religious life is the foundation of moral life.

In a word, Christ takes possession of the entire man. The whole life of the Christian is under Christ's rule and guidance. This is true, not only of the religious, but just as much of the material and social, life of the believer.

4. Material life. There is no sphere of Christian life which is not governed by the spirit of Christ. The proof thereof is given by the fact that in the NT the term "fellowship" may designate so high a reality as the communion of the believer with his Lord, when the Eucharistic meal is celebrated (I Cor. 10:16), as well as such a trivial thing, at first sight, as the sharing of material goods (*see* COMMUNION; COMMUNITY OF GOODS). This sharing is recommended as a sacrifice which is pleasing to God (Heb. 13:16). Its factual examples in the NT are the corporate life of the first Christians and the collection undertaken by Paul for the Jerusalem church.

Among the first Christians at Jerusalem no one said that any of the things he possessed was his own, but they had everything in common (Acts 2:44; 4:32). It is further explained that the possessors of lands or houses sold them, and brought the proceeds to the apostles, who made distribution to each as any had need (Acts 2:45; 4:34-35). These were quite voluntary acts, inspired by the love which reigned in the church, and also, no doubt, by the feverish expectation of the imminent return of Christ. The same expectation of the end was to incite the Thessalonians to stop working (II Thess. 3:6-12). Since, however, the present world continued as before, the communism of the early church proved to be a wrong solution of the problem of community life. But this economic failure was not a spiritual one. On the contrary, the experience of the first believers teaches us that the Christian life is not compatible with a selfish attachment to earthly possessions, and that Christian communion affects all planes of life. Further, the experience at Jerusalem established the principle of sharing which rendered the collection organized by Paul necessary; and this is the most striking example of financial, as well as religious fellowship in the primitive church.

In the eyes of Paul the *collection* (*see* OFFERING FOR THE SAINTS) was not a mere gesture of liberality. It expressed the communion which united all believers and which had its source in the fact that they all belonged to the same Savior and were all one in him. The collection was a religious act in the etymological sense of the word: it bound to one another those who, in Palestine on the one hand, in Asia and in Europe on the other, were bound to Christ. Paul bases his argument not on philanthropic and sentimental motives but on these spiritual ones, when he recommends the collection to the Corinthians (II Cor. 8). He states, in fact, that the Christians of Jerusalem, who are of Jewish origin, will be convinced, in receiving the sum from the collection, that the members of the Pauline churches, who were formerly Gentiles, believe in the same gospel as they do. The collection is an act of Christian communion, a sign of the unity of the church and of the material and spiritual solidarity of the Jews and Gentiles bound together in one body (cf. II Cor. 9:12-13). More than that, the collection is a debt which the Gentile Christians must settle with the Jewish Christians. They, children of Israel, are at the origin of the salvation; it is they who received through their father Abraham the divine promises and covenants; it is from them that Christ received his human nature; it is from them also that the apostles came, not excepting even the Apostle to the Gentiles. Now, all these spiritual riches have been transmitted by the Jews to the Gentiles, who now form with them the Israel of the Spirit, the church of Christ. Consequently the Gentiles must, on their side, share with them the material riches which they possess and which the Jews lack (cf. Rom. 15:26-27).

Paul is able to quote a similar example of this sharing of spiritual and material goods: the preacher who brings the gospel to men has the right to live in the temporal wealth of the believers (I Cor. 9:11; Gal. 6:6).

Thus the gospel places man in his entirety, with his soul and his worldly possessions, in a new relation to those who share with him the supreme riches —i.e., the salvation in Christ. The exchange of spiritual and material goods is the expression of the communion between one person and another among all those who believe in Christ.

5. Church and society. It remains to describe the social life of the church and the relations of this new society, which was the Christian community, with the society of antiquity in which it moved.

The church united people of every social status, from the rich who had slaves to serve them to the very slaves themselves. The current idea that the early church was recruited essentially from the lower classes of society does not appear to be founded on scripture. Paul says that in the Corinthian church there are not many "wise according to worldly standards, not many . . . powerful, not many . . . of noble birth" (I Cor. 1:26). This is a somewhat rhetorical way of saying that there are at least some such people, and above all that God appeals to all men without any consideration of social distinction. There were at Corinth rich Christians (I Cor. 1:11; 11:21-

22). Almost everywhere some men and women of good position entered the church (Luke 8:3; Acts 16: 16; 17:4, 12, 34), and well-to-do members placed their houses at the disposal of the church (Acts 12: 12; 16:14-15; Rom. 16:23; I Cor. 16:19; Col. 4:1; Philem. 2). Paul himself was, no doubt, of high social standing, as is more than suggested by his Roman citizenship inherited from his father (Acts 22:28); his wide culture, both Judaic and Hellenistic (Acts 21: 29; 26:24); and the funds he had at his disposal, at least at some periods of his life (Phil. 4:12; Philem. 19).

What is the attitude of the church toward the different social groups of which it is composed? Here we have two questions of particular interest: the attitude of the church toward women and toward slaves, for both of these groups were stirred, in the first century, by aspirations for emancipation from marital authority in the one case and for freedom from slavery in the other.

Not only did women enter the church, but they exercised therein a ministry of assistance which the apostle Paul approves (Rom. 16:1; Phil. 4:3). If the apostle forbids women to interrupt the worship by their chattering (I Cor. 14:34-35), he allows them to prophesy on condition that they do so wearing dress considered suitable at that time (I Cor. 11:3-15). In the question of mutual relations and reciprocal duties of husband and wife (Eph. 5:21-33; Col. 3:18-19; cf. I Pet. 3:1-7) Paul does not defend, as is ordinarily supposed, the old oriental conception according to which the first religious duty of a woman was absolute submission to a husband who, as far as he was concerned, had all the rights. In the first place, the Christian MARRIAGE, of which the apostle speaks, is strictly monogamous for the husband as well as for the wife, and this is a singular novelty as compared with pagan customs. Further, according to Paul, there should be complete harmony between husband and wife in love and mutual service, which corresponds to that which exists between Christ and the church. The submission of the wife is not the obedience of a slave to his master; it is the attitude with which the wife accepts the place God gives to her as a married woman. When the apostle bids the husband love his wife as Christ loved the church and gave himself up for her, he claims for the husband an authority which rests only on love and self-forgetfulness. He ordains for the husband an attitude of tenderness and faithfulness that no husband can adopt and keep unless he is animated by the spirit of Christ.

As regards SLAVERY, the apostle Paul, in a general way, advises slaves to submit themselves to their masters (Eph. 6:5-8; Col. 3:22-25; cf. I Pet. 2:18-21), but he reminds the masters that they themselves have in heaven one who is the Master of both slaves and masters (Eph. 6:9; Col. 4:1). Paul deals with the question in the same spirit in the letter to Philemon with reference to the slave ONESIMUS. The apostle sends back to his master, Philemon, in accordance with the law at that time, the fugitive slave, who, under his influence, has become a Christian. Paul does not ask for his liberation in so many words, but he reminds Philemon that this slave is now a brother, which means that the master and the slave are now, in their relations to each other, in a new situation created by the communion which they both have with Christ.

This cautious attitude of the early Christians in the social sphere can be explained by two facts. First, the end of history was believed to be at hand; "the form of this world is passing away" (I Cor. 7:31). Consequently, "every one should remain in the state in which he was called" (I Cor. 7:20). The church did not care, in the first place, to change the social order of the time. On the contrary, it accepted the political and sociological setting in which it lived, so long as God maintained that setting. Thus the apostle Paul advises the faithful not to break off personal relations with the heathen (I Cor. 5:9-10); to remain amenable to the state (Rom. 13:1-7; cf. I Tim. 2:1-2; I Pet. 2:13-17); to work like all men, not only in order to live honorably, but also to be in a position to help others (Acts 20:35; Eph. 4:28; I Thess. 4:11-12; II Thess. 3:7-12). In a word, the church did not think of making the gospel a ferment of social revolution any more than Jesus thought of confusing the preaching of the kingdom of God with the anti-Roman agitation of the Zealots.

Second, the church appealed primarily to the individual. It taught the believer to consider every man, whoever he may be, as a "brother for whom Christ died" (I Cor. 8:11; cf. Matt. 25:40, 45). If the church did not preach a revolution which would lead to disorder, neither did it sanction a social state inspired by the hardness and selfishness of the human heart. It wished to bring man first into communion with Christ, for the man who himself is changed by Christ will in his turn change the framework of society in which he lives.

The church, however, had also worked positively in the social sphere. It had created a new sociological form, the Christian community itself. In fact, the church as such ignored racial and social differences (Gal. 3:28); it exercised its own discipline (Matt. 18:18) without having recourse to pagan tribunals (I Cor. 6:1-6). Finally, it bestowed in itself a specific form of organization.

B. ***THE ORGANIZATION OF THE CHURCH.*** The church is the body of Christ, and each member of the body has to serve according to his calling and ability. There is no dead member in the living body of the church. "As each has received a gift, employ it for one another, as good stewards of God's varied grace" (I Pet. 4:10). While, however, all the faithful must serve in the church, the ministry of certain members is indispensable to the life of the church.

The work of salvation had been accomplished by Jesus Christ at a given moment in history. This work had been done once for all; it was not repeated. Besides, no repetition was necessary; for Christ had chosen certain men to be his witnesses, his apostles, to proclaim to the world what he had said and done. The witness of the apostles, who made the person and the work of Christ known to men, was therefore as important and as necessary as that work itself. The church was thus founded by the work of Christ and by the testimony of the apostles. But the construction or the edification of the church must be pursued until the second coming of Christ, well beyond the time of the apostles. This work of edification required other ministries than the apostolate.

These other ministries were quite as indispensable as the apostleship to the life of the church. This is why Paul considers the ministry as a divine institution. It is God (I Cor. 12:28) or Christ (Eph. 4:11) who gives to the church "apostles," "prophets," and "teachers."

The church draws its life from the gospel; it needs men to preach it and to explain it. On the other hand, the church is called on to be a structure and not a heap of materials; it must be a body and not an unorganized mass of believers. These two images of the edifice and the body, which in the NT are current similes for the church, show that it cannot exist without services of order and government.

Lastly, the church has had, from earliest times, the care of the poor and the unfortunate; it cannot dispense with ministries of assistance and benevolence either. This is why the different forms of the ministry appear very early in the church, during the lifetime even of the apostles. Their appearance is normal. It is the necessary expression of the life of the church. *See* MINISTRY.

1. The apostleship. It is generally admitted that the NT uses the term "apostle" in both a looser and a stricter sense. In the first case it is applied either to missionaries like Barnabas or to messengers of a particular community. In the second, it designates a limited group of men who have been recognized by both the NT and the Christian tradition as the authorized representatives of Jesus Christ. The Twelve and Paul are undisputed holders of the apostle's title in this second sense. For discussion of the most debated questions of the origin and meaning of the word "apostle" and of the number of early Christian missionaries who were apostles in the strict sense of the word, *see* APOSTLE.

a. The meaning of apostleship. The TWELVE were chosen by Jesus in his earthly life to join him (Mark 3:13-19). They saw the risen Lord and received from him the commission to be his witnesses in Jerusalem, in Palestine, and to the end of the earth (Acts 1:8). Thus the Twelve stood in a unique position. They were witnesses of the ministry and the resurrection of Christ, and they had been commissioned by him. The promise had been given them that in the world to come they would judge or rule the people of God (cf. Matt. 19:28; Luke 22:28-30). In other words, they were entrusted with a historical and eschatological mission. They were apostles forever.

In this respect two facts in the early church are significant. Between the Ascension and the day of Pentecost, Matthias was appointed to fill the vacancy in the Twelve left by Judas (Acts 1:15-26). But when James the son of Zebedee was put to death by Herod Agrippa I (Acts 12:2), no attempt was made to fill his place. The implication is that only apostasy such as that of Judas could create a vacancy. The death of one of the Twelve did not do so, because these men were chosen for this world and the world to come (cf. Rev. 21:14).

Now Paul stands in a position similar to that of the Twelve. Although he had not been a witness of the earthly life of Jesus, he claimed—and the Twelve acknowledged his right—to be recognized as an "apostle of Jesus Christ" in the same strict sense as those who were apostles before him (Gal. 1:1, 17). First, Paul sets his experience on the Damascus Road alongside the experience of the Twelve on Easter Day (I Cor. 15:3-8). He too has seen Jesus our Lord (I Cor. 9:1). Second, Paul has been entrusted by Christ with the gospel to the Gentiles, just as Peter has been, in the name of the Twelve, with the gospel to the Jews (Gal. 2:7).

Moreover, Paul is highly conscious of the exceptional vocation of an apostle. He is also well aware that the circle of the apostles is one which has been formed once and for all and which is now closed. Paul reminds us that there were apostles before him. He never says that there will be any after him. On the contrary, he is persuaded that he is the last of the apostles. In fact, in order to be an apostle, one must be a direct witness of the glorified Christ. Now the appearances of the risen Lord are at an end.

Thus, according to the NT, the apostle occupies a unique position in the history of salvation. He has seen the risen Lord and has been commissioned by him to preach the gospel. To this specific status of the apostle a specific function in the church corresponds.

b. The mission of the apostle. It is not enough, if the world is to be saved, that Christ should have died and risen again. What is further necessary is that the death and the resurrection of Christ should be announced to the world. If there had been no eyewitnesses to the resurrection of Jesus Christ, or if the witnesses had remained silent, there would be, practically speaking, neither gospel nor salvation. God has elected to save the world by a work of redemption accomplished at a given moment and at a given place. The mission of the witnesses is to announce this work, which has been accomplished once and for all. By their testimony the apostles are the hinge between Jesus Christ, who has brought about salvation, and the church, which lives by it. Thus there is nothing contradictory between these two assertions of Paul: The foundation of the church is Christ (I Cor. 3:11), and the church is built upon the foundation of the apostles (Eph. 2:20).

Witnesses for Christ, the apostles are clothed with his power. They speak the word of God with all boldness (Acts 4:29; cf. 28:31) and perform signs, wonders, and mighty works as Christ did (Acts 4:30; II Cor. 12:12). The apostles exercise their authority over the whole church and not only over a local community. They hold ecumenical power, and they effect the unity of the one church of Jews and Gentiles. In the beginning the apostles exercise the whole ministry by themselves. The apostle Paul, e.g., acts as a prophet when he announces the conversion of Israel (Rom. 11), or as a teacher when he proves that Christ is the fulfilment of the law (Gal. 3), and as a pastor when he exhorts the elders at Ephesus (Acts 20). But as the church grows, the apostles leave certain of their functions in the hands of new ministers. Only their charge as witnesses of the risen Lord is not transmissible.

c. Apostolic succession. The church can have no other apostles than those chosen by Jesus himself, because the apostle is the witness of the risen Lord, of whom there have been no new appearances. In the history of salvation the apostleship is a unique fact, as the resurrection of Christ, of which it bears

witness, is a unique fact. Until the end the church draws its life from the redemption effected by Christ and testified to by his apostles. This is why new apostles are not appointed to succeed those who die. The case of Matthias (*see* § B1*a above*) is unique. In taking the place of Judas, Matthias did not succeed an apostle who had died; he replaced one who had forfeited his position by his betrayal. His choice, made by the Lord, did not lay down the principle of apostolic succession. On the contrary, the conditions of apostleship which had been definitely recalled—to be a witness of the ministry and resurrection of Jesus (Acts 1:21-22)—emphasize in the clearest possible fashion the fact that the apostolate is, by definition, an institution bound up with the origin of the church. In short, considering what an apostle is, it is quite impossible that there should ever be a successor of the same kind. We might add that the apostles, in their capacity as witnesses, have no need of successors, for their testimony is always there, written down in the NT. But, at the same time as he founds the church by his testimony, the apostle begins to construct it, to build it up by his preaching and his teaching. This second function of the apostle, and only this, is transmissible. The ministry of Timothy and of Titus (*see* § 4 *below*) clarifies this point.

2. The church of Jerusalem. At first the apostles were the sole leaders of the church (Acts 1–5). But soon, as the church grew, the apostles were seconded by the Seven and then by the elders.

The growth of the church necessitated the appointment of the SEVEN "to serve tables," in order that the apostles might devote themselves "to prayer and to the ministry of the word." The Seven were chosen by the community, and the apostles installed them in their charge by prayer and the laying on of hands (Acts 6:1-6). Among the Seven, two played a great part as real preachers and missionaries: Stephen (Acts 6–7) and Philip (Acts 8; cf. 21:8). They were the forerunners of the apostles in the mission beyond Jerusalem and with the non-Jews. The Seven had no successors, and their missionary work in Palestine and in Antioch (Acts 11:19) was taken over by the apostles and fellow workers. The author of Acts does not seem to make of the Seven the precursors of the deacons. He never gives this name to the Seven. In any case, he never mentions deacons.

The ELDERS appear a little later in the church of Jerusalem. It was in their hands that Barnabas and Paul placed the collection made at Antioch for the brothers of Judea (Acts 11:30). At this point the apostles are not mentioned; they were doubtless detained at some distance by their missionary journeys (cf. I Cor. 9:5). The book of Acts says nothing of the nomination or of the duties of the elders. No doubt, they were the chief residents belonging to the church. They collaborated with the apostles when the latter were present and assumed the direction in their absence. Such is the position at the moment of the Council of Jerusalem (Acts 15). Later, when Paul arrives for the last time in the holy city, he finds at the head of the church James, the Lord's brother, seconded by the elders (Acts 21:18).

According to the book of Acts, elders existed in the churches founded by Paul (14:23) and notably at Ephesus (20:17-38). Paul himself never uses the term "elders" in his letters; at times they are mentioned in the Pastoral letters, which are ascribed to him but are generally considered as belonging to a later time. But Paul speaks of ministry equivalent to that of the elders. There is, moreover, an echo of this equivalence of terms in Acts. The Ephesian elders are also called guardians or bishops (Acts 20:28), and the passage underlines the point that their mission consisted in feeding the flock as good pastors of the church. Now, the church at Philippi, founded by Paul, was directed by bishops and deacons (Phil. 1:1), and in the Letter to the Ephesians both "pastors" and "teachers" apparently designate the same ministers. Thus we can establish an almost certain identity between the terms and the offices of elders, bishops, and teachers. In fact, "to feed the church of the Lord" (Acts 20:28) is to nourish spiritually the believers with the true apostolic teaching and to defend them against the peril of false doctrines (cf. vss. 29-30). Therefore, it should be admitted that the same pre-eminent ministry of the word was entrusted to elders, according to the book of Acts, and to teachers and bishops, according to the Pauline letters.

The elders are mentioned again in the letters traditionally attributed to the apostles of Jerusalem. According to I Peter, it is the duty of the elders to "tend the flock of God" (5:1-4). They have thus the same mission as the elders in Ephesus. According to James, the elders must also pray over the sick and anoint them with oil in the name of the Lord (5:14).

3. The Pauline churches. The apostle Paul had the care of organizing the churches which he founded. God is a God of order, and order must reign in the house of God (I Cor. 14:40). But the apostle never dealt with the question of the ministry as such. He confined himself to giving in each church directions in connection with local circumstances.

In the Letter to the Philippians he salutes the "bishops and deacons" (1:1). But he does not state what their duties consist of. The bishops are, without any doubt, those who watch over the church in order to make sure that the members are persevering in the teaching received from the apostle; their ministry seems to be the same as that of the teachers of Corinth and of the elders or bishops in Ephesus. The deacons are most certainly subordinate to the bishops, since they are named subsequently. The bishops and deacons make their appearance also later in the Pastoral letters. It is striking to meet them at Philippi, and at Philippi only, at the most active period of Paul's missionary life. On the other hand, Philippi is the only church which never caused the apostle any worry, either in theological or in practical matters. Philippi was the model church. Consequently, the simple organization which existed in this church —bishops to carry out the ministry of the word and deacons to take charge of all matters of assistance—might have been the organization answering most nearly the desires of Paul, and which he established there where he was able to act freely, without—as was the case at Corinth—being hampered by local difficulties.

The situation was, indeed, very different in the church of Corinth. Fanatical and lawless tendencies were at work there, and the difficulties Paul had in bringing the Corinthians back to the divine order in

all fields are well known. The apostle reminds them that it is the will of God himself that there should be ministries to secure the normal life of the church. He writes: "God has appointed in the church first apostles, second prophets, third teachers, then workers of miracles, then healers, helpers, administrators, speakers in various kinds of tongues" (I Cor. 12:28; cf. vss. 29-30). In this sentence the apostle makes a distinction between two series of ecclesiastical functions, which he by no means puts on the same level. He first mentions the three ministries of the word, and he numbers them in order to mark their hierarchy and their importance. These ministries, indeed, are to be found in all churches, under somewhat different names, for they are indispensable to the life of the church. The apostle comes in at the head of the list, because it is he who founds the church by his testimony rendered to the risen Lord. The prophets are, no doubt, inspired preachers, who express themselves in clear and comprehensible language, unlike those who speak with tongues (*see* PROPHET IN THE NT). The particular task of the teachers here seems to be to interpret the Christian message, to show its relation to the OT, and to bring to light all its riches. In other words, the prophets and teachers explain to the believers, and apply to their lives and circumstances, the message of salvation that has been brought them by the apostle.

In the second part of his enumeration, Paul gives a list of SPIRITUAL GIFTS. He designates them by abstract, and not personal, terms, like the three first ministries, for these gifts are doubtless spontaneous and sporadic manifestations of the Spirit, which have not the permanent character of a ministry. Nor does Paul enumerate these spiritual gifts, for they are too free to form a complete, invariable set; by their very nature they elude all classification. When Paul resumes the same subject (I Cor. 12:29-30), he again places at the head of his list, and in the same order, the three ministries of apostle, prophet, and teacher, but he gives a rather different series of spiritual gifts. In a word, Paul recalls the fact that the Spirit pours out its gifts on certain believers in order to enrich the life of the church. But the church may, in certain cases, withhold these gifts. A church where no one spoke in different tongues would nevertheless be a real church. But on the other hand, a church cannot be formed without the testimony of the apostle, and it cannot continue to live without the ministry of the word, which is its spiritual nourishment. The three ministries of the apostle, the prophet, and the teacher are themselves indispensable to the life of the church.

In the Letter to the Ephesians, Paul gives an almost identical list of the essential ministries. He writes: "[God gave some to] be apostles, some prophets, some evangelists, some pastors and teachers" (Eph. 4:11). The last two terms, "pastors" and "teachers," refer to the same men: by their teaching the teachers feed the flock of God; the term "shepherd" is only an image taken from that of the flock, frequently found in the NT, to signify the church. The only new term in this list, as compared with the one in I Corinthians, is EVANGELIST. The evangelist has the same function as the apostle: to spread the gospel where as yet it has not been preached. If the evangelist is not quite the equal of the apostle, it is because, unlike the latter, he is not an eyewitness of the risen Lord. The evangelists are seldom mentioned in the NT. Only two are known personally: Philip, one of the Seven (Acts 21:8), and Timothy, the faithful fellow worker with Paul (II Tim. 4:5).

In the Letter to the Romans (12:6-8) Paul names the following spiritual gifts, in speaking at one time of duties, at another time of the men who fulfil them: "prophecy, . . . service, . . . he who teaches, . . . he who exhorts, . . . he who contributes, . . . he who gives aid, . . . he who does acts of mercy." The list is vague, no doubt intentionally so. In writing to the Romans, Paul addresses himself to a church which he did not found and which he has not yet visited, and he has no direct knowledge of the particular circumstances of its inward life. But this list too gives an important position to prophets and teachers. We know besides, from the book of Acts (13:1), that prophets and teachers did exist in the church of Antioch, starting point of the apostle's first great missionary journey.

4. The later church. The letters to Timothy and Titus (the so-called PASTORAL LETTERS) are here our source of information. They were probably drawn up by a disciple who was perhaps prompted by oral indications given by Paul or who perhaps utilized written notes left by the apostle. At all events, these three letters bring to our knowledge a situation which was definitely more advanced than that which appears in the Pauline letters and in Acts. The apostle Paul has vanished from the scene. He is no longer the living, active link between the churches, busy directing and advising the ministers of the local churches. His disciples Timothy and Titus appear in these letters as the apostle's agents, whose task is to supervise the good organization of the church, and to specify the duties of the different ministers. These ministers are four in number:

The deacons (*see* DEACON) must be invested with strong moral and practical qualities (I Tim. 3:8-13). Their duties are not indicated in precise terms. Since practical qualities are required of the deacons, we may conclude that they have to devote themselves to works of assistance and administration. It is possible that the widows, who seem to form an order, may be deaconesses (*see* DEACONESS).

The elders (*see* ELDER IN THE NT) must be men of irreproachable character. They occupy a governing office, but some among them take up the work of preaching and teaching, and thus deserve a "double honor," which means most probably an additional material recompense rather than particular esteem on the part of the congregation (I Tim. 5:17-22; Tit. 1:5-6). It is evident from this that the functions of the elders vary, since not all are preachers and teachers, but here, as already in the time of Paul, the ministry of the word holds the pre-eminent place. We see, moreover, that the elders are remunerated, which implies that they devote at least part of their time, if not the whole, to their ministry.

The BISHOP is always spoken of in the singular, whereas deacons and elders are invariably mentioned in the plural (I Tim. 3:1-7; Tit. 1:7-9). It therefore seems likely that at the time of the Pastoral letters there was only one bishop to a community. The bishop fulfils the same ministry of the word as

the elders, but he also undertakes duties which are distinct from those of the elders. The bishop must be hospitable—i.e., he must entertain traveling Christians, who were reluctant to use public inns, for moral as well as ceremonial reasons—and he must also have the respect of outsiders. In other words, it is the bishop who represents the church in the eyes of other churches and also in the eyes of the Gentiles among whom his community is established. What is more, the bishop does not confine himself to teaching like the elders; he must also be able to urge men to follow the sound teaching and to correct those who disagree with it; in other words, he must defend the traditional apostolic teaching against all deviation. The bishop is presumed to have had wider knowledge than the elders and a clearer understanding of the difficult situation in which the church was placed at the moment when the apostles, who were its mainstays during the first decades, disappeared from the scene of history. In a word, the bishop appears, at the head of the elders, as the leader of the local church.

TIMOTHY and TITUS acted, in Ephesus and Crete respectively, as the heirs of the apostle Paul and his authorized delegates. As was the case with the apostleship, their ministry overlapped the local church and extended over a whole province, to secure the link and the unity between the various churches of one district. Thus the functions of these apostolic delegates were quite distinct from those of the bishop, the elders, and the deacons. This ministry must also be continued in the church, since Timothy receives the command to entrust the teaching he has received to faithful men, who will be competent to teach others also (II Tim. 2:2).

5. Church order in the NT. The description just given (*see* § B4 *above*) of the ministries within the church during the first century brings to light the three following facts: First, all the believers were active members of the community and in this sense fulfilled a service; the ministry of men set apart to preside over the essential working of the church was, however, indispensable. Second, God himself gave ministers to the church, primarily the apostleship, which, through the testimony rendered to the person and work of Christ, founded the church and began its edification or construction. This construction was carried on by the work of other ministries. Third, the ministry which is of first necessity is always that of the word, whereby the gospel and the apostolic tradition continue faithfully to nourish the church.

The question of the organization of the church remains to be examined. On this point the NT contains very few precise indications, and they are always in reference to a local or regional church. It must not be forgotten that, in the first century, there was really no general, uniform organization of the church.

a. The appointment of the ministers. The twelve apostles were chosen by Jesus during his earthly days. Similarly, the new apostles Matthias and Paul are called by the Lord and not elected by the church. In the case of Matthias (Acts 1:21-26) it should not be lost sight of that the first congregation presents only two possible candidates who satisfy the conditions put forward by Peter—namely, to have been witnesses of the ministry and of the resurrection of Christ. These conditions, in fact, limit the choice of the community to men already designated by the Lord, for he did not appear to all people but only to those who were chosen by God (Acts 10:41). The will of the Lord expresses itself by the casting of lots. Now, as far as Paul is concerned, it is sufficient to quote his own words: he is apostle "not from men nor through man, but through Jesus Christ and God the Father" (Gal. 1:1).

In the appointment of the Seven (Acts 6:1-6) the first step is made by the apostles, who recommend that "men of good repute, full of the Spirit and of wisdom," be elected. Thus the Seven are picked out by the "brethren," but among men already set apart by their spiritual gifts.

Barnabas and Paul are sent out as missionaries by the Spirit, who has set them apart for this work (Acts 13:1-3). Similarly the elders in Ephesus were made leaders of the community by the Spirit (Acts 20:28). It is not told how this designation by the Spirit was practically carried out. Most probably the apostle was also the agent of the Spirit here, according to the practice followed elsewhere in Acts: during their first great journey Paul and Barnabas appointed elders for the disciples "in every church, with prayer and fasting" (Acts 14:23). This text is important. It shows us that the power that the apostle possessed, by virtue of his vocation, bestowed on him the capacity of discerning, by prayer, the will of the Lord and of being, in fact, the intermediary by which Christ gave to the church the necessary ministers.

It is by virtue of this same capacity, without the slightest doubt, that Paul chose Timothy and Titus as his successors, in the restricted sense mentioned *above* (*see* § B4), and transmitted to them, with the charge of directing the church at Ephesus and in Crete, the precise duty to see that the ministry was carried on. When the apostle commanded Timothy to entrust what he had received to faithful men who would be able to teach others also (II Tim. 2:2), he no doubt meant that it was his disciple's business to discriminate between such men. This is also what we may gather from the passages in which Timothy and Titus are given the order to establish elders in the church (Tit. 1:5; cf. I Tim. 5:22), as, according to the book of Acts, the apostle has done. So, at the moment when the apostle disappears from the pages of history, his power is not handed on to the church as a whole, but to men who have assumed a certain ministry.

b. The ordination of the ministers. In passing on the ministry the apostle was only acting as the agent of Christ or of the Spirit. For this reason ordination in the early church was always accompanied by prayer. Prayer is the genuine Christian rite of ordination. In the Jewish ordination of elders there is no prayer and no explicit statement of a gift of the Spirit, but only an imposition of hands. In the church, on the contrary, the laying on of hands is seldom used (*see* HANDS, LAYING ON OF). Only the Seven (Acts 6:6) and later Timothy (I Tim. 4:14; II Tim. 1:6) explicitly receive the imposition of the apostolic hands. In his turn Timothy must impose hands on the elders whom he creates (I Tim. 5:22). Prayer, more than the gesture of ordination inherited from Judaism, proves that there is nothing mechanical in

the transmission of the ministry in the church, and that the new minister receives in truth his charge from the Spirit. In the NT, however, the imposition of hands is always done by the apostle or by the minister of the word who has himself received the imposition.

c. The beginning of church order. Jesus chose his own apostles. Subsequently the apostles presided with prayer over the choice and ordination of the new ministers required by the church, and these ministers were to act in the same manner toward their successors. The believers were consulted and called upon to express their approbation. But the ministry was not transmitted by the church. It was given from on high, and it was transmitted by those who had already received it. Yet the Spirit himself was at work in this transmission. The ministers were called from on high by the Lord of the church to accomplish their service in the church.

This is an absolutely original system. The church in the NT is not a democracy, in the sense that the power is in the hands of the people, who would then delegate it to ministers freely elected. Neither is the church in the NT an oligarchy, in the sense that the apostles, and after them ministers freely appointed by the apostles, are capable themselves of designating their successors with authority.

The original church order has its source in the idea of the church. Christ is the head of the church, which he rules through his Spirit. Power in the church belongs neither to the ministers nor to the community itself, but to Christ.

CHURCH, WORSHIP OF. *See* WORSHIP IN THE NT, CHRISTIAN.

CHUSHAN-RISHATHAIM. KJV form of CUSHAN-RISHATHAIM.

CHUSI kū′sī [Χουσεί, *also* Χούς *or* Οὖξ]. A locality mentioned in Jth. 7:18. The name is omitted from the Vulg. but occurs in OL. It is located to the W of Aqrabeh (*see* ACRABA), S of modern Nablus.

P. WINTER

CHUZA kū′zə [Χουδᾶ(ς); Aram. כּוּזָא, little jug]. Steward of Herod Antipas (*see* HEROD [FAMILY]); husband of JOANNA, a Galilean woman, who followed and supported Jesus (Luke 8:3). Chuza, a man of position and of means, may have been a manager of Herod's property or a political appointee.

D. M. BECK

CIEL, CIELD, CIELING. KJV archaic verb forms used to translate the following Hebrew words:

a) חִפָּה (II Chr. 3:5; RSV "cover").

b) סְפַן (Jer. 22:14; Hag. 1:4; RSV "panel"), "cover."

c) שָׁחִיף (Ezek. 41:16; RSV "paneled").

CILICIA sĭ lĭsh′ə [Κιλικία] (Acts 6:9; 15:23, 41; 21:39; 22:3; 23:34; 27:5; Gal. 1:21). A large and important district situated in the SE coastal zone of Asia Minor. It had various names in the earlier periods of its history. The Greek and Roman designation of Κιλικία is derived from a population first attested in Assyrian records of the ninth century B.C. as Hilakku (OT HELECH).

1. Geography. The classical name of Cilicia is applied to an area which geographically is bipartite. The W part of Cilicia extends from Pamphylia to the Lamus River. This is Cilicia Tracheia (Aspera), true to its name in its forbidding mountainous appearance. Between Coracesium (modern Alanya) and Soli-Pompeiopolis the coast is steep and rocky. Promontories form small harbors. The hinterland is agriculturally unprofitable, although picturesque for its rocky plateaus and natural chasms and caves. The chief river descending from the Taurus Mountains

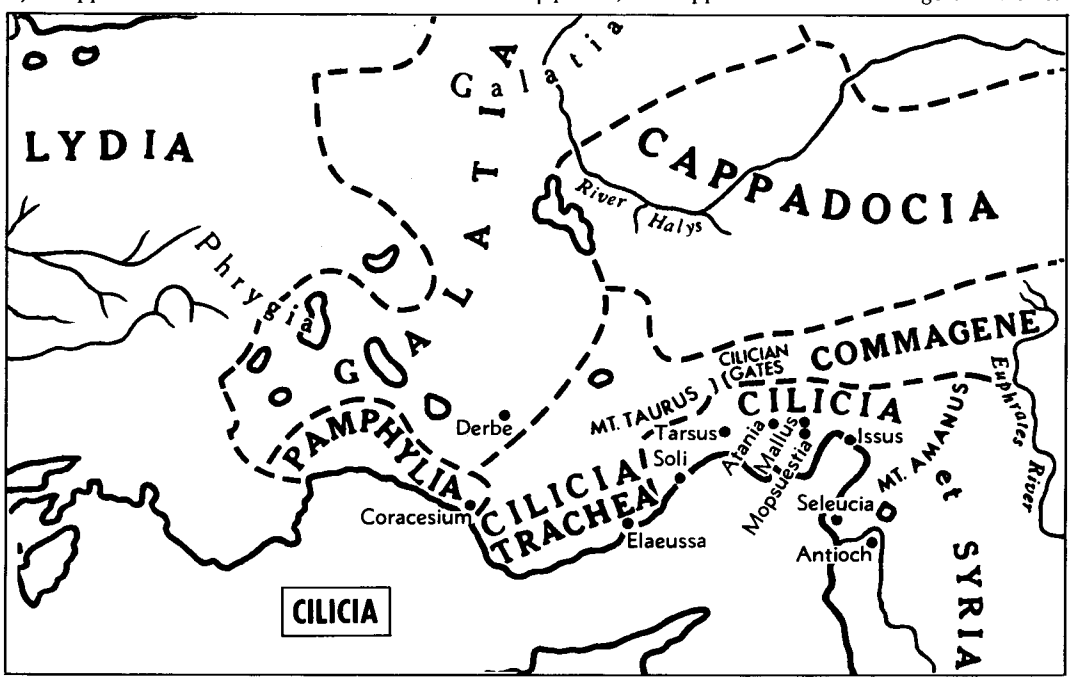
28. The Cilician Gates: a view of a modern road through the narrowest part of the gorge

here is the Calycadnus (Göksu), which flows in deep gorges. Communications were difficult in the broken-up interior of this part of Cilicia, and traffic naturally followed the coast as well as it could. Of the re-

sources, the forests covering the mountain slopes provided excellent timber.



The second part of Cilicia, the region E of the Lamus River, forms a vast contrast to the W. The coastal plain widens eastward and forms one of the most fertile regions of Asia Minor, extending to the Gulf of Issus. This is Cilicia Pedias (Campestris), modern Çukurova, a subtropical district well watered by several rivers, the Cydnus (Tarsus çay), the Sarus (Seyhan), and the Pyramus (Ceyhan). The plain is a vast expanse of rich land, intensively exploited for agriculture in ancient and modern times (grain, rice, flax, vines, fruit trees, nowadays citrus groves and cotton). Communications are rapid and easy within Cilicia Pedias, whereas ancient roads connected it with the country N of the Taurus Mountains via controlled passes, the most famous of which are the Cilician Gates (Gülek Bogaz).* In time of peace the Cilician Gates are adequate to maintain contact between Cilicia and the N, but they can be blocked if isolation is desired. The same applies to the connections with the E: the road to Syria and Antioch (Antakya) has to cross the Amanus Mountains, a S extension of the Taurus. Coastal defiles and a high pass (Beilan) make these "Syro-Cilician Gates" equally ambivalent as a thoroughfare or a closed border. Fig. CIL 28.

2. Prehistory. The earliest inhabitants of Cilicia Pedias lived in villages and towns all over the plain, which is dotted with ancient tells. Prehistory in Cilicia begins in the Neolithic period and shows strong affinities in material culture to N Syria and Mesopotamia. In this phase the Taurus was more of a border than the Amanus, but in the third millennium B.C. the situation was reversed. Contact with inner Anatolia was increased, and coastal navigation was also rapidly developing. New intrusions from Syria appear after 2000 B.C.

3. History. ***a. Hittite period.*** In the course of the second millennium B.C., Cilicia entered history under the name of Kizzuwatna, an independent country which negotiated treaties with the Hittites. The first treaty was concluded between Išputahšu and Telepinu (the fifth Hittite king after the fall of Babylon); the last one was made by Šunaššura with the famous Hittite king Šuppiluliuma in the early fourteenth century B.C. Sometime during Šuppiluliuma's rule Kizzuwatna was made part of the Hittite Empire, and it remained so until the downfall of the Hittites *ca.* 1200 B.C. The population of Kizzuwatna at that time was mixed, Luvian and Hurrian elements being attested. The country was literate, and part of its population lived in important towns such as Tarša (TARSUS) and Atania-Adana.

b. Dark Ages to Persian period. During the invasions by the Sea Peoples, Cilicia was also overrun and sacked. The Hilakku-Cilicians and some groups of Mycenean Greeks settled in the country in this period of disturbances. With the Assyrian expansion to the E, Cilicia re-entered history. In the late eighth century B.C. its people made a conspiracy with the invading Phrygians (*see* MESHECH) but were defeated by Sargon of Assyria (*ca.* 712 B.C.). The later Assyrian kings maintained some control in Cilicia, which in the meantime became an aim of renewed Greek interest and colonization.

In the course of the seventh century B.C., Cilicia emerged as an independent kingdom, a minor rival of Lydia, Babylon, and the Medes. The Cilician king Syennesis mediated between Alyattes of Lydia and Cyaxares the Mede in 585 B.C. (Herodotus I.74). It is not clear what the leading language of Cilicia was by this time, but several coastal cities had absorbed enough Greek colonists to be predominantly Greek. The use of Greek remained common in the Persian period, as is apparent from the coinage of the cities.

Cilicia was allowed some autonomy under its own kings until the fourth century B.C., when it was made into a Persian satrapy. The most important cities of this period were Nagidus, Celenderis, Soli, Tarsus, Mallus, and perhaps Mopsuestia.

c. Hellenistic period to 67 B.C. In the Hellenistic period Cilicia came under Seleucid rule. Seleucus Nicator founded several new cities in the coastal area—e.g., Seleucia ad Calycadnum—a practice followed by his successors. Many cities were renamed Antiocheia or Seleucia in the third century B.C. The coast of Cilicia Tracheia was encroached upon by the Ptolemies, who seized several cities after 246 B.C.—e.g., Soli. Under Antiochus III (223-187) these cities were reconquered, but this monarch had his territory reduced by the Romans in 188 B.C. E Cilicia remained firmly Seleucid and was actively Hellenized by Antiochus IV, Epiphanes (175-163). Local coinage of the cities was resumed or began under his rule. After his death Seleucid control broke down and dissension prevailed. Many cities dropped their Seleucid names after 150 B.C.

In Cilicia Tracheia, a local dynasty of priest kings, the Teucrids, maintained itself in the mountains at Olba, N of Seleucia. These rulers, supposedly descendants of Ajax, son of Teucer, based their prestige on the cult of Zeus Olbios. The coastal zone of Cilicia Tracheia became a paradise for robbers and pirates, who used the small harbors to escape detection and terrorize coastal shipping. Rhodes by this time had lost control of the seas, and it was Rome which had to combat the Cilician pirates. A first campaign was conducted in 102 B.C., without lasting results. In Cilicia Pedias, the Armenian king Tigranes established himself in 83 B.C. and deported many citizens to Tigranocerta. The Romans forced him to give up Cilicia in 69 B.C.

The major blow against the pirates was struck by Pompey in 67 B.C. He defeated them effectively, resettled the better elements in cities of Cilicia, and refounded Soli as Pompeiopolis. Cilicia, both the E and the W parts, was annexed as a Roman province, with Tarsus as its capital.

d. Roman period. The province of Cilicia was not ruled as a unified district. Some of the local princes were allowed to continue their rule as vassals of Rome—e.g., the Teucrid Dynasty of Olba and that of Tarcondimotus in the Amanus region. Shortly after Cicero's governorship (51-50) changes were made in the size of Cilicia, and *ca.* 38 B.C., Cilicia Pedias was attached to the province of Syria. It probably stayed under the governor of Syria until A.D. 72. The W part, Cilicia Tracheia, had a much more checkered career. It was given by Antony to Cleopatra (36 B.C.), later by Octavian to King Amyntas of Galatia. After his death it went to Archelaus of Cappadocia, who made his residence and built a palace at Elaeussa, a town he renamed Sebaste. His son succeeded him in A.D. 17.

The last Hellenistic monarch to rule over Tracheia was Antiochus IV of Commagene (A.D. 38-72). He again made an energetic effort to Hellenize the province, to found cities, and to defeat the insurgent mountaineers. His abdication in 72 led to the final unification of Cilicia Tracheia and Pedias as a Roman province known as Cilicia under Vespasian.

Probably under Theodosius the Younger (408-50), Cilicia was again divided into two parts, Cilicia Prima with Tarsus as its capital in the W, and Cilicia Secunda with its capital at Anazarbus in the E.

4. Biblical references. The joint references to Syria and Cilicia in Acts 15:23, 41; Gal. 1:21 indicate that Cilicia Pedias is meant, which administratively was part of Syria *ca.* 38 B.C.–A.D. 72. In the wider sense Cilicia is mentioned as the entire coastal strip E of Pamphylia (Acts 27:5).

The travels of Paul in his native country are not specified as to the cities visited, but he clearly followed the ancient road from Antioch to Tarsus and N through the Cilician Gates to Derbe on his second journey, a route which would have taken him to many of the old cities of Cilicia in addition to Tarsus.

5. Archaeology. The exploration of Cilicia is still far from complete, but the recording of inscriptions and monuments has covered a wide field. Extensive excavation has taken place at Mersin (a prehistoric mound near ancient Zephyrium) and Tarsus. Some work has also been done in Mopsuestia, and a spectacular discovery was made at Karatepe on the River Ceyhan in the Taurus Mountains, where a fortress with sculptures of *ca.* 700 B.C. also produced the first long bilingual text in Hittite hieroglyphs and Phoenician.

Of the aspect of Cilicia Tracheia in the first century A.D., the remains of Roman towns and cemeteries along the coast give a remote impression. Elaborate ruins line the road from Pompeiopolis to Elaeussa, Corycus, Seleucia; dilapidated aqueducts are left as marks of engineering which enabled the towns to exist under adverse circumstances. Most of the ancient towns of Cilicia Pedias are covered by new settlements, as its fertility is undiminished. In the mountains, grandiose ruins are left of such abandoned towns as Anazarbus—Anavarsa in the E and Olba in the W.

CINNEROTH. KJV form of CHINNEROTH in I Kings 15:20.

CIRAMA. KJV Apoc. form of RAMAH.

CIRCUMCISION [מוּלָה; περιτομή]. The act of cutting off the foreskin (prepuce) of the male genital. Among the Hebrews circumcision was a religious ceremony performed on the eighth day after birth, as a sign of the covenant between Yahweh and Israel (Gen. 17:10-14). Not only Israelite children were circumcised, but also slaves owned by Israelites, whether they were bought or were born in slavery; furthermore, any resident alien who wished to keep the Passover had to undergo circumcision (Exod. 12:48-49).

Circumcision was widely practiced in antiquity, and was by no means unique with the Hebrews. It was practiced by the Egyptians* and by most of the ancient Semites, except the Babylonians and the Assyrians. Of the peoples living adjacent to the ancient Hebrews only the Philistines did not practice it; they were contemptuously referred to by Hebrews as "the uncircumcised" (עֲרֵלִים; Judg. 14:3; 15:18; I Sam. 14:6; 17:26, 36; 31:4; II Sam. 1:20; I Chr. 10:4). It was

29. Relief from a Sixth Dynasty tomb at Saqqarah (2350-2000 B.C.), showing the operation of circumcision

observed by pre-Mohammedan Arabs, and is now generally practiced by Muslims, although it is not even mentioned in the Koran. The custom has been found among many tribes of Africa, Australia, and America, some of whom have an analogous rite for females. It was apparently not known among the Indo-Germanic and Mongolian peoples. Fig. CIR 29.

1. History of the rite. The origin of circumcision is lost in the mists of antiquity. Gen. 17:9-27 ascribes its origin to the time of Abraham, but the account is a part of the late Priestly Code (fifth century B.C.). Exod. 4:24-26 is interpreted by some scholars as indicating an origin in the time of Moses, under Midianite influence. Others attribute the origin to the time of Joshua, on the basis of Josh. 5:2-7, noting that the LXX has a different text, which omits "again the second time." Herodotus says that the Jews and other peoples borrowed the rite from the Egyptians (II.104). None of these theories is satisfactory, in view of the widespread practice of circumcision in antiquity. The early use of flint knives (Exod. 4:25; Josh. 5:2) points to an origin before the beginning of the use of iron for tools (eleventh century B.C.). Mention of the practice in Gen. 34:14-24 speaks for a pre-Mosaic origin. It is worthy of note that the earliest law codes of Israel do not enjoin the rite.

It is probable that in the early period of Hebrew history circumcision was performed at the onset of puberty or at marriage. Ishmael is said to have been circumcised at the age of thirteen (Gen. 17:25). The Hebrew word for "father-in-law," חוֹתֵן, means literally "the circumciser." Among the other peoples who have practiced circumcision, childhood or puberty, rather than infancy, is the general rule.

It is not known when the rite was transferred by the Hebrews to infancy; at any rate, it was by the time of the writing of Gen. 17:12; Lev. 12:3, both in the Priestly Code. By the time of the NT, naming of the child on the eighth day accompanied the rite (Luke 1:59; 2:21).

Circumcision must have been widely practiced in the pre-exilic period, but there were prophetic circles in which the rite was not highly valued. Deuteronomy nowhere enjoins physical circumcision, but twice speaks of circumcision of the heart (10:16; 30:6). Jeremiah once pronounced God's judgment upon the various nations—Egypt, Judah, Edom, the Ammonites, Moab, and the desert Arabs—that were "circumcised [in the flesh] but yet uncircumcised [in heart]" (9:25-26).

It was apparently in the period following the Babylonian exile that circumcision assumed great importance for the Jews, being one of their most distinctive religious rites, along with sabbath observance.

When Hellenistic influence grew strong in Palestine, the Jews came into contact with Greeks who did not practice circumcision. Some Jews sought to overcome the effect of circumcision by epispasm, making foreskins for themselves (I Macc. 1:15; Jos. Antiq. XII.v.1; cf. I Cor. 7:18). Antiochus Epiphanes forbade circumcision, and his agents put to death women who had circumcised their children (I Macc. 1:48, 60). Yet followers of Mattathias forcibly circumcised many Jews. After the Hasmonean successes, the rite became most important as a mark of Jewish fidelity. In the book of Jubilees (second century B.C.) it is said that every child that is not circumcised "belongs not to the children of the covenant which the Lord made with Abraham, but to the children of destruction; nor is there, moreover, any sign on him that he is the Lord's, but (he is destined) to be destroyed and slain from the earth" (15:26). The view was developed that the higher angels and many of the early patriarchs were born circumcised. Circumcision became a requirement of proselytes, along with baptism; some rabbis of the Tannaitic period taught, however, that baptism alone was sufficient. The Roman emperor Hadrian issued an edict making circumcision a capital crime, along with castration. Reaction to this decree was one of the causes of the Jewish revolt led by Bar Cocheba (132-35).

Circumcision was a bitter source of contention in Christianity of the NT period. Both John the Baptist and Jesus were circumcised (Luke 1:59; 2:21). Those early Christians who were Jews had doubtless

been circumcised, but when Christianity spread among the Gentiles, particularly away from Palestine, the question arose whether it was necessary for Gentiles to be circumcised in order to be Christian. Some Judean Christians taught that circumcision was necessary. The Jerusalem council which is reported in Acts 15 was summoned to deal with the question; the decision reached was that circumcision was not obligatory for Christians.

Paul was himself circumcised on the eighth day (Phil. 3:5) and insisted upon the circumcision of Timothy, who had a Jewish mother and a Greek father (Acts 16:3), but not of Titus (Gal. 2:3). Nevertheless, he was a leader among those who denied the necessity of physical circumcision and gave the word a spiritual meaning. He insisted that for the Christian neither circumcision nor uncircumcision was of any avail, but only "faith working through love" (Gal. 5:6), or "a new creation" (Gal. 6:15), or "keeping the commandments of God" (I Cor. 7:19). He taught that "circumcision is a matter of the heart, spiritual and not literal" (Rom. 2:29), and that "in him [Christ] also you were circumcised with a circumcision made without hands, by putting off the body of flesh in the circumcision of Christ" (Col. 2:11).

In Christianity circumcision has not usually been observed as a religious rite, except in the Abyssinian and Coptic churches, which probably were influenced by the Egyptian practice.

2. The significance of circumcision. In discussing the significance or meaning of this custom, we must distinguish between the meaning or purpose which it had in its beginnings, and the interpretation given to the developed form of the rite.

The purpose for which circumcision was originally practiced can only be conjectured. We cannot hope to fathom accurately the primitive or early mind. Many theories have been advanced to explain the origin of circumcision. Of these, three deserve mention here:

a) It was performed for physical reasons—such as to prevent disease, to prepare for marriage by facilitating intercourse, or for reasons of general cleanliness and hygiene. Philo, e.g., in writing in defense of circumcision says that it prevents a severe and almost incurable malady of the foreskin, that it promotes the cleanliness of the whole body as befits a consecrated order, and that it promotes fertility of offspring (*On the Special Laws* I.4-7). Philo's explanation is in part too sophisticated, but it seems probable, in view of the widespread occurrence of the custom and its frequent association with puberty or marriage (perhaps among the Hebrews in the earliest stage), that preparation for marriage was an important element in the early custom.

b) It was a form of sacrifice—perhaps a sacrifice of the reproductive powers to a fertility deity, or even a substitute for human sacrifice, a part being offered up in lieu of the whole. While this view is not impossible, the rite does not appear to have been considered a sacrifice among the Hebrews. The rite was not performed by priests, and no altar or sanctuary was involved. The rite presumably was performed in the home before being transferred to the synagogue *ca.* the ninth century A.D. This remained the practice until the early nineteenth century, when it reverted to the home (or the hospital).

However, Targumic interpretations of Exod. 4:24-26 viewed the blood of Moses' son's circumcision as having expiatory value to avert the wrath of Yahweh from Moses (*see bibliography*). Also Judaism laid stress on the shedding of blood in circumcision, from the Tannaitic period on (M. Shab. 19.6). The notion of sacrifice, nevertheless, was not emphasized.

c) Circumcision was an act of initiation, either into membership in the tribe or nation, or into the duties of manhood. Thus circumcision may have been a kind of tribal mark.

For the later Hebrews circumcision was indeed an act of initiation into the covenant people. Whether this was the original purpose we cannot say. It does not seem likely that it was considered primarily as a "tribal mark," for its effect would usually be hidden from view, unless we assume that nudity was practiced at the time it originated.

It is probable that a combination of the above views, especially the first and third, is necessary to explain the original purpose of circumcision. For early man so much of life was penetrated by religion that we should not think that a simple, secular motive was dominant.

Our discussion thus far has suggested some aspects of the meaning of circumcision in its developed form, as we see it in the Priestly Code.

Above all, it was an act of initiation into the covenant community. The command to Abraham and his descendants was: "You shall be circumcised in the flesh of your foreskins, and it shall be a sign [אות] of the covenant between me and you" (Gen. 17:11). Paul spoke of Abraham's circumcision as a "sign or seal" of his righteousness (Rom. 4:11). The rite served to indicate that a Hebrew was a son of the covenant. Today a common name in Judaism for the circumcision ceremony is ברית (lit., "covenant").

Circumcision represented the removal of impurity, and thus was an act of purification. The word for "uncircumcised" is closely associated with "unclean" in Isa. 52:1, and is actually used of the fruit of a tree in its first three years as the equivalent of "unclean" or "prohibited" (Lev. 19:23). One of the words used by Arabs for circumcision is *ṭuhr*, "cleansing."

Circumcision was observed as an ordinance of divine origin, and was considered to be an occasion for joy and rejoicing. A passage in the Babylonian Talmud says: "R. Simeon b. Gamaliel said: Every precept which they accepted with joy, e.g., circumcision . . . they still observe with joy" (Shab. 130*a*). The ceremonies accompanying the rite include many expressions of joyfulness.

3. Figurative circumcision. In three different ways circumcision was given a figurative or spiritual meaning in the Bible.

a) Deut. 10:16 has the injunction: "Circumcise therefore the foreskin of your heart, and be no longer stubborn." In Deut. 30:6, it is said: "The LORD your God will circumcise your heart and the heart of your offspring, so that you will love the LORD your God with all your heart and with all your soul, that you may live." Jeremiah uses the figure in 4:4, and the "uncircumcised heart" is mentioned in Lev. 26:41. Paul uses the figure in Rom. 2:28-29 (cf. Col.

2:11). The circumcised heart is a heart open to God's command and obedient to him, not closed and stubborn.

b) Moses is described as one "of uncircumcised lips" in Exod. 6:12, 30. The context indicates that he did not consider himself to be eloquent and persuasive, but needed Aaron to serve as his spokesman.

c) In one passage Jeremiah speaks of the ears of the Israelites as being uncircumcised (6:10). Here the RSV renders: "Behold, their ears are closed." This gives the meaning, which is similar to that of the uncircumcised heart.

CIS. KJV form of KISH in Acts 13:21.

CISAI. KJV Apoc. form of KISH.

CISTERN [באר, בור]. A pit, hole; more often WELL, never "fountain" or "spring." The difference between "well" and "cistern" often is not apparent (cf. Prov. 5:15; Isa. 30:14; Jer. 14:3). Pits dug in Palestine's porous limestone were not satisfactory for water storage until lime plaster became common, apparently about the time of the Conquest.

The cistern brought a measure of comfort and security, especially in dry summers and times of siege (cf. Isa. 36:16), and it eased the labors of women. It contributed to the individual's prosperity and status (II Kings 18:31 = Isa. 36:16). The cisterns in the cities were fed by water from the roofs. Such may have been the cistern of Malchiah in the court of the guard, in which Jeremiah was cast (Jer. 38:6-13). The Israelites were to take over cities in which were cisterns they had not hewn out themselves (Deut. 6:11). Uzziah hewed out cisterns to assure water supply for his herds and agricultural activities (II Chr. 26:10). In Jer. 14 the pagan gods are symbolized as broken cisterns that can hold no water. In Eccl. 12:6 the wheel broken at the "cistern" is one of several symbols of cessation of life.

Cisterns were often roughly bottle-shaped, but most irregular. The mouth was sometimes finished with a prepared rim and was covered with a stone. Drains gathered water from flat roofs, courtyards, and even streets. Sometimes a small settling basin was placed beside the rim, and cisterns were occasionally cleaned, but in nearly every one under the mouth lay a heavy cone of debris containing earth, broken vessels, jewelry, coins, and rarely a skeleton of a beast or a man. They could be used for storage of grain.

CITADEL [ארמון; ἄκρα; *see* FORTRESS]. A stronghold of a city (Ps. 48:3, 13—H 48:4, 14) or palace (I Kings 16:18; II Kings 15:25) for purposes of defense or domination. David conquered Jerusalem by first taking the stronghold or citadel of the city (II Sam. 5:7, 9; I Chr. 11:5, 7). The Hebrew word may refer to a fortified tower or building, and, in addition to "citadel," is rendered variously TOWER (Ps. 122:7), STRONGHOLD, (e.g., Isa. 34:13; Amos 1:12; 2:2), PALACE (e.g., Jer. 6:5; Lam. 2:7), and CASTLE (Prov. 18:19).

The citadel or *akra* of Jerusalem in Maccabean times remained a Seleucid stronghold until Simon conquered it (*ca.* 142 B.C.; I Macc. 13:49-52; Jos. Antiq. XIII.vi.6-7). The last citadel of Jewish Jerusalem, the Antonia of the Herodian temple, fell under the Roman attack led by Titus in A.D. 70 (Jos. War VI-VII). J. A. SANDERS

CITHERN sĭth'ərn. KJV translation of κιθάρα (RSV HARP).

CITIES OF THE VALLEY [ערי ככר]; KJV CITIES OF THE PLAIN. The five cities, SODOM, GOMORRAH, ADMAH, ZEBOIIM, and ZOAR, situated in the Valley of the Jordan and the Dead Sea. With the exception of Zoar, they were destroyed by the Lord because of their wickedness (Gen. 19:24-29). They are referred to as the "Five Cities" (Pentapolis) in Wisd. Sol. 10:6. In Gen. 14:3, 8, 10, the cities are located in the Valley of Siddim, thought to be in the area now under the waters of the S part of the Dead Sea.

For location and bibliography, *see* SODOM.

J. P. HARLAND

CITIMS sĭt'ĭmz. KJV Apoc. form of KITTIM, meaning "Macedonians." *See* MACEDONIA.

CITIZENSHIP. The state of being a citizen, whether of a Greek city-state or of the ROMAN EMPIRE. According to Acts 22:28 the apostle PAUL was a Roman citizen because he was born with this status. This suggests that his father was among the pro-Roman provincials who were given citizenship in the last years of the republic. Cicero tells us (*Philippic* II.92) that Mark Antony gave it, not to individuals, but to whole peoples, while Suetonius (*Julius* XLII.1) says that Caesar gave it to all the physicians and teachers of liberal arts at Rome, though not elsewhere. These examples show how widely citizenship was being extended. Under CLAUDIUS further extensions occurred: native auxil-

iary soldiers became citizens upon their discharge from the army; and the emperor's wife, Messalina, together with the imperial secretaries, sold the privilege, at first for large sums, later for "broken bits of glass" (Dio Cassius LX.17; the statement reflects senatorial lack of enthusiasm for the new citizens). It was perhaps under such circumstances that the tribune Claudius Lysias paid a large sum to become a citizen (Acts 22:28).

We do not know how citizens provided proof of their citizenship at this time, though presumably they carried with them the equivalent of the modern passport. During Claudius' reign there were executions of some who falsely claimed to be citizens (Suetonius *Claudius* XXV.9).

The right of citizenship meant that a citizen could not be punished without trial; according to Acts 16:39 either the lictors or the magistrates at Philippi apologized to Paul (and Silas, a citizen?) for a beating and an imprisonment. A citizen could not be examined by scourging, or even bound (Acts 22:24-29; so also Cicero *Against Verres* II.5.170), though Paul tells us that he was beaten three times (illegally?) by lictors (II Cor. 11:25). Most important of all was the right to "appeal to Caesar" and be tried at Rome (Acts 25:10-12); naturally, once the right was exercised, it could not be revoked by the appellant (Acts 26:32). During Claudius' reign the free state of Rhodes was deprived of its independence because some Roman citizens had been executed there (Dio Cassius LX.24). At a later date the question of citizenship continued to be important in dealing with Christians; Pliny (Epistle X.96) says that he segregated citizens from others in order to send them to Rome. The emperors gradually extended the citizenship until in A.D. 212 it was given to all free inhabitants of the Empire.

Paul was also, according to Acts 21:39, a citizen of TARSUS, capital of Cilicia, and according to Acts 22:3 was born there. At the end of the first century Tarsian citizenship was restricted to those who possessed at least five hundred drachmas (Dio Chrysostom *Oration* XXXIV.23), though it is not certain that such was the case earlier. A citizen of a provincial city had to be a member of a particular phyle (tribe); because of the religious character of such tribes, there must have been one at Tarsus consisting only of Jews.

Thus Paul's ethnos (nation) was Jewish (Acts 26:4), as his tribe at Tarsus probably was; his citizenship was dual, since he was a citizen both of Tarsus and of Rome. Such dual citizenship had already been developed in the Greek world, when city-states banded together in leagues and "isopolity" was given the citizens of individual cities. Paul's status as citizen was one of the factors which fitted him to become an apostle to the Gentiles.

***CITY** [עיר, *less often* קריה; Aram. קריה, קריא, *also, rare and poetic,* קרת, *perhaps from* קרה, meet *or* gather; πόλις]. Since the Bible is by no means a parochial book, the biblical writers are concerned with Near Eastern, Greek, Hellenistic, and Roman cities, all of which must be considered in their proper contexts and perspectives. It is hardly necessary to refer to such now well-known cities as Babylon, Ur, Carchemish, Byblos, and Alalakh, the cities of ancient Palestine, and the Hellenistic and Roman cities mentioned in the NT, to arouse mental pictures of opulence and magnificence. However, excavators have, quite naturally, been so much concerned with the artistic and magnificent, with palaces and temples, with baths and theaters, that they have neglected the actual living conditions of the people, the VILLAGE and the slum.

A. ***THE GENERAL CHARACTERISTICS OF THE CITY.*** The definition and application of the three commonly used English terms "city," "town," and "village" vary with local custom and authors' individual experience. The word "suburbs" adds a fourth modern category. So it is in any language. None of our modern terms, such as those just used, covers exactly the same area of meaning or suggests the same mental picture as do the words of any ancient language, and the ancients were as capricious as moderns in their use of terms. Outstanding cases are easy, but in every class there are many borderline cases.

Cities varied among themselves in ancient as in modern times, probably much more in ancient times than today. Because intercommunication was greatly restricted, each city and its small region were, as far as possible, self-sufficient, and any society was much more at the mercy of local conditions than now. Defensibility, water, food, and therefore a hilltop site, springs, arable land, and building materials were prime necessities that tended to produce uniformity. Proximity to the sea, to the steppe, and to caravan routes, and a site on mountain or plain were modifying factors that produced diversity; but all cities needed to provide for shelter, food, drink, and

security, for civic and cultic functions, for business and economic life, trade, commerce, industry, and social life.

B. ***HEBREW CITIES.*** The cities of Palestine bore little resemblance to Nineveh and Babylon, to Ephesus and Corinth, to Alexandria and Rome. Two sources of information regarding biblical cities are available—the Bible itself and the cities that have been excavated.

1. Biblical usage. ***a. Walls.*** The primary distinction between the city and the village was that the former was walled. This is equally true whether the term עיר, קריה, or קרת is used; the difference in terms seems to have been purely rhetorical. The expressions "walled cities" (RSV "fortified cities"; KJV "fenced cities") and "country cities" (RSV "unwalled villages," "open towns") are contrasted (cf. I Sam. 6:18; Esth. 9:19; Ezek. 38:11), but such language is exceptional. The repetition of the phrase "walled cities" does not imply that there were any unwalled cities. The frequent enumeration of the doors, bolts, and bars of the city gate is a similar literary convention, a picturesque repetition for emphasis (Deut. 3:5; Judg. 16:3; I Sam. 23:7; II Chr. 8:5). Were there walled cities without gates? Hardly. The GATE was extremely important, not only in the defense of a city, but also in its social functions. *See* §§ B2*e, i, below.*

b. The city's villages. Its defenses were demanded by another basic characteristic of the ancient city to which there is no parallel in modern Western culture. The city was a place of refuge. In Palestine, as elsewhere in the Mediterranean world, one mark of a city was its villages—i.e., its surrounding agricultural area—which looked to it for protection. In the OT two expressions are used: the city had its "villages" (חצרים) or its "daughters" (בנות). The use of בנות seems to be preferred for non-Israelite cities in Judges (1:17). There seems to be no difference between the two phrases, except that, in a series of statements in Joshua (15:45-47), the Philistine cities Ekron, Ashdod, and Gaza are credited with both "daughters" and "villages." In this case בנות is legitimately translated "towns," as intermediate between cities and villages. Elsewhere, if "town" is used, it is because the translator introduces his belief that the known importance or size of the place does not call for the title "city."

One exception is to be noted. The cities given to the Levites had no villages, but מגרש, "pasture lands," (incorrectly translated "suburbs" in the KJV). Since these pasture lands included only an area within a radius of two thousand cubits from the cities' walls, there could hardly be any villages included (Num. 35:1-8; Josh. 20:7-8; 21:1-42; I Chr. 5:16; 6:40-66; etc.).

c. Legal distinction between city and village. In one passage (Lev. 25:31), the village (חצר) is distinguished from the city by its having no walls, and as to redemption its houses are under the same law as the "fields of the country." A house in a village could not be permanently alienated, but must be returned in the year of jubilee. A house in a walled city, on the contrary, if sold, was open to redemption during one year only. After a year, if not meantime redeemed, it became the property of the buyer in perpetuity (Lev. 25:13-17, 25-31).

d. Legal obligations and responsibilities. The laws regarding relationships between city and village are nowhere set forth. The main value of such a relationship to the villagers was doubtless that the city could be a place of refuge in time of war. It would also be the natural center for selling produce and buying whatever the farmer could not produce.

e. Various types of cities. The usual Palestinian city served an agricultural population, both in the city itself and in its villages. It would have been essentially a market town. Various specialized types are mentioned in the OT: the store city, the chariot city, the city for horsemen (Exod. 1:11; I Kings 9:19; II Chr. 1:14; 8:4-6; 9:25; 17:12). There are also royal cities (Josh. 10:2; I Sam. 27:5), with which "country towns" are contrasted (I Sam. 27:5). Cities built especially for defense, fortress cities, are also mentioned, and, indeed, any fortified place, no matter how small, might be called a city (Num. 13:19; II Kings 17:9; 18:8).

2. Archaeological evidence. ***a. City sites.*** In ancient Palestine, since there was a great dearth of trees, there were, aside from caves, two completely diverse solutions of the problem of housing: the tent and the building of stone or mud brick; the latter was largely confined to plains like the coast and the Jordan Valley at Jericho. In the mountains chiefly limestone and, in the Hauran and about the Sea of Galilee, basalt were used. In all periods the tent must be reckoned as an important domicile. A "tent city" of great size might easily spring up overnight on the edge of the steppe in Transjordan or the Negeb when different sections of a tribe came together for a festival or for consultation. Cave dwellings were used by nomads for shelter and warmth in winter, and for storage in summer in addition to their tents. Otherwise they were used by the poor. Petra is a unique example of cave dwellings de luxe, in connection with free-standing buildings, used by an originally nomad people.

In selecting a site for a village or city, as actual practice shows, proximity to cultivable land was naturally a first consideration, but it was not infrequently overridden by the desire to be on a hilltop and near a spring. This consideration became less persuasive after cisterns came into use (*see* CISTERN) but was by no means forgotten. The hilltop allowed measures to be taken against approaching raiders. It also provided unintended sanitation, since the winter downpours washed the streets clear and put mosquitoes—if they had them—at a greater distance.

b. Sources of evidence concerning fortifications. Jericho stands apart. Under Tell es-Sultan, the mound of OT Jericho is a unique example of a walled city, the oldest yet discovered. Already before 7000 or 8000 B.C. (according to a Carbon^{14} dating), in a Neolithic period when pottery was not yet known, it had a strong wall connected with a massive round tower. The walls belonging to the successive city levels make a most enlightening study. Unfortunately those connected with biblical history from Joshua's time on were excavated in the early days of archaeology in Palestine, and their history cannot at present be successfully unraveled.

Other excavations, especially at Kiriath-sepher, or Debir, Gibeah or Saul, Beth-shemesh, Samaria, Megiddo, Mizpah, and Lachish, throw light on many

features of city life. Here use will first be made of the results of excavation at Tell en-Nasbeh (probably Mizpah of Benjamin), as yet the most completely excavated site in Palestine. It was first a little border city (*ca.* 1200-900) and was then turned (by Asa) into a strong border fortress (*ca.* 900-850), while it served also as a market town for a considerable area. According to stamped jar handles found there, it served as a local administrative center during a considerable portion of the postexilic period down to *ca.* 400 or 350. With it must be compared the excavated strata VI-I of Megiddo, which cover the same period.

c. Walls and towers of a primitive village. The city (really only a small village) had a crude rubble wall usually two stones in thickness and reaching a width of about a yard, rarely as much as two yards. Two heavily built towers, each having two rooms, may have belonged to this period or to the earlier, unwalled village. The towers are not unlike that at the corner of the fortress of Gibeah, Saul's capital, and the wall resembles those of Debir, but is much weaker. The size of this "city" was probably not half that of the later fortress.

d. Walls of a border fortress city. The great wall of the main period was still standing to a height of twenty feet or more. It had a foundation of large flat stones piled up on projecting limestone strata to a height of a yard or more, and projecting a foot or so beyond the face of the wall. Spaces between the rocks allowed for drainage. On the outside, from the surface of the ground, the wall was often overlaid

Courtesy of Chester C. McCown

31. Typical section of a city wall, from Mizpah (Tell en-Nasbeh)

with a thick coating of hard yellow plaster up to fifteen or eighteen feet, evidently intended to discourage scaling. Elsewhere there was a sloping glacis as a protection against battering rams. In some areas there was a dry moat at the foot of the wall. The average height of the wall was estimated to have been from forty to forty-six feet above the limestone strata on which the wall was based. Fig. CIT 31.

The construction of the wall was quite unmethodical; apparently it was done by gangs that worked separately, for in one place, at least, one section was not bonded into the next. The stones were only hammer-trimmed and were laid in irregular, ill-fitting courses in clay mortar, with small stones used to fill up the chinks. Many of the stones were large enough to require three men to lift them. The two faces of the wall were ashlar with a rubble filling. Rectangular towers were placed at irregular intervals, some of them as expansions of the wall itself, some as additions, as apparent afterthoughts. The thickness of the wall, like that at Megiddo IV, varied from *ca.* 11.5 to 13 feet; with the towers it ran to from 20 to 30 feet.

As elsewhere, the limestone strata of the hill were in horizontal layers, receding upward. The walls were built on the projecting strata and followed contours that ranged between 2,540 and 2,560 feet above sea level. The circuit of the walls amounted to 2,165 feet, or half a mile less about 150 yards. Megiddo IV and III measured *ca.* 2,600 feet in circumference. The coffin-shaped area at Mizpah measured a little less than eight acres, making it larger than the early "City of David" at Jerusalem.

The casemate, or casement, type of wall was formed by connecting two adjoining, parallel encircling walls by cross walls at right angles to them. It appears in the Late Bronze Age in Asia Minor and Syria, and reaches Palestine perhaps in the Early Iron period, at Jericho, Gibeah of Saul, Beth-shemesh (*see* § B1 *above*), Debir, and Shechem, and later at Samaria, but not at Tell en-Nasbeh.

The use of the stone glacis, as seen at Tell en-Nasbeh, is common in the Iron Age. As an alternative, the *terre pisée* (beaten-earth) rampart of the Hyksos period has been found all the way from Tell el-Yehudiyeh in Egypt far into Asia. Traces of it appear on at least a dozen mounds in Palestine. Hazor (Tell el-Qedah), where one of the largest Hyksos encampments lay, is reported to have housed later an immense population in stone houses on the encampment site.

e. The gate. For the ancient Hebrew, the city gate was much more than a means of ingress and egress, much more than an important part of the city's defenses. It was also the "center" (even though at one side) of the city's social, economic, and judicial affairs. A brief description of the excellently preserved gate at Tell en-Nasbeh will, therefore, eventually involve much more than details of stonework. *See* § B2*i below*.

Usually city gates were placed in the opening between the two ends of the wall.* The placement of the Tell en-Nasbeh gate was unusual; otherwise it had features in common with other gates of the period. It was built on the NE side of the city. The wall from the N came down on a slightly higher (inner) stratum than the one coming up from the S. They were continued until they overlapped one another *ca.* 40 feet, and there was a space of *ca.* 40 feet between the two walls, giving a square of nearly 40 by 40 feet. The gate proper absorbed *ca.* 17 feet. There were two sets of gate piers with an opening (a gateway) of 14 feet between them. The two "guard rooms" were *ca.* 6 by 8 feet. Figs. MEG 36-37.

Pivots fitted into stone sockets carried the two (doubtless solid, wooden) gate leaves, which were placed between the outer piers. (There was none between the inner piers.) The two gates, when closed, were made fast by a bar, the end of which was thrust into a lock hole in one pier, but which was run back into a long slot in the other pier when the gate was opened. The sizes of the slot and the lock hole indicate a metal bar. There was a very slightly raised stone door sill and, at the center, an embedded stone to serve as a gate stop, against which the two leaves of the gate pressed when closed.

The overlapping walls provided an unusually strong defense for the gate. A parallel has not yet been discovered elsewhere. The extended end of the outer, E wall was built into a tower measuring 30.8 by 32.8 feet, protected by a glacis that at its bottom was 43.3 by 43.8 feet. Defenders could thus be concentrated on the inner wall, on the wall over the gate itself, and on the great tower on the outside. If the gate were broken down or burned, there would be defenders who could take refuge in the rooms within the gate structure and attack entering enemies from the side.

How Hebrew gates and walls were completed above cannot be positively determined. In some cases (Megiddo), the upper courses may have been of mud brick. At Tell en-Nasbeh no evidence of mud brick and no voussoirs were found to indicate an arched gateway, and the mass of rubble at the foot of the wall seemed to point to the use of stone throughout. Fires, frequently mentioned and even depicted in the destruction of ancient cities, indicate a large use of wood. Heavy wooden lintels over the gateway may have carried the wall, but the arch is probable. Judged by the few Assyrian representations of Syrian towns, the walls would have been finished with parapets having stepped, triangular, or conical crenelations. *See* ARCHITECTURE.

At Tell en-Nasbeh, a three-pier, indirect-access gate at a point farther S in the E wall was belatedly discovered. This type of gate with three pairs of piers was long maintained in many cities—e.g., Megiddo—and has been found at Gezer, Beth-shemesh, Shechem, Tell Beit Mirsim, and in Syrian cities such as Alalakh and Carchemish, all of them from the middle second down to the early first millennium. Various forms of the indirect-access gate appear later at Megiddo, Samaria, and Tell Beit Mirsim. It has persisted down to modern times, as the Damascus and Bethlehem (or Jaffa) gates at Jerusalem illustrate.

f. The citadel with palace and temple. A small fortress city, such as Tell en-Nasbeh, may or may not have had a further interior defense. Evidence for or against at Tell en-Nasbeh is lacking, since there the central hilltop is bare. Larger cities usually had one. Hazor is an excellent example, where Khirbet Waqqas, with its great expanse (600 by 1,200 yards), is presided over by Tell el-Qedah at its SW corner, which rises to a much greater height. Cf. the situation at Tell el-Meqbereh—Tell Abu Kharaz (JABESH-GILEAD?), where the latter tell was a fortress towering over the former, which was probably the residential section of the city.

The citadel, or acropolis, was usually combined with the palace (*see* CASTLE), sometimes with a temple, also as at Jerusalem. Aside from the highest point, two positions seem to have been preferred—either the NW corner (or the W side), for the sake of the cool winds from that quarter, or a place by the city gate. At MEGIDDO in Strata VA-IVB and IVA, there was a governor's headquarters (?) by the gate, which was low on the NW side, while there was another complex of buildings on the highest part of the mound on the E shoulder of the mound, at first regarded as a temple, later as the palace of the commander of the chariot corps. This last has also been suggested as the governor's residence, as has a large residence with a walled paved courtyard on the S. In the Samaria of Omri and Ahab, the palace, which was strongly fortified, and eventually the Temple of Augustus were on the NW.

At Tell en-Nasbeh a well-constructed long-room building with a distinctive plan (sometimes called *hilani*) appears in three places: just inside the great

Courtesy of Chester C. McCown

32. A "governor's residence," just back of an abandoned triple gate. The central entrance and open court are right of the center; one long room is at the left; another room is across the back; a fourth room is beyond the wall at the extreme right.

gate, inside the position of the early gate, and at the extreme S end of the city (but near no present signs of a gate). The one by the later gate, with its upper story, its four long rooms and a fifth added later, could have served as the official residences of the city's "governor."* But it was not fortified. The long, narrow rooms were probably for the storage of taxes in kind. The room nearest the gate at Tell en-Nasbeh had many wine jars. Fig. CIT 32.

g. The storage city. In Hebrew Palestine no storage cities that can be distinguished as such have been excavated, although small storage pits for grain are frequent. At Tell Jemmeh on the S border of Philistia, Sir Flinders Petrie did discover great grain pits under a citadel or fortress of the Persian period (fifth century). Presumably they were of imperial design and construction and connected with provision for the Persian armies that invaded Egypt. The dry climate was especially favorable to storage, and the area produced abundant grain.

h. Industrial, caravan, and seaport cities. There were cities of still other types besides those mentioned in either the OT or the NT: industrial, seaport,

and caravan cities played little part in Hebrew economy, and no caravan or industrial cities are mentioned as such. Tyre, Sidon, Joppa, and Ezion-geber are referred to, but none of them affected Hebrew life except indirectly. EZION-GEZER is the only industrial city.

As to caravan cities, the well-known international routes through Syria determined their sites and their character, even though they were not mentioned in the Bible as such. Gaza, Tyre, Damascus, and Petra are known as caravan cities, both from their locations and from written and archaeological records. Gaza and Tyre are ports for both ships and camels. Sela, later Petra, and possibly Teman were essentially caravan cities, as were Philadelphia, Gerasa, Pella, and Beth-shan. Principal seaports in NT times were Joppa, Caesarea, Stratonis, and Ptolemais.

i. City plans. In general, Palestinian cities were not planned but merely grew. The nature of the terrain modified their growth. Plans at Megiddo and Samaria were not greatly affected by their gentle terrain and their walls. But there was some evidence of planning. At Tell en-Nasbeh and Tell Beit Mirsim the centers of the hills were decidedly higher than the base of the walls, and the houses followed the curve of the walls, allowing no really straight streets.

At Samaria and Tell Beit Mirsim the houses often used the inner wall of the casements as their back wall. Not so at Tell en-Nasbeh. There in almost its entire circuit there was a space of from *ca.* 13 to 33 feet between the houses and the wall. In some areas it is impossible now to discover how a house was approached. The unbuilt area along the wall is in one section practically filled with stone-lined pits for the storage of grains. Similarly cisterns were excavated throughout the city. The difference is that the storage pits were usually dug in the earth and built of small stones, which were probably plastered with mud mortar and were not watertight, whereas cisterns were dug in the rock under houses or courtyards and plastered.

Few Palestinian cities of Hebrew date have been sufficiently excavated to provide detailed data on their interior plans and on provisions for communal life. In both Tell en-Nasbeh and Tell Beit Mirsim what appears to be a street seems to be cut off by a projecting house corner or a wall. Appearances may deceive. However, cities on Palestinian hills were usually crowded in order to bring as many families as possible within the walls. Often today entrance to one house may be from the roof of one built below it on the hillside. Doubtless such practices have always been known.

The Hebrew words for "street" are significant in that none arrives at the clear-cut definition of a narrow, clearly bounded strip of land set aside for the wayfarer in a city or village. The Hebrew word most often translated "street" (חוץ) actually means merely "outside" the house or the city or any enclosure. The LXX often renders it ἔξω ("outside"), or ἔξοδος ("exodus"). The word שוק appears only four times in the OT, and is rendered in the LXX by δίοδος, ὁδος, and ἀγορά (twice). Apparently the little lanes in the oriental city were thought hardly worthy of a name. Only the "broad way" (רחוב; πλατεῖα) has a designation.

The ordinary streets in Hebrew times received no paving. No attempt was made to clear them. They accumulated potsherds and small stones, and, trodden down, these gradually came to constitute a very unsatisfactory kind of macadam. Areas that called for pavement—e.g., floors and courtyards—might be paved with stone (slabs or cobblestones), or with limestone chips and powder. An earthen floor sufficed for ordinary houses and courts.

In larger cities, especially where there was a much-visited temple or a king's palace to be reached, room was taken for a "broad way" (רחוב; πλατεῖα), often with an enclosed courtyard before the temple or palace, and these were often paved. In large cities there were "streets" (special sections of streets) for craftsmen—copper and iron workers in one place, jewelers in another; the modern *sûq* (שוק, *shûq*) had its parallels in ancient times. "Streets" (in the bazaar) for these commercial purposes were sometimes set aside for foreign merchants (I Kings 20:34; cf. RSV "bazaars").

No temples or provisions for worship are found in Hebrew cities outside of Jerusalem. At Megiddo one area was occupied by altars or sanctuaries, or was left vacant as if taboo, from the beginning down to Stratum IV, when a Solomonic stable and veterinary headquarters appear on it (*ca.* 1000). Since the top of the mound at Tell en-Nasbeh was denuded, no "high place" (במה) could be expected. Not so at Megiddo. The whole area of Stratum III was cleared. Yet, since high places would probably have no permanent structures or furniture, this negative evidence does not absolutely prove their absence.

A striking feature of cities all over the Near East is the immense labor spent on provisions for water (*see* WATER WORKS). Long shafts and tunnels became common in the Late Bronze Age. "Hezekiah's tunnel" at Jerusalem is a late imitation. Cisterns came into use at about the beginning of the Iron Age (*ca.* 1200), when the use of lime plaster became known.

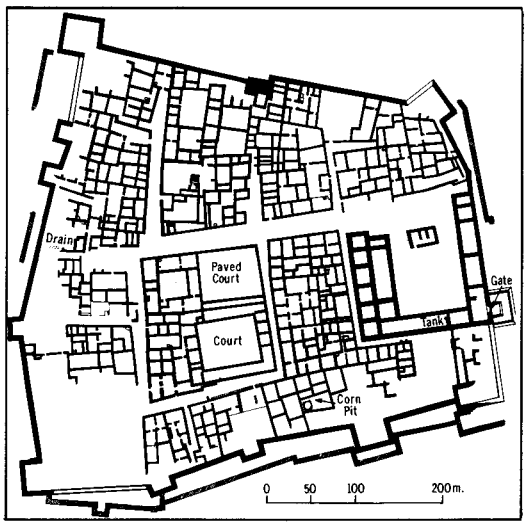
In the larger cities, especially royal cities, there were streets of some width and directness that ran from the gates to a plaza, the "square" or "broad place," before the royal palace (Esth. 4:6; 6:9, 11; Dan. 9:25). Near the gate of the city (Neh. 8:1, 3, 16; Job 29:7, *et passim*) also, such a provision might be made. Tell en-Nasbeh illustrates the latter. Both inside the city by the "long-room house" that was by the gate, and outside between the walls, a "broad place" was left. Inside, the place was empty. Outside, stone seats were placed against the wall on both sides. At Megiddo along the approach to the gate of Stratum VA a platform and benches were installed. In the gate wares of all kinds were exchanged, justice was dispensed, business was carried on, assemblies met, proclamations and speeches were made, and social life was at its height. *See* BROAD PLACE.

To the Hebrew the gate was socially all-important. His concrete, visualizing way of thinking, therefore, coined various idioms in which "gate" (שער) had pregnant meanings. Since the "judges sat in the gate," the one place where there was room and everybody congregated, "gate" stood for "justice." "They are crushed in the gate" (Job 5:4) has no ref-

erence to physical crushing, of course, but to injustice done them. In Genesis (23:18; 34:24) the expression "to go out of" and "to come in by" the city gate is used to mean the total (male) community. "Within thy gates" appears again and again in Deuteronomy, by synecdoche for "within thy city."

Occasionally a whole city moved to a new site, for reasons not now apparent. Cities were "built" (i.e., rebuilt) or "founded" (given local autonomy) usually for defense and often were border fortresses. The rebuilding and refounding of cities was a cultural, as well as military, policy among the Hellenistic-Roman rulers.

C. *GRECO-ROMAN CITIES.* 1. Language usage. In Greek there is the same ambiguity as elsewhere in such words as πόλις, "city," and κώμη, "village." There is no word for "town," except the rare Hellenistic compound κωμόπολις (Mark 1:38; Strabo XII.2.6, etc.). In one passage in Mark (6:56) there is an interesting illustration of the use of some of the significant words. It says that wherever Jesus went into villages or cities or fields (ἀγρούς), they placed the sick in the market places (ἀγοραῖς) for him to cure. Important MSS and versions replace the word for "market" (ἀγορά) with that for "broad ways" (πλατεῖα), the word that serves for "bazaar" (Arabic *sûq*), "street," and "plaza." In Greco-Roman cities, the agora supersedes the city gate as a place of general concourse. The word ῥύμη appears four times in the NT, as a lane, or street. For ῥύμη (Luke 14:21), Matthew (22:9) has διεξόδους τῶν ὁδῶν, "the ends of the streets" (hardly the RSV "thoroughfares," which is an etymological translation not sanctioned by usage). But Acts 9:11 has ῥύμη for the "street called Straight" in Damascus.



2. General character of Greco-Roman cities. ***a. Their effect on the Orient.*** The Greco-Roman city is much better known than that of the Orient because of the closer connection of the Western world with Greek and Latin material culture than with that of the Near East. It is a notable fact also that whereas Judaism and the gospels had a distinctly agricultural background, Christianity almost immediately gravitated toward the city. Jesus was a man of the country; Paul, of the city. No book in the Bible is more thoroughly bound to the city than the book of Revelation. Judaism also moved to the city when it left Palestine.

Before this happened, Alexander and his successors took the Greek city to the Orient. Necessarily it was the external form, not the Greek spirit, that migrated to the East. (Indeed, the "Greek spirit" was already largely lost to Greece.) Not enough Greeks migrated to Syria and Palestine, to Mesopotamia and Egypt, to leaven the population. The people still lived in their country villages and spoke Aramaic, while the cities put on an alien veneer.

All around the Mediterranean, Alexander and the Seleucids were vigorous city builders. They intended the cities they founded to be citadels of Greek culture that would preserve their conquered lands for their successors. But their "foundations" were imposed, often far from successfully either as to form or culture, upon a tough oriental tradition. The Qaṣr el-'Abd at 'Araq el-Emir, the Nabatean temple at Khirbet et-Tannur, and Petra itself are exhibitions of the mixtures that resulted.

b. The Hippodamian city. This type of city, which became the fashion in the fifth century, was marked by (*a*) its (fairly) rectangular form; (*b*) its agora, or market place; (*c*) its open-air theater; a smaller, roofed odeum; a gymnasium, or palestra; and an amphitheater or a stadium—i.e., various places of amusement; and (*d*) various temples. It usually had an acropolis. It also had its villas and its tenements. Fig. CIT 33.

The ideal city plan was oriented to the four points of the compass, but in practice the terrain and other factors decidedly affect both the direction and the regularity of the city plans. Orientation might take any direction, with preference for the main street running W, W-NW, and N.

33. Plan of Idumean city of Marisa (OT Mareshah), a Hippodamian plan which, for some reason, is not exactly rectangular

c. The agora. The agora was a market place, but much more than this; it was actually a civic center. It took the place of the "gate."* Its shape varied in older Greek cities. Sometimes it had a horseshoe form. But in the Hellenistic (Hippodamian) scheme it was an open rectangular area of some size. No street passed through it, but a main city street along one side, while the other three sides were occupied with city office buildings, halls for the meetings of the citizens and official city bodies, and temples. Various monuments were set up there to be seen by all men, and, as time went on, the agora became filled with statues of men and gods. Figs. ATH 109; 114.

d. The Roman city. Superficially following the Hellenistic city plan came the Roman model, rectangular like its predecessor, but marked by its cardo and decumanus (the N-S and E-W lines respectively). They crossed at right angles, usually near the center of the city, and ran from a gate on one side through the city to a gate on the other side. The decumanus was supposed to end in a temple. Shops lined the main streets, which were bordered by stoas, and decorated with fountains and monuments of various kinds. The forum, or forums, took the place of the agora as sites for display of the statues

of famous citizens and other supposedly decorative pieces. Streets passed through them. The bath was a necessary feature of the Roman city.

Usually Greek and Roman cities exhibited great care in providing for water by aqueducts and underground tunnels and pipes, and likewise in provisions for drainage and sanitation. Less attention in proportion was paid to city walls, although they were always built. The gates were largely ornamental, and often a triumphal arch preserved the name of some donor who had dedicated it to the emperor. Place was found also for many inscriptions in honor of governors, the imperial family, and benefactors of the city. A street of tombs outside the city along a prominent road was a standing feature.

CITY AUTHORITIES [πολιτάρχαι, politarchs]. A term occurring in Acts 17:6, 8, and nowhere else in extant Greek literature, but in inscriptions. Cf. πολίταρχος in Aeneas Tacitus 26.12.

The title politarch was mainly, although not exclusively, the Macedonian title for the non-Roman city magistrate. Most of its occurrences in inscriptions are from Macedonia; five of them are from Thessalonica.

The number of politarchs in a town varied with its importance. Amphipolis had five, Pella two; Thessalonica had five in the time of Augustus, and six later. The politarchs of Thessalonica would carry heavy responsibilities, since Thessalonica was both a free city and capital of the province of Macedonia. When Macedonia was conquered by the Romans in 168 B.C., it was divided into four districts, with Thessalonica the capital of the second district; in 146, however, the whole of Macedonia was reduced to a single province with Thessalonica as its chief city. In turn Thessalonica was made a "free city" by Octavius and Antonius and was ruled by its own assembly and magistrates. Although after A.D. 44 the head of the Roman administration in Macedonia was a proconsul of praetorian rank, supported by a legate and a quaestor, whose seat was in Thessalonica, yet it was not the intent of Rome to displace or supersede local governmental institutions in Macedonia any more than elsewhere. If the presence of the Roman government in Thessalonica is obvious from the form of the charge against Paul and Silas ("They are all acting against the decrees of Caesar, saying that there is another king, Jesus" [vs. 7]), nevertheless, in the story in Acts, it is the "city authorities" (politarchs) who are in full charge, and who are responsible both to the city and to Rome. They would hold executive power by the joint authority of senate and people. Although the freedoms granted a "free city" were real, they did not include freedom to recognize "another king."

CITY OF DAVID. *See* David, City of.

CITY OF DESTRUCTION. *See* Heliopolis.

CITY OF MOAB [עיר מואב] (Num. 22:36). The place where Balak went to meet Balaam; probably the same as Ar.

CITY OF PALM TREES [עיר התמרים]. A place mentioned as a part of Jericho (Deut. 34:3; II Chr. 28:15) and the residence of the Kenites (Judg. 1:16) and Eglon (Judg. 3:13). Since Jericho lay in ruins from the time of the Conquest until that of Ahab, and the Kenites were tent-dwellers, the term probably does not refer to the city as such but to the groves of palm trees that flourished nearby. S. Cohen

CITY OF REFUGE [עיר מקלט (Num. 35:11-12), intaking cities, *cf.* קלט, Mishnaic Heb. take in, receive=אסף in Josh. 20:4; עיר מועדה (Josh. 20:9), appointed cities]. One of six Levitical cities appointed to receive and give asylum to accidental manslayers.

Among many peoples of antiquity (e.g., Phoenicians, Syrians, Greeks, Romans) certain shrines or sacred precincts were regarded as providing absolute security to fugitives. Innocent and guilty, criminals, runaway slaves, debtors, and political fugitives passed beyond the reach of revenge and justice alike upon attaining sacred ground and claiming the protection of the deity (cf. Tac. Ann. III.60-63). In Israel as well, the altar of Yahweh afforded asylum to fugitives (I Kings 1:50-53; 2:28-34). But biblical law restricted the right of asylum to the accidental homicide alone (Exod. 21:12-14; Num. 35:9-34; Deut. 19:1-13; Josh. 20; *see* Crimes and Punishments § 2*b*). Its aim was to control blood revenge by making it possible for public justice to intervene between the slayer and the Avenger of Blood, "that the manslayer may not die until he stands before the congregation for judgment" (Num. 35:12). Ensuring the safety of the accidental homicide was in the vital interest of the whole community: "lest innocent blood be shed in your land . . . and so the guilt of innocent bloodshed be upon you" (Deut. 19:10).

As to the nature of the asylum, Exodus speaks vaguely of a "place" to which the accidental manslayer might flee, going on to say that the murderer must be taken even from the altar to execution (cf. I Kings 2:31-33). Numbers says nothing of the altar, but prescribes that six Levitical Cities, three on each side of the Jordan, are to be appointed as asylums (Num. 35:6, 13-14). Deut. 4:41-43 records that Moses designated the Transjordanian cities of refuge. Moses further ordered that three more be appointed in Canaan, with the eventual addition of yet another three contemplated when "all the land which [God] promised to give to your fathers" was conquered (19:1-10). That these are Levitical cities is not said in Deuteronomy. Josh. 20:7-8 lists the six cities of refuge as follows: Kedesh, Shechem, and Hebron in Canaan; Bezer, Ramoth-Gilead, and Golan in Transjordan—all priestly or Levitical cities (cf. Josh. 21:13, 21, 27, 32, 36; I Chr. 6:63).

Both the viewpoint and the procedure for dealing with the manslayer vary from source to source. In Numbers the "congregation"—a tribunal outside the asylum—tries the fugitive manslayer. If it finds him innocent of murder, it "rescues" him from the

avenger and "returns" him to the city of refuge, where he must remain until the death of the (local?) high priest. If he leaves before, he may be slain with impunity by the avenger. No ransom may be accepted from the manslayer in lieu of his remaining in the asylum (Num. 35:32)—his stay has, then, something of the nature of a punitive detention. Its termination at the death of the high priest was later interpreted—doubtless correctly—as a vicarious expiation of life by life (cf. T.B. Mak. 11*a*). The old idea of objective BLOODGUILT dominates these laws.

Deuteronomy stresses the responsibility of the community to establish easily accessible asylums for manslayers, and to keep murderers from enjoying immunity in them. Should a murderer flee to a city of refuge, the elders of his home town must send for him and surrender him into the hand of the avenger. Nothing is said of an enforced detention or of a release at the death of the high priest.

Josh. 20 reflects both Numbers and Deuteronomy: the elders—here those of the city of refuge—pass upon the fugitive's right of asylum at his arrival; later the congregation tries him; if innocent, he must remain in the city until the high priest's death.

It is commonly held that the cities of refuge were conceived of by Deuteronomy (which is followed by Numbers) as a replacement of the local altars—abolished by the Deuteronomic reform—that had heretofore served as asylums. Yet even during the period of local sanctuaries provision must have been made for the prolonged protection of the manslayer, for whom the local altar afforded only a temporary refuge. Furthermore, the ancient notion that bloodguilt is objective and defiles the land makes it necessary even for the accidental homicide to expiate his act. In Greece, where a similar notion of bloodguilt prevailed, the unintentional homicide was punished with banishment until the kinsman of the slain person forgave him. Since BANISHMENT is not a biblical penalty, the Israelite analogue to this could only have been an enforced exile of the manslayer from his home town. Moreover, since the law does not permit the kinsman to compose the homicide in any way, another means of expiating the guilt had to be found. The city of refuge, especially as conceived of in Numbers, at once takes account of all these considerations: It secures the life of the manslayer for an indefinite period while at the same time providing for the expiation of his guilt, first by an enforced detention—tantamount to banishment from his home town—and then by the death of the high priest. Viewed in this light, the cities of refuge are necessary adjuncts, rather than later replacements, of the local altars.

The asylums were presumably priestly towns containing important shrines (this is certain for Hebron and Shechem) that had become popular refuges. The six cities were all part of Israelite territory only during the heyday of the United Monarchy, shortly before and after the death of David. The United Monarchy may also be considered the most likely time for such a national program for regulating blood revenge to have been conceived. Deuteronomy transformed the ancient conception by effacing its sacerdotal side: the Levitical character of the cities of refuge—i.e., their being temple cities—as well as the role of the high priest's death, is ignored by Deuteronomy, whose doctrine of centralized worship entailed the virtual secularization of the asylums. The law of Numbers alone, whatever be the date of its formulation, preserves the cultic and expiatory features that are the earmarks of antiquity. Thus, although there is no mention of the cities of refuge outside the laws, it appears likely that the laws take their departure from a living custom of the early age.

CITY OF SALT. *See* SALT, CITY OF.

CITY OF THE SUN (Isa. 19:18); KJV CITY OF DESTRUCTION. A translation of עיר החרס (*'îr haheres*), to be emended, on the basis of several MSS, Symm., and Vulg., to עיר החרם (*'îr haḥeres*); generally taken as a reference to HELIOPOLIS.

T. O. LAMBDIN

CLAMP [מחברה, *from* חבר, to join] (I Chr. 22:3); KJV JOINING. An iron instrument among the materials prepared by David for use in the construction of the Jerusalem temple.

CLAN [משפחה]; KJV FAMILY; DUKE; THOUSAND; TRIBE; DIVISION; GOVERNOR. Alternately: FAMILY (generally); KINDRED (Gen. 24:38). The word "clan" is used to distinguish a kin group more extensive than the FAMILY, although the Hebrew does not always make such a distinction.

The father's house and kindred, the "whole family" of a widow's husband, a clan united in the Passover sacrifice, and a man's clan which will be cut off for sacrificing a child to the god Molech are examples of biblical usage (Gen. 24:38; Exod. 12:21; Lev. 25:10; II Sam. 14:7). Further, "clan" indicates a technical division of the tribes of Israel (Exod. 6:14 ff; Num. 3:15 ff; Neh. 4:14—H 4:7). O. J. BAAB

CLAROMONTANUS, CODEX klăr'ə mŏn tăn'əs, —tā'nəs. A sixth-century uncial codex MS of the Pauline letters in Greek and Latin (symbols: Greek, "D^{p}"; Latin, "*d*"). It is an important witness to the early text of the NT. *See* TEXT, NT; VERSIONS, ANCIENT.

The codex contains 533 vellum leaves measuring 9⅝ by 7⅝ inches. Leaves 162-63 are palimpsest. Their under writing contains fragments of the *Phaethon* of Euripedes. The Greek and Latin texts face each other on opposite pages—the Greek text on the left and the Latin text on the right. Each page contains one column of text with 21 lines of varying length (sense lines) per column. The MS contains all the letters traditionally assigned to Paul (Hebrews

follows Philemon). It has suffered some slight mutilation.

The place of origin of the MS is unknown, although it undoubtedly was written in the West. The Greek and Latin texts have not been harmonized to the extent that they have in Codex Bezae. The text is Western.

According to Theodore Beza, the MS was found in a convent at Clermont-en-Beauvais. He acquired it sometime between 1565 and 1582. The codex later (probably at Beza's death in 1605) came into the possession of Claude Dupuy, counselor to the Parlement of Paris. Upon his death, it passed to his sons, Jacques and Pierre. Jacques Dupuy was the king's librarian; and sometime before 1656 the MS was sold to Louis XIV and became a part of the Royal Library. Thirty-five leaves of the codex were stolen in 1707 by an apostate priest, John Aymont. One of these stolen leaves was sold by Aymont in Holland, but it was recovered and returned to Paris in 1720. The other thirty-four leaves were sold to Harley, Earl of Oxford. When his son learned the true identity of the leaves, they, too, were returned to Paris. The MS is now in the Bibliothèque Nationale.

CLASPS [קרס, *from* קרס, to bend down, crouch down]; KJV TACHES. Alternately: HOOKS (Exod. 35:11; 39:33); KJV TACHES. Gold (Exod. 26:6; 36:13) or bronze (Exod. 26:11; 36:18) fastenings by which the linen curtains and the goatskin hangings of the tabernacle were held together. The veil which separated the Most Holy Place from the rest of the tabernacle was also hung from clasps (Exod. 26:33).

E. M. GOOD

CLAUDA. KJV form of CAUDA.

CLAUDIA klô′dĭ ə [Κλαυδία, *feminine of* Κλαύδιος, *for* Lat. *Claudius,* from *claudus*(?), lame]. A Christian woman, probably a Roman, mentioned in II Tim. 4:21 as sending greetings to Timothy. In the Apostolic Constitutions VII.46 she is mentioned as the mother (or wife) of LINUS, the first "bishop" of Rome. There is also a tradition that she became the wife of PUDENS.

Bibliography. Conybeare and Howson, *Life and Epistles of St. Paul* (1897), pp. 835, 844.

B. H. THROCKMORTON, JR.

CLAUDIUS klô′dĭ əs. Tiberius Claudius Nero Germanicus, successor of CALIGULA as Roman emperor (A.D. 41-54). He is named in Acts 11:28; 18:2, and is evidently the Caesar intended in Acts 17:7. Fig. CLA 34.

Claudius was born in 10 B.C.; his father was Drusus, son of Livia and brother of TIBERIUS. Partly paralyzed, and regarded as stupid by Augustus, Tiberius, and Caligula, he came to the throne only because he was acclaimed by the praetorian guard during the chaos after the murder of Caligula. He repaid their favor with a series of military campaigns, including an invasion of Britain, which became an imperial province.

34. Claudius

During his early years of retirement he had developed an intense interest in Roman history and religion, and in 47 he led a revival of Roman religious practices. Like Augustus and Tiberius, he suppressed the religion of the Druids, though there is no evidence that he attacked the popular worship of Isis.

At the beginning of his reign he endeavored to suppress the anti-Jewish activities which Caligula had favored, and Josephus cites some pro-Jewish decrees which come from this period. Probably, though not certainly, his action against Jews at Rome comes from a later period. Speaking of Claudius' treatment of foreign nations, Suetonius (Claudius XXV.3) says that "he expelled from Rome the Jews, who were constantly rioting under the leadership of Chrestus." Since we know that "Chrestus" and "Christus" were pronounced alike, we may assume that Suetonius has at least the name, if not the person, Christus in mind. It is very doubtful that he knew, or even thought he knew, that Christus, the founder of the Christian "superstition," was at Rome under Claudius, even though the Christian father Irenaeus places Jesus' death under this emperor. There were Christian Jews at Rome during Claudius' reign, and from Acts 18:3 we know that Paul's friends AQUILA AND PRISCA were expelled from the city because of Claudius' edict. Presumably what Suetonius knows is that there were Jewish riots in Rome and that these had been related to the claims of someone named Christus. The actual edict of Claudius, discussed more fully by Dio Cassius (LX.6), seems to agree with this analysis. The edict did not actually expel the Jews from the city but forbade their assemblies because of Jewish turbulence. For a devout Jew such a decree could mean only that he would have to leave the city in order to continue his religious observances.

While Claudius rejected divine honors for himself, they were provided for him in the provinces, and in Britain a temple to him was erected at Colchester, the principal Roman base.

Two freedmen, Narcissus and Pallas, were extremely influential during his reign. Narcissus, his private secretary, exposed the plot of the emperor's third wife, Messalina, and confirmed reports of her promiscuity. Pallas, his financial secretary, persuaded him to marry Agrippina, the emperor's own niece,

and ultimately to adopt her son Nero. Both freedmen were voted honors by the Senate in recognition of their power.

In the year 54 the emperor was reviewing the problem of the succession and reached the conclusion that his own son (by Messalina) Brittanicus should succeed him, rather than Nero. Before he could make his decision public, Agrippina gave him poison in mushrooms, which Nero called "divine food, since by eating them Claudius became a god" (Dio Cassius LXI.35). Publicly Agrippina and Nero arranged for a magnificent funeral and the deification of Claudius, though Nero's tutor, Seneca, soon derided the ceremony in his *Pumpkinification of Claudius*.

In spite of fiscal reforms and some military successes, the reign of Claudius was marred by domestic infelicity, a good deal of conspiracy and informing, and the emperor's own ineptness. The succession of NERO made a bad situation worse.

CLAUDIUS LYSIAS. *See* LYSIAS, CLAUDIUS.

CLAY. The OT is very skilful in its use of the various Hebrew terms for "clay," although the English translations do not always bring this out. Three different terms were used for a dry native clay and two for a wet native clay. Another designated a worked clay for use by either the potter or the brickmaker, although the clays were prepared differently. Five terms were used for fired clay. POTTERY § 3 discusses some of these technical terms.

Clay was used for the making of both sun-dried and kiln-fired brick. Marly clay was used as a cheap plaster and a floor surface. It also served as a roof covering, for a good marly clay sheds water. Jesus used clay when healing the blind man (John 9:1 ff).

The most skilled craftsman in clay was the potter. He made not only dishes of all kinds, but also toys, idols, cult objects, etc. Cuneiform writing was upon clay tablets. Potsherds were a common writing material when ink was used. Ownership seals were stamped on wet clay. Clay was not only used as a mold in metallurgy but also, when fired, served as a crucible. The clay referred to in Dan. 2:33 was a special type—terra cotta—used in this instance much as cloisonné. *See* POTTERY. J. L. KELSO

CLAY TABLETS. The normal material for writing in Mesopotamia. Clay was ideally suited for this purpose, being always available in large quantities and, unlike papyrus in Egypt, inexpensive. Shaped into tablets when soft, the clay surface was smoothed, and the CUNEIFORM signs were impressed in it with a stylus. When dried or baked, the tablets became hard and almost indestructible. Initiated by the Sumerians, and then adopted by the Semitic Akkadians, the use of clay tablets soon passed to other Western Asiatic peoples such as the Hurrians, Hittites, Elamites, and Canaanites of Ugarit. *See* WRITING AND WRITING MATERIALS. 35. Clay tablet from Tell el-Amarna (*ca.* 1380 B.C.)

CLEAN AND UNCLEAN. To be unclean means to be contaminated by a physical, ritual, or moral impurity; the absence of such impurities constitutes cleanness. These concepts have very ancient rootage in tribal life, and in advanced religions evolve into a system of ritual laws, administered by the priests. At this stage uncleanness is thought of as what is displeasing to the deities or as what belongs to the sphere of the demonic.

OT laws of clean and unclean are applied to persons, foods, places, and objects. Human beings become unclean principally by contact with the dead or with the discharge of one of the body fluids, by the eating of tabooed foods, and by the disease of leprosy. Places and objects are usually clean in themselves and become unclean by contact with something impure. Procedures for purification involve a waiting period of one, seven, or more days; a ritual employing water, fire, or some other cleansing agent; and often a sacrifice of the nature of a sin offering.

Hebrew priestly tradition regarded the laws of cleanness as part of the Mosaic covenant, and essential to the survival of the nation, since violation of them was offensive to the holiness of God and estranged him from his people. In the Prophets, the wisdom literature, and the Psalms there is a tendency to emphasize moral cleanness, but the ceremonial aspects are not set aside, and actually increase in importance during the intertestamental period.

Impurity due to leprosy and to demon-possession are NT themes, but the main direction of NT thought is an almost exclusive emphasis on moral purity, and an abrogation of the dietary laws, necessary in order

that the Gentiles might become part of the church.

1. Terminology. The words "clean" and "unclean" and such kindred words as "cleanness," "uncleanness," "cleanse(s)," and "cleansing" appear over five hundred times in English translations of the Bible, chiefly in the priestly laws of Leviticus and Numbers and in the legal parts of Ezekiel. Concepts related to cleanness are purity and impurity; HOLINESS; PROFANE; COMMON; DEFILEMENT; ABOMINATION; and pollution. Altogether the linguistic picture shows that questions of cleanness and uncleanness were major concerns of the biblical writers, and particularly of those who held most closely to the priestly tradition. This is to be expected, because an important part of the priestly function was "to distinguish between the holy and the common, and between the unclean and the clean" (Lev. 10:10; 11:47; 20:25; Ezek. 22:26).

The KJV uses "clean" in the now obsolete sense of "entirely" in such expressions as "clean escaped" (II Pet. 2:18), "clean gone" (Ps. 77:8), and "clean passed over" (Josh. 4:1, 11); the RSV has "clean cut off" in Ezek. 37:11. Also, the process of cleaning grain is mentioned in II Sam. 4:6; Jer. 4:11. Neither of these latter uses will be considered further herein.

a. Biblical Hebrew. The basic root for conveying the idea of "cleanness" is טהר (active, "to be clean" [Lev. 15:13; 22:4]; intensive, "to cleanse" [Lev. 16:30; Num. 8:6]; causative reflexive, "to cleanse oneself" [Num. 8:7; Josh. 22:17]; derived nouns טהר, "clearness" [Exod. 24:10] or "purifying" [Lev. 12:4], and טהרה, "cleansing" [Lev. 13:7; Num. 6:9]; adjective, טהור, "clean" [Gen. 7:2; Lev. 11:47]). In the priestly law and in Ezekiel (see also Ps. 51:7—H 51:9) the intensive and causative forms of the verb "to sin" (חטא) are used of purification rituals, and are normally translated "to cleanse" (Lev. 14:52; Num. 19:19; Ezek. 43:20) and "to cleanse oneself" (Num. 19:12-13, 20). The fact that the verb forms in question should mean "offer a sin offering for" indicates the close relationship in OT thought between SIN and uncleanness; both represent a contamination of the true nature by an alient element.

Three words for "cleanness" not found in the technical sense in the priestly literature are: בר (root ברר); the adjective זך and related verbs זכה and זכך; and the adjective נקי (from נקה). The first of these (בר), judging by its Akkadian cognate, means "to make bright by polishing," and two similar Hebrew words (בר and ברית) are used of the alkali employed in refining metals (Job 9:30; Isa. 1:25) and in making soap (Jer. 2:22; Mal. 3:2). בר is used chiefly in the phrase "the cleanness of one's hands" (II Sam. 22:21, 25; Job 22:30; Ps. 18:20, 24—H 18:21, 25; but cf. Job 11:4), and it refers to moral purity. The second word (זך) is used in the priestly writings of pure frankincense (Exod. 30:34; Lev. 24:7) or olive oil (Exod. 27:20; Lev. 24:2). Outside the priestly writings it appears occasionally with the meaning "morally clean" (Job 15:14; 25:4; 33:9; Ps. 73:13; Isa. 1:16). נקי, basically "to be empty of," is normally rendered "innocent," but refers to "cleanness of teeth" in Amos 4:6, and of hands in Ps. 24:4—the latter indicating moral purity.

The idea of "uncleanness" is expressed by derivatives of the root טמא, the direct opposite of טהר. The verb (טמא) means "to be unclean" (Lev. 15:32; 22:6), the passive form "to defile oneself" (Lev. 11:43; Num. 5:13), the intensive form "to make or declare unclean" (Lev. 13:3, 8, 11, 15; Num. 35:34), the causative reflexive form "to defile oneself" (Lev. 11:43; Ezek. 14:11). The noun (טמאה) means "uncleanness" or "filthiness" (Lev. 5:3; 7:20; Num. 19:13; Ezek. 22:15), and the adjective (טמא) means "unclean" (Lev. 11:35; Isa. 64:6; Ezek. 4:13). The RSV twice translates a noun normally rendered "impurity" (נדה) as "unclean thing" (Ezek. 7:19-20), and gives the intensive passive form of the verb "to defile" (גאל) the meaning "exclude as unclean" (Ezra 2:62; Neh. 7:64).

Fundamentally, to be unclean means to be contaminated by some impurity, as a cloth is contaminated by dirt (Zech. 3:5), or a metal by dross (Dan. 11:35). A clean object or person has no such impurity and possesses its true nature in unadulterated form. Cleanness thus appears as a negative condition; the active, malignant state, calling for protection by taboos and purification rituals, is uncleanness. In keeping with this principle, uncleanness is contagious and transferable from one object to another, while cleanness, the passive state, cannot be transmitted (Hag. 2:10-19).

b. LXX and NT. The common LXX word for "clean" is καθαρός (noun καθαρότης, verbs καθαρίζω and καθαίρω). For "uncleanness" negative forms derived from the same root are used (ἀκάθαρτος, ἀκαθαρσία). The general sense is again to be free from, or contaminated with, any form of impurity, whether physical, ritual, or moral. This group of words is used to render all the Hebrew roots discussed above (e.g., טהר in Lev. 7:19; ברר in Hab. 1:13; זכך in Job. 15:15; and נקה in Job. 4:7). A LXX synonym for καθαρίζω is ἐξιλάσκεσθαί (Lev. 12:8; 16:30).

The NT employs concepts of cleanness and uncleanness in ways closely parallel to the OT, and its vocabulary is like that of the LXX, but concepts of cleanness and uncleanness occur relatively infrequently in the NT. The derivatives of καθαρίζω and their negatives are exclusively employed, except that the KJV has "lust of uncleanness" where the RSV reads "lust of defiling passion" (ἐπιθυμία μιασμοῦ) in II Pet. 2:10.

2. General considerations. The clean and the unclean take an important place in the religions of tribal societies, and the emphasis continues in modified and developed form in all the religions of mankind. The origins of this type of thought are complex and obscure, and, since cleanness is an inclusive idea incorporating many conflicting and contradictory elements, no logically satisfying account of the practices and beliefs associated with it is possible.

a. Primitive concepts. Primitive man makes no real distinction between animate and inanimate nature, but regards the whole universe as infused with a personality or personalities akin to his own. The vital force in the world may be conceived as a diffuse and mysterious presence (e.g., the "mana" of the Melanesians), or it may be made concrete and individual in a hierarchy of gods and demons (e.g., the pantheons of Canaanite, Babylonian, and Egyptian religions). The peoples of ancient Mesopotamia felt the presence of personal powers in everything from the majestic dome of the sky (the god Anu) to the worm which caused toothache.

Since the nonhuman powers may be hostile to man, any object—a rock, a stream, a tree, or an animal—may be dangerous to human life, and the survival of the group demands exclusion from it of the potentially destructive elements in the world about it. This is done by a system of taboos. Certain seasons, kinds of food, types of marriage, etc., introduce alien elements into the life of the group. Such things are unclean, and contact with them renders a person unclean.

Although self-preservation is the fundamental reason for laws of cleanness, a wide variety of secondary reasons may account for any particular object's being regarded as unclean. In sexual intercourse (II Sam. 11:11), birth (Lev. 12), and death (Num. 6:6) potent and mysterious forces are at work, and purification rituals are almost universally associated with these phenomena. Anything repulsive, abnormal, or distorted was likely to be regarded as unclean. Thus, the Israelite priests, whose holy office demanded scrupulous care in matters of purity, could not officiate if any blemish were found on them (Lev. 21:16-24). The pig was unclean for the Hebrews probably because of its extensive use by the Canaanites as a sacrificial animal. Pig bones were found in several Canaanite shrines excavated in Palestine, and the pig was considered sacred in Babylonia, Cyprus, and Syria. Altars with steps, a common pagan type, were prohibited by Israelite law (Exod. 20:26), and the regulation against boiling a kid in its mother's milk (Exod. 23:19; 34:26; Deut. 14:21) is a protest against a well-documented Canaanite practice. Tribal conservatism played a large part in establishing rules of cleanness and uncleanness. The traditional customs were venerated, and any innovation was easily regarded as a source of contamination. The camel, introduced relatively late into the Palestine area, was included with the unclean beasts (Lev. 11:4) probably because it was not one of the foods traditionally accepted among the tribes.

b. Evolution of ideas of cleanness. When a religion has developed to the point of possessing a pantheon of deities, uncleanness is defined in relation to the will of these supreme beings. The unclean is repulsive to or prohibited by the gods (Isa. 35:8; 52:1; Ezek. 39:24; Rev. 21:27), or belongs to the sphere of the demonic powers opposed to the gods (Zech. 13:2; Mark 1:23; Luke 4:33; Acts 5:16). Uncleanness is often described in the OT as an ABOMINATION to Yahweh (Lev. 7:21; 11:10; Deut. 17:1).

The priesthoods of developed religions tend to systematize the laws and practices of clean and unclean, and to bring them into harmony with the theology of the priesthood. In Babylon rituals of purification were concentrated in the most meaningful of the festivals, the New Year celebrations, where they formed part of a developed theological understanding of the relationship of the state to the cosmic order. Similar tendencies are evident in the OT. While many of the laws of cleanness obviously have ancient origins and a long history, they were codified by the priesthood during the monarchy and after the Exile, and appear in systematized form in Leviticus and Numbers. The priests related them to the covenant theology by placing their origin in the Mosaic period and making them an integral part of the formative events which called Israel into existence and defined her nature (*see* COVENANT). The most important of the purification rituals were concentrated in the Day of Atonement. *See* ATONEMENT, DAY OF.

A third line of development runs in the direction of ethical cleanness. When the gods of a nation become concerned for the moral conduct of their worshipers, the concept of "cleanness" inevitably broadens to include ethical purity, "clean hands and a pure heart" (Ps. 24:4). It is possible to distinguish between ritual and moral cleanness, the former being the result of a contaminating element which comes into the life of the individual or nation from outside, and the latter of an act of rebellion arising from an inner defect of the HEART. Jesus makes this distinction very sharply: "There is nothing outside a man which by going into him can defile him; but the things which come out of a man are what defile him" (Mark 7:15). No such clear distinction is made in the OT. Both prophets and priests recognized that, since Yahweh is a moral God, he demands ethical purity, and that sinfulness is a form of uncleanness. The prophets occasionally seem to discount ritual practices and to emphasize ethical conduct as the only binding demand of Yahweh, but, by and large, immorality and ritual uncleanness stand side by side in the OT as equally displeasing to the God of Israel, and the priests consistently treated uncleanness as a form of sin. *See 5b below.*

The close connection between the holy and the clean remains to be noted (*see* HOLINESS). Since a holy person, place, or thing is specially set apart for the service of, or as the property of, the deity, it is removed from common use, filled with divine powers, and potentially dangerous to unauthorized persons who have not taken the proper ritual precautions in approaching it (II Sam. 6:1-8). The holy thing is removed from ordinary life and hedged around by ritual protections similar to those governing an unclean object. It is isolated because it is so close to the deity, while the unclean is isolated because it is so remote from him (*see* § 5*a below*). The

COMMON may be put to ordinary uses because it is neither holy nor unclean, but ritually neutral.

3. Laws of uncleanness. ***a. Of persons.*** Since in priestly thought uncleanness was infectious, a human being might incur it by contact with any unclean person or thing (Lev. 5:3); but the law regarded three forms of uncleanness as serious enough to exclude the infected person from society. These were leprosy, uncleanness caused by bodily discharges, and impurity resulting from contact with the dead (Num. 5:2-4).

The appearance of swellings, eruptions, and raw sores on a formerly clear skin has an uncanny quality, which to the ancient mind indicated the work of evil powers or divine judgment on sin. The horrible effects of leprosy and the disfiguring nature of many skin diseases heightened the impression of mysterious forces at work in producing them, and brought them into the realm of the unclean. The Hebrew described such diseases as "leprosy" (צרעת; λέπρα; *see* LEPROSY), and thought of them as producing an uncleanness which lasted until a cure was obtained, or the sufferer died. The uncleanness due to leprosy is mentioned in the story of NAAMAN (II Kings 5), and the full law of leprosy is given in Lev. 13–14. Frequent NT references to the healing of lepers show that OT ideas of the disease continued virtually unchanged into NT times (Matt. 8:1-4; 10:8; 11:5; Mark 1:40-45; Luke 4:27; 5:12-14; 7:22; 17:11-19).

The discharges issuing from the body—blood, semen, menstrual flow, and excretions accompanying childbirth—caused in ancient man irrational revulsion. The semen, ejaculated from the sacred genital organs (Gen. 24:2-3) at the climax of the sexual act and associated with the powerful forces of reproduction, was unclean, and its emission during sexual intercourse produced uncleanness in both the man and the woman (Lev. 15:16-18), or in the man, if discharged by accident (Deut. 23:10). In both cases the period of uncleanness was until evening, but an unnatural discharge from the male organs made the man unclean for seven days after the discharge had ceased (Lev. 15:1-15). A woman's menstrual flow, because of its cyclic occurrence analagous to such important cosmic rhythms as the phases of the moon, its connection with fertility, and its relationship to the life forces contained in the blood, was a potent source of uncleanness (Lev. 15: 19-24; II Sam. 11:4). It produced an impurity of seven days' duration in the woman and in any man who had sexual intercourse with her (Lev. 15:19, 24). Such intercourse was sternly forbidden (Lev. 18: 19; Ezek. 22:10). Analagous to, but more serious than, menstrual impurity was a persistent discharge of blood from a woman (Lev. 15:25-30). Childbirth produced a similar uncleanness, continuing seven days for a male child and fourteen for a girl, with an additional thirty-three- and sixty-six-day period during which the woman was excluded from touching holy things. All discharges produced uncleanness which could be transferred to objects and people by contact. Even the spittle of a man with a discharge made the one on whom it fell unclean (Lev. 15:8).

The dead body of a human being is an object of horror, and, to the primitive mind, of danger as well, for the spirit of the dead might be lurking nearby to do harm to anyone who approached. In the OT priestly laws (Num. 19) contact with a corpse (vs. 11), with a human bone (vs. 16; cf. Matt. 23: 27), or with a grave (Num. 19:16) caused uncleanness and made necessary elaborate purification rituals (vss. 13, 17-19). The need to bury the dead meant that this source of impurity could not be entirely avoided. Priests could bury only members of their immediate family (Ezek. 44:25); the high priest and the Nazirites could not contaminate themselves even for their parents (Lev. 21:11; Num. 6:7). No one unclean by a dead body could celebrate the Passover, but he was allowed to do so a month later (Num. 9:6-11).

A demon, one of the cosmic powers opposed to God, is an "unclean spirit" (ἀκάθαρτον πνεῦμα). When in intertestamental times Judaism developed a demonology under Persian influence (*see* DEMON), insanity was attributed to the presence of an unclean spirit (Matt. 10:1; Mark 1:23-27; Luke 4:36) or an unclean demon (Luke 4:33). The only use of "unclean" in the gospels is in reference to demon-possession (Matt. 12:43; Mark 3:11, 30; 5:2, 8, 13; 6:7; 7:25; 9:25; Luke 6:18; 8:29; 9:42; 11:24; Acts 5:16). In the OT the expression "unclean spirit" (רוח הטמאה) appears once in a late passage (Zech. 13:2) in reference to the spirit of false prophecy, possibly demon-inspired.

Pagan idols and the cult practices associated with them belonged, like the demons, to the sphere of antigod, and rendered Israel unclean, when imported into her worship (Ps. 106:38; Isa. 30:22; Ezek. 24: 13; 36:25; 37:23). The presence of idols, pagan worship, and disregard for Israel's purity laws rendered all foreign lands and peoples unclean (Ezra 9:11; Jer. 43:12; Amos 7:17). In the postexilic period the nationalistic exclusiveness of Judaism became so rigid that anyone who could not prove pure Israelite descent was automatically excluded from the priesthood as unclean (Ezra 2:62; Neh. 7:64). The early church saw the purification of the Gentiles as part of the atoning work of Christ (Acts 15:9; Eph. 2:11-13), and Peter's vision taught him not to call any man common or unclean (Acts 10:28).

It is untrue to say that the concept of ritual uncleanness gradually gave way to a higher, moral conception of purity. In fact, both grew together and in close relationship to each other (*see* § 5*b below*), so that both moral and ritual laws reached their most stringent form in the postexilic Jewish community. Clean hands (II Sam. 22:21, 25; Job 17:9; 22:30; Pss. 18:20, 24—H 18:21, 25; 24:4), a clean heart (Pss. 51:7, 10—H 51:9, 12; 73:13; Prov. 20:9), clean lips (Isa. 6:5), and clean "innermost parts" (Prov. 20: 30) are symbolic of righteousness (II Sam. 22:21, 25; Pss. 18:20, 24—H 18:21, 25) and innocence (Job 11: 4; 33:9; Ps. 51:7, 10—H 51:9, 12; Prov. 20:9). Uncleanness comes from sin (Ps. 51:2—H 51:4; Isa. 64:6), and cleansing from forgiveness and from ceasing to do evil (Isa. 1:16). It will be noted that all these references come from outside the priestly cycle of writings. The NT repudiated the whole corpus of purity laws, food laws most vigorously of all (*see* § 3*b below*), and concentrated almost ex-

clusively on uncleanness caused by lying speech (I Thess. 2:3), licentiousness (Eph. 4:19), and sin (Jas. 4:8). Cleanness is virtually equated with holiness (II Cor. 7:1; I Thess. 4:7).

b. Of animals and foods. Since food is taken into the human body, it represents a potential source of uncleanness, and food taboos are an early and important part of purity legislation. Samson's mother was warned against eating any unclean thing before the birth of her son (Judg. 13:4, 7). In the priestly view of human prehistory man was permitted from the Creation to eat green plants (Gen. 1:29-30), and this was not modified in the Mosaic law. If, however, unclean food was used in baking, the bread was unclean (Ezek. 4:12-13). Permission to eat meat came immediately after the Flood, the only restriction being that meat with the blood in it was not to be eaten (Gen. 9:3-4; cf. Lev. 17:14-15; Deut. 12:16, 23). According to priestly tradition the main body of food laws was given by divine revelation during the Mosaic period (Lev. 11; Deut. 14:3-21). In contrast to the priestly theory, the Yahwist represented the distinction between clean and unclean animals as existing in the time of Noah (Gen. 7:2, 8; 8:20).

OT food laws declared unclean any animal which died of itself (Deut. 14:21) or was torn by wild beasts (Lev. 17:15), and any meat which still had blood in it (Gen. 9:4; Lev. 17:14-15; Deut. 12:16, 23) or had touched an unclean thing (Lev. 11:34). In addition the law described those animals which were unclean in themselves, and were therefore called "abominable things" (Lev. 11; Deut. 14:3-21). The Deuteronomic legislation, the older of the two, divided the animal kingdom into four categories: animals (בהמה; Lev. 11:2; Deut. 14:4), water creatures (כל אשר במים; Lev. 11:9; Deut. 14:9), birds (עוף [Lev. 11:13]; צפור [Deut. 14:11]), and winged insects (כל שרץ השרץ; Lev. 11: 20; Deut. 14:19). To this classification Lev. 11:29 added swarming things (שרץ העוף). *See* FAUNA.

Beasts which did not both divide the hoof and chew the cud were unclean. Lev. 11:3-7; Deut. 14: 6-8 specify the camel, the rock badger, the hare, and the swine as unclean, and Deut. 14:4 lists ox, sheep, goat, hart, gazelle, roebuck, wild goat, ibex, antelope, and mountain sheep as clean. Among the water creatures only those with fins and scales were fit for food (Lev. 11:9-12; Deut. 14:9-10). In both books only the birds that are considered unclean are listed: eagle, vulture, osprey, buzzard, kite, raven, ostrich, nighthawk, sea gull, hawk, little and great owl, water hen, pelican, carrion vulture, cormorant, stork, heron, hoopoe, and bat! These birds are unclean probably because they are flesh eaters or scavengers. While Deut. 14:19 makes all winged insects unclean, Lev. 11:20-23 permits the eating of jumping insects, such as locusts, crickets, and grasshoppers. Swarming creatures form a miscellaneous class, including rodents and reptiles (Lev. 11:29-38). Those which crawl on their bellies, go on all fours, or have many feet are unclean, and the weasel, mouse, and several kinds of lizard are specified. All unclean animals produce uncleanness when they are eaten, or when their carcasses are touched or carried (Lev. 11:8, 11, 27-28, 31). The dead bodies of clean animals also produce impurity (Lev. 11:39-40). Animals suitable for food do not have to be slaughtered at a sacred place (Deut. 12:15, 21).

The fact that the food of all Gentile nations was unclean (Hos. 9:3) posed a difficult problem for Jewish communities living in a foreign environment, and for the early church when it moved out into the Gentile world. There was a clear lead in the teaching of Jesus, who had declared that defilement could not be caused by any external agent (Mark 7:14-23; Luke 11:41), and who ate with tax collectors and sinners (Matt. 9:11; Mark 2:16; Luke 5:30; 7:34). Peter's vision of the sheet lowered from heaven and containing all types of animal, all of which the divine voice pronounced clean and fit for food, provided the church with a mandate to abandon the food laws, and by implication the other purity laws as well (Acts 10:9-16; 11:1-10). Nevertheless, whether or not to observe the Jewish food laws was a subject of controversy between the Judaizing and the Hellenizing branches of the church (Gal. 2:11-13; Col. 2:16). The Council of Jerusalem settled on the formula: Abstain from meat offered to idols, from blood, from things strangled, and from fornication (Acts 15:20, 29), freeing the Gentiles in other respects from the law. Paul's position was that "nothing is unclean in itself" but that Christian love demands a sympathetic understanding of those who are troubled by such matters (Rom. 14:14, 20-21).

c. Of places. In the matter of clean and unclean places the OT writers are chiefly concerned to prevent intrusion of the unclean into localities made holy by the presence of Yahweh. The holy soil of Israel could be defiled by oppression (Ezek. 22:24), by idolatrous or prohibited religious practices (Josh. 22:17, 19; Ezek. 36:17), or in Ezekiel's eschatology by the dead bodies of the slaughtered armies of Gog (Ezek. 39:12). The holy city, Jerusalem, might be polluted by sin (Lam. 1:8); by idolatry (Jer. 13:27); by the blood of those killed in its streets (Lam. 4:15); and by the ruin of the temple, which, like an unburied corpse, spread contagion through the city and the surrounding land (Hag. 2:10-19). The entrance of the unclean into the temple, where it would come directly into the presence of the holy God, was the most serious invasion of the holy. Hezekiah, therefore, cleansed the temple from the defilement caused by the apostate religion of Ahaz (II Chr. 29:12-19). Ezekiel prescribed cleansing rituals for altar and sanctuary when they would be re-established after the Exile (Ezek. 43:20-22; 45:18-20). Nehemiah purified the chambers of the temple which had been contaminated by an unclean person, Tobiah (Neh. 13:9). The impressive annual ritual of the Day of Atonement removed the pollution of the sacred place which the sins and impurities of Israel during the year past had caused (Lev. 16, especially vss. 19, 33). During the Maccabean Revolt one of the first acts of the victorious Jewish army was to cleanse the altar and the temple from the profanation to which they had been exposed (I Macc. 4:36-58).

The same concern to protect the holy from the unclean appears in the requirement that remnants of sacrifices be disposed of in a clean place (Lev. 4:12; 6:11), and that human excrement be buried outside the military camp, which in the theology of the holy war was a sacred place (Deut. 23:12-14; *see* WAR,

IDEAS OF). Unclean objects, such as the debris of a leprous house, had to be disposed of in an unclean place (Lev. 14:45).

d. Of objects. Objects are not unclean in themselves, but become unclean by contact with impure persons or animals. Exceptions are houses, garments of wool or linen, and leather objects which have contracted leprosy—greenish or reddish spots with a tendency to spread. An infected house was shut up fourteen days, the infected parts were removed, and the building was replastered. If this did not effect a cure, the building was destroyed. Garments and skins, uncured after a fortnight, were burned (Lev. 13:47-59; 14:33-52).

The carcasses of unclean swarming creatures defiled any object they touched, except water in a cistern or spring and dry seed (Lev. 11:29-38). Any type of discharge or the touch of a person with such a discharge contaminated any object, but especially the bed, seat, or saddle occupied by an infected person (Lev. 15:4-12, 17, 20, 26). Pottery vessels and clay ovens contaminated in this way were broken; other objects were washed and returned to use. Uncovered vessels in a dwelling where a dead body lay were unclean (Num. 19:15). Booty captured in war, coming from a foreign environment, was considered impure. Noninflammable material was cleansed by FIRE, other objects by the WATER FOR IMPURITY (Num. 31:21-34).

The Bible also describes objects as clean or unclean in a nonritualistic sense. The human teeth (Amos 4:6), a turban (Zech. 3:5), and the linen shroud which covered Jesus' body (Matt. 27:59) are called "clean," and the verb "cleanse" is applied to the washing of dishes (Matt. 23:25-26) and to shaking lice from a garment (Jer. 43:12). Metaphorically, Ezekiel declares that God has made the wealth in which Jerusalem trusts unclean, and Job insists that not even the heavenly bodies are clean in the sight of God (Job 15:14-15; Ezek. 7:19-20).

4. Purification rituals. A complete purification ritual consists of three elements: (*a*) a waiting period, beginning when the source of pollution ceases, as when a discharge stops running (Lev. 15:28), and lasting for one of the sacred units of time or a multiple thereof—one, seven, fourteen, forty, or eighty days; (*b*) a cleansing agent: fire (Num. 31:23), water (Lev. 15:5), blood (Lev. 14:25), or a complex mixture prepared by the priests, such as the "water for impurity" (Num. 19:9); and (*c*) a sacrifice of the type of the sin or guilt offering (*see* SACRIFICES AND OFFERINGS). The seriousness with which the priests viewed any case of uncleanness may be inferred from the duration of the waiting period, the complexity of the cleansing agent, and the elaborateness of the sacrifice.

Secondary infections—i.e., those which did not originate in the person himself but were acquired by contact with uncleanness—were usually "until the evening" (Lev. 11:24-25)—i.e., "when the sun is down" (Lev. 22:7). Exceptions to this general rule were semen, which produced only a one-day uncleanness (Lev. 15:16), and contact with the dead, which rendered unclean for seven days (Num. 19:11). Touching the dead bodies of animals (Lev. 11:24-25, 27-28, 32, 39), eating what dies of itself or is torn by wild beasts (vs. 40), being in a house sealed up after a death (14:46), being contaminated by the discharge of another person (15:5-8, 10-11, 16-19, 21-23, 27), and preparing or using the "water for impurity" (Num. 19:7-8, 10, 21-22) produced one-day uncleanness. A waiting period of seven days followed contact with a corpse (Num. 19:11, 14; Ezek. 44:26), the birth of a male child (Lev. 12:2), the cure of a leper (14:9), or a discharge of any kind, except semen (15:13, 19, 28). Fourteen-day periods applied to the quarantine of a suspected leper (13:5-6), and to the birth of a female child (12:5). The forty- and eighty-day periods are the length of time during which the mother of a newborn child must stay away from holy things (12:4-5).

Water, the most common agent of purification, is symbolic of cleansing throughout the Bible (Ezek. 36:25; Zech. 13:1; John 13:10; Eph. 5:25-26; Heb. 10:22), and blood has the same symbolic value in more intense form (I John 1:7). In the actual rituals water alone was the normal cleansing agent for one-day uncleanness, the full formula being: Wash the clothes, bathe the body, and be unclean until evening (Lev. 15:5-8, 10-11, etc.). Sometimes only the washing of the clothes (11:25, 28; 14:47), sometimes only the bathing of the body (15:16, 18), is mentioned. Where no washing is specified (11:24, 27, 31, 39), it is probably implied. Washing the hands prevents a man with a discharge from spreading infection by his touch (15:11). Blood alone was used to cleanse the altar (Lev. 16:18-19; Ezek. 43:20) and the holy place (Lev. 16:15-16; Ezek. 45:18-20). Cedarwood, scarlet thread, and hyssop dipped in blood were used for cleansing lepers (Lev. 14:2-9) and leprosy in houses (vss. 49-51). The same ingredients mingled with the ashes of a red heifer and mixed with spring water constituted the "water for impurity," and cleansed from contact with the dead (Num. 19:1-11). *See* BLOOD; CEDAR; HYSSOP; RED HEIFER; SCARLET; WATER FOR IMPURITY.

Sacrifices, often combined with or preceded by ritual washing, were part of the purification following discharges, childbirth, and leprosy. Purification from discharges (except semen and menstrual fluid) required two turtledoves or two young pigeons, one for a sin offering and one for a burnt offering (Lev. 15:14-15, 29-30). After childbirth a lamb and a pigeon or a turtledove were offered (12:6); and a leper who had been healed presented two male lambs, a yearling ewe, three tenths of an ephah of fine flour mixed with oil, and a log of oil (14:10). The poor were allowed to substitute animals of lesser value (Lev. 12:8; 14:21-32; Luke 2:24). The elaborate nature of the leprosy sacrifices—a combination of guilt offering, cereal offering, sin offering, and burnt offering—witnesses to the seriousness attached to leprous uncleanness. *See* LEPROSY; SACRIFICES AND OFFERINGS.

An interesting feature of some purification rituals, showing that the priests regarded uncleanness as an almost physical thing, is the transference of human uncleanness to an animal, which is then sent away and carries the uncleanness with it. This occurs in purification after leprosy. Two birds are provided. The blood of one is used to make the cleansing agent; the other is released alive "into the open

field" (Lev. 14:7). This rite recalls the release of the scapegoat on the Day of Atonement. *See* AZAZEL.

5. Theology of cleanness. The foregoing sections indicate that questions of cleanness and uncleanness, far from being peripheral matters, were of pressing theological concern to those OT writers most closely associated with the priesthood, and that their importance increased in postexilic times.

a. Cleanness and holiness. A pervasive principle of OT theological thought is that Israel should reflect in her community life the character and activity which she ascribes to God. If Yahweh acts in justice, the national conduct should be marked by justice (Amos 5:21-24). If the key to Yahweh's nature is steadfast love, this becomes Yahweh's chief demand on his people (Hos. 4:1-2; 11:1-4). If Yahweh is pre-eminently a holy God, then his people must be peculiarly a holy nation (Exod. 19:6; Num. 15:40; 16:3; Deut. 14:21). Holiness and uncleanness are as incompatible as light and darkness. Therefore, in fulfilling her destiny as a holy nation, Israel must rigidly exclude every form of uncleanness and must protect with special zeal those institutions, such as the priesthood (Lev. 16; Num. 8), the sacrifices (Lev. 7:19-21; 10:14; Num. 9:13; 18:11, 13; Deut. 26:14; II Chr. 30:17-18; Ezra 6:20), and the sacred buildings and vessels (II Chr. 23:19; Isa. 52:11), which were devoted in a unique way to the service of Yahweh. The concern for cleanness is, thus, not merely a set of conventions, inherited from paganism and blindly carried on in Yahwism, but an essential part of Israel's response to the holiness of Yahweh: "You shall be holy; for I the LORD your God am holy" (Lev. 19:2; cf. 11:45; 20:7). *See* HOLINESS.

There is nothing casual or optional in the demand for cleanness. It is a matter of national life and death. Uncleanness in Israel causes Yahweh to turn away his face, and without his saving presence the nation is doomed to exile and destruction (Ezek. 39:24). The same sense of the vital necessity of preserving the cleanness of the nation is seen in Lev. 15:31: "Thus you shall keep the people of Israel separate from their uncleanness, lest they die in their uncleanness by defiling my tabernacle that is in their midst." To profane Yahweh (Ezek. 22:26) by bringing uncleanness into his presence is to negate the holiness of Israel, and to forfeit Yahweh's protecting presence. At the end of the present age, when Israel is finally redeemed, all uncleanness will be excluded (Isa. 35:8; 52:1; Rev. 21:27).

It appears, then, that the distinction between holy and unclean is not simply a religious but a cosmic division, running through the whole universe and dividing animals, objects, and places into two categories which could be mingled only at the gravest peril. The priests were repeatedly charged to maintain the distinction between these incompatible aspects of reality (Lev. 10:10-11; 11:47; 20:25-27; Ezek. 22:26; 44:23). The incipient dualism which existed in the distinction between clean and unclean became more explicit when Jewish thought was exposed to Persian influences. The unclean was then identified with the demonic powers of darkness, which war against the forces of light. In the Manual of Discipline of the Qumran Community (*see* DEAD SEA SCROLLS) "ways of defilement in the service of uncleanness" are included among the works of the spirit of darkness. The demons that cause insanity are regularly called "unclean spirits" in the NT.

b. Uncleanness and sin. The priestly literature does not distinguish moral wickedness from impurity. The law of jealousy in Num. 5 deals with cases of suspected adultery by means of the ordeal of the WATER OF BITTERNESS. Here a case of moral delinquency is named and treated as a problem of uncleanness (vs. 28). In like manner sin and guilt offerings are extensively used in purification rites (*see* § 4 *above*), and the ritual of the Day of Atonement removes simultaneously the accumulation of guilt for both sin and uncleanness (Lev. 16:16, 30). The Levitical law frequently uses "sin" and "uncleanness" as synonyms (5:3-4).

The Israelite cultus did not claim the power to remove the source either of sin or of uncleanness by ritual means. Only God could "bring a clean thing out of an unclean" (Job 14:4). The creation of a clean heart is the exclusive work of God (Ps. 51:10—H 51:12), and he may forgive apart from the "sanctuary's rules of cleanness" (II Chr. 30:19; cf. Isa. 4:4; Ezek. 36:25, 29; Zech. 3:4). Therefore, OT purification rituals could begin only after the source of infection had been removed, as when a leper was healed (*see* §4 *above*). Moral iniquity is a form of uncleanness of which the source is the inner life of the sinner, and unless God forgives the sin, the source of defilement remains. Deliberate and unrepented sin is, consequently, a continuing source of pollution which renders purification rituals useless.

When, however, the originating cause of uncleanness has been removed, a stain is left which continues unless and until taken away by the prescribed ritual. Involuntary transgressions and those for which forgiveness is sought likewise leave a stain on the individual and the nation. It is this "uncleanness of sin" with which the cult is competent to deal, by removing the continuing impurity left by forgiven sin or removed infection. Because the Jewish priests could not deal with the source of impurity, whether external or internal, without encroaching on the prerogative of God, they had no need to draw a sharp line between sin and ritual impurity. Although their theology conceived uncleanness in quasi-physical terms, there can be no doubt that the cultic purifications which they performed for the people fulfilled an important psychological function by relieving the worshipers of the debilitating sense of guilt and by mediating to them assurance of forgiveness and cleanness.

c. Relation to the covenant. The mighty act of God, which above all others revealed his holiness, was the deliverance of Israel from Egypt and the making of the covenant at Sinai. A priori, therefore, it appears likely that priestly theology would connect its laws of cleanness with these crucial events. This is done by the device of projecting back the Holiness Code, the Priestly Code, and Deuteronomy to the Mosaic period and representing them as secondary to and explanatory of the covenant itself. The connection is explicitly stated in Lev. 11:45: "I am the LORD who brought you up out of the land of Egypt, to be your God; you shall therefore be holy, for I

am holy," a formula reminiscent of the beginning of the Ten Commandments (Exod. 20:2; Deut. 5:6; cf. Lev. 19:36; Num. 15:41). *See* COVENANT.

The structuring of the cleanness laws into the covenant theology not only gave them Mosaic sanction, but also made them unequivocally binding on Israel. The God who had delivered the nation, and who as its king gave the nation his law, had included the purity laws as part of his will. There was, therefore, no possibility of evading them as trivial or of regarding them as of lesser importance than the moral laws. They were part of the constitution of Israel's national life, and their observance was an inescapable necessity if the obligations of the covenant were to be met. The Zadokite Document, dating probably from the first century B.C., repeats and expands OT purity laws as part of the legislation for the community of the new covenant. *See* DEAD SEA SCROLLS.

d. Relation to the work of Christ. In the NT, concepts of cleanness and uncleanness are peripheral and metaphorical. Paul reversed the OT view that uncleanness was contagious while holiness was not (*see* §1*b above*). In a marriage between a Christian and an unbeliever, the Christian consecrates the other partner, and the children are "holy" (I Cor. 7:14). This usage is plainly *argumentum ad hominem,* and is in no way central to the apostle's thought.

Since the NT eliminates the concept of ritual uncleanness coming from external sources and concentrates on moral impurity arising from within (*see* § 3*a above*), its theology of uncleanness is reduced to a minor aspect of the doctrine of atonement (Heb. 10:22; Jas. 4:8; I John 1:9; *see* ATONEMENT). Cleansing is part of the redeeming work of Christ in his office as High Priest. He cleanses the disciples by his word (John 15:3), and, symbolically, by washing their feet (13:10). The NT applies the metaphor of the sin offering to the work of Christ, whose blood cleanses from all sin (I John 1:7) and who gives himself for the church and cleanses her by water and the word (Eph. 5:25-26). OT cleansing agents typologically foreshadow the water of Christian baptism (Eph. 5:25-26). The Letter to the Hebrews, the most priestly of NT writings, condemns OT rituals as inadequate because they had to be continuously repeated (Heb. 10:2), and declares that Christ, the perfect High Priest, sprinkles the heart clean from an evil conscience and washes the body with pure water (vss. 21-22).

L. E. TOOMBS

CLEMENT klĕm′ənt [Κλήμης] (Phil. 4:3). An individual living in Philippi; one of Paul's fellow workers (συνεργοί) in the establishment of this first Pauline church in Europe. Clement is here distinguished as one whose name is written "in the book of life," while the others whose names are so written are referred to as "the rest"; so Clement occupied a place of special esteem in Paul's memory of his days in Philippi. Perhaps this mode of mentioning Clement indicates that he was no longer living. The context in which Clement is mentioned shows that he—living or not—would be a favorable factor in the efforts to which Paul was exhorting his "true yokefellow" to bring about a Christian reconciliation between Euodia and Syntyche, two women of Philippi, who had worked with Paul and Clement and the rest in the establishment of the Philippian church.

Attempts to identify this individual with Clement of Rome (*see* CLEMENT, EPISTLE OF) fail for lack of evidence that this Clement ever went to Rome, and because of the chronological difficulty in thinking that this Clement—already quite mature, or possibly dead—could have lived until the end of the first century, when Clement of Rome was active. Also, the name is so common that identifications are precarious unless supported by evidence other than the name.

J. M. NORRIS

***CLEMENT, EPISTLES OF.** Two documents, the first a letter, the second a homily, attributed since the second century to Clement, reputed disciple of Peter and third Bishop of Rome; appended to the NT in Codex A; included in all modern editions of the APOSTOLIC FATHERS. I Clement has a good claim to authenticity. An extant Latin translation of it, made in the second century, is probably the oldest surviving piece of Latin Christian literature. There is also a Syriac version. The reason for the attachment of Clement's name to the homily known as II Clement, however, is, to date, an unsolved problem. The two documents have no inherent connection and will therefore be treated separately.

1. I Clement. This is an official communication of the church in Rome, dispatched with an embassy of three of its senior members, to the church in Corinth. The occasion of this missive was the deep concern at Rome over a factional dispute in Corinth created when certain younger members of the church there succeeded in deposing from the ministry elder men of the hierarchy, for reasons—whether theological or personal, but in any case not moral—that are not clearly indicated. The Roman church took strong exception to this deposition as an affront to the revealed will of God for the orders of ministry in the church, and to the arrangements made by the apostles before their death for a due succession of ordained men as bearers of their authority. The letter is thus of great importance for the development in the church of the threefold orders of bishops, elders, and deacons, and for the emergence of a theory of apostolic succession in the ministry. *See* MINISTRY, CHRISTIAN.

The situation at Corinth is utilized by the author as an opportunity to impart, with utmost gravity and dignity, a considerable amount of exhortation to the Christian virtues of faith, compassion, humility, self-control, and hospitality; and warnings against the unseemly vices of factiousness, jealousy, envy, double-mindedness, and pride. Christian ethic and piety are grounded in the beneficent creation and providential activity of God, and in the distinguished examples of

humble and steadfast endurance of holy men and women in all ages. Among the noted witnesses of "recent" times, the author refers (ch. 5) to the patient endurance of martyrdom, because of jealousy and envy and strife, of the "good apostles" Peter and Paul.

The writer of I Clement has an excellent command of the LXX Version of the OT, and cites from all parts of it, copiously and, when it suits him, with considerable textual liberties. Three apocryphal passages (17:6; 23:3; 46:2) are cited as scripture, but remain otherwise unknown. He also uses Christian sources, though they are never advanced with the scriptural authority of the OT. He recalls sayings of Jesus (13:2; 46:8—similar to but not textually identical with any canonical gospel). He knows and quotes Paul's letters, especially Romans, I Corinthians, and Ephesians (ch. 49 is a hymn to "love" modeled upon I Cor. 13). He is also quite conversant with the Letter to the Hebrews. Chs. 59–61 contain a remarkably fine example of early Christian liturgical prayer of supplication, easily identifiable as a form that ultimately stems from the Jewish synagogue of the Dispersion. Many critics believe that chs. 33–34 also reflect a liturgical preface and *Sanctus* adapted from the synagogue.

Clement's style betrays marked influence from the rhetoric of the Hellenistic diatribe, and his vocabulary shows acquaintance with Stoic, and to a lesser degree Platonic, terms. Church tradition has identified the author with the Clement mentioned in Phil. 4:3, as also with the Clement spoken of by Hermas (*Visions* II.4.3). His name strongly suggests that he was related in some way with the household of the imperial Flavian Dynasty. The ancient basilica of San Clemente, one of the oldest parish churches of Rome, is thought by many archaeologists to stand on the site of his home.

The chronological limits for the writing of I Clement are set by its use of NT documents such as Hebrews and Ephesians, on the one hand, and by the extensive influence of the letter manifest in the Epistle of Polycarp (*see* POLYCARP, EPISTLE OF). But a reference to recent persecution at Rome in 1:1 has persuaded almost all critics that I Clement was composed in A.D. 95 or 96, shortly following the persecution associated with DOMITIAN.

2. II Clement. This homily was preached to Gentile converts following a lesson read from Isa. 54:1 ff (cf. 2:1; 17:3; 19:1). It deals principally with ethical themes—repentance, self-control, and watchfulness in view of the coming judgment. The principal theological interest of the homily is the speculation in ch. 14 concerning the spiritual church, pre-existent before creation.

In 2:4, the preacher cites Matt. 9:13 as scripture; and he also shows acquaintance with Luke, the Pauline letters, Hebrews, and possibly I Peter. Several noncanonical gospel sayings are employed, one of them derived from the apocryphal Gospel According to the Egyptians. There is likewise an unknown "prophetic word" quoted in 11:2 ff, which was also used in I Clem. 23:3, and which bears some relation to the apocryphon cited by Paul in I Cor. 2:9.

These indications suggest a date for the homily sometime toward the middle of the second century. As a place of origin, Rome, Corinth, and Alexandria have all had their advocates. It is possible that Irenaeus (Her. IV.3.2) shows acquaintance with II Clement, alongside his summary of I Clement.

CLEOPAS klē′ə pəs [Κλεοπᾶς, *probably a shortened form of* Κλεόπατρος]. One of the two disciples who were confronted by the risen Jesus on the road to Emmaus (Luke 24:18). The other is not named. Tradition gives the name Simon to the companion and includes both among the Seventy of Luke 10:1-24. Cleopas is sometimes identified with CLOPAS. The connection is not impossible, but in the absence of clear supporting evidence it must remain uncertain.

H. H. PLATZ

CLEOPATRA klē′ə pā′trə, —pă′trə [Κλεοπάτρα]. The name given to the queens of Egypt in the Ptolemaic Dynasty, four Ptolemies having had wives by that name. The Cleopatra of Add. Esth. 11:1 is thought to have been the wife of Philometor (181-146 B.C.). To them was brought the translated letter concerning Purim. Onias, son of the high priest of that name, when he saw the wicked Alcimus installed in the high priesthood, fled to Ptolemy Philometor, "king of Egypt; and when he found he was in great esteem with him, and with his wife Cleopatra, he desired and obtained a place in the Nomus of Heliopolis, wherein he built a temple like to that in Jerusalem" (Jos. Antiq. XII.x.7). It was the citation by Onias of the prophecy in Isa. 29:19 which won over Cleopatra and her husband (Jos. Antiq. XIII.iii.1).

The Cleopatra of I Macc. 10:57-58 is thought to have been the daughter of the above. The younger Cleopatra was given in marriage to Alexander Balas after he had taken the kingdom of Syria, following the slaying of Demetrius. Her father "celebrated her wedding at Ptolemais with great pomp, as kings do" (I Macc. 10:58; Jos. Antiq. XIII.iv.1). Some consider that Ps. 45 was either written or edited as an epithalamium on this occasion. Hearing later that Alexander was involved in a plot on his life, "Ptolemy blamed himself for having given his daugh-

ter in marriage to Alexander, and for the league he had made with him to assist him against Demetrius; so he dissolved his relationship to him, and took his daughter away from him" (Jos. Antiq. XIII.iv.7), and gave her to Demetrius. J. C. SWAIM

CLEOPHAS. KJV form of CLOPAS.

CLERK, TOWN. *See* TOWN CLERK.

CLOAK; KJV CLOKE. The translation of several words referring to outer garments. *See* DRESS AND ORNAMENTS § A1.

CLOPAS klō′pəs [Κλωπᾶς; *cf.* Palmyrian קלופא] (John 19:25); KJV CLEOPHAS klē′ə fəs. The husband (or son or father) of one of the women who stood at the foot of the cross. No certain reference to him appears elsewhere in the NT, though he is sometimes identified with CLEOPAS and/or ALPHAEUS. There is no linguistic relationship between "Cleopas," a genuine Greek name, and "Clopas," which seems to be of Semitic origin. Grammarians recognize that the names may commonly have been interchanged, but this is hardly sufficient grounds for assuming personal identity. There is no indication that the Clopas named in John 19:25 was also known as Cleopas or that the names have been interchanged in the transmission of the text. The connection with Alphaeus can be established only if MARY the wife of Clopas is the same person as Mary the mother of James and Joses (Mark 15:40=Matt. 27:56; cf. Luke 23:49; 24:10), and if the James mentioned here is the same as JAMES (2) son of Alphaeus (Mark 3:18=Matt. 10:3=Luke 6:15; Acts 1:13). Mary the wife of Clopas may thus be recognized as the wife of Alphaeus, and it is possible to suppose that Alphaeus and Clopas are the same person. Since other alternatives are present in each of the preliminary suppositions, as well as in the final identification, the question must remain undecided. "Clopas" can hardly be explained as a variant transliteration of חלפי, the Aramaic or Hebrew form from which "Alphaeus" is derived.

Efforts to connect Clopas, and therefore Alphaeus and his sons, with the family of Jesus, are based on the inference that only three women are named in John 19:25 (cf. Mark 15:40=Matt. 27:56). Mary the wife of Clopas must then be identified as the sister of Jesus' mother. The text permits such an identification, but it certainly does not require it. In this connection it is interesting to note that Hegessipus mentions a brother of Joseph whose name was Clopas (Euseb. Hist. III.11; 32.1-4, 6; IV.22.4).

CLOSET [חדר (Judg. 3:24; KJV CHAMBER); KJV חפה (Joel 2:16; RSV "chamber"); KJV ταμεῖον (RSV "room" *in* Matt. 6:6; "private room" *in* Luke 12:3)]. *See* CHAMBER; ROOM.

CLOTH. Because fabrics disintegrate in wet climates, not many of those made in Bible times have survived in Palestine, and the Bible references to fabrics give us a very hazy notion of what was made and almost no idea of how it was made. E.g., in Gen. 37:3 we find the vague phrase "long robe with sleeves" (KJV "coat of many colors"; cf. II Sam. 13:18-19).

John 19:23, speaking of Jesus' robe, reads: "His tunic was without seam, woven from top to bottom." Exod. 28:32, referring to a priest's robe, is not much more definite, but it does suggest that there was a customary way of making an opening for the head: "It shall have in it an opening for the head, with a woven binding around the opening, like the opening in a garment, that it may not be torn."

Exod. 26:2 gives us some exact dimensions of the curtains for the tabernacle: "The length of each curtain shall be twenty-eight cubits, and the breadth of each curtain four cubits" (*ca.* six feet). Vs. 8 mentions a length of thirty cubits but the same four cubits' width. This suggests that four cubits or *ca.* six feet was a standard width for curtains, though apparently they could be any length. The materials to be used in the fabrics for the tabernacle were fine twined linen, blue and purple and scarlet stuff, and goats' hair. The directions call for cherubim to be skilfully worked on the inner curtains and the veil, and for the screens for the door of the tent and for the gate of the court to be embroidered with needlework.

For the holy garments (Exod. 28:5) gold was added to the other materials. The coat was to be woven of checker work. There are no specific directions as to how to spin, how to weave, what type of loom to use, or the shape of the garments.

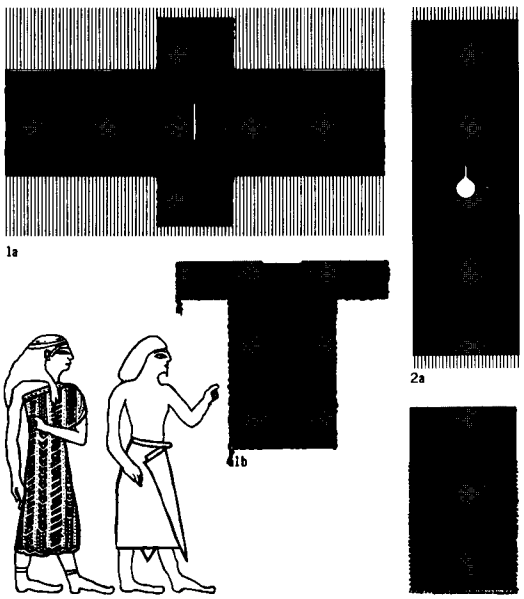
Bibliography



1. Archaeological specimens. Although few textiles have been preserved in Palestine, many are found in the dry climate of Egypt; and, as textiles are easy to carry either by boat or by camel, some may have come from Palestine. There are specimens six feet wide, as well as narrow tapes. There are textiles made of linen and textiles made of wool. Plain and patterned specimens have been found of both. The method of WEAVING was uniformly simple and therefore did not require mention, but the workmanship was in many cases extraordinary. However, we see at a glance that these specimens by themselves will not answer all our questions, for the colors do not confine themselves to the "blue and purple and scarlet" of the Bible, but cover the whole spectrum (cf. the "many-colored robes" in Ps. 45:14). There is little that seems to us like embroidery at first sight. But by studying the fabrics and ancient texts together

we may be able to reconstruct much of the technology of the period and bring to light once more many points which were common knowledge in a nomadic society and so were referred to by formula instead of being described in detail. As natural phenomena and weaving habits are almost entirely unknown or forgotten in our modern urban economy, we do not understand the Bible texts. To rediscover the fascinating set of circumstances contributing to the evolution of man-made fabrics, let us start with the four fibers most used in making cloth.

2. Vegetable fibers. Flax and cotton are vegetable fibers. The people who cultivated them had to stay in one place long enough to sow and reap. They were luxuries in lands where the economy was based on flocks and herds. Conversely, sedentary people who grew crops were not so well supplied as shepherd folk with hides and leather from which to make clothing and shelter. Consequently, in all parts of the world it seems to have been the vegetable fibers which were first spun in order to make continuous yarns for weaving.

a. Spinning. In fact, it was probably the vegetable fibers themselves which suggested the idea of spinning to man, for when vegetable fibers are wet, they turn as they dry. Flax turns in the direction of the center part of the letter "S"; cotton turns quite actively in all directions but apparently rather more in the "Z" direction than in the "S." Flax was a medium-length fiber—12 to 20 inches—but the cotton in Bible lands was very short, 1¼ inches at most. Flax, therefore, was the easier fiber to spin, and the spinning in Egypt, where it was the principal fiber, followed the lead of the flax itself and turned in the "S" direction. This method of spinning reached the boundaries of Egypt's influence. Cotton from India, where it seems to have originated, was Z-spun, and this method traveled W over the trade routes. Vegetable fibers have been spun since the Stone Age, when sheepskins were being used whole and felt was made with the wool shed by sheep and goats. Wool began to be spun in the Bronze Age, but the practice became much more common in the Iron Age, when the invention of shears made it possible to shear sheep instead of plucking the wool. By this time both vegetable spinning crafts were well established, and either or both were adopted by people with wool to spin, since animal fibers have no innate preference as to direction of spin. By Bible times spinning was traditional and did not warrant description. (It may be said here parenthetically that when linen yarns are found Z-spun, they are mostly of superior quality, and we know that we have to do with a spinner trained on cotton, who could hardly fail to make good thread with a fiber ten times as long and much less active, even when he spun it the way it did not want to go. There is no evidence to show that linen spinners spun cotton, though wool spinners did so on occasion.)

b. Location and preparation. Flax grew abundantly in Egypt. The Pharaohs gave garments of fine linen* as presents, together with gold and jewels (Gen. 41:42). The chief characteristic of Egyptian linen was its softness and pliability. Clothes made of it were comfortable to wear, and sails did not cut themselves in a gale (cf. the fine embroidered linen from Egypt used in the ship's sails in Ezek. 27:7). This pliability seems to have been produced by steeping or retting the flax in running water to decompose the woody parts of the stem and liberate the linen fibers; flax laid out on the roofs to be retted by the dew (Josh. 2:6)—Rahab's method in Jericho—produced fibers which were stiff and brittle. Some flax grew in Palestine, the linen of Galilee being likened to Egyptian linen, but most of the export linens other than the Egyptian came from Syrian towns. Solomon sent to Tyre for a man trained to work in fine linen (II Chr. 2:13-14). Greek historians tell us that the flax industry was very old in ancient Mesopotamia, and the Bible mentions cotton fabrics in Assyria. The cotton tree was introduced into Assyria *ca.* 700 B.C. by King Sennacherib, and over two centuries later we find "cotton curtains," both white and blue (Esth. 1:6), at the king's palace in Susa, with linen and wool being used for the cords. Cotton grew in many lands, but it seems to have been spun only in countries with a damp or humid climate, which helped keep the short fibers together during the process. Isa. 19:9 probably refers to Upper Egypt or the Sudan, where cotton was indigenous. The climate of Lower Egypt seems to have been too dry to allow cotton to be spun there. Fig. CLO 36, nos. 2*a-b*.

From *Workshop Notes*, no. 18 (The Textile Museum, Washington, D.C.); by permission of Louisa Bellinger

36. 1*a-b*) Tunic "without seam, woven from top to bottom" (John 19:23), with neck opening and sleeves; (2*a-b*) Egyptian gown of Dynastic times, of plain linen with a hole for the head in the middle of the weave; (3) Asiatic garment with arms bare and scallop at the bottom; (4) Egyptian plain white kilts, uniform in width

c. Colors. In earlier Bible times, as in the Roman period, linen and cotton were used undyed, with certain exceptions. Cotton could be dyed or printed with indigo (Esth. 1:6); linen was harder to dye, but occasional blue threads either in warp or in weft do decorate some otherwise plain linen fabrics such as

were found in the Scroll Caves and at Dura-Europos on the Euphrates. That the robe of the ephod (Exod. 28:31) was to be made all of blue shows how very special it was.

3. Animal fibers. Silk and wool are the two animal fibers most used for fabrics. Silk at our period was still largely confined to the Far East. The economy of Bible lands, except for Egypt, was based on wool. Sheep and goats were raised in many places, but few people nowadays stop to think what fodder and climate do to wool.

a. Effect of climate and fodder on wool. Sheep raised at high altitudes grow a special undercoat of fine wool to keep them warm. Those raised at sea level may not grow this undercoat, because they do not need it. According to Matthews (*Textile Fibers*) the wool in Egypt today is coarse and medium long, in Syria long and very resilient, in Asia Minor long and medium fine. This agrees with the archaeological specimens. Wool in Asia Minor is clear white; in the Caucasus and Upper Mesopotamia it contains a series of colors from clear white through yellow, tan, and chocolate brown, to dark brown. Thus we see that even today food and climate seem to produce the same basic results as they did in the time of the patriarchs, for though Laban removed "every speckled and spotted sheep and every black lamb, and the spotted and speckled among the goats" (Gen. 30:32-34), Jacob seems to have had little difficulty breeding speckled and spotted sheep and black lambs at Paddan-aram. In Anatolia he might not have managed it.

b. Colors and dyeing centers. This story points up the fact that there were many natural colors in wool which could be separated or used together. It seems also to have been customary to dye animal fibers. Therefore, any color mentioned in the Bible except blue, which was used sparingly on cotton or linen also, connoted wool. The reiteration of "blue and purple and scarlet stuff" in such places as Exod. 26:1 sounds as if these were the only three colors available. However, indigo dyed on white wool could give a light or medium dark blue; if dyed on gray wool, it would be darker still; on yellow wool it produced green. Madder or kermes on white would give red or pink; on yellow, orange; on gray, garnet. In fact, with a blue dye and a red dye and the natural colors in wool itself, the weaver had at his disposal a complete palette. By dyeing first with blue and then with red he could even approximate the Tyrian purple, which was such an expensive color. The habit of dyeing wool before spinning gave yet another method of achieving gradation of color, for wools of various natural shades or dye lots were often spun together to make a desired effect. In Palestine dyers were concentrated in certain towns. There was the "Magdala of the dyers" on the River Jarmuk. At Tell Beit Mirsim, Albright identified a house containing stone vats and weights as a dyers' workshop. Similar vats were found at Gezer, which in Hellenistic times and probably earlier too was an important dyeing center, as were also the "town of byssus" Beth-Asbea and Luz, a center for blue stuffs.

4. Looms. Three kinds of looms were in common use in Bible times. Of the two types of vertical looms Herodotus tells us that the Egyptians were the only people to use their loom, while all other peoples used the Greek type. Palestine, therefore, probably used the types discussed in §§ 4*b-c below*.

a. Egyptian vertical. The Egyptian loom had two beams, a warp beam at the top and the cloth beam at the bottom. Two weavers stood, one on each side of the loom, and passed the shuttle back and forth through alternating sheds, beating the weft down. The fabrics made on this loom were sturdy, for

37. Egyptian wall painting of the Twelfth Dynasty, showing women weaving and spinning

gravity helped pack the wefts in tightly. As linen was a strong, sleek fiber, the Egyptians set their warps close together and put in a lesser number of wefts. Fig. CLO 37.

b. Greek vertical. The Greek loom used extensively for weaving wool had the cloth beam at the top and loom weights on the bottom of the warps. The weaver stood in front of this loom and beat the weft upward. Wide fabrics could be made, since the weaver was mobile. A whole shed was not opened at once on this loom. The wefts were darned or embroidered past five or six warps at a time, and this section was beaten up before the next section was put in. Near Eastern wool was springy and had many scales which caught at and clung to anything they touched. Consequently, wool warps were spaced and were usually entirely covered by the wefts, which were beaten up close to make compact fabrics. The weaving process was slow, but the fact that the weft traveled short distances at a time led to the weaving of color patterns, for it was as easy to substitute a new color for a space as to continue the old one.

c. Horizontal.* This loom was an easy type for nomadic peoples to carry with them. It consisted of two beams held in place by four pegs driven into the ground. The weaver sat in front of the loom, which was generally narrower than those in §§ 4*a-b above*. Since a whole shed was opened at once for the weft, the width had to be confined to the reach of the weaver's arms, or in some cases, to the reach of two weavers sitting side by side. This was obviously the loom mentioned in Judg. 16:13-14, which Delilah used when weaving the seven locks of Samson's head into her web; otherwise Samson would have had to sit up while sleeping. Both wool and linen were woven on this loom, and it was probably the loom on which linen weavers first tried weaving wool patterns into linen webs. Because linen yarns were so much finer than most wool, several linen warps had to be grouped together to approximate

Courtesy of the Metropolitan Museum of Art; anonymous gift, 1930

38. Egyptian model of a weaving shop with horizontal loom, found near Girgeh, Upper Egypt, Twelfth Dynasty (1990-1780 B.C.)

the size and spacing of wool warps, or the pattern would not lie flat. Unless a linen weaver wove a pattern band across the whole web, he was plagued with the question of how to connect the pattern and background areas, for he threw his linen weft across the web in an open shed, but the pattern weft inched its way along, being embroidered on the grouped warps. Narrow tapes were woven on this loom, as well as wider fabrics. Fig. CLO 38.

5. Weaving customs. The specifications for the curtains for the tabernacle (Exod. 26:1-2, 7-8) show us that four cubits or six feet was a standard width for both linen and wool materials; the length was limited only by the amount of warp the weaver put on the loom.

a. Long warp. It is much easier to put a long warp on a loom than to thread the loom several times. This seems to have been the custom in Palestine, for the hangings for the court (Exod. 27:9) were to be 50 yards long. Their width was not given in the text, but as the height of the court was 7½ feet, 6-foot hangings were probably implied. It is customary to mention the warp material first, since the warp must be strung on the loom before weaving begins. Therefore, we assume that the inner curtains were to be linen, with inwoven wool patterns. This difficult technique seems to have been reserved for the most important place. The hangings for the court were to be plain linen, and the goats'-hair curtains for the tent were to be plain also. The veil (Exod. 26:31) and the screens for the door of the tent (vs. 36) and for the gate of the court (27:16) were to be wool, with linen probably used just to highlight the design. The veil was to be of "skilful work," and the screens were to be "embroidered."

b. Shaping of garments. Garments were woven on the same types of looms as the curtains, and a long warp would suffice for many garments. To weave a long robe with sleeves on a wide loom, the weaver would have made sure that his warp was twice as wide as the length of the gown he wished to weave. However, material was expensive and not to be wasted, so he wove the shape he wanted, as we knit a sweater. By weaving his tunic from cuff to cuff, the selvages, the strongest part of a fabric, came at the hems and at the neck opening, the two places that needed most strength. In the case of a wool robe, stripes could easily be made by changing the color of the weft, which ran up and down the tunic.

The weaver began his work on enough of the center warps to make a sleeve, leaving the warps at each side bare. These would be added when the sleeve had been woven from cuff to shoulder line, to form the length of the tunic. Across the shoulder he wove the whole width of the warp. When it was time to make the opening for the head, he would weave half the web at a time to separate back and front of the tunic, either leaving several inches of bare warp in the center to be cut away later and bound "with a woven binding around the opening" (Exod. 28:32) or weaving to adjacent warps so that no cutting was necessary. When the head opening was large enough, he wove the second shoulder across the whole warp and finished up with a sleeve to match the first one. The tunic was then cut from the loom and the raw ends finished.* The cut ends at the cuffs were either turned in and hemmed or the warp was left long enough to roll or braid into a warp cord. The free warps on the sides of the front and back panels were made into warp cords, which strengthened the sides of the tunic. In many cases these warp cords were begun at the hem, the ends being buried in the selvage of the sleeve. However, Num. 15:38 exhorts the people of Israel to make tassels on the corners of their gowns. This was done by beginning the cord at the top and leaving the ends at the bottom.* This is the way Jesus' tunic without seam was woven (John 19:23). When a tunic was woven on a narrow loom, it was made in three pieces. The center section was woven as on a wide loom, from cuff to cuff with a head slit in the middle. Two other pieces were woven wide enough for the front and back skirts. These were seamed to the top section, selvage to selvage. When a circular garment was to be woven, the weaver broadened his web a warp or two at a time instead of all at once. Fig. CLO 36, nos. 1*a-b*.

c. Pairing yarns for strength. When narrow tapes were woven which had to be strong and still should be flexible, two yarns were quite often used together instead of a single yarn of larger size. Two yarns might be used together in both warp and weft or in either. The process of weaving was the same. Wide fabrics occasionally had two warps used together at the selvage, and it was quite usual to run an extra weft up each edge of a fabric, weaving it a little way in from the edge with the regular weft. Possibly such an extra weft would have been used to make the fifty loops on the edge of the curtains (Exod. 26:10).

As with the hangings, expensive materials and methods were used for important garments. Of the holy garments, the turban and breeches were to be made of plain linen, the coat was to be blue-and-white checked linen, and the girdle was plain linen with wool patterns. The breastpiece and the ephod were to be wool with gold and linen detail.

6. Interpretation of Bible texts. Now let us see how this data will help us interpret the Bible texts. The materials available in Palestine were linen, wool, goats' hair, and gold. Linen was referred to as "fine twined linen." As there is little difference in diameter of linen fibers from various places in the Near East, the "fine" must refer to the quality and method of preparation in running water, explained in § 2*b above*. As linen was used undyed, spun yarn was called for; and the spin, being traditional, did not

have to be mentioned. Wool was mentioned as "blue and purple and scarlet (stuff)." The formula of naming the three principal dyes apparently covered colors in general. The only mention of spinning wool in connection with the tabernacle is in Exod. 35:25-26, and it is probable that those "women who had ability spun with their hands" to the specifications of the master craftsman. The mention of goats' hair raises no question. The preparation of the gold thread, explained in Exod. 39:3 because it was a rare technique, is not translated in either the KJV or the RSV quite according to what we find archaeologically. "Gold leaf was hammered out and cut into threads" (RSV); "they did beat the gold into thin plates, and cut it into wires" (KJV). Apparently, drawn wire such as that used for the filigree (vs. 16) was beaten thin and cut in strips. A hank of such gold thread, spun but without a core, was found at Dura on the Euphrates. Textiles from Palestine or Syria used the metal thread flat. Gold leaf, beaten into parchment, was used in the Far East, but has not been found in Near Eastern fabrics. The method of weaving—over one warp and under the next—was not mentioned, for it was universal. However, the type of loom on which fabrics were to be made seems to have been implied by formula. Fabrics to be made on a Greek vertical loom were to be "embroidered"; those to be made on a horizontal loom were to be "skilfully worked," the exact manner being left, apparently, to the ingenuity of the craftsman.

One question we cannot answer conclusively concerns Lev. 19:19: "Nor shall there come upon you a garment of cloth made of two kinds of stuff" (KJV adds "mingled"). The ban may have been against spinning two fibers together. At least, this was never done. If it means that two fibers may not be used in a single garment, it goes counter to the specifications for the holy garments, since the girdle calls for wool and linen, and the robe, breastpiece, and ephod call for wool, linen, and gold. Only the turban, breeches, and coat are to be made all of linen.

The most interesting question still to be answered concerns the type of garment made by Jacob for Joseph (Gen. 37:3). Unlike Ps. 45:13-14:

> The princess is decked in her chamber with
> gold-woven robes;
> in many-colored robes she is led to the king,

neither version mentions weaving. The KJV, following the LXX, reads "coat of many colors." The meaning of the last word is obscure, and another proposed rendering of the expression is "robe of pieces." In looking for the best rendering we must begin by remembering that Jacob lived in the Bronze Age, when wool still had to be plucked from the sheep. A great proportion of plucked wool was sorted, dyed, and made into felt, and the yield per sheep was small, compared with that when shears had been invented in the Iron Age. Though tablets from Ur III (*ca.* 2200-2000 B.C.) do attest to spinning and weaving of wool as a female occupation, they do not mention male weavers. Apparently wool as a fiber to be spun and woven had not come into its own, and it is now realized that the *kaunakes* which figures so prominently in Sumerian and later art, formerly thought to be tapestry weave with long pile, was originally a sheep's fleece and later often a fleece or fur mantle. Farther W the University Museum Excavations at Gordium disclose as late as the seventh century B.C. specimens of spun and woven linen of various qualities, but also felted wool, a few pieces with inlaid felt pattern and a piece or two with flocks of wool sewed to the felt. There is also fine tanned leather set with designs of large and small metal studs. At Naqada in Egypt, Petrie has found specimens with Old Kingdom dates, of painted leather with zigzag and herringbone patterns similar to the patterns on the garments of an Asiatic family—roughly contemporary with Abraham—shown in a wall painting in the tomb of a noble at Beni-hasan, together with scribes dressed in Egyptian kilts (Fig. JOS 29). A study of this mural shows that the Egyptian kilts are evidently made of oblong pieces of plain linen cloth draped around the wearer.* When the upper corner of the kilt falls below the belt line, the lower corner also falls below the straight line of the hem. The fabric is obviously uniform in width. The Asiatic garments, on the other hand, are scalloped at the hem and bias at the top, so that one shoulder and both arms are left bare.* In a part of the world where the pattern was made by the weft, there was no way to weave such garments, for if the color changes are to lie weft-ways, the weaver would have had to scallop one selvage while making the other bias. A bias edge can be made on a two-beam loom, but a scalloped one cannot. These garments all show a binding at the neck opening and also at the hem, like that mentioned in Exod. 28:32. However, because of their shape (which applies also to the Syrians depicted in the tile decoration from the palace of Ramses III, who have long robes with sleeves), it seems more likely that these garments were made of leather or wool felt than that they were woven. This supposition is strengthened by the costumes shown on the Megiddo ivories dating *ca.* 1200 B.C., after the Exodus, which have straight bands of decoration and are made in shapes easy to weave—shapes which are found in many places. Therefore, unless further archaeological evidence changes the picture, it seems logical to assume that Jacob made Joseph a garment of leathers or wool felt, with a woven binding to keep it from tearing (Exod. 28:32). For the painted garments in the Egyptian murals, whether long robes with sleeves or short robes without sleeves, do agree both with the KJV (LXX) interpretation, "coat of many colors," and with the alternate suggested translation of the Hebrew, "robe made of pieces." The same kind of garment (*k*^{e}*thoneth happassim;* RSV "long robe with sleeves"; KJV "garment of divers colors") was worn by Tamar, David's daughter, and we are told that "thus were the virgin daughters of the king clad of old" (II Sam. 13:18). *See* JOSEPH § 2*b*. Fig. CLO 36, nos. 4, 3.

The questions we have been able to answer make it clear that Bible references to textiles and garments alike were meant for a civilization well acquainted with all weaving and tailoring processes and therefore, habitually, point to a technique or custom without explaining it.

Bibliography. E. Riefstahl, *Patterned Textiles in Pharaonic Egypt* (1944): a well-illustrated study gathering together much

information. R. Pfister and L. Bellinger, *The Excavations at Dura-Europos, Final Report IV, Part II, the Textiles* (1945): five color plates which give an idea of the colors available in wool before A.D. 256; the gold thread and blue bands in a linen fabric are also illustrated. Forbes, *Studies in Ancient Technology,* vol. IV (1956): the most comprehensive modern work written in English on fibers, fabrics, and dyeing in antiquity; however, it contains much information not applicable to the Near East.

L. BELLINGER

***CLOUD** [ענן, cloud, cloudiness, mist; עב, a particular cloud, rain cloud; נשיא, towering cloud; ערפל, murky cloud; νέφος, νεφέλη, cloud, cloudiness, mist]. The "pillar of cloud" (Exod. 13:21) is composed of ענן, as is the rain cloud (Exod. 19:9; Job 26:8). The ענן covering the tabernacle (Exod. 40:36-37) was not a defined, individual cloud, but morning mist or a cloudy sky. The ענן and darkness (חשך) between the Egyptians and the Israelites at the Red Sea (Exod. 14:20) was probably the dust storm of a sirocco or EAST WIND. For "cloud" as a visible token of Yahweh's presence, cf. Exod. 16:10; 20:21; Lev. 16:2; I Kings 8:10; Ezek. 10:4; Matt. 17:5. "To come with clouds" (Rev. 1:7) is to come as the instrument of divine judgment, since Mark 13:26 is dependent on Dan. 7:13, which in turn is derived from Jer. 4:13, with its unique plural of ענן.

See also PALESTINE, CLIMATE OF; GLORY; TABERNACLE; SON OF MAN. R. B. Y. SCOTT

CLOUD, PILLAR OF. *See* PILLAR OF CLOUD AND FIRE.

CLUB. A weapon. The following words are translated "club":

a) תותח (Job 41:29—H 41:21; LXX σφυρά, "hammer, mallet"; KJV "dart"). Since this word is parallel to כידון, "javelin," it must be a weapon of some sort. Since the Arabic cognate *wataḥa* means "to beat with a stick," "club" is probably a better rendering than "dart."

b) מפץ (Prov. 25:18). The Hebrew text has מפיץ, "scatterer," but "war club" (KJV "maul"), following the LXX ῥόπαλον, fits the context. See also Jer. 51:20, where מפץ, "hammer" (KJV "battle-axe"), along with "weapon of war," describes the Medes as the Lord's instrument.

c) Ξύλον. The kind of instrument which, along with swords, was carried by the crowd that came with Judas to Gethsemane to seize Jesus (Matt. 26:47, 55; Mark 14:43, 48; Luke 22:52).

J. W. WEVERS

***CNIDUS** nī'dəs [ἡ Κνίδος] (Acts 27:7). A Greek city on the coast of SW Asia Minor.

Cnidus was a city of some renown in antiquity. Colonized by Dorian Greeks, it lay in territory which had even attracted prehistoric settlers from the Aegean area. The promontory of Cnidus is the southernmost on the coast of Caria. Its length is *ca.* forty miles from W to E, consisting of rugged mountains to the E, and separated by an isthmus, some fertile territory in coastal plains to the W. Ancient Cnidus probably lay at the central isthmus near Burgaz-Datça (the modern port of call) originally, and was moved to the site near Tekir on the W tip of the peninsula in the fourth century B.C. This Hellenistic Cnidus had two harbors (Strabo XIV. 656), a regularly planned town, many sanctuaries, and famous fourth-century Greek sculpture (e.g., the Aphrodite of Praxiteles). The site was explored in the nineteenth century.

The sailing beyond the S coast of the Cnidian Peninsula is often endangered by northerly winds, as Paul experienced on his voyage from Lycia westward.

Bibliography. G. E. Bean and J. M. Cook, "The Cnidia," *Annual of the British School at Athens,* XLVII (1952), 171-212.

M. J. MELLINK

COAL, COALS [גחל, *gaḥal, geḥāl, used only in plural;* גחלת (II Sam. 14:7; Isa. 44:19); פחם (Ps. 11:6; Isa. 44:12; 54:16; Prov. 26:21 KJV [RSV "charcoal"]); רצפה, a hot stone or coal (I Kings 19:6; Isa. 6:6); KJV שחור (RSV "soot"); ἄνθραξ (Rom. 12:20), ἀνθρακία (John 18:18; 21:9; RSV "charcoal")]. True mineral coal has not been found in Palestine, whose geological formation is too recent. Biblical references are not to mineral coal, but to charcoal. Charcoal was used for heating (Isa. 47:14; John 18:18) and cooking (Isa. 44:19; John 21:9), and by the blacksmith (Isa. 44:12).

Ps. 120:4 refers to coals of the broom tree (KJV "juniper"). W. G. WILLIAMS

COAST. A KJV archaism for "border" or "boundary." The RSV uses variously "country"; "territory"; "region"; "boundary"; "border," and, when the context fits, "coast" (i.e., Num. 34:6; Josh. 9:1; Judg. 5:17; Acts 27:2; cf. also Isa. 23:2, 6: אי, usually "coastlands").

COAT. 1. כתנת. Alternately: ROBE; GARMENT. A long, shirtlike inner garment, usually of linen, sleeveless or sleeved, worn under the outer garment (מעיל). The RSV restricts the term to the undergarment of priests, except in II Sam. 15:32, but the KJV uses it more frequently. *See* DRESS AND ORNAMENTS § A2. On כתנת פסים ("long robe with sleeves"; KJV "coat of many colors"), *see* CLOTH § 6.

2. KJV translation of מעיל. *See* DRESS AND ORNAMENTS § A2.

3. שריון. *See* COAT OF MAIL.

4. סריון. *See* COAT OF MAIL.

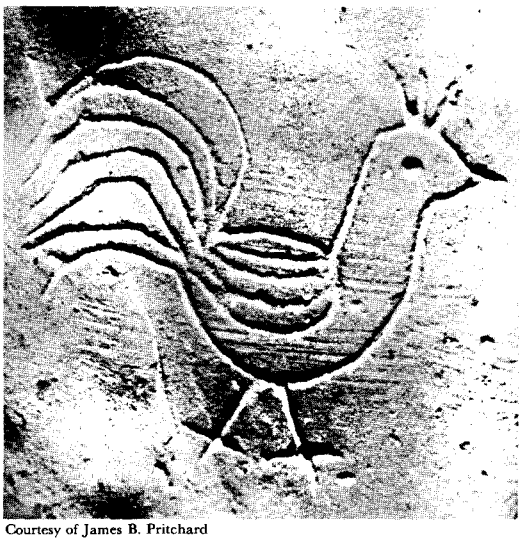
5. מד (Ps. 109:18). A garment.

6. KJV translation of סרבל. *See* MANTLE 10.

7. Χιτών. The inner garment worn next to the skin; distinct from the ἱμάτιον, which is the outer garment. *See* DRESS AND ORNAMENTS § A2.

8. KJV translation of ἐπενδύτης (John 21:7; RSV "clothes"), a general term for wearing apparel.

J. M. MYERS



COAT OF MAIL [שריון קשקשים, שריון]. A protective cuirass worn from the neck to the girdle, probably formed of two pieces of leather joined below the arms.

Goliath wore such a coat covered with bronze scales (קשקשים; I Sam. 17:5), the weight of which is

reported to have been five thousand shekels (*see* SHEKEL). David refused to wear Saul's coat of mail (שִׁרְיוֹן; vs. 38), because of its weight. The armored skin of the Leviathan is described as a double coat of mail (Job 41:13—H 41:5, with emendation after the LXX). For "coat of mail" as part of armament, see also II Chr. 26:14; Neh. 4:16; Jer. 46:4; 51:3.

COCK [זַרְזִיר (KJV *translates* זַרְזִיר מָתְנַיִם GREYHOUND); *cf.* Jewish Aram. זַרְזִיר, wrestler, antagonist, starling; Syr. *zarzīrā*, starling (*so also* Arab.); ἀλέκτωρ, *a poetic form of* ἀλεκτρυών, cock; *cf.* ἀλεξητήρ, protector, *from* ἀλέξω, to ward off, defend]; COCKCROW [ἀλεκτοροφωνία]. The male of the common domestic FOWL, as of various other birds. Figs. COC 39; JAA 1.

Courtesy of James B. Pritchard

39. Cock on a sherd of a cooking pot, found in the excavations at Gibeon

On the Jewish prohibition against the rearing of fowl (cocks) in Jerusalem, see B.K. 7.7. The Hebrew phrase in Prov. 30:31: "זַרְזִיר of loins," is obscure (RSV "the strutting cock"; KJV "greyhound"); Jewish Aramaic suggests "the powerful wrestler."

In Mark 13:35 the third watch of the night (approximately 12:00-3:00 A.M.) is "cockcrow"; this reflects the Roman custom of dividing the night into four watches (for three watches, which was the Jewish practice, see Jos. War V.ii.510). All the other NT references to "cock" are associated with its crowing at Peter's denial of Jesus (Matt. 26:34, etc.).

W. S. MCCULLOUGH

COCKATRICE. KJV translation of צֶפַע (Isa. 14:29; RSV "adder") and צִפְעוֹנִי (Isa. 11:8; 59:5; Jer. 8:15; RSV "adder"). A fabulous reptile alleged to be hatched by a serpent from a cock's egg, and having the power to kill by its glance (cf. Pliny's reference to the "basilisks" found in Cyrene, in Nat. Hist. VIII.33). In KJV usage the cockatrice is merely a venomous serpent. W. S. MCCULLOUGH

COCKLE. KJV translation of בָּאְשָׁה (RSV "foul weed") in Job 31:40. *See* WEEDS 1.

CODE. A term used for various collections of OT legal materials. *See* LAW IN THE OT; COVENANT, BOOK OF THE; PENTATEUCH.

CODEX. The earliest book form. Derived from Latin *codex* or *caudex*, "tree trunk," the term came to be used for wooden leaves or tablets (*see* TABLET), and eventually for books consisting of leaves laid on one another. Finally, sheets of papyrus or vellum were folded and bound together. *See* WRITING AND WRITING MATERIALS. R. J. WILLIAMS

COELE-SYRIA sē'lĭ sĭr'ĭ ə [Κοίλη Συρία, hollow Syria]; KJV CELOSYRIA sē'lō sĭr'ĭ ə. The Greek name of the region between the Lebanon and the Anti-lebanon mountains; modern Beqa'. During the Hellenistic period the name was also used more broadly of all Palestine and Phoenicia, which under the successive rule of the Ptolemies and the Seleucids was considered a single province under a single governor (Polybius V.87.6), perhaps corresponding to the former Persian province W of the Euphrates. Polybius (V.80) includes the Philistine coast, and Jerusalem seems to be considered one of its cities in II Macc. 3:5-8 (cf. Jos. Antiq. XIV.iv.5: "Coele-Syria as far as the river Euphrates and Egypt"). The name is also used of S Syria apart from Phoenicia (I Esd. 2:17, 24, 27; 4:48; etc.; I Macc. 10:69; II Macc. 4:4). When Herod in 47 B.C. was given military supervision over it by the Romans, it designated all the land E of the Jordan, as distinguished from Judea, Samaria, and Galilee (Jos. Antiq. XIV.ix.5; War I.x.8; cf. Pliny Nat. Hist. V.9). In Jesus' day, Coele-Syria thus included the tetrarchy of PHILIP (5), together with the land S of the Yarmuk to the Jabbok (Jos. Antiq. XIII.xiii.3).

COFFER. KJV form of BOX in I Sam. 6:8, 11, 15.

COFFIN. *See* BURIAL.

COHORT [σπεῖρα] (Acts 10:1; 21:31; 27:1); KJV BAND. Alternately: BATTALION (Matt. 27:27 = Mark 15:16); BAND (John 18:3, 12); KJV BAND. One tenth of a LEGION. The paper strength of a cohort was six hundred men. However, the troops stationed in Palestine were not legionaries but auxiliaries; auxiliary cohorts had a paper strength of 760 infantry and 240 cavalry. Such cohorts, composed chiefly of local units, were usually posted on the frontiers in small forts, four to eight acres in area, each holding one cohort. Agrippa I, at his death in A.D. 44, left five cohorts and one *ala* ("wing" = "squadron") in Caesarea; the *ala* consisted mainly of cavalry (Jos. Antiq. XIX.ix.2; War III.iv.2). The cohort in Jerusalem was stationed in the fortress of Antonia, N of the temple (Jos. War V.v.8).

F. D. GEALY

COIN. *See* MONEY.

COLA. KJV form of KOLA.

COL-HOZEH kŏl hō′zə [כל־חוזה, every seer] (Neh. 3:15; 11:5). Apparently the eponym of a clan of Judah; mentioned in postexilic lists of names.

Bibliography. M. Noth, *Die israelitischen Personennamen* (1928), p. 248.

COLIUS. KJV Apoc. form of KELAIAH.

COLLAR. 1. פה (Job 30:18; Ps. 133:2 [KJV SKIRTS]). On the basis of Exod. 28:32, obviously the opening for the head, and in no sense an ornament, of a garment.

2. ענק (Judg. 8:26); KJV CHAIN. A decorative ornament, with pendants, which hung around the necks of the camels of the Midianites. The word also occurs in Prov. 1:9; Song of S. 4:9 ("pendant"; "necklace"; KJV "chain").

3. צינק (Jer. 29:26); KJV STOCKS. A pillory into which a person's head was placed.

4. In Ps. 105:18 "in iron" is interpreted "in a collar of iron," in the context referring to "neck" (נפש). J. M. MYERS

COLLECTION (NT). *See* OFFERING FOR THE SAINTS.

COLLEGE, THE. KJV translation of משנה (RSV SECOND QUARTER) in II Kings 22:14; II Chr. 34:22.

COLONY. Roman colonization really began as a measure taken by Julius Caesar (*see* CAESAR) to provide land and employment at low cost to the state for two kinds of persons: (*a*) able-bodied members of the Roman proletariat whom he had removed from the relief rolls, and (*b*) veterans of his legions. Most of the colonies he established were therefore in the provinces, and he thus relieved the overcrowded city of Rome while strengthening the Roman element outside Italy. Most of his colonies—more than twenty in number—were in the West, but in the East his foundations included CORINTH and PHILIPPI.

AUGUSTUS continued Caesar's policy. In his *Res gestae* (V.28) he expressed his pride in his work: "I settled colonies of soldiers in Africa, Sicily, Macedonia, both Spains, Achaea, Asia, Syria, Gallia Narbonesis, Pisidia. Moreover, Italy has twenty-eight colonies founded under my auspices which have grown to be famous and populous during my lifetime." Among his foundations were ANTIOCH (PISIDIAN); LYSTRA; TROAS; and SYRACUSE, all mentioned in the book of Acts. Also mentioned in Acts is Ptolemaïs (*see* ACCO), colonized by Claudius. It is not certain whether ICONIUM was colonized by Claudius or by Hadrian.

In addition to such colonies, other communities were given the status of Roman colonies simply in order to honor their inhabitants and strengthen their ties with Rome; but this practice was much more common in the West than in the East.

The colonies possessed autonomous government, in some cases immunity from taxation, and—by a legal fiction—use of Italian legal procedure and precedents. In Acts 16:12-40 a clear picture of such procedure is given us. The magistrates (vs. 19) included praetors (vss. 20 ff), who in colonies could deal with civil or criminal cases. (They are apparently the "unrighteous" judges of I Cor. 6:1 ff.) They could impose floggings by the agency of lictors (Acts 16:22), though not legally in the case of uncondemned Roman citizens (16:37-38).

Bibliography. A. N. Sherwin-White, *The Roman Citizenship* (1939); G. H. Stevenson, *Roman Provincial Administration* (1939). R. M. GRANT

COLORS. The OT has no word for the abstract concept "color." Words so translated have another basic meaning:

a) עין (Lev. 13:55), literally, "appearance" (as in Num. 11:7).

b) פסים (Gen. 37:3, 23, 32; II Sam. 13:18-19) describes the type of garment worn by Joseph and by Tamar. But the correct translation is doubtless "long, with sleeves" (RSV), rather than "many-colored" (KJV).

c) טלא (Ezek. 16:16 KJV), רקמה (I Chr. 29:2; Ezek. 17:3), חטבות (Prov. 7:16), ברמים (Ezek. 27:24), "variegated," "many-colored."

d) Aramaic זיו (Dan. 5:6, 9-10; 7:28), "complexion" (cf. Akkadian *zîmu*).

In the NT the word "color" does not occur; the phrase "color of fire" (Rev. 9:17) translates the single Greek word πυρίνος.

When one turns to the names for the individual colors, one is struck both by the relative poverty of terms and by the lack of precision in their definition. The most frequent, and apparently the most carefully differentiated, are the names of manufactured colors, especially of those used in the dyeing of fabrics (*see* BLUE; PURPLE; SCARLET; VERMILION; VIOLET). Natural colors rarely are used in descriptions, and then, as a rule, only when the writer desires to make a special point, as in the case of RED and Edom, or wishes to bring out the unusual character of that which is being described.

It has also been noted that colors in the OT can be classified as either somber or brilliant; indeed, the Hebrew appears often to have been concerned more with the lightness or "value" of a color—the amount of light which was reflected—than with its hue. A similar phenomenon has been noted both in Homer and in Old English poetry.

Colors are often used symbolically by various writers in the OT (*see* BAY; BLUE; BROWN; CRIMSON; DAPPLED; GRAY; GREEN; GRISLED; PURPLE; RED; SCARLET; VERMILION; VIOLET; YELLOW; *see also* BLACK; WHITE). But there is no evidence that colors were so employed in the decoration of such buildings as the tabernacle or the temple, or in the manufacture of the priestly garments. In later ages, however, the colors were given an allegorical meaning: the fine white linen was said to represent the earth from which the flax had sprung; purple stood for the sea, since "it is reddened with the blood of fish"; blue was the color of the air, and scarlet of fire. Thus the four elements from which the world had been formed were represented (Philo *Life of Moses* II.17; Jos. Antiq. III.vii.7).

R. W. CORNEY

COLOSSAE kə lŏs'ī [Κολοσσαί]. A city in SW Asia Minor.

Colossae is a city with a Hellenized but originally non-Greek (Phrygian?) name. It lies in the valley of the River Lycus (modern Çürüksuçay), a tributary of the Maeander, in the SW confines of ancient Phrygia. The valley of the Lycus is the ancient thoroughfare from W to E. The modern railroad and highway still follow its course from Sarayköy to the E.

Of the three major Christian cities in the Lycus district, Colossae is the earliest to have achieved city status. Herodotus (VII.30) lists it as a "large city of Phrygia," a station on the expedition of Xerxes to Sardis in 481 B.C. At that time the population must have consisted primarily of Phrygians speaking their native language and worshiping their great goddess and associate deities. Colossae is mentioned again as a prosperous and large city by Xenophon in his account of the march of Cyrus the Younger in 401 B.C. (Anabasis I.2.6). This marks Colossae as the most prominent pre-Hellenistic city in the Lycus Valley.

Competition arose from LAODICEA and HIERAPOLIS in Hellenistic times, although Colossae maintained its status as a city under the Romans and was one of the active centers of the textile industry in the district. Its inscriptions and coins reflect its importance in the imperial period. The city must have been Hellenized and partly Romanized in a gradual process of assimilation to its neighbors, rather than by a new foundation.

The location of Colossae has been known since the travels of William J. Hamilton in 1835. He identified the ruins of the city and its acropolis on the left (S) bank of the river, where he still saw many architectural fragments in marble (columns, architraves, cornices) and the cavea of the theater with several of the stone seats preserved. On the N bank lies the necropolis, with rock-cut and partly built graves.

Also on the N bank, E of Colossae, a Byzantine church was built for Saint Michael, who had performed a miracle in opening the rock for the river to flow through at the time of an inundation. This late story about the spectacular gorge of the Lycus at Colossae recalls the fantastic tale Herodotus records from hearsay about the underground course of the river. The ruins remain of the Church of Saint Michael, which was destroyed in a raid by the Turks at the end of the twelfth century.

The site of the city of Colossae was abandoned in the eighth century and became a quarry for the inhabitants of the neighboring city of Chonai (modern Honaz), three miles to the S.

No excavations have taken place at Colossae. The epigraphic evidence is the only local material which has been examined by modern scholarship. The available archaeological and historical references do not yet match the importance of the city as based on the Letter to the Colossians.

M. J. MELLINK

***COLOSSIANS, LETTER TO THE** kə lŏsh'ənz [Κολοσσαεῖς *or* Κολασσαεῖς, *see* COLOSSAE]. A letter from Paul and Timothy to the Christians of Colossae, carried by Tychicus and Onesimus (the slave of Philemon); now the twelfth book in the NT canon. Notable are its advanced Christology in the impressive hymn, 1:15-20, and its refutation of a dangerous syncretistic heresy (2:6-23). Colossians is also the primary source of EPHESIANS.

1. Authorship. Colossians was canonical and accepted as Pauline by A.D. 200 (Iren. Her. III.14.1; Muratorian Canon), though traces of its use before then are remarkably few. Marcion included it in his NT, and the Alexandrian Gnostics naturally found it valuable. Mayerhoff in 1838 first questioned its authenticity, regarding it as based on Ephesians. On similar grounds of interrelationship and style De Wette reached opposite conclusions. Baur and his school rejected both letters because of alleged Gnostic and Montanist elements.

Hitzig and especially Holtzmann, however, suggested that the author of Ephesians used a much shorter, genuinely Pauline, Colossians which he later reworked into our present letter. This theory received almost no support during the first half of the twentieth century, but in 1950 Masson independently made a similar proposal. The short original lacked, he thought, 1:5-6, 9-29; 2:1-5, 7, 10, 11*b*, 12*b*, 13-15, 17-19, 22-23; 3:1-2, 5-11, 13*b*-17, 22*b*-24; 4:3*c*, 4, 8*b*, 12*b*, 13, 16. In these verses are found the closest parallels to Ephesians in style and vocabulary, as well as such un-Pauline features as the negative tone of the ethical instruction; the pre-Pauline hymn of 1:15-20, to which was added 1:18*a;* the feeble opposition of "barbarian" and "Scythian" in place of "Greek" and "barbarian" (3:11; cf. Rom. 1:14); and the "mystery of Christ" (1:26-27; 2:2; 4:3). The author of Ephesians has altered the "brethren from Laodicea" (i.e., a group of Laodiceans resident at Colossae) to the "brethren at Laodicea" and inserted 4:16 in order to designate his own composition as a letter to the Laodiceans. This solution of the close relationship of Colossians to Ephesians must not be

dismissed too easily, because there probably was interpolation into the genuine letters when the Pauline collection was made (e.g., Rom. 16:25-27, which is in the style of Ephesians), and disciples did not hesitate to edit Pauline materials (as possibly II Timothy).

Persuasive as it is, nevertheless, Masson's theory, like Holtzmann's, should be rejected. The principal objections are: (*a*) minute differences are exaggerated; (*b*) the variety of expression in Col. 1:9-14 is unaccounted for on the view that it echoes Eph. 1:15-23; 2:2; 1:7; (*c*) the texts were assimilated during transmission (e.g., Col. 3:6; Eph. 5:6: "upon the sons of disobedience"); (*d*) various Colossian passages were conflated in one Ephesians passage, and this phenomenon demands that the Colossians used was our present letter; (*e*) the theory rests on too subjective criteria (e.g., that Paul could not have composed hymns like Col. 1:15-20; Phil. 2:6-11; in fact, however, poems from prison are not unusual, and Paul had poetic gifts, as I Cor. 13 shows).

Colossians has thirty-four words not found elsewhere in the NT; fifteen common with Ephesians but otherwise used in non-Pauline material; and ten common only with Ephesians (e.g., "men-pleasers" and "eyeservice"). All agree that vocabulary alone contributes little to the argument (Philippians has thirty-six *hapax legomena*), and the absence from Colossians of the Pauline words "righteousness" (justification), "fellowship," and "law" is not serious. Style is a more important concern, and, like Ephesians, Colossians has long sentences, many participles, synonyms, parallel clauses, heaped-up genitives, and epexegetic infinitives. It is true that each of these appears also in accepted letters (Phil. 1:3-8 is one sentence; Rom. 1–2 contains a number of examples of the use of synonyms; parallel clauses are used in II Cor. 10:4-6; genitives abound in I Corinthians, Romans, and Philippians). Yet arguments from vocabulary and style have a cumulative effect along with evidence of ideas. A similar style in Ephesians produces a ponderous tone marked by liturgical tautology, and the non-Pauline character is masked. It is otherwise in Colossians. Whereas Ephesians is dull and impersonal, Col. 2:6–4:6 is lively with personal feeling; definite people and places appear (1:2, 5-8, 27; 2:1; 4:7 ff, 13). We have to do with a real letter. No doubt, the crisis of the Colossian heresy is responsible for the introduction of unusual words like "beguiling speech," "philosophy," "deity," "disqualify," and "rigor of devotion" (2:4-23). In respect to ideas, the Christology is developed, but on lines compatible with Rom. 5; I Cor. 1:24; 2; 4:1; 15:45-49; II Cor. 4:4; 5:18-19; etc.; the doctrine of angelic spirits is quite Pauline (cf. Gal. 3:19; 4:8-11; Rom. 8:38-39); so is the doctrine of the church as the body of Christ (Rom. 12; I Cor. 10:18, 32; 12; and probably 11:29).

Despite Timothy's appearance, the letter is really Paul's (1:23; 4:18; cf. similar shifts in II Thess. 3:17; I Cor. 16:21), though 4:18 may mean that the letter was dictated.

The links between Colossians and PHILEMON support authenticity. Paul (a prisoner), Timothy, Onesimus, Archippus, Epaphras, Mark, Aristarchus, Demas, and Luke belong to both. The words "fellow worker," "fellow prisoner," "knowledge" (ἐπίγνωσις —once in Philemon and four times in Colossians, which is four times as long), "church in a house," are common. The genuineness of Philemon carries with it that of Colossians, and Philemon is incontestably Pauline.

PHILIPPIANS shares with Colossians ἀξίως ("worthily"; of behavior); πλοῦτος ("riches") and δόξα ("glory"); ὑστέρημα ("what is lacking"); ἀγών ("conflict"); εὐχαριστία ("thanksgiving"). Γνῶσις ("knowledge") is used once in each; ἐπίγνωσις ("discernment") once in Philippians as in Philemon; σοφία ("wisdom"), used six times in Colossians, is absent from Philippians. This variation in emphasis on wisdom and knowledge marks the difference in situation and purpose. But notice too the "death and resurrection" theme in both (Col. 2:12; 3:1; Phil. 3:10-11; cf. Rom. 6:3-4); the spiritual "circumcision" (Col. 2:11-13; Phil. 3:3); Christ's enabling power (Col. 1:29; Phil. 4:13). Completing Christ's tribulations (Col. 1:24), an unusual idea, has a parallel at Phil. 3:10; and both letters contain great christological poems. The different tone in Philippians is also due to the intimate connections of Philippi with Paul, its founder. In Colossians, Paul is following up the work of Epaphras, who had done well but was not sent back (4:12). The RSV "on our behalf" (1:7) makes Epaphras the delegate of the apostle; but the reading is uncertain. Allowing for these changes in occasion, relationship, and destination, one finds little to suggest a different authorship. Whereas Philemon must belong to the same imprisonment as Colossians, Philippians need not, and it may be earlier (cf. Phil. 2:6-11 with Col. 1:15-20; Phil. 3:10-11 with Col. 2:12).

Angelology combined with legalism and Encratite practices is found in pre-Christian Jewish groups (e.g., at Qumran), and the type of heresy met at Colossae could certainly belong to Paul's day.

For all these reasons, then, the authenticity of Colossians should be accepted.

2. Date and place of writing. These belong together because one prison must fit Philemon and Colossians. On the evidence of Acts, Paul could have met Onesimus the runaway at Caesarea or at Rome. Scholars have presented strong claims for both places. EPHESUS has been proposed as the place of meeting, because Onesimus and Epaphras would have gone to a nearby city; Paul suffered there (I Cor. 15:32; II Cor. 1:8-10; 11:23) and encountered Jewish or Judaizing opposition when he was writing Galatians, Colossians, and Phil. 3; Paul's travel plans in Philippians and Philemon contradict Rom. 15:24, 28; there was a *praetorium* at Ephesus, where later tradition located a prison also. Acts, however, is silent, and Acts must not be dismissed as a poor source; I and II Corinthians need not imply imprisonment, and it is very doubtful that Paul could, legally, have been thrown to the lions. Judaizing or Jewish opponents troubled Paul and his congregations at many places and times. As for travel, the apostle could have changed his mind under new circumstances. Hence the Ephesian hypothesis must be rejected.

Paul was indubitably a prisoner at Rome and martyred there (I Clem. 5 and early tradition). Onesimus would run as far from Colossae as possi-

ble, and the ease of communication between Rome and Asia Minor makes the travel arrangements plausible. But the high Christology of Colossians contributes little to the case for Rome (II Cor. 4:4; 5:18-19 come from the end of Paul's Ephesian mission). If Colossians was written at Ephesus, the date would be *ca.* A.D. 56-57; if at Rome, *ca.* 61-62. *See* CHRONOLOGY, NT.

3. Purpose. The apostle wrote (*a*) to establish the Colossians in the true faith by exposing the deadly nature of the heretical teaching (1:23; 2:4, 7-8, 16); "Why do you submit to . . . ?" (2:20) may mean that the menace was making serious inroads; possibly he has one particular teacher in mind (2:4, 8, 16, 18), but this cannot be proved; (*b*) to instruct them in the Christian way of life (2:20; 3:1, 5, 12, 18 ff); (*c*) to encourage them to promote mutual love and harmony (2:2; 3:12-15; 4:8); and (*d*) to give news of the company at Rome and send greetings to his friends (4:7 ff).

What was the Colossian heresy? Apparently a mystery cult in which visions played a part (1:26-27; 2:2, the Christian use of "mystery" as a revealed secret; cf. the esoteric teaching of Qumran, 1QS 4.18; 5.11; 9.16-20; *see* DEAD SEA SCROLLS). More specifically: (*a*) the heretics assailed Christianity as an immature faith and denied the sufficiency of Jesus Christ as divine revealer and redeemer from sin. Paul dubbed it an empty deceit, based on mere human tradition (cf. Mark 7:8). Christ is the beloved Son of God, the Savior of the universe, victor over the angelic powers, mediator of the whole creative process (1:13-20; 2:15—at the Cross, according to RSV mg.). (*b*) The angelic powers were to be worshiped as well as Christ—or above Christ? (1:16; 2:8-20). These *stoicheia* are the planetary and starry spirits that affected man's birth and destiny; probably also the angels standing behind the Mosaic law. It is believed that the heretics regarded the angels as intermediaries between holy, transcendent deity and the material world where man lives. The names of the angels played an important role among the ESSENES, and we find the same element in the Qumran literature. (*c*) Certain ascetic and liturgical practices were regarded as essential to the maturity or perfection of salvation. Paul mentions "food and drink" rules, possibly abstinence from meat and wine, and Jewish observances like New Moon, sabbath, and circumcision (2:11 ff). Should baptism be added? (Cf. 2:11-12, 20; 3:1-3, 10; and the lustrations so common at Qumran.) There is hardly enough evidence for a heretical practice of baptism. Paul vigorously objects that the Colossian usages constitute a new and negative legalism and deny the reality of faith union with the living Christ, "in whom are hid all the treasures of wisdom and knowledge" (2:3).

Thus the heresy seems to have been a syncretistic cult drawn from pagan and Jewish sources, perhaps by Gentile converts (2:13) who had enjoyed previous contacts with the synagogue. The Judaism in question may have been Essene or Zadokite (cf. 1QS 2.24 for "humility" and "charity"; CD 2.3, 13, for "wisdom"; 1QS 4.22 for "knowledge"; 1QH 3.21-22 and 11.11-12 for an "inheritance among the holy ones"; angels have been noticed above; Col. 1:12-13, "light . . . darkness," reminds one of Qumran dualism). We may have to do with a pre-Christian Jewish "gnosticism," though not necessarily with a fully developed speculative system like that of Basilides or Valentinus. *See* GNOSTICISM.

4. Contents. Analysis is, on the whole, a simple matter:

I. The greeting, 1:1-2
II. The true, apostolic gospel, 1:3–2:5
  A. A prayer for the church, 1:3-12
  B. The absolute pre-eminence of Christ, 1:13-23
  C. Paul's apostolic ministry and authority, 1:24–2:5
III. Christian liberty defended against the challenge of the Colossian heresy, 2:6–3:4
IV. Christian behavior, 3:5–4:6
  A. General ethical injunctions, 3:5-17
  B. Household duties, 3:18–4:1
  C. Exhortation to prayer, 4:2-6
V. Personal messages, 4:7-17
VI. Closing greeting and autograph, 4:18

Colossians is brilliantly conceived and written, an "example of great prose being addressed to a very little clan" (Moffatt). Paul is at his diplomatic best, graciously recognizing Epaphras' work and perhaps Timothy's (1:7-8; 2:7; 4:3, 12-13; cf. 1:24; 2:1-2, 5); yet he fights almost fiercely (2:8: "See to it that no one makes a prey of you") for the true faith of the crucified and risen Lord (1:23, 28; 2:3-4, 7; for Pauline "orthodoxy" cf. esp. Gal. 1:6-9). Nothing suggests an old man at the end of his course (cf. Philem. 9 RSV mg.); rather, we see the missionary to the Gentiles arrayed for battle and the defense of the church.

a. Doctrine. God is the Father (1:2, 12; 3:17), or the Father of our Lord Jesus Christ (1:3). He is at once the invisible and the knowable, revealed in his Son, the perfect Image, whom he raised from the dead (1:9, 15; 2:12). God the supreme Sovereign is righteous and gracious, Lord of history, and Judge of the immoral, on whom his "wrath" will fall at the End (1:6, 13; 2:12-15; 3:1, 6; 4:11; for "wrath" cf. John 3:36; Rom. 1:18; 2:5; Eph. 5:6). His plan to redeem the sinful and the fallen world is a mystery that was hidden from all eternity (or, "hidden from angels and men"), but has been revealed to his holy ones—i.e., the church (1:26). God "elects" or chooses a people and through missionaries like Paul proclaims his Word (1:12; 2:19; 3:10, 12, 15; 4:3).

Like Philemon but unlike Philippians, Colossians lacks teaching about the Spirit of God (unless at 1:8-9; love and wisdom are fruits of the Spirit; if so, cf. other references to wisdom). Paul may have been led to this strange position by his christological polemic or by heretical claims to a false spirituality.

Jesus is the Messiah and the Lord (2:6; RSV is not adequate; the historical manhood is stressed in 1:22; 2:6). He was put to death, but raised by God to reign at his right hand; he is the beloved Son, the Savior of the universe (1:20) and of men (1:14; 2:13-14). Moreover, he was the divine agent at Creation and is the principle of coherence for every creature (1:15-17). Paul may be thinking of the divine Wisdom (Prov. 8:12 ff) or of the immanent Logos of which Philo and the Stoics spoke. Christ is the eternal head

(the "first-born") who directs every process of life and energy—there is no explicit reference here to an eternal generation of the Son; but cf. the "Adam" typology of Rom. 5:14; I Cor. 15:45; and the condescension theme of II Cor. 8:9; Phil. 2:7-8. Three propositions sum up the high Christology of Colossians: (*a*) Deity in its fulness chose to dwell in Christ "bodily"—i.e., in the concrete reality of a body (1:19; 2:9; cf. 1:22; 2:11; and the "substance" [Greek "body"] of 2:17. It is farfetched to refer 2:9, 17, to the church as the body of Christ). (*b*) Christ is Lord over all angels (1:16; 2:10, 15; cf. Heb. 1:4-14). Paul accepted the existence of good and bad angels, although he denied the reality of pagan idols (I Cor. 8:4). (*c*) Christ is the head of the church, his body, both as mediator of Creation and as Savior (1:18; cf. John 2:21; I Cor. 11:3). In this sense also he is "first-born," the first-born from the dead, the commencement of the new family of God, the new Adam (cf. Rom. 8:10-11; I Cor. 15:20 ff). The phrase "to present you" (1:22) may have in view Christ's high-priestly office; if so, cf. Heb. 3:1; I Pet. 3:18; and the priestly messianism of Qumran.

The salvation offered by such a Christ cannot therefore be a mere preparation, in need of the secret teaching and regulations of another discipline. Legalism of the Jewish type is repudiated; the faithful are liberated from the power of angels (2:15); and sins (conceived as debts listed on a bond, 2:14) are remitted (this phrase is used instead of "justification"). Paul thinks of salvation both as a future inheritance (1:5, 22, 28; 3:4, 24; 1:12 is ambiguous, but may be eschatological) and as a present possession (1:13-14, 22; 2:11-15, 20; 3:1, 3, 10). Christ is the "hope of glory" and yet "in you" or "among you" (1:27). Christian life "is hid with Christ in God" (3:3). This "mysticism" is related to the new-Adam idea (3:10, "manhood," not "nature" as RSV) and to baptism (2:12; but too much should not be deduced from the analogy of baptism with circumcision—e.g., to justify infant baptism). Because the "substance" is in Christ, he is not only the clue to ultimate reality, he is also the judge of every religion and the touchstone of morals (3:5, 11, 15-16, 24). He is God's own "secret" by whom all mankind can be redeemed (1:6, 23-29; 3:11). Hence Paul's powerful missionary impulse and adoring gratitude (1:29; 3:17).

Christ's redemptive work, man's response in faith and baptism, bring the church into being as the body of Christ (1:4, 22, 24; 2:12) and the temple of God (1:23, "stable and steadfast," and 2:7, "built up," imply this concept). Its range is universal (1:6, 28, where one notes the triple "every man"; 3:10, Adam; 3:11, race or culture or economic status count for nothing). This church is to become united, in love, and ought to grow, in wisdom, as each member becomes mature (1:8, 28; 3:14). Worship, with prayers and songs of thanksgiving at its heart, is central to the church's life (3:15-17). The eucharistic context of the hymn about Christ (1:12, 15 ff) has been emphasized by N. A. Dahl; cf. the same thought in 3:17. Paul may be indebted to the Jewish hymns and benedictions known to us in the Psalms of Solomon and the Qumran *Hodayôth;* and through him the line to the ancient prayers of the third century A.D. can be traced. The apostle is both teacher and ruler in the church (1:28), and in its service he completes the Messiah's sufferings (a daring idea, but no reflection on Christ's all-sufficiency can possibly be intended; 1:24). The phrase "that we may present" (1:28) answers Christ's work in 1:22 and so may indicate the priestly function of the apostle, in the setting of the eschatological hope (cf. Rom. 12:1; 15:16; Phil. 2:17, for priestly and sacrificial language). No local minister is addressed, except probably the Laodicean ARCHIPPUS (4:17). Christ is the Head who operates through his servants (2:19; implying the teaching of Rom. 12:4 ff). Clearly this doctrine is what the second century meant by catholicity.

Impartial judgment awaits the world (1:22-23; 3:6, 25), but little stress is laid on this idea (cf. 3:4).

b. Ethics. Paul's ethical teaching flows from his theology of salvation (1:10; 3:5—RSV "in you" represents Greek "the members." This difficult phrase may be a gloss. Masson ingeniously solves the problem by translating it as a vocative, "you, the members [of Christ's body, the church]," and ascribing it to the author of Ephesians). Christ's example is held up for imitation (1:11-12; 3:14-17; 4:2-6); hence love is the greatest virtue, the bond of unity (or of maturity), the motive for mutual forgiveness. This love is Christian charity, compassionate, tender, gracious, Christlike (*see* LOVE IN THE NT). Paul's converts and friends are his beloved, his brothers (1:7; 4:7, 9, 14; cf. 1QS 5.24–6.1; 8.1-6; and note the differences).

The teaching on household duties is summary, apart from the section on slaves (because of ONESIMUS). The inferior groups are told to be submissive, as befits the Christian community; but Paul fails to advise them to love their superiors, the husbands, fathers, and masters (3:18–4:1). Slavery is not condemned, presumably because the adventist hope is strong. An ethic for today would require fuller discussion of the duties and rights of other "superiors" —e.g., governments, industrial corporations, mortgage companies, schools, trade unions, etc. Yet the Pauline principle is always relevant: "as serving the Lord . . . , knowing that you also have a Master in heaven" (the Greek word "master" or "lord," κύριος, occurs nine times in the brief paragraph 3:18–4:1).

c. Personalia. Note the range and depth of Paul's friendships. MARK is probably the author of the Second Gospel (cf. Acts 12:25; 13:5, 13; 15:37).

House churches were usual in the primitive days (4:15—the text here is uncertain; Nympha or Nymphas is equally possible; cf. Philem. 2; Acts 16:15). The "letter from Laodicea," if not lost, may be Philemon; Marcion called canonical Ephesians "Laodiceans"; for a spurious letter with this title, see Lightfoot on 4:16 and LAODICEANS, EPISTLE TO THE.

LUKE is usually identified with the author of Luke-Acts or the "we sections" in Acts. Paul's thorn in the flesh (II Cor. 12:7) has been identified, dubiously, as epilepsy; hence his need of a doctor to accompany him (cf. Gal. 4:13). Other lists of friends and colleagues will be found in Rom. 16; I Cor. 16:12-17; II Tim. 4:9-12.

5. Text. There are major difficulties in 2:18, 23, and minor problems at 1:7, 12, 16; 2:2, 10, 22; 3:22. Even Lightfoot and Hort resort to conjecture at 2:18 ("taking his stand on visions"), by ingenious division

of the letters. But Hort's "riding on the clouds" is not much better than the RSV, which may be a *terminus technicus* from the mystery cults. In the same verse, the RSV "insisting on" would be more accurately translated as "taking pleasure in" (θέλων ἐν; cf. I Sam. 18:22; Pss. 111:1; 146:10 LXX). Or θέλων alone may mean "willingly" or "deliberately." Again, on the plausible analogy of the Greek noun behind the RSV "rigor of devotion" in 2:23, Hort would emend so as to have: "Let no one disqualify you in a voluntary humility." The reference would then be to a false meekness in the presence of the angels or to ascetic mortification. Resort to conjecture is not really necessary, but "priding himself on" would be better than the RSV. Vs. 23 is a famous crux also. Some MSS omit "and" after "self-abasement," thus leaving the next phrase without connection. "Severity to the body" may be an intrusive gloss explaining "self-abasement"; similarly, "they are of no value" may be a gloss on "an appearance of"; while the last phrase is ambiguous—either "looking to indulgence of the flesh" or "to check indulgence of the flesh." Paul's point is that mortification does not promote spiritual health, that it leads rather to self-indulgence; this point can be verified in the history of monasticism.

COLT [בן, son; עיר, *see* Ass; πῶλος, the young of various animals, *sometimes* horse; *cf.* Lat. *pullus*, young animal]. The young of the horse or of animals of the horse kind.

In the OT "colt" is used of the young of camels (Gen. 32:15), of the domesticated ass (Gen. 49:11; Zech. 9:9), and of the wild ass (Job 11:12).

In the NT πῶλος is used of the animal which was obtained by Jesus' disciples for their Master's entry into Jerusalem (Mark 11:2, etc.), in connection with which two of the evangelists quote Zech. 9:9 (Matt. 21:5; John 12:15). Matt. 21:2; John 12:14 indicate that the animal was a young ass, but Mark and Luke use πῶλος without qualification.

Bibliography. W. Bauer, *JBL*, LXXII (1953), 220-29, maintains that when πῶλος is used with no restriction, it means "horse," and he implies that this was the earliest Christian tradition about the animal on which Jesus rode. His discussion, which avoids the question of the original Aramaic term, does not give full weight to the fact that in Jewish Palestine it was the ass which was ordinarily used for riding.
W. S. MCCULLOUGH

COMFORT [נחם (Pi'el); παρακαλέω, παράκλησις; *also* παραμυθέομαι, παραμυθία, παραμύθιον; *and* παρηγορία]. While παρακαλέω may mean "to call (somebody) to one's side" for help (*see* PARACLETE; COMFORTER), it is also used of calling or speaking to someone else by way of comfort, encouragement, entreaty, or exhortation. With the noun παράκλησις it appears in the NT as a gospel key word, going back, perhaps, like other gospel key words, to the exordium of the good news of Isa. 40:1 ff:

> Comfort, comfort [נחמו נחמו] my people,
> says your God;

(cf. Isa. 51:12: "I am he that comforts you" [lit. "your comforter"—מנחמכם]; also 49:13; 51:3, 19; 61:2; 66:13). So in the NT, God is the "God of all comfort" (II Cor. 1:3). II Corinthians might, indeed, be called the letter of comfort, so repeatedly does Paul strike this note in it, especially in the opening paragraph (1:3-7) and in 7:4-13. Those who enjoy the comfort of God are best able to comfort others; and Paul, who had received such comfort by the reassuring news which Titus brought him from Corinth, is now eager to impart a full measure of that comfort to his readers as compensation for the distress which his "severe letter" had caused them.

In the teaching of Jesus those who mourn are congratulated because they are to be comforted (Matt. 5:4); Lazarus in Abraham's bosom is comforted after his wretched life on earth (Luke 16:25).

"Comfort" is a commoner word in the KJV than in the RSV, because its range of meaning was wider in older English than it is today. In accordance with the Latin *confortare* (from which the English word is derived), it meant "to strengthen," as well as "to aid, console, encourage, refresh, relieve, soothe." The RSV retains "comfort" only where it means "to console or relieve from distress"; elsewhere it replaces it by such words as "encourage" (cf. Rom. 1:12; 15:4; I Cor. 14:31; Col. 2:2; I Thess. 5:14); "incentive" (Phil. 2:1); "cheer" (Phil. 2:19). In II Cor. 13:11 the RSV has "heed my appeal" for the KJV "be of good comfort" (παρακαλεῖσθε).

A "word of exhortation" (λόγος παρακλήσεως) apparently denotes a synagogue homily (Acts 13:15; Heb. 13:22). The "comfortable words" of Zech. 1:13 KJV are "comforting words" in the RSV; the "comfortable" word of II Sam. 14:17 KJV is literally a word "for rest" (RSV "The word . . . will set me at rest"). To "speak comfortably" (KJV) is literally to speak "upon the heart"; the RSV renders to speak "kindly" (II Sam. 19:7); "encouragingly" (II Chr. 30:22; 32:6); "tenderly" (Isa. 40:2; Hos. 2:14). *See* CONSOLATION.

COMFORTER. KJV translation of παράκλητος in John 14:16 ff. *See* PARACLETE.

COMMANDMENT. An authoritative word or precept; most frequently found in reference to the divine commands. The OT expression "according to the mouth of Yahweh" is generally translated: "according to the commandment of Yahweh" (Exod. 17:1). The term דבר, "word," is frequently to be translated "commandment"; so also the term אמרה, "that which is said."

The two most common Hebrew and Greek terms

for "commandment" are, respectively, מצוה and ἐντολή. Both are derived from roots which have the basic meaning "to give an order," "to appoint," "to commission" (for a specific task).

In the OT, and often in the NT as well, the commandments of God generally refer to those found in the Pentateuch, the TORAH. In the NT, the commandments are summarized by Jesus in the command to love God and neighbor (Matt. 22:35-40; Mark 12:28-34; Luke 10:25-28). This combination of Deut. 6:5; Lev. 19:18 is already reflected, however, in certain intertestamental writings (Test. Iss. 5:2; 7:6; Test. Dan 5:3). W. J. HARRELSON

COMMANDMENTS, TEN. *See* TEN COMMANDMENTS; LAW IN THE OT.

COMMENTARY. Anglicized form of Latin *commentarius*, which, usually used in the plural, first meant sketchy notes as in a pupil's notebook or a speaker's outline, then a book of unpolished history (cf. Caesar's *Commentarii*), and finally a book of notes explaining some earlier work (cf. Julius Hyginus' commentaries, late first century B.C., on Vergil). Jerome, the first great Latin biblical commentator, mentions many commentators (on secular texts) before his time.

A biblical commentary takes a section of scripture and seeks to make its meaning clear, or at least clearer, to the man of the author's own day. Typically it begins with the commentator's conclusions on the questions of introduction—who wrote it, why, etc. But some commentaries proceed inductively, leaving the reader to gather these matters in the course of the comment. Many reproduce the text in the original or in translation. The comment must deal to some extent with textual, grammatical, and lexical problems of the original; some do little more. More satisfactory commentaries strive to outline the author's thought, to relate each part to the aim of the whole, and to see it against the background of its religious and its sociopolitical matrix. Others place greater emphasis on exegetical history and the writing's bearing upon present religious needs.

COMMERCE. *See* TRADE AND COMMERCE.

COMMISSION, THE GREAT. A way of referring to Jesus' command in Matt. 28:18-20 that his disciples should go into all the world and "make disciples of all nations, baptizing them in the name of the Father, and of the Son, and of the Holy Spirit." The story presents a typically Matthean picture of the risen, exalted, yet abiding, Lord. From a new mountain of authority (cf. Matt. 5:1; 7:21-29), he sends his disciples on the final, universal mission (Matt. 24:14; John 20:19-23; Acts 1:8) of the newly begun messianic age.

Did the early church receive its universal commission through some such christophany, or was it learned gradually by experience (Acts 10:1–11:18; Gal. 2:9)? Is such an appearance of the risen Christ sufficient explanation for its baptismal practice, or had the latter (Acts 2:38; 8:16; I Cor. 1:14-16) some other origin? Since the threefold baptismal formula occurs only here in the NT, was it an original part of this Gospel (*see* BAPTISM)? The strophic form gained by retranslating this passage into Aramaic supports the reading "in my name," found in Eusebius. The present text, however, is attested by all other evidence, and its joining of Father, Son, and Spirit appears in other primitive confessions (I Cor. 12:3-6; II Cor. 13:14; I Pet. 1:2).

I. W. BATDORF

COMMON [חל (KJV *alternately* PROFANE); κοινός, δημόσιος]; COMMON LAND(S) [מגרש] (Lev. 25: 34; II Chr. 11:14; KJV SUBURBS). In OT priestly literature "common" is the opposite of "holy" (קדש; Lev. 10:10; *see* HOLINESS), the unconsecrated rather than the consecrated—e.g., "common bread" (I Sam. 21:4—H 21:5), a "common journey" (I Sam. 21:5—H 21:6).

Although in the OT the common is ritually neutral, and may be either clean or unclean, in the NT κοινός is synonymous with "unclean" (*see* CLEAN AND UNCLEAN; Acts 10:14-15, 28). The same Greek word means "shared"—e.g., "common faith" (Tit. 1:4), "common salvation" (Jude 3), "all things in common" (Acts 2:44). "Common" in the meanings "shared" and "ordinary" (δημόσιος; Acts 5:18) is omitted in Hebrew (Num. 16:29; I Kings 10:27; Jer. 23:28), or expressed by circumlocution—e.g., "a man's stylus," "a man's cubit," "people of the land," "sons of the people" for "common script" (Isa. 8:1), "the common cubit" (Deut. 3:11), and "the common people" (Lev. 4:27; Jer. 26:23).

L. E. TOOMBS

COMMON LIFE. The distinguishing characteristic of the Spirit-possessed community of the Christian body, expressing that fellowship between men which results from corporate communion with God and transcends secular divisions (Rom. 15:27; Gal. 3:27-29). It finds practical expression in mutual assistance (Rom. 12:13; 15:26; II Cor. 8–9); in the COMMUNITY OF GOODS, especially emphasized by Luke, for whom offenses against the common life are directed against the Holy Spirit (Acts 5:3, 9); and in the common table (cf. Acts 6:1; Gal. 2:12). Its source and focus lie in sacramental COMMUNION.

Bibliography. L. S. Thornton, *The Common Life in the Body of Christ* (1941). G. W. H. LAMPE

COMMONWEALTH. The translation of πολίτευμα in Phil. 3:20 (KJV CONVERSATION) and of πολιτεία in Eph. 2:12.

Paul wrote to the Philippians: "Our commonwealth is in heaven" (Phil. 3:20). Implicit here are the following considerations: (*a*) "Our commonwealth"—i.e., the commonwealth of Christians—is distinct from all others. Christians are already citizens of the heavenly state, as contrasted with earthly states. (*b*) "Commonwealth" implies "community." The Christian lives out of, and shares in, Christian community. (*c*) The conduct of Christians is to be appropriate to their citizenship. (*d*) Only a miracle—the coming of the Savior from the commonwealth in

heaven—will establish the fulfilment of the community's life.

Πολιτεία, translated "commonwealth" in Eph. 2:12, is translated "CITIZENSHIP" in Acts 22:28.

COMMUNICATION. *See* MESSENGER; TRAVEL AND COMMUNICATION.

COMMUNION [κοινωνία]. A term literally meaning "sharing" and particularly important in connection with the covenant relation between God and his people. *See* COVENANT.

1. In the OT
   a. Between God and his people
   b. Between God and individuals
   c. In relation to Israel's hope
2. In the NT
   a. As participation in Christ
   b. Church and sacraments

Bibliography

1. In the OT. ***a. Between God and his people.*** The entire notion of the covenant involves the idea of communion between God and man, although this is generally implicit and not actually expressed in terms of "communion." The latter conception might suggest a participation in the divinity such as is foreign to the thought of the OT, although Philo (*Life of Moses* 1.158) is able to speak of the relation between God and Moses as a κοινωνία.

The covenant involves the closest fellowship between God and his people, but without compromising the completeness of the divine lordship or modifying the fundamental truth that the whole relationship is based upon the sovereign grace of God, who remains transcendent, calling his people into existence and resting his covenant with them upon his promises, which are the expression of his omnipotent will. There can be no tendency in the covenant theology of the Bible to suggest the possibility of an absorption of the human by the divine, or of any union which would obscure the basic distinction between the Creator and his creation or between the all-holy God and those who are made holy only by virtue of their vocation from him. Nevertheless, within the terms of the relationship of grace and obedience presupposed in the call of Israel, communion of a close and intimate kind is established between man and God. The foundation of the covenant is the divine promise: "I will be with you" (cf. Exod. 3:12), and it is expressed in the presence of God among his people, and the access to him which this implies (*see* COVENANT). The divine presence is symbolized in the ark, which represents and mediates it (cf. Num. 10:35-36), and in the ideas associated with the cloud of the presence (Exod. 33:7-11), and the angel of the Lord leading and directing the covenant people (Exod. 23:20-21; 32:34). Later, the presence of God among his people is represented chiefly by the temple at Jerusalem, and by Israel's possession of the revealed will of God as set out in the Law.

b. Between God and individuals. Certain individuals are granted a special and peculiarly close relationship to God. Moses is marked out from all other men as one with whom God communed directly, without an intermediary: "When Moses entered the tent, the pillar of cloud would descend and stand at the door of the tent, and the LORD would speak with Moses. . . . Thus the LORD used to speak to Moses face to face, as a man speaks to his friend" (Exod. 33:9-11). His communion with God was thus different from that of the prophets: "And there has not arisen a prophet since in Israel like Moses, whom the LORD knew face to face" (Deut. 34:10). The prophets themselves, however, are specially favored in their relationship to God. They are

> filled with power,
> with the Spirit of the LORD,
> and with justice and might,
> to declare to Jacob his transgression
> and to Israel his sin (Mic. 3:8).

> The Spirit of the Lord GOD is upon me,
> because the LORD has anointed me
> to bring good tidings to the afflicted
> (Isa. 61:1).

They are men to whom the word of the Lord comes (Jer. 1:2), to whom God reveals the meaning of his acts in history:

> Surely the Lord GOD does nothing,
> without revealing his secret
> to his servants the prophets
> (Amos 3:7).

c. In relation to Israel's hope. The hope of Israel, however, included the expectation that in the age of fulfilment all God's people, and not merely a selected few, would be admitted to a similar intimate, personal knowledge of God. This might be conceived in terms of a general effusion of the prophetic Spirit upon the whole people (cf. Num. 11:29; Joel 2:28-29). In a deeper sense it might be seen as the essence of a new relationship to God, which might properly be described as one of personal communion rather than external observances: "This is the covenant which I will make with the house of Israel after those days, says the LORD: I will put my law within them, and I will write it upon their hearts; and I will be their God, and they shall be my people. And no longer shall each man teach his neighbor and each his brother, saying, 'Know the LORD,' for they shall all know me, from the least of them to the greatest, says the LORD; for I will forgive their iniquity, and I will remember their sin no more" (Jer. 31:33-34). This is the hope of a deeper communion between God and man, which was seen by the NT writers as having been fulfilled in Christ. Under the system of the old covenant it could not be fully realized, although at its best devotion to the law as the principle of fellowship with God, seen, e.g., in Ps. 119, and also the liturgical system of the temple and its sacrifices, provided some measure of personal, and far from merely formal, communion with God. The sacrifices themselves were intended to supply a means toward this end. Whereas the sin offering and its associated sacrifices were meant to serve as a way of removing the barriers to fellowship with God set up by sins (at least unwitting and ritual offenses), the peace offering was evidently thought of as constituting a communion meal in which God and the worshiper were brought together in a mutual participation in the dedicated offering (*see* SACRIFICE AND OFFERINGS). The clearest indication that the sacrifice

could be regarded as a real bond of close personal union is to be found in the illustrations and analogies adduced by Paul. "Consider the practice of Israel," he says; "are not those who eat the sacrifices partners [i.e., communicants] in the altar?" (I Cor. 10:18). The worshipers in the sacrificial system participate in the altar—i.e., in the divine presence as thereby symbolized. Paul believes that there is a similar participation on the part of heathen worshipers, but that in their case the communion is with demons: "I imply that what pagans sacrifice they offer to demons and not to God. I do not want you to be partners with [i.e., communicants with] demons. You cannot drink the cup of the Lord and the cup of demons. You cannot partake of the table of the Lord and the table of demons" (I Cor. 10:20-21). To partake of the sacrifice makes the worshiper a participant, either in fellowship with God in the case of the sacrifices of Judaism, or in fellowship with demons if he eats and drinks the offerings consecrated to pagan deities.

2. In the NT. ***a. As participation in Christ.*** In the Christian dispensation, communion between God and man has been established in a new and deeper sense through Christ. Through his life, death, resurrection, and glorification the new covenant has been brought into being (cf. Mark 14:22-25; I Cor. 11:23-26). Man's communion with God is now in and through Christ, and the Christian life is life "in Christ." This frequently repeated phrase of Paul indicates the heart and essence of the Christian experience of communion. The gospel proclaimed by Paul and the other apostolic missionaries is summed up in the words: "We beseech you on behalf of Christ, be reconciled to God. For our sake he made him to be sin who knew no sin, so that in him we might become the righteousness of God" (II Cor. 5:20-21). The vocation of those who are converted by the apostolic preaching is a calling "into the fellowship of his Son, Jesus Christ our Lord" (I Cor. 1:9).

This calling involves union with Christ in his death, burial, and resurrection. It is a sharing in the life of the new age, to be partially realized in the present time and to be consummated after death; the state of being "always with the Lord," in a complete and final sense, belongs to the future hope (I Thess. 4:17). It is, however, experienced now in the most profound personal communion with Christ, which is mediated by the Spirit and is identical with life in the Spirit of God, which is the Spirit of Christ (cf. Rom. 8:9-17). Its character is best expressed in Paul's acknowledgment of his death with Christ to the life of the "flesh" and his entry upon a life whose inner principle and motive is Christ, apprehended by faith: "I have been crucified with Christ; it is no longer I who live, but Christ who lives in me; and the life I now live in the flesh I live by faith in the Son of God, who loved me and gave himself for me" (Gal. 2:20). The Christian has died with Christ, believing that he will also live with him (Rom. 6:8). We suffer with Christ in the assurance of glorification with him (Rom. 8:17; cf. II Cor. 7:3). By anticipation the Christian can be said to be exalted with Christ and enthroned with him, even while he still lives in the present age: "God, . . . even when we were dead through our trespasses, made us alive together with Christ . . . , and raised us up with him, and made us sit with him in the heavenly places in Christ Jesus" (Eph. 2:4-6). The personal experience of Paul himself was of rejecting all that had seemed valuable to him in his unconverted days and accepting a righteousness given by God, the essential content of which is a new relationship to God through communion with Christ in death and resurrection: "that I may gain Christ and be found in him, not having a righteousness of my own, based on law, but that which is through faith in Christ, the righteousness from God that depends on faith; that I may know him and the power of his resurrection, and may share his sufferings, becoming like him in his death, that if possible I may attain the resurrection from the dead" (Phil. 3:8-10). The thought, however, though more profoundly expressed by Paul, is not peculiar to him. With a somewhat different emphasis, the idea of the Christian life as a sharing in the sufferings of Christ is found also in such passages as I Pet. 4:13; 5:1.

b. Church and sacraments. This communion with Christ is not merely an individual experience. It is constitutive of the church as the body of Christ (cf. especially I Cor. 12:12-13). The community is a body indwelt by the Spirit, so that it can, in one aspect, be virtually equated with Christ. The effective sign of incorporation into Christ is baptism, in which the converts are buried with Christ to rise as participants in the resurrection life (Rom. 6:3; Col. 2:12). This new life is a participation or communion in the Holy Spirit (II Cor. 13:14), and results in communion between the human members of the one body which is Christ (the phrase "participation in the Holy Spirit" in the last-mentioned passage may also, or perhaps alternatively, convey the meaning of "fellowship brought about by the Holy Spirit"; cf. RSV text and mg.). In Christ the various earthly divisions and distinctions are transcended (Rom. 10:12; Gal. 3:28). *See* CHURCH, IDEA OF.

The communion of the church with Christ (which is a union through him with the Father; cf. John 14:20-23; I John 1:3-6; 3:24; 4:13), and culminates in the hope of the vision of God as he is (I John 3:2), is effectively signified and expressed in the Eucharist. Participation in the one loaf and the cup is the means and the bond of union with Christ, and continually constitutes the church as his body. It brings the community into present union with the ascended Christ, and both symbolizes and effects the unity of all Christians. It is the communion in and of the body and blood of Christ (I Cor. 10:16-17; 11:23-29). In this Eucharistic communion, there are gathered up the ideas underlying the commemoration of Christ's death, the re-enacting of the Last Supper, the meals of fellowship between the risen Christ and his followers (cf. Luke 24:30; John 21:13), and the "breaking of bread" in fellowship, practiced by the early Jerusalem church (Acts 2:42, 46).

Present communion with God in Christ is to be perfected when the future hope of total redemption is fulfilled. The proclamation of Christ's death in sacramental communion is "until he comes" (I Cor. 11:26). The promises of God thus imply a release from the "corruption that is in the world because of evil desire [RSV 'passion']," and participation, or

communion, in the divine nature (II Pet. 1:4). This "deification" of the believer signifies chiefly participation in the future life, which is the life of God.

COMMUNITY OF GOODS (Acts 2:44-45; 4:32–5:10). In the first days of the church in Jerusalem, the believers, taught by the apostles, united in a communal life in which they joyfully and generously shared both spiritual and material possessions. Luke reports twice that they had all things in common. In 2:44-45 they sold their goods and divided to all as needed. In 4:32-35 no one selfishly claimed his own property. No one was in want, because owners of lands and houses sold these and gave the proceeds to the apostles to distribute to the needy. Luke graphically reports the gift of BARNABAS to the common fund, the lies and deaths of ANANIAS and SAPPHIRA.

The origins of this community of goods may be found in the example of Jesus and his disciples (Luke 8:3; Mark 10:21), and in the contagious new joy of a common life in the Spirit which overflowed into a sharing of wealth. The communal life of the Essenes was well known (Jos. War II.viii.3-4). The Dead Sea Scrolls show some parallels, or possible antecedents, in community of goods at Qumran (1QS 1.12; 5.2; 6.3, 19, 22; 7.25), where communism was required.

Because of Marxism today, "communism" is not a suitable term for the communal life of the first Christians. Their community of goods was voluntary, set up by sales, and shared by apostles with the poor. Its motivation was God's grace. It was not an equality of property or of production. It resulted in the first dissension in the church (Acts 6:1-6). It soon faded out, and the poor were aided by other plans (Gal. 2:10; I Cor. 16:1; II Cor. 8:1-15). But its influence continued long (Did. 4.8; Barn. 19.8), especially in the communal monastic orders of the church.

COMPASS POINTS. *See* ORIENTATION.

COMPASSION, PITY. The words for "compassion" and "pity" in the original languages of the Bible are also frequently translated "mercy," and the meanings of these terms are interchangeable. *See* MERCY.

CONANIAH kŏn′ə nī′ə *Kethibh* כונניהו, *Qere* כנניהו, Yahu has established]; KJV CONONIAH in II Chr. 31:12-13. Alternately: JECONIAH jĕk′ə nī′ə [Ἰεχονίας] (I Esd. 1:9); KJV JECONIAS —əs. **1.** A Levite and chief officer over the collection of contributions and tithes in the reign of King Hezekiah (II Chr. 31:12-13).

2. A chief of the Levites in the reign of King Josiah (II Chr. 35:9). B. T. DAHLBERG

CONCISION. *See* MUTILATION.

CONCUBINE [פילגש; πάλλαξ]. A slave girl who belonged to a Hebrew family and bore children. Concubines were acquired by purchase from poor Hebrew families, captured in war, or taken in payment of debt. A girl in this classification achieved a certain status if she had sons (Gen. 21:10; 22:24; 30:3; 31:33; Exod. 23:12; 21:7, 10). Her son might become a co-heir; her name was remembered because of her offspring; a barren wife might have a son through her; she might have her own quarters; she was to benefit by the seventh day of rest; and she had the right to food, clothing, and sexual intercourse. She had the affection of her "husband" (Judg. 19:1-3). Eunuchs were put in charge of concubines (Esth. 2:15); they are called "man's delight" (Eccl. 2:8), along with singers. A king might have many concubines (I Kings 11:3). The faithfulness of the daughter of a concubine induced David to give decent burial to the bones of Saul and Jonathan (II Sam. 21:10-14).

See also FAMILY; MARRIAGE. O. J. BAAB

CONCUPISCENCE. A word occurring in the KJV and some other older versions in several NT passages with the meaning of "covetousness" (Rom. 7:8; Col. 3:5) and "sexual lust" (I Thess. 4:5), translating ἐπιθυμία. The term is not used in the RSV or other modern translations, because of technical theological connotations acquired by the concept in Roman Catholic theology. *See* COVETOUSNESS; DESIRE; LUST. F. W. YOUNG

CONDEMNATION. Primarily, the act of judging guilty.

1. In the OT. In the OT the term "condemn" is used to translate רשע, except in four passages. It renders שפט in Pss. 109:31; 141:6; Prov. 19:29; and אשם in Ps. 34:21-22.

The concept of condemnation appears primarily in Job, Psalms, and Proverbs, but also in Exod. 22:9; Deut. 25:1; I Kings 8:32; and it is usually, but not always, used in connection with God. God will condemn one who breaks a trust (Exod. 22:9), the man of evil devices (Prov. 12:2), the unrighteous (Ps. 34:21); and Solomon prays that God will condemn the guilty (I Kings 8:32). But God will not condemn those who take refuge in him (Ps. 34:22), and he saves the needy man from those who condemn him to death (Ps. 109:31; cf. Ps. 37:33). The wicked are said to condemn the innocent (Ps. 94:21; Prov. 17:15), and the righteous condemn the wicked (Deut. 25:1; Ps. 141:6; cf. Prov. 19:29). Job condemns himself (Job 9:20; cf. 15:6); he fears that God will condemn him (9:29) and pleads with God not to (10:2). Job is asked both by Elihu (34:17) and by God himself (40:8) whether he will condemn God.

2. In the NT. "Condemn" and "condemnation" translate eight different Greek words, six of which have the same root. Of these six, two are verbs (κρίνω, κατακρίνω) and four are nouns (κρίμα, κατάκριμα, κρίσις, κατάκρισις). The other two Greek words are καταγινώσκω (Gal. 2:11; I John 3:20-21) and καταδικάζω (Matt. 12:7, 37; Luke 6:37; Jas. 5:6). The root of the first six words meant originally "to separate or distinguish"; then "to pass a judgment on"; and finally "to pass an unfavorable judg-

ment on," or "to condemn." This root combined with the preposition κατά always means "to pass a sentence against," or "to condemn." The word "condemn," therefore, is to be understood primarily as referring to a verdict of guilty, and usually only by implication to a punishment.

In the NT, God is sometimes the source of condemnation, either explicitly—as, e.g., of "sin in the flesh" (Rom. 8:3) or of Sodom and Gomorrah (II Pet. 2:6)—or implicitly (cf. Matt. 12:37; Mark 12:40=Luke 20:47; John 3:18*b;* Rom. 3:7; 13:23; I Cor. 11:32, 34; II Cor. 3:9; II Thess. 2:12; Jas. 5:12; II Pet. 2:3; Jude 4). But God sent his Son, not to condemn the world (John 3:17; cf. 3:18*a;* 8:11).

Men also condemn one another (cf. Matt. 12:7; John 8:10; Rom. 2:27; Heb. 11:7; Jas. 5:6); but they are forbidden to do so (Luke 6:37). Jesus warns that the men of Nineveh and the queen of the South will condemn his "generation" (Matt. 12:41-42=Luke 11:31-32); and Paul rejoices that no one whom God acquits can be condemned by any other (Rom. 8:34).

Jesus was condemned to death (Matt. 20:18=Mark 10:33; Matt. 27:3; Mark 14:64; Luke 24:20); and one may condemn oneself (Rom. 2:1; Gal. 2:11; I John 3:20-21). The devil also condemns (I Tim. 3:6).

The word used only in Rom. 5:16, 18; 8:1 (κατάκριμα) probably means the punishment following sentence, and not the sentence itself. It refers in Rom. 5 to the punishment of servitude in which all men live following Adam's sin; and in Rom. 8 the servitude is said to be past for those who are in Christ.

CONDUIT [תעלה] (II Kings 18:17; 20:20; Isa. 7:3; 36:2). A water channel or tunnel. *See* Water Works; Jerusalem § 6*c*.

CONEY. KJV translation of שפן. *See* Rock Badger.

***CONFESSION.** An aspect of the worship of God. It involves acknowledgment of sin and helplessness, the declaration of the acts of God by which man is rescued from his troubles, and praise and thanksgiving to the mighty God who shows mercy to his people. In the NT the second aspect relates to Jesus as God's anointed one and develops into a liturgical and theological proclamation of the lordship of Jesus. As the Christian mission moved into the Hellenistic world, a variety of misinterpretations of the gospel arose. To combat them, the liturgical confession became more complex, moving toward the theological formulation found in second-century baptismal creeds.

3. In the NT
   a. Confession of sin
   b. Confession of Jesus
   c. Praise and thanksgiving

Bibliography

1. Terminology. Confession as proclamation, acknowledgment of sin, and praise of God is expressed by many terms in the OT. The commonest among them are the verb ידה, "to confess or declare" (Pss. 7:17; 9:1; 28:7; etc.); the noun תודה, "confession, thanksgiving" (Pss. 26:7; 50:14; 100:4; Ezra 10:11); the verb נדר, "to vow" (Ps. 76:11; Isa. 19:21); the noun נדר, "vow" (Ps. 22:26; Jonah 1:16); the verb שבח, "praise, glorify" (Pss. 63:3; 117:1; 145:4); and the verb קרא, "call upon, proclaim" (Exod. 33:19; 34:6; Isa. 61:2).

The LXX also has a great variety of expressions. The verbs ὁμολογέω, "to confess"; ἐξομολογέομαι, "to praise, thank"; ἀνθομολογέομαι, "to give thanks"; and the noun ὁμολογία, "confession," are used to render ידה ,נדר ,שבח, and נדר. Ἐπικαλέω and καλέω, "to call upon," render קרא; αἰνέω and ἐπαινέω, "to praise," translate שבח; αἴνεσις, "praise," is used for תודה. ידה is also translated by κράζω and ἐξαγορεύω.

In the NT the chief terms are the verb ὁμολογέω, "to confess, declare" (Matt. 10:32; John 1:20; Rom. 10:9); the noun ὁμολογία, "confession" (II Cor. 9:13; I Tim. 6:12; Heb. 3:1; 4:14); the verb ἐξομολογέομαι, "to confess, acknowledge, praise" (Matt. 3:6; 11:25; Mark 1:5; Luke 10:21); and ἀνθομολογέομαι, "to give thanks" (Luke 2:38).

2. In the OT. Confession roots in the liturgical tradition of the cultus. It is first the proclamation of the deliverance wrought by God: Israel's redemption (*see* Redeem) from bondage in Egypt, or the deliverance of an individual oppressed by his enemies, crushed by disaster, or burdened by guilt:

> I waited patiently for the Lord;
> he inclined to me and heard my cry.
> He drew me up from the desolate pit,
> out of the miry bog,
> and set my feet upon a rock,
> making my steps secure
> (Ps. 40:1-2).

Secondly, it is the acknowledgment of Sin and helplessness. Under the chastening hand of God, Israel recognizes its sin. The worshiper ponders the desperation of his plight and his helplessness to escape. Confession of sin glorifies God by recognizing that he is in the right over against man:

> So that thou art justified in thy sentence
> and blameless in thy judgment
> (Ps. 51:4).

In the postexilic period individual confession of sin becomes an increasingly prominent part of religious life.

Thirdly, it is the praise of God, who rescues his people. The Psalter is the chief repository of Israel's eloquence in such confessional praise of God, particularly Pss. 22; 30; 34; 40; 51; 116. Similar hymns are to be found in I Sam. 2:1-10; Isa. 38:10-20; Jonah 2:2-9. *See* Worship in the OT.

3. In the NT. The OT pattern of liturgical confession provides the framework of NT usage. The three basic elements recur: confession of sin, proclamation of the divine deliverance, and thankful praise. The centrality of the person of Jesus and developments in the early church, however, cause significant modifications.

a. Confession of sin. John the Baptist emphasizes strongly the importance of confession of sins. It is a sign of Repentance and a part of the baptismal rite by which Israel is to be purified for the coming of the Messiah (Matt. 3:6; Mark 1:5). Jesus also stresses

confession of sins, making it central in the parables of the prodigal son (Luke 15:18) and of the Pharisee and the tax collector (Luke 18:10), as well as in the Lord's Prayer (Matt. 6:12; Luke 11:4).

b. Confession of Jesus. Where the OT confession proclaims God's redeeming acts for Israel, the NT confession focuses on Jesus as God's redemptive deed. Jesus is himself the great example of confession, "who in his testimony before Pontius Pilate made the good confession" (I Tim. 6:13). Similar language is used in Rev. 1:5; 3:14. When false witnesses testified against him (Mark 14:56) and the disciples denied him (vs. 68), Jesus bore witness to his messianic vocation before the high priest (vs. 62) and Pilate (15:2).

The disciple is also required to make confession. It is a public event taking place "in the presence of many witnesses" (I Tim. 6:12), quite possibly in connection with the rite of BAPTISM. At the beginning of the ministry John the Baptist made confession (John 1:20, 29-34; 3:25-30). At Caesarea Philippi, Simon Peter confessed Jesus as Messiah (Matt. 16:13-20; Mark 8:27-30; Luke 9:18-21). Mary did so after the death of Lazarus (John 11:27), and Paul in his speech before Felix (Acts 24:14 ff).

The disciple commits himself in loyalty to Jesus as God's anointed one (Matt. 10:32; Luke 12:8; Acts 23:6), an identification which is by no means obvious, and which may involve risks, such as religious and social ostracism (John 9:22; 12:42). Jesus confronts his disciples with the necessity of choice: they cannot serve both God and mammon (Matt. 6:24; 19:23; Luke 16:13). The Fourth Evangelist puts the issue as the glory of God opposed to the glory of men. Those who crave glory among men are unable to confess Jesus (John 5:44; 12:43).

The apostolic church knows the necessity of confessing Jesus: "If you confess with your lips that Jesus is Lord and believe in your heart that God raised him from the dead, you will be saved. For man believes with his heart and so is justified, and he confesses with his lips and so is saved" (Rom. 10:9-10; cf. II Cor. 4:13). In the life of the early church a number of factors influenced the development of confessional formulas. There was the need for catechetical instruction as preparation for baptism. The Western text of Acts 8:37 relates that the Ethiopian eunuch confessed: "I believe that Jesus Christ is the Son of God." While the quotation may not be a part of the original text, it shows that the custom of confession at baptism is very early.

The worship of the early church also influenced the forms of confession. I Tim. 3:16 is believed to be an early christological hymn:

> He was manifested in the flesh,
> vindicated in the Spirit,
> seen by angels,
> preached among the nations,
> believed on in the world,
> taken up in glory.

Other liturgical formulations are to be seen in Phil. 2:6-11 and in I Cor. 15:3-7, where Paul's reference to "delivering" what he had "received" points to a liturgical and confessional tradition. The Jewish liturgical tradition of the Shema has probably influenced the confession: "There is one God, the Father, from whom are all things and for whom we exist, and one Lord, Jesus Christ, through whom are all things and through whom we exist" (I Cor. 8:6); "There is one body and one Spirit, . . . one Lord, one faith, one baptism, one God and Father of us all" (Eph. 4:4-6).

Persecution also played a role. The Roman imperial cult required sacrifice to the emperor and the acknowledgment that Caesar was Lord, κύριος καῖσαρ. Early Christians were convinced that the one κύριος was revealed to them in Jesus the Messiah, and they therefore regarded EMPEROR-WORSHIP as idolatry. Jesus himself made the good confession before Pontius Pilate, and the Christian was obliged to confess his name before Roman authorities also. Out of this experience a close connection developed between confession of Jesus and the concept of witness of martyrdom (μαρτυρία). *See* MARTYR.

Growth of HERESY was a fourth conditioning factor. Some of the NT confessional formulations show sharp reaction to false teaching: "Who is the liar but he who denies that Jesus is the Christ?" (I John 2:22); "Every spirit which confesses that Jesus Christ has come in the flesh is of God, and every spirit which does not confess Jesus is not of God" (I John 4:2-3; cf. I John 4:15; II John 7). Confession is an affirmation of the historical character of God's redeeming deed in Jesus Christ; commitment to the lordship of Jesus, with all its risks; and rejection of all intellectualistic, moralistic, and mythological misinterpretations of the Christ event.

c. Praise and thanksgiving. While confession of Christ in its controversial setting is most prominent in the NT, confession as praise is not absent. The prophetess Anna praises God after seeing the child Jesus (Luke 2:38). Jesus makes a confession of praise to the Father for his gracious revelation (Matt. 11:25; Luke 10:21). The author of the Letter to the Hebrews sees the life of the Christian as confessional praise: "Let us continually offer up a sacrifice of praise to God, that is, the fruit of lips that acknowledge his name" (Heb. 13:15). Rom. 15:9 asserts that Christ became a servant of the circumcised in order that Gentiles might glorify God, and Phil. 2:9-11 envisages the triumph of the exalted Christ when "at the name of Jesus every knee should bow . . . and every tongue confess that Jesus Christ is Lord, to the glory of God the Father."

CONFIRMATION. The beginning of the church's rite of confirmation is found by some scholars in a narrative of Acts (cf. 8:14-17): The Samaritans have been baptized by Philip, one of the Seven, and they received the HOLY SPIRIT by the laying on of the hands of the apostles Peter and John. A somewhat similar case appears in Ephesus (Acts 19:1-7): Some "disciples" who have only received "John's baptism" are baptized in the name of the Lord Jesus and receive the Spirit on the imposition of Paul's hands. Elsewhere in the NT the Spirit is given at the moment of baptism (cf. Acts 2:38). The laying on of

hands does not appear as an element of Christian BAPTISM or a rite of admission to the church. *See* HANDS, LAYING ON OF.

Different explanations of the origin of confirmation have been proposed by scholars. The most probable seems to be the following: With the mission in Samaria the gospel passed over to non-Jews for the first time. The solemn intervention of the apostles must then underline the fact that a great step had been made toward the fulfilment of the Lord's command (Acts 1:8), and that the new converts now fully shared in the communion of the one apostolic church. Similarly the Ephesian story emphasizes that the "disciples" were now real Christians incorporated in the church. In this sense both narratives may be considered as precedents of confirmation.

CONFISCATION. Appropriation of private property to the public use or treasury. Confiscation, not mentioned in biblical law, came into vogue in Israel with the rise of the monarchy. It was a prerogative of the king to seize private property for his personal use and for his officers (I Sam. 8:14; cf. 22:7); the abuse of this prerogative led to the reaction visible in Ezek. 45:7-8; 46:16-18. As a judicial punishment, Ahab's appropriation of Naboth's property was early interpreted—correctly, it would seem—as an exercise of the royal right to confiscate the estate of state offenders: "The property of persons executed by the king devolves upon the king" (Tosef. Sanh. 4.6, citing I Kings 21:15-16). Jewish authorities under Persian rule were granted the power to inflict property penalties (ענש נכסיו; Ezra 7:26), illustrated by Ezra 10:8, where יחרם, "forfeited," means "confiscated to the public treasury."

M. GREENBERG

CONGREGATION, ASSEMBLY. The translation of several words denoting a gathering. Most frequent and most important are the terms עדה and קהל.
