K

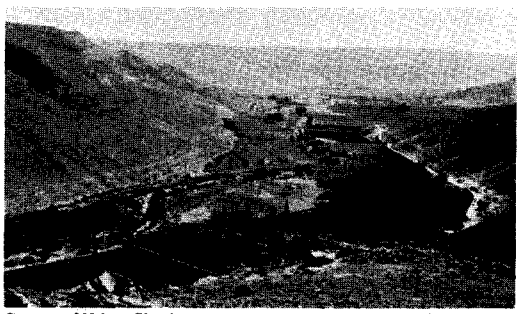
KAB kăb [קב]; KJV CAB. A measure of capacity mentioned only in II Kings 6:25. According to Josephus and rabbinical sources it would be slightly larger than a quart. *See* WEIGHTS AND MEASURES § C4*j*.

KABZEEL kăb′zĭ əl [קבצאל, may God gather]. Alternately: JEKABZEEL jĭ— [יקבצאל] (Neh. 11:25). A city in the extreme SE part of Judah, near the border of Edom (Josh. 15:21). It was the native town of Benaiah, one of the chief officers of David and Solomon (II Sam. 23:20; I Chr. 11:22). It was one of the towns reoccupied by the Judeans after their return from the Babylonian exile. The site is unknown. S. COHEN

KADESH, KADESH-BARNEA kā′dĭsh, bär′nĭ ə [קדש, קדש ברנע; Καδὴς τοῦ Βαρνή]; KJV Apoc. CADES kā′dēz [Κῆδες, Κάδης] (I Macc. 11:63, 73); CADES-BARNE kā′dēz bär′nĭ [Καδὴς Βαρνή] (Jth. 5:14); KADES kā′dēz [Κάδης] (Jth. 1:9). Alternately: ENMISHPAT ĕn mĭsh′păt [עין משפט, spring of judgment] (Gen. 14:7); MERIBATH-KADESH mĕr′ə băth kā′dĭsh [מרבת קדש, (waters of) strife at Kadesh] (Deut. 32:51; Ezek. 47:19; 48:28); KJV MERIBAH-KADESH mĕr′ə bə— in Deut. 32:51. An oasis in the Wilderness of Zin, where the Israelites encamped for a lengthy period during their travels from Egypt to Canaan.

1. Name. The names Kadesh and Kedesh are used for cities that were ancient sanctuaries in the land of Canaan; the MT is usually careful to use the former in the cities of Judah and the latter for those in the N. The meaning of the word "Barnea," which is appended to this Kadesh to distinguish it from the others, is unknown; it may be a personal name, of similar formation to those of Bera and Birsha (Gen. 14:2).

2. Location. Kadesh-barnea is located just S of the Israelite border, not far from its W extremity at the river of Egypt (Wadi el-'Arish; Num. 34:4-5). Ezek. 47:19; 48:28 has the same location for Meribath-kadesh (KJV "waters of strife in Kadesh"). There are three springs, grouped closely together, which suit this locality: 'Ain el-Qudeirat, 'Ain Qedeis, and 'Ain Qoseimeh. The latter is entirely too small to have taken care of the Israelites (*see* AZMON). Trumbull made out a strong case for 'Ain Qedeis, which retains the Arabic form of the name, and for a long time was accepted by Bible scholars; but the investigations of Woolley and Lawrence have pronounced in favor of 'Ain el-Qudeirat, which is by far the largest of the three, the only one which flows all year, and is close to extensive land for pasturage. There are also the remains of an Israelite fortress maintained there between the tenth and eighth centuries B.C., located to guard the Israelite



Courtesy of Nelson Glueck

1. Wadi Qudeirat, with Khirbet Qudeirat (Kadesh-barnea?) back of the trees

settlement. In any case, the Israelites who were encamped in the locality undoubtedly made use of all three springs. Fig. KAD 1.

3. History. The first reference to Kadesh-barnea is in Gen. 14:7, where it is mentioned together with its old name En-mishpat; it is described as being not far from EL-PARAN and the point farthest W that was reached by the raid of Chedorlaomer and his confederates. It is also spoken of as being near Beer-lahai-roi (Gen. 16:14), where both Abraham and Isaac frequently sojourned, and as both of them traveled through the Negeb, Kadesh-barnea was probably one of their watering places.

After Moses and the Israelites left Mount Sinai, they journeyed northwestward across the "great and terrible wilderness" (el-Tih) toward the hill country of the Amalekites and settled in Kadesh-barnea (Deut. 1:19-20). The corresponding passage in Num. 13:26 speaks of the location as the wilderness of PARAN, but it is evident that Kadesh is meant. It was from here that a company was sent out to spy out the land of Canaan; when their unfavorable report led to the divine decree that the entire generation would perish in the wilderness and only their children inherit the land promised by God, it was from Kadesh that the Israelites, rejecting the counsel of Moses, made a hasty attempt to force their way into the hill country of the Amorites and were beaten back with great slaughter. After this event, they remained in Kadesh "for many days" (Num. 13; 14; Deut. 1).

It is not certain how long this first sojourn in Kadesh lasted. The whole series of chapters from Num. 15 to 19 has no mention of any removal, and ch. 20 finds them still in Kadesh, so that it might be inferred from them that almost the entire period of the wilderness sojourn was spent there. But chs. 15–19 are all from the P document and represent an intrusion in the JE narrative; hence it is probable

that they have misplaced some accounts of the journeys, which are summarized in Num. 33. This list of stations follows closely the account of the leaving Egypt, journey to Sinai and trip northwestward as far as Hazeroth, and the station before Kadesh, and gives a number of stations from that point on until the end of the wilderness wanderings, when Kadesh reoccurs just before the death of Aaron (vs. 36). The first sojourn at Kadesh-barnea is completely omitted; it is possible that the list is defective or that Kadesh is regarded as the same as RITHMAH. According to Deuteronomy, it was apparently not long after the abortive invasion that the Israelites left Kadesh, for it was thirty-eight years from that time that they reached the brook Zered (Deut. 2:14).

According to the account in Num. 20, it was at Kadesh that the people murmured because of lack of water; Moses brought forth a supply from the rock, but was punished for some lack of faith, not clearly defined, by being forbidden to enter the Promised Land. This argument (*mᵉrîbhâ*) gave rise to the name Meribath-kadesh. According to Num. 20:14-21 it was from Kadesh that Moses sent messengers to the king of Edom, requesting a passage through his country, which was refused; this account is repeated in Judg. 11:16-17. Deuteronomy, however, knows nothing of such an embassy and even indicates that the Israelites passed through the Seir territory of the Edomites (Deut. 2:4-8, 29) and gives no hint of any murmuring about water in a second trip to Kadesh, unless the statement that "the LORD was angry with me on your account" (Deut. 3:26) refers to this story. *See* EXODUS, ROUTE OF, § 2.

The final reference to Kadesh-barnea—or rather, to Meribath-Kadesh—is when Ezekiel makes it a part of the S border of his idealized land of Israel (Ezek. 47:19; 48:28). There are also indications that in some older accounts that have been preserved Kadesh was regarded as much nearer the mount of revelation than the later narratives have it. Thus, in one passage the voice of the Lord shakes the wilderness of Kadesh (Ps. 29:8); in the passage in Deut. 33:2, which describes the advance of God from his holy mountain and mentions, in turn, Sinai, Seir, and Mount Paran, the words "from the ten thousands of holy ones" (*mērîbhᵉbhôth qōdhesh*) are probably to be emended to *mēmᵉrîbhath qādhesh*, "from Meribath-Kadesh."

Bibliography. H. C. Trumbull, *Kadesh-Barnea* (1884); C. L. Woolley and T. E. Lawrence, *The Wilderness of Zin* (1914-15); W. F. Albright, *Recent Discoveries in Bible Lands* (1955), pp. 86-87. S. COHEN

KADESH ON THE ORONTES ō rŏn'tēz [קדש; Amarna *Qidši, etc.*]. A town S of the Lake of Hums, where the famous battle between the Egyptians under Ramses II and the Hittites took place in 1288 B.C.; modern Tell Nebi Mend.

KADMIEL kăd'mĭ əl [קדמיאל, God is of old, *or* God goes before]. A Levite name connected with several aspects of postexilic reconstruction (Ezra 2:40; 3:9; Neh. 7:43; 9:4-5; 10:9; 12:8, 24).

KADMONITES kăd'mə nīts [קדמני, easterners] (Gen. 15:19). The Semitic people, nomadic or pastoral, who inhabited the Syro-Arabian Desert between Palestine-Syria and the Euphrates River.

Since the Hebrews, in orienting themselves with relation to the four directions, always faced the direction of sunrise, the East was called קדם, "front" or "before." The land of Qedem (Gen. 25:6; RSV "East Country"), to which Abram sent the sons of Keturah, who bear Arabian names, is believed to have been in the Syrian Desert, E of Byblos. The Kadmonites, associated with the nomadic Kenites and Kenizzites, are among those whose lands God gave to Abram and his descendants (Gen. 15:18-21). The name seems quite parallel to the more common designation, "sons of Qedem" (RSV "people of the east"), among whom were included Job (Job 1:3; cf. 18:20), the camel-riding Midianite kings (Judg. 8:10-12, 21, 26), and the wise men who bear names with Arabian associations (I Kings 4:30-31—H 5:10).

Bibliography. R. Kittel, *Geschichte des Volkes Israel* (1921), vol. I, p. 392, note 2; J. A. Montgomery, *Arabia and the Bible* (1934); W. F. Albright, "The Oracles of Balaam," *JBL*, LXIII (1944), 211. R. A. BOWMAN

KAIN kān [קין (1 *below*), הקין (2 *below;* KJV CAIN)]. **1.** Singular collective form of the clan name equivalent to the KENITES. It occurs in Num. 24:22 (KJV THE KENITE) in the oracle of Balaam, and also in Judg. 4:11, where it is translated "the Kenites." The same word designates Cain, the son of Adam and Eve, and some scholars view Cain as the eponymous ancestor of the Kenites, but this is very doubtful.

G. M. LANDES

2. A city in the S of the hill country of Judah; identified with Khirbet Yaqin, SE of Hebron (Josh. 15:57). According to Arab tradition it was from a hill nearby that Abraham witnessed the destruction of Sodom and Gomorrah. As the name indicates, Kain was a settlement of the Kenites. It has been suggested by some scholars that the name of the city was not Kain, but Zanoah, and that the last word of vs. 56 should be read with the first word of vs. 57—i.e., "and Zanoah of Kain" (or "of the Kenites"), and also that "nine" instead of "ten" cities be read in vs. 57 (following the LXX). In Judg. 4:11, מקין (RSV "from the Kenites," but probably to be read "from Kain") should be translated: "And Heber the Kenite, a descendant of Hobab . . . left Kain" (lit., "was separated from Kain").

Bibliography. A. Alt, "Das Institut im Jahre 1925," *PJB*, (1926), 76-77; M. Noth, *Das Buch Josua* (2nd ed., 1953), pp. 92, 98. S. COHEN

KAIWAN. *See* SAKKUTH AND KAIWAN.

KALLAI kăl'ī [קלי] (Neh. 12:20). A priest in the time of Joiakim.

KAMON kā'mən [קמון] (Judg. 10:5); KJV CAMON. A city of Gilead where the judge Jair died and was buried. It may be the same as the Kamoun (Καμοῦν) of Polybius which is mentioned after Pella. It has been identified as Qamm, a village *ca.* three miles N of Ṭaiyibeh, but Steuernagel's description of the place indicates no settlement earlier than Roman times, so this is a case of a name wandering. Another

possibility is the village of Qumeim, E-NE of Irbid.
S. COHEN

KANAH kā′nə [קנה, reed]. **1.** The brook Kanah (נַחַל קָנָה; KJV "river Kanah"), an important feature of the border between Ephraim and Manasseh. The N border of Ephraim extended from TAPPUAH westward along the brook Kanah, ending at the Mediterranean (Josh. 16:8). In defining the S border of Manasseh, similar information is reported, including the naming of the brook Kanah (Josh. 17:9), with the additional statement that some of the cities of Manasseh were S of the brook in Ephraim (see 16:9).

Most commentators identify the brook Kanah with the Wadi Qanah, which flows into the modern Yarkon before reaching the Mediterranean. It has been suggested that at the time of Joshua its lower course may have been different, discharging its waters into the Mediterranean N of modern Arsuf (Apollonia).

2. The city of Kanah (not to be confused with NT Cana), on the N border of the territory of Asher (Josh. 19:28). The ancient name is preserved in the modern Qana, located *ca.* six miles SE of Tyre.

Bibliography. W. F. Albright, "The Administrative Divisions of Israel and Judah," *JPOS,* V (1925), 30; D. Baly, *The Geography of the Bible* (1957), pp. 134, 136-37, 176; E. Danelius, "The Boundary of Ephraim and Manasseh in the Western Plain," *PEQ,* XC (1958), 32-43. W. L. REED

KAREAH kə rē′ə [קרח, bald one]; KJV once CAREAH (II Kings 25:23). The father of Johanan, who was a Judean contemporary of Jeremiah and one of the captains of the forces in the open country who escaped deportation by Nebuchadnezzar (II Kings 25:23; Jer. 40:8 ff; 41:11 ff; 42:1, 8; 43:2 ff).
M. NEWMAN

KARKA kär′kə [הקרקע, the floor] (Josh. 15:3); KJV KARKAA kär′kĭ ə. A city on the S border of Judah, near Azmon. The site is unknown.
S. COHEN

KARKOR kär′kôr [קרקר] (Judg. 8:10-11). A place in E Gilead, somewhere up in the mountains, where Gideon for the second time surprised and defeated the Midianites. Its site is unknown. S. COHEN

KARNAIM kär nā′əm [קרנים, two horns *or* peaks] (Amos 6:13); KJV HORNS. A city in N Transjordan; same as ASHTEROTH-KARNAIM. Amos apparently makes a wordplay on the meaning of Karnaim ("horns") and Lo-debar ("a thing of nought").

KARTAH kär′tə [קרתה] (Josh. 21:34). A Levitical town in the territory allotted to Zebulun. Its location is unknown.

KARTAN kär′tăn [קרתן] (Josh. 21:32). A Levitical town in Naphtali; the same as KIRIATHAIM (I Chr. 6:76—H 6:61). It is perhaps to be identified with Khirbet el-Qureiyeh in Upper Galilee.

KATTATH kăt′ăth [קטת] (Josh. 19:15). A town in Zebulun; probably the same as KITRON in Judg. 1:30.

KEDAR kē′dər [קדר, mighty, *or* swarthy]. The second son of Ishmael (Gen. 25:13; I Chr. 1:29), and the eponym of an important Arab tribe. Some Arab genealogists trace the ancestry of the prophet Muḥammad through Kedar.

1. Biblical description. The Kedarites were desert-dwellers (Isa. 42:11), living alone (Jer. 49:31) in tents (Ps. 120:5; Jer. 49:29), which were black in color (Song of S. 1:5; cf. black goat's-hair tents of modern Bedouin) and which had curtains (Jer. 49:29). Some Kedarites lived in unwalled villages, *ḥaṣērîm* (Isa. 42:11; cf. Arabic *ḥaḍarīyah* of settled Arabs). They were herdsmen with flocks of sheep and goats (Isa. 60:7; Jer. 49:29, 32), which they brought as far as Tyre for sale (Ezek. 27:21), and camels (Jer. 49:29, 32). They "cut the corners" of their hair (Jer. 49:32; an Arab custom noted by Herodotus III.8; cf. shaving the head in Arabia today). They were ruled by princes who conducted trading enterprises (Ezek. 27:21; cf. the sheiks of the modern Bedouin). They were known for their fighters and particularly their archers (Isa. 21:17). Evidently the Kedarites occupied a position of power and "glory" in the ancient Near East (vs. 16).

2. Associations. In Gen. 25:13, Kedar is associated with eleven other Ishmaelite tribes, most of which can be located in N Arabia. In Jer. 49:28, Kedar is included among the "people of the east," who are elsewhere shown to have lived E of Syria-Palestine (Gen. 29:1; Judg. 6:3; Ezek. 25:4, 10; *see* EAST, PEOPLE OF THE). Arab tribes and places mentioned in connection with Kedar include Dedanites and Tema (Isa. 21:13-14), Sela (42:11), Midian, Ephah, Sheba, and Nebaioth (60:6-7), and Hazor (Jer. 49:28, 33).

3. Location. According to Gen. 25:18, Kedar and his brothers settled between Havilah (some place in Arabia) and Shur (E of Egypt and S of Palestine). Jer. 2:10 refers to Cyprus on the W and Kedar on the E. Isa. 21:13-16; Ezek. 27:21 imply that Kedar was in Arabia. According to the above indications, the territory of Kedar was E of Transjordan, and doubtless at least part of the tribe wandered in this area seeking pasture like modern Bedouin. In the fifth century B.C. there were also Kedarites on the E border of Egypt. *See* § 4*c below.*

4. History. ***a. Relations with Assyria.*** The Assyrian campaign records of the seventh century B.C. refer to the Kedarites (Assyrian *Qidri, Qadri*) in such a way as to indicate that by this time the name of this tribe was practically synonymous with Arabs. E.g., Hazail is called king of the Arabs by Esarhaddon and also king of Kedar by Ashurbanipal. This Hazail was defeated by Sennacherib of Assyria (704-681), who took Arab idols from Adumatu (biblical

Dumah). At the plea of Hazail, Esarhaddon (680-669) returned these images. Another king of Kedar, Ammuladi, attacked Palestine-Syria, but Ashurbanipal (668-633) defeated him. Kedarites were among the soldiers of Abiate, the leading Arab general in the wars against Ashurbanipal. The Arabs whom Ashurbanipal took captive are called Kedarites. It is noteworthy that these Kedarites were in league with the Nabaiateans (biblical Nebaioth, with whom Kedar is associated; *see* § 2 *above*). The tribute and booty taken by the Assyrians from Kedar include typical products of Arabia, as mentioned in the Bible: gold, precious stones, aromatic matter, camels, donkeys, sheep, goats, and cattle.

b. Relations with Babylonia. According to Jer. 49: 28, Nebuchadnezzar (605-562) conquered Kedar, and this conquest of N Arabia is confirmed by a quotation of Berossus the Babylonian historian, preserved by Josephus (Apion I.xix). Nabonidus (555-539) occupied the important caravan centers, Tema and Adummu (biblical Dumah), which, as indicated above, had been controlled by Hazail, king of Kedar.

c. Influence in the time of Geshem. Geshem the Arabian was one who obstructed the work of Nehemiah in rebuilding the wall of Jerusalem (*ca.* 440 B.C. (Neh. 2:19; 6:1-2, 6). His importance is shown by the fact that a Lihyanite inscription at al-'Ula (biblical Dedan) is probably dated in his time.* From an Aramaic inscription of the fifth century B.C. from Tell el-Maskhutah in Egypt we learn that Geshem was king of Kedar and that there were Kedarites on the E border of Egypt, perhaps stationed there as guards by the Persians. According to these data, Kedarite influence in the later fifth century extended from Transjordan, to N Arabia, to the border of Egypt, the territory later controlled by the Nabateans. Fig. KED 2.

From *Journal of Near Eastern Studies*, published by the University of Chicago Press; copyright 1956 by the University of Chicago

2. Votive inscription (Aramaic) of "Qainu the son of Geshem, king of Kedar," on a fifth-century-B.C. silver bowl found at Tell el-Maskhuta in Egypt

5. Religion. Assyrian records tell of the shrine of Hazail king of Kedar, at Adumatu. The following gods had images there: Atarsamain (often mentioned as the chief goddess of the Arabs and identified by the Assyrians with Ishtar Dilbat), Dai, Nahai, Ruldaiu, Abirillu, and Atarquruma. The chief functionary of the shrine was a priestess of Atarsamain. A symbol of this goddess was a star of gold decorated with precious stones. Another name for this goddess was han-Ilat (originally meaning "the goddess"), attested in the Aramaic inscription mentioned above. According to the Babylonian Talmud (Ta'an. 5*b*), the Kedarites worshiped water—perhaps a reference to the veneration of sacred wells or of Ba'l, the spirit of underground water, in pre-Islamic Arabia.

Montgomery, *Arabia and the Bible* (1934), pp. 45, 58, 62; A. L. Oppenheim, trans., the Babylonian and Assyrian Historical Texts, in J. B. Pritchard, ed., *ANET* (2nd ed., 1955); I. Rabinowitz, "Aramaic Inscriptions of the Fifth Century B.C.E. from a North-Arab Shrine in Egypt," *JNES*, XV (1956), 1-9; P. K. Hitti, *History of the Arabs* (6th ed., 1958), p. 42. J. A. THOMPSON

KEDEMAH kĕd'ə mə [קדמה] (Gen. 25:15; I Chr. 1:31). A son of Ishmael, and the name of an Arabian tribe. It is apparently identical with NODAB. With the name cf. בני קדם (*bᵉnê qedhem*), "sons (people) of the East." S. COHEN

KEDEMOTH kĕd'ə mŏth [קדמות]. A priestly city in Reuben, apparently situated on the Upper Arnon (Josh. 13:18; 21:37). It was from the wilderness nearby that Moses sent a message to Sihon, king of the Amorites, requesting a passage through his country (Deut. 2:26). It was one of the Levitical cities, assigned to the Merarites (Josh. 21:37; I Chr. 6:79—H 6:64). The city may be either Kasr ez-Za'feran or Khirbet er-Remeil, both of which are in that vicinity and were in existence at that time. S. COHEN

KEDESH kē'dĕsh [קדש, sacred place, *or* sanctuary]; Apoc. KADESH kā'dĭsh [Κηδες, Κεδες] (I Macc. 11: 63, 73); KJV Apoc. CADES kā'dēz. **1.** A town on the S border of Judah (Josh. 15:23); same as KADESH.

2. A Canaanite town in E Galilee, the king of which was defeated by Joshua (Josh. 12:22). It was allotted to Naphtali (19:32, 37) and hence called Kedesh in Naphtali (Judg. 4:6). It was also called Kedesh in Galilee, and was set apart as one of the cities of refuge and allotted to the Gershonite Levites as one of their residences (Josh. 20:7; 21:32). It is identified with Tell Qades, situated in the hills NW of Lake Huleh.

Kedesh in Naphtali was the home of Barak (Judg. 4:6) and where Deborah and Barak gathered their followers for the battle with Sisera (vss. 1-10). In its vicinity Heber the Kenite pitched his tent, in which Sisera met his death at the hands of Jael, Heber's

wife (4:21; 5:24-27). Tiglath-pileser captured the town, along with others, in the reign of Pekah king of Israel, and exiled its inhabitants to Assyria (II Kings 15:29). Here too Jonathan Maccabeus defeated the army of Demetrius (I Macc. 11:63, 73). At the time of Josephus it belonged to the Phoenicians (War II.xviii.1; IV.ii.3).

3. According to I Chr. 6:72—6:67, a city in Issachar, allotted to the Gershonite Levites. In Josh. 21:28 this town is called Kishion (קשיון; KJV "Kishon"). It has been suggested that "Kishion" should be changed to "Kishon." "Kedesh in Issachar" may have arisen from misreading "Kishon" for "Kedesh," a scribal error antedating the LXX. If Kedesh existed as a town, Abel proposes an identification with Tell Abū Qedeis, 2½ miles SE of Megiddo, and would combine with it the Kedesh of Judg. 4:11. It is doubtful, however, that the tribal claims of Issachar ever extended this far SW.

Bibliography. W. F. Albright, "The Topography of the Tribe of Issachar," *ZAW*, 44 (1926), 231; F.-M. Abel, *Géographie de la Palestine*, II (1938), 412, 415-16; W. F. Albright, "The List of Levitic Cities," *Louis Ginzberg Jubilee Volume* (English section; 1945), pp. 49 ff. J. L. MIHELIC

KEDESH IN NAPHTALI nāf'tə lī [קדש נפתלי] (Judg. 4:6); KJV KEDESH-NAPHTALI. A town in Galilee; the home of Barak son of Abinoam; same as KEDESH 2.

KEDRON kē'drən [Κεδρών] (I Macc. 15:39-41; 16:9); KJV CEDRON sē'drən. A town near Modin; identified with modern Qatra, and probably same as GEDERAH (Josh. 15:36). Kedron was fortified by Antiochus VII of Syria in order that he might attack Judea, in the time of Simon Maccabeus.

N. TURNER

KEEPER. The translation of a number of Hebrew and Greek words, signifying:

a) A guard or watchman, especially over cattle, vineyards, and orchards; so also a herdsman. Such laborers are depicted on a shell from the third millennium B.C. at Tell El-Obeid. In Egypt the keepers of cattle were the lowest class, but in Israel theirs was an honorable profession* (Gen. 47:6; I Sam. 11:5; 21:7; I Chr. 27:29; etc.). As urbanization increased, however, the prestige of this class declined (I Kings 4:23; Eccl. 2:7). Uzziah, Hezekiah, and Josiah in Judah, as well as Mesha of Moab, were cattle raisers (II Kings 3:4 ff; II Cor. 26:10; 32:28-29; 35:7-9). Amos may have been a keeper of cattle (Amos 7:14).

Courtesy of Staatliche Museen, Berlin

3. A keeper feeding a temple herd; from a marble cylinder seal of the Uruk period (end of fourth millennium) containing details of pastoral life

Abel was a keeper of sheep and so a shepherd (Gen. 4:2). The term is used also for those who watch over vineyards (Song of S. 1:6; 8:11; Isa. 27:3) and orchards (Prov. 27:18), so a watchman (II Kings 17:9; Job 27:18; Jer. 31:6). Fig. KEE 3.

b) Similarly, the guard of a prison (Gen. 39:21, 23; Acts 5:23; 12:6). Sentinels were set to guard the tomb of Jesus (Matt. 27:65).

c) Symbolically, a person is to be a keeper of his tongue and lips (Pss. 34:13; 141:3). C. U. WOLF

KEHELATHAH kē'ə lā'thə [קהלתה, assembly] (Num. 33:22-23). One of the stopping places of the Israelites after Hazeroth. The name is perhaps a doublet of MAKHELOTH (Num. 33:25-26). The LXX has almost identical names for the two: Μακελλάθ (vss. 22-23) and Μακηλὼθ (vss. 25-26).

J. L. MIHELIC

KEILAH kē ī'lə [קעילה, קעלה]. A fortified city of Judah in the Shephelah district of Libnah-Mareshah (Josh. 15:44; cf. I Chr. 4:19); identified with modern Khirbet Qila, 8½ miles NW of Hebron.

David rescued Keilah from a Philistine attack, but when Saul heard that David was at Keilah, he sent a detachment of troops to take David and his men. David, after consulting the oracle, decided that the gratitude of the citizenry did not extend to protecting him against Saul, so he withdrew again into the wilderness of ZIPH (I Sam. 23:1-13). Keilah was occupied and rebuilt by Jewish returnees from the Exile (Neh. 3:17-18).

Qilti (Keilah), during the turbulent Amarna period in Palestine, seems to have been on the border of the territory of the prince of Jerusalem, Abdu-Heba, and the prince of Hebron, Shuwardata. Letters from each addressed to Akh-en-Aton of Egypt (*ca.* 1369-1353) complain of the other's "improper" occupation of Keilah at various times (*ANET* 487-89).

Keilah was one of a number of places at which the prophet Habakkuk was said to be buried.

V. R. GOLD

KELAIAH kī lā'yə [קליה, *perhaps* Y has dishonored] (Ezra 10:23; I Esd. 9:23); KJV Apoc. COLIUS kō lī'əs. One of the Levites compelled by Ezra to give up their foreign wives; identified with KELITA.

KELITA kī lī'tə [קלימא, *perhaps* adopted one, *more probably* crippled, dwarfed one; Apoc. Καλιτας]; KJV Apoc. CALITAS kə lī'təs (I Esd. 9:23, 48). A Levite who assisted in interpreting the law when it was read at the great assembly in the time of Ezra (Neh. 8:7; I Esd. 9:48) and who participated in the sealing of the covenant (Neh. 10:10—H 10:11). According to Ezra 10:23 (cf. I Esd. 9:23), KELAIAH, one of the Levites compelled by Ezra to give up their foreign wives, was also called Kelita (קליה הוא קלימא). Possibly this is a gloss which falsely identifies two different people. More likely it refers to one man with two different names. When he is introduced, both his real name and his nickname ("Cripple") are given, and subsequently he is alluded to by his nickname alone. M. NEWMAN

KEMUEL kĕm'yo͞o əl [קְמוּאֵל; *meaning obscure*]. **1.** The father of Aram, and the son of Nahor the brother of Abraham (Gen. 22:21).

2. A leader of the tribe of Ephraim, and its commissioner for the allotment of Canaan (Num. 34:24).

3. A Levite; father of Hashabiah, who is listed as a contemporary of King David (I Chr. 27:17).

B. T. DAHLBERG

KENAN kē'nən [קֵינָן, *from* קַיִן; *see* CAIN; LXX Καιναν] (Gen. 5:9-14; I Chr. 1:2); KJV CAINAN kā'nən in Genesis. Alternately: CAINAN [Καιναμ] (Luke 3:37). Son of Enosh (NT "Enos").

KENATH kē'năth [קְנָת]. A city in E Gilead which was taken by Nobah and given his own name (Num. 32:42). The old name seems to have persisted, for we later read that Kenath fell into the hands of Aram and Geshur (I Chr. 2:23). The site is probably Qanawat in el-Hauran, NE of es-Suweideh, a city of the Druses.

S. COHEN

KENAZ kē'năz [קְנַז]; KENIZZITE kĕn'ə zīt; KJV KENEZITE in Num. 32:12; Josh. 14:6, 14. **1.** Son of Eliphaz the first-born of Esau (Gen. 36:11; I Chr. 1:36); Edomite clan chief (Gen. 36:15, 42; I Chr. 1:53); eponymous ancestor of the Kenizzites. *See* 3 *below*.

2. The father of Othniel (Josh. 15:17; Judg. 1:13; 3:9, 11) and Seraiah (I Chr. 4:13).

3. Grandson of Caleb through Elah (I Chr. 4:15). The gentilic adjective "Kenizzites" refers once to a people whose land Yahweh gave to Abraham's descendants (Gen. 15:19) and three times to Caleb son of Jephunneh (Num. 32:12; Josh. 14:6, 14).

Kenizzites were a non-Israelite people who moved into the Negeb, apparently from the SE, before the main body of the Conquest. They were composed of the clans of the Calebites, who occupied Hebron (formerly called KIRIATH-ARBA; modern el-Khalil; Josh. 14:6-14; 15:52-54); the Othnielites, who occupied Debir (formerly KIRIATH-SEPHER; modern Tell Beit Mirsim[?]; Josh. 15:15-19; Judg. 1:11-15); and perhaps the Jerahmeelites, who must have occupied the southernmost hill country of the Negeb (I Sam. 27:10; 30:29). Later all these became politically related to the composite group generally termed Judah. They were also associated with Edomites and, most probably, with Kenites, from whom they would have learned copper and iron smithery (cf. I Chr. 4:13-14).

Bibliography. N. Glueck, "Ḳenites and Ḳenizzites," *PEQ*, LXXII (1940), 22-24.

L. HICKS

KENITES kĕn'īts, kē'nīts [קֵינִי, הַקֵּינִי, הַקֵּינִים, belonging to the (copper) smiths; Arab. *qayn*, Aram. קֵינָא, smith]; KAIN [קַיִן]. A nomadic or seminomadic tribe of smiths, who as early as the thirteenth century B.C. appear to have made their livelihood as metal craftsmen, inhabiting the rocky country S of Tell 'Arad on the W slopes of the mineral-rich Wadi 'Arabah above Tamar (Num. 24:21; Judg. 1:16). It is probable that they bore some resemblance to the modern Arab tribe, the Sleib, who ply their trade (somewhat like the gypsies, Arabic *Nawar*) as traveling smiths or tinkers, more or less following regular trade routes with their asses and tools, and who support themselves by means of their craftsmanship, supplemented by music and divination. The ancient Kenites, however, were probably more prosperous than the notoriously poor Sleib, and certainly more respected by the surrounding population. Nomadic tribes of metalworkers in the ancient Near East are known from the early second millennium B.C., at least if the famous party of Asiatics depicted on a tomb at Benihasan (nineteenth century B.C.) represents such a group, as their portrayal would seem to indicate. Although there is no positive evidence to relate the early biblical tradition concerning TUBAL-CAIN to the Kenites, such a connection is possible. Both copper and iron are known to have been mined at a very early date in the Jordan Valley and elsewhere in this region.

1. Earliest references
2. Connection with the Mosaic movement
3. Kenites and Amalekites
4. Kenites and David
5. Final disappearance
Bibliography

1. Earliest references. In the earliest biblical reference the Kenites appear at the head of a list of peoples living in Canaan whom God had promised Abram to dispossess in order to give the land to his descendants (Gen. 15:19). From the thirteenth century, or a little later, stems another early mention of the Kenites in the oracles of Balaam (Num. 24:21-22), where the perennial Kenite abodes are described as "set in the rock," doubtless referring to the region of the Wadi 'Arabah. There follows a curious passage in which the Kenites are consigned to destruction, one of the rare instances in biblical tradition when Kenites are viewed unfavorably. The historical basis for this judgment eludes us.

2. Connection with the Mosaic movement. Most often the Kenites are seen in close association with the Hebrews, or at least holding a recognized place in Israelite society. They may have introduced the arts of mining and metallurgy to the Israelites, and perhaps also to Edom. We are told, however, that at the time of Samuel the Israelites had no smiths of their own, since the Philistines had removed them (I Sam. 13:19-20). In Judg. 4:11 the Kenites are designated as the descendants of HOBAB (cf. also Judg. 1:16), although elsewhere Moses' father-in-law is termed a Midianite (Exod. 2:16-21; 18:1; *see* JETHRO; REUEL). The Kenites may have been living among the Midianites (*see* MIDIAN) at this time. Shortly thereafter, we learn that the Kenites entered Palestine in company with the tribe of Judah—a relationship which seems to be reaffirmed by I Sam. 15:6, where it is acknowledged that the Kenites "showed kindness" (or, more literally, "showed loyalty") to Israel during the Exodus. At any event, it is clear that these traveling craftsmen were associated with the Mosaic movement, and it has been suggested that Moses learned from his Kenite father-in-law how to fashion the copper serpent (Num. 21:8-9). Some scholars assert that Moses was introduced to Yahweh and his worship through Kenite mediation. Our present evidence does not support this, although the possibility cannot be ruled out. Still more

tenuous is the hypothesis held by those who think the casuistic type of Mosaic legal tradition was borrowed from the Kenites.

3. Kenites and Amalekites. After reaching the Negeb near Arad in S Palestine, the Kenites apparently settled among the AMALEKITES (emending Judg. 1:16 to read העמלקי for העם, as most scholars suggest). In any case, we find the Kenites in close association with the Amalekites in the time of Saul (*ca.* 1020-1000 B.C.), when the latter warns them to depart from the doomed Amalekites if they wish to escape destruction (I Sam. 15:6). This does not necessarily mean that the Kenites "belonged" to Amalek, as sometimes maintained (notwithstanding the mention of the Kenites immediately following Amalek in the oracles of Balaam, Num. 24:20-22), any more than it means that they "belonged" to Midian or Judah at other times in their history. In the period of the judges, a nomadic branch of the Kenites, apparently under the leadership of Heber, lived in Galilee (Judg. 4:11; 5:24). The historical circumstances surrounding this movement are unknown. The fact that Kenites are mentioned in biblical tradition as living in various places in Palestine not only illustrates their nomadic character, but also suggests that they were not completely absorbed by any other people, but maintained a separate existence throughout most of their history. The Chronicler (I Chr. 2: 55) designates as Kenite certain families of scribes who dwelt at Jabez in S Judah, tracing their ancestry from Hammath, father of the house of Rechab.

4. Kenites and David. The last mention of the Kenites in connection with the history of Israel is during the time of David before he became king over all Israel (*ca.* 1000). While David dwelt in the Philistine city of Gath, he made raids on some of the foes of Israel, but told Achish, king of Gath, that he was plundering enemies of the Philistines, among whom were clans living in the Negeb of the Kenites (I Sam. 27:10). Subsequently, he sent gifts of spoil to the "elders of Judah" and "to his kinsmen" (with the LXX), among whom are named those residing "in the cities of the Kenites" (I Sam. 30:29). Since all place names mentioned in this connection are well-known sites in the S Judean hill country, presumably the "cities of the Kenites" are also to be sought in this region. Possibly one of them was KAIN, listed in Josh. 15:57. It has been suggested that David was related to the Kenites through his marriages to Ahinoam and Abigail (I Sam. 25:42-43; cf. Josh. 15: 55), but this is very doubtful.

5. Final disappearance. We hear no more of the Kenites in the later history of Israel. Presumably they disappeared or lost their identity during the early first millennium B.C. The relationship sometimes posited between the biblical Kenites and the early Islamic tribe Banu 'l-Qayn in the region between Teima and Hauran (sixth century A.D.) cannot be demonstrated.

G. M. LANDES

KENIZZITE. *See* KENAZ.

KENOSIS kĭ nŏ'sĭs, kĕ— [κένωσις, emptying, depletion]. A term used in Christian theology from the third or fourth century on, to describe the idea expressed in Phil. 2:7, according to which the preexistent Christ "emptied himself," "impoverished himself," or laid aside his equality with God, in order to become man. It is difficult to know exactly what Paul implied by this bold language. He can hardly have supposed that Christ entirely lost his divinity or his special relation to God the Father in assuming humanity; otherwise his incarnate life would have had no more significance than that of any other prophet or teacher. The point must therefore be that Christ voluntarily stripped himself of the insignia and prerogatives of deity. That in Paul's mind this is not a case of God's masquerading as man, but of Christ's suffering all the consequences of his humanity, is shown, not only by Phil. 2:8: "He humbled himself and became obedient unto death," but also by the statement that Christ was "crucified in weakness" (II Cor. 13:4) and the strong language regarding the Cross as a scandal or "stumbling block" (I Cor. 1:18-30). There is some reason to think that the passage Phil. 2:5-11 had as its source an early Christian hymn or proclamation of the gospel and thus is even older than the Pauline letters.

The word "kenosis" was originally used in patristic literature as a synonym for the INCARNATION to express the condescension of the Son of God (cf. II Cor. 8:9); it is employed in modern theology to describe a wider doctrine—namely, that Christ voluntarily gave up some or all of his divine attributes and submitted to all the conditions of human life, including the limitation of knowledge. While several parts of the NT furnish data to support this doctrine (*see* HUMANITY OF CHRIST), the Gospel of John appears to take a different position. It portrays the earthly Jesus as possessing miraculous power and knowledge and asserting his constant communion and full equality with the Father (see, e.g., John 1:14, 48; 5:19-24; 10:30; 11:41-42; 13:1-3). *See also* CHRIST; SON OF GOD.

KERAK, KHIRBET. *See* KHIRBET KERAK.

KERCHIEFS. *See* VEIL *f.*

KERE. *See* QERE.

KEREN-HAPPUCH kĕr'ən hăp'ək [קרן הפוך, horn of antimony (eye shadow); *i.e.*, a cosmetics case, a compact] (Job 42:14). The youngest of the daughters who were born to Job after the restoration of his fortunes.

KERIOTH kĕr'ĭ ŏth [הקריות, קריות, cities]; KJV KIRIOTH kĭr'ĭ ŏth in Amos 2:2. **1.** A city in the tableland of Moab (Jer. 48:24), apparently strongly fortified (Amos 2:2; also Jer. 48:41, if it refers to Kerioth [RSV "cities"]). Mesha of Moab (*see* MOABITE STONE) claims to have brought the chieftain of Ataroth before CHEMOSH in Kerioth, so apparently Kerioth contained a sanctuary of Chemosh.

Perhaps Kerioth is identical with AR, since Amos 2:2 seems to treat it as the capital of Moab.

E. D. GROHMAN

2. *See* KERIOTH-HEZRON.

KERIOTH-HEZRON kĕr'ĭ ŏth hĕz'rən [קריות חצרון] (Josh. 15:25); KJV KERIOTH AND HEZRON. A village of Judah in the Negeb district of Beersheba; usually identified with Khirbet el-Qaryatein, 4½ miles S of Maon. Some scholars, with the KJV, separate Kerioth from Hezron. *See* HAZOR.

V. R. GOLD

KEROS kĭr'ŏs [קירס] (Ezra 2:44). Head of a family of postexilic temple servants. *See* NETHINIM.

KERYGMA kĭ rĭg'mə [κηρύγμα]. The general term for PREACHING. *See also* GOSPEL, especially §§ 1*b-d*, 2*a*.

KETAB kē'tăb [Κητάβ]; KJV CETAB sē'tăb. Head of a family of temple servants who returned with Zerubbabel (I Esd. 5:30; omitted in the parallels Ezra 2:46; Neh. 7:48). *See* NETHINIM.

KETHIBH kə thēv' [כתיב, that which is written]. The authoritative consonantal MT, from which the QERE marginal readings show divergence. *See* TEXT, OT, § A3*a*.

KETTLE. The translation of דוד, a vessel in which the sacrifice might be boiled, in I Sam. 2:14; and of סיר, a vessel in which meat was cooked, in Mic. 3:3 RSV (KJV POT). *See* POTTERY § 3*a*.

KETURAH kĭ tŏŏr'ə [קטורה, incense, *or perhaps* the perfumed one]. The second wife of Abraham, who bore him six sons (Gen. 25:1-6 [J]; I Chr. 1:32-33).

It was presumably after Sarah's death that Keturah became Abraham's wife and gave birth to Zimran, Jokshan, Medan, Midian, Ishbak, and Shuah. Gen. 25:6 (cf. I Chr. 1:32) gives her a lesser status than that of wife by speaking of the sons of Abraham's "concubines" (evidently Keturah and Hagar), to whom he gave presents and whom he sent away to the "east country."

The Keturah tradition seems to reflect the belief of the Hebrews that they were related to these six Arab tribes who lived to the E and S of Palestine and whose eponymous ancestors were Keturah's sons. The Keturah tribes were indeed sons of Abraham, but, of course, through a subordinate wife. The number six suggests that they were organized into some kind of tribal amphictyony, concerning which we know nothing more. The most prominent of these six tribes elsewhere in the OT is MIDIAN.

M. NEWMAN

KEY [κλείς]. Literally, an instrument for locking or unlocking doors or gates; figuratively, that which controls entrance or exit. In the NT the word is used only as an eschatological symbol of authority and power delegated by God. As the Messiah, Jesus receives power to admit or exclude men from the kingdom of David (Rev. 3:7). As one who died and was raised, he has power over Death and Hades (1:18). The key is used to release plagues from the Abyss (20:1). The scribes are said to possess the key of knowledge, which enables men to enter the kingdom (Luke 11:52; cf. Matt. 23:13). Given to Peter and the church, the key conveys the power to bind and loose (Matt. 16:18-19). Open gates signify unrestricted access to God's forgiveness and community (Rev. 21:25; 22:14). For this symbolic usage, there are many antecedents in diverse Near Eastern traditions.

KEYS, POWER OF. *See* POWER OF KEYS.

KEZIAH kĭ zī'ə [קציעה, cassia (cinnamon)] (Job 42:14); KJV KEZIA. The second of Job's daughters who were born to him when his fortunes were restored.

KEZIZ, VALLEY OF kē'zĭz. KJV translation of עמק קציץ (RSV EMEK-KEZIZ) in Josh. 18:21.

KHIRBET KERAK kĭr'bĕt kûr'äk [Arab. ruins of the fortress]. An important archaeological site on the S shore of the Sea of Galilee, W of the mouth of the Jordan River. Khirbet Kerak is strategically located near a ford of the Jordan, through which passes one of the routes linking Palestine with Damascus and the N, and along the principal N-S route in the Jordan Valley. The nearby intersection of these routes inevitably made the site an important center of trade.

The mound covers an area of nearly sixty acres, extending a distance of *ca.* 3/5 mile along the shore. Excavations were carried on from 1944-55 by B. Maisler (Mazar), M. Stekelis, M. Avi-Yonah, P. L. O. Guy, and recently by Bar-Adon. The site seems to have been more or less continuously occupied from the Late Chalcolithic (Esdraelon culture) through the EB III period. It is in the latter occupation that great quantities of Khirbet Kerak pottery—named after this site, in which it was first discovered—were found (*see* POTTERY). An enormous

5. Foundation of a building of the Early Bronze Age at Khirbet Kerak. A Roman bath pipeline can be seen on the surface.

building, perhaps a granary, with eight large circular rooms was also found in this stratum.* The next occupation, MB I, is represented by houses and a potter's workshop. Several tombs of MB II have also been discovered on the mound. The site was unoccupied until the Persian period, and it is because of this occupational gap, which corresponds to the major OT period, that the site is not mentioned in the biblical narrative. During the Hellenistic period a new city was built, which was protected by strong fortifications and contained many fine houses with painted plaster walls. It is probably to be identified with Philoteria, a city named in honor of the sister of Ptolemy Philadelphus. The Roman period is represented by a fortress of the second-third centuries A.D., and a large bath, of the fourth-fifth centuries A.D. In the Talmud, Khirbet Kerak is called Beth-Yerah (house of the Moon [god]). Fig. KHI 5.

KHIRBET QUMRAN kĭr'bĕt kōōm'rän. The ruins of an Essene monastery which was the center of the community of the Dead Sea Scrolls. Khirbet Qumran is situated at the W coast of the Dead Sea, 8½ miles S of Jericho.

KIBROTH-HATTAAVAH kĭb'rŏth hə tā'ə və [קברות התאוה, graves of craving *or* appetite] (Num. 11:34; 33:16; Deut. 9:22). The first stopping place of the Israelites after they left Sinai and before they came to Hazeroth. In their craving for flesh, the Israelites overindulged in eating quails, which a wind from the Lord had brought from the sea (Num. 11:31). As a result an epidemic broke out in which very many people died. The dead were buried on the spot, and these graves gave the place its name.

The place may perhaps be identified with Rueis el-Ebeirij, which is *ca.* a ten-hour journey by foot from Jebel Musa, the mountain generally identified with Sinai.

J. L. Mihelic

KIBZAIM kĭb zā'əm [קבצים]. A city in Ephraim, one of the forty-eight cities allotted to the Levites after the conquest of Canaan (Josh. 21:22). Its location is uncertain. The Chronicler's parallel list has at this point (I Chr. 6:68—H 6:53) the name Jokmeam, not to be confused with the Jokmeam of Zebulun in I Kings 4:12, which is to be equated with Jokneam, located at Tell Qeimun. It has been suggested that Jokmeam is not a corruption of Kibzaim, but that both cities occurred originally here, in the list of Levitical Cities.

KID [גדי (*feminine* גדיה *in* Song of S. 1:8), *sometimes alone, but generally in* גדי עזים, kid of goats; *cf.* Akkad. *gadû*, Ugar. *gdy*, Arab. *jady;* for עזים (*plural of* עז), *see* Goat; בני עזים (II Chr. 35:7), sons of goats; שה (Num. 15:11; *usually* "lamb"), *see* Cattle; ἔριφος]; KJV KID OF GOATS [שעיר עזים, hairy one of goats (RSV *correctly* "goat," "male goat")]. A young goat. In the husbandry of ancient Israel a young male kid was the most expendable of the animals, being less valuable than either its mother or a young lamb, and it therefore served admirably as a small present or as the meat basis for a special meal (Gen. 27:9; 38:17; Judg. 6:19; 13:15; 15:1; I Sam. 10:3; 16:20; Luke 15:29). A year-old kid is suitable for the Passover (Exod. 12:5; cf. II Chr. 35:7); on general regulations for sacrifices involving kids, see Num. 15:11-16. In the picture of the future age of peace, marked by amity among even the animals, the kid is grouped with the leopard (Isa. 11:6).

The thrice-repeated injunction against boiling a kid in goat's milk, the milk commonly available in OT times (Exod. 23:19; 34:26; Deut. 14:21), has long been suspected of being directed against some popular Canaanite ritualistic practice. Maimonides (died 1204) suggested that the act was prohibited because "it is connected with idolatry . . . or . . . used on some festival of the heathen." This suspicion has received some confirmation from Ugaritic: in the drama "The Birth of the Gods" a kid is cooked in milk as part of a sacrificial meal to ensure good crops for the ensuing seven years. The biblical prohibition eventually came to serve as the scriptural basis for the Jewish dietary conventions about the separation of meat and milk in cooking and at meals.

KIDNAPING. *See* Crimes and Punishments § C6*a*.

KIDNEYS [כליות; νεφροί]. Like most other words for parts of the physical body, the word "kidneys" has both a literal and a metaphorical sense. When the word is used for the human kidneys, usually with metaphorical overtones, the KJV translates "reins" (e.g., Jer. 12:2; Rev. 2:23); the RSV in these passages renders "mind," "heart," "soul," or "inward parts," except in Job 16:13 ("kidneys").

With the exception of Isa. 34:6, the kidneys of animals are mentioned only in connection with sacrificial regulations. In all the sacrifices other than the whole burnt offering (where no such distinction was possible), the kidneys, together with the fat at-

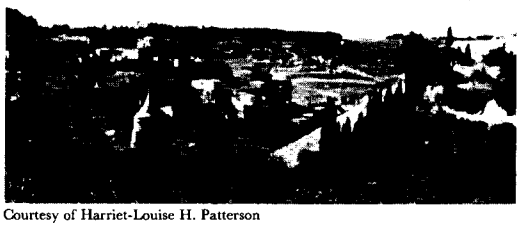
tached to them, and certain other bits of fat, along with the CAUL of the liver, were the special parts to be burned upon the altar as a gift to Yahweh (Exod. 29:13; Lev. 3:4, 10, 15). Perhaps originally, because of their color and density, the kidneys may have been regarded as in a special sense the seat of life and consequently, along with the blood, the peculiar perquisite of the deity. Later this conception seems to have been at least partially rationalized by seeing in them the choicest part of the animal; a strange expression in Deut. 32:14 speaks of the choicest of the wheat as the "fat of kidneys" (cf. KJV and RSV).

The reasons which led to the attaching of special value to the kidneys in animal sacrifice may have led also to the view that they are an important center of psychic and moral life in man. In a number of passages, the "reins" (KJV) are associated with the HEART as constituting the innermost sanctuary of the human personality; God is able to examine even this and to know its secrets (Pss. 7:9; 26:2; Jer. 11:20; 17:10; 20:12; Rev. 2:23). Emotions are occasionally attributed to the "reins": grief or bitterness (Ps. 73:21 KJV), and joy (Prov. 23:16 KJV). More characteristic are the passages which seem to connect the kidneys with the moral life. This is suggested by the passages, mentioned above, which speak of God's examining or testing the reins and is made explicit in Ps. 16:7 KJV; Prov. 23:16 KJV, where it is said that the reins "instruct" a man and rejoice when the "lips speak right things." The passages are too few, however, for it to be possible to build upon them any theory that the Hebrews regarded moral judgment as the special function of the kidneys.

R. C. DENTAN

KIDRON, BROOK kĭd′rən [קדרון]; KJV CEDRON sē′drən [Κεδρών] in John 18:1. The name attached to a valley E of Jerusalem, dividing the E parts of the city from the Mount of Olives. The Arabic names given to its upper sections show no great consistency. In its lower course, the valley is called today Wadi en-Nār. On leaving the suburbs of Jerusalem, the brook of Kidron, which gives the valley its name, bears to the SE, winds through the wilderness of Judah, and drains into the Dead Sea, some ten miles from the mouth of the Jordan following the shore line. Fig. KID 6.

The Kidron is described as a נחל—viz., a valley down which a stream of water may flow intermittently. This term is rendered in the LXX and in the NT by χειμάρρος, and in the English versions by "brook." The actual bed of the valley in its suburban portions is from ten to fifty feet above the primitive level, because of the accumulation of rubbish. No water runs in it except for a brief interval after heavy rainfalls. During the earlier period of the monarchy, however, the waters of the spring of GIHON* were allowed to flow freely in the Kidron, previously to being diverted by means of a tunnel to the pool of SILOAM. Fig. GIH 32.



Courtesy of Harriet-Louise H. Patterson

6. The Kidron Valley, with the so-called "Tomb of Absalom" at the left-center

Orchards and gardens were watered from the brook or from irrigation channels dug along the lower slopes of the valley beneath the city of David. These gardens are referred to in II Kings 23:4; Jer. 31:40 as the "fields" of the Kidron. The Davidic kings owned some property in the Kidron, which on account of this came to be known as the King's Valley (*see* SHAVEH, VALLEY OF). Absalom set up a monument for himself in the King's Valley (II Sam. 18:18), by which the domain of the Kidron is obviously meant. The exact location of the royal estate, however, is not known. Nehemiah's mention of the KING'S GARDEN, in connection with the Pool of Shelah, or Pool of the Aqueduct (Neh. 3:15), suggests that it extended at least as far as the junction of the valley with the TYROPOEON VALLEY, and perhaps occupied the lower tract of the Tyropoeon itself with its ancient reservoir. The irrigation of the Kidron gardens must have been drastically reduced when Hezekiah sealed off Gihon and the waterspouts of the old aqueduct, and blocked definitely the access to the city through the Tyropoeon, in prevision of the Assyrian invasion.

The Kidron is commonly regarded as the E boundary of Jerusalem. David crossed it as he fled his capital in the days of Absalom's rebellion (II Sam. 15:23); Shimei was assigned a forced residence in Jerusalem and forbidden ever to pass beyond the Kidron limit (I Kings 2:37).

The valley and the neighboring areas have been repeatedly the theater of the struggle between the religion of the Hebrew God, Yahweh, and foreign cults, like those practiced on the high places of the Mount of Corruption (*see* CORRUPTION, MOUNT OF) and of TOPHETH. The books of Kings and Chronicles record the destruction of idols and other illicit paraphernalia in the valley or in the fields of the Kidron by the pious monarchs Asa and Josiah (I Kings 15:13; II Kings 23:4, 6, 12; II Chr. 15:16; 29:16; 30:14).

The rocky slopes and scarps on the E side of the valley have been used for the burial of the dead until our days. Some of the rock-cut tombs among the houses and shanties of Selwan and the so-called Tomb of the Daughter of Pharaoh toward the N edge of the village go back to the pre-exilic monarchy. The four monuments surrounded today by the tombstones of a modern Jewish cemetery, opposite the SE corner of the temple area, may date from the third century B.C., in spite of their being identified fancifully as the tombs of Jehoshaphat, of Absalom, of James the Less (in reality the vault of the priestly family of the Benê Ḥĕzîr, according to the Hebrew inscription on the frieze), and of Zechariah (cf. Matt. 23:35). All these tombs have been looted, and have been used as shelters by Christian anchorites.

The Fourth Gospel mentions explicitly the Valley of Kidron, which Jesus crossed with his disciples after leaving the Upper Room, when they went to

spend the night at Gethsemane (John 18:1). In this passage, the reading τοῦ Κεδρὼν is the only one true to the Hebrew usage, and must prevail over the numerous readings which have failed to recognize Kidron as a proper name and have read instead: τῶν Κέδρων, τοῦ Κέδρου, or even τῶν δένδρων.

The name of the Kidron occurs in a messianic passage of Jer. 31:40, which opened the way for all sorts of symbolic interpretations void of topographical significance. Thus some exegetes of the fourth century of the Christian era identified the Valley of Kidron with the Valley of Jehoshaphat or of Decision (*see* JEHOSHAPHAT, VALLEY OF; DECISION, VALLEY OF), the Valley of Baca (*see* BACA, VALLEY OF), or with the "rich valley" (RSV), the "fat valleys" (KJV), of Isa. 28:1, by reason of a confusion between the Hebrew גיא שמנים and NT Gethsemane. *See* map under JERUSALEM, and under OLIVES, MOUNT OF.

KILAN kī'lən [Κιλάν] (I Esd. 5:15); KJV CEILAN sē'lən. Head of a family who returned from captivity. J. C. SWAIM

KILN. A large oven or furnace used for processing various materials. In Hebrew תנור is used both for the small bread oven used in the home and for the large pottery kiln used in the factory. The potter's kiln gave the name "Tower of the Ovens" to a part of the fortifications of Jerusalem (Neh. 3:11). The firing of the kiln was the key trade secret in ancient ceramics, and therefore it did not enter into figurative language, as did the other phases of the potter's work.

In Nah. 3:14 the old translation of מלבן was "brickkiln," but the RSV correctly reads "brick mold." "Brick mold" should probably also be the translation in II Sam. 12:31, although the text is uncertain. Most Palestine brick was sun-dried, not kiln-fired. The glazed tile of Exod. 24:10, however, came out of the potter's kiln.

The smoking furnace of Gen. 19:28; Exod. 19:18 was probably a charcoal kiln, although by etymology it could be a smelting furnace. In later Israelite history such a smoking furnace could also have been a lime kiln.

For more details on kilns, *see* POTTERY. J. L. KELSO

KINAH kī'nə [קינה] (Josh. 15:22). A city in the extreme SE of Judah, near the boundary of Edom. The name indicates a settlement of the KENITES and may be preserved in that of the Wadi el-Qeini, S of Hebron. S. COHEN

KINDNESS. *See* LOVE IN THE OT; MERCY.

KINE. KJV plural of COW.

***KING, KINGSHIP.** "King" is the designation applied to a male sovereign, who usually exercised power over an independent nation and had the right to transmit the royal power to his descendants. Kingship is the state, office, and dignity of a king and the power wielded by him.

Bibliography

1. Biblical terminology. The OT uses the Hebrew noun מלך for "king" as the designation of a foreign king (e.g., Gen. 39:20) as well as an Israelite king (e.g., Gen. 36:31). Besides an earthly monarch, the Lord also received this title (e.g., I Sam. 12:12). The verb מלך, which means "to be or to become king, to reign," is also applied to foreign (e.g., Judg. 4:2) and Israelite (e.g., I Kings 16:22) monarchs, as well as to God (e.g., Exod. 15:18). The verb משל, meaning "rule, have dominion, reign," shows a similar width in applicability (cf. Judg. 8:23). The Israelite kings were also called PRINCE and "the LORD's anointed" (*see* MESSIAH [JEWISH]). The words מלוכה (e.g., I Sam. 14:47), ממלכה (e.g., Amos 7:13), ממלכות (e.g., I Sam. 15:28), and the late word מלכות (e.g., Num. 24:7) express royal power, reign, and sovereignty.

The NT applies the noun βασιλεύς, "king" (e.g., Matt. 1:6), and the verb βασιλεύειν, "to be king, to reign, rule" (e.g., Matt. 2:22). The Greek word βασιλεία is the LXX (e.g., Tob. 13:1) and NT (e.g., Luke 1:33) expression for "kingship."

2. Kingship in the ancient Near East. The monarchies of the ancient Near East represent three types. The first group was the petty kings of the Palestine cities who, in many cases, were of foreign origin and ruled, with the support of a military aristocracy, over the population of the city-state. The Egyptian and Mesopotamian kings of the biblical period represented a second type, whose kingship was regarded as a political order divinely ordained for the good of the empire. The third class of kingship might be seen in the kingship of the Transjordanian peoples, who were ethnically related to the Hebrews. There, the kingship had its roots in the military leadership of the native army and was, therefore, completely national in its characteristics.

3. Beginnings of the Israelite kingship. In the earliest times, the Israelites of the settled country were under the leadership of tribal or clan chieftains. Only occasionally did there appear charismatic leaders who rallied a number of the tribes into a united military

enterprise for the deliverance of the hard-pressed Israelites. Deuteronomic systemizers of the Israelite history later called these heroes judges (*see* JUDGE). In premonarchic Israel there was no political, administrative, or military organization which would have embraced the whole of the people of Israel. The only tie effectively joining the people was their faith. They entered into a covenant with Yahweh and recognized him as their king (Deut. 33:5). Of course, this kingship of God meant, first of all, a religious recognition of his reign (*see* THEOCRACY) and carried the danger of total anarchy (Judg. 21:25). The first attempt to introduce a kingship in Israel is associated with GIDEON, who was offered the rule over the people of Israel (?) by the assembled warriors after the victory over the raiding Midianites (Judg. 8:22). Gideon's refusal of the offer clearly witnesses to the recognition of the Lord's kingship (vs. 23). The difficulty of interpretation becomes apparent when the fact is considered that, after Gideon's death, Abimelech claimed the kingship of Shechem as his rightful heritage (Judg. 9:1-3). In this light, the refusal of the royal power by Gideon appears puzzling, and there have been several attempts to eliminate the contradiction. The offered solutions of this enigma are: (*a*) to deny the historicity of Gideon's refusal of the kingship, (*b*) to interpret his words as a shrewd diplomatic rejection of the external signs of kingship and a silent acceptance of the royal power, or (*c*) to understand it as Gideon's oath pledging to preserve, undisturbed, the continuity of the theocracy during his rule. Whatever is the case, the kingship of Gideon and that of his son, Abimelech, were limited in importance and scope. The tribal kingship of Gideon and the city kingship of Abimelech were abortive attempts to establish a kingship in Israel.

The institution of the kingship in Israel was prepared by the slow settlement of the nomadic people and the embracement of a sedentary civilization. These changes meant a slow dissolution of the clan and tribal authorities and produced a need for greater political cohesion. However, the final impetus, and probably the most decisive one, came from the desperate political situation. In the time of Samuel, the Israelites were under a heavy Philistine yoke (I Sam. 13:19-21); some of the territories, which had escaped the Philistine overlordship, suffered repeatedly under other onslaughts brought about by the Transjordanian Ammonites (I Sam. 11:1-2) and the inroads of foraying nomads such as the Amalekites (14:48). Thus, the introduction of kingship was a historical necessity. The so-called antimonarchic source of the books of Samuel disclaimed this historical necessity of the institution of kingship (I Sam. 7:13-14), and stamped the people's wish to have a king as an apostasy and rejection of the Lord's kingship (I Sam. 8:7). To be sure, there was provision made to ensure the continuity of the theocracy, even if in mediated form, through the reign of an earthly vassal. Accordingly, Saul was selected and anointed by the Lord to be king over Israel (I Sam. 10) and to be the ruler and military leader of the nation (I Sam. 8:20; 10:1). Saul appeared to be a charismatic leader, and, in the matter of inspiration, he was clearly related to the judges (cf. I Sam. 11:6). His reign represents a transition between the type of tribal kingship, like that of Gideon, and the type of national monarchy. So Saul relied almost exclusively on the men of his own tribe, that of Benjamin (I Sam. 22:6-8), but claimed sway over all Israel.

4. Hereditary transmission of the Israelite kingship. In the beginning, there were no clearly defined provisions for the transmission of the royal power. The Israelite kingship, in its initial stage, preserved some of the charismatic aspects of the office of judge, and consequently it was dependent on a special divine designation as to who would be the king. Already in Saul's reign, the two principles of succession to the throne, the hereditary principle (I Sam. 20:31) and the charismatic principle (I Sam. 11:6; 16:13-14; 20:12-16), appeared to be in tension. At the time of the death of Saul, however, the two principles overtly clashed. Thus Judah accepted David's kingship (II Sam. 2:4), but the N and Transjordanian tribes that of Ish-bosheth, Saul's son (vss. 8-10). Probably a survival of the idea of charismatic kingship helped to facilitate the revolutions which led to the changing dynasties of the Northern Kingdom. *See*, e.g., JEHU 1.

Even though the hereditary character of the kingship was recognized, the right of primogeniture was not always statutorily established in the ancient Near East. Thus, in the Hittite Empire, King Telepinus (1525-1520 B.C.) regulated, relatively late, the succession to the throne. Esarhaddon of Assyria (681 B.C.) was installed as crown prince, though he had elder brothers. The same unsettled situation is revealed in Aram by the Hadad inscription, in the question: "Who among my sons will grasp the sceptre and will sit on my seat?" A similarity to these cases may be discovered in the case of Abimelech's claim to Gideon's throne (Judg. 9:2). In the struggle for the Davidic throne, between Solomon and Adonijah (I Kings 1–2), the right of the first-born and the right of the father to designate his heir conflicted. To be sure, the law of primogeniture could not have been unequivocally settled, even in family law in the earliest times, as the existence of the Deuteronomic law regulating the question of inheritance (Deut. 21:15-17) indicates. The fact that the names of the mothers of the kings of Judah are preserved (e.g., I Kings 14:21; 15:2, 10; 22:42) is indicative of the assumption that the maternal side of the king's forebears played some kind of role in the succession to the Davidic throne.

5. Duties of the king. The duties of the king were threefold: he was the military leader of the nation, the supreme judge, and, in the earliest period at least, an officiating priest.

a. Military defense. The king was the first military leader of the nation, and his duty was to lead the army and to fight the battles of the nation (I Sam. 8:20). Thus, kings led the army as Saul did in the war against the Amalekites (I Sam. 15:4-5), Ahab at Ramoth-gilead against the Syrians (I Kings 22:29-36), and Jehoram in the war against the Moabites (II Kings 3:6-12).

b. Upholding justice. The king's duties in the ancient Near East included the obligation to uphold the concept of justice within the nation; to support the rights of the widows and the poor, as is manifested by the Ugaritic legend of Keret. Also the kings

of both Israelite kingdoms had the duty and power for adjudicating occasional disputed cases and for correcting legal injustice (II Sam. 12:1-6; 14:4-7; 15: 2; I Kings 3:16-28). However, the king's legal function must not be interpreted as a kind of supreme tribunal, for the administering of justice was normally practiced by the elders (*see* ELDER) without any provision for further appeal (Deut. 19:12; 21:20).

6. Execution of the royal power. The limits of the royal power were defined by the laws of kingship; for the execution of his power, the king needed officials who helped him to secure the revenue necessary for the maintenance of the royal power.

a. The law of the kings. The premonarchic Israelite concept of kingship was seriously influenced by some bitter experiences of the Israelites with the kings of the numerous petty states of Canaan. So Jotham's fable taught that only useless fellows were willing to accept the dubious honor of kingship (Judg. 9:7-15). At the time of Samuel, there was opposition to the introduction of the kingship, and the despotic excesses of the kings are depicted as the "ways of the king" by some later author (I Sam. 8:10-18). But the power of the king was not completely unrestrained.

The elders made a covenant with the new king (II Sam. 5:3; II Kings 11:17). The rights and duties of kingship were codified and deposited in the central sanctuary (I Sam. 10:25), most likely during the anointment ceremony. The king was not exempt from the regulations of ancient civil laws and customs. Ahab resented, but accepted, the right of Naboth to keep his inheritance (I Kings 21:4). Kings acquired the property of their subjects by buying it, as did David the threshing floor of Araunah the Jebusite (II Sam. 24:24), and Omri bought the hill of Samaria for his capital to be built upon (I Kings 16:24). Undoubtedly, kings had the right to seize and appropriate the estate of a conspirator (II Sam. 16:4) or a person who "cursed God and the king" (I Kings 21:10).

The king was not the absolute lord of the life of his subjects. David did not have the power to take Bathsheba from Uriah or to kill Uriah overtly. Instead, he had to resort to cunning plots (II Sam. 11). Naboth was executed after due legal procedure, but the accusation was false and plotted by royal command (I Kings 21:8-14), for even Jezebel tried to preserve the appearance of legality. The severe denunciation of kings by prophets points also to the fact that the king was subject to laws. Nathan sternly rebuked David (II Sam. 12:1-15), and Elijah Ahab (I Kings 21:17-24), for their disregard of the law. The Deuteronomic law of the kingship (Deut. 17:14-20), which subjected the king to the law, was not complete innovation, but an extreme development of a prevalent practice. To be sure, the existence of the laws of kingship, which outlined and limited the royal power, did not deter the flagrant disregard for the law of some powerful rulers such as SOLOMON and MANASSEH.

b. Royal officials. The members of the royal entourage were those who "saw the king's face" (Esth. 1:14). The bodyguard, composed of foreign mercenaries, was in constant company of the king during military enterprises (II Sam. 15:18), and it played an important part in the coronation of Solomon (I Kings 1: 38) and of Jehoash (II Kings 11:4). The commander of the bodyguard (II Sam. 8:18) and the commander of the army belonged to the royal court (I Sam. 14: 50; II Sam. 8:16). There were the recorder, whose duty was possibly that of an "announcer" at the court (II Sam. 8:16; I Kings 4:3), the secretary (II Sam. 8:17; II Kings 18:18), and the chief administrator, who "was over the officers" of the twelve administrative districts (I Kings 4:5). There was also a man in charge of the palace (I Kings 4:6), who was a kind of major-domo over the royal household (I Kings 18:3; II Kings 18: 18) and was called steward (Isa. 22:15). There were an overseer of the forced labor (II Sam. 20:24; I Kings 4:6), a "friend" of the king (II Sam. 15:37; I Kings 4:5; I Chr. 27:33), a counselor (II Sam. 15: 12), and a keeper of the wardrobe (II Kings 22:14). There were also some minor officials in charge of the royal farms (I Chr. 27:25-31). Probably the Israelite court, like the Persian court, also had a cupbearer (Neh. 1:11).

Besides these secular officers, priests were attached to the royal court (II Sam. 8:17; 20:25; I Kings 4:4). Prophets were also associated with the court, as Nathan was with David's court (II Sam. 7:2; 12:25), and Gad, David's seer (I Sam. 22:5; II Sam. 24:10-25).

c. Royal revenue. Saul did not subject the people to taxation; he lived in the rustic simplicity of his paternal estate and kept court under the tamarisk tree (I Sam. 22:6). His followers brought him occasional gifts (I Sam. 10:27; 16:20). David had considerable spoil from his many wars (II Sam. 8:1-14), and thus there was no urgent need for taxation of the people. However, the census of the people, completed on David's command, was most likely preparatory to a system of taxation (II Sam. 24:1-9), but apparently the general taxation of the people was first introduced by Solomon. During the reign of Solomon, the territory of the N tribes was divided into twelve administrative and revenue districts (I Kings 4:7-19, 27-28), headed by twelve officers (vs. 7), whose duty it was, each in his turn, to provide for the royal household for one month of the year (vss. 7, 27-28). The same administrative and revenue districts remained in existence, even in the independent Northern Kingdom, as the ostraca of Samaria reveal. The tax was paid in kinds, with the delivery of a tenth of farm products and animals (I Sam. 8:15, 17) for the needs of the royal household (I Kings 4:28; cf. Amos 7:1). Occasionally, extraordinary taxes were levied in the land (II Kings 23:35).

The king also had his own estate. Apparently David already had large land holdings (I Chr. 27:25-31). Uzziah had large flocks and both farm lands and vineyards (II Chr. 26:10), and so had Hezekiah (32: 27-29). The royal landholdings grew considerably at the expense and to the detriment of the people (Ezek. 45:8).

The bond service or *corvée* might be regarded as a royal revenue. This form of forced labor was already introduced under the reign of David; the name of the officer in charge of the *corvée* was included in the list of David's officers (II Sam. 20:24). Later, the same man, Adoniram, was also in charge of the *corvée* under the reign of Solomon (I Kings 4:6). This type of forced labor hardly burdened "all Israel" (I Kings 5:13), but only some of the descendants of the origi-

nal inhabitants of the land who were kept in servitude (I Kings 9:20-22; cf. Josh. 9:3-21; Judg. 1:27-35).

Several of the most important trade routes of the Fertile Crescent passed through Israel, and Solomon secured an income from the road toll paid by the merchants (I Kings 10:15). He also had an extensive trade in horses and chariots (*see* MEGGIDO) which was apparently a monopoly (I Kings 10:28-29). The merchant fleet of Solomon took up trade connections with some Arabian and probably African ports (I Kings 9:26-28). An unsuccessful building of fleets is remembered from the time of Jehoshaphat of Judah (I Kings 22:47-49). The vivid interest of the kings in mercantile enterprise is also documented in the agreement of Ben-hadad of Syria and Ahab of Israel, which permitted Ahab to establish Israelite bazaars in Damascus (I Kings 20:34). The copper refineries of EZION-GEBER also contributed to the royal income.

d. Royal attributes. The attributes of the king symbolically expressed his power. The crown (II Sam. 1:10; II Kings 11:12; Pss. 89:39; 132:18), the scepter (Num. 24:17; Ps. 45:6), and the throne (II Sam. 14:9; I Kings 2:12) were royal attributes par excellence. However, these attributes also implied the consecrated character of the king. It is possible that the spear (I Sam. 22:6; II Sam. 1:6) and the armlet (II Sam. 1:10) served, in Saul's case, as symbols expressing the royal authority, but they did not become of foremost importance. The possession of the royal harem indicated the right of the seizure of the royal power (II Sam. 16:20-22; I Kings 2:19-23); yet the harem can hardly be regarded as an outright symbol of the royal authority. The palace (II Sam. 5:11-12; I Kings 7:1-12; 22:39), the royal sanctuary (II Sam. 7:1-2), the chariot (I Sam. 8:11; I Kings 1:5), were not attributes of the king, but their splendor served to enhance the glory of the monarch and indicate his power and riches.

7. Religious aspects of the Israelite kingship. In the ancient Near East, kingship was nowhere a purely secular institution. And in Israel, there were religious implications of the office of kingship.

a. The Lord as the King of Israel. The Lord was the original King of Israel. Unfortunately, the dating and the evaluation of the historicity of the biblical passages (e.g., Exod. 15:18; 19:6; Num. 23:21; Deut. 33:5; I Sam. 8:7; 12:12; Judg. 8:23) supporting this contention are often disputed. Some scholars think that all these evidences are too late and of no value. But there is sufficient evidence to substantiate the claim that the COVENANT of Israel with Yahweh was a royal covenant, and Israel pledged loyalty to him in a covenantal ceremony (cf. Josh. 24). Therefore, in some circles, the earthly kingship was thought of as an apostasy (I Sam. 8:7; Hos. 8:4). But even in circles favorable toward human kingship, the Lord's kingship over Israel was maintained as an article of faith. Earthly kingship was derived from divine authority, as the expressions "the LORD's anointed" (e.g., I Sam. 16:6; II Sam. 1:14) and "prince" (נגיד; e.g., I Sam. 9:16; 10:1; 13:14) seem to indicate. The king's role was that of a vassal of Yahweh.

b. Enthronement of the king. The fact that the Lord was recognized as the absolute ruler of Israel, who had appointed as his vassal the king, did not exclude, at least in the earliest period of the monarchy, the democratic acceptance of the king by the elders and chieftains (I Sam. 11:15; II Sam. 5:3; I Kings 12:1, 20). This democratic recognition appeared in the making of a covenant before the Lord (II Sam. 5:3; 3:21). How long this democratic side of the enthronement survived in the two kingdoms cannot be decided, for the details of the enthronement ritual are not available. The main elements, if not the order, of the enthronement ritual might be reconstructed from the detailed accounts of the enthronement of Solomon (I Kings 1:32-40) and Joash (II Kings 11:4-20).

The most essential part of the enthronement ceremony was the anointment of the king, and the less decisive components of the ritual surrounded this particular one. Solomon was brought on the mule of his father to the Gihon, accompanied by the foreign mercenaries. Probably a sacrifice was made at Gihon by Solomon (cf. I Kings 1:9), and then he was anointed by the priest Zadok (I Kings 1:38-39) and the prophet Nathan (vss. 34-35). After the anointment of the king, they blew the trumpet, and the people shouted: "Long live King Solomon!" Then, a festival procession accompanied the new king from the holy place to the throne, and he took his place and received the obeisance of the officials and the royal princes (I Kings 1:40, 53). The enthronement of Jehoash was composed of a coronation by the priest of the temple, the receiving of the "testimony," and the anointment. Those present clapped their hands and shouted: "Long live the king!" (II Kings 11:12). Afterward, the anointed king stood at the pillar (which most likely was one of the pillars of the temple), and the people rejoiced and blew the trumpets (II Kings 11:13-14). A covenant was made between the Lord and the king and the people (vs. 17). From the temple, accompanied by the bodyguards and the people, the king went to the royal palace and took his place upon the throne (vs. 19). Somewhere within this ceremony, the king received a new name, a throne name; this change of the king's name was already practiced in ancient Sumer. Thus, Eliakim's throne name became Jehoiakim (II Kings 23:34), and Mattaniah's regnal name became Zedekiah (24:17). Jedidiah was the private name of Solomon (II Sam. 12:25), and it is probable that Elhanan (*see* ELHANAN 1) was the original name of David.

c. Divine kingship in the ancient Near East. The kings were believed to be superhuman in the ancient Near East. In the Amarna Letters, the Canaanite vassals address their Egyptian sovereign as "my god," "my sun," "sun of the land," and "my breath." The Egyptian Pharaoh was regarded as the earthly manifestation of the gods Horus, Seth, and Osiris. The Egyptians believed that the king was the very son of the gods by his nature, for he was begotten by Re. Thus the king was the absolute lawgiver of his land, ruling by divine decrees. He did not merely uphold justice, but he was the very source of justice as the incarnation of the heavenly justice. As the god Osiris, the Pharaoh was also the giver of life, sustainer of fertility, and dispenser of abundant blessing. The Egyptian kings, being divine, were worshiped in their life and death.

The Mesopotamian concept of kingship was compatible with the divinity of the king. The early

Sumerians most often looked upon the king as one of the human beings—greater, to be sure, than other men, but still a man. The Sumerian king reigned in his god's stead as a viceregent. But the early Babylonian kings freely used the title "god." Their divinity, however, largely differed from that of the Pharaoh. The Babylonian king was a divine servant of the gods, chosen to maintain the reign of the gods. The relationship of the Babylonian king to the gods and goddesses was conceived as sonship by adoption and not by nature. The divine election endowed the king with "divine," superhuman qualities, but his divinity was "functional" rather than metaphysical. Therefore, the king, unlike the Egyptian Pharaohs, was never worshiped.

The Babylonian king was a "divine" intermediary between the gods and the people, and accordingly one of his main functions was to participate in the most important religious rites; especially in his role in the New Year festival, which was of crucial importance. In a ritual drama which re-enacted the creation myth, he helped the gods establish for a year the cosmic order. The ritual represented Marduk's initial imprisonment and humiliation by the forces of chaos and his subsequent victory over the chaos-dragon, Tiamat (*see* DEEP, THE). Occasionally the king took part in the rite of "sacred marriage," from which blessing and fertility stemmed forth for the land and the people. In the cultic drama of the New Year festival, the king, though representing the deity, was not regarded as identical with him.

The Hittites never recognized the living king as a god. Nevertheless, the divinity of the dead kings was an established belief. The king in the N Syrian states was not an offspring or son of the gods. Neither is there any evidence that the king was deified after his death.

In Canaan, as the Ugaritic documents indicate, kings of the legendary past like Keret were recognized as demigods. Keret's son was suckled by the goddess Asherah. King Keret himself was the "son" and "servant" of the highest god, El, and received immortality.

The prevalent variations in the Near Eastern concept of kingship militate against the contention that there was a general Near Eastern belief in the divinity of the kings.

d. The problem of divine kingship in Israel. The question of divine kingship in Israel must be viewed within the context of Israel's monotheism and the nonuniform estimate of kingship among the nations of the ancient Near East.

By the anointment, the king of Israel became sacrosanct (II Sam. 1:14, 16). David did not dare kill King Saul, who was at his mercy, and forbade Abishai to slay the Lord's anointed (I Sam. 26:9). After David cut off the skirt of Saul's robe, he was afraid, and "[his] heart smote him" (I Sam. 24:5). Whoever cursed the king deserved to be put to death (II Sam. 19:21-22; I Kings 21:10, 13). God and the king were equally to be feared and obeyed (Prov. 24: 21). The king's unique position can be further illustrated by a comparison of his wisdom to that of the angel of God (II Sam. 14:17, 20; 19:27).

It was an article of faith in Judah that God made an everlasting covenant with David for the establishment of his dynasty (II Sam. 23:5; cf. 7:8-15; Ps. 89:19-37). The kings of Judah were heirs to the divine promise given in the dynastic oracle (II Sam. 7:5-16) that the Davidic king would be the "son" of God (vs. 14). This "divine sonship" of the king did not rest on divine procreation as in Egypt; the king of Judah remained David's descendant by nature (II Sam. 7:12). His sonship was expressed in terms of adoption, as the adoption formula "You are my son, today I have begotten you" (Ps. 2:7), suggests. The Davidic king could be called the first-born of God (Ps. 89:27). In the language of myth, a psalm tells that he was born from the womb of dawn (Ps. 110:3), and that he sat at the right hand of God (Ps. 110:1). In an exaggerated praise, he might have been called "god" (though there are difficulties with the rendering of this text), and his throne was regarded as divine (Ps. 45:6).

Because of such intimacy with God, the king embodied the Lord's blessing, which meant harmony and prosperity, peace and well-being, for the whole people. Therefore, the king was the life-sustaining breath (Lam. 4:20) and the protecting shield of the people (Ps. 89:18). Fertility was connected with him; abundance of grain and blossoming forth of the human race were equally among his works of "righteousness" (Ps. 72:3, 16). Accordingly, the king was called the "lamp of Israel" (II Sam. 21:17); his life, which was worth the lives of ten thousand heroes (II Sam. 18:3), had to be protected in the interest of the nation. Through adoption, the king became God's heir and could ask for universal dominion over the nations of the earth (Ps. 2:8), for the first wish of the king after his anointment was granted by God (cf. I Kings 3:5). He established divine justice in the world (Pss. 45:4, 7; 72:1-4) and destroyed his enemies (Pss. 2:9; 21:10-12; 45:5), who cringed before him as chastised slaves (Pss. 72:9; 110:1).

A mistaken evaluation of the evidence presented above led some scholars to maintain that the belief in the divinity of the Hebrew king was a deeply rooted conviction in ancient Israel and Judah. But this assumption can hardly stand close scrutiny.

Indubitably, a superior importance of the Israelite king as God's unique instrument must be maintained. The king's inviolable character cannot be denied either; there are, however, indications that inviolability was not an exclusive royal privilege but was shared also by the priests (I Sam. 22:17-18; I Kings 2:27). The threefold comparison of the king's wisdom to that of the angel of God (II Sam. 14:17, 20; 19:27) loses its implications when it is remembered that twice the speakers either tried to deceive the "omniscient" king or received a clear indication of the king's fallibility. The assumption is at hand that at least some of the exaggerated expressions must be accounted for as stylistic borrowings from the language of the royal courts of the great empires.

The kings apparently did not assume their own divinity, as the words of the king of Israel reveal: "Am I God, to kill and to make alive?" (II Kings 5: 7; cf. 6:26-27). The sonship of Israel (Hos. 11:1) and the Israelites (Isa. 1:2) also is rooted in the thought of divine covenantal adoption and differs only in the degree of proximity from that of the king. To be sure, the king of the Davidic dynasty was a channel of

blessing, but the source of the blessing was the Lord himself (Ps. 132:11-18). The king was not worshiped; on the contrary, the people entreated God in behalf of the king (Pss. 20:1-5; 72:15). The argument of silence also might be introduced rightly at this point: it is significant that the prophetic denunciations of the kings never censured the monarchs because of their claim upon divinity.

The king of Israel was close to God, but his proximity to the deity must not be interpreted as identity, metaphysical or functional. His intimacy with God qualified him as the Lord's vicegerent in Israel and in the world.

e. The cultic functions of the king. The king's importance in Israel's religion was enhanced by his association with the cult. As Melchizedek, king of Salem, was the priest of God Most High (Gen. 14: 18), and as the kings of most of the ancient Near Eastern nations performed priestly functions, so the Israelite king, at least in the earliest period, exercised cultic functions. On important occasions the kings offered sacrifices to God, as did Saul (I Sam. 13:10; 14:35), David (II Sam. 6:13, 17; 24:25), and Solomon (I Kings 3:4, 15; 8:62; 9:25). Saul erected an altar to the Lord (I Sam. 14:33-34), as did David (II Sam. 24:21; cf. Ahaz' cultic role in II Kings 16:10-18). David's sons were priests (II Sam. 8:18); Absalom (II Sam. 15:12) and Adonijah (I Kings 1:9) offered sacrifices at sacred places. In the Northern Kingdom, Jeroboam officiated at the sacrifices (I Kings 12:32; 13:1; cf. II Kings 10:24).

The kings presented supplication for the nation on important occasions. Solomon (I Kings 8:22-53) and Hezekiah (II Kings 19:14-19) are examples. David danced in the ark procession clad in a linen ephod, which was priestly garment par excellence (II Sam. 6:14). Afterward, he blessed the people in the name of the Lord of hosts (II Sam. 6:18), and so did Solomon at the dedication of the temple (I Kings 8:14).

The king had authority over the priests and, at least to some extent, over the cult. He could punish the priests (I Sam. 22:11-18; I Kings 2:26-27), for the priests, in the beginning, were regarded as royal officials (II Sam. 8:17; 20:25). The king's duty extended not merely to the supervision of the cult, but he could even reform the cult, as the reforms of Asa (I Kings 15:12-15), Hezekiah (II Kings 18:1-7), and Josiah (II Kings 22:3–23:23) amply illustrate. Jehoash regulated the priestly income (II Kings 12:4-16). Noteworthy is the important part credited to David in the preparations for the building of the temple and in the musical aspects of the cult (I Chr. 22; 25). Though the historicity of the Chronicler's information can hardly be asserted, it manifestly shows the memory of an undisputed royal influence upon the cult.

The importance of the cultic role of the king, however, must not be overestimated, for it must be measured by the fact that, in the premonarchic period and probably even later, any paterfamilias had the right to offer sacrifices, establish a shrine, and appoint his own priests (Judg. 17:5, 10).

f. The king and the New Year festival. It is assumed in some schools of biblical scholarship that the most important cultic function of the reigning monarch of Judah was his participation in the ritual of the NEW YEAR festival. For lack of direct evidence concerning the pre-exilic New Year festival, the so-called "enthronement of the LORD" psalms (47; 93; 96–99) are utilized in the attempt to reconstruct the ritual. Similarly, the royal psalms (2; 18; 20–21; etc.) and the psalms of royal lamentations (3; 11–13; etc.; *see* PSALMS, BOOK OF) serve as elements in the reconstruction undertaken by scholars.

The so-called "myth-and-ritual school" of the history of religions endeavors to establish that myth and ritual stood in organic relationship within the religions of the ancient Near East. Thus the New Year ritual in Babylon is interpreted as a dramatic re-enactment of the creation myth (*see* § 7*c above*). There is sufficient evidence supporting the existence of a ritual drama of the same kind in Ugarit. The New Year ritual in Israel itself, it is claimed, complied with the general Near Eastern ritual pattern or was the result of the Israelite adaptation of a hypothetical Jebusite ritual of El Elyon, God Most High. *See* GOD, NAMES OF, § C2*b*.

The proposed reconstructions of the Israelite New Year ritual enlist several elements, but there are two constant motifs present: (*a*) a sham battle in sacramental re-enactment of God's struggle against and victory over the forces of chaos at the Creation; (*b*) a procession of the ark-throne (*see* ARK OF THE COVENANT) with the triumphant Creator enthroned as the giver and sustainer of life. Other elements of the ritual would be identified as the ritual humiliation and suffering of the king in the grip of "Death"; the monarch's ritual combat against his enemies, who were also the foes of the Lord; and the king's annual enthronement.

There are, however, several weighty objections to this reconstruction of the pre-exilic New Year ritual. The so-called "enthronement of the LORD" psalms are questioned as having any relevance to the observance of a New Year festival, and they are proposed to be designated as sabbath psalms. The ritual humiliation and cultic suffering of the king are also disputed on the ground that the psalms identified as "psalms of royal lamentations" can be construed with impressive cogency as laments of the suffering innocent wrongly accused. Similarly, it is proposed, the royal psalms might echo historical situations, and a ritual background is not necessary to their understanding (*see* PSALMS, BOOK OF). The paucity of incontestable data leaves any hypothesis on the pre-exilic New Year festival extremely vulnerable.

Whatever be the case in regard to the existence of the pre-exilic New Year ritual, this much can be convincingly established: that the king did not represent the Deity in the Israelite ritual. In the ritual combat it was the Lord who delivered the hard-pressed king (Ps. 18:43). The royal suffering must not be construed as re-enactment of a divine humiliation and imprisonment alien to Israel's faith. In the ritual, the king's role could have been the leading of the ark procession (Ps. 132:6-10) in a cultic commemoration of David's original ark procession, in which this ideal "anointed of the LORD" danced before the ark-throne of God (II Sam. 6:12-19). The king's function was essentially that of a priestly intermediary who represented the people in penitence and supplication before God in accord with his office as

the "priest after the order of Melchizedek" (Ps. 110:4).

S. SZIKSZAI

*KINGDOM OF GOD, OF HEAVEN [ἡ βασιλεία τοῦ θεοῦ, τῶν οὐρανῶν]. These synonymous expressions (*see* §§ 1*b-c below*) represent an idea which is deeply rooted in the thought of the OT, and which constitutes the central theme of the teaching of Jesus as recorded in the Synoptic gospels. The basic meaning of the idea, in the Bible, is that of the kingly rule or sovereignty of God (*see* § 1 *below*), rather than that of the sphere, or realm, in which his rule operates. The latter meaning is, however, necessarily implied in the idea. The Bible regards the kingly rule of God under three different aspects: as an eternal fact, as manifested upon earth in its acceptance by men, and as a consummation to be hoped for in the future. In the last of these aspects, the idea is an eschatological one. It is this eschatological aspect that predominates in the teaching of Jesus on the kingdom of God, and modern discussions of Christian eschatology have largely centered around the question of the interpretation of his teaching on this subject.

Bibliography

1. Terminology and meaning. The purpose of this preliminary section is to survey briefly the use, in the biblical and related literature, of the term "kingdom of God" and its equivalents, and to consider the meaning of the terms.

a. In the OT. The actual phrase "kingdom of God" does not appear in the OT, except for one occurrence of the form "kingdom of the LORD" (*malkuth Yahweh*) in one of the latest books (I Chr. 28:5). The word "kingdom," however, is sometimes used in relation to God. "Thy kingdom" occurs in Pss. 45:6 ERV; 145:11, 13; and "his kingdom" in Pss. 103:19; 145:12 RSV mg. In I Chr. 17:14 "my kingdom" appears on the lips of "the LORD of hosts." In all the foregoing passages the Hebrew word is מלכות. In Obad. 21; Ps. 22:28 ERV, "the kingdom" is described as "the LORD's"; in each case the Hebrew word is מלוכה. The phrase "Thine is the kingdom, O LORD," is found in I Chr. 29:11; in this case the Hebrew is ממלכה. In the Aramaic portion of the book of DANIEL "his kingdom" occurs in 4:3, 34; 7:27 ERV, while in Dan. 2:44 we read of the "God of heaven" setting up "a kingdom." In all these passages the Aramaic word is מלכותא. The different Hebrew and Aramaic words for "kingdom" mentioned above, when applied to God, all have, as their primary meaning, the idea of "kingship," "sovereignty," or "kingly rule."

b. In later Jewish literature. In the Apoc. the phrase "kingdom of God" (βασιλεία τοῦ θεοῦ) occurs once (Wisd. Sol. 10:10), and there are occasional references to "his [or thy] kingdom" (e.g., Tob. 13:1; Wisd. Sol. 6:4; Song Thr. Ch. 33). A similar usage is found in the Pseudep. (e.g., Enoch 41:1; 52:4; Pss. Sol. 5:18; 17:3, 30-34; Asmp. Moses 10:1). In later literature the phrases "kingdom of God" and (especially) "kingdom of heaven" occur more frequently, being used particularly by the Targ. writers (*see* TARGUM) who wished to avoid the thought that God in person should appear on earth. Thus, e.g., the Targ. on Isa. 40:9 substitutes for "Behold your God" the phrase: "The kingdom [Aramaic מלכותא] of your God has become manifest"; similar substitutions appear in the Targ. on Isa. 31:4; 52:7; Ezek. 7:7, 10; 11:24; Obad. 21; Mic. 4:7; Zech. 14:9. There is no difference in meaning between the forms "kingdom of God" and "kingdom of heaven" in this connection, since the word "heaven" was frequently used by the Jews as a reverent periphrasis for the divine name (*see* GOD, NAMES OF). The term "kingdom" (Aramaic מלכותא) also appears, in relation to God, in Jewish prayers (e.g., the Kaddish prayer, which includes the petition: "May he establish his kingdom during your life"). As in the OT (*see* § 1*a above*), so in all this later literature, the meaning of "kingdom" is fundamentally that of "sovereignty" or "rule."

c. In the NT. The terms "kingdom of God" and "kingdom of heaven" occur very frequently in the

Synoptic gospels. The use of the latter form is, however, confined to the Gospel of Matthew, which, in keeping with its Jewish-Christian character (*see* MATTHEW, GOSPEL OF), regularly adopts the periphrasis "heaven" for "God" (*see* § 1*b above*). "Kingdom of God," however, appears in Matt. 12:28; 19:24; 21:31, 43. It is possible that Jesus himself sometimes used the periphrasis and spoke of the kingdom of heaven, but the evidence suggests that "kingdom of God" was the form of the expression normally used by him. Other equivalent expressions which occur in the Synoptics are: "thy kingdom" (Matt. 6:10; Luke 11:2); "his kingdom" (Matt. 6:33; Luke 12:31); "the kingdom" (Matt. 4:23; 8:12; 9:35; 13:19, 38; 24:14; 25:34; Luke 12:32); "the kingdom of their Father" (Matt. 13:43); "my Father's kingdom" (Matt. 26:29). In all the foregoing passages the kingdom is regarded as belonging to God. In a few passages the kingdom is spoken of as belonging to "the Son of man" (Matt. 13:41; 16:28), or to Jesus himself (Matt. 20:21; Luke 1:33; 22:29-30; 23:42 RSV mg.).

In the Fourth Gospel the term "kingdom of God" occurs twice (John 3:3, 5), and the phrase "my kingdom" appears on the lips of Jesus in John 18:36 ERV-ASV.

In Acts "kingdom of God" occurs six times (1:3; 8:12; 14:22; 19:8; 28:23, 31) and "the kingdom" twice (1:6; 20:25). In the Pauline letters "kingdom of God" is found in Rom. 14:17; I Cor. 4:20; 6:9-10; 15:50; Gal. 5:21; Col. 4:11; II Thess. 1:5. I Cor. 15: 24 speaks of Christ's delivering "the kingdom to God the Father," and Eph. 5:5 has the phrase "the kingdom of Christ and of God." "His own kingdom" (i.e., God's) occurs in I Thess. 2:12, and "the kingdom of his beloved Son" in Col. 1:13. In the Pastoral letters "his kingdom" is used twice with reference to Christ (II Tim. 4:1, 18). In Hebrews "thy kingdom" occurs in connection with "the Son" in 1:8, and "a kingdom" is found in 12:28. In the Catholic letters "the kingdom" occurs in reference to God in Jas. 2:5, and II Pet. 1:11 refers to "the eternal kingdom of our Lord and Savior Jesus Christ." Finally, in Revelation we have references to the "tribulation and kingdom and patience which are in Jesus" (1:9 ERV-ASV), "the kingdom of our Lord and of his Christ" (11:15), and "the kingdom of our God" (12:10).

In every NT passage referred to above, the word for "kingdom" is βασιλεία. The primary meaning of this word, like that of its Hebrew and Aramaic counterparts (*see* §§ 1*a-b above*), is that of "kingship" or "rule," although its use is extended, to a greater degree than is the case with the Semitic words, to include the meaning of "realm" or "territory governed by a king." It must be remembered, however, that in the teaching of Jesus, and consequently in NT usage generally, the Greek βασιλεία represents the מלכותא of his native Aramaic, and must be understood accordingly.

2. The Jewish background. If the actual term "kingdom," in relation to God, is of comparatively rare occurrence in the OT (*see* § 1*a above*), the concept in which the idea of the kingdom of God is rooted—namely, the concept of God as king—is, nevertheless, everywhere present.

a. The preprophetic period. In the early period of Israelite religious history, the kingship of Yahweh over Israel, like that of other gods over their respective peoples (e.g., Chemosh over Moab and Milcom over Ammon—see I Kings 11:33), was regarded as something similar to human kingship. The sovereignty of each god was limited to the territory, and the subjects, of the nation that worshiped him. To leave the land of Israel was to leave the jurisdiction of the God of Israel, and to become unable to worship him (see II Kings 5:17-18, where Naaman the Syrian seeks to overcome this difficulty by transporting a quantity of earth from Yahweh's territory into that of Rimmon; cf. also I Sam. 26:19; Ps. 137:4). The god's sovereignty was also limited in the sense that his functions as king were fairly strictly defined; in the main, his functions were to provide help against the nation's enemies, counsel by oracles or soothsayers in matters of national difficulty, and a sentence of justice when a case was too hard for human decision. Yet a further limitation of the god's sovereignty was involved in the fact that his people and his land were as essential to him as he was to them, since the idea of a god without a land and a people to rule over was inconceivable. This meant that there was a limit to what a god could do with his people, since he could not destroy them or surrender them to a foreign power without disinheriting himself. In all these ways, the sovereignty of Yahweh over Israel was regarded as limited. Within such limitations, however, it was absolute: "You shall have no other gods before me" (Exod. 20:3).

b. The influence of the prophets. If the kingship of Yahweh over Israel was at first regarded in the same light as that of other gods over their peoples, the way in which the idea developed in Israel was very different from that which was the case elsewhere. This was primarily due to the work of the great prophets of the eighth and subsequent centuries B.C., the effect of which was to remove the above-mentioned limitations from the conception of Yahweh's sovereignty. The message of these prophets brought a new insight into the nature and character of Yahweh, and at the same time a realization that his sovereignty was universal and unrestricted in its scope. The insistence that Yahweh's essential nature was absolute holiness, righteousness, and love made impossible the restriction of his functions as king to those of a mere helper in time of need. He came to be seen as the ever-watchful guardian of justice and mercy in the relations of man to man, and the swift judge of all wrong and oppression. All human affairs, and all men's dealings with one another, must come under his jurisdiction. For the prophets, Yahweh was not so much the champion of Israel as the champion of righteousness; and the natural corollary of this development was the extension of his sovereignty to include other nations besides Israel. Thus Amos proclaimed that not only Israel but many other nations also were accountable to Yahweh for their transgressions (Amos 1–2), that the people of Israel were like the Ethiopians to him, and that, just as he had brought up Israel from the land of Egypt, so it was Yahweh who had also brought up the Philistines from Caphtor and the Syrians from Kir (Amos 9:7). Similar ideas appear in Isa. 5:26; Jer. 27:5-11.

The bitter experiences of the Babylonian exile, which the prophets regarded as the punishment of

Judah for her sins, gave added force to this spiritualizing and universalizing of the conception of Yahweh's kingship. In Deutero-Isaiah there appears the idea that Yahweh can use the mighty world powers, and the events of history outside Israel, to bring about the fulfilment of his own purposes. The rise of the Persian Empire is spoken of as his work, and CYRUS referred to as the "shepherd" and the "anointed" of Yahweh (Isa. 41:1-7; 44:24–45:25). The other gods cease to be regarded as rival deities and become mere nonentities.

> I am the LORD, and there is no other,
> besides me there is no God
> (Isa. 45:5).

This degradation of other deities involved not only the tribal and national gods, but also the whole host of nature and fertility gods and goddesses. Thus the sovereignty of Yahweh was seen to extend, not only over all the nations, but over the whole of nature as well (Job 38–41; Hos. 2:8). With the rise of this monotheistic faith, the relation between Yahweh and Israel could no longer be regarded as one of mutual dependence. Thus all limitations came to be removed from the idea of Yahweh's kingship, and it was seen to be, not a national and limited monarchy, but an ethical and universal reign. In this sense, God is eternally and universally king; his "kingdom is an everlasting kingdom," which "rules over all" (Pss. 145:13; 103:19).

c. The postexilic period. This new conception of Yahweh's kingship as eternal and universal, which we have seen to be the result of prophetic teaching, raised, however, new problems. The conviction that the whole world was subject to one God had to be reconciled with the hard facts of experience, for nothing was more obvious than that the rule of God was not universally recognized and obeyed, not even within Israel herself. The attempt to solve this problem led inevitably to the development of eschatology. True as it was that God was eternally king, there was clearly a sense in which his complete and absolute sovereignty was not yet manifested in this world. So there arose the conception of the rule of God as a hope for the future.

The beginnings of Jewish eschatology are to be found in the writings of the prophets themselves. Though they were primarily preachers to their own day, warning men of the just demands of God and of the inevitable consequences of behavior and policies that were at variance with his rule, the prophets nevertheless looked beyond the present and the immediate future to a great DAY OF THE LORD, when God would triumphantly intervene to establish his sovereignty finally and absolutely. In contrast to popular expectation, this day was not to be one of divine deliverance for Israel and vengeance on her enemies, but rather a day of judgment for Israel as for every other nation (Amos 5:18-20; Zeph. 1:14-18). And beyond this day of the Lord, the prophets saw the coming of a new and golden age of universal peace and harmony under the sovereign rule of God (Isa. 2:2-4; 11:6-9; Mic. 4:1-4). This eschatological expectation was developed in an apocalyptic direction in such postexilic writings as Joel; Isa. 24–27; Zech. 9–14, until it reached its fullest development in Daniel and the extracanonical apocalypses of the last two centuries B.C. and the first A.D. *See* APOCALYPTICISM.

Apocalyptic really arose out of the attempt to reconcile a faith in the sovereignty of a good God with the experience of evil and suffering in this world. The solution it offered to this problem involved a qualified dualism, which saw a spiritual kingdom of evil, headed by SATAN, at war with the kingdom, or rule, of God. This powerfully organized kingdom of evil, though it often appeared to be in the ascendant in this world, existed only by the permission of God, and would ultimately be overthrown. Indeed, the sufferings and disasters which were mounting with such rapidity, to the consternation of the faithful, were, to the apocalyptists, merely the signs of the approaching end.

The time and the nature of the final consummation of the reign of God are variously described in the different apocalypses. Some look for a golden age to be realized on earth, whereas others look only to the establishment of the eternal kingdom in heaven. Sometimes the kingdom is thought of as being established by the direct intervention of God without any mediator; thus, e.g., in Asmp. Moses 10:1:

> Then His kingdom shall appear throughout all His creation,
> And then Satan shall be no more,
> And sorrow shall depart with him.

At other times the coming of the kingdom is associated with the figure of a MESSIAH; thus, e.g., in Apocal. Bar. 73:

> It shall come to pass, when He [the Messiah] has brought low everything that is in the world,
> And has sat down in peace for the age on the throne of His kingdom,
> That joy shall then be revealed,
> And rest shall appear.

Of special importance for the background of the NT doctrine of the kingdom of God is the vision of Dan. 7, where the dominion of the successive world empires to which Israel was subject from the Exile onward, represented by the beasts, is seen to be taken away, and the kingdom given to the "saints of the Most High" (7:18, 22, 25, 27), represented by "one like a son of man" (7:13; *see* SON OF MAN), whose

> dominion is an everlasting dominion,
> which shall not pass away,
> and his kingdom one
> that shall not be destroyed
> (7:14).

Underneath all the differences of form which the conception takes in the apocalyptic writings, there lies, however, the common conviction that the reign of God is shortly to become effective over all the world. Such was the hope cherished by the faithful in Israel through all the vicissitudes of the centuries immediately preceding the Christian era. It finds expression in the prayer of the Kaddish, which pious Jews prayed in the first century A.D. as they do today, and which concludes with the petition: "May he establish his kingdom during your life and during your days, and during the life of all the house of Israel." The gospels themselves afford an occasional glimpse of such faithful souls who were "looking for the king-

dom of God" (Mark 15:43; Luke 23:51; cf. Luke 2: 25, 38; 14:15; 17:20; 19:11).

It was to a people that cherished this eschatological hope that JOHN THE BAPTIST began to preach *ca.* A.D. 28-29. Matthew attributes to John the statement: "Repent, for the kingdom of heaven is at hand" (3:2). It is probable that the actual words of John have here been assimilated to those of Jesus at Matt. 4:17 (cf. Mark 1:15). Nevertheless, the burden of John's prophetic message was the announcement that the day of the Lord was imminent, and the appeal to men to repent in preparation for that day, and to signify their repentance by submitting to the rite of baptism. The new element in John's eschatology, as compared with that of the popular expectation, was that the Messiah would come, not so much as a national deliverer, but as the judge, whose "winnowing fork is in his hand, and he will clear his threshing floor and gather his wheat into the granary, but the chaff he will burn with unquenchable fire" (Matt. 3:12; Luke 3:17). Moreover, this judgment or "wrath to come" would fall upon Jews as well as Gentiles, unless they had prepared themselves by repentance and the bearing of fruit that befitted repentance; to be able to claim physical descent from Abraham would be no guarantee of escape (Matt. 3:7-10; Luke 3:7-9). In spite of this harsh element in his message, the preaching of John the Baptist met with a considerable response, and multitudes "were baptized by him in the river Jordan, confessing their sins" (Mark 1:5). It is thus evident that when the ministry of Jesus opened, the thought of the coming consummation of the reign of God was very much in men's minds.

d. Rabbinic teaching. While the rabbis who were contemporary with the beginning of the Christian era certainly shared the eschatological hope referred to *above* (*see* § 2*c*), they were equally concerned with another aspect of the idea of God's sovereignty. They thought of it as a divine discipline to be accepted by individuals by obedient submission to God's will. In the rabbinic literature (which belongs to a later date, but which probably embodies the teaching of a much earlier period), the kingdom of God (or heaven) is sometimes spoken of as something to be "taken upon" oneself. Thus Israel is said to have taken upon herself Yahweh's kingdom at Sinai. The proselyte who adopts the law thereby "takes upon himself the kingdom of heaven." And for the Jew, the daily recitation of the Shema (Deut. 6:4-5) is regarded as a continually repeated "taking upon oneself of the yoke of the kingdom of God." In this sense, of course, the kingdom of God (or heaven) is thought of as a reality that is present and effective wherever the rule of God is submitted to by perfect obedience to the law.

3. The teaching of Jesus. That the kingdom of God was the theme of Jesus' public preaching during the Galilean ministry, we are expressly told by the evangelists (Matt. 4:23; 9:35; Luke 8:1; 9:11; cf. Luke 4:43-44). An examination of his sayings and parables, as recorded in the Synoptic gospels, confirms that the idea of the kingdom occupied a central place in the whole of Jesus' thought and teaching. The term "kingdom of God," or one of its equivalents (*see* § 1*c above*), occurs frequently on his lips in each of the Synoptic sources (*see* SYNOPTIC PROBLEM). It is found in thirteen sayings in Mark, some thirteen in Q, some twenty-five in M, and some six in L. The accounts of the mission of the disciples reveal that the message which they were sent to proclaim also concerned the kingdom of God (Matt. 10:7; Luke 9:2; 10:9, 11). That the idea of the kingdom of God was a familiar one to the contemporaries of Jesus, is clear from what has been said about its place in apocalyptic and rabbinic thought (*see* § 2*c-d above*). Jesus himself was fully aware of the different ways in which, as we have seen, the idea of the kingdom of God could be conceived: the idea of God as eternally king (*see* § 2*b above*); the idea of the sovereignty of God as a present reality wherever individuals acknowledge it by obedient submission to his will (*see* § 2*d above*); and the idea of the kingdom as the object of the eschatological hope (*see* § 2*c above*). Each of these ideas is to some extent reflected in the teaching of Jesus, but the idea that predominates is the eschatological one. The main problem in connection with the interpretation of Jesus' eschatological teaching arises from the paradox that, whereas much of it envisages the kingdom of God as about to come into being in the near future, there are also sayings which clearly imply that the kingdom, in the eschatological sense, has already come in the person and ministry of Jesus himself. Attempts have been made to bring the teaching as a whole into one consistent pattern, either of futurist or of "realized" eschatology (*see* ESCHATOLOGY OF NT), but such attempts invariably involve a strained and unnatural exegesis of a number of the sayings. It is accordingly advisable to allow for the existence, in Jesus' thought, of both emphases, and to attempt to understand their relationship to one another.

a. The imminence of the kingdom. According to Mark 1:14-15, Jesus began his public ministry in Galilee with the proclamation: "The time is fulfilled, and the kingdom of God is at hand; repent, and believe in the gospel." Many scholars prefer the translation "has come" to "is at hand" for the Greek ἤγγικεν in this passage, and so include it among the sayings in which Jesus speaks of the kingdom as already present (*see* § 3*b below*). This interpretation depends upon the view that the Greek verb in question (ἐγγίζω) represents the Aramaic מטא, which means "to arrive." It is true that ἐγγίζω is sometimes used in the LXX to translate מטא and the Hebrew נגע, which also means "to arrive." Such cases, however, are exceptional; in the majority of its occurrences in the LXX, ἐγγίζω has its normal Greek meaning of "to draw near," and where it does mean "to reach, or arrive," the context makes it clear that such is, in fact, the meaning. Moreover, the usual meaning of ἐγγίζω in the NT is "to draw near." The idea that "the kingdom of God has come" could have been expressed much less ambiguously than by the use of the verb ἤγγικεν; indeed, it is so expressed by the use of ἔφθασεν in Matt. 12:28; Luke 11:20 (*see* § 3*b below*).

In view of these considerations, it is better to understand the words of Mark 1:15 as indicating the imminence, rather than the actual presence, of the kingdom of God. The same interpretation will naturally apply to the use of the same expression, ἤγγικεν ἡ βασιλεία τοῦ θεοῦ (τῶν οὐρανῶν), in the message delivered by Jesus to his disciples when sending them

out on their mission (Matt. 10:7; Luke 10:9, 11). Thus Jesus opened his ministry with the proclamation that the eschatological event, the kingdom of God, was near, and later sent his disciples out to make the same proclamation.

The same emphasis on the kingdom of God as an event which is to take place in the near future is to be seen in the important saying: "Truly, I say to you, there are some standing here who will not taste death before they see the kingdom of God come with power" (Mark 9:1). Here again, there are some scholars who interpret the saying as implying the actual presence of the kingdom, the promise being that some of the bystanders would come to see, in the future, that the kingdom of God had already come in the person and ministry of Jesus. This, however, is a strained interpretation of the words, which in their natural sense point to the coming of the kingdom as an imminent future event. The words "with power" suggest a coming in a fuller and more final sense, in contrast with the coming of the kingdom that has already taken place (*see* § 3*b below*). The prophecy of Mark 9:1 is sometimes regarded as having been fulfilled in a historical event such as the Transfiguration, or the Resurrection, or the fall of Jerusalem, or the triumphant spread of Christianity throughout the Roman Empire. It is much more likely, however, that Jesus was here speaking of the final consummation of the kingdom of God. That the author of Matthew understood the saying in this sense is clear from the fact that he substitutes, for Mark's "kingdom of God come with power," the phrase "the Son of man coming in his kingdom" (Matt. 16:28); and this interpretation is confirmed by the fact that, in another saying recorded by Mark, Jesus uses the phrase "with great power" in a reference to the coming of the Son of man: "And then they will see the Son of man coming in clouds with great power and glory" (Mark 13:26). The coming of the kingdom of God "with power" (Mark 9:1) is thus to be identified with the PAROUSIA of the SON OF MAN, and as such is clearly a future event.

Another indication that Jesus thought of the kingdom of God as being established in the future is seen in his saying at the Last Supper: "Truly, I say to you, I shall not drink again of the fruit of the vine until that day when I drink it new in the kingdom of God" (Mark 14:25; cf. Luke 22:18, which is probably the L version of the same saying; Luke records also a similar saying, with reference to the Passover meal, in 22:16). Jesus is here thinking of the consummation of the kingdom of God, in terms of the messianic banquet (*see* MESSIAH), of which the Last Supper is an anticipation. The same thought appears later in Luke's account of the Supper, where Jesus, however, speaks of the kingdom as appointed for himself by the Father: "As my Father appointed a kingdom for me, so do I appoint for you that you may eat and drink at my table in my kingdom" (Luke 22:29-30). These sayings at the Last Supper reveal that the thought of the coming consummation of the kingdom of God was prominent in Jesus' mind as he faced his death, and suggest that he believed his death to be a necessary step toward that consummation (*see* § 3*d below*). The idea of the messianic banquet in the future, consummated kingdom of God is found again in a saying which belongs to the Q source: "I tell you, many will come from east and west and sit at table with Abraham, Isaac, and Jacob in the kingdom of heaven" (Matt. 8:11; cf. Luke 13:28-29). It is also implied in the parable of which variant forms appear in Matt. 22:1-14 (the marriage feast; note the introductory formula: "The kingdom of heaven may be compared to . . .") and Luke 14:16-24 (the great supper; note that here the parable is Jesus' reply to a man who said: "Blessed is he who shall eat bread in the kingdom of God!").

The imagery of a marriage feast is also a feature of the parable of the wise and foolish maidens (Matt. 25:1-13). The emphasis in this parable, however, is on the thought of an impending crisis, for which men are exhorted to be prepared. The introductory formula: "Then the kingdom of heaven shall be compared to . . ." (Matt. 25:1), connects this impending crisis with the kingdom. The same thought of an impending crisis of judgment appears in the following parable of the talents (Matt. 25:14-30); cf. the parable of the pounds (Luke 19:11-27), which is probably the L version of the same parable, and which is told to men who "supposed that the kingdom of God was to appear immediately" (Luke 19:11). The third parable of Matt. 25, that of the sheep and the goats (vss. 31-46), clearly points to a future judgment, at which "the King will say to those at his right hand, 'Come, O blessed of my Father, inherit the kingdom prepared for you from the foundation of the world' " (vs. 34). A number of other parables stress the need for preparedness in the face of an impending crisis; such are the servants of the absent householder (Mark 13:33-37; cf. Luke 12:35-38), the faithful and unfaithful servants (Matt. 24:45-51; Luke 12:42-46), and the thief at night (Matt. 24:43-44; Luke 12:39-40). In these, the crisis is pictured in terms of the parousia of the Son of man rather than of the coming of the kingdom of God as such, but as we have seen, no distinction need be drawn between these two different ways of speaking of the *eschaton*. All these parables of crisis or judgment may thus be understood as implying the expectation that the kingdom of God, in its full and final sense, was to come in the future—and in the near future at that, since the exhortations to his contemporaries to be watchful and prepared would be pointless unless Jesus thought of the coming as happening within their lifetime (cf. Mark 9:1, discussed above).

Another group of parables describe processes of growth. Four of these are specifically related to the kingdom of God; they are the seed growing secretly (Mark 4:26-29), the tares (Matt. 13:24-30), the mustard seed (Matt. 13:31-32; Mark 4:30-32; Luke 13:18-19), and the leaven (Matt. 13:33; Luke 13:20-21). Though it is not explicitly said to refer to the kingdom, the parable of the sower (Matt. 13:3-9; Mark 4:3-9; Luke 8:5-8) occurs in the same context in Mark and Matthew, and obviously belongs to the same group. While these parables may rightly be claimed to imply an actual presence of the kingdom (*see* § 3*b below*), the fact that in each case the process of growth culminates in a climax (the harvest, the full-grown tree, the leavening of the whole) suggests that the future consummation of the kingdom is also in mind. In the interpretation of the parable of the tares given in Matt. 13:36-43, we are expressly told

that "the harvest is the close of the age," and that when it comes, "the righteous will shine like the sun in the kingdom of their Father." There are, however, good reasons for regarding this interpretation (and that of the closely similar parable of the dragnet in Matt. 13:47-50) as not belonging to the authentic teaching of Jesus.

Finally, we may mention what is perhaps the clearest indication of all that Jesus thought of the coming of the kingdom of God in terms of the future —namely, the petition which forms part of the prayer which he taught to his disciples: "Thy kingdom come" (Matt. 6:10; Luke 11:2).

b. The kingdom as present. This aspect of Jesus' teaching about the kingdom of God is seen most clearly in sayings in which he explains the significance of his own mighty works. Of special importance is the saying, which occurs in the Q version of the Beelzebul controversy: "If it is by the finger of God that I cast out demons, then the kingdom of God has come upon you" (Luke 11:20; cf. Matt. 12:28). The verb here is ἔφθασεν, the aorist tense of φθάνω, which in Hellenistic Greek had almost entirely lost its classical meaning of "to anticipate, or precede," and normally meant "to arrive" (this is its clear meaning in four out of the five other occurrences of the verb in the NT). Moreover, φθάνω is used in the LXX to translate the Hebrew נגע and the Aramaic ממא, both of which mean "to arrive." The Aramaic underlying φθάνω in the saying of Jesus under consideration was probably ממא. The translation of ἔφθασεν by "has come" is thus undoubtedly correct, and attempts to explain it as an example of the familiar prophetic device of speaking of a future event as though it had already happened are hardly convincing. The saying is accordingly to be interpreted as meaning that Jesus' exorcisms are an indication that the kingdom, in a real sense, has already arrived. This interpretation is confirmed by the saying which follows in Q, and which is also found in the Markan version of the Beelzebul controversy: "How can one enter a strong man's house and plunder his goods, unless he first binds the strong man? Then indeed he may plunder his house" (Matt. 12:29; cf. Mark 3:27; Luke 11:21-22). Here the "strong man" clearly stands for SATAN; and it was a definite Jewish expectation that at the last day Satan would be bound. The actual plundering of Satan's house implied by Jesus' exorcisms is thus an indication that the *eschaton* is already in operation.

A similar interpretation of the significance of his mighty works appears in Jesus' reply to the question of John the Baptist: "Go and tell John what you have seen and heard: the blind receive their sight, the lame walk, lepers are cleansed, and the deaf hear, the dead are raised up, the poor have good news preached to them" (Luke 7:22; cf. Matt. 11:4-5). The actual term "kingdom of God" does not occur in this context, but Jesus refers to his miracles in language that clearly echoes the prophetic description of the messianic last days (cf. Isa. 29:18-19; 35:5-6; 61:1). There are also other sayings which, though not specifically referring to the kingdom, suggest that the eschatological hope of Israel is finding fulfilment in the acts and words of Jesus. These are the declaration of blessedness upon the disciples (Matt. 13:16-17; Luke 10:23-24), and the reference to the "something greater" that "is here" (Matt. 12:41-42; Luke 11:31-32; cf. Matt. 12:6).

The actual presence of the kingdom is again implied in a Q saying which is found in widely different forms in Matt. 11:12-13; Luke 16:16. There is widespread agreement that neither evangelist has preserved the saying as a whole in its original form, but that Luke has preserved more accurately the reference to the law and the prophets, whereas Matthew's version of the rest of the saying is closer to the original (Luke having mitigated its harshness by introducing the idea of the good news being preached). Thus the original saying was probably something like this: "The law and the prophets were until John; since then the kingdom of God βιάζεται, and men of violence (βιασταί) take it by force (ἁρπάζουσιν αὐτήν)." The latter half of the saying is still ambiguous, since βιάζεται can be taken either as passive ("suffers violence") or as middle ("exercises its power"). Whichever of these interpretations is adopted, however, the saying clearly distinguishes between two periods, that of the law and the prophets on the one hand and that of the kingdom of God on the other, and makes the ministry of John the Baptist the dividing line between them. If the kingdom of God is suffering violence (whether at the hands of its enemies, as some think, or at the hands of enthusiasts who are eager to enter it at all costs, as others interpret βιασταὶ ἁρπάζουσιν αὐτήν), it must already be in existence. On the other hand, if it is exercising its power, it must equally clearly be already in existence.

Another saying, the meaning of which has been the subject of much discussion, but which on the whole seems to support the view that Jesus thought of the kingdom as present, is that which is found only in Luke 17:20-21. The first problem that arises here concerns the meaning of the Greek expression ἐντὸς ὑμῶν, which can be translated either "in the midst of you" (RSV) or "within you" (RSV mg.). The latter is the more natural meaning of the Greek phrase as such, but several considerations make it likely that the former is the correct interpretation in this context. The idea of the kingdom as an inward principle or disposition in men suits neither the context of this saying nor the general tenor of Jesus' teaching on the subject, and it must not be forgotten that he is addressing, not his own disciples, but certain Pharisees who asked "when the kingdom of God was coming" (vs. 20). Moreover, the ambiguity of the preposition was probably more marked in the Aramaic which Jesus spoke than is the case with the Greek ἐντός. If the translation: "The kingdom of God is in the midst of you," is adopted, it is possible to understand the statement as referring to a future coming of the kingdom; in this case, the reply to the Pharisees' question would mean that it is useless to try to predict the time of the kingdom's coming, since it will suddenly come to be in their midst, without previous warning. The more natural interpretation of Jesus' reply, however, is that it means that the kingdom is already "in the midst of" men, in his own person and ministry. It may be added that, if the reading "within you" is adopted, the saying still implies the actual presence of the kingdom, though in rather a different sense.

The parables of growth, although they point for-

ward to a consummation that still lies in the future (*see* § 3*a above*), nevertheless imply that the kingdom is, in a real sense, already present. The present activity of Jesus, during his ministry, corresponds to the sowing of the seed, or the planting of the leaven in the meal, and the point of the parables is that the process of growth, or leavening, is a divine activity that will inevitably follow, until the climax or consummation is reached. The kingdom itself is likened to the act of sowing in the parables of the seed growing secretly (Mark 4:26) and the tares (Matt. 13:24), and to the mustard seed and leaven respectively in the parables of the mustard seed (Luke 13:18-19) and the leaven (Luke 13:20-21). Thus the process has already been set in motion, and is, in a real sense, a present manifestation of the kingdom.

These parables of growth point the way to the solution of the problem of reconciling the two divergent emphases which have been noted in the teaching of Jesus about the kingdom of God. There is no good reason to suppose that the two emphases belong to different periods of the ministry, and represent a development of his thought from the idea of the kingdom as imminent to that of it as actually present; as we have seen, the imminence of the kingdom was still in his mind at the close of his ministry (*see* § 3*a above*). The evidence suggests rather that he held both ideas in his mind, sometimes emphasizing the one and at other times the other. And in the parables of growth the relationship between the two ideas becomes clear. In the person and ministry of Jesus, the kingdom is already present germinally or in principle; the messianic age has been inaugurated. But it is not yet seen in its complete fulfilment, so that a consummation may still be looked for in the future; in the words of Mark 9:1, the kingdom is still to come "with power" (*see* § 3*a above*).

This means that the eschatology of Jesus was a radical departure from that of the Jewish apocalypses (*see* § 2*c above*). Instead of conceiving the *eschaton* as one cataclysmic, world-ending manifestation of divine power, he conceived it as a kind of "new era," bounded at its opening and close by decisive manifestations of divine power, and marked throughout by the constant operation of the same divine power. In his own coming, the powers of the "age to come" (*see* TIME) had invaded the "present age," and were now at work within it. This meant that God had begun to rule in the world in a fuller sense than was the case before; in other words, that the kingdom of God, in the eschatological sense, had been inaugurated. The eschatological process thus inaugurated would, however, be consummated in the future by a further decisive manifestation of divine power.

c. The consummation of the kingdom. Jesus expressly disclaimed any precise knowledge as to the time of the future consummation (Mark 13:32). Nevertheless, the evidence suggests that he expected it to take place in the near, rather than the distant, future (*see* § 3*a above*). It is true that there are clear indications that he envisaged an interval that was to elapse before history came to an end. He warned his disciples of the sufferings that awaited them (Mark 13:9-13); he predicted historical events like the fall of Jerusalem (Luke 19:41-44) and the destruction of the temple (Mark 13:2); his ethical teaching (*see* TEACHING OF JESUS) is clearly related to life in this imperfect world; and he commanded his disciples to continue the rite of the Last Supper after his death (I Cor. 11:24-25; cf. Luke 22:19-20 RSV mg:). It would seem, however, that the interval he envisaged was a comparatively short one—a fact which may be accounted for as an example of the foreshortening of the future that was characteristic of Hebrew prophecy. *See* PROPHET.

d. The kingdom and the Cross. There is no saying of Jesus in which he explicitly connects the coming of the kingdom of God with his own death. There is ample evidence, however, that he regarded his death and resurrection as the necessary fulfilment of his messianic mission (Mark 8:31; 9:12, 31; 10:33-34, 45; Luke 12:49-50; 13:32-33; 17:25). It is clear, therefore, that the Cross must be related to the conception of the kingdom. If the kingdom had already come during the ministry of Jesus (*see* § 3*b above*), it could not be said that the Cross was the condition of its coming. Nor, if the coming of the kingdom "with power" refers to the final consummation (*see* § 3*a above* on Mark 9:1), and if Jesus envisaged an interval between his death and that consummation (*see* § 3*c above*), can his death and resurrection be identified with the coming of the kingdom "with power." The fact that the thought of the coming consummation of the kingdom was present in Jesus' mind as he faced his death does suggest, however, that he regarded his death as a necessary step toward the consummation (*see* § 3*a above* on Mark 14:25). This means that the Cross was an essential element in that whole eschatological process which was inaugurated by the coming of Jesus (*see* § 3*b above*). The Cross, however, is not to be separated from the ministry which preceded it; as the inevitable fulfilment of that messianic ministry, it belongs with it as part of that decisive manifestation of divine power which inaugurated the eschatological process.

e. The community of the kingdom. The kingly rule, or sovereignty, of God, which is the basic meaning of the term "kingdom of God" (*see* § 1 *above*), cannot be conceived as operating *in vacuo*. Thus the idea necessarily implies the further idea of a realm or community in which the rule is exercised. The thought of such a community appears in much of Jesus' teaching about the kingdom. Those sayings which picture the kingdom in terms of the messianic banquet (*see* § 3*a above*) clearly imply a community, as do also the parables of the mustard seed (with its picture of the birds—a familiar symbol for the Gentile nations —nesting in the branches), the tares, and the dragnet (Matt. 13:31-32, 24-30, 36-43, 47-50). In these sayings and parables, the community is primarily that of the future, consummated kingdom (*see* § 3*a above*), though the parables may be said to imply that the community is already being brought into being in the present, and will continue to grow until the final consummation (*see* § 3*b above*).

In a number of sayings Jesus speaks of persons entering into the kingdom (Matt. 5:20; 7:21; 18:3; 21:31; 23:13; Mark 9:47; 10:15, 23-25). In most of these the future tenses used suggest that entry into the consummated kingdom is meant. The conditions upon which such entry may be obtained, however, are thought of as being fulfilled in the present; these are obedience to God's will (Matt. 7:21), the display-

ing of a righteousness that "exceeds that of the scribes and Pharisees" (Matt. 5:20; the nature of this superior righteousness is made clear in the antitheses which follow in vss. 21-48), the willingness to sacrifice any possession that might constitute a hindrance or stumbling block (Mark 9:47; 10:23-25), and above all the readiness to receive the kingdom in a spirit of childlike trust and humility (Mark 10:15; cf. Matt. 18:3). The saying in Mark 10:15 suggests that the kingdom may be received in the present as a gift from God. The same thought appears in Luke 12:32, where the kingdom is described as God's gift to the "little flock" of Jesus' disciples. The latter saying, which is peculiar to Luke, is closely linked in this gospel to the Q saying which urges the disciples to seek the kingdom in preference to all material benefits (Matt. 6:33; Luke 12:31). In the beatitudes, the kingdom is said to belong, presumably as a present possession, to the "poor" (Matt. 5:3; Luke 6:20; the term "poor" is here a synonym for "pious" or "saintly"—*see* POOR) and to "those who are persecuted for righteousness' sake" (Matt. 5:10); and in Mark 10:14 it is said to belong to those of a childlike spirit.

This evidence, taken as a whole, suggests that the kingdom, which has come in the person and the ministry of Jesus, may be received by individuals, as a gift of divine grace, in the present. So to receive it means humbly and loyally to submit to God's rule by obedience to the commandments of Jesus. This aspect of Jesus' teaching corresponds to the rabbinic idea of "taking upon oneself the yoke of the kingdom of God" (*see* § 2*d above;* cf. Jesus' reference to his "yoke" in Matt. 11:29-30). Those who receive the kingdom in this way constitute the present community of the kingdom of God, and to them is promised entrance, in the future, into the consummated kingdom.

Another group of sayings which clearly point to a community of the kingdom may be mentioned—namely, those which speak of comparative greatness or littleness within it. "He who is least in the kingdom of God" is said to be greater than John the Baptist (Matt. 11:11; Luke 7:28); that this saying has reference to the present community is likely, not only in view of the present tense, but also in view of the fact that Jesus would hardly have excluded John from the consummated kingdom, in which the patriarchs were to share (Matt. 8:11). In Matt. 18:1-4, the criterion of greatness in the kingdom is shown to be the possession of that spirit of childlike humility which is the main condition required for entry into it (cf. Mark 10:14-15). Matt. 5:19, which implies a quite different criterion of greatness and littleness in the kingdom, is widely believed to represent a piece of Jewish-Christian apologetic rather than the authentic teaching of Jesus.

It is in this idea of a community of those who have submitted to the rule of God made manifest in Jesus that the connection is to be found between the idea of the kingdom of God and that of the church (*see* CHURCH, IDEA OF). It is not the kingdom as such (as has often been supposed), but rather the community that is necessarily implied by it, that is to be identified with the church.

f. The discipline of the kingdom. The kingdom of God is a gift of divine grace offered to all who are willing and able to receive it (*see* § 3*e above*). To receive it, however, means to submit to a discipline that makes absolute demands upon a person's loyalty and devotion. The kingdom is the one thing of supreme value and importance for men, to be sought in precedence over all else (Matt. 6:33; Luke 12:31). The twin parables of the treasure and the pearl (Matt. 13:44-46) emphasize that it is well worth while for a man to surrender everything else that he possesses in order to gain the kingdom. The same insistence that no sacrifice is too great to make in order to secure entrance into the kingdom is seen in Mark 9:43-47, where "life" and the "kingdom of God" are clearly synonymous terms (*see* § 4*c below*). The service of the kingdom is to take precedence over even the most sacred and urgent of other duties (Matt. 8:21-22; Luke 9:59-60), and only those who seek it with single-minded interest and attention are "fit for the kingdom of God" (Luke 9:61-62). The ethical demands of the kingdom involve a standard of righteousness that exceeds even that of the Jewish law (Matt. 5:20). This standard of righteousness, which is set forth in the ethical teaching of Jesus (*see* TEACHING OF JESUS; SERMON ON THE MOUNT), constitutes a way of life to which those who belong to the present community of the kingdom of God are called; and their loyal pursuance of this way of life is the condition upon which they will receive entry, at the last, into the consummated kingdom (*see* § 3*e above*). The basis of this new way of life is to be seen in the twin commandments of love to God and love to one's neighbor (Mark 12:28-31). To acknowledge, as did the scribe, the supremacy of these commandments is to be "not far from the kingdom of God" (Mark 12:34); but actual entry into the kingdom depends, not upon any kind of formal acknowledgment, but upon active obedience (Matt. 7:21).

4. The kingdom of God in the rest of the NT. In view of the centrality of the idea of the kingdom of God in the teaching of Jesus as recorded in the Synoptic gospels (*see* § 3 *above*), it is surprising how comparatively rarely the term occurs in the other books of the NT. The subject of the church's preaching in the apostolic age was not so much the kingdom of God as such, but rather Christ himself. The difference, however, is merely one of terminology and of standpoint. Our study of the teaching of Jesus has revealed the close connection in which the idea of the kingdom stands to his own person and work. And the fact is that the early Christian preachers were less concerned with repeating the message of Jesus, in his terms, than with proclaiming the significance of Jesus himself as the crucified and risen Messiah (cf. I Cor. 1:23; 2:2; 15:3-4), who was shortly to return in glory (cf. I Thess. 1:10; II Thess. 1:7). The proclamation of the historical events of the life, death, and resurrection of Jesus corresponded to the announcement that the kingdom of God had already come, and the expectation of the PAROUSIA corresponded to Jesus' emphasis upon the future consummation of the kingdom. That the church did not lose touch with the actual terms of Jesus' own message, however, is proved by the fact that it preserved the message in the gospel tradition. It remains for us to review briefly such use as is made of the concept of the kingdom of God in the NT, outside the Synoptic gospels.

a. Acts. According to Acts 1:3, Jesus continued, during his postresurrection appearances to his disciples, to speak to them about the kingdom of God. That they were still slow to understand the true meaning of his teaching, and that they continued to think of the kingdom in nationalist terms, is indicated by their question: "Lord, will you at this time restore the kingdom to Israel?" (1:6). In 8:12, the content of Philip's preaching in Samaria is described as "good news about the kingdom of God and the name of Jesus Christ." A similar combination of "preaching the kingdom of God and teaching about the Lord Jesus Christ" is seen in the reference to Paul's witnessing in Rome (28:31; cf. 28:23—"testifying to the kingdom of God and trying to convince them about Jesus"). In 19:8, we are told that Paul, in the synagogue at Ephesus, "for three months spoke boldly, arguing and pleading about the kingdom of God"; and in 20:25, Paul himself addresses the Ephesian elders as "all you among whom I have gone about preaching the kingdom." Thus the evidence of Acts suggests that the idea of the kingdom of God was not entirely absent from the preaching of the apostles, and that it was closely related to preaching about Jesus Christ. The references mentioned above are all very general, and tell us nothing about the content of the apostles' preaching of the kingdom. There is, however, another reference, in 14:22, to Paul and Barnabas, in Lystra, Iconium, and Antioch, "strengthening the souls of the disciples, exhorting them to continue in the faith, and saying that through many tribulations we must enter the kingdom of God"; in this passage it is clearly the future, consummated kingdom that is in mind (*see* § 3*e above* on the sayings of Jesus concerning entrance into the kingdom).

b. Pauline letters. The evidence of Acts, so far as Paul's usage is concerned, is confirmed by the occurrence of the term "kingdom of God," or its equivalent, in a number of passages in the letters. The same double emphasis, on the kingdom as a present reality and as a future hope, as is found in the teaching of Jesus (*see* § 3 *above*), appears also in Paul's references to it. Passages which clearly refer to the present life of Christians in this world are Rom. 14:17; I Cor. 4:20, in both of which Paul is describing the kind of life which is to be lived by those who have submitted to the rule of God, and so are members of the present community of the kingdom (*see* § 3*e above*). It is a life in which what matters "is not eating and drinking, but righteousness and peace and joy in the Holy Ghost" (Rom. 14:17 ERV); and it is a life which "does not consist in talk but in power" (I Cor. 4:20). Thus Paul emphasizes both the blessings which belong to those who have received the kingdom and the moral demands which it makes upon them (*see* § 3*f above*). The moral demands of the kingdom are also stressed in a number of passages in which Paul gives lists of vices which preclude men from inheriting the kingdom of God (I Cor. 6:9-10; Gal. 5:21; Eph. 5:5). In each of these (in spite of the fact that the tense in Eph. 5:5 is present, and not future as in the others), the reference seems clearly to be to the inheritance of the future, consummated kingdom; cf. I Cor. 15:50 ("Flesh and blood cannot inherit the kingdom of God"), where the same expression is used in a context which even more clearly demands a future reference. II Thess. 1:5 ("that you may be made worthy of the kingdom of God, for which you are suffering") also seems to require a future reference; cf. Acts 14:22 (*see* § 4*a above*). In I Thess. 2:12, the linking of the idea of God's kingdom with that of his GLORY suggests that the future kingdom is in mind, though the words "to lead a life worthy of God" may indicate that the idea of the present kingdom is not excluded. Col. 4:11, in which Paul speaks of certain men as his "fellow workers for the kingdom of God," is a very general reference, which might be understood in terms of either the present or the future, but perhaps the preposition which is used (εἰς, "unto") makes the future the more likely.

In a few passages Paul speaks of the kingdom as Christ's. Eph. 5:5 ("kingdom of Christ and of God") suggests that he meant no clear distinction between the two phrases. I Cor. 15:24-28, however, seems to mean that he thought of Christ as ruling over the kingdom, in the capacity of vice-regent, during the interval before the final consummation, "when he delivers the kingdom to God the Father." This is confirmed by Col. 1:13, where the Father is said to have "delivered us from the dominion of darkness and transferred us to the kingdom of his beloved Son"; the reference here is clearly to the present status of Christians. It seems, therefore, that when Paul speaks of the kingdom of Christ, he is thinking of the present kingdom; this does not mean, however, that he does not occasionally use "kingdom of God" also in a present sense (*see above* on Rom. 14:17; I Cor. 4:20). There are two passages in II Timothy which speak of the kingdom as Christ's, and which refer to the future (4:1: "his appearing and his kingdom"; 4:18: "The Lord will . . . save me for his heavenly kingdom"). It is doubtful, however, whether these represent the genuine thought of Paul. *See* PASTORAL LETTERS.

c. Johannine literature. In the Fourth Gospel the term "kingdom of God" occurs twice in the words of Jesus to Nicodemus (John 3:3, 5). No distinction need be drawn between the idea of seeing the kingdom in the former reference and that of entering it in the latter. The two statements taken together mean that entrance into the kingdom is dependent upon the experience of REGENERATION. In general, however, this evangelist has reinterpreted the teaching of Jesus, so that instead of speaking of the kingdom of God he speaks of eternal life, or LIFE. In this connection, it is important to remember that even in Mark's Gospel the idea of the kingdom is sometimes equated with that of "life" or "eternal life" (*see* § 3*f above* on Mark 9:43-47; cf. also 10:17 with 10:23-25). The fact that "life" in Johannine thought is primarily a present possession of believers (cf. John 5:24; I John 3:14; 5:12) suggests that in John 3:3-5 the kingdom of God is thought of as present rather than future (in contrast to the Synoptic passages which speak of entrance into the kingdom; *see* § 3*e above*).

The word "king" is used of Jesus frequently in the Fourth Gospel (1:49; 6:15; 12:13, 15; 18:33, 37, 39; 19:3, 12, 14-15, 19, 21), and in 18:36 Jesus himself speaks of his "kingship" (ERV-ASV "kingdom"; the Greek is βασιλεία), which "is not of this world." This usage implies the idea of a spiritual sovereignty which Jesus is already exercising as Messiah.

The book of Revelation (*see* REVELATION, BOOK

OF), in keeping with its apocalyptic character, looks forward to the consummated kingdom of God. In 11:15 it is described as the "kingdom of our Lord and of his Christ" (cf. Eph. 5:5; *see* § 4*b above*), and in 12:10 the "kingdom of our God" is linked with the "authority of his Christ." These passages imply an eternal reign of God and Christ together, rather than the Pauline idea of a reign of Christ until the consummation "when he delivers the kingdom to God the Father" (*see* § 4*b above*, on I Cor. 15:24-28). In Rev. 1:9, John claims to share with his readers in "the tribulation and kingdom and patience which are in Jesus" (ERV-ASV); this passage seems to imply the idea of the kingdom as a fact of present experience.

d. Other books. In spite of its prevailing Platonism, the Letter to the Hebrews (*see* HEBREWS, LETTER TO THE) contains much eschatological thought. The last days are regarded as having arrived (cf. 1:2; 6:5; 9:26), but a future consummation is looked for (cf. 9:28; 10:25, 37). The idea of the kingdom of God as such, however, is not prominent, and appears only in two passages. In 12:28 it is described as a "kingdom that cannot be shaken," which is to be received by Christians; the context suggests that the receiving is thought of as taking place in the future, when the last day is ushered in by the shaking and removal of heaven and earth (12:25-27). The other reference to the kingdom is at 1:8, which quotes Ps. 45:6, interpreting it messianically; thus Christ is regarded as the messianic king, the scepter of whose kingdom is a righteous scepter.

The Letter of James contains one reference to "the kingdom" which God "has promised to those who love him" (2:5); the heirs of this kingdom are "those who are poor in the world," whom God has chosen "to be rich in faith" (cf. Matt. 5:3; Luke 6:20; *see* § 3*e above*). The future kingdom is meant (cf. Paul's references to inheriting the kingdom; *see* § 4*b above*), and the idea of a community is clearly implied.

Finally, in II Pet. 1:11 (*see* PETER, SECOND LETTER OF), there is a late, conventional reference to the future kingdom as the "eternal kingdom of our Lord and Savior Jesus Christ," into which Christians who are zealous to confirm their call and election, so that they never fall, are promised an entrance.

A. *TITLE.* The title of the books in the Hebrew canon is I and II Kings. These two books were originally one, but the LXX first introduced the division and named them the third and fourth books of the "Kingdoms" (βασιλεῶν γ' and δ'), for the books of Samuel are the first and second books of the "Kingdoms." The English title "Kings" can be traced to Jerome, who preferred the name *Regum* ("Kings") in consonance with the Hebrew title as against the literal translation of the LXX title, *Regnorum* ("Kingdoms"). The division of the book into two books appeared in the Hebrew text first, in a MS in A.D. 1448, and was printed thus in the Bible of Felix Pratensis in 1517-18. The final Masora (*see* TEXT, OT) appears only at the end of II Kings and consonantly regards both books as one.

A Talmudic tradition which maintains that Jeremiah was the author of the books of Kings (B.B. 15*b*) appears to be without foundation, and merely mirrors a trend in later Judaism which tried to assign all the biblical books to prophetic authors.

B. *CONTENTS.* The contents of the books can be divided into three parts: (*a*) Solomon's ascension to the throne and his reign (I Kings 1–11); (*b*) the vicissitudes of the two kingdoms (I Kings 12–II Kings 17); and (*c*) the surviving kingdom of Judah (II Kings 18–25). *See* map "Palestine: I Kings 1–11, The Kingdom of Solomon," under SOLOMON.

1. Solomon's ascension and reign (I Kings 1–11). This narrative complex begins with the depiction of David's senility (I Kings 1:1-4). When Adonijah, the eldest son of David, was unexpectedly proclaimed king, Bathsheba, the mother of Solomon, and Nathan the prophet asked David to designate Solomon as the

successor to the throne (vss. 5-27). David yielded to the entreaty and commanded Zadok the priest and Nathan the prophet to anoint Solomon to be king. Thus Solomon was anointed at Gihon in David's lifetime. When the news reached Adonijah and his followers, they scattered (vss. 28-53).

The dying King David charged Solomon to be pious (2:1-4) and gave him advice on how to consolidate his throne (vss. 5-12). Shortly after David's death, Solomon had his brother Adonijah killed (vss. 13-25). Abiathar the priest, one of the supporters of Adonijah's *coup d'état,* was banished to Anathoth (vss. 26-27), Joab was executed (vss. 28-35), and, in addition, Shimei was killed when he left Jerusalem on an errand in disregard of the royal prohibition (vss. 36-46).

At the high place of Gibeon, Solomon offered sacrifice to the LORD, who appeared to him in a dream and granted Solomon's request for wisdom (I Kings 3:1-15). The next episode illustrates Solomon's wisdom by his shrewd judgment in the suit of the two harlots (vss. 16-28).

Lists of Solomon's court officials (4:1-6) and provincial administrators (vss. 7-19) are followed by a depiction of the splendor of Solomon's court, his power (vss. 20-28), and his incomparable wisdom (vss. 29-34).

The preparation for the building of the temple and the treaty with Hiram of Tyre (ch. 5) precede the erection of the temple building (ch. 6). An account of the building of the royal palaces (7:1-12) is concluded by the report on the casting of the bronze pillars (vss. 13-22), the making of the bronze sea (vss. 23-26), and the making of other bronze vessels and objects (vss. 27-47). The listing of the temple furnishings closes with the report on the golden objects of the house of the Lord (vss. 48-51).

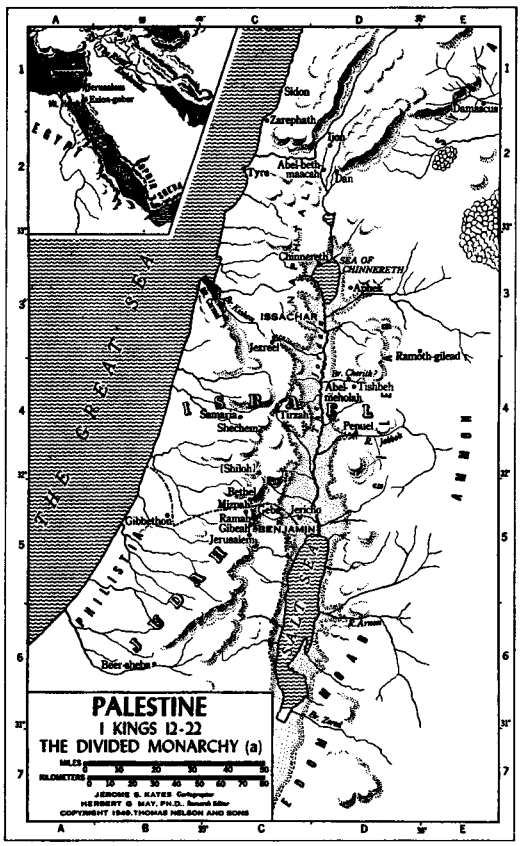
The dedication of the temple is related in considerable length. First, the ark of the Lord was brought into the temple (8:1-13). Then Solomon addressed himself to the people (vss. 14-21). His prayer (vss. 22-53), his blessing given to the people (vss. 54-61), and the ensuing sacrifices and feast (vss. 62-66) bring to a conclusion the dedication of the temple.

In a second vision, the Lord appeared to Solomon and warned him to remain faithful (9:1-9). There are reports on several issues of the Solomonic reign in ch. 9, such as the selling of twenty Galilean cities to Hiram of Tyre (vss. 10-14), the use of forced labor in the building activities (vss. 15-24), and Solomon's sacrifices and overseas commerce (vss. 25-28).

The narrative of the visit of the Queen of Sheba to Solomon's court (10:1-13) is followed by an enumeration of Solomon's splendors and commercial success (vss. 14-29).

Solomon's riches are also seen in the number of his wives and concubines, but the foreign wives led him astray to the worship of strange gods (11:1-13). As divine punishment for Solomon's apostasy, external and internal difficulties arose. Hadad of Edom returned from Egypt and revolted against Solomon (vss. 14-22), as did Rezon of Syria, who, after establishing his reign in Damascus, denied fealty to Solomon (vss. 23-25). In Israel itself, Jeroboam, an Ephraimite, started an abortive rebellion (vss. 26-40). Finally, the death of Solomon is concisely reported (vss. 41-43).

2. The vicissitudes of the two kingdoms (I Kings 12–II Kings 17). After the death of Solomon, Rehoboam, his son and successor, entered into negotiations with the elders of the people at Shechem.



The ill-advised rigidity of Rehoboam led to the secession of the N tribes from Judah and Jeroboam's election to the throne of Israel (I Kings 12:1-20). An oracle averted the danger of civil war between the two kingdoms (vss. 21-24). Jeroboam consolidated his kingdom and devised the cult of Bethel and Dan (vss. 25-33).

An anonymous man of God from Judah foretold to Jeroboam the Josianic reform and the resulting destruction of the sanctuary of Bethel (13:1-10). This anonymous prophet was killed by a lion and buried in Bethel (vss. 11-34).

When her child was sick, the wife of Jeroboam visited Ahijah the prophet, who foretold the death of the child and condemned Jeroboam for his apostasy (14:1-16). After a short report on the child's death and that of Jeroboam (vss. 17-20), the chapter is concluded by an account of Rehoboam's reign in Judah, including the invasion of Judah by Shishak, king of Egypt (vss. 21-31).

The synchronistic accounts of the reign of Abijam of Judah (15:1-8) and the reign of his son, Asa (vss. 9-24), include Asa's cultic reforms (vss. 11-15) and his war against Baasha of Israel. In this war, his alliance with Syria secured victory for him (vss. 16-24). Nadab, the son of Jeroboam, reigned over Israel

for two years but was assassinated by Baasha (vss. 25-32).

Baasha's reign (15:33–16:7) and that of his son, Elah (16:8-14), are shortly related. Zimri, who conspired against Elah and murdered him and the whole house of Baasha, could not reap the fruits of his conspiracy, for he was defeated by Omri in the ensuing civil war (vss. 15-22). Omri's reign over Israel and the founding and naming of Samaria as the capital are summarily related (vss. 23-28). A short introduction to Ahab's reign closes ch. 16 (vss. 29-34).

During the reign of Ahab, Elijah the prophet announced the coming of a drought (17:1). In the time of the famine resulting from the drought, he was fed by the ravens first (vss. 2-7), and later by the jar of meal and cruse of oil which were miraculously unspent. The jar and the cruse belonged to a widow of Zarephath (vss. 8-16). When the son of the widow suddenly died, Elijah resuscitated the child (vss. 17-24).

The prophet appeared before King Ahab to announce the end of the drought and to extend a challenge to the prophets of Baal (18:1-19). The contest between the prophets of Baal and Elijah on Mount Carmel brought victory to Elijah and the drought's end (vss. 20-46).

In spite of the vindication of the Lord's rule over the land, Elijah had to flee for his life through the wilderness of Judah to the mount of Horeb, where he received a new divine commission and further encouragement (19:1-18). Elijah, following the divine command, called Elisha, as his successor, into his service (vss. 19-21).

Ben-hadad of Syria besieged Samaria during the reign of Ahab of Israel, but Ahab succeeded in repelling the Syrian force (20:1-21). The next year, Ben-hadad attempted to repair the defeat by a new campaign, but Israel triumphed by crushing the Syrian army at Aphek (vss. 22-30) and even capturing Ben-hadad. The latter gladly accepted the peace dictates of Ahab in exchange for his freedom (vss. 31-34). The liberation of the Syrian king brought severe reprimand upon Ahab from an anonymous member of the prophetic guilds (vss. 35-43).

Naboth, an Israelite farmer, refused to sell his vineyard to Ahab, who ardently desired to possess it. In order to acquire the vineyard, Jezebel, the wife of Ahab, plotted the death of Naboth (21:1-14). Thus Ahab took possession of the coveted vineyard (vss. 15-16), but for this he was condemned by Elijah (vss. 17-29).

Ahab planned a military attack upon Syria and was encouraged by four hundred prophets (22:1-12). But when Micaiah the son of Imlah was summoned, he prophesied disaster (vss. 13-28). This prophecy was fulfilled, for even Ahab died in the battle (vss. 29-40). The account of the reign of Jehoshaphat of Judah (vss. 41-50) and the introduction to the reign of Ahaziah of Israel (vss. 51-53) close the first book of Kings.

The report on Ahaziah's reign is continued with the miracle of Elijah's calling fire from heaven upon the royal troops that were sent to capture him (II Kings 1).

When Elijah was taken up to heaven, Elisha, his disciple, became the heir of his spirit (2:1-18). After

mite woman spent a time in the land of the Philistines, but, upon her return, her estate was restored to her by the king (8:1-6). Elisha went to Damascus and foretold to Hazael that he would become the king of Syria (vss. 7-15). The reigns of Jehoram of Judah (vss. 16-24) and of his son Ahaziah (vss. 25-29) receive a summary treatment.

Jehu, the commander in chief of Joram of Israel's army, was anointed to be king by a disciple of Elisha (9:1-13). In the subsequent revolution, Jehu killed his king, Joram, and Ahaziah, the king of Judah (vss. 14-29). Jezebel, the queen dowager, was killed by her eunuchs, who joined Jehu's revolt (vss. 30-37).

During the ensuing events, the whole dynasty of Ahab (10:1-11) and forty-two Judean princes (vss. 12-14) were massacred. Jehonadab the Rechabite accompanied Jehu, and together they wiped out the Baal-worshipers of Israel (vss. 15-31). A short summary of Jehu's reign concludes ch. 10 (vss. 32-36).

After the death of Ahaziah of Judah, his mother, Athaliah, seized the throne of Jerusalem (11:1-3), but her reign was overthrown seven years later, and her grandson Jehoash was anointed king over Judah (vss. 4-21).

Jehoash, during his reign (12:1-3), regulated the use of the temple income (vss. 4-16). Jehoash paid tribute to Hazael of Syria (vss. 17-18); he was killed by conspirators in a palace revolt (vss. 19-21).

Reports on the kingship of Jehoahaz of Israel (13:1-9) and that of his son, Jehoash (vss. 10-13), precede Elisha's deathbed scene and his symbolic acts with the arrows (vss. 14-19). Nevertheless, Elisha's death did not mean the end of his miraculous power, for a dead man rose as soon as his corpse touched Elisha's bones (vss. 20-21). A short summary of Jehoash' victory over the Syrians closes the chapter (vss. 22-25).

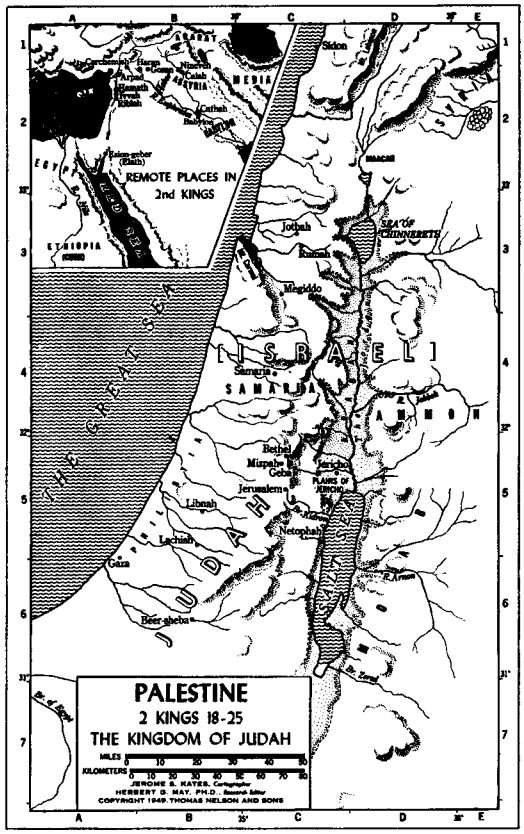
Amaziah, the king of Judah, after consolidating his power, executed the murderers of his father (14:1-6). After his victory over the Edomites (vs. 7), Amaziah challenged Israel to war and was defeated by Jehoash of Israel (vss. 8-14). Short reports are included in this chapter concerning the death of Jehoash of Israel (vss. 15-16), the assassination of Amaziah (vss. 17-22), and the reign of Jeroboam II of Israel (vss. 23-29).

In similar fashion, summary notices appear on Azariah of Judah (15:1-7), Zechariah (vss. 8-12), Shallum (vss. 13-15), Menahem (vss. 16-22), Pekahiah (vss. 23-26), and Pekah (vss. 27-31), successive kings of Israel, and finally on Jotham of Judah (vss. 32-38).

The reign of Ahaz of Judah, which occupies the whole of ch. 16, included the Syro-Ephraimitic War, his visit to Tiglath-pileser in Damascus, and the building of a new altar in Jerusalem.

The end of Israel is narrated in ch. 17 by the presentation of the account of Hoshea's reign, the fall of Samaria (vss. 1-6), and a recapitulation of Israel's apostasy which brought the Lord's judgment on Samaria (vss. 7-23). In place of the exiled people of Israel, the Assyrians brought to Samaria a variety of people from the four corners of the empire, who became the Samaritans (vss. 24-41).

3. The surviving kingdom of Judah (II Kings 18-25). In connection with Hezekiah's reign, several



details are related: his reform of the cult (18:1-8), the fall of Samaria (vss. 9-12), and Sennacherib's expedition against Judah (18:13–19:37).

Hezekiah's sickness and recovery (20:1-11) and the embassy of Merodach-baladan to his court (vss. 12-21) are the themes of ch. 20.

The evil reigns of Manasseh (21:1-18) and his son, Amon (vss. 19-26), precede King Josiah, under whose reign the Book of the Law was found in the temple (ch. 22); after this discovery a reform was completed in accord with the regulations of the Book of the Law (23:1-25). Josiah's untimely death at Megiddo (23:26-30) was the prelude to the short reign of Jehoahaz (vss. 31-35) and that of Jehoiakim (23:36–24:7).

Jehoiachin's abortive reign, his surrender to Nebuchadnezzar, and his exile to Babylon follow in quick succession (24:8-17). The reign of Zedekiah, the last king of Judah, the siege of the city of Jerusalem (24:18–25:7), the fall of Jerusalem, the plundering and burning of the temple and the city (25:8-17), the execution of the leaders of the people (vss. 18-21), and Gedaliah's assassination by Ishmael (vss. 22-26) brought the fate of Judah to its end. A final hopeful note appears in the report that, in the thirty-seventh year of his exile, Jehoiachin was accepted as a guest of the royal table of Evil-merodach, king of Babylon (vss. 27-30).

C. *COMPOSITION.* The books of Kings show unmistakable traces of composition. Apparently, several distinct sources are present and joined by a stereotyped framework. Like ancient Near Eastern literature in general, so individual literary pieces of

these books are most likely not the works of so many individual authors, but in each instance the probability of collective or corporate authorship must be maintained. The same is true in the case of the collection and edition of the independent sources. (If only for the sake of convenience, the author and editor will be mentioned in the singular, without the constant inclusion of the remark "or authors and editors.")

1. Framework. The reports on the kings of Israel and Judah are enclosed in a framework of introductory and concluding formulas. Though some parts of this framework appear in connection with the earliest kings (cf. I Kings 2:10-12; 11:41-43; 14:19-20), the complete formula does not appear until it is introduced in the case of Rehoboam (I Kings 14:21-31). The introductory formula is: "Now Rehoboam the son of Solomon reigned in Judah. Rehoboam was forty-one years old when he began to reign, and he reigned seventeen years in Jerusalem. . . . His mother's name was Naamah the Ammonitess" (I Kings 14:21). The concluding formula is stated in vss. 29-31 as follows: "Now the rest of the acts of Rehoboam, and all that he did, are they not written in the Book of the Chronicles of the Kings of Judah? . . . And Rehoboam slept with his fathers and was buried with his fathers in the city of David. . . . And Abijam his son reigned in his stead."

The same introductory and concluding formulas serve as a frame for the reports on the kings of Judah (cf. I Kings 15:1-8, 9-24; 22:41-50). The framework enclosing the reign of the kings of Israel differs in that neither the kings' ages at the time of their ascension to the throne nor their mothers' names are included in the formulas (cf. I Kings 15:25-32; 15:33–16:7; 16:8-14). The introductory or the concluding formula, or both, are missing in some cases—e.g., in the case of Joram and Ahaziah, who were killed in the Jehu revolution, the concluding formula is missing (II Kings 9:22-28). In Athaliah's case both opening and closing formulas are absent (II Kings 11).

For lack of an absolute chronological system, the author of the books used a synchronistic interrelating method for the establishment of the data of the kings of Israel and Judah. Thus in the introductory formula of a king, a reference to the other monarch is present —e.g.: "Now in the eighteenth year of King Jeroboam the son of Nebat, Abijam began to reign over Judah" (I Kings 15:1), or "Nadab the son of Jeroboam began to reign over Israel in the second year of Asa king of Judah" (vs. 25). This synchronization of the regnal years of the monarchs of the two kingdoms is, unfortunately, not always reliable. There are discrepancies between the synchronistic data and the absolute regnal years of the individual kings, and also the established dates of Babylonian and Assyrian history; e.g., the time elapsed from the revolution of Jehu to the fall of Samaria is 170 years according to the synchronistic system, 165 years if computed by the regnal years of Judah, and 143 years and 7 months according to the regnal years of Israel, when, in reality, only 121 years passed by in this period according to Assyrian documents. This inaccuracy in the chronology of the books led some scholars to the complete rejection of the synchronistic system and to a drastic revision of the regnal years. Contemporary scholarship, in general, is inclined to accept the essential validity of the synchronistic system, but nevertheless it recognizes also the presence of many inaccuracies which might be traced to errors in transmission, either of the documents used by the writer of the framework or of the completed books of Kings. Some scholars proposed that the chronology of the books is the result of the mingling of several chronological systems. *See* CHRONOLOGY OF THE OT.

2. The Deuteronomic outlook of the framework. Another characteristic feature of the framework is the judgment pronounced on the kings of Israel and Judah. These judgments clearly reveal a Deuteronomic point of view; e.g., Rehoboam is condemned in the statement: "Judah did what was evil in the sight of the LORD, and they provoked him to jealousy with their sins which they committed, more than all that their fathers had done. For they also built for themselves high places, and pillars, and Asherim on every high hill and under every green tree; and there were also male cult prostitutes in the land. They did according to all the abominations of the nations which the LORD drove out before the people of Israel" (I Kings 14:22-24). This condemnation of Rehoboam of Israel is in complete harmony with the Deuteronomic requirements of the unity and purity of the cult. In order to safeguard the purity of the cult, its centralization and the destruction of the high places, pillars, and Asherim were required by the Deuteronomist (cf. Deut. 12:1-3, 29-31).

The judgments pronounced on the kings of Judah are unqualifiedly appreciative only for Hezekiah (II Kings 18:3-7) and Josiah (II Kings 22:2), for these two kings abolished the sacrifices on the high places (as required by the Deuteronomic legislation) and made general reforms of the cult. The favorable decisions on Asa (I Kings 15:11-14), Jehoshaphat (I Kings 22:43), Jehoash (II Kings 12:2-3), Azariah (II Kings 15:3-4), and Jotham (II Kings 15:34-35) are limited in this manner: "He did what was right in the eyes of the LORD, according to all that his father Uzziah had done. Nevertheless the high places were not removed; the people still sacrificed and burned incense on the high places" (II Kings 15:34-35). All the other kings of Judah are summarily condemned with the stereotyped expression that they "did what was evil in the sight of the LORD" (cf. II Kings 8:18, 27; 21:2, 20). Nonetheless, the author thought that worship at the local high places was legitimate before the building of the temple (I Kings 3:2).

Besides the high places, the N shrines were especially denounced by the author as being contrary to the will of the Lord. There is even a report given on how Jeroboam, in his attempt to alienate the N tribes from the temple of Jerusalem, founded the shrines of Bethel and Dan (I Kings 12:26-33). The preservation of these N pilgrim shrines is constantly referred to as the "way of Jeroboam" or the "sin which he committed, making Israel to sin" (cf. I Kings 15:26, 34; 16:19). By application of this measure, all the kings of Israel, with the exception of Shallum, who reigned for only one month (II Kings 15:13-16), were condemned for not doing what was right in the eyes of the Lord (cf. I Kings 15:26, 34; 16:25). This general condemnation of the kings of Israel extended even to Zimri, who reigned for only

seven days (I Kings 16:19), and upon Jehu, the great partisan of the Lord (II Kings 10:29-31). To be sure, in Jehu's case, as in also the cases of Jehoram (II Kings 3:2) and Hoshea (17:2), the criticism was somewhat meliorated.

Some of the kings were further denounced because of the worship of foreign gods, which is variably designated as either the "way of the kings of Israel" (II Kings 16:3), or the "way of the house of Ahab" (II Kings 8:27). For the worship of other gods, Ahab and his son Ahaziah of Israel (I Kings 16:31-33; 22:53) were condemned, as were Jehoram (II Kings 8:18), Ahaziah (8:27), Ahaz (16:2-4), Manasseh (21:2-9), and Amon (21:20-22), kings of Judah. In all these instances, the convictions of the Deuteronomic school can be discovered.

3. The sources mentioned. There are three sources mentioned by title in the books of Kings. These are: (*a*) the Book of the Acts of Solomon, (*b*) the Book of the Chronicles of the Kings of Israel, and (*c*) the Book of the Chronicles of the Kings of Judah.

a. The Book of the Acts of Solomon. At the end of the Solomon narrative complex, which occupies I Kings 3–11, there appears the reference: "Now the rest of the acts of Solomon, and all that he did, and his wisdom, are they not written in the book of the acts of Solomon?" (11:41). This reference offers sufficient information for a fair estimate of the nature of the lost Book of the Acts of Solomon. Because of the mention made of the "wisdom" of Solomon, one must assume that the original source included much legendary and folklore material. Into this class belong the Lord's appearance in Solomon's dream, Solomon's entreaty of the Lord for wisdom (I Kings 3:4-15), the well-known episode of the Solomonic judgment (vss. 16-28), and the visit of the Queen of Sheba, who "came to test him with hard questions" (10:1-10).

Besides the apparently legendary material on Solomon's wisdom, contemporary lists were utilized by the compiler of the source. Such lists are the list of Solomon's court officials (I Kings 4:1-6) and that of the provincial administrators (4:7-19, 27-28), both of which might originally have been deposits of the court archives. The description of the building and furnishing of the temple might have come from the temple archives (I Kings 6; 7:15-31). The description of Solomon's wisdom and splendor (I Kings 4: 20-26, 29-34), the account of his agreement with Hiram of Tyre (ch. 5), the details of Solomon's settlement of Hiram's claim for the services rendered (9:10-14), the report on the royal building activities and the use of forced labor (vss. 15-24), and the memories of Solomon's mercantile enterprise (9:26-28; 10:11-12) are based upon reliable ancient archival tradition.

Thus, the Book of the Acts of Solomon must be recognized as a late collection of archival material which included some legendary biographical information for the enhancement of the wisdom and glory of the king. So, sound and veracious historical reports and legends mingle in this composite work.

b. The Book of the Chronicles of the Kings of Israel. This source is repeatedly referred to in the closing formulas of the author. The first time this source is mentioned is in connection with Jeroboam I (I Kings 14:19), the last time in the concluding statement concerning Pekah's reign (II Kings 15:31); and altogether the book is mentioned seventeen times. The reports on Joram of Israel, the victim of the Jehu revolution, and Hoshea, the last king of Israel, are not concluded by this stereotyped reference. Some scholars assumed that the reference to the Book of the Chronicles of the Kings of Israel was missing in the concluding formula of the reign of Hoshea because Hoshea, having been the last monarch of Israel, was not included at all in this source. The case for this assumption is, in some degree, weakened by the fact that the reference is also missing in the case of Joram, whose predecessors and successors are definitely reported in this source.

The assumption was sometimes entertained that the Book of the Chronicles of the Kings of Israel and that of the kings of Judah were, in reality, a single historical work, and the difference is merely manifest in the two separate and inaccurate titles. This view, however, can hardly be maintained under critical scrutiny. The references to the source offer occasional glimpses of the real nature of the original Chronicles of the Kings of Israel. Thus, it is stated that the source incorporated an account on the "acts of Jeroboam, how he warred and how he reigned" (I Kings 14:19). This source included reports in Zimri's case on the "conspiracy which he made" (I Kings 16:20), in the case of Ahab on the "ivory house which he built, and all the cities that he built" (22:39), and in connection with Joash on the "might with which he fought against Amaziah king of Judah" (II Kings 13: 12). These references reveal the annalistic nature of the source, which most probably contained all the memorable events of the reign of every king and was preserved in the court archives. These annals were concluded shortly before Samaria's fall, *ca.* 724 B.C.

c. The Book of the Chronicles of the Kings of Judah. This source is mentioned first in the concluding formula attached to the account of the reign of Rehoboam (I Kings 14:29), last in that of Jehoiakim (II Kings 24:5), and fifteen times altogether. Again, there are reports on some of the Judean kings which do not contain any reference to these chronicles. The lack of reference in the case of the kings Ahaziah, Jehoahaz, Jehoiachin, and Zedekiah might be explained by the circumstances of their deaths, which prohibited the author's application of the stereotyped formula of the death and burial of the king (cf. I Kings 14:31). Thus, the author left out the whole concluding formula in the cases in question. The fact that the concluding formula of Jehoiakim points to this source (II Kings 24:5) militates against the assumption, maintained by some scholars, that the Book of the Chronicles of the Kings of Judah was completed with the account of the reign of Josiah. Allusions to Asa's building activities (I Kings 15:23), to the wars of Jehoshaphat (22:45), and to Hezekiah's building of a water reservoir and water conduit (II Kings 20:20) clearly establish the annalistic character of this source. These annals, like the Book of the Chronicles of the Kings of Israel, are court annals and were deposited in the royal archives of Jerusalem. The last pages of these Judean annals were written in *ca.* 590 B.C.

4. Other sources. Besides these three annalistic sources utilized and mentioned by the Deuteronomic

author, there were also, manifestly, other sources upon which he had drawn. The fact that the author does not refer to the origin of some material does in no way justify the assumption that those pieces were interpolated by the later Deuteronomic editor. But the main theme of fidelity to the Lord in the unity and purity of the cult seems to join, so effectively, the different materials that their incorporation must have been completed by the Deuteronomic author. The Davidic court narrative; the Elijah, Elisha, Ahab, Isaiah sources; and some other prophetic narratives might be distinguished as sources unnamed but utilized by the author.

a. Davidic court narrative. I Kings 1–2 is the direct continuation of the Davidic court memoirs preserved in II Sam. 9–20 and represents the same outlook, distinctive stylistic ability, and proximity to the events related. It is a product of the second half of the tenth century B.C. *See* SAMUEL, I AND II, § C4*b*.

b. Elijah cycle. The Elijah stories embrace I Kings 17–19; 21; II Kings 1. The sequence of chs. 17–19; 21 in I Kings is interrupted by the story of the war of Ahab against the Syrians in ch. 20. The LXX and the Lucianic recension place the Ahab story (ch. 20) after the Naboth episode (ch. 21). This smoother order might have been the original sequence of the narratives. The Elijah cycle might be recognized as a N narrative complex. The lack of condemnation of the "calf worship" of Bethel and occasional telltale remarks (e.g., "Beer-sheba, which belongs to Judah" [I Kings 19:3]) help to establish that the Elijah stories originated in the N. The admiration paid to the prophet Elijah and the noticeable enhancement of the memories of his power and greatness are conceivably motivated by the disciples' pious and affectionate veneration of their master. The organ of the preservation and transmission of these Elijah stories was apparently the N prophetic guilds. The Elijah cycle is securely anchored in history, but nevertheless, its transformation into legends had started. The narratives in I Kings 17–19; 21 reveal high moral spirit, unyielding allegiance to the Lord, and profound theological sensitivity.

The narratives in I Kings 17–18 are joined by the link of the disastrous drought and the eventual coming of the rain. The resuscitation of the dead child of the widow of Zarephath (17:17-24) and the ordeal on Mount Carmel (ch. 18) fill the frame of the drought narrative. The account of the Horeb pilgrimage (I Kings 19) appears to be an independent narrative which originally served as introduction to the appointment of Elisha, Jehu, and Hazael as God's instruments of history. To be sure, the fulfilment of the divine command to anoint Hazael and Jehu (I Kings 19:15-16) is lacking, for apparently it was suppressed in favor of the version preserved in the Elisha cycle (II Kings 8–10). Only the call of Elisha into the service of Elijah (I Kings 19:19-21) corresponds with the divine command (vs. 16).

The great reverence of the narrator for the prophet does not hinder him in the consideration of many important problems. The focal questions of monotheism and complete allegiance to the only God (I Kings 18:21, 27, 36-39) gain expression in the narrative of the contest on Mount Carmel. The problems of the revelation of God (I Kings 19:9-13), the responsibilities of the prophetic office (vss. 14-17), and God's hidden work in history (vs. 18) occupy the foreground of the story of the pilgrimage to Horeb. The Naboth story (I Kings 21) represents an undoubtedly historical episode which throws light upon the tyranny of Ahab and Jezebel and documents the existence of inheritance laws sanctioned by custom. It is, however, more important that the Naboth story also reveals the ethical integrity, social responsibility, and unfailing courage of this Israelite prophet who intrepidly confronted the king with his wrongdoings and proclaimed a disastrous judgment upon the royal house. The same courageous attitude and single-mindedness of the prophet are vividly depicted in his encounter with the king, in which Elijah flung the accusation "troubler of Israel" back at King Ahab (18:17-19).

The story in II Kings 1 is unlike the rest of the Elijah stories and shows a measure of affinity with the Elisha cycle of legends. In spite of the crude and immoral thaumaturgical atmosphere of the narrative, there is a probably historical kernel preserved within this narrative. To this historical kernel belong the sickness of Ahaziah and his inquiry of BAAL-ZEBUB, the God of Ekron (1:2). Indubitably also, the condemnation of Ahaziah for inquiring of a strange god is completely consistent with Elijah's character (vss. 3-8). The story of the destruction of the hundred men by heavenly fire (vss. 9-16)—with the folk-tale motifs present—is a legendary overgrowth of the original narrative.

c. Elisha cycle. The Elisha stories, which occupy II Kings 2–13, represent a circle of tradition which was independent from that of the Elijah cycle. There is such a marked difference in literary expression and religious outlook that the common authorship of the Elijah and Elisha stories can hardly be entertained. The fact that some of the themes of the Elijah narratives appear in a new setting within the Elisha cycle, as is the case in the parallel stories of an unspent oil cruse (I Kings 17:8-16; II Kings 4:1-7) and the resuscitation of a dead child (I Kings 17:17-24; II Kings 4:18-37), seems to indicate that there was free interaction between the two traditions in the oral stage of their development. The motif of the transfer of Elijah's mantle to Elisha is common to both cycles of tradition (I Kings 19:19; II Kings 2:13-14). It is interesting to note that a special divine commission was given to Elijah on Mount Horeb to anoint Hazael of Syria and Jehu of Israel (I Kings 19:15-16), but the mission was completed only by Elisha (II Kings 8:7-15; 9:1-13). All these factors contribute to the recognition that the Elijah and Elisha cycles of tradition belong to the same general environment.

The Elisha narrative complex embraces a wide variety of literary pieces ranging from miracle narratives (e.g., II Kings 4:38-41) to the historical report (e.g., II Kings 9:1–10:27). The narratives which are centered around magical and thaumaturgical motifs must be classified as miracle narratives. Miracle narratives are the healing of the waters of Jericho (II Kings 2:19-22), the miracle of the jar of oil (4:1-7), the healing of the poisonous food (vss. 38-41), the feeding of the hundred men (vss. 42-44), and the miracle of the floating axe head (6:1-7.) On the other hand, the stories of the translation of Elijah, the trans-

fer of the prophet's spirit (2:1-18), and the resuscitating power of Elisha's dead body (13:20-21) transcend the sphere of the magical and belong to the type of medieval miracle legends of the saints. As literature, all these stories are deeply rooted in folk tale; their aim is to glorify the prophet by the means of an emphasis on the prophetic power.

In all these legends and miracle stories, the prophet Elisha is surrounded by the prophetic schools of Bethel, Jericho, and Gilgal, and he seems to be their leader. It is justifiable to assume that these prophetic colleges represent the literary circle where the narratives originated and were reverently transmitted.

There are other narratives of the Elisha cycle which might be regarded as legends, for they reveal a less folkloristic element and a greater proximity to the historical happenings of the time. The story of the healing of Naaman (5:1-27) and the Shunammite stories (4:8-37; 8:1-6) belong to this class. They have in common that Elisha is in the company of his servant, Gehazi, and is not surrounded by the prophetic disciples, though his close relationship to the prophetic groups is implied (5:22). To be sure, no consecutive narrative can be reconstructed from these stories. Their common traits are outweighed by some discrepancies. It must be especially noted that in the second story of the Shunammite woman, Elisha seems to be dead (8:4-5), and Gehazi appears in the company of the king, but apparently he does not have the leprosy with which he was already smitten in Elisha's lifetime (5:27).

There are some other narratives within the Elisha cycle which present Elisha in the middle of political turmoil and military activity; these stories might be defined as historical narratives. These historical narratives include the stories on Elisha's role in Joram's war against Mesha king of Moab (3:4-27) and during the Syrian wars (6:8–7:20). The historical narratives presenting the Syrian wars (6:8–7:20) are in no way one literary piece. The narrative which relates how Elisha thwarted the surprise attacks of the Syrians by foretelling them to the king of Israel and how he blinded a Syrian raiding party (6:8-23), asserts that "the Syrians came no more on raids into the land of Israel" (vs. 23). Notwithstanding, the next verse commences with the narrative of Ben-hadad's siege of Samaria, the resulting famine in the city, and the miraculous deliverance of the city as it was foretold by Elisha (6:24–7:20). The loose connection between these historical narratives might be further illustrated with the relationship of Elisha toward the court. This relationship shifts, within these narratives, from definite friendliness (6:9, 21) to open animosity (3:13-14; 6:31-32). This unevenness of the narratives points to sharply fixed tradition preceding the written transmission of the stories.

If the historical narratives revealed a proximity in their relationship to historical events, the same might also be noted even more so in the case of the historical narratives of the anointment of Hazael by Elisha (8:7-15), the Jehu revolution (chs. 9–10), and the death of Elisha (13:14-19). In these narratives a historical core is viewed from the angle of prophetic tradition.

d. Ahab source. The Ahab narratives (I Kings 20; 22:1-38), which interrupt the continuity of the Elijah source, markedly differ from the latter in their portrayal of Ahab. These narratives show a vivid interest in the Syrian wars, and their emphatic enmity toward the Syrians (20:42) sets them apart from the Elijah and Elisha cycles. These Ahab narratives are interwoven with prophetic traditions of the Northern Kingdom which relate Ahab's controversy with an anonymous prophet (20:35-43) and with Micaiah the son of Imlah (22:5-28). Some scholars assume, on insufficient grounds, that this source was continued by II Kings 3:4-27; 6:8-23; 6:24–7:20, which seem to fit better the Elisha cycle. The Ahab source, as its apparent closeness to the Syrian wars of Ahab would indicate, must have been written in the late ninth or early eighth century B.C.

The Elijah, Elisha, and Ahab sources have in common a definite interest in the destiny of the Northern Kingdom and in the prophetic traditions of the N, and this is indicative of the N origin of these sources.

e. Isaiah source. Placed between the introductory and concluding formulas on Hezekiah's reign (II Kings 18:1-12; 20:20-21), a literary complex appears (18:13–20:19) which, because of its emphasized interest in the prophet Isaiah of Jerusalem, might be designated as the Isaiah source. This source was incorporated into the books of Kings from an independent collection of Isaiah legends. This complex is duplicated, with the exception of 18:14-16, in the biblical book of Isaiah (chs. 36–39). Biblical scholarship, in general, agrees that these Isaiah legends were transplanted from the books of Kings to the book of ISAIAH.

This source represents the coalescence of historical narratives and the prophetic legends. That the prophetic legends' influence was decisive in this process can easily be conceived if the matter-of-fact report on the events of Sennacherib's campaign against Judah (18:14-16) is compared with the two other versions of the same (18:17–19:8, 36-37; 19:9*b*-35). Apparently the report of Hezekiah's tribute paid to Sennacherib (18:14-16) is based upon a laconic record in the Book of the Chronicles of the Kings of Judah. The two other versions, which relate the miraculous deliverance of Jerusalem in accord with the encouraging prophecy of Isaiah (19:6-7, 20-34), bear the stamp of the prophetic legends. Also, the story of the sickness of Hezekiah and his recovery, together with the miraculous recessing of the shadow given as a sign for the divine promise delivered by Isaiah (20:1-11), has to be regarded as prophetic legend. The account of the visit of the embassy of Merodach-baladan (20:12-19) is based on historical memories; this account was revised by the second Deuteronomic editor, who was familiar with the events following the fall of Jerusalem. The whole complex of Isaiah legends originated in Jerusalem among Isaiah's disciples and was transmitted by the same prophetic circle and could have been put in written form around the middle of the seventh century B.C.

f. A prophetic source. There is one more source present in the books of Kings. This source contains independent prophetic legends which might still have been in the formative process of oral transmission when the Deuteronomic author incorporated them into his work—as their adaptation to the Deutero-

nomic ideas would indicate. The prophecies of Ahijah the Shilonite (I Kings 11:29-39; 14:1-18) and their fulfilment (12:15; 15:29) demonstrate perceivably the didactic tendencies of the Deuteronomic author. The same late outlook also characterizes the prophetic words of Shemaiah (I Kings 12:21-24). The story of the condemnation of the altar of Bethel by an anonymous prophet (I Kings 12:32–13:34), who even knows the name of Josiah (13:2), might be a faint reminiscence of Amos' denunciatory prophecies in Bethel (cf. Amos 7:10-16; 9:1). Or this story might be a late local tradition of Bethel (cf. II Kings 23:16-20) which was adapted to the Deuteronomic thoughts. Another prophecy of anonymous character condemns Manasseh and is acquainted with the fall of Jerusalem (II Kings 21:7-15); accordingly, its literary formulation must also be from the pen of the Deuteronomic editor.

5. The problem of a pre-Deuteronomic book of Kings. Some scholars propose that the Deuteronomic editor had utilized one already complete literary work into which he incorporated the annalistic accounts of the Book of the Acts of Solomon, the Chronicles of Judah, and that of Israel. Thus, the pre-Deuteronomic book of Kings would have embraced all the sources which are not referred to by title. This pre-Deuteronomic book of Kings would have been the continuation of the books of Samuel and would have consisted of several strata, which were the continuation of the strata apparent in the books of Samuel. The attempted separation of two (J and E) or three (L, J, and E) strata is not convincing. There are several proposed analyses of the assumed pre-Deuteronomic book which agree in only one aspect—that they take it for granted that the sources of the Pentateuch (or sources closely related to them) extend beyond the books of Samuel. Thus J is traced to I Kings 12 by one scholar, to II Kings 17:3-4 by another; similarly, E was supposed to be found in II Kings 22–23 or even in II Kings 25. Some scholars assume that a pre-Deuteronomic book was in existence, but, beyond the assertion of the possibility of the continuation of the sources of the books of Samuel, they do not attempt to demonstrate their thesis in an analysis.

The occasional traces of parallel traditions are not sufficient for the separation of continuous strata which would span the books. The discrepancies and parallel accounts can be explained as a mere accumulation of variants of the same tradition. To be sure, the possibility of the existence of a pre-Deuteronomic book of Kings cannot be disproved, but the assumption of its existence is in no way necessary for the understanding of the formation of the books of Kings.

6. The Deuteronomic edition. It has already been demonstrated (*see* § C2 *above*) that the author of the framework of the books of Kings is definitely under the influence of the Deuteronomic thought. It is also obvious that whoever wrote the framework is also responsible for the conception of the whole work, for the framework alone ensures the continuity of thought and purpose of the books. Thus, if the framework is Deuteronomic in thought, it is justifiable to speak of a Deuteronomic editor or author. There are, however, some discrepancies which can hardly be explained by the assumption of only one Deuteronomic editor. Thus, the prophecy in II Kings 22:20 does not reveal knowledge of the death of Josiah on the battlefield of Megiddo (23:29-30); the destruction of the temple is not known in I Kings 8:8; the Davidic dynasty was still on the throne at the writing of I Kings 9:21; 11:36; II Kings 8:19. These facts lead to the recognition that there was one Deuteronomic editor writing before the death of Josiah (609 B.C.). On the other hand, the existence of references to the destruction of the temple (I Kings 9:6-9), and to the Exile (I Kings 8:46-53; II Kings 21:11-15; 22:16-17), and the inclusion of the report on the fall of Jerusalem (II Kings 24:1–25:26), and of the exilic narrative of the favor shown to the captive King Jehoiachin by Evil-merodach (25:27-30), presuppose a second Deuteronomic editor. His activity is dated as *ca.* 550 B.C. by the last event reported (561 B.C.) and the lack of any reference to the fall of Babylon (539 B.C.).

Still, there was a solution proposed to explain the unevenness of the books of Kings and to maintain that only one editor was at work in the book. According to this theory, the only Deuteronomic editor of the book who would also be responsible for a great historical work embracing Deut. 1–II Kings 25 would be one who was writing during the Exile, and therefore all the references to the Exile are his work (I Kings 8:46-53; 9:6-9; etc.). Other passages, which are obviously unaware of the Exile (I Kings 8:8; 9:21; II Kings 8:19; etc.), would be accounted for by the editor's incorporation of unchanged older documents into his work. Accordingly, the role of the editor would have been, in part, a servile compilation of the sources and documents as the discrepancies would indicate. This solution cannot be rejected on a priori grounds, but the assumption of two Deuteronomic editors is able to eliminate the difficulties in a more satisfactory manner.

Nevertheless, even among those scholars who accept two Deuteronomic editors, agreement is not complete. So it was proposed that the first Deuteronomic editor wrote, not before, but after the death of Josiah, and his work was concluded with II Kings 23:28, and that the preceding verses (25*b*-27), which allude to the fall of Jerusalem and to the Exile, are the work of the second editor. This suggestion also maintains that the first Deuteronomic editor was so blinded by the Deuteronomic conviction that good deeds gain their earthly reward, that when Josiah, the Deuteronomic reformer and paragon of the Deuteronomic virtues (II Kings 23:25*a*), died on the battlefield, the editor disregarded the facts which contradicted his theology and wrote as if Josiah had died in peace (II Kings 22:20). The supporting evidences for this contention are in the introductory statement for Josiah (II Kings 22:1), which states the length of the king's reign as thirty-one years and reports judgment on the king's reign (vs. 2), and in the concluding reference to the Book of the Chronicles of the Kings of Judah (23:28). The evident difficulty of this theory is that a deliberate silence about the tragic end of Josiah is hardly compatible with the editor's unmistakable intention to appeal to his contemporaries, whom he could not have blinded to the contemporaneous events. It is much more plausible to assume that the first editor wrote before the death

of Josiah, and that the "thirty-one years" of Josiah's reign (II Kings 22:1) was inserted into the introductory formula by the later editor. The concluding formula (23:28) itself would have originated in its entirety from the pen of the later editor, who also supplied an identical reference to the Book of the Chronicles of Judah in the case of Jehoiakim (II Kings 24:5), who died in 597 B.C.

The second Deuteronomic editor (*ca.* 550 B.C.) apparently wrote during the Exile, as his reference "beyond the River" (i.e., "beyond the Euphrates," in the Hebrew text of I Kings 4:24) to the Palestinian region reveals. When Jehoiachin, the exiled king of Judah, was admitted to the Babylonian court, this editor understood it as a sign of the returning divine favor. The second editor was confronted with the crux of the Deuteronomic theology (the untimely death of the pious King Josiah in 609 B.C.), but he thought to solve this crux by the assumption that the Lord's wrath was so fierce, "because of all the provocations with which Manasseh had provoked him" (II Kings 23:26), that not even the righteous reign and pious reforms of Josiah could quench his anger (vss. 27-28; cf. 24:1-4). The same thought is also expressed in the words of Huldah the prophetess (II Kings 22:15-20), which apparently were adapted by the second editor. The divine warning given to Solomon in I Kings 9:1-9 is written by the second editor, as can be recognized by the allusion to the destruction of the temple (vs. 8). The second editor maintains that Samaria deserved destruction because of the embracement of the Canaanitish idolatry (II Kings 17:7-18). This view is at variance with the first editor's conviction that Samaria was destroyed because of the calf-worship of Bethel (vss. 21-23).

7. The purpose of the Deuteronomic author. The first Deuteronomic editor of the books of Kings, who might rightly be called the Deuteronomic author, was motivated by the Deuteronomic theology of the unity and purity of worship which recognized only the Jerusalem temple as the sole, legitimate sanctuary of the Lord. Therefore, he condemned all the kings of Israel, for they all shared in the calf-worship, the "sin of Jeroboam the son of Nebat." Guided by the same theological outlook, he denounced those kings of Judah who did not destroy the local shrines, the high places. The author's advocacy of the unity of the worship, however, did not make him a cultic formalist. In his eyes, the cult was one expression of Israel's allegiance to the Lord which had to be manifest in the whole life of the holy people.

The Deuteronomic author did not conceive this literary work in the terms of secular historiography, but as a history of the Lord's dealings with his chosen people. The author's foremost interest in God's plan with his people explains the fact that such an important king (at least by secular standards) as Omri of Israel is handled in a mere six verses (I Kings 16:23-28). The author recognized the prophets as the Lord's spokesmen in history, and therefore he incorporated into these books bulks of prophetic narratives in the Elijah and Elisha cycles. Similarly, the Ahab source aroused the author's interest because of its prophetic implications, and not because of its merits as relatively objective historical narrative. Undoubtedly, the work of the Deuteronomic editor cannot be compared with any Western historical writing, secular or ecclesiastical, because the goal before the eyes of the author was not merely to report the events of the past, but to give an evaluation and criticism of the past as an admonition for contemporaries. This work, by retelling the apostasy and the ensuing trials and visitations of the holy people, called to repentance, conversion, and total commitment of the national existence in allegiance to the Lord. The work of the Deuteronomic author is like a long sermon using the history of the chosen people for illustration; as a matter of fact, the same admonishing, instructive, and edifying spirit permeates this historical work as the Deuteronomic sermons of Deut. 5–11.

D. ***TEXT.*** The books of Kings, as they are preserved in the MT, do not represent, in every detail, the best text. The LXX, which is often shorter than the MT, and the Lucianic recension of the LXX present, in places, more reliable variants, and they are essential to the reconstruction of the text. The discovery of fragments of the books of Kings in the Dead Sea region seems to support the theory of the existence of a Hebrew text which, on the whole, was closer to the LXX than to the MT, and which, in some cases, was superior to both.

KING'S GARDEN [גן המלך]. A royal estate near Jerusalem, mentioned (Neh. 3:15) in connection with the Pool of Shelah (*see* SHELAH, POOL OF), toward the junction of the Tyropoeon with the Kidron. *See* KIDRON, BROOK.

KING'S HIGHWAY [דרך המלך]. A road mentioned three times in the Bible, twice by this name; Moses promised the Edomites and Sihon that the Israelites would keep strictly to it in passing through their lands (Num. 20:17; 21:22; see also Deut. 2:27). These references are to a well-known highway which ran from Damascus to the Gulf of Aqabah along the length of E Palestine, passing through Bashan, Gilead, Ammon, Moab, and Edom and connecting with the roads that led across the Negeb toward the coastal route from Phoenicia to Egypt. Archaeological investigation has shown that there was a line of fortresses along it. The first ones were apparently destroyed by the raid of Chedorlaomer and his allies, who followed it and picked off one town after another (Gen. 14); the region was then uninhabited for about six hundred years, and then new fortresses were built by the invading peoples who resettled there. The road was used by the Nabataean traders; Trajan had it rebuilt after he conquered the latter people (A.D. 106), and it became known as Trajan's Road. The Arabic name, Tariq es-Sultani, has the same meaning as that of the Hebrew; the modern road in Jordan closely follows the original course, with modifications for automobile traffic.

KING'S POOL [ברכת המלך] (Neh. 2:14). Presumably the same as the Pool of Shelah (*see* SHELAH, POOL OF), a reservoir of the king's garden in Jerusalem. *See* JERUSALEM § 7*b*.

KING'S VALE, VALLEY [עמק המלך]; KJV KING'S DALE. *See* SHAVEH, VALLEY OF.

***KINSHIP.** *See* FAMILY; MARRIAGE.

KIR kĭr [קיר, Heb. wall, Moabite city]. **1.** A city of Moab, mentioned in connection with Ar in Isaiah's oracle against Moab (15:1). Kir is probably the same city as KIR-HARESETH, an ancient capital of Moab, located at Kerak, *ca.* seventeen miles S of the Arnon and eleven miles E of the Dead Sea.

E. D. GROHMAN

* **2.** A Mesopotamian locality (Isa. 22:6; cf. vs. 5) from which Arameans had migrated to Syria (Amos 9:7) and to which their descendants were exiled as a result of the Assyrian deportations (1:5)—e.g., at the hands of Tiglath-pileser during the reign of Ahaz (II Kings 16:9). Amos (9:7) knew of an exodus saga according to which God had brought the Arameans out of Kir to their promised land (probably Damascus), much like the exodus of Israel from Egypt (and of the Philistines from Caphtor). The tragedy of the forced return of the Arameans to Kir is paralleled by the aversion of the Hebrews to being sent back to Egypt (Deut. 17:16; 28:68). C. H. GORDON

KIR-HARESETH kĭr hăr'ə sĕth [קיר חרשת, Heb. wall of potsherds, Moabite city of potsherds] (II Kings 3:25; Isa. 16:7); KJV KIR-HARASETH in II Kings 3:25. Alternately: KIR-HERES —hĭr'ĭz [קיר חרש; LXX ταῖχος ὃ ἐνεκαίνισας *in* Isa. 16:11 *suggests* Kir-hadesheth, new city, *perhaps corrupted into* Kir-hareseth, wall of potsherds] (Isa. 16:11; Jer. 48: 31, 36); KJV KIR-HARESH —hăr'ĕsh in Isa. 16: 11. An ancient capital of Moab, located *ca.* seventeen miles S of the Arnon and eleven miles E of the Dead Sea. Modern Kerak is 3,110 feet above the Mediterranean, and so 4,400 feet above the Dead Sea, standing on a small plateau *ca.* 2,500 feet long. Except at one or two points, Kerak is isolated from the surrounding hills by valleys more than 300 feet deep. The neighboring hills overlook the city.

In the time of Elisha, while Mesha was king of Moab, the kings of Israel, Judah, and Edom attacked Moab from the S (II Kings 3:4 ff). After a miraculous victory by the allies, the Moabites fled and the allied armies pursued, destroying the land and besieging Kir-hareseth. To turn the tide of battle, Mesha sacrificed his oldest son as a burnt offering upon the wall. Thereupon "there came great wrath upon Israel," and the allied armies withdrew. Kir-hareseth, or Kir-heres, is mentioned twice in Isaiah's oracle against Moab (16:7, 11) and twice in Jeremiah's (48:31, 36). Also, KIR (1), mentioned in Isa. 15:1, is probably the same city.

A tunnel, a cul-de-sac *ca.* two hundred yards long, runs toward the citadel from the wadi below. It is probably an abortive water passage, begun but never finished by some Moabite king, the water source being found too weak or the work being interrupted. The account mentioned above of the siege against Kir-hareseth illustrates the need of the city for a good water supply. In 1924 great masses of distinctive Moabite pottery were found on the steep SE slopes of the hill, below the citadel. In addition, pottery of the Nabatean, Roman, Byzantine, and medieval Arabic periods has been found.

Courtesy of Denis Baly

8. Kir-hareseth (modern el-Kerak)

There are impressive remains at Kerak from later times. In *ca.* 1140 a castle was built by the Crusaders under King Fulco of Jerusalem. It fell into the hands of Saladin in 1188. Since the time of the Crusades, the Greek bishop of Petra has had his seat at Kerak.

KIRIATH kĭr'ĭ ăth [קרית, city of] (Josh. 18:28 RSV mg.); KJV KIRJATH kûr'jăth. *See* KIRIATH-JEARIM.

KIRIATHAIM kĭr'ĭ ə thā'əm [קריתים, קריתמה, two cities]; KJV alternately KIRJATHAIM kûr'jə thā'əm. **1.** A city of the Moabite tableland (Jer. 48:1, 23;

Ezek. 25:9), assigned to the tribe of Reuben (Num. 32:37; Josh. 13:19). It was in Moabite hands in Mesha's time, since he spoke of building Qaryaten (קריתן; *see* MOABITE STONE). Kiriathaim has frequently been identified with el-Qereiyat, 5½ miles W-NW of Dibon, but no remains have been found there earlier than the first century B.C.

Bibliography. F.-M. Abel, *Géographie de la Palestine,* II (1938), 419; N. Glueck, *Explorations in Eastern Palestine,* III, *AASOR,* XVIII-XIX (1937-39), 131.

2. A city of the tribe of Naphtali given to the Gershomites (I Chr. 6:76—H 6:61); probably identical with KARTAN in the parallel list in Josh. 21:32.

E. D. GROHMAN

KIRIATH-ARBA kĭr'ĭ ăth är'bə [קרית ארבע, city of four, tetrapolis]; KJV KIRJATH-ARBA kûr'jăth-är'bə. The ancient name of HEBRON, near which the cave of Machpelah, burial place of the patriarchs, was located (Gen. 23:2; 35:27). Caleb captured it from the Anakim, after whose great hero, Arba, the city was allegedly named (Josh. 14:15; cf. 15:13). It was the chief city of a hill-country district (15:54) and was both a city of refuge (20:7) and a Levitical city (of the Kohathite family; Josh. 21:11). The tradition of the ancient name of Hebron, Kiriath-arba, persisted throughout the biblical period, reappearing as a city in which returnees from the Exile settled (Neh. 11:25).

V. R. GOLD

KIRIATH-ARIM kĭr'ĭ ăth âr'ĭm [קרית ערים]; KJV KIRJATH-ARIM kûr'jăth âr'ĭm; KJV Apoc. KIRIATHIARIUS kĭr'ĭ ăth'ĭ âr'ĭ əs (I Esd. 5:19). A misspelling in Ezra 2:25 for KIRIATH-JEARIM.

KIRIATH-BAAL kĭr'ĭ ăth bā'əl, bāl [קרית בעל, city of Baal] (Josh. 15:60; 18:14); KJV KIRJATH-BAAL kûr'jăth bā'əl, bāl. Same as KIRIATH-JEARIM.

KIRIATH-HUZOTH kĭr'ĭ ăth hū'zŏth [קרית חצות, city of streets; LXX πόλεις ἐπαύλεων *suggests perhaps an original* קרית חצרות, city of courts] (Num. 22:39); KJV KIRJATH-HUZOTH kûr'jăth hū'zŏth. A Moabite city, the first place to which Balak took Balaam. It was apparently near the Arnon (vs. 36), not far from Bamoth-baal (vs. 41). Its precise location is uncertain.

E. D. GROHMAN

KIRIATHIARIUS. KJV Apoc. form of KIRIATH-ARIM.

KIRIATH-JEARIM kĭr'ĭ ăth jē'ə rĭm [קרית יערים, city of forests]; KJV KIRJATH-JEARIM kûr'jăth jē'ə rĭm. Also: BAALAH bā'ə lə [בעלה] (Josh. 15:9; I Chr. 13:6), KJV BAALE OF JUDAH bā'ə lĭ; BAALE-JUDAH [בעלי יהודה] (II Sam. 6:2), KJV BAALE OF JUDAH; KIRIATH-ARIM kĭr'ĭ ăth âr'ĭm [קרית ערים] (Ezra 2:25), KJV KIRJATH-ARIM kûr'jăth âr'ĭm; KIRIATH-BAAL kĭr'ĭ ăth bā'əl, bāl' [קרית בעל] (Josh. 15:60; 18:14), KJV KIRJATH-BAAL kûr'jăth bā'əl, bāl'. A city of Judah identified with Deir al-Azhar near the modern village of Qaryet el-'Inab or Abu Ghosh (after an early-nineteenth-century sheik who terrorized the countryside), *ca.* 8⅓ miles N of Jerusalem. Eusebius refers to Kiriath-jearim (Cariathiareim) twice, once as 9 and once as 10 (Roman) miles from Jerusalem on the road to Diospolis (Lydda, Lod). Peter the Deacon also places it 9 miles from Jerusalem.

Deir al-Azhar lies on a commanding hill just to the W of Abu Ghosh. Pottery from the Late Bronze and Early Iron periods, as well as later periods, can be picked up on the surface of the tell, which was well situated for defense and observation of the surrounding territory. Later, the city seems to have moved from the hill to the site of Abu Ghosh, perhaps during the Roman period, as indicated by the excavation in 1944 of the Crusader church at Abu Ghosh.

Kiriath-jearim first appears as a member of the Gibeonite confederacy of four strategically located fortress cities occupied by Hivites, possibly a non-Semitic people (e.g., Hittites or Hurrians; Josh. 9:17; cf. II Sam. 21:1-9). Its earlier name seems to have been Kiriath-Baal ("city of the god Baal"). In the description of Judah's N boundary it appears as Baalah, a shortened form of the name (Josh. 15:9-10). In the description of the Benjaminite borders, it appears as Kiriath-Baal (Josh. 15:60; 18:14). It was the boundary point where the E border of Dan, the W border of Benjamin, and the N border of Judah met. In the course of their northward migration, the Danites camped near Kiriath-jearim, a place always well supplied with water (Judg. 18:12).

After the Battle of Ebenezer (*ca.* 1050), the Philistines carried the captured ark of the covenant to Ashdod. After a series of unpleasant incidents, including the smashing of the cult statue of Dagon and a plague of boils, the Philistines' diviners suggested a device by which the cause might be determined. It turned out to be their possession of the ark. It was returned to Beth-shemesh, from which, after another untoward incident, it was sent on to Kiriath-jearim. Here it remained in a specially designated house, feared by both Philistines and Israelites, until David brought it to Jerusalem with great pomp and ceremony (I Sam. 5:1–7:2; II Sam. 6:1-15, where Kiriath-jearim is called Baale-judah; I Chr. 13:1-13; 15:1-29). In the royal administrative reorganization, it was assigned to the province of Jerusalem (Josh. 15:60; 18:28, where it appears as Kiriath [LXX Kiriath-jearim] and is attributed to the tribe of Benjamin, to whom it may originally have belonged, though by the time of the judges it was said to belong to Judah; cf. Judg. 18:12; I Chr. 2:50-53).

The ill-fated prophet Uriah, son of Shemaiah, a contemporary of Jeremiah, came from Kiriath-jearim (Jer. 26:20-23). Among those who returned from the Exile were people from Kiriath-jearim (Neh. 7:29; Ezra 2:25, where it appears as Kiriath-arim).

In the Roman period a fort was built over the ruins of Kiriath-jearim as a military post to guard the strategic Roman road between Jerusalem and the maritime plain. The garrison, consisting of a detachment of the Tenth Legion (*Fretensis*), whose headquarters were in Jerusalem, built a large reservoir near the spring at Qaryet el-'Inab—Abu Ghosh, whose walls were later used in the foundation of a medieval church. During the Byzantine period a basilica was built on Deir el-Azhar (Kiriath-jearim) commemorating the long stay of the ark of the covenant in Kiriath-jearim.

KIRIATH-SANNAH kĭr'ĭ ăth săn'ə [קריית סנה] (Josh. 15:49); KJV KIRJATH-SANNAH kûr'jăth—. Another name, perhaps a misspelling, for KIRIATH-SEPHER.

KIRIATH-SEPHER kĭr'ĭ ăth sē'fər [קריית ספר, city of the scribe] (Josh. 15:15-16; Judg. 1:11-12); KJV KIRJATH-SEPHER kûr'jăth—. The older name for DEBIR 2.

KIRIOTH. KJV form of KERIOTH in Amos 2:2.

KIRJATH. KJV form of Kiriath. *See* KIRIATH-JEARIM.

KIRJATHAIM. KJV alternate form of KIRIATHAIM.

KIRJATH-ARBA. KJV form of KIRIATH-ARBA.

KIRJATH-HUZOTH. KJV form of KIRIATH-HUZOTH.

KIRJATH-JEARIM. KJV form of KIRIATH-JEARIM.

KIRJATH-SANNAH. KJV form of KIRIATH-SANNAH.

KIRJATH-SEPHER. KJV form of KIRIATH-SEPHER.

KISH kĭsh [קיש; Κίς]; KJV CIS sĭs in Acts 13:21; CISAI sī'sī in Add. Esth. 11:2. **1.** A Benjaminite of Gibeah; the father of King Saul. According to I Sam. 9:1 he appears to have been the son of ABIEL (1), but was more probably the son of NER (cf. I Chr. 8:33).

Kish is described as a man of wealth, who possessed servants and asses (I Sam. 9:3). The representation of Saul that his family was the humblest of all the families of the tribe of Benjamin must be construed as an illustration of oriental modesty (I Sam. 9:21). Kish was doubtless present at the selection of the king at Mizpah, when the Matrites, a clan of the Benjaminites to which he belonged, obtained the lot. From this clan Saul was ultimately chosen king (I Sam. 10:20-24). No other details of the life of Kish are preserved except the notice of his sepulchre in Zela of Benjamin, where Saul and Jonathan were also interred (II Sam. 21:14).

2. A Benjaminite who is included among the sons (?) of Jeiel (I Chr. 8:30; 9:36). He should probably be distinguished from the Kish who was the father of Saul.

3. Son of Mahli, a Levite of the family of Merari. His sons married the daughters of his brother, Eleazar (I Chr. 23:21-22). His son Jerahmeel became the head of the family of Kish and gave his name to one of the courses into which the Levites were presumably divided (I Chr. 24:29).

4. Son of Abdi, a Levite of the family of the Merarites. He assisted in the cleansing of the temple in the reign of Hezekiah (II Chr. 29:12).

5. A Benjaminite who is described as an ancestor of Mordecai, the uncle of Esther (Esth. 2:5).

E. R. DALGLISH

KISHI kĭsh'ī [קישי, *possibly* gift] (I Chr. 6:44—H 6:29). Alternate name of KUSHAIAH.

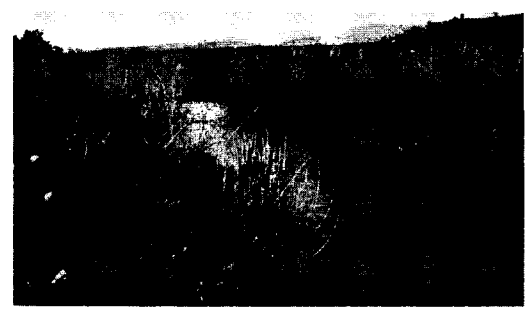
Bibliography. M. Noth, *Die israelitischen Personennamen* (1928), p. 171, note 3.

KISHION kĭsh'ĭ ən [קשיון] (Josh. 19:20; 21:28); KJV KISHON kĭsh'ən in Josh. 21:28. A Levitical town in Issachar. The Chronicler's list reads "Kedesh" at this point (I Chr. 6:72—H 6:57), which is probably in error. Kishion is mentioned in the Thutmose III list (no. 37, spelled *Qsn*) of conquered towns. Its location is uncertain; two sites have been suggested: Tell el-Muqarqash and Tell el-'Ajjul (near En-dor).

Bibliography. W. F. Albright, "The Topography of the Tribe of Issachar," *ZAW,* N.F. 3 (1926), p. 231; F.-M. Abel, *Géographie de la Palestine,* II (1938), 422-23.

G. W. VAN BEEK

KISHON kī'shŏn, kĭsh'ŏn [קישון]; KJV alternately KISON kĭs'ən (Ps. 83:9—H 83:10). A river draining the W part of the Valley of Jezreel, or Plain of Esdraelon, and the Plain of Acco. The major sources of the Kishon, known in Arabic as Nahr el-Muqatta', are located at the E end of the Plain of Esdraelon. From the SE, Wadi en-Nusf, whose name changes downstream to Wadi Shemmah, flows northward from the vicinity of Jenin, S of Mount Gilboa.



Courtesy of Herbert G. May

9. The River Kishon

From the NE, Wadi Muweili, which rises from springs W of the foot of Mount Tabor, makes its way southwestward. The latter is joined by Wadi el-Mujahiyeh, which has its origin in the Galilean hills S of Nazareth. From the SW, the waters from several springs in the vicinity of Megiddo join and flow northeastward. The confluence of these sources takes place in the center of the plain, at a point *ca.* four miles NE of Megiddo. Other wadies, draining the Galilean hills on the N—including especially Wadi el-Khawajah—and the Carmel Range on the S, feed into the Kishon as it winds northwestward across the plain, roughly paralleling the Carmel Range. Most of these wadies are dry except during the winter, when water from heavy rains fills their courses and rushes down to collect in the Kishon. Fig. KIS 9.

In the Valley of Jezreel the Kishon is scarcely more than a brook, attaining a width of *ca.* twenty feet in the spring. Its width increases near the W

end of the plain, and at Tell el-Qassis it is slightly more than thirty feet wide and *ca.* three or four feet deep in June. In spite of its relatively small size, it is a formidable geographical barrier during the rainy months of winter and early spring, when its bed is boggy and the plain on both sides is marshy. Fording is difficult at this time. By summer, however, its bed is usually dry. As it crosses the plain, the Kishon gradually descends from an elevation of *ca.* three hundred feet at its SE source near Jenin, to *ca.* eighty feet above sea level at the point where it leaves the plain. A slight rise of land in the center of the plain deflects the river to the N and largely determines its course.

The Kishon leaves the Valley of Jezreel and enters the Plain of Acco through a narrow pass formed by a jutting spur of the Galilean hills, which almost touches Mount Carmel a short distance NW of Tell el-Qassis. After entering the Plain of Acco, the Kishon hugs the foot of Mount Carmel to a point slightly W of Tell el-Harbaj (possibly HELKATH), where it changes course to the N, and empties into the Mediterranean Sea just S of the sand dunes along the coast. Its total length from its sources to the Sea is approximately twenty-three miles.

In the Plain of Acco, the Kishon receives the waters of a number of tributaries, chiefly the Wadi el-Melek from SW Galilee, and from several springs, especially those at el-Harbaj on the N, and at Jelameh and Yajur on the S. These sources supply enough water to make the Kishon a perennial stream for the remainder of its length, and it attains a width of *ca.* sixty-five feet in this plain.

The Kishon is chiefly remembered in the OT as the scene of the defeat of Sisera by Barak and Deborah. According to Judg. 4:7, 13, Sisera, the Canaanite captain residing at HAROSHETH of the Gentiles, led his forces and chariotry to do battle with Barak and Deborah of Israel at the Kishon. The exact place where this battle was fought is not known, but the poetic account—the Song of Deborah—states that it took place in the vicinity of Taanach, by the Waters of Megiddo—i.e., in the Valley of Jezreel, perhaps near the confluence of the streams which make up the Kishon (Judg. 5:19). The battle was apparently waged when the Kishon was in flood after a heavy rainstorm, with the result that Sisera's chariots became mired in the boggy plain, and his forces fled before Barak's lighter-armed troops (vs. 21). To later Israelites, the victory at the Kishon was evidence of God's providence, and the psalmist cites this victory among others in his petition for God's help against the enemies of Israel in his time (Ps. 83:9—H 83:10). The Kishon is also mentioned in connection with the contest on Mount Carmel between the prophets of Baal and Elijah. Following Elijah's triumph, the discredited prophets of Baal were taken to the river and put to death there (I Kings 18:40).

G. W. VAN BEEK

KISS. A touch of the lips to another person's lips, cheek, hands, feet, as a gesture of affection or homage, frequently in greeting or farewell, and usually without erotic meaning.

1. Terminology. The Hebrew verb is נשק substantive נשיקה; LXX and NT φιλέω and καταφιλέω substantive φίλημα. The Hebrew verb is used figuratively to mean "touch" in Ezek. 3:13; Ps. 85:10—H 85:11.

2. The familiar kiss. The seductive kiss of the "loose woman" in Prov. 7:13 and the romantic kisses of lovers in Song of S. 1:2; 8:1 are exceptional in biblical usage. Most commonly it is one member of a family who kisses another: a son his father (Jacob kisses Isaac in Gen. 27:26-27; Joseph kisses Jacob in Gen. 50:1); a son his parents (Elisha in I Kings 19:20) or father-in-law (Moses kisses Jethro in Exod. 18:7); a man his son (David kisses Absalom in II Sam. 14:33) or children (Laban in Gen. 31:28, 55) or grandsons (Jacob kisses Ephraim and Manasseh in Gen. 48:10); a man his brothers (Esau kisses Jacob in Gen. 33:4; Joseph his brothers in Gen. 45:15; Moses kisses Aaron in Exod. 4:27); his cousin (Jacob kisses Rachel in Gen. 29:11) or nephew (Laban kisses Jacob in Gen. 29:13); or finally, a woman her daughters-in-law (Naomi kisses Ruth and Orpah in Ruth 1:9; cf. vs. 14).

Also beyond the circle of the family but without erotic overtones, one man may kiss another as FRIEND, genuinely so as David does Jonathan (I Sam. 20:41) and Barzillai (II Sam. 19:39—H 19:40) or in hypocrisy as Absalom the politician does (II Sam. 15:5; cf. Prov. 27:6), or even in treacherous pretense (as Joab kisses Amasa in II Sam. 20:9).

It appears that biblical man acted out his feelings with less reserve than we; other demonstrative gestures usually attended the kiss. Kissing, one clutched and embraced the other (II Sam. 15:5; 20:9; Prov. 7:13; Gen. 29:13; 33:4; 48:10) and wept (Gen. 33:4), or merely wept (Gen. 29:11; 45:15; 50:1; I Sam. 20:41; Ruth 1:9, 14). Sometimes one bowed deeply (Exod. 18:7; I Sam. 20:41; II Sam. 14:33; I Kings 19:18) or even groveled, "licking the dust of"—i.e., kissing—the other's feet (Isa. 49:23; cf. Mic. 7:17; Ps. 72:9; dubiously also Ps. 2:12).

3. The ceremonial kiss. The gestures do not seem always to have been an expression of genuine emotion; they were often a kind of ceremony. The biblical combination of kissing with weeping may be compared to the ceremonious weeping on similar (by no means always sorrowful) occasions also among other cultures. The obeisance, too, and "licking the dust" present an obvious ceremonial aspect; even so, for example, according to proud boasts of Sargon and Sennacherib, the kings of conquered peoples kissed their conquerors' feet in abject surrender. Related, though in different contexts, were the kiss which Samuel gave Saul as he anointed him (I Sam. 10:1) and the kisses which worshipers directed to the sundry objects of their reverence—Baal, an idol, the moon (I Kings 19:18; Hos. 13:2; Job 31:26-27).

Other occasions also suggest the ceremonial or conventional nature of the kiss. It is frequently associated with greeting, especially when persons meet after an extended absence (Gen. 29:11, 13; 33:4; 45:15; Exod. 4:27; 18:7; II Sam. 20:9) or when they are about to part (Gen. 31:28, 55; Ruth 1:9, 14; I Sam. 20:41-42; II Sam. 19:39—H 19:40; I Kings 19:20),

and when they part at the approach or occurrence of death (Gen. 27:26; 50:1). The kiss may be the prelude to a solemn blessing (Gen. 27:26-27; 31:55; II Sam. 19:39—H 19:40).

4. In the Apoc. OT examples of the kiss find parallels in the Apoc. Raguel weeps and speaks a blessing as he greets and kisses Tobit (Tob. 7:6-7); he also kisses and blesses his daughter when they part (10:12). The kissing of another's hand in Ecclus. 29:5 appears to be a beggar's gesture of servility.

5. In the NT. The NT material also largely parallels that of the OT. In the parable in Luke 15:20 the father embraces and kisses his returned son. The Ephesian elders weep and embrace Paul and kiss him as he sets sail (Acts 20:37). Both demonstrations have OT parallels. The homage of the sinful woman who, weeping, anoints and kisses the feet of Jesus (Luke 7:38, 45) is a touching counterpart to Isa. 49:23. The Judas kiss of Luke 22:47-48 is proverbial for betrayal, and it too has its OT equivalent in Joab's treachery to Amasa (II Sam. 20:9).

Several of the Pauline letters conclude: "Greet one another with a holy kiss" (φίλημα ἅγιον) or a "kiss of love" (φίλημα ἀγάπης; Rom. 16:16; I Cor. 16:20; II Cor. 13:12; I Thess. 5:26; I Pet. 5:14; cf. Luke 7:45), a ceremonious greeting comparable to the practice reflected in the OT.

The rabbinic period added the poetic thought that such a one as Moses died with the kiss of God upon his lips (*Midrash Deut. rabbah,* 11). S. H. Blank

KITCHEN [בית המבשלים, house of those who cook] (Ezek. 46:24); KJV PLACE OF THEM THAT BOIL. One of four small oblong subcourts at the corners of the outer court of Ezekiel's ideal temple. They were provided with hearths for boiling such sacrifices as the common people were allowed to eat (Ezek. 46:21-24). The sin, guilt, and cereal offerings were cooked in kitchens within the priests' chambers (vss. 19-20), so that their greater holiness would be protected from contact with unconsecrated persons. *See* Sacrifice and Offerings; Temple, Jerusalem.

L. E. Toombs

KITE [איה, *see* Falcon; דאה (Lev. 11:14; KJV VULTURE); דיה (Deut. 14:13, *though the word is absent from five* Heb. MSS, Samar., *and* LXX, *and* RSV *therefore omits it;* KJV VULTURE), *plural* דיות (Isa. 34:15; KJV VULTURES), *possibly* swift one, *from* דאה, to fly swiftly; *cf.* Ugar. *d'y,* to fly, *and diy(m),* bird(s), *serving as a parallel to nšr(m),* eagle(s); LXX γύψ, vulture (Lev. 11:14; *and seemingly also* Deut. 14:13); ἔλαφος, deer (Isa. 34:15); Vulg. *milvus,* kite; Targ. (Onq.) דיתא]. A medium-sized bird of prey, best described as the scavenger of the hawk family (Accipitridae), of the subfamily Milvinae of the genus Milvus. The common red kite (*Milvus milvus milvus*) is found in Palestine, as is the black-winged one (*Elanus caeruleus caeruleus,* of the genus Elanus, of the subfamily Elaninae). It is a reasonable supposition that דאה (*dā'â*) refers to the kites. As the latter eat not only refuse, but also various small birds and mammals, there is nothing improbable in the association of these birds with a deserted human habitation in Isa. 34:15. W. S. McCullough

KITHLISH. KJV form of Chitlish.

KITRON kĭt'rŏn [קטרון] (Judg. 1:30). A town in Zebulun, from which Israel could not expel the Canaanites; probably the same as Kattath. Its location is uncertain, although two sites, Tell Qurdaneh and Tell el-Far, have been suggested.

KITTIM kĭt'ĭm [כתים]; KJV alternately CHITTIM; KJV Apoc. CHETTIIM kĕ tī'əm, CITIMS sĭt'ĭmz. The Hebrew name for Cyprus, used by late writers for Greece and Rome.

Kittim was used at first in the OT for the island of Cyprus. The name itself, as was known to Josephus (Antiq. I.vi.1), derived from the name of the city-state of Kition (Latin Citium, present-day Larnaka) on the SE coast of the island. Kition was the important Phoenician establishment on Cyprus since the ninth-eighth century B.C., and Phoenician inscriptions found there refer to the city as כתי, *Kty.* Although there was still a large autochthonous population, the island was by the eighth century B.C. essentially Greek in population. This is acknowledged by the listing of Kittim as one of the sons of Yawan (Ionia, and by extension Greece), along with Elisha, an older name for Cyprus; Rhodes (Rodanim); and Tarshish (Gen. 10:4; I Chr. 1:7).

For the Israelite, Kittim was a land across the sea and associated with ships, as may be seen from the present state of a difficult line of the "Song of Balaam":

> Ships shall come from Kittim
> and shall afflict Asshur and Eber
> (Num. 24:24).

Cyprus served for a while as a haven for Tyrians and Sidonians fleeing from the Assyrians. However, under Sargon, a statue of whom was found at Kition, Assyrian rule spread to Cyprus. This rule was expanded and maintained under Sennacherib and Esarhaddon. The latter boasted that besides Tyre and Sidon, his control extended from Cyprus as far as Tarshish. The allusions to Kittim (Cyprus) in Isa. 23:1, 12 (vs. 13, too, if כתים is to be read for כשדים of the MT), are to this era, and vs. 12 may refer to the flight from Sennacherib of Luli of Sidon to Cyprus and Luli's death there.

To the Judean, Kittim was a familiar place. Jeremiah used Kedar for the E and the coasts of Kittim (Cyprus) for the W as geographical poles in pointing out the unique disloyalty of his countrymen to God (Jer. 2:10). After the fall of the Assyrian Empire the close ties of Phoenician Cyprus to its mother cities on the mainland remained. In his lamentation over Tyre, Ezekiel lists Kittim (Cyprus) as the source of pine used for the decks of Phoenician ships (Ezek. 27:6).

Since Cyprus was increasingly under Greek influence and maintained strong contact with the Greek mainlands during the period of Persian rule, it is not at all surprising that the name Kittim came to be used generally for areas beyond the seas. The extended use of Kittim may be seen in I Macc. 1:1, where Alexander the Great, identified as a Macedonian, is described as one "who came from the land of

Kittim" (Χεττιμ). In I Macc. 8:5 Perseus, a Macedonian king, is called "King of the Kittim" (Κιτιέων βασιλέα; RSV "king of the Macedonians"). In a contemporary writer, Daniel, the use of Kittim is further extended and used for the Romans. The author of Dan. 11:30 meant by ובאו בו ציים כתים: "Roman ships shall come against him." As scholars have pointed out, he understood וצים מיד כתים ועגו אשור ועגו עבר (Num. 24:24) to mean: "Ships shall come forth from Kittim [the Romans] and shall afflict Asshur [the Seleucid Syrians], who in turn shall afflict Eber [the Hebrews]." For him this passage alluded to Rome's compelling Antiochus IV to withdraw completely from Egypt in 168 B.C., and to the subsequent persecution of the Jews by Antiochus. The LXX of Dan. 11:30 was aware of this meaning in translating כתים by 'Ρωμαῖοι. There are also references to the Kittim in the Pseudep. The Kittim are mentioned in Jub. 24:28-29; 37:11. Some interpreters have understood these passages to refer to the Hittites, but this is due to the fact that Kittim is, at times, written Χεττιμ, Χεττειν, etc. (Ezek. 27:6 LXX; I Macc. 1:1; etc.) in Greek and that this, when occurring in an unclear context, may be mistaken for Hittites (and may have been so understood by the translator of Jubilees into Ethiopic). In the Testament of Simeon, the Kittim are listed along with the Canaanites, the Amalekites, and the Philistines (Cappadocians = Caphtorim, as in the LXX) as enemies of the Jews and among those to be destroyed. In these texts the Seleucid Greeks seem to fit the needs of the passages best.

The Kittim are also to be found in the Dead Sea Scrolls. In the Habakkuk Commentary (1QpHab) the Chaldeans (כשדים) of the text are interpreted as the Kittim, spelled here as כתיאים. In this text we learn that the Kittim are swift in battle (2.12-14), come from afar from the isles of the sea, on their horses like an eagle (3.9-11). All fear them, and their plans are evil (3.4-5); they despise the fortresses of the nations, conquer and destroy them (4.5-9). They are merciless and do not pity anyone (6.3-5). They sacrifice to their insignia and weapons (6.3-5). The army of the Kittim will in the end take over the wealth of the last priests of Jerusalem (9.5-6). The description fits the Romans best, and the last two remarks concerning the Kittim make this identification highly probable. The Romans, according to Josephus, sacrificed to their standards. In the War of the Sons of Light and the Sons of Darkness (1QM), the Kittim (spelled here כתיים) are listed among the enemies of the "sons of light." Indeed, the purpose of the war is the disappearance of the Kittim (1.6). The day in which the Kittim will fall will be one of great battle (1.9-12). In the rest of this scroll there are references to a ruler of the Kittim (15.2) and to troops of the Kittim (11.11; 16.2, 5, 7-8; 17.14; 18.2; 19.10). The name gave the author occasion for an etymological pun: והכתיים יכתו, "and the Kittim will be smashed" (18.2), based, undoubtedly, on Jer. 46:5. The Kittim are not limited to a particular area, and some are established in Egypt (1.4 is an allusion to Roman forces in Egypt). A skilful identification of the Kittim with Assyria (כתיי אשור; 1.2) enabled the author to apply anti-Assyrian prophecies to the Kittim (1.6; 11.11; 18.2; 19.10). The identification of the Kittim in these works with the Seleucid Greeks, proposed by many scholars on the basis of the early publication of only a few columns of 1QM, was almost entirely abandoned with the publication of all of 1QM, in which the identification of the Kittim with the Romans is clear. This identification was bolstered by the publication of 4QpNah., where the line "by the hands of the Kings of Greece [יון] from Antiochus until the rise of the rulers of the Kittim [כתיאים]" (1.3) makes identification with the Romans positive. The identification of the Kittim of the Qumran texts with either opposition sectarians or the Seleucid Greeks is not warranted by the texts. The *Pesharim* and 1QM were among the latest texts of the Qumran sect, and for their writers the conquest of Judea by the Romans in 63 B.C. was a historical fact. Later tradition based on the usage which developed during this period referred various OT passages using כתים to the Romans: Num. 24:24 (Targ. Onq.; Vulg.); Ezek. 27:6 (Targ. Jon.; Vulg.); Dan 11:30 (LXX; Targ. Jon.; Vulg.).

KNEAD [לוש]; **KNEADING BOWL, KNEADING-TROUGH** [משארת]. The process of kneading consisted of mixing flour with water in a kneading-trough containing a small piece of the previous day's batch (cf. Gen. 18:6; I Sam. 28:24; II Sam. 13:8; Jer. 7:18; Hos. 7:4). The dough was then allowed to stand until it fermented. The bowl, or trough, could be made of wood, bronze, or earthenware. During the plagues the frogs invaded even the Egyptian kneading bowls (Exod. 8:3—H 7:28); the Israelites were careful to take their bowls with them when they fled from Egypt (12:34). The kneading-troughs are among the objects of Yahweh's blessing and cursing (Deut. 28:5, 17).

KNEEL [ברך; Akkad. *birku;* γονυπετεῖν]; **KNEE** [ברך, *from* kneel; γόνυ]. The Hebrew word is the same root as that for "blessing," and this suggests that the blessing was received in the kneeling position (*see* BLESSINGS AND CURSES). Weakness in the knees was said to be caused by fear (Job 4:4; Isa. 35:3; Ezek. 7:17; 21:12; Dan. 5:6; Nah. 2:10; Heb. 12:12) or by fasting (Ps. 109:24) or by disease (Deut. 28:35). The knees were considered, as today, the seat of intimate affection, where Samson slept (Judg. 16:19; cf. II Kings 4:20) and where children were dandled (Isa. 66:12). "Upon the knees" is a figure of adoption, whereby a handmaid's child is recognized as a child of her mistress (Gen. 30:3); though the reference may originally have been to birth on the father's knees (cf. Gen. 50:23; Job 3:12). Children were sometimes placed "between the knees"—i.e.,

as near as possible to the seat of life—for blessing (cf. Gen. 48:12 and the euphemism "under the thigh" in Gen. 24:2, 9; 47:29). "Knee-deep" is a measurement of water in Ezekiel's temple river (Ezek. 47:4). In the NT "knee" occurs in phrases of obeisance and prayer (Mark 15:19 KJV; Luke 5:8; Rom. 11:4; 14:11; Eph. 3:14; Phil. 2:10).

"Kneeling" is expressed by the same verb (II Chr. 6:13; Matt. 17:14; etc.); or by "bow the knee," to drink (Judg. 7:5-6) or to worship and pray (Isa. 45:23). There are variants such as "set upon the knees" (Dan. 10:10; cf. Luke 22:41; Acts 7:60; 9:40; 20:36; 21:5; etc.). Kneeling is the posture of (*a*) petition: Daniel (Dan. 6:10); the dying Stephen (Acts 7:60); Peter (Acts 9:40); Paul (Acts 20:36; Eph. 3:14); Elijah also prayed with his head between his knees (I Kings 18:42); (*b*) obeisance to a superior (cf. II Kings 1:13; Matt. 17:14; 27:29; Mark 1:40; 10:17; Luke 5:8); (*c*) worship. Like spreading the hands and prostration, kneeling was a posture of worship.

So Solomon (I Kings 8:54=II Chr. 6:13) and worshipers generally (I Kings 19:18; Isa. 45:23) knelt. Most instructive is Ps. 95:6, where kneeling succeeds prostration. Following the entry in 95:2, the prostration in vs. 6 shows that the worshiper has reached his station of worship, and the kneeling suggests that there was something for him to see, so he did not remain prostrate.

KNIFE [מאכלת, *specific term for the slaughterer's knife* (Gen. 22:6; Judg. 19:29; Prov. 30:4); חרב, *normally* SWORD; שכין (Prov. 23:2), *probably* Aram. *loan word;* KJV מחלף (Ezra 1:9; RSV CENSER)]. A small single- or double-edged cutting instrument of flint, copper, bronze, or iron, used mainly for domestic purposes. *See* WEAPONS AND IMPLEMENTS OF WAR.

The knife resembles the dagger or short stabbing sword, but is smaller and more cheaply made, and usually has no ornamentation on blade or pommel. The ambiguity among these implements is reflected in the language of the OT, where the common Hebrew word for "sword" (חרב) is translated once in the RSV (Josh. 5:2) and three times in the KJV (Josh. 5:2; I Kings 18:28; Ezek. 5:1) by the English "knife."

Almost every archaeological expedition in Palestine has produced some knives. The "Canaanite" type of FLINT knife, in use from *ca.* 3500 B.C. until replaced by metal, was *ca.* six inches long, with a double edge and a raised central ridge. Joshua was ordered to make flint knives (חרבות צרים) for the circumcision of the Israelites (Josh. 5:2-3). Since at this time the flint knife was not in ordinary domestic use, its employment in circumcision implies an ancient ritual to which an old form of knife was appropriate. The copper knife was used from the patriarchal period to the Early Monarchy. The most common form was a straight blade six to ten inches long, although knives with curved tips have also been found. The handles were sometimes made in one piece with the blade; and sometimes wooden handles, fastened to the blade by a tang or by rivets, were provided. When introduced, iron knives followed the same general pattern as their copper forerunners. The metal blades were cast in limestone molds. One such mold, designed to make a blade sixteen inches long, was found at Tell Beit Mirsim, and reminds one of the large knife used by the Levite for his gruesome task (Judg. 19:29), and by Abraham for the sacrifice of Isaac (Gen. 22:6).

The knife served many purposes in the ancient economy—e.g., pruning trees, killing and skinning animals, and slaughtering sacrifices. The knife might even be used as a razor, for there was apparently little difference in form between the two. Jehoiakim's PENKNIFE (תער; Jer. 36:23) is the same word elsewhere translated "razor." The KJV includes twenty-nine knives among the temple furnishings (Ezra 1:9), but here the RSV reads "censers," following I Esd. 2:13. When comparison with a cutting edge is required, biblical metaphors almost invariably speak of the sword. Only once (Prov. 30:14) is "knife" used in this way, as a metaphor for rapaciousness.

KNOP. 1. KJV translation of כפתר (RSV CAPITAL), a detail of the LAMPSTAND in the tabernacle, in Exod. 25:31, 33-36; 37:17, 19-22. The translation "knop" was probably derived from the LXX σφαιρωτήρ (Vulg. *sphaerula*), a knob-shaped ornament.

2. KJV translation of פקעים (RSV GOURD) in I Kings 6:18; 7:24. E. M. GOOD

***KNOWLEDGE.** The verb "to know" is used in two different ways—viz., in a realistic sense, referring to individual objects with which we are familiar, and in a scientific sense, where knowledge is concerned with the general features or the "essence" of things. The former usage implies a personal relationship between knower and thing known; nevertheless, there is considerable difference between "objective" knowledge, in which the individual is primarily eager to apprehend the "whatness" of the object, and existential" knowledge, in which the individual apprehends the object merely as a factor by which his self-consciousness is affected in a specific way.

Knowledge in the OT is of the realistic and objective type under the two aspects. Failure to differentiate between the OT view of knowledge and scientific knowledge has often resulted in erroneous exegesis.

Bibliography

1. In the OT. ***a. Knowledge in general.*** The noun "knowledge" in the English versions of the OT is the

rendering of a number of cognate words, such as דעת, מדע, דעה, and דע, all of which are derived from the verb ידע. The lexicons often render the latter by "to know from experience," which is appropriate in some instances—e.g., to know afflictions (I Kings 8: 38), loss of children (Isa. 47:8), disease or grief (Isa. 53:3), or God's vengeance (Ezek. 25:14). However, the fact that ידע can be used to designate sexual intercourse—e.g., on the part of the husband (Gen. 4:1, 17, 25) and on the part of the woman (Num. 31:18, 35; Judg. 21:12)—points to the fact that for the Hebrews, "to know" does not simply mean to be aware of the existence or nature of a particular object. Knowledge implies also the awareness of the specific relationship in which the individual stands with that object, or of the significance the object has for him.

In accordance with the Hebrew view of man, in which the individual is considered as a differentiated totality rather than as a being composed of body and mind, knowledge is an activity in which the whole individual is engaged, not his mind only. The heart, which is sometimes mentioned as the organ of knowledge (see, e.g., Ps. 49:3; Prov. 2:2; 10:8; Isa. 6:10), is not being conceived of as a special noetic faculty, but rather the use of the term explains the fact that this kind of knowledge is always accompanied by an emotional reaction. The relation in which the object stands to the individual causes the latter to rejoice (e.g., Pss. 1:2; 19:7-10; 40:16) or to be grieved, to love it or to hate it (e.g., Pss. 34:8; 119:97, 103-4; Prov. 23:6). On account of the particular character of the object this reaction cannot be limited to mere sentiments. Full comprehension of the object manifests itself in action which corresponds to the relationship apprehended—e.g.:

> The ox knows its owner,
> and the ass its master's crib:
> but Israel does not know
> (Isa. 1:3).

Israel's lack of knowledge is not theoretical ignorance, but rather failure to practice the filial relationship in which they stand with God.

The "tree of the knowledge of good and evil" (Gen. 2:17) is not to provide scientific or theosophic knowledge, or a purely theoretical knowledge of moral values. Rather, as the forbidden tree it will disclose the difference between good and evil to the first couple through their very act of eating the fruit. It is through trespassing God's prohibition that one will "know" what the wrong is like—viz., a quality of one's own self in action.

The OT evinces no interest in the possible limitation of knowledge. There is an awareness of the fact that to know a person is more difficult than to know a thing, because a person must disclose his will in order to be adequately known (e.g., Prov. 25:3: "The mind of kings is unsearchable"). While the fact that man is unable to know the future is taken seriously (e.g., Ps. 39:6), the view is generally held that man is capable of knowing everything required for a meaningful and worth-while life. However, in a view similar to modern pragmatism it is held that the original encounter with the object does not immediately yield full and true knowledge. It is from partial ignorance (e.g., Deut. 11:2) through practical tests that the individual is taught what the true nature and significance of the object is and by what kind of reaction the individual will fully apprehend and comprehend it. That final stage of knowledge is called WISDOM. In order to shorten the way to full knowledge, the individual is advised to seek and heed the teaching of the wise men (e.g., Prov. 1:1-7; 5:1; 13:14; Eccl. 8:1). The fool, in turn, is the man who, instead of following the arduous road to wisdom, is satisfied with the primary impressions.

b. The knowledge of God. In the field of religion, "knowledge" is the principal term used to describe man's right relation to God. In numerous instances, where Christian usage would speak of "faith" and "to believe," the OT employs the phrase "to know God" (e.g., Judg. 2:10; Jer. 10:25; 31:34). The knowledge of God is thought of as originating in the same manner as all other knowledge—namely, by an encounter with God. However, unlike the pagan religions, in which people apprehend various aspects of the nature of the divine from the general features of this world, the OT derives the knowledge of God from those outstanding historical events in which God has evidenced or is showing the interest he takes in the subject (e.g., Exod. 9:29; Lev. 23:43; Deut. 4:32-39; Pss. 9:10; 59:13; 78:16; Hos. 2:19-20).

Since God does not enter into every man's experience directly, knowledge of God is dependent on the witness of those privileged persons to whom he has revealed himself—e.g., Abraham, Moses, Joshua, the judges, David, the prophets (*see* REVELATION). This does not mean, however, that for the majority of the people knowledge of God was confined to the acceptance of the witness of the "men of God." Rather, guided by their message, people are advised "to seek" God (e.g., Deut. 4:29; I Chr. 16:11; 28:9; II Chr. 7: 14; Ezra 8:22; Pss. 9:10; 14:2; 119:2; Isa. 9:13; 51:1). This phrase does not denote the search for an unknown entity, but rather an effort of the will to comprehend the significance which God's dealing with his people has for the individual and for the nation, as well as the readiness to live the kind of life which is in accordance with this significance. The reciprocal character of man's knowledge of God comes out in the fact that the believer's life is considered as one in which God teaches man (e.g., Exod. 4:12; 33:13; I Kings 8:36; Pss. 25:4; 27:11; 86:11; 90:12; Isa. 28: 9; 54:13; Jer. 31:34) or searches and tests him (e.g., Job, or the Servant of God; cf. also Ps. 139:1-2, 23; Jer. 12:3; 16:21; 17:10)—i.e., one in which by means of the experiences through which he is to pass, a man will become aware concretely of what it means to have a God (Prov. 4; cf. Deut. 8:5: "As a man disciplines his son, the LORD your God disciplines you"). The "FOOL" is therefore particularly the man who refuses to be taught and educated by God (Job 2:10; 30:8; Pss. 14:1; 53:1).

Thus knowledge of God implies a knowledge of oneself as related to God—e.g., as acknowledging one's transgression (Ps. 51:3), realizing the former and present benefits of God (Jer. 9:12*b* LXX; Ezek. 34:27-28), or assuming one's religious obligations (e.g., Isa. 1:3). Thus as grammatical object of "to know" one finds quite frequently "God's ways" or "precepts" instead of "God" (e.g., Pss. 25:4, 12; 119: 104; cf. Hos. 6:3). Because knowledge of God is ex-

perience of the reality of God, not merely knowledge of propositions concerning God, it frightens man (e.g., Exod. 3:6; Job 27:34), and the fear of God (*see* FEAR) is an essential ingredient in the OT knowledge of God (e.g., Pss. 25:14; 111:10; Prov. 9:10). This fear is not a mere sentiment. It manifests itself in a way of life, in which man respects the majesty and power of God. Only the righteous man (*see* RIGHTEOUSNESS) can therefore be said truly to know God (e.g., Deut. 4:39; Jer. 22:15-16). This feature, more than any other, brings out the wide gulf which separates the Hebraic from the Greek view of knowledge. In the latter, knowledge itself is purely theoretical, and it is left to man's discretion whether or not he will derive rules for conduct from his insight, whereas in the OT the person who does not act in accordance with what God has done or plans to do has but a fragmentary knowledge, which, if not coupled with the fear of God, will eventually result in moral disintegration (e.g., Hos. 4:1).

The God of the OT is a God who wants to be known. While his revelations are limited to a few chosen ones, they are to be taught to all members of the nation (e.g., Deut. 4:9; 5:31; 6:7; Ps. 51:13), and the promise is extended to Israel that eventually all shall know God (Jer. 31:34; cf. Isa. 11:9). However, since the knowledge of God rests upon his self-disclosure, mankind will never be able to know more of God than God deigns to reveal (Prov. 25:2). Thus in a way God remains hidden (Isa. 45:15) and unsearchable (Job 37:5; 42:3; Prov. 25:1).

c. God's knowledge. In view of the personalistic character of the biblical religion, it is not surprising to find knowledge ascribed to God. There is nothing that could be hidden from God (e.g., Ps. 139:1-18). However, this knowledge of God is not, like the later concept of omniscience, a mere awareness of all that is and goes on in this world. God's knowledge is primarily knowledge of people, and like all knowledge, too, implies an interest taken in those whom he knows. Often the phrase designates acts of care, help, and succor (e.g., Job 31:6; Pss. 1:6; 50:11; 73:11; 103:13-14; 144:3; Nah. 1:7)—i.e., treating everyone according to his deserts (e.g., Jer. 17:9-10). This knowledge manifests itself especially in God's mighty deeds and judgments (e.g., Job 36:5). Thus in a special sense those known by God are his chosen ones (Jer. 1:5; Hos. 5:3; Amos 3:2; in the latter two passages the term has the sexual connotation), and in turn those whom God does not know, or knows from afar only (e.g., Ps. 138:6; cf. Matt. 25:12) are those whom God disregards or leaves devoid of support.

2. In the intertestamental period. The Jewish literature of the period between the end of the Exile and the days of Jesus evidences the continuation of the OT view of knowledge. However, since the rabbis are preoccupied with the knowledge of the law, they lose sight of the basic encounter with God, and as a result knowledge of the law of God is understood as the ability so to interpret the Torah that it yields practical juridical rules. In the DEAD SEA SCROLLS and in the Zadokite Document (*see* ZADOKITE FRAGMENTS), however, a new concept of knowledge appears, which is based upon a special illumination which the Spirit of God has imparted to certain individuals. This knowledge serves to apprehend the true sense of the Torah and to be aware of the stage reached by the eschatological process. This type of knowledge comes closest to the prophetic experience in the OT. However, whereas the prophet receives a divine message, the "Teacher of Righteousness" excels his contemporaries by the fact that he possesses a new noetic faculty, by which he is enabled spontaneously to grasp the exact meaning of the Torah.

3. In the NT. ***a. Common features.*** The writers of the NT continue the OT usage, and particularly in the Fourth Gospel knowledge of God and faith are practically synonymous. However, in view of the new level which has been reached in the realization of God's redemptive work, the knowledge of God, too, has been modified. True knowledge expresses itself in action (e.g., Luke 19:44; Acts 2:36; II Pet. 2:20-21; Rev. 2:23), but what matters is in the first place the right attitude, the purity of heart (Matt. 5:8) which engenders the action, not the action itself. Whereas in the OT the knowledge of God was focused upon his past deeds and thus upon his faithfulness, the NT looks primarily toward the goal which the Lord is about to realize and thus concentrates upon God's redemptive purpose. The subject matter of knowledge is often described as God's mystery or the mystery of the kingdom (*see* MYSTERY)—i.e., the disclosure of the fact that God is now entering upon the final act of the redemptive drama (e.g., Mark 4:11 and parallels; Rom. 11:25; 16:25; I Cor. 2:1; 15:51; Eph. 1:9; Col. 1:26-27; Rev. 10:7; cf. II Pet. 3:17). Thus the Christian's knowledge of God carries finality within it.

While in the NT the subject matter of knowledge can be described in OT fashion as that of the way of God (e.g., John 14:4; Acts 13:10; I Cor. 12:31; Heb. 3:10) or the will of the Lord (Col. 1:9), it is not so much the commanding will of God which is thereby designated as, rather, his redemptive purpose and his goal, which is Jesus (e.g., Acts 2:36). The only true knowledge of God is therefore the one which the Son has (Matt. 11:27). Thus the knowledge of God requires a special revelation which comes to man through the life and teachings of Jesus (John 1:14; 14:10). He is, as John describes him, the final "Word" of God. In order to know God, people must therefore listen to him (e.g., Mark 4:3, 9, 24; Eph. 1:13; 3:2; Phil. 4:9; Col. 1:23)—i.e., be willing to heed God's message. However, the communication of the revelation and the attention paid to it do not preclude misunderstandings (e.g., Jas. 1:3), nor does the communication immediately engender full knowledge of God, as is evidenced, e.g., by the disciples' lack of understanding (e.g., Matt. 15:10, 17; 16:9, 11; John 2:22; 6:60; 12:16; 14:20; cf. I John 5:13). The sublimity of the redemptive work of God transcends the natural limits of the human mind. God himself has to work the understanding of his revelation (e.g., Phil. 2:13; II Pet. 1:2; I John 5:20) by imparting his Holy Spirit to those who have accepted his revelation (I Cor. 2:10-12; I John 2:20; 3:24; cf. Luke 19:42, 44). The individual's views and experiences have therefore to be tested by God's word and commandment as evidenced in the work of Christ (e.g., I Cor. 14:37). Failing to teach that God is capable of revealing himself afresh, the scribes have taken away from the peo-

ple the "key of knowledge" (Luke 11:52). *See* IGNORANCE.

b. John. Among the NT writers, John and Paul have given special thought to the problem of knowledge. John emphasizes particularly the fact that Jesus not only has perfect knowledge of God's purpose and nature (John 3:11; 4:22; 7:28-29; 8:14, 55; 10:15; 12:50; 13:3), because he is anxious not to do anything but the Father's will (5:30), but he also desires through his ministry to disclose the Father to all men (e.g., 14:1-17; 17:1-6). Though from the beginning mankind was offered an opportunity to know God (1:9), man's actual or "natural" knowledge of the divine revelation is useless and misleading, because of his sin (John 1:10; 8:54-55; I John 3:6). Even the Jews' knowledge of God remains, therefore, sheer ignorance, unless it leads to a love of Jesus in which his saving function is recognized (John 14:28; I John 3:16; 4:17). The first step of true knowledge consists in receiving Jesus' message; on this road his followers will be led to the full TRUTH (John 8:31-32).

However, this message consists in actions, which are signs, *semeia* (*see* SIGNS IN THE NT)—i.e., events in which the outward circumstances point toward the divine will of Christ embodied in them. Those only who are willing to believe that in his actions Jesus is doing the will of the Father, receive the LIGHT which enables them to discern the Son of God in his hiddenness. In Jesus one sees eventually God (John 14:17). Thus knowledge, which has reached this level, is not a mere acceptance of God's revelation, but rather an ontic relationship with God has been established therein. In turn, one has eternal LIFE in such knowledge (17:3). The believer is therefore certain that God, or Christ, abides in him (I John 3:24; cf. John 14:17) and transforms him into his likeness (I John 3:2; 4:2). The proof that one has attained to this knowledge is found in the assurance that Jesus came from God (John 16:30; 17:8), in readiness to follow his example (John 7:17; I John 2:3-5, 29), and consequently in the public profession of faith—i.e., the willingness to suffer for Christ's sake (e.g., John 7:12; I John 4:2; cf. 2:3; 3:24). Because Christ is present in the church through his Spirit, its message has the same effects as that of Jesus (I John 4:6). Even without personally seeing the works of Christ, one is able to believe by accepting the eyewitnesses' testimony (John 20:29-31).

The knowledge brought by Jesus is contrasted with that of the rabbis (John 7:28; 8:19; 9:24, 29), who from the knowledge of the commandments formed both their image of God and the aim of life. Jesus reminds his disciples that in him they know the goal and thus the way. What they ought to do is not told them in advance; they will learn it as they love Jesus and the Father who sent him (e.g., John 14:4-12; I John 5:2).

Certain writers have defined John's view of knowledge as belonging to Hellenistic mysticism. While John shares with Hellenism the individualistic concept of knowledge, he has this in common with Pharisaism. Thus no special outward influence needs to be postulated. Furthermore, even though John uses freely the terminology and thought-patterns of Hellenistic mysticism, he does so in order to present in an apologetic way what is a typically Hebraic concept of knowledge. He wants to show his contemporaries how their epistemology has to be modified to make sense religiously.

According to John, knowledge does not lead to a gradual merger of the knower's mind with that of God, but rather to a harmony of their wills in which God remains distinctly the authority to be recognized. Furthermore, the subject matter of true knowledge is shown to be, not God's eternal nature, but rather the divine love which at a very definite moment has entered into our lives (e.g., John 16:30: "now we know"; cf. 17:7)—i.e., God's dealing with us. The truth which liberates (8:32)—a typically Stoic expression—does not so much make a person indifferent toward social conditions as free from the fetters of unbelief and sin.

While John shares with Hellenistic epistemology the clear distinction of levels of knowledge, the development from the original apperception of the message to the union of the wills is not so much the result of the individual's efforts or of his possessing a special faculty of "higher" knowledge as of the intrinsic challenge of the message, or of it being the light or the truth.

Even the concept of the Logos, which seems to be so conspicuously Hellenistic, is understood as the Hebrew *dabar* (*see* WORD). Far from being the basis of a rational world, it interprets the universe as a divine communication destined to lead people to personal fellowship with God (I John 1:1-3). By means of the "Word" speaking within themselves, people are enabled to become aware of their relation to God and to make this relatedness articulate in acts of obedience to, and love of, God.

c. Paul. A somewhat different picture is offered in Paul's letters. Whereas for John it is the earthly ministry of Jesus, which through its signs (σημεῖα) forms the basis of the knowledge of God, for Paul it is primarily the experience of the risen Lord's operation in the life of his church (*see* CHURCH, LIFE AND ORGANIZATION OF). Thereby knowledge assumes a personal character, by means of which it is essentially differentiated from the knowledge of Gnosticism.

The Christian knowledge transcends all other knowledge, including that of the OT, by the fact that in Jesus Christ for the first time in the history of mankind the glory of God has been manifested in a human life (II Cor. 4:6). Hence there can be no true knowledge of God except in his manifestation in Christ (e.g., Gal. 4:9; Col. 2:2-3). Paul's view differs from John's in that John finds the divine manifestation in specific actions of Jesus, whereas Paul focuses his attention upon the moral and spiritual character of Jesus. In him the goal of God's "mystery"—i.e., of his saving purpose—becomes visible (I Cor. 2:7; Eph. 1:2-4; Col. 1:9; 3:23-24), and thus he determines our moral obligations (e.g., Eph. 5:5; Col. 3:16). Christ offers also the clue to all God's works in the universe (Col. 2:2-3; cf. I Cor. 1:24). Furthermore, since Christ fulfils a divine mission, knowledge of him implies awareness of the future eschatological events as well (Phil. 3:10-11; I Thess. 4:13-18; cf. I Cor. 15:35-57). Above all, however, knowledge of Christ is the realization of his saving significance (I Cor. 2:12-13; Phil. 1:9-10; Philem. 6). Thus he is the supreme value, and our whole scale of values has to

be reappraised and orientated toward this fact (Phil. 3:8).

Though all men are capable of knowing God, the knowledge of Christ is given to those only in whom the HOLY SPIRIT operates (e.g., I Cor. 2:12-13; Eph. 3:4-5; Phil. 3:8). It is through the Holy Spirit that the believers are enabled to apprehend the manifestation of God in the earthly life of the man Jesus (I Cor. 2:10-13). This spiritual comprehension of God's revelation Paul contrasts with a religious knowledge κατὰ σάρκα—i.e., of a purely earthly character (I Cor. 3:1-3; II Cor. 5:16; cf. I Thess. 5:12)—in which God's work is related to innerworldly goals only. Such were, e.g., the Jewish eschatological and messianic expectations. Truly spiritual knowledge originates in the hearing of the message in which God's revelation in Christ is proclaimed (Rom. 10:17; I Cor. 8:1; Col. 1:6; I Thess. 4:9). Faithful acceptance of the "word of Christ" (Rom. 10:17; Eph. 1:13) or the "gospel" (e.g., Rom. 1:15; 10:16; I Cor. 1:17; II Cor. 4:3; Eph. 3:6; Col. 1:5) leads to spiritual experience, both of its reality and of its implications (Rom. 15:14; I Cor. 1:5; II Cor. 8:9; Gal. 2:9; Eph. 1:18). However, Paul points out that even the richest spiritual knowledge remains fragmentary here on earth (e.g., Rom. 11:34; I Cor. 13:12-13), both because of the limited range of our experience and because the Spirit of Christ has to operate upon an earthly mind. Progress in spiritual knowledge can, nevertheless, be accomplished by means of mental discipline and willingness to listen to God (I Cor. 1:24-27).

Since spiritual knowledge is dependent upon verbal communications (e.g., Rom. 10:14; Eph. 4:21; cf. I Cor. 15:1), it can easily be mistaken for theological verity—i.e., propositions which are accepted on account of their intrinsic consistency (e.g., Rom. 3:19; 7:1; I Cor. 3:16; 5:6; 6:15; 8:4; Eph. 5:5). However, from the very beginning, spiritual knowledge points to its ontological basis—viz., the relation in which the believer stands to or "in" Christ (Eph. 1:18-19; Phil. 3:8-18)—and it is intended to lead to experience, e.g., of the crucifixion of our "old self" (Rom. 6:6), of Christ's love (Eph. 3:19), or of the power of his resurrection (Phil. 3:10) and the spiritual world in general (Phil. 3:8; Col. 2:2-3). Such progress of knowledge is the fruit, not of reasoning, but rather of a deepened insight of the heart (Eph. 1:17; cf. 3:19)—i.e., of intensive listening to the Holy Spirit, who together with the message comes to the audience as the intrinsic "intention" of the message. The level of spiritual knowledge is not due to one's possessing larger or smaller portions of the Spirit, because the Spirit is a person rather than an energy (e.g., I Cor. 12:11; I Thess. 4:8; cf. John 8:34), but to man's willingness to follow his promptings (e.g., I Thess. 5:19). It is this experience of the Spirit's reality in one's own life which in turn moves the believer to actions (Rom. 2:18; 6:22; I Cor. 3:16; 6:13-16; Gal. 5:22; Eph. 5:9; Col. 1:6) such as would not follow from speculative views.

Paul insists that God is a God who wants to be known (Rom. 16:25). His purpose in granting this kind of spiritual knowledge is to let man be formed into the likeness of Christ (Gal. 4:19; Col. 3:10; cf. Rom. 2:20; 8:28) and in this "metamorphosis" (Rom. 8:29; 12:2; Phil. 3:21) to have full knowledge (I Cor. 2:12; *see* IMAGE). By imparting such knowledge to man, God indicates that he takes man seriously and that he will arrange all things for our good (Rom. 8:26). In turn, this formative function of knowledge effects the kind of conduct in which the believer's relation to Christ becomes articulate (Rom. 6:17: "form of instruction"; II Tim. 1:13: "form of sound words"; cf. Rom. 2:20: "form of knowledge"). In all these instances, "form" is not a legal "standard" (so RSV) but rather a formative principle realizing itself from within the individual.

Developments in the church of Corinth made Paul aware of the fact that the experiential character of spiritual knowledge brings it into proximity to enthusiastic and ecstatic experiences which have nothing to do with faith (I Cor. 12–14). He was therefore anxious to indicate criteria by which genuine spiritual knowledge could be tested. First of all, it must be in agreement with the Lord, or the revelation of our Lord (e.g., Rom. 14:14; I Cor. 1:7; 4:4; 7:10; 9:1, 14; 10:9)—i.e., with the life and sayings of Jesus. He is the reliable and unshakable foundation of all knowledge (I Cor. 3:11). Secondly, there is the witness of the OT (e.g., I Cor. 1:11; 10:1-13; 14:37; 15:3-4; II Cor. 1:18), which is closely related to the Lord, because he is the Amen—i.e., the fulfilment of its promises (II Cor. 1:19-20). Thirdly, there is the agreement with God's manifestations in the universe (e.g., Rom. 1:21). Finally, there is the witness of the Spirit in our own experience, which is characterized by the fact that it confirms our deepest aspirations while at the same time overcoming our reluctance to follow them (e.g., Rom. 8:16, 26). The individual's willingness to accept all these tests is proof of his having a genuine spiritual knowledge.

A further test is the collective character of spiritual knowledge. It has entered into history through the witness and proclamation of the apostles (*see* APOSTLE), who were the ones to see the heavenly glory of the risen Lord (I Cor. 15:5-9) and who were commissioned to propagate the gospel (e.g., Rom. 15:14; I Cor. 9:1; 12:28; II Cor. 12:11; Gal. 1:1; Eph. 3:8, 10). The nucleus of spiritual knowledge is formed by the tradition (παράδοσις; *see* TRADITION, ORAL) of the church (Rom. 6:17; I Cor. 11:2, 23; 15:1, 3; Gal. 1:9, 12; Phil. 4:9; I Thess. 2:13; 4:1; II Thess. 2:15; 3:6). There is also a special spiritual gift of knowledge (γνῶσις; I Cor. 12:8; 13:2, 8; 14:6; II Cor. 6:6; 11:6) by which certain members of the church are enabled more distinctly than others to discern the implications and applications of its message. The test of the genuineness of such a charisma is to be found in genuine humility and love (e.g., I Cor. 8:1-2), which, far from boasting of such knowledge (Col. 1:28; cf. I Cor. 1:29, 31), is anxious to let the other members of the church share in it (I Cor. 14:26).

Like the OT writers, Paul, too, in some passages uses the phrase "being known by God" (I Cor. 8:3; 13:12; Gal. 4:9). God knows the best way to the goal he has set himself, and thus manifests himself in actions which both disclose the futility of unenlightened wisdom (I Cor. 1:20; 3:20) and refute it effectively (I Cor. 1:25). God's "knowledge" is therefore not to be identified with his omniscience; rather, the term designates those special events in which the truth or

the falsehood of people's attitude toward God is brought to the light. Thus whatever takes place in the redemption of mankind presupposes that it has been known beforehand by God (Rom. 8:29; 11:2; cf. I Pet. 1:20). This indicates that in all his works God acts with a purpose and thus uses those best fit for the specific end contemplated. This foreknowledge manifests itself in the election of his chosen people (Rom. 11:2) or of individual believers (Rom. 8:3, 29; 13:12; Gal. 4:29; II Tim. 2:19). As a manifesting activity the divine knowledge is seen in a man's love of God (I Cor. 8:3) as well as in his knowledge of God (I Cor. 8:3; 13:12; Gal. 4:9).

Consequently, the Christian knowledge of God is not the result of speculative insight, but rather is based upon the experience of being used by God for his saving work. Thus the egotistic tendency implied in man's desire for salvation is overcome in such knowledge by the awareness of God's redemptive action in and upon the individual. The believer knows from inner experience that he is Christ's, not his own (e.g., Rom. 14:7-8; I Cor. 3:21-23; II Cor. 10:7; Gal. 3:29). While substantially the believer's knowledge of God is his awareness of being known by God, man's knowledge here on earth never equals the divine knowledge, because of the fundamental difference between God's Spirit and the human mind. God's knowledge requires no mediation. He knows all things directly in himself (I Cor. 2:10-12). Far from ever erring in his ways, he arranges everything exactly in accordance with the nature of the people as well as with his ultimate goal (Rom. 11:33; I Cor. 1:20-21). Conversely, our knowledge remains fragmentary, because in this life we apprehend God only indirectly, as through a mirror, in our experience of our being known by him (I Cor. 13:12). Thus our "good works" are but symbols of our faith and not good in themselves. The reason for the limited character of man's knowledge of God is not found, as in the OT, in the limitations of man's wisdom, but rather in the mode of the givenness of God, and thus there is hope that though a creature, man will know God face to face—i.e., as he is—in the life to come. But since it is God in Christ who is apprehended in Christian knowledge, there is divine truth even in its provisional, earthly stage, and consequently the believer's actions and words bear adequate and effective witness to God's saving work (e.g., I Cor. 1:6-7, 25; 2:6; 3:1-3; 4:1-5; II Cor. 2:14-16; 3:5).

The believer's knowledge of God is radically contrasted by Paul with man's natural wisdom. God's will is known to all men as it manifests itself in the voice of conscience (Rom. 2:14-16). Yet the natural religious knowledge of the Gentiles is a perverted one, because on account of their sinfulness they interpret the data in the wrong way (Rom. 1:18). They transmute the transcendence of God into immanence (Rom. 1:23), and instead of relating their insights to God's ultimate goal, they interpret God as serving human ends (II Cor. 4:4). The wrongness of their religious knowledge can be seen most clearly in their lack of true reverence for the transcendence of God, their lack of gratitude for all that we possess, and their unwillingness to dedicate their lives to his service (e.g., Rom. 1:21-25). Thus no matter how bright and keen their intellect may be, their wisdom is futile (Rom. 1:21; Eph. 4:17), foolish (I Cor. 3:19), and blind (II Cor. 4:4; cf. I Cor. 1:20-21), and their moral standards serve to justify immoral practices (Rom. 1:28-32). Paul does not teach that man's reason is worthless, nor does he hold that the believer is privileged by having a special cognitive faculty for religion, but rather he contends that apart from faith all human knowledge operates in a wrong frame of reference. Man is never fully devoid of a knowledge of God, but the original datum is falsified as a result of his arbitrary arguments and speculations (II Cor. 10:5). Failing to see the consistency of God's operations, he sees the gospel as an absurdity (I Cor. 1:23). Since the unconverted man's thinking moves in a vicious circle, the cogency of logical arguments will not convince him; only God's Spirit is able to lead him to an acceptance of the truth (I Cor. 2:10-13; Eph. 1:17).

d. Paul and Gnosticism. A word should finally be said about Paul's relation to GNOSTICISM. While our survey has shown that Paul's mentality and concept of knowledge represents substantially the dynamic realism of the Hebraic type, it is certain that formally the Apostle, more than any other NT writer, shows the influence of Hellenistic thought. Quite apart from the fact that Paul employs terms and stylistic patterns of popular Hellenistic philosophy, the influence is most obvious in his insistence upon "systematic" thought. He wants to show how Christ is related to everything in the universe. He is not satisfied, e.g., with proclaiming the lordship of Christ, but is anxious also to show the exact place Christ occupies in relation to all other cosmic powers (e.g., Col. 1:15-20; cf. I Cor. 8:4-6). Similarly he discusses, e.g., man's place in the universe (e.g., Rom. 8:18-25), the place of Christian faith among the world's religions (Rom. 1–3), the diversity and the relative value of the various gifts of the Spirit (I Cor. 12–14), or the order of the final eschatological events (I Cor. 15:22-28). This is a procedure which has no parallel in other biblical writers. However, it is not truly Hellenistic, either. For Paul presents a comprehensive view of the concrete facts, whereas Hellenistic philosophy aims at a logical classification of the essences underlying the concrete facts.

However, when all is said about Hellenistic influences upon Paul's mind, we are still worlds apart from Gnosticism. While it is true that Paul has used oriental materials which have also been incorporated into the Gnostic systems, his thinking not only is not Gnostic but is opposed to it. For Gnostic mentality it is characteristic to believe that by an intellectual knowledge of the arrangement of the universe the initiate will be able to map out his own way of salvation. Paul, on the contrary, will say that the better we get to know Christ, the more deliberately we shall cling to him as our only salvation (Phil. 3:8). The knowledge itself is not valuable; separated from its object, it puffs up (I Cor. 8:1). Christians are enriched by the knowledge of Christ (e.g., I Cor. 1:5; Eph. 1:17; cf. Rom. 11:33), because thereby they are enabled in all spheres of existence to be "in Christ."

Furthermore, whereas the Gnostic knowledge is a faculty with practically unlimited applicability, Paul points out that Christ is the limit of all knowledge (Col. 2:3) and that he confounds our aberrations. Beyond what God has done in him, there is nothing

that man is capable of knowing concerning salvation. Thereby not only a supreme value but also an ultimate goal has been introduced into the system of knowledge (e.g., Phil. 2:10-11; Col. 1:16). Teleology is completely absent from the Gnostic systems; they are built upon the principle of static values. Finally, while the Gnostic systems share with Paul the search for comprehensiveness, they do not, like Paul, start with the experience of a redeemer (e.g., Gal. 1:16, where, however contrary to the RSV, we should read "to reveal his son *in* me"; cf. 1:12; I Cor. 2:10). Rather, by means of an ontological analysis of the universe they finally attain to a supreme reality, out of which, in turn, the order and the "mechanics" of being are interpreted. As a result, in lieu of the basic conflict between sin and salvation, which is implied in Paul's original experience and which dominates his whole thinking, we find in Gnosticism merely gradual differences of being.

It is true that Paul, too, knows a special charisma of knowledge (*gnosis*) transcending the general knowledge that is given to all the believers through the Holy Spirit (e.g., I Cor. 8:1; 14:6). But whatever he may have meant thereby, it cannot be the esoteric knowledge of Gnosticism, given the fact that he fights so fiercely against false knowledge and philosophy (I Cor. 1:17, 20-25; Col. 2:8, 23), contrasting them with the "foolishness of the cross" (I Cor. 1:18, 23). The argument in I Cor. 8 suggests that this special knowledge is the ability to discern the comprehensive function of Christ in the universe (cf. also II Cor. 2:11). Unlike esoteric Gnostic knowledge, the "secret and hidden wisdom of God" (I Cor. 2:7) is therefore not to be kept secret, except for a few initiates, but rather to be proclaimed to all men (Rom. 1:14); cf. also the recurrent phrase "I do not want you to be ignorant" (e.g., Rom. 1:13; 11:25; I Cor. 10:1; 12:1; I Thess. 4:13) referring to spiritual mysteries. Finally, it would never have come to a Gnostic's mind to interpret lack of knowledge of the mysteries as the work of the Devil (II Cor. 4:4), but rather as a result of man's natural inability.

O. A. PIPER

KOA kō′ə [קוע] (Ezek. 23:23). A gentilic mentioned in the sequence Babylonians, Chaldeans, Pekod, Shoa, and Koa. Since the Pekod clearly correspond to the Paqudai, living in S Babylonia, it has usually been suggested that Shoa refers to the Sūtu people and Koa correspondingly to the Guti, but it seems more likely to consider "Shoa" and "Koa" a rhyming locution, like "Krethi" and "Plethi," "Gog" and "Magog."

A. L. OPPENHEIM

KOHATH kō′hăth [קהת; LXX Καα θ]; KOHATHITE —hă thīt. Second son of LEVI (Gen. 46:11; Exod. 6:16; Num. 3:17; I Chr. 6:1—H 5:27; 6:16—H 6:1; 6:38—H 6:23; 23:6). He was the father of Amram, Izhar, Hebron, and Uzziel (Exod. 6:18; Num. 3:19; I Chr. 6:2—H 5:28; 6:18—H 6:3; 23:12), who became heads of Kohathite branches (Num. 3:27), and he died at the age of 133 (Exod. 6:18). Since Kohath was the grandfather of Aaron, Moses, and Miriam (Exod. 6:20; Num. 26:59; *see* AMRAM), the Kohathites (usually משפחת הקהתי or בני קהת, but twice בני הקהתים [II Chr. 20:19; 34:12], once בני הקהתי [Num. 4:34], and once just הקהתים [10:21]) were the most important of the Levitical families.

All information about Kohath as a person and the Kohathite families descended from him comes through either the priestly writer (*see* PENTATEUCH § A) or the Chronicler (*see* CHRONICLES, I AND II) and falls into the periods of the Exodus, the Conquest, the Monarchy, and the Restoration.

1. Exodus. When the TABERNACLE was constructed in the wilderness, the three chief Levitical families—Gershonites, Kohathites, and Merarites—were stationed around it and charged with its care and transit. Divided into four major families, the Kohathites numbered 8,600 males from one month upward (Num. 3:28) and 2,750 from thirty years old up to fifty, all who could "enter the service, to do the work in the tent of meeting" (4:1-3, 34-37). Their station was on the S side of the tabernacle; and their "charge" (משמרת) was the ark, table, lampstand, altars, sacred vessels, and screen (3:29-31). But the Kohathites were not to touch these "holy

things" (הקדש)—or, at 4:4, "most holy things" (קדש הקדשים)—lest they die. Whenever the camp was moved, Aaron and his sons would cover the holy things and fit them with poles, by which the Kohathites could then carry them upon their shoulders (4:4-15, 17-20; 7:9; cf. 10:21).

2. Conquest. At the occupation of Palestine the Kohathites who were descendants of Aaron received by lot thirteen cities, with their pasture lands, from the tribes of Judah, Simeon, and Benjamin (Josh. 21:4, 9-19; I Chr. 6:54-60—H 6:39-45). The remaining Kohathite families received ten cities, including Shechem as a "city of refuge," from the tribes of Ephraim and Dan and the half-tribe of Manasseh (Josh. 21:5, 20-26; I Chr. 6:61, 66-70—H 6:46, 51-55). The Kohathite families possessed, therefore, significant territory in the hill country of S (Judah) and central (Ephraim) Palestine.

3. Monarchy. When David "prepared a place for the ark of God, and pitched a tent for it," he gathered 120 Kohathites, under Uriel as chief (I Chr. 15:5), to bring the ark up into Jerusalem. Then Heman was appointed to represent them in the "service of song in the house of the LORD" (6:33—H 6:19).

When JEHOSHAPHAT sought the Lord for the deliverance of Israel from Moab and Ammon, Levites of the Kohathite line functioned as sacred ministers (II Chr. 20:19).

In 725 B.C., when Hezekiah called upon the Levites to purify Judah's cultic practices, Mahath and Joel represented the Kohathites (II Chr. 29:12).

Similarly, when Josiah undertook to repair the temple in 621 B.C., the Kohathites Zechariah and Meshullam were among the supervising Levites (II Chr. 34:12). *See* JOSIAH.

4. Restoration. Upon the return from exile in Babylon, when ministers were appointed their tasks in the temple, some of the Kohathites "had charge of the showbread, to prepare it every Sabbath" (I Chr. 9:32). L. HICKS

KOHELETH. Hebrew title of ECCLESIASTES.

KOLA kō'lə [Χωλά, *also* Κωλα, Κειλα; *omitted in* Vulg.]; KJV COLA. A locality mentioned in Jth. 15:4. Possibly identical with HOLON in Josh. 15:51.

KOLAIAH kō lā'yə [קוליה, voice of Yahu]. **1.** Ancestor of some Benjaminites living in Jerusalem after the Exile (Neh. 11:7).

2. The father of the false prophet Ahab (Jer. 29:21).

KONA kō'nə [Κώνα *or* Κείλα]; KJV THE VILLAGES. A locality mentioned in Jth. 4:4; the location is unknown. Codex A and a later corrector of ℵ understood κώμαι, "villages." P. WINTER

KOPH kōf [ק, *q* (*Qôph*)]. The nineteenth letter of the Hebrew ALPHABET as it is placed in the KJV at the head of the nineteenth section of the acrostic psalm, Ps. 119, where each verse of this section of the psalm begins with this letter.

KORAH kôr'ə [קרח, bald; Κορέ]; KORAHITES —īts [הקרחי, הקרחים, בני הקרחים]; SONS OF KORAH [בני קרח] (Exod. 6:24); KJV alternately: CORE kôr'ī (Jude 11); KORATHITES kôr'ə thīts (Num. 26:58); KORHITES kôr'hīts (Exod. 6:24; I Chr. 12:6; 26:1; II Chr. 20:19); SONS OF KORE kôr'ī (I Chr. 26:19).

1. A son of ESAU (Gen. 36:5, 14; I Chr. 1:35); chief of a clan of EDOM (Gen. 36:18).

2. A grandson of ESAU; son of ELIPHAZ; chief of a clan of EDOM (Gen. 36:16 [not listed in vss. 11-12; I Chr. 1:36]).

3. A leader of rebellion in the wilderness. The narrative in Num. 16 interweaves three revolts: a JE story of a revolt by laymen led by DATHAN and ABIRAM against the civil authority claimed by Moses (vss. 1*b*-2*a*, 12-15, 25-26, 27*b*-32*a*, 33-34), a P story of a revolt led by Korah (vss. 1*a*α, 2*b*-7*a*, 18-24, 35, 41-50); a later revision of Korah's revolt by a P redactor (vss. 1*a*β, 7*b*-11, 16-17, 35, 36-40). The first two stories originally were told independently of each other and subsequently were combined; the third worked over the material according to P perspectives existing in a time later than the first P writer. The two P versions are to be understood in the context of the struggles which occurred over religious leadership. In P, Korah led 250 leaders of the people in protesting against the Levites (represented by Moses and Aaron) as the only ones to discharge religious offices, since "all the congregation are holy, every one of them, and the LORD is among them" (vss. 1*a*α, 3). Moses invited Korah and those with him to a trial by ordeal: the next day they were to bring fire pans with incense, and Yahweh would choose who was holy and thus could come near Yahweh and perform religious offices (vss. 5-7*a*). The following day the glory of Yahweh appeared, and Yahweh ordered Moses and Aaron to separate themselves from the congregation, to escape the destruction about to come (vss. 18-24). Fire came from Yahweh and consumed the rebels (vs. 35). The next day the people spoke for Korah and his associates and protested the action of Moses and Aaron. The congregation assembled at the tent of meeting; the glory of Yahweh appeared again; Yahweh proposed instant destruction of the people; Moses and Aaron interceded; and Aaron, with his censer filled with incense and fire from the altar, stopped the plague (vss. 41-50). In this story Korah and the others protesting were non-Levites (cf. 27:3, where a Manassite has to make clear that he was not a follower of Korah). The issue was the prerogatives of the Levites in religious affairs. The story was an assertion of Levitical pre-eminence, and bears witness to the downfall of other groups. In the redactional material by a later P reviser, the struggle was within the tribe of Levi. Korah was a Levite (vs. 1*a*β) and led other Levites in a protest against the monopoly of the priesthood by Aaron, a protest which asserted the claim of all Levites to the priesthood (vss. 7*b*-11). The trial by ordeal (vss. 16-17) and the destruction by fire (vs. 35) were repeated from P. The censers of Korah and his company were hammered into a covering for the altar, as a warning that none but priests should come near to the altar of Yahweh (vss. 36-40). This later P redaction may indicate that at some time the Levites, who previously had had a higher status, were assigned a lower position relative to the priest-

hood (*see* PRIESTS AND LEVITES). The P story and the P redaction suggest that developments in the leadership of the cult occurred with considerable inner opposition. They further suggest that there was a time when Korah and those descended from him were important. The further identity of Korah in the P story is uncertain; in the P redaction Korah is identified as the son of IZHAR. *See* § 4 *below.*

4. A Levite, a descendant of IZHAR, of the family of KOHATH (Exod. 6:21; I Chr. 6:22, 37). The attempt to correlate passages where Korah and the Korahites appear encounters gaps and variations in the method of treatment. The Korahites were one of four or five families of Levite-priests located around HEBRON sometime between Deborah and David; the LXX lists them third and the MT fifth (Num. 26: 58*a*, an ancient genealogy, possibly redacted by addition of "Mahlites" and rearrangement). ASSIR; ELKANAH; and ABIASAPH are listed as the families of the Korahites in Exod. 6:24; these and other names are aligned vertically in the genealogical lists in I Chr. 6:22-23, 37. This Korah may be the figure of that name in the P redaction in Num. 16 (*see* § 3 *above;* Num. 26:11 states that "the sons of Korah did not die"). At some time the "sons of Korah" and ASAPH were the two great guilds of temple singers: the superscriptions of some Psalms indicate that they may have been taken from the hymnbook of the Korahite choir (Pss. 42; 44–49; 84–85; 87–88). The Korahites are named alongside the Kohathites as singers in II Chr. 20:19. In late arrangement the three guilds of temple singers were HEMAN; ASAPH; ETHAN (I Chr. 6:33-48, revised material reflecting late postexilic times)—Heman has replaced Korah. The Korahites were gatekeepers (I Chr. 9:19; 26:1, 19), and bakers of sacrificial cakes (9:31).

5. A son of HEBRON in a Calebite genealogy (I Chr. 2:43; *see* CALEB); possibly a geographical name: perhaps a town in Judah somewhere in the neighborhood of Hebron. In the latter case the five Korahites among those who joined David at ZIKLAG (12:6) may have been persons from this town. If they were Benjaminites, as stated in vs. 2, they may have been from another town of this name (site unknown). More probably I Chr. 12 is largely fictional exaggeration: it is unsupported by I Sam. 27, and it is unlikely that more than a few Benjaminites joined David.

Bibliography. M. Noth, *Die Israelitischen Personennamen* (1928), p. 227; K. Möhlenbrink, "Die levitischen Überlieferungen des ATs," *ZAW,* LII (1934), 188-89, 191-206, 230; A. C. Welch, *The Work of the Chronicler* (1939), pp. 96, 115; W. Rudolf, *Chronikbücher,* HAT (1955), pp. 174-75.

T. M. MAUCH

KORE kôr'ĭ [קורא (I Chr. 9:19; II Chr. 31:14), קרא (I Chr. 26:1), partridge]. **1.** A Levite of the house of Korah (I Chr. 9:19; 26:1).

2. KJV form of KORAH 4 in I Chr. 26:19.

3. A Levite, son of Imnah; appointed to have charge of the freewill offerings in the reign of King Hezekiah (II Chr. 31:14). B. T. DAHLBERG

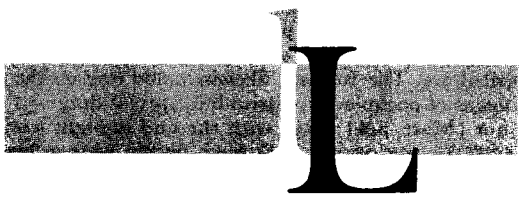
KOZ kōz [קוץ, thorn]; KJV COZ. **1.** A descendant of Judah (I Chr. 4:8); perhaps an ancestor of the priestly house HAKKOZ.

2. KJV alternate form of HAKKOZ.

***KUE** kū'ĭ [קוה; Akkad. *Que;* κουε; Vulg. *Coa*]. Probably an ancient name of CILICIA in Asia Minor, most likely E Cilicia.

The name is found in I Kings 10:28; II Chr. 1:16, but it seems not to have been understood by the Masoretes, while the LXX came closer to the meaning. The RSV has rendered מקוה as "from Kue," while the KJV has "linen yarn." Kue is mentioned as a country from which King Solomon imported horses. It is mentioned together with Mizraim, which does not here mean Egypt (as KJV-RSV), but probably Musri, a country in Asia Minor, like Kue. Cilicia is situated on the fertile coastal plain in the S part of Asia Minor, with the Taurus Mountains in the N and the W, and the Amanus Mountains as border against Syria in the E. Cilicia was famous for its horses, which were bred here in great numbers. In the annalistic reports of King Shalmaneser III of Assyria (858-824 B.C.) Kue is mentioned. The king of this country was one of Shalmaneser's opponents. King Tiglath-pileser III (744-727) received tribute from King Urik of Kue and King Urikki, as can be seen from building inscriptions and from slabs found in ancient Calah. A. S. KAPELRUD

KUSHAIAH kōō shā'yə [קושיהו] (I Chr. 15:17). A Merarite Levite, listed as one of the singers for the sanctuary in the reign of King David; called Kishi in I Chr. 6:44—H 6:29.



L. A symbol used by certain scholars to designate the hypothetical source of much of the material peculiar to Luke, exclusive of the infancy narrative and the passion story. The source is believed to have originated *ca.* A.D. 60(?), perhaps in Caesarea and either in oral or in written form, and to have been composed mainly of stories and parables (*see* Q for contrast) which breathe a spirit of sympathy for the poor and the outcast and the universalistic implications of God's love.

See also SYNOPTIC PROBLEM; LUKE, GOSPEL OF.

D. T. ROWLINGSON

LAADAH lā'ə dɔ [לעדה, *perhaps* having a fat neck or throat; *cf.* Arab. *luṛdun*] (I Chr. 4:21). A descendant of Judah.

Bibliography. M. Noth, *Die israelitischen Personennamen* (1928), p. 227.

LAADAN. KJV form of LADAN.

LABAN (MAN) lā'bən [לבן, white; *apparently originally* Akkad.; *cf.* Aram. (Gen. Apocryphon XX.4); *cf. also personal name* לבלי *and place names* בולה *and* לבלון; *the frequent occurrence of the root* לבן *in* Gen. 30: 25-43 *may reflect a popular etymology*].

1. Family and residence. Although the various sources are not consistent concerning Laban's family relationships, it is best to see him as Rebekah's brother, whose dominant personality eclipses the role of his father, Bethuel (Gen. 24:24, 29; 25:20; 28:5). He is clearly the father of Leah and Rachel (29:16). As the grandson of Nahor (29:5 probably indicates more general relationship, as does 24:48 · ["my master's kinsman"]), Laban lived in the "city of Nahor," which was in the vicinity of—if not identical with—the strategic metropolis Haran (27:43; 29:4; *see* NAHOR 3; HARAN 4). This area, also called PADDAN-ARAM (28:2), was the home of an Aramean family (note "Laban the Aramean" in 25:20[P]; 31: 24[E]) related collaterally with the Israelites. *See* ARAM 1.

The story of Laban circles mainly around two figures: Abraham's trusted servant (ch. 24) and Jacob (chs. 29–31).

2. Laban and Abraham's steward. When Abraham sent his major-domo back "to my country and to my kindred" (24:4) to obtain a wife for Isaac, Laban was chiefly responsible for the betrothal of Rebekah. *See* ABRAHAM § C1*m;* ISAAC § 2*d.*

Laban is introduced as a man whose curiosity took him out to meet a stranger (24:29) and whose hospitality prompted him to bring the traveler into his home and care personally for him (vss. 31-32; cf. 29:13-14). Moreover, it is to Laban's credit that first to last, in this matter, he recognized the activity of God in the steward's mission (24:31, 50-51) and blessed his sister when she left (vs. 60).

However, the first word about Laban leaves the inescapable impression that his hospitality was motivated by self-interest (vs. 30). His expectation of personal gain was satisfied; for the visitor, having told of his master's prosperity (vs. 35), gave Rebekah's family lavish gifts (vs. 53; cf. also 30:27-30*a*). It may be, also, that the desire to share longer in this largess was partly responsible for Laban's reluctance to let his guest depart (24:55).

3. Laban and Jacob. After Jacob defrauded Esau (see JACOB SON OF ISAAC § C1), he fled to his uncle (27:41-44; cf. 27:46–28:5). Laban received him (29: 13-14), agreed to give him Rachel in payment, but deceived him by making him take Leah first (vss. 15-27), then gave him the younger sister in exchange for further service (vss. 28-30). When Jacob wished to return to his "own home and country," Laban agreed with him on a satisfactory division of the flock, which had prospered under Jacob's care. When Laban sought by cleverness to hinder—if not defraud—Jacob in the bargain, he demonstrated the same self-interest which characterized his dealings with Abraham's servant (30:25-43).

Upon learning not only that Jacob had outwitted him in the deal but also that Rachel had stolen the "household gods" (התרפים in 31:19; אלהים in vs. 30; *see* TERAPHIM), Laban pursued and accosted them. At GILEAD (4), in Transjordan, the two kinsmen entered into a mutual nonaggression covenant, each swearing by the God of his fathers (ch. 31; *see* PATRIARCHS § 4). This Mizpah pact, now combined with other traditions, probably represents at its earliest level an actual agreement between Israelites and Arameans concerning the borderland separating them.

L. HICKS

LABAN (PLACE). A place in the Sinai region, mentioned with Tophel, Hazeroth, and Dizahab (Deut. 1:1). Some have identified it with Libnah, the third stopping place after Hazeroth (Num. 33:20), but the location is unknown.

LABANA. KJV Apoc. form of LEBANAH.

LABOR. Physical or mental toil; usually the physical exertion necessary to subdue the land and supply the wants of the individual and society.

יגיע is the labor and toil which produces (Job 39: 11, 16). In the return from Babylon, each man was to leave his own task and rebuild the walls of the city (Neh. 5:13). In the KJV "labor" is most frequently equivalent to the RSV "produce" or "wealth" (Isa. 45:14; cf. Ps. 128:2).

מעשה is anything which is done or made by man. It includes the work of farming, the labor of slaves, the creation of God, the worship of God-fearers, the skill of the craftsman, and the produce of manufacture. עמל emphasizes the sense of toil and hard labor which accompanies much of man's work. The Hebrew also uses מלאכה for "occupation" or "workmanship," עבודה for the labor of slaves and craftsmen, and פעלה for deeds of any kind.

The Greek κόπος is in the LXX for עמל and signifies "toil" and "manual labor." In the NT, however, it is used primarily of the travail and suffering of the righteous to accomplish the will of God (I Cor. 15:58; II Cor. 5:5). The general term for "work" or "business" of any kind is ἔργον. Again, in the NT this is seldom used of the physical labor of workmen, but more particularly of humanitarian deeds and the works of righteousness.

Probably all labor can be classified as follows: (*a*) that of the independent or self-employed, such as shepherd or farmer (*see* OCCUPATIONS); (*b*) that of craftsmen (*see* CRAFTS); (*c*) that of the hired laborer receiving a daily wage (*see* SERVANT); (*d*) that of the native and foreign-born slave (*see* SLAVERY).

God labored at the Creation (Gen. 1), and he continues to labor (Ps. 104:24; Isa. 28:29; etc.). Man was given work to perform in this creation (Gen. 2: 15). Sin did not make labor necessary, but it made it less rewarding and subject to frustrations and problems (Gen. 3:19; *see* FALL). There was no exemption from labor by reason of sex. In the ancient Near East women were sometimes the beasts of burden. Men and women frequently performed the same tasks. Jesus worked (John 5:17). Paul also worked and he expected the Christians to work (Acts 18:3; I Thess. 4:11; II Thess. 3:10 ff). All the apostles were workmen before they were commissioned.

Manual labor was honored among the Hebrews, in contrast to the Greek and Roman emphasis on mental and spiritual activity. Human labor has a dignity all its own. Physical exertion, even with its accompanying sweat, was not looked down upon. Toil was honored (Prov. 10:16). Hard work by the wife (31:15) and by the craftsman (22:29) is praised. The lazy man should look to the ant for an example (6:6 ff). Six days of labor were as much a part of the covenant command as the one day of rest (Exod. 20:9-11). Idleness was the real curse (Eccl. 10:18): Labor was always blessed (Exod. 34:21; Ps. 127:1; Prov. 10:4; 21:5; Eccl. 5:11; Ecclus. 10:30; etc.). God rewards the honest laborer (Gen. 26:12; 39:5; Ps. 107:36-37; Eccl. 2:24; etc.).

Laborers were protected by law (Lev. 19:13; Deut. 24:14). Masters should be merciful to laborers, whether slave or free (Eph. 6:9; Philemon). A workman is worthy of his pay (Luke 10:7). Freeborn laborers were often associated in guilds, especially those engaged in crafts. Jacob labored in order to gain a wife (Gen. 31:40-41). Many workers had overseers (Ruth 2:5; I Sam. 11:5; Matt. 20:1; I Cor. 3:9; etc.).

Forced labor was practiced by the Egyptians and imitated by Solomon and his son (I Kings 11:28 ff). Objection to this type of labor is already indicated by the prophet Samuel (I Sam. 8:11-17). Yet Asa later followed this practice in Judah (I Kings 15:22). The *corvée* was used largely on special projects such as road building and the making of monumental palaces. The citizen may have been impressed only for the duration of the project and was not considered a slave. This type of labor was seldom used in agriculture. The Romans likewise could impress the citizens of occupied countries into special duty and labor (Matt. 5:41). But with the end in sight (*see* ESCHATOLOGY OF THE NT), such people were to be patient.

C. U. WOLF

LACCUNUS lə kŭ'nəs [Λακκοῦνος, *possibly from* בלל בניה (Ezra 10:30; *the final* ל *of the first word has been read as the first consonant of the second word, and the* ב *of the second word was read as a* כ] (I Esd. 9: 31); KJV LACUNUS. One of the sons of Addi who put away their foreign wives and children in the time of Ezra.

C. T. FRITSCH

LACE [פתיל]. A twisted thread or CORD. Such a cord of purple was used to fasten the breastpiece to the rings of the ephod (Exod. 28:28; 39:21), and the golden plate to the turban for Aaron (Exod. 28:37; 39:31).

LACEDAEMONIANS lăs'ə dĭ mō'nĭ ənz [Λακεδαιμονίοι]. The inhabitants of Lacedaemon, or SPARTA, the capital of Laconia in S Greece—a name sometimes used of all Laconia (Homer *Iliad* II.581; Herodotus I.67). Friendly relationships with the Jews were established as early as *ca.* 270 B.C., perhaps growing out of the mutual friendship of the Jews and the Spartans with Egypt as well as out of their common conception of a community of law. That a Jewish colony existed in Sparta in the second century B.C. is suggested by the fact that Jason the high priest found asylum there in 168 (II Macc. 5:9). Diplomatic relations between Sparta and the Maccabean state were renewed in the time of Jonathan, as attested by the letter he wrote to the Spartans *ca.* 146 B.C. and recorded in I Macc. 12:6-18 (cf. Jos. Antiq. XIII.v.8). The authenticity of this and the other official letters in I Maccabees has been questioned frequently, but there is no doubt that there were declarations of friendship made at this time by the Romans and the Spartans with the Jews; and many scholars regard them as genuine state documents in complete or abridged form. Jonathan writes that earlier Areios I, king of Sparta (309-265), sent a letter of friendship to the high priest Onias I (320-290), a copy of which follows in vss. 20-23 (cf. Jos. Antiq. XII.iv.10). Mention is made of a blood relationship between the Spartans and the Jews, apparently a widely diffused legend in the East (cf. II Macc. 5:9, where the name Lacedaemonian appears). I Macc. 14:20-22 preserves an official letter from the Spartans to Jonathan's successor, Simon, which, though probably genuine, is set in an appendix to the original book, which may have consisted only of chs. 1–12. Finally, I Macc. 15:16-22 records a declaration of

friendship between the Roman Senate and the Jews, written by the consul Lucius to the king of Egypt and addressed also to neighboring countries including the Spartans (vs. 23; cf. Jos. Antiq. XIV.viii.5).

5. The Lachish Letters
Bibliography

1. Name and identification. Outside the OT the name of Lachish first appears prominently in the Akkadian correspondence of the Pharaoh Akh-en-Aton recovered from Tell el-Amarna. A single occurrence of *Ra-ki-ša* in the hieratic papyrus no. 1116 A of the Hermitage collection, a document contemporary with Thut-mose III, and of a "king of *La-ti-ša*(?)" named in a hieratic inscription on a pottery bowl (*see d* under § 4 *below*), are perhaps the only mentions of

2. A drawing from a bas relief from Sennacherib's palace at Nineveh, showing the siege of Lachish

Lachish in the Egyptian language, unless—against the probabilities—a place name *Lu-ga-za* in the Karnak lists of Thut-mose III refers to the same city. The Amarna correspondence contains five references to a city spelled alternatively *Lakisu* or *Lakišu;* and three of the letters actually emanate from individuals, named Iabni-ilu and Zimridi, who style themselves "man of Lachish." The same name, *Lakisu,* is given to a town depicted as surrendering after a siege in the wall reliefs of Sennacherib's palace at Nineveh (Figs. LAC 1-2). These Akkadian names assuredly refer to the same place as the OT Lachish.

3. Lachish (modern Tell ed-Duweir)

It is the general belief that Lachish stood on the site known as Tell ed-Duweir (Fig. LAC 3), an imposing mound lying five miles by road to the SW of Beit Jibrin, the ancient Eleutheropolis. The identification rests on three considerations: Tell ed-Duweir is the most prominent Bronze and Iron Age site in the region indicated by Eusebius for the contemporary village of Lachish, "in the 7th mile from Eleutheropolis to Daroma"; excavation has revealed a striking resemblance between the Iron Age ruins at Tell ed-Duweir and the pictorial representation of Lachish at Nineveh; and the ascertained history of Tell ed-Duweir corresponds correctly with that of Lachish as inferred from literary sources.

2. Excavation and history. Tell ed-Duweir lies toward the lower W slopes of the Judean hill country. It rises from a valley in which settlement has been favored at all times by the presence of copious water near the surface. The surrounding ridges have yielded finds of worked flints giving evidence of human habitation as early as Upper Paleolithic times.

The tell and certain areas of the neighboring slopes were explored between 1932 and 1938 by the Wellcome-Marston Archaeological Research Expedition,

directed by James L. Starkey, and after his death in 1938 by Charles H. Inge. Knowledge of the history of the site is derived from the results of these excavations, combined with the historical indications of the OT and the nonbiblical Akkadian and Assyrian documents named above.

Natural caves in the limestone slopes of the valley sheltered an open settlement in Upper Chalcolithic times (before *ca.* 3000 B.C.) and in the first phase of the Early Bronze Age; this has been traced over an area of nearly two hundred acres. The culture is characterized by sherds of pottery, stone mortars and querns, and a few stone maceheads and other implements of flint and bone. Marks in the soft limestone show that many of the caves were enlarged by their occupants, using stone adzes.

In the Early Bronze II period, *ca.* 2800 B.C., the settlement contracted and moved to the site of the present tell; the old cave dwellings then began to be used as tombs. We cannot follow subsequent urban developments in detail; until the Late Bronze Age they are known only from limited soundings in the flanks of the mound and by inference from the contents of cemeteries. For the Late Bronze Age (1600-1200 B.C.) the ruins of the fosse temple (*see* § 3 *below*) furnished some detailed evidence.

The city on its growing mound was first protected *ca.* 1700 B.C. by a fosse and a plaster-covered glacis rising to a height of *ca.* one hundred feet above the valley and presumably crowned by a brick wall. These defenses belonged to the period of Hyksos domination, and they had fallen into disuse early in the Late Bronze Age when a small temple was built on rubbish accumulated at the bottom of the fosse (*ca.* 1550 B.C.). This event corresponded in time with the renewal of Egyptian power in Asia; at an earlier stage Egyptian influence had already been active in Lachish, as shown by the presence of numerous scarabs, of Egyptian or foreign manufacture, dating from the Twelfth to the Twenty-second Dynasty. The Tell el-Amarna Letters (fourteenth century) reveal the Egyptian party in Lachish suffering the same embarrassments as their confrères in other Canaanite cities. In one letter written from Jerusalem the city is linked with Ashkelon and Gezer, and charged with having supplied the HABIRU with food and oil. In another it is reported that Zimridi's servants have conspired with the Habiru against him, and perhaps killed him. Confused as the situation is which the correspondence reveals, we can assume that the prosperity of the city and the interests of its rulers were always closely linked with the maintenance of Egyptian power.

Having been twice enlarged during this period, the fosse temple was finally destroyed by fire simultaneously with a general conflagration within the town, *ca.* 1200 B.C. The event reveals the decay of Egyptian power, and may be linked with the invasion of the hill country by Israel and the slaughter of King Japhia (Josh. 10:3-40).

Ca. 1000 B.C., perhaps by the initiative of David or Solomon, the city was reconstructed. Either then or soon afterward a massive stone platform was raised about the ruins of a Bronze Age building at the center of the mound to form the podium of a brickwork palace, of which all other trace has vanished. The same podium, however, successively enlarged in later centuries, served to support a citadel or governor's residence, which in one form or another, with only a break after Sennacherib's invasion of Judah, lasted throughout the history of Lachish.

II Chr. 11:9 tells us that Rehoboam fortified Lachish; and Asa probably strengthened it (14:7) shortly before 900 B.C. A great enlargement of the citadel may perhaps be attributed to Jehoshaphat, who set garrisons in the cities of Judah (ch. 17). To Lachish, King Amaziah of Judah fled for his life from a conspiracy against him in Jerusalem, and in Lachish nevertheless he lost it (ch. 25). The defenses of the city then consisted of an upper wall of brick following the edge of the mound and a lower wall or revetment of stone halfway down the slope. Both walls followed a roughly rectangular plan, and both were built with alternate recesses and projections. Outside the walls near the SW corner there stood a square outwork defending a roadway which led up the slope toward the gateway of the city. To the late eighth century may be attributed an enigmatic shaft which was found driven into the rock within the SE corner of the inner wall. Surrounded by funnel-shaped slopes of crushed chalk laid on a bed of rock chippings, this prodigious excavation, forming a hollow cube some fifty feet each way, was presumably intended for storing water within the city. It may well have been undertaken, like Hezekiah's tunnel in Jerusalem, for purposes of defense when Judah was threatened by Assyria (*see* WATER WORKS). The work was never finished. *Ca.* 700 B.C., Sennacherib captured Lachish and encamped there; the marks of a vast conflagration within the town, as well as arrowheads, slingshots, a spearhead, and an Assyrian bronze helmet crest found in a thick bed of ashes on the approach road, bear visible witness to his assault, which was also depicted in relief on the palace walls at Nineveh.

After Sennacherib's withdrawal reconstruction within the city was slow; but the defenses were restored and improved, possibly by Manasseh (II Chr. 33:11-14). A new stone wall replaced the upper line of brick, and the former outwork was incorporated as a bastion in the lower revetment. The entrance to the city was then contrived to pass through two gates, the outer one in the bastion facing S, the inner one on the line of the upper wall facing W. Thus an intruder must first approach the bastion with his unshielded right side exposed to missiles from the wall and then, having penetrated the outer gate, must turn to the right and advance uphill across an enclosed court to the inner gate.

Nebuchadrezzar captured Lachish in 588-586 B.C. (Jer. 34:7). Marks of a huge conflagration on the road leading up to the gate, and on the adjacent wall, show that the attackers relied largely on fire, for which felled olive trees not yet harvested supplied the fuel. An earlier layer of ashes within the city may have been a relic of the first campaign of Nebuchadrezzar against Jehoiakim in 597 B.C.

Between *ca.* 586 and 450 B.C., Lachish lay deserted. It revived for three centuries under the Persian and Hellenistic kings (Neh. 11:30). On the site of the old citadel a new residence was then built in N Syrian style, with suites of rooms opening

through columned porches on a central court. Here, we may suppose, a Persian governor lived and worked. To the NE a smaller building was built some years later in a similar style. It had a broad flight of steps leading up from a central court into an antechamber, which gave access in turn to a small, square room or shrine. The orientation of this building and the discovery in it of a small limestone altar, with crude reliefs of a human hand and of a human figure in an act of adoration, suggested that the building was a solar temple, which the excavators attributed tentatively to the Seleucid period.

The city was finally deserted, never to be reoccupied, *ca.* 150 B.C.

3. The fosse temple. This deserves separate description, for it is one of the most informative relics of the Canaanite religion that have been recovered in Palestine. Like the Tophet at Jerusalem, it lay outside the city, in the disused fosse of the Middle Bronze Age. It was built of unhewn stones set in mud mortar, and in all its stages consisted essentially of a large cult room with varying subsidiary annexes. The cult room was seemingly open to all worshipers.

Built probably in the sixteenth century B.C., the cult room was initially a rectangle measuring thirty-three feet from N to S and half this width from E to W. It was entered by a door near the N end of the long W wall. A small, square room with an outside door adjoined the N wall; and another was connected with the cult room on the W. The roof of the cult room was carried by two wooden posts resting on stone bases aligned on the long axis of the room. The cult was focused on a low bench or offering table of clay, having three projections attached to its front, which was applied to the middle of the short S wall. Before it a large pottery jar was found sunk into the floor of the shrine; and this seemed to have replaced an earlier and smaller jar of which the bottom part was also found embedded nearby. A heap of other pottery vessels, mostly dipper flasks, lay on the ground beside one end of the bench.

This earliest temple, of which inevitably little remains, was demolished and replaced *ca.* 1450 B.C. by a much larger structure, in which the cult room was doubled in width while the N annex, rebuilt and enlarged, became an anteroom and the principal entrance to the shrine. The second annex was now suppressed, but a new room, connected with the cult room by a door, and having also an outside door, was attached to the S wall. The roof of the new cult room was carried by four, instead of two, posts.

In this second stage of the temple the offering table was enlarged and remade of rough stones instead of clay, and with only one projection in the middle of its front face. The W end of the table incorporated a small concealed cupboard facing to the side, which contained lamps. Several long benches built of mud bricks were provided at the same time against or parallel to the N, E, and W walls of the cult room. Large numbers of plain pottery bowls were found placed on or fallen beside these benches. Where in the first temple there had been a pottery jar, directly in front of the offering table, in the second there was a small hearth sunk in the floor and surrounded by a curb of clay and plaster.

Ca. 1350 B.C. or later the temple was again modified (Fig. TEM 44); its floor level was raised and its columns and roof rebuilt. Excavation has revealed the lines of ashes where its wooden crossbeams joined the tops of the columns to the side and end walls. A second room was added to the S end of the temple, making two rooms behind the cult room, each connected with it by a doorway. At this stage of the temple the offering table was rebuilt and transformed into a spacious white-plastered platform, partly recessed into the back wall and partly projecting from it. On it, in a mass of burnt debris, were found lying numerous delicate vessels, ornaments, and beads, of ivory, glass, faïence, and alabaster, among them scarabs of Amenophis III. At a late stage an altar of mud bricks had been built against the front of the platform; three steps against it on the W side illustrated the arrangement prohibited by Exod. 20:26. A new lamp cupboard was built against the S wall of the room W of the platform; and in front of this stood a tall, tubular pottery libation stand. Balancing this, on the E side of the platform was an earthenware bin with four handles. There was still a hearth before the platform. Three small cupboards or niches were built into the E wall of the cult room at this time, and a few extra benches were provided. Some thirty-five pottery bowls were found stored in one of the wall cupboards, and many more had fallen from the other two.

Vast quantities of pottery vessels, both plain and decorated, but with a predominance of shallow hemispherical bowls, were recovered from all the

4. The Duweir ewer (1350-1200 B.C.), with inscription beginning "A gift to . . ."); from a water color by B. Gaver

rooms; and the soil was full of the bones of birds, animals, and fish. The animals included sheep or goats, oxen, and gazelles or ibexes; they were all young, and nearly all the identifiable bones were right shoulder bones (cf. the priest's portion of the peace offering in Lev. 7:32). Before the cult platform among other pottery fragments was found an earthenware footbath (cf. Exod. 40:31). A violent conflagration had destroyed the temple *ca.* 1200 B.C. or a few years before. The ground outside the building was honeycombed with pits, in which it was clear that refuse from the temple had been thrown throughout its history—not only ashes, bones, and broken pots, but also whole vessels and more precious objects of bone, ivory, faïence, or metal.

No cult statue was found in the temple, but an ivory hand was recovered from one of the pits and a bronze statuette of a seated male deity out of context in the fosse.

Two inscribed pottery vessels were found in rubbish outside the temple, a ewer and a bowl. The former was decorated round the neck with wavy lines and squares in red paint, while on the shoulder was a zone of crudely stylized animals supporting an inscription of eleven letters and a mark composed of three dots (Fig. LAC 4). The ewer is attributed to the third stage of the temple and the second half of the thirteenth century. The letters closely resemble those scratched on the rocks of Serabit el-Khadim, and they are also recognizably akin to early Phoenician inscriptions of the tenth and later centuries; they are therefore to some extent a link between the two (*see* ALPHABET). Many different readings have been proposed, but most agree that the first word is to be read *mtn*, "gift," and the last *'lt*, "goddess."

The bowl is inscribed in black ink with eleven unintelligible letters or parts of letters.

The exact nature of the cult cannot be known. The many small bowls which were found in the precincts have been likened to the "gardens of Adonis," vessels containing quick-flowering anemones, with which country folk in Syria once celebrated the flowering and early death of spring. The cult shrine, too, in its enlarged final stage, with its cosmetic pots and trinkets, has been explained as a sacred marriage bed. These are possible explanations of some of the facts. We can be sure only that the cult room was open to all worshipers; that they brought with them innumerable pottery bowls and put them on the benches; that young animals were sacrificed and consumed; that the cult table received precious objects; and that fire burned in the hearth before it, lamps were lit, and libations poured. The debris of holy days was periodically removed and dumped in pits outside the temple.

4. Inscriptions. Lachish has produced more evidence of literacy during the Bronze and Iron Ages than any other town in Palestine. In chronological sequence the principal documents are:

a) A bronze dagger blade inscribed vertically with four signs (*ca.* 1600 B.C. or before). One sign, representing a human head, is fully pictographic, and may be read, if the language is Semitic, and the notation acrophonic, as *r* (*rosh*). No interpretation of the text is possible at present.

b) Five pieces of pottery inscribed with alphabetic signs of "Sinaitic" type (*ca.* 1350-1200 B.C.; *see* INSCRIPTIONS; ALPHABET): (i) censer lid with three unintelligible signs painted in red; (ii) bowl with eleven signs painted in white lime, of whch five seem to read in Semitic *bšlšt*—"for three"—and six are disputed; (iii and iv) ewer and bowl fragment (*see above*); (v) sherd with parts of four letters in black ink tentatively reading *l'wt*, perhaps after 1200 B.C.

c) Four-sided paste seal with name of Amenophis II (*ca.* 1450-1425) on one side and on another Ptah facing a row of eight unintelligible marks resembling North Semitic signs.

d) Egyptian (*ca.* 1200 B.C. or later): (i) fragment of a clay coffin painted with clear but unintelligible hieroglyphic signs in red; (ii) fragments of a pottery bowl inscribed in ink with a hieratic text seemingly concerned with taxation, and including the words "king (of) Latish(?)"; also two other small hieratic inscribed sherds.

e) Scratched on a limestone step in the stairs leading up to the citadel platform, the first five letters of the Hebrew alphabet, אבגדה, written in their traditional order (*ca.* 800 B.C.).

f) Fragment of a jar incised with six early Hebrew characters *btlmlk* "royal *bath*," a measure of volume (*see* WEIGHTS AND MEASURES; *ca.* eighth century B.C.).

g) Seven seals or seal impressions with names inscribed in early Hebrew characters (eighth-sixth century B.C.). One reads "belonging to Gedaliah who is over the household"—perhaps identical with the Gedaliah son of Ahikam made governor of Judea by Nebuchadrezzar (II Kings 25:22; Fig. GED 16).

h) Stamped jar handles (eighth to early sixth century): (*i*) forty-eight with names of private persons, either owners or potters; (*ii*) *ca.* three hundred stamped *lmlk*, "belonging to the king," followed by one of the names Hebron, Ziph, Sokoh, or *Mmšt*, combined with a scarab or winged scroll symbol.

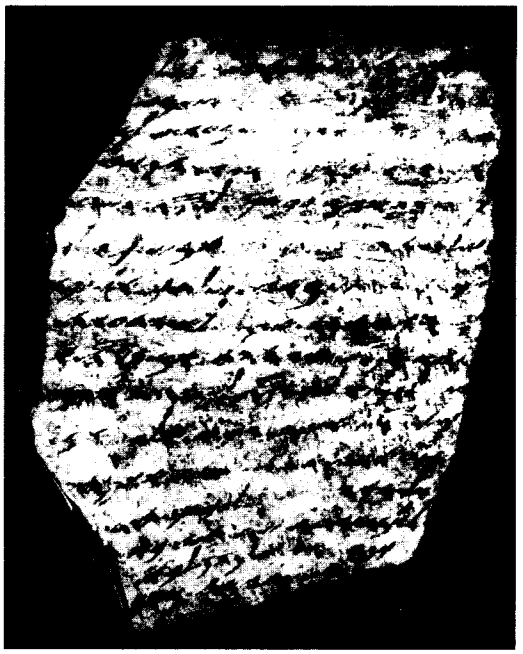
i) Early sixth-century ostraca. Twenty-one pot fragments inscribed with texts in black ink. All but two appear to have been letters, the most important being a group of eighteen texts recovered from a small room built in one of the towers of the outer city gate and opening on the courtyard of the bastion. *See* § 5 *below*.

j) Six three-quarter-spherical stone weights engraved with the words *nṣp* (one example), *pym* (two), or *bq'* (two; seventh-sixth century B.C.). The sixth weight is marked simply *b*, while others were found with numerical signs.

k) A stone altar incised with a three-line votive text in Aramaic script, beginning with the word *lbnt'*, "incense" (*ca.* fifth-fourth century B.C.). The third line, containing the letters *lyh mr'*, might be read: "To Yah(weh) Lord [of heaven]," by analogy with contemporary Aramaic texts from Elephantine.

5. The Lachish Letters. The eighteen texts mentioned under *i* in § 4 *above* lay on the floor of a room filled with ashes from the conflagration which had destroyed Lachish. Written in a Hebrew identical with the language of the latest pre-exilic books of the OT, during the last decade of the Judean kingdom (*ca.* 590 B.C.), their epigraphic and linguistic interest is surpassed only by their unique historical character.

The texts have been often translated, and their significance much discussed. The most interesting historically are the letters numbered 3, 4, and 6. Letter 3 gives the names of both writer and recipient: the former is Hoshaiah, a subordinate official in an outpost of Lachish; the latter Ya'osh, his superior in the city itself. Ya'osh is addressed also in the second and sixth letters; and the tone and substance of the whole series suggest that all belong to the same correspondence.



Copyright: The Matson Photo Service

5. The Lachish Letter No. 3

Letter 3 consists largely of exculpations by Hoshaiah evoked by some rebuke over a letter.* It ends with a report of various military movements, including a journey to Egypt by the captain Koniah son of Elnathan, and of a warning message brought by an unnamed prophet from Tobiah, a royal official, to Shallum son of Yaddu'a. Fig. LAC 5.

Letter 4 (Fig. INS 15) acknowledges orders, reports certain facts and actions, and ends: "We are looking for the signals of Lachish, according to all the indications my Lord has given, because we do not see Azekah."

Letter 6 comments on a letter from the king and on the demoralizing contents of letters received from princes in Jerusalem. The writer urges Ya'osh to protest in writing.

In sum, the Lachish Letters are a unique example of cursive script and epistolary style in Judah at the time of Jeremiah; and they are firsthand documents of the uneasy political and military situation reigning in Judah on the eve of Nebuchadrezzar's destruction of Jerusalem.

R. W. HAMILTON

LACUNUS. KJV form of LACCUNUS.

LADAN lā'dən [לעדן, *perhaps* fleshy at the throat; *cf.* LAADAH]; KJV LAADAN lā'ə dən. **1.** An ancestor of Joshua (I Chr. 7:26).

2. A Gershonite Levite; eponymous ancestor of several father's houses (I Chr. 23:7-9; 26:21).

3. KJV form of DELAIAH in I Esd. 5:37.

B. T. DAHLBERG

LADDER [סלם] (Gen. 28:12). A series of steps made for ascent and descent. The steps may be of metal, rope, wood, stone, etc. In its one occurrence in the Bible the word symbolizes God's present care and man's ascending prayer (*see* JACOB).

The rock strata exposed naturally in the vicinity of Bethel suggests "flight of stairs" would be a more appropriate translation. Ladders are depicted on the Ur-Nammu stela showing the construction of a ziggurat. Egyptian friezes show ladders raised against walls for scaling in warfare already in the Fifth and

C. U. WOLF

LADDER OF TYRE tīr. A prominent landmark, apparently a mountain *ca.* twelve miles N of Ptole-

maïs (Acre), according to Jos. War II.x.2. Josephus says that, among the mountains of Galilee and Carmel, it was the "highest of all." This statement has led some to suggest that the Ladder of Tyre was the high ridge which bounds the plain of Acre on the N, rising to over a thousand feet; indeed, on the seaward side there are distinct steps formed by three mountains: Ras el-Abyad (the White Cape), Ras en-Naqura, and Ras el-Musheirifeh. From the S side, silhouetted against the sky, these mountains would give the impression of a huge ladder by which one might ascend into the land of Tyre. The W end of the ridge drops sheer into the sea, and there is no way around it; one must ascend into Phoenicia as by a ladder. The difficulty of this interpretation is that Josephus states that the Ladder is higher than Carmel, and yet Carmel rises to over eighteen hundred feet.

Whatever its precise position, the Ladder was the N border of the region over which SIMON MACCABEUS was made governor by Antiochus VI (I Macc. 11:59; *see* ANTIOCHUS 6).

LAEL lā′əl [לאל, belonging to God] (Num. 3:24). A Gershonite Levite; the father of Eliasaph.

LAHAD lā′hăd [להד, *perhaps* slow, indolent; *cf.* Arab. *lahdun*] (I Chr. 4:2). A descendant of Judah.

Bibliography. M. Noth, *Die israelitischen Personennamen* (1928), p. 227.

LAHAI-ROI. KJV form of BEER-LAHAI-ROI.

LAHMAM lä′măm [לחמם] (Josh. 15:40). A village of Judah in the Shephelah district of Lachish; usually identified with modern Khirbet el-Lahm, 2½ miles S of Beit Jibrin (Eleutheropolis).

LAHMI lä′mī [לחמי] (I Chr. 20:5). Brother of Goliath the Gittite. He was slain by Elhanan the son of Jair. However, the text of II Sam. 21:19 reads: "Elhanan the son of Jair ['oregim' is admittedly a scribal error from the following line], the Bethlehemite, slew Goliath." The rendering of the words "the Bethlehemite" (בית־הלחמי את) as "Lahmi the brother of" (את־לחמי אחי) by the Chronicler is usually considered an attempt to harmonize I Sam. 17 and II Sam. 21:19. Older interpreters argued generally for the originality of I Chr. 20:5. E. R. DALGLISH

LAISH lā′ĭsh [ליש (1 *below*), lion; לישה (2-3 *below*)]. **1.** The father of Paltiel (Palti in I Sam. 25:44), to whom Saul gave his daughter Michal, the wife of the proscribed David. Ishbaal took her from Paltiel and returned her to David (I Sam. 25:44; II Sam. 3:15).

2. A Canaanite city in N Palestine (Judg. 18:7, 14, 27, 29); called Leshem in Josh. 19:47, and later known as Dan.

3. KJV form of LAISHAH.

LAISHAH lā′ə shə [לישה, lion] (Isa. 10:30); KJV LAISH. A village of Benjamin, NE of Jerusalem; listed between Gallim and Anathoth in Isaiah's visionary and poetic portrayal of a hostile army's village-by-village advance on Jerusalem from the N (Isa. 10:28-34). The site is possibly to be identified with modern el-Isawiyeh. W. H. MORTON

LAKE OF GENNESARET. *See* GENNESARET, LAKE OF; GALILEE, SEA OF.

LAKKUM lăk′əm [לקום] (Josh. 19:33). A border town in Naphtali. It is generally identified with Khirbet el-Mansurah, a site *ca.* three miles SW of Khirbet Kerak.

LAMA. *See* ELI, ELI, LAMA SABACHTHANI.

LAMB. In addition to its literal usage, the lamb is a frequent symbol in both the OT and the NT.

1. In the OT. Several Hebrew words are translated "lamb." By far the most common term is כבש ("male lamb") and the feminine form, כבשה; occasionally by metathesis—i.e., inversion—כשב and כשבה are used. In the priestly legislation of Exodus, Leviticus, and Numbers, these terms appear many times.

The term שה also denotes a youngster from the sheep (lit., "small cattle," צוֹם; *see* SHEEP; SHEPHERD). Very infrequently (see I Sam. 7:9; Isa. 65:25) the terms טלה and טלאים (see Isa. 40:11) appear; and, finally, indicating probably a state of maturation between the he-lamb proper and the RAM (איל), the term כר (see, e.g., Jer. 51:40; Amos 6:4).

The lamb is the dominant sacrificial victim. It was, from the point of our earliest knowledge of the institution (Exod. 12:11-12), the central symbol and sacrifice in the PASSOVER. Morning and evening burnt offerings (Exod. 29:38-42); the first day of each (lunar) month (Num. 28:11); all seven days of Passover (Num. 28:16-19); the Feast of Weeks (Num. 28:26-27; *see* FEASTS AND FASTS); the Day of Atonement (Num. 29:7-8; but cf. Lev. 16, where the victims are rams, goats, and bulls); the Feast of Tabernacles (Num. 29:13 ff)—all these, together with sacrificial prescriptions for numerous eventualities (see, e.g., Lev. 3:6, 4:27, 32; 5:6), called for the sacrifice of lambs.

For the Israelites, as for other peoples, the lamb symbolized, among other things, innocence and gentleness. Nathan's parable to David, employed by the prophet in denunciation and conviction of the sin of the king in the Bathsheba affair, may then suggest the relative innocence of the woman, since she is analogous to the lamb (כבשה; II Sam. 12:3). As used figuratively of persons, the term could be calculated to summon the sympathetic emotions of concern and pity and compassion, as in the case of Second Isaiah's consoling words to exiled Israel about to be redeemed by Yahweh:

> He will feed his flock like a shepherd,
> he will gather the lambs [טלאים] in his arms,
> he will carry them in his bosom
> (Isa. 40:11).

Or in the same manner, Jeremiah, who refers to himself as a "gentle lamb" (11:19; but cf. Hebrew כבש אלוף; see Commentaries). With not altogether dis-

similar connotations, Israelite prophetism describes the era of the consummation of Yahweh's purpose and reign with this remarkable figurative use of the lamb:

> The wolf shall dwell with the lamb [כבש],
> and the leopard shall lie down with the kid,
> and the calf and the lion and the fatling together,
> and a little child shall lead them
> (Isa. 11:6).

All the qualities of innocence, purity, and meekness, and possibly also a sense of efficaciousness, derived from the actual sacrificial system, are summoned with deepest poignancy in the figurative use of the lamb as applied to the Suffering Servant:

> He was oppressed, and he was afflicted,
> yet he opened not his mouth;
> like a lamb [שה] that is led to the slaughter,
> and like a sheep that before its shearers is dumb,
> so he opened not his mouth
> (Isa. 53:7; see also vss. 4-6).

2. In the NT. In the NT (ἀμνός, ἀρήν, and ἀρνίον), the term is used only figuratively. In Luke 10:3 the Seventy are sent forth "as lambs in the midst of wolves" (the only occurrence of ἀρήν; generally ἀρνός is used); in John 21:15, Jesus admonishes Peter: "Feed my lambs" (the diminutive form, ἀρνίον, from ἀρήν); and in Rev. 13:11 the Antichrist is seen as having "two horns like a lamb" (ἀρνίον). All other occurrences (ἀμνός in John 1:29, 36; Acts 8:32; I Pet. 1:19; and ἀρνίον, aside from John 21:15, only in Revelation, where the term appears, in addition to 13:11, some twenty-eight times in reference to Christ in chs. 5–22) are figurative allusions to the person and work of Jesus Christ. Although the exact significance of the term in Revelation has been a point of debate among scholars and interpreters, the Lamb here appears as Savior and as Ruler of the world; and, despite the difference in term, the word probably conveys the same essential character as is intended in the word ἀμνός.

Strong inferences out of the life and cultic practice of ancient Israel are surely present in these:

a) John the Baptist sees Jesus approaching and cries: "Behold, the Lamb of God, who takes away the sin of the world!" (John 1:29). The next day he declares of Jesus again: "Behold, the Lamb of God!"

b) Acts 8:32 quotes Isa. 53:7, imprecisely (cf. above):

> As a sheep led to the slaughter
> or a lamb before its shearer is dumb,
> so he opens not his mouth.

c) I Pet. 1:18-19 affirms: "You know that you were ransomed from the futile ways inherited from your fathers, not with perishable things such as silver or gold, but with the precious blood of Christ, like that of a lamb without blemish or spot."

d) The innocence and purity of the OT sacrificial lamb and the lamb's function in redeeming and restoring man's relationship with God are employed in the early church community in essential interpretation of Jesus Christ.

B. D. NAPIER

LAME, LAMENESS [צלע; χωλός]. A physical condition in which a person experiences difficulty in walking, or finds himself unable to do so. Lameness may be congenital, if existing from birth; or acquired, if it is subsequently developed. Congenital lameness may be the result of mineral or vitamin deficiencies during the intra-uterine life of the fetus.

The lack of orthopedic knowledge in antiquity made cyllosis (clubfoot) a far more permanent malformation than at present. Some of the more frequently found forms of cyllosis were talipes equinus, in which the heel is permanently retracted from the ground, with the weight resting on the ball of the foot; talipes calcaneus, in which the heel projects downward to carry bodily weight; talipes valgus, a permanent outward eversion of the foot, and talipes equino-varus, an inversion of the feet in which only the outer borders rest on the ground.

Imperfectly formed lower limbs, or legs of unequal length, were apparently not unknown in early Israelite history (cf. Lev. 21:18), and such deformities were an impediment to the priesthood. The general incidence of lameness among the Hebrews is difficult to estimate for lack of proper data. However, the narrative of II Sam. 5:6, 8, would seem to suggest that during the early monarchy there were numerous lame and crippled persons among the inhabitants of the Jebusite stronghold of Jerusalem. Allusions to the physical deformity of lameness found their way into the realm of the proverb. Thus the sages of Israel could speak of a proverb in the mouth of a fool as being like the legs of a lame man (Prov. 26:7).

7. A lame man with an atrophied right leg (the result of infantile paralysis?), from an Egyptian stele of the Eighteenth Dynasty (1570-1310 B.C.)

To what extent lameness was due to malnutrition or deficiency diseases such as rickets can only be conjectured. More certain is the evidence which Egyptian monuments present for the existence of such afflictions as tuberculous spondylitis (inflammation of one or more of the spinal vertebrae, otherwise known as Pott's Disease). Two instances of these lesions have been depicted in figures carved on ancient Egyptian monuments, and dated *ca.* 2000 B.C. In one of these, the lower cervical and upper dorsal regions are involved, while the other indicates that the lesion was situated in the lumbar region.* If there was any degree of compression of the spinal cord in these or any other instances of Pott's Disease, there would be a corresponding amount of paraplegia, which would involve the extremities at the very least. While the existence of Pott's Disease still remains to be demonstrated clinically in Palestinian skeletons, there are good reasons for supposing that it did in fact exist there (cf. Lev. 21:20, where גבן and דק imply spinal kyphosis). Fig. LAM 7.

Another Egyptian monument has preserved with remarkable fidelity a picture of a Syrian settler who had been afflicted with anterior poliomyelitis (infantile paralysis). The portrait, dated *ca.* 1200 B.C., shows the man working at agricultural pursuits, carrying a long staff held in position across his body by his left forearm. His left leg is well developed, but the right leg is deformed, with the foot drawn up in a manner characteristic of infantile paralysis. The fact that this man is clearly depicted as a Syrian immigrant furnishes grounds for believing that poliomyelitis, with its attendant disabilities, was not uncommon in Bible lands generally.

It is not unreasonable to expect the lame to include those who suffered from bilateral congenital dislocation of the hip joint, because the pelvic socket was too shallow to accommodate the head of the femur properly. The consequent dislocation, if left untreated, would produce a characteristic waddling gait. In children and adults, hip-joint disease is most frequently tubercular in nature. If remedial measures are neglected, deformities of the pelvis and legs may follow, with a shortening of the latter. In any event, the hip joint may become ankylosed (immobile).

Specific pathology of the bones must also be included as an important cause of lameness. Osteoarthritis in elderly persons would inhibit movement, and in a chronic state would produce some deformity. *Osteitis deformans juvenilis,* in which the head and neck of the femur become flattened and shortened, may have afflicted Hebrew children. To what extent paraplegic conditions were responsible for lameness is again uncertain. However, ataxic paraplegia, resulting in progressive paralysis of the leg muscles, and senile paraplegia, with general weakness or actual developing paralysis of the lower extremities, should not be excluded from the larger picture of pathological conditions contributing to lameness.

Probably many persons became disabled through fractures of bones, particularly if a fragile condition of the bones, leading to spontaneous fractures (*osteopsathyrosis*), was present. While Egyptian physicians were proficient at reducing and splinting fractures, there is no indication that such procedures were undertaken in Israel (cf. Lev. 21:19).

A childhood accident at the hands of his nurse (II Sam. 4:4) occurred to Mephibosheth, the son of Jonathan. As a result, he was lame for the rest of his days. Apparently some form of treatment was applied locally for the disability, since he did not pause to dress (עשה; LXX ἐθεράπευσεν) his feet before meeting with David (II Sam. 19:24). The precise nature of the complaint from which he suffered is uncertain.

The healing of the lame formed part of the therapeutic activity of Jesus (Matt. 15:30; 21:14), although the references to those who were cured of their lameness are general in nature, and in consequence afford no proper indication of the actual ailment with which individuals were afflicted.

More fully documented are the accounts of the lame being healed through the ministry of the disciples in the early church. Peter and John were confronted by a congenitally lame man as they passed by the Gate Beautiful to enter the temple (Acts 3:2). His lameness was apparently due to weakness of the astragalus and metatarsus bones of the foot. Luke used the technical terms βάσις ("foot") and σφυρά ("ankles"), found alike in classical and medical writers from Hippocrates onward. The lameness may have been due to cyllosis, or to some congenital malformation such as *spina bifida,* although cases of the latter do not always survive adolescence. Another congenital cripple was healed by Paul at Lystra (Acts 14:8), and he too may have suffered from some form of cyllosis.

R. K. HARRISON

LAMECH lā′mĭk [למך; Λαμεχ].

1. In the J tradition
2. In the P tradition
3. The Song of Lamech
4. Unity of meaning
5. In the NT
6. In apocryphal literature
Bibliography

1. In the J tradition. According to the Yahwist, Lamech was the son of Methushael, of the line of Cain, and the husband of Adah and Zillah (Gen. 4:18-24). Adah bore Jabal, the "father of those who dwell in tents and have cattle," and Jubal, the "father of all those who play the lyre and pipe." Zillah bore TUBAL-CAIN, the "forger of all instruments of bronze and iron," and his sister, Naamah. In line with the Yahwist's interest in etiologies, this genealogy accounts very briefly for the rise of nomads, musicians, and smiths (metalworkers). To Lamech also are attributed, at least by inference, the beginning of polygamy—or, more strictly, bigamy—and the ugly growth of human pride. *See* § 3 *below.*

2. In the P tradition. According to the Priestly source (*see* P), Lamech was the son of Methuselah, of the line of Seth, and the father of Noah (Gen. 5:25-28, 30-32; cf. I Chr. 1:3). He was 182 years old when Noah was born, then lived 595 years longer, having other children. He died at the age of 777 years. However, Gen. 5:29 is from J; and the Noah which it describes as mitigating the curse Yahweh had laid upon the ground because of man's sin (cf. 3:17-19) might not originally have been linked with the Flood.

3. The Song of Lamech. The Song (Gen. 4:23-24) is an ancient poem similar in mood to Judg. 15:

16; I Sam. 18:7 (*see* POETRY, HEBREW). If "Adah and Zillah" are not intrinsic parts of the Song (cf. Commentaries), it may originally have been unrelated to the genealogy; for the Song itself does not necessarily presuppose the manufacture of weapons by Tubal-cain, as has often been held. However, its reference to the wives of Lamech, Cain, and the increase of sin through man's pride and desire for almost limitless revenge now tie it closely to the Yahwist's epic.

4. Unity of meaning. Regardless of their original relationship, these three traditions are linked together in the present Genesis story and teach that although the human family (through Lamech) increased in sin as it advanced in civilization, it also (through Noah) received partial remission of the curse. Further, the occurrence of the number 7 serves as a unifying motif: Cain was to be avenged 7 times, Lamech 77; and Lamech lived 777 years.

5. In the NT. Lamech's genealogy as given in Luke 3:36 agrees with P (*see* § 2 *above*). Jesus' word about unlimited forgiveness (Matt. 18:22) may be a conscious reference to the Song of Lamech.

6. In apocryphal literature. In the Dead Sea Genesis Apocryphon, Lamech confronts his wife, Bat-Enosh ("Bêtênôs, the daughter of Bârâkî'îl," in Jubilees), with the suspicion that their son (Noah in Jubilees; Menachem in Jashar) is not his. Although she assures him that the child is indeed from him, not from a stranger or divine being (ולא מן כול עירין ולא מן כול בני שמין), for additional information Lamech hastens to his father, Methuselah, who in turn has recourse to Enoch, his father, from whom he is sure of learning the truth (II.1-26; the text breaks here). The book of JUBILEES supplies further information about such divine beings (especially the "Watchers" [4:15]; *see also* WATCHER) and Enoch's divinely revealed knowledge (4:17-19, 23).

LAMED lä'mĭd (Heb. lä'mĕth) [ל, *l* (*Lāmedh*)]. The twelfth letter of the Hebrew ALPHABET as it is placed in the KJV at the head of the twelfth section of the acrostic psalm, Ps. 119, where each verse of this section of the psalm begins with this letter.

LAMENTATION. *See* MOURNING.

LAMENTATIONS, BOOK OF lăm'ən tā'shənz [איכה, O how! LXX Θρῆνοι, Dirges]. The OT book normally third among the Megilloth (*see* CANON OF THE OT). The LXX and Vulg. place it after the book of Jeremiah. The English versions enlarged the title to read "Lamentations of Jeremiah."

Lamentations consists of five poems imitative of the forms of individual lament and funeral celebration, four of which are acrostic in form. The meter is mixed, with a prevailing 3+2 pattern. The occasion for the poems was the destruction of Jerusalem in 586 B.C. The cruelty of the plundering enemy, the ravages of plague and famine, the helplessness of leaders, and the cessation of the temple cultus are described poignantly.

Tradition has regarded Jeremiah as the author, but without justification. The poems were probably composed during a period of years for the annual lament over Jerusalem's fall. One hand may be responsible for the first four poems. Events are seen through the eyes of Palestinian Jews who lived in the economically and spiritually depleted homeland between 586 and 538 B.C. The book is doubtless a liturgical collection from an originally larger assortment of commemorative laments. Catharsis of grief and despair is a primary aim of the poems. Animated by a prophetic spirit, the poet is moved by contrition at the judgment of Yahweh and by hope in the divine purposes in spite of Israel's historical nemesis.

1. Literary form
2. Occasion
3. Authorship
4. Liturgical use
5. Purpose

Bibliography

1. Literary form. Lamentations consists of five poems, of which four are ACROSTIC. The twenty-two letters of the Hebrew alphabet are given in succession throughout each poem, appearing at the beginning of each verse or strophe. Poems 1-3 have three lines to a stanza (except for an accidental four lines in 1:7; 2:19), whereas the fourth poem has but two lines to a strophe. The final poem is not acrostic, but is alphabetic in the sense that it contains twenty-two lines. Another variation is in the third chapter, where the acrostic device is used at the beginning of each line rather than strophe (thus there are three *'āleph* lines, three *bêth* lines, etc.). The dominant metric pattern is 3+2, with ample exceptions in 2+2, 2+3, and 3+3 form. The fifth poem is chiefly 3+3. *See* POETRY, HEBREW, § D.

In spite of the rather artificial form, Lamentations attains a remarkable emotional vitality. Although the poems lack the literary finesse associated with the elegiac tradition in English literature, they compare favorably with ancient Near Eastern laments, including other OT specimens. While one of the motivations for the acrostic form may have been to facilitate memory, another, and more cogent, reason was to express the completeness of grief and despair and the plenitude of faith and hope. There are parallels from later synagogue compositions (e.g., the *widui* or lists of sins and sinners in alphabetic form, and poems such as Yose ben Yose's seventh-century acrostic for the Day of Atonement). A regular Talmudic idiom speaks of keeping the Torah "from *'āleph* to *tāw*."

As to literary type, the poems are composite. Chs. 1-2; 4 have traits of the funeral song (e.g., II Sam. 1:17-27; *see* MOURNING). As Amos had earlier applied a funeral lament to Israel (5:1-2), so does the poet of Lamentations, although he pictures Jerusalem not as the corpse but as the sorrowing widow. The third poem is in individual lament style, seemingly the protest of a lone sufferer, although the context shows that Judah is personified in the manner of corporate personality. The interpretation is confirmed by the explicit national reference of individual imagery elsewhere in the book (e.g., 1:13-16). Thus the imagery and mood of individual lament and funeral dirge have been joined to a national catastrophe in order to convey its deeply personal and tragic import.

2. Occasion. The capture and destruction of Jerusalem by the Chaldeans (*see* CHALDEA) in 586 B.C. is background for all the poems, and the immediate subject of at least the first, second, and fourth. Dissenting opinions that find the occasion of lament in the pillage of the temple by Antiochus IV Epiphanes (*see* ANTIOCHUS 4) in 168 B.C. or the Roman Pompey in 63 B.C. are not convincing. While Lamentations offers no direct historical evidence (the only proper name is Edom [4:22]), it does correlate substantially and convincingly with the accounts of the last days of Judah found in the book of Kings and the book of Jeremiah. Among the relevant points of comparison are: siege (II Kings 25:1-2; Lam. 2:22; 3:5, 7), famine (II Kings 25:3; Jer. 37:21; Lam. 1:11, 19; 2:11-12, 19-20; 4:4-5, 9-10), flight of the king (II Kings 25:4-7; Lam. 1:3, 6; 2:2; 4:19-20), looting of the temple (II Kings 25:13-15; Lam. 1:10; 2:6-7), burning of the temple, palace, and important buildings (II Kings 25:8-9; Lam. 2:3-5; 4:11; 5:18), demolition of the city walls (II Kings 25:10; Lam. 2:7-9), slaughter of the leaders (II Kings 25:18-21; Jer. 39:6; Lam. 1:15; 2:2, 20; 4:16), exile of the inhabitants (II Kings 25:11-12; Lam. 1:1, 4-5, 18; 2:9, 14; 3:2, 19; 4:22; 5:2), expectation and collapse of foreign help (Jer. 27:1-11; 37:5-10; Lam. 4:17; 5:6), Judah's fickle political allies (II Kings 24:2; Jer. 40:14; Lam. 1:2, 8, 17, 19), and the provincial status of Judah (II Kings 25:22, 24-25; Lam. 1:1; 5:8-9).

3. Authorship. The traditional author is the prophet Jeremiah. His role is classically represented in Michelangelo's Sistine Chapel painting, where he sits in the brooding and melancholy posture of lament. The tradition can be traced back to the LXX preface: "And it came to pass after the captivity of Israel and the desolation of Jerusalem that Jeremiah sat mourning and he lamented this lament over Jerusalem and said . . . ." Whereupon the text of Lamentations follows. Furthermore, the LXX places the book after the book of Jeremiah. The Vulg. follows the same tradition. Even the Talmud claims Jeremianic authorship. Apparently the common source for the traditions was II Chr. 35:25: "Jeremiah also uttered a lament for Josiah; and all the singing men and singing women have spoken of Josiah in their laments to this day. They made these an ordinance in Israel; behold, they are written in the Laments." The Chronicler hardly refers to the book of Lamentations, since it contains no lament over Josiah but only brief reference to Zedekiah. But traditions have been set in motion with less justification, and it is likely that the careful distinction of Chronicles was overlooked by later readers.

Internal evidence indicates not an iota of support for the tradition. Jeremiah is never named or implied. There are, as a matter of fact, some fairly telling arguments against Jeremianic authorship. One wonders if so adamant a prophet could have closely and sympathetically identified himself with the city's reliance on foreign help and facile trust in the king (4:16, 19). It is difficult to imagine the prophet, who remained in Palestine only a few weeks after Jerusalem's capture, writing the fifth poem, with its ennui and lassitude induced by years of foreign occupation. It is unlikely that Jeremiah, who in the whole of his identified writings never resorts to extensive poetic formalities, should have undertaken the construction of acrostic poems. And finally, if the poems are by the prophet, it is difficult to know why they were not included in the book of Jeremiah, especially when we consider how many oracles of much later origin have been collected under his name.

With the surrender of the traditional theory, most scholars have assumed the activity of two or more poets. The third poem is frequently treated as a fifth- or fourth-century mosaic of psalm clichés. It is true that many differences may be pointed out among the poems, especially contrasting the first and third with the second and fourth. Yet the affinities, linguistic and ideological, are considerable. Diversities within the same poem as great as those between poems can be singled out, and yet few would ignore the acrostic unity of each of the poems and argue for composite authorship for any one chapter. Several literary types and images have been freely appropriated but not wholly assimilated, yet a single mood pervades the collection. All the poems are rooted in the same historical era—i.e., the period of the Palestinian "exile" (586-538 B.C.). Probably the first four poems, and possibly all five, come from the same poet. It is arguable that the nostalgia toward the king and enthusiasm for nobility (e.g., 1:6; 4:7-8) point to an origin in court circles, perhaps within the family of Shaphan (*see* SHAPHAN 1), whose members had been cordial toward Jeremiah (Jer. 26:24; 29:3; 36:10; 40:5). One difficulty with the hypothesis is that the ranks of the nobility were severely decimated by execution and deportation.

4. Liturgical use. The subtle differences between the poems, as well as the manifest repetitions, suggest that they were composed one at a time and not as parts of a greater whole. The fourfold repetition of the acrostic makes this almost conclusive. There is no dramatic progress. Any of the poems can stand alone. Lamentations is best thought of as a collection of laments to be sung on the annual fast days in remembrance of the fall of Jerusalem (cf. Jer. 41:4-5; Zech. 7:1-5). Probably these poems represent the selective sifting of many seasons. Out of a large number of compositions, long years of usage had endeared these to the community as most expressive of the chastened mood of Israel—both in its abysmal sorrow and in its unshakable faith. The final poem looks like a summary appended to the four acrostics, intended to round out the anthology and even bring it up to date.

The process of compilation was governed by a chiastic principle. Chs. 1 and 5 are summaries of the disaster, chs. 2 and 4 more explicit recitals of the details of death and devastation, while ch. 3 occupies the pivotal position in form (intensified acrostic; *see* § 1 *above*) and content (trust in the goodness of God toward Israel). The strophes which are important from the standpoint of theology are central in the poem's structure and, consequently, the crux of the entire collection (3:31-36). The effect of the compilation has been to make everything lead up to the third poem and then flow away from it, thereby putting the climax in the middle.

Catharsis of grief and dejection is the aim of lament liturgies. In Lamentations the acrostic, the quasi-dialogue structure, the iteration and savagery of ex-

pression, are best accounted for by liturgical use. Public recital of the poems on the appropriate memorial days, perhaps with various readers taking the parts of Zion, the groups of citizens, the onlookers, etc., must have been an effective outlet for the pent-up emotion of a people who had lost practically everything that belonged to their former mode of life. In orthodox Jewry, Lamentations has been read in the synagogue since *ca.* A.D. 70 to commemorate the fall of the city to the Romans and the dispersion of Israel. Christian interpretation has assigned the poems to the sufferings of Jesus Christ, with readings designated from Lamentations for Holy Week.

5. Purpose. The axis around which the thought of the book turns is the conflict between historical faith and historical actuality (*see* SUFFERING AND EVIL). Although this enigma is the age-old despair of religion, it took on peculiar urgency on account of the sharp reversal of Israel's historical destiny after 586 B.C. In substance, Lamentations asks: What is the meaning of the terrible calamities that have overtaken us between 608 and 586 B.C. (*see* ISRAEL, HISTORY OF)—i.e., from the untimely death of King JOSIAH through vassalage and rebellion, siege and famine, to the city's humiliation and the extinction of the state? Can these events really be understood as expressive of Yahweh's will? If so, what is our present role? Has Yahweh further plans with Israel? How are we to react to a God who has chastened his people without mercy? Lamentations reveals a deep sense of desertion by men and God, and confronts suffering as a threat to God's purposes in history and thus, inevitably, to the very life of faith.

There is a bitter realism in the book. No efforts have been spared to portray the carnage and destruction. The plight of the emaciated and dying children is etched in pathetic detail. Cannibalism, provoked by extreme hunger, and the slaughter of the priests in the temple, are cited by the poet as the ultimate denial of God's purpose with Israel. The poems throb with a spiritually desolating anguish. And yet almost the whole of the compilation is cast in the mold of prayer, as the poet lifts before God the appalling scene and thereby lays the basis for plaintive appeal. The essence of biblical PRAYER in its vigor and candor could not be better illustrated.

But alongside this "priestly" intercessory protest runs a profoundly "prophetic" stream of thought. Lamentations vindicates the prophetic word of doom. Jerusalem has fallen because of her sin; her fate, though extreme, was a deserved one. The poet counsels passivity toward the enemy and quiet trust in God. He exhibits an absolute loyalty to Yahwism, firmly rejecting all temptations to syncretism or polytheism of the sort that enticed other exilic Jews (e.g., Isa. 57; Jer. 44; Ezek. 8). The poet berates faithless prophets and priests, secure in his faith that the religion of Yahweh could continue independent of professional leadership. The book indicates a steady hope in God's covenant love. *See* LOVE IN THE OT.

Lamentations spans the death of Hebraism and the birth of Judaism. Concentrated in the third poem (especially in the climactic vss. 19-39) are several of the dominant convictions of that faith which was to spring phoenixlike from the ashes and rubble of political annihilation: responsibility for sin, the disciplinary value of suffering, the absolute justice and abiding love of God, the inscrutability of his ways, the unconquerable trust of the believer, the necessity of patience. God's further purposes with Israel are grounded solely in his love and mercy, unfathomable but dependable. With fervor, chastened and refined by suffering, Lamentations proclaims Israel's incredible faith and writes it indelibly into the liturgical practice of Judaism.

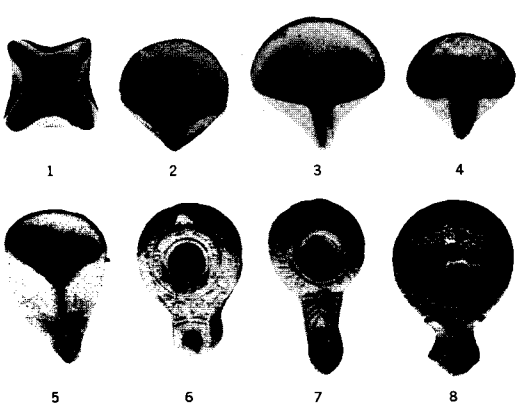
LAMP [מנורה (KJV CANDLESTICK), ניר (KJV *alternately* LIGHT; PLOWING), נר (KJV *alternately* CANDLE), KJV לפיד (RSV TORCH); λαμπάς (*alternately* TORCH), λύχνος (KJV *alternately* CANDLE; LIGHT)].

Lamps are mentioned many times in the OT, referring mostly to the lamps of the LAMPSTAND in the tabernacle and in the temple, but also used with symbolical meaning. The few passages where the lamp is mentioned as an object of daily use are styled in a way which shows how common it was (e.g., Prov. 31:18; Jer. 25:10). This is in agreement with the numberless lamps found in excavations.

Lamps of the OT period were made exclusively of pottery. In earliest times a saucer filled with olive



From *Atlas of the Bible* (Thomas Nelson & Sons Limited)

8. Oil lamps from various periods: 1-3 are from the three periods of the Bronze Age, 3000-2000 B.C., 2000-1600 B.C., 1600-1200 B.C.; 4-5, with a narrower lip, are Israelite types; 5 is fourth-century; 6, 7, and 8 are Hellenistic, Roman, and Byzantine respectively.

oil (cf. Exod. 27:20), on the rim of which rested a wick of twisted thread, was used. *Ca.* 2000 B.C. the first real lamps appeared: the saucers had the rims pinched in four places to form lips for holding the wick. From the Middle Bronze Age onward the lamp had a single lip (Fig. LAM 8). The lip became increasingly pinched, and in the Israelite period the lamp acquired a base. Seven-lipped lamps, such as those mentioned in Zech. 4:2, have also been found. Fig. LAM 11.

The first lamps in the temple may have been similar to the type described above (I Sam. 3:3), but several lamps were later joined on a common stem from which the seven-branched lampstand, the "menorah," developed. Fig. LAM 10.

Under the impact of Greek models introduced into Palestine in the fifth-fourth centuries B.C., the open saucer lamp was replaced in Hellenistic times by a covered, spouted model, which was wheel-made; the spout was formed from a lump of clay attached to the round body. The ascendancy of the covered lamp was interrupted only by archaic revivals like the Maccabean folded type and occasional remnants of an earlier age, but it had been universally adopted by 100 B.C. The spout gradually became shorter and was incorporated in the Roman period into the lamp itself; at the same time the molded lamp—made in two separate sections, upper and lower—was introduced. The round-bodied Roman lamp with a nozzle that projects only slightly was followed by molded lamps with a square end in which the wick hole was made; these in turn gave way to oval or pear-shaped types in late Roman and Byzantine times. Lamps in the Hellenistic Roman period were normally smaller and more delicate than their earlier counterparts. Fig. LAM 8.

The KJV translation "candle" is, of course, inaccurate. The small clay oil lamp was a commonplace, as its abundance on excavated sites, in tomb deposits, and in literary references indicates. Candles were not in use until after the biblical period.

The lamp, when taken together with "light" and "lampstand," had considerable symbolic power in the biblical period. Broadly speaking, the lamp is a localization of LIGHT, which universally symbolizes life, as opposed to death—the realm of darkness. This accounts in part for the nearly universal practice of placing lamps in tomb deposits. Light, and hence lamp, also stands for the divine presence (Rev. 21:23; 22:5; cf. John 8:12; I John 1:5; etc.), and consequently for those things emanating from or related thereto: the prophetic word is a lamp shining in the darkness (John 5:35 [cf. Ecclus. 48:1]; II Pet. 1:19; cf. Mark 4:21-22; Luke 8:16-17, where the context of this saying differs from the ethical interpretation given to it in Matt. 5:15-16); as a saving and transforming light, the lamp may represent the law (Ps. 119:105; Prov. 6:23) or works of righteousness (Matt. 5:15). From another point of view, the lamp may symbolize the eyes of God (Zech. 4:1-14, with the suggestion that the seven lamps on the Menorah are the seven planets; I Clem. 21:2), just as the woman lights a lamp to aid her eyes in searching for the lost coin (Luke 15:8); the eye may be depicted as the lamp of the body—i.e., the medium (or source?) of light. The lamp is a symbol of the lasting existence of the Davidic dynasty in I Kings 11:36; 15:4; II Kings 8:19; II Chr. 21:7. God is the lamp, lighting the darkness (II Sam. 22:29). The symbolism is sufficiently plastic to be utilized in a wide range of contexts, as this brief summary shows, although the root of the concept lies in the light-life equation, irrespective of whether it is understood transcendently or immanently.

LAMPSTAND [מנורה, *menôrâ*, *from* נור, light; Aram. נברשתא (Dan. 5:5 *only*); λυχνία]; KJV (anachronistically) CANDLESTICK. A device for elevating a lamp so that its light will cover a large area; specifically, the sacred seven-branched lampstand of the temple and the tabernacle. *See* MENORAH.

Bibliography

1. Archaeological data. The simplest method of elevating a lamp for better illumination is to set it in a niche in the wall or on a shelf jutting from a wall or a pillar, or to suspend it by a cord from the ceiling (cf. possibly Eccl. 12:6). If, however, the lamp is

9. Tripod or offering stand from Megiddo tombs (Late Bronze II)

placed on a stand, it is easier to tend, and the lighting is more efficient (Matt. 5:15). A great variety of stands have come from the excavation of Palestinian cities. Usually they are made of pottery and are roughly cylindrical in shape, with holes along the sides and painted designs on the exterior surface. The function these stands were intended to fill is not always clear, and the specimens actually found may be offering stands or supports for incense vessels, but the lampstand was probably of similar type. A variety of metallic stand from Megiddo and Beth-shan, consisting of a single upright shaft rising from a tripod base, has been suggested as illustrative of the lampstands of Solomon's temple.* Lamps with high bases were common in Iron Age Palestine (*see* LAMP), and it was only necessary to increase the height of the base in order to produce what was in effect a lamp and lampstand in one piece. A seven-spouted lamp of this kind was found at Tell Ta'annak, and provides an excellent archaeological illustration of the lampstand (RSV "lamp") which the Shunammite woman provided for Elisha's private chamber (II Kings 4:10). The lampstand of Zechariah's vision (Zech. 4:2, 11) was probably an elaborate example of the same type. *See* § 3 *below*. Fig. LAM 9.

2. The menorah. Lampstands in private houses or royal palaces are rarely mentioned in the Bible (II Kings 4:10; Luke 8:16), which is concerned almost exclusively with the sacred lampstands of the tabernacle and the temple. Indeed, the Hebrew word for "lampstand" (*menôrâ*) has been adopted as a technical term for the seven-branched lamp ("menorah"), and has become one of the best-known symbols of Judaism, found today in both synagogue and home. The single menorah which stood on the S side of the tabernacle opposite the table for the bread of the Presence (Exod. 26:35) is described in detail in Exod. 25:31-40; 37:17-24. It consisted of three main parts: the base, the shaft, and the branches. From a tripod base a vertical shaft arose, from either side of which sprang three branches, curving upward to the same height as the central shaft. Each branch and the shaft terminated in a cup, made in the form of an open almond flower, the extended petals of which held a lamp, so that support was provided for seven lamps in all. These were probably of the seven-spouted variety common in the Israelite period (Zech. 4:2).

10. Seven-branched candelabra of Herod's temple, from the arch of Titus at Rome

The branches and central shaft were decorated with the open-almond blossom motif, three to each branch and four on the central shaft. The insistence that the menorah was made by skilled craftsmen is understandable in view of the fact that it was made all in one piece out of *ca.* ninety-six pounds of gold (one talent), and that its complex decoration was of hammered work.

The lampstands of Solomon's temple are not described in detail, but we learn from I Kings 7:49 that there were ten of them placed before the inner sanctuary, five on the N and five on the S side. Additional lampstands of gold and silver were provided, probably for lighting the lesser rooms (I Chr. 28:15). In the second temple, built after the return from the Exile, the tabernacle practice of having only one menorah was restored (I Macc. 1:21; 4:49), and this was continued in Herod's temple, the menorah of which may be seen pictured with the other spoils taken from the temple on the triumphal arch of Titus in Rome. Figs. LAM 10; MUS 85.

3. The menorah as a symbol. The origin and early symbolic value of the sevenfold lamp is obscure. Its branched structure has suggested that it may be connected with the tree of life, a familiar symbol even in pre-Israelite Palestine. If this suggestion is true, the rounded tripod base may represent the world mountain from which the tree grows. Light and life are certainly related concepts in ancient thought. Seven is an almost universally sacred number, but the reason for its association with the sacred lamp is not clear. Zech. 4:10 interprets the seven lamps as the seven eyes of the Lord, "which range through the whole earth"—probably an oblique reference to the seven planets as the eyes of heaven.

Apart from a single reference to the tabernacle menorah in Heb. 9:2, and casual mention of household lampstands (Mark 4:21), lampstands in the NT are confined to the book of Revelation, where they have a symbolic function. The seven churches of Asia are represented by seven lampstands, among which "one like a son of man" (the Christ) walks (Rev. 1:12-20). The church at Ephesus is threatened with the removal of its lampstand if it fails to repent (Rev. 2:5).

4. History of the menorah. Since the description of the menorah in Exodus probably dates from post-exilic times (fifth century B.C. or later), the actual appearance of the menorahs of the tabernacle and temple can only be reconstructed tentatively from archaeological data and some biblical allusions. The most important of the latter is Zech. 4:2, 11, where the lampstand consists of a large bowl, elevated on a stand, with seven lamps, each having seven spouts, ranged around its rim.* It is variously conjectured that the support for the bowl was a metal tripod, or a chalicelike stand resembling the tall-footed lamps referred to above. By the time of the second temple the more familiar seven-branched form had been adopted. Antigonus Mattathias (40-37 B.C.) used the menorah as a symbol on his coinage, but apart from this the menorah is not a common symbol until after the destruction of the temple in A.D. 70. After that time it rapidly became one of the most common of all Jewish symbols, appearing on buildings, in catacombs, and on small objects such as amulets and

11. Suggested archaeological reconstruction of the lampstand in Zech. 4

lamps (*see* SYNAGOGUE). The basic form of the menorah in these representations remains the same as that described in the Exodus passage, although it is often much simplified and occasionally five, nine, or eleven branches are depicted. With the introduction of candles the lampstand became a candelabrum, thus providing a kind of historic justification for the translation "candlestick." Fig. LAM 11.

LANCE. *See* WEAPONS AND IMPLEMENTS OF WAR § 3*d*.

LANCETS [רמח]. A textual error in I Kings 18:28 KJV (RSV correctly LANCES). *See* WEAPONS AND IMPLEMENTS OF WAR § 3*e*.

LAND CROCODILE [כח, *possibly* strong one; *cf.* כח, strength, power] (Lev. 11:30); KJV CHAMELEON. An old name for the "monitor," any of a family (Varanidae) of large, carnivorous lizards ranging from four to seven feet in length, of the genus Varanus. Two species are reported by Tristram as living in Palestine.

The context in Lev. 11 suggests that כח (*kôaḥ*) is a reptile and probably a lizard; the LXX and the Vulg. take the word as "chameleon," and the Peshitta as "mole." If the monitor is meant, the Hebrew word doubtless indicates that it was the largest and strongest lizard known in Israel.

LAND LAWS. Those laws in the Pentateuch pertaining to the allotment of land by tribes and the provision for its protection (Num. 27:5-11; 36:5-9; Deut. 19:14; 27:17). For sabbatical-year legislation on land (Exod. 23:10-11; Lev. 25), *see* JUBILEE.

See also LAW IN THE OT.

LANDMARK [גבולה, גבול, border]. In the ancient Near East stones were erected to mark the boundaries between fields, districts, and nations (Gen. 31:51-52). In Mesopotamia and Egypt these were often elaborately inscribed, and it may be assumed that Palestinian landmarks had at least a few words of identification. Naturally the removal of landmarks was a serious offense. It is specifically mentioned as a crime in Babylonian law and is prohibited in the Instruction of Amen-em-opet (*see* EGYPT) as well as in Greek and Roman law. The Code (*cf.* DEUTERONOMY) twice warns against the removal of landmarks (Deut. 19:14; 27:17). The offense was also used as a symbol of overturning ancient customs or laws (Prov. 22:28; 23:10; cf. Job 24:2; Philo *On the Special Laws* IV.149-50). Thus those who defect from the Qumran sect are called "removers of the landmark." *See* TRIBE § 2*f*. Fig. LAN 12.

LANGUAGES OF THE ANCIENT NEAR EAST. Interest in the linguistic diversity of the ancient world appears in such biblical stories as the tower of BABEL and the day of PENTECOST. By counting the peoples enumerated in Gen. 10 the rabbis later figured at seventy-two the number of languages spoken in the ancient world. This number found wide acceptance among both Christians and Mohammedans. Of many peoples mentioned in the Bible we have no linguistic records whatever. At the same time, modern exploration has uncovered texts in the languages of peoples not identifiable in the Bible. Knowledge of such languages is necessarily derived from written documents; and as the art of writing arose in the Near East only *ca.* 3500 B.C., we can know nothing of these languages earlier than this date. The earliest WRITING was pictographic or ideographic. These ideograms became phonograms when a symbol stood for a sound and no longer for the meaning. In early writing symbols were used frequently both as ideograms and phonograms. Only at a later period did alphabets develop (*see* ALPHABET) out of these syllabic, ideographic systems.

Records in some languages of the ancient Near East are almost completely intelligible, others only partly intelligible, while others are still undeciphered. For some there is available an abundance of material, for others much less—perhaps only proper names, a few glosses, or texts too brief and obscure to permit of any sure interpretation. Any classification other than geographical is thus hardly practicable.

1. Mesopotamian group
2. Zaghros group
3. Anatolian group
4. Iranian group
5. Syro-Palestinian group
6. Aaegean group
7. Coastal languages of Asia Minor
8. Egypto-Berber group

1. Mesopotamian group. The art of writing would seem to have originated in S Mesopotamia, where the earliest intelligible texts are in Sumerian. The inhabitants of SUMER invented a pictographic script which, when it came to be written on clay instead of inscribed on harder material, developed the characteristic wedge-shaped signs known as the cuneiform script. In this we have Sumerian texts from *ca.* 3200 B.C. to Arsacid times. Sumerian is a non-Semitic, non–Indo-European language of an agglutinative type. There are two dialects, the *eme-ku* and the *eme-sal,* of which the former is the older. Early in the third millennium B.C. incoming Semitic speakers had become an important element in N and central Mesopotamia. From the Sumerians they learned the cuneiform script in which they wrote their own language. This is Akkadian, the first of the Semitic languages (*see* SEMITES) to appear in written form. Its main dialects are Babylonian and Assyrian. (*See* ASSYRIA AND BABYLONIA.) Between the fifteenth and thirteenth centuries, however, Akkadian became a lingua franca in much of the Near East, and was adopted by peoples of non-Semitic speech habits, giving rise to such dialectal forms of Akkadian as Cappadocian, Nuzi, Elamite, and the Mari dialect used by the Amorite invaders. Akkadian is known from inscriptions and tablets from *ca.* 2800 B.C. to A.D. 50. From Seleucid times come a few Akkadian texts in Greek transcription. So great was the prestige of Akkadian culture that neighboring peoples adopted the cuneiform script to write their own languages.

2. Zaghros group. From early times Mesopotamia has been subject to invasion by the hill peoples. From the Zaghros Mountains have come certain recognizable groups of invaders. The Guti from this region established a dynasty of Gutium between the fourth and fifth dynasties of Uruk. There are no connected texts in their language, but the names of the Gutian kings are non-Semitic and seem unrelated to any known language family. Of the later Kassites from the Zaghros, who held hegemony in Babylonia for hundreds of years, there are, besides names of gods and men, a number of glosses in Babylonian texts. The names of their overlords are Indo-European, but the glosses suggest that the common Kassite folk spoke a language akin to Elamitish. An even more important invasion was that of the Hurrians, the OT Horites, who from the fifteenth to the thirteenth century B.C. exercised considerable influence in the Near East, from the Zaghros to the Mediterranean and as far S as Egypt. The Mittani overlords of these Hurrians were of Indo-European speech, as appears from their names, the names of their gods, and their numerals. The Hurrian language, however, known from great numbers of cuneiform texts, is an agglutinative language unrelated to any known linguistic family.

To this group should be attached the Elamite languages (*see* ELAM), for which considerable material is available but which are not yet fully intelligible. The earliest inscriptions from Susa, the main city of Elam, are in a pictographic script which is possibly of Mesopotamian origin but which may be an independent development. Later the people of Susa adopted the cuneiform script which they used for writing an Elamite dialect of Akkadian but also for writing their own language. If the pictograph language is called Proto-Elamite, the earliest cuneiform texts, from *ca.* 2500 B.C., may be called Old Susian. The same language, but in a more developed form and a somewhat different style of cuneiform script, is used in texts from the sixteenth to the eighth century B.C., and may be called Neo-Susian. In the Achaemenid period a still later form of the language is used both for inscriptions on rock and on thousands of clay tablets, and is known as Elamitish. All attempts to relate these to other language families have failed.

3. Anatolian group. The cuneiform script spread also westward into Anatolia, where it was used to write Akkadian and also local languages. Perhaps

through the Hurrians it came to the HITTITES, a people of Indo-European speech who had entered Asia Minor from the W and established a kingdom in the bend of the Halys River. In their inscriptions they call themselves Nesians, but they had superseded an older Khatti people, whose name, in the modified form "Hitti," is that by which they came to be known. Their own language is Indo-European of the *centum* type; but the language of the older people, now known as Proto-Khatti, appears to be unrelated to any known linguistic family. Inscriptions in a hieroglyphic script, not yet fully intelligible but thought to be associated with the Hittite Empire and so called hieroglyphic Hittite, though known to be younger than cuneiform Hittite, are possibly in the language of the Cilician kingdom of Kassuwatna. The Nesians were not the only Indo-European speakers to invade Asia Minor, for among the cuneiform texts are a few in Luwian and Palawi, which seem to be cognate dialects belonging to roughly the same period as the Hittite cuneiform texts.

A much later invasion of Indo-Europeans brought speakers of the *satem*-type Phrygian into central Anatolia. Its inscriptions belong to two groups: the Old Phrygian, which are of the seventh and sixth centuries B.C. and are written in an alphabet of the old W Greek type; and the Neo-Phrygian of the Roman period, written in the ordinary Greek alphabet. Phrygian seems still to have been spoken in that area till the fifth century A.D. A relatively small warrior group of similar origin moving farther E imposed their rule on the Urartean land, and their Indo-European speech spoken by their Urartean subjects developed into Armenian, which we know only as a Christian language, since it was not written till after the conversion of the country to Christianity. The original Urarteans had long been writing their language in cuneiform script. It was formerly called Vannic, because the earliest inscriptions came from near Lake Van, and some call it Kaldi. These inscriptions date from between 840 and 640 B.C. and are in a non-Semitic, non-Indo-European language. Unsuccessful attempts have been made to relate it to Hurrian and to the Caucasian languages.

4. Iranian group. To the N and the E of Elam were the lands of the MEDES and the Persians (*see* PERSIA). These speakers of Indo-European dialects came as invaders to settle among peoples of quite different speech habits. The earliest inscriptions are those of the Achaemenid rulers, Darius, Cyrus, Xerxes, Artaxerxes, etc., written in an alphabetized form of cuneiform script. This was the language of the Persians from Persis, and is known as Old Persian. Median is known only from person and place names and some glosses. It gave rise, however, to the Middle Iranian dialect of Arsacid Pahlavi used throughout the great Parthian Empire. Avestan, the language of the older Zoroastrian scriptures, possibly represents the old Bactrian tongue of the NE, from which area came also the Soghdian language. The tongue of the Scythians belongs to this Iranian group. It is represented by Ossetian, still spoken in the Caucasus. Avestan and Pahlavi are written in a script probably derived from Syriac.

5. Syro-Palestinian group. Both the Egyptian hieroglyphic script and the Mesopotamian cuneiform script were in early use in Syria and Palestine, and from both of them developed scripts for writing the local languages. The excavations at Ras Shamra in uncovering the ancient city of UGARIT revealed a whole literature written in an alphabetic script based on a selection of cuneiform signs. These Ugaritic texts come from the period 1500-1300 B.C. and are in a Semitic language. Phoenician is also a Semitic language. Its inscriptions range from the twelfth century B.C. to the sixth century A.D. and are in a characteristic alphabet developed by the Phoenicians out of earlier attempts at adapting Egyptian hieroglyphic signs to write Semitic. The form of the language used in the Phoenician colonies in North Africa is called Punic. It was still in use in the lifetime of Augustine. Excavations at Byblos have revealed another group of inscriptions written in a semihieroglyphic script based on Egyptian. This Byblian language would also seem to be Semitic. Far S in Sinai at Serabit al-Khadem has been found yet another script based on Egyptian, which links up with certain enigmatic inscriptions found elsewhere in Palestine, whose language when satisfactorily interpreted will probably also be found to be Semitic. The Canaanitish tongues, Hebrew, Aramaic, Samaritan, Moabite, Edomite, and Ammonite, are all Semitic. *See* HEBREW LANGUAGE; ARAMAIC LANGUAGE; EDOM; MOAB.

Here also should be mentioned the Arabian groups (*see* ARABIANS). Numerous inscriptions from the South Arabian kingdoms and from their N trade outposts reveal the Minaeo-Sabaean language from as early as the ninth century B.C. Certain North Arabian groups learned from them their distinctive alphabet, which they adapted to write their own Dedanite, Lihyanite, Thamudic, and Safaite dialects, which are the precursors of classical Arabic. The Arabians present on the day of Pentecost were doubtless Nabateans, whose language, written in a modification of the Aramaic script, continued in use up to Islamic times. All the Arabian dialects are Semitic.

6. Aegean group. In historical times Greek (*see* GREEK LANGUAGE), in various dialectal forms, was spoken in the Aegean, but these dialectal forms arose because it was Greek imposed upon peoples of other speech habits. Possibly there is evidence of some of these earlier languages in the Cretan and Cypriote inscriptions. The Minoan language of the Cretan hieroglyphic inscriptions is still undeciphered. Besides the hieroglyphs, however, two groups of linear inscriptions of Cretan origin are known, named Linear A and Linear B. Linear B has proved to be an archaic form of Achaean Greek. Some Cypriote inscriptions in a script closely resembling the Cretan are called Cypro-Minoan. The Cypriotes also used a purely syllabic script. The earlier inscriptions in this script, called Eteo-Cypriote, are still undeciphered, but later texts in the same script have proved to be in a dialect of Arcadian Greek. If the mysterious Phaistos disk turns out to be Philistine, it should doubtless be included here.

7. Coastal languages of Asia Minor. These are known mostly from proper names, but for a few we have some glosses, and for a lesser number some short inscriptions, partly in strange alphabetic scripts and later in the Greek script. Cilician, Pisidian,

Mysian, Isaurian, and Lycaonian are known only from a few glosses which tell little about the nature of the languages. Of Sideto-Pamphylian there are coin inscriptions from the fourth and third centuries B.C., and three undatable tomb inscriptions in Sidetan and Greek. Carian is known from proper names of a characteristic form, from some glosses, eighty graffiti, and three bilingual inscriptions of the seventh century B.C. from Egypt. Lydian is represented in inscriptions recovered from the excavations at Sardis and a bilingual Lydian-Aramaic text. The inscriptions date from the fifth and fourth centuries B.C. For Lycian there is also a body of inscriptional material, some in Greek letters but many in a strange script. Some are bilingual Greek-Lycian texts dating from the first century B.C. There is no certainty of linguistic connections of these coastal languages.

8. Egypto-Berber group. Almost as anciently attested as Sumerian is the old Egyptian language (*see* EGYPT) which also was at first written in pictograms, still familiar as the hieroglyphs on the Pharaonic monuments. A more cursive form of this writing for use on softer materials is the Hieratic script, and a still more cursive form, which appears *ca.* 700 B.C., is the Demotic script. The language underwent great changes during its history, so the language of Dynasties I–VIII (*ca.* 3000-2155) is called Old Egyptian, that of Dynasties IX–XVIII (2155-1350) Middle Egyptian, and that of Dynasties XIX–XXIV (1350-720) Late Egyptian. From then on till Roman times it, like the script, is referred to as Demotic. After the Christianization of Egypt the documents in a new alphabet based on Greek script are called Coptic, the four main dialects of which are Sahidic in Upper Egypt, Akhmimic and Fayumic in Middle Egypt, and Bohairic in Lower Egypt.

Far up the Nile the Ethiopian rulers of Napata had adopted the Egyptian language for their inscriptions as early as the eighth century B.C. In the first century B.C., however, at the capital city of Meroe, the seat of that Candace whose eunuch appears in Acts 8:26-39, there had been developed from the hieroglyphs a system of signs for writing the local Meroitic language, inscriptions which, both in lapidary and in cursive, continue till late in the third century A.D. Though this script can be read, the inscriptions are still undeciphered. To the W of Egypt lies the area of the Berber languages, only one of which, Numidian, presents inscriptions of any age. It is written in a curious Libyan alphabet of uncertain origin, and the texts, which date from the second century A.D., are only partially intelligible.

LANGUAGES OF THE BIBLE. The Bible, as every other scripture, reflects the linguistic environment in which its documents were written (*see* LANGUAGES OF THE ANCIENT NEAR EAST). Thus, though the OT is in the HEBREW LANGUAGE and the NT in the GREEK LANGUAGE, there are names, words, phrases, from other languages in use in the environment of the biblical writers. There is frequent reference to this linguistic diversity. Ahasuerus had his edict written to every province in its own script and to every people in its own language (Esth. 3:12). Nehemiah found that where the Jews had taken wives from Ashdod, Ammon, and Moab, their children could not speak the language of Judah but spoke the language of each people (Neh. 13:23-24). Officials in besieged Jerusalem besought the Assyrian envoys to speak in Aramaic rather than in Hebrew (II Kings 18:26). The gospels tell that the inscription above the cross was in Greek, Latin, and Hebrew. Jews from the Diaspora who heard the apostolic preaching on the Day of Pentecost were amazed to hear the gospel proclaimed in their own native languages (Acts 2:6-7).

Whole chapters in Daniel and Ezra are in the official Aramaic of the chancelleries, while in the NT such familiar expressions as "Eloi, Eloi, lama sabach-thani," "Talitha cumi," and "Maranatha" are in the colloquial Aramaic of the day. *See* ARAMAIC LANGUAGE.

When Pharaoh gave Joseph the name Zaphenath-paneah and the servants cried before him, "Abrek" (Gen. 41:43, 45), these represent Egyptian words.

Similarly when Daniel is given the name Belteshazzar (Dan. 1:7), and when the officers of the Assyrian king are called Tartan, Rabsaris, Rabshakeh (II Kings 18:17), these represent Babylonian and Assyrian words.

The musical instruments in Dan. 3—the "lyre," "trigon," "harp," and "bagpipe"—are Greek words.

The title "satrap" (Ezra 8:36; Esth. 3:12) and those translated "counselors," "treasurers," "justices," in Dan. 3:2-3, are Persian words.

In the NT "centurion" (Mark 15:39), "legion" (Luke 8:30), "praetorian" (Phil. 1:13), "denarii" (Matt. 18:28), are Latin words.

Place names in the Bible are from a variety of languages, and there are several words of uncertain meaning whose origin is unknown. A. JEFFERY

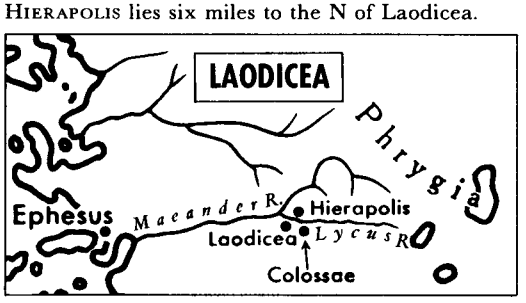
LANTERN. The translation of φανός, which is used in the Greek Bible only at John 18:3. The word comes from the common word φαίνω, which means "to appear" or "to shine." It is evident that it refers to some means of giving light, but even in its extra-biblical usages, which are rather rare, it has never been discovered in a context clear enough to enable us to gain an exact picture of it. It may have been a kind of torch, though the more common word for "torch," λαμπάς, is used along with it in John's passage. It is an open question as to whether John was trying to distinguish between two different kinds of lights or was employing the two words as synonyms.

S. A. CARTLEDGE

***LAODICEA** lā ŏd'ə sē'ə, lā'ə də sē'ə [Λαοδικία *or* Λαοδίκεια]; LAODICEANS —ənz. A city in SW Asia Minor.

Laodicea is one of the cities in the Valley of the Lycus (modern Çürüksuçay), a tributary of the Maeander. It is located in the extreme SW of Phrygia and sometimes is considered as belonging to Caria—a geographical uncertainty also reflecting the mixed ethnic situation to be assumed for pre-Hellenistic times. The site occupied by Laodicea is an almost square plateau some hundred feet above the river valley, S of the river and the modern railroad station of Goncali. The flat hill of the city is protected by two smaller rivers, the ancient Asopus (Baspinar) and Caprus (Gümüşçay), both tributaries of the Lycus. To the S lie the high mountains Salbacus and Cadmus (the Babadağ and Akdağ Range).

The city was located on the ancient highway leading up from Ephesus through the Maeander and Lycus valleys to the E and ultimately to Syria (Strabo XIV.663). COLOSSAE is ten miles to the E, while HIERAPOLIS lies six miles to the N of Laodicea.



Pliny (Nat. Hist. V.105) gives the earlier names of Laodicea as Diospolis or Rhoas, the latter perhaps standing for a Phrygian village in this area. As a city, Laodicea was founded by the Seleucids, presumably *ca.* 250 B.C. by Antiochus II, who named it after his wife, Laodice. It was meant to be a Seleucid stronghold in the area, to which its location made it eminently suitable. Some inscriptions refer to the early Hellenistic history of the site, but not much is known in detail. In 190 B.C., Laodicea came under Pergamenian rule, which meant some decline for the city; but prosperity increased under the Romans after 133 B.C. (cf. Strabo XII.578), when the city was allowed to develop its economic and commercial potential. It was made the center of a judicial district (*conventus*) to which Hierapolis, and later also Cibyra, among other cities, belonged.

Although the region of the Lycus Valley is subject to earthquakes and Laodicea was hit several times, the reference by Tacitus to the earthquake of A.D. 60 shows that the city was prominent and wealthy enough to be reconstructed without financial aid from the Romans (Ann. XIV.27).

Laodicea's wealth was related to her fertile land and good grazing grounds for the sheep, whose raven-black wool (Strabo XII.578) made her famous. Special garments and carpets were woven in the city, and guilds of craftsmen (e.g., fullers and cloak-makers) are attested. In this industry Lacodicea was a

prominent partner and competitor of the Ionian cities and its neighbors Colossae and Hierapolis.

The prosperity led to the development of financial operations and banking at Laodicea (Cicero *Ep. ad Fam.* III.5; cf. the boast in Rev. 3:17). Local benefactors increased the material prestige of the city—e.g., Hieron, who left the city two thousand talents, and the family of the orator Zenon, whose descendants were kings in various parts of Asia Minor (Strabo XII.578). The city struck its own coins from the second century B.C. on, with iconographic references to the local river gods and cults.

The population of the city included Greek-speaking Syrians, Romans, and Romanized natives, as well as a prominent and wealthy Jewish contingent. In 62 B.C., by order of the governor Flaccus, the annual contributions which the Jews were accustomed to send to Jerusalem were seized and sent to Rome; twenty pounds of gold were taken at Laodicea (Cicero *Pro Flacco* 68). The special rights of the Jews were abolished in A.D. 70.

The early history of Christianity and the church at Laodicea (Rev. 1:11; 3:14) is not much illuminated by local evidence. The association of the early Christian community in Laodicea with those in Colossae and Hierapolis (Col. 2:1; 4:13-16) reflects the joint religious development in the Lycus Valley. Laodicea emerged in the fourth century as the most prominent bishopric in Phrygia. In those days it was also the secular capital of W Phrygia and was called Metropolis of Asia.

The city suffered in the wars of Seljuks and Turks and was abandoned soon after the thirteenth century, to be succeeded by the modern town of Denizli; although the identification of the once famous city was never lost to memory.

Nowadays the ruins of Laodicea (Eski Hissar) occupy a large area strewn with architectural fragments. It is unexcavated, and the final identification of the various buildings will have to wait for archaeological confirmation. The lines of the ancient city walls can still be traced. The triple E gate (the "Syrian" gate) was dedicated to Vespasian, as proved by an inscription.

Some of the buildings are relatively well preserved. A stadium lies in the SW part of the site. It is of Roman shape with two semicircular ends, of *ca.* a thousand feet in length, and, like the E gate, dedicated to Vespasian (in A.D. 79). Gladiatorial combats are known to have been staged in Laodicea in the first century B.C. A large building near the stadium, probably of the Hadrianic period, may represent a gymnasium or baths. Its arches, piers, and colonnades are much dilapidated. Two theaters are in better preservation. The remains of an aqueduct and water tower have attracted the special attention of early travelers. Water, brought from springs near Denizli, was carried partly on arches of masonry but part of the way in stone barrel pipes, up and down the slopes. The necropolis of the town is on the N side, near the river, where many disturbed sarcophagi mark the site.

M. J. MELLINK

LAODICEANS, EPISTLE TO THE. A short letter purporting to have been written by Paul and occasioned solely by the reference in Col. 4:16 to the "letter from Laodicea." *See* APOCYPHA, NT.

The date of the composition is unknown. That it was in existence in the fourth century is evidenced by warnings against it by many of the fathers, notably Jerome. By the sixth century it was widely accepted as Pauline and is found in many Latin MSS of the NT. The two earliest occurrences are in the Pseudo-Augustine *Speculum* (a group of OL MSS edited by Mai) and the famous sixth-century Vulg. MS Fuldensis. From then until the fifteenth century its presence in Latin MSS is about as common as its absence. Its most common position is after Colossians, but in some MSS it stands after II Thessalonians, between Titus and Philemon, after Philemon, after Hebrews (a very common position), and at the end of the NT. Despite Jerome's stricture ("Some say also 'To the Laodiceans,' but we reject this"; *De Viris Illustribus* 5), it was regarded as authentic by Gregory the Great. To be sure, it was not canonical: the church had said that there were fourteen such letters by Paul. To Gregory this number was highly appropriate, for it suggested a combination of the Ten Commandments and the four gospels. Nonetheless, Gregory held, Paul actually wrote fifteen, and this, he clearly implied, was one of them. Haymo of Halberstadt (died A.D. 853), in commenting on Col. 4:16, remarks that the Apostle "directs the Laodicean epistle to be read to the Colossians because, though very short and not considered in the canon, it still has some use." The tenth-century Anglo-Saxon abbot of Cerne, Alfric, did not trouble himself with Gregory's nice distinction between "Pauline" and "canonical" but listed this writing as one of the fifteen which were "loud as thunder to faithful people." It is found not only in many Latin Bibles but also in many of the vernacular versions into which the Vulg. was translated—notably, in many editions of the pre-Luther German Bible. Although not translated by Wyclif or Purvey, it was added before the middle of the fifteenth century in

two distinct English versions. After the sixteenth century its influence rapidly declined.

Although it exists only in Latin and has been widely regarded as originally composed in that language, its frequent Grecisms, its wide variation from both the diction of the OL and the Vulg. in the form in which its catena of excerpts from the Pauline letters occurs, and the occasional warnings against it by the Greek fathers combine to make the hypothesis of a Greek original far from unlikely. Both Theodore of Mopsuestia and Theodoret condemned it as spurious. The Second Council of Nicea (A.D. 787) gave warning: "Indeed a forged epistle of the divine apostle is extant, having a place in some copies of the Apostle, which our Fathers rejected as not his own." That this apocryphon is to be identified with the "Epistle to the Laodiceans" mentioned in the Muratorian Fragment (*ca.* A.D. 180) along with one "to the Alexandrians," as produced in the interests of the heresy of Marcion and which "cannot be received in the catholic church," has seemed to most scholars, despite Harnack's advocacy, quite impossible.

The writing itself is simply a cento of short, unconnected Pauline phrases lifted bodily from the canonical letters. Dependence upon Philippians is the heaviest, but there is also clear use of Galatians, I and II Timothy, and I and II Corinthians, while reminiscences of both II Peter and Matthew are probably to be seen. Unlike many pseudonymous writings, this trivial little forgery has no ax to grind, and it is devoid of any purpose, doctrinal or otherwise, save to fill the gap suggested by the reference in Col. 4:16, which word has intrigued readers in every age and has led to many speculations: (*a*) a letter from the Laodiceans to Paul; (*b*) a letter from Laodicea by Paul himself; (*c*) a letter to Laodicea by Paul or someone else.

The little letter—the Latin contains but 247 words—begins: "Paul, an apostle not of men or by man, but by Jesus Christ, unto the brethren that are at Laodicea"; expresses thanks for their perseverance in his (Christ's) works; warns them against heresy and those "who are filthy in lucre"; mentions his "bonds seen of all men," which he suffers in Christ, but wherein he rejoices and is glad; advises them that it is God who works in them; admonishes that their petitions be made openly to God; bids them do "what things are sound and true and sober and just and to be loved"; advises them that "the saints salute" them; and, of course, concludes: "And cause [this epistle] to be read unto those of Colossae, and [the epistle] of the Colossians [to be read] unto you."

One has but to read this utterly trivial and artificial congeries of disjointed phrases, lifted bodily from their earlier contexts and hitched together without rhyme or reason, to agree with Erasmus: "There is no argument which will more effectively convince that this is not by Paul than the epistle itself."

Bibliography. A convenient English translation of the epistle is given by M. R. James, *The Apocryphal NT* (1924), pp. 478-79. For a more detailed discussion, including a partial list of the MSS carrying it and a reconstruction of the conjectured Greek original, see J. B. Lightfoot, *Saint Paul's Epistles to the Colossians and Philemon* (9th ed., 1890), pp. 272-98. See also A. von Harnack, *Die apokryphen Briefe des Paulus an die Laodicensis und Korinther* (1905). M. S. ENSLIN

LAPIS LAZULI lăp'ĭs lăz'yo͞o lī. RSV mg. alternate rendering for SAPPHIRE in Job 28:6 and seven other passages. Lapis lazuli is a stone of rich azure blue, frequently showing spangles of iron pyrites. The sapphire of Theophrastus and Pliny was probably lapis lazuli. A few specimens of this stone have been discovered in Palestine. It was used more widely in Mesopotamia as a semiprecious stone, for seals, ornaments, inlay, and occasional small objects.

W. E. STAPLES

LAPPIDOTH lăp'ə dŏth [לפידות] (Judg. 4:4). The husband of Deborah the prophetess, whose home appears to have been in the vicinity between Ramah and Bethel.

LAPWING. KJV translation of דוכיפת (RSV HOOPOE). While the lapwing (*Vanellus vanellus; Hoplopterus spinosus*) is known in Palestine in the summer (R. Lydekker, *Royal Natural History* [1895], IV, 480-84), it is probable that the bird designated is the hoopoe. W. S. MCCULLOUGH

LASEA lə sē'ə [ἡ Λασαία] (Acts 27:8). A city on the S coast of Crete.

The name of the city, which appears as Λασαία in the Common Text, is found as Λασσαία in Codex Sinaiticus (where a corrector has also changed it to Λαΐσσα), as Λασέα in Codex Vaticanus, as 'Αλάσσα in Codex Alexandrinus, and as *Thalassa* in the Vulg. The variant spellings suggest that the place was not well known, and it is not mentioned by ancient geographers. This need not be surprising, since even in Homer's time there were ninety cities on Crete (*Odyssey* XIX.174). In 1853 Captain T. A. B. Spratt, directing a Mediterranean survey, found ancient ruins on the shore near FAIR HAVENS, and these may well be identified with Lasea. Probably it was only a small coast town.

Bibliography. T. A. B. Spratt, *Travels and Researches in Crete* (1865), II, 7-8; Bürchner, "Lasaia," *Pauly-Wissowa, XII, i* (1924), col. 883. J. FINEGAN

LASHA lā'shə [לשע] (Gen. 10:19). One of the (NE?) boundary points for the land of the Canaanites; the location is unknown. With good reason, Lasha has been compared with Laish-Dan (cf. Josh. 19:47; Judg 18:29). Jerome, following a Jewish tradition, places it at Callirrhoe, a ravine E of the Dead Sea, famous for its hot springs. Herod the Great visited it during his last illness. V. R. GOLD

LASHARON lă shâr'ən [לשרון] (Josh. 12:18). A city whose king was defeated by Joshua. Probably the word is not the name of a city, but was originally part of the phrase "Aphek belonging to Sharon," distinguishing this from other Apheks (cf. the LXX B reading: Σαρων, Saron). *See* SHARON. W. L. REED

LASHES, FORTY LESS ONE. *See* CRIMES AND PUNISHMENTS.

LAST DAY(S), LATTER DAYS. *See* ESCHATOLOGY OF THE NT.

LAST SUPPER, THE. The last meal of Jesus with his disciples, on the eve of his passion, as related by

the Synoptic evangelists (Matt. 26:17-30; Mark 14: 12:26; Luke 22:7-38) and by Paul (I Cor. 11:23-26). The meal is mentioned also in the Gospel of John (13:2 ff), though without precise reference to any institution of the sacrament of the Lord's Supper. But the Fourth Evangelist treats of the sacrament in the discourse appended to the miracle of the feeding of the multitude (especially 6:51-56). *See also* AGAPE; LORD'S SUPPER.

Critical problems for the interpreter of the Last Supper accounts concern the occasion of the meal, the textual tradition of Jesus' words and their authenticity, and the meaning of his words and actions. These problems, of course, cannot be isolated from the larger questions raised by the literary, historical, and theological criticism of the gospels. But in this particular case, the problems have been so complicated by doctrinal controversy in the church that it is difficult for any interpreter to approach them without some degree of subjective or ecclesiastical bias.

1. The occasion of the Supper. The problem of the occasion of the Last Supper is involved in the broader question of the chronology of the Passion. All the evangelists and the unanimous tradition of the church agree that the Last Supper took place on Thursday evening before the crucifixion of Jesus, which occurred on a Friday. If one counts the day in the Jewish manner, from sunset to sunset, then the Synoptic gospels relate that the Supper and the Crucifixion occurred on the festival of the PASSOVER—i.e., on Nisan 15. By this reckoning, the Last Supper was a Passover meal. The Gospel of John, however, is explicit in stating that the Crucifixion occurred on the "preparation day" or eve of the Passover—i.e., Nisan 14—and that in the year of Jesus' death the Passover fell, not on Friday, but on the sabbath (18: 28; 19:14, 31). In this case, the Last Supper could not have been a Passover meal, since the paschal lambs would not have been slaughtered until Friday afternoon, at the time when Jesus was on the cross. With this Johannine tradition is commonly associated the connection made by Paul (I Cor. 5:7) between the death of Jesus and the sacrifice of the paschal lamb on the preparation day of the feast. Biblical critics have been sharply divided in their preferences for the Synoptic or the Johannine chronology, respectively. Similarly, in ecclesiastical usages, the Latin church, by its use of unleavened bread in the Eucharist, supports the Synoptics; the Greek church, by its use of leavened bread in the rite, adheres to the Johannine position.

Numerous theories have been offered to reconcile this discrepancy in chronology and harmonize the gospel traditions. The chronological notices of Mark, upon which Matthew and Luke appear to depend, are inherently contradictory—especially 14:12, where the "first day of Unleavened Bread" (Nisan 15) is erroneously identified with the day "when they sacrificed the Passover lamb" (Nisan 14). To some critics, this confusion is evidence that Mark's tradition of the Passion originally agreed with John's, and that Mark's identification of the Last Supper with the Passover (particularly by his insertion of the Preparation pericope, 14:12-16) is a later and less authentic interpretation. Others consider the text of Mark 14:12 to be merely the result of ignorance or of a faulty translation from Aramaic to Greek, and in no way to impair Mark's trustworthiness in identifying the Supper with the Passover. Even if the pericope recounting the preparation for the Supper were not an original part of Mark's basic source for the Passion, it may nonetheless represent an ancient and sound tradition. Some scholars have interpreted the saying of Jesus in Luke 22:15 to mean an "unfulfilled desire" to eat the Passover, thus bringing the special Lukan material into line with John. But others maintain that the phrase is a Semitism and expresses an "intense," rather than an "unfulfilled," wish of Jesus.

Several Jewish scholars have put forward the view that in the year of Jesus' death the Passover was observed on two consecutive days, because of different reckonings of its date by the Sadduccees and the Pharisees respectively. But such a theory lacks incisive evidence in Jewish and rabbinic sources. The many efforts to solve the problem by recourse to astronomical calculations of the coincidence of the full moon of Nisan and the sabbath have all proved to be inconclusive. This is partly because of our ignorance of the precise method used by the Jews at that time in observing and calculating the date of the new moon, and partly because of uncertainties about the exact year, among several possibilities, of the death of Jesus. Hence the majority of scholars fall back upon a preference for one gospel tradition as over against another, on the basis of internal criticism of the passion narrative itself.

Opponents of the Passover interpretation of the Last Supper have marshaled a formidable series of objections to the Synoptic theory from the regulations for Passover observance known to have been operative in the time of Jesus. Many of these have to do with details of the passion narrative as a whole. Those that are specifically related to the Supper are: (*a*) the absence of any reference to the Passover lamb itself, the principal constituent of any Passover meal; (*b*) the use of the Greek word for ordinary bread (ἄρτος) instead of the technical term for unleavened bread (ἄζυμα); (*c*) the mention of only one, or at most two, cups of wine, whereas the Passover ritual provided for four cups. Further objection is made to the Synoptic dating on the grounds that the Lord's Supper as observed in the early church betrays none of the distinctive features of the Passover; and that, if the Passover meal had been the occasion of the institution of the Eucharist, one would have expected the rite to have been an annual rather than a weekly, or even daily, observance in the church.

None of these objections to the Synoptic interpretation is decisive. The evangelists' purpose was not to describe a Passover meal as such, but only to report those features that were distinctively marked by words or actions of Jesus, or were continued in the ritual of the church. It has been demonstrated that the word for ordinary, leavened bread was at times used also for unleavened bread in the OT and the Talmud, and by Greek writers such as Philo and Josephus. As to the observance of the Lord's Supper in the church—the eschatological outlook of the early Christians accounts for the frequency of the rite, as an anticipation or foretaste of the "Supper of the Lamb" in the age to come.

There are not wanting suggestions of other occa-

sions for the Supper on the part of those who oppose the Passover interpretation. A theory that has found wide acceptance relates the words of Jesus at the Supper to the Jewish kiddush, a special form of blessing, or sanctification, said over a wine cup at the beginning of special holy days such as the sabbath and Passover. This theory suffers, however, from the total lack of evidence that the kiddush of the Passover, any more than the Passover meal itself, was ever anticipated and observed twenty-four hours in advance.

Another explanation has been the suggestion that Jesus and his disciples formed a *Chaburah,* or fellowship group, that from time to time enjoyed together formal religious meals. The evidence for such groups comes only from later rabbinic sources, and the meals of these groups were celebrated on special occasions such as weddings, funerals, circumcision, etc. There is no proof that they were religious associations of a more regular communal life and discipline. In any case, all meals of Jews, whether taken alone or in family or friendly groups, were religious, in the sense that formal benedictions offered to God over bread and wine were always said (though the use of wine was generally confined to special occasions of festivity or mourning). If the Last Supper was not a Passover, it was probably an ordinary meal of Jesus with his disciples, albeit specially dignified by Jesus for a particular purpose and intention. The use of a special wine "cup of blessing" at the conclusion of the meal at least testifies to the more solemn character of the occasion.

14. A fresco of the Last Supper, from a catacomb of Callistus (*ca.* A.D. 200)

The question whether the Last Supper was a Passover meal or not may never be definitely settled in the light of our present sources of information. But at least it can be affirmed that the thoughts of the Passover season were in the mind and heart of Jesus and his disciples at the time (in the same way that a Christian today is likely to be mindful of the birth of his Lord already on the eve of Christmas Day). These paschal motifs, continued in the early oral tradition of the church's celebration of the Lord's Supper, may explain the differing ways in which the evangelists in their writing down of the gospel story interpret the occasion of the Last Supper. Fig. LAS 14.

2. The text. Only a few of the major problems of the textual tradition of the NT narratives of the Last Supper can be noted here. It is generally agreed that the accounts of Mark and Paul are equally primitive and independent of each other. Careful comparison of these two traditions affords a primary basis for establishing the authentic details of the occasion. The narrative of Matthew is largely dependent upon Mark; and its chief additions—notably the phrase "for the remission of sins"—are commonly ascribed to the influence of liturgical use or theological reflection. The Lukan version presents greater difficulties, for the text has come down to us in several recensions. Throughout his Passion narrative, Luke availed himself of a special source or sources in addition to Mark, and it is possible that he was also familiar with the Pauline tradition about the Supper. The simplest solution of the problem would be to take Luke 22:15-18 as derived from his special source, and 22:19-20 as based upon the Pauline tradition, with some Markan influence throughout the whole account. This full, or "long," version of Luke is supported by all Greek MSS except Codex Bezae (D), and also by most of the versions except the older Syr. (before the Peshitta) and some of the Old Latin texts.

The shorter text, contained in D and some Old Latin MSS, omits Luke 22:19*b*-20; whereas the older Syr. versions present the verses of the narrative in this order: 15-16, 19, 17-18. A number of scholars, including the translators of the RSV, accept the shorter version of Luke as original with its cup-bread rather than bread-cup order—a sequence also found in the Didache. The principal argument of those who accept this shorter version is the close textual similarity of vss. 19*b*-20 to I Cor. 11:24-25. They consider these verses, therefore, to be an interpolation. Those who object to this position rightly question how such an interpolation could have found its way into all Greek MSS save one, and into most of the versions. The longer version is also supported by such ancient witnesses as Marcion, Justin, and Tatian. It is much easier to explain the shorter text, and the Syr. variants, as corrections of the longer version, in order either to avoid a cup-bread sequence or to eliminate one of the two cups mentioned. The curious order of the longer version, if it be such, is probably the result of Luke's manner of treating his sources. In any case, the shorter text of Luke, in association with the Didache material, provides no justification for theories concerning a variant form of celebration of the Supper, whether by Jesus or by the early church.

More difficult is the problem posed by the command of Jesus: "Do this in remembrance of me," contained in the Pauline and longer Lukan narratives, but wanting in Mark and Matthew. A decision for or against the authenticity of the command cannot be made on grounds of the textual evidence alone, but rests in large measure upon one's view regarding the meaning that Jesus gave to the Supper and his intentions for his disciples. If Jesus anticipated the coming of the kingdom in climax to his own ministry and death, the command would not have any purpose. If, on the other hand, he expected a long interim between his earthly career and the final end of the age, the repetition of the Supper by his disciples, in remembrance of him, would be a bond uniting them "until he come."

3. The meaning of Jesus. There can be no question but that the Supper was in Jesus' mind an anticipation of the messianic banquet that he would share with his disciples in the coming kingdom. The imagery of the banquet was a common Jewish symbol for the life of the age to come (e.g., Ps. 23:5; Isa. 25:6 ff; 55:1 ff; 65:13; Zeph. 1:7; Enoch 62:14; Syr. Apocal. Bar. 29:3-8; cf. Mark 10:37; Luke 14:15;

Rev. 7:16-17; 19:9; 22:17). Jesus had appropriated this figure in his own teaching about the kingdom (Matt. 8:11; 22:2; 25:10; Luke 14:16; 22:29-30), and had applied it specifically in his ministry by eating with sinners, thereby indicating to them his offer of the divine acceptance and forgiveness—a significance that was not missed by his enemies (cf. Matt. 9:10-12; Mark 2:15-17; Luke 15:2). The feeding of the multitude was a messianic sign, recognized as such by the crowd (John 6:14-15). All the gospel accounts of the miracle show a close, textual assimilation of the narrative with the account of the Last Supper; and the discourse appended to the miracle in John 6 unmistakably draws out the relation of Christ as the "bread of God" with the Eucharist of the church and the resurrection to eternal life "at the last day" (cf. Mark 8:14-21). Moreover, the Jewish Passover celebrations in Jesus' day were vividly linked with the eschatological expectations of the final deliverance of God's people from bondage (see M. Pes. 10.6). A clear trace of this outlook is the midrash of Paul on the meaning of "unleavened bread" (I Cor. 5:7-8).

It is also clear that Jesus' words, identifying the bread and the cup at the Supper with his own flesh and blood, linked the elements in the most intimate way with his death. Later theological controversy has beclouded his meaning, in what precise way this identification should be defined. But the words unmistakably interpret the significance of his death as a vicarious sacrifice "for many"—i.e., a sacrifice universal in its scope. One cannot miss the allusion to the Suffering Servant (Isa. 53:10-12), or fail to recall his earlier saying of the Son of man, who came "to give his life as a ransom for many" (Mark 10:45 and parallels). It should be noted, too, that the separation of flesh and blood of sacrificial victims was essential in the OT cult. Whether the sacrifice of Jesus was comparable to the Passover victim or to a sin offering is debatable. But it is most probable that we are confronted here with a creative association of sacrificial types, in Jesus' own mind, of both a redemptive and an expiatory nature.

Both the eschatological and the sacrificial connotations of Jesus' words are linked in further creative unity by his reference to the "covenant." Such a term could only indicate on Jesus' part a deliberate act of fulfilment of the Old Covenant, established on Mount Sinai after the Passover deliverance from Egypt (Exod. 19:3 ff; 24:1 ff), and an inauguration of the New Covenant foretold by Jeremiah (31:31-34). Thus Jesus offered his disciples in the Supper a full participation in the atoning benefits of his own self-offering on the cross—deliverance from the bondage of this world, remission of sins, incorporation in the new people of God, an inner obedience of the heart to the will of God, and the joy and benediction of his presence and fellowship in the age to come. The words and actions of Jesus at the Last Supper testify more clearly than does any other place in the gospel tradition to the consciousness of Jesus of the uniqueness of his person and mission, both in continuity with the OT revelation and in fulfilment of the OT promise.

Seen in this perspective, the question of the authenticity of the command to repeat the Supper "in remembrance of me" becomes relatively unimportant. The repetition of the act is far more than a memorial of a past event. It looks forward to a future consummation "until he come." The question has been raised, however, whether the "remembrance of me" refers in any case to Jesus' disciples', or to God's, remembrance of him. If the latter interpretation is adopted, the Supper is a prayer of the messianic community—a remembrance before God—that God should remember his Messiah by bringing into existence his kingdom. To "do this"—i.e., to celebrate the Supper—is to realize the final consummation of God's redemptive purpose, whether viewed as accomplished in the death and resurrection of Jesus, or in his coming at the end of time. The Supper expresses the paradoxical character of the gospel witness in twofold dimension: to a kingdom that is both here and now and also yet to come.

Bibliography. In addition to the standard commentaries on the gospels and I Corinthians, one should consult, as an indispensable guide, J. Jeremias, *The Eucharistic Words of Jesus* (1955), with its copious bibliography. See also: H. Strack and P. Billerbeck, *Kommentar zum NT aus Talmud und Midrash*, II (1924), 812-53; W. O. E. M. H. SHEPHERD, JR.

LASTHENES lăs'thə nēz [Λασθένης] (I Macc. 11:32). Governor of Coele-Syria in the days of Jonathan the Hasmonean. Josephus (Antiq. XIII.iv.3) calls him Lasthenes the Cretan, who brought mercenary soldiers to Demetrius. He had the title of honor, "kinsman."

When Jonathan and his government were recognized by Demetrius, he received a copy of a letter sent by Demetrius to Lasthenes, in which the Jews were extolled as friends. Promises were made to do them good because of their good will. The letter to Lasthenes delineated the boundaries of Judea and reaffirmed the cession of the three districts of Samaria to Judea. It also assured the exemption from taxes, and the tribute that had originally appertained to the Syrians was now bestowed upon the Jews. All who offered sacrifices to Jerusalem (excluding perhaps Samaritans and Hellenized Jews) were exempt from dues.

S. B. HOENIG

LATCH. In Song of S. 5:4 for מן החר, "from the hole," the RSV has "to the latch," which is not a good translation. In the context it is probably a euphemism.

LATCHET. KJV translation of שרוך in Gen. 14:23; Isa. 5:27 (RSV SANDAL-THONG) and ἱμάς in Mark 1:7; Luke 3:16; John 1:27 (RSV THONG). "Latchet" is an archaism for a leather strap or thong by which sandals are tied. *See* SANDALS AND SHOES.

LATIN [Ῥωμαϊκός] (Luke 23:38 mg.; John 19:20). The language spoken by the Romans. It is stated that the title on the cross "was written in Hebrew, in Latin, and in Greek" (*see* INSCRIPTION ON THE CROSS). In Italy every educated Roman used Greek as well as Latin. In Palestine a knowledge of Latin

was limited to those who were involved in legal, military, and official duties. B. M. METZGER

***LATIN VERSIONS, OLD.** Beginning in the latter part of the second century A.D., anonymous translators made many translations of the Bible into vernacular Latin. Despite the popularity of Jerome's Latin Vulg., these other renderings continued to be used here and there throughout Europe until the late Middle Ages. *See* VERSIONS, ANCIENT, § 3.

B. M. METZGER

LATTER RAIN. Alternate translation of מלקוש. *See* SPRING RAIN.

LATTICE [אשנב, חרכים, שבכה] (Judg. 5:28; II Kings 1:2; Prov. 7:6 [KJV CASEMENT]; Song of S. 2:9). A window covering through which one could look. *See* HOUSE; WINDOW.

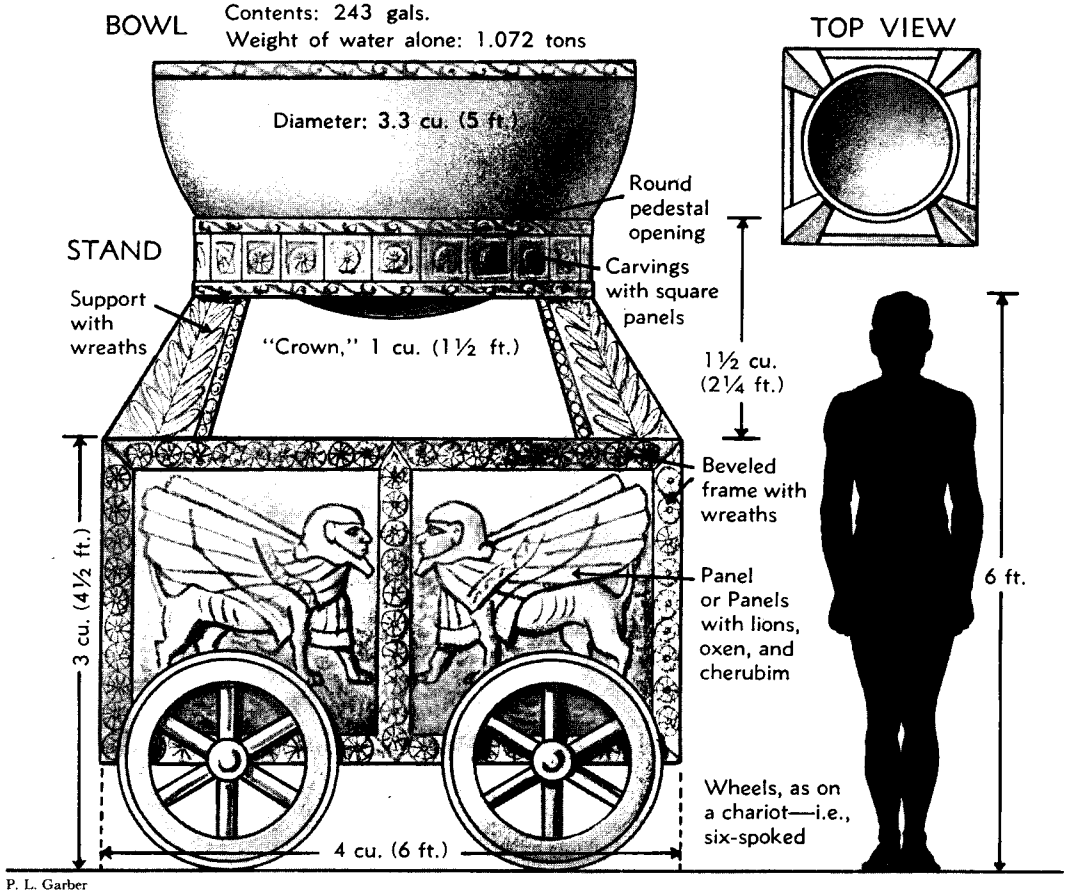
LAVER [כיור; λούτρον]. A fairly large vessel. In the OT the Hebrew word usually (cf. Zech. 12:6) refers to a metal basin or bowl used in rites of purification. Hence, in the NT the Greek term is related to the water of baptism (e.g., Eph. 5:26; Tit. 3:5; etc.).

1. In the tabernacle. The tabernacle laver (Exod. 30:18, 28; 31:9; 35:16; 38:8; 39:39; 40:7, 11, 30) was a copper-bronze basin for water which stood on a "foot" or base (Exod. 30:18); it was made "from the mirrors of the ministering women . . . of the tent" (Exod. 38:8; cf. I Sam. 2:22) and was located between the altar and the door of the tabernacle. The Levites were to cleanse themselves ritually "lest they die" (Exod. 30:20-21; Num. 8:7; *see* BATHING); the laver thus was intended to make holy the priests and, presumably, the sacrifices. Some ancient versions append to Num. 4:14 the provision that when transported, lavers and bases were to be wrapped in a purple cloth and protected by a blue skin covering.

2. In the Solomonic temple. In the temple (*see* TEMPLE, JERUSALEM) lavers included: (*a*) the molten sea (*see* SEA, MOLTEN)* and (*b*) ten smaller but sizable bronze lavers or bowls, each supported by stands of artistic and exceptional workmanship (I Kings 7:27-39; II Chr. 4:6). Fig. SEA 34.

These ten bronze bowls held 40 baths each (*ca.* 243 gallons, weighing *ca.* a ton; I Kings 7:38). If the lavers were hemispherical, the diameters would have been *ca.* 5 feet (3.3 cubits).

The stands (I Kings 7:27-37) were "four cubits long, four cubits wide, and three cubits high." The lower part consisted of panels decorated with lions, oxen, and cherubim and framed in beveled borders with wreaths. The upper round-bowl support was within a "crown" which projected upward one cubit



P. L. Garber

15. Drawing showing one of the ten lavers and bases of Solomon's temple

and had corner supports "with wreaths at the side of each." The cast bronze chariotlike (six-spoked) wheels were 1½ cubits high and turned on axles made "of one piece with the stand." Such detailed descriptions even with some archaeological parallels do not provide an exact picture of these technically remarkable castings. It is still more difficult to see how such stands of cast bronze and small wheels could carry the weight involved. The ten stands were sent as scrap metal to Assyria by King Ahaz (II Kings 16:17; cf. the "stands" of II Kings 25:13, 16; Jer. 52:17, 20).

II Chr. 4:6 states that the sacrificial offerings were purified by water from the ten bowls. Their height in comparison with a man's raises some question as to their practical usefulness for such purposes. The Ezekiel (40:48–43:17) description of the temple does not contain any reference to lavers. Fig. LAV 15.

3. In the NT. The NT employs the LXX word for "laver" (λούτρον) solely in metaphorical connection with baptism (Eph. 5:26; Tit. 3:5); the word is translated "washing."

Wright, "Bringing OT Times to Life," *The National Geographic Magazine*, vol. CXII (1957). P. L. GARBER

***LAW IN THE OT.** Law has as its object the maintenance of life in community. Two aspects of law will inevitably be found in a community in which a legal tradition of complex character has developed: (*a*) the policies or general statements which provide the legal understandings of how life in community is to be maintained; and (*b*) the procedures by which these policies are to be put into effect and applied in specific instances.

The OT does not have different terms for these two aspects of law, but they are nonetheless easily recognized in the legal materials. The policies are closely related to the self-understanding of Israel as a covenant community under God. The procedural legislation also reveals at a number of points the extent to which the covenant relationship between God and Israel is intimately involved in actual judicial proceedings.

The time-honored distinction between the OT as a book of law and the NT as a book of divine grace is without grounds or justification. Divine grace and mercy are the presupposition of law in the OT; and the grace and love of God displayed in the NT events issue in the legal obligations of the New Covenant. Furthermore, the OT contains evidence of a long history of legal developments which must be assessed before the place of law is adequately understood. Paul's polemics against the law in Galatians and Romans are directed against an understanding of law which is by no means characteristic of the OT as a whole.

A. *OT TERMS FOR LAW.* The basic term for "law" in the OT would appear at first glance to be "Torah." In Judaism this term is used to designate the first five books of the OT, the Pentateuch. Its actual meaning, however, is not "law" but "instruction," "guidance," "direction." Torah is that which points the way for the faithful Israelite and for the community of Israel. Not merely the laws of the Pentateuch provide guidance; the entire story of God's dealings with mankind and with Israel points the way. The term "Torah" may therefore stand in the way of an adequate understanding of law in the OT, if it is given too prominent a place.

1. Law in biblical Hebrew. Apart from the term "Torah" (תורה), no single Hebrew word is widely translated "law." The most common designations for Israelite law are מצוה, "commandment" (Gen. 26:5; Exod. 15:26); דבר, "word" (Exod. 34:28; Deut. 4:13); חק and its cognate terms, "decree," "precept" (Amos 2:4); משפט, "judgment," "ordinance," "custom" (Exod. 21:1). In the postexilic period the term דת becomes rather prominent (Esth. 1:8). This is a loan word from Old Persian, with the meaning "order," "law," regulation." In the Aramaic portions of the OT, the same word is frequently used as a synonym for תורה (Dan. 6:5; Ezra 7:14).

In a few instances the terms חק and משפט are used as though they were intended to summarize two types of Israelite law (Exod. 15:25; Josh. 24:25; Ezra 7:10). In Exod. 24:3 the terms דבר and משפט (in the plural) may also point to a distinction between two types of law. It has been suggested that these two types may refer, respectively, to the "policy" and the "procedural" aspects of law mentioned above.

2. Law in LXX Greek. The LXX regularly translates the Hebrew word תורה by the Greek νόμος (Exod. 24:12). The same Greek term is also used less frequently to translate מצוה (Prov. 6:20), דבר (Ps. 119:57—G 118:57), חק (Josh. 24:25), משפט (Jer. 49:

12—G 29:12), and דת (Prov. 13:15). The Greek term ἐντολή ("commandment," "order," "decree") is more customarily used to render the Hebrew word מצוה (Gen. 26:5), while πρόσταγμα ("order," "injunction") and δικαίωμα ("regulation," "requirement") often appear for חק and its cognate terms (Gen. 26:5; Exod. 18:16). The Greek δικαίωμα is more frequently found as the translation of משפט (Exod. 21:1).

B. ***LAW IN THE PRE-MOSAIC PERIOD.*** Since all the materials in the Pentateuch date, in their present literary form, from the period following the exodus from Egypt, it is impossible to describe with any certainty the form and content of legal materials from the pre-Mosaic period. It is in order, however, to sketch tentatively those characteristic features of law which appear to antedate the Sinai covenant and the organization of the community of Israel into a twelve-tribe system. On the problems of literary composition of the Pentateuch, *see* PENTATEUCH. For the history of the pre-Mosaic period, *see* ISRAEL, HISTORY OF.

Legal and social customs reflected in the book of Genesis have appeared in a new light as a result of the recovery of comparable materials from the second millennium B.C. found in NW Mesopotamia (*see* MARI; NUZI; PATRIARCHS; ARCHAEOLOGY). A man whose wife had borne him no son might adopt a slave as his heir (Gen. 15:1-4; 24:1-2). Such an adopted son had his rights secured by law in the event that a natural son should later be born. A barren wife was expected to provide another wife to bear children to her husband; she is expressly prohibited from sending such children away (cf. Gen. 16:1-6; 21:8-14; 30:1-13). The possession of the household gods was an indication of the right to the inheritance of the firstborn (Gen. 31:19, 30-35). Deathbed oaths also appear to have had a binding character in law, as indicated by a lawsuit among brothers about the ownership of a slave-wife of the dead father (Gen. 24:1-9).

These indications of a common legal and social tradition between the ancestors of the Israelites and the peoples of NW Mesopotamia make clear that the period prior to the Exodus was not without its laws and community regulations. The ancestors of the Israelites are not to be understood as wandering nomads without any sort of legal tradition apart from that which is suited to tribal life among such nomads. At the same time, however, the indications of a kind of tribal law in this period and in later epochs are not to be overlooked or ignored. One of the most basic features of Israelite law belongs to this period: the notion of tribal wholeness and the necessity for vengeance in the face of any weakening of tribal integrity.

Blood revenge is one of the most fundamental aspects of tribal law. It is concerned with the restoration of health (*shālôm*) when the tribal solidarity had been damaged by the loss of one of its members. Normally the family was responsible for the execution of blood vengeance (Judg. 8:18-21). No more than restoration of the wrong done was considered proper. The Song of Lamech (Gen. 4:23-24) probably represents the brutal and excessive aspects of blood vengeance, which are not condoned in the OT.

It is highly probable that in the pre-Mosaic era the tribal groups from which the community of Israel was to be formed had, therefore, a fairly well-developed system of legal procedures based on customs widely prevalent in the ancient Near East. Certain matters, such as blood vengeance, marriage and adoption procedures, and the like, were administered by the heads of families or tribal chieftains. Others, however, involved relations among several tribes. Treaties or covenants were made between tribes regulating boundaries and grazing rights (Gen. 31:43-54), or legitimizing intermarriage (Gen. 34). Such arrangements were sanctioned by an oath ceremony in which the parties to the covenant each pledged to uphold the agreement and invoked the curse of God (or the gods) against themselves if they should not remain faithful to the agreement.

16. The Ur-Nammu Law Code, the oldest law code as yet uncovered

In addition to these occasional connections between the laws and customs of the ancient world and those of early Israel, reference must be made to the several law collections which have been recovered from the ruins of ancient Near Eastern cities. The earliest collection of laws thus far discovered is that of the Sumerian king Ur-Nammu of the city of Ur, dated to *ca.* 2050 B.C.* Next in chronological order is that ascribed to the Amorite king Bilalama of the city of

17. Cast of tablet reconstructed from three fragments of the Lipit-Ishtar Code

Eshnunna, from the last quarter of the twentieth century B.C. The third collection is from Lipit-Ishtar, ruler of the Sumero-Akkadian Dynasty from the city of Isin. This collection is dated to the first half of the nineteenth century B.C. Figs. LAW 16-17.

The most famous law collection of the ancient world is that of Hammurabi of Babylon.* The dates of Hammurabi's reign remain uncertain; most probably the collection of laws dates from the end of the eighteenth century B.C. The Hittite laws probably belong to the middle of the fifteenth century B.C., although they bear the marks of revision and thus antedate, perhaps by centuries, the time of their collection.* A group of Assyrian laws from the Middle Assyrian Empire are assigned to the fifteenth or fourteenth century B.C., although the law tablets themselves belong to the period of Tiglath-pileser I (twelfth century B.C.). A small body of Neo-Babylonian laws is also available, presumably from the end of the seventh century B.C. Figs. HAM 5; LAW 18-19.

The connections between Israelite and ancient Near Eastern law are undeniable, although the precise nature of such connections is difficult to determine. The form of the collections consists of a prologue, the laws, and an epilogue. This form is preserved in the Lipit-Ishtar and Hammurabi laws but is missing from the others. In the prologue the laws are traced to the action of the gods, who had appointed the king to rule over the land and had provided,

From *Atlas of the Bible* (Thomas Nelson & Sons Limited)

18. A section of the Code of Hammurabi. *See* Fig. HAM 5.

through these laws, for his wise and just rule. The contents of the laws reveals that, in each case, the affairs of highly complex societies are being regulated by the laws. Perhaps the most striking difference between these laws and those of Israel is the preponderance of laws dealing with property over those dealing with persons. In the OT, the opposite is so.

The epilogues affirm the faithfulness of the kings in upholding these divine laws and apply curses upon anyone who violates them or damages the tablets or the steles upon which they have been written. The form of the law collections is quite similar to that found in certain bodies of Israelite law. The contents also bear many marks of similarity; it is beyond question that these ancient laws, particularly those of early Mesopotamia, have been of considerable influence in the formation of the laws of the OT. *See* § C3 *below; see also* TEN COMMANDMENTS.

In the subsequent period, however, these regulations and customs are set in a new context by the exodus (*see* EXODUS, BOOK OF) from Egypt and Israel's growing awareness of what it meant to be a people of the one God, Yahweh.

C. ***LAW IN THE PERIOD FROM MOSES TO THE EXILE.*** The testimony of all biblical writers is unanimous in assigning to Moses a unique place in the promulgation of the divine law. In later times (Neh. 8:1) the "law of Moses" became a regular designation for the entire Pentateuch. Laws which actually developed centuries later were traced back to the events at Mount Sinai or to the plains of Moab, where God communicated with Moses face to face.

Although this judgment is historically erroneous, its theological meaning is clear. The act of divine redemption which brought forth a band of slaves from Egypt was the decisive moment in Israelite history. The covenant between God and Israel at the holy mountain (Exod. 19–24) provided the foundation for all Israelite law. Yahweh had called forth a people from the nations of mankind and had made this people his own. The people in turn had acknowledged that Yahweh was their God. With this acknowledgment of Yahweh's demonstrated power and mercy, the people were bound to the God who had delivered them. They were his people, and the totality of their life was at his command.

1. Law and covenant. Israelite law is, accordingly, covenant law. Law rests upon an understanding of the meaning of life in community. The meaning of Israel's life is provided by the saving action of God in her midst. God, who redeemed her, has a purpose for her. Through Israel, all the families of the earth are to receive blessing (Gen. 12:3). The covenant relationship thus issues in a distinctive type of Israelite law which is of fundamental importance. It is this type of law which sets forth the policy on the basis of which all procedural law is to be understood. *See above.*

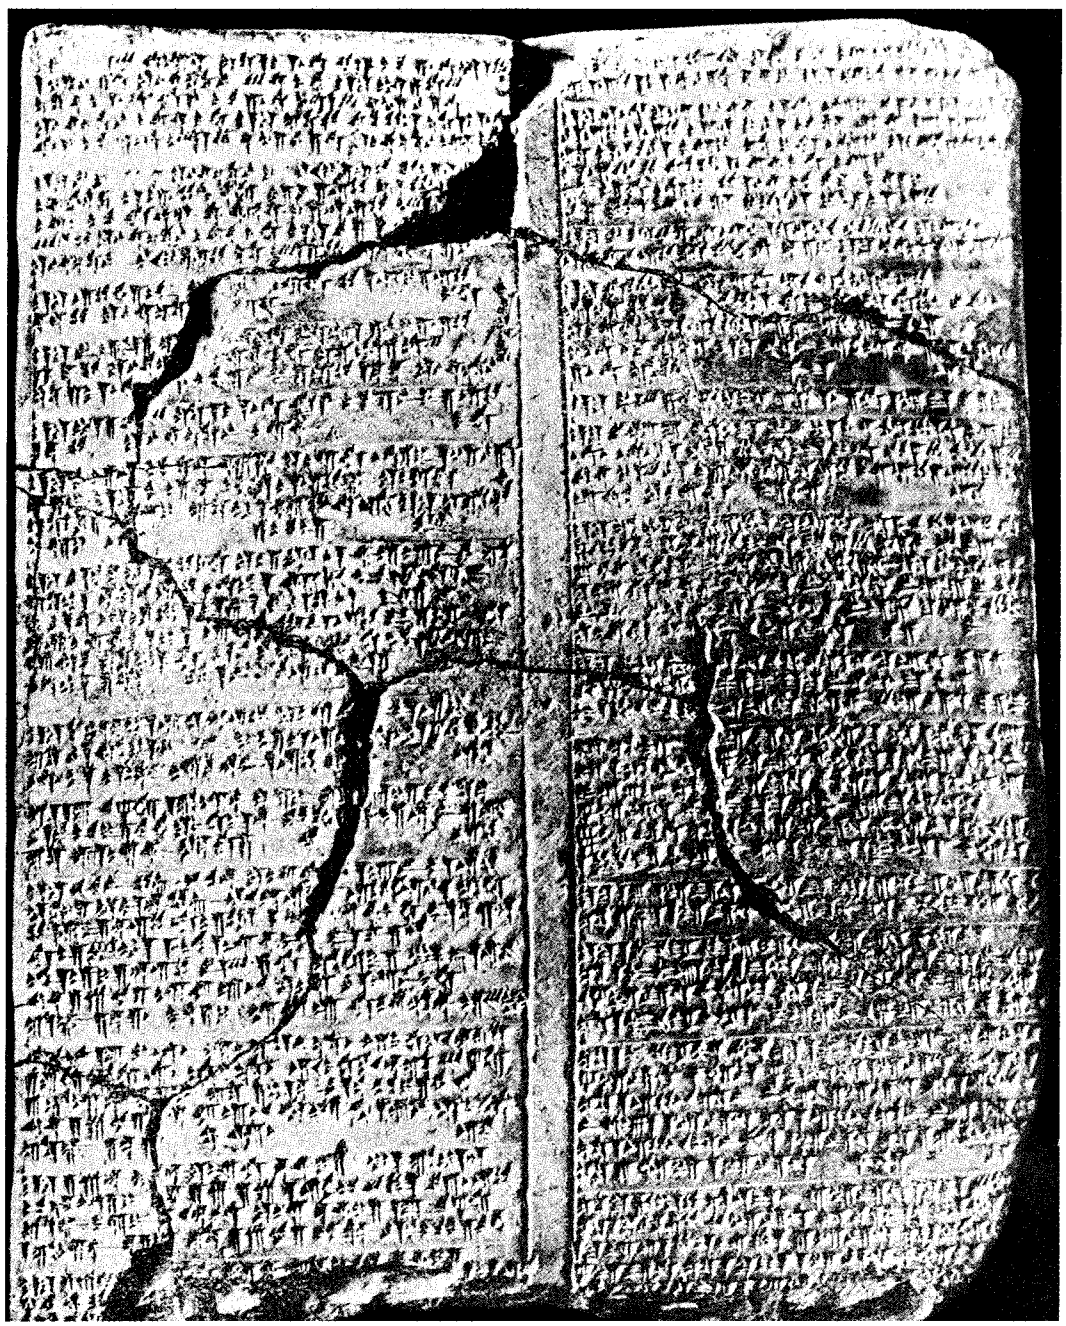
The result of the Exodus upon Israelite law was that the legal tradition of the tribes was itself transformed and the distinctive type of law referred to above attained a dominant position. In the book of Exodus many evidences of both facts are present. The TEN COMMANDMENTS represent this distinctive type, and the Covenant Code (Exod. 20:22–23:33) represents the older legal tradition at one stage of its transformation.

2. The Ten Commandments. The Ten Commandments are found in the OT in two places (Exod. 20:2-17; Deut. 5:6-21). Although the variations in the two versions are slight (cf. Exod. 20:11 with Deut. 5:15; Exod. 20:17 with Deut. 5:21), even these slight differences make clear that the Ten Commandments have not been handed down without change from the time of Moses.

The Ten Commandments open with the self-identification of God: "I, Yahweh, am your God, who brought you out of the land of Egypt, out of the house of bondage" (Exod. 20:2; Deut. 5:6). The relationship between Yahweh and Israel which sets the condition of the act of lawgiving is one of divine redemption. God has acted to save, and he now calls this act to remembrance as the presupposition of the commandments to follow.

The commandments are to be understood as the stipulations of the covenant relationship. They are stated negatively, with only two exceptions (the sabbath command and the command to honor parents). These two exceptions have very probably undergone changes from negative commandments in the course of history. In its original form, the Ten Commandments probably consisted of very short sentences preceded by the strong negative particle, לֹא.

These stipulations indicate that the covenant God is in a position to specify unqualifiedly what the covenant conditions are. God commands and Israel is to obey. Nothing is promised as a result of obedience (apart from the probably late addition to the com-



Courtesy of the Philosophical Library

19. Clay tablet with a cuneiform inscription, containing a Hittite code

mandment to honor parents). It is naturally understood that the keeping of the commandments means life and blessing (cf. Deut. 30:15-20), but the covenant relationship does not rest on a *quid pro quo* understanding. Israel is not commanded to keep these commandments in order that God may prosper her cause; she is called to obedience without qualification.

The Commandments are addressed to the individual Israelite ("you"); yet he is addressed as a member of the Israelite community. This is the law of the covenant community—the "neighbor" is the neighbor Israelite—but what is commanded applies to this community as a whole and to all its members.

Not a word appears in the Ten Commandments concerning the manner of upholding and enforcing this legislation. This is the policy statement on law which must then be made effective in procedure. Yet it is remarkable that one of the commandments (the law on covetousness) hardly allows for any kind of legal implementation. These commandments obviously in-

tend to define negatively the very heart of the covenant relationship. They exclude those kinds of actions or intentions which are not in keeping with the nature of the bond between Israel and her God.

Such policy law, however, by virtue of its negative cast, is remarkably restricted in its content. The aim is certainly not to constrict the freedom of Israel or to make the community slavishly dependent upon the divine judgment in all matters. Legislation stated negatively actually provides the most extraordinary freedom in the covenant relationship. The history of Israelite law is evidence for the fact that this freedom has been put to full use. The Ten Commandments are often pointed to as the foundation of Western society. This they could not have become had they not been in the form of prohibitions of a categorical sort which then leave open the manner of their enforcement and allow for development within the whole field of positive legal procedures. *See* TEN COMMANDMENTS.

3. The Covenant Code. Immediately following upon the Ten Commandments in Exodus is a body of law of mixed character generally designated the Covenant Code or the Book of the Covenant (Exod. 20:22–23:33). This body of legal materials contains some laws stated in a form very similar to that of the Ten Commandments. The Covenant Code may be outlined as follows:

I. Historical-theological prologue, 20:22 (the counterpart to Exod. 20:2)
II. Laws on true Yahweh worship, 20:23-26
III. Laws dealing with persons, 21:1-32
  A. Slavery, vss. 1-11
  B. Bodily injury, vss. 12-32
IV. Property laws, 21:33–22:17—H 21:33–22:16
V. Laws on maintenance of covenant, 22:18–23:19—H 22:17–23:19
  A. Exclusive claim of Yahweh upon Israel, 22:18-20—H 22:17-19
  B. Dealings with the stranger and the weak, 22:21-27—H 22:20-26
  C. Maintenance of covenant holiness, 22:28-31—H 22:27-30
  D. Dealings with the neighbor in general, 23:1-9
  E. The sabbatical year; the sabbath; the festivals, 23:10-19
VI. Epilogue containing warnings and promises, 23:20-33
  A. God's protecting messenger or angel, vss. 20-21
  B. Warnings and promises concerning entrance into the Land of Promise, vss. 22-33

Among these laws are some with the formal characteristics of the Ten Commandments—categorical prohibitions which do not specify how they are to be implemented (20:23; 23:1-2, 6; etc.). Another form of law quite similar to these categorical prohibitions is found in 21:12, 15-17; 22:19—H 22:18. These laws open with an active participle ("Whoever strikes, steals, curses," etc.) and close with the strong Hebrew expression, "he shall surely be put to death." Such laws probably belong to the same understanding of the relationship between God and Israel as outlined in connection with the Ten Commandments. *See* § C2 *above*.

Another entirely different form of law predominates in the Covenant Code, however. This is procedural law, consisting of precise specifications of how particular legal issues are to be dealt with. Such laws open with a specification of the general matter at law, introduced by the Hebrew particle כִּי, "When," or "When it should happen that . . . ." This is followed by a subordinate clause, introduced by the weaker Hebrew particle אִם, "If," in which particular legal situations growing out of the general issue are covered. The following example illustrates the form of such laws: "When [כִּי] a man sells his daughter as a slave, she shall not go out as the male slaves do. If [אִם] she does not please her master, who has designated her for himself, then he shall let her be redeemed; he shall have no right to sell her to a foreign people, since he has dealt faithlessly with her. If [אִם] he designates her for his son, he shall deal with her as with a daughter. If [אִם] he takes another wife to himself, he shall not diminish her food, her clothing, or her marital rights. And if [אִם] he does not do these three things for her, she shall go out for nothing, without payment of money." (Exod. 21:7-11.)

The distinctions between this type of law and those dealt with above are obvious. The brief, categorical law, normally in the form of a prohibition, is entirely unlike this type of explicit, procedural law. The two types are often referred to, respectively, as apodictic (categorical) and casuistic (*see bibliography*). The casuistic or case-law type is the dominant form of law known from the ancient Near East. Several law collections from Mesopotamia and Asia Minor have been discovered by archaeologists. The best known of these is the Code of Hammurabi (seventeenth century B.C.), but older codes from Mesopotamia have also been discovered, as well as the Hittite Code from Asia Minor (middle of second millennium B.C.).

The use of the term "code" may, however, be misleading. These law collections are better understood as having resulted from the promulgation of a body of law at various times for the purpose of providing a general standard to guide the judges. They do not represent precise stipulations for the regulation of all legal matters. Rather, they serve as a collection of precedents, of guides for the legal authorities. No doubt, the ancient judges were in a position to exercise considerable freedom in the use of these legal guides.

Since the discovery and publication of the Hammurabi Code in 1902, it has been acknowledged that the Covenant Code is remarkably similar in content and form to the laws of ancient Mesopotamia. This judgment has been greatly strengthened by the comparison of the Covenant Code with the other law codes from Mesopotamia and Asia Minor. There can be no doubt that the laws of the OT (and the Covenant Code in particular) have been influenced by these non-Israelite laws, directly or indirectly. E.g., in the laws from the old Amorite city of Eshnunna in Mesopotamia (dated to the twentieth century B.C.) one law concerning the goring ox has its almost exact counterpart in Exod. 21:35: (*a*) "If an ox gores an(other) ox and causes (its) death, both ox owners shall divide (among themselves) the price of the live ox and also the equivalent of the dead ox" (Eshnunna Law 53; *see bibliography*). (*b*) "When one man's ox

hurts another's so that it dies, then they shall sell the live ox and divide the price of it; and the dead beast also shall they divide" (Exod. 21:35). The examples of such near parallels could be multiplied.

The more remarkable fact, however, is that this common tradition of law which the early Israelites and the other peoples shared has been modified at many points in light of the Israelite understanding of the covenant relationship. The stringent laws against idolatry demonstrate that Yahweh alone is to be worshiped. The existence of other gods is probably not doubted, but Israel is reminded again and again that Yahweh alone is the God who has authority in her life and destiny.

In the midst of the case law, elements of the categorical type of law also appear. In the law on female slavery quoted above, the expression "since he has dealt faithlessly with her" (בבגדו־בה) is explicable on the basis of a covenant relationship which specifies what the true relationships between an Israelite and his neighbor are. Further, the requirement that a disliked slave-wife still be treated as a wife in every respect points to an understanding of the relationship between man and woman which has no counterpart in the other laws of the ancient world. The laws dealing with oxen have their parallels in several of the other law collections of Asia Minor and Mesopotamia. Yet the Israelite requirement that a goring ox be stoned and its flesh not be eaten (Exod. 21:28, 32) rests on the view that life belongs to God; even beasts must not take human life. Should they do so, they are acting in place of God (cf. Gen. 9:5).

The laws on SLAVERY are quite different from those of the neighboring peoples. Circumstances may force a man to sell his daughter into slavery, yet the daughter is and must be treated as a wife. The Hebrew slave (Exod. 21:2-6) may or may not be an Israelite in the full sense of the term. It appears probable that the term עברי ("Hebrew") refers rather to an outsider, one who stands outside the legal and covenantal community of Israel—although perhaps related to Israel by blood and historical background. It may be, however, that an Israelite, a full member of the covenant community, may be sold (or may sell himself) into slavery or bond service (Lev. 25:39). Yet all classes of slaves are to be given their freedom after a six-year period, unless they decide otherwise (Exod. 21:2-6).

Certain of these laws (e.g., 22:21-27—H 22:20-26; 23:1-12) show a remarkable concern for the weak and the oppressed. Once again, such legislation would seem to presuppose the experience of Israel at the Exodus, when God demonstrated his graciousness to a band of slaves in a foreign land.

The Covenant Code is generally dated, not to the wilderness period, but to the period after the entrance of the Israelites into Canaan (after 1200 B.C.). This may very well be correct. Yet it should be remembered that the ancestors of the Israelites had their own laws and customs prior to the Exodus (*see* § B *above*). Some legislation of the sort found in the Covenant Code might just as well be considered a part of the law proceedings brought by the patriarchs into Palestine centuries before the Exodus. The laws, indeed, presuppose a settled people engaged to some extent in agriculture and living in close relations with foreign peoples. It is doubtful that all the legislation contained in the code was a part of the pre-Mosaic legal tradition. There is no reason to deny that some of it may have antedated the Exodus.

Even so, it is the period following the Exodus and the Sinai events which saw the firm establishment of a body of customary law, as the necessities of a new mode of life developed.

4. Law and the tribal confederacy. The books of Genesis and Exodus indicate that already in pre-Mosaic times the Israelites consisted of twelve tribes, bound together by blood ties. Each tribe had as its head one of the twelve sons of Jacob. This twelve-tribe confederacy is much more a product of the period following upon the Exodus (Josh. 24; *see bibliography*). The entrance of the Israelites into Canaan under Joshua (*ca.* 1200 B.C.) was effected without opposition in the central hill country. The valley beside the old Canaanite city of Shechem became the gathering place for the Israelite tribes. It is highly probable, therefore, that in that region other Hebrew tribes and peoples who had not been involved in Egyptian slavery entered the covenant community under Joshua. The twelve-tribe confederacy may well have been in existence before this time, but it became an important legal entity only after the conquest of Canaan by Joshua had been effected.

This twelve-tribe system actually provides the basic communal and institutional structure for Israelite law. The law of Israel had its roots in the covenant relationship. This covenant relationship was regularly reaffirmed at the tribal center in a great tribal gathering (Deut. 27; 31:9-13; Josh. 8:30-35; 24), in connection with which the laws of Israel were read aloud and the people called upon to pledge renewed allegiance to the covenant God and his requirements.

It is noteworthy that the laws of Israel never became state law. They always maintained their relationship to the covenant God. Not even the greatest of Israel's kings were looked upon as lawgivers.

The Covenant Code has often been considered to be the law given by Joshua to the people at Shechem (Josh. 24:25). This may have been the case, although the apparent distinction between חק and משפט in Josh. 24:25 may rather point to two types of law—the categorical and the case law. Should this be true, then it may well be that the Ten Commandments in some form provided the covenant stipulation—the legal policy—and the Covenant Code (in an early form) the procedural law materials.

Distinction is often made between cultic, moral, and juridical types of law. Such a distinction may be useful in the present day, but it is not a distinction which ancient man knew or would recognize. The early priests were oracle givers (Deut. 33:8-10) and guardians of the sanctuaries. Their judgments would be sought on procedures for sacrifices, and in particular concerning the matter of clean and unclean offerings. Each worshiper in this period would make his own sacrifices, however (Judg. 6:19-24). It is not surprising, therefore, to find in the legal materials a mixture of cultic, ethical, and juridical legislation. The aim of all law was the maintenance of the wholeness and health of the covenant community. Cult, ethics, and jurisprudence were all involved in the health and holiness of the community.

5. Law and the kingship. The introduction of the institution of kingship (*see* KING) into the life of Israel (I Sam. 8–12; II Sam. 5:1-10) wrought considerable change in the legal practices of Israel. The loose tribal organization with its central gathering place was superseded by a monarchical system with a capital city, Jerusalem. The king soon came to exercise the function of a supreme court in legal matters (II Sam. 15:2-6). It is remarkable, however, that the king was not himself beyond the law or a law to himself (II Sam. 11–12); the covenant stipulations applied with equal force to him. Even more noteworthy is the fact that at no time in the life of Israel did a king set up his own law. The laws of Israel during the long period of the united and divided kingdoms were always understood to be those which Yahweh himself had disclosed to Moses on Sinai. Many changes in the legal system and practices came about, but all such changes were regarded, not as modifications introduced by the state, but as resting firmly upon the Mosaic tradition.

During the period of the kingship, many pressures were at work to bring about a centralization of the legal traditions under the kingship and the Jerusalem priesthood. It is highly probable that under David and Solomon much of the earlier legislation was gathered together and promulgated as a kind of constitution of the monarchical state. The present form of the Covenant Code (Exod. 20:22–23:33) may stem from the close of David's reign. Yet no collection of such laws was interpreted to be the law of the state; it was Yahweh's law, revealed to Moses.

Counterpressures were operative at the same time to preserve the force and efficacy of the law within the family, village, and town. The Israelites always seem to have maintained a dual attitude toward the kingship. It was instituted by Yahweh himself, but it came about as a consequence of the failure of Israel to be Yahweh's people (Judg. 8:22-23; I Sam. 8; 12). Such a view of kingship is not to be assigned merely to a late period of Israelite history; it belongs to the very essence of Israel's understanding of the covenant relationship between God and his people.

The attitude toward kingship is reflected in the attitude of the Israelites toward Jerusalem. The capital city was the seat of government and of worship. It was also an old Canaanite city into which David and his successors settled their troops, among whom were many foreigners. Jerusalem was not possessed by any of the Israelite tribes in the early period. After the conquest of the city by David (II Sam. 5:6-10), it was still considered to be a separate entity, distinct from the genuinely Israelite territory. The "men of Judah" are frequently contrasted with the "inhabitants of Jerusalem" (Isa. 5:3; Jer. 11:2; cf. "Judah and Jerusalem" in Isa. 1:1; 2:1; 3:1; etc.). The result of this attitude toward Jerusalem was that the law was never fully entrusted to a special class of interpreters directly related to and under the authority of the king. In the towns and villages, moreover, there was determined resistance to any kinds of innovations which were believed to be departures from the covenant law. It was from the towns and villages in particular that the prophetic movement of the eighth century stemmed; and from these areas the Deuteronomic legislation (*see* § 7 *below*) seems to have developed.

6. Law and the prophets. The prophets (*see* PROPHET) of Israel exercised many functions related to the law. Chief among these was the task of directing attention, in the name of Yahweh, to those breaches of the covenant stipulations which, if not repaired, would bring Yahweh's judgment upon Israel. Only occasionally do the prophets actually refer to the law. Hosea is quite explicit, however, in referring to the transgression of the law (8:1, 12). He also appears to refer to the prologue and the first commandment of the Ten Commandments (13:4). Amos describes many specific acts of injustice which document the failure of Israel to maintain the covenant relationship. In the judgment against Judah (Amos 2:4-5), reference is found to Yahweh's law (תורה) and his statutes (חקים). This passage may not be from Amos, however, but from a later period. The expression "for I will pass through the midst of you" (Amos 5:17) probably indicates the coming of Yahweh to punish Israel for violating the covenant requirements (cf. Gen. 15:17; Deut. 29:12—H 29:11; Jer. 34:18).

Isaiah refers to "testimony" (עדה) and "teaching" (תורה; 8:16; 30:8) which are written down for a later period. Such references suggest the collection of the oracles of the prophet, however, not the writing out of laws of an earlier period. In general, it may be said that the great prophets presuppose the existence of a legal tradition by which the covenant between Yahweh and the people of Israel is to be maintained. They attack the people for their violation of the covenant and its legal requirements. Particular terms are used to depict this covenant violation: Amos is concerned especially with injustice and unrighteousness; Hosea with infidelity and lack of knowledge of God; Isaiah with unbelief and violation of the holiness of Yahweh. Their concern is to call the people to repentance and to a reconsecration to the covenant stipulations. Although they refer only occasionally to the older legal materials, the latter provide the indispensable context for the strictures of the prophets against their generation.

7. The Deuteronomic legislation. The book of Deuteronomy is represented as a long speech given by Moses to the people of Israel in the plains of Moab, shortly before they are to cross over into the Land of Promise (Deut. 1:1-5). In this instance as in others, the OT writers are attributing to Moses a body of legislation which has a long history behind it, a history reaching far into the period following the death of Moses.

The culmination of the history of this legal collection must be seen as related to the great reform of JOSIAH of Judah in 622-621 B.C., as recorded in II Kings 22–23 (cf. II Chr. 34–35). Josiah's reform followed upon the discovery of a Book of the Law in the temple (II Kings 22:8-11), and was carried out in accordance with the provisions set forth in this book. The reform included the destruction of the places of worship outside the city of Jerusalem, the cleansing of the temple, and the centralization of worship in the Jerusalem temple.

While the contents of this Book of the Law are unknown, it may be assumed that they embodied much of what is now found in chs. 12–26 of the book of Deuteronomy. A comparison of the contents of these chapters with the steps taken in Josiah's reform re-

veals many apparent points of contact. It is not possible, however, to consider the Book of the Law found in the temple as the actual text of Deuteronomy as it now stands in the OT. The legislation in Deuteronomy has had a very long and complex history. The reform of Josiah was undoubtedly carried through in the spirit of the Deuteronomic legislation, but this legislation had developed, it appears, through centuries of teaching and preaching on the part of earlier Israelites, and in particular, the teaching Levites (*see* PRIESTS AND LEVITES) of the town and country areas of N Israel and Judah.

The materials in Deuteronomy of particular importance for the history and understanding of Israelite law are found in the following sections: (*a*) ch. 5—a second version of the Ten Commandments (*see* § C2 *above*); (*b*) chs. 12–26—the law collection itself; and (*c*) ch. 27—a curse ritual from the ancient ceremony of covenant renewal in the region of the city of Shechem. The entire book, however, expresses in the strongest way possible the significance of the divine law for the life of Israel. To love God and to keep his commandments—this is Israel's very life and blessing (Deut. 6:4-9; 30:19-20). To forsake God and to go after other gods—this is death, curse, and evil (Deut. 8:11-20; 28:15-68; 30:15-18; etc.).

The entire book is cast in the form of a series of sermons or homilies by Moses to the people. This fact provides the best clue to its origin and background. It is not priestly legislation or prophetic oracles; neither is it primarily historical reminiscence or interpretation. Rather, the Deuteronomic materials represent a body of teaching in sermonic style which had developed through the centuries, particularly in the towns and villages. Local priests and teaching Levites had probably been primarily responsible for its development. The aim was to give force and direct applicability to the ancient covenant law under changing conditions.

Of particular importance is the way in which the contemporaneity of subsequent generations with the community of the wilderness period is stressed. This law does not belong merely to a past epoch; God has constantly reaffirmed its relevance up to this day (cf. Deut. 5:2-3; 26:16-19; 29:10-15; 30:11-14; etc.). While the phrase "this day" purports to refer to the day of the gathering of Israel in the plains of Moab prior to the death of Moses, it is clear that much more is at stake. Each generation stands in the same relation to God as did that generation with whom God made his covenant at the holy mountain.

Within the legislation proper (chs. 12–26 and ch. 27) the same sermonic approach is discernible. The various forms of law noted in the Covenant Code and in the Ten Commandments appear again and again; but these are usually underscored through appeals to historical precedent, to the consequences of disobedience, and particularly to the love and grace of God for his people. Strictures against idolatry are especially prominent in the entire book. The exclusive claim of the covenant God upon Israel is stressed over and over. Yet the legislation discloses the remarkable adaptability of the teaching priests and Levites as social, economic, and political conditions have changed since the days of Moses. Tests of the authenticity of a prophetic message are provided (13:1-5; 18:21-22). The institution of the cities of refuge is amplified (4:41-43; 19:1-13). Provision is made for judicial appeal to the Levitical priests and judges of the central sanctuary (17:8-13), a provision which later is made to apply to Jerusalem only. The authority and limitations of kingship are prescribed (17:14-20). In these and in other instances the Deuteronomic legislation discloses how the older policy legislation of the covenant community could be made applicable to changing circumstances without losing its force as the direct command of the covenant God.

The strongly humanitarian tone and flavor of this legislation are unmistakable. The widow and the orphan, the poor and oppressed, are singled out for particular treatment. There are to be no poor within Israel, because of God's blessing upon his people; yet the Deuteronomists acknowledge almost in the same breath that the poor will never cease out of the land (Deut. 15:4, 11). The legislation prohibits the cutting down of fruit trees in time of warfare (20:19-20), the defilement of the land of Israel by various means (21:22-23; 22:9-10; 23:12-14), and in particular the defilement of the holy people. These regulations are designed to ensure that both land and people will correspond with the promise and intention of God for his people. They are measures to be taken to maintain the covenant relationship. Pollution of the land is considered a repudiation of its character as the Land of Promise. Corruption of the people would mean that God's holy people had profaned his covenant. Neglect or mistreatment of the poor and the oppressed, of the sojourner within the gate, or of the runaway slave, would mean that Israel had forgotten her own period of enslavement in Egypt; it would also mean that she had turned her back upon the purpose of God to make of her an example to all the nations, so that through her, God's blessing would go forth to all peoples.

Legislation concerning the holy war is found in ch. 20. It is probable that these stipulations had developed during the period of Israel's domination by foreign powers (the Assyrians in particular). Under the Assyrian overlordship, no Israelite standing army could be maintained. Such provisions as these in ch. 20, however, may have enabled the Israelites to call together a volunteer army, ready to overthrow the despot's authority at the first sign of weakness. The reforms of Hezekiah (II Chr. 29–31) and of Josiah (*see above*) were probably supported by this kind of volunteer army.

Deut. 12 prescribes that all Israelite worship is to be centralized in one place, at which place God will cause his name to dwell. In the reform of Josiah, this place is clearly understood to be Jerusalem. It is not certain, however, that this was the earlier understanding of the Israelites. From the period of the Conquest and the time of the judges, Israel had maintained a central gathering place for the twelve tribes. Under David, Jerusalem was intended to represent this central gathering place. It continued to have its rivals, however, as is indicated by the revolt of Jeroboam and the establishment of Bethel and Dan as the central places of worship for N Israel (I Kings 12). Already in the Covenant Code, specification was made that certain cases were to be settled "before God" (Exod. 21:6; 22:8-9—H 22:7-8; 23:15-17, 19).

With the development of the Jerusalem cultus, especially after the fall of the Northern Kingdom in 722-721 B.C., the place in which God had caused his name to dwell came to be understood as the Holy of holies of the Jerusalem temple. This concern with the "name" of Yahweh is characteristic of the Deuteronomic legislation and the recasting of the historical traditions in Joshua–II Kings by the Deuteronomic historian.

D. ***THE EXILE AND ITS SIGNIFICANCE FOR LAW.*** **1. The destruction of the temple.** The high hopes attached to the reform of Josiah very quickly were crushed. Josiah died in battle in 609/608 at Megiddo, vainly seeking to prevent the Egyptians from going to the aid of the embattled Assyrians in NW Mesopotamia. It is probable that Jeremiah had already sought to make clear to the Judeans that they should not pin too great hopes upon this reform and upon its talisman, the Jerusalem temple (Jer. 7; 8:8; 26). With the destruction of the city of Jerusalem and its temple by Nebuchadrezzar in 587 B.C., this safeguard to Israelite law and religion was swept away. A poet whose words were probably written just after the event has summed the matter up: "The law is no more" (Lam. 2:9).

One of the most remarkable features of Israelite life and faith is, however, that the destruction of the temple and the Babylonian exile did not destroy Israelite law or Israelite faith. On the contrary, it was during the Exile that the great bodies of priestly legislation were gathered together and elaborated.

2. Law and the priests. In the period before the Exile, the PRIESTS had been the primary interpreters of the law. The term "Torah" (תורה) is closely associated with the acts of oracle giving and the determination of the will of God on specific occasions. The priests were the custodians of the sacred traditions, and particularly of those associated with the acts of worship, the festivals, and the sacrificial rites. The role of the Levitical priests and teachers has already been noted in reference to the Deuteronomic legislation. The Jerusalem priesthood, however, was of even more decisive significance in the preservation and elaboration of the priestly legislation. During and following upon the Babylonian exile, the priestly laws took the shape which they now have in the OT, particularly in the books of Exodus, Leviticus, and Numbers.

3. The Holiness Code. One of the more ancient collections of priestly law is found in Lev. 17–26, which has been designated as the Holiness Code. The collection in its present form dates from the period following the fall of Jerusalem in 587 B.C., although the legal materials contained in it belong, no doubt, to a much earlier period and had been handed down within the priestly community in Jerusalem from generation to generation.

The laws are concerned primarily with the maintenance of Israelite HOLINESS and purity. Sacrifices are to be offered only before the tabernacle; this stipulation is to be understood to refer to the centralization of sacrifice in Jerusalem (17:1-7). Family purity is to be maintained through strict observance of the restrictions against marriage with near relatives (18:6-18). In the strongest terms the laws prohibit religious and social practices like those of the foreign peoples.

Ch. 19 contains a collection of laws similar in content and form to earlier laws, in particular the Ten Commandments and the Covenant Code. Other laws also have their connections with earlier legislation. These are treated, however, from the priestly point of view.

This point of view is clearly expressed over and over again: "You shall be holy to me; for I Yahweh am holy, and have separated you from the peoples, that you should be mine" (Lev. 20:26). A regular refrain concludes the particular prescriptions: "I am Yahweh." The priestly community has sought to draw the consequences of God's election of Israel from among all the nations to be his "own possession" (Exod. 19:5). God's people must be discernibly different from the other peoples. Nowhere in the OT legislation is this judgment expressed with such force and repetitiveness as in the Holiness Code.

4. Other priestly legal materials. Certain legal features are discernible in the framework within which the entire Pentateuch has been set by the priestly community during and following the Exile. God appears as lawgiver in the creation story itself. He speaks, and heaven and earth are provided, step by step, with their divinely ordained structure. The blessing upon man includes a specific command: "Be fruitful and multiply, and fill the earth and subdue it" (Gen. 1:28). This command is repeated in connection with the law against the taking of human life (Gen. 9:5-7). These laws apply to all men, although presumably they were understood to have particular force for the people of God.

With the law on CIRCUMCISION (Gen. 17:9-14) the priests introduce into their treatment of the early narratives the first commandment concerned specifically with Israel. Priestly legal concerns appear next in the Passover legislation, in connection with the last of the plagues (Exod. 12:1-13, 43-49). The major collections of priestly law are found, however, in the context of the events at Mount Sinai and in the wilderness.

The first large body of priestly law deals with the building and equipping of the TABERNACLE. Exod. 25–31 contains the prescriptions for this undertaking and for the consecration of the tabernacle to the worship of Yahweh. In Exod. 35–40, the execution of these commands is recorded.

The book of Leviticus consists entirely of priestly legislation. The book contains regulations on sacrifices (chs. 1–7), the consecration of priests (chs. 8–10), and clean and unclean animals (ch. 11); laws on impurity (chs. 12–15); and the ritual for the Day of Atonement (ch. 16). Following the Code of Holiness (chs. 17–26) is a concluding chapter (27) dealing with the making and fulfilment of vows to Yahweh.

The book of Numbers consists primarily of priestly materials, only a part of which are of a specifically legal character. The following are the major legal stipulations: on the service of the Levites in the tent of meeting (chs. 4; 18); on adultery and jealousy (ch. 5); on the making and fulfilment of vows (chs. 6; 30); on dedication of the Levites (ch. 8); on sacrifices (ch. 15); on uncleanness (ch. 19); on inheritance (ch. 27); on festivals and festival sacrifices (chs. 28–29); on the holy war (ch. 31); and on the Levitical and refuge cities (ch. 35).

In this legislation it is once again clear that the priests are employing older legal materials but that these are set in the context of that priestly understanding of the law referred to above. Israel is to be a holy people, consecrated to Yahweh. Her entire life is to be ordered by the understanding that Yahweh has set her apart to his service. It is remarkable that the priests, who have been closely associated with the kingship in Jerusalem, have not set forth their legal understandings as having been transmitted by the kings. All the priestly legislation is assigned to Moses, apart from those requirements which were understood to have been given by God at the Creation, or following the Flood, or directly to Abraham.

During the Exile, therefore, the priestly community has devoted itself to the study and elaboration of the divine law with almost single-minded purpose. The aim is the preservation of the holy community within an alien environment. Yet the priests, as well as other Israelite men of faith, have looked forward to a day when Israel should return from exile and be reconstituted as God's people in the holy land. The Israelite view of the "latter days" (Isa. 2:2), when God would bring his work among men to fulfilment, was of profound influence upon the development and understanding of law.

5. Law and eschatology. The Israelite conception of Yahweh as a God actively involved in the course of world history is of decisive importance for an understanding of OT faith. In reflection upon the meaning of Yahweh's redemption of Israel from Egyptian slavery, the OT theologians were led to develop a view of God as creator of heaven and earth. Through the same reflection, they were led to ponder the purpose of God's action among men, the end toward which it pointed. In the successive stages of Israel's history, the purpose of God could not be seen to have been fulfilled. Israel's repeated acts of apostasy, of failure to be God's people, were understood to have delayed the fulfilment of God's promise that through Israel all the families of the earth were to receive blessing (Gen. 12:3). In the century preceding the Exile, and particularly during the exilic period, prophets and poets of Israel arose to sketch in broad outline the features of the "latter days," when God's purpose would come to its culmination. These pictures of the day of fulfilment at the "end" of history are referred to by the term "eschatology," the doctrine of the last days or the last things. *See* ESCHATOLOGY OF THE OT.

In these "latter days," the law occupies a prominent place. First of all, the Last Day, the Day of Yahweh (*see* DAY OF THE LORD; cf. Isa. 2:12–3:15; Amos 5:18-20; Zeph. 1:7, 14-18) is a day of divine wrath upon those who have not been faithful to the covenant or obedient to God's law. God will appear in wrath against a faithless people. But this is not the major aspect of OT eschatology. Of greater prominence is the hope that in the "latter days" God will himself see to his promise. Israel will be restored to fidelity and obedience, and from Jerusalem, God's law will be taught to all the nations (Isa. 2:2-4; 42:1-4; Mic. 4:1-4; etc.). The various depictions of this Last Day do not constitute a unified eschatology, nor do all of them give the same prominence to the law. Three features of the Israelite view of the relation between law and eschatology should be noted, however:

a. Law and the New Covenant. One way of describing the action of God at the Last Day, by which his purpose for Israel and for mankind is brought to fulfilment, is provided by the prophet Jeremiah (31:31-34; cf. Isa. 49:8-13; Ezek. 11:17-20; 36:24-27; 37:26-28; Hos. 2:18-20). The day is to come in which Yahweh will make a new covenant with Israel and Judah, not like the covenant made with their forefathers, which they broke. God will put his law within them, write it upon their hearts, so that the teaching of the law will no longer be necessary. All will know it and will keep it. The sin and iniquity of Israel will be swept away, to be remembered no more.

It should be noted that, while a new COVENANT is promised, no new law is to be given. A new relationship between God and man is to be established, a relationship in which the law of the Old Covenant finds expression in the very being of the people of the New Covenant. It will no longer be a reality external to the people, to which they respond in obedience or faithlessness. The law will be within them, constitutive of their very life, so that simply to live will be to live in communion with God and in obedience to his law.

b. Law and the restored community. While the prophet Ezekiel seems to have shared this view of the Last Day with Jeremiah (Ezek. 11:17-20; 36:24-27; 37:26-28), he (or one of his disciples) has also provided a sketch of the restored commonwealth of Israel (Ezek. 40–48). These chapters certainly come from the period of the Exile, whether written by Ezekiel or by a later writer. The prophet reports a vision received in the twenty-fifth year of exile (40:1). He is transported to the temple area of Jerusalem, where he is shown a fully restored temple, the measurements of which are provided him. The glory of God then enters the temple (43:1-5), and the prophet is told that never again will Israel defile God's holy name (43:7). The prophet is given further details of the temple worship and service and is provided with the new boundaries of the twelve tribes.

This vision does not constitute a part of Israelite law, although it does contain a number of legal matters, some of which are not in agreement with the laws of the Pentateuch. But as a visionary description of the restored commonwealth of Israel it is significant for the way in which a prophet has related law and eschatology. Israel is to be reconstituted upon the Land of Promise. She is to be a holy people, charged not to let God's holy name come again into disrepute. All God's laws and statutes are to be strictly obeyed (44:23-24). In a new Jerusalem, a new temple, and a newly distributed land, Israel is to be God's people, recognizable by all as his people. The mission to the nations seems to consist in this fact alone: that they shall be able to see a faithful people of God, bent upon his service, maintaining their identity in the world as God's people.

c. Law and worship. Already in the early period of Israelite history, the worship of Israel (*see* WORSHIP IN THE OT) and the law of God are seen to be intimately related. The ceremony of covenant renewal included a reaffirmation of obedience to the covenant stipulations (*see* § C4 *above* and note in particular

Josh. 24). Priestly custodianship of the legal traditions guaranteed that in the acts of worship the people should be presented with the significance of God's law and of its background and implication in the totality of their life. In the Psalms, further evidence of the connection between law and worship is to be found.

Ps. 19 consists of two parts, perhaps originally independent of each other. The first (vss. 1-6—H 2-7) is a hymn in praise of the God of nature. The second (vss. 7-14—H 8-15) is in praise of God's law (תורה). In this psalm, as in several others (Pss. 1; 94; 119), the Israelite worshiper expresses his delight in God's law. He counts it as the greatest of gifts that God has taught him how to walk before God in faithfulness and obedience. Moreover, in meditation upon God's law (Ps. 1:2) the worshiper participates in that end time, in which the purpose and promise of God find their fulfilment. Israelite worship as anticipation of the final victory of God, and in which the law of God has an important place, provides another connection between law and eschatology. In the act of worship the entire sweep of God's dealings with man, from the Creation to the new creation, is gathered up into an experience by which man is judged, forgiven, is enabled to discern, if only for a time, the glory of God as judge, lawgiver, and redeemer.

E. ***LAW IN THE POSTEXILIC PERIOD.*** It is possible that during the Exile the site of the ruined temple had not been entirely abandoned by those who remained in the land. It was not, however, until a number of exiles had returned to Judah that the temple was rebuilt (Haggai; Zech. 6:9-15). Upon the resumption of Israelite worship in the temple, provision was made for many of the legal practices of the earlier periods, elaborated during the Exile, to be put into effect. Within a period of about one hundred years the final edition of the laws of Israel was completed. The "book of the law of Moses" referred to in Neh. 8:1 probably represents the Pentateuch in its present form.

The conditions of life in the Exile had led not only to elaboration and development of the laws of the earlier periods. In the process of such development, the law had been studied assiduously and its observance strictly impressed upon the community. Observance of the sabbath and of circumcision were of particular significance in the maintenance of Israel as a separate and distinct community. Gatherings of Israelites for the study of the law were probably a regular feature of the exile period (Ezek. 33:30-33). Thus the way was prepared for the emergence of the SYNAGOGUE as an institution of primary importance within Judaism following the Exile.

A further development occurred in connection with the law. Israel had to exist in exile without king or temple, and without the possibility of maintaining the tribal organization in anything more than an idealized form. Thus the sacral structure within which the law had developed had disappeared. In the period following the Exile, the consequences of this event emerged. The law came to be regarded as an independent reality, loosed from its moorings in the tribal system, in the acts of worship at the temple, and no longer the criterion by which kingship and other functions of an organized state could be judged. It may be that only by this means was the community of Israel preserved in the Exile. It is certain, however, that the consequences of the law's having been loosed from its institutional and structural moorings within Israel were serious indeed.

1. Law as the dominant reality within Judaism. Chief among these consequences was the appearance of an understanding of the law of Israel as containing within itself the totality of God's will for man. Israel had failed to keep the law; consequently, God's judgment had befallen them—just as the prophets had warned. Now that the community had returned to the Land of Promise, it was imperative that the law be strictly observed. Worship in the temple had to be carried out in rigid accord with the legal specifications; in fact, worship tended to be understood itself as the fulfilment of the law. The freedom with which earlier generations had dealt with the law was now exercised less in the development of that law than in its interpretation. Torah had become the basic reality for the life of the Jews.

It should be remembered, however, that Torah meant more than the legal requirements. It included the whole sweep of God's dealings with mankind from the beginning up to the death of Moses. Furthermore, the Torah was still understood to be the gift of God. The saving deeds of God still constituted the basis for Torah (Neh. 9). Israel had been chosen by God and then had been given the Torah; God's choice was not based upon obedience to Torah.

Even so, it cannot be denied that in postexilic Judaism the law and obedience to the law outweighed all other religious realities and obligations. The influence of the historical interpretations provided by the recasting of the old traditions by the Deuteronomic school (as seen in Joshua–II Kings) and by the Chronicler (I–II Chronicles; Ezra; Nehemiah) became of decisive importance. Obedience to the law would guarantee God's blessing; disobedience meant disaster (Mal. 3:6-12). The way was thus prepared for a doctrine of merits. Those who kept the law were the pious ones, whom God would surely reward for their piety. Those who spurned the law were evildoers, with whom the pious should have no dealings. The motivation for obedience to the law came to be understood less as gratitude to God for his gracious acts of redemption (Amos 2:9-12) and more as a means to secure God's favor.

2. Law and wisdom. The WISDOM tradition in Israel is as old as the people of Israel. Solomon was the legendary wise man in Israel and the collector and creator of a great store of wisdom (I Kings 4:29-34). The wise men of Israel were a distinct group alongside priests and prophets (Jer. 18:18). They were concerned primarily with practical matters: with the right relations between different groups in society; with protocol in business and politics; and in general with the maintenance of decency and order. In the postexilic period, however, as the law came to occupy such a central place in the life of the Jewish community, the law and the wisdom tradition became much more closely related to each other. The beginning of wisdom is the fear of Yahweh (Prov. 9:10). Wisdom was God's own gift, his creation at the beginning of his work, the first of his acts (Prov. 8:22). The teachers of wisdom in postexilic Judaism

developed as a group devoted to the law, giving practical reinforcement to the legal requirements.

The next step, which was taken in the intertestamental period, was the virtual identification of the law and wisdom (Ecclus. 24; Wisd. Sol. 6–10). This is a further stage in the development of the notion of the law as a divine reality, an intermediary between God and man.

In the books of Job and Ecclesiastes, however, strong attacks are leveled against the more popular understanding of the wisdom school. The author of Job (*see* JOB, BOOK OF) presents the friends of Job as the protagonists of pragmatic wisdom and has no difficulty in showing up the untenability of their superficial judgments. The author of ECCLESIASTES attacks the bourgeois morality of the wisdom tradition point by point, insisting that the sum of all human actions is nothing but vanity.

3. Obedience to the law and the hope of Israel. It has been noted that in Israelite eschatology the law occupies a very significant place. This is equally true of that form of eschatology which is called APOCALYPTICISM. Foreign influences, notably from Persia, led to the development within Judaism of a picture of the "latter days" significantly different from that represented in earlier texts. The most prominent features of this apocalyptic eschatology are the following: The present age is viewed as being under the domination of evil powers, engaged in conflict with the forces of goodness, and more often than not prevailing over them. The struggle between good and evil is a cosmic struggle; it also has its counterpart in the heart of every man. At the last day, however, a pitched battle will ensue between good and evil. God will vanquish the evil forces and reconstitute the cosmos in accordance with his purpose at Creation.

The OT contains only a few documents which reflect this apocalyptic eschatology, among them Isa. 24–27; Ezek. 38–39; Daniel. The hero of the book of DANIEL is depicted as a scrupulous observer of the law of Israel. This document, which has arisen in its present form from the time of the persecution of Judah by Antiochus IV (*ca.* 165 B.C.), reveals the author's sympathy to be with the pious of Israel who hold fast to the law even in the face of persecution and death. The Maccabean brothers are looked upon as no more than a "little help" (11:34). The hope of Israel is seen to rest in unswerving obedience to the law. In the evil age in which men now live, the law is the one sure hope of mankind. Those who are righteous will pass through the great cataclysm of the last day and will arise to new life (Dan. 12:2; Isa. 25:8; 26:19).

In later Judaism, obedience to the law was considered the prerequisite to the coming of the Messiah. Should Israel keep the law perfectly for but a single day, then the Messiah would appear (*see* LAW IN FIRST CENTURY JUDAISM). Various movements within Judaism in the NT period, and shortly before, arose out of the dual conviction that the last day was close at hand and that at least a remnant within Israel should devote itself to the law with uncompromising rigor. One such movement is that of the Essenes, with whom the community of Qumran was probably closely related, if not identical.

In the OT, then, law is understood to rest upon the initiative of God, who has redeemed a particular people, entered into covenant with them, and provided the basic stipulations of this covenant relationship in the form of the covenant law. The love and grace of God constitute the setting for the giving of the law. Responsive love, gratitude, and faith provide the motivation for obedience to the law, although the OT does not too frequently express the matter in this way (but cf. Deut. 6:5; Ps. 18:1—H 18:2; Jer. 2:2). In the postexilic period the law tends to be viewed as an independent reality, less integrally related to the saving action of God, obeyed less from gratitude to God and more as an ordinance decreed at the creation. But the promise of a new covenant is not forgotten; and Torah is one day to come to the coastlands, to all the nations (Isa. 2:2-4; 42:4).

LAW IN FIRST-CENTURY JUDAISM [תורה; Aram. אוריתא, אוריפא; νόμος]. The term *torah* in Judaism, usually (under the influence of the LXX translation of it as νόμος, "law") rendered by "law," ranges in meaning from teaching or instruction to the totality of the divine revelation, written and oral. It is with this last that we are here concerned.

The nature and content of this revelation in first-century Judaism cannot be determined with exact certainty for three reasons: (*a*) the period was one of fluidity: the Jewish tradition had not been stabilized in the Mishna (redacted *ca.* A.D. 200-220; *see* TALMUD), but was still in lively process; (*b*) the law was so variously interpreted by different groups—e.g., the Pharisees, the Sadducees, and the Essenes—that no integrated description of it can be given, and a too systematic presentation of the material must be suspect; (*c*) the rabbinic sources directly dealing with the law (the Mishna, the Midrashim, etc.) are later than the first century, and, by and large, represent only one current in the Judaism of that time, and only the dominant element within this one current (the Pharisaism of Rabbi Johanan ben Zakkai and his collaborators at Jamnia), so that they can be used only with extreme caution. However, by very careful sifting of these sources, which contain traditional material going back to the first century and earlier, and by the critical use of the Apoc. and the Pseudep., Philo, Josephus, and the Dead Sea Scrolls, certain positions can safely be suggested, as characterizing first-century Judaism.

1. The written law
2. The oral law
   a. Its rise
   b. Its authority

c. Codification
d. Exegesis
3. Law as agent of salvation
4. Law as agent of creation
5. The law in the future
Bibliography

1. The written law. Judaism in the first century, as always, postulated that God exists and that he has revealed his nature, character, and purpose, and his will as to what man should be and do. And, as is the case in other revealed religions, Judaism claimed that, in the very act of revelation, there had been given a law, which was, therefore, of divine origin and authority, to govern man in all the details of his life. This law, it was believed, was partly enshrined in the documents now called the OT. The notion of inspired scriptures probably arose in connection with prophecy. While first-century Judaism continued to believe in the OT convictions that God could reveal himself, through angels, messengers, visions, dreams, and voices, the act of prophecy, through which God declared his will, had come to be particularly associated with the activity of the Holy Spirit; all the prophets spoke by the Holy Spirit, and with the last of the prophets the Holy Spirit had ceased from Israel (T.B. Yom. 9*b;* T.B. Sot. 48*b;* T.B. Sanh. 11*a;* etc.). The law of the prophet Moses, the books of the prophets themselves, and, by a natural evolution, all the other books now contained in the OT, came to be conceived as written by persons moved by the Holy Spirit. This connection with prophecy, and thereby with the Holy Spirit, gave to them an inspired character. Although much inspired material had not found a way into the writings of the OT, everything within them was inspired.

The names given to the OT varied. For long there was no generic title in use. The books of the OT were referred to as "the law and the prophets" (II Macc. 15:9; IV Macc. 18:10; Matt. 5:17; 11:13; Luke 16:16); then there was used the phrase "the law, the prophets, and the writings" (T.B. Sanh. 90*b*). Possibly the first term used to designate the whole of the Law was "the book," "the books," "the holy books" (βιβλίον, βιβλία=ספר, etc. [I Macc. 12:9; II Macc. 8:23]; ἡ ἱερά βίβλος; βιβλίον; βίβλος ἱερά, etc. [see an index to Philo]). In the NT we find "the scripture," ἡ γραφή (הכתוב); Philo has γράμματα, γραφή (Josephus has τὰ ἱερὰ γράμματα). The precise contents of "the scripture" we can deduce. After A.D. 70 there was still discussion in Judaism on the authority of certain books. The inspiration of Ezekiel can hardly have ever been seriously doubted, but the wisdom of placing it in the hands of all was questioned, because it contained contradictions of the Pentateuch; these were subsequently resolved (T.B. Shab. 13*b,* etc.). But the following books were in dispute: (*a*) Ecclesiastes, because it contradicted itself, and was more the product of Solomon's own wisdom than of the Holy Spirit; according to Jerome's Commentary on Eccl. 12:13, the closing words of the book alone eventually secured its place in the canon. (The dispute over this book was lively in the days of Hillel and Shammai [M. Eduyoth 5.3; M. Yadaim 3.5], and continued till the third century [Tosef. Yadaim 2.14].) (*b*) The Song of Songs, Proverbs, and Ecclesiastes were regarded by some as too profane (ARN 1.5); Proverbs contradicted itself (26:4-5). (*c*) Esther was in conflict with the fundamental principle that the law was complete (Lev. 27:34) and that no new institution was to be introduced by any prophet after Moses—Esther and Mordecai were concerned to introduce a new festival, the Day of Purim.

Eventually, at the school at Jamnia, Ecclesiastes and the Song of Songs were accepted as scripture. At the same time, other documents were excluded from the canon. Tosef. Yadaim 2.13 reads: "The Gospel [הגליונים] and the books of the heretics [ספרי המינים] are not sacred Scripture. The books of Ben Sira, and whatever books have been written since his time, are not sacred Scripture." The exact connotation of "the Gospel" and "books of the heretics" cannot here be discussed (*see bibliography*), but since Ecclesiasticus was rejected, because its author lived in comparatively recent times, when the Holy Spirit had departed from Israel, the same would apply to documents similarly dated, including the gospels and other Christian books (though it is surely incredible that the canonicity of these would ever have been even considered by Judaism).

By the end of the first century, we can be sure that the OT, as we know it, was regarded as canonical, although discussion of certain of its books continued to a later date. The phrase used to denote the canonical character of a book was that it "defiled the hands." M. Eduyoth 5.3 illustrates the usage: "According to the School of Shammai the book of Ecclesiastes does not render the hands unclean. And the School of Hillel say: It renders the hands unclean" (קהלת אינו מטמא את הידים כדברי ב . . . ש וב . . . ה אומרים מטמא את הידים). Is this to be taken to mean that the distinction between what defiles the hands and does not, as applied to the Scriptures, was opposed by Shammaites? In M. Yadaim 4.6 the Sadducees ascribe the distinction to the Pharisees. Thus "the Sadducees say, We cry out against you, O ye Pharisees, for ye say, 'The Holy Scriptures render the hands unclean,' [and] 'The writings of Harmiram [either the books of the heretics or those of Homer] do not render the hands unclean.' " The latter passage reveals that it was out of love for the Scriptures that the Pharisees declared them "to defile the hands," and both passages make it clear that they participate in the quality of things consecrated to God. As a consequence, the rolls on which the OT was written were treated with extraordinary respect. Rules concerning their form and the mode of their composition were multiplied: they could not be introduced into an impure place; the honor of the law was jealously guarded (Jos. War II.xii.2). The question was discussed as to the languages into which the law could be translated: according to Rabban Simeon Gamaliel, it could only be written in Greek, and, although targums were permissible in other languages (M. Meg. I.8; T.B. Meg. 3*a*), these were not to be used as lectionaries (cf. T.B. Shab. 115*a*). The law had become the consolation of Israel (I Macc. 12:9), for which many were prepared to die (I Macc. 1:56-60; T.B. 'A.Z. 17*b*); already in the first century it had become an important part of the liturgy of the synagogue and the chief object of study (M. Ab. 5. 22). Josephus' words are apt: "But for our people, if anybody do but ask any one of them about our laws,

he will more readily tell them all than he will tell his own name, and this in consequence of our having learned them immediately as soon as ever we became sensible of anything, and of our having them, as it were, engraven on our souls" (Jos. Apion II.xix). Exaggerated this may be, but nonetheless indicative. *See* CANON OF THE OT.

This last quotation refers us to the laws as such. Were there distinctions made between the different parts of the OT? So far, we have referred to the whole of the OT as Torah; and, while the translation of this term as "Law" is not strictly correct, because it merely covers the meaning of Torah as "commandment" (מצוה), nevertheless, the use of "Law" for the whole Torah is significant. Because the fundamental section of the OT was the Mosaic law contained in the OT, the Decalogue as such was given prominence (Mek. on 15:26; 20:1; Song of Songs Rabba 5.14-15; Philo *On the Decalogue*); but it was not to be regarded in any exclusive sense as *the* Torah. The withdrawal of its recitation from the synagogue service, when it was used by Christians as if it were the whole Torah, points to this (T.B. Ber. 12*a;* J. Ber. 3*c*). It is, however, difficult not to think of the Pentateuch, as a whole, as constituting the Mosaic law: it was called Torah, even in its non-legal aspects (e.g., Gal. 4:21 ff).

The authority of the Mosaic law—i.e., the Pentateuch—was indicated variously. Its derivation directly from God (T.B. Sanh. 99*a;* on the relation of the Jewish law to God, see especially Jos. Antiq. Preface 3; Apion II.xviii ff), or by the mediation of angels from God (Jub. 1:27-28; 2:1 ff; 6:22; etc.) emphasized this (the notion that such mediation implied inferiority is a Christian development; Gal. 3:19; Heb. 2:2). On the other hand, this distinguished it from the Prophets, and the other writings of the OT, which, though produced under the inspiration of the Holy Spirit, only derived their authority from the Law—i.e., their agreement with the Pentateuch (T.B. Sanh. 30*b*); Moses was the first and greatest prophet; all that was communicated to prophets, who followed him, he had already received. No prophet could contradict him or change or add to what he had proclaimed (Lev. 27:34; Deut. 4:2; 13:1 ff; T.B. Shab. 104*a*). The prophets were guardians of the torah of Moses (II Macc. 2:1 ff). The writings outside the Pentateuch are designated "tradition," קבלה, and derive their authority from their "exposition" of the Mosaic law—i.e., from their Sinaitic character (T.B. Ned. 22*b*). While there was no doubt expressed as to the authority of the Law and the Prophets, the authority of certain documents among the Writings, we saw, was questioned. The Writings were not read in public worship, in the synagogue, as were the Law and the Prophets. Thus all writings in the OT outside the Pentateuch were of second rank, although inspired: that proof texts were often quoted in three verses, from the Law, the Prophets, and the Writings, did not mean that these were all on the same level of importance, but that the last two confirmed or reiterated what was in the Law (T.B. Meg. 31*a*).

Before we leave the written law, it is necessary to point to revelations of God's law made before that on Sinai. The basic laws essential to man, it was claimed, had been given to Adam (Mek. on 19:10; T.B. Sanh. 56*b;* Deuteronomy Rabba 2.17; Jub. 3:10-14, 30-31). In addition, Noah had been given, according to some, seven laws (Mek. on 20:2; Tosef. 'A.Z. 8.4). T.B. Sanh. 56*ab;* Jub. 7:20-21 speak of more general laws, and others refer to thirty commandments given to him (Genesis Rabba 98.9; J. 'A.Z. 2.1.40*c*). These Noachian commandments were placed on all mankind, and may roughly be taken to correspond to the Stoic "law of nature." Some scholars consider them to signalize the recognition on the part of Judaism of the extreme improbability that all nations would ever come to obey the whole law; it resigned itself to this fact by insisting only on a minimum of decency for Gentiles. It should also be noted that, after the exodus from Egypt, Israel had received some laws before the revelation on Sinai (Exod. 15:25), and that the patriarchs, especially Abraham, were thought to have practiced all the laws, either because they had discovered them for themselves or because they had received a revelation of them. In Philo, both Moses and Abraham are not only examples of lives after the law (νόμιμος βίος) but in themselves incarnations of the Law (Moses is νόμος ἔμψυχός, and Abraham νόμος αὐτος ὢν καὶ θεσμὸς ἄγραφος).

2. The oral law. ***a. Its rise.*** The term "torah" had reference not only to scriptures, but also to an unwritten tradition, partly interpreting and partly supplementing the written one, and usually referred to as the oral law. The phrase "oral law" (תורה שבעל פה) probably goes back to Hillel (T.B. Shab. 31*a*), or at least to Gamaliel II (Sifre Deuteronomy XXXIII.10). But, in the first century, it was little used, the term "tradition," קבלה, being preferred (so in the NT; Josephus uses παραδόσεις, "traditions"; *see* LAW [IN THE NT]; in Philo, νόμος ἄγραφος [see an index to Philo] refers to the natural law; again, in the Rabbis, as we saw, "tradition," קבלה, also refers to the non-Pentateuchal books—e.g., M. Ab. 3.13).

The development of such an oral law was natural on several grounds. No written law can be so exhaustive as to cover all the contingencies of life, and so the ritual and ceremonial, as well as the civil and criminal, law of the Pentateuch implies, or presupposes, a great deal of custom or usage, which was law, although it was not written. Thus Deut. 16:18 directs the appointment of judges, but gives no details as to the procedures they are to follow. Presumably such procedures were orally transmitted. Similarly "custom" was followed in matters such as divorce, the payment of taxes to priests, the observance of the sabbath. As to this last, e.g., the OT gives no definition of work that was prohibited, but custom gradually established certain patterns of rest. It is likely also that during the Exile written codes or collections of laws were lost which were never later replaced but whose contents were orally preserved, at least in substance.

More specifically, it may be said that while the Scriptures themselves recognize the need for the interpretation and adaptation of the law (e.g., Deut. 17:8–26:19) by the hands of priests and judges, the biggest impetus to this arose probably at three periods:

a) At the time of Ezra, when the returned exiles

had to resettle in Israel, and made the law the ground of their life. In this connection the description of Ezra in 7:6 ff is significant. *See* EZRA.

b) During the time when Persian rule gave place to Greek rule in Palestine. Under the Persians the scribes (*see* SCRIBE) had ruled Israel; they constituted an authoritative body of teachers, versed in "the Book" (hence their name, Soferim, from the Hebrew ספר), and up to the Greek period they faced conditions of continuity that were manageable in terms of the Book and their interpretation of it. The change to Greek rule interrupted the activity of the Soferim, as an authoritative body, and, at the same time, faced the nation with bewilderingly new conditions. New ideas and customs had to be met for which the Soferim and the law, which they had interpreted, were unprepared. Hence there had to be an expansion of interpretation and a new adaptability, and this meant the growth of oral tradition—i.e., a tradition alongside the written tradition. This condition of change received some regulation with the establishment of the SANHEDRIN in 190 B.C. This, an authoritative body of priests and laymen, taught and interpreted the law and sought to regulate the life of the people. But again under Antiochus IV Epiphanes (175-163 B.C.) books were burned, and there had to be a greater reliance on tradition as such, and this gave an impetus to the development of the oral law.

c) There can be little doubt that in the Roman period and in the first century, perhaps especially, economic tensions within the nation contributed to the same development. The needs of the expanding artisan and commercial elements in the nation have been claimed to dictate the concern of the Pharisees with the expansion of the oral law, and the interests of the patrician Sadducees, in maintaining the economic *status quo,* to govern their conservatism on the law (*see* PHARISEES; SADDUCEES). E.g., according to Deut. 15:2, all loans were remitted in the seventh year. The uncertainty which this introduced into commercial transactions is evident: it could lead to fraud and oppression (Deut. 15:9), and the advent of the seventh year would tend to paralyze the economy. Hillel accordingly enacted the rule of the Prosbol. This was a declaration, made before a court of law by a creditor, and signed by witnesses, to the effect that the loan in question would not be remitted under the terms of the seventh-year law (M. Sheb. 10.3 ff). (Was Hillel introducing Babylonian usage?)

b. Its authority. Various factors, then, inevitably produced a rich tradition alongside the written law, and the question arose as to the authority of this tradition. Ultimately, the oral tradition was rooted in long-established custom. At first, its authority was directly connected with the written law. By the use of midrashic methods of interpretation, each tradition was grounded in the Scriptures. There are illustrations of this in the Mishna at M. Soṭ. 8.1-6; Neg. 12.5-7; Sh. 5.10-13, where we have a running commentary on the scriptural text, as the basis of certain commandments. Attempts to prove that the oral law was first formulated without reference to the Scriptures, and later related to them, have failed. That view is most likely which finds the midrashic presentation of the oral tradition—i.e., its presentation in connection with the text of scripture—giving place, under the pressures, particularly of Hellenism, in the Greek period, when there was a rapid growth in oral laws, to the Mishnaic method—i.e., the presentation of the traditions independently of the sacred text, as in most of the Mishna. Not that the Mishnaic method of transmitting the oral law ousted the midrashic, but that the former came to coexist with the latter: both methods continued in use, the one culminating in the redaction of the Mishna, the other in the production of the great Midrashim.

c. Codification. What is clear, however, is that, although the oral law came to be presented in isolation from the text of scripture, nevertheless, it was regarded as of equal obligation as the written law, and was deemed to have been included in the revelation given at Sinai, just as was the latter. It was the attempt to connect the oral law with the Mosaic law that led to the development of rabbinic exegesis. Laws which could not be so connected were, probably at Jamnia, designated "Mosaic halakah from Sinai" (הלכה למשה מסיני); eventually the grammatical and exegetical rule and methods of rabbinic Judaism were traced back to Sinai. To what extent the statements concerning the equal derivation of the oral and written law from Moses are playful hyperbole is difficult to assess, although only of a few oral laws is it explicitly stated that they were revealed to Moses.

The first century was alive with the questions here referred to. On the one hand, the Mishnaic method had become so customary that that century saw collections of oral law made. There may have been collections of important laws dealing with the temple and its ritual, as early as the period of the Soferim, but these were probably never written down. The earliest code mentioned in postbiblical times is the Sadducean criminal code in force down to the time of Queen Alexandra (78 B.C.); the *Megillat Taanith,* the "Scroll of Fasts," a record of days which it is not lawful to keep as fasts, probably dated in part before A.D. 70, can be regarded as the earliest rabbinical code. This is an anti-Pharisaic work, but it is probable that in the time of Jesus, although the Pharisees for various reasons were seeking to hinder the writing of codes for the public (there was, in fact, no interdict against this), many scholars had secret books of *halachah,* which they considered important, in codified form (*see bibliography*). In that period the house of Hillel and the house of Shammai were submitting the oral law to intense discussion. They differed so much that there was a danger that Israel should be faced with two laws rather than one (Tosef. Soṭ. 14:9). The discussions between them could not but have produced grave religious uncertainty. Toward the end of the first century at Jamnia, under the influence probably of Gamaliel II, attempts were made to bring an end to this uncertainty. The decisions of the school of Hillel were adopted as standard, although in practice authority was often given to the school of Shammai (J. Ber. 3*b;* T.B. 'Er. 13*b*). But the work at Jamnia did not dispel the uncertainty, and it was Akiba's work in collecting *halachoth* that laid the fundamental outlines for the Mishna. Immediately before and after A.D.

70, the need for codification among scholars was probably "in the air." Immediately after 70, the pupils of Rabbi Johanan ben Zakkai, and his younger contemporaries, collected the treatises Yoma, Tamid, and Middot. It is certain that material from this period, as from before 70, which had already been codified, was later included in the Mishna.

d. Exegesis. On the other hand, along with the activity of a Mishnaic or codifying kind went another, which, however, is not to be regarded as inconsistent with this—namely, the development of "exegesis" to connect the oral law with the written law. Many have held that the rules of rabbinic exegesis, or hermeneutics, were derived from classical Greek, Aristotelian models, as employed in the schools of Alexandria (*see bibliography*). Others regard them as more popular, and less rationalized, than this view demands. What is clear is that, in the time of Jesus, rules of exegesis had been developed, though it must be understood that the aim of this exegesis was not so much the elucidation of the text, as the convincing imposition of particular laws upon it. The rabbinic tradition preserves certain catalogues of rules. It ascribes the first to Hillel. His catalogue contained seven rules, while that of Rabbi Ishmael (who flourished A.D. 120-35) had thirteen such. Possibly the rules of Hillel are older than he, consisting of the direct methods of earlier scribes. But that the first century saw developments in this field is clear (for Hillel's rules, see: Tosef. Sanh. 7.11, p. 427; ARN 37.10; for those of Ishmael, Siphra on Leviticus [preface]; there is an allusion to them in Mek. on Exod. 13:2). *See bibliography.*

If we now analyze the oral law, as it was in process in the first century, the following components of it emerge: (*a*) It contained long-established custom. (*b*) It incorporated regulations or decrees of a prohibitive kind (גזרות) and enactments of a positive kind (תקנות) issued by individuals or bodies, who at different times had authority to do this—e.g., the Prosbol of Hillel. Later than the first century this procedure was justified on scriptural grounds; for our period two things are noteworthy: many oral laws could not be connected with the written law—to such laws the appellation "Mosaic rules from Sinai" was given (*see* § 2 *above*); and much in the oral law was in direct contradiction to the written law. Authorities, when necessary, did not hesitate to modify and even to suspend the written law, on their own initiative, without any attempt at elaborate casuistry to justify their procedure. The Prosbol of Hillel is the classic example of this; for other instances, see M. Soṭ. 9.9. (*c*) The oral law grew from the very study of the written law; new laws were found to be implicit in the latter, which did not belong to the former, but which were then naturally proclaimed as demands which had fallen into desuetude. Along with this went the discovery of principles in the written law to meet the new conditions that were continually being faced.

It was over the validity of this growing oral law that the Pharisees and Sadducees were divided. Josephus has expressed the matter thus: "What I would now explain is this, that the Pharisees have delivered to the people a great many observances by succession from their fathers, which are not written in the law of Moses; and for that reason it is that the Sadducees reject them, and say that we are to esteem those observances to be obligatory which are in the written word, but are not to observe what are derived from the tradition of our forefathers; and concerning these things it is that great disputes and differences have arisen among them" (Antiq. XIII. x.6). It was in their attitude toward the law that other sects also differed (*see* ESSENES; SADDUCEES; PHARISEES). And it is over against a background of intense discussion on the relative claims of the written law and the oral, and of the meaning of the latter, that the ministry of Jesus is to be placed (*see* LAW [IN THE NT]). One caveat is to be issued. Under the impact of Josephus, who emphasized the importance of the Pharisees in the first-century scene, and of the NT, where they play a prominent role, the influence of the law in that century has been probably overestimated. While Pharisees, Sadducees, Essenes, and other groups would have been occupied with the law, they constituted only a small portion of the total population; the vast majority were not so interested, being what were technically called "people of the land" (*see* 'AM HA'AREZ), ignorant of the law and indifferent to rules of cleanness and uncleanness.

3. The law as the agent of salvation. So far, the content, written and oral, of the Torah, has been indicated. Clearly its scope was exceptionally wide, including what we should call canon, civil, criminal, and even international law, all in one, and embracing the whole range of human activity (*see* TALMUD). A third-century rabbi computed that there were 613 commandments placed upon Israel (T.B. Mak. 23*b*). Doubtless many of these had emerged after the first century, while the majority of them dealt with matters which did not impinge directly on the ordinary life or, as, e.g., in the case of laws on the priesthood and divorce, concerned only a few within the community. Nevertheless, the importance of the law in first-century Judaism is too obvious to need emphasis.

Because the law was regarded as the gracious gift of God to man, the yoke of the law was readily accepted by the pious, and there was joy in submission to it. No profound theological justification of obedience was offered or necessary; the stark statement that the law was commanded by God and was, therefore, to be obeyed, sufficed. (This did not prevent much discussion on the "grounds" or "reasons" for certain laws—the טעמי תורה: the *Doreshe Reshumoth* [דורשי רשמות] were concerned with these and other difficulties in the law. In one sense the development of rabbinic exegesis itself is an attempt at the rationalization of the oral law, this under Hellenistic influences.) The classic example of this acceptance is the statement of Rabbi Johanan ben Zakkai, who, on being questioned as to the meaning of the seemingly pointless rite dealing with the red heifer, simply asserted: "The Holy One, blessed be He, merely says: 'I have laid down a statute, I have issued a decree. You are not allowed to transgress my decree'; as it is written, 'This is the statute of the Law'" (Numbers Rabba XIX.8).

It was obedience to the law that secured merit (זכות) before God. This merit could, moreover, be assessed with some exactitude according to deeds

committed, just as guilt (חובה) could be measured by the transgression of the law (עבירה). Every Israelite thus had to give a reckoning (חשבון) before God, and his destiny was determined according to his deeds. As Akiba "used to say: All is given against a pledge, and the net is cast over all living; the shop stands open and the shopkeeper gives credit and the account book lies open, and the hand writes and everyone that wishes to borrow let him come and borrow; but the collectors go their round continually every day and exact payment of men with their consent or without their consent" (M. Ab. 3.17). *See bibliography.*

At first sight such a view implied that man can fulfil the law, and that salvation is his own achievement. Moreover, when reward was so closely connected with observance, the temptation to a mechanical obedience unrelated to religious sincerity was a real one. But Judaism was aware of the dangers and difficulties of its attitude toward the Torah. On the ability of man to achieve his own destiny there were differences among Pharisee and Sadducee and others, but it is no accident that among the things enumerated as pre-existing creation was repentance *(see bibliography)*. The rabbis recognized that the nature of man is so constituted that he cannot escape sin, so that repentance is a condition of his existence. Hence its premundane creation (*see* REPENT). Moreover, the law itself ordained the sacrificial system as a means of atonement for sin, though sacrifice without confession of, and compensation for, the wrong done—i.e., without true repentance—did not avail. So, too, Judaism recognized the danger of a merely formal obedience to the law by insisting on the necessity for a pure intention (כונה) behind all obedience (M. Ber. 2.1; M.R.H. 3.7), by distinguishing between moral and ceremonial demands, as even in Numbers Rabba XIX.8, by demanding a piety from the heart and not a merely "legal" piety *(see bibliography)*. It is over against these considerations that criticisms of Pharisaism in the gospels must be assessed. The potency of repentance is such that a single day of it would bring in Israel's redemption (Pesiḳta 163*b*, dated A.D. 300; earlier are T.B. Yom. 86*b* [A.D. 110] and T.B. Sanh. 97*b* [A.D. 90]).

4. The law as the agent of creation. We have been concerned with the law mainly as the demand of God, by obedience to which salvation was to be achieved. But, so profound was the devotion of Judaism to the law, that it was not content merely to regard it as God's agent for human redemption.

The law was given a kind of personal existence. Despite the multiplicity of its demands, the law was conceived of as an entity, which could teach and speak ("The Scripture says, . . . speaks, . . . teaches, etc."; cf. Paul's personification of the law). The personalized unity given to the law is illustrated by the fact that the plural form, "laws" (תורות), occurs usually when it is necessary to deny the existence of more than one law (T.B. Sanh. 80*b*). The law was a living, unified reality (T.B. Shab. 31*a;* Tosef. Soṭ. 14.9).

It was given, not only a redemptive, but also a cosmic, significance. We have seen that the oral law was traced back to Sinai, but the whole law, conceived as revelation, was given still greater antiquity —in fact, a precosmic existence. The way was prepared for this, long before the first century, through the identification of wisdom with the law. WISDOM in the OT, especially in Prov. 8, is the agent both of redemption and of creation, its precosmic role being clearly defined. And, as early as Deut. 4:6, the law was associated with wisdom, and in Ecclus. 24:23 the identification of the two was made explicit, so that, by the first century, the precosmic existence of the law and its agency in creation were well established (Bar. 3:14–4:1; IV Macc. 1:17; *et passim*), and, although some of the testimonia adduced below are later than the first century, there can be little doubt that the motifs go back to that period. The following emphases are noteworthy:

a) The law, like wisdom in Prov. 8, was regarded as older than the world. Sifre on Deut. 11:10 takes Prov. 8:22 to mean that the law was created before everything. In Genesis Rabba 1, it is made clear that the law not only existed in the mind of God before creation, but that it had actually been created then.

b) The law was connected with the very act of creation. Rabbi Akiba (A.D. 120-35) said: "Beloved are Israel to whom was given a precious instrument wherewith the world was created. It was greater love that it was made known to them that there was given to them a precious instrument whereby the world was created, as it is said, Prov. 4:2" (M. Ab. 3.15; cf. Philo *On the Creation of the World*).

c) The Torah was thus one of the pillars of the universe (M. Ab. 1.2 in a saying ascribed to Simon the Just [either 280 or 200 B.C.]); later passages speak of the world as having been created for the law (e.g., Genesis Rabba 12.2).

d) It followed that in a real sense God himself was bound by and to the law: He had studied it and fulfilled it (T.B. 'A.Z. 3*b*).

e) It was corollary to this that the law was perfect and eternal (I Enoch 99:2; Bar. 4:1; Jos. Apion II; Philo *Life of Moses* 2.3.14), although later passages have been taken to suggest a distinction between the Pentateuch, at this point, and the rest of scripture, the former alone being eternal (J. Meg. 1.70). But see context.

How seriously are we to take these emphases? Are they merely the play of fancy? It may be argued, in the light of the ease with which Judaism ascribed pre-existence to other things than the law—repentance, Paradise, Gehenna, the throne of glory, the sanctuary, the name of the Messiah (Pes. 54*a;* Genesis Rabba 1.4, etc.)—that the category of pre-existence in itself was not highly significant. But it was otherwise with the idea of the law as the instrument of creation. This concept gives expression to one of the most fundamental convictions of Judaism: that the universe conforms to the law, that nature itself is after the pattern of it. To claim that the law was the instrument of creation was to declare that nature and revelation belonged together; in theological terms, that there was no discontinuity between nature and grace. It was to give cosmic significance to morality, and to cosmic speculation a sobriety it might otherwise have lacked. Nor is the close relation of God himself to the law to be lightly treated; for Judaism this meant that religion, revealed in law, was no secondary afterthought but primeval to God

himself. Again these emphases raise the possibility that within Judaism there may have been conceptions not far removed from the Platonic doctrine of ideas, albeit expressed far more naïvely than in Plato. Thus the law had a kind of celestial existence before it came into being on Sinai, and we are reminded of Philo's doctrine of the Word conceived and residing in the mind (λόγος ἐνδιάθετος), the Word expressed (λόγος προφορικός; *see* PHILO JUDEUS). In any case, the law was regarded as existing in two places: first, in what Plato would have called the realm of ideas, and, secondly, in time. But this is part of the problem of the relation between symbolism and imagery in Judaism (especially apocalyptic) and Hellenism. It is, however, well to be on our guard against too sharp a distinction between what is Platonic or Hellenistic and what is Hebraic.

This is the best place to ask whether in Hellenistic-Jewish writers such as Josephus and Philo the understanding of the law was modified under Hellenistic influences. Josephus remained a Jew in his attitude toward the law, but in three ways he reveals a Hellenistic coloring. His praise of Moses, as a pious, wise man, probably stems from his desire to commend him to the Hellenistic world, as does his interest in supplying reasonable grounds for the law—he had intended to write a book on this theme; Hellenistic in its appeal is also his understanding of the law in terms of virtue. Hellenistic motifs are still more marked in Philo, although he remained a practicing Jew. He identified the law of Judaism with the law of nature, or the order of the world, because for him God is both creator and revealer. The fathers (Abraham, etc.) were able to live according to the law, before the law had actually been given, because reason and revelation are one. This attempt to equate revelation and nature, philosophy and law, led Philo to the use of the allegorical method, but his allegorism never led him to neglect the observance of the law. Along with his use of allegory went his attempt to find rational grounds for the law in order to avoid offense to the Hellenistic world.

5. The law in the future. Finally, we have to ask what role the law was expected to play in the messianic age or in the age to come. We have seen that it was regarded as perfect and eternal: it was impossible that it should ever be forgotten, no prophet could ever arise who would change it, and no new Moses should ever appear to introduce another law to replace it. Matt. 5:18 adequately expresses the dominant first-century doctrine. Note, however, the following:

a) There are a few passages which suggest the cessation in the messianic age of certain enactments concerning sacrifices and the festivals (Leviticus Rabba 9.7; Yalqut on Prov. 9:2); others suggest changes in the laws concerning things clean and unclean (Midrash Tehillim on 146.7; Leviticus Rabba 13.3); others often claimed to imply changes in the law are of doubtful weight (e.g., Sifre on Deut. 17:18).

b) Difficulties or incomprehensibilities in the law will finally be adequately explained. God himself would teach his people in the messianic age (Numbers Rabba 19.6). The passages which speak of a new law in the messianic age are of a late date, but they may be cogent enough to permit us to assert that the expectation of a new, messianic law was not incompatible with first-century Judaism (see Targ. on Isa. 12:3); it is possible that anti-Christian polemic may have caused the suppression of early evidence for this. In the age to come, beyond the messianic age, commandments were to cease (T.B. Ned. 61*b*). On the whole, however, the picture that emerges is that of a future, when God himself or his Messiah would study the laws, reveal their "grounds," return backsliders, and give the law to the Gentiles. Judaism could no more think of the future than of the past and present other than in terms of the eternal law.

LAW IN THE NT [νόμος; תורה]. By "law," or "the law," the NT usually means the law of God revealed in the OT. Except, by implication, in Matt. 17:24-27; Mark 12:13-17; Rom. 13:1 ff; I Pet. 2:13 ff, the civil and criminal laws of states are not dealt with. Even in I Tim. 1:8 the reference is probably to the Mosaic law, and in Rom. 2:12-16 the law written on the heart (*see* CONSCIENCE) is also probably to be understood as "what the [Mosaic] law requires" (vs. 15). Our main concern, therefore, will be with the law of the OT in the NT.

Bibliography

1. The law in the Synoptic gospels. The term "law" (νόμος) does not occur in Mark at all; in Matthew and Luke it occurs eight and ten times respectively, always with the article, except in Luke 2:23, where also the reference is to the law of the OT.

Usually the term denotes the Pentateuch (e.g., Matt. 5:18-19). Probably the phrase "the law and the prophets" is used for the whole of the OT (Matt. 5:17; 7:12; 11:13; 22:40; Luke 16:16; 24:44 [here the psalms are distinguished]), as are also "the scripture" (ἡ γραφή; e.g., Mark 15:28) and "the scriptures" (αἱ γραφαί; e.g., Mark 14:49). The "oral law" (תורה שבעל פה) is not described as "law" (νόμος), but as the "tradition of the elders" (παράδοσις τῶν πρεσβυτέρων; Mark 7:5) or the "tradition of men" (παράδοσις τῶν ἀνθρώπων; Mark 7:8).

The meager incidence of the term itself is no measure of the deep significance of the problem of "the law" in the Synoptics. But at the outset it must be said that it is beyond dispute—however much it may have been exaggerated by some scholars—that in the course of their transmission, the words and works of Jesus have been colored by the experience and needs of the churches that preserved them. To distinguish the attitude of Jesus himself toward the law from that of the early church, therefore, is exceedingly difficult. Here the Synoptic evidence is presented without any attempt to establish how far it accurately represents the position of Jesus himself.

a. Criticism of the law. According to the Synoptics, the ministry of Jesus implied, and possibly explicitly recognized, that the law, as understood by Judaism, no longer regulated the ways of God with men, and that Jesus himself had taken over the place previously held by the law. "The law and the prophets were until John; since then the good news of the kingdom of God is preached" (Luke 16:16; cf. Matt. 11:11-13). The coming of Jesus has inaugurated a new order in which, in some sense, the law is superseded; the new wine of this new order cannot be put in old wineskins (Mark 2:22). This is most marked, not only in the parables, which illumine a crisis in which the KINGDOM OF GOD is now in the process of realizing itself, but also in the relationship of Jesus with publicans and sinners, the "people of the land." A "friend of sinners," he ignored limitations placed on social intercourse by the law, and by implication he broke down barriers essential to the maintenance of the distinction between "clean and unclean" (Mark 2:13-17; Matt. 11:19). An examination of his attitude toward the sabbath (Mark 2:23–3:6), toward things clean and unclean (Mark 7:1-24), and toward divorce (Mark 10:2 ff), reveals that: (*a*) Jesus rejected the oral tradition (in this sense he was, from one point of view, near the Sadducees); (*b*) he set one passage of scripture over against another, not to harmonize them, but to invalidate the one by means of the other (Mark 2:23-28; 10:5-9); and (*c*) he elevated moral above ceremonial commandments (cf. Mark 12:28-33).

Moreover, Jesus appealed to men to judge of themselves that which was good (Luke 12:57), and himself claimed the right to reinterpret the will of God (Matt. 5:17-48). Nurtured as he was in the Law and the Prophets, Jesus passed beyond his nurture to an intuitive awareness of the will of God. We cannot doubt that he followed the immediate deliverances of his own conscience, and the view is probable (though many would contest this) that his attitude toward the law implies his messianic awareness or consciousness. This may be implicit in his use of the messianic "I" in Matt. 5:21 ff (in the phrase "but I say to you," though some take this to be merely a rabbinic formula of no such significance) and even more so in his appeal to creation. The messianic age was to inaugurate a new creation comparable to the first. It is in the light of this that we are to understand the teaching of Jesus on divorce in Mark 10:2 ff, where he appeals to the order of creation as supplying a truer clue to the intention of God than the law, and much in the parables and other passages (Matt. 5:45 ff; 6:25-33). It is not surprising, therefore, that Mark sets Jesus in opposition to the scribes and Pharisees from the beginning (2:1–3:6), while Matthew places the ethical demands of Jesus in antithesis to those of the law (5:17 ff) and ascribes to Jesus a bitter attack on Pharisaic casuistry and hypocrisy (ch. 23), even while accepting the validity of the teaching of the Pharisees (23:1-2). Henceforth, it is man's relationship to Jesus, not to the law, that is decisive (Matt. 10:32-40; Mark 8:38). The inadequacy of even a strict adherence to the law, rather than humble readiness to receive God's grace, is clear in Luke 18:10-14.

b. Affirmation of the law. On the other hand, the Synoptics recognize that Jesus was not concerned (or, at least, not primarily) to annul the law. While some of the alleged evidence for this may be due to Jesus' desire to comply with necessary civil laws (Mark 1:44), his personal conservatism in the observance of the law is noteworthy. He goes to the synagogue on the sabbath (Mark 1:21; Luke 4:16; 13:10); he appears in Jerusalem at the festivals (Luke 2:41 ff; Mark 11:1 ff); he teaches in the synagogues and in the temple (Mark 1:29 ff; 14:49); he celebrates the Passover (Mark 14:12 ff; Luke 22:15-16); he does not speak disapprovingly of religious usages as such—fasting, almsgiving, prayer (Matt. 5:23-24; 6:1-18); he wears the prescribed fringes on his garments (Mark 6:56; Luke 8:44). Even where he, or his disciples, do break the law, this is justified, not in any spirit of iconoclasm or unprincipled "liberalism." Either this breaking of the law happens in the interests of the emerging messianic community (as in Mark 2:23-28, where the "Son of man" may connote the "people of the saints of the Most High"—i.e., Jesus and his disciples—and where no impatience with sabbatarianism is shown, but, rather, a desire to enlighten his opponents), or Jesus reacts to certain situations in immediate response to the will of God, thereby recognizing the supreme claims of that will without considering the effect of his action on the law (so Mark 3:1 ff, where no mere antisabbatarianism governed Jesus' action). Similarly, Jesus' inability, even against himself, to resist the priority of human need, or the claims of the rule of God, governs his action in Luke 13:10-13 rather than frivolous antisabbatarianism. What the latter called forth from him we see in the Western text (D) at Luke 6:5.

Unless Mark 7:15 be so interpreted, there is no explicit assertion of the annulling of the law by Jesus, and many interpret Mark 7:15, not as a rejection of the distinction between things clean and unclean, but as an assertion of the priority of the moral over the ritual. The moral demand of Jesus is expressed, in part at least, in terms of the Law and the Prophets (Matt. 22:34-40; Mark 12:28-34; Luke 10:25-28), and, in Matt. 5:17 ff, Jesus probably, as a second Moses (parallel to, and not only antithetic to, the

first one), is sent, not to annul the law, but to fulfil it.

c. Explanations of Jesus' dual attitude. As the Synoptics present him, then, Jesus had a twofold attitude toward the law: he seemed to annul it, at least by implication, and at the same time to affirm it. This contradiction has been variously explained:

a) Possibly the attitude of Jesus toward the law changed during his ministry. As they now stand, our sources set Jesus in opposition to the Jewish religious leaders from the start, but there are indications that, at some stage in his ministry, Jesus attempted to be friendly with Pharisees. He well understood how natural it was for them to suspect his position, and sought to conciliate them (Matt. 23:23; Mark 12:28-29; Luke 5:39; 13:31; 17:20). Nevertheless, although there may have been development in the mind of Jesus, the chronology of the ministry is so confused that it would be hazardous to trace this too confidently.

b) The conservatism of Jesus on the law, it has been claimed, is the result of Jewish Christian influences on the tradition, which have "Judaized" Jesus. Thus Matt. 5:17-18 has been declared unthinkable on the lips of the historical Jesus; and Matt. 23, by making him attack merely scribal, and Pharisaic, hypocritical misuse of it, rather than the law itself, has falsified the position of Jesus. But the passage upholding the law in every iota and dot occurs, not only in the Jewish Christian source M, but in Q, which is often connected with the Gentile church at Antioch. There is nothing in Matt. 5:17-19 which cannot be connected with Jesus' ministry, with his encounter with the "people of the land," with discussions between Hillel and Shammai and others on knowing and doing the law and on heavy and light commandments. Since friend and foe could find sufficient cause, in both the practice and the teaching of Jesus, to stimulate the suspicion of iconoclasm, Matt. 5:17 ff could have been called forth by conditions, during the ministry itself, in which Jesus disclaimed any intention to annul the law.

c) The contradiction under discussion may be due to the fact that Jesus attacked, not the law itself, but the oral tradition. In his treatment of the sabbath and divorce, Jesus always criticizes the law from within the law (Mark 2:23-26; 3:1-6; 10:2-3). At two points, however, the attempt to relate Jesus' conflict with the law exclusively to the "fence" around it—i.e., the oral tradition—has been claimed to fail. In Mark 7:15, Jesus seems to annul the law itself (although even here he may still be attacking the ceremonial laws merely in order to emphasize the ethical), and in Matt. 5:31, 38, the law itself is cited, and particular provisions abrogated (although here too Jesus may merely be offering a new interpretation of the law; as we saw, scholars are divided as to the exact force of the phrase: "But I say to you"—some regard it as messianic in significance; others treat it as a customary rabbinic formula to denote that Jesus is merely presenting his understanding of the law).

d) Another possible explanation of Jesus' twofold attitude toward the law is that there was a distinction in Jesus' mind between the period before his death, which is the final culmination of the old order, and that which comes to birth through his death. In the former, the law is not annulled by him, although "signs" that it is passing are given. Only after his death has sealed the new covenant, and fully inaugurated the new order, does the law cease to govern relations between God and man. This may be the meaning of Matt. 5:18, the phrase "until all is accomplished" (ἕως ἂν πάντα γένηται) possibly referring to the death of Christ. This view has been little discussed, and is highly tentative; but it might explain why Paul connects the death of Christ so closely with the end of the law (Gal. 2:19-21; 3:13; 5:11; Eph. 2:13-14; Col. 2:14), and why Jesus, who looked to a future incursion of Gentiles into the kingdom (Matt. 8:10-11), nevertheless confined his ministry to the Jews.

e) The reference to the death of Jesus may supply us with a clue that we need. Jesus went to his death in obedience to the will of God (Mark 14:36), and thus fulfilled the law, as the demand of God, as he understood it (Luke 24:25-27). It may be impossible for us to disentangle the precise attitude of Jesus toward the ceremonial laws (he himself perhaps would not have made the rigid distinctions that we make at this point), but we can be sure that the moral demand of the law, as the expression of the will of God, Jesus never annulled. His very call to repentance implies this (Mark 1:15; Matt. 4:17); the prodigal son is to return to obedience to his father (Luke 15:19); to know and to keep the two great commandments of love to God and neighbor is to be near the kingdom (Mark 12:28-34); Jesus has his own yoke to impose (Matt. 11:25-30). The concept of "law" as the demand of God would not have repelled Jesus. Nevertheless, it was not in terms of the law of Judaism that he issued his call to repentance, but in terms of the kingdom of God (Mark 1:15). By setting the call to repentance in the context of the givenness and immediacy of the kingdom, Jesus freed it from mere moralism and utterly radicalized it. Thus, too, he came to understand the law in terms of the will of God, not the will of God in terms of the law. And the will of God for him was one of absolute love, so that God's demand was one for such love (Matt. 5:17-48). And to know the demand of God as such—i.e., as one of absolute love—is to recognize that one cannot "obey" it fully, nor set up any claim to merit before God, that the "broken and the contrite heart" alone is possible for us. This was at the root of the criticism that Jesus made of the scribal and Pharisaic tradition: that it assumed the "achievability" of a right relation to God on grounds of obedience, whereas to stand under the will of God as love, as Jesus understood it, was to know that, when we have done all that is commanded, we are unworthy servants (Luke 17:10). But Jesus does not deliver us from all commandments. He gives us a commandment, that of love, and we must ask whether this means that he introduced a new law. *See* ETHICS IN NT.

f) Matt. 5 possibly makes of Jesus a new Moses proclaiming new, radical commandments to be applied. It is, moreover, not unlikely that Jesus set himself in conscious parallelism to Moses. But we can only speak of the words of Jesus, as a new law, with extreme caution. The total obedience to the will of God, which is one of love, could not be reduced to a written code in a prescriptive sense. This obedience has to discover its own means of expression in any

given situation, even though it be informed by the law, tradition, or even the words of Jesus himself. Precisely because the law could, and often did, hide the immediate demands of love, in any particular situation, and could, and often did, lead to external observance without the true intent, and to a concern for merit and reward, and hence to hypocrisy, Jesus opposed scribes and Pharisees. And he himself spoke, not, primarily at least, as a lawgiver, though he commanded, but as one sent of God in the last hour to reveal the absolute will of God. His hyperbolical statements of the demand of God, though to be taken with the utmost seriousness, are, therefore, to be interpreted, not as a "new law," but as pointers to the true nature of God's demand of love.

2. The earliest Christians and the law. ***a. Radicalism: Stephen.*** The ambiguity which marked the attitude of Jesus toward the law, according to the Synoptics, reappears in the attitude of the earliest Christians—i.e., the claims of the law are recognized and, at the same time, rejected. In the very earliest days, to judge from Acts, Christians continued to "practice Judaism," and were occupied more with asserting that Jesus of Nazareth was the Messiah than with what their attitude should be toward the law (Acts 2–3). This is true, probably, despite the work of the firebrand Stephen, who was accused of talking against the temple and the law (Acts 6:13 ff). Although in fact there is no attack on the law as such in Stephen, but only on the temple and on the history of the Jews, nevertheless, his attitude implies a detachment from the tradition of Judaism, which could lead to a rejection of the law on which the service of the temple was based. (Though Stephen was a Hellenist, it is not justifiable on this ground to ascribe his radicalism to liberal, Hellenistic influences, because Acts 6:9 ff makes it clear that the Hellenists opposed him; his attitude arose either from an antilegalistic and anticultic tradition in Judaism itself or under the influence of Jesus' example.) Stephen's wholesale dismissal of the temple, and, by implication, of the law, and his condemnation of the people of Israel, were not embraced by the church, which found his attitude too radical, and the problem of the relation between law and gospel too complex, to be thus summarily solved. This problem emerged fully only later, when numbers of Gentile converts entered the church.

b. Compromise. To judge from Gal. 2; Acts 15, there was common agreement among the leaders of the church that salvation was by faith in Jesus Christ and not by works of the law. Difficulties arose when the actualities of a community including Jews and Gentiles had to be faced. Did the acceptance of the gospel imply that Jews should now forswear the observance of the law in order to make it possible for them to enjoy table fellowship, and, especially, the Eucharist, with Gentile Christians; or, conversely, for the sake of Jewish sensibilities, should Gentile Christians be circumcised and submit to the observance of the law? No problems arose as long as communities were exclusively Gentile or exclusively Jewish; and the church tactfully recognized a division in its missionary task. In Jewish Christian churches, while justification was proclaimed on the basis of faith, it was acknowledged that Jewish Christians might obey the law—the mission to the circumcision was assigned to Peter. In Gentile churches obedience to the law was not observed—the uncircumcision was the field of Paul (Gal. 2:7-8). This approach to the law was virtually ratified in the Council of Jerusalem, and, either at this council or slightly after, the conditions on which there could be actual intermingling of Gentile and Jewish Christians were laid down (Acts 15:1-30). The exact significance of these conditions has been variously assessed, either as a minimal ethic to be observed by all (but the nature of the conditions, and the Jewish attitude toward the law as a unity, are against this), or as a safeguard against Gnostic influences (a vague phrase which does not take us very far), or as the Noachian commandments which Judaism laid upon all men—this is the most probable interpretation. The church virtually followed Judaism at this point, because the presence of Gentiles in many synagogues had long involved the mother faith in the same problem, and it had dealt with it in terms of the Noachian commandments. Here the actualities of the situation which confronted the church have to be grasped:

a) While most Christians were aware that salvation was only in the name of Jesus, they also had to recognize that, if there was to be any effective approach to Jewry, the law had to be honored. A movement that sat loose to the law would be self-condemned among Jews from the outset. Not only would it be difficult for Jews brought up in obedience to the law to reject it (even though they no longer placed their hope of salvation upon it), but Romans shows how naturally they feared moral laxity should the law be abandoned and justification by faith alone offered (Rom. 6). There were understandable reasons why the church was cautious on the question of law and took a *via media.*

b) In Galatians, however, Paul ascribes to certain champions of the law more dishonorable motives. They favored the law from fear of persecution, in order to make a good showing in the flesh (Gal. 6:12-13). It was these, who are usually referred to as the Judaizers, who, centered in Jerusalem, invaded the Pauline churches to undo the work of Paul. While it is possible to overemphasize the significance of the Judaizing movement, and to give to James, the brother of the Lord, and to Peter, a Judaizing role which they never played (they were not Judaizers), it is even more erroneous so to minimize the gulf between Paul and the primitive community as to deny the differences of emphasis between him and Peter and James, and, in particular, the reality of the Judaizing opposition which he faced. Two extreme positions are to be, therefore, avoided—the one which tends to equate the Christianity of the primitive church with that of later Jewish Christianity, so as to make it legalistic, and the other that would obliterate any real distinction between the primitive church and Paul. The Judaizing elements eventually led to Jewish Christianity, which demanded the observance of the law from all Christians, and to the Nazoreans, who held fast to the law for Jewish Christians only. Attempts to ascribe to Jewish Christianity a major role in the struggle of the church against Marcion and incipient Gnosticism have not always been convincing. *See bibliography.*

3. Paul and the law. ***a. Terminology.*** By the term "law" (νόμος) Paul usually means the law of God as contained in the OT, whether he uses "the law" or "law" without the article. This is so even when the law is not defined as the law of Moses (I Cor. 9:9) or the law of God (Rom. 7:22, 25; 8:7). Occasionally, perhaps, it refers to the Decalogue, as such (Rom. 2:20 ff; 7:7; 13:8-10), but there is no essential difference in Paul between the Decalogue and the rest of the law. Though he uses "the law and the prophets" for the whole of the OT (Rom. 3:21), and although "law" may refer to the Pentateuch in isolation, this is not to be pressed, because in I Cor. 14:21; Rom. 3:19, the single term "law" stands for all the OT. The term is also used without reference to the OT. In Rom. 3:27 it seems to mean "dispensation" or "order," the order of faith over against the order of works (διὰ ποίου νόμου; τῶν ἔργων; οὐχί, ἀλλὰ διὰ νόμου πίστεως). In Rom. 7:21 "law" is a kind of inexorable necessity. Followed by a genitive, it refers to what we may call a governing principle, either internal (Rom. 7:21-25) or "external" (Rom. 8:2; Gal. 6:2), though this distinction is not to be pressed. In Rom. 7:1-3, "law" refers simply to a legal enactment; in Rom. 5:13 to a "commandment"; in Rom. 2:14-15 to an interior law, written on the heart, but not to be identified with CONSCIENCE; in Rom. 13:8 "the law" is summed up in the commandment to love the neighbor.

Paul never uses the plural "laws," probably because he regards all "law," in and outside Judaism, as a unified whole. In Judaism this takes the form of the law of the OT, and among Gentiles of a "law written on the heart" (Rom. 2:15). In both cases "the law" is a living demand of God. This enables Paul almost to personify the law (Rom. 3:19; 4:15; 7:1; I Cor. 9:8); but this personification is found in Judaism also. *See* LAW (IN FIRST-CENTURY JUDAISM).

b. Life under the law and "in Christ." As a Pharisee, Paul would have regarded the law as the perfect expression of God's will. But his conversion (*see* PAUL) compelled him to reassess Judaism and, particularly, the law. Historical factors lay back of his concentration on the relation of the law to the gospel, rather than on other aspects of the relation between Judaism and Chrisianity—its cruciality in his previous life as a Jew, and the practical pressure of problems in the church on the relation between Jewish and Gentile Christians. But not only so. It was Paul's very zeal for the law of God that had blinded him to the Son of God and led him to persecute his church (Gal. 1:13-14; 3:13; Phil. 3:5-6)—the law had proved a veil to hide Christ (II Cor. 3:14-15). This fact governed his re-examination of the law. Its staggering character was reinforced by the difference which Paul found between his life under the law and "in Christ," which his antitheses set forth. The law was powerless; Christ was the power of God (Rom. 3:20-21, 27-28; 4:14; 8:3-4; 9:31-32; Gal. 2:16, 21; 3:2, 5, 11, 19; 5:4; Phil. 3:9). The law condemned; Christ saved from the wrath and curse and death (Rom. 3:21-25; 4:15; 5:1-11, 20-21; 6:22; 7:7-13; 8:1-14; I Cor. 1:30; 3:7; 15:25-27; II Cor. 5:17-19; Gal. 1:3-4; 3:10, 13, 21-22). The yoke of the law was bondage (Gal. 3:23; 4:1-7, 21-23; 5:1-3); the service of Christ was freedom (Rom. 6:18-22; 8:2, 21). It is in the light of these antitheses, which arose out of his conversion—there being no evidence that before this Paul had found the law weak, condemnatory and tyrannical (Phil. 3:6)—that his understanding of the law is to be comprehended. What, then, was Paul's analysis and interpretation of the function of the law?

To begin with, it expresses the will of God, and is holy, just, good, and spiritual (Rom. 3:2; 7:12, 14); to be outside the law is to be at enmity with God (Rom. 7:12; 8:7). That the law cannot give life, does not mean that its demands are evil, but that no one can keep them; it is at the point of obedience, not of demand, that the law is to be judged; and it is an empirical fact that all have sinned, and, therefore, cannot be justified under the law (Rom. 3:20, 23). Why?

First, the law usually confronts us as prohibition, expressing the negative aspect of God's will (Rom. 7:7). And, while the prohibition makes man responsible, by revealing sin to him, it leaves him powerless in his responsibility.

The law actually incites to sin. This is not merely because prohibition promotes desire, but because, by confronting man with God's demand, it excites what lies behind all sin—namely, the rejection of God's rightful claims, the refusal to recognize dependence on him. And the rebellious desire thus created by the prohibition becomes the base from which sin attacks man. Thus, the law, intrinsically good, subserves the ends of sin, which is intrinsically evil, but which is, apart from the opportunity provided by law, impotent. What is good in itself, the law, thus becomes a power for evil. While sin is in man before he encounters the law, it is the latter that brings it to life by presenting the possibility for transgression (Rom. 4:15; 5:20; 7:13; Gal. 3:19). The law even aims at transgression (Rom. 5:20; Gal. 3:19)..

Nevertheless, the law condemns sin (Rom. 2:12; 3:19; 8:1), works wrath (Rom. 4:15; *see* WRATH OF GOD) and death (I Cor. 15:56; Rom. 7:9-10), and, if never to be identified with sin, by Paul comes to be closely connected with it (I Cor. 15:56; Rom. 3:20; 4:15; 6:14; 8:3).

But how is it that what was intrinsically good has been thus diverted to the service of sin? Paul would seem to give two answers:

a) The powerlessness of the law is due to its relation to the flesh (Rom. 8:3; *see* FLESH IN THE NT); and part of the meaning of II Cor. 3:6 ff is that this is due to the external character of the law, which works, not from within, but approaches man from without.

b) More important, Paul regards the law as related to the "elemental spirits of the universe" (τὰ στοιχεῖα τοῦ κόσμου; Gal. 4:3, 9; Col. 2:8, 20). Whether Paul thought of the law as itself one of the demonic principalities and powers, whose might was canceled on the cross (Col. 2:13-14), or as an instrument used by demonic, angelic powers (Gal. 3:19; 4:1-11; II Cor. 4:4), which had not only gained control of the law in Judaism, but, in the Gentile world, reigned under the form of pagan gods, is difficult to determine. Under the influence of these powers, we are best to understand, the law had itself come to serve an evil purpose, so that its functions would seem (it has been claimed) to correspond to those of Satan (as prosecutor, executioner, and tempter; Rom. 2:12; 3:19; 7:7-8; II Cor. 3:6 ff). *See* SATAN.

c. Role of the law in history. But if so, has the law any positive role in history? Yes; but only in a relative and transitory sense. Its role is relative because it came into being, not of God's primordial purpose, but as a result of his reaction to human sinfulness. God's dealing with man reveals two stages: (*a*) a covenant based on a gracious promise to Abraham (Gal. 3:1 ff; Rom. 4:20); (*b*) a covenant, which followed this, based on the law (Gal. 3:19, 22-25; Rom. 5:20). Thus, the law slipped in between the promise and its fulfilment in Christ, which means that now its writ is at an end. It was allowed to slip in to increase trespass (Rom. 3:20; 5:20; 7:7)—i.e., to reveal sin as sin—because sin is only seen as sin when it becomes transgression and thus engenders guilt. And the recognition of sin as sin, through the advent of the law, was an advance preparing the way for Christ. In this way the law was a custodian (παιδαγωγός) unto Christ (Gal. 3:24); it had quickened the recognition of the need for deliverance by deepening the sense of sin. The merely relative value of the law is apparent also to Paul in its ordination through angels (Gal. 3:19)—i.e., it was mediated from God indirectly, not directly, as was the promise to Abraham. From its very promulgation it was a phenomenon not capable of lasting (II Cor. 3:13).

d. Christ the end of the law. Paul's criticism of the law culminates in the claim that with the coming of Christ the law's dispensation is at an end (Rom. 6:14; Gal. 3:13, 25; 4:5; 5:1). But it has ceased only for those who have died and risen with Christ (Gal. 2:19; Rom. 7:4, 6; Col. 2:20)—this experience is symbolized in baptism (Gal. 2:21; Rom. 6). But that Christ is the end of the law (Rom. 10:4) signifies, not that the law has come to an end, but that it has reached its final purpose in him: Christ was the goal to which the law was directed (cf. Rom. 3:21); he has achieved its destiny. The cessation of the law was associated with the Cross (Gal. 2:19, 21; 3:13; 5:11; Eph. 2:13-14; Col. 2:14). But the Cross is also the most complete obedience to God, which is precisely the demand of the law (Rom. 8:34 ff). To share "in Christ" is to fulfil the law (Rom. 3:31). The demand of the law, in its essence, is not violated by the Christian, because it can be gathered up in love (Gal. 5:14; 6:2; Rom. 8:4; 13:8, 10). Paul is thus no antinomian. And he reveals the same ambiguity on the law as do Jesus and the early church (Rom. 3:31; 10:4).

This ambiguity is due not merely to fluidity in the use of the term "law," because it pervades Paul's personal conduct and missionary policy. Thus he allowed Jewish Christians to observe the law (Acts 21:21-26), and himself did so, certainly when necessary, possibly always (I Cor. 7:18; Acts 16:3, 21; 23:6). Certain practical considerations would incline Paul to this; any deviation from orthodoxy would inevitably close the doors of Judaism against him; and an increasingly ironic attitude toward the law emerges in his letters (cf. Gal. 4:25; 5:1; Rom. 7:12, 14; 8:3; II Cor. 3:14-18).

It became clear to Paul early in his ministry that obedience to the law of Christ sometimes demanded obedience to the old law (I Cor. 9:19-20; *see bibliography*). In giving rules to churches Paul even drew upon the law (I Cor. 9:8, 13). Nevertheless, he did so parenthetically, and he finally appeals to a commandment of the Lord (I Cor. 9:14). Here, as elsewhere, the law is understood in the light of Christ.

This is why scholars have, on the whole, been loath to admit that Paul understood Christ in terms of the law, but, only and always, the law in terms of Christ. But the possibility is not to be ruled out that much in Paul's understanding of his Lord, as the preexistent agent of creation, e.g. (Col. 1:15 ff), may be due to his ascription to Christ of attributes ascribed by Judaism to the law. Certain it is that Christ, in his person and words, has taken the place of the law in Paul's life and thought, and, in this sense, has become for him a new Torah. The influence of the Reformation, because of its emphasis on the gospel as justification by faith, makes it difficult for us to do justice to this aspect of Paul's thought. His criticisms of the law belong chiefly to his polemic letters, Galatians and Romans; nor must they be minimized. Paul did come to believe that to accept life under the law as the means to salvation was to enter upon an impossible road marked either by despair at failure or by overweening, insensitive pride (ὕβρις, καύχημα) at achievement, but this was so only because the light of Christ had revealed the more excellent way to him. His criticism of the law is a consequence of his faith in Christ, but not its center. Polemic, and the historic circumstances attending the emergence of Christianity, have somewhat hidden the fact, but the center of Paulinism lies, not in the relation of gospel and law, but in Paul's awareness that with the coming of Christ the age to come was becoming present fact, the proof of which was the advent of the Spirit: it lies in those conceptions of standing under the judgment and mercy of a new Torah, Christ, of dying and rising with this same Christ, of undergoing a new Exodus in him, and of so being incorporated into a new Israel, the community of the Spirit.

4. The Letter to the Hebrews. The term "law" refers here again to the law of the OT, even in Heb. 7:16, where it may mean "order." The plural "laws" occurs only in quotations from the OT in 8:10; 10:16. Unlike Paul, who was concerned with the law as a system of prohibitions and commandments designed to make man righteous, and with the moral problem thus created for a Pharisee, Hebrews was concerned with the problem of worship, of access to the presence of the Holy God, which the priesthood and sacrifices were designed to achieve. Hence the law is significant for Hebrews as it is related to the priesthood and sacrificial system (the reference to foods in 13:9 is secondary). This relation is twofold. The law was, on the one hand, the foundation on which the priesthood and sacrifices were built, because it had ordained them (although 7:11 makes the law almost dependent on the priesthood, this must not be taken to mean that God was not the source of the law). On the other hand, because the law was broken, the media for expiation, the priesthood and sacrifices, became necessary for continued life under the law (7:5, 11-12; 8:4; 10:8). How then does Hebrews regard the law?

First, like the rest of the OT, the law was the word of God. Although mediated by angels—this mediation implied its inferiority (as in Gal. 3:19)—it was valid. There is nothing in Hebrews comparable to the radical dismissal of the temple and, by implication, the law, in Stephen (Acts 7:47-50); no suggestion that, in

the past, the law should not have been obeyed. Moreover, the ordinances of the law had a positive value. They pointed upward to what was already eternally existent in the mind of God, and forward to a real fulfilment of that after which they grope in the future. The temple, the priesthood, the sacrifices, the covenant, all are copies of the real (8:5) and foreshadowings of better things to come (10:1). Thus the old covenant, including the law, was not false but imperfect, premonitory rather than satisfying. The force of this can be gauged only by reading the whole of Hebrews, but especially 7:1–11:1. For the merging of Platonic and eschatological concepts implied, *see* HEBREWS, LETTER TO THE.

Nevertheless, the critical attitude of Hebrews toward the law is noteworthy. The dispensation of the law had been ineffective. Priest and sacrifice had failed in their aim of bringing men near to God by the cleansing of their consciences (7:15; 9:14; 10:4). This was so because: (*a*) the OT ordinances were only outward arrangements, which could not effectively deal with sin and guilt (9:9-10); (*b*) the priests, the human agents of reconciliation, were themselves mortal and sinful and could not, therefore, really be effective (5:3; 7:27); and (*c*) the very repetitive nature of the sacrificial system showed its inefficacy (10:1 ff). Moreover, that the OT itself looked forward to better things to come (Jer. 31) *ipso facto* implied and recognized its incompleteness (Heb. 8:8-12).

Thus, though Paul and Hebrews are not concerned with the same aspects of the law, they agree in much of their understanding of it. The difference between them is clear. In Hebrews the law is especially connected with the priesthood (7:11). A change in priesthood meant a change in the law (7:12). Christ is a new kind of priest, after the order of Melchizedek. This priesthood was announced to Abraham before the Levitical priesthood existed, and the latter has not abrogated it. Had the Levitical priesthood procured access to God, the rise of a priest after the order of Melchizedek, as was predicted in Ps. 110:4, would have been unnecessary. But the antiquating of the cultus through the high priesthood of Christ carries with it the supersession of the law. The argument is very similar to that applied directly to the law by Paul in Gal. 3:17-18, except that for Paul it is the abrogation of the law in Christ that implies the supersession of the cultus. For both Paul and Hebrews, moreover, the Christian dispensation is a higher order than that of Judaism; but the element of discontinuity between them may be more marked in Paul, because he found in Christ what Judaism could not give, whereas Hebrews found in Judaism what pointed forward to Christ (but see Rom. 3:21).

5. The Letter of James. This letter is concerned with the relation of faith and works (not faith and law, as is Paul; 2:14 ff), and the term "law," which occurs ten times, refers not primarily to the OT law as such. In 1:25 the "law," with which James is occupied, is defined as the "perfect law . . . of liberty," and the context makes it clear that this is a summary description of the Christian message—i.e., the "Word" referred to in 1:21-23, the gospel itself. Does this mean that James understands the gospel in terms of law? This possibility, which is enforced by the explicit injunctions in 2:1 ff; 3:1 ff; etc., is offset by the emphasis on liberty or freedom in the phrase "perfect law of liberty." The "Word" demands obedience, but "in freedom."

The law of freedom is further defined in 2:8 ff as the "royal law," which in the light of 2:9 consists of the Golden Rule. This rule is to be obeyed in all its demands, but this demand is not expressed in specific directions for conduct. This is the implication of 4:11 ff. This passage echoes Rom. 14:4, which asserts that each man stands or falls before his own master —i.e., he is not subject to any fixed law, which can be discerned by outsiders, and which prescribes a set course of action. He is free himself to decide what he should do, under the constraint of love or of Christ; to judge another's action is to presume to know the meaning of that constraint for him, to judge the law of love itself, and this very judgment is itself a transgression of that law.

Thus James too, despite his sane earthiness, takes seriously the principle of freedom from specific enactments and in this is like Paul, as he is also like Paul in his ethical seriousness (1:22 ff; 2:14 ff *et passim*). Pauline controversies over the Jewish law, as such, are outside the purview of James, although the possibility is a real one that, especially in 2:14-26, he may be attacking certain misunderstandings of Paul which were current in his circles. The method of argument suggests this. *See* JAMES, LETTER OF.

6. The Fourth Gospel. Here "law" (νόμος) is used in three ways: (*a*) of a specific commandment (7:19, 23); (*b*) of the system governing the administration of justice among Jews, though this was for them part of the law of God (7:51; 8:17; 18:31; 19:7); (*c*) of the Pentateuch (1:45), the law of Moses (7:23), or the law given by Moses (7:19), or the law given by God through Moses (1:17), which was the authoritative basis for Jewish life; (*d*) of the whole of the OT (10:34; 12:34; 15:25; and probably 7:49).

Though an intimate knowledge of rabbinic interpretation of the law appears, the evangelist looks at the law from the outside also. E.g., 8:17, where he uses a phrase ("In your law it is written") used by Gentiles in discussions with Jews; 1:17, where grace and truth, particularly associated with the law in the OT (Pss. 25:10; 85:11; 89:15), are claimed to be in Christ, not in the law; and 5:39, where the true quest for eternal life in Christ is contrasted with the misguided quest for him in the law, point to a major theme of the gospel—namely, the superiority of the revelation of God given in Christ over that given in the law.

It is this point of view that largely governs the symbolic forms under which Christ is presented. In 2:6-10 the water of the dispensation of the law or again its inferior wine (2:10) is contrasted with the wine that Christ brings. Water, a symbol of the law in Judaism, is applied to Christ in 4:12-14; he is the living water; the evanescent manna, which probably here (through its association with bread, a regular symbol for it) stands for the law, is contrasted with the true bread, which Christ brings (ch. 6); similarly, Christ becomes the Light (8:12; 9:5; 12:35), the Way, the Truth, and the Life (14:6). Christ is source of the true light (1:9), the true bread (6:32), the true judgment (8:16), the true vine (15:1)—i.e., Christ introduces us to the world of realities. The law, it is implied, dealt only with shadows. Here the Fourth

Gospel and Hebrews show an affinity. But most noteworthy is the ascription to Christ, as "the Word," of attributes Judaism had reserved for the law. Preexistence (1:1-2), association with God (1:1), sonship (1:14), light and life (1:4), creative activity in the beginning (1:3)—all these are ascribed to Christ as the Word, just as they are ascribed to wisdom in the OT and Judaism (*see* LAW IN FIRST-CENTURY JUDAISM) and to the law. The Prologue, no less than the rest of the gospel, thus proclaims the reality of the revelation in Christ as superseding that given in the law.

We have seen the parallelism between John and Hebrews. The concept of the law as a shadow is not explicit in John, however, although it is implicit. Does John ascribe a further positive value to the law? In 1:45 this would seem to be the case: the law has borne witness to Christ. To deny Christ is to deny the Scriptures (5:39 ff); and the law is fulfilled in his ministry (8:17; 10:34; 12:34; 15:25). But this fulfilment, while it lends partial validity to the law, also spells its end. For the Fourth Gospel, as for Paul, even though it is not concerned as was he with the law as a rule for life, as commandment, loyalty to Christ has replaced obedience to the law as the demand of God (5:19 ff; 7:17), and this means sharing in his love (13:34; 15:12-15).

7. Conclusion. The NT documents, throughout, reveal the same ambiguity in the evaluation of the law that we found in Jesus. Just as they reveal a parallelism between Moses and Christ, which is sometimes antithetic (John and Hebrews) and sometimes synthetic (Matthew and Paul, broadly speaking), so they find in the law both the passing shadow of the gospel to come and that which is completed or fulfilled "in Christ." They all affirm that the law, insofar as it is the expression of the holy will of God, remains valid, radicalized, and at the same time relativized, by the absolute claim of love.

LAWLESS ONE [ἄνομος] (II Thess. 2:8-9); KJV WICKED. *See* ANTICHRIST.

LAWYER [νομικός, *from* νόμος, law]. One learned in the law, specifically in the law of Moses.

The Greek term occurs six times in Luke, twice in Titus, once in Matthew, but nowhere else in the NT (cf. IV Macc. 5:4). At Tit. 3:9 it is an adjective, describing those preoccupied in legalistic discussions (*see* TEACHER). In vs. 13 it refers to Zenas, who is otherwise unknown. It is evident from the context that he was on some urgent mission, but there is no way of telling whether the law in which he was engaged was Hebrew, Greek, or Roman.

At Matt. 22:35; Mark 12:28, the term is equivalent to "scribes" (*see* SCRIBE). Luke may have preferred "lawyer" to "scribe" as being more familiar to Gentile readers. Interestingly enough, however, he never has νομικός in passages drawn from Mark or Q.

Except at Luke 10:25 (which may be Luke's substitute for Mark 12:28 ff), the word always has a bad sense in the Third Gospel. Lawyers are among those who oppose Jesus' sabbath healings (Luke 14:3). They have rejected John the Baptist and, in so doing, rejected the purpose of God (7:30). They neglect justice, place unbearable burdens on their fellow men, and then refuse to help them (11:45-46). They refuse sound knowledge and hinder those who seek it (11:52). Most of these accusations are on Jesus' own lips, and in one case (11:45) a lawyer complains that Jesus is insulting them (ὑβρίζεις). Rarely elsewhere does Luke wax so polemical as this—though he often blames Jews, rather than Romans, for the sufferings of Jesus and his followers.

LAZARUS AND DIVES lăz'ə rəs, dī'vēz [Λάζαρος = אלעזר, one whom God helps, *shortened form* לעזר *presupposed by the* Gr.; Vulg. *dives, see below*]. The beggar and the rich man in the parable told by Jesus (Luke 16:19-31). The Vulg. translates the adjective "rich" by *dives,* which has often incorrectly been taken to be the name of the rich man (*see* DIVES). Lazarus was a common Jewish name, as shown by many ossuary inscriptions. The poor man is distinguished by the only proper name reported in Jesus' parables, while the rich man remains nameless. Since biblical names have significance, Lazarus' name was well chosen: "God's help of a needy beggar."

Lazarus of the parable and LAZARUS OF BETHANY (John 11:1-44) are two different persons. Scholarly opinion is divided about whether or not there is any relationship between the parable of Lazarus and the narrative in John. The decision depends upon the unsettled question as to whether or not either of the gospel authors knew the other. Jesus may have created the story or adapted it from a somewhat similar tale about a rich and a poor man.

The parable has two parts: (*a*) an earthly scene; (*b*) a scene in the afterworld. Poor ulcerated Lazarus was laid at the large gate of the palace of a rich man who lived in the luxury of the finest clothing and food. Lazarus longed to eat, not "crumbs" (KJV), but whatever fell from the rich man's table, where bread was used for wiping the fingers. Even the street dogs, unclean animals, nosed the helpless beggar. Death called both men and reversed their situations. Lazarus was carried by angels to a place of honor nearest Abraham (*see* ABRAHAM'S BOSOM; cf. John 13:23) at a heavenly banquet. The rich man found himself tormented in flames in the underworld.

In Jewish belief such good and evil people could see one another, but their places were separated by a great chasm. Lazarus nowhere speaks in the parable, but the rich man called to Father Abraham to send Lazarus with water to cool his tongue. Abraham acknowledged his kinship ("son") but rejected the request, because justice required the reversed roles and because the chasm could not be crossed. The rich man wanted Lazarus sent to his five brethren to warn them lest they should come to the place of torment. Again Abraham denied his request, because the brothers had ample teaching from Moses and the prophets, and because not even one from the dead would make them repentant when they ignored God's revelation in the Scriptures.

This parable emphasizes three points: (*a*) warnings to the selfish rich; (*b*) an eventual evening-up of fate for rich and poor; (*c*) that a miracle like resurrection will not bring repentance if the teachings of God are not heeded.

LAZARUS OF BETHANY [לעזר, *abbreviation of* אלעזר, God has helped: Λάζαρος]. A friend of Jesus, living at Bethany; brother of Martha and Mary (*see* Mary 3). He was raised from the dead by Jesus, and was present at the supper in their house six days before the Passover, at which his sister Mary anointed Jesus, according to John 11:1-44; 12:1-11.

Apart from those who deny on general principles the possibility of any miracles, there are many scholars who hold that the raising of Lazarus involves such formidable difficulties as to make it impossible to accept it as historical.

He had been dead for four days, whereas the other recorded raisings had been of persons only recently dead—Jairus' daughter (Mark 5:22-43) and the son of the widow at Nain (Luke 7:11-17). Both these, it can be argued, were not really dead, but only deeply unconscious—indeed, Jesus says in the former case: "The child is not dead but sleeping" (Mark 5:39).

A more serious objection is the silence of the other evangelists on what must have been the most astounding of Jesus' miracles, particularly in the case of Luke, who knew of the sisters Martha and Mary but not of Lazarus (Luke 10:38-42).

Moreover, while John attributes the decision of the high priests and Pharisees to kill Jesus to the consternation caused them by this miracle (John 11:47-53), the other evangelists, probably following Mark 11:18, attribute it to their anger at Jesus' action in cleansing the temple of the merchants and moneychangers. Mark records the anointing at Bethany (14:3-9), but he mentions neither Lazarus nor Mary, and he places the anointing in the house of Simon the leper.

Accordingly, some scholars, seeking an explanation of the origin of the story, find it in the parable of Luke 16:19-31. It is argued that it originated as an illustration or reinforcement of the lesson of the parable: "If they do not hear Moses and the prophets, neither will they be convinced if some one should rise from the dead" (vs. 31). Jesus had indeed raised a Lazarus from the dead, and, so far from believing him, the authorities had planned his death.

This explanation does not, however, account for the association of Martha and Mary with Lazarus, for which no theological motive can be discerned.

Furthermore, while the raising of Lazarus is admittedly the most spectacular of Jesus' miracles, it is not absolutely unique. The naming of a character in a parable is, however, unique, and it may be argued accordingly that, since it is the unique that most demands explanation, the relationship of miracle and parable is the other way round. Jesus had indeed raised Lazarus, with the result known, and had named the poor man in his parable Lazarus with deliberate irony.

There are other examples of correspondences between John and Luke (*see* John, Gospel of, § C1), where it can be argued that Luke is dependent on the tradition found in John. This would account for Luke's knowing of Martha and Mary, and would also make it unlikely that in one instance only John is secondary to Luke.

The silence of the other evangelists on the raising of Lazarus remains to be explained. It could be due either to ignorance on the part of Mark's principal informant, or to deliberate suppression on the part of Palestinian tradition during the lifetime of Lazarus, in view of the determination of Jesus' enemies to kill Lazarus also (John 12:10). The confusion in the Synoptic accounts of Jesus' anointing is as readily explained on the assumption that John gives the best account as on any other view.

The remark of the evangelist: "Jesus loved [ἠγάπα] Martha and her sister and Lazarus" (John 11:5), may be a clue to the identity of the disciple whom Jesus loved (*see* Beloved Disciple; also John 13:23; 19:26; 21:7, 20, in all of which the verb ἠγάπα is found—in John 20:2 the verb is ἐφίλει, and the disciple here may be a different person; *see* John, Gospel of, § F). If Lazarus was this disciple, it would explain how Jesus' saying: "If it is my will that he remain until I come, what is that to you?" (John 21:22) came to be taken as meaning that he was not to die—he had already died once.

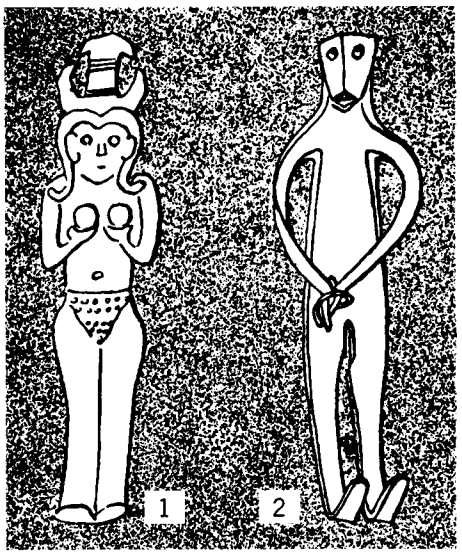
LEAD [עופרת]. A blue-gray metallic element (Pb), heavy, pliable, readily tarnishing to dull gray; in antiquity often confused with metals of similar physical properties, as tin.

Lead was regarded as the heaviest metal (Ecclus. 47:18). In lists of metals (gold, silver, bronze, iron, tin, lead) it is mentioned last (Num. 31:22; Ezek. 22:18, 20), and in Ecclus. 22:14 it is named "Fool." Yet it was an important metal. One significant use was



20. Lead figures: (1) figure of Hathor, found in a Hyksos tomb at Gaza; (2) either a votive offering of a bound soldier, or a victim of incantation, found at Tell Sandahannan in the debris above the floor level of the Seleucidan "barracks"

in the reduction of silver; the lead was placed in the crucible with the silver, and the heated lead oxidized and carried off the alloy, leaving pure silver (Jer. 6:27-30). It was used in weights (illustrated archaeologically), for fish-net sinkers (cf. Exod. 15:10), for sounding lines, plummets (*see* PLUMBLINE), and for heavy covers (Zech. 5:7-8). Figurines made of lead have been found in Egyptian and Palestinian excavations.* In Job 19:24 there is a reference to lead poured into letter forms cut in stone (as in part of the inscription of Darius I at Behistun), or to a lead tablet inscribed with an iron pen. Another Hebrew word, translated "plumbline" in Amos 7:7-8 (אנך; Akkadian *anâku*, "lead"), may also designate lead. Fig. LEA 20.

Tyre was an area distributing point for lead (Ezek. 27:12). Abundant galena (lead sulphide) ore is to be found in Asia Minor; Mesopotamian merchants trading for pure lead were settled there *ca.* 2000 B.C. Galena was used as eye paint in earliest Egypt, before 3400 B.C.

LEAH lē′ə [לאה, wild cow *or* gazelle]. The elder daughter of Laban; Jacob's first wife, who bore him six sons and a daughter.

It was only by a ruse that the Aramean Laban tricked Jacob into marrying Leah, his weak-eyed and less attractive elder daughter, in addition to the younger and more beautiful Rachel (Gen. 29:15-30). The children born to the less favored (vs. 30; cf. 33:1-3) Leah were Reuben, Simeon, Levi, Judah (29:31-35), and later Issachar, Zebulun, and Dinah (30:14-24). Her handmaid, Zilpah, bore to Jacob Gad and Asher (30:9-13). Leah and her children went to Palestine with Jacob (ch. 31), and presumably she died there, since the Priestly Code (49:31) says she was buried in the cave at Machpelah.

The OT view of corporate personality (cf. Ruth 4:11) would suggest that the Leah traditions reflect tribal relations and history, although conclusions in this regard must be tentative.

It is possible that there was originally a Leah tribe or clan of cattle breeders, the totem of which was the wild cow. It is almost certain that the six Leah tribes belonged to the twelve-tribe amphictyony in which Israel was organized during the period of the judges and which is reflected in the grouping of Jacob-Israel's family. Some think there was a six-tribe Leah amphictyony before the twelve-tribe organization. JUDAH, the fourth of Leah's sons, became the dominant tribe in the S in Israel's later history.

LEANNOTH lē ăn′ŏth. *See* MUSIC.

LEATHER, LEATHERN [עור, skin; תחש (Ezek. 16:10; SHEEPSKIN *in* Num. 4:25; KJV BADGERS' SKIN *in* Ezek. 16:10); עור תחש (Num. 4:6, 8, 10, etc.) = GOATSKIN (KJV BADGERS' SKINS); δερμάτινος (Matt. 3:4; Mark 1:6), *from* δέρμα, skin, hide]. Animal skin tanned and prepared for human use. *See also* SKIN; TANNER.

We know that leather was widely used in the ancient Near East, and it is evident that it was equally common in biblical Palestine. There are references to the use of hides, probably tanned, as garments, girdles, and footwear (Gen. 3:21; Lev. 13:48; II Kings 1:8; Ezek. 16:10; Matt. 3:4; Mark 1:6; Heb. 11:37). It is possible that the "leprous disease" found in certain skin garments (Lev. 13:47-59) was due to the improper tanning of the leather. The skin coverings for the tabernacle (Exod. 26:14) and for its various furnishings (Num. 4:6, etc.) were undoubtedly tanned. Numerous secular objects were made of leather (Lev. 13:48; Num. 31:20), as probably was David's pouch (I Sam. 17:40). Complete hides of small animals, with the holes duly sewn, were widely used as water, milk, and wine containers (Gen. 21:14; Judg. 4:19; I Sam. 1:24; Job 38:37; Matt. 9:17; *see* WATERSKINS; WINE § 2*a*). Leather was also used for writing material, though Jeremiah's scroll (Jer. 36), which was readily combustible, may have been of papyrus. The Isaiah MS of the DSS, which comes from *ca.* 150 B.C., is written on a scroll made up of seventeen sheets of leather prepared from rather coarse skins sewn together, with the writing on the hair side. *See* WRITING AND WRITING MATERIALS.

LEAVEN [שאר, a piece of fermented dough; חמץ, leaven, leavened, leavened dough; ζύμη]. Any substance which is added to dough or liquids to produce fermentation; a portion of fermenting dough reserved from a previous batch to be used for this purpose; figuratively, an element or admixture which tempers,

moderates, debases and corrupts, or otherwise changes the whole by a progressive inward operation.

1. In biblical times. In biblical times leaven generally consisted of a portion of dough reserved from a previous batch. No other leaven than this sour dough is mentioned in the OT or the NT (for a list of leavens used in NT times, see Pliny Nat. Hist. 18.26; for directions as to the proper use of leaven by Jews in Mishnaic times, see Men. 5.1-2). This piece of fermented dough was named שאר in the MT, ζύμη in the LXX and the NT. Leavened dough, whether it had risen under the action of leaven or by spontaneous fermentation, was known as חמץ, "leavened," and when baked into bread as לחם חמץ, "leavened bread." The term חמץ is generally used as a substantive, sometimes meaning "leaven" (Lev. 2:11), sometimes "that which is leavened" (Exod. 13:3); nonetheless, the words שאר and חמץ are not entirely synonymous in the OT, for the former word is never used as the object of the verb "to eat."

2. Leaven and sacrifices. Leaven was absolutely prohibited in connection with any sacrifices to the Lord (Exod. 23:18; 34:25), and in meal offerings (Lev. 2:11; 6:17; cf. Men. 5.2). It would seem likely that all offerings of bread to the Deity were unleavened throughout the Israelitic tradition; the injunction seems to be an ancient one and is so represented in later Israelitic tradition (Exod. 23:18). Leaven could, however, be used in offerings which were to be eaten by the priests or others (the peace offering in Lev. 7:13; the offering of the wave loaves in 23:17). The loaves of the bread of the Presence were unleavened, according to Josephus (Antiq. III.vi.6; x.7).

The Israelite was forbidden to eat leavened bread or to have leaven in his possession or household during the Passover season. Unleavened bread (מצה, or, more frequently in the OT, the plural form מצות) had been used during the Exodus because of the haste in which the Hebrews had left Egypt (Exod. 12:34-39); later practice continued this and other customs popularly associated with the first Passover. The eating of the unleavened bread during the days of the Passover celebration not only served to remind the devout Jew of the circumstances of the Exodus but also symbolized for him the manner of life which service to God requires (Exod. 12:39; Deut. 16:3).

3. Symbolic significance in the OT and the NT. The rationale for this prohibition was simply that fermentation was emblematic of a process of corruption; the leaven was capable of debasing and corrupting the mass of dough. That such an idea was suggested by association may be inferred from numerous OT passages and is explicitly shown in the NT, in which "leaven" is used for the unsound teaching of the Pharisees and the Sadducees (Matt. 16:11), and for the moral laxity of the Corinthians (I Cor. 5:6-8; cf. "yeast" in Gal. 5:9). The association of these ideas was also known in other traditions; among the Greeks it was made by Plutarch (*Quaest. Rom.* 109); the Roman satirist Persius used the word *fermentum,* "leaven," with reference to moral corruption (1.24).

"Leaven" is used in a good sense in the parable of the leaven (Matt. 13:33; Luke 13:20-21), in which Jesus likens the silent, unrelenting growth of the kingdom of God among men to the pervasive, assimilating action of the yeast. More generally, however, the NT uses of the symbol are based upon the traditional association of "fermentation" with political and moral corruption (Matt. 16:6, 11-12; Mark 8:15; Luke 12:1). Paul was fearful of the consequences of moral corruption and disobedience to Christ among the members of the Corinthian church, and he warned them with the reminder "that a little leaven leavens the whole lump"; he therefore admonished them to cleanse out the old leaven—i.e., the traces of the unregenerate condition—and to live the Christian life "with the unleavened bread of sincerity and truth" (I Cor. 5:6-8).

In rabbinical literature "leaven" symbolizes evil desires. The figure is also commonly used in Jewish theology to represent the inherited corruption of human nature.

See also SACRIFICE AND OFFERINGS; UNLEAVENED BREAD; WORSHIP IN THE OT. H. F. BECK

LEBANA lĭ bā′nə [לבנה, white] (Neh. 7:48); LEBANAH (Ezra 2:45; I Esd. 5:29); KJV Apoc. LABANA. Head of a family listed among the exiles who returned from Babylon.

LEBANON lĕb′ə nən [לבנון, *or with the definite article,* הלבנון, the white (mountain); Akkad. *Labnānu;* Egyp. *Ramanan;* Λίβανος; Arab. *Jebel Lubnān*]. The mountain range in Syria following the coast of the Mediterranean from Nahr el-Kebir in the N to Nahr el-Kasimiye (the lower part of Nahr el-Litany) in the S.

1. Landscape. The mountains of Lebanon and Anti-lebanon (*see* ANTI-LEBANON) are a part of the line of mountains which extends from the Amanus in the N to the Peninsula of Sinai in the S. The range of Lebanon is the mountain barrier between Nahr el-Kebir ("the great river"; the ancient name was Eleutherus), and Nahr el-Kasimiye (the lower part of Nahr el-Litany, Leontes). The latter river flows southward in the valley which divides Lebanon from Anti-lebanon. The name of the valley is Biqa'.

From *Atlas of the Bible* (Thomas Nelson & Sons Limited)

21. The Lebanons as seen from Baalbek

Another river, Orontes, flows northward in the valley. Their watershed is in the vicinity of Baalbek* at a height of *ca.* 3,770 feet above sea level. The Biqa' varies in breadth from *ca.* 6-10 miles. It is part of the great depression which was called Coele-Syria in antiquity. In Josh. 11:17 it is called the "valley of Lebanon." Fig. LEB 21.

The name of Lebanon, "the white," could be taken as an indication of the snow covering the mountain. In the winter much snow falls, and only during that season the higher parts are covered with snow. The mountain ridge is *ca.* 6,230 feet high, but there are summits of a height of more than 11,000 feet: the

22. The hinterland near modern Beirut in Lebanon

highest peak is el-Qurnat el-Sauda' (11,024 feet). Other high summits are Dahr el-Qadib, Jebel Makmal, and Timarun. Jebel Sannin, overlooking Beirut and St. George Bay, is also of a majestic height (10,800 feet).* Particularly the S part of Anti-lebanon, HERMON, is often covered with snow, and the white crown of Hermon offers a majestic and impressive view. The mountain chains are divided into a N and a S part of the defile of Lebanon. The mountains are the result of a series of faults. This being so, there are a number of high peaks and summits, and between the higher parts of the range there are valleys and ravines. The communication between one part of the country and the other is often very difficult. Among the more important valleys may be mentioned the Holy Valley, which collects the water from the Mountain of the Cedars. This is the region where the Maronites found a refuge in the beginning of their history, and this cradle of the Maronite community has remained a holy place through the ages, from where the Maronite sect spread over a considerable part of Lebanon. The Valley of Adonis is another famous name. Through the valley flows the River of Adonis. To the Valley of Adonis, the pilgrimage of Adonis took place, at the end of the spring, when the verdure was in its greatest beauty. The ruins of a temple from Roman times still give a remembrance of the ancient Venus-Adonis cult, particularly the funerary reliefs sculptured on a high rock associated with Venus bewailing the death of Adonis. The Valley of Nahr el-Kelb is another name famous through historical reminiscences.* Two inscriptions, one Egyptian and one Assyrian, side by side on the same rock, record historical events showing the military importance of this route. Marcus Aurelius tells us about his work to open the coastal route. *See* PHOENICIANS. Figs. LEB 22-23.

2. Geological formation. Lebanon, as well as Anti-lebanon, has originated through faults. Both mainly consist of limestone from the Jurassic, Cretaceous, and Eocene periods, but also sandstone from the early Cretaceous period. Before the glacial age, the whole region of Syria and the neighboring countries was covered by water, and on the bottom of the sea stratifications accumulated, through which the limestone rocks originated which now constitute the main part of the W mountain range of Syria. During the following period, the Tertiary, earth movements took place, through which the bottom was lifted, and in this way the mountains originated. Thanks to animal remains, some of which are fossilized, in the sedimentations it is possible to determine the date. There are two limestone layers, the lower one covered by sandstone. This in its turn is covered by the upper limestone layer, which forms the mountain summits. It may vary in thickness from some hundred to five thousand feet. The upper layer of limestone has given Lebanon its scenery, which has its color from the grayish limestone. It has created the soil for the agriculture; its stones have been desired as building material. The thickness of the sandstone layer below the upper limestone may vary from a few hundred to a thousand feet. The sandstone is from the early Cretaceous period. It contains in some places lignite, which has been used as fuel in modern times.

3. Plants and animals. The valley between Lebanon and Anti-lebanon (el-Biqa') has favorable soil for agriculture. There is also good pasturage. On the mountains vegetation is perhaps not so rich as it was in ancient times (cf. Ps. 72:16; Isa. 35:2; 60:13). Particularly famous were its wine (Hos. 14:7—H 14:8), its cedars (I Kings 5:14; Ps. 29:5; Isa. 2:13; Ezek. 17:3; etc.), its cypresses (I Kings 5:8; II Kings 19:23; Isa. 14:8; etc.). In I Kings 7:2 ff the palace of Solomon is called the "House of the Forest of Lebanon." In Song of S. 4:11; Hos. 14:7, the fragrance of the trees is alluded to. The wild animals of Leb-

anon are mentioned in II Kings 14:9; Isa. 40:16; Hab. 2:17. Accordingly, Lebanon was famous also for its game. Today there is not much left of the cedar woods;* almost all of them are gone. The olive tree also played an important part in ancient times, and it is still cultivated, as well as the wine. Olive oil was used for various purposes: as food, for ointment and perfume, and as fuel in the lamps. The pasturage of the mountains is scanty, but sheep and goats are able to find enough food there. Pl. IX*a*.

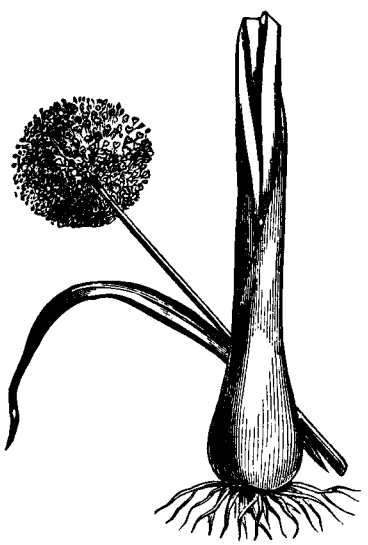
LEEK [חציר, *ḥāṣîr*]. A bulbous herb of the lily family, *Allium porrum* L., which looks like an elongated onion. Leeks were an important part of the diet of the ancient Near East. During the wilderness period



25. Leek

the Hebrews longed for them and for other foods of Egypt (Num. 11:5). *Ḥāṣîr* usually denotes GRASS (nineteen of twenty-one occurrences), and this leads some scholars to question the translation "leek," which goes back to the LXX (πράσα). Another green, cloverlike herb, *Tragonella foenumgraecum* L., popular in Egypt, is claimed, therefore, as the meaning here. The grasslike leaves of the leek and the association with ONIONS and GARLIC in Num. 11:5 provide stronger arguments for retaining the traditional meaning.

J. C. TREVER

LEES [שמר]. The dregs remaining in a skin of WINE. In biblical times it was customary to allow wine to remain on the lees in order to gain strength and flavor; after it was strained, it was preferable to the newly fermented product. Thus in the age to come, Yahweh will prepare a feast (*see* BANQUET) of "wine on the lees well refined" (Isa. 25:6). The term is used as a simile for undisturbed peoples: (*a*) those "thickening upon their lees," who say that Yahweh will do nothing (Zeph. 1:12); and (*b*) the Moabites, who have "not been emptied from vessel to vessel" and have thus "settled on [their] lees" (Jer. 48:11). In the latter passage the author refers to the fact that Moab has never gone into exile. J. F. Ross

LEFT HAND. *See* RIGHT HAND.

LEGEND. This word has in English a much wider use than, e.g., in German or Nordic scholarly terminology, and often includes both myth and fairy tale and all kinds of "folk tales." Legend in this wide sense is not restricted to "primitive" folk tales; there are learned or consciously artistic (poetic) legends as well.

Legenda was, at least since the twelfth century A.D., used about the stories of the Martyrs (*see* MARTYR) and other saints, which were "read" at their respective memorial days and thence gradually got the meaning of "miracle tale." The word was finally used often for every fanciful tale about some hero, even a secular one, and mostly with the implication of an invented, not true, story. In scholarly terminology it will be appropriate to restrict the use of the word to the original *religious* area, thus distinguishing it from other literary types, which are more or less akin to the legend proper. The mention of these other types here is justified by the popular usage of the word, by the difficulty of drawing sharp limits between the different types in every single case, and by the genetic relation among the types.

Bibliography

1. The fairy tale. The fairy tale, or "chimeric" (German *Märchen*), is the oldest type of oral "literature," found everywhere and in all ages. It sprang from man's original and innate "lust of fabling," sometimes called "fabulating urge," and the thrill he experiences in the flight of his fancy. It plays beyond time and place—fairies, elves, trolls and other nature spirits, demons, animals, plants, and things are the acting persons, besides the hero, often the youngest son, despised by his brothers. After many dangers, trials, and marvelous adventures, he "gets the princess and half the kingdom" (a common finale in Norwegian folk tales).

In the OT we find the fairy tale only as poetical metaphor: the man who borrows the wings of the morning (Ps. 139:9); the Nessus shirt (109:18); or as motifs in legends and "short stories" with or without historical kernel: the speaking serpent (Gen. 3); Balaam's speaking ass; the sea monster that devours JONAH and spews him out again.

Here we have to do with international motifs, wandering from land to land. Of this type is also the story of the birth and childhood of Moses—the same story is told of the old Babylonian king Sargon, of Cyrus, Perseus, and Romulus and Remus (in the last-mentioned case combined with the motif of the hostile brethren). Sometimes the whole story is built upon such a motif, as in Solomon's judgment (I Kings 3:16-28), to which a close parallel is known from India. To Joseph and Potiphar's wife we have a parallel from an Egyptian *Märchen*. The Joseph narrative partly plays over the well-known motif—the hostile brethren—as does also the story of Jacob and Esau; the motif of the story of TOBIT, "the grateful dead," is found partly in older recensions, in many folk stories, as in Hans Christian Andersen's "Traveler's Companion" and a Norwegian *Märchen*. To this type of short stories or "historical novels" belong the stories of JONAH; ESTHER; JUDITH; and RUTH.

A didactic offshoot of the animal and plant *Märchen* is the FABLE.

2. *Sagn*. This Norwegian word (German *sage*, lit. "what is said") means a more or less fanciful story, which may be of the type described in § 1 *above*, but which is connected with some factual person or thing, an event, a locality, a sociological or cultural relation, and thus includes a kernel of fact. The living TRADITION always tends to glorify heroes and events by attaching to them all sorts of fairy-tale motifs and poetical decoration.

***a. Ancestor* sagn.** An important role among the Hebrews and other Semites is played by ancestor stories. The ancestor may be a mere *heros eponymos*, a fictitious person originating from the name of the tribe or clan; but he is nevertheless a personification of the ideals of the tribe, he lives on in the "sons," and events and customs from the history and life of the tribe have been connected with him—it is now mostly impossible to disentangle them (see the work of Bräunlich). Biblical instances of such stories, where the tribe characterizes itself, are: Cain and Lamech (Gen. 4); Tamar and Judah (Gen. 38); and others. The Lamech story shows that these characterizations often have taken poetical form (*see* LITERATURE § 5*a*). The ancestor is a sociological reality, sometimes with historical individual traits. This also holds good for the PATRIARCHS; it is more important to discern the sociological entities for which they stand ("Hebrew" tribes migrating to Canaan from NW Mesopotamia some three hundred to four hundred years before the migration of the Israelites from the S) than to speculate over individual persons—Abraham, Jacob, etc.

b. Culture-hero tales. Ancestors, among them also totem ancestors (*see* TOTEMISM), are often seen as the inventors and founders of the different kinds of human culture, even rituals and cults and secret "wisdom." They then are mostly considered as hav-

ing lived in primeval times, and often as supernatural beings, as well—of the type of the Australian "originators" (see the work of Söderblom). In the OT we are told of Enoch, the first founder of a town; Jabal, the father of the tent dweller and cattle breeder; Jubal, the inventor of musical instruments and music and ancestor of the musicians; Tubal-Cain, the first smith; Noah, the husbandman who made the first wine; and Enosh, who "began to call upon the name of Yahweh" (Gen. 4:26). From here there is a short step to speculations and fancies about the first man —Adam, Enosh—and the origins of mankind.

*c. **Cosmological or cosmogonical** **sagn.*** These are stories about the CREATION of the world and of the living beings, tales about the original happiness of man (*see* EDEN, GARDEN OF; PARADISE), and the present tragedy of man's life, etc. To a similar type of literature belong the fanciful speculations on the "primeval man" (*der Urmensch,* to be distinguished from the first created man)—an idea which later Judaism has taken over from Persia. The tales of the creation of man's world often reflect what is regularly created anew by the cult; they often have the character of a myth (*see* § 5 *below*). On the contrary, a myth may be "historified" into a *sagn* about later times; thus the creation out of the original water is reflected in the Babylonian and biblical stories of the FLOOD.

*d. **Etiological tales.*** The above-mentioned types often include an element of etiology. The tale will explain the reason (αἴτιον) for which things now are as they are: a striking locality, such as the "salt pillar" (explained as the petrified wife of LOT); or the tower of BABEL; the origin of a custom, a rite, a sociological or political state; the name of a person or of a tribe—which things then are the factual kernel of the *sagn* in question. Other instances: How came the holy well of Qadesh into existence? Why do the springs of Upper and Lower Gullot belong to the OTHNIEL clan and not to CALEB? What about the big tell of AI? Most of what the book of JOSHUA tells about the Conquest (*see* ISRAEL) is based upon such local etiologies.

*e. **Cult-place etiological tales.*** A special type of etiological tale is the story about the foundation of a holy place—in the OT commonly ascribed to one of the patriarchs. As the cultic place, in the opinion of the ancients, had its own sanctity, the story often tells how the hero discovered it, as Jacob did at BETHEL. A theological explanation is regularly given in the OT: the place has been sanctified and appointed by a revelation of the God. Such a "cult *sagn*" was told at the feast of the sanctuary, to the glorification both of the place and of the saint, and thus may be called a cult legend (cf. § 4 *below*).

*f. **Hero tales.*** These are connected with real historical persons, and the events related often include a greater or smaller historical kernel, although often overgrown by poetical embellishments, etiological and fairy-tale motifs, etc. To this type belong the tales of the so-called "great JUDGES," and even many of the stories about SAUL and DAVID, overgrown by legend.

3. Historical narrative. No sharp boundaries divide the hero tale from the historical narrative, to which the Norse word "saga," derived from the same root as *sagn,* should be restricted, according to its Old Norse use. Even here—e.g., in the stories from the deeds and life of David and his family—we have to reckon with the free poetical art of the storyteller and with his modeling of the events after the customs and rites of his own time (e.g., II Sam. 6). Even apparent historical events such as the two decisive battles through which Joshua conquered the land (Josh. 10–11) may be due to the constructive work of a later "sagaman" (cf. § 2*d above*).

4. The legend proper. This type has drawn upon all the above types of tales and motifs. It may be defined as a *sagn* with edifying, devotional tendency, a story from the life and works of some religious hero, a saint, a prophet, an ancestor and culture hero of the type in § 2*b above*. The wonders and the activity of the deity play an important role. To the tendency also belong the glorification of the saint, appealing to admiration, awe, and to imitation of his religious and moral virtues. As the cult aition, the legend is told at the festivals of the sanctuary with which the saint is connected. By definition even the legend may include a historical nucleus, as in the MOSES and Exodus (*see* EXODUS, BOOK OF) stories in their present form.

Here the "salvatory deeds," not of Moses, but of the Lord, are retold and re-experienced, and we may therefore call them the myth (*see* § 5 *below*) of the cultic feast.

Most of the legends in the OT are concerned with prophets and their miraculous predictions and wonders, often built up upon some fairy-tale motif (*see* § 1 *above*). Masterpieces of epic art are the Elijah legends (*see* ELIJAH THE PROPHET § 1), while the ELISHA legends contain more of the popular conceptions of the "holy man." Devotional tendency and legendary motifs are also in the ISAIAH tales (chs. 36–39). The spiritual situation of the DISPERSION is reflected in the DANIEL legend.

The postcanonical literature—such as the Ascension of Moses (*see* MOSES, ASSUMPTION OF); the book of JUBILEES; the "Genesis Apocryphon" from the Qumran caves (*see* DEAD SEA SCROLLS); the TESTAMENTS OF THE TWELVE PATRIARCHS; the Great Synagogue (*see* SYNAGOGUE, THE GREAT); etc.—swarms with legends and legendary motifs, partly more or less international fairy-tale motifs (*see* § 1 *above*), partly spun out of Bible passages by means of MIDRASH. A good instance of this sort is the legend of Balaam in Josephus and the Talmud. Late Judaism also offers examples of the martyr legend, as in II Maccabees (*see* MACCABEES, BOOKS OF) or the Martyrdom of Isaiah (*see* ASCENSION OF ISAIAH).

5. Myth. In principle the legend must be distinguished from the genuine MYTH, the epic account of the saving facts and deeds (*Heilstatsachen*) rehappening and re-experienced in the cult. But even here the border line is not sharp (*see* § 4 *above* on the Exodus legend, and § 2*c above*). Even the cult myth may under the hands of the poets lose its direct connection with the cult and become "epic poetry" of the *sagn* type (§ 2 *above*), with its own "place in life," the god becoming a semidivine hero, as the Sumerian Gilgamesh, or a (super)human dynasty founder, such as the Ugaritic Keret (*see* UGARIT).

S. MOWINCKEL

LEGION [λεγιών, λεγεών; *loan word from* Lat. *legio*] (Matt. 26:53; Mark 5:9, 15; Luke 8:30). The principal unit of the Roman army. The composition of the legion varied as Rome was successively confronted with the tasks of conquering Italy and the world, of assimilating its conquests, and of maintaining peace and order throughout its vast extent and holding its frontiers. Originally made up of property-holding citizens, the legions were always regarded as the best and most trustworthy Roman soldiers and were carefully distinguished from the "allies," first the *socii* and then the *auxilia,* and other second-class troops. If, throughout its history, the quality and prestige of the legion were related to its emphasis on citizenship and consequent capacity for rigid discipline and arduous training, its effectiveness in warfare was due to its concentration on heavy infantry.

A legion in the republican army—the army which for nearly three centuries after 350 B.C. was engaged in conquering Italy and the world—was generally composed of 4,500 men—1,200 *hastati* (spearmen), 1,200 *principes* (mature and experienced men), 1,200 *velites* (light-armed troops or skirmishers), 600 *triarii* or *pilarii* (veteran reserves), and 300 *equites* (cavalry). Sometimes there might be as many as 6,000 men.

Toward the end of the Republic (509-27 B.C.), as a result of the reforms of Marius (157[?]-86 B.C.), the private-property qualifications for service in the legions were abolished. The legionaries became proletarian and professional. The legion also was reorganized as a body of 6,000 men divided into 10 cohorts (*see* COHORT) and 60 centuries. The unit of tactical action thus became 600. Marius also modified the legion by abolishing its cavalry. About this time the Roman franchise was extended to all Italians. This meant the conversion of allies (*socii*) and subjects into citizens, thus providing the increase of soldiery required by the growth of empire, although it threatened to weaken the distinction in status between the legions and the auxiliaries.

When Augustus (27 B.C.-A.D. 14) reorganized the imperial army of defense, he set up two grades of troops: first, the legions, made up of Roman citizens, whether in Italy or in the provinces; second, the *auxilia,* made up of subjects (not citizens) of the Empire in the provinces. To the Marian legion of 6,000 heavy infantry in 10 cohorts, Augustus added 120 cavalry. During the first century A.D., Italy provided the bulk of the recruits. After A.D. 70 the soldiers were drawn almost entirely from the Romanized towns of the provinces. The effort continued to be made to maintain the citizenship qualification for admission to the legion, although in times of stress this could sometimes be done only by granting citizenship on enlistment. Nevertheless, the legionary soldier continued to be thought of as the typical "Roman" soldier, even after Augustus had greatly extended the republican practice of using *socii* as auxiliary armies by creating a new order of *auxilia,* regiments (cohorts) of infantry and squadrons (*alae*) of cavalry, 500 to 1,000 strong, and composed of apparently voluntary recruits from the noncitizen populations of the provinces. Ultimately the numbers of the auxiliaries greatly exceeded those of the legions. These *auxilia* seem to have provided all the archers and most of the cavalry, and were originally important for the diversity of their fighting methods. Since military service was often professional and might last twenty years or more, the noncitizen on discharge was given a bounty, sometimes of both land and money, and Roman franchise for himself, his wife, and his children. And in turn the auxiliaries must generally have become Romanized.

Although at least three and sometimes more legions were quartered in Syria during the whole of the first century, the troops in Palestine at this time were normally auxiliaries. In times of special crisis legionary soldiers might be brought in. There may, indeed, have been some legionaries in the garrison at Jerusalem. However, in the main, the legions were stationed in the frontier provinces, and they do not appear prominently in Judea until A.D. 66.

The word "legion" never occurs in the NT in its proper military sense, nor does it occur at all in the LXX. In Josephus it is rare, if at all. In War II.v.44; III.viii.97, τάγμα ("corps, division") stands for "legion." In the NT, "legion" is used only for the hosts of demons (Mark 5:9=Luke 8:30; Mark 5:15) or the hosts of angels (Matt. 26:53). No greater tribute to the prestige of the legion in the Empire could be paid than this NT use of the word to refer to the armies of demons and angels.

F. D. GEALY

LEHABIM lĭ hā′bĭm [להבים] (Gen. 10:13; I Chr. 1:11). A group named as offspring of Egypt, together with the Ludim, Anamim, Naphtuhim, Pathrusim, Casluhim, and the Caphtorim. They are completely unknown unless, as some scholars suggest, the name is to be emended to לובים, "Lubim." *See* LIBYA.

T. O. LAMBDIN

LEHEM lē′hĕm [לחם] (I Chr. 4:22). An unknown place in Judah, if it ever existed, to which, according to the RSV, Joash and Saraph returned after ruling in Moab. The KJV reads the corrupt text (וישבי לחם) as a personal name, ". . . and JASHUBI-LEHEM." But against the Commentaries, the correct reading is perhaps וישבו להם (cf. LXX καὶ ἀπέστρεψεν αὐτούς). This requires the least textual emendation, the full phrase then reading: ". . . Joash and Saraph, who ruled in Moab, *but returned*" (lit., returned *to themselves;* Hebrew *lahem*). The same idiomatic form is found, e.g., in Num. 22:34; Deut. 5:30; I Sam. 26:12.

B. T. DAHLBERG

LEḤI lē′hī [לחי, jawbone]. A place in Judah. Possibly some geological formation had a shape reminis-

cent of a jawbone and so gave the place its name, or the name may reflect the scene of the incident of Judg. 15:9 ff. It was probably in the region of Beth-shemesh, between Zorah and Timnah.

After Samson had burned some of the Philistines' crops, they retaliated with a raid against Lehi (Judg. 15:9). To placate the Philistines, the men of Judah attempted to put Samson into Philistine hands at Lehi, but he seized the jawbone (*leḥî*) of an ass and crushed the skulls of a sizable number of Philistines (vss. 14 ff). The place of the Philistine rout was called Ramath-lehi ("hill of the jawbone").

V. R. GOLD

LEMUEL lĕm'yōō əl [למואל, devoted to God, *or* belonging to God, God's (=לאל)] (Prov. 31:1, 4). A king to whom are ascribed words "which his mother taught him." Vss. 2-9 are presented as if spoken by the mother. Whether the words "Lemuel" and "king" refer to a historical individual or have some other significance is unknown.

Bibliography. C. H. Toy, *Proverbs,* ICC (1916), pp. 538-41. M. Noth, *Die israelitischen Personennamen* (1928), p. 249, no. 814; cf. pp. 32, 153. B. T. DAHLBERG

LEND. *See* DEBT.

LENTILS [עדשים, *ʿadhāšîm* (*plural only*); Arab. *ʿadas;* LXX φακός (*singular*)]. The fruit of a leguminous plant of the pea family, *Lens esculenta* Moench (also called *Ervum lens* L.). Fig. LEN 26.

Jacob's pottage made from lentils (Gen. 25:34) was probably similar to the modern Arab dish called *mujedderah,* made from lentils, onions, and rice stewed in olive oil. The reddish-brown color of lentil stew seems to be connected with the name Edom (="red"; Gen. 25:30).

Lentils were included with other foods supplied to David and his men, when he was forced to flee to Mahanaim (II Sam. 17:28). Shammah, one of David's "Mighty Men" (*see* SHAMMAH 4) had a single-handed victory over the Philistines near LEHI in a "plot of ground full of lentils" (II Sam. 23:11). Lentils were included in the mixture of grains used by Ezekiel to make a bread symbolic of famine (Ezek. 4:9). Lentil bread (with a little barley added) is still an important part of the diet of the poor people of the Near East, especially in S Egypt.

LENTULUS, EPISTLE OF lĕn'chə ləs. A medieval writing of uncertain date (thirteen-fifteenth century) describing the physical appearance of Christ (*see* APOCRYPHA, NT). Although in the oldest form the document purports to be from the "annal books of the Romans," it is commonly in the form of a short letter to the Roman Senate by Lentulus, a Roman official in Judea. The delineation gives medieval ideas of Christ's appearance and may well be a written description of one of the many traditional portraits. The theme was a popular one from the earliest days. Eusebius (Hist. VII.18.4) says that he had seen "the likenesses of both his apostles Peter and Paul and of Christ himself, preserved in pictures painted in colors." The tradition that Luke painted many such is very ancient. M. S. ENSLIN

LEOPARD [נמר, Aram. נמר (Dan. 7:6), *cf.* Arab. *namir,* Akkad. *nemru;* πάρδαλις]. A formidable and ferocious carnivorous mammal, *felis pardus,* of the family Felidae, surviving in Palestine as late as the twentieth century. The cheetah, a variety of leopard that can be tamed and trained to hunt, and known for its speed, was also familiar in the biblical world and may be referred to in Hab. 1:8.

In the OT, apart from the references to the leopard's spots (Jer. 13:23), to the leopard's lying down with the kid in the future age of peace (Isa. 11:6), and to Lebanon and Hermon as being the home of leopards (Song of S. 4:8), the leopard serves either as a figure of speech or as an apocalyptic animal. In Hos. 13:7 Yahweh, who is about to punish Israel, is likened to a leopard, whereas in Jer. 5:6 the figure is applied to Israel's waiting enemy, presumably Babylon. In Hab. 1:8 Chaldean horses are paid the compliment of being swifter than leopards (or cheetahs). In Dan. 7:6 the third beast, likened to a winged four-headed leopard, appears to represent Achaemenid Persia; in Rev. 13:2 the composite beast, typifying the Roman Empire, is said to be like a leopard—a simile that many first-century Christians must have fully endorsed.

W. S. MCCULLOUGH

LEPROSY [צרעת; נגע צרעת; LXX *and* NT λέπρα]. One of the more serious genera of skin diseases which was particularly associated with the idea of uncleanness. The Hebrew term צרעת is generic, and is derived from a root which contains the idea of being struck or afflicted with an eruptive skin disease. The Greek rendering λέπρα originally signified an ailment which was characterized by the appearance of rough, scaly patches on the skin. This meaning is found in Hippocrates, Polybius, and other writers, and appears

to correspond with psoriasis, a skin disease which assumes several different forms.

Another Greek medical term, ἐλεφαντίασις (ἐλέφας), or "elephantiasis Graecorum," describes a much more serious chronic disease, whose symptoms correspond largely to those associated with the leprosy of modern times. Quite probably the term λέπρα was indefinite and general in nature, with the result that the Greek translators of the Hebrew Bible employed it to include psoriasis, leucodermia, ringworm, and the like, as well as true leprosy. The usage of λέπρα in the NT, however, appears to be restricted to specific dermatological conditions exclusive of true leprosy. In medieval European medical writings, the Vulg. rendering *lepra* was employed as a designation of elephantiasis Graecorum, so that the symptoms of this much-feared affliction were associated descriptively with what was recorded about צרעת and λέπρα in the Scriptures. From this confusion arose the belief that the chronic, hopeless, medieval European leprosy was being described by the biblical references.

In antiquity leprosy was a familiar disease in Mesopotamia and the Orient, being described as far back as the third millennium B.C. Only one instance of true leprosy has been discovered on Egyptian mummies, and this leaves room for the contention that the individual concerned may have been an immigrant from Syria or Mesopotamia. In view of these observations it is curious that some classical writers associated leprosy almost exclusively with Egypt. Josephus (Apion I.xxvi) recorded that three Egyptian historians, Manetho, Cheremon, and Lysimachus, preserved the legend that the Hebrews under Moses (Osarsiph) were expelled from Egypt at the time of the Exodus because they were "leprous and scabby, and subject to certain other kinds of distempers," an allegation which Josephus indignantly repudiated.

While Herodotus did not mention that leprosy was endemic in Egypt, he recorded the incidence of a certain skin disease (λεύκη) among the Persians, which was such as to compel the sufferers to live outside towns and villages. Hippocrates also included this disease in a group of dermatological conditions which he described, and which may be suggestive of leprosy.

During the medieval period the term "leprosy" signified almost any cutaneous disease which erupted in rough, scaly patches over a period of time. In the eighteenth century it became apparent that the areas of skin affected by one particular disease became completely devoid of sensation. The true causative organism was discovered in 1871 by Hansen, who showed that leprosy was the result of infection by a minute schizomycetous fungus, Mycobacterium leprae (Hansen's Bacillus). The onset of this chronic endemic disease is often insidious, and the first indications are of lassitude, febrile interludes, and pains in limbs and joints. An eruptive stage follows, in which the cutaneous blotches may appear and disappear by turns, and when this activity has concluded, the disease assumes its particular form. There are three commonly described varieties of clinical leprosy, or Hansen's Disease, as it is often called today.

The nodular type results in the formation of lumps in the skin of the face, and the general thickening of the tissues produces a characteristic lionlike appearance. Degenerative changes also take place in the mucous membranes of the nose and throat. The anesthetic variety is less severe, and involves the cutaneous nerves. Depigmented areas of skin, in which there is no feeling, result from the thickening of the nerves, and after a time blisters form on these anesthetic patches. Perforating ulcers may also be present on the feet, while portions of the extremities frequently necrose and fall off, leaving a healed stump (*lepra mutilans*). This form of leprosy is chronic in nature, and may last up to thirty years. A third or mixed variety has a combination of all the above symptoms in varying degrees. Diagnosis of Hansen's Disease is established by the detection of the presence of the Bacillus leprae in the nodules or blisters.

A detailed description of the disease rendered in the English versions by "leprosy" is given in Lev. 13. The Hebrew is technical and obscure to the modern student, and the situation is further complicated by the obsolete English terminology employed to translate the Hebrew. These include "scall" (RSV "itch") and "tetter," the latter being virtually meaningless but still surviving, unfortunately, in the RSV (Lev. 13:39).

To the priesthood was committed the responsibility of pronouncing a man leprous, or of entertaining a differential diagnosis, and a number of symptoms are described carefully. The affliction might occur spontaneously (vss. 2-17); it might follow a furuncle (vss. 18-23) or a burn on the skin (vss. 24-28), or it might develop on the head or beard (vss. 29-44). The first symptoms were those of a swelling (שאת; LXX οὐλή) or subcutaneous nodule, a cuticular crust (ספחת; LXX σημασία), and a whitish-red spot (בהרת; LXX τηλαύγημα).

Taken together, these symptoms presented a picture of subcuticular penetration resulting in a whitening of the small hairs present in that portion of the skin under examination. If such was the case, the patient was tentatively pronounced unclean. But if only one of these symptoms was present, the priest imposed a seven-day quarantine. At the end of this period the patient was examined again, and isolated for another week if no further degeneration was apparent; after this time he could be declared clean.

A chronic form of the disease was indicated by the presence of white hairs and red granular or ulcerated tissue in a raised area of depigmented skin. When these symptoms occurred, the sufferer was pronounced unclean by the priest. But if the patient presented evidence of a white cutaneous disorder covering his whole body, he was considered clean (Lev. 13:13). In such instances he would probably be suffering from acquired leucodermia (vitiligo), characterized by an absence of pigment in the skin without other abnormalities. Less probable would be a diagnosis of psoriasis, a chronic cutaneous condition marked by a covering of white scales on reddened patches of skin, and found generally on the extensor surfaces of the scalp, knees, and elbows. This common affliction is neither infectious nor dangerous.

If, however, on subsequent examination by the priest, the sufferer was found to be ulcerated, he was to be declared unclean (Lev. 13:14). In the event that this ulceration merely constituted the mild pustulation common to most cutaneous diseases, the priest was empowered to declare the patient clean. Great im-

portance was attached to the early recognition of leprosy, having regard to the various possibilities of differential diagnosis. The crux of the matter lay in the degree of cutaneous penetration which the disease had achieved. If it affected the epidermis or outermost layer of skin and did not produce pathological changes in the hairs, the affliction was not regarded as especially serious. As such it might consist of eczema, leucodermia, psoriasis, or some allied cutaneous disease. But if the affliction had infiltrated the dermis (corium) and had caused the hairs to split or break off and lose their color, then leprosy was to be suspected. The word "dim" (KJV "somewhat dark") indicates a fading spot or rash.

Another cutaneous affliction of importance in the larger diagnosis of leprosy was that which emerged as a white or inflamed spot on the site of an old boil or burn (Lev. 13:18-28). If the dermis had not been penetrated, a seven-day quarantine period was imposed, after which the priest re-examined the patient. If the pustule or swelling remained localized, the diagnosis of leprosy was excluded. The actual condition involved is obscure, and may have been a keloid, a connective-tissue growth of the skin which normally arises in the scar of some previous injury or disease. Less probable is the diagnosis of diffuse symmetrical scleroderma (*sclerema adultorum*), in which symmetrical patches of the skin become hardened and thickened.

The diagnostic principles mentioned above were applied to the incidence of disease affecting the scalp (Lev. 13:29-37), where the affliction was spoken of as נתק; (LXX θραῦσμα; RSV "itch"; KJV "dry scall"). If no black hairs were present, the patient was to be quarantined for one week. After this time he was required to shave off all the hair in the vicinity of the affliction without actually touching the affected portions of the skin. If after another week of quarantine it was apparent that the disease was spreading, the priest was empowered to declare the patient unclean, whether yellowish hairs were actually present in the skin or not.

But if there was evidence that the progress of the disease had been checked, and on examination there were seen to be black hairs growing on the affected area, the patient was to be pronounced clean. The general symptoms contemplated are those of favus (ringworm), a contagious cutaneous disease which frequently occurs in childhood. Caused by a fungus, *Achorion schönleinii*, it is marked by the formation of yellow, saucer-shaped favose scabs around the hair follicles.

The presence of dull white spots on the body indicated the outbreak of a disease which, however, did not render the patient unclean. This eruption (בהק; LXX ἀλφός) is apparently acquired leucodermia (vitiligo), the λέπρα of the Greek medical writers. It is a cutaneous condition marked by white patches in which there is an absence of pigment (*see* TETTER). Alopecia (baldness) was a clean condition (Lev. 13:40-41) unless complicated by the characteristic leprous eruptions. Where the chronic condition was diagnosed, the afflicted person was banished from society, and was ordered to dress distinctively and to announce his uncleanness. Appropriate ritual ceremonies were prescribed for those occasions on which spontaneous healing took place and the leper was declared clean (Lev. 14:1-32).

The deteriorated condition of garments (Lev. 13:47-59) probably resulted from the incursion of dampness, mold, or fungus. Its incidence was taken seriously, and the material was burned if the deterioration showed signs of spreading; otherwise washing would render the article clean. If discoloration of the walls of a house occurred (Lev. 14:34-47), the usual principles of quarantine applied. Affected stonework or woodwork had to be removed and replaced by new material. These regulations appear to have been directed at halting the spread of dry rot in the woodwork, and discouraging the growth of lichens, fungi, and mineral precipitates on the masonry of houses.

While the leper was regarded as ceremonially unclean, the Bible never refers to leprosy as a type of sin. Its incidence was regarded as an act of God, and in consequence the healing of the leper was invariably interpreted as a miracle of divine grace. The nature of the affliction which beset Moses (Exod. 4:7) is obscure, while the leprosy of Miriam, his sister (Num. 12:10-15), was of a transient nature, perhaps psoriasis. Naaman (II Kings 5) was permitted to mingle freely with his own people, indicating that he was not suffering from Hansen's Disease, but from some other complaint, possibly vitiligo. Since there are reasons for believing that emotional stresses frequently underlie the incidence of most cutaneous disorders, the injunction to wash in the Jordan may have constituted an important suggestive element in a regime of psychotherapy. The four lepers outside besieged Samaria (II Kings 7:3-10) seem typical of those victims of Hansen's Disease who had been banished from human society. Uzziah (II Chr. 26:19-21), who lived in a separate (KJV "several") house, also appears to have suffered from true leprosy. Job's ailment, in spite of popular opinion, was not leprosy (*see* BOIL).

In his ministry Jesus healed many described in the NT as λεπροί, and, according to Matt. 10:8, the cleansing of such people was one of the tasks allotted to the Twelve during their mission. In Mark 1:40-45 (=Matt. 8:2-4; Luke 5:12-15) Jesus healed a man from a skin disease by means of his touch and a pronouncement. Perhaps this condition was vitiligo rather than true leprosy.

The ten men whom Jesus healed on his way to Jerusalem (Luke 17:11-19) were instructed to satisfy the requirements of Levitical ceremonial law before returning to their homes. They, too, probably suffered from vitiligo, which, if psychogenic in nature, would respond to that suggestion which appears to have been undertaken as part of the treatment (Luke 17:19). The term εἰλκωμένος ("ulcerated") was used of the parabolic Lazarus of Luke 16:20 alone in the NT, and there is no reason for assuming that the brother of Martha and Mary was similarly afflicted.

R. K. HARRISON

LESHEM lē'shəm [לשם] (Josh. 19:47). Alternate name of LAISH; DAN 2.

***LETTER.** A written message sent as a means of communication between persons separated by distance. While historical books of the Bible, both in the OT and in the NT (Acts), occasionally incorpo-

rate examples of such correspondence at appropriate points in the narratives, the NT is especially rich in letters. In the older terminology, these were called "epistles," but in modern usage a technical distinction is often made between the terms "letter" and "epistle."

1. Biblical terminology
   a. In the OT
   b. In the NT
2. Ancient letter forms
3. Dispatch of letters
4. Distinction between letters and epistles

   b. Epistles in the NT
Bibliography

1. Biblical terminology. ***a. In the OT.*** Both the KJV and the RSV regularly use "letter" in the sense of "missive" to translate four different Hebrew or Aramaic terms, the commonest being the Hebrew ספר, signifying a writing, more frequently translated "book." The other terms, all probably of Persian origin, are אגרא or אגרת, indicating a message dispatched by courier; נשתון, meaning a writing; and פתגם, a word. The term "epistle" is not used in an English version of the OT.

b. In the NT. The KJV uses "letter" in the sense of a missive, as well as "epistle," to translate the Greek ἐπιστολή. The RSV has abandoned the term "epistle" entirely. However, both versions also employ the term "letter" in a different sense—viz., for a character of the alphabet, thus translating the Greek γράμμα, in Luke 23:38 (RSV mg.; cf. KJV John 7:15; Rom. 2:27, 29; 7:6; II Cor. 3:6). Since the plural of this Greek term (γράμματα) clearly refers to a written message in Acts 28:21, the KJV interprets the dative plural (γράμμασιν) in the same sense in Gal. 6:11, where the RSV has more accurately "with what large letters"—i.e., the written characters. Thus, with the exception of Acts 28:21, the Greek term for "written correspondence" in the NT is always ἐπιστολή. In the LXX, likewise, ἐπιστολή is far more usual than γράμματα to designate a missive.

2. Ancient letter forms. About the precise forms in which letters were composed in antiquity, more information is available from Greek and Roman than from Hebrew sources. Scantiness of evidence in the latter case is due largely to the tendency in historical records in the Bible to abbreviate all such documents by eliminating everything not essential to the message. If Hebrew letters, in II Sam. 11:14-15; I Kings 21:8-9, appear curtly peremptory by any standard of polite address, this might be because they represent royal orders issued to subordinates. Since the same consideration cannot explain an equally terse message from one king requesting a favor from another, in II Kings 5:6, the assumption is that the narrator omitted the customary amenities for the sake of brevity. Evidence of such curtailment survives, in Ezra 4:11, where names of addressees and senders are followed by an Aramaic equivalent of *et cetera*. A hint of the normal greeting remains in Ezra 4:17: "peace, etc." (RSV "greeting"), while the salutation "all peace" occurs in Ezra 5:7. A Hebrew letter from Bar Cocheba, leader of the Second Jewish Revolt (A.D. 132-35), was discovered in a cave in the Wadi Murabba'at, in 1952; it is addressed "From Simeon ben Kosiba to Jeshua ben Galgola, peace."

Most letters included in the Apoc. use the characteristic Greek "greeting" (χαίρειν; lit., "to rejoice"), but II Macc. 1:1-2 combines this with the typically Semitic "good peace."

In the NT, Paul, who never opens a letter with χαίρειν, couples the Hebraic "peace" with "grace" (χάρις). Abundant evidence for the form of Greek letters came to light with discoveries of Egyptian papyri, which not only illustrate the external appearance of such correspondence, but also demonstrate that the various formulas of address and closing greetings found in NT letters are exactly those in common use. They include, in addition to χαίρειν (Acts 15:23; 23:26; Jas. 1:1; cf. II John 10-11), prayers for the reader's health (εὔχομαί σε . . . ὑγιαίνειν; III John 2); "making mention" of him before the Deity (μνείαν σου ποιούμενος; Philem. 4); thanksgivings (εὐχαριστῶ; Rom. 1:8; I Cor. 1:4; etc.; *see* THANKSGIVING). Urgent pleas begin: "I appeal to you" (παρακαλῶ ὑμάς; Rom. 12:1; I Cor. 1:10). At the close come greetings from the writer and those with him to the reader and others mentioned by name (ἀσπάξομαι in its various forms; Rom. 16:3 ff; III John 15), and "farewell" (ἔρρωσθε; Acts 15:29). Thus, in this, as in other respects, NT Greek reflects current Hellenistic usage.

Historical study of the NT would have been greatly facilitated, had not the various letters included in the canon been stripped of all indications of date. The commonest method of dating, at the end of a letter, was by reference to the year of the emperor (cf. Luke 3:1). However, published collections of ancient letters frequently omit date lines, though occasionally both date and place of writing are preserved. It is generally recognized that subscriptions appended to Paul's letters in some MSS are scribal conjectures affording no reliable data. E.g., Athens, Laodicea, and Rome, all unlikely, vie with one another as the place of writing of II Thessalonians, while Philippi rivals Ephesus (the probability) for I Corinthians.

3. Dispatch of letters. After writing, the sheet of papyrus was folded or rolled, tied, and often sealed to ensure privacy. Sealing is mentioned in I Kings 21:8; Esth. 3:12; 8:8, where it serves the double motive of secrecy and royal authority. Dispatch of letters by foot runners, or by mounted couriers, is described in Esth. 3:13; 8:10, but about the sending and delivery of NT letters little information appears in the sources. Since the official postal service of the Roman Empire (*cursus publicus*) did not carry private correspondence, wealthy families had their own slaves for this purpose, and large commercial enterprises likewise employed their own letter carriers, called *tabellarii* (from the wooden tablets, *tabella,* used for briefer communications). Hence, it is natural that, according to Acts 15:22, the bearers of the letter which follows were men chosen from the congregation for that purpose. II Cor. 8:16 suggests that Titus may have been entrusted with the message which mentions his approaching departure for Corinth; just as Phil. 2:25 may indicate Epaphroditus; Col. 4:7-8, Tychicus, as the respective carriers of those letters.

4. Distinction between letters and epistles. Since the English term "epistle" is derived from the Greek ἐπιστολή, Latin *epistula,* which in ancient usage designated precisely the kind of written missive now ordinarily called a "letter" (cf. Latin *litterae*), the technical distinction made by modern scholars in the application of these two terms requires brief explanation. The papyri preserve private correspondence of people in humbler walks of life, who never dreamed that the personal greetings and intimate bits of news they exchanged with relatives and friends would ever be read by other eyes. Collected letters of Greeks and Romans prominent in civic affairs, however, often include documents which, although composed in epistolary form, might more accurately be classified as public orations, philosophical treatises, political tracts, or moral exhortations. By mentioning in their opening address the name of some well-known individual, literary compositions of this kind were given the semblance of personal correspondence, even though intended for a much wider circle of readers. But unlike true letters characterized by some measure of confidential privacy, such *epistulae* have all the marks of having been written for general publication. It is to distinguish a work of this type from a genuinely personal "letter" that the term "epistle" is now frequently used.

a. Letters in the NT. The question arises how far this distinction may be applicable to documents in the NT canon. Does it contain any real letters? Limiting this term strictly to private correspondence between two individuals, the answer would be negative, with the exception of III John, for even PHILEMON is addressed to the "church in your house." Yet the message which follows is intensely personal, even if—as is likely—this is the letter which Colossian Christians were directed to obtain from Laodicea and read in their congregation (Col. 4:16). However, such directions for an exchange of letters addressed to two different churches, unique in Paul's correspondence, in no way indicates that the eventual collection and publication of his letters was ever part of the apostle's own intention. On the contrary, his frank discussion of scandalous conditions in certain local congregations, particularly at Corinth, suggests that wider publicity was far from his mind. Had a copy of the letter Paul received from the Corinthian church (I Cor. 7:1) likewise been preserved, the task of interpreting parts of his message would be less difficult, since certain obscurities stem from the fact that we possess only half this written "conversation." Such is the nature of a true letter, which is usually intelligible enough to its original recipient.

Because of its more formal rhetorical style, Romans is sometimes regarded as marking a transition from "letter" to "epistle." Nevertheless, ch. 15, especially vss. 22-29, must have served the purposes of genuine correspondence, even if at some time copies were circulated omitting the local address of 1:7; 15 (personal greetings in ch. 16 constitute a separate problem). *See* ROMANS, LETTER TO THE.

b. Epistles in the NT. Questions of pseudepigraphy are not our concern here. However, whether by Paul or not, "Ephesians" should be considered an encyclical. The earliest extant MS (P^{46}) preserves a text without reference to Ephesus in 1:1. The anonymous work called "Hebrews" lacks all suggestion of epistolary form until the closing lines (13:22-25), where it is described as a "message of exhortation." Despite their form as letters, the three Pastorals have more in common with a category of writings known as Church Orders.

Eusebius reports that early in the fourth century seven documents now in the NT were classified as "catholic"—i.e., general—epistles (Hist. II.xxiii.25). This description is not altogether inappropriate for James, I and II Peter, and Jude, although James after its opening lines is really a moral homily akin to the OT wisdom literature. I John, too, appears as a homily from an absent teacher. Finally, the letters to seven churches, or more accurately to their "angels," in Rev. 2:1–3:21, are simply literary introductions to a book which is itself cast in an epistolary framework (1:4; 22:21).

LETTUS. KJV Apoc. form of HATTUSH.

LETUSHIM lĭ tōō′shəm [לְטוּשִׁים] (Gen. 25:3). A people mentioned as one of those descended from Dedan, the others being the Ashurim (Ashurites; *see* ASHUR) and the Leummim. The meanings of the names Letushim and Leummim are dubious, and their location uncertain; it may possibly have been the Sinai Peninsula. S. COHEN

LEUCIUS lōō′shəs [Λεύκιος]. The reputed author of the Acts of John (*see* JOHN, ACTS OF); and subsequently considered the author not only of all five of those apocryphal Acts which the Manicheans are said to have substituted for the canonical Acts of the Apostles, but also of many other apocryphal writings. M. S. ENSLIN

LEUMMIM lē ŭm′ĭm [לְאֻמִּים, people, hordes(?)] (Gen. 25:3). A people reported to be descended from Dedan. *See* LETUSHIM. S. COHEN

LEVI lē′vī [לֵוִי, *possibly gentilic of* לְאָה (LEAH), wild cow; *or from lāwīyū,* person pledged for a debt or vow; *see bibliography*]. **1.** Either the eponymous ancestor or a personification—which one is unknown—of the tribe of Levi. In the sagas of the Hebrew patriarchs he is the third son of Jacob and Leah (Gen. 29:34; cf. 35:23; Exod. 1:2; I Chr. 2:1; etc.). The most ancient reputation ascribed to him, which means to the tribe bearing his name, is that of a predatory and merciless adversary. With his brother Simeon he cruelly avenges his sister DINAH on Shechem for having assaulted her (Gen. 34:25-31), and Jacob's "blessing" describes Simeon and Levi in phrases of abhorrence for their wanton anger against their enemies (49:5-7). It is the sons of Levi who at

Moses' behest slaughter three thousand of the apostate Hebrews in the wilderness and thus, according to one account, ordain themselves for the service of Yahweh (Exod. 32:25-29; cf. Deut. 33:8-11). Traditionally the three original sons of Levi were GERSHON (or Gershom); KOHATH; and MERARI (Gen. 46:11; Exod. 6:16; and many other references), ancestors of the three main divisions of the Levites. Num. 26:59 speaks of Moses' mother, Jochebed, as having been "born to Levi," but clearly this must mean the tribe and not the original ancestor.

For the role of this tribe in Israel's history and on the "Levites," "sons of Levi," "house of Levi," etc., *see* PRIESTS AND LEVITES. On Levi in the apocryphal and pseudepigraphical literature, *see bibliography.*

2. An ancestor of Jesus Christ (Luke 3:24); son of Melchi, and father of Matthat.

3. An ancestor of Jesus Christ (Luke 3:29); son of Symeon, and father of Matthat.

4. A local tax collector in Capernaum who became a follower of Jesus (Mark 2:14). According to the Lukan account, Jesus was also a guest in his home (Luke 5:27-32). In Mark he is called the "son of Alphaeus," but is otherwise unknown. Some of the Markan MSS read "James" for this name in 2:14, while the parallel account in Matthew reads "Matthew" instead of "Levi" (Matt. 9:9), whom it then identifies with Matthew one of the twelve apostles (10:3). The name Levi appears in none of the lists of apostles and cannot with any certainty be identified with the Matthew who is among the Twelve.

Bibliography. On the many proposed etymologies of the name Levi, see, besides the lexicons: J. Pedersen, *Israel,* III-IV (1940), 680; W. F. Albright, *Archaeology and the Religion of Israel* (1942), pp. 109, 204-5; T. J. Meek, *Hebrew Origins* (rev. ed., 1950), pp. 123-24; C. A. Simpson, Exegesis of Genesis, *IB,* I (1952), 703. LEVIATHAN lĭ vī′ə thən [לִוְיָתָן, coiled one, *from* לוה; Arab. *l-w-y,* coil, wind]. One of the names of the primeval dragon subdued by Yahweh at the dawn of creation (Ps. 74:14; Isa. 27:1). In apocalyptic literature (II Esd. 6:52; II Bar. 29:3-8), Leviathan is represented as destined to break loose from his bonds at the end of the present era, only to suffer a second and final defeat. A prototype of the cosmogonic myth appears in the Canaanite texts from Ras Shamra–Ugarit (fourteenth century B.C.), where Baal defeats the draconic *L-t-n;* while the apocalyptic version is probably influenced by parallel Iranian beliefs concerning the dragon Aži Dahaka (cf. Yasht 13.62). *See* COSMOGONY § D2*b.* Fig. LEV 27.

27. Two deities are destroying a seven-headed serpent-dragon (cf. the Leviathan); an impression of a cylinder seal found at Tell Asmar in Mesopotamia; Akkadian period (*ca.* 2360-2180 B.C.)

In Job 41:1; Ps. 104:26, the term "Leviathan" is used by extension to denote a sea monster in general, without mythological implication. T. H. GASTER

LEVIRATE LAW. The legal provision that if brothers live together and one of them dies leaving no son, the other brother shall marry the widow. The first son of this union shall take the name of the brother who died (Deut. 25:5-10). *See* MARRIAGE § 1*g.*

LEVIS lē′vĭs. KJV Apoc. form of LEVI.

LEVITES. *See* PRIESTS AND LEVITES.

LEVITICAL CITIES. According to Josh. 21:1-42= I Chr. 6:54-81, forty-eight cities, with their surrounding pastures as grazing lands for their cattle, are to be set apart in Palestine as the dwelling places of the tribe of Levi (Num. 35:1-2). The sons of Aaron are to receive thirteen of these cities for their exclusive use. These cities, with houses and pastures, are the inalienable rights of the priests and Levites, and any which have been sold may be redeemed at any time, but must be released in any case to the Levites in the Year of Jubilee (Lev. 25:32-34). The six cities of refuge—i.e., for homicides, etc.—named in Num. 35:9-34; Deut. 4:41-43; Josh. 20:1-9, are included in the Levitical cities (Num. 35:1-8). An average of four cities per tribe is thus envisaged (Joseph =Ephraim and Manasseh).

But other passages presuppose a different situation. According to Num. 18:20; 26:62; Deut. 10:9, the priests are to have no inheritance or portion in the Promised Land. Accordingly the priests are classed with other needy members of Israel as deserving of charity (e.g., Deut. 14:28-29). What thus appears to be a contradiction in the laws has led many scholars to reject the regulations concerning the Levitical cities as unhistorical. They have felt themselves confirmed in this view by the differences between the lists in Josh. 21; I Chr. 6, by the fact that many of the Levitical cities did not become Israelite until later times, that the pastures surrounding some cities would have overlapped the pastures of other cities (e.g., Hebron and Holon, Anathoth and Almon), and that the whole scheme was patently impossible in postexilic days, to which period the Levitical legislation was thought to belong. The Levitical cities of Josh. 21 are thus best explained, according to these writers, as the adoption of the ancient holy cities of Canaan into Israel's religious system.

There has been an increasing tendency, however, to recognize that the priestly editors, though they were postexilic, were yet editors of material of varying dates. Accordingly, various scholars not only attributed the institution of cities of refuge to the time of David, but ascribed to his day the Levitical cities also. Comparative study of the lists has greatly lessened the differences between Josh. 21 and I Chr. 6, and has shown that many of the cities did not belong to Israel until the time of David, and that some

of the cities were lost to Israel after the division of the monarchy. Albright, following Löhr and Stein, has further shown that other considerations point to the reign of David rather than that of Solomon as the time of origin. David's plan may only have existed on paper, but the laws prohibiting Levitical inheritance cited above suggest that a beginning was made with the plan, but that the possession of Levitical property was abused, and so gave rise to the prohibitions.

The Davidic origin of the plan is preferable to the postexilic date. On either view an idealizing element is largely present. It is also important to recall the theological basis of the conception. By this the Levitical cities are seen as part of the doctrine that all property belongs to God.

G. HENTON DAVIES

***LEVITICUS** lĭ vĭt'ə kəs. The third book of the Bible. The same word appears as the title of the book in the Vulg. This in turn is derived from the LXX τὸ Λευειτικόν—i.e., the Levitical book, the book which deals mainly with the Levitical priests and their duties (cf. Heb. 7:11). The Hebrew title of the book is its first Hebrew word, ויקרא, "And he called." It is the third book of Moses, and a comparison of Exod. 40:1, 17, with Num. 1:1 shows that it belongs to the first month of the second year of the Exodus. There are but four legislative narratives in the book: Aaron's priesthood (chs. 8–9); the punishment of Nadab and Abihu (10:1-7); the ritual error of Eleazar and Ithamar (10:16-20); and the stoning of a blasphemer (24:10-14, 23). The remainder of the book contains legislation.

1. Sources. Perhaps the least difficult of all the tasks of Pentateuchal criticism (*see* PENTATEUCH) has been the identification and isolation of the material now commonly ascribed to the P document. This is true of narrative material and even more true of legal material. Law (*see* LAW IN THE OT) is the domain of the priest (Jer. 18:18); and without denying that priestly activity and personality are behind other narrative and legal portions in the Pentateuch, nevertheless the priestly origin and character of parts of Exodus and Numbers and of all Leviticus are clearly recognized. It may be said then that Leviticus belongs to P. This is not to say, of course, that Leviticus is a unity, for there are various indications which show the contrary. The book, in fact, contains a number of smaller units of law dealing mainly with cultic matters. These smaller units of law may be detected by means of their introductory formulas or superscriptions, which may be an editorial framework, as in Lev. 1:1-2, or may be an exact title of the law which follows: e.g., "This is the law of the burnt offering" (6:9—H 6:2; cf. 6:9-13, 14, 25—H 6:2-6, 7, 18; 7:18). There are other superscriptions in Lev. 7:1, 11; 14:2. In addition, the end of such groups of laws or individual laws is also indicated by a closing formula, a subscription (Lev. 7:37—H 7:38; 11:46-47; 12:7; 13:59; 14:32, 54-57; 15:32-33). Both introductory and closing formulas are the work of an editor or compiler who was classifying and ordering his material, but they clearly enshrine the older, separate units. Eissfeldt points out that 14:54-57 serves not merely to round off a law or group of laws, but contains also in the words "to show when it is unclean and when it is clean" a rubric for its use. These corpora are styled "Agendas" by Eissfeldt and are really groups of professional directives for the priests in their ministry to the people. But it is also clear that besides these groups of laws intended for the priests for use in their ministry to the people, there were other laws and groups of laws which were intended directly as manuals or "agendas" for the laity. These will be found, e.g., in the directions concerning the calendars of feasts (23:9, 21, 39-43); in the regulations covering forbidden degrees of relationship for the purpose of marriage (18:6-18), and in the lists of those animals which may or may not be eaten (11:1-23, 41-47). It has also been suggested that the sacrificial tariffs known to us from Marseilles and Carthage would point to official announcements which would have lain behind such summary passages as 7:28-36 (cf. Deut. 18:1-5).

The next stage in the development of law was clearly the combination of laws of like character or similar theme into larger units or collections of laws. Such collections would be a stage on the way to the fully developed codes of law such as the Book of the Covenant (*see* COVENANT, BOOK OF THE); DEUTERONOMY; and the Holiness Code. It is the recovery of these intermediate collections of laws which offers the greatest opportunity for subjective criteria of analysis. Indeed, one scholar has described these intermediary stages of law by the term "balks," and these are arrived at and isolated by the detection of duplicates, parallels, and variant traditions. The study of commentaries on Leviticus will show at once the criteria which enable various commentators to arrive at the intermediary groups of law. Thus, by way of example, it is claimed that 6:8–7:38 is parallel to and supplements 1:1–6:7. Then within these it is claimed that chs. 1; 3 belong together, but that ch. 2 has a different origin because of the different introductory formula (2:1). Though chs. 1; 3 and ch. 2 are thus said to be separate, both may be very old, whereas ch. 4 belongs to the late strand of P. Again, 5:1-6 belongs to a different source from that of ch. 4. So the division continues, and the whole book is divided into a considerable number of intermediary sections. But the arguments which prompt such divisions may be countered by other considerations, and this suggests that the precise analysis of these laws into intermediary sections is unwise. It is questionable, too, whether such documentary analysis, which is often so helpful to the study of Pentateuchal narrative, is really appropriate to the laws. In these

circumstances it is best to regard these intermediary sections, if ever they existed, as the missing links in the growth of the major codes of law as they now exist in the OT. The analysis of case and categorical laws (*see* LAW IN THE OT) and the recognition of introductory and concluding formulas in individual laws or brief units of law is one thing. But beyond this until the greater corpora of law emerge, all is really uncertain, though, as will be seen below, there are exceptions. Adhering to this principle, the analysis of the contents of Leviticus will show the presence of several sizable corpora of law, including, of course, that separate code which is commonly styled the Law of Holiness (chs. 17–26). It should be noted that von Rad finds both his P^A and his P^B sources in Lev. 8; 9; 10; 16.

Similarly, the dating of such laws is very difficult. There is, however, a growing recognition that many of the laws, both as to form and as to content, go back to old and very old times. There was thus a stream of law categorical in character which came from the Mosaic side of Israel's life, and there was another stream mainly of case law which Israel canalized from Canaanite sources. Of course, in their present codified form these laws belong to the latest pre-exilic days or later. A suggestion may be hazarded from the parallel of the book of Isaiah. The writings of Isaiah of Jerusalem come first in the book of Isaiah, though chs. 1–39 contain material from a later date. Isa. 40–55 is exilic and chs. 56–66 exilic and later. It is possible then that, with exceptions, the blocks of law in P in Exodus and Leviticus may reflect either a historical order or a priestly tradition of the chronological order of the laws. If there is any sort of validity in this conception, then the exilic dating of Lev. 17–26 might be a *terminus ad quem* from which the material could be dated into earlier periods. Then, too, the law of the Day of Atonement in Lev. 16 would stand largely at the end of P's laws, where, of course, it historically belongs. The principle, of course, may only be broadly applied.

2. Contents. The contents of the book may be analyzed and summarized as follows:

a) 1:1–6:7 is a code of laws concerning sacrificial worship addressed to Israelite worshipers through Moses. It contains the following laws:

Ch. 1. The law of the burnt offering (vss. 2*b*-9, of the herd; vss. 10-13, of the flock; vss. 14-17, of fowls).

Ch. 2. The law of the meal or cereal offering (vss. 1-3, of fine flour; vss. 4-13, cooked, baked, or fried; vss. 14-17, of first fruits).

Ch. 3. The law of the peace offering (vss. 1-5, of the herd; vss. 6-11, of the flock: sheep; vss. 12-16, of the flock: goats; vs. 17, perpetual statute concerning blood and suet).

4:1–6:7. The law of the sin offering (4:1-12, for an anointed priest; 4:13-21, for the whole congregation; 4:22-26, for a ruler; 4:27-31, for any person [a goat]; 4:32-35, a lamb; 5:1-6, for any person [lamb or goat]; 5:7-10, for poorer people [fowls]; 5:11-13, for the poorest [meal or cereal]; 5:14-16, guilt offering for deceit in holy things; 5:17-19, for unknown sins; 6:1-7, for crimes against a neighbor).

b) 6:8–7:38—H 6–7 is a code of similar laws addressed mainly to the priests through Moses (6:8). Note the recurring formula: "This is the law of . . . ." There are the following subdivisions:

6:8-13. The law of the burnt offering.

6:14-18. The law of the cereal offering.

6:19-23. The offering of the priest.

6:24-30. The law of the sin offering.

7:1-10. The law of the trespass offering, with priestly perquisites (vss. 8-10).

7:11-21. The law of the peace offering.

7:22-27. Exposition of 3:17; prohibition to eat fat or blood.

7:28-34. Selected portions; wave breast and heave thigh for the priests.

7:35-36. Further portion for the priests.

7:37-38. Conclusion.

It should be noted that the regulations in 1–7 correspond to the directions in Exod. 29. But the other requirement of Exod. 29—namely, the command to consecrate Aaron—is not fulfilled until Lev. 8. Thus Lev. 1–7 interrupts the connection between Exod. 29 and Lev. 8, and these interrupting chapters are themselves paralleled in Exod. 29. But further, Exod. 25–29 suggests that a complete law of the tabernacle and its contents is being presented, and 29:43-46 is the final religious formula which closes this section. But in Exod. 30:1-10 a law for the construction of the altar of incense is given, and thus it supplements the laws of chs. 25–29. In turn this altar is required for the special cases of the sin offering in Lev. 4. The author of Exod. 25–29 knows of no altar of incense or of its ritual. Thus one group of passages (Exod. 27:1-8; 29:38; Lev. 1–3; 5–6; 8–9; 16; Num. 16:46) refers to "the altar"—i.e., they know but one altar. This is the narrative of P proper. Other passages, however (Exod. 30:28; 31:9; 35:16; 38:1; 40:6, 10, 29), speak of the "altar of burnt offering." This second group of passages, then, which either mention the incense altar or point, by a distinguishing title such as "altar of burnt offering," to a second altar no doubt belongs to a different and later stratum of P. There is thus evidence of a long tradition of growth.

Of the two manuals in Lev. 1–7 it may be said that the first deals with the method and materials of sacrifices, whereas the second also deals with a great variety of more incidental detail. Certain differences in the order of sacrifices in the treatment of the fire (cf. 1:7; 6:12-13), not to mention the formula of 6:9, 14, 25; 7:1, 11, 37, suggest that the codes are by different hands. 7:37-38 is a colophon which suggests a concluding summary.

c) In chs. 8–9 the ordination of Aaron and his sons is according to the instructions given in Exod. 29:

8:1-5. The scene.

8:6-13. Washing, vesting, and anointing of Aaron and his sons.

8:14-30. The sacrifices (vss. 14-17, the bull of the sin offering; vss. 18-21, the ram of the burnt offering; vss. 22-30, the ram of ordination; vss. 31-36, the days of ordination).

Ch. 9. The initial sacrificial activity of Aaron (vss. 7-14, the atoning offering for himself; vss. 15-21, the atoning offering for the people; vss. 22-24, the blessing of Israel and the advent of God's glory).

d) Two legislative narratives are found in ch. 10:

Vss. 1-7. Punishment of Nadab and Abihu without priestly mourning.

Vss. 8-11. Prohibition of intoxicants for priests.

Vss. 12-15. Law concerning edible holy things.

Vss. 16-20. The ritual error of Eleazar and Ithamar.

Lev. 8 appears to be based on Exod. 29 as an expanded version of a more original and shorter narrative detailing the fulfilment of Exod. 29. Lev. 9 doubtless belongs to the main strand of P and continues the story of Exod. 29.

e) Chs. 11–15 contain the laws of purification:

Ch. 11. The law of food and clean and unclean animals (vss. 1-8, land animals; vss. 9-12, water animals; vss. 13-19, birds; vss. 20-23, winged creeping things; vss. 24-28, land animals; vss. 29-31, creeping things on earth; vss. 32-38, things unclean by contact; vss. 39-40, dead clean beasts; vss. 41-43, creeping things on earth; vss. 44-47, concluding summaries).

Ch. 12. Purification following childbirth.

Chs. 13–14. Diagnosis and treatment of leprosy (ch. 13, detection on various parts of the body; 14:1-8, the rites for leprosy; 14:9-32, the sacrifices for leprosy and for the poor; 14:33-57, leprosy in houses).

Ch. 15. Ritual for bodily excretions and discharges.

The analysis of chs. 11–15 shows that Lev. 11:2-23, 41-45, forms a continuous law on diet and animals marked by the Hebrew word שקץ, "abomination," or better, "detestation" while vss. 24-40 are a separate and probably interpolated section dealing with uncleanness from contact; 12:2*b* appears to refer to 15:19, so that chs. 12; 15, in view of their subject matter, may have belonged together; the laws of leprosy, though they represent various aspects of one theme, probably represent a long development in legal practice, and the material is from different dates and sources. The repetitions of ch. 15 on secretions similarly suggest a late date (cf. also the references to the sin offering).

f) Ch. 16 is concerned with the Day of Atonement:

Vss. 1-2. The occasion.

Vss. 3-10. The entry of Aaron into the holy place.

Vss. 11-28. The ceremonial in detail.

Vss. 29-34. Annual repetition of the DAY OF ATONEMENT.

To Lev. 16 belongs a long investigation of its unity, sources, and place in the P code. Various scholars have made critical analyses of different themes such as the cleansing of holy place, tent, and altar, and the atonement for persons, and have chosen various portions as the original or early form of the ritual. There is, however, no agreement. The different topics within the chapter must be accepted as evidence of a long development, but there are no agreed criteria for the analysis of the development, even though different ideas are present. The atomizing process in such detail is not suited to legal material, and the form history of legal material does not favor it.

g) Chs. 17–26 contain the Law of Holiness (H):

Ch. 17. Sacrifice (vss. 1-9, the place of sacrifice; vss. 10-14, eating meat with blood prohibited; vss. 15-16, eating of carcasses also forbidden).

Ch. 18. Sexual laws; various prohibitions and exhortatory conclusion.

Ch. 19. Moral and ceremonial laws.

Ch. 20. Miscellaneous laws (vss. 1-8, Molech-worship; vs. 9, respect for parents; vss. 10-21, sexual laws; vss. 24-26, exhortatory directions).

Chs. 21–22. Priesthood and sacrifice (21:1-9, priests; 21:10-15, high priests; 21:16-24, disqualifying blemishes; 22:1-6, clean and unclean food; 22:17-25, blemished sacrificial animals; 22:26-33, further directions and exhortatory conclusion).

Ch. 23. A sacred calendar (vss. 1-3, sabbath; vss. 4-8, Passover and Unleavened Bread; vss. 9-14, First Fruits; vss. 15-22, Feast of Weeks; vss. 23-25, New Year Festival; vss. 26-32, Day of Atonement; vss. 33-44, Feast of Tabernacles).

Ch. 24. Miscellaneous laws (vss. 1-4, lamps; vss. 5-9, the bread of the Presence; vss. 10-16, 23, the blasphemer; vss. 17-22, injuries; vs. 23, conclusion).

Ch. 25. The sabbatical year and the Year of Jubilee (vss. 1-7, the sabbatical year; vss. 8-23, Year of Jubilee; vss. 24-34, redemption of land; vss. 35-38, usury; vss. 39-55, slavery).

h) Ch. 26 contains a concluding exhortation and colophon to the code.

Chs. 17–26 are marked by their beginning (17:1-2) and by their ending (26:46) as a separate law code, which Klostermann entitled the "Law of Holiness" in reference to its recurring holiness formula (19:2; 20:7-8, 26; 21:6, 8, 15, 23; 22:9, 16, 32). Various writers have given lists of words and phrases that are peculiar to the code, and which show that the author is nearer to Ezekiel than to any other book in the OT.

Some passages in H, such as parts of ch. 23 and 24:1-9, are paralleled elsewhere in P; but when these are subtracted, what remains is unlike P. There are doublets (e.g., 17:12 = 19:26*a*; 19:27-28 = 21:5; 19:30 = 26:2; 19:31 = 20:6; 19:34 = 24:22; 19:30 = 26:2*a*), and these show that little groups of laws have been incorporated into H and the duplications allowed to remain. On the other hand, to detect such smaller codes as H^1 or H^2 and H^3 is difficult. Elements from P have been combined with parts of another destructive code of laws to provide H.

The analysis reveals that the code contains much exhortatory material and so is more closely akin to Deuteronomy. Von Rad has shown how sermonic utterances have been combined with various laws to form liturgical wholes. Thus Lev. 18 begins with exhortation in vss. 2-5; then follow the laws in vss. 6-23 and a concluding exhortation in vss. 24-30. Von Rad analyzes the material formally and thus reveals various runs of laws (e.g., 19:9*a*, 9*b*, 10*a*, 10*b*; or another series in vss. 11-12, 13*a*-18*a*). He finds a cultic series in 19:19*b*, 26-28. Again, 20:7-21 furnished a collection of various commandments with similar beginnings and endings, with a concluding exhortation in vss. 22-24. These illustrations show that von Rad is justified in his claim that H contains sermonic instruction for the community which is based on series of older laws and ordinances. In 26:3-45 is the last and longest of these sermonic exhortations, and it doubtless is also intended to mark the end of the code.

The demonstrable connections of H with Ezekiel, which have led some scholars to claim Ezekiel as the author of H, show that H and Ezekiel are roughly contemporary and possibly that H originated among the exiles in Babylon rather than in Jerusalem. It

cannot be shown with certainty that H preceded Ezekiel or vice versa. Neh. 8:14-18 refers to Lev. 23:33-43, and this suggests that by Ezra's day H was a part of P and, indeed, of the Pentateuch.

i) Ch. 27. Vows and tithes (vss. 1-29, vows and their redemption; vss. 30-33, appendix on tithes and their redemption; vs. 34, conclusion).

3. Character of the book. The study of the book of Exodus and the four gospels has familiarized many people with the idea of *Heilsgeschichte,* "sacred and saving story." *Heilsgeschichte* both records the story of salvation and seeks to confer salvation. One scholar has coined a similar expression to describe the character and function of Hebrew law: Hebrew law is *Heilsgesetz,* "sacred and saving law." *Heilsgesetz* in the OT not only records and is the revelation of a divine order of society but also seeks to establish such a society in the commonwealth of Israel. The character and function of Leviticus then is summed up in this idea of *Heilsgesetz.* The themes of this Levitical saving law, as shown by the analysis of the book, are worship and sacrifice (chs. 1–7); the ministry of the priesthood (chs. 8–10); the purifying of Israel's life (chs. 11–15); the annual atonement (ch. 16); the holiness of God and Israel (H chs. 17–22; 24); the dedication of time, life, and property (H chs. 23; 25); and preaching (H chs. 26–27).

a. Worship and sacrifice. There are excellent summary tables of the differentia of sacrifices (*see* SACRIFICE AND OFFERINGS) provided in commentaries on Leviticus. As revelation is the approach of God to his people, so worship and sacrifice are the approach of Israel to God. Sacrifice is one of the bonds of Israel and God. Whether by gifts without ritual and without presentation at the altar—e.g., half-shekel temple taxes paid to the priests; by offerings such as first fruits presented at the altar but then given to the priest; by slain offerings, partly burned on the altar and partly consumed by the priests and by the offerers, such as peace offerings; by most of the sin offerings and guilt offerings, partly burned on the altar and with the rest consumed by the priests; or, lastly, by the burnt offerings in which the altar retained everything, the Israelites according to their need and condition came near to their God. Yet their approach is not of their making, for they come to fulfil divinely revealed requirements. In this fulfilment there lies hidden the grace of humility and obedience. There are, however, two major principles which throw further light on the meaning of this sacrificial system. The altar is essentially the place of slaughter, and there the blood of slain sacrifices is made over to God. The blood is the life, and sacrifice is surrendered life, and so involves surrendered time, surrendered property, and surrendered self (laying on of hands). Thus it is laid down that in the blood is the life of the flesh (17:11), but this important and oft-quoted maxim should not hide the reference to the still more important and by no means often-quoted principle stated in this same context—namely, that God gives this shed blood upon the altar to make ATONEMENT. The divine evaluation of the devoted blood is the key to the understanding of Israel's approach to God through sacrificial worship. God chooses to provide and to regard such blood as the means and the method of Israel's atonement. The thought of 17:11 is paralleled in the law of the meal offering (6:14-18), and it is noteworthy that in both passages there is a sudden emergence of the divine first person—no doubt, by way of urgent emphasis. *See further* WORSHIP IN THE OT.

b. The priesthood. Israel's saving law provided for the ministry of a permanent and hereditary priesthood. Again there is no need to recapitulate the ceremonies of washing, vesting, anointing, of ordination sacrifices which Lev. 8–10 describes in such detail. The priest is the permanent religious official in ancient Israel and fulfils both teaching and sacrificial functions. In Leviticus the teaching role is apparently much diminished, but it is still manifest in such features as the URIM AND THUMMIM, in the diagnosis of leprosy, in the directions concerning the clean and the unclean, in the moral and ethical portions of the book, and in the longer sermonic portions already noted. The priest is a revelatory organ, but he tended to neglect his teaching functions and to concentrate more on his sacrificial duties and function, and it is these which are more obvious in Leviticus. There are various points in the sacred law which are worthy of note. It has been pointed out that the priests offered a threefold sacrifice upon ordination. There was first the sin offering, which was a sign of the forgiveness of sins; then the whole burnt offering declared the totality of his consecration, and the ram of ordination, an elaborated peace offering, expressed the fellowship of God and Israel in the mediating priesthood. It is the blood of this ram which is put on the tip of Aaron's right ear, upon his right thumb, and upon the great toe of his right foot, and likewise upon Aaron's sons. Thus was consecrated their obedience, their office and possessions, and their way of life. "To fill the hand" is the Hebrew way of saying "to appoint to the priesthood," and the blood upon the hand must be thus interpreted.

It is remarkable that following upon Aaron's consecration and his first ministry for his people, there is in the legislative narrative of ch. 10 the story of the first priestly transgression and the punishment that accrued. It is not clear wherein lay the fault of Nadab and Abihu, the sons of Aaron, and commentators seek to relate the story to various parts of the ordination or to the regulation concerning intoxicants which appears in the same context (10:8-9). The detailed connection of the story may not be certain, though it is, of course, in some way connected with priestly access to God; but the *Heilsgesetz* implication of the story is clear. The priestly fault so soon after the ordination must be seen in the light of similar stories. There is the Garden, but then the sin in the Garden; there is the release of Noah and all his family from the ark and the accompanying sacrifice, and then comes the story of his drunkenness. Similarly, at Sinai there is first the theophany and the covenant, but then the golden calf. So priestly trespass emerges immediately upon priestly ordination. Even priests can go wrong, and they can go wrong in the very aftermath of ordination. The story, then, is designed to warn and thus to save the ministry in Israel, and no doubt rests upon some historical reminiscence, even if from another context.

c. The laws of purification. These chapters are, of course, very unattractive and in part decidedly re-

pulsive. They are mainly of interest to the anthropologist and sociologist. Beneath these laws may be hidden early hygiene, ancient superstitions, customs now meaningless, simple prejudices, or perhaps deliberate revulsion from what were once known as the practices of the peoples in the service of their gods. However meaningless and irrelevant, these laws meant for the Israelite the fulfilment of a divinely appointed way of life. By the observance of these laws of purification Israel felt that it was dedicating its life to God. The laws of purification are, then, the dedication of Israel's national life. This is their redemptive purpose within the revelation.

d. The Day of Atonement. In Lev. 16 is the order of service for the annual service of atonement. Attempts at analysis have been abundant, but they cannot be said to have been successful. Attempts have been made to distinguish between old and newer rituals, between ritual for the place as distinct from that for the atonement of Israel. No doubt, various ideas are enshrined in different parts of the ritual, and they may have been drawn from different sources; but the ceremony is now presented as a whole, even if supplementary observations may be detected in places. The history of the development of the ritual is probably, for the time being, not possible.

First, there are various minor ideas which must be noted. Aaron, here representative of all succeeding high priests, must wash and be attired in his linen garments, coat, breeches, girdle, turban. At the conclusion of the ceremonies, he must doff these humble linen garments, wash, and resume his clothing—the beautiful and holy garments of his office: breastpiece, ephod, robe, checker coat, turban, and girdle (Exod. 28), robes which by their colors, decorations, and ornaments, including diadem, suggest royal status and function. Again, in the matter of the sacrifices of the Day, a comparison of Lev. 16:11-24 with the part played by Ezekiel's prince in the provision of sacrifices (cf. Ezek. 45:17-18, 21-22) will show a great similarity in the sacrifices and their purposes. Since both are really the ritual of New Year's Day, the comparison is instructive, for it bears again on the royal role of the high priest.

The ideas, then, which the Day represents are those of affliction (cf. Lev. 16:29, 31, and linen garments), purity, propitiation, substitution and transference of guilt, and death as the due reward for sin. But the all-embracing idea is that of performed intercession. It is the redeeming, sanctifying, of sanctuary with its system of sacrifice, of the priesthood of Aaron and of the people of Israel, that is the concern of the Day. The Day seeks to achieve the spiritual health and wholeness, the blessedness of all the community in all its parts for the succeeding year. It is the equivalent, if not indeed the same thing, as the שוב שבות restoration of fortunes of the pre-exilic psalms (Pss. 14:7; 53:6; 85:1; cf. Hos. 6:11; Amos 9:14). The intercession is in words (Lev. 16:21), and in the deeds of sacrifices and other activities of the Day.

The Day of Atonement became the supreme Jewish festival. Yet apparently there is no evidence for its observance in pre-exilic days, or, indeed, in Ezekiel or in Nehemiah. This has led to such conceptions as the idea of the growth of sin in exilic days and so on. Yet it is hardly possible that such a ritual burst newborn on Judaism like Jordan does at its source. There must be a prehistory to the Day. The obvious solution is, of course, that the Day was in some way connected with a possible New Year Festival or its Israelite equivalent in pre-exilic days, and that its ritual conceals in some ways pre-exilic royal ritual. Certainly references to mercy seat and testimony (Lev. 16:13) presuppose the holy of holies of the first, and not the second, temple. Similarly the ritual of AZAZEL must be very ancient.

e. The Code of Holiness. In the Code of Holiness (chs. 17–26) there are all the usual features of a ceremonial and moral law code and the theological ideas appropriate thereto. But the perusal of these chapters soon reveals a more sermonic style and the appearance in 17:10 of the divine first person. Apart from such blocks of laws as 18:7-23 (cf. 19:19*b*-25*a;* 20:9-21; 22:17-30; 23:12-21), the appearance of the divine first person, at the beginning, or at the end, or interspersed through the laws, is constant from Lev. 17:10 onward and is very prominent in the final exhortation in ch. 26. The final chapter of Leviticus, 27, which does not belong to H, shows no occurrence of this divine first person. These first-person sentences testify to the theocentric art of the Levitical preacher, and are reminiscent of Ezekiel and of Isa. 40–55. There are the expressions: "I am Yahweh," "I am Yahweh your (their) God" (cf. 18:2, 4, 30; 19:3, 10, 25, 31, 34; etc.), with the occasional addition of "who brought you out of the land of Egypt" (19:36; 25:38; 26:13) or some other clause of praise (cf. 20:8, 24; 21:8, 15, 23; 22:9, 16, 32). This divine utterance in the first person is an important form of revelation in both Testaments. God describes himself with a number of varying predicates. The utterance may thus be described as the self-predication of God. Especially in the phrase: "I, Yahweh, your God, am holy" (19:2; 20:26) is the self-predication almost "tautological," for holiness here has a theistic, rather than an exclusively moral, connotation. Holiness expresses thus the "godness" or deity of God, so that the sense is virtually: "I, Yahweh, your God, am God." Perhaps the best description of this quintessence of the theocentric art is W. Vischer's phrase by which he describes these divine-first-person sentences as *Autokerygma*—God's heralding of himself. In such sentences it is not really a question of *Heilsgeschichte* or *Heilsgesetz,* but *Heilspredigt,* "sacred and saving preaching," which, as ch. 19 shows, touches all departments of Israel's life. Here is the hallmark of revelation, and in the simple sentence: "I am Yahweh your God," the final, most complete, and sovereign sentence of all scripture, without exception. It is, in fact, the apotheosis of *Heilsgeschichte* and of scripture.

The Code of Holiness, however, does not close without bearing witness to that most characteristic feature of Israel's faith (cf. Exod. 33:16), which is given at Lev. 26:11-12: "I will make my abode among you . . . . And I will walk among you, and will be your God, and you shall be my people." Here the tabernacling presence and the guiding presence and the covenant faith are combined in an exceptionally rich autokerygmatic context.

4. Leviticus and the Scriptures. Wheeler Robinson's dictum that Leviticus and the Psalter should

be studied side by side has long been a commonplace. He thought of them side by side in the post-exilic period, but equally it is true that many of the psalms and much of the ritual were side by side in the pre-exilic period also. It is studying Leviticus and Psalms that corrects the impression of silence that is gained from Leviticus. It is true that the book is a series of speeches, and there is much sermonic material, but the performance of the ritual appears to be silent. Thus the movement, vitality, and sound of the Psalter, not to mention such a passage as Ecclus. 50:5-21, provide the corrective. By such means Leviticus takes its place not merely among the codes of law but also among the manuals of worship in the OT.

Leviticus describes the performance of much ritual action, and the exposition that accompanies the ritual is missing. Deut. 26 offers an interesting illustration of the faith and the ritual. Similarly the promise made to Abraham (Gen. 15:18) is embodied and guaranteed in a series of ritual actions (vss. 9-19). Ritual is thus expressive of religion, just as morality often is the fruit of religion. Revelation and all the divine side of religion find an expressive outlet in ritual, and gospel is declared through sacrament. On the other hand, too, ritual aims at hallowing life through sacred ceremony. Ritual is thus the accompaniment of the revealed word and, as informed by a moral and numinous purpose, has its due place in the religious life; and this is the justification for Leviticus in the OT, even though the ritual dominates in the book.

It is also necessary to read Leviticus side by side with certain passages from the NT, notably the Letter to the Hebrews (*see* HEBREWS, LETTER TO THE). Jesus found in Lev. 19:18 the source for the second part of his summary of the law: "You shall love your neighbor as yourself" (Matt. 5:43; 19:19; 22:39; Mark 12:31; Luke 10:27; Rom. 13:9; Gal. 5:14). There are also the leprosy passages (Matt. 8:2-4; cf. Lev. 14).

The tabernacle is the shadow of the templehood of Christ and of the Christian believer (cf. II Cor. 6:16); the sacrificial system the pointer to the one atoning sacrifice of Jesus Christ; the Day of Atonement the parallel to Christ's cross; and the high priest the type of the apostle and high priest of the Christian profession (Heb. 3:1; 8–9 in general). There are other allusions too, such as Matt. 5:18; 19:17; 27:51; Rev. 4:5, which presuppose Leviticus.

On the face of it, the case against considering Leviticus as part of scripture is very strong. But in favor of it there is a case even stronger. There is first the testimony of the book to Jesus Christ; then there is its autokerygmatic emphasis. Finally, by his choice of Lev. 19:18 Jesus canonized Leviticus once for all.

LIBERTINES. *See* FREEDMEN.

LIBERTY [דרור, חפשה; ἐλευθερία; Lat. *libertas*]. Primarily, the state of those who are not slaves; and secondarily, though more fundamentally, the quality of personal and social life, here and hereafter, which is the given possession of those whom Christ has set free from human bondage.

1. In the OT. Liberty in the OT is almost exclusively the condition of those free from slavery, or of those exempt from forced labor, etc. It is significant that the more humane treatment of slaves by the Hebrews was a direct consequence of their religion, and that in Isa. 61:1 "liberty" is a metaphor of what God was about to effect in history in releasing his people from Babylon. Jesus took the metaphor to its final stage when, preaching at Nazareth, he used it to indicate the deliverance wrought by his own coming (Luke 4:16-21).

2. In the NT. In contrast to the Stoic idea of liberty of self-sufficiency (the free man is always "master of himself," never the "slave of circumstance"), the NT conceived of liberty as man's relationship to God.

a. Negative conditions. Man, a fallen creature in a fallen world, is in bondage to sin. The bondage is universal ("All have sinned and fall short of the glory of God"; Rom. 3:23) and absolute ("I know that nothing good dwells within me, that is, in my flesh. I can will what is right, but I cannot do it"; 7:18). Man is in bondage to the law, whether he knows it as divine revelation, as the work of conscience, or as positive human law; for while law was intended to enable man to achieve a righteousness acceptable as a basis of community between man and God, it proves incapable—human nature being what it is—to free men from sin (7:7-20). This leaves man in bondage to death, for, apart from sharing in the eternal life of God, man, with the whole creation, is in "bondage to decay" (8:21).

b. The Liberator. What the law could not achieve because of human nature, God has done in a human nature. God's Son became man, assumed flesh, took the form of a slave, yet, in remaining sinless, "condemned sin in the flesh" (Rom. 8:3), and brought human nature to its divine destiny. For "God raised him up, having loosed the pangs of death, because it was not possible for him to be held by it" (Acts 2:24).

c. The liberated. Such an achievement is the proclamation of liberty to those captives of sin, law, and death who believe and trust in Christ. They are free from the bondage of sin—now because adequate

grace is available for them (II Cor. 12:9), and in the end because they no longer need to justify themselves to God, since Christ is their justification (Rom. 3:20-22). They are free from bondage to law because their life is no longer a vain attempt to keep perfect obedience to ordinances, but an acceptance of the given guidance of the Spirit (Gal. 5:5, 18), of the life of Christ himself in the believer (2:20). They are freed from bondage to death, for "the wages of sin is death, but the free gift of God is eternal life in Christ Jesus the Lord" (Rom. 6:23).

But Christian liberty is not simply freedom *from,* not license to "do as you like"; rather, it is so complete a surrender to God as to be called "slavery" to God, to righteousness (Rom. 6:18, 22). Liberty begets its own pattern of gracious living: "You were called to freedom, brethren; only do not use your freedom as an opportunity for the flesh, but through love be servants of one another. For the whole law is fulfilled in one word, 'You shall love your neighbor as yourself' " (Gal. 5:13-14). Love may be called the "perfect law of liberty."

Transition to the life of liberty is made at baptism, where the believer is crucified with Christ and raised to new life in him (Rom. 6:3-4). He is no longer a slave to the flesh, no longer alien from God, no longer exempt from God's service; he has become a son, whose meat it is to do the Father's will, and who, as a son, will abide in the Father's house forever. The transition is made in time, but the end is in eternity, and what the full liberty of the sons of God is like passes our poor imagination. "Beloved, we are God's children now; it does not yet appear what we shall be." (I John 3:2.) J. MARSH

LIBNAH lĭb′nə [לִבְנָה, white]. **1.** A camp of the Israelites in the wilderness (Num. 33:20-21). The site is unknown; perhaps the same as Laban (Deut. 1:1).

* **2.** An important town in the SHEPHELAH (Josh. 15:42), probably on the border between Judah and Philistia (cf. II Kings 8:22, where Libnah's revolt against Judah implies that the town was located on the edge of Judahite territory).

Eusebius equated Libnah with a town "Lob(a)na" in the district of Eleutheropolis. The only important tell which can be said to lie within this district and which at the same time is located near the Judeo-Philistine border is Tell es-Safi, on the W end of the Valley of Elah (*see* ELAH, VALLEY OF); it was the site of the Crusader fortress of Blanche-garde. The white cliffs of the region doubtless gave the tell both its Hebrew and its French name.

Excavations at Tell es-Safi have uncovered pottery, the dates of which range from pre-Israelite times to the period of the Seleucids; several of the jar handles were imprinted with Hebrew royal stamps. Sections of the city wall were also discovered; it is similar in style to the wall at Ashur, which was built during the reign of Sennacherib. Five fragments of an Assyrian stele provide another indication of Assyrian occupation at this period (cf. II Kings 19:8). The absence of significant signs of the Greek and Roman settlement of Lobna may be due to the fact that only a small portion of the tell was available for excavation.

The chief objection to the identification of Libnah with Tell es-Safi is that it places this town farther N than any of the others in the same province and requires that a provincial boundary be drawn through the middle of the Valley of Elah. Hence some have sought the location of Libnah in the more southerly Wadi Zeita. Here the favored site is Tell Bornat.

Libnah first appears in the OT as one of the Palestinian cities captured by Joshua (Josh. 10:29-39; 12:15). However, these passages are of doubtful historical value; there is no indication in the Amarna Letters that Libnah was a Canaanite royal city.

Libnah seems to have served the S kingdom as a fortified border station, and appears to have been under Judah's control during most of its history. We do read of a revolt against Jehoram, when this king was trying unsuccessfully to subdue the rebellious Edomites (II Kings 8:22); but by the time of Hezekiah, Judah seems to have regained control. Libnah was one of the two major forts on Judah's W border to which Sennacherib laid siege (19:8). The mother of Jehoahaz was an inhabitant of this city (II Kings 23:31; Jer. 52:1).

The name Libnah is found in the Judahite province list (Josh. 15:42), which may come from either the ninth or the seventh century B.C., as well as in the list of LEVITICAL CITIES (21:13). Perhaps the *Rbwn* which appears in the list of towns which the Egyptian Sheshonk I (biblical Shishak; I Kings 14:25-26) claimed to have taken is to be interpreted as Libnah.

LIBYA lĭb′ĭ ə, lĭb′yə; LIBYANS lĭb′ĭ ənz. A large territory in North Africa, bordered by Egypt and the Sudan on the E, by Tunisia and Algeria on the W, and by French Equatorial and West Africa on the S. The name had a wider and less specific application throughout most of biblical and classical antiquity.

1. The name. Three distinct Hebrew words are rendered by "Libya" or "Libyans" in the versions. The following equations illustrate the existing variety:

a) כוּב, "Libya" (Ezek. 30:5; KJV "Chub"; RSV mg. "Cub")=LXX Λιβυες(?).

b) לוּבים (*lûbhîm*), "Libyans" (II Chr. 12:3; 16:8; Dan. 11:43; Nah. 3:9; KJV alternately "Lubims")= LXX Λιβυες.

c) KJV פּוּט (*pûṭ*), "Libya," "Libyans" (RSV "Put"; KJV alternately "Put"; "Phut")=LXX φουτ, φουδ, or Λιβυες.

d) Λιβύη, "Libya" (Acts 2:10).

Further, it is possible that להבים (*see* LEHABIM) is also a variant of the ethnic term לוּבים, or at least refers to the same or a neighboring area and its inhabitants. Hebrew *lûbhîm* and Greek Λιβυες are both adaptations of the native name found in Egyptian sources as *Rbw* (*Lbw*).

2. Early history. For our knowledge of Libyan history before the classical period we are dependent almost entirely on Egyptian sources. The most ancient inhabitants of Libya about whom we know anything are the Tehenu, mentioned in texts of the Old Kingdom (third millennium B.C.). It is now thought that the Tehenu were not Libyans in an ethnic sense but rather an isolated group of people originally closely related to the Egyptians themselves. From the end of the Old Kingdom there is evidence of a steady invasion of Egypt from the SW by a light-skinned, blond, blue-eyed people identified by the Egyptians as the Temehu. During the first half of the second millennium the name Temehu became synonymous with the Libyans in general; and it is not until the New Kingdom that two groups, the Meshwesh and the Lebu, stand out in their conflicts with Egypt, notably under the reigns of Thut-mose III, Sethi I, and Ramses III. That Egypt was not able to subdue completely these tribes, which constantly threatened her W border, is evidenced by the fact that *ca.* 950 B.C. the Libyan prince Shishak (Shoshenq) mounted the royal throne of Egypt as pharaoh and ushered in the Twenty-second, or Libyan, Dynasty.

3. The Libyan Dynasty. Shishak, the founder of the Libyan Dynasty, is best known from OT sources as a supporter of Jeroboam I. His rise to power in Egypt marked the end of the weak, quasi-priestly rule of his predecessor, Psusennes II, last of the Tanite House (Twenty-first Dynasty). He adopted instead a policy of aggression, which resulted in his invasion of Palestine in an attempt to restore Egyptian dominion over this area. A brief account of this campaign is contained in I Kings 14:25-26, during the fifth year of Rehoboam. From the biblical narrative and from Egyptian sources, such as the list at Karnak of towns and cities taken by Shishak in this campaign, it is clear that the Egyptian ruler did not stay his forces at the confines of Judah but pushed well on into Israel. This effort, though successful, brought Egypt little more than plunder, for she was not able to establish any kind of permanent hold over the ravaged area. The dynasty ruled from the Delta city of Bubastis (*see* PIBESETH) for approximately two hundred years (until *ca.* 730 B.C.) and included the rules of Shishak I-IV, Osorkon I-II, Takelot I-II, and Pemou. The reconstruction of events which brought an end to this long dynasty is very complicated, but it appears that it was followed immediately in Bubastis by the Twenty-third Dynasty, which in turn was contemporary with the ascendant Tefnakht, precursor of the Twenty-fourth Dynasty at Saïs. This, too, was short-lived, falling, after the brief reign of Bocchoris, to the triumphant Ethiopic (Twenty-fifth) Dynasty under Shabaka *ca.* 715 B.C. *See* CUSH.

LIFE. Notwithstanding the great differences between the OT and NT views of life, the biblical religion represents a common concept of life which differs conspicuously from all nonbiblical views. Failure to notice this fact has often misled exegetes into reading wrong features into the biblical record.

Over against the naturalistic-monistic view, which interprets all the manifestations of man's life as rooted in physiology, but also over against the dualistic separation of physical and mental life, the Bible teaches the oneness of man's life yet differentiates its functions according to the goals served. This fact implies also that while life has a common origin in all human beings, the differentiation into nations, sexes, and individuals adds an essential feature to it. Nobody is simply a human being. The biblical view is therefore above and beyond both individualism and collectivism. While Israel, like other nations, is regarded as a collective agent, its true life depends on the spontaneous and responsible participation of its individual members.

The idealistic view, found both in ancient Greece and in our age, according to which the value of life depends on what an individual or a group makes of its faculties, is rejected in favor of the belief that life's meaning depends primarily on the purpose God has with it. There is no room left for a fatalistic interpretation, according to which man is the passive organ of Life, or the slave of deities, so that at the best he can try to adjust himself to his destiny. Rather, the Bible emphasizes that he is free to make of his life what he pleases.

Bibliography

1. The OT view. "Life" in the OT designates the sum total of spontaneous activities and experiences of an individual or group capable of preserving its identity in the flux of changing conditions. This power of identity, the *nephesh* (wrongly translated "soul"), is lost in death, and what remains of the organism disintegrates. The living organism is designated as *basar* ("flesh"); this term, however, does not indicate a material which is being animated, but rather the individual being in its earthly condition (e.g., Deut. 5:26; Ps. 56:4; Isa. 31:3). The spontaneity of life is described as "ghost" or "spirit" (*ruaḥ*), and the latter is said to be "given up" in death (e.g., Gen. 25:8, 17; 35:29; 49:33; Job 3:11; 10:18; 11:20; etc.; cf. Matt. 27:50; John 19:30). In other places, it is the *nephesh* which is breathed out (Job 11:20; Jer. 15:9), or poured out (Isa. 53:12). In other words, "life" designates the concrete existence of a being; it is not an energy operating in, or upon, a body. *Nephesh* indicates that each life is an articulate individual urge, not just the individuation of a species.

However, individual existence is not self-contained. Life is described throughout the OT as co-existence with other individuals of the same kind. This co-existence implies co-operation and mutual dependence, yet not equality. Superior power and authority, on the one hand, and subjection, on the other, are essential features of human life. By co-ordinating the origin of life with the creation story, the OT reminds the reader of the fact that life would not be possible if we were not living in a universe which is so arranged that each individual finds food and shelter (Gen. 1: 28-30; Pss. 104:27-28; 145;15; 147:8-9; cf. Luke 12:24).

Life is experienced as something that essentially transcends purely material existence and that therefore represents something "numinous" for the ancient Hebrews. This fact is most frequently described by differentiating between the Word of God, by means of which the things of this world were brought into existence, on the one hand, and the Spirit of God as the giver of life, on the other (e.g., Gen. 2:7; 6:17; 7:15, 22; Ps. 104:29). God is the "God of life" (Num. 14:28; Deut. 32:40; Judg. 8:19; Ruth 3:13; I Sam. 14:39; 19:6; Jer. 5:2; etc.) or the "living God" (e.g., Deut. 5:26; Josh. 3:10; I Sam. 17:26; II Kings 19:4; cf. Matt. 26:63; Acts 14:15; Rom. 9:26; Rev. 7:2). His very nature is life, and thus he is able to impart it to the creatures. For this reason, life is basically the same in all that moves on earth (e.g., Job 12:10; Ps. 104:30; Isa. 42:5; cf. Eccl. 3:19; Ezek. 37:8-10; Acts 17:25). This does not mean, however, that with the gift of life creatures partake of the divine nature (Deut. 5:20; Ps. 56:4; Isa. 31:3; Jer. 25:31; etc.), but rather that by God's grace they are enabled to communicate with their Creator. Life is not regarded as an immanent creative principle in all that is, as in modern vitalism. Though man has no control or power over it, life is entirely, both in its origin and in its manifestations, in God's hands (e.g., I Sam. 2:6; Ps. 49:7, 9). Thus when God withholds his "breath" or "spirit," the creatures die (e.g., Job 4:9; 34:14; Ps. 104:29; cf. Deut. 5:23; Josh. 3:10; II Kings 19:4; Ps. 76:11-12; Isa. 37:17).

Accordingly, idols, with whom God has nothing in common, are "dead" (Pss. 113; 134; Isa. 44:9-20; Jer. 10:8-10, 14). In turn, the very fact that we are alive is to be considered a divine gift (e.g., Pss. 36: 10; 42:8; 66:9; 139:13), which must be upheld by God (e.g., Job 33:4; Ps. 119:116; Isa. 38:16; Wisd. Sol. 3:1; 16:12). A similar idea is expressed by the images of the "tree of life" in paradise, over which God alone has control (Gen. 2:17; Prov. 3:18; 11:30; 13:12; cf. Rev. 2:7; 22:2, 14), and the "fountain of life" (Prov. 10:11; 13:14; 14:27), which has probably its parallels in the river which flows from the throne of God and the Lamb (Rev. 22:2) and the waters of life in paradise (Rev. 7:17; 21:6; 22:17). God was under no obligation to impart life to any creature. For the same reason the procreative ability is not to be regarded as a matter of course; rather, it is a divine blessing (e.g., Gen. 1:22, 28). Consequently, individual features and special abilities do not originate in heredity or physiological particularities, but rather are rooted in the divine Spirit's creativity (e.g., II Chr. 15:1; 20:14; Ezek. 2:2; 3:24; 11:5).

The individual's life is God's property. Hence the individual has no right to destroy his own life or wantonly to kill other life (Exod. 20:13; Deut. 5:17; cf. Gen. 4:10, 20-24). Human sacrifices are not demanded by God (Gen. 22). The death penalty, which has been fixed by God for certain crimes—e.g., adultery (Lev. 20:10; Deut. 22:22)—is therefore an indication of the degree to which God abhors them, and the wholesale destruction of sinful mankind by the Flood (Gen. 7:21-23) was a sign of its complete corruption. Since life is God's property, blood, as the "vehicle" of life, must be abstained from (Gen. 9:4; Lev. 3:17; 17:10; Deut. 12:23; etc.). The value of life can be seen in God's care for the preservation of the animal realm—e.g., when he commanded Noah to take a pair of each species into the ark (Gen. 7:2-3), or in his provision of food for all (e.g., Ps. 145:15). It is not surprising, therefore, that in the OT life is valued as the supreme earthly good, surpassed only by God's grace or mercy (e.g., Ps. 63:3).

This does not mean, however, that life is a gift to be enjoyed only. The seat of life is the heart (לב, לבב), and thus life is of a volitional and appetitive character (e.g., Exod. 34:21; Ps. 51:12), which manifests itself in the affections and emotions rather than in reflection. Life consists in willing and doing things (e.g., Ps. 90:10), or hating and fighting off dangers and evils. Having received his life from God, however, man is not free in the choice of his goals and actions. Life is always desire for something not yet appropriated; yet this self-transcendence, rightly understood, points ultimately to the fact that man is destined to live for God (e.g., Isa. 38:10-20). The legislation on Mount Sinai was not interpreted as a tyrannical act of Yahweh, but rather as a means by which God made the Israelites aware of their final destination as human beings. The true nurture of life consists in doing God's will (e.g., Lev. 18:5; Prov. 15:27) or feeding on God's word (e.g., Deut. 32:47; Ezek. 3:18; 14:13 ff; 18:1 ff; 33:1 ff; cf. Deut. 8:3). Apart from it, no good life may be expected (e.g., Ps. 16:11; cf. Prov. 2:19; 5:6; Ecclus. 4:12). Thus the divine gift of life and human responsibility are correlative terms in the OT.

The outright positive evaluation of life in the OT

seems at first sight strange, since the ancient Hebrews not only took a very sober and realistic view of life but also considered the hardships and dangers of it, as well as pain and mortality, the result of God's curse pronounced over a sinful mankind (Gen. 3:14-19). The shortness and frailty of human life are often bewailed (e.g., Pss. 89:47; 103:15-16; cf. 90:10). Life is like a grain of sand (Ecclus. 18:10), a dream (Job 20:8), a shadow (I Chr. 29:15; Job 8:9; 14:2; Pss. 39:6; 102:11; 109:23; 144:4; Eccl. 6:12; 8:13; Wisd. Sol. 2:5), a cloud (Job 7:9), a fleeting breath (Job 7:7), a mist (Job 7:16; cf. Jas. 4:14), a grass (Pss. 102:11; 103:15; Isa. 40:6-7; Ecclus. 14:18; cf. I Pet. 1:24), or a flower (Job 14:2; Ps. 103:15; Isa. 40:6; cf. Job 9:25-26; Jas. 1:10). Taken from the dust (Gen. 2:7), man must return to it (Gen. 3:19; Ps. 103:14). Thus an early death is believed to be a special penalty of sin (Job 8:13; 15:32; 22:16; Pss. 9:18; 31:18; 37:35-36; 55:23; Prov. 10:27; 22:23; Ecclus. 19:3; 40:8-10; Jer. 2:19; etc.). Some scholars deny that in Gen. 3 death is interpreted in this way. The truth is that man, like all the other earthly creatures, is described as having his life from God. Thus he possesses no natural, innate immortality. But being able to do the will of God, he had the opportunity to acquire unending life. However, with the transgression of God's commandment this possibility was destroyed, and death became the inescapable fate of man.

But the curse has not deprived life completely of its value. To those who keep God's commandments, long life and happiness are promised (Gen. 15:15; Exod. 20:12; Lev. 18:5; Deut. 5:15-16; 16:20; 30:19; Judg. 8:32; Ps. 91:16; cf. Gen. 25:7 ff; 35:28 ff; Ps. 34:12; etc.) so that "life" and "happiness" have become synonymous. Even under the curse, life is blessing (e.g., Deut. 30:16-18). While man is tripped all the time by life (Job 18:10; Jer. 5:26), God is man's refuge from danger (e.g., Deut. 33:27; Pss. 14:6; 46:1). No wonder that people wish to live until life is exhausted (e.g., Gen. 25:8; 35:29; Job 42:17). A good old age is the supreme good (Prov. 3:16), and thus people wish one another to live (e.g., Dan. 2:4; 3:9; etc.)—i.e., to enjoy a long and happy life. Man is willing to sacrifice everything for his life (Job 2:4). In turn, death, which is the result of old age, is accepted without sentimentality as the end willed by God (e.g., II Sam. 14:14; Ps. 89:48).

The idea of an afterlife was originally unknown in ancient Israel. People were interested only in the continuation of the nation (Isa. 56:3, 5) and/or the family (Ps. 37:27-28; note especially vs. 28). The later acceptance of the idea of Sheol, in which the individual *nephesh* survives (e.g., Job 3:12-19), was not intended to increase the value of life, as did the Orphic concept of afterlife; on the contrary. Originally it is often emphasized that the dead are cut off from the cultic community (Pss. 88:11-12; 115:17; cf. Pss. 6:5; 30:9; Isa. 38:10-11, 18; Ecclus. 17:27). The only passage in which resurrection is clearly stated in the OT is in Dan. 12:2. Other passages, such as Job 14:13; 19:25-27; Pss. 16:10; 49:15, which have been interpreted as speaking of individual resurrection, probably use "Sheol" as a metaphor for the affliction in which the individual finds himself, and the return from Sheol means deliverance from the present ills. Isa. 25:6-8; Ezek. 37 do not speak of individuals, but rather of the recovery of Israel as a nation (see also Isa. 26:19).

When in the sixth century B.C. the idea of man's responsibility and of the divine curse were coupled with that of personal life, the outcome was a differentiation between true life and actual life. Only life in obedience to God's law deserves to be called life (see particularly Ezek. 3:18; 14:13 ff; 18:1 ff; 20:1 ff, 11; 33:1 ff; cf. Deut. 30:15; Ecclus. 15:17). Such life will be rewarded by God. He will be with the righteous ones and defend them against all evils (e.g., Ps. 73:23; Jer. 21:5). Thus the life of obedience carries with it full satisfaction (Deut. 30:15, 20; Ps. 119:144; cf. Ps. 39:12; Ezek. 33:18-19; Amos 5:4), and sinners are admonished to repent in order to "live" (Ezek. 33:11; cf. Jer. 38:20; Ezek. 3:18; 18:4, 21; 20:11; Hab. 2:4), whereas the wicked ones will experience misery and death (e.g., Ps. 49:10).

2. Intertestamental literature. This literature, in particular the wisdom literature, shows signs, however, of recognition that this view in which the experiences of the collective life of the chosen people had been transferred to the individual did not square with the facts. While earthly life is still highly evaluated (e.g., Ecclus. 31:20; Tob. 8:17; 12:9-10; Bar. 3:14), the success of the wicked is an undeniable fact (Ps. 73:4-5; cf. Job 21:7; Pss. 10:13; 17:14-15; etc.). But wisdom is the light (Wisd. Sol. 7:25) by which the individual learns to combine obedience to God's law with a maximum of happiness. Thus wisdom (Prov. 4:10; 8:35; 9:6) or the successive experience of life (Eccl. 11:7-8), rather than Yahweh, is considered the source of true life and of happiness (Job 5:26; Ps. 91:16; Prov. 3:2, 16, 22; 4:10, 22; 8:35; 9:11; 10:27; etc.). Though the misery of life (Job 7:1; Ecclus. 40:1-4) and its futility (Eccl. 1:2, 17; 2:11; etc.) are strongly emphasized, life is sweet (Eccl. 9:4-6; 11:7), because the good man has the key to felicity.

In the apocalyptic literature, it is particularly by means of the idea of the resurrection and the Final Judgment that the success of the wicked and the misery of the righteous are shown to be provisional only. Thereby the life of the righteous one is rendered meaningful and the desire for a moral order is satisfied. The righteous ones will eventually be compensated for their present sufferings, whereas the evildoers will then receive their due (e.g., Dan. 12:2). But this apocalypticism lacked convincing power. Measured by the actual conditions, it looked like wishful thinking. Large sections of Judaism, and particularly the Sadducees, refused to hold such beliefs.

3. The NT view in general. The term "life" is found frequently in Paul's letters and the Johannine literature, including Revelation, but only occasionally in the other NT books. In the English Bible the picture is affected by the fact that not only ζωή and βίος, but also ψυχή, which corresponds to the Hebrew *nephesh*, has been rendered "life." Basically the NT view of life agrees with that of the OT. God is the living God (Matt. 16:16; 26:63; John 6:68-69; Acts 14:15; Rom. 9:26; etc.), who has life in himself (John 5:26; cf. Rev. 4:9-10; 10:6; 15:7) or immortality (I Tim. 6:16). God is Lord of life and death (e.g., Luke 12:20; II Cor. 1:9; Jas. 4:15; cf. Matt. 10:28 and parallels). Since human life is the life of flesh

and blood—i.e., of the individual in its totality and concreteness (e.g., Matt. 16:17; I Cor. 15:50; Eph. 6:12)—βίος and ζωή are not to be differentiated as physical and spiritual life, but rather βίος designates the conduct of life (e.g., Luke 8:14; II Tim. 2:4; I John 2:16) and ζωή the human existence. In Mark 5:23; John 4:50, e.g., ζωή connotes "health."

However, the NT differs from the OT in the fact that Jesus has brought the true life to light (II Tim. 1:10). The terms "life" and "to live," used without further qualification, designate frequently the true life rather than the actual one (e.g., Matt. 7:14; 18:8-9; Mark 9:43, 45; Luke 10:28; Rom. 1:17; 8:13; I Thess. 5:10; Heb. 12:9; I Pet. 3:7, 10; II Pet. 1:3; etc.). This usage indicates that the "natural" life is no longer considered as being merely less perfect than the true life, as is the case in the OT, but rather as the perversion of the divine gift. The responsibility for this condition rests, in the first place, with the individual, who is free to seek his own life (e.g., Matt. 10:39); but, like Judaism (e.g., Wisd. Sol. 1:13; 2:24), the NT points out also that the possibility of sin was caused by the ancestor of the race (Rom. 5:12). It is on account of the Fall and our sins that death reigns in the world (Rom. 5:12-21). Thus unlike the Hellenistic mystery religion, the NT does not consider mortality the worst of evils, but rather sin. Also in contrast to Hellenistic individualism and Judaism, both of which believe in the good man's ability to render his life meaningful, the NT proclaims that only by a divine act of redemption embracing the whole human race can true life in the individual be set free. This is done by Jesus, who gave his life for the forgiveness of mankind's sin (e.g., Matt. 20:28; Mark 10:45; Rom. 5:6-7; Gal. 3:13; Eph. 5:2; Phil. 2:8; I Pet. 2:24; etc.). Thereby he brought to light a new feature of life. Life is not only mutual dependence and co-existence, but is also destined to be lived for mutual help. In living this life of love to the very limit by giving himself unto death, Jesus did not simply comply with a moral commandment given to him. Since he had this life in himself (John 5:20)—i.e., since it was his very nature—he was thereby able effectively to transform the life of mankind.

Through Jesus' redemptive life, the perverted life of people can be renewed and regenerated (e.g., John 3:3-8; I Pet. 1:3). This change is not merely one of conduct but of status. While the unregenerate man is "dead" (Luke 15:24, 32; Rev. 3:1; cf. Matt. 8:22), a follower of Christ has passed from death into life (John 5:24; cf. Eph. 2:1; Col. 2:13; I John 3:14). Thus the new life is not, as in Judaism, merely a condition to be hoped for, but rather a present experience (Matt. 18:20; 28:20; John 5:24; Rom. 6:4, 11; 8:6; Col. 3:3; I John 3:14; etc.). It is not acquired by adding a new quality or energy to our natural life. Rather, by the work of Christ man is freed from the inhibitions which had made it impossible for him unrestrictedly to practice love. Thus the true life is still man's concrete daily life, but he is no longer restlessly seeking to find his satisfaction therein, but rather he rests in God or Christ (e.g., Matt. 11:29), or "dwells in his Father's house" (e.g., Luke 15:31; John 14:1-15). That is to say, it is his privilege to use all God's resources and opportunities for the implementation of his new birth.

Just as with the "natural" life, this new or true life is not the result of man's efforts, but altogether God's gracious gift (John 6:63; Acts 17:25; Rom. 4:17; 6:23; I Cor. 15:45; I Pet. 3:7; Jude 21; cf. I John 5:12). It can therefore also be called the inheritance of God's children (e.g., Matt. 19:20; Mark 10:17; Luke 10:25; Tit. 3:7; I Pet. 3:7) or the kingdom—i.e., the domain into which the elect enter (e.g., Matt. 18:8-9; 19:17; Mark 9:43 ff; cf. John 3:5). In Christ this gift of true life is offered to the whole of mankind, but it is not distributed mechanically or indiscriminately. In order to receive it, people must be worthy of it (e.g., Matt. 25:46; Mark 10:17 and parallels; 10:30 and parallels; John 5:29; 12:25; Rom. 2:7; 6:22-23; Gal. 6:8; cf. Matt. 7:13-14; Luke 10:28). A person is worthy when he believes in Jesus—i.e., when he no longer considers his own activities as the source of true life, but rather hopes to receive the latter as a result of God's grace. A believer does not only look at Jesus' life as the highest type of life, but also is eager to follow him in order to be transformed into the likeness of his life (e.g., Matt. 10:25; John 5:39-40; I Tim. 1:16). Practically, this means both losing oneself—i.e., renouncing those goals of life which enhance only our individual or collective position in this world (e.g., Matt. 10:39; Luke 10:29; Rom. 6:2; II Cor. 5:15)—and positively serving God in love (Mark 10:17 ff; Luke 10:25 ff; cf. Matt. 25:46; Rom. 2:7; 14:7-8; II Cor. 5:15; Gal. 2:19; cf. Gal. 3:7; II Tim. 3:12; Tit. 2:12; I Pet. 2:24).

The new life is still lived in this body and thus requires food and care (e.g., Matt. 4:4 and parallels; Luke 12:15; I Cor. 9:14). But the sustenance of the body does not suffice to keep the new life alive. Rather, it is the service of God, based in a receptive way upon God's love and the means he provides, especially his "living words" (e.g., Acts 7:38; Heb. 4:12; I Pet. 1:23), which furnishes the food that sustains and strengthens the new life (Matt. 4:4 and parallels; Luke 12:15; John 4:8; 6:27, 32-58). Hence a person who feeds on it can be sure that God will take care of his physical life, too (e.g., Matt. 6:25). For, as the miracles of Jesus indicate, he is a God who wants to preserve and restore life (Matt. 9:18; Mark 5:23; John 3:15-16; 4:47 ff; 10:10; cf. Rom. 8:31-39). Life thus understood is therefore quite the opposite of modern subjectivism and existentialism. Rather than being "simple openness to God," it is a voluntary subjection of one's existence to God's plans. It is therefore not confined to a special psychological sphere of "spiritual life" but rather manifests itself as a special quality or outlook which informs a person's whole life (e.g., Matt. 7:21; Luke 6:46). Yet far from being mere passivity, such commitment implies spontaneity; otherwise it could not reach its climax in love. However, its spontaneity is one in which one's egotism is subordinated to God's will (e.g., Matt. 19:19; 22:39 and parallels).

Thus the new life, as the NT sees it, is the individual's personal life, or the life of his "spirit" (e.g., Matt. 26:41; Mark 14:38; Rom. 1:9; 7:6; 8:16; I Pet. 4:1-2; etc.), and its newness is due to his willingness to accept the love Christ shows for him. This offer of Christ's love is in the NT coupled with the Holy Spirit. Those willing to be redeemed by Christ will feel in themselves the stimulus of God's Spirit. This is

the same Spirit who according to the OT conveys life; but by the death and resurrection of Jesus, life has reached a new level. Through him, it has been hallowed, and thus the Spirit has become the vehicle of hallowed life (e.g., John 3:5; 6:63; 7:39). Just as by our receptivity Christ's life is enabled to engender the new life in us, so in turn our new life is capable of bearing fruit—i.e., not only capable of acting in accordance with his life, but also of bringing about such life in others (Matt. 3:8-10; 7:16-20; 12:33; Mark 4:7-8, 29; 11:14 and parallels; John 4:36; 12:24; 15:1-16; Rom. 1:13; 15:28; Eph. 5:9; Col. 1:10; Heb. 12:11; etc.).

While the NT writers refer frequently to the growth of the new life, they are not thinking of it in Hellenistic terms—viz., as a gradual perfection of one's moral or religious life—but rather as a growing awareness of the value and significance of the gift of Christ, and accordingly of the responsibility implied therein (*see* KNOWLEDGE). This explains the paradoxical fact that the new life is compatible with sins (e.g., Rom. 7:15-20; I John 1:8-10; 2:1-2) and spiritual weakness (e.g., Matt. 17:20; 26:30-35 and parallels; Rom. 8:16, 26; cf. Heb. 5:11-14). But these conditions are caused by the infirmity of our flesh (e.g., Matt. 26:41; Mark 14:38; Rom. 7:18)—i.e., the fact that even in the new life we are still subject to the conditions of this world. The sins of the believer differ essentially, nevertheless, from the unbeliever's sinfulness. Whereas the latter is a deliberate refusal to live for God's sake, the former show merely a temporal failure to actualize the new life. This difference accounts for the fact that despite their sins the disciples of Jesus continue to co-operate with him in his work of transforming this world, whereas apart from Christ man's works are dead (e.g., John 5:24; I John 3:14). No matter how great the outward changes may be which they bring about, such actions do not alter the nature of this universe, in which good and evil keep themselves in a permanent equilibrium (John 15:5).

The new life is an indestructible one. The believers are "living stones" (I Pet. 2:4-5) of which God's temple is built here on earth (e.g., Rev. 21:12, 14). In their service they offer themselves as "living sacrifices" (Rom. 12:1; cf. 6:13, 19). However, this life is constantly threatened by three enemies—viz., the devil, the law, and death. While no earthly power is capable of annihilating the new life, the latter is not preserved automatically. The devil is anxious to destroy it (Matt. 10:28; Luke 12:4-5; I John 3:10, 14-15), and only in the power of Christ can he be overcome (Rom. 8:37-39; Eph. 6:10-18). Furthermore, the new life is endangered by the law. The very fact that we are called into the service of God can be interpreted, as indeed the Pharisees interpreted it, as meaning that by his own moral efforts man provides life for himself. Yet believing so, man denies the givenness of the new life (e.g., Rom. 7:10, 13; II Cor. 3:4-6; cf. Jas. 1:15), and thus fails to receive or preserve it. Finally, physical death seems to terminate the individual's existence, as is implied in such expressions as "giving up one's spirit" (e.g., Luke 23:46; John 19:30; Acts 7:59) or "one's *psyche*" (e.g., John 10:11, 15, 17; 13:37; 19:30; I John 3:16). Yet those who have tasted the new life realize that it must be unending, if it is to be more than an imagination (e.g., Matt. 19:16 and parallels; 19:29; 25:46; John 3:15-16; 4:14; 6:27; Acts 13:46, 48; Rom. 2:7; 5:21; 6:22-23; Gal. 6:8; I Tim. 1:16; 6:12; Tit. 1:2; 3:7; Jude 21). The modern longing for death is the very opposite of the NT view of life.

The answer to man's quest for life everlasting is the NT belief in a personal resurrection. Its basis is the resurrection of Jesus, which was understood as a bodily one. Hence the Christian resurrection is not, as in Judaism, a compensation for the miseries of life, but rather the continuation of that true life which the disciples of Jesus enjoy already in their earthly existence (I Cor. 15:19). This belief explains the seeming paradox that the new life is sometimes spoken of as a present possession (e.g., Matt. 10:39; 16:25 and parallels; Luke 17:33) and sometimes as a future good (Matt. 7:14; 18:8-9; 19:16; Mark 9:43, 45; 10:30; Luke 18:30; Jas. 1:12; I Pet. 3:7, 10; II Pet. 1:3; Rev. 2:10; 3:1; 11:11; etc.). There is no contradiction between the two views. Rather, physical death is the death of the body (Matt. 10:28 and parallels; Rom. 7:24; Jas. 2:26; cf. Rom. 6:6; 8:23); yet in death the believer's self is raised, and will eventually receive a new spiritual body in the resurrection (I Cor. 15:44, 53). As a result, all the obstacles which presently beset the manifestation of the true life will then be removed. This new risen condition is called the "crown of life" (Jas. 1:12; Rev. 2:10). Since life is activity, the future life is not imagined in an Orphic-Platonic sense as taking place in an absolute vacuum, but rather in a "new world" (Rev. 21:1-4). The resurrection is coupled with the Final Judgment, in which it will appear whether or not those who held that they possessed the new life had actually apprehended it. Those who did not are destined for the "second death" (Rev. 20:14-15; cf. Matt. 25:44-46).

4. John's view. To this general view of life, both John and Paul add a few specific features. John's message is rooted in the OT idea that God is life. The evangelist emphasizes that in Jesus the eternal "word of life" (I John 1:2; cf. John 1:1-4; 5:26; 6:57; I John 5:11-20) had become man (John 1:14), so that the people who by faith had identified themselves with him would share in his life (e.g., John 3:16; 6:63; 10:10; 20:31; cf. I John 4:9). John is particularly anxious to stress the presence of the new life (e.g., John 3:36; 5:24; 6:47, 54) and thus our ability to do God's commandment (I John 2:29). Through Jesus alone, to whom it was given to have life in himself (John 5:26; cf. 11:25; 14:6), can people have life (e.g., John 4:14; 5:21; 6:33, 58; 10:10, 28; Rom. 6:11, 23; Col. 3:4; II Tim. 1:1, 10), and in this life which is God's life (John 5:20-21; 17:2), they become children of God (John 1:12; 12:36; 14:11, 13, 26; 17:3; I John 3:1; cf. John 8:44).

Jesus' existence is an everlasting one because it is not lived in self-chosen freedom but rather in God's service (John 12:50; cf. 4:34; 5:19-20). However, unlike Buddhism, Jesus does not teach the equality of all life; on the contrary. It is only in his own life that God's purpose in imparting life to his creatures is fully disclosed (John 11:25; 14:6). The nature of God's life is thereby to be made known to the world (John 15:8; 21:19). Ultimately, life consists in the knowledge of God (John 17:3)—i.e., in conscious

love of the Creator and the fellow creatures. In its freedom (John 8:32, 36; cf. Rom. 6:18; I Pet. 2:24) life bears witness to the God who gave it, and thus refutes fatalism. Though the new life appears only occasionally in the believer, it is a seed which will grow into a full plant (I John 3:9). Having this power of the Son in themselves, believers are therefore capable of influencing the course of this world (John 15:4), especially through prayer (John 15:7). In line with this, their resurrection is not thought of as an extraneous act but rather as the full manifestation of the resurrection power in the believers (John 11:23-25; cf. 5:28-29). However, the resurrection is definitely regarded as a future event by John (John 5:28-29; 6:39-40, 44, 51-56; 12:48; I John 2:28-29; 3:2; 4:17; cf. John 17:24). It is not feasible, without doing violence to the text of the Johannine writings, to eliminate all these passages in order to ascribe a non-futuristic eschatology to their author.

The undeserved divine gift of Christ's coming shows that the new life is not destined to be a privilege for a few people only, as in the mystery religions, but rather a blessing for the whole of mankind (John 3:15; 10:10; 14:9; cf. 1:4, 7, 12). Furthermore, "the life was the light of men" (John 1:4; cf. 8:12); i.e., knowledge of the true life does not so much depend on written information as on belief in Jesus (e.g., John 3:15, 36; 5:24, 40; 6:40, 47, 58; 8:51; 11:25; 14:6; 20:31; cf. 10:10; I John 3:15)—i.e., on contact with his saving life (John 6:51, 57) as it goes on through the ages (John 8:12; 15:1-8; 17:3; I John 4:9). Against this background John states very powerfully that what is commonly called life is but frustration and, in the last analysis, death (John 5:24; I John 3:14), because it is unwillingness to do God's will (John 7:17; cf. 3:19-21; 12:25). The true life is not an innate quality (John 4:14; 5:24; 6:33; 11:25) but a divine gift (John 3:15-16). However, John also emphasizes the faithfulness of Christ, who will keep his followers alive (John 6:40; 10:28; 15:4) and will eventually render them like himself (I John 3:2). Through his love he makes them willing to keep God's commandment (e.g., John 5:29; I John 3:14).

5. Paul's view. Paul's teaching on life resembles in many respects that of John, yet is couched in a different language, which shows both rabbinical and Hellenistic influences. Paul starts from the assurance (Hab. 2:4) that the prerequisite of true life is righteousness—i.e., the whole person's agreement with God's will (Rom. 1:17; cf. Gal. 3:11; Tit. 1:1-2). This true life which on account of man's sinfulness had never been a reality (Rom. 3:23), has by the grace of God become a historical fact in Jesus (Rom. 3:25; 5:15, 17; I Tim. 1:10). Other people, too, may share in it by believing in that gracious act of God (Rom. 3:24; 6:8 ff; I Tim. 1:16; cf. Acts 11:18; 13:46; 15:7-9). Basic for Paul is the contrast between the common life of man, which is "fleshly" (κατὰ σάρκα; e.g., Rom. 8:12), and the life in Christ, which is spiritual (κατὰ πνεῦμα). The former is worthless and futile (e.g., Eph. 2:12), because it leads inevitably to death (e.g., Rom. 5:14; 6:21; 7:5), whereas the latter is a priceless good (Phil. 3:7), since it has the promise of the life everlasting (e.g., Rom. 5:10, 21; I Cor. 15:19; Col. 3:4). The fleshly life is not understood in a Hellenistic sense by Paul as designating the passions and desires of the body, but rather it is man's life as adjusted to the demands which the earthly conditions make upon him. True life, on the other hand, is lived in Christ—i.e., it is one in which the individual believer has become a member of the body of the risen Lord (e.g., Eph. 4:13-16; cf. Rom. 6:11-13). Whereas according to John the true life is that which God works through the incarnation of the Word, Paul holds that it is the heavenly life of the risen Christ which vivifies the believer (e.g., Rom. 8:29; Eph. 2:5; Col. 1:18; 2:13). This change implies closest personal contact of the disciples of Jesus with their risen head (e.g., Phil. 1:21; I Thess. 3:8), but it guarantees also that the new life is experienced as a power, which reigns over the faithful (e.g., Rom. 5:21). Significantly, "Lord" is the principal title given by Paul to Jesus. Baptism is the specific act in which the incipient believer dies to sin and to his past (e.g., Rom. 6:1-11; cf. Gal. 2:19-20; 6:14) and enters completely into the Lord's life (e.g., Rom. 6:4; 8:10; II Cor. 4:8-10; 6:4-10; Gal. 2:19-20). He is thus under obligation to live in the historical movement initiated by Jesus and to serve it (e.g., II Cor. 2:16; 4:12) and thereby to engender such life in others, too (e.g., Rom. 6:22-23; Gal. 6:8; Phil. 3:8-14). Missionary activity is therefore incumbent on all Christians. The gospel—i.e., the proclamation of the Christ—is in turn life (II Tim. 1:10).

Since the life of the risen Lord is interpreted eschatologically as the conquest of the universe for God, the new life of the believer has both present (e.g., Rom. 5:12-21; 6:11; 8:2, 10, 20; Gal. 2:20; II Tim. 1:1) and also futuristic features (e.g., Rom. 1:17; 2:7; I Cor. 15:20-22, 44-49; II Cor. 5:1-10; Gal. 6:8). The power of Christ's life, manifested in his resurrection, has already overcome sin (Rom. 5:10) and brought to light his indestructible life (II Tim. 1:10). The believers are destined eventually to share in the glory of Christ (e.g., I Cor. 15:43; II Tim. 2:10; cf. I Pet. 5:1, 4, 10; Rev. 2:10), but that glorious life is still "hid with Christ" (Col. 3:3-4; cf. Rom. 8:35), because throughout this earthly life we must first participate in the suffering of Christ (e.g., Phil. 1:20; cf. II Cor. 4:7-12; 6:9). On account of the saving activity of the risen Christ, Paul notices how the believer's body of sin is gradually made subservient to the Lord's redemptive goal (e.g., Rom. 6:12-13; 8:11; 12:1). Nevertheless, only through the gift of a new spiritual body in the final resurrection (I Cor. 15:44, 51; II Cor. 5:1-5; Phil. 3:21; I Thess. 4:13-18) will the individual be able fully to actualize his new life.

Paul usually describes the manifestation of the life of the risen Lord as the work of the Holy Spirit. However, when he says that "the Lord is the Spirit" (II Cor. 3:17), he does not identify the two, but rather states that the life-giving work of the Spirit (e.g., I Cor. 15:45; II Cor. 3:6) has reached its goal in the risen Lord. Whereas the Spirit's power manifests itself in general in the lives of all the mortal creatures, in Christ it is realized in a way which is in accordance with the Spirit's own unlimited duration—i.e., as a never-ending life (Rom. 6:9). In the Lord's resurrection the work of the Creator was completed. Over against mortal Adam (Rom. 5:12; I Cor. 15:22, 45-49) the "man in Christ" is a new creation (II Cor. 5:17; cf. Rom. 6:4), which bears fruits of new life

(Gal. 5:19-22; cf. I Cor. 15:58; Gal. 6:8; Eph. 5:5, 9); i.e., he acts in the power of the risen Lord and performs spontaneously the will of God (Eph. 6:6; cf. Rom. 8:12; I Cor. 14:1; Gal. 5:22-25). His life is therefore one of living for Christ (Rom. 6:11, 13; II Cor. 5:15; Gal. 2:19-20; Phil. 1:20-22). Thereby he is enabled to know God (I Cor. 13:12) and to realize that earthly goods yield no real satisfaction (I Cor. 7:29-31). This effective operation of the Spirit is in turn taken by Paul as a guarantee that the believer has been made new (Rom. 8:23; II Cor. 5:5), and that he will therefore be raised from the dead (II Cor. 5:5; Phil. 1:6; II Tim. 1:10). For the work of the Spirit is a sign that Christ's love surrounds and protects us (Rom. 5:5; 8:35).

LIFE, BOOK OF [Τὸ βιβλίον τῆς ζωῆς; ὁ βίβλος ζωῆς]. A heavenly book in which the names of the righteous, as predetermined by God, are inscribed (cf. Ps. 139:16; I Enoch 104:1; Luke 10:20; Phil. 4:3; Heb. 12:23; Rev. 13:8; 17:8; 21:27; I Clem. 45:8). There is a corresponding book of destruction for the wicked (I Enoch 81:4; Jub. 30:22; Test. Levi 5:4). In the main the concept was predestinarian; however, through apostasy, e.g., a name might be removed; or possibly, through repentance, it might be added (cf. Ps. 69:28; Jub. 30:22; Rev. 3:5; Herm. Vis. I.3). Related to these books of life or of destruction are books of destiny, which predicted—if, indeed, they did not predetermine—future events. Notable examples are the book of seven seals in Rev. 5:1 ff and the heavenly tablets which Enoch (81:1-3) saw in heaven (cf. also Ezek. 2:9-10; Rev. 10:8 ff; Herm. Vis. II). These deterministic heavenly books remind one of the Babylonian concept that the zodiac with its constellations was a heavenly tablet controlling the destinies of mankind.

Heavenly books in which the deeds of men, good or evil, are recorded after they have occurred, not predicted or detemined beforehand, are obviously somewhat different (cf. Dan. 7:10; 12:1; II Esd. 6:20; I Enoch 47:1; II Bar. 24:1; Rev. 20:12, 15; Herm. Sim. II.9; Ascension of Isaiah 9:22). Some of these are to be opened at the Last Judgment.

LIGHT, LIGHT AND DARKNESS [Light: *usually* אור; φῶς; Darkness: חשך, אפל, ערפל; σκότος, σκοτία]. **1. "Light" in the OT.** For the ancient Hebrews, light is one of the primal phenomena of this world (e.g., Job 38:19). Created prior to and independent of the heavenly luminaries (Gen. 1:3-5), light is the most general and most adequate manifestation of divine operation in a world which apart from it is darkness and chaos. The ancient Hebrews did not differentiate between natural and supranatural light. The phenomenon of dawn prior to sunrise was to them an evidence that God pursued a special goal in creating this world. The dawn indicates that darkness will not last and reign forever (e.g., Ps. 130:6; Hos. 6:3, 5). Light is therefore the essence of all the gifts through which God blesses his creatures.

This view implies that light is a substance or an energy which brings about certain effects in this world, and that it is primarily for man's benefit that the light shines. It is only in exilic times that we have clear evidence that light and the sun are seen in a causal connection (e.g., Isa. 60:19); and this fact, in turn, is clear proof that the high regard in which light was held in the Hebrew religion was at no time connected with the worship of the sun. The metaphorical use of "light" is rooted in the creation story.

The constant rhythm of night and day prevents a strictly dualistic view of the universe. Though light and darkness are opposites, the latter is as real as the former. Darkness is not merely the absence of light. The religious interest the Bible takes in light concerns the benefits which it imparts, rather than its nature. Hence it is practically impossible to differentiate between the natural and the metaphorical usage of the term. God is the creator of light and darkness (Isa. 45:6-7), he has made his covenant with day and night (Jer. 33:25; cf. Ps. 148:3-6; Jer. 31:35-36)—i.e., he watches over their orderly succession (e.g., Ps. 104:20; Amos 4:13). All things were originally in the darkness, which is, as it were, the womb in which everything exists. But through light God uncovers them (Job 12:22; cf. Dan. 2:22). Thus it is God's will that light and darkness shall coexist in this world. However, light curbs darkness (Pss. 91:5; 139:11-12); and since both are energies, this activity entails conflict. In this conflict, light by its limiting power proves its superior value (Eccl. 2:13).

Many are the effects of light. It is, above all, the source of life (e.g., Eccl. 11:7). "Seeing the light" is frequently used as a synonym for "being alive"

(e.g., Job 3:20; Ps. 49:19) or "being born" (e.g., Job 3:16); cf. the "light of life" (Job 33:30; Ps. 56:13—H 56:14). Since life is not only truly life unless it can be enjoyed, "light" often designates the pleasures of life (e.g., Job 10:22; 30:26; Ps. 97:11; Isa. 45:7; 60:19-20; Amos 5:18, 20). The phrase "Light dawns for the righteous" (Ps. 97:11; cf. Job 18:5; 38:15; Ps. 112:4) means that he sees good days. "In thy light do we see light" (Ps. 36:9) has originally nothing to do with knowledge, as Augustine interpreted it, but rather it states that man is happy when God's light shines upon him. In a more general way, light in the OT designates "salvation" or "rescue from danger," because salvation implies good days or happiness. The two concepts can hardly be separated in the OT, because all good fortunes are God's blessings—e.g., "When I sit in darkness, the Lord will be a light to me" (Mic. 7:8-9; cf. II Sam. 22:29; Pss. 18:28; 27:1-2; Isa. 9:2; 10:17).

In addition to life, light brings order to this world. This idea starts probably from the fact that the dawn appears with great regularity, so that the coming of light is the prototype of all order. At the same time, through the light the things in this world are shown in their relation to one another, and thus light becomes the source of knowledge. With the practical outlook of the OT, the two aspects are closely related. Order must manifest itself as underlying the whole of Creation if people are to walk accordingly. Light and truth are thus coupled in Ps. 43:3, and light symbolizes God's law in Ps. 19, where the regularity of the revolutions of the heavenly luminaries (vss. 1-6) points to God's law (vss. 7-13; see also Ps. 119:105; Prov. 6:23; Isa. 51:4). According to the dynamic realism of the OT, the light of truth and law operate upon man both by imparting knowledge (e.g., Pss. 19:8—H 19:9; 139:11-12) and by guiding him (e.g., Deut. 28:29; Job 12:24-25; 22:28; 43:3; 78:14; 119:105; Prov. 4:18; 6:23; Isa. 42:16; cf. Job 29:3; Ps. 43:3; Isa. 2:5; Mic. 7:8).

As a result of the reciprocal relationship between light and man, the recipient of light becomes a light himself. He shines both outwardly (Ps. 34:5; Eccl. 8:1) and inwardly, having been made wise by God's light (e.g., Prov. 4:18; 20:27; Eccl. 2:13-14; Dan. 5:11). Thus faithful Israel is to become a light for the Gentiles (Isa. 49:6; 60:3, 5; 62:1).

Similar views are found in other religions. The peculiar character of the OT view, however, lies in the fact that the wholesome effects of light are contingent on righteousness (Job 22:21, 28); that the rhythm of darkness and light is dependent exclusively on God's behest (Isa. 50:3; Jer. 4:23 ff; Amos 5:20), who can change it at will (e.g., Josh. 10:12-13; cf. Matt. 27:45); and that the light carries judgment with it (Ps. 37:6; Isa. 10:17; 51:4; Hos. 6:5; cf. Ps. 90:8). All this results from the fact that the manifestations of light are God's own work (Pss. 44:3; 89:15—H 89:16; 119:130), who dwells in light (Exod. 13:21; Ps. 104:2; Dan. 2:22; cf. Job 37:21; I Tim. 6:16).

The "light of God's face" shines upon his people (e.g., Num. 6:25; Pss. 4:6—H 4:7; 31:16—H 31:17; 44:3—H 44:4; 80:7; 90:8). This personalization of the work of light explains the eschatological hope that eventually the rhythm of darkness and light will give way to an eternal day, when God will be his people's light (e.g., Isa. 30:26; 60:19-22; Hos. 6:3; Zech. 14:7; cf. Eccl. 12:2; Isa. 2:1; 42:6; Rev. 21:23; 22:5).

2. "Darkness" in the OT. Strictly parallel with the view of "light" runs that of "darkness" or "night." In the beginning of Creation, darkness brooded passively over the primeval ocean (Gen. 1:2), and this darkness represents the original condition of the world. That this is not a "mere possibility rejected by God in the act of Creation" (K. Barth) can be seen in the power darkness has over the creatures (e.g., Job 12:24-25; Isa. 59:10; Jer. 13:16; 23:12; cf. Luke 22:53). Being originally related to chaos, darkness manifests itself as bad luck, evil fate or affliction (e.g., Job 17:12; 21:17; 29:3; Pss. 18:28—H 18:29; 23:4; Isa. 5:30; 8:22-9:1—H 8:22-23; Zeph. 1:15), and particularly death. There is no light in Sheol (e.g., Job 10:21-22; 38:17; Pss. 49:18—H 49:20; 88:11-13; Eccl. 6:4; Isa. 45:19).

Since light is the manifestation of God's nature, darkness also designates ignorance of God's saving and demanding will, and thus it is the sphere, or rather the source, of sin and iniquity (e.g., Job 18:5-6; 24:13-17; Pss. 10:8, 11; 74:20; Isa. 21:11-12; 29:15; 59:9; cf. Rom. 13:12; Eph. 5:8-12). By its superior power, light, which manifests God's own purpose, is enabled to disclose the true nature of darkness (e.g., Job 34:21-22; Ps. 139:11-12), thereby passing judgment on it (e.g., Isa. 5:30; 13:10; Jer. 4:23-24; Joel 2:1-2, 31; 3:14-15) and delivering people from its sway (e.g., II Sam. 22:29; Job 29:3; Pss. 23:4; 139:11-12; Isa. 50:10; Mic. 7:8-9; cf. Luke 1:79).

3. "Light" in the NT. NT usage follows, on the whole, that of the OT. Unlike Hellenistic mysticism, in which light is identified with God, the NT emphasizes that light is a divine gift. While God dwells in the light (I Tim. 6:16), this brightness or GLORY of God is not itself imparted to man. Accordingly, there is no divine spark residing in human nature. Whatever light a person has has been received from God. This continuation of the OT view explains the absence of cosmological speculations about light and darkness in the NT. All the NT references to light are dealing with the function it has in the execution of God's saving purpose.

As the "Father of lights," God is the fountain of all good gifts (Jas. 1:17). Several of the OT passages referring to the light of salvation are quoted in the NT (e.g., Matt. 4:16; Luke 2:32; Acts 13:47; cf. also John 1:4; 8:12; 11:9; Acts 2:20; I Pet. 2:9; Rev. 18:1), and the evaluation of the OT as a lamp or light is taken over (e.g., II Pet. 1:19). The term "light" is particularly used to designate the fact that it is through a divine revelation (e.g., Acts 9:3; 22:6, 9; Eph. 5:13; II Tim. 1:10; cf. Eph. 3:9) that men have been made aware of Christ's redemptive work. Revelation speaks of candlesticks that are placed in front of the heavenly Christ (Rev. 1:12-13, 20), and says that he has given one to each congregation (Rev. 2:5), symbolizing his revealing light. Conversion is described as illumination (e.g., Heb. 6:4; 10:32; cf. II Cor. 4:4-6), and this gift is a sign of election (e.g., Eph. 5:13; I Pet. 2:9). Thus for practical guidance the life of faith relies on the heavenly light (e.g., Rom. 13:12; Eph. 1:18). For by its coming from God

the light makes visible what is and what is not in agreement with the Lord's will (e.g., Rom. 13:12; I Cor. 4:5; Eph. 1:18; 5:13; Heb. 10:32; cf. John 3:21; Eph. 5:11) and thereby divides mankind forever. This is the judgment (John 3:17-21; 8:15; 12:47).

More frequently than the OT, yet following a tendency already found there and intensified in the intertestamental Judaism, the NT emphasizes that the believers, or the whole people of God (Acts 26:23; Col. 1:12; I Pet. 2:9), are "sons of light" (Luke 16:8; John 12:36; I Thess. 5:5; cf. Eph. 5:8). They have been so cleansed and transformed by the power of the heavenly light that they are the "light of the world" (Matt. 5:14; cf. Mark 4:21-22; Luke 2:32; Acts 13:47; Phil. 2:15). Whereas the OT, when speaking of the light, lays the emphasis upon the value it has for people, the NT stresses the believers' responsibility to act according to the light imparted to them (Matt. 6:22-23; Luke 11:34-36; John 9:4; 12:46-47; II Cor. 6:14; I Thess. 5:4-8; I John 2:10), because as a result of inactivity or indifference the gift may be lost (e.g., John 5:35; 12:35; I Thess. 5:5-6). Consequently they must use that heavenly light as their armor or weapon (Rom. 13:12; Eph. 6:12; I Thess. 5:8; cf. Matt. 6:23) in their fight against the powers of darkness. By doing so they will not only bear fruits of the light—i.e., act in accordance with God's will (Eph. 5:9)—but also make that light shine forth for the rest of mankind (Matt. 5:16; 10:27; Luke 8:16; 11:33; 12:3; Acts 13:47; cf. Rom. 2:19).

Some entirely new features in the NT usage of "light" are called forth by the change in the eschatological situation brought about by Jesus. Instead of the intermittent manifestations of the heavenly light characteristic of the old aeon (*see* TIME), in which light and darkness alternate, as in the natural order, the light is now permanently present in Jesus Christ (Matt. 4:16; John 1:7-9; 8:12; 9:5; 12:46; Eph. 5:14; Heb. 1:3; cf. Matt. 17:5) and in the GOSPEL (e.g., Acts 26:23; II Cor. 4:4), through which the operation of his light is continued. Christ's coming announced the dawn of the New Age, which will never be followed by a night (Rev. 21:23; 22:5). The children of light are therefore the rulers of the world forever (Rev. 22:5; cf. I Pet. 2:9; Rev. 1:6). Though they are still surrounded by darkness (e.g., John 1:5; 8:12; 12:35, 46; Acts 26:18; II Cor. 6:14; Eph. 6:12; I Thess. 5:4; cf. John 3:19; I John 3:9, 11), the night is nearly spent (Rom. 13:12), and Christ is shining as the morning star (Rev. 2:28; 22:16). The darkness will be dispelled as a result of their splendor (Col. 1:12; I John 2:8; cf. Jas. 1:17) and of Christ's Parousia (Rev. 21:23-24).

As a result of this Christocentric and personalized view of light, darkness appears in two different ways. It may be the natural condition of man who has not yet been "enlightened" (John 1:4-5; 12:35, 46; Eph. 5:14), or it may be the result of one's turning away from the light (John 3:19-20). The former condition, though a deficiency, can nevertheless be remedied, because God's light shines to all men (John 1:9; 11:10; Eph. 5:14; I Thess. 5:5-7); whereas of the latter condition men should be ashamed (Eph. 5:12; cf. John 3:20), for it is the devil's work in them (II Cor. 6:15; 11:14; Col. 1:13; I Thess. 5:4-5). By their self-inflicted darkness people are rendered spiritually blind (Acts 26:18; I John 2:9-11; cf. John 9:39-40), and if persisting in it bring upon themselves everlasting doom (Col. 1:13; II Pet. 2:17; Jude 13). The designation "outer" and "extreme" darkness (e.g., Matt. 8:12; 22:13; 25:30), used for the eschatological state of the doomed, indicates that darkness, though it is not destined ever to vanish from this world, yet will be permanently curbed.

John, who has a rather elaborate theology of light, thereby probably reflects his Jewish-Hellenistic background. However, over against the idealistic and naturalistic tendencies of the Hellenistic theology of light, John stands close to the Qumran "Hymns of Praise." He emphasizes that God "is light" (I John 1:5); this form of speech characterizes him as the source or creator of light (cf. John 4:24; I John 4:16), rather than as a substantial light; and by stating that Jesus is the light of the world (John 8:12) the Fourth Gospel points out that God's full blessing to mankind (John 9:5) is tied up with a definite historical event. Though the operation of the eternal Logos implies the shedding of light (John 1:9), full salvation can be found only where he is present as the incarnate One or in his proclamation (John 12:35-36; cf. 9:4). In turn, since the coming of the light manifests God's love, true life in the light consists in keeping Jesus' commandments, especially in loving one's brother (I John 1:7; 2:8). He who hates his brother is therefore in the darkness (I John 2:11).

LIGHTNING. *See* THUNDER AND LIGHTNING.

LIGNALOES līn ăl′ōz [Vulg. *lignum aloes,* wood of aloes]. KJV translation of אהלים (RSV ALOES) in Num. 24:6.

LIGURE lĭg′yo͝or. KJV translation of לשם (RSV JACINTH) in Exod. 28:19; 39:12.

LIKHI lĭk′hī [לקחי] (I Chr. 7:19). A Manassite. The name may be the result of an error for Helek (חלק, "portion"), which stands in the related lists of Num. 26:30; Josh. 17:2.

LILIES. *See* MUSIC.

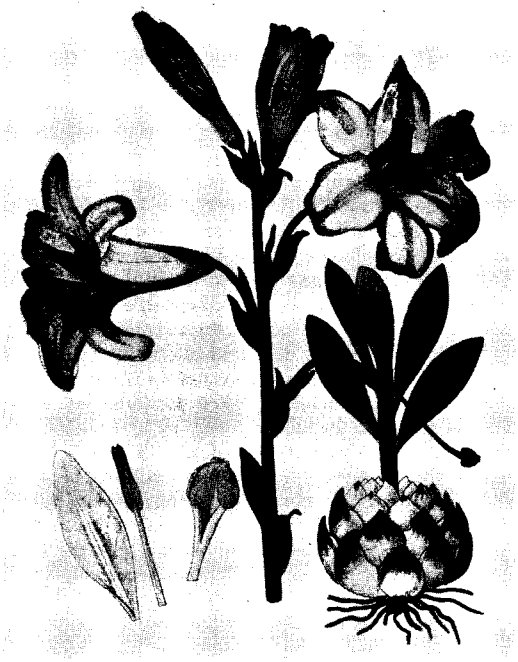
LILITH lĭl′ĭth (RSV NIGHT HAG) [לילית, *lîlîth;* Akkad. *lilītu;* LXX ὀνοκένταυρος; Vulg. *Lamia*] (Isa. 34:14); KJV SCREECH OWL. A female demon who was believed to haunt desolate places. She is identified in a Canaanite charm of the eighth century B.C., and likewise in postbiblical Jewish literature,

with the child-stealing witch Lilith of world-wide folklore. The name derives from Sumerian *lil,* "wind" (i.e., "spirit"), and has nothing to do with Hebrew *lāyil,* "night," as was formerly supposed.

See fully DEMON, § A4*a*. T. H. GASTER

LILY [שׁוּשָׁן, *šûšan, šôšān (masculine);* שׁוֹשַׁנָּה, *šôšannâ (feminine), from* Egyp. *sšn;* κρίνον]. A flower of the *Liliaceae* family, or perhaps any showy flower with the general appearance of the lily. There is little agreement concerning the original meaning of the above Hebrew words. The Egyptian *sšn* was the sacred lotus water lily, *Nymphaea lotus* L., common along the edges of the Nile; it was the inspiration of the earliest pillar capitals in Egypt (cf. I Kings 7:19, 22), as well as prominent on reliefs and paintings.

Although the LOTUS may have once grown along the Jordan River, there is no evidence of it in the Holy Land today, and it seems unlikely that the Hebrew word ever referred directly to it. It may have come into the language meaning "lotuslike," and may have been applied to a certain Palestinian flower or to several. צְאֲלִים, *ṣe'ᵉlîm,* in Job 40:21-22 may possibly be a biblical reference to the Egyptian LOTUS, but it is not so considered by most scholars.



From *Plants of the Bible* (London: Crosby Lockwood & Son, Ltd.)

28. Lily (*Lilium candidum* L.)

The form of the capitals of the pillars of JACHIN AND BOAZ ("lily-work"; I Kings 7:19, 22) and the rim of the "molten sea" (I Kings 7:26=II Chr. 4:5) in Solomon's temple may have been inspired by the lotus through Egyptian architectural influence (Fig. TEM 28). It could already have carried the meaning "flower," implying a stylized lilylike form (*see* TEMPLE, JERUSALEM). The prominence of the lotus on Canaanite Astarte plaques and Syrian god representations (*ANEP* 469-70, 472-75, 566; cf. 314-16) would suggest a wider Egyptian influence of this flower than previously thought, and may indicate an original meaning "lotus" for *šûšan.* The only lily in Palestine which could possibly have been intended, *Lilium candidum* L.,* does not fit any of the passages where these words appear in the Bible. *See* FLORA § A10. Fig. LIL 28.

The "lily of the valleys" in Song of S. 2:1 (cf. 6:11) is not the flower to which this expression normally applies today, *Convallaria majalis* L. (not found in Palestine), but would indicate a general reference to the many springtime flowers, or perhaps some predominant flower. The next verse refers to a "lily among brambles." Several times the idea of animals' feeding among "lilies" appears in these love songs: 2:14; 4:5; 6:3 (cf. 6:2). These passages bring to mind the springtime flower-studded open fields with their grazing flocks. "His lips are lilies" (5:13) could be a poetic allusion to shape rather than color, and therefore may not require a red flower. Although the evidence points to a relatively late date for the writing of the Song of Songs, the secular nature of these "wedding songs" raises the possibility of a connection between their use of *šûšan* and the Canaanite Astarte figurines holding the lotus flower, despite the evidence of the contexts to the contrary.

In a figure of the restoration of Israel (Hos. 14:5), "He shall blossom as the lily" implies both beauty and abundance, again bringing forth the vision of the colorful hillsides and valleys of springtime.

"Consider the lilies of the field" (Matt. 6:28=Luke 12:27) is the most widely discussed allusion to the lily. The Greek κρίνον is more specific, usually referring to the *Lilium candidum* L., the white Madonna lily, even though the nature of the growth of this woodland lily clearly argues against its use in this context. The white lily has nevertheless played an important part in Christian symbolism through the centuries. Although many scholars think that Jesus intended specific flowers in his figure, the tendency today is to consider it a reference to the many prominent flowers so well known to Jesus' listeners. In the Holy Land one may be impressed with the progression of the brilliant scarlet anemones (*Anemone coronaria* L.), ranunculi (*Ranunculus asiaticus* L.), and poppies (*Papaver rhoeas* L. and *P. syriacum* Boiss. et Bl.), which appear in this order from late January to early May. Their similarity, abundance, delicate structure, and brilliance, appearing over such a long period of each year, would argue in favor of their having been in the mind of Jesus as he spoke. The distinctions between these flowers are not clearly apparent. Either the above predominant flowers or flowers in general would seem to be the best interpretation of the passage. Although yellow flowers seem to dominate the Galilean hillsides today, the scarlet flowers among them make a vivid impression. Jesus thought the array of the flowers of the field exceeded that of Solomon in all his glory.

Ecclus. 39:14; 50:8 may refer specifically to the *Lilium candidum,* or even the lotus, but could also be taken in the general sense of any flower.

SUSA (Shushan; Neh. 1:1, etc.), the winter residence of Persian kings, received its name from the lily, probably the *Fritillaria imperialis* L., which is still abundant in Persia.

For the references in the titles of some of the Psalms, *see* SHOSHANNIM. *See also* FLOWERS; SUSANNA.

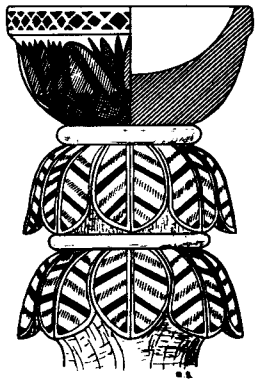
LILY-WORK [מעשה שושן] (I Kings 7:19, 22). Decoration on the bowl-shaped capitals (I Kings 7:41) of the free-standing columns, JACHIN AND BOAZ, at the vestibule of Solomon's temple; and the part of the column immediately below the capital probably bore a similar decoration (*see* PILLAR). The lily motif was most likely suggested by the resemblance of the bowl-like capitals to the open calyx of a flower, a resemblance specifically noted in the case of the "molten sea" (I Kings 7:26).* Two incense altars from Megiddo illustrate the probable nature of lily-work. The first, a pottery altar, has stylized petals or leaves around the rim of the bowl with a second row a little farther down on the stand (Fig. INC 4). The other Megiddo altar, a more elaborate object, has the bowl decorated with lotus buds and open flowers



Courtesy of the Oriental Institute, the University of Chicago

29. Drawing of an incense stand, from Megiddo (*ca.* 1000 B.C.)

with two registers of downward-folding leaves below (Fig. LIL 29). Since this limestone incense stand resembles a pillar, it provides the closest analogy to the lily-work mentioned in I Kings. Fig. LAM 11.

Bibliography. H. G. May and R. M. Engberg, *Material Remains of the Megiddo Cult* (1935), pp. 20-23, plate XX; H. G. May, "The Two Pillars Before the Temple of Solomon," *BASOR*, 88 (1942), 19-27. L. E. TOOMBS

LIME [שיד, *cf. denominative verb* שיד (Deut. 27:2, 4), to whitewash; LXX κονία, a potash or alkali powder used as soap; Vulg. *cinis*, ashes]. A caustic, highly fusible solid, white when pure, obtained by calcining limestone, shells, etc.

Palestine limestone is a carbonate of lime, which, when heated, becomes quicklime, a chief ingredient of mortar. In Isa. 33:12 "lime" appears in connection with burning in a figure of ignominious destruction; the text could mean "burned to lime" (RSV) or a "burning of lime"—i.e., by lime. The former is more in keeping with Amos 2:1, which says that Moab will be visited because he burned the bones of the king of Edom to lime. Since the lime of these two

Courtesy of Herbert G. May

30. A Palestinian limekiln

passages is the result of the burning of bones, it must have been a phosphate of lime. In Deut. 27:2, 4, the word is translated "plaster."

Lime was produced for use as plaster of walls, floors, cisterns, etc., or for other purposes by burning crushed limestone in kilns (Fig. LIM 30). Slaked lime was used in setting the dye in preparing woolen cloth. W. E. STAPLES

LINEN. The growing of flax (פשת) was not limited to Egypt, though that country was doubtless the most productive area for it in the ancient world. Specific biblical references indicate that it was raised also in Palestine—e.g., at Jericho (Josh. 2:6); cf. also the notice of the month for the plucking of flax in the Gezer Calendar (*see* INSCRIPTIONS § 3; CALENDAR § 3*b*). In Talmudic times it was grown around Beth-shan and Arbela. Egyptian linen was celebrated in antiquity, and extant pieces of royal linen are so finely woven that they cannot be distinguished from silk without the use of a magnifying glass. Even ordinary linen was of excellent quality.

Flax culture requires fertile soil for abundant production and good quality. When the stalks were ripe, they were pulled up by the roots, tied in bundles, and shocked to dry or spread upon a flat roof. When dried, the seed pods were removed and the stalks placed in a steeping pond, where they were weighted down with stones. They were allowed to remain there until they had softened to the point where the fibers could easily be separated. Then they were wrung out, dried in an oven, bleached, and cleaned. Finally they were pounded to loosen the fibers, then twisted into strands and combed to separate them from tow when it was ready for delivery to the spinners.

The spinners spooled the threads on the distaff; after this they were ready for the weaver (*ANEP* 42, fig. 143). *See* CLOTH § 5.

While there is no indication of colored linen in the Bible, we do know that there was such in Egypt (tomb of King Tut-Ankh-Amen). Blue linen threads were used in some of the textile materials found with the Qumran Scrolls (*see* CLOTH § 2*c*). Ordinarily garments were of bleached linen, though those of the wealthy were often interspersed with colored threads as bands or otherwise decorated. According to I Chr. 4:21, there was a family or guild of linen workers at

Beth-ashbea, and linen designers were present among the Israelites in the time of Moses (Exod. 35:35; 38:23).

Linen was commonly used for all kinds of clothing, for the swathing of the dead, bed sheets, curtains, and in the varied colored patterns of weaving. It was especially desirable for summer wear because of coolness. Imported linen was an item of luxury. The Egyptian mummies were bandaged exclusively with linen. The priestly garments and vestments were all made of this product of flax—undergarments, headgear, tunics, etc. It was also used for sails for ships and as wrappers for scrolls.

There are a number of words translated "linen":

a) בד (LXX λίνον, βύσσινος), a word used in connection with the linen garments of the high priest (Lev. 16:23, 32), in which he carried out the ritual of atonement. The regular garment proper for conducting the burnt offering (Lev. 6:10—H 6:31) was linen. The linen garments of the priest consisted of the holy coat (Lev. 16:4), the breeches (Exod. 28:42; 39:28; Lev. 6:10—H 6:31; 16:4), the girdle (Lev. 16:4), and the turban (Lev. 16:4). The ephod was also made of linen (I Sam. 2:18; 22:18; II Sam. 6:14; I Chr. 15:27). The scribe with the six men in Ezekiel's vision was clothed in linen (9:2-3, 11; 10:2, 6-7), as was the man in Daniel's vision on the banks of the Tigris (10:5; 12:6-7).

b) שש (LXX βύσσος, βύσσινος), "fine linen," limited by tradition to Egyptian linen. When Joseph was made minister by the Pharaoh, he was arrayed in שש (Gen. 41:42). The offerings collected from the people for the tabernacle and its furnishings were also of this kind of linen (Exod. 25:4; 28:5; 35:6, 23, 25). The same is true of the tabernacle curtains (Exod. 26:1; 36:8), the veil (Exod. 26:31; 36:35), the screen for the tent door (Exod. 26:36; 36:37), the hangings for the tabernacle (Exod. 27:9; 38:9, 16), and the screen for the entrance of the court (Exod. 27:16, 18; 38:18). The priestly vestments—the ephod and its band (Exod. 28:6, 8; 39:2-3, 5), the breastpiece of judgment (Exod. 28:15; 39:8), the checkerwork coat (Exod. 28:39; 39:27), the breeches (Exod. 28:42; 39:28), the girdle (Exod. 39:29), the turbans and caps (Exod. 39:28), and the pomegranate designs on the skirt of the robe of the ephod (Exod. 39:24)—all were of fine Egyptian linen.

c) בוץ (LXX βύσσος, βύσσινος), a fine white linen. This term replaced שש and does not occur before Ezekiel. The term is used in association with the Israelite family of linen workers noted above. Huramabi of Tyre was skilled in linen working (II Chr. 2:14). This linen was a valuable article of trade with Edom (Ezek. 27:16). David and the Levitical singers were clothed in linen garments when the ark was brought to Jerusalem (I Chr. 15:27), as were the members of the musical guild of the Solomonic temple (II Chr. 5:12). Mordecai wore a linen garment in the presence of the Persian king (Esth. 8:15). The veil of the temple was made of linen (II Chr. 3:14), and the hangings in the palace garden at Susa were held up with linen cords (Esth. 1:6).

d) פשתה (LXX λίνον, στιππύινος), "flax"—i.e., linen—apparently a more general term, as may be seen from the reference to leprous garments of flax and wool (Lev. 13:47-48, 52, 59) and the prohibition against the wearing of mixed clothes of flax and wool (Deut. 22:11). In a more specific sense the term is used of Jeremiah's waistcloth and the garments of the priests in Ezekiel's new order (44:17-18).

e) אמון (Egyptian *idmy;* Prov. 7:16), prized linen from Egypt.

f) Βύσσος, soft, fine linen. The rich man (Luke 16:19) wore clothes of such linen, and it was a valued article of trade brought to Rome (Rev. 18:12) by oriental merchants.

g) Βύσσινος ("material of βύσσος"), a linen garment. The term is used figuratively in Revelation to describe the luxury of the harlot city (18:16), the worthy raiment of the bride of the lamb (19:8) and the armies of heaven (19:14).

h) Σινδών, fine, costly linen (cloth). The young man who broke away on the night of Jesus' arrest had only such a linen cloth about him (Mark 14:51-52). The body of Jesus was wrapped in a linen shroud in preparation for burial (Matt. 27:59; Mark 15:46; Luke 23:53).

i) Ὀθόνη, a linen sheet or cloth. This term is used for the sheet let down from heaven, which Peter saw in a trance (Acts 10:11; 11:5).

j) Ὀθόνιον, a strip of linen used for swathing the dead (Luke 24:12; John 19:40; 20:5-7).

k) Λίνον, flax; linen as clothing, wick of lamp. This term is used of the apparel of the seven angels (Rev. 15:6) and the smoking wick (Matt. 12:20=Isa. 42:3; cf. Isa. 43:17).

In addition to these, the KJV uses "linen" in several other passages. On מקוה (KJV "linen yarn"; I Kings 10:28; II Chr. 1:16), *see* KUE. On סדין (KJV "fine linen"; Prov. 31:24; Isa. 3:23), *see* LINEN GARMENT. On שעטנז (KJV "a garment mingled of linen and woolen"; Lev. 19:19), *see* STUFF; CLOTH § 6.

Bibliography. S. Krauss, *Talmudische Archäologie,* I (1910), 138 ff; L. M. Wilson, *Ancient Textiles from Egypt* (1933); G. Dalman, *Arbeit und Sitte in Palästina,* V (1937), 23-30; L. Bellinger, "Report upon a Fragment of Cloth from Dead Sea Scroll Cave," *BASOR,* 118 (1950), 9-11; G. M. Crowfoot, "Linen Textiles from the Cave of Ain Feshkha in the Jordan Valley," *PEQ* (1951), pp. 5-31. J. M. MYERS

LINEN GARMENT [סדין; Akkad. *saddinu*]; KJV SHEET; FINE LINEN. A large rectangular sheet of linen, serviceable as a garment or as a cover. Because of its size and nature, it was quite valuable and highly prized. The term is used of the thirty sheets wagered by Samson on his riddle (Judg. 14:12-13), of one of the products of the industrious housewife (Prov. 31:24), and of one of the luxuries of the women of Jerusalem (Isa. 3:23). In later Jewish literature the word refers to the light summer garment. It was used for sails, curtains, bedspreads, and runners to protect carpets or rugs from being soiled.

For other occurrences of "linen garments" as a literal translation, *see* LINEN; DRESS AND ORNAMENTS.

J. M. MYERS

LINTEL [משקוף, אויל; KJV כפתור (RSV CAPITAL)]. A wooden beam above the door. In I Kings 6:31, which is obscure, the meaning may be that the lintel in this case, instead of a horizontal beam, was two beams meeting at an angle, suggestive of the tent which originally contained the ark. In the Pass-

over the lintel and the doorposts were sprinkled with blood (Exod. 12:22-23).

O. R. SELLERS

LINUS lī'nəs [Λίνος] (II Tim. 4:21). A Christian man who sent greetings to Timothy. An untrustworthy tradition in the Apostolic Constitutions 7.46 makes him the son of Claudia, who is found in the same verse. Linus in rescued from the obscurity surrounding so many others who are briefly mentioned in the NT letters by the tradition, first found in Irenaeus (Her. III.3.3) that the apostles Peter and Paul, after they had founded the church in Rome and set it in order, made Linus bishop of that church; at the same time he identifies him with the Linus of II Timothy. Many later church fathers repeat this tradition of Irenaeus, though Tertullian (Presc. Her. 32) implies that Clement was the first subapostolic bishop of Rome.

Many questions, difficult or impossible of solution, have been raised concerning Linus. First, is the identification of the Roman bishop with the Linus of II Timothy correct? Did Linus assume office before the death of Peter, and what was the nature of his power? Was he bishop jointly with Clement, or did each of them rule over part of the Roman church?

Eusebius (Hist. III.13) says Linus was bishop twelve years; a likely dating would be *ca.* A.D. 64-76. The Roman Breviary says he was born in Volterra in Etruria and martyred by the consul Saturninus; the latter statement seems unlikely, since there were no outstanding martyrdoms between Nero and Domitian. The Western church honors him September 23.

F. W. GINGRICH

LION [אריה, אריה (*so also* Aram.; Dan. 7:4, *etc.*), *cf.* Akkad. *arū;* כפיר, *possibly* covered one (*i.e., with mane*) *or* concealed one (*i.e., a tricky prowler*), *cf.* Arab. *kapara,* to cover, conceal; לביא, *lābhî'* (לבי *in* Ps. 57:4—H 57:5; Nah. 2:13; לביא, *lebhîyā', in* Ezek. 19:2), *cf.* Ugar. *lb', lbit;* Arab. *labā'a, etc.;* ליש (Job 4:11; Prov. 30:30; Isa. 30:6), *cf.* Arab. *laish;* Akkad. *nēšu;* שחל, *perhaps* noisy one, *cf.* Arab. *saḥala,* to bray (*of an ass, mule*); λέων; Lat. *leo*]; KJV LION'S WHELPS [בני שחץ, sons of pride] (Job 28:8; RSV PROUD BEASTS; cf. 41:34—H 41:26). A large carnivorous quadruped (*Panthera leo* or *Felis leo*) of a tawny color, and with a tufted tail, the male usually with a mane.

The lion of Palestine belonged to the Asiatic or Persian lion, *Panthera leo persica* Mey. Contrary to earlier assumptions, this subspecies contained maned lions, as well as the almost maneless, blackish-maned to pale-maned individuals. The mane stopped at the shoulders but covered most of the belly. Lions were common in Palestine in biblical times. They decreased until shortly after A.D. 1300. The last two reported lions were killed near Beisan (Beth-shan) and near Megiddo. In Mesopotamia lions died out only toward the end of the nineteenth century. Usamah ibn Munqidh gave us as late as the twelfth century very vivid descriptions of lion hunts in the Orontes Valley.

אריה (*'aryê*) is the most general word for "lion"; the others are all poetic names of strong lions in their full power. כפיר (*kᵉphîr*) is often translated "young lion," but there is little justification for distinguishing it in this way from the other general designations. In poetic parallelism it may be only a synonym for the different word for "lion" in the preceding line, as in Ps. 91:13; Ezek. 19:6; Hos. 5:14; etc.

The Assyrian sources indicate that lion-hunting was the sport of kings* (*see bibliography;* on the Syrian lion, see Aristotle *History of Animals* VI.31 [579*b*]). From the time of the judges (Judg. 14:5-9) through the age of Job (Job 4:10-11), and as late as the Mishna (B.K. 1.4; B.M. 7.9; Sanh. 1.4), Israel's literature has numerous references to these animals, including lionesses and cubs. While Samson (Judg. 14:6), David (I Sam. 17:34-36), and Benaiah (II Sam. 23:20) are credited with killing lions, others fared less well in such encounters (I Kings 13:24; 20:36; II Kings 17:25; M. Sanh. 1.4; on one method of capturing and killing lions, cf. Ezek. 19:4, 8; on lions in captivity, cf. Dan. 6). Generally speaking, the lion appears in the Bible as a bold, destructive creature, the bane of the flock (Amos 3:12), whose roaring inspires fear; Prov. 30:30 recognizes it as the mightiest of all the beasts. Although the lion, like all God's creatures, is sustained by divine providence (Job 38:39; Ps. 104:21), it is represented in forecasts of the future age of blessedness as being altogether absent (Isa. 35:9) or as domesticated (Isa. 11:6-7; 65:25). Fig. ASS 102.

The lion serves as a common metaphor or simile in the Bible. Thus "Judah is a lion's whelp" (Gen. 49:9); the wicked "lurks in secret like a lion in his covert" (Ps. 10:9); "a king's wrath is like the growling of a lion" (Prov. 19:12); Judas Maccabeus is "like a lion in his deeds" (I Macc. 3:4); etc. Even the Lord is likened to a lion (Job 10:16; Hos. 13:7), as is the devil (I Pet. 5:8). In Rev. 5:5 the Messiah is termed the "Lion of the tribe of Judah" (cf. 22:16)—a concept presumably resting on (*a*) the reference to Judah as a lion's whelp in Gen. 49:9, and (*b*) the view that the Messiah was a descendant of the house of David (cf. II Esd. 12:31-32).

The lion played a limited role in the religious symbolism of the ancient Near East. In Egypt it was associated with Horus and Re, while a number of goddesses manifested themselves as a lioness (e.g., Tefnut, Sekhmet).* Although in Babylonia, Ishtar and a lion are often grouped together, E. D. Van Buren (*see bibliography*) suggests that in early Mesopotamia "the lion was not the emblem of one particular god, but indicated that warlike strain which was latent in the character of most divinities." Later, when the natural lion was felt, despite its strength, to be inadequate to cope with evil spirits, its own powers were augmented by wings, etc., and it became a semidivine cherub, the *lamassu.* In the late Assyrian period the lion was seemingly regarded as a royal beast; thus weights, of the king's standard, were cast in the shape of a lion couchant. In Palestine the lion motif in the fine arts was established before the coming of the Hebrews, as we learn from the orthostat of a lion excavated in 1955 from a thirteenth-century Canaanite sanctuary at Hazor;* cf. the lions in the temple-palace at Tell Halaf and at Mari. It was Phoenician craftsmen who were responsible for the lions which graced Solomon's temple (I Kings 7:29,

36) and palace (10:19-20); cf. the lion faces of the cherubim carved on the paneling of Ezekiel's temple (Ezek. 41:15-19). A seal depicting a lion, and belonging to Shema the servant of Jeroboam, was found at Megiddo (*see bibliography*); whether at this time the lion was a Hebrew symbol of royalty is uncertain. The ivories found at Samaria supply other examples of the use of the lion motif.* For illustrations, *see bibliography*. Figs. LIO 31; ART 86; LIO 32.

In view of the above evidence, the employment of the lion as a symbol of power and ferocity by biblical writers, especially by the apocalyptists, is quite intelligible. Ezekiel's cherubim have as one of their four faces that of a lion (Ezek. 1:10; 10:14); the first of the great beasts to come out of the sea in Dan. 7:1-4 was a winged lion; the first of the four living creatures around the throne of God in Rev. 4:7 is described as "like a lion"; and in Rev. 13:2 the seven-headed beast rising out of the sea is said to have a mouth "like a lion's" (cf. 9:8, 17).

***LISTS, ETHICAL.** Two main types of ethical lists occur in the NT letters: (*a*) catalogues enumerating moral obligations of individuals in specified relationships within a household or community; (*b*) catalogues with more general ethical content.

1. Terminology
2. Cultural background of household codes
   a. Jewish
   b. Greek and Roman
3. Development of household rules in the NT
4. NT rules for life in community
5. The other ethical lists
Bibliography

1. Terminology. In Luther's German translation of the Bible, two lists in particular, Eph. 5:21–6:9; Col. 3:18–4:1, are headed by the word *Haustafel* (lit., "household table"), now a technical term designating such a catalogue of domestic duties, much as "table" is employed in the OT for the Hebrew לוח (LXX πλάξ; Vulg. *tabula*)—e.g., in Deut. 5:22—for the actual stone tablets containing the Decalogue (cf. II Cor. 3:3; Heb. 9:4). Another term, *Gemeindetafel* (lit., "community table"), designates a more inclusive code of rules governing conduct of members within the church, or toward those outside (e.g., I Tim. 2:1-15; 5:1-21; 6:1-2; I Pet. 2:13–3:7). More general ethical lists usually take the form of catalogues enumerating certain sins, or vices, to be "put off," or virtues to be "put on" (Col. 3:5-14; cf. Gal. 5:19-23). The background and origin of all such lists has been widely debated.

2. Cultural background of household codes. ***a. Jewish.*** In the OT the Decalogue provided a nucleus for domestic regulations in the Fifth Commandment (Exod. 20:12; Deut. 5:16), quoted in Eph. 6:2-3 (cf. Mark 7:10, followed by a list of sins in vss. 21-22). Respect for parents likewise occupies a prominent place in the Holiness Code (Lev. 19:3), as well as in imprecations appended to the Deuteronomic Code (Deut. 27:16; cf. Exod. 21:15, 17). Honor due to God is deduced from that accorded a father by his son and a master by his slave, in Mal. 1:6. Similarly, rabbinic teaching coupled Exod. 20:12 with Prov. 3:9, and Lev. 19:3 with Deut 6:13 (Ḳid. 30*b*). Philo frequently connects filial piety with duty to God, as do Tob. 4:3-5; Ecclus. 3:1-16, in the Apoc. A Hebrew household (בית; LXX οἶκος; Vulg. *domus*) frequently included not only husband, wife, sons, and daughters, but also daughters-in-law (Gen. 7:1, 7), or mother-in-law (cf. Mark 1:29 ff), as well as slaves with their children (Gen. 15:3; 17:23; 24:2). The Mishna lists together wife, children, and slaves, as exempt from certain religious duties required of the man (Ber. III.3; Suk. II.8). A woman was subject to her father's authority until transferred to that of her husband (Keth. IV.3), while a man's responsibility for certain actions of his wife, slave, son, or daughter is discussed in B.M. I.5. A Jewish household code, more inclusive than any in the NT, occurs in Ecclus. 7:18-36, embracing obligations to friends, wife, slaves, domestic animals, children (especially marriageable daughters), parents, the Lord and his priests, together with the poor, the dead, mourners, and the sick. Lists given by Philo include many of the same items, the chief addition being duty to one's country and its rulers. Among the Dead Sea Scrolls, the Manual of Discipline provides rules for a community, but none for households.

b. Greek and Roman. Among familial obligations stressed by Greek and Latin moralists, respect for parents is often joined with reverence for the deities. Pythagoras is credited by Diogenes Laertius with teaching that, next to gods and heroes, parents should receive highest honor (*Lives of Eminent Philosophers* VIII.2). Similar connections are made by

Epictetus (II.xvii), Marcus Aurelius (V.31), and in a work on the *Education of Children* attributed to Plutarch. Greek and Roman households included not only those related by kinship and marriage but also domestic servants. On the one hand, the Latin *familia* designated, first of all, the retinue of *famuli* or household slaves; on the other hand, the adjective *familiaris* applied to friends, even acquaintances. By rule of *patria potestas* a father had absolute authority over his children, and a wife, given *in manu,* was transferred from parental authority to that of her husband. Since domestic relations were conducted in accord with unwritten custom, problems arose on which Stoic moralists gave advice of rather general nature. Seneca (*Epistle* 94) refers to that part of philosophy which counsels a husband how to treat his wife, a father how to bring up his children, a master how to govern his slaves. Marcus Aurelius (V.31) asks: "How have you dealt with the gods, with parents, brothers, wife, children, teachers, guardians, friends, relatives, domestic servants?" Epictetus (II.xiv) speaks quite as broadly regarding duties of son, father, brother, citizen, husband, wife, neighbor, companion, ruler, and ruled. Plutarch, if he wrote the work mentioned above, says: "One must reverence deities, honor parents, respect elders, obey laws, submit to rulers, love friends, be discreet with women, affectionate toward children and not mistreat slaves."

3. Development of household rules in the NT. The fervid eschatological expectations of the primitive church had the effect of weakening family ties, as concerns of an age soon to pass away (Mark 10: 29-30; 13:12; cf. Matt. 8:21-22; 10:35 ff; Luke 12:52-53; 14:26). On such grounds, Paul could counsel everyone to remain in the state in which he was called; contracting marriage was held inadvisable, slavery a matter of indifference (I Cor. 7:17-35). Given this outlook, it is unlikely that, in I Thess. 4:4, the obscure phrase "to possess his vessel" (KJV) really means "to take a wife" (RSV), nor is the passage in which it occurs an incipient *Haustafel.* Although I Cor. 7:3-6 outlines mutual obligations of husband and wife, where both are believers, while vss. 12 ff treat special problems raised where one is an unbeliever, probably the earliest attempt to draw up a more comprehensive table of domestic relations is that in Col. 3:18–4:1. Here rules governing relations between slaves and masters, especially, probably bear upon the Letter to Philemon, where the Christian master of Onesimus is urged to accept him "no longer as a slave but more than a slave, as a beloved brother, . . . in the Lord" (vs. 16). That a domestic servant should be treated as a brother is taught in Ecclus. 33:31. Duties of wives and husbands, children and parents, are more briefly sketched in this list than in Eph. 5:22–6:4.

Some scholars believe that these and other such catalogues reflect current catechetical instruction given in preparation of converts for baptism (*see* EDUCATION, NT); they indicate that antecedents are to be sought in Judaism. Other investigators, pointing to similarities in content between these lists and those of Stoic moralists (*see* STOICS), maintain that the latter were taken over and adapted by early Christian teachers with only slight modifications; some suggest that in Colossians the table may be an interpolation, interrupting an original sequence from 3:17 to 4:2. Perhaps these two views are not mutually exclusive, for while some of the Greek terminology of the NT *Haustafeln* coincides with that of Stoic teachers, certain phrases used in them are characteristically Jewish. Examples in Col. 3:22 ff include "singleness of heart," "fearing the Lord," and "respect of persons" (partiality). Eph. 5:31 ff contains not only quotations from Gen. 2:24; Exod. 20:12, but other reflections of OT thought and language. The same is true of I Pet. 2:17 ff; 3:6; 5:5. On the other hand, requirements of a bishop, in I Tim. 3:2-7; Tit. 1:7-9, include qualifications from Hellenistic lists for a king, a general, and even a midwife.

4. NT rules for life in community. The Pastoral letters illustrate how tables of purely domestic duties could be adapted to the needs of church order. This is especially evident in I Tim. 3:4, 15, where a bishop must manage his own household well, in order to know how to take care of the congregation, which is God's household, as in Num. 12:7. Within this larger family, older men and women are to receive the respect due to father and mother; younger men and women are to be treated as brothers and sisters (I Tim. 5:1-2; cf. Matt. 23:8*b;* Mark 3:35). Yet ties of kinship are not broken, and filial responsibilities should not be shifted to the church (I Tim. 5:3-8). By the same token, Christian slaves whose masters are also believers must not take advantage of their brotherhood by failing to give them proper respect and service (6:2). That Christian masters should treat their slaves fairly (Eph. 6:9; Col. 4:1) is not repeated in the Pastorals.

Such community rules also urge the maintenance of good relations between church members and outsiders. Christian slaves of unbelieving masters should strive to give satisfaction, guarding the name of God and church doctrine from disrepute (I Tim. 6:1; Tit. 2:9-10; I Pet. 2:18 ff). On similar grounds, Christians are not only to pray for pagan rulers, but to submit to their lawful authority (I Tim. 2:1 ff; Tit. 3:1 ff; I Pet. 2:13 ff). If, in spite of good conduct, believers suffer unjust treatment, they should endure it patiently, following Christ's example; only they must never commit criminal acts justly punishable by the state (I Pet. 3:13 ff; 4:13 ff). Thus governmental authority might even be invoked to reinforce the moral code of the community.

5. The other ethical lists. Catalogues of pagan vices to be avoided sometimes accompany lists of household or community duties (Eph. 5:3-8; Col. 3: 5-9; I Tim. 1:9-10; Tit. 3:3; I Pet. 4:3). Such lists also occur quite independently of *Haustafeln* (Rom. 1:29 ff; I Cor. 5:10-11; 6:9-10; Gal. 5:19 ff; II Tim. 3:2 ff). In at least two instances they are placed in direct contrast to lists of virtues (Gal. 5:22-23; Col. 3:12 ff; cf. Eph. 4:25 ff; 5:2; Tit. 3:2). Some scholars hold that all such lists go back to the teaching of Stoic moralists; they point out that parallels are rare in the OT, or in rabbinic teaching, although represented in Hellenistic Judaism, in Wisd. Sol. 14:25-26, and the work of Philo on the *Sacrifices of Cain and Abel* (V.32). The list in Rom. 1:28 ff is headed by a Greek phrase (τὰ μὴ καθήκοντα, "improper conduct"), derived from the Stoic term for "duty," while

in the catalogue of II Tim. 3:2-4 nearly half the words do not occur in the LXX. Starting from such premises, it is suggested that the sins in Mark 7:21-22 are another example of the list-making activity of Hellenized Christianity, rather than a deposit from Palestinian tradition. Nevertheless, here every term occurs in the LXX, each (with the exception of ἀσέλγεια, "licentiousness") representing a Hebrew term. Moreover, the belief that evil thoughts and actions originate in the heart is typically Hebraic (cf. Gen. 6:5; Matt. 5:28).

A rabbinic catalogue of the heart's activities includes several sins listed in Mark 7:21-22 (Eccl. Rabbah I.16). Among the Dead Sea Scrolls, the Manual of Discipline lists certain counsels attributed to two spirits which contend within man's heart; counsels of the spirit of error include terms listed in Mark; several counsels of the spirit of truth coincide with virtues found in other NT lists (1QS IV.2 ff, 9 ff). While the scroll writer might have come under Hellenistic influence, evidence of this is lacking from his catalogues, which employ no terms borrowed from the Greek, but a purely biblical Hebrew vocabulary. If a community of Palestinian Jews residing near the Dead Sea drew up lists of this kind for its members, Jewish Christians may have done likewise. Even the reliability of the tradition attributing such a list to Jesus can scarcely be disproved by any objective criterion, although the esoteric device in Mark 7:17, as elsewhere, appears rather artificial.

In substance, the teaching of Mark 7:21-22 harmonizes with another saying of Jesus which likewise emphasizes the internal root of character, the human heart (Luke 6:45). It is further underscored by Paul's recognition of all virtue as the "fruit of the Spirit" (Gal. 5:22-23). The net result of the catalogue method, with its tendency to externalize both vice and virtue, the latter as something to be "put on," was a reintroduction of legalism. This limitation of formal ethical lists, whatever their actual content, may help explain their scarcity in the gospels.

O. J. F. Seitz

***LITERATURE.** In the broadest sense literature includes all that is written. Writing was originally used for merely practical purposes. In the OT many sorts of such "literature" are mentioned: commercial documents and accounts (cf. the Samaria Ostraca, letters (*see* Letter; Lachish), lists of state officials (I Kings 4), tax lists, population lists (Ezra 2), and other administrative documents. Even curses (*see* Blessings and Cursings) may early have been written with the magical letters to increase their power (Zech. 5:1 ff; cf. Ezek. 2:9 ff).

In the more restricted sense, however, literature designates artistic compositions, in poetry or in prose, which are related to the life and thought of a particular community. Biblical literature includes various genres or types which are similar in many respects to the literary pieces produced by Near Eastern and Greco-Roman antiquities.

1. Origins
2. Wisdom literature
3. Laws
4. Historiography
5. Poetic literature
   a. Popular poetry
   b. Epic poetry
   c. Sacral poetry
   d. Written texts
   e. Postcanonical religious poetry
6. Prophetic literature
   a. Prophetic sayings and poems
   b. Books
   c. Apocalyptic
7. Metrical forms

Bibliography

1. Origins. Behind practically all literary types and styles in the OT lies the oral stage transmitted by Tradition. In the times of the tribal amphictyony neither administration nor cult needed written texts. A written literature came into existence with the kingdom. For his political relations with the neighboring powers the king needed scribes (*see* Scribe), educated in the knowledge of international affairs and in forms of expression necessary for their work. The historical kernel which may be found in the idea of Solomon as the patron of the "wisdom" of the scribes, is in all probability that he organized a school for scribes in connection with palace and temple. Both the study of foreign languages and the education in the beautiful art of writing and in the proper conduct of a king's scribe made models and texts necessary. Thus Israel simply stepped into an interoriental literary tradition with fixed types and styles, each of them according to its own "place in life"—with Canaan as intermediary. In fact, most of the Israelite literature has close parallels in the much older oriental literature, both as to types (*Gattungen*) and to style and phraseology, partly also as to religious and moral ideas.

2. Wisdom literature. Wisdom was the international word that also included the art of the scribes. In Egypt and Babylonia they long had laid down the self-consciousness and the ideals of their class as to education, morals, life style, and literary forms, in "wisdom books," with their specific didactic style and metrical form. Nothing was more natural than that such books were the first books with which the school and the scribes of Solomon were acquainted. Among the minor collections which are assembled in the book of Proverbs is also one that drew directly on the Egyptian "Wisdom of Amen-em-ope." There can be little doubt that the oldest *written* literature in Israel was translations and imitations of foreign wisdom, gradually developing into an Israelite wisdom showing something of the spirit of Yahwism. Compared with that of the foreign models, the influence of the popular proverb was unimportant.

The older wisdom is of a merely practical and utilitarian kind. The presence of many advices for the career shows that this wisdom originates within the circle of the royal officials (cf. also the heading in Prov. 25:1). The younger collection, Prov. 1–9, reveals influence from foreign speculations on the metaphysical nature of wisdom. That also the fundamental problems of religion and philosophy of life in the course of time have been felt and taken up by the wise men, is seen from JOB, which shows a mixture of wisdom and psalm style, also found in the latest psalm poetry (*see* § 6 *below*), and the pessimistic ECCLESIASTES, while the book of ECCLESIASTICUS in this respect walks on the traditional path. Influence from Greek popular philosophy betrays the WISDOM OF SOLOMON, where the old metrical form mostly is given up.

3. Laws. The scribes of the palace had to deal with the affairs of the royal chapel, the temple, as well (cf. II Kings 22:3 ff; Jer. 36:10-12). This must have given strong impulses to written fixations of sacral traditions. The scribes, in a way, became the "traditionists" of a sacral literature. Already in preexilic times there may have existed written collections of psalms, as in Deut. 26:1-6, and of priestly TORAH, etc. Written laws (*see* LAW IN THE OT) very often have been among the first demands of a nation. The origin of the Israelite law is a double one: the orally transmitted separate decisions and "instructions" (*tôrôth*) and ordeals of the priest in the name of Yahweh, and the more "civil" right, expressed in casuistic "judgments" (*mishpāṭîm*), both stylistically and materially dependent on interoriental jurisprudence and certainly taken over from the Canaanites. Soon, they too came to be considered as the laws of Yahweh. The common man, of course, was first and foremost interested in the latter, and even the scribes might wish to have written the norms according to which they had to deal in public affairs or as judges at court. There is therefore good reason to think that one of the first written collections was the "*Mishpāṭîm*" (Exod. 21:1–22:27). The priestly, apodictic *tôrâ* style of the additions at the end (22:17-27) proves that they were transmitted within circles closely related to the temple, and adapted to Yahwistic ideas.

There are also laws of such nature and purpose that it was early felt necessary to inscribe them on tables and set them up publicly. Thence the word חק (חקה), from חקק, "cut in," "engrave," "inscribe." Such laws are the specific *leges sacrae* of a sanctuary, setting the conditions for entering the place and taking part in its blessings. An example of such old sacral law is reflected in the etiological anecdote (*see* LEGEND § 2*d*) in II Sam. 5:6-8: "The blind and the lame shall not come into the house"—i.e., the temple (cf. Lev. 21:18). In Jerusalem the idea of such conditions of entrance was connected with the idea of the fundamental commandments of the COVENANT, preferably in decalogue form, and thus got its place in the liturgies both as "conditions of entrance" (Pss. 15; 24:3-4) and at the annual renewal of the covenant (Pss. 81; 95). Various forms of decalogues may early have been written—the background of the legend in Exod. 32 and the "charter" (ספר הברית) in Exod. 24:7.

The greater law books have gradually been built up of such smaller, oral and written, collections. The "Book of the Law" found in the temple in Josiah's time probably was one of the sources of DEUTERONOMY; D itself (=Deut. 4:45–27:9; ch. 28) is best explained as the "constitution" of the consolidated Jewish congregation after the "restoration" (*ca.* 520 B.C.). Somewhat younger are probably the codification of the "Law of Holiness" (Lev. 17–26), the temple order proposed in Ezek. 40–48 and the last redaction of the laws now included in "P" (*see* § 4 *below*).

4. Historiography. This is the first of the two points where Israel's literature distinguishes itself from the rest of the ancient Near East. From the beginning the royal annals (ספר דברי הימים) belonged to the duties of the scribes. They knew the stories told at court, of the deeds of David and the splendor of Solomon. And their close connection with the temple also made them acquainted with the traditions and legends told at the festivals—the Exodus legends, the concentrated form of which was the "historical credo" (von Rad): "Yahweh thy God who led thee up from Egypt." The historical foundation of Israel's existence as Yahweh's elected people gave to its religion a feeling of history, unknown to the ancient Near East—Yahweh the Lord of history.

The beginning was the living tradition of the court and its oral connection with greater pragmatic complexes, as the Saul-Samuel and Saul-David traditions, the record of David's last years and the ascension of Solomon, where the vivid oral style and epic skill are easily recognizable. How early they were written, one cannot tell. Some of them may have been incorporated in the "book of the acts of Solomon" (I Kings 11:41). The "book of chronicles of the kings of Judah," or of "Israel," often referred to in Kings, was scarcely the original annals, rather a more epic and "popular" recension of these, that even may have included many prophet legends (*see* LEGEND).

The *opus magnum* of OT historiography is the national saga of J. Using all existing myths and *sagns* about the primeval times, the patriarchs, the Exodus, etc., J wrote the history of the Davidic "Great Israel" from the Creation to the conquest of Canaan, from a religious point of view—the election and the fulfilling of the promises to the fathers. In spite of his respect for the fixed tradition, J is no mere collector; he is a real author who has stamped his book with his own spirit. On the later expansion of his book *see* TRADITION § 5.

On all these sources the Deuteronomistic saga has drawn, dealing with the history from the last days of Moses to the fall of Jerusalem (587 B.C.) and the release of Jehoiachin twenty-seven years later. Of the events from the Exodus to Jordan it gives only a short résumé, in the form of a speech of Moses, dependent on the expanded J. Then follows the Law=D, the source of the author's theology and religious pragmatism—the fate of the people is determined by its right or wrong relation to the Law. The book was written after the consolidation of the Jewish congregation, that it might learn from history to walk on the path of life. The often accepted theory about a pre-exilic origin and a later redaction is very improbable (for another view, *see* DEUTERONOMY; PENTATEUCH).

The "memorial" (not "memoirs"!) of Nehemiah follows the literary line of the oriental royal inscriptions, with their "I" style and enumeration of the deeds of the king. This record of the governor's pious works is written to be laid down "before the face of God" in the temple, that he may "remember him them for good." *See* EZRA AND NEHEMIAH, BOOKS OF.

A later author, P, representing priestly traditions and interests, rewrote the history from the CREATION to the Conquest (*see* ISRAEL) as seen from a "church-historical" point of view—the origin and old history of the people of the covenant and of its sacral institutions. The greatest place is taken up by the inserted ritual laws; the history itself is only a short scheme, with some new, quite legendary elements. Later on, P was braided together with the expanded J, and this compound work and the Deuteronomistic saga were telescoped into each other, with the final result that the first part of this work, Genesis–Deuteronomy, has the character of a law book—"the Law"—and is considered as a book of its own. *See* PENTATEUCH; TORAH.

The CHRONICLES drew the consequences of the predecessor's philosophy of history. "Israel" is here Judah only, the history of which is told from David to EZRA; the older times are only given in the form of tribal genealogies (*see* GENEALOGY), partly old traditions, partly learned constructions. The legendary development of the TRADITION (*see* §§ 4-5) makes it easy to demonstrate the ideological pragmatism of the author. The original Chronicles had no room for Nehemiah, whose place was given to the more edifying Ezra narrative, representing a tradition (or a written source) of its own, partly imitating Nehemiah.

Later Jewish "historical" literature (*see* DANIEL; ESTHER; JUDITH; TOBIT) becomes more and more LEGEND, lacking real historical feeling. This, however, had a short revival at the time of national freedom (*see* MACCABEES, BOOKS OF).

5. Poetic literature. Also the POETRY originally lived in oral form. This means that in spite of the relative fixity of tradition, poems often may have been linguistically and ideologically "modernized," unconsciously and consciously—let alone other possible errors—and that even the written "Ur text" may have existed in different forms (see the double recensions of Pss. 14 and 53; Ps. 18 and II Sam. 22). *See* TRADITION § 5.

It follows from the old Israelite conception of life that no sharp distinction can be drawn between profane and sacral poetry. It is, however, possible to speak of a more "popular" poetry besides the strictly sacral one.

a. Popular poetry. One of the oldest types is the power-filled rhythmical word of blessing—used both at solemn occasions of private life, as betrothal (Gen. 24:60) or the last words of the dying father (Gen. 27), and at the cultic assemblies (Num. 6:22-27)—and of curse—used, e.g., together with cultic rites before the battle to break the force of the enemy (Num. 22–24). *See* BLESSINGS AND CURSINGS.

This type has often been combined with the tribal anthem (*cf.* LEGEND § 2*a*), characterizations of the tribe's nature and fate (e.g., Gen. 4:23; 27:27-29, 39-40), which then have been formed as effective words and mostly put in the mouth of the dying ancestor. The fate and actual situation of the tribe are explained as the result of a blessing or a curse of the ancestor. Collections of such *vaticinia ex eventu* we have in Gen. 49 and the younger Deut. 33, imitations in the Balaam oracles and the so-called "last words of David" (II Sam. 23:1-7—a typical mixture of prophetic and wisdom style).

Among folk songs may be mentioned the short workers' songs (also known from Egypt), both at vintage and harvest and at *corvée* (Neh. 4:4). It may also have the character of an effective incantation—e.g., at the digging of a well "with the [power-filled] scepters of the chiefs" (Num. 21:17-18). Further examples are the mocking songs, often hinted at; the harlot's song (Isa. 23:16); the drinking song (Isa. 22:13); the watchman's song (cf. Isa. 5:1 ff).

At the burials were heard the conventional funeral songs of the professional "mourning women" (II Sam. 3:33-34; Jer. 9:16; 22:18), with the characteristic beginning, אכה and the sad cry, "Oh, our brother!" They gave impetus to passionate personal poems such as II Sam. 1:19-27; and the style was often used both in earnest and ironically, in poems on the fall of a city or of a people ("political dirges"; *see* LAMENTATIONS, BOOK OF), and often was imitated by the prophets (Amos 5:2), sometimes combined with the tone of the triumphant mocking song (Isa. 47).

At weddings, but also at other assemblies, the love poetry had its place (*see* SONG OF SONGS) among the poems, of which also may be found echoes from the drama of the old fertility cult, "secularized" into popular game and song.

From the short war songs, improvisations on the battlefield or at the return of the victorious warriors (cf. Judg. 11:34; I Sam. 18:7), sprang a higher poetry—e.g., the so-called Song of Deborah (Judg. 5; *see* DEBORAH 2), which was already influenced by the style of the hymn of praise (*see* § 5*c below*). The so-called Song of Miriam (Exod. 15; *see* MIRIAM 1) is no popular poem, but a regular cultic festival hymn, commemorating Yahweh's salvatory deeds of old, thus belonging to the strictly sacral poetry (*see* § 5*c below*).

b. Epic poetry. There also seems to have existed an epic poetry. There is reason to believe that the Book of Jashar (*see* JASHAR, BOOK OF) and the Book of the Wars of the Lord (*see* WARS OF THE LORD, BOOK OF) are identical, and that it was a sort of national epos, dealing poetically with the traditions about the Conquest and the first kings. It may, as usual, have originated from the independent, separate songs of the "rhapsodes" (מושלים). The age may be that between the original J and its later expansions (*see* § 4 *above*), which draw upon it.

c. Sacral poetry. The strictly sacral poetry includes, above all, the cultic poetry of PSALMS, with their different types, each having its specific function in connection with the different cultic and liturgical acts and situations: general hymns of praise; hymns to the definite feasts, among them the group of the hymns at Yahweh's throne ascension; national (congregational) psalms of lamentation on the days of penitence and prayer in public disaster and danger, often put in the mouth of the king; general prayer

psalms; national thanksgiving psalms at the feast after experienced deliverance, even these partly with the king as the speaking Ego; individual psalms of lamentation for the use of "Everyman" who had fallen in illness or any other disaster and had to offer his "sin offering"; individual psalms of thanksgiving; festal liturgies, reflecting the different acts of the ritual—e.g., the coming of the festal procession, its entrance through the temple gates, etc. (Pss. 24; 68; 118; 132 and possibly others).

To the sacral poetry must also be added the oracles of the cult prophets—e.g., at the anointment of the king (Pss. 2; 110; 72), or in connection with the recitation of a psalm of lamentation; likewise, the priest's formulas of blessing and curse (*see* § 5*a above*) as regular or casual part of the liturgy—sometimes, like the oracles, included in the transmitted psalm text. Even the king's promise, his "charter" (Ps. 101), may be mentioned.

Even some of the prophetic "books," such as HABAKKUK and JOEL, may have come into existence as cultic liturgies for a definite occasion.

Religious in its outlook and motivation is also the wisdom poetry (*see* § 2 *above*) from the beginning, and it tends more and more in this direction. "The fear of the Lord is the beginning of wisdom."

d. Written texts. The fixation in script gradually took place (*see* § 3 *above*). The "Wars of the Lord" is quoted as a "book" both by the expanded J (*see* § 4 *above*) and by the sources of the Deuteronomistic saga. Most of the postexilic poetry seems to have been written at once—an indication is the use of the alphabetic acrostic, a decoration more for the eye than for the ear, found in Lamentations and late psalms.

e. Postcanonical religious poetry. The same must be said of the postcanonical psalmody. It is partly found as poems made *ad hoc* and put into the mouths of the heroes of the legendary literature (Daniel and his friends, Tobit, Judith, etc.) or in the books of the "wise," such as ECCLESIASTICUS, and partly in separate collections, such as PSALMS OF SOLOMON; DEAD SEA SCROLLS. It tries to walk on the traditional paths, but demonstrates, however, a typical mixture of psalm and wisdom style and ideas. Characteristics of the Qumran Hodayoth are the overwhelming biblical reminiscences, the disintegration of the style of the classical thanksgiving psalm, the allusions to the external and the mystical experiences of the poet, and the religious reflections.

6. Prophetic literature. This represents the second point that demonstrates the originality of Israelite literature. In spite of pretended Egyptian and Babylonian models—which at best are remote formal analogies—it has nothing to be compared with in the ancient East. Phenomenologically and psychologically the prophets of Israel have close analogies almost everywhere in the ancient Near East. What these other נביאים said, however, was ephemeral only and is "gone with the wind." In Israel only the words of the נביאים gave rise to a literature of world importance. This fact is due to the spiritual originality of the prophets (*see* PROPHET) and the uniqueness of the religion of Israel, or, in other words, their experience and idea of God. The religion of the Psalms is the spiritual background of the prophets, who always stood in close connection with the temple and the cult.

a. Prophetic sayings and poems. The originally oral sayings of the prophets, sprung from the more or less ecstatic inspiration of the moment, were independent short units, giving Yahweh's "oracle" of fortune or misfortune, or his "instruction" for the definite historical situation (cf. II Sam. 5:19, 23-24). Genetically and formally they are connected both with the exclamations of the religious ecstatics and with the visions of the old seers (cf. Num. 24:17) and their power-filled words of blessing or curse, which in themselves had the virtue to influence the things to come (*cf.* § 5*a above*). The visuality, the impressionism, the vivid picturing of the events to come, the emotions called forth by the picture in the mind of the prophet, the changing scenes, the hinting-at instead of a description, the metaphors—all these point to the connection with the ecstatics and the vision. This is true even in later times, as the normal form of the oracle—under the influence of the idea of inspiration by the Spirit of Yahweh—became the "message," introduced by the messenger's (and letter's) formula: "Thus saith Yahweh: Go and say unto So and So." In this latter type, the auditory element, which is not lacking in the vision, becomes more prominent.

The form of blessing and curse has lived on in the prophetic words, giving occasion to a more or less detailed description of the fortune or destruction to come.

The classic prophetic style was fully developed before Amos. What distinguishes it from the older one is, above all, that the prophet now is not content only with telling *what* Yahweh will do; he must also say *why* Yahweh acts as he does. The scheme is as follows: "Because So and So has done [said] such and such, therefore I now shall do this and this"; or vice versa: "I shall do such or such, for So and So has done . . . ." These may be called "expanded, or motivated, oracles." Materially we may distinguish between oracles of doom (threats) and oracles of fortune and "salvation" (promises). In the former the scolding and the reproach, the enumeration of the sins of the people, often using the style of the lamentation in the psalms, and the threat, akin to the curse, become prominent elements. In the promises, which were in exilic and postexilic times the predominant form of prophecy, Yahweh's remembering of the covenant, his "trustiness" and "lovingkindness" (*hésedh*), more and more became the usual motivation.

The oldest sayings were very short, as can be seen both in the prophetic legends (*see* § 4 *above*) and even in Amos, where the original units easily can be distinguished from one another through the use of standing introductory and finishing formulas; they often comprise only two or three up to eight or even ten biblical verses. The "expanded oracle," of course, tends to become longer, but even the Deutero-Isaiah collection includes forty-six originally independent sayings, while the prophecies from his circle of disciples, the so-called Trito-Isaiah, are longer and often have imitated the form of the cultic "compound liturgies"—these eleven chapters include fourteen separate prophecies. But even the longer compositions—e.g., Jer. 2—reveal the original independence

of the smaller units; even here the logical and formal connection is very loose.

During the ages the prophets have used the styles and forms of practically all the given poetic types, to make their sayings the more impressive. The prophetic oracle was in itself a poem, often a perfect one, in the usual metrical forms (*see* § 7 *below*). Especially the prophecies of JEREMIAH can be viewed as an anthology of the prophetic variations of the most different literary types. The influence of the psalm style is very prominent, both in Jeremiah (especially the psalm of lamentation) and in Deutero-Isaiah (ideas and forms from the hymns of praise, especially from the throne-ascension hymns).

Probably under the influence of the "wise scribes" as the tutors of the laws (*see* §§ 2-3 *above*) there came up prophetic "sermons" in prose, clearly akin to the Deuteronomistic admonitions and warnings, mostly secondary and literary, as in the books of Jeremiah and Ezekiel. In this "evolution" also the oral transmission of prophetic sayings played a role (on this subject and on the occasional use of script, *see* TRADITION § 5).

b. Books. The prophetic books are gradually composed of smaller collections of orally transmitted sayings, arranged after the following pattern: prophecies of doom followed by prophecies of salvation and re-establishment, often with catchwords as the principle of collection. Sometimes also biographical stories, as in Baruch's Jeremiah book (*see* BARUCH), or in Amos 7:10 ff, and legends have been attached. Some introductory and final formulas have been preserved, but often the single oracles have been attached to one another, without any connecting link, sometimes, however, connected by short redactional remarks, often only a כי ("for") or על־כן ("therefore"). A useful means of distinguishing is the study of the stylistic forms and types.

In the partly oral, partly literary process of collection and redaction especially the "school" of disciples such as that of ISAIAH seems to have played an important role—a fact to which, e.g., the combination of the Isaian and Deutero-Isaian "books" may be due. Both collection and redaction sprang from the religious needs of the congregation, aiming at the edification and at the fortifying of the hope for the "restoration of the kingdom for Israel."

c. Apocalyptic. The last offshoot of the prophetic literature is APOCALYPTICISM and the apocalyptic books (*see* PSEUDEPIGRAPHA), the beginnings of which we have already in the OT: Isa. 24–27; JOEL in its present form; Zech. 9–14; part of EZEKIEL; and DANIEL, here and oftener combined with the legendary "history."

Apocalyptic is learned, not popular, literature, but imbued with the author's consciousness of inspiration—the "wise men" considered themselves the heirs of the prophets—and often expressing personal mystical experiences; the right understanding of the older prophecies has "come to them" from above.

7. Metrical forms. On the metrical forms of Hebrew POETRY—which, no doubt, are dependent upon older Near East tradition—opinions still disagree. The normal form is no doubt the double line, or stich (bicolon), the two parallel hemistichs (cola) of which make a "thought-rhyme"; sometimes also tripartite stichs (tricola) occur—certainly a later evolution, although already found in Ugaritic poetry. The thought-rhyme (*parallelismus membrorum*) is no metrical phenomenon, but a stylistic; it became, however, fundamental in Hebrew poetry. Even in verses where we find neither a synonymous nor an antithetical parallelism, the verse is logically, grammatically, and metrically divided in two halves through a caesura (by Lowth called "synthetical parallelism"). Even the hemistich (colon) very often is dipodic, but also monopodic verses occur. Very often also 2+2 stichs (bicola) are parallel, making the basic strophe, but even more artificial stanzas (3, 4, 5, 7 stichs) are found. According to the still generally accepted system of Sievers, the ordinary stich (bicolon) has 3+3 (often even 3+4, or 4+3, or 4+4) metrical beats. Others here find a 4+4 meter, exclusively used in the wisdom poetry and thence called "mashal meter." A brachycatalectic descendant of the mashal is the kinah meter, with 4+3 (according to Sievers 3+2) beats, especially used in funeral songs, but also by psalmists and by prophets.

LITTER [מטה, *miṭṭâ* (Song of S. 3:7), *from* נטה, recline; צב, *ṣābh* (Isa. 66:20), *from* Akkad. *ṣumbu*, wagon]. A curtained couch borne on men's shoulders.

The meaning of *miṭṭâ* in Song of S. 3:7 appears to be related to *'appiryôn* in 3:9 (*see* PALANQUIN). Elsewhere usually BED or COUCH is used.

The context of *ṣabbîm* (plural of *ṣābh*) in Isa. 66:20 suggests that the Akkadian meaning, "wagons," is more appropriate than the RSV "litters" (cf. "covered wagons" of Num. 7:3, and *see* CART, WAGON).

W. S. McCULLOUGH

LIVER [כבד]. The liver is rarely mentioned in the Bible, and then usually in its literal, physiological sense. The Hebrew word is derived from the root "to be heavy," perhaps with the implication that, in view of its density, the liver is to be regarded as the preeminently heavy organ of the body.

In the offering of ordinary sacrifice the CAUL (RSV "appendage") of the liver, along with the KIDNEYS and some other specified portions of the viscera, is set apart to be burned upon the altar as a special gift to Yahweh (Lev. 3:4, 10, 15).

In the ancient Orient the markings on the liver were studied for the purpose of DIVINATION ("hepatoscopy").* There is no direct evidence that the Hebrews themselves engaged in this practice, but the OT records an example of it in the case of the king of Babylon (Ezek. 21:21). The book of Tobit (6:4-7; 8:2) relates an instance of the use of a fish's liver to drive away demons. *See* MAGIC. Figs. DIV 31-33.

The liver was undoubtedly regarded as a seat of the psychic life, especially in its emotional aspects, although only one passage in the present Hebrew Bible actually uses the word with this implication (Lam. 2:11 KJV; RSV "heart"). It is probable, however, that certain other passages which now speak—rather unintelligibly—of the "glory" of an individual originally spoke of his "liver." The word for "glory" or "honor" (כבוד) in consonantal Hebrew script, when written defectively (as in Gen. 49:6), is identical with the word for "liver." It seems likely that in such passages as Gen. 49:6; Pss. 16:9; 57:8 the more delicate sensibilities of a later age have caused the alteration of the crude word "liver" (*kābhēdh*), in the sense of "innermost person" (cf. RSV "spirit" or "soul"), into the poetic-sounding "glory" (*kābhōdh*), by a simple change of the vowel points.

R. C. DENTAN

LIVING CREATURE [חיות, *from* חיה, to be alive]. In his inaugural vision Ezekiel beheld four living creatures (cf. Ezek. 1:5, 13-15, 19-20, 22) which looked like men in form but each of which had four faces. The faces were of man, lion, ox, and eagle. The same unusual appearance was witnessed by Ezekiel in 3:13 and in the second vision of God, which is recorded in ch. 10.

The exact meaning of this mysterious vision would not be easily unraveled, since it probably is more or less a refraction of symbols whose real meaning has been lost. However, the rabbinic interpretation would seem to be on the right track—namely, that the four faces represent God's dominion over man, who was created to rule the earth; over the lion, which is king of the forest; over the ox, which is most powerful of domesticated animals; and over the eagle, which rules the air. In other words, this somewhat bizarre vision contains a profound truth: that God is universal ruler over all life, whose source he is.

Life itself is bound up in the presence of God and is so symbolized by the creatures who are in proximity to the Almighty. In Rev. 4:7-8 the living creatures are mentioned, but instead of an oxen face there is the face of a calf, and instead of four wings each possesses six. Always the living God is represented as being surrounded by living creatures; this would suggest that he is not only ruler over all life but its source also.

C. G. HOWIE

LIZARD [לטאה (Lev. 11:30), *possibly* clinger; *cf.* Arab. *laṭa'a,* to cleave (to the ground); שממית (Prov. 30:28; KJV SPIDER) *probably* poisonous one, *cf.* Arab. *samm,* poison; *sāmm,* gecko; Syr. *sam,* medicine, poison; *samomīthā,* poisonous lizard; Jewish Aram. סממיתא, spotted lizard, spider]. Any of a suborder (*Lacertilia*) of reptiles, mostly small, having a scaly body and generally four legs and a long tail; there are *ca.* 1,700 species, commonly arranged into 20 distinct families. Tristram, who noted the abundance of lizards in Palestine, collected 22 species, belonging to 18 genera.

The ancient versions and the context in Lev. 11 point to לטאה (*leṭā'â*) as being a lizard, but more precise identification is impossible. If, as Bodenheimer holds (*see* FAUNA § D), this is a "general name for lizards," it is rather odd that it appears in the middle of a list of words with more restricted meanings.

The ancient versions agree that שממית (*śemāmîth*) is a lizard, though the word in the Targ. can also mean "spider" (so Luther; KJV). If the term means "poisonous one," it reflects a popular superstition when applied to lizards in the Near East, for the only poisonous lizards (*Helodermatidae*) are found in the Western Hemisphere. Koehler takes the animal to be a gecko.

LOAF. *See* BREAD, particularly § 1*d*.

LO-AMMI lō ăm'ī. KJV translation of לא־עמי, a symbolic name given by the prophet Hosea to his third child, to indicate God's decisive repudiation of Israel (Hos. 1:9; RSV lit. "Not my people").

LOAN [משא, משאה]. *See* DEBT.

LOCK. 1. Four Hebrew words refer to "lock of hair": ציצית (Ezek. 8:3); מחלפות (Judg. 16:13, 19); פרע (Num. 6:5; Ezek. 44:20); קוצות (Song of S. 5:2, 11). Another word, צמה, is translated "lock" in the KJV (Song of S. 4:1, 3; 6:7; Isa. 47:2; RSV "veil").

2. נעל. To fasten a door (Judg. 3:23-24). *See* BOLT; KEY.

3. KJV translation of מנעול (RSV BOLT) in Song of S. 5:5; Neh. 3:3, 6, 13, 15.

O. R. SELLERS

LOCUST. An insect species of the order *Orthoptera,* family *Acrididae,* which is capable at times—more or less periodically—of multiplying in appalling masses, of wandering into distant lands, and of causing frightful destruction of cultivated vegetation. Grasshoppers are also various members of *Acrididae,* but are distinctive in that they lack the locusts' capacity of swarming and mass migration.

The locust plague was the eighth of the ten Egyptian plagues (Exod. 10:3-20). Fig. ASS 95.

Bibliography

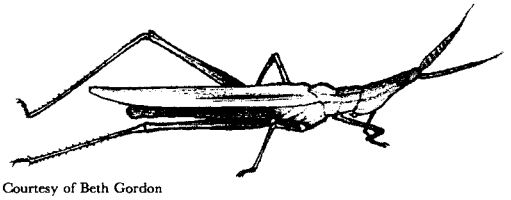
1. Locust terminology in the Bible. ***a. In OT Hebrew.*** Twelve words are used in the Hebrew OT for "locust," or are rendered so in the translations and by exegetes:

a) ארבה (Akkadian *arbu, aribu, aribi, erebu;* Ugaritic *irby*). Occurring twenty-four times, this is the commonest word meaning "locust." It is generally used collectively, but is also used in the singular to refer to the individual members of the species—i.e., as a *nomen unitatis*—as in Exod. 10:19. This noun means the adult and winged insect adapted to fly (Exod. 10:13, 19).

b) חגב. This word occurs five times, used once (Eccl. 12:5) metaphorically. In the Talmud this word means any species of the short-horned grasshoppers, and it is said there (Hull. 63*b*) exaggeratively that there are eight hundred kinds of grasshoppers (חגבים). However, once (II Chr. 7:13) חגב is used in the sense of "locust" (cf. I Kings 8:37). *See* GRASSHOPPER.

c) גבי, גובי (Amos 7:1; Nah. 3:17). This is a synonym of ארבה. In Aramaic it is גובא (Targ.) and גובאי or גוביו (Talmud). In Hull. 65*a* it is specifically identified with ארבה (Arabic *jāb, jābī*). The doubling גוב גובי (Nah. 3:17) may indicate many locusts ("clouds of locusts").

d) גבים (Isa. 33:4). This word is to be understood in the same meaning as *c*, for it is paralleled with חסיל (*see i-k below*).



Courtesy of Beth Gordon

33. A female locust

e) סלעם (Lev. 11:22). From the morphological symptoms given for this grasshopper in the Talmud (Hull. 65*b*-66*a;* Yom. 77*b*), there is no doubt that this word means the very similar grasshopper genera *Truxalis* L. or *Acrida* F. (Fig. LOC 33) of the subfamily *Tryxalinae*, or slant-faced locusts.

f) חרגל (Lev. 11:22). From the discussion in the Talmud (Hull. 65*b*) we may with certainty conclude that this word means any species of the family *Tettigoniidae*, vernacularly named katydids or long-horned grasshoppers.

g) חנמל (Ps. 78:47; RSV "frost"). Targ., Symm., Midrashim, Rashi, and the Karaite Ḥassan render this word too as a kind of locust. But this meaning is not acceptable, since the sycamore of this verse is just one of those few trees which are not damageable by the locust (*see* § 6 *below*).

h) צלצל (Deut. 28:42). Most interpreters render this word as "grasshopper" or "cricket." The LXX translates ἐρυσίβη (after A: ἐρισύβη) and the Vulg. *rubigo* (or also four times for חסיל); both generally meant "rust," a fungus disease of plants. But Levy, Kohut, Jastrow, and Krauss in their lexicons identify ἐρμσίβη with the Talmudic ערצוביא (Hull. 65*a*) as a locust species. It may also be identified as *Gryllotalpa*, the mole cricket, which has a decided rusty color.

i-k) ילק (nine times), חסיל (six times), and גזם (three times). These three words doubtless signify the successive stages of the immature locust.

From the succession of ילק, חסיל, and גזם twice in Joel (1:4; 2:25), which differs with respect to the commencement of the series but is constant in consecution, it can be concluded that ילק means the first instar, חסיל the middle instars, and גזם the last ones of the immature locust. According to this opinion, ילק פשט ויעף (Nah. 3:16) may be rendered: "nymph [of the first locust instar] sheds [its skin] and flits."

l) הצפוני, "the northerner" (Joel 2:20). This expression is to be understood as a rhetorical epithet for the locust, on the one hand symbolizing the violent N intruding peoples who keep the Orient in awe (Jer. 1:14; Ezek. 38:15-16), and on the other the locusts themselves being symbolized by the N peoples.

b. In LXX Greek. The translation of the LXX for the twelve words pertaining to "locust" is not fully consistent. For ארבה it usually has ἀκρίς, which means "locust." Ἀκρίς is also the translation of חגב, גבי, and גבים; in one case (Lev. 11:22) ὀφίοωαχην is written for חגב, and ἀκρίδα takes the place of חרגל, but this seems to be only a displacement, and is already corrected by the Vulg. Ὀφίοωαχην= *ophiomachus*, the literal sense of which is "snake-combatant," may be suited as hyperbole for the giant preying katydid genus *Saga*. סלעם is translated αττακην, transliterated by the Vulg. *attacus*, the meaning of which is unknown. גזם is rendered by κάμπη, "caterpillar" or "nymph." ילק is usually rendered βροῦχος, "unwinged locust"; this word is once (II Chr. 6:28) used for חסיל, and the Vulg. has *bruchus* for חסיל also in Isa. 33:4; κάμπη and βροῦχος may fit the nymphal stages of the locust. Four times חסיל is translated ἐρυσίβη, a word used also for צלצל (*see* § 1*a above*). חנמל is rendered πάχνη=*pruina*, "rime." הצפוני is translated βορρᾶ=*Aquilone*, corresponding to "the northerner" of the RSV (*see* § 1*a above*).

c. In NT Greek. Ἀκρίδες, which corresponds to Vulg. *locustae*, is used in the four references to locusts in the NT (Matt. 3:4; Mark 1:6; Rev. 9:3, 7).

d. In the RSV and the KJV. The rendering of the Hebrew names for "locust" is not always consistent or certain in either the RSV or the KJV. "Locust" is given equally for ארבה (KJV "grasshopper" in Judg. 6:5; 7:12; Job 39:20; Jer. 46:23); חגב (only II Chr. 7:13; otherwise "grasshopper" [Lev. 11:22; Num. 13:33; Eccl. 12:5; Isa. 40:22]); גבי (Amos 7:1 RSV;

otherwise "grasshopper"); גבים; צלצל ("locust"); and, with corresponding adjectives, also for ילק, חסיל, and גזם. חרגל is translated "cricket" (Lev. 11:22 RSV), the root of which is "crick," an imitative of chirping sounds, and which commonly means insects of the unclean *Gryllidae* family, but "cricket" is also variously used as the name of different katydids (*Tettigoniidae*); the KJV "beetle" must be rejected. סלעם (Lev. 11:22) is rendered "bald locust," which quite fits the meaning of a slant-faced grasshopper (*see* § 1*a above*), recognized by a "high" face or front baldness (גבחת in Talmud: Hull. 65*b*). The rendering "hopping locust" or "hopper" for ילק, "destroying locust" or "destroyer" for חסיל, and "cutting locust" or "cutter" for גזם is only a verbal conception; but once (Ps. 105:34) we find for ילק a well-fitted equivalent: "young locusts"; "cankerworm," "caterpiller," and "palmerworm" of KJV are to be rejected, being the young stages of butterflies or moths only. חנמל (Ps. 78:47) is translated "frost," which is in accordance with LXX, Vulg., Syr., Sa'adia, and Ibn Janaḥ.

2. The locust in the ancient world. The locust plague, one of the severest evils of mankind, left many indelible impressions in the Bible and in other documents of the ancient world. It serves as a threat (Deut. 28:38) and as a harbinger of the day of the Lord (Joel 2:1, 11). Special days of praying, fasting, and trumpet-blowing were proclaimed to remove this plague (I Kings 8:37=II Chr. 6:28; Joel 2:12-17).

According to Talmudic regulations, the locust plague was, as in cases of drought (Palestinian Ta'an. 1.7), blight, mildew, invasions of wild beasts or despoiling armies, counteracted by general trumpet-blowing, and not only at the place where it broke out, because it was considered as a "walking plague" (Babylonian Ta'an. 3.5).

The Magi produced special amulets and sorcery stones presumed to protect against the locust plague (Pliny Nat. Hist. XXXVII.40). Here (VIII.43) it is also said, according to Marcus Varro, that a tribe in Africa was put to flight by locusts.

In the Bible the locust symbolizes powerful and large enemy armies completely destroying the earnings of man's toil (Judg. 6:5; Isa. 33:4; Jer. 46:23; 51:27; Joel 2:20; Nah. 3:15). Similar metaphors are frequent in the other oriental literatures (e.g., Ugaritic Legend of KRT, I K: 104-5, 192-94).

3. The locust as a food. Locusts were eaten, and they were esteemed as a dainty to adorn the king's table (Bereshith Raba 67.2; Pliny Nat. Hist. VI.35; VII.2).* In Lev. 11:21-22 the kinds permitted for food are designated; in the Talmud this matter is discussed in detail, and there are given precise specifications for clean locusts, to distinguish them from the unclean ones (Mishna, Hull. 3.7; Gemara, Hull. 65-66 *et passim*). Nowadays the Bedouins eat locusts raw, roasted, and cooked. They are preserved by drying and threading; they are also crushed and ground, and the grists are put into dishes or eaten with bread, sometimes mixed with honey or dates. Hasselquist (1746) states that in Arabia the locusts "never occasion a plague to the country, as they do in other places." Also the Jews of Yemen and North Africa prepare in many ways the allowed kinds of locusts for food. Fig. LOC 34.

34. Assyrian attendants carrying locusts and pomegranates on skewers

According to the analysis of Guggenheim in Jerusalem, the desert locust consists of 75 per cent proteins, 3.4 per cent fats, and 7.5 per cent carbohydrates; as to vitamins, he found 1.75 milligrams riboflavin and 7.5 milligrams nicotinic acid in each 100 grams. According to E. B. Uvarov (1931), this species is also rich in many minerals, especially in iron, calcium, and sulphur.

4. Definition and distribution. Only three of the hundreds of Acridids common in Bible lands are capable of increasing from time to time to immense multitudes, then to wander in frightful swarms and invade wide and distant areas, causing a total devastation of natural and cultivated vegetation. This alone is, according to B. P. Uvarov (1928), the true definition of "locust," in distinction from "grasshopper." Only one of these three species, namely the desert locust (*Schistocerca gregaria* Forsk. = *Acridium peregrinum* Oliv.) can be considered as the widespread plague in all Bible lands, and stray bands of them may penetrate as far as Transcaucasia and Transcaspia in the N, Burma in the E, the S parts of the Iberian Peninsula in the W, and the Cape Province in the S.

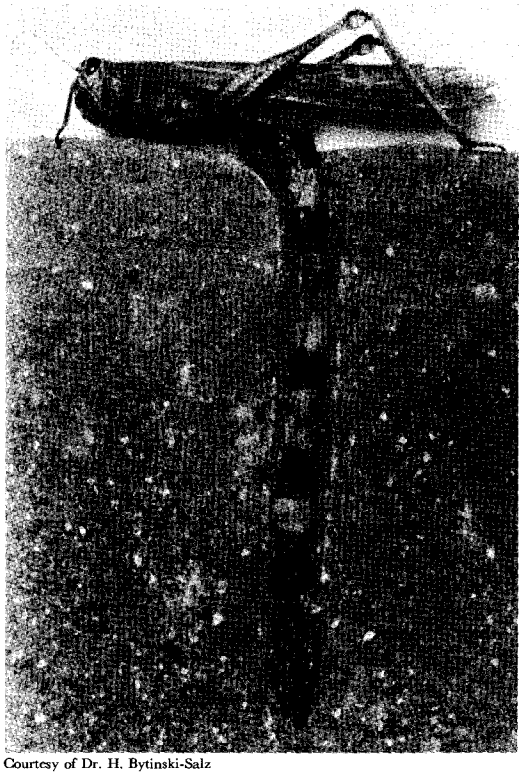
5. Biology of the locust. The following biological sketch is concerned mainly with the desert locust.

a. Origin and mass outbreaks. The native region of the desert locust is the spacious Sudan. The correct explanation for the swarming and wandering periodicity of locusts was at first proposed by B. P. Uvarov (1921) in his phase theory, affirming the principle of morphobiological phases as a base for this phenomenon.

Each locust species appears in two distinct phases: (*a*) *phasis solitaria* and (*b*) *phasis gregaria;* and there may also be distinguished an intermediate third phase, *phasis transiens*. The differences between the phases are manifest both in the immature and in the adult stages by external (color, form, and proportion differences) and physiological (metabolism, mobility, and general behavior differences) symptoms. A full reciprocity between the two series of symptoms was already proved both by natural observations and by laboratory experiments. The periodicity is bound up with the transition from the calm solitary phase to the extremely active and destroying gregarious phase. This transition occurs in the native area of the locust in years in which the quantity and temporal distribution of rains particularly afford adequate conditions for reproduction, because the locusts deposit their eggs and these develop only in moisty soil. One or two such years may bring into the world huge locust swarms in their gregarious phase.

In this phase the wandering instinct is the most peculiar trait of the locust's habit and is a result of its gregarious behavior. Because of the climatic conditions in the area invaded by him, the locust does not reach sexual maturity, and so it tarries here as a plunderous stranger only, and in the years between invasions "not a single locust [is] left in all the country" invaded (Exod. 10:19).

b. Development and behavior. After copulation, lasting from fifty minutes to a few hours, the female deposits eggs in a hole previously excavated in the ground by means of her ovipositor, for which purpose the abdomen can elongate twofold or more (Fig. LOC 35). A female is able to deposit 1-6 egg pods containing 28-146 eggs each. The egg is .3-.4 inch in length and yellow-grayish in color. During the oviposition a glutinous fluid is discharged which makes the eggs adhere to one another and also forms a foamlike bung to the egg burrow from above.



Courtesy of Dr. H. Bytinski-Salz

35. A female locust depositing eggs in a hole by means of her ovipositor

The larvae emerge from the eggs fifteen to forty-three days after oviposition, depending on the season and weather. The newborn larvae have a vermiform appearance and are covered with a rosy-whitish envelope, which they shed immediately after emergence, and they are already able to move by leaps, for which the locust larvae deserve their name: hoppers. Besides this intermediate molt, there are five regular molts in the larval stage of the locust. From molt to molt the larva increases about a fourth part in length and doubles in weight, and in the last instar even more. The hoppers of instars 4 and 5 already possess well-decided wing rudiments enveloped in flat sheaths. After the fifth molt appears a winged insect. This is the perfect, but not sexually mature, locust. The maturing period can continue some weeks, according to season, being longer in winter than in summer. In its gregarious phase the desert locust has at first a pink or reddish main coloration, and turns glossy lemon-yellow, bearing a brown network on forewings when it is mature. The female is larger than the male, and during maturation until oviposition it doubles in weight.

The adult locust, as its larvae, possesses six legs, as all other insects. The hind pair of legs is longer than the four other and is provided with very large and ample thighs, in which strong muscles enabling good jumping are placed. The ancients considered the hind legs of locusts as limbs by themselves; they do not include them in the number of legs and consequently give them a separate term: כרעים in the Bible and קרצולים in the Talmud. This view is also alluded to by Aristotle, who states: "All these creatures [leaping insects] have six feet, inclusive of the parts used for leaping" (*Parts of Animals* IV.6).

c. Wandering instinct. In the gregarious phase, from the second instar and afterward, the locust is overwhelmed by a strong wandering instinct, causing a random procession of overflowing masses which ignores any obstruction. The hopper swarms climb and pass unhindered over hills, rocks, and walls; trenches and pits are filled out by the bodies of the vanguard, and the afterguard marches over its brethren as on a plain; water dikes and rivers are crossed by swimming, and Ballard (1932) states that a swarm of hoppers even rushed across the Suez Canal. The prophet Joel (2:4-9) describes this phenomenon in an expressive style, with strong coloring.

There is only one firm regulator for the movement and power of action of the locust—temperature. Bodenheimer (1930) concludes from laboratory experiments that a temperature of 4-5 degrees centigrade conduces the hoppers to cold torpor; at 20-26 degrees they behave normally; 43-44 degrees causes maximal excitation; 49-50 degrees leads to heat paralysis; at 51 degrees centigrade appears heat death. These experimentally found facts are also observed in the behavior of the locust in nature and in

the daily order of its activities, and are also used figuratively by the prophet Nahum (3:17).

Shortly after winging, the locusts set out from their larval home and fly in prodigious bands straight ahead, not altering the direction during the whole journey, extending sometimes three days without interruption. The desert locust is the most diligent and most skilful flyer among the locusts, and it is capable of moving up to 1,240 miles from its native place. The factors inciting and directing the wandering rage seem to be chiefly physiological ones, internally connected with the process of genital increations. Similar stimuli are also observed in other animals during their sexual maturation period. An auxiliary journey-directing factor is the direction of the winds. This fact, which is already emphasized in the Bible (Exod. 10:13, 19) and also by Pliny (Nat. Hist. XI.35), is repeatedly verified by recent scientific observations.

6. The locust as a destroyer. Consuming almost every plant, the locust can cause an absolute devastation of the fresh vegetation in the areas invaded by it. Factually, indeed, the desert locust does not eat the carob, sycamore, and castor trees and the oleander bush. Also the olive and date trees do not seem to suit its taste, since it eats their foliage only in emergency cases. Among the alien plants, Melia Azedarach (bead tree), eucalyptus, and prickly pear are spared by the desert locust.

7. Modern control organization. Many natural enemies, parasites as well as predators, assail the mature locusts, the hoppers, and the eggs; but notwithstanding all their importance, they have not sufficient power "to remove this death" (Exod. 10:17) from mankind. However, the great desert locust outbreak in 1927-30 caused the United Kingdom government to establish a special Anti-Locust Research Centre, and brought also the other interested governments to international and interterritorial cooperation, resulting in the International Anti-Locust Conferences, the first of which took place at Rome in September, 1931. Since then much investigation work, both pure and applied, has been made—and now it may be hoped that step by step man approaches the final control of the agelong locust plague.

Y. PALMONI

LOD lŏd [לֹד]; LYDDA lĭd'ə [Λύδδα]. A town of Benjamin near the S border of the Plain of Sharon and *ca.* eleven miles SE of Joppa. It was built by the sons of Elpaal, descendants of Benjamin (I Chr. 8:12), and, along with Hadid and Ono, was the ancestral homeland of more than 720 exiles who returned from the Babylonian exile (Ezra 2:33; Neh. 7:37; 11:35). With these sites, also, it constituted the westernmost district of the restored community.

Its strategic location, at the intersection of the great trunk road between Egypt and Babylon and the main highway from Joppa to Jerusalem, made it often-contested territory. Under the name Lydda, it was head of one of the districts of Samaria which Demetrius Nicator ceded to Judea in 145 B.C. at the request of Jonathan Maccabeus (I Macc. 10:30, 38; 11:28, 34, 57; Jos. Antiq. XIII.iv.9). Jewish rights in the site were removed by the Roman general Pompey, but Caesar promptly restored them. *Ca.* 45 B.C. the site was captured by Cassius and its inhabitants sold into slavery (Jos. Antiq. XIV.xi.2). Release was soon gained, however, by decree of Marcus Antonius (Jos. Antiq. XIV.xii.2-5). In A.D. 66, Cestius Gallus burned the vacated city while the inhabitants were celebrating the Feast of Tabernacles in Jerusalem (Jos. War II.xix.1), and, again, in 68 the site was occupied and resettled by Vespasian during the progress of his campaign in Judea (Jos. War IV.viii.1).

Lydda was the residence of an early Christian community (Acts 9:32), which was substantially increased as a result of the visit of Peter and the healing of Aeneas, a paralytic (vss. 33-35). News of these events soon reached the Christians of nearby Joppa, who straightway sought the ministry of the Apostle in the case of Tabitha (vs. 38).

Sometime in the second or third century Judaism was virtually eradicated from the site, and it was renamed Diospolis. Christianity, however, survived and flourished to the extent that the site was the seat of a bishop in the fourth century and the scene of the trial of Pelagius at the Synod of 415.

36. Air view of Lydda, the old town in the upper center

During the Crusader period the town bore the name of Saint George, who suffered martyrdom in 303, and over whose reputed tomb on the site the Crusaders built a church. The ruins of this church may still be seen, but the name of the site long ago reverted to its original form and is preserved in the Arabic Ludd.

W. H. MORTON

LO-DEBAR. Alternate form of DEBIR 3.

LODGE [מלונה (*alternately* HUT); מלון (*alternately* LODGING PLACE; PLACE WHERE ONE LODGES; RETREAT)]; LODGING [*see above;* ξενία (*alternately* GUEST ROOM)]. Usually a temporary resting place or campground (Josh. 4:3, 8; Isa. 10:29; Philem. 22). Paul's "lodging" in Rome (Acts 28:23) seems to have been more permanent, and Jeremiah may have wished for a permanent dwelling away from his sinful people (Jer. 9:2). The "lodge in a cucumber field" (Isa. 1:8) probably refers to a lean-to, used by the workers in the field (the same word is translated "hut" in Isa. 24:20). It is a symbol of desolation. *See* BOOTH. E. M. GOOD

LOFT. KJV translation of עליה (RSV "upper chamber") in I Kings 17:19. *See* ARCHITECTURE; CHAMBER; HOUSE; UPPER ROOM.

LOG. 1. A Hebrew liquid measure (Lev. 14:10). *See* WEIGHTS AND MEASURES § C4*b*.

2. A section of a tree trunk. "Log(s)" in this sense is the translation of the following words:

a) עצים (Eccl. 10:9; Ezek. 24:10; KJV "wood," which is perhaps better in the latter verse).

b) עצמים (Ezek. 24:5; KJV "bones," which is the meaning of the MT; the RSV "logs" is based on an emendation to עצים; cf. vs. 10).

c) קורה (II Kings 6:2, 5; KJV "beam").

d) Δοκός (Matt. 7:3-5; Luke 6:41-42; KJV "beam," which is precise, since δοκός is a long, shaped piece of lumber).

Hiram king of Tyre sent cedar, cypress, and algum wood, presumably in the form of logs tied together as rafts, by sea to Solomon for the building of the temple (I Kings 5:8-9—H 5:22-23; II Chr. 2:8, 16—H 2:7, 15).

The vivid saying of Jesus in Matt. 7:3-5; Luke 6:41-42 has a close parallel in the Babylonian Talmud: "Rabbi Tarfon [*ca.* A.D. 120] said: 'I wonder whether there is any one in this generation who would accept reproof. If one said, Take the mote from between your eyes, he would answer, Take the beam from between your eyes' " ('Arak. 16*b;* cf. B.B. 15*b*).

LOGIA lō′jĭ ə. A term applied especially to collections of sayings employed by the gospel writers. The word is a transliteration of the plural of λόγιον (diminutive of λόγος; *see* AGRAPHA), which is used frequently in the LXX and several times in the NT ("oracles," "first principles").

This term is of special interest because of its use in a remark of Papias in the early second century, quoted by Eusebius, to the effect that Matthew was responsible for the arrangement or the writing down of the logia of Jesus in the Hebrew (Aramaic) language. Some have thought that Papias was referring to the Gospel of Matthew or to a lost Aramaic gospel such as the Gospel of the Hebrews. In support of this hypothesis may be cited some patristic tradition and the use of "logia" by Philo and others to mean "scripture," in a sense inclusive of both historical incidents and discourse. Against it, at least so far as Matthew is concerned, is the evidence that the First Gospel was composed in Greek from Greek sources.

The most popular hypothesis is that the logia of Papias are to be identified with a sayings source (*see* Q), used by both the First Gospel and the Third, its use by the First accounting for the connection of Matthew's name with that gospel. Alternative views, such as that the logia were a collection of messianic proof texts or that Papias was misinformed, have not commended themselves widely.

Ground for identifying Q and the logia exists in the restricted meaning the word usually has in the LXX, the NT, Clement of Rome, Polycarp, and Justin Martyr. Such an understanding of the logia also fits well with the practice in the early church of bringing together sayings of Jesus, considered as oracles, for didactic purposes, just as Judaism treasured the sayings of the rabbis. In this view the emphasis falls upon the sacred and oracular nature of a brief utterance of universal significance (cf. Matt. 5–7), as distinguished from both a saying of purely local significance, usually embedded in a narrative framework (Mark 2:23-28; Matt. 8:5-13=Luke 7:1-10), and a lengthy or reasoned discourse such as those in the Gospel of John.

D. T. ROWLINGSON

LOGOS lŏg′ŏs [λόγος]. *See* WORD, THE.

LOINS. The Hebrew and Greek words translated "loins" refer specifically to the hips or lower part of the back.

The normal Hebrew word מתנים (dual) is often used in a purely physical sense as indicating the middle of the body (Exod. 28:42; Ezek. 1:27; 47:4), as the place where a belt is fastened (II Kings 1:8; Isa. 11:5; Jer. 13:1), a warrior's sword is hung (II Sam. 20:8), or sackcloth is placed (Gen. 37:34; I King 20:32), and as the thickest part of the body (I Kings 12:10). There are a number of references to the practice of tying the long lower garments about the middle of the body ("the loins") in preparation for running (I Kings 18:46) or traveling speedily (Exod. 12:11; II Kings 9:1). The word is also frequently used in a figurative sense as representing the seat of man's physical strength (Nah. 2:1). In this sense "to loose the loins" (Isa. 45:1) or "make them shake" (Ps. 69:23) means simply to make a person weak. Also, in this sense, the loins can be thought of as the place where disease or misfortune most obviously manifests its presence (Ps. 66:11; Isa. 21:3; Nah. 2:10).

The word חלצים (dual) has approximately the same sense in Hebrew and covers much the same range of meanings, except that it is also taken as a symbol of the generative organs or powers and can therefore be used in the rhetorical description of a man's descendants as "those who come out of his loins" (cf. Gen. 35:11; I Kings 8:19). In this last sense the word ירך (properly "side") sometimes occurs as a synonym for חלצים (Gen. 46:26; Exod. 1:5).

The word כסל (lit., "flank") is also used to desig-

nate the loins, but (except for Ps. 38:7) only in the literal sense.

In the NT, the word ὀσφῦς covers the various meanings of the Hebrew words mentioned above: the middle of the body (Matt. 3:4; waist); the source of progeny (cf. Acts 2:30; Heb. 7:5, 10); and the place where garments are tied, in the metaphor "girding the loins" meaning "be prepared for activity" (Luke 12:35; Eph. 6:14; I Pet. 1:13; references are to the KJV; the RSV in many instances renders more freely). R. C. DENTAN

LOIS lō'ĭs [Λωίς, more desirable, better(?)] (II Tim. 1:5). The mother of Eunice, and grandmother of Timothy. Lois is commended for her Christian faith. "Paul" reminds Timothy that he has been nurtured in a family of believers and so exhorts him to "rekindle the gift of God." B. H. THROCKMORTON, JR.

LONGSUFFERING.

1. In the OT. This word occurs four times in the KJV of the OT—three times as an adjective (Exod. 34:6; Num. 14:18; Ps. 86:15) and once as a noun (Jer. 15:15)—as a translation of אֶרֶךְ אַפַּיִם (lit., "length of wrath"). Elsewhere this same Hebrew expression is translated "slow to anger" in the KJV; the RSV uses this translation for the adjective and "forbearance" for the noun. The term characterizes one of the two aspects of God's dealing with Israel—its rebelliousness demands punishment, but he delays in order to give opportunity for repentance and amendment. The LXX translates the Hebrew expression by μακρόθυμος and μακροθυμία, an almost literal rendering.

2. In the NT. Although the Greek adjective does not appear in the NT, the noun is used fourteen times and the corresponding verb once. For them the KJV uses "longsuffering" thirteen times, "patience" twice (Heb. 6:12; Jas. 5:10). The RSV uses either "forbearance" or "patience." When the word is used of God (Rom. 2:4; 9:22; I Pet. 3:20), it has the same connotation as in the OT—i.e., "delay in inflicting a deserved punishment on sin, in the hope that repentance may take place" (cf. especially Rom. 2:4: "Do you presume upon the riches of his kindness and forbearance and patience? Do you not know that God's kindness is meant to lead you to repentance?" II Pet. 3:9: "The Lord is not slow about his promise as some count slowness, but is forbearing toward you, not wishing that any should perish, but that all should reach repentance"). In I Tim. 1:16; II Pet. 3:15 the word is used of Christ in much the same way.

When it is applied to men, it is generally one of a list of Christian virtues, "fruit of the Spirit"—"love, joy, peace, patience, kindness, goodness" (Gal. 5:22), which are necessary in preserving unity within the Christian fellowship (Eph. 4:2). In the light of the preceding, therefore, the meaning would seem to be that the child of God is to reflect God's attitude of forbearance toward wrongdoers, not condoning evil but hoping that PATIENCE will lead him to a better mind.

LOOM [אֶרֶג (Judg. 16:14; KJV BEAM; WEAVER'S SHUTTLE *in* Job 7:6), weaver's bobbin; דַּלָּה (Isa. 38:12; KJV PINING SICKNESS; FLOWING LOCKS *in* Song of S. 7:5—H 7:6; *cf.* RSV mg.; KJV HAIR), thrum]. Apparatus for weaving. *See* CLOTH.

LOOPS [לֻלָאוֹת] (Exod. 26:4-5, 10-11; 36:11-12, 17). The cloth fastenings by which the two halves of the TABERNACLE were joined. The inner linen lining of the tabernacle consisted of two separate sections which were fastened together along one edge by running gold clasps through fifty matching loops on each half. The single flat piece thus formed was draped over the frame of the structure. The goatskin outer covering was made in the same way, except that the clasps were bronze, and the loops probably goats' hair. L. E. TOOMBS

LORD. The English rendering of various words that appear in biblical Hebrew, Aramaic, and Greek to express the idea of a person who commands respect or exercises authority. In many cases "Lord" is a title of honor and majesty used in addressing God, or a substitute for the special name Yahweh (KJV-RSV "the LORD").

a) אָדוֹן, "Adon," is the basic Hebrew word. It is a title of courtesy and respect used in addressing superiors—e.g., in the case of a slave speaking to his master or a subject to the king. God is called the "Lord of all the earth" (e.g., Ps. 97:5). Usually, however, when the title refers to God, it is vocalized *Adonai* as a plural of "majesty" (lit., "my Lords"). When the special name Yahweh was withdrawn from common usage, for fear of profaning it, Adonai was adopted as a substitute in public worship; this practice is reflected in the Masoretic vocalization of the Tetragrammaton (YHWH) with the vowels of the name Adonai. *See* JEHOVAH; GOD, NAMES OF, §§ B, C6.

b) בַּעַל, "Baal" ("owner, lord"), is sometimes used of human leaders (Num. 21:28; Isa. 16:8) or the "master" of cattle (Isa. 1:3). Because of the associations of the name with the Canaanite nature god Baal, however, it was never finally approved as a name for Israel's God (cf. Hos. 2:16—H 2:18). *See* GOD, NAMES OF, § C5.

c) Less important words are גְּבִיר, meaning "master, commander" (Gen. 27:29, 37); סָרָן, the title of the Philistine rulers (e.g., Judg. 16:5). In the Aramaic portion of Daniel are found רַב, רַבְרְבָן, in the sense of "lord, noble" (Dan. 4:36—A 4:33; 5:1) and מָרֵא in the sense of "exalted one, lord" (2:47; 4:19, 24—A 4:16, 21; 5:23). The latter is important for religious usage, for the Christians applied it to Jesus in the Aramaic prayer Maranatha, "Our Lord, come" (I Cor. 16:22; cf. Rev. 22:20).

d) The LXX uses κύριος to translate "Adon" and also to translate "Baal" when it has a nonreligious sense (e.g., Isa. 1:3). In the great majority of cases, however, it is a substitute for "Yahweh," although occasionally δεσπότης is used in compound titles like "the Lord God." The LXX usage carries over into the NT, though with the new development that

κύριος is a confessional title applied to Jesus Christ (Rom. 10:9; Phil. 2:11). B. W. ANDERSON

***LORD (CHRIST)** [יהוה, אדוני; Aram. מר, אדון; ὁ κύριος]. The Hebrew word is used in the English versions of the OT to translate the divine names Yahweh and Adonai; the Greek Bible, both LXX and NT, employs ὁ κύριος for the same purpose. The Greek word has, however, a very wide reference, being used of the God of the OT (e.g., Acts 2:34, quoting Ps. 110:1), of Jesus (e.g., Luke 10:1), of human masters (Acts 16:19), in address to an angel (Acts 10:4), or with the force of "Rabbi" or "Sir" (e.g., Matt. 8:6).

When characters in the gospels use the word in addressing Jesus, it often means no more than "Sir," but at other times it expresses full Christian faith, as in Thomas' ejaculation: "My Lord and my God!" (John 20:28). "The Lord" as a simple designation for Jesus is mostly confined to the narratives of Luke-Acts (e.g., Luke 17:5-6; Acts 9:10-11, 15, 17). Acts also frequently uses the phrase "the Lord Jesus" (e.g., 4:33), and speaks of faith in the Lord Jesus (16:31) and baptism in the name of the Lord Jesus (8:16; 19:5). Evidently "Jesus is Lord" was one of the early formulas of faith, and in Acts 2:36 Peter is quoted as saying that God has made Jesus both Lord and Messiah.

Paul often uses the fuller phrase "the Lord Jesus Christ" in conjunction with the mention of God the Father (e.g., I Thess. 1:1; cf. II Cor. 13:14, where the Holy Spirit is also named). He also uses the simpler formulas "the Lord Jesus" (II Thess. 1:7) and "our Lord Jesus" (I Thess. 3:13). In contrast to the many so-called gods and lords, there is for Christians but one God, the Father, and one Lord, Jesus Christ (I Cor. 8:5-6). It has often been noted that the statement of I Cor. 10:21: "You cannot partake of the table of the Lord and the table of demons," is paralleled by the famous papyrus letter: "Chaeremon invites you to dinner at the table of the Lord Sarapis" (Oxyrhynchus Papyrus CX). Paul, like the author of Acts, knows of the formula "Jesus is Lord," and says that no one can say κύριος Ἰησοῦς except by the Holy Spirit (I Cor. 12:3). In the important christological passage, Phil. 2:5-11, the "name which is above every name," which Jesus received at his exaltation, is probably κύριος (cf. Acts 2:36). The word is used in connection with the hope of his parousia (Phil. 3:20; 4:5; I Thess. 3:13), and at the conclusion of I Corinthians, Paul utters the Aramaic prayer: Μαράνα θά, "Our Lord, come!" (16:22; cf. Rev. 22:20: "Amen. Come, Lord Jesus!").

To an early Christian accustomed to reading the OT, the word "Lord," when used of Jesus, would suggest his identification with the God of the OT. It expressed Christ's divinity without explicitly asserting his deity, which was an idea startling to non-Christian Jews. A Christian of pagan background would find the word reminiscent of the god of a cult, like Sarapis. That even the Aramaic *mar* could have this meaning is shown by the fact that a god was worshiped at Gaza under this title, and his sanctuary was known as the Marneum. This does not, however, lead to the conclusion that Christians borrowed the title "Lord" from paganism. The evidence of Acts, taken together with I Cor. 16:22 and the very Jewish book of Revelation, shows that it belongs to the very earliest stratum of Christianity. Phil. 2:5-11 may, indeed, be representative of a pre-Pauline hymn or creed.

In the book of Revelation the title "Lord" has still another connotation. The Emperor Domitian liked to be called "our Lord," and one of his decrees began: "Our Lord and God commands that this be done" (Suetonius *Domitian* 13). To the author of Revelation, such lords and gods were blasphemous and demonic beasts (e.g., Rev. 13:1-6). His book implies that Christ, as King of kings and Lord of lords, is the only emperor whom Christians can recognize (19:16). The author of I Peter, who is much more friendly to the Empire, exhorts his readers to honor the emperor but to fear God (2:17) and to sanctify Christ as Lord in their hearts (3:15). *See* CHRIST.

LORD OF HOSTS *Yahweh Ṣᵉbhā'ôth* [יהוה צבאות; LXX κύριος τῶν δυνάμεων, κύριος σαβαώθ, κύριος παντοκράτωρ]. A special epithet for the God of Israel which was originally associated with the central sanctuary of the tribal confederacy at Shiloh (I Sam. 1:3, 11). This form, which occurs most frequently in the OT (267 times), is often assumed to be an abbreviation of the allegedly older form "Yahweh, God of [the] hosts" (יהוה אלהי [ה]צבאות), which occurs 18 times (with the article: Hos. 12:5—H 12:6; Amos 3:13; 6:14; 9:5; without the article: II Sam. 5:10; I Kings 19:10, 14; Jer. 5:14; Amos 4:13; 5:14-16; etc.). Since these passages do not necessarily represent an older tradition than those which associate the epithet with Shiloh, the ark (I Sam. 4:4; II Sam. 6:2, 18; cf. Isa. 37:16=II Kings 19:31), holy war (I Sam. 15:2; 17:45), the sacred oath (I Kings 18:15; II Kings 3:14), or the cultus of Jerusalem (II Sam. 7:8, 26; Ps. 24:10, the likelihood is that יהוה צבאות is the original form and יהוה אלהי הצבאות an interpretive expansion. Other expansions are "Yahweh, the God of hosts, the God of Israel" (Isa. 21:10; Jer. 35:17; 38:17; 44:7; cf. Ps. 59:5—H 59:6); "Yahweh of hosts, the God of Israel" (II Sam. 7:27; Jer. 7:3, 21; Zeph. 2:9); "the Lord, Yahweh of hosts" (Isa. 1:24 [האדון]; 3:15 [אדני]).

It is possible grammatically to regard the two words, יהוה צבאות, as standing in apposition, in which case צבאות would be a second divine name rather than a genitive which determines the *nomen regens*, Yahweh (in the construct state). Nevertheless, the expanded forms of the divine epithet are probably correct in expressing the grammatical dependence of צבאות upon the proper name of Israel's God. The hosts over which Yahweh is sovereign are variously taken to mean the armies of Israel or the heavenly host—i.e., the celestial bodies or the angels. *See* HOST OF HEAVEN. B. W. ANDERSON

***LORD'S DAY** [ἡ κυριακὴ ἡμέρα]. The first day of the week, celebrated by the early Christians with joyful worship as the day of Jesus' resurrection, and sharply contrasted with Saturday, the Jewish SABBATH.

1. The NT phrase
2. Sunday and sabbath
3. Dating by the week
4. How the Lord's Day was observed
5. Sunday as a day of rest
Bibliography

1. The NT phrase. The actual phrase occurs only once in the NT, at Rev. 1:10, and although some scholars have suggested its meaning there as the eschatological "Day of the Lord" and not Sunday, this is highly doubtful. The Day of the Lord is always ἡ ἡμέρα τοῦ Κυρίου, never ἡ κυριακὴ ἡμέρα. Moreover, our phrase (though with the word ἡμέρα suppressed and understood) unquestionably refers to the Christian observance of Sunday in early Christian literature—e.g., Did. 14; Ign. Magn. 9.1; Gospel of Peter 9.35; 12.50. The phrase itself is similar to Σεβαστή ("Imperial"), by which the first day of the month was known in Egypt and Asia Minor, in honor of the emperor. The Christian day is the day of the Christian Lord or Emperor, Jesus.

That the first day of the week was given special prominence in the Christian calendar is clear from Acts 20:7, where a service of preaching and the Lord's Supper is referred to; from I Cor. 16:2, where Paul probably intends that weekly collections for the Jerusalem church be taken up at the time of the Lord's Supper; from John 20:19, 26, where the passages may reflect a paschal octave as well as the observance of Sunday; and from Luke 24:30 ff, where the Emmaus story is intended as a prototype of the weekly Eucharist at which the Lord is present.

That the day, moreover, was chosen to celebrate the resurrection of Jesus is clear from the emphasis of the evangelists on his having risen on the first day of the week (Matt. 28:1, etc.).

2. Sunday and sabbath. The Lord's Day stands in marked contrast to the Jewish sabbath, which up to the eleventh century never meant Sunday, but always Saturday. Since the NT gives no evidence that sabbath observance was a cause of strife in the primitive Jewish Christian church, as was circumcision, we may assume that the two days were at first celebrated together. Paul, e.g., frequently attended synagogue worship and preached there on his missionary journeys (Acts 13:14, 45; 16:13; 17:2; etc.). As Christianity spread in Gentile circles, however, the sabbath observance was soon dropped and never made binding on Gentile Christians. In Col. 2:16, Paul criticizes sabbath scrupulosity in reference to Gentile converts. Indeed, the observance of the sabbath soon distinguished Jewish Christian groups in contrast to the Gentile church, and its celebration was regarded as a feature of "Judaizing." For Ignatius, the Christian no longer "sabbatizes," but lives according to the Lord's day (Magn. 9.1). Similarly the peculiar turn of phrase in Did. 14: κατὰ τὴν κυριακὴν δὲ κυρίου συναχθέντες ("according to the Lord's [Day] of the Lord gathering together [for worship]"), seems to mean "meeting for worship on the Lord's Day—*his special day,*" in contrast to the sabbath. It was not until the fourth century that Saturday (and then only in the East) became a liturgical day. Even there, its observance bore no reference to the Mosaic legislation on the sabbath. Indeed, the early Christian attitude toward the Fourth Commandment was the precise opposite of the later Roman Catholic and Puritan Sabbatarianism, which applied its restrictions to Sunday. Early Christianity viewed the Fourth Commandment as a ceremonial part of the law now abrogated. It was regarded as symbolic, not of Sunday, but either of a perpetual turning from sin (Just. Trypho 12) or of the future rest of the eschatological kingdom (Barn. 15.8; Iren. Her. 4.16.1).

3. Dating by the week. That Gentile Christians took over the observance of the Lord's Day from the Jewish Christian church implies also that they appropriated from Judaism the seven-day WEEK. Such a division of time is Babylonian in origin and based on astrology. Via the Canaanites, it was adopted by the Israelites, who developed their unique sabbatarianism from the seventh Babylonian day, which was a *dies non*—a day of prohibition on which it was unlucky to do important things.

The Roman calendar was entirely different, revolving around the calends, nones, and ides of the month. It was the cumbersome and unsatisfactory nature of the Roman reckoning, together with the spread of oriental and Jewish customs, especially through syncretic cults, that was responsible for the diverse ways of calculating the week in the early Empire (see Jos. Apion II.xl; Tert. Apol. 16; Nat. 13). In Mithra, e.g., the first day of the week was observed as the day of the sun, though the day of Saturn (Saturday) was more generally celebrated with rest and banqueting. Constantine's motives in finally legislating the public holiday of the "venerable day of the sun" in A.D. 321, while primarily determined by his Christian conversion, doubtless owed something to his desire to straighten out the Roman calendar, as well as to the influence of cults like Mithra and to the general importance of the sun-god in the Empire. Indeed, this god was the titulary divinity of Constantine's family, and from the fourth century there is an increasing assimilation of Christ to the sun-god (as Sun of Righteousness), the *Christos Helios* (cf. Euseb. *Life of Constantine* 1.4.18; and the notable mosaic of *Christos Helios* recently uncovered in the tomb of the Julii under the Vatican). However, this does not belong to the earlier period. The symbolism of Sunday is not that of relating Christ to the sun-god but of suggesting the correspondence in time between the original creation and the new creation in the risen Christ, both of which occurred on the first day of the week (Just. Apol. 67).

4. How the Lord's Day was observed. It is altogether impossible to tell exactly how the primitive Christians kept the Lord's Day. One thing only is certain—viz., that they held their distinctive service of worship on that day. But precisely what this included, how it was related to the preceding sabbath, and at what time it came, are dark questions indeed. When the church emerges into clear light in the second century, we know that around dawn there was a celebration of the liturgy which included scripture, prayers, sermon, and Eucharist on Sunday morning (Just. Apol. 67; *see* LORD'S SUPPER; WORSHIP IN NT TIMES, CHRISTIAN). For the Gentile church there was no sabbath observance, though some pious Christians in the West may occasionally have prolonged their Friday fast through Saturday, as early as the second

century, but this had nothing to do with the Fourth Commandment.

What was the situation in the first century? The only NT passage we have to guide us is Acts 20:7-11; and the only other aids we have in reconstructing events are the unclear references in Pliny's letter (Epis. 10.96) and in Did. 9–10; 14. It is possible that the author of Acts wishes us to understand his story as a typical example of early Christian practice. On the first day of the week the disciples came together to "break bread" (a technical term for observing the Lord's Supper, which then was a regular evening meal). Paul first preached an inordinately long sermon, causing the near tragedy of Eutychus, and then, when the young man was restored, those present held their meal and talked on till daybreak. The Lord's Supper was thus an evening meal preceded by a sermon. But it is unclear whether the author wishes us to understand that the events occurred on what we should call Sunday evening or on Saturday evening. The difficulty arises from the fact that Jews dated their days from sundown, while the Romans (like us), from midnight. Which dating is here intended? On the whole, one is inclined to imagine it is Sunday evening, and that Paul leaves "on the morrow," in accord with his intention—that is, on Monday morning (vss. 7, 11). The dating would then be Roman, and the Eucharist story would fit the gospel patterns to which we have already referred, and according to which Sunday evening is viewed as the occasion of Jesus' revealing himself in Christian worship.

This, too, would correspond with Pliny's account. By his time the actual supper had been separated from the distinctively Christian service—or rather was in process of being separated. There is a service "before dawn," which consists of hymnody (probably the antiphonal reciting of the messianic psalms), the Decalogue (derived from synagogue worship), and doubtless prayers and lections which Pliny does not mention. But in the evening of the same day (Sunday) there is a supper, which is finally abandoned because of Trajan's edict forbidding evening dinners of unlicensed clubs. We can also read the Didache along the same lines. The simple eucharistic supper of chs. 9–10 would come on Sunday evening (ch. 14) and include, or be preceded by, a confession of sins. But of all this we cannot be absolutely sure, and it is possible to read the evidence (but not Pliny's evidence) to refer to events on Saturday evening. A late meal on Saturday evening (such as the Passover meal whose traditions have so vitally affected the Lord's Supper) would occur for a Jew on Sunday, since his day would begin with sundown.

In any case, the observance comes in the evening with a eucharistic meal. The origins of a service around dawn, which eventually absorbed the sacramental part of the meal (leaving only an *agape* or church supper in the evening, deprived of its original significance), are to be found in the needs and circumstances of the Gentile church. Trajan's edict outlawing dinners of unlicensed clubs naturally forced a change in the Christian mode of worship. Evenings, furthermore, were not a time when slaves, who formed so large a part of an early Christian congregation, would be free to attend a service. The increasing need, moreover, that a persecuted group act secretly led to the transfer of worship to the very early hours of the morning. Finally, the fact that Christ had risen around dawn doubtless lent an appropriateness to the solution. The Lord's Day was celebrated at the moment of the Resurrection.

5. Sunday as a day of rest. For the early Christian, Sunday was a regular day of work, just as any other day. The special liturgical observance could not alter the cultural context in which he lived. There was, moreover, no question of applying the Jewish sabbatarian rules to the Christian day. The two days were distinct; and the Fourth Commandment was viewed by the Gentile church as part of the ceremonial law which had been abrogated in Christ. It is not until the third century that we learn from Tertullian (*On Prayer* 23) that some stricter Christians even deferred their business in order the better to celebrate the joy of the Lord's Day. But while this practice is in line with Tertullian's somewhat rigorous tendencies, there is no hint that he has in mind the Fourth Commandment. The point is merely that the festive character of the day can be best celebrated in that way, just as the common custom of standing, rather than kneeling, for prayer on Sundays reflects the joyful mood of the Christian on the day of the Resurrection. Indeed, Tertullian's reference is absolutely unique, until the advent of Constantine's edict in 321, making the "venerable day of the sun" a public holiday (*Codex Justinianus* 3.12.3). The motives behind his action have already been suggested. It was to be a day of rest; workshops and law courts were to be closed, but rural labor was permitted so that "the bounty of heaven might not be neglected." It is from the required rest of the imperial edict that the tendency toward sabbatarianism arose in the fourth and fifth centuries. In Ambrose (in Ps. 47) and Chrysostom (Homily 10 on Genesis) we have the first theologians to defend the Sunday relaxation from work on the basis of the Fourth Commandment. Pseudo Athanasius (*De Semente* 1) says in his homily: "God transferred the day of the sabbath to the Lord's day."

The ecclesiastical legislation which reflects this growing sabbatarianism, however, is far from demanding a complete cessation of work. Most of the canons (e.g., Apostolic Constitutions 7.23; 8.33; Council of Agde in 506, Canon 47) are primarily concerned with church attendance, and with emphasizing that Sunday, and not Saturday, is the Christian day. For instance, the Council of Laodicea, Canon 29 (later fourth century), insists "Christians must not Judaize by resting on the sabbath"; it then goes on to stress the honor due to the Lord's Day, on which, "if they can," Christians should rest. The injunction to rest is thus far from absolute. Not until the sixth-century Synod of Orleans (Canon 28) is manual labor forbidden.

The severest restrictions on work on Sunday belong to later medieval Catholicism and to English Puritanism. In the former case, however, the actual observance of Sunday was far removed from the church's ideal. It is noteworthy, furthermore, that the early reformers refused to admit a literal reference of the Fourth Commandment to the Lord's Day. Typical is the position of John Frith, the Cambridge reformer, who after stressing Sunday worship goes on to observe: "That done, they may return into their houses and

do their business as well as any other day." The work which, more than any other, influenced the stern Puritan attitude was Nicholas Bownd's *True Doctrine of the Sabbath* (1595), to which King James I in 1618 made his notable reply in *The Book of Sports*.

LORD'S PRAYER. The brief set of petitions ascribed to Jesus in Matthew and Luke, nowhere in the NT referred to under this title but possibly by the double term "Abba! Father!" (ἀββά ὁ πατήρ).

1. The texts of the prayer
2. Origin and context of the double tradition
3. Purpose and plan of the prayer
   a. The address
   b. The first petition
   c. The second petition
   d. The third petition
   e. The fourth petition
   f. The fifth petition
   g. The sixth petition
   h. The doxology
4. Eschatology and existence
5. An epitome of Jesus' teaching
6. Liturgical and personal use

Bibliography

1. The texts of the prayer. The two accounts, in Matthew and Luke, literally translated, may be compared as in the following column.

Matt. 6	Luke 11
9*a* Pray then like this:	2*a* when you pray, say:
b Our Father	*b* Father,
c who art in heaven,	
d may thy name be hallowed;	*c* may thy name be hallowed;
10*a* May thy kindom come;	*d* May thy kingdom come;
b May thy will come to pass	
c as in heaven so also on earth;	
11*a* Our bread for the morrow	3*a* Our bread for the morrow
b give us today;	*b* give us day by day;
12 And forgive us our debts, as we also have forgiven our debtors;	4*a* And forgive us our sins, for we ourselves also forgive all who are indebted to us;
13*a* And do not lead us into temptation,	*b* And do not lead us into temptation.
b but deliver us from evil (or, the evil one).	
c Some MSS of Matthew (W, H, 13, bg etc., Byz., Sy^{c}, Sa, Did.) contain an added doxology: "because thine is the kingdom and the power and the glory for ever."	

Important variations are found in Luke. E.g., vs. 2*b* is found as above in important witnesses (ℵ, B, 1, 118, etc., sy^{s}, Marcion, Origen), but the Matthean expansion is found in others (A, C, D, W, θ, 13, 69, etc., Byz., it, sy^{c}, sy^{pc}, sa, bo). Likewise vs. 2*d* is found as above (B, 1, 118, etc., sy^{c}, sy^{s}), but the Matthew form is found in many MSS (ℵ, A, C, D, W, θ, 13, 69, etc., Byz., it, vg, sy^{pc}, bo). The variants are probably assimilations to Matthew. For Luke alone the shorter text is more original. A further important variant of Luke 11:2 is referred to in § 3*c below*. Other minor signs of assimilation in both gospels are found.

2. Origin and context of the double tradition. The Q hypothesis is of little help, or the suggestion that Jesus delivered two forms of the prayer on two separate occasions. It is more likely that the two forms reach us from independent sources, each evangelist recording the form familiar in the church services of his region (*see* MATTHEW, GOSPEL OF; LUKE, GOSPEL OF). All the essentials are found in the shorter form. A liturgical origin for the two versions is indicated in several ways. The appearance of the doxology in some MSS shows that liturgical development was still in progress before the text of Matthew became settled. The variations are better explained by liturgical tradition than otherwise, in particular the form of Luke 11:2*c* found in Marcion and Gregory of Nyssa (*see* § 3*c below*). Luke's form of the fourth petition, compared with Matthew's, shows adaptation to a liturgical situation. The use of "Abba! Father!" in Rom. 8:15 (cf. I Pet. 1:17); Gal. 4:6 suggests a liturgical usage intelligible to the reader, and the combination of Aramaic and Greek terms testifies to a liturgical situation where both languages were used, which would have been true of many places besides Jerusalem. Jewish parallels and the lack of anything more than editorial contexts in the gospels point in the same direction.

Matthew has intruded the prayer into the Sermon on the Mount at a point where it interrupts the parallel construction of a section on religious practices (see Matt. 6:1-4, 5-6, 16-18). Luke has also attached it to a section on prayer (11:5-13), with an editorial transition, which, however, is less artificial than Matthew's. Luke's immediate introduction referring to a custom of John the Baptist's (cf. 5:33) also applies to the rabbis. It was not unusual to provide a brief summary prayer, and if Jesus did so, its liturgical history would inevitably begin with the earliest Christian gatherings.

We cannot, therefore, point with confidence to a brief original testified to by Luke which might have stood in Q. A considerable history stands behind the

forms which finally entered the gospels. The diverse liturgical origins also make problematical the reconstruction of an Aramaic original. So far as this is possible, the results for each gospel indicate that, like much of Jesus' teaching, the prayer was cast in a rhythmic form, reminiscent of poetry, with stresses, assonances, and a strophic structure which would make for ease in memorizing. While this consideration must be applied with caution in determining the form of words, the Eastern ability to retain and pass on oral tradition makes such structure probable.

3. Purpose and plan of the prayer. The claim of the two passages both to be a guide to prayer and to provide a specific set piece to be said corporately or individually is about equal. Certainly, to take it as a liturgical piece only would be to misconstrue the intent of the evangelists and, no doubt, of Jesus himself. It clearly served this purpose when the gospels were compiled and has continued to occupy a climactic place in Christian liturgies. The value of the Lord's Prayer as a plan upon which to base all prayer is indicated by each evangelist. Matthew, in offering it as a substitute for the wrong kind of prayer, establishes in it the priority of attention upon God and his kingdom. Luke, likewise, presents it in answer to a plea to be taught how to pray rather than to be taught a prayer. The similarity between the prayer and Jewish forms suggests the same thought. It forms a summary of the matter of prayer, and the Jewish rabbis provided such synopses. Tractate Berakoth (29*a*) reads: "What is the abstract of the eighteen? Rab said, 'An abstract of each benediction.' Samuel said, 'Give us understanding, O Lord our God, to know thy ways.' " There follows a brief prayer which summarizes the Eighteen Benedictions (cf. the *Habinenu* in the Jewish Prayer Book). This is later than Jesus, but there is no reason to think that the custom was not older than the Talmud. Jesus' prayer is in many respects a summary of the Shemoneh Esreh (Eighteen Benedictions) and doubtless was designed to cover in brief both an outline and order for the matter of prayer and a form which might be used as a short comprehensive prayer in itself.

The Lord's Prayer in the Didache is attributed to our Lord's command and presented as a substitute for "praying as the hypocrites" (revealing a knowledge of both the Matthean setting and the text). It is to be used three times a day (Did. VIII.2.3).

a. The address (Matt. 6:9b-c; Luke 11:2b). It is not unknown for Jewish prayers to be addressed to God as Father. More frequent in the synagogue service, however, is: "Our Father, Our King" (*'abînû malkhênû*). "Our Father" occurs in connection with the Fifth Benediction (*'abînû*)—though there immediately appears in parallel: "O our King" (*malkhênû*)—and elsewhere occasionally alone. "My Father" is occasionally found among the rabbis (e.g., Sifra Lev. 20: 26; Mek. 68*b;* etc.). The OT thinks of God as Father (Creator; Deut. 32;6; cf. Mal. 2:10) and addresses him as such (Isa. 63:16; 64:8; Jer. 3:4, 19—passages which the Targums translate with some circumspection). The later literature tends to treat God as Father of a more limited group within Israel (Wisd. Sol. 2: 16, 18; Jub. 1:24-25; Pss. Sol. 13:8; 17:30; 18:4).

The Lord's Prayer tells us nothing of Jesus' mode of addressing God, but the gospels record two cases of Jesus' use of "Father" (Matt. 11:25-26 [cf. Luke 10:21]; Mark 14:36 [cf. Matt. 26:39: "My Father"]; Luke 22:42). Mark 14:36 has ἀββὰ, ὁ πατήρ, and since Mark does not interpolate his usual translation, this may reflect a liturgical familiarity (the Passion in Mark is arranged as if for liturgical use) rather than a reminiscence. "Abba" is an Aramaic word which may represent the form with a personal suffix or be translated, as in Luke, simply "Father." This seems to have been Jesus' mode of address. It would be more usual in prayer to find the noun with the pronominal suffix (Hebrew *'abînû;* Aramaic *'abûnā* or *'abûnan*), "our Father." The loss of the pronoun in Luke may be explained by its Gentile Christian provenance.

Jewish piety would tend to add: "who art in heaven," as in Matt. 6:9*c* (ὁ πατὴρ ὑμῶν ὁ οὐράνιος, "your heavenly Father," occurs, e.g., in Matt. 5:48; 6:14, 26; etc.; and ὁ ἐν τοῖς οὐρανοῖς, "who is in heaven," e.g., Matt. 5:16, 45; 7:21; etc.). Its absence from Luke is not a sign of more primitive, but of non-Jewish, usage. Many MSS bring Luke into conformity with Matthew at this point. The Didache varies Matthew with πάτερ ὑμῶν ὁ ἐν τῷ οὐρανῷ, an indication that in use the text was still being adapted. Origen refers to a "boldness of speech" on the part of Jesus in addressing God as Father which goes beyond Jewish practice. It has become the characteristic use of the Christian church, which knows God through Christ the Son.

b. The first petition (Matt. 6:9d; Luke 11:2c). The first three petitions (two in Luke) have ultimately a similar meaning. To hallow God's name, to pray for the kingdom and for the doing of God's will, all suggest the affirmation of God's sovereignty in an eschatological hope. It is the prayer of a community living in an eschatological atmosphere, and this is properly what the church is when it prays this prayer.

The three petitions have in common the passive verb forms. Luke's verbs differ from Matthew's in the later petitions but not here. The passive imperatives are the language of prayer. Use of the passive was an act of reverence and may be widely illustrated in statements about God, as well as in prayers (e.g., Matt. 5:5, 7, 9; 7:1; Luke 14:14*b*). In the later petitions, where the subject is no longer God and the object no longer the divine situation, the active voice is used.

There is evidence in the Fathers that the variant petition for the Holy Spirit (*see* § 3*c below*) was sometimes found in place of this petition and the added ἐφ' ὑμᾶς, "upon us," found in D, may be a reflection of it (cf. Isa. 43:1; 63:19).

The name of God implied his nature and power. The danger petitioned against is represented in Rom. 2:24 (cf. Ps. 74:10, 18; Isa. 29:23; Ezek. 36:22-23). Ber. 40*b* asserts: "A benediction which contains no mention of the Divine Name is no benediction." The synagogue service in the *Atta hu ad* has the petitions: "Sanctify thy name upon them that sanctify it, yea, sanctify thy name throughout the world. . . . Blessed art thou, O Lord, who sanctifiest thy name among the many." The Kaddish begins: "Magnified and sanctified be his great name." To hallow God's name means to recognize and accept his nature and its demands, and the full answer to this petition presupposes the eschatological consummation. In the interim

it is in every sense a "missionary" prayer, for it implies the spread of the knowledge of God's name until all men hold it sacred (cf. Rom. 10:13-15).

c. The second petition (Matt. 6:10a; Luke 11:2d). This is also a completely Jewish prayer, though on Christian lips it is informed with Jesus' distinctive teaching and his own relation to the kingdom. "King" is a favorite designation for God. The synagogue Kaddish reads: "May he establish his kingdom during your life and during your days, and during the life of all the house of Israel." In Johanan's reply to the statement about the divine name, Berakoth states: "A benediction which contains no reference to the Divine Kingship is no benediction."

A few witnesses testify to the substitution for this petition in Luke the words ἐλθάτω τὸ ἅγιον πνεῦμα σου ἐφ' ἡμᾶς καὶ καθαρισάτω ἡμᾶς, "May thy Holy Spirit come upon us and cleanse us" (162, 700, Gregory of Nyssa, Maximus). It seems to be a Christian variant rather than an original reading, although it fits Luke's emphasis on the Holy Spirit. It may possibly have been a form connected with Christian initiation. Tertullian knew of it in Marcion as a substitute for the first petition.

This is also an eschatological prayer. The tension in Jesus' teaching about the kingdom as impending and yet operative is more obvious in the third petition in Matthew.

d. The third petition (Matt. 6:10b-c). That God's will may be accomplished is an interpretation of the coming of the kingdom, since when God's will is completely fulfilled to the exclusion of all other wills, the sovereignty of God in his kingdom will be evident to all. As such this petition is a proper expansion of the last.

Pirke Aboth contains the saying of Jehuda ben Tema: "Be strong as a leopard, and swift as an eagle, and fleet as a hart, and courageous as a lion, to do the will of thy Father which is in heaven." Also the words attributed to Gamaliel: "Do his will as thy will, that he may do thy will as his will. Annihilate thy will before his will, that he may annihilate the will of others before thy will." This may be compared with Jesus' prayer in Mark 14:36, which provides support for the inclusion of this petition.

The second part (vs. 10*c*) suggests that the doing of God's will is intended in the absolute sense that the situation which obtains in heaven may also obtain on earth (but cf. Col. 1:20). For the Christian the fulfilment is found in Christ's complete response to the Father, as developed in the Fourth Gospel, so that the prayer for the coming kingdom is in a real sense a prayer for the coming of Christ, *Maranatha*.

Origen and many since have speculated whether this clause might not be applied to the preceding petitions (for Origen, all three). The usual punctuation attaches it to the prayer for God's will, but the petitions for hallowing God's name and for his kingdom are susceptible of the same application. It is probably a liturgical adaptation in which the present answer becomes an anticipation of the final reality.

e. The fourth petition (Matt. 6:11; Luke 11:3). In the remaining petitions the verbs cease to be passive and become active. Matt. 6:11*a* and Luke 11:3*a* are identical, including the unusual word ἐπιούσιον. Origen thought the term, "invented by the evangelists," to have been derived from οὐσία, "substance," meaning "essential"—i.e., necessary for real life. So the Peshitta and Arabic are understood, and Jerome translates *panis supersubstantialem*. This suggests the OT "food that is needful" (לחם חקי) of Prov. 30:8. The combination of ἐπί and οὐσία is, however, grammatically unlikely, and οὐσία has usually another meaning.

The word is found only in the Lord's Prayer and in discussions of it, with the possible exceptions of a doubtful reading on an inscription now lost and a fifth-century A.D. papyrus (Sammelbuch 5224.20), where, if the incomplete form is correctly reconstructed, it seems to read: "for the day's (rations? expenses?)." In this case the term might be a form of ἐπιοῦσα construed with ἡμέρα (expressed or understood) to mean the coming day or the next day (cf. Acts 7:26; 16:11; 20:15; 21:18). This might justify Jerome's claim to have found *maḥar* in the Gospel of the Hebrews version, and he translates *crastinum, id est futurum*. The meaning then would be "of the morrow"—i.e., the day's ration for the next day. This could be given the weight of "daily," as is suggested by the Curetonian Syr., "continual bread" (Aramaic *lāḥman 'amînâ*, for Hebrew לחם התמיד); cf. Num. 4:7: "the bread of continuity" (LXX οἱ ἄρτοι οἱ διὰ παντὸς). There is possibly behind this nothing more than the simple Aramaic "our bread of the day" (*laḥman deyômâ*), but an original reference to the future seems more likely.

It is difficult to understand why so curious a word was used if it were not original, as its later introduction would be even more difficult to understand. It is best taken as a term fixed in the tradition and retained by liturgical conservatism and sanctity. The remaining and varying parts of the petition in Matthew and Luke then are not glosses (redundant if ἐπιούσιον meant "today's") but liturgical adaptations which apply the meaning to the circumstances of use and plead for the eschatological benefit to be applied to the present. The phrase is clearly a temporal one. The example of the manna in the OT suggests that the bread for the coming day would be sufficient for that day only. The term is best read as having no simply limited meaning. It is unlikely that it had a metaphysical one. The prevailing eschatological tone on the whole prayer shows that "bread of the coming day" could also suggest a share in the messianic banquet, of which the present, material bread, received thankfully, was a foretaste—an idea not remote from that of the "breaking of bread" or the Eucharist.

The remaining clause of the petition then becomes, in each case, easy to explain. Matthew's "give us today" (cf. Did. 8:2) interprets the petition to apply to bread needed for the day and would form a morning petition or, on Jewish reckoning, an evening one. The aorist, δός, fits the σήμερον. The Lukan present, δίδου, suggests a constant situation in keeping with the idiomatic τὸ καθ' ἡμέραν ("day by day"), a petition which might be used at any hour, better fitting a Hellenistic situation. (The Aramaic verbs give no guidance as to temporal sense.) If these clauses are taken to be liturgical adaptations of τὸν ἐπιούσιον, this *hapax legomenon* does not have to fit either to the exclusion of the other and shows that it had come to be understood most probably as "that portion de-

signed for the day at hand." Most attempts to translate it (though "daily" is colorless) represent a possible meaning in its actual use but are not a sure guide to the original. The two versions are best explained as modes by which an eschatological term was adapted to the existential situation. An eschatological tension between future and present is not peculiar to the Lord's Prayer.

f. The fifth petition (Matt. 6:12; Luke 11:4a). In the first clause the difference is Luke's substitution of τὰς ἁμαρτίας ("sins") for Matthew's τὰ ὀφειλήματα ("debts"). This is hardly significant, since Luke in the parallel clause follows Matthew (except grammatically). Luke uses synonyms wherever possible. The Didache has the variation τὴν ὀφειλὴν ἡμῶν (cf. Matt. 18:32). The commercial word represents the Aramaic *ḥôbhā* (Hebrew חוב), sin conceived as a debt, and "sins" would be a better translation in each case. (The term "trespasses," familiar to some liturgical uses, comes from neither version but is borrowed from Matt. 6:14-15: τὰ παραπτώματα.)

The fifth and sixth benedictions of the Shemoneh Esreh bless God, who delights in repentance, is gracious, and abundantly forgives, but there is no real parallel in Jewish prayers. The conditioning of God's forgiveness on man's, as in Matthew (reinforced by vss. 14-15), seems strange to Jewish ears. Matthew's aorist (ἀφήκαμεν, RSV "have forgiven") seems to imply a limit based on man's action. In Luke the present (ἀφίομεν) is used, suggesting concurrent practice. The tense may represent, however, an indeterminate Aramaic verb and be read as present or future. The NT present is sometimes used in a future sense. It is possible to read Luke's version, not as accomplished fact, but as intention: "Forgive our sins, for we ourselves will forgive." Matthew's insertion of vss. 14-15, choosing, as it does in its present context, one petition of the Lord's Prayer for comment, seems out of place (but cf. Matt. 18:23-34, with its added moral in vs. 35). The future sense is supported by Syr. versions for both gospels.

The difficulty, if it exists, may also be a sign of a reduced eschatological reference, the forgiveness referred to in each case being a final reckoning here made operative in current relationships (cf. Polyc. Phil. VI.2, where Rom. 14:10, 12, is quoted). Otherwise, it must be understood to mean that God's abundant grace, offered to all, must turn to judgment for those who will not themselves forgive. There is a self-commitment implied in the other petitions, especially in Matthew's parallelisms, but nowhere as emphatically as here. There seems no ground for limiting the application within the Christian community.

g. The sixth petition (Matt. 6:13a-b; Luke 11:4b). In view of Jas. 1:13, this request has seemed strange, and in some of the versions and ancient liturgies it reads: "Do not let us succumb to temptation." Attempts have been made to reveal an underlying Aramaic idiom which could be translated: "Do not let us go under in temptation." The causative verb may have a permissive sense, but since the Hebrew little distinguished cause and result and all that happened came under God's control, this is not important. In Ber. 60*b* a prayer for retiring says: "Bring me not into the power of sin, iniquity, temptation or contempt; and let the good impulse have dominion over me but not the evil impulse." Similar words occur in the Jewish Prayer Book: "Lead us [*t*ebhê'ênû] not into sin or . . . temptation . . . ; let not the evil inclination [*yêṣer hāra'*] have sway over us." In Mark 14:38, Jesus counsels such prayer, and here the word πειρασμός refers to immediate dangers which will prove to be a test.

Πειρασμός means primarily a testing, and not enticement to sin. In the LXX it translates the verb and place name *Massah* (where God was put to the test; Exod. 17:7; Deut. 6:16; etc.; cf. Ps. 95:8), and the verb *anah*, "to be afflicted." Its peculiarly biblical use is for putting men to the proof (e.g., Gen. 22:1; Exod. 20:20; Judg. 2:22; Dan. 1:14; Heb. 11:17; etc.). Such testing is to be expected (Ecclus. 2:1-2), even for Jesus (Luke 22:28), and prayer for deliverance seems, in view of I Cor. 10:13, to provide a difficulty (yet cf. Mark 14:35-36). It may be met by the very probable solution that the petition referred primarily to the final time of trial, the messianic woes (cf. Matt. 24:21, 29; Mark 13:24; I Pet. 4:12; etc.). In this case the word usually is θλίψις, though πειρασμός occurs at Rev. 3:10. There is only one case of parallel use, when Luke 8:13 substitutes ἐν καιρῷ πειρασμοῦ for the θλίψεως ἢ διωγμοῦ of Mark 4:17. Probably an eschatological reference is here modified for use in a prayer which seeks deliverance from, but comes to imply deliverance within, testing. To limit the petition to enticement to sin is to narrow its meaning to the point of distortion.

Eschatologically, the addition in Matthew must be read: "Deliver us from the evil one"—namely, the Devil, Antichrist, etc. The words τοῦ πονηροῦ may be masculine or neuter, "evil one" or "evil," and both are found in the NT. The Didache text is the same, but in 10:5 it is applied in the neuter to the church (ἀπὸ παντὸς πονηροῦ), "from all evil." In the Jewish prayer *above*, evil is found in the *yêṣer hāra'* or "evil impulse." Neither possibility can be absolutely excluded. Whether evil comes from other men, inner impulse, circumstances, or the enemy finally disclosed, prayer for deliverance is appropriate, and we may be asked to be spared the final, overwhelming test.

h. The doxology (Matt. 6:13c in some MSS). This is clearly a later addition and liturgical development, as the Didache shows. In 8:2 it is added to the prayer in the short form: "Thine is the power and the glory." It is clearly said by the people as a response and may have been so said after the Lord's Prayer. In Did. 9–10 it is repeated in a threefold pattern. The first two responses in each case are: "Thine is the glory for ever" (9:2-3; 10:2, 4), and the third: "for thine is the glory and the power through Jesus Christ for ever" (9:4) or "power and the glory" (10:5). These are responses to blessings and prayers over the wine and bread (9) and thanksgiving for the same and prayer for the church (10).

The addition of the doxology makes the Lord's Prayer a more complete act of worship. As a response it can also enlighten the meaning of each petition and give substance to the hope expressed. While fulfilment must await the last day, the kingdom, power, and glory are already in God's hands. We may pray for God's kingdom because the kingdom is his; for the hallowing of his name, because the glory is his;

for the doing of his will, because the power is his. We may share in the provision of bread, forgiveness, and deliverance also, because these are gifts that come with his kingdom; they express his power and manifest his glory.

4. Eschatology and existence. The doxology speaks of an existing state, promised but not realized, basic to the faith by which the prayer is prayed. In each petition it can be seen that there is a primary reference to an eschatological reality and hope. It most likely explains the difficulties involved in the present texts. In the first three petitions we are aware that the answer must be an ultimate reality, for they deal with what God must accomplish in the end, yet are brought into touch with our situation by the words: "as in heaven so also on earth." The last petitions deal with our relation to this final gift of the kingdom and in the text are already modified under the stress of applying the realizable fruits of the "coming near" of the kingdom to our present state. In every case we can pray for the final provision, forgiveness, and deliverance, but also for some anticipation of it in present experience. Thus the prayer of a community eschatologically conditioned becomes "existential" in use. What we pray for is an ἀρραβών, a "down payment."

5. An epitome of Jesus' teaching. In manifesting this tension the Lord's Prayer reflects that present in Jesus' teaching (and experience) between the kingdom near at hand and the kingdom yet to come. It also reflects clearly the priorities which he emphasized and applies them to the practice of prayer. Our first concern must be for God's concerns, as they were Christ's, and then our needs fall into perspective. The Lord's Prayer acts upon the injunction: "Seek first his kingdom and his righteousness, and all these things shall be yours as well" (Matt. 6:33). In affirming where our true treasure is, the petitions determine the proper nature of our interest (Matt. 6:9-21).

6. Liturgical and personal use. The developing forms revealed by the texts and by the doxology in particular indicate the propriety of both personal and corporate (liturgical) use. In each case the Lord's Prayer provides a plan upon which to base private practice and the priorities which ought to operate in public worship or liturgical order. The unvarying use of the prayer in every act of worship serves to bring that worship to a climax and at the same time to remind each worshiper to "pray like this."

Bibliography. The treatment of the several petitions, even words, is voluminous. The following will lead to the key materials: M. Margoliouth, *The Lord's Prayer No Adaptation of Existing Jewish Petitions* (1876). F. H. Chase, *The Lord's Prayer in the Early Church,* Texts and Studies, vol. I, no. 3 (1891). I. Abrahams, *Studies in Pharisaism and the Gospels,* 2nd Series (1924). C. F. Burney, *The Poetry of Our Lord* (1925). P. Fiebig, *Das Vaterunser* (1927). G. Dalman, *Die Worte Jesu* (1930). C. G. Bibliography

1. Names of the rite. The term "Lord's Supper" is not used by any other writers of the NT than Paul, but the phrase "marriage supper of the Lamb" in Rev. 19:9 is probably related to it. The word "supper" (δεῖπνον) is common in Greek writers, and in the papyri and inscriptions for cult meals of communion between gods and men. This circumstance may explain why the early church fathers seldom employed the term. Both Clement of Alexandria (*The Instructor* II.2.33) and Hippolytus (*Apostolic Tradition* XXVI.5) use it of the AGAPE, the informal suppers of the church for purposes of fellowship and charity that were not considered a sacramental rite.

The author of Luke-Acts favored the phrase "breaking of bread" (Acts 2:42, 46; 20:11; cf. Luke 24:35) to denote the common meals of the church, without clearly distinguishing between its sacramental and social characteristics. With "the prayers," the act is a peculiarity of the fellowship or "communion" of the church with the apostles. Paul also in one place uses the word "communion" with specific reference to the sacramental body and blood of Christ (I Cor. 10:16); otherwise, he employs "communion" in wider contexts of the fellowship of Christians with Christ and the Holy Spirit, with one another, and more particularly, of sharing in the spread of the gospel and in charity to the poor. *See* COMMUNION.

Christian writers from the second century on (e.g., the Didache, Ignatius, Justin, Irenaeus) preferred the title "Eucharist," derived from the thanksgiving over the bread and wine, the principal ritual act of the Lord's Supper. The absolute use of the noun "Eucharist" in this technical sense is not found in the NT, however, with the possible exception of I Cor. 14:16. Some commentators have found an allusion to the sacrament in the "sacrifice of praise" (Heb. 13:15), but the context suggests that it is a description of Christian life and worship in general, comparable to the summary of Col. 3:16-17; Eph. 5:19-20.

2. Times of observance. The primary form and meaning of the Lord's Supper were given to the church by Jesus in his words and actions at the LAST SUPPER with his disciples before his passion. It should not be overlooked that a primitive and recurrent aspect in the tradition of the Resurrection is the association of the appearances of the risen Lord to his disciples with the occasion of their table fellowship

and common meals (Luke 24:30-43; John 20:19; 21: 9-14; Acts 10:41; and the appearance to James, recorded in the Gospel According to the Hebrews, as reported by Jerome *On Illustrious Men* 2). This intimate association of the resurrection faith with the "breaking of bread" explains the festive quality and character of the celebration of the Lord's Supper from the very beginning of the church's existence, as it is admirably summarized in Acts 2:46-47: "And day by day, attending the temple together and breaking bread in their homes, they partook of food with glad and generous hearts, praising God and having favor with all the people."

This passage from Acts suggests that the supper-fellowship of the earliest Jewish Christians was a daily observance. This may well have been the case, in view of their vivid expectation of the imminent return of Jesus from heaven in the Second Coming. The sayings of Jesus at the Last Supper had pointed to an impending fulfilment of God's promise of the revelation of his kingdom. The church, in these earliest days, was living in a continual Passover experience of redemption, reinforced by the sense of participation in the "last times" by the manifest outpouring of the Holy Spirit. The delay of Jesus' return, however, and the spread of the church outside the limited boundaries of the Jerusalem community, made so constant a resort to common meetings less urgent and practical. Though we cannot trace the development with any detail, it is no less clear that before the end of the apostolic period, the regular time of meeting of Christians was the "first day of the week," Sunday—or, as Christians called it, the LORD'S DAY (cf. Acts 20:7; I Cor. 16:2; Rev. 1:10; Did. 14:1; Barn. 15:9; Ign. Magn. 9:1).

We can only surmise the process whereby Sunday became the peculiar day for the corporate worship of the church. So long as the church's membership was predominantly Jewish, and the tension between Jewish and Christian beliefs about Jesus had not provoked an open breach of fellowship, we may suppose that Jewish Christians continued to worship on the sabbath in temple and synagogue. But at sundown on the sabbath, which marked for the Jews the close of the seventh and the beginning of the first day of the week, the Christian disciples would gather for their own peculiar observances, including the "breaking of bread." As the church became more and more Gentile in membership, and Jewish Christians were themselves separated from participation in the communal assemblies of Jewry, the meetings on Saturday evening, often lasting into the early hours of the morning (cf. Acts 20:7-11), would remain as the primary occasion of Christian worship. Whether the selection of the first day of the week for the church's worship was a fortuitous or a deliberate choice in the mind of Christians, it was soon understood as a providential guidance, and significant of the entire orientation of Christian faith around the resurrection of Jesus. Throughout the early centuries of the history of the church, Sunday was universally observed by the celebration of the Lord's Supper. This unanimous association of Sunday with the Eucharistic rites testifies, as does no other single fact, to the early Christian way of understanding the Lord's Supper, not only as a memorial of the Lord's death, but also of his resurrection, the earnest of eternal life in the age to come.

3. Form of the rite. The most debated question concerning the Lord's Supper in the apostolic age concerns the form of its observance. It is unanimously agreed that the celebration as a whole involved, as did the Last Supper, a full supper or meal. But critics disagree as to whether the earliest Christians distinguished the blessed elements of bread and wine, received in conscious memory of the Lord's special institution, as more sacred and sacramental in character than the rest of the meal and accompanying devotions. In other words, did the early church maintain a clear distinction between the Eucharist and the AGAPE?

a. As a common meal. The two types of observance, Eucharist and Agape, were certainly distinguished, not to say separated, from each other by the time of Justin Martyr (A.D. 150). By that time the Eucharist was a ceremonial meal, involving only the offering, blessing, and sharing of the elements of bread and wine, and carefully differentiated by its sacramental character from the fellowship and charitable suppers of the Agape and the funerary, memorial banquets for departed Christians. The passing references in writers of the subapostolic age are not detailed enough to afford a clue to the problem at an earlier phase of development. This includes the mention in Acts, as already noted, of the "breaking of bread." The fuller directives of the DIDACHE 9–10, 14, are themselves involved in this critical controversy, and are in any case an uncertain guide because of other problems of this document with respect to its date, location, and significance. We are thus dependent almost entirely upon the notice of Paul in I Cor. 11:17-34.

Among the Jews, even the most ordinary meals were sanctified by the benedictions—i.e., thanksgivings—offered to God by the head of the family, both at the beginning and at the end of the repast. The former of these benedictions was pronounced at the breaking of bread. At occasions of a more formal, religious nature, the thanksgiving after meals was said over a "cup of blessing" of wine mixed with water, which was then passed about the table for each member of the company to partake. The special grace thus shared in common was associated more especially with participation in the one blessing rather than with consecrated elements of food. The food and drink, however, were hallowed by the recognition that they were gifts of God's providence; and the special thanksgiving over the cup linked the remembrance of God's providence with the recalling of his past acts of redemption and his promise of the coming kingdom. In a setting such as this, the earliest Christian missionaries imparted to their converts the tradition of the Last Supper, translating the older Jewish table benedictions into terms recalling the redemptive act of Christ, the fulfilling of his church with the Spirit, and the sure hope and expectation of his imminent return to establish his kingdom.

Gentile converts to the faith were also familiar with cult meals in their pagan background. We know too little of the details of sacramental meals in the mystery religions, other than that they existed, since the more solemn ceremonies of these cults were kept with extraordinary secrecy. In addition, there were the feasts following upon religious sacrifices; and many

guilds of tradesmen and funerary associations held common meals under the patronage, and in devotion to, particular tutelary deities. Such meals would be formally opened by libations offered to the gods; and in many cases special offerings of food would be set aside for the patron deity, as one present in the company of devotees. All too often, however, pagan cult meals degenerated into gluttonous feasting and drinking, and exceeded the limits of decent decorum.

b. Problems of the meal. The church in Corinth, founded by Paul, may not have been typical of Christian congregations; but the problems raised by their behavior at the Lord's Supper were no doubt symptomatic of the difficulty of preserving the decorous and sacred atmosphere of the Jewish tradition of religious meals among converts of heathen background. The particular abuses at Corinth to which Paul addresses his strenuous remonstrances had to do with three things: (*a*) the open divisions of the Corinthians in their celebration of the Supper; (*b*) the disregard of certain members, perhaps the wealthier and more leisured, for others by the way they began the observance of the Supper before all the church members had arrived; and (*c*) the excesses of certain members in eating and drinking. The divisions of the Corinthian church were not only social and economic, but ethnic and religious, for in the same letter Paul deals with the problem of Jewish-Gentile tension over eating meat that had been offered in pagan sacrifice, and with the partisan strife that centered in conflicting loyalties to several missionaries. *See* CORINTHIANS, FIRST LETTER TO THE.

By reminding them once more of the tradition as to how the Lord had celebrated the Last Supper, Paul roundly condemned the Corinthians' observance as a travesty upon it. He insisted that they should all begin the Supper together and share it together, with full regard for Christian charity to impoverished Christians who could not provide much in the way of food and drink for the meal. He recalled them to the religious solemnity of the occasion, as predominant over its social character. And he directed that any temptation to immoderate feasting be removed by reminding those who were hungry to eat at home.

There is no suggestion in Paul's directives that the Supper was to be reduced to a purely ceremonial meal upon the bread and wine. It is generally accepted by all commentators that Paul allowed for a continuation of a common meal, as at the Last Supper, between the blessing of the bread at the beginning and the blessing of the cup after supper. His one concern is that this meal be done by all together, with sobriety and devout remembrance of the Lord. It is certainly possible to distinguish, as many critics do, the two actions of blessing and sharing of the bread and the cup, respectively, from the rest of the meal, and to denote these actions only as sacramental and cultic. Support for this view can be found in I Cor. 10:16: "The cup of blessing which we bless, is it not a communion in the blood of Christ? The bread which we break, is it not a communion in the body of Christ?" Certainly the blessed bread and cup of wine had a greater significance than any other part of the meal, by virtue of the Lord's words about them at the Last Supper. There can be no denying this. But it is not clear, by any means, in the recital of I Cor. 11:20, that the title "Lord's Supper" refers only to the words and actions associated with the bread and the cup, and not to the entire observance of the meal.

c. Separation from the meal. There is no record of the time and place when and where the meal was detached from the memorial of the Last Supper and a clear separation made between the sacramental Eucharist and the fellowship meal of the Agape. A theory has been propounded that, in view of the universal and uniform development of this differentiation throughout the church by the middle of the second century at the latest, if not at a considerably earlier time, the arrangement was made by authority of the apostles. This is possible, but it is incapable of proof. We may surmise, however, the principal reasons for its taking place. One was undoubtedly the need of preserving the most sacred cult act of the church from the kind of abuses that happened at Corinth, and that was likely to be repeated as the membership of the church was drawn more and more from Gentiles of heathen background.

A practical consideration may well have been the limitations of space. As congregations grew in size, it would have been impossible to accommodate them at a regular meal, all at one time, even in the more commodious houses of well-to-do members, where in most places Christians would be enabled to meet. Unfortunately, no house-church of a primitive age has come to light. The oldest one as yet identified—that at Dura, dated 242—had probably ceased to be a private residence by the time it was taken over for use by the local church. It exhibits modifications in the interior arrangements, through the combination of several rooms to form one large meeting room, precisely to provide enough space for the gathering of the church at the Eucharist.

The separation of the Eucharist from the common meal led to an important modification in the ritual and manner of its celebration. With the dropping out of the meal, the older, separate thanksgivings over the bread and the cup were combined into a single prayer of thanksgiving over both elements together. Henceforth the bread and the wine were offered together and blessed together, with communion in both species following immediately. On Sundays, at least, this ceremonial meal was preceded by a synaxis, or corporate devotion of lessons, sermon, prayers, and kiss of peace, which presents analogies with the service of the Jewish synagogue, from which it may have been derived and developed. The lessons and sermon were open to any person, whether a member of the church or not—though, for security reasons, unbaptized persons must have been allowed to attend only upon invitation. Before the prayers, however, all non-Christians and unbaptized catechumens were required to leave, and the rest of the rite was observed by the faithful alone behind guarded doors to avoid profanation of the sacred mystery. In this respect, the sacramental rite of the church provided certain analogies to the cults of the mystery religions. The oldest, detailed account of such a celebration that we have is provided in Justin Martyr's first Apology, 65-67.

4. Ministers of the rite. From the time of Ignatius (*ca.* 110), it was a universal custom that only the bishop presided over the celebration and offered the

consecratory prayer of thanksgiving over the bread and wine. In his absence, he could deputize this office to an elder (presbyter). The deacons assisted the celebrant in receiving the offerings of the people and in administering communion both to those present at the assembly and to the absent (the sick and prisoners). Whether or not this arrangement goes back to apostolic times cannot be exactly determined, since neither Paul nor the book of Acts gives us any precise information on this point. Doubtless an apostle, when present, took precedence over all other ministers in presiding over the celebration. Did. 10:7 allows a prophet to offer the thanksgiving "howsoever he wishes," but it is disputed by commentators whether this passage refers to the Eucharistic consecration or to the table blessings of the Agape. However, in ch. 15, after a precise mention of the Eucharist, the Didachist prescribes the appointment of bishops and deacons who "also minister the liturgy of prophets and teachers." It may be that this directive is a commentary upon Acts 13:1-3, where prophets and teachers at Antioch are described as "liturgizing" for the church there. In I Clem. 44.4, the bishop is especially described among those "who have offered the gifts"—i.e., the Eucharistic elements. Many scholars believe that the original and primary function of the office of bishop was that of "overseer" of the Eucharistic rite. *See* BISHOP; MINISTRY, CHRISTIAN, § 8.

5. Doctrine. The theological meaning of the Lord's Supper is obviously based upon the intention of Jesus in his words and actions at the LAST SUPPER (*see* § 3), though undoubtedly the understanding of them by the early Christians was colored by their own comprehension and beliefs respecting the nature of his person and atonement, and the character of his relation to his church. For Jesus, the Supper was the sign of the New Covenant, sealed in his death and resurrection, that constitutes the new Israel of God as the heir of the impending kingdom. It is a pledge that his disciples partake of the benefits of his redeeming work and hence have an earnest of the heavenly messianic banquet that they will share with him. The Supper is the means whereby those who belong to Jesus join with him in that entire, sacrificial self-offering to the Father's will that alone is the way to eternal life.

a. As a sacrament. Later NT teaching is basically faithful to this perspective of Jesus, both in its sacrificial and in its eschatological aspects. Paul developed and stressed especially the realistic communion that the Christian has with Christ and his fellow believers in the elements of the Supper. It is "supernatural food," typified in the OT by the manna and water from the rock enjoyed by the Hebrews in their wilderness wandering to the Promised Land (I Cor. 10:1 ff). This communion with Christ has two principal corollaries: (*a*) it is of such holiness and power that profanation of it by association with the communions of either Jewish or pagan sacrifices provokes the Lord to "jealousy" (I Cor. 10:16-22); and (*b*) it is such a bond of unity in the church that want of charity among the members of the one body, who share the one bread, brings judgment of damnation. More than that, unworthy participation in the consecrated bread and cup results in dire consequences, by not "discerning the body," not only in the spiritual, but also in the material, sphere of life (I Cor. 11:27-34). Thus, in Paul's thought, the sacrament seals the intimate union of Christ with his church, and of the several members of the church one with another.

The Fourth Evangelist also employs the typology of the manna to stress the supernatural receiving of Christ, "the bread . . . which comes down from heaven," in the eating of his flesh and the drinking of his blood. The sacrament is both the nourishment of the Christian in eternal life now during his life on earth, and a pledge of his being raised up "at the last day." The evangelist meets the scandal aroused by his intensely realistic language by the reminder that Christ offers us not his material, natural flesh and blood, but his risen and ascended life in Spirit, and that the gift of this life is received and appropriated in faith (John 6:25 ff).

Many modern critics see in the Pauline and Johannine sacramental realism the influence of pagan mystery cults, or, at least, a radical transformation of the historical and eschatological context of Jesus' words of interpretation into the nontemporal and metaphysical outlook of Hellenism with its concern for the redemption of matter by spirit. To some extent this is true, and perhaps inevitable in the process of translating the gospel into the terms of a Greek-speaking, Greek-thinking culture. The trend in this direction very early reached a term in the definition of the Eucharist by Ignatius (Eph. 20.2) as the "medicine of immortality, the antidote that we should not die but live for ever in Jesus Christ." On the other hand, it is not fair to include either Paul or "John" with those who conceived of sacraments as quasi-magical operations, infusing "immortality" in their mortal recipients. They guard the efficacy of the Eucharist by their insistence upon the conditions of faith and charity in the participants. Nor do they ignore the tension of future judgment which the sacrament places upon all who partake of it. Their teaching is loyal to the "realized eschatology" of the NT outlook as a whole. *See* ESCHATOLOGY OF THE NT.

b. As a sacrifice. The sacrificial character of the Lord's Supper is necessarily related to Jesus' own association of the bread and wine with the offering of his body and blood on the cross. It has been argued by some scholars that his very command, "Do this," implies that the performance of the rite itself is a sacrifice. Even if this be admitted, it does not help us to define the precise character of the Eucharistic sacrifice, especially in view of the varied kinds of sacrifice current in the ancient world among both Jews and Gentiles. *See* SACRIFICE AND OFFERINGS.

No writer of the NT uses the word "sacrifice" to denote the Eucharist. We have seen, however, that Paul draws an analogy between the Christians' communion in the sacramental elements and the meals of the sacrificial offerings of Jewish and pagan cult. Yet Paul does not suggest that the Eucharistic bread and wine are in and of themselves offered to God as a sacrifice. Insofar as Christians offer sacrifice at all, in Paul's view, they offer the totality of their lives in Christian service: "a living sacrifice, . . . your spiritual worship" (Rom. 12:1). The same thought underlies the statement of I Pet. 2:5, that Christians "offer spiritual sacrifices," and of Heb. 13:15-16: "Through him [i.e., Christ] then let us continually offer up the

sacrifice of praise to God, that is, the fruit of lips that acknowledge his name. Do not neglect to do good and to share . . . , for such sacrifices are pleasing to God."

There is no need to exclude from these passages the Lord's Supper, since it was part and parcel of the Christian life of fellowship and sharing. But they contain no specific doctrine of a Eucharistic sacrifice apart from the obvious truth that the sacrament is a means, among others, whereby the faithful in Christ, being one with him, are participants by grace in the demands, as in the effects, of his one offering of himself once for all on the cross. It is therefore quite in accord with NT thought to speak of the Lord's Supper as a "memorial sacrifice" or as a "sacrifice of praise and thanksgiving." (The Christian sacrament, in this respect, shares many of the motifs of the Jewish Passover.) It is a thankful and joyous memorial of redemption, not in the way of mere mental recollection of a past event, but, more than that, a here-and-now experience of the mighty deliverance of God, with his promise—made sure for the Christian by Christ's victory—of salvation in the world to come.

The first Christian document to call the Eucharist a "sacrifice" as such was the Didache (14:2-3), by considering it a fulfilment of Mal. 1:11. The Eucharist is the "pure offering" magnifying God's name among all peoples throughout the world. This notion may not be very faithful to the original meaning of the prophet, but the idea was to have a rich development in second-century Christian theology. It fit into the trend of late Jewish and pagan philosophical thought, with its depreciation of material offerings—particularly "bloody" ones—and its emphasis upon true sacrifice as an inner oblation of the heart and mind of those who are in moral character fit for communion with God. The Christian development of the theme took one of its cues from Paul's concept of spiritual sacrifice in Rom. 12:1. Possibly Paul himself borrowed the phrase from current philosophical discussion. To trace the application of it to the Eucharist would take us, however, far beyond the boundaries of NT theology. *See* WORSHIP IN NT TIMES, CHRISTIAN.

LOT lŏt [לוט; LXX *and* NT Λωτ]. Son of Haran, and nephew of Abraham (Gen. 11:27).

The Lot stories are now found intertwined with the more dominant Abraham narrative (Gen. 11:27-32; 12:4*a*, 5*a*; 13:1-13; 14:12, 16; 19). Viewed separately, however, they contrast Lot with his uncle, his neighbors the Sodomites, his wife, and his daughters.

Bibliography

1. Lot and Abraham. Like Noah, Terah had three sons: Abram (the form Abraham is not used until 17:5; *see* ABRAHAM § A), Nahor, and Haran. Haran was the father of Lot and presumably also of Milcah and Iscah. He died before his father "in the land of his birth, in Ur of the Chaldeans" (11:26-29). Taking Abram, Lot, and Sarai (*see* SARAH), Terah left the ancient Sumerian city of Ur for the land of Canaan. But when he reached Haran, a flourishing city on the Upper Balih River, he settled there and died (vss. 31-32).

When Abram was called by Yahweh to leave Haran, he took with him Lot and all the members of their families (12:4-5*a*). Entering Palestine, Abram and Lot camped first at Shechem and then near Bethel, each time building an altar for the worship of Yahweh. Yet they "journeyed on, still going toward the Negeb" (the S—originally "dry"—country; vss. 6-9).

This movement of Hebrew patriarchs from Haran down to the S border of Palestine would indicate that Israelites shared in the general migration of Arameans into the W and SW sections of the ancient Near East during the Middle Bronze Age (2000-1500 B.C.).

Although the narrative in 12:10-20 does not explicitly state that Lot accompanied Abram and Sarai to Egypt, the three are named together upon their return to Palestine (13:1). Moreover, the Dead Sea Genesis Apocryphon (*see* DEAD SEA SCROLLS § 5*e*) has Lot not only accompanying Abram into Egypt (XX.11, 33-34) but also functioning as spokesman to Pharaoh's agent (lines 22, 24), acquiring great possessions, and obtaining a wife (line 34).

After their sojourn in Egypt, Abram and Lot went through the Negeb up into the Benjaminite hill country, seeking adequate pasturage for their flocks and herds, which had greatly increased in Egypt (12:16; 13:2). When they reached their former camp between Bethel and Ai, they parted. The earlier J source gives the reason as personal strife between their herdsmen (13:7*a*); the later P writer adds that "the land could not support both of them dwelling together" (vs. 6). The note that the Canaanites and Perizzites were then dwelling in the land (vs. 7*b*) serves two functions. First, it emphasizes the dimension of faith; for the land was not yet in the possession of the Hebrew patriarchs, to whom it had been promised (12:7; 13:14-17). Then it points up the acuteness of the economic situation; for not only must Abram and Lot find enough land to support their large flocks, but they must further reckon with the prior claims undoubtedly being urged by the native inhabitants.

Eschewing discord, especially between "men who are brothers," Abram gave his nephew first choice of the best of the land (13:8-9). Lot, having surveyed

the scene, chose the whole Jordan basin (lit., the "circle of the Jordan," a technical term; *see* JORDAN § 4), whose fertile richness the editor compares with the garden of Yahweh and with Egypt. He journeyed through it and settled at Sodom (vss. 10-12). This story offers an intentional contrast between Abram's magnanimity and Lot's self-interest; and its closing words form both a judgment upon Lot and a connecting link with ch. 19, the second unit in the Lot tradition: "Now the men of Sodom were wicked, great sinners against Yahweh" (13:13).

Lot appears in ch. 14 as one of the captives taken by CHEDORLAOMER and his E confederates when they quelled the revolt of five Canaanite kings from the region of Sodom and Gomorrah (vss. 1-12). Lot was then rescued by Abram, whose valorous action brought him honor (vss. 13-24; *see* ABRAHAM § C3). Within this unique chapter the figure of Lot serves to link together two originally separate units (vss. 1-12, 13-24). Also, his capture brings Abram out into the international scene, dramatizing him as a military hero and a savior of his people.

2. Lot and Sodom. Other comparisons are found in the next section. Dwelling in one of the "cities of the plain," Lot himself forms a clear contrast with the perverted Sodomites, just as his hospitality to the angelic visitors is contrasted with the wickedness of the citizens (19:1-9). However, the story implies also a comparison with Abraham's hospitality (18:1-8) which is not favorable to Lot, who let the claims of courtesy transcend the moral obligations of fatherhood (19:6-8).

3. Lot and his wife. Again Lot is rescued (19:12-29; cf. ch. 14), this time by divine intervention which takes into consideration his relative righteousness (Wisd. Sol. 10:6-8; Luke 17:28-29; II Pet. 2:7-8) and accommodates itself to his weakness (Gen. 19:16-21; but cf. vs. 29[P]). Here Lot is favorably contrasted with the members of his own family. "His sons-in-law, who were to marry his daughters," given the chance to share in Lot's salvation, condemned themselves by their frivolous disbelief. Even his wife, though specifically warned (vs. 17), brought her own condemnation by refusing to give herself totally to the flight. Looking back because of reluctance or curiosity, "she became a pillar of salt" and so has served as a warning in later Jewish (Wisd. Sol. 10:7) and Christian (Luke 17:32) teaching. Fig. LOT 37.

37. One of the columns of rock-salt traditionally associated with the story of Lot's wife

4. Lot and his daughters. As the "cities of the valley" were being destroyed (*see* SODOM; GOMORRAH; DEAD SEA § 2*d*), Lot and his two daughters fled from ZOAR, where they had taken refuge (Gen. 19:17-22), up into the hills of Moab (vs. 30; cf. 14:10). Dwelling with their father in a cave, through incestuous relations Lot's older daughter becomes the mother of the Moabites; his younger, of the Ammonites (vss. 30-38; cf. Deut. 2:9, 19). Although these popular ethnic etymologies are historically and linguistically unsatisfactory, they preserve a memory of intermarriage between ancestors of the Israelites and inhabitants of S Transjordan (cf. also Gen. 36 [especially vss. 20-30]; I Sam. 22:3-4; Ruth; *see* MOAB; AMMON). The present form of the stories leaves no doubt as to Israel's feeling of superiority (cf. Isa. 15–16; Jer. 48; Amos 2:1-3; Zeph. 2:8-9).

The Lot narrative ends with the same theological motifs which characterize the whole J epic: God's election of Israel and his providential guidance of the patriarchs, his judgment of sin, his accommodation to man's weakness, and his saving grace.

L. HICKS

LOTAN lō′tăn [לוטן, *probably connected with* LOT; *note frequent nunation in* Edomitic (Gen. 38) *and* N Arabian (Gen. 25:1-3) *personal names*]. The first son of Seir (Gen. 36:20; I Chr. 1:38); clan chief of the native Horite inhabitants of Edom (Gen. 36:22, 29 [אלוף לוטן]; I Chr. 1:39). L. HICKS

LOTHASUBUS. Apoc. alternate name of HASHUM.

LOTS.

1. In the OT. The employment of the lot (גורל), either in the form of casting it on the ground or of drawing it from a receptacle, was much in vogue in the ancient world (cf. Esth. 3:7, where the Akkadian *pûru* is equated with the Hebrew גורל; Joel 3:3—H 4:3; Jonah 1:7; Nah. 3:10). In the OT the use of the lot is reported on many occasions: to apportion the newly conquered land among the tribes (Num. 26:55; Josh. 14:2; etc.), to detect a guilty person who has broken a taboo (Josh. 7:14; I Sam. 14:42), to determine which of the two goats in the ritual of the Day of Atonement shall be sacrificed as a sin offering and which shall be sent away into the wilderness to Azazel (Lev. 16:7-10), etc. The same method was sometimes employed to solve exceptional political and labor problems. The first king of Israel was chosen by lot (I Sam. 10:20-21). The courses of the priests, singers, and gatekeepers in the temple

were assigned by the same means (I Chr. 24:5; 25:8; 26:13). In times of emergency certain tasks, such as the provision of wood for the temple and the resettling of Jerusalem, were also accomplished by the casting of the lot (Neh. 10:34—H 10:35; 11:1). According to Prov. 18:18, the lot was used in settling disputes between powerful contenders.

The use of the lot was not considered a practice bordering on magic (cf. Josh. 18:6, 8, where the lot is cast "before the LORD our God"). Deut. 18:10-12, which condemns all forms of witchcraft, does not mention the lot; and Prov. 16:33 contends that though the lot is thrown, "the decision is wholly from the LORD."

The term "lot," as first used in Joshua as a method to apportion land, acquired later the meaning of hereditary land property (cf. Josh. 17:14; Ps. 16:5-6; etc.), and finally, in a metaphorical sense, that of "destiny" (cf. Isa. 17:14; Jer. 13:25; Dan. 12:13). The character and form of the lot in ancient Israel are not known.

See also URIM AND THUMMIM. I. MENDELSOHN

2. In the NT. Casting lots (βάλλειν κλῆρον) was a method of ascertaining the divine will, widely employed in pagan, Jewish, and to some extent in Christian antiquity. In our literature the practice rests upon the belief that a man's lot, his κλῆρος, is his inheritance, his κληρονομία, and that what he has has been assigned to him by God. To know God's will for oneself is, therefore, to know what God has assigned to one, to know what one's appointed "lot" is. This might be a tangible possession, such as a field; it might be a function, task, or office; it might be even a share in the final salvation. In any case, the emphasis is on the idea that it is something given by God, not earned or obtained. In order to magnify God's initiative, the NT will either minimize man's part in decision or overlook it entirely.

The method of casting lots—i.e., of putting stones, perhaps of various colors or with symbols marked upon them, into a vessel to be shaken until one jumped out—seemed to remove the human element, so that God might make the choice. This is the intent of Acts 1:26. Luke does not mean to say that the Eleven voted Matthias in, but that the Lord Jesus chose Matthias, as he had previously chosen the Twelve. As Judas had "turned aside" from his inheritance, so the Lord Jesus appointed a successor to this "lot." And Acts says, suggestively, that this was done in the casting of "lots." The number of the Twelve, the New Israel, could be made full only by the Lord Jesus himself.

That Acts does not hereafter note the practice again, may be due to the fact that after Pentecost, Luke regularly sets forth the divine activity in terms of the Holy Spirit or the Spirit of Jesus.

That the soldiers cast lots for the garments of Jesus (Mark 15:24=Matt. 27:35=Luke 23:34=John 19:24), will indicate the utter humiliation of Jesus before man. Here man dares to usurp God's prerogative, by seeking to dispose by "lot" of him who alone determines "lots."

LOVE IN THE OT. Love in the OT is the basic character of the relationship between persons, a relationship with the qualities of devotion, loyalty, intimate knowledge, and responsibility. It is not simply an emotion but is the total quality of relationship. In its personal character, love is closely related to the sexual realm, even when the subject is God's love. And the "person" may be collective, as is the case in God's love for Israel as a whole. In all cases, love is the force which both initiates and maintains relationships, be it among persons or between God and man. The OT idea of the love of God is decisive for the NT ideas of love and GRACE. It includes the relationships of friendship, sex, covenant, loyalty, kindness, and sometimes mercy or pity.

Bibliography

1. The vocabulary of love. A large number of words are used to express the various aspects of love. The most important of these is perhaps אהב, a word which denotes both human and divine love, sometimes with a sexual connotation (Gen. 24:67; cf. Hos. 3:1). The verb is pointed by the Masoretes as stative (except in Gen. 37:3-4; Deut. 4:37; I Kings 11:1). Its primary connection with sexual love is suggested, but not proved, by the nominal derivatives *'áhabh,* "carnal love" (Hos. 8:9; but cf. Prov. 5:19 in a good sense), and *'ôhabh,* used only in Hos. 9:10 of "idolatrous love." The noun אהבה corresponds in meaning to the range of meanings of the verb (see II Sam. 13:15; Song of S. 2:4; Isa. 63:9; Jer. 2:2; 31:3). אהב can also denote a perverted devotion, as where the object of love is evil (Ps. 52:3—H 52:5), food (Gen. 27:4), sleep (Prov. 20:13), etc. The other word which is most often used is the noun חסד, which has the principal connotation of "loyal love," the love which characterizes covenant (cf. Deut. 7:12; I Sam. 20:8). The RSV almost always translates חסד as "steadfast love," sometimes as "kindness" or "loyalty," while the KJV and the ASV usually have "mercy" or "lovingkindness" (cf. LXX ἔλεος, Vulg. *misericordia*). The verb חסד appears in the *Hithpa'el* in II Sam. 22:26=Ps. 18:26. One other term is found in all the main meanings of "love," the verb חשק (of human love: Gen. 34:8; Deut. 21:11; of divine love: Deut. 7:7; Isa. 38:17; of man's love of God: Ps. 91:14), which may be derived from a root meaning "to bind or press together."

Other words are narrower in sense. רעה generally means "to be friendly" (cf. Prov. 22:24), and its derivative, רע, is often "friend," though this becomes "lover" in the sexual sense (Song of S. 5:16; Jer. 3:1, 20). רעיה is to be found only in the Song of Songs (1:9, 15; 2:2; etc.; but cf. *Kᵉthîbh* of Judg. 11:37), where it refers to the bride (translated "love" in the nominal meaning). The corresponding masculine term in the Song of Solomon is דוד (1:13; 2:3; 5:2; etc.), which is also used for "uncle" (cf. Lev. 10:4, etc.) and for sexual love in general (Prov. 7:18; Ezek. 16:8; etc.). The probable cognate ידיד, "beloved," usually refers to Yahweh's love for men (see Deut. 33:12; Isa. 5:1; Ps. 60:5—H 60:7; but cf. the title to Ps. 45, where a secular love song may be meant), as does ידדות (Jer. 12:7; but cf. Ps. 84:1—H 84:2). עגב expresses sensual love carried to the inordinate extreme of desire (Jer. 4:30; Ezek. 23 *passim*), and its nominal derivatives עגב (Ezek. 33:32) and עגבה (Ezek. 23:11) refer to the same lust. Once רחם, normally "mercy" or "pity," refers to man's love for Yahweh (Ps. 18:1). The *hapax legomenon* חבב (Deut. 33:3) may be an Aramaic loan word (cf. חב, "bosom" [Job 31:33]), which, as the MT stands, denotes Yahweh's intense love for "the peoples" (עמים), though the RSV emends to "his people" (עמו), narrowing the scope of the expression. In Dan. 9:23; 10:11, 19; 11:37, Daniel is called "greatly beloved" (חמודה, a word which denotes something highly desirable and precious) by the angel.

2. Human love. Love is a pervasive quality in human relationships for the OT. It takes many forms: the sexual, quite possibly the romantic, the love within families and within the bonds of kinship, the love of friendship and of human covenant. From the highest pitch of sexual communion to the calmest and most detached kindness, the rightly ordered human relationship is one of mutuality in love.

a. Sexual love. On its most elemental level, love is sexual relationship. The OT has no trace of prudery with regard to sexuality. On the contrary, the primacy of the sexual relationship in the nature of man is evident in both P and J creation stories (*see* CREATION; MAN, NATURE OF, OT; SEX AND SEXUAL BEHAVIOR). In Gen. 1:28, the implication even seems to be that man is in the image of God in his nature as male and female, and this is further suggested by the importance of the term KNOWLEDGE as a symbol both of man's relationship to God and of the sexual relationship of man and woman (cf. Gen. 4:1, etc.). Though this element of man's love may be purely sexual (cf. Prov. 7:18, where the plural אהבים denotes sexual acts), on the whole it requires a deeper aspect to be a true love. There is present in several OT stories a love which is best described as "romantic," the love of first sight (Gen. 29:18, 20, 32) or of long intimacy (Deut. 21:15-16; I Sam. 1:5; Eccl. 9:9). This love includes the sexual dimension but is not comprised of it. It is rather the intimate devotion and loyalty of life together, which, at least in the early OT narratives, is not incompatible with polygamy (*see* MARRIAGE). The OT understands the danger of concentration on the sexual to the exclusion of the other aspects of human love, such as loyalty (cf. Gen. 20:13; Judg. 14:16; 16:4-5; Ezek. 16:8; 23:17; Hos. 3:1), mutuality (cf. Gen. 24:67), and responsibility (cf. II Sam. 13:1, 4, 15). The SONG OF SONGS is probably a collection of marriage poems, all praising the wonder of sexual love but with emphasis on the mutuality and devotion on which it is founded (cf. Song of S. 2:16; 3:1-8; 7:10; 8:6-7).

b. Familial love. Tribal and familial bonds were very strong in Israel. It is not surprising, therefore, to find love a significant element in the relationship of kinsmen. It is related to sexual love in Ruth 3:10, where the "kindness" (חסד) involves both the initiative of sexual love and the loyalty to next of kin. Elsewhere we meet this love usually within the FAMILY unit, most frequently of father and son (Gen. 22:2; 37:3; 44:20; 47:29; Prov. 13:24) or of parents and all the children (Prov. 15:17[?]; Hos. 9:16); in Ruth 4:15 it is of mother-in-law and daughter-in-law. Yet when familial love is too selective, serious difficulties arise. Isaac loved Esau, but Rebekah loved Jacob (Gen. 25:28), and this led to the hatred between Jacob and Esau. Jacob's overbearing love for Joseph (Gen. 37:3) made the other sons of Jacob hate Joseph (vs. 4). The very exclusiveness of love may be a point where hatred can enter, for love must be responsible as well as devoted. *See* JEALOUSY.

c. Friendship and human society. The social life of man is for the OT an important—perhaps the most

important—area of human relationships. Here too we find the love of man for man a primary aspect. Just as the basic social units of family and tribe are maintained by love, the quality of life most desirable in a man is that of חסד, "kindness, loyalty" (Prov. 19:22; cf. 3:3). Though the word has primary religious connotations, they are extended into his responsibility in the whole of society. The specific relationships of human life are designated at various points as love: the respect of man for man (I Kings 5:1—H 5:15; Prov. 16:13); the consistent loyalty of friend for friend (Prov. 10:12; 17:9, 17); the joyful hero-worship of people for leader (I Sam. 18:16, 22, 28); the devotion of slave to master (Exod. 21:5; Deut. 15:16); the love of the neighbor (Lev. 19:18); the love of the individual and of society for the stranger (גר; Lev. 19:34; Deut. 10:19); the kindness (חסד) shown to the poor and unfortunate (Prov. 14:21, 31; 19:17; 28:8). When the love of human friendship is present, rebuke and reproof are accepted in the spirit of man's oneness (Ps. 141:5 [but read perhaps חסיד יוכיחני, "the loyal man may reprove me"]; Prov. 27:5): "Reprove a wise man, and he will love you" (Prov. 9:8). But when these loyalties of love break down, when the wicked show no kindness to the poor (Ps. 109:12, 16), when the friend shuns and despises his friend (Job 6:14; 19:19; Pss. 88:18—H 88:19; 109:4-5), when love is lavished on those who hate (II Sam. 19:6), then society is in danger.

In the OT, human society is principally a covenantal society, not only a society which lives under the divine covenant (*see* § 4 *below*) but also a society structured within itself by a multiplicity of covenants, each of which demands the same responsibility from the participants as does the national covenant with Yahweh. Indeed, the covenant between two men can be referred to as producing the חסד יהוה, the loyalty of Yahweh (I Sam. 20:14). The covenant between David and Jonathan is an excellent example. Jonathan loves David "as his own soul" (I Sam. 18:1, 3; 20:17), and their relationship is one of "sacred covenant" (20:8), the decisive quality of which is חסד, the loyalty of devoted love. David can even say that his covenantal love with Jonathan was a finer thing than the love of women (II Sam. 1:26). Jonathan gives David help in escaping from his father, and David reciprocates after Jonathan's death with unfailing kindness to the family of Jonathan (II Sam. 9:1, 3, 7). Human covenants are always reciprocal, and love is the characteristic of the relationship. Thus "to show kindness" (עשה חסד) is almost always to reciprocate in covenantal terms, in return for a favor (Gen. 40:14; Josh. 2:12, 14; Judg. 1:24; 8:35) or in response to previous loyal dealing (cf. I Sam. 15:6). Love in the covenantal context is therefore a consistent loyalty which the covenanting parties may expect (Gen. 21:23; II Sam. 10:2; I Kings 2:7; I Chr. 19:2), the breaking of which is regarded as evidence of total irresponsibility (cf. II Sam. 3:8; 16:17; II Chr. 24:22). Such a false covenant is the antithesis of true love, as when Jehoshaphat is accused of loving those who hate Yahweh (II Chr. 19:2).

The whole range of human relationships is therefore viewed in the OT as directed and determined by love. This love is, however, no abstract emotion, but the concrete acts of love and loyalty which go to the maintenance of human society.

3. Divine love. Consonant with the personal and active character of human love is the view of divine love in the OT. God's love is not the emotional or intellectual imposition of a favorable viewpoint upon an object of love, but is his redeeming activity in human history. To call it love is to recognize that this activity produces the relationship of persons between man and God. There is no doubt that the sexual magic of indigenous Canaanite fertility worship had its effect on the OT terminology and imagery, but considering the number of times where love is mentioned as an active characteristic of God, the rarity of the husband image is remarkable. The love of God manifests itself most strongly in Israel's history.

a. The love of election. Perhaps the prime focus of Israel's self-awareness is the notion that she is the chosen people (*see* ELECTION). The act of choice on God's part is analogous to a man's choice of a wife, as in Hos. 3:1: "Go again, love a woman who is beloved of a paramour and is an adulteress; even as Yahweh loves [אהב] the people of Israel" (cf. Jer. 2:2; Hos. 2:14-20—H 2:16-22). Hosea also uses the image of the father-child relationship (11:1), where Yahweh's calling Israel out of Egypt is the act of his love. The event of the Exodus, as the original act of election, is frequently referred to as an act of love (cf. Exod. 15:13 [חסד]; Deut. 4:37 [אהב]; 33:3 [חבב]; Neh. 9:17 [חסד]; Ps. 106:7 [חסד]; Hos. 11:4 [אהבה]). The election of the patriarchs, however, is seldom known as an election of love (cf. Ps. 47:4—H 47:5; Mal. 1:2, of Jacob; Deut. 33:12 [ידיד], of Benjamin). On the other hand, the love of Yahweh which elects can also be applied to persons chosen for a particular purpose (cf. II Sam. 12:24; Neh. 13:26, of Solomon; Ezra 7:28, of Ezra; Dan. 9:23; 10:11, 19, of Daniel). This electing love is always to a degree inexplicable. The efforts of the Deuteronomists to explain it come to the conclusion that Israel is God's chosen because "Yahweh loves you" (Deut. 7:8), though they move the step one generation back by referring to Yahweh's oath to the fathers (cf. 4:37). Considering the magnitude of the whole earth, which belongs to Yahweh, Israel can only marvel at God's special love for her (Deut. 10:15). But it is Yahweh's character to love and choose as he pleases, so that even the love for the sojourner in Israel is rationalized by Yahweh's love for the sojourner (Deut. 10:18-19). To this redeeming and elective love Israel responds, for it is the goodness which Yahweh lavishes on his people (Isa. 63:7, 9), the human curse which is turned to blessing (Deut. 23:5—H 23:6), the saving help and faithfulness for his own (Ps. 40:10—H 40:11), the revivification of a weary people (Ezra 9:9), the casting down of his people's foe (Isa. 48:14). This may also be applied to the individual, where deliverance from death is seen as an act of love intended to set the individual on the right way (Pss. 86:13; 103:4). Yahweh's redemption of Israel is the love which upholds the precious thing he has created (Isa. 48:14).

b. The love of covenant. The distinction between the love of election and that of covenant is a narrow one. It is not simply a matter of terminology (Snaith

[*see bibliography*] treats אהב as election love and חסד as covenant love; but cf., e.g., Deut. 7:13). The two are closely related, since the act of Yahweh's choice of Israel and the covenant between Yahweh and Israel are two aspects of the same relationship. We may, however, make a distinction for analytic purposes between that love of God which manifests itself in the original choice of Israel and in the election of individuals and that love which presupposes the relationship of covenant and operates within it. Covenant love is therefore the love which maintains a relationship already established. It is to "keep covenant and steadfast love" (cf. Exod. 20:6; Deut. 5:10; 7:9, 12; I Kings 8:23; Neh. 1:5; 9:32; Ps. 89:28—H 89:29; Dan. 9:4). In many places חסד occurs either in the phrase ברית וחסד or in parallel with ברית (*see* COVENANT). חסד is therefore primarily covenant love, a love which presupposes the mutuality of relationship (cf. II Sam. 22:26: "With the *ḥāsîdh* thou dost practice *ḥésedh''* [עם חסיד תתחסד]). The covenant raises the possibility of Yahweh's love:

> He remembered for their sake his covenant,
> and relented according to the abundance of his steadfast love (Ps. 106:45).

The finality of the covenant also assures the continuance of Yahweh's love (cf. Isa. 54:10; 55:3). Yahweh will "keep" (שמר, "guard") his steadfast love for Israel (Exod. 34:7; I Kings 3:6); he will "continue" it to those who know him (Ps. 36:10—H 36:11). He will not remove it from Israel (II Sam. 7:15; I Chr. 17:13; Pss. 66:20; 89:33—H 89:34; Isa. 54:10; Lam. 3:22; cf. Ruth 2:20).

The covenant love of Yahweh is therefore a faithful love, a steadfast, unshakable maintenance of the covenantal relationship. This is most clearly shown by the associations between חסד and the root אמן, particularly the nouns אמת ("truth," "faithfulness") and אמונה ("faith," "faithfulness"; *see* FAITH). When חסד is paired with אמת or אמונה, the latter are usually translated "faithfulness" or "loyalty" by the RSV. Such love is shown in Yahweh's continuing acts of love to those in the covenant relationship: to Abraham (Gen. 24:27), to Jacob (Gen. 32:10—H 32:11), to the men of Jabesh-gilead in return for their loyalty (חסד) to Saul (II Sam. 2:6), to Ittai in return for his loyalty to David (II Sam. 15:20 LXX), to the king (Pss. 61:7—H 61:8; 89:24—H 89:25), to the individual (Ps. 40:10—H 40:11; cf. Ruth 1:8). In each case, the continuance of covenant love is a reward for faithfulness to a covenant on the part of the individual. Covenant love is also maintained for Israel (cf. Ps. 98:3), and for this love and faithfulness Israel gives thanks (Ps. 138:2) and glory to Yahweh (Ps. 115:1).

c. Love and eschatology. Because Israel knows the steadfastness of covenantal love, she looks forward to its continuance. The accompaniment of a recital of the events of the Exodus by the formula כי לעולם חסדו, "For his steadfast love endures for ever" (Ps. 136), is an expression of the faith that the covenant will continue, and that Yahweh's promises will be effective "for ever," as long as Israel can imagine (*see* TIME § 2*c*). The חסד of Yahweh is often referred to as being in force "for ever" (לעולם [I Chr. 16:34, 41; II Chr. 5:13; 7:3, 6; 20:21; Ezra 3:11; Pss. 100:5; 103:17; 106:1; 107:1; 117:2; 118:1-4, 29; 138:8; Jer. 33:11]; עולם ועד, "for ever and ever" [Ps. 52:8—H 52:10]). Therefore Israel can hope in Yahweh's love (Ps. 147:11), and so in Yahweh because he is a God of love (Ps. 130:7). For Yahweh watches over those who hope in his love (Ps. 33:18, 22). In the love of covenant there is great forgiveness (Hos. 14:4—H 14:5), and this forgiveness will come to Israel as it did in "days of old" (Mic. 7:18-20). Therefore, the psalmist may trust in the love of God as over against those who trust in earthly riches (Ps. 52:8—H 52:10; cf. vs. 7—H 9). To expect Yahweh's love and the fulfilment of his promises is to expect the same thing (119:41; cf. 77:8—H 77:9). For love is the character of God's judgment and is the mode in which he exercises his power (62:11-12—H 62:12-13). Therefore the description of the final restoration of Israel shows a time when "steadfast love and faithfulness [אמת] will meet" (85:10—H 85:11). And the expectation of ultimate salvation is the hope in Yahweh's covenantal love. He will save because of his love (ישע למען חסד [6:4—H 6:5]; פדה למען חסד [44:26—H 44:27; cf. 31:16—H 31:17]). His eschatological victory will be a renewal of Israel in love (Zeph. 3:17; read יחדש באהבתו with the LXX and the RSV for MT יחריש). Indeed, Yahweh's salvation and his love can be spoken of as synonymous (note the parallelism of Pss. 85:7—H 85:8; 119:41 [ישע]; 130:7 [פדות]). Salvation is to be found in the consummation of the covenant at an "acceptable time" (Ps. 69:13—H 69:14). And the psalmist, presuming that covenant love is possible only in life, asks in complaint: "Is thy steadfast love declared in the grave?" (88:11—H 88:12), unaware that the saving love of God would be found in death and a grave, an eschatological consummation which was unthinkable for the OT. *See* SALVATION.

4. Man's love of God. The covenantal love of God is primary in the divine-human relationship. Man is to love God, but his love is derived from God's primal establishment of covenantal relationship. It is because Yahweh loves that the "faithful" (חסידים; RSV "saints") are exhorted to "love Yahweh" (Ps. 31:23—H 31:24). Yahweh's faithfulness in attendance upon his people's prayer is cause for their love for him (116:1), and his gracious might exerted on their behalf motivates their love (רחם; 18:1—H 18:2). The great commandment: "You shall love Yahweh your God with all your heart, and with all your soul, and with all your might" (Deut. 6:5; cf. 13:3—H 13:4; 30:6), sets forth the most profound response to Yahweh's oneness, his uniqueness, and his sole claim to man's devotion ("Hear, O Israel; Yahweh our God is one Yahweh"). *See* DEUTERONOMY; SHEMA.

a. Love and covenant. It is not surprising, therefore, that in the Deuteronomic circle of writings, Israel is commanded to love Yahweh (Deut. 11:13, 22; 19:9; 30:16; Josh. 22:5; cf. 23:11). The love which Yahweh has shown is a love which initiates and sustains the COVENANT, and Israel's life in the covenant can properly be only a life of love to Yahweh. Therefore, the commandment of love is not the contradiction in terms which it might seem. It is a description of covenantal life, as well as an exhortation to responsibility in the covenant. To love Yahweh is life itself (Deut.

30:20: כי הוא חייך וארך ימיך, "for that means life to you and length of days"; cf. 13:3—H 13:4; 30:6). Those who love Yahweh are the objects of his "keeping covenant and steadfast love" (Exod. 20:6; Deut. 5:10; 7:9; Neh. 1:5; Dan. 9:4; cf. Ps. 145:20; *see* § 3*b above*). Yahweh delivers those who love him (חשק; Ps. 91:14). His custom (משפט, "justice," "regular practice"; *see* JUSTICE) is to have mercy on them (Ps. 119:132). And the faithful love not only Yahweh but also his promise (vs. 140). Israel's covenantal love, therefore, is the response to the love Yahweh has first shown by his establishment of the covenant. At a time of great apostasy and stress, Yahweh speaks through Jeremiah of his remembrance of Israel's youthful loyalty (חסד) and her "love as a bride" (אהבה; Jer. 2:2). But this covenantal devotion has been short-lived (cf. Jer. 2:5-37), and Israel's חסד is a "morning cloud, like the dew that goes early away" (Hos. 6:4). *See* RIGHTEOUSNESS.

b. Love and worship. Israel's worship (*see* WORSHIP IN THE OT) is thus undertaken in love to Yahweh. The combination of the two ideas is not often found, but worship is sometimes an expression of the love of the chosen people. Those who "love the name" of Yahweh will dwell in the restored Zion (Ps. 69:36—H 69:37), and the impression is that their dwelling in Zion is a continual ritual worship. The pious love Yahweh because he answers prayer (116:1). Those who love his name participate in ritual exultation in him (5:11—H 5:12; the text of the first part of the verse is in some disrepair). By extension, those who love Yahweh love also the temple in which he lives, "the place where [his] glory dwells" (26:8; cf. also 84:1—84:2 [ידידות]). Even foreigners may enter into the joyful worship of the people of the covenant if they

> join themselves to Yahweh,
> to minister to him, to love the name of Yahweh,
> and to be his servants (Isa. 56:6-7).

There is, of course, that false worship which is false love. Israel has "loved strangers" (Jer. 2:25), which seem in the context to be alien gods (cf. 8:2). Hosea twice specifies these "lovers" as the Baals (2:13—H 2:15; 9:10). And the indignant outcries of Hosea, Jeremiah, Ezekiel, and the author of Lamentations against Israel's seeking "lovers" among the nations carry the connotation of a departure from the exclusive and loving devotion to the worship of Yahweh, since political alliance in ancient times involved recognition of foreign deities (cf. Jer. 2:33; 3:1 [רעים]; 4:30 [עגבים]; 22:20, 22; 30:14; Lam. 1:2, 19; Ezek. 16:33, 36-37; 23:5, 9, 22; Hos. 2:12—H 2:14; 8:9).

c. Love and ethics. Just as love for man is a touchstone of the OT ethical outlook (cf., e.g., Lev. 19:18), so love for Yahweh provides the most profound impulse to responsible life. It is the חסד of the moral life which Yahweh desires, rather than the multiplication of external rituals (Hos. 6:6; Mic. 6:8). The time has come for Israel to sow the seed of righteousness (צדקה) and reap the fruit of covenant love (Hos. 10:12; read לפרי חסד with the LXX and the RSV for MT לפי חסד). Repentance involves the keeping of steadfast love and justice in human relations (Hos. 12:6—H 12:7). It is perhaps notable that for most of the OT, חסד is the love Yahweh shows for men, and אהבה is that of men for Yahweh. In Hosea, the terms are reversed: the love of Yahweh is אהבה, and man's reciprocal love is חסד. But though the terminology may be different, the fundamental idea is not changed. The ethical life takes place within the covenant. It is a life of love to Yahweh. To love Yahweh is to walk in his ways (Deut. 10:12; 11:22; 19:9; 30:16). Those who love Yahweh are those who keep his commandments (Exod. 20:6; Deut. 5:10; 7:9; 11:1; Neh. 1:5; Dan. 9:4; etc.). There is in the OT, therefore, no antithesis between love and law. The love of God is primary, and man loves both God and man in response to God's love. But the life of love is a life lived out in the relationship of the covenant. The law is the gift of God's love in order that man may have a framework in which he orders his devoted obedience (*see* LAW [IN THE OT]). Hence the psalmist can reiterate untiringly his love of Yahweh's law (Ps. 119:97, 113, 163-64), of his commandments (vss. 47-48, 127), of his testimonies (vss. 119, 167), of his precepts (vs. 159). To love Yahweh is to know his primary love and to live in responsible devotion to man and God. It is to "hear the voice of Yahweh and to cleave to him" (Deut. 30:20).

   b. The Fourth Gospel

Bibliography

1. Terminology. Love language is much less common in the NT than one would expect (Acts has one example, Titus none). The verb is more frequent than the noun, of which there are no occurrences at all in Mark, Acts, Titus, James, or I and II Peter. Distribution among the users of the term is approximately as follows: Jesus, ten per cent; Paul, twenty-eight per cent; John (gospel and three letters), thirty-three per cent; sub-Paulines (Ephesians and the Pastorals), thirteen per cent; and the remainder, sixteen per cent. It is thus significant that John, who accounts for one tenth of the NT, provides one third of the references to love.

The great NT word for "love" is ἀγάπη; the adjective is ἀγαπητός (*see* BELOVED). Φιλία occurs once only, in Jas. 4:4 ("friendship with the world"; cf. Rom. 8:7; I John 2:15). The usual verb is ἀγαπάω; less common is φιλέω. It is doubtful if any distinction should be made between these verbs (cf. Matt. 23:6 and Luke 11:43; John 3:35 and 5:20; 11:3, 5; 19:26 and 20:2; 21:15-17). Originally ἀγάπη seems to have meant "satisfaction," "sympathy," or "a hospitable spirit"; whereas the commoner φιλία denoted the affection of friend or of kinsman; each denotes passionless love. Contrasted with both is ἔρως, which denotes sexual desire, passionate aspiration, sensual longing. Despite the use of ἔρως in philosophical discussion for "upward longing to the eternal and divine," NT writers avoid the word.

Ἀγάπη (the noun) is almost never found in pre-Christian Greek (one example in the Berlin Papyrus 9869), but it occurs some twenty times in the LXX for the Hebrew *'āhăvâh*.

2. The Synoptic teaching of Jesus. In this body of material Jesus never says that God loves, and it may be that John preserves valuable traditions. For the general impression of what Jesus had to teach about God must surely be that of an infinite love, invincible in resources, altogether perfect in its good purposes. The two great commandments ("Love the Lord your God. . . . Love your neighbor as yourself" [Mark 12:30-31; Matt. 19:19]) depend on the prior assumption that God is, in fact, lovable and loving. Here Jesus served himself heir of the OT teaching reviewed *above* (*see* LOVE IN THE OT), and he reminded Jewish religious leaders that God preferred loving kindness (חסד) to a sacrificial cult (Matt. 9:13; 12:7). But, as the Galileans soon recognized, there was in his message a new note (Mark 1:27; 2:22), which may be summed up as the doctrine of God as Father (Matt. 5:16; 6:9; 11:25-27; 16:17; 23:9; Mark 8:38; 11:25; 13:32; 14:36; Luke 6:36; 12:32; 22:29; 23:46 [and 34?]). The intimate tone of *Abba* ("Father") implies a deep fellowship of understanding and affection as well as obedience. Hence the idea of God's kingdom, imminent in his mission and already effective for the work of salvation, was transformed. For the Jews were summoned, not by the judgment blasts of John the Baptist or the warrior psalms of Qumran, but by the gentle, teasing words of the prophet from Nazareth. He proclaimed their fathers' God (cf. Mark 12:26), the high and holy One, the creator of heaven and earth; and yet the way of life demanded by the Father's incoming reign of righteousness was far different from the holiness of the priests or the Essenes, or the legalism of the Pharisees or the Zadokites of Qumran. God, said Jesus, cares for his creatures and for mankind: he clothes the grass and feeds the ravens (Luke 12:22 ff); he makes his sun rise on the evil and the good, and sends rain on the just and the unjust (Matt. 5:45); the cheapest sparrow does not die without God's remembrance, and the very hairs of our heads are all numbered (Luke 12:6-7). This is not quaint, poetic hyperbole so much as a tender declaration of the universal and intimate character of the divine love as Jesus knew it. Man is dependent; God is independent, the self-existent, without beginning and end, and yet God cares!

Three words may describe briefly what this love is: it is patient, merciful, and generous. The parable of the fig tree teaches the divine goodness that allows another chance, and at the same time the awful judgment if the opportunity is rejected; for God is God, and he is to be scorned and hated at our peril (Luke 13:6-9; cf. Matt. 18:35; Luke 12:5; *see* FEAR). The parables of Luke 15 (lost coin, lost sheep, lost boy) demonstrate the wonder of that gracious mercy from which forgiveness springs (cf. Mark 2:3 ff; Luke 7:36 ff; 18:13: the penitent publican). Grace elicits love in return; this is the lesson of the incident in Luke 7:36 ff ("for she loved much"). But we must not press Luke 7:42-43 as if Jesus implied that love is in proportion to the sins forgiven! God's generosity is illustrated in the story of the laborers in the vineyard, which is not intended to apply to industrial wage disputes (Matt. 20:1-16; cf. 7:11; Luke 11:13; 12:32).

This divine love is an active benevolence that will go to any length to do good to the beloved object and to secure its well-being. Jesus, however, does not analyze the nature of love; his mind was concrete rather than speculative. Nevertheless, it would be true to his teaching to affirm that the divine love is sovereign, unmotivated save by the necessity to be itself, spontaneous, and redemptive.

Jesus revealed the meaning of love by his life, and the church proclaimed that this was because he is the unique Son of the Father. Not only so, but Jesus himself seems to have claimed this status. Hence in the gospels he is recognized from heaven as the "beloved Son" (Mark 1:11; 9:7), and he invites men to perceive the revelation of God in him and to follow him as Master (Matt. 11:25-30; Luke 10:21-22). Sonship may be implied too in the parables of the wicked husbandmen (Mark 12:1-11) and the marriage feast (Matt. 22:1-14; on this *see* SON OF GOD; CHRIST). But the most significant fact about the role of Jesus is that his mission was thought of in terms derived from the image of the Servant of the Lord; that he had come to seek and to save the lost; to heal the spiritually sick, and to do wonders among men as one in whom and through whom the Spirit of God was at work (Mark 1:10, 23 ff; 2:17; 10:45; Luke 7:22; 19:10).

Jesus therefore speaks the word of forgiveness (Mark 2:5), and demands the utmost in sacrifice for love's sake (Mark 9:34-37; 10:21; Luke 9:57-62). The divine compassion is overheard in his words to sufferers, "child" or "daughter," and seen in the pity he felt for the infirm and troubled (Matt. 9:36; Mark 1:41; 2:5; 5:34; 6:34). Cf. also the anguish of his cry over Jerusalem (Luke 13:34) and the patience of his dealings with the lunatic of Gerasa (Mark 5:1-13). It was offensive to the so-called godly that Jesus ate with tax collectors and public sinners (Mark 2:15-17; Luke 15:2), and that he often preferred to break the sabbath law if he could save or comfort a human life (Matt. 12:12; Luke 14:1-6). For his part, Jesus was justly angered by Pharisaic legalism and hypocrisy (Matt. 15:1 ff; Mark 3:5; 7:9 ff). This stern attitude, no less than his compassion, reflected love which is the holy, righteous love of God. Again, Jesus welcomed mothers with their children, rebuking the surly disciples for their fussy guardianship (Mark 10:13-16). His love understood, even when it could not approve (e.g., Mark 10:21 ff); it exhausted itself in the work of mercy for the sake of the kingdom; and at last

his love embraced the Cross with all its agony and dereliction. In that full and perfect life of gracious concern and care for others, men have seen the revelation of God himself, and the name of that God is Love. The Son has given the exposition of the Father (John 1:18).

The consequent duty of man as the child of such a God is to love God with all his heart, soul, mind, and strength (Mark 12:30), and never to let Mammon (money or materialism) or self-interest usurp God's place (cf. Matt. 6:24; Mark 9:43-47; Luke 16:14). As the love of Jesus did not freeze in the crisis, neither should that of his disciples; but it does (Matt. 24:12). Even religion may get in the way of the spirit of genuine love, and this was the worst condemnation of the Pharisees and other opponents of Jesus (Luke 11:42: "You tithe mint and rue and every herb, and neglect justice and the love of God," where the last phrase must mean "love for God"; Matt. 23:23, with an echo there of Mic. 6:8). Nothing but a single-minded devotion to the cause of the kingdom can enable love to flourish in the disciple (Matt. 5:8; Luke 10:42). It is true that love is not mentioned in the Lord's Prayer, but it is surely implied in the opening word: "*Abba,* Father" (Luke 11:2). Secret prayer is a means to real fellowship with God, who is to be loved for himself alone (Matt. 6:1-6, 16-18).

Whatever the reason, these examples comprise all that Jesus, in the Synoptics, had to say about man's love for God. His primary emphasis was that his disciples should live as the "sons of God"; and full treatment of his meaning would demand an adequate discussion of Matt. 5:43-48. Because God is what he is, men are to be sincere, patient, kind, merciful, humble, and generous. Quite clearly, the Father's love is the exemplar, so that Nygren (*see bibliography*) properly asserts that the Christian ethic derives from the relation of fellowship with God: "It is the Christian conception of fellowship with God that gives the idea of Agape its meaning." Hence Jesus said that the second chief commandment was "like the first," for neighborly love is the will of God for his children. All through the NT it will be seen that the love of God may virtually be equated with love for the neighbor (e.g., Heb. 6:10; I Pet. 2:17; I John *passim*). E. Stauffer, however, writes that Jesus, "like a good Jew, . . . takes a sober view of the matter, and simply[!] tells us to love our neighbors as ourselves." In this way Jesus avoided a vague universalism and an impracticable idealism. Did Jesus merely love sinners "as himself"? Is this the meaning of the Cross? Or does this not rule out self-love altogether? Love gives to the uttermost; if it counts the cost (Luke 14:28-33), it is only that, in full self-consistency, it may recklessly "renounce all" to become a follower of the Christ of God.

Jesus never advised that reasonable self-love be the yardstick for a neighborly love that would not shame even the heavenly Father! He did not advocate love as a policy which ultimately promotes only the ends of the self—e.g., to be humble so that exaltation may follow, or to serve others in order to attain greatness (Mark 10:43-44; Luke 14:7 ff). Such motives and conduct would represent a complete misunderstanding of the mind and spirit of Jesus. A man's heart must be made clean (Mark 7:21), so that he may be sincere (Matt. 6:1; 7:3-5; cf. Mark 12:38-40). He must treat others positively as he would like to be treated (Luke 6:31; the negative form of the Golden Rule is found outside Christianity—e.g., Hillel, T.B. Shab. 31*a*). He is to be merciful (Matt. 5:7), forgiving seventy times seven (Matt. 18:21-22; cf. Gen. 4:24 on the vengeance of Lamech). He is to be tolerant of nonconformists (Mark 9:40) and to be generous (Luke 14:13). The whole point is that the disciple acts, not out of prudence, but from obedience to the Father, because his true destiny is to be a son of the Most High. He is committed, therefore, to an uncalculating loving kindness, for even the blow of insult is to be tolerated without reprisal. "Love your enemies," said Jesus (Matt. 5:44). James Moffatt (*see bibliography*) asserts: "To 'love' them does not mean that we are pleased with them in their present position, or that we are to be amiable to them; it means a new moral relationship, for which 'love' was a new term."

Thus there was always an ethical "plus" in the teaching of Jesus, corresponding to the gracious dealings of God the heavenly Father with men and women. Jesus demanded a righteousness that exceeded that of the scribes and Pharisees. Accordingly, disciples were not to pass by when they encountered the "outsider" in trouble, for any "outsider" is the neighbor to be loved (Luke 10:30-37; the choice of a Samaritan for this story was deliberate, since Jews hated Samaritans [John 4:9]). Love was not merely a matter of the emotions; on the contrary, it was much more of the mind and the will. Disciples must be obedient, and deeds count, as well as words (Matt. 7:21 ff; 10:42; 12:36-37). Love gives, expecting no return (Luke 6:35); love stoops to serve, like the master who waited on his laborers (Luke 12:37; cf. 17:7-8).

Love is rewarded. This does not involve any diminution of the quality of love, for the supreme compensation is membership in the new family of the kingdom (Matt. 23:8-9; Mark 3:34-35; 10:30). The self may be "lost," yet paradoxically it is "found" (Matt. 10:39 ff). Disciples enjoy the vision of God and life eternal (Matt. 5:8; 19:16, 29; 25:34-36). These are personal gifts, and "love" is the only word that does justice to the meaning of life as a system of personal relationships, created by God for his children.

Jesus stands alone in his proclamation that Love made the universe and watches over the creation; that sacrificial love is the pattern of the good life here for those who would serve God, so long as any evil and sin remain, and that mutual love is the eternal mark of life in God's kingdom; that ritual observance is therefore less important than active benevolence, and so men and women are called to display the neighborliness of a meek and loving heart that ignores the conventions of race and sex and culture. The good of the other must be a man's care. The favor of the heavenly Father, said Jesus—that shall be his reward.

3. Paul. The first considerable use of the noun ἀγάπη occurs in the letters of Paul, who so fills it with content and makes it so central that it virtually becomes a technical term.

Contrary to expectation, there is very little dependence on OT teaching. Hos. 2:23 (the beloved people) is cited in Rom. 9:25-26; Mal. 1:2-3 ("I have loved [i.e., preferred] Jacob") in Rom. 9:13; and there may

be a reminiscence of Deut. 33:12 ("beloved of the LORD") in II Thess. 2:13. Paul's primary source was history rather than scripture. There was the private history of his own experience, though he hesitated to make much use of it in his correspondence (II Cor. 11:16 ff). It was the traditional kerygma of what God had done in Jesus Christ that formed the articles of first importance (I Cor. 15:3). In the fulness of time God had sent the Christ, his own Son and Image, to be the Redeemer. God reconciled sinners to himself graciously through the death of this same Christ; for it was God who had set him forth in his death as the personal means of propitiation (or expiation). All is of God, cried the astonished apostle (Rom. 3:21 ff; II Cor. 4:4-6; 5:14, 18 ff; Gal. 4:4-5). This divine act had brought to an end the religion based on law, replacing it with the religion of grace and faith. And the restoration of personal relations between God and man produced also a new society, a people consecrated in Christ Jesus, the church of God (*see* CHURCH, IDEA OF). Like any Magdalene or Zacchaeus, Paul the Pharisee had found in the brotherhood of the church "his place and his peace" (a phrase of Mrs. Elton Trueblood's). It was out of his life and service in the Christian fellowship, with all its joys and tribulations, that Paul's teaching on love emerged.

It is customary and, indeed, essential to discuss this teaching in terms of (*a*) the divine love as manifested to man; (*b*) man's answering love for God; (*c*) man's love for his neighbors and his brethren.

a. Divine love as manifested to man. Love is revealed at the Cross, and in the character of Jesus Christ. "God shows his love for us in that while we were yet sinners Christ died for us" (Rom. 5:8). This declaration is set in the context of the divine wrath against sin and sinners (Rom. 1:18; 2:5; cf. 9:22; 12:19; Col. 3:6; I Thess. 1:10; in I Thess. 2:16 Paul says that the divine wrath has already overtaken the Jews, who crucified Jesus and now hinder the preaching of the gospel). God, who is holy, requires moral integrity and obedience from men, both Jew and Gentile, and he rewards them according to their deeds (Rom. 2:6-11). Yet the Christ had been made a sin offering (II Cor. 5:21), and through the crucified Lord, God himself had provided a way of escape from the ultimate consequences of the wrath. "Christ died for us" means that Jesus chose to die and did this to redeem us; that somehow in him were concentrated the horror, the anguish and pain, of human guilt. Paul does not quite say that Christ bore our guilt; the atonement springs from the love of God and Christ's own love, so that there is an unfathomable mystery in the sin-bearing. The other side of this doctrine is that of baptism, for in its sacramental waters the man who believes in Jesus as the risen Christ and trusts in him is united with the Lord who died. The confession of guilt and the renunciation of sin, which one assumes as antecedents to the sacrament, involve a kind of spiritual death, a con-crucifixion (Gal. 2:20); and on rising out of these waters of death the believer is renewed in spirit by the divine Spirit; he is clothed upon with Christ and becomes a man in Christ, a new creation, a limb of his spiritual body, the church. Now he is a son of God, who should be led by the Spirit and live in the same love that Christ exhibits (Rom. 6:3 ff; 8:2-16; 13:14; I Cor. 12:12 ff; II Cor. 5:17; Gal. 5:16 ff; Col. 1:18, 22; 2:11 ff; I Thess. 3:12).

The wonder of the Cross, then, was the great new word it announced concerning the holy God whose wrath men feared. God was responsible for it in the last analysis, and he had made the enmity of men his tool. He had done what the law could not do in Judaism, nor any system of Gentile men outside the law. He had renewed Adam.

Paul's view rests on the Semitic notion of solidarity by which Adam is humanity and the king incorporates the nation, and on the actual moral transformations seen within the Christian community. He did not intend to evict moral responsibility from the redeemed life (e.g., "continue in sin that grace may abound" [Rom. 6:1]), nor did he conceive of Jesus Christ as a mere scapegoat. Rather, he had discovered that sin is primarily a rebellion against divine love and that atonement results from the sacrificial ministry of this love personally present in the human life of God's Son, and evoking in return the gratitude and loyalty of those who perceive the glory of God in the face of Jesus Christ. It is not surprising that, with such a grasp of what Christ is as love incarnate, Paul spoke seldom about repentance and never of penance; and that he called men and women to have "faith"—a loving, trustful attitude that involves the total personality in the acceptance of a free gift of grace (Rom. 4:16-25; 5:6-21).

Because the Cross stands for victory over sin and evil (princes and powers of evil, the apostle would have said), love is almighty. Divine providence means that God's care is constantly exercised for the good of mankind. This was a truth that Christians needed over and over again, because love also involved them in suffering. By tribulations are the sons of God to enter the kingdom (II Cor. 11:23–12:10; I Thess. 2:14; 3:3-4; II Thess. 1:5). Whatever threats there might be from the cosmic powers in the stars, from natural disaster, from the onset of the devil, or from any other source, believers could take courage from the assurance that love reigns and that God will never desert them; for God's love is precisely the same as Christ's love (Rom. 8:28-39).

Within the church also, God is immanent as a loving Power in the Holy Spirit, who knits the faithful into a communion (koinonia, partnership [II Cor. 13:14]; perhaps corresponding to יחד, the technical term for the Qumran brotherhood [1QS 1.12, 24; 9.2]). "We rejoice in our sufferings, . . . and hope does not disappoint us, because God's love has been poured into our hearts through the Holy Spirit which has been given to us" (Rom. 5:3, 5). Love is inspired in disciples by the Spirit (Gal. 5:22; Rom. 15:30: "by the love of the Spirit"), so that they should pray for one another. Paul can assume that such love emerges within a newly founded congregation, whoever the evangelist (cf. Col. 1:3-8; Epaphras was the missionary to Colossae). The reason for this is that, just as God is the Father of the Lord Jesus Christ, so the Holy Spirit must now be identified as the "Spirit of Jesus Christ" (Phil. 1:19; cf. Rom. 8:2, 9 ff; *see* SPIRIT; HOLY SPIRIT). The church is the family of God, through faith in his Son and the presence of his Son's Spirit (Rom. 8:14 ff, 29; Gal. 3:26, 29; 4:5-7).

Its members are "beloved by the Lord," elect, "holy and beloved" (Rom. 1:7; Col. 3:12; II Thess. 2:13). One is not surprised, therefore, to find grace, love, and fellowship combined in a Pauline benediction (II Cor. 13:14). Each word denotes what is virtually the identical spiritual reality; for grace is loving, and only love can effect a genuine communion among men and women of diverse race, color, culture, and wisdom. God is the "God of love and peace" (II Cor. 13:11), whose benefits are enjoyed by those who are obedient to Paul's teaching; and Paul claimed to have the "mind of Christ" (I Cor. 2:16; 7:40, in some readings).

This note of love is remarkable in one who had been a Pharisee. It was held together in his thought with others—e.g., judgment, righteousness, forgiveness, ministry—and was never alone. In this, of course, Paul stands in the central NT tradition (cf. Matt. 25:31 ff; Luke 12:4-12; John 3:16-21; 16:7-11; Heb. 2:14-18; 9:27-28; Jas. 4:12; I Pet. 1:13; 3:12; 5:10; II Pet. 2:4-10; I John 4:10, 17-18; Rev. 2–3). Like these other writers, Paul believed in God as the chief fact of his life, and had a prophetic conception of the divine work in history, electing and rejecting. The Eternal had to be thought of as personal will, so that Paul uses the terms "foreknowing," "predestining," "calling," and "justifying." The Ephesian continuator (*see* EPHESIANS, LETTER TO THE) rightly set all this in the context of a love that was active before the foundation of the world (Eph. 1:4-5). Love created, love saved, love sanctifies; and love will crown its work for the faithful when they are "with Christ" and have attained the "prize of the upward call of God in Christ Jesus" (Phil. 1:23; 3:14). Paul is not far from that saying of I John which sums up the Christian revelation in three words: "God is love" (4:8).

In spite of the prominence given to our theme, the expression "God's love" does not occur in I Thessalonians, I Corinthians, Philippians, and Philemon. Its place is taken by such words as "grace" and "peace." In Philem. 9 "for love's sake" means: for the sake of that love of God which we have both known in Jesus Christ the Lord.

b. Man's answering love for God. If the references to the divine love for men are comparatively few, what is one to say of those to man's answering love for God? Excluding absolute uses and Eph. 6:24, there are at most five places where love toward God or Christ is mentioned:

a) II Thess. 3:5: "May the Lord direct your hearts to the love of God and to the steadfastness of Christ." Moffatt understands love here as God's "loyal care for the interests of His people in a time of strain," and the steadfastness is what God inspires and requires. The genitives are ambiguous, and the second phrase might mean "a steadfastness like that shown by Christ" or, more simply, "Christian endurance." As to the first, why should the Lord guide the Thessalonians toward God's care for them, when they have just been assured that God chose them, called them, and loves them (2:13 ff)? Paul wants them to prove their obedience to his instructions by deeds ("every good work and word" [vs. 17; 3:4]). Presumably he had taught them the first commandment of the Mosaic ten and the first of the two "great commandments"—to love God with everything one has—for those who had but lately abandoned the Greek pantheon for the God of Abraham, Moses, and Jesus needed this kind of teaching (cf. I Thess. 3:6: "the good news of your faith and love"; God is the natural object of both faith and love). It is interesting to note that Irenaeus read "the love of God" instead of "the love of the truth" in II Thess. 2:10, for the apostle had to warn the young church against the wiles of the devil (vs. 9; 3:3). Stand fast, he tells them; follow the example of Christ. At I Thess. 5:8 "faith and love" are substituted for "righteousness" (Isa. 59:17; cf. Eph. 6:14), probably under the influence of a favorite triad (I Cor. 13:13; Col. 1:4-5; I Thess. 1:3).

b) I Cor. 2:9: "What God has prepared for those who love him." If Paul is using Isa. 64:4, he has altered "those who wait for him" into "those who love him." There are exact parallels at Jas. 1:12; 2:5 (cf. *Epistle to Diognetus* 10.2; Luke 11:42). Paul is reminding the quarrelsome, conceited gnostics of Corinth that, in the eschatological crisis of that time (I Cor. 7:29-31), their duty is to learn "love's sweet lesson to obey," instead of preening themselves on the more glamorous gifts of spiritual ecstasy.

c) I Cor. 16:22: "If any one has no love for the Lord [the verb is φιλεῖ], let him be accursed." Paul's Christ was lovable. Had he not, though he was rich, yet become poor? (II Cor. 8:9; cf. Phil. 2:7-8.) Who but the Lord Jesus sat for the portrait of I Cor. 13:4-7? "Love is patient and kind." The apostle, therefore, set Christ before himself and his converts as an example (I Cor. 11:1; cf. Eph. 5:1). The force of this example is much heightened by the bridal theme to which Paul alludes at several places. A believer becomes "one spirit" with the Lord, as in a marriage (I Cor. 6:17). A church is betrothed to Christ so that its apostle may present it as a pure bride to its one husband (II Cor. 11:2, the source of Eph. 5:25 ff).

Such a unity is at once covenantal and contractual, and Paul thinks of himself as bound by the law of Christ, a law how different from the Mosaic! (I Cor. 9:21; cf. Rom. 6:16, where "obedience" is substituted for Christ; 7:6; 8:2.) Love too imposes a service; love is not antinomian or licentious. The proper way to progress in the knowledge of God's truth is to obey his will; and growth is to be desired (Phil. 1:9: "that your love may abound more and more, with knowledge and all discernment, so that you may distinguish [RSV 'approve'] what is excellent"; cf. John 7:17; 8:32, 42 ff).

d) I Cor. 8:3: "If one loves God, one is known by him" (the correct reading in spite of the omission of "God" by the important Papyrus 46). In this chapter, as in ch. 13, love is contrasted with knowledge (gnosis): love builds up; knowledge is arrogant. The issue for Paul was not so much whether the heathen gods exist, as that some of his converts were lamentably ignorant of the right relations which should obtain in the church as the body of Christ (8:10-13). The "know-alls" at Corinth did not understand the profound spiritual reality of the body, with its consequent sense of mutual involvement in joy and sorrow (Rom. 12:10-15; 14:7, 10; I Cor. 12:25-26). Only through love does one enter into the relation that might be expressed as the knowledge of God. Paul, however, inverts the phrase: "One is known by him," as in Gal. 4:9. Partly from reverence, partly perhaps

because of the arrogant claims of Greek mystery cults, Paul avoids the direct statement, "One knows God" (but see Rom. 1:21). He was, in any case, inclined to emphasize the divine initiative both in revelation and in salvation (cf. I Cor. 12:3). It may be that with respect to I Cor. 8:3 the Hebrew sense of knowledge of persons as a love relationship would clarify the meaning. To "know" a woman is to love her sexually; and so to know anyone, including God, is to be bound up in the fellowship of love. If, then, we love God, it is only because God has loved us in Christ; how dare we take pride in our knowledge? Love is expressed by wonder, praise, adoration, and brotherly affection to others for whom the Son of God died.

e) Rom. 8:28: "We know that in everything God works for good with those who love him, who are called according to his purpose." This is part of Paul's exposition of the providential care of God. Christians, as the sons of God who hope for inheritance in his kingdom, are expected to love God. This is in direct continuity with the teaching of Jesus (cf. also I Cor. 14:1: "Make love your aim," where love to God and man is in view; Eph. 6:24: "Grace be with all who love our Lord Jesus Christ with love undying").

Why did Paul speak so rarely about love to God or Christ? From some sense of his own unfitness as a former persecutor? "Beloved," so common on his lips with reference to brother Christians, is never used of the Christ (Col. 1:13 is not an exception; but cf. Eph. 1:6). Paul is his Master's slave rather than his lover. Did he then abhor false emotionalism, or any love concepts, because of his environment? Hardly, in the light of the marriage imagery he employs. Perhaps he was influenced by local conditions in Corinth, for most of the passages that speak about loving God are associated with that city of Aphrodite Pandemos, goddess of love (*eros*). Paul the Jew, like Jesus himself, preferred the language of reverence and service (Rom. 11:20; II Cor. 5:11; 7:1; Col. 3:22; cf. Phil. 2:12).

Nygren's explanation is that "love," *agape,* is not proper to man's response to God, because *agape* is unmotivated. Man's devotion must therefore be called "faith." If we ask why Paul can use *agape* for brotherly or neighborly affection, the reply is that through the invasion of the Holy Spirit, God's free, dynamic love flows from the believer toward the neighbor. It is not really the believer's at all! This is to evacuate Christian love of any value, and it is to be rejected for the same reasons that one must reject the notion that faith is a moment of passivity. Nygren insists that Christians are to love the neighbor, not "God in the neighbor." Surely then it is the Christian who is to love, not simply "God in the believer." True, Paul stresses the predestining power of God, both in electing and in "hardening" (Rom. 9:16, 18; 11:7, 25; cf. 1QS 3.17–4.1, 15-26). He would therefore agree that it is God who "enables" the Christian to love. Yet the method of the Cross, the long-suffering goodness of God, ceases to impress us if it is in fact a form of irresistible grace. Paul safeguards himself to some extent by his use of love for man's attitude toward God. When he has occasion, he takes it.

c. Man's love for neighbors and brethren. Because it is grounded in a binding obligation to God in Christ, the new life could not be left at the whim of fluctuating emotion. God remained the holy One, and men were set free to be his servants (Rom. 6:22; I Cor. 6:20; cf. I Cor. 7:22; Gal. 6:17; Phil. 3:12; Col. 4:1). A God who is holy expects his people to be holy, as those dedicated to him, "saints" (II Cor. 6:14–7:1; I Thess. 4:3). This holiness must be defined in terms of the divine graces of love: patience, tenderness, fatherly affection, loyalty to promises, and humility (Rom. 2:4; II Cor. 1:18 ff; Phil. 1:8; 2:5 ff; Col. 1:12-13; I Thess. 3:11-13; II Thess. 2:16). Or the new life might be described as growth into the likeness of Jesus Christ the Lord, the head of the body (Rom. 14:7-9; Col. 2:6-7). Such a life, no longer "according to the flesh"—man's weak, creaturely, and sinful nature (the "old Adam")—was to be lived "according to the Spirit"—i.e., in the church of the "last Adam, the life-giver" (Rom. 8:5; I Cor. 15:45; cf. II Cor. 3:3; I Thess. 4:8). For only so could one become worthy of the inheritance that awaited at the end of the age (eschatological hope spans the entire range of Paul's ministry: Phil. 1:10; II Thess. 1:5). The motive to love one another did not, however, arise from thoughts of the Judgment so much as from gratitude for divine grace.

The sum of duty is given in Rom. 13:8: "Owe no one anything, except to love one another." A similar care for members of their community is found among the Zadokites of Qumran (1QS 1.8-10; 8.12-16; 1QM 10.9; 1QH 6.9-11; 11.11; CD 6.20, quoting Lev. 19:18; *see* DEAD SEA SCROLLS).

In the first instance such love was applied by Paul to fellow members of the church, the beloved brethren; but he went far beyond this, following the spirit of Jesus, and insisted that love should determine one's attitude toward outsiders and enemies: "Bless those who persecute you; bless and do not curse" (Rom. 12:14-21). At Qumran, on the other hand, the brotherhood were trained for a holy war and were commanded to hate (1QS 2.25; 3.1-5; 1QH 2.30-31; 4.6 ff). Of course, even Paul fell below the standard of love in his relationships with the churches, and his apostolic authority could appear overbearing; but he was conscious of his faults and emerges from controversy with the highest reputation (see I–II Corinthians *passim*). The most bracing challenge to love came from the sense that one must be worthy of the Lord or of God or of the gospel (Phil. 1:27; Col. 1:10; I Thess. 2:12).

For those who entered the church, ancient barriers of nationality, culture, and sex were broken down (Gal. 3:28). Master and slave became brothers beloved (Philemon); parents learned that children are to be loved, and this was sometimes a quite new thought in that age (Col. 3:21; cf. I Cor. 7:14); marriage too is consecrated, and divorce is forbidden (but the Christian spouse may separate from a pagan partner under definite circumstances: I Cor. 7; Col. 3:18-19). It followed that every form of sexual perversion must be abhorred (Rom. 1:24 ff; I Cor. 5; 6:15 ff; Gal. 5:19 ff; Col. 3:5 ff). Paul's principle in guiding his converts was that love sets bounds to individual liberty without destroying individual responsibility (Rom. 14:1–15:6; I Cor. 10:23-30; Gal. 6:1 ff). He makes no attempt to erect a Christian casuistry or to make brotherly love a legal enactment. Love, because it answers to the very nature of God in

redemptive action, is the crown of every virtue: patience, gentleness, self-control, fidelity, kindness, are all so many expressions of love itself; and this love is the first fruit of the Holy Spirit (Gal. 5:22). Here is the source of the later doctrine that the Spirit is, in fact, Love. "Above all these put on love, which binds everything together in perfect harmony" (Col. 3:14). The Pythagoreans are said to have called *philia* the bond of all virtues. Moule suggests that Paul's meaning may be that *agape* gives coherence to conduct, in much the same way as Christ gives coherence to the universe; and Christ is the embodiment of *agape*.

It should be observed that Paul refused to translate the duty of neighborly love into a policy of revolution, not only because of the adventist hope (I Cor. 7:17 ff), but perhaps because he did not see to what lengths this new ethic must lead in the end. Wives, e.g., were not told to love their husbands, nor were children enjoined to love their parents. Yet the commandment: "Love your neighbor as yourself," must be relevant to family life. Paul seems to have been held by the Jewish idea that slaves, children, and wives belonged to the inferior classes, so that "submission," "obedience," and "reverence" were the appropriate words to be addressed to them about their duty. It was, nonetheless, a tremendous gain that the superiors were encouraged to love their inferiors, to treat them justly, to show kindness and long-suffering (*see* COLOSSIANS; PHILEMON; SLAVERY; MARRIAGE; FAMILY). At this point the NT ethic should be critically appreciated, especially in its bearing on modern social issues like the status and service of women in church and society.

Paul's sensitive awareness of the dignity and glory of genuine love came to its magnificent climax in the hymn of I Cor. 13. Despite the doubts of a few critics, who think the poem has been inserted between 12:31 and 14:1, its authenticity is beyond question. For Paul's rhetorical and poetic gifts were considerable, as we see from Phil. 2:5-11; Col. 1:15-20. "Love" is used absolutely in the poem, and this has led to divergent definitions of what is strictly in mind. Is it love to God (the Latin Fathers; Lütgert; Allo; Reitzenstein)? Is it love for the neighbor (the Greek Fathers; Harnack; recently C. Spicq most emphatically)? Are God and man both its objects (Cornely; Corssen; Huby; Schlier)? Nygren declares that it is just simply *agape*, God's free love that shines in its own light "regardless of any significance it might acquire from its object."

The context (I Cor. 12:27 ff) would suggest that Paul is concerned with human relationships, primarily behavior within the church. "This is the way in which love acts when it is genuine *agape*," is the apostle's meaning (cf. 12:31, but "way" and "love" are not simply to be equated).

The first strophe (vss. 1-3) indicates what is false in the Christian life: *glossolalia* (speaking with tongues) without love; wisdom and faith without love; self-sacrifice without love. All these SPIRITUAL GIFTS (for they are gifts of the Spirit) are unprofitable and good for nothing if love is missing; for love alone edifies, and the Spirit distributes his gifts "for the common good" (I Cor. 8:1; 12:7).

The second strophe, noted already, delineates the positive character of love (vss. 4-7). "Love is patient and generous; love is not jealous or pretentious; love is not arrogant or dishonorable; love does not insist on its own advantage, is not irritable, does not reckon up a wrong. Love does not rejoice at injustice, but applauds the truth. Love bears all things, believes with unquenchable faith, ever hopes, endures to the uttermost. Love is for always." (This translation is partly indebted to Father Spicq.) "Love is not love which alters when it alteration finds."

The third strophe (vss. 8-13) contrasts love with prophecy and gnosis, then with faith and hope. All these belong to the imperfect, to life here and now, the life of struggle, defeat, and growth; and their time will run out. Love too is for now, but love is for the beatitude of heaven, where God is who loves us with an everlasting love. That is why love is the greatest thing in the world.

What is this love? Of course, it is love for God the Father, the Father of the Lord Jesus Christ! Of course, it is also love for friend and love for foe (so long as there are opponents and enemies). It is love, absolutely. It is genuine good will that puts first the needs and interests of the other; it is the secret of personal unity, and as such is forever relevant. Paul would gladly have signed the great sentence of Baron von Hügel: "Christianity taught us to care. Caring is the greatest thing, caring matters most."

4. Acts; the sub-Paulines; the Catholic letters; Revelation. The only example in Acts of a derivative from "love" is in 15:25, where Barnabas and Paul are described as "our beloved" in the letter from Jerusalem to the Gentile Christians of Syria and Cilicia. This agrees with Lukan usage, for, outside the teaching of Jesus and the heavenly voice at the Baptism and the Transfiguration, only the verb ἀγαπάω occurs (Luke 7:5; cf. Mark 10:21 for Mark). As distinct from the words, one finds the substance of Christian love in the early community of goods (2:44-47); Stephen's final cry (7:60), and the prayer meeting for Peter (12:5); the constant use of "brethren" (e.g., 1:16; 6:3; 9:17; *see* BROTHERHOOD); the affectionate embraces of Paul and the Ephesians at Miletus (20:36-38); and the protesting question of the apostle at Caesarea: "What are you doing, weeping and breaking my heart?" (21:13). Kindness is not confined to Christians, however (27:3; 28:2), and there is plenty to mar the idyllic unity of the first years (5:1 ff; 6:1; 11:2; 15:36-39; 20:29-30). The Golden Rule in its negative form is quoted in 15:29 in the Western text; and a lovely word of Jesus occurs in Paul's speech to the Ephesians (20:35): "It is more blessed to give than to receive."

EPHESIANS, thoroughly Pauline in tone and theology, emphasizes the love of God in predestination (1:5; but perhaps "in love" belongs with the preceding phrase). This is of special interest, because it rightly links the doctrines of creation and salvation (2:4-7; for Christ's love cf. 3:19; 5:2, adapted from Gal. 2:20; and 5:25). "The Beloved" (1:6) may be a messianic title. Love is associated with peace in the Pauline manner, in the closing prayer for divine blessing (6:23).

The love of Christians for one another is stressed in 4:2; 5:2, 25, 28, 33 (cf. 1:15, in spite of Codex Vaticanus and Papyrus 46). The absolute uses at 3:17; 4:15-16 look to brotherly love, probably, rather

than love for God or Christ. Eph. 4:1-16 is important for the themes of church unity and growth, and it seems to envisage the development of a redeemed humanity in which Jesus Christ will find his completion. 4:15 should perhaps be translated: "Rather, practicing the truth, we are to grow up in love."

In ch. 5 the expansion of the section on husbands and wives is notable (cf. Col. 3:18-19). Christ's union with his church is put in terms of the marriage relationship in true OT and Pauline style; they constitute "one flesh" (5:29). Paul would have said "one Spirit." Christ is the Head, with full authority, and in consequence the advice to wives remains as in I Corinthians and Colossians. Husbands should love and cherish their wives; and wives should revere (or fear) their husbands, being duly subject as to the Lord (5:22, 33). The mutual submission of 5:21 does not imply that husbands are to be subject to their wives, for we still have to do with a hierarchy (cf. I Cor. 11:3). Tit. 2:4 remains the one place in the NT where wives are exhorted to love their husbands!

The inclusion of love in the lists of virtues in the Pastorals seems somewhat formal (I Tim. 1:5; 4:12; II Tim. 2:22; Tit. 2:2). The example of Paul, the great martyr-apostle, includes his love (II Tim. 3:10; cf. I Tim. 6:11). Women must pay the price of Eve's sin, and may win salvation by childbearing and perseverance in "faith and love and holiness" (I Tim. 2:14-15). A large number of nouns and adjectives compounded with *phil-*, "lover of," suggests the development of a new Christian vocabulary, but too much should not be made of this. They are: lover of children, of husbands, of strangers, of God, of the good; and, by contrast, lover of money, of pleasure, and of oneself (I Tim. 3:2; 6:10; II Tim. 3:2, 4; Tit. 1:8; 2:4; 3:4). Demas, "in love with this present world," is a deserter (II Tim. 4:10; cf. I John 2:15; note the object of the verb ἀγαπάω, and *see* § 5*a below* on I John). The genuine believers await the epiphany of Christ at the Day of Judgment (II Tim. 4:8): they "have loved his appearing." "Beloved" is still the appropriate adjective for fellow Christians—e.g., masters are beloved brethren of their slaves (I Tim. 6:2).

On the whole, the tone is colder than in Paul, yet grace and love belong together (I Tim. 1:14; cf. the "philanthropy" of God in Tit. 3:4; and the "God-lover" of II Tim. 3:4). God grants a "spirit of power and love and self-control" rather than timidity or fear (II Tim. 1:7; *see* FEAR), but this is not adequately related to the work of the Holy Spirit (in spite of II Tim. 1:14). It is difficult to evaluate the evidence of the Pastoral letters, and the tendency to underrate them must be resisted. Nevertheless, the final impression is that the author does not fully understand the meaning of love as a dynamic power, the effect of God's Spirit.

The Catholic letters and Revelation come from dark days of persecution and long days of disappointed hope, because Christ had not returned. Hence their God, though merciful and kind, is the God of discipline and judgment (Heb. 12:6-7; Jas. 5:9; I Pet. 4:17; Rev. 14:6–17:6). One may venture to respect him with awful reverence (Heb. 10:31; 12:9; Rev. 11:17-18); but also to love him (Jas. 1:12; 2:5; Jude 21; cf. I Pet. 1:8, of Christ: "Without having seen him you love him"). God's love is mentioned in Jude (1-2), and one doxology (Rev. 1:5-6) makes much of it: "To him who loves us and has freed us . . . and made us a kingdom, . . . to him be glory and dominion for ever and ever. Amen." Nothing else is said about the divine love explicitly, yet there is real nobility in I Peter, which is full of tender touches (e.g., 2:3, 25; 3:8, 15; 4:10-11). Hebrews too, with its concept of the high priest who understands us men from within, has a profound sense of what God has done for sinners in the work of salvation. We must not judge the writers merely by statistics.

Christians, as always, are beloved brethren in all these documents. Jas. 2:8 repeats the second great commandment (the royal law) to love one's neighbor, although the emphasis is on justification by works (vss. 14 ff). The profession of love without doing works of love is fatally easy for Christians, so that James must have rendered valuable service. His panegyric on wisdom (3:17) is somewhat reminiscent of the praises of love in I Cor. 13. Stress on the good works of love appears also at Heb. 6:10; 10:24, 34; 13:1-2; I Pet. 2:12 ff; Rev. 2:4-5, 19. It is indeed odd that II Pet. 1:7 requires the addition of love to brotherliness, though a pastor knows how formal piety may pay lip service to brotherly status, and even the word "brother," used of fellows in the same order or society, may be uttered in the oily tones of sheer hypocrisy. Christians who lived in the middle of the second century had to learn such lessons, and needed to be told their duty to "grow in the grace and knowledge of our Lord and Savior Jesus Christ" (II Pet. 3:18), since enemies and heretics would readily seduce them to another "knowledge" (cf. I Tim. 6:20-21). In the sub-apostolic age apostasy was not unknown, rich members despised the poor, and even the presbyters had to be warned not to domineer or serve for petty gain (Heb. 10:29; Jas. 2:1-7; I Pet. 5:2; Rev. 2–3). So the line between church and world had to be clearly drawn (Revelation does this and inspires martyrs; I Peter is more cautious, but inspires equal loyalty).

The use of Prov. 10:12 ("Love covers all offenses") is found in Jas. 5:20; I Pet. 4:8; and also I Clem. 49. Apparently it was thought that love shown to the erring (James) or to the church (Peter) qualified one for the pardon of one's own sins; and if so, love has become a work of merit rather than the fruit of the Holy Spirit in the life of the redeemed (*see bibliography*). This would mark a very serious declension from the highest NT teaching on the divine love as grace, and the resulting birth of true love in those whom Christ has restored to the Father.

5. John. ***a. The letters.*** These documents, which are to be dated close to A.D. 100, reflect a situation when the church was gravely threatened by forms of Docetic and Gnostic heresy. John's opponents seem to have claimed that they had no need for redemption from sin (I John 1:8, 10; cf. 3:6). They could go beyond mere faith to actual vision of God (I John 2:4; 4:12), for they were the enlightened (I John 2:9; perhaps a reference to mystic initiation). In spite of their unlovely temper, and possibly immoral conduct, they said that they loved God (I John 4:20) and perhaps too that they had "passed from death into the life eternal" (I John 3:14; initiates into certain of the

mystery cults claimed to have been "reborn into eternity"). And the sum of it all was their assertion that they enjoyed "communion with God" (I John 1:6; 2:6). Reading between the lines, one can see that John was distressed by the dreadful gap between the profession and the practice of those teachers who were seeking to corrupt the faithful Christians. Over and over again, therefore, he states the elementary truth that he who is "of God," who has been born anew, is one who acts righteously, and especially that he loves his brethren (e.g., I John 3:10). To live is to love, because it means "having the Son of the Father" and "having the Father" (I John 2:23; 5:11-12, 20; to have is to enjoy personal fellowship with). Hence John can speak about loving God (I John 2:5, 15; 3:17). This is not simply a counterassertion to heretical claims; John makes love a primary term in everything he has to say of religion and duty. For this reason many commentators have been impressed with the warmth of the letters.

John's "outstanding contribution to Christian theology" (Dodd) is the sublime sentence in the First Letter, "God is love" (4:8). It is assumed that God is, and that he is holy, faithful, and righteous, as the whole Judeo-Christian tradition taught (cf. I John 1:9). Again, God is invisible (I John 4:12, 20; but cf. III John 11; in the OT cf. Exod. 33:20). Nevertheless, the Christian knows that God is "light"—i.e., he reveals himself and is knowable. The proof is found, not so much in the history of Israel as in the historic life of Jesus, the Christ, the Son of the Father: in that incarnation denied or obscured by the heretics (I John 1:2-3; 4:2; 5:6; II John 7), and in the atoning death of the Son, who came to defeat the devil and be the Savior of the world (I John 1:7; 2:2; 3:5, 8, 16; 4:10, 14). The faithful, who may commit acts of sin in spite of the fact that God's children properly ought to be incapable of sinning, can rely on the exalted Son to be their Advocate (Paraclete; I John 2:2) and are blessed with the gift of the Spirit (I John 3:24; 4:13). But the Spirit is not so definitely linked to the moral life as one would expect; it stands here for the theological confession of the Incarnation, and for the witness to Jesus Christ as the Son in certain events of his life and in the sacraments (I John 4:2; 5:6-8). On the other hand, belief and love go together, as in Paul (I John 3:23; 5:1; II John 1: "whom I love in the truth"; III John 1). The truth is the final reality of God, disclosed in a human life and expressed in the doctrine of God's Son; hence to believe the truth is, in fact, to love the Son of God, Jesus Christ. For believers, Christ is always the norm; and as he defines the Godhead, so he defines the nature of the true life: the faithful are therefore the "children of God," and at the end they will be like Christ, for they shall see him as he is (I John 3:1-2). Love must issue in vision. At the same time love provides assurance and hope. Those who know that the Day of Judgment is still to come can await it without terror, if they love God and are in communion with the Father and the Son through the Spirit (I John 1:3-4; 4:17-18). Love brings the joy of fellowship (I John 1:4; II John 4, 12; III John 3-4).

"God is love" is no palindrome like "sin is lawlessness" (I John 3:4). John offered no Aphrodite substitute, "Love is God," for he meant that God is so perfectly loving that one can understand what love is only by knowing who God is and what he has done for men. John can say, however, that "love is of God," who is its fountainhead, who enables his children to be loving. "We love, because he first loved us" (I John 4:19). Or again: "If God so loved us, we also ought to love one another" (I John 4:11); and: "By this we know love, that he [here it is Christ] laid down his life for us; and we ought to lay down our lives for the brethren" (I John 3:16). Divine love elicits love from the redeemed, but this involves obedience to the divine will; and God's will is "that you follow love," the new commandment "that we love one another" (I John 2:3-5, 7 ff; 3:11, 18, 22-24; 4:21; 5:1-2; II John 5-6; cf. John 13:34-35). Hate, disobedience, mere profession in words without deeds, pride in one's "experience," all point to a fundamental hypocrisy. Notice that John's call for readiness to be a martyr states the royal law of neighborly love so effectively as to exclude any casuistic idea of loving the other only after we have taken care of loving ourselves. The test of sincerity is to walk in the steps of Christ, who gave up his life (I John 2:6). To live otherwise is to dwell in darkness (I John 1:6-7).

It may be thought that the "we love" of I John 4:19 is absolute and includes all possible objects (cf. vs. 14: Savior of the "world"). But, in fact, John seems to limit love to brotherly love (cf. 1QS 1.10; 5.4; 8.2; 10.26). He does not advise love for heretics (see II John 10-11), and denies that it is any use praying for one who has committed mortal sin, probably apostasy (I John 5:16). The "children of the devil" recalls the "sons of Belial" in 1QS. John believed that he was at war with those who put the whole cause of apostolic Christianity in jeopardy. Believers, then, must not love the world, the system of organized paganism (I John 2:15-17; 5:19; cf. 1QS 1.3-4; 2.7-8; 5.11; 9.17-18). Here as in II Tim. 4:10 ἀγαπάω has an object, and from this Nygren deduces that Christian *agape* was in danger of becoming a mere aspiration like *eros*. The fact is that NT evidence will not always fit into such a thesis. People do love the world, with a passion that should be reserved for devotion to God.

How much warmth is there in the brotherly love of the letters? Love "in the true faith" (II John 1-3) smacks of a theological virtue. There is greater warmth in III John (e.g., 15: "The friends send greetings. Give my greetings to my friends, each by name"; the RSV is misleading). The primary contribution of the letters is their rigorous insistence that love is not a matter of the lip but of the heart, that the love of God is meaningless if it is not expressed in love for one's fellow Christians, that Christ is the supreme example of love in a human life, and that such love touches the very heart of the ultimate reality with which we have to do.

b. The Fourth Gospel. Here too there is stress on the duty of obedience, and this book shares with I John an ambivalent attitude toward the world.

Disciple and Master share the same fate, because they are under the same obligation: "He who loves [φιλῶν] his life loses it, and he who hates his life in this world will keep it for eternal life" (12:25; cf. Mark 8:35; Luke 14:26; 17:33); note above all the sublime story in John 13 (vs. 15: "I have given you

an example"). Cowardly disciples are mentioned in 12:43: "They loved the praise of men [ἀγαπάω, again with an object] more than the praise of God." Obedient disciples "bear fruit," and this involves "going," presumably to become witnesses (15:2, 8, 16, 27). They must give their testimony in a world that hates them (15:18 ff; 16:33; 17:14), so that their vocation may eventuate in martyrdom (15:13). But the Son has set them free to be spiritually responsible, and they are promised the guidance and help of the Holy Spirit, the Paraclete, as well as the joy of communion with the Father and the Son (8:31-32, 36; 14:16-17, 26; 15:26; 14:23). Nothing else is said to give body to the implications of obedience. In the Appendix, however, this theme recurs in the story of Peter's restoration and commission. Thrice Peter affirms his love (the verb is φιλέω); Jesus uses ἀγαπάω twice, and the third time φιλέω. "Are you really my friend?" might be the distinction from the first two questions: "Do you love me?" But it is perhaps oversubtle to press the difference in the language. Peter was not the disciple whom Jesus loved (19:26, etc. Was he a fiction?). In this scene, however, Peter becomes the disciple who truly loved Jesus, and here he receives authority to be a shepherd in the church (21:15-18; cf. 10:3 ff). The relationship of this dramatic and moving story to Peter's primacy in the church catholic is obscure. 21:22 ("What is that to you? Follow me!") reminds us that an apostle and even a bishop should attend to his own calling and get on with his immediate duty.

The duty of obedience may be summarily stated in terms of what Archbishop Ussher called the "eleventh commandment": "A new commandment I give to you, that you love one another; even as I have loved you, that you also love one another" (13:34). This is the peculiarly Christian limitation of the second great commandment of the Law (Lev. 19:18). If, then, it is new, the reason must be found in the clause: "even as I have loved you." It is the quality of Christ's graciously condescending, sacrificial love that is to be the model for that of his disciples in their relations with each other. We note that Jesus is represented as delivering this to the disciples as a commandment, and it may be asked, both of this saying and of the two great commandments of the OT, how love can be made a matter of law. The reason is that God is the one who has the right to make such demands of men, and that Jesus speaks in the name of God as the Word incarnate. Moreover, Jesus is the Master and Lord, with authority to lay down the conditions for discipleship. What is commanded, of course, is not merely the emotion of brotherly affection; it is rather a steady, disciplined will to seek the good of others. The moral imperative for the redeemed is that they should walk in the way of the Lord Christ, who is the Truth and the Life, following him who embodied in his own person and death the goodness that pleases the heavenly Father.

The world is the creation of God through his Word, and the Word became flesh in that Jesus Christ who, as the Lamb of God, ascended the cross in order to save the "world" (1:3, 29; 3:16; 12:19, 32). Yet the sacrifice of Jesus was in order to gather into one the "children of God who are scattered abroad" (11:52), and none may be saved unless the Father draw him and give him to Jesus (1:12; 6:44; cf. 8:47; 17:6). John seems to mean that spiritual realities demand spiritual insight for their apprehension (cf. I Cor. 2:13) and that believing in Jesus as the Word and Savior (he avoids the noun "faith") is the work of God within a man (cf. I Cor. 12:3). Unbelievers, like those who compassed the death of Jesus, belong to the devil, and on them rests the divine wrath (John 3:19-21; 5:29; 8:24, 44 ff).

Because of the situation in which he wrote (*see* § 5*a above*), John emphasized the care of God for the disciples (10:29; 16:27; 17:23; cf. 5:23; 12:26) and the love of Christ for his disciples (11:3: "he whom you love"; 13:1 ff; 15:15-16: "I have called you friends"; 19:26, his kindness to his mother at the Cross; and 20:17: "Go to my brethren"). There is a peculiarly Johannine tenderness in the language employed.

Almost nothing is said about love to God (5:42?) and little about love to Christ (8:42; 14:15, 21 ff). Love ideas lurk behind the theme of the Bridegroom (3:29). John seems to make more of the rewards and duties of love: freedom, joy, life (5:24; 6:40; 8:34 ff; 10:28; 12:50; 15:11). The church of disciples enjoys communion with the Son as he does with the Father, and through the Son's revelation and the work of the Holy Spirit their life in God is fulfilled. It is along this line that John develops what Paul understood by life in the body of Christ (cf. 14:17, 20; 15:1 ff: the "vine of God" is the Christ and is also his Israel and church; 17:20-26: "I in them and thou in me, that they may become perfectly one, so that the world may know that thou hast sent me and hast loved them even as thou hast loved me").

Two other elements are distinctive to the Fourth Gospel: the mutual love of the Father and the Son; and the paradox of the Son's obedience as the authentic mark of his divine glory. For the first, see 14:31 ("that the world may know that I love the Father"); 3:35; 5:20 (the Father loves the Son and has delivered all things into his hands); 10:17-18 (the sacrifice of the Son and his rising again fulfils the will of the Father: "For this reason the Father loves me"). Gnostic heresies that God was not in the crucified Christ are thus denied, just as Docetic error is refuted by 19:34. So the glory of Christ is a glory he had with the Father before the world began (17:5); and yet for the believer his supreme glory is that he should have died to redeem the sinful, and that he desires for them the love with which his Father loved him (17:26).

Following Martin Dibelius, Nygren would define this love of the Father as the "self-communication of God to the Son," and he finds in John the concept of a love that is motivated by the inherent worth of the Son. This at once denies his own definition of *agape* as a love freely outflowing and unmotivated. By what W. F. Howard called the method of "explicative emphasis," John is simply showing the deepest meaning of Jesus' recognition by the heavenly voice as "my beloved Son." The doctrine of the incarnation of the eternal Word or Logos is John's contribution to Christology, but he failed to proceed to the concept of the eternal Trinity of Father, Son, and Paraclete. He does provide material, however, on which the systematic theologian may build who would

explore further the meaning of the Christian faith that "God is love." *See* CHRIST.

The obedience of the Son appears throughout the book: 4:34; 5:19, 30; 6:38; 8:28-29; 12:50; 14:31; 17:4, 6 ff. Is this not also the extension of the Synoptic theme of the Son of man, who came to minister (Mark 10:45)?

The sum of the matter is that the relations of the Father to the Spirit and the Spirit to the Son (14:16, 26; 15:26: "whom I shall send . . . , who proceeds from the Father") are all to be subsumed under the concept of love. With the First Letter one must say that God is love in all his being, works, and purposes. Consequently God is the Redeemer as well as the Creator of the world, and God stoops to win his children, patiently, graciously (1:17). God's will for those who turn to him through the Son and the Spirit is that they should live in love, forbearing one another, caring for the weak, seeking the truth, finding in simplicity and meekness of heart the way and the life. This is the entire secret of the NT gospel. In Jesus of Nazareth (1:45; 6:42) love had taken a human face and spoken by a human voice, for the sake of the scattered children of the Father. Love had offered the sufficient sin sacrifice and so had won fresh glory. Love had reached down from God to man, that man might rise up to enjoy life in God forever.

LOVE FEASTS. *See* AGAPE, THE.

LOVINGKINDNESS. Occasional KJV and frequent ASV translation of חסד, which in the RSV is regularly rendered "steadfast love." *See* LOVE IN THE OT.

LOW COUNTRY, LOWLAND. Same as SHEPHELAH.

LOWER BETH-HORON. *See* BETH-HORON.

LOZON lō′zŏn [Λοζών]. Apoc. alternate name of DARKON.

LUBIM lōō′bĭm [לובים]. Plural of the gentilic לובי (*lûbhî*), "Libyan." *See* LIBYA.

LUCAS. KJV alternate form of LUKE.

LUCIFER. KJV translation of הילל (RSV DAY STAR).

LUCIUS lōō′shəs [Λεύκιος, Λούκιος]. **1.** A Roman consul who sent a letter (I Macc. 15:16-21) to Ptolemy VII of Egypt and to other Near Eastern rulers, stating the Roman Senate's backing for the Jewish state of SIMON (1) in his struggle with the Seleucids.

Identification of Lucius is difficult, since his full name is not given, and since the letter may be wrongly placed; even the genuineness of the letter has been questioned (*see* MACCABEES, BOOKS OF). The following identifications are most frequently suggested:

a) Lucius Caecilius Metellus, consul in 142 B.C. If he is intended, the letter would seem to belong in I Macc. 14 rather than in its present place in ch. 15, which puts it in 139 B.C.

b) Cnaeus or Lucius Calpurnius Piso, consul in 139 B.C. His consulship fits the date of the letter as it appears in I Maccabees, but his name most probably was Cnaeus, not Lucius (the sources differ on this point).

c) Jos. Antiq. XIV.145-48 inserts a letter which bears striking similarities to that in I Macc. 15:16-21. Josephus dates this letter in the time of Hyrcanus II (47 B.C.). Probably he has edited and inserted a letter from an earlier time, but scholars differ as to the proper date of Josephus' letter. He mentions a praetor, not consul, named Lucius Valerius, whom some have identified with the consul Lucius of I Maccabees. But identification of Josephus' Lucius Valerius with any other known Lucius is very precarious.

W. A. BEARDSLEE

2. Lucius of Cyrene, one of the prophets and teachers of the Christian church at Antioch (Acts 13:1).

3. An otherwise unknown Christian, probably a Jew by birth ("kinsman" = "fellow countryman"), who sent greetings from Corinth in Rom. 16:21.

The undoubted fact that LUKE (Λουκᾶς) is an alternate form of Lucius or Lucanus has led to an identification of this Lucius with the author of the Third Gospel and Acts, from Origen to Deissmann (*see below*). The great likelihood that Luke was a Gentile and Lucius a Jew tells heavily against this identification. There was also a tendency, shown in some variant readings, to identify Luke with 2 *above* (*see* the works of Cadbury in the *bibliography*). Finally, it is possible that Lucius 2 and Lucius 3 were the same man.

F. W. GINGRICH

LUD, LUDIM lŭd, lōō′dĭm [לוד, לודים, לודים]. A people in Asia Minor, presumably. The name of Lud/Ludim can only be identified, to our present knowledge, with that of the Lydians, *Luddu* of Ashurbanipal's inscriptions (Rassam Cylinder II.95). Since the Lydians are an ancient population established in Asia Minor (*see* LYDIA), the biblical genealogies are somewhat difficult to reconcile with the historical situation. It seems, however, that at the basis of all the references there are some elements of historical reality.

In Gen. 10:22; I Chr. 1:17 Lud appears among the sons of Shem. In Gen. 10:13; I Chr. 1:11 Ludim

is a son of Mizraim (i.e., Egypt), second son of Ham. The Lydians of Asia Minor were neither Semites nor Hamites, but the contradictory nature of the two classifications of Lud and Ludim would seem to emphasize that the people in question were only incidentally known to the Near East. This would be explained if the original habitat of the Lud/Ludim were remote, although they at times must have entered the horizon of Egypt and Babylonia.

Historically, the Lydians came into contact with Assyria and Egypt in the early seventh century B.C., when their king Gyges sent an embassy to Ashurbanipal in 668 or 660. The Assyrians then did not know the language of the Lydian envoys, but diplomatic contact was established, and from Gyges' rule on, the name of the Lydians was known in the Near East, although few people from oriental countries would have had personal experience of Lydia in a geographical sense. Better information about Lydia became available after the Persian army under Cyrus had conquered Lydia in 546 B.C. and had incorporated it in the Persian Empire.

The listing of Lud among the nations in Isa. 66:19, with Tubal, Javan, and the coastlands afar off, is perfectly consistent with the situation of Lydia in Asia Minor near the Ionian coast. This passage supports the identification of Lud as Lydia. The other references seem to know of Lydians employed as mercenaries in foreign armies. In Jer. 46:9 they are fighting with the Egyptians in the Battle of Carchemish (605 B.C.); in Ezek. 30:5 they are again listed among the helpers of Egypt.

The presence of Lydian mercenaries in Egypt goes back to the days of Gyges, who sent military aid to his ally Psammetichus of Egypt (663-609) against the Assyrian armies (Ashurbanipal, Rassam Cylinder II.114-15). This contingent would certainly have included Lydians, who were known as good soldiers in pre-Persian times (Herodotus I.79), and it would have been known under the collective name of Lydians. The Greeks report that mercenaries from Asia Minor ("bronze men from the sea") supported the Saite dynasty; according to Herodotus (II.152), they were of Carian and Ionian derivation. These mercenaries have left many graffiti in Egypt, one of which is in Lydian (Friedrich no. 49).

It does not seem probable that Lydians were important among the mercenaries in other foreign armies—e.g., in Tyre (Ezek. 27:10)—although after the Persian conquest the Lydians furnished a contingent to the Persian army. M. J. MELLINK

LUHITH lo͞o′hĭth [לחית, הלחית] (Isa. 15:5; Jer. 48:5). A city of Moab, associated with Horonaim. It was apparently at the top of an ascent, probably near the S end of the Dead Sea, since it seems to be a stage in the flight of Moabites to Zoar. Eusebius and Jerome identify it with Loueitha, a city between Areopolis (*see* AR) and Zoar. It is probably identical with לחיתו of a Nabatean inscription from Medeba.
E. D. GROHMAN

LUKE (EVANGELIST) lo͞ok [Λουκᾶς, *an affectionate form of* Λούκιος (Lat. *Lucius*) *or* Λουκανός (Lat. *Lucanus*)]. A companion of Paul; a physician; and the probable author of our Third Gospel and the book of Acts. *See* LUKE, GOSPEL OF; ACTS OF THE APOSTLES.

Λουκᾶς ("Luke") occurs three times in the text of the NT (Col. 4:14; II Tim. 4:11; Philem. 24). Λούκιος ("Lucius") appears twice (Acts 13:1; Rom. 16:21).

From the first three references we learn that Luke was a physician beloved by Paul; Paul's fellow worker (συνεργός; Philem. 24) during Paul's imprisonment, probably in Rome; and a Gentile by birth (note the division of Paul's companions into "men of the circumcision" and those not so, in Col. 4:10-14).

It is possible, though not probable, that "Lucius of Cyrene" at Antioch (Acts 13:1) and "Lucius . . . my kinsman" (συγγενής; Rom. 16:21) are references to Luke. The appearance of "we" in the Western text of Acts 11:28, if not original, is at least witness to an early belief that the author was present at Antioch at the time of Agabus' prophecy. This would lead naturally to the view (as it did for Ephrem Syrus of the fourth century) that the author was the Lucius of Cyrene of Acts 13:1. Acts 20:3-6 may imply that Luke was with Paul at Corinth, the city from which the readers of Rom. 16:21 are greeted by "Lucius." Would there have been two men with the same name among Paul's companions? Against both identifications it has been argued that the Lucius of Rom. 16:21 was a Jew ("my kinsman"), while Luke was a Gentile; that Lucius was a very common Roman first name in this period and may well have been carried by several early Christians; and that the author, who seems studiously to avoid direct reference to himself, would hardly have flatly named himself in Acts 13:1. Certainty concerning the suggested identifications is impossible.

Luke's native country is likewise uncertain. The Western text of Acts 11:28, the possible identification of Luke with the Lucius of Acts 13:1, and persisting church tradition (in the so-called Anti-Marcionite Prologue to Luke, Eusebius, Jerome) favor Antioch in Syria as his place of residence. On the other hand, certain other data in Acts point toward Philippi. The "we" passages, beginning in 16:10, may indicate that the author of the book was himself the "man of Macedonia" and that he joined Paul and his associates at Troas for the journey to and evangelization of his native land. He seems to have remained in Philippi while Paul and his party journeyed into Achaia and rejoined them some years later when the missionaries again came through Philippi (Acts 20:5-6). His pride in the importance of Philippi (Acts 16:12) has been cited as supporting evidence. Antioch in Pisidia also has been suggested.

It is possible that Luke and Titus were brothers (II Cor. 8:18; 12:18)—a suggestion made by Origen and Jerome. This might account for the nonmention of Titus in Acts, surely a strange phenomenon in view of Titus' importance in the Pauline letters.

Luke's medical training may have been taken at Tarsus, which, along with Alexandria and Athens, was a famous center of learning. Until recent times it was believed that the vocabulary of Luke-Acts was saturated with medical terminology, final proof that the author of this two-volume work was a physician. But it has been shown conclusively that the writer of Luke-Acts used no language beyond the competence of the average, educated, nonmedical Greek of the period. *See* LUKE, GOSPEL OF.

If Luke the "beloved physician" and companion of Paul was the author of Luke-Acts, it is possible to derive from this work characteristics of the author's mind and spirit. He was broad in his sympathies, compassionate toward the poor and the outcasts of society, genuinely pious, self-effacing, radiantly joyful, charmingly urbane, and deeply loyal. He remained with Paul to the end, doubtlessly serving him in medical and other ways, and earned the great apostle's gratitude and admiration (Col. 4:14; II Tim. 4:11; Philem. 24).

The Anti-Marcionite Prologue to Luke says that he never married and that he died at the age of seventy-four in Bithynia (in some MSS "Boeotia"), "full of the Holy Ghost." Traditions are abundant and various concerning his later fields of activity and place and manner of death.

***LUKE, GOSPEL OF** [κατὰ λουκᾶν, *see* LUKE (EVANGELIST)]. The third book of the NT canon. This gospel is dedicated by the author to an unknown patron, the "most excellent Theophilus," but was intended for general circulation in a Gentile community. As the Preface (1:1-4) shows, the evangelist was capable of writing excellent Greek, but he adapts his style to that of his several sources.

He intended the gospel to be the first part of a larger work, for the book of ACTS is clearly a sequel to it. In Acts 1:1 he explains that "in the first book" (i.e., the gospel) he has dealt with "all that Jesus began to do and teach, until the day when he was taken up"—i.e., until his ASCENSION into heaven. Even apart from the fact that the word used here for "first" usually designates the former of two, there is no good reason to think that the author proposed to write a third book. In Luke 1:4 he describes the purpose which he has in view in the words: "that you may know the truth concerning the things of which you have been informed," thus referring to earlier instruction.

The fidelity with which he follows the language and style of his sources and his marked religious interests make his book of inestimable value as one of the basic documents of historical Christianity.

Bibliography

1. Authorship. According to tradition the gospel was written by "Luke the beloved physician" (Col. 4:14). "Luke," writes Irenaeus (A.D. 185), "the follower of Paul recorded in a book the gospel that was preached by him." The Muratorian Canon (*see* CANON OF THE NT § 3*e*), which reflects the opinion of the church of Rome (A.D. 170-90), says: "The third book of the Gospel, according to Luke, Luke that physician, who after the ascension of Christ, when Paul had taken him with him as companion of his journey, composed in his own name on the basis of report." In view of the tendency to ascribe NT writings to apostolic authorship, this tradition has much weight, and is accepted by very many, although not by all, modern scholars. It is confirmed by the probability that Luke is the author of the "we sections"—i.e., the parts of the Acts which are written in the first person plural (16:10-17; 20:5-15; 21:1-18; 27:1–28:16). In these sections the writer is manifestly a companion of Paul, since he writes accurately and with considerable detail, and may well be Luke, since in them Luke himself is never mentioned. The retention of the first person ("we," etc.) is best explained by the view that the writer of these sections is also the author of the Acts as a whole; and strong linguistic arguments have been advanced to show that he is also the author of the gospel.

Lukan authorship is also supported, although by no means demonstrated, by the linguistic evidence which suggests that the author of Luke-Acts was a physician. Much less stress is laid on this "medical argument" today, in consequence of evidence which shows that many of the words formerly cited as "medical words" are used by contemporary and later writers who were not physicians. Other scholars think that this counterargument has been pressed too far and that, while the vocabulary and the style do not prove that the author was a physician, they tend to confirm the ancient tradition. In favor of this view they cite 4:38: "Now Simon's mother-in-law was ill with a high fever" (cf. Mark 1:30); 5:12: "There came a man full of leprosy" (cf. Mark 1:40); and 8:43, where Luke replaces Mark's description of the woman with the issue of blood ("who had suffered

much under many physicians, and had spent all that she had, and was no better but rather grew worse"; Mark 5:26) by the statement that she "could not be healed by any one."

The objections to Lukan authorship turn mainly upon the historical problems which meet us in the Acts, especially the difficulty of reconciling the account of the Apostolic Council in Acts 15 with Paul's personal narrative in Gal. 2:1-10 and the problems raised by the decree in Acts 15:23-29 (*see* COUNCIL OF JERUSALEM). These problems belong mainly to the study of the ACTS and all that can be said here is that the difficulties have been exaggerated, especially if it is remembered that the aims and circumstances of Luke and Paul were different. Some scholars, it may be added, prefer (but on doubtful grounds) to identify Gal. 2:1-10 with Acts 11:27-30; 12:25. *See also* GALATIANS.

On the question of authorship we may, with some confidence, conclude that the Third Gospel was written by Luke the beloved physician. Much force belongs to B. H. Streeter's words: "The burden of proof is on those who would assert the traditional authorship of Matthew and John and on those who would deny it in the case of Mark and Luke."

2. Purpose. In considering this question we have the advantage of the author's personal explanation in his Preface (1:1-4). He writes to confirm in the minds of his readers the truth of what they have been already taught, presumably in the primitive Christian community. With this end in view he selects from his sources, and from oral tradition, material by which to present an outline of the life, ministry, and death and resurrection of Jesus Christ. Basically his interests are historical. This fact, it must be said, is one of his virtues, in spite of the tendency of many scholars to describe him in a depreciatory sense as a "historicizer" of the tradition. He does not write as a modern historian would write or within the limitations of his knowledge. His intention is to record what Jesus had said and done in the light of certain definite interests of his own. He is not primarily a theologian, and certainly not a "Paulinist." Irenaeus, we have seen, says that he recorded the gospel preached by Paul; but this statement is quite general and cannot be pressed. Like Paul, Luke speaks expressly of sin (5:8; 7:47), of forgiveness and reconciliation (15:11-32), and records teaching which reminds us of Paul (17:10; 18:14; 19:9-10); but in these respects he simply hands down primitive Christian teaching in which both writers shared. How little Luke had entered into Paul's deepest thoughts is shown by the quite general reference to justification in the apostle's sermon at Antioch of Pisidia: "Let it be known to you therefore, brethren, that through this man forgiveness of sins is proclaimed to you, and by him every one that believes is freed from everything from which you could not be freed by the law of Moses" (Acts 13:38-39). This statement is only a pale, and not very accurate, reflection of the kind of teaching we find in Paul's letters—e.g., in Rom. 3:27-31; Gal. 5:1, 13-15. Luke's purposes are not doctrinal, but practical in the best sense of the word.

It is a fascinating, and by no means improbable, suggestion that one of the reasons which shaped the writing of Luke-Acts was the desire to commend Christianity to members of the Roman court circle. T. Flavius Clemens, joint consul in A.D. 95, whose wife Domitilla was an adherent, if not a baptized member, of the church at Rome, was probably favorably disposed to the new faith, and excavations suggest that other members of leading families were also interested in it. The contents of Luke-Acts lend support to this suggestion. The gospel is related to world history in 3:1-2, and Tiberius is mentioned in 3:1 and Augustus in 2:1. Three times Pilate declares Jesus innocent (Luke 23:4, 14, 22), and although he passes sentence upon him, the guilt of the chief priests and rulers of the people is emphasized in the words: "And their voices prevailed," and the statement that he delivered up his prisoner "to their will" (23:24-25). In the Acts, Roman officials are not unfriendly, as the references to Sergius Paulus (13:4-12), to the magistrates at Philippi (16:35-40), to Gallio (18:12-17), and to the Asiarchs at Ephesus (19:31) show. To Festus, Paul says: "I am standing before Caesar's tribunal, where I ought to be tried; to the Jews I have done no wrong, as you know very well . . . . I appeal to Caesar" (25:10-11); and later Agrippa says to Festus: "This man could have been set free if he had not appealed to Caesar" (26:32). The climax of Luke-Acts describes Paul's preaching and teaching in Rome as being carried on "quite openly and unhindered" (28:30-31). Luke may well have wished to suggest that Christianity was not politically dangerous. This, of course, is not his main purpose, as Luke 1:1-4 makes clear, but it appears to have influenced his use of his material.

3. Contents. The gospel may be summarily outlined as follows:

I. The Preface, 1:1-4
II. The birth and infancy narratives, 1:5–2:52
III. The Galilean ministry, 3:1–9:50
IV. The journey to Jerusalem through Samaria, 9:51–19:48
V. The Jerusalem ministry, chs. 20–21
VI. The passion and resurrection narrative, chs. 22–24

a. The Preface. There are several important statements in this passage, the only one of its kind in the Synoptic gospels. Luke speaks of many predecessors. Many, he tells us, had undertaken to compile a narrative of the "things which have been accomplished among us," and they had done this "just as they were delivered to us by those who from the beginning were eyewitnesses and ministers of the word" (1:1-2). Mark is certainly one of these early evangelists, but whether the other narratives amounted to gospels is uncertain. Who the others were we do not know, and it is idle to guess. Luke may be referring to those, including perhaps himself, who had already strung together groups of narratives and sayings illustrative of various aspects of the ministry of Jesus. He modestly says that it seemed good to him to write an orderly account inasmuch as he had followed the course of all things closely (or "accurately") from the first.

b. The birth and infancy narratives. The change from the excellent Greek of the Preface to the Hebraistic Greek of 1:5–2:52 is noted by all commentators. Semitic idioms and the biblical style of the

narratives suggest that the evangelist either is using a Hebrew or Aramaic document or is deliberately adapting his language to that of the Greek OT. A series of narratives which announce the birth of John the Baptist, the son of Zechariah and Elizabeth, his conception, birth, and circumcision, is balanced at every point by a second series concerning Jesus which ends with the story of his visit to Jerusalem and the temple at the age of twelve. It has been conjectured that the basic cycle is that concerning John and that the evangelist has shaped the narratives about the birth and infancy of Jesus in accordance with it. A reference to the Virgin Birth appears in 1:34-35: "And Mary said to the angel, 'How can this be, since I have no husband?' And the angel said to her,

> 'The Holy Spirit will come upon you,
> and the power of the Most High will overshadow you;
> therefore the child to be born will be called holy,
> the Son of God.' "

Some think that this passage may have been added at the time of the composition of the gospel, or less probably later, since it is difficult to harmonize it with the terms of the messianic prophecy in 1:30-33, but most commentators conclude that it is an original element in the cycle. The beauty and restraint of the whole section, its marked Jewish-Christian character, as seen in the great hymns which have come to be known as the Benedictus, the Magnificat, the Gloria in Excelsis, and the Nunc Dimittis, and the deep religious spirit which prevails throughout—these are some of the characteristics of these matchless chapters.

c. The Galilean ministry. As in Mark and Matthew, the early ministry is introduced with an account of the preaching of John and the baptism of Jesus. Distinctive of the gospel is the elaborate, sixfold date in 3:1-2. After a summary reference to the imprisonment of John and a brief account of the baptism of Jesus, a genealogy is introduced which traces his descent from Adam, "the son of God" (3:23-38). "Full of the Holy Spirit," Jesus is led into the wilderness and "tempted by the devil"; and returning "in the power of the Spirit," he begins a teaching and healing ministry in Galilee, "being glorified by all" (4:1-15).

With intention Luke sets at the beginning of the ministry an independent account of the preaching of Jesus in the synagogue at Nazareth (4:16-30), a story which sounds the note of universalism characteristic of his special interests. From this point he is dependent mainly on his principal sources, but he introduces material peculiar to his gospel in the narratives of the call of the first disciples (5:1-11), the raising of the widow's son at Nain (7:11-17), the woman of the city (7:36-50), and the ministering women from Galilee (8:1-3). In 6:20-49 he introduces the Great Sermon. The form is more compact than Matthew's SERMON ON THE MOUNT (Matt. 5–7). This is followed by other material from the same sayings source.

The rest of the section consists of portions of Mark. Thus Luke retells the stories of the storm on the lake (8:22-25), the Gerasene demoniac (8:26-39), the raising of Jairus' daughter (8:40-56), the mission of the Twelve (9:10-17), the confession of Peter (9:18-22), the Transfiguration (9:28-36), the epileptic lad (9:37-43), the second prophecy of the Passion (9:43*b*-45), the child in the midst (9:46-48), and the man casting out devils who was not a disciple (9:49-50). This Markan material consists of extracts (Mark 1:21-39; 1:40–3:19; 3:31-35; 4:1-25; 4:35–6:44; 8:27–9:40), some of them long, as will be seen. In these sections Mark's order is meticulously followed, with transpositions only in 3:7-19, 31-35. Clearly for this part of his gospel Luke had little special information of his own apart from isolated traditions noted above.

d. The journey to Jerusalem through Samaria. It would be tedious, and it is not necessary, to list all the narratives and sayings in this long section of some ten chapters. In 9:51–18:14 Mark is not used at all, except possibly in a few phrases.

The section opens with a summary statement: "When the days drew near for him to be received up, he set his face to go to Jerusalem" (9:51). Its amorphous contents are linked loosely together by such passages as 13:22: "He went on his way through towns and villages, teaching, and journeying toward Jerusalem"; 17:11: "On the way to Jerusalem he was passing along between Samaria and Galilee"; and by briefer captions introducing single narratives and groups of sayings and parables. Manifestly, Luke had no detailed chronological knowledge of the course of events in this journey.

Various reasons have been suggested for this want of continuity. It has been conjectured that accounts of three separate journeys have been loosely compiled. It has even been suggested that the evangelist has selected and arranged his material so as to present a sequence corresponding to the book of Deuteronomy. A better suggestion is that he is making use of existing groups of tradition compiled for the guidance of individual missionaries on such topics as the charge of Jesus to his disciples, prayer, miracles, wealth, forgiveness, and mammon. More is to be said for the view that Luke has followed the order of Q (*see* § 5*b below*), and has introduced his special tradition at appropriate points. This view would not rule out the probability that Q was preceded by groups of allied materials.

More important than the origins of this long section is the distinctively Lukan material which it contains. It is this section more than any other which gives to the gospel its peculiar stamp. Outstanding among the contents are the parables of the good Samaritan, the friend at midnight, the rich fool, the tower builder, the rash king, the lost sheep, the lost coin, the lost son, the unjust steward, the rich man and Lazarus, the farmer and his servant, the unjust judge, the Pharisee and the tax collector, and the pounds; and such stories as Martha and Mary, the woman who cried: "Blessed is the womb that bore you," Herod's threat, Zacchaeus, and the weeping over Jerusalem. The religious value of this material cannot be estimated.

e. The Jerusalem ministry. In this section Luke is again largely dependent on Mark for his account of the controversies in Jerusalem and at least part of the eschatological discourse on the Mount of Olives. The discourse is of special importance because in 21:20-36 he appears to be using a special tradition. Several American and British scholars have more or less independently maintained that the evangelist has inserted short Markan extracts (vss. 21*a*, 23*a*, 26*b*-27,

29-33) into a section which otherwise is non-Markan. The importance of this contention is that, if this view is accepted, it disposes of the common objection that Luke would probably not deliberately have interpolated verses from Mark into another source. The apparent fact that he does this very thing in 21:20-36 bears closely upon the vital question of the origins of his passion and resurrection narrative.

As for the discourse itself, in spite of much that has been said to the contrary, one can be far from certain that it reflects a knowledge of the siege of Jerusalem in A.D. 68-70, as indeed we should have to conclude if Luke 21:20-24 is only an editorial expansion of Mark 13:14-20.

A feature of the Lukan discourse is that it emphasizes the political more than the eschatological aspects of the teaching of Jesus. In 21:37 Luke adds the summary statement: "Every day he was teaching in the temple, but at night he went out and lodged on the mount called Olivet. And early in the morning all the people came to him in the temple to hear him." This passage appears to be more than a mere editorial expansion of Mark 11:19.

f. The passion and resurrection narrative. The nature of chs. 22–24 presents the greatest difficulties to the commentator, and, at the same time, is a matter of great importance for the general reader. If, as is commonly held, this section is a re-edited version of Mark's account, with certain Lukan additions, its historical value will be appreciably less than the estimate we may put upon it if, in fact, it contains an independent Lukan account of the Passion with Markan supplements. Some of the facts connected with the problem are undoubted. Luke 22:1-13 is certainly a re-edited version of Mark 14:1-2, 10-16; and Luke 24:13-53 (the journey to Emmaus, the appearance to the Eleven, and the Ascension) is a part of Luke's special tradition. In the intervening section, Luke 22:14–24:11 (24:12 is no part of the original text: *see* § 10 *below*), there are also several passages which have indubitably been drawn from Mark. These include Luke 22:19*a*, 22, 34, 46*b*(?), 50*b*, 52-53*a*, 54*b*-61; 23:3, 26, 34*b*(?), 38, 44-45, 50-54; 24:10(?); and perhaps other passages in 22:39-46, 47-53; 23:18-25.

The beauty, pathos, and religious value of the distinctively Lukan elements in chs. 22–24 are recognized by all. This applies especially to the narratives of the Agony (22:39-46), the women of Jerusalem (23:27-31), and the Emmaus story (24:13-35). On the other hand, the appearance to the Eleven (24:36-43) contains legendary elements in the references to "flesh and bones" and the eating of "broiled fish." The passion narrative, and the gospel as a whole, find an impressive climax in the words: "Then he led them out as far as Bethany, and lifting up his hands he blessed them. While he blessed them, he parted from them. And they returned to Jerusalem with great joy, and were continually in the temple blessing God."

4. Distinctive characteristics. *a. Universalism.* This quality has already been noted in the account of the sermon at Nazareth, in the references to the widow at Zarephath and Naaman the Syrian (4:25-27). It runs throughout the gospel—in the birth stories, where the promised salvation is described as a "light for revelation to the Gentiles" (2:32); in the parable of the great supper, in which the servant is bidden to "go out to the highways and hedges, and compel people to come in" (14:23); and in the story of the appearance to the Eleven according to which the disciples are to preach repentance and the forgiveness of sins "to all nations, beginning from Jerusalem" (24:47).

b. An interest in social relationships. This concern appears in the beatitudes addressed to the poor and woes addressed to the rich (6:20-26). Illustrations from finance are frequent—e.g., in many of the parables, such as the two debtors, the rich fool, the tower builder, the rich man and Lazarus, and the pounds. There are also several references to almsgiving (11:41; 12:33), and frequent allusions to lodging and entertainment (2:7; 9:12; 21:37; also 7:36 ff; 10:38 ff; 13:26; etc.).

c. A deep concern for outcasts, sinners, and Samaritans. See 5:1-11; 7:36 ff; 9:51-55; 10:29-37; 17:11-19; 18:9-14; 19:1-10; 23:39-43. The remark of Harnack has often been quoted: "He has a boundless—indeed a paradoxical—love for sinners, together with the most confident hope of their forgiveness and amendment."

d. An interest in stories about women. This interest is illustrated in portraiture of the Virgin, Elizabeth, Anna, the widow at Nain, the penitent harlot, the ministering women from Galilee, Martha and Mary, the bent woman, and the women mentioned in the parables of the lost coin and the unjust judge. The same interest, it will be recalled, is manifest in the Acts in the stories about Tabitha, Lydia, Priscilla, and the four daughters of Philip the evangelist.

e. An emphasis on joy, prayer, and the Holy Spirit. The angelic message to the shepherds speaks of "good news of a great joy which will come to all the people" (2:10). Prayer is mentioned in 5:16; 6:12; 11:1; 22:32, 41-42. On the cross Jesus prays: "Father, forgive them; for they know not what they do," and commends himself to the Father in the words: "Father, into thy hands I commit my spirit" (23:46). The Holy Spirit is mentioned in 4:1, 14, and again at 10:21, and the gift of the Spirit to the disciples is promised in the words: "Behold, I send the promise of my Father upon you; but stay in the city, until you are clothed with power from on high" (24:49). These same interests are abundantly illustrated in the Acts.

f. An emphasis on the graciousness and severity of the demands of Jesus. The graciousness of the Lukan Jesus is universally recognized. At Nazareth "all spoke well of him, and wondered at the gracious words which proceeded out of his mouth" (4:22). Tenderness and compassion shine in the narratives of the woman of the city, Zacchaeus, and the penitent bandit. It is not always immediately recognized, however, that along with this graciousness there is an imperious note in the sayings of Jesus. Without counseling hatred, he demands undivided loyalty to himself in the saying: "If any one comes to me and does not hate his own father and mother and wife and children and brothers and sisters, yes, and even his own life, he cannot be my disciple" (14:26); this saying appears in a more challenging form than in the parallel in Matt. 10:37. Complete renunciation is required in the words which follow the parable of the rash king: "So therefore, whoever of you does not renounce all that he has cannot be my disciple" (14:

33). The saying on salt (14:34-35; cf. Matt. 5:13; Mark 9:50), which closes this group, appears in a form more searching and more absolute than in the parallel versions: "Salt is good; but if salt has lost its taste, how shall its saltness be restored? It is fit neither for the land nor for the dunghill; men throw it away. He who has ears to hear, let him hear."

g. The stress on the lordship of Christ. The sonship of Christ, while fully recognized in Luke (cf. 1:35; 3:22; 4:3, 9; 10:22), is not emphasized to the degree illustrated in the Pauline letters and the Johannine writings. The stress lies, as indeed it does in the case of Paul, upon the lordship of Christ. This is true also of the Acts. In fact, we may say that the Christology of Luke-Acts is that of primitive Christianity. The evangelist uses the title "the Lord" at least eighteen times, and in various combinations nearly fifty times in the Acts. There can be little doubt that it expresses an attitude of marked religious veneration.

h. The interest taken in the Passion. In this respect the gospel resembles Mark, but there is perhaps a greater interest in its tragic aspects. In 9:51 Jesus sets his face to go to Jerusalem. In 12:50, in a saying found only in Luke, Jesus says: "I have a baptism to be baptized with; and how I am constrained until it is accomplished!" (cf. Mark 10:39). In reply to the threats of Herod Antipas, he says: "Behold, I cast out demons and perform cures today and tomorrow, and the third day I finish my course" (13:32); and, at the Last Supper, he quotes Isa. 53:12 in the words: "I tell you that this scripture must be fulfilled in me, 'And he was reckoned with transgressors'; for what is written about me has its fulfilment' " (22:37). The last clause in this passage has even greater point if, with a number of scholars, it is rendered: "For my life draws to its end." In Luke, Christ is the divine Son and Lord who in filial obedience fulfils a ministry of grace which culminates in suffering, death, and resurrection.

5. Sources. Already, in discussing the ideas characteristic of this gospel, it has been found difficult to avoid references to its sources. They are Mark, Q, L, and the birth and infancy narrative.

a. Mark. The evangelist's use of Mark is beyond question. It is one of his principal sources, and is generally held to provide the framework of his gospel. In 3:1–4:30 the phrases "preaching a baptism of repentance for the forgiveness of sins" (3:3) and "the thong of whose sandals I am not worthy to untie" (3:16) appear to have been drawn from Mark. In 22:14–24:11 a greater use of Mark is made. In both these sections, however, the question of sources is very complicated and is still open to argument.

A most copious use of Mark is obvious in the long intervening section 4:31–22:13, and it is here more than anywhere else that we can best assess Luke's dependence upon this source. Here the Markan sections are: Luke 4:31-44; 5:12–6:11 (19); 8:4–9:50; 18:15-43; 19:29-36, 45-46; 20:1–21:11, 16-17; 22:1-13. In these passages the proportion of words shared with Mark ranges from 52 to 68 per cent, in spite of changes of vocabulary and style. (Only in 4:40-44; 5:36-38; 6:6-19; 9:28-45; 19:47-48, does the agreement fall below 45 per cent.) Percentages may be thought a mechanical means of deciding dependence, but they draw attention to, and confirm, conclusions suggested by a close linguistic comparison, and the upshot is to show that Luke uses Mark with a high degree of fidelity to his source, despite additions and changes. They justify hesitation when elsewhere in the gospel commentators find it necessary to describe Luke's narratives as "editorial" or as a "radical revision of Mark."

It is important to observe that, while Luke uses Mark, he omits nearly half the material in his source, and that the verses which he takes over do not amount to a third of his own gospel (300-350 verses out of 1,149). Luke is indebted to Q, L, and oral tradition to a far greater extent than he is to Mark.

b. Q. This is the sayings source used independently by Matthew and Luke. The material Luke derives from Q amounts to some 220-30 verses. It includes the following passages: Luke 3:7-9, 16-17, 21-22; 4:1-13; 6:20-23, 27-49; 7:1-10, 18-28, 31-35; 9:57-60; 10:2-16, 21-24; 11:2-4, 9-26, 29-35, 49-51; 12:2-12, 22-31, 33*b*-34, 39-46, 51-53, 57-59; 13:18-29, 34-35; 14:11, 15-24, 26-27; 16:13, 16-18; 17:1-6, 23-24, 26-27, 33-35, 37; 22:30*b*. Probably also it contained a few passages not found in Matthew, including 6:24-26; 9:61-62; 12:35-38, 47-48, 54-56. Q may have been preceded by short groups of sayings and parables, but there can be little doubt that it was in the form of a document at the time when Matthew and Luke wrote. This inference is suggested by two facts: (*a*) that many sequences of passages can be traced between Luke and the five groups Matt. 5–7; 10; 13; 18; 23–25; and a sixth group consisting of the rest of Matthew; and (*b*) that the sayings not in sequences are those which the First Evangelist has conflated with material derived from other sources (Mark and M). There are good grounds for believing that Luke reproduces Q in its original order, and that he adheres closely to its text. After decades of further research the probability remains that, whether Luke recorded the words of Jesus from Mark or found them in Q, he seldom made any changes for the sake of giving them wider scope or application.

An important fact bearing upon the composition of the gospel is that material from Mark is not introduced into Q contexts and that Q sayings are not inserted in Markan contexts. The contents of the two sources are segregated. In contrast, material peculiar to Luke, usually designated by the symbol L, is commonly and freely connected with the Q passages listed above.

c. L. The evangelist owes more of his material to L than to any other source. Some 400-450 verses belong to this source apart from the 132 verses in Luke 1-2. It has been maintained that L was a document, but it may be doubted that this view can be sustained, if the birth stories belong to a separate source. It is best to regard L as a body of oral tradition which Luke first reduced to writing at Caesarea.

It is the L material which gives much of its distinctive character to the Third Gospel. To it belong the parables and narratives peculiar to Luke which already have been enumerated (*see* §§ 3*c-f above*). Besides these parables and narratives Luke has derived groups of sayings from this cycle: on dividing the inheritance (12:13-15); on being invited to a banquet and on issuing invitations (14:7-14); on mammon (16:9-12); on wealth (16:14-15); on true greatness (22:24-

30); together with the non-Markan parts of 21:12-36.

A reasonable conjecture is that this L material was collected by Luke *ca.* A.D. 60, when, as he tells us in Acts 21:8-9, he remained with his companions "many days" in the house of Philip the evangelist at Caesarea. Philip, he tells us, had four unmarried daughters. In view of the special interest in women which marks the L tradition, it may well be that these women were the evangelist's intermediaries. The probability that his information reached him in an oral form is supported by the fact that his distinctive style is especially marked in the narratives and parables derived from this source—in 5:1-11; 7:36-50; 10:29-37; 17:11-19; 19:41-44; 23:5-12, 14-15, 39-43; 24:13-35, 36-53.

d. The birth and infancy narrative. The biblical style and the Semitic idioms of Luke 1–2 have already been mentioned. The question arises how far these linguistic features are due to Luke himself and how far they are distinctive features of a source. Upon this issue critical opinion is divided. It may be that Luke is dependent on oral tradition and that he deliberately used the idioms of the LXX as being peculiarly appropriate to these stories. The alternative is to suppose that he drew upon Hebrew or Aramaic sources, possibly already translated into Greek, and that he embellished them by the artistry of his style. These stylistic features are more strongly marked in the annunciation to Mary (1:26-38) and the visit of Mary to Elizabeth (1:39-45, 56), and again in the narratives of Luke 2, than they are in the Baptist stories (1:5-23, 57-80); and to this extent the hypothesis that the Baptist cycle is basic is supported. The intermediaries are probably women, perhaps those who handed down the L tradition. It has often been conjectured that the ultimate authority for the birth stories is Mary the Virgin, and support for this view is afforded by the delicacy of the narratives and by 2:19: "Mary kept all these things, pondering them in her heart," and 2:51: "He went down with them and came to Nazareth, and was obedient to them; and his mother kept all these things in her heart." This suggestion must remain conjectural, since it depends for its force upon the view taken of the historical value of the birth and infancy tradition. The date when this tradition first became a matter of general knowledge in the church is the period A.D. 60-80. How much older it is, we do not know.

How Luke has used the four sources described above is a question upon which opinion is divided. The generally accepted view is that Mark forms the framework of the gospel, into which, mainly at two points, Luke introduced the matter he drew from Q and L, prefacing the whole with the birth and infancy section and inserting his special tradition in the passion and resurrection narrative. The two sections in the body of the gospel in which non-Markan material has been introduced are 6:20–8:3; 9:51–18:14, the so-called "lesser" and "greater interpolations." How far this construction is sound depends on the view taken of the Proto-Luke hypothesis, of which some account must now be given. *See* SYNOPTIC PROBLEM.

6. Proto-Luke. Although the existence of Proto-Luke is disputed, a summary statement of the hypothesis must be supplied, in view of its wide acceptance and the probability that, in some form or other, it represents a stage in the composition of the Third Gospel. Proto-Luke is not a lost gospel, but a first draft on which, it is presumed, Luke drew when composing his gospel. According to the hypothesis, he began with Q and expanded it with material from L and an account of the Passion and the Resurrection. Later he enlarged it with many longer or shorter extracts from Mark, with the birth stories, and with the Preface to the gospel. The hypothesis is represented by the formula: (Q + L) + Mark + the birth stories + the Preface = Luke.

For a detailed account of this hypothesis, reference must be made to the textbooks. Here only a brief summary of the main points can be offered.

As already observed, the Q passages in the gospel are constantly combined with material from L, but Q and the Markan passages stand apart. The presumption is that Q + L represents a stage antecedent to the composition of the gospel. This part of the hypothesis would be widely conceded.

The Markan sections in Luke, which consist of larger or shorter extracts, do not form a whole, but appear to be inserted in non-Markan contexts (Q + L). The same structure is present in the eschatological discourse (Luke 21) and in the passion narrative (Luke 22–24). If this is so, Proto-Luke is an original entity. This view would not necessarily be inconsistent with the widespread opinion that Mark supplies the ground plan of the gospel.

The non-Markan parts of Luke form a readable whole with a continuity of their own.

If Luke expanded Proto-Luke, we see why he omitted so much of Mark. He passed by material to which he already had parallel or similar versions.

The sixfold date in 3:1-2 and the position of the genealogy in 3:23-38 are intelligible if they stood at the beginning of Proto-Luke, and the statement in the Preface, that the evangelist has "followed all things closely for some time past" (or better, "from the beginning"), is in harmony with the hypothesis.

The passages which, it is suggested, belonged to Proto-Luke include: 3:1–4:30; 5:1-11; 6:20–8:3; 9:51–18:14; 19:1-28, 37-44, 47-48; 22:14–24:53 (minus the Markan insertions). (*See* § 3*f above.*) The obvious difficulties of the hypothesis are the gaps between 8:3 and 9:51 and before 22:14. Whether 21:20-38 formed part of Proto-Luke cannot be demonstrated, and the same is true of the original introduction to the passion narrative, which, apparently, the Markan passage, Luke 22:1-13, has replaced. In general, one must say that the hypothesis has suffered from attempts to determine too precisely the contents of Proto-Luke, especially in the passion narrative; but that Q + L had been compiled before the gospel was written has much probability. If this is so, the importance of Proto-Luke, as a source slightly earlier than Mark and comparable with it, is great; and we have a broader basis for the gospel tradition and a better insight into Luke's methods as an evangelist.

7. Date. The date is not easy to determine, but most is to be said for a date *ca.* A.D. 80. The main competing views are as follows:

a) A date *ca.* A.D. 60 was suggested by A. Harnack as a consequence of his submission that Acts was compiled shortly after Paul's imprisonment for two years in his "hired house" (RSV "at his own expense") in Rome (Acts 28:30-31). The difficulty in

accepting this date is that it compels us to assign Luke-Acts to a period earlier than the contents of these writings would naturally suggest, and to date Mark as early as 50-60. Mark 13:14 suggests that the investment of Jerusalem by the Romans was imminent, and this circumstance makes it impossible to date Mark earlier than *ca.* 65-67. If this opinion is accepted, the composition of Luke must be later.

b) Many scholars have held that Luke is indebted to Josephus, who wrote his *Jewish War* before the death of Vespasian in 79 and his *Antiquities* in 93. If this is so, the gospel must be dated *ca.* 100. Luke's language, it is held, reflects the vocabulary and style of Josephus. In particular, it is argued, he was misled by what Josephus wrote about LYSANIAS (Luke 3:1) and THEUDAS (Acts 5:36-37). As regards the former, to whom Luke refers in the phrase "Lysanias tetrarch of Abilene," we now know from an inscription that there was a younger Lysanias, and Luke's statement is thus correct. The difficulty in the allusion to Theudas is less easily met, but even if Luke is guilty of an anachronism, it is far from probable that he was misled by what he read in Jos. Antiq. XX.v.1, where Josephus speaks of a revolt under Theudas when Fadus was procurator of Judea (A.D. 44-46). The linguistic argument for dependence upon the works of Josephus is held by very many scholars to be "not proven" or "not quite conclusive." It does not seem necessary, therefore, to date the gospel at the end of the first century.

c) The commonly accepted view, that in consequence of his use of Mark, Luke's Gospel belongs to the period 70-80, must be held to stand. It is often argued that Luke 21:20: "When you see Jerusalem surrounded by armies, then know that its desolation has come near," is a conscious modification of Mark 13:14: "When you see the desolating sacrilege set up where it ought not to be (let the reader understand), then let those who are in Judea flee to the mountains." If this plea is accepted, the date must be subsequent to 68-70. It does not seem necessary to take this view of Luke 21:20 in the light of other references to the fate of the city (Luke 13:34-35; 19:41-44); but, in any case, a date after the fall of Jerusalem seems probable, and toward the end of the decade 70-80 rather than earlier. The use of the name "the Lord" for Jesus and the development of the tradition as it appears in the Acts, in the account of the Apostolic Council (Acts 15) and in other narratives, support this view. It should be remembered, however, that while the actual composition of the gospel is comparatively late, it draws upon much earlier sources, which, we have maintained, were used with fidelity.

8. Place of writing. Where the gospel was written we do not know. The Anti-Marcionite Prologue mentions Achaea. This tradition is attested by Gregory of Nazianzus (*Oratio* 23.11) and is reflected by Jerome (Preface to Matthew), but there are no strong arguments in its favor. The further tradition, that Luke was buried at Thebes in Boeotia, throws no light upon the place of composition. The probability that Luke first read the Gospel of Mark at Rome, and the possibility that one of the reasons Luke-Acts was written was to present the case for Christianity (*see* § 2 *above*) support the Roman origin of the Third Gospel. It is also consistent with this suggestion that Acts describes the expansion of Christianity from Jerusalem to Rome, reaching its climax in the reference to Paul's preaching and teaching in Rome "quite openly and unhindered" (28:30-31). These arguments do not amount to demonstration, and no more can be said than that of all suggestions regarding the place of writing the view that the Gospel of Luke was written at Rome is the most probable.

9. Canonicity. The gospel has been included among the books recognized as authoritative in the church from the time when the NT writings first began to be collected and regarded as scripture (*see* CANON OF THE NT). As is true of all the gospels, its history in the first half of the second century is obscure. Some scholars think that it is quoted in the letter of Clement of Rome to the church at Corinth written *ca.* 95, but the echoes of gospel tradition in this writing are uncertain; and the same is true of alleged quotations in Ignatius, Polycarp, Barnabas, and the Didache in the opening decades of the second century. It is more widely agreed that Marcion (*ca.* 140) abbreviated Luke's Gospel in forming his canon, although some scholars prefer to think that he used an earlier form of the gospel on which also Luke depends. With Justin Martyr (*ca.* 150) the situation becomes clearer, for by general consent he drew upon all the Synoptic gospels in writing his *Apologies*. The Anti-Marcionite Prologue (A.D. 170) alludes to the composition of the gospel by Luke and says: "Afterwards the same Luke wrote the Acts of the Apostles." The same testimony is given by the Muratorian Canon (A.D. 170-200), as we have seen (§ 1 *above*), while Tatian, the pupil of Justin Martyr, used all four gospels in forming his gospel harmony known as the *Diatessaron* (A.D. 170). Irenaeus (*ca.* 185) not only speaks of the composition of the gospel by Luke, but attests the existence of the fourfold gospel canon by curious arguments from the four quarters of the world, the four universal winds, and the fourfold shape of the cherubim. Among other things he says: "The Gospel according to Luke, as having a sacerdotal character, begins with Zacharias the priest offering incense to God" (Her. III.11.8). At the end of the second century the gospel occupied an undisputed place among the books recognized as scripture by all parts of the Christian church.

It is not necessary to proceed further than the period covered by the testimonies of Irenaeus, Tertullian, and Clement of Alexandria. When councils spoke, the gospel had already established itself in the usage of the church, and it is universally accepted by every part of the church today.

10. Text. Several interesting questions arise, some of which are of historical importance, especially in the additions, and still more in the omissions, of Codex Bezae (D), the chief authority for the text current in many quarters, both in the East and in the West, in the second century A.D.

The additions consist of the following:

a) After 6:4, D reads: "On the same day beholding a certain man working on the sabbath day he said to him, 'Man, if you know what you are doing, blessed are you; but if you do not know, you are accursed and a transgressor of the law.' " This passage may well be authentic tradition, but it is not part of the original text of the gospel.

b) In 9:55, supported by other MSS and versions, D adds: "And he said, 'You do not know of what spirit you are.' " In this case there is a greater possibility that the passage is original. The same may also be true of the addition in vs. 54: "as Elijah did" (A C D etc.).

c) In 11:2-4 (the Lord's Prayer), besides smaller additions ("Our Father who art in heaven" instead of the vocative "Father"), D reads: "Let thy kingdom come upon us." Two other MSS (700 and 162) read: "Let thy Holy Spirit come upon us." Some scholars think that this reading is original and that it has support in D. The reference to the Holy Spirit, whose activity is a characteristic interest of Luke, may be held to support this view, but on the whole it is more likely to be a liturgical expansion of the text.

d) In 23:38, with the support of Codex Sinaiticus, Codex Alexandrinus, and many early versions, D adds the phrase: "in letters of Greek and Latin and Hebrew," but this reading is probably an assimilation to the text of John 19:20.

e) In 23:53 a picturesque, but probably not original, addition is made by D in the words: "And when he laid him there, he had a stone placed before the tomb that twenty men could scarcely roll."

The omissions of Codex Bezae are of more importance than the additions, since the tendency of this MS is to add rather than to omit. Among the principal omissions are the following:

a) 5:39: "And no one after drinking old wine desires new; for he says, 'The old is better.' "

b) 7:7*a*: "Therefore I did not presume to come to you."

c) 10:42: "Few things are needful, or only one."

d) 11:35-36: "Therefore be careful lest the light in you be darkness. If then your whole body is full of light, having no part dark, it will be wholly bright, as when a lamp with its rays gives you light."

e) 12:19: "laid up for many years; take your ease, eat, drink."

f) 19:25: "And they said to him, 'Lord, he has ten pounds!' "

g) 22:19*b*-20: " 'which is given for you. Do this in remembrance of me.' And likewise the cup after supper, saying, 'This cup which is poured out for you is the new covenant in my blood.' "

h) 24:6: "He is not here, but has risen."

i) 24:12: "But Peter rose and ran to the tomb; stooping and looking in, he saw the linen cloths by themselves; and he went home wondering at what had happened."

j) 24:36: "And said to them, 'Peace to you!' "

k) 24:40: "And when he had said this, he showed them his hands and his feet."

l) 24:51: "and was carried up into heaven."

m) 24:52: "worshiped him, and."

In most of these omissions Codex Bezae is supported by important OL MSS and often by the Old Syr. version, Marcion, and Tatian. The tendency of textual critics and commentators is to reject these passages. Those in ch. 24, along with 22:19*b*-20, are assigned to the margin by the RSV. Westcott and Hort enclose them in double square brackets and describe them as "Western non-interpolations." A better name would be "Alexandrian" or "Neutral insertions." Recently a more favorable estimate has been formed of some of these passages, notably 22:19*b*-20; 24:51. The former, which belongs to the longer text of the narrative of the institution of the Lord's Supper, is accepted as original by a number of scholars, but is still rejected as based on Mark 14:24; I Cor. 11:24-25, by very many others. 24:51: "and was carried up into heaven," the only allusion to the Ascension in the Synoptic gospels, is also accepted by many who suggest that it may have been canceled because it does not harmonize with the forty days' interval mentioned in Acts 1:3.

Two other passages must be mentioned because they are omitted by a number of MSS: 22:43-44, which describes the agony and bloody sweat, and 23:34: "And Jesus said, 'Father, forgive them; for they know not what they do.' " The former is omitted by Codex Vaticanus (B) and the Washington Codex (W), and by many other authorities, but its Lukan characteristics suggest that it is original, its omission being due to the feeling that it was derogatory to the full divinity of Christ. The latter, which is omitted by many of the same MSS, is recognized as containing genuine tradition by many who reject its authenticity. It should probably be read, since it may well have been omitted because in the second century some found it difficult to believe that God could, or ought to, forgive the Jews. Both passages are read by the RSV with notes in the margin.

It will be seen that the textual problems of the Third Gospel are as interesting as they are difficult. The difficulties are enhanced by the fact that Marcion often agrees with Codex Bezae in the omissions listed above, and it is hard to determine how far Marcion is a witness to the original text and how far his omissions are deliberate cancellations. Where it is not possible to show that the omissions represent his known doctrinal views, he should be regarded as an early and valuable witness to the original text of Luke. *See* TEXT, NT.

11. The value of Luke. An outstanding feature of the gospel is the variety and extent of its points of value. The close bearing of its use of sources upon historical problems is one of these. When both Mark and Luke record the same incident, we naturally turn to Mark as our primary authority; but Luke's version is always of interest because he is the earliest commentator on that gospel, and because we can trace the influence of his special interests upon all that he writes. Luke's Gospel, along with that of Matthew, is the starting point for any useful study of Q, and it is also a mirror in which we can faintly see stages behind the compilation of that source.

His special tradition, however, is the theme of greatest interest on the critical side, for the artistry of his writing should not be allowed to conceal from us the wealth of the early tradition he records. There is doubtless a kind of film overshadowing his narratives, so that the rugged character of the earliest tradition is hidden from us. One notices a certain tendency for details from one narrative to pass over to another. Thus, in his account of the Great Commandment (10:25-28) he introduces the question: "Teacher, what shall I do to inherit eternal life?" and there are correspondences between the story of the woman of the city (7:36-50) and that of the anointing at Bethany in Mark (14:3-9) and John (12:1-8). The stories have

been shortened and rounded in the course of transmission and developed by Luke's art, so that in them there is a combination of simplicity and directness with a certain vagueness of outline.

The textual value of Luke has been sufficiently indicated. Luke-Acts is the gateway to many textual studies.

The charm and literary value of the gospel will always be highly esteemed, and it is not surprising that later tradition speaks of the evangelist as an artist. Perhaps the greatest service of the gospel is its value to the preacher, in its broad humanity, the beauty of its parables, and its portraiture of Jesus. How much we owe to the statement that "Jesus increased in wisdom and in stature, and in favor with God and man" (2:52)! Each of the gospels has its special dignity and worth. Luke's Gospel will always stand out as that of a "scribe of the gentleness of Christ" (Dante *De Monarchia* 1.16[18]).

LUMBER. *See* WOOD.

LUNATICK. Once a popular term for "epileptic" (so RSV; *see* EPILEPSY); used by the KJV to translate σεληνιάζεται, σεληνιαζομένους (Mark 4:24; 17:15). The verb from which the Greek word is derived means "to be affected by, or under the influence of, the moon [σελήνη]." In the same way, "lunatick" is derived from Latin *lūna,* "moon."

In 4:24 Matthew uses σεληνιαζομένους in a series with δαιμονιζομένους, as if a distinction from demon-possession was being indicated; but in 17:15 the epilepsy is cured when the demon is expelled. So the use in series in 4:24 is popular and inexact, and does not exclude possession. Probably the popular belief was that the influence of the moon had caused a DEMON to enter.

Matt. 17:15 should be compared with the earlier account in Mark 9:17, which says that the boy has a "dumb spirit." Luke 9:39 attributes the ailment to a spirit which seizes the child.

The popular conception among the Greeks is described by Hippocrates *The Sacred Disease* I; Lucian of Samosata *Lover of Lies* 16.

LUST [נפש, soul as the seat of appetites; תאוה, delight; עגבה, erotic pleasure; ἐπιθυμία, ὄρεξις, *etc.,* desire; θυμός, πάθος, passion]. The biblical terms that are usually translated by this word carry the meaning of "passionate desire," especially "sexual desire," or "desire for worldly pleasures."

In the OT the root עגב, "to have inordinate sensuous love," is related largely to the entire community of Israel or to other nations, in the context of religious PROSTITUTION and sexual corruption. Other figures are also used to convey the idea of "lust." Babylon is said to be "wanton as a heifer at grass" and to "neigh like stallions" in heat (Jer. 50:11). Although such usage represents the personification of the nations concerned, it undoubtedly reflects the experience of personal lust also.

The NT has words for "lusts," "passion," "burn with sexual desire," and the like (θυμός, πυρόω). A man must not look lustfully at a woman (Matt. 5:28); wicked men dishonor their bodies among themselves in the lusts of their hearts (Rom. 1:24). Passion and evil desire are to be put to death (Col. 3:5); and the believer should take a wife in holiness and honor, not in a heathenish passion of lust (I Thess. 4:4-5). Timothy is advised to shun youthful passions (II Tim. 2:22), for desire produces sin and sin death (Jas. 1:14-15). Believers are urged to set an example by abstaining from passions of the flesh (I Pet. 2:11-12); they are to live no longer by human passions but by the will of God (4:2). Lust and defiling passion produce corruption and evil in the world (II Pet. 1:4; 2:10; cf. 2:13-14, 18, 20-22).

LUTE. *See* MUSICAL INSTRUMENTS.

LUZ lŭz [לוז]. **1.** The early name of the Canaanite city renamed BETHEL by Jacob (Gen. 28:19; 35:6). Jacob later recalled to Joseph the appearance of El Shaddai to him at Luz. In the definition of the boundary of Benjamin, Luz is mentioned and identified as Bethel (Josh. 18:13; see also Judg. 1:23). A later commentary on Jacob's experience makes the same identification (Jub. 27:19, 26).

Josh. 16:2 merits special consideration because it contains the expression "from Bethel to Luz" (מבית אל לוזה), as if two different cities existed at the same time on the N border of Joseph. More probably the two names in this passage refer to a single city,

which we might designate as Bethel-Luz (cf. a LXX variant reading εἰς βαιθηλ Λουζα).

With a theory that Luz and Bethel were originally distinct towns, Luz has been located by some scholars at et-Tell, near Bethel. A city by the name of *Rwś* (for *Lwś*) appears in the list of places conquered by Thut-mose III. It has been proposed that this may be Luz, although it may rather be LAISH of Judg. 18:27.

2. A city in the land of the Hittites built by a man from Bethel (Luz) who was spared when the Israelites conquered Bethel (Judg. 1:26). The location of the city might be any place in Syria or Lebanon, which were at one time within the great Hittite Empire. W. L. REED

LXX. Abbreviation for SEPTUAGINT.

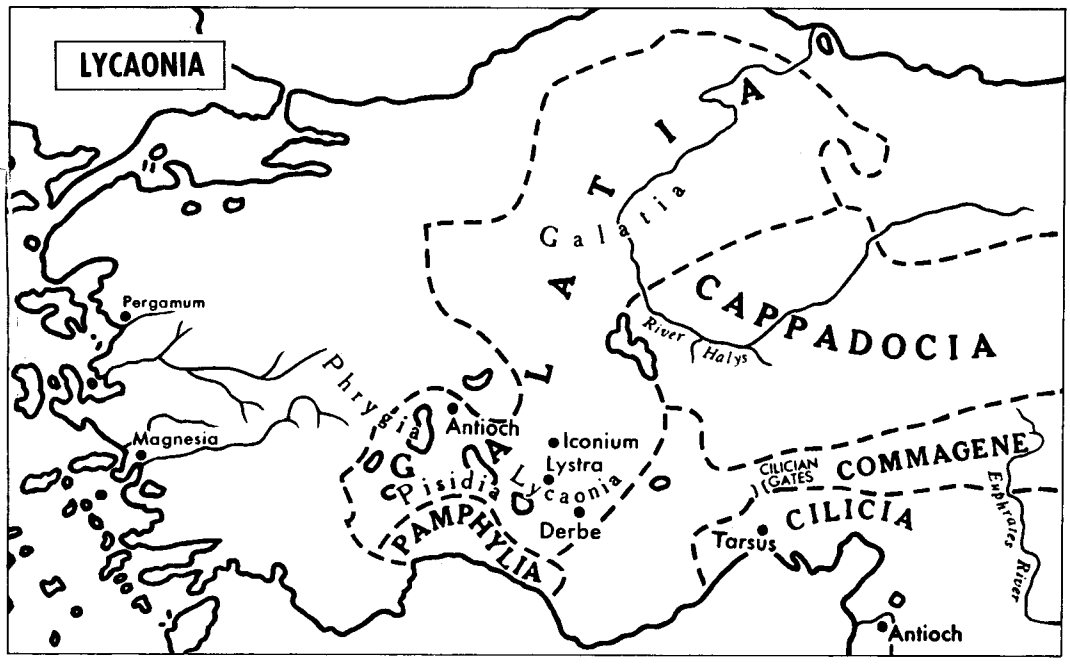
LYCAONIA lĭk'ĭ ō'nĭ ə, lī'kĭ— [Λυκαονία]; LYCAONIAN —ən. A region in S central Asia Minor. Its borders varied and often do not appear clearly defined, but in general Lycaonia was bounded on the N by GALATIA proper, where the Gauls who invaded Asia Minor had settled; on the E by Cappadocia; on the S by Cilicia (Strabo and others included Isauria in Lycaonia); and on the W by Pisidia and Phrygia. The region was, for the most part, a high, treeless plateau, not well watered and with a more than average salt content in the soil. Strabo says that water was scarce and wells were deep in Lycaonia (*Geography* XII.6.1). The vegetation, however, proved suitable for sheep-raising; and when Amyntas was king, he had three hundred flocks in this region.

The origin of the Lycaonians is uncertain. These wild and warlike people were able to keep free of Persian domination, but from Alexander the Great's time they were under outside control. The Seleucids ruled the region until Antiochus the Great was defeated by the Romans at Magnesia (190 B.C.). The Romans gave Lycaonia to the king of Pergamum, but actually continued to exercise ultimate control over the area. The N portion came to be united with Galatia, the E part with Cappadocia, and the S part with Cilicia. This last part was given to Polemon in 39 B.C. and soon after, in 36 B.C., was given to Amyntas, king of Pisidia, who was then made king of Galatia. On his death in 25 B.C. the Romans took over his kingdom and made it the province of Galatia. Thus Lycaonia, except for an E section which had been given to Antiochus of Commagene and was thereafter called Lycaonia Antiochiana, was during the apostolic age a part of Galatia. Later, Galatia and Cappadocia were combined for a time; and in the second century A.D., Lycaonia, Isauria, and Cilicia were united in one province.

Lystra and Derbe were leading cities of Lycaonia. Iconium was in earlier times considered Phrygian, and in the apostolic age was sometimes reckoned as part of Phrygia. This usage seems implied in Acts 14:5-6, where Paul fled from Iconium to Lystra and Derbe, and only these two latter cities are called "cities of Lycaonia."

Under the Seleucid rulers the Hellenization of Lycaonia, especially in the main cities, made some progress. The Lycaonian language did not die out, however; for when Paul healed the crippled man at Lystra, the crowd, either because most of them normally spoke Lycaonian or because in their excitement they fell back into the use of their native tongue, cried out in Lycaonian that "the gods have come down to us in the likeness of men" (Acts 14:8-11). Little is known of the Lycaonian language. The fact that Paul could preach in Greek and be understood shows that Greek was common in Lycaonian cities.

The book of Acts clearly reports the presence of



aggressive Jews at Pisidian Antioch and Iconium, but gives little evidence of a Jewish community at Lystra and Derbe. The one event reported on Paul's first visit to Lystra (Acts 14:8-18) reflects the continued vitality of pagan religion there; nothing is told of the religious situation Paul found at Derbe, except that he made many disciples there. However, since Timothy came from Lystra and his mother was a Jewess (16:1-3), it seems clear that there were Jews in Lystra; moreover, the influence of Jews of Antioch and Iconium on people at Lystra must have had a point of contact through Jews of Lystra (14:19). Such a conclusion would go well with the fact that there were large numbers of Jews in Asia Minor, and that Paul's regular practice was to preach to Jews first.

Paul visited cities in Lycaonia at least three times. In Acts 13-14 he and Barnabas came from Pisidian Antioch and Iconium to Lystra and Derbe, and then retraced their route to Pisidian Antioch and returned through Pamphylia to Syrian Antioch. In 16:1-5, Paul and Silas, after leaving Tarsus in Cilicia and passing through the Cilician Gates to reach the high tablelands of central Asia Minor, strengthened the churches of Derbe and Lystra and took Timothy, who probably had been converted on the earlier visit, as a helper on their further missionary journeys. In 18:23 the route of Paul when he left Syrian Antioch is not clearly indicated. Probably he again went up the road through the Cilician Gates and passed through Lycaonia, revisiting the churches there. This is certain if the reference to Galatia, as seems probable, means the Roman province of Galatia and has in view the S Galatian churches of Antioch, Iconium, Lystra, and Derbe.

Christian inscriptions show that the church had made great headway in Lycaonia by the third century.

LYCIA lĭsh'ĭ ə [Λυκία]. A rugged, mountainous district in SW Asia Minor. It is bounded on the NW by Caria; on the N by Phrygia and Pisidia; on the NE by Pamphylia; and on the E, S, and W by the Lycian Sea, which is a N portion of the Mediterranean.

The fertile valleys of the Xanthus and other streams supported a highly civilized and politically capable group of cities, whose federation continued strong through centuries and to a great extent preserved freedom even under foreign rulers. Lycia was ruled by the Persians, Alexander the Great, and the Seleucid and Ptolemaic dynasties before the power of Rome began to be felt. Then, after a period of indirect and loose control, the Emperor Claudius in A.D. 43 made Lycia a Roman province. This arrangement lasted but a short time, and Lycia was perhaps free again for a few years. Later, in 74, Vespasian united it with Pamphylia in a more clearly defined provincial organization. Throughout its pre-Roman history, however, the Lycians, even when subject to foreign powers, retained their unity as a federation of cities, and this local vigor continued under the Romans.

Among the important ports of Lycia were MYRA (Acts 27:5) and PATARA (21:1; some MSS include here a stop at Myra also). These references call attention to two features of first-century sea travel: (*a*) These Lycian ports were natural stopover points for ships carrying Jews from ports in the W Mediterranean or from the Aegean Sea to Jerusalem for Jewish feasts. (*b*) Alexandrian grain ships, when the prevailing winds were from the W, worked N past Palestine and Syria, often going E of Cyprus, and used shore winds to work westward along the S coast of Asia Minor; this would make the ports of Lycia natural ports of call.

The letter the Romans sent to the confederation of Lycian cities *ca.* 139 B.C. to urge good treatment of the Jews (I Macc. 15:23) shows that there were Jews in at least the important cities of Lycia. The book of Acts gives no hint of Christian churches in Lycia, and I Pet. 1:1 likewise offers no suggestion of the early spread of Christianity there. A petition against the Christians was directed by Lycians to the Emperor Maximin in A.D. 312. This act suggests that Christianity was then known in Lycia but was actively opposed.

LYDDA. *See* LOD.

LYDIA lĭd'ĭ ə [Λυδία, *see below*]. A woman from Thyatira in Asia Minor whom Paul met at Philippi. Perhaps her name had originally been an adjective—"a woman of Lydia"—for Thyatira was a Lydian city. Her name occurs only in a narrative in Acts 16:11-40; Paul does not refer to her. Possibly, though not probably, she was a Jewess: the conclusion depends on whether the words "a worshiper of God" (Acts 16:14) are here a technical expression designating a non-Jew worshiping in the synagogue.

Lydia sold purple-dyed goods which she had brought to Philippi from Thyatira—a city which, like all the land of Lydia, was famous for its dyeing. Its guild of dyers is known from inscriptions. She was apparently well-to-do, for a considerable amount of capital was needed to trade in such articles.

Lydia heard and conversed with Paul; and eventually (Acts does not say when) she and her household were baptized. At her urging Paul and his companions stayed in her house. Her hospitality thus relieved the apostle of the necessity of earning his living in Philippi, as he was required to do elsewhere. Not only was Paul taken care of when he was in Philippi, but we know from his letters that he accepted gifts from the Philippian church when he was at other churches (cf. II Cor. 11:8; Phil. 4:16). He thus permitted the church there to support him as he did not allow any other church to do (Phil. 4:15).

Paul's Letter to the Philippians reveals his special love for their church (cf. 1:3-8; 2:12, 15-16; 4:1, 15-16, 18); and Lydia's help must have been a chief cause of this unique relationship.

B. H. THROCKMORTON, JR.

LYDIA (PLACE) [Λυδία]. A country in SW Asia Minor which received its name from an old component in the population of the peninsula, the Lydians. Its territory lies mostly in river valleys. To the N it extends beyond the Hermus (modern Gediz); it includes the Cayster Valley (modern Küçük Menderes) and is bordered on the S by the Meander (modern Büyük Menderes). Its W border varies with the development of Greek colonization along the coasts of Asia Minor. The Lydians never seem to have been interested in naval expansion. They quarreled with the Greek cities on the coast, but their own strength lay inland, as is demonstrated by the location of their capital, SARDIS, deep in the Hermus Valley. The borders to the E were disputed with the Phrygians.

1. History. ***a. Prehistory.*** In prehistoric times the region belonged to a culture which, though part of a larger Anatolian complex, developed local traits typical of W Asia Minor. Little excavation has taken place so far for the preclassical periods. Indications point to a contrast between a conservative inland element and a more active coastal region where commerce and warfare had more scope.

b. Hittite period. In the records of the Hittite Empire no specific references to the Lydian region can be identified, although there is some probability in a theory which localizes Ashshuwa (later Asia) in Lydia. Rock-cut monuments of the Hittite period exist in two Lydian sites: the "Niobe," an image of a seated goddess near Magnesia ad Sipylum; and the reliefs of a warrior (god?) near Karabel which Herodotus mentions (II.106). Both reliefs are inscribed in Hittite hieroglyphs. They show that the Lydian area was exposed to Hittite cultural penetration, although we have to distinguish regional variants in this period as much as in the third millennium.

c. Lydian kingdom. Our direct historical information begins after the fall of the Bronze Age empires and the subsequent dark ages. Lydia then appears in Assyrian, Persian, and Greek texts. The most extensive account is found in Herodotus (I.6-86); but more reliable chronological inferences can be drawn from Assyrian sources. Herodotus mentions a Heraclid Dynasty whose last king, Candaules-Myrsilos, was ousted by the historical figure of Gyges, founder of the Mermnad Dynasty.

Gyges ruled *ca.* 685-652 B.C. Under him, Lydia gathered considerable strength as an independent country. Gyges attacked Greek cities on the coast and maintained friendly relations with Delphi. To the E, his country was threatened by the raids of the Cimmerians (*see* GOMER) in Asia Minor. In this emergency Gyges entered into contact with Ashurbanipal (*ca.* 668 B.C.), in whose Annals the Lydian king is referred to as Guggu of Luddu (Rassam Cylinder II.95; *see* GOG). The Lydian ambassador caused embarrassment in Nineveh, where nobody understood his language. Previous contact of the Assyrians with Asia Minor had been via the Mushki-Phrygians (*see* MESHECH), whose power had been destroyed by the Cimmerians. The Assyrians may have aided Gyges indirectly. The Lydian king succeeded in defeating the Cimmerians and sent two prisoners with presents to Ashurbanipal. Soon he felt no longer obliged to continue his respects and sought an alliance with Psammetichus I of Egypt, whom he sent troops to help liberate Egypt from Assyria (*ca.* 654 B.C.). *See* LUD.

The Cimmerians ransacked Lydia after this, and Gyges died in these raids. His son Ardys (*ca.* 652-615 B.C.) restored good relations with Assyria. The Cimmerians were still active during his rule and that of his successor Sadyattes (*ca.* 615-605); but Alyattes (605-560) finally expelled them from Lydia. In the meantime the Indo-European migrations had brought the Scythians and Medes into action in Asia Minor. The Medes under Cyaxares rose to power as a major adversary of Alyattes. After several battles (during one of which an eclipse was observed—May 28, 585 B.C.) peace was established, whereby the Halys River became the border between the Lydian and the Median empires. The power of Lydia had extended far beyond its original limits, to include what used to belong to Phrygia. Lydia entered an international phase: the peace with Cyaxares was mediated by the kings of Cilicia and Babylonia; and a daughter of Alyattes was married to Astyages, son of Cyaxares.

The most famous of Lydian kings, Croesus (560-546 B.C.), appeared to Greek historians as the prototype of a wealthy oriental monarch. His intensive contacts with the Greeks in Asia Minor led to their vassalage and his Hellenization. His gifts to Delphi were spectacular; and his support to Greek culture in Asia Minor is exemplified in his subsidy to the building of the archaic temple of Artemis at Ephesus, on which his name is preserved.

d. Persian period. The Persians, successors to the Median Empire, proved too strong for the Lydian kingdom. After an undecided battle between Cyrus and Croesus, E of the Halys, Cyrus pursued the unsuspecting Lydians W and captured Sardis in 546 B.C. This meant the end of political independence for Lydia, which until 334 B.C. figured as a satrapy of the Persian Empire, with the satrap's residence established at Sardis. The Persians again separated the important satrapy of Lydia from the coastal strip, which was the satrapy of Ionia. The Hellenization of Lydia continued under Persian rule; but as a considerable number of Persians resided in the capital, Achaemenian culture was blended with the old Greek elements.

e. Hellenistic and Roman times. After the Battle of the Granicus in 334 B.C., Lydia fell to Alexander the Great, who restored some of its cultural autonomy. In the Hellenistic period Lydia at first belonged to the Seleucids, but as a result of the defeat of Antiochus III at Magnesia in 190 B.C., it was given to the Pergamene Dynasty. This battle and its conse-

39. Mountain pass in the territory of ancient Lydia, showing a Hittite relief of Karabel

quences for Lydia are reported on in I Macc. 8:8. In 133 B.C. Lydia was bequeathed to Rome by the testament of Attalus III.

Under the Roman emperors Lydia was prosperous as a part of the province of Asia, to which Mysia, Phrygia, and Caria also belonged. Lydia did not become a separate entity again until the reign of Diocletian, who made Lydia a district of the dioecesis Asiana, with Sardis as its capital (after A.D. 297).

2. Language. The Lydian language is insufficiently known, although a good number of inscriptions were found at Sardis. It may well be an old Indo-European idiom. From the royal names of Myrsilos, Sadyattes, and Alyattes one may gather that the period of the Lydian kingdom had linguistic ties with the second millennium, when Murshilis was a Hittite royal name and names in *-attes* (e.g., Maduwattash) appeared in W Asia Minor. The Lydians thus seem to represent part of the Bronze Age heritage in the peninsula, rather than an intrusive element.

Fig. LYD 39.

3. Art and industries. Lydian art, so far as known especially from the excavations at Sardis, is strongly influenced by E Greek and Persian styles. In architecture and metallurgy one notices excellent craftsmanship and a taste for the luxurious. The wealth of Croesus was proverbial; ancient stories told about gold washed down by the Pactolus River; the amount of gold found in Sardis is not inconsiderable, and the dedications by Gyges and Croesus in Delphi were lavish. Lydia established a reputation also for its textile and carpet industries. In Roman times guilds of woolworkers and dyers are known. Lydian perfumes were sold in containers of an elegant shape known as Lydion.

4. Religion. The old cults of Lydia were tenaciously preserved into Roman times. Worship of the Anatolian mother-goddess and a youthful male god is attested under various names, often with Phrygian intrusions into the Lydian stratum. The later rulers of the country introduced various other cults. There was a Jewish element in Lydia, since Antiochus III (223-187 B.C.) probably settled two thousand Jewish families from Babylonia in Lydia and Phrygia (Jos. Antiq. XII.iii.4). Sardis and Thyatira both had Jewish communities in Roman times. The rise of Christianity in Lydia can be measured by the presence of three of the seven churches of Revelation in this country: Thyatira, Sardis, and Philadelphia, called churches of Asia (rather than Lydia) in accordance with the Roman provincial classification.

LYE [בר (Job 9:30; Isa. 1:25; *cf.* KJV); נתר (Jer. 2:22; KJV NITRE)]. A substance used for cleansing purposes. נתר is, no doubt, Greek νίτρον or Latin *natrum*, in which case it may have been sodium carbonate. This occurs naturally and is referred to by ancient writers as appearing in Egypt and Armenia. However, it may also have referred to potassium carbonate, a strongly alkaline solution made from wood ashes or other vegetable matter. In Palestine it was probably the latter, since we have no knowledge of natural deposits of sodium carbonate in this part of the world.

Both potassium carbonate and sodium carbonate possess excellent detergent qualities and would have been suitable for washing purposes.

The putting of vinegar on such an alkali (Prov. 25:20) would render it useless; hence the RSV is probably correct in rejecting the Hebrew and following the Greek text at this point ("wound").

H. N. RICHARDSON

LYING. The sin of speaking or acting falsely, deceitfully, or treacherously. It may occur with or without deliberate intent.

There are a number of terms which suggest "lying": in the Hebrew, כזב ("falsehood"), שקר ("deception"), שוא ("vanity"), כחש ("disappointment"), בגד ("treachery"), and derivatives of רמה ("beguile"); in the Greek, ψεῦδος ("falsehood"), δόλος ("craftiness"), πλάνη ("error"), and ideas associated with the verbs δολιόω ("deceive"), ἀπατάω ("beguile"), and παραλογίζομαι ("cheat").

In Hebrew thought, lying appears as a spiritual distortion which does violence to a man's true being, to his communal relations, and to his standing with God. Although in the NT it is construed more in intellectual terms, it retains its religious character as opposition to God's saving TRUTH. Since God (Num. 23:19; I Sam. 15:29; Rom. 3:4) and Christ (John 1:17; 14:6) are absolutely true and bring the truth, and since "no lie is of the truth" (I John 2:21), it follows that falsehood is ultimately attributed to the devil (John 8:44).

As truthfulness is admonished in God's people, lying and all deceit are forbidden (cf. Zech. 8:16-17; Col. 3:9). A heinous sin is the bearing of false witness (Exod. 20:16; Deut. 19:18; etc.; cf. ψευδομαρτυρία in Mark 14:56-57, etc.).

Diviners and prophets who bring false oracles are frequently condemned (e.g., Isa. 9:15—H 9:14; Jer. 14:14; 23:25-26; 28:15; Ezek. 13:6-7; 21:29—H 21:34; 22:28; Mic. 2:11; Zech. 10:2; 13:3). Because they are vain and deceitful, idols are spoken of as "lies"

(Ps. 40:4 KJV—H 40:5; Isa. 44:9 ff, especially vs. 20; Jer. 10:14; Amos 2:4; Hab. 2:18; Rom. 1:25).

LYSANIAS lī sā'nĭ əs [Λυσανίας]. The Tetrarch of Abilene. When Luke (3:1-2) introduces John the Baptist, he fixes the date by mentioning the fifteenth year of the Roman emperor Tiberius, the procuratorship of Pilate, the tetrarchies of Herod (Antipas) and of Philip, the tetrarchy of Lysanias, and the high priesthood of Annas and Caiaphas.

No other reference to any Lysanias in this period (perhaps A.D. 28 or 29) has survived. However, a Lysanias is known from Josephus, though the time factors obstruct identifying these two as the same person; this Lysanias succeeded his father, Ptolemaeus, to the throne of Chalcis and was executed by Mark Antony in 36 B.C. (Antiq. XV.iv.1; Euseb. Chron. I.170, reading Λυσανίου for Λυσιμάχου). On the assumption that there was only this one Lysanias, many responsible scholars have concluded that Luke committed a rather striking error in chronology.

While no other Lysanias is directly mentioned in the sources, there are some scattered data which are used to acquit Luke of error. Thus, Josephus (Antiq. XV.x.1; War I.xx.4) relates that "a certain Zenodorus purchased (leased) the house of Lysanias." Again, an inscription, regrettably partially indistinct, seems to identify this Zenodorus as the son of a Lysanias who lived later than the Lysanias executed by Mark Antony.

Moreover, Abilene, the history of which is obscure, was added to the kingdom of Agrippa II in the time of Claudius (*ca.* A.D. 53). Josephus relates that Claudius bestowed "Abila of Lysanius" upon Agrippa and that Abila ('Αέλλα) had been the "tetrarchy of Lysanias" (Antiq. XIX.v.1; XX.vii.1; see also War II.xi.5). The question can be asked, Is the Lysanias in these latter passages the one who reigned some ninety years earlier? And did his name still attach to the territories, despite a short and undistinguished reign? Or do these passages refer to a second Lysanias? The inscription cited above names both a Lysanias and Zenodorus, the son of Lysanias, though the latter is a partly restored reading. A second inscription increases the probability that there was this second Lysanias; on the inscriptions, *see bibliography.*

If it appears established that there was actually a second Lysanias, then conceivably in the ninety-three years between 40 B.C. and A.D. 53 there could have been even more men who bore this name, and quite conceivably some Lysanias could have been the tetrarch of Abila/Abilene *ca.* A.D. 28-29, and therefore Luke need not be charged with error.

Yet to vindicate Luke, respecting Lysanias, does not in itself eliminate other acute chronological problems in Luke, such as the date of the census of Quirinius or the high priesthood of Annas and Caiaphas. Nor does it answer the enigma which has puzzled many scholars—namely, why should unimportant Abilene have been selected from the various areas near Judea for Luke's chronological purposes? The standard commentaries on Luke supply conjectures which need not be repeated here; the matter remains an enigma.

LYSIAS (SYRIAN) lĭs'ĭ əs [Λυσίας]. The regent appointed by Antiochus Epiphanes to rule Syria in 166-165 B.C., while he was fighting the Parthians (I Macc. 3:31-37; *see* Antiochus 4). In this capacity Lysias sent Ptolemy, Nicanor, and Gorgias with a large army against Judas Maccabeus. They miserably failed, and the next year Lysias came to attack Judas himself. The accounts in I and II Maccabees conflict with each other, but what probably happened is as follows: Lysias encamped at Beth-zur, S of Jerusalem, and either Judas was successful (I Macc. 4:34-35) in a skirmish with Lysias or it was inconclusive; a peace treaty was signed between them, approved by Antiochus Epiphanes (II Macc. 11), which took away the restrictions on the worship of Judaism. It was a glorious thing for the faithful Jews and led immediately to the cleansing of the temple by Judas from the pollution of the worship of Zeus, and to the inauguration of the Hanukkah Feast. *See* Dedication, Feast of; Hanukkah.

The next year, 164, on the death of Antiochus Epiphanes, Lysias invaded Judea once again, taking with him the boy-king Eupator (*see* Antiochus 5), on whose behalf he was claiming to act as regent. He defeated Judas Maccabeus at Bethzacharia, near Beth-zur, and laid siege to Jerusalem. But just then he heard that a rival for power, a general named Philip, had set himself up in Antioch, and Lysias was compelled to make terms with the Jews and retire. He finally subdued Philip, but he was unable to resist another claimant, Demetrius, and met his own death when Demetrius came to the throne in 162.

N. Turner

LYSIAS, CLAUDIUS klô'dĭ əs [Κλαύδιος Λυσίας] (Acts 23:26). Commander of a cohort (detachment of a thousand) of Roman troops in Jerusalem at the time of Paul's arrest, and apparently military commander there.

He was not a Latin, as his Greek name, Lysias, and his purchase (perhaps by emancipation from slavery) of Roman citizenship (Acts 22:28) indicate. His garrison was quartered in the tower Antonia, NW of the temple area and connected to it by a staircase (Acts 21:35, 40; Jos. War V.v.8).

He rescued Paul from the crowd (Acts 21:31-36; 22:24); discovered his Roman citizenship (22:24-29); had him examined by the Sanhedrin (22:30); and sent him to Caesarea (23:23-33). The wording of his letter to Felix (vss. 26-30) was probably formulated by the author of Acts (note vs. 25: "to this effect").

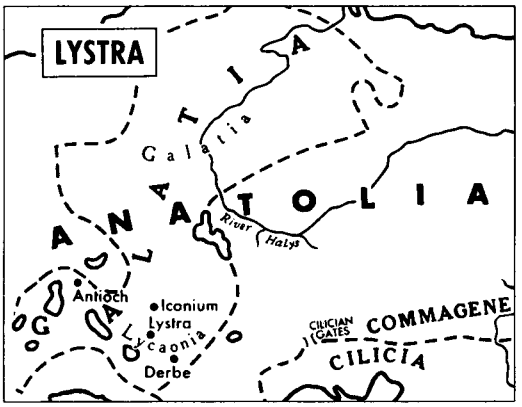
Bibliography. H. J. Cadbury, *The Book of Acts in History* (1955), pp. 66-68.

W. A. Beardslee

LYSIMACHUS lī sĭm'ə kəs [Λυσίμαχος]. **1.** Son of Ptolemy. He is reported (Add. Esth. 11:1) to have translated the book of Esther into Greek.

2. Brother of the Menelaus who supplanted Jason as high priest. The name had once been borne by a Thessalian general who became one of the successors of Alexander the Great. Menelaus, described as "having the hot temper of a cruel tyrant and the rage of a savage wild beast" (II Macc. 4:25), named "his own brother Lysimachus as deputy in the high priesthood" (vs. 29). With the connivance of Menelaus, Lysimachus personally appropriated some of the temple wealth and committed other acts of sacrilege. When the people became "aroused and filled with anger," Lysimachus sent against them troops to the number of three thousand. He had scarcely reckoned upon the resistance he encountered; "some picked up stones, some blocks of wood, and others took handfuls of the ashes that were lying about, and threw them in wild confusion at Lysimachus and his men. As a result, they wounded many of them, and killed some, and put them all to flight; and the temple-robber himself they killed close by the treasury" (vss. 41-42). J. C. SWAIM

LYSTRA lĭs'trə [ἡ Λύστρα, τὰ Λύστρα] (Acts 14:6, 8, 21; 16:1-2; II Tim. 3:11). A town in the central part of S Asia Minor.



Lystra is an ancient site in the district of Lycaonia, the plateau SW of the Salt Lake in central Anatolia. Its nearest important neighbor is ICONIUM, some twenty miles to the NE; but Iconium, inhabited by Phrygians, was politically rather separate from the region to the S and the SE, where Lystra and DERBE were the most prominent Lycaonian centers.

The Lycaonians were a small Anatolian tribe speaking their own idiom, presumably one of the many surviving Bronze Age languages spoken along the fringe of the Anatolian Plateau. The story of the healing of the crippled man in Lystra (Acts 14:8-11) refers to the popular usage of the Lycaonian language in the days when Greek had become the cosmopolitan idiom. Lycaonian was still spoken in the sixth century A.D.

The site of Lystra has been known with certainty since 1885, when the finding of an inscription confirmed a guess made by Leake as early as 1820 that Lystra was to be sought in a ruined mound slightly

40. The mound of ancient Lystra

N of Hatunsaray. The mound, variously referred to as Zoldera or Zordula hüyük, is a prehistoric tell with accumulations dating back to the third and second millenniums B.C., but actively inhabited in classical times.* On and around it the city of Lystra must have been located; but no excavations have been made, and some scattered blocks are all that is left of the ancient buildings on the surface. Fig. LYS 40.

The name of Lystra presumably goes back to prehistoric times and can be attributed to the Lycaonian language. The uncertainty of its gender in Greek emphasizes the non-Greek character of the name.

The plain around Lystra is fertile. Two small streams flow N and S of Hatunsaray, and the N one skirts the W side of the mound. The choice of this well-watered site for an early settlement is a logical one, although the location was barely of commercial or strategic advantage. In early history Lystra therefore plays no role. It existed as a rural settlement into Hellenistic and Roman times, much on the lines of many other early villages marked by mounds in the neighborhood. Its vicissitudes under Persian and Hellenistic rule can be inferred from general references to the Lycaonian district, which was subject to the Seleucids (280-189 B.C.) first, then to the Attalids (189-133), and finally to the Romans. For a short time in the first century B.C., Lystra was under control of a local potentate Antipater who ruled from Derbe, but it passed to Amyntas of Galatia until 25 B.C.

Augustus decided to make use of the old but inconspicuous settlement of Lystra to found one of his military colonies as a Roman stronghold against the mountaineers to the S. Lystra thus received some Roman settlers, mostly veterans, and was partly Romanized *ca.* 6 B.C. Its name became Julia Felix Gemina Lustra, as attested on coins and in the inscription which allowed the definite identification of the site (CIL III.6786). Local coinage began under Augustus. This status of a Roman colony allowed Lystra later on to send a statue of Concord to its "sister" colony of Antioch in Pisidia.

The Romanization of the mountainous districts of N Pisidia was also furthered by the construction of roads under Augustus' rule. A branch of the Via Sebaste, which led to Iconium, continued to Lystra. From there a road led to Derbe and the Cilician Gates.

The later history of Lystra is similar to that of Derbe. The two towns were ruled by the client-king Antiochus IV of Commagene (A.D. 38-72), but returned to Roman provincial administration in 72. Antoninus Pius made them part of Cilicia.

The somewhat rustic character of Lystra, in spite of the Roman colonization, is reflected in Acts 14: 6-21. Paul and Barnabas fled the hostility of the Jews at Iconium to Lystra and Derbe. The reaction of the Lycaonian natives of Lystra to the healing of the crippled man must be typical of the local beliefs in epiphanies of the old gods. The reference to the "priest of Zeus, whose temple was in front of the city" (Acts 14:13), is a topographical indication of remains awaiting excavation at the foot of the Zordula mound. At this first visit of Paul the local people of Lystra were friendly until Jews from Antioch and Iconium created disturbances. Timothy of Lystra presumably had been converted before then (II Tim. 3:10-11). Paul and Barnabas left for Derbe, which is *ca.* sixty miles to the SE of Lystra. They probably followed the Roman road from Lystra to Derbe, a road which Paul traveled in the opposite direction, coming from the Cilician Gates, for his second visit to Derbe and Lystra (Acts 16:1).

The coins of Lystra continue into the rule of Marcus Aurelius (161-80). The later history of the site is obscure. There are some listings of bishops, and on the E side of the mound at Lystra there are foundations of a small Byzantine church.

M. J. MELLINK

M

M. A symbol used to designate one of the alleged sources of the Gospel of Matthew. *See* SYNOPTIC PROBLEM.

MAACAH mā′ə kə [מעכה, *perhaps* dull, stupid; *see bibliography*]; KJV usually MAACHAH; MAACATHITE mā ăk′ə thīt′; KJV MAACHATHITE; KJV MAACHATHI —thī′ in Deut. 3:14. Alternately: MAACATH mā′ə kăth [מעכת] (Josh. 13:13); ARAM-MAACAH âr′əm— [ארם מעכה, *see* ARAM] (I Chr. 19:6); KJV SYRIA-MAACHAH sĭr′ĭ ə—. **1.** Eponymous ancestor, or a personification, of 10 *below;* a son of Nahor, Abraham's brother (Gen. 22: 24).

2. Evidently the wife of Machir (I Chr. 7:16), although called his sister in vs. 15 (the text is corrupt); generally interpreted as a personification of 10 *below* (*see bibliography; also* JABESH-GILEAD § 2).

Bibliography. E. L. Curtis and A. A. Madsen, *Chronicles*, ICC (1910), pp. 151-52.

3. A concubine of Caleb, ancestor of the Calebites (I Chr. 2:48).

4. The wife of Jeiel of Gibeon, an ancestor of Saul (I Chr. 8:29; 9:35).

5. One of King David's wives, and the mother of Absalom (II Sam. 3:3; I Chr. 3:2).

6. The father or an ancestor (if not the town of this name) of Hanan, one of David's Mighty Men (I Chr. 11:43).

7. The father or ancestor of Shephatiah, the chief officer of the tribe of Simeon in David's reign (I Chr. 27:16).

8. The father or ancestor of Achish king of Gath, a contemporary of Solomon (I Kings 2:39).

9. According to I Kings 15:2, the mother of King Abijam of Judah. In vss. 10, 13, she is called the "mother" of Abijam's son King Asa, but the latter reference probably signifies "queen mother," which she had remained after her son's death (cf. vs. 13). She was, moreover, probably the granddaughter, rather than the daughter, of Absalom (Abishalom; cf. I Kings 15:2 with II Chr. 11:20-22; *see bibliography*). MICAIAH (1) in II Chr. 13:2 is probably an error for Maacah, since the latter name occurs in connection with this person several times.

Bibliography. M. Noth, *Die israelitischen Personennamen* (1928), p. 250. N. H. Snaith, Exegesis of I Kings, *IB*, III (1954), 133-34. B. T. DAHLBERG

10. An Aramean kingdom forming, together with Geshur, the W border of Bashan, in which was situated Argob, the territory of Jair son of Manasseh (Deut. 3:14; Josh. 12:5; 13:11, 13). The kingdom of Bashan was situated S of Mount Hermon. Accordingly Maacah may have been situated SW of the mountain. In Josh. 13:13 we are told that the invading Israelites did not oust the Maacathites and the Geshurites, but they lived among them. According to II Sam. 10:6-8; I Chr. 19:6-9, Maacah, together with Zobah and Beth-rehob, was allied to the Ammonites in their war with King David.

A. HALDAR

MAADAI mā′ə dī [מעדי] (Ezra 10:34). One of those compelled by Ezra to give up their foreign wives. In I Esd. 9:34 the name is Momdius (Μομδιος).

MAADIAH mā′ə dī′ə [מעדיה, *perhaps from* יעד, Yahu assembles, *or from* מעד, Yahu promises (*the latter as in* Old S Arab.)] (Neh. 12:5). One of the priests who returned from Exile with Zerubbabel, perhaps identical with the Moadiah of Neh. 12:17, or the Maaziah of Neh. 10:8 (this latter variant is also in the LXX of 12:5). J. M. WARD

MAAI mā′ī [מעי] (Neh. 12:36). A musician in the procession at the dedication of the wall of Jerusalem after it was rebuilt.

MAALEH-ACRABBIM. *See* AKRABBIM.

MAANI. KJV Apoc. form of BANI.

MAARATH mā′ə răth [מערת, barren field] (Josh. 15:59). A village in Judah's hill-country district of Beth-zur; possibly identical with Maroth (Mic. 1:12). Maarath may be Khirbet Qufin, just NE of Beit Ummar, *ca.* two miles N of Beth-zur. V. R. GOLD

MAASAI mā′ə sī [מעשי, *perhaps shortened from* מעשיהו, work of Yahu; *see* MAASEIAH] (I Chr. 9:12); KJV MAASIAI mā ăs′ĭ ī. One of the priests who returned from the Babylonian exile. "Amashsai" (Neh. 11: 13) apparently stands for this name and may be a corrupted form of it. Again, both names may be forms of "Amasai" (עמשי). B. T. DAHLBERG

MAASEIAH mā′ə sē′yə [מעשיה, מעשיהו, work of Yahu; *cf.* BAASEIAH; MAASAI; Apoc. Μαθήλας (A; I Esd. 9:19), Μάνης (BA; I Esd. 9:21), Μασσίας (A; I Esd. 9:22)]; KJV Apoc. MATTHELAS măth′ə ləs (I Esd. 9:19); EANES ē′ə nēz′ (I Esd. 9:21); MASSIAS mə sī′əs (I Esd. 9:22). Alternately; MASSEIAH [Μαιάννας] (I Esd. 9:48; KJV MAIANEAS mā ăn′ĭ əs); MOOSSIAS mō′ə sī′əs [Μοοσσίας] (I Esd. 9:31; KJV MOOSIAS). **1.** A Levite musician of the second order among those appointed to accompany worship before the ark in the tabernacle during David's reign (I Chr. 15:18, 20).

2. A military officer who took part in the rebellion led by the priest Jehoiada against Queen Athaliah to

put Joash (*ca.* 837-800 B.C.) on the throne (II Chr. 23:1).

3. An officer in Judah during the reign of King Uzziah (*ca.* 783-742 B.C.) who helped prepare the military lists mentioned in II Chr. 26:11.

4. A son or brother of King Ahaz of Judah (*ca.* 735-715 B.C.) who was slain in the war with the N kingdom, Israel (II Chr. 28:7).

5. Governor of Jerusalem during the reign of King Josiah (*ca.* 640-609 B.C.; II Chr. 34:8).

6. The father of the prophet Zedekiah, whom Jeremiah the prophet charged with "prophesying a lie" (Jer. 29:21).

7. The father of Zephaniah the priest, a contemporary of Jeremiah the prophet (Jer. 21:1; 29:25; 37:3).

8. KJV form of MAHSEIAH.

9. A doorkeeper in the temple at Jerusalem, and a contemporary of the prophet Jeremiah (Jer. 35:4). Presumably he was a Levite (cf. I Chr. 26:1, where Meshelemiah may be the same individual as Shallum here).

10. A man of Judah among the residents of post-exilic Jerusalem (Neh. 11:5). In I Chr. 9:5 the name has been rendered "Asaiah" (עשיה).

11. A Benjaminite ancestor of a resident of post-exilic Jerusalem (Neh. 11:7; lacking in I Chr. 9:7-8).

12. A priest among those contemporaries of Ezra who had married foreign wives. He was of the family of Jeshua the high priest (Ezra 10:18; I Esd. 9:19).

13. Another priest, of the family of Harim, who had married a foreign wife in the time of Ezra (Ezra 10:21; I Esd. 9:21).

14. A third priest such as 12-13 *above*, of the family of Pashhur (Ezra 10:22; I Esd. 9:22).

15. A layman who had married a foreign wife in the time of Ezra (Ezra 10:30; cf. I Esd. 9:31).

16. The father or ancestor of the Azariah who helped repair the wall of Jerusalem for Nehemiah (Neh. 3:23).

17. One of the "chiefs of the people" signatory to the covenant of Ezra (Neh. 10:25); possibly the same as 15 *above* and 18 *below*.

18. One of those who stood beside Ezra at the public reading of the law (Neh. 8:4). They were probably laymen; possibly the same as 15 or 17 *above*, or both. In I Esd. 9:43 the name is Baalsamus.

19. One of those Levites who assisted as interpreters of the law when Ezra read from it to the people (Neh. 8:7; cf. I Esd. 9:48).

20. A priest among those taking part in the ceremonies dedicating the rebuilt walls of Jerusalem in the time of Nehemiah (Neh. 12:41). *See* 21 *below*.

21. Another priest among those noted in 20 *above* (Neh. 12:42). Either person may be the same as 12, 13, or 14 *above*. The distinctions, if any, between some of the foregoing individuals are obscure.

MACALON măk'ə lŏn. KJV form of MICHMASH.

MACCABEES, MACCABEAN REVOLT. The Maccabees (or Hasmoneans; *see* HASMONEAN) were the leaders of Judea during the last two centuries B.C., especially in the earlier stages (second third of the second century), during the epic struggle of the Jewish people against Hellenistic culture and imperialism.

Judas (i.e., Judah), son of Mattathias, was nicknamed "Maccabee" (I Macc. 2:4; Ἰουδας ὁ καλούμενος Μακκαβαῖος; cf. 2:66; 3:1), probably meaning "the Mallet-headed" (Aramaic מקבא, *maqqābâ*). Judas' brothers all had nicknames, also probably reflecting physical characteristics. Several popular etymologies were later derived from, and then attributed to, the name "Maccabee"—e.g., Judas the "Hammerer" (or "Quencher"; from the root כבה, *kābâ*) of the enemy; or מכבי, representing the initial letters of the four well-known words: מי כמוך באלים יהוה, "Who is like Thee, O LORD, among the mighty [RSV 'gods']?" (Exod. 15:11).

The name "Maccabees" never occurs in the rabbinic literature; it is the term "HASMONEAN" that is there employed. The title "(Books of the) Maccabees," deriving from Judas' nickname, originated in the church, apparently so designated for the first time in the second century by Clement of Alexandria; in the third century it is so referred to by Hippolytus, Tertullian, and Origen, among others.

Ancient Israel's career was invariably one of involvement; it could not be otherwise, since Israel's land constituted a bridge between Western Asia and Africa. This involvement, however, reached its peak in antiquity in the Greco-Roman period, thanks to the revolutionary conquests under Alexander the Great. Never before in history had so many countries and peoples and religions come simultaneously under the influence of a single, dominant culture and way of life as did those of Asia and Africa in relation to Hellenism. Judea, Judaism, and the Jewish people, partly because of geography but chiefly because of

unique religious beliefs and practices, became more involved—and more dramatically—than any other ethnic-religious-political group. Indeed, not only do we have a more complete literary record of Judaism's experience in that hectic period, but Judaism turned out to be the sole survivor among the cultures with which Hellenism came in contact.

Alexander himself was favorably disposed toward the Jews. Most of the Jews at the end of the fourth century B.C. lived outside Judea, along the Mediterranean coast of Asia and in Babylonia and Persia. It was sensible policy, therefore, for Greek strategy to curry favor with the Jews in the attempt to overcome the Persian Empire of Darius. Thus Alexander supported Jerusalem as the site of the temple against the Samaritans' Mount Gerizim, and he added to Judean territory several important cities of Samaria. Legend added that Alexander, on the way from Tyre to Egypt, turned off to Jerusalem and offered sacrifices in the temple to Israel's God (Jos. Antiq. XI.viii.4-6; Talmud Yom. 69*a*).

After Alexander's death in 323, General Seleucus acquired Babylonia and General Ptolemy obtained Egypt. But three years later Ptolemy invaded Judea—on a sabbath, when their law prevented the Jews from fighting—only to retreat in the face of another of Alexander's generals, Antigonus. Subsequently, Seleucus and Ptolemy joined forces against the too-powerful Antigonus, and in 312 they overcame his fleet at Gaza. Seleucus then emerged as the strongest ruler in Western Asia, and the year 312—the "year of the Greeks," it came to be called—became year 1 of the Seleucid era.

Alexander's empire suffered a second major division after the Battle of Ipsus, in 301. Judea, as part of Syria, fell to Seleucus; but Ptolemy rushed in and occupied the little, but very strategic, country. And for over a century thereafter, Judea became a pawn and sometimes also a battlefield for Syria and Egypt.

Generally, the Jews supported the Seleucids in this struggle. Ever since the Persian restoration of Judah in the sixth century B.C., the Jews had been living in Western Asia under a single rule. This was true also under Alexander, and would be true under the Seleucids. And there were other factors. E.g., the vernacular of Babylonian Jewry, Aramaic, resembled that of Judea, whereas the Jews of Egypt had acquired that country's vernacular, Greek. Again, the temple in Jerusalem received considerable support from Babylonian and Persian Jewry, and the priesthood preferred the centralized rule of the Seleucids throughout Western Asia. And so, *ca.* 250, the high priest Onias II sided with Seleucid II, against Ptolemy III; and when the latter was defeated by the former in 242, Onias refused to pay him even the token tribute of twenty talents. But another faction of Jews, led by Joseph (a nephew of Onias) and his father, Tobiah (husband of Onias' sister), opposed Onias because it had business dealings with Egypt, and counseled payment of the tribute, in the interest of increased Mediterranean trade. As a consequence of this clash of interests, Joseph—who was not of male priestly descent—became secular head of Judea, while Onias retained the priestly authority. And Judea remained loyal to the Ptolemies.

Joseph then intrigued for additional power, to Judea's hurt. He borrowed money from some Samaritan friends, went to Ptolemy's court in Alexandria as Judea's ambassador of good will, and with the money he bribed enough important officials to secure the lucrative post of tax collector of Coele-Syria. Jerusalem, as the seat of the chief tax collector, became an even more important city, and civil authority became the property of Joseph's descendants—the "sons of Tobias," as they came to be known.

Judean Jewry henceforth became essentially a divided people. Under the influence of the Tobiads, and because of the greatly increased Jewish population in Egypt, the cultural influence of Hellenized Egypt upon the commercial aristocracy of Judea became ever more prominent. Greek became increasingly their vernacular, and Hellenism in various social and cultural forms became more apparent. After Joseph's death, his son Hyrcanus continued his father's pro-Egyptian policy, whereas his half-brothers—Joshua, Onias, and Simon—deprived of authority, sided with Syria.

But for several decades neither Syria nor Egypt could long remain the superior power, and tiny Judea often suffered the consequences. In 219 Antiochus III* the Great conquered Coele-Syria and Transjordan; and two years later Ptolemy IV Philopator reconquered this territory. Again, in 201, after a special meeting of Judea's council of elders (ἡ γερουσία) had been convoked and had decided in favor of Syria over Egypt, an Egyptian army reconquered several Judean cities and punished many pro-Seleucid Jews; and a garrison was stationed in Jerusalem. Finally, two years later, Antiochus invaded Coele-Syria and destroyed the Egyptian army. Judea was now lost to the Ptolemies forever. Fig. ANT 33.

In 192 Antiochus and Ptolemy signed a treaty in which, *inter alia,* the problem of Coele-Syria seemed settled; but each party soon claimed that the other had misunderstood the clause in question, and each laid a claim to that area. Nevertheless, international conditions appeared bright for Judea. In several concrete ways Antiochus demonstrated his appreciation of its efforts in his behalf: he canceled its taxes for three years; he promised compensation for the cities destroyed by the wars; he exempted priests, scribes, temple singers, and the like from the poll and crown taxes; he provided duty-free timber for the reconstruction of Jerusalem's walls and the temple's cloisters; he made moneys available for sacrifices; Jewish captives were restored to freedom.

But the storm broke loose over Judea's head after 175, in large part as a result of Rome's entering upon the Near Eastern scene of history. In that year Seleucus IV was assassinated, and his brother, Antiochus IV Epiphanes,* after bringing about the murder of the designated successor, Seleucus' infant son, occupied the throne. Antiochus had spent some time as a hostage in Rome (after his father's defeat at the Battle of Magnesia in 190) and had lived in Athens. Antiochus realized that Rome would surely seek control of all Western Asia. Accordingly, he sought to prevent this imperialistic expansion by conquering Egypt and uniting it with Syria. An important step in this direction was the Hellenization of the heterogeneous populations of these areas. It was this leveling process of Hellenization that was the immediate

cause of the Judean revolt led by the Maccabees. Fig. ANT 34.

Within Judean Jewry there were opposing forces at work. It is true that one part of the ruling class was pro-Syrian, the other pro-Egyptian; after all, it was simply not possible for this class to remain independent in the face of the greatly superior economic, political, and military forces around it. But in one major respect the ruling class was united—namely, in the desire to imitate and assimilate the current Hellenistic culture of these same superior forces. Increasingly these Jews spoke Greek instead of Hebrew, and adopted Hellenic and Hellenized forms of names. Many laws of Judaism became irksome for them. Their economic interests impelled them, through the medium of Jason (*né* Joshua), who had supplanted his brother Onias as high priest, to request Antiochus Epiphanes for "permission . . . to establish . . . a gymnasium and a body of youth [ephebeum] . . . , and to enrol the men of Jerusalem as citizens of Antioch" (II Macc. 4:9)—in other words, to turn the Holy City into a Hellenistic city with the right to strike its own coinage. Indeed, Jason did build a gymnasium in Jerusalem, where the youth, even priests, took part in games, with their bodies exposed.

The Tobiads, however, wanted all power in their own hands. In 175 Jason had occasion to send one of the Tobiads, Menelaus Onias, to Antiochus, "to carry the money to the king and to complete the records of essential business" (4:23 ff). Menelaus, however, flattered the king with such unction that he secured the high priesthood for himself, "outbidding Jason by three hundred talents of silver." But Jason and his supporters fought back, and Menelaus might well have failed in his purpose had not Antiochus sent a military force to his aid in Jerusalem.

International and domestic strife now came simultaneously to a head. Antiochus began an all-out campaign to annex Egypt. In 171 Syria and Egypt went to war for control of Coele-Syria, and a year later Egypt capitulated. On his return to Syria, Antiochus turned off to Jerusalem, entered the temple, and robbed much of its gold treasure. "He committed deeds of murder," the account in I Maccabees continues (1:20-28; cf. II Macc. 5:11-26),

> and spoke with great arrogance.
> Israel mourned deeply in every community,
> . . . . . .
> and all the house of Jacob was clothed with shame.

But Antiochus was not destined to annex Egypt. Rome had by now become powerful and interested enough to thwart this obstacle to her own imperialistic program. Rome ordered Antiochus to leave Egypt at once; and he did. He retreated along the coast of Judea, determined at least to retain that little state as a buffer against Egypt and as an outlet to the sea.

Rumor spread that Antiochus had died. Jason then organized a Jewish force and attacked Jerusalem, forcing Menelaus to seek refuge in the citadel. Consequently Antiochus took sweeping revenge, determined to stamp out all opposition to his regime. He gave orders for "the Jews to depart from the laws of their fathers, to cease living by the laws of God, and to pollute the Temple. . . . This onset of evil came to be harsh and odious for everyone" (II Macc. 6; cf. I Macc. 1:29-64). On the site of the temple hill a fortress, called Acra, was built, and a permanent garrison was placed there.

While the Judean upper class did not oppose the Hellenization of their religion and way of life, the common people, most of them farmers, craftsmen, menial workers, petty merchants, and the like, having little or nothing to gain from collaboration with either Syria or Egypt, did not favor it. Why should they give up the Judaism of their fathers for alien paganism? Some of these Jews actively opposed the foreign and brutally enforced attempt to alter their religious and social beliefs and practices.

Most prominent among these activists was the priestly family of Mattathias, which had moved from Jerusalem to Modein; he and his five sons "rent their clothes, put on sackcloth, and mourned greatly" (I Macc. 2:14). When the king's officers came to Modein to enforce improper sacrifice, Mattathias slew both the king's official and the first Jew who stepped forward to oblige the aliens. He then tore down the altar and proclaimed throughout the town: "Let every one who is zealous for the law and supports the covenant come out with me!" (I Macc. 2: 15-27). Mattathias and his sons and followers fled to the mountains, and the spark of revolt was lit.

Mattathias was soon joined by many other Jews, among them the Hasidim, who realized that in order to gain religious freedom they would have to battle also militarily and politically; indeed, they agreed with Mattathias to set aside the law of the sabbath, if it became necessary for them to defend themselves on that day (2:28 ff). Mattathias' forces proceeded to wage war against the Jews who had complied meekly with Antiochus' orders. They tore down altars, circumcised Jewish children that had been left uncircumcised, and exhorted Jews everywhere to join in the revolt. "They rescued the law out of the hands of the Gentiles and kings, and they never let the sinner gain the upper hand" (vss. 45-48).

Mattathias knew he was dying. He called together his sons and told them, somewhat in the manner of Jacob the biblical patriarch: "Behold, I know that Simeon your brother is wise in counsel; always listen to him; he shall be your father. Judas Maccabeus has been a mighty warrior from his youth; he shall command the army for you and fight the battle against the peoples" (2:49-68; 168-167 B.C.).

Under Judas the revolt continued to spread. When Apollonius, governor of Samaria, mustered a large force to stop him, Judas routed them and killed the governor. A Syrian army under General Seron shortly afterward suffered the same fate at Bethhoron. Antiochus realized for the first time that the Judean revolt was a very serious matter.

But Antiochus was now beset also by other troubles. His treasury was low, and he was forced to lead an expedition to Persia, there to acquire additional revenues. He designated Lysias, a "prominent man of royal lineage," next in command, assigning to him half his forces and ordering him to liquidate the Judean menace: "to wipe out and destroy the strength of Israel and the remnant of Jerusalem; . . . to banish the memory of them from the place, settle

aliens in all their territory, and distribute their land" (3:35-36).

Forty thousand infantry and seven thousand cavalry marched into Judea, pitching camp near Emmaus; there they were joined by additional forces. Judas and his followers realized their crucial position. They could scarcely hope to achieve victory; but, they said, "it is better for us to die in battle than to see the misfortunes of our nation and of the sanctuary. But as his will in heaven may be, so he will do" (3:59-60).

General Gorgias took five thousand infantry and a thousand horsemen and marched out by night, planning to catch Judas' forces by surprise. But Judas learned of it. He broke camp at once and marched out to attack the enemy at Emmaus. With his small force of three thousand, Judas routed the much more numerous enemy: "They pursued them to Gazara, and to the plains of Judea [RSV 'Idumea'], and to Ashdod [RSV 'Azotus'] and Jamnia" (4:1-15). This done, Judas turned on the forces under Gorgias and routed them also. Much booty fell into their hands. And "Israel had a great deliverance that day."

The following year Lysias sent another powerful army against the Judean rebels. Once again, however, Judas' force, numbering some ten thousand, discomfited the Syrian army of some sixty thousand picked men and five thousand horsemen, for, as Lysias himself had noted, they were ready "either to live or to die nobly" (4:35).

With the first phase of the war of liberation accomplished, Judas set about to achieve the second. He selected "blameless priests devoted to the law," and they proceeded to cleanse the temple. They tore down and removed every vestige of uncleanness and reproach. In 165, on the twenty-fifth day of the ninth month (Chislev), proper sacrifices to the Lord were offered up in the temple, amid prayers of thanksgiving and rejoicing. For eight days the dedication (חנכה, *Ḥᵃnukkâ*) was observed, "and all the assembly of Israel determined that every year at that season the days of the dedication of the altar should be observed with gladness and joy for eight days" (4:59).

But Judas did not forget that he was beset by enemies in his midst and around him. He "made war on the sons of Esau in Idumea, at Akrabattene [near Shechem], because they kept lying in wait for Israel. . . . He also remembered the wickedness of the sons of Baean. . . . He crossed over to attack the Ammonites. . . . He also took Jazer and its villages" (5:1-8). When the Jews in Galilee and in Gilead urgently asked for help, a great assembly (ἐκκλσία μεγάλη) was convoked, and it was decided that, meager as Judea's forces were, the Jews in the N and in the E could not be abandoned. Judas left a small force to guard Judea, and to his brother Simon he said: "Choose your men and go and rescue your brethren in Galilee; I and Jonathan my brother will go to Gilead" (5:14-19). The subsequent campaigns, with but few exceptions, were eminently successful.

Far off in Persia, Antiochus had heard of Lysias' defeat, and "he was astounded and badly shaken" (6:8). The one great fortress still under his control was the citadel in Jerusalem, Acra. He gathered a force of "a hundred thousand foot soldiers, twenty thousand horsemen, and thirty-two elephants accustomed to war" (6:30 ff), to rescue the garrison and annihilate all Judean opposition to his rule.

But death (October, 165) cut Antiochus short, and a certain Philip was appointed to take charge for his successor, Antiochus V Eupator.

Judas did not know that the hated Antiochus IV was no more when the temple was dedicated (December; II Macc. 9:1 ff). But Lysias heard the report. Having decided to return to Antioch, to forestall his demotion and perhaps even his death, Lysias persuaded Antiochus V to grant the Jews religious freedom: "Let us come to terms with these men, . . . and agree to let them live by their own laws as they did before; for it was on account of their laws which we abolished that they became angry and did all these things" (I Macc. 6:58-59; cf. II Macc. 11:22-33).

Civil war once again broke out in Syria. In 163-162 Demetrius, nephew of Antiochus IV and a hostage in Rome, made his escape with the aid of Polybius the historian. In Tripoli he established himself as king. He and his followers made their way to Antioch, where the army had arrested Antiochus V and Lysias. The latter were killed, and Demetrius became king of Syria (I Macc. 7:1-4).

The repercussions were felt soon enough also in Judea. "Then there came to him [Demetrius] all the lawless and ungodly men of Israel; they were led by Alcimus, who wanted to be high priest. And they brought to the king this accusation against the [Jewish] people: 'Judas and his brothers have destroyed all your friends' " (7:5-7).

A Syrian army, under Bacchides, with Alcimus as the new high priest, was soon dispatched to punish Judas and Judea. A group of Jewish scholars ("scribes"), including Hasidim, sought peace with the Syrians. They were content with religious freedom, and were not sympathetic with Judas' desire for political independence also. They were happy to receive a sworn promise of religious liberty from Alcimus and Bacchides—until sixty of them were arrested and slain in one day (7:12-18). Judas' group, however, had not been deceived by these glib promises (vss. 10-11).

Unable to halt the activities of Judas, Alcimus returned to Antioch, "and the king sent Nicanor, one of his famous officers, who hated and despised Israel, and ordered him to get rid of the people" (7:26). After several skirmishes, the two forces met in battle. Nicanor's army was shattered (161 B.C.), "and the land of Judah was quiet for a little while" (7:50).

Judas now went beyond the purely military range of leadership. He initiated a pact of friendship with Rome, having heard "that they pledged friendship to those who came to them." The Roman Senate accepted the proposal of Judas (8:1 ff).

But Demetrius persisted. He sent a fresh army, under Bacchides and Alcimus, to subdue Judea. Judas now found himself with but 800 men—after some 2,200 had fled—against about 20,000 of the enemy. In the losing battle that ensued, Judas was killed, and he was replaced as leader by his brother Jonathan, aided by his brother Simon (9:1 ff).

The prospects for Judea appeared black indeed. "The lawless emerged in all parts of Israel . . . . In those days a very great famine occurred" (9:23-24).

Jonathan and Simon and all their men had to flee, seeking refuge in the wilderness of Tekoa. To all intents and purposes Syria was in control of Judea. Yet opposition was not really dead. On several occasions Bacchides and his Hellenized Jewish supporters had a falling out. Several Bedouin groups joined with Jonathan against Syrian attempts to dominate them. Alcimus himself became paralyzed from a stroke and died in great agony. Bacchides was constantly being harassed. Consequently, Jonathan considered the circumstances ripe for a proposal of peace. Bacchides "agreed, and did as he said . . . . He turned and departed to his own land, and came no more into their territory . . . . And Jonathan dwelt in Michmash. And Jonathan began to judge the people, and he destroyed the ungodly out of Israel" (9:55-73).

Judea was now further helped by internal struggles for power in Syria, Alexander Epiphanes (Balas) of Smyrna laid claim to the throne of Antiochus V; but so did the latter's son, Demetrius. The two claimants vied with each other for Judea's support. Demetrius abandoned all the fortified posts—except Beth-zur—that Bacchides had established in Judea, and authorized Jonathan to gather an army as his ally. Alexander, in turn, designated Jonathan high priest and "friend of the king." Demetrius then relieved Jerusalem, as a holy city, and the Jews of many taxes, attached to Jerusalem three toparchies previously belonging to Samaria, and recognized the high priest as the highest authority over the Jews. Fortunately, Jonathan sided with Alexander Balas, for the latter disposed of Demetrius in battle and then—by marriage—acquired the Egyptian royal house as ally (ch. 10).

Subsequently, war between Egypt and Syria, as well as within Syria itself, furthered the interests of Judea. Alexander Balas (151-146) had to flee Syria and lost his life. Demetrius II Nicator (146-139) and Antiochus VI Epiphanes (146/5-143/2)*—the latter supported by Alexander Balas' adjutant, Trypho—like their predecessors, vied with each other for Judea's support. Jonathan sided with Antiochus, and a Judean force defeated part of Demetrius' army marching on Galilee (ch. 11). Fig. ANT 35.

Jonathan then turned again to the diplomatic field of battle. He sent an embassy to Rome to renew the bond of friendship between them, and sought one for the first time with the Spartans. However, in the midst of his high-water mark of leadership, Jonathan was killed. Trypho cleverly arranged the arrest of both Antiochus and Jonathan, obtained from Simon as ransom a hundred talents of silver as well as two of his sons as hostages, and then killed his two rival rulers. Trypho became ruler of Syria, and Simon remained in control of Judea (chs. 12–13).

Simon rebuilt the fortresses of the land and stored food in them, and then offered his support to Demetrius II in a common struggle against Trypho, "for the sole activities of Trypho were to plunder." Demetrius agreed to the pact, and renounced forever all Syrian claims to Judea: "King Demetrius to Simon, the high priest and friend of kings, and to the elders and nation of the Jews, greeting. We have received the golden crown and the palm branch which you sent, and we are ready to make a general peace with you and to write to our officials to grant you release from tribute. All the grants that we have made to you remain valid, and let the strongholds that you have built be your possession. We pardon any errors and offenses committed to this day, and cancel the crown tax which you owe; and whatever other tax has been collected in Jerusalem shall be collected no longer [=*de facto* and *de jure* recognition of Judea as a sovereign state]. And if any of you are qualified to be enrolled in our bodyguard, let them be enrolled, and let there be peace between us." And so, "in the one hundred and seventieth year [144-143 B.C.] the yoke of the Gentiles was removed from Israel, and the people began to write in their documents and contracts, 'In the first year of Simon the great high priest and commander and leader of the Jews'" (13:36-42). Subsequently, the citadel itself was also captured, and the day of its purification observed as a festival (vss. 49 ff).

With this incident the original Book of the Hasmoneans ended. The author began with the account of the capture and pollution of Jerusalem by Antiochus IV Epiphanes, followed this with the story of the Hasmonean revolts against the alien and pagan elements in control of the country, and concluded with the grand deliverance of the land under Simon. The philosophy of our historian is clear and consistent: While God was with the Hasmoneans in their righteous struggle against paganism, it was largely the heroic deeds of the Hasmoneans and their followers, together with their alert exploitation of the struggles between and within Syria and Egypt, that achieved independence for Judea. Even Rome now recognized this little country.

For Simon's reign and the succeeding Hasmonean rulers, *see* HASMONEANS.

MACCABEES, BOOKS OF [Μακκαβαίων; Lat. *Machabaeorum; see* JUDAS 10; MACCABEES]. A group of historical and quasi-historical books concerned with the struggle of Judaism for survival under the pressure of forcible Hellenization, particularly during the persecution of Antiochus IV Epiphanes (*see*

ANTIOCHUS 4). I and II Maccabees belong to the APOCRYPHA, and, together with III and IV Maccabees, were cherished by the early church for their inspiration to faith and loyalty during persecution.

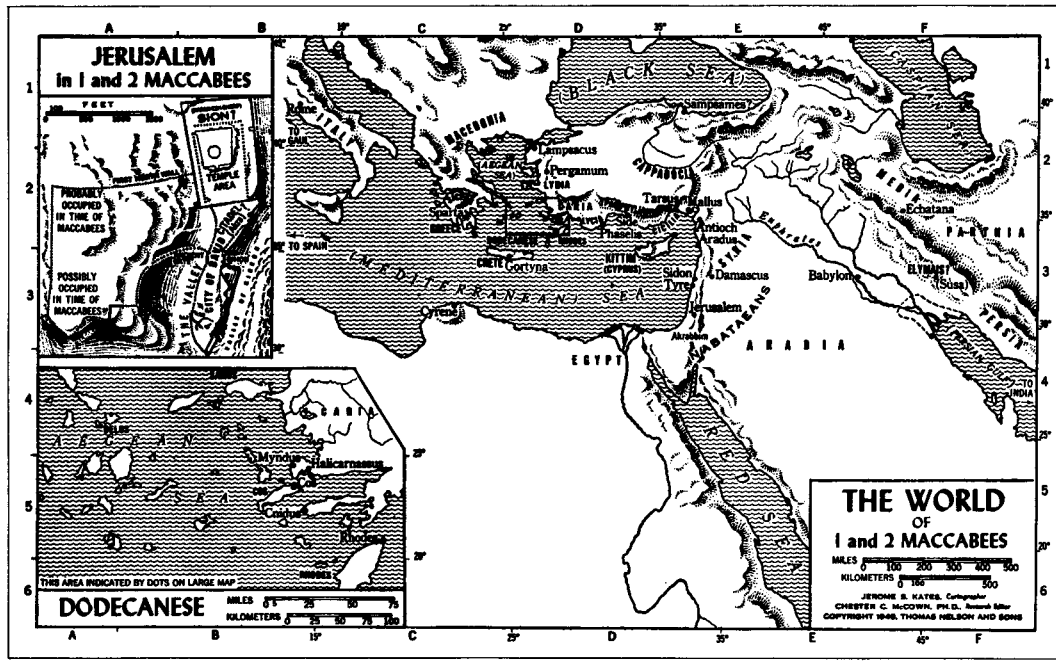
Bibliography

A. ***THE BOOK TITLES.*** Τὰ Μακκαβαϊκα ("The Things Maccabean") was employed as a designation of both I and II Maccabees as early as the late second century A.D.; but it was probably used originally only for II Maccabees, since the surname Maccabeus belongs properly to Judas, who alone features prominently in this book, whereas I Maccabees tells also the history of his brothers and successors, who had other distinguishing epithets (I Macc. 2:2-5). *See* MACCABEES.

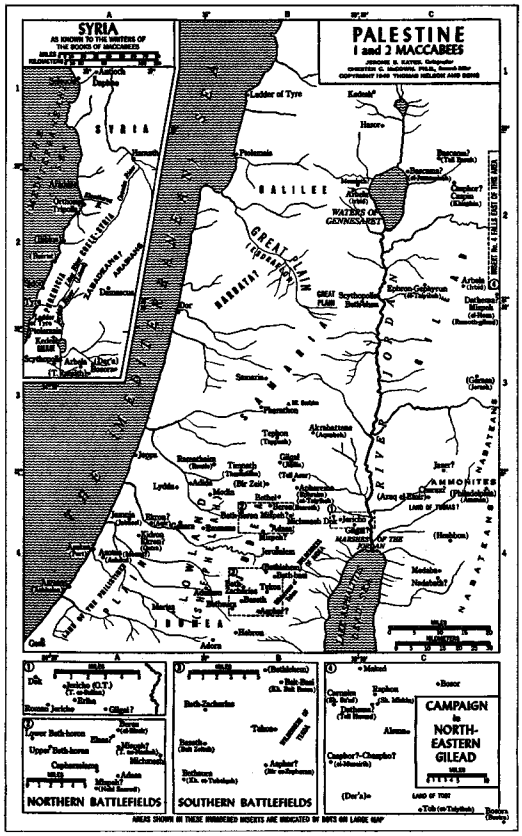
Clement of Alexandria (*ca.* A.D. 195) distinguishes between these books by designating I Maccabees as



τὸ [Βιβλίον] τῶν Μακκαβαϊκῶν and II Maccabees as ἡ τῶν Μακκαβαϊκῶν ἐπιτομή—"The [Book] of Things Maccabean" and "The Epitome of Things Maccabean," respectively. Cyprian (*ca.* 250) uses the Latin title *Machabaei* for citing either I or II Maccabees. Eusebius sometimes employs indiscriminately ἡ γραφή τῶν καλουμένων Μακκαβαίων ("The Scripture of the Things Called Maccabean"); yet with precision he mentions also ἡ πρώτη καλουμένη τῶν Μακκαβαίων Βίβλος ("The First Book Called Maccabees"). Most Greek MSS distinguish them as Μακκαβαίων Α′ and Μακκαβαίων Β′.

The titles III and IV Maccabees (Μακκαβαίων Γ′ and Μακκαβαίων Δ′) are commonly employed to designate two other books, through an extension of the name Maccabee to refer to any Jewish martyr in the struggle against Hellenism, whether those who suffered for their faith during the reign of Antiochus Epiphanes in Syria Palestine (as in IV Maccabees), or even in the supposedly earlier persecution in Egypt under Ptolemy Philopator (as in III Maccabees). For further discussion of the titles, *see* §§ B-E *below*.

B. *I MACCABEES*. 1. Original title. As seen above, the designation "Maccabees" cannot be original. More appropriate would be "The Book of the Hasmonean House"; for (according to Jos. Antiq. XII.vi.1) Mattathias, the father of Judas and his brethren, was descended from one who bore the name Hashmoneus, and the concern of the book is with the adventures of all the sons of Mattathias, and not merely with those of Judas Maccabeus.



Early Hebrew and Aramaic writings do not know the term "Maccabee," but employ the term "Hasmonean." The Hebrew *Josippon* (a free translation of Josephus' *Jewish Wars*), written perhaps as early as the fourth century A.D., concludes its account of the wars of Judas by declaring: "The rest is written in the *Book of the House of the Hasmoneans*." Rabbi Saadia seems to know a book entitled either *Megillath Bēth Ḥashmōnā'î* ("The Scroll of the Hasmonean House") or *Kitabh Bᵉnê Ḥashmōnā'î* ("The Writing of the Sons of Hashmoneus").

Several scholars have sought to recover from a transcription of Eusebius a similar Semitic title. Upon the authority of Origen, Eusebius cites the name σαρβηθ σαρβαναιελ (Euseb. Hist. VI.25.2). This is perhaps a corruption of σφαρ βηθ σαραχαι ελ, transliterating Aramaic *sᵉphār bēth sārᵉkhê ēl* ("The Book of the House of the Princes of God"). This Aramaic title would be equivalent to the Hebrew *sēpher bēth ḥashmōnā'îm*, provided *ḥashmōnā'î* is only an honorific title meaning "prince." Cf. πρέσβεις ("dignitaries") as a translation of *ḥashmanîm* (KJV=ASV "princes"; Ps. 68:31—H 68:32—G 67:32) in Origen's Hexapla. For other etymologies, *see* HASMONEANS.

2. Contents. After a brief account of the origin of Greek rule in the East (1:1-9), the book sketches briefly the background of the Maccabean revolt against the Seleucid king Antiochus Epiphanes (1:10-64) and its inception under the leadership of Mattathias and his sons (ch. 2) and then portrays at length the military and political careers of Mattathias' sons Judas (3:1–9:22), Jonathan (9:23–12:53), and Simon (13:1–16:17). The book concludes with a brief summary of the rule of Simon's son John. For fuller treatment of this history, *see* MACCABEES; HASMONEAN.

3. Message. I Maccabees teaches the continuing providence of God over his people Israel during the Greek era. It was probably intended as a sequel to the OT Hebrew book of Ezra-Nehemiah; for as the latter depicts the Jewish history of the Persian period against the background of the conquests of Cyrus, so I Maccabees portrays Jewish history against the backdrop of the conquests of Alexander the Great. In its citation of official correspondence, it is also reminiscent of Ezra-Nehemiah. Frequent allusions to God's saving acts of the past, as encouragement for the present, underscore the belief that the history of salvation begun in the OT continues into Maccabean times. Victory over implacable enemies depends more upon loyalty and faith in God than upon the size of the armies. *See* WAR, IDEAS OF.

The Maccabees were agents of God's salvation from pagan oppressors. Mattathias, burning with zeal for the law, like the ancient Phinehas (2:26; cf. Num. 25:10-15), sparked the Maccabean Revolt; and like the patriarch Jacob (Gen. 48–49), his final testament (I Macc. 2:65-68) determined the course of Hebrew history. Judas was the "savior of Israel" (9:21), as truly as the judges and kings of old (Judg. 3:9; II Kings 13:5). Jonathan *judged* the people at Michmash (I Macc. 9:73; cf. I Sam. 14). Thus the Maccabees fulfilled the hope of future "saviors" who would govern the nation (Obad. 21).

Although prophecy has ceased, one still awaits the coming of the "prophet" foretold in Deut. 18:15, 18,

to determine what should be done with desecrated altar stones (I Macc. 4:46) or who should be priest or ruler after the interim appointment of Simon and his heirs (14:41). Messianism per se does not appear, but the revival of Israel as a state seems to presage the messianic age. Hence Simon is extolled in language borrowed from messianic prophecy (14:4-15; cf. Mic. 4:4; Zech. 8:4-6, 12).

The Maccabees may be blamed for not being content with the achievement of religious liberty, for launching their own new aggressions against Gentile neighbors; but they argued that it was their destiny to re-establish the borders of ancient Israel (15:33). Had not the prophets foretold the repossession of Edom, Philistia, Ammon, and Moab (Isa. 11:14; Obad. 21)? Significantly I Maccabees uses these archaic names in referring to Jewish conquests of these areas.

4. Chronology. Dates in I Maccabees are regularly according to the "year of the kingdom of the Greeks" (1:10). Therefore, for the period concerned, the book provides the backbone for any Jewish chronology in relation to world history. The era, as Josephus explains (Antiq. XIII.vi.7), is that of the "Syrian Kingdom, reckoned from the time when Seleucus, surnamed Nicator, occupied Syria."

The decisive event which initiated this epoch was the Battle of Gaza, of the summer of 312 B.C. The official Seleucid calendar followed the Syrian custom of beginning the year in the autumn, as also the preexilic Hebrew calendar, so that the Seleucid era began officially in the autumn of 312. Postexilic Jewish practice, however, followed the Babylonian custom of calculating the year from the spring, in the month Nisan, but anomalously retained the tradition of an autumnal New Year's celebration dated to the seventh month, Tishri. (For spring as the beginning of the Jewish Year, see Jos. Antiq. III.x.5; *see also* CALENDAR.) This complicates the problem of dates in I and II Maccabees.

Did the Jews antedate the beginning of the Seleucid era to Nisan, 312 B.C., or even more radically to Tishri, 313? Or did the Palestinian Jews wait until Nisan of 311 for beginning the Seleucid era? Competent scholars have espoused each one of these positions, or have argued for more than one method of calculation among the divergent sources of I and II Maccabees. The enumeration of the months in I Maccabees supports the reckoning of the year from the spring; but which spring? The footnotes explaining the dates in the RSV are all calculated from the year 311, which may be seen by subtracting a number one less than the ordinal number given from 311. Thus the reign of Antiochus Epiphanes, which began in the 137th year of the Seleucid era, is dated to 175 B.C. (311 minus 136). This rough calculation cannot always be correct, even assuming a Nisan, 311, era; for the year overlaps the Julian calendar. On the other hand, some of the year dates may be accurate, even if one begins the era in the spring or autumn of 312, for these years would be completed in the spring or autumn of 311.

Recent research has led to the analysis of the dates into official Syrian and popular Jewish datings. The former are all of the most general character, not giving the number or name of the month, whereas the latter are mostly very precise, recording not only the month, but often even the day. The former are especially related to general events of Syrian history (as the accession year of a king), whereas the latter are concerned with internal Jewish affairs or with Syrian history as it impinged directly upon Judea. These differently calculated dates stem from the sources utilized by the author, and they seem to find their best resolution if one calculates the year's beginning in each case from the year 312. *See* § C4 *below*. *See also* CHRONOLOGY OF THE OT.

5. Literary sources. So rich is I Maccabees in accurate, detailed, and circumstantial historical information that it is scarcely conceivable that it could have been written, even by an eyewitness, without some aid from written sources. The following source analysis may be examined:

a. Letters and official documents. Numerous documents are quoted, whose genuineness has often been called in question; but there is a growing conviction that most, if not all, are genuine. Characteristically they interrupt the flow of the narrative; but this does not prove them to be later interpolations. Thus ch. 8, which contains a letter from Rome, breaks the continuity of chs. 7; 9; but it is clearly presupposed by the narrator at 12:1. Similarly, 6:1 resumes the narrative concerning Epiphanes, which had been abandoned at 3:37, but this may be readily explained by the introduction of a different literary source on the part of the original author, as also by the exigency of keeping two interrelated stories going at the same time.

I Maccabees mentions a probable source for its quoted documents, the archives of the chief priest in the temple treasury (14:23, 49). This seems natural, since the letters are mostly addressed to the Jewish community, or are copies of foreign documents prepared for the high priest (8:22; 11:37; 15:24). In such an archive there might well have appeared even a previously forged document like the letter of the Spartans to Onias (12:20-23)—of whose genuineness one is justly skeptical. *See* SPARTA.

b. A Seleucid chronicle. The events dated according to the official Seleucid era are prominent events of Syrian history, such as those which concern the accession and demise of kings. For this information the author seems to have been dependent upon a Greek or Aramaic chronicle, from which he made appropriate excerpts from time to time, interweaving it with his Jewish sources, and often giving it a Jewish coloring.

c. A biography of Judas. The very fact that half the book is devoted to a period of only seven years (166-160 B.C.) in Judas' life, whereas the remaining half is devoted to his brothers Jonathan and Simon and covers twenty-five years (160-135), suggests the dependence upon a special document for the period of Judas' leadership. The vividness of the narration shows that Judas' biographer was a contemporary and eyewitness of many of the events. To this biographical work perhaps the author of I Maccabees alludes at 9:22: "Now the rest of the acts of Judas . . . have not been recorded, for they were very many." This negative reversal of a familiar OT mode of literary reference (cf. II Kings 10:34; II Chr. 25:

26) seems to allude, not merely to the inexhaustible unwritten traditions concerning Judas, but also to the author's sole dependence upon written material which has been substantially embodied. *See* § B5*d*, *below*.

d. The Mattathias tradition. The stories of Mattathias in ch. 2 give structure and coherence to the entire book, for here we meet his sons who figure prominently in the subsequent narrative. Judas, Jonathan, and Simon each in turn took up the cause of Israel bequeathed to them by their father.

The present account of Mattathias contains within it a section which originally belonged to the biography of Judas; for 2:29-48 is clearly distinguished from the rest of the chapter by style and content. Most notably, it is "Mattathias and his friends" who figure here, whereas in the material preceding and following it is Mattathias and his sons. Since this material alone really advances the course of events in ch. 1, it appears probable that this piece originally referred to "Judas and his friends" (cf. 9:26, 28). A comparison with II Maccabees confirms this conjecture, where the same sequence for the acts of Judas is followed: the wilderness withdrawal (I Macc. 2:29-30; II Macc. 5:27), refusal to fight on the sabbath (I Macc. 2:31-41; II Macc. 6:11), Judas' recruitments (I Macc. 2:42 ff; II Macc. 8:1), Judas' early exploits (I Macc. 2:44-48; II Macc. 8:5-7). Further, II Macc. 5:27 makes explicit the origin of the circle of friends which appears already formed in I Macc. 2:39. The defection of the Hasideans from Judas, as recorded in I Macc. 7:13-14, implies their previous alliance with him as related in 2:42 (cf. II Macc. 14:6).

The legends of Mattathias, then, were only two: his heroic action in withdrawing to Modein, where he resisted pagan sacrifice (2:1-28), and his final testament to his sons (vss. 49-70). These are obvious interpolations into the Judas source, for they break the original sequence of 1:62-64; 2:29-48; 3:10 ff. The author of I Maccabees made brilliant use of the Mattathias legends by way of tying together his entire narrative of the Maccabean movement. He filled the hiatus between the legends of Mattathias by transforming a section of the Judas biography into stories about Mattathias. Thus Mattathias usurped the role of Judas as the dynamic initiator of the Maccabean Revolt—appearing now as the patriarchal head of a family of heroes. Judas was then made the first successor to his noble father (3:1-9). *See* MATTATHIAS 1.

e. The annals of the high priests. Judas' brothers Jonathan and Simon became high priests. In this capacity they doubtless followed the ancient custom of keeping official chronicles of the outstanding events of each year. Of Simon's son John it is written: "The rest of the acts of John . . . are written in the chronicles of his high priesthood" (16:23-24). The assumption that such annals had been kept since the time of Jonathan would explain satisfactorily the accurate and carefully dated history of the deeds of Jonathan and Simon. However, the reader is not referred to them in connection with these men, since the author believed he had made adequate use of their material in piecing together this history. In the case of John, one is directed to the annals, since the author chose to conclude his story with John's accession and only a brief digest of his rule.

These chronicles were probably kept in the temple treasury along with other official documents (*cf.* § B5*a above*). Naturally, they followed the Jewish system of dating; but they were interwoven in the narration with material gleaned from the Seleucid chronicle employing the official calendar. *Cf.* § B4 *above*.

f. Poetic source. Interspersed through the book are a number of poetic sections: laments upon Antiochus' ravaging of Jerusalem (1:24*b*-28), the desolation of the sanctuary (1:36-40), the ruin of Zion (2:7-12; 3:45, 50*b*-53), and the death of Judas (9:21); an imprecatory prayer against Nicanor (7:37-38); and eulogies of Judas (3:3-9) and Simon (14:4-15). There is also a free quotation of Ps. 79:2-3, lamenting the slaughter of the Hasideans (I Macc. 7:17). This last shows that the author was capable of quoting and adapting poetic material to the needs of the historical content of his work. He may have composed some of these poems himself. Yet some or all may have been borrowed from a body of Maccabean psalms. Like the hymnody of the ancient Essenes, which is probably contemporary with our author, this poetry is saturated with phraseology borrowed from the OT. *See* DEAD SEA SCROLLS.

6. Integrity. The genuineness of the final chapters has been contested by many scholars because Josephus discontinued his use of I Maccabees as his historical source for *Jewish Antiquities* after the selection of Simon as high priest (Jos. Antiq. XIII. vi.7). There are several views as to the original termination of the book: 13:42; 13:53; 14:13; 14:15. Though small inner contradictions of ch. 14 have reinforced the opinion of an originally shorter work, these occur mostly between the poetic eulogy of Simon (vss. 4-15) and the following prose narrative, as also between the inscription on the bronze tablets honoring Simon (vss. 27*b*-45) and the sequence of events elsewhere. None of these disagreements is serious, but all are well explained as discrepancies between the author and the documents he cites.

Josephus' abandonment of I Maccabees at this point is easily explained as a falling back upon an earlier work of his, *Jewish Wars,* in which he had drawn heavily upon Nicholas of Damascus, in apparent ignorance of I Maccabees. Even so, some scholars allege that the account of *Jewish Antiquities* is not devoid of coloring from I Maccabees for the latter part of Simon's rule. There is insufficient justification, therefore, for denying the genuineness of the final chapters. On Josephus' writings, *see* JOSEPHUS.

7. Original language. I Maccabees was originally composed in the Hebrew language, according to the explicit testimony of Jerome in his *Prologus Galeatus*. The extant Greek text, from which the later versions were made, is full of Hebrew idioms. Often this text may be corrected upon the assumption of an error in the reading or copying of the original Hebrew—which, unfortunately, is no longer extant.

8. Authorship and date. The author of I Maccabees, writing *ca.* 110 B.C., perhaps at the prompting of Simon's son John, undertook an official history of the Hasmonean house, beginning with the patriarchal leadership of Mattathias and reaching its climax in the hereditary rule of Simon. The accession of John Hyrcanus I (*see* HASMONEANS) is pre-

sented, with a brief summary of his rule, by way of showing the establishment and durability of Simon's line. The descendants of Mattathias are presented as an elect family without whose hegemony victory is impossible (5:55-62).

Though the final verses seem to indicate that John's rule was well advanced, there is nothing to indicate that the annals of his priesthood had been completed. The author's dynastic concern may indicate that he wrote against the background of the growing discontent of all Hasidic elements (including PHARISEES and ESSENES) with the Hasmonean leadership. John's reign closed with an open rupture between him and the Pharisees and his espousal of the Sadducean cause (Jos. Antiq. XIII.x.6). The authorization of Simon's line had been qualified "until a trustworthy prophet should arise" (14:41)—with adverse allusion to such prophetic figures as the Qumran Teacher of Righteousness (*see* DEAD SEA SCROLLS) and Judas the Essene, who by implication were not "trustworthy."

The history of I Maccabees appears to be nonpartisan, espousing the views of neither Sadducee nor Pharisee. It was therefore written before the open break of the Pharisees with Hyrcanus. With deference to the Sadducean point of view, it avoids doctrines which would offend them; but at the same time it represents all the sons of Mattathias as zealous champions of the law and opponents of paganism, at one in their aims with the Hasideans. It is therefore not anti-Pharisaic. It does record, however, the misguided gullibility of the Hasideans who had welcomed Alcimus as chief priest, despite the suspicions of Judas and his brothers (7:8-18). This partial defection of the Hasideans, with all its tragic consequences, is reported as a caution against disaffection in the author's own day.

9. Importance for the NT. The book illustrates the contrast between Jewish national aspirations and the universal KINGDOM OF GOD envisaged by Jesus; for I Maccabees belongs to the dispensation of the Old Covenant, which was to terminate with the coming of the Prophet (4:46; 14:41), whom early Christians were to identify with Jesus. *See* JESUS CHRIST.

Other religious parallels are few. I Maccabees 2:52 combines Abraham's offering up of Isaac (Gen. 22) with his justification by God (Gen. 15:6) in precisely the same way as Jas. 2:21-23. Similarly the Scriptures are regarded as the true source of encouragement (παράκλησις), in I Macc. 12:9; Rom. 15:4.

Alcimus' destruction of the wall of the inner court of the TEMPLE, separating Jews from Gentiles (9:54), finds an interesting parallel and contrast in Eph. 2:14. The former is the work of a sacrilegious priest, imperiling the existence of Judaism; but the latter is the redemptive act of the Messiah, extending the moral power of Judaism to the whole world. *See* EPHESIANS, LETTER TO THE.

C. *II MACCABEES*. 1. Original title. The book may well have been qualified by the adjective "Maccabean" (*cf.* § A *above*) from the beginning, since it is primarily concerned with the history of Judas Maccabeus. Clement of Alexandria called it appropriately ἡ τῶν Μακκαβαϊκων ἐπιτομή, since it claims to be a condensation of a five-volume work of Jason of Cyrene (2:23). Even more apt is the title of the colophon at the end of the book in MS V: "An Epitome of the Deeds of Judas Maccabeus."

2. Contents. II Maccabees is introduced by two epistles from the Jews of Judea to their brethren in Egypt (1:1-9; 1:10–2:18). Both letters are concerned with the observance of the Feast of Dedication (*see* DEDICATION, FEAST OF) in commemoration of the reconsecration of the sanctuary after its profanation by Antiochus IV Epiphanes (*see* ANTIOCHUS 4). *See also* § C5*b*.

After a prologue describing the author's condensation and embellishment of the history written by Jason of Cyrene (2:19-32), we reach the epitome proper. Any adequate outline of II Maccabees must be theological, not merely chronological. The following principal heads may be given:

I. God's blessing of Jerusalem and protection of the temple from desecration by Heliodorus, during the devout administration of the high priest Onias, under Seleucus IV, ch. 3
II. God's punishment of Jerusalem—Antiochus IV's profanation of the temple and proscription of Judaism—resulting from the evil intrigues of Simon and the Hellenizing priests Jason and Menelaus, chs. 4–7
III. God's merciful deliverance of the Jews and the reconsecration of the temple, resulting from the devout and heroic action of Judas and his men, as also from the timely death of Antiochus IV, 8:1–10:9
IV. God's loyal support of Judas and his men in their numerous victories, during the reign of Antiochus V, 10:10–13:26
V. God's self-manifestation in his defense of Jerusalem and the temple through Judas' defeat of Nicanor, during the reign of Demetrius I, 14:1–15:36
VI. Epilogue, 15:37-39

3. Message. The sanctity of the temple is the unifying theme of the entire narrative, as may be seen from the foregoing outline. One will note the perfect balancing of the headings I and V, and the neat reversal of II in III. Headings III and V are also in strict parallelism, since the former led to the establishment of the Feast of Dedication (10:5-8) and the latter to the institution of Nicanor's Day (15:36; *see* NICANOR 1). The Jerusalem temple is the greatest, most famous, and holiest of the entire earth (2:19, 22; 5:15; 14:31; 15:18), for through it God dwells among his people (14:35-36).

Judas' role is deliverer of people and sanctuary. In the second introductory letter (*see above*), he is also preserver of the Scriptures, but primary attention is given to his purification of the altar of burnt sacrifice. In both respects he labored as a second Nehemiah; but as a kindler of the holy fire upon the altar, he stands in the tradition of Moses, Solomon, and Jeremiah.

Theodicy dominates the book; for everywhere the perfect justice of God is maintained. The persecution of the Jews by Antiochus Epiphanes was occasioned by national apostasy under the leadership of the Hellenized priests. To be sure, this involved the suffer-

ing of the righteous; but it was a kindly discipline intended to bring the people to repentance. God is quick to scourge his own in order to deter them from further sin; but he is forbearing with the heathen until their sins are ripe for an annihilating judgment (6:13-16; 7:33; 10:4). God's wrath toward Israel was turned to mercy through the prayers and obedience of Judas and his party (8:1-5, 27). Their observance of the law guaranteed their success in battle (8:34-36). There are numerous examples of the principle of exact retribution, or punishment in the same place or manner as the crime committed (4:16, 38; 5:9-10; 7:17; 8:33; 9:5-6; 13:8).

Monotheism and the absolute sovereignty of God are stressed, not only by the narrative, but also by the appellations given him. Seldom is he simply "God" or "Lord," but rather "the Almighty God [or Lord]" (3:22; 8:18), "God [or Lord], the righteous Judge" (12:6, 41), "great Sovereign of the world" (12:15, 28), "him who sees all things" (12:22), etc. Always the appellation is that which best suits the historical context. The strongest assertion of divine sovereignty is Judas' ascription to "Almighty God" the ability "with a single nod to strike down those who are coming against us and even the whole world" (8:18). So great is God's power, he created the world from nothing (7:28). Here is the first explicit expression of the doctrine of creation *ex nihilo*.

The battles in which the Jews engage are supermundane, for angels participate in the struggle. Here is perpetuated the OT concept of the "Lord of hosts," or "Sovereign of spirits" (3:24), who commands heavenly as well as earthly legions. The angelic warriors appear regularly as horsemen mounted upon glorious steeds (3:25; 10:29-31; 11:8), but sometimes simply as resplendent young men (3:26, 33). The coming of a good angel renders the Hebrew armies invincible (11:6, 8; 15:23); but the forty-day apparition of contending cavalries charging over the sky of Jerusalem (ch. 5) was an evil omen, as similar apparitions reported by Josephus (War VI.v.3) and Tacitus (Hist. V.13) which presaged the destruction of Herod's temple. Contrast the good omen of II Sam. 5:23-24 (I Chr. 14:14-15). For angelic horsemen and charioteers in the OT, cf. II Kings 2:11; 6:17; 13:14; Zech. 1:8; 6:1-8. *See* ANGEL.

The martyred saints are also profoundly concerned with the human struggle; for in Judas' vision the priest Onias and the prophet JEREMIAH appeared as the people's intercessors (II Macc. 15:11-14). Jeremiah handed Judas a golden sword with which to strike down his adversaries (vss. 15-16).

The doctrine of the RESURRECTION is presented as a stimulus for heroic dying for the sake of religious conviction. The descriptions of the dauntless deaths of Eleazar (6:18-31), of the mother and her seven sons (ch. 7), and of Razis (14:37-46) are the earliest known martyrologies. *See* MARTYR.

The resurrection of the dead is described in such strongly physical terms as to suggest a resuscitation to participate in the earthly blessings of the messianic age. Apparently only the righteous are to be raised (7:14). On one occasion, Judas made atonement for his men who fell in battle, by sending money to provide a sin offering on their behalf at the temple. The purpose was to guarantee the resurrection of those whose religion was compromised by their wearing pagan amulets (12:39-45).

4. Chronology. II Maccabees follows the official system of calculating the beginning of the Seleucid era from the autumn of 312 B.C. (*cf.* § B4 *above*). This method, of course, is used in the official correspondence of ch. 11, where within the same year is found the sequence: Dioscorinthius (11:21) and Xanthicus (11:33)—the former being the autumn month Dios and the latter corresponding with the Jewish month of Nisan (roughly, April), which for the Jews began the new year. "Dios" was qualified by "Corinthius" in Lysias' letter, apparently out of his admiration for things Greek.

The same CALENDAR is followed in the narrative of the book, for where I Macc. 7:1 reports a Syrian dating, II Macc. 14:4 agrees. On the other hand, where I Macc. 6:20 reports a Jewish dating for the summer of 163 B.C., it reckons it as the 150th year, whereas II Macc. 13:1 locates the same event in the 149th year. Year 150 according to the Jewish calculation began the spring preceding, but according to the official Seleucid calendar it would not begin until the following autumn. The availability of mulberry juice at the time (I Macc. 6:34) points to the summer. The fact that the Jews were hindered in their defense of BETH-ZUR by food shortages (I Macc. 6:49, 53) occasioned by the SABBATICAL YEAR also reinforces the dating, for this holy year was calculated from the autumn (Tishri, 164), so that food shortages would have been felt by the following summer.

5. Literary sources. ***a. Jason's history.*** The author of II Maccabees, commonly called the "epitomist," names the principal source of his historical narrative as the five-volume work of Jason of Cyrene (*see* JASON 3). He describes his process as one of omitting tedious and uninteresting matters and of embellishing the material appropriated in order to improve its literary style (2:23-31). Some incidents, particularly the martyrdoms, are dealt with at such length and with such striving for emotion-stirring effect that they can hardly be regarded as in any sense an epitome, but more probably an elaboration of a simpler narrative in Jason's work. Yet other materials are so highly condensed that they appear to be a hasty summary of events told more fully in the original source (13:22-26).

The epitomist also omitted whole episodes. Thus in ch. 14 he omits an account of Bacchides' expedition to install Alcimus as high priest (I Macc. 7:5-7, 25; II Macc. 14:4-10) and records only the later dispatch of Nicanor to reinstall Alcimus (II Macc. 14:11-27), which parallels I Macc. 7:26-32. The author makes it clear that he knew that Alcimus had been made high priest earlier (II Macc. 14:3), and the same is indicated indirectly by his knowledge of the date of Alcimus' initial visit (II Macc. 14:4; I Macc. 7:1).

The book divides into five clear-cut divisions, corresponding to the outline given above (*see* § C2). Each of these ends with a summary statement marking the formal close (3:40; 7:42; 10:9; 13:26*b*; 15:37*a*). Many scholars believe that these correspond with the fivefold division of Jason's work.

b. Letters. To the epitome are prefixed epistles

from the Palestinian Jews to those of Egypt, urging the observance of Hanukkah—the festival commemorating the purification of the temple after its desecration by Antiochus IV (*see* DEDICATION, FEAST OF). The letters are generally explained as two in number: (*a*) 1:1-9, written in the 188th year (124 B.C.), but citing an earlier letter (vss. 7-8) written in the 169th year (143); and (*b*) 1:10–2:18. The latter, however, appears to be composite; for 2:16 resumes the epistolary thread of 1:18, so that the intervening legendary matter may not have been an original part of this letter. It bears no date, but the situation implied would assign it to 165, prior to the first celebration of the Feast of Dedication. Since, however, its account of the death of Antiochus does not accord with the accounts found elsewhere, it is probably spurious (*see* ANTIOCHUS 4). These letters were prefixed to the historical work either by the epitomist himself or by a later editor. *See* § C7 *below*.

6. Sources of Jason's history. ***a. The biography of Judas.*** Since Judas' career is presented in close agreement with the life of Judas employed by I Maccabees (*cf.* §§ B5*c-d above*), it appears probable that Jason knew and ultilized this same biography. Jason, apparently, enriched his written material with the oral legends which the author of I Maccabees disdained to use (cf. I Macc. 9:22).

b. A Seleucid chronicle. For his knowledge of profane history, Jason may have consulted a Seleucid chronicle, employing the official Seleucid system of dating; but it was not necessarily the same document as that employed by the author of I Maccabees (*cf.* § B5*b above*); for in such matters as the number of soldiers employed in a battle, I and II Maccabees are not in agreement.

c. The temple archives. Jason must have had access to the archives of the temple, if we are to believe in the genuineness of the documents cited by the epitomist (II Macc. 9:19-27; 11:16-38). In these same archives may have been found the annals of the pre-Hasmonean priests containing some of the information concerning Onias, Jason, and Menelaus. Yet much of this material may have been transmitted by tradition which was embellished by supernatural occurrences. To have obtained so rich, extensive, and often accurate material, Jason must have visited the Holy Land. *See* JASON 3.

7. Integrity, problem of disarrangements. The origin of the introductory letters and of the disarrangements in the proper historical sequence of the book must be explained. The most obvious chronological error is the placing of the death of Antiochus IV prior to the rededication of the temple by Judas, both in the prefixed correspondence (1:11-18) and in the historical narrative (9:1–10:9). In the case of the latter, there is an obvious literary dislocation; for 10:9 ("Such then was the end of Antiochus") should stand immediately after 9:29 as the conclusion of the account of Antiochus' death. Yet it also belongs immediately before 10:10, as affording the proper antecedent for "that ungodly man." The reconsecration of the temple (10:1-8) is therefore an intrusion in its present context and should doubtless be placed prior to Antiochus' death, as in I Macc. 4–6.

There are other errors in sequence. II Macc. 8:30-33 intrudes an account of battles with Timothy and Bacchides between vs. 29 and vs. 34, breaking the original continuity of the account of the defeat of Nicanor (vss. 23-29, 34-36). At the same time vss. 30-33 presuppose the Maccabean recovery of Jerusalem, which has not yet been recorded, but which is correctly presented as the result of Judas' first defeat of Lysias in I Macc. 4; but the parallel account of II Maccabees is 11:1–12:1*a*, erroneously placed under the reign of Antiochus V, rather than Antiochus IV. The proper sequence would therefore be: (*a*) Lysias' campaign and defeat (11:1–12:1*a*); (*b*) the rededication of the temple (10:1-8); (*c*) the defeat of Timothy and Bacchides (8:30-33); (*d*) the death of Epiphanes (ch. 9; 10:9). The wars with neighboring peoples in 12:3-45 might also be properly placed before the death of Epiphanes, as in I Macc. 5; but it is highly probable that some of these battles occurred later, during the rule of Eupator.

These passages cannot be merely reshuffled, however, to restore the text to its original form; for they are clearly integrated in their present context. Thus the result of assigning the events of the Seleucid year 148 to the reign of Eupator in ch. 11 is to assign the death of Epiphanes to the year 147 and to shorten the period of the temple's desecration from three years (I Macc. 1:54, 59; 4:52) to two years (II Macc. 10:3). Moreover, in 11:1 Lysias is not the guardian of the king's son, as in I Macc. 3:33, but of the king himself. Hence Eupator has already become king, with the implication that Antiochus Epiphanes has died. Similarly the letter of II Macc. 11:22-26 (of doubtful genuineness) alludes to the death of Epiphanes, signifying that Lysias' campaign (11:1–12:1*a*) really occurred after Eupator became king. Finally, the dating of the reconsecration of the temple after the death of Epiphanes not only accords with the variant account of 1:10-18; it also makes for an over-all parallelism in the book, whereby the first half concludes with the institution of the Feast of Dedication (10:5-8), while the second half concludes with the establishment of Nicanor's Day (15:36).

Are these dislocations to be assigned to the epitomist or to a later editor? On the side of the first alternative, it may be claimed that the complete integration of the materials and the literary balance of the present book point to its composition in the form known to us. On the side of the second alternative, one may note the great discrepancy between the accounts of the death of Antiochus Epiphanes in chs. 1; 9 and question whether the epitomist, with his high regard for Jason's work, would have incorporated such a contradictory account as 1:13-16 (with Epiphanes actually killed in the Persian temple which he tried to rob, rather than suffering the later affliction described in ch. 9) and then have proceeded to rearrange the events of Jason's history to fit the implied historical sequence. Whoever wrought this confusion was doubtless influenced by the account of 1:13-16, for he surely would not have himself composed such a variant story. The epitomist may have been as likely content with a simple chronological adjustment of the text as a later editor; for he does not appear to be a man with acumen for historical research (2:28). It appears unnecessary, therefore, to attribute either the introductory epistles or the disarrangements to an editor; for the prologue to the

epitome (2:19-32), as also its epilogue (15:37-39), discloses an author who had more concern for literary effectiveness than for historical accuracy. As the painter of a landscape does not hesitate to move, or even remove, any tree which obscures an aesthetically attractive view, so the epitomist felt free to rearrange or omit as suited his intention.

8. Original language. The epitomist was a skilled rhetorician who wrote good literary Greek, though his love of bombast and pathos too often descends to bathos to appeal to modern literary tastes. The original language was certainly Greek, unless it be for the introductory letters, which disclose sufficient Semitisms as to suggest the possibility that they may have been composed in Hebrew or Aramaic.

9. Authorship and date. ***a. Hasidic affinities.*** Judas Maccabeus, the chief hero of the book, is presented as the leader of the Hasideans (14:6). No reference is made to their defection from him, as in I Macc. 7:12-16. Their refusal to fight on the sabbath day, even in self-defense, is presented with approval (6:11). The compromise of fighting in self-defense (I Macc. 2:39-42) is not recorded. Judas' leaving off pursuit of Nicanor is explained by the approach of the sabbath in II Macc. 8:25-26, whereas a military explanation is employed in I Macc. 4:16-18. II Macc. 15:1-5 discloses how sabbath-keeping Jews thwarted Nicanor's attempt to attack Judas in the region of Samaria. In all his prayers and speeches, Judas is a true Hasid. *See* HASIDIM; HASIDEANS.

b. Relationship to Daniel. It has often been pointed out that a knowledge of II Maccabees (as well as of I Maccabees) is necessary for an understanding of the historical allusions of Daniel, not only those which relate to the arrogance and cruelty of Antiochus Epiphanes, but also those which pertain to the details of his reign (especially in Dan. 11:21-39). Allusions to Heliodorus (Dan. 11:20; cf. II Macc. 3), to the martyrdom of Onias (Dan. 9:26; cf. II Macc. 4:30-36), and to Judas Maccabeus (Dan. 11:34) have been alleged (*see* DANIEL). It is likewise important to note the influence exercised by Daniel upon II Maccabees and his forebear Jason of Cyrene —since the two cannot be clearly distinguished.

The martyrs of II Maccabees (6:10–7:42; 14:37-46) act with the courage and piety of Daniel and his three companions in refusing to compromise with paganism. Their trust in the resurrection of the dead reflects the popularity of the book of Daniel (11:35; 12:2). There is a similar prominence given to angels. Judas, if alluded to in Daniel, is only a "little help" (11:34); for direct intervention of God is necessary for salvation: sending a fatal plague upon Epiphanes and dispatching the archangel Michael (11:45–12:1). II Maccabees, however, represents Judas' victories as miracles achieved through the help of angels, though, of course, the human struggle is very real. In both books pagan rulers are compelled to recognize the might and divinity of the Lord (Dan. 2:47; 3:28; 4:34-37; 6:25-27; II Macc. 3:35-39; 8:36; 9:17). Since the book of Daniel was written by a Hasidean, these affinities strengthen the Hasidic character of II Maccabees.

c. Affinities with the War Scroll. There is also a close conceptual relationship with the ancient military manual known as the War of the Sons of Light and the Sons of Darkness (*see* DEAD SEA SCROLLS). The battle slogans of Judas—"God's Help" (II Macc. 8:23; cf. 12:11; 13:13, 17; 15:7-8, 35) and "God's victory" (13:15)—are similar to those inscribed on the banners of the Sons of Light. Both works give a prominent place to the restoration of the temple and its cult. In both fighting is avoided during the sabbatical years. The military manual forbids it, and the epitomist does not represent the fighting in 11:1-12 as occurring during the sabbatical year, as indicated by I Macc. 6:49, 53. In the War Scroll there is the same supermundane character of the conflict as in II Maccabees; for the Sons of Light are supported by good angels in their war with the Sons of Darkness, who also for their part are supported by evil angels (*see* § B3 *above*). Since the ESSENES, who possessed the scroll, evolved from the Hasideans, once more the affinities reinforce the Hasidic character of II Maccabees. The author cannot be identified with either Pharisee or Essene; the most we can assert is that his outlook was Hasidean.

d. Anti-Hasmonean and pre-Roman. It is only in the second introductory letter that there is any direct allusion to the Hasmonean dynasty established by Simon (2:17). The fact that Simon appears in the narrative only in a somewhat unfavorable light (10:18-22; 14:17-19) probably indicates that the epitomist was anti-Hasmonean. In any case, his Hasidic affinities would place him in the company of those who opposed that dynasty, including both PHARISEES and ESSENES. The first introductory letter, dating from *ca.* 124 B.C. (1:9), was written during the rule of Simon's son John Hyrcanus. Though Hasidic discontent with the Hasmonean dynasty arose earlier (*cf.* § B8 *above*), Hyrcanus' open break with the Pharisees occurred near the end of his rule (*ca.* 106). It is doubtful that II Maccabees should be assigned a date much before 100. Since Jerusalem is still in the possession of the Jews (15:37), the book must be pre-Roman, prior to 63.

The work of Jason, upon which the epitomist depended, would be earlier, but probably not prior to the early part of Hyrcanus' rule—which lasted from 135 to 105; for time has to be allowed for the developed state of the traditions he recorded, as also for the composition of Judas' biography which was used by him (*see* § C6*a above*). Jason and the author of I Maccabees appear to have labored independently, for all the striking agreements between them are easily accounted for by their use of common sources, especially the biography of Judas. Jason probably wrote earlier than I Maccabees, but outside the Holy Land, so that his work was unknown to the author of I Maccabees.

e. Egyptian provenance. The fluent Greek of the epitome would seem to point to its composition by a Jew of the DISPERSION. Also, only outside Palestine would confessing oneself to be a Ἰουδαῖον (6:6) mean to "confess himself to be a Jew," rather than a "Judean." Though it has been suggested that Antioch may have been the place of composition, upon the assumption that some of the martyrdoms occurred there (7:3; cf. 6:8), the prefixing of letters addressed to the Egyptian Jews supports the prevalent view that the book was written in Egypt, perhaps at Alexandria. The stress upon the unique

sanctity of the Jerusalem temple may have been directed against the rival Jewish temple at HELIOPOLIS. Similarly, the impressing upon them of the observance of the Feast of Dedication was intended to promote the unity of Egyptian and Palestinian Jews.

10. Importance for the NT. The Letter to the Hebrews refers to the martyrdoms of II Macc. 6:10–7:42, when at Heb. 11:35 it declares: "Some were tortured, refusing to accept release, that they might rise again to a better life." The allusion of Heb. 11:38 is especially to II Maccabees (5:27; 6:11; 10:6; cf. I Macc. 2:30-31), when again it describes the martyrs as "wandering over deserts and mountains, and in dens and caves of the earth."

The influence of II Macc. 8:13 appears in the language of Rev. 21:8—"those who were cowardly and distrustful [οἱ δειλανδροῦντες καὶ ἀπιστεῦντες] of God's justice ran off and got away" being echoed by "the cowardly, the faithless [τοῖς δειλοῖς καὶ ἀπίστοις]," in the latter. The former reference makes clear that ἀπίστοις should be understood, not simply as "faithless" in the sense of disloyal, but also as "unbelieving" (KJV). Faith is the wellspring of the martyr's faithfulness.

For the interpretation of the coming of the Christ, II Maccabees affords important antitheses. In the NT, the Christ replaces the temple as God's abiding presence among his people (John 2:19-21; Rev. 21:22); and the glory of God, which was expected to return to the temple (II Macc. 2:8), has been manifested in him (John 1:14). Similarly, one may contrast the spurious divinity of Epiphanes, who "had just been thinking that he could command the waves of the sea, in his superhuman arrogance" (II Macc. 9:8), with God's unique Son, whom winds and sea obeyed (Luke 8:25).

Christ's expiatory suffering is adumbrated by the suffering of the martyrs, who thought of an atoning value in suffering (II Macc. 7:37; 8:3), though their vengeful attitude toward their enemies was not emulated by him. The necessity of an atonement with validity for the next world (in contrast with the OT sacrifices for this world only) underlies the crudity of prayer and sacrifice for the dead in 12:42-45. In fulfilment of this need is the "once for all . . . eternal redemption" of Christ (Heb. 9:12, 25-26). *See* ATONEMENT.

The supermundane character of the struggle of God's people is stressed in the NT, as also in II Maccabees. Jesus, in his wilderness trial, was tempted by Satan and ministered to by holy angels (Mark 1:13). In the agony of Gethsemane he was strengthened by an angel (Luke 22:43); but, unlike Maccabeus (II Macc. 11:6; 15:23), he accepted suffering rather than appeal for heavenly legions (Matt. 26:53-54). His death and resurrection are represented as the undoing of Satan (John 12:31; 14:30; 16:11; Col. 2:15; Heb. 2:14; Rev. 12:7-9). For Paul, the struggle of the saints is with the "spiritual hosts of wickedness in the heavenly places" (Eph. 6:12). *See* § C3 *above*.

In the area of custom one may note that the practice of mixing water with wine (II Macc. 15:39) prevents Jesus' command of drawing water for wine jars from appearing strange (John 2:7)—the novelty appears only in their having been filled with water alone. Perhaps against this background we are to understand I Tim. 5:23: "No longer drink only water, but use a *little* wine" (*see* WINE AND STRONG DRINK). John the Baptist's diet of locusts and wild honey (Mark 1:6) is well explained by the practice of the Hasideans, who in their wilderness retreat sought to avoid defilement by subsisting "on what grew wild" (II Macc. 5:27). *See* JOHN THE BAPTIST.

There are Greek words in the NT whose meanings are illumined by II Maccabees. Thus God's redemptive "appearance" (ἐπιφάνεια) occurs repeatedly in II Maccabees, not merely through the apparitions of angels (2:21; 3:24-25, 33; 12:22), but also through the military might of Maccabeus (15:27). God's epiphany in the NT is in the incarnation of his Son (Luke 1:79; II Tim. 1:10) and in his expected return in glory (II Thess. 2:8; I Tim. 6:14; II Tim. 4:1, 8; Tit. 2:13). Likewise, the persecutor in II Macc. 7:19 is one who dares "to fight against God" (θεόμαχειν); the same verb is employed as in Acts 5:39 for the persecutors of the church.

D. *III MACCABEES*. 1. Original title. The present name is a misnomer (*cf.* § A *above*). Consequently, where the listing of the *Synopsis Athanasii* mentions Μακκαβαϊκὰ βιβλία δ′, Πτολεμαϊκά ("four Maccabean books, Ptolemaica"), it is supposed that we should emend δ′ to καί, so as to read "the Maccabean books and Ptolemaica"—the latter being III Maccabees. Its proximity to I and II Maccabees in MSS of the SEPTUAGINT probably gave rise to its present name. This association was not without reason; for its affinities with II Maccabees (*see* § D5 *below*), together with the fact that its history precedes that of II Maccabees, makes the book an excellent prolegomenon to II Maccabees.

2. Contents. The book presents three stories of conflict between Ptolemy Philopator and Judaism—each being the outgrowth of the preceding. The first (1:1–2:24) is his attempt to enter the sanctuary of the Jerusalem TEMPLE, following his victory over Antiochus III in the Battle of Raphia. After popular protest and the eloquent prayer of the high priest Simon (*see* SIMON 1), Philopator swooned. Gradually recovering his wits, he withdrew with bitter threats to Alexandria.

The second story (2:25-33) is his spiteful effort to exclude the Jews from Alexandrian citizenship, by requiring all citizens to sacrifice at the royal temples. All who refused were to be enrolled as serfs and branded with the ivy leaf, the emblem of the god Dionysus. Only a few Jews acquiesced; the rest resorted to bribery in order to avoid the enrollment, and even ostracized their apostate brethren.

In the third story (chs. 3–7) the king brought with great cruelty all the Jews of the Egyptian interior to the hippodrome near Alexandria, where they were to be enrolled for execution; but this was hindered by a failure in the supply of papyrus and pens, so that after a period of forty days the census was still incomplete. Impatiently, the decree was given that they should be trampled by drunken elephants; but this was delayed on two successive days, first by the king's oversleeping, and then by his complete forgetfulness—events presented as miracles, but placed in the setting of the king's carousals. When the event was in readiness, the Jews gave themselves to prayer,

being led by an aged priest, Eleazar. Two angels descended; this panicked the elephants and turned them back upon Philopator's own soldiers.

Moved to penitence, the king released the Jews, feasted them for a week, and then dismissed them with a letter which indicated their loyalty. He also gave them permission to kill their weaker brethren who had apostatized. En route home, they celebrated a second week of festivity after reaching Ptolemaïs (apparently "Ptolemaïs of the harbor," twelve miles SW of Cairo). Then they completed their homeward journey in safety. After each of the foregoing weeks of feasting, the Jews ordained to commemorate the occasion by instituting an annual festival.

3. Message. III Maccabees is an apologetical work intended to make the Jews more steadfast in their faith and practice and designed also as a warning to all would-be persecutors; for the Jews are a unique people, the sanctity of whose temple cannot be safely violated (1:8–2:24) and the purity of whose religion cannot be contaminated even under duress (2:25–7:23). They are loyal citizens, who have always been devoted to the Egyptian government, having manned her fortresses from of old (3:21; 6:25; 7:7; *see* ARISTEAS; ELEPHANTINE PAPYRI). Though they reside in the lands of their enemies, they are protected by the special providence of God (6:15), who is the "eternal saviour of Israel" (7:16).

4. Historical sources. ***a. An anti-Ptolemaic history.*** The book is so replete with obvious exaggerations and needless resort to miracles that a cursory reading suggests a historical romance. Yet the author is so well informed that he must have been dependent upon a written history of the period. His account of the Battle of Raphia is remarkably close to that of Polybius of the second century B.C. (*Histories* V.80-86). Philopator's visit to nearby cities and their enthusiastic welcome of him is duly recorded by Polybius, as also by III Macc. 1:6-8. In this setting, it is most reasonable that he should have visited Jerusalem. The ancient monuments attest his lavish expenditures upon temples, in full accord with his gifts to Syrian shrines and his sacrifices at Jerusalem (1:7-10). He enacted two censuses: one in 220-219 B.C., the other in 206-205. The second, which alone follows the Battle of Raphia (217), is too far removed to have been a vengeful act occasioned by his rebuff in Jerusalem; but it is late enough for the king to refer to his children (7:2)—his legitimate son having been born in 208. His life of dissipation and misgovernment is attested by Polybius (*Histories* V.34), as also by Plutarch (*Lives of Agis and Cleomenes* XXXIII-XXXIV), who depicts him as "absorbed with women and Dionysiac routs and revels."

Though such characterizations may not be wholly fair, it is obvious that the author had access to some good historical information. Unexplained differences in detail prevent us from identifying his source with the *Histories* of Polybius—though his *memoriter* usage of it is possible. Since a certain Ptolemy of Megalopolis, who served as governor of Cyprus under Philopator, wrote an uncomplimentary biography of his overlord, it is suggested that his work was the primary source of both Polybius (who was also of Megalopolis) and III Maccabees for the history of this period. His writing is believed to have been characterized by extravagances adaptable to the use of III Maccabees. Unfortunately, only fragments of his work survive.

b. Jewish traditions. The political rights of the Jews in ALEXANDRIA were ambiguous and often contested, so that an attempt to curb them may well have occurred upon the occasion of a census—knowledge of which was transmitted by tradition.

The elephant story was an independent legend, unrelated to the census; for Josephus (Apion II.v) presents us with a variant account which locates the event under Ptolemy IX Physcon (146-117 B.C.), as an act of political reprisal against the Alexandrian Jews for supporting the rival claims of Queen Cleopatra. This setting is intrinsically more probable. Yet the identity of the Ptolemy may have been indefinite in popular lore, enabling the author of III Maccabees to fuse the story with other traditions and history.

The sharp distinction drawn between the Jews of Alexandria and those of the interior, as also between the two festivals inaugurated—one at Alexandria, the other at Ptolemaïs—points to the fusion of variant traditions into one dramatic story.

5. Literary affinities. ***a. Comparison with Esther.*** The work combines the elements of religious oppression characteristic of Daniel with the purely ethnical oppression of the canonical ESTHER. The conspiracy of Theodotus (1:2) recalls that of the chamberlains of Esth. 2:21-23; and Dositheus saves the king's life (III Macc. 1:3), as does Mordecai (Esth. 6:2). Similar charges of disloyalty are brought against the Jews (III Macc. 3:19; Esth. 3:8). In each case an attempted pogrom was abortive and recoiled upon the perpetrators, ending with the institution of a commemorative festival. In both books the delivered Jews are given license to kill. In Esther (ch. 9) this is a mostly vengeful slaying of hostile Gentiles, but in III Maccabees (7:10-15) it is a heartless slaying of their weaker brethren. The tone of Esther is almost secular, whereas that of III Maccabees is profoundly religious; but this difference is remedied by the apocryphal additions of the Greek Esther. *See* ESTHER, APOCRYPHAL.

b. Comparison with II Maccabees. In III Maccabees (2:27-30), as also in II Maccabees (4:9; 6:1-9), an effort was made to impose an alien citizenship upon the Jews involving compromise with Hellenism. In both books remarkable deliverances are commemorated by festivals. The abortive effort of Philopator to penetrate into the sanctuary at Jerusalem (III Macc. 1:9–2:24) recalls the similar incident of Heliodorus (II Macc. 3). Heliodorus' vision of scourging angels (vs. 25) is paralleled by those which terrify the Egyptians and their elephants in III Macc. 6:18-21. Prayers for the protection of the sanctuary figure in both works (II Macc. 3:15-23; 14:34-36; III Macc. 2:1-20).

6. Authorship and date. Since Alexandria is the focal point of the story, there is no room to doubt that the author was an Alexandrian Jew. He was a true Hasidean who believed in loyalty unto death to the law of Moses. In the spirit of the Bible, his defense of Judaism was based upon history alone, not upon philosophical argument—in this respect being quite unlike ARISTEAS, PHILO JUDEUS, and the

author of IV Maccabees (*cf. below*). His faith in miracles parallels that of Daniel, whose stories are recalled in Simon's prayer (III Macc. 6:6-7). No mention is made of Esther, for in the story there is no room for hero or heroine, but only for the "mighty works" of God (6:13). The focus upon deliverance is sufficient to explain the absence of any reference to the resurrection, precisely as in the stories of Dan. 1–6, despite that faith which finds expression later in the same book (Dan. 11:35; 12:2). The author believed in "glorified angels of terrifying aspect" (III Macc. 6:18); but naturally he allowed them to be seen by the Egyptians only, mercifully shielding the Jews from any further terror. Though he wrote in Greek for Greek-speaking Jews, his religion is scarcely influenced by his Hellenistic environment.

The book could not have been written prior to the first century B.C., as may be inferred from the influence of II Maccabees. The author probably knew Esther and Daniel only in the enlarged Greek recension. His description of three youths in the fiery furnace (6:6; cf. Dan. 3:20-25) reflects the language of the Greek Daniel (Song Thr. Ch. 26-27). Linguistic similarities with the Greek Epistle of Aristeas (*see* ARISTEAS) also suggest a date not earlier than the first century B.C. Epistolary formulas indicate the same period. The Ptolemies did not use personal epithets like "Philopator" (III Macc. 3:12; 7:1) in official correspondence before *ca.* 100 B.C.

The author's intention was to prepare a religious scroll to meet the inspirational and instructional needs of the distinctive festivals of Egyptian Jewry. This alone may be sufficient occasion for his writing, without there being any especially severe persecution in his own day. There is no reference to emperor-worship or to the erection of images in synagogues expected in a work written in the time of Caligula (cf. the persecution of A.D. 38-39, described in Philo's work *On Flaccus*). Though it has been claimed that the word for "census," λαογραφία (2:28), is distinctively Roman, the evidence is ambiguous; for though in Roman usage it applied to noncitizens only as in 2:28-30, it was concerned with a poll tax, of which nothing is said in III Maccabees. Hence the word may be used in a nontechnical pre-Roman sense of an enrollment for general purposes of administration and taxation. Allowing for the ambiguity, the book may be safely dated to the first century B.C., either before or after Roman rule, which began in 30 B.C.

7. Importance for the NT. The book affords additional examples of God's "manifestation" (ἐπιφάνεια) in history (2:9; 5:8, 51). God "manifests" his mercy (2:19), his might (5:13), and his presence (6:18) in order to protect his temple and his people. He is, indeed, through the deliverances of this book "the manifest God" (5:35)—but how much more through the redemption of Christ! *Cf.* § C10 *above*.

E. *IV MACCABEES*. 1. Original title. The common name of this book in Greek MSS is IV Maccabees (*cf.* § A *above*). But through a false attribution to JOSEPHUS, it appears also among his works, entitled *On the Supremacy of Reason* (Περὶ αὐτοκράτορος λογισμοῦ), and is thus cited by Eusebius (Hist. III. x.6) and Jerome (*On Illustrious Men* 13). Variant forms of the title appear in some MSS of Josephus. Whatever the original name, *On the Supremacy of Reason* is most apt.

2. Contents. The book contains a philosophic discourse on the supremacy of religious reason over all passions of body and soul. After a statement of the theme (1:1-12) and a careful definition of the philosophical terms (1:13-30*a*), the author illustrates his oft-reiterated thesis by OT examples (1:30*b*–3:17). The greatest demonstration of his proposition, however, is to be found in the heroism of those who died for their religion during the persecution of Antiochus Epiphanes: Eleazar, the seven brothers, and their mother. To them he refers at the outset (1:8-12), and to them he devotes the major part of his book (5:1–18:24).

3. Message. The book is dedicated to the proposition that the law is the most authentic expression of true philosophy, as seen by the following propositions: "Reason, then, is the intellect choosing with correct judgment the life of wisdom; wisdom is knowledge of things human and divine and their cause. Such wisdom is education in the Law, through which we learn things divine reverently and things human advantageously" (1:16-17, translated by Hadas; *see* WISDOM). Reason is frequently denominated "religious wisdom," ὁ εὐσεβὴς λογισμός (1:1; 7:16; 13:1; 15:23; 16:1; 18:2), or the "reason whose source and essence is piety," ὁ λογισμὸς τῆς εὐσεβείας (7:4, 23; 16:4). By claiming that God designed Jewish food laws in accordance with that which was fit for the soul (or physical life?), the author equates the law of Moses with natural law, as in Stoicism (5:25-26; *see* STOICS; CLEAN AND UNCLEAN). There is also an echo of universal brotherhood, grounded in the common nature of man (12:13).

The human passions are capable of an Aristotelian division into pleasure (ἡδονή) and pain (πόνος); but associated with these are desire (ἐπιθυμία) and joy (χαρά), fear (φόβος) and grief (λύπη)—a fourfold classification of emotions similar to that of Stoicism (1:20-23; *cf.* STOICS). Anger (θυμὸς) is common to both pleasure and pain, and the inclination to EVIL (ἡ κακοήθης διάθεσις) is a form of pleasure including many emotions of body and soul (1:24-28). This last is derived from rabbinic Judaism, wherein the evil inclination (*yeṣer ha-ra'*) stands opposed to the good inclination (*yeṣer ha-tobh*). Accordingly it is elucidated so as to include the appetite for forbidden foods (vs. 27). Equally Jewish is the author's repudiation of the Stoic notion that the sage achieves freedom from passion (ἀπάθεια); for virtue is achieved, not by eradication of God-given emotions, but by their subjection to religious reason (2:21-23). *See* GREEK RELIGION AND PHILOSOPHY.

Judaism may boast of her philosophers, of whom the aged priest Eleazar and even the seven youths are outstanding examples (5:4; 7:7-9; 8:1). Like Socrates in Plato's *Gorgias*, they believe that it is better to suffer evil than to do evil, also that the evildoer is more miserable than the man wronged (9:30). On the other hand, Antiochus, like the opponents of Socrates, advocates hedonism and opportunism (5:6-12; 8:5-10; 12:3-4). By choosing death in preference to apostasy, the noble "Maccabees" reveal (1:6, 18; 3:1) that they possess the qualities of: prudence (φρόνησις), justice (δικαιοσύνη), courage (ἀνδρεία),

and self-control (σωφροσύνη)—virtues acclaimed by the Stoics, but Platonic in origin. The amazing endurance (ὑπομονή) of these martyrs, whereby they demonstrated their Stoic strength, proves (9:18) that "the Hebrews alone are invincible in virtue's cause."

As with Socrates and Plato, the ultimate moral sanctions are rooted in the doctrine of immortality: eternal life with God for the righteous (7:3; 9:22; 14:5-6; 16:13; 17:12; 18:23), but eternal punishment for the wicked (9:9, 31; 10:15, 21; 12:12, 18; 13:15; 15:27; 18:5, 22). Immortality, as in Greek thought, seems to be wholly spiritual—nothing is made of a physical resurrection, but some of the language is suggestive of a spiritual resurrection. *See* § E9 *below; see also* RESURRECTION.

The author sometimes uses philosophic titles for God: Providence, πρόνοια (9:24; 13:19; 17:22); Justice, δίκη (4:21; 8:14, 22; 9:9; 11:3; 12:12; 18:22); and Power, δύναμις (5:13). These attributes are never hypostatized, however, as in PHILO JUDEUS. We have rather the traditional angelology (4:10; 7:11). *See* ANGEL.

The most astonishing doctrine is the expiatory power of the blood of the martyrs. It dissolves the power of tyranny (a punishment for the nation's sin), cleanses the fatherland, and renews the observance of the law (1:11; 17:21; 18:4). Atonement is explained in strongly substitutionary terms (6:28-29; 17:21)—life for life (a ψυχή becomes an ἀντίψυχος)! Like the blood of Abel (Gen. 4:10-11), it calls down the wrath of God upon the wrongdoer (IV Macc. 11:22; 12:17-18). The expiatory death of the SERVANT OF THE LORD in Isa. 53 partially anticipates this doctrine; but the closest parallels are in the Essene Manual of Discipline, where the Council of the Community must "expiate iniquity through practicing justice and through the anguish of the refining furnace" (VIII.3-4), and as "the chosen of divine acceptance must atone for the land and render to the wicked their desert" (VIII.6-7; cf. 9-10). *See* DEAD SEA SCROLLS; *cf.* § C10 *above*.

4. Literary classification. The book has been variously assessed, as: (*a*) a sermon, (*b*) a diatribe (or lecture), and (*c*) a panegyric on Maccabean martyrs. Its religious tone, including the use of doxologies (1:12; 18:24), suggests its delivery in the context of worship; but the fact that it develops a philosophical dogma rather than a biblical text favors its classification as a diatribe, rather than a sermon. Still the element of eulogy and frequent apostrophizing favors even more a panegyric. In any case, the book was written for oral delivery and is a splendid piece of Hellenistic oratory. It is quite declamatory and employs many rhetorical devices to create the moods of pathos, horror, admiration, and conviction.

5. Literary source. The historical material of the book seems to be dependent upon II Maccabees. The background of the Seleucid persecution of the Jews (IV Macc. 3:19-4:26) summarizes II Macc. 2-6:11. The martyrologies (IV Macc. 5:1-18:24) expand and elaborate II Macc. 6:18-7:42. Reference is also made to the cruel fate of Antiochus Epiphanes (IV Macc. 18:5), with allusion to II Macc. 9. The only alternative to the use of II Maccabees is a possible dependence upon Jason of Cyrene, whose work II Maccabees professes to condense. (*cf.* § C5*a above*). In support of this dependence are notable differences in the narrative and the considerably fuller account of the martyrdoms; but these are easily explicable as the author's own free deviations—especially since in the story of King David's thirst (IV Macc. 3:6-16), he embellishes and alters the biblical account (II Sam. 23:13-17; I Chr. 11:15-19).

6. Integrity. The genuineness of three sections has been questioned. IV Macc. 17:23-24; 18:6-19 interrupt the context and do not accord in language or tenor with the rest of the book. The latter passage gives a speech of the martyr mother concerning the domestic teaching of the now deceased father, in order to attribute the endurance of the sons to their paternal instruction. Its citations of Deut. 30:20; 32:39; Ezek. 37:3 (at IV Macc. 18:17-18) allude to a doctrine of physical resurrection at odds with the rest of the work (*cf.* § D3 *above*). Despite claims to the contrary, 18:5*b* is defensible as genuine and in its proper place as an explanation of how Antiochus met his end (vs. 5*a*), and no mere gloss accounting for Jewish military successes (vs. 4). It accords also with the author's method of simplifying the more complex historical situations of II Maccabees—leaving Antiochus in the vicinity of Jerusalem (4:22-5:3) until the martyrdoms were over and he himself was ready to march to his death in Persia.

7. Occasion. Since IV Maccabees was composed to commemorate those "who at this season died" (1:10; cf. 3:19), one is led to inquire as to the identity of the "season." As early as the fourth and fifth centuries A.D., the Greek and Syriac churches observed an anniversary of the martyrdoms on August 1. The tomb (or tombs) was (or were) believed to be near a synagogue in the Kerateion Quarter of Antioch (*see* ANTIOCH [SYRIAN]). However, 18:5*b*-6*a* (*cf.* § D6 *above*) would contradict this location of the tomb; and there is late Arabic attestation to a synagogue built over the remains of these martyrs—the first constructed after the destruction of the second temple (*see* TEMPLE, JERUSALEM) and therefore supposedly at Jerusalem. Consequently, even though the book was written as a memorial, since its composition was probably outside the Holy Land (*cf.* § D8 *below*), it could not have been intended for delivery at (or near) the place of burial—the only allusion to the tomb (17:8-10) being wholly rhetorical.

The stories are highly embellished legends which record the execution of Eleazar as taking place at a common trial with the seven youths and their mother. These were separate incidents in II Macc. 6:18-31; 7:1-41, with the king present only for the latter, which can be presumed to be historical only in the sense that it is a legend growing out of real persecution and martyrdom. Therefore, no death date could have been known, and any memorial address must have been assimilated to some other occasion.

Since the Christian commemoration of August 1 approximates the Jewish Ninth of Ab lamentations of the destruction of the first and second temples, it may have been borrowed from the Kerateion Synagogue of Antioch, where it was recited on that occasion. However, this observance did not come into vogue until after 70, whereas IV Maccabees bemoans the suppression of the temple cult by Antiochus as a great tragedy (4:20) from which the faith-

ful suffering of the martyrs has brought relief. Consequently, the temple is presumed still to stand, and the book was composed prior to 70, and therefore for some other festival.

The book's constant emphasis upon atonement wrought by the martyrdoms would make it suitable for reading on the annual Day of Atonement. Analogously, a rabbinic legend of the execution by Hadrian of ten teachers of the law is included in the synagogue liturgy for that day.

The Feast of Dedication (*see* DEDICATION, FEAST OF) would be most apt of all for commemoration of Maccabean martyrs, though no reference is made to the festival in this book. Yet it reiterates the theme of the purified fatherland (1:11; 17:21) through the suffering of the martyrs for the people (6:29), in harmony with II Maccabees' representation of the festival as one of purification (II Macc. 1:18; 2:16, 19; 10:3, 5). The doctrine of the inviolability of the temple while the law is faithfully observed is borrowed from II Maccabees, as also the explanation of Antiochus IV's profanation as due to the sins of the Jews. Since the deaths of the "Maccabees" under torture have undone the desecration of the tyrant, the book would be appropriate for the Feast of Dedication, with its commemoration of the renewed altar and purified temple. In harmony with this, there is some evidence for the Jewish recitation of a rabbinic variant of the story of the seven brethren and their mother (though assigned to the persecution of Hadrian) at this feast. To be sure, one might expect some allusion to the noble Hasmonean house, to whom much credit was due from recovery of the temple; but in pious circles the HASMONEANS fell more and more into ill repute, and our author represents the deliverance as achieved through martyrdom rather than by military prowess (17:22; 18:4).

8. Authorship and date. The book was written in a semiclassical style of Greek (making frequent use of the archaic optative) by a writer versed in Greek philosophy, who addressed a Jewish audience expected to follow and appreciate his learned reasoning. This suggests that he was a Jew of the Diaspora. It is commonly claimed that he was ignorant of the topography of Jerusalem, since he locates a gymnasium *upon* the citadel of the city (4:20) instead of *under* it as in II Macc. 4:12. However, he employs ἐπ(ί) with the dative, which in both classical and koine Greek often means "near," or "at," rather than "upon." Even so, the sense of detachment from the place, indicated by the change of preposition, does imply composition outside the Holy Land. The assimilation of Greek philosophy by Judaism is well attested for ALEXANDRIA. Therefore, the author of IV Maccabees has often been assigned to this city. If, however, the Greek of IV Maccabees is Asiatic (as good authorities claim), composition at the great cultural center of Antioch (*see* ANTIOCH [SYRIAN]) seems more probable. In that case, pious "invention" had not yet located the Maccabean tomb in that city, or the author would not have represented the martyrdoms as taking place at Jerusalem.

As already seen (§ E7 *above*), the book was written while the temple was still standing. The most precise criterion for dating is the alteration of the title of Apollonius from "governor of Coelesyria and Phoenicia" (II Macc. 4:4) to "governor of Syria and Phoenicia and Cilicia" (IV Macc. 4:2); for CILICIA was connected administratively with Syria and Phoenicia only for the brief span of A.D. 18-55. The persecution by Caligula occurred in the middle of this period (38-39); but this time, as also the years following, is excluded, since the auditors of the panegyric find it difficult to believe their ears concerning the cruelty of Antiochus (14:9). So, then, IV Maccabees was written between 18 and 37.

9. Importance for the NT. As a writing roughly contemporary with Jesus and the apostles, IV Maccabees is very important for establishing the thought of the Diaspora Judaism at that time. However, one must not draw too rigid a distinction between the religion of the Jews inside and outside the Holy Land; for the Greco-Roman world was largely one.

Jesus' admonition not to fear him who can kill the body alone, but rather him who can kill both body and soul (Matt. 10:28; Luke 12:4-5), is paralleled by IV Macc. 10:4; 15:8; II Macc. 6:30—from which it is apparent that Jesus referred to God as the one to be feared (*see* FEAR). Reception of the righteous dead into the fellowship of the patriarchs was a current view (IV Macc. 7:19; 16:25) appearing at Luke 16:23, an idea combined also with the phrase "live to God" (Luke 20:37-38). The sympathetic suffering of the mother with each of her sons (IV Macc. 15: 12, 16, 22) is applied to Mary the mother of Jesus in a parenthetical remark of Luke 2:35*a*. The association of sweat with blood (IV Macc. 7:8) appears likewise at Luke 22:44. If the last two Lukan references are genuine to Luke, and not glosses, Luke may have been influenced by IV Maccabees.

Paul had not necessarily read IV Maccabees shortly before writing I Corinthians; but when he wrote (13:3*b*): "If I deliver my body to be burned, but have not love, I gain nothing," it was a poignant criticism of IV Maccabees and similar stories. Paul's great moral trilogy of faith, hope, and love—of which the greatest is love (vs. 13)—strikingly suggests an antithesis to the four Hellenistic virtues, prudence, justice, courage, and self-control—of which the greatest is prudence (IV Macc. 1:18-19). Most significantly, in this letter Paul developed fully his doctrine of the spiritual body (I Cor. 15:35-57), which may have been suggested in part by IV Macc. 9:22: "As though he were being transformed into incorruption [μέτασχηματιζόμενος εἰς ἀφθαρσίαν] by the fire, he nobly endured the torments" (cf. I Cor. 15: 52-54; Phil. 3:21). The "as though" (ὥσπερ) of IV Maccabees seems to indicate a mere figure of speech, yet the author also speaks of receiving pure and deathless souls at physical death (18:23)—an idea somewhat suggestive of Paul's "spiritual body" (cf. II Cor. 5:1-4). *See* PAUL; RESURRECTION.

The "history of religion" (ἡ τῆς εὐσεβείας ἱστορία) for IV Maccabees (17:7; cf. 3:19) is not the usual *Heilsgeschichte* (salvation story) of the Bible, but a record of human endurance under trial. So also in the Letter to the Hebrews, where likewise FAITH is a heroic principle of doing and suffering for righteousness' sake (Heb. 11; cf. IV Macc. 15:24; 16:22; 17:2). Heb. 11:34-35 suggests IV Maccabees as background, but it may rather be accounted for by II Maccabees (*cf.* § C10 *above*). The common figure of

the spectators in the stadium (Heb. 12:1; IV Macc. 17:11-16), observing the gladiators, would cause no pause, if "looking to Jesus" (Heb. 12:2) were not reminiscent of "looking unto God" (IV Macc. 17:10) —in each case the Greek ἀφορῶντες εἰς. Sanctification by the expiatory blood of the martyrs in IV Macc. 1:11; 6:29; 17:21-22 is paralleled by the sanctifying death of Christ in Heb. 1:3; 2:11; 10:10, 14, 29; 13:12—the former, however, being limited to the Jews and the Holy Land, whereas Christ's expiation is universal. Neither has Christ's blood the vengeful effect ascribed to that of the Maccabean martyrs (*cf.* § E3 *above;* Rev. 6:9-10), but it "speaks more graciously than the blood of Abel."

In IV Maccabees "to conquer" (νικᾶν) continually means to endure martyrdom without apostasy (6:10; 7:4, 10-11; 8:1; 9:6; 11:20), thereby defeating tyranny (1:11; 9:30; 16:14) and proving the power of religious reason over the passions (3:17; 6:33; 13:2, 7; 17:15). Similar meanings are common for the word in Johannine literature (John 16:33; I John 2:13-14; 4:4; 5:4-5; Rev. 2:7, 11, 17, 26; 3:5, 12, 21; 11:7; 12:11; 13:7; 17:14; 21:7). In both IV Macc. 17:18; Rev. 7:15, the martyred dead stand before the throne of God.

The Gospel According to John traces the ministry of Jesus through a sequence of Jewish feasts, including the Feast of Dedication (10:22). If stories of Maccabean martyrs were told on such an occasion (*cf.* § E7 *above*), a comparison with John is most instructive; for here Jesus is threatened with martyrdom (vss. 31-39) and like a good shepherd will lay down his life for others (vs. 15). The raising of Lazarus signifies that Christ has the power of renewal (note ἐγκαίνια as a name for the festival). This Lazarus (whose name is a form of Eleazar) was himself in danger of being martyred (12:10-11); but it was Jesus who was destined to be the vicarious sacrifice (11: 49-53). *See* ATONEMENT.

F. *CANONICITY.* The books of Maccabees, along with other APOCRYPHA and PSEUDEPIGRAPHA, owe their preservation solely to the church, which cherished them as historical works of God's people Israel and as examples of heroic defense of the truth. Although I and II Maccabees are cited by some church fathers as scripture, the more scholarly of them who could read Hebrew, or who were acquainted with the Jewish Bible, did not include these among the canonical writings. I and II Maccabees had no place in the original Vulg. of Jerome, although they were in the OL Version and from there gained later admission into the Vulg. III Maccabees was well received only in the Eastern churches (Greek, Syriac, and Armenian), where it was received along with I and II Maccabees. IV Maccabees was widely influential in the writing of martyrologies and for celebrating the heroism of the Maccabean martyrs; and it appears in some MSS of the LXX. However, it has rarely received recognition as canonical. As late as the time of Luther, prominent Roman Catholic scholars rejected all the Apoc. It was in opposition to the Reformers that the Roman church at the Council of Trent in 1546 decreed the canonization of the Apoc., including I and II Maccabees. *See* CANON OF THE OT.

As regards historical and religious value, I Maccabees compares favorably with Kings, II Maccabees with Chronicles, and III Maccabees with Esther. IV Maccabees, either as a philosophical treatise or as a panegyric, is without any counterpart in the Bible. For biblical scholarship, the concept of canon is an irrelevance; for all literature is welcome material of study for the light it can shed upon the OT (as these books upon Daniel) or the NT. The Maccabean books are also appreciated for themselves as the religious literature of God's chosen people, wherein great truths often find apt expression.

Bibliography. Commentaries: R. L. Bensly, *The Fourth Book of Maccabees and Kindred Documents in Syr., with an Introduction and Translations* (1895), shows Christian interest in this book. See the following commentaries in R. H. Charles, *The Apoc. and Pseudep. of the OT* (1913): W. O. E. Oesterley, "The First Book of Maccabees," II, 59-124; J. Moffatt, "The Second Book of Maccabees," I, 125-54; C. W. Emmet, "The Third Book of Maccabees," I, 155-73; R. B. Townshend, "The Fourth Book of Maccabees," II, 653-85. C. W. Emmet, *The 3rd and 4th Books of Maccabees* (translations of early documents; 1918): of popular character. A. Dupont-Sommer, *Le quatrième livre des Machabées,* Librairie Ancienne Honoré Champion (1939): very valuable. F.-M. Abel, *Les livres des Maccabées,* EB (1949): valuable for the first two books, with critical Greek text. M. Hadas, *The Third and Fourth Books of Maccabees,* Jewish Apocryphal Literature (1953): valuable, with critical Greek text. J. C. Dancy, *A Commentary on I Maccabees* (1954): semipopular, with notes on II Maccabees also. S. Tedesche (trans.) and S. Zeitlin (commentator), *The First Book of Maccabees,* Jewish Apocryphal Literature (1950); *The Second Book of Maccabees,* Jewish Apocryphal Literature (1954): both important studies with critical Greek texts. MACCABEUS măk'ə bē'əs [Μακκαβαῖος]. Surname of Judas, son of Mattathias, who gave the name to his family and to their celebrated revolt against the Syrian king. The meaning is often said to be "hammerer"; but it has been pointed out that, if this is so, the word from which it is derived does not mean a heavy hammer, as might be expected, but a small workman's tool.

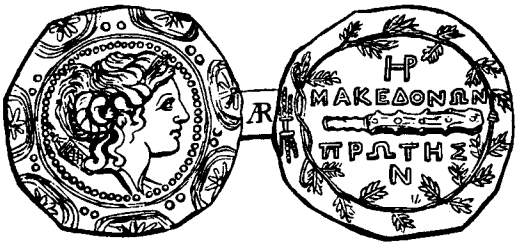
See also MACCABEES. N. TURNER

***MACEDONIA** măs'ə dō'nĭ ə [ἡ Μακεδονία]; MACEDONIAN —ən. The region N of ACHAIA in what is now the Balkan Peninsula.

Macedonia is predominantly mountainous but also has many fertile plains. Stretching from the Adriatic Sea to the Aegean, its most important cities were on the Aegean coast. Analysis of the ancient population indicates a pre-Indo-Germanic stratum overlaid by Thracian, Illyrian, and Macedonian tribes, with later Greek and Latin colonization and additional immigration from the N and the E.

According to Herodotus (VIII.139), the founder of the Macedonian kingdom was Perdikkas I, who must have reigned in the first half of the seventh century B.C. He was succeeded in turn by six descendants named by Herodotus, among them Philip I, Amyntas I, and Alexander I. Amyntas I may be placed in the second half of the sixth century, Alexander I *ca.* 480-450 B.C. The next kings were Perdikkas II (*ca.* 450–*ca.* 413 B.C.) and Archelaus (*ca.* 413–*ca.* 399). Of the latter, Thucydides (II.100) says that he did more than all his eight predecessors together to build up the roads and the military forces of Macedonia. In the following decades a number of different rulers struggled for and held the power; then in 359 B.C., Philip II, son of Amyntas III, came to the throne. It was the work of Philip II, by war and diplomacy, to weld together the Macedonian kingdom as never before, and then, with victory at the Battle of Chaeroneia in 338 B.C. (Diodorus XVI.85-86), to establish the supremacy of Macedonia over most of the Greek states. Thereafter he proposed war against Persia and in 336 sent an advance force across the Hellespont; but before he himself could follow, he was assassinated by a Macedonian noble. Alexander III, son of Philip II and Olympias, at thirteen a student of Aristotle, at eighteen a commander in the Battle of Chaeroneia, and now but twenty, acted swiftly to claim the kingdom. In the meteoric career which followed, Alexander, known to history as the Great, accomplished such amazing conquests



1. A Macedonian coin, bearing the Greek inscription

that by the time of his death in Babylon in 323 B.C. the Macedonian name belonged to an empire which extended from his native highlands to the Nile and the Indus (Plutarch *Alexander*). Fig. MAC 1.

The regent of Macedonia during Alexander's expedition to the East was Antipater, formerly an ambassador of Philip II to Athens. Before his death in 319 B.C., Antipater handed power to Polyperchon, former phalanx leader under Alexander, passing over his own son Cassander. Cassander took up the struggle and by 316 was master of Macedonia (Diodorus XIX.52). When Antigonus Cyclops, former general of Alexander and claimant to all his empire, fell at the Battle of Ipsus (301 B.C.), Cassander was recognized as king of Macedonia. Alexander, son of Cassander, followed the latter in 297 B.C. but was soon slain by Demetrius Poliorcetes, son of Antigonus Cyclops, who reigned from 294 to 287 (Plutarch *Demetrius*). After that there were years of confused struggles and also of invasion by migrating Gauls; then in 276 B.C., Antigonus II Gonatas, son of Demetrius, consolidated his position as king of the land (Polybius II.45; IX.29). Henceforward, till the coming of the Romans, Macedonia was the realm of the Antigonids.

In 168 B.C., Perseus, king of Macedonia and last of the Antigonids, was defeated at the Battle of Pydna by the Roman consul L. Aemilius Paullus (Polybius XXIX.xvii-xxi; Plutarch *Aemilius Paullus* XVI-XXII). In the settlement made the next year, Macedonia was declared free but divided into four districts (μερίδες) and placed under annual officials (Livy XLV.xvii-xviii, xxix-xxx). The first district extended from the River Nestos to the Strymon; the second from the Strymon to the Axios; the third from the Axios to the Peneios; the fourth from W of Mount Bora to the borders of Illyria and Epirus. The capitals were Amphipolis, Thessalonica, Pella, and Pelagonia (probably Heraclea Lyncestis) respectively. In 149 B.C. the Roman army under Q. Caecilius Metellus crushed the revolt of a certain Andriscus, who claimed to be the son of King Perseus and attempted to re-establish the monarchy. After that, Macedonia was made a Roman province; and the date of its foundation as a province, 148 B.C., was taken as the beginning of an official era. From A.D. 15 to 44, Macedonia was combined with Achaia and Moesia in a large imperial province under the legate of Moesia; but from 44 on, it was again a senatorial province. The Roman governor was a proconsul of praetorian rank, and the seat of administration was the free city of Thessalonica.

Macedonia provided the major land route between

Jack Finegan

Asia and the West; and soon after it became a province, the Romans constructed the famous Via Egnatia, which is mentioned already by Polybius (XXXIV.12), who died *ca.* 125 B.C. From a double point of departure on the Adriatic at either Dyrrhachium or Apollonia this route ran across the mountains to reach the sea at Thessalonica and then went on through another Apollonia to Amphipolis, Philippi,* Neapolis, and beyond. Strabo (VII.322) says that it was marked by pillars from Apollonia on the W coast to Kypsela beyond the Hebros River in Thrace and that the distance was 535 Roman miles or, at 8 stadia to the mile, 4,280 stadia. The apostle Paul must have traveled on this road from Neapolis to Philippi, Amphipolis, Apollonia, and Thessalonica (Acts 16:11-12; 17:1). Fig. MAC 2.

MACHABEES măk′ə bēz. Douay Version form of MACCABEES.

MACHAERUS mə kĭr′əs [Μαχαιροῦς]. The strongest Jewish castle, after Jerusalem. It was situated to

From *Atlas of the Bible* (Thomas Nelson & Sons Limited)

3. Remains of the fortress of Machaerus, where tradition says John the Baptist was imprisoned and suffered death

the E of the Dead Sea (the modern Mkaur). The place had originally been fortified by Alexander Janneus (*see* JANNEUS, ALEXANDER; HASMONEANS § 3*d*), according to Josephus, but was later demolished. Herod the Great refortified it and used it as one of his chief residences, and at his death it passed to Herod Antipas. After the Nabatean wife of Antipas had been divorced, she was imprisoned here; and, according to Josephus, this was where John the Baptist also was sent as a prisoner and perished.* The gospels do not identify the place; indeed, Mark's reference to the notables of Galilee suggests a place much farther N. The fortress became a stronghold of the Jews in the war against the Romans (A.D. 66-70). Fig. MAC 3. N. TURNER

MACHBANNAI măk băn'ī [מכבני] (I Chr. 12:13—H 12:14); KJV MACHBANAI măk'bə nī. One of the famed warriors from the tribe of Gad who joined the outlaw band of David at Ziklag; subsequently appointed as an officer in David's army.

MACHBENAH măk bē'nə [מכבנה] (I Chr. 2:49). A town in Judah; possibly the same as Meconah. The location is unknown.

MACHI mā'kī [מכי, reduced(?), *or* bought(?)] (Num. 13:15). The father of Geuel, who was sent from the tribe of Gad to spy out the land of Canaan.

Bibliography. M. Noth, *Die israelitischen Personennamen* (1928), pp. 39, 232.

MACHIR mā'kĭr [מכיר, bought (*as an orphan or waif*)]; MACHIRITES mā'kə rīts. **1.** Son of Manasseh. Little is known of him as an individual. The ancient list in Josh. 17:1-2 calls him Manasseh's firstborn. The Chronicler names Asriel as his brother (I Chr. 7:14) and Maacah as his wife, who bore him Peresh and Sheresh (vs. 16*a*). An unnamed daughter is mentioned in 2:21; but further information from 7:15-18 is questionable.

Of Machir as a clan (Num. 26:29) two aspects are notable:

a) Anciently Machir was named among the tribes settled W of the Jordan, presumably as a constituent part of the Israelite federation (Judg. 5:14). But other references locate Machir in Transjordan, occupying specifically the territory from Mahanaim, N of the Jabbok, to the Yarmuk River (Deut. 3:15; Josh. 13: 29-31; 17:1). Probably the warlike Machirites helped conquer part of central Palestine, then moved back E, dispossessing the Amorites from Gilead in Transjordan (Num. 32:39-40). This tribal movement was represented stylistically by calling Gilead Machir's son (Num. 27:1; 36:1; Josh. 17:3). *See* GILEAD 1.

b) Whatever its original position among the Israelite tribes—and some admixture with Arameans is indicated (*see* JAIR 1; Deut. 3:14; I Chr. 2:21)—Machir emerges as the dominant Manassite family. Gen. 50:23 is an ethnic etiology, explaining Machir's adoption into the "house of Joseph." *See* MANASSEH 2.

Bibliography. M. Noth, *Die israelitischen Personennamen* (1928), p. 232; *The History of Israel* (1958), pp. 61-62, 72, 89-90. L. HICKS

2. Son of Ammiel of Lo-debar, presumably near Mahanaim. As a loyal supporter of the house of Saul, Machir afforded a gracious sanctuary to Meribbaal (Mephibosheth) during the anxious days that followed the regicide of his uncle Ishbaal (Ishbosheth), until David accorded the lame son of Jonathan a princely status at his court (II Sam. 9). Converted, no doubt, by this kindly act of the king, Machir became a loyal adherent of David and subsequently joined two other wealthy Transjordanian patricians, Shobi the Ammonite prince and Barzillai the Gileadite, in supplying David and his men with ample supplies of food and equipment when they had established their quarters at Mahanaim during their flight from the usurper Absalom (II Sam. 17:27-29).

MACHMAS. KJV Apoc. form of MICHMASH.

MACHNADEBAI măk năd'ə bī [מכנדבי, *possibly a corruption of* מכרנבו, possession of Nebo, *or more probably, as* I Esd. 9:34 *suggests, a corruption of* ומבני זכי, and from the sons of Zaccai (*cf.* Ezra 2:9)] (Ezra 10: 40; I Esd. 9:34). One of those compelled by Ezra to give up their foreign wives. M. NEWMAN

MACHPELAH măk pē'lə [המכפלה, the double (cave)].

1. Location. A place in the center of modern el-Khalil (Hebron) in which there is a cave purchased by Abraham for use as a family sepulchre. In it were buried Sarah (Gen. 23:19) and Abraham (25:9), Isaac (35:29) and Rebekah, Jacob and Leah (49:31; 50:13), and perhaps others. The biblical datum locates it "east of Mamre." The traditional identification with the area now covered by the Haram el-Khalil ("sacred precinct of the friend of the merciful one, God") is almost certainly correct. Ancient Hebron was built on a hill, er-Rumeideh, W of the present site. During the Middle Ages the earlier site was abandoned, and the city began to grow around the sanctuary below it.

2. Biblical history. The only reference outside Genesis to the patriarchal sepulchre is obliquely in the sermon of Stephen (Acts 7:15-16). Here Stephen says that Jacob was returned from Egypt and buried in the tomb Abraham had bought from the sons of Hamor in Shechem. According to Gen. 50:13, Jacob was buried in Machpelah; it was Joseph who was buried at Shechem (Josh. 24:32). In the pseudepigraphic Testament of the Twelve Patriarchs, Joseph is said to have been buried at Hebron (Test. Joseph 20:6). Where the other tribal ancestors were buried is not mentioned in the Bible, but Josephus (Antiq.

II.viii.2), the Testament of the Twelve Patriarchs, and the book of Jubilees (46:9-10) say they were buried in Hebron. On the other hand, Jerome (*Epistles* 47.10; 108.13) says that their tombs were also pointed out at Shechem. This double location may reflect the hostility between the Jews and the Samaritans. The traditions had been confused, and Stephen's words reflect the confusion.

The "field of Machpelah" in which the cave lay belonged to one Ephron, a Hittite, and was legally purchased by the Amorite chieftain Abraham. The account in Gen. 23, usually assigned to P, has customarily been interpreted as a typical example of the lengthy negotiations characteristic of the East, with Ephron getting a large price under the guise of pretended generosity. It has been pointed out, however, that this is rather a typical example of land purchase under Hittite law. Abraham's first request is countered with an offer to use or lease but not buy (vs. 6). He insists on buying the cave at the edge of the field belonging to Ephron, who first offers both the cave and the field as a gift. Abraham refuses and insists on paying for it. Ephron's price of four hundred shekels is accepted by Abraham and weighed out in the presence of witnesses. The point of the protracted negotiation and Ephron's insistence on the sale of the field is that under Hittite law the purchaser of property also became liable to the feudal service required of the landowner. Thus Ephron was trying to rid himself of this obligation—whatever it was—by selling the whole tract to Abraham. Also typical is the mention of the trees in the account, for in Hittite business documents it was customary to list all the trees when a plot of land was purchased. Thus the story reflects a situation in which Hittite legal practice was observed.

From the patriarchal days to the Roman period, nothing is known of the tombs of the patriarchs except that the tradition seems to have remained current throughout this long period. In the Hellenistic period we meet the traditions already cited in which the patriarchs, their wives, and Jacob's sons (including Joseph) were buried at Hebron (Jubilees, Testament of the Twelve Patriarchs). The book of Jubilees also mentions frequently a tower or house of Abraham (29:17-19; 31:5; 33:21; 36:20), and this tower played a role in the conflict between Esau and Jacob (chs. 37–38). These accounts not only reflect in legendary form the conflicts between the Jews and the Idumeans, but also preserve a memory of some kind of monument at the site of the tomb of the patriarchs, of which there is no longer any trace.

3. Postbiblical history. Our first archaeological evidence is from the time of Herod, who erected a splendid enclosure around the site, *ca.* 197 feet long and 111 feet wide, with walls *ca.* 8 feet thick, oriented in a NW-SE direction. The original entrance, located to lead to the opening of the cave, was probably where the present "Tomb of Joseph" is. In 1917, from the cenotaph of Abraham, an English army officer entered a chamber which may have been the vestibule of Herod's day before one entered the cave consisting of two chambers cut in the rock. On the upper level Herod built monuments or cenotaphs to mark the tombs. It would be these to which Josephus refers as "of really fine marble and of exquisite workmanship" (War IV.ix.7). The Pilgrim of Bordeaux (333) mentions the quadrangle and the marble tombs. A century or so later, Peter the Deacon speaks of the church without a roof and the house of Jacob to be found at Abramiri ('Αβραὰμ μεσίς, "field of Abraham").

At the time of Eudocia (mid-fifth century) or Justinian (early sixth century), a basilica was built in the E part of the enclosure. *Ca.* 570 another traveler noted the church which one could see there, as well as the patriarchal tombs, including the tomb of Joseph—Joseph had been finally "annexed" to Hebron by a tradition competing with that of Shechem, it would seem. After the Arab invasion, the church became a mosque.

In 670, Arculf, after a visit to the shrine, does not speak of the church but of three large cenotaphs for Abraham, Isaac, and Jacob and three smaller ones for Sarah, Rebekah, and Leah. The six probably came from the Byzantine period and are not the ones seen today. Of interest is the mention of a monument to Adam, which reflects a Jewish tradition, also accepted by Jerome, that Adam was buried at Hebron. Indeed, the ancient name of Hebron, Kiriath-arba, was said to refer to the four tombs of Adam, Abraham, Isaac, and Jacob.

The description of Muqaddasi (985) indicates that the cenotaphs were then placed as they are today. The monuments to Isaac and Rebekah were built by the Mamluks, those to Abraham and Sarah by the Abbasids or Omayyads. The Persian traveler Naṣir-i-Khosrau (1047) speaks in glowing terms of the beauty of the mosque and notes that Caliph Mahdi (in 918) made a new entrance, probably because the old one was obstructed by the "tomb of Joseph."

With the coming of the Crusaders, the shrine again became the property of the Christians. The mosque was reconverted to a church, and in 1168 it became the seat of a bishopric.

In June, 1119, according to two Arab writers and a Latin account, the bones of the patriarchs were found. Some of the paving stones were removed from the floor of the church. A small vestibule was found from which a corridor led westward to a small, circular hall, then to a chamber cut in the rock, and finally, at the end of this, to a second chamber. The remains in the first chamber were attributed to Jacob, those in the second to Isaac, while the body of Abraham was apparently sealed in a sarcophagus. In addition, there were fifteen clay jars filled with bones. The twelfth-century investigators had entered from the SE corner of the church, which entrance is now sealed (though its location can be seen), and reached the chamber into which one may peer from the twelve-inch hole in the floor of the present mosque, near the NW wall *ca.* ten feet SW of the main entrance. This is the same chamber visited by the English officer in 1917 by an opening which had been hidden since the time of the Crusades, the first of the two burial chambers. The Crusader clergy placed some bones in the main altar of the church and returned the rest to the graves. A Jewish traveler, Benjamin of Tudela, was allowed to visit the sepulchre in 1170. He tells of six sarcophagi on which "the Gentiles" had inscribed the names of the patriarchs and their wives. In his short visit, the

English officer caught a quick glimpse of one of the medieval tombs. The Crusaders rebuilt the church on its Byzantine plan but embellished it with vaults supported by massive pillars built around the earlier columns, and added an entrance porch.

After the fall of the Frankish Kingdom, the shrine again became Muslim. For a time visits by pilgrims were permitted, but after the fourteenth century all Christians and Jews were forbidden entrance to the cave and the enclosure above it. The church became a mosque, with few alterations. The marble veneer and the present cenotaphs date from Malik en-Naṣer, son of Qalaûn (1332). The description of the shrine by Mudjir ed-Dîn in 1496 fits the present establishment, including the Tomb and Mosque of Joseph (from the time of Barquq, 1395).

V. R. GOLD

MACRON mā'krŏn [Μάκρων, *perhaps* long-headed]. A name of the Ptolemy who, according to II Macc. 10:12, was governor of Cyprus at the time of Ptolemy Philometor. He was regarded as a gifted governor (Polybius 1.27.13; 5.61). He deserted Philometor VI in favor of Antiochus Epiphanes IV. Because of his pro-Jewish policies, taking "the lead in showing justice to the Jews because of the wrong that had been done to them" (II Macc. 10:12), he was accused before Antiochus Eupator by the king's friends, presumably Lysias. Since he could not maintain the honor of his position, he took poison and thus ended his life.

Some identify him with son of Dorymenes (I Macc. 3:38). Such identification is not well founded, because of the different attitudes taken toward the Judeans. Ptolemy son of Dorymenes was the one who induced the king to change his mind favorably, to clear Menelaus of the accusations by the Jews that he allowed his brother Lysimachus to steal golden vessels from the temple. He also was the one who issued the order to the Jews to conform with Greek manners and sacrifice (II Macc. 6:8).

S. B. HOENIG

MADAI mā'dī [מדי, Mede(s)] (Gen. 10:2; I Chr. 1:5). An eponym; one of the "sons" of Japheth. *See* MAN, DIVISIONS OF, § A1*a;* MEDIA.

MADIABUN. KJV form of EMADABUN.

***MADMANNAH** măd măn'ə [מדמנה]. A city in S Judah, mentioned next to Ziklag (Josh. 15:31). In the parallel list of cities of Simeon (Josh. 19:5) it is replaced by BETH-MARCABOTH, but the two are probably the same city. According to I Chr. 2:49, it was founded by Shaaph the son of Caleb (i.e., Shaaph was the "father" of Madmannah); hence Madmannah was probably the older name, which was altered when Solomon selected the place as a good location for the manufacture and storage of chariots (cf. II Chr. 9:25).

S. COHEN

MADMEN măd'mĕn [מדמן, dung pit] (Jer. 48:2). A town mentioned in Jeremiah's dirge upon the destruction of Moab; possibly identical with DIMON. It may be located at Khirbet Dimneh, 2½ miles NW of Rabbah.

MADMENAH măd mē'nə [מדמנה, dunghill] (Isa. 10:31). One of the places on the N invasion route to Jerusalem. The location is unknown, though it was certainly N of Jerusalem, perhaps at Shu'fat.

The invasion may be that of Sennacherib in 701, though the route itself may well have been used earlier, so that this would be a sort of "traditional" description (for a similar description from the S, see Mic. 1:10-15).

V. R. GOLD

MADNESS [שגעון, מתהלל; μανία, παραφρονία, ἄνοια]; MADMAN. Mental disease of a chronic nature was not uncommon in the ancient Near East, although there are comparatively few instances of insanity recorded in the Scriptures. The Hebrew root שגע, akin to an Akkadian verb meaning "to be furious," appears to include violent rage as one manifestation of madness, while the verb הלל may originally have been used of those thought to be "moonstruck." In the OT, however, the latter verb is used of one who makes a fool of another, or who behaves like a madman. The Greek words of the LXX and the NT envisage mental disorders in general.

In antiquity the madman was held in universal dread, since it was believed that his insanity was the result of special contact with a deity, generally through demon possession. In consequence no one dared to interfere with the mentally infirm in any way, and in practice all contact with them was sedulously avoided. Even at the present day there is very little interest anywhere in the Near East in the plight of the insane.

In the Pentateuch, madness was regarded as a divine punishment to be meted out to those who disobeyed the laws of God (Deut. 28:28), while elsewhere its incidence was attributed to a spirit sent by the Lord (I Sam. 16:14; cf. I Kings 22:19-23).

The picture of psychological deterioration presented by Saul has often been interpreted in terms of typical manic-depressive insanity. But in actual fact he seems to have been suffering from the more malignant psychotic reaction of paranoid schizophrenia. This disease is frequently characterized by delusions of grandeur and of persecution, which may be complicated by fluctuations of the general mental condition. The patient is usually moody and suspicious, and his attempts to compensate for personality weaknesses not infrequently result in hallucinations and delusions. As the disease progresses, a violent act may be committed, particularly against someone who is suspected of being an actual or even potential enemy. The condition frequently terminates in complete intellectual and emotional deterioration (cf. I Sam. 18:11; 20:30-34; 28:20; 31:5; *see* SAUL). The attitude characterizing the thinking of the day was reflected in the behavior of Achish, king of Gath, toward David (I Sam. 21:12-15), which contributed materially to the success of the stratagem employed by the desperate fugitive.

The madness attributed to Nebuchadnezzar (Dan.

4) has every appearance of being historical, despite the understandable reluctance of contemporary historians to record or discuss it. He suffered from a psychotic condition (monomania), the symptoms of which were related to a specific paranoid delusional concept, and which assumed the rare form of *boanthropy*, where the sufferer believed himself to be an animal and acted as such. A damaged Babylonian inscription recovered by Sir Henry Rawlinson may perhaps provide independent confirmation of this situation. *See* DISEASE.

NT demoniacs were believed to be possessed by evil spirits (*see* DEMON; DISEASE), for which exorcism was the only reliable therapy. Jesus healed many such persons afflicted with neurotic and psychotic conditions (cf. Luke 8:2, 30; 11:14; etc.) and commanded his disciples to do likewise (Matt. 10:1; Mark 16:17).

R. K. HARRISON

MADON mā′dŏn [מדון] (Josh. 11:1; 12:19). A Canaanite town in Galilee, whose king joined Jabin's unsuccessful confederacy against Israel. It is identified with the LB–Iron I (*ca.* 1550-900 B.C.) site on the summit of Qarn Hattin, NW of Tiberias.

Bibliography. W. F. Albright, "Among the Canaanite Mounds of Eastern Galilee," *BASOR,* 29 (1928), 5-6.

G. W. VAN BEEK

MAELUS mā ē′ləs. KJV Apoc. form of MIJAMIN 2.

MAGADAN măg′ə dăn [Μαγαδάν]. A place of uncertain location on the Sea of Galilee, according to Matt. 15:39 in the best MSS. Some MSS and the RSV mg. read "Magadan" also in Mark 8:10, where the best MSS read "DALMANUTHA." *See also* MAGDALA.

D. C. PELLETT

MAGBISH măg′bĭsh [מגבישׁ, thick(?)] (Ezra 2:30). A town of Judah to which the descendants of former residents returned after the Exile; possibly to be identified with Khirbet el-Mahbiyeh, *ca.* three miles SW of Adullam.

MAGDALA măg′də lə. KJV translation of Μαγδαλά (Μαγαδάν in the best MSS; Aramaic מגדלא, "tower") in Matt. 15:39 (RSV MAGADAN); and RSV mg. alternate translation in Mark 8:10 (DALMANUTHA in the text). The city called Magdala was on the W shore of the Sea of Galilee. The adjective "Magdalene" occurs in the gospels as the identification of a particular Mary probably identifying her as from Magdala. In NT times the Greek name for Magdala was probably Tarichea, which was well known as a flourishing city and center of the fishing industry (Jos. War II.xxi.8; III.ix.7–x.5).

The modern Mejdel almost certainly preserves both the name of the ancient city and the correct identification of the site. Mejdel is in a strategic location at a junction of the road along the lake from Tiberias and the road coming down from the hills into the plain through the Valley of Robbers. Apparently the city was named because it served as a guard tower or fort. The Talmud identifies Magdala as a short distance from Tiberias and in terms not inconsistent with the fact that Mejdel is *ca.* three miles N-NW of Tiberias (J.T. 'Er. V.1 [IV.3]; T.B. Pes. 46*a*). Medieval travelers spoke of Mejdel and identified it with Magdala. Fig. MAG 4.

4. Magdala, on the shore of the Sea of Galilee, with the Plain of Gennesaret in the foreground

Bibliography. G. Dalman, *Orte und Wege Jesu* (1919), pp. 123-26; W. F. Albright, "Contributions to the Historical Geography of Palestine," *AASOR,* II-III (1923), 29-46.

D. C. PELLETT

MAGDALENE măg′də lēn [Μαγδαληνή; Aram. מגדליתא, the one from Magdala]. The standard term in the gospels for designating one of Jesus' most prominent Galilean female followers (Matt. 27:56, 61; 28:1; Mark 15:40, 47; 16:1; Luke 8:2; 24:10; John 19:25; 20:1, 18; lit., "Mary, the one [the woman] from Magdala").

Magdala is not mentioned in the gospels or in Josephus ("Magdala" in Matt. 15:39 KJV should read "Magadan," as in ℵBD; so RSV). In the Talmud, Magdala is located near Tiberias and is called "Migdal Nunya" ("fish tower"; Pes. 46*a*). It lay at the S end of the fertile Plain of Gennesaret (Ginnesar).

See also MARY 2.

E. P. BLAIR

MAGDIEL măg′dĭ əl [מגדיאל, choice gift from God(?)] (Gen. 36:43; I Chr. 1:54). An Edomite clan chief (but perhaps "clan chief of Magdiel").

MAGED. KJV Apoc. alternate form of MAKED.

MAGGOT [רמה] (Job 25:6; Isa. 14:11); KJV WORM. Alternately: WORM.

***MAGI** mā′jī [*singular:* μάγος; Lat. *magus;* Old Pers. *magu*]. The wise men in the nativity story. According to Matt. 2:1-12, after Jesus was born in Bethlehem, while Herod was king, "wise men from the East" arrived in Jerusalem with gifts for the newborn Messiah, saying that they had seen his star in the East. Led by the star to the very house in which the child was, they presented their gifts of gold, frankincense, and myrrh, and worshiped him. But warned in a dream of threats of Herod, they departed; and the strange visitors, whose identity and homeland are uncertain, are heard of no more. The episode is not mentioned elsewhere in the Bible. Who were they? Why are they unknown to other biblical writers? What does the story mean?

3. Identity of the Magi of the gospel story
4. Interpretation of the story
Bibliography

1. Translations. The Greek expression in Matt. 2:1 is μάγοι ἀπὸ ἀνατολῶν. The RSV translates this as "wise men from the East" (KJV "wise men from the east"; ASV "Wise-men from the east"; Moffatt "magicians from the East"; Goodspeed "astrologers from the east").

2. Identity of the Magi. ***a. Shaman caste of ancient Medes.*** Most of our information about the Magi in the ancient period is based on statements of Herodotus. He mentions them in I.101, 107, 120, 132; III.65, 73, 79; VII.19. He states in I.101 that the Magi are a γενεά of the Medes, listing them along with five other groups. It is probable that he uses γενεά here in the sense of "caste." The Magi then would probably be a priestly caste, similar to medicine men and shaman groups of various early peoples, and somewhat parallel to the Brahmans of India in their earlier period. In I.107, 120; VII.19, Herodotus indicates that the Magi specialized in interpreting dreams.

b. Zoroastrian priests. On the other hand, Herodotus indicates that in his time the Magi were priests of Persia. As the religion of Persia was Zoroastrianism at that time, the Magi, therefore, were Zoroastrian priests. It has been suggested that when this aboriginal group of shamans was conquered by the invading Aryans, they succeeded in adopting the religion of their conquerors, but they also transformed it to the extent that they became its priests. In their adopted religion they eventually came into a position of great power. In the fourth century A.D. the Magi were in such a dominant position that they were able to instigate a deadly persecution of both Christians and Jews in Persia.

c. Scholarly profession in Mediterranean world. But Magi ranged far beyond the bounds of Persia. Such writers as Strabo (XV.727, 733) and Plutarch (*On Isis and Osiris* 46) are familiar with them in the Mediterranean area. As we have seen, they appear in Matt. 2:1-12. Acts 8:9-24 tells of SIMON MAGUS at Samaria. Acts 13:6-11 gives an account of ELYMAS, a magus at the city of Paphos on the Island of Cyprus associated with Sergius Paulus the proconsul. Josephus also in Antiq. XX.vii.2 tells of a magus of Cyprus named Atomos, who was attached to the court of Governor Felix at Caesarea. Magi were common in the Mediterranean world and were well known to early Christians. The three just named were Jews. This makes it clear that the Magi were by no means limited to persons of Persian nationality. The term had come to indicate a profession rather than any particular citizenship or culture. They were no longer necessarily associated with Persia in the popular mind.

Except for the Magi who came bearing gifts for the Christ child, the NT gives an unfavorable impression of these men. Simon Magus and Elymas Magus are presented as vile men without either true understanding or moral principles. That Magi were attached to the courts of such highly placed Roman officials as the proconsul and the governor indicates that some of them, at any rate, possessed qualities which made them welcome guests in the cultured social life of the age. This view is strongly supported by Philo of Alexandria, who in *Every Good Man Is Free* 74 and *On the Special Laws* 100 highly commends the Magi for their research into the facts of nature. This type of knowledge he calls the "true magic." A similar appreciation of the Magi is also implied by Cicero in his *On Divination* I.91, where he says that no Persian is able to become king who has not first mastered the scientific discipline of the Magi—a fact which is also mentioned by Philo. It is clear that some Magi in the Mediterranean area had established a sound reputation for both character and learning.

d. Adepts in magic of various types. But it is evident also that *magus* indicates adepts in MAGIC of various kinds. In his *Special Laws* III.101, Philo refers to them in this broader sense. He says that this type of practice is a counterfeit and perversion of art; that it is pursued by charlatan mendicants and parasites, but especially by low-grade women and slaves, who use charms, incantations, etc. Philo compares them to vipers, scorpions, and other venomous creatures.

Somewhat similar evidence may be derived from the Greek translations of the OT, which are relevant here because on account of their dates they neatly span the period of the writing of the NT. The LXX of Dan. 2:2, 10, uses *magus* to translate אשף, which the Hebrew lexicon defines as "conjurer" or "necromancer." This translation must have been made *ca.* 100 B.C. Theodotion, who translated Daniel in the second century, renders אשף by *magus* in Dan. 1:20; 2:2, 10, 27; 4:7; 5:7, 11, 15. Fragments of Aquila, also of the second century, use *magus* to render *'ob* in Deut. 18:11; I Sam. 28:3, 7-9; II Kings 21:6; 23:24; Isa. 29:4. אוב means either a necromancer or the spirit which he possesses in order to perform his art. Symmachus, another second-century translator, renders חרטמים as *magi* in Gen. 41:8, 24. This word means "magicians" or "interpreters of dreams." In all these cases *magus* is used to designate magicians of foreign cultures, such as Egyptian, Persian, and Babylonian, or outlawed practitioners among the Hebrews.

Yet the Bible presents some heroes of its own, such as Joseph and Daniel, who specialize in oneiromancy (interpretation of dreams). Several instances of this are presented also in the NT. Note Matt. 1:20, 24; 2:12-13, 19, 22; 27:19; Acts 2:17.

When Aquila translates אוב as *magus* in I Sam. 28:3, 7-9, in vss. 3, 8, and 9 it means the medium, but in vs. 7 it is the spirit which the medium possesses. The necromancer visited by the desperate King Saul at night possesses a *magus*. This same point of view is reflected in Mark 3:22-30, where the scribes accuse Jesus of possessing Be-elzebub and by this means casting out demons. The accusation is renewed in John 7:20, where the people say he has a demon or devil. The words thus used in parallel are אוב, "Be-elzebub," *daimonion,* and *magos* or *magus*. In other words, the scribes accuse Jesus of being a *magus*. The same charge could have been brought against the apostles and other early

(and later) Christians who followed the practice of casting out demons.

In spite of the view of such a writer as Ignatius in Eph. 19.3 that by the birth of Christ all magic had been overthrown, it is evident that magic was variously used. When Philo idealizes it and Ignatius scorns it, they use the word in different senses. Although Jews and Christians ordinarily applied the word only to phenomena in other religions, they themselves nevertheless habitually practiced many of the same things but called them by different names.

e. The term finally adopted by some Christians. The cycle appears to have become complete when in the third century Cyprian, bishop of Carthage, in *Confessio Sancti Cypriani* 7, refers to himself as *magos philosophos* and in his *Homologia* as *Cyprian the Magus* busied with magic and possessing magical scriptures.

3. Identity of the Magi of the gospel story. Matthew makes no effort to identify the Magi. He only says that they are from the East, which could mean Arabia, Mesopotamia, or regions beyond. But they know the stars and understand their meaning; this knowledge was a science which was deeply rooted in various peoples of the ancient Orient. In his story of the Magi, Matthew recognizes that the science in this case was right. But he is not the only biblical writer who holds that stars and other heavenly bodies may serve as signs, portents, and wonders revealing God's will. Note Gen. 37:9; Joel 2:28-32; Mark 13: 24-27; Acts 2:17-21; Rev. 6:12-17.

4. Interpretation of the story. While Matthew does not identify the Magi (nor can we), it appears that they have come from far away. They are not Hebrews; their questions indicate this. They are pagans. The wonder, mystery, and reverence of the Magi are tribute to the Messiah from unnamed peoples; and the world's oldest learning pays homage. The Scriptures provide the background for this. In view of Matthew's fondness for the fulfilment of scripture, it is remarkable that he did not mention Num. 24:17, which says that a star will arise from Jacob, or Isa. 60:3:

> Nations shall come to your light,
> and kings to the brightness of your rising.

Other relevant passages are Pss. 68:29; 72:10, which tell of kings bearing gifts. These poetic statements are probably the origin of the later belief that the Magi were kings. All these and possibly other similar passages have prepared the way for, even if they have not outrightly inspired, Matthew's beautiful story. A half-century after Matthew wrote of the Magi a violent Jewish messianic movement named its leader, Simon, *Bar Cocheba,* "Son of the Star," a name suggested by Num. 24:17.

While geography, ethnology, and Eastern religions shed a dim light on the Magi, they become fully luminous only to eyes of faith in the Christmas season.

S. V. McCasland

MAGIC, MAGICIAN. In any polytheistic system the gods, by virtue of their multiplicity and limitation of power, are incapable of securing for themselves, for nature, and for mankind the stability and security essential for the continuation of things as they are. This deficiency forced both gods and men to make use of magic—an inactive power independent of gods and men, but which could be activized by the aid of incantations and rituals in order to accomplish supernatural deeds. The employment of magic by gods as a means to achieve definite purposes is well attested in the Sumero-Akkadian and Canaanite religious literatures. The Babylonian Creation Epic (Enuma Eliš) tells us that in the struggle against the primeval pair Tiamat and Apsu, the hero of the young generation of gods, Ea-Enki, killed Apsu with the aid of a spell which he recited (Tablet I, 60-70). It was because of his knowledge of effective spells and rituals that Ea-Enki had the epithet "Lord of Incantation," and was considered as the god of magic par excellence. The gods sought his advice to combat the malevolent deeds of evil spirits, and when the great Marduk once betook himself to his father for such help, Ea-Enki told him:

> O my son, what dost thou not know,
> What more can I give thee?
> How can I add unto thy knowledge?
> What I know thou knowest also.

In his fight against the monsters created by Tiamat to destroy her rebellious offspring, Marduk the champion of the gods used, among other weapons, a "red paste" which he held between his lips (The Babylonian Creation Epic, Tablet IV, 61; red was the magic color for warding off evil influences). Tiamat, on her part, did not rely solely on her armies either; in the midst of the battle she "recited a charm and cast a spell." Marduk, however, emerged victorious from the encounter, because he proved himself to be a better magician than the primeval Mother Tiamat. Furthermore, it would seem that the very vitality of the gods depended on a talisman which the chief deity carried on his body. In the Myth of Zu (*ANET* 111-13) we are told that when the bird-god Zu stole the tablets of Destinies from Enlil, all the norms of life were suspended and the gods themselves wasted away until the Tablets of Destinies were recovered and returned to Enlil. The gods wear amulets to protect themselves and to ensure victory in their undertakings. The goddess Ishtar wore charms when she descended to the nether world (Descent of Ishtar to the Nether World, *ANET* 106-9; cf. *bibliography*). A classic example of the use of magic is related in the Babylonian Creation Epic. Before proclaiming Marduk as their chief the gods in assembly put him to the test in order to find out whether he possessed the magical know-how, without which no god could rule supreme. They placed a piece of cloth before him and said:

> "Lord, truly thy decree is first among the gods.
> Say but to wreck or create; it shall be.

Open thy mouth: the cloth will vanish!
Speak again, and the cloth shall be whole!"
At the word of his mouth the cloth vanished.
He spoke again, and the cloth was restored.
When the gods, his fathers, saw the fruit of his word,
Joyfully they did homage: "Marduk is king!"
(Tablet IV, 21-29).

In comparison with the wealth of material available relating to the part played by magic in the Sumero-Akkadian religion, the sources from Canaan (Syria and pre-Israelite Palestine) are very meager. However, the references in the OT to magic practiced by the Canaanite inhabitants of Palestine and the data supplied in the myths and legends from Ugarit give us a clear insight into the role of sorcery in the Canaanite religion of the second millennium B.C. When Keret, king of Ugarit, fell ill, the supreme deity of the Ugaritic pantheon, El, addressed himself to the assembly of the gods, saying: "Who among the gods can remove the sickness, driving out the malady?" After having repeated the same question seven times without any of the gods' volunteering for the task, El decided to act himself. He declared: "I will work magic ['*iḥtrš*, Gt form of the root *ḥrš* "magic"; cf. חרשים (Isa. 3:3)], and will surely compass the removal of illness, driving out the malady." The next few lines of the text are partially broken off, but from what follows it is clear that El fashioned a creature (from clay?) called Sha'taqat, who brought about the complete recovery of the king. Her method consisted of washing his body clean of sweat and restoring his appetite for food, with the result that "death on the one hand, is broken; Sha'taqat, on the other, has prevailed" (The Legend of King Keret; cf. *ANET* 148*b*). A graphic description of the restoration of fertility by sympathetic magic is preserved in the Baal Epic. After Baal, the god of fertility, was killed by Mot, the god of sterility, the goddess Anath avenged the death of her brother in the following manner:

She seizes the Godly Mot—
With sword she doth cleave him.
With fan she doth winnow him—
With fire she doth burn him.
With hand-mill she grinds him—
In the field she doth sow him
(*ANET* 140*b*).[1]

By the process of dissecting Mot's body and planting it in the ground, fertility returns to the land. In a vision El perceived that "the heavens rain with fat, the wadies flow with honey" (Poems About Baal and Anath; cf. *ANET* 140*b*). This is a sure sign that Baal is alive again and that nature is responding with abundance once more.

Some human beings are endowed with magical power and can foretell future events or reveal hidden things by observing and interpreting omens. Of Paghat, the daughter of the legendary Daniel, it is said, she

who observes the water,
Who studies the dew from the drip,
Who knows the course of the stars
(The Tale of Aqhat, *ANET* 153*b*).[1]

[1] J. B. Pritchard, ed., *Ancient Near Eastern Texts* (Princeton University Press; rev. ed., 1955).

Paghat is also credited with the ability "of using magic against the dwellers in the tents" (Gordon, *Ugaritic Handbook,* I Aqhat, 221-22).

That the Hebrews engaged in magic practices is amply attested in the OT. The repeated prohibition of the use of magic by law, as well as the zealous and fervent struggle waged against it by the prophets, proves how deep-rooted was the belief in the efficacy of this art. Saul, who is reported to have banished the "mediums and the wizards" from the land, sought their help in a critical situation (I Sam. 28:3, 7). When Joram, king of Israel, asked Jehu whether he came in peace, the latter answered: "What peace can there be, so long as the harlotries and the sorceries [כשפיה] of your mother Jezebel are so many?" (II Kings 9:22). When Isaiah (3:2-3) placed the "diviner" [קסם], the "skilful magician" [חכם חרשים], and the "expert in charms" [נבון לחש] on the same plane as the "mighty man and the soldier, the judge and the prophet," he merely stated a known fact—namely, the importance attached to these practitioners in the life of the people and of the state. And it was in keeping with this high regard for magicians that King Manasseh made public use of their services (II Chr. 33:6). But it was not the kings only who sought help from magicians and sorcerers. The people, of course, did likewise. Jeremiah (27:9) appeals directly to the people not to put trust in "your [false] prophets, your diviners [קסמיכם], . . . your soothsayers [ענניכם], or your sorcerers [כשפיכם]." Ezekiel (13:18-20) reports of women "who sew magic bands [כסתות] upon all wrists, and make veils for the heads of persons of every stature, in the hunt for souls" (i.e., witches who subjugate the mind of the victims to their power).

Not all the forms of magic, as known to have been in vogue in the ancient Near East, are mentioned in the OT. The reason for the omissions might be either that the Palestinian practices were less elaborate and did not attain the high level of specialization as in Egypt and Babylonia, or that our texts simply failed to record all the aspects of the art prevalent in the country. The difficulty in assessing the range of magical practices in biblical Palestine is further complicated by the uncertainty of the primary meanings of the technical terms used in the OT to describe these activities. The law of Deut. 18:10-11, which prohibits all magic art, lists its most important features in the following order: קסם קסמים, "one who practices divination"; מעונן, "a soothsayer"; מנחש, "an augur"; מכשף, "a sorcerer"; חבר חבר, "a charmer"; אוב, "a medium"; ידעני, "a wizard"; and דרש אל המתים, "a necromancer." The professions omitted in this passage are לחש or מלחשים, "charms, charmers"; and חרשים, "magic, magicians." (The חברי שמים and החזים בככבים, "astrologers"; חרטמים, "magicians"; אשפים, "enchanters"; and אטים, "shades of a dead person," referred to elsewhere in the OT, are not mentioned in this law, since they all represent Egyptian and Babylonian practitioners.) All terms, with the exception of חרשים and מכשף, are discussed respectively under ASTROLOGER; DIVINATION; ENCHANTER; FAMILIAR SPIRIT; INCANTATIONS; SHADES.

Figs. AMU 23-24.

The term חרש, whatever its etymology be, has long been known from Aramaic and Syriac (*ḥaršā*), and it

has been found now also in Ugaritic (*ḥrš; see above*), with the general meaning of "magic, sorcery." It is mentioned only once in the OT (Isa. 3:3), in the form חכם חרשים ("skilful magician"), but its use in Ugaritic proves that it is an old West Semitic word. The abstract noun כשפים, "sorceries" (participial forms מכשף, מכשפה, plural כשפים and מכשפים), has its cognate in Akkadian *kišpu* and *kaššāpūtu*, "sorcery, magic." We may assume that, while the other terms, mentioned above, designate specific magical practices, חרשים and כשפים denote the generic name for "magic" in all its aspects (for the all-inclusive meaning of כשפים, see in particular Exod. 22:18; II Kings 9:22; and the reference to Assyria in Nah. 3:4 as בעלת כשפים, "mistress of magic arts" [RSV "deadly charms"; KJV "mistress of witchcrafts"]).

Magic in any form is forbidden by law, and its practitioners are to be put to death (Exod. 22:18—H 22:17; Lev. 19:26, 31; 20:6, 27; cf. the Code of Hammurabi, paragraph 2, and the Middle Assyrian Laws, paragraph 47). The sorcerers are an antisocial group, and they are considered as enemies of the people. Their practices are equated with that of the offering of human sacrifices (Deut. 18:10-11; cf. II Kings 17:17; II Chr. 33:6). They are liars and deceivers (cf. Isa. 44:25; Jer. 27:9-10; Ezek. 22:28; Zech. 10:2; etc.). Isaiah (57:3) calls the guild of the sorcerers (בני עננה; lit., "sons of the sorceress") the "offspring of the adulterer and the harlot"; and Malachi (3:5) puts them in the same category with those who oppress the widow and the orphan. Micah cherishes the hope that in the near future the Lord will

> cut off sorceries from your hand,
> and you shall have no more soothsayers
> (5:12—H 5:11).

The apostolic writers held substantially the same view of magic. Paul called the magician Bar-Jesus (=Elymas) "you enemy of all righteousness, full of all deceit and villainy" (Acts 13:10); he compares sorcery to immorality, licentiousness, and idolatry (Gal. 5:19-21; and see II Tim. 3:8). John places the sorcerer on the same plane as liars and murderers (Rev. 9:21; 18:23; 21:8; 22:15).

MAGISTRATE [στρατηγός (Acts 16:20, 22, 35-36, 38)]. Alternately: CAPTAIN, CAPTAIN OF THE TEMPLE (Luke 22:4, 52; Acts 4:1; 5:24, 26). A word used in Acts 16 five times, always in the plural, to designate, we may suppose, the highest officials of the Roman colony of Philippi. The Greek word στρατηγός itself had an extensive usage. It could mean a leader of an army or general, or a governor of a city-state; it was the title of the ten officers annually elected in Athens to command the army and the navy; it was used to designate the chief magistrates of the cities of Asia Minor and of other Greek states; in Ptolemaic and Roman Egypt, it could mean the military and civil governor of a nome; it could refer to a consul or proconsul, to the *praetor urbanus,* or to the *praetor;* and it was also used for the *duumviri* or chief magistrates of Roman colonies. An informed person reading Acts would be at least somewhat aware of the varied and important official connotations of the term.

In the cities under Roman rule the στρατηγοί would ordinarily be the governing officials. There could have been three, four, more commonly five, but sometimes even ten or twelve of such making up the magisterial board, which had in charge the administration of civic affairs. Since the terms ἄρχοντες (Acts 16:19) and στρατηγοί are both frequently used in letters addressed to communities by emperors or Roman officials, it may be regarded as probable that the former term was merely the general designation for the governing board. Most probably Luke does not intend his readers to understand him as meaning that "rulers" (vs. 19) and "magistrates" are two different groups.

The functions of the board of στρατηγοί involved the administration of the community. They would include the management of public finances, the enforcement of the enactments of the Council and People. They could have to do with trying those accused of violating laws, and with their punishment if found guilty. Sometimes their names and titles appeared on the bronze coins issued by a city. They are frequently attested as having responsibility for maintenance of order. It is known that Smyrna had a "στρατηγός in charge of arms," whose duty may have been to furnish weapons for suppressing riots.

It is clear enough what Luke intends his readers to understand by στρατηγός. However, the question is raised whether Luke, in using the word, accurately reflects the historical situation. The usual Latin word for στρατηγός, it is affirmed, is *praetor;* the governing officials in a Roman colony, however, were *duumviri,* a title carrying somewhat lesser prestige than *praetor.* We may say either that Luke—and this is possible for well-understood reasons—designates the magistrates at Philippi by the most impressive term available; or—and this is probable—that the Latin *praetor,* like the Greek στρατηγός, was broadly and somewhat imprecisely used and could refer to *duumviri.* In any case, Luke was writing for Greek, not Latin, readers, and what other term than στρατηγός could he have used?

Since Luke does not give the number of the magistrates, he may think of them as two or more.

MAGNIFICAT măg nĭf'ə kăt [Lat. *magnifico,* magnify]. The Song of Mary, the first of three psalms contained in the infancy narrative of the Gospel of Luke (1:46-55). *See also* BENEDICTUS; NUNC DIMITTIS.

The song is modeled, in structure and expression, upon the Song of Hannah in I Sam. 2:1-10, with numerous reminiscences of the Psalms and other OT poetry. The Magnificat is a beautiful summary of the OT hope of God's redemption of his people, as it is brought to concrete realization in the Incarnation, in the womb of God's handmaiden of "low estate." Characteristic of Hebrew poetic and prophetic utterance in exalted moments of the spirit is its celebration of the saving acts of God, which are expected in the future, in tenses that speak of them as already accomplished. His mighty deeds of old are a surety of the fulfilment of his promises for the coming days.

Several Old Latin MSS and a few Western fathers, such as Irenaeus and Nicetas of Remesiana, ascribe the song to Elizabeth rather than to Mary. A number of modern critics, noting the greater similarity between Elizabeth's circumstances and those of Hannah, have adopted this view. But the greater weight of all the Greek MSS and most of the versions in the attribution to Mary cannot be easily set aside. Nor is it necessary to suppose, with some critics, that the song is in reality a Jewish psalm adapted for the church by the interpolation of vs. 48, or that it emanated originally from the circle of disciples of John the Baptist. The piety of early Palestinian Christians, nurtured as it was almost solely upon the OT, was certainly capable of producing a piece of this kind. Nor is there any cogent reason for denying the possibility of its having been composed by Mary herself. In particular, the song reflects the humble situation of early Christian believers, such as is outlined in the BEATITUDES.

In the Eastern liturgies the Magnificat is sung at the morning office of Lauds. Benedict of Nursia, possibly following Roman custom, appointed it in his monastic rule as the climax of Vespers, with which office it has been associated ever since, in the daily prayers of the Western church.

MAGOG mā'gŏg [מגוג; Μαγωγ] (Gen. 10:2; I Chr. 1:5; Ezek. 38:2; 39:6; Rev. 20:8). The land from which GOG came, whose attack on Israel is described in Ezek. 38–39; it constitutes his kingdom and territory. Some have thought that this name resulted from a גוג מגוג play on "darkness from darkness," but the presence of the name in the Genesis table of nations makes this very unlikely. It is possible that Magog might be identified with the Scythian hordes who wrought such havoc in the sixth century B.C.

Again, though there may be some identifiable place called Magog, Ezekiel did not know of such a locality and so chose the name to symbolize that great kingdom of men who would challenge the rule of God. There is no land of Magog except as every land is such.

The usage in Revelation illustrates how the passage of time allows a place to become a person (Rev. 20:8); but even so, the original concept of evil in array against the Almighty is carried over from prophecy to apocalypse. Magog is the focal point in human history where men join together in a desperate effort against God and are defeated. After defeat, God's people become secure, and God's kingdom is established.

C. G. HOWIE

MAGOR-MISSABIB mā'gôr mĭs'ə bĭb. KJV translation of מגור מסביב (RSV lit., TERROR ON EVERY SIDE), the name given by Jeremiah to the priest Pashhur son of Immer, who had put him in the stocks for prophesying the destruction of Jerusalem by the Chaldeans (Jer. 20:3). The same phrase appears elsewhere, though not as a name (Ps. 31:13; Jer. 6:25; 20:10; 46:5; 49:29; Lam. 2:22). The absence of the words "on every side" from the LXX, which renders "Magor" by Μέτοικος ("exile"), and from the interpretation in Jer. 20:4, suggests that they may be a later addition, conforming to the complete phrase in 6:25; 20:10.

J. MUILENBURG

MAGPIASH măg'pĭ ăsh [מגפיעש] (Neh. 10:20). One of the chiefs of the people, signatory to the covenant of Ezra.

MAHALAB mā'ə lăb [מחבל; Akkad. maḫālīb] (Josh. 19:29). A town in the territory allotted to Asher; identical with AHLAB. The different order of the last two consonants in the Hebrew form probably results from metathesis (cf. LXX). It is listed among the towns captured by Sennacherib in his third campaign (*ca.* 701 B.C.).

G. W. VAN BEEK

MAHALALEL mə hăl'ə lĕl [מהללאל, God shines forth, *from* הלל (*Hiph'il*), flash forth light; *cf.* יהללאל; LXX *and* NT Μαλελεηλ]; KJV MAHALALEEL —lēl. Alternately: MAHALALEEL (Luke 3:37); KJV MALELEEL mā'lə lēl. **1.** Son of Kenan; father of Jared (Gen. 5:12-17; I Chr. 1:2; Luke 3:37).

2. A postexilic Judahite (Neh. 11:4).

L. HICKS

MAHALATH mā'ə lăth. *See* MUSIC.

MAHALATH LEANNOTH mā'ə lăth lē ăn'ŏth. *See* MUSIC.

MAHALI mā'ə lī. KJV alternate form of MAHLI 1.

MAHANAIM mā'ə nā'əm [מחנים, double camp]. A city of some importance, located in Gilead in the territory of the tribe of Gad, close to the territory of Manasseh (Josh. 13:26, 30; 21:38). The name is twice explained: as due to the fact that Jacob saw an encampment of angels beside his own (Gen. 32:1-2—H 32:2-3), or that his family had grown large enough to become two companies (vs. 10—H vs. 11). Egyptian records give the name in the form *Mahan-ma;* so it is possible that the original Hebrew form was "Mahaneh" ("encampment"), lengthened by mimation to "Mahanem," which in turn became "Mahanaim" (cf. *yᵉrûshālēm* and *yᵉrûshālayim* for "Jerusalem").

Mahanaim must have been a place of considerable strength, as it twice served as a place of refuge. After the defeat of Saul at Mount Gilboa, the shattered

remnants of his army fled to Mahanaim, where Ishbosheth, his son, set up a kingdom, and eventually recovered control of the greater part of Palestine (II Sam. 2:8-9). It was in this city that the king was murdered by Rechab and Baanah (4:5-7), and thus David became ruler over the entire country. David, in turn, while fleeing from Jerusalem after the sudden coup of Absalom, halted his retreat at Mahanaim, where his troops received refreshment and allies arrived (17:24-27). He waited at the gate of Mahanaim as his troops went forth to battle with those of Absalom in the forest of Ephraim, and it was there that David uttered his poignant lament: "O my son Absalom . . . ! Would I had died instead of you" (ch. 18).

During the reign of Solomon, Mahanaim was the capital of his seventh district, which comprised a part of Gilead. *Ca.* 925 B.C. the city was sacked by Shishak of Egypt in his raid on Palestine. There are no later references to the city, but it is possible that the "dance before two armies" mentioned in Song of S. 6:13 may be the "dance of Mahanaim," as the Hebrew word has both meanings.

The site of Mahanaim has not been identified. The identification with Tulul edh-Dhahab has been proved false by investigation, and this site is rather PENUEL. There is a Khirbet Mahneh N of the Jabbok and not far from the village of Ajlun which seems to have preserved the name, but this needs further confirmation. The biblical data are so vague that Mahanaim could have been almost anywhere in the hill country of Gilead, in the neighborhood of Ajlun to the N or es-Salt in the S, the two present-day centers of the Gilead area. S. COHEN

MAHANEH-DAN mā'ə nə dăn' [מחנה דן, camp of Dan] (Judg. 13:25; 18:12). A place W of Kiriath-jearim where the Danites camped en route from Zorah and Eshtaol to the hill country of Ephraim.

MAHARAI mā'ə rī [מהרי]. One of the members of the Mighty Men of David known as the "Thirty" (II Sam. 23:28; I Chr. 11:30). He came from the city of Netophah in Judah and was of the clan of the Zerahites. He was also in command of the Davidic militia that served for the tenth month (I Chr. 27:13).
E. R. DALGLISH

MAHATH mā'hăth [מחת, tough(?)]. **1.** A Kohathite Levite (I Chr. 6:35—H 6:20).

2. One of the Levites assisting in the reforms of King Hezekiah (II Chr. 29:12) and appointed to be one of the overseers of the offerings brought into the temple (31:13).

Bibliography. M. Noth, *Die israelitischen Personennamen* (1928), p. 225. B. T. DAHLBERG

MAHAVITE, THE mā'ə vīt [המחוים] (I Chr. 11:46). A gentilic name used to describe Eliel, who was a member of the company of the Davidic Mighty Men known as the "Thirty." The reading is unintelligible and may be emended to read המחנימי or המחני, "the Mahanaimite." E. R. DALGLISH

MAHAZIOTH mə hā'zĭ ŏth [מחזיאות]. According to I Chr. 25:4, 30, one of the sons of Heman appointed to prophesy in the sanctuary with music. But these names appear to form a liturgical prayer and may not refer to real persons. *See* GIDDALTI.

MAHER-SHALAL-HASHBAZ mā'ər shăl'əl-hăsh'băz [מהר שלל חש בז]. The symbolic name of the second son of Isaiah (Isa. 8:1, 3; cf. vs. 18). Its meaning is: "The spoil speeds, the prey hastes" (RSV mg.), and its import is that the doom of Syria and Ephraim is irrevocable. This doom is doubly attested, first by the writing of the words on a tablet in the presence of witnesses and in letters that all might read, and a year later by the birth of the child bearing the name.

See also SHEAR-JASHUB; IMMANUEL § 1.
C. R. NORTH

MAHLAH mä'lə [מחלה, weak one(?)]. **1.** One of the five daughters of Zelophehad who through Moses received the family territorial inheritance in W Manasseh after the death of their father (Num. 26:33; 27:1; 36:11; Josh. 17:3). The names of the five daughters seem originally to have been the names of Canaanite towns, but the location of Mahlah is unknown.

2. A descendant of Manasseh, presumably male (I Chr. 7:18). M. NEWMAN

MAHLI mä'lī [מחלי, *possibly* shrewd, cunning; *cf.* Arab. *mihālun;* Apoc. Μοολί]; KJV MAHALI mā'ə lī in Exod. 6:19; KJV Apoc. MOLI mō'lī; MAHLITES mä'līts. **1.** A Levite; son of Merari; brother of Mushi; eponym of a priestly house (Exod. 6:19 [cf. Test. Levi 12:3]; Num. 3:20, 33; 26:58; I Chr. 6:19, 29—H 6:4, 14; 23:21; 24:26, 28; Ezra 8:18; I Esd. 8:47).

2. A Levite; son of Mushi, and grandson of Merari (I Chr. 6:47—H 6:32; 23:23; 24:30).

Bibliography. M. Noth, *Die israelitischen Personennamen* (1928), p. 249. B. T. DAHLBERG

MAHLON mä'lən [מחלון] (Ruth 1:2, 5; 4:9-10). One of the two sons of Elimelech and Naomi. He migrated with his family to Moab, where he married the Moabitess Ruth and later died.

MAHOL mā'hŏl [מחול, place of dancing, dancing (*cf.* Ps. 30:11—H 30:12; Jer. 31:13), *from* חול, to circle, dance] (I Kings 4:31—H 5:11). The putative father of Ethan, Heman, Calcol, and Darda, wise men who are said to have been surpassed in wisdom by Solomon. However, the phrase "the sons of Mahol" is more correctly taken to mean "members of an orchestral guild." Since wisdom and music were closely associated in the Hebrew mind, it is not surprising that wise men were included among the members of the ancient Israelite musical guild (cf. I Chr. 25:2 ff; II Chr. 29:30).

MAHSEIAH mä sē'yə [מחסיה, Yahu is a refuge; Apoc. Μαασαίας] (Jer. 32:12; 51:59; Bar. 1:1); KJV

MAASEIAH mā'ə—; KJV Apoc. MAASEAS mā'ə sē'əs. Grandfather of Baruch the scribe of Jeremiah.

MAIANEAS. KJV Apoc. form of MAASEIAH 19.

MAID, MAIDEN [אמה, בתולה, נערה, עלמה, שפחה; κοράσιον, παιδίσκη; KJV παῖς (Luke 8:51, 54; RSV "child")]. A young unmarried woman, usually of the servant class.

1. In the OT. With SLAVERY an accepted institution, female slaves were used in many households. The term אמה emphasizes this aspect, and its alternative translations ("female slave," "bondwoman," "bondmaid," "maidservant"; KJV "handmaiden") follow out this understanding. These maidens were to be well cared for, according to the law (Lev. 25:6; Deut. 15:12 ff; cf. Job 31:13). They participate in God's blessing and receive his protection (Deut. 5:14; 12:12; Ezra 2:65). They sometimes became concubines and substitute wives when the first wife was sterile (Gen. 30:3; 31:33). As a term of humility אמה is used by Abigail before David (I Sam. 25:24 ff; cf. II Sam. 14:15); so, too, by Ruth (3:9) and Bathsheba (I Kings 1:13, 17). The devout and pious woman may call herself אמה of God (I Sam. 1:11 [cf. Luke 1:38, 48]; Pss. 86:16; 116:16).

Closely paralleled to this word is שפחה (alternately "female slave," "maidservant," "handmaid"), which is characteristic of the patriarchal narratives for slaves (Gen. 24:35; 30:43; etc.) and for the concubines who were originally maids of the free wife (cf. Hagar, Zilpah, and Bilhah). As a token of humility the woman of Endor speaks of herself as a "handmaid" before Saul (I Sam. 28:21), and the word is also used in a different narrative by a woman before David (II Sam. 14:6).

The Hebrew בתולה refers to a young woman of marriageable age. She is often a "virgin" (Exod. 22:16; Deut. 22:17). עלמה is simply a "girl" (Exod. 2:8) or "young woman" (Isa. 7:14), presumably a virgin (Prov. 30:19; the LXX uses παρθένος, with the meaning "virgin," in Isa. 7:14). Similarly, נערה is used for unmarried girls (II Kings 5:2), but also for female servants (Ruth 2:8; Esth. 2:4).

2. In the NT. The κοράσιον is simply a child or young "girl" (Matt. 9:24-25; the parallel in Luke 8:51, 54, uses παῖς, "child"). The παιδίσκη is a servant girl, not necessarily indentured (Matt. 26:69; Mark 14:66; John 18:16).

The pious formulation of Mary reflects the OT use of "servant," and so she uses δούλη, "handmaid" (Luke 1:38, 48). The same Greek word is used for the slave in the Pentecost quotation from Joel's prophecy (Acts 2:18; "maidservant").

C. U. WOLF

MAIL, COAT OF. *See* COAT OF MAIL; WEAPONS AND IMPLEMENTS OF WAR § 4*b*.

MAINSAIL. KJV translation in Acts 27:40 of what is evidently a FORESAIL.

MAKAZ mā'kăz [מקץ, a cutting off, end] (I Kings 4:9). A city in Solomon's second administrative district; possibly Khirbet el-Mukheizin, S of Ekron.

MAKED mā'kĕd [Μακέδ] (I Macc. 5:26, 36); KJV MAGED —gĕd in I Macc. 5:36. A city in Gilead from which Judas Maccabeus rescued the Jews who were threatened by their Greek neighbors. The site is unknown.

S. COHEN

MAKHELOTH măk hē'lŏth [מקהלת, קהל, to assemble] (Num. 33:25-26). A stopping place of the Israelites in the wilderness. There is a strong similarity to KEHELATHAH, mentioned in Num. 33:22-23. The location is unknown.

MAKKEDAH mə kē'də [מקדה, place of shepherds]. A Canaanite royal city near which was a cave in which the five kings of a S Canaanite alliance against Gibeon, an "ally" of the invading Israelites, took refuge after their rout at the hands of Joshua's forces. Joshua ordered the cave sealed and put under guard, set up headquarters at Makkedah, and directed the "mopping up" of the remnants of the Canaanite forces.

After the second phase of the battle was completed, the five kings were brought out of the cave, executed, and their bodies hung on trees until sundown, when they were returned to the cave for final burial. The populace of Makkedah was put to the sword, as were other cities southward (Josh. 10:16-39).

Later on, Makkedah was included in the Shephelah district of Judah, of which Lachish was the district capital (Josh. 15:41).

The location of Makkedah is uncertain. Eusebius placed it eight (Roman) miles E of Eleutheropolis (Beit Jibrin), but most scholars feel it would make better sense to place it N of this city. At present, Tell es-Safi, S of Hulda, appears to be the most likely identification.

MAKTESH măk'tĕsh. KJV translation of מכתש (RSV MORTAR, THE).

MALACHI măl'ə kī [מלאכי, the messenger or angel of Yahweh; LXX Μαλαχίας]. The last of the short books which constitute the collection of the Twelve Prophets; the last book of the OT prophetic canon. Together with the books of Haggai and Zechariah, it forms a block of postexilic prophecy, and, like them, affords valuable evidence of religious and social conditions in this scantily documented period.

Superficially its closest connection is with the concluding chapters (9–14) of the book of ZECHARIAH, in that it would appear to be the third section of a collection of prophecies (Zech. 9:1–Mal. 4:6) which at some point have been added to the Book of the Twelve, two of the sections (Zech. 9–11; 12–14) having been added to the work of the sixth-century prophet Zechariah, and the third section having been given a separate identity under the name of Malachi.

This association is suggested by the fact that each of the three sections has a similar and distinctive superscription: "An oracle of the word of the LORD" (cf. Zech. 9:1; 12:1; Mal. 1:1). The detachment of the third section from the book of Zechariah has been explained as an editorial device to complete the sacred number of twelve prophets, but clearly the basic justification for the separate existence of this book is that both the theological content and the his-

torical background are entirely different from those of Zech. 9–14. Apart from the sole resemblance to Zech. 9–14 lying in the fact that these prophecies are in all probability anonymous, they bear the distinctive mark of a single author and can be dated with considerable certainty.

The author, who may have been a cult prophet, was active in Jerusalem in the period of Persian rule *ca.* 450, shortly before the appearance of Nehemiah. His chief concern is with the correct conduct of the worship of the temple and with the danger of mixed marriages. He depicts a state of affairs where religious duties were taken lightly and ethical standards were loosely observed. It is obvious that a more rigorous policy, even with its dangers, was at this stage urgently required, and in paving the way for the work of Nehemiah and Ezra (*see* EZRA AND NEHEMIAH, BOOKS OF), who introduced such a policy, the author made an important contribution to the development of Judaism.

From the point of view of NT studies, however, the most significant feature of the prophecies is the reference to the messianic herald (3:1) which is applied by the Synoptists to JOHN THE BAPTIST (Mark 1:2, etc.), who is likewise regarded by Jesus as the fulfilment of the prediction concerning Elijah (*see* ELIJAH 1) in Mal. 4:5 (Mark 9:11-13).

Bibliography

1. The author. The evidence for attributing this book to a prophet who bore the name of Malachi is the superscription of 1:1. This, however, is clearly an editorial preface to the prophecies which begin in 1:2 (cf. Zech. 9:1; 12:1). It is possible, but unlikely, that Malachi is a personal name. The suggestion has been made that it is an abbreviation for "Malachiah." This, however, would tend to mean "Yahweh is a messenger or angel," an impossible concept, rather than "the messenger or angel of Yahweh," which is the usual translation of "Malachiah."

A stronger argument against the view that Malachi was the name of the prophet is that it appears to have its origin in the Hebrew word for "my messenger" in 3:1 (מלאכי, *mal'ākhî*). But since the LXX reads "his messenger" in 1:1 (מלאכו, *mal'ākhô*) and both the Talmud and the Targum of Jonathan identify "my messenger" in 1:1 as Ezra the Scribe, an explanation which was accepted by Jerome, it is unlikely that the author bore the name of Malachi at all.

The tradition in favor of Ezra as the author is no more valuable than similar traditions in favor of Nehemiah and Zerubbabel. Both the themes and the historical allusions of the book would suggest any one of these names as possible authors, and it would seem most probable that the writer is unknown, an editor of the Book of the Twelve having bestowed the name of Malachi upon the author of this anonymous collection of prophecies on the basis of the phrase in 3:1. For convenience, however, he is generally referred to as Malachi.

2. Date. Although we know nothing of the author, he gives us sufficient indication of the conditions of his time to enable us to date his prophecies with a reasonable degree of accuracy. Since the land is ruled by a Persian governor (*Pechah;* 1:8; cf. Neh. 5:14; Hag. 1:1), the time must be after the return from exile. There is, however, no reference to a derelict temple or to the need for its rebuilding, as in Haggai and Zechariah. On the contrary, the cultus is in full operation (1:10; 3:1, 10), and this points to a date later than 516—indeed, a good many years later, since the prophet's complaint is that the priests have grown weary of the ritual (1:13).

He inveighs against mixed marriages (2:10-16), but there is no suggestion that there is any official legislation against them. This would point to a date before 444, when Nehemiah appeared in Jerusalem and proceeded, among other things, to deal with this problem (Neh. 13:23-27). It was, in fact, during Nehemiah's second term of office that he took action on this matter, and for this reason some scholars regard these prophecies as dating from the period between Nehemiah's first and second administrations. This is, however, more than evidence warrants. For it is clear that the prophet's strictures on the inadequacy of the temple cultus (e.g., 1:8) are based on the Deuteronomic Code of 621 and not on the Priestly Code of *ca.* 450-400. The fact that the reference to tithe law in 3:10 is based on P (Num. 18:21), rather than on D (Deut. 14:22-29), does not necessarily point to a date later than the promulgation of the Priestly Code, since any codification may include some legislation which is already established practice.

Further, the author's conception of the priesthood (2:4-9) makes no distinction between priests and Levites, thus agreeing with the Deuteronomic view (cf. Deut. 17:9), whereas the Priestly Code distinguished between the Aaronic priesthood (Lev. 1:5) and the Levitical assistants (Num. 18:1-4). For these reasons most support is given to a date somewhere *ca.* 460-450. If it were possible to date the Nabatean invasion of Edom (1:2-5), an even closer approximation might be reached.

3. Jerusalem *ca.* 450 B.C. If the date of these prophecies may be reckoned to be approximately the middle of the fifth century B.C., the picture which Malachi gives of the state of society at that time is indeed somber. The land is under the domination of Persia, and, even if there is no evidence of oppression or abuse of power, the lot of a subject state and its people is never a happy one. Under the most liberal regime vassals must bear the cost of occupation, and levies for Persian military exploits in the region must have been a drain on the limited man power of the small community. Nature herself had added her quota of afflictions in the form of drought, blighted vineyards, and plagues of locusts (3:10-11).

The return from exile almost a century before was

a fading memory, and disillusion had followed the glowing promises of Second Isaiah (e.g., Isa. 49; 54). The exiles had returned to a troubled heritage and not to the joyous and blissful era which they had been led to expect. Roused to fresh heights of endeavor by HAGGAI and Zechariah, they had set to work to rebuild the shattered temple and had completed it with laudable speed. But once more the prophetic promises had not come true. Haggai's pledges of prosperity once the house of the Lord was restored had come to nought (Hag. 2:6-9). Zechariah's plea for deeper commitment to Yahweh had been mocked by the apparent failure of Yahweh to safeguard even the primary needs of his people (Zech. 8:4-13).

Men had therefore lost heart and, worse still, lost faith. The more devout section of the community, the precursors of the HASIDIM, wept bitter tears by the altar (2:13) and mourned before the Lord of hosts (3:14). But skepticism and indifference were more common, and the cleavage which became more obvious in the Hellenistic period between the pious minority and the lax "progressive" majority was beginning to make its appearance. Many had come to doubt whether Yahweh still cared for his people at all (1:2) and whether their obedience meant anything to him (2:17; 3:15). The less scrupulous had already gone beyond questioning and were treating organized religion with contempt (1:14; 3:7-12). Adultery, perjury, and victimization of the underprivileged were rife (3:5). Intermarriage with pagan women (2:10-12), with its attendant infiltration of heathen religious practices into the homes of the people, was but an outward sign that the covenant relationship had ceased to matter.

The spiritual leaders were little better than the laity. Priests were perfunctory in their offices. They were bored with religion (1:13). They paid so little heed to the ordinances of the sacred law that they reckoned any kind of offering to be good enough for Yahweh (1:7-8). All in all, it is a dismal scene which the prophet surveys and which he now seeks to restore to something more worthy of the people of Yahweh. *See* ISRAEL, HISTORY OF.

4. The prophecies. ***a. The first oracle.*** Mal. 1:2-5 is a reaffirmation of Hosea's proclamation of Yahweh's love for Israel (e.g., Hos. 11). Malachi is faced with a body of skeptical opinion among the people of Jerusalem, which questions whether Yahweh still cares for his people. Subjection to a foreign overlord (1:8), plagues of locusts, and lack of the rainfall which was vital to their economy (3:11) were a sorry caricature of what might be expected by the people of Yahweh's choice. Where was the fulfilment of the rosy prospect of peace and plenty which Second Isaiah, Haggai, and Zechariah had spread before them?

The prophet's reply is in the spirit of the man in the proverb who complained that his shoes pinched until he met a man who had no feet. He points to the even sorrier plight of Edom. Traditionally, Jacob, the father of the tribes of Israel, and Esau, the progenitor of the tribes of Edom (Gen. 36:1), were twin brothers (Gen. 25:21-27). Yet Jacob and his descendants had been singled out for Yahweh's blessing, while Esau and his line had been visited with divine displeasure.

The Jews had many reasons for perpetuating bitter feud with the Edomites (*see* EDOM; OBADIAH, BOOK OF). They had exulted over Jerusalem's downfall (cf. Ps. 137:7) and by their hostility had incurred the condemnation of more than one prophet (e.g., Jer. 49:7-22; Ezek. 35; Amos 1:11-12). But now apparently some major disaster had overtaken them, which Malachi cites as evidence that in comparison with Yahweh's wrath against Edom his love for Israel is abundantly plain.

The disaster referred to was doubtless the invasion of Edomite territory by Nabatean Arabs, who drove the population out of their lands S of the Dead Sea, forcing them eventually to settle in the S part of Judah, which was later known as Idumea. The prophet's message is that Edom will never recover its ancestral home, whereas Israel, whatever its present afflictions, has at least seen the fulfilment of the promise that it should once more, after the discipline of the Exile, inhabit Mount Zion. Ironically, it was a descendant of the ancient Edomites, Herod, who later became king of the Jews. Paul quotes Mal. 1:2*b*-3*a* in Rom. 9:13 in connection with his doctrine of election.

b. The second oracle. 1:6–2:9 is a denunciation of the priesthood for their failure to give the moral and religious leadership that Yahweh demands of his ministers, implying their responsibility for the hardships which the people are suffering, and for their lack of spiritual resources to meet them. Yahweh asks his priests where are the reverence and honor that even a human father would expect from his children. Instead of receiving these, he has been treated with contempt (1:6).

The law (Lev. 22:20-22; Deut. 15:21; 17:1) ordained that nothing but the best should be regarded as a fitting offering to the Lord—the sacrificial animals must be without blemish. Yet the priests had become so casual in their office that they were prepared to accept from the people and offer to Yahweh maimed animals, which they would not even dream of offering to their Persian governor (1:7-8). How could priests like these intercede for the people before Yahweh (1:9)? Far better were it that they should close the temple doors and quench the altar fires forever (1:10).

Even among the Gentiles there was more reverence, and purer worship was offered to Yahweh by them than by his own priests (1:11), who were so bored with their religious office that they no longer cared how they performed it (1:13). The curse of Yahweh would fall upon the man who dared to bring to the temple an offering which he knew to be a makeshift and a second best (1:14), and a like curse would fall upon the unworthy priests who encouraged him (2:1-2). Their authority would be taken from them, and they would be thrown aside like the ordure of the animals they sacrificed (2:3).

Yahweh had founded the priesthood on Levi (Deut. 18:1-8; 33:8-11), who was the pattern of what every priest should be (Mal. 2:4). In return for the knowledge of the meaning of life and the inward peace divinely given, which came by virtue of his sacred office, the true priest must stand in awe before the Lord and reverence his holy name (2:5). His words must be words of truth; integrity must inspire his actions. Men must know that from him they would

learn the will of Yahweh (cf. Deut. 17:8-12), and his life must be dedicated to turning men from their sins to the service of the living God. For the true priest is nothing less than the "messenger of the LORD of hosts" (Mal. 2:6-7).

But the priests of Israel have failed woefully to fulfil their vocation. They have prevented their people from offering proper worship. They have corrupted the true relationship between Yahweh and his people (2:8). Now they stand exposed as false and unworthy pastors, currying favor with the well-to-do, so that even their own flock despise them (2:9). *See* PRIESTS AND LEVITES.

c. The third oracle. 2:10-16 is concerned with mixed marriages and divorce. It is addressed to the laity. They too have broken covenant with Yahweh and with one another. Disregarding their common Father and the fact that they are a community of brothers, some of them have gone outside the family of Israel to find wives, who bring with them religious beliefs and practices which are contrary to the law (2:10-11). They cannot expect such actions to go unpunished (2:12). When they pour out their lamentations to Yahweh because of their present plight, let them remember that they have only themselves to blame (2:13). They cannot imagine that Yahweh will bless with prosperity men who for the sake of some young and pretty foreign face divorce the wives who have borne their children. Marriage is a lifelong companionship (cf. Gen. 2:24), not just a biological necessity (Mal. 2:14-15). Ill-treatment of a faithful wife is abhorrent to Yahweh. DIVORCE is anathema to him (2:16). *See* MARRIAGE.

d. The fourth oracle. 2:17–3:5 is a prophecy of the coming of Yahweh in judgment. He has grown weary of the constant complaints of the people that there is no justice in the world, that the wicked prosper, and that Yahweh merely strengthens their hand (2:17). But suddenly the Day of Yahweh will be upon them, and the Lord himself will come in judgment (*see* DAY OF THE LORD), heralded by his messenger (3:1-2). The priesthood will be the first to be subjected to the sifting of the faithful from the faithless (cf. 1:6–2:9) so that the worship of the temple may become once more acceptable to Yahweh (3:3-4). Next the laity (cf. 1:14; 2:10-16) will be purified, and punishment will be meted out to all who have been guilty of offenses against the Lord—and, in this, religious and moral crimes will be condemned alike (3:5).

e. The fifth oracle. 3:6-12 traces the divine disfavor, of which the people complain, to their failure to give Yahweh his dues. His attitude toward his people does not suddenly change without cause. It changes because they have failed to keep his laws. If they will return to their proper service of obedience, Yahweh will restore their prosperity (3:6-7). Their particular offense lies in their failure to pay the correct amount of tithe (Num. 18:21). Once this obligation is fulfilled, the curse of Yahweh will be lifted: the rains will come and the fields will burgeon. Locusts will no longer devour their crops, and rich harvests will gladden their hearts and impress their neighbors (Mal. 3:8-12).

f. The sixth oracle. 3:13–4:3 returns to the problem of the moral order of the universe (cf. 2:17). The devout and faithful section of the community wonder what profit lies in obedience to Yahweh. They perform their religious obligations, but, despite this, the arrogant and highhanded unbeliever seems to fare better and to suffer no penalty for his sins (3:13-15). The prophet's reply is that a record is kept in heaven of the deeds of the righteous. When the terrible Day of the Lord comes, Yahweh will remember their good works. The world will see then that the service of Yahweh is one that brings rich reward (3:16-18). For when the great Day dawns, the wicked will be destroyed, whereas the faithful servants of Yahweh will know blessedness and joy (4:1-3).

g. Conclusion of the book. The concluding verses (4:4-6) are probably editorial additions. The compiler of the Book of the Twelve may have added vs. 4 as a summary of what he considered to be the essence of the message of Malachi, or he may have meant to suggest that prophecy had now come to an end and that the words once spoken by Yahweh to Moses, and now contained in the written law, should take the place of the words more recently spoken by Yahweh through his prophets. The reference to Elijah in vs. 5 is presumably intended to clarify the allusion to the "messenger" in 3:1.

5. The significance of Malachi. Malachi cannot be reckoned among the great prophets. He does not share the profound and original insights into the nature and purpose of God which were given to men like Amos, Jeremiah, and Second Isaiah. He lived at a time when prophetic utterances were no longer accepted without question as direct communications from Yahweh. Although prophecy had not yet sunk to the depths described in Zech. 13, it is clear from the dialectic character of Malachi's oracles (1:2-3, 6-7; 2:13-14, 17; 3:7-8, 13-14) that a prophet's words were no longer taken at their face value. He had to argue his case in a way that his predecessors in the heyday of classical prophecy had never been obliged to do. *See* PROPHET.

Men were dissatisfied with the old and sometimes oversimplified answers that had been given by the great prophets to the problems of good and evil, rewards and punishments, and they now were beginning to question the providential government of life, both in the narrower community and in the world at large. Malachi obviously enters into their difficulties insofar as he sees that it is not enough merely to enunciate high doctrine and moral principles, but seeks to enshrine them in a practical code of behavior and points toward a final solution of the world's disorder in the Day of Yahweh.

He shares the genuine prophetic insight which knows that true obedience to God must come from personal commitment, but he also recognizes that for ordinary mortals this must be expressed in sundry small acts of discipline and religious observance.

Thus, on one side, Malachi, with his insistence on the correct fulfilment of the worshiper's obligation to the priesthood (3:8-10), his stress on the importance of offering unblemished sacrifices (1:7-8), his fear of the infiltration of foreign religious practices through mixed marriages (2:10-11), points through Ezra and Nehemiah to the hardening of the spiritual arteries of the prophetic faith, which reached its apex in Pharisaism. *See* PHARISEES.

On the other hand, there are many echoes of the older voice of true prophecy to be found in these

oracles. There is not only the recognition of the holiness and righteousness of God but also the conviction that his true service includes moral obedience. Correct ritual is obligatory, but so also are honesty, justice, and mercy (1:14; 3:5). Here too is the recognition that fundamentally the first step toward the right relationship with God is repentance (3:7), that reverence and awe are the foundations of true religion (3:16), and that iniquity will not forever go unpunished (4:1).

The limitations of Malachi's thought are obvious (e.g., 1:2-5; 3:10; 4:3), but these were common to the prophetic outlook as a whole. More significant, however, is the equally obvious fact that in the early stage of Judaism which he reflects, the basis of the desire for correct ritual is that nothing but the best is good enough for Yahweh (1:7-8), and that a casual attitude toward the ordinances of religion betrays a fundamentally casual attitude toward God (1:12-13).

We may be grateful to this unknown author for his impressive and moving conception of the vocation of the holy ministry (2:5-7) and for his daring and, for these times, astounding recognition that worship offered in sincerity and truth under the auspices of any religion whatever is in effect offered to the one true God (1:11; cf. Acts 10:35). In his high doctrine of the institution of marriage and his condemnation of easy divorce, he is more akin to the spirit of the NT than the OT (cf. Deut. 24:1-4 with Mark 10:2-12).

His eschatology is partly conventional and partly original. The Day of the Lord in these oracles is largely of the normal prophetic pattern (cf. Amos 5:18-20; Zeph. 1:7-18), but a new note is introduced with the conception of the book of remembrance in which are recorded the names of the righteous (Mal. 3:16) and which points toward later developments in the belief in a future life.

Significant too is the conception of a forerunner to "prepare the way" for the coming of Yahweh at the great Day (3:1). It is not clear whether the author had in mind two separate figures, the "messenger" and the "messenger of the covenant," or whether the latter is an editorial emendation. Nor is it clear whether the "messenger" is a prophetic figure who will proclaim a last chance of repentance before the judgment, and who, as we have seen, one of the editors of the oracles believed to be the author himself (1:1), or whether the concept is rather that of a supernatural "angel of Yahweh," almost a manifestation of Yahweh himself.

On the basis of the editorial note in 4:5, which identifies the messenger with Elijah redivivus (cf. II Kings 2:11), the idea of a herald of the messianic age came to play a large part in later apocalyptic. Our Lord clearly regarded the prophecy as foreshadowing the mission of John the Baptist (Mark 9:11-13), and the early church without hesitation saw in the relationship of the work of the Baptist to the messianic kingdom inaugurated by Jesus, the perfect fulfilment of this oracle (Mark 1:2; Luke 1:17).

MALACHIAS măl'ə kī'əs. Douay Version form of Malachi.

MALACHY. KJV Apoc. form of Malachi.

MALCAM măl'kăm [מלכם, *perhaps shortened from* Akkad. *Abdi-milḫi*, servant of the king (deity)] (I Chr. 8:9); KJV MALCHAM. A Benjaminite.

Bibliography. M. Noth, *Die israelitischen Personennamen* (1928), p. 118.

MALCHIAH. Alternate form of Malchijah.

MALCHIEL măl'kĭ əl [מלכיאל, Malki is God]; MALCHIELITES —ə līts. A descendant of Asher (Gen. 46:17; Num. 26:45; I Chr. 7:31).

Bibliography. M. Noth, *Die israelitischen Personennamen* (1928), pp. 36, 118, 140.

MALCHIJAH măl kī'jə [מלכיה, מלכיהו, Yahu is king; Apoc. Μελχίας]. Alternately: MALCHIAH —ə; Apoc. MELCHIAS měl kī'əs; KJV MELCHIAH —ə (Jer. 21:1). **1.** A Gershonite Levite, ancestor of Asaph the temple musician (I Chr. 6:40—H 6:25).

2. A priest or priestly family listed as contemporary with King David (I Chr. 24:9). Pashhur, a subdivision of this family, is listed among the residents of postexilic Jerusalem (I Chr. 9:12; cf. Ezra 2:38; Neh. 11:12).

3. A royal prince who owned the cistern in which the prophet Jeremiah was imprisoned (Jer. 38:6). He may also have been the same Malchiah who was the father of the Pashhur mentioned in Jer. 21:1; 38:1 (and to be distinguished from 2 *above*).

4. One of those Jews contemporary with Ezra who are listed as having married foreign wives (Ezra 10:25*a;* I Esd. 9:26).

5. Son of Harim; one of those who helped build the Jerusalem wall with Nehemiah (Neh. 3:11). He may have been the same person who is listed in Ezra 10:31 as having a foreign wife (cf. I Esd. 9:32).

6. Son of Rechab; one of those who helped build Nehemiah's wall (Neh. 3:14).

7. A goldsmith who worked on the wall of Jerusalem in Nehemiah's time (Neh. 3:31).

8. One of the priests taking part in the ceremony dedicating the rebuilt Jerusalem wall in the days of Nehemiah the governor (Neh. 12:42).

9. One of those standing beside Ezra during the public reading of the law (Neh. 8:4). Probably they were laymen.

10. A priest signatory to the covenant of Ezra, or the priestly house represented among the signers (Neh. 10:3). If the latter, perhaps the same as 2 *above*.

11. KJV translation in Ezra 10:25*b*. The LXX and I Esd. 9:26 show this Malchijah to be an error for Hashabiah (8), and the RSV omits the name.

B. T. Dahlberg

MALCHIRAM măl kī'rəm [מלכירם, my king is exalted] (I Chr. 3:18). Son of Jeconiah (Jehoiachin).

MALCHISHUA măl'kə shōō'ə [מלכי־שוע]; KJV MALCHI-SHUA —kī— in I Chr. 8:33; 9:39; MELCHISHUA měl'— in I Sam. 14:49; 31:2. The youngest of the three sons of Saul by his wife Ahinoam. The Philistines slew Malchishua in the battle on Mount Gilboa (I Sam. 14:49; 31:2; I Chr. 10:2). E. R. DALGLISH

MALCHUS măl'kəs [Μάλχος=מלך, king] (John 18:10). The high priest's slave whose ear was cut off by Peter.

The name is found in Josephus and in Palmyrene and Nabatean inscriptions, usually of kings (Malchus I and II of Nabatea) or of chieftains. The slave may have been a Syrian or a Nabatean, attached to the high priest's (Caiaphas'; John 18:13) household, in his personal service, or even captain of the temple police.

Whether he was an onlooker or a key figure at the arrest of Jesus is unclear. Peter's attack on him and Jesus' immediate rectification of the damage (Luke 22:51) suggest that the injury occurred directly before Jesus and not at the fringe of the motley band. If he was Caiphas' personal representative in the arrest, according to ancient Hebrew conceptions he was entitled to the same respect as the high priest himself. That Peter's offense was heinous, Jesus saw immediately.

Only the Fourth Gospel offers the names of the attacker and the attacked—possibly evidence of a special tradition behind this gospel.

Bibliography. H. L. Strack and P. Billerbeck, *Kommentar zum NT aus Talmud und Midrasch,* II (1924), 568; M. Rostovtzeff, Οὗς δεξιὸν ἀποτέμνειν, *ZNW,* 33 (1934), 196-99; V. Taylor, *The Gospel According to St. Mark* (1952), pp. 559-60.
E. P. BLAIR

MALELEEL. KJV NT form of MAHALALEL 1.

MALLET [הלמות] (Judg. 5:26); KJV HAMMER. The workman's tool with which Jael killed Sisera. It may have been the instrument with which the tent pegs were driven (cf. Judg. 4:21, where מקבת, "hammer," is mentioned as the tool used for that purpose). *See* HAMMER. H. F. BECK

MALLOS. KJV form of MALLUS.

MALLOTHI măl'ə thī [מלותי] (I Chr. 25:4, 26). One of the sons of Heman among the priests appointed to prophesy in the sanctuary with music. But the names in this verse appear to constitute a liturgical prayer and may not refer to real persons. *See* GIDDALTI. B. T. DAHLBERG

MALLOW [מלוח, *mallûaḥ*]. Any plant of the genus *Malva*. The translation "mallow" in Job 30:4 seems to have come from the similarity to the Greek word for the true mallow (μαλάχη). The association of the Hebrew word with *melaḥ,* "salt," the LXX ἅλιμον, and the context of Job 30:4 have led most scholars to identify it with the *Atriplex halimus* L., the "shrubby orache," or other similar shrubs common to the salt marshes of the Holy Land. In the Job passage the "disreputable brood" of men is reduced to a state of eating these salty shrubs (cf. Zeph. 2:9).

In Job 24:24 the RSV reads after the LXX "like the mallow," instead of "like all." The context fits the *Malva* better than the *Atriplex*. The pink flowers of the *Malva sylvestris* L. are very prominent around Jerusalem in the late spring.

See also FLORA § A9*k;* SALT.

J. C. TREVER

MALLUCH măl'ək [מלוך; Apoc. Μαλούχ]; KJV Apoc. MAMUCHUS mə mū'kəs. **1.** Ancestor of a Levitical singer in Solomon's temple (I Chr. 6:44—H 6:29).

2. A priest who accompanied Zerubbabel in the return from the Exile (Neh. 12:2).

3. Son of Bani, and one of the laymen whom Ezra required to put away their foreign wives (Ezra 10:29).

4. Son of Harim in the same list as 3 *above* (Ezra 10:32).

5. A priest who witnessed the covenant renewal under Ezra (Neh. 10:4); perhaps identical with 2 *above.*

6. A chief of the people in the same list as 5 *above* (Neh. 10:27); perhaps identical with 4 *above.*

J. M. WARD

MALLUCHI măl'ōō kī [מלוכי]; KJV MELICU měl'ĭ kū (Neh. 12:14). A family of priests in the time of Joiakim; headed by Jonathan. The name should probably be read "Malluch," as in Neh. 12:2.

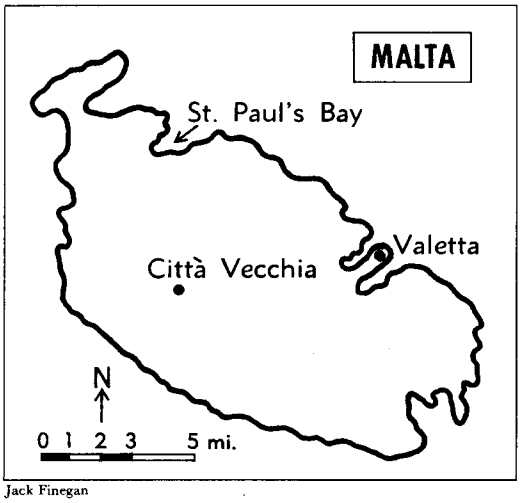
MALLUS măl'əs [Μαλλώτης] (II Macc. 4:30); KJV MALLOS. A Cilician city of considerable size situated in the SE part of the region on the River Pyramus at the head of the river's delta. In the Seleucid period the city contained a small Greek element in addition to the native Cilician and oriental people. The city joined with Tarsus in a revolt against the proposal of Antiochus Epiphanes to present the two cities as gifts to his concubines—a common practice of Persian and Seleucid rulers (cf. Thucydides I.138.5; Cicero *Against Verres* II.3.33; I Macc. 10:89).

Bibliography. F.-M. Abel, *Les Livres des Maccabées* (1949), p. 340.
E. W. SAUNDERS

MALTA môl'tə [ἡ Μελίτη] (Acts 28:1); KJV MELITA měl'ĭ tə. An island S of Sicily.

As described in the first century B.C. by Diodorus of Sicily (V.12), there are three islands which lie out to sea off Sicily, each of which possessed a city and harbors capable of offering safety to ships in stress of weather. These are Malta, Gaulus (modern Gozo), and Kerkina. Malta is ninety miles (eight hundred stadia, according to Diodorus) from Syracuse, sixty miles from the nearest tip of Sicily.

The position of Malta made it significant for Mediterranean travel both from E to W and also from the N to Africa. Presumably it was the last relationship which led Ptolemy (*Geography* IV.3) to list Malta among islands along the coast of Africa. According to Diodorus, the island was colonized by the Phoenicians, who in the course of extending their trade to the W ocean found it a safe retreat, since it was well supplied with harbors and lay out in the



Jack Finegan

open sea. For the same reason, he says, the inhabitants of the island received much assistance from the sea merchants and accordingly advanced rapidly in manner of living and in renown.

Malta is approximately eighteen miles long and eight miles wide. The highest point is 845 feet above sea level. On the SW side the cliffs descend abruptly to the sea, but on the NE coast there are many inlets and bays. The largest harbor is the site of the present city of Valetta; the bay to which the name of Paul is given, as the traditional place of the shipwreck of the apostle, is *ca.* eight miles farther NW, toward the upper tip of the island.

On the voyage on which he was shipwrecked on Malta, Paul left Fair Havens, Crete, after the fast (Acts 27:9). This was the Day of Atonement, which came on the tenth day of the seventh month, Tishri (Lev. 16:29), and in A.D. 57 fell on September 27. The ship drifted for over thirteen days (Acts 27:27); therefore the wreck on Malta must have been not far from the middle of October. At that time it was cold and raining (28:2). According to one set of observations in Valetta, October temperatures ranged from a maximum of 73 to a minimum of 59 degrees, and there was rain on from five to twelve days of the month.

Archaeological investigation has found extensive remains of a Neolithic culture on Malta, characterized particularly by megalithic structures in double-oval form, which were probably cult places. Later, objects of the Bronze Age are found, doubtless indicating the arrival of a new population. The first landings of the Phoenicians were probably made in the course of their voyages to Spain soon after the beginning of the first millennium B.C., and it may have been in the eighth or seventh century B.C. that they built the city of Malta on the site of the present Città Vecchia, near which Phoenician graves are found. Stephen of Byzantium (sixth century A.D.) states (*De Urbibus*) that the city of Acholla in Libya was a colony of Malta, and, since such colonization in North Africa would hardly have been possible after the rise of Carthage to dominance in the sixth century B.C., the power of Phoenician Melita prior to that time is shown.

With the rise of Carthage, it was natural that Malta should come under its dominance; and the first historical reference to Malta, a notice in the middle of the fourth century B.C. in the *Periplus* attributed to Scylax, states that the island, with its city and harbor, was under the Carthaginians. During the wars between Carthage and Rome, Malta passed back and forth between the two powers and was finally surrendered to Rome at the beginning of the Second Punic War in 218 B.C., when the Roman consul Titus Sempronius Longus landed on the island (Livy XXI.li.1-2). Under the Romans the administration of Malta was placed in the hands of the governor of Sicily. This governorship was held by Gaius Verres for three years just preceding 70 B.C., when Cicero, himself quaestor at Lilybaeum, Sicily, in 75 B.C., prosecuted him for misgovernment and extortion. In his speeches Cicero told how Verres plundered an ancient temple of Juno which stood on a headland not far from the town of Malta, and also referred to the hordes of pirates who infested neighboring waters in those days and spent their winters on Malta (*Against Verres* II.4.103-4). When he himself went into exile in 58 B.C., Cicero would have liked to go to Malta (*To Atticus* III.4). With the reorganization of the Empire under Augustus, the Maltese islands appear to have been placed directly under a procurator, and an inscription from Malta mentions a "procurator of the islands of Malta and Gaulus." On Malta itself the leading local official seems to have borne the simple title "chief," or "first" (ὁ πρῶτος or *primus*), as shown by inscriptions in both Greek and Latin. This is the title of Publius in Acts 28:7 (ὁ πρῶτος τῆς νήσου).

There are many Jewish and Christian catacombs on Malta. The Christian tombs are usually considered, although without sufficient evidence for a positive decision, to date from the fourth century. *See bibliography.*

MAMAIAS. KJV alternate form of SHEMAIAH.

MAMDAI măm′dī. Alternate name of BENAIAH 9.

MAMMON măm′ən [μαμωνᾶς = Aram. ממונא, ממון]. A word of uncertain Semitic origin meaning "wealth," "money," "property," or "profit." The term appears in the NT only in the words of Jesus (Matt. 6:24; Luke 16:9, 11, 13), but it was known well enough to need no explanation (S-B, I, 434-35). It is found in Ecclus. 31:8 (H); Enoch 63:10; M. Ab. 2.12; and in the Targums repeatedly. Jesus' use of the word displays two aspects:

a) In Matt. 6:24; Luke 16:13, service to God forbids service to mammon. No one (οὐδεὶς; Matthew), no slave (οὐδεὶς οἰκέτης; Luke), can serve two masters. Not the possession of money, but the unshared service of it as a slave serves his owner, makes impossible an undivided obligation to God. Ultimate loyalty belongs to God alone.

b) In Luke 16:9, 11 (cf. Ecclus. 5:8), mammon, like the steward, is described as unrighteous (ἀδικία). Its acquisition often involves injustice and wickedness, "tainted money," but it is to be used to make friends to win eternal security with God. Faithfulness to earthly possessions prepares one to be entrusted with true mammon (riches).

IV, fasc. 1 (1952), pp. 60-65; J. Jeremias, *The Parables of Jesus* (1954); trans. S. H. Hooke, from *Die Gleichnisse Jesu* (3rd ed., 1954), pp. 31-36. D. M. Beck

MAMRE măm'rĭ [ממרא]. **1.** An Amorite, brother of Aner and Eshcol. All three are pictured as allies of Abram in the routing of Chedorlaomer (Gen. 14: 13, 24). *See* 2 *below*.

2. A place, Ramet el-Khalil ("height of the friend [of the merciful one, God]"), *ca.* 1⅔ miles N of the later site of Hebron.

It seems to have been the focal point of the general area in which Abraham lived. According to the biblical tradition, it was named after an Amorite, Mamre, who, with his brothers, joined Abraham in the pursuit and defeat of Chedorlaomer and his allies (Gen. 14:13 ff). Abraham erected an altar here, "by the oaks of Mamre" (13:18), and later pleaded for the sparing of Sodom and Gomorrah here (18: 1 ff). The cave in the field of Machpelah, E of Mamre, was purchased by Abraham for use as a tomb in which he, Sarah, and the other patriarchs and their wives were buried (23:17 ff; 25:9; 35:27; 49:30; 50:13).

Because of its patriarchal associations, the precinct became sacred to the Jews. A pavement from the ninth-eighth centuries B.C., found in the course of excavation, is a tangible witness to this long-standing tradition. A break in the pavement just NE of the "well of Abraham" may mark the location of an earlier "oak of Abraham."

In Josephus' day an oak, said to have been there since Creation, was pointed out as the Oak of Abraham (War IV.ix.7; Antiq. I.x.4). Josephus' distance from Hebron (⅔ mile N) is *ca.* a mile short of the oak described by fourth-century travelers and may be an error.

The enclosure built by Herod bears striking similarities to that of the Haram around the site of the Cave of Machpelah in Hebron and the temple enclosure in Jerusalem. Destroyed in 70, it was rebuilt by Hadrian and in A.D. 135 was the scene of the sale of Jewish prisoners captured in the course of putting down the Second Revolt, led by Bar Cocheba, in the course of the famed "Fair of Terebinthos" (i.e., Oak of Abraham).

The mixed population of S Palestine used the precinct, its altar, and its well for assorted rites, largely superstitious, which the construction of the Constantinian basilica and the destruction of the altar in the fourth century failed to halt. The pagan practices apparently continued until the Arab invasion. The basilica was destroyed by the Persians in 614 and partially rebuilt.

Today the walls of the enclosure, rebuilt during the centuries, still rise to a height of eighteen feet in one place. The Herodian masonry still rests upon some courses of pre-Herodian stonework. Chalcolithic and Early Bronze remains reveal that this site was a gathering place for people for perhaps nearly two millenniums before the new city of Hebron eclipsed it; even then its religious significance prevented its being forgotten "to this day."

MAMUCHUS. KJV Apoc. form of Malluch.

MAN, ETHNIC DIVISIONS OF. The OT deals often with relations between Israel and her neighbors; it also has an interest in the interrelations of the various subdivisions of mankind. In both these areas the OT offers ethnographic information that adds up to a substantial amount. The whole reflects stated principles of classification and broad geographic horizons; but it suffers inevitably from the scientific limitations of that age. The material, moreover, is uneven in regard to sources, date, and emphasis. Consequently, the detail often proves confusing, and at times self-contradictory. Many of the difficulties can be clarified by co-ordinating the biblical evidence with the mass of pertinent information to be found in extrabiblical sources.

A. The ethno-geographic evidence of the OT

  2. Hittites
  3. Hurrians
Bibliography

A. ***THE ETHNO-GEOGRAPHIC EVIDENCE OF THE OT.*** Biblical terminology uses "people" (עם)

primarily for a genetically related group, and "nation" (גוי) largely for a political entity centered in a given locality. These terms may be interchanged, yet the underlying distinction is still apparent for the most part. For purposes of national classification, therefore, it is thus גוי that is the more suitable term; hence the Table of Nations employs it repeatedly (Gen. 10:5, 20, 31-32), but dispenses with עם altogether. According to the same source, the subdivision of a nation is the "clan, family" (משפחה), but the main criteria are "language" (לשון) and "land" (ארץ; vss. 5, 20, 31). Nor is the genealogical factor left out of account, since "direct descent" (תולדות) is explicitly recognized (vs. 32). Historically, of course, some nations are known to have been superseded by others: "The Horites . . . lived in Seir formerly, but the sons of Esau dispossessed them" (Deut. 2:12; cf. vss. 10, 20, 22-23).

Yet not all these theoretical criteria have uniform validity in practice. Although language is duly stressed, and peoples can be distinguished by their vocabulary (e.g., Deut. 3:9)—indeed, the proper pronunciation may sometimes be a matter of life or death (Judg. 12:6)—it is recognized that a mastery of more than one language was possible (II Kings 18:26= Isa. 36:11). On the other hand, there are some otherwise prominent distinctions that the Table of Nations ignores. Circumcision was not practiced by the Philistines (e.g., I Sam. 18:25, 27) or, at least originally, by the Hivites (Gen. 34:13-14), but was customary with many other peoples (Jer. 9:24-25) aside from the Israelites. The formal lists are silent on this point. The same holds true, significantly enough, of pigmentation, even though the color of skin could loom large in other contexts (Jer. 13:23). It thus follows that race in the anthropological sense was viewed as incidental. In short, the principal criteria for classifying the subdivisions of mankind were nation and country. The basis was thus essentially ethno-geographic.

1. The Table of Nations. This name has long been applied to Gen. 10, a chapter devoted in its entirety to ethnographic matters. In it the peoples of the world are subdivided according to stated principles of classification. This is an ambitious undertaking, the first of its kind known from anywhere. Naturally, the achievement has to be viewed in terms of the knowledge and the methods of its particular age. As such, it operates with a very large canvas, extending from Transcaucasia to Ethiopia and from Iran to the Aegean; but the coverage is concentric and fades out on the peripheries. The Table, moreover, is by no means self-consistent—a fault that derives in part from the composite character of the work. Portions of it come from the J document, notably vss. 8-19, 25-30. The remainder stems from P, except where the ultimate compiler left some additions and dislocations. In any case, even the later entries cannot be put after the seventh century, since their substance was known to both Jeremiah and Ezekiel.

a. Japhethites. The Table traces the nations of the world to the three sons of Noah, thereby accounting for the progressive repopulation after the Flood, and providing a starting point for subsequent scientific terminology. In the original use, however, geography took precedence over linguistics. The Japhethite branch (vss. 2-4) includes Cimmerians (Gomer), Medes, Ionians (Javan), Scythians (Ashkenaz), and Cypriotes (Elisha and Kittim), among others. Its settlements thus skirt the Fertile Crescent from the N and penetrate the maritime regions in the W. The fact is worth stressing that no Japhethite list has come down from J, evidently because that particular horizon was as yet closed to the J source.

b. Hamites. The main subdivisions of this branch (vss. 6-20) are the peoples of the S shores of the Red Sea (Cush), Egypt (Mizraim), Canaan, and the as-yet-ambiguous Put (probably Cyrene rather than Somaliland).

The case of Cush was complicated by the fact that there were originally two independent bearers of this name, which led to their becoming telescoped in the OT (*see* § B3 *below*). This is why the Nimrod passage (vss. 8-12), at one time an extension of the Mesopotamian Cush, is now inserted with Ethiopia under the Hamites. No such accident, however, can be held responsible for the inclusion of both the Philistines and the Cretans (Caphtorim) under Egypt (vss. 13-14). The author (J) was surely aware that no ethnic or linguistic bonds linked the Egyptians and the Philistines; the main reason, then, for such a connection had to be geographic, with Crete drawn in as the Philistines' previous home. The mention of Ludim in the same company remains enigmatic, if the name stands for Lydians, unless this is an echo of the invasion of Egypt by the so-called Sea Peoples, an event in which the Philistines participated; another, and no less puzzling, Lud is listed with the Semites (vs. 22).

Most difficult of all, however, is the placing of Canaan within this branch (vs. 6), in view especially of Canaan's further subdivisions. The main one is Sidon (Phoenicia), which is appropriate enough, since the Phoenicians themselves called their country Canaan; but Sidon's brothers became the eponyms of the Hittites (Heth), along with Jebusites, Amorites, Hivites, and others (vss. 15-18). Now the authors (both J and P) could not but know that Phoenician was very close to Hebrew, but quite different from Egyptian, not to mention the other dialects in question. To be sure, the lists of Canaanite nations (*see* § A2 *below*) had something to do with this situation, and the tradition behind the curse of Canaan (Gen. 9:25-26) must also have been a factor. Yet such socio-political arguments cannot very well be stretched to Phoenicia or Egypt. It would thus seem to follow that the basic principle of classification was once again neither ethnic nor linguistic alone, but ethno-geographic. By this token, the biblical Hamites extended from Phoenicia down through W Palestine, and from there into Africa. Only the Amorites (vs. 16) are partly out of focus in this picture; but vss. 16-17 are now commonly ascribed to the final compiler ("R").

c. S(h)emites. This branch is given special prominence because it comprised, among other groups, "all the children of Eber" (vs. 21)—i.e., the Hebrews in the broader sense. Under it were subsumed, naturally enough, the related groups of As-

syrians and Arameans, as well as numerous tribes of Arabia. What is less transparent is the inclusion of the Elamites (vs. 22), whose center was in SW Persia. Here again, however, geographic considerations must have played a part. Elam was the nearest E neighbor of Mesopotamia; for this reason, therefore, it could properly be cited together with Asshur. On the other hand, Arpachshad still defies explanation as the ancestor of Eber and the Hebrews (vs. 24); the name itself appears to be non-Semitic.

No less puzzling, at least at first glance, is the omission of Israel from this list, together with Israel's E neighbors and relatives, such as the Edomites, the Moabites, and the Ammonites. All these peoples should have been listed under Peleg, but no descendant of this first-born son of Eber is here recorded. His detailed genealogy, however, is given in Gen. 11:18-27. It is likely, therefore, that the J document had originally dealt with Peleg at greater length, but the details were later left out in favor of P's separate statement. Another notable omission is that of Babylon. Quite probably, this name had figured at one time under descendants of a Mesopotamian Cush (cf. vs. 10), as part of the Semitic branch, only to be shunted aside in the technical merger with the Hamitic Cushites.

All in all, the Table of Nations, for all its reshuffling and dislocations, remains an achievement remarkable for its wide scope and analytical approach. As such, it stands out as a pioneering effort among the ethnographic inquiries of the ancient world.

2. Lists of pre-Israelite nations. These are incidental and stereotyped groupings of the occupants of Palestine prior to the Israelite settlement. There are twenty-two such lists, ranging in number from two (Canaanites and Perizzites; Gen. 13:7; 34:30; cf. Judg. 1:4-5) to ten (Gen. 15:19-20). More commonly, however, the enumerations center on the following intermediate group: Amorites, Canaanites, Hittites, Perizzites, Hivites, Jebusites, and Girgashites —in this approximate order of prominence. All seven are given in Deut. 7:1; Josh. 3:10; 24:11. As a rule, however, the number is six (eleven instances), the Girgashites being usually the ones left out; but the LXX tends to restore the higher figure. The sources range all the way from the J document to the Chronicler (II Chr. 8:7), thus suggesting a common underlying tradition.

Of the seven nations just cited, the first five—and more particularly the first three—may be used inclusively as general terms for larger ethnic blocks. Moreover, either the Canaanites (e.g., Gen. 12:6) or the Amorites (e.g., Gen. 15:16) may stand, in descriptive contexts, for the entire population of Palestine. The choice in such cases is not automatically a matter of source pure and simple. It is true that the J document favors the Canaanites as a comprehensive ethnic designation, whereas the E document has a similar partiality for the Amorites; yet E does not hesitate to employ the term "Canaan" as a land name (e.g., Gen. 42:13, 29, 32; 45:17, 25), and there is no geographic term "Amor" as such. One may, therefore, posit as a general hypothesis that "Canaan" actually started out as a geographic name, but took on extra duty for ethnic and even linguistic (Isa. 19:18) purposes, whereas "Amorite(s)" was never extended beyond its original ethnic use. Both terms would thus be basically independent, their diverse employment in the OT pointing to a mixed population in early biblical times.

This conclusion is supported by the evidence of the extrabiblical sources (*see* § B *below*) as well as that of sundry narrative passages in the Bible (*see* § A3 *below*). It is borne out, furthermore, by the lists themselves. Mention has already been made of "the Canaanites and the Perizzites." On another occasion, moreover, we hear of "the Hivites, the Canaanites, and the Hittites" (Exod. 23:28). It follows that behind the broader distinction between Canaanites and Amorites—insofar as these terms were not regarded as interchangeable—there was usually the concept of other ethnic groups. These in turn could be subsumed either under the Perizzites or under the Hivites and Hittites.

3. Descriptive contexts. As opposed to the bare lists, there are in the OT various scattered passages in which ethnic elements in Palestine and vicinity are linked to particular localities or events. Thus Amorites are located in Hebron (Gen. 14:13), and especially in Transjordan (Deut. 1:4; 2:24; 3:2, 8; etc.). According to Num. 23:29, "the Amalekites dwell in the land of Negeb; the Hittites, the Jebusites, and the Amorites dwell in the hill country; and the Canaanites dwell by the sea, and along the Jordan." Another significant passage, as preserved in the LXX, is Isa. 17:9, in that it brackets together "the Hivites and the Amorites"; in the case of the former, the MT points to Horites instead (*see* HORITES § 2). There is, lastly, Ezekiel's reference to Jerusalem as the offspring of an Amorite father and a Hittite mother (16:3, 45). All such combinations, stemming as they do from various authors and periods, serve to emphasize the fact that Israel thought of the earlier population of the country as composed, not just of Canaanites and Amorites alone, but of other elements as well.

Biblical literature abounds, of course, in descriptive and poetic references to nations near and far with which Israel had direct contact at one time or another. These include comments about Israel's close relatives in Edom, Moab, and Ammon, as well as other ethnic groups in Egypt, Syria, Mesopotamia, and the like. There are also occasional antiquarian references to such older elements as the Emim (Deut. 2:10), the Horites (vs. 12), the Rephaim or Zamzummim (vs. 20), and the Avvim (vs. 23); cf. also Gen. 14:5-6.

B. *THE MODERN ETHNO-LINGUISTIC PICTURE OF BIBLE LANDS.* Whereas the OT refers only to such nations or tribes as were part of its own historical experience, modern scholarship reconstructs the ethnic picture of the biblical age from many different sources. Skeletal remains provide certain anthropometric data. Ancient paintings and sculptures show how the given human types were portrayed by artists. Innumerable written documents, in a profusion of languages and from many areas of the ancient Near East, furnish a vast amount of information on the history, culture, and location of a

truly bewildering array of peoples. And finally, there is the internal linguistic evidence of the documents that have come down to us: the structure of each particular language, and its family relations, if any.

Of all these and other similar sources, it is the linguistic material alone that is fully dependable and capable of scientific control. To arrive at a satisfactory ethnic classification, therefore, it is necessary to match, if at all possible, a given people with the language which that group commonly employed. Accordingly, herein such terms as "Akkadians" or "Amorites" will be understood to refer primarily to native speakers of "Akkadian" or "Amorite." On this basis, the "Canaanites" in an ethno-linguistic sense correspond only in part with the ethno-geographic Canaanites of the OT. And by the same token, the Elamites can no longer be classified as Semitic, the Hittites as Canaanite, or the Philistines as Egyptian. Nevertheless, it will be seen that the differences between the biblical and the modern groupings are less drastic than one might expect, for there remains a substantial area of agreement.

1. The Semito-Hamitic family. Modern research leaves no doubt that the Semitic languages, Egyptian, and the Hamitic languages had a common ancestry. The original home of this family would seem to suggest a location in North Africa, though this is by no means certain. In any case, after separating from the parent stock, the Semites are found in Asia, where they can be eventually distinguished by a number of separate languages.

a. Akkadians. The principal historic speakers of the language called "Akkadian" (after the city of Akkad; Gen. 10:10) by the ancient users and modern students alike were the Babylonians and Assyrians. The language itself is the oldest and easternmost branch of Semitic. Its main difference from all its sister languages consists in a distinctive verbal system. The OT contains various Akkadian personal names and some special terms (e.g., טפסר, Akkadian *tupšarru*, "scribe" [Jer. 51:27; RSV "marshal"; Nah. 3:17]; מסכן, "pitiable," Akkadian *muškênu* [Eccl. 4: 13; 9:15-16]). The Table of Nations gives Asshur a prominent place under the descendants of Shem (Gen. 10:22), but lists Babylon (Babel) only as a city (vs. 10). *See* § A1*c above.*

b. Amorites. Akkadian texts often mention a land Amurru, and this name is known to interchange with the written Sumerian form *MAR.TU*. Whether these two forms referred originally to separate lands is as yet uncertain; but both occur in the same sense in the Alalakh texts from the Old Babylonian stratum. The gentilic term in Akkadian was *Amurrû*, and the corresponding Hurrian term was *Amur(r)uḫḫi* (in Alalakh). Because Amorites were the nearest historic neighbors to the W of Akkadian Mesopotamia, the Akkadian term for "west" came to be *amurru*.

Bearers of distinctive W Semitic personal names appear in Mesopotamia toward the end of the third millennium, and their numbers increase appreciably by the beginning of the second millennium. These intrusive elements have generally been traced back to the Amorites. They proceeded to establish a number of new dynasties, notably at Larsa, Babylon, Mari, and Asshur. The First Dynasty of Babylon, whose best-known ruler was the celebrated Hammurabi (or rather, Hammurapi), is frequently referred to for this very reason as the Dynasty of Amurru. That all these newcomers were soon thoroughly assimilated is proof of the cultural superiority of Babylonia, but not of a want of Amorite enterprise.

Later in the second millennium, the Amarna Letters cite the Amorites repeatedly as invading or threatening various places in Phoenicia and vicinity. The Hittite archives have yielded several treaties with rulers of Amurru. Nor are references to the land lacking in later Assyrian records. Nevertheless, the exact location of Amurru is difficult to establish, possibly because its boundaries were fluid and its people widely scattered outside their own homeland. The general region, however, is not seriously in doubt. Amurru lay to the S of Aleppo and Alalakh, and E of the Phoenician strip. When political conditions favored their expansion, Amorite holdings might impinge on the old states of the Mesopotamian area in the E, and spread to the Jordan watershed in the S. It should be noted that some of the Asiatic names in the Egyptian execration texts of the patriarchal age appear to be Amorite in origin.

c. Canaanites. Whereas the Amorites are cited early and all the way E in Lower Mesopotamia, both as an ethnic group and by country, the Canaanites are not alluded to before the middle of the second millennium, to judge from the sources available thus far; except, moreover, for a rare lexical reference, the name is reflected in the Mesopotamian area only at Nuzi; its concentration was in the W, and its older use is primarily geographic. Thus the Alalakh texts of the Mitannian period speak of the "land of" *Ki-in-a-nim* (with the so-called "broken" spelling reflecting a medial '-sound) and *Ki-na-a-ni*. Amarna texts record eleven occurrences of a land name *Kinaḫḫi*, *Kinaḫ/na*, as against a single gentilic *Ki-na-ḫa-ay-u*. A geographic connotation underlies also the Nuzi adjective *Kinaḫḫu*, which describes a type of purple wool imported from the W. Egyptian *p' Kn'n* and Phoenician כנען likewise refer to a land, the latter to Phoenicia itself. The corresponding gentilics (including Ugaritic *kn'ny*) are met with less frequently, outside the OT. There is thus good reason for assuming that the primary connotation was geographic, the areas being Phoenicia and Palestine.

Thus both usage and distribution impose a sharp distinction between Canaanites and Amorites. Linguistic evidence points to a similar conclusion. Although there is little early material on the subject—mostly personal names—it indicates nevertheless certain dialectal differences, both in the treatment of the sibilants and in the morphology of the verb. E.g., the personal name "X has listened" appears as *(Y)išma(')-X* in Canaanite, but *Yasma'-X* in Amorite; the corresponding Akkadian form is *Išme-X*.

On geographical grounds, Ugaritic should be classed with Canaanite, and there is considerable linguistic evidence to confirm this expectation. There is, however, also some contrary evidence. The problem may prove to be largely one of chronology, inasmuch as Ugaritic is older than the extant Canaanite material.

If Canaan was originally the geographical name for Phoenicia and the adjoining districts of Palestine, then anyone settled in those areas could have been described as a Canaanite, regardless of his native language; and such, indeed, is the bearing of many biblical occurrences of the term. If one starts, however, with the language of the historical Phoenicians and calls it, quite properly, "Canaanite," then the related dialects of the Israelites and the Moabites should likewise be classed as Canaanite. The latter usage is found already in Isa. 19:18; and it is reflected in modern linguistic terminology, which groups together under "Canaanite" (or "Hebrew") the same group of dialects—or, in other words, the speech of the Pelegite branch of Eber as well as that of the Phoenicians. The term has thus a dual application, one geographical (OT) and the other linguistic.

d. Arameans. This group poses no problems in the present context, in that OT and modern terminology are this time in complete agreement. The eponymous Aram was a descendant of Shem (Gen. 10:22), and the speech of that people is a long-recognized member of the Semitic family. The ARAMEANS superseded the Amorites as menacing neighbors of Mesopotamia along its W borders. They harassed Assyria for centuries, and were an even more serious threat to Israel.

5. Libyans, Syrians, and Negroes represented as prisoners, on the interior of a state chariot of Tut-ankh-Amon

And the Aramaic language was to show unprecedented vitality long after the political decline of the Arameans, spreading over the whole of the ancient Near East, and becoming the main speech of Palestine and Syria. The extensive Aramaic portions of the OT, glosses in the NT, the Targums, and much of the Talmud are among the many witnesses to the pervasive force of that language.

Fig. MAN 5.

e. The Arabic groups. Current terminology employs "Arabian" for geographical, "Arab" for ethnic, and "Arabic" for linguistic purposes. The first two usages speak for themselves, but the last lends itself to misunderstanding in that it is applied to two independent branches of Semitic: North Arabic, or the group of dialects now included under Arabic proper; and South Arabic, which is so named on account of its relation to the Arabian Peninsula rather than to Arabic. The logical designation for the latter is Southeast Semitic. This is a sizable subdivision of Semitic, comprising, in the main, ancient Sabaean, Minaean, and Ethiopic (in the strict linguistic sense), as well as numerous modern descendants. On internal linguistic grounds, Southeast Semitic proves to be a very old member of the family. It displays certain intimate links with Akkadian. The Table of Nations, moreover, hints at similar ties with "Hebrew" by tracing such elements as Sheba and Hazarmaveth (modern Hadramaut) to Joktan, who was the second son of Eber (Gen. 10:25-27). But it also names Seba, Sheba, and Dedan under Cush, brother of Canaan (vss. 6-7). This vacillation is readily explained, however, inasmuch as the Cushitic listing goes back to the P document, and the Hebrew connection to J. In any case, contacts with actual North Arabians are rare, and they are signified both in the cuneiform sources and in the OT by explicit use of the term "Arab."

f. Egyptians and Cushites. Within the larger Semito-Hamitic family, both Egyptian and Cushitic depart markedly from Semitic proper. For cogent methodological reasons, Egyptian is classified as a separate branch, whereas Cushitic has long been grouped under Hamitic proper. Egyptian is represented in the OT by certain proper names and a small number of loan words. Cushitic—in the linguistic sense, and hence distinct from Ethiopic, which is a Southeast Semitic language, and from Kassite—happens to show a striking, yet unmistakable, tie with certain pronominal forms of Akkadian. Together with pertinent details of phonology and verbal structure, this is a highly significant, though isolated, reminder of linguistic conditions in the oldest stratum of the common Hamito-Semitic stock.

2. The Indo-European family. Indo-European elements are reflected in Bible lands and in the OT in various periods and circumstances. Midway through the second millennium the Near East was host to speakers of the two distinctive branches of this family: the *centum* group (which includes Greek, Italo-Celtic, and Germanic, among others) is represented by Hittites; and the *satem* group (which lists Indo-Aryan and Balto-Slavic among its members) is attested by an early wave of Indo-Aryans. By the end of the second millennium a coastal strip of Palestine was occupied by the Philistines, whose meager linguistic traces hint at an Indo-European background. In the following millennium other groups of Indo-Europeans made their appearance in increasing numbers, notably Iranians, Scythians, Celts, and Greeks.

a. Hittites. This name carries several conflicting connotations, which derive in part from local Anatolian usage, in part from the terminology of the Table of Nations, and in still another part from the nature of the subject itself. There is thus the ancient Anatolian land name *Ḫatti,* whose "Hattic" people spoke "Hattic" and had their capital at *Ḫattus* (modern Boghazköy). This is evidently the source of the biblical Heth, listed in the Table of Nations as the brother of Sidon (Gen. 10:15); hence our term "Hittite." The Hattic language was neither Semitic nor Indo-European. Now when Hatti was overrun by a foreign people, the conquerors retained the old geographic names for the country and its capital, but imposed on the territory their own language. This

language has proved to be Indo-European—or Indo-Hittite, in a highly technical sense. Its modern decipherers can hardly be blamed for calling it "Hittite," even though it turned out eventually to have nothing in common with Hattic. This Indo-European Hittite is now known to have had several relatives in the area, among them Luwian and so-called Hieroglyphic Hittite, so that "Hittite" today can be used for this whole interrelated group. In this broader linguistic sense Hittite is attested in Anatolia and parts of N Syria through most of the second millennium. Fig. MAN 6.

Against this complex background the biblical occurrences of the term pose a difficult problem of their own: do they reflect the ancient Anatolian Hattians, the intrusive Hittites, or at times the former and other times the latter? *See* HITTITES; *and cf.* § C2 *below.*

b. Indo-Aryans. Toward the middle of the second millennium much of the Near East was devastated by invaders under the leadership of E Indo-Europeans, or Indo-Aryans. In the wake of this irruption, Vedic deities entered the Hittite pantheon, Aryan kings ruled the new state of Mitanni, and Aryan princes were found in various cities of Syria and Palestine—as shown in particular by the Amarna correspondence. The success of the invaders was facilitated apparently by their large-scale employment of horses; small wonder, therefore, that cuneiform records of that age contain Aryan technical terms for chariot racing and for breeds and colors of horses. Before long, however, the newcomers were absorbed by the local elements, and the *status quo* was restored. Thus the whole fateful, though relatively brief, episode appears to have left no tangible mark in the OT.

c. Philistines. As here considered, the PHILISTINES are an offshoot of the Sea Peoples deposited in Palestine shortly after 1200 B.C.; this dating is supported by archaeological remains and historical references. Accordingly, the appearance of this ethnic term in earlier OT contexts would seem to indicate an extension of the name to prior, and perhaps related, settlers. In any case, the historical Philistines came, according to the Table of Nations, either from or by way of Caphtor (Gen. 10:14, where the last two words have been accidentally misplaced). What little information can be gathered from the few original personal names and a handful of possible Philistine loan words in Hebrew is not inconsistent with the assumption that the language was a dialect of Indo-European, perhaps related to Illyrian.

d. Others. By the seventh century, when the latest entries in the Table of Nations had been recorded, Mesopotamia and Syria had long been in contact with many other groups of Indo-Europeans. Visitors from Ionia (OT Javan) were not uncommon, Cimmerians (Gomer) and Scythians (Ashkenaz) were thorns in the side of Assyria, and the Medes (Madai) were soon to leave Nineveh in ruins. A few decades later, the Persians extended their empire over the entire Near East, only to give way in time to Greeks and Macedonians. It is natural, therefore, that the later books of the OT should show increasing evidence of Indo-European connections, chiefly in the form of Iranian personal names and loan words. There is even an ascertained Greek loan word, the term פסנתרין, פסנטרין (Greek ψαλτήριον; the name of a musical instrument; Dan 3:5, 7, 10, 15). By then, however, the West was well established throughout the Near East.

3. Unassigned groups. The Semitic-Hamitic and Indo-European families were not the only stocks in the ancient Near East any more than they are today. The modern population includes Turks, who are relatively recent arrivals, and also—in the northernmost districts—various ethno-linguistic elements of the large Caucasic family. The past knew likewise, especially in the Fertile Crescent and Anatolia, a number of such separate groups. Some of these proved to be exceptionally important cultural and historical factors. Aside from the Sumerians, moreover, these scattered elements appear to represent the earliest population of the area.

a. Sumerians. Immensely important though they were culturally and historically, the Sumerians (*see* SUMER) remain linguistically isolated, and hence ethnically, too, a group apart. The weight of the evidence would seem to point to their arrival in Lower Mesopotamia late in the prehistoric period, probably from a considerable distance. The OT calls their land Shinar (actually *Šin'ar*, Akkadian *Šumer*, from Sumerian *Kiengir;* cf., e.g., Gen. 10:10; 11:2; 14:1, 9). And it is a measure of the far-reaching influence of that people that Sumerian loan words found their way into the OT: e.g., *'ēdh*, "underground swell" (Gen. 2:4), and—in all probability—the name Eden. The common Semitic terms for "chair" and "carpenter" also go back to Sumerian. These borrowings, however, reflect the stratified character of the cultural and ethnic picture of the ancient Near East; for both these words had been taken over, in turn, from the pre-Sumerian inhabitants of the land.

b. Elamites. A people settled in SW Iran since early prehistoric times, the Elamites continued as a significant local factor down to the Persian period. The Elamite language, known from records that span many centuries, has no demonstrable relatives. There is not enough material to decide whether such neighboring groups of the Lullu and the Guti were linguistically affiliated with Elamites; conceivably, all three might be ancestral to some of the languages of

modern Caucasic. The Table of Nations lists Elam with the Shemites (Gen. 10:22), apparently for geographical reasons. Some of the later notices in the OT could well allude to Persians.

c. Kassites. A people originally from W Iran, the Kassites (Akkadian *Kaššû*, Nuzi Akkadian *Kuššu-;* cf. Κοσσαῖοι) made themselves masters of Babylonia following the fall of the First Dynasty, and held this position for several centuries. In the Middle Babylonian period "Kassite land" was synonymous with Babylonia. The people had a distinctive language of their own, which remains isolated thus far. The corresponding biblical term is "Cush" (Gen. 2:13; 10:8), wholly distinct from the more common and better known Cush in the region of the Upper Nile, but inevitably confused with its Nilotic namesake.

d. Hurrians. A people widely diffused throughout the Near East, the HURRIANS had intimate relations with Mesopotamia, Anatolia, Syria, and various districts of Palestine. The OT appears to have known them locally as HIVITES; JEBUSITES (*see* JEBUS); and perhaps Perizzites (*see* PERIZZITE), whereas the pertinent term "HORITES" is used in this connection only in the LXX. Linguistic witnesses of the diffusion of Hurrians are now known from many areas of the Near East. The language itself may have been an early representative of the Caucasic group. Its only known relative is Urartean, the speech of pre-Indo-European Armenia; the cognate biblical term is ARARAT.

e. Anatolians. Of the various ethnic groups that were settled in Anatolia before the Indo-European invasion, the most important is that of the Hattians. It is they who gave their name to the land of the later Hittites, and to the biblical eponym Heth (Gen. 10:15; *cf.* § B2*a above*). The Hattic language is once again an isolated medium.

f. Others. The above survey does not fully delimit the ethnic horizons of the ancient Near East as reflected in extrabiblical sources. It is known, e.g., that contacts were maintained with Cyprus (cuneiform *Alašiya;* OT Elishah) and with Crete (cuneiform *Kaptara;* OT Caphtor). But until the original languages of these islands have been deciphered, we shall remain in ignorance of their linguistic connections. Similarly, the source or sources of certain cultural terms that are common to Semitic and Indo-European—such as those for "wine," or "iron" (Hebrew *barzel;* Latin **ferzom>ferrum*), and the like —must remain undetermined. Large areas have been illuminated. But there are still many dark corners.

C. ***BIBLICAL AND EXTRABIBLICAL DATA COMPARED.*** A comparison of the two sets of data that have been outlined above bears out the initial assumption that they differ not so much in content as in methodology; as has already been stressed repeatedly, the biblical criterion was primarily ethnogeographic, whereas ours is ethno-linguistic. The Shemites and Hamites of the OT are now subsumed for the most part under the joint Semito-Hamitic label. That Philistines and Hurrians and Elamites were included with these categories in the past, but must now be excluded from them, is accounted for by former political and geographical considerations. Just so, the largely maritime nations which the OT combines under Japhethites must now be classified on other terms; some of the entries prove to be Indo-European, while others emerge as unrelated.

The main problems that are still to be reviewed stem from the scattered notices of pre-Israelite nations rather than the comprehensive ethnic image of the Table of Nations. The over-all results may be summarized as follows:

1. Canaanites and Amorites. It was shown above that these two terms had separate and independent meanings in nonbiblical sources. The former goes back to a geographic concept applied, in the main, to the Phoenician coast and the neighboring districts of Palestine. The latter is met with in earlier times and over a much larger area. Its use is more pronouncedly ethnic than geographical; and insofar as location is involved, Amurru paralleled Canaan to the E. Furthermore, Canaanite and Amorite were separate and distinctive dialects, if not fully differentiated languages. Significantly enough, this dialectal division is actually attested in the OT. For we learn from Deut. 3:9 that "the Sidonians [i.e., Phoenicians, or, in other words, Canaanites] call Hermon Sirion, while the Amorites call it Senir."

During the Amarna age and immediately thereafter, there would thus be a predominance of Canaanites in Palestine, and of Amorites in Transjordan. But we also know from local cuneiform sources that Palestine was inhabited at that time by other groups in addition to Semites; Hurrians and Aryans have been positively identified. It is self-evident, moreover, that a contemporary user of a local Semitic dialect could readily tell the difference between a fellow Semite and a non-Semite, on the basis of speech, personal names, or the like. And such distinctions were bound to be reflected in local traditions.

How would such traditions be recorded in the OT? As a geographic designation, the established name for Palestine was Canaan; and on this basis, anyone living in Canaan would be a "Canaanite," no matter what his native speech. But if one wished to particularize the various ethnic elements, he would specify Canaanites, Amorites, Hittites, Hivites, and others, precisely as is done in some of the lists of pre-Israelite nations. On the other hand, if a more comprehensive ethnic summary were attempted, we would speak today of Semites and non-Semites. The OT offers instead "Canaanites and Perizzites" or, in reverse ethnic order, "Hivites and Amorites" (LXX; *cf.* §§ A2-3 *above*), with Canaanites or Amorites being equivalent to Semites, and Perizzites or Hivites to non-Semites. The Table of Nations does much the same thing in subdividing Canaan into Sidon and Heth (Gen. 10:15). As a transition to the detailed lists, Exod. 23:28 gives us "Hivites, Canaanites, and Hittites."

Thus both "Canaanites" and "Amorites" could designate the entire Semitic population of the area, depending on the particular vantage point, period, and author. In addition, however, each term had its own specialized and more precise meaning.

2. Hittites. In its early biblical application, this term should refer to the pre-Indo-European Hattians of Anatolia, and by extension to Anatolians in general. That some elements from this region may have

been settled in Phoenicia and Palestine is inherently probable, but conclusive evidence is lacking. On the other hand, Indo-European Hittites could not be expected in that region prior to the Amarna age, at least not in substantial numbers. In any event, the biblical term has to be regarded as ambiguous. In Ezek. 16:3, 45, moreover, this *ethnicon* harks back to "Jebusite" and is thus descriptive of a Hurrian rather than an Anatolian element. Yet elsewhere we find Hurrians distinguished from "Hittites" (e.g., Exod. 23:28). All in all, therefore, the usage was flexible. The term could express (*a*) Hattians; (*b*) Indo-European Hittites; (*c*) Anatolians in general, as distinct from Hurrians; (*d*) non-Semites as opposed to Semites, under the geographical concept of Canaan (Gen. 10:15).

3. Hurrians. There is ample extrabiblical evidence that Hurrians were settled in Palestine in the latter half of the second millennium. Yet the MT fails to record them by name, the Horites being confined there to the area of Edom. It follows, therefore, that Hebrew tradition had come to refer to Hurrians under some other name or names; the LXX still locates them in Palestine in several significant instances. On various grounds, both the Hivites and the Jebusites may safely be linked with Hurrians. It is immaterial how these local designations may have come into vogue; the fact that accidental similarity in sound led to confusion with the Semitic Horites of Edom could well have worked against retention of the ethnic term for the Palestinian and non-Semitic Hurrians.

The term "Perizzites" cannot be ignored in this connection. Its vocalization would seem to suggest non-Semitic origin, and its use can be comprehensive enough to express the concept of "non-Semites," as in the phrase "Canaanites and Perizzites" (Gen. 13:7; 34:30; Judg. 1:4-5). The suffix *-izzi* is independently attested in Hurrian. There is thus the inherent possibility that the Perizzites were originally yet another local group of Hurrians, alongside the Hivites and the Jebusites. No confident conclusion, however, can be founded on such meager evidence.

There is, finally, one other question that remains to be posed. Among the intrusive ethnic groups that are witnessed in Palestine during the Amarna age, Indo-Aryans have been identified just as positively as Hurrians. Their numbers, however, were smaller, and there is nothing to indicate that they played a part in the cultural life of the country. In these circumstances, would some ethnic reference to these Indo-Aryans have found a place in later traditions? It is highly improbable that the term "Perizzites" is the answer to this question. At best, one might reserve for the purpose the as-yet-unplaced name Girgashites, which occurs only in the routine biblical lists, aside from some Phoenician inscriptions. It is much more likely, however, that the local Indo-Aryans did not keep their ethnic identity long enough to find a permanent place in biblical tradition.

MAN, NATURE OF, IN THE OT. The OT knows nothing about autonomous man. Man's nature is determined entirely by his relation to God, a relation which preserves the distance between God and man, between the Creator and the creature. The belief that man was created in the divine image defines his relation both to God and to the rest of nature. He cannot claim divine descent, but he is called to a unique fellowship with God, which involves obedience to the will of God.

Since God is transcendent to nature, man's duty cannot be defined in terms of any kind of mystical identification of himself with nature so as to achieve harmony with it. The OT thinks of man as a psychophysical organism which is related to God as a whole. There is in man no immortal part which can survive death on its own account.

Man has worth, though not in his own right. On account of his creatureliness and in the absence of faith, man is in a state of anxiety. Man is sinful—though this is not to be included in the definition of man—and this reveals itself especially in self-assertion and arrogance.

The OT has a conception of humanity as a whole. The special privilege and responsibility of Israel is due to God's choice and not to any racial superiority. Israel was called to be representative man, and, as such, experienced to the full the responsibility of being involved in historical existence.

History has an end as well as a beginning, but man's destiny was not fully understood within the OT period.

1. Terminology of man in the OT. ***a. In biblical Hebrew.*** There are five words translatable by "man." Certain other words rendered occasionally in English versions by "man" are not significant for our purpose.

a) אדם, "mankind" (=*homo*), is sometimes used of individual man, but the more precise expression is בן־אדם (etymology doubtful). Jos. Antiq. I.xxxiv connects אדם and אדמה ("earth") with the root אדם, "red." This view is now generally abandoned. אדם is

now usually connected with Arabic *'adām,* collective for "creatures, mankind" (cf. Akkadian *amêlu*).

b) For אִישׁ, "man (=*vir*), husband, individual," two derivations have been suggested: (*a*) the root אוש or אושׁ, "to be strong" (cf. Akkadian *ûšu,* "power"); (*b*) the root of Hebrew אֱנוֹשׁ and Arabic *'insān*. The former is more probable. No etymological connection between אִישׁ and אִשָּׁה ("woman") has been established in spite of Gen. 2:23.

c) For אֱנוֹשׁ, "man, mortal," two derivations have been suggested: (*a*) the root אנשׁ, "to be weak" (cf. Akkadian *anâšu* and Arabic *'anutha*), which would suggest the meaning "frail man" or "mortal"; (*b*) Arabic *'anisa,* "to be friendly, social" (cf. Ugaritic *'anš,* "to be friendly," and Arabic *'insān*).

d) גֶּבֶר, man as strong in distinction from women, children, etc., is related to Arabic *gabara,* "compel" (cf. Akkadian *gapru,* "strong").

e) מֵת, only found in the plural, מֵתִים, "males, men, people," is related to Akkadian *mutū,* "husband."

These words are often used synonymously, especially in poetry. They may reflect in some measure the differing aspects of human nature as conceived by the Hebrews.

b. In LXX Greek. As might be expected, no consistent system of equivalences is followed. The following are among the terms used: ἄνθρωπος, ἀνήρ, βροτός, θνητός, ψυχή, ἄρσην, ἀνδρεῖος, δυνατός, γηγενής.

2. Creation of man. There are two distinct accounts in Genesis of the creation of man. The first (1:26-30) is attributed to the P source, and may represent the fruit of centuries of priestly reflection. Man is represented as the climax of creation. The word אדם is not the proper name Adam. Neither is it collective, so as to lay the emphasis on men as a group. Rather is the word generic ("man"). The words "Male and female he created them" (vs. 27) imply at least two individuals, but not necessarily only two. What interests the author is primarily man's nature when summoned into being by God.

The creation of man is signalized by an introductory reference to the divine deliberation: "Let us make man." This is usually now regarded as referring to the divine court, beings subordinate to God but superhuman and along with God forming the category אלהים. Perhaps, however, we have merely the equivalent of an impersonal construction. God deliberates: "Let us make man in our image [צלם], after our likeness [דמות]" (*see* IMAGE OF GOD). The usage in the OT of צלם suggests a concrete meaning here, as does the appearance of the same two words in Gen. 5:3 with reference to the resemblance between Adam and his son Seth. Yet perhaps the use of two words in Gen. 1:26; 5:3 (though not in 1:27; 9:6) suggests the effort to express a difficult idea or to guard against misunderstanding. Moreover, Hebrew thought did not distinguish sharply between physical and spiritual. Yet, even though "image" has a concrete meaning, this need not exclude a reference to the dignity of man as in a certain respect like God. Man is a being who can be given authority and responsibility. While the reference to two sexes does not prove that the word "image" cannot be meant physically, there is no suggestion here of the deification of sex. The reference to two sexes merely points forward to the command to human beings to reproduce themselves. God's intention from the beginning was, according to this narrative, that the human race should go on. Moreover, man is given the charter of civilization. He is to have authority over the lower creatures and use the world to satisfy his legitimate needs. Cf. also Ps. 8, which speaks of man's dignity and responsibility.

The second account of the creation of man (Gen. 2:7-8, 18-23) is attributed to the J source. We are told that God created man as the center of creation. Man is referred to generically in vs. 7, but immediately, in the naïve manner found also in fables (e.g., Aesop's fables), the generic passes into the individual use, until finally (3:20-21; 4:1) the first pair are named ADAM and EVE. In this account God does not "make" or "create" man; he forms him—the word used is that which describes the activity of the potter. Cf. the vivid descriptions in Job 10:8-11; Ps. 139:13-16, which reveal, not only a knowledge of natural procreation, but an understanding of the truth that man's origin is hidden in the thought and intention of God.

The creation of the woman as partner of the man is preceded by the creation of the animals and birds. The man names them, thus asserting his authority (cf. 1:28), but none of the lower creatures meets man's need of a Thou. The primitive idea that the woman was fashioned from a rib taken from the man's side, while he lay in a magic sleep which preserved the mystery of creation, may have etiological significance, but this is not the chief interest of the story for the author.

3. Constitution of man. The second account of Creation not only tells how God formed man, but makes a classic statement on the constitution of man which is basic to the Hebrew view of man's nature. We read (Gen. 2:7): "Then the LORD God formed man of dust from the ground, and breathed into his nostrils the breath of life; and man became a living being." The expression "living being" (נפש חיה), signifying a living individual, is here unique. (Contrast the usage in Gen. 1:20, 21, 24.) Actually נפש alone would have meant the same thing (*see* SOUL). Man's uniqueness is also implied by God's direct action in communicating the breath of life (נשמת חיים). By Yahweh's communication of the vitalizing breath to the earthen man he had fashioned, we are not to conclude that man is compounded of two separate entities, body and soul—the view characteristic of Orphism and Platonism. To use the now classic phrase, the Hebrew conceived of man as an animated body, not as an incarnated soul. The material of which man is made is called "flesh" (בשר) as soon as he is a living being (*See* FLESH [OT]). But neither נפש nor נשמה is the soul conceived of as able to exist in separation from the flesh. נפש is both the vital principle which gives form to the flesh and the living being itself (*see* SOUL). It is not pre-existent, and it cannot survive the body. Man is a psychophysical organism made up of many parts forming a unity or totality.

Curiously enough, Hebrew has no word meaning "BODY" apart from several words which properly signify "corpse" (גופה, נבלה, פגר, גויה, the last named occasionally denoting the living body). Yet there is a clear awareness that all the different members cohere in a unity. Hebrew makes do with the word "flesh,"

while NT Greek has both σάρξ and σῶμα. The Hebrew did not think of the soul as having a body but as being a body which was alive, and this he called נפש with the emphasis on its "livingness." The word נפש, however, while it can mean "self," "person," does not clearly mark off one self from another. It can be used collectively (e.g., II Kings 9:15) in accordance with the principle of "corporate personality." Man is constituted as an individual, not by the boundary of his physical being, but by the responsibility to which he is summoned by God.

OT thought had at its disposal a rich vocabulary to describe the functions of the self. It is a natural extension of the meaning of the word נפש to make it the subject of the sentient and emotional life in all its different shades and expressions. Incidentally, one gets the impression from the OT that the Hebrew was characterized by a certain emotional instability which expressed itself in a tendency to swing from one extreme to another. The words for "flesh" and "bone" are also sometimes made the subjects of emotion.

It was noticed, however, that some men exhibited from time to time an exceptional access of life and power, and a special word was used to express this, "spirit" (רוח). This power was thought of as invasive and normally as coming from God (*see* SPIRIT; HOLY SPIRIT). Unusual skill or strength or insight or power of leadership was supposed to originate in this way. Men were lifted above themselves. The OT does not speak of human genius; it prefers to think of endowments of the spirit. Spirit, however, is not always invasive, but, like soul, can be used to describe the ebb and flow of vitality. Spirit is essentially power (cf. Isa. 31:3, where it means "strength" in contrast to "flesh," which means "weakness"). Spirit, too, can express aspects of human character which are conceived of as energies of the self, and, when thus used, it signifies the human, not the divine, spirit. As such it has no separate existence any more than soul has. In Ps. 51 we have the interesting attempt to relate the human and divine spirits.

Hebrew can express a remarkable number of psychological shades of meaning by the use of this or that term denoting a part of the body. These terms can represent the self by synecdoche. The suggestion that the Hebrews believed in a diffusion of personality throughout the body is to be rejected. It is not surprising that, related as they are to the totality, the terms tend to overlap in meaning.

The Hebrews had no knowledge of the nervous or muscular or respiratory systems or of the circulation of the blood. The significance of the brain as the center of the nervous system was completely overlooked by them. The word "HEART" (לב לבב), however, plays a very large part in descriptions of man's inner life, often in association with the words already referred to. Occasionally used with reference to the emotions, it more often occurs where we would speak of the mind or will or conscience, knowledge and action (following upon volition) being closely associated in Hebrew thought. To express emotion, the word "bowels" (מעים) is employed and to a much lesser extent the word "liver" (כבד). The kidneys or reins (כליות) too are regarded as the seat of the emotions and affections, and, in conjunction with the heart (in Psalms and Jeremiah), describe the inmost character exposed to the testing scrutiny of God. רחמים, the plural of רחם ("womb"), is used to signify "compassion." Further, the head and certain of its parts (face, eye, ear, nostrils, mouth, tongue, etc.), the limbs and their parts (especially the hand), serve to express a great variety of psychological shades of meaning. This, however, in no way implies diffusion of personality.

4. Characteristics of man. ***a. Worth.*** The OT does not credit man with any worth in his own right, though he is tempted to arrogate such worth to himself. Yet, as the crown or center of creation and as made in the image and likeness of God for fellowship with God, man has worth as God's gift. In a number of places the self is designated by the word כבוד ("honor, glory"), and it should probably not be emended to כבד ("liver"). The most notable expression of the worth of man in God's sight is in Ps. 8, which tells how God condescends to man and grants him royal honors (כבוד והדר) and a status little less than divine. In spite of Gen. 3:17-19, man shares with God the dignity of work (Gen. 1:28; 2:15; Ps. 104:23).

b. Frailty. In himself man is frail. The classic statement of this is Ps. 103:13-16:

> He [God] knows our frame;
> he remembers that we are dust.

The psalmist goes on to compare man to the grass, which withers. The same comparison is found in Isa. 40:6-8, where the prophet declares: "All flesh is grass." This is one of a limited number of passages where "flesh" is used with the connotation of weakness (e.g., II Chr. 32:8; Ps. 78:39; Isa. 31:3; Jer. 17:5). Man is also described as "dust and ashes" (Gen. 18:27).

Man's frailty shows itself in his liability to disease, in the fact that such strength as he possesses diminishes with age (except in rare cases [Deut. 34:7]), and in his mortality (*see* DEATH). Man is a being who knows that he must die. As a result of his frailty, vulnerability, and mortality, man experiences anxiety and fear, one of the commonest emotions referred to in the OT. *See* FEAR § 2*a*.

c. Sinfulness. Though the OT does not theorize about sin and certainly knows nothing of the loss of man's likeness to God (*see* IMAGE OF GOD), it tells much of man's sinfulness (*see* SIN, SINNERS). Sinfulness, however, is not part of the definition of man. The most remarkable analysis of the human situation is in Gen. 3–11, which may be regarded in intention as the story of Everyman. Man sins because he wishes vainly to assert his autonomy over against God. Adam and Eve, Cain, Lamech, the builders of the Tower of Babel, all exemplify this (J). The priestly writer, too, knows that man is a sinner and even approaches stating a doctrine of total depravity, though such a view is not characteristic of the OT as a whole. Both before and after the Flood, P asserts that the thoughts of the human heart are corrupt. Cf. Ps. 143:2 with Ps. 51:5, which represents the psalmist as acknowledging his sinfulness from birth.

It was, above all, the prophets who brought home the fact of sin to the conscience of Israel, and in whose words is found that searching analysis of the

nature of sin as estrangement from God and rebellion against God which corresponded to their conviction that God was holy, loving, and righteous. Man's creaturely weakness, though not itself the cause of sin, might tempt him to lack of faith in God and to self-assertion and arrogance. The sin of Adam and Eve was the attempt to be "like God, knowing good and evil." The builders of the Tower of Babel wished to make a name for themselves, and there was no limit to their ambition. A prophecy is directed against the king of Babylon (Isa. 14:13-14):

> You said in your heart,
> "I will ascend to heaven;
> . . . . . .
> I will make myself like the Most High."

The prince of Tyre (Ezek. 28:2) is condemned because in his pride he said: "I am a god, I sit in the seat of the gods." It is characteristic of Isaiah, who had a vision of the Lord high and lifted up, that he denounces in God's name all human pride (see especially 2:12-19) and condemns the glaring example of such pride shown by the king of Assyria, who attributed his victories to his own strong hand. Isaiah also appears in the lists to oppose Ahaz and urges him to find security in faith. Elijah opposes the pretensions of Ahab.

5. Humanity. In spite of Israel's belief in its election by God, which it often arrogantly interpreted as election to special privilege instead of to special service, the OT is clear that humanity is one. Paul was in accord with Hebrew thought when he declared at Athens that God had "made from one every nation of men to live on all the face of the earth" (Acts 17:26). In the table of the nations in Gen. 10 the Hebrew people takes its place among all the others (*see* MAN, ETHNIC DIVISIONS OF), and when Abraham is summoned to his special destiny, it is with the promise to him that by him "all the families of the earth will bless themselves."

It may well have been in the spacious days of the United Monarchy that Israel reached this broad, human outlook on the world. When later they lost it, a Hebrew voice was uplifted to remind them that all men are equal before God. God is concerned with Ethiopians, Philistines, and Syrians as with Israel itself (Amos 9:7). A prophet said: "Blessed be Egypt my people, and Assyria the work of my hands, and Israel my heritage" (Isa. 19:25). The international outlook finds its finest expression in the picture of the Servant of the Lord in Second Isaiah (Isa. 42:6), who is to be a "light to the nations"; in the vision of a unified mankind with its religious center in Jerusalem (Isa. 2:2-4; Mic. 4:1-3); and in the books of Jonah and Ruth. In the P source in Genesis, God makes a covenant with all mankind (Gen. 9:8-17).

Israel was unaware of the kind of distinction which for the Greeks divided mankind into Greeks and barbarians. If Israel was chosen from the other nations, this was not because of any particular merit (Deut. 7:6-8; 9:4-5), but because of the mysterious will of God. In Job 31:13-15 even the distinction between master and slave is denied. Alongside its intolerance, Deuteronomy is also marked by a fine sympathy for the unprivileged classes in society, including the sojourner (גר).

One of the merits of the OT is that it depicts for us Hebrew man as representative man, Everyman. This was possible because the Hebrew in the circle of the chosen people found himself confronted and challenged by God, and in this relationship learned what it is essential that man should know about himself, and what God ultimately demands of all men.

6. Man's responsibility. It is characteristic of the OT that man is represented as a being responsible to God, who has made his will known and expects it to be obeyed. This is made clear in both the creation narratives. The call to obedience is the burden of Law and Prophets alike, a call which is grounded in God's grace (see Exod. 20:2; Deut. 5:6; Isa. 1:2; Mic. 6:4). Deuteronomy links obedience and life (30:15-16; 32: 46-47). Hence the importance of man's heart, which is the organ of will. Cf. Prov. 4:23:

> Keep your heart with all vigilance;
> for from it flow the springs of life.

While individualism is no late phenomenon in history, it is true that the Hebrew had a strong sense of the importance of the institution, and exemplified throughout the centuries the primitive sense of corporate personality. Yet this did not prevent his leaders from impressing upon him his individual responsibility for the institutions of family (Gen. 2:18) and state, and characteristically the OT ignores the distinction between secular and religious law. Man is summoned by God, both to the worship of God and to the practice of righteousness toward his fellows (cf. Mic. 6:8, addressed to man!). In all the relationships of life man is responsible to God for his conduct, and God has made his mind known (*see* MAN AND SOCIETY). Man is to understand himself, not just as a part of nature, but as having his place in history as responsible to the Lord of history, whose will for man is not a static law revealed once for all, but a law which is made known in the crises of history, when man must make the decisions on which his life depends.

7. Man's destiny. As history had its beginning, so it will have its end. There were times when Israel was little conscious of the end toward which history was moving, but, by and large, the OT has an eschatological accent upon it. Yet when Hebrew seers looked forward, what they saw on the horizon of time was the consummation of God's rule upon earth in a people or in humanity obedient to his will (*see* ESCHATOLOGY OF THE OT). That individual man had a destiny on the other side of DEATH, either through resurrection on this earth or in some other world, was, if ever entertained, little more than a wild surmise, with two exceptions (see Isa. 25:8; 26:19; Dan. 12: 2-3). What the OT does teach, however, is the possibility of a faith in God's care and forgiveness and of a fellowship with him, without which in the fulness of time a more positive view of man's destiny would scarcely have been possible.

A. *JESUS.* The views of Jesus about the nature of man are derived mainly from the Synoptic gospels, on the assumption that the reports which they give are the most authentic record of his teachings. The Gospel of John, by contrast, appears to be a somewhat later, entirely new exposition of the gospel of Jesus along the lines of its author's own, individualistic thinking.

1. Psychological terms. The most general impression derived from a survey of passages in the Synoptic gospels which might indicate the ideas of Jesus about the nature of man is that, on the whole, his views are essentially those of the OT. First of all is the concept of the physical body, which is expressed by either σῶμα, "body," or σάρξ, "flesh." In Mark 5:29: "She felt in her body that she was healed," the word is σῶμα. This word appears also in 14:8: "She has anointed my body beforehand"; and in 15:43: "Joseph . . . asked for the body of Jesus." On the other hand, in 14:22: "This is my body," σῶμα obviously means "flesh." Mark 10:8 uses σάρξ, "flesh," to mean the sexual function, which simply preserves the meaning of *bāsār*, "flesh," in Gen. 2:24. In a popular way Mark 14:38: "The spirit indeed is willing, but the flesh is weak," seems to indicate a dualistic view, but this is not actually the case. It is characteristic of Jesus, as it was also of the OT, to think of personality as a unity.

In Mark 13:20: "No human being would be saved," the word for "human being" is σάρξ, "flesh": no flesh would be saved. "Flesh" in this sense is a metonym for man, a usage which is frequent in the OT (cf. Isa. 40:5). "Body," on the other hand, as in Matt. 5:29: "that your whole body be thrown into hell," is a metonym for "person" or "personality," a figure which appears also in Matt. 6:22: "The eye is the lamp of the body." Of course, in this passage "eye" is a metaphor for "mind." There is nothing in these uses of σῶμα and σάρξ which was not often expressed by *bāsār* in the OT.

In Mark 3:4: "to save life or to kill," the word for "life" is ψυχή, which is our word "psyche." It is used in this sense also in 10:45: "to give his life as a ransom for many." In 8:35, however: "Whoever would save his life will lose it," a pun is involved. For here "psyche" means not only "life," but also "soul," in the sense of "eternal life." Jesus means that in the effort to save your temporal life you may lose it eternally. This idea that man possesses an eternal soul had developed toward the end of the OT, but was not evident in the earlier writings.

Mark 14:34: "My soul is very sorrowful, even to death," shows that "psyche" or "soul" is used in the sense of the first-person pronoun "I." The idea expressed is, "I am sorrowful." This again is a common idiom in the OT (cf. Pss. 6:3; 7:2; etc.).

The translation of Deut. 6:5, which occurs in Mark 12:30; Matt. 22:37; Luke 10:27, introduces the Greek word διάνοια, "mind," into the Hebrew quotation. But this is only an effort of Jesus himself, or the translator whom he is quoting, to show that the Hebrew word *nephesh*, "soul," in the passage includes an intellectual element. It introduces no new idea. Psyche in the words of Jesus could, almost without exception, be turned back into the Hebrew *nephesh*.

2. Spirit possession. *Pneuma*, "spirit," is used of the Holy Spirit, as in Mark 1:8, 12; 3:29; 12:36; 13:11; or it can refer to the spirit of an individual person, as in 2:8; 8:12. Both these uses are common enough in the OT. The use of *pneuma* with reference to "unclean, evil spirits" or "demons" goes beyond the OT. It occurs with great frequency in the Synoptic gospels. In the OT we are limited to such passages as I Sam. 16:14: "An evil spirit from the LORD tormented him"; or I Kings 22:23: "The LORD has put a lying spirit in the mouth of all these your prophets." The appearance of evil spirits is far more frequent in the gospels, and also the theology is different. In the OT the evil spirits are under God's control, while in the gospels they are subject to Satan. In both cases, however, the references throw important light on the view of man's nature. Like his OT predecessors, Jesus assumes that a spirit has an objective existence of its own; that it may succeed in gaining entrance into the personality of a human being, where it can either expel or dominate the human spirit, and take up residence in the body; and also that such a spirit may be overcome and driven out by an exorcist who understands how to do it. This phenomenon of possession and exorcism was an ancient way of diagnosing and treating what we call mental illness, with its neuroses and psychoses (*see bibliography*). A similar view of personality is shown also in the belief that the Holy Spirit objectively entered into persons. In Mark 1:10, "the Spirit descending upon him" is actually in the Greek ". . . into him" (εἰς αὐτόν).

3. His words and stories. The most basic element in Jesus' view of the nature of man is his assumption throughout that man has intelligence, free will, and emotions which require discipline. Man's intelligence enables him to understand God's will; his freedom makes it possible for him to choose the will of God; and his autonomy permits him to do it.

These qualities of intelligence, freedom, and responsibility are indicated in such a saying as Matt.

15:19: "Out of the heart come evil thoughts, murder, adultery, fornication, theft, false witness, slander." The same insight into personality is shown in Matt. 5:28: "I say to you that every one who looks at a woman lustfully has already committed adultery with her in his heart." In such passages Jesus assumes that all acts of the moral life spring from the autonomy of the self. "Heart" in these sayings is similar to "flesh" in Paul's vocabulary, as illustrated in Gal. 5:19, where he gives a catalogue of sins which are the "works of the flesh." The insight of Jesus here is certainly no less profound than that of Paul. However, "heart" means much more for Jesus than "flesh" does for Paul in such contexts. It includes in its range what Paul lists in Gal. 5:22-23 as "fruits of the Spirit." Jesus knows that the inner self of man is capable of good things as well as bad; and so he is able to say in Matt. 5:8: "Blessed are the pure in heart, for they shall see God." Such purity is within reach of the devout man who responds to the grace of God by keeping his commandments.

In the eyes of Jesus, sin is a deliberate, wilful, evil deed. He says in Mark 9:42: "Whoever causes one of these little ones who believe in me to sin, it would be better for him if a great millstone were hung round his neck and he were thrown into the sea." This saying is based on the responsibility of a man for his evil deeds. The same principle is implied in Mark 10:21, where Jesus says to the young man: "You lack one thing; go, sell what you have, and give to the poor, and you will have treasure in heaven; and come, follow me." This shows that the truly moral and spiritual life is based squarely on the individual autonomy of decision, which belongs to the genius of man's nature by virtue of the fact that he is created in the image of God.

The same view of personality is reflected in the parables. In the story of the sower in Mark 4:3-20, Jesus says the seed fell in four different kinds of soil: in the uncultivated footpath, where obviously nothing could grow; in rocky soil, where there was no depth; in thorns, where young plants were quickly crowded out; and in good soil, which produced abundantly. The parable illustrates four types of persons. But even here Jesus does not mean that a man's character is determined by heredity. He assumes as a matter of course that a man is responsible for the sort of soil he is.

The story of the wayward son in Luke 15:11-32 shows the same principle. The father, who represents God, allows his son complete freedom in arriving at the decision to leave home. Moreover, the son returns only after he has freely made up his mind that it is best for him to go back.

The story of the rich man and Lazarus in Luke 16:19-31 lets the rich man suffer for the course he has deliberately chosen to pursue. The ten maidens of Matt. 25:1-13, who are going to a wedding, are allowed to decide freely whether to keep their lamps trimmed and burning; and in the Last Judgment of Matt. 25:31-46 the Son of man pronounces his blessing on those who have freely shown compassion on needy persons.

While Jesus was not attempting to set up a system of psychology or ethics, the moral and spiritual structure of personality and the principles which are at the basis of man's nature are transparent in all his words and stories. Although his principles are those of the OT, no prophet before him had seen so clearly what it means to be created in the image of God.

The idea of life after death has little place in the OT, although it would seem to have been implicit in the concept that man was created like God (Gen. 1:27). But for long centuries Hebrews believed that the religious drama came to its end in death. Nothing but a dreary Sheol was to follow. But this view was finally replaced by such writers as that of Dan. 12:1-3; and at the very end of that era Wisd. Sol. 2:23 was to say:

> God created man for incorruption,
> and made him in the image of his own eternity.

Jesus was the heir of this faith. For him it was fundamental. There is hardly a word in his teaching which does not presuppose that the possibility of eternal life belongs to the nature of man (see Matt. 6:19-21; 13:37-43, 47-50; 22:30-32; 25:10, 34, 41, 46; Luke 16:19-31; 18:18, 29-30; John 5:25; 6:27, 40, 44, 47, 51, 54, 58; 11:25-26).

B. *PAUL*. 1. Natural religion. Although the general exposition of salvation in Paul's letters is stated in terms of the supernatural, his understanding of faith, nevertheless, is based on a solid foundation of natural religion. In Rom. 1:19-20 he writes: "What can be known about God is plain to them, because God has shown it to them. Ever since the creation of the world his invisible nature, namely, his eternal power and deity, has been clearly perceived in the things that have been made. So they are without excuse." The idea in this passage is that God is revealed to the intelligence of man by his works of creation. This is natural revelation, and it is apprehended by the natural reason of man. It is possible for man, entirely apart from historical revelation—such, e.g., as that given through Moses and the prophets—from a study of the natural world itself to arrive at belief in the existence of God, and in a conception of divine law, which he ought to obey. Paul goes on to say that man has not lived up to his opportunity and obligation in this respect, but it is not because of lack of natural ability to know God and comprehend his law. Man's failure is due rather to some innate perversity of his own nature, which causes him to sin.

Paul carries his statement about natural religion further and makes it more explicit in Rom. 2:14-15: "When Gentiles who have not the law do by nature what the law requires, they are a law to themselves, even though they do not have the law. They show that what the law requires is written on their hearts, while their conscience also bears witness and their conflicting thoughts accuse or perhaps excuse them." In these words Paul recognizes that among Gentiles who have never heard the law of Moses there are good people who obey God; and the reason they are able to do this, although they have never heard of Moses, is that God has written his law on their hearts. Their consciences are therefore divinely equipped to direct them in the moral life.

This sympathetic view of the Gentile world is an extension to all mankind of what Jeremiah had said long before about Israel. In 31:33 this prophet spoke of a time when God would write his law upon Hebrew hearts, so that they would have a natural knowl-

edge of the divine will. Paul takes this insight and makes it universal, although he is quick to point out that Gentiles have usually fallen short of their opportunity and obligation.

Paul's views of the religious capacity with which human beings are endowed are in line with the OT idea that man is created in the image of God (Gen. 1:27). The prophets and psalmists (cf. Pss. 8; 19; Isa. 40:26; Amos 5:8-9) make the original religious endowment of man a basic assumption. Paul is mainly preoccupied with man's tendency to sin, but at times the optimistic humanism of his Hebrew heritage comes to expression. His mood usually calls for somber colors as he paints human nature. Nevertheless, he has brighter hues at his disposal into which he sometimes dips his brush.

2. The self. The failure of Gentiles to live by natural revelation, like that of Jews to keep the law of Moses, led Paul into a searching analysis of human nature in an effort to isolate the element of perversity which causes man to be a sinner. He succeeded in penetrating deep recesses of personality. Picturesquely, but also profoundly, and quite unintentionally, he was the first great introspective psychologist. The school of depth psychology has been powerfully influenced by his insights.

But Paul was neither a psychologist nor a philosopher in a technical sense. His language is closer to that of a poet. The first step that one must take in understanding what he writes is to recognize the figurative nature of his vocabulary. If he knows scientific forms of thought, he does not use them. He likes to play with words. There rushes from his pen a torrent of colorful metaphors, metonyms, and puns. In the course of a few sentences he will use the same word in so many different meanings that the reader may find himself lost in a maze. There is an element of the fox in Paul as he baffles his pursuers. Yet in spite of the poetic subtleties with which he expounds the Christian faith, and the difficulty of defining his terms with complete certainty, the broad outlines of his thought are fairly clear.

Among the important words which Paul uses in his analysis of personality are "soul" (ψυχή), "spirit" (πνεῦμα), "body" (σῶμα), "flesh" (σάρξ), "sin" (ἁμαρτία), "reason" (νοῦς), "death" (θάνατος), "law" (νόμος), "heart" (καρδία), and the adjectival forms derived from them.

a. Desire. Paul does not limit himself to one word to express desire. Indeed, it seems doubtful that he actually had an abstract concept of desire. His thought in this respect is Hebrew rather than Greek. Yet, whether he was conscious of it or not, desire was the most determinative idea in his vocabulary of personality. This is such a decisive concept for Paul that one could say that it was his prepossession, not to say obsession. In this respect he moved far away from his classical Hebrew heritage and speaks more like a man of the Far East. He reminds us of Gautama Buddha, whose most basic affirmation was that the tragic human predicament results from desire—a view which he held in common with Jains and various ascetic elements of Hinduism. While not a Gnostic in the sense of regarding the flesh as totally evil, or a Manichaean in the sense of going in for extreme asceticism, especially with reference to sex, yet Paul must inevitably be placed in the ancestry of these later cults.

Paul associates desire very closely with the flesh. In Gal. 5:16-21 he says: "Walk by the Spirit, and do not gratify the desires of the flesh. For the desires of the flesh are against the Spirit, and the desires of the Spirit are against the flesh; for these are opposed to each other, to prevent you from doing what you would. But if you are led by the Spirit you are not under the law. Now the works of the flesh are plain: immorality, impurity, licentiousness, idolatry, sorcery, enmity, strife, jealousy, anger, selfishness, dissension, party spirit, envy, drunkenness, carousing, and the like." And in vs. 24: "Those who belong to Christ Jesus have crucified the flesh with its passions and desires."

In such passages one must distinguish between individual passions and desires and the "flesh," which is the seat of them all. In the latter sense "flesh" is a metonym for "desire." Some desires, such as hunger and sex, have such specific and obvious location in the flesh of the body that "flesh" becomes a metonym for all desire. So in the passages quoted above, flesh is referred to as if it were a person. Flesh as a sort of foreign, alien person seems to reside in the body.

Paul also uses "body" in the same sense. In Rom. 6:6 he says: "We know that our old self [Greek 'our old man'] was crucified with him so that the sinful body might be destroyed, and we might no longer be enslaved to sin." Again in 6:12: "Let not sin therefore reign in your mortal bodies, to make you obey their passions." Here "body" has the meaning of "flesh" in the passages quoted from Galatians, and "sin" is introduced in the same sense. Paul can use "flesh," "body," and "sin" interchangeably in these contexts, and they mean essentially the same thing.

In Rom. 8:13 he says: "If you live according to the flesh you will die, but if by the Spirit you put to death the deeds of the body you will live," where "flesh" is equated with "body." If we bear in mind that "flesh," "body," and "sin" are metonyms for the same thing—i.e., for "desire"—an important step has been taken toward understanding Paul. His statement in Rom. 7:20: "It is no longer I that do it, but sin which dwells within me," is intelligible as soon as we are aware that "sin" is a metonym for "desire." In this case, as sin so often results from desire, it is substituted for desire itself.

b. Reason. In line with his tendency to avoid abstract terms, Paul rarely mentions reason or mind. Yet his respect for natural religion, as we have seen, implies that rationality is an important element in personality as he sees it. But the word "reason" itself appears in certain key passages. A notable example of this occurs in I Cor. 14, where Paul draws his famous contrast between inspired ecstatic phenomena and Christian rational behavior, showing that he has high respect for the latter. In 14:14-16 he writes: "If I pray in a tongue, my spirit prays but my mind [νοῦς] is unfruitful. What am I to do? I will pray with the spirit and I will pray with the mind [νοῦς] also; I will sing with the spirit and I will sing with the mind [νοῦς] also." In vs. 19 he continues: "I would rather speak five words with my mind [νοῦς], in order to instruct others, than ten thousand words in a tongue."

But Paul's most relevant use of "reason" for our

purpose occurs in Rom. 7:22-23: "I delight in the law of God, in my inmost self [*see* INNER, INWARD MAN], but I see in my members another law at war with the law of my mind [νοῦς] and making me captive to the law of sin which dwells in my members." The context shows that in this case Paul equates "reason" with "inmost self," which makes it of basic importance in his analysis of personality. The passage occurs at a crucial point in his great discussion of the nature of man (Rom. 5–8).

c. Will. Nor do we find will dealt with by Paul in abstract, technical terms. Yet some of the obscure statements in his exposition of human nature are clarified only if we realize that here is a description of will struggling with alien forces which have overcome it and hold it in bondage. The demonic monsters which overpower the will are called variously: "body," "flesh," "law," "sin," "death." In I Cor. 15:56 death is conceived as a dragon which bears sin embedded as a mortal sting in its tail.

The predicament of man, as Paul sees it, appears in Rom. 7. Here the human self is constructed with three levels at the same time. Above is reason, which apprehends the law of God and knows well what man's duty is. At bottom is the flesh, whose overriding desire blocks the performance of duty. But in between, on another level, is the conscious "I," which is aware of both the upward challenge of God's law and the downward pull of carnal desire. The "I" has will at its disposal, but finds it constantly thwarted and made impotent by desire. Such is man's condition. Yet at the same time, the "I" cannot stand aside as a mere spectator and observe the struggle between reason and desire. Paul knows well that this trinity of the self is also a unity; that reason, desire, and the conscious will are together components of the one self, the one nature of man. Although figuratively there are three selves, the "I" can, and does, in this passage from verse to verse speak from the point of view of first one of these selves and then the other. Yet it knows that in a true sense it absorbs and includes them all. Thus Paul concludes in vs. 25: "So then, I of myself serve the law of God with my mind, but with my flesh I serve the law of sin." In this statement Paul summarizes his triangle of the self.

3. Will of God versus will of man. There is also an element of determinism in Paul's understanding of man. Human destiny is shaped by decrees of the divine will. This idea is formulated in Rom. 8:29-30: "Those whom he foreknew he also predestined to be conformed to the image of his Son, in order that he might be the first-born among many brethren. And those whom he predestined he also called; and those whom he called he also justified; and those whom he justified he also glorified." Paul knows that no man holds his own destiny entirely in his own hands. But this is an election of love. There is no predestination of punishment in Paul's mind. Nor does he say that God ever invades man's autonomy or coerces his will. God's sovereignty and man's freedom both find their place in Paul's thought. But man finds true freedom only when he brings his will into harmony with the will of God. Paul himself enjoys being a slave of Christ.

4. Salvation. Paul's study of human nature shows that without aid from beyond or above himself, man is lost. He does not say that help has not been available. God has constantly sought to come to man's rescue. From the beginning of time he has been revealing himself in nature (Rom. 1:19-20). Then he sent Moses and the prophets. Man has good inclinations; he apprehends the truth; but desire has paralyzed his will, and holds him in bondage. Salvation is impossible unless someone sets him free (Rom. 7:17-25).

a. Redemption. Freedom from slavery can be achieved only by running away or through redemption (*see* REDEEM). The former is impossible because man can never escape from himself. Nor can he redeem himself, as he is bankrupt (7:24-25). The only possibility is redemption by another, which is freely offered by Christ to those who have faith. Faith is necessary because God does not override man's will (Rom. 1:16-17). But Christ is ready to deliver man from law, flesh, body, sin, and death, the monsters which hold him in bondage. This is Paul's gospel (Gal. 2:19-21).

b. Sanctification. Salvation is thus a mutual experience in which both God and man inevitably participate. The only way in which redemption can occur without violating the nature and dignity of man is through his full response to God in mind, heart, and will, which is faith. As the commitment involves the entire personality, it means that all of man's faculties must be transformed into the likeness of Christ. This is SANCTIFICATION. The real Christian is changed into the divine image (II Cor. 3:12-18); this is a process both moral and spiritual which continues throughout life, but reaches culmination only in the hereafter (I Cor. 13:12). But sanctification is not a humanistic achievement. Its source is God through Christ (I Cor. 1:30; I Thess. 4:3).

c. Immortality. Pneuma in the Pauline sense inherits from classical Greek *pneuma,* on the one hand, and from Hebrew *nephesh,* on the other, the idea of shadowy survival in Hades or Sheol as a natural quality; but IMMORTALITY, which is the hope of the Christian, is for Paul, not the heritage of the first Adam, but the hope of the second Adam (I Cor. 15:45-50). The first man is of the dust; the second is from heaven. "Just as we have borne the image of the man of dust, we shall also bear the image of the man of heaven." This is the final possibility of man.

Just as Paul sees the forces of sin which hold man in bondage as cosmic powers, he assumes that the inanimate creation has also been "subjected to futility" and "groaning in travail together until now." But he appears to contemplate that in the final consummation, when the sons of God are revealed, all nature will participate in some marvelous way in the "glorious liberty of the children of God" (Rom. 8:18-25).

C. *OTHER NT WRITERS.* Nowhere else among NT writers do we find such deep concern about man's nature. The Gospel of John (1:6-9) sees the drama of redemption in cosmic terms. It is a struggle between light and darkness. Man cannot enter the kingdom of God unless he is born again (1:13; 3:3-7). This writer assumes the depravity of man, but he does not stop to analyze it. The same is to be said of I Peter (1:23). Both these authors appear to stand in Paul's debt. II Peter, Jude, and Revelation share Paul's view that the natural world is to be renewed,

but this idea they, as well as Paul, have drawn from Jewish apocalyptic writers in general. They make no contribution to a study of man. The author of Hebrews breaks new ground with his original interpretation of Jesus as the incomparable high priest; but insofar as man is concerned, he is a son of the OT. This is true also of James, whose letter shows more similarity to the words of Jesus than any other document in the NT. The letters of John are concerned with Christian ethics in a simple, unspeculative way.

MAN, SON OF. *See* Son of Man.

MAN AND SOCIETY. The word "society" does not appear in the English versions of the Bible. The term is of somewhat indeterminate nature, applicable to many human groups and relationships. These may involve families, tribes, nations, religious communities, or even world-wide humanity. All these appear in the Bible; hence the social nature of man is assumed therein at every turn. Man is man only as a member of a social group. Monotheism in Israel, once attained, had as its corollary the sovereignty of God over all peoples. But the societies at the focus of attention in the OT and the NT, being religiously grounded, felt both their differences from and their responsibilities toward other societies in the world.

Bibliography

1. Terminology employed in the Bible. Although there is no word in the Bible corresponding to our word "society," there are many words which refer to what we may call the constituent elements of the social order.

a. In biblical Hebrew. The basic unit of society is designated either by משפחה ("Family"; LXX πατριά; I Sam. 9:21) or by בית אב ("father's house," "household"; LXX οἶκος τοῦ πατρός; Gen. 24:7, 38). These terms are sometimes used interchangeably (Exod. 12: 3, 21). The family seems to have been a social unit between the "father's house" and the tribe (Num. 2: 34; Josh. 7:14; "tribe" is מטה and שבט, both terms deriving from words meaning the staff of the ruler). Two terms ordinarily employed for stated meetings for worship are קהל ("assembly"; LXX ἐκκλησία) and עדה ("congregation"; LXX συναγωγή), but these words could also designate the permanent community of all Israel (Deut. 23:2-3; Mic. 2:5). The term רע ("Neighbor") usually meant "fellow Israelite" (Deut. 15:2; Jer. 31:34; cf. Lev. 19:18). The Sojourner was given legal protection by the Book of the Covenant (*see* Covenant, Book of the; Exod. 22:21-22; cf. Deut. 5:14).

b. In NT Greek. The NT uses some of the same words as the LXX; e.g., πατριά for "family" (Luke 2:4; Eph. 3:15) and οἶκος for "household" (Luke 19: 9; Acts 10:2). Another word, κόσμος, peculiar to the LXX—the OT Hebrew has no comparable word—is used in the NT for the created world, especially the sphere of human relations or the world of men (Matt. 18:7; John 1:29). The words used for the Christian community and its members are many. Members are called "Christians" thrice (Acts 11:26; 26:28; I Pet. 4: 16); "disciples" (μαθητής; Acts 6:1; 15:10); "brethren" (ἀδελφός; Rom. 7:4; cf. I Pet. 2:17); "saints" (ἅγιος; Acts 26:10; Col. 1:4, 26). The Christian community was called a "fellowship" (κοινωνία; Acts 2:42; I Cor. 1:9; cf. I John 1:3, 7); a "household of faith" or "of God" (οἶκος; Gal. 6:10; Eph. 2:19); "God's elect" or "chosen" (ἐκλεκτός; Rom. 8:33; Tit. 1:1); the "body of Christ" (σῶμα χριστοῦ; I Cor. 12:27; cf. Eph. 4: 12; Col. 1:18*a*); the "Israel of God" (Gal. 6:16). The "church" (ἐκκλησία) is the term most commonly used for the Christian community, either for separate churches or for the church as a whole (Acts 9:31; I Cor. 12:28; Eph. 3:21). The "church of God" is also found (I Cor. 10:32; Gal. 1:13; cf. II Thess. 1:4).

2. Man and society in the OT. In both testaments it is assumed that no man by himself can live a complete life; he needs a society to fulfil his true nature, and he gains stature to the extent that he carries out his responsibilities to God as well as to society.

a. The social nature of man in the OT. In the early nomadic period especially, the solidarity of family, clan, and tribe was of necessity such that the individual could scarcely hope to survive outside his kinship group. A man's life was merged into the collective or corporate personality (Num. 16:1-35; Josh. 7:10-26; cf. II Sam. 24:10-15). This concept of corporate personality is often exaggerated to the degree that individualism is thought to have been entirely absent from Israel until the time of Jeremiah and Ezekiel. It is true that these prophets voiced the first definitive statement of individualism (Jer. 31:29-30; Ezek. 18:4, 20; cf. Deut. 24:16), yet it is equally true that individual leadership and responsibility, as well as personal religious experience, were recognized long before this. It is true also that the thought of Israel remained distinctly social throughout OT times. The prophets were conspicuous for their urging man's responsibility for his neighbors' welfare and insisting that mercy and justice be accorded the least and humblest of them (Isa. 3:13-15; Amos 8:4-6). The same note of social responsibility is often struck in the Psalms and the wisdom books (Job 31; Ps. 15).

Beyond this, the prophets discerned within the community of Israel a faithful group which should be a means of salvation, even though disaster might overtake others. Isaiah made this a characteristic of prophetic faith (*see* Remnant; Isa. 10:20-22). In the hands of Second Isaiah this religiously faithful portion of Israel, perhaps, was to spread the Yahweh faith among other peoples (Isa. 42:1-4; 49:5-6).

b. The place of the law in OT society. The law was also on the side of social justice and responsibility (*see*

LAW IN THE OT). The Book of the Covenant calls for the individual's obedience to the divine will as expressed in the law and as the basis of moral and social conduct. The Decalogue (*see* TEN COMMANDMENTS) demands that every man respect his neighbor's rights (Exod. 20:12-17). Even the rights of Hebrew slaves were recognized (Exod. 21:1-6; cf. Deut. 15:12-18). The book of DEUTERONOMY, owing perhaps to prophetic influence, is especially important for its high quality of social legislation. One writer has called Deut. 17:14-20 the "Magna Charta of Israel," because it puts limitations upon the monarchy to protect the dignity and personal value of the common man. There are suggestions in both the legal and the prophetic books that the ideal society would be one in which all men were equal in the sight of God and deserving of equal rights to consideration and justice from others.

3. Man and society in the NT. Many of the concepts in this category in the NT are rooted in the OT, yet with significant differences and extensions. For one thing, just as in the OT Israel felt itself to be a unique creation of God, different in nature from all other peoples, so in the NT the "new Israel" was felt to be a separate and radically different kind of society —a "new creation" (Gal. 6:15-16)—different in a qualitative, not a racial or social, sense.

a. In the gospels. Jesus can hardly be called a social reformer, nor was he interested primarily in ethical teaching per se (*see* ETHICS IN THE NT). He did, however, as the prophets before him, enunciate many ethical and social principles, as a means to the end that men might gain true fellowship with God and thus truer fellowship with one another. He regarded himself as a teacher in the prophetic tradition (Mark 6:4; Luke 13:33). He did not nullify the law which had governed the OT community for centuries; rather, he fulfilled it (Matt. 5:17; cf. 22:36-40). In his teaching on the moral duty of the individual man, Jesus gave greater weight to the inward motive than to the external command or the overt act (Matt. 5:19-22, 27-28, 38-48).

The KINGDOM OF GOD, the main theme in the Synoptic gospels, was in one sense the envisioning of a new kind of society, for which men were urged to prepare and in which all would acknowledge God's sovereignty. But in a larger sense it was an eschatological expectation which had already begun to manifest itself (Matt. 12:28; cf. Luke 17:20-21), and which was to come in its fulness in the coming age (Matt. 13:36-43; cf. Mark 10:29-30).

b. In Acts and Paul's letters. The apostles' preaching in Acts proclaims the risen Jesus as the coming Messiah (Acts 3:20-21; cf. 1:11; 10:39-42). There was as yet no thought of Jesus' followers' breaking with Judaism to form an independent society. They constituted an eschatological community within Judaism, expecting the new age to appear soon and their Messiah to return at any moment. This was the bond which held them together and distinguished them from their fellow Jews.

But it was not long before the movement reached out beyond Judaism (Acts 8:5-8, 14-17; 10:9-16, 34-35, 44-48). The Christian movement was now on its way to becoming a separate community. And with Paul's mission to the Gentiles, the separation became more fully marked (Acts 13:43-46). The new society was now a "people" (Acts 15:14), made up of men of various nations and classes. When men entered this society, they ceased to be Jews or Gentiles, slaves or freemen. They were "one body in Christ" (Gal. 3:28-29; Col. 3:11-15; cf. Rom. 12:5, 9-10).

The separateness of the new community may be seen in the various names applied to it (*see* § 1*b above*). The very term "church" (ἐκκλησία) means "called out," as does the term "elect" or "chosen" (ἐκλεκτός). "People of God," "Israel of God," "household of faith," connoted a community intimately bound together. The "body of Christ" implied also a single vital organism, somewhat like the OT concept of corporate personality (*see* § 2*a above*) or better, a "remnant" (cf. Rom. 11:5).

Yet despite its sense of separateness from the world, the Christian community did not remain aloof from the world. It could not do so if it would, for it felt a responsibility for the world and sought to win as many as possible from the world before the end time should come (I Cor. 9:19-23; cf. 7:29*a*, 31). The Christian society, the church as the eschatological community, may thus be called a new type of society, the prototype of the still more inclusive and perfect world society which is to be (Eph. 2:19-22).

c. In other NT writings. In later books of the NT the Christians are shown more fully aware than ever of their differences from all other societies. They are to be distinguished from Jews in that they are the community of the "new covenant" (Heb. 9:15; 12:24; cf. II Cor. 3:6), and as "God's own people" (I Pet. 2:9-10; cf. Tit. 2:14). They are advised to keep themselves "unstained from the world" (Jas. 1:27), and they are warned that "friendship with the world is enmity with God" (Jas. 4:4; cf. I John 2:15-17). It is said also that the Christian society is "of God" and others are "of the world" (I John 4:4-6). "The Lord knows those who are his" (II Tim. 2:19).

The Christians must expect persecution from evil men (II Tim. 3:12-13; I Pet. 4:12-19). But they must not allow this to deter them from living exemplary lives among themselves (Heb. 13:3-7; I Pet. 1:22; 3:8-9) or from exercising the ethic of love toward those outside their fellowship (I Tim. 2:1-4; I Pet. 2:12-16; 3:15-17).

The Christian community was still the eschatological community and the end time was imminent (I Tim. 6:14-15; I Pet. 4:7, 17; I John 2:28). Yet, though it awaits consummation, it has already begun, for the church represents the household of faith, the pattern of the future kingdom of God (Jas. 2:5; cf. Eph. 2:19-22; Heb. 12:28). The church is, indeed, the "first fruits of his creatures" (Jas. 1:18; cf. Rev. 14:4*c*), a society which is in the world but not of it (cf. I Cor. 2:12), yet a society responsible to the world —to human society—for the salvation of all men (I Tim. 2:3-6; cf. 4:10).

MAN OF LAWLESSNESS [ἄνθρωπος τῆς ἀνομίας] (II Thess. 2:3). A mythical satanic character who is to be the personal adversary of Jesus Christ at the time of his second advent. *See* ANTICHRIST.

MANAEN măn'ĭ ən [Μαναήν = מנחם (Menahem), comforter] (Acts 13:1). Listed along with Barnabas, Symeon called Niger, Lucius the Cyrenian, and Saul as one of the "prophets and teachers" in the church at Antioch.

He is called a σύντροφος of Herod the tetrarch—i.e., Herod Antipas, who in 4 B.C. succeeded his father, Herod the Great, as ruler over a part of his domain (4 B.C.-A.D. 37). The word σύντροφος occurs only here in the NT (cf. the LXX of III Kings 12:24; also I Macc. 1:6; II Macc. 9:29). It should be translated either as "member of the court" (so RSV) or "courtier," or as "intimate friend"; and it probably does not mean in this passage "foster brother." Manaen had apparently been a close friend of Herod, perhaps since childhood.

MANAHATH măn'ə hăth [מנחת, *apparently* resting place, settlement; *cf. place name* מנחת *and personal names* נחת, מנוח]. **1.** The second son of clan chief Shobal; ancestor of a Horite subclan in Edom (Gen. 36:23; I Chr. 1:40). L. HICKS

2. A site, probably in Judah, to which were exiled certain Benjaminite inhabitants of Geba (I Chr. 8:6); generally identified with Manocho, a city appearing in the list of towns in the hill country of Judah, which the LXX adds to the Hebrew text of Josh. 15:59. The ancient site is probably represented by modern Malha, a village three miles SW of Jerusalem in the vicinity of Bittir. W. H. MORTON

MANAHATHITES măn'ə hăth'īts [מנחתי]; KJV MANAHETHITES —hĕth'—. A clan mentioned only in I Chr. 2:54, where they are said to belong to the genealogy of Judah. It is therefore assumed that the town of MANAHATH was reckoned to the tribe of Judah. *Cf.* MENUHOTH. E. R. ACHTEMEIER

MANASSEH mə năs'ə [מנשה, one who causes to forget—*e.g., some misfortune (thus correctly in* Gen. 41:51); *originally the name of a person*]; MANASSITE —īt [מנשי]; Apoc. MANASSEAS —ĭ əs (I Esd. 9:31); KJV Apoc. and NT MANASSES —ēz. **1.** The first-born son of Joseph, and the eponymous ancestor of one of the twelve tribes. Born of Asenath, the daughter of the Egyptian priest (Gen. 41:51; 46:20), he was adopted, along with his brother Ephraim, by Jacob (48:5). Although Manasseh is regularly specified in the tribal lists, the name is never found in the lists of the sons of Jacob, where only Joseph is mentioned. Manasseh also appears elsewhere occasionally as an individual (e.g., Gen. 50:23), but for the most part his function as *heros eponymos* of the tribe of Manasseh can be discerned.

The tradition that Ephraim and Manasseh were adopted by Jacob (Gen. 48) already contains clear etiological statements concerning history. It has to explain not only the equal status of the younger tribes alongside the older tribes, but, above all, the reversal of political importance which occurred in the course of time in the younger group itself. The old assumption is still to be preferred—that only the Joseph or Rachel group (at least in part) was in Egypt in the course of the "Israelite" occupation of the land, and then only later joined the movement toward Canaan as a second, large wave, after the Leah group, which was already settled there. The common point of departure was probably the region of Kadesh-barnea. From here the Leah group had penetrated into Palestine directly from the S and had gradually spread through the whole wooded hill country which had been but slightly developed by Canaanite cities, until in the central area the tribes of Simeon and Levi were suddenly smitten by the catastrophe which forced them to retreat to the S edge of the cultivated land (Simeon), and even to the point of departure in Kadesh (Levi). From here, too, the Joseph or Rachel group, having returned from Egypt, began its new advance, respecting, however, the land taken by its kindred—i.e., the territory of Judah (and, not least of all, the crossbar of Canaanite cities from Jerusalem to Gezer) no less than that of the Edomites, the Moabites, and the Ammonites. They advanced on a new route which led them to their goal from the E, into the country in which Simeon and Levi had once tried in vain to gain a foothold (Gen. 34:30; 49:5-7). While Benjamin crossed the Jordan near Jericho and apparently had to suffer severe casualties, the Joseph group either crossed at the same spot (but not until later) and/or at fords farther N. In any case, they were able to preserve their large number and gradually capture the whole area from Bethel to the Plain of Jezreel.

To these people also belonged the group later called Manasseh. That they had to restrict themselves to the hill country and were unable for a long time to penetrate the coastal plain or the Plain of Jezreel and its E continuation, the Plain of Beisan, is stated expressly in the document preserved in Judg. 1:27 ff and is shown, likewise, by the old anecdote in Josh. 17:14 ff. The particulars as to the composition of the group and how it coalesced are, naturally, beyond our cognizance. Presumably it absorbed parts of the older wave which were scattered throughout the country. From a later, but still pre-statehood, period, a document has been preserved for us in connection with the border descriptions in the book of Joshua, a document which permits a glimpse into the further development of the tribe of Manasseh—i.e., Josh. 17:2 and (without the genealogy) perhaps also vs. 3. Canaanite cities such as Helek, Shechem, and Hepher had already been incorporated, also Hoglah and Tirzah; alongside them were communities like Abiezer and Azriel, which can be recognized as purely Israelite by their names. The document is only a fragment, but it is instructive insofar as it shows that the Manassites have already captured cities and settled in them, and surely not everywhere by destroying the native population. At first, to be sure, they, like all the Israelites, avoided the Canaanite

cities and established themselves in the open country in new settlements by clans. A clear-cut example of this is furnished again by Josh. 17:8, an old notice interspersed in the boundary description of Manasseh itself. According to this, Manasseh settled at first only the area belonging to Tappuah (Tell Sheikh Abu Zarad). The town itself, located on the S border, was occupied only at a later stage, and then by the Ephraimites. By the time the boundary which divided the city from its territory was fixed, in the period before statehood, the people of Joseph had already developed separately. This development may have been based in part on blood differences. Certainly the physical and political contrasts of the regions in the N and the S also played a role. The S part of the country, more reminiscent of Judah, was furrowed by deep valleys in which it was also easier to maintain one's own character because of the absence of Canaanite cities. Because this area sealed itself off, the N was left alone and more and more had its own destiny, which was determined, not so much by the struggle against the forest (Josh. 17:15) as by the conflict with the Canaanite city-states (vss. 2-3). Being larger in extent and with a more friendly terrain, not so closed up, and with many smaller plains scattered in it, it attracted the greater number of settlers. This accounted for its initial pre-eminence. The fact that the N lost its pre-eminence to the S is connected with political development. Not by chance did Ephraim produce such important men as Joshua, Samuel, and Jeroboam I.

The name Manasseh probably did not come into constant use as a general designation for the N until relatively late. Before that it was in competition with the name Machir, if the latter is not really the older. In any case, the Song of Deborah mentions the same name, Machir (Judg. 5:14), and connects it with Issachar and Zebulun, but clearly separates it from Ephraim, with which Benjamin appears and which is named first. The Blessing of Moses also knows both parts and gives Ephraim precedence, but designates the brother tribe as Manasseh (Deut. 33:17) and combines both as Joseph and praises them for the wild-ox strength with which they struck down nations. The Joseph saying in the Blessing of Jacob (Gen. 49:22-26) mentions neither Manasseh nor Machir, and reveals that a true center of political power lies with Joseph, the "consecrated one" (for the holy war), the champion "among his brothers." When the fertility of the land is emphasized, Manasseh is thought of primarily.

Machir was probably, like Manasseh, originally the name of an important leader, and his clan was in the N section of the territory of Joseph. The clan in part emigrated again in the period before the kings, and drew others along with it and after it. From this comes the idea of Machir as the "son of Manasseh" (Gen. 50:23; Num. 26:29; 32:39-40; Josh. 13:31) and the "father of Gilead"—i.e., of the country lying across from Manasseh N of the Jabbok (Josh. 17:1; I Chr. 2:21, 23; 7:14; also Num. 26:29; 27:1; 36:1; Josh. 17:3). Thus originated the tradition of the "half-tribe of Manasseh" as possessor of the N land E of the Jordan, alongside Reuben and Gad to the S (Num. 32:33; 34:14; Deut. 3:13 [cf. 4:43]; Josh. 1:12; 4:12; 12:6; 18:7 [cf. 20:8]; 21:6, 27; 22:1 ff [cf. II Kings 10:33]; I Chr. 5:18, 23, 26; 6:47, 56; 12:38; 26:32; 27:21). This was an instance of colonization rather than a seizing or occupation of the land (*Landnahme*). At first it involved only the ascents to the hills out of the Jordan Valley. Even the boundary description in Josh. 13 restricts the Israelite territory N of the Jabbok to a narrow strip which runs to the Sea of Chinnereth (vs. 27). With the strength they gained in the period of the kings, the Israelites naturally attempted to extend their territory; there is talk more than once of battles, evidently border battles, against the Arameans at Ramoth, some sixty miles E of the Jordan (I Kings 22; II Kings 8-9). Already in the time of Solomon a N Israelite district official resided here (I Kings 4:13). Obviously no uniform tribal relationship existed in this colonial territory, nor was it settled exclusively by Israelites. One can hardly be wrong if he conceives of the first stage of colonization in the pre-statehood period in all the land E of the Jordan as not too grand and especially not too vast in area. Indeed, limits were set every place there for the advance of the Israelites beyond the belt of forest by the states of the Moabites and the Ammonites in the S and of the Arameans of Rehob and Maacah in the N. The latter, in turn, probably exploited the great forest area of "Gilead" from the E for their purposes. Coexistence with Arameans is also confirmed by the tradition, fixed at a late date, that Machir married Maacah (I Chr. 7:15-16), although this tradition may refer to the situation at the time of the kings. The fact that different tribes participated in the colonization of Gilead is illustrated by Judg. 12:4, where the Gileadites take revenge on the Ephraimites because the latter have reproached them with being "fugitives of Ephraim" ("Gileadites in the midst of Ephraim and Manasseh"). On the other hand, the colonists of Manasseh also did not hesitate at settling in Gadite territory; for Nobah, which is included in Manasseh in Num. 32:42, probably lay in the region of Jogbehah (Judg. 8:11) in Gadite territory (Num. 32:35)—in any case, S of the Jabbok line (Judg. 8:4-9), S of Sukkoth and Penuel, the first of which is likewise designated as Gadite in Josh. 13:27. The so-called tent villages of the Manassite Jair, on the other hand (Num. 32:41; Deut. 3:14; Josh. 13:30; I Kings 4:13), are to be sought in Gilead N of the Jabbok. Jair was buried in Kamon, perhaps modern Qamm (Judg. 10:3-5). That the Manassite groups on the other side of the Jordan did not withdraw from the obligation to Israel as a whole, is shown by the fact that Gideon of the Manassite clan of Abiezer (Judg. 6:15) was able, with the levy of the amphictyony (6:35; 7:23), to pursue the Midianites from the Plain of Jezreel far across the Jordan, where he attacked their camp once more E of Nobah and Jogbehah. This presupposes undoubtedly the manifold assistance of the Manassites who lived there. In a similar fashion Jephthah was able to count on them (Judg. 11:29).

In the period of the kings Isaiah mentions Manasseh (Isa. 9:1—M 9:20). Ps. 60:7—H 60:9=108:8—H 108:9 names Gilead and Manasseh before Ephraim; Ps. 80:2—H 80:3, Ephraim (and Benjamin?) before Manasseh. The later literature presents the name of Manasseh frequently in statistical contexts: thus P in Num. 1:10, 34-35; 2:20; 7:54; 10:

23; 13:11 always has Manasseh after Ephraim; this order is reversed only in Num. 26:28-34; 34:23. In the list of the Levite cities the W "half-tribe of Manasseh" ranks after Ephraim, separated from it by Dan, which is inserted for geographical reasons (Josh. 21:5, 25=I Chr. 6:61, 70—H 6:46, 55). The E half-tribe is once placed before Reuben and Gad—but taken along with the Galilean group—and has, therefore, displaced Zebulun as last of the E Jordan group (Josh. 21:6=I Chr. 6:62—H 6:47). Another time it is put at the beginning of the Galilean group, so that it follows immediately after the W half-tribe (Josh. 21:27=I Chr. 6:71—H 6:56). In Ezek. 48:4, Manasseh is ranked, because of geography, ahead of Ephraim. The lists of Chronicles show in I Chr. 12 the W half-tribe of Manasseh after Ephraim (vs. 31); the E, after Reuben and Gad at the end (vs. 37); and in I Chr. 27:20-21, both together after Ephraim. In the arrangement of I Chr. 1-9 the E part appears as the "half-tribe of Manasseh" after Reuben and Gad (5:23-26), with a note about the abduction by Tiglath-pileser; the W, as "Manasseh" before Ephraim (7:14-19). Elsewhere the Chronicler has all kinds of unverifiable things to report about Manasseh—i.e., Manassites who live in Jerusalem (I Chr. 9:3), Manassites who go over to David (12:20-21), wards protected by the laws of the land under Asa (II Chr. 15:9), participants in the Passover at Jerusalem under Hezekiah (30:1, 10-11, 18), those who broke down the pillars and the Asherim (31:1), the purge of the cult in the Manassite territory under Josiah (probably the single historical fact), and the payment of the temple taxes (34:6, 9). In the NT, Manasseh appears in Rev. 7:6, strangely enough, alongside Joseph, who represents here Ephraim—if Manasseh is not conceived of as meaning only the portion E of the Jordan.

For Manasseh in Judg. 18:30 MT-KJV *see* JONATHAN 1. For the territory of Manasseh *see* TRIBES, TERRITORIES OF, § 3*b*. For bibliography *see under* ASHER. K. ELLIGER

2. King of Judah *ca.* 687-642 B.C.; son and successor of Hezekiah. Manasseh came to the throne at the age of twelve and is said to have reigned for fifty-five years (II Kings 21:1*a;* II Chr. 33:1). His mother was Hephzibah (II Kings 21:1*b*). If we assume that Hezekiah died *ca.* 687, and that the recorded years of the reigns of Amon and Josiah are correct, the length of Manasseh's reign must be shortened to *ca.* forty-five years. It is probable that during his reign under Assyrian influence the system of postdating, instead of antedating, became the accepted custom in Judah.

Practically the whole account of Manasseh's reign (II Kings 21:1-18) is devoted to a description of his attempt to establish polytheistic worship in the land. The Chronicler paints the same picture for the earlier part of his reign (II Chr. 33:1-9). But he tells also of an invasion of Judah by the Assyrians, of Manasseh's being carried to Babylon as a captive, of his repentance and return to Jerusalem, and finally of his restoration of Yahweh-worship (vss. 11-17). Of these things the Deuteronomist makes no mention.

After the death of Hezekiah a reaction followed under Manasseh. This is not surprising. Hezekiah's reformation was only partly successful. Presumably it met with considerable opposition. Perhaps many people even attributed the misfortunes which Judah suffered as a result of Sennacherib's invasion to Hezekiah's rejection of the old ways. Manasseh succeeded to the throne at the age of twelve, and apparently came under the influence of the pro-Assyrian party. His apostasy consisted in restoring the high places—i.e., the local Yahweh shrines—which Hezekiah had abolished. With the erection of an altar to the Baal and the making of an Asherah, Baalism once again came to be officially recognized. Not only Baalism, but astral worship as well, flourished in Judah. It was a feature of Assyrian policy to impose the worship of the Assyrian gods on conquered peoples. The OT contains various references to the worship of the host of heaven (cf. Jer. 7:18; Amos 5:26; Zeph. 1:5; etc.). That such a practice was abhorrent is clear from the injunctions against it (cf. Deut. 4:19; 17:3; etc.). Popular worship of this type had a profoundly demoralizing effect upon the people. In addition, human sacrifice was reintroduced, and a revival of necromancy took place, with consultation of the spirits of the dead (II Kings 21:6). On the evidence of cuneiform records the use of magic and divination was widespread during this period. No small subject nation of the time could successfully resist such encroachments. Syncretistic worship was the order of the day.

In addition to these specific acts of apostasy Kings records that "Manasseh shed very much innocent blood, till he had filled Jerusalem from one end to another" (II Kings 21:16). Traditionally this has been interpreted as a reference to the slaughter of the prophets and their followers, and Isaiah was reported to have been sawn asunder during Manasseh's reign (cf. the Ascension of Isaiah; cf. also Heb. 11:37). The king was repeatedly warned by prophetic voices that inevitable punishment would follow the course of action he was pursuing (II Kings 21:10). It is true that during this period the voice of prophecy was apparently silenced. At least no record has survived. But such an interpretation is questionable. For the most part, the person of a prophet was regarded as sacrosanct (cf., however, Jer. 26:20-23). It is to be doubted that Manasseh would have gone to such lengths. This datum stands by itself, unconnected with his idolatrous acts. It seems much more probable that it is a general reference to injustices and even acts of violence for which the king was responsible. It must also be remembered that his countermeasures to Hezekiah's reformation must have met with bitter opposition from those who remained loyal to Yahweh.

The problem of Manasseh's reign centers round the historicity of the events recorded by the Chronicler in II Chr. 33:11-17. Punishment came upon the king in the form of an Assyrian invasion of the land. Manasseh was treated with humiliation and carried off in bonds to Babylon. There he repented and in his need called upon Yahweh, who brought him back to Judah. He spent his remaining years in furthering the restoration of the Yahweh cult.

. The Chronicler gives no historical reason for the appearance in Judah of the Assyrian army commanders. No mention is made of any act of disloyalty

on Manasseh's part against the king of Assyria. Two opportunities, however, presented themselves. From the Assyrian inscriptions of Esarhaddon (*ca.* 681-669) and his son Ashurbanipal (*ca.* 669-630) we know that Egypt was conquered and brought into subjection to Assyria (cf. Nah. 3:8). It is possible that Manasseh came under suspicion in connection with these events. It is to be noted, however, that in his first campaign against Egypt, Ashurbanipal lists among his vassals twenty-two kings, of whom one was Manasseh. In 652 a serious rebellion broke out against Assyria, led by Babylon. The commander of the rebel forces was Shamashshumukin, brother of Ashurbanipal. This civil war lasted until *ca.* 648, and ended with the capture of Babylon. If Manasseh was actually guilty of rebellion, this would seem to have been the most opportune time. Perhaps at this time, too, the Arab tribes of the Syrian Desert began to press into the territory of Transjordan. Ashurbanipal fought them there. He mentions specifically Ammon, Edom, and Moab. This may have been the occasion for the lament over the fall of Moab preserved in Isa. 15–16; Jer. 48. Perhaps the Babylonian revolt was the signal for a more widespread rebellion, of which details are lacking. Manasseh may have been summoned to Babylon, where the Assyrian king resided frequently after 648, along with the heads of all the subject states, to renew their loyalty to Assyria. But this does not explain the Chronicler's statement of the presence of an Assyrian army in Judah. Consequently, it seems better to assume that Manasseh actually joined in the rebellion against Assyria and was carried to Babylon at the close of the campaign directed chiefly against the Arabs. It is most surprising that no mention of Manasseh's action appears in the Assyrian inscriptions. That Manasseh was taken to Babylon and then restored to Jerusalem constitutes no difficulty. Neco I of Egypt was also among the royal captives at Ashurbanipal's court, and was later restored.

On his return Manasseh is said to have built an outer wall to the city of David (II Chr. 33:14), presumably in order to strengthen its defenses. He also put army commanders in all the fortified cities of Judah. But all the fortified cities had been captured by Sennacherib (II Kings 18:13). They must, therefore, have been recovered by Judah. Vs. 14 interrupts the connection between vs. 13 and vss. 15 ff, but it gives the impression of furnishing reliable data. Who was the enemy against whom Judah strengthened her defenses? It could not have been the Assyrians, for they had allowed Manasseh to return. It must then have been Egypt, which in the meantime had succeeded in regaining her independence, *ca.* 652. Assyria's purpose was clearly to safeguard this outpost of the Empire against a possible Egyptian attack.

That Manasseh had an actual change of heart in Babylon is possible; but, if so, it was temporary. The reform measures which the Chronicler attributes to him are unhistorical. They stand in sharp contradiction to such passages as II Kings 23:4-6, 26; 24:3; Jeh. 15:4, even if one makes allowance for Amon's evil reign.

From the Chronicler's viewpoint there must have been some reason why such an evil king reigned such a long time—the longest reign of any king of the S kingdom. To explain this, he assumed that a complete change must have taken place in the king's life —a change necessarily accompanied by religious reforms in accordance with his change of heart.

Are there two separate sources mentioned in II Chr. 33:18-19—the "Chronicles of the Kings of Israel" and the "Chronicles of the Seers"—or is the latter a part of the former? It seems preferable to adopt the second viewpoint. From this passage the "Prayer of Manasseh" (*see next entry*) took its title.

3, 4. Two Israelites who put away their foreign wives (Ezra 10:30, 33; I Esd. 9:31, 33).

MANASSEH, PRAYER OF. A short penitential psalm of fifteen verses (thirty-seven *stichoi*) ascribed to King Manasseh (*see* MANASSEH 2) on the basis of the account in II Chr. 33:11-13. Here, in contrast to the narrative in II Kings 21–24, he is represented as being taken prisoner to Babylon and there repenting of his sins and uttering this prayer for forgiveness. Our document, while of much later origin, came to circulate with the Apoc. in some MSS and editions (*see below*), doubtless in part because of its intrinsic worth. It is then generally found among the Odes or Canticles which were often appended to the Psalter in Greek MSS, as well as in Syriac, Armenian, and such other versions as were made from the Greek. But in some of the versions it stands after II Chronicles.

The prayer opens with a long apostrophe in which God is addressed as God of the fathers and of the righteous, creator and orderer of all things, punisher of sin, and dispenser of mercy. He has appointed repentance, not for the righteous, but for sinners. Among these is Manasseh, who acknowledges that his sins are as the sands of the sea in number and who prays fervently for forgiveness. He promises that if God in his mercy will forgive him, he will continually praise him as long as he lives. Manasseh's iron fetters are mentioned in vs. 10, and the various references to the heavens and to the "host of heaven" are thought to reflect aspects of the idolatrous worship which, according to the biblical accounts, he encouraged.

The prayer is typical of Judaism of the postexilic period. Ideas generally regarded as evidence of this are the mixture of universal and particularistic elements, the designation of God as God of the righteous, and the notion of the sinless patriarchs. The afterlife, however, is spoken of in terms of Sheol. Comparison is often made with such documents as Ps. 51 and the Prayer of Azariah in the Greek of Daniel. While the Prayer of Manasseh may be somewhat inferior to these, it breathes a spirit of genuine piety and devotion.

The exact origin of our document is an unsolved problem. Its contents, form, diction, and history all point to a relatively late date—i.e., probably in the first century A.D. or B.C. But it has been variously dated from the second century B.C. to the third A.D. One theory derives it from the Didascalia (*see below*); another supposes that it was part of the original LXX of Chronicles, displaced by the version of Theod. Both of these are questionable. There is no evidence that it was originally part of the LXX; nor is it found in any list of Jewish canonical or extra-canonical books. However, its form and content and the Jewish legends about Manasseh (*see below*) point to Jewish authorship, perhaps in Alexandria, the composer's purpose being doubtless to supply the prayer which is referred to in Chronicles and also described there as found in the "acts of the Kings of Israel" and in the "acts of the seers" (cf. II Bar. 64:8).

The repentance of Manasseh was subject to much legendary embellishment and speculation. The underlying motivation, beginning with the Chronicler or his sources, was doubtless to explain how the king could have enjoyed so long a reign. In Chronicles he returns to Jerusalem and carries out the reforms which in the Kings account are ascribed to Josiah. The narrative in II Kings had blamed the Babylonian captivity, along with the destruction of Jerusalem and the temple, upon the wickedness of Manasseh (II Kings 21:13-14; 23:26-27; 24:3-4), in spite of the reforms of the good King Josiah. The Chronicler, however, appears to make King Zedekiah responsible for these calamities (II Chr. 36:14-21). Later sources, such as II Bar. 64, the Jewish Targums, and various rabbinic writings (*see bibliography*), spell out in detail the experience of Manasseh in Babylon and speculate upon the acceptance of his repentance and the possibility of his having a share in the world to come. Rabbinic sources are generally negative on the latter point, although admitting that God must have forgiven his sins, as he would those of any truly repentant sinner.

The original language of the prayer is also in doubt. The admittedly Semitic structure and Semiticisms naturally suggest Hebrew or Aramaic; but these are not such as to preclude composition in Greek. There are also reflections of LXX phraseology. Most scholars have therefore favored the Greek, although the brevity of the document makes judgment difficult, and composition in a Semitic language in Palestine or elsewhere is not positively excluded.

The earliest extant text is actually in the Syr. Didascalia (II:21), a church manual of the first half of the third century A.D. The Greek is found in Codex Alexandrinus of the fifth century (Ode 8, following Isa. 38:9-20) and later codices. It was unknown to Jerome, but appears in medieval Latin MSS, on the basis of which it is included in printed editions of the Vulg., beginning with R. Stephanus (1540). Before the Council of Trent it was placed at the end of II Chronicles; afterward, in an appendix following the NT. The Council did not include it in its endorsement of the Apoc., but it appeared in such important editions as the Complutensian Polyglot (1514-17) and the Clementine Vulg. (1592). The Bibles of Luther (1534) and the French Protestant Olivétan included it, but it was omitted in the Zwingli Bible (1527-29) and the Zurich Latin edition (1543). It is often omitted in editions of the LXX.

In English the prayer first appears in the Wyclif Bible, reflecting the Vulg. tradition. Its initial printing was in the "Matthews" revision of the Coverdale Bible (1537). It is then continued in the "authorized" editions: the Great Bible (1539), the Bishops' Bible (1568), and the KJV (1611). It is part of the Apoc. of the ERV-ASV and the RSV. Early editions of the Reims-Douay Bible (1609-10) and the Geneva (1560) include it, the latter after II Chronicles. *See also* APOCRYPHA.

MANASSES mə năs'ēz. KJV Apoc. and NT and Douay Version form of MANASSEH.

MANDRAKE [דודאים, *dûdhā'îm*]. A stemless perennial herb with large, deep-green rosetted leaves and a divided fleshy root, *Mandragora officinarum* L., common in uncultivated fields throughout the E Mediterranean region. The major biblical reference to it (Gen. 30:14-16) parallels the legends which have persisted regarding the herb throughout the centuries. Its small, plumlike berry and fleshy root were reputed to induce human fertility. (It is commonly called the "love apple.") Apparently the original Genesis story purported to relate how RACHEL, to relieve the embarrassment of her own barrenness, bargained for the mandrakes which Reuben, the son of LEAH, had found in a field. Later editors, however, wove a religious motif into the story to cover the primitive elements (vss. 17-24). The Arabic

7. Mandrake

name, *bayḍ ul-jinn* ("eggs of the jinn-spirits"), has perpetuated the superstition. The fruit ripens to a bright yellow in May, about the time of the wheat harvest (Gen. 30:14). Although considered edible by the natives, the somewhat poisonous fruit produces a purgative effect. It is closely related to the deadly poisonous nightshade, *Atropa belladonna* L.

In Song of S. 7:13 the fragrance of the plant is emphasized. This has occasioned much discussion about identification, since the odor of *Mandragora officinarum* is considered fetid by Westerners. Oriental tastes, however, are known to differ radically from those of the West. Post calls the fruit "fragrant."

In the ancient legend of 'Anat in Ugaritic three occurrences of *ddym* ('nt III:12; IV:53, 73) have been thought by some to refer to mandrakes.

MANES. Same as MANI 2.

MANGER [φάτνη] (Luke 2:7, 12, 16; 13:15); KJV STALL in Luke 13:15. A trough or box for feeding cattle. The main OT equivalent is CRIB (אבוס). The context in which this word is used in Job 39:9; Isa. 1:3 would suit "manger" as well as "stall." In Prov. 14:4 the RSV follows most commentators in emending the text, though a footnote gives "manger" as the translation of this word itself.

The exact reference of the Greek φάτνη is not so clear. It is used, e.g., in the LXX of II Chr. 32:28 ("stalls [אורות] for all kinds of cattle, and sheepfolds") and of Hab. 3:17:

> the flock be cut off from the fold
> and there be no herd in the stalls [רפתים],

where the parallelism in both cases favors "stall" rather than "manger." The general evidence, however, of both biblical and classical usage favors "manger" as the normal meaning.

The evidence of archaeology and of modern Arabic custom suggests two possibilities as to the location of the stable and its manger: (*a*) Most poorer Palestinian homes consisted simply of one large room divided into a lower and a higher section. The lower section was at ground level and nearer the entrance. This was naturally where the animals would find shelter and be fed, especially in colder weather. The other section was separated, not by a partition, but by being raised eighteen inches or more above the level of the lower. Here the family slept and ate their meals. In such homes the manger would be a stone box set against a wall of the lower section, or carved in a natural outcropping of rock, or constructed of masonry. Stone mangers were found *in situ* in the stables at Megiddo (*see* MEGIDDO; STALL). They were cut out of single pieces of limestone rock and were *ca.* three feet long, eighteen inches wide, and two feet deep. Cut into the corners of the pillars beside them, just above the tops of the mangers, were holes for the tie ropes of the horses (Fig. MAN 8). Mangers constructed of masonry were found in a cave stable at Lachish, dated from *ca.* 1200 B.C., and also, though less relevant to biblical times, in some Crusaders' stables near Acre in N Palestine, dated from *ca.* A.D. 1200. (*b*) The other possibility for the location of the stable and manger is in a natural cave near the house, or beneath the house in the limestone foundation. At Lachish, from early Israelite times, such a cave found beneath the remains of a house bore marks of having been used as a stable and still contained the masonry manger mentioned above. Another, larger cave, originally a quarry, also bore marks of use as a stable, or as a dwelling, or both. W. M. Thomson (*The Land and the Book*) mentions seeing inns, or *khans*, built thus over caves in which were mangers for cattle. In such cases the mangers are usually carved out of the limestone walls of the cave, though they may be stone boxes like those at Megiddo.

8. Manger from the Megiddo stables (period of Solomon?)

The tradition that it was in a cave stable that Jesus was born was current at least as early as Justin (*ca.* A.D. 150) and is reflected in some of the apocryphal gospels of the early centuries. In the fourth century Constantine enclosed the traditional cave of the Nativity with a basilica, which has become the Church of the Nativity in Bethlehem, with its many later chapels around it. However, the evidence of Luke's Gospel would point as easily to a simple shelter in or near a house. S. V. FAWCETT

MANI. 1. mä'nī. KJV Apoc. alternate form of BANI 6.

2. mä'nē; also MANES mā'nēz (Μάνης) or MANICHEUS măn'ə kē'əs (Μανιχαῖος). Founder of the religion MANICHEISM. Born in Babylonia of Iranian origin, Mani lived A.D. 216-77(?), during the reigns of the first rulers of the Sassanian Dynasty (*see* PERSIA § D6). He traveled extensively, and as a result Manichean communities were established in Persia and India. He is the author of religious scriptures and letters addressed to his followers, who, at one time, were located in an area stretching from North Africa to China. Until a few years before the end of his life Mani enjoyed the official favor of the Sassanian ruler Shapur I (239/41-270/73), but he suffered violent death at the instigation of the Zoroastrian priesthood under the accusation of heresy.

Bibliography

1. Sources. The sources of documentation for the Manichean faith are of a great variety. Until recently they consisted of the indirect, apologetic, and often untrustworthy testimonies of the Greek and Roman church fathers, Christian Syriac chroniclers, and Persian and Arabic Muslim authors (*see bibliography*). This documentation was supplemented by the discovery of original Manichean texts in such distant areas as Chinese Turkistan in the E and the Egyptian Fayum in the W, which testify to the extension of Manicheism at one time. The documents unearthed in Central Asia in the beginning of the twentieth century were written in three Iranian languages (Middle Persian, Middle Parthian, and Sogdian; *see* PERSIA § C2), in Chinese, and in Uigur (Old Turkish). In 1931 the Egyptian Fayum yielded a library of Coptic translations of Manichean texts (*see bibliography*). It is easy to see that these original materials gave new impulses to the study of Manicheism and will continue to do so as their publication progresses.

2. Mani's works. The Manichean canon seems to have consisted of the following scriptures, which, presumably, were originally written in Aramaic: (*a*) the "(Great Living) Gospel," (*b*) the "Treasure of Life," (*c*) the "Pragmateia" or "(Historical) Treatise," (*d*) the "(Book of) Secrets," (*e*) the "Book of the Giants," (*f*) the "Epistles," (*g*) the "Psalms" and "Prayers." Another popular work was the "(Book of the) Two (Great) Principles," which originally may have been composed in Middle Persian. Besides, references are made to the "(Great) Drawing," apparently a picture book illustrating Mani's teachings, and to the "Tradition."

3. Mani's doctrine. ***a. Religious background.*** In the beginning of the third century A.D., W Iran was the meeting place of a prodigious manifoldness of either indigenous or imported creeds and beliefs (*see* PERSIA § D6*b*). These included ancient local pagan faiths, Zoroastrianism, Hellenistic philosophy and science, and Judaism. Christianity, introduced in Persia by Arameans belonging to the church of Syria, sectarianism of various coloration (called *Mughtasila* by the Arabic and *Mnaqdē* by the Syriac authors), and gnostic philosophies, all had their followers in that area. It seems even likely that Brahmins and Buddhist monks exercised some influence, although the main center of their activities lay, naturally, in E Iran. For the understanding of Manicheism the possible attribution of its constituent components to any one of these potential sources is a necessity. Labeling such Manichean doctrinal elements as the belief in metempsychosis, the duality of Light and Darkness, and the important role assigned to the Paraclete and Jesus, as simple borrowings from Buddhism, Zoroastrianism, and Christianity respectively, is not much more, however, than a truism. Closer scrutiny is required before these parallels can be evaluated. Similar caution is recommended when it comes to a classification of Mani's system of thought. Such commonly used terms as "syncretistic," "dualistic," and "gnostic" are to be taken only as general indicators of its character.

b. Basic characteristics. Manicheism claims to be a universal religion: "The previous religions existed (only) in one land and in one language. My religion, however, is such that it will become manifest in every country and will be taught in the remote(st) lands." Mani, the "seal of the prophets" such as the patriarchs, Buddha, Zoroaster, and Jesus, considered himself the supreme and final revelator.

It is a missionary religion, and each servant of the church, after the example set by Mani himself by his frequent trips, has the obligation to "wander forever in the world while preaching the doctrine and guiding men in truth."

It is a religion of the book. Since, according to Mani, previous religions failed partly because their founders neglected to put their teachings down, Mani took great pains to commit his words to writing and to have them canonized during his lifetime.

c. Cosmogony. In order to explain to man his condition in this world and make him understand from where he comes, why he has fallen down, what he is, and where he is going, Mani conceived a grandiose cosmological myth. In it it is said that in the beginning two antagonistic substances existed, the one Good and the other Evil, or Light and Darkness, or God and Matter. The acceptance of the duality of the "two principles" is one of the two fundamental dogmas of the Manichean credo, the other being the belief in the three "periods" or "moments." By means of an attack executed by the forces of darkness, the unmixed state of separation between the two principles is followed by a state of mixture in which part of the luminous particles of light is imprisoned in and made subservient to the dark substance of matter. The operation of delivering the light particles and transferring them back to their place of origin lasts for the duration of the world. The visible world is organized by God through a series of complicated processes, which all aim at the restoration of the original situation. This move is counteracted by Matter, which creates the first couple of human beings: Adam and Eve. Adam's eyes were opened by a savior known, among other names, as *yyšw' zyw'*, "Jesus-splendor," to the divine origin of his soul; but Adam's offspring continues to procreate in accordance with the design of Matter. This is

the state mankind is in at present. The third moment of the Manichean myth is to be inaugurated by a series of apocalyptic upheavals. After a Last Judgment the world will burn for a period of 1,486 years. The last light particles will be reunited with the light world, the material world will come to an end, and darkness will be restricted to its own original domain. The absolute and eternal separation of the two principles brings about the closure of the cycle.

d. Salvation. From this bare outline of the cosmogonic myth, which in the Manichean scriptures is expounded in complex detail and in ornate language which in some of its verse parts reaches great suggestive power, it will appear that understanding of the dual nature of whatever exists and of man himself opens the road to man's salvation. Since in the "mixed" world in which man lives most things, plants, animals, and others contain light particles, violence against them constitutes an act of sin. Manichean ethics, therefore, prescribe not to have sexual intercourse, not to kill, not to eat meat or to drink wine, not to possess, not to sow or harvest, etc. Rigorous observation of these rules is required only of the elite, however, and the rules are somewhat relaxed for other members of the community. The latter—in theory, at least—cannot escape from subsequent reincarnation, while the former at the time of their death shall return to the Paradise of Light.

e. Expansion and survival. There is no way to give a fair estimate of the number of followers of the Manichean faith for the almost twelve centuries it was active or provoked repercussions in areas as far apart as North Africa and China. In the eighth and ninth centuries it was the official state religion in the Uigur state on the River Orkhon in Outer Mongolia, and in spite of severe prosecution Manichean communities managed to survive in the province of Fukien in SW China.

The vicissitudes of the "religion of light" in the Western world, from its successes in North Africa —the future Saint Augustine was among its members —to its decline under the pressure of state and church in the Roman Empire, cannot be related in full.

The relationship between Manicheism and such medieval sects as the Paulicians, Bogomils, Cathares, and Albigenses still offers many unsolved puzzles.

MANNA măn'ə [מָן; μάννα]. An edible substance on which the Israelites subsisted for part of their food during their forty years of wilderness wandering. Its name was connected in popular etymology with מָן הוּא (*mān hû'*), "What is it?" the question the Israelites are reported to have asked one another when

they first found it on the ground in the morning (Exod. 16:15). It is described as a "fine, flake-like thing, fine as hoarfrost . . . . It was like coriander seed, white, and the taste of it was like wafers made with honey . . . [or] cakes baked with oil" (Exod. 16: 14, 31; Num. 11:8). It could be ground in mills or beaten in mortars, boiled in pots, and made into cakes (Num. 11:7-8).

It was first given after Israel arrived in the Wilderness of Sin (*see* SIN, WILDERNESS OF). In response to the murmuring of the hungry Israelites against Moses and Aaron, the Lord promised to Moses that he would rain bread from heaven, and the people should go out and gather a day's portion every day, but on the sixth day they would be permitted to gather an additional portion for the sabbath. The daily ration could not be kept overnight, lest it become wormy and spoiled—the only exception to this was the portion for the sabbath (Exod. 16:1-30). The supply did not cease until the Israelites arrived at the border of Canaan, according to one tradition (vs. 35); and according to another, until they came to Gilgal and "ate of the fruit of the land of Canaan" (Josh. 5:12).

In order that future generations might see the bread with which God had fed their forefathers in the wilderness, Aaron was commanded by Moses to "take a jar, and put an omer of manna in it, and place it before the LORD, to be kept throughout your generations" (Exod. 16:33).

Manna is also mentioned in Deut. 8:3, 16; Neh. 9:20; Ps. 78:24, where it is called "grain of heaven" (דגן שמים); and in Ps. 105:40 it is alluded to as "bread from heaven" (לחם שמים).

Christ spoke of manna as the "bread from heaven," and referred to himself as the "living bread which came down from heaven," and added that if anyone ate of this bread, he would live forever (John 6:31-65). Paul called manna the "supernatural [Greek 'spiritual'; RSV mg.] food" (I Cor. 10:3). In Rev. 2:17 "some of the hidden manna" is promised as a reward "to him who conquers."

From time to time investigations have been made in the Sinai region to discover a substance that would accord with the description of manna in the OT references.

Josephus claimed that manna was still coming down in his day. "Even now, in all that place, this manna comes down in rain" (Antiq. III.i.7). On the other hand, the Greek monks who lived in Sinai in the early Christian centuries associated the biblical manna with the manna produced by the tamarisk thickets. The tamarisk bush produces in June a granular type of sweet manna from pinhead to a pea size. It appears on the tender twigs of tamarisk bushes for a period of three to six weeks. The quantity of manna depends upon the winter rainfall.

Certain wadies such as Wadi Nasib and the Wadi esh-Sheikh are famous for their manna production. At the peak of season a steady worker may collect over half a pound (kilogram) per day. This, however, is hardly enough to have supplied the daily food for the wandering Israelites. It must have been its sweetness which justified its inclusion into the reports of the wilderness wandering.

Until recently this manna was regarded as a secretion of the tamarisk. However, a study of the tamarisk production of manna in the valleys of Central Sinai led to the conclusion that manna is produced by excretions of two closely related species of scale insects.* One of these, *Trabutina mannipara* Ehrenberg, produces it in the mountain regions; and the other, *Najacoccus serpentinus* Green, produces it in the lowlands. Fig. FAU 10.

A chemical analysis of these excretions revealed that they contain a mixture of three basic sugars with pectin. The plant saps on which these insects feed are rich in carbohydrates but extremely poor in nitrogen content. In order to acquire a minimum amount of nitrogen for their metabolism, they must consume great quantities of sap. The excess passes from them in honeydew excretions which in the dry air of the desert quickly change into drops of sticky solids. These manna pieces later turn a whitish, yellowish, or brownish color.

On the basis of these findings, manna production is a biological phenomenon of the dry deserts and steppes. The liquid honeydew excretions of a number of Cicadas, plant lice, and scale insects speedily solidify by rapid evaporation. From remote time the resulting sticky and often granular masses have been collected and called manna.

J. L. MIHELIC

MANOAH mə nō'ə [מנוח, rest]. A Danite of Zorah; the father of SAMSON. The narrative in Judg. 13 relates that the barren wife of Manoah was instructed in a vision that she was to become the mother of a son, who would be a lifelong Nazirite and who would begin to deliver Israel from the oppression of the Philistines. When the man of God reappeared in answer to the petition of Manoah, the latter requested additional instructions concerning the nurture of the child. The former directions,which stipulated that the mother should abstain from unclean food and intoxicating drink, were simply reiterated. Manoah then invited the man of God to partake of a meal, but was bidden to offer the food as a burnt offering instead. When the flame ascended from the altar, the man of God went up in the flame, disclosing his identity as none other than the angel of Yahweh. Terrified at this discovery, Manoah was seized with the fear of death because as a mortal he had seen God; but his wife persuaded him that the gracious promise and acceptance of the offering by the angel contradicted his fears.

The tomb of Manoah was located between Zorah and Eshtaol, where the remains of Samson were also interred (Judg. 16:31). E. R. DALGLISH

MANSION. The KJV translation of μονή in John 14:2. The Greek word comes from μένω, "to remain," and means "an abiding place." The RSV more accurately renders it "room": "In my Father's house are many rooms." S. A. CARTLEDGE

MANSLAYER. *See* CRIMES AND PUNISHMENTS § C2*b*.

MAN-STEALING. *See* CRIMES AND PUNISHMENTS § C6*a*.

MANTELET [סכך] (Nah. 2:5); KJV DEFENSE. A movable structure used to shield besiegers while attacking a city.

The word occurs in a description of an attack on Nineveh, and its exact meaning is uncertain. The Hebrew root means "to weave together," as well as "to screen, protect." Both the LXX (προφυλακή) and the Vulg. (*umbraculum*) understood the word as a protection of some sort; hence the rendering "mantelet" seems likely to be approximately correct.

J. W. WEVERS

MANTLE. The translation of a number of words:

a) אדרת (alternately: "robe"), a cape or loose coat. In Josh. 7:21, 24, the term is used of a mantle (KJV "garment") of Shinar (Babylon). Elijah had such a mantle (I Kings 19:13, 19), which fell from him when he was taken from Elisha (II Kings 2:8, 13-14). A mantle made of hair (a hairy mantle) was evidently worn by the prophets (Zech. 13:4; KJV "rough mantle"). Esau was as hairy as such a mantle (Gen. 25:25; KJV "hairy garment"). In Jonah 3:6 the word refers to a garment of state.

b) מעיל (alternately: "robe"), a sleeveless coat. Ezra possessed one (Ezra 9:3, 5), as did Samuel (I Sam. 15:27; 28:14) and Job and his friends (Job 1:20; 2:12). The word is used figuratively in Ps. 109:29 with shame and in Isa. 59:17 with fury as the mantle of the Lord.

c) מעטה, a wrap; used figuratively in Isa. 61:3 as a mantle of praise.

d) מעטפה, an over-tunic. In Isa. 3:22 it is one of the luxuries of the women of Jerusalem.

e) שמלה, a wrap, robe. It was an article possessed by the Israelites at the time of the Exodus (Exod. 12:34 [KJV "clothes"]; 22:27—H 22:26 [KJV "raiment"]). It was a sign of respectability (Isa. 3:6-7; KJV "clothing").

f) KJV translation of שמיכה (RSV RUG) in Judg. 4:18.

g) מטפחת (Ruth 3:15 [KJV "vail"]; Isa. 3:22), a cloak.

h) תכריך (Esth. 8:15; KJV "garment"), a robe.

i) רדיד, the veil-like garment worn by the women of Jerusalem (Isa. 3:23; "veil") and the maiden in Song of S. 5:7. The LXX understood it as being a thin summer garment (θέριστρον), probably something like the stoles worn by women today.

j) Aramaic סרבל (Dan. 3:21, 27; KJV "coat"; alternately: "tunic"), garment, trousers.

k) KJV שמיכה (Judg. 4:18; RSV RUG).

l) Ἱμάτιον, an outer garment. *See* DRESS AND ORNAMENTS § A1.

m) Χιτών, an undergarment. *See* DRESS AND ORNAMENTS § A2.

n) Περιβόλαιον, an outer garment. *See* DRESS AND ORNAMENTS § A1.

J. M. MYERS

MANURE [κοπρία] (Luke 13:8; cf. KJV). The droppings of animals or birds, used as fertilizer. Sometimes the animals are pastured in those fields which have to be fertilized. Road scrapings are also spread on fields or made into compost heaps. Varro reports on various types of fertilizers in Roman times. In more primitive society DUNG was more important as a fuel than as fertilizer.

C. U. WOLF

MANUSCRIPTS. Any hand-written documents; particularly the copies of the Bible known on papyrus, vellum, parchment, and leather. They date from shortly before the beginning of the Christian era to the sixteenth century.

Pls. I-VIII.

M. M. PARVIS

MAOCH mā'ŏk [מעוך] (I Sam. 27:2). The father of Achish, king of Gath, where David and his men took refuge from the relentless pursuit of Saul. While Maoch has sometimes been identified with MAACAH (8), the father of Achish (I Kings 2:39), it is more likely, in view of the elapsed time, that Maacah may have been the son of Achish I and the grandson of Maoch. *See bibliography.*

Bibliography. A. Šanda, *Die Bücher der Könige*, I (1911), 46.

E. R. DALGLISH

MAON mā'ŏn [מעון, dwelling]; MAONITES —ə nīts. **1.** A descendant of Caleb; son of Shammai, and the father of Bethzur (I Chr. 2:45). As elsewhere in this section, this is probably a collective referring to the village or city and implying some sort of relationship between the inhabitants. The location is the same as 2 *below*.

2. The chief town of a hill-country district of Judah (Josh. 15:55); identified with modern Tell Ma'in, 1½ miles S of Carmel of Judah (Kirmil) and 8½ miles S of Hebron. It is situated on a high, isolated hilltop. Scattered along the hillside are a few fragments of Early Iron (Iron I) pottery indicating occupation at the time of David. There are no remains of a wall from this period on the rocky crest. Traces of a wall, possibly that of a watchtower guarding the approach to the Roman fortress at Chermula (Carmel, Kirmil), can be seen. Maon may have served to protect the fields in the small plains around it (cf. I Sam. 25:2 ff).

David took refuge from Saul in the "wilderness of Maon," E of Maon. Only an urgent message concerning a Philistine raid prevented Saul from capturing David and his men (I Sam. 23:24-25).

Nabal, a property holder in Maon, refused hospitality to David, who had seen to it that his men did not disturb the crops and flocks of NABAL (I Sam. 25:2 ff).

The next reference to Maon appears in the Talmud, which calls it "Maon of Judah" to distinguish it from Beth Ma'on near Tiberias.

V. R. GOLD

MARA mâr'ə [מרא, bitter] (Ruth 1:20). The name chosen by NAOMI after God had "dealt bitterly" with her.

MARAH mâr'ə [מרה, bitter, bitterness]. The first source of water which the Israelites found after three days' journey in the Wilderness of Shur (Exod. 15:23), which is also called the Wilderness Etham (Num. 33:8). Bitter and otherwise unpalatable water pools and wells are found frequently in desert areas.

This is an etiological story, explaining how this place received its name. The Israelites, after wandering for three days in a waterless waste, came upon water which was undrinkable because of its bitterness. Hence the place was called "bitterness." The account continues in a typical form. The people were helpless without a leader. They murmured against Moses, and he prayed to the Lord, who showed him a tree, which he threw into the water and the water became sweet.

The site cannot be definitely located. It may perhaps be 'Ain Hawarah, which is *ca.* two hours before Wadi Gharandel (Elim?). *See* EXODUS, ROUTE OF.

Bibliography. E. Robinson, *Researches in Palestine,* I (1856), 67. J. L. MIHELIC

MARALAH. KJV form of MAREAL.

MARANATHA măr'ə năth'ə [μαραναθά; Aram. מרן אתא, Our Lord has come, *or* Our Lord, come!]. An Aramaic expression used by Paul as a part of his closing salutation in I Cor. 16:22, and probably to be taken imperatively as a transliteration either of מרנא תא or of מרך אתא, "Our Lord, come!" One may compare the equivalent Greek (with the addition of the name Jesus) in Rev. 22:20: ἔρχου Κύριε Ἰησοῦ ("Come, Lord Jesus!"). Editors of Greek texts have differed in dividing the words in accordance with the supposed Aramaic. Tischendorf, Hort, von Soden, Merk, and Vogels read μαρὰν ἀθά; Nestle and Bover read μαράνα θά. The MS evidence in general would show no division, and this was followed by B. Weiss.

Treatments of the phrase in some Christian sources and by early editors and translators had erroneously connected it with the preceding word, "ANATHEMA," and made it part of the curse in the Corinthian passage. The nondivision of words in the MSS and ignorance of Aramaic most likely account for this. It so appears in several English Bibles, down to and including early printings of the KJV. Another explanation would find in the expression a possible equivalent of *shamathâ* (Aramaic שמתא), meaning a "curse" or "ban" (lit., "The name [i.e., God] comes"). A number of reputable scholars have suggested that the phrase be taken to mean "Our Lord is the sign," reading the underlying Aramaic as מרן אתא; or as "Our Lord is the *aleph* and *tau*"—i.e., the Aramaic or Hebrew equivalent of the familiar Greek "*alpha* and *omega*" (e.g., Rev. 1:8).

The fact that these occurrences are both part of a more or less formal salutation and that Paul is using Aramaic in addressing a Gentile group would indicate that the phrase had become a familiar watchword of hope and encouragement among the early Christians at a time when the return of Jesus was a lively element in their faith. It is used in the Didache (X.6), of the early second century, in the context of a Eucharistic prayer with strong eschatological overtones. Cf. Phil. 4:5: "The Lord is at hand."

Bauer; 5th ed., 1957). C. F. D. Moule, "A Reconsideration of the Context of Maranatha," *NTS,* 6 (1960), 307-10, endorses the possible connection with *anathema* and gives further data and bibliography. A. WIKGREN

MARBLE [שיש, שש, *šeš, cf.* Akkad. *šaššu,* white marble *or* alabaster] (I Chr. 29:2; Esth. 1:6; Song of S. 5:15 KJV). Marble differs from common limestone in being more or less crystallized by metamorphism. It can take a good polish. The color of marble varies from white to black.

In I Chr. 29:2 the LXX reads πάριον (cf. Vulg. *marmor Parium*); Paros is the source of the finest marble for the classical world. It is doubtful, however, that David obtained his building stone for the temple from Paros. It seems more likely that he used the limestone of the country from the hill Bezetha, N of the temple area. This classical allusion to Paros as a source of fine marble is repeated in Esth. 1:6, in the LXX and Vulg. translations in which שש is used for pillars and pavement stones in the garden court at Susa. The Persians obtained marble locally for the buildings at Persepolis. Ashurbanipal also boasted of having carried off marble statues from Elam. It should be noted also that Sennacherib obtained marble from Mount Amnana. In the Song of S. 5:15 "ALABASTER columns" (KJV "pillars of marble") describe the legs of the lover. Egyptian alabaster, a crystalline form of calcium carbonate, was certainly known to the author, even if only in the guise of jars for ointment mentioned in Matt. 27:7, etc. W. E. STAPLES

MARCHESHVAN mär kĕsh'văn [מרחשון; μαρσουάνης]. The Hebrew form of the Akkadian-Babylonian name *Arahsamna,* meaning "eighth month," corresponding to the Macedonian *Dios* (October-November). It occurs first in Aramaic papyri of the Jews in Egypt in the fifth century B.C. Modern Hebrew regards the name as properly Heshvan. *See* CALENDAR. E. W. SAUNDERS

MARCION, GOSPEL OF mär'shən [Μαρκίων]. A gospel used by Marcion, a highly influential second-century reformer and ardent Pauline Christian, easily (but mistakenly) dismissed as "another Gnostic" and archheretic.

This gospel, together with his version of ten Pauline letters and his own *Antitheses,* formed for him and his many followers a canon of scripture in place of the OT, which latter he rejected *in toto.* This gospel, which Marcion adopted and to which he added no further designation, is commonly regarded a version of the canonical Gospel of Luke, purged of what Marcion believed to be accretions and Jewish interpolations, notably the birth story, and thus restored to its primitive form. In the "primitive" form it began: "In the fifteenth year of Tiberius Jesus Christ [or God?] came down to Capernaum, a city of Galilee, and taught in the synagogue." To what extent Marcion's text differed from the one he had inherited is not easily said. It would appear to have been substantially an abridgment, with very little actual interpolation by Marcion himself. Nor is it to be overlooked that in both this gospel and the

Apostolicon (the Pauline letters) many of the variations, formerly ascribed to his pen, must now be regarded as primitive (pre-Marcionite) readings, which were subsequently altered in what may be styled the "ecclesiastical texts," as we know them.

Frequent guesses as to why Marcion selected Luke as the one best embodying what he believed to be the primitive gospel have been made. Obviously Matthew would have been quite unacceptable; John, which Marcion presumably knew, would have contained some highly congenial material—"All who came before me are thieves and robbers" (John 10:8)—but such material as the Prologue, the high appraisal of John the Baptist, the incident at Cana, would have been quite impossible. On the other hand, he must have *one* gospel, for one gospel, like the Pauline letters, must have been genuine although (unfortunately) adulterated by Jews and Jewish Christians, against whom, he argued, Paul had so valiantly contended. Only Mark and Luke would thus seem to have been prominent enough to come into choice. Perhaps the scanty amount of discourse material in Mark tended to weight the balance in favor of Luke. Nor is it impossible that in Pontus the Gospel of Luke had been the one in common use and thus the one to which Marcion had been accustomed in the days before he broke away from orthodoxy. It is not without interest that the Gospel of Basilides (*see* BASILIDES, GOSPEL OF) may with some plausibility also be regarded as a revision of the canonical Luke.

Occasional voices have been raised at this identification of Marcion's gospel. John Knox would see Marcion making use of an "early Luke" or "proto-Luke" (but not the proto-Luke of Streeter). Sometime after Marcion this early Luke was revised and combined with other materials to form our Luke-Acts. Knox's arguments are not lightly to be dismissed and merit more attention than they have apparently received.

Bibliography. The fullest and most adequate treatment of Marcion and his writings is to be found in A. von Harnack, *Marcion: das Evangelium vom fremden Gott* (2nd ed., 1924). See also J. Knox, *Marcion and the NT* (1942). M. S. ENSLIN

MARCUS. KJV alternate form of MARK. *See* MARK, JOHN.

MARDOCHAI mär'də kī. Douay Version form of MORDECAI.

MARDUK mär'dōōk. The state god of Babylon, BEL, to whom in the time of Hammurabi (*ca.* 1700 B.C.) were transferred the functions and exploits of the storm-god and creator En-lil. The name is Hebraized as Merodach. In the myth and ritual of the Babylonian New Year Festival each spring his victory as champion of the gods over the chaotic waters and his creation of nature and man were celebrated, and he was acclaimed as king. This ideology was expressed in the myth and cult of Baal in Syria, and influenced Hebrew thought regarding the kingship of Yahweh.

MARESHAH mə rē'shə [מרשה, head place(?); LXX Μαρισα]; KJV MESHA mē'shə [מישע]. **1.** The first-born son of Caleb, and the father of Ziph and Hebron (I Chr. 2:42). The text is confused, indicating some accident in transmission. In the Hebrew text Caleb's son is first named Mesha and then, apparently, Mareshah. The RSV's consistent use of Mareshah follows the LXX.

2. A Judahite, son of Laadah (I Chr. 4:21).

R. F. JOHNSON

* **3.** Modern Tell Sandahannah, one mile SE of Beit Jibrin (Eleutheropolis). Mareshah was a Canaanite city (Amarna *Muḫrashti*) which became chief city of a Shephelah district of Judah (Josh. 15:44).

Rehoboam (*ca.* 922-915 B.C.) fortified it (II Chr. 11:8), and Asa (*ca.* 913-873) apparently strengthened the fortifications. Zerah, an Ethiopian commander of a garrison in Gerar, presumably established by Shishak after his invasion in *ca.* 918, marched against Judah. Asa met and defeated him near the fortress city of Mareshah and chased the Ethiopians back to Gerar, thirty miles SW of Mareshah (II Chr. 14:9-

14). Mareshah was the home of Eliezer, son of Dodavahu, who correctly predicted that the joint merchant-marine program of Ahaziah of Israel (*ca.* 850-849) and Jehoshaphat (*ca.* 873-849) would come to naught (II Chr. 20:37). In a section of Micah's prophecy noted for its play on words, Mareshah is one of the cities which will be destroyed (Mic. 1:15).

During the Exile the Idumeans (Edomites) infiltrated S Judah, and Marisa (Μαρισ[σ]α=Mareshah) became one of their capitals. In 312 it changed hands twice (Seleucids–Ptolemies–Seleucids), and for the next 150 years the exchange continued, with the city being under Egyptian control longer than under Seleucid. *Ca.* 250 a Sidonian colony under Apollophanes settled in Marisa. In the course of the archaeological investigation of the site, one of the most unusual discoveries was that of the painted tombs, the earliest one bearing the name of Apollophanes.

Though under Egyptian rule, the process of Hellenization in this part of the Near East was so rapid at this time that the Sidonians began to use Greek names after a couple of generations rather than Phoenician. Excavation revealed a city built according to Hellenistic practice, with streets running at right angles whenever possible and houses arranged in regular blocks.

Marisa was a center for the Idumean slave trade as a record of Zeno from 259 B.C. indicates. The tombs near Mareshah not only provide us with Phoenician and Greek names but also Idumean, many of them including the name of the Idumean god Qos.

During the Maccabean period Marisa remained important. First, Gorgias, governor of Idumea, used it for a refuge in 164 (II Macc. 12:35; cf. I Macc. 5:66). Possibly *ca.* 110 it was captured by John Hyrcanus (134-104), who granted the Idumeans permission to remain if they submitted to circumcision (Jos. Antiq. XIII.ix.1). In 63, Pompey restored Marisa to the Idumeans, and *ca.* 57, Gabinius, the Roman governor of Syria, ordered the rebuilding of Marisa's fortifications, perhaps destroyed by John Hyrcanus. By order of Caesar, Idumea was again annexed to Judea in 47, when he appointed Hyrcanus high priest and Antipater, the Idumean, procurator of Judea (Jos. Antiq. XIV.viii.5; x.6). Later, Herod, Antipater's son, fled to Marisa to escape Antigonus and his Parthian allies (Jos. Antiq. XIV. xiii.9). In 40 B.C., Marisa was captured and destroyed by the Parthians. It was never rebuilt. Its place in the region was taken by Eleutheropolis (Beit Jibrin). Fig. CIT 33.

***MARI** mä'rē [Akkad. *Ma-ri*^{KI}; Sumer. MA-ER]. An ancient city of MESOPOTAMIA, on the right bank of the EUPHRATES.

1. Location
2. Excavations
3. The royal archives
4. History
5. Relations to the Bible
Bibliography

1. Location. The site of Mari, known today as Tell Hariri, is situated 6.8 miles N-NW of Abu-Kemal, a townlet on the Syrian side of the Syro-Iraqi frontier. Mari owed its importance to its location at the intersection of two caravan roads: one, crossing the Syrian Desert, linked the city with Syria and the Mediterranean coast; the other, descending from N Mesopotamia through the valleys of the rivers Habor and Euphrates, was one of the main highways leading from Assyria to Babylonia. *See* ASSYRIA AND BABYLONIA.

Fig. MAR 11.

10. Statue of Ebih-il, steward to Ishtar, in which he sits on a stool of basketwork; from the temple of Ishtar at Mari (middle third millennium B.C.)

2. Excavations. In 1933, Bedouins searching for stones near the summit of Tell Hariri unearthed a headless stone statue. Excavations were started soon afterward under the auspices of the Louvre Museum and under the direction of A. Parrot. When the outbreak of the Second World War interrupted the excavations in 1939, six highly successful campaigns had taken place. The work was resumed in 1951 but, after four further campaigns, was broken off again in 1956 as a consequence of the Suez incident. The most important buildings uncovered were: (*a*) a temple of the goddess ISHTAR,* located near the perimeter of the city and consisting of four superposed buildings from various periods, the latest belonging in the time of the First Dynasty of Babylon; (*b*) a *ziqqurrat,* or

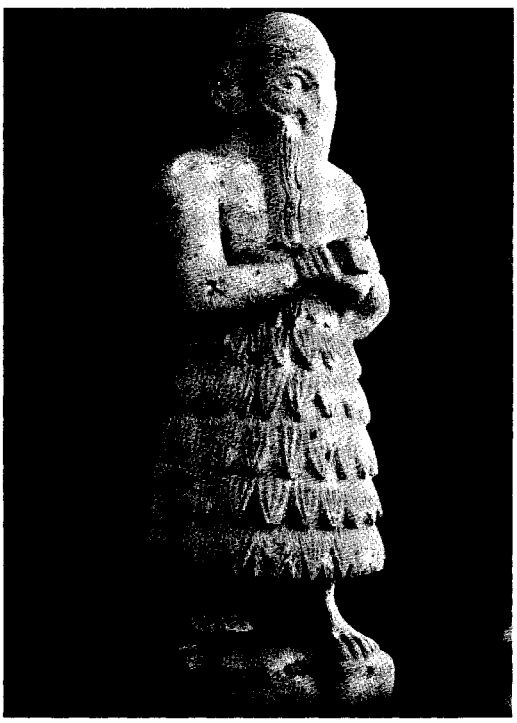
temple-tower, with an adjoining sanctuary dedicated to the "Divine King of the Land" (*dŠarru-ma-tim*); (*c*) a sprawling palace, contemporary of the First Dynasty of Babylon, occupying the center of the mound and containing almost three hundred rooms. The throne room furnished some of the rare specimens of well-preserved wall paintings.* (*d*) In the postwar campaigns, the excavators investigated mainly the older strata, reaching buildings from the time of the Dynasty of Akkad and the pre-Sargonic period. Figs. MAR 10, 12-13.



Courtesy of James B. Pritchard

12. Lamgi-Mari, king of Mari

3. The royal archives. In the palace area were found some twenty thousand cuneiform tablets the bulk of which dates from the time of kings Iasmaḫ-Adad, under whose reign the construction of the palace was begun, and Zimri-Lim, under whom it was completed. With the exception of a few texts of a religious character written in Hurrian and some bilingual Sumero-Akkadian inscriptions, the documents are written in Akkadian, even though the personal names and some peculiarities of the vocabulary indicate that the ruling class of Mari was of West Semitic origin. Several rooms contained particularly economic, administrative, and juridical texts relating to everyday life in the palace, and others furnished the royal correspondences. King Iasmaḫ-Adad corresponded in particular with his father, the powerful empire-builder, King Shamshi-Adad I of Assyria, and with his brother, King Ishme-Dagan I of Assyria, as well as with his representatives in the provinces of his realm. King Zimri-Lim's correspondence comprises letters exchanged with King Ḥammu-rapi (*see* HAMMURABI) of Babylon, King Iarîm-Lim of Aleppo, and other royal personages, as well as with several vassal kings. Two letters sent from Aleppo to Zimri-Lim concerned prophetic utterances pronounced in the name of the god Adad (*see* HADAD) of Aleppo, the subject and tenor of which are reminiscent of biblical prophecies.

Courtesy of James B. Pritchard

13. Ishtup-ilum, of Mari

4. History. The earliest reference to Mari is found in an inscription of King Eannatum of Lagash (middle of the third pre-Christian millennium), who prides himself on having conquered Mari. The next conqueror of Mari was King Sargon of Akkad (*see* SARGON 1). At the time of the Third Dynasty of Ur, Mari was ruled by governors (*šakkanakku*) of the kings of Ur. Eventually, however, a prince of Mari, Ishbi-Irra, who had brought the city-state of Isin

14. Puzar-Ishtar, governor of Mari, Ur III period (*ca.* 2060-1955 B.C.)

under his domination (*ca.* 2021 B.C.), was instrumental in bringing about the downfall of the Dynasty of Ur.* Iaḥdun-Lim, a king of Khana, expanded his realm by conquering several adjoining kingdoms including Mari. He was defeated by King Shamshi-Adad I of Assyria (1818-1786 B.C.) and lost his life in a palace revolution (*ca.* 1793 B.C.). Four years later, Shamshi-Adad placed his younger son, Iasmaḫ-Adad, on the throne of Mari. Iaḥdun-Lim's son, Zimri-Lim, taking advantage of Shamshi-Adad's death, assembled a coalition against this king's sons, Ishme-Dagan I of Assyria and Iasmaḫ-Adad of Mari. Under the protection of the army of Eshnunna and of the powerful king of Aleppo, he ascended his father's throne in 1780 B.C. He lost his independence when Ḥammu-rapi of Babylon conquered Mari in 1765 B.C., but continued to rule until *ca.* 1746 B.C., when the Kassites conquered and destroyed Mari. Figs. MAR 14, 13.

5. Relations to the Bible. The texts from the royal archives frequently mention a tribe named TUR^{MEŠ}-*ia-mi-na*. Whereas it is not established yet whether the first element of this name must be read *mârê*^{MEŠ} (with the Akkadian term for "sons") or *binû*^{MES} (with its West Semitic equivalent), the meaning "sons of the South" is beyond doubt. The tribe so named was renowned for its military prowess. It had, at least to a large extent, given up nomadic life and was settled in towns and villages along the rivers Habor, Euphrates, and Balikh, S of the city of Harran. The names of the tribesmen are West Semitic, with a high percentage of theophorous names alluding to the moon-god (Eraḫ or Sîn), the grain-god Dagan (*see* DAGON), and others. One letter mentions an alliance between the "sons of the South" and another tribe concluded in the temple of Sîn at Harran. Whereas other peoples and tribes were ruled by kings, they were headed by "chieftains" (*suqâqû*) and "elders" (*šibûtum*). When not engaged in warfare, they tilled the soil. The relation of this tribe to the Israelite tribe of BENJAMIN (1) is obvious; it remains to be investigated whether they migrated from Mesopotamia to Palestine, taking with them from their former habitat near Harran the traditions centering around this famous holy city, as reflected in the patriarchal stories.

MARIMOTH. KJV form of MERAIOTH 1 in II Esd. 1:2.

MARINER. *See* SHIPS AND SAILING.

MARISA măr'ə sə [Μαρισ(σ)α] (I Macc. 5:66; II Macc. 12:35). Greek form of the name MARESHAH.

MARK, GOAL, SIGN [אות, מפת, תו, נס, משאת; σημεῖον, σκοπός, στίγμα, χάραγμα, παράσημος].

1. In the OT. Cain's "mark" (אות) may have been a facial tattoo later characteristic of Kenites (Gen. 4:15). A similar purpose was served by the "mark" (תו, a cross, the archaic form of the letter *tau*) of Ezek. 9:4, 6. The marks prohibited in Lev. 19:28 were probably Canaanite cultic signs. The heavenly luminaries are "signs" (אתת) marking time divisions (Gen. 1:14). Moses' miracles were "signs" of the genuineness of his commission (Exod. 4:8-9); in this sense אות overlaps with מפת ("portent"), translated "sign" in I Kings 13:3, 5; II Chr. 32:24 (corresponding to אות in II Kings 20:8-9 = Isa. 38:7, 22); Ezek. 12:6, 11; 24:24, 27 (of the prophet as a "sign " to his audience; cf. אות and מפת together in Isa. 8:18 of Isaiah and his children). In Ps. 74:4, אות is used of standards; cf. נס in Exod. 17:15 ("The LORD is my banner") and in the sense of "warning" in Num. 26:10. The "signal" of Jer. 6:1 is a fire beacon (משאת).

2. In the NT. The commonest word for "sign" in the NT is σημεῖον. As Jonah was a "sign" of impending judgment to the Ninevites unless they re-

pented, so was the Son of man to his contemporaries (Luke 11:30). In apostolic times prophecy and glossolalia were "signs" for believers and unbelievers respectively (I Cor. 14:22). The most distinctive use of the word in the NT denotes Jesus' mighty works as "signs" of the kingdom of God, or (in John) of the incarnate Word (*see* SIGNS AND WONDERS; SIGNS IN THE NT). The "mark" of Phil. 3:14 KJV (σκοπός) is Paul's "goal" (RSV) in his apostolic service. The "marks [στίγματα] of Jesus" (Gal. 6:17) are the scars left by Paul's beatings, stoning, etc.—brand marks which he bears as Christ's slave, contrasted with the mark of circumcision. The "mark" (χάραγμα) of the beast (Rev. 13:16-17) is Antichrist's name or cryptogram tattooed on his devotees. The "sign" (παράσημος) of the ship in Acts 28:11 was its figurehead.

***MARK, GOSPEL OF** [Μᾶρκος, *see* MARK, JOHN]. The second book in the NT canon. This gospel was written, probably in Rome, by Mark, who was able to draw on the personal reminiscences of Peter, with whom he had been associated. After an initial period of extensive influence it was for many centuries thought to be merely an abridgment of Matthew and so tended to be the least valued and least read of the gospels. It is now widely recognized as the earliest gospel and our primary source of information concerning the ministry of Jesus. Within the fourfold testimony it has its own characteristic and outstanding merits, besides being fundamental to the study of the other gospels.

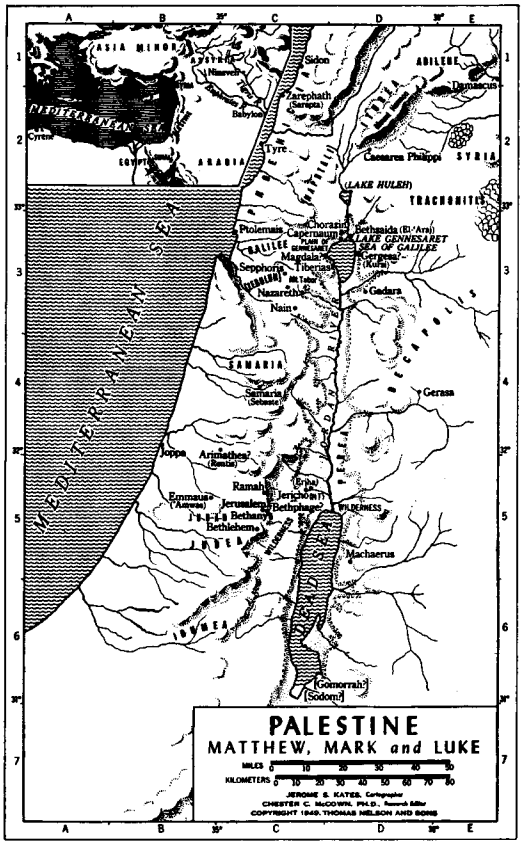
1. Early tradition. The earliest extant statement about the gospel comes from a lost exposition of the Lord's sayings written by Papias, bishop of Hierapolis, *ca.* A.D. 140. It is quoted by Eusebius in his *Ecclesiastical History* (III.39) and may be translated as follows: "This also the Elder said: Mark, who became Peter's interpreter, wrote accurately, though not in order, all that he remembered of the things said and done by the Lord. For he had neither heard the Lord nor been one of his followers, but afterward, as I said, he had followed Peter, who used to compose his discourses with a view to the needs [of his hearers], but not as if he were composing a systematic account of the Lord's sayings. So Mark did nothing blameworthy in thus writing some things just as he remembered them; for he was careful of this one thing, to omit none of the things he had heard and to state no untruth therein." The first sentence, at any rate—and this is the vital one—is a quotation within a quotation and gives us the testimony of an older contemporary of Papias (probably to be identified with the elder John who is mentioned by Papias in another passage which Eusebius has just quoted). It is thus evidence of what was believed in the province of Asia at the beginning of the second century. It affirms a close connection between Mark and Peter (the significance of "interpreter" is perhaps that Mark translated Peter's Aramaic into Greek or perhaps that he committed Peter's reminiscences to writing and so acted as his spokesman) and testifies to Mark's accuracy, while at the same time indicating that his gospel was criticized for a certain deficiency of order (whether the complaint related to chronological order or to systematic arrangement and comprehensiveness is not certain). The second and third sentences, though probably not part of the Elder's words, probably do correctly interpret them. They explain the deficiency of order as due to the fact that Mark was not himself a firsthand witness but derived his information from Peter's discourses, and they underline the Elder's testimony to Mark's carefulness.

Only a little later than the Papias passage is Justin Martyr's reference (Dial. 106) to Peter's "memoirs" (Πέτρον . . . ἐν τοῖς ἀπομνημονεύμασιν αὐτοῦ). If



Mark is meant, as seems likely, since the words to which Justin is referring occur in Mark and in no other gospel, then this is another testimony to the close connection between this gospel and the apostle Peter.

The Anti-Marcionite Prologue to Mark is perhaps to be dated as early as 160-80 (though some would date it much later). The first part is lost. The rest is as follows: "Mark declared, who is called 'Stump-fingered' because he had small fingers in comparison with the size of the rest of his body. He was Peter's interpreter. After the death of Peter himself he wrote down this same gospel in the parts of Italy." This adds two details of importance to the information given by Papias: that the gospel was written after the death of Peter; that it was written in Italy. (The former of these is perhaps implied by the references to remembering in the Papias passage.)

The witness of Irenaeus (*ca.* 180) agrees with the Anti-Marcionite Prologue in dating Mark after the death of Peter. In Her. III.1.2 he says: "And after their [i.e., Peter's and Paul's] deaths Mark, the disciple and interpreter of Peter, himself also handed down to us in writing the things preached by Peter."

The first line of the Muratorian Canon (*ca.* 200; *see* CANON, NT) refers to Mark (what follows makes this clear), but it is only the end of a sentence. It reads: ". . . at which he was present, and so wrote them down." It seems reasonable to suppose that the lost antecedent of "which" referred to Peter's discourses.

Later writers repeat the tradition of the Petrine connection. The tendency was to heighten it, as is seen in the references of Clement of Alexandria to the subject. According to him the gospel was written during the lifetime of Peter, and, while in one place he says that Peter "neither actively hindered nor encouraged the undertaking" (quoted in Euseb. Hist. VI.14), in another place he actually affirms that the apostle "ratified the writing for reading in the churches" (Euseb. Hist. II.15).

The testimony of early tradition to Mark's authorship and to the connection of the gospel with Peter is thus clear and constant from the beginning of the second century onward. There is early and reliable support for dating the gospel after Peter's death. Irenaeus had been in Rome, and his dating may well reflect the local Roman tradition. That the place of writing was Rome would seem to be the implication of the early testimonies. Chrysostom's statement that Mark wrote it in Egypt is doubtless a mistake due to the tradition that he was the first bishop of Alexandria.

2. Authorship. The gospel itself is anonymous; but it contains nothing which forbids us to accept the universal tradition that its author was Mark, the associate of Peter, and much which points to a close connection with PETER (*see* § 6 *below*). The fact that, in spite of the strong tendency to claim direct apostolic authorship for the gospels, tradition persistently named one who was not an apostle as the author of this gospel, itself goes a long way toward guaranteeing the truth of the tradition. That the author was Mark is not open to serious doubt.

But is this Mark (cf. I Pet. 5:13) to be identified with the Mark of Acts 12:12, 25; 13:13; 15:37-39; Col. 4:10; II Tim. 4:11; Philem. 24? The objections which have been urged against this identification by some scholars are hardly convincing. The apparent tentativeness with which Jerome identifies the Mark of Philem. 24 with the author of the gospel: "Mark, . . . whom I take to be the author of the gospel," is certainly a little strange, but probably only reflects the scholar's cautiousness. The failure of earlier writers to make this identification explicitly may well be due to the fact that it never occurred to them that anyone would think otherwise. The objection that the gospel contains blunders with regard to Palestinian matters such as one who had been a resident in Jerusalem would not have been likely to make is not very weighty; for some, at least, of the alleged blunders are probably not blunders at all (the most notable example is Mark's dating of the Last Supper and the Crucifixion in relation to the Passover). We may take it as virtually certain that the Mark who wrote the gospel and who is referred to in I Pet. 5:13 and the Mark of Acts and the Pauline letters are one and the same person. For further information about Mark, *see* MARK, JOHN.

3. Date. That the gospel was written after the death of Peter is explicitly stated by the Anti-Marcionite Prologue and by Irenaeus, is probably implied by Papias, and is borne out by the internal evidence. The striking frankness with which details to the discredit of Peter are related is best accounted for on the assumption that he had already died a martyr's death, so that the unsparing recital of his past failures would not offend the church for which the gospel was written but would rather be welcomed as an encouragement to weak Christians. That Peter was martyred in the Neronian persecution (A.D. 64-65) seems certain. So we have 65 for our *terminus a quo*. The use of Mark by the later Synoptists makes a date later than 70 unlikely, and the fact that ch. 13 is in no way colored by awareness of the actual events of the tragic Jewish War of 66-70 (contrast Luke 21:20-24) suggests that the gospel was written before the later stages of that war. We may date the gospel, then, between 65 and 70, and probably within the narrower period 65-67.

4. Place of writing. The fact that Mark explains Jewish customs (7:3-4; 15:42) and gives a translation of Aramaic expressions (3:17; 5:41; 7:11, 34; 15:22) suggests that he was writing for Gentiles. The Anti-Marcionite Prologue states that he wrote the gospel "in the parts of Italy." Clement of Alexandria implies that it was in Rome. The testimony of I Pet. 5:13 to Mark's presence with Peter shortly before Peter's martyrdom is in favor of Rome. The mention of the sons of Simon of Cyrene in 15:21, which suggests that they were known to the church for which the evangelist was writing, may possibly be another pointer to Rome—if the Rufus whom Mark names is the same as the Rufus mentioned in Rom. 16:13 and if Rom. 16 was really addressed to Rome (*see* RUFUS; ROMANS, LETTER TO THE). Other points in favor of Rome as the place of writing are the special interest shown in the subject of persecution and martyrdom (e.g., 8:34-38; 13:9-13), which fits in well with the gospel's having been written there soon after the Neronian persecution; and the fact of the gospel's rapid and wide dissemination (attested by the use made of it by the other Synoptists and probably also

by the Fourth Evangelist), which suggests that it had behind it the authority of no less important a church than that of Rome. The presence of a number of Latin loan words and of some possible Latinisms of idiom is scarcely evidence of an Italian origin, for the influence of Latin must have been strong throughout the Empire; but the special frequency of these in Mark possibly points to a Western origin. The arguments which have led a few scholars to suggest Antioch as the place of writing are weak in comparison with those which support Rome.

5. The earliest gospel. It is now very widely agreed that Mark is the earliest of the Synoptic gospels (that it is earlier than John is universally admitted). The arguments on which this conclusion is based may be indicated here briefly (for fuller discussion, *see* SYNOPTIC PROBLEM): (*a*) The substance of over ninety per cent of Mark's verses is contained in Matthew, the substance of over fifty per cent in Luke. (*b*) Where the same matter is contained in all three Synoptic gospels, usually more than half Mark's actual words are to be found either in both Matthew and Luke or in one of them; and, while there is often agreement in sentence structure and collocation of words between both Matthew and Luke and Mark or between one of them and Mark, it hardly ever happens that Matthew and Luke agree against Mark, except in some instances covered by *d* below. (*c*) The order in which the material is arranged in Mark is usually followed by both Matthew and Luke; where either of them differs from Mark, the other usually agrees with him. (*d*) Often where Matthew and/or Luke and Mark differ in language, the language of Matthew and/or Luke is either grammatically or stylistically smoother and more correct than that of Mark. (*e*) On other occasions something in Mark which could perplex or offend is either absent from, or appears in a less sharp form in, Matthew and/or Luke (cf., e.g., Mark 4:38*b* with Matt. 8:25; Luke 8:24; and Mark 6:5 with Matt. 13:58; and Mark 10:17-18 with Matt. 19:16-17). (*f*) In Mark the disciples' pre-Resurrection mode of addressing Jesus (as "Teacher," "Rabbi") is faithfully reflected, whereas Matthew and Luke often represent him as addressed by the title "Lord," thus reflecting the post-Resurrection usage of the church.

Against the hypothesis that Matthew was written first and was used by Mark (the suggestion that Luke in the form in which we have it was the original gospel is not made) the following points may be made, in addition to those indicated above: (*a*) Matthew is much more succinct than Mark, and, while Matthew's omission of Mark's unnecessary words and phrases in order to make room for additional matter is easily understood, the contrary process of omitting valuable material in order to make room for verbosity is hard to imagine. (*b*) Where Matthew's order differs from Mark's, it is often clearly secondary (e.g., the series of stories in Mark 2:1-3:6 appears in part in Matt. 9 and in part in Matt. 12; and cf. Mark 6:6*b*-33 with Matt. 9:35; 10:1, 9-11, 14; 14:1-13).

If Mark, then, is the earliest of the gospels, its special importance as our primary source of information about the ministry of Jesus is obvious.

6. Contents and sources. The material contained in the gospel is not all of the same kind.

There are narratives which by their vividness and wealth of detail give the impression of being derived directly from the reminiscence of an eyewitness. Some of these are narratives in which Peter figures prominently or which must have had a special interest for him (e.g., 1:16-20; 1:29-31; 1:35-38; 14:27-31, 54, 66-72; 14:32-42); others relate incidents at which only a few, but including Peter, were present (e.g., 5:21-24, 35-43). In 9:14-27 it is noticeable that the story is told from the point of view of the three disciples who return with Jesus. It is reasonable to suppose that as far as these narratives which have a special Petrine interest, and also most of the other narratives which are distinguished by special vividness and wealth of detail, are concerned, the tradition of Mark's dependence on the reminiscences of Peter is correct.

But there are other narratives (e.g., 2:18-20; 2:23-26; 3:31-35) which show signs of having passed through the processes of oral tradition, in the course of which details have been lost and the stories molded by frequent repetition into a rounded form. Often these narratives are pronouncement stories—i.e., stories in which the interest is concentrated on a saying of Jesus to which the story leads. For a discussion of the various "forms" according to which the form critics have sought to classify the gospel material, *see* FORM CRITICISM.

In addition to narratives which are probably derived directly from Peter (or occasionally perhaps from some other eyewitness) and narratives which are units of oral tradition which had been in circulation in the primitive Christian communities, two other kinds of narrative material may be distinguished: narratives which seem to have been constructed by Mark on the basis of tradition (e.g., 3:13-19; 6:6*b*-13; 6:14-16; 6:30-33; 6:53-56) and brief statements which indicate in summary form what was happening over a period of time (e.g., 1:14-15; 3:7-12; 4:33-34). Narratives of the former sort, while they rest on tradition, seem to be Mark's own composition and not actual units of tradition. They lack vivid details and tend to be somewhat vague. On the question how far passages of the latter sort reflect a traditional outline of the ministry of Jesus, *see* § 8*c below*.

The gospel also contains a considerable amount of sayings material. While sometimes tradition preserved the memory of the circumstances which had called forth a particular saying (hence the pronouncement stories mentioned above), more often the circumstances were forgotten and the sayings preserved as independent units of tradition. So it comes about that the same saying can appear in different contexts in the different gospels (cf., e.g., Mark 4:22 with Matt. 10:26; Luke 12:2). Collections of sayings would seem to have been made in the various churches and used for catechetical purposes (*see* Q). It is likely that Mark drew upon a collection in use in the church of Rome. Traces of the groupings of sayings in his source (or sources) according to catchwords and according to topics are to be seen from time to time in the gospel. A particularly interesting example is 9:37-50. It looks as if 42 may first have been joined to 37 because of the presence of "one such child" in 37 and "one of these little ones" in 42; and afterward 38-40 may have been inserted after 37 because of another catchword,

"in my name" in 37 and "in your name" and "in my name" in 38-40; and 41 similarly inserted after 38-40 because it contained "because you bear the name of Christ" (ἐν ὀνόματι, ὅτι Χριστοῦ ἐστε—which should probably rather be translated "on the ground that you belong to Christ," though it contains the Greek word for "name"). The connection between 42 and 43-48 is the verb "cause to sin," the expression "it would be [is] better," and the verb "throw." Again, the connection between 48 and 49 is the word "fire," and between 49 and 50 the verb "to salt" and the noun "salt." Such a grouping made it easier to memorize the sayings.

It is probable that the narrative material also was to some extent collected into groups of units before the compilation of the gospel. In the case of the passion story, it is almost certain that some kind of summary continuous narrative was traditional. It seems likely that the Markan passion narrative represents such a traditional narrative filled out with additional material derived from the reminiscences of an eyewitness or eyewitnesses. In other parts of the gospel there are narrative "complexes"—i.e., groups of narrative units—of which some, at least, appear to have been brought together at an earlier stage than the compilation of the gospel. One such group that has often been noticed is the series of conflict stories, 2:1-3:6. It is noticeable that in some of these groups there are no connecting links between the units other than a simple "and"; the stories are merely placed one after another. In these groups the bond between the different narratives is topical. In other groups the separate stories are joined together by temporal or geographical links, and the connection would seem to be historical. Examples of this sort of group are to be seen in 1:21-38; 4:35-5:43; 8:27-9:29. While complexes of this latter sort probably go back to the memory of an eyewitness, the topical complexes would seem to have originated in the catechetical requirements of the primitive church.

To what extent, if any, the sources mentioned were written, it is difficult, perhaps impossible, to decide.

A further question with regard to the sources of Mark arises at this point: Was there perhaps an intermediate stage (or stages) between the sources of the sort we have been discussing and the actual composition of the gospel as we know it? Various hypotheses about extensive written sources have been put forward. Some have posited a first edition of Mark (*Ur-Markus*) earlier than the gospel we possess and lacking the passages which both Matthew and Luke lack; according to this theory Matthew and Luke used, not our Mark, but Ur-Markus (*see* SYNOPTIC PROBLEM). Others have suggested that the evangelist combined a "disciple source" and a "Twelve source"; or that he used three sources—a Palestinian gospel written in Aramaic, a gospel of the Dispersion written by Mark himself, and a Gentile gospel written for the Pauline mission; or, again, that the gospel arrived at its present form by three stages—first an original form used by Luke, then that form expanded by a Galilean redactor, which was the gospel as used by Matthew, and finally this expanded form edited by a Roman editor, which is our Gospel According to Mark. But none of these hypotheses has met with anything like general acceptance.

7. Arrangement and purpose. The central turning point of the gospel, which marks its rough division into two halves, is the narrative of Peter's confession of Jesus as the Messiah and of the first prediction of the Passion (8:27-33). The second half of the gospel falls easily into four main divisions: 8:27-10:52; 11-13; 14-15; 16. It is not so easy to see exactly what are the main divisions of the first half. That 1:1-13 is the introduction or prologue to the gospel is clear enough. But commentators divide 1:14-8:26 differently. On the whole, it seems best to divide it into 1:14-3:6; 3:7-6:13; 6:14-8:26. We thus get the scheme:

I. Introduction, 1:1-13
II. Beginnings of the Galilean ministry, 1:14-3:6
III. Later stages of the Galilean ministry, 3:7-6:13
IV. Jesus goes outside Galilee, 6:14-8:26
V. The way to Jerusalem, 8:27-10:52
VI. Ministry in Jerusalem, chs. 11-13
VII. The Passion, chs. 14-15
VIII. The Resurrection, ch. 16

The whole of the latter half of the gospel is dominated by the Passion (see, e.g., in the earlier part of the latter half, 8:31; 9:9-13, 31; 10:32-34, 38-39, 45). In the former half, too, there are many features which point forward to it: e.g., the reference to the arrest (the verb παραδίδωμι is used; cf. 9:31; 10:33; 14:10, 41; 15:1, 10, 15) of John the Baptist (the Forerunner) in 1:14; the crescendo of opposition indicated in 2:1-3:6, culminating in the plot against Jesus' life (3:6); the scribes' accusation in 3:22; the rejection at Nazareth (6:1-6); and the account of Herod's fears ("John, whom I beheaded, has been raised"), followed by the story of John's end (6:14-29). The movement of the gospel is the march of Jesus toward the Cross and the Resurrection.

Mark's emphasis on the Passion is an indication of his purpose to set forth the good news of the Deed of God for the world's salvation. It is not, however, intended to suggest that what preceded the actual Passion was unimportant, but rather to illumine the significance of the whole. To describe the gospel as a passion narrative with a rather full introduction might mislead; for God's Deed included more than the cross, resurrection, and exaltation of Jesus. His miracles, his mixing with sinners, his choice of the Twelve, his teaching both the crowds and the disciples—these and other things were also part of that Deed,,and so accounts of them find their place in the gospel. But these things are rightly understood only when they are seen in the light of what followed them.

Mark's general purpose in compiling the gospel may be summed up in the language of John 20:31. He wrote in order that those who should read or hear his words might believe that Jesus is the Messiah, the Son of God, and that believing, they might have life in his name. Within the framework of this general purpose, which he shared with all three later evangelists, it is possible to discern his special motives. He had in mind primarily, it seems, the church in Rome and the Gentile mission. The gospel was intended to supply a catechetical and liturgical need and a need

of the church's missionary preaching, to nourish and sustain the faith of Christians in Nero's Rome, and to strengthen and guide their obedience.

8. Historical reliability. We have seen that the gospel was written from faith to faith. Its purpose was not simply to pass on some historical information, but to support faith. Its contents are not the coldly objective depositions of neutral observers, but the testimony of people who believed in Jesus of Nazareth as the Son of God. We have seen too that, while some of the material in the gospel probably derives from the reminiscence of Peter, much of it bears the marks of having undergone the processes of oral tradition over a considerable period. In view of these facts, what can we say about the historical reliability of the gospel?

Here we must distinguish two questions: that of the general reliability of the sources Mark used and that of Mark's own reliability.

a. Of Mark's sources. According to the more skeptical of the form critics, much of the narrative material which Mark received was legend and ideal construction, and many of the sayings ascribed to Jesus were similarly the creation of the primitive community. The tradition, according to them, is evidence of the faith and the interests of the early church (it is, indeed, indirectly evidence of the historical ministry of Jesus, since it would not have arisen had there not been some sufficient cause to give rise to it; but it is only indirect evidence), and tells us what Jesus had become for Christian faith, not what he actually had been in his historical life. Some have even gone so far as to assert that of the historical Jesus we can now know next to nothing. But there are many considerations to be set over against this radical skepticism, considerations which have led other scholars to believe that there was preserved through the oral-tradition period a substantially reliable picture of the historical Jesus.

We may mention some of them: (*a*) The survival of eyewitnesses, hostile as well as believing, throughout the oral-tradition period must have limited severely the church's freedom to invent and even to embellish. (*b*) The prominence in the NT of the words μάρτυς, μαρτυρέω, μαρτυρία, μαρτύριον ("witness," "bear witness," etc.) implies that the primitive community was conscious of its obligation to tell the truth (the word μάρτυς means primarily a witness in court). I Cor. 7, in which Paul distinguishes carefully more than once between that for which he has the authority of a definite word of the Lord Jesus and that which he is saying on his own account as a Christian, illustrates its sense of responsibility in the matter. The fact that the primitive community believed that it was speaking about God's Deed made its sense of responsibility all the stronger (cf. I Cor. 15:15). (*c*) The main outline of events, especially the story of the Passion, must have been constantly repeated in preaching and liturgy, and so kept clear in the memory. (*d*) The fact that the church grew up within the Jewish community, a community with a long-established and highly revered oral tradition of its own, must not be forgotten. Among the rabbis the most meticulous care was taken to preserve the oral tradition of their teachers unaltered. (*e*) The form of much of the teaching of Jesus (poetry, epigram, parable) made it particularly easy to remember accurately. (*f*) The respect paid by the later evangelists to Mark is something we should not expect if the early church had really felt as free to invent and embellish as some would have us believe. (*g*) The presence of Semitisms in many of the sayings of Jesus and also in many of the narratives of the gospel, while it does not, of course, guarantee the historical accuracy of the material, tells strongly against any theory which sees in it corruptions of the tradition due to Hellenistic influences. (*h*) The fact that material which was discreditable to Peter and the other apostles, and, still more, such sayings of Jesus as his admission of ignorance of the date of the Parousia (13:32) and his cry of dereliction on the cross (15:34), which we know puzzled and embarrassed the early church, have been preserved, goes a long way toward guaranteeing the general reliability of the tradition.

b. Of Mark himself. Can we make out anything of the way in which Mark used his sources? Did he treat them with respect, recognizing an obligation to pass them on as he received them, or did he feel free to embellish them or to smooth away difficulties? Was he a creative writer?

Here several things must be said: First, there is the fact, to which reference has already been made (*see* § 5 *above*), that some statements in Mark that could offend or perplex are either omitted or softened down in Matthew and/or Luke. To the examples already given, others may be added: e.g., the request ascribed in Mark 10:37 to James and John is in Matt. 20:21 ascribed to their mother; the statement that Jesus "began to be greatly distressed and troubled" (Mark 14:33) is softened in Matt. 26:37 (λυπεῖσθαι is much weaker than ἐκθαμβεῖσθαι) and omitted altogether in Luke; the picture of the three disciples' failure to watch with Jesus in Gethsemane is considerably softened by the addition of the words "for sorrow" in Luke 22:45; in Mark 14:71 (cf. Matt. 26:74) Peter is said to have begun "to invoke a curse on himself and to swear, 'I do not know this man . . . ,' " but Luke has the much less offensive "Man, I do not know what you are saying" (Luke 22:60); and the cry of dereliction (Mark 15:34; Matt. 27:46) is omitted in Luke. There is also the fact (mentioned in § 5 *above*) of Mark's retention of the pre-Resurrection mode of address, which contrasts with the frequent use of "Lord" in Matthew and Luke. These two features not only point to the priority of Mark; they also suggest that Mark was strikingly frank.

It is very noticeable, also, that the Markan constructions (i.e., those passages which Mark, in the absence of an actual unit of tradition to incorporate at a particular point, has himself composed on the basis of a general knowledge of what had happened —e.g., 3:13-19; 6:6*b*-13; 6:14-16; 6:30-34; 6:53-56) are singularly lacking in vivid details, in striking contrast with such passages as 5:1-20; 9:14-29; 10:17-22. The most natural explanation would seem to be that, where Mark did not find vivid details in the material which he had received, he refrained from creating them. The evidence does not point to Mark's having been a born storyteller, the sort of person who just cannot tell a story badly, as has sometimes been suggested; rather it suggests that the vividness characteristic of so much of the gospel must be attributed,

not to Mark, but to his sources. The gospel Mark has left us gives us no solid grounds for acclaiming him as an artist and a creative writer. On the contrary, the evidence points to his having been something which on the surface seems very dull in comparison but which in actual fact is from our point of view of infinitely greater worth—a careful and conscientious compiler. Since we need not suppose that he could not have made his own constructions more interesting had he wished, we may attribute their lack of vividness to a deliberate choice on his part. His peculiar merit as an evangelist would seem to have been that of self-restraint—the virtue of a witness. It reflects a real reverence for the sacredness of historical events which he believed to have been the very Deed of God.

Mark has shown this same self-restraint in the matter of connecting links between his sections. When he has received a unit of tradition in isolation and has no reliable information about its historical context, he does not supply from his imagination suitable temporal and geographical details to link it with the context in which he sets it, but prefers to introduce it with a simple "and." By contrast, Matthew and Luke sometimes introduce connecting links where Mark has none: e.g., Luke connects the question about fasting with the supper in Levi's house (οἱ δὲ εἶπαν in 5:33; contrast Mark 2:18); and Matthew connects Jesus' withdrawal in 14:13 with the execution of the Baptist by the phrase "Now when Jesus heard this" (contrast Mark 6:30-31). The same restraint is apparent in the way Mark leaves intact groups of units which he has received as such, even where the grouping is clearly topical, not historical (e.g., 2:1–3:6).

The conclusion to be drawn from this evidence is surely that we may have very great confidence in Mark's own reliability.

c. Some special questions. There are several special problems which should at least be mentioned here, even though it is impossible to discuss them at all adequately.

There is first the problem of the Markan framework or outline, about which opinions differ widely. On the one extreme there are those who, placing great weight on the order in which the various incidents are related, are confident that they can trace in considerable detail the successive stages of the ministry of Jesus and even of his inner psychological development. On the other extreme there are those who regard the Markan order as purely artificial, apart from chs. 14–16 and perhaps one or two complexes like 1:21-38. A middle position was taken up by C. H. Dodd (*see bibliography*), and his view has been widely supported. According to him, while "it is hazardous to argue from the precise sequence of the narrative in detail . . . , there is good reason to believe that in broad lines the Marcan order does represent a genuine succession of events, within which movement and development can be traced." While some of his arguments are perhaps less conclusive than they seemed at first, he was probably right in thinking that Mark received, in addition to a number of independent units of tradition and a number of complexes (some of which were continuous narratives in which the connection between the parts was historical, while others were merely topical), an outline of the ministry of Jesus. Dodd seems to think of this outline as something that was a familiar part of the general oral tradition of the church; but, while it is certainly likely that a simple and summary outline of the ministry was traditional in this sense, it seems rather unlikely that such a long and detailed outline as he seems to envisage ever was. It seems more reasonable to suppose that the summary statements (*see* § 6 *above*), which form to a large extent the framework of the gospel, were composed by Mark on the basis of a knowledge of the course of the ministry which he possessed as a result of his association with Peter (and perhaps other eyewitnesses) rather than that they are fragments of an outline that was a familiar part of the general oral tradition. If we allow, as we surely must, that Peter is likely to have retained a fairly accurate memory, not only of particular incidents but also of the general course of the ministry, we need not accept the view that the Markan framework is purely artificial; on the other hand, we must make due allowance for the fact that much of Mark's material seems to have come to him as isolated units carrying no indications of their proper historical contexts, while some was already grouped, not historically, but topically. We must examine on its merits the relation of each separate unit of tradition to the outline.

Other special questions concern the accounts of miracles, the references to angels, Satan, demons, and the suggestion of Bultmann that the NT contains a mythological element which it is proper to attempt to "demythologize." That all these matters would have to be considered in any full discussion of the historical reliability of Mark's gospel is obvious; but, as they are problems not just of Mark but of the NT as a whole, and as any worth-while treatment of them would require considerable space, it suffices here to make, in addition to some suggestions in the bibliography, this one observation—that, in view of what we have seen in §§ 8*a-b above*, we shall be wise to listen attentively to, and to take very seriously, what Mark has to say, and to beware of rejecting anything simply because it cannot easily be reconciled with our twentieth-century presuppositions.

With regard to the question whether the material contained in Mark has been affected by the influence of Paulinism, it is perhaps enough here to register the now widely held opinion that, while there are many contacts between the teaching of the gospel and the teaching of Paul, there is very little, if anything, that can justifiably be claimed as distinctively Pauline.

On two other questions—that of the alleged distortion of some of the teaching of Jesus as a result of the preoccupation of Mark and the church of his time with apocalyptic hopes, and that of the alleged coloring of the material by a doctrine of a "messianic secret"—some light will, it is hoped, be shed by § 9 *below*.

9. Theology. Christology is by no means the whole of Christian theology, but it is the heart of it. We shall get as clear and adequate a picture of the theology of this gospel as belongs in a summary article if we concentrate on its Christology.

The whole gospel presupposes the early church's faith that Jesus is Lord (cf. Rom. 10:9; I Cor. 12:3; II Cor. 4:5; etc.)—it would never have been written

if Mark had not shared this faith. But, because he had a sense of responsibility about historical truth, he avoided representing Jesus as being called "Lord" during his ministry. Only once in the gospel does the vocative κύριε occur as a form of address to Jesus (it is read in 1:40 and 10:51 in some MSS, but is rightly omitted by the RSV); this is in 7:28, where, on the lips of the Syrophoenician woman, it only means "Sir." In the body of the gospel Jesus is never referred to as "the Lord" (unless in 11:3; but here it is probable that ὁ κύριος should be translated, not "the Lord" as in the RSV, but "its [i.e., the colt's] owner"). But there is one place in the Prologue to the gospel where "the Lord" may well refer to Jesus. In 1:3 Mark quotes Isa. 40:3, but by substituting "his" for "of our God" (LXX; RSV has "for our God") he makes it possible, though not necessary, to identify the preceding "the Lord" with Jesus. It seems probable that Mark intends κυρίου in the quotation to be understood of Jesus (though it is often taken to refer to God), and that here in the Prologue he is pointing to the truth (which he will not be able to express in so many words in the course of the gospel) that the One whose ministry he is about to record is the One whom the church acknowledges as "the Lord." But whether or not this is correct of 1:3, there is no doubt that the gospel was written from the faith that Jesus is Lord.

The Christology of the gospel may be considered conveniently under four heads:

a. The Lord who "was rich." If we were right about 1:3, then that verse is an eloquent pointer to the Lord who—in Paul's language (II Cor. 8:9)—"was rich"; for it would be an example of something which is common elsewhere in the NT—the application of an OT passage, in which κύριος stands for "Yahweh," to Jesus. And this usage points to belief in the pre-existence of him who in his earthly life was known as Jesus of Nazareth; for "Lord" in this sense is something which no Jew worthy of the name could think of a man's becoming. Only he who had from all eternity been Lord could at a particular moment become or be designated or made Lord in this sense.

A claim to pre-existence is probably implied by Jesus' self-designation SON OF MAN (*see also bibliography*); for in Enoch 46:1-3; 48:2-7; 62:7 a heavenly pre-existence of the Son of man seems to be assumed (though this has been disputed). It is also perhaps implied by the sayings which begin "I came" or "the Son of man came" (Mark 2:17; 10:45; possibly also 1:38).

Specially important here is the title SON OF GOD (*see also bibliography*), which is a prominent theme of the gospel—1:1 (*see* § 13 *below*); 1:11; 3:11; 8:38; 9:7; 12:6; 13:32; 14:36, 61; 15:39. It is not to be explained as merely a messianic title (though some would so explain it); for the evidence of its use as a messianic title in pre-Christian Palestinian Judaism is scanty and doubtful. Its use is rather to be explained as having its origin in the filial consciousness of Jesus. The absolute use of "the Son" in 13:32 is specially interesting; for this saying is one of which the genuineness cannot reasonably be doubted (an assertion of Jesus' ignorance is not likely to have been created by the early church). It is evidence of Jesus' having thought of himself as the unique Son of God.

While it is true that the Gospel According to Mark contains no explicit statement such as is found in the Prologue of John—that the Word, which from the beginning was with God and was God, became flesh (i.e., assumed human nature) in Jesus—the Christology of Mark, though less directly stated, is every bit as high as that of the Fourth Gospel.

b. The Lord who "became poor." While the whole gospel presupposes the heavenly riches of this Lord's pre-existence (and also his exaltation and the hope of his coming again), it is the history of his poverty that it is throughout the first fifteen chapters concerned to record.

Mark begins at the point where Jesus, the first quiet stages of his course completed, makes his mature self-dedication to the fulfilment of his life's mission of complete self-identification with sinners by submitting to John's baptism of repentance. This was the first decisive step on the road of the Servant, which led down into the very lowest depths of human anguish and shame. The poverty he had to endure included not merely death but death under the curse of God. In Mark, of all the gospels, the horror of this stands out most starkly. The temptation to depict Jesus as the supreme Christian martyr is not yielded to. Here we see, not the calm courage of the martyr, but the inexpressible fear and horror (14:33-34) of one who knows that for him death must mean drinking the cup of God's wrath to the dregs (14:36; cf. Isa. 51:17-23; Jer. 25:15-28; 49:12; 51:7, etc.). The cry of dereliction (15:34), which is not to be explained away, bears witness to a real abandonment by God his Father, endured by him on our behalf and in our place. That is what it meant "to give his life as a ransom for many" (10:45); and the fact that in some way beyond our comprehension the unity of the Blessed Trinity was even then unbroken does not permit us to gloss over the awful reality of that abandonment.

The history Mark records is the history of the hidden Lord, the Lord who, having laid aside every outwardly compelling evidence of his divine glory, had become one whose claim to authority could only appear to the world paradoxical and problematic. This hiddenness was an essential part of the cost of redeeming the "many"; for, while his presence placed men in a situation of crisis, the hiddenness was necessary in order that they might be allowed sufficient room in which to make a personal decision. Everything in the ministry of Jesus has to be seen in the light of this hiddenness of the divine Lord. Here is the clue to the understanding of his refusal to give a sign (8:11-12), his silencing of the demoniacs (1:25, 34; 3:12), his efforts to limit the publicity of his miracles (1:44; 5:43; 7:36; 8:26), his teaching the multitudes by means of parables, indirectly, and confining his more direct teaching about himself and the kingdom of God to his disciples (4:33-34), his enjoining secrecy on the disciples (8:30; 9:9), and also the slowness of the disciples to understand (4:13, 40; 6:52; 8:17-21). These features, most of which Wrede (*see* SECRET, MESSIANIC) supposed were the invention of the primitive church read back into the story in order to get over a dogmatic difficulty (the alleged fact that Jesus neither claimed to be Messiah during his life nor was recognized as such by the disciples), are an

integral part of the history, connected with this hiddenness, that was necessary for the fulfilment of Jesus' mission.

In the last hours of the ministry the hiddenness deepens. Forsaken by his disciples (14:50; note the hammerlike blows with which the original Greek drives home his loneliness), rejected and condemned by the religious leaders of Israel (14:63-64), denied by Peter (14:66-72), sentenced to death by Pilate (15:15), scourged (15:15), mocked by the soldiers (15:16-20), physically exhausted (15:21), he is brought to the place of execution, and there, powerless in the hands of his enemies, the defenseless object of men's gibes (15:29-32), he dies, abandoned by God (15:34), the death that the law declares accursed (Deut. 21:23), to all outward appearance the absolute antithesis of kingly and divine dignity and power. In those last hours the truth about him is expressed only indirectly and unconsciously—the truth of his messiahship (15:9, 12, 18, 26, 32), his saviorhood (15:31), and his divine sonship (15:39).

But the hidden Lord was really Lord, and the history of his poverty is the history of God's mighty Deed. In him the KINGDOM OF GOD, God's kingly rule, God's sovereign and effective claim upon men, had come near to men (1:15) and was confronting them in mercy and judgment, in command and promise. The "secret of the kingdom of God" (4:11), which had been revealed to the disciples, was the secret of its presence in him. His miracles, though they were not compelling proofs or signs of the sort demanded by the Pharisees (8:11) and though, as far as unbelievers were concerned, the amazement they caused was counterbalanced by the apparent weakness and unimpressiveness of him who wrought them, were indeed the power of God in action and the expression of God's own compassion (5:19). For the eye of faith they were an effective manifestation of his divine glory. His exorcisms were a spoiling of Satan's house (3:27), the evidence that Satan had suffered a decisive defeat, though he still remained strong. In his teaching too the kingdom of God was present and active. And finally, his death in all its horror and loneliness was the fulfilment of the divine purpose, to which the Scriptures bore witness (9:12; 14:21); the redemption of "many" (10:45); the establishment of God's new covenant with men (14:24); and the opening of the way for sinners into the presence of God (15:38).

c. The Lord who is exalted. The whole gospel is written from the point of view of faith in the living and exalted Lord. There can be no doubt that the faith which the writer of the longer ending (*see* § 10 *below*) expressed so magnificently—"So then the Lord Jesus, after he had spoken to them, was taken up into heaven, and sat down at the right hand of God" (16:19)—was shared by Mark. The very fact of his having put pen to paper to write an altogether new and special sort of book, which was not a mere memoir or biography or history but a "gospel," points to such a faith.

Direct references to the "Lord who is exalted" are naturally not to be expected in any number in the gospel, since it is concerned with the historical life of Jesus, though there are such passages as the account of the angel's message at the empty tomb (16:1-8), the reference to the Son of man's "sitting at the right hand of Power" (14:62), and—more direct, if they are, as seems probable, Mark's own comments made from his viewpoint—the words: "But that you may know that the Son of man has authority on earth to forgive sins" (2:10) and the statement: "So the Son of man is lord even of the sabbath" (2:28). But it is not necessary to search for special references. The whole gospel implies the existence of a church living by faith in a risen and exalted Lord, whose presence it joyfully greeted in its celebrations of his Supper and whose power to save it experienced daily in the midst of trials and persecutions.

d. The Lord who is coming. The Lord to whom the gospel bears witness is also the Lord who is to come. From beginning to end it breathes the hope of his coming. The sayings of Jesus contrast the present hiddenness and apparent weakness of the kingdom of God with its future manifestation. God's kingly rule had indeed come near to men in his person and works and words; but it was veiled, something which could be recognized only by faith, a μυστήριον (4:11). Now in its apparent weakness and insignificance it was like the mustard seed, "which, when sown upon the ground, is the smallest of all the seeds on earth" (4:31); but, as the tiny mustard seed, proverbial among the Jews for its smallness (Matt. 17:20), becomes a great shrub "and puts forth large branches" (4:32), so the kingdom of God will one day be made manifest in its real splendor. The parable of the lamp (4:21) has a similar point. One does not carry a lighted lamp into a house merely in order to conceal it. If one brings it in, it is because one intends to put it on the lampstand. And God has not sent his Son into the world merely in order to hide him. For a while he is indeed hidden (cf. 4:22), but God's ultimate intention is that he should be manifest to all. The point of the parable contained in 4:26-29 is similar. It is another parable of contrast. As sowing is followed in due course by the joy of harvest, so the present obscurity of the kingdom of God will be followed by the glorious unveiling.

To attempt to explain this contrast between the kingdom's present veiledness and future manifestation by reference to the small beginnings of the church in the lifetime of Jesus, on the one hand, and, on the other hand, its later world-wide expansion, would be to ignore not only the ambiguousness and questionableness which mark the church's life in history but also the evidence of other material in the gospel. The contrast intended is rather between the veiledness of the kingdom in the ministry of Jesus (and in the witness of his church throughout history), on the one hand, and the glorious manifestation of the kingdom at the PAROUSIA, on the other.

The subject of NT eschatology is beset with difficulties. So it will be well, before indicating briefly the witness of Mark's gospel to the coming Lord, to say something about these difficulties and about the various solutions which have been suggested. The main problem is that which is posed by the NT insistence on the nearness of the Parousia and the fact that many centuries have passed and the Parousia has not yet occurred.

One suggested solution of this problem, which has had considerable popularity, is that the early church misunderstood the teaching of Jesus at this point.

Jesus never envisaged a second coming at all. Insofar as sayings of an apocalyptic nature with a future reference are allowed to be authentic, they are explained as symbolic: the future tenses are "an accommodation of language" and signify, not a future event, but "the timeless fact." But the teaching of Jesus has, according to this view, been subjected to reinterpretation along the lines of the apocalyptic interests of the early church. Such is the solution of thoroughgoing "realized eschatology" (*see* ESCHATOLOGY OF THE NT). It has the effect of transferring from Jesus to the early church the responsibility both for an unfulfilled prediction and for the idea of a second coming so uncongenial to those who are consciously or unconsciously under the influence of Platonism.

A less extreme form of this "mistake of the early church" solution is that which allows that Jesus did envisage a future coming of the Son of man but ascribes to the early church the emphasis on its imminence and the apocalyptic color with which it is depicted.

Another suggested solution, which is also widely supported, is that Jesus himself was mistaken. He expected the final manifestation of the kingdom of God to take place in the immediate future, and his expectation was not fulfilled.

Before indicating the other possible solution, which seems the most probable, it is necessary to refer to the special difficulties connected with ch. 13. Since the publication of T. Colani's *Jésus-Christ et les Croyances Messianiques de son Temps* in 1864 the theory that ch. 13 contains a Jewish Christian apocalypse (the "Little Apocalypse" theory) has been very widely held—though there has been much disagreement as to what exactly the alleged apocalypse contained. This theory has suffered damaging criticism from different directions; but even the scholars who reject or drastically modify the theory tend to agree with its supporters in thinking that the chapter as it stands gives a false picture of the eschatological teaching of Jesus. Apart from a general dislike of anything savoring of apocalyptic, three main objections have been brought against the authenticity of 13:5-37: (*a*) it is asserted that the passage is not self-consistent, that the idea of a sudden Parousia cannot be reconciled with that of a Parousia heralded by signs; (*b*) it is asserted that the passage is inconsistent with the teaching of Jesus given elsewhere in the gospels, the idea of a Parousia heralded by signs being incompatible with such a passage as Luke 17:22-37; (*c*) it is asserted that 13:5-37 is incongruous with its immediate context, since it makes Jesus reply to a question about the date of the destruction of the temple by talking about the end of the world.

But these objections are not so conclusive as at first sight they seem. To *a* and *b* it may be replied that, while vss. 5-31 make use of the language of apocalyptic, they differ widely from typical apocalyptic in form. Whereas it is characteristic of Jewish apocalyptic that the seer either is himself addressed or else relates in the first person what he has seen and heard, this discourse is characterized by the use of the second person plural imperative. It is therefore not to be taken for granted that the purpose of the signs is to enable the disciples (or the reader) to predict the date of the Parousia (as one would expect if this passage were typical apocalyptic); and, if this is not their purpose, then the listing of them is not necessarily incompatible with the idea of a sudden and unexpected Parousia (*see further below* on the signs). In answer to *c* it may be pointed out that the idea of the replacement of the old temple by a new was already an element of Jewish eschatological expectation (e.g., Enoch 90:28-29). So it would be natural for the disciples to connect Jesus' prediction in 13:2 with the end of the world, and Matt. 24:3 may well be a correct gloss of Mark 13:4.

While it is likely that the discourse (13:5-37) is composite (i.e., that it was not all spoken as a continuous discourse, but that sayings on the same theme have been brought together in what seemed a suitable context), there seems to be no sufficient reason for maintaining that it misrepresents the eschatological teaching of Jesus.

It is now possible to indicate briefly what seems the most likely solution to the problem of the NT insistence on the nearness of the Parousia, and at the same time to sum up what seems to be the significance of Mark's witness to the coming Lord. Jesus apparently did assert the imminence of his parousia, but probably neither he nor the NT writers meant by this that it must necessarily occur within a few years or months (passages such as Matt. 10:23; Mark 9:1; 13:30; I Cor. 15:51; I Thess. 4:15-17, which at first sight seem to imply this, are patient of other interpretations), though it was only natural that some elements in the early church should have misunderstood what was meant in this way (see, e.g., II Pet. 3:3-9). In one sense the interval between the Ascension and the Parousia might be long or short; but there was a more important sense in which it could only be described as short; for this whole period is the "last days"—the epilogue, so to speak, of history—since it comes after the decisive event of the life, death, resurrection, and ascension of Christ. Indeed, the Incarnation-Crucifixion-Resurrection-Ascension, on the one hand, and the Parousia, on the other, are essentially but one event, one saving act of God; and the interval between them is the time of God's patience, during which the final manifestation of the kingdom of God is held back in order to give men opportunity for repentance and faith. So Mark witnesses to the nearness of the Lord's coming (13:29). It will be sudden and unexpected (13:33, 35); not even the Son of God himself in his earthly life knows when it will be (13:32). Because they do not know when their Lord will come, the disciples must be always prepared for him, always engaged in those tasks with which he has charged them (13:33-37). But his coming, though it will be unexpected, is nevertheless heralded by signs (13:5-23). Faith is to see in the events of history reminders and pledges of his coming and of its nearness. The signs are listed in 13:5-23, not in order that disciples may be able to predict the date of the Parousia, but in order that, recognizing the signs as they occur, they may have their attention, which is so easily distracted, directed back again and again to its proper object, their coming Lord.

10. Problem of the ending. Mark 16:9-20, though found in the majority of Greek MSS, is omitted by ℵ B k sy^{s} and by some MSS of the Georgian, Ethiopic, and Armenian versions. Both Eusebius and

Jerome regarded these verses as unauthentic in view of their absence from almost all the Greek MSS known to them. The OL MS k gives in their place a shorter ending, while L and a few other Greek MSS and also some Coptic and Ethiopic MSS give both this shorter ending and 16:9-20 as alternatives. One tenth-century Armenian MS, which has 16:9-20, attributes it to "the presbyter Ariston" (probably meaning the Aristion whom Papias mentions). There is a possible echo of 16:20 in Just. Apol. I.45, but the earliest definite testimony to these verses as a part of Mark is Iren. Her. III.10.6. Probably they were added sometime before the middle of the second century, in order to fill what was an obvious gap. The clumsiness of the connection, however, shows that they were not written for the purpose. Apparently they were originally compiled as a catechetical summary and may have been in existence for a considerable period before being attached to Mark. The lengthy gloss (often referred to as the "Freer Logion"), which is read by W at the end of vs. 14, was apparently known to Jerome, since he quotes the first part of it as found in some MSS; it was probably added at the end of the second or the beginning of the third century, apparently in order to soften the rebuke of the apostles in that verse.

To the question why the gospel as written by Mark ends with 16:8, there seem to be four possible answers: (*a*) that it was never finished, because Mark was prevented in one way or another from finishing it; (*b*) that the conclusion was lost or destroyed by some mischance; (*c*) that the conclusion was deliberately suppressed; (*d*) that 16:8 was intended to be the end of the gospel. Of these *c* is unlikely; and *b* is not very likely, since it involves assuming both that Mark was unavailable to rewrite the conclusion and also that the gospel had not been in use long enough for someone else to be able to restore the conclusion from memory. Since the fact of resurrection appearances was clearly an element of the primitive preaching (cf. I Cor. 15:5-7; and also Acts 1:22; 2:32; 3:15; 10:41; 13:31), *d*, though it has received a good deal of support, should surely be rejected. It is extremely improbable that Mark intended to conclude his gospel without recording at least one resurrection appearance. The most probable answer to the question is *a*.

11. Style. The style of the gospel is unpretentious and close to the everyday speech of the time. While it lacks the refinements of literary Greek, it has the merits of simplicity and directness. The Semitic flavor is unmistakable. But the Greek of the gospel, though it reflects strongly the influence of Aramaic and though it is certainly rough and colloquial, is not incompetent; that Mark had a reasonable grasp of the language is indicated by his careful use of the tenses.

The vividness and dramatic power which are so characteristic of the gospel should probably be attributed to Mark's sources rather than to Mark himself. *See* § 8*b above*.

12. Canonicity. Mark is contained in all the ancient versions of the NT and is mentioned in all the early lists of the canon. No evidence is extant of any doubt about its authority having been expressed in the early church.

13. Text. From the point of view of textual criticism Mark is specially interesting, because as a result of the comparative neglect which it suffered in the early church it quite often happens that a MS has a more primitive type of text in Mark than it has in the other gospels (so, for instance, the Codex Washingtonianus I [W], the Codex Sangallensis [Δ], and the Codex Koridethianus [Θ]).

The following are examples of the more interesting textual problems in this gospel:

1:1: Should υἱοῦ θεοῦ be read or omitted? Probably it should be read, for the attestation is very strong. Furthermore, the phrase could easily have been omitted by homoeoteleuton. "Son of God" is a theme of the gospel (*see* § 9*a above*), and it is intrinsically likely that it would be found in the first verse; at a time when the divine sonship of Jesus was taken for granted, the phrase could have been omitted on stylistic grounds in order to diminish the ugly series of genitives. The patristic evidence for omission is not very significant, as a Father's omission of words that are not relevant to the point he is making does not prove that they were not in the text which he knew.

1:41: Here the reading ὀργισθείς should probably be accepted in place of σπλαγχνισθείς; for, while an original ὀργισθείς would be likely to be changed to the easier σπλαγχνισθείς, it is difficult to account for the substitution of ὀργισθείς for an original σπλαγχνισθείς; and it is noticeable that neither Matthew nor Luke has reproduced σπλαγχνισθείς here, which would be surprising if it was in Mark as known to them.

6:3: Here the question which has to be decided is whether it is easier to account for an original ὁ τέκτων, ὁ υἱὸς τῆς Μαρίας (let us refer to it as reading A) in Mark being changed by Matthew to ὁ τοῦ τέκτονος υἱός; οὐχ ἡ μήτηρ αὐτοῦ λέγεται Μαριάμ, by Luke to υἱὸς Ἰωσήφ, and by a copyist of Mark to ὁ τοῦ τέκτονος υἱὸς καὶ (τῆς) Μαρίας, or for an original ὁ τοῦ τέκτονος υἱὸς καὶ (τῆς) Μαρίας (reading B) in Mark being reproduced by Matthew as ὁ τοῦ τέκτονος οἱός; οὐχ ἡ μήτηρ αὐτοῦ λέγεται Μαριάμ changed by Luke to υἱὸς . . . Ἰωσήφ, and by a copyist of Mark to ὁ τέκτων, ὁ υἱὸς τῆς Μαρίας. If reading A was original, then the alterations in Matthew and Luke may be explained as due to a feeling that the idea of Jesus' being a carpenter would offend Gentile readers and/or a feeling that ὁ υἱὸς τῆς Μαρίας was derogatory—tantamount to a charge of illegitimacy; and the other reading in Mark can be explained as assimilation to Matthew. On the other hand, if reading B was original in Mark, while the Matthew and Luke texts give no difficulty, it is not easy to explain the alteration in Mark. The suggestion that it was made in the interests of the doctrine of the Virgin Birth is unsatisfactory; for both Matthew and Luke are content that the people of Nazareth should call Jesus the son of the carpenter (of Joseph), though it is in their gospels that the doctrine is clearly expressed. Moreover, Jesus would in any case be the legal son of Joseph (cf. Luke 3:23—ὡς ἐνομίζετο), so that for the people to refer to Jesus as the son of the carpenter Joseph would not be in any way incompatible with the truth of the Virgin Birth. The conclusion to be drawn would seem to be that the reading A is original, and that Origen's denial (in reply to Celsus) that Jesus is anywhere described in the gospels current in the churches as an artisan was due either to

a lapse of memory, or, more probably, to his knowing a Markan text already assimilated to Matthew.

8:38: Here W k* sah Tert(?) omit λόγους, and this reading has been preferred by a number of scholars. The meaning of τοὺς ἐμούς would be "my disciples." The fact that D it (some MSS) sy^{c} Orig omit λόγους in the Luke parallel supports the omission in Mark. The support for omitting λόγους is small in quantity but impressive in quality, and warrants the recognition that there is a real possibility that λόγους is not original; but in view of the ease with which it could have been omitted accidentally by homoeoteleuton, we should hardly be justified in omitting it, supported as it is by the overwhelming majority of authorities.

14:62: Θ fam.13 *pc* geo arm Orig attest σὺ εἶπας ὅτι ἐγώ εἰμι. This reading would account for Matt. 26:64; Luke 22:70, while it is not near enough to them to be easily explicable as assimilation. It is, moreover, intrinsically quite probable, being consistent with the attitude of Jesus to the messianic title (cf. his immediate substitution of "Son of man" in this same verse); for according to this reading his reply, though affirmative, is more reserved than the direct ἐγώ εἰμι of the majority of MSS. It indicates that while Jesus knows himself to be the Messiah, he has different ideas from those of the high priest about the meaning of messiahship. If, on the other hand, the direct ἐγώ εἰμι is read, we have a clear affirmative reply, the explanation of which would presumably be that now at last, when he is in the power of his enemies and the claim can only seem altogether paradoxical, it is consistent with his mission to declare openly what previously it was necessary to veil. Here the balance of probability would seem to be in favor of the reading of Θ, etc.

MARK, JOHN jŏn märk [Μᾶρκος; Lat. *Marcus,* a large hammer; Ἰωάν[ν]ης, *from* יוחנן, יוחנן, Y is gracious]. Son of Mary of Jerusalem (Acts 12:12); a companion of early Christian missionaries; and the probable author of our Second Gospel.

Around Peter and Paul were many secondary figures whose names appear now and then in the fragmentary literary records of the early days of Christianity. One such was called John or Mark—John was his Jewish and Mark his Roman name (Acts 12: 12, 25; 15:37)—in keeping with the custom of Hellenistic Jews of this time (cf. Saul-Paul; Joseph-Justus [Acts 1:23]).

When we first meet John Mark, he is living in Jerusalem, apparently in the home of his mother, Mary (Acts 12:12, 25; *see* MARY 6). She appears to have been a widow of some means, inasmuch as she is described in Acts as the owner of a house spacious enough to accommodate a large Christian gathering and as having the services of a maid (Acts 12:12 ff). It has been suggested that the Last Supper was held in her home and that John as a boy may have witnessed some of the final events of Jesus' life. It is further conjectured that the young man who fled away naked in the Garden of Gethsemane (Mark 14:51-52) was John, that he was serving as caretaker of the family garden, and that at the time of the arrest of Jesus he had been sleeping there in the watchtower. This would explain the young man's state of dishabille.

Such conjectures are attractive but unprovable. Against them are the facts that the Upper Room is said to have belonged to a male "householder" (Mark 14:14-15), that John Mark (if he was the evangelist) seems to have possessed little detailed personal knowledge of the closing events of Jesus' life, and that Papias cites a tradition to the effect that Mark "had neither heard the Lord nor been his personal follower" (Euseb. Hist. III.39.15).

John comes clearly before us in Acts 12–15, where he is said to have journeyed to Antioch with Barnabas, his cousin (Col. 4:10), and Saul (Paul). He was taken by these men on the so-called first missionary journey as an assistant (ὑπηρέτης; Acts 13:5). The nature of his duties has been much debated. Was he to make travel arrangements, care for food and lodging, handle requests for interviews with Paul and Barnabas, assist with baptisms, and the like? Or was he a catechist, whose responsibilities were primarily instructional? "Assistant" (ὑπηρέτης) in Luke 4:20

(RSV "attendant") means the *hazzan*, the caretaker and instructor in the synagogue school, and in Luke 1:2 it signifies persons who handed down the gospel tradition. In the papyri the word frequently means a person who handles documents and delivers their contents to others. It is likely that John was a teacher as well as a travel secretary.

For some unknown reason John forsook Paul and Barnabas at Perga in Pamphylia (Acts 13:13) and returned to Jerusalem. Perhaps he was irritated at Paul's wresting of leadership in the missionary venture from his cousin Barnabas. Whatever the cause, it was sufficiently serious in Paul's eyes to lead to his refusal to take John on the second journey and to warrant a break with Barnabas (Acts 15:36-40). The cousins went back to Cyprus, and Paul took Silas into Cilicia and Galatia.

Nothing more is heard of Mark until near the end of Paul's ministry. In Col. 4:10; Philem. 24, Paul refers to him in such a way as to indicate that a reconciliation has taken place. Mark is with him (in Rome or in Ephesus) as a fellow worker (συνεργός), and apparently Mark plans to visit the Colossians soon. In II Tim. 4:11, Paul is represented as instructing Timothy to bring Mark (from Asia Minor?), "for he is very useful in serving me." Whether Mark returned to Paul is not said. The evidence is clear that the young man finally had made good in the eyes of the venerable missionary.

In I Pet. 5:13, Mark is referred to as Peter's "son," who joins the church in Rome ("Babylon" here is a sobriquet for Rome) in sending greetings to the readers. Whether I Peter in some sense was written by Peter or is a pseudepigraph, the phrase "my son" offers evidence of close attachment between Peter and Mark (such as may be assumed from Acts 12:12-17), and makes probable the alleged association of the two in Rome (probably after the death of Paul). That Mark during this period could be associated with both Paul and Peter indicates the extent to which old chasms had been bridged.

Papias of Hierapolis, according to Eusebius (Hist. III.39.15), quotes a tradition to the effect that Mark was Peter's "interpreter" and that he wrote down what he remembered from Peter's preaching concerning the "things said or done by the Lord." That the record referred to is our Gospel of Mark can scarcely be doubted, though it is not absolutely certain that the Mark mentioned is John of Jerusalem. Furthermore, our gospel is certainly not derived simply from Peter's preaching. *See* MARK, GOSPEL OF.

Many traditions connect Mark with the founding of Alexandrian Christianity. According to Hippolytus (*Refutation of All Heresies* VII.30), he was "stump-fingered." The Paschal Chronicle claims that he suffered a martyr's death.

MARKET PLACE [רחב (Ps. 55:11; KJV STREETS); ἀγορά]. The usage in Ps. 55:11 is metaphorical. In the NT we must distinguish between the market places referred to in the gospels and those mentioned in Acts. The market places in the gospels were all Jewish-Palestinian—i.e., they were streets of shops something like the "bazaars" of modern oriental towns. Here children sat and called to their playmates (Matt. 11:16; Luke 7:32); here the sick were laid and Jesus healed them (Mark 6:56), and men stood idle (Matt. 20:3), and scribes in long robes were saluted (Mark 12:38 and parallels). The Pharises also loved salutations in the market places (Luke 11:43); and, having left a market place, they "purified themselves" before they ate (Mark 7:4).

In Acts, however, the two market places mentioned are in Greek cities—Philippi (16:19) and Athens (17:17).* These were the centers of public life, being open places full of statues and colonnades, and surrounded by numerous temples and other public buildings. It was to the "market place" (Lake-Cadbury "courthouse") in Philippi that Paul and Silas were dragged to appear before magistrates. And in the market place of Athens, Paul disputed with "those who chanced to be there." Fig. ATH 114.

B. H. THROCKMORTON, JR.

MARMOTH mär'mŏth. KJV form of MEREMOTH.

MAROTH mâr'ŏth [מרות, bitterness, bitter fountains] (Mic. 1:12). A town in Judah; possibly identical with MAARATH.

***MARRIAGE.** The institution of marriage in the Bible reflects a long history of sociological and cultural development, as to some stages of which there can be no absolute certainty. However, the main characteristics of this institution are clear.

The status of the bride (wife) and her personal relations to her husband show the influence of Greco-Roman and Christian conceptions in the later biblical literature. In the background of biblical teaching about marriage is the idea of the marriage of the gods, which is adapted to the faith of Israel. For the literary expression of their views the biblical writers made considerable use of the figure of marriage and its relationships. Marriage was understood to signify also the fulfilment of God's purpose in creation by the spiritual and sexual union of a man and his wife.

1. **Forms of marriage.** Scholars have identified many patterns or forms of marriage in the Bible. Assuming as an essential hypothesis the continuity of Israel's social culture with that of the ancient Near Eastern world, they have found verification of this assumption in the biblical documents. The pertinent passages from the Bible are readily compiled. Their bearing upon specific forms of marriage must be determined with caution. For full presentation of the various arguments, *see bibliography.*

a. Matriarchal marriage. This type of marriage assumes the authority of the mother but is also used to identify the way relationship is determined. So-called "sadiqa" marriage is of two types, the "beena" and the "mota." The term "beena" marriage is sometimes used when the children remain under the mother's control and the husband settles in his wife's home more or less permanently. In "mota" marriage the visits are periodic. "Matrilinear" signifies that descent is reckoned from the mother, and "metronymic" suggests that the wife remains with her own kin and is visited there by her husband from time to time. For examples of "beena" marriage the cases of Jacob and Moses are used. Both lived in the homes of their wives (Gen. 29:1-30; Exod. 2:21-22) for a considerable length of time. To illustrate "mota" marriage, Samson's visits to his wife at Timnah have been noted (Judg. 15:1). When Abimelech went to "his mother's kinsmen" (9:1) and visited the "whole clan of his mother's family," they listened to his plea because they realized that he was their brother (vs. 3). The literal meaning of "metronymic," "named after the mother," is evident here.

In further support of the matriarchal idea, references to the wife's possession of her own quarters have been gathered. When Abraham's servant arrived at the city of Nahor, he encountered Rebekah, who "ran and told her mother's household" about the meeting (Gen. 24:28). Leah had her own tent, as did Rachel (31:33). When Sisera fled from the victorious Hebrew troops, he entered the tent of Jael, the wife of Heber the Kenite (Judg. 4:17-18). Naomi urged her two daughters-in-law to return "each of you to her mother's house" (Ruth 1:8). The "mother's house" recurs in Song of S. 3:4. Some or all of these passages may, of course, simply signify that the wife or mother occupied a separate part of the family tent or had her own tent which was a part of a group of family tents concentrated in one place.

Another kind of evidence thought by some to point to matriarchal marriage is the appearance of maternal groups in opposition to one another in the same family. These are composed of children who have the same father but who are divided because they have different mothers. Listed in this category of mother-centered groups in tension is the account of the vengeance taken by the brothers Joab and Abishai upon Abner because he had killed their brother Asahel (II Sam. 3:30). In II Sam. 13:27-29 appears the record of Absalom's anger at his half brother Amnon for the violation of his sister Tamar. We may observe a similar incident in Gen. 34:13. These are hardly proof of survivals of matriarchal marriage, however. They may be referred more properly to blood feuds and the desire for revenge against any who bring injury or dishonor. Again, certain restrictions against marriage have been observed in the Pentateuch. These bar marriage with kin on the mother's side but not on the father's (cf. Gen. 20:12; Num. 26:59). On the other hand, marriage with the sister of the father or of the mother is forbidden (Lev. 18:12-13; 20:19).

The role of the wife in some parts of the Bible may lead to the conclusion that this reflects a survival of matriarchal authority. A wife has the right to give her maid to her husband as his second wife, e.g. (Gen. 16:3; 30:9). Even a secondary wife (Hagar) takes a wife for her son, evidently on her own initiative, without any challenge to her authority to do this (Gen. 21:21). The prevailing form of marriage in the Bible, the patriarchal, was perhaps not so suppressive of woman's rights as is commonly supposed.

In evaluating the various positions held by biblical scholars as to the presence of material which presupposes the matriarchal type of marriage, the student should realize how these positions have been influenced by research outside the biblical field, especially in the fields of anthropology and sociology. Drawn largely from primitive societies, data have been interpreted to fit into a concept of development from a stage of promiscuity, through subsequent stages of group marriage, matriarchy, etc., to monogamy. When this principle is applied to the culture of the Bible, the results are interesting, but unimpressive, partly because of the meagerness and inconclusiveness of the pertinent facts and partly because the Bible is preoccupied with the presentation of theological-religious rather than sociological phenomena. When we reject the necessity of confirming any hypothesis as to the history of marriage in the Bible, the facts at hand as to some kind of matriarchy are far from conclusive.

b. Patriarchal marriage. This relates to the authority of the father and the effect of this authority upon the entire marriage pattern. Descent is reckoned from the father. One notes the impressive proof of this in the genealogical and census lists (Gen. 5 [even though there are references to "other sons and daughters," no daughter is named]; 10; 36:9-42 [wives are named only to distinguish between the sons of the father]; Num. 1:1–3:39; 26:5-62; Ruth 4:18-22; I Chr. 1–9; Ezra 2:3-61; 10:18-43; etc.). The emphasis upon the authority of the father is perhaps suggested in the custom of the father's naming his child. In Hebrew thought the name was the essence of the self. This essence was transmitted by the father to his son. Through his son he could project his very being into the future after he had died and gone to his fathers. So the act of naming was of great importance. While the mother does this in a number of instances (Gen. 4:25; 29:32), we may observe some of the references in which the father assumes this significant function: Gen. 4:26; 5:3, 29; 16:15; 29:34(?); 38:3; Exod. 2:22. Related to this act is the deep and sometimes despairing desire for sons which the Bible describes (*see* FAMILY). This

passionate longing for sons rather than daughters reveals the influence of the father concept upon the normal desire for children. For the theological effect of this concept, *see* FATHER; GOD, OT; GOD, NT.

The power a husband may exercise over his wife is also an indication of patriarchal marriage. She has rights and freedom only within the context of this authority, although there are apparent exceptions to this, or developments beyond it, in the later books of the Bible. The husband may even revoke a vow that his wife has made to God, if he sees fit (Num. 30:10-14). Wives are classified with chattel property: both fields and wives, Jeremiah announces, will be seized by the enemy (Jer. 6:12). Paul speaks plainly of the husband's authority: "The head of a woman is her husband" (I Cor. 11:3); and this view is repeated by other writers (Eph. 5:22; cf. Col. 3:18; I Pet. 3:1-2). משל, "rule," "have dominion," is used of man's relation to his wife; evidently her subjection to her husband is regarded as punishment for disobedience in the garden (Gen. 3:16). Other proofs of the subordination of the wife to the husband which characterize a patriarchal society support this concept of authority. Such terms as נתן לאשה, "give to wife" (Gen. 29:28; 34:8, 12; Josh. 15:16-17; Judg. 1:12-13; etc.), and לקח לאשה, "take to wife" (Gen. 4:19; 6:2; 11:29; 12:19; 20:2-3; etc.), show the woman is an object acted upon, rather than the initiator of action. Her father or her husband determines her marriage and her fate.

Again, the meaning of the term בעל, "baal," is both "owner of property" and "husband." The verb may mean "to possess" or "to marry." As a divine name it means "Lord." The meaning "husband" in the context of ownership and control is significant (Gen. 20:3; Exod. 21:22; Deut. 22:22; 24:4; II Sam. 11:26; Esth. 1:17, 20; Prov. 12:4; 31:11, 23, 28; Joel 1:8). The use of forms of the verb supports the idea of male authority in marriage (Gen. 20:3; Deut. 21:13; 22:22; 24:1; Isa. 54:1, 5; 62:4-5; Mal. 2:11). This term signifying father-control has been applied by some authorities to the form of marriage it connotes —i.e., "baal" marriage—over against "beena" marriage (*see* § 1*a above*). In Hebrew marriage, as will be seen below (§ 2*c*), a distinction was made between ownership and control, however. The power of the husband-father must be understood within the total framework of the patriarchal idea as set forth in the Bible.

Within the over-all structure of the patriarchal form of marriage specific elements have been identified. The children are identified with the father, particularly sons; they descend from him. Sociologists call this patrilinear descent. Related to this practice is the custom of naming the child after the father, a custom that is called patronymic. These terms, together with so-called "baal" marriage, serve to single out the principal aspects of patriarchal marriage recorded in the Bible.

c. Polygamy. The term "polygamy" literally means "many marriages." In actual use, it simply signifies more than one marriage alliance existing concurrently in the same family or family group. The term may be applied to either of the two major types of marriage, the matriarchal or the patriarchal. Polygamy was widespread in ancient Israel. It assumed the form of polygyny (marriage with more than one woman) rather than polyandry (marriage with more than one man). The latter has been found as the background of levirate marriage (*see* § 1*g below*). Polygamy is also largely bigamous; social position and economic status usually determine the possession of more than two wives. Social change and the breakdown of the seminomadic way of life, as well as the effect of other cultures, reduced the practice of polygyny (polygamy) and encouraged the more general practice of monogyny.

The practice of polygamy in biblical times was due to several values derived therefrom. Biblical examples will show what these values were. Sarai, Abram's wife, bore him no children. So she gave him Hagar, her Egyptian maid, as a second wife (Gen. 16:3). Jacob worked seven years in order to secure Rachel as his wife, because he loved her (29:18), and he worked seven more years when her sister Leah was foisted upon him (vss. 25, 30). Another barren wife gave her maid to her husband that she might have children by him (30:1-5). Other allusions to polygamous marriage recite the names of sons born to David of the wives and concubines he took from Jerusalem (II Sam. 5:13-16); the alliances of Solomon with foreign princesses ("He had seven hundred wives, princesses, and three hundred concubines"; I Kings 11:1, 3); the size of Rehoboam's household (II Chr. 11:21); and, with considerable embellishment, the passion of David for Bathsheba, which resulted in murder and matrimony (II Sam. 11:15, 27). In Deut. 21:15 the existence of polygamy is assumed. The harems of a Persian ruler are noted in the book of Esther (2:3, 14). The reasons for polygamy, therefore, are love and lust, the desire for children, and diplomacy on the part of the nation's rulers. Undoubtedly the need and the desire for sons was the most prominent factor. In the seminomadic and agricultural periods of Israel's history the possession of several wives made a large working force available to tend the flocks and the fields. The maintenance of the nation's manpower could also have been a consideration in the perpetuation of polygamy.

The desire for sons was paramount in marriage. A wife was regarded as a means of securing this result. If she failed, either polygamy or divorce was demanded. The powerful craving of a man for a son of his own conception made the alternative of ADOPTION unthinkable. The practice of levirate marriage promoted polygamy, for the levir might himself already possess a wife before marrying his deceased brother's widow.

In polygamous marriage, and perhaps in a special way when there are only two wives, the appearance of conflict and dissension is apparent. One wife might be the husband's favorite, and bitter rivalry could ensue, especially if the husband showed a preference for the son of such a wife (II Chr. 11:21-22). The Deuteronomic Code deals with such a situation when it requires the father, in the event his first-born is the son of a "disliked" wife, to acknowledge his first-born "by giving him a double portion of all that he has" (Deut. 21:15-17). It is significant that the common Semitic name for "second wife" is צרה, the

root meaning of which is "show hostility toward," "vex" (Ecclus. 26:6; 37:11; I Sam. 1:6).

d. Monogamy. In opposition to the earlier view of the history of human marriage which saw it in an evolutionary pattern ranging from primitive promiscuity to monogamy, many now believe that early man probably had a form of temporary monogamy (*see bibliography*). However this may be, the general practice of monogamy in the biblical records cannot be denied. It is frequently evident in the OT, and it is regularly presupposed in the NT. The creation account in Genesis writes of the first marriage in clearly monogamous terms: "A man . . . cleaves to his wife" (2:24). Many of the Hebrew laws strongly imply this form of marriage (Exod. 20:17; 21:5; Lev. 18:8, 16, 20; 20:10; 21:13; Num. 5:12; Deut. 5:21; 22:22; 24:5; etc.). In its various admonitions regarding the good life, the book of Proverbs is silent on polygamous life (cf. Prov. 12:4; 18:22; 19:13). The skeptic writes that a man should "enjoy life with the wife whom [he] love[s]" (Eccl. 9:9). The extravagant expression of the goodness of life under the God of Israel includes a description of the fruitful wife in the home of the faithful (Ps. 128), while the love poetry of the Song of Songs reports the passionate longing of two lovers for marriage to each other. Faithlessness to the wife of one's youth is condemned in a revealing championship of fidelity in marriage to one woman (Mal. 2:14).

e. Exogamy. Interacting with each other, and sometimes in conflict with each other, are the tendencies toward exogamy and toward endogamy in Hebrew marriage. A marriage can be at one and the same time exogamous and endogamous. It may be exogamous in its demand that marriage take place outside a defined kinship circle; it may also be endogamous in its rejection of marriage with those who are too far outside, such as members of another ethnic group. With respect to exogamous marriage we must ascertain the limits of this kind of marriage. Who may be included and who must be excluded? We discover that Esau married Canaanite women (Gen. 36:2), while Joseph (41:45) and Moses (Exod. 2:21) also married foreign women. An Israelite woman's son, we are told, had a father who was an Egyptian (Lev. 24:10); and the daughter of Sheshan, who had no sons, married an Egyptian slave whose name was Jarha (I Chr. 2:34-35). An understandable development of exogamous marriage attended the occupation of Canaan, as the documents reveal. Gideon married a Canaanite woman (Judg. 8:31), and the Hebrew sons of Elimelech married Moabite girls (Ruth 1:4). And Samson asked his parents to obtain a certain Philistine girl for his wife (Judg. 14:2).

In the postexilic period marriages with foreign women, Canaanite, Hittite, and Ammonite, had taken place (Ezra 9:1-2). These indications of marriage by members of the biblical community with persons outside it reflect in some instances a response to exceptional circumstances, such as residence among foreigners. Other examples of so-called exogamy may be accounted for on the ground of the interpenetration of cultures and peoples during the long process conventionally called the conquest of Canaan. The encounter between the Hebrews and the mixed people living in or near Canaan inevitably resulted in intermarriage. But these examples do not constitute a pattern which was defended and promulgated by the Israelite group. It is evident that to use the term "exogamy" at all in connection with Hebrew marriage, it must be used in a restricted sense, as a means of identifying the outer limits of permissible endogamous marriages. This conclusion is supported by passages already cited. The references to marriages with Hittites and Ammonites, e.g., in Ezra are made in connection with a statement of the drastic action which was taken to annul these marriages.

f. Endogamy. Marriage in biblical society was restricted to members of the group both by custom and by conscious support of custom. Thus it was endogamous in that it excluded marital relations with communities outside Israel. Marriage between members of different clans was not forbidden, however. This means there was exogamy with respect to relations between Israelite clans and endogamy with respect to non-Israelite people. We may therefore say that the Israelite community as a whole was endogamous. This endogamy was supported by both sociological and theological considerations, which biblical writers sometimes enunciate with great vigor. The power of the community was mobilized in its defense. We observe the concern of Abraham to secure a wife for his son from his kindred from whose land he had moved (Gen. 24:4, 10). Similarly, Jacob was commanded not to marry a Canaanite, but to take one of the daughters of Laban his uncle (28:1-2). When their son besought them to arrange a marriage with a Philistine girl for him, the parents of Samson urged him to take an Israelite girl (Judg. 14:3). Tobit married Anna of his own kin group (Tob. 1:9; cf. 4:12; 6:12).

When David took Bathsheba the wife of Uriah the Hittite, he encountered strong opposition (II Sam. 11:3; 12:14). Kings are rebuked for their "expedient" exogamy, which was nonetheless in defiance of the Lord's command (I Kings 11:1-2; 16:31). The books of the Law take up this theme of denunciation and attack marriages outside the community and ardently defend intragroup alliances. Israel is to take heed lest she take the daughters of the Canaanites and related peoples for her sons, thereby creating idolatry (Exod. 34:16). And, as already noted, marriages with the "peoples of the lands" in the postexilic community were abrogated by mass action by the men of Israel. They took an oath to put away their foreign wives and their children (Ezra 10:5; cf. Neh. 10:28-30; 13:23-27). In Neh. 13 the reason for the wholesale purge of foreign wives is pointedly stated—because such marriages were a great evil and treachery against the God of Israel.

Apart from the threat of social and cultural breakdown through intimate association with foreign peoples, the real danger, religious leaders realized, was the deadly threat to Israel's faith. Through intermarriage with these people the integrity of Israel's faith could be undermined and ultimately destroyed. This was the supreme biblical argument for endogamy and against exogamy. In a modified form, because the people of the covenant had become the

community of Christ, this is the NT case for in-group marriage and marital relations. Paul prohibits marriage with unbelievers (II Cor. 6:14-15). Of course, if a wife already has an unbeliever as a husband (which must have been the situation in many of the early Christian homes), she is to exhibit patience, reverence, and chastity, in order to win her spouse to her Christian faith (I Pet. 3:1-2).

The terms "endogamy" and "exogamy" are complementary rather than contradictory to each other, as already suggested. The former determines that marriage must occur within the group. As far as the OT is concerned, this group is Israel. When endogamy is applied in a more limited sense—to a clan or family, e.g.—how close can be the relationship of the partners to a marriage? An opposing, exogamous force becomes operative in determining this question. For purposes of marriage a man must go outside a specified series of kinship classifications. Women who fall within these classifications may not be taken in marriage. On the precise nature of these prohibitions, *see* INCEST.

g. Levirate marriage. The term "levirate" comes from the word "levir" meaning "a husband's brother." This term is applied to that form of marriage which is defined in the book of Deuteronomy (25:5-10). It may also be applied to marriages which involve a deceased husband's brother and his widow, without necessarily conforming at every point to the Deuteronomic legislation (*see* LEVIRATE LAW). The purpose of the law is clear—to prevent marriage of the Israelite girl to an outsider and to continue the name of the dead husband in Israel. This purpose underscores the value of endogamous marriage (*see* § 1*f above*) and the importance of sons. One example of the levirate form of marriage is contained in the story of Judah and Tamar (Gen. 38). Judah took a wife for his first-born son, Er. Upon the latter's untimely death, Judah instructed a brother of Er, Onan, to "perform the duty of a brother-in-law to her, and raise up offspring" for Er (vs. 8). When Onan understood that the children of his union with Tamar would not be his, but his dead brother's, he avoided making her pregnant (vs. 9). When still another brother was not given to her in marriage (vs. 14), she by subterfuge caused her father-in-law to have intercourse with her. The effort of both Judah and Tamar to raise up offspring for her late husband reveals a strong interest in the levirate principle, even though it is hardly a typical instance of this kind of marriage.

The book of Ruth is another notable illustration of this form of marriage. Although at certain points it differs from the form envisioned in Deut. 25, it recites in some detail the efforts of a Hebrew woman to secure a second husband for her widowed daughter-in-law. It will be noted that the appearance in this story of the matter of INHERITANCE (4:10) is one point of differentiation from the law in Deuteronomy. It differs also in that the two men who are confronted by the opportunity to marry Ruth and to redeem Elimelech's property are clearly not brothers of Ruth's deceased husband. Thus the term "levirate" in the strict sense of the word does not apply. The act of Boaz in the book of Ruth extends the levirate custom to other male relatives of the deceased in the event no brothers survive. Such an adjustment of the custom may also be seen in ancient Hittite law.

In Ruth the Hebrew word translated "do the part of next of kin" is from the root גאל, from which comes the word *goel,* "redeemer." In Gen. 38:8; Deut. 25:5, 7, the word is from the root יבם. Derivatives from this root have the meaning "husband's brother" in the first instance and "sister-in-law" in the second. In Matt. 22:24 the Greek text has the word ἀνίστημι, "to raise up, cause to be born." Here it is used in connection with the argument about marriage in the resurrection. One after the other, each of seven brothers married the same woman, none having any sons.

These allusions to levirate marriage raise several questions: Was the levirate widely practiced? Does the legislation in Deuteronomy indicate that it was endorsed by law? Does the levirate mean that both the widow and her husband's property became the possession of her brother-in-law—i.e., that it deals primarily with inheritance rather than with marriage? How can the differences noted above be explained? As to the first question, there is evidence that levirate marriage extended beyond the borders of Israel. It was certainly known to the Assyrians and the Hittites, and to the Canaanites as well. The extent to which it was in effect in Israel is uncertain, but the so-called levirate law in Deut. 25 indicates its practice and possibly its partial abandonment, the law being published in order to reaffirm it. Conceivably, the custom needed to be urged in this way because of the change in social patterns brought about by the increasing urbanization and commercialization of Israel's life. This affected marriage customs as well as other social institutions that had been based upon a patriarchal organization of life. A late priestly document indicates strong opposition to, or complete unawareness of, the levirate concept. Sexual relations (marriage) with one's brother's wife are forbidden (Lev. 18:16; 20:21). These prohibitions may, of course, be interpreted to mean that they are in effect only while the brother is alive. Yet the language is emphatic and unqualified.

It is unlikely that the Hebrew view of marriage would permit the levirate to develop as a simple matter of inheritance in the event of the death of a childless brother whose widow survived him. If a distinction may be made between casuistic and apodictic laws in the OT, as has been proposed, then it is conceivable that the passage in Deut. 25 has a Canaanite origin and content. This is based on the hypothesis that casuistic laws were taken over from the Canaanites, whereas the apodictic are Israelite in origin. If the Canaanite origin of the levirate law in Deuteronomy is upheld, it was obviously adapted to Israelite life and thought. In Hebrew law levirate marriage became entirely different from a provision for the inheritance of property. The emphasis in the book of Ruth upon redemption of the brother's estate is, by this reasoning, closer to the Canaanite practice than to the Hebrew.

While it may have been originally an inheritance law, its adaptation by the Israelites to their own cus-

toms and outlook cannot be doubted. The law in Deuteronomy includes the significant statement, introducing the legislation (or description of custom): "If brothers dwell together," etc. Here the reference is to a definitely Israelite practice and the preservation of a closely knit family. The purpose of this law is to preserve the homogeneity of the family group and the name of its male members in the ongoing life of Israel. Josephus, Jewish historian at the beginning of the Christian era, writes that the purpose of levirate marriage was threefold—to preserve the family name and the family estate and to provide for the welfare of the widow. In biblical thought the first of these is by far the most important (but *see* WIDOW). It assumed a special importance because among the Hebrews it was equivalent to the practice of ADOPTION among other peoples. Some authorities believe that levirate marriage may be traced to polyandrous marriage of the fraternal type, while still others assert that it grew out of ancestor-worship, where the need to provide sons to carry on the requirements of the cult was great. *See bibliography.*

2. The marriage transaction. The arrangement of a marriage, the means of selecting or securing a bride, the character of the marriage contract or agreement, and the marriage ceremony itself leading to the consummation of the union, although debatable at certain points, are rather clearly reflected in the biblical writings. Here again may be detected the continuity of biblical social customs with those of the ancient Near Eastern world. Archaeological research continues to support this generalization.

a. The initiation of the marriage transaction. The father as head of the household usually instituted the plans for marriage on behalf of his son. This included the selection of the bride. On her part, she was a more or less passive participant in the transaction, since her father gave her to be the wife of the man involved. Abraham directed his servant to take a wife for his son from his kindred (Gen. 24:4); Laban gave his daughters to Jacob (29:23, 28); and Hamor negotiated with Jacob to arrange a marriage between his son Shechem and the latter's daughter Dinah (34:8). Caleb promised to give his daughter as wife to the conqueror of Debir (Josh. 15:16; see also Gen. 29:19; 38:14; Exod. 2:21; Judg. 1:12; etc.). The mother took the initiative in arranging a marriage for her son Ishmael (Gen. 21:21). This role of the mother is exceptional, however. The place of the father in arranging marriage is consistent with the concept of the family in the Bible. It does not rule out some activity at this stage on the part of the potential bridegroom and bride. There is some indication of romance. We are told, e.g., that Michal loved David (I Sam. 18:20). At harvest festivals and at the village well the sexes met and mingled freely (Gen. 24:15-20; 29:2-11; Exod. 2:15-19).

b. Marriage by capture. Some anthropologists have used the idea of marriage by capture to account for the transition from matriarchal to patriarchal marriage. In this view, in primitive society daughters were a liability, and female infanticide was general. When this disturbed the balance between the sexes and girls became too scarce to meet the demand for wives, tribes raided one another. Thus the name for "wife" became synonymous with terms meaning a person with a subject or inferior status. Does the Bible contain support for marriage by capture? Supposed survivals of this type of marriage are found by some in the book of Judges (5:30; 14:11; 21:21) and in the Pentateuch (Lev. 18:17; Deut. 21:10-14). But none of these so-called survivals is convincing, and we must agree with the majority of scholars that there is no real evidence for marriage by capture in our sources.

c. Marriage by purchase. מכר, "to sell," in Gen. 31:15, used in connection with Jacob's marriage with Leah and Rachel, evidently refers to marriage by purchase. The two wives say of their father's action in giving them to Jacob: "He has sold us, and he has been using up the money given for us." Another word is used as a substantive in Gen. 34:12; Exod. 22:17—H 22:16; I Sam. 18:25, and as a verb in Ps. 16:4 (where the Hebrew text is uncertain) and in Exod. 22:16—H 22:15. It is translated in the Bible "marriage present," or "give the marriage present" in the case of the verb. The Assyrian equivalent is *m'aru,* "to send," whence *tamirtu,* "gift." However, this root has also been translated "to acquire by paying the purchase price, or bride price." An examination of the context in which this word is used in the passages listed above may be helpful. In the verse from Genesis, Shechem pleads with the father and brothers of Dinah to let him have her as his wife. He wants their favor and is willing to give whatever they say in the form of a marriage present and gift. Evidently to secure their favorable action he will allow them to set the amount of the gift or purchase price. This gift(?) is to be given to the father (and brothers?), but not to the bride. In I Sam. 18:25 the *mohar* ("marriage present") takes the form of the foreskins of one hundred Philistines, to be paid to Saul. This ghastly form of the *mohar* is evidently in lieu of the usual gift, which was waived because David was a poor man (vs. 23). In Exod. 22:16-17 provision is made that a man who seduces an unbetrothed virgin must give the *mohar* for her and make her his wife. Here the *mohar* also goes to the father, not in the payment of damages for seduction, but as a bride gift in the marriage transaction. If the father is unwilling to make this settlement of marriage, the offender must pay a sum of money to him equivalent in amount to the "marriage present for virgins."

The inconclusive results we have obtained from noting the use of the term *mohar* in the Bible require that we go beyond this term to actual or alleged instances of marriage by purchase in the Bible. Seemingly, a poor bridegroom might, instead of paying *mohar,* serve the family of his intended wife. This seems to have been the situation when Jacob served Laban (Gen. 29:20, 28) and possibly when Moses went to live with the priest of Midian (Exod. 2:21). The substitute for *mohar* might also take the form of some special act for the benefit of the bride's father. So a city is taken (Josh. 15:16-17; cf. Judg. 1:12); a giant is slain (I Sam. 17:25); one hundred of the enemy are killed and mutilated (I Sam. 18:25-27; cf. II Sam. 3:14). In return for such deeds as these

the hero received a wife without, presumably, the payment of *mohar* as such. In Deut. 22:29 = Exod. 22:16-17, there occurs the specific amount of the *mohar* which is to be paid—fifty shekels of silver. In Ruth 4:5, *mohar* as purchase price may be indirectly alluded to: "You are . . . buying Ruth."

An ancient mythological poem from the Ras Shamra Tablets contains several words relating to the marriage contract (*see bibliography*). One of these is *mohar*. As there used, the word denotes some kind of payment by the bridegroom to the girl's father before marriage: "And thou wilt *mhr* her from her father for a thousand (shekels) of silver, and ten thousand of gold." This poem also uses *tlh*, which is equivalent to the Hebrew word שלוחים and is translated "parting gift" (of/to the bride). The Hebrew term occurs in Exod. 18:2; I Kings 9:16 (it is used figuratively in Mic. 1:14 also). In the first case, it refers simply to the departure of Zipporah, but in I Kings the reference is to a king's parting gift—i.e., dowry—to his daughter. The problem of the meaning of the "parting gift" or the *mhr* is complicated by the fact that gifts not described by either of these terms are also given. Abraham's servant took "all sorts of choice gifts" (Gen. 24:10), including a gold ring and two bracelets (vs. 22), which he put on the bride-to-be (vs. 47), and other jewelry and clothing, some of which was given to Rebekah's mother and brother (vs. 53). Achsah asked and received from her father, evidently as a marriage gift, choice land sites containing springs of water (Judg. 1:15). Again, these occurrences of gifts in relation to marriage pose the question of their use either as payment for value received or as noncommercial gifts. It is evident that gifts may have no connection with purchase and can be simply indications of friendship or good will. Or they may subtly suggest that the bridegroom is able to keep a wife.

Too many difficulties stand in the way of the idea of purchase marriage to justify its unqualified acceptance. It is impossible to identify any out-and-out commercial transaction where something of value is given and something of value is received. The bride is more than a commodity to be bartered. The penetrating insight of the author of Gen. 24 and the delicacy of his portrayal of human relations in the oriental community, as he recites the negotiation of a marriage transaction, supports this. Certainly Rebekah is not chattel to be bought in the market. The conception of the status of a wife found in Prov. 31 further supports the view that marriage by purchase is an untenable interpretation.

d. Marriage by covenant. In the Bible marriage is regarded as a covenant entered into by two families who thereby form an alliance through their representatives, the bridegroom and the bride. So marriage is both personal and communal. Our justification for using the word "covenant" derives in part from the use by biblical writers of the figure of marriage to describe the covenant relation between Yahweh and Israel (*see* § 5*c below*). and in part from the place of the covenant in social contracts of the biblical community. In the context of the covenant idea the special terms that have been presented above may be understood in their proper perspective. Two biblical books use the word "covenant" in relation to marriage (Prov. 2:17; Mal. 2:14). The establishment of a covenant between two parties, and in relations between members of Near Eastern communities generally, was not a simple process. The use of gifts was an important element. The gift was an object of value which was tendered for a number of reasons. One of these was to establish the prestige and social standing of the giver. This was doubtless one purpose of the bride gift or bride price, the *mhr* (cf. מתן; Gen. 34:12; Num. 18:11). Another was the expectation of a return which would reflect in some manner the value of that which was given. A third purpose—and this is peculiar to the biblical idea of possessions—was the transfer to the recipient of a part of the life of the giver. An object which a biblical man possessed was not detached from his self and his life; it was a genuine part of the self. It may have been, and often was, symbolized by a covenant of blood (*see* BLOOD; COVENANT), in which some kind of exchange and compensation are involved. The gift of *mhr* seals the covenant between two families, establishes the prestige of the husband and his family, and gives him authority, although not absolute control, over his wife. In this sense of compensation and ratification of a covenant, a kind of purchase may be understood. But we have in this view of the marriage transaction something more than a *quid pro quo*—what is added is drawn from the purpose of the gift and the personal and social nature of the covenant of marriage.

e. The betrothal. The word translated "betroth," ארש, in cognate languages, such as Arabic, has the root meaning "a fine," "pay the price," and so gain the right of possession, or "tribute" in Assyrian. We may note first its appearance in Exodus (22:16—H 22:15). In Deut. 20:7 a distinction is made between betrothing a wife and taking her. Another use of the word "betroth" appears in Deut. 22:23-24, where a man who performs the sexual act with a betrothed virgin is stoned to death because "he violated his neighbor's wife." In the same chapter (vs. 28) intercourse with a virgin who is not betrothed involves, not death, but marriage to the girl and payment of a fine to her father. Betrothing a wife appears to be equivalent to marrying her (Deut. 28:30; II Sam. 3:14). In Hos. 2:19-20—H 2:21-22 the word is used figuratively to affirm the meaning of the true covenant relation between God and his people Israel. The emphasis is upon faithfulness and permanence. Matt. 1:18; Luke 1:27; 2:5 contain the Greek term μνηστεύω, "woo and win," "betroth."

In at least one of these citations betrothal legally constitutes an actual marital relationship, as already noted. The account of the encounter between Lot and the men of Sodom (Gen. 19:14) assumes that the men who were to marry his daughters were already his sons-in-law. Samson's betrothed is also called his wife (Judg. 14:15; 15:1). The language of Matt. 1:18, 20, 24-25, shows that in being betrothed to Joseph, Mary was actually his wife, even though he did not know her sexually until after the birth of Jesus. This equivalence of betrothal and marriage is in harmony with the OT teaching on the subject. *See* VIRGIN BIRTH.

f. Circumcision. While the timing of the several elements of the marriage arrangements is not clear, the betrothal was probably sealed after the payment of the *mohar* and the exchange of other gifts. This did not complete the transaction, however, for the preparation included other factors, one of which was the performance of circumcision upon the bridegroom in anticipation of his sexual use of his wife. Of special interest is the Hebrew word for "bridegroom," חתן, which may also be translated "daughter's husband." From the same root the word for "wife's father" is derived: "one who circumcises." In the "Hymn to Nikkal, etc.," ancient Canaanite poem, the same word appears, in the sense of "son-in-law," and is used in relation to the rite of circumcision at marriage, showing that this practice existed in Palestine-Syria as early as 1500 B.C. *See* CIRCUMCISION.

g. The marriage ceremony. The completion of plans for the wedding was not climaxed by the execution of a written contract prior to the actual marriage ceremony itself, as far as available evidence from the Bible is concerned. In Aramaic papyri from the fifth century, however, there is a record of such a contract between Hebrews and the Egyptians whom they married (*see bibliography*). Further, in the apocryphal book of Tobit (7:14) we read of an "instrument of cohabitation" (RSV "contract") which a father wrote for his daughter and her groom, evidently as a private document. In any case, a covenant agreement, whether written or not, is presupposed as the basis for the actual ceremonies which culminated in a man's physical possession of his wife. For the wedding special attire was worn (Song of Songs; Isa. 61:10; Ezek. 16), and the bridal pair were bedecked with ornaments, including garlands and jewelry (*see* DRESS AND ORNAMENTS). A veil was evidently worn by the bride (Gen. 24:65). In the account of Laban's deception in giving Leah instead of Rachel to Jacob on his wedding night, the use of a veil by the bride may be inferred (29:23, 25). The bridegroom had his party of friends or attendants (Judg. 14:11). Jesus speaks of them by using the strange words "sons of the bridechamber" (RSV "wedding guests"; Matt. 9:15; Mark 2:19; Luke 5:34). Possibly one of these acted as best man and may be identified in the phrase "friend of the bridegroom" of John 3:29. The words "best man" actually occur in Judg. 14:20. The bride also had attendants (Ps. 45:14; Song of S. 3:11; etc.).

A procession of some sort was a part of the wedding ceremonies. The two bridal parties left their places of assembly separately and met at a predetermined location (I Macc. 9:39). The processions were accompanied by music (Jer. 7:34); the combined parties moved to the house, usually the bridegroom's, where the wedding feast was to be held (but see Gen. 29:22, where the feast is held in the home of the father-in-law). One such feast lasted for seven days (Judg. 14:12), but in Tobit this period is doubled (Tob. 8:20). Music during the procession and perhaps during the feast itself is noted in Ps. 78:63; Song of Songs; Isa. 5:1; Ezek. 33:32.

The ceremony proper may have included a skirt-spreading ceremony, symbolizing that a woman is taken as a wife. In the book of Ruth, the widowed young woman approaches Boaz, uncovers his feet (genitals?), and lies down (Ruth 3:7). When Boaz awakens, she identifies herself and requests him to spread his skirt over her, because he is next of kin. This certainly signifies an effort on Ruth's part to secure Boaz as a husband. A modern observer has noted an Arab practice of throwing over the bride a cloak belonging to a man with the words, "None shall cover thee but such a one," naming the bridegroom (*see bibliography*). For the completion of the marriage ceremony a special tent or room is prepared as a bridal chamber.

The final ritual before the consummation of the marriage may have been formal proof of the bride's virginity. This practice is perhaps reflected in the provision of Deut. 22:13-21, to the effect that if a man marries a girl and fails to find in her the "tokens of virginity," then her parents shall submit the "tokens of her virginity" to the elders as proof of the falsity of his accusation. It further provides that the garment shall be spread before the elders for their inspection. In this connection, of interest is the action of Joseph, who, when he discovered that Mary was pregnant before he had taken her, refused to make this evidence that she was not a virgin a public matter and "resolved to divorce her quietly" (Matt. 1:19). It is conceivable, if a display of tokens of virginity was a customary part of the marriage ritual, that the so-called "friends of the bridechamber" mentioned in the gospels (RSV "wedding guests") functioned as witnesses to check on the bride's virginity in the bridal chamber (Mark 2:19).

3. The figurative use of marriage. With singular clarity and concreteness the biblical writers drew upon the common experiences of their day to communicate their message. The experience of marriage illustrates this point. The prophet expresses the compassion of Israel's God when he writes:

> Your Maker is your husband.
> . . . . . .
> For the LORD has called you
> like a wife forsaken and grieved in spirit,
> like a wife of youth when she is cast off
> (Isa. 54:5-6).

In the same book the persistent, purposeful love of God holds out the promise that his desolate people will receive a new name, Beulah, Hebrew for "married"; and her God will rejoice over her as the bridegroom rejoices over the bride (62:4-5). The book of Jeremiah stresses the awful desolation of the land which was imminent for Judah and Jerusalem by contrasting it with the joy and merriment of the wedding feast—the "voice of mirth and the voice of gladness, the voice of the bridegroom and the voice of the bride" shall cease (Jer. 7:34; 16:9; 25:10; cf. Bar. 2:23). In another context a poet describes the "garments of salvation" as bridal attire (Isa. 61:10). A dramatic and impressive lesson on the nature of the kingdom of heaven is driven home in Jesus' parable of the marriage feast (Matt. 22:1-14). Equally vivid and effective in using his audience' experience of marriage ceremonies is the story of the wise and foolish maidens in the same gospel (25:1-12). Again, language learned by familiarity with wedding festivities was utilized to explain why the disciples of Jesus

did not fast (Mark 2:18-20). John the Baptist compares his own deep joy with that of the friend of the bridegroom, who rejoices at the happiness of the latter in his possession of the bride (John 3:29). *See* FAMILY; FATHER; PROSTITUTION.

4. The theological use of marriage. Since marriage was indeed a covenant (*see* § 2*d above*), its relationships served a theological purpose, that of defining the meaning of Israel's God and of her obligation to him. Beyond this, since Israel's faith was fashioned in the fires of religious and cultural tensions, the prominence of the concept of sacred marriage in the Canaanite culture made an Israelite adaptation of this concept a most effective weapon for defending the faith. In the Canaanite world the cycle of the seasons was believed to be intimately associated with sexual relations between gods and goddesses. These relations were momentous for the welfare of an agricultural community. *See bibliography; see also* PROSTITUTION.

Biblical writers wrote polemics against this widespread concept of marriage while at the same time adopting some of its terminology and adapting it to the biblical concept of marriage and of God. The use of the figure of marriage to express the relation between Yahweh and Israel has been suggested above, by its value in articulating the divine love. Yahweh speaks to Israel through his prophet:

> I remember the devotion of your youth,
> your love as a bride,
> how you followed me in the wilderness
> (Jer. 2:2).

Here the past is idealized by the prophet and Israel is depicted as the devoted, faithful bride of her Lord and Redeemer. This concretely affirms the personal dimension of the covenant relation between God and his people. This use of the husband concept to emphasize the relational theology of the covenant is brought out clearly in the book of Hosea. Here it is written that Yahweh the husband has repudiated his conjugal relation with his wife, Israel (Hos. 2:2), but that he will again betroth her to himself when she abandons her faithless practices (vss. 19-20). Then she will "know the Lord" in a deeply personal and ethical way comparable to the knowledge which a man has of his wife (*see* SEX; KNOWLEDGE). In the NT use of marriage for theological definition of the gospel, Paul's words are significant: "I betrothed you to Christ to present you as a pure bride to her one husband" (II Cor. 11:2). In admonishing his readers as to the proper relations between a husband and his wife, the writer of the Letter to the Ephesians states that "the husband is the head of the wife as Christ is the head of the church, his body" (Eph. 5:23). This affirms more than mere control, as vs. 25 shows—husbands are to love their wives, as Christ loved the church, and tenderly nourish and cherish them. With this background of the biblical use of marriage, the seer who has visions of the end time is able to announce that the marriage of the Lamb and his bride is about to be consummated; Christ and the faithful are to be united in marriage (Rev. 19:7-9). This union marks the appearance of the church triumphant, for the description of which the writer turns to the experience of marriage.

5. The function and purpose of marriage. Because of its importance in providing progeny and thus preserving the family name, marriage was practically universal in biblical society. There were widows, but no spinsters, in biblical times. Celibacy was limited to those who through injury were unable to function sexually (Deut. 23:1), and to those who through a congenital condition or through violence or choice had become eunuchs (Matt. 19:12; *see* EUNUCH). In the Dead Sea Scrolls the Manual of Discipline contains the words "bear seed," thereby showing that the particular Essene sect represented here were not celibates and thus did not resemble the Covenanters of Damascus. Josephus the ancient Jewish historian mentions the marrying sect of ESSENES. The power of the desire for sons and the value of the family made marriage a prominent institution in the life of biblical people.

Beyond this reproductive and social function of marriage a personal one may also be noted, although it is not conspicuous in most of the biblical books. Paul concedes the presence of sexual passion and grants that it had better be satisfied within marriage rather than in illicit relations (I Cor. 7:9). He recommends that husband and wife grant each other sexual pleasure on a reciprocal basis (vss. 3-4). The delights of marriage, largely on this level, are fully and beautifully set forth in the Song of Songs. Here deeply satisfying personal relations are described. At its best, the biblical account of the function of sex in marriage is presented in a setting of personal, spiritual, and social values, as an essential part of a partnership between persons who are creatures of God. Love in marriage is urged—a husband is to be "infatuated always" with his wife's love (Prov. 5:19). The heartbreak of the prophet Hosea over the tragedy of his marriage is second only to the truth it enabled him to enunciate—the persistent, forgiving love of God. And Malachi movingly states the personal meaning of marriage in describing one's wife as "companion" and "wife by covenant" (Mal. 2:14; cf. Ecclus. 7:19; 25:1, 8; 41:23).

At its deepest level, marriage is a personal-sexual-spiritual companionship ordained and instituted by God. This interpretation rests upon the biblical experience of marriage in the light of the biblical faith in the God who is both Creator and Redeemer. This faith is affirmed, as far as marriage is concerned, in clear terms: "A man leaves his father and his mother and cleaves to his wife, and they become one flesh" (Gen. 2:24). Jesus reads the Pharisees a lesson on divorce by using the same passage as a text when he says: "God made them male and female. For this reason a man shall leave his father and mother and be joined to his wife, and the two shall become one" (Mark 10:6*b*-8). By using the common terms for "man" and "woman"—אישׁ; אשׁה—the writer of Gen. 2:23 stresses the close relation between man and woman. The words are pronounced similarly: *'ish* and *'ishshâ*, the latter mistakenly taken by the biblical writer to contain as its last syllable a feminine ending of the former (in fact, אישׁ probably derives from a root meaning "to lead," and אשׁה may come from אנשׁ, "to be delicate"). *See* SEX.

Such an understanding of marriage may be more

clearly seen in the later rather than in the earlier documents of the Bible, although its appearance in the earlier period within the framework of the polygamous pattern must not be ignored. Doubtless the effect upon social institutions of the loss of nationality, the disintegration of the Exile, and the fuller exposure of the Israelites to foreign cultures may be detected in the developing personal emphasis upon marriage. Notably the impact of Greco-Roman thought and custom and of Christian teachings was considerable in the late OT and in the NT periods. *See bibliography.*

MARSENA mär sē'nə [מרסנא] (Esth. 1:14). One of the "seven princes of Persia and Media" ranking next after King Ahasuerus in authority within the kingdom.

Bibliography. L. B. Paton, *Esther,* ICC (1908), pp. 68-69, 152-53.

B. T. Dahlberg

MARSH [בצה, *probably* soft place; גבא, cistern pool]. Except along the flat shore line of the Dead Sea (Ezek. 47:11), marshes are almost unknown in dry Palestine. The references in Job 8:11; 40:21 are probably to Egyptian marshes, where the papyrus grows and Behemoth is to be found.

L. E. Toombs

MARSHAL [טפסר] (Jer. 51:27); KJV CAPTAIN. A military officer in charge of the census of the troops. Cf. ספר, "Scribe" (KJV "writer"), in Judg. 5:14 (as well as γραμματεύς in I Macc. 5:42), which in the military context of the Song of Deborah must denote an officer who mustered the troops. Cf. also II Kings 25:19, where "secretary" should probably be changed to "marshal."

J. W. Wevers

MARS' HILL märz. KJV translation of Ἄρειος πάγος (Acts 17:22; RSV Areopagus).

MARTHA mär'thə [Μάρθα; Aram. מרתא, lady, mistress]. Sister of Mary and Lazarus of Bethany (Luke 10:38-42; John 11:1–12:2).

That Martha had a sister named Mary (*see* Mary 3) is clearly indicated in the gospel tradition. That these sisters lived at Bethany and had a brother Lazarus is affirmed only in the Fourth Gospel. From Luke alone one would conclude that the sisters lived somewhere in S Galilee (see Luke 9:51; 10:38-42; 17:11). Luke's central section (9:51–19:27), however, is clearly a collection of materials from various periods of Jesus' ministry, with little regard for chronological and geographical order. The details concerning the sisters and their brother in John supplement the fragmentary information offered in Luke and serve to explain some obscure points in the Synoptic narrative (e.g., Mark 11:1-12; Luke 21:37). Many recent scholars look upon specific data of the Fourth Gospel not present in the Synoptics (personal names, place names, time notations, and the like) as evidence of a trustworthy special tradition, not as fanciful expansions of Synoptic material.

The character portrayal of the sisters in Luke and John is strikingly similar. Martha was the practical type: the mistress of the house (Luke 10:38; John 12:2); concerned that adequate provision for Jesus' physical needs be made (Luke 10:40; John 12:2); impatient over her sister's contemplative bent (Luke 10:40); collected enough in her bereavement to meet Jesus on his approach to Bethany and to explain the situation to him, while her sister sat at home in black despair (John 11:20); mindful of the unpleasantness of a body four days dead (John 11:39).

Jesus loved both sisters. The Fourth Evangelist even writes: "Now Jesus loved Martha and her sister and Lazarus" (11:5). Jesus undoubtedly accepted Martha's ministrations gratefully. He took note when customary courtesies were not extended to him (Luke 7:44-46). But he was distressed at Martha's petulant bondage to secondary concerns. Whatever the exact original wording of his rebuke of Martha (the text of Luke 10:41 has come down in several forms), his general meaning is clear: The kingdom of God is a value transcending all other values. Mary has set her heart on this. You, Martha, should seek first the kingdom of God and let other things take their proper place.

In John 12:1-8 we read of a dinner at Bethany at which Martha served Jesus, his disciples, and Lazarus, and Mary anointed Jesus' feet. In Mark 14:3-9 a meal at Bethany in the house of Simon the leper is described, during which Jesus' head was anointed by an unnamed woman. These are obviously variant reports of the same incident, however the similarities and differences are to be explained (*see* Mary 3). It is possible that Simon was a leper who had been cured by Jesus and that he was the father or the hus-

band of Martha; or he may have been deceased and the house still known by his name.

MARTYR. A believer who has borne witness to Christ by shedding his blood for him.

1. The terms "witness" and "martyr." Both terms are translations of the Greek μάρτυς. WITNESS is the more primitive rendering. In the NT it is primarily applied to the apostles who bear witness to the risen Christ. They are prepared to suffer gladly "for the name" (Acts 5:41; 9:16), yet it is by their life and missionary work that they bear witness to Christ.

"Martyr" is a literal transcription from the Greek in order to give expression to a new meaning. In the second century and at a time of persecution the term "martyr" is commonly used to designate Christ's confessors who suffered martyrdom rather than deny their Lord. A witness bears testimony by his actual preaching. A martyr has borne testimony even by his death, which gives him his title and rank as a martyr (cf. Mart. Polyc. 14:2; 16:2; 17:3).

2. The martyrs in the NT. According to some scholars this new meaning is already apparent in the NT. We read in Acts (cf. 22:20) that the blood of Stephen the "μάρτυς of the Lord" has been shed. Versions translate either "witness" (ASV, RSV) or "martyr" (KJV, Moffatt). The translation "witness" might be recommended by the fact that Stephen had a preaching activity (Acts 6-7). Yet Stephen does not see the Lord at the beginning of his career and does not receive express command from him, as the other "witnesses" in Acts, the first disciples (cf. 1:8, etc.), and Paul (cf. 22:15; 26:16) do. He sees him only at the hour of his martyrdom. Thus it may be admitted that this use of the term μάρτυς is at least a step in the direction of the meaning of "martyr."

The same may be said about two passages in the book of Revelation. A Christian Antipas, "who was killed" (Rev. 2:13), is called a "witness" (ASV, RSV) or a "martyr" (KJV). Later (cf. 17:6) the "blood of the martyrs of Jesus" is spoken of. Elsewhere in the same book persecuted Christians who remained faithful unto death are not called "martyrs" (Rev. 6:9-11; 13:15; 18:20; 20:4), although they bore testimony to Christ (Rev. 6:9; 20:4). It may be concluded that in NT times the term μάρτυς began to receive the new connotation of "martyr," but that this new meaning was not yet in general use.

3. Discipleship and martyrdom. The first-century church had not yet undergone general persecution. Yet the believers had before their eyes the example of Christ, who died on a cross. They had been warned by their Master that God's messengers in the Old Covenant were persecuted (Matt. 23:34-35), and they had been themselves commanded to take up their cross and follow him (Mark 8:34-38; cf. 13:9-13; John 15:20; 16:1-3). In all times true discipleship means readiness to suffer all kinds of ill-treatment for Christ's sake (cf. Phil. 1:29-30; I Thess. 2:14-15; I Pet. 3:14). During an age of persecution the faithful witness becomes the martyr of Christ.

MARTYRDOM OF MATTHEW. *See* MATTHEW, MARTYRDOM OF.

MARTYRDOM OF POLYCARP. *See* POLYCARP, MARTYRDOM OF.

MARVEL. *See* SIGNS AND WONDERS.

MARY mâr'ĭ [Μαριάμ (*e.g.*, Matt. 13:55; 27:61; 28:1; Luke 1:27; 10:39; John 11:2; 20:16; Acts 1:14), *from* מרים, *perhaps from* מרא, the corpulent one; *also* Μαρία (*e.g.*, Matt. 1:16; 2:11; 27:56; 28:1; Mark 6:3; Luke 1:41; 2:19; John 11:1; 19:25; Acts 12:12; Rom. 16:6), *Grecized form of* מרים]. The name of the mother of Jesus and several other women of the NT; first made famous by Moses' sister (Miriam; Exod. 15:20; Num. 26:59). It appears in Josephus (Antiq. III.ii.4) as Mariamme (Μαριάμμη).

1. *See* MARY MOTHER OF JESUS.

2. Mary of Magdala (*see* MAGDALENE), one of the most prominent of the Galilean women who followed Jesus.

Magdala (probably also called by the Greek name Tarichaea), at the S end of the Plain of Gennesaret (Ginnesar), was an important agricultural, fishing, fish-curing, shipbuilding, and trading center, a city of considerable wealth. The population was predominantly Gentile, as evidenced by the presence of a hippodrome (Jos. War II.xxi.3). Rabbis later attributed the fall of the city to licentiousness (Midrash on Lamentations II.2), so bad was its reputation.

We do not know when or where Jesus met Mary of Magdala. It is not said that he visited the city, though its environs are mentioned (Mark 6:53; Matt. 14:34).

Neither do we understand Mary's condition when she first met Jesus. It is said that seven demons had gone out of her (Luke 8:2; cf. Mark 16:9). Since demon possession was at that time associated with both physical and moral-spiritual sickness, Luke's statement does not offer us much help. The reference to "seven demons" probably emphasizes either the seriousness of her condition (Luke 8:30) or the recurrent nature of it (Luke 11:26).

There is no solid reason for assuming that Mary had been a harlot and therefore is to be identified with the sinful woman of Luke 7:36-50. Luke surely did not intend this identification, as he introduces Mary Magdalene in a formal way in 8:2, with no suggestion that she has been presented in 7:36-50. It is, furthermore, doubtful whether Joanna, the wife of Herod's steward, would have traveled around Galilee (Luke 8:1-3) with a notorious courtesan.

Neither is Mary Magdalene to be identified with Mary of Bethany (John 11:1–12:8; Luke 10:38-42). The former was a Galilean (Mark 15:40-41; cf. Luke 8:1-3); the latter, with Martha and Lazarus, lived in Judea, in the village of Bethany, just E of Jerusalem (John 11:1 ff; on Luke's location of their resi-

dence, *see* 3 *below*). There is no suggestion in the narratives about Mary of Bethany that she had been delivered from a serious physical or moral illness. The aggressive role of Mary Magdalene in the distaff side of the gospel story (*see below*) contrasts sharply with the contemplative bent of Mary of Bethany (John 11; Luke 10:38-42).

The identification of Mary Magdalene, the sinner of Luke 7:36-50, and Mary of Bethany, widely accepted in the Western church from about the sixth century (but rejected in the Eastern), probably arose because of the similarities in the stories of the anointing of Jesus by women contained in Luke 7:36-50; John 12:1-8, and the unfounded supposition that Mary Magdalene's "seven demons" were demons of unchastity. The unsavory reputation of Magdala may have helped to blacken her character.

Mary Magdalene's devotion to Jesus and his cause is clearly underscored by her practical service. She participated in his itinerating mission in Galilee and contributed financially to the venture (Luke 8:1-3; Mark 15:40-41). She went with him and his followers to Jerusalem for his final appeal to the nation in its capital city (Mark 15:41). She was present at the Crucifixion (Mark 15:40; John 19:25), came to the tomb to anoint Jesus' body (Mark 16:1; Luke 23:55–24:1), reported the fact of the empty tomb and the message of the angels to the Eleven (Luke 24:1-11), and was the recipient of a personal appearance by Jesus after the resurrection (John 20:11-18).

Bibliography. P. Ketter, *Die Magdalenenfrage* (1929). F. C. Burkitt, "Mary Magdalene and Mary, Sister of Martha," *ET*, 42 (1930/31), 157-59. G. Dalman, *Sacred Sites and Ways* (English trans., 1935), pp. 125-28.

3. Mary of Bethany. As was pointed out in 2 *above*, she is probably not to be identified with Mary Magdalene or the sinful woman of Luke 7:36-50. Information about Mary of Bethany comes from Luke 10:38-42; John 11:1–12:8. That these two passages are concerned with the same Mary is hardly subject to doubt: in both she has a sister Martha; in both the same qualities of personality of the sisters appear; in both the same loving relationship to Jesus is pictured. Luke's location of the home of the sisters in S Galilee (Luke 10:38; 13:22; 17:11), rather than in Bethany near Jerusalem, is no argument against the identification, since Luke's whole central section is loosely arranged chronologically (*see* LUKE, GOSPEL OF). These two passages supplement and illuminate each other most strikingly.

The Lukan narrative represents Mary as the contemplative type, somewhat indifferent to mundane matters, single-mindedly absorbed in the truth about the kingdom of God and its inaugurator. The Johannine stories picture her as grieving inconsolably over her brother's death (John 11:20, 31), as deeply devoted to Jesus and cognizant of his power (vs. 32), and as effusively thankful for the superlatively wonderful restoration of her brother from the dead (12:1-3).

The stories of the anointing of Jesus by Mary in Mark 14:3-9 (without mention of her name) and in John 12:1-8 pose numerous problems: whether she anointed his head (Mark) or his feet (John); what her precise motive in the anointing was; the circumstances of the act (time, place, persons present); the literary relationship of these stories to the anointing recorded in Luke 7:36-50; and the like. It is widely believed that Mark is correct in asserting that Jesus' head was anointed by Mary, probably as her grateful ascription to him of royal dignity. Jesus reinterpreted the act in the light of his premonition of coming disaster and declared it an anointing of his body "beforehand for burying" (Mark 14:8). Whether there was an earlier anointing, as recorded in Luke 7:36-50, or simply one anointing, with variant reports of it, has not yet been settled. In any case Mary of Bethany figured in one—to her eternal credit (Mark 14:9)!

Bibliography. F. C. Burkitt, "Mary Magdalene and Mary, Sister of Martha," *ET*, 42 (1930/31), 157-59. D. Daube, "The Anointing at Bethany and Jesus' Burial," *ATR*, 32 (1950), 186-99. J. N. Sanders, "Those Whom Jesus Loved," *NTS*, I (1954-55), 29-41.

4. The mother of James the Younger and Joses; a Galilean follower and financial supporter (Mark 15:40; Luke 8:3) of Jesus. She is said to have accompanied him to Jerusalem (Mark 15:41; Matt. 27:55), stood by at the Crucifixion (Mark 15:40; Matt. 27:55-56; Luke 23:49), witnessed the entombment (Mark 15:47; Matt. 27:61; Luke 23:55), joined in the securing of spices for anointing Jesus' body (Mark 16:1; Luke 23:56), seen the empty tomb and heard the angelic announcement of Jesus' resurrection (Mark 16:2-7; Matt. 28:1-7; Luke 24:1-7), reported to the apostles what she had seen and heard (Matt. 28:8; Luke 24:9-11), and even to have seen the resurrected Jesus (Matt. 28:9-10).

It is possible that this Mary is to be identified with Mary the wife of Clopas (*see* 5 *below; see bibliography* under 5).

5. The wife of Clopas; one of the women standing near the cross (John 19:25). She almost certainly is not to be identified with the sister of Mary mentioned in this passage, since two sisters would not have possessed the same name.

CLOPAS may be identical with the ALPHAEUS of Mark 2:14; 3:18, but probably not with Cleopas of Luke 24:18. The latter is a pure Greek name (abbreviated from Κλεόπατρος), not a Greek rendition of a Semitic name.

Hegesippus mentions a Clopas who is said to have been a brother of Jesus' father, Joseph (Euseb. Hist. III.11; IV.22). If there is any truth in this tradition, Mary of Clopas was Mary the Virgin's sister-in-law. We may conjecture then that her husband was Clopas (Alphaeus) and that her children were James (one of the Twelve; Mark 3:18), Joses (Mark 15:40), and Levi (Mark 2:14).

"Mary of Clopas," as the text of John 19:25 reads literally, may mean "daughter of Clopas," in which case the neat solution suggested above is upset.

6. The mother of John Mark; the owner of a house in Jerusalem in which the early church met (Acts 12:12) and mother of the John who became a companion and helper of Paul and Barnabas and who was probably author of the Second Gospel (*see* MARK, JOHN).

7. A diligent worker in a Pauline church (Rome or Ephesus; *see* ROMANS, LETTER TO THE), who is saluted by Paul for her achievement (Rom. 16:6). She was probably of Jewish descent. E. P. BLAIR

MARY, BIRTH (OR DESCENT) OF. A Gnostic writing known only from a reference in Epiphanius (*Heresies* XXVI.12.1-9), and which, if fairly reported, would seem to have been a viciously anti-Jewish writing: the reason Zacharias had first been struck dumb and subsequently murdered was that he had seen, while offering the incense, the God of the Jews in the form of an ass; the reason the high priest was commanded by Moses always to wear bells on his garment was to warn this divinity to hide lest his form be seen. *See* APOCRYPHA, NT. M. S. ENSLIN

MARY, GOSPEL OF THE BIRTH OF. A Latin infancy gospel (*see* APOCRYPHA, NT) which repeats substantially that part of the Gospel of Pseudo-Matthew (*see* PSEUDO-MATTHEW, GOSPEL OF) which tells of the birth and life of the Virgin Mary until the birth of Jesus. Its alterations are severely editorial and pedestrian.

Mary was born at Nazareth, of the stock and family of David. The name Mary was given the child by command of the angel. The three-year-old Virgin, when brought by her parents to the temple, went up *all* the altar steps "in such a way that you would think she had attained full age." Joseph was the only one of "all those of the house and family of David that were unmarried and fit for marriage" who at first deliberately "withheld his rod."

After the annunciation to Mary the author quits his source with the word: "It will be long, and perhaps to some even tedious, if we insert in this little work everything which we read of as having preceded or followed the Lord's nativity; wherefore, omitting those things which have been more fully written in the gospel, let us come to those which are held to be less worthy of being narrated." These "less worthy" details are the return of Joseph to Mary after a three-month absence, "intending to marry the virgin." He found her pregnant, suspected fornication, was corrected by an angel of the Lord in a dream, took her as his wife, and kept her in chastity. Then her days were fulfilled, "and she brought forth her firstborn son, as the holy evangelists have shown."

The traditional ascription of this writing to Jerome is utterly without foundation. Its only source of information, except the canonical gospels, is Pseudo-Matthew, of which it is a distinctly inferior copy in artificially elegant Latin. Its influence upon medieval art is quite out of proportion to its own merits, for it was incorporated bodily into his *Golden Legend* by Jacobus de Voragine in the thirteenth century.

This is a totally different work from the Gnostic BIRTH OF MARY.

Bibliography. An English translation is available in the *Ante-Nicene Christian Library,* vol. XVI. A brief résumé of its contents is printed by M. R. James, *The Apocryphal NT* (1924), pp. 79-84. M. S. ENSLIN

MARY MOTHER OF JESUS. It is impossible to write a historical sketch of Mary's life, so inadequate are the data in the gospels and so unreliable are the traditions of the church. Such data as we have are contained in stories whose purpose is not historical narration but theological affirmation: they declare that God has come to men in a child born of a virgin, that he may redeem them from sin and death and lead them into his blessed kingdom. Mary is depicted as the instrument of God's gracious purpose (the "handmaid of the Lord" [Luke 1:38]).

2. Virginal conception
3. Marital relationship to Joseph
4. Place of Jesus' birth
5. Relationship to the child Jesus
6. Relationship to the adult Jesus
7. Relationship to other children in the family
8. Character
9. Christian tradition

Bibliography

1. Family background. We know very little concerning Mary's background. She was a devout Jewess, apparently living in Nazareth at the time when she conceived. Since both genealogies (Matt. 1:2-16; Luke 3:23-28) are Joseph's, we do not know whether she belonged to the Davidic line, though the angel's words in Luke 1:32 would at least imply that the early church believed that she was so descended. Davidic lineage is affirmed for Jesus outside the nativity stories (Acts 13:23; Rom. 1:3; II Tim. 2:8; Rev. 5:5; 22:16), but on what ground is not indicated. Elizabeth, "of the daughters of Aaron" (Luke 1:5), is called Mary's "kinswoman (συγγενίς; Luke 1:36). If the kinship was of blood and not from marriage, Mary would seem to be of Levitic descent. It is not, of course, impossible that both lines lay behind her. Priests were not absolutely required to marry within their tribe, although it was held desirable that they should do so. The second-century Protevangelium of James identifies her parents as Joachim and Anna—possibly a reliable tradition.

2. Virginal conception. At the time when she conceived, she was betrothed to Joseph, who is said to have been "of the house of David" (Luke 1:27 and the genealogies). He is described in Matthew (1:18-25) as a God-fearing, law-abiding man, of considerate nature. Since betrothal in Judaism was tantamount to marriage, except for residence in the bridegroom's home (*see* JOSEPH HUSBAND OF MARY), Mary's pregnancy was at first a shock to Joseph. How could this condition have occurred except by an adulterous act? The stories in both Matthew and Luke explain the pregnancy as due to the Holy Spirit (Matt. 1:18, 20; Luke 1:35), the purpose of God being to raise up for his people a divine Savior ("Emmanuel" [Matt. 1:23]; "the Son of the Most High" [Luke 1:32]), who "will reign over the house of Jacob for ever" (Luke 1:33). Joseph's fears were allayed by the assurances of an angel, and he is said to have proceeded with his plans with respect to Mary.

How early belief in the Virgin Birth arose in the church it is impossible to say. Peter in the sermons of Acts and Paul in his letters never mention it, if they knew of it. In fact, in Gal. 4:4 Paul writes that Jesus was born of a "woman" (γυνή), when he might easily have used the more particular word "virgin"

(παρθένος). Mark and John do not refer to the Virgin Birth (though some have read it into Mark 6:3; John 1:13). Outside Matthew and Luke it appears nowhere in the NT.

It has been argued that earlier forms of the birth stories now contained in Matthew and Luke lacked the virgin-birth explanation. Matt. 1:16 exists in three text forms, one of which reads: "Joseph, to whom Mary the virgin was betrothed, begat Jesus called the Christ" (syr^{s}). It has been contended that Luke 1:34-35 is an addition to the original text by some early Christian scribe or, more probably, that it is Luke's own addition to his source. It must seem queer to any perceptive reader that Luke, after telling the story of the Virgin Birth, should offer the comments contained in 2:33, 48-51. Is this an indication that he was utilizing sources which did not know of the Virgin Birth?

If the miraculous birth rests solely, as far as the NT is concerned, on the testimony of the writers of Matthew and Luke (both of whom clearly believed it, regardless of what their sources contained), the doctrine is, of course, not overthrown. It is indeed possible that Jesus was virgin born, even though only two writers of the NT record it. It is congruous with the pattern set by the Incarnation and the Resurrection. Jesus was unique, and it is not wholly incredible that he should have been uniquely born. However, it clearly is not an indispensable doctrine, or Peter, Paul, and other Christian preachers would have included it.

3. Marital relationship to Joseph. Roman Catholics have made much of Mary's response to the angelic announcement, as recorded in Luke 1:34: "How can this be, since I have no husband [lit. 'I am not knowing (γινώσκω) a man']?" They point out that the present tense expresses durative action and therefore means that Mary was then under a vow of perpetual virginity. The marriage of Mary and Joseph was thus never sexually consummated, and the so-called brothers and sisters of Jesus were really his cousins (*see* § 7 *below*). In response to the objection that the ideal of perpetual virginity was unknown in Judaism, they point to the Essenes, one group of whom eschewed marriage (Jos. War II.viii.2; Pliny Nat. Hist. V.15). In addition they cite Paul's advocacy of celibacy for some people (I Cor. 7).

It is doubtful whether Luke 1:34 can bear the heavy dogmatic weight heaped upon it. Why did Mary become betrothed to Joseph at all, if she already had vowed perpetual virginity? It will hardly do to answer, as some Roman Catholic scholars have, that she was obliged by the Mosaic Law (Num. 27:1-11; 36) and custom to enter this relationship because she was an heiress. The passages cited do not *require* marriage of heiresses, and that Mary belonged in this category is a gratuitous assumption. Neither does it help to cite the unreliable tradition in apocryphal literature (e.g., in the Protevangelium of James) that Joseph was an old man at the time of his betrothal (and therefore willing to forego the full marital relation). Lacking solid evidence to the contrary, one can only assume that the betrothal was the customary first stage in a relationship meant to be consummated. Matt. 1:24-25 says: "He took his wife, but knew her not until she had borne a son"; and in Luke 2:7 Jesus is called Mary's "first-born son"—these passages would hardly have been written in this way by persons who believed in Mary's perpetual virginity.

4. Place of Jesus' birth. According to Matthew and Luke, Jesus was born in Bethlehem. Luke, who holds that Joseph and Mary resided in Nazareth, explains their presence in Bethlehem as due to the necessity of enrollment in their ancestral city (2:1 ff). While there, Mary gave birth to her son in a stable, "because there was no place for them in the inn" (vs. 7).

The birth in Bethlehem has been challenged on various grounds: during the reign of Herod the Great a Roman census in Palestine is inherently unlikely; Quirinius, under whom Luke says it was held, was not then governor of Syria. C. J. Cadoux writes: "No government in its senses would have required a village-carpenter to undertake a journey of seventy miles simply in order to fill up the census-paper at the place where his *ancestors* had lived centuries before." And it is not likely that Joseph would have taken his wife in an advanced stage of pregnancy on such a trip. The story of the Bethlehem birth probably arose out of the church's reading of OT prophecy (Mic. 5:2).

Answers of varying value have been given to these objections. Evidence from Egyptian papyri indicates that a census was taken in the Roman world every fourteen years. One of these must have fallen *ca.* 8 B.C. and may have been somewhat delayed in Palestine. Quirinius, though not then properly governor of Syria, was in the East as commander in the Homanadensian War (10-7 B.C.) and may have supervised the census in Syria and Palestine. Further evidence from Egyptian papyri shows that in Egypt in A.D. 104 people were required to return to their own town for enrollment along with their kinsmen. It is likely that the same procedure was in effect in Syria-Palestine at the time of Jesus' birth. It is not impossible that Mary made the journey with Joseph, whether out of official or personal reasons. Finally, only extremely skeptical criticism assumes the unhistoricity of a NT statement because there is an OT prophecy corresponding to it. Though questions still remain (e.g., concerning Quirinius), it cannot be said that the NT affirmation of Jesus' birth at Bethlehem has been refuted.

5. Relationship to the child Jesus. Events following the birth are narrated by Luke and Matthew. Luke reports a visit of shepherds to the stable, the circumcision and naming of the child on the eighth day, and the purification ceremony for Mary forty days after the birth (Lev. 12), followed by the presentation of the child at the temple. The fact that Mary's sacrificial offering at the termination of her period of uncleanness consisted of a "pair of turtle doves, or two young pigeons," indicates the humble circumstances of the new parents (Lev. 12:6-8). The presentation ceremony recognized God's claim on the first-born, which, if not actually surrendered to him, had to be redeemed by an offering (Exod. 13: 2, 11-16; Num. 18:15-16). Luke makes no mention of this offering. He seems to interpret the presentation of Jesus by his parents in the light of the story

about Hannah's grateful presentation of Samuel for the Lord's service (I Sam. 1:24-28). The prophetic declaration of Simeon is said to have caused Joseph and Mary to marvel at what was said about the child's future (Luke 2:33).

Matthew tells other infancy stories involving Mary. The Wise Men are said to have found her and the child in a house (Matt. 2:11), presumably in Bethlehem. A journey into Egypt by the holy family in order to escape Herod, and their subsequent return and settlement in Nazareth (vss. 13-23), are recorded.

Luke narrates one incident from the period of Jesus' youth in which Mary figures. When she and Joseph, after much searching, found him in the temple among the rabbis, they were "astonished" (2:48). She reproached her son for such treatment of his father and mother and was told that she should have expected him to be in his Father's house. This remark they did not understand (vs. 50), and Mary added this also to her store of matters for reflection (vs. 51). The story implies that Jesus knew who he was and something about his mission, but that the parents were still somewhat in the dark.

6. Relationship to the adult Jesus. Mary's perplexity and joy over Jesus appear to have continued during the period of his ministry. Joseph apparently was dead by this time, and Mary seems to have been living with Jesus' brothers and sisters at Nazareth (Mark 6:3). She is not represented as accompanying Jesus on his preaching missions in Galilee, as did Mary Magdalene, Joanna, Susanna, and "many others" (Luke 8:3). The picture of her offered in the Johannine story of the wedding at Cana (John 2:1-11) implies that she had faith in her son's ability to meet the emergency, but Jesus' mild rebuke of her shows that she had not entered very far into his understanding of the nature and conditions of his ministry. Similarly, when Jesus' mother and brethren sought him out—obviously to lodge some formal family appeal with him—his attitude reveals a marked independence of them. Instead of warmly welcoming them, he remarks to his hearers that his true relatives are those who join him in obedience to the will of God, that fleshly ties have no ultimate significance (Mark 3:31-35). The priority of the spiritual over the physical relationship to him is similarly emphasized in his response to the woman of the crowd who eulogized his mother: "Blessed rather are those who hear the word of God and keep it!" (Luke 11:27-28). When all allowance is made for the dramatic element in his teaching technique, it still must be said that his family according to the flesh, and even to a degree his mother, seem somewhat removed from him (cf. John 7:1-9).

Mary last appears in the gospels at the foot of the cross (John 19:25-27). Only deep mother love could have emboldened her to stand near a son who was being crucified as an enemy of the state. It is significant that Jesus' brothers are not mentioned as being present. During those last moments Jesus committed his mother to the Beloved Disciple, who thereupon took her to his own home (vs. 27). (Some interpreters view Mary at Cana and at the Cross as representative of Judaism.)

Mary is mentioned only once more in the NT: in Acts 1:14, where she and Jesus' brothers, together with the apostles, are pictured as participating in a prayer meeting following the Resurrection and Ascension. The brothers, like the scattered and confused disciples, had been reached by the testimonies concerning Jesus' resurrection, and James, at least, by a personal encounter with him (I Cor. 15:7). Mary is there, her hopes for her son transmuted and now gloriously realized.

7. Relationship to the other children in the family. Was Mary the mother of children besides Jesus? As noted in § 3 *above*, Roman Catholics affirm her perpetual virginity. The matter has been debated since early Christian centuries. Views fall into three categories: the Helvidian (advocated by Helvidius, *ca.* A.D. 380), which holds that these children (Mark 6:3; Matt. 13:55-56) were Jesus' blood brothers and sisters; the Epiphanian (from Epiphanius, *ca.* A.D. 382), that they were children of Joseph by a former wife; and the Hieronymian (Jerome, *ca.* A.D. 383), that they were the children of Mary, the wife of Alphaeus, the Virgin Mary's sister, and thus Jesus' cousins. Each view has had considerable support in both antiquity and modern times, the last now being favored by Roman Catholics.

Jerome's answer was shaped to meet the views of Helvidius. Jerome held that the word "brother" (ἀδελφός) is used in the Bible in a wide sense—to cover not only actual brotherhood, but also wider kinship, common nationality, and friendship. He argued that three women, not four, are mentioned in John 19:25 as standing at the foot of the cross, the second named being Mary's sister, identified here as "Mary the wife of Clopas," and that this Mary is said in Mark 15:40 to be the mother of James the Younger (i.e., James the Lord's brother [Gal. 1:19]). He believed this James to be the same as "James the son of Alphaeus" of the lists of the apostles (Mark 3:16-19; Matt. 10:2-4; Luke 6:14-16; Acts 1:13). Thus James the Lord's brother was really his cousin.

Later writers affirmed on linguistic grounds the identity of the names Alphaeus and Clopas and found the Judas and Simon mentioned in Mark 6:3 in Judas of James (Luke 6:16) and Simon the Zealot (Luke 6:15). Thus several of Jesus' cousins were held to belong to the Twelve.

Jerome's view, though superficially attractive, is undoubtedly erroneous. Though "brother" (ἀδελφός) is unquestionably sometimes used in the LXX and probably in the papyri in a wide sense, and therefore could have been used by the evangelists in the sense of "relative," its usual meaning is "brother" (blood brother). If they had meant "cousin," why did they not use the customary word (ἀνεψιός; Col. 4:10) for this relationship? Furthermore, to suppose that several of Jesus' cousins were members of the apostolic circle is to fly in the face of the flat statement in John 7:5 that his brothers did not believe in him (cf. Mark 3:21, 31-35). What is more, they are never associated with Mary of Clopas (the assumed wife of Alphaeus) in the gospels, but only with Joseph and Mary—exceeding strange if Mary of Clopas were their mother. And, finally, it is unlikely that John 19:25 means to make Mary of Clopas Jesus' mother's sister. Two sisters in the same home would hardly have borne the same name, Mary. Four women, rather than three, are undoubtedly

meant in this passage. Jerome's hypothesis was devised to support his doctrine of the perpetual virginity of Mary.

The view of Epiphanius is less objectionable on NT grounds. It is possible that Joseph had children by a former wife. But the correlative hypothesis, that Joseph's marriage to Mary was never sexually consummated, seems not to have been believed by the evangelists. Would not the evangelists have avoided such statements as appear in Luke 2:7 ("her firstborn son"); Matt. 1:25 ("Joseph . . . knew her not until she had borne a son") if they had believed in Mary's perpetual virginity?

The Helvidian view, that Jesus' "brothers" were also born of Mary, is supported by other ancients (notably Tertullian) and by many modern scholars. Jesus' committing his mother to the Beloved Disciple at the Cross, said to be unlikely if she had other sons, is no real argument against this, as it overlooks the fact that these sons were at this time hostile to Jesus. They were not at the Cross. And it is possible to argue that if Jesus had actual blood brothers and sisters, he entered more deeply into our humanity than the other views assume.

8. Character. The Mary of the NT represents all that was finest in Jewish womanhood and motherhood. Her deep spiritual sensitivity; her purity, faith, and obedience to the divine will; her scrupulous attention to the training of her son in the religious traditions of his people; her loyalty to him, as evidenced by her presence at the Cross, even when she did not fully understand him—all mark her as a person of remarkable qualities.

That she was mystified by much that her son did is not strange. Jesus did not fit the traditional messianic pattern. His most sensitive disciples were confused. In the light of the Resurrection both they and she began to see through the veil of mystery and to discern the divine purpose in Jesus' strangely wonderful life, death, and resurrection. For her as well as for them, he became "Lord and Christ" (Acts 2:36).

9. Christian tradition. There is no veneration of Mary in the NT. In fact, Jesus expressly warned against such (Luke 11:27-28). Mary takes her place in the NT as one of the servants of God through whom his redemptive purposes toward man were advanced.

However, Christian imagination soon set to work to embellish and expand the NT picture of Mary. In the second-century Protevangelium of James, Mary is said to have been born to rich but childless Joachim and Anna as a result of fervent prayer and to have been dedicated by her grateful parents to a life of service in the temple. There, from three years of age, she lived "like a dove that is nurtured." She was fed by an angel. At twelve she was taken from the temple by Joseph, a widower, as a result of a sign marking Joseph as her divinely ordained protector. Later she was appointed among seven virgins to the task of weaving a new curtain for the temple. During this work the angel of the Annunciation appeared to her. When she at length was found to be pregnant, both she and Joseph were forced to undergo the water test for adultery (Num. 5:16 ff), which they successfully passed. Near the end of the journey to Bethlehem, Joseph searched for a midwife while Mary rested in a cave. A cloud overshadowed the cave, a great light appeared, and the child was born and began to nurse. The midwife was astonished at the miraculous signs accrediting the Virgin Birth. The narrative proceeds to describe the visit of the Magi, the slaughter of the children at Bethlehem, and other happenings.

Legends concerning Mary's death and assumption began to appear. The earliest is contained in the Assumption of the Virgin (*Liber Transitus*), falsely attributed to Melito of Sardis; various recensions of it circulated in the fifth century. This book holds that Mary died in Jerusalem (another tradition says in Ephesus), attended by the apostles, who had been miraculously assembled. A Jewish priest, who during the funeral procession laid his hands in wrath on the bier to overturn it, found that he could not free his hands until he had confessed faith in Mary's divine Son. The body of Mary was placed in a new sepulchre and then raised by the command of Jesus, who appeared before the tomb with a band of angels. Angels straightway bore her into paradise.

Since the fifth century the bodily assumption of Mary has been widely believed in the Roman Catholic Church. A bull issued November 1, 1950, by Pope Pius XII declared that it is a "revealed dogma" that "the Virgin Mary, the Immaculate Mother of God, when the course of her life was finished, was taken up, body and soul, into the glory of heaven." Roman Catholic theology has increasingly ascribed to Mary many of the miraculous features associated with the birth, life, resurrection, and ascension of Jesus in the NT.

***MASADA** mə sä′də [מצדה, mountain stronghold; Μασάδα]. Modern es-Sebbe; an impregnable rock fortress on the W shore of the Dead Sea *ca.* ten miles S of En-gedi, which was the scene of the last stand of the Jewish insurgents in the revolt which began in A.D. 66. It was taken by the Romans after a herculean effort in 73.

Although it plays no direct role in the NT narrative, Masada has been immortalized by the lengthy account of Josephus (War VII.viii.1–ix.2). Its history is brief and violent. According to Josephus it was first fortified by the high priest Jonathan, brother and successor of Judas Maccabeus (161-142 B.C.), but it came to prominence only in the time of Herod the Great. In 42 B.C., during the reign of Hyrcanus II, a certain Helix, an opponent of the brothers Herod and Phasael, came into temporary possession of the stronghold while Herod was away in Syria (Jos. War I.xii.1; Antiq. XIV.xi.7). Knowing its

value full well, Herod soon recovered the citadel (Jos. War I.xii.2) and made it a haven for his family while he was away in Rome claiming his kingdom (40-39 B.C.; Jos. War I.xiii.7-8; xv.1; Antiq. XIV.xiii.8-9; xiv.6); one of Herod's first moves after his return was to force Antigonus to lift his siege of Masada, thus freeing Herod's relatives (Jos. War I.xv.3-4; xvi.1; Antiq. XIV.xv.1-2). Once in firm possession of his realm, Herod began serious work on the fortress and made it a monument to his genius as a builder and military strategist.

The Romans occupied the stronghold during the period of provincial governors in Judea (A.D. 6-66; cf. Jos. War II.xvii.2). In the summer of 66, however, a band of fanatical revolutionaries, known as the sicarii, took it from the Romans by ruse, and it became the focal point of sicarius activity throughout the war (Jos. War II.xvii.2, 8-9; xxii.2; IV.ix.3, 5). By 68 Vespasian had reduced the whole of Palestine save Jerusalem and the three wilderness fortresses of HERODIUM; MACHAERUS; and Masada. It was not until five years later that Flavius Silva, as commander of the Tenth Legion, raised an enormous earthwork and succeeded in breaching the walls. The 960 occupants, except for 7 women and children, formed and executed a suicide pact, which left the Romans masters of their bodies and the smoldering ruins of the palace (Jos. War VII.viii.1–ix.2).

15. Masada

The site of Masada is a mesa, the flat top of which comprises *ca.* twenty acres, much of which is still covered with soil; Josephus' statement that the land inside the fortress was cultivated is therefore not improbable. The sheer rock faces of the mountain rise *ca.* 820 feet on the E and 600 feet on the W above the surrounding valleys. The summit was approached by a "snake" path on the E and a less precipitous route on the W, the latter being guarded by a tower (Jos. War VII.viii.3). Fig. MAS 15.

Most of the extant ruins are to be attributed to Herod the Great. The whole plateau, except for a triple terrace on the N point, was encompassed by a formidable casemate wall with thirty-seven towers. Numerous cisterns were cut into the top of the mountain and into its face, particularly on the W, to ensure an abundant water supply (Jos. War VII.viii.3). A number of buildings are sufficiently well preserved to make evident their plan and function. Within the enclosure wall at the N end is a huge complex of buildings consisting of long, narrow rooms which served as arsenal and for stores (cf. Jos. War VII. viii.4); quarters for part of the garrison were also included in this structure. It is in this complex that the remains of an earlier tower—presumably belonging to Jonathan—are to be found. Adjoining the outer wall on the W is a large palace consisting of rooms grouped around three courtyards with store rooms attached; this residence was probably designed for Herod's entourage. Between the palace and the storehouse-arsenal lies another building, which probably served as the barracks for the Roman garrison during the period 6-66.

The plateau comes to a point on the N in a narrow finger which extends beyond the limits of the fortress proper and drops in two terrace-steps more than one hundred feet below the summit. It was this point which Herod, following his Hasmonean predecessors, selected for his personal palace. The upper palace, which was probably originated by Jonathan and rebuilt by Herod, consists of nine rooms and a semicircular terrace; on the second level sixty-five feet below is a circular structure the function of which is unknown. On the lower terrace, the small area of which abuts the precipitous cliffs, Herod erected a peristyle building with lavish appointments. The three levels of the palace are connected by stairways cut into the rock to hide them from view (Jos. War VII.viii.3).

The remains of two later buildings are found within the fortress: an apsidal church—probably Byzantine—and a monastic complex which may have gone with the church.

While the figures and description of Josephus are at points exaggerated or confused, he has accurately represented the formidableness and beauty of the Herodian stronghold.

MASIAH mə sī'ə [Μεισαίας (B), Μασίας (A)] (I Esd. 5:34); KJV MASIAS —əs. Head of a family of "sons of Solomon's servants" who returned with

Zerubbabel. The name is omitted in the parallels Ezra 2:57; Neh. 7:59. C. T. FRITSCH

MASKIL măs'kĭl [משכיל]; KJV MASCHIL. A word in the title of Ps. 32 and twelve other psalms. In Ps. 47:7—H 47:8 it is translated "a psalm" (KJV "with understanding"). The term is to be derived either from השכיל, "to have understanding" (e.g., Ps. 2:10; Isa. 44:18; cf. LXX συνέσεως in Ps. 32:1—H 31 title; συνετῶς in Ps. 47:7—H 47:8; εἰς σύνεσιν in Ps. 42:1—H 41 title) or from the musical term השכיל (II Chr. 30:22; cf. the parallelism מהללים ["praising"] in vs. 21 and משכילים in vs. 22). The term may signify a psalm accompanied by some special kind of music, or sung at a special (annual) festival.

MASMAN. KJV Apoc. form of MAASMAS; SHEMAIAH.

MASON [גדר, *from verb* build a wall; חצב (*alternately* STONECUTTER), splitter, cutter; חרש קיר, cutter of a wall; חרש אבן קיר, cutter of a stone wall]. Though the ordinary man built his house, cutting his own stone, skilled masons, particularly Phoenicians or those trained by Phoenicians, played a considerable part in the life of Israel.* Solomonic structures show a high class of work in the cutting and laying of stones, including the use of mason's setting-out marks and identification marks (Fig. TEM 33). The tunnel which Hezekiah had made (II Kings 20:20; II Chr. 32:30) shows skill of the cutters in working from both ends toward the middle (Fig. HEZ 18). The palaces of Omri and Ahab at Samaria, together with the later additions there, are an example of excellent work with stone.* Remains of Herod's buildings are impressive in their masonry. Figs. WAL 1-2; SAM 10-11, 14-15, 20; TEM 11.

Much of the native stone in Palestine is soft and not difficult to cut, but becomes hard after exposure to air. A good mason could cut the stone so accurately that no mortar was needed in the laying of his wall. The mason who worked in brick would need mortar.

MASORA mə sôr'ə [מסורה, tradition]; MASORETES măs'ə rēts. Notes entered on the top, bottom, and side margins of MT MSS to safeguard the traditional transmission. They were subsequently assembled into independent collections; and during the later transmission and especially in printed Bibles, they were erroneously regarded as uniform. The Masoretes were the scribal preservers of the Masora.

Leander, *Historische Grammatik der hebräischen Sprache* (1922). B. J. ROBERTS

MASORETIC ACCENTS măs'ə rĕt'ĭk.

1. Function. The MT of the OT contains accents of punctuation and other signs endowed with phonetic and musical meanings. Their significance for the proper reading of the text has been differently evaluated, from total neglect by the Lagarde school to high esteem by Delitzsch and Berliner. Two systems of accents are known: that of the twenty-one prosaic books and the system of the three so-called "poetic" books of Psalms, Job, and Proverbs.

The function of the Masoretic accents is at least twofold, in many cases threefold:

a) They constitute a most exact and intricate system of rhetoric punctuation of the MT. Problems of proper punctuation have frequently influenced the tradition of biblical exegesis, as, e.g., in Isa. 40:3. The Masoretic accents determine the punctuation thus:

> A voice cries:
> "In the wilderness prepare the way of the LORD,"

not:

> A voice cries in the wilderness:
> "Prepare the way of the LORD."

b) Many civilizations and ethnic groups of the fading ancient world used diacritical signs in their MSS in order to indicate to the reader the rise and fall of his voice. These primitive marks developed into the general ecphonetic notation, of which the Masoretic accents are one of many special cases. (The Byzantine, Armenian, Syrian, Nestorian, and Latin churches all developed ecphonetic systems of their own.) Aside from fixing the proper punctuation of a sacred text, the Masoretic accents became also the signs of a primitive notation, upon which the cantillation of scripture was based.

c) In many cases the Masoretic accents are also used to indicate, by their position, the stressed syllable of the respective word of the MT. This third function was imposed upon the Masoretic accent well after the first millennium.

2. The three systems. The external shape of the Masoretic accents has undergone several changes, as has their nomenclature. In correspondence with the three schools of MASORA, one distinguishes three sets of Masoretic accentuation. The oldest one is the so-called Palestinian system; it originated late in the fifth or early in the sixth century A.D. It marks only the strongest disjunctive accents, called in Hebrew מפסקום (full stop, half stop, semicolon, colon, comma, dash) by various arrangements of dots or small strokes. The second was the Babylonian, more complex and also more extensive than the earlier system. The last and definite system was established in Tiberias *ca.* A.D. 900 by Ben Asher and Ben Naphtali. It has been generally accepted by all Jewish groups and was "canonized" by the rabbinic authorities.

3. Age and provenance. The history of the Masoretic accents belongs to the most difficult aspects of textual criticism (*see* TEXT, OT). Its origin is still obscure, in spite of the efforts of Praetorius, Kahle, Grimme, and other scholars to discover the

Exod. 12:2 in Three Renditions (*see* p. 298)

starting point and origin of all ecphonetic notation, and in particular that of scriptural accentuation. Today many, but by no means all, scholars accept Kahle's suggestion that the accents of the Palestinian Masora originated in or near Nisibis (in E Syria) in the fifth century A.D.: the external resemblance of those accents with the oldest Syriac ones seems to sustain this hypothesis.

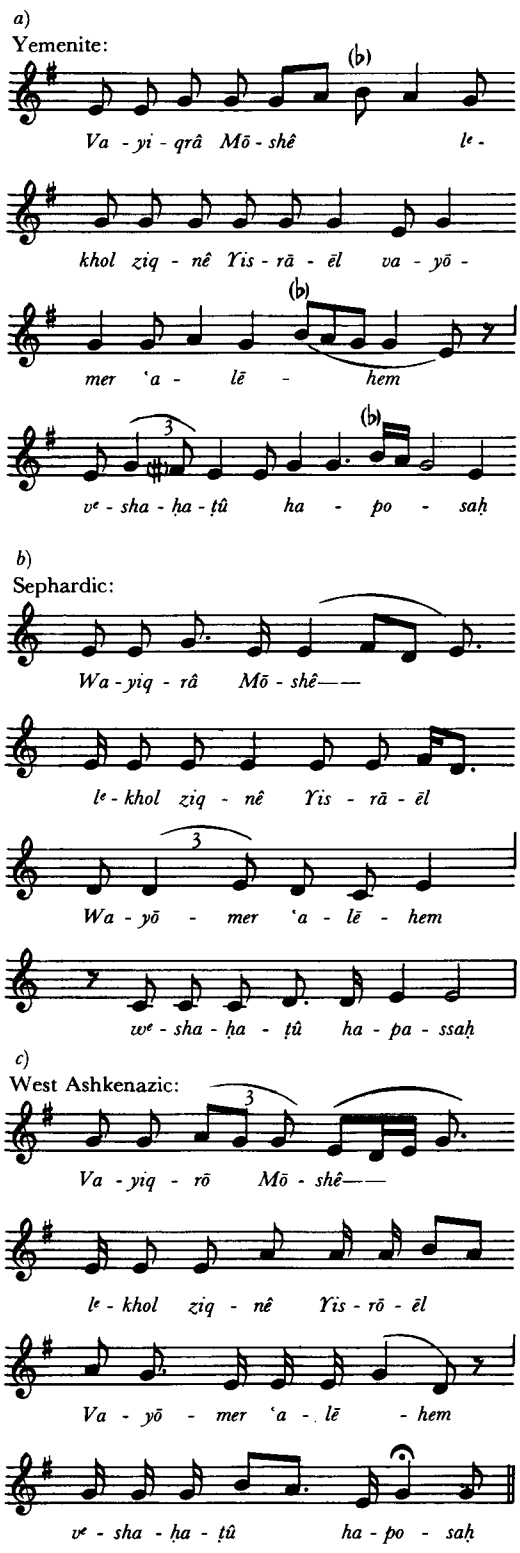
Whether the Masoretes borrowed their accents from Byzantine lectionaries, as Praetorius claimed, or whether they established their system in collaboration with a Nestorian school of catechetes, as Kahle proposes, or whether the method of Alexandrian grammarians played an essential part in the early Masora (Fleischer's assumption), remains problematic. However, there can be no doubt about the resemblance of Byzantine ecphonetic and Hebrew Masoretic accents (*see* Table 1). The ecphonetic accents became, in the course of many centuries, the forerunners of our Western musical notation.

4. Cantillation of the Hebrew Text. Masoretic accents have preserved the traditional features of ancient cantillation, a practice which was used long before the destruction of the temple (A.D. 70) and probably went back to Ezra himself in the fourth century B.C. Cantillation of scripture was governed by grammatical rules, syntactic analysis, and the interpretation of the text. The study of the Masoretic accents and of their significance for the cantillation of the text is therefore of extreme importance for the exegesis of the MT.

The practice of chanting biblical texts antedates by many centuries the establishment of the Masoretic accents, as we know from early tannaitic literature, since a rabbinic discussion in the Talmud (Meg. 32*a*) takes cantillation for granted and even closes with the categorical dictum: "Whoever reads Scripture without melody and the Mishna without chant, to him applies the biblical verse: 'I gave them laws which were not beautiful' " (from Ezek. 20:25). Rabbi Aqiba also championed the practice of cantillation (Tosef. Par. 4(3), 7, ed. Mandelkern). There is, however, no evidence that the chant of these early centuries was in any way regulated. We must assume that cantillation crystallized but slowly into a standardized pattern during the thousand years that preceded its regulation by Masoretic accents. But this new unity was lost again, when the subsequent migrations of the Jews broke up the once-effected general pattern. Thus, today, we make a distinction between three basic traditions of cantillation, typical of the Ashkenazic, Sephardic, and Yemenite Jews, respectively. Nonetheless, the same set of Masoretic accents has been accepted by all three groups as the basis of their scriptural chant. The latter is called *trôp* in Hebrew (from τρόπος), and must well be distinguished from the *ta'ᵃamê migrâ'*, as the Masoretic accents are called in Hebrew.

Of the three oral traditions of cantillation, the Yemenite one is doubtless the oldest. Three significant facts confirm this assumption: (*a*) The Yemenite Jews use the same group of motifs for both the Torah and the prophetic lesson; (*b*) the musical range of their cantillation is narrow and hardly exceeds a fourth; (*c*) there are resemblances and even identities between Yemenite cantillation and ancient

Exod. 12:21



After A. Z. Idelsohn, *Jewish Music in Its Historical Development*; copyright, 1929, by Holt, Rinehart and Winston, Inc.; copyright renewed in 1956

elements of Gregorian chant (*see below*). The Sephardic cantillation is divided into two types of the Eastern Mediterranean group (Balkan, Turkey, and the Near East in general) and the Western group (Low Countries, England, France). However, their common origin is obvious, and there are many similarities between the two groups. The Ashkenazic tradition knows of many variants, influenced by the folk song of the various environments (SW Germany, Central Europe, Poland, Latvia, Lithuania, Russia, Hungary, etc.), but its basic identity is unmistakable.

All systems of cantillation are very closely connected with certain grammatical principles of the Hebrew language. The punctuating function of the Masoretic accents, upon which cantillation rests, is still evident in every chanted scriptural verse of whatever tradition.

There are various theories concerning the original function of cantillation. Probably the most plausible ones were offered by Franz Delitzsch and E. Hommel. Both scholars emphasize the gradual transition from clearly accentuated speech to musically intoned recitation. Hommel, moreover, gives many examples of peddlers' and laborers' cries which demonstrate such a transition. According to these scholars, the cantillation of scripture has the function of drawing public attention to the lesson and of solemnizing the ritual of scripture reading. A somewhat different interpretation was offered by the *Tossafists* (Talmud commentators of the High Middle Ages) and, in recent times, by A. Berliner and especially A. Ackermann. According to their view all cantillation had originally a mnemotechnical purpose, and they list a number of medieval Hebrew statements to this effect. Of course, the two theories mentioned do not exclude each other.

The various musical systems of cantillation are clearly distinguished by the motifs for the strong, punctuating accents (מפסקים), which, in many cases, have a distinctly cadential character. Since it is impossible to illustrate here all traditional systems of cantillation, let us confine ourselves to a comparative list of six disjunctive accents of the various traditions and their typical motifs (*see* p. 296). Finally, one biblical sentence as cantillated by each of the three main traditions will be presented (*see* p. 297).

It is but natural that these melodic patterns, repeated and heard three times every week, for at least a millennium, have exerted a powerful influence upon the crystallization of synagogue chant in general.

The first musical notation of cantillation was attempted by Rabbi Salomon Mintz in North Italy, *ca.* 1483 (MS in the Jews College, London). This, however, was an effort lacking in system and method. It was the great Reuchlin and his collaborator Böschenstein, who in his *De Accentibus Linguae Hebraicae* (Haguenau, 1518) gave the first exact notation of Pentateuch cantillation of the Ashkenazim. Many others followed Reuchlin's example—e.g., Sebastian Münster, A. Guarin, Bartolocci. Reuchlin's (or Böschenstein's) sources are somewhat obscure, although their notation reflects a cantillation which hardly deviates from today's Ashkenazic rendition.

Modern scholars have noticed in this version of cantillation a conspicuously pentatonic element, which does not occur in either the Sephardic or the Yemenite tradition. It has been pointed out that the German version of Gregorian chant during the Middle Ages exhibits very similar pentatonic motifs. The profound research of Peter Wagner let it seem probable that the preference for pentatonic formulas in the High Middle Ages was a result of the recent intrusion of secular Teutonic folk song. This theory might also account for the pentatonic elements in the Jewish tradition of Central Europe. However, there can be no doubt that the original tradition was not pentatonic, but based upon a tetrachordal structure of melodic invention, which is generally characteristic of all ancient strata of Jewish music.

This fact is demonstrated by the frequent resemblances between Yemenite cantillation and ancient elements of Gregorian chant (*see below*).

We observe that a syntactically ordered Hebrew sentence (according to Masoretic principles) and its melody have lost their original punctuating structure in the Latin version. Only the melodic flow was retained, including the characteristic cadence.

MASPHA măs'fə. KJV Apoc. form of MIZPAH (I Macc. 3:46 [*see* MIZPAH § 5]; I Macc. 5:35 [but read ALEMA; so RSV]).

MASREKAH măs'rə kə [משרקה, vineyard(?)] (Gen. 36:36; I Chr. 1:47). The home of Samlah, a king of Edom. The name may be preserved in Jebel el-Mushraq, near the Nabatean site of Khirbet et-Telajeh, twenty miles S-SW of Ma'an, near the Hismeh Valley. Eusebius puts it in the Gebalene, the N part of Edom. V. R. GOLD

MASSA măs'ə [משא]. The seventh son of Ishmael, and the eponymous ancestor of a N Arabian tribe (Gen. 25:14; I Chr. 1:30). A people of Mas'a (Mas'ai) are also mentioned by Tiglath-pileser III, along with the inhabitants of Tema (Gen. 25:15), Saba', Haiappa (? = Ephah; Gen. 25:4), Badana, Hatti, and Idiba'ileans (= Adbeel; Gen. 25:13), who submitted to his rule and paid tribute (*ANET* 283).

The name occurs also in Prov. 30:1; 31:1, where it is a part of the title. In Prov. 30:1 it appears with a definite article, המשא, and hence can be rendered as "the burden" or "the oracle." The term משא is frequently used of prophetic oracles or utterances (Isa. 13:1; Nah. 1:1; Hab. 1:1; etc.). However, as has been shown, משא has acquired in prophetic usage an ominous sense, suggesting the idea of an impending doom or the judgment of God. Such an idea, however, is not present in Prov. 30, and hence המשא cannot mean "the burden" or "the oracle" here. Perhaps the term was originally a gentilic, המשאי (="the Massait")—e.g., an inhabitant of Massa or a member of the tribe or the nation of Massa. On the other hand, in Prov. 31:1 the word is without a definite article, and it may be read "king of Massa." Thus, in Prov. 30:1; 31:1, "Massa" may refer, as in Gen. 25:14; I Chr. 1:30, to the N Arabian tribe of Massa.

The names of these two persons occur also in some form in certain Minaean and other ancient S Arabian inscriptions. In Bar. 3:23 there is a reference to the "sons of Hagar [Ishmaelites or N Arabians], who seek for understanding on the earth."

Bibliography. P. K. Hitti, *The History of the Arabs* (1953), p. 43; W. F. Albright, "The Biblical Tribe of Massa and Some Congeners," *Studi orientalistici in onore di Giorgio Levi della Vida* (1956), pp. 1-14. J. L. MIHELIC

MASSADA mă sā'də. Alternate form of MASADA.

MASSAH AND MERIBAH măs'ə, měr'ə bə [מסה, ומריבה, מסה, *from* נסה, to test, try; מריבה, *from* ריב, to strive, contend, find fault]. The names of a station of the Israelites in the wilderness.

The combination of these two words occurs three times: Exod. 17:7; Deut. 33:8; Ps. 95:8. The first refers to the locality where the lack of water caused the Israelites to grumble and to challenge Moses' position of leadership; and, as Moses implied in Exod. 16:7-8, this contention amounted to testing Yahweh's presence among them: "Is the LORD among us or not?"

In both the second and the third occurrence of this combination, the allusion is to the above experience in the wilderness, but with the following difference. In Deut. 33:8, Yahweh is said to have tested the tribe of Levi at Massah and contended with it at the waters of Meribah. This suggests an experience different from that contained in Exod. 17:7 or in the parallel account in Num. 20:13, of which otherwise there is no record. On the other hand, it is possible that the episode of Exod. 17:7; Num. 20:1-13 was interpreted by the writer of the Blessing of Moses (Deut. 33) as God's testing of Moses, who was of the tribe of Levi (Exod. 6:17-27). Deut. 33:8-10, however, breaks completely the style, meter, and content of the rest of the poem. The passage is regarded by some scholars as a late addition. On the other hand, in Ps. 95:8-9 the allusion is clear and corresponds with the actions presented in Exod. 17:1-7; Num. 20:1-13. Whether Deut. 33:8 is a reference to a now forgotten historical experience, in which Levi's faithfulness was subjected to a test, or whether it is a later, interpretative addition, as some scholars claim, or both, we do not know.

For the question of location and other allusions to Meribah, *see* MERIBAH.

MASSEBAH măs'ə bə. Transcription of the Hebrew מצבה (*massēbhâ*), used by archaeologists as a technical term for "sacred pillar." *See* PILLAR. Fig. PIL 55.

MASSEIAH; MASSIAS. Apoc. forms of MAASEIAH.

MASSORAH, MASSORETES. *See* MASORA.

MAST [תרן (Isa. 33:23; Ezek. 27:5); חבל (Prov. 23:34), *possibly* what is roped, *cf.* חבל, rope]. A long pole rising from the keel of a vessel through the deck to support the sail.

Of the three biblical references (Prov. 23:34; Isa. 33:23; Ezek. 27:5), only Ezek. 27:5 refers to the mast of a specific vessel, the mast (of cedar of Lebanon) of a Tyrian ship propelled by oar and sail.

The earliest masts on Egyptian river boats were bipod to give greater stability to the reed craft. Later a single-pole mast was used, and when it was not required for navigation, it was commonly unstepped and placed on deck. On seagoing Mediterranean vessels permanent masts, supported by shrouds, came to be standard equipment, but even these larger ships sometimes had masts that could be dismantled.

W. S. MCCULLOUGH

MASTEMAH măs'tə mə. *See* DEMON § B.

MASTER (AS TITLE OF JESUS). **1.** A KJV translation of διδάσκαλος. *See* TEACHER.

2. A translation of ἐπιστάτης (from ἐφίστημι, "stand over"), a term meaning "manager" or "chief" and applied to various kinds of officials in the LXX and in Greek literature (e.g., to overseers of work,

military officers, etc.). Only Luke uses it in the NT, each time in the vocative, ἐπιστάτα, as addressed to Jesus. At corresponding points Matthew and Mark use διδάσκαλε (cf. Luke 8:24; 9:49), or κύριε or ῥαββί (cf. Luke 9:33), or nothing at all (cf. Luke 5:5; 8:45; 17:13). Luke evidently regarded all these terms as roughly equivalent, using ἐπιστάτα chiefly for reasons of style. PIERSON PARKER

MASTIC [σχῖνον]; KJV MASTICK. A shrub or small tree whose sap provides a gumlike resin used for chewing and medicine in the Near East. The tree

16. Mastic

is referred to (in the garden of Joakim in Babylon) in Sus. 54. The shrubby tree, *Pistacia lentiscus* L., is common throughout the Mediterranean world, though the island of Chios is famed for high quality mastic.

See also BALM; BALSAM; FLORA § A7*b*.

Fig. MAS 16. J. C. TREVER

MATHANIAS. KJV Apoc. form of BESCASPASMYS.

MATHUSALA. KJV NT form of METHUSELAH.

MATRED mā'trĭd [מטרד, spear, *from* Arab. *mitrad*(?)] (Gen. 36:39; I Chr. 1:50). A parent of Mehetabel, the wife of Hadar (Hadad), a king of Edom. The MT makes Matred the daughter of Mezehab, but in Genesis the LXX and the Syr. more credibly make Matred the son of Mezahab. M. NEWMAN

MATRITES mă'trīts [מטרי] (I Sam. 10:21; RSV rightly includes the LXX addition); KJV MATRI—trī. A family of the tribe of Benjamin. In the selection of the king the lot fell upon them; and one of their members, Saul of Gibeah, was crowned the first king of Israel. E. R. DALGLISH

MATTAN măt'ən [מתן, gift (of God)]. **1.** A priest of Baal slain before his altar by the revolutionaries who killed Queen Athaliah and placed Joash on the throne of Judah (II Kings 11:18; cf. II Chr. 23:17).

2. The father of Shephatiah, a prince under King Zedekiah in the days of Jeremiah the prophet (Jer. 38:1).

Bibliography. M. Noth, *Die israelitischen Personennamen* (1928), pp. 37, 170. B. T. DAHLBERG

MATTANAH măt'ə nə [מתנה, gift] (Num. 21:18-19). A stopping place of the Israelites on their route from the Arnon into the territory of Sihon king of the Amorites. Khirbet el-Medeiyineh, on the left bank of the Wadi eth-Themed in the upper reaches of the Wadi el-Wala, has been suggested as the most probable location. Its distance SE of Madeba would agree with the figure of twelve miles given by Eusebius in his Onomasticon. A dry ditch or moat encircled the mound about halfway down the slope. Exploration disclosed also traces of a wall surrounding the top of the mound. The pottery sherds indicate occupation from perhaps shortly before 1200 to *ca.* 800 B.C., most of it belonging to the Early Iron I period (1200-900).

Bibliography. B. Baensch, *Exodus-Leviticus-Numeri* (1903), p. 580; N. Glueck, "Explorations in Eastern Palestine," *AASOR*, XIV (1934), 13-27. J. L. MIHELIC

MATTANIAH măt'ə nī'ə [מתניה, מתניהו; Apoc. Ματθανίας]; KJV Apoc. MATTHANIAS măth'ə-nī'əs. **1.** The original name of King Zedekiah of Judah (II Kings 24:17). The name was changed by the Babylonian conqueror Nebuchadnezzar.

2. The son of Mica, a Levite and Asaphite, and one of the first to return to Jerusalem after the Exile, according to the Chronicler (I Chr. 9:15).

3. A son of Heman, and a member of the temple musicians, who "prophesied" with lyres, harps, and cymbals (I Chr. 25:4).

4. A Levite and Asaphite (*see* ASAPH; II Chr. 20:14).

5. A son of Asaph, a Levite who took part in the sanctifying of the temple in the religious reform under King Hezekiah of Judah (II Chr. 29:13).

6. A Levitic leader of the temple choir in the time of Zerubbabel (Neh. 11:17, 22; 12:8).

7. A Levitic gatekeeper who guarded the storehouses of the gates in Jerusalem (Neh. 12:25).

8. A Levite, the father of Shemaiah (Neh. 12:35).

9. Grandfather of Hanan, a treasurer in the storehouse; and the father of Zaccur (Neh. 13:13).

10. Four of the returned exiles who had married foreign wives and were therefore thought to have broken the covenant (Ezra 10:26, 27, 30, 37; I Esd. 9:27, 31).

Some of the above may be identical, but it is now impossible to tell. E. R. ACHTEMEIER

MATTATHA măt'ə thə [Ματταθά] (Luke 3:31). One of the ancestors of Jesus. His father was Nathan, a son of King David.

MATTATHIAS măt'ə thī'əs [Ματταθίας = מתתיה, מתתיהו(?)]. **1.** Mattathias I, the father of the Hasmoneans. He was a native of Jerusalem but settled in Modin. A member of the priestly family of Jehoiarib (cf. I Chr. 24:7), his genealogy is listed in I Macc. 2:1 and in Jos. Antiq. XII.vi.3.

Mattathias defied King Antiochus' decree of violation of the law by declaring: "I and my sons and my brothers will live by the covenant of our fathers. Far be it from us to desert the law." He refused to sacrifice to heathens and slayed an offender. He commanded that the Jews fight on the sabbath rather than be cut down, and he conducted underground guerrilla warfare against the enemy, circumcised children, and thereby rescued the law (I Macc. 2 ff). His motto was: "Let every one who is zealous for the law . . . come out with me!"

He led for one year and died in 168/167 B.C. at the age of 146. His burial place was in the ancestral tomb in Modin.

His last will and testament to his sons was: "Obey the ordinance of the law." Therein, as portrayed by Josephus, he stressed the idea of immortality, "for though our bodies are mortal and subject to death, they can, through the meaning of our deeds, attain heights of immortality" (Antiq. XII.vi.3).

The rabbis spoke of Mattathias in glowing terms (Meg. 11*a*). As progenitor of the Hasmoneans, he is remembered in special Hanukkah prayers as the spearhead of the battle for religious freedom.

It has been suggested that Taxo in the Assumption of Moses is to be identified with Mattathias.

Bibliography. S. Zeitlin, "The Assumption of Moses," *JQR*, vol. 38 (1947); R. H. Pfeiffer, *History of NT Times* (1949), pp. 14, 80; S. Tedesche and S. Zeitlin, *The First Book of Maccabees* (1950), p. 32.

2. Mattathias II, third son of Simon the Hasmonean. He was murdered by Ptolemy, a brother-in-law, when the latter killed Simon and his sons at Jericho (I Macc. 16:14; Jos. Antiq. XIII.viii.1; War I.ii.3).

3. Son of Absalom; one of Jonathan's (the Hasmonean's) captains who escaped ambush. When the Syrians under Demetrius attacked the Hasmonean army, they fled at Hazor, but Jonathan then came to rout the Syrians (I Macc. 11:70).

Bibliography. R. H. Pfeiffer, *History of NT Times* (1949), p. 19.

4. Son of Ananos; appointed by Agrippa I as high priest (A.D. 42-43; Jos. Antiq. XIX.vi.4).

5. Mattathias ben Margalit, a scribe who, with Judas ben Sariphaeus, insurrected against Herod. Josephus (Antiq. XVII.vi.2) calls him a "celebrated interpreter of Jewish law." Mattathias and Judas incited young men to pull down the large golden eagle which Herod had erected over the gate of the temple. For this insurrection Mattathias was burned. Josephus remarks that on the night there was an eclipse of the moon (War I.xxxiii).

6. The father of Josephus; descendant of a distinguished priestly family; there are also two ancestors of the same name. One of the forefathers called Mattathias had married a daughter of Alexander Janneus (Jos. Life I; Antiq. XVI.vii.1).

7. Mattathias ben Theophilus, a native of Jerusalem who succeeded Simon ben Boethus as high priest appointed by Herod (5-4 B.C.). He became ritually unclean on the Day of Atonement and could not perform the services; he was then assisted by one Joseph ben Ellemus. Herod later deprived Mattathias of the high priesthood (Jos. Antiq. XVII.vi.4). In the Talmud his name is not mentioned in the narrative (Tos. Yom. 1.4; Yom. 12*b;* J. Yom. 38*d*).

8. Son of Theophilus; appointed high priest in A.D. 65 by Agrippa II. He succeeded Jesus ben Gamaliel, but was deposed before the siege. Because he was of the aristocratic peace party, he was put to death by Simon ben Giora, whom he had invited to Jerusalem (Jos. Antiq. XX.ix.7).

Bibliography. H. Graetz, *Monatsschrift* (1881), pp. 62-64.

9. Son of Boethus; high priest (Jos. War VI.xxii; IV.ix.11; V.xiii.1. S. B. HOENIG

MATTATTAH măt'ə tə [מתתה, gift (of God); Apoc. Ματταθίας] (Ezra 10:33; I Esd. 9:33); KJV MATTATHAH —thə; KJV Apoc. MATTHIAS măthī'əs. One of the laymen persuaded by Ezra to divorce their foreign wives.

Bibliography. M. Noth, *Die israelitischen Personennamen* (1928), p. 170.

MATTENAI măt'ə nī [מתני, gift (of God); Apoc. Ἀλτανναῖος (Codex A), Μαλτανναῖος (Codex B)]; KJV Apoc. ALTANEUS ăl'tə nē'əs. **1.** A priest in the days of Joiakim the high priest (Neh. 12:19).

2. A layman among those persuaded by Ezra to divorce their foreign wives (Ezra 10:33; I Esd. 9:33).

3. Another layman in the same group as 2 *above* (Ezra 10:37; the name is not recognizable in the parallel I Esd. 9:34).

Bibliography. M. Noth, *Die israelitischen Personennamen* (1928), pp. 38, 170. B. T. DAHLBERG

MATTHAN măth'ăn [Ματθάν=מתן (II Chr. 23:17; Jer. 38:1)] (Matt. 1:15; Luke 3:23 ff in MS D). An ancestor of Jesus. F. W. GINGRICH

MATTHANIAS. KJV Apoc. form of MATTANIAH.

MATTHAT măth'ăt [Ματθάτ, Μαθθαθ, Μαθθατ, Ματταθ=מתת] (Luke 3:24, 29). The name of two ancestors of Jesus.

MATTHELAS. KJV Apoc. form of MAASEIAH 12.

MATTHEW măth'ū [Μαθθαῖος, Ματθαῖος; Heb. *or* Aram. מתי *or* מתאי, *shortened from* מתתיה *or* מתניה, gift of Y]. One of the twelve apostles of Jesus, according to the four NT lists (Mark 3:18; Matt. 10:3; Luke 6:15; Acts 1:13).

Matt. 9:9; 10:3 assert that he was a tax collector before he became a follower of Jesus. In Mark 2:14 this man is called "Levi the son of Alphaeus" (D, Θ, and other MSS read "James the son of Alphaeus" here, obviously in an attempt to bring the name into line with the list in Mark 3:16-18). Luke calls him simply Levi (5:27, 29). *See* LEVI 4; JAMES 4.

In Mark and Luke, Levi and Matthew seem not to be regarded as the same person. Only in Matthew is this equivalence made. Is it historically correct?

It is argued that Jews frequently bore two names, that the name Matthew may have been given him after he became a disciple of Jesus (cf. Simon Peter), that the tradition lying behind the identification in Matthew is very early, and that there would be no good reason for the equivalence if it were not his-

torical. Conversely, it is held that Mark and Luke know nothing of it, that it is not proved that Jews carried two Jewish names ("Peter" is an epithet, not a true name), that "the tax collector" of Matt. 10:3 is an early gloss intended originally to refer to James the son of Alphaeus (who in some texts of Mark 2:14 is said to have been the tax collector), and that Origen and others denied the identity of Levi and Matthew (*see below*).

It seems obvious from the many problems in coordinating the four NT lists and doing justice to other data about the apostles in the gospels that the exact membership of the first group was soon forgotten. The early tradition of the identity of Levi and Matthew may or may not be sound.

If Matthew was Levi, he was in the service of Herod Antipas near or at Capernaum. It was his duty to levy on merchandise carried over the Damascus-Acre road and perhaps to tax the fishing and other industries of the area. Jesus' ministry around Capernaum provided many opportunities for contacts between the two prior to the occasion of the call (Mark 2:14).

Luke says that Levi entertained Jesus and a large company of tax collectors at a banquet in his home (5:29; the location is unclear in Mark 2:15). Was this Levi's way of celebrating his break with the old life, his method of introducing others to Jesus, or simply a gesture of gratitude to one who looked on tax collectors and other despised persons, not as horrible sinners, but as potential members of the kingdom of God?

The early church believed that Matthew wrote our first gospel (*see* MATTHEW, GOSPEL OF). Heracleon (Clement *Stromata* IV.ix), Origen (*Contra Celsum* I.lxii), and others distinguished between Levi and Matthew. Eusebius said that Matthew first evangelized among Hebrews and then among other peoples (Euseb. Hist. III.24.6). Clement of Alexandria made Matthew a vegetarian (*Instructor* II.i). Heracleon (Clement *Stromata* IV.ix) held that he died a natural death, but late legend dramatized his death by fire or the sword. It tended to confuse Matthew and Matthias. The tradition in the Babylonian Talmud (Sanh. 43*a*) concerning the trial and execution of "Matthai" is probably of no historical value.

Bibliography

1. The order of the gospels. Matthew is the first of the gospels, in the traditional order. But this is not necessarily the chronological order, and there is good reason for thinking that Matthew was one of the later gospels, rather than the first. Tradition has maintained its early date, and the location of Matthew as the first book of the NT has in turn supported the tradition, at least has maintained its wide acceptance in popular thought. But, in the first place, it is quite certain that Matthew is later than Mark, upon which, like Luke, it is based (*see* GOSPELS); further, as we shall see, its formulation of the gospel tradition, the problems with which it deals, especially those of the Palestinian or Syrian church, the carefully arranged order and articulation of its contents—all these probably point to a later date than Luke. Nevertheless, the fact that Luke and Matthew reflect no influence of one upon the other—save as the MS text of Matthew has influenced Luke, as it has influenced the other gospels—makes it impossible for us to claim that either of these two gospels must be later than the other. And anyway, their dates must be somewhere within the same generation, approximately between A.D. 90 or 95 and A.D. 115. So far as internal evidence goes, it is only a general probability that the order of the gospels was Mark, Luke, Matthew, John.

But this literary probability is confirmed archaeologically:

a) Since the time of Irenaeus (A.D. 180), and even before, the four beasts named in Rev. 4:7 have been identified, in Christian exegesis and art, with the four evangelists—the fourfold gospel canon had been formed presumably thirty years before Irenaeus wrote his work *Against Heresies* (see III.11.8). The lion was Mark, the ox was Luke, the "living creature with the face of a man" was Matthew, the flying eagle John. But there is nothing in these gospels, either covert reference or literary or theological character, to suggest the identifications.

Why should Mark be symbolized by a lion, Luke by an ox, Matthew by a man? The description is based on Ezek. 1:10, but the symbolism is modified—in Ezekiel each figure had "the face of a man in front, . . . the face of a lion on the right side, . . . the face of an ox on the left side, . . . the face of an eagle at the back." The author of Revelation has made this over into four separate creatures, not alike in form or features. The ultimate origin of the symbol may have been ancient Assyrian mythology, or rather the later Assyrian astral lore, in which Nergal was a winged lion, Marduk a winged bull, Nebo a human being, Ninib an eagle. These four astral gods were identified with the four cardinal directions—a view reflected in Irenaeus' insistence that there must be four gospels—and can be only four—as there are four cardinal directions, east, west, north, south, and four winds, four quarters of the earth, etc. Four was also Plato's "perfect" number, as later expositors pointed out. But the strange and unaccountable thing is Irenaeus' assumption that his readers will recognize, as something already known, that the lion symbolized Mark, etc; and that, in other words, the order of the evangelists is the order of the four living creatures: Mark,

Luke, Matthew, John. This is unaccountable—unless it was the order in which, as some early Christians recalled (contrary to Papias, *ca.* A.D. 135, and others), the gospels had been written.

b) Further evidence for this tradition, as contrasted with the views of Papias and, later, Augustine, may be seen in the old Roman mosaics in the mausoleum of Galla Placidia, outside the Church of San Vitale at Ravenna. Here on a low, antique bookcase with sloping shelves the four gospels are pictured in the following order:

MARCVS	LVCAS
MATTEVS	IOANN ES

The date of the mosaic is *ca.* 440. Galla Placidia was the sister of Honorius, the Emperor of the West, and her adventurous and really heroic life ended at Ravenna soon after she had ordered her mausoleum to be built. The date of the mosaics, 440, is scarcely more than a century after the Council of Nicea (325), and only nine years after the Council of Ephesus (431). It was evidently early enough to antedate the popular acceptance of Augustine's conjecture, based on Papias, according to which Matthew came first, then Mark, "walking in Matthew's footsteps and abridging him," then Luke and John (Augustine *On the Agreement of the Evangelists* I.2.4).

It cannot be said that a specific tradition underlies this order at Ravenna, though it is not improbable. Some explanation there must be. Possibly some artist or scholar, uninfluenced by the Papian-Augustinian view, preserved what once had been the traditional order, the same as that presupposed by Irenaeus. For these mosaics are not Byzantine but Roman—i.e., old Italian. The same order is found elsewhere: e.g., in the nearby Accademia at Venice, where the medallion reliefs in the ceiling of the Sala della Presentazione preserve the same order. And there are other instances: e.g., a Spanish copper-gilt set of plaques of the four evangelists in the Metropolitan Museum, New York (M 167), probably from the twelfth century; or a modern Russian brass binding, in relief, of an Evangelisterion by Ovchinnikov, where the order is reversed—the binding is modern, but its motif is ancient.

Luke	Mark
John	Matthew

Of course, such evidence is not conclusive, but it supports the probability advanced on the basis of the literary data, and—to say the least—demands an explanation, the simplest being the one already suggested by the internal evidence of the gospels themselves. On the other hand, there is no similar archaeological or literary evidence, so far as we know, of a similar early date of origin, supporting the Papian-Augustinian order.

Other orders are found in various MSS, but they are more easily explained: e.g., the placing of the apostles' names first, as in the Clermont list (from Egypt, *ca.* 300), Matthew, John, Mark, Luke; or the Cheltenham list, discovered by Mommsen in 1885 and sometimes called the Mommsen list (from North Africa, *ca.* 360), Matthew, Mark, John, Luke—where the apostles are kept together but Mark, as the "abridgment" of Matthew, follows next to it; or in Codex Bezae, probably from the fifth century, which has Matthew, John, Luke, Mark, and reflects the low estimate of Mark held commonly after the fourth century. (It is surprising that the copyists of D did not bring Luke-Acts into sequence.) *See bibliography.*

c) Moreover, the simplest explanation of the present order, found in our NT today, is that when the Papian-Augustinian hypothesis came to prevail, and was accepted as genuine tradition, the order of the gospels was altered only to the extent of shifting Matthew to first place, leaving Mark, Luke, and John where they had always been.

2. The traditional theory. The view that Matthew was the earliest gospel rests mainly upon the statement of Papias quoted by Eusebius in his *Church History* (III.39.16): "Matthew compiled [and arranged: the Greek verb, συνετάξατο, means both] the *logia* [oracles] in the Hebrew language [lit., dialect], and each one interpreted them [i.e., either translated or expounded them, or both] as best he could." The modern view that by *logia* Papias meant a life of Christ, or a gospel, or the sayings of Jesus, or Q, is most improbable. For hundreds of years, *logion* had been the technical term, in Greek, for a divine oracle, an inspired utterance—e.g., the oracles of Apollo delivered at Delphi. In time the usage spread to the OT, viewed as a collection of such divinely inspired utterances (cf. the "living oracles" delivered at Mount Sinai [Acts 7:38] and the "oracles of God" in Rom. 3:2; Heb. 5:12; I Pet. 4:11). In time, also, but not before the second century, the utterances of Christ were described as oracles. That Papias (unlike some modern writers) did not confuse *logia* with *logoi* ("words") is clear from the same chapter in Eusebius, § 14, where also Papias is quoted. In view of the character of Matthew's materials, and the large number of his quotations from the OT, viewed as "prophecies" which Christ "fulfilled" (*see* § 6 *below*), it is most probable that Papias meant exactly what he said: "Matthew compiled the prophetic oracles [of the OT] in the Hebrew dialect, and each one [each teacher in the early church] interpreted them as best he was able."

The later church fathers assumed without question that Matthew, being a disciple and the collector of the logia, must have been the first evangelist to write. They overlooked the fact that Papias himself—as quoted by Eusebius—discusses Mark before Matthew. So Irenaeus assumed (Her. III.1.1; Euseb. Hist. V.8.2-6; the old Anti-Marcionite gospel Prologues, from the period between Papias and Irenaeus, unfortunately lack the Prologue to Matthew; and the Muratorian Canon, *ca.* 180-200, is likewise fragmentary, though Luke is described as the "third" gospel—the order presupposed is probably the one we now have). So Clement of Alexandria assumed (Euseb. Hist. VI.14. 5-7), who found it natural for the gospels to begin with Matthew's genealogy; so did Eusebius himself (Hist. III.24.5-8), and Jerome (*Proem to the Commentary on Matthew,* §§ 5-7), as well as Augustine. It cannot be proved that the order favored by the later church fathers rests upon early tradition. It looks

more like the rationalization of a *fait accompli*, as fateful for the historical interpretation of the gospels as was the assignment of the Pentateuch to Moses, or the Psalms to David, the author of Daniel to the days of Belshazzar, or the writing of Hebrews to the apostle Paul.

But the theory that Matthew was the earliest gospel, and that Mark abridged it—a view in flagrant opposition to Papias' view of Mark as based on Peter's teaching (Euseb. Hist. III.39.15)—or, in its modern form, that Matthew was first written in Hebrew (or Aramaic, as some writers who hold this view maintain), and then translated into Greek after Mark was written, is impossible. If Mark is an abridgment, it must abridge both Matthew and Luke, as its relations are as close to one as to the other; but no one could abridge two works and show equal reliance upon both, keeping them in perfect balance, but betraying none of the peculiar literary qualities or theological views of either. By far the simplest and most natural view of the Synoptic gospels is the one which looks upon Matthew and Luke as two entirely independent gospels—both, however, being based upon Mark as one of their two primary sources, the other being Q (*see* Q; GOSPELS). Luke cannot have used Matthew, nor Matthew Luke, for similar cogent reasons: neither is influenced by the other's distinctive "ideas," language, or theological convictions, and neither is affected by the peculiar sources of the other (L or M). Their sole bond of connection is Mark, which both use almost *in toto*. (This is not to deny the later influence of the text of Matthew upon that of Luke, perhaps in the second century; but that was after the finished gospels had been in circulation for some time.) Further, the view that Matthew, or any other of our four gospels, was originally written in Aramaic, though warmly advocated by several modern scholars, has been almost universally repudiated. The gospel traditions undoubtedly once circulated in oral Aramaic; but the written gospels are Greek books, and the basic source for Matthew and Luke was unquestionably a Greek work, the Gospel According to Mark. Even the advocates of Aramaic gospels have to assume that the translators of Matthew and Luke kept their eyes on both the Aramaic original and the already-existing Greek translation of Mark—a complicated hypothesis for which there is no evidence in the gospels themselves.

3. The structure of Matthew. When we examine the structure of the Gospel of Matthew, it is evident that the work, whatever its sources, has been very carefully and artistically arranged. Like many ancient Jewish works, it is in five "books" or main divisions—cf. the five books of the Pentateuch, and the Psalms, the five Megilloth, the five chapters (now six) of Pirke Aboth read on sabbath afternoons following Passover. These five divisions are alike in structure: each contains a narrative section (i.e., Jesus' ministry), followed by a didactic section (i.e., Jesus' teaching). In outline the gospel is as follows:

I. The infancy narrative, chs. 1–2
II. Discipleship, chs. 3–7
  A. Narrative, the beginning of Jesus' ministry, chs. 3–4
  B. Discourse, the Sermon on the Mount, chs. 5–7
III. Apostleship, chs. 8–10
  A. Narrative, Jesus' ministry of healing and teaching, 8:1–9:34
  B. Discourse, the mission of the disciples, 9:35–10:42
IV. The hidden revelation, 11:1–13:52
  A. Narrative, growing opposition to Jesus, chs. 11–12
  B. Discourse, the hidden teaching of the parables, 13:1-52
V. The church, 13:53–18:35
  A. Narrative, messiahship and suffering, 13:53–17:23
  B. Discourse, church administration, 17:24–18:35
VI. The Judgment, chs. 19–25
  A. Narrative, controversies in Jerusalem, chs. 19–22
  B. Discourse, criticism of the scribes and Pharisees, ch. 23; the doctrine of the Parousia, chs. 24–25
VII. The passion narrative, chs. 26–27
VIII. The Resurrection, ch. 28

Comparing Matthew with Mark, one finds it most striking that Matthew has kept Mark's order, for the most part, as well as preserving almost the entire contents of Mark (Luke, on the contrary, has long omissions); and Matthew has done this while impressing upon his finished work the subject arrangement just described. The gospel is clearly the work of a first-rate literary artist and teacher, who has reflected long and deeply upon the substance of the Christian gospel—both Jesus' life and his teaching—and has combined the teaching material with the biographical (or anecdotal) narratives in a most appropriate way. That the evangelist has behind him a "school" of Christian teachers and interpreters is not improbable; this is the way teaching was usually transmitted in the ancient world, especially in Semitic areas. Although many persons still hold that the author was Matthew the tax collector (cf. 9:9), who would have been a man accustomed to writing, to keeping accounts and making records, the gospel itself points to a later author—or authors. As is true of most ancient books based upon tradition, partly oral, partly written, many persons (cf. Luke 1:1) had a share in handing on the stories and sayings upon which it was based, and even in its literary formation. The gospels do not rest upon the literary production of four men, or their own personal recollection, but upon the widespread social memory of the larger group, the whole Christian church, from its beginning, in the particular area where each gospel was finally produced. If the Gospel of Matthew was produced in Syria—i.e., either in Antioch or somewhere in its hinterland (as Bacon held)—this would still be within the area of bilingual Hellenized Semitic culture; this hypothesis well accounts, not only for the language of the gospel, its Jewish as well as its Greek background, its thought, the institutional development of the church which it takes for granted, but also for the same phenomena in the cognate writing, the Didache (or "Teaching of the Twelve Apostles," now found among the APOSTOLIC FATHERS). As Paul Wernle said (*see bibliography*), the author of Matthew was "a Hellenist."

4. Main sources: Mark and Q. In addition to his use of Mark as his basic source, the author also uses the collection, oral or written, of Jesus' sayings which modern scholars call "Q," from German *Quelle*, "source" (i.e., as Bernhard Weiss and others used the term, the "apostolic" source; *see also* SYNOPTIC PROBLEM). This was no doubt originally an Aramaic collection (and therefore not the logia collected by Matthew "in the Hebrew dialect," according to Papias, *see* § 2 *above*); but it had already been translated into Greek, and was used by both Luke and Matthew in its Greek form—though clearly with occasional reference—certainly in Matthew's use—to the underlying Aramaic. Since Matthew has arranged this sayings material to meet the requirements of his didactic organization of the gospel (i.e., by main subjects, in five "books"), it seems probable that the original order of Q is better preserved by Luke, whose aim is not so much subject arrangement as historical continuity, and who makes no effort to rearrange Q by any topical order of his own. In fact, when we examine this Q material, in its Lukan order, we find that it already had an order of its own, quite different from both Matthew's topical arrangement and the order of Luke's material. Obviously it begins with John the Baptist and the beginning of Jesus' ministry; obviously it had to end with Jesus' teaching about the coming Parousia of the Son of man and the Last Judgment. But the main, central section of Q is on the subject of discipleship, as if this were veritably an ancient "Master's Guide for His Disciples," which Matthew made over into a manual for church doctrine, order, discipline, and worship.

As identified by most modern NT scholars, the contents of Q were as in Table 1 (in the order of Luke). No special theory of origin, or of some possibly ampler form of which this is an abridgment, or of authorship, is presupposed by the following list. Q is simply the material, common to Luke and Matthew, not derived from Mark: its extraction and isolation is almost a mathematical or physical process. Obviously, some explanation of its origin ought to be possible. At the moment, the only fact to be emphasized is the high value placed on this source by both the later Synoptists, Luke and Matthew. In Table 1, probable passages, whose inclusion is all but self-evident, are cited within brackets.

Table 1
The Contents of Q

John the Baptizer:
- 3:[2*b*], 3*a*, 7*b*-9, John's preaching of repentance (cf. Matt. 3:1-10)
- 3:16-17, John's prediction of the coming Judge (cf. Matt. 3:11-12)

The ordeal of the Messiah:
- 4:1*b*-12, the Temptation (cf. Matt. 4:1-11)

Jesus' public teaching:
- 6:20-49, the Sermon on the Plain (or Mountain; cf. Matt. 5:3-12, 39-48; 7:12, 1-5, 16-27; 10:24-25; 12:33-35; 15:14)

The response to Jesus' teaching:
- 7:1-2, 6*b*-10, the centurion's faith (cf. Matt. 8:5-13)
- 7:18*b*, 19, 22-28, 31-35, John's emissaries; Jesus' words about John (cf. Matt. 11:2-6, 7-19)
- 9:57*b*-62, various followers (cf. Matt. 8:19-22)

The mission of the Twelve:
- 10:2-16, the mission of the disciples (cf. Matt. 9:37-38; 10:7-16, 40; 11:21-23)
- [10:17*b*-20, the return of the Twelve]
- 10:21*b*-24, the rejoicing of Jesus (cf. Matt. 11:25-27; 13:16-17)

Jesus' teaching about prayer:
- 11:2-4, the Lord's Prayer (cf. Matt. 6:9-13)
- [11:5-8, the parable of the friend at midnight]
- 11:9-13, constancy in prayer (cf. Matt. 7:7-11)

Controversy with the scribes and Pharisees:
- 11:14-23, the charge of collusion with Beelzebul (cf. Matt. 12:22-30)
- 11:24-26, the story of the unclean spirit (cf. Matt. 12:43-45)
- 11:29*b*-32, the warning contained in the "sign of Jonah" (cf. Matt. 12:38-42)
- 11:33-36, Jesus' sayings about light (cf. Matt. 5:15; 6:22-23)
- 11:39*b*, 42-43, [44], 46-52, the controversy with the scribes and Pharisees (cf. Matt. 23:4-36)

Jesus' teaching about discipleship (especially the duties of disciples when persecuted):
- 12:2-12, the testimony of disciples amid adversaries (cf. Matt. 10:26-33; 12:32; 10:19-20)
- 12:22-31, on freedom from care (cf. Matt. 6:25-33)
- 12:33*b*-34, on treasure (cf. Matt. 6:19-21)
- 12:39-40, 42-46, three parables on watchfulness (cf. Matt. 24:43-51*a*)
- 12:49-53, messianic divisions (cf. Matt. 10:34-36)
- [12:54-56, signs of the times (cf. Matt. 16:2-3)]
- 12:57-59, the duty of speedy reconciliation (cf. Matt. 5:25-26)
- 13:18-21, the parables of the mustard seed and the leaven: the steady growth of the kingdom despite opposition (cf. Matt. 13:31-33)
- 13:24-29, the narrow way (cf. Matt. 7:13-14; 7:22-23; 8:11-12)
- 13:34-35, the fate of Jerusalem (cf. Matt. 23:37-39)
- 14:11 = 18:14, on self-exaltation (cf. Matt. 18:4; 23:12)
- 14:16-23, the parable of the great supper (cf. Matt. 22:1-10)
- 14:26-27, on hating one's next of kin, and on bearing the cross (cf. Matt. 10:37-38)
- 14:34-35, the saying on salt (cf. Matt. 5:13)
- 15:4-7, the parable of the lost sheep (cf. Matt. 18:12-14)
- [15:8-10, the parable of the lost coin]
- 16:13, on serving two masters (cf. Matt. 6:24)
- [16:16-18, the Law and the Prophets were until John; on divorce (cf. Matt. 11:12-13; 5:18, 32)]
- 17:1-2, on offenses (cf. Matt. 18:6-7)
- 17:3-4, on forgiveness (cf. Matt. 18:15, 21-22)
- 17:6, on faith (cf. Matt. 17:20*b*)

The coming Parousia:
- 17:23-24, 26-30, 34-35, 37*b*, the Parousia (cf. Matt. 24:26-28, 37-39; 10:39; 24:40-41, 28)
- 19:12-13, 15*b*-26, the parable of the entrusted talents (cf. Matt. 25:14-30)
- [22:28-30, the apostles' thrones (cf. Matt. 19:28)]

A study of this table, especially of the section on discipleship, and even more a study of the passages in a "harmony" like *Gospel Parallels* (in English) by B. H. Throckmorton or the latest edition of A. Huck's

Synopsis of the First Three Gospels (in Greek, but with English headings, edited by H. Lietzmann and F. L. Cross) will make clear Matthew's method of using Q and rearranging it to fit the Markan outline, which he has already taken over, abridged, and reorganized.

5. Special source or sources. Not only has Matthew rearranged Q to suit his arrangement by subject; he has also added considerable material which is peculiarly his own, not shared with any other NT writer. Many scholars (e.g., B. H. Streeter) designate this material, or large parts of it, with the letter "M"—just as they designate Luke's peculiar material by the letter "L." Peculiar to Matthew is the genealogy of Jesus (1:1-17), which cannot be identified with that of Luke (3:23-38) save for thirteen names between Abraham and David—where the agreement probably rests upon a common use of I Chr. 2:1-15 or Ruth 4:18-22, but not I Chr. 3:10-19, except for the two names Shealtiel (Salathiel) and Zerubbabel (from I Chr. 3:17-19), and, of course, Joseph, who was known to Christian tradition as the father of Jesus. (Matthew and Luke do not agree on the name of Joseph's father, nor any other ancestors between Zerubbabel and Joseph, a period of *ca.* 460 years, to which Matthew assigns twelve generations, Luke nineteen.) But Matthew's genealogy is artistic, schematic, arranged (presumably) in three groups of fourteen generations (1:17), from Abraham to Jesus (actually there are fourteen plus fourteen plus twelve generations). The great point of the two genealogies is evidently Jesus' royal descent, from David and from Abraham, in Matthew; and his universal human ancestry, his descent from Adam, who was figuratively or typically the "Son of God," in Luke (3:38).

Peculiar to Matthew are also the account of the birth of Jesus and the story of his infancy, the Wise Men ("magi," or astrologers) from the East, the flight into Egypt, and the return to Palestine and settlement in Nazareth after Herod's death (1:18–2:23). All this special material, which has only the faintest parallels in Luke's infancy narrative (chs. 1–2) and is really incompatible with Luke's narrative as a whole, is an example of Jewish Christian "midrash"—i.e., the imaginative elaboration, in story form, of a striking text or series of texts, combined with a certain element drawn from historical tradition somewhat as a modern historical writer describes an event for which information is very scanty, but uses inference and imagination, and (above all) endeavors to write "in character"—i.e., appropriately—to the person or persons involved. Much of the "historical" writing in the OT is of this nature—not annalistic data drawn from written records, but imaginative, poetic, descriptive. Much of the ancient historical literature of the East, in general, had this character. And even the more "scientific" historical writing of the Greeks and Romans often allowed for such an element, especially in writers who dealt, not with a narrowly limited and fairly recent or contemporary period like Thucydides or Tacitus, but with the more distant past, as did Herodotus and Livy. Where annalistic or factually recorded history did not exist, we can either have its imaginative reconstruction, using whatever data are available (in this case chiefly OT texts), or go without—and the Christian church decidedly preferred an appropriate story. Thus Matthew's narrative begins: "Now the birth [or origin, *genesis*] of the Messiah was like this"—translating literally from what many scholars believe to be the best Greek text (1:18). Here the central text, in which the story centers, is Isa. 7:14 as read in the LXX, not the Hebrew:

> Behold, a virgin shall conceive and bear a son,
> and his name shall be called Emmanuel.

The doctrine of the Virgin Birth, found only here in Matthew and in Luke 1:34-35 (though Luke's present text may be due to textual conformation; *see below*), and nowhere else in the NT, is clearly an inference from the LXX translation of Isaiah; and in the first or second century such an inference would be perfectly natural and unquestioned. If many great and famous men were believed to be the sons of virgin mothers, or supernaturally born—and there was then no "scientific" objection to the belief—why should not Matthew conclude that the LXX verse referred to the birth of the Messiah, and had been "fulfilled" at Jesus' conception and birth? *See* JESUS CHRIST.

So also the story of the search for his birthplace, and its location in Bethlehem on the basis of ancient prophecy (2:1-6); and the terrible tale of Herod's murder of the children at Bethlehem, and of the flight into Egypt—a mingling of prophecy, interpretation, fancy, and fact, all "in character": for Herod was a grisly murderer, as we know from Josephus, and Rachel's "children" were slain (though Ramah was not Bethlehem), and Egypt was often a refuge for Jews driven out of their homeland (though *Nazōraios*, in 2:23, does not mean "Nazarene," and it is impossible to find this text in the OT). This "midrashic" type of narrative, immediately recognizable to anyone familiar with ancient Jewish literature, is not only found here and there in the main body of the gospel, which is based on Mark, but reappears in quantity again at the end. The story of Peter's walking on the water and his loss of faith (14:28-31), the blessing of Peter and the promise of the keys (16:17-19)—these are attached to Markan pericopes, and are few in number. Far more ample are the amplifications of the passion and resurrection narratives: the designation of Judas as the betrayer (26:25); the rebuke of Peter's resistance to and Jesus' acceptance of suffering as in accordance with the Scriptures (26:52-54); the death of Judas (27:3-10, also in accordance with scripture—three passages woven together—though the story contradicts the one in Acts 1:18-19); Pilate's wife's dream (27:19), and Pilate's dramatic washing his hands of responsibility and the impossible self-imprecation of "the people" (27:24-25); the earthquake following the death of Jesus on the cross (27:51*b*-53); the guard at the tomb (27:62-66); the second earthquake, at the Resurrection (28:2-4, again with a verse of scripture as the key [Eccl. 12:3 LXX]); the meeting of Jesus with the two Marys (28:9-10, a far better conclusion than Mark 16:8 provides); the bribing of the soldiers (28:11-15); and the resurrection appearance in Galilee (28:16-20) leading to the Great Commission—the sublime climax and conclusion to the whole gospel. All this special material is midrashic, and anyone familiar with the Jewish midrashim will recognize it as both typical and extraordinary. If one can rid his mind of the narrowly modern view of religious literature, which must be strictly factual

to be "true," and can recognize in imaginative writing like this, in poetry and midrash, the presentation of something more than bare annals—viz., what the worshipers of Jesus came, in later Jewish Christian circles, to believe of him—the material will gain added meaning and value. It is like some of the material in the apocryphal gospels (*see* GOSPELS, APOCRYPHAL) or even in some of the imaginative "lives of Christ" of today; but it is older, more Jewish, more appropriate, and explicitly "in character." Fortunately, the question of "historicity" need not be raised—as in another example, the coin in the fish's mouth (17:24-27), or the two animals at the Triumphal Entry (21:1-7); for, as modern theologians now recognize, the Christian message of salvation is not dependent upon, or even proclaimed by means of, these elaborations of the gospel story. They must be viewed as fancies—pious fancies, no doubt, but still only the poetic or imaginative embellishment of the central narrative and message of the NT.

Another type of material, cognate to this, but more explicit, is found in the OT quotations which Matthew cites, predominantly—but not always—from the LXX.

6. OT quotations in Matthew. These are over sixty in number, as follows, not counting innumerable echoes of single words and phrases which give Matthew's style its marked "biblical"—i.e., OT—coloring.

1) Matt. 1:23 (Isa. 7:14 LXX):

> " 'Behold, a virgin shall conceive and bear a son,
> and his name shall be called Emmanuel'

(which means, God with us)."

The Hebrew reads "a young woman" and "she shall call." Matthew uses the LXX.

2) Matt. 2:6 (Mic. 5:2):

> And you, O Bethlehem, in the land of Judah,
> are by no means least among the rulers of Judah;
> for from you shall come a ruler
> who will govern my people Israel.

This follows approximately the MT. Matthew's unconcern for the doctrine of Christ's pre-existence is reflected in his omission of the last two lines of Mic. 5:2.

3) Matt. 2:15 (Hos. 11:1): "Out of Egypt have I called my son."

Hosea's reference was to God's redemption of Israel from slavery in Egypt; Matthew reinterprets.

4) Matt. 2:18 (Jer. 31:15):

> A voice was heard in Ramah,
> wailing and loud lamentation,
> Rachel weeping for her children;
> she refused to be consoled,
> because they were no more.

Again Matthew sees this "fulfilled," not in the history of Israel, but in the events surrounding the birth of Christ. Here is an example of early Christian midrash, or imaginative interpretation of the OT.

5) Matt. 2:23: "He shall be called a Nazarene [or Nazorean]."

This strange text, introduced by the same formula as other messianic prophecies in Matthew, is not from the OT, and may come from some lost apocryphal book. Just possibly it may be a covert "mystical" reference to Isa. 11:1 or 53:2.

6) Matt. 3:3 (Isa. 40:3 LXX):

> The voice of one crying in the wilderness:
> Prepare the way of the Lord,
> make his paths straight.

As in Mark 1:3, Matthew's text follows the LXX. The Hebrew had read: "In the wilderness prepare . . ."; but early Christian exegesis saw this verse "fulfilled" in John's preaching "in the wilderness."

7) Matt. 4:4 (Deut. 8:3 LXX):

> Man shall not live by bread alone,
> but by every word that proceeds from the mouth of God.

Matthew, following the Greek translation, renders as poetry what Deuteronomy had set forth in prose. The same is true of Jesus' quotations from Deuteronomy in vss. 7, 10—the temptation narrative is almost a mosaic of Deuteronomic verses applied to the career of Jesus as Israel's true Messiah, one of the profoundest themes in the Gospel of Matthew.

8) Matt. 4:6 (Ps. 91:11-12):

> He will give his angels charge of you.
> . . . . . .
> On their hands they will bear you up,
> lest you strike your foot against a stone.

These two verses, indeed the whole of Ps. 91—so violently in contrast with Ps. 22, the passion psalm—must have given rise to much painful questioning in the early church. Why should Jesus die? Above all, why had God permitted his chosen Messiah to die on a cross? The whole temptation narrative is a midrashic or exegetical answer to this question.

9) Matt. 4:7 (Deut. 6:16): "You shall not tempt the Lord your God."

Again Israel's experience—and the divine oracle addressed to the nation—is interpreted as referring to the individual and specifically to Christ: "You shall not put the LORD your God to the test, as you tested him at Massah." As generally in the Bible, "temptation" means "testing," "making trial of," "putting to the test" (see Ecclus. 2:1 ff).

10) Matt. 4:10 (Deut. 5:9; 6:13):

> You shall worship the Lord your God
> and him only shall you serve.

The whole OT forbids idolatry and polytheism—above all, the worship of evil spirits; positively, it commands the worship of God alone, the one and only God, as specifically in the Shema (Deut. 6:4-5) and in Isa. 43:11; 44:6, 8; 45:6, 21; 46:9; etc.

11) Matt. 4:15-16 (Isa. 9:1-2):

> The land of Zebulun and the land of Naphtali,
> toward the sea, across the Jordan,
> Galilee of the Gentiles—
> the people who sat in darkness
> have seen a great light,
> and for those who sat in the region and shadow of death
> light has dawned.

I.e., "Galilee of [or, surrounded by] the Gentiles" will see the dawn of the new day in Jesus' proclamation of the gospel. This is another good example of messianic reinterpretation of the OT.

12) Matt. 5:5 (Ps. 37:11): "Blessed are the meek."

This is taken directly from the Psalter: "The meek shall possess the land," in order to complete the num-

ber (nine) of the Beatitudes in Matthew's recension.

13) Matt. 5:21 (Exod. 20:13; 21:12): "You shall not kill."

This and the other OT verses quoted in Matt. 5 belong to the reinterpreted halachah of the gospel, which widens and deepens the range of the law's demands by including, more explicitly than in the Pentateuch, the inner attitudes and motives of men. The law is not rejected or abrogated (5:17-20), but made more authoritative than ever, as contrasted with any purely external legal casuistry, dealing only with overt actions.

14) Matt. 5:27 (Exod. 20:14): "You shall not commit adultery."

15) Matt. 5:31 (Deut. 24:1): on divorce.

In the Pentateuch, the privilege of divorce is taken for granted, and the text in Deuteronomy rules out the possibility of collusion or blackmail through remarriage. But Jesus attacked the whole practice of divorce and remarriage (Mark 10:2-12; cf. Mal. 2:13-16).

16) Matt. 5:33 (Deut. 23:22): on oaths.

17) Matt. 5:38 (Deut. 19:21): the *lex talionis*.

18) Matt. 5:43 (cf. Lev. 19:18): "You shall love your neighbor and hate your enemy."

The second half of this command cannot be found in the OT, though it is presupposed in some passages (e.g., the command to exterminate the Canaanites, and the psalmist's "Do I not hate them that hate thee, O LORD?" [Ps. 139:21]). But Jesus' teaching included all men within the range of perfect love—which must be like the love of God.

19) Matt. 5:48 (Deut. 18:13; Lev. 19:2): "You, therefore, must be perfect, as your heavenly Father is perfect."

This is more than an echo of the OT; it reinterprets and applies the command to be upright in God's sight: one must be *like* God.

20) Matt. 8:17 (Isa. 53:4): "He took our infirmities and bore our diseases."

Like 12:18-21, this is an example of the evangelist's recognition of the character of Jesus as anticipated and described by Isaiah. The "fulfilment" was more than a series of external events; it involved deep insight into the divine purpose of God's revelation. To Matthew, the aspects of Jesus' messiahship which meant most were not power and glory—though he emphasizes these more than any other evangelist—but gentleness, tenderness, divine compassion.

21) Matt. 9:13 (Hos. 6:6; cf. I Sam. 15:22): "I desire mercy, and not sacrifice."

This is another instance of Matthew's religious interpretation of the OT.

22) Matt. 10:35 (Mic. 7:6): family divisions in the last time—a common feature in apocalyptic descriptions of the "messianic woes," the social and political chaos which was to precede the end of the present age.

23) Matt. 11:5 (Isa. 29:18-19; 35:5-6; 61:1; cf. Luke 4:18-19): the supernatural gifts of the Messiah —i.e., of the divinely appointed and anointed King of Israel in the age to come.

These were often emphasized: he should be a powerful ruler, as in Isa. 9; Ps. 110; but also, as in Ps. 72, he should be the friend of the poor and suffering, and should bring them relief and release.

24) Matt. 11:10 (Exod. 23:20; Mal. 3:1):

> Behold, I send my messenger before thy face,
> who shall prepare thy way before thee.

The words of Malachi have been transformed (as in the LXX, and in Mark 1:2) under the influence of Exod. 23:20, and then reinterpreted as a reference to the coming of John the Baptist, who is Jesus' predecessor and the preparer of his "way." Matt. 11:10 may be the source of the expanded text in Mark (1:2*b* is not in "Isaiah").

25) Matt. 12:7 (Hos. 6:6; cf. I Sam. 15:22; Matt. 9:13): identical with 21 *above*.

26) Matt. 12:8-21 (Isa. 42:1-4; cf. 41:9):

> Behold, my servant whom I have chosen,
> my beloved with whom my soul is well pleased.
> I will put my Spirit upon him,
> and he shall proclaim justice to the Gentiles.
> He will not wrangle or cry aloud,
> nor will any one hear his voice in the streets;
> he will not break a bruised reed
> or quench a smoldering wick,
> till he brings justice to victory;
> and in his name will the Gentiles hope.

This long quotation is approximately identical in wording with Isa. 42:1-4, but has been influenced by ch. 41. *See* 20 *above*.

27) Matt. 12:40 (Jonah 2:1): "As Jonah was three days and three nights in the belly of the whale, so will the Son of man be three days and three nights in the heart of the earth."

This gives Matthew's literalizing interpretation (cf. the literalism in 21:1-9) of the saying and its OT reference: the forms found in Mark 8:12; Luke 11:30; and here in Matthew represent a series of interpretations.

28) Matt. 13:14-15 (Isa. 6:9-10):

> You shall indeed hear but never understand,
> and you shall indeed see but never perceive.
> For this people's heart has grown dull,
> and their ears are heavy of hearing,
> and their eyes they have closed,
> lest they should perceive with their eyes,
> and hear with their ears,
> and understand with their heart,
> and turn for me to heal them.

Matthew gives in full the passage which the saying in Mark 4:12 gives briefly and which Luke 8:10 echoes. Matthew is surely right in explaining Jesus' use of parables "because seeing they do not see"—as against Mark's and Luke's "so that," as if Jesus intended to withhold the truth from his hearers. Their interpretation of Isa. 6:9-10 seems to be justified by the OT language, where the final result is ascribed to the divine purpose; but Matthew assumes that the judgment of blindness has already overtaken his hearers, and therefore Jesus had to use simple figurative language to help them understand.

29) Matt. 13:35 (Ps. 78:2):

> I will open my mouth in parables,
> I will utter what has been hidden since the
> foundation of the world.

This is a further scriptural support for the straightforward, natural understanding of Jesus' purpose in using parables. The psalmist is referred to as a

"prophet"—for Matthew the whole of the OT was "prophetic" of the Latter Days and especially of Christ.

30) Matt. 15:4 (Exod. 20:12; Deut. 5:16; Exod. 21:17; Lev. 20:9): "Honor your father and your mother. . . . He who speaks evil of father or mother, let him surely die."

Both the positive commandment and the negative threat of penalty—a draconic survival of primitive custom—are given by Mark and Matthew. Together they set the background for Jesus' criticism of scribal laxity in interpretation of the halachah. This, of course, reflects Matthew's viewpoint also.

31) Matt. 15:8-9 (Isa. 29:13 LXX):

> This people honors me with their lips,
> but their heart is far from me;
> in vain do they worship me,
> teaching as doctrines the precepts of men.

The passage (given in the same form in Mark 7:6-7) differs somewhat from the MT (for which see RSV), and is doubtless in the form in which it circulated in the early Gentile churches, where it expressed the church's rejection of Jewish traditions.

32) Matt. 18:16 (Deut. 19:15): "Take one or two others along with you, that every word may be confirmed by the evidence of two or three witnesses."

This just and salutary provision in the Jewish law (see Num. 35:30; Deut. 19:15-21; 17:6) is taken over by Matthew into the Christian halachah, the subject of the present context. That it should be required among Christians is clear from I Cor. 6 and later history.

33) Matt. 19:4-5 (Gen. 1:27; 2:24): "Have you not read that he who made them from the beginning made them male and female, and said, 'For this reason a man shall leave his father and mother and be joined to his wife, and the two shall become one'?"

This passage is quoted as in Mark 10:6-8, approximately as in the Hebrew. So also is vs. 7 (Deut. 24:1).

34) Matt. 19:18-19 (Exod. 20:12-16; Deut. 5:16-20; Lev. 19:18): The commandments necessary for life, as in Mark 10:19; Luke 18:20; but in a different order from Exodus, and with the addition of Lev. 19:18 (which some ancient authorities omit; *see* 43-44 *below*).

35) Matt. 21:5 (Isa. 62:11; Zech. 9:9):

> Tell the daughter of Zion,
> Behold, your king is coming to you,
> humble, and mounted on an ass,
> and on a colt, the foal of an ass.

This is also quoted, in abridged form, in John 12:15. In both passages there is a significant variation from the OT—the omission of line 4 of Zech. 9:9: "Triumphant and victorious is he," perhaps as inappropriate to the present occasion.

36) Matt. 21:9 (Ps. 118:25-26; cf. II Sam. 14:4): "Hosanna to the Son of David! Blessed be he who comes in the name of the Lord! Hosanna in the highest!"

All four gospels give this verse, but in different forms (cf. Mark 11:9-10; Luke 19:38; John 12:13). Matthew alone omits mention of "the king" or "the kingdom of David"—though the title "Son of David" implies it. *Cf.* 35 *above*.

37) Matt. 21:13 (Isa. 56:7; Jer. 7:11): "My house shall be called a house of prayer."

As in Mark 11:17; Luke 19:46, two OT quotations are combined: the description of the temple is from Isaiah; the criticism of the priesthood echoes that of Jeremiah, who accused them of murder and oppression, not merely of extortion as in some modern expositions of the gospels. The temple was no "den" of petty "thieves," but a "cave of armed bandits," robbers of the whole nation, including the poor.

38) Matt. 21:16 (Ps. 8:2):

> Out of the mouth of babes and sucklings
> thou hast brought perfect praise.

This is found only in Matthew. The text varies from the MT, but paraphrases it.

39) Matt. 21:33 (cf. Isa. 5:1-2; 27:2): "There was a householder who planted a vineyard, and set a hedge around it, and dug a wine press in it, and built a tower, and let it out to tenants, and went into another country."

The language echoes that of Isaiah, but this was only natural in the telling of the story. It is not cited as a quotation.

40) Matt. 21:42 (Ps. 118:22-23):

> The very stone which the builders rejected
> has become the head of the corner;
> this was the Lord's doing,
> and it is marvelous in our eyes.

As in Mark 12:10-11, abridged in Luke 20:17, this is understood as an explicit reference to Jesus, and a rebuke to his critics.

41) Matt. 22:24 (Deut. 25:5-6; Gen. 38:8): "Teacher, Moses said, 'If a man dies, having no children, his brother must marry the widow, and raise up children for his brother.' "

This is a typical "school problem," cited in Mark 12:19; Luke 20:28, and one which doubtless still caused trouble for early Christian believers in the resurrection—who usually (unlike Paul in I Cor. 15; II Cor. 5; etc.) viewed it as material and physical.

42) Matt. 22:32 (Exod. 3:6): ". . .'I am the God of Abraham, and the God of Isaac, and the God of Jacob.' He is not God of the dead, but of the living."

As in Mark 12:26; Luke 20:37, this is a fine example of early church exegesis which doubtless went back to Jesus' own expositions of the Scriptures, in the synagogues and elsewhere publicly.

43) Matt. 22:37 (Deut. 6:5): "You shall love the Lord your God with all your heart, and with all your soul, and with all your mind."

This commandment appears also in Mark 12:30; Luke 10:27. It was a part of the Shema, recited by every observant Jew twice or even thrice a day. But the unique thing about the teaching of Jesus was his combination of the "second commandment" with it, as follows:

44) Matt. 22:39 (Lev. 19:18): "You shall love your neighbor as yourself."

This is also in Mark 12:31; Luke 10:27. Rabbi Hillel had set forth the "Golden Rule" (Matt. 7:12), in its negative form ("Do not to another what you would not have him do to you"), as a "summary of the law." Jesus' characteristic emphasis added love to one's neighbor as like—or equal—to the first.

45) Matt. 22:44 (Ps. 110:1; cf. Mark 12:36; Luke 20:42-43):

> The Lord said to my Lord,
> Sit at my right hand,
> till I put thy enemies under thy feet.

Clearly this was one of the favorite "messianic" texts used in the early church (see Acts 2:34-35; I Cor. 15:25; Heb. 1:13; 10:13). Indeed, it was a text which exercised considerable influence upon the formulation of early Christian doctrine and theology.

46) Matt. 23:39 (Ps. 118:26): "Blessed be he who comes in the name of the Lord."

This is found also in Luke 13:35. The verse from the "Psalm of Ascents" might have been thought to be fulfilled at the entry into Jerusalem (*see* 36 *above*), but both Luke and Matthew (i.e., Q) give it a further significance: its final fulfilment will come to pass at the Parousia—which, as in much Jewish and early Christian thought, was somehow related to the fate of Jerusalem.

47) Matt. 24:7 (Isa. 19:2): "Nation will rise against nation, and kingdom against kingdom, and there will be famines and earthquakes in various places."

This is from Mark 13:8; cf. Luke 21:10. The language is typical (cf. II Chr. 15:6), but the oracle against Egypt (Isa. 19:2) is still awaiting its complete fulfilment, on a universal scale.

48) Matt. 24:15 (Dan. 9:27; 11:31; 12:11): the "desolating sacrilege spoken of by the prophet Daniel."

As in Mark 13:14 (but reinterpreted in Luke 21:20 as the siege of Jerusalem), this famous oracle was taken to refer, not to the desecration of the temple in 168 B.C., or to Caligula's proposed statue in A.D. 40, but to Antichrist standing in the holy place at the end of the age. Apocalyptic was constantly reinterpreted, in generation after generation.

49) Matt. 24:21 (Dan. 12:1): the "great tribulation."

This is as in Mark 13:19; again Luke reinterprets.

50) Matt. 24:29-31 (Isa. 13:10; 34:4; Zech. 12:10 ff; Dan. 7:13; Isa. 27:13; Zech. 12:10-14; Deut. 30:4): a mosaic of apocalyptic detail.

Some of this is already combined in Mark 13:24-27. Luke considerably abridges and tones down. Matthew, as usual, expands and emphasizes apocalyptic details.

51) Matt. 26:15 (Zech. 11:12): the payment of Judas.

Matthew makes explicit the "thirty pieces of silver," which in Mark 14:11; Luke 22:5 is only "money." Thus he prepares for the "fulfilment" of the oracle of Zechariah in 27:3-10 (*see* 55 *below*).

52) Matt. 26:31 (Zech. 13:7): "I will strike the shepherd, and the sheep of the flock will be scattered."

This is in Mark 14:27. It is again one of the more obvious passages of the OT to be interpreted of Jesus and his disciples (cf. John 16:32). Another interpretation is found in Matt. 9:36.

53) Matt. 26:38 (Pss. 42:6, 11; 43:5): "My soul is very sorrowful, even to death."

A most appropriate quotation, from one of the Passion Psalms, this is as in Mark 14:34; it is omitted by Luke (though see 12:49 ff). It was deeply rooted in the early Christian tradition (see John 12:27; Heb. 5:7).

54) Matt. 26:64 (Ps. 110:1; Dan. 7:13; cf. Mark 14:62; Luke 22:69): "Hereafter you will see the Son of man seated at the right hand of Power, and coming on the clouds of heaven."

This is the cardinal passage for the apocalyptic interpretation of Jesus' second coming as Son of man in glory (see Mark 9:1; Luke 9:27; Matt. 16:28; Mark 13:26; Luke 21:27; Matt. 24:30; Acts 7:56; Rev. 1:7; etc.). It had already been interpreted as a reference to the heavenly Messiah, *the* Son of man, in the "parables" of the book of Enoch (and see Matt. 25:31).

55) Matt. 27:9 (Zech. 11:12-13; Jer. 18:2-12; 19; 32:6-9; Exod. 9:12 LXX): the prophecy concerning the pieces of silver.

The prophecy is basically that found in Zechariah, but conflated with material from other OT passages. Jerome says he found the same text in an "apocryphal book of Jeremiah" (*Commentary on Matthew* VII.1.228*a;* but see his *Epistle* 57.7). A totally different account of the death of Judas is given in Acts 1:18-19, with other supporting OT quotations.

56) Matt. 27:34 (Ps. 69:21): the wine mingled with gall.

Cf. Mark 15:23; Luke omits. This and the many following details of the Passion were identified in the OT by the early Christian evangelists and teachers—i.e., interpreters of scripture. See also John 19:28-29, 36-37.

57) Matt. 27:35 (Ps. 22:18): the casting of lots for Jesus' garments.

Cf. Mark 15:24; Luke 23:34; John 19:24. The division of the spolia by the crucifixion squad was customary. John adds a unique and highly symbolic detail.

58) Matt. 27:39 (Pss. 22:7; 109:25): "Those who passed by derided him, wagging their heads."

Cf. Mark 15:29; Luke 23:35. This is a further "fulfilment" of the oracle in the greatest of the Passion Psalms.

59) Matt. 27:43 (Ps. 22:8; cf. Wisd. Sol. 2:13, 18-20): "He trusts in God; let God deliver him now, if he desires him; for he said, 'I am the Son of God.' "

This taunt is peculiar to Matthew. But the cry, and the scandal of such apparently misplaced trust in God, rings throughout the Psalms, the book of Job, Isa. 53, and many other parts of the OT.

60) Matt. 27:46 (Ps. 22:1): "My God, my God, why hast thou forsaken me?"

This is in Mark 15:43; Luke omits it, and substitutes Ps. 31:5 (Luke 23:46; cf. what he does in 23:34 and what John does in 19:30). The "cry of desolation"—or "cry of dereliction," as it is often called—was directly quoted from Ps. 22, either by Jesus himself, or by the early Christian evangelists, who took the cry to be the words of Jesus' last "great shout" (Mark 15:37).

61) Matt. 27:48 (Ps. 69:21): the sponge filled with vinegar.

As in Mark 15:36, even the tiny detail of the vinegar is added. Luke 23:36 takes it to be an act of mockery by the soldiers—not a very probable interpretation.

It is obvious that Matthew's "collection and arrangement of the OT oracles" (the logia), of which the sixty-one most obvious examples are listed here, is much fuller than that of any other evangelist—or any other writer in the NT, including Paul and the

authors of Hebrews and Revelation. Not limited to a dozen or fifteen well-known "proof texts," it is by far the fullest and most complete collection of passages bearing on the theme "Christ in the OT"—chiefly in the book of Isaiah, the "evangelical prophet," and in the Psalms, but also representative of the OT as a whole: the Law, the Prophets, and the Psalms (Luke 24:27, 44). An early Christian writer like Papias, whose five books of exegesis on the "Oracles of the Lord" may have dealt with the same material, and who, like all other early Christians, greatly prized the testimonia found in the ancient Jewish scriptures, would naturally be strongly impressed by this feature in Matthew's work—the use of these same OT oracles—and therefore emphasized it in his account of the origin of Matthew's Gospel (Euseb. Hist. III.39.16; *see* § 2 *above*).

7. Material peculiar to Matthew. The "peculiar" material of Matthew clearly includes, not only the Christian midrashic "haggadah" just described, and the Christian "messianic" texts from the OT—i.e., texts messianically interpreted from the Christian point of view—but also examples of Christian exegesis and homiletics, and even of reinterpretation of the church's own tradition, such as we find in 3:14-15; 12:5-7; 13:36-43. It also includes formulations of Christian duty approaching those of a code—as in the Didache, the early Church Orders, and the early canons: the process of formulation is at least moving in that direction (see 10:41; 18:18; 19:10-12; 23:2-3, 8-10). Even early liturgical material is present, as in 11:25-30, the rejoicing of Jesus and the Evangelic Invitation, which some scholars view as a baptismal hymn, and the Great Commission in 28:18-20, which includes the baptismal formula. The Matthean version of the Lord's Prayer, in 6:7-13, which differs markedly from the parallel in Luke 11:2-4, must have been taken, as many scholars now believe, from the current worship of the church; and so is the oft-quoted promise: "Where two or three are gathered in my name, there am I in the midst of them" (18:20). The Sinaitic Syr. MS even reads, in vs. 19: "If two of you agree on earth about anything concerning which they shall be asked [this could be a literal Syr. rendering of the Aramaic impersonal plural, 'which they'—i.e., people—'shall ask'] it will be binding in heaven." Here we have the early Christian assembly united, not only in worship, but also judicially (as in I Cor. 5:4*b*-5) or legislatively; indeed, it is not even the whole assembly, but a Christian local Sanhedrin, assembled for the purpose of rendering a decision upon some matter of duty, practice, or observance. The Jewish Christian outlook of the passage is obvious.

One of Matthew's chief characteristics is its emphasis on apocalyptic eschatology, which is heightened and underscored repeatedly (see 13:24-30; 20:1-16; 22:1-14; 25, *passim*). Most of Matthew's parables are given this strongly apocalyptic-eschatological emphasis, and the climax is the great panorama of the Last Judgment in 25:31-46, where the ethics of the gospel—love and compassion for the poor and helpless—is woven in with every silken fiber of this majestic tapestry: "As you did it to one of the least of these my brethren, you did it to me"—i.e., to the heavenly Son of man, throned in glory, judging all nations on the Last Day.

8. The "ecclesiastical" gospel. Matthew is sometimes described as the "ecclesiastical" gospel, and appropriately, for its interests are far more thoroughly centered in the church than are those of any other gospel—or any other writing of the NT. Here the church is not an ideal, as it is in Ephesians or in John, but the actual living body of worshipers and devotees of Christ and his teaching—a sect which originated within Judaism, but which is now more or less completely separated and living a life of its own. It is still in contact with Jews and with Jewish beliefs and practices. Much of the SERMON ON THE MOUNT (ch. 5) deals with the Christian interpretation—i.e., Jesus' interpretation—of the great commandments in the Law, which he came, not to destroy, but to "fulfil" (5:17-20), to deepen, widen, apply more consistently, and interpret in the light of the divine intention behind the command. The practices of piety (discussed in ch. 6) are those of the Pharisees and increasingly of all Jews in the first century—but with notable omissions (tithing, the food laws, and sabbath observance). These were part of a rule of life—prayer, fasting, almsgiving—which was rooted deeply in the older Judaism reflected in the Apoc., especially in Tobit, Judith, and Ecclesiasticus. The admonitions contained in the rest of the Matthean Sermon—i.e., those in 6:19-34, which reinforce the requirement of sincerity and simplicity and the absence of ostentation and pride in the observance of the three rules of life, and in ch. 7, where censoriousness is forbidden and complete self-dedication to the will of God is commanded—conclude with the magnificent and unforgettable parable of the two housebuilders (7:24-27), the point of which is clearly the indispensable requirement of not only hearing but also doing the "words" of Jesus. The Christian disciple must not only say, "Lord, Lord," but actually practice the Lord's teaching (vss. 21-23).

Moreover, the Jewish ties of Matthew and his circle (teachers, presumably, in the early Palestinian or Syrian church) are implied in ch. 23, where "the scribes sit on Moses' seat." (The addition, "and the Pharisees," is perhaps an early gloss; the scribes were the official teachers, while the Pharisees were only a society of pious, devoted laymen who undertook to carry out the full requirements of the law as expounded by its scribal interpreters. Of course, the two groups were closely related.) As the authoritative "teachers of righteousness"—i.e., of the Jewish religion—they are to be obeyed: "So practice and observe whatever they tell you, but not what they do; for they preach, but do not practice." Here their authority is recognized, though their personal character is sharply criticized (23:1-12). Seven tremendous woes are pronounced against them in 23:13-33, each following a standard literary pattern; to this is added the threat of the impending Judgment (vss. 34-36), followed by the lament over Jerusalem (vss. 37-39)—a powerful introduction to the apocalyptic discourse in chs. 24–25. The evils of the present—religious insincerity and hypocrisy, greed, false teaching, a human tradition which obscured the divine commands and substituted the minutiae of petty legal rulings for the basic requirements of "justice, mercy, and faith"—these features in the religion of Jesus' day, and equally in that of the evangelist, are leading directly to the Day

of Judgment. No OT prophet, no Jewish apocalyptist, no Qumran or Essene sectary, no Stoic or Cynic street preacher, ever castigated the evils of his time in more searching, more inescapable invective.

9. Background, place, and date. Hence the background of Matthew must be sought in some area where Judaism and early Christianity still overlapped, were in close contact—and in conflict. The area which best suits these requirements is probably N Palestine or Syria, perhaps Antioch; and the date, some time after the fall of Jerusalem in 70—probably a considerable time after this date, when apocalyptic eschatology has had a long enough period to decline and revive again—as in IV Ezra and II Baruch. A. H. McNeile and others have dated the book between 70 and 115, when Ignatius of Antioch apparently quotes the gospel, or at least is familiar with traditions which Matthew also uses. E.g., his Letter to the Ephesians, ch. 19, seems to show acquaintance with Matthew's birth narrative, though with a difference—including midrashic elements very like those in Matthew. "The virginity of Mary and her giving birth were hid from the Prince of this world, and so also was the death of the Lord. [There were] three mysteries of a cry [or, of shouting] which took place in the silence of God. How then was he manifested to the ages [or, aeons]? A star shone out in heaven, brighter than all other stars, and its light was indescribable and its newness [sudden appearance?] was most strange, and all the rest of the stars together with the sun and moon formed a chorus about it, but its light far outshone them all; and there was perplexity as to whence this novelty [astronomers would say, *nova*] came, so unlike them. In consequence, all magic was dissolved and every bond of wickedness disappeared; ignorance was taken away, the old kingdom [of evil] was wholly destroyed, God being manifested humanly for the renewal of eternal life, and what had been prepared by God had its beginning. Hence all things were moved, because the destruction of death was being set in motion."

Such a passage does not prove the dependence of Ignatius upon Matthew, but suggests it; and it also illustrates the midrashic type of exegesis and the quasi-Gnostic speculation which were current in the Syrian milieu of Ignatius and also—most probably—of Matthew. It was in such an atmosphere that early Syrian Gnosticism arose; and it was also the atmosphere of the surrounding Greco-Roman-Jewish syncretism in which Matthew lived and taught. The anchorage of the Christian tradition in actual history, rather than in theosophical fancy or speculation, and the valiant defense of Jesus' firm ethical and religious teaching, his proclamation of the coming kingdom of God, his actual death and resurrection, stand out ever more clearly against this background. The echoes of current debate which we catch between the lines of Matthew's gospel—as in 5:3: "poor in spirit" (contrast Luke 6:20); or 5:19, the threat of antinomianism; or 5:32; 19:9, the exception clause in the prohibition of divorce; or 19:12, the answer to the Encratites, who forbade marriage; or 18:22, the problem of the "unforgivable" sin; or 18:15 ff, the problem of scandal in the church; or 17:24-27, the problem of the temple tax (now, presumably, paid to Rome—i.e., the *Judaicus fiscus*)—all these and many more references to current issues help to fix upon a probable milieu and approximate date for Matthew—viz., Syria around the end of the first century.

The Judaism presupposed by Matthew is that of the postbellum period when the Jews were still crushed and defeated after the catastrophe of A.D. 70, when Jerusalem fell and the temple was destroyed. It was a time of recession and retreat, when renewed study of the sacred scriptures and deeper devotion to prayer and synagogue worship took the place of the ancient sacrificial system with its attendant liturgical forms. The Jews were determined to survive, despite the loss of their freedom, their temple, and their ancient ritual. The hierarchical party of the Sadducees disappeared, and the popular lay leaders, the Pharisees, with their scribal teachers, completely took over the religious leadership of what was left of the nation. Rabbi Johanan ben Zakkai, a saintly scholar who survived the fall of Jerusalem, obtained permission from the Romans to establish a school at Jamnia, which became a center of fresh religious learning and activity. Sectarian errors were weeded out. The malediction against the *minim* and the apostates (not necessarily limited to Christians) was added to the daily prayer, the Eighteen Benedictions. The canon of the OT was settled. The more recent and as yet unrecognized works which circulated in Greek at Alexandria (approximately our APOCRYPHA), and also the clandestine or "hidden" writings now called PSEUDEPIGRAPHA were firmly rejected. Only the books already in use in the synagogue—i.e., the Hebrew scriptures (our OT)—were recognized, pronounced canonical and inspired, and authorized for use in worship and study. The Greek translation of the OT, the SEPTUAGINT, was repudiated—one rabbi said that Israel should observe as a fast day the day on which it was completed—or begun! The world mission of Judaism was suspended, and writers like Philo of Alexandria, who had endeavored to synthesize Judaism and Greek culture or philosophy, were discouraged. (The Christians, not the Jews, preserved Philo's writings for posterity.) This was the rallying time of resurgent Judaism, and the beginning of what George F. Moore called the "rise of normative Judaism"—i.e., the movement which eventually resulted, in the fourth and fifth centuries, in the achievement of the classical, or normal, Judaism which has been known to history ever since.

Along with this revival of Judaism went a renewed emphasis upon and cultivation of apocalyptic thought, a movement which Matthew both reflects and shares. (Matthew's apocalyptic passages, when compared with those in Mark or Luke, fully illustrate this; cf. 24:4-36 with Mark 13:5-37; Luke 21:8-36; to this chapter Matthew appends ch. 25, which is wholly apocalyptic-eschatological in doctrine and emphasis.) The revived apocalypticism in contemporary Jewish religious thought is represented, as we have seen, by II Baruch and IV Ezra.

Another tie with contemporary history is the renewed emphasis on refusal to seize weapons and join the proposed revolt against Rome (e.g., 26:52). Sufficient time had elapsed for a revived Zealotism to emerge, promising a quick victory against the oppressor. This must have been long after 70, and may even reflect conditions under Trajan, when, ap-

parently, the Jewish uprising in North Africa and in Cyprus and Syria was shared to some extent in Palestine—though the records are incomplete: this is one more lacuna in early imperial history. Certainly we know that just before and during the revolt under Hadrian (132-35) the Christians were urged and even compelled to join the forces of Akiba and Bar Cocheba in the great rebellion. Bar Cócheba may be one of the pseudo messiahs referred to in 24:5. The story of Hegesippus which describes the arrest and examination of Jude's grandsons (Euseb. Hist. III.20) in the time of Domitian also reflects the conditions of the time, and the Christian abstention from armed resistance or insurrection. Finally, 24:12 also reflects the growing tension: "Because wickedness [i.e., lawlessness, *anomia*] is multiplied, most men's love will grow cold."

10. Later influence. Throughout the centuries since this gospel was written, it has exercised a great and dominant influence. Not only have its MSS influenced the text of the other gospels (especially, e.g., in the Old Syr. version); not only have its pericopes been the favored ones in the church's liturgies, outnumbering those chosen from the other gospels; not only have its formulations of favorite passages (e.g., the Beatitudes, the Lord's Prayer, the passion narrative, as in Bach's setting) prevailed over the parallels in the other gospels; but its theology has been a dominant influence, comparable only with that of John.

Matthew's theology is a Christianized Jewish set of doctrines, with a far from normal Jewish or even later Christian emphasis upon apocalyptic eschatology. Yet it does not go all the way with modern "thoroughgoing" apocalyptic: Matthew has room for the world church and its world mission. His conception of the person of Christ is thoroughly apocalyptic; and yet the deeply religious and ethical characteristics of his Christology are unmistakable, and rarely matched (as in the "parables" of I Enoch), and not at all equaled in I Thess. 4; II Thess. 1; Jude; or Revelation.

Above all, the ecclesiastical influence of such a passage as Matt. 16:17-19 has been incalculable, and is fitly symbolized by the great inscription about the dome of St. Peter's in Rome: *Tu es Petrus et super hanc petram aedificabo ecclesiam meam.* There is no parallel to this in any other gospel, and its underlying assumption of Peter's primacy is rejected or ignored everywhere else in the NT. Modern scholars believe that this piece of midrash reflects the later position of Peter, either in Jerusalem, before his departure for "another place" (Acts 12:17), or in Antioch, where for a time he was looked upon as the "prince of the apostles," superior to James, John, James the Lord's brother, Andrew, and the rest of the Twelve—and certainly superior to Paul, whose "freedom from the law" seemed to the conservatives to go altogether too far. The commission to Peter, in Matt. 16:19, giving him the right to "bind and loose" (i.e., by decisions as to the interpretation and application of the law or of Jesus' own commands), is apparently shared by others in 18:18. Yet if Peter is only *primus inter pares,* he remains *primus.* The authority is centered in him, according to this passage. It is already within the range of the "monarchical episcopate" claimed by Ignatius of Antioch, and not far removed from the papal claims which date at least from the second century.

MATTHEW, MARTYRDOM OF. A late, long-winded, and very confused account of the martyrdom of Matthew at the hands of the king of the Anthropophagi (cannibals), to whose city he had been ordered to return by Christ. The account is clearly dependent upon the Acts of Andrew and Matthias (*see* ANDREW AND MATTHIAS, ACTS OF), but is in no sense a consistent sequel.

Matthew, "a publican but now called an apostle by the Lord crucified by the Jews," has replaced Matthias in the older story. A church is in the land, with Plato as its bishop, but there is little other evidence of the earlier successful labors. The account is a loosely strung-together tale of Matthew's arrival at the city, his planting of a rod given him for this purpose by Christ, its speedy growth into a tree with resultant marvels; the exorcism of the demon Asmodeus from the wife and family of the king; Matthew's martyrdom by fire, in the course of which the fire had been as dew to him but had consumed the metal idols and had chased the king to his palace, whence he had returned as a momentary suppliant begging for aid; the burial of Matthew in an iron coffin, sealed with lead and sunk secretly at night in the sea by the once-more hostile king; the reappearance of Matthew on the sea, with two men in shining apparel and led by Christ in the form of a child; the emergence from the sea of the cross and at its end the iron casket; the long-delayed conversion of the king and his ordination, under the new name Matthew, to become the bishop of the city.

This is an example of the low ebb reached by many of these later apocryphal Acts. There is no apparent interest in either religion or dogma, orthodox or otherwise. It is simply a farrago of wonder tales appropriated from earlier sources, each one

garishly exaggerated, and strung together with no attempt at consistency. The work is extant in Greek and Latin, with many differences in the several accounts.

See also APOCRYPHA, NT.

MATTHIAS măthī'əs [Μαθθίας, Ματθίας, *shortened form of* Ματταθίας; מתתיה, gift of Yahweh]. The apostle selected to fill the place among the Twelve left by Judas Iscariot.

Peter preached to the "brethren"—"about a hundred and twenty" people (Acts 1:15)—that the scripture which prophesied Judas' betrayal of the Lord (Ps. 69:25) also prophesied that the place Judas left would be filled by another: "His office let another take" (Acts 1:20). Therefore, another must be enrolled with the Eleven.

The qualifications mentioned as needed for apostleship are that the candidate must have "accompanied" Jesus and the apostles from the days when John baptized to the time of Jesus' ascension, and that he be able to witness to Jesus' resurrection. The story assumes that apostleship was not possible apart from a close association with Jesus during his life and ministry and a witnessing of Jesus' ascension. Whether Acts 1:2 assumes that anyone other than the eleven apostles witnessed the Ascension is at least questionable, if not doubtful; but the account of the selection of Matthias may come from a different tradition.

Two men who fulfilled the necessary requirements were put forward as candidates—Joseph called Barsabbas, who was surnamed Justus, and Matthias. In the Western text D, the verb is in the singular: "He put forward," presumably referring to Peter. (In Greek the only change involved is a change in one letter, with an accompanying slight difference in pronunciation.) Augustine also read the singular verb, believing that Peter had the authority to select the two men, one of whom was to be made an apostle.

The choice was made by the casting of lots. But before lots were cast, the disciples prayed together to "the Lord" (probably Christ is meant) that he would guide them in their selection. This is the first corporate oral prayer recorded in the NT (cf. Acts 4:24). It was probably led by Peter. Then "they cast lots" (lit., they "gave" lots). The Hebrews had commonly decided issues by casting lots (cf. Lev. 16:8; Prov. 16:33). It was usually done by putting stones with the names written on them into a vessel. The vessel was then shaken until one stone fell out. But the verb ordinarily used to describe this practice would be a word for "casting," not "giving." Perhaps the meaning in the Acts passage is that they "gave votes." Or the use of "gave" may be a Hebraism, a literal rendering of נתן.

It is to be noted that in this early passage there is no mention either of the laying on of hands or of the Holy Spirit; but Irenaeus refers to Matthias as "ordained" (*ordinatus est*) in the place of Judas (Iren. Her. II–XX.2, 5).

According to Eusebius and Epiphanius, Matthias was one of the seventy disciples (Euseb. Hist. I.12.3; Epiphanius I.20). There is also a tradition that he preached in Judea and was stoned to death by the Jews. An early apocryphal gospel bore his name (cf. Euseb. Hist. III.25.6; Clem. Misc. II.163; VII.318); and he was later believed to have suffered martyrdom (cf. *Menologium Graece* III.198).

MATTHIAS, ACTS OF ANDREW AND. *See* ANDREW AND MATTHIAS, ACTS OF.

MATTHIAS, GOSPEL OF. *See* MATTHIAS, TRADITIONS OF.

MATTHIAS, TRADITIONS OF. A work known only from Clement of Alexandria, who quotes from it three times and remarks that the Gnostics cited it in support of an ascetic abuse of the flesh. Origen, whose statements are repeated by Ambrose and Jerome, mentions a schismatic Gospel According to Matthias. A book by this title was condemned in the Gelasian Decree. Occasionally the Traditions and the Gospel have been considered the same writing, but our knowledge is too limited to make this certain or even to suggest the nature of either work. *See* APOCRYPHA, NT. MATTITHIAH măt'ə thī'ə [מתתיה, מתתיהו, gift of Yahu; Apoc. Μαζιτίας (I Esd. 9:35)]; KJV Apoc. MAZITIAS măz'ə tī'əs. Alternately: MATTATHIAH [Ματταθίας] (I Esd. 9:43); KJV MATTATHIAS măt'ə thī'əs. **1.** A Levite, son of Jeduthun (I Chr. 25:3), and one of the musicians appointed to minister before the ark in the sanctuary (15:18, 21; 16:5; 25:21).

2. A Korahite Levite in charge of the baking of liturgical cakes for the sanctuary (I Chr. 9:31).

3. One of the laymen persuaded by Ezra to divorce their foreign wives (Ezra 10:43; I Esd. 9:35).

4. One of those attending Ezra at the public reading of the law (Neh. 8:4; cf. I Esd. 9:43).

Bibliography. M. Noth, *Die israelitischen Personennamen* (1928), p. 170. B. T. DAHLBERG

MATTOCK [מחרשה, *from* חרש, cut in, plow (I Sam. 13:20-21); KJV חרב (II Chr. 34:6; RSV "ruin"), מעדר (Isa. 7:25; RSV "hoe")]. A metal tool used for grubbing or breaking up the soil, having a blade at one end and usually a pick or narrow blade at the other. Constant use required that it be sharpened periodically.

Fig. MAT 17. H. N. RICHARDSON

MAUL. KJV translation of מפץ (Prov. 25:18; RSV "war club"). *See* CLUB.

MAW. KJV translation of קבה (RSV "stomach"), the rennet-bag, the bag-shaped appendage of the stomach, in Deut. 18:3. It was one of the parts of the sacrificial animal given to the priests.

17. 1-2) Bronze adzes or mattocks from Ugarit, with inscription "*Hrsn* [or 'adze of'] the chief priests," and "chief priests," respectively; (3) bronze mattock from Gerar

MAZITIAS. KJV Apoc. form of MATTITHIAH 3.

MAZZAROTH măz'ə rŏth [מזרות] (Job 38:32). A constellation mentioned in association with 'Ayish (עיש)—i.e., Arcturus or Aldebaran. Identification is disputed. The LXX omits the word; Symm. renders τὰ σκορπίσθεντα, "the scattered ones" (from the root זרה); and the Vulg., *Lucifer*. The Targ. equates with מזלות, "constellations," of II Kings 23:5 (where the LXX, indeed, has μαζουρωθ), and the Syr. translates *'agaltâ*, "Wain," a name of the Great Bear (cf. Talmudic עגלה ['Er. 56*a*]; Sumerian *MARGIDDA*, "Large Chariot"; English "Charles' Wain," etc., in the same sense). Some translations venture "the twelve signs" (i.e., of the Zodiac), an interpretation anticipated by Olympiodorus (in Migne, *PL*, XCIII, 408*d*) and Suidas (μαζουρωθ); while others, including the KJV and the RSV, content themselves with mere transliteration.

According to Michaelis and Dhorme, the name derives from נזר, "crown," and denotes the Corona Borealis. According to G. Hoffmann, it is from זרה, "sprinkle," and denotes the Hyades (cf. ὕειν). According to G. R. Driver, it should be vocalized *Mazzôreth* and derived from אזר, "engird," in the sense of the circle of the Zodiac.

It has been suggested also that *Mazzaroth* is simply a feminine variant of *Mᵉzārîm* (מזרים), mentioned in Job 37:9 as the place whence "cold" is sent forth. This reading, however, is itself suspect and should probably be emended to מזוודים or מזוים, "storehouses," in accordance with the parallel: "From its chamber comes the whirlwind," and with the well-attested belief that snow and hail were conserved within celestial promptuaries (cf. Job 38:22; Enoch 69:23).

MEAH, TOWER OF mē'ə. KJV translation of מגדל המאה (RSV TOWER OF THE HUNDRED). *See* HUNDRED, TOWER OF THE.

MEAL [קמח (*alternately* FLOUR; *see below*), סלת, עריסה (*see below*); ἄλευρον]. Meal is to be distinguished from FLOUR in that meal was ground from the whole kernels and the bran, whereas flour (usually termed "fine flour") was prepared from the inner kernels only. Normally meal was made from wheat, but the exception "barley meal" is to be found in Num. 5:15 (cf. II Kings 7:1). Possibly barley was used more extensively in the early history of Israel and was gradually replaced by wheat. However this may be, meal was much more commonly used than flour (I Kings 4:22—H 5:2); it was taken to soldiers at their camps (II Sam. 17:28; I Chr. 12:40) and was one of the last foods possessed by the widow of Zarephath in a time of drought (I Kings 17:12). Accordingly it is a sign of God's judgment when the grain has no heads and thus yields no meal (Hos. 8:7). Meal was rarely used in sacrifices, however; it appears only in Gideon's present to the angel (Judg. 6:19; קמח; KJV-RSV "flour"), in Hannah's offering at Shiloh (I Sam. 1:24; קמח; KJV-RSV "flour"), and in the offering required of a woman suspected of adultery (Num. 5:15). The "coarse meal" (עריסה; KJV "dough") mentioned in the offerings of first fruits (Num. 15:20-21; Neh. 10:37—H 10:38; Ezek. 44:30) was probably a barley paste.

The grinding of meal was done at dawn (cf. Prov. 31:15), usually by women (Exod. 11:5; Isa. 47:2; Matt. 24:41; Luke 17:35). Indeed, it was ignoble for a man to grind; as a result of the destruction of Jerusalem "young men are compelled to grind at the mill" (Lam. 5:13; cf. Judg. 16:21). Only enough meal was prepared to last the day; this was apparently three measures (*ca.* four pecks; Gen. 18:6; Matt. 13:33; Luke 13:21). The work was, of course, very difficult and noisy, particularly before the introduction of the rotary mill in Hellenistic times; the cessation of the sound of grinding is a mark of the destruction of a city (Jer. 25:10; Rev. 18:22).

For details on grinding and the construction of mills, *see* MILL. *See also* BARLEY; CEREALS; THRESHING; WHEAT.

MEAL OFFERING. *See* SACRIFICE AND OFFERINGS §§ A2*bi*-ii.

MEALS. In the Near East, both ancient and modern, meals are not merely occasions for consuming food and drink; rather, they are also expressions of fellowship between man and man and between man and God. In addition, they provide the context for most of the entertainment enjoyed by all classes; although Koheleth is convinced that "money answereth all things," he also avers that "a feast is made for laughter, and wine maketh merry" (Eccl. 10:19 KJV).

1. Time of meals. ***a. Everyday meals.*** Ordinarily the day began without any meal; however, the laborer might fortify himself with a bit of bread and cheese and a few dates or olives. A meal corresponding to the modern breakfast is mentioned only in connection with one of the resurrection appearances: Jesus asks the disciples to "come and have breakfast" (John 21:12). Elsewhere, eating a meal early in the day is condemned as childish (Eccl. 10:16; cf. Isa. 5:11; Acts 2:15, where Peter points out that the disciples cannot be drunk, "since it is only the third hour of the day"). Thus the first proper meal came late in the morning. According to the rabbis (Shab. 10*a*), the fourth hour (*ca.* 10:00 A.M.) was the mealtime for ordinary people, the fifth for laborers in the fields, and the sixth for scholars. Thus Peter becomes hungry "about the sixth hour" (Acts 10:9-10). There is no special name for this meal in the OT, although it is mentioned in connection with the harvest (Ruth 2:14). In the NT, however, it is specifically termed the ἄριστον (Matt. 22:4; Luke 11:38; 14:12; in all three passages both the RSV and the KJV have "dinner"). Contrary to Egyptian usage, where an elaborate meal was served at noon (Gen. 43:16, Joseph's meal for his brethren), this meal was not extensive in Palestine. It was as much a time for rest from one's labors as a time for eating. Only bread dipped in VINEGAR (RSV "wine") and PARCHED CORN are mentioned in the harvest meal eaten by Ruth (2:14) and Boaz.

The chief meal was therefore held in the evening, when there was not enough light for work (Judg. 19:16, 21; Luke 17:7-8; cf. Ruth 3:2, 7). Accordingly, the ravens bring Elijah food both in the morning and in the evening (I Kings 17:6). The custom of eating two meals a day is traced back to the wilderness period; Yahweh tells Moses to command the people: "At twilight you shall eat flesh, and in the morning you shall be filled with bread" (Exod. 16:12). The same passage shows that the evening meal was the more substantial of the two; only then is meat appropriate. Again, there is no specific name for this meal in the OT; the NT, however, calls it δεῖπνον (John 12:2; 13:2; 21:20; I Cor. 11:20; etc.; both RSV and KJV "supper" in these passages, although elsewhere RSV renders "banquet" [e.g., Luke 14:17]).

b. Banquets and feasts. As in modern times, it was customary to hold banquets and feasts in the evening. The two angels come to Sodom "in the evening," and Lot prepares a feast for them (Gen. 19:1-3). There are exceptions, however. Jesus tells the ruler of the Pharisees not to invite only his friends to "a dinner or a banquet" (ἄριστον and δεῖπνον respectively; Luke 14:12). Abraham entertains the three men "in the heat of the day" (Gen. 18:1-8), and the family banquets of Job and his sons seem to have been held during the working day (Job 1:13-14). For the occasions upon which banquets and feasts were held, *see* BANQUET.

2. Guests at meals. At ordinary meals the women ate with the men; thus Ruth partakes of the harvest meal with her fellow workers (Ruth 2:14). But only men were invited to banquets. Absalom thus sends for only the king's sons on the occasion of a sheep-shearing banquet (II Sam. 13:23). And the three men have to ask for Sarah during their meal with Abraham; she was listening at the tent door (Gen. 18:9-10). Sirach makes the exclusion of women at meals an absolute rule:

> Never dine with another man's wife,
> nor revel with her at wine
> (Ecclus. 9:9).

Naturally one invited his friends, relatives, and rich neighbors to a banquet; thus he could be assured of receiving an invitation in turn. Jesus, on the contrary, urges that one invite "the poor, the maimed, the lame, the blind"; they cannot repay, and the host will be repaid at the resurrection (Luke 14:12-14). In any case, the official invitation to a banquet was in two parts: First, the host sent out servants announcing the forthcoming festivities. Then on the actual day of the banquet the servants were again dispatched, this time to inform the guests that all was in readiness (Matt. 22:3-4; Luke 14:16-17; cf. Esth. 5:8; 6:14).

When the guests arrived, they were dressed in a special garment (a "mantle of praise"; Isa. 61:3; cf. Matt. 22:11-12). Apparently this was to be of white material (Eccl. 9:8); furthermore, the head was adorned with flowers (Isa. 61:3; Wisd. Sol. 2:7-8). The latter custom is apparently referred to by Isaiah in his denunciation of the "proud crown of the drunkards of Ephraim" and the "fading flower of its glorious beauty" (Isa. 28:1). Thus arrayed, the guests were received by their host with a kiss (Jesus rebukes Simon the Pharisee for omitting this [Luke 7:45]), and their feet were washed (Gen. 18:4; 24:32; 43:24; Judg. 19:21; I Sam. 25:41; Luke 7:44). Finally the head and feet of the guest were anointed (*see* ANOINT); ordinarily this was done with oil (*see* OIL § 2*b*), but Mary used a "pound of costly ointment of pure nard" to anoint Jesus (John 12:3; cf. Matt. 26:7; Mark 14:3; Luke 7:38; for other references to anointing at banquets, cf. Ps. 23:5; Eccl. 9:8; Amos 6:6). The guests and their host then proceeded to the dining hall ("house of feasting"; Jer. 16:8).

3. Customs at meals. Seating arrangements at meals and proper etiquette in the consumption of food were of the greatest importance in biblical times, as in the modern Near East.

a. Seating arrangements. In the earliest times the Hebrews merely sat on the ground for their meals. This may be assumed from the description of Abraham's meal for the three strangers, at which the host stands under a nearby tree (Gen. 18:8). Similarly Gideon brings a kid, unleavened bread, meat, and broth and presents them to the angel "under the tree" (Judg. 6:19). Following Canaanite customs, however, the Hebrews later sat on chairs or stools, and the dishes were placed on small leather stands. Thus David says that he must not fail to "sit at table with the king," and Saul's "seat by the wall" is mentioned (I Sam. 20:5, 25). Lying on couches was probably a

Babylonian custom imported into Palestine. It is denounced as a mark of irresponsible luxury by Amos:

> Woe to those who lie upon beds of ivory,
> and stretch themselves upon their couches
> (Amos 6:4).

Elsewhere in the OT and the Apoc., however, such reclining is taken for granted. Couches are mentioned in connection with the feasts described in Esther (1:6; 7:8), and Judith's maid lays out "soft fleeces" upon which her mistress reclines (Jth. 12:15).

In NT times the guests still reclined, but the arrangements, ultimately derived from Greco-Roman usage, were much more elaborate. A square table was set up in the center of the dining hall (cf. Mark 7:28, where the Syrophoenician woman refers to the "dogs under the table"), and wide couches were arranged around three of the sides, the fourth side by the door being left free for the servants. Each of the couches could accommodate three persons (cf. Latin *triclinium*), and the usual practice was to lie at a right angle to the table, supporting oneself on the left elbow and leaving the right hand free for eating. On the basis of modern Arabic parallels it may be assumed that eating with the right hand was the universal practice; to eat with the left hand is an insult to the host.

At a banquet the guest of honor was given a place at the head of the table, opposite the entrance to the room (cf. I Sam. 20:25). Thus Samuel gives Saul and his servant a "place at the head of those who had been invited" (I Sam. 9:22). Similarly James and John ask Jesus: "Grant us to sit, one at your right hand and one at your left, in your glory" (Mark 10:37). Jesus advises his banquet companions to take the lowest place as a sign of humility, so that the host can later ask them to "go up higher" (Luke 14:7-11). Those other than the honored guests were seated according to age or importance; Joseph seats his brethren "the first-born according to his birthright and the youngest according to his youth" (Gen. 43:33).

After all the guests were in their places, servants circulated among them with ewers and basins (*see* VESSELS) in which the hands were washed. This was not only a matter of cleanliness, but also a ceremony of sanctification. Mark reports that "the Pharisees, and all the Jews, do not eat unless they wash their hands, observing the tradition of the elders" (Mark 7:3); therefore, the Pharisees criticize Jesus' disciples for eating "with hands defiled" (Matt. 15:1-2; Mark 7:2).

Finally the host offered thanks for the forthcoming food. Such a blessing, coupled with praise of the host, is spoken by Eleazar, the oldest of the priests invited to a banquet by Ptolemy Philadelphus (Aristeas 184-85). At the feeding of the multitude Jesus gives thanks for the loaves and fish (Matt. 15:36; cf. Mark 8:6-7, where Jesus gives thanks for the loaves but blesses the fish; cf. also Matt. 14:19; Mark 6:41; Luke 9:16). And at the Last Supper (*see* LORD'S SUPPER) Jesus gives thanks for both the bread and the cup (Matt. 26:26-27; Mark 14:22-23; Luke 22:17, 19; I Cor. 11:24; cf. Acts 27:35). Indeed, the name of the Christian sacrament, EUCHARIST, is derived from the Greek word meaning "to give thanks," εὐχαριστεῖν.

b. Serving of food. Meals were usually served by the women of the family; Peter's mother-in-law serves Jesus and some of his disciples after she has been cured of a fever (Matt. 8:14-15; Mark 1:30-31; Luke 4:38-39). But in the wealthier households male servants were employed. The queen of Sheba is astonished at the number of Solomon's servants (עבדיו [masculine]) and cupbearers (I Kings 10:5; II Chr. 9:4). The meal or banquet itself was divided into two main parts. In the first, food alone was served; in the second, wine was provided. Thus at Jesus' last supper with his disciples the bread is given before the wine. Similarly Jacob brings Isaac game, and he eats; only then is the wine served (Gen. 27:25; cf. Gen. 26:30).

In biblical times no eating utensils were used, and the only dishes were those on which the food itself was served. Consequently the guests ate out of the common bowl with their fingers:

> The sluggard buries his hand in the dish;
> it wears him out to bring it back to his mouth
> (Prov. 26:15).

Similarly Jesus identifies his betrayer as "one who is dipping bread in the same dish with me" (Mark 14:20; cf. Matt. 26:23; Luke 22:21). This also refers to the use of a piece of bread to sop up broths, sauces, and gravies (cf. John 13:26; Ruth 2:14; *see* BREAD § 2*a*). Of course, cups and goblets (*see* VESSELS) were provided for wine; we are told that all of Solomon's drinking vessels were made of gold (I Kings 10:21; II Chr. 9:20).

Naturally the best portions of food were given to the guest of honor. Joseph shows that Benjamin is his favorite by giving him a portion "five times as much as any of [his brothers]" (Gen. 43:34). And Samuel has his cook put aside a special piece of meat for Saul (I Sam. 9:23-24). Especially enjoyed were the fat pieces. Thus, in the days to come, Yahweh will prepare a feast for all peoples, "a feast of fat things, a feast of wine on the lees, of fat things full of marrow" (Isa. 25:6). But the guest is not to be greedy; he must not marvel at the quantity and quality of the food, or reach out for everything in sight. Rather, he is to eat "like a human being," and is to be the first to stop (Ecclus. 31:12-18).

c. Entertainment. The chief form of entertainment at a banquet was music and song. Amos condemns those who "sing idle songs to the sound of the harp" (Amos 6:5), and Isaiah is no less scathing in his sarcasm (Isa. 5:12; cf. 24:9). But in later times musical accompaniment to banquets was generally accepted. Sirach exclaims:

> A ruby seal in a setting of gold
> is a concert of music at a banquet of wine.
> A seal of emerald in a rich setting of gold
> is the melody of music with good wine
> (Ecclus. 32:5-6).

Furthermore, at the return of the prodigal son his father holds a feast with "music and dancing" (Luke 15:25). Naturally, drinking songs were sung at such celebrations; one is preserved in Wisd. Sol. 2:6-9.

Dancing (*see* DANCE; cf. the parable of the prodigal son) was also a feature of important banquets. On Herod's birthday his stepdaughter danced before the assembled multitude; the king was so pleased that he offered to grant her any wish (Mark 6:21-22; Matt. 14:6-7).

Finally, it was not uncommon for the guests to be entertained by riddles at a festive occasion. At his wedding banquet Samson puts a riddle to his thirty guests and challenges them to answer it within the seven days of the feast; having found out the answer, the guests propose a counterriddle (Judg. 14:12-18). A large part of the Letter of Aristeas (*see* ARISTEAS) is taken up with hard questions put by Ptolemy to his guests, the Jewish elders who had been commissioned to translate the Torah into Greek (Aristeas 187-294).

Naturally the rich food and wine and lavish entertainment at banquets could lead to excess, and this is often condemned in both the OT and the NT. The views of Amos and Isaiah have already been noted, but they are not alone. Paul urges the Romans not to engage in "reveling and drunkenness" (Rom. 13:13), and cites "drunkenness, carousing, and the like" as "works of the flesh" (Gal. 5:19, 21). Similarly the author of I Peter says that the time is past for "drunkenness, revels, [and] carousing" (4:3). Even Koheleth warns that princes should hold their feasts at the proper time and eat and drink "for strength, and not for drunkenness!" (Eccl. 10:17). *See* DRUNKENNESS; WINE § 4.

4. Meals in biblical imagery. Since biblical imagery generally makes use of the things and events of everyday life, it is natural that meals and eating customs should be used metaphorically.

a. Meals in OT imagery. Since laughter and joy are naturally associated with banquets, it can be said that "a cheerful heart has a continual feast" (Prov. 15:15). More frequent, however, is the metaphor of a feast prepared by Yahweh. Such a feast can be an expression of blessing, as in Isaiah's "feast of fat things" for all people (25:6; cf. 61:3), but it can also be a threat of judgment. Thus Jeremiah says of the Babylonians:

> While they are inflamed I will prepare them a feast
> and make them drunk, till they swoon away
> and sleep a perpetual sleep
> and not wake, says Yahweh (51:39).

b. Meals in NT imagery. Reference has already been made to the use of banquets in Jesus' parables (Matt. 22:1-10; Luke 14:16-24; etc.). In addition, however, the coming kingdom of God is often connected with a feast. This usage is derived from Isa. 25:6 (*see* § 4*a above*) and the concept of the messianic banquet found in the Pseudep. (Enoch 62:14; Syr. Apocal. Bar. 29:5-8; for the parallel from the Qumran sect, *see bibliography*). At the Last Supper, Jesus says that he will not drink wine again "until . . . I drink it new with you in my Father's kingdom" (Matt. 26:29; cf. Mark 14:25; Luke 22:18). The universality of the gospel is likewise expressed in terms of a banquet in the kingdom of heaven, at which there will be "many . . . from east and west" along with Abraham, Isaac, and Jacob (Matt. 8:11; cf. Luke 13:29). Finally, the twelve are to "eat and drink at [Jesus'] table in [his] kingdom, and sit on thrones judging the twelve tribes of Israel" (Luke 22:30; cf. Luke 14:15; Rev. 19:9).

J. F. ROSS

MEANI mē ā′nī. KJV Apoc. form of MEUNIM.

MEARAH mē âr′ə [מערה] (Josh. 13:4). Probably identical with the caves called Mughar Jezzin, E of Sidon; mentioned among the places remaining to be conquered after Joshua's conquests.

MEASURES. A term used to translate many Hebrew and Greek words indicating units of uncertain value. *See* WEIGHTS AND MEASURES.

MEAT. *See* FOOD.

MEAT OFFERING. *See* SACRIFICE AND OFFERINGS §§ A2*b*i-ii.

MEBUNNAI mĭ bŭn′ī [מבני]. An apparently corrupt form appearing in II Sam. 23:27 as the name of one of the Davidic "Thirty." It should, no doubt, be SIBBECAI, as it appears in the parallel passages (I Chr. 11:29; 27:11).

MECHERATHITE mĭ kĕr′ə thīt [מנרתי] (I Chr. 11:36). The title given to Hepher, one of David's army. It probably should be "Maacathite" (*see* MAACAH 1), following II Sam. 23:34.

MECONAH mĭ kō′nə [מכנה, foundation] (Neh. 11:28); KJV MEKONAH. A town in S Judah, between Ziklag and Ain-rimmon. The site is unknown.

MEDABA. KJV Apoc. form of MEDEBA.

MEDAD mē′dăd [מידד, beloved(?); LXX Μωδαδ] (Num. 11:26-27). An Israelite who prophesied in the wilderness camp. After seventy elders had been equipped by the spirit of Yahweh to assist Moses, Medad and Eldad were similarly equipped by exceptional divine action.

Bibliography. M. Noth, *Die israelitischen Personennamen* (1928), p. 223.

R. F. JOHNSON

MEDAN mē′dăn [מדן] (Gen. 25:2; I Chr. 1:32). The third son of Abraham and Keturah, and hence the name of an Arabian group. It is mentioned just before Midian and is possibly a corrupt dittograph of the latter. However, there was an Arabian god named Madan, known from the famous family name Abd-al-Madan, and this may have been the original vocalization. There was also a place called Badan, which was conquered by Tiglath-pileser III of Assyria in 732 B.C. and which was located to the S of Tema; this may be Medan, as the consonants "b" and "m" are often interchanged in Arabic.

S. COHEN

MEDEBA mĕd′ə bə [מידבא; Apoc. Μήδαβα]; KJV Apoc. MEDABA. A city in Transjordan, *ca.* fifteen miles SE of the entrance of the Jordan into the Dead Sea.

Medeba was a Moabite town taken by the

Amorite king Sihon from Moab just before the Israelite conquest, and in turn taken by the Israelites in their victory over Sihon (Num. 21:30). The territory allotted by Moses to the tribe of Reuben included all the tableland of Medeba (Josh. 13:9, 16). In David's time it seems to have been in Ammonite hands, for the Syrian allies of the Ammonites encamped there before their defeat by Joab (I Chr. 19:7). According to the Moabite Stone, the Israelite king Omri had retaken Medeba (מהדבה), probably from Moab, and Israel dwelt there in his time and in half of his son's time, forty years. Mesha recaptured and rebuilt it, along with other cities of the area. Jeroboam II "restored the border of Israel from the entrance of Hamath as far as the Sea of the Arabah" (II Kings 14:25), probably pushing Moab S of the Arnon and taking once again the area including Medeba. Israelite possession was probably short-lived, and Medeba was included in Isaiah's oracle against Moab (Isa. 15:2), although not in Jer. 48, where we would also expect to find it mentioned.

In Maccabean times (*see* MACCABEES) John, the oldest son of Mattathias, was ambushed just outside Medeba (I Macc. 9:36) by the children of Ambri (Josephus: Amarios). Jonathan and Simon, John's brothers, avenged themselves by lying in wait outside Medeba and killing a wedding party of their enemies (I Macc. 9:35-42; Jos. Antiq. XIII.i.2, 4). Later John Hyrcanus, Simon's son, captured Medeba after a six-month siege (Jos. Antiq. XIII.ix.1).

Medeba was an early Christian center. In the sixth century A.D. an artist constructed an illustrated mosaic map of Palestine on the floor of a church in Medeba. In 1890, unfortunately, most of the map was destroyed when a new church was being built.

Medeba is still occupied today, being called Madeba. It is in the midst of rich farm lands, and it would seem that most pre-Nabatean remains have been wiped out by the heavy subsequent occupation and cultivation. Madeba is on the main N-S highway through Transjordan, which has followed practically the same route since the Early Bronze Age, over four thousand years ago. *See* KING'S HIGHWAY.

MEDIA mē′dĭ ə [Heb.-Aram. מדי; Aram. *determinative* מדיא *Kethibh*, מדאה *Qere;* Akkad. *ma-da-a-a;* Elam. *ma-da;* Old Pers. *māda*]; MEDES mēdz [מדי; Μῆδοι]. An ancient area in NW Iran, situated between the Elburz Mountain range, the Salt Desert, Fārs (Persia), and Mesopotamia; the capital was ECBATANA. Later a distinction was made between Southern, or Greater, and Northern Media or Atropatene (Azerbaijan).

Both the Medes and the Persians (Esth. 1:19; Dan. 5:28; 6:8, 12, 15; cf. Media and Persia in Esth. 1:3, 14, 18; 10:2; *see* PERSIA) are among several groups whose idioms show features characteristic of the (Indo-)Iranian branch of the Indo-European language group, and who entered the Iranian and adjacent territories in the course of several centuries between approximately 1400 and 1000 B.C. in subsequent waves. In the Table of the Nations in Gen. 10, Madai (מדי, Media) is a "son" of Japheth, along with Gomer, Magog, Javan, Tubal, Meshech, and Tiras (Gen. 10:2; I Chr. 1:5; *see* MAN, ETHNIC DIVISIONS OF, § A1*a*). Fig. MED 18.

Some of the most important information on the ancient Medes is contained in Assyrian sources. They are first mentioned in a passage in which the Assyrian king Shalmanezer III (858-824), in a campaign to the N, invaded the territory of the *Parsua* and then, turning to the SW, entered the land of the Medes. Other references from documents of Shamshi-Adad V (823-810), Tiglath-pileser III (745-727), Sargon II (721-705), and Sennacherib (705-681) show the continuous relations between Assyria and Media over a period of almost two centuries. The name *Dayaukku* of a prisoner of Sargon captured in 715 calls to mind the Deioces mentioned by Herodotus (*see below*). From Sargon until *ca.* the middle of the seventh century Media seems to have been in the position of a subject to the Assyrian kings.

18. Head of a Mede, with his high rounded hat, beard and mustache; from the stairway of the Apadana, Persepolis (521-465 B.C.)

Among the places to which Sargon exiled the Israelites were the "cities of the Medes" (II Kings 17:6; 18:11). Fig. MED 19.

In a well-known passage Herodotus (I.96-98) reports that Deioces (Δηιόκης) succeeded in uniting the Medes and persuaded them to build the city of Ecbatana (see Ezra 6:2; Tob. 3:7). The list of other Median rulers—Phraortes (φραόρτης; Old Persian *fravarti*), Cyaxares (κυαξάρης; Old Persian [*h*]*uwaxštra*), Astyages ('Αστυάγης)—given by the same authority and the longer lists of Ctesias (Diodorus 2.32.6) and other, later historians show an effort to harmonize conflicting data. The details are still under debate. The succession of the rulers over a period of more than a century seems to have been: (*a*) Deioces, (*b*) Phraortes (675?-653?), the same, perhaps, as the *Kaštarita* (Old Persian *xšaθrita*[?]) mentioned in As-

syrian sources, (*c*) Cyaxares (625?-585?), and (*d*) Astyages (585?-550?).

In the first half of the seventh century Cimmerians (*Gimirrai; see* GOMER) and SCYTHIANS (*Išguza*) were in frequent contact with the Medes. At one time they made common cause with them against the Assyrians.

Cyaxares' role in the formation of the short-lived Median Empire was large. He succeeded in pushing back the Scythian hordes, became Nabopolassar's ally in the campaigns (620-605) which led to the final downfall of the Assyrian power, and was successful in campaigns against Lydia. The possibility of a Median attack upon Babylon, envisaged in Isa. 13: 17-18; Jer. 51:11, 28, never materialized (see also Jer. 25:25).

His successor, Astyages, was defeated *ca.* the middle of the sixth century by Cyrus the Great. Media became part of the vast Persian Empire, and its importance was similar to any other of its many provinces. In Sassanian times the name Media was still used and appears on a list of provinces (*Ammianus Marcellinus* XXIII.6.14). The Muslim authors use the name *Jibāl* for the area approximately corresponding to ancient Media.

No written documents in the Median language have so far come to light. A number of Old Persian words show phonological features which can be explained by assuming that they were borrowed from Median. Herodotus' note (I.110) contains the expected initial group *sp-* in the Median word σπάκα, "dog," which afterward is incorporated in the Greek lexicons (Hesychius σπάδακες· κύνες). Among the Jews at Jerusalem at Pentecost were Parthians, Medes, Elamites, and others (Acts 2:9).

Kent, *Old Persian* (1950), pp. 8-9.

M. J. DRESDEN

MEDIATOR, MEDIATION. Religious thinking necessarily implies a distinction between natural and supernatural, the human and the divine; and at the same time it affirms the possibility of relationship between the two. Mediation means the establishing and maintaining of this relationship, and every religion makes available "means of grace"—i.e., religious rites by which deity and worshipers are brought into communion with one another. However wide and deep may be the gulf envisaged between man and God, religion depends on the assumption that it is bridgeable. God may be estranged by the evil in human conduct, and may be imagined as at enmity with man; and certain aspects of human experience, e.g., suffering, may be interpreted as evidence of this enmity. But something in man's heart encourages the hope that this enmity can be put away; there is some atonement which transforms estrangement into reconciliation.

Apart from the consideration of human sinfulness, the problem is posed by the very differentiation between man and God, particularly when divine transcendence is emphasized. If God is exalted above his creatures, what communion between him and them is possible? How can the high and lofty one who inhabits eternity have any habitation among mortal beings? This line of consideration will be concerned with the more philosophic aspect of the problem, with knowledge and revelation, faith and reason, time and eternity. Where the approach is determined, as in the Bible, by the thought of human sin and divine holiness, the discussion will be more concerned with ATONEMENT and RECONCILIATION.

All offers of redemption imply some idea of mediation. If the deity is conceived as personal, "reconciliation" is the more appropriate term. The basic problem for man is how he shall be brought into a right relationship with his environment, that environment being understood as including supernatural factors which, together with natural, condition human life and determine human destiny.

This subject has wider scope than is suggested by the relatively few occurrences of the Hebrew and Greek terms translated "mediator," etc.

A. ***LINGUISTIC INTRODUCTION.*** The word "mediation" does not occur in the English Bible, but "mediator" (μεσίτης) is found six times in the NT, and the cognate verb (ἐμεσίτευσε) once, with God as subject, in the sense of "interpose," "give a guarantee" (Heb. 6:17). The noun μεσίτης (Gal. 3:19-20; I Tim. 2:5; Heb. 8:6; 9:15; 12:24; also once only in the LXX, Job 9:33) has the sense of one who intervenes between two parties to inaugurate a contract. It may be translated "negotiator," "intermediary." The sense of reconciling differences is not to the fore in these NT passages. The reference in Gal. 3 is to Moses; he was commonly so regarded in Judaism (cf. Philo's *Life of Moses* II.166 [Loeb] and *On Dreams* I.143; cf. also Asmp. Moses 1:14; 3:12). The other four references are to Christ: his efficacy for man's salvation, or (in Hebrews) his inauguration of the new covenant —i.e., right relationship between man and God.

B. ***MEDIATION IN THE OT.*** **1. Sin and the covenant.** The status of mankind is illustrated in the third chapter of Genesis in terms of man's disobedience. This unflattering affirmation is reinforced by the use made of the story of the Flood (Gen. 6–8), where full attention should be given to the theological introduction which Hebrew authors have provided before their adaptation of this old Babylonian saga (Gen. 6:5-12; cf. also for the same implication 4:1-16; 11:1-9; 13:13; 15:16). There are insights here which are basic for the whole of the OT. Man is capable of conforming to the divine will, which is his highest good (Gen. 1:26-27, which ascribes to man alone of all created beings the image and likeness of God, is always presupposed), but in fact he does not do so. No generation of men can make such a boast, not even the favored recipients of revelation (Israel, the posterity of Abraham; Gen. 12:1-3). Just as Noah's generation "corrupted their way," so does Israel continually.

Similar is the teaching of the prophets. God's rebuke is sounded by the earlier prophets against Baal worship and its accompanying social evils, and against the syncretism and moral degeneration of the later pre-exilic period by Jeremiah and Ezekiel (Jer. 2:26-28; 5:1-9, 23-31; 13:23; Ezek. 8; 22–23). For the period after the Exile we may refer to Isa. 56–66 and Malachi. Not only is man's actual behavior antisocial, but his affection is alienated from God and his fellow man: "Their hearts are far from me" (Isa. 29:13).

> The heart is deceitful above all things,
> and desperately corrupt (Jer. 17:9;
> cf. Gen. 8:21; Ps. 51; Ezek. 36:26).

The deliverance from Egypt was interpreted (if not by Moses at the time, at least by later tradition) as Yahweh's intervention on Israel's behalf. This is an aspect of divine election—Yahweh *chose* a people to be in this special relationship with him. They need him more than he needs them, and his ministration to their need is his invitation to them to be in covenant with him. He has rescued them at a major crisis, and promises prosperity in the future. Their response should be to live as he directs, to "keep the statutes and the ordinances." The book of Deuteronomy sets out the fundamentals of the covenant idea (7:6-13; 26:16-19; 30:15-20). The Ten Commandments (Exod. 20:1-17) and the "ordinances" (Exod. 21:1–23:22) are to be understood as representing the human obligations under the covenant.

But in ancient Israel the covenant involved much more than a contract in which each side received advantage and accepted obligations. The distinctive feature of the OT is the perception that when man (Israel) fails in his obligations—in other words, breaks the commandments—God does not look upon the covenant as null and void. In ordinary contracts, if one partner defaults, the contract is at an end and the other party is free of obligation. This kind of legality is not applicable to OT religion, for Yahweh's justice far transcends it. In strict logic the prophets of Israel should have argued that because the nation had repeatedly sinned, their God would punish them with sickness, bad harvests, and defeat in battle, and even cast them off utterly. They do in fact say this. But they have an intuition that there is something more to be said; they discern that Yahweh will never utterly cast off his covenant people. Israel may not keep the statutes and the ordinances, but he can be relied on to keep the covenant and to show mercy (Deut. 4:31; 7:9). His justice is more than the justice of law court or moralist upon earth. *See* COVENANT; cf. Ps. 103:7-18; Isa. 54:1-10; 55:3-9; Jer. 31:28-34; Hos. 11.

2. Moses. As mediator of the law and inaugurator of the covenant of Sinai, Moses claims a unique place among agents of the biblical revelation. See Exod. 20:19; Deut. 5:2-5; and the quaint narrative of Exod. 33:18-23, according to which he was permitted to see more of the divine presence than was vouchsafed to any other mortal. By comparison with this the later priests and prophets were subordinates, officers of lower commission. His intercession on behalf of the calf-worshipers (Exod. 32:11-14, 30-34) shows a more personal aspect of his mediation. Abraham's pleading for Sodom (Gen. 18:22-33) is similar, as also perhaps the experience of Jeremiah (Jer. 1:4-10; 8:18-22; 15:15-21; 20:7-18).

3. The law. The law itself was regarded as a mediating factor. It was not a hard task to be performed so much as a privilege to be enjoyed (Ps. 19:7-11). It was an imperative which assured those who endeavored to fulfil it that they were in communion with one whose providence was an inspiration. The author of this imperative was not taskmaster but deliverer (Deut. 7:6-8). Later speculation equated Torah with wisdom as mediator (Ecclus. 24:23-29).

4. The prophets. The prophet had a new word to deliver, directed to contemporary circumstances, a true understanding of which had been revealed to him directly by Yahweh. He did not conceive himself to be declaring his own views, in the manner of a newspaper columnist; he was certain that thoughts had been communicated to him by God. And this was doubtless admitted by the audience who heard him preface his utterance with: "Yahweh's word came unto me." Doubts might arise for the hearers if the utterance was contrary to their private wish or traditional customs. But it was generally accepted that a man might appropriately dare to speak thus in the name of Yahweh, and to mediate between Yahweh and his worshipers in this way. *See* PROPHET; INSPIRATION AND REVELATION.

5. The priests. Priests were the custodians of the old revelation rather than the bearers of new revelation. They interpreted and applied the written word of law. It was not their privilege, as it was that of the prophet, to announce a spoken word that had been heard in the counsel of Yahweh. It is the priests, rather than the prophets, who are to be regarded—if the comparison be allowed—as the regular clergy of Israel. They were attached to the various centers of worship and pre-eminently to the great temple in Jerusalem (the only center of worship in the postexilic period). One thinks of them more particularly as the administrators of the system of sacrifice, which was designed as the means by which even the sinner could approach God. The priest then was the mediator by whose agency worshipers could become acceptable to God and feel that the barriers created by their sins were removed.

The priest was in attendance at the temple to advise people what their duty was, what sort of offering they should make in view of their wrongdoing or as a thank offering for benefits received. He carried out the ritual observances, and also interpreted the laws, of Hebrew religion. This included some duties of the modern physician—e.g., certification of freedom from infectious disease (see Lev. 13–14; Mark 1:44). Where the existing body of statutes was not explicit, the priests might be asked to give a judgment in a disputed case, as in Hag. 2:11-13. Thus, in addition to the more technical tasks of their profession, priests were looked up to as the appointed guides of the nation in morals and religion (Leviticus; Ezek. 40–48; cf. Deut. 33:8-10; Hos. 4:1-9; 6:6-9; Mal. 2:4-7). The priest's responsibility involved in some sense his bearing of the iniquity of the whole people (Ezek. 4:4). The vestments of the high priest symbolized the representative character of his functions (Exod. 28, especially vs. 29).

In the light of this we can look on the priests and prophets as colleagues rather than as rivals. It is not inappropriate to conceive the mediation of the prophet as, so to speak, a downward movement, and that of the priest as an upward movement, provided they are seen as complementary, not contrasted. There were occasions when a happy complementing of functions did not obtain, but we are outlining what the respective functions of priest and prophet were in principle. The priest was essentially the man who maintained the traditional religion, in its ritual and also its moral aspect. The prophet was not concerned so much for custom and outward form as for inner principle and for new revelations from Yahweh. But the prophet could reassert the "old" traditional religion if it seemed to him that current practice had departed from it (cf. Jer. 7:22-28); in this case the prophet is a reformer, not an innovator. He judges the present and actual in the light of an ideal—namely, God's will—whether as revealed at Sinai to Moses in the classic past, or as freshly revealed to the prophet of a later day.

6. The king. As Yahweh's anointed, the king is the representative of Yahweh to the people. He may even have been regarded as superhuman. He is Yahweh's son (Pss. 2:7; 89:26-27). In II Sam. 14:17, 20; Ps. 110; Jer. 22:18, he is lord. In I Sam. 16:13; II Sam. 23:1-5; Isa. 11:2; 61:1, the king has the divine spirit. But he is also the people's representative before Yahweh. He is their "shield" (Pss. 84:9; 89:18). The people is in some sense embodied in him, and he is the expression of their ideals. Their conduct, whether good or bad, is, as it were, focused in him. Like people, like king; a wicked king is both cause and consequence of a wicked people (cf. II Kings 16 [Ahaz]; 21:1-16 [Manasseh]); similarly in the case of good kings like Hezekiah (II Kings 18–20) and David. Generally, on the king as inseparable from the kingdom, see II Sam. 3:28; 21:1-14; I Kings 18:18.

The king's function included the performance of cult acts which were later the exclusive prerogative of the priests (I Kings 8). In the view of some scholars he did even more: he performed a ritual act which fell to no priest of a later day, not even to the postexilic high priest. At the New Year festival, which was a re-enactment of Creation, he was annually enthroned, and this was viewed as an impersonation of Yahweh (just as in the Babylonian cult the king impersonated Marduk); Yahweh was triumphing over the winter-death of vegetation, as he did over primeval chaos, and this triumph guaranteed the fruitfulness of earth and man for another year, victory over enemies, and general prosperity. An additional element in this cultic drama in Israel was the conception of the renewal of the covenant. The OT evidence supporting this theory is not as definite as could be desired. It is mainly derived from the Psalms (especially 93–99; 132–35). Not all scholars are willing to allow that the Babylonian rites must have had their parallel in Israel. For discussion of Babylonian religion, *see* ASSYRIA AND BABYLONIA.

A distinctive feature of Yahwism was the limitation of the king's autocracy by the assumption of his responsibility for upholding the covenant. Only insofar as he accepts this responsibility is he a king "after Yahweh's own heart" (Deut. 17:14-20; Ps. 72). The ideal of kingship was not always realized (cf. I Sam. 8; Jer. 22:13-17; and the summaries in I–II Kings).

7. Sacrifice. The sacrificial system among the Hebrews figures largely in their experience of mediation. There is need here only to mention in general terms what was implied in the ritual. (*See also* SACRIFICES AND OFFERINGS.) No rationale of ancient sacrifice can be given, because our ancient sources give us no information about the intention of worshipers. The theories that sacrifice was essentially man's offering a gift to his deity, or seeking communion, or making available the magic potency of blood, or annulling sin

and thereby restoring a right relationship with an offended deity—all have some truth in them and might all in varying degrees be in the minds of those who stood around an altar.

We note the part played by priests as mediators, and by the high priest in particular, in the ritual of the Day of Atonement (Lev. 16). But apart from the priestly agency, the system in itself meant that God was willing to be on good terms with his people, whether there were normal relations, so to speak, and the people came conscious simply of their humanity vis-à-vis their god (as in the kind of sacrifice known as peace offering [Lev. 3], which was followed by the jollity of a feast); or whether good relations had been violated and the people approached with a deep consciousness of sin (as with the postexilic sin, or guilt, offering, which was not accompanied by feasting). However little the average Israelite may have understood the details of the ritual of the later period, and however little he may have reflected on the significance of it, he must have accepted it as the means provided by God himself by which man could be freed from the sense of alienation from God. God was willing to be approached in this way; reconciliation was effected by this means.

The sacrificial system of Israel dealt with sins of ritual uncleanness rather than of moral transgression (Lev. 5:17-19; Num. 15:22-29; Ps. 19:12). For deliberate sins, "with a high hand" (Num. 15:30-31), presumptuous sins (Ps. 19:13), no sacrifice availed—e.g., for the disobedience of Adam in Gen. 3, or for the moral failure described in Rom. 1–2; 7. In the older legislation there had to be restitution where possible (Lev. 5:16; 24:17-21) and penalties, including extermination (Exod. 32:30-35; Lev. 20:2-27; Num. 15:30-36). In the Prophets it is realized that the real need is at a deeper level: what God requires most is repentance (Ps. 51; Ezek. 18). If the sinner has come to a penitent attitude, the grace of God forgives and restores, even though the consequences of his sin still have to be faced. This is beautifully clear in the account of David's sin with Bathsheba and the prophetic rebuke of it (II Sam. 12:13). Doubtless the performance of the sacrifices presupposed penitence on the part of the offerer and were not believed to be efficacious *ex opere operato*. "If one sacrifices from what has been wrongfully obtained, the offering is blemished," says Ben Sirach (Ecclus. 34:18-26), though he recognizes the necessity of sacrifice (35:1-11; 50:1-21). This may be taken as typical of how the system was regarded in the later period (second century B.C.). Jews of the Dispersion could not attend the temple, and had to concentrate on observances other than sacrifice—e.g., prayer, almsgiving, fasting. This was an unwitting preparation for the time when the temple cult was forcibly terminated (A.D. 70). It meant a certain spiritualizing and individualizing of religion, though it also laid stress on human effort in the endeavor for acceptance with God.

8. Hypostatic mediation. The postexilic period saw an increasing emphasis on the divine transcendence, and this led to the conception of mediating agencies other than the definitely human ones we have already considered (prophet, priest, king). The thought is now rather of the wisdom or word or spirit of Yahweh visualized as in some sense distinguishable from him but representing his dealing with man. The three terms mentioned are certainly used as more than mere attributes of Yahweh, and wisdom in particular is almost personified. Some scholars would place the Isaianic figure of the Servant in this category. A more popular type of thinking which is increasingly in evidence is the conception of angelic mediation. *See* ANGEL.

The word "hypostasis" (ὑπόστασις) means literally "solid basis," "essential nature," as in Heb. 1:2; 11:1. It is a more philosophic term than "angel," but like "angel" signifies something between a person and a pure abstraction, related to and dependent on God Most High, though distinct from the supreme majesty of the Godhead.

a. Wisdom. WISDOM appears in the OT as practical knowledge, but it rises to theological significance when understood as the principle of order in the universe. The relevant passages for this are Job 28:23-27; Ps. 104:24; Prov. 1:20-33; 3:13-19; and, above all, Prov. 8:22-31. In this last passage wisdom is not only the enlightener of mankind, but also the agent of God in the creation of the universe. The modern mind naturally assumes that this implies pre-existence—an independent existence of wisdom, apart from God though proceeding from him, seems to be implied. Some scholars, however, hesitate to attribute such precision to the author of Proverbs, and prefer to speak of poetic personification.

Two later passages in the Apoc. leave no doubt as to the substantive independence of wisdom (Ecclus. 24:3-6; Wisd. Sol. 7:22–8:4). The latter passage is the most important of all, and its agreement with Prov. 8 is plain, although the influence of Greek thought on the author of the Wisdom of Solomon is clear. The extra feature found in Ecclus. 24 is the conception of the embodiment of wisdom in the Torah or law of Israel. This is developed from the idea of wisdom's heavenly origin and immanence in the universe, with which the chapter opens. But the main thought is of the special relationship of wisdom to Israel (vs. 8: "Make your dwelling in Jacob"). This chapter stands by itself, and it is not possible to say that this identification of wisdom with law underlies all the references to wisdom in Ecclesiasticus (4:11-19; 6:18-22; 14:20-27; 51:23-26). But it is significant that the identification was made. With it may be connected the rabbinic idea that at the Creation Yahweh consulted the law, as an architect looks at his plans. The law, like wisdom, was in existence before the world. The significance of Ps. 119 must not be forgotten in this connection.

b. Word (Logos). For the word of God in the OT we have to distinguish three main usages: (*a*) The natural world is thought of as deriving its existence from the divine word or command (Gen. 1; Ps. 33:6-9; Isa. 40:26). (*b*) There is the legal word, divine commands for the moral guidance of society. (*c*) There is also the prophetic word, fresh revelation for the guidance of the people transmitted by the medium of the prophet. These three senses are combined in the conception of the word as the sovereign power and purpose of Yahweh. This conception dominates Deuteronomy and is reflected in some postexilic passages (Deut. 4:4-8; 8:3-4; Pss. 147:15-20; 148:8; Isa. 44:24-28; 45:18-23).

The prophets, both before and after the Exile, emphasize the objectivity of the word; it comes to them from God, and is not confused with their own thinking (Isa. 55:10-11; Jer. 20:9; 23:29). We may compare also the crystallization of this thought in Ps. 147:15-19; Wisd. Sol. 16:12; 18:15. This prepares for the definite hypostatization of the word, and its visualization as a distinct entity. This stage was not definitely reached, however, until after Greek philosophy had begun to influence Judaism.

The particular theme in Greek philosophy which is here meant was the teaching about the LOGOS which may be translated "Word" but always signifies thought, reason, rational principle, as well as its utterance—a twofold signification which other languages cannot reproduce. For Plato the Logos mediated between this imperfect world and the higher world of perfect archetypes, between the world of sense perception and the real or "intelligible" (νοητός) world. It might be called all-pervasive mind, but it is not personified. Later Platonists were more inclined to regard it as divine. In Stoicism, which was pantheistic and did not make the Platonist distinction of the two worlds, Logos was reason immanent in the world. It could be thought of as natural law, as the power that sustains the world, and as the mental power of individual men. As such it was divine, and might be identified with certain of the traditional gods.

The differentiation of Logos from the supreme God —i.e., its hypostatization in the strict sense—is seen first in Philo the Jew of Alexandria (*ca.* 20 B.C.-A.D. 49). Philo makes Logos one of the divine "powers" or agencies of the will of God. It is the instrument by which the world was created, the mediator of the law, the image (εἰκών) of God, the messenger (ἄγγελος), and the son (υἱός) of God. But it is neither personal nor pre-existent. Our present consideration is of the Logos figure as a cosmological principle, and—a more distinctively religious concept—as the medium both of God's providential control of the world and of man's knowledge of God. Full personification of the Logos had to wait for John's Gospel and Christian theology.

In later thought, represented in the Hermetic writings (A.D. 200-300), Logos became identified with Hermes, the messenger of the gods, who was variously thought of as the mediator of creation and the mediator generally between gods and men, as revealer of truth and savior, son of the supreme God, second god (δεύτερος θεός). In the Gnostic systems of the second century A.D., Logos tends to appear as one of the divine aeons or emanations who mediate between the supreme God and the world.

c. Spirit. The third main example of hypostatic conceptions is the developed doctrine of the SPIRIT. The thought of the OT is no more systematic here than in other connections, but we may define the functioning of the Spirit as meaning God's creative activity, whether in nature (Gen. 1:4; Job 33:4; Ps. 104:29-30) or in history and human experience (Neh. 9:20; Isa. 4:4; 61:1; Ezek. 37:1-14; 36:27; Zech. 4:6). The eschatological sense, of God's new creation at the end of history, is the climax of this. This is not much ascribed to the Spirit in the OT, but there is the well-known passage Joel 2:28-32, which seemed so significant to the first Christians (Acts 2:17-21). The idea that this creative divine energy is imparted to individuals is very common—e.g., in the case of Bezalel, with reference to artistic skill (Exod. 31:1-5), or with reference to extraordinary feats, as in the case of Samson (Judg. 14:16) and Saul (I Sam. 10:6-11; 11:6-15). This applies particularly to prophets (cf. Num. 11:25; 24:2; Neh. 9:30; Hos. 9:7; Zech. 7:12). The great prophets seem to show a certain caution in claiming God's spirit behind their utterances, and to prefer to speak of Yahweh's hand being upon them (Isa. 8:11; Jer. 15:17; Ezek. 1:3; 8:1).

The phrase "*holy* Spirit" occurs three times (Ps. 51:11; Isa. 63:10-11), and some have felt a suggestion here that the Spirit is distinct from Yahweh. Passages like Ps. 139:7 ("Whither shall I go from thy Spirit?"); Isa. 40:13; 48:16; Hag. 2:5 might be taken as lending support to this view. Caution is advisable here. The basic OT thought about the Spirit is as Yahweh personally in operation, making his will known to men, increasing their moral and religious potentialities, granting special quickening to certain people as agents of his purpose. This is not a conception of a divine hypostasis, but of God himself as *dynamis* (δύναμις) energy; in more Hebraic terms, the OT does not say so much that God has spirit (רוח), as that he is spirit (cf. John 4:24).

The later Judaism continued to think of the Spirit as power and heightened vitality, with special emphasis on its place in the temple cultus and in the person of the high priest. The living voice of a prophet was no longer heard, but the prophets of old were believed to have been prompted by the Spirit, as was scripture generally. We read much of the Spirit as source of morality and wisdom in the Testaments of the Twelve Patriarchs (Test. Simeon 4:4; Test. Levi 18:7, 11; Test. Judah 20:1; 24:2-3). Here we note the connection of the Spirit with wisdom, which is also found in Dan. 5:11-14; Wisd. Sol. 9:17; and frequently in Philo. The idea of the Spirit as a cosmic potency is found—doubtless under Stoic influence—in Wisdom of Solomon and Philo (cf. Wisd. Sol. 1:7; 7:23–8:1; 12:1). It is this line of development which leads to the hypostatization of the Spirit (if it is indeed justifiable to differentiate Spirit from its divine author)—namely, the notion of divine immanence in creation. The parallelism with wisdom no doubt contributed. Much of what is said about the activity of wisdom in Wisd. Sol. 7–8 might equally well be said of the Spirit (cf. Wisd. Sol. 1:4-7; 9:17).

9. Servant of the Lord. The mediatorial role of the much-debated figure of the Servant of Yahweh (Isa. 53) must not be overlooked. Recent discussion has introduced the suggestion that it is a king of Israel whom the prophet has in mind, and this, of course, brings the conception into closer relation with the concept of Messiah. Other interpretations keep to the thought of a prophetic figure, who displays, not in preaching but in bitter experience, the value for sin's atonement of obedience unto death. *See* SERVANT OF THE LORD.

10. Messiah. The significance of the Messiah similarly must not be overlooked. Even if Messiah was not strictly a mediating figure, he was the representative of Yahweh, whether his function was conceived as political (i.e., Messiah as ideal king of the future)

or spiritual. The conception must be evaluated in the light of the king ideology referred to above. Some scholars bring it into relation with the figure of the Servant, and it is then suggested that Judaism had the doctrine of a suffering Messiah.

Judaism certainly had a brief in the atoning potency of the suffering of righteous men. This is presented in its most sublimated form in Isa. 53, and the trials of good men in later times (e.g., during the Maccabean Revolt) were seen as exemplifications of it. It may be that the concept of the Messiah tended to be interpreted in the light of this. But the real fusion of these ideals had to wait for the creative experience of Jesus. *See* MESSIAH, JEWISH.

C. *MEDIATION IN THE NT.* 1. Christian beginnings. The most primitive Christian proclamation declared that in the life of Christ the power of God was at work; even his death was part of God's purpose; his resurrection meant, not only his vindication against adversaries and doubters, but also his exaltation to the presence of God, as Messiah and Lord (Acts 2:23-24, 32-36; 10:36-42; Rom. 1:4).

Through this Messiah, who had not been king in Jerusalem, and was not of priestly stock, but a humbly born Galilean carpenter, God was acting redemptively as never before. For this divine activity was that of the "end time" to which Israel's prophets had pointed (Acts 2:16-24; 10:43; I Cor. 15:3-4; I Pet. 1: 10-12). Through this Lord a new deliverance is available for Israel; that is the significance of the fresh outpouring of divine empowering Spirit (Acts 2:1-11; 3:16; 4:31-35; 5:32; 11:15-18). A new opportunity to attain moral triumph over sin is being offered (Acts 2:38-40; 3:26; 11:18). Christ is God's Righteous One, the Author (or Pioneer) of life (Acts 3:14-15). He is also the final arbiter of human destiny (Acts 10:42).

2. Jesus' own conception of his work. ***a. Fulfilment.*** The interpretation of Jesus' work as fulfilment was the original deposit of faith after the first Christians' eyes had been opened to the significance of their Master by the event of his resurrection and the experience of Pentecost. The basis of it was the Master's own understanding of his person and task. This may be reconstructed, in barest outline, from the Synoptic gospels as follows:

Whereas prophets spoke the word of God, Jesus incorporated it in himself. He knew himself to be greater than the prophets (Mark 8:27-38); greater than Jonah (Matt. 12:41); greater than John the Baptist (Matt. 11:2-11). Whereas the priests of Israel put men in touch with imperfect means of bridging the gulf caused by sin, Christ effected the perfect means of atonement, and inaugurated the new covenant (Mark 10:45; 14:24). Something greater than the temple was there during his ministry to Israel (Matt. 12:6). Christ made a higher claim on men's allegiance. He was the true king of Israel; he embodied the divine sovereignty. "Something greater than Solomon is here" (Matt. 12:42). Even the mediator Moses has now to acknowledge that a greater than he has come to the service of men (Mark 9:7).

b. The kingdom. Recent study has interpreted Christ's teaching and work as centering round the idea of the KINGDOM OF GOD. This is illuminating, provided the idea of God's fatherhood is not minimized. From this point of view his mediatorial achievement consisted in enabling his followers to take seriously the loving sovereignty and redemptive reality of God. In this sense the kingdom of God drew near to men (Mark 1:15); it could even be said to have come (Matt. 12:28).

The ethical teaching of Jesus is best understood as the laws of the kingdom. As men gathered round Jesus and heard him teaching, they stood under the kingdom's authority and felt the urge to obey. This was the authority with which he spoke, and the obedience of faith which his words inspired (Mark 1:22-27; 4:37-41). Negatively, he attacked the evil influences that plagued men. This is the inner significance of the healings and exorcisms; the kingdom of Satan was being overthrown that the kingdom of God might be inaugurated (Matt. 12:15-29). The advent of Jesus on the human scene made Satan recognize the limitations of his power. He had been strong in his tyranny over mankind, but he is now bound and his evil works are being undone by one stronger than he.

Such is the testimony of the gospels to the inner significance of Jesus' acts of healing and compassion, and critical scholarship cannot deny that this represents also the self-consciousness of Jesus himself (Mark 9:1; Luke 4:1-21; 10:1-24; 11:14-32; 13:10-17; 16:16 [cf. Matt. 11:11-12]; 17:20-21). He created conditions in which people could realize God's fatherly nearness, and could be reconciled to him and submit to his sovereignty with humble joy. This is clear not only from passages which explicitly mention the sovereignty, but also in incidents like those described in Luke 7:36-50; 19:1-10; and in the parables of Luke 15; 18:11-14. Christ's ministry was the supreme event in the long series of God's mighty acts on man's behalf. By it the divine love was brought down to man's level, and man was placed within its reach. Christ, as no other, enables the prodigal son to come to himself and return to the welcoming Father. So man's deepest need is satisfied, and mediation and reconciliation effected.

c. Messiah. The christological titles of the gospels are intended to express this concept (*see* CHRIST and related articles).

Such titles as "prophet" or "rabbi" (Matt. 16:13-20) were inadequate to express the fact that the divine sovereignty was making itself real among men through him. He could be no less than Messiah, in Jewish terminology. But this involved him in embarrassment, because of its prevailingly political connotation at that period. In the highest sense of the term he was Messiah, the peacemaking Messiah of Zech. 9:9-10, as hinted in the drama of the Entry into Jerusalem (Mark 11:1-10). But to have allowed this fact to be broadcast earlier in his ministry would have exposed him to the charge of being a Zealot nationalist. Hence the remarkable reticence of the Jesus of the Synoptic gospels about his messiahship.

"Lord" is fairly frequent in Luke as a title of Jesus, but elsewhere it is rare, and the proper inference from our Synoptic gospels is that deliberate thinking about Jesus as Lord (κύριος; Aramaic מר) was the usage of the early church rather than of the first disciples and Jesus himself.

d. Son of God. Jesus certainly thought of himself as the Son of God. Even if with extreme critical caution we set aside as unhistorical the acclamation of

him as Son of God by disciples, by the centurion at the Cross, by demons, and also in the narratives of birth, baptism, temptation, and transfiguration, there are still three basic passages in which his own conviction, if not his public teaching, about himself, as in a unique filial relationship to God, is clear: Matt. 11:25-27; Mark 12:1-12; 13:32. Proper reverence must be preserved about our ability to reconstruct the inner life of Jesus, but it is reasonable to assume that this filial consciousness was the basis of all Jesus' thinking about himself and his duty. The significance of it is that Jesus was appropriating to himself as a title what the OT used as a description of Israel's relation to her God (Hos. 11:1, etc.). It could be applied to an individual—e.g., the king (II Sam. 7:14; Ps. 2:7)—but seems not to have been a normal designation of the Messiah. The gospels, however, take it as synonymous with "Messiah," and probably this was a Christian innovation.

e. Son of man. The self-designation most favored by Jesus appears to have been the enigmatic title "Son of man." The primary meaning of this phrase, whether in the classical Hebrew (as in Ps. 8:4; Ezek. 2:1; etc.) or in the Aramaic of Jesus' time, was "man," "human being," "anybody." By using this term of himself, therefore, Jesus was indicating his sense of kinship with ordinary humanity. But this can hardly have been the whole of his intention. Modern sentiment tends to assume that Jesus thought of himself as the ideal man, but this ignores the categories that were available to him as a Jew of the first century. It is clear, however, that whereas the title "Son of God" expresses his relationship with his Father, "Son of man" expresses his relationship with his human brethren, the words "son of" in each case being a Hebraism for "likeness to" or "affinity with."

The uncertainty about the term "son of man" arises from its symbolic use, as in Dan. 7:13-27, where a human figure, in contrast with animal figures, is made to represent the "saints of the Most High." There is a further uncertainty whether the later use of the term in apocalyptic writing (I Enoch) was familiar to Jesus or not. There is less tendency among scholars now than a generation ago to assume this. Mark 14:62 is more likely to reflect the beliefs of the first Christians than to be an actual statement of Jesus. But the eschatological Son of man is firmly embedded in Mark and Q, and there can be no doubt that Jesus spoke in these terms (Matt. 19:28; 24:27, 37, 44; Mark 8:38; 13:26; 14:62). Whether Jesus fully identified himself with this conception of the vicegerent of God intervening at the end of history, and whether it expresses his distinctive thought, is more doubtful. It is certainly wrong to regard his earthly career as only a prelude to final intervention.

The view has been advocated that, as in Dan. 7, so in the thought of Jesus, the "Son of man" stands for a messianic community rather than an individual Messiah. This links back with Hebrew ideas of corporate personality, and points forward to the church as the new Israel, the new society "in Christ." On this view Jesus, in gathering disciples round him, was constituting the nucleus of the new covenant, the redeemed society, the kingdom of God on earth. This foreshadows the Pauline doctrine of Christ as the second Adam.

f. Self-sacrifice. The very ambiguity of the term "Son of man" may have made it welcome to Jesus, in the sense that it was more susceptible than the term "Messiah" of fresh meaning which he was waiting to pour into it. This new connotation is the element of self-sacrifice. For in the Markan presentation the Son of man is one destined not only to come on the clouds in a glorious denouement, but first to be humiliated and crucified (Mark 8:31; 9:12, 31; 10:33, 45; 14:21, 41). Some scholars have regarded this as unhistorical, but there is growing recognition that it was the characteristic thought of Jesus to accept death as the climax of his obedience to God and his service to his fellow men, and not to reject it as incompatible with messiahship. The full interpretation of these passages seems also to require the assumption that Jesus conceived his destiny in terms of Isa. 53. If Jesus thought of himself as that Servant of God who voluntarily made himself an offering for sin and poured out his soul to death, this expresses not only his relation to God (as Son of God) and his relation to men (as Son of man), but also the extent of his devotedness to his fellow men.

Summing up, we discern in Jesus' sense of mission a unique fusion of complete self-sacrifice with assurance of triumph as God's representative. He was convinced that, in the divine overruling, to lose his life was to save it; that God was undertaking for him and would make his suffering potent for the establishment of the divine society and the liberation of men from their sins.

3. Paul. The problem to which mediation is the answer is seen by PAUL in terms of man's sin and need of deliverance from it. No other NT writer takes it so seriously in these terms except the author of Hebrews.

There is a characteristic Pauline doctrine of the inability of man's idealism and moral consciousness (in biblical terminology, knowledge of law), with all the moral endeavor that may be prompted by it, to solve the basic problem of man's existence (Rom. 2: 17-29; 3:9-20; 7; 8:3-4; 10:4; Gal. 2:16-21; 3:21; Phil. 3:9).

Christ's fitness to effect mediation is expressed in the titles "Lord" and "Son of God," which Paul ascribes to him as part of his inheritance from the primitive Christology. The marks of his own reflection on that Christology, and of his attempts to bring out its significance, particularly for non-Jewish Christians, are to be seen in the conception of Christ as emancipator of the human race, as reconciler, as second Adam, and as wisdom.

a. The lordship of Christ. Christ as Lord is presupposed everywhere, and it is superfluous to quote references (*see* CHRIST). The most illuminating passages are probably Rom. 10:9; 14:8-9; I Cor. 8:6; II Cor. 3:16-18; Phil. 2:6-11. We note in the two Romans passages the connection with the Resurrection; this was in the most primitive preaching the signal proof of Christ's lordship, as we may infer from Acts 2:36. There is an individual apprehension of this in Phil. 3:8-10. The general idea needs little elucidation: it is that of Christ's complete control, directly in the church, indirectly in the whole universe, and ultimately (Phil. 2:11) over all existing beings, natural and supernatural. The references to Christ's final ap-
