In the Pastorals we see the beginnings of this process. There is concern about requirements for ordination, concern about the offices of bishops, presbyters (*see* ELDER), deacons (*see* DEACON), and widows. Yet we must not imagine the threefold "apostolic" ministry to be present. We are here at a stage in the development of the church in a particular geographical area, where the office of BISHOP is not yet clearly distinct from that of presbyter. Ἐπίσκοπος and πρεσβύτερος occur, but never in conjunction. This is a stage of the ministry similar to that in Acts 20, where ἐπισκοποι and πρεσβύτεροι are synonymous (vss. 17, 28). It is probable that a fusion took place between the terms "elder" and "overseer." The first term refers to the patriarchal structure of extra-Pauline Jewish Christian churches; the second to the Pauline order of overseers-deacons (cf. Phil. 1:1). The Pauline order was probably derived from Hellenistic society, in which the function of ἐπίσκοπος refers to a general title for "office," often that of the finance officer. However, a complete synonymity between ἐπίσκοπος and πρεσβύτερος seems excluded by the fact that ἐπίσκοπος is always spoken of in the singular. This does not necessarily refer to the monepiscopate, since the singular may be a generic singular (cf. I Tim. 5:1: πρεσβύτερος). A stage in the development of the ministry seems reflected in which the bishops are about to emerge out of the presbyterate and assume a position of leadership. The function of the bishop has not yet become pastoral. The office of teaching is still charismatic (II Tim. 2:2), yet the bishop's authority is emerging (I Tim. 3:5), especially in the antiheretical struggle. The situation seems not unlike the one reflected in the DIDACHE (15:1), where the transition from the charismatic pastoral function of prophets and teachers to the regular ministry of the bishops is reflected.

It should be observed that the rite of ordination is in the hand of the "apostles" and presbyters, but is still accompanied by the authority of the charismatic prophet (I Tim. 1:18; 4:14; II Tim. 1:6).

F. *THEOLOGICAL EMPHASES.* The Pastorals have the imprint of second-generation Christianity, in which the spiritual urgency of the apostolic era has made way for efforts of stabilization. A growing institutionalism within and a gradual adjustment to the world outside are signs that the church faces a future in society and must come to terms with that society. A strategy is developing. Unity in obedience to orthodox norms and to church officers who guard over these norms is a defense against opposition without and division within. Good works and intercession for the authorities serve to show that the church is a positive factor in society and not something to be hastily condemned.

The Pastorals can be studied from two different points of view: (*a*) One may compare their theological mood with that of Paul; (*b*) one may view their emphases in the context of their own time.

When we compare the Pastorals with the genuine Pauline letters, we see that although the author wants to write in Paul's name and authority and is familiar with the Pauline letters, the vitality and originality of Pauline religion has been replaced by a conservative religious emphasis. The subjective element of faith, its character as surrender to and trust in the living Lord, who permeates the whole life of church and believer, has undergone a shift to a more propositional, institutionalized emphasis. Faith approximates an acceptance of a creedal formulation, the content of Christian belief. In this light, the emphases on "sound doctrine" (I Tim. 1:10; II Tim. 4:3; Tit. 1:9; 2:1), on "sound speech" (Tit. 2:8; cf. I Tim. 6:3; II Tim. 1:13), on "religion" and "piety," must be seen. Justification by faith is, indeed, expressed in Tit. 3:4-5, but within the context of the Pastorals it has become a traditional phrase without living content. Thus the author can say: "The grace of God

has appeared for the salvation of all men, training us to renounce irreligion and worldly passions, and to live sober, upright, and godly lives in this world" (Tit. 2:11-12). Righteousness has become uprightness, and "good works" receive an independent emphasis.

This has consequences for ethics, as well. The antithesis in Paul between faith and the law is not any longer felt. "Now we know that the law is good" (I Tim. 1:8) is indeed a quotation from Paul (Rom. 7:12); yet its Pauline meaning has disappeared, as this sequel shows: "if any one uses it lawfully, understanding this, that the law is not laid down for the just but for the lawless and disobedient." For those who lead a decent life the law is nothing to be feared, the author seems to say. Indeed, a certain rationalism molds Christian faith and ethics. The reasonableness and respectability of Christian faith are stressed. The church takes over the secular virtues of the society around it and Christianizes them. Thus an ethic of humanity, decency, and godliness is introduced. Words rarely found in the Pauline letters show this tendency toward a bourgeois ethic. "Sobriety," a "godly life," a "good conscience," and a "good standing in the community" become essential marks of the Christian. "I desire you to insist on these things, so that those who have believed in God may be careful to apply themselves to good deeds; these are excellent and profitable to men." (Tit. 3:8.)

Yet it would be a misrepresentation merely to compare the Pastorals with Paul. Their importance can be assessed only when we view them in their own setting. One must consider seriously the changed situation of the church. The church must undergo a structural change in its self-understanding. It must come to terms with a continuing existence in the world. And in doing so it must hold fast to its confession, to its basic dissimilarity from the world. At the same time it must combat a perverted Paulinism —the Gnostic interpretation of Paul—in its midst. Therefore, we must not reject too easily the moralistic tone of the Pastorals as merely an expression of the bourgeois ideal of a good, healthy, and sober life. When we understand the issues the church faces, with respect to the dangers both from within and from without, we shall appreciate its attitude. For the heretics in the church belong to a type of introspective religiosity which claims its own esoteric traditions and which spiritualizes religion in such a way as to disregard the material life. The dualism of Gnosticism leads to the conviction that the God of redemption is really not the God of creation, or at least that salvation is for the soul, not for the body. This way of thinking is opposed by the insistence of the church that the apostolic tradition, which affirmed the God of redemption to be the God of creation, be safeguarded. This implies a healthy concreteness of earthly life, an appreciation for the gifts of creation, and the insight that "everything created by God is good, and nothing is to be rejected if it is received with thanksgiving; for then it is consecrated by the word of God and prayer" (I Tim. 4:4-5). Therefore the author insists on marriage, on childbearing, and on the enjoyment of wine. And all this in moderation—"if we have food and clothing, with these we shall be content" (6:8).

Also the author recognizes that if the life of creation is important, so is the life of the community. The tendencies to weld the church into an organized community, and to make it an instrument for the good of society, are important at a time when Gnosticism disrupts the church from within, and when gossip, slander, and the possibility of persecution threaten it from without. Therefore, the church must lead a life which carries its own apology. An ethic of good will must encounter the suspicion of the world. "Remind them to be submissive to rulers and authorities, to be obedient, to be ready for any honest work, to speak evil of no one, to avoid quarreling, to be gentle, and to show perfect courtesy toward all men." (Tit. 3:1-2.) Even so, the author calls men to be loyal to the faith of the church; and as II Timothy shows, this loyalty can mean suffering and martyrdom.

PASTURE LANDS [מגרש, common land, common *or* pasture lands]. Open country around the villages, to be used freely in common by the herdsmen and shepherds in the village. These lands are frequently mentioned in the allocating of lands in the Priestly sections of the Pentateuch (Num. 35:7, etc.); Joshua (14:4, etc.); and Ezekiel (45:2, etc.).

C. G. HOWIE

PATARA păt'ə rə [τὰ Πάταρα] (Acts 21:1). An ancient city of LYCIA *ca.* six miles E of the mouth of the Xanthus River. Its good harbor, sea commerce, and trade with the fertile Xanthus Valley made it one of the largest and most prosperous cities of Lycia. It was one of the six largest cities of the Lycian League of twenty-three cities described by Strabo (*Geography* XIV.3.2-3), and as such had three votes in the meetings of the League. The city was said to have been founded by Patarus, son of Apollo. Prominent in the religious life of Patara was the worship of Apollo, called Apollo Patareus. His temple and oracle at Patara were famous. Remains of a theater, baths, walls, etc., can still be seen; the modern village at the site is called Gelemish.

When the Ptolemies controlled Lycia, Ptolemy Philadelphus (285-246 B.C.) enlarged Patara and renamed it Arsinoe, but the new name never came into general use and was soon forgotten. Patara had strong commercial ties with Egypt. The prevailing westerly winds of the Mediterranean made it convenient to cross from Egypt to Lycia and thence sail westward under cover of Asia Minor and various islands.

Paul, on his final journey to Jerusalem, came from Miletus and Cos and Rhodes to Patara, probably on a small coastal vessel. To get to Palestine, he transferred to another ship and sailed directly, on the W and S sides of Cyprus, to reach Tyre (Acts 21:1-3).

So says the usual text. However, in vs. 1, Codex D and some other ancient MS authorities read, not merely "to Patara," but "to Patara and Myra." If this latter reading is correct, it was not at Patara but at MYRA that Paul transferred to a ship sailing directly to Tyre.

PATH [ארח, נתיבה, מעגל; ὁδός]. In the typical biblical sense, the course of human life in relationship to God and man. This is seen in the doctrine of the two "ways" or "paths" in the wisdom literature (*see* WISDOM; WAY), which contrasts the "good path," the path of "justice" and "life" (Prov. 2:9, 19; 8:20), with the path of the "wicked," of "sinners" (Prov. 1:15; 4:14). The former is the path of the "righteous" and "wise," while the latter is the path of the harlot and "evil men," the path to SHEOL (Prov. 2:15; 5:5; 7:25).

Other passages speak of the "path of Yahweh" (Ps. 17:5; Isa. 2:3)—i.e., the life which he ordains (Ps. 16:11; Isa. 30:11; Jer. 31:9). Yahweh leads the faithful along paths that are level and straight (Ps. 27:11; Isa. 26:7), not tortuous and fraught with danger, as is the "crooked path" of those under judgment (Lam. 3:9; cf. Job 19:8; Jer. 23:12).

In vivid descriptive language, the "path" may refer to the mysterious thoroughfares of the sea (Ps. 8:8); the route to the "home of darkness" (Job 38:20); the channel of God's anger (Ps. 78:50); or his avenue through the sea for Israel's deliverance (Isa. 43:16; cf. Job 28:7; Ps. 77:19; Hos. 2:6; Joel 2:7-8).

For the NT ὁδός, occasionally "path," *see* WAY.

PATHEUS pə thē'əs. KJV Apoc. form of PETHAHIAH 3 (I Esd. 9:23).

PATHROS păth'rŏs [פתרוס; LXX Παθουρη]. A designation of Upper Egypt.

Hebrew *Pathrôs,* with the gentilic *Pathrūsîm,* is a borrowing from Egyptian *p³-t³-rsy,* "the Southern Land," the exact pronunciation of which is disputed. On the basis of LXX Παθουρη, Assyrian *pa-tu-ri-si,* and Coptic data bearing on the vocalization of the final element as *-rīs,* it would appear that the Hebrew vocalization of the word is incorrect, a form *Pᵉthōrîs* or *Pᵉthōrēs* being expected.

In Egyptian texts the term *p³-t³-rsy* is used to designate the whole of Egypt above Memphis. To judge from the Assyrian material, in which Esarhaddon refers to himself as the king of *Muṣur, Paturisi,* and *Kūsi* (i.e., of Egypt, the Southern Land, and Cush) and from the same sequence in Isa. 11:11, this would restrict *Muṣur* and Hebrew *Miṣrayim* to Lower and Middle Egypt, leaving *Pathrôs* for the Thebaid. OT *Pathrôs* is further attested in Jer. 44:1; 44:15; Ezek. 29:14, where Pathros is called the original home of the Egyptians; and in Ezek. 30:14. The gentilic *Pathrūsîm* occurs only in the ethnographic lists of Gen. 10:14; I Chr. 1:12.

PATHRUSIM pə thrōō'zĭm [פתרסים; LXX Πατροσωνιιμ]. The people of PATHROS, Upper Egypt. The term occurs only in the ethnographic lists of Gen. 10:14; I Chr. 1:12.

PATIENCE [ארך; ὑπομονή; μακροθυμία]. The words "patience," "patient," and "patiently" occur infrequently in the English versions of the OT. "Patience" is found in Prov. 25:15 and "patient" in Job 6:11, where the KJV has, respectively, "long forbearing" and the more literal "prolong my life." Prov. 14:17 RSV has "patient," depending upon the LXX, while the corresponding passage in the KJV has "is hated," based on the Hebrew. Both versions have "patient in spirit" for ארך רוח in Eccl. 7:8, where the meaning seems to be "humble" as opposed to the "lofty in spirit"—i.e., "haughty." The adverb, "patiently," occurs in Pss. 37:7; 40:1, where the emphasis appears to be on waiting persistently for God to act when other help has failed.

So far as the NT is concerned, in the great majority of instances where "patience" occurs in the KJV, the original Greek word is ὑπομονή or the cognate verb; but the RSV prefers to translate this term with STEADFASTNESS, although other synonymous words are also found. Occasionally, however, μακροθυμία is translated "patience" in both versions. In one place, II Tim. 2:24, the KJV has "patient" as a translation for ἀνεξίκακος, which the RSV better renders by "forbearing," since the word means literally "to bear up under pain or evil"; and in I Tim. 3:3 the KJV has "patient" where the RSV has "gentle," which is a better translation for ἐπιεικής.

Trench (*see bibliography*) distinguishes between the use of the two principal terms by asserting that μακροθυμία has to do with persons and ὑπομονή with circumstances. The man who has μακροθυμία, "having to do with injurious persons, does not suffer himself to be provoked by them or to blaze up into anger," but the man who exercises ὑπομονή is the one "who, under a great siege of trials, bears up and does not lose heart or courage . . . . Thus while both graces are ascribed to the saints, only μακροθυμία is an attribute of God." Usually, therefore, "endurance" is a better translation for ὑπομονή than "patience," which in current English seems more to have the connotation of passive resignation, although there is always in the truly religious man a hope and a trust in the power of God to deliver him. Trench again remarks, quoting Ellicott on I Thess. 1:3: "In this noble word, ὑπομονή, there always appears a background of ἀνδρεία . . . . It does not mark merely the *endurance* . . . but . . . the *brave* patience with which the Christian contends against various hindrances, persecutions, and temptations that befall him in his conflict with the inward and outward world." Heb. 12:1-3 provides a good illustration of the use of the word, both in its nominal and its verbal form—we are to run "with perseverance" (δι ὑπομονῆς) the race that is set before us, looking to Jesus who "endured" (ὑπέμεινεν) the Cross as he had previously "endured" (ὑπομεμενηκότα) such hostility against himself. The RSV sometimes agrees with the KJV in translating ὑπομονή by "patience," but generally it renders the word by "endurance," "steadfastness," "perseverance," or "patient endurance."

E. J. COOK

PATMOS păt'məs [Πάτμος]. One of the Sporades Islands in the Icarian Sea. It lies *ca.* thirty-seven miles W-SW of Miletus; it is *ca.* ten miles long from N to S; and its greatest width, at the N end, is *ca.* six miles. It consists of rocky, volcanic hills. Such small islands of the Aegean Sea were used as places of political banishment by the Romans (Tac. Ann. 3.68; 4.30; 15.71). The reference to Patmos in Rev. 1:9 seems best explained as such banishment, or as banishment at hard labor. John the Seer states that

23. Panorama of Patmos

he "was on the island called Patmos on account of the word of God and the testimony of Jesus." This hardly means that he was there to preach the gospel or to receive the revelation he is to "write . . . in a book." He is sharing with the persecuted churches "the tribulation and the kingdom and the patient endurance." Cf. Rev. 6:9; 20:4, where "word of God" and "witness" or "testimony" are used in reference to a persecution situation. An ancient Christian tradition, reported, e.g., by Eusebius (Hist. III. 18.1), says that John was banished to Patmos by the Emperor Domitian in A.D. 95, and released eighteen months later when Nerva became emperor (III.20.8-9). The Monastery of Saint John, founded by Christodulos in A.D. 1088, is located near the traditional "cave of the revelation."

***PATRIARCHS** [πατριάρχαι; Lat. *patriarchae*]. Forefathers of the Israelite nation. The translation of the two words commonly used by the LXX and the NT to express the concept "patriarchs," πατριάρχαι (singular πατριάρχης) and πατέρες (singular πατήρ), varies in the English version, but they are usually rendered by "patriarchs" (e.g., Acts 2:29; Rom. 9:5), "forefathers" (Jth. 8:25; Rom. 9:10), "fathers of old" (Tob. 4:12), or most frequently "fathers" (Gen. 48:16; Deut. 1:11 [אבות]; so Luke 1:55, 72).

Bibliography

1. Usage. When applied to biblical figures, "patriarch" has both a strict and a loose usage. Specifically the term is limited to the ancestors of Israel presented in Genesis, whether those living before the Flood (the "antediluvian" patriarchs) or after it (the "postdiluvian" patriarchs). Of the latter group Abraham, Isaac, and Jacob are traditionally "the patriarchs" par excellence (IV Macc. 7:19; 16:25; Heb. 7:4), though the twelve sons of Jacob might be added to this inner group (Acts 7:8-9). It is to this inner group of three that the terms "patriarchs" and "patriarchal" most frequently apply.

However, a broader scope is also found, ranging widely across Israel's history. Acts 2:29 calls David a patriarch specifically; I Macc. 2:51-60 lists eleven worthy names from Abraham to Daniel; and the ὕμνοι πατέρων in Ecclus. 44–50; Heb. 11 are even more inclusive.

2. The antediluvian patriarchs. Genesis offers two genealogies of the early fathers who lived before the Flood. The first is from the Yahwist and concentrates on the line of Cain (ch. 4). The second, from the priestly writer, follows the line of Seth (ch. 5). Since both exhibit undeniable similarities of names and order, conclude in Lamech, and purport to trace mankind's growth from Adam to Noah, they probably represent two versions of an original (perhaps Mesopotamian) list. The great length of life spans, which has been variously explained, illustrates the phenomenon, shared by many cultures, of idealizing a golden age in the past by exaggeration.

3. The postdiluvian patriarchs. Previous generations have debated at length two major questions concerning the postdiluvian patriarchs: Is the picture of the period in which the OT sets them historically dependable, and did they actually live?

a. The historicity of the patriarchal period. The wealth of data now available from recent excavations at ancient Near Eastern sites permits a reconstruction of the Middle Bronze Age (*ca.* 2000-1500 B.C.) on a far more extensive and accurate scale than past ages could have hoped. The thousands of tablets from UGARIT; MARI; and NUZI have, almost by themselves, restored this period to its former richness. These texts and the patriarchal narratives in Genesis show such notable parallels in the formation of proper names, linguistic and stylistic expressions, as well as in legal and social customs, as to justify carrying the Abraham, Isaac, and Jacob traditions back to the Middle Bronze era. Although this would not necessarily make Abraham a contemporary of Hammurabi (*ca.* 1728-1686 B.C.), it does equate the age of the Hebrew patriarchs with an unusually brilliant and flourishing Mesopotamian civilization. *See* ASSYRIA AND BABYLONIA § C3; HAMMURABI.

b. The patriarchs as individuals. To the question of whether the Hebrew patriarchs really lived, contemporary scholarship tends to give an affirmative, though not unanimous or unqualified, answer. It recognizes that the Genesis stories are built on ancient oral traditions which have a long, complex history of transmission behind them, and that they came to be valued as much for their theological as

for their sociological and historical importance. The narratives were handed down and received, not as the straight history of mere individuals or as general personifications of tribes, but as recollections of real and distinct personalities whose lives continued to shape the character of the nation.

Abraham, Isaac, and Jacob have not turned up in ancient Near Eastern records as either individuals or tribes. But although history has not discovered the individual patriarchs, it has recovered the period into which the personalities seem to fit without distortion.

4. The religion of the patriarchs. The problem of the nature of patriarchal religion is even more complex than the historical problem and has received a less satisfying answer. Nevertheless, the materials which have helped recover the historical background of the Hebrew patriarchs contribute also to the reassessment of their religion and the evaluation of the Genesis traditions.

The patriarchs worshiped a God who appeared to each of them, calling them and promising to be with them, and whom each chose as the patron of his family. He was thus known as "the God of Abraham, the God of Isaac, and the God of Jacob" (Gen. 24:12; 26:24; 28:13; 32:9; cf. 50:24; Exod. 3:6).

This God would bless the patriarch, and through him "all the families of the earth" (Gen. 12:2-3; 18:18; 26:4; 28:14). Specifically the blessing entailed the promise of the land of Canaan and innumerable descendants (12:7; 13:14-17; 15:4, 18; 17:6-8; 22:16-18; 24:7; 26:3; 28:13; 50:24). He who blesses also protects and saves (ch. 19 [Lot]; ch. 21 [Ishmael]; ch. 22 [Isaac]; ch. 28 [Jacob]). He hears the cry of the afflicted (18:20-21; 19:13; 21:15-19 [*see* ISHMAEL § 1]; 32:9-12) and allows himself to be called by name and petitioned (e.g., 18:22-33).

He is, therefore, a personal God; and it is of his nature to associate himself with persons—both individuals and families—not principally with places. In this he is sharply distinguished from the Canaanite deities. Nevertheless, the places where he chooses to appear are accorded special prominence (Gen. 12:7; 16:13-14; 22:14; 26:23-25; 28:10-22; 32:1-2, 22-32).

The chief cultic means by which this God binds a person to himself is the "covenant relationship." If the worshiper accepts the covenant (Gen. 15:7-21; ch. 17), he must also fulfil the covenant obligations of worship, faithfulness, and morality (18:19; 22:2). *See* COVENANT § 3.

Finally, the patriarchal religion of Genesis was so similar in basic type to the Yahwism championed by Moses that Yahweh could be identified as the "God of my/your father" (אלהי אבי[ך]; Exod. 3:6; 15:2; 18:4).

PATROBAS păt′rə bəs [Πατροβᾶς, *shortened form of* Πατρόβιος] (Rom. 16:14). A Christian man greeted by Paul.

PATROCLUS pə trō′kləs [Πάτροκλος] (II Macc. 8:9). The father of Nicanor, one of the generals sent to battle Judas Maccabeus.

PATROL (התהלך, to go to and fro). A verb used in Zech. 1:10-11, where the prophet sees horsemen patrolling the earth and reporting to the angel, and the steeds of the four chariots were impatient to get off and patrol the earth (6:7). The figure is that of a military patrol. *See* ZECHARIAH, BOOK OF.

J. A. SANDERS

PAU pô, pā′ū [פעו, groaning, bleating] (Gen. 36:39). Alternately: **PAI** pī, pā′ī [פעי] (I Chr. 1:50). An Edomite city, the home of a King Hadad (Gen. 36:39; read "Hadad" for "Hadar"; cf. I Kings 11:14; I Chr. 1:50, where one should read, with many MSS and several versions, "Pau" for "Pai"). Its location is unknown. V. R. GOLD

***PAUL, ACTS OF.** One of the earliest of a long series of romances, commonly styled apocryphal Acts (*see* ACTS, APOCRYPHAL), which attempt to provide the information missing in the canonical Acts as to the subsequent doings of the several apostles. This work contains the widely circulated story of Paul and Thecla, the apocryphal correspondence between Paul and Corinth, and the legendary Martyrdom or Passion of Paul.

References to the existence of such a book have long been known, but it was not until the end of the nineteenth century that its original content was determined. Its earliest mention is by Tertullian (*On Baptism* 17), who strongly disapproved of it as encouraging women to preach and baptize, and who records that its author, a presbyter in Asia, had been convicted and removed from his office, although he had confessed that he had written it solely from love for Paul. Among other early fathers who mention the book are Hippolytus, Origen, Eusebius, and Jerome, the latter two reporting that it was rejected in their day. In the Stichometry, now appended to the ninth-century Chronography of Nicephorus, but very probably several centuries earlier, its length is given as 3,600 lines—i.e., 800 lines longer than the canonical Acts. Photius (A.D. 890), who read it along with the four other Acts, with which it had been combined by the Manicheans as a substitute for the canonical Acts, reports that all five were attributed to LEUCIUS, but the nature of the work, as we know it, together with Tertullian's identification of the author, makes probable that it was produced by an orthodox Christian *ca.* A.D. 160-70.

Despite these several references, little of the actual content of this apocryphon was known until recently. In 1904, C. Schmidt published a very defective sixth-century Coptic MS which contained material long known but hitherto as separate writings—viz., the Acts of Paul and Thecla, the correspondence of Paul with the Corinthians, and the Martyrdom of Paul—and argued that these were all parts of the original apocryphon. Subsequent discoveries of two Greek

fragments, each but a page in length, and a little later of a substantial eleven-page Greek fragment (A.D. 300) did much to confirm Schmidt's judgment as to the original content of the writing.

As reconstructed from the clues provided by the Coptic MS, the original form seems to have been substantially as follows: In Pisidian Antioch, Paul restores to life the son of Panchares and Phila, but soon is obliged to flee from the city. Then follows the famous episode of Paul and Thecla, preserved complete in several Greek MSS, in Latin, in many oriental versions, and in part in Schmidt's Coptic MS. The abrupt beginning, which had long perplexed critics: "When Paul went up to Iconium after he had fled from Antioch, there journeyed with him Demas and Hermogenes the coppersmith," is now explained. This is not a complete story but only a chapter in a larger work.

Thecla, a Greek girl in Iconium who is of prominent family and is engaged to be married, hears from her window Paul's preaching. Impressed by his insistence on the importance of chastity, she breaks off her engagement, visits Paul in prison, engages in missionary work, miraculously escapes death several times in the arena, and then baptizes herself without ill effects in a great tank of water containing seals. Later she goes to Myra to rejoin Paul, reports to him her baptism, and is sent back by him to Iconium to preach. Finally she departs to Seleucia, "and after she had enlightened many with the word of God, slept a good sleep." In some Greek MSS the tale is still further embellished: At the age of ninety, while living on Mount Calamon, she is visited by lewd fellows who seek to rape her. In answer to prayer the rock opens and, after her entrance, closes upon her. In some of these later additions she goes underground to Rome.

To what extent this legend was produced as a direct correction of Paul's views with regard to women as teachers (I Cor. 14:34; I Tim. 2:12) and his reported counterendorsement of marriage (Tit. 2:4) is perhaps uncertain, although far from unlikely. The romance became very popular, and Thecla became by far the most famous virgin martyr. It is in this little episode that the description of Paul, which has so influenced subsequent ecclesiastical art, is given: "a man little of stature, thin-haired upon the head, crooked in the legs, of good state of body, with eyebrows joining, and nose somewhat hooked, full of grace: for sometimes he appeared like a man, and sometimes he had the face of an angel."

Then follow episodes in Myra (where he heals a man of dropsy, and thereby incurs the wrath of the man's son and heir), in Sidon (where the temple of Apollos in which he was imprisoned suffered collapse), and in an unidentified place where he is condemned to the mines and restores to life a Christian convert, Frontina, who has been flung from the cliff. It is probable that at this point the episode of the lion who caressed him in the Ephesian arena occurred. The story, long known from the *Ecclesiastical History* of Nicephorus, and a natural consequence of Christian curiosity as to how Paul had escaped the wild beasts at Ephesus (I Cor. 15:32), does not occur in the Coptic MS but is found in the lengthy Greek fragment already referred to. In this Greek fragment the lion speaks to Paul, and Paul asks in return if he is not the same lion whom he has earlier baptized. In an Ethiopic MS now in the British Museum, E. J. Goodspeed discovered a story of Paul's baptism of a lion and of its subsequent recognition of him in the Ephesian arena, and not unplausibly conjectured that this was the story which Jerome knew and rejected ("the pure fable of the baptized lion" [*Illustrious Men* 7]).

From Ephesus, Paul goes to Philippi, where, following the Coptic account (the Greek omits mention of a stay in Philippi), he is imprisoned. It is during this imprisonment that he has his later correspondence with Corinth. The Corinthians write him to report that two men, Simon and Cleobius, are overthrowing the faith in Corinth by their insistence that "we must not use the prophets, that God is not almighty, that there shall be no resurrection of the flesh, that man was not made by God, that Christ came not down in the flesh, neither was born of Mary, and that the world is not of God but of the angels." In reply Paul refutes these evil notions in considerable detail and in phrases strongly biblical.

Like the Acts of Paul and Thecla, this section enjoyed wide independent publicity and popularity. Not only did it circulate in Syriac, Latin, and Armenian, but the two letters were regarded as authentic and a part of the Pauline letters in both the Syriac and Armenian churches. In consequence, Paul's reply is commonly styled III Corinthians. In his commentary, now available only in Armenian, Ephraem the Syrian commented on it along with the rest of the Pauline letters. It is also extant in many Armenian MSS and in three Latin ones.

The Coptic text from this point on is very fragmentary and obscure. In the Greek fragment Paul visits Corinth and then embarks for Rome, having baptized the vessel's captain. He meets Jesus walking on the water, is urged by him to continue to Rome, arrives, is saluted by the brethren, is arrested, tried before Nero, beheaded, and later appears to terrify this wicked monarch.

Although the Coptic MS is here incomplete, it contains fragments of the famous Martyrdom, extant as a separate story in two Greek MSS, in an incomplete Latin version, and in Syriac, Coptic, Ethiopic, and Slavonic. It is thus highly probable that this section too was originally a part of the Acts. Like the other parts of the apocryphon, it is a purely legendary expansion of themes from the canonical Acts. Thus Paul restores to life Nero's cupbearer, Patroclus, who has fallen from a high window as he sat listening to Paul. Because of Patroclus' not unnatural subsequent conversion, Nero has Paul arrested and beheaded. As Paul's head is struck off, milk spurts upon the cloak of the soldier. Paul appears to Nero and warns him of the evils soon to befall him.

No sources for this thoroughly orthodox expansion and completion of the life of Paul, so intriguingly incomplete in the book of Acts, need be sought other than a knowledge of the canonical Acts and of the districts of Asia Minor, and a fertile imagination. There seems little reason to question that it was an honest and well-meaning attempt by the unfortunate Asian presbyter to add to the fame of the apostle he so greatly venerated. Despite occasional voices to the

contrary, the work appears to have enjoyed wide favor in the early church.

Bibliography. M. R. James, *The Apocryphal NT* (1924), pp. 270-99, contains a readable translation of all this material save the eleven-page Greek fragment later discovered. For a more extensive bibliography, including the work by Schmidt, *see* J. Quasten, *Patrology* (1950), I, 132-33. For a survey of the various types of apocryphal writings, of which these Acts are but one part, *see* APOCRYPHA, NT. M. S. ENSLIN

PAUL, ACTS OF ANDREW AND. *See* ANDREW AND PAUL, ACTS OF.

PAUL, ACTS OF PETER AND. *See* PETER AND PAUL, ACTS OF.

***PAUL, APOCALYPSE OF.** A late but widely circulated apocalypse, which purports to set forth the experiences of Paul when he was "caught up to the third heaven" (II Cor. 12:2-4).

In his *Church History,* Sozomen writes: "The book now circulated as the Apocalypse of Paul the apostle, which none of the ancients ever saw, is commended by most monks; but some contend that this book was found in the reign of which we write [Theodosius]. For they say that by a divine manifestation there was found underground at Tarsus of Cilicia, in Paul's home, a marble chest, and that in it was this book" (VII.19). He continues that when he inquired, an aged priest at Tarsus assured him that no such thing had ever happened in that city and that he had never heard the story.

Augustine is contemptuous of those who had forged a writing full of fables regarding the unutterable words which Paul had heard (*On John,* Tract 38). There seems no reason to question that the book to which he makes reference is the same as that reported by Sozomen and extant in many versions.

In addition to the Greek, copies of which are both few and incomplete, it is preserved in a full Latin text, commonly styled *Visio S. Pauli,* and in several abridged Latin texts from which many popular translations have been made. Besides the Greek and Latin versions it is extant in Syriac, Coptic, and Ethiopic. It is commonly dated in the last years of the fourth century.

It was inevitable that Paul's reference to the "man in Christ" who was snatched up into the third heaven and in paradise "heard things that cannot be told" (II Cor. 12:2-4) should prove fertile seed. Epiphanius (*Heresies* XXXVIII.2) mentions a forgery on this theme by the Cainites styled the "Ascent [*Anabastikon*] of Paul." While this writing—surely not the same as the widespread apocalypse—is commonly said to have vanished without a trace, it is not impossible that the Coptic Apocalypse of Paul, found in 1946 along with many other Gnostic treatises at Chenoboskion in Upper Egypt (*see* APOCRYPHA, NT), may eventually be found to have some connection with the work cited by Epiphanius.

With this intriguing word of Paul as a text and the Apocalypse of Peter (*see* PETER, APOCALYPSE OF) as a model, the present apocalypse was composed. The long section regarding ministering angels and their daily reports to God (7-10) may well have been suggested by the mention of "their angels" in Matt. 18:10. That the "man" referred to by Paul was the apostle himself—the regular (and undoubtedly correct) understanding of early readers—is, of course, the view of the highly imaginative compiler of the present apocryphon.

The writing falls into seven parts: (*a*) the story of the discovery of the book in a marble chest underground at Tarsus by the occupant of Paul's former home; (*b*) the Lord's command to Paul to preach repentance to the children of men, against whom, because of their wickedness, the sun, the moon and stars, the sea, the waters, and the earth were wont to make passionate pleas to God to allow them "to do according to our powers"; (*c*) a lengthy account of the functions and daily reports of the "angel of every people and of every man and woman, which protect and keep them, because man is the image of God"; (*d*) Paul's vision from on high of the representative deaths and subsequent fates of one righteous and one sinful man; (*e*) his first view of paradise, his meeting with Enoch the scribe, the amazing fertility of the place, the city of Christ on Lake Acherusa, the rivers of honey and of milk and of oil, the golden throne, and (a climax) the exceedingly high altar and beside it David, who alone was privileged to act as minstrel before Christ and his Father; (*f*) his tour of hell and his visions of the torments of the damned, of whom (among many other sinners) faithless priests, bishops, deacons, readers, and heretics (who deny such doctrines as the virgin birth, real presence in the Eucharist, and physical resurrection) are especially singled out for hideous torment. This section concludes with Paul's plea to God for mercy for them, and the appearance of the Son of God, who after assuring the tormented of the propriety of their fate, grants them, in part for Paul's sake but chiefly because of his own goodness, a respite of one day and night each week forever, as a sort of weekly anniversary of his own resurrection.

Here the document would seem properly to have ended, but in all our copies there is a seventh section in the form of a second vision of paradise, in which Paul has a personal introduction to and word with such figures as the three patriarchs (Abraham, Isaac, and Jacob), Moses, the three major prophets (Isaiah, Jeremiah, and Ezekiel), Lot, Job, Noah, and Elijah and Elisha. At this point the Greek, Latin, and Syriac texts end, but the Coptic continues with Paul meeting Zacharias, John the Baptist, Abel, and Adam.

At this remove it is pointless to attempt any reconstruction of what has been, not inaptly, styled "so ill-proportioned and inartistic a book"; but the obvious repetition involved in the second tour of paradise, together with the fact that the mitigation of the punishments of the damned on Sunday, due to Paul's entreaty, is the so patent climax, raises a question as to whether the earliest form of this work did not end with this elaboration of Paul's cryptic word in II Cor. 12:2-4.

Bibliography. An English translation, largely following the text of the longer Latin version, is provided by M. R. James, *The Apocryphal NT* (1924), pp. 523-55. A convenient bibliography of some of the studies this apocryphon has inspired may be found in J. Quasten, *Patrology* (1950), I, 148-49.

M. S. ENSLIN

PAUL, PASSION OF. A revision in Latin, attributed to Linus, of the original Martyrdom of Paul, now known to have been a part (although circulated independently) of the Acts of Paul (*see* PAUL, ACTS OF). This later version adds several stories, notably that of the handkerchief given to Paul by Plautilla and returned to her stained with blood by Paul, who appeared to her "with a celestial company"; and a paragraph about Seneca's profound admiration of Paul and his letters and about his reading portions of them to Nero. M. S. ENSLIN

PAUL, PASSION OF PETER AND. *See* PETER AND PAUL, PASSION OF.

PAUL AND SENECA, EPISTLES OF sĕn'ə kə. A series of fourteen Latin letters between Paul and the Roman philosopher Seneca, in which in most intimate fashion each applauds the other. Seneca is deeply impressed by the majesty of Paul's thought and the clear evidence of his divine inspiration, but regrets that the literary form of the letters is not more in keeping with the sublimity of their content.

Since this correspondence was known to Jerome, who says that it was "read by many" (*Illustrious Men* 12), it cannot be later than the fourth century. It was presumably composed in Latin. Many MSS are extant, some as early as the ninth century. The precise reason for its composition—to bring Seneca, long regarded as lacking but little of being a Christian, the more securely into the fold; or to encourage Roman society to read the Pauline letters—is uncertain. While manifestly a crude and trivial forgery, the letters were very influential in establishing Seneca at an early date as a "Christian." The tenth Council of Tours (A.D. 567) invokes his words as though he were a father of the church. In his native Spain, Seneca is represented along with Peter and Paul in the antics of the marionettes as playing a part in the Lord's passion. *See* APOCRYPHA, NT.

Bibliography. An English translation of the letters is printed by M. R. James, *The Apocryphal NT* (1924), pp. 480-84. A useful critical discussion of the letters is to be found as an addendum to J. B. Lightfoot's lengthy essay, "St. Paul and Seneca," at the end of his commentary, *Saint Paul's Epistle to the Philippians.* M. S. ENSLIN

***PAUL THE APOSTLE** pôl [Παῦλος; Lat. *Paulus*, little]; SAUL sôl [Σαῦλος, Σαούλ; שאול] only in Acts. A first-century Jew who from being a persecutor of the followers of Jesus was transformed into the leading missionary of early Christianity. He called himself an "apostle to the Gentiles" (Rom. 11:13) and was the founder of churches in Asia Minor and Greece, carrying on an extensive correspondence with these new churches as he moved about. Paul's extant letters form an important part of the NT, and Acts devotes more than half its contents to his career. He was a pioneer in formulating the doctrines and the ethical implications of the gospel. His influence has persisted across the Christian centuries, and he must be reckoned as second only to his master, Jesus Christ, as a creative personality in Christianity.

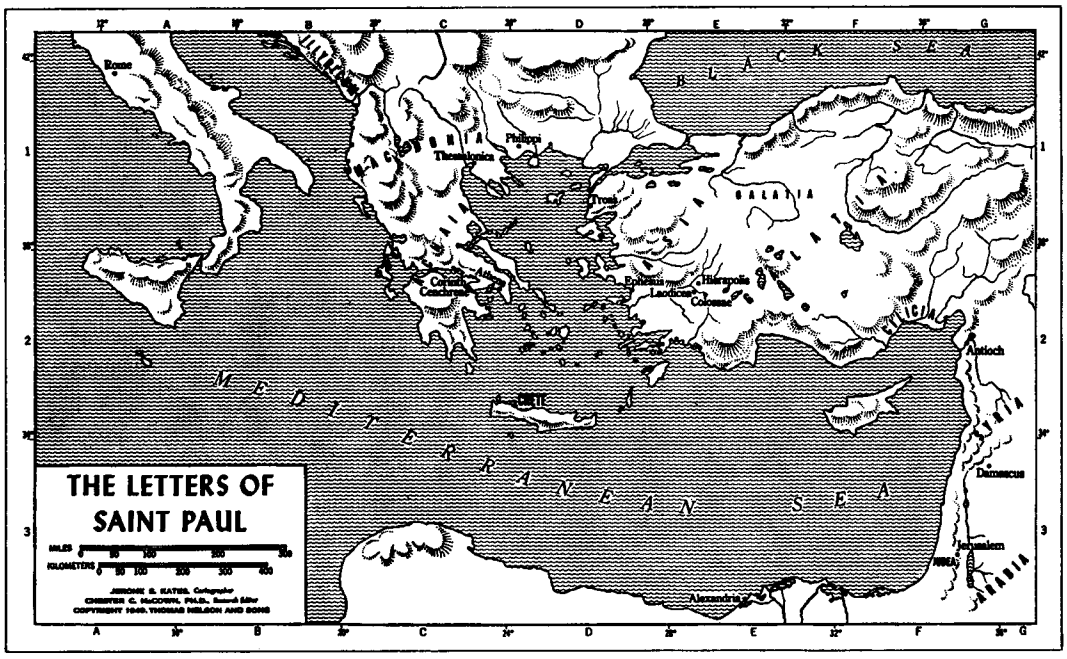
A. ***THE LIFE OF PAUL.*** **1. Sources.** If we may disregard the Acts of Paul, and other relatively late apocryphal works, Paul is never mentioned in any ancient nonbiblical source. Even Josephus, who might have known and been interested in him, is silent. It is clear that Paul did not sufficiently impress contemporary literary or official circles to gain recognition.

The NT, however, contains a wealth of material on Paul, for we possess not only firsthand sources in Paul's own letters to the churches but also an important and lengthy account of his missionary career by the author of Acts. These two sources are independent of each other. It is generally held among scholars that the author of Acts did not know Paul's letters. The few verbal identities and similarities between Acts and the letters are more likely to be the result of chance agreement of two writers on the same theme than of any dependence of the one on the other, while the striking differences include both



significant omissions and equally significant contradictions. This independence of our sources is both an advantage and a liability. Where they agree, they confirm each other and give us confidence in the reliability of the information or understandings they convey; but when they differ, they confront us with many problems, especially since Acts is prevailingly biographical, while Paul's letters are, of course, only incidentally so. These facts not only work out in major difficulties as regards chronology, but also raise important problems with reference to Paul's career.

a. Paul's letters. The very substantial corpus of extant Pauline letters, out of what may well have been scores now lost, affords a fascinating field of study from the purely literary point of view. It is now generally acknowledged that the Pauline writings in the NT are indeed genuine letters—not, of course, private, "off the record" communications, for they are addressed to the churches and presumably intended for public reading. Even Philemon, the one genuine Pauline letter addressed to an individual, is addressed also to the "church in your house." For our purposes a letter may be defined as a communication, on whatever subject, determined as to its contents by the personal relations existing between writer and reader(s). With some small exceptions, Paul's writings conform to this definition. Even the first eight chapters of Romans, the longest discussion of a single theme (Rom. 1:16-17), have a personal purpose growing out of Paul's plans and hopes with regard to the church at Rome (1:8-15; 15:14-33).

Paul conforms to the general epistolary style of his times, with significant changes due chiefly to the nature of the message he proclaims or to his work as a missionary (*see* LETTER). E.g., the epistolary greeting in the usual Greek letter consisted of the writer's name, the name of the person addressed, and a greeting (χαίρειν). Paul follows this pattern but enlarges it so as to indicate the Christian status of both writer and readers, with such phrases as "an apostle," "the church of God which is at Corinth, . . . sanctified . . . , called to be saints." He also changes "greeting" (χαίρειν) to "grace" (χάρις) and adds the familiar Semitic "peace." He often names one or two persons with himself in the salutation (I Cor. 1:1; II Cor. 1:1; Phil. 1:1; I and II Thess. 1:1), but it is unlikely that this means joint authorship; the letters are often too personal for that (see especially II Corinthians). It means rather a joint greeting. Frequently in a Greek letter a word of praise or thanks or a prayer for the health of the recipient follows the salutation. This too is so characteristic of Paul's letters that the absence of the thanksgiving from Galatians appears to be deliberate and in keeping with the tension under which he writes this letter. Apparently it was Paul's custom to dictate his letters to an amanuensis, who on one occasion identifies himself (Rom. 16:22; cf. references to Paul's writing with his own hand in I Cor. 16:21; II Thess. 3:17; Gal. 6:11; Col. 4:18).

Occasional corrections (e.g., I Cor. 1:16), incomplete sentences (e.g., Rom. 5:12), and a general roughness and vigor of style witness to the extempore character of the compositions. But many passages are carefully and exactly phrased. E.g., I Cor. 13, the "hymn of love," while obviously pertinent to the unlovely divisions at Corinth, does seem to go beyond the immediate requirements of the context; and a great passage such as Phil. 2:5-11 has been thought to be from an early Christian hymn. Perhaps Paul, like an experienced preacher, makes use of passages, here and there, which have been independently composed. It is natural to suppose that extended exegesis of OT materials (cf. Rom. 15:7-12; Gal. 3:10-13; 4:21-31) often first appeared in sermons preached by Paul. And the collocations of exhortations of a general rather than specific nature, which tend to appear near the close of the letters (cf. Rom. 12:9-13; II Cor. 13:11-12; Phil. 4:8-9; and the "household

lists" of Col. 3:5–4:6), bear more than a superficial resemblance to what we find in James, I Peter, and Hebrews, and witness to the beginning of a Christian "didache."

What impresses one most of all in the letters is the dominance of Paul's central message about Christ and the salvation that is in and through him. Paul does, indeed, seek to "take every thought captive to obey Christ" (II Cor. 10:5). Every subject he touches —vegetarianism, women's headdress, lawsuits, personal illness, gross immorality, the status of a Christian slave, party strife—is brought into some connection with the "law" of Christ. Quite earnestly and consistently, Paul seeks to bring everything under the one principle of being "in Christ." It is this above everything else—not Paul's literary gifts, which were considerable; not his eloquence, which could leap like a flame at times—which makes his letters of permanent significance.

No autograph of any of Paul's letters is known, and none is apt to turn up. We have only copies of copies many times removed from the originals, and these copies have been edited and collected before forming the considerable part of the NT canon that we know. It is not surprising that the question of authenticity has been raised and discussed for more than a hundred years. Something like a consensus on the major questions has been achieved. Thirteen writings bear the name of Paul (the Letter to the Hebrews does not have Paul's name in the text). Of these the most important for Paul's thought, Romans, I and II Corinthians, and Galatians, are fortunately widely held to be substantially as they came from him. So are Philippians, Philemon, and I Thessalonians. Many scholars would also include Colossians and II Thessalonians, although these are often seriously questioned. Ephesians, while quite Pauline in content, is often held to be by a Paulinist; and the Pastorals, I and II Timothy and Titus, are usually thought to be post-Pauline but to contain perhaps genuine fragments of his letters.

b. The Acts of the Apostles. In Acts we possess another source of major importance for the life and thought of Paul. Since the letters contain a minimum and Acts a maximum of biographical data, we would seem to be in the happy situation of combining Paul's letters and the Acts for a knowledge of his life and his message. This is exactly what has happened across the centuries. The very simplicity and consistency of the record in Acts is impressive as the framework for the letters, which have been fitted in even when some admitted difficulties arose. If we had four Acts of the Apostles, as we have four gospels, the picture might be much less simple and consistent but nearer the truth. While errors may occur in firsthand sources, these are obviously to be preferred to secondary accounts, which must always justify themselves as over against the primary records in every case of difference. It is a mistake in method to assume that a secondary source provides a framework of events into which the primary sources must be made to fit. This is the mistake frequently made with regard to Acts, probably because it is the only source we possess for much of the biographical data we desire. The extraordinary value of Acts must not be allowed to obscure the fact that it is a later and secondary source to be critically examined in comparison with Paul's letters.

The purpose of Acts is to record the expansion of Christianity from Jerusalem to Rome under the inspiration and control of the Holy Spirit (see 1:8, which is indeed a condensed "table of contents" of the book). While Acts is not, therefore, intended as a biography of Paul, his place in it is of unparalleled importance. He is mentioned in 7:58; 8:1; the first account of his conversion comes in 9:1-30 (cf. 22:1-29; 26:1-23); the initial mission as a colleague of Barnabas is described in 11:25-30; 12:25. But beginning with 13:1, the following sixteen chapters are devoted entirely to Paul.* This considerable amount of unique material so important for the career of Paul needs to be critically assessed (*see* ACTS OF THE APOSTLES), but only some of the results of this study can be referred to here. It is widely recognized that Acts and Luke form a two-volume work by one author. Now we can know, from observing the way the Gospel of Luke is related to Mark and Matthew, how our author used his sources and what emphases are characteristic of him. Among these (some of them become clearer and more explicit in Acts) are the dominant role of Jerusalem and the Jerusalem church; the prominence of the Holy Spirit in the motivation, guidance, and discipline of the early church; the mission to the Gentiles acknowledged by all the leaders (even Peter was sent to the Gentiles [15:7]), with amazement but without dissension (cf. 11:18); and the innocence of Christians of any charge of rebellion against Rome, coupled with the constant malice and persecution of the Jews. This last is especially noteworthy, for Pilate three times asserts the innocence of Jesus in the Gospel of Luke, while the magistrates at Philippi, Gallio in Corinth, the Roman captain, Felix, and Festus in Jerusalem regularly attest to Paul's innocence according to Acts. *See* map "The Travels of Paul in the Book of Acts" under ACTS OF THE APOSTLES.

The straightforward narrative of Acts predisposes the reader in its favor. Is it not unwarranted to question so clear and satisfactory an account? Two answers must be given to this question: First, the author is not an eyewitness—at any rate, for most of the events he records (*see* ACTS OF THE APOSTLES for a discussion of the "we" passages)—and he is accordingly dependent on the reliability of his sources. Second, while it can be shown that he introduces his sources without radical re-editing, it can also be shown, in the case of the gospel, that he is quite free to select and arrange material from his sources in such a way as to bring out his own views. Much, perhaps most, of the surplus information of Acts, as compared with the letters, is to be welcomed as adding to our knowledge. When, however, Acts stands in clear contradiction to the letters (*see* § A2 *below*), the student must not be obsessed with the necessity of harmonizing the two; the letters must be accorded primary authority unless they can be shown to be themselves contradictory or otherwise of doubtful validity.

2. The events in the life of Paul. Only occasionally do Paul's letters furnish data for his biography, and while these glimpses are of great value, they do not add up to anything like a life story. We are so

accustomed to draw upon Acts and the letters without discrimination that the results of isolating the biographical materials according to sources is somewhat startling; we are dependent on Acts alone for most of our knowledge of Paul's career. That he was born in Tarsus, and was a citizen of Tarsus by birth; that he was named Saul; that he was educated in Jerusalem "at the feet of Gamaliel" (Acts 22:3); that he was present at the stoning of Stephen and was a persecutor of the Jerusalem church; that he made a persecuting trip to Damascus and was converted as he approached this city; that he subsequently engaged in three distinct missionary journeys; that he was arrested in Jerusalem, appealed to Caesar as the right of a Roman citizen, and was sent to Rome for trial—all this we know only from Acts. Paul himself never mentions any one of these items. Of course, Paul's known letters may have been written before the final sea voyage to Rome, but the other data lie certainly within their scope. Probably the best arrangement of the materials on the life of Paul is geographical.

a. Tarsus. According to Acts, Paul says he was "born at Tarsus in Cilicia" (22:3; cf. 21:39), and three times in Acts he is associated with this city (9:11, 30; 11:25). While the letters do not mention Paul's birthplace, there appears to be no reason why they should, just as there appears no reason why the author of Acts should have invented it. Tarsus had a considerable reputation for culture, and, as a Hellenistic city in Cilicia—one of the early fields of Paul's missionary activity (Gal. 1:21)—it would provide the environment for his use of the common Greek speech and perhaps also for some acquaintance with the kind of thinking exposed in the streets and market place by Stoic, Cynic, and other propagandists.

That he received at birth the Jewish name Saul may also be assumed without much question. While he never uses any other name than Paul in the letters, addressed as they were to churches with many Gentiles, he does claim to belong to the "tribe of Benjamin" (Rom. 11:1; Phil. 3:5), and Saul would be an appropriate name. It has been pointed out that the author of Acts shifts from Saul to Paul (13:9) as Paul moves into more Hellenistic territory, and that Semitisms yield in general to a superior type of Greek in the second half of Acts.

The letters also confirm in general that Paul was a Hellenistic Jew, but it is unwarranted to conclude from his birthplace that he would be acquainted in more than a superficial way with Greek philosophy and culture. He insists on the correctness of his Jewish upbringing and on his zeal for Judaism (cf. Rom. 11:1; Gal. 1:14; Phil. 3:5), and we know how ingrown and intense small minorities in a large and alien city can become.

It is generally assumed that Paul came from a family of some wealth and position. That he had a trade of "tentmaker" or "leatherworker" (Acts 18:3) would not be inconsistent with this assumption, since there is reason to believe Paul was a student of the law, and every such student had a trade to live by. The letters do not add to our knowledge here, unless the phrase "We labor, working with our own hands" (I Cor. 4:12), shows a self-consciousness about physical work unnatural in a hand worker. That he was a citizen of Tarsus (Acts 21:39) and of Rome by birth (Acts 22:25-28) has been much discussed, for we do not know precisely what citizenship meant in the first century, and Acts does not tell us how Paul's citizenship had been earned by his forebears. Paul himself does not mention this fact of his citizenship.

b. Jerusalem. Acts tells us of Paul's education at the feet of Gamaliel in Jerusalem (5:34; 22:3), of Paul's presence at the stoning of Stephen (7:58; 8:1; 22:20), of his persecution of the Jerusalem church (9:1), and of his journey from Jerusalem with letters to the synagogues in Damascus "so that if he found any belonging to the Way, men or women, he might bring them bound to Jerusalem" (9:2). Each of these items is known to us from Acts alone, and each raises a difficulty when the letters are considered. It is strange that Paul does not mention Gamaliel, the famous rabbi, when he is asserting his own thorough grounding in Judaism. Furthermore, Paul's rigoristic interpretation of Judaism—especially his statement that failure to keep the whole law brings the legalist under a curse (Gal. 3:10)—disregards the Jewish emphasis on repentance and forgiveness, and is hard to understand if he had indeed sat at the feet of Gamaliel, a teacher of the liberal school of Hillel. Again, we face a difficulty in the account of Paul's persecution of the Jerusalem church. That he had been a persecutor of Christians is unquestioned (I Cor. 15:9; Gal. 1:13). But he is so emphatic in asserting that after his conversion he was "still not known by sight to the churches of Christ in Judea" (Gal. 1:20, 22) that it is difficult, indeed, to suppose that he had been active in persecuting these very churches. The view that Paul was an inconspicuous participant in the Jerusalem persecution is hardly convincing.

c. Damascus. If we had only Paul's own words in Galatians, we would assume that his place of residence at the time of his conversion was Damascus, since he never mentions Tarsus and speaks of not going *"up to* Jerusalem" and of returning *"to* Damascus" (1:17). It is the account in Acts of his education in and his persecuting activity in and out from Jerusalem, together with the conversion experience on the Damascus Road (9:3; 22:6; 26:12), that predisposes us to Jerusalem as his residence. It has been argued that Luke's special interest in Jerusalem and the church there must be set over against Paul's passionate insistence that he was quite independent of that church. Do both overstate the case? It is hardly possible to reconcile the two positions as they are stated. At any rate, both Acts and the letters associate Damascus with Paul's transforming experience.

"Conversion" is a convenient word for Paul's transformation, although Paul himself calls it a revelation (Gal. 1:16), a new creation (II Cor. 5:17), an appearance (I Cor. 15:8). It did mean a radical about-face in his attitude toward the followers of Jesus, on the one hand, and in his estimate of the role of the Jewish law, on the other. There are several implications usually associated with the word "conversion" which are not appropriate in describing Paul's experience. He was not changed from a

morally bad to a morally good man nor from an irreligious to a religious man. He had, he insists, always striven to obey the law and in the eyes of men could claim to be "blameless" (Phil. 3:6). If the seventh chapter of Romans is reckoned to be autobiographical, it does not refute this claim, for it was powerlessness to obey the law perfectly, rather than licentiousness or any type of gross immorality, that drove Paul to the verge of despair (Rom. 7:8, 16 ff).

Nor was it a conversion in the sense of a change from one religion to another. Paul never consciously forsook Judaism for "Christianity." The gospel he insisted upon was the proclamation of the age-old plan and purpose of God, which his fellow religionists had so tragically rejected. Paul did assert that the function of the law had been misunderstood, and he endeavored to prove the true relationship of faith and the law from the very history of his own people. To the end he yearned for their redemption and believed that in the providence of God, Israel's temporary rejection of the gospel opened the door to the Gentiles, and that ultimately "all Israel will be saved" (Rom. 11:26). It was dissatisfaction with himself, and so with man as man in isolation from God, which was the background for the central experience that transformed Paul. Various attempts have been made to rationalize the conversion experience in psychological terms. Paul was moved, it is held, by the behavior of Christians under persecution, especially by the behavior of Stephen (whom he never mentions). Their spirit, unbroken and unembittered by persecution, witnessed to an inner peace which he himself longed for. He tried to resolve his own inner conflict by externalizing it and persecuting the Christians, who represented one side of his own inner conflict. This only intensified the struggle, which was resolved by the "vision" on the Damascus Road, for only an external stimulus adequate for reorganizing Paul's inner self could avail. He believed it was an outside life and light and energy that flooded his embattled mind and heart to bring him into a new creative state of being, and he named this power "Christ," "the Spirit (of Christ)"; and his new state he called being "in Christ."

This and other ways of explaining the event are, of course, legitimate, but we must remember that they are almost purely conjectural, since our sources do not so understand it. Paul presents his experience as the act of God, penetrating, indeed, to the innermost core of his being, but inexplicable, humanly speaking, and to be ascribed to the unmerited favor, the grace, of God. Here the three accounts in Acts (9:1-18; 22:1-16; 26:1-18) and the scattered references in the letters are in agreement. They also agree that Paul was not instructed in the truths of Christianity; how he came to know these truths is not told in our sources. A further agreement is in the immediate connection of the "conversion" and the sense of Gentile mission (cf. Acts 9:15; 26:17; Gal. 1:16). In other respects the accounts differ. The three accounts in Acts constitute a pattern and sound like a traditional phrasing of the decisive event. All three reflect a sense of an organized Christian group to which Paul was now joined; all three omit the interior emphasis so unmistakable in the letters; and all three stress the voice, the light, but not the actual vision of Christ, which is central in Paul's own words (cf. I Cor. 9:1; 15:8). Paul refers to his own transforming experience on several occasions (I Cor. 15:8; Gal. 1:15-16; and perhaps II Cor. 4:6), but there is no pattern; indeed, the idea that his own "conversion" could be duplicated by any other man is probably excluded. Paul was not only the latest, but also the last, witness of the risen Christ—there are to be no more. The clear chronological sequence in I Cor. 15:3-8, together with Paul's view that the mark of belonging to Christ is to "have the Spirit of Christ" (Rom. 8:9), would seem to suggest this; and we are probably safe in assuming that he regarded his own unique experience as the authentication of his apostolic standing and mission (Gal. 1:15-16), rather than as a pattern for others. There is no clear statement, either in Acts or in the letters, regarding Paul's knowledge of Jesus' life and teaching and of the teaching of the earliest church and how he came by such knowledge. We must assume that he did know why he persecuted the church and that he did have contacts with the leaders—"those, I say, who were of repute." When he writes of the latter that they "added nothing to me" (Gal. 2:6), he is insisting on the independent validity of his apostolic commission, and the polemical context of the words would not encourage him to admit that he had learned much from these leaders and from other Christians outside the area of controversy.

d. Asia Minor and Greece. Neither the letters nor Acts furnish much data for the early days of Paul's Christian career. The important biographical passage in Gal. 1:11–2:21 is keyed, not to biography as such, but to Paul's vigorous defense of his apostolic commission and its consequences. Acts seems not to know about most of the items in the Galatians passage, and it is difficult to harmonize Acts and Galatians, as we shall see. From ch. 13 on, however, the author of Acts has very detailed sources at his command, including the famous "we" passages generally thought to be extracts from a diary kept by the author or some other companion of Paul (16:10-17; 20:5-15; 21:1-18; 27:1–28:16). The exact limits of these "we" passages are uncertain, since the diary may be quoted beyond the point where the last plural pronoun appears.

Let us sketch rapidly the run of the material in Acts and then face the questions raised by a comparison of Acts with the letters. The "first" missionary journey—Acts does not enumerate but does quite definitely separate the three—is formally initiated at Antioch when Barnabas and Saul are "set apart . . . for the work to which I have called them" (13:2), John (Mark) accompanying them as far as Perga (13:13). They sail to Cyprus, Barnabas' native island, where Salamis at the E and Paphos at the W end are mentioned. Sailing again to the mainland of Asia Minor, they journey in the provinces of Pamphylia, Pisidia, and Lycaonia, the towns of Perga, Antioch, Iconium, Lystra, and Derbe being noted along their way and in reverse order as they retrace their steps. They sail this time from Attalia directly to Antioch in Syria (of course, Seleucia was actually the seaport). Chs. 13–14 tell this story with vivid detail. The contrast between Paul's sermons to Jews

at Antioch (13:16-41) and those to Gentiles at Lystra (14:15-17) is noteworthy. Assuming that these sermons were freely composed by the author of Acts, we must admire his skill and the appropriateness of the words he ascribes to Paul. The famous Jerusalem "conference" (15:1-29) account follows, rounding out the scheme of Acts, according to which each journey terminates in Jerusalem (cf. 18:22; 21:15). Both the content and the chronology of this "conference" must be considered later.

The "second" missionary journey (15:36–18:22) begins with changed personnel—Silas (Silvanus) and later Timothy (16:3), instead of Barnabas (15:36-40), are the companions of Paul. After "strengthening the churches" in Syria and Cilicia (15:41), whose founding is only hinted at (Acts 15:23; cf. Gal. 1:21), he revisits Derbe and Lystra. The journey through the enigmatic "region of Phrygia and Galatia" follows, and the divinely guided decision to go to Macedonia—Europe to us but not, of course, to Paul—with the significant planting of new churches at Philippi, Thessalonica, Beroea; the incident at Athens; and the longer and more fruitful stay at Corinth. Ephesus, destined to be a center for future evangelization, was briefly visited, and Paul sailed for Caesarea, "went up and greeted the church" (18:22), and then "went down to Antioch." The graphic style and the highlighting of dramatic incidents, such as the stories of the slave girl and of the jail delivery at Philippi (16:16-40) and Paul's address at Athens (17:22-34), give us the authentic flavor of Paul's mission, although we have only a very general outline of it. The address at Athens,* like that at Lystra (14:15-17), seems very appropriate, whatever is to be made of the inscription "To an unknown god," which has been so much debated. 18:22 marks the close of the "second" journey, but it is strangely worded. Is "the church" at Caesarea or at Jerusalem? Most scholars would answer "Jerusalem," "went up" and "went down" being almost technical phrases in Acts for visits to the religious capital. Does this brief, almost casual sentence really mark the end of an important and separate stage in Paul's mission, or does the author lack information at this point and simply introduce it to conform to the pattern of Paul's missionary journeys as he understands them, each ending at Jerusalem? Fig. ARE 58.

The "third" missionary journey (18:23–21:16) again starts from Antioch and ends in Jerusalem. After another vague reference to the "region of Galatia and Phrygia," where the disciples were strengthened (18:23), and the introduction of Apollos and others who needed and received Christian instruction (18:24–19:7), the rest of the nineteenth chapter is devoted to events at Ephesus, where Paul stayed for two years and three months (cf. 19:8, 10). It is assumed that churches at Colossae, Laodicea, and Hierapolis were founded by Paul's disciples during this period, but Acts only summarizes by reporting "that all the residents of Asia heard the word of the Lord, both Jews and Greeks" (19:10), by noting that Paul's authentic miracles aroused the envy of Jewish exorcists (19:11 ff), and by giving a full account of the riot at Ephesus (19:23-41). A visit to Macedonia and Achaia is given in very condensed form (20:1-6), and then the coastwise trip from Troas to Caesarea, amplified only by the moving words of Paul to the elders from Ephesus who came down to Miletus at Paul's request to hear what was to be his valedictory (20:1–21:16).

Before going on to the account of the final events as recorded in Acts (21:17–28:31), we must consider briefly some of the many questions raised by a comparison of Acts with the Pauline letters. First, we may note that the agreements are quite as numerous and substantial as sources separated by almost a generation in time of writing could be expected to yield, especially if they are independent. It was in the area of Asia Minor and Greece that Paul did his major work, as Acts and the letters agree. The churches addressed in the letters are all mentioned in Acts, with the exception of Rome, which Paul did not found, and possibly the Galatian churches if the "North Galatia" theory is held (*see* GALATIA; GALATIANS, LETTER TO THE). A convincing, if incidental, item is the fact that about three fourths of the fifty or so persons associated with Paul in Acts appear in the letters. Of course, Acts is far from a complete record of Paul's career, in spite of its considerable detail. His residence at Corinth (18:11 [a year and a half]) and at Ephesus (19:8, 10 [two years and three months] or 20:31 [three years]) is summarized only, with striking incidents recorded. Neither Illyricum (Rom. 15:19) nor Arabia (Gal. 1:17) is mentioned, nor is Titus, although he is important in Galatians (2:1 ff) and in II Corinthians (2:13; 7:6, 13-14; 8:6, 16, 23; 12:18). The list of hardships in II Corinthians (11:24 ff) is scantily documented in Acts—of the many items only one beating with rods (16:22-23), one stoning (14:19), and no beatings "at the hands of the Jews" are recorded. Acts does have the escape from Damascus (9:23-25), which Paul appends to his list (II Cor. 11:32-33); the variations between the two accounts observable in the Greek suggest that they are independent of each other.

These differences and others are not serious; they are what we would expect. But the case is other with some basically contradictory material which we must now consider. Paul's letters record three visits to Jerusalem, each quite pointedly characterized as to purpose and result (Rom. 15:25-32; I Cor. 16:4; Gal. 1:18-21; 2:1-10). Acts, on the other hand, records five visits (9:26-27; 11:29-30 [12:25]; 15:1-29; 18:22; 21:15). Not only is the number of visits in question, but it is by no means easy to identify the three letter visits with any three of the Acts visits, so variously are they described as to purpose and outcome. Many scholars hold that the third visit of Acts (15:1-29) is identical with the second in Galatians (2:1-10), arguing that this visit is recorded from two different viewpoints: a private, informal conference vindicating Paul and Barnabas and laying no restriction on them, "only they would have us remember the poor, which very thing I was eager to do" (Gal. 2:10); and a formal, official council resulting in a compromise formula communicated to the churches (Acts). While not all the difficulties are resolved by this view, it should be noted that the account in Galatians is strictly consonant with Paul's thinking and that the Acts account, with its emphasis on the authority of Jerusalem, is in harmony with the viewpoint of that writer. The suggestion that Acts 11:

29-30; 12:25 is to be regarded as the parallel to Gal. 2:1-10—i.e., that the Galatians visit is not the "council visit" of Acts 15—has the advantage of eliminating a visit by Paul to Jerusalem between the two noted in Gal. 1:18; 2:1, but it is something of a tour de force, since the famine visit in Acts 11:29-30; 12:25 simply has no point of contact with the issues raised in Gal. 2:1-10 and is relieved accordingly of any overt contradictions. This solution often discounts Acts 15 as tendentious—James proposes the compromise, and Peter talks like Paul—and suggests that the "decrees" (vss. 28-29) are really later in date than this visit.

The most radical proposal for dealing with the confusion about the visits is to identify the three letter visits with the only three visits in Acts described as having the same purposes—i.e., Gal. 1:18-21 with Acts 9:26-27, both presenting the new convert Paul to the Jerusalem apostles; Gal. 2:1-10 with Acts 15:1-29, both dealing, with whatever differences, with the basic Jewish-Gentile issue; and I Cor. 16:1-4 and Rom. 15:25-32 with Acts 11:29-30; 12:25, both having as a purpose the bearing of an offering to the Jerusalem church. It has also been suggested that Acts has confused the chronology of these three visits. The famine visit in Acts could not have happened at the time there indicated (cf. Gal. 1:18–2:10), and it is cogently argued that the council visit (Acts 15:1-29) should be after, not before, the "second" missionary journey (could 18:22 be the right place for it?) and only a few years before the final visit. This would have the great advantage of eliminating the fourteen to seventeen "silent" years so difficult to fit into the Pauline chronology, since the whole of the "second" journey would be located in this period. It would also explain why the "decrees" do not figure in Paul's letters, as they would come, not in the middle, but toward the end of his active career. Perhaps the nature of our sources is such that no completely satisfactory solution of the visits to Jerusalem, around which the chronology of Paul's active life revolves, is possible. We ought, indeed, to be thankful that the sources are not even more confusing.

Two other issues as between the letters and Acts must be noted: the Jews as persecutors of the Christians, and the collection of funds for the saints of Jerusalem as the ruling motive for the final visit. In Acts the Jews are repeatedly said to be persecutors (9:23-24; 13:45, 50; 14:2, 19; 17:5 ff, 13; 18:6, 12 ff; 20:3; 21:27; 23:12 ff; 24:1-9; 25:7), and when Paul and his companions once gain the ear of the Roman officials, they can count on protection and justice. Paul's letters represent the Jews as rejecting the gospel, to be sure, but they are not conspicuously persecutors. I Thess. 2:15 is almost alone in branding the Jews as active persecutors; elsewhere Paul's sorrow and dismay arise from their failure to respond to the good news, rather than from persistent persecution. Acts may possibly reflect here the hostility which emerged toward the end of the first century when Christianity began to be defined as a separate religion. The Dead Sea Scrolls are adding to our understanding of late Judaism as a much more flexible, less rigid religion than we had supposed. According to Paul's letters, the "contribution for the saints" (Rom. 15:25-29; I Cor. 16:1-4) was quite definitely the major purpose of his final visit to Jerusalem. Acts, too, regards this last visit as important and dangerous, but nowhere reveals any knowledge of "aid for the saints" (Rom. 15:25) which Paul has been collecting for some time past. In Acts the motive for the visit seems to be the fulfilling of a vow (18:18; 21:23-26), and the one reference to an "offering" comes late and is far from clear. The words: "I came to bring my nation alms and offerings" (24:17), would suggest a temple offering rather than gifts from Gentile to Jewish churches. Perhaps the obscurity in Acts is the consequence of the author's thesis that tension between Gentile and Jewish Christians had been early faced and settled harmoniously and that the "offering" could hardly be regarded as the strategic and symbolic act intended to resolve a continuing conflict between the two racial groups.

e. Jerusalem to Rome. Acts is our only source for the events in Jerusalem leading up to Paul's appeal to Caesar and the dramatic record of his journey to Rome (21:17–28:31). Even if Rome is to be regarded as the provenance of the so-called "prison letters"—Philippians, Philemon, Colossians, Ephesians—in contradiction of the currently popular view that Ephesus is their place of origin, they throw almost no light on the Pauline biography.

From Acts we learn of Paul's rescue by the Roman soldiery from the hands of a temple mob, aroused by the rumor that he had brought Gentiles into the inner court, and of the permission granted him to address his accusers—an address which permits the author to insert the second account of Paul's conversion (Acts 21:18–22:21) but which it is difficult to imagine that a Roman officer would allow. Paul's assertion of Roman citizenship saves him from scourging (22:22-29), but he is brought before the Sanhedrin in order that the authorities may be enlightened on the real issues involved (22:30). The turn of the controversy to the question of resurrection must have left them uninformed (23:1-10).

Paul's removal to Caesarea, when the plot to assassinate him was discovered, and his relations with the governor Felix and his Jewish wife, Drusilla, including the charges brought against Paul by the Jews, and his defense, are recorded in Acts 23:12–24:27. The "two years" of 24:27 are usually reckoned as the time of Paul's imprisonment, although the alternative view—i.e., the term of Felix' governorship—remains a possibility.

Chs. 25–26 give the next act in the drama, with Festus, successor to Felix, and Agrippa and Bernice as the actors, and the Jews as the accusers. Given the choice of going up to Jerusalem to stand trial before Festus, Paul appeals to Caesar. He makes his final defense before Agrippa; it consists, in the main, of the third account of his conversion, the three (cf. 9:1 ff; 22:3 ff) serving as a kind of chorus to remind the reader of the motif binding the varied events into an ordered whole.

The voyage and shipwreck have been called among the best sea tales from antiquity (Acts 27–28). Paul is at last at Rome (28:14), but what the closing verses of the book: "He lived there two whole years at his own expense, and welcomed all who came to him, preaching the kingdom of God and

teaching about the Lord Jesus Christ quite openly and unhindered" (28:30-31), intend to convey to the reader and why they form the conclusion of Acts—these are as yet unanswered questions. Was Paul released? Was he martyred? And why, in either case, did the author not inform his readers? No answer commanding general assent has yet been given.

For the dating of each letter and its setting in the career of Paul, *see* THESSALONIANS, FIRST LETTER TO THE, and the other Pauline letters. For the chronology, *see* CHRONOLOGY OF THE NT; the articles on the several letters; ACTS OF THE APOSTLES.

3. Paul as a person. Paul was a Jew by race, and he had been a Jew in religion; indeed, he never ceased to think of himself as belonging to God's people (Rom. 11:1 ff) and to yearn for the ultimate inclusion of the Jews in God's gracious purpose (Rom. 9–11). His message was proclaimed in terms familiar to Jews—the law, faith, the promises, the righteousness of God, the Judgment, the Spirit—however unacceptable his presentation of these themes might be to his fellow religionists. Paul was, of course, a Hellenistic Jew, a Jew of the Diaspora, who wrote in Greek, used the Greek translation of the OT, and at points betrays Hellenistic influences. He must be appraised, accordingly, in the light of the mingled Greek and oriental syncretism which was the atmosphere of the first-century Mediterranean world.

Paul was a Christian although he never uses this word. Jew and Greek alike were in his eyes only custodians "until Christ came" (Gal. 3:24), and he felt himself to be "under obligation both to Greeks and to barbarians, . . . to preach the gospel" (Rom. 1:14-15). He quotes no Hellenistic source in his writings, only the OT; and the impact of the larger world around him must be discerned in his ideas, style of writing, and unconscious absorption of the contemporary culture, rather than in direct borrowing. The centrality of Christ is evident on every page of his letters.

When the student has exhausted all the resources at his disposal in appraising Paul as Jew, Hellenist, Christian, Paul himself is still unexplained. Something has been left out—indeed, the most important something. Paul was a unique person. Just as aunts see now the father and now the mother in the child, so we can see now the Jew and now the Hellenist in Paul. But the child is not his mother or his father; he is himself. Paul was emphatically himself. His letters to the churches of Galatia, to Thessalonica, to Corinth or Philippi, are not just the serious communications of a Christian theologian; it is Paul writing, and the unmistakable flavor of his personality pervades them. Perhaps it would have been easier to estimate him if his writings had been less personal, for we get hints, flashes, intimations, of a rich, many-sided, complex character who remains something of an enigma in spite of the unusually revelatory nature of our sources. But just as Paul's thought is clear in its main outlines, however difficult in particular aspects, so his personality is reasonably clear, however complex and baffling certain traits may seem to be.

a. "Man of conflict." Conflict, struggle in the inward man and in outward situations, characterized not only the pre-Christian but also the Christian Paul. He was born into a conflict of cultures. His heritage was strict Judaism (Phil. 3:5 ff), and the Jews were a minority group whose loyalty to the one God made them resist the eclectic, syncretistic temper of the first century. Hardly an ancient writer has a kind word to say about the Jews. We do not know precisely how a Jewish family outside Palestine would react or adjust to Gentile customs, but Paul's lengthy and labored discussion of the dietary laws and the Christian's relation to them in I Cor. 8–10 suggests that he himself had battled long and hard with this problem. Whether Rom. 7 is to be reckoned as autobiographical or as typical, the chapter shows a profound insight into the struggle between the law as an external code and the inward desires and frustrations of an earnest and serious soul.

Paul viewed nature as sharing the struggle between good and evil. The creation, he writes, knows the pain and also the hope of a woman in childbirth (Rom. 8:22 ff). This cosmic struggle will go on until Christ "delivers the kingdom to God the Father after destroying every rule and every authority and power" (I Cor. 15:24). He sees nature as within the framework of the apocalyptic warfare.

Conflict continued to be the very breath of Paul's life as a missionary. If his inner conflict had been resolved "in Christ," Paul was still "in the flesh." His personal situation—indeed, that of all Christians—has often been compared to a war in which the decisive battle has been fought and won but the war lasts on, and exhortation and effort are required even though the victorious outcome is now assured and triumph can be anticipated. Paul was a protagonist defending the gospel against Jews and Jewish Christians, on the one hand, and against libertines and sectarians among the Gentile converts, on the other. Hardly a letter omits entirely this note of struggle, not even so joyous a communication as Philippians.

Paul's argumentative style of thinking and writing also reveals the same characteristic note of conflict. He has the habit of putting things in terms of their opposites: flesh versus spirit, faith versus works, grace versus merit. The question-and-answer method of the rabbis, the Stoic diatribe, the epistolary "I" and "you," or just the native temper of a born debater—all these have been credited with Paul's style. The virtue of this dialectical method is its clarity. We can hardly mistake where Paul stood on the main issues he discusses. The weakness of the method is the tendency to exaggeration, so that very little ground remains for opposing parties to stand together on.

b. Man of inward peace. Paul was indeed a "man of conflict," but he was also a man of inward peace, whose wholeness of outlook and statesmanlike leadership are conspicuous among the early followers of Jesus. He knew an inner center of peace and joy "in Christ." Outward turmoil, external circumstance, whether of plenty or of hunger, abundance or want, did not disturb him. "I can do all things in him who strengthens me" (Phil. 4:12-13). He believed that "in everything God works for good with those who love him" (Rom. 8:28). Whatever scars, whatever memories of his tumultuous life, still plagued him,

Paul knew a radiant oneness and wholeness of life so that nothing "in all creation" is "able to separate us from the love of God in Christ Jesus our Lord" (Rom. 8:39). His dark view of the creature and of the creation is not his final word, for he held that the walls that separate man from man—slave, freeman; Jew, Gentile; male, female—have actually been leveled, and that the entire creation has been unified, healed, redeemed, and reconciled by the revelation of God in Christ. His gospel has behind it and within it a cosmic sweep and sanction. There is for him no such unit as an isolated individual; the tiny person "in Christ" is caught up into a cosmic purpose, and conversely the power and love of God are available for every particular human situation. It is this central conviction that speaks to us through Paul, flowing over all the ancient vocabulary and thought-forms that separate us from him. Paul moves from the particular to the universal, from the temporal to the eternal and vice versa, without effort or strain. "If we live by the Spirit, let us also walk by the Spirit" (Gal. 5:25), is the constant correlation he makes; and to particularize this, he adds: "Let us have no self-conceit, no provoking of one another, no envy of one another" (vs. 26). "Do you not know that the saints will judge the world?" (I Cor. 6:2), he asks the quarreling Corinthians, and then: "If the world is to be judged by you, are you incompetent to try trivial cases?" They expect to sit on the Supreme Court of the universe but cannot qualify as justices of the peace (perhaps Paul did have a sense of humor).

c. Other traits. We possess no reliable evidence about Paul's physical appearance except his own quotation from opponents: "They say, 'His letters are weighty and strong, but his bodily presence is weak, and his speech of no account' " (II Cor. 10:10). The earliest external witness comes from a late second-century collection of legends (*see* PAUL, ACTS OF) to the effect that he was small in stature, baldheaded, bowlegged, of vigorous physique, with meeting eyebrows and a slightly hooked nose, and full of grace. Paul himself writes of a recurrent physical ailment, deliverance from which was not granted him although he prayed three times for it. He came to see that this weakness of the flesh had its lesson for him (II Cor. 12:7-8). All conjectures as to the nature of this affliction—epilepsy, malaria, an eye malady (Gal. 6:11)—must remain conjectures, since we simply do not have enough evidence for a diagnosis. The amazing list of physical hardships endured (II Cor. 11:24-29) witnesses rather to a rugged than to a frail physical constitution. That Paul was by nature a sensitive, proud, quick-tempered man can be abundantly documented from his letters, for he is conscious of his tendency to boast (II Cor. 10:8, 13, 15; 11:1, 16, 21, 30; 12:1), and he glories in the victory faith in Christ assures (Phil. 3:4-14) and in the sublimation made possible by another object of glorying (Gal. 6:11-15). He is capable of sarcasm and irony, although he himself regrets that his opponents have maneuvered him into playing the fool (II Cor. 11:16-21).

Paul had a genius for friendship. The extraordinary list of twenty-seven names in Rom. 16 (whether this chapter was originally addressed to Rome or elsewhere is immaterial at this point), with just the little touches here and there that save the names from being a mere catalogue, is eloquent of his concern for people. He could be magnanimous—this protagonist—even with persons whose motives were questionable (Phil. 1:12-18).. He was tenderhearted —this fighter for his own understanding of the gospel—like a "nurse taking care of her children . . . , ready to share with you not only the gospel of God but also our own selves, because you had become very dear to us" (I Thess. 2:7-8). The catalogue of his sufferings reaches its climax, not in some physical agony, but in the words: "Apart from other things, there is the daily pressure upon me of my anxiety for all the churches. Who is weak, and I am not weak? Who is made to fall, and I am not indignant?" (II Cor. 11:28-29).

Although Paul traveled through spectacular country, his letters are wanting in figures from nature in either its humbler or its more majestic aspects. The few nature illustrations he does use (e.g., I Cor. 9:8-10) are not very happy. But when he turns to city life, the arena, the court, the military, he is often effective in analogy, imagery, and figure of speech (I Cor. 3:10-15; 4:9; 9:24-27; etc.).

Had Paul a sense of humor? The writings we possess are so deadly serious in intent that the lighter touch may well have been rigorously excluded, but with all his truly extraordinary gifts as a phrasemaker, the humorous, witty flavor so characteristic of the remembered teaching of Jesus seems not to be native to Paul.

Subject as he was or had been to ecstatic experiences (II Cor. 12:1-4), it is inevitable that Paul's psychic health should be questioned. He had, no doubt, passed through a period of psychical instability, but the amazingly balanced estimate of spiritual gifts in group worship and in relation to ethics contained in I Cor. 12–14 is powerful evidence of the kind of integration Paul had achieved. The impact of his life and work on his own times and ours is also eloquent testimony to his essential sanity.

The most serious charge that can be brought against Paul is that of personal inconsistency. Proclaiming an ethos of love, did he himself deal with his opponents lovingly? Especially in Galatians and in II Cor. 10–13, Paul uses sarcasm, irony, and bitter denunciation, including curses, against those who have attacked him and his gospel. Without attempting to defend him, for he himself is conscious that his words do not represent a very high plane of thinking (II Cor. 11:1), we may point out the considerations necessary for a proper perspective. His language betrays an oriental exuberance foreign to the usual standards of Western speech and writing. These are letters, after all, and they show a spontaneity which more careful editing would perhaps have modified. His opponents, moreover, are not attacking him and his message from outside the Christian movement but from within it. He can endure persecution from "the world" (II Cor. 11:23-33) without any hint of bitterness—indeed, as almost normal Christian experience, the sharing of "his sufferings" (Phil. 3:10)—but when the gospel is attacked directly or indirectly through his own apostleship, he indignantly strikes back. He knows the

teaching of Jesus about loving the enemy (Rom. 12:14; I Cor. 4:12-13) and has lived it out in some of his own personal relationships. Cast out by his fellow Jews, he maintains a moving loyalty to them and is convinced that their rejection of the gospel is only temporary and that, in the providence of God, it has opened the door to Gentiles (Rom. 9–11). But when from within the Christian fellowship leaders play upon the fickleness, the credulity, and the lower nature of his converts to subvert what Paul believes to be the gospel of the love and grace of God in Christ, he meets this challenge with all the force of his aroused emotions and his agile mind. We may argue that Paul was deficient in an understanding of his opponents and less loving in his attitude toward them than he ought to have been, but he does not condemn them out of personal pique. He believes that the gospel itself in all its implications is at stake; he could do nothing less than meet this danger with vigor. That this is more than mere rationalization becomes apparent when we consider how Paul dealt with rivalries between the partisans of genuine Christians leaders. Cephas, Apollos, Paul—who are they? "Servants of Christ and stewards of the mysteries of God" (cf. I Cor. 1:12-13; 4:1-5; Phil. 1:15-18). Rivalry is unthinkable.

B. *PAUL'S MESSAGE.* 1. Introduction. Paul's letters afford us rich firsthand source material for his thinking. Yet as letters they depend on situations and relationships known to the writer and his readers but not always entirely clear to us. The epistolary form of our sources creates another difficulty. The letters do not purport to be systematic presentations of Paul's theology; their content is rather determined by the needs of the readers as Paul conceives those needs. Accordingly the nature of our sources is at once an asset and a liability—an asset because we are able to come at Paul's thinking so directly and in immediate relation to human situations; a liability because we must undertake to organize his thinking without any systematic presentation from his own hand.

The interpreter seeks for a key to open up Paul's thought or, better, some central thesis about which all his thinking may be arranged. Paul's doctrine of God, of Christ, of man; Paul's background, Jewish and Hellenistic; Paul's religious experience; these and other focuses have been proposed as central in his theology. Solid gains in understanding Paul have been achieved by this method, even when a single thesis proves inadequate. We have always to remember, however, that any organization is the work of the interpreter and so must be constantly subjected to the test of our sources. We are not dealing with theological treatises but with firsthand communications addressed by a complex personality to diverse human situations. The interpreter's legitimate urge to establish consistency in the whole range of Paul's thinking must be balanced by his determination to let the sources speak for themselves even when consistency is threatened.

The headings selected for this article do not, of course, escape an imposed arrangement of Paul's thought. The order of topics is determined in part by the run of the thought in Romans. The first eight chapters of Romans constitute the longest and most orderly presentation of a theme in Paul's writings, although important topics such as the nature of Christ in distinction from his work, the Resurrection, and the sacraments are not discussed at any length. Paul is addressing a church which he has neither founded nor visited. He wants to inform them of his own understanding of the gospel of which he is not "ashamed" (1:16), "that we may be mutually encouraged by each other's faith, both yours and mine" (vs. 12). Perhaps he is also clarifying and arranging his own thinking as he contemplates a fresh stage in his missionary career (15:22-29). The wording of the following topics is derived from Paul's own writings; that the topics correspond in part with rubrics of systematic theology is inevitable, since Paul is concerned with fundamental theological issues. It is not to be assumed that Paul always thought in this sequence. He could and did present his message beginning from any one of these points as the epistolary situation required.

2. The power and righteousness of God. Addressing readers who had never heard him expound his message, although they are "God's beloved" (Rom. 1:7) whose "faith is proclaimed in all the world" (vs. 8), Paul begins with these oft-quoted words: "I am not ashamed of the gospel: it is the power of God for salvation. . . . For in it the righteousness of God is revealed" (vss. 16-17). Paul glories in the power (δύναμις) of the gospel. The word and the thought pervade his letters. Christ is the "power of God and the wisdom of God" (I Cor. 1:24). "The word of the cross is . . . the power of God" (vs. 18). He longed to know Christ "and the power of his resurrection" (Phil. 3:10). This power is not an enhancement or release of human energy; it is a divine gift given when a man confesses that his own power is utter weakness: "I can will what is right, but I cannot do it" (Rom. 7:18); "for when I am weak, then I am strong" (II Cor. 12:10); even Christ "was crucified in weakness, but lives by the power of God" (II Cor. 13:4). We must examine Paul's thought about the power of God.

a. God is the author of salvation. In Rom. 1:16-17, Christ is not mentioned, although it is clear from the following chapters that God's saving act is in Christ. Paul's theology has been called Christ-centered, and this is true enough if we remember that the center and the circumference alike depend on God. Writing of the ultimate outcome, he says: "When all things are subjected to him, then the Son himself will also be subjected to him . . . , that God may be everything to every one" (I Cor. 15:28). Or when he speaks of the "new creation" in Christ, he immediately adds: "All this is from God" (II Cor. 5:17-18). God is the ultimate reference for Paul. Not Paul, not Christ, but God alone is the author of salvation. "All things are yours, . . . and you are Christ's; and Christ is God's" (I Cor. 3:21-23).

Paul's God is the God of Judaism. Paul has no new conception of God to propose. He constantly stresses the will and the purpose of God as revealed in his acts and supremely in his new and final act in Christ. God for Paul, as for Judaism, is the living God to be known, as all life is known, through action. Doubtless Paul might have quoted the words ascribed to him in his address at Athens: "In him we

live and move and have our being" (Acts 17:28), but they certainly are not characteristic of his own writings. God is the living, active, dynamic source of events, rather than the ground of being or the Absolute beyond empirical knowledge. It is the God who rescued the Hebrews from Egyptian bondage, led them to the Promised Land, and brought them back from exile, who has acted in Christ and will act decisively in the final outcome of human and cosmic history. The gospel is the power of God, and Paul would have been amazed at the charge that monotheism was threatened by his doctrine of Christ. Christ is for Paul the manifest proof on the plains of history of the power of God. He has no other terms in which to present God's act than the familiar OT concepts of justice and mercy. Perhaps most strikingly Jewish is Paul's emphasis on the righteousness of God.

b. The righteousness of God. "In it [i.e., the gospel] the righteousness of God is revealed" (Rom. 1:17). Righteousness is revealed in the gospel to be the kind of power God exercises for salvation. The context of this verse requires the meaning here that God is the source, not the object, of righteousness. Perhaps Paul would not have been disturbed by the grammarian's difficulty in deciding whether the "righteousness of God" is objective or subjective genitive, for although it is obvious here that God's power, not man's, is being proclaimed, yet Paul was so convinced that man must possess or be possessed by this righteousness that the distinction would have seemed oversubtle to him.

Was it Paul's Jewishness, the necessities of his polemic against the law-righteousness of Pharisaism, or something else that led him to single out the word "righteousness"? Obedience to the law was the *sine qua non* of being "right" with God according to Pharisaic teaching. Paul could hardly expound the gospel in relation to Judaism without facing this position squarely. But we will not understand him unless we sense his deep personal hunger for rightness with God beneath all the polemical necessities. Of course, Paul includes in the term "righteousness" the connotation of "goodness" included in ethical monotheism. Of course, there is a genuine forensic factor in his argument, for Paul is keenly aware that man does not and cannot earn the verdict of acquittal before God's judgment seat. Man is offered in God's boundless mercy a status, a relationship with God which he does not deserve. The dominant note, however, is neither exclusively ethical nor exclusively forensic. It is centrally dynamic. States of being such as "goodness" or "acquittal" do not really do justice to Paul's thought. We must consider later what Paul meant by the righteousness of God. Here we need only note that it is God's own righteousness which gives content to his saving act in Christ.

c. The power of God as love. Paul's emphasis on God's righteousness neither excludes nor contradicts in his thinking God's gracious love in his salvation. He can and does write of the love of God (Rom. 5:5, 8; 8:37-39; II Cor. 13:11) and of the grace of God (Rom. 1:5; I Cor. 15:10; Gal. 1:15; 2:9) without using the word "righteousness." He writes also of the fatherhood of God quite in the manner of Jesus—i.e., God *is* the Father, men *become* his sons, for the father-son relationship is neither necessary nor physical as based on the creator-creature status; it is ethical and spiritual, based on God's unmerited choice and man's response in faith (Rom. 8:14-17). God is first of all Father of the Lord Jesus Christ (Rom. 15:6; I Cor. 1:9; II Cor. 1:3). Through Christ, God is the Father of all believers (I Cor. 8:6; II Cor. 1:3; 6:18). They name him Father (II Cor. 1:2; Gal. 1:4; Phil. 1:2; Philem. 3). Yet men are not children of God by nature but by faith (Gal. 3:26), by adoption (Gal. 4:4-7), by the Spirit (Rom. 8:14-17). The variety and richness of Paul's vocabulary when he writes of God and of God's relationship with man confirms our view that Paul is centrally concerned to show that God has acted for the salvation of men and that the gospel is the power of God to this end. "Righteousness," "love," "grace," "fatherhood," can be used almost interchangeably to express the character of the God who acts. It is God's *act* in Christ that reveals his power unto salvation. Righteousness is particularly relevant when Paul explicitly relates his thought to the Judaism he is seeking to reinterpret, but the word "righteousness" is not the only or the inevitable term for the power of God.

3. Man from the human point of view. Having announced the theme of Romans, the "power of God for salvation to every one who has faith" (1:16), Paul follows with a sustained argument to show that all men, Jews and Gentiles alike, are guilty before God, that they are in bondage to sin, and that they are powerless to save themselves by obeying God's law, whether written in the scriptures or in their consciences (1:18–3:20). Man's utter and unexceptionable need of salvation and God's grace and power to save—these are the focuses of Paul's theology. The link between power and need is faith, without which even God's amazing offer of salvation cannot avail. This does not mean that Paul centers his gospel in "experience" as over against "theology." It means, as his letters show, that he is concerned to lift the saving acts of God in Christ and man's response in faith into the "clarity of conscious knowing." He is not engaged in formulating a speculative system, even as he is not content to present salvation as a vague and formless "experience." As we grasp his purpose, which cannot be called exclusively experiential or exclusively theological—being, indeed, the interpenetration and illumination of both—we shall be prepared for certain obscurities, and even contradictions, which more systematic thinking might have avoided.

"From now on, . . . we regard no one from a human point of view" (II Cor. 5:16). The RSV rendering of κατὰ σάρκα is an interpretative, rather than an exact, translation. It has the value of carrying Paul's thought over into contemporary English more adequately, if not perfectly, than the literal "after the flesh." For σάρξ means, not just a phase of man's life such as his desires and passions, but the whole man when he is viewed apart from or in opposition to God. Man so viewed can be saved only by a "new creation," by becoming a "new creature" (vs. 17).

Let us examine further Paul's view of man as isolated from or in opposition to God. Paul accuses the Gentiles of sinful deeds such as idolatry and sensual and antisocial behavior (Rom. 1:18-32). He then

brings home to the Jews their own sins, which are even more blameworthy in the light of their privileges (Rom. 2). His indictment might merit the charge that it is never possible to condemn wholesale an entire people. Were there not "good" Gentiles and "good" Jews? Paul would, no doubt, have agreed. His listing of overt sinful acts may be regarded as a description of the symptoms of the disease which afflicts all mankind, even those men who do not exhibit the flagrant symptoms. The human predicament, Paul holds, is deeper than "sins." "Sins" are the fruit of "sin." "All men, both Jews and Greeks, are under the power of sin" (Rom. 3:9). "There is no distinction; since all have sinned and fall short of the glory of God" (Rom. 3:22-23). Man as man is the slave of sin (Rom. 6:17, 20; 7:14); sin is the constant pattern or principle of his life (Rom. 7:25; 8:2).

What is sin? We shall miss Paul's meaning if we equate sin with "badness" defined in terms of an ethical standard or code, although he is convinced that sin bears evil ethical fruit. Sin is falling "short of the glory of God" (Rom. 3:23). It is man's isolation from, his independence of, God, and his pride in his own ability to deal with life on the level of his own wisdom. Paul believes that this self-confidence leads to gross moral evils, but its chief disaster is that men are caught in the toils of their own little selfhood. The ultimate tragedy of existence does not lie in little or larger misdemeanors but in the failure to rise to the creative purpose of God, the "glory of God." Sin is more than an act or an attitude of rebellion against God; it is more than a transgression of God's law; Paul appears to regard sin as an objective condition or status, even when man is not guiltily responsible (Rom. 6:12-14). Indeed, many expressions Paul uses suggest that sin is actually a personal being, an outside, demonic power. Sin "came into the world" (Rom. 5:12), "reigned in death" (5:12), "lies dead" (7:8), "revived" (7:9), "wrought in me all kinds of covetousness," "deceived me and . . . killed me" (7:8, 11; cf. vs. 13), "dwells within me" (7:17, 20), enslaves me (cf. 6:6, 17), pays the "wages of . . . death" (6:23). This is either mythology or vivid rhetorical language. Suggesting the latter is the fact that Paul speaks of the flesh in similar personal terms (cf. Rom. 8:12; Gal. 5:13, 17, 19, 24), and so he does of the world (I Cor. 1:20-21). In any case, Paul is clearly saying that man is caught in the toils of sin beyond his power to extricate himself and that sins —i.e., deeds and attitudes patently evil—spring from sin as the objective condition of man as man, man from the human point of view.

When man becomes conscious of this status, he may be driven to the verge of despair (Rom. 7:24). Yet God created man in his own image (I Cor. 11:7), and one of the benefits of the gospel is "our hope of sharing the glory of God" (Rom. 5:2). Even as the desperate nature of man's plight is brought home to him, he is aware that this sinful condition is alien to his true nature and not part of the creative work of God (Rom. 7:20, 23). The awareness that man is essentially a creature and child of God, though he is actually estranged from him, results in the deep inward cleavage in the self so characteristic of Paul's view of man from the "human point of view."

What of the origin of sin? Paul seldom raises this question, and when he does, his answer is far from clear. The classical passage is Rom. 5:12-21. The terse, closely packed opening sentence: "As sin came into the world through one man and death through sin, and so death spread to all men because all men sinned," is never finished, but few sentences, finished or unfinished, have occasioned more discussion. The "one man" is Adam (vs. 14), whose "transgression" had dire consequences for all humanity. Is Adam regarded as a historical figure (Christ is his counterpart in vss. 15-21), or is he the symbol of a doomed humanity in mystical union with him, just as the redeemed are to be "made alive" in Christ (cf. Rom. 5:17; I Cor. 15:22)? Or did Paul think in such categories as literal over against symbolic? In the verse as it stands, it is death which "spread to all men because all men sinned," and it has been argued that Paul regarded death as inherited from Adam, rather than sin. Each man does his own sinning, it is held, but he is born into a world in which death is the penalty for sin. Yet in this very context Paul writes: "By one man's disobedience many were made sinners" (vs. 19), and: "Sin reigned in death" (vs. 21). He makes no distinction between sin and death as inherited from Adam. We do scant justice to Paul's thought, however, if we fail to note that every statement about the reign of sin and death and about man's helplessness and hopelessness in the grip of sin is set in immediate and vivid contrast to the "reign in life through the one man Jesus Christ" (vs. 17). Paul's impact on successive generations since his time is due in part to the sheer realism with which he faces our human situation and the equally amazing faith that he proclaims in the redeeming, transforming power of God in Christ. We are born into a human situation corrupted by sin, whether the spread of sin is reckoned biologically, sociologically, or psychologically. Yet we are perpetually haunted by the consciousness that we are children of God, made in his image and with the hope of sharing his glory.

How and where does sin lay hold of man? Paul is deeply concerned with this question, and he answers it in many and varied ways. The words "flesh" (σάρξ), "body" (σῶμα), and "soul" (ψυχή) are the chief terms he employs, while the word "spirit" (πνεῦμα; *see* § 7 *below*) is the chief term for the redemptive power which overcomes the power of sin and death.

"Flesh" (*see* FLESH [NT]) as Paul uses the word has many different shades of meaning which only the context can determine. (Translators render the Greek word σάρξ by different English words and phrases such as "worldly," "earthly," etc. This is confusing to the reader who does not know Greek. In the following documentation the Greek word for "flesh," σάρξ, is always present, even when the English translation does not reveal it.) Often, perhaps usually, Paul uses the word "flesh" for the physical or natural man, the tangible stuff of human life (cf. Rom. 1:3; I Cor. 15:39; II Cor. 12:7; Gal. 4:13; Phil. 1:22; Philem. 16). But it is clear that Paul does not limit the use of this word to the instinctual or sensual aspects of man's life. The "works of the flesh" include not only the vices that we call sensual but also

"enmity, strife, jealousy, anger, selfishness, dissension, party spirit" (Gal. 5:20). While the flesh is the sphere of imperfection (cf. Rom. 2:28; 6:19; I Cor. 3:1; 15:50; II Cor. 5:16; Gal. 1:16) and so subject to capture by sin, many scholars think that Paul regards the flesh itself as morally neutral. Perhaps in principle he thought of the flesh as neutral but in fact saw it as sinful and, indeed, as the seat of sin. Nevertheless, it is "sin in the flesh" (Rom. 8:3) which is the essentially evil thing. Flesh for Paul may be characterized as the sense-bound, earth-bound, time-bound, self-bound existence of man apart from God and in opposition to his will.

The word "BODY," σῶμα, also has a number of different meanings and shades of meaning for Paul. He can use it for the natural, physical human body (I Cor. 5:3; 12:12; 15:38; I Thess. 5:23). He can also use it of the whole community of Christians in his famous figure of speech (Rom. 12:4-5; I Cor. 12: 12-30). But perhaps the characteristic use approaches the meaning of our word "personality," a word not available for Paul. Paul's sustained argument about the spiritual body in I Cor. 15 contains the real clue to his meaning. He cannot conceive of existence after death as bodiless. The spiritual body, however, is not of "flesh and blood" (vs. 50). "Body" for Paul in this context is the principle of individuality, the imperishable mold of the person. The body, so understood, is capable of being glorified, transmuted from the physical to the spiritual (vss. 42-50), and so has a spiritual potential not attributed to the flesh.

The word "SOUL," ψυχή, is perhaps the least important of the three terms for Paul and at the same time the most difficult for the English reader, since the word "soul" carries with it meanings not present for Paul. It is usually defined as the animating, vital principle of the fleshly body. As such Paul can at times use the word to mean "physical," "soulish," "unspiritual," in ways that seem very like his use of "flesh" (cf. I Cor. 2:14; 15:44, 46). But it has a wider significance than the word "flesh," and Paul can use it of full human life, the natural life of earthly men, in contrast to the life endowed with the "gifts of the Spirit of God" which constitute a new creation (I Cor. 2:14). Paul was pioneering in religious psychology, and it is not surprising that he leaves the modern reader somewhat confused as to the precise meanings intended. It seems clear, however, that he intends to say that man by his very nature is open to the onslaught of sin and that sin may capture—indeed, has captured—his whole being.

4. Christ the wisdom and power of God. Paul is proud of the gospel because it is the power of God for salvation (Rom. 1:16). But how is this saving power revealed and made operative for men? Paul answers: "In Christ," who is the "power of God and the wisdom of God" (I Cor. 1:24). Paul's thought may be gathered around three questions: Why did Paul center his gospel in Christ? Who is Paul's Christ? What is the origin of his Christology?

a. Christ the gospel's center. Paul's background, racial and religious, was Jewish, and while Judaism could look for the manifestation of God's sovereignty by God's own acts without reference to an anointed Agent or Messiah (*see* MESSIAH [JEWISH]), yet the coming of Messiah and of the messianic age was characteristic of Judaism. Paul as a Jew was predisposed to look for the coming of Messiah. As a Jew he would look for God's reign to come through deeds rather than by the emergence of new ideas. The structure of Paul's thought required a revelation of God in terms of history. But it was surely the impact of the historic Jesus upon Paul that determined his emphasis and led him to the full and formal ascription: "the Lord Jesus Christ."

If the historic Jesus was determinative for Paul, why did he make so little use of the words and deeds of Jesus in his letters? He centers attention almost exclusively on the death and the Resurrection. Paul does refer to words of Jesus (I Cor. 7:10), and they are authoritative for him. An impressive list of possible allusions to sayings of Jesus can be compiled (*see* § B9*b below*). Perhaps most significant of all is the central place of "love," ἀγάπη (I Cor. 13), in the Pauline ethos and the fact that he understands so clearly the Lord's deeds and words as manifesting God's outreaching love to men who do not deserve it. He can catch this up in one memorable sentence: "While we were yet sinners Christ died for us" (Rom. 5:8). Yet we must not gloss over the fact of the fewness of references to Jesus' life and words. It is due in part to Paul's radical evaluation of human existence apart from God. Outside the divine purpose and power, death spiritual and physical is the final outcome for humanity. The ultimate issue, then, is whether there can be life-through-death. The death and resurrection of Jesus is the answer. More positively put, the messianic role for Paul does not lie in the past; Christ is the living Lord now, and his lordship will be gloriously consummated in the future. This dominates Paul's thinking. The historic Jesus is now caught up in the divine Lord. It may well be that Paul told his converts more about Jesus' words and deeds than the letters reveal, but it is abundantly clear that Christ is now the living Lord for him.

b. Who is Paul's Christ? The risen Lord Jesus Christ is unmistakably a divine being for Paul. The older messianic concept of a divinely anointed and empowered king who would be God's instrument in restoring the kingdom to Israel has little, if any, meaning for him. Jesus Christ was indeed "descended from David according to the flesh," but he was "designated Son of God in power according to the Spirit of holiness by his resurrection from the dead," and the name given him was not "son of David" but "Jesus Christ our Lord" (Rom. 1:3-4). Christians are called of God (Rom. 8:30) and of Christ (Rom. 1:6; I Cor. 7:22) and of both together (Gal. 1:6). Paul's apostolic commission is from God (II Cor. 5:18; Gal. 1:16) and from Christ (Rom. 1:5; II Cor. 5:20; 10: 8; 13:10; Phil. 3:12). Revelation is from God (Gal. 1:16) and from Christ (Gal. 1:12). Paul is the servant of God (II Cor. 6:4; I Thess. 3:2) and of Christ (I Cor. 3:5; II Cor. 11:23). Christ is the object of prayer, is seated at the right hand of God, and is Judge. The title "Lord" is freely used, and it is not always possible to be sure whether Paul means God or Christ by it. Paul's freedom in using almost interchangeably the same expressions of God and of Christ raises the inevitable question: Was Christ God for him? The few verses which in some versions seem

to identify God and Christ, actually distinguish between them, as the modern translations correctly indicate (cf. Rom. 9:5; II Cor. 4:4, 6; II Thess. 1:12). Two verses in Colossians (1:17; 2:9) are more difficult to harmonize with Paul's usage elsewhere, but Colossians has a different orientation from the other generally accepted letters and reflects a type of controversy not so central in them. Yet even in Colossians (*see* COLOSSIANS, LETTER TO THE) God is "the Father of our Lord Jesus Christ" (1:3). Only the Paulinist author of Titus seems to allow a direct ascription to Christ of the name God (2:13). Over against these scattered verses are the several passages which explicitly distinguish Christ from God and subordinate him to God (Rom. 11:36; I Cor. 3: 23; 11:3; Phil. 2:11; I Thess. 1:9). That Paul never thought of his monotheism as compromised by his conception of Christ is spelled out in the full and formal pronouncement of I Cor. 8:4-6: "We know that 'an idol has no real existence,' and that 'there is no God but one.' For although there may be so-called gods in heaven or on earth—as indeed there are many 'gods' and many 'lords'—yet for us there is one God, the Father, from whom are all things and for whom we exist, and one Lord, Jesus Christ, through whom are all things and through whom we exist."

None of the titles Paul uses was invented by him. "Christ," "Son of God," "Lord"—all these were current religious titles in the Jewish and Hellenistic environment. The full and formal "our" or "the Lord Jesus Christ" (Rom. 5:11, 21; 6:23; 7:25; 8:39; I Cor. 1:10; 15:57) and the "grace of our Lord Jesus Christ" (Rom. 16:20; I Cor. 16:23; II Cor. 13:14; Gal. 6:18) sound like accepted forms needing neither explanation nor defense. Paul as a Jew must have known that the word "Christ" was a title (*see* CHRIST), but in most cases he uses it as part of a proper name. Possibly his usage of "Christ Jesus" interchangeably with "Jesus Christ" retains the memory of the title, since strictly proper names were not variable in this fashion. "Christ" as a title has all but disappeared in his letters. Was this because Gentile readers had no background of tradition for the Messiah-Christ title unless and until they had been instructed? Was it made congenial because for Paul and the early Christians, Jesus and Jesus alone was the Christ?

SON OF GOD is a frequent designation in Paul's letters. In its Jewish meaning, "Son" or "my Son" would refer to character and appointment, not to metaphysical relationship. Paul's usage certainly implies more than the Jewish implications, although many scholars question whether he is primarily concerned with metaphysical relationship of the Son to the Father. His presentation at this point, however, would bring the Lord Jesus into the area of Hellenistic thought. "Lord" was perhaps the most significant and characteristic title used by Paul. The exact contemporary religious usage of "Lord" (κύριος) is a complicated area of research. We may only remark that Paul uses "Lord" to designate Christ as a pre-existent, divine being just as he uses the name Jesus to retain the significance of the historic man. The title Lord brought Paul's message within the circle of Hellenistic religious thought as the title Messiah-Christ could not do. Yet Paul was not the founder of a Christ cult in which the Lord Christ paralleled the Lord Serapis or the Lord Mithras. Such a passage as I Cor. 8:4-6 makes such an interpretation impossible. The use of the title Lord no doubt carried with it certain dangers to be guarded against. Paul had, indeed, a "mystery" to proclaim (I Cor. 2:7; 4:1), but it was not to be kept secret but to be broadcast to all who had faith to hear and heed.

Some christological titles do not appear in Paul's letters. "Born of the seed of David," Jesus Christ is "Son of God" and "our Lord," not "son of David" (Rom. 1:3-4). The title Savior (*see* SALVATION, SAVIOR) is not applied to Christ; God is Savior, and the one exception, in Phil. 3:20, immediately adds the familiar "the Lord Jesus Christ." Although Paul never uses the exact title SON OF MAN—it would be a barbarism in Greek—he does make significant use of a related concept, the first Adam and the last Adam, the earthly and the heavenly man (Rom. 5: 12-20; I Cor. 15:45-49).

c. The origin of Paul's Christology. When we ask how Christ became the "power of God and the wisdom of God," Paul's answers are not in the form of precise definition but in glowing and vivid figures of speech. The three most important passages are I Cor. 15:20-28 (cf. Rom. 5:12-21); Phil. 2:5-11; Col. 1:13-20. According to Philippians, the "mind . . . in Christ Jesus" was far other than that of the presumptuous and rebellious angels who would have grasped "equality with God." His mind was bent on obedience, on humiliation and self-emptying, that he might despoil death, "even death on a cross," of its doom. And this, writes Paul in bold phrases, turned out to be in accord with the very mind of God, who "has highly exalted him . . . , that . . . every tongue [should] confess that Jesus Christ is Lord, to the glory of God the Father." Here the age-old myth of rebel angels cast out of heaven is daringly replaced by the Son, who in complete obedience to the Father chooses the life of a slave among men and a death on a cross. The outcome is that our humanity is no longer doomed to death as the penalty for sin but has the potential of sharing with Christ in the hope of glory.

Whether from the pen of Paul or of a Paulinist, Col. 1:13-20 only carries into the cosmic realm Paul's thought of Christ as the power and wisdom of God. Here, as the agent of God in creation, the Son is the "first-born of all creation," and "in him all things hold together," since "in him all the fulness of God was pleased to dwell." Although the language here differs in emphasis from the other letters, it is to be noted that this cosmic speculation yields practical consequences (vss. 12-14) and has an ethical outcome, "to lead a life worthy of the Lord, fully pleasing to him, bearing fruit in every good work and increasing in the knowledge of God" (vs. 10). The type of thought in the whole passage reminds us of contemporary thinking in Alexandrian Judaism (*see* PHILO JUDEUS) and in the late WISDOM literature. If this is Paul, he is presenting Christ as the sole MEDIATOR over against some threat of angelic mediators.

In the final key passage (I Cor. 15:20-28) Paul presents the Lord Christ as the head of the new human-

ity (cf. vs. 22 with Rom. 5:12-21), this time as the victor over sin and death. He will vanquish all rebellious wills, human and demonic, to achieve the final consummation, when God will "be everything to every one" (vs. 28). The framework of this kind of thinking is clearly apocalyptic messianism.

One other christological passage has been much discussed: Rom. 1:1-4. Here the crux is the ambiguous verb in vs. 4. Is it to be rendered "declared to be" (KJV), "installed" (Moffatt), or "designated" (RSV)? In other words, is the Resurrection here presented as the proclamation of a status already existing, or as the assumption of an office not previously possessed, or is the verb designedly ambiguous? The last suggestion seems a bit subtle. Would it not be more likely that Paul was unaware of the theological problem he raises for us? If the verb is translated "installed"—i.e., the assumption of an office not previously held—this might support the adoptionist Christology which passages implying the pre-existence of Christ (II Cor. 8:9; Gal. 4:4; Phil. 2:6-11) would contradict. It has been argued that Paul here represents a transition between a primitive adoptionism (cf. Acts 2:36) and the thoroughgoing pre-existence, incarnation, exaltation, of the Gospel of John and the Letter to the Hebrews. Another way out of the difficulty is to hold that Paul is tactfully beginning his Letter to the Romans by citing *their* Christology, which is not *his*. Paul could be tactful, but hardly at a point like this.

If we ask of Paul, Was your Christ once really a man? he answers: *Was?* He *is* the heavenly man, and "just as we have borne the image of the man of dust, we shall also bear the image of the man of heaven" (I Cor. 15:49). If we ask, How could the exalted Lord be genuinely human? he replies: He "emptied himself, . . . and became obedient unto death, even death on a cross" (Phil. 2:7-8). If we ask, How can a cosmic Christ be conceived as personal or a personal Christ as cosmic? he answers: This is the whole goal of creation, which "waits with eager longing for the revealing of the sons of God" (Rom. 8:19). If we object that Jesus was, after all, but an incident, an episode, in human history, Paul answers that there is no isolated fact hereafter, for "all are yours; and you are Christ's; and Christ is God's" (I Cor. 3:22-23). *See also* CHRIST.

5. The word of the Cross. "The word of the cross is folly to those who are perishing, but to us who are being saved it is the power of God" (I Cor. 1:18). At the outset it is important to remember that to isolate the Cross from the Resurrection is a formal procedure, for just as the Resurrection can have no meaning apart from death, so the death is informed by the Resurrection, even when there is no verbal reference to it in Paul's words. What is everywhere implicit becomes explicit in such a sentence as: "If while we were enemies we were reconciled to God by the death of his Son, much more, now that we are reconciled, shall we be saved by his life" (Rom. 5:10). Was the sequence death-life, or was it life-death? Or was the former the logical, and the latter the experiential, sequence? Surely it was the living Lord Jesus Christ whose impact upon Paul illuminated the Cross and gave it significance. The two events are inseparable, inextricable; and when the one is considered apart from the other, we must remember that their relationship to each other is almost organic.

Why and how is the death of Christ on the cross effective for salvation? No part of Paul's message has been more debated, as he himself anticipated when he said of the Cross that it was a "stumbling block to Jews and folly to Gentiles" (I Cor. 1:23). Paul employs a number of metaphors to communicate what God has done for man's salvation in the death of Christ: It is a redemption, a ransoming, like a slave's release from bondage (Rom. 3:24; I Cor. 1:30). It is a sacrifice adequate for restoring favorable relations with deity (Rom. 3:25; 5:9). It is a victory over demonic powers who are competing for man's soul (Rom. 8:38-39; I Cor. 2:8; 15:25; Col. 2:15). It is the end of the old and the beginning of the new humanity (Rom. 5:12-21; I Cor. 15:20-22). Similarly, the consequences flowing from God's saving act in Christ are presented in richly varied imagery: as acquittal or justification when man is arraigned before the heavenly court (Rom. 3:24; 5:1); as reconciliation replacing the estrangement between God and man (Rom. 5:10-11; II Cor. 5:18-20); as belonging in Christ to the new humanity instead of in Adam to the old (Rom. 5:12-21; I Cor. 15:22; II Cor. 5:17); as sustained by the love of God, from which not even demonic powers can separate (Rom. 8:35-39); and ultimately as salvation, which is already initiated but will be consummated in glory (Rom. 5:2; 8:18).

Yet the Pauline imagery, varied though it is, is far from chaotic. God is always the author of salvation; there is no slightest hint that it is wrested from an unwilling God, even though the nature of sin is such as to involve estrangement, nor is there any suggestion that the death of Christ is the noble sacrifice of a good man over against an unfeeling or hostile world. Paul can exhort his readers to the imitation of Christ (II Cor. 8:9; Phil. 2:5), but always this is imitation of the will and the act of God in Christ (II Cor. 8:5, 16; Phil. 2:9). Furthermore, it is clear that the death of Christ is the way God deals with human sinfulness, universal and unexceptionable (Rom. 3:22-23). For Paul the origin of sin is on the circumference rather than at the center of his thought. He uses in homiletical fashion an analogical argument from Adam's sin (Rom. 5:12-21; I Cor. 15:21), but it is the fact of sin supported by data (Rom. 1:18-32) and by experience (Rom. 7:7-25) and the cure of sin by the creation of a new humanity in Christ which chiefly concern him. And finally, it is clear that the death of Christ reveals the nature and meaning of God's forgiveness. Paul seldom uses the word "FORGIVENESS." Was it too closely associated with the legalism he was opposing? But his favorite words, "grace," "peace," "reconciliation," express the same deep sense of God's forgiving, restoring love. The death of Christ carries the note of the cost of sin and the costly character of God's act in Christ. These are the major notes sounded throughout Paul's letters when he treats of the death and the resurrection of Christ. He is neither obscure nor esoteric in expressing these convictions.

It is when we ask how the death of Christ reveals and makes operative God's saving action—exactly

how—that the recurrent discussion of Paul's doctrine of the Atonement arises. Some of the more important passages in which Paul treats this question are the following:

Rom. 3:21-26. Here the three major notes are clearly sounded: God is acting in Christ, "whom God put forward" (vs. 25); his act deals with universal sin—"all have sinned" (vs. 23); and in this act the nature of the divine forgiveness is set forth (vss. 25-26). Two figures of speech are used: redemption—i.e., emancipation from slavery—and sacrifice, an "expiation by his blood" (vs. 25). "Expiation" is to be preferred to "propitiation," not only because the Greek word ἱλαστήριον usually has this meaning in the LXX, but also because it is God himself who "put forward" Christ Jesus to this end. The two figures of speech proclaim that in the death of Christ both the power and the guilt of sin are broken. But does Paul mean to say that the death of Christ exhibits in action God's costly forgiving love, or does he mean that Christ paid the inevitable, inexorable penalty for sin as an atoning sacrifice? In the latter case it is God who acts to propitiate himself. Or does Paul rest back upon the ancient axiom: "Without the shedding of blood there is no forgiveness of sins" (Heb. 9:22), without regard to the subtleties of our modern interpretation?

Rom. 5:8-11. Here again Paul is discussing the death of Christ, but his thought is oriented to the new life issuing from justification by faith (5:1), which is here called "reconciliation." The same three notes are sounded again: it is God who is the actor (vs. 8); his act deals with sin (vs. 8); and it exhibits the nature of God's forgiveness—i.e., there is a wrath of God to be saved from (vs. 9). Two emphases not present in Rom. 3:21-26 appear: the word "RECONCILIATION," found only in the Pauline letters (Rom. 11:15; II Cor. 5:18-20; Eph. 2:16; Col. 1:19-22); and the eschatological reference to salvation (vs. 9). The barrier between God and man—which must be a barrier, in some sense, for God himself—is removed by Christ, who "died for us" as an act of God's love (vs. 8).

Rom. 6:1-11. This important passage relates the death of Christ to still another area of thought. Instead of the language of sacrifice or of reconciliation, the imagery is of the "old self" (vs. 6) and the new, of dying to sin and living to God (vs. 10), of being buried "by baptism into death" and being "raised from the dead [as Christ was]" that "we too might walk in newness of life" (vs. 4). The death of Christ is a death to sin (vs. 10), but the "life he lives he lives to God," and "we believe that we shall also live with him" (vs. 8). The old humanity "in Adam" as contrasted with the new humanity "in Christ" (Rom. 5:12-21) is the background for this thought. The death of Christ, a death to sin, is the end of the old; the Resurrection is the beginning of the new order. By a vivid use of the analogy of baptism—"baptized into his death," "buried . . . with him by baptism into death"—Paul conceives the believer as having died to sin and potentially to be raised to that newness of life characterized as being "alive to God in Christ Jesus" (vs. 11). Again it is God who is the ultimate actor, the death of Christ (and here explicitly the Resurrection) which reveals the nature of God's act, and sin which conditions that redeeming act.

II Cor. 5:14-21. This great passage is reminiscent of Rom. 6:1-11. The same controlling concern with the new life dominates, although the occasion is a very personal one (vss. 11-13). There is the same emphasis on personal appropriation of the death and the Resurrection (vss. 14-15), with an even stronger note of the believer's solidarity with Christ (vs. 14), this time without the analogy of baptism. Once again it is God who is the actor, even more emphatically than before (vss. 18-20); it is the death of Christ which reveals the significance of God's act; and it is sin which is vanquished. The closing verse, 21—one of the many terse, enigmatic Pauline sentences—has been variously interpreted. Does it mean that the sinless Jesus bore the penalty for sin on our behalf, or does it mean that by his incarnation he lived the life of man, a life dominated by sin and death, and so wrought out our salvation in the real world of our human experience? In addition to these more ordered treatments of the death of Christ there are occasional references scattered through Paul's letters (I Cor. 2:8; II Cor. 8:9; Gal. 2:20; 6:14; Phil. 2:8-9).

6. To everyone who has faith. According to Paul the gospel "is the power of God for salvation to every one who has faith" (Rom. 1:16). Faith is man's response to the gospel; it is the gateway to salvation. Paul uses the word "faith" with more than one meaning, but his characteristic use is to be seen in relation to the law. An understanding of his view of the law is essential to an understanding of faith.

a. Faith and the law. By "law" Paul usually means the revelation of God's will in the Scriptures. In a few passages "law" means obligation such as conscience exerts (Rom. 2:14-16), or civil law (Rom. 7:2-3), or even the demand of Christ (Gal. 6:2). Again, without losing the sense of "obligation," "law" can mean principle or pattern (Rom. 8:2). But most frequently Paul means the OT law or the whole OT (Rom. 3:10-19, where passages from the Psalms and the Prophets are regarded as law; I Cor. 14:21, which includes Isa. 28:11-12 as law). Paul draws no explicit distinction between the ritual and the ethical demands of the law; both are law for him as a Jew (Gal. 3:10; 5:3). Nevertheless, an unconscious distinction is apparent. What the conscience of a Gentile demands can hardly be the ritual, but only the ethical, requirements of the law (Rom. 2:14-16), and Paul regularly thinks of the ethical demands when he discusses the permanent validity of the law (Rom. 2:21-29; 13:8-10; Gal. 5:14-23). He deals with the dietary laws in considerable detail, reckoning them as of relative rather than absolute validity (I Cor. 8:1–11:1; Gal. 2:11 ff), and circumcision is spiritualized in a way that would not be satisfactory to a Jew (Rom. 2:28-29). Perhaps the solution of this apparent contradiction lies in recognizing that Paul thinks like a Jew in his view of the law. He is not so much concerned with the content of the commandments as with the fact that they are commandments. Then how are they to be fulfilled? This is the question facing him, and in answering it he undoubtedly, if perhaps unconsciously, shifts the center of gravity from the ritual to the ethical demands, for it is in the area

of ethical requirements that the inward struggle goes on (Rom. 7:7-25).

The major difficulty, however, lies in the apparent contradiction between the law as embodying the will of God for men and the law as intimately related to sin and death in Paul's view. He is quite aware of this difficulty and devotes considerable space to its solution. On the one hand, he asserts the validity of the law and his own zeal in upholding it (Rom. 2:13; 3:31; 7:12). The law is to be fulfilled (Rom. 13:8-10; Gal. 5:14); and it brings no charge against those who bear the fruit of the Spirit (Gal. 5:23). On the other hand, "Christ is the end of the law, that every one who has faith may be justified" (Rom. 10:4); the law brings knowledge of sin (Rom. 3:20; 7:7) and death (Rom. 7:9); it stimulates sinful activity (Rom. 5:20; 7:8) and brings those who "rely on works of the law . . . under a curse" (Gal. 3:10). Not only is this puzzling, but it is also shocking to Paul's Jewish readers, as he well knows it will be. He insists again and again that he is an upholder of the law, that "the law is holy, and the commandment is holy and just and good" (Rom. 7:12), and that the law itself is not sin (Rom. 7:7). He answers the charge of blasphemy in a twofold way: first, the law is the instrument of sin, not sin itself; and second and more important, the function of the law in the divine economy has been misunderstood. It is not the validity of the law, but its misunderstood role, that Paul attacks. The law does not bring a man into right relationship with God, as the classic example of Abraham shows, for faith in his case preceded the very existence of the law (Rom. 4; Gal. 3:6-18). Furthermore, the law is good but powerless as a motivating force, since, on the one hand, it fails to ensure right conduct (Rom. 1:18–2:29), and, on the other hand, zeal in keeping the law only increases one's confidence in his own righteousness and thus defeats the end in view—i.e., the righteousness of God (Rom. 10:3; Phil. 3:4-9).

Law and gospel are thus mutually exclusive as ways to the right relationship with God. Law has the positive function of revealing sin as sin—indeed, of stimulating the activity of sin and showing man that he is in sin's fatal grip, from which only a power not his own can rescue him (Rom. 7:24). Passage after passage (Rom. 3:20; 7:7-25; Gal. 3:21-25) sets forth the role of the law as an instrument in God's gracious providence to reveal to man, to stab him broad awake to the fact, that no effort of his own, however strenuous, will enable him to lift himself by his own bootstraps out of the entangling web of sin, and to show him that every victory apparently won by his own effort is actually a defeat, since it encourages the self-deception that he can save himself. Only a "new creation" like the creative act of the God who made light to shine in darkness (II Cor. 4:6) will restore, redeem, reconcile, and save mankind. But how is man to respond to God's saving act in Christ? Paul's answer is, By the obedience of faith.

b. Faith as the opposite of boasting. Negatively, faith is the absence of all self-confidence, self-assurance, self-satisfaction in human goodness, wisdom, power. While Paul can use the word "faith" to mean "trust" or "intellectual assent" and the like, faith owes its characteristic features to the sharp antithesis: faith versus law. Law—any kind of law—is powerless to set a man right with God, to put him in creative relationship with God. On the contrary, law shows man his powerlessness, incites him to sin, makes sin into guilt, and, in short, closes every avenue to salvation save only the way of faith. The objectivity of law, in other words, cuts through the subjective rationalizing of conduct ("I meant well, however short the deed fell from the intention"). The impact of the law, accordingly, either sets a man at enmity with a God who demands what no man can fulfil, or else it opens up the possibility of a radically different relationship with God from that between a lawgiver and a lawkeeper. This is what Paul means when he writes: "The law was our custodian until Christ came, that we might be justified by faith" (Gal. 3:24).

Lover of paradox as he is, Paul expresses this negative quality of faith by writing about "boasting," "glorying," but now the object has been shifted from man to the gospel which reaches man in his helplessness (Rom. 4:20; I Cor. 1:31; II Cor. 10:17; 12:9; Gal. 6:14). Paul knows that human boasting is folly, even when he feels that he is forced by his adversaries to indulge in it (II Cor. 10:8, 13; 11:1, 16, 21), and he often sets faith over against it as its radical opposite (Rom. 11:18; I Cor. 1:29; 4:7).

c. Faith as obedience, receptivity. Faith is obedience, surrender, receptivity; it is acceptance with the whole self of the good news that God's saving grace is offered to men in Christ. Paul does not think of faith as a native, human quality progressively clarified as to its object (with the author of Hebrews; cf. Heb. 11:1–12:2), even though he can include the idea of faith as an attitude toward the unseen reality (II Cor. 4:18; 5:7). Faith is the response of the whole man toward the humanly unbelievable love of God in Christ, freely offered to men who do not deserve it. This act Paul calls "obedience," almost interchangeably with "faith" (cf. Rom. 1:5, 8, with 16:19), and its opposite he terms "disobedience" (cf. Rom. 11:30-32 with 10:3, 16), for faith is submission and "heeding" (Rom. 10:16). It is, in other words, the condition for receiving salvation, and not a virtue, an attitude, or an experience. It is the continuous necessity of an act of submission, of receptivity to God's grace in Christ. Thus, of course, faith cannot be regarded as meriting salvation, since it is surrender of the self and one's own estimate of the self. But while faith is the basic response of the whole man to the revelation of God in Christ, it is not the whole of salvation. The Spirit and the fruits of the Spirit issue from the faith that puts man in creative relationship with God.

7. Life through the Spirit. If faith is the human response to God's saving act, the consequence of faith is a "new creation" (II Cor. 5:17; Gal. 6:15). This new life can be characterized as life in and through the Spirit; it can also be described as life in and through Christ, "Spirit" and "Christ" being used interchangeably.

a. What does Paul mean by the Spirit? The antecedents of Paul's concept of the Spirit are clearly Jewish. As in the OT, "Spirit" is predominantly a religious rather than a metaphysical term, stand-

ing for the divine presence and power and for man's capacity for receiving it, and not for an invisible essence in man relating him to the rest of creation (*see* SPIRIT; HOLY SPIRIT). Paul knows of the Spirit as a miraculous divine power, a kind of invading energy enabling man to perform more than human deeds. He writes at length about "spiritual gifts" (I Cor. 12–14), quite in the temper of the OT, if with different terminology. In two respects, however, Paul deviates from the OT pattern. First, he relates spiritual gifts, unquestionably personal and individual, to group sanctions, arguing that the variety of gifts is a manifestation of the one Spirit (I Cor. 12:4-11) and that an individual gift, however highly prized, is for the edification of the church (I Cor. 14:18-19), which is itself the product of the Spirit (I Cor. 12:13). Second, the gift of the Spirit is no longer temporary or an *ad hoc* endowment; it is a permanent possession of the believer. He now lives by the Spirit (Gal. 5:25); without the Spirit (of Christ) he does not belong to Christ (Rom. 8:9). He is one of the "spiritual" (Gal. 6:1). Here we meet again the persistent Pauline paradox: the Christian *is,* the Christian *ought to be.* His true life is the life of the Spirit; yet he is exhorted to "walk by the Spirit" (Gal. 5:25; *see* § B9 *below*). That Paul thinks of the Spirit as more than an invading, dynamic energy manifested in spectacular gifts such as speaking with tongues, is evident from expressions such as "led by the Spirit of God" (Rom. 8:14; Gal. 5:18) and setting "the mind on the Spirit" (Rom. 8:6, 27). The Spirit means a direction, a will, for all of life.

Paul can and does use the word to designate the human spirit (I Cor. 7:34; I Thess. 5:23) and as an equivalent of "I" (I Cor. 16:18; II Cor. 2:13; 7:13 [translated in the latter two cases as "mind" in the RSV]; Gal. 6:18; Phil. 4:23; Philem. 25). Perhaps it is unwarranted to say that Paul thinks of the human spirit as having the capacity for receiving the divine Spirit, since he usually thinks of the self as a unified whole, yet there are at least two passages in which the spirit of man appears to be that part or aspect of the self which is open to the divine Spirit. "When we cry, 'Abba! Father!' it is the Spirit himself bearing witness with our spirit that we are children of God" (Rom. 8:15*c*-16)—this passage and especially the analogy in I Cor. 2:10*b*-13 point in that direction. It is clear that the term "spirit" has a Jewish rather than a Hellenistic background in Paul's usage, for it does not so much reflect a dualism as refer to the divinely empowered transformation of the whole person to be a "new creation." It is not clear whether "Spirit" is consistently personal or impersonal for Paul, whether we should use the pronoun "he" in all cases or "it" in some instances. There can be no question of the personal meaning in passages such as Rom. 8:16; I Cor. 2:10-16, but where impersonal expressions such as "pouring out," "sealing," "supplying," are used (Rom. 5:5; II Cor. 1:22; 5:5; Gal. 3:5)—and these are the more numerous—the precise intention is less clear. The answer to this question may lie in another direction. Personal and impersonal conceptions of the Spirit are both found in the OT. Paul's use of both, accordingly, is not surprising. What is significant is his intimate association of "Spirit" and "Christ."

b. Life in and through the Spirit. The new life is life in and through the Spirit. The Spirit is the seal, the guarantee, the first installment, of the new life (Rom. 8:23; II Cor. 1:22; 5:5). We live by the Spirit (Rom. 8:13; Gal. 5:25). The Spirit means "peace and joy" (Rom. 14:17), the freedom of sonship (Rom. 8:14-17; Gal. 4:4-7), hope (Rom. 15:13), and fruit (Gal. 5:22-23). Similarly, the new life is life in Christ and through Christ. The believer has his "life in Christ Jesus" (cf. Rom. 8:1; I Cor. 1:2, 30; Gal. 2:17; Phil. 4:1). "In Christ" are all the goods of the new life: joy (Phil. 3:1; 4:4, 10), the love of God (Rom. 8:39), the peace of God (Rom. 5:1; Phil. 4:7), and freedom (Gal. 2:4). The new life is life in the Spirit and in Christ, both expressed in the same passage: "You are in the Spirit . . . . Christ is in you . . . . Your spirits are alive . . . . Life to your mortal bodies . . . through his Spirit" (Rom. 8:9-11; cf. 8:1; Gal. 5:5-6). Paul also uses the expression "the Spirit of Jesus Christ" (Rom. 8:9; Gal. 4:6; Phil. 1:19), but never "the Spirit of Jesus." He apparently reserves the name Jesus for the historical person. Some scholars think that complete identification of Spirit and Christ is indicated by II Cor. 3:17: "Now the Lord is the Spirit, and where the Spirit of the Lord is, there is freedom," since "Lord" undoubtedly means "Christ" here, as vs. 14 assures. But a study of the context does not warrant this conclusion. The essence of Paul's thought here (3:4-18) is that scripture, which can be rightly interpreted only by the Spirit, is unveiled by the "Spirit of the Lord," which Spirit sets us free from the written code (vs. 6), for we are "changed into his likeness . . . . This comes from the Lord who is the Spirit" (vs. 18). That the Lord (Christ) has the universality and effectiveness of the Spirit is, no doubt, Paul's meaning, but that he is identifying Spirit and Christ in any metaphysical sense is questionable. The whole passage is to be understood from the religious and experiential viewpoint.

c. The Pauline mysticism. We have seen that the new life is described by Paul as life in and through the Spirit and in and through Christ. What does he mean when he writes of being "in Christ" and of Christ "in me"? This is usually called "mysticism," a word with many meanings. It will be well to appraise Paul's thought as positively as possible.

The new life is personal life. While it is true that Paul can use impersonal terms of the Spirit (*see above*) and in Col. 1:15-20, terms which strain, if they do not burst, the bounds of the personal in setting forth the cosmic aspects of Christ's role, these terms are not typically Pauline. The life of the Spirit, the life in Christ, is a definite *way* of living patterned after Jesus. Even the cosmic Lord "emptied himself," and his followers are to "have this mind among yourselves" (Phil. 2:5-11). Love even toward the unlovely is the mark of the new life (I Cor. 13). Paul writes the famous "hymn to love" in a context (I Cor. 12–14) devoted to the discussion of spiritual gifts, and he makes it as explicit as words can that the ultimate and only permanent gift of the Spirit is love expressed in personal relations. Every Pauline letter issues in the same concrete, personal application to specific human situations. This is to be the outcome of life in the Spirit, in Christ. The classic

statement of Paul's mysticism is found in Gal. 2:19-20: "I through the law died to the law, that I might live to God. I have been crucified with Christ; it is no longer I who live, but Christ who lives in me; and the life I now live in the flesh I live by faith in the Son of God, who loved me and gave himself for me." This statement shows at once the intimate relationship with Christ and the resultant redirection and reconstitution of the self. The self is neither annihilated nor merged with the divine as a stream is absorbed into the ocean; the "I"-"Thou" relationship is retained, "that I might live to God," and its ultimate purpose realized.

The new life is corporate life. If a passage like Gal. 2:19-20 stresses the individual aspect of the new life, many other passages emphasize the corporate aspect. Life in the Spirit, life in Christ, is life in the new humanity (I Cor. 15:22). Perhaps being "in Adam" is not less "mystical" than being "in Christ," and this corporate consciousness may well be a central aspect of Paul's thought. To be "in Christ" may well mean a complete sharing in the body of Christ, the church (Rom. 12:4; I Cor. 12:12-27). Paul's discussion of baptism (Rom. 6:1-11; Gal. 3:27-29) and of the Lord's Supper (I Cor. 11:23-25) is probably to be understood from the same corporate viewpoint. Paul does, indeed, use language which approaches the terminology of the mystery cults, but the major reference seems to be directed toward the new humanity, the body of Christ.

The new life, then, is personal life in a new realm or a new creation. It is conditioned by faith, which involves a personal response to a definite object, God's gracious act in Christ, and which issues in a new relationship with God through the Spirit. Christ is released from the limitations of the man Jesus and is made contemporary and inward by the Spirit; the Spirit, on the other hand, is given the ethical content and the personal implications inherent in Jesus.

8. The church is the body of Christ. It is generally agreed that Paul's most significant contribution to the concept of the church is his teaching about the "body of Christ." In the two classic passages (Rom. 12:4-5; I Cor. 12:12-30) the word "church," ἐκκλησία, does not appear; it is only in Colossians and Ephesians that the identification is explicit (Eph. 1:22-23; Col. 1:18). The content and context of the extended Corinthian passage on spiritual gifts (I Cor. 14:4-5, 19, 28) make it certain, however, that Paul uses "body" and "church" synonymously. No other NT writing employs the concept of the body, unless it is hinted at in John 2:21. The new life manifests itself most conspicuously in the church and in the personal conduct of the believer. These two, church and ethics, are, indeed, intimately associated (*see* §§ B9*b-c below*), for the Spirit is the unitary source—the lifeblood, so to speak—of the varied spiritual gifts, and the ethical issue of the new life is described as "fruit of the Spirit" (Gal. 5:16-25).

a. The meaning of the church. There are at least two reasons why it is a mistake in method to stress the meaning of the Greek word ἐκκλησία, used by Paul for the new community. First, he can and does use other words, such as "saints" (more than twenty-five times), "brethren" when the reference is to the common faith (about one hundred times), and a variety of other expressions to indicate that the new community constitutes the true Israel of God (Rom. 4:11: "all who believe"; 9:6-8: "children of the promise"; Gal. 3:29; 6:16; Phil. 3:3: "the true circumcision"). Second, the Greek word ἐκκλησία has behind it Aramaic and Hebrew words (*see* CHURCH, IDEA OF), and the linguistic genealogy is by no means clear. Both etymologically and genealogically the background of the Greek word is uncertain, not to speak of the fact that our English word "church" has no relation whatever to the Greek word Paul uses.

It is best to study Paul's usage from the immediate context. His free use of the word we translate "church" indicates that he regards it neither as peculiar to himself nor as in need of definition. This corresponds with the common use of the word in Acts, which purports to give the story of the primitive pre-Pauline community. In Acts and in Paul's letters the word "church" occurs both in the singular and in the plural. Did Paul move from the particular (a church at Corinth) to the several churches, here and there, and so to the universal (the "church of God") by a kind of sociological progression? It is quite widely, and probably correctly, held today that the reverse is true. Paul conceived of the church, not as a new and tiny entity, but as the existing and true Israel, the "church of God which is [i.e., has its local habitation] at Corinth" (I Cor. 1:2). In the same way he can recall that he persecuted "the church of God" or "the church" (I Cor. 15:9; Gal. 1:13; Phil. 3:6) when his Jewish zeal was directed against Christians in a specific locality. This helps us to understand his otherwise extravagant hope and confidence in the struggling little communities so seemingly insignificant over against mighty Rome. The church was the eschatological community. Only so can we understand its existence as the heart of a movement which in its inception, at least, looked for the imminent coming of the kingdom.

It has been argued that there was no room for the church as an institution in the eschatological expectation. But is the church envisaged as an institution in the NT? Certainly not in Paul's writings. The church is the eschatological community; it is a "colony of heaven" (Phil. 3:20 Moffatt). This accounts for the informality and flexibility of its organization and worship, on the one hand, and for the fact that organization stems from the consciousness of the one body with its several members rather than from any sense of the need for a polity, on the other (I Cor. 12:14-30; *see* CHURCH, LIFE AND ORGANIZATION OF THE). Paul's view of the church is seen to be entirely consonant with the Synoptic records, according to which the individual is not so much saved by a unilateral relation to God as by being incorporated into the fellowship of God's people, the kingdom of God. Paul develops his thought along his own distinctive lines, but he is not in conflict with Acts and the Synoptics at this point.

b. The church is divinely constituted. We must unthink our modern sociological approach to the rise of the church, if we are to understand Paul's thinking. He does not think of himself as an organizer or even as a missionary in our modern sense of the word; he is not one who selects strategic centers

for propaganda and strategic methods of work. We may well appreciate the statesmanship of Paul in choosing the bases for his operations and the skill with which he discovers and develops prepared groups, ready for his message. But these are quite incidental, almost unconscious aspects of his work. He believes that he is heralding the "message of reconciliation" as an ambassador for Christ (II Cor. 5:19-20), and those who hear and heed are the "saints" (Rom. 1:7; I Cor. 1:2; II Cor. 1:1; Phil. 1:1; Col. 1:2 and often). The saints are the called ones, the separated ones, the holy ones. The word "saint" does have an ethical connotation, but goodness is the implication, not the explication, of sainthood. When Paul writes to the Corinthian or to the Roman Christians as to κλητοῖς ἁγίοις ("called saints"), he does not mean that they are called to *become* saints any more than he means that he himself as a "called apostle" (κλητὸς ἀπόστολος) is called to *become* an apostle. He *is* an apostle because he has been called; they *are* saints by virtue of their calling. Any other understanding makes nonsense of the use of the word "saints" to characterize those Corinthian Christians whose moral deficiences Paul is going to expose in the frankest way. It is just because they are "saints" in the Pauline sense that he can appeal to them to behave as such. When we remember that the word "saint" is never used in the singular in the NT (Phil. 4:21 is an apparent but not a real exception), we become aware of the power of Paul's conception of the church as made up of the saints who have been called by God and who constitute a "colony of heaven."

c. The church and the eschatological event. The modern idea of the church as a means of propaganda for high ends is also foreign to Paul's thinking. To be sure, he urges the Corinthian Christians to "give no offense to Jews or Greeks or to the church of God" (I Cor. 10:32); but to regard the church as a means to an end is not the Pauline thought. He does, indeed, believe that the end of the old world will come with the imminent parousia of Christ (I Cor. 15:23, 51-57; I Thess. 4:16), but this anticipated event has already been manifest with the coming of Christ (Gal. 4:4), so that "the old has passed away, behold, the new has come" (II Cor. 5:17). The church is not so much an agency for promoting desirable causes; it is itself an invasion of the eschaton into time, having already the "first fruits of the Spirit" (Rom. 8:23) as a "guarantee" of things to come (II Cor. 1:22; 5:5) and of "sonship" (Rom. 8:15; Gal. 4:6). Paul makes use of the cosmic imagery of Jewish apocalyptic to prefigure the eschaton (I Cor. 15:51-57; I Thess. 4:13-18), but with his teaching about the new life and the church he has decisively "lifted the eschaton out of the dimension of cosmic occurrence into that of historic events."

d. The body of Christ. With this background we come to a consideration of the church as the body of Christ, an important Pauline concept, consonant, as we shall see, with his total view of the new humanity in Christ. The figure of the body must not be too rigidly interpreted, since Paul himself develops various aspects of it. In I Cor. 12:12-30 after a brief statement to the effect that the body is one, its many members actually demonstrating rather than negating its unity and "so it is with Christ," Paul focuses attention on the vital interrelations in the community of Christians. Each member, however insignificant in himself, is related organically to the body by the "same Spirit," and the differing spiritual gifts are to be understood from the functional viewpoint, for "you are the body of Christ and individually members of it" (vs. 27). In Rom. 12:4-8 the figure is again directed to the same end of unity in diversity. In Colossians, however, a different note is sounded. Here there is no suggestion of rivalry over spiritual gifts; the danger is from those who fail to acknowledge that Christ is the "head of the body, the church" (1:18), and so the "head of all rule and authority" (2:10). That Christ is the head of the church is apparently derived from the cosmic headship of Christ in the universe (Col. 1:15-20), and Christians are not so much thought of as separate parts of one body as they are incorporated into the very person of Christ. The Paulinist Ephesians carries this concept much further, along lines, many think, of Gnostic mythology, although designed to combat it.

Whatever the source of this striking figure of the body of Christ, Paul uses it to emphasize, now in one way and again in another, the unity of the Messiah-Christ and the messianic community. It is thoroughly consonant with the eschatological and the ecclesiological outlook so central in his thought. It is, as indicated above, so closely related to the mysticism of Paul as to constitute an integral part of his thought about being "in Christ." Is this phrase Paul's way of proclaiming that the Christian is "in" the fellowship of believers, "in" the church, and "in" the eschatological community of those who are being saved? At the least, this aspect of his thought must be included in any consideration of his mysticism. But does the complementary "Christ in you" (Rom. 8:10; Gal. 2:20; Col. 1:27) find its explanation so readily in eschatological and ecclesiological terms? Should we not be willing to allow Paul a genuinely mystical idea of the interpenetration of the living Lord with the spirit of the believer, which is not inconsistent with the mysticism of the body and its members?

9. Walking by the Spirit. Paul knows what ecstasy means (II Cor. 12:1-4), and he prizes the spiritual gift of speaking with tongues in its rightful place (I Cor. 14:18-19), but the fruit of the Spirit is a kind of character and conduct consonant with the new life in Christ and quite different from spectacular gifts; it is a matter, not of flying or soaring, but of walking (Gal. 5:25). The importance of ethics in Paul's message is unmistakable. Not only does he commonly close his letters with ethical admonitions and exhortations, but in most instances his doctrinal discussions are conditioned by some ethical problem or interwoven with it. It is the ethical collapse of both Gentile and Jew (Rom. 1:18–2:29) that makes justification by faith alone a necessity. The most significant passages on the sacraments are related to questions of behavior: baptism ought to issue in "newness of life" (Rom. 6:1-14), and we possess the words of the institution of the Lord's Supper only because of the disgraceful conduct of members of the Corinthian church (I Cor. 11:17-34). An important christological passage such as Phil. 2:1-11 and the significant discussion of the

church in I Cor. 12:12-30 both appear to owe their presence in the Pauline corpus to the ethical needs of the churches addressed. Whether Rom. 7:7-25 is autobiographical or meant to represent the typical experience of man-under-the-law, or partly both, the ultimate despair (vs. 24) is occasioned by a "commandment" and by man's inability to "do the good" (vs. 19).

Paul's doctrine of salvation is set forth in language which at a number of points reminds us of the mystery cults, but his insistence on morality as the fruit of the Spirit sunders him sharply from these cults. It is unnecessary to look to Stoicism as the source of Paul's ethical emphasis, although he would approve and on occasion appears to have used some Stoic terms (*see* STOICS). The obvious background of Paul's ethical emphasis is Judaism, with its identification of religion and conduct. The ethical monotheism which was Paul's heritage made it quite impossible for him to think of conduct without its source in religion or of religion without its consequence in behavior. Judaism, however, had the law as the standard of conduct, and when Paul displaced law by faith as the basis of right relationship with God, what was to be the new standard? This question troubled both Paul and his readers and must be considered later.

a. The nature of Paul's ethics. Paul was, ethically speaking, a Jew from the beginning to the end of his life, and as a Jew he was the heir of an ethical monotheism he never abandoned and of the law of Moses, which remained valid for him as a guide to conduct although he denied that it was capable of setting a man in right relations with God. Consciously or unconsciously, Paul's ethical center of gravity had shifted from the ritual to the moral commandments of the law, although he made a gesture toward the former by interpreting them symbolically (Rom. 2:28-29). His respect for the law as a guide to behavior obviates the necessity of providing a new system of ethics for converts to the gospel. Paul conceives the Christian as freed from all external requirements (Gal. 5:1, 13), but this freedom does not mean license (vs. 13); it is freedom to act according to the new life principle (Gal. 5:25). The law of Moses—indeed, all law as an externally binding control—is finished, "for Christ is the end of the law" (Rom. 10:4). This was not, at least in Paul's intention, a charter of moral subjectivity, although some of his converts so interpreted it, creating thereby one of the most difficult problems he had to face. They understood his teaching to mean that every man might now do what was right in his own eyes. Paul meant that the new man in Christ now wants to do from inward compulsion what was formerly imposed from without. This is the new Christian freedom. Henceforth good deeds are to be considered the normal expression of the Spirit-filled life; the Christian is to walk by the Spirit by which he lives (Gal. 5:25). Just as the child learns to walk with many a fall, so Paul believed that the new life in the Christian would mean walking after the pattern of Christ, and falling was not ruled out as a possibility. He found this difficult to explain to his new converts, and he devotes much space in his letters to the ethical implications of the new life.

b. The Pauline standards of conduct. Eager as Paul was to escape from the bondage of all law—for sin used the law as its instrument—and emphatic as he was in insisting that the new life creates its own "fruit" and is untrammeled by external rules, he cannot avoid standards, norms of conduct, if he is to deal concretely with ethical issues as they arise in the Gentile churches. "Walking" (Gal. 5:25) involves putting one foot before the other and doing this in a certain direction. Right conduct is not inevitable, even among the "saints," as Paul knows from experience; it is a matter of decision and of effort. Accordingly, Paul's letters do reveal certain standards of conduct even though he has no system of ethics as such. Chief among these norms are the law of Moses, the words and example of the Lord, and the leadings of the Spirit. Although Paul repudiates the law of Moses—indeed, all law—as the way to justification and shocks his Jewish readers by associating it with sin and death (Rom. 7:7-11), he himself is certain that he has maintained the validity of the law as "holy and just and good" (vs. 12). It is the function of the law which Judaism misrepresents, not its demands. God in Christ has acted so that the "just requirement of the law might be fulfilled in us" (Rom. 8:3-4). The ethical demands remain in force for him, and they are meant to be fulfilled, except that the new man, Spirit-filled, now performs what the law demands from an inward motivation rather than from an outward compulsion. There are a number of passages (Rom. 2:6; II Cor. 5:10; Gal. 6:7; Col. 3:24-25) in which Paul appears to look forward to a judgment according to deeds done "in the body" quite in terms of the Jewish pattern which he has repudiated. The apparent contradiction is to be resolved, not by supposing that Paul has forgotten for the moment his doctrine of the saving grace of God in Christ to be received by faith, but by remembering that the divine grace was a morally creative power, in his view, which made possible all and more than the law required.

The words and example of the Lord are also authoritative as a standard of conduct. While there is little direct quotation, Paul's letters reflect, here and there, the influence of Jesus' teaching (cf. I Thess. 4:8 with Matt. 10:40; Luke 10:16; cf. Gal. 4:17 with Matt. 23:13; Luke 11:52; cf. I Cor. 4:12-13 and Rom. 12:14 with Matt. 5:44; Luke 6:27; cf. I Cor. 5:4 with Matt. 18:20; cf. I Cor. 9:19 with Mark 10:44; cf. I Cor. 13:2 with Matt. 17:20; Mark 11:23; cf. I Cor. 13:3 with Mark 10:21; Luke 12:33; cf. II Cor. 10:1 with Matt. 11:29; cf. Rom. 2:1 and 14:13 with Matt. 7:1; cf. Rom. 14:14 with Matt. 15:11; Mark 7:15; cf. Rom. 16:19 with Matt. 10:16 and many other passages). Three explicit references to Jesus' teaching are: I Cor. 7:10 (cf. Matt. 5:32; Mark 10:11-12); I Cor. 9:14 (cf. Matt. 10:10; Luke 10:7); I Cor. 11:23-25 (cf. Matt. 26:26-29; Mark 14:22-25; Luke 22:15-19). To this should be added Paul's stress on love (ἀγάπη) as the ultimate determinative of conduct. Love is the Pauline ethos, the "way" (I Cor. 12:31) in which all spiritual gifts are to be expressed. I Cor. 13 does not mention Christ, but the context makes it evident that Paul is speaking of the way in which the Spirit (of Christ) issues in conduct. Even when Paul refers to the

teaching of Jesus explicitly, the manner of his reference is significant. Jesus' teaching about marriage has, indeed, final authority (I Cor. 7:10), but Paul does not present it as an objective command like the law of Moses. It is rather part of that revelation of the new life in the Spirit, in Christ, which Paul himself shares (7:12, 25). Jesus' saying is not an isolated dictum but an integral part, if the supremely authoritative part, of the total revelation.

It is the Spirit which is the prevailing sanction and norm of Christian conduct. What saves this standard from being vague and indecisive is the role of the Spirit in binding the many into one body (I Cor. 12:12, 27). Because of the Spirit each individual member has an organic relationship (obligation?) to all other members. There can and must be no schism (I Cor. 1:10-13), no self-conceit (Gal. 5:26), no censoriousness, but only a "spirit of gentleness" (Gal. 6:1), for this is the "law of Christ" (vs. 2). This sense of sharing, κοινωνία, produced the Pauline ethic or, at any rate, gave it its distinctive form. This is another reason for the lack of any formal system of ethics, although the list of household duties (*see* HOUSEHOLD DUTIES, LIST OF) in Col. 3:18–4:1 (cf. Eph. 5:21–6:9) is a step in that direction.

c. The Pauline paradox. It is in the realm of ethics that the Pauline paradox is most clearly encountered. The Christian, Paul insists, lives a new life; he is a new creation; yet he must be exhorted and admonished to *be* what he *is*, to act in accordance with his new nature. Perhaps there is no logical solution of this paradox. Paul simply knows that the new life comes from God through Christ and the Spirit as men open their hearts in faith to receive it; he also knows that he must exhort his converts to walk by the Spirit, which is their true life. Of course, salvation for Paul is still an end event, the Christian is still living "in the flesh" (Gal. 2:20), and the battle with sin is still going on even though the decisive victory has been won. Accordingly Paul exhorts and admonishes, for the believer has the seal, the guarantee or down payment, of the Spirit, but the final and complete salvation is still to be expressed in future tenses (Rom. 6:5, 8, 14).

Another unsolved problem, logically speaking, is the basis for obligation in the Pauline ethic. He has abandoned the law, all law, as the means of a right relationship with God and has reinterpreted its role in the economy of salvation. Has Paul also abandoned all objective grounds for obligation? This was the position taken by certain antinomian Christians in the Pauline churches, and Paul is seriously troubled by their plausible arguments (Rom. 3:7-8; 6:1, 15). Our obligation is to God, who in Christ has acted for our salvation, but what is the ground of our obligation to our fellows once the law has ceased to play that role? Paul's answer appears to be, We are bound into one body by the gift of the Spirit, and so our obligation is as members one of another. But here his striking figure of the body is not wholly satisfactory as a logical solution, for the members of the body operate organically and automatically and not from obligation in a moral sense. It is clear, therefore, that in Paul's thought the body is still a metaphorical term and is not meant to be taken literally.

10. The Lord is at hand. The coming of the Lord (*see* PAROUSIA) is but one aspect, although of central significance (I Cor. 15:20-28; I Thess. 4:13-17), in Paul's expectation of events to be realized at the end of history and as its divinely ordained culmination. Eschatology is central rather than peripheral for Paul. He contemplates these end events both in chronological terms as near (Rom. 13:11-12; I Cor. 7:29) and in terms of decisive opportunity and fulfilment (*see* TIME), looking forward, not with foreboding, but with eager joy, to the emancipation from human and cosmic enslavement when "the creation itself will be set free" (Rom. 8:19-23).

a. The importance of eschatology for Paul. How important eschatology was for Paul is to be seen by surveying the scope of his expectations. The most complete statement is I Cor. 15:20-28. There the major notes are sounded, although his terse phrases leave the precise meaning open to conjecture. The destiny of believers, alive and dead, is bound up with the coming of Christ in messianic power (I Thess. 2:19; 4:15; 5:23). He is the "first fruits" of the new humanity. The resurrection of Christ—so the logic of Paul's reasoning runs—means the resurrection of believers, who are members of his body. Just as they have been "in Adam," so they are now "in Christ" (I Cor. 15:22). The rule of Christ is to mean the defeat of all alien powers (vss. 24-26). How long this rule of Christ is to continue is not indicated (contrast Rev. 20:5, 7), but it is to issue in the complete conquest of the enemies of God and in the final consummation when the Son delivers the kingdom to God (vs. 28). Whether the final judgment of all, believers and unbelievers alike, is meant by the words τὸ τέλος (vs. 24; "the end" or "finally"?) is not clear; Paul is here concerned primarily with the destiny of believers, although, no doubt, sharing the view that all will be judged (Rom. 2:6-11; but Rom. 14:10; II Cor. 5:10 refer to the judgment of Christians). Two Thessalonians passages deal with the destiny of Christians who have died before the coming of the Lord, in order to assure the readers that the dead in Christ will share equally with the living at his coming (I Thess. 4:13-18) and to correct their view that "the day of the Lord has come" by an enigmatic presentation of the "man of lawlessness" and of events that must yet occur before the coming of the Lord (II Thess. 2:1-17; *see* THESSALONIANS, SECOND LETTER TO THE).

An integral part of Paul's eschatology is his view of the cosmic conflict between Christ and the invisible, supernatural powers of evil. These "principalities" and "powers" (Rom. 8:38; Col. 1:16) reign over all mankind, bringing sin and death since Adam. But in the Cross they have been defeated (I Cor. 2:8; Col. 1:13; 2:10, 15), for Christ's coming and especially his resurrection marked the turning point in the tide of battle, and the ultimate victory is now assured (I Cor. 15:26-26).

It follows naturally that salvation for Paul is a strictly eschatological event, the climax of God's dealing with men (Rom. 13:11 and often): we have been reconciled to God; we shall be saved (Rom. 5:10). That Paul can speak of salvation as a present reality (Rom. 8:24) is a contradiction in terms but

not in reality, for he is emphasizing the fact that ours is, indeed, a saving hope, not contrasting something completed now over against the eschatological climax.

b. Was Paul apocalyptic? Neither Paul's eschatology nor the apocalyptic form it took (*see* APOCALYPTICISM) when he was contemplating the sequence of coming events (I Cor. 15:20-28; I Thess. 4:13-18; II Thess. 2:1-12) can be dismissed as oriental hyperbole or as merely the framework of his thought from which his essential message can be lifted without surgery. These ideas are too deeply embedded in his gospel and too intimately woven into it to be treated as incidental. Yet the question, Was Paul apocalyptic? remains a valid one. He did think in terms of the two ages, the Judgment and the resurrection, the reign of the saints and the coming of the Lord. Apparently he also accepted the intermediate messianic kingdom as preceding the age to come (I Cor. 15:25-28), after the general pattern of Jewish apocalypses (cf. II Bar. 30:1; II Esd. 7:26-30), although this plays an incidental role in his presentation of end events.

But Paul stands over against the apocalypses in important respects. His OT citations and allusions are from the Pentateuch, Isaiah, and the Psalms prevailingly, and he makes almost no use of the apocalyptical parts of the OT. In contrast to the pseudonymity of the apocalypses, Paul's personality is of significance in his writings. While the epistolary character of our sources guarantees this, it remains true that a thoroughgoing apocalyptist would have regarded an apocalypse as alone worth writing. Furthermore, moral values and motives, peripheral in the apocalypses, are central for Paul. The apocalyptic message was primarily one of comfort for the faithful and of condemnation for unbelievers. Paul's eschatology had a different relevance to his ethics (*see* § B10*c below*) than in the Jewish apocalypses. Finally and chiefly, the apocalyptic dualism —this age and the age to come—has been essentially transformed in Paul's thought. There is no longer a sharp boundary between the now and the then, for "all things are yours, whether . . . the present or the future, all are yours" (I Cor. 3:21-22). The dualism is now not simply a matter of time or of space, but it is a warfare between flesh and Spirit. Though the believer is still "in the flesh" (Gal. 2:20), he is also "in the Spirit," and the Spirit dwells in him. The age of the Spirit is yet to come, but the reality of the Spirit's presence is the guarantee of victory and of participation in the kingdom of God (Rom. 14:17). Paul puts this in a striking phrase in I Cor. 10:11: "written down for our instruction, upon whom *the end of the ages has come.*" He believes that he and his readers "stand in the isthmus of time between the ages," or better, he believes that the age to come can be entered from within history. Indeed, Paul has lifted the eschaton out of the "dimension of cosmic into the realm of historic occurrence." Accordingly, while it is correct to say that Paul accepted and employed apocalyptic, it is more accurate to say that he stands above apocalyptic, unconfined by its boundaries. This age of historical time has yet opportunities opening out into the age to come. That age has invaded this in Christ and the Spirit.

c. Eschatology and ethics. Paul's ethical teaching is surprisingly free from an explicit eschatological sanction and motivation. It is, of course, true that all his exhortations to right conduct imply the "new creation" in Christ (II Cor. 5:17), which is to be consummated in salvation as an end event. Behavior, however, is usually the "fruit of the Spirit" (Gal. 5: 22-23). "Love is the fulfilling of the law" (Rom. 13: 8-10), and it is through the Holy Spirit that "God's love has been poured into our hearts" (Rom. 5:5). Paul seeks to work out each ethical problem to the "way" of love (ἀγάπη). In two instances he does make explicit use of the eschatological sanction: In Rom. 13:11-12 he follows the important declaration that "love is the fulfilling of the law" (vs. 10*b*) with the words: "Besides this you know what hour it is . . . For salvation is nearer to us now than when we first believed; the night is far gone, the day is at hand." The imminence of the end is not used to control the content (love) of conduct; it only enforces the relevance of that teaching. The situation in Paul's discussion of marriage in I Cor. 7 is quite different, however. Here, in counseling the unmarried to remain in their present state, Paul explicitly introduces the imminence of the end as the reason for his advice (vss. 26, 29). This is the clearest example of "interim ethic" in the NT. It is to be observed that Paul uses eschatology here, not to invalidate the institution of marriage, but only to show its inadvisability in view of the imminent end.

How thoroughly eschatological Paul's thought is can be tested by considering any one aspect of it. He cannot think of the destiny of the Jewish people, e.g., without evaluating their present rejection of the gospel in terms of the ultimate purpose of God (Rom. 9–11). Salvation, the conduct of the believer, the unceasing battle with the flesh—every aspect of the new life is at once a mingled faith and hope and a definitive assurance of victory. Yet Paul was never obsessed with speculations about the end, else we would have had only an apocalypse from his pen. His letters are replete with admonitions, exhortations, warnings, and encouragements. He is convinced that "the form of this world is passing away" (I Cor. 7: 31), but what saves him from being an apocalyptist is the event of Christ and the gift of the Spirit. Because of these events human history is now conjunct with the age to come. The day is dawning, and the eyes of faith can see its approaching glory. To the Christians at Thessalonica who are tempted to sloth by the imminence of the end, Paul writes a sharp rebuke (II Thess. 3:6-12). The nearness of the end should mean the release, the enhancement, the revitalization, of the whole man to live the new life. What the end means is a new range and significance for life here and now "so that whether we wake or sleep we might live with him" (I Thess. 5:10). Into this temporal, transient age new and lasting powers and values have come. Love, "poured into our hearts through the Holy Spirit," lasts on, even when the form of this world passes away. The church is a "colony of heaven" (Phil. 3:20 Moffatt), and the believer is being changed into the Lord's likeness.

11. The permanent significance of Paul. It is hard to write calmly about Paul. Across the centuries, as during his lifetime, he has been the center

of controversy arousing passionate defense and equally passionate opposition. The fact that his letters were preserved and that they were ultimately accepted as scripture is solid evidence of the verdict of the early church. That verdict has never been successfully challenged. It is true, however, that the significance of Paul's message has been quite variously assessed. Sometimes little more of Paul is known today than the well-loved I Cor. 13, together with Rom. 12; Phil. 4:8-9; and other such ethical exhortations. Sometimes one would gather from theological works that Paul only wrote a series of proof texts to support and illustrate the rubrics of systematic theology. Perhaps Paul would write again as he did to the church at Philippi: "What then? Only that in every way, whether in pretense or in truth, Christ is proclaimed; and in that I rejoice" (1:18).

Paul himself acknowledged the marks of human frailty both in his thinking and in his doing. His achievement—or, as he would say, what God wrought through him—is the more impressive because of it. He asked and gave significant answers to the major theological questions which were to recur again and again through the subsequent centuries. But perhaps his most creative contribution was the union in him of the universal and the particular, for he released the universal message of Jesus from Jewish limits, laying the foundation for Gentile Christianity, and at the same time he planted little Christian churches in the strategic centers of the NW Mediterranean world in the firm conviction that they were "colonies of heaven," thus influencing and helping to shape the history of the Western world. Paul was an authentic ambassador for Christ whom nothing "in all creation" could separate from the love of God.

A. C. PURDY

PAULUS, SERGIUS sûr'jĭ əs pôl'əs [Σέργιος Παῦλος] (Acts 13:7-12). PROCONSUL of Cyprus when Paul and Barnabas visited the island, *ca.* A.D. 45. By temporarily blinding a magician who was with the proconsul, Saul, "also called Paul" (for the first time in Acts), convinced Sergius Paulus of the truth of the gospel, though it has been suggested that either Luke or Paul "may have mistaken courtesy for conversion."

A certain L. Sergius Paullus was consul for the second time in 168, but inscriptions and literary evidence tell us nothing of an earlier consul of that name. There is, however, an inscription which mentions L. Sergius Paullus as a Curator of the Tiber during the reign of Claudius; this may well be the man mentioned in Acts.

The theory that the apostle changed his name from Saul to Paul in honor of the proconsul, though known to Origen, has little but antiquity to commend it.

Bibliography. F. J. Foakes-Jackson and H. J. Cadbury, *The Beginnings of Christianity,* V (1933), 455-59 (K. Lake), 183-87 (A. D. Nock).

R. M. GRANT

PAVEMENT [מלבן (Jer. 43:9; KJV BRICKKILN), brick mold, pavement of bricks (Akkad. *nalbanu*); מעשה לבנה (Exod. 24:10; KJV PAVED WORK), a construction of tile *or* flagstone (Akkad. *libittu,* tile pavement); רצפה, *from* רצף, fit (stones) together (Akkad. *raṣapu*); KJV מרצפת (II Kings 16:17; RSV "pediment"); λιθόστρωτος]. The pavement of the palace at Susa was made of porphyry, marble, mother-of-pearl, and precious stones (Esth. 1:6). Ezekiel's temple had a pavement around the outer court (Ezek. 40:17-18). Jeremiah hid some stones in the mortar of the palace court at Tahpanhes (Jer. 43:9). In a theophany the pavement under God's feet was made of sapphire (Exod. 24:10; cf. Ezek. 1:26).

Jesus sat on the judgment seat at a place called "The Pavement" (in Hebrew, GABBATHA; John 19:13). It was the courtyard of Pilate's headquarters. It has been identified with the Roman pavement now under the Convent of the Sisters of Zion. The pavement and the underground constructions may belong to the tower of ANTONIA.

See also JERUSALEM § 11; CITY § B2*c*.

C. C. MCCOWN

PAVILION [סכה; KJV סך (Ps. 27:5; RSV "shelter"); *both from* סכך, to weave together]. A shelter or covering. In I Kings 20:12, 16, the word is used in the KJV (RSV "booth") to designate tents of the royal entourage in which Ben-hadad and his aides became drunk at noon before Ben-hadad's decisive defeat at Samaria.

The word is used figuratively in several contexts. In Pss. 27:5 KJV (RSV "shelter"); 31:20 (RSV "covert") it refers to a place where Yahweh hides from evil those who fear him. In Isa. 4:5—H 4:6 it is a protective covering over the restored Jerusalem (KJV "tabernacle"). A "pavilion" is also the concealment of Yahweh in theophanic appearances (Job 36:29; KJV "tabernacle"; cf. KJV "pavilion," RSV CANOPY, in II Sam. 22:12=Ps. 18:11—H 18:12). The object so designated may have been the kind of booth built from boughs used at the Feast of Booths or a tent pavilion, woven from textile material. In Job 36:29; Ps. 18:11=II Sam. 22:12 it is the clouds that are the pavilion, or canopy, of Yahweh.

E. M. GOOD

PE pē (Heb. pā) [פ, *p* (*Pê*)]. The seventeenth letter of the Hebrew ALPHABET as it is placed in the KJV at the head of the seventeenth section of the acrostic psalm, Ps. 119, where each verse of this section of the psalm begins with this letter.

PEACE IN THE OT. The state of wholeness possessed by persons or groups, which may be health, prosperity, security, or the spiritual completeness of covenant. In the OT no particular distinction is made

among these categories; military or economic peace is similar to the bodily and spiritual health of the individual.

1. Vocabulary
2. Secular peace
   a. Individual

3. Religious peace
   a. Peace and righteousness
   b. Peace and covenant
   c. Peace and blessing
   d. Peace and salvation
Bibliography

1. Vocabulary. The most important word, covering the whole range of connotations, is the verb שלם, "to have or be at peace," with its cognate nouns, שלום, "peace"; שלם, "PEACE-OFFERING"; and Aramaic שלם, "peace." A denominative verb from שלום is שלם, "to make or be at peace." The root meaning of שלם seems to be "completeness, wholeness" (cf. Akkadian *šalāmu,* "to be faultless, healthy, complete"), whence come the connotations of "health," "prosperity," "political and spiritual weal." The verb שלה (originally שלו) is "to be at rest" (Job 12:6), and its derivative nouns, שלוה (Dan. 8:25 KJV) and שליו (I Chr. 4:40), are used for "peaceable" or "time of peace" (so Dan. 8:25; 11:21, 23—H 11:24, "without warning"—i.e., at a time when peace seems assured). The *Hiph'il* of נוח, "to rest," is rendered "give peace" in Chronicles, and its cognate noun, מנוחה, appears in I Chr. 22:9 (*see* REST). Other terms translated "peace" are: עשה ברכה (lit. "to make a blessing"; II Kings 18:31; Isa. 36:16); מישרים ("equitable terms"; Dan. 11:6, 17—the latter emended from ישרים); and רגע (Job 21:13; KJV "a moment"). Several verbs are translated "to hold one's peace" (דמם, חשה, חרש; cf. also Neh. 8:11 KJV; Job 29:10 KJV [קול נחבא, "the voice . . . was hushed"]; Zeph. 1:7 KJV [הס, the interjection, "Hush!" formed as if from a verb הסה]), but this means simply "be silent."

2. Secular peace. The distinction between secular and religious peace is made only for analytic purposes. In the OT, peace of any kind is a wholeness determined and given by God. What is here called secular peace is the wholeness of men in their social relations and individual existence.

a. Individual. This peace principally involves health and the good life. It is protection by God's favorable promise (Judg. 18:6) or by someone who cares for one's needs (Judg. 19:20). Restoration to health is restoration to peace (Isa. 38:17; RSV "welfare"). The man who returns in safety from battle has preserved his health and is at peace (Josh. 10:21; I Kings 22:17; II Chr. 19:1; Ps. 55:18—H 55:19); one who is going into danger is therefore wished peace (Exod. 4:18; II Sam. 15:27). The individual's peace is synonymous with his good life, for it involves his healthful sleep (Ps. 4:8—H 4:9), length of life (Prov. 3:2), posterity (Ps. 37:37), and a tranquil death after a full life (Gen. 15:15; Judg. 6:23; II Kings 22:20; II Chr. 34:28; Job 21:13; Jer. 34:5; negatively, I Kings 2:6).

b. Communal. Just as the peace of the individual is his health and safety, the peace of the nation or of the family is its prosperity and security. Peace is often economic prosperity (cf. I Chr. 4:40; 22:9; Pss. 37:11; 147:14; Isa. 54:13; 66:12; Zech. 8:12), and some passages describe it as a state wherein society and nature are harmoniously joined in covenant (Lev. 26:6; Job 5:23-24; Ezek. 34:25; cf. Ps. 72:3). Political security is also peace (II Kings 20:19; Isa. 32:18; Hag. 2:9), but this is negated by the entrance of "sickness" or "wounds" into the society (cf. Jer. 6:14; 8:11; 14:19; Ezek. 13:10, 16), which can be healed only by Yahweh (Isa. 57:19; Jer. 33:6). Peace then comes to attain its connotation as the reverse of strife (cf. Jer. 12:5; Zech. 8:10), when peaceful covenants are entered upon (Gen. 34:21; Josh. 9:15; Obad. 7). It may be simply the absence of war (Judg. 21:13; I Sam. 16:4-5; 29:7; I Kings 2:5; 4:24—H 5:4; Ps. 120:7; Eccl. 3:8; Jer. 14:13; 28:9). On the other hand, peace is frequently the term for the ending of war. It may mean making a treaty or agreement of nonviolence (Deut. 2:26; 20:10-12; Josh. 10:1, 4; 11:19; Judg. 4:17; I Sam. 7:14; I Kings 5:12—H 5:26; 22:24; II Kings 9:17-31; 18:31; Isa. 36:16; Dan. 11:6). It is sometimes military victory (Judg. 8:9; II Sam. 19:24, 30; I Kings 22:27-28; I Chr. 22:18; Isa. 9:7—H 9:6; Jer. 43:12; Mic. 5:5—H 5:4; Zech. 9:10). The royal name in Isaiah's oracle, "Prince of Peace" (שר שלום; Isa. 9:6—H 9:5; *see* MESSIAH [JEWISH]), seems to denote a victorious prince. To make peace may also be to surrender (II Sam. 10:19; I Kings 20:18; I Chr. 19:19; Isa. 27:5; Dan. 11:17).

3. Religious peace. All peace is of God (Isa. 45:7; RSV "weal"), and the condition of peace is the presence of God (Num. 6:26; I Chr. 23:25). It is therefore man's righteousness under the covenant which makes him peaceable.

a. Peace and righteousness. "The effect of righteousness will be peace" (Isa. 32:17), and the two ideas are frequently combined (cf. Pss. 72:7; 85:10—H 85:11; Isa. 48:18; 57:2; 60:17). To be at peace is to be upright (Mal. 2:6), faithful (II Sam. 20:19), an upholder of truth (Esth. 9:30; Zech. 8:19). It is to practice justice (Isa. 59:8; Zech. 8:16). Peace is thus the antithesis of wickedness (Ps. 34:14—H 34:15; Prov. 10:10 [RSV with LXX]; Isa. 48:22). The wholeness of man's life includes his obedience to God. *See* RIGHTEOUSNESS (IN THE OT); JUSTICE.

b. Peace and covenant. Since the COVENANT is the relationship which restores man to wholeness of relationship with God, it may be referred to as a covenant of peace which is everlasting (Ezek. 37:26), which brings man the love of God (Isa. 54:10; *see* LOVE [OT] § 3*b*). For Yahweh to remove his peace is for him to abrogate the covenant (Jer. 16:5). The covenant of peace involves a mutuality of relationship which is absent from the cognate term in Islam (cf., e.g., the infinitive *islam,* "submission," and the participle *muslim,* "one who submits to Allah"; but cf. also Job 25:2). At the same time, the covenantal peace conveys Yahweh's blessing on man (Num. 25:12; Mal. 2:5; in these cases, a blessing on the priestly function).

c. Peace and blessing. The blessing is Yahweh's gift of the wholeness of relationship. It may be applied to strength (Ps. 29:11; negatively, Ezek. 7:25), to pardon for sin (II Kings 5:19), to joy (Isa. 55:12), to the assurance of an answer to prayer (Gen. 41:16

[RSV "favorable answer"]; I Sam. 1:17). The blessing of peace is essential for the integrity of Jerusalem and therefore of Israel's religion (Pss. 122:6-8; 125:5), and with it comes the promise of continued blessing (I Kings 2:33; Ps. 128:6). *See* BLESSEDNESS.

d. Peace and salvation. Because God rules over the fortunes of men, his peace is salvation (Isa. 52:7; Nah. 1:15—H 2:1). Those who trust him (Isa. 26:3), who hope in his salvation (Ps. 119:165), have peace. For the eschatological promise of God is a promise of peace (Ps. 85:8—H 85:9; Isa. 26:12). Indeed, though judgment and trouble may precede the actuality of eschatological peace, Israel knows that her suffering is the "chastisement of our peace" (Isa. 53:5 KJV), the stripes that bring about God's own healing. *See* SALVATION.

E. M. GOOD

PEACE IN THE NT [εἰρήνη]. In classical Greek the word is used to describe the cessation or absence of hostilities between rival groups. In the NT, however, the word carries a far wider range of meaning. This is partly because it was used in the context of Christian faith and experience, and partly because of the influence of the Hebrew word שלום. This word was represented in the LXX by εἰρήνη, and therefore its meaning dominates the Greek word which translated it. *See* PEACE IN THE OT.

The Hebrew word embraces all that the Greek word normally meant, and much more besides, and in the NT the Greek word has some of the breadth of meaning of its Hebrew counterpart. Perhaps we should recognize this in such passages as Luke 1:79; 2:14; 19:42; Rom. 3:17; etc.

Because of its comprehensiveness of meaning, the Hebrew word came to be used as a common greeting, both on meeting and on parting. This greeting is found on the lips of Jesus, as "Go in peace" (Mark 5:34; Luke 7:50), or "Peace be with you" (John 20:19, 21). It is clear, however, that as he used it, and as he expected his disciples to use it, it was much more than a merely conventional salutation. With the word of peace went the actual bestowal of peace, and if this proffered gift was spurned, the peace returned to him who had offered it (Matt. 10:13; Luke 10:5-6). Paul also incorporates this greeting into the opening sentences of his letters, and other letter writers follow his example (I Pet. 1:2; II John 3; Jude 2; Rev. 1:4).

In these greetings the peace which is offered comes from God (Gal. 1:3; Eph. 1:2; Rev. 1:4). It can, therefore, elsewhere be described as the "peace of God" (Phil. 4:7; Col. 3:15); and God himself is the "God of peace" (Rom. 15:33; II Cor. 13:11; Phil. 4:9; Heb. 13:20), since it is from him that peace comes to man. In John 14:27 it is the gift of Christ.

Within this inclusive significance of the word, derived from the OT, there are, however, in the NT three more precise meanings which can be distinguished:

a) The first follows the usage of classical Greek and indicates peace, as opposed to war or strife. This is found in its ordinary secular sense in Luke 14:32; Acts 12:20. An extension of this meaning occurs in Eph. 2:14-17, where "peace" is the reconciliation which Christ has brought about between Jews and Gentiles, groups normally antagonistic to each other.

In I Cor. 7:15 it refers to "domestic peace" between husband and wife, and in Matt. 10:34; Luke 12:51 to harmonious relationships within the whole family. In the sense of happy personal relationships with others, especially one's fellow Christians, it is set forth as the goal of a Christian man's endeavor (Rom. 14:19; Eph. 4:3; Heb. 12:14; I Pet. 3:11). The cognate verb εἰρηνεύω is also used to exhort Christians to be at peace with one another (Mark 9:50; Rom. 12:18; II Cor. 13:11; I Thess. 5:13). Jesus also speaks his blessing upon the "peacemakers" (εἰρηνοποιοί) in Matt. 5:9 (cf. Col. 1:20).

In I Cor. 14:33 the word εἰρήνη is used, in contrast to "confusion," to mean a proper orderliness in the conduct of church meetings.

b) Since the NT is so greatly concerned with the restoration of right relationships between God and man, it is not surprising to find the word "peace" used to describe this restored relationship. Before his conversion man is "alienated" from God (Eph. 4:18; Col. 1:21), an "enemy" of God (Rom. 5:10; Col. 1:21). In Christ, however, this wrong relationship has been set right. Man has been reconciled to God (II Cor. 5:19; Col. 1:22), and "justified by faith" (Rom. 5:1). Thus he has "peace with God through our Lord Jesus Christ" (Rom. 5:1). God has made peace through the blood of the cross (Col. 1:20). So emphatically is this the work of Christ (Eph. 2:15) that he himself is called "our peace" (vs. 14).

c) In the NT the word may also mean "peace of mind" or serenity. This appears to be a distinctively Christian meaning, since it is not characteristic either of εἰρήνη in classical Greek or of שלום in Hebrew. In consequence some scholars are reluctant to acknowledge its presence even in the NT. There are, however, certain contexts from which it cannot reasonably be excluded—e.g., Rom. 8:6, where the "mind of the Spirit" is described as "life and peace"; 15:13 ("joy and peace in believing"). So too in Gal. 5:22 "peace" as one of the fruits of the Spirit must carry something of this significance. Its association with joy, patience, and self-control requires it (cf. also Rom. 14:17). At Phil. 4:7 we read that "the peace of God . . . will keep your hearts and your minds in Christ Jesus"; and in Col. 3:15 the "peace of Christ" is to "rule in your hearts." The actual mention of "heart" and "mind" as the sphere where peace rules points to this same meaning. Moreover, it is difficult to deny this meaning to John 14:27, since the gift of peace is explicitly offered in contrast to the troubled and fearful hearts of the disciples.

In certain contexts, therefore, "peace" may bear any one of these three distinguishable meanings. It is, however, more than probable that in many cases it is used comprehensively to embrace all three, as, e.g., when one Christian wished for another "peace from God."

C. L. MITTON

PEACE OFFERING. *See* SACRIFICE AND OFFERINGS § C2.

PEACEMAKER. The translation of εἰρηνοποιός (Matt. 5:9). The peacemakers who are "blessed" are

not primarily those who spread cheer and good will; but those who create peace where there is hatred, who reconcile where there is separation. These are the "sons of God," who draw upon the peace they have been given by God—the eschatological peace, which is proleptically available—to reunite the estranged. The peace which they offer can only be reconciliation through Christ. The price is high; and to those who will not accept the terms, Christ brings, not peace, but a sword. *See* BEATITUDES.

B. H. THROCKMORTON, JR.

PEACOCK [תכיים (I Kings 10:22); תוכיים (II Chr. 9:21), *probably from* Egyp. *kyw,* a kind of monkey (*see* FAUNA § B2*k*), *but Koehler favors* poultry, *cf.* Vulg. *pavos,* peacocks; KJV רננים (Job 39:13; RSV OSTRICH)]. The male bird of the peafowl, especially of the common species, *pavo cristatus.*

It seems unlikely that the peafowl, a native of India, was introduced into Palestine as early as the age of Solomon. It is more probable that it came into the Mediterranean area only after Achaemenid Persia had established relations with India. The peacock is first mentioned in Greek literature in Aristophanes' *Birds* (102, 268), which was produced in Athens in 414 B.C. Aristotle was familiar with this bird (*History of Animals* 488*b*), as, of course, were the later Romans (e.g., Pliny Nat. Hist. X.22-23).

In I Kings 10:22; II Chr. 9:21 "peacocks" is a very questionable translation of תכיים; "monkeys" is to be preferred. These would be Old World monkeys, doubtless from Africa, and probably of the genus *Cercopithecus. See* APE.

W. S. MCCULLOUGH

PEARL [פנין (Job 28:18; KJV RUBY); KJV פנינים (Job 28:18; RSV CRYSTAL); μαργαρίτης]. A dense shelly concretion, formed as an abnormal growth within the shell of mollusks.

"The price of wisdom is above pearls" (Job 28:18). "Pearl" is used in evaluating the kingdom of heaven (Matt. 13:46). It is a simile for religious truth (Matt. 7:6); an ornament not worn by modest women (I Tim. 2:9), of a great harlot (Rev. 17:4), of Babylon (Rev. 18:16). It is an export of Babylon (vs. 12). It is material for the gates of the New Jerusalem (21:21).

See also JEWELS AND PRECIOUS STONES § 2.

W. E. STAPLES

PEASANTRY. A reasonable translation of the obscure word פרזון, found only in the ancient song of Deborah (Judg. 5:7, 11). Related Semitic words indicate "those who dwell in open country, away from walled cities."

PEDAHEL pĕd′ə hĕl [פדהאל, God has delivered] (Num. 34:28). A Naphtalite leader, son of Ammihud. He was one of those appointed, under the oversight of Eleazar and Joshua, to superintend the distribution of the W Jordanian territory among the ten tribes to be settled in that area of Canaan. The meaning of the name Pedahel and of other names in this account underscores Israel's dependence upon God for the new life in Canaan.

R. F. JOHNSON

PEDAHZUR pĭ dä′zər [פדהצור, (the) rock has ransomed] (Num. 1:10; 2:20; 7:54, 59; 10:23). The father of Gamaliel, who was the leader of Manasseh in the wilderness.

Bibliography. M. Noth, *Die israelitischen Personennamen* (1928), p. 180.

PEDAIAH pĭ dā′yə [פדיהו, פדיה, Y has ransomed; Apoc. Φαδαία]; KJV Apoc. PHALDAIUS făl dā′yəs.

1. The maternal grandfather of King Jehoiakim of Judah (II Kings 23:36); from Rumah.

2. A descendant of King David; named in I Chr. 3:18-19 as the father of Zerubbabel. However, according to Ezra (3:2, 8; 5:2), Nehemiah (12:1), and Haggai (1:1, 12, 14; 2:2, 23), Zerubbabel was the son of Shealtiel, Pedaiah's brother.

3. The father of Joel, from that part of the tribe of Manasseh which lived W of the Jordan in the time of David (I Chr. 27:20).

4. One of those who helped repair the wall of Jerusalem after the Exile (Neh. 3:25; II Esd. 13:25). He was the son of Parosh.

5. One of those who stood at the left hand of Ezra during the reading of the "book of the law of the LORD" before the people (Neh. 8:4; II Esd. 18:4). Pedaiah's position is reminiscent of the seat of honor afforded leading men in the synagogue service of the third and second centuries B.C.

6. A Benjaminite; son of Kolaiah; father of Joed (Neh. 11:7; II Esd. 21:7).

7. A Levite appointed by Nehemiah as a treasurer over the storehouses to distribute the required portions to the Levites serving in the temple (Neh. 13:13; II Esd. 23:13).

E. R. ACHTEMEIER

PEDDLER [καπηλεύων]. In II Cor. 2:17 Paul writes that he was not a "peddler" of God's word. This may imply that he did not receive pay from the churches, or it may mean something quite different. Paul knew Jesus' word that the "laborer deserves his food" (Matt. 10:10; Luke 10:7-8; cf. I Cor. 9:14; I Tim. 5:18); but he may also have known another word of Jesus about giving without pay (Matt. 10:8-9). At Corinth he had apparently not "made use of his right" to remuneration (cf. I Cor. 9:12*b*, 15). So in II Cor. 2:17 Paul may be referring in part to "not receiving pay." But the point is primarily that Paul had not used tricks in his preaching and had not falsified the gospel. The contrast is between "peddling," with which various cheap or dishonest practices might be associated, and preaching out of pure motives and in the knowledge of having been commissioned by God to do so (cf. II Cor. 4:2).

B. H. THROCKMORTON, JR.

PEDESTAL [כן] (I Kings 7:31); KJV BASE. The round foot of a column; elsewhere "base." *See* LAVER; PILLAR.

PEDIMENT [מרצפת] (II Kings 16:17); KJV PAVEMENT. A stone foundation with which Ahaz replaced the bronze oxen which supported the "sea" in the temple, after he had melted them down. *See* SEA, MOLTEN.

PEG, TENT PEG [יתד, יתד אהל]; KJV NAIL. Alternately: PIN; STAKE; STICK. A stick for

digging (Deut. 23:13), a peg for hanging articles on a clay wall (Isa. 22:23, 25; Ezek. 15:3), a pin used in loom weaving (Judg. 16:14), or the stake with which a tent was made fast to the ground. Jael extended the hospitality of her tent to Sisera, the fleeing Canaanite commander, and then slew him with a tent peg and mallet (Judg. 4:21-22; 5:26). The term is used as a fitting metaphor to describe Jerusalem made secure and strong by the favor and power of the Lord (Isa. 33:20; 54:2; cf. Ezra 9:8; Zech. 10:4). G. B. COOKE

PEKAH pē'kə [פֶּקַח, he has opened (the eyes), *perhaps contraction for* (ו)פְּקָחְיָה, Yahu has opened (the eyes); Assyrian *Pa-qa-ḫa*]. King of Israel *ca.* 737-732 B.C.; son of Remaliah. Pekah succeeded to the throne after his murder of Pekahiah.

The close similarity between the names of these two successive kings, Pekahiah and Pekah, has led to the suggestion that they were one and the same individual. This is most unlikely. Pekahiah is said to have been the son of Menahem, while Pekah's father was Remaliah. A more plausible hypothesis is that the usurper Pekah, one of Pekahiah's officers, was so eager to ensure his position as king that he deliberately assumed the name of his predecessor. This seems to be borne out by the fact that only in these two biblical names is the root פקח to be found. In this connection Isaiah's practice is to be noted of referring to the king, almost scornfully, it seems, as the "son of Remaliah" (Isa. 7:4-5, 9; 8:6), even when he uses the specific name of his ally, Rezin the king of Syria (cf. a parallel in the reference to the "son of Tabeel" in 7:6).

Pekah is said to have reigned twenty years (II Kings 15:27). But a reign of this duration is impossible. Assyrian sources indicate that Menahem paid tribute to Tiglath-pileser in 738, and that Hoshea became king of Israel in 732. Between these two dates the reigns of Pekahiah and Pekah have to be fitted. If Pekahiah occupied the throne for *ca.* two years, it is clear that Pekah's reign can have lasted no more than six years. Those who seek to defend the general historicity of the text hold that Pekah may have "reigned twenty years" (II Kings 15:27), but not necessarily in Samaria. He seized power in Gilead at the death of Jeroboam II, and maintained it there throughout Menahem's reign. This was the cause of Menahem's constant insecurity until the appearance of Tiglath-pileser III confirmed him on the throne of Israel. Then Pekah capitulated, declared his loyalty to the king, and was given a high military office. When the opportune moment arrived, he murdered his royal master, with Syrian assistance, and became king himself in Samaria.

Apparently the two states of Syria and Israel attempted to force Ahaz of Judah to join them (Isa. 7:2). In view of Ahaz' determination to resist, the allies had their plans ready to conquer the land, dethrone the king, and install the son of Tabeel as king in his stead (vs. 6). But the attempt was unsuccessful. Ahaz appealed for help to Tiglath-pileser, over the strong protestations of Isaiah.

Such an appeal, however, was unnecessary. The provocation of Syria and Israel was such as Tiglath-pileser could not be expected to tolerate. The Assyrian records indicate that in the twelfth year of his reign—i.e., 734—he marched again to the West, especially "against Philistia." For the years 733 and 732 campaigns are listed "against Damascus." In the course of the first campaign Tiglath-pileser attacked N Israel, including Gilead, captured all of Naphtali (Galilee) and Transjordan, and annexed this territory (II Kings 15:29). It is probable that the reference to Argob and Arieh (vs. 25) is to be included here, with a change of reading from "Arieh" to "Havvoth-jair." Both these territories are in Transjordania. In the inscriptions only the "wide land of Naphtali" is specifically named, but II Kings 15:29 gives a broader picture of Tiglath-pileser's conquests. That all these N towns were still in the possession of Israel at this time is an item of considerable interest. Some of them had been taken from Baasha of Israel by Ben-hadad king of Aram (I Kings 15:20). They had subsequently been recovered. Then Tiglath-pileser turned on Syria. Damascus was captured, and the people carried captive to Kir. Rezin was put to death (II Kings 16:9). After his conquest of N Israel, Tiglath-pileser used the method of extensive deportations of the population, whom he settled elsewhere in his empire (15:29*b*). N Israel and Aram were made into Assyrian provinces.

But intrigues still continued in Samaria. According to II Kings 15:30, a conspiracy took place, led by Hoshea son of Elah. Pekah was murdered, and Hoshea took his place on the throne of Samaria. Tiglath-pileser's inscription gives a different picture: "Israel [lit., 'Omri-Land' Bît Ḫumria] . . . all its inhabitants [and] their possessions I led to Assyria. They overthrew their king Pekah [Pa-qa-ḫa] and I placed Hoshea [A-ú-si-'] as king over them. I received from them ten talents of gold, one thousand[?] talents of silver as their [tri]bute and brought them to Assyria." That the entire population of Samaria was deported to Assyria at this time is not historical. Rather is it a piece of boastfulness on the part of the Assyrian king. Further, the inscription makes no mention of a conspiracy in the land in which Pekah was assassinated. This item is almost certainly historical, and its historicity is borne out by the fact that no mention is made of his burial. With the land in the position of a vassal state of Assyria, the revolt led by Hoshea must have been largely a domestic matter, as Hoshea during the first years of his reign continued to acknowledge the overlordship of Assyria.

H. B. MACLEAN

PEKAHIAH pĕk'ə hī'ə [(ו)פְּקַחְיָה, Yahu has opened (the eyes)]. King of Israel *ca.* 738-737 B.C.; son and successor of MENAHEM. Pekahiah was murdered by Pekah.

The uneasy situation which prevailed in Israel

during Menahem's reign continued during his son's brief reign of two years. Rival parties, presumably pro-Assyrian and anti-Assyrian, vied for control of the kingdom. In all probability Pekahiah continued his father's policy and served as a vassal of Assyria.

He was assassinated at the hands of PEKAH son of Remaliah (II Kings 15:25), the king's "captain." The meaning of the Hebrew word שלישׁ used here is not altogether clear. Its root meaning, on the evidence of Hittite pictures, was the third man on a war chariot. But it also had a more general meaning—"adjutant" or "military officer." It may be assumed that Pekah was an army officer in close touch with the king. "Fifty men of the Gileadites" took part in the murder along with Pekah. This probably indicates that Pekah himself was a Gileadite and came from the territory E of the Jordan. If this was so, it seems highly probable that he had the backing of Damascus, more especially as Damascus and Israel acted together in close concert during his reign (II Kings 15:37; 16:5 ff; Isa. 7:1 ff).

Bibliography. E. G. Kraeling, *Aram and Israel* (1918), pp. 115-21. H. B. MACLEAN

PEKOD pē'kŏd [פקוד; Assyrian Babylonian *Puqûdu*]. A minor Aramean tribe dwelling on the E bank of the Lower Tigris, approximately between modern Kut-el-Amara and the confluence of the Kerkha. Temporary subjection of the Puqûdu (Pekod) is recorded in the annals of the Assyrian kings Tiglath-pileser III (746-727), Sargon II (722-705), and Sennacherib (705-681). Puqûdu (Pekod) appears to have been organized under village sheiks and to have subsisted mainly on agriculture and husbandry. Sargon II forced their surrender by damming the Tupliash River, on which they relied for irrigation water; tribute paid by them consisted of horses, cattle, and sheep; four of their sheiks and the villages or towns in which they resided are mentioned by name in the annals of Sargon II. Pekod appears in Jeremiah's oracle against Babylon (Jer. 50:21); and Ezekiel includes Pekod along with the Babylonians, Chaldeans, Shoa, and Koa among the lovers of Jerusalem who will turn against her (Ezek. 23:23).

T. JACOBSEN

PELAIAH pĭ lā'yə [פליה, פלאיה (I Cor. 3:24), Yahu is wonderful; Apoc. Φιαθάς (I Esd. 9:48)]; KJV Apoc. BIATAS bī'ə təs. **1.** Son of Elioenai, among the remote descendants of David (I Chr. 3:24).

2. A Levite who attended Ezra's public reading of the law and helped expound it to the people (Neh. 8:7; 10:10). J. M. WARD

PELALIAH pĕl'ə lī'ə [פלליה, Yahu has interceded (to judge)] (Neh. 11:12). A priest of Ezra's time.

PELATIAH pĕl'ə tī'ə [פלטיה, פלטיהו, Yahu delivers]. **1.** Son of Hananiah, and a remote, obscure descendant of David (I Chr. 3:21).

2. One of the captains, all sons of Ishi, of the Simeonite band that destroyed the Amalekite remnant at Mount Seir during the reign of Hezekiah (I Chr. 4:42).

3. Son of Benaiah, and one of the two Judean princes seen by Ezekiel in a vision of judgment (Ezek. 11:1, 13). Apparently they were in the pro-Egyptian party during the Babylonian siege of Jerusalem, who helped assure the destruction of the city by giving "wicked counsel" of rebellion (vs. 2).

4. One of the "chiefs of the people" who attended the sealing of the covenant under Nehemiah (Neh. 10:22). J. M. WARD

PELEG pē'lĕg [פלג; Φάλεκ]; KJV NT PHALEC fā'lĕk. A son of Eber, and descendant of Shem (Gen. 10:25; 11:16-19; I Chr. 1:19, 25). The name is explained as "division," because in his days the earth was divided—probably a reference to the Tower of Babel story. However, "earth" in this case may be a more limited region and may refer to the fact that in the original table the descendants of Peleg and Joktan were regarded as the two main branches of the Semitic group, the latter containing Arabian peoples and the former those located in Aram and Mesopotamia. In the present text all the descendants of Peleg have been omitted except the line that leads to Abram. Some scholars have regarded the explanation of the name as a later gloss on the genealogy and have suggested other explanations. Among these is the suggestion that, as Peleg can also mean "watercourse," the Peleg peoples were those who lived in a region where there was artificial irrigation by canals; or that the name is derived from the city of Phalga, at the junction of the Euphrates and Chaboras rivers. S. COHEN

PELET pē'lĕt [פלט]. **1.** A Calebite who is included among the sons of Jahdai (I Chr. 2:47).

2. One of the two sons of Azmaveth who were among the disaffected Benjaminite warriors who joined the proscribed band of David at Ziklag (I Chr. 12:3).

PELETH pē'lĕth [פלת, swift(?)]. **1.** A Reubenite; the father of On, who is named as a participant in Korah's rebellion against Moses (Num. 16:1). Since nothing is related about the activity of On, in the rebellion, the name is probably to be removed as a textual corruption. "Peleth" should then be read as "Pallu," who appears elsewhere as a son of Reuben and the father of Eliab (Gen. 46:9; Num. 26:5, 8).

2. A Jerahmeelite; son of Jonathan, whose ancestry is traced in the tribe of Judah (I Chr. 2:33). The Jerahmeelites were probably of Edomite extraction, resident in S Judah.

Bibliography. M. Noth, *Die israelitischen Personennamen* (1928), p. 255. R. F. JOHNSON

PELETHITES pĕl'ə thīts [פלתי]. A group of foreign mercenaries who are always associated with the Cherethites and with them formed the royal bodyguard under the command of Benaiah in the time of David (II Sam. 8:18; 20:23; I Chr. 18:17). Their origin is, no doubt, to be located among the Peoples of the Sea. Montgomery is of the opinion that "Pelethite" is an obvious equation of "Philistine" (פלשתי), by the absorption of š in t, and that the original pronunciation is represented by the Greek Φελεθθει.

The loyalty of the Pelethites to the crown is illustrated when they accompanied David in his flight

from Jerusalem during the rebellion of Absalom (II Sam. 15:18) and by the role they played in arresting the Israelite defection from the house of David in the insurrection of the Benjaminite Sheba (II Sam. 20:7). Moreover, they followed Benaiah when he supported the Solomonic claims to the Davidic throne, and their presence at Solomon's coronation was sufficient reason for the complete fiasco of his rival Adonijah (I Kings 1:38, 44). E. R. DALGLISH

PELIAS pĭ lī'əs. KJV Apoc. form of BEDEIAH.

PELICAN [קאת, *qā'āth, possibly onomatopoeic;* Vulg. *onocrotalus and pellicanus,* pelican *except in* Deut. 14:17 (*mergulus,* diver); LXX πελεκάν, pelican *in* Lev. 11:18; Ps. 102:6—G 101:7; *in* Deut. 14:17 καταράκτης, swooper (*but text of* LXX *in* Deut. 14:15-17 *is different from* Heb., *and* pelican *occurs in vs.* 18); Targ. (Onq.) קתא]. Alternately: HAWK (Isa. 34:11); VULTURE (Ps. 102:6—H 102:7; Zeph. 2:14); KJV CORMORANT (Isa. 34:11; Zeph. 2:14). Any of a family (*Pelecanidae*) of large, web-footed birds distinguished by an enormous bill, with a dilatable pouch attached to the lower mandible. They are found in the vicinity of swamps, estuaries, rivers, and seas; their food is mainly fish.

Courtesy of the Oriental Institute, the University of Chicago

24. Egyptian wall painting from the tomb of the royal scribe Haremhab, showing a trapper with pelicans (fifteenth century B.C.)

Although Tristram records the occasional appearance of the pelican in nineteenth-century Palestine, it is not certain that this bird is designated by any known Hebrew word. If קאת means, as was once supposed, "the vomiter," this rules out the pelican, which does not regurgitate its food for its young. Moreover, קאת in Ps. 102:6—H 102:7; Isa. 34:11; Zeph. 2:14 is associated with the wilderness and with the ruins of Edom and Nineveh, regions in which the pelican would not normally be found. Bodenheimer takes this word as "a night bird" (*see* FAUNA § B5); G. R. Driver (*see bibliography*) as the scops owl.

W. S. MCCULLOUGH

***PELLA** pĕl'ə. A city of the Decapolis in E Palestine and the seat of a bishopric in the early centuries A.D. Though it is not mentioned in the Bible, it was an important center with a long history. It is mentioned in the Egyptian Execration Texts (1850-1825 B.C.; *ANET* 329) and in the Amarna Letters (*ca.* 1400) under the name Piḥilum (*ANET* 486), the equivalent of the Canaanite form *Pahel.* It appears in the records of Thut-mose III (*ca.* 1490-1436) and Seti I (*ca.* 1318-1301); see *ANET* 243, 253. The stele of Ramses II, dated 1284, gives the details of an interesting little war between Pahel and Hammath on one side and Beth-shal (Beth-shan) and Rehob on the other, in which the Pharaoh was called upon to intervene. Pahel was destroyed before the Israelite conquest, apparently in some such war, and was not rebuilt until Greek colonists settled in the region after the conquest of the country by Alexander the Great (332). They were Macedonians, and the name Pahel recalled that of Pella, the famous capital of Macedonia; accordingly Pella became the official Greek name of the town. It was destroyed by Alexander Janneus in the early part of the first century B.C. but was rebuilt and adorned by Pompey (Jos. Antiq. XIII.xv.4; XIV.iv.4).

When the great revolt against the Romans broke out in A.D. 66, the Christian community of Jerusalem, being warned of the impending destruction of the city, removed to Pella; from that time on, it became an important center of the church, and did not lose its importance after the return of a large part of the community to Jerusalem after 135. The site of ancient Pella is marked by the ruins of Tabaqat Fahil, with the Roman and Byzantine remains mostly in the nearby Khirbet Fahil; it is located on the Wadi Jurm on the E side of the Jordan Valley, *ca.* eight miles SE of Beth-shan on the other side. In addition to Bronze and Iron Age pottery, there are ruins of a Roman theater and many buildings of the Hellenistic and Roman ages, as well as numerous caves of anchorites and sepulchres.

Bibliography. G. Schumacher, *Pella* (1888); J. Richmond, *PEQ* (1934), pp. 18-31; N. Glueck, *AASOR,* XXV–XXVIII (1951), 254-57. S. COHEN

PELONITE, THE pĕl'ə nīt [פלוני, פלני] (I Chr. 11:27, 36; 27:10). A title given to Helez and Ahijah, two of David's Mighty Men who fought with him in his wars against the Philistines and lesser foes. However, in the parallel list in II Sam. 23:26 Helez is called the PALTITE—i.e., a native of Beth-pelet in the Negeb of Judah—and this is undoubtedly his proper designation. Ahijah is probably identical with Eliam in II Sam. 23:34, where he is properly identified as a Gilonite. The text of Chronicles is here recognized by most scholars to be erroneous.

E. R. ACHTEMEIER

PELUSIUM pĭ lōō'shĭ əm [Πηλουσιον]. An important fortress town on the extreme NE frontier of Egypt.

The Hebrew name for Pelusium, סין (*Sîn*), is taken directly from the native Egyptian *Sin,* modern *El-Faramā,* near the mouth of the easternmost branch of the Nile, *ca.* 18½ miles W of the Suez Canal and *ca.* a mile from the Mediterranean. Pelusium is cited in texts of the Old Kingdom for its excellent wine, but because of its strategic location in reference to the Asiatic countries to the N and E it acquired considerable military importance in Late Egyptian times. Thus we find it mentioned in the Annals of Ashurbanipal and in Ezek. 30:15, where it is called the "stronghold of Egypt."

The Greek name Πηλουσιον is perhaps based on a false etymology, wherein the Egyptian name *Sin* is

taken to be the homonymous *sin*, "mud," translatable by Greek πηλος. It is possible, however, that it corresponds partly to a religious name which the fortress town had and which is more accurately retained in Coptic *Peremūn*, the source of the modern Arabic name *El-Faramā*.

Bibliography. W. Spiegelberg, "Der ägyptische Name von Pelusium," *Zeitschrift für Ägyptische Sprache und Altertumskunde*, 49 (1911), 81-84; A. H. Gardiner, "The Delta Residence of the Ramessides," *JEA*, 5 (1918), 253-54.

T. O. LAMBDIN

PEN. The translation of several words in the Bible.

a) The term עט is used either of an iron stylus (Job 19:24; Jer. 17:1) or of a reed pen (Ps. 45:1—H 45:2; Jer. 8:8; cf. 36:18), the end of which was frayed to be used as a brush.

From H. Junker, *Gîza;* courtesy of Österreichische Akademie der Wissenschaften, Vienna

25. Scribes with rush pens and palettes, from the tomb of Ka-ni-nesut, son of Snefru, at Gizeh, Fourth Dynasty (2650-2500 B.C.)

b) The pointed, split-reed pen called κάλαμος in the NT (III John 13) was developed only when parchment came into use.

c) The word חרט, rendered "pen" in the KJV, paraphrased as "(common) characters" in the RSV (Isa. 8:1), probably designates a stylus for writing on a tablet; in Exod. 32:4 it denotes a tool for carving the molten calf.

d) For שרד, probably a stylus for marking wood (Isa. 44:13), *see* PENCIL.

e) The צפרן, "nail, claw," made of diamond and rendered "point" (Jer. 17:1), may be yet another term for stylus, or may designate the point of the עט; perhaps צפרן should be read in Job 19:24 (for עפרת, "lead").

f) The KJV "pen" for שבט (Judg. 5:14) is a mistranslation, corrected in the RSV to "staff."

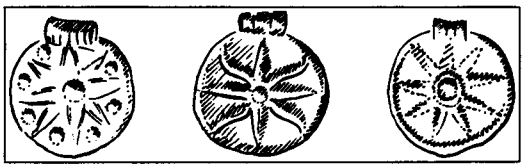
See also WRITING AND WRITING MATERIALS.

Fig. PEN 25.

R. J. WILLIAMS

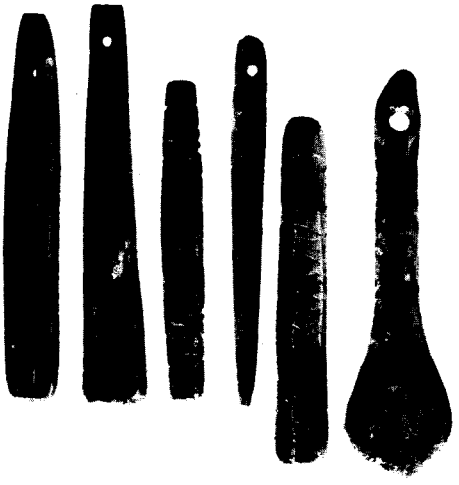
PENCIL [שרד; LXX παραγραφίς, writing instrument; Vulg. *runcina*, plane] (Isa. 44:13); KJV LINE. An instrument for marking wood; perhaps a type of stylus. *See* PEN; WRITING AND WRITING MATERIALS.

PENDANT. 1. נטיפה ("drop"). A droplike pendant. This item was listed among the materials captured from the Midianites and contributed toward Gideon's ephod (Judg. 8:26; KJV "chain") and among the items of luxury of the women of Jerusalem (Isa. 3:19; KJV "collar"). Pendants were of varied character; some were droplike clusters worn as earrings, while others were worn on chains or cords and suspended from the neck,* as was the case with those mentioned in Judges. They doubtless often had amuletic significance, such as some found in the excavations. They were of gold, bronze, bone, iron, faïence, or various kinds of stone. *See* JEWELS AND PRECIOUS STONES. Figs. GOL 35; PEN 26-27.



From Kurt Galling, *Biblisches Reallexikon* (Tübingen: J. C. B. Mohr)

26. Gold pendants, from Shechem



Courtesy of the Oriental Institute, the University of Chicago

27. Bone pendants, from Megiddo

2. The translation of ענק ("necklace"; cf. Akkadian *unqu*, "ring") in Prov. 1:9 (KJV "chain"), in the phrase "pendants for your neck." This was probably a necklace. Translated "necklace" (KJV "chain") in Song of S. 4:9; "collar" (KJV "chain") in Judg. 8:26.

J. M. MYERS

PENIEL. Alternate form of PENUEL 3.

PENINNAH pĭ nĭn′ə [פנינה; Arab. *fainānā*, woman with rich hair(?), *or* coral (branching?)] (I Sam. 1:2, 4). Wife of Elkanah the Ephraimite. She had children, while HANNAH, Elkanah's other wife, had none. Hannah, provoked and irritated each year by the fecundity of her rival, was finally "deeply distressed" and besought God for a son (I Sam. 1:6-11).

D. HARVEY

PENITENCE. *See* REPENTANCE.

PENKNIFE [חעך]. A knife employed for making and repairing reed pens and for cutting papyrus and rolls (Jer. 36:23). The Hebrew term elsewhere refers to a "razor" (Isa. 7:20) or a "sheath" for a sword (II Sam. 20:8). *See* WRITING AND WRITING MATERIALS.

R. J. WILLIAMS

PENNY. *See* MONEY, COINS § 3*c*.

***PENTATEUCH** pĕn′tə tōōk, —tūk. The Pentateuch, or Five Books of Moses, constitutes the first and most

important division of the Hebrew Bible (OT). It holds pride of place in the Jewish canon, and was regarded as having the highest authority, higher even than the Prophets and the Writings, since it was traditionally thought to be the work of Moses, who alone of the biblical heroes spoke with God face to face (cf. Exod. 33:11; Deut. 34:10-12).

Bibliography

A. *COMPOSITION.* The Pentateuch itself is the first part of a larger literary complex, which we may designate the "primary history." This comprises the books from Genesis through II Kings, but omits Ruth (which in the Hebrew Bible is to be found among the Writings). The primary history recounts the story of Israel in the context of the total human experience from the beginning (i.e., Creation) to the collapse of the kingdom of Judah and the Babylonian exile. It is to be distinguished from the Chronicler's history (I and II Chronicles–Ezra–Nehemiah), which, while covering the same general subject matter, omits most of the earlier narratives and focuses attention on the kingdom of David and Solomon and their successors. It continues down to the Persian period and the reconstitution of the Jewish community under the leadership of Ezra and Nehemiah. It is apparent from an examination of the two histories that not only do they reflect drastically different points of view, but they are also the products of vastly different periods in Israel's history. The inconclusive endings point toward a date of composition shortly after the events with which the story closes (i.e., before the next significant occurrence). Thus with regard to the primary history it is difficult to suppose that the return from Babylon would not have been mentioned had the primary history been completed subsequent to that momentous event. By contrast the Chronicler's account includes this datum, and brings the narrative down to the reforms of Ezra and Nehemiah (late fifth century B.C.). His story ends at this point somewhat inconclusively, and

it is a reasonable inference that the Chronicler's history was compiled about this time, or in any case not later than the early fourth century.

1. The primary history. The date of composition of the primary history may be fixed by the final entry in II Kings, itself a footnote to the story of the fall of Jerusalem and the Exile. This note refers to the favor shown the shadow-king Jehoiachin by Evil-merodach the Babylonian emperor, in the year 561 B.C. Since the death of Jehoiachin is hinted at in these verses (II Kings 25:29-30), we may date the work of the editor (R_{PH}) in the decade following. By 550 the primary history in substantially its present form was completed.

The compilation of this sacred history was itself a remarkable achievement. It reflected the determination of the exilic community to remain alive and to retain its identity as the people of God, in spite of a series of catastrophic blows culminating in the loss of king and land, temple and priesthood. Nor could they minimize the significance of the disaster by attributing it to a hostile fate or the changing fortunes of war, or the superiority of alien gods or peoples; rather, it was the deliberate act of judgment by their own God, the covenant God of Israel, who was Lord of heaven and earth and the disposer of the affairs of men. Soberly the exiles reviewed their history in order to discern the meaning of their fate: What had happened between God and his people in the past, from the start? How had they come to their present unhappy state, and what, if anything, might the future hold for them? They could delineate throughout the course of history a consistent pattern of divine grace and favor toward men: a special commitment

by God to Abraham and his descendants, fulfilled in the mighty deeds of Exodus and Conquest surrounding the covenant-making mystery of Sinai, wherein God had declared Israel to be his people and they had claimed him as their God. Successive generations saw the unfolding of this relationship of promise and demand, of grace and obligation, of hope and threat, through the tumultuous period of the judges until it reached fruition in the kingdom of David and Solomon. At the same time the unity and cohesion of the nation were flawed by disobedience to the terms of the covenant and defiance of the will of God, so that the state divided under pressure from within, and finally collapsed in ruins from the attacks of foreigners. Thus had a singularly blessed, but persistently sinful, people reaped an inevitable judgment. Nevertheless, the end was not the end. Before and beyond the law of sin and death, there was an unconditional commitment and an eternal relationship of love (cf. Jer. 31:3). The God who had summoned Abraham from the East would call his seed to a new pilgrimage westward. And the God who had saved his people from Pharaoh would deliver them again from bondage. Out of the momentous past, and in view of the present agony, the serious student could read sobering lessons for himself and his people. This history was not only a record of what had happened, but words of life and hope for today and tomorrow.

Here was Israel's legacy to Israel: the remains of the old age and a foundation for the new. Old Israel perished in the furnace of exile, but a new Israel was to emerge. The authoritative guide of postexilic Judaism was the Pentateuch. The division of the primary history into Pentateuch and Former Prophets (Joshua–II Kings) was occasioned by the needs and insights of the postexilic community: the law of Moses and the social and cultic pattern of the wilderness society were to be normative for the Persian province of Judea. It may well have been Ezra who permanently fixed the authority of the Pentateuch in the Jewish community, although the books themselves had long since been written. There can be little doubt of the relative antiquity of the text of the Pentateuch (and the Former Prophets) as compared with the other books of the OT. Not only do we have distinct recensions—e.g., the MT, the LXX, the Samar.—but also a long, traceable history of textual transmission. The *Vorlage* of the LXX text goes back at least to the third century B.C., and almost certainly to the fourth, while the Samar. is almost as old. The MT, on the other hand, may be even older. All three are represented in ancient MSS from Qumran.

If the Pentateuch was a finished product by the fifth century B.C. (probably it was already complete in the sixth century B.C., as part of the primary history), is it possible to trace the earlier history of this great work and the sources which contributed to its compilation? Such questions have exercised the minds of biblical scholars for hundreds of years, and the results of their inquiries have varied considerably. While there is as yet no consensus, and the "assured results" of critical analysis are no longer so sure, certain conclusions may be regarded as highly probable, and others as likely. The documentary hypothesis, commonly associated with the name of Wellhausen, but actually the product of the labor of many eminent OT scholars of the past two hundred years, remains the point of departure for the scientific study of the Pentateuch. The minute source analysis, which was one of the crowning achievements of nineteenth-century biblical criticism, grew out of repeated efforts to deal with the difficulties apparent in the received text. Inconsistencies in content, duplicate or parallel narratives, and significant variations in diction and style militated against the traditional view of the unity of authorship. Obvious anachronisms, and shifts in the historical and geographical perspective, likewise indicated that a Mosaic date for the composition of the Pentateuch was untenable.

In its standard form the documentary hypothesis rested upon arguments of two kinds: those based upon literary and linguistic evidence, which resulted in the division of the Pentateuchal material into various written sources; and those based upon historical evidence for the evolution of religious institutions and ideas in Israel, which produced an analytical description of the interrelationships among the documents, and a chronological arrangement to account for them.

Literary investigation isolated four primary written sources: J, E, D, and P. D was the simplest to identify, since it stands out as a literary unit (i.e., the bulk of the book of Deuteronomy—hence the designation D), with a distinctive style and viewpoint. The separation of P (for "Priestly document") from the remaining narrative material was also a comparatively routine undertaking, and practical unanimity has been achieved by scholars in defining the contents of this work. It consists chiefly of archival and institutional data spread out on an elaborate genealogical framework. What remains is the general narrative, itself manifestly composite. Thus the separation of the two creation stories in Genesis (1–2:4*a;* 2:4*b*–3), and the assignment of the former, with its schematized and formulaic pattern, to P, and the latter to the narrative source (in this case J), is easily seen. On the other hand, the disentanglement of the narrative strands has proved much more difficult. The Joseph story (Gen. 37; 39–50) is clearly composite. In the episode describing the brothers' treachery against Joseph (37:12-36), there are two accounts of what happened, which have been blended into confusion. In one, Joseph was thrown into a pit and left there to die. He was found by Midianites, brought to Egypt, and sold there (vss. 22-24, 28*a* [to "pit"], 28*c*-30, 36; the source is E). In the other, he was sold to a passing band of Ishmaelites (vss. 25-27, 28*b* [to "silver"], 31-35; the source is J). Reuben figures as the intercessor for Joseph in one (E), Judah in the other (J). Only such a separation offers an intelligible account of the episode.

Two principal narrative sources were identified: J (so-called because of its standard use of the name Jehovah [YHWH] for God; it has also been associated with the S kingdom, Judah), and E (because of its use of Elohim for God, though with less consistency beyond the book of Genesis; it has been connected with the N kingdom, Ephraim). The details of the division are not nearly so certain as in the case of D and P; in many passages where J and E have

been fused, the analysis is disputed (e.g., Exod. 32–34).

D was the starting point in the determination of the chronological relationships of the sources among themselves and with respect to the history of Israel. D was identified with the law code discovered in the Jerusalem temple in the eighteenth year of Josiah (622 B.C.); its composition has generally been dated in the seventh century. Careful comparison of D with JE, on the one side, and with P, on the other, showed that D was the middle term chronologically. With regard both to narrative and to legal material, D proved to be later than and dependent upon JE; but independent of and prior to P. JE therefore belonged to the monarchic period (tenth to eighth centuries), while P was exilic or later. More precise examination of JE established the priority of J (tenth-ninth century perhaps) over E (ninth-eighth century). This decision was based in part on the opinion that J was more primitive in his theology (i.e., grossly anthropomorphic), more exuberant and naïve in his storytelling. E, on the other hand, was more subtle and sophisticated, and therefore of a later date.

The major conclusions of the documentary hypothesis with regard to source analysis and the relative dating of the documents stand fairly firm. Some of the premises are less certain, particularly the theory of a simple evolutionary development of Israel's religious institutions and ideas. And the details of the analysis are open to question in a number of instances. In addition, important new areas of interest have been opened up in the continuing quest for knowledge about the Pentateuch. *See bibliography.*

A synthesis of what appear to be the soundest insights of scholars who have worked and are now working in the field follows:

2. G (the underlying source). In the beginning was G. This symbol represents the original narrative source (*Grundlage*), which dealt in connected fashion with the principal themes of Israel's early history and prehistory: including the primeval history, patriarchal sagas, the Exodus and wanderings, and presumably the settlement in the Promised Land. G is no longer extant, but what remains of its contents is scattered through the books from Genesis to Joshua. Its outline is still to be found in the Israelite credos (to use the happy expression of G. von Rad) —e.g., Deut. 26:5-10 (cf. Exod. 13:14-16). Josh. 24 preserves a much more detailed account based on the same pattern. G thus constituted the official tradition of "all Israel." It traced the beginnings of the people back to the fathers and their wanderings, and brought the story of hardship and deliverance, wandering and conquest, down to the present circumstance: the confederation of tribes settled in the land chosen and promised to the fathers.

The precise character of G can hardly be determined now; it was composed of older poetic materials, perhaps a sequence of patriarchal sagas, and a continuity dealing with the exodus-conquest cycle. Behind these are the individual stories, legends, etiological tales, cult narratives, the original data which formed the oldest traditions of Israel. G may have been a connected poem or series of poems orally transmitted and recited in whole or in part at the sacred festivals of "all Israel." Or it may have been a prose document derived from such an oral poetic collection. The former would seem more likely for the period of the judges. We conclude that G was a poetic composition, orally transmitted, relating the official story of Israel and its forebears. It is to be dated in the twelfth-eleventh centuries B.C. and finds its cultic locus in the amphictyonic festivals.

3. J and E. J and E, the familiar narrative sources of classic Pentateuchal analysis, are prose compositions derived from G. In the Tetrateuch at least, J and E follow the same basic pattern and order of events, thus presuppose a common source. At the same time they are distinct compositions, with diverging concerns and attitudes, and differ strikingly in numerous details. On the basis of a minute analysis of these sources, so far as they can be extricated from the Hexateuch, scholars have concluded that J has a S orientation, as against E, which is N; that J is concerned with David as king and with his dynasty, while E has marked affinities with and interest in the prophetic movement, especially as it was related to political developments in the N. In general, J has been regarded as a product of the United Monarchy (*ca.* tenth century), E of the N kingdom (*ca.* ninth-eighth centuries). Subsequent editions (e.g., J_2, E_2, etc.) would be dated still later.

The distinctive historical character of Israel's religion made it inevitable that the story would be rewritten repeatedly so as to include the most recent events which were the result of Yahweh's dealings with his people. Unlike pagan myth, which was timeless and self-completing, and which required only to be rehearsed and re-enacted in the cult, Israelite traditions could not finally be contained in this fashion; and re-enactment did not exhaust the historical significance or future possibilities of the tradition. In like manner the pagan epic was a self-enclosed entity describing a distinct era of the past: the age of the heroes and their great deeds. But Israel, even with the "epic" tradition reflected in G, could not simply look back to the glorious past, but was concerned with the continuing actions of God. Even G may have been expanded and revised during the period of the amphictyony.

a. J. While scholarly agreement on the scope of J and E has never been reached, and end points for both have been fixed all the way from the end of Numbers on into Samuel and Kings, it is likely that the end point is determined roughly by the date of the writer. The interpretation herein adheres to the common, if somewhat conservative, view that J dates from the United Monarchy (i.e., tenth century), and that E is northern and is to be dated in the late ninth or early eighth century. This means that both J and E are not simply prose abstracts of G, but rather separate historical accounts based upon G, carrying the story beyond G to their own time. Thus J finds the complete fulfilment of G's promise to the fathers, not in the original settlement under Joshua, but in the conquests and kingdom of David. Without attempting to pin down precisely the J material in Judges and Samuel, one may nevertheless point to the two sources of I Samuel and identify the earlier, pro-monarchy source with J. The transference of the Abrahamic covenant (Gen. 15—originally G) to David and his house (II Sam. 7) is also to be attrib-

uted to J. Whether J extends beyond this point is debatable (the so-called court history—II Sam. 9–20; I Kings 1–2—is a separate source); other possibilities for the reign of Solomon are I Kings 4:20-21—H 4:20-5:1: "Judah and Israel were as many as the sand by the sea; they ate and drank and were happy. Solomon ruled over all the kingdoms from the Euphrates to the land of the Philistines and to the border of Egypt; they brought tribute and served Solomon all the days of his life." Subsequent editions of J may well have carried further the story of the fortunes of the house of David and the kingdom of Judah.

b. E. E is more difficult to fix as to date and extent. On the basis of a N provenience and demonstrable interest in the prophetic movement, E may be regarded as a product of the religious enthusiasm stimulated by Elijah and Elisha, and his work may be placed in the age of Jehu and his successors (*ca.* 842-745 B.C.). A clue to the character of E may be found in the evaluation of Jehu's revolution in II Kings 10:28, 30: "Thus Jehu wiped out Baal from Israel. . . . And the LORD said to Jehu, 'Because you have done well in carrying out what is right in my eyes, and have done to the house of Ahab according to all that was in my heart, your sons of the fourth generation shall sit on the throne of Israel.'" This material is embedded in a typically hostile Deuteronomic estimate of the same king (vss. 29, 31) and must therefore derive from a different, and sympathetic, N source. The reference to the descendants of Jehu to the fourth generation would bring us down to Jeroboam II, whose dominion might be regarded more suitably as a fulfilment both of promise and of prophecy. The assertion that Jeroboam's victories were achieved as fulfilment of the word of the prophet (Jonah son of Amittai) is particularly instructive: "He restored the border of Israel from the entrance of Hamath as far as the Sea of the Arabah, according to the word of the LORD, the God of Israel, which he spoke by his servant Jonah the son of Amittai, the prophet" (II Kings 14:25). E reconstructed the story of Israel in the light of the prophetic movement, beginning with Abraham, anachronistically described (by E) as a prophet and similarly identifying Miriam, Deborah(?), Samuel, and other ancient figures by the same term. If we remove the Deuteronomic framework and commentary, what remains of Kings (through II Kings 14, essentially E) is predominantly the story of the prophets and their impact on the history of the N kingdom; for it was the prophets who were the successors to the judges, and the N kingdom that inherited the traditions of the amphictyony and its cult center. Thus E was the defender of the older tradition against the claims of the Davidic dynasty. It may be concluded that E was composed in the eighth century B.C., in the N, and represented an attempt, in the prophetic tradition, to relate the ancient pattern of G to the history of the N kingdom, and to establish the latter's claim to be the true successor and heir of "all Israel."

c. JE. JE is the product of a literary merger. At some time after the completion of J and E as separate entities, they were blended into a continuous narrative by an editor or redactor, R_{JE}. Analysis of the surviving material in the Pentateuch (or Tetrateuch, since J and E are practically nonexistent in Deuteronomy) indicates that the editor used a variety of methods in weaving the narratives together. First, it is clear that the dominant strand is J, which, in fact, formed the basic narrative. E has actually been broken up and inserted piecemeal into the over-all structure of J. On occasion there are parallel accounts (J and E) of the same episode; on occasion one version has been suppressed in favor of the other (where apparently they were practically identical); elsewhere they have been woven together into a single narrative. On the face of it, JE is the work of a S (Judahite or Jerusalemite) editor whose object was to preserve the traditions of the N and to harmonize them with the J narrative to form a single composite history of the people of God. The logical occasion for this work would have been the destruction of Samaria and the collapse of the N kingdom (722-721 B.C.). Its purpose was to win the surviving population of Ephraim to allegiance to the temple in Jerusalem and the Davidic king of Judah. Since this was the announced policy of Hezekiah, according to the account in II Chr. 30:1–31:1, in which a determined effort was made to establish Jerusalem as the center of worship for northerners as well as southerners, we may plausibly connect the compilation of JE with the movement toward religious reunion initiated by Hezekiah. We may date R_{JE} in the early seventh century B.C., and hold that his work included the major part of J, selected material from E, and closed with the reformation of Hezekiah and the attempt to unite "all Israel" in the worship at Jerusalem.

4. D and DH. *a. The Deuteronomic Code.* The next major subdivision in the classic analysis of the Pentateuch is D, identified with the document found in the temple in the eighteenth year of Josiah (622 B.C.) and corresponding roughly to the present book of Deuteronomy (perhaps chs. 5–26; 28). Scholars have been divided on the questions of the date of composition and provenience of this document, though there is increasing agreement that D, like E, has N affinities, and that it was composed during the century preceding its discovery. Its nucleus is a legal corpus, preserving many ancient laws and customs derived from the days of the confederation (e.g., the law of holy war), and reflecting the traditions of the cult center at Shechem and its priesthood. In their present form, chs. 5–26; 28 constitute a series of warnings and exhortations uttered by Moses just before his death. A date of composition in the reign of Hezekiah or later is practically required by the emphasis upon centralization of worship in a single sanctuary, presumably the temple at Jerusalem. The tradition of the central sanctuary is very old, going back to the days of the amphictyony, if not to the wilderness wanderings. But the principle of exclusiveness—i.e., the single, central sanctuary—is new. It reflects the circumstances of Hezekiah's time: the fall of the N kingdom and the emergence of the Jerusalem temple as the only "independent" cult center. The temple at Bethel apparently survived, but was under constant attack from the S as hetero-

dox, and had suffered considerable loss of prestige with the fall of Samaria. It was finally wrecked by Josiah (cf. II Kings 23:15 ff). Furthermore, the sermonic addresses anticipate or more probably presuppose the destruction of the N kingdom and the captivity of its inhabitants, thus pointing likewise to a date *ca.* 700. A date in the reign of Manasseh is also possible but less likely, while the idea that D was composed in the reign of Josiah and deliberately planted in the temple in order to be discovered there, may be dismissed as a fantasy.

The principal concern of D is the Horeb (Sinai) covenant, and its significance for the life of Israel. The COVENANT is a guarantee of life to those who obey its stipulations (the Ten Commandments and subsequent legislation), but for those who forget, ignore, or defy its demands, there is certain disaster. Placed in the mouth of Moses, these sermons are not only a reminder of the solemn bond between God and Israel; an explanation of the requirements of the covenant, with its promise of security and threat of destruction; but also a prophetic anticipation of the culmination of Israel's history. For D, Moses is the true prophet (18:15 ff; cf. 34:9-10, which is secondary), who, long before the great prophets of more recent times, foresaw the threatened catastrophe of military invasion and conquest, intensified by that peculiarly inhuman practice of mass deportation. The only hope of Israel, or what survived of it, lay in strict adherence to the covenant obligations beginning with the first commandment, which requires the exclusive worship of Yahweh, and which, on the Deuteronomist's reasoning, restricts worship to the one place which he has chosen for his name.

b. The Deuteronomic history. The effect upon Josiah and Judah of the discovery of D in the temple is familiar to all. The great reformation of the national life and religion is described in detail in II Kings 22:3–23:25 (cf. II Chr. 34:8–35:19). The so-called Deuteronomic history (DH) probably owes its inspiration and composition to the reformation stimulated by the discovery of D. In a major contribution to the higher criticism of the OT, Martin Noth has identified and isolated the Deuteronomic history as a single work including the books from Deuteronomy through II Kings. Beginning with the Mosaic sermons (to which he has prefixed an introduction, Deut. 1–4), the Deuteronomic historian has traced the Horeb covenant through the history of Israel, interpreting it in the light of the covenant requirements, and evaluating kings and people according to their adherence or defiance of them. He has incorporated much older material practically untouched—e.g., the court history of David (II Sam. 9–20; I Kings 1–2)—while providing for the whole a chronological and theological framework. Thus in the book of Judges he has organized chronologically and classified theologically a heterogeneous group of ancient heroes and the folk tales handed down about them. In the books of Kings he has inserted from the official court records the necessary chronological data of accessions, reigns, deaths, and successions; he has also interspersed a theological commentary grading each king in relation to his good or evil deeds.

According to Noth, the Deuteronomic history was compiled during the Exile (i.e., after the last date in II Kings), but it has been cogently argued by others that the first edition of this work was issued earlier, during the reign of Josiah. It is clear that the description of the Josianic reform in II Kings 22–23 is the climax of this history, while what follows is a melancholy epilogue. Note especially the fulfilment of the prophecy concerning Bethel (from I Kings 13:1-3) in II Kings 23:15-18, with particular reference to the name of Josiah (which is anticipated in the prophecy), and the conclusion in vs. 25: "Before him there was no king like him, who turned to the LORD with all his heart and with all his soul and with all his might, according to all the law of Moses; nor did any like him arise after him." This, together with the formal summary of his reign in vs. 28, looks like the original ending of the historical work. It is interesting that the notice of his defeat and death at Megiddo follows the summary.

The Deuteronomic historian was inspired by the conviction that Josiah was the long-awaited scion of David who in his work and life would fulfil the ideals of kingship, restore the empire of his illustrious ancestor, and also lead his people to renewal of life in obedience to the terms of the ancient Mosaic covenant. The entire history aims at this conclusion, the happy climax of the biblical story. At the same time the Deuteronomic discourses of Moses and the disastrous experience of the N kingdom served as a warning of another denouement, so that the catastrophe which actually ensued was not entirely unprepared. All along there had been two possibilities. With the tragic death of Josiah, it became clearer which alternative was the more likely. It is probable that the Deuteronomic history originally ended with the successful reformation of Josiah, and was subsequently revised to accord with the somber facts of history (cf. the pathetic attempt at reinterpretation, II Kings 23:26: "Still the LORD did not turn from the fierceness of his great wrath, by which his anger was kindled against Judah, because of all the provocations with which Manasseh had provoked him").

Concerning the scope of DH, the question must be raised whether Deut. 1 actually constitutes the beginning. In other words, does Deut. 1–4 serve simply as an introduction to DH, or is it rather a bridge between the narrative of the Tetrateuch (JE) and DH? When it is remembered that D is explicitly attributed to Moses, then the necessity for placing these addresses in the context of the JE narrative becomes clear. Unless JE (and G) is to be cut off at the end of Numbers plus a few verses on the death of Moses, it is not possible to argue that DH is an entirely independent work. Not only does such a view leave JE in the Tetrateuch a hopeless torso, but it offers no explanation for the beginning of DH in the fortieth year of the wanderings. If in the course of D, Moses actually reviewed the previous sequence of mighty deeds, then we could recognize here an imitation of epic style. But there is specific recapitulation only as far back as the Horeb (Sinai) experience, while the antecedent history is dealt with in the vaguest possible way. In short, JE is assumed, because it was attached. If J and E actually carried the story down into the period of the monarchy, then DH must have

used them, as he used the court history, D, and other sources. And if he made use of JE for the post-Mosaic period, he could hardly have dismissed or ignored it in the pre-Mosaic and Mosaic eras.

It is likely, therefore, that DH compiled his history along the same lines as J and E (or JE, which is presumably all that was available to him)—i.e., he began with Genesis and carried the story down to the reign and reformation of Josiah. However, the fulcrum of his account was the major prophetic exhortations of Moses, the new document, D, found in the temple. DH had little or nothing to add to the JE narrative in the Tetrateuch, though there may be traces of his work (so-called D_2, which need not be categorically dismissed). His creative enterprise begins with Deut. 1–4, which constitutes an introduction to the history which follows but also serves as a bridge connecting it with what has gone before. It is clear that DH did not think that Israelite history began with Moses, whatever may be the opinion of scholars since Wellhausen.

We conclude that the Deuteronomic history was originally composed before the fall of Jerusalem, and that it consisted of JE and D, plus other materials of a narrative and archival nature, covering the period from the Creation down to the reign and reformation of Josiah.

5. P. It remains to deal with P, the last of the sources identified in the classic Pentateuchal analysis. It is generally agreed that P was compiled, chiefly from older sources, during the Exile, if not in post-exilic times. P consists mainly of archival data of different kinds: genealogical tables, tribal lists, including a pair of census tabulations, and priestly data and regulations—concerning, e.g., the tabernacle, the priesthood, sacrifices, questions of clean and unclean. Embedded in P, there are also legal prescriptions which form part of the complex legal corpus of the Pentateuch (e.g., the Book of the Covenant and Exod. 34, usually associated with JE; the law code in D; and H, the so-called Holiness Code of Lev. 17–26). The principal questions concerning P are: (*a*) Is P an independent source, or is it merely supplemental to JE in the Hexateuch (or Tetrateuch)? Put another way, is P himself the compiler of the Pentateuch incorporating into the narrative such archival data as seemed desirable? (*b*) What is the extent of P? It is generally agreed that P is to be found in the books through Numbers, and not in Deuteronomy (except for a couple of verses). But what about Joshua?

The two questions are linked, and the answer given to one will influence one's view of the other. It would seem that the meticulous analysis of earlier scholars and their conclusions concerning the nature of P have not been overthrown by more recent advocates. It still appears that the case for P as an independent source is stronger than the case against it. If P was a self-contained entity, what was its character and scope? That P in Exodus–Numbers is primarily concerned to fix in detail the cultic practice of the wilderness encampment and to establish it as a permanent norm for Israel through the unquestioned authority of Moses is clear. Here there is essentially a static treatment of ancient materials, with a concern, not, as in the older sources, for the movement of God in history, but for the original pattern of worship, which is binding forever. The particular historical event has partly given way to the timeless and unchangeable pattern of heavenly things. If P were limited to Exodus–Numbers, then the question of its independent status would not figure seriously, and its incorporation into the narrative as essentially supplementary data would be understandable. But the presence of P in Genesis, where it provides the chronological framework and some narrative details, suggests a broader, at least partly historical, concern. If this is true, and it can hardly be doubted, then we must recognize in P the old *heilsgeschichtliche* pattern of Israelite religion already observable in G, present in the other historical works, and preserved in the festivals which are a principal interest of P. P's interest in the patriarchs, however, requires a corresponding concern with the settlement in the Promised Land. While Moses and the pattern of life and worship in the wilderness are central to P, the prelude in Genesis can only be balanced by the fulfilment in Numbers and Joshua; but it is only in Joshua that the specific expectations of P in the patriarchal narratives are fulfilled. In no way can Moses and the wanderings or even Sinai be regarded as the resolution of patriarchal anticipation. The divine promise can only be realized in the occupation of the land (which is explicitly not Transjordan, and for P does not even include it). Therefore, if P is an independent source, and is found in Genesis, as well as in Exodus–Numbers, then we should expect to find it in Joshua also.

It is probable that P was compiled early in the Exile and was incorporated by the final redactor into the so-called Deuteronomic history (including JE, as already pointed out) shortly after. Apparently R_{PH} added the final reference to Jehoiachin, and this points to the completion of the work in the decade 560-550 B.C. Thus by the middle of the sixth century, the primary history was complete, and has been preserved substantially without change. Subsequent to the completion of this work the Pentateuch was abstracted, and not later than the time of Ezra it was firmly established as the Holy Scripture of Israel.

B. *FORM AND CONTENTS.* The separation of the Pentateuch from the primary history, and its assignment to a unique place of honor and authority in Israel, was a development of the greatest importance. The factors responsible for the division between Deuteronomy and Joshua were neither literary nor historical, but primarily theological; they arose out of the concerns and needs of the exilic community. As we have seen, classic critical scholarship identified the Hexateuch as the basic literary compilation, recognizing the close connection between the occupation of the land described in Joshua and the preceding stories of the Pentateuch. More recent scholarship has identified the Deuteronomic history as a single literary work, thus dividing the primary history at the end of the book of Numbers and connecting Deuteronomy with the following books. It will be seen that neither approach allows for a normal break at the end of Deuteronomy. At the same time, the ultimate sources, oral and documentary, cut across the same dividing line. The conclusion seems inescapable that the isolation of the Pentateuch from the primary history was the last stage in the process, and

that it was occasioned by the special interest of the exilic community in the person of Moses and the experience of Israel in the wilderness. A subtle shift in emphasis from the historical pattern of the older sources (e.g., the *heilsgeschichtliche* promise and fulfilment of G, elaborated in J and E, and the theme of covenant and consequence in D and DH) to the more static pattern of P is discernible in the new arrangement. Where the primary history is essentially the record of God's dealings with his people, and their experience together through more than twelve hundred years, the Pentateuch, while retaining a chronological framework and, of course, sharing the same narrative for the first half of this era, nevertheless has its central interest, not in the mighty deeds of God nor in the historical vicissitudes of Israel, but rather in the description of an eternal, perfect, and unchangeable pattern of community life, first and fully revealed at Sinai and successfully achieved by Israel in the wilderness. For the Pentateuch, the desert encampment governed by all the laws, civil and criminal, cultic and dietary, was the first true realization of the anticipations outlined in Genesis, and the embodiment of the kingdom of God. The pattern of the desert constituted the authoritative example and model for the postexilic community. History has been subordinated to revelation, and mighty deeds to eternal words. Essentially what was required of Israel was conformity to the Sinai pattern; in this would be found the guarantee of its survival and the promise of its security. To a considerable extent, the Pentateuch defined and also restricted the future hope of the postexilic community. While Pentateuchal passages could be pressed into service for messianic purposes, such expectations were more at home in the prophetic literature. The themes of a second Moses, a second Exodus, and the perfect realization of the Sinai pattern reflect the shadow cast by the Pentateuch upon all hopes and speculations about the future. Alongside the controlling pattern of community life is the figure of Moses, which dominates the Pentateuch. His life constitutes the frame and thread of the story from the beginning of Exodus to the end of Deuteronomy (to which may be added the traditional view that he was the author of all five books). Not only is he the charismatic hero of the JE narrative, but he is also the prophet "nonpareil" of D, and Israel's sole lawgiver of P. Thus all the sources and strands of the four latter books of the Pentateuch are drawn together around the superhuman figure of Moses (cf. Exod. 34:29-35), while Genesis serves as prologue to the great drama. The chief emphases of the Pentateuch are upon the intricate but ultimate pattern of laws governing the life of the people of God, and the mediator of these laws, Moses, who at the same time receives a full biographical treatment.

1. The beginnings (Genesis). ***a. The primeval story (chs. 1–11).*** Here is provided the universal setting of the *Heilsgeschichte,* which follows. The Mesopotamian orientation of the familiar legends and folk tales is striking, confirming the traditions associating the patriarchs with that region (i.e., Ur, and more particularly Harran). The selection and arrangement of the materials serve to stress certain points essential to the whole narrative. Thus Creation is not only the proper starting point for world and faith history, but stands out starkly as the uniquely divine achievement of the sole God. Both absolute power and ultimate goodness are revealed in the mounting sequence of creative acts, while corollary to divine authority are human dignity and responsibility. Man is not only obliged to obey, but is also answerable for his deeds, from which flow irreversible consequences, as the tragic stories of Adam and Eve, Cain and Abel, show. Alongside the power and authority of the Creator are revealed his righteousness and wrath; but these latter are punctuated by mercy. The flood story, ultimately derived from a widespread myth of great antiquity, is nevertheless the vehicle of profound insight into the nature of God and his ways with men. An angry judgment overwhelms a sinful world; the righteous Noah is spared, and the operation of moral law is confirmed. The aftermath, however, involves the revocation of the divine curse upon the earth (cf. 8:21 with 3:18), and the unilateral commitment to preserve the world from natural catastrophe in spite of, or rather in view of, man's sinfulness. The covenant with Noah, sealed by the sign of the heavenly bow, establishes the basis for the future action of God described in the Bible—an action essentially gracious and kindly, in full recognition of man's failure to discharge his responsibilities and his inability to rectify either his attitudes or his behavior. Already in the primeval history, the basic features of the biblical narrative are present: the power and authority, the righteousness and mercy, of God; man's dignity and inferiority—his responsibility and his defiance; God's commitment in grace to man and man's obligation in love to God.

b. The patriarchal narratives. In the tradition, both literary and liturgical, the patriarchal figures are Abraham, Isaac, and Jacob, but in the Genesis narratives Isaac plays a minor role, while Jacob's son Joseph is the hero of the longest sustained narrative in the book (chs. 37; 39–50). Doubtless in this case the tradition is more conservative, while the Genesis narratives are the end product of a lengthy process of sifting and selection. The material falls conveniently into three sections of approximately equal length: (*a*) Abraham, chs. 12–25; (*b*) Jacob, chs. 25–36; (*c*) Joseph and his brothers, chs. 37–50.

Without analyzing the stories in detail, one may sketch the principal themes. From the biblical point of view, the history of Israel properly begins with the patriarch Abraham, since he was the ancestor from whom Israel traced its origin. At the same time, it is with the appearance of the fathers that we can speak of general historical reliability, though not of history in the proper sense. However the chronological sequence and factuality of the events are to be reconstructed, there can be no doubt of the substantial validity of the account of the fathers in the Middle Bronze Age, and their movements from Harran through Canaan to the Nile Delta.

The main theme of GENESIS is the promise to the fathers. This promise is first made to Abraham, when he is summoned to embark on a new adventure: "Go from your country and your kindred and your father's house to the land that I will show you. And I will make of you a great nation, and I will bless you, and make your name great, so that you will be

a blessing. I will bless those who bless you, and him who curses you I will curse; and by you all the families of the earth will bless themselves" (Gen. 12:1-3). It is repeated frequently throughout the book, in almost identical language, both to him and to his descendants. This promise, which is solemnized by oath in a covenant ceremony (cf. Gen. 15:17 ff and the repeated expression: "The land which I swore to give to your fathers," in later sources), represents the unilateral, unconditional commitment of God. It consists of three major points: (*a*) the assurance of a posterity, which has particular relevance to Abraham's childlessness at an advanced age; but it also refers to the innumerable population of the patriarchs' descendants; (*b*) from the uncounted progeny a great nation will emerge in the future; and (*c*) they will possess the Promised Land—i.e., Canaan, specifically as surveyed by Abraham after his separation from Lot (ch. 13).

Posterity, nationhood, and the gift of the land are the different facets of the divine promise; and to these are attached the rather heterogeneous narratives of Genesis. Alongside the divine commitment and corresponding actions are human obligation and response, reflected in the behavior of the patriarchs. These are intertwined in a series of dramatic episodes, which maintain interest, even suspense, though over-all plot development and story movement in the book of Genesis are more illusion than fact. Thus the theme of progeny is stressed in connection with the birth of Isaac (and repeated in connection with Rebekah and Rachel), which requires miraculous intervention by God. Once born, Isaac is the sole heir of the promise; consequently the hope of progeny remains in jeopardy with each threat to the child's life. The masterful story of the sacrifice of Isaac (ch. 22) weaves this theme into the testing of Abraham, by portraying God as the instigator and Abraham as the reluctant instrument of the plot to destroy the child and wreck the promise altogether. When the angel intervenes at the last moment, it is more than Isaac that is saved. On a broader scale, the theme involves the survival of the patriarchs and their families, constantly threatened by the violence of nature and man. In addition there is the delicate problem of maintaining identity in the midst of an alien population whose friendship poses a graver danger (of submersion) than its hostility, which is bad enough. Just to secure and maintain a foothold in Canaan proves beyond their power. In fact, they are almost as far from the Promised Land at the end of Genesis as they were at the beginning—i.e., in Egypt instead of Mesopotamia. Nevertheless, a certain symbolic success was achieved: Abraham, though paying an exorbitant price (cf. ch. 23), was able to secure outright a small plot of ground as a graveyard for his family and himself. So the book closes symbolically with the children of Israel making a pilgrimage to this graveyard in Canaan in order to bury their father, Jacob, who had died in Egypt.

According to the tradition a long interval (400 years) separated the patriarchs from the Exodus and the age of Moses. While the accuracy of the number may be questioned, the efforts of certain scholars to close the gap entirely and bring the patriarchs, and Joseph in particular, down to the Late Bronze Age have not been successful. The patriarchal stories reflect a Middle Bronze (*ca.* 2100-1500 B.C.) orientation and background, while Moses belongs to the end of the Late Bronze Age, specifically the thirteenth century. The sharp break in narrative sequence confirms the validity of the tradition: a new era has begun with the book of EXODUS. The life of Moses, 120 years according to the biblical record, spans the remaining books of the Pentateuch. There is a convenient division into three generations of 40 years each: from birth to banishment; the shepherd in the desert; the deliverer and lawgiver. The Bible, however, passes briefly over the first two phases of Moses' life (chs. 1–2 of Exodus) and concentrates attention upon the third (from ch. 3 on). The biblical materials fall into the following convenient pattern: (*a*) the events surrounding the Exodus from Egypt; (*b*) the experience of Israel at Mount Sinai; (*c*) the wanderings in the wilderness and the conquest of Transjordan; (*d*) Moses' farewell discourses.

2. The Exodus (Exod. 1–18). On the basis of the close association of the exodus tradition with the PASSOVER festival, it has been argued that the narrative (chs. 1–15) actually constituted the liturgy of the Passover. Though the case can hardly be proved for the chapters in their present form, the idea has nevertheless proved fruitful. The story is related in such a way as to emphasize both its unrepeatable historicity and its dramatic character, designed for liturgical re-enactment. It is at once the unique adventure of the generation of slaves in Egypt, and the common experience of all the generations of Israel. The artificial pattern of the material suggests both a long period of transmission and a liturgical setting for its preservation. Whatever relation to a sequence of natural phenomena the plagues may originally have had, they are now immobilized and isolated by stereotyped formulas, and arranged like tenpins or wooden soldiers in the conflict between Moses and Pharaoh for the release of the slaves. In the present form of the narrative, even protagonist and antagonist are puppets acting out the parts already prepared for them. The only independent participant is God himself, and the whole order of events is designed as a pyrotechnic display of divine power and majesty: to show, in short, that God is God, and that Moses and Pharaoh are both his servants, but in different ways. Through the agency of Moses and the obstinacy of Pharaoh, miracle is piled upon miracle until the triumphal climax is reached. In order to achieve this cumulative effect, God finds it necessary not only to encourage Moses and the Israelites, but also to stiffen Pharaoh's resistance, lest he falter and release the slaves too soon.

While the actual course of events is obscured, and the interplay of human factors is distorted by the one-sided presentation of the mighty deeds of God, nevertheless the theological emphasis is valid. Except for the powerful intervention of the almighty God, deliverance of a rabble of slaves from Egypt, the greatest empire in the world, was both impossible and unthinkable. Let no one, Israelite or Egyptian, or anyone else, whether of that time or of any future time, delude himself with the notion that what happened was natural, or explicable in human terms. The decisive, and only truly significant, factor was the hand

of God. If not for that, the bravery of a Moses and the loyalty of his followers would have gone for nought. As it is, Moses is characterized more by reluctance than by enthusiasm for the cause, and the people by cowardice rather than by courage. But it is all one. God acts in a series of shattering blows, which reach a climax in the slaying of the first-born and the hasty departure of the Israelites. These two events constitute the occasion of the Passover, and doubtless formed the nucleus of the liturgy. The famous crossing of the Reed Sea caps even this climax, and constitutes the mightiest deed of all. This event is described in a prose account in ch. 14, which is divided, according to most scholars, among J, E, and P. It is also celebrated in the victory song of ch. 15, which may have served Israel as its national anthem and the culmination of the Passover observance. The crossing of the sea marks not only the end of bondage and the beginning of freedom, but also the separation of Israel from the world, and the commencement of its history as the peculiar and distinctive people of God. In the course of the wandering, the process of separation gains sharpness and clarity. Already in the later plagues this tendency was apparent; the plagues afflict only the Egyptians, while the Israelites are spared. In the wilderness the special marks of favor and protection are likewise present: the pillar of cloud and fire, the angel, the miraculous gifts of quail and manna, all identify Israel as uniquely different. The distinguishing characteristic is the relationship with God. It is precisely in the fact that God was with them that their separateness is to be seen (cf. Exod. 33:16). Both people and era were thus marked off by special signs of divine protection. Only the wilderness generation enjoyed the miracles of manna and quail; the pillar and the angel; and, above all, the man Moses, whose shining face reflected the glory of God. While this was a period of testing for all and punishment for many, it was also the uniquely creative and normative experience of Israel, determinative for its whole future history.

3. Sinai (Exod. 19:1–Num. 10:10). The Sinai revelation and the COVENANT of the Ten Words are justly regarded as the crucial event in Israel's religious experience. The compiler of the Pentateuch has underlined the importance of Sinai by making it the scene, and Moses the agent, for the ordering of the whole life of Israel. Practically the whole legislation of Israel, including the prescriptions for the tabernacle, priesthood, feasts, sacrifices and services, as well as the rules of community life, is assigned to the Sinai sojourn. The demands or obligations of the covenant are the principal word of God to Israel, while for Israel the ultimate goal was to achieve in word and deed the pattern of holiness established for it at the beginning of nationhood, and to fulfil by enthusiastic obedience and detailed observance the requirement of the summons of God to be a "kingdom of priests and a holy nation" (Exod. 19:6). It is therefore no accident that the chief efforts of the post-exilic community were bent toward reconstituting the Mosaic commonwealth. From the Exile on, community life was governed by the prescriptions of the Pentateuch, as elaborated and interpreted by priest, Levite, and scribe—and later, rabbi—in the extensive body of legal opinion and decision which accumulated over the centuries, and were gathered in the tractates of the Mishna and the Gemara. There has been, therefore, a legal tradition in Israel going back to patriarchal times and continuing down through biblical and postbiblical times to the present. The tenacious conservatism as well as flexible adaptability of biblical law (*see* LAW IN THE OT) can be illustrated amply by comparison between legal procedures recorded in early Mesopotamian codes to which patriarchal legal customs are related, and those described in the Talmud 2,500 years later. The biblical datum constitutes the middle term in the long process of legal transmission and development. Thus in the division of the inheritance among the heirs, the old Mesopotamian practice of assigning a "double portion" to the oldest son is reflected in the patriarchal stories. The same practice is attested in Pentateuchal law, and explained and confirmed in detail by the Talmud.

In this long process the period of the monarchy may be regarded as a legally insignificant interlude. The Pentateuchal legislation, with roots in the patriarchal customs, and its substance derived from the decisions and precedents of the age of the judges, shows little influence of or interest in the monarchy (cf. Deut. 17:14-20, which is the only specific reference to the king in all the legal codes of the Pentateuch, and hardly to be regarded as codified law). That the monarchy powerfully influenced judicial procedure and legal practice may be seen from the frequent allusions in the historical books: e.g., the different judicial reforms instituted by various kings, and the combination of royal decrees affecting the population or some part of it, and royal decisions made in a variety of cases creating precedents with binding force. But of all this, little or nothing has survived in the law. The cultus was doubtless an exception, since the monarchy was the period of the great elaboration of public worship at the temple; such, at least, is the tradition preserved in the Chronicler's history. Even here, however, the sacred customs of the premonarchic age were preserved, embedded in the later ritual of the temple. Furthermore, the repeated purges and reforms of Israel's worship tended to restore the older practice and remove later accretions. Thus the Pentateuchal legislation was the result of a deliberate effort to compile the ancient laws and customs of Israel, even to recover the original pattern given at Sinai and publish it as the work of the architect of the nation, Moses. While the claim is somewhat greater than the fact, we have nevertheless an archaic collection of legal and cultic material reflecting the earliest period of the nation, between Moses and the monarchy. The differences in the legal formulations of the codes of the Pentateuch do not, as a rule, indicate evolution in the pattern of law, but local variation and development. The codes embody the traditions of different shrines.

The events of Sinai were associated in later Judaism with one of the three great religious feasts of early Israel—the Feast of Weeks (Pentecost) or First Fruits. The other phases of the Exodus-Deuteronomy complex are likewise associated with the major festivals: the Exodus with Passover (or Unleavened

Bread), and the wanderings with the Feast of Tabernacles (or Ingathering). Thus the three annual celebrations together reproduced the cycle of Exodus–Sinai–wanderings, which are the very substance of the Pentateuch. Each year Israel relived the most important days of its existence: once again delivered from bondage, created the people of God by covenant rite, and tried and purified by the rigors of the desert sojourn to be fit for the life of the Holy Land promised to the fathers. *See* WEEKS, FEAST OF; PASSOVER AND FEAST OF UNLEAVENED BREAD; BOOTHS, FEAST OF.

Sinai and its covenant are the central theme of the Pentateuch in its present form. For the compiler, Sinai is the main objective of the Exodus, the creation of the covenant community the purpose of the divine deliverance (cf. Exod. 3:12: "When you have brought forth the people out of Egypt, you shall serve God upon this mountain"). It has long been recognized, however, that the Sinai events are intrusive in the pattern of promise and fulfilment of the older narratives, in which the possession of the land is the goal. Thus one would expect the story to proceed from the initial experience of the patriarchs to the oppression in Egypt, the deliverance from bondage, the movement through the wilderness, and the invasion and conquest of the Holy Land (as, in fact, we find it in the confession of faith, Deut. 26:5-9). At this point, the formal establishment of the new state should take place with the ratification of a solemn agreement between God and his people. Such an event is actually recorded in Josh. 24, the historical significance of which has increasingly been recognized. With the reconstruction of this logically cohesive sequence of events, matters ought to rest. But the Shechem celebration is treated as the occasion for renewing and not initiating the covenant. Sinai has entirely replaced it in the latter role, so far as the tradition is concerned. Sinai may come embarrassingly in the middle of the story, but it is no late invention capriciously inserted where it would do the most damage. It is too ancient and important a tradition (in both J and E, and therefore G) to be set aside. While the Sinai events might fit better in a different locale or a different time, the awkwardness of their present position may help to validate the tradition.

The difficulty with Sinai, however, concerns not only questions of geography and history. There is also a conflict in motivation between the basic story of promise and fulfilment and the Sinai covenant. In the former we have the divine commitment to the fathers, which finds its realization in the mighty deeds of deliverance and conquest. These constitute the gracious action of the deity, to be duly acknowledged by a grateful people. But Sinai, with its demands and threats, comes in the middle of this story: after the Exodus, which is the down payment on the original promissory note, but before the obligation is fully discharged through the Conquest. At Sinai the movement of the story is temporarily halted, for the storyteller wishes to re-examine and specify in more formal terms the meaning of the relationship between God and his people. Already in the patriarchal narratives the significance of the divine promise and protection had been assessed in terms of obligation. Gratitude itself is the heaviest of obligations; and the unsolicited gift evokes the most elaborate response. An unconditional commitment actually imposes an unlimited obligation: the stories of Abraham in Gen. 15 (of unilateral divine promise); 22 (of unlimited human obligation) illustrate this inescapable interrelationship. Less dramatically, Jacob likewise recognizes both the privileges and the responsibilities of a junior partnership with El Shaddai (cf. Gen. 28:10-22).

Such stories, however, reflected the indeterminate scope and depth of a personal relationship, and could not define the formal status of a people. Only after definite assurance had been given of God's powerful good will, and independently of the course of predetermined grace, the Sinai interlude occurred, to establish a responsible community and to specify the nature and extent of its obligation to its suzerain. Just as God had previously announced his responsibility for and involvement in the destiny of Israel, so now the cost to Israel of its own responsibility and involvement is revealed. The formulation of the terms is put in negative form to indicate the limits within which the community of God is to conduct its affairs and beyond which it may not go. The commands are binding upon each member of the covenant community, but society as a whole is responsible for their enforcement. Essentially, what is required of Israel is obedience, formally in the sense of subscription to the divine demands, but more than this, conformity to the character and purpose of God. The distinction of Israel is the presence of God in its midst, at once its source and hope of glory and the chief threat to its existence. To ensure that blessing and honor, peace and security, rather than judgment and destruction, are the accompaniments of this intimate relationship, is the purpose of the covenant codes. The object is to attain to the holiness of God: "You shall be holy; for I the LORD your God am holy" (Lev. 19:2; cf. 11:44; 20:7; Exod. 19:6; etc.).

That the whole of Israelite life was involved in covenant regulation was recognized from the start. The original stipulations are summed up in the Ten Words, as tradition attests (*see* TEN COMMANDMENTS). But case and cult law, moral and ethical behavior, social and economic practice, religious observance and festival, are subsumed under the covenant terms, so that the major part of Pentateuchal legislation was regarded as an extension of the Sinai agreement. The Book of the Covenant and its incomplete parallel in Exod. 34 (cf. also the Holiness Code [Lev. 17–26]) represent historically the penetration of the Sinai covenant into the life of the community after the settlement in Canaan. The process of expansion and proliferation is carried on through Leviticus and Numbers, while Deuteronomy is a recapitulation of this process, stemming from a separate (N Israelite) source. The elaboration of the covenant in the detailed regulations associated with the Sinai encampment reflects in an artificial and static way what was nevertheless true in a historical sense. The Pentateuchal legislation grew out of the Sinai covenant. The compiler sees it as a perfect whole originating in a single revelatory event.

While the law unfolds in glacial fashion, emphasizing permanence and immutability, the narrative pur-

sues a different tack. Here the covenant is broken almost as soon as it is made. After suitable protestations and ceremonies, the covenant is ratified through a common meal eaten by the elders in the presence of God (Exod. 24:9-11). Within forty days, the people have rebelled, violated the principal terms of the covenant, and incurred the wrath of the suzerain. The penalties implicit in the covenant are threatened, but disaster is narrowly averted by the intervention of Moses. A second covenant is made, with new tablets to replace the broken ones.

The essential conflict between the two covenant ideas—the one of divine commitment to Israel through the fathers, which is irrevocable, and the other, of demand with the threat of annihilation through Moses—is brought out clearly in the episode of the golden calf. The result is that the promise to the fathers remains unbroken—i.e., Israel survives—but this by no means guarantees blanket protection or exemption from the consequences of the Sinai covenant. At the same time, although the penalties for violation of the Sinai covenant are inescapable and devastating, they nevertheless are subject to the prior and unbreakable divine commitment. So divine and human obligation are intermeshed, but without contingency or dependence upon each other. Each pursues remorselessly the logic of its own character, and together they determine the course and consummation of Israel's history. Israel's defection at Sinai is grievously paid for, but the divine commitment is fulfilled in a renewal of the covenant. A second and a third defection are similarly disastrous for Israel; in fact, the whole generation must perish in the wilderness, but the oath to the fathers is maintained when the next generation makes successful entry into the Promised Land.

The chief practical consequence of the sojourn at Sinai and the solemnizing of the covenant was the construction and dedication of the TABERNACLE. The detailed instructions concerning the tabernacle and its furnishings, and the priesthood who serve in it, were given to Moses by God himself (Exod. 25–31). These are repeated *in extenso* (Exod. 35–40), when the work was actually carried out, perhaps to emphasize the meticulous care with which each detail was accomplished in conformity with the original pattern. While the aniconic character of Israel's religion (i.e., the absence of an image of the deity) militated against a complete identification of the tabernacle with the heavenly abode as in pagan religion, nevertheless the presence of God was localized in the tabernacle (for P in the expression כבוד יהוה "the glory of the LORD"; for D in the expression שם יהוה "the name of the LORD"). The tabernacle was designed to serve a twofold function: to protect the holiness of God from contamination by the people (note the regulations restricting the approach to Mount Sinai and the reasons for them, in Exod. 19); and, on the other hand, to protect the people from an outburst of divine wrath. The priests also perform a double function: to serve the Lord of the tabernacle, according to his needs and wishes; and to mediate his presence to the people, including instruction in, and interpretation of, the divine will. Appropriately in the book of LEVITICUS, the service of the tabernacle is described in detail: the types and purpose of the sacrifices which are central to worship (chs. 1–8), and the responsibilities and prerogatives of the priesthood (chs. 9–15) culminating in the liturgy of the Day of Atonement, later Israel's most solemn observance (ch. 16). Here the high priest, who alone may enter the holy of holies, mediates the mercy of God to his people through the scapegoat ritual. In this fashion the accumulated sins and iniquities of the previous year are removed, and the reconciliation between God and people achieved. *See* SACRIFICES AND OFFERINGS; WORSHIP IN THE OT; ATONEMENT, DAY OF.

The so-called Holiness Code (Lev. 17–26) is a summary catchall of legal prescriptions, cultic regulations, and moral exhortation, which may well have served as a catechism for some sanctuary school, or as a guide for PRIESTS AND LEVITES in their work as teachers of the people.

NUMBERS begins with the final action at Sinai: the dedication of the tabernacle. Only when this elaborate and prolonged ceremony was completed, the last animal sacrificed and the last gift offered, was Israel ready to march.

In its present form the Sinai tradition centers upon the elaboration of covenant obligation, in close association with the construction and dedication of the tabernacle. The tabernacle symbolized the PRESENCE of the holy God in the midst of his people, while the covenant legislation defined the character and duties of a not-yet-holy people. Behind the tabernacle of P, as also behind the different codifications of law, lay a simpler and perhaps historically more valid tradition of the Sinai covenant, and the TENT OF MEETING. This tent was no replica of the heavenly house, but rather the place where God and man met to settle their pertinent business. Central to its function was the ARK OF THE COVENANT, symbol of the legally binding nature of the relationship between God and Israel. The association of ark and tent made legal righteousness rather than cultic HOLINESS the principal concern of the worshiping community (*see* RIGHTEOUSNESS IN THE OT). To render just decisions and carry them out in conformity with covenant regulations was the chief obligation of the community gathered at the ark.

From ark and tent developed the elaborate scheme now preserved in the Pentateuch, but the essential emphases are still discernible: a holy God joined to a holy people, but holiness defined in terms of moral and legal obligation, as well as of cultic and ritual purity.

4. The wilderness wanderings (Num. 10:10–36:13). This section consists of a patchwork of narrative material intermingled with priestly data, which have some apparent or superficial connection with the stories or their personnel. Its purpose is to explain how it happened that Israel, which set out from Sinai for Canaan at the start of the second year after the Exodus (Num. 10:11), managed to end up thirty-eight years later far off course in Transjordan, still trying to make entry into the Promised Land. This state of affairs posed serious problems to the compiler, who made little effort to relate a continuous narrative—e.g., thirty-eight years are passed over in silence. While granting that there are numerous gaps in the story, which is itself strange and improb-

able, these facts alone suggest that an authentic nucleus of tradition is at the bottom of it. Invention would have produced a smoother account, and would hardly have led Israel by the bizarre route described, to the wrong country.

The gap in the chronology is largely a blank, so the narrative is artificially divided between the events of the second year and those of the fortieth (after 20:1). This awkwardness clearly reflects a firm tradition that the generation which came out of Egypt did not reach the Promised Land, but perished in the wilderness—including specifically the leaders, Moses, Aaron, and Miriam. This contretemps, which seems factual on the face of it, is explained rather elaborately as the result of the mishandling of the report of the spies (chs. 13–14). The mixture of *Realpolitik* and theology may not be convincing, but it doubtless preserves the important truth that an attempted invasion of Canaan from the S failed. It failed so badly, in fact, that a generation passed before Israel could build up strength for another effort, and even then it had to be made from another direction. The avoidance of war with Edom and Moab (here a kind of reciprocal evasion was practiced) tends to confirm the impression of military diffidence, though doubtless other factors, not excluding kinship, played a role. At the same time, the rather aimless wanderings of Israel, during the whole period from the Exodus on, may suggest that the Promised Land was not so fixed an objective as our present sources indicate. It may be that they drifted about until they found a weakness in the settled areas. The conquest of Transjordan was not part of the original plan; according to the biblical account, it resulted from the obstinacy of Og and Sihon, who refused the Israelites passage through their territories.

The impression made by the stories is that of growing strength and consolidation of forces until the Israelites were able to meet the enemy in the field and defeat him. Internal difficulties continued: the aftermath of the spies episode is disastrous, and the revolt of Korah (P) and Dathan and Abiram (JE) threaten the very existence of the community. On the other hand, the Balaam narrative shows Israel in a most favorable light, as this international diviner is unable to resist the persuasive pressure of the God of Israel and prophesies the splendor and power of the new nation to the dismay of his patron and the serious detriment of his own fortune. The oracles of Balaam, like the Song of the Reed Sea, are a potent example of early Hebrew poetry, authentically portraying the Israel of the wilderness wanderings.

With the defeat of Og and Sihon, Israel at last was able to claim possession of a suitable territory. While the settlement in Transjordan was provisional and preliminary, it is on this note that the Tetrateuch closes. The wanderings have come to an end, and Israel is poised for the final adventure.

5. The epilogue (Deuteronomy). Before the invasion of Canaan, there was an interlude: Moses' farewell sermons in the Plains of Moab in the last year of the wanderings, and shortly before his death (*see* DEUTERONOMY). It is this break in the narrative sequence which focuses attention on the special significance of the wilderness experience. For in these addresses Moses recapitulates the desert experience beginning with the revelation at Horeb (Sinai). Particular emphasis is placed upon the covenant and its stipulations. The Ten Words are repeated (in ch. 5); then the sense of the first commandment is explained and elaborated for six additional chapters (6–11), beginning with a restatement of the main theme of the covenant in positive terms: "You shall love the LORD your God with all your heart, and with all your soul, and with all your might" (6:4). There follows (chs. 12–26) a body of legal material similar to the collections in the earlier books of the Pentateuch, but worked out in a special hortatory style. Additional and presumably original features of the covenant pattern are preserved in ch. 27 (blessings and curses); the covenant-renewal ceremony is connected with mounts Ebal and Gerizim, in the vicinity of Shechem (cf. Josh. 24).

Two old poems (Deut. 32–33, both probably dating from the period of the amphictyony or early monarchy) are attached to the book, which closes with the death of Moses. For the Deuteronomist, Moses was a prophet, but more than a prophet: "There has not arisen a prophet since in Israel like Moses, whom the LORD knew face to face" (34:10).

The Pentateuch is a composite presentation of the beginnings of Israel. Genesis, including the Creation and primeval history, even the patriarchal narratives, is preamble. The center of interest is the formation of Israel: Exodus, Sinai, wanderings, and Transjordan are the key words. The story is bounded by the life of Moses, who is the master agent of God's will and the chief architect of Israel. The mighty deeds of God constitute the basic narrative, set in sharp relief by the stupidity and wickedness of Israel. Tabernacle and covenant describe the presence of the holy God in the midst of his chosen people, while the interaction of divine commitment and human obligation defines the area of Israel's experience. The special emphasis of the Deuteronomic sermons, with which the Pentateuch closes, is on the covenant responsibilities of Israel: to obey means life, to disobey death, in the simplest possible terms (cf. Deut. 30:15 in the context of this speech). These words were aimed at a community on the verge of disaster (cf. also Jer. 38:2 ff). The Sinai-Horeb covenant, with its sanctions and penalties, could not be set aside in favor of some more palatable doctrine of election privilege. But the last word even of the Deuteronomist was one of hope. The commitment to Abraham was eternal and irreversible: "For the LORD your God is a merciful God; he will not fail you or destroy you or forget the covenant with your fathers which he swore to them" (Deut. 4:31).

C. *HISTORY OF PENTATEUCHAL CRITICISM.* The systematic, critical investigation of the Pentateuch has been carried on for the past two hundred years. Practically every OT scholar of note has written extensively on the subject, with the result that the pertinent literature is so vast as to defy satisfactory compilation, much less adequate review and evaluation. We must be content with a hasty sketch of the subject.

Scientific Pentateuchal criticism is commonly said to have begun with Jean Astruc, a French Catholic physician, who published his *Conjectures sur les mémoires dont il paroît que Moyse s'est servi, pour com-*

poser le livre de la Genèse, in 1753. Nevertheless, he had precursors, and some of his conclusions about the diversity of sources in Genesis had been anticipated but forgotten. During the hundred years following, the main issues of the literary analysis of the Pentateuch were worked out by a succession of brilliant Continental scholars until the proponents of the "new documentary theory" emerged triumphant. By the last quarter of the nineteenth century, the Reuss-Graf-Kuenen-Wellhausen hypothesis had swept the field, and was widely accepted as the definitive solution to the literary problems of the Pentateuch. In particular, the writings of Julius Wellhausen summed up the scholarly contributions of previous generations and presented the assured results of literary criticism in a compact and decisive fashion, briefly symbolized by the scholarly tetragrammaton JEDP. J and E were narrative sources, dating in the ninth and eighth centuries respectively, while the compilation JE was achieved in the seventh. D was composed in the seventh century, while P was postexilic. The final editing of the Pentateuch took place *ca.* 400 B.C.

Many new developments have occurred since the time of Wellhausen, though it is fair to say that the documentary hypothesis remains the landmark of Pentateuchal criticism, and the foundation for all further research. These developments may be grouped under three classifications: literary analysis, form-critical investigation, and tradition history. While these overlap, and scholars work across the lines of division, they are helpful in indicating the direction of interest and investigation.

1. Documentary hypotheses. Since the Pentateuch is literature and behind its present compilation there are sources (whether clearly defined documents or oral traditions), literary analysis will remain a basic task in Pentateuchal criticism, though other disciplines may be useful and necessary. For many years scholars have been engaged in refining the documentary analysis. It has generally been conceded that none of the major sources is itself a unity.

On the one hand, secondary and supplementary data have been separated from primary source material (thus, e.g., D_S is the Deuteronomic redaction of D, the code found in the temple); on the other, independent sources have been identified within the larger groupings of older analysis. Just as P and E were separated out of the original E source, so J_1 and J_2 were isolated, P_A and P_B, and so on. Because the sigla used to identify separate sources and secondary additions tended to be confused, new letters have appeared in the documentary formulation: L (for J_1, Eissfeldt); K (J. Morgenstern); and S (R. Pfeiffer). As part of the same process of re-examination, two of the older sources have been challenged, E and P. Are these independent documents or supplements and insertions into the basic J narrative?

The net effect of the close investigation of the sources has been to blur the clear lines of the documentary hypothesis. Looked at from one point of view, there are too many documents; thus the fragmentary hypothesis revives. From the opposite viewpoint, there are too few or none at all. As a result, the documents appear to be compilations themselves rather than original compositions, and to reflect a process covering hundreds of years and reaching back into the period of oral tradition with its discrete entities. The increasingly unsatisfactory results of literary analysis (for no new scheme has commanded anything like the support given to the older documentary alignment) have led scholars behind the literary sources into the preliterary origins of the contents of the Pentateuch, and also to a new investigation of the process by which the sources were gathered and preserved, and the Pentateuch compiled.

2. Form-critical analysis. The form-critical analysis of the Pentateuch is associated primarily with the name of Hermann Gunkel, whose monumental commentary on Genesis (1902; 3rd ed., 1910) marked an epoch in OT scholarship (cf. also *Die Urgeschichte und die Patriarchen* [2nd ed., 1921], and Gressmann's *Die Anfänge Israels* [2nd ed., 1922]). Gunkel was mainly concerned with two matters: to classify the biblical materials according to formal characteristics (i.e., the structure or pattern of the unit, rather than its content), and also to determine the *Sitz im Leben* (life situation) reflected by the particular item, out of which it arose, or in which it found its function and place. By close examination of the biblical materials, and comparison with similar literature of the other peoples of the Near East, it was possible to deal with both questions in a highly satisfactory and stimulating way. Some authentic idea of the prehistory of the literature of the Pentateuch could be gained, as well as helpful insights into the nature of Israelite and pre-Israelite patriarchal life. The danger of circular or self-validating reasoning was always present—i.e., to reconstruct a *Sitz im Leben* from the contents of a given piece, and then to interpret the piece on the basis of the supposed *Sitz im Leben.* In addition, while the purely scientific and objective discipline of form-classification has proved extremely useful, inferences concerning historicity and accuracy have been drawn on the basis of such classifications, which are often given tendentious titles—e.g., legend, myth, etc. With the aid of archaeological research, and in the light of the enormous quantities of inscriptional and other data bearing on the life of man in the ancient Near East, it was possible to put Pentateuchal criticism on a much sounder historical foundation than ever before. While the literary interrelationships of the Pentateuchal sources could be dealt with by the tools of literary analysis, and the relative chronology of the sources worked out, the question of the antiquity of the P material, e.g., could only be guessed at, or treated inadequately by the hazardous comparison of the Pentateuch with the historical books. Now it was possible to evaluate the traditions, customs, and nomenclature of the Pentateuch on the basis of contemporary data from the Near East and to show that the date of compilation of a Pentateuchal source did not necessarily bear upon either the antiquity or the accuracy of its contents. As a result of the archaeological revolution there has been a wholesale re-evaluation and redistribution of the Pentateuchal materials, especially those assigned to P. While this does not signify a return to the traditional view of Mosaic authorship or date, it has meant the rehabilitation in appropriate settings of the large mass of data hitherto regarded as mere priestly invention. Used cautiously, the Pentateuch is

an invaluable source, not merely for the point of view of its compilers, but for the actual early history of Israel.

Albrecht Alt, following the labors of A. Jirku (*Das weltliche Recht im AT* [1927]), and A. Jepsen (*Untersuchungen zum Bundesbuch* [1927]), established a landmark in the application of the form-critical method to the laws of the Pentateuch in his *Die Ursprünge des Israelitischen Rechts* (1934; now available in Alt's *Kleine Schriften zur Geschichte des Volkes Israel* [1953], vol. I). Alt distinguished formally between casuistic and apodictic laws, the former being characteristic of the jurisprudence of the ancient Near East, while the latter (with the form "Thou shalt not . . .") were peculiarly Israelite in their formulation and belonged to the sphere of sacral usage. Subsequent investigation has followed the lines laid down by Alt, though some of his conclusions have been questioned or modified. It does not seem likely that Israelite case law developed directly from contemporary Canaanite practice, but rather that it evolved indigenously in Israel from older, pre-Israelite patriarchal custom, going back ultimately to Mesopotamian sources. On the other hand, G. E. Mendenhall in *Law and Covenant in Israel and the Ancient Near East* (1955) has suggested that the suzerainty treaty of the second millennium provides an appropriate setting for categorical stipulations such as we have in the apodictic laws in the Pentateuch. Just as the suzerain imposes obligations upon his vassal, so the God of Israel requires obedience to the terms of the covenant (Exod. 19–24). The possible cultic *Sitz im Leben* for the presentation of the Decalogue—i.e., the covenant-renewal festival—had already been described by Sigmund Mowinckel in *Le décalogue* (1927).

Another development of the form-critical approach is to be seen in the works of G. von Rad and M. Noth. Von Rad retains the traditional JEDP pattern but regards the sources as aggregates of tradition accumulated or compiled over centuries. The basic pattern of the Hexateuch is defined by the credo (e.g., Deut. 26:5-9), while it is out of the cult that the Pentateuchal sources and the Pentateuch itself emerge. The sources, beginning with J, reflect the same historical (i.e., *geschichtliche,* or really *heilsgeschichtliche*) pattern, because it antedates them, having already been shaped by the confession of the worshiping community at the (central) sanctuary.

Noth deals similarly with the process of oral tradition which lies behind the documentary sources of the Pentateuch. He identifies a number of major themes, like the promise to the fathers, the deliverance from bondage, the Sinai experience. Around each of these cluster the etiological tales, cult legends, etc., which constitute the original oral materials. In his analysis of the documents, Noth separates Deuteronomy from the rest of the Pentateuch and attaches it to the Deuteronomic history. The other sources, J, E, and P, do not extend beyond Numbers, with the exception of some material at the end of Deuteronomy. On the other hand, there are no traces of the Deuteronomist in the Tetrateuch. Behind J and E, he recognizes a common source G (*Grundlage*). Some of the implications, and difficulties, of Noth's position have been considered above. Whether the Deuteronomic history will succeed the Hexateuch as the basic literary unit of the primary history remains to be seen. It is clear that both cannot survive.

Counterbalancing Noth's restriction of JE to the Tetrateuch is Hölscher's extension of these sources throughout the primary history. For him, J comes down to the division of the monarchy (I Kings 12), while E includes the whole history from Genesis to the end of II Kings. His views have not met with general acceptance. The contrast with Noth is so striking as to provoke the question of the nature of Israelite history writing, and the proper approach to the materials at hand. Eissfeldt has treated both presentations in a short but penetrating critique (*Geschichtsschreibung im AT* [1948]).

3. Traditio-historical criticism. The most radical resistance to the Wellhausen hypothesis has come from the so-called Uppsala school. Its chief representative is Ivan Engnell, who has proposed a new analysis of the Pentateuch, based upon the view that oral tradition played a much larger and longer role in the formation of the Pentateuch than is usually assigned to it. While much of the technical and legal material in the Pentateuch was written down, the narrative traditions were transmitted orally. It is useless, therefore, to try to isolate documentary sources, since these did not exist, and what sources there were had already been fused with one another and the P narrative framework in the preliterary stage. Engnell distinguishes two principal collections of material: the "P-work," which corresponds to the Tetrateuch, and the "D-work," which corresponds to Noth's Deuteronomic history. These works developed independently of each other, and were ultimately written down separately in postexilic times (fifth century). Later they were joined, since the "D-work" begins approximately where the "P-work" leaves off. The P-work centers upon the exodus tradition (Exod. 1–15), which reflects the cultic celebration of the deliverance from Egypt. (Here Engnell follows the lead of J. Pedersen, whose own views of the Pentateuch are highly original and anti-Wellhausenian.) It is around this nucleus that the rest of the material has accumulated in P-circles. By the time the traditions were reduced to writing, they were verbally fixed, so that the MT reflects faithfully the original. This conservative approach to the MT is a welcome shift from the days of free emendation. At the same time, however, the well-known Uppsala disregard for the LXX is less defensible, especially since the Qumran discoveries. A number of Hebrew MSS have been found which preserve a LXX-type text, thus confirming the fact that in the Pentateuch and historical books the LXX was a faithful, almost literal rendering of its *Vorlage*. The existence of distinct scribal recensions of the Pentateuch can only be damaging to the Scandinavian view of the very late compilation of the text.

There can be little doubt that Engnell's general emphasis upon the importance, the tenacity, and the reliability of oral tradition is warranted and commendable. His contention that much ancient material has been preserved faithfully in the text of the Pentateuch is likewise valid, and the idea of continuing circles of "P" and "D" may offer a solution to the problem of the accumulation of traditions. Nevertheless, the sharp distinction between oral and

written transmission tends to break down, the more the tenacity and reliability of oral tradition are maintained. There is no reason to doubt that the art of writing, even of narrative and poetic material, was practiced in early Israel, especially after the rise of the monarchy. It is very difficult to suppose that the court history of David was not written down within a comparatively few years of the events described, and so with other narrative materials, particularly those in prose. Moreover, the problems of the Pentateuch are literary, at least to a considerable extent; and one cannot banish them by transferring them from a written to an oral setting. In the future we shall have to reckon more with the oral traditions and their transmission, but hardly less with the written materials and their transmission.

4. Synthesis and summary. A. Weiser in his *Einleitung in das AT* (2nd ed., 1949) attempts a synthesis of the different approaches and methods of dealing with the Pentateuch. Instead of choosing one over another, use can be made of all, since the Pentateuch is more than a collection of traditions, more than a mixture of literary sources. It is closely bound to the cult and faithfully reflects the religious life and experience of the people. Its basic structure and unity come out of the cultic confession, which itself is the affirmation of Israel's historical experience. So Israel's authentic history, focused in the cult, finds expression in the Pentateuch, which is the precipitate of accumulated cultic traditions.

C. R. North, after surveying recent developments in Pentateuchal criticism, summarizes as follows: (*a*) It must now be recognized that the Pentateuch consists of traditions concerning the history of Israel down to the death of Moses, and that they do not have the values of scientific history. This is *Heilsgeschichte*—Israel's confession, its affirmation of what God has done for and to Israel in the world. That it is based upon some nucleus of fact may be granted, but this is not the most important fact about this type of literature. It has its *Sitz im Leben* in the cult; it is first of all a religious document. (*b*) Can the development of Israel's religious ideas be traced in the familiar JEDP arrangement, or are the evolutionist assumptions of the Wellhausen school no longer acceptable now that the simple chronological scheme of documents can no longer be sustained? North believes that some defense can be made both of the documents and the "evolution" of Israelite religion, though hardly with the assurance of the earlier scholars. North's view is judicious, and reflects the evolution of OT scholarship in its grasp of the nature and complexity of the Pentateuchal traditions. Nevertheless, we suggest that the distinction between *geschichtlich* and *historisch* should not be pressed too far in dealing with the Pentateuch. A religion that affirms the mighty deeds of God and attempts to place them in a historical context cannot afford to make nice distinctions between the fact and the affirmation of it. Admittedly what is central is the interpretation of the event, which itself is the confession of faith. But the event is or must be historical. Beneath the layers of tradition there was an event, which may not now be recoverable, though pessimism about the possibility of such recovery is excessive. It is that event (i.e., what actually happened, but theologically interpreted) which faith must affirm, not some imaginative tradition about it.

With regard to the second point, the question of evolution in Israelite religion can be separated from the chronological interrelationship of the sources. One may accept the scholarly dating of the sources without accepting also some evolutionary scheme concerning the religion of Israel: e.g., from polytheism to henotheism to monotheism; or from a tribal to a national to a universal God; or in ethical and moral principles. The arrangement and dating of the contents of the Pentateuch (as distinguished from the documents) will depend, not upon the inner criticism of the sources, but on comparison with objective nonbiblical data from the contemporary Near East.

The Pentateuch is the end product of an incredibly long process of accumulation, transmission, and redaction. Its original traditions go back to dim antiquity (e.g., the traditions behind the flood story must be many thousands of years old), and were transmitted orally for hundreds of years: folk tales, cult legends, etiological stories, and the like, each with its characteristic form, shaped and polished through repeated telling. These were linked into more complex collections, until a connected narrative emerged, built out of the basic pattern of the credo, or confession of faith. These poetic materials were consolidated into the official tradition of the confederation around its sanctuary during the period of the judges (G). Likewise going back to patriarchal times was a legal tradition, around which gathered customs and precedents, and from which emerged the various bodies of law preserved in the Pentateuch. With few exceptions, the mass of the material is premonarchic. Cultic practice is also of great antiquity; and in various collections, the Pentateuch preserves the sacral customs of early Israel. Because of the tenacity and conservatism of religious observance, it is almost impossible to trace development, but in general the Pentateuchal cult legislation reflects the practice of the early monarchy.

Formal classification, oral tradition, cultic setting and function, are important new tools in the struggle to understand the Pentateuch. Even more significant is the mass of archaeological data, which increasingly provides an external, historically reliable check upon the theories imposed upon the Pentateuchal material, and the reconstructions made of them. The Pentateuch apparently consists of essentially authentic data concerning the history of Israel from the time of the patriarchs down to the death of Moses, but including cultic, legal, and other technical data, which in their present form derive from later periods, particularly the amphictyony and the early monarchy. The documents themselves were composed at various times, beginning in the tenth century B.C. and ending in the middle of the sixth, when the whole of the primary history was completed. During the next century the Pentateuch was separated, and officially promulgated as the authoritative word of God for Israel, the only infallible rule of faith and practice.

Bibliography. The most recent presentation of the general subject of Pentateuchal criticism is to be found in O. Eissfeldt, *Einleitung in das AT* (2nd ed., 1956), which has an extensive bibliography. Very worthwhile are: C. R. North, "Penta-

teuchal Criticism," *The OT and Modern Study* (1951), pp. 48-83, which also includes a useful Bibliography; and H. F. Hahn, *OT in Modern Research* (1954).

General treatments in English: A. Bentzen, *Introduction to the OT* (2nd ed., 1952). R. H. Pfeiffer, *Introduction to the OT* (2nd ed., 1953). The old classic is S. R. Driver, *Introduction to the Literature of the OT* (9th ed., 1913). The most comprehensive publication of the Wellhausen hypothesis, along with a complete history of criticism to that time, is to be found in J. E. Carpenter and G. Harford-Battersby, *The Hexateuch According to the Revised Version* (1900).

D. N. FREEDMAN

PENTATEUCH, SAMARITAN. *See* SAMARITAN PENTATEUCH.

PENTECOST pĕn'tĭ kôst, —kŏst [πεντηκοστή, fiftieth; *or* ἡ ἡμέρα τῆς πεντηκοστῆς, the fiftieth day]. The Greek term for the Jewish Feast of Weeks (*see* WEEKS, FEAST OF), so named because it fell on the fiftieth day after the ceremony of the barley sheaf during the Passover observances (*see* PASSOVER AND FEAST OF UNLEAVENED BREAD). It marked the beginning of the offering of first fruits. The NT uses the term to refer to the established Jewish feast. But since the gift of the Holy Spirit to the church occurred on the day of Pentecost (Acts 2:1), Christians reinterpreted the meaning of it in terms of this event.

J. C. RYLAARSDAM

PENUEL pĭ nōō'əl, pĕn'yōō əl [פְּנוּאֵל, face of God]. Alternately: PENIEL —nī'—, pĕn'ĭ əl [פְּנִיאֵל] (Gen. 32:30). **1.** A son of Hur and grandson of Judah, mentioned as the "father" (founder) of Gedor (I Chr. 4:4).

2. A Benjaminite, son of Shashak (I Chr. 8:25).

3. A city in E Palestine, situated on the River Jabbok (Nahr ez-Zerqa) above and to the E of Succoth. According to the story told in Gen. 32:24-32, Jacob was returning home from Paddan-aram and was spending the night on the banks of the Jabbok when one (cf. Hos. 12:4: "angel") in the form of a man came and wrestled with him all night, departing in the morning after giving him the name Israel. Thereupon Jacob called the place Peniel, "for I have seen God face to face, yet my life is preserved." Elsewhere, however, the only name given for the town is Penuel.

When Gideon was pursuing the Midianites after he had defeated them in the Valley of Jezreel, he asked the citizens of the town for food and received a rude answer; on his return he avenged this insult by destroying the tower of the city and killing all its male inhabitants (Judg. 8:8-9, 17). Nothing further is heard of the city for two centuries, and it may have been in ruins when Jeroboam I of Israel "built" it (I Kings 12:25); but the term may mean that he enlarged and fortified it. The city is perhaps Pernoual, number fifty-three in Shishak's list of conquered cities; it is mentioned in late Assyrian records as Panili. The site of Penuel is the E of the two mounds Tulul edh-Dhahab (N. Glueck named this Tell edh-Dhahab esh-Sherqi), which contains sherds from the Early Iron period (1200-900 B.C.) and was evidently a strongly fortified place, nearly surrounded by the river and very steep on the E side; it commanded the entrance into the Jordan Valley from the gorge of the Jabbok and was in a fertile district.

Bibliography. S. Merrill, *East of Jordan* (1881), pp. 390-92; N. Glueck, *AASOR*, XVIII-XIX (1939), 232-35.

S. COHEN

PEOPLE OF GOD [עַם אֱלֹהִים; λαὸς τοῦ θεοῦ]; **PEOPLE OF THE LORD** [עַם יהוה]. One of many expressions in the OT which indicate the unique relationship which exists between Yahweh and his people (Num. 11:29; 16:41; Judg. 5:11, 13; I Sam. 2:24; II Sam. 6:21; II Kings 9:6; Zeph. 2:10; cf. Judg. 20:2; II Sam. 14:13); used in the NT in a similar framework (*see below*).

1. In the OT. Israel is Yahweh's "property, possession, inheritance" (Exod. 19:5; Deut. 4:20; 7:6; Mal. 3:17); his "servant" (Ps. 135:14; Isa. 48:20); his "son" (Exod. 4:22-23; Hos. 11:1); his "sheep" (Ps. 95:7); his "holy people" (Deut. 14:2; 28:9; Isa. 62:12). While the term "people of God" appears relatively few times, the use of עַם with personal suffixes ("my people," "thy people," "his people") occurs very frequently in this sense (cf. also the "congregation, assembly of the LORD"; Num. 16:3; Deut. 23:2-4; cf. Neh. 13:1).

The term עַם יהוה, "people of Yahweh," may have had its origin in the cultic institution of the holy war in the days of the tribal federation before the monarchy, as a designation for the assembly of able-bodied men gathered for defensive warfare (*see* WAR, IDEAS OF) against a common enemy (Judg. 5:11, 13; cf. 20:2). Behind this institution lay the unique COVENANT relationship, according to which the tribes confessed Yahweh as the one who had constituted the people Israel through certain mighty acts in history, and had entered into covenant with them (cf. Deut. 26:5-9; Josh. 24:2-13). Cultic renewal of this covenant, with its obligation of faithfulness to covenant law, seems to have formed the core of ancient Israelite worship. *See* WORSHIP IN THE OT.

Deut. 4 (cf. Exod. 19:4-6; Deut. 7:6-12; 32:8 ff; Ps. 135) expresses the relationship of Yahweh to Israel in the theological terms of the seventh century: Israel is Yahweh's possession (vs. 20) because of his gracious choosing, wrought in love (vs. 37; cf. Deut.

7:6; 14:2; Ps. 135:4), though there is nothing impressive (Deut. 7:7) or virtuous (9:5-6) about Israel which evokes this love. Yahweh remains faithful to his covenant (4:31), while Israel's enjoyment of the covenant promises is conditioned by faithfulness to the obligations (vs. 40).

While the expanding glory of the Davidic-Solomonic empire seemed to epitomize Israel's special relationship to God as the foundation and norm of her existence, the prophets of the ninth through the seventh centuries proclaimed that this relationship placed Israel under judgment; the covenant had been broken through Israel's unfaithfulness, and she was no longer "my people" (Hos. 1:9; cf. Deut. 4:27; Isa. 1:10; Amos 3:2).

Nevertheless, Yahweh's faithfulness remains unchanged (Hos. 2; cf. Deut. 4:31), and a repentant REMNANT might yet expect the restoration of Israel as the people of Yahweh (Hos. 2:23; cf. Jer. 31:31-34; Ezek. 11:16-20). In postexilic prophecy the doctrine of restoration occasionally broke nationalistic bounds to include all nations (Zech. 2:10-12; cf. Isa. 45:18-25; 49:6; 55:4-7), but such universalism was countered by a strong religious particularism, which ultimately became the guiding element in late Judaism.

2. In the NT. Λαὸς τοῦ θεοῦ, "people of God," and related terms may be used to describe the "old Israel" (Heb. 11:25; cf. Matt. 1:21; Luke 1:68; Rom. 11:1-2), but the decisive NT usage identifies the people of God with the church (Rom. 9:25-26; II Cor. 6:14 ff; Tit. 2:14; Heb. 8:10; I Pet. 2:9-10; Rev. 21:3; *see* CHURCH, IDEA OF) grounded upon faith in Jesus Christ. In a similar framework of OT fulfilment, the NT sees the church as the true Israel (Rom. 9:6; I Cor. 10:18; Gal. 6:16), the true seed of Abraham (Gal. 3:29; cf. Rom. 9:7-8), the true circumcision (Phil. 3:3), and the true temple (I Cor. 3:16).

PEOPLE OF THE EAST. *See* EAST, PEOPLE OF THE.

PEOPLE OF THE LAND. The literal translation of the עם הארץ, a technical term designating originally the qualified male citizenry of a land. *See* 'AM HA'AREZ.

PEOR pē'ôr [הפעור, the opening. **1.** A mountain in Moab, the last place to which Balak took Balaam that he might curse Israel (Num. 23:27-28). They went "to the top of Peor, that overlooks the desert" (KJV "that looketh toward JESHIMON"), from which the camp of the Israelites in the Plains of Moab was visible (24:2). The location must be near Mount Nebo, but a specific mountain has not been identified. *See* BAAL-PEOR; BETH-PEOR.

2. The god of Mount Peor (*see* 1 *above*); a shortening of the name BAAL-PEOR. The Midianite incident in Num. 25 is referred to Peor (vs. 18). In 31:16, but not elsewhere, it was by the counsel of Balaam that the Midianite women led Israel astray in the matter of Peor. In Josh. 22:17, the sin of the Reubenites, the Gadites, and the half-tribe of Manasseh in building an altar is compared to the sin at Peor.

3. A location in Judah (Josh. 15:59 LXX); modern Khirbet of Faghur, SW of Bethlehem.

E. D. GROHMAN

PERAZIM, MOUNT pĭ rā'zĭm [הר פרצים] (Isa. 28:21). A place in Isaiah's warning message. *See* BAAL-PERAZIM.

PERDITION. A translation of בליעל and of ἀπώλεια.

In the OT the word occurs in II Sam. 22:5 and in the parallel verse in Ps. 18:4. Here the meaning of "perdition" is "death." The psalmist, in referring to the "torrents of perdition" or floods of destruction which assailed and terrified him, is alluding to Sheol and death.

In the NT "perdition" translates ἀπώλεια four out of the eighteen times the Greek word occurs. The Greek word means essentially "destruction, annihilation, ruin," and it is usually translated "destruction." The reference is primarily to eternal destruction—e.g., in Matt. 7:13, where "destruction" is opposed to "life," and in Phil. 1:28, where it is opposed to "salvation." In Rev. 17:8, 11, the reference is not to the destruction of an ordinary mortal, but to the ruin of "the beast," and here the KJV-RSV translation is "perdition." The beast goes to perdition—i.e., he is doomed to destruction; he is not to participate in the new creation.

"Perdition" occurs in two other NT passages, both times in the expression "son of perdition" (John 17:12; II Thess. 2:3). In the gospel passage the "son of perdition" is Judas Iscariot, who alone, of those whom the Father gave the Son, was lost. The "son of perdition" is the son destined for destruction. In the Thessalonians passage the "son of perdition" is the "man of lawlessness" who proclaims himself to be God and must be revealed before the end comes. (*See* ANTICHRIST.) But this man of lawlessness will be destroyed by the Lord Jesus (II Thess. 2:8).

The phrase "son of perdition" refers also to those who perished in the Flood (Jub. 10:3); to Satan (Gospel of Nicodemus XX); and to false prophets (Akhmim Fragment of the Apocalypse of Peter 1.1).

B. H. THROCKMORTON, JR.

PEREA pə rē'ə [Περαία, *from* πέραν τοῦ Ἰορδάνου = עבר הירדן (Isa. 9:1), beyond the Jordan]. The Transjordan district which was part of the kingdom of Herod the Great and after his death in 4 B.C. inherited with Galilee by his son, Herod Antipas; significant as the route of Jesus' last journey to Jerusalem.

1. Location. The district was bounded on the W by the Jordan River and the NE part of the Dead Sea; on the E by the districts of Gerasa, Philadelphia, and Heshbon. The city of Pella, to which the Christian community of Jerusalem fled shortly before the outbreak of the Jewish Revolt in A.D. 66, marked the N boundary; and the Herodian fortress of Machaerus, the scene of the execution of John the Baptist, established the S line against which the Nabatean kingdom pressed (Jos. Antiq. XX.i.1; War III.iii.3). According to Josephus (War IV.vii.3) the capital was Gadara or Gador, the modern Tell Gadur, which is to be distinguished from the city of the same name in the Decapolis. The fortified city of Amathus (Tell

'Ammata) may have served as the N capital above the Jabbok. Glueck's surveys in Transjordan have confirmed the S boundary as running from Machaerus to the top of the W edge of the Moabite Plateau; on the E the boundary consists of a N-S line running somewhat W of MEDEBA, thus correcting Josephus' notation "from Philadelphia to the Jordan" to read "from the Jordan to about one half the way to Philadelphia." Dalman (*see bibliography*) places the N limit as S of Pella near the Wadi Fakaris. One of three main routes from Galilee to Judea led southward through Perea along the Jordan Valley; another followed the valley on the W side of the Jordan via Scythopolis, Koraia, and Jericho; and the third, via Scythopolis, Shechem, and Bethel. According to Matt. 19:1 it was the first of these roads that Jesus and his disciples took, remaining for some time in Jewish Perea.

2. History. In earlier times this territory had been inhabited by the peoples of Gilead, Ammon, and Moab. In early Maccabean times Judas Maccabeus brought relief to an oppressed Jewish minority in the cities of Gilead and transported them for safety to Judea (I Macc. 5:9-54). John Hyrcanus (135-104 B.C.) conquered the important city of Medeba and possibly introduced the policy of forcible conversion to Judaism; this policy then carried on by the ruthless Hasmonean ruler Alexander Janneus (103-76), who in bloody campaigns subdued and Judaized Perea and Galilee. Ragaba in Perea was the scene of Alexander Janneus' death from malaria in 76 B.C. In 57, Gabinius, the proconsul of Syria, made Amathus the capital of one of the five districts of Palestine. During Jesus' time the district of Perea was under the control of Herod Antipas, who rebuilt the city of Betharamphtha, giving it the names Julias and Livias (Jos. Antiq. XVIII.ii.1; *see* BETH-HARAM). At this time the population was predominantly Jewish. The Mishna speaks of Perea as one of the three Jewish provinces (B.B. III.2). In some sense, however, these provinces were regarded as separate districts; Keth. XIII.10 says that a wife (or husband) could not be forced by her partner to move from one to another of these territories. *Ca.* A.D. 44 strife broke out between the Pereans and the Philadelphians over border lines (Jos. Antiq. XIX.ix.2). In the Jewish Rebellion the Jews of Perea joined their brethren all over Palestine in the fatal struggle to throw off the Roman yoke (Jos. War IV.vii.4-6). Under Nero the territory was given to Herod Agrippa II, who ruled until his death in A.D. 100; thereafter, it became part of the Roman province of Syria.

3. In the NT. The name Περαία is found frequently in Josephus, but it occurs nowhere in the NT except in a variant reading of Luke 6:17. Instead the expression "beyond the Jordan" (πέραν τοῦ Ἰορδάνου) is found, a translation of an Aramaic or Hebrew form. In John 1:28, John is said to have been baptizing in the Perean city of BETHANY. Early in Jesus' Galilean ministry crowds followed him from all three of the Jewish provinces (Matt. 4:25; cf. Mark 3:8). According to Matt. 19:1 (note the expression "Judea beyond Jordan") Jesus and his disciples came into this territory after they left Galilee for the last time, perhaps crossing the Jordan at Scythopolis or coming around the E side of the lake and thence descending into the Jordan Valley. Mark 10:1 may be understood to mean that they traveled through Samaria into Judea, crossing into Perea along a Roman road NE of Bethel. It is not known whether Jesus on his way through Perea remained in the valley or went up to the highlands, where he might have passed through such cities as Ragaba, Mahanaim, Gador, Beth Nimrin, and Bethany; but Matthew clearly states that he continued his active ministry of healing and teaching while he remained for some time in this area.

E. W. SAUNDERS

PERES pĭr'ēz [פרס]. Singular of "parsin." *See* MENE, MENE, TEKEL, AND PARSIN.

PERESH pĭr'ĕsh [פרש] (I Chr. 7:16). Son of Machir and his wife Maacah, of Manasseh.

PEREZ pĭr'ĕz [פרץ, breach, bursting forth, *or perhaps* spreading; *cf. place name* פרץ עזה *and* Akkad. *personal name Parṣī;* LXX and NT Φάρες]; KJV OT PHAREZ fâr'— except in I Chr. 27:3; Neh. 11:4, 6; KJV NT PHARES —ēs; PEREZITES pĭr'ə zīts; KJV PHARZITES fär'—. One of twin sons (the other was Zerah) born to Judah and his daughter-in-law Tamar (Gen. 38:29; I Chr. 2:4; 4:1); the father of Hezron and Hamul (Gen. 46:12; Num. 26:21; I Chr. 2:5); ancestral head of the "family of the Perezites" (Num. 26:20).

The story of his birth (Gen. 38:27-30, with which cf. 19:36-38 and especially 25:21-26) gives the popular etymology of his name, but is more significant for its attempt to account for the pre-eminence of the younger Perez clan over the older clans of Judah. The importance of the Perez group is reflected in the later notices giving the positions occupied by the Judahites in and around Jerusalem (I Chr. 9:4; 27:3; Neh. 11:4-6). But the superiority of Perez must also be linked with the tradition that David descended from this branch (Ruth 4:18-22; Matt. 1:3; Luke 3:33).

The reference to Perez in Ruth 4:12 harks back to Gen. 38, in that both stories concern the institution of Levirate marriage and the blessing of numerous descendants. *See* MARRIAGE § 1*g*.

L. HICKS

PEREZ-UZZAH pĭr'ĭz ŭz'ə [פרץ עזה, breach of Uzzah] (II Sam. 6:8). Alternately: PEREZ-UZZA [פרץ עזא] (I Chr. 13:11). The name given to the site, associated with the threshing floor of Nacon (or Chidon; I Chr. 13:11), commemorating the death of UZZAH in connection with David's attempted transport of the ark to Jerusalem (II Sam. 6:8). The designation reflects the belief that Uzzah's death resulted from the breaking forth of the anger of the Lord upon him for his presumptuous touching of the ark.

Although the exact site is unknown, it was W of Jerusalem, along the road leading to that city from Kiriath-jearim.

W. H. MORTON

PERFECTION. The classical definition of "perfection" is given by Aristotle (Metaphysics V.16): a thing is perfect (τέλειος) when it "lacks nothing in respect of goodness or excellence" and "cannot be surpassed in its kind." By this definition, taken strictly, perfection is an ideal condition, never actually realized in this imperfect world. But even Aristotle is not concerned with the theoretic ideal of perfection, for he goes on to speak of a flute player and a physician as being perfect when they lack nothing in regard to the form of their peculiar excellence. Ordinarily, in the Bible as elsewhere, the words "perfect" and "perfection" are used of what closely approaches the ideal condition. This is not a misuse, or even a loose use, of language, for in all the languages with which we are now concerned the words which are rendered in English by "perfect" and "perfection" denoted originally something other and less than ideal perfection. In Hebrew, תמים—to take only the most common of a dozen or more words which can be translated by "perfect"—meant "whole, entire, sound." In Greek τέλειος meant "full-grown, mature, having reached the appointed end [τέλος] of its development." In Latin, similarly, *perfectus* meant, to begin with, "thoroughly made or done." Much more often than not, it is in this lower or loose sense that these words are used in the Bible.

Thus in the OT more than half the ninety or so occurrences of תמים refer to the requirement that animals offered in sacrifice must be "unblemished." Wherever the word is used of men or their conduct, "upright" or "blameless" is a better rendering than "perfect" (e.g., Gen. 6:9). Only in five instances, where the reference is to God (Deut. 32:4; II Sam. 22:31=Ps. 18:30; Job 37:16; Ps. 19:7), may "perfect" rightly be used, and in its strictest sense.

In the NT the word τέλειος occurs nineteen times. In two passages (I Cor. 14:20; Heb. 5:14), because of the contrast with "children" or "babes," some word expressing "full growth" or "maturity" is plainly required, and in five other places the same sense is almost certainly intended (I Cor. 2:6; Eph. 4:13; Phil. 3:15; Col. 1:28; 4:12). In most of the remaining twelve instances it is fairly clear that the word is used in the lower sense mentioned above (cf., e.g., Matt. 19:21; Jas. 3:2). Even in Matt. 5:48: "You, therefore, must be perfect, as your heavenly Father is perfect," although the perfection of God is absolute, it is obvious that such absolute perfection cannot be rightly required of men. The parallel in Luke (6:36) is: "Be merciful, even as your Father is merciful," and in the context thus seems to express more exactly the meaning intended. But it is as clearly impossible for men to be merciful as God is merciful as for them to be perfect as God is perfect. In both versions this saying presents an ideal to which the Christian must aspire, not a standard to which he must attain. So understood, it involves no difficulty, at least for our understanding of it.

The verb τελειοῦν, "to make (something) τέλειος," has a wider range of meaning than the adjective itself; it is used of the fulfilling of a prophecy (John 19:28), of the completion of a period of time (Luke 2:43), and of the finishing of a course or task (Acts 20:24). It is used more often in Hebrews (nine times) than in any other NT writing. The gifts and sacrifices prescribed by the law cannot perfect the worshiper (Heb. 9:9; 10:1; cf. 7:19), but Christ "by a single offering . . . has perfected for all time those who are sanctified" (10:14). Clearly this does not mean that they are made morally and spiritually perfect, but that their consecration is complete and final. But the phrase "the spirits of just men made perfect" (12:23) may perhaps indicate that it is only after death that spiritual perfection is attained by those who have been so consecrated on earth (cf. also 11:40). (There may be the same suggestion in Phil. 3:12, where the perfection toward which Paul strives seems to be identified with the "resurrection from the dead" [vs. 11].) The three remaining instances of the word in Hebrews refer to Christ's being made perfect through his sufferings (2:10; 5:9; 7:28). Since, as the Son, Christ had the perfection of God before his incarnation, it is clear that it is only as the Redeemer of men that he could be "made perfect" through sufferings—i.e., made completely adequate and effective as Redeemer (cf. 2:14-18).

The only NT passage in which the word causes real difficulty is Jesus' message to Herod Antipas: "Behold, I cast out demons and perform cures today and tomorrow, and the third day τελειοῦμαι" (Luke 13:32). Here the RSV renders: "I finish my course," but it is very doubtful that the verb by itself can have this sense. It is probably better to take it to mean: "I am (being) made perfect," and admit that the phrase is a gloss, which expresses much the same idea as the three passages in Hebrews just considered.

It is unnecessary to consider the other words derived from τέλειος which occur in the NT—τελείως (I Pet. 1:13; "fully"); τελειότης (Col. 3:14 ["perfect harmony"]; Heb. 6:1 ["maturity"]); τελείωσις (Luke 1:45; Heb. 7:11 ["fulfilment, perfection"]); and τελειωτής (Heb. 12:2). (In this last instance the meaning of the whole phrase depends upon whether πίστις is "*our* faith" [RSV] or faith generally of which Jesus himself was the perfect example.) Nor is it necessary to consider the other words (ἐπιτελοῦν, καταρτίζειν, and the cognate nouns) sometimes rendered in the KJV by "perfect" or "perfection"; in all but two instances the RSV gives a different rendering, and even in those two instances "perfect" must be understood in its loose sense.

J. Y. Campbell

PERFUME. Perfume occupied an important place in the life and worship of the Near East in biblical times.

Bibliography

1. Terminology. Words translated by "perfume" or its derivations are:

a) Forms of the root רקח, *rāqāḥ*, "to prepare perfume or ointment": the participle, רקע, *rôqēᵃḥ* (Exod. 30:25, 35; 37:29; Eccl. 10:1; "perfumer"; KJV "apothecary"); and the nouns רקח, *raqqaḥ* (feminine plural, I Sam. 8:13; masculine plural, Neh. 3:8; "perfumers"; KJV "apothecaries"), רקח, *riqqûᵃḥ* (Isa. 57:9; "perfumes"), מרקחת, *mirqaḥath* (II Chr. 16:14; "perfumer's art"; KJV "apothecaries' art"; lit., "perfume mixture," or "spice or ointment mixture"; cf. Exod. 30:25; I Chr. 9:30).

b) קטרת (Prov. 27:9; "perfumes"), usually meaning "incense"; the participle מקטרת, *mᵉquṭṭereth* (Song of S. 3:6; "perfumed").

c) להריח (Exod. 30:38; "as perfume"; KJV "to smell thereto"; lit., "to make a smell or perfume"; cf. ריח, "scent, fragrance, smell, savor," of garments, nard, ointments, in Gen. 27:27; Song of S. 1:3, 12; 4:11).

d) בשם (Isa. 3:24; "perfume"; KJV "sweet smell"; elsewhere usually rendered "spices" [Exod. 25:6; 35:28; I Kings 10:2; Ezek. 27:22; etc.]; possibly balsam oil).

e) נוף (Prov. 7:17; "to perfume"; lit., "to sprinkle").

f) בתי הנפש (Isa. 3:20; "perfume boxes"; KJV "tablets"; lit., "soul houses," perhaps a reference to "charms").

For specific perfumes mentioned in the Bible, *see:* ALOES; BALM; BALSAM; BDELLIUM; CAMEL'S THORN; CASSIA; CINNAMON; FRANKINCENSE; GALBANUM; GUM; MYRRH; NARD; ONYCHA; SAFFRON; STACTE; SWEET CANE. *See also* SPICE; INCENSE; OINTMENT.

2. Perfume trade. ***a. Sources of perfume.*** The known sources of the biblical perfumes are: Arabia (bdellium, frankincense, myrrh), India (aloes, nard), Ceylon (cinnamon), Persia (galbanum), Palestine (stacte, saffron), Somaliland (frankincense), and the Red Sea (onycha).

b. Routes of transport. In Bible times Arabia was not only itself the source of many perfumes, but also the land of transit for perfumes from Africa and India. From Arabia caravans took the spices to Babylon or to Mediterranean ports. Gaza was an important terminus for such caravans, and the Sabeans also transported spices to Tyre (Ezek. 27:22). It was to such Arabian spice merchants that Joseph's brothers sold him (Gen. 37:25). I Kings 10:10 records the large quantity of spices which the Queen of Sheba brought to Solomon as a gift. Job, who lived along the route of the perfume caravans, named one of his daughters Keziah—i.e., "cassia" (Job 42:14). In the first century A.D., Rome was a center for spices, as well as for all other merchandise (Rev. 18:13).

c. Manufacture. The first maker of perfume mentioned in the Bible is Bezalel, who prepared the holy anointing oil and the sacred incense (Exod. 37:29), doubtless according to Egyptian methods. Samuel warned that a king would take women (as in Egypt) to be perfume makers (I Sam. 8:13). Perfumers are mentioned in Jerusalem after the return from exile (Neh. 3:8). I Chr. 9:30 indicates that certain priests were responsible for mixing the perfumes for the incense. According to the Mishna (Sheḳ. V.1), the priestly family of Abtinas had this duty. In ancient Egypt the overseer of incense for the Temple of Amon at Thebes was an important personage.

The process of making the perfume varied according to the raw material and the purpose. The raw material could be the hardened sap of a plant (bdellium, frankincense, galbanum, myrrh, stacte), the bark (cinnamon), the flower (saffron), or the root (nard). Onycha was the closing flap of a species of mollusk, called stromb or wing shell. Fresh flowers were squeezed, as women are shown doing on Egyptian reliefs.* Sometimes the raw material was powdered and used in a dry form, like a sachet powder (Song of S. 3:6). The modern method of distilling an essence was not practiced in ancient times. On the making of ointment with oil, *see* OINTMENT § 3. Fig. PER 29.

Imprimerie de l'Institut Français d'Archéologie Orientale

29. Lotus blossoms being gathered, pressed, and the liquid presented to a woman holding a lotus; from Egypt (450-350 B.C.)

An important element in the art of the perfumer was the blending of different scents. In the sacred anointing oil, myrrh, cinnamon, aromatic cane, and cassia were combined (Exod. 30:22-25), as fourteen perfumes were used in an anointing oil for the idols at Edfu in Egypt. The holy incense of the Hebrews originally included four perfumes: stacte, onycha, galbanum, and frankincense (Exod. 30:34-35). In the Herodian temple seven other perfumes were added to the incense: myrrh, cassia, nard, saffron, costus, aromatic cane, and cinnamon (T.B. Ker. 6*a*). The Egyptian incense called kyphi had sixteen ingredients. Exod. 30:33, 38, warns that the formulas of the holy oil and incense were not to be imitated for secular use.

3. Containers. A dry perfume could be kept in a bag (Song of S. 1:13). The luxury-loving women of Isaiah's day carried perfume boxes (Isa. 3:20). The Mishna (Shab. VI.3) forbids women to carry perfume boxes or flasks on the sabbath. The nard ointment with which Mary anointed Jesus was in an alabaster jar (Matt. 26:7). Many ornate perfume containers of

alabaster were found in the tomb of Pharaoh Tutankh-Amon. *See* ALABASTER.

4. Secular uses of perfume. ***a. As a cosmetic.*** In a hot climate perfume is needed to counteract body odors. Perfume in oil could be used on the head (Matt. 26:7), on the feet (Luke 7:38), on the hands (Song of S. 5:5), or on the body especially after a bath (Ruth 3:3; *see* OINTMENT § 6*a*). In powdered form perfume might be carried in a bag inside the clothes (Song of S. 1:13). The sweetness of breath in Song of S. 7:8 may well be natural, though some suggest the verse implies chewing perfume. Perfume was especially applied by women who wished to be attractive—e.g., Esther (Esth. 2:12) and Judith (Jth. 10:3)—and was much employed by lovers (Song of Solomon and the erotic poetry of Egypt). Its excessive use is associated with a life of pleasure (Wisd. Sol. 2:7).

b. On clothes and furniture. The clothes of the beloved (Song of S. 4:11) and of the king at his wedding (Ps. 45:8—H 45:9) were perfumed. The palanquin of Solomon was fragrant with many perfumes (Song of S. 3:6). The harlot sprinkles her bed with various scents (Prov. 7:17).

c. In wine. Spiced wine is mentioned in Song of S. 8:2. Wine with myrrh was offered to Jesus at the Crucifixion as an anesthetic, but he refused it (Mark 15:23).

d. Mortuary use. According to the Egyptian process, perfumes were undoubtedly employed in the embalming of Jacob (Gen. 50:2-3) and of Joseph (Gen. 50:26). Perfumes were strewn on the bier of King Asa (II Chr. 16:14) and were doubtless burned in the fire at this royal funeral. Nicodemus brought a mixture of myrrh and aloes which was used in wrapping Jesus' body (John 19:39-40). The weight of these spices, a hundred pounds, is not excessive, in light of the fact that five hundred slaves carried the spices used for the funeral of Herod the Great (Jos. Antiq. XVII.viii.3).

5. Liturgical uses. Various perfumes were combined, as indicated above (§ 2*c*) in the holy oil (*see* OINTMENT § 6*a*) and in the sacred INCENSE.

6. Comparisons and figurative references. In the Song of Solomon both the lover (1:13) and the beloved (4:13-14) are metaphorically called perfumes. Wisdom is compared in excellence to various perfumes (Ecclus. 24:15), and the memorial of Josiah is like incense compounded by the perfumer (Ecclus. 49:1). Perfume used as incense is a symbol of the knowledge of Christ (II Cor. 2:14), of the self-sacrifice of Christ (Eph. 5:2), of the offering of the Philippians to Paul (Phil. 4:18), and of the prayers of the saints (Rev. 5:8).

J. A. THOMPSON

PERFUMER. *See* PERFUME §§ 1, 3*c*.

***PERGA** pûr'gə [Πέργη] (Acts 13:13-14; 14:25). One of the leading cities in ancient Pamphylia, a province on the S coast of Asia Minor.

Perga is located in the Plain of Pamphylia, some eight miles inland from the coast and some five miles W of the ancient River Cestrus (modern Ak Su). This situation had a double advantage: the city was sheltered from coastal attacks and was located on the road from Attalia to Side, still an easy W-E communication in the Pamphylian Plain. A natural rocky hill formed its citadel.

The period of foundation of Perga is uncertain. Its name is pre-Greek, and presumably carried over from prehistoric times. Greek settlers may have occupied the city in the time after the Trojan War, when Pamphylia absorbed groups of Mycenean refugees. Late local dedications name Mopsos and Kalchas as founders of Perga in a clear reference to the colonization by Greeks of the Late Mycenean Diaspora. The dialect of Pamphylia confirms such guesses. At Perga the local goddess, sometimes labeled Artemis, was also referred to as Wanassa Preija, which sounds like a Bronze Age epithet.

The general history of Perga in the Persian period is unknown, and it cannot have been a prominent city at the time. Alexander in 334 B.C. borrowed guides from Perga and came through the city twice, once on his way E from Lycia to Side, and after a detour in E Pamphylia again on his way to Phrygia. In Hellenistic times the city had a Seleucid garrison when Manlius Volso approached Perga in 188 B.C. Its surrender was ordered by Antiochus; and the city, although claimed by Eumenes, seems to have become free after 188.

The coins of Perga begin at this period and continue into the third century A.D. The history of the town is uneventful except for minor local incidents such as the plundering of some temple treasure of Artemis by Verres in 80-79 B.C. Several honorary inscriptions mention the Roman emperors of the first and second centuries A.D. The most outstanding proof of the activity in Roman Perga is its buildings and monuments.

Perga appears as a metropolis on coins issued under the Emperor Tacitus (275-76). In early Byzantine times Perga was the metropolitan bishopric of W Pamphylia, but later on it was eclipsed by Attalia.

Paul and Barnabas on their first missionary journey set out from Paphos and came to Perga (Acts 13:13). Since Attalia is not mentioned as an intermediate port here, it seems possible that their ship sailed up the Cestrus River to a port E of Perga, or perhaps stopped at the mouth of the Cestrus. They traveled from Perga to Pisidian Antioch without delay, but after their return from Antioch they traveled back through Pisidia to Perga, where they preached, this time leaving the country via the harbor of ATTALIA.

The ruins of Perga are relatively well known. The site is near the village of Murtuna some eleven miles E of Antalya. It consists of an acropolis, a walled lower city, and outlying monuments. The acropolis, *ca.* 160 feet high, dominates the town. Its access is from the S. No major buildings have been identified on the citadel, which must have been the point of attraction for the earliest settlers at Perga.

The lower city was at least of Hellenistic origin, but probably of earlier date. Its city walls are Seleucid in appearance. They formed a rough rectangle with a magnificent city gate to the S. Two round towers flanked the entrance into an oval court. This Hellenistic complex was remodeled in the early second century A.D. by a Roman benefactress of the city, Plancia Magna, whose lavish dedications have recently been found.

The Hellenistic city plan presumably was less regular than the Roman remodeling. In the final version, two wide colonnaded streets formed vast crossroads through the town, one leading from the citadel to the S gate and the other connecting the E and W gates. The streets had Ionic colonnades, were over seventy feet wide with channels in the center, and had shops behind the colonnades. E of the chief gate lay a Roman market place with shops on four sides behind Corinthian stoas.

Some of the civic buildings have been identified within the walls—e.g., a palestra and baths. The theater and the stadium are outside the walled lower city. The stadium is built in Roman fashion on ground level, supported on sloping barrel vaults. The theater is built into a natural hill. Its capacity is estimated at twelve thousand spectators, an indication of the attendance at festivals in Roman times.

The cemeteries of Perga are neatly aligned along the streets leaving the S and W gates. Decorated sarcophagi and small mausoleums of the second century A.D. display the talents of Pamphylian sculptors.

The most important monument of Perga, the temple of the city goddess, has not yet been located. The Wanassa Preija or Artemis Pergaia is known from coins as a Hellenized Artemis figure or an idol resembling Artemis of the Ephesians. Her shrine, which had the rights of an asylum, was on a height near the city (Strabo XIV.667). The goddess, whose cult was known in other cities (e.g., Rhodes, Halicarnassus), maintained herself and her festival tenaciously as a survival from time immemorial. Begging priests were associated with her ritual.

30. View of Perga with stadium in left center

Of Christian remains there are at least four churches: two large basilicas in the lower city seem to date to the fourth century A.D.; and on the citadel there are ruins of two medieval churches.

   b. Hellenistic
   c. Roman
3. Topography and monuments
4. Biblical references
Bibliography

1. Location. Pergamum is located *ca.* fifteen miles inland from the Aegean Sea, some two miles N of the ancient River Caicus (modern Bakir çay). The Caicus is approximately the border between the ancient districts of Mysia and Lydia. The citadel of Pergamum was built on a hill *ca.* one thousand feet high between two tributaries of the Caicus, the Selinus to the W, the Cetius to the E.

2. History. ***a. Early.*** Pergamum is certainly a prehistoric site, as attested by its pre-Greek name (presumably meaning "citadel," a name also applied to the fortress of Troy) and by Bronze Age finds in the neighborhood. Its contact with Greek colonists began at least as early as the archaic period, but little mention is made of the town until the Hellenistic period. Xenophon and the remnants of his ten thousand occupied it as a prominent town in Mysia (*Anabasis* VII. 8.8). The city issued coins in the fifth century B.C.

b. Hellenistic. The great period of Pergamum began with the successors of Alexander. The city was originally part of the territory seized by Antigonus. After his death in 301 B.C., Lysimachus king of Thrace took control of W Asia Minor. He entrusted Phileterus, an officer, with the charge of Pergamum and a treasure of nine thousand talents put in safekeeping there. This Phileterus revolted and took the side of Seleucus against Lysimachus in 282. After Lysimachus had been killed in battle (281) and his rival Seleucus murdered in Thrace, Pergamum gradually worked its way up from the status of a Seleucid vassal to that of an independent kingdom under the dynasty founded by Phileterus (283-263).

There are three main themes in the Hellenistic history of Pergamum: the struggle against the Galatians, dangerous invaders of Asia Minor since 278 B.C.; the friendship with Rome; and above all, the cultural interests of the kings who made their city into a renowned center of art and learning.

Phileterus was the first Pergamene king to defeat the Galatians in battle. His nephew and successor Eumenes I (263-241) preferred to pay ransom to them; but Attalus I (241-197) gained a great military victory over the barbarians. This triumph was celebrated in the erection of bronze commemorative statue groups in Pergamum and Athens. Another battle was won in 167 by Eumenes II (197-159).

The glorious days of Pergamum began under

Attalus I. He supported the Roman cause against Macedon. Eumenes II continued this policy and sided with the Romans against Antiochus III of Syria. In spite of consistent pro-Roman politics, the importance of Pergamum declined under his successors Attalus II (159-138) and Attalus III (138-133).

Eumenes II's achievements within Pergamum are perhaps the greatest contribution to the splendor of the city. Its library was superseded in size only by that of Alexandria. Cultural patronage remained a dynastic tradition until 133 B.C., when Attalus III bequeathed his kingdom to Rome.

c. Roman. The outcome of this decision was far from profitable for Pergamum, a city of tremendous wealth accumulated by the Attalids. The treasure of Attalus was sent to Rome, a brief civic war strained the resources, and taxation was high. Opposition to Rome found the Pergamenians willing to follow Mithradates' order to massacre all the Romans in their city in 88 B.C. As a result Pergamum lost its freedom temporarily, but had it restored under Caesar in 47-46.

In the period of the Roman Empire, Pergamum, although not a commercial center, regained its prominence as a prosperous city with a glorious past. Under Augustus a cult of Roma and Augustus was established in the city. Later a temple of Trajan was built on the citadel and one for Caracalla on the theater terrace, making Pergamum "thrice temple-warden" of the emperor cult and an official cult center in the province of Asia.

The city by now had lost some of its cultural treasures, such as the library which had been sent by Antony to Alexandria as a gift to Cleopatra, or the bronze statues of the Galatians, carried off to Rome by order of Nero; but the building of public monuments and shrines continued, especially under the Flavians. Among the famous later intellectuals of Pergamum was the physician Galen, who worked in the city *ca.* A.D. 160.

3. Topography and monuments. Pergamum was easily the most spectacular Hellenistic city of Asia Minor because of its imaginative town-planning. While the lower city to the S of the citadel contained the residential area, the important public buildings, shrines, and palaces were built on terraces artificially created on the mountain slope.

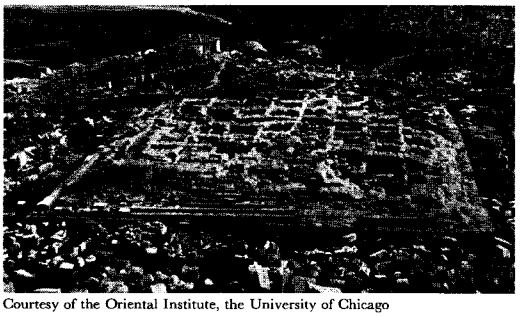
Courtesy of Ahmet Dönmez

31. The Asclepieum theater at Pergamum

One approached the city through the S gate of the Hellenistic city wall and followed a street uphill to the first major complex, the core of which was the rectangular lower market place surrounded by multistoried colonnades. The middle terrace of the citadel grouped three gymnasiums (for the different age groups) on separate levels. Sanctuaries, a small theater, and baths formed part of the upper gymnasium complex.

The most spectacular planning was displayed in the upper citadel terrace. With a vast Hellenistic theater as its center, a radiating array of sacral and royal buildings spread out on the slope which consisted of an inner half-circle of the upper market place, the great altar, the Athena shrine, the temple of Trajan and Hadrian, and an upper crescent of palaces, barracks, and arsenals across the rising street.

The great altar on the upper terrace, with its dramatic sculptural decoration of the battle of gods and giants, is the most important artistic monument pre-



Courtesy of the Oriental Institute, the University of Chicago

32. Excavations at Pergamum showing the altar of Zeus

served at Pergamum. Its specific destination is unknown. It may contain a symbolic reference to the battles against the Galatians and be dedicated to Zeus Soter, the Savior.* The reference to Satan's throne in Rev. 2:13 could hardly refer to this altar, as some would have it, but more probably aims at the emperor cult established in Pergamum. Figs. PER 32; ZEU 2.

The terrace to the N of the altar, containing the Athena temple set in a colonnaded courtyard, gave entrance to the great library. This complex also was decorated with the bronze statues of the defeated Galatians and many works of art collected by the Attalids.

The lower city S of the walls was expanded in Roman times. A Roman theater, stadium, and amphitheater lay on the W slope, from where a covered street led to the shrine of Asclepius, where Galen worked in the second century A.D.

4. Biblical references. The early church at Pergamum and its struggle against the emperor cult are referred to in Rev. 1:11; 2:12. The setting and circumstances of the early Christian community can be reconstructed from historical evidence, but no specific light has been thrown on the first century A.D. by

archaeological exploration. The Roman city with its houses and mosaics lies under the modern town of Bergama. In Byzantine times, when Pergamum was a bishopric, the inhabitants withdrew to the citadel and built a new fortification wall with ancient blocks such as the sculptures of the altar friezes.

PERIDA. *See* Peruda.

PERIZZITE pĕr'ə zīt [פְּרִזִּי, *pᵉrizzî,* dweller of the open country(?)]; KJV Apoc. PHEREZITE fĕr'—, PHERESITE —sīt. One of the population groups encountered by the Israelites in Palestine. The derivation and exact meaning of the term are obscure. Its association with the names of other peoples in population lists suggests that it is an ethnic term, but the occurrence of other nouns apparently derived from the same root suggests that is is an appellative (cf. פְּרָזוֹת, *pᵉrāzôth,* "unwalled villages," in Esth. 9:19; Ezek. 38:11; Zech. 2:4—H 2:8; and פָּרָזִי, *pᵉrāzî,* "unwalled villages" and "dwellers of the open country," in Deut. 3:5; I Sam. 6:18; Esth. 9:19). Some commentators suggest that *pᵉrāzî* is the proper form, that "Perizzite" (*pᵉrizzî*) is a variant, probably incorrectly vocalized, and that the term refers, not to a tribe, but to a class—namely, the inhabitants of peasant villages. On the other hand, the name, apparently in an ethnic sense, occurs frequently as the designation of one of a group of peoples. In the Tell el-Amarna Letters, Tushratta of Mitanni in his correspondence with Amen-hotep IV names one Perizzi as his messenger or envoy. This has raised the suggestion that the name is of Hurrian origin.

The name Perizzite occurs twenty-three times in the OT (also II Esd. 1:21; Jth. 5:16), but always in lists without details to assist in an identification or to fix a specific area which they inhabited. Four times they are named with the Canaanites as the two main population groups in Palestine (Gen. 13:7; 34:30; Judg. 1:4-5). This may be intended to suggest the population of Palestine generally, those living in fortified cities and those living in the unwalled towns or hamlets. Of these four references, the first relates an incident near Bethel, the second apparently in the vicinity of Shechem, and the last two inform us that the Perizzites were in the territory occupied by Judah.

The Rephaim are once named together with the Perizzites (Josh. 17:15), and this had led some scholars to conclude that they were to be found in Transjordan. But the Rephaim were not restricted to the Transjordan region, and Joshua's suggestion to the Joseph tribes can as well be interpreted as a reference to clearing the forests of the hill country of Ephraim to make room for themselves.

More frequently the Perizzites are summarily named in longer lists, once among ten peoples (Gen. 15:20) but most commonly with five others—namely, the Canaanites (*see* Canaan); the Hittites; the Amorites; the Hivites; and the Jebusites (*see* Jebus; Exod. 3:8, 17; 23:23; 33:2; 34:11; Deut. 20:17; Josh. 9:1; 11:3; 12:8; Judg. 3:5). The only other passage of interest is I Kings 9:20 (=II Chr. 8:7), which informs us that Solomon recruited those who remained of the Perizzites (and of other nations) for his forced levy of slaves.

PERSECUTION [Lat. *persecutio, from persequor, literal rendering of* διώκω, pursue, *in its secondary sense of* persecute]. Suffering inflicted upon an individual or group for fidelity to a faith, usually with the object of inducing apostasy or of destroying the faith itself by killing its adherents and intimidating prospective converts. Persecution may be inflicted by official authority (civil or religious or both in concert), or by unauthorized activity of hostile individuals or crowds; it may be limited to insult and scorn, but may extend to the loss of civil rights, imprisonment, torture, and death.

Bibliography

A. *PERSECUTION IN OT TIMES.* 1. Persecution of prophets by kings. It is consistently presupposed in the NT writings that all the prophets of Israel suffered persecution at the hands of their own people. Thus we read in Stephen's indictment of the nation, addressed to the Sanhedrin: "Which of the prophets did not your fathers persecute? And they killed those who announced beforehand the coming of the Righteous One, whom you have now betrayed and murdered" (Acts 7:52). The killing of Christ and the persecution of his followers were seen as the repetition of a pattern which had been followed over and over again in the national life (Matt. 5:12; 23:34-37; I Thess. 2:14-15). The Hebrew scriptures themselves, however, afford little support for such a sweeping generalization; the case of Micah is expressly cited to the contrary (Jer. 26:17-19); and many of the earlier prophets, for all their boldness, were treated with the greatest respect (e.g., Nathan, Elisha, and Isaiah [II Sam. 12:1-15; II Kings 13:14; Isa. 37:1-2]). The persecution of prophets seems to have been relatively rare, except in times of moral and religious decadence.

In the reign of Ahab, the introduction of the worship of the Tyrian Melkarth through the influence of Jezebel, Ahab's Tyrian queen, seems to have been followed by a persecution of the prophets of Yahweh. Elijah was forced to flee the country, and at one time complained that all the prophets except himself had been slain; Obadiah tells of saving a hundred prophets from the murderous fury of Jezebel by hiding them in caves (I Kings 17:9; 18:13-14; 19:10). In the last years of the kingdom of Judah, Jeremiah was saved from death at the hands of Jehoiakim by

the intervention of a powerful protector, but another prophet, who delivered a similar message was executed (Jer. 26:20-24); and a few years later Jeremiah was flung into a dungeon at the insistence of the princes, and was rescued by an Ethiopian eunuch in the service of Zedekiah (Jer. 38). It is possible that Manasseh slaughtered a number of prophets for protesting against his introduction of Assyrian rites into the worship of Judah; we are told that he "shed very much innocent blood, till he had filled Jerusalem from one end to another" (II Kings 21:16); but it is not clear that his victims were killed for their stand on religion.

2. Persecution of Jews by aliens. The sufferings of the Hebrews at the hands of the Egyptians and of the Philistines can hardly be regarded as persecutions, for there is no suggestion that anything more was involved than oppression by foreign masters. The first attempt to force the people of God to renounce their own faith is that which was initiated by Antiochus IV (Epiphanes) of Syria (175-164 B.C.), who drove out the legitimate high priest, profaned the temple by the sacrifice of swine, and sought to compel conformity with the Hellenic worship of Zeus, which he was promoting as part of his policy of Hellenizing his empire. By fostering Greek cultural institutions and especially by promoting the worship of the great gods of Greece among the peoples of his multiracial dominions, he hoped to give them an inward unity which would enable him to hold them in firm possession against the encroachments of Roman imperialism, the growing Parthian menace to the East, and the unceasing conflict with Egypt. Some elements of the Jewish community were fully prepared to co-operate with him (I Macc. 1:11-15, 43, 52); but large numbers suffered death rather than submit to his religious ordinances or fail in the obligations of their own faith (I Macc. 1:44-61). Jewish resistance increased as the pressure of persecution was intensified, until the situation was brought to an end by the successful revolt of the Maccabees. *See* ANTIOCHUS 3; DANIEL; JUDAS 10; MACCABEES.

B. *PERSECUTION IN NT TIMES.* 1. Persecution of the church by Jewish opponents. The early chapters of Acts tell of attempts by the Great Sanhedrin to prohibit public preaching by the apostles (4:17-18); but they were unable to secure obedience to their injunctions, even though they sentenced the apostles to a flogging (5:27-42). The first sustained persecution arose around the Hellenist preacher Stephen, who probably voiced more radical views about the transience of the temple and the law than had the Galilean leaders. He himself was put to death by stoning, the ancient punishment for blasphemy; but it is not entirely clear whether this was a judicial execution or an act of mob violence (7:54–8:1*a*). The ardent young Pharisee Saul—destined to become the great apostle of the Gentiles, Paul—makes his first appearance in Christian history as leader of the stoning party and of the general persecution which followed (Acts 8:1*b*-3). Christian men and women were thrown into prison, and many were driven to seek safety in flight; but the flight led to a wide and significant expansion of the Christian mission. The gospel was brought to Samaria, in disregard of the bitter hostility between Jews and Samaritans (8:4-25); and to Antioch on the Orontes, one of the chief cities of Syria, where the first Gentile converts were made (11:19-26); and the church was launched on its secular task of the evangelization of the world. *See* STEPHEN.

Shortly before the end of his life (A.D. 44), Herod Agrippa I, king in Jerusalem, struck savage blows at the leaders of the church; he executed James the son of Zebedee (and perhaps his brother John with him), and put Peter into prison (Acts 12:1-5). We are told that his action "pleased the Jews" (vs. 3)—an indication that the public generally had become hostile to the Christians, in contrast to the favorable, even protective, attitude of the earliest days (2:47; 4:21; 5:12-16). Peter escaped, by what the church interpreted as a divine intervention made in answer to its prayers (12:6-17); and with the death of Agrippa, the church was able to resume its mission more energetically than ever (vss. 20-24); but the smoldering hostility of the populace remained, carrying a continual menace of renewed violence, held in check by the Roman procurators, to whom the government of Palestine was again entrusted.

We hear nothing more of the situation of the Jerusalem church until the year 62, when James the Lord's brother, long its head, was murdered by a fanatical mob. (The attack on Paul of which we read in Acts 21:27-36 was occasioned by the rumor that he had brought Gentiles beyond the barrier in the temple.) It would appear that the church incurred bitter hatred by its refusal to share in the madness which was soon to come to a climax in the rebellion against Rome. As the legions gathered for the siege of Jerusalem, the Christians departed from the city, scorned by their fellow countrymen as traitors and cowards.

It is indicated in our documents that at some point the decision was made to expel Christians from the synagogues (John 16:2; cf. 9:22 and the note of C. K. Barrett); this was regarded as a more serious punishment than the floggings which were frequently administered to Christians by the rulers of the synagogues.

2. Persecution of the church by the Roman authorities. *a. Before the Neronian persecution.* During the first generation, the church had constantly to contend with popular hostility, but seldom with official police measures; the Roman administrators, as a rule, acted for the protection of the Christians against mob violence. Our only evidence for the period consists of the references in Acts and the Pauline letters. Paul tells us, indeed, that he was beaten with the rods of the lictors three times (against five floggings in synagogues [II Cor. 11:24-25]); but only one of these beatings is recorded in Acts, and there it is said that the magistrates were full of apologies the next morning, as soon as they learned that Paul was a Roman citizen (Acts 16:22-23, 35-40). On the other hand, the proconsul of Achaia refused to take action against him, on complaints made by Jews (Acts 18:12-16); some of the Asiarchs were among his friends at Ephesus, and the town clerk pacified a hostile crowd and

threatened them with Roman sanctions (Acts 19:30-41); and a detachment of Roman troops saved Paul from death at the hands of the mob in Jerusalem (Acts 21:27-36). He was not afraid to appeal to Caesar (and the Caesar was Nero!) from an accusation brought against him by his own people (Acts 25:9-12); and he assured the Christians of Rome that "rulers are not a terror to good conduct, but to bad" (Rom. 13:3).

b. The Neronian persecution. The Christian church at Rome suffered inhuman treatment at the command of the Emperor Nero, following the great fire which broken out in July of 64 and ravaged much of the poorer quarters. The populace, which had already come to detest Nero, was persuaded that he had ordered the fire set and had sent his guards to spread it, in order to clear space for his great building schemes. Nothing that he could do had any effect in dissipating these rumors (which were probably untrue); and at last he sought to find a scapegoat. He found it in a "people whom the masses called Christians, who were hated for their vicious crimes" (Tacitus). Some of those who were first arrested "confessed"—probably to the guilt of arson, rather than to the profession of Christianity; Nero, that is to say, procured false confessions, both to facilitate prosecutions and to divert the public anger from himself. Those who confessed implicated others, and "on their testimony a mighty multitude [*ingens multitudo*] was convicted, not so much of arson, as of hatred of the human race" (Tac. Ann. XV.44). Evidently the charge of arson could not be proved, but the general detestation of the Christians provided sufficient excuse for the severest measures against them.

The legal basis of this persecution is not clear. Obviously, some more specific charge than "hatred of the human race" must have been alleged—possibly treason (*maiestas*) or violence (*vis*). It is sometimes held that Nero must have issued a formal decree making the profession of Christianity an offense punishable by death (*Institutum Neronianum de Christianis*); but it is more likely that the action taken was an exercise of police powers (*coercitio*), which would not change the legal position, or have effect in other parts of the Empire. Even if a decree were issued, its validity would cease with Nero's death, for the Senate condemned his memory and nullified all his decrees. The Neronian persecution, then, was fierce but limited to the time and the place. After him as before him, the Christians had to fear mainly the inflamed passions of hostile crowds, fed with slanderous rumors of what went on in their secret gatherings, and often enough fanned by commercial interests (as of the silversmiths at Ephesus).

c. Persecutions under the Flavian emperors. The Julian line of emperors ended with Nero, and the Flavian succession began with Vespasian, who was the final victor in the struggle for power which followed Nero's death. There is no solid evidence that Christians suffered persecution by the Roman state under Vespasian and his two sons, Titus and Domitian. It is possible that some of the victims of the terror under Domitian were Christians, but there is nothing to show that they suffered for their faith.

Our first concrete evidence of measures taken against Christians as Christians, for no other offense than confession of the name, comes from the reign of Trajan (98-117). The correspondence of Ignatius, bishop of Antioch, is generally regarded as having been written on his journey to Rome, as a prisoner, in the anticipation of suffering martyrdom; if it is authentic, it belongs to the time of Trajan. Indisputable evidence of the first importance comes from the province of Bithynia and Pontus, in the correspondence of its governor, Pliny the Younger, with Trajan, in 111-12. Pliny informs Trajan that he has had occasion to deal with Christians, and as he has had no previous experience with such cases, he asks for instructions on how to dispose of them. His inquiries have shown him that they are not, in fact, guilty of the offenses with which they were commonly charged, but only of illegal association for an unauthorized worship. He has nevertheless sentenced them to death, whenever they refused to renounce their faith, on the ground that "stubbornness and unbending obstinacy certainly deserve to be punished." He is prepared to set free any who recant under his threats. (The same pattern is seen in the "Acts" of later martyrdoms, where the Roman officials are reluctant to enforce the law against Christians, and give them every opportunity to escape execution or banishment by denying Christ and offering incense on the altar of the emperor.) Trajan approves Pliny's procedure. Christians are not to be sought out, and anonymous accusations are not to be entertained; but if a charge is laid and proved in proper fashion, punishment must be inflicted, except that a free pardon is to be granted to all who recant and offer sacrifice to the Roman gods (Pliny *Letters* X.96-97).

This rescript defined the legal position and governed the official treatment of Christians for the next hundred years. It was against the law to be a Christian; but in practice, the law was seldom enforced. *See* PETER, FIRST LETTER OF.

an even larger scale by his son Xerxes (485-465) and his successors. Its glory was forever crippled by the thorough though, perhaps, only partly intentional holocaust lit by the victorious Alexander the Great in 330 B.C. in a gesture of political bravado. Its ruins, however, have offered a fascinating attraction for travelers and archaeologists from the fourteenth century on. In spite of its splendid outlay and facilities Persepolis at no time could compare with Susa as a political, administrative, or commercial center. Persepolis' role as a recreational resort in the heart of the homeland to which the Achaemenians were naturally attached came virtually to an end after the disaster of 330.

After the descriptions and drawings of the ruins of Persepolis provided by such men as Pietro della Valle (*ca.* 1622), Jean Chardin (1665-75), Cornelis de Bruin (*ca.* 1704), Carsten Niebuhr (*ca.* 1765), William Ouseley (1811-12), E. Flandin and P. Coste (1840-43), F. Stolze and F. C. Andreas (1874 and after), and others, systematic archaeological investigations did not start until Ernst Herzfeld reported on Persepolis and directed excavations under the auspices of the Oriental Institute of the University of Chicago between 1931 and 1934. These excavations were continued by E. F. Schmidt between 1934 and 1939 and after his departure by the Iranian Archaeological Service (A. Godard and M. T. Mustafavi).

Only some of the most important structures, the

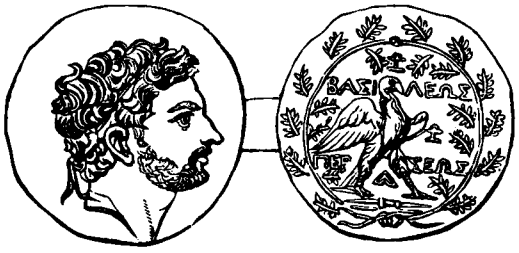
36. The tribute procession on the E stairway of the Apadana, showing Syrians with gold vessels and braces, and a pair of horses

total of which constitutes a model of Achaemenian architecture, can be listed: (*a*) a monumental staircase* leading through (*b*) a gate building (Xerxes *Persepolis a* as translated by R. G. Kent, *Old Persian* [1950], p. 148) to (*c*) a gigantic terrace laid out under Darius the Great; on the terrace which at one time was surrounded by a high wall are found (*d*) the "hall of hundred columns," built under Xerxes (Xerxes *Persepolis b;* Kent, p. 148), (*e*) Xerxes' harem building, (*f*) Xerxes' palace (Xerxes *Persepolis d* 16-17: "This palace [Old Persian *hadiš*] I built"; Kent, p. 149), Darius' palace (Darius *Persepolis a* 6: "This palace [Old Persian *tačara*] I made"; Kent, p. 135), (*g*) the *apadāna* or audience hall, built by Darius and Xerxes, with famous bas-reliefs of the "immortals," the king's special regiment, and of a succession of tributary subjects. Figs. PER 33-34, 35-36; MED 19.

Bibliography. The older publications such as F. C. Andreas and F. Stolze, *Persepolis* (1882); F. Sarre and E. Herzfeld, *Iranische Felsreliefs,* vols. I-II (1910); E. Herzfeld, "Rapport sur l'état actuel des ruines de Persépolis et propositions pour leur conservation," *Archäologische Mitteilungen aus Iran,* vol. I (1929); A. Sami, *Persepolis* (1954), are now all replaced by E. F. Schmidt, *Persepolis,* vols. I-II (1953, 1957). Important archival documents in the Elamite language found in Persepolis were published in G. G. Cameron, *Persepolis treasury tablets* (1948).

M. J. DRESDEN

PERSEUS pûr'sĭ əs [Περσεύς] (I Macc. 8:5). Illegitimate son and successor of Philip III. He is called



37. Coin showing Perseus, king of Macedonia

king of "Kittim," which is loosely applied in I Maccabees to Macedonia; Josephus has the word "Greece." Perseus was defeated by Aemilius Paulus at the Battle of Pydna 168 B.C., after which Macedonia became a Roman province. He was taken captive by the Romans.

Fig. PER 37. S. B. HOENIG

PERSIA, HISTORY AND RELIGION OF [Heb.-Aram. פרס; Περσῶν (*usually*), Περσίδι (Dan. 11:2) *referred to as* Μήδων (II Chr. 36:20) *and reversely* Περσῶν *for* מדי (Isa. 21:2)]; PERSIANS [פרסי (Neh. 12:22), פרסיא (K) *and* פרסאה (Q; Dan. 6:28—H 6:29); Old Pers. *pārsa, used for both* Persia *and* Persians; Elam. *par-sin;* Akkad. *pa-ar-sa;* Πέρσης, Περσία]. The terms "Persia" and "Persians" refer to the empires of various duration and territorial expanse from the Achaemenian until the present Pahlavi dynasty which reigned from capitals in different parts of the Iranian territory. At the initiative of Reza Shah (1925-41) "Persia" was replaced, for purposes of international nomenclature, by "Iran." More recently either name, Persia or Iran, has been officially recognized. It may further be remarked that the designation Iran (derived from Avestan *airyana,* "Aryan," in *airyanəm vaējah,* "the Iranian expanse"; Middle Iranian *'yr'n* ["Ērān"], *'ry'n* ["Aryān"]; New Persian *Īrān*) has been and is used by Western scholars for the area which comprises, besides the territory of the present kingdom of Iran, the regions of Afghanistan, Baluchistan, and W Turkistan.

Bibliography

A. *BIBLICAL REFERENCES.* Persia and the Persians, either with or without the Medes and MEDIA, are frequently mentioned in the OT. The Persians are not mentioned in the NT. The Medes (Μῆδοι), however, occur, together with the Parthians and the Elamites, in Acts 2:9.

Ezra 9:9 speaks of the "kings of Persia"; Ezra 6:14 of "Cyrus and Darius and Artaxerxes king of Persia"; and Dan. 8:20 of the "kings of Media and Persia." Dan. 10:13 mentions the "prince of the kingdom of Persia" (cf. vs. 20), and "three more kings . . . in Persia" occurs in Dan. 11:2. References to the "army chiefs of Persia and Media," the "seven princes of Persia and Media," and the "ladies of Persia and Media" are to be found in Esth. 1:3, 14, 18, respectively. Belshazzar's kingdom is going to be "given to the Medes and Persians" (Dan. 5:28).

The following individual Achaemenian rulers are referred to: (*a*) CYRUS as the "king of Persia" (II Chr. 36:22-23; Ezra 1:1-2, 8; 3:7; 4:3, 5; Dan. 10:1) and as "the Persian" (Dan. 6:28—H 6:29); (*b*) DARIUS as the "king of Persia" (Ezra 4:5, 24), as "the Persian" (Neh. 12:22), and as "the Mede" (Dan. 5:31; cf. 6:1, 25; 9:1; 11:1); and (*c*) ARTAXERXES (Ezra 4:7), "king of Persia" (Ezra 7:1). *See* AHASUERUS, perhaps in Esther to be identified with Xerxes.

References to the immutable laws of the Medes and the Persians are to be found in Dan. 6:8, 12, 15—H 6:9, 13, 16 (cf. Esth. 1:19), and the "Book of the Chronicles of the kings of Media and Persia" occurs in Esth. 10:2.

B. *THE LAND.* Iran, in the larger sense, is situated between the Caspian Sea and W Turkistan in the N, the Persian Gulf and the Gulf of Oman in the S, the lower and middle Indus Basin in the SE, and Mesopotamia in the SW. Geologically it forms a part of the highland belt which stretches across Asia from the Bering Strait to the Mediterranean.

In the W a mountain range (Kurdistan Mountains and Zagros Range), which extends from Armenia to the Persian Gulf over a distance of some 1,250 miles with a width of nowhere less than 125 miles, marks the border of the plateau. Through the massif of S Kurdistan leads one of the main routes which connect Mesopotamia and the Iranian Plateau. As such it was used under the Achaemenians, as it appears from the fact that Darius had his largest inscription engraved on the Rock of Behistun* on that route, and later by Alexander the Great and by the Arab armies. The city of ECBATANA, modern Hamadan, is situated at the point where this route enters the plateau. The province of Fars, ancient Pārsa, constitutes the connection between the W and S borders of Iran. Under the Achaemenians its principal city was PERSEPOLIS. At the W feet of the mountains of Fars the plains of Khuzistan are situated in the lower

38. The Rock of Behistun

basin of the Karun River. Under the Achaemenians, and later under the Sassanians, the water of this river was used for effective irrigation, as it appears from the importance and splendor of the city of Susa. Fig. PER 38.

The littoral plains along the Persian Gulf and the Gulf of Oman are of little depth, squeezed in as they are between the Mekran Mountains and the sea, and have offered little attraction to potential settlers because of adverse climatic and physico-geographical conditions.

In the NW, Azerbaijan (capital Tabriz), ancient Atropatene (*see* MEDIA), continues the Kurdistan mountain range and at the same time forms the beginning of another range, the Elburz (highest peak Demavend), which stretches eastward along the S coast of the Caspian Sea. The conditions of the intermediate belt between the Elburz Mountains and the plateau was favorable to the foundation of such cities as Qazvin, Rhages (Ray[y]), and Teheran. The two provinces to the S of the Caspian Sea, Gilan in the W and Mazanderan in the center and E, are favored by a mild and humid climate, and they harbor in numerous villages about one fifth of the total population of the country.

In N Khurasan (Khorasan), today the most eastern province of Iran and in the terminology of the Muslim geographers all of E Iran, a series of plains between E-W mountain ranges constitutes a natural way of access between the Elburz and Hindu Kush mountain chains for migrations from Central Asia in a westward direction. The plateau of S Khurasan marks the beginning of the vast desert known as Dasht-i Lut, which occupies the major part of central E Iran. The Helmand River, which originates in the mountains of Afghanistan and ends in a conglomeration of lagoonlike basins, offers what little attraction for sedentary life exists in the area known as Seistan (Sistan), to the SW of Khurasan.

To Iran in the larger sense (*see above*) and, at the present, to part of Afghanistan and the U. S. S. R. belong such areas as Gurgan, at the SW corner of the Caspian Sea; Khwarezmia (Chorasmia, Khwarizm), to the S of the Aral Sea; Sogdiana, in what was later known as Transoxiana, between the Oxus (Amu Darya) and Yaxartes (Syr Darya) rivers, with the cities of Bukhara and Samarkand; Bactria in N Afghanistan; and, farther to the E, the areas around the cities of Khotan, Turfan, and other settlements in the Tarim River basin in Chinese Turkistan.

C. *LANGUAGES.* For the sake of convenience, three stages of development have been assumed for the Iranian language group.

1. Old Iranian (600 B.C.–300 B.C.). ***a. Old Persian.*** The foundation of the Achaemenian Empire (*see* § D3 *below*) raised Old Persian (*see* PERSIAN, OLD), the local speech of SW Iran, to the rank of the official, imperial language, as found in the royal Achaemenian inscriptions. Of the other vernaculars used by local communities within the vast territory of the Empire, next to nothing has been preserved. Of the language of the SCYTHIANS, e.g., only a few vocables are known from Herodotus, and a limited number of Median words have survived as loan words in Old Persian. *See* MEDIA.

b. Avestan. The other known representative of Old Iranian is the language in which AVESTA is composed. In the Avestan writings two different forms of language can be distinguished: (*a*) "Gāthic," the language in which Zarathushtra's preachings are written, and (*b*) "Younger Avestan," the language of the remainder of the Avestan writings. At the moment the available linguistic and other evidence seems to warrant the suggestion of E Iran as the most likely area of origin.

c. Aramaic. It should be mentioned at this point that the existing language diversity within the Achaemenian Empire became the reason for the introduction and use of Aramaic as the common language for purposes of administrative communication. The appropriate name *Reichsaramäisch,* "imperial Aramaic," was coined for it by J. Markwart (*Ungarische Jahrbücher,* vol. VII [1927], p. 91, note 1), and a survey of the available linguistic materials was given by F. Rosenthal (*see bibliography*). One of the immediate results of this practice was the fact that the Aramaic alphabet initiated the inhabitants of the faraway provinces for the first time in the art of writing and subsequently not only served as the basis for most, if not all, of the writing systems used in Iran until the Islamic period, but also became the example of the Kharoshthi script used in NW India.

Besides the Aramaic documents, which form part of the correspondence between the Achaemenian prince Aršām(a), governor of Egypt, perhaps written from Susa to his officials and friends in Egypt (*see bibliography*), the wide spread of the Aramaic language and script is proved by the discovery of Aramaic documents in areas as far apart as Armenia and Georgia in the W and Afghanistan in the E. For the reverse process of Aramaic borrowings from Iranian, *see* § C4 *below.*

2. Middle Iranian (300 B.C.–A.D. 700). Until around the beginning of the twentieth century only one Middle Iranian language, Middle Persian or Pahlavi, was known. Through discoveries in Central Asia (Turfan) and philological research, more materials have been brought to light since then. Today five major forms of Middle Iranian, some of which, in addition, show what may be dialectical or other differences, can be distinguished. Of these, Middle Persian and Parthian belong to the western, and Sogdian, Khwarezmian, and the Saka languages to the eastern, language group.

3. New Iranian (700—). The main representative of this stage is New (or Modern) Persian, the standard language of Persia. The first documents in (New) Persian, written in Arabic script, date from the ninth century A.D. Of other Iranian languages, such as

Kurdish (Persia, Iraq, Turkey), Ossetic (Caucasus), Baluchi (Baluchistan), Pashto (Afghanistan), Wakhi and other languages spoken in the Pamirs, and dialects used in Persia and Russian Azerbaijan, mention can be made by name only.

4. Iranian elements in Aramaic and elsewhere. Reference has already been made to the importance of Aramaic for Iranian studies (*see* § C1*c above*). In not a few cases Aramaic is on the receiving end of the borrowing process. This is not only the case in such well-known words as אספרנא, אספרנא, "fast, with speed, speedily, diligently" (Ezra 5:8; 6:8, 12-13; 7:17, 21, 23; Old Iranian **aspṛnā/uspṛna;* Avestan *aspərənah,* "completeness"; Manichaean Middle Persian and Parthian *'spwr;* Sogd[ian] *'spwrn;* Khotanese Saka *uspurra,* "complete, entire, thorough"; New Persian *siparī,* "finished"); דת, "law" (Dan. 6:8, 12, 15—H 6:9, 13, 16; Old Persian *dāta* and many other forms until New Persian *dād,* "law, justice"); דתבר, "judge" (Dan. 3:2-3; Pahlavi *d'twbr;* Christian Sogdian *d'ṯbr*); גזבר, "treasurer" (Ezra 1:8; 7:21; cf. [המלך] גנזי, "[the king's] treasuries," in Esth. 3:9; 4:7; Manichaean Middle Persian *gznwr;* Manichaean Parthian *gznbr;* Sogdian γznβr; cf. Pahlavi *gnz,* "treasure"; Elamitic *kan-ša-iš* [*nu-da-nu*], "treasure [storehouse]"); perhaps also אשרן (Ezra 5:3, 9; and in the Elephantine Papyri) and אופשר (Elephantine Papyri), if respectively from Old Iranian **ācarna* and *upacāra* (cf. New Persian *afzār,* "tool"). Not only words but also idioms are borrowed. E.g., עבד לנפשה, "to make one's own, to appropriate," seems to be a translation of Old Persian *(h)uvāipašiyam akuta,* "he made his own, appropriated"; the verb שאל, "to ask," is used (תשתאל, "you will be punished") in the sense of Old Persian *fras-,* with the double meaning of "to ask" and "to punish"; the expression אספרן והדאבגו, "the base sum [for אספרן, *see above*] together with [Old Persian *hadā,* 'with'] the interest" (*'bgw;* Manichaean Parthian *'bg'w,* "increase"), is clearly Iranian.

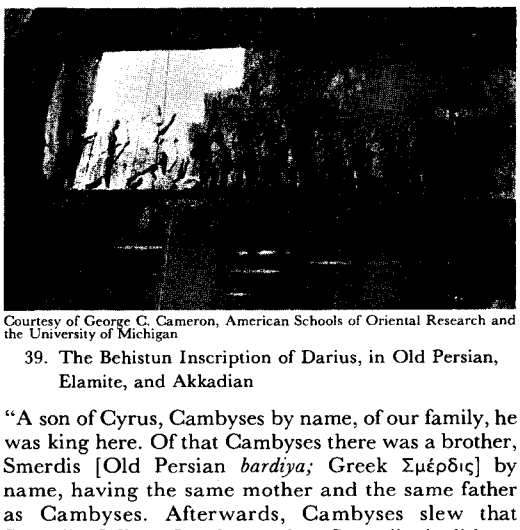
Iranian loan words are also found in Elamite and Armenian. In the former case the publication of tablets from the Persepolis "treasury" (*see bibliography*) has proved to be of great importance; further discoveries may be expected from the "fortification" tablets, also from Persepolis. In the latter case, a field of longer standing, renewed investigation of the Iranian elements in Armenian is highly desirable.

D. *HISTORY.* 1. Extent. Iran's history, in pre-Islamic times, falls into the following periods, which correspond to the reigning dynasties: (*a*) Medes (*see* MEDIA); (*b*) Achaemenians (middle of the sixth century B.C.–330 B.C.); (*c*) Hellenistic intermezzo (Alexander the Great [330-323]; Seleucids); (*d*) Arsacids or Parthians (middle of the third century B.C.–A.D. 223/224 [or 226/227]); (*e*) Sassanians (223/224 [226/227]-651). In the following discussion the Achaemenians will for obvious reasons be accorded more space than the other periods.

2. Prehistory. Systematic archaeological investigations, conducted at such *tepes* as Hissar, Giyan, Siyalk, and Susa, have shown the existence of a homogeneous culture, with local variations in Iran, from the Hassuna period onward. *See bibliography.*

3. Achaemenians. *a. History.* By the middle of the sixth century B.C., after the downfall of the Assyrian Empire, two great powers, Babylonia and Media, faced each other. In Anshan, a district in Elam, a revolt against the Median king Astyages was started by Cyrus II in 550. (For the events of the next two decades, *see* CYRUS.) The outcome was the establishment of the Achaemenian Empire. The Achaemenians traced their family to its founder, Achaimenes (Old Persian *haxāmaniš*), the father of Teïspes (Τείσπης; Old Persian *čišpiš;* Elamitic *ši-iš-pi-iš;* Akkadian *ši-iš-pi-iš*), Cyrus' ancestor. The genealogy of the Achaemenian offers certain difficulties. *See bibliography.*

After his death (529) his son Cambyses II (Old Persian *ka(m)būjiya;* Elamite *kan-bu-ši-ia;* Akkadian *kam-bu-zi-ia;* Greek Καμβύσης) continued his father's work and after careful preparation succeeded in the conquest of Egypt (525) and of the Greek islands of Cyprus and Samos. These and other events are related in colorful detail by Herodotus (III.1-60). Before his death (522) the throne had been forcefully taken by the so-called Pseudo-Smerdis. The Behistun Inscription (Figs. PER 39; INS 10) gives this account:



Courtesy of George C. Cameron, American Schools of Oriental Research and the University of Michigan

39. The Behistun Inscription of Darius, in Old Persian, Elamite, and Akkadian

"A son of Cyrus, Cambyses by name, of our family, he was king here. Of that Cambyses there was a brother, Smerdis [Old Persian *bardiya;* Greek Σμέρδις] by name, having the same mother and the same father as Cambyses. Afterwards, Cambyses slew that Smerdis. When Cambyses slew Smerdis, it did not become known to the people that Smerdis had been slain. Afterwards, Cambyses went to Egypt. . . . There was a man, a Magian [Old Persian *maguš*], Gaumāta by name. . . . He lied to the people thus: 'I am Smerdis, the son of Cyrus, brother of Cambyses.' After that, all the people became rebellious from Cambyses, (and) went over to him, both Persia and Media and the other provinces."[1] The reason for the rapid success of Gaumata, whose reign lasted only six months (from March, 522) may have been general discontent with Cambyses among both the "people" and the nobility.

The Behistun Inscription relates in annalistic form how in a series of bold campaigns Darius, a member of the older branch of the Achaemenian family, succeeded in securing the throne for himself and in restoring the Empire to its former extent and strength. These successes were due to Darius' extraordinary military genius, which showed itself in the skilful

[1] R. G. Kent, *Old Persian* (New Haven, Conn.: American Oriental Society).

combined use of different kinds of armament and in the expert handling of his troops at the right time and place. *See* DARIUS 1. Fig. XER 1.

On the other Achaemenian kings, Xerxes (486-465), Artaxerxes I (465-425), Darius II (423-404), Artaxerxes II (404-359), Artaxerxes III (359-338), and Darius III (336-330), *see* ARTAXERXES; DARIUS; XERXES.

b. Organization. The many peoples which together formed the subjects of the "king of kings" (Old Persian *xšāyaθiyānām xšāyaθiya*) were governed on the basis of a division into some twenty administrative units, known as satrapies (provinces), of the Empire. This system, begun by Cyrus and fully developed by Darius, left to each of the satrapies a relative amount of autonomy under the government of a local administrator or satrap (Old Persian *xšaçapāvan;* Greek σατράπης; Hebrew-Aramaic אחשדרפן [Ezra 8:36; Esth. 3:12; 8:9; 9:3; Dan. 3:2-3, 27; 6:7]). The Old Persian inscriptions give several lists of satrapies, and a list of the revenues from each of the provinces is to be found in Herodotus (III.90-95). Darius (Naqš-i Rustam A Inscription; see R. G. Kent, *Old Persian* [1950], pp. 137-38) lists the following: Media, Elam, Parthia, Aria, Bactria, Sogdiana, Chorasmia, Drangiana, Arachosia, Sattagydia, Gandara, Sind, the *haumavarga* Sakas, the Sakas with pointed caps, Babylonia, Assyria, Arabia, Egypt, Armenia, Cappadocia, Sardis, Ionia, the Sakas across the sea, Skudra, the *petasos*-wearing Ionians, Libyans, Ethiopians, men of Maka, and Carians. In the majority of cases the satraps came from noble families or, sometimes, from the royal family itself. They exercised civil and judiciary authority and controlled the local finances. In foreign policy they enjoyed large autonomy, especially in the frontier provinces. The local armed forces were under the orders of a local military commander. A delegate from the central government and responsible to it, known as "the king's eye" (τὸν σὸν πιστὸν πάντ' ὀφθαλμόν [Aeschylus *Persae* 980, and elsewhere]; "the king's ear(s)," τὰ βασιλέως ὦτα [Xenophon *Cyropaedia* VIII.2.10], also occurs in Aramaic גושם), checked on the functioning of the local government. Rapid and reliable communication was assured by the royal mail service between Susa and the local centers of administration (cf. Esth. 3:15). Although precise details are lacking, it can be inferred that the individual satraps used a large number of officials of all ranks. In Neh. 5:14-18 a glimpse is caught of the circumstances under which they lived (vs. 15), in contrast with Nehemiah's own understanding of a governor's life (vss. 16-17). The "governor" (פחת; Ezra 5:3, 6; 6:6, 13; Neh. 3:7) "this side the river" refers to the satrap.

c. The king and his court. There is little doubt that both in theory and in practice the form of the Persian state was absolutistic. Contrary to the statement of Curtius (VIII.5.18), the king was probably not considered a divine being. The so-called *xvarənah* (Old Persian *farnah;* Middle Persian *farrah,* regularly represented by the Aramaic ideogram [ה]גד in the Pahlavi books; *see* § E1 *below*), the royal majesty and good fortune of the legitimate king, to which a complete Avestan hymn (Yasht 19) is devoted, was given, however, divine status. In executive, judiciary, military, and possibly also religious matters, the ultimate decision was in the king's hands. His edicts sealed with his ring (Esth. 3:12; 8:8) had force of law (8:8). The "seven counselors" (Ezra 7:14) and the "seven princes of Persia and Media, who saw the king's face, and sat first in the kingdom" (Esth. 1:14), may have been the king's ministers who were under his immediate orders. The heads of the six prominent families, known as *vispati,* held hereditary privileged positions. It has been suggested that the chiliarch—the commander of the "immortals," the ten thousand men of the king's guard—was the most distinguished among the *vispati* and, in later times, also held the rank of great vizier.

A number of details in the nomenclature and function of the members of the bureaucracy remain uncertain. The Aramaic papyri from Egypt shed some light on Persian officials on the subsatrapal, provincial level. An official with the title בעל טעם (Ezra 4:9) seems to have held a high, if not the highest, position in the chancery of the satrap. At the head of the province was the פקיד (Gen. 41:34); among the members of his bureau were the אזדברייא; in his treasury the המוכרייא, officials of the treasury (גנזא), or "accountants," were employed. It seems legitimate to use these and similar data, by transferring them from the provincial to the satrapal and to the royal level, for conclusions regarding the functioning of the government in the highest echelons.

d. The administration of justice. On the matter of law and its administration little or no direct Iranian evidence is available. Most of the information is of Greek or other non-Iranian origin. Ezra 7:26 refers to the "law of the king" (דתא די מלכא), and Darius refers to the matter of law in similarly general terms ("These peoples by the grace of Ahura-mazda showed respect for my law"; Behistun Inscription I.23). The attempt of Olmstead (*see bibliography*) to establish a close parallel between Hammurabi's Code and Darius' assumed "Ordinance of Good Regulations" does not seem to carry sufficient persuasive power.

The Aramaic papyri from Egypt give some information concerning the conduct of judicial action. Besides "the judges," "the king's judges," or "judges of the court," the local commander took an active part in the procedure and in an adoption case acted entirely on his own. In another case the commander ordered a special investigation to be carried out by the judges, the תיפתיא (cf. Dan. 3:2), and the גושכיא (lit., "the listeners"; *see* § D3*b above*). It seems likely that, as in the case of the provincial administration and its officials, the judiciary system of the provinces and satrapies was modeled after that of the capital.

The Greek sources give abundant examples of capital and other physical punishment. The form of execution referred to in Old Persian as *uzmayāpatiy kar-,* with regard to some of those who rebelled against Darius, is probably "impalement." Ezra 7:26 mentions "death . . . banishment . . . confiscation of goods . . . imprisonment" for those who "will not obey the law of . . . God and the law of the king."

e. Finance and economic conditions. Among the revenues of the state, taxes or tributes (Old Persian *bāji;* βαζιγραβαν ὅ ἐστι τελώνιον [Isidorus of Charax]) levied from all over the Empire were the most important. Herodotus (III.90-97) gives a list in which

the Babylonian silver talents and other tributes to be contributed by each of the satrapies are itemized. Darius set up a uniform tax system, standardized the monetary unit, and introduced uniform weights and measures. As a result industry and commerce in the Empire grew rapidly, banking houses such as the Murashu family from Nippur thrived on the increasing need for ready cash, and new markets were opened by the improvement of the ancient caravan routes. The keen interest taken by the Achaemenian rulers in seafare and foreign commerce is shown by the trips of Democedes of Croton along the coasts of Greece and S Italy, by the exploration of the Indus River by Skylax of Karyanda, and also by the termination of the canal between the Nile and the Red Sea. ("Darius the king says . . . I gave order to dig this canal from the river Nile which flows in Egypt to the sea which goes from Persia. Then this canal was dug . . . and ships went from Egypt . . . to Persia.")[1]

Among human activities agriculture and cattle breeding were considered the most commendable from both the socio-economic and the religious point of view. The existing conditions of climate necessitated large-scale irrigation, and in spite of their scarcity references in both Iranian and Western sources testify to the great importance attached to the proper care of irrigation systems.

The Avestan scriptures contain evidence for a socio-religious division of society into three classes: (*a*) priests (*āθravan*), (*b*) warriors (*raθaēštar*), and (*c*) farmers (*vāstryō fšuyant*), to which in one instance a fourth group, the artisans (*hūitu*), is added. There seems to have existed a political hierarchy, from the smallest unit, that of the family (*nāfa*), to the largest, that of the "land" (*dahyu*).

f. Foreign relations. The Greek settlements along the W coast of Asia Minor which had come under the control of Cyrus and had been organized by Darius into two satrapies revolted against Persian rule under the leadership of Aristagoras of Miletus in 499. In spite of its abundance, the information on the causes of this revolt, which led to the Median Wars, is incomplete. Only the Greek argument, as presented by Herodotus, is available, while Persian inscriptional materials bearing on them are practically nonexistent. In a general way, when dealing with the relations between Persia and the West, it should be kept in mind that in most cases the lack of a proportionate amount of Iranian information to counterbalance the Greek and other Western sources is responsible for what necessarily can be only an imperfect picture.

The history of the Median Wars—two expeditions, both ending, in spite of the most careful military, technical, and political preparations, in utter failure for the Persian armies and fleet (Marathon [490] and, under Xerxes' personal command, Thermopylae [480], where Leonidas and his three hundred Spartans died their heroic death at a place named Kolonos near to the Phocidian wall; Salamis [480] and Plataeae [479])—is too much a part of the Western heritage to justify an attempt at repetition.

As one of the results of the Median Wars a strong impulse was given to the material and cultural development of classical Greek civilization. As another, the Persian rulers continued to keep a finger in the pie of Greek politics (Peloponnesian War). In general it can be said that the range of relations between Persia and Greece is extraordinarily wide and varied.

From the reign of Darius, Greek scientists and artists were employed at the Persian court. Besides explorers like Skylax of Karyanda (*see* § D3*e above*) and Hecataeus of Miletus, Greek physicians enjoyed the particular favor of the Achaemenian kings. The same Democedes who surveyed the coasts of Greece and S Italy (*see* § D3*e above*) was held in high esteem by Darius as his personal physician; Apollonides of Cos and Ctesias practiced at the court. It seems likely that they served as intermediaries for the incorporation of certain data from Indian medicine into the Hippocratic corpus.

Of even greater importance is the subject of the relations between Iranian and Greek philosophical thought. On this much-discussed and complex matter opinions range from those that tend to consider Iranian influence responsible for some of the basic ideas of Greek philosophy to those that minimize this influence. The seemingly attractive parallelism between a passage from the Sassanian text known as *Bundahishn* (*see* PAHLAVI 2) and from the Greek Περὶ Ἑβδομάδων, between the concept of time as found in Pherecydes and in Iran, between the Platonic world of Ideas and the spiritual creation of Zoroastrianism, between the myth of Er (Plato *Republic* 614B ff) and certain passages in Iranian sources—each of these and other, similar parallelisms have to be studied and analyzed separately before a conclusive and comprehensive answer, if any, to the problems they raise can be proposed. *See bibliography.*

For the political influence exercised by Cyrus, Darius, and Artaxerxes I on the fate of the people of Israel, see the articles on these rulers.

Next to these political relations the question of the interdependence of Iranian religion and postexilic Jewish thought and speculation arises. Here, as in the case of Iran and Greece (*see above*), scholars vary in their points of view with regard to problems both of detail and of a more general nature, from those who estimate the influence of Iranian religion on Judaism as decisive to those who are reluctant to admit any such dependence. Such points as that of the growing rank of Satan, if compared with Ahriman's position; of the Two Spirits as found in the Manual of Discipline, if compared with the Gāthic doctrine; of the introduction of abstract entities in Jewish literature, such as the Wisdom of God, the Spirit or the six potencies of God (Philo), if compared with, respectively, *Vohu Manah* (or *Ārmaiti?*), *Spənta Mainyu*, and the six *Amaša Spəntas;* of the Son of God with the Iranian *Gayōmart;* of the doctrine of millennial periods; of the book in which the deeds of men are recorded, the belief in resurrection, the final transformation of the earth—each of these seems to be a case of general analogy, the details of which deserve careful attention, rather than of decisively proven immediate borrowing. (For the Zoroastrian terms, *see* §§ E2, 5, *below.*)

4. Alexander and the Seleucids. Within the short span of a few years between the crossing of the Dardanelles (334) and the sack of Persepolis (331),

[1] R. G. Kent, *Old Persian* (New Haven, Conn.: American Oriental Society).

Alexander succeeded in a series of rapid victories to bring about the end of the existence of the Achaemenian Empire. *See* DARIUS 3; ALEXANDER 1.

In the first years after his death (June 13, 323) Iran did not attract the immediate attention of the Diadochs, among whom Seleucus emerged as the master of Iran. In 304 Seleucus came to an agreement with the Indian ruler Chandragupta, by which he gave up Afghanistan and other Eastern possessions in return for a corps of Indian war elephants, which enabled him to win a victory over his rival Antigonus in the Battle of Ipsus (301).

The Seleucid Dynasty, which ended in 63 B.C. when Pompey deposed its last ruler, witnessed an increasing diminution of their territory. In spite of the foundation of several Greek Antiochs, Laodiceas, and Seleucias, their grip on Iran constantly loosened. Gradually Media, Armenia, and other areas became independent; the campaigns of Antiochus III and IV in Iran had little or no lasting success; the Jews revolted against Antiochus IV; and the Parthians, in N Iran, started a movement of independence under the leadership of Arsaces.

5. Arsacids (Parthians; middle of the third century B.C.–A.D. 223/224 [226/227]). The tribe of the *Parni,* who invaded and subjected Parthia before the middle of the third century B.C., exchanged their own E Iranian for the indigenous Parthian language. Under the dynasty of the Arsacids (after its ancestor, Arsaces), they conquered most of the rest of Iran and established Ctesiphon, their capital, near Baghdad in Babylonia. It was Mithridates I (*ca.* 171-138/137) who was instrumental in this expansion. Preoccupied by the Indo-Scythian Kushans in E Iran and the threat of nomadic invasions in N Iran, they remained for a long time confined, in the W, by the Euphrates.

The Parthians served as middlemen in the traffic between the Mediterranean and the Far East. At Dura-Europos, on the middle Euphrates, Hellenistic, Semitic, and Iranian cultural influences met. Hellenistic art penetrated via Parthian Iran into Afghanistan and into what is now Pakistan. From Palmyra, in the Syrian Desert, the beginning of the caravan routes from Syria to Iran, Syrian glassware and decorative motifs reached Afghanistan.

After Rome became the master of Syria, it was tempted on several occasions to try to transfer its boundaries beyond the Euphrates. The disastrous results of the attempts made by Crassus (Carrhae [53 B.C.]) and Mark Antony (defeat in Atropatene [36 B.C.]) are well known. Although Trajan succeeded in entering Ctesiphon (A.D. 116), his successor, Hadrian, had to renounce the newly won possessions and was forced to accept once more the traditional Euphrates frontier.

In 40 B.C. the Parthians, who invaded the Roman provinces in the Near East and occupied Syria, were considered by the Jews as their liberators. They put Antigonus, son of Aristobulus, on the throne in Jerusalem. Antigonus reigned for three years (40-37 B.C.), at the end of which Jerusalem was recaptured by Herodes, with the support of Roman troops, and looted. The Parthian rulers gave military support to Jerusalem during the siege by Titus (Jos. War II.520; VI.356); and under Trajan and Hadrian, Jews and Parthians worked together against the Romans. The *Oracles of Hystaspes* seem to reflect some of the expectancy on the part of the Jews of their coming liberation from Roman supremacy through help from Iran (see, e.g., Lactantius *Institutions* VII.15.19; VII. 15.11). *See also* PARTHIANS.

6. Sassanians (223/224 [226/227]-651). *a. History.* In the beginning twenties of the third century the rule of the Arsacids came to an end because of the defeat suffered by Ardavān (Artabanus V) at the hands of Ardashīr (the Middle Persian form of Artaxerxes), son of Pāpak and descendant of Sāsān, from the province of Fars, who had previously become master of the city of Istakhr, the capital of that province. The rock reliefs of Naqsh-i Rajab and Naqsh-i Rustam near Persepolis retain the memory of the investiture of Ardashīr by Ahura-mazdā. The decipherment of the inscriptions on the reliefs by Silvestre de Sacy in 1793 ranks among the first major achievements in the systematic study of Iranian antiquities.

Within a period of some fifteen years Ardashir succeeded in rebuilding the power of Iran. By the time of his death his son and successor, Shāpūr I (239 or 241–270 or 273), was in a position to annex part of the Kushan Empire in NW India and N Mesopotamia and Armenia by defeating and capturing the Roman emperor Valerian at Edessa (260); "at Edessa battle with the emperor Valerian took place and by me the emperor Valerian himself . . . was made prisoner," as the *Ka'be-yi Zardušt* Inscription (Persian version, lines 13-14) puts it. In the period between Ardashir and the end of the Sassanian Empire (651), Iran was in close contact with such different civilizations as the Roman and Byzantine empires, China, and India. As a result Indian works were translated into Pahlavi (*Kalila wa Dimnah,* after the Indian fable collection known as *Pañchatantra;* an Indian original is at the origin, through several intermediaries, of the romance of *Barlaam and Josaphat*); Iran used, and exported to the West, Chinese silk and other products; Iranian examples inspired Chinese painting in Central Asia; Greek science, probably through Syriac intermediaries, was incorporated in the Pahlavi scriptures ("Shāpūr . . . collected and incorporated in the Avesta books on medicine, astronomy . . . , which had been scattered in India, Rome and other countries" [*Dēnkart* 412.17-21]); etc.

In political and military terms Sassanian history is a long struggle against Western and Eastern rival powers. In the West the possession of Armenia and adjacent areas was among the main causes of war. On the Eastern front, the more dangerous one in the long run, the Sassanian rulers had to face the ever-present threat of invasions. In the end of the fifth century Kavād paid tribute to the Hephthalites, but this situation was brought to an end by Khosrau I in the beginning of the next century. The latter's reign became the apogee of Sassanian power and civilization.

b. Religion. The religious situation in Sassanian Iran reflects the multiple influences to which the state was subject. Apart from Zoroastrianism (*see* ZARATHUSHTRA; *see also* § E5 *below*), the official state religion, an inscription, from the second half of the third century, of Kartīr, the then high priest of the Sassanian church, mentions "Jews, Buddhists, Brahmins,

Nazoreans [(?); *n'cl'y*], Christians, *mktyky*[?] and Manichaeans" (*Ka'be-yi Zardušt*, lines 9-10) as subject to persecution.

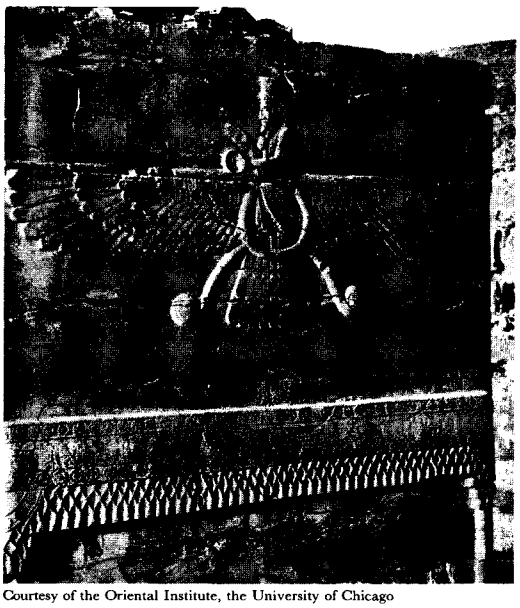
Judaism flourished in all of Mesopotamia, and centers of learning could be established where the arts of exegesis and casuistry were fostered, which led to the compilation of the Babylonian Talmud. The Indian religions, Buddhism and Hinduism, recruited the majority of their followers in the E parts of the Empire. Christian communities were founded in Persian territory in the first century A.D. Periods in which a policy of tolerance was displayed by the state alternated with times of violent persecution, the change from one attitude to the other being motivated in not a few cases by political and military considerations. After a critical period of *ca.* half a century the Persian church received the official blessing of the secular authorities in 410, partly because of the dangerous situation on the E frontier. In 468 it became schismatic (Nestorianism) with the approval of the state, which perceived its own advantage in a dogmatic breach between its own Christian subjects and those of the Byzantine emperor. From Iran the Nestorian church spread eastward, and its remaining followers were encountered by Franciscan missionaries (Willem van Ruysbroeck, Giovanni di Piano Carpini) and travelers (Marco Polo) on their trips to the Mongol rulers in the thirteenth century. The numerous Christian fragments in Sogdian (*see* § C2 *above*) testify to the same expansion. For the Manicheans, *see* MANICHEISM.

Partly religious, partly social, motives are behind the movement started by Mazdak (died 524[?]) toward the end of the fifth century.

E. *RELIGION*. 1. The most ancient period. The correspondence in both concepts and names of divinities as found in the Indian Rig Veda and the Iranian Avesta point to a period in which the Indo-Iranian tribal community held common religious beliefs. The earliest document, outside India, in which Indo-Iranian divinities are mentioned is a treaty between the Hittite king Suppiluliumas and Mattiwaza, the ruler of the Hurrian kingdom of Mitanni from the fourteenth century B.C. In it the gods Mitra, Varuna, Indra, and the twin Nāsatya occur; all these are known from the Rig Veda.

Since written documents for this period are absent, it can only be surmised from later evidence that in Iran several Iranian varieties of these Indo-Iranian beliefs existed. In one, or some of these, Ahura-mazdā was given a supreme position. Other divinities, referred to as *yazata*, existed next to him. Animal sacrifice and libations of *haoma*, the Indian *soma*, were common practice. Among the other divinities are Mithra (Indian Mitra), the god of contract; Haoma (Indian Soma), the personification of the intoxicating beverage of that name; Xvarənah, the personification of fortune and royal majesty; (Arəd-vīsūrā) Anāhitā, goddess of rivers and fertility; Tishtrya, the rain-bringing star Sirius; and the Fravashi, the spirits of the righteous dead and, at the same time, protecting genii.

2. Zarathushtra. In the Gāthā (*see* AVESTA), Zarathushtra's preachings, an ethical dualism, along with a tendency toward monotheism represented by Ahura-mazdā,* is evident. The dualism shows itself



Courtesy of the Oriental Institute, the University of Chicago

40. Ahura-mazdā, the Persians' winged god, on the E doorway of the main room of the Council Hall at Persepolis

in the opposition of *Aša*, "Truth" (Old Persian *arta;* Indic *ṛta*), versus *Drug*, "Falsehood" (Old Persian *drauga*); and of *Spənta Mainyu*, "the Augmentative Spirit," versus *Angra Mainyu*, "the Wicked Spirit" (later *Ahriman*); the latter pair are represented as twin brothers (Yasna 30.3). The relation of Ahura-mazdā and Spənta Mainyu is one of father and son (Yasna 47.3). Next to Spənta Mainyu, Ahura-mazdā is the creator of the six entities: (*a*) *Vohu Manah*, "Good Mind"; (*b*) *Aša*, "Truth"; (*c*) *Xšathra*, "Power, Dominion"; (*d*) *Ārmaiti*, "Devotion"; (*e*) *Haurvatāt*, "Wholeness"; and (*f*) *Amərətāt*, "Immortality"; all six of these together are referred to as the *Amәsa Spənta*, "the Augmentative Immortals," and connected with cattle, fire, metal, earth, water, and plants respectively. The notion of monotheism as evidenced by Ahura-mazdā and the Amәša Spənta is coupled with the dualistic notion of truth versus falsehood, and both are integrated by the introduction of the concept of free will. Figs. PER 40; AHU 6.

So far for part of Zarathushtra's ideology. In the Younger Avesta, the documents written in Younger Avestan (*see* AVESTA), there is clearly a considerable admixture of other ingredients. Some of those non-Zarathushtrian components, part of which have counterparts in the Rig Veda (Soma, Mitra) and others of which do not (Xvarənah, Anāhitā), are represented by the divinities already mentioned. The Avestan scriptures, therefore, contain several religious strata. In the process of codification, which may have taken place in the course of the fifth and fourth centuries B.C., most of the subject matter contrary to the teachings of the Gāthā was incorporated, after having been duly legalized by such introductory phrases as: "Thus Ahura-mazdā said to Zarathushtra." The result of the process of integrating opposite religious concepts leaves, nevertheless, a considerable number of patently incompatible elements. In

other words, the apparently intentional outcome of the efforts of the priestly diaskeuasts was a corpus of mixed origin and purpose, intended for a likewise composite audience.

One of the important facts in the emergence of the Avesta is that the linguistic structure of the Avestan language points to E Iran and more specifically Khwarezmia (*see* §§ B, C2 *above*), part of which coincided with what in the Avesta is called Airyana Vaējah as its place of origin. When this area politically became part of the Achaemenian Empire under CYRUS a direct connection was established between it and the center of the Empire in SW Iran.

3. The Achaemenian period. The problem of the religion of the Achaemenians is among the most passionately discussed. In the heat of the debate the pendulum has swung to both extremes: those who, taking the identity of Vishtāspa, the father of Darius and the protector and patron of Zarathushtra, for granted, held that the Achaemenian kings were orthodox Zoroastrians; and those who took the opposite view.

In the inscriptions frequent mention is made of Ahura-mazdā and, to a lesser degree, of Drauga (Avestan *drug*) and Arta (Avestan *aša*); Xerxes, *Daiva* Inscription, lines 51-56, reads: "The man who adheres to the law which Ahura-mazdā has established and worships Ahura-mazdā in the proper way in accord with Arta, becomes happy while living and *artāvan* ['blessed'; Avestan *ašavan;* Old Indic *ṛtāvan*] when dead." On the other hand, no reference is made to Spənta Mainyu, Angra Mainyu, the Amәša Spənta, or Zarathushtra. It may, therefore, seem as if part of Zarathushtra's most essential concepts, the cult of Ahura-mazdā (cf. the Aramaic term *mzdyzn,* "worshiper of Mazdā") and the opposition Drauga-Arta, were introduced in SW Iran from the time of Darius onward. This novelty must have run counter to the ideas of the priestly Magi, as it appears from the fact that Darius rebuilt the "places of worship" destroyed by the Magus (Old Persian *magušˇ*) Gaumāta (*see* DARIUS 1; *see also* § D3*a above*) and killed a large number of other Magi (Herodotus III.79)—an occasion which was since yearly commemorated as the μαγοφονία festival. From then on, the Magi might have been forced to yield to royal pressure and to assign a place, the most prominent perhaps, to Ahura-mazdā in a pantheon which included Mithra, Anāhitā (both mentioned in inscriptions of Artaxerxes II and III), and others. By the time of Artaxerxes I (*see* ARTAXERXES 1) it seems as if the clergy of Airyana Vaējah may have put the Avestan texts together in the form of the mixed religion in which it is now known, under the influence of the fact that "Zoroastrianism" had by then become the official form in SW Iran, where the royal rulers had faltered in their sole allegiance to Ahura-mazdā. The introduction, in 441, of the Zoroastrian calendar, a reform of the Old Persian calendar with Zoroastrian names as, in fact, they occur in the Younger Avesta attached to the names of the months, possibly constitutes an important factor in this process. By then it had also become a matter of further recovering the formerly lost prestige for the Magi to claim ZARATHUSHTRA as their own and to locate his birthplace in Media.

4. The Arsacid period. There is little direct evidence for the form of Zoroastrianism prevalent in Iran during the Arsacid period. If credit is to be given to the Zoroastrian tradition that the Avestan books were collected by a Parthian king Vologesus, which seems to receive confirmation from a statement by MANI in the Coptic *Kephalaia* (*see* bibliography under MANICHEISM), in which it is said that "he [Zarathushtra] did not write any books, but his disciples after his death remembered [his words] and wrote the books which they read today," a continued strong activity of the Zoroastrian clergy under the auspices of the secular rulers is indicated.

A revival of the cult of Mithra in this period is likely, from the immense success of the Mithras cult, from Armenia to Spain and from Libya to Scotland, in the Roman Empire from the middle of the first century B.C. onward. The Roman Mithras is clearly modeled after the Iranian Mithra.

5. The Sassanian period. In the PAHLAVI books, which in matter may be assigned to the sixth century and in actual written form to the period immediately following the Muslim conquest of Persia, the opposition between Ormuzd (the principle of good) and Ahriman (the principle of evil) is fully systematized. The Amәsa Spənta (*Amahraspand*) and the other Zoroastrian divinities have become Ormuzd's created spirits and his willing servants. Both Ormuzd and Ahriman are pure spirits. Their antagonism necessarily will lead to a struggle, which will take twelve thousand years, the equivalent of one cosmic year. Ahriman initiates the hostilities and is temporarily repelled. Taking advantage of his indisposition, Ormuzd fashions creation, which has become necessary to him for use as a weapon with which to meet Ahriman. Man, by his own individual choice between good and evil, sides with Ormuzd ("I belong to Ormuzd, not to Ahriman; I belong to the gods, not to the demons, to the good, not to the wicked; I am a man, not a demon, a creature of Ormuzd, not of Ahriman") by adhering to the principles of good thoughts, words, and deeds (*humat, hūkht, huvarštˇ*), or with Ahriman. Both Ormuzd and Ahriman have their assistants, the Amahraspands (*Vahuman,* "Good Mind"; *Artvahišt,* "Best Truth"; *Šahrēvar,* "Choice Kingdom"; *Spandarmat,* "Augmentative Devotion," identical with the earth; *Hurdāt,* "Wholeness"; and *Amurdāt,* "Immortality") and gods (*yazatān*), and the demons (*dēv*) respectively. Ahriman, then, returns to the attack, brings death, disease, anger, envy, and other, similar entities into the world and destroys *Gayōmart,* father of the human race and origin of the first human couple (*Mašya* and *Mašyānag*). On the fourth day after individual death the soul of the departed has to face the judgment on the *Činvat* bridge, where his good and evil deeds are weighed so as to determine his ultimate destination—heaven, hell, or the "place of the mixed." In the end, a resurrection (*fraškart*) is brought about by the *Sōšyans* or "savior," which at the same time signifies the final victory of Ormuzd over Ahriman.

It should be pointed out that in Sassanian times, as it appears from passages in the Pahlavi books, a heterodoxy, known as *Zervanism* (from *zurvān,* "time"), which attempted to derive the principles of good and evil from the common principle of "Infinite

Time," existed. *See* bibliography under PAHLAVI.

Bibliography. The most recent survey of the Iranian languages is: K. Hoffman (on Old Iranian), W. B. Henning (on Middle Iranian), H. W. Bailey (on languages of the Sakas), G. Morgenstierne (on New Iranian languages), and W. Lentz (on New Persian), *Iranistik, Erster Abschnitt, Linguistik* in *Handbuch der Orientalistik,* vol. IV, no. 1 (1958). Shorter surveys are: H. W. Bailey, "The Persian Language," in A. J. Arberry, ed., *The Legacy of Persia* (1953), pp. 174-98. G. Redard, "Panorama linguistique de l'Iran," in *Festgabe Emil Abegg* (*Asiatische Studien,* VIII; 1954), pp. 137-48.

References to publications on the Iranian Turfan materials are given by W. Lentz, "Fünfzig Jahre Arbeit an den iranischen Handsscriften der deutschen Turfan-Sammlung" *ZDMG,* CVI (1956), *3-*22. For a Sogdian bibliography, see M. J. Dresden, "Bibliographia sogdiana concisa," in *Jaarbericht No. 8 van het Voor-Aziatisch-Egyptisch Gezelschap Ex Oriente Lux* (1942), pp. 729-34. Major studies on Khwarezmian are: Z. V. Togan, *Islamica,* III (1927), 190-213. Z. V. Togan and W. B. Henning, *ZDMG,* XC (1936), *27-*34. A. Freiman, *Xorezmiyskiy Yazik* (1951). W. B. Henning, "The Structure of the Khwarezmian Verb," *Asia Major,* N.S. V (1955), 43-49; "The Khwarezmian Language," in *Zeki Velidi Togan'a Armağan* (1955), pp. 421-36. A bibliography on the Saka languages is to be found in H. W. Bailey, "Languages of the Saka," in *Iranistik* (1958), p. 154. New Persian and other modern Iranian languages are discussed by W. Lentz and G. Morgenstierne in *Iranistik* (1958), pp. 155-78, 179-221, both with bibliography.

For a survey of the available linguistic materials on Aramaic, see: F. Rosenthal, *Die Aramaistische Forschung* (1939), pp. 24-71. The main collections of Aramaic documents are: A. Cowley, *Aramaic Papyri of the Fifth Century B.C.* (1923). E. G. Kraeling, *The Brooklyn Museum Aramaic Papyri* (1954). G. R. Driver, *Aramaic Documents of the Fifth Century B.C.* (1954; abridged and rev. ed., without facsimiles, 1957). See also: S. Telegdi, "Essai sur la phonétique des emprunts iraniens en araméen talmudique, *JA,* CCXXVI (1935), 177-256. W. Eilers, "Neue aramäische Urkunden aus Ägypten," *Archiv für Orientforschung,* XVII (1954-55), 322-35. Some of the examples quoted are taken from E. Benveniste, "Éléments perses en araméen d'Égypte," *JA,* CCXLII (1954), 297-310. H. Cazelles, "Nouveaux documents araméens en Égypte," *Syria,* XXXII (1955), 75-100. E. Hammershaimb, "Some Observations on the Aramaic Elephantine Papyri," *Vetus Testamentum,* VII (1957), 17-34. On the publication of tablets from the Persepolis "treasury," see: G. G. Cameron, *Persepolis Treasury Tablets* (1948). E. Benveniste drew attention to the importance of the Elamite materials in "Notes sur les tablettes élamites de Persépolis," *JA,* CCLVI (1958), 49-65. The matter of Iranian elements in Armenian was last comprehensively treated by H. Hübschmann, *Armenische Grammatik,* vol. I (1897).

No comprehensive study of the results of archaeological activities in Iran exists. A provisional survey was written by L. v. Berghe, "De stand van de archaeologische opgravingen in Iran," in *Jaarbericht No. 13 van het Vooraziatisch-Egyptisch Genootschap Ex Oriente Lux* (1953-54), pp. 347-93; a more extensive work by the same author has been published under the title *Archéologie de l'Irān ancien* (*Documenta et Monumenta Orientis Antiqui,* vol. VI; 1959). On stratigraphy, see: D. E. McCown, *The Comparative Stratigraphy of Early Iran* (1942); "The Relative Stratigraphy and Chronology of Iran," in R. W. Ehrich, ed., *Relative Chronologies in Old World Archeology* (1954), pp. 36-68.

There exist two comprehensive works on the Achaemenian period, neither of which is quite up to date: A. Christensen, *Die Iranier* (1933), in *Handbuch der Altertumswissenschaft* 3. Abt., 1. Teil, 3. Band, *Kulturgeschichte des Alten Orients* 3. Abschn., 1. Lief. A. T. Olmstead, *History of the Persian Empire* (1948; paperback ed., 1959). Both works are documented. For a discussion of the difficulties of Achaemenian genealogy, see: R. G. Kent, *Old Persian* (1950), pp. 158-59.

Scholars who accept the thesis of a basic Iranian contribution to Greek thought are: W. Eisler, *Weltenmantel und Himmelszelt* (1910). R. Reitzenstein and H. H. Schaeder, *Studien zum antiken Synkretismus* (1926). And, to a lesser degree, J. Bidez, *Eos, ou Platon et l'Orient* (1945). A negative conclusion is reached by: J. Kerschensteiner, *Platon und der Orient* (1945). W. J. W. Koster, *Le mythe de Platon, de Zarathustra et des Chaldéens* (1951). See also: A. Goetze, "Persische Weisheit in griechischem Gewande," *Zeitschrift für Indologie und Iranistik* (1923), pp. 72 ff; and the discussion of this article by J. Duchesne-Guillemin, "Persische Weisheit in griechischem Gewande," *HTR,* XLIX (1956), 115-22.

A positive view with regard to the influence of Iranian religion on Judaism is held by: E. Stave, *Über den Einfluss des Parsismus auf das Judentum* (1898). E. Böklen, *Die Verwandtschaft der jüdisch-christlichen mit der parsischen Eschatologie* (1902). L. Mills, *Zarathuštra, Philo, the Achaemenids and Israel* (1906); *Our own religion in ancient Persia* (1913). E. Meyer, *Ursprung und Anfänge des Christentum,* vol. II (1921). W. Bosset, *Die Religion des Judentums im späthellenischen Zeitalter* (3rd ed., 1926). G. Widengren, "Juifs et Iraniens à l'époque des Parthes," *Supplements to Vetus Testamentum,* IV (1957), 197-240. The opposite view is held by: N. Söderblom, *La vie future d'après le Mazdéisme* (1901). J. H. Moulton, *Early Zoroastrianism* (1913). J. Scheftelowitz, *Die altpersische Religion und das Judentum* (1920).

The literature on Alexander is, of course, very large. The most commendable monograph is, perhaps, W. W. Tarn, *Alexander the Great,* vols. I-II (1948-50). See also the recent survey articles of R. Andreotti, "Il problema di Allesandro Magno nella storiographia dello ultimo decennio," *Historia,* I (1950), 583-600. G. Walser, "Zur neueren Forschung über Alexander den Grossen," *Schweizer Beiträge zur allgemeinen Geschichte,* 14 (1956), 156-89. The Alexander romance is the subject of A. Abel, *Le roman d'Alexandre, légendaire médiéval* (1955). For the Seleucids, see such general works as: M. Rostovtzeff, *The Social and Economic History of the Hellenistic World,* vols. I-III (1940). W. W. Tarn and G. T. Griffith, *Hellenistic Civilization* (3rd ed., 1952). The Eastern Hellenistic world is the subject of: F. Altheim, *Weltgeschichte Asiens im griechischen Zeitalter,* vols. I-II (1947-48).

N. C. Debevoise, *A Political History of Parthia* (1938), discusses the political relations between the Arsacids and Rome. For the relations between Parthians and Jews, see: G. Widengren, "Juifs et Iraniens à l'époque des Parthes," *Supplements to Vetus Testamentum,* IV (1957), 197-240.

The main work on Sassanian history and civilization is A. Christensen, *L'Iran sous les Sassanides* (2nd ed., 1944). See also: F. Altheim and R. Stiehl, *Ein asiatischer Staat, Feudalismus unter den Sasaniden und ihren Nachbarn,* vol. I (1954). O. Widengren, "Recherches sur le féodalisme iranien," *Orientalia Suecana,* 5 (1957), 79-182. On the relations with the Hephthalites, see: G. Widengren, "Xosrau Anašurvan, les Hephthalites et les peuples turcs," *Orientalia Suecana,* 1 (1952), 69-94. On Mazdak, see: O. Klíma, *Mazdak, Geschichte einer sozialen Bewegung im sassanidischen Persien* (1957).

On Christianity in the Sassanian Empire, see: J. Labourt, *Le christianisme dans l'empire perse sous la dynastie sassanide* (1904; 2nd ed., 1914). On Persian martyrs, see: G. Hoffman, "Auszüge aus syrischen Akten persischer Märtyrer," *Abhandlungen für die Kunde des Morgenlandes,* vol. VII, no. 3 (1880).

The literature on Iranian religion is of considerable extent. Not even an attempt at approximate completeness can be made here. In addition to the references given above and in the bibliographies under PAHLAVI; ZARATHUSHTRA; ZOROASTRIANISM, see: G. Widengren's articles "Stand und Aufgaben der iranischen Religionsgeschichte," *Numen,* I (1954), 16-83; II (1955), 47-132 (also available together separately), which present the present status of the subject with the pertinent literature. They deserve particular attention and, at the same time, make repetition unnecessary. An exception may be made for two important contributions on Mithra: M. J. Vermaseren, *Corpus inscriptionum et monumentorum religionis Mithriacae* (1956). I. Gershevitch, *The Avestan Hymn to Mithra* (1959).

M. J. DRESDEN

PERSIAN, OLD. The language of ancient Fars (Greek Persis) in SW Iran (*see* PERSIA, HISTORY AND RELIGION OF, § C1*a*); primarily known through the inscriptions of the Achaemenian kings from Darius the Great (521-486 B.C.) to Artaxerxes III (359-338 B.C.). Old Persian and Avestan, the language of the Zoroastrian scriptures, the AVESTA, are the most ancient representatives attested in writing of the Iranian language group, a member of the Indo-European language family.

The existence of some of the inscriptions had been known to the Western world since the Greeks. European visitors to PERSEPOLIS from the end of the fifteenth century onward gave more or less accurate descriptions of them and copied some passages. Carsten Niebuhr (1733-1815), a Danish-German explorer and traveler, was the first who, while taking advantage of a short stay in Persepolis in 1765, made approximately correct copies of half a dozen inscriptions of Darius and Xerxes. The decipherment of the cuneiform script and the language was initiated by G. F. Grotefend in 1802. It opened the way to the understanding of other languages such as Elamite, Assyrian, Babylonian, and others. *See* ASSYRIA AND BABYLONIA § D.

The most important inscriptions were found in Bisutun (to the NW of Kermanshah), Elvend (near Hamadan), Persepolis, Naqsh-i Rustam (to the NW of Persepolis), Susa, and Suez. The majority is written in three versions: (*a*) Old Persian, (*b*) Elamite, and (*c*) Babylonian.

As to their contents, the inscriptions are official state documents which proudly commemorate for public cognizance and consumption the high exploits of the Achaemenian rulers such as military campaigns and victories, the building of palaces and canals, and the like. Limitation in number and repetitiousness by reason of the contents of the inscriptions impose natural restrictions on the variegation of the vocabulary of the Old Persian language. The usefulness of its vocabulary, however, for comparative Indo-European and Iranian language studies ranks high.

Bibliography. The extensive literature on the subject is aptly summarized by R. G. Kent, *Old Persian, Grammar, Texts, Lexicon* (1950; 2nd rev. ed., 1953), which gives the text of all the inscriptions in transliterated form, accompanied by an English translation. M. J. DRESDEN

PERSIS pûr'sĭs [Περσίς, a Persian woman] (Rom. 16:12). A Christian woman, greeted and praised by Paul. The name is often found in papyri and inscriptions, especially in connection with female slaves.

F. W. GINGRICH

PERSON OF CHRIST. *See* CHRIST.

PERUDA pĭ rōō'də [פרודא; Apoc. Φαρειδά, Φερειδά] (Ezra 2:55; I Esd. 5:33; II Esd. 17:57); Apoc. PHADOURA fə dōōr'ə in II Esd. 2:55. Alternately: PERIDA pĭ rī'də [פרידא] (Neh. 7:57). Head of a family of Solomon's servants who returned from the Exile. The name should probably be Perida in all occurrences. E. R. ACHTEMEIER

PERVERSE. The translation of a number of Hebrew words which generally share the meanings "twist," "bend," "be crooked," etc. Most often, it occurs in the WISDOM literature and in deuteronomic sources (*see* DEUTERONOMY). Our term belongs in the context of the unrighteous WAY of the wisdom literature, as opposed to the righteous way, and is characterized by foolishness, sensuality, and disobedience to God's order. In the Deuteronomic framework of blessing and curse (*see* BLESSINGS AND CURSINGS) the word takes on the clear distinction of "twisting" the commandments of God into something different or opposite, through disobedience. The perverse man (cf. perverse speech, mind, way, thing, etc.) is the man who behaves in a manner opposed to the demands of the law of God and the practical wisdom and morality which derive from it.

In the NT the word is used to translate various forms of στρέφω ("to turn, twist"), and reflects the typical OT usage (cf. Matt. 17:17; Luke 9:41; Phil. 2:15; cf. Deut. 32:5).

PESHITTA pə shē'tə. A Syriac term, meaning "simple," which came to be applied to a Syriac translation of the Bible which lacked the elaborate marginal annotations of the Harclean Syriac version and Paul of Tella's Syriac Hexaplar. *See* VERSIONS, ANCIENT, § 4*b*.

PESTILENCE [דבר; λοιμοί]. A general though quite distinctive designation of scourges of fatal termination sent by God as a punishment, and normally linked with other catastrophic events such as famine or the ravaging of the land. Moses utilized the possible incidence of pestilence as a threat to Pharaoh (Exod. 9:14), while in the Egyptian plague (Exod. 9:3) דבר was devastating MURRAIN.

The rebellious Israelites were frequently confronted with warnings concerning pestilence during the wilderness wanderings (cf. Num. 14:12; Deut. 28:21), and a number of unspecified epidemics actually broke out consequent upon Israelite disobedience (Num. 11:33; 16:46; 25:8). In Num. 14:37 the term מגפה is used in a synonymous sense.

The dedication prayer of Solomon (I Kings 8:37) incorporates a clause for the removal of sundry calamities, including pestilence, when national repentance was evident. In Amos 4:10, "pestilence" is used to describe the plague of Egypt, while in Hab. 3:5 it is one of the heralds of divine judgment. λοιμοί is rendered as "pestilence" and linked with "famine" in the apocalyptic utterance of Matt. 24:7 KJV; Luke 21:11.

While "pestilence" and "plague" are frequently associated with each other in incidence, there appears to have been a distinction made between them in antiquity, and thus there is no real justification for identifying them, as some philologists do. Cholera, typhoid, typhus fever, dysentery, smallpox, and bubonic plague were all scourges of Bible lands to varying degrees. But bubonic outbreaks are generally designated as "plague," while "pestilence" is often associated with sieges, suggesting a contaminated water supply, and hence diseases such as cholera or enteric fever. However, smallpox, bubonic

plague, and pneumonic plague may be indicated occasionally. R. K. HARRISON

PESTLE [עלי]. A hand tool used to pound, crush, or rub substances in a MORTAR. Fig. MOR 70.

***PETER** pē'tər [Πέτρος]. The name which Jesus gave to the most prominent of his twelve apostles.

1. The names of Peter
2. Home and family
3. Call as disciple and apostle
4. Role among the Twelve
5. "On this rock"
6. Witness to the Resurrection
7. Leadership in and near Jerusalem
8. Wider work
9. Relation to other apostolic leaders
10. Peter in Rome
11. Place of burial
12. Writings ascribed to Peter
13. The message Peter preached
14. Permanent contribution
Bibliography

1. The names of Peter. The NT uses four names to refer to Peter. Least used is the Hebrew name Symeon (שמעון; Συμεών), which appears only in Acts 15:14 and in most Greek MSS of II Pet. 1:1. The Greek name Simon (Σίμων) occurs much more often: in Matthew, five times; in Mark, six; in Luke, eleven; in John, twenty-two; in Acts, four (all in the Cornelius story); and possibly in II Peter, one (1:1). Nearly twenty times, almost all of them in John, the name Simon is used in the double name Simon Peter. The other two names, Cephas and Peter, are identical in meaning. Both mean "rock." Cephas (Κηφᾶς) is the Greek transliteration of the Aramaic word כפא, "rock." It occurs in John once, in I Corinthians four times, and in Galatians four times. The Greek word πέτρος has the same meaning (John 1:42). It occurs in Matthew twenty-three times, in Mark nineteen, in Luke seventeen, in John thirty-four, in Acts fifty-six, in Galatians twice, and in I Peter and II Peter once each. Because Greek MSS vary in the name given in some passages, these figures are only approximate, but they show clearly that the name Peter is dominant in NT usage, and that the name Simon, though used often, is much less frequent. The double name Simon Peter and the phrase "Simon called Peter" recall that Simon was the earlier name and the name Peter was given later. The frequency of the name Simon in the gospels and the rare use of Symeon in the NT indicate that the name Simon was not merely a later Greek substitute for Symeon, but that the name Simon was his alternate original name and was in common use during Jesus' ministry. If this is so, it hints at some Greek background for the pre-Christian life of Peter. He was not an Aramaic-speaking Jew who had no touch with the Hellenistic forces in Galilee, but a bilingual Jew who thereby had some providential preparation for later missionary preaching.

2. Home and family. Two gospels refer to the father of Peter. In Matt. 16:17, Jesus calls his leading disciple Simon Bar-Jona—i.e., Simon son of Jonah (although an attempt has been made to interpret it as a descriptive title meaning he was an "extremist"). In John 1:42, according to the probable text, he is called Simon the son of John (Σίμων ὁ υἱὸς Ἰωάννου).

That Peter was married is clear from Matt. 8:14; Mark 1:30; Luke 4:38, which speak of his mother-in-law, whose fever Jesus healed. Later, in the apostolic age, Paul states that Cephas took his wife with him on journeys to various churches (I Cor. 9:5).

The gospels speak often of Peter's brother Andrew. The two brothers were partners in a fishing business on the Sea of Galilee, and Mark 1:29 indicates that they lived together. Just which city on that lake was their home is not entirely clear. According to Mark 1:21, 29, they lived at CAPERNAUM on the NW shore of the lake. John 1:44 says that BETH-SAIDA, the residence of Philip, was the "city of Andrew and Peter." John 12:21 locates this Beth-saida in Galilee. There is no convincing evidence of a Beth-saida W of the Jordan. The only Beth-saida of which we have clear knowledge lay a little E of the Jordan, on the N shore of the Sea of Galilee. Either the Gospel of John is in error in placing Beth-saida in Galilee, since the site of Beth-saida Julias is not in Galilee but in Gaulanitis, or Galilee is here used in a popular sense to indicate the settled region W and N of the Sea of Galilee, in which sense Beth-saida could be considered a city in Galilee. If the Gospel of John is correct in placing the home of Andrew and Peter in Beth-saida, this must refer to the original family home; in the days of Jesus' ministry the home of these brothers was in Capernaum, where in their fishing business they were "partners" (κοινωνοί) of James and John the sons of Zebedee (Luke 5:10).

3. Call as disciple and apostle. All four gospels unite in reporting that Peter became a disciple of Jesus in the very early days of Jesus' ministry. They differ, however, as to the place and circumstances. The Synoptic gospels place the event by the Sea of Galilee. According to Matt. 4:18-22; Mark 1:16-20, Jesus walked along the shore and called first Simon and Andrew, and then James and John, to follow him; he told Simon and Andrew, and presumably the other two also, that they were to "become fishers of men." They promptly left their boats and nets and followed him. Luke 5:1-11 agrees as to the location of the call; this account, however, centers attention on Peter; Andrew strangely is not mentioned, and James and John receive minor attention. A remarkable catch of fish while Jesus was in Peter's boat led Peter to confess his own unworthiness, but Jesus promised him and the sons of Zebedee that thenceforth they would be "catching men." This account reflects what the other Synoptic gospels take for granted—the overawing sense of a mysterious greatness in Jesus. Whatever the exact circumstances of the call, it occurred at the Sea of Galilee, included the two pairs of brothers, and evoked a sense of personal power in Jesus.

The Gospel of John dates Peter's first contact with Jesus earlier, and places it in Judea near the place where John the Baptist was carrying on his ministry (1:35-42). In this account Andrew, and apparently Peter, had come to hear John and had become his disciples. When John pointed to Jesus as the Lamb of God, Andrew and another disciple of John fol-

lowed Jesus, and Andrew came away from this first encounter convinced that Jesus was the expected Jewish Messiah. He at once reported this discovery to his brother and brought him to Jesus, who promptly announced that Simon was to be called Cephas, which means Peter.

In this account the initial call occurred in the S Jordan Valley (1:28); the first disciple named is Andrew; and the messianic identification of Jesus, ascribed in the Synoptic gospels to Peter as a new insight attained near the end of the Galilean ministry, here occurred on the first day of Jesus' contact with his disciples, and it was made, not by Peter, but by Andrew, before Peter had even seen Jesus. It may be said, and often is said, that this was the preliminary call, while the full and definite call to active and full-time discipleship was given later by the Sea of Galilee. But this leaves a serious problem unexplained: in the Johannine account it was Andrew who first identified Jesus as the Messiah, while the Synoptic gospels assign this act to Peter, and Andrew did so on the first day Jesus met his disciples rather than toward the end of the Galilean ministry. This early connection of Peter and Andrew with John the Baptist is entirely possible, but the dramatic method of the Gospel of John, which emphasizes its witness by giving its full testimony to Jesus from the first chapter on, has apparently led it to place the Messianic identification much too early in the story. The actual call to accompany Jesus as full-time disciples may therefore be dated at the beginning of the Galilean ministry of Jesus.

From the day of the call by the Sea of Galilee, Peter was a full-time disciple, living with his Teacher, learning his Master's message and spirit, and helping him in minor ways. The word "disciple" (μαθητής) means "pupil," "learner." To live as a disciple implied more than classroom instruction; it included continual personal association with the Teacher as an integral part of the learning process. The word "disciple" did not mean the same as the word "apostle" (ἀπόστολος). Yet to be a disciple in the full sense prepared the way for later appointment as apostles. For Jesus called these men to learn from him that they might then "become fishers of men." A mission, a commission to carry forward the work of Jesus, was his purpose in calling Peter to discipleship. So when Jesus later "appointed twelve, to be with him, and to be sent out to preach and have authority to cast out demons" (Mark 3:14-15), he did not do something entirely new. Some such mission was in his mind from the start, though the appointment of twelve made it more specific and fixed the number of men chosen for the immediate task.

When the definite number was fixed and the Twelve chosen, and the plan to send them out through the Galilean cities was formed, these men began to be called apostles (Matt. 10:2; Mark 6:30; Luke 6:13; 9:10). Some scholars have argued that the title APOSTLE came into use only in the apostolic age. But the title was appropriate as soon as a definite mission was planned; the gospels clearly report that the title was used of the Twelve during the lifetime of Jesus; there is no sound reason for denying that Jesus designated these men as his apostles. The wider use of the title "apostle" in the apostolic age shows that the term was not identical in meaning with "the Twelve," but the evidence indicates that the Twelve were called apostles from the time that Jesus sent them out on a preaching and healing mission in Galilee.

Among the Twelve, Peter was included, and he was always named first (Matt. 10:2; Mark 3:16; Luke 6:14; cf. Acts 1:13). Indeed, Matt. 10:2 emphasizes his right to first mention: "first, Simon, who is called Peter." In the Synoptic gospels, he is the first to be called to follow Jesus; he is the first to be named in the lists of the Twelve. To think of the apostles is to think first of Peter.

4. Role among the Twelve. The practice of mentioning Peter first was not due simply to his early call or to his prominence in the apostolic age. Throughout Jesus' ministry Peter was the outstanding member of the Twelve. At times he acted as a vigorous individual quick to take the initiative. This occurred in Matt. 14:28, where Peter volunteered to come to Jesus upon the water, though he became afraid while carrying out his proposal, and also in Matt. 18:21, where he asked Jesus how often he must forgive his brother.

Usually, however, Peter acted or spoke for the group of disciples, and was recognized as the outstanding one of the group. At one time he asked Jesus for whom a parable is intended (Luke 12:41). At Caesarea Philippi he spoke for the disciples in affirming Jesus to be the Messiah (Matt. 16:16; Mark 8:29; Luke 9:20); and when Jesus announced his impending suffering and Peter rebuked him, Jesus' stern rebuke of Peter was not intended for Peter alone, for Jesus' act in looking at the disciples while rebuking Peter shows that he recognized in Peter's words an expression of the mind of the group (Mark 8:33). Peter spoke again for the disciples when, thinking of future rewards, he reminded Jesus of their sacrifice in following him and asked what their reward would be (Matt. 19:27; Mark 10:28; Luke 18:28). On a few occasions a question is ascribed to the disciples in one gospel but to Peter in another (cf. Mark 7:17 with Matt. 15:15; Matt. 21:20 with Mark 11:21).

The prominent role of Peter is reflected where Peter is singled out and the other disciples are mentioned as a group associated with him: "Simon and those who were with him" sought out Jesus when he left Capernaum for prayer (Mark 1:36; but cf. Luke 4:42: "the people"); "Peter and those who were with him" remonstrated with Jesus when he asked who of the crowd had touched him (Luke 8:45, according to a well-attested reading; but other good authorities read only "Peter," and the parallel in Mark 5:31 says "his disciples"); "Peter and those who were with him"—i.e., John and James—were heavy with sleep on the Mount of Transfiguration (Luke 9:32); and the angel at the empty tomb, according to Mark 16:7, instructed the women to "tell his disciples and Peter" (Matt. 28:7 says only: "tell his disciples"). Back of the varying form of these statements is the common knowledge that when the disciples spoke or acted, Peter was normally their spokesman and took the lead.

When an inner circle of the Twelve is mentioned, Peter is always included and is named first. Peter,

James, and John are the most often mentioned inner group: on the occasion of the miraculous catch of fish (Luke 5:10); when Jesus entered the house of Jairus the ruler of the synagogue to raise his daughter from the dead (Mark 5:37; Luke 8:51 names John before James); at the Transfiguration (Matt. 17:1; Mark 9:2; Luke 9:28 names John before James); and in the Garden of Gethsemane, when Jesus went apart to pray (Mark 14:33; Matt. 26:37 says here: "Peter and the two sons of Zebedee"). In Mark 13:3 Andrew is included with these three as asking the time of the destruction of the temple; Matt. 24:3 says that the disciples asked the question, and Luke 21:5 ascribes the question to an unidentified "some." Luke 22:8 says that Jesus sent Peter and John to prepare the Passover; Matt. 26:17 and Mark 14:12 say that "his disciples" asked about the plans, and they (in Matthew) or "two of his disciples" (in Mark) were instructed to make ready.

The prominence of Peter appears in other ways. Jesus went to Peter's house in Capernaum (Matt. 8:14; Mark 1:29; Luke 4:38), and made use of Peter's boat as a vantage point from which to teach (Luke 5:3). It was Peter who made the epoch-making confession that Jesus is the Christ (Matt. 16:16; Mark 8:29; Luke 9:20). Peter was to rally the disciples after Jesus' arrest had scattered them (Luke 22:31-32). Peter's denial of Jesus had its pathos precisely in the fact that Peter was the outstanding disciple who, above all others, should have held fast and encouraged the others (Matt. 26:69-75; Mark 14:66-72; Luke 22:54-62). But he proved of crucial importance as the first witness to the resurrection of Jesus (Luke 24:34; I Cor. 15:5).

The role of Peter in the Gospel of John is not quite the same. Here, too, Peter entered the scene early (John 1:40-42); he uttered for the disciples the stirring confession: "You have the words of eternal life; . . . you are the Holy One of God" (6:68-69); and he was prominent at the Last Supper, in his denial, and at the empty tomb (chs. 13–20). In the appendix he is solemnly charged to carry out a pastoral ministry: "Feed my lambs. . . . Tend my sheep. . . . Feed my sheep" (21:15-19). But the outstanding role of Peter, while not obscured, is somewhat qualified. It was Andrew who first met Jesus and then brought Peter to Jesus (1:40-41). It was Andrew who first discerned that Jesus was the Messiah; he told Peter this central fact (1:41). Between that first meeting with Jesus and the Last Supper this gospel reports no act or word of Peter except the confession of 6:68-69. At the Last Supper and throughout the passion narrative and resurrection account the Beloved Disciple appears with Peter in a prominent role (chs. 13–21). This "Beloved Disciple" had the highest-ranking position, "close to the breast of Jesus" (13:23). To him was entrusted the mother of Jesus (19:26-27). He ran to the tomb when it was reported empty, and was the first to realize what had happened; he "believed" (20:8). He first recognized the risen Lord at the Sea of Tiberias (21:7). He shared the attention with Peter. Whether he was the "other disciple" (18:16) who had access to the court of the high priest and could obtain entrance for Peter is not certain, but here too Peter was not the unchallenged leader of the disciples. Peter is prominent in the Gospel of John, but he does not hold the unrivaled position among the disciples which he does in the Synoptic gospels.

5. "On this rock." Peter's original names were Symeon and Simon, and it appears that during Jesus' ministry he was commonly called Simon. He is known to us, however, through the new name which Jesus gave him. This Aramaic name, transliterated, was Cephas, and its Greek translation, soon to prevail, was Peter. It is not clear when Jesus gave this name to Simon. John 1:42 states that he did so the first time he saw Simon. Since the Gospel of John, for dramatic purposes, seems to date too early the full confession of Jesus as Messiah, it is possible and, indeed, probable that the giving of the new name is likewise dated too early. In Mark 3:16; Luke 6:14 the new name is said to have been given when Jesus chose the Twelve. Matt. 16:18, however, puts the naming at the time when Simon, on behalf of the group of disciples, declared that Jesus was the Messiah. This conflicting evidence of the gospels makes it impossible to be certain just when Jesus gave the new name. We may accept it as fact that he did so at some time during the public ministry. The name Cephas or Peter soon superseded the name Simon, perhaps in part because it was a distinctive name and not so commonly used as Simon, and perhaps even more because the followers of Jesus knew that the name carried significance not only for Peter but also for the life of the church. While the name actually given to Simon by Jesus was Cephas, Aramaic for "Rock," it was natural for this to be expressed in Greek translation as Peter, and just as in the past this disciple had had both a Semitic name, Symeon, and a Greek name, Simon, we may infer that almost at once began the use of the name Peter, Greek for "Rock."

The gospels do not say why Jesus gave Simon the new name of "Rock." It was not simply a description of his character, for he was volatile and impulsive and liable to failure. Nor was it an ironic jest, for the giving of a new name was a solemn and significant act; it had some serious meaning. It may express in part a sense of Peter's potential usefulness and challenge him to live up to his possibilities and his trust. Certainly it indicates that he now has a new role and is responsible for giving strength and steadiness to the group of disciples.

Crucial for the understanding of Peter's role is the interpretation of Matt. 16:17-19. Did Jesus speak these words? Many scholars have denied that he could have done so. They point out that these verses have no parallel in any other gospel, that Jesus throughout his ministry showed no interest in ecclesiastical organization, and that apart from Matt. 18:17 the word "church" does not occur in any other passage in the four gospels. They point out that James the brother of the Lord and Paul the apostle take the leadership of large portions of the church, with no hint that they are under Peter's control.

If we are to understand these verses, we must put aside certain modern preconceptions: (*a*) We must not assume that the word "church" meant to Jesus what it means today. We must not think in terms of advanced organization. We must not think that Jesus had seceded from Judaism and was speaking of an

organization completely separate from his ancestral religious home. He was speaking of the group which centered in him and which was the true center of the people of God. Whatever Aramaic word he may have used—it may have been *qahᵉla* or *kᵉnishta*—he meant this loyal people of God rather than an organization. (*b*) We must put aside all thought of successors to Peter. The passage makes no mention of such. Peter is given a basic work to do, and nothing is said of any need or right to convey his authority and role to successors. (*c*) We must avoid the idea of external, automatic, and exclusive authority. In Matt. 18:18 Jesus gives to the entire group of disciples authority like that which in Matt. 16:19 he gives to Peter. Then in Matt. 18:19-20 he promises to give to any two or three of his followers whatever they ask. It is clear to every Christian that this latter promise is spiritually conditioned. A request for what is evil or damaging to others will be denied; no true Christian would want an unworthy request granted. In other words, just as in Matt. 18:19 there are unexpressed spiritual conditions, so the promise of authority to Peter or to the entire group of disciples does not mean that unworthy human leadership or judgments will be sanctioned by God. The writer of the Gospel of Matthew knew this; he reports that, immediately after the apparently unconditional promise of Matt. 16:19, Jesus condemned Peter for being untrue to the mind of Jesus: "Get behind me, Satan" (16:23). (*d*) We must not assume that these verses necessarily belong in the context where we now find them. Form criticism has made it clear that the gospel tradition was preserved at first mainly in the form of separate units; single incidents, sayings, or parables were repeatedly used in the life of the church to serve its needs. Even though a general outline of Jesus' life was preserved, the exact situation in which a saying was spoken by Jesus was often unknown. Our gospel writers therefore had to organize their material in a form more unified than the oral tradition had. And of all the gospel writers, the writer of Matthew is most clearly skilled in organizing sayings of Jesus in large discourses. Matt. 16:17-19 may preserve genuine words of Jesus which are not now within their original historical setting.

If we examine these verses with such cautions in mind, it becomes much more reasonable to say that they were spoken by Jesus. In the first place, they are Semitic in language and thought-world; they must come either from Jesus or from the early Aramaic-speaking wing of the apostolic church. Moreover, the reference to Peter as a rock has a real Jewish tone; a rabbinical saying reports that when God saw Abraham, he said that he had found a rock on which he could build the world (Yalkuth 1.766). It was Peter who was the rock—not merely his faith, though this was included, and not Christ, although Peter would be a rock only through his relation to Christ. It fits Jesus' outlook to say that Peter's understanding of Jesus' role in God's work was God-given. Matt. 16:17 could hardly be from Jesus if, as John 1:41 says, Peter already knew from Andrew, before he ever became Jesus' disciple, that Jesus was the expected Messiah. But if, as seems true, Peter first of the disciples realized and stated the role of Jesus, he had been guided by God to the truth and its expression. In the beginnings of the church Peter was to be the key figure; all its later stages would build upon his pioneer witness and leadership. This church, this people of God, would survive martyrdom and every threat of destruction; its promise of life would be vindicated in the fulfilment of God's purpose, and Peter would make a basic contribution to that ongoing life of God's people. In his crucial pioneer work Peter would have authority; he could not use it selfishly or capriciously, nor exercise it mechanically, but he could speak and act for God insofar as he acted in the spirit of Christ and served the purpose of Christ. There was to be leadership and authority in the church, and Peter would have a crucial role in laying its foundation. The church was not to live in anarchy but in unity and with order adapted to the living situation, and Peter had his basic place in this original development and work of the church.

When later ideas foreign to the mind of Jesus are kept out of the picture, it is clear that Jesus did give to Peter the place of outstanding leadership among his disciples. It may be that these words were not spoken near Caesarea Philippi but toward the end of Jesus' life, and in the course of talks with the disciples about what lay ahead. Certainly these words reflect an important fact: Peter was the outstanding member of the Twelve; he was the one who took the lead, and Jesus parried the attempt of James and John to supersede him (Mark 10:35-37; cf. Matt. 20:20-21); it was to Peter Jesus committed the task of rallying his fellow disciples even after Peter's denial (Luke 22:31-32); and Peter was the founding leader of the apostolic church, as the early chapters of Acts show. Luke 22:31-32 offers a parallel to Matt. 16:17-19 in the essential commission of Peter to take the lead among his fellow disciples. It is a fact of history that Peter was the Rock; he followed Jesus' instruction to "strengthen [his] brethren"; he was the key leader of the earliest years of the church. The later sharing of prominence with James the brother of the Lord and with Paul bars the way to unjustified ideas of hierarchy and apostolic succession, but it does not take from Peter the honor of basic leadership in the crucial days of the church's beginnings.

6. Witness to the Resurrection. The usual Christian view emphasizes Peter's confession of Jesus as Messiah as his unique and basic contribution. There is no reason to minimize the importance of this event, although the necessity Jesus found to rebuke Peter immediately afterward shows that Peter's confession was but a stage on the way to that full understanding and insight needed as the basis for the apostolic church. His denial of Jesus at the time of the trial is further evidence that Peter needed more than he possessed when he first confessed Jesus as Messiah. Peter was not ready to lead the church or to give its basic witness until he could witness to the resurrection of Christ. In fact, there was and could be no church until the resurrection witness became the triumphant climax and interpreting center of the gospel.

It is at this turning point that the leading role of Peter is most clear. In the earliest written report of

the resurrection appearances, that of Paul in I Cor. 15:3-8, the first appearance is "to Cephas." Luke 24:34 seems to agree with this; it was to Peter, who had been instructed to "strengthen [his] brethren" (Luke 22:32), that Jesus first appeared. This is not entirely clear in Luke, since it may be thought that Jesus had appeared to the two disciples on the way to Emmaus before he "appeared to Simon." But Luke probably means that the appearance to Peter came first.

The central work of an apostle of Christ, as Peter himself is reported to have said, was to be a "witness to his resurrection" (Acts 1:22). It was fitting for the "first" of the apostles (Matt. 10:2) to be the first to see the risen Christ. He then was ready to do what Jesus had instructed him to do. He then was ready to begin the courageous witness which played so important a role in the apostolic church.

7. Leadership in and near Jerusalem. During the period of approximately fifteen years which is covered by the first twelve chapters of Acts, Peter was the dominant leader of the church. Undoubtedly the other apostles were faithful, but nine of them Acts never mentions as active individual leaders. John the son of Zebedee accompanied Peter to the temple (3:1), was imprisoned with Peter (4:3), and later went to Samaria with him (8:14), but he was a secondary figure who never took the initiative. James his brother was singled out for martyrdom (12:2), and this shows that he had been active in Christian work and so had attracted Herod Agrippa I's attention; but no acts of his career are reported, and he cannot have been the church's dominant leader. Two members of the Seven appear prominently in Christian leadership: Stephen, whose powerful preaching at Jerusalem among Greek-speaking Jews resulted in his martyrdom (6:8–8:1), and Philip, who, when driven from Jerusalem by persecution, preached effectively in Samaria, on the way to Gaza, and in the coastal cities of Palestine (8:4-8, 26-40). It is entirely possible that prior to Stephen's death the Seven played a more prominent role in Jerusalem than the narrative of Acts reports, but it would be wrong to assume that either Stephen or Philip matched the leadership of Peter. Barnabas emerged as an able and sincere leader (4:36-37; 11:22-30; 12:25), but his role was obviously subordinate. By the time of 12:17 James the brother of the Lord, associated with the church from its earliest days (1:14; cf. I Cor. 15:7), had risen to a place of leadership, but during the period of Peter's stay in Jerusalem, James did not hold first rank there. Peter dominated that period.

It was Peter who proposed the selection of a twelfth witness to the Resurrection, to take the place of Judas Iscariot (1:15-22). On Pentecost, Peter seized the opportunity to preach to the assembled pilgrims, and his powerful appeal, which led to the conversion of "three thousand souls," marked him as worthy to carry evangelistic leadership in the church (2:14-41). When Peter and John went "to the temple at the hour of prayer," about 3 P.M., and encountered the lame beggar, Peter spoke the word that gave healing, and so proved powerful not only in preaching but also in the working of miracles; and he again seized the opportunity to speak to his fellow Jews in the outer court of the temple (3:1-26). When he and John were arrested and brought before the Jewish authorities for examination, Peter spoke with "boldness" (4:13), and no threats from the officials intimidated him (4:1-31). When Ananias and his wife, Sapphira, tried to deceive the other Christians by pretending to give the church all their money while really keeping part of it, Peter sensed the danger which hypocrisy brought to the church; he denounced each of the conniving couple in turn, and their death resulted (5:1-11). Peter was undoubtedly active in the healing and preaching which led to the arrest of all the apostles, and in the ensuing rebuke before the Sanhedrin he voiced the apostles' determination to "obey God rather than men," and again gave his witness to Christ (5:12-42).

Up to this time the story centered in Jerusalem, and the Twelve, with Peter in first place, were the center of the life and work of the church. The appointment of the SEVEN calls attention to the Hellenistic portion of the Jerusalem church. It had been present all the time, and its vigorous leadership finally provoked a crisis, and the martyrdom of Stephen led to the scattering of the Hellenistic Jewish group. The Twelve were not driven from Jerusalem (8:1). But just at that point the role of Peter changed. By his Galilean origin he had been given some knowledge of Greek, and he was able to follow the work of Philip at Samaria and bring help to the new Christians there (8:14). Thus by the decision of the Twelve he began an outreaching ministry. As 9:32 says: "Peter went here and there among them all," and this means that he went not only to the Hellenistic Christians and Jews but also to any Aramaic-speaking Christians and Jews that he found. He probably spent most of his time among the Aramaic-speaking population, and his work at Lydda and Joppa may have been with such people (9:32-43), but he could go to the Caesarea home of the centurion Cornelius, who no doubt spoke Greek, and preach the gospel to him and his household and friends (10:1–11:18).

A broadening spirit marks the story at Joppa and especially at Caesarea. At Joppa, Peter stayed with "one Simon, a tanner," whose trade was objectionable by strict Jewish ceremonial law. At Caesarea, Peter was led, somewhat against his inclination and with obvious reluctance, but in response to what he was certain was God's guidance, to speak to uncircumcised Gentiles. He admitted them to baptism without requiring them first to conform to the rites which Judaism required of proselytes. This free spirit, added to the vigor and prominence of Peter's work at Jerusalem, no doubt enraged Jewish leaders so that Herod Agrippa I could see that Peter's arrest would please them (12:3). The increased hostility to Peter indicated that his days of free and active leadership in Jerusalem were at an end, and so, when he was released from prison and had visited the Christians at the home of Mary the mother of John Mark, he indicated that James the brother of the Lord should now lead the Jerusalem church, and "he departed and went to another place" (12:4-17). This marked the end of Peter's dominant leadership in and near Jerusalem. On the one later occasion when he appeared in Jerusalem, at the apostolic conference

(15:1-29), James presided and formulated the decision of the conference.

8. Wider work. The later career of Peter cannot be traced in detail. No connected account of this period of his life exists, and only scanty evidence at best supports traditions about his later work. He "went to another place" (Acts 12:17). This evidently means that he left Jerusalem, and probably implies that he began to work outside Palestine. But it does not say where he did go. Wherever it was, his wife went with him (I Cor. 9:5).

He may have gone to Antioch in Syria. Certainly he later visited the city (Gal. 2:11), and the strong ancient tradition that he was the first bishop at Antioch suggests that even though this tradition as it stands cannot be true, he may have visited the church there at an early date and stayed long enough to have real influence.

He may have gone to Asia Minor. This is not probable at such an early date as Acts 12:17, and even I Pet. 1:1 does not claim he had visited these regions. But even if Peter did not write I Peter, this verse shows that the church thought he had some interest in the greater part of Asia Minor. The case for extensive missionary work by Peter in Asia Minor is weakened by the fact that I Peter contains no indication of personal acquaintance with the areas addressed.

He may have gone to Corinth and neighboring regions. The presence of a Cephas party at Corinth (I Cor. 1:12) may indicate that Peter had been there and won adherents to his point of view. The later tradition, stated by Dionysius, bishop of Corinth, that Peter and Paul had founded the church at Corinth, is obviously a fiction, and at most reflects a knowledge that Peter had at some time been in that city.

Some have thought that he went to Rome. However, there is no evidence that he went to Rome so early. The later tradition that Peter spent twenty-five years at Rome, founding the church there and acting as its first bishop until his martyrdom, is certainly untrustworthy. With the problem of Peter's connection with Rome we shall deal later. We must not exclude work there, but we must not assume that Peter went there directly from Jerusalem at the time of Acts 12:17.

9. Relation to other apostolic leaders. To estimate correctly the role of Peter in the primitive church, we must study carefully his relations with other apostolic leaders of that period. We have seen (§ 7 *above*) that during the period of his dominant leadership at Jerusalem his importance greatly surpassed that of James and John the sons of Zebedee. Stephen was an outstanding leader, and may have had a longer and more influential career of leadership than a first reading of Acts might suggest, but he was not the equal of Peter, and attempts to picture the Jerusalem church as divided into two separate groups, an Aramaic-speaking wing under Peter and a Hellenistic wing in which Stephen was dominant, are unconvincing. The Jerusalem church was not split into two separate denominations, even though there were two groups which had a partially separate life because of language differences. Peter and other Christians (including Barnabas) were able to bridge these differences, and Peter was the outstanding leader of the entire Jerusalem church.

James the brother of the Lord gradually became the dominant leader of the Jerusalem church. Paul reflects an early stage of this process in Gal. 1:18-19; he went to Jerusalem, three years after his conversion, primarily "to visit Cephas," who was then the most important leader there; he mentions James, but not as equal to Peter. By the time of Acts 12:17 James had become more prominent. Peter indicates this by saying: "Tell this to James and to the brethren." During the past few months or years Peter had begun to travel about Palestine, and James had proved an adequate and able leader during his absence. The departure of Peter in Acts 12:17 left the leadership of the Jerusalem church in the hands of James. In Acts 15, at the apostolic conference, though Peter was present, James apparently presided, and he formulated the decision which the conference approved. This indicates that James had an influence that reached far beyond Jerusalem. Paul confirms this dominant position of James; in speaking of his conference with the Jerusalem leaders, he names James first and gives Peter second place (Gal. 2:9).

The continuing dominance of James at Jerusalem and in a wider area is suggested, not only in Acts 21:18, where Paul "went in" to see James on his final visit to Jerusalem, but especially in Gal. 2:12, where "certain men came from James" to Antioch in Syria and so awed Peter and Barnabas that they stopped eating with Gentiles. Even if these men did not have a direct commission from James to act as they did, it remains true that the influence of James was felt outside Palestine, and Peter and Barnabas did not feel able to resist it. These facts imply that Peter was no longer the dominant head of the Jewish Christian portion of the church.

Paul's relation to Peter combined respect with independence. On his first journey to Jerusalem after conversion (Acts 9:26-30; Gal. 1:18-20), Paul's purpose was "to visit Cephas," to establish friendly relations and no doubt to learn more of Jesus. Paul is careful to emphasize, however, that he already had his gospel before he met Peter. He did not place himself under Peter, but continued to work independently (Gal. 1:21-24). The next visit to Jerusalem which Paul reports (Gal. 2:1-10) is probably that described in Acts 15:1-29. These narratives raise many questions, but for our purpose two facts stand out: (*a*) according to both accounts Paul won approval of his essential gospel to the Gentiles, and his future work was not subjected to the control of Peter; (*b*) Paul states as a fact not open to dispute that Peter was an apostle to Jews as Paul was to Gentiles. It had never occurred to Paul that Peter had authority over the entire church. Each had his independent field of work and sphere of leadership. The independence of Paul was illustrated when Peter visited Antioch (Gal. 2:11-14); when Peter submitted to the influence of James, Paul rebuked his vacillating attitude. As Peter's equal, Paul felt justified in condemning Peter for inconsistency in first eating with Gentiles and then refusing to do so.

10. Peter in Rome. Lack of clear early evidence makes it impossible to determine definitely the rela-

tion of Peter to the church at Rome. The NT never reports a visit of Peter to that city. Acts tells nothing of such a visit, and the story of Paul's arrival in Rome never suggests that Peter had been there or was there when Paul arrived. Paul's letter to the Roman church gives no hint that this church had any connection with Peter. These facts are at least decisive against any view that Peter spent long years in residence at Rome or was present there when Paul wrote to Rome or arrived there.

I Pet. 5:13, which sends greetings from "Babylon," probably implies that Peter writes from Rome; here, as in the book of Revelation, it seems that Rome is cryptically called Babylon. Even if Peter did not write I Peter, the letter reflects the view that he had been there and so could have written from there. This is the one NT hint of a visit to Rome, for the suggestion that the two witnesses in Rev. 11:3-12 were Peter and Paul, martyred in Rome, is by no means convincing; this passage is usually thought to be a reference to Moses and Elijah. The NT thus does little to indicate the presence of Peter in Rome. John 21:18-19 does predict the future martyrdom of Peter, but does not say where it will occur.

Somewhat stronger evidence comes from I Clem. 5.4, where, in connection with a mention of Paul and his martyrdom, it is said of Peter that he "suffered not one or two but many trials, and having thus given his testimony went to the glorious place which was his due." The context on the whole favors the view that this vague sentence refers to Peter's martyr death and places it at Rome. Ignatius, bishop of Antioch, on his way to Rome and anticipated martyrdom, writes to the Roman church: "I do not order you as did Peter and Paul" (Ign. Rom. 4.3). In the context, this suggests that both apostles had been at Rome, and it can be taken to imply their martyrdom there.

Explicit tradition begins only toward the end of the second century. Dionysius, bishop of Corinth, writing somewhere near A.D. 175, says that Peter and Paul founded both the Roman and the Corinthian churches: "Both planted also in our Corinth, and likewise taught us; and likewise they taught together also in Italy, and were martyred on the same occasion" (Euseb. Hist. II.25.8). Since it is certain that Peter did not collaborate with Paul in founding the church at Corinth, this witness about their work and death at Rome is not above suspicion. At about the same time or a little later, Irenaeus speaks of "Peter and Paul . . . preaching at Rome, and laying the foundations of the Church" (Her. III.1.1). These and other words of Irenaeus are weakened by the fact that Peter and Paul did not found the church at Rome. Tertullian refers to three martyrdoms at Rome: those of Peter, Paul, and John, who was plunged (unhurt) into boiling oil (Presc. Her. 36). Either Clement of Alexandria or some unidentified voice of tradition assigns the writing of I Peter to Rome (Euseb. Hist. II.15.2). Origen reported that Peter "at the last came to Rome and was crucified head-downwards" (Euseb. Hist. III. 1.2). Gaius of Rome refers to the "trophies" (τρόπαια —places of martyrdom or burial or observance of the martyrdom) of Peter and Paul; "if you will go to the Vatican [i.e., the Vatican Hill] or to the Ostian Way you will find the trophies of those who founded this church" (Euseb. Hist. II.25.7). From this time on, the tradition is definite. The witnesses at the end of the second and opening of the third century are strong, although it must be said that every statement cited above contains at least some legendary aspect.

The conclusions that seem indicated by the evidence are: Peter did not found the church at Rome or live long in that city; he was not there when Paul wrote to the Romans or when Paul reached Rome; he probably went to Rome toward the end of his career and had a ministry of limited length there; he probably suffered martyrdom in Rome, as did Paul, but it is much less certain that the two died at the same time.

11. Place of burial. For centuries scholars and churchmen have debated the location of Peter's grave. Denominational and theological interests must be excluded from such a study. To those who accept John 21:21-24 these interests are not involved. The place of burial is a historical and archaeological question. It has received renewed attention in recent years on account of explorations under the Church of St. Peter at the Vatican.

The statement of Gaius of Rome (*see* § 10 *above*) shows that by the beginning of the third century at the latest, a remembrance of Peter took place on the Vatican Hill. Some "trophy" or memorial monument was located there. With this site was connected the death of Peter or his burial or a memorial to recall and honor his martyrdom. On this site the Emperor Constantine built a church in the conviction, it would appear, that Peter was martyred or buried there. The present St. Peter's stands on the same site.

In 1939 alterations were undertaken under the altar area of this church, and when an early pagan cemetery and other important data were found, extensive and systematic explorations were undertaken. In the pagan cemetery were found the ruins of a memorial monument, which may reasonably be identified with the "trophy" or memorial which Gaius mentioned. The area under this memorial had been disturbed centuries ago, so that the early history and use of the site are difficult to determine. The official reports of the explorations claim that the burial place of Peter has been found but do not clearly establish this conclusion.

This may be the actual burial place of Peter. It certainly has been so regarded since the end of the second century or shortly thereafter. For even if the "trophy" of which Gaius speaks was built to locate or recall the martyrdom rather than the place of burial, it was soon taken to mark the place of burial; and it remains possible, or rather probable, that Gaius himself thought it was the place of burial. However, what he thought toward the end of the second century is not decisive proof of what actually happened in the sixties of the first century. More than one question still remains to hinder a final answer to the question where Peter was buried.

Was Peter put to death in the fury of the Neronian persecution, as is widely thought? If so, was it possible for the hunted Christians to identify and recover and bury the body of the martyr? Would they have buried the body in the very neighborhood of Nero's gardens, as the traditional location of the burial

would imply? In view of the legendary features (*see* § 10 *above*) concerning Peter's connection with Rome (and Corinth), can we trust fully the tradition about the burial which we first get toward the end of the second century? What of the tradition that Peter was buried on the Appian Way? Is it fully satisfactory to reconcile this tradition with the Vatican burial site by saying that Peter was first buried on the Vatican, then transferred *ca.* A.D. 258 to the Appian Way site, and a few generations later transferred back to the Vatican site? Since this theory about a transfer relies on a hypothetical *correction* of ancient data to complete the theory, can we be content with such evidence?

These questions do not disprove the traditional view that Peter was buried under the spot where the altar of St. Peter's now stands. The tradition may be correct. The burial site could have been remembered in the life of the grateful Roman church. But one fact is clear: the evidence for Peter's martyrdom in Rome is much stronger than that for his place of burial. The evidence is sufficient to establish the possibility that Peter was buried where the memorial monument has been found. Many would say that it establishes the probability; but it certainly does not constitute a decisive demonstration that this is where Peter was buried.

12. Writings ascribed to Peter. Three NT writings have been connected with Peter. The Gospel of Mark, according to a tradition which goes back to Papias (Euseb. Hist. II.39.15), was indebted to the preaching of Peter, but no one claims that Peter wrote this gospel. The opening verse of I Peter (*see* PETER, FIRST LETTER OF) ascribes the writing of this letter to Peter, and there is good ground for accepting this position if we may assume, as 5:12 indicates, that Silvanus phrased the writing as it now stands. It is generally agreed that Petrine authorship cannot be defended for II Peter (*see* PETER, SECOND LETTER OF); it is one of the latest writings of the NT.

In addition to these writings, a number of apocryphal works are ascribed to Peter. These later works, all of which come from the second century or later, include the Preaching of Peter, the Gospel of Peter, the Apocalypse of Peter, and an Epistle of Peter to James connected with the Clementine Homilies. They cannot be trusted for information about the life and thought of Peter. Nor can the apocryphal Acts of Peter, which make no claim to Petrine authorship, be used for writing the life of Peter. (For further information on these apocryphal works *see* the separate titles and APOCRYPHA, NT.) It is clear that the essential contribution of Peter did not lie in the realm of writing but in action.

13. The message Peter preached. It is hard to determine clearly the distinctive message of Peter. We cannot derive it directly from the Gospel of Mark, for while one source of Mark was the preaching of Peter, its material, as form criticism has taught us, came largely from the gospel tradition used by the church; what Peter and other eyewitnesses had told, the church preserved, used, and shaped for its needs in worship, teaching, and daily life. Similarly, we must exercise caution in using I Peter, for even if it goes back to Peter, it still owes something to Silvanus (5:12) and shows linguistic kinship with letters of Paul; so we cannot hold that Peter dictated the letter. Nevertheless, the resurrection hope, the redemption through Christ, the new life in Christ, the church as the people of God, faithfulness under persecution, and steadfast loyalty to God, who judges the wicked and saves the faithful, are themes of I Peter which accord with Peter's mind and work.

Some things about Peter's message can be learned from Paul's letters. Points which stand out are the leading role of Peter in the resurrection witness, his loyalty to his ancestral faith even to the point of breaking with Paul when James pressed its claim upon him, his recognition of Paul's gospel as a valid presentation of the work of Christ, and his willingness to break down narrow Jewish lines and eat with Gentiles when not confused by conservative Jewish pressure. Paul obviously thought that Peter was in fundamental agreement with his universal gospel, and indicates that at Antioch only vacillation kept Peter from siding with Paul; indeed, Peter, by his action prior to the coming of representatives from James, *had* sided with Paul, so that Paul could feel sure that Peter was basically on his side.

Perhaps our best source for understanding the message of Peter is found in the speeches of Peter found in Acts. These have often been regarded as the free composition of the author of Acts, and so of little or no value in determining what Peter preached. It is more likely that Luke used early reports of the preaching of the apostolic leaders and presented its substance largely in his own style. If this is so, we may use Acts 1:16-25; 2:14-40; 4:7-12; 5:29-32; 10:34-43 as giving us, not the exact words of Peter's preaching, but its essential substance. These sermons are not unique in content. Part of the power of Peter was that he preached the basic, common faith of the early church, and took a leading part in shaping its message.

Included in this message which Peter preached, according to Acts, were the importance of the resurrection of Jesus; loyalty to the OT and the heritage from Israel; the fulfilment of God's plan and Israel's history in Christ; the control of history by God; Jesus as Prophet, Messiah, Lord, Suffering Servant, and Judge of all men; the necessity of repentance and faith; the promise of the Holy Spirit to those who believe and are baptized; the outreach of the gospel to "every one whom the Lord our God calls," since God shows no partiality and no man is common or unclean; and the necessity to obey God rather than man. The prominent and clear reference to Jesus as the Suffering Servant occurs in Acts only in 3:13, 26; 4:27, 30, passages particularly connected with Peter; this may have been a special emphasis in Peter's thought and message.

14. Permanent contribution. The significance of Peter is often obscured by disputes over his connection with the papacy. The NT does nothing to link him with a chain of completely authoritative successors, or with a chain of bishops at Rome, and the earliest ancient traditions do not support such ecclesiastical claims. The real contribution of Peter lies elsewhere. Protestants should not belittle that contribution because of exaggerated claims made for a hierarchy on the basis of its supposed dependence on Peter.

The Twelve were responsive followers of Jesus and made advances during the ministry of Jesus largely because Peter was their active and vocal representative. He was the outstanding member of the group. His initial, basic confession of Jesus as the Christ, while weak in its blindness to the role of suffering in Jesus' mission, gave the Twelve a clear basis of loyalty. To Peter, Jesus committed the task of rallying and leading the disciples after his departure. He was the key witness to the resurrection of Jesus, and he was the strong leader of the church in its earliest years. Then, in a way less striking and less far-reaching than Paul, he became a missionary evangelist and led in the preaching of the gospel among the Jews of Palestine, Syria, and still wider areas. While not a great theologian, he took a constructive part in understanding and interpreting the work of Christ and its gift of grace.

In a real sense every later generation of the church rests upon the basic confession, witness, and ministry of Peter. Moreover, he remains a moving example of how a warmhearted, impulsive, gifted, but imperfect man can be won by love, deepened by training, disciplined by hardship, and used by God to be an outstanding instrument of God's purpose until his fruitful ministry ends in the final witness of martyrdom for Christ.

F. V. FILSON

PETER, ACTS OF. One of a long series of romances, commonly styled apocryphal Acts (*see* ACTS, APOCRYPHAL) devoted largely to Peter's activity in Rome—his contest with Simon Magus, his miracles, and his martyrdom.

Eusebius mentions this writing, along with others attributed to Peter, as unknown in catholic tradition, "for no orthodox writer of the ancient time or of our own has used their testimonies" (Hist. III.3.2). In the Stichometry of Nicephorus its length is given as 2,750 lines, approximately 1,000 more than are now extant. A large section of this writing, which was certainly composed in Greek and probably before A.D. 200, is preserved in a single Latin MS (Vercelli Acts) and contains several episodes: (*a*) the departure of Paul from Rome to Spain in obedience to a vision from heaven; (*b*) the arrival in Rome of Simon Magus, who by his miracles and defamation of Paul causes all but Narcissus and six devout women to fall away from the faith; (*c*) the departure of Peter from Jerusalem, in obedience to a heavenly vision, to combat his old adversary (Acts 8:9-24), his miracles in Rome, his contest with and discomfiture of Simon; (*d*) his martyrdom, in consequence of the wrath of Agrippa and a friend of Caesar because their concubines and wives had been led by Peter's preaching to abstain from intercourse.

The Martyrdom is also preserved separately, in two Greek MSS, in Latin, and in Syriac, Coptic, Armenian, Arabic, Ethiopic, and versions.

In addition to the material in the Vercelli Acts several other episodes, presumably also from the Acts of Peter, are extant. Among these are the story of Peter's paralyzed daughter, momentarily restored to health to prove Peter's power to heal, but subsequently returned to her infirmity to preserve her from Ptolemaeus, who has seen her while bathing. This story, now contained in the Coptic Berlin MS carrying Gnostic writings, was known to Augustine, who mentions it along with the not dissimilar story of the gardener's daughter, now known from the Letter of Titus. *See* TITUS, LETTER OF.

These two stories suggest that the original form of the Acts of Peter may well have carried a more outspoken attack upon marriage and that the lost sections may well have been excised because of their acceptance by the Manicheans. Traces of an ascetic nature—the use of *water* and bread by Paul in the Eucharist celebrated prior to his departure from Rome; the decision against sexual intercourse by those who listened to Peter's preaching—are present in the parts known to us, but the present form of the writing as a whole, perhaps in part because of editing, is far less insistent at this point than is either the Acts of John or the Acts of Paul. *See* JOHN, ACTS OF; PAUL, ACTS OF.

The definitely secondary nature of all the writings of this type—i.e., their purely imaginative expansion and elaboration of the materials preserved in the canonical book of Acts and gospels—is particularly evident in this writing. There is no slightest evidence of tradition which by any stretch of imagination can be considered historical. That anterior to this writing the tradition had arisen connecting Peter with Rome is certain. This writing seeks to explain what led him to go to Rome: the explanation is found in the episode of Peter's first contact with Simon Magus in Samaria. Familiarity with the earlier Acts of John and Acts of Paul has frequently been postulated, and with probability. The reference to Peter's departure from Jerusalem "whereas the twelve years which the Lord Christ had enjoined upon him were fulfilled" (5) is plausibly explained as taken from the Preaching of Peter (*see* PETER, PREACHING OF), which, according to Clement of Alexandria, carried the Lord's command to the apostles: "After twelve years go ye into all the world, lest any say, 'We did not hear.' " These evidences of dependence suggest no earlier date than the beginning of the third century; the total silence regarding Peter as bishop of Rome, on the other hand, makes any date after 200 increasingly unlikely.

Some of the exploits are not without interest—the conversion of the sea captain during a calm, and Peter's descent by a rope to baptize him in the sea; the supernatural gift of speech to the watchdog and to the seven-month-old child to enable them to force Simon to meet Peter; the combat between Simon and Peter and the latter's fall to earth, due to Peter's prayer. But as a whole the document is definitely

slow reading and clogged with turgid speeches. In contrast, the story of Peter's martyrdom stands out: Peter's reluctant departure from Rome at the instance of his well-wishers; his meeting with Jesus as the latter approaches Rome; the latter's reply to Peter's "Lord, where are you going?" "I go unto Rome to be crucified"; Peter's return to the city and his death by crucifixion, head downward. But even this narrative is clogged by the labored explanation as to why he wished thus to be crucified.

See also APOCRYPHA, NT.

Bibliography. The extant sections of this writing are found in convenient English translation in M. R. James, *The Apocryphal NT* (1924), pp. 3-36. M. S. ENSLIN

PETER, APOCALYPSE OF. The earliest of the apocalypses attributed to apostles; highly regarded by orthodox Christians in the second century and, although subsequently rejected, reported by Sozomen (*Ecclesiastical History* VII.19) to have been read annually in the fifth century in some churches of Palestine on Good Friday.

The so-called Muratorian Canon lists it after the canonical Revelation of John, but with the warning: "Some of our people will not have it read in the church." Clement of Alexandria appears to have regarded it as canonical and makes several quotations from it. It closes the list of biblical books in the Codex Claromontanus, and its length is there given as 270 lines. In the Stichometry of Nicephorus it is listed as containing 300 lines. Eusebius' statement regarding it (which he joins with the Acts, Gospel, and Preaching of Peter): "We have no knowledge at all in Christian tradition, for no orthodox writer [ἐκκλησιαστικὸς συγγραφεύς] of the ancient time or of our own has used their testimonies" (Hist. III.3.2), is thus scarcely strictly accurate. Jerome (*Illustrious Men* 1), following Eusebius, lists it as uncanonical. Its unmistakable use in later apocrypha, such as the Epistle of the Apostles, Acts of Paul, Acts of Thomas, bk. II of the Sibylline Oracles, and a late Latin homily on the Ten Virgins, all evidence its wide popularity. At an early date it was translated into Ethiopic, a complete text of which was discovered in 1910, and also into Arabic.

In 1886 a substantial Greek fragment of this apocryphon was discovered in a tomb at Akhmim in Upper Egypt, together with a fragment of the Gospel of Peter (*see* PETER, GOSPEL OF). Comparison with the subsequently discovered Armenian suggests that our Greek fragment is from a shortened or condensed form in which the far briefer account of the delights of paradise preceded that of the torments of the damned.

The Greek fragment opens abruptly toward the end of a discourse of the risen Lord. Then at his word the apostles go to the Mount of Olives, where, in answer to the plea that he should show them "one of our righteous brethren that had departed out of the world, that we might see what manner of men they are in their form, and take courage, and encourage also the men that should hear us," they are first afforded a vision of two men "upon whom we were not able to look." The vision is clearly dependent upon the canonical account of the Transfiguration, although with modifications and romantic additions. Then follows a second vision: "And I saw also another place over against that one, very squalid." In the subsequent paragraphs the various torments suffered by sinners are described in full detail, later to be reflected in Dante's *Inferno* and its illustrations by Gustave Doré. One short sample will indicate the nature of the whole: "And some there were there hanging by their tongues; and these were they that blasphemed the way of righteousness, and under them was laid fire flaming and tormenting them. And there was a great lake full of flaming mire, wherein were certain men that turned away from righteousness; and angels, tormentors, were set over them. And there were also others, women, hanged by their hair above that mire which boiled up; and these were they which adorned themselves for adultery."

That this writing, in all likelihood in no small part suggested by the canonical Revelation, and the product of perfervid imagination, aided by Orphic and Pythagorean accounts of the future, is not later than the middle of the second century is universally admitted. That it was earlier than the Gospel of Peter is probable. That the latter made heavy use of it, even incorporating it almost entire, has been urged by M. R. James, who would regard the fragment of this apocalypse discovered at Akhmim actually a second fragment of this expanded gospel.

Among the Gnostic texts discovered in 1946 at Chenoboskion in Upper Egypt there is reported to be a Coptic writing also entitled Apocalypse of Peter. This latter would appear to have been a Gnostic document with nothing in common with the one described herein.

See also APOCRYPHA, NT.

Bibliography. The Greek text and an English translation of both the gospel and the apocalypse, as well as a discussion of their nature, were provided by J. A. Robinson and M. R. James, shortly after their first discovery, in the still useful little volume, *The Gospel According to Peter and the Revelation of Peter* (1892). The text is also translated by James in *The Apocryphal NT* (1924), pp. 505-24. M. S. ENSLIN

PETER, FIRST LETTER OF. One of the so-called CATHOLIC LETTERS in the NT; written by, or in the name of, Peter the apostle to Christians of Pontus, Galatia, Cappadocia, Asia, and Bithynia. The author himself has defined his work in 5:12 as an "exhortation" and as a "declaration" of the true grace of God, in which his readers must firmly stand. These two words are a fair description of the contents, in which dogmatics and ethics, Christian faith and behavior, are interwoven into an indissoluble unity. This characteristic makes it one of the finest and clearest examples of NT teaching. Its main thoughts are very distinct and are repeated with various modifications, although the sequence of the different parts of the letter is not always clear.

1. Contents. It is impossible to distinguish as clearly as one can in many of Paul's letters between doctrinal and ethical sections. Therefore, it will be better simply to summarize the contents as the letter proceeds.

The salutation (1:1-2), containing the names of the sender and of the recipients, with greetings, is in form like the salutations in Paul's letters and follows the pattern of ancient letter writing generally, with (of course) distinctively Christian notes. There follows (vss. 3-12) a benediction of God for the blessedness given to the Christians in the present time and for eternity. Their living hope is the eternal salvation which will be revealed in the future, but which, in spite of fiery trials, is a certainty through the resurrection of Christ. By love they are bound to Jesus Christ, whom they have not seen, but in whom they believe. The prophets of the OT foretold the sufferings of Christ and his subsequent glory, so important to the Christians. This preaching of the prophets was inspired by Christ's Spirit and was destined for the present generation, which has received the gospel through the messengers sent by the same Spirit.

The writer next points out (1:13–2:3) that this gospel is the Word abiding forever. It has completely changed the lives of his readers, bringing the new birth of eternal life. The foundation of their faith and hope is the precious redemption by Christ's blood. This new life involves a break with their former way of life, and a new obedience to God, Father and just Judge, which expresses itself in holiness and brotherly love. For them, the people of the New Covenant (*see* COVENANT), Christ has become the cornerstone, spoken of in the OT, laid down by God, a sure foundation for the believers, a stumbling block for the unbelievers (2:4-10). The believers are built upon Christ; they have become a holy nation, to which, by the mercy of God, the epithets of the Lord's people in the OT can be applied.

In 2:11–3:7 we have an ethical passage whose unity appears in the thrice-repeated theme of submission (2:13, 18; 3:1; cf. 5:5), in all probability forming part of an early Christian ethical code. This code is headed by some general instruction (2:11-12): the Christians shall not follow worldly lusts, but shall lead a decent life, which ultimately brings the glorification of God. The first submission paragraph (2:13-17) is concerned with subjection under the civil authorities; Christianity means freedom, not revolution; right behavior as servants of God will stop slander. This message is summed up in these commandments: "Honor all men. Love the brotherhood. Fear God. Honor the emperor" (the latter part being a slightly, but interestingly, modified version of Prov. 24:21). The second paragraph (2:18-25) is directed to house slaves, who are directed to give perfect service to their masters, even the harsh ones. Injustice has to be endured in imitation of Jesus Christ, whose saving suffering and trust in God are described with the words of Isa. 53. The third paragraph deals with Christian women, married to unbelieving husbands, whom they must try to win for Christ, not by their outward appearance, but by their chaste and gentle behavior (3:1-6); Sarah of the OT is their example of submission. I Pet. 3:7 is a rule of conduct for Christian men to look upon their wives, not as a means for sexual pleasure, but as "joint heirs of the grace of life," that their contact with God in prayer may be undisturbed.

In 3:8–4:6 the readers are reminded that according to the word of God (Ps. 34:13-17), the way to attain life eternal is to abstain from all unrighteousness. So Christians must live in "unity of spirit," with sympathy, love of the brethren, a tender heart and a humble mind." Their new life may be reviled, because they no longer join in the pleasures of the world (4:4), but this must not cause the Christians to return reviling. They should have a clear conscience, and be able to defend their convictions and to bless their opponents. In all this they must follow the example of Christ, the righteous, who died for the unrighteous and brought salvation, who even preached after his death to the disobedient generation of Noah's time. Just as Noah was saved through the Flood, so now baptism washes away sins and is an "appeal to God for a clear conscience through the resurrection of Christ," who reigns over all powers of the universe. Christ's suffering, which led to glory, meant death to flesh and sin; therefore, Christ's followers should no longer serve earthly passions. For those who are disobedient the judgment is at hand.

The life in this world stands in the light of this coming final judgment (4:7-19). Again the writer urges his readers to mutual love, which passes by the sins of others; they must use their special abilities in the service of the brethren, for God bestowed a large variety of gifts, "in order that in everything God may be glorified." It may be that their way will go through tribulations. These are the refining fire, a test to the Christians. If they are suffering for the name of Christ—and not for ordinary crimes—they will be sharing in Christ's sufferings, which means sharing also in his glory. The final judgment will mean a narrow escape even for the righteous, and sinners will disappear.

There is finally (5:1-11) an exhortation to the elders to be good shepherds, without seeking shameful gain or domination, in order that they may receive the crown of glory, and to the younger members of the congregation to be submissive to the elders. Humility is the great virtue. In all their anxieties they may be sure of God's care. In this difficult time they must be watchful, resisting the wiles of the devil. After a short time of suffering they will be restored by God.

The letter closes (5:12-14) with the name of the writer's assistant, a brief summary, some greetings, and a final blessing.

2. Character of the letter. The outward appearance of this writing is that of an ordinary ancient LETTER, in both its opening and its final section. But what kind of letter? The fact that no direct personal relations between the writer and the readers become manifest points in the direction of a general letter, an open one meant for public circulation (like, e.g., those of Seneca), and not a private one. This letter does not enter into questions raised by a particular community, as Paul's Corinthian letters do, nor does

it show close friendship with the recipients as Philippians does. It has more the general tone of an address. On the other hand, it should be noted that its salutation is not that of a "catholic letter" to be read by Christians anywhere in the world. It is not a theological or ethical treatise, but is directed to a special group of persons and deals with a very specific situation. Whatever may be the meaning of "the exiles of the dispersion" (1:1), it is evident that they form a special group in a special part of the world. The instructions given to certain groups (2:13 ff) may form part of a current catechetical pattern; but comparison with other parallel lists, as in Ephesians and Colossians, brings to light that while there are certain obvious similarities, there are also unmistakable divergences: certain items are left out (slaves are mentioned, but not masters; in the marriage section nothing is said about children). Also, in the phrasing certain additions are found, such as the examples of Jesus and of Sarah. The common material has not been taken over automatically, but has been formulated as needs required (the comparison of I Pet. 2:13 ff; Rom. 13:1 ff is also highly instructive, because it shows that Paul has a more personal touch and is less "general" than I Peter). All this points to the conclusion that the letter was conceived with particular persons in view, persons living in a particular situation.

The ascription of a general character to the letter has led some critics to the excision of the opening and closing sections as having been added in a later period to connect this work with the name of Peter. This critical operation is entirely arbitrary; it is unwarranted by MS evidence, and other writings under the name of Peter show a quite different character. Moreover, and most important of all, no feasible explanation can be given why a forger of the second century should have invented the strange address—why these out-of-the-way countries?

In 1911 the German scholar Perdelwitz formulated another theory which was to become of great influence in the course of years. His main point was that there is a clear break between 4:11 and 4:12 (doxology; new address), and that there is a certain amount of repetition before and after the break; the persecutions which the readers have to suffer are spoken of in 4:12 as actual facts, while in 1:6; 3:13 ff they are only a possibility. For these reasons Perdelwitz distinguished two parts: (*a*) 1:3-4:11; (*b*) 1:1-2; 4:12–5:14; the latter being a letter to comfort Christians in time of persecution, while the former part was a homily to newly baptized persons. This idea that the first half of the letter in reality was no letter but a baptismal sermon, following the pattern of a baptismal liturgy, has become influential through commentaries of Windisch-Preisker and F. Beare and the studies of F. L. Cross and Boismard. A number of texts have been adduced either from the NT or from other early Christian literature in which ideas similar to those in I Peter are found in the setting of baptism.

After a detailed examination of the arguments this view was rejected by C. F. D. Moule, on good grounds. It is hard to see where baptism would have taken place within the structure of this letter; the distribution of the various sections according to a supposed liturgy appears forced. Some "parallels" turn out on closer inspection to be merely superficial. Such parallelism as there is cannot be pressed further than to testify of a common Christian vocabulary connected with the conversion from paganism to Christianity, of which baptism was the visible sign. Attention is sometimes called to the thought "regeneration" that occurs here (1:3, 23; 2:1); an allusion to baptism is seen in it (cf. Tit. 3:5); but let it be observed that in I Peter the new birth is connected with the resurrection of Christ (cf. also 3:21) and the word of God in the preached gospel (1:23-25; cf. vs. 12). Not the mere moment of baptism, but the whole process of the transition from paganism to life in Christ with all its implications, stands before the writer's mind.

The division of the letter into two parts is unnecessary. A certain amount of repetition belongs to the style of the writer and can also be found in part 1. He is always moving in the same circle of ideas, but making different applications. There is, then, no reason to take this letter as other than an ordinary letter written to newly converted Christians in certain parts of the ancient world to give them comfort and exhortation (both are implied in the Greek word παρακαλέω) amid imminent dangers, and to testify to the greatness of their faith triumphing over all hardships (see 5:12).

3. Attestation in the early church. Among the so-called Apostolic Fathers there is no unequivocal testimony about this letter in I Clement, Ignatius, Barnabas, Didache, Hermas, and II Clement. Similarities in expressions which have been adduced are not so striking as to prove familiarity; they can easily be accounted for as derived from common Christian teaching. In view of the small body of literature concerned, this argument from silence does not tell very much; and this is the more true because the writings just mentioned belong to varying times and places. It is important to learn that, according to Eusebius, Papias of Hierapolis (Asia Minor, *ca.* 125) used this letter (Euseb. Hist. III.39.17: "The same writer [=Papias] has used testimonies drawn from the former epistle of John, and likewise from that of Peter"). Since, however, Papias' works are lost, it is impossible to know in what form he quoted these testimonies (whether under the actual name of the apostle or anonymously, a phrase or two which made Eusebius think of this letter). The same observation must be made with regard to the group of Asian teachers, called the "presbyters," of whom Eusebius (Hist. III.1.3) reports: "Of this [I Peter] the elders of older time have made frequent use, as a work beyond dispute, in their own treatises."

Papias' contemporary Polycarp of Smyrna was clearly quoting this letter; the express statement of Eusebius (Hist. IV.14.9: "Polycarp in the said writing of his to the Philippians, extant to this day, has employed certain testimonies taken from the former epistle of Peter") is confirmed by the actual letter: Polyc. Phil. 1:3 (=I Pet. 1:8); 2:1 (=1:15, 21); 2:2 (=3:9); 6:3 (=3:13); 7:2 (=4:7); 8:1-2 (=2:22, 24); 10:2 (=2:12). Polycarp, however, does not mention the name of his source, nor does he even give these texts as quotations; they are simply incorporated in the sentences. Striking though this may seem to us,

Polycarp does the same with words of Paul; it was usual in antiquity to leave it to the hearers to recognize such citations. The date of Polycarp's letter is still in dispute (according to many scholars written in 117, according to others 135). But at any rate, one is allowed to say that *ca.* A.D. 125 I Peter was well known by leading churchmen in Asia Minor.

Other traces may be found in the writings of Gnostics like Basilides (*ca.* 125; see Clem. Misc. IV. 12.81) and the Eastern disciple of Valentinus, Theodotion (*ca.* 160; see Clem. *Excerpts from Theodotion* 12:3 [=I Pet. 1:18: "according to the Apostle"]; 12:2 [=I Pet. 1:12: "Peter says"]). Since here again it is difficult to determine in these *Excerpts* what belongs to the terminology of Clement, it is unsafe to rely completely upon this expression. On the other hand, Irenaeus offers a number of references in his *Against Heresies* (*ca.* 180); besides some general quotations, he remarks explicitly (IV.9.2): "Peter says in his epistle"; there follows I Pet. 1:18 (cf. also IV.16.5; V.7.2). Irenaeus lived in Gaul, but he had been born in Asia Minor. There he had known men like Polycarp. A little younger are Tertullian, who (*Scorpiace* 12) quotes I Pet. 2:20-21: "Peter said to the Pontians"; and Clement of Alexandria, who cites I Pet. 3:14 ff as a word of Peter (Clem. Misc. IV.7. 46). This is only one out of a great number of citations. Clement also commented on the letter in his *Outlines* (*Adumbrations*).

From this survey it appears that by 200 this letter was accepted as the work of the apostle Peter by the churches in various countries. It will be noted that the name of MARCION is missing in this list. This is striking, since he was from Pontus (cf. I Pet. 1:1), but his silence about I Peter can be explained by the assumption that he rejected it because of his distrust of Peter the Jew. That he did not know it is less probable. Neither is the letter found in the Muratorian Canon (*ca.* 200; *see* CANON, NT), but the omission may be due to the fragmentary state of this document. The great scholar Origen (died 253) wrote in his exposition of John 5 (see Euseb. Hist. VI.25.8) that "Peter . . . has left one acknowledged epistle, and, it may be, a second also; for it is doubted." This remark shows that in Origen's time our letter formed an undisputed part of the canon. So it continued to do everywhere except for a while in the Syriac church, although it was at last accepted there also, in contrast with II Peter and other Catholic letters. *See* CANON, NT.

From this survey we may conclude that I Peter has good credentials. By its author's name it is first quoted *ca.* 170; but since then it has never been disputed, as Hebrews and other books have been. It is used without citation of name in the first half of the second century; but the fact that the name is missing does not tell against the attribution of the letter to the apostle, in view of literary habits in antiquity. It makes its first appearance, as far as we can see, in Asia Minor, the area to which it had been sent.

From the point of textual criticism this writing does not offer particular features; the text is fairly well preserved. *See* TEXT, NT.

4. The readers. According to the address the letter is sent to the "exiles of the dispersion in Pontus, Galatia, Cappadocia, Asia, and Bithynia" (1:1). The ERV-ASV reads for "exiles" the word "sojourners," which seems to be preferable, although it must be conceded that the exact meaning of the Greek term is difficult to determine. In any case, the readers lived in certain well-defined parts of Asia Minor. These districts are enumerated in a rather strange order, running from NE through the middle to the W and the NW. It is remarkable that the letter is not dispatched to particular churches in this area. On the other hand, it should be observed that its address does not speak about Christians or Christianity in general (though the writer speaks of the "world-wide" movement [5:9]), but of those individuals who bear the Christian name (4:16), called "sojourners of the dispersion," in a clearly marked part of the world.

The word DISPERSION is well known from Jewish history. It was applied to those Jews who lived outside the Holy Land, among the Gentiles. It is supposed by almost all commentators that this was one of the many Jewish words taken over by the early Christians to describe the situation of the new people of God spread in all the world while their homeland was in heaven (cf. Phil. 3:20; Heb. 13:14; Jas. 1:1; etc.). This impression is strengthened by the words of 1:17; 2:11, where the readers are spoken of as living in the situation of aliens. The difficulty of this explanation is that "dispersion" is never used for the Christian church in early Christian literature (Jas. 1:1 is an extremely dark text). It is not very feasible to suggest that it was borrowed from the OT, because there it was always linked with the wrath of God against his disobedient people (which would be in flat contradiction with 1:14: "obedient children").

This word "dispersion," taken in its Jewish sense, has long been one of the main arguments for the opinion that the readers had been Jews by birth and were now converts to Christianity. From inscriptions and literary sources the existence of Jewish communities in these districts is proved. Another argument for this view is the extensive use made by the author of the OT, in both direct quotations and allusions, especially words like 2:9. This long-standing opinion, however, has been definitely abandoned since the beginning of the twentieth century. All students have reached an agreement that the people addressed had come into the church from paganism. Texts like 1:15 ("ignorance"); 1:18 ("the futile ways inherited from your fathers"; "futile" is a favorite word in the OT for "idols"); and especially 4:3 ("Let the time that is past suffice for doing what the Gentiles like to do") are conclusive.

These former pagans have given up their previous way of life and turned to the "living God." This change was experienced as the consequence of God's election and mercy (1:2-3; 2:10). It was a redemption by the blood of Christ (1:18-19). This conversion came about by the preaching of the word of God, announced by the OT prophets and "by those who preached the good news to you" (1:12)—the word which, according to Isa. 40:9, abides forever (1:25), and by which they are regenerated. They were "no people, but now [they] are God's people" (2:10). Although, strictly speaking, belonging to a passage

directed to slaves, the words of 2:25 apply to all: "You were straying like sheep, but have now returned to the Shepherd and Guardian of your souls." Christ died to "bring us to God" (3:18); just as Noah was saved through water, they have been saved by baptism (3:21). They belong to a world-wide brotherhood (5:9) which is bound together by mutual love (1:22). This religious change meant a break with their own past (1:18) and with the habits of their environment (4:4). Therefore, they have become "aliens" in this world (2:11). Their present condition is not very happy, because they are slandered and abused (*see* § 5 *below*). Yet their situation is not hopeless or without good prospect. A deep tone of joy rings through this whole letter from beginning to end (cf. 1:3; 5:10). The writer, reminding his readers of the greatness of their new life in Christ, wants also to incite them to firmness in their faith and to behavior in agreement with their Christian calling. Surrounded by suspicion, their lives must be a witness of their religion. *See* § 8 *below*.

Nowhere are we told who was the first preacher of the gospel among them. The author himself does not seem to have any such special claim in this respect, as Paul asserted in Corinth (I Cor. 4:15). Their conversion came as the gift of God, the writer wishes to stress, and not as a deed of men.

5. Date. With other NT writings I Peter shares the lack of a direct indication about its date, as is true of many papyri. One must depend here on inward criteria, the interpretation of which is difficult and opens the way to many guesses. Not even the way to a relative chronology through references in contemporary writings is open.

The address mentions PETER the apostle of Jesus Christ as the author (1:1). If this is correct, the date must fall before 64 or 67, the probable year of Peter's death. But this name is considered fictitious by many scholars (*see* § 6 *below*), for the very reason that, in their view, the situation presupposed here must be later than 64. What was this situation? It is clear that it is very unpleasant. See 1:6-7: "Now for a little while you may have to suffer various trials . . . tested by fire" (cf. also 4:12; 5:9). This uneasy condition is not the consequence of their social status, as in the case of the slaves or the wives (2:18; 3:1 ff), but applies to all. It is not confined to the readers alone, but is shared by all Christians (5:9). The hardship of this ordeal is compared to fire—in the eyes of the writer it is a refining fire, a sharing in the sufferings of Christ; this comparison sufficiently reveals its heavy character. If one tries to ascertain more precisely what kinds of sufferings are involved, one notes at once the recurring references to slander and reviling. The Christians are looked upon as evildoers (2:12); they suffer unjustly (2:20); their good behavior is reviled (3:16-17). The readers are admonished not to "return evil for evil or reviling for reviling" (3:9), but to follow the example of their Master (2:21; 3:18). They must not be punished because of offenses against the civil order: "Let none of you suffer as a murderer, or a thief, or a wrongdoer, or a mischief-maker; yet if one suffers as a Christian, let him not be ashamed" (4:15-16). All this amounts to sufferings because of the new life they lead in Christ (punishments for transgression of the general social code are not considered as "sufferings" in the Christian sense; cf. 2:20; 4:15). Because the Christians do not join their pagan fellow men in wild profligacy (4:4), they have become outcasts.

Since it seems in 4:16 that to bear the name of CHRISTIAN is itself a crime, as it was in the second century according to the apologists, it has often been thought that official persecutions by the state authorities were threatening the Christians at the time of I Peter. On this supposition three possible dates offer themselves: (*a*) if the writer was Peter, it may be the persecution under Nero (64); (*b*) if the Petrine authorship is unlikely on other grounds, it could be that under Domitian (95); (*c*) whereas various parallels between I Peter and the famous letter of Pliny, the governor of Bithynia (cf. I Pet. 1:1) under Trajan, about the prosecutions of Christians in that district (*ca.* 110; Pliny X.96-97), can be detected, many critics have favored this date (e.g., Beare; *see bibliography*). Many pages have been devoted to the discussion of which of these three persecutions is reflected in the letter.

Actually, however, much of this discussion is beside the point, because the presupposition is wrong (*see bibliography* for works by Selwyn and Moule). No state persecution in any period is reflected in the letter. Three facts point to this conclusion: (*a*) In 5:9 it is said that the whole church throughout the world shares in the same sufferings; now, all the persecutions before the third century were more or less local; therefore, the sufferings must have another character. (*b*) In 2:13 ff a very positive relation with the state authorities is implied which is important even if it is part of catechetical instruction; the emperor and the governors are not decried, as in Revelation, and it is supposed that they will praise the Christians as good citizens, since they do good. (*c*) The sufferings all belong to the personal sphere; they are the results of evil feelings and hatred against people who do not follow the general line—i.e., a nonconforming minority who have become the victims of suspicion and slander. All this makes it impossible to look upon the difficult situation of the Christians addressed as if it had been brought about by state measures; it had more the character of a pogrom, which can be nerve-racking and hardly less difficult than open, official persecution. Most certainly it was a fierce trial of the faith. But once we rule out the possibility of identifying these sufferings with some particular persecution, we are left with no direct indication as to the date. The situation reflected in the letter could have happened at any time in the first or second century wherever a Christian group was found.

6. Authorship. The salutation explicitly mentions "Peter, an apostle of Jesus Christ" (1:1). There is no doubt that here the disciple of that name (*see* PETER) is intended. Unfortunately his whereabouts after the COUNCIL OF JERUSALEM and the meeting with Paul in Antioch (Gal. 2:11 ff) are unknown. He made missionary tours in the company of his wife (I Cor. 9:5), but where and how is hidden. This gap in our knowledge involves a period of *ca.* fifteen years! Ignorance makes it impossible to say what kind of relations existed between him and the communities or individuals to whom the letter was sent. It is nowhere claimed that he was their special apostle, and it is

not clear, either, what induced him to write this letter except the general desire to fortify their faith. He does not defend his personal work or express his personal affection, as Paul often did.

It is completely obscure why this writing was sent to certain remote areas which, so far as we know, did not play an important part in first-century Christianity. This fact pleads strongly in favor of the authenticity of this salutation, for no reason can be found for the invention of these "sojourners of the dispersion" in, e.g., Pontus and Cappadocia (on the implications of Gal. 2:7, *see* § 7 *below*). In 5:13 the writer mentions his "son Mark," who cannot be other than the evangelist. Papias (Euseb. Hist. III. 39.15) declares that Mark (*see* MARK, JOHN) functioned as the "interpreter of Peter"—an activity which was important for the propagation of the gospel, since Peter as a Galilean fisherman would not have been well versed in Greek. This fact also strengthens the case for Peter as the author. In one text (5:1) the writer claims to be an eyewitness of the Lord's sufferings (other texts, such as 1:8, have not sufficient weight); this also points to a disciple and apostle. All these facts have long been sufficient reasons for accepting the veracity of the salutation and for considering Peter as the author—the more so because the early church (*see* § 3 *above*) did not hesitate to do so.

This view has, however, not passed unchallenged. Many NT scholars, especially in Germany and America—British scholarship was, on the whole, more conservative—discovered great difficulties in the traditional view and therefore considered the letter pseudonymous. In discussing these arguments we may disregard the wrong supposition about the so-called persecutions (*see* § 5 *above*) and the false argument taken from the mention of Silvanus (5:12; *see* SILAS). This prophet and companion of Paul, so ran the latter argument, could not have been in the company of Peter, who was looked upon as the great opponent of Paul. But we know too little about the history of the church in NT times to make such a judgment. The view that the early church was divided as between "parties" of Peter and Paul has been largely discredited. Other arguments deserve more serious attention.

The first of these is the claim that if the writer were the disciple of Jesus, it is unintelligible that he does not refer to words and deeds of his Master except for his death and resurrection. In 5:5-6 he expresses a thought found in Luke 14:11, but he formulates it, not in Jesus' words, but in those of Prov. 3:34. In 2:12 there is a parallel to Matt. 5:16, and in 3:9 a parallel to Matt. 5:39 ff; but in both cases no reference to the Lord appears. Christ's suffering is described with words from Isa. 53, rather than in terms more reminiscent of a disciple's experiences.

In answer to this argument it may be pointed out that the letter is much more concerned with the Cross and the Resurrection, because they created the new situation of grace, than with the earthly career of Jesus. It is the crucified and risen Lord, rather than the teacher of Galilee, who is the prime importance. The drawing of Jesus' sufferings with the words of Isa. 53 is due to the fact that this chapter so clearly sets out the meaning of his sufferings. A pseudonymous writer by the end of the first or the beginning of the second century would have been inclined to lay more stress upon the special relation of Peter with Jesus and would have quoted sayings of Jesus, since the gospels were then already in existence, in order to give his work more authority. In later Petrine stories various incidents of Peter's life are recounted as providing an example; but nothing of the kind is done here. Finally one may ask whether this argument does not start from the false presumption that the apostle would have written as we would expect him to do.

Secondly, it is urged that if the writer were the Jew Peter, he would have stressed obedience to the Mosaic law and other peculiarities of Judaism, whereas the law is actually not mentioned at all and the letter breathes the same atmosphere as those of Paul. The similarity is so great that I Peter is often ascribed to a follower of Paul who missed the deep spiritual insights and toned down the lofty ideas of his master. Typical Pauline expressions like "in Christ" (3:16; 5:10) are used; there are many points of contact and agreement in connection with the work of Christ. A detailed discussion of these points may be found in Selwyn's Commentary; and the upshot of it is that behind this correspondence lies, not Paul merely, but a common pattern of catechetical instruction. With regard to the relation between I Peter and Ephesians, C. L. Mitton (*see bibliography*) does not agree; he finds I Peter dependent upon EPHESIANS. Many other scholars would hold that the relation is not sufficiently close to prove dependence. The common elements can be explained by the fact that there was much "common ground" in the preaching and teaching of the gospel and that the similarity in the situation of the readers of the two letters must be taken into account.

A third argument against the Petrine authorship of this letter is the relative excellence of the Greek. It is not ordinary Koine (*see* GREEK LANGUAGE), but shows preference for a certain literary style. Semitisms or "mistranslations" are absent. It is incredible, some argue, that the Galilean fisherman who used an interpreter and was known as "uneducated" (Acts 4:13) had such a command of the Greek language that he could produce a document like this. This argument would be decisive were it not for 5:12, which reads: "By Silvanus, a faithful brother as I regard him, I have written." From these words it is clear that the author used the services of Silvanus (*see* SILAS), whom, he assures his readers, he considers absolutely trustworthy. What were these services? The word "by" may mean that Silvanus was the messenger who carried the letter; in this case no particular value can be attached to this note. But the "by" can refer to Silvanus' agency as the amanuensis who wrote the actual letter (cf. Dionysius of Corinth in Euseb. Hist. IV.23.11, where the same preposition is used of Clement as the secretary of the Roman church). This explanation is preferable. If Silvanus was merely the bearer of this letter, it would not be necessary to state this so expressly, even before the recapitulation and the greetings. On the other hand, the statement is perfectly intelligible if it was meant to prevent suspicions on the part of

the readers of a letter in such perfect Greek from the "barbarian" Peter. To be sure, it was he who gave the general outline and leading thoughts; but it was Silvanus who put them into their proper Greek form.

Fourthly, it is argued that the writer's habit of quoting the OT in ways which point to his using the LXX rather than the MT is peculiar for a Jew in Palestine (*see* SEPTUAGINT; MASORA). But textual criticism of the OT (*see* TEXT, OT)—especially after the DEAD SEA SCROLLS—shows that the MT was one Hebrew text form among others, chosen for its value in the second century A.D., but not the only one. It could be that Peter's Hebrew text was much more akin to the text from which the LXX was made. Besides, a foreigner writing in another language will usually stick to the standard translation for literal quotations and not dare to change it to suit his own text. Finally, if Silvanus really served as an amanuensis, this consideration does not arise at all. Silvanus was a Greek, and his Bible would naturally have been the LXX.

None of these arguments by itself nor all of them taken together amount to proof against the authorship of Peter. On the other hand, it must be said that no proof in favor of it can be derived from a comparison between this letter and the speeches of Peter in Acts (chs. 2–5; 10), since it is yet undecided how far these speeches in Acts reflect the ideas of the author of the ACTS OF THE APOSTLES and how far they are expressions of a common stratum of early Christian teaching. On the whole, it must be said that the view which takes Peter as the author but sees him as using the services of Silvanus offers the most satisfactory explanation of the data of the letter. One small point may be noticed: in 5:14 the author uses "peace" instead of "grace," the usual term in the Pauline letters. This is decidedly more Semitic; does it point to a Jewish writer?

As to the place of writing, it may be pointed out that according to 5:13, "she who is at Babylon who is likewise chosen" sends her greetings together with Mark. The reference is evidently to the church in "Babylon" (*see* BABYLON [NT]). Practically all commentators regard the word as a sobriquet for Rome, as in Revelation; Sibylline Oracles V.143, 152; Apocalypse of Baruch IX.1. This explanation is supported by the fact that the only name of a dwelling place of Peter known to tradition was Rome, and that in the Eastern church nothing is said about a connection between Peter and Babylon (names of other missionaries are mentioned). Reasons for questioning this explanation are that elsewhere the writer never uses the cryptic language of apocalyptic writers; that it is closely linked with the hypothesis of state persecution (*see* § 5 *above*); that the list of countries in 1:1 runs from E to W, and our ignorance about Peter's travels makes it impossible bluntly to declare that a residence in Babylon, with its large Jewish communities (and Peter was the apostle to the circumcised [Gal. 2:9]), is excluded. Until further notice either possibility is still open.

7. Origin. It has been shown (*see* § 4 *above*) that the readers of I Peter were former Gentiles who had been converted to God and now belonged to his people, to which the epithets of Israel as a holy nation are applied (2:9-10). This result was brought about by the death of Christ, who died "that he might bring us to God" (3:18). This expression may seem somewhat pale to modern readers, but it was full of meaning in ancient times. It is a translation of the rabbinic *hiqrib*, which meant "to make proselytes"—i.e., to make pagans full members of the people of God. *See* PROSELYTE.

Careful reading of this letter reveals that this case of proselyte terminology does not stand alone. In various places parallels with expressions used by Philo, Josephus, and the rabbis with regard to the proselytes can be detected. E.g., the salutation contains a very strange "trinitarian" order ("Father . . . Spirit . . . Christ"), and at the end a clear reference to the blood of the covenant (Exod. 24:8)—not improbably an allusion to proselytes' being made members of the people of God. Again, the phrase "to be called from darkness to light," found in I Pet. 2:9 in connection with sayings about the "holy nation" or "God's own people," is also used by Philo in speaking of the transition from paganism to Judaism. Similarly the warning in 4:12: "Do not be surprised at the fiery ordeal . . . ," may be interpreted in the light of the fact that rabbis warned their converts that the Israel which they were joining was oppressed in this world. It was part of proselyte instruction that suffering was the lot of the chosen people.

The same background can be detected in 1:18-19. The usual interpretation finds here the merging of two images: the redemption of a slave and the offering of a lamb. Yet the passage is simple and clear if reference is being made to the sacrifice connected with a conversion. Later rabbinic sources hardly mention this sacrifice for proselytes, because after the destruction of the temple in A.D. 70 this part of the ceremony had gone out of use. For fuller discussion and other examples of proselyte terminology, *see bibliography*.

Perhaps the "sojourners of the dispersion" (*see* § 4 *above*) were the so-called "God-fearers" like Cornelius (Acts 10:2; cf. 13:16, 26; 16:14; 17:17; 18:7), pagans who lived on the fringe of the synagogues, but according to Jewish standards could not become full members, proselytes, and share in the benefits of Israel unless they were baptized, circumcised, and an offering for them was brought. It is interesting to see that in this letter, not the preaching of the only God stands in the center, but the glory and duties of the people of God. The readers must already have had instruction in the OT, since it is so freely used and was so obviously authoritative for them. They are assured by the writer that the sacrifice of Christ is absolutely satisfying; everything has been done "to bring them to God." Therefore, it is said: "Through him [Jesus Christ] you have confidence in God, who raised him from the dead and gave him glory, so that your faith and hope are in God" (1:21). But this membership is beset with dangers which may make these converts waver; therefore, he admonishes them to live according to the standards of God's people in freedom, but as slaves of God (2:16).

If the proposed exegesis of 1:18-19 is sound, it must be concluded that the proselyte offering stood still in force—i.e., the letter was written before A.D. 70. Peter had been specially commissioned for the Christian mission among the Jews (Gal. 2:7). His

word as a spokesman of the Jewish part of the church, as the man who had consented to the abolition of the requirement of circumcision for the Gentiles (cf. Acts 10; 15), would carry great weight with these pagans who had been nourished in Judaism. Because this letter is addressed, not to churches as such, but to a special class of individuals who have had relations with the synagogue, Peter can speak even to some living in districts which belonged to Paul's missionary area. When the missionary situation of the middle of the first century, as we see it reflected in Acts, is taken into account (cf. Acts 2:9), this letter fits perfectly well into it. It was written, as the salutation says and the end suggests, by Peter, probably *ca.* A.D. 60.

8. Main theological ideas. The comparison of the ideas in I Peter with certain ideas in Paul's letters brings to light an important fact. They are not mere copies or repetitions, but rank alongside those of the Apostle to the Gentiles. In certain places, as in 1:20; 3:18, the tone of a confession of faith is heard. It has been well pointed out that the primitive kerygma and didache are reflected in the phraseology of this writing. The letter wishes to bring home to its readers what is the "grace" into which they have come by their conversion. This new situation, graphically described as a transition from darkness to light, rests upon God's election, mercy, and calling (1:2; 2:10). It had been announced by the prophets of the OT (1:10 ff), effectuated by Jesus' work, and preached in the gospel. All these things have been prepared from the beginning of the world, but now "at the end of the times" it has been completely revealed in the coming of Jesus Christ (1:20). This is the great turning point, the decisive step in God's salvation of the world. The time of the writer and his readers is the end of times. A strong eschatological note pervades the whole letter; "the end of all things is at hand" (4:7). This implies the final judgment by Him who judges without respect of persons (1:17; 2:23); and this moment of judgment is near by (4:6), just as the salvation is "ready to be revealed in the last time" (1:5). All this makes the teaching and preaching the more earnest. The writer does not give a number of wise proverbs or pious sayings; but since the hour is pressing, all things have come into a decisive stage. Time is hastening to its end; the sufferings which befall the Christians will not last long (1:6; 5:10), because the present world order to which these sufferings belong is quickly passing away.

The foundation of the teaching is Jesus' death and glorification as the risen Lord. By his sacrificial death he took away sins and opened the way to God (1:18; 2:24; 3:18). By his resurrection and entrance into the glory of God (cf. Luke 24:26) his followers are assured that they, sharing in his sufferings, will also share in his glory (4:13; cf. Rom. 8:17; II Tim. 2:12). This coming glory means salvation (1:9), which fills the hearts with joy (1:6). In glowing terms (1:3 ff) the future blessedness is described; but this is still the period of faith and hope (1:21; cf. vss. 3, 9). The saving power of Jesus' work is preached in the world as the good news (1:12, 25). By some it is rejected; they are the disobedient (2:8; 3:1; 4:17) and will receive punishment. But the readers have become "obedient children" (1:14); they believe in Jesus (2:4) and will not be put to shame. They have become new men and women, "regenerated" (1:3, 23; 2:1) by the resurrection of Christ. This new life expresses itself in a new behavior, a readiness for the service of God (1:13 ff) in holiness and brotherly love.

As regards the character of this new life, the author emphasizes two main themes. The former is that of steadfastness in suffering, which is to be expected and which must be firmly borne. But in spite of this emphasis, the outlook of this letter is not gloomy. Belief in Christ means rejoicing "with unutterable and exalted joy" (1:8). "Rejoice in so far as you share Christ's sufferings, that you may also rejoice and be glad when his glory is revealed" (4:13). Christ Jesus is not only the foundation of their salvation, but also the example: "that you should follow in his steps" (2:21; cf. 3:18 ff). Suffering in the flesh means being set free from sins: "Since therefore Christ suffered in the flesh [to take away the sins], arm yourselves with the same thought, for whoever has suffered in the flesh has ceased from sin" (4:1; cf. Rom. 6:7; both reflect a Jewish theological thought). Those who suffer are blessed, because they may be sure of the coming blessing. God himself will give them strength (5:10). Hearts may be fainting, but they must be sober and watchful (1:13; 5:8), full of hope amid the tribulations.

The second theme is that of good behavior (a phrase which occurs in this letter as many times as in the rest of the NT). It recurs after 2:11 in all sections till 4:19. These "good works" are not those of later Judaism, such as special deeds on behalf of the poor, the dead, etc.; nor are they those of the later Christian church, such as fasting, etc.; but they are right attitudes toward all one's fellow men, including even a slave's attitude toward his master (2:18 ff). The excellence of such good works will be praised by the authorities (2:14). They may have missionary power (3:1) and serve to stop slander (2:15); and in the day of judgment it will become manifest that the Christians performed them in the service of God Almighty (2:12). The Christians, redeemed by Jesus Christ, may live as free men, but this freedom is not license, but holiness (1:15; 2:16). Their character expresses itself, on the one hand, in the rejection of former vices toward their neighbors such as malice, guile, insincerity (2:1), and, on the other hand, in true love toward their brethren (1:22) and in tenderness and humble-mindedness (3:8; 5:6). The demand for such life is set before them in the word of God (Ps. 34:12 ff; cf. I Pet. 3:10-12)—and as a general rule, not as an endless code of rules. This righteousness is the essential condition of attaining the goal. And although notwithstanding these good works they may be subject to reviling, they will have a good conscience and can make a defense about the hope that is in them (3:15). So their life and work as disciples of Christ will be a continual glorification of God: "that you may declare the wonderful deeds of him who called you out of darkness into his marvelous light" (2:9). They themselves glorify God, because their sufferings (4:16) and their service (4:11) are for Christ's sake, and at the end even the Gentiles will be won over (2:12). Therefore, they are a holy priesthood which offers spiritual sacrifices (2:5; cf. Rom. 12:1). This offering is not only

prayer, but the complete daily service of their lives. They who are called "sojourners of the dispersion," without any rights according to Jewish standards, thus come to be called by the highest names—names reserved for the people of God. Set apart to be God's own people in the highest sense, they live in this world expecting the glorious revelation of the fulness of God's kingdom.

As an element in Christology (*see* CHRIST), this letter has (3:18-19; 4:6) the remarkable teaching of Christ's DESCENT INTO HADES, thus bearing testimony to the all-embracing power of the work of Christ, who now reigns over all powers. In glowing words the writer sets forth the greatness of the Christian faith in Jesus Christ, the Suffering Servant (*see* SERVANT OF THE LORD) and glorified Lord (*see* LORD [CHRIST]); the greatness of the Christian hope amid adversities; the greatness of Christian love. The letter combines in a marvelous way faith and works; it is an exposition of dogmatic truth with attention to its direct impact upon ordinary life. The burning gratitude for all God gave in Jesus Christ will exhibit itself, according to this writer, in a lofty way of life—life to the glory of God.

PETER, GOSPEL OF. A passion gospel, current in Syria and Egypt in the second half of the second century, purporting to have been written by Peter and evidencing a distinctly Docetic view of the relationship between the divine Christ and the human Jesus, as well as a markedly anti-Jewish bias.

Until the end of the nineteenth century this writing was known to us through the preservation by Eusebius of a portion of a refutation of it by Serapion, bishop of Rhossus. The latter had earlier known that this book was being read by Christians, but, when subsequently informed of its true nature, wrote a tract "Concerning What Is Known of the Gospel of Peter." In the passage preserved by Eusebius (Hist. VI.12), Serapion charges that the writing was composed by the Docetists. Origen also refers to a book by this title, which, he says, with the "book of James" indicates that the brothers of Jesus were the sons of Joseph by a former marriage (*On Matthew* X.17). Theodoret (*Of Heretical Fables* II.2) mentions a book bearing this title as in use by the Nazarenes, "who regard Christ as a righteous man."

In 1886 a considerable fragment of this writing was found in a tomb at Akhmim in Upper Egypt, together with a portion of the Apocalypse of Peter and thirty-two chapters in Greek of the book of Enoch. This fragment, published in 1892, begins abruptly with the words: "But of the Jews no man washed his hands, neither did Herod nor anyone of his judges," recounts the crucifixion of Jesus as due entirely to the hostility of the Jews, and explicitly remarks that the Lord "kept silence, as one feeling no pain," only subsequently to cry out "aloud saying, 'My power, my power, thou hast forsaken me.' And when he had so said, he was taken up." Then follows a description of the descent of two figures from heaven (in the presence of the guards at the tomb) who entered the tomb and brought Jesus out. Their heads reached to heaven, but Jesus "overpassed the heaven." The cross followed the three, and in answer to a query from heaven: "Hast thou preached to them that sleep?" replied: "Yea." After a brief account of the women at the tomb the next morning and their flight in fear, the fragment closes with the intriguing words: "But I, Simon Peter, and Andrew my brother, took our nets and went unto the sea; and there was with us Levi the son of Alphaeus, whom the Lord. . . ."

Dependence upon all four of our canonical gospels (including John 21) is unmistakable, while the words "Then the women were affrighted and fled," suggest that the author's copy of Mark ended with 16:8. The variations from the canonical accounts are all of the nature of interpretation: the transfer of complete responsibility for the tragedy to the malice of the Jews; and the sharp distinction between the superhuman Christ ("my power"), who ascended from the cross, and the earthly Jesus.

To what extent the present fragment represents the original Gospel of Peter it is hard to say. It is clear that it is a complete copy of a fragment, which in turn also began *in medias res*. The present fragment (eighth century) gives no indication of the section referred to by Origen (*see above*); the statement by Theodoret that a "Gospel of Peter" was in use by the Nazarenes, if correct, most certainly does not refer to the present so strongly anti-Jewish writing.

The manifest use of the fourfold gospel would make any date before 125 unlikely; its use in Rhossus, as attested by Serapion, would make any date after 175 impossible. Its use by Justin Martyr, occasionally hazarded on the basis of possible similarities and phraseology, is, at best, far from certain. The most probable date is the third decade of the second century. *See also* APOCRYPHA, NT; PETER, APOCALYPSE OF.

Bibliography. A convenient translation of the fragment is printed by M. R. James, *The Apocryphal NT* (1924), pp. 90-

94, while a working bibliography of studies which this intriguing fragment has occasioned is given by J. Quasten, *Patrology* (1950), I, 114-15. M. S. ENSLIN

PETER, PASSION OF. A late revision in Latin of the Martyrdom of Peter, which stood as the concluding section of the Acts of Peter (*see* PETER, ACTS OF). The Passion of Peter has been attributed to Linus, by tradition Peter's successor as bishop of Rome. This Latin rescript, no earlier than the sixth century, follows largely the traditional Martyrdom, but adds some details. In addition to naming the jailers, it records the somewhat complicated vision which occurred at the time of Peter's crucifixion: "angels standing with crowns of the flowers of roses and lilies, and upon the top of the upright cross Peter standing and receiving a book from Christ, and reading from it the words which he was speaking."

M. S. ENSLIN

PETER, PREACHING OF. An early handbook of mission preaching, attributed to Peter and in keeping with the Lord's command to go into all the world and preach the gospel (Matt. 28:19-20; Acts 1:8).

It is dismissed by Eusebius (Hist. III.3.1-4), together with three other writings ascribed to Peter, with the word: "We have no knowledge at all in catholic tradition, for no orthodox writer [ἐκκλησιαστικὸς συγγραφεύς] of the ancient time or of our own has used these testimonials."

Clement of Alexandria, despite Eusebius, knew it, accepted it as genuine, and made several extended quotations from it, not improbably thereby giving an essential epitome of its contents. The twelve apostles are directed to go into all the world that men should know that there is one God and to declare by faith in Christ that those who hear and believe may be saved (Misc. VI.6). If any of Israel repent so as to believe in God through Christ, they shall be forgiven. After twelve years the apostles are to go to the Gentile world (VI.5). We must not worship God after the manner of the Greeks, with idols and deified animals, nor after the manner of the Jews, who, though they claim alone to know God, do not know him but serve angels and keep days and seasons; rather, we are to worship him in a new way, in accord with the new covenant he has made with us, "for the ways of the Greeks and Jews are old, but we are they that worship him in a new way, in a third generation [race], even Christians." Whatever we do in ignorance God will forgive (VI.6). The grounds of Christian belief are clearly established in the prophets who predicted his coming, death, resurrection, and ascension unto heaven; which prophecies we know are commanded by God, "and without the Scriptures we say nothing" (VI.15).

Thus this little writing—if we may trust Clement's seemingly full epitome—would seem to have been a forerunner of such apologies as those of Aristides and Quadratus, although the assumption, often made, that these latter embody its contents is rash. Origen (*On John* 13:17) repeats a quotation made by Heracleon (*ca.* 180) from this writing, and is noncommittal as to its Petrine authorship. Origen also knew a Teaching of Peter, which contained the word: "I am no bodiless spirit," which Jerome mentions as being found in the Gospel According to the Hebrews (*see* HEBREWS, GOSPEL ACCORDING TO THE). That Origen considered the Preaching and the Teaching the same book, while often assumed, is far from certain. The detailed warning against the worship of animals (including weasels, mice, cats, dogs, and apes), together with Clement's seeming firsthand knowledge of it, would suggest Egypt as a likely source of origin.

There would seem no real reason to identify this little booklet, which apparently had but limited circulation, with the expanded "Preachings of Peter," which bulk so large in the late Clementine fictions known as the *Homilies* and *Recognitions*. *See bibliography.*

See also APOCRYPHA, NT.

Bibliography. Occasionally the identification of the Preaching of Peter and the Preachings of Peter, central to the claims of F. C. Baur and his disciples, has been reasserted, notably by H. J. Schoeps, *Theologie und Geschichte des Judenchristentums* (1949), who contends that the early apocryphon was not only a real source for these romances but also is epitomized in *Recognitions* III.75. M. R. James, *The Apocryphal NT* (1924), pp. 16-19, provides an assembly of possible quotations.

M. S. ENSLIN

PETER, SECOND LETTER OF. A letter said to have been written by the apostle Peter to the church at large in order to combat doubts growing out of the delay of the Parousia. The letter is the latest one of the NT, and its canonicity was long in doubt. Yet it is an important work, on both theological and historical grounds. The theological importance rests on the facts that (*a*) its presence in the canon raises sharply the issues of the "apostolic" authority and unity of the NT canon; (*b*) it has provided the church with a rationale to deal with the delay of the Parousia while retaining a doctrine of the destruction of the world at the time of the Last Judgment. The letter is important for historical reasons because it gives a picture of the period of transition from the primitive church to the early Catholic church of the second century.

1. Authorship, style, and canonicity. It is clear that although the author wants to convey the impression that he is writing a letter (3:1), the epistolary character of his work is not emphasized. Its destination cannot be ascertained, since the letter is truly a Catholic letter—i.e., it is addressed to the church at large: "to those who have obtained a faith of equal standing with ours in [by means of] the righteousness of our God and [of the] Savior Jesus Christ" (1:1). This impression is confirmed by the absence of epistolary marks at the conclusion, which is a doxology to Jesus Christ. (It should be noted that except for II Tim. 4:18 this forms the only clear doxology to Christ in the NT.)

But though the epistolary character is not emphasized, the Petrine authorship is conspicuously and sonorously stressed: "Simon Peter [Συμεών, found elsewhere only in Acts 15:14], a servant and apostle of Jesus Christ" (1:1). The prince of the apostles is the authoritative voice which speaks to the church in this his second letter (3:1)—a clear reference to I Peter—to remind the church of the "predictions of the holy prophets and the commandment of the Lord and Savior through your apostles." He is in a

position to write authoritatively, since he has been a witness of Christ's glorification on the "holy mountain" (1:18). And, as if to stress the solidarity of all the apostles, Paul is called his "beloved brother" (3:15). The author has adopted the name of the foremost apostle, Peter, to enhance the authority of his letters—a practice not unknown in the early church. We have evidence of a rich Petrine literature. Fragments of a Gospel of Peter, an Acts of Peter, and an Apocalypse of Peter have survived (*see* PETER, GOSPEL OF; PETER, ACTS OF; PETER, APOCALYPSE OF). II Peter belongs to this class of literature. Both internal and external evidence show with cumulative force the impossibility of ascribing the letter to Peter, the disciple and apostle.

The author addresses Hellenistic-Christian churches which must have been established for some time, since the first generation of Christians has died (3:4). In view of Peter's martyrdom in Rome *ca.* A.D. 64, it is difficult to imagine that at so early a date the situation described in II Peter prevailed.

The only explicit reference to I Peter is to be found in 3:1, where the author refers to II Peter as his second letter. If I Peter is unauthentic and is to be dated in the beginning of the second century A.D., it follows that II Peter is likewise not a product of the apostolic era. If, however, I Peter is authentic, no theory of secretarial aid (*see* PETER, FIRST LETTER OF) can explain the differences in style and thought between I and II Peter.

The author presupposes the collection of the Pauline letters and their Gnostic interpretation (3:15-16). He may know the fourfold gospel (1:16-17) and seems to attribute canonical value to other writings besides the OT (3:16).

All of the Letter of Jude (*see* JUDE, LETTER OF) is virtually incorporated in II Peter 2. Since Jude is most certainly a post-apostolic writing, the apostolic origin of II Peter can be defended only on the basis that Jude borrowed from II Peter. However, that II Peter is the borrower is evident from the fact that Jude is intelligible without II Peter, while certain sentences of II Peter require a knowledge of Jude in order to be understood—i.e., the reference to "angels" in II Pet. 2:11 is unintelligible without the reference to Michael in Jude 9, and II Pet. 2:17 requires the reference to the stars of Jude 13 in order to make sense. Moreover, the author mixes up Jude's imagery—it is more appropriate for "wandering stars" (Jude 13) to be imprisoned in darkness than for "waterless springs" (II Pet. 2:17). He improves upon Jude's chronology (II Pet. 2:4-10) in the sequence angels, Flood, Sodom and Gomorrha (cf. Jude 5-7), and overcomes the judgment theme in Jude by emphasizing the rescue of the faithful ones (Noah with seven other persons and Lot), illustrating thereby his parenetic concern for his addressees. The author makes out of the general reference of Jude 17-18: "the predictions of the apostles of our Lord Jesus Christ," a specific one, by adopting the high authority of the apostle Peter (3:1-2). But by the time the author writes, pseudepigraphical references have become suspect. He omits, therefore, the references to the ASSUMPTION OF MOSES and to Enoch (*see* ENOCH, BOOK OF) in Jude 9-10, 14-15. Pseudonymity shines through when the author forgets his own Petrine status and stature in adopting Jude 17 in the awkward Greek of II Pet. 3:2: "that you should remember the predictions of the holy prophets and the commandment of the Lord and Savior through your apostles."

With regard to style and language, it has been said that "II Peter is perhaps the only book of the NT whose language profits from being translated." Clumsy sentence constructions, an artificial Atticism, and a preference for Hellenistic expressions and thought-forms—especially those of the mystery religions—abound. It seems clear that a second-century author is at work here, rather than a Palestinian of the first generation.

A look at the canonical history of II Peter can only confirm its unauthentic nature as this was established by internal criticism. The first explicit reference to II Peter occurs in Origen (A.D. 217-51), and only once. "Peter left one epistle which is acknowledged [*homologoumenen*], but there is also a second one. This one however is doubtful" (Commentary on John 5:3). Before Origen, the letter has not left any sure traces. Neither the Muratorian Canon, Tertullian, nor Cyprian mentions it. Clement of Alexandria does not refer to it in his extant writings, although Eusebius states (Hist. VI.14.1) about Clement's Outlines: "He gave concise explanations of all the canonical scriptures not passing over even the disputed writings such as Jude and the remaining Catholic epistles and the Epistle of Barnabas and the Apocalypse known as Peter's." Not even implicit references in the Apostolic Fathers or Apologists are of such a nature as to establish an acquaintance with II Peter. Eusebius (Hist. III.25.3) pronounces it "disputed, but familiar to the majority." After Origen, it is mentioned in Asia Minor by Firmilian in a letter to Cyprian and also by Methodius; then in the West by Jerome, who registers the doubts of many, yet states: "Peter wrote two epistles which are called Catholic." From the fourth century on (Athanasius, Augustine, and the third Council of Carthage [397]), it is accepted as canonical. In the Syrian church it was excluded generally until the sixth century.

The canonical history of II Peter is the weakest of all the NT books. Its place in the canon must be regarded as the test case, not only for the historical, but also for the theological, validity of a NT canon.

2. Purpose and date. The purpose of the letter is clearly expressed in 3:4, where the author cites his opponents: "Where is the promise of his coming? For ever since the fathers fell asleep, all things have continued as they were from the beginning of creation." To combat this skepticism and to defend the Parousia, with its accompanying judgment, is the sole intent of the author. II Peter, then, is an apology for early Christian eschatology. Although only the last chapter is explicitly devoted to this purpose, the first two chapters cannot be understood unless seen in the light of the parousia discussion.

The theological and historical importance of this letter then can be assessed only if we see it in the context of the situation out of which it arose. Internal and external criticism seem to point to a date around the middle of the second century. The difficulty in understanding the letter against its back-

ground lies in the historical obscurity of this period. Several attempts have been made to identify the opponents with names of well-known heresiarchs such as Cerinthus, Marcus, Marcion, etc., and to locate the letter in a specific area of the Roman Empire (*see* JUDE, LETTER OF). An ultimate judgment on these matters is impossible because of the nature of the polemics it carries on, and the pseudonymity of the letter itself. Yet several significant features can be ascertained which would point to a more definite stage within the fluid history of the second-century church in which the letter may have to be located:

a) The style and language of the letter show an indebtedness to the religious language of Hellenistic Roman culture and to an ideology which is in the midst of a "Hellenization of the Christian church." A doctrine of immortality, a submersion into the divinity, is mixed with the traditional Jewish apocalyptic language of the early church.

b) The orthodoxy of the author and the way he appeals to apostolicity and a legitimate ministry point to the postapostolic era in which the church began to formulate criteria of authenticity and legitimacy. Peter, the Twelve, and Paul form the exclusive apostolic authority, and this authority is based on a criterion of apostolicity which is close to that of Acts 1:21 ff. The kerygma is hardened into a sacred history which only the apostles can guarantee and safeguard. The appeal to the "established truth" (1:12) is the apostolic testimony in objective propositional form. Apostolicity, then, is the criterion of truth—not only inasmuch as it safeguards the gospel tradition, but also because it guarantees the correct interpretation of scripture (1:20; 3:5). The canon seems established: the fourfold gospel may be a fact; the collection of the Pauline letters certainly is, also Gnostic interpretations thereof. The apostolic canon must be protected by apostolic authoritative interpretation against false interpretations.

c) The first generation of Christians has died. Heretics are in abundance and have seemingly the majority (πολλοὶ [2:2]) of the church behind them. It is unclear whether they still belong to the church or have already organized themselves in separate groups (2:13). The situation is not dissimilar from that of Jude (*see* JUDE, LETTER OF), while that of I John, where the heretics have definitely been ousted, is not yet present. The letter may actually give a true picture of the confusing state of the church in Asia Minor, just prior to the formulation of definite criteria of orthodoxy. Bauer has shown that the status of "unorthodox" as over against "orthodox" churches may have been unsettled at that time.

d) The Gnostics are, in all probability, closely linked to the Marcionite wing of the movement. The reference to a perverted interpretation of the Pauline corpus may well be seen in this light, and would yield a picture similar to that of the Pastoral letters, where Marcionites seem explicitly mentioned (I Tim. 6:20). The attempt to claim "our beloved brother Paul" for orthodoxy may have been a dire necessity, if we remember the peculiar silence about Paul in general in the second-century church prior to Irenaeus and Hippolytus. This silence was due to the appropriation of Paul by proto-Gnostics and Gnostics (e.g., Marcion and Basilides), who also wrote the first commentaries on the Gospel of John (cf. Heracleon and Ptolemaeus). The kerygma of the Gnostics percolates at times through the abusive language of the author: "freedom" (ἐλευθερία; 2:19); "corruptibility" (φθόρα; 2:19); "gnosis" (cf. the antithesis, ἐπιγνώσις [1:2-3, 8; 2:20; 3:18]); emancipation from the rule of angels (κυριοτης, δόξαι; 2:10)—i.e., the angels and powers which dominate the world of matter (2:10-12). Their pneumatic freedom is interpreted as ethical licentiousness and their teachers as men of greed—which may rest on fact, if we take into account the ethical consequences the Gnostics at times drew from their pneumatic freedom. The contempt for an eschatological future and, in connection with it, for an earthly realization of the kingdom would follow from their interpretation of eschatology. They probably held this in the form of an eschatology realized in their pneumatic existence, an emphasis we find already in the Corinthian letters and in II Tim. 2:18. The stress of the author on perseverance and "gnosis" as ethical discipline, become intelligible in the face of this. These factors, then, point to a date *ca.* 150 and to Asia Minor or Syria as the seedbed of early Gnosticism.

3. Contents. The letter may be outlined around the theme of the promise of the Parousia, as follows:

I. Greeting, 1:1-2
II. Preface: the promises of God (to the apostles?) are great and wonderful, but require a virtuous life, 1:3-11
III. The promise stands sure, 1:12-21
  A. On the basis of the apostolic eyewitness to the glorification of Jesus on the Mountain, vss. 12-18
  B. On the basis of OT prophecy, vss. 19-21
IV. Those who attack the promise are doomed, ch. 2
V. The "apocalypse of Peter": refutation of those who deny and doubt the promise, 3:1-13
VI. Final exhortations, 3:14-18

The greeting (1:1-2) suggests the emphases of the letter: (*a*) apostolic authority; (*b*) the true knowledge of Christ (ἐπιγνώσις) over against the Gnostic opponents who confuse the church with their false knowledge, "gnosis."

The true knowledge of Christ has been communicated to the apostles (1:3-11). The promises form an integral element of it by which we will attain to the divine nature. This seems to be the content of the awkward third verse—difficult in construction and vague in content. The author does not show how the participation in the divine nature is consistent with his apocalyptic outline in 3:1-13 (cf. vs. 13: "According to his promise we wait for new heavens and a new earth in which righteousness dwells"). The change of the personal pronoun in 1:4 should be noticed, for it may indicate that the "we" of the preceding verses refers to an exclusive apostolic privilege (vs. 3), granted by the divine and sinless Jesus (cf. 1:17).

The expectation of new heavens and a new earth clothed with righteousness, which follows Jewish apocalyptic linear-temporal thinking, cannot be easily harmonized with the dualistic Hellenistic an-

tithesis of "divine nature" (θεία φύσις) and the transitory corruptibility (φθόρα) of this world. For this introduces a spatial eschatology of a Philonic-Platonic type. The condition for participation in this divine world is a gnosis which, contrary to the ill-founded speculations of the opponents, is communicated through apostolic authority and exhibits itself, not in esoteric truth, but in outward ethical behavior: a catena of Hellenistic virtues is introduced as the embodiment of the gnosis of Jesus Christ (vss. 5-8). It would seem that in face of the protracted parousia delay and the mocking attacks by the opponents, "Peter" emphasizes self-discipline and perseverance ("self-control" and "steadfastness") within the context of the unity of the church. The unity of the church is threatened and torn apart by opponents from within and without.

The following verses (9 ff) show that vss. 3-11 are reminiscent of the characteristic NT attitude with respect to Christian life between the Resurrection and the return of Christ. It is marked by the dynamic tension of the "already" and the "not yet." This tension is expressed by the dialectic of an imperative based on an indicative. The indicative of God's redemptive act in Christ is complemented by the imperative of ethical action in correspondence with it. "Peter" wants to indicate that church members are in error if they forget the imperative of ethical action (vs. 9 shows that they—i.e., the ones cleansed from their old sins—are the heretics, and not outsiders). But since the call and election of vs. 10 are left vague and seem to refer to the futuristic promises and glory of the kingdom (vss. 3-4)—since, in other words, the indicative is not clearly grounded in a christological present—the theological depth of the indicative-imperative correlation is misunderstood and approximates a new legalism, in which the ethical virtues of vss. 5 ff become an "entrance Torah" (cf. εἴσοδος [vs. 11]) for the kingdom. This conviction is heightened by the doctrine of forgiveness of prebaptismal sins, which, because of the absence of the power of the Holy Spirit in II Peter, effects an ethical rigorism of Judaistic color.

The promise stands secure (1:12-21). There can be no doubt about it. The growing disruption within the church (cf. πολλοὶ [2:2]) is encountered, not by theological debate, but by historical criteria of authenticity which must safeguard the church against dangerous heretical inroads. The author makes it abundantly clear that the apostle Peter was aware of impending heresies (3:3) and that he has left his letter as a testament to the church which must put beyond any doubt the orthodox teaching about the end and the Parousia. The prophetic element of 2:1 shows the utopian view the author has of the pristine purity of the apostolic church. The security of orthodox teaching rests both on the witness of scripture and on that of apostolic ear- and eye-witness. This section (1:12-21) betrays a possible knowledge of the four gospels: the reference to Peter's "exodus" (vs. 15) may refer to John 21; the transfiguration scene to the Synoptic account. It may be that the author is acquainted, not only with the collection of the Pauline letters (3:15-16), but with the fourfold gospel as well, which would indicate a post-Marcionite date for his letter. It is more probable, however, that the author has recourse to a (lost) oral tradition. The author changes his pronoun again to a solemn "we" as in the opening verses: the authority of the Twelve stands behind the message of the church.

The ground for the authority of the Twelve and Peter as their foreman rests in their presence at the transfiguration of Christ. The scene is described as a Hellenistic initiation rite. The mysteries are disclosed: the holy mountain (vs. 18), the initiates (ἐπόπται), the divine majesty (μεγαλειότης; vs. 16), and the metamorphosis of the cult hero (τιμὴν καὶ δόξαν; vs. 17). The importance of the scene for the author is twofold: the transfiguration of Christ is the earthly anticipation of his heavenly glory, and this anticipation makes the coming fulfilment of the Parousia sure, when again Christ will come in heavenly glory, but then publicly manifesting what had been a secret vision to the privileged few on the Mountain. The Transfiguration is an earthly, historical fact, and the author has been a witness to this fact, which was both seen and heard. Just as the voice on the Mountain carried divine authority, so the voice of the one who bears witness to it must be heard with equal deference. Peter, then, witnesses to the resurrection appearance as an objective historical phenomenon which will guarantee the Parousia. The apostolic witness is affirmed by scripture: the messianic promises of the OT have been vindicated by the transfiguration of Christ. In the same manner, the promises contained in the proleptic realization of the heavenly glory on the Mountain will be fulfilled in the final glory of the kingdom. For this reason the prophetic word is "made more secure." An attack on heretical interpretations of the OT follows—possibly alluding to Gnostic interpretations of the creation stories and genealogies of the OT. Just as apostolic authority guarantees the gospel message, so this same apostolic authority guarantees the interpretation of scripture. The principle seems to be: only like knows like. The pneumatic authority of the apostles alone is capable of expounding the pneumatic authority of the OT prophets (cf. I Pet. 1:11).

The attack against an individualistic and speculative interpretation of the OT (1:16-21) forms the introduction to a vehement defamation of the Gnostics (ch. 2). The author has incorporated Jude in this chapter (*see* § 1 *above*) along the following lines: (*a*) general description of heretics (vss. 1-3; cf. Jude 4); (*b*) three OT examples—the fall of the angels, Noah and the Deluge, Lot and Sodom and Gomorrha (vss. 4-9; cf. Jude 5-7); (*c*) sins against the flesh and against authorities (vss. 10-12; cf. Jude 8-10); (*d*) licentiousness (vss. 13-14; cf. Jude 12); (*e*) OT examples (vss. 15-16; cf. Jude 11); (*f*) illustrations from nature (vs. 17; cf. Jude 12*b*); (*g*) spiritual pride (vs. 18; cf. Jude 16*c*).

This section is characteristic of the polemics of the second century: abusive language, in which the opponents are especially blamed for sexual offenses and greed, follows a pattern of heresiological polemics. This general pattern does two things: (*a*) it makes it difficult to draw any conclusions as to the nature of the opposition (*see* JUDE, LETTER OF), and (*b*) it shows the intellectual shallowness of the author. Abuse replaces debate. The successfulness of the Gnostics may have been one of the reasons for this

polemical style. Likewise, the close association of idolatry and adultery in early Christian teaching may be responsible for the emphasis on sexual perversity. It is apparent that the author addresses recent converts (vs. 18) who have slipped away or are in the process of doing so, and the reference to *apatai* (ἀπάται, "deceits") may be a pun on the separatist *agapai* (ἀγάπαι, "love feasts") of the heretics.

In 3:1-13 the real purpose of the author becomes plain. The groundwork has been laid for his apology for Christian eschatology. The legitimacy and authority of his witness have been established; the "myths" of the Gnostics have been condemned, together with the persons who fancied them. Their pneumatic freedom has been denounced as slavery to perishable matter (2:19). All this is directed to one goal: to remove the sting out of their biting questions about the Parousia. The author gives his apology a fourfold argument:

a) Just as the earth has once perished (ἀπώλετο; 3:6) by water, so it will in the future be burned up by fire. The Gnostic argument of the essential unchangeability of creation ("All things have continued as they were from the beginning of creation"; vs. 4) is disproved by scripture itself in the deluge story. The author uses here a theory of Stoic and Iranian provenance—i.e., the concept of "world fire," traces of which we find already in Jewish apocalyptic sources (Zech. 1:18; 3:8; Sibylline Oracles IV.172-82; V.155-61) and more rarely in Christian apocalypses (Apocalypse of Peter 5 [*see* PETER, APOCALYPSE OF]; Herm. Vis. 4.3.3). Justin Martyr (Apol. I.20) refers to the twofold origin of the concept as follows: "Both Sybil and Hystaspes [a Persian legendary sage] declared that there will be a destruction of corruptible things by fire. Those who are called Stoic philosophers teach that God himself will be resolved into fire and the universe come into being again by return."

b) God's sense of time is not ours—Ps. 90:4 provides scriptural authority to suspend any restlessness about the delay of the Parousia. The author seems to be unaware that this argument undercuts his own theme. The promise of the kingdom, which brings reward for the "godly" (1:11; 2:9) and swift punishment for heretics (2:1), may give an answer to disappointed expectations about the Parousia, but annuls these expectations in substituting eternal categories for those of time.

c) Furthermore, God does not foreshorten the time of the end, as Jewish and Christian apocalypses have it, but lengthens it, out of his mercy to give everyone opportunity for repentance (cf. I Tim. 2:4).

d) Finally, the author switches back to the early Christian expectation of the suddenness of the end (cf. Mark 13:35; I Thess. 5:2). This switch comes somewhat unexpectedly after the change of time categories in 3:8 and points to the inability of the author to cope with the question of the mockers (vs. 4). The description of cosmic catastrophe which accompanies the "Day of Yahweh" provides the background for the final ethical exhortations. Here Peter calls upon Paul, who had said similar things (Rom. 2:4; Phil. 1:10 ff; I Thess. 3:13), to strengthen the apostolic witness. Notwithstanding false interpretations by Gnostic Paulinists, Peter and Paul guarantee the authenticity and legitimacy of the one apostolic tradition.

PETER, SLAVONIC ACTS OF slə vŏn'ĭk. A late and grotesque romance, unfettered by either history or earlier legend, of some of Peter's experiences en route to and in Rome, and culminating in his martyrdom. It is extant only in Slavonic and has no seeming connection with the so-called Leucian Acts of Peter. *See* PETER, ACTS OF.

During his voyage to Rome, made at the insistence of a young child, Peter purchases the child, also now on the ship, from the captain. The child performs many miracles in Rome, both for Peter and for Aravistus, to whom Peter sells him. When Nero arrests Peter, the child appears to rebuke him and withers Cato, Nero's adviser, when Cato cuffs Peter. At that the city is shaken by an earthquake and the dead are raised, only to be restored to their graves by Peter, to await the advent of Michael. Peter is crucified head downward. The child appears again; the nails fall from Peter's head, breast, hands, and knees; Peter forgives his enemies, and the child at long last reveals himself as Jesus.

Bibliography. A précis of this curious work is given by M. R. James, *The Apocryphal NT* (1924), p. 474. A German translation was made by I. Franco and published in *ZNW* (1902). M. S. ENSLIN

PETER AND ANDREW, ACTS OF. A short sequel to the flashy Acts of Andrew and Matthias (*see* ANDREW AND MATTHIAS, ACTS OF), extant in Greek and Slavonic. The identical story, although in still shorter form, is found in Ethiopic in the amorphous Oriental Acts, with Thaddaeus in the role of Andrew.

Andrew is carried by a cloud from the land of the cannibals to the mountain where Peter is preaching and to which Matthias has earlier escaped. Jesus appears—as a child—and bids Peter and Andrew go to the land of the barbarians. This they do. They produce a crop of ripe grain for a hospitable old man, and then come into contact with the hostile Onesiphorus. Peter twice causes a camel to go through the eye of a needle, the second time employing the accessories provided by the still skeptical Onesiphorus: his own needle, swine's flesh, a camel, and a defiled woman upon the camel's back. The doubter is now convinced and is bidden by Peter to attempt the miracle himself. He does; the camel passes through as far as the neck, then stops because Onesiphorus has not been baptized. He is forthwith baptized, together with a thousand other converts, including a now penitent wanton woman, who had earlier been hung up naked by her hair by the city gate in the vain attempt to prevent the men of God from entering. She makes lavish gifts, including her own house for a monastery for virgins. The apostles consecrate a church, ordain clergy, and commit the people to God.

The change in style and emphasis in these later Acts from that in the five principal romances, which earlier had suggested the possibilities of edifying fiction outside the ranges of the canonical Acts, is very evident. No longer is there any emphasis on, or seeming interest in, doctrine. The prayers and exhortations of the apostles, which in the earlier Acts bulked large in the eyes of the authors, are no longer to be found. Instead, we have a welter of wonder stories, seemingly the sole concern and interest of the writers. *See* APOCRYPHA, NT.

M. S. ENSLIN

PETER AND PAUL, ACTS OF. A writing extant only in Greek, and, save for the early chapters, essentially the same as the Passion of Peter and Paul (*see* PETER AND PAUL, PASSION OF), commonly ascribed to Marcellus. In this version Paul comes to Rome from the island of Gaudomelete. The Jews in Rome, having heard of his intent, persuade Nero to forbid his landing. While in Sicily, en route to Rome, Paul's friend the shipmaster, who like Paul is bald, is mistaken for Paul; he is beheaded by the local toparchs, and his head is sent to Nero. The description of the voyage to Rome is heavily dependent upon the canonical Acts, although embroidered with other local legends. After Paul's arrival in Rome the account is essentially the same—often in identical language—with the above-mentioned Passion. *See* APOCRYPHA, NT.

Bibliography. The Greek text is printed in Lipsius-Bonnet, *Acta Apostolorum Apocrypha* (1891), I, 178-222.

M. S. ENSLIN

PETER AND PAUL, PASSION OF. A comparatively late and thoroughly orthodox writing, extant in both Latin and Greek, recounting the close relationship and harmony between Peter and Paul, their continued and successful opposition to Simon Magus, and their subsequent martyrdoms. Though it contains earlier material, this work is not to be dated before the fifth century. It is commonly, but without warrant, ascribed to Marcellus.

There is also a quite different writing, having the same title, extant only in Latin. The two apostles, lodging in Rome in the home of a relative of Pontius Pilate, are recommended by their host as competent to reply to Simon Magus' claims to be the Christ. Their death sentence follows, but only the briefest mention of their execution is given. *See also* PETER AND PAUL, ACTS OF; APOCRYPHA, NT.

Bibliography. The full text of both of these writings is available in Lipsius-Bonnet, *Acta Apostolorum Apocrypha* (1891), I, 118-72.

M. S. ENSLIN

PETER AND THE TWELVE DISCIPLES, ACTS OF. A Gnostic apocryphon discovered in 1946 at Chenoboskion in Upper Egypt. It apparently has no connection with the Acts of Peter, the Ebionite Acts of the Apostles, or the Manichean Acts of the Twelve Apostles. *See* APOCRYPHA, NT.

M. S. ENSLIN

PETHAHIAH pĕth'ə hī'ə [פְּתַחְיָה, *perhaps* Yahu opens, *though probably an ethnic name*]. **1.** Ancestor, supposedly of David's time, of one of the postexilic priestly families (I Chr. 24:16).

2. A postexilic Judahite, son of Meshezabel, and adviser to Zerubbabel in matters "concerning the people" (Neh. 11:24).

3. A Levite in Ezra's time who attended the covenant ceremony at the Feast of Tabernacles (Neh. 9:5) and who was among those required by Ezra to put away their foreign wives (Ezra 10:23).

J. M. WARD

PETHOR pē'thôr [פְּתוֹר; Assyrian-Babylonian *Pitru*]. An ancient city located in Upper Mesopotamia on the Sajur River near its confluence with the Euphrates below Birejik. Pethor figures in biblical tradition as the home of Balaam, who was called in by King Balak of Moab to curse the advancing Israelites (Num. 22:5; Deut. 23:4). It is mentioned in the inscriptions (Obelisk 40, Monolith rev. 36 and 85) of Shalmaneser III (859-824) as located on the other side of the Euphrates on the Sajur River. Besides the name Pitru (Pethor), by which it was known to the Hittites, the city had an Assyrian name, *Ana-Asshur-utīr-aṣbat*, "I settled it again for Asshur," which seems to commemorate the fact that it and the neighboring city of Mutkīnu had earlier been settled by Shalmaneser's predecessor Tiglath-pileser I (1116-1077), had been lost to the Arameans, and were now again settled with Assyrians by Shalmaneser.

T. JACOBSEN

PETHUEL pĭ thōō'əl, pĕth'yōō əl [פְּתוּאֵל] (Joel 1:1). The father of the prophet Joel.

PETRA pē'trə [Πέτρα, rock]. The famous capital of the Nabateans, situated in a valley of the mountains of W Edom, *ca.* sixty miles N of Aqabah. It is reached by ascending the Wadi Musa and passing through a narrow gorge called the Siq, which opens up into a plain *ca.* a thousand yards wide, surrounded by massive cliffs of red and variegated sand-

42. General view of a line of tombs known as Umm es-Sanadiq at Petra

stone. This plain contains ruins of temples and houses, as well as a number of structures which are hewn out of the rock, and a Roman basilica and theater, which make it one of the most impressive sites in the Near East. Fig. PET 41-42.

Attempts have been made to identify Petra with the biblical SELA, on the grounds of the identity of the meanings of the names. However, there is no evidence of any Edomite settlement except at the Umm el-Bayyarah fortress, around which the later city grew.* Petra, therefore, is not mentioned in the Bible. It seems to have been built beginning *ca.* the fourth century B.C. and to have lasted through the period of Roman rule, but it fell into ruins after the Mohammedan conquest of the seventh century A.D. Figs. SEL 37-38; HIG 23.

Bibliography. For excellent descriptions and illustrations of the ruins of Petra, see Erskine, *Vanished Cities of Arabia* (1925), pp. 21-71; Robinson, *Sarcophagus of a Vanished Civilization* (1930), pp. 1-171. S. COHEN

PEULLETHAI pē ŭl′ə thī [פְּעַלְתַי, recompense (of God)] (I Chr. 26:5). One of the gatekeepers for the sanctuary; a Levite, and son of Obed-edom.

Bibliography. M. Noth, *Die israelitischen Personennamen* (1928), p. 189, note 3.

PHARAOH fâr′ō, —ĭ ō [פַּרְעֹה; LXX Φαραώ; Akkad. *pir'u, pir'ū;* Egyp. *pr-'*, the great house]. In the Bible, a title used as a name, or a title prefixed to a name (as in Pharaoh Hophra), of the king of Egypt.

By 2500 B.C., under the Egyptian Old Kingdom one of the designations of the royal palace was "the Great House." This was a common exponent of authority in titles, such as "Superintendent of the Domain of the Great House." By 1800 B.C. this name for the palace had attracted to itself some of the divine epithets associated with the name of the king, but it was not until 1500, in the Eighteenth Dynasty, that it came to be used as a title for the inhabitant of the palace, the king of Egypt. By the ninth century B.C. it was prefixed to a royal name—e.g., Pharaoh Shishak. Early in the seventh century B.C. it was written in the cartouche, or name ring, regularly reserved for the writing of the royal name. Thus in biblical times it was so effective a substitute for a name that it might be used alone to designate the ruling king.

1. Names of the pharaohs. The names of the pharaohs had meaning. The majority of them can be translated as assertive sentences: e.g., Ramses, "(the sun-god) Ra is the one who begot him"; Amen-hotep, "(the god) Amon is satisfied." The first name in time was the personal name, that given a prince at birth. This tends to be a family name. The Eighteenth Dynasty had four kings named Amen-hotep and four named Thut-mose; the Nineteenth Dynasty had two kings named Ramses, and the Twentieth had nine. These names, like those later added, had religious relationship, Amen-hotep to the god Amon, Thut-mose to Thoth, and Ramses to Ra. When the heretic pharaoh changed his religion, he changed his name from Amen-hotep to AKH-EN-ATON, asserting a devotion to the god Aton.

At coronation a king received four additional names asserting religious devotion or purpose. The most important of these four was the prenomen. For Ramses II the prenomen was User-maat-Re, "Strong is the right of Ra," which was rendered in Greek as Ozymandias. The prenomen and the personal name (the nomen) were written within ovals, modernly called cartouches. This isolation of such royal names as Ptolemy and Cleopatra was of help for the first steps in the decipherment of the hieroglyphic system.

2. The pharaoh in the state dogma. Egypt was the first civilization in which widely separated areas were bound together as a nation under a single government. Culturally, Upper Egypt was as different from Middle Egypt as Middle Egypt was from Lower Egypt (the Delta). The economy of Upper Egypt (biblical Pathros) was based upon barley and the cow; the economy of Lower Egypt was more varied in agriculture and was more mercantile. Upper Egypt's religion and political organization were related to African forms, Lower Egypt's to Asiatic and Mediterranean forms. Although all parts of the land were united by a common dependence upon the Nile, the Egyptians were so conscious of internal difference that they called their country the "Two Lands"—i.e., Upper and Lower Egypt.

To bind together such disparate regions, the Egyptians insisted that their ruler was a god. He did not come from any province or town of Egypt; he came from the realm of the gods, carrying the divine function of rule. By the dogma of the state, the entire land, its properties, and its peoples were his by divine right. There was no need to codify law, because the word of the god-king was present to make law. From the beginning of the dynasties he was Horus, the "distant" or "upper" god. By the Fifth Dynasty the dogma asserted that at death he became the god

Osiris, who, though dying, yet lived forever in rule over the dead.

In the course of history various challenges were made to the doctrine that the king was absolute because he was a god. Yet modifications of his absolutism did not essentially alter the assertion of the dogma. As government became more complex, it was no longer possible to govern the nation directly from the palace. An elaborate bureaucracy was constructed, headed by a vizier. Under weak kings, the authority of such an official might be as sweeping and as independent as was the authority of Joseph. The armies in earlier Egypt were raised by a civilian draft, but by biblical times there was a professional army, including foreign mercenaries. Out of army command there might arise such founders of dynasties as Shishak.

The priests of the important gods were also jealous for worldly power. By the Fifth Dynasty it was asserted that the sun-god Ra of On (Heliopolis) was the father of the king, who thus owed filial allegiance to his sire. By 1500 B.C., in the Eighteenth Dynasty, Amon, the "hidden" god of Thebes, compounded with Ra to become Amon-Ra, was the imperial god in Egypt's attempts to control other nations. At least by that time the pharaoh began to seek the oracle of the great gods to sanction the major enterprises of the state. The high priest of Amon-Ra of Karnak became a powerful figure in the nation, taking his place beside the pharaoh, the vizier, and the commander of the army. Perhaps Exod. 7:1 reflects this dependence of the pharaoh upon the oracle of a god, where Moses is made the "god to Pharaoh" and Aaron is the priestly spokesman for that god.

Although state dogma continued to assert the pharaoh's divine and single right to rule, these competitors for political power united to remove the king from immediate contact with the people and the state. In large measure he became the god-symbol of the state, rather than the ruling magistrate. As such, he still had great power, but it was a power which he had to share with others.

3. The biblical concept of pharaoh. This picture of a remote palace figure does not accord very well with the account given in Genesis and Exodus, where the pharaoh takes so paternal an interest in the young slave Joseph or where Moses and Aaron may appeal to the pharaoh as he returns from a morning bath in the river. In defense of the biblical picture it may be claimed that after 1100 B.C. there were pharaohs and pharaohs, some of whom were little more than rulers of city-states. Further, much of the background of the court of pharaoh as suggested in the Bible can be paralleled out of the Egyptian texts.

From the time that Egypt attempted to set up an Asiatic empire, the pharaohs contracted a number of international marriages to cement alliances with friendly nations, and these included wedding an Egyptian princess to an Asiatic, just as Solomon received a daughter of the pharaoh (I Kings 3:1). Victories abroad brought many foreign slaves into Egypt. Some of them became household servants and body servants to the kings and nobles, and thereby rose to positions of trust and responsibility. Although we know no other who gained such sweeping powers as Joseph, the parallel is still valid. Other foreign slaves were placed in charge of the palace herds or temple herds of cattle (like Gen. 47:6), were made mercenary soldiers, or were formed into gangs for the great public works projects (like Exod. 1:11).

The picture of the pharaoh's court, with his counselors, the "wise men and magicians," is also familiar from Egyptian texts. These tell of the constant attendance upon the pharaoh by a body of experienced officials and the summoning of priests who were learned in the magical lore of ancient documents. The interpretation of dreams had its special importance for the pharaohs. Joseph's responsibility for the assessing and collecting of taxes (Gen. 47:13-26) accords with what we know about the duties of the vizier of Egypt. The statement that Joseph exempted the land of the priests from taxation, because the priests enjoyed special privileges accorded by the king, has some general conformance to Egyptian practice. However, the situation is puzzling: certainly at some times in Egyptian history the lands of the priests and of the temples were taxed against their produce, but several of the pharaohs did grant some of the temples special immunity from the draft of forced labor.

The pharaoh who promoted Joseph, the pharaoh of the Oppression, and the pharaoh of the Exodus cannot be satisfactorily identified by name or even by century (*see* EXODUS, BOOK OF). For the pharaoh of the Oppression, the task of building the store cities of Pithom and Rameses should point to Ramses II (1290-1224 B.C.), but there are complicating factors when one assumes that his successor MER-NE-PTAH was the pharaoh of the Exodus. The pharaoh who honored Joseph was, of course, much earlier, but the Egyptian names in the Joseph story, Potiphar, Potiphera, Asenath, and Zaphenath-paneah, are of types which occur late in Egypt, chiefly after 1100. The frank attitude toward the stories about Egypt in Genesis and Exodus is that folk memory had retained the essentials of a great Hebrew experience but had later clothed that memory with some details imperfectly recollected and some circumstantial detail borrowed from later times and conditions.

1. Origin and name. For an understanding of the origins and antecedents of the Pharisees, we must go back to Ezra and beyond—to the pre-exilic institutions of the prophetic guilds and the priesthood.

In the light of the NT picture of Pharisaism, it may seem unnatural to connect the Pharisees with the ancient prophets of Israel; in Christ's day the prophetic demands, the "greater things of the law," were buried beneath a mass of petty Pharisaic regulations. Nevertheless, there is a sense in which the conflict between Pharisees and SADDUCEES, in its origins and much of its later history, was a revival—in new ages and new forms—of the ancient, unresolved conflict and opposition between prophet and priest in Israel.

The seeds of historical Pharisaism were sown during the Exile. Deprived of the temple and its cultus, exiled Israelites had to be content with the dream of its restoration and the reality of the Book of the Law, which they had been able to take with them into exile. During the Exile it was the law which became the center of Jewish religion and supplied the pattern of Jewish life; and it was to remain ever afterward the soul of Judaism. Under the restoration of Ezra and his successors the temple was again to become the focus of national life. The old hierocratic Israel, with the high priest as supreme authority in matters of law and religion, was re-established; but the law did not cease to be the soul of the nation.

There grew up side by side with the temple and its priestly aristocracy a new authority, a body of "lawyers" called scribes or Sopherim (*see* SCRIBE). Torah was still taught and practiced (we must presume from our records) under the aegis of the temple and its restored priesthood; its interpretation and application was still, like the cultus itself, the primary function of the temple hierarchy and their assistants, the Sopherim. Scholars are agreed that it is still the priestly scribe or sage who is glorified in the pages of ECCLESIASTICUS (38:24–39:15), and the guilds or families of Sopherim (I Chr. 2:55) were restricted to the ranks of the priestly families or the Levites (cf. II Chr. 34:13; Neh. 8:7, 13). In this respect the Israel of the restoration stood in the pre-exilic hierocratic tradition: it was a restored priestly hierocracy in which the privileges of interpretation and application of Torah were vested solely in the priestly caste.

But it is doubtful if the realities of the restoration correspond to the blueprint of the exiles' dreams of a new Israel with temple and Torah as its center. The law, not the temple, was the primary factor in postexilic Jewish life; and the stage was set for the next development, when Torah could stand in opposition to temple and be taught and applied among the people by a new class of lay "lawyer," non-priestly doctors of the law, who owed no allegiance to the temple hierarchy and were prepared even to resist its rule and enactments.

It is not known for certain when this revolution within postexilic Judaism took place, but its beginnings are probably to be set at the end of the Persian and the beginning of the Greek period. There may have been lay lawyers in Israel during the Exile itself and at the time of the restoration; the leading figures of the period, perhaps drawn from the Sopherim or *Hakhamim* (sages), and certainly including them, are traditionally referred to as the "Men of the Great Synagogue" (*see* SYNAGOGUE, THE GREAT), the "Men of the Second Temple." The records of Ezra, Nehemiah, and Chronicles present us with the ideal, not the actualities, of the reorganized Judaism of the period. What we certainly can observe is that the chaotic conditions which followed the breakup of the restoration temple and the rule of the Men of the Great Synagogue led to the progressive weakening of the power of the hereditary priesthood. The high-priestly office was discredited in the eyes of the loyal Jewish nation; the Seleucid nominees did not even belong to the hereditary priestly families. For a long period after the invasion of Jewish life by Hellenism, there was a complete moratorium on the temple services. But no foreign power or priestly collaborators could destroy the law, which became the rallying point of Jewish loyalty.

The religious backbone of the Maccabean resistance was provided by an assembly or "synagogue" of scribes, and the HASIDIM, the "pious," or loyalists for the law (I Macc. 7:11-17). Whether these scribes were priestly scribes or lay lawyers or (just as probably) included both, cannot be known for certain. According to one ancient authority, there was a body of priests who seceded from the temple, about the same time as the rise of the Hasidim, in protest against Seleucid Hellenization; these, along with the "synagogue of the scribes," must have formed the spearhead of the popular resistance. The Maccabean family itself was a priestly family. But the revolt came from the Jewish people, and the priestly caste which remained in office betrayed the national cause by making terms with the Syrian conqueror (cf. I Macc. 7:14). They were the forerunners of the Sadducees.

Though the temple services were again restored under Judas Maccabeus (*see* JUDAS 10), the Hasmonean dynasty which he founded represented a new order in Judaism. It became a monarchy with a governing body known as the *Gerousia* or Senate (the predecessor of the SANHEDRIN). The most significant feature of the *Gerousia*—an indication of the revolution that must have taken place in Judaism in the preceding half century—is that lay Sopherim were now admitted as representatives of the people to its councils. When the ancient office of the high priest was revived under the Hasmoneans, it was a revival of the form of hierocracy, when the reality of priestly rule had long since been discarded. The name given the highest authority in the Jewish state is itself eloquent of the inroads made by Hellenism in Jewish

life; the *Gerousia* was a Greek institution with laymen as rulers and administrators, of a higher rank than the priesthood, whose office and function was now largely confined to tending the altar.

There can be little doubt that the Pharisaic movement took its rise from among the ranks of these lay lawyers of the Greek period. The Pharisees were, no doubt, the successors of the Hasidim, but only in a very general sense; it must have been a body of lay scribes that formed the core of the emerging Pharisaic party, soon to be strengthened by partisans from the people and eventually to include priests in their numbers. At the beginning and during the early Greek period, such a group or party must also at some stage have successfully challenged the pretensions of the priestly caste to be the sole authorities on Torah, and so rulers of the people. When the Pharisees first emerge in the historical records, they do so, as we shall see, as an already established religious-political party in the Jewish state.

This revolution in postexilic Judaism was not effected without a prolonged and bitter struggle, for the temple was still the national shrine, and the ancient office of temple priest still possessed great prestige and authority. It was a revolution which was never completed, for the struggle for power within the Jewish state between the priestly caste and its adherents (the Sadducees) and the lay element in the state and their followers (the Pharisees) was to continue for the next two centuries. Indeed, this tension between temple and Torah, or rather temple and a lay-interpreted Torah as a new center of power and authority, between Sadducee and Pharisee, is the key to an understanding of much in Jewish life in the two centuries before Christ.

The derivation of the name Pharisee is obscure. A common form of explanation derives the word from Hebrew *parash* (Aramaic *perash*), meaning "one who is separate [*parush, perish*]," but separate from what (or whom) is not clear. Some explain the word as the "seceders" from the priestly interpreters of the law; the lay interpreters at one time "separated" themselves from their clerical colleagues. Alternatively, it has been suggested that the name arose from the "separation" of the Hasidim from the partisans of Judas Maccabeus in 163 B.C. Perhaps these explanations have less to be said in their favor than the meaning of *perushim* as those who, in their meticulous observance of the law and in particular its Levitical observances, "separated themselves" from uncleanness, and especially from the unclean, the "people of the land" (*'am ha'areṣ*). Hebrew *parush* is associated with *qadhosh,* "holy"; thus Sifra on Lev. 11:44-45 comments on the words "You shall . . . be holy; for I am holy": "As I am separate [*parush*], so be ye also separate [*perushim*]." The Pharisees were the "separate" or "holy ones" (cf. the use of ἅγιοι for Christians in the NT). Another explanation takes the noun "Pharisee" to mean "interpreters," since this is one meaning of Hebrew *parash,* "to divide [Scripture]" and so "to interpret." The form of the name (passive) is not, however, what this theory would require. A third type of explanation is that the Greek name is a Grecized form of the Aramaic word פרישׁוא, meaning "Persian"; "Persians," it is argued, was a nickname applied to the Pharisees by their opponents the Sadducees because of their willingness to introduce foreign (in particular, Iranian) doctrines into Judaism. No single theory can be said to hold the field to the exclusion of any other. The one possibly more generally favored is the meaning "those who are separated" from impurity, the reference being to the legal, and, in particular, ritualistic, separatism of the party.

2. Leading characteristics. ***a. Legalism and separatism.*** The main characteristic of the Pharisees was their legalism or legalistic rigorism. Josephus informs us that the Pharisees were noted for their strict accuracy in their interpretation of the law and their scrupulous adherence to it (War I.v.2; II.viii.14; Life 38; Antiq. XVII.ii.4). It was their "accuracy" in the interpretation of the law which led to the development of the elaborate system of legal traditions, handed down orally "from the Fathers," which came to be regarded as the main characteristic feature of historical Pharisaism (*see* § 2*b below*). The Pharisees were accused by their opponents of building a "fence around the law," and one of the opprobrious epithets applied to them was that of being "builders of the wall"—i.e., builders of a wall around the Torah, fencing it in with the "wall" of Pharisaic tradition, and at the same time excluding non-Pharisaic interpretations (or halakoth)—and non-Pharisees—from the benefits and privileges of a monopolized Torah. *See* HALACHAH.

It was not, however, only their detailed and elaborate system of traditional halakoth which characterized Pharisaism as a living and influential movement in Judaism. What gave this system of Jewish legalism its force and influence was the rigorism of this strictest of Jewish sects in the actual observance of their tradition. It was their scrupulous adherence to their legalistic traditions which created the Pharisaic ethos, and which has given rise to the modern use of the name Pharisee as a self-righteous formalist.

It is this central characteristic of legalistic rigorism which led to and accounts for Pharisaic emphasis on ritual purification and separateness, with regard to both their own persons and their cult furniture or implements (Mark 7:3 and parallels). The Pharisees strove to achieve a perfectionism of purity and purification by the meticulous observance of the ritual requirements of the Levitical code, again as handed down in their traditional halakoth or legalistic observances and ordinances. This also explains their policy of separateness or exclusiveness, especially from the common people, the *'am ha'areṣ*. Just as the priest and the Levite in the gospel parable avoid the wounded Samaritan from fear of ritual contamination, the Pharisee shunned the non-Pharisee as unclean. The closest modern parallel is the caste system in Hinduism. Pharisaic exclusiveness led to a caste-bound society where contact between members of the exclusive sect and the rest of the population was avoided or regulated by a system of elaborate legal precautions designed to minimize or remove ritual uncleanness contracted in the unavoidable intercourse of daily life.

The Pharisees were not the only exclusive and rigoristic sect in Judaism. There were other, even more exclusive sectarians, such as the ESSENES and the Qumran sect (if they are not one and the same

group; *see* DEAD SEA SCROLLS), and these at times could out-Pharisee the Pharisees themselves. But it is the Pharisees who came to enjoy this reputation in later times; and the picture of the Pharisees in the gospels as strict legalists, observing all the minutiae of their elaborate legal tradition, including their ritualistic ordinances, is in keeping with all we know about them from other sources. Cf., e.g., their attitude toward the Sabbath or toward the washing of the outside of the cup and the platter (Matt. 23:25).

b. Observance of ancestral traditions. Their second main characteristic, deriving from the fundamentally legalistic character of the movement, was Pharisaic respect for ancestral tradition, the "tradition of the elders" (Matt. 15:2; cf. Mark 7:3, 5). It was in this respect that the Pharisees differed, on principle, from the Sadducees, who followed a more literalist interpretation of Torah.

This bald contrast calls, however, for qualification. The Sadducees, as ecclesiastical and juridical authorities, had also their own developed tradition of halakoth, of laws and ordinances. The Sadducean code of law was also a *traditio* or *paradosis,* based on the Pentateuch. The essential difference from the Pharisaic form of law was that Sadducean law tended to be conservative, static and fixed, incapable of adjusting itself to new conditions. Pharisaic traditional halakoth retained a flexibility capable of adjustment to new situations. Furthermore, as an *oral* tradition (and this was also an essential feature), it remained flexible and adjustable. The result in the end was the growth within Pharisaism of a large body of authoritative tradition which could always be enlarged. It was, of course, also built primarily around the law; but another factor, as we shall now see, contributed enormously to this growing and adaptable system of Pharisaic tradition.

The Pharisaic canon of scripture went far beyond the five books of Moses, to include both the Prophets and the Writings. The Pharisees were prepared to allow their halakoth of the Torah to be influenced by this wider scriptural authority to an extent which the Sadducees, with their narrower views of scripture, were prevented from doing. In this respect, Pharisaism represents a development similar to that of the Qumran sectarians: side by side with their legalism and ritualism went an openness to the new ideas of the prophetic scriptures which challenged and corrected the narrower outlook of the ancient legal code. It was in the circles of the Pharisees (and other sectarians) that the Jewish messianic hope was nourished on the ancient prophetic scriptures, as well as on the Torah.

c. Pharisaic "modernism." So far as the period of their greatest influence is concerned, this openness to new ideas, including ideas from other religions, represents one of the main characteristics of historical Pharisaism. It is for this reason that Josephus speaks of them as "rationalists" (Antiq. XVIII.i.3). They were the progressives in the religion of their day.

This is the important element of truth in some of the older views about the essential character of Pharisaism. A. Geiger (whose views were, in the main, accepted by such older liberals as Graetz, Klausner, and others) tried to show that the Sadducees were the conservative group in postexilic Judaism, attached to the traditional laws and customs; in opposition to them were the Pharisees, a liberal, forward-looking party, corresponding, in both their spirit and their aim, to reform Judaism in its relation to traditional Jewish orthodoxy. Geiger's views were challenged by Wellhausen, who tried to prove that Sadducees and Pharisees represented two divergent attitudes toward the destiny of the Jewish people: the Sadducees were a political party only, closely associated with the HASMONEANS, the priestly caste and the ruling nobility; they stood for Jewish independence and opposition to Syria and Rome. The Pharisees formed a movement which was not essentially political, so long as their religious life was unaffected.

It was a mistake to regard the Pharisees as religious quietists. Both Pharisees and Sadducees were power groups, each striving for ascendancy in the Jewish state; political alignments were formed by both groups with the dominant foreign power. But it is true that the Pharisees were actively concerned with the progress and development of Jewish religion. Studies by Finkelstein have shown that the Pharisees were not only a democratic party, but also a progressive religious movement originally drawn from the people; the Sadducees represented the old priesthood and the landed nobility. The most fundamental differences between the two groups was, however, undoubtedly that the Sadducees stood for the old ways and the *status quo,* eventually becoming in Roman times little more than a civil service or bureaucracy holding the form of the old order together; the Pharisees were the popular democrats, the liberals and the progressives in the Jewish state and society of the two centuries before Christ.

3. Doctrines and beliefs. For the doctrines and beliefs of the Pharisees our main source is again Josephus (War II.viii.4). Josephus' account can, however, be supplemented by Pharisaic writings of the intertestamental period, as well as from the NT and to some extent also from later rabbinical sources. It is not, of course, always certain that an apocryphal or pseudepigraphical writing was written by a Pharisee; Ben Sirach, e.g., has been claimed for both Pharisees and Sadducees, though he was in fact too early to belong to either party (his sympathies were clearly with the old priestly order, and any Pharisaic traits in his work are probably redactional). Fortunately there is no doubt about the Pharisaic authorship of the Psalms of Solomon (*ca.* 60 B.C.), doctrinally one of the most important of the Pharisaic and anti-Sadducean documents of this century, since it supplies our main evidence for the Pharisaic messianic hope. *See* § 3*e below.*

The main account of the Pharisees in Josephus reads:

"Of the two first-named schools, the Pharisees, who are considered the most accurate interpreters of the laws, and hold the position of the leading sect, attribute everything to Fate and to God; they hold that to act rightly or otherwise rests, indeed, for the most part with men, but that in each action Fate co-operates. Every soul, they maintain, is imperishable, but the soul of the good alone passes into another body, while the souls of the wicked suffer eternal punishment.

"The Sadducees, the second of the orders, do away with Fate altogether, and remove God beyond, not merely the commission, but the very sight, of evil. They maintain that man has the free choice of good or evil, and that it rests with each man's will whether he follows the one or the other. As for the persistence of the soul after death, penalties in the underworld, and rewards, they will have none of them.

"The Pharisees are affectionate to each other and cultivate harmonious relations with the community. The Sadducees, on the contrary, are, even among themselves, rather boorish in their behaviour, and in their intercourse with their peers are as rude as to aliens. Such is what I have to say on the Jewish philosophical schools."[1]

We can best summarize by noting the main differences between Pharisees and Sadducees (in each case the Pharisees put forward a positive position which the Sadducees rejected):

a. History divinely controlled. The Pharisees believed that history was divinely controlled and governed by a divine purpose (Josephus gives us this doctrine in Stoic terms). The Sadducees denied it, insisting on the individual's freedom to direct his own life and so history itself.

It is possible that Josephus has to a great extent "Stoicized" Pharisaic doctrine in this connection and that all that lies behind the Pharisaic doctrine of Εἱμαρμένη (Destiny) is the OT idea of divine providence. It may have been passages such as the following from the Psalms of Solomon (5:6) which gave rise to this conception:

> Man and his portion lie before Thee in the balance;
> He cannot add to, so as to enlarge, what has been prescribed by Thee.[2]

b. The resurrection. The Pharisees believed in resurrection and in a future world where men are rewarded or punished according to their behavior in this one. The Sadducees held fast to the doctrine of Sheol. In this the Sadducees were true Semites; T. W. Manson recalls the derision with which Mohammed's teaching of the resurrection was met in the early stages of his career.

c. Angelology. The Pharisees had a highly developed angelology which the Sadducees rejected. Acts 23:8 is our main authority for this item of Pharisaic belief: "The Sadducees say that there is no resurrection, nor angel, nor spirit; but the Pharisees acknowledge them all."

d. Eschatology. The Pharisees regarded themselves as the true and pious Israel, enjoying a specially close relationship with God (with divine revelations through God's holy angels). To be sure, God's favor was not specially manifest in the sufferings and miseries of the present times of foreign conquest, but there was a good time coming in which the tables would be turned and the glories of David's kingdom restored on earth by a descendant of Davidic line, "the anointed Lord." It was an earthly Paradise which the Pharisees expected; their expectation was this-worldly, not otherworldly, though they appear also to have expected the pious dead to arise to share these earthly glories with them in the messianic age.

e. The Messiah. The classic passage for the Pharisaic doctrine of the Messiah is Pss. Sol. 17:23–18:9 (the book is dated by several references to Pompey's capture of Jerusalem in 63 B.C.). God's Anointed One (or the "Anointed Lord" [Χριστὸς κύριος], the "son of David") is to be raised up by the Lord God as King over Israel.

> Behold, O Lord, and raise up unto them their king,
> the son of David,
> At the time in the which Thou seest, O God, that he
> may reign over Israel Thy servant.
> . . . . . .
> This (will be) the majesty of the king of Israel whom
> God knoweth;
> He will raise him up over the house of Israel to
> correct him.
> . . . . . .
> At his rebuke nations shall flee before him,
> And he shall reprove sinners for the thoughts of
> their heart.[2]

(The "nations" refer to the Gentiles, and by "sinners" the author probably means the Sadducees.)

The Messiah (*see* MESSIAH, JEWISH) was to overthrow the supremacy of the Gentiles, to drive them from Jerusalem and Israel (17:25, 27, 31). But he was also to restore Israel, to set up a kingdom in place of that of the Gentiles and sinners (17:23 ff):

> He shall have the heathen nations to serve him under
> his yoke;
> And he shall glorify the Lord in a place to be seen
> of [?] all the earth;
> And he shall purge Jerusalem, making it holy as of old:
> So that nations shall come from the ends of the earth to
> see his glory.[2]

There are hints at the reassembling of Israel and its tribes (8:27 ff; 17:28 ff; etc.). Jerusalem will be his capital, and the temple worship will be restored (17:33-35). The Gentiles will be subject to him, bringing him tributes, and they shall be converted to the worship of Israel (17:31-32, 34).

There are certain distinctive features of this picture which exercised a determinative influence on NT Christology.

It is frequently claimed that the title "Christ," "Anointed One" (Χριστός), is here used for the first time of the expected savior of Israel. The OT usage has been usefully summed up by Westcott: "It is not a characteristic title of the promised Saviour in the Old Testament. It is not even specifically applied to Him, unless perhaps in Dan. 9:25 f, a passage of which the interpretation is very doubtful." But the name occurs three times in the Psalms of Solomon (17:36; 18:6, 8). The Messiah was to be the "son of David." We thus return to the conception of the ideal of the restoration of the lineage of David, and of the glories of the Davidic age of the prophecy of Nathan, so prominent in the great prophets (Isa. 9:7; 11:1; 55:3; Jer. 23:5; Ezek. 37:24); Haggai had been the last to point to the lineage of David (2:21-23); Zechariah had emphasized the priestly aspect of the messianic hope (6:11-13). The Maccabean age looked for the return of a "trustworthy prophet"

[1] Reprinted by permission of the publishers and The Loeb Classical Library from Loeb Classical Library Volume: Josephus *Jewish Wars* (Cambridge, Mass.: Harvard University Press, 1927, 1956).

[2] R. H. Charles, ed., *The Apocrypha and Pseudepigrapha of the Old Testament* (Oxford: The Clarendon Press).

(I Macc. 14:41; cf. 4:46); Jeremiah, not David, appears in a dream to Judas Maccabeus (II Macc. 15:12-16). In Ecclesiasticus (48:10-11) it is Elijah the prophet who is to "restore the tribes of Jacob." Thus, as Ryle and James comment: "The Messianic vocation of the house of David, which since the Captivity had fallen into the background, and under the glorious reign of the first Asmonaean princes had almost been lost to view, reappears in the Pharisaic Psalms."

The Psalms of Solomon are thus the bridge uniting the hope of the ancient prophets, which centered on a restoration of the Davidic kingship, with NT times.

4. The history of Pharisaism. ***a. Greek period.*** It is not until well into the Greek period of Jewish history, during the reign of the Hasmonean ruler John Hyrcanus (135-105 B.C.), that we come upon the first mention, in our primary historical source (the works of Josephus), of the Pharisees and Sadducees (Antiq. XIII.v.9; x.5-7).

There the Pharisees emerge as an already strongly established and powerful religious-political party in the Jewish theocratic state, partisans of an authoritative system of law based on tradition, and opposed to the Sadducean party, with its restricted, literalist appeal to the law of Moses.

"For the present I wish merely to explain that the Pharisees had passed on to the people certain regulations handed down by former generations and not recorded in the Laws of Moses, for which reason they are rejected by the Sadducean group, who hold that only those regulations should be considered valid which were written down (in Scripture), and that those which had been handed down by former generations (lit. by the fathers) need not be observed. And concerning these matters the two parties came to have controversies and serious differences, the Sadducees having the confidence of the wealthy alone but no following among the populace, while the Pharisees have the support of the masses. But of these two schools and of the Essenes a detailed account has been given in the second book of my *Judaica*" (War II.viii.14; Antiq. XIII.x.6).[1]

In this same passage Josephus supplies us with evidence of the power and popularity of Pharisaism in this early period of its history; of its social position (as a democratic movement); and in general of its character as a laymen's party.

He recounts an incident in which the Hasmonean king (Hyrcanus) came into conflict with the Pharisaic party, which he had hitherto supported. The story itself is prefaced by the statement that it was the Pharisees at that time who were, among all the Jews, the most envious of Hyrcanus' success and prosperity; and "so great is their influence with the masses that even when they speak against a king or high priest, they immediately gain credence" (Antiq. XIII.x.5).

Pharisees had been invited by the king to a banquet, in the course of which John Hyrcanus explained that he was anxious to do everything in his power to please God after the manner of the Pharisees; if there was any way in which he erred, he begged them to inform him. The assembled Pharisees expressed their satisfaction, except one, a certain Eleazar, who informed Hyrcanus (in the manner of an ancient prophet) that, if he would be really righteous, he must lay down the office of the high priesthood; at the same time he cast aspersions on Hyrcanus' descent, implying that, as coming from a non-priestly line, he had no right to the title of high priest. The rest of the company were indignant, but their protestations did not help, for the Sadducees managed to persuade the king that Eleazar was, in fact, expressing the real views of the Pharisaic party. John Hyrcanus withdrew his support from the Pharisees and went over to the Sadducean side, abolishing all his earlier decrees in which he had been guided by the Pharisaic legal tradition.

We have to read between the lines of Josephus' narrative to understand the main cause (or causes) for this break between the Pharisees and John Hyrcanus. Josephus tells us that it was out of envy for Hyrcanus' successes; but he reveals the real reason in his statement about the popular influence of the Pharisees being so high that "even when they speak against a king or a high priest," they are believed. It seems probable that it was because Hyrcanus was the first Hasmonean to assume the royal title that the Pharisees broke with him. They may have objected to this as "loyalists" for the law. It may also be argued, however, that it was Hyrcanus' assumption of the high-priestly office to which the Pharisees mainly objected.

Under Hyrcanus' successor, Alexander Janneus, the Pharisaic-Sadducean conflict became even more acute and bitter. The Pharisees returned to power and eventually succeeded in securing the banishment of the king himself from Jerusalem, after inflicting insult and humiliation upon him. The outstanding popular Pharisee at the time was a certain Simon ben Shataḥ. Simon appears to have been a powerful and violent personality. He succeeded in ousting the Hasmonean king and high priest from the leadership of the *Gerousia* and himself assumed the office and duties of its president in place of the exiled king-high priest. The fortunes of the Pharisees were never higher. A Pharisaic layman now held the highest office in the state, if only for a brief period. Simon set about reforming the constitution of the *Gerousia*. He demanded that Alexander should lay down his office as high priest. There is a story that the king was summoned on one occasion to appear before the *Gerousia;* and that when he did appear, Simon forbade him to sit, "for thou standest not before Simon ben Shataḥ but before Him Who spoke and the world was." It is not surprising to read that, when the tide did turn again and Janneus was restored to power, he immediately had eight hundred Pharisees put to death (Antiq. XIII.xiv.2). Simon went into exile.

Josephus tells us that Janneus, presumably toward the end of his reign, advised his wife, Alexandra Salome, to make peace with the Pharisees and to allow herself to be guided by them. Since Alexandra was the sister of the exiled Simon ben Shataḥ, this advice was followed with alacrity. When Janneus died, Alexandra (76-67 B.C.) recalled Simon and other exiled Pharisees, allowed the Pharisaic party a large share in the government, and reintroduced

[1] Reprinted by permission of the publishers and The Loeb Classical Library from Loeb Classical Library Volume: Josephus *Jewish Wars* (Cambridge, Mass.: Harvard University Press, 1927, 1956).

Pharisaic laws and decrees which Hyrcanus had abolished (Antiq. XIII.xvi.1; War I.v.1). The powerful Pharisaic lawyer Simon ruled with almost papal authority, resisting especially the Hellenization which had been allowed to go unhindered under Alexander. He executed eighty "witches" on a single day, thus creating a terrible precedent for subsequent mass murders of Pharisees by Sadducees and Sadducees by Pharisees. (Only one execution on one day had hitherto been permitted by Pharisaic tradition.)

Now securely in power, the Pharisaic party proceeded once again to take a terrible revenge on their Sadducean opponents. The latter sought out the support of Aristobulus, Salome's younger son (the heir apparent was a second Hyrcanus). A deputation pleaded the Sadducean case to the queen, reminding her of their services to her late husband. They not only succeeded in stopping the Pharisaic reign of terror, but also managed to get control of a number of strategic fortresses. There they were joined by Aristobulus, who only waited his mother's death to seize power (Antiq. XIII.xvi.2-3, 5; War. I.v.3-4). On the death of Alexandra (69-63 B.C.), Hyrcanus II was dispossessed by his younger brother Aristobulus (Antiq. XIV.i.2; XV.vi.4; XX.x), and the Sadducees again advanced to power.

This internal struggle between the two parties, however, had momentous consequences for the Jewish people, for both sides appealed to Rome. They met the Roman general Pompey in Damascus, bidding for his support. Soon afterward (*ca.* 63 B.C.) Pompey marched on Jerusalem. This was more than the people or its leaders had bargained for, and they resisted the invasion. Pompey took the temple by storm and entered the Holy of Holies, though he does not appear to have laid sacrilegious hands on the temple treasure. The usual proscriptions followed; leading Sadducees were executed, and Aristobulus and his family were deported to Rome. Hyrcanus was restored, not as king, but as high priest and ethnarch. The outward form of the Jewish state was preserved, but the real power passed to Rome (Antiq. XIV. iii–iv).

The story of the fortunes of the Pharisaic party in Hasmonean times as told by Josephus is a tale mainly of political intrigue, wholesale murder of their Sadducean opponents (who were never slow to retaliate), and traitorous bargaining with powerful outsiders in their ceaseless struggle for power within the state. It was undoubtedly this irreconcilable cleavage between Pharisees and Sadducees within Hasmonean Judaism which eventually led to its downfall, when Rome stepped in and eventually took over the reins of government in Jerusalem.

Yet it was no less certainly in this period that Pharisaism as a religious system reached its heyday; and it was the hour of its eclipse as a political power which saw the production of its greatest literary monuments—writings such as the Psalms of Solomon.

b. Roman period. The second stage in the history of Pharisaism, the Roman period, is a period of declining influence and the gradual decay of what had been for two centuries the living stock of Judaism. As the nation lost its independence, the differences between Pharisees and Sadducees tended to become less and less political and more distinctively religious. It is true they still remained a powerful political factor, especially during the long reign of Herod the Great. During the ethnarchy, under the Romans, of the second Hyrcanus, the Sadducees sought to call Herod to account for his conduct in Galilee, but they only succeeded in demonstrating their own powerlessness. When Herod captured Jerusalem in 37 B.C., he put forty-five of the Sadducean Sanhedrists to death (Antiq. XV.i.2 calls them the leaders of the party of Antigonus; cf. War I.xviii.4; Antiq. XIV. ix.4 speaks of "all the members of the Sanhedrin" except Sameas), and sought further to diminish their power by introducing members of the (nonpriestly) Herod clan among the high-priestly families. When the Sanhedrin was thus purged, however, the leaders of the Pharisees were spared, since they had advised the citizens of Jerusalem to throw open the gates of the city to receive Herod (Antiq. XV.i.1). Although the Pharisees refused to take the oath of allegiance to Herod, the king appears to have resorted to no more drastic measures than a fine (Antiq. XV.x.4; XVII.ii.4). It was because of their influence with the people that Herod went out of his way to respect their religious views; for their part, they simply acquiesced in his rule as a judgment on the people for their sins. Toward the end of Herod's reign their attitude, however, ceased to be one of passive acceptance and became actively hostile. Pharisees conspired with members of Herod's household to secure his overthrow (Antiq. XVII.vi.2); and in 4 B.C. they instigated their pupils to cut down the golden eagle, which the king had erected as a symbol of Roman sovereignty, over the main entrance to the temple. (For this offense the culprits were buried alive [Antiq. XVII.vi.2-4].)

When the Romans, after deposing Archelaus, took over what was virtually the direct rule of the country, internal affairs became the concern of the Sanhedrin under the presidency of the high priest (himself controlled by the Romans). But the struggle for ascendancy and power between the two great parties still continued; the Sadducean aristocracy, though it had been strengthened by the accession to its ranks of members of the Herod family, was still obliged to respect the opinions of the Pharisees on legal matters (Antiq. XVIII.i.4). On two different occasions in the book of Acts (5:34; 23:6) it is Pharisees who prove to be the real leaders of the people, and under Agrippa I (A.D. 41-44), they seem to have had matters much in their own hands. It was on the instigation of the Pharisees that Agrippa put James, the Lord's brother, to death.

Some conception of their numbers and influence in Jesus' time may be formed from the figures given by Josephus, who puts them at the time of Herod the Great above six thousand (Antiq. XVII.ii.4). Josephus is probably here dependent on a contemporary member of Herod's court (Nicholas of Damascus), and likely to be accurately informed. This number applies, no doubt, to full membership of the Pharisaic order only. Various estimates have been made for their total numbers (members and adherents) in the time of Christ. T. W. Manson, following J. Jeremias, estimates a total number of members and adherents

at twenty-five thousand, with probably as many as twenty thousand resident in Jerusalem.

There is no reason to doubt that the Pharisees still exercised a powerful influence within the Judaism of our Lord's time. But it is doubtful if they still enjoyed the same popularity with the masses as in the heyday of their political power in the previous centuries. By the first century A.D. (before the fall of Jerusalem) Pharisaism had become a bourgeois rather than a popular movement, a predominantly Jerusalem "city" party. No doubt the Jerusalem Pharisees also had their followers in the country districts, but their attitude to the *'am ha'areṣ* suggests that the gulf between the Pharisees and the peasants who formed the bulk of the population was as great as that between the Sadducees and the small traders in the cities from whom the Pharisees drew their main support.

This loss of influence with the broad masses, especially in the provinces and the countryside, applied to Pharisaic religion no less than to the membership of the sect. Pharisaism is the immediate ancestor of rabbinical (or normative) Judaism, the largely arid religion of the Jews after the fall of Jerusalem and, finally, the Bar Cocheba debacle (A.D. 135). In Jesus' time, no doubt with certain differences, the broad picture of Pharisaism cannot have been so far removed from that of rabbinical Judaism of the post-Jamnia period, the Judaism of the Tannaites. It is a sterile religion of codified tradition, regulating every part of life by a halachah, observing strict separation, and already as entrenched in its own conservatism as that of the Sadducees. Its golden age lay in the second and first centuries B.C., from which its main literary monuments come, and where its important ideals and conceptions are to be found.

PHAROSH. KJV form of PAROSH in Ezra 8:3.

PHARPAR fär'pär [פַּרְפַּר] (II Kings 5:12). A river mentioned together with ABANA as one of the rivers of Damascus. It may be identical with the river now called Nahr el-'A'waj, which flows down from Antilebanon in Wadi 'A'waj S of Damascus to disappear in Bahret Hijjane. As to the identification of the river of Pharpar, other suggestions have been set forth. Of these one may particularly deserve mentioning, according to which Pharpar is identical with Nahr Taura, an arm of the river of Barada. It is, of course, difficult to decide which identification may be considered to be correct. The fact that in II Kings 5:12 Pharpar is called one of the rivers of Damascus may be in favor of the view that it is to be identified with Nahr Taura, though a river identical with Nahr el-'A'waj flowing *ca.* ten miles S of Damascus may very well have been said to be one of the rivers of Damascus. In Wadi 'A'waj there were in ancient times important centers of settlement. The mound of Deir Khabiye, SW of Damascus, hides the remains of a town which, particularly in the Old Babylonian period, must have been of considerable importance.

PHASEAH. KJV form of PASEAH in Neh. 7:51.

PHASELIS fə sē'lĭs [Φάσηλις] (I Macc. 15:23). A city of Asia Minor, situated on a promontory on the coast of Lycia. Possessing three harbors, it was an important trading place in the sixth century B.C., and at that period it was issuing its own coins. It had to cease doing so for a time when the Athenian confederacy gained ascendancy on the coasts of Asia Minor, but from the beginning of the fourth century Phaselis became virtually independent. It probably came under the power of the Ptolemies in the third century, and it seems to have been a member of the Lycian confederacy from *ca.* 168 B.C. On the other hand, it must have been a free city in 138, when the Roman consul Lucius required certain states, expressly including Phaselis, not to fight against the Jews, and to grant them privileges. It would therefore appear that Phaselis held a substantial Jewish colony at that time. In the next century, under the Romans, the city lost its independence. It had become the ideal haven for pirates.

This city is not to be confused with Phasaelis, the town in the Jordan Valley which was founded by Herod the Great in memory of his brother Phasael.

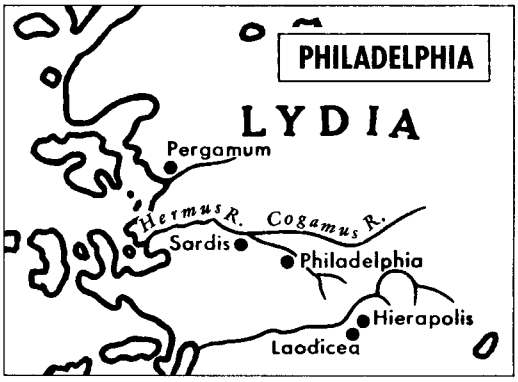
PHILADELPHIA fĭl'ə dĕl'fĭ ə [Φιλαδελφία, Φιλαδέλφεια]. 1. A city in the province of Lydia in W Asia Minor (Rev. 1:11; 3:7).

Philadelphia, modern Alaşehir, is located in one of the river valleys of the ancient country and Roman province of Lydia. Its river, the ancient



Cogamis, is a tributary of the Hermus (modern Gediz) and a natural line of communication from Sardis, the ancient capital of Lydia, to the East. The modern railroad still follows the Hermus and Cogamis valleys, with an important town and station located at Alaşehir.

The city of Philadelphia was built on a plateau on the S side of the Cogamis River, its high ground an extension of the Tmolus Mountain and protected by minor streams flowing to the N. Its strategic location was one of the main reasons for its Hellenistic foundation by Attalus II (Philadelphus; 159-138 B.C.), after whom the city was named. The Pergamene kings needed the communication from Pergamum via Sardis and Philadelphia to the Maeander Valley and the S highway (with the cities of Laodicea and Hierapolis). The country was fertile enough to support the new city, although the region was subject to severe earthquakes (Strabo XII.579; XIII. 628). Many people preferred living in the country to staying in the city, and part of the wealth of Philadelphia was located in villages belonging to the city, as attested for imperial times.

The Hellenistic career of the city seems to have been fairly prosperous. Coinage began in the second century B.C.; Macedonian shields appearing as coin types indicate that some colony of Macedonian veterans was incorporated in the city.

In Roman times the vicissitudes of the city again are mostly reconstructed from numismatic (and some epigraphic) evidence. The disastrous earthquake of A.D. 17 hit Philadelphia as one among many prominent cities of Asia Minor (Tac. Ann. II.47). Tiberius came to its aid, and in gratitude the city assumed the epithet of Neocaesarea. Under Vespasian the title Flavia began to appear on coins; from the time of Caracalla (*ca.* 214) the city was called Neokoros ("temple warden") in connection with the cult of the emperor.

Administratively the city belonged to the district of Sardis, which maintained its status as the leading city of Lydia. The prosperity of Philadelphia was based on agriculture as well as industry, which here, as elsewhere in Lydia, was marked by textile and leather production. Considerable wealth of private citizens is attested, and in the fifth century A.D. the city was nicknamed "little Athens" because of its festivals and pagan cults.

The rise of Christianity in Philadelphia and the early history of its church (Rev. 1:11; 3:7) cannot yet be substantiated by archaeological discoveries.

44. Roman ruins of Philadelphia (modern Alaşehir), founded by Attalus Philadelphia of Pergamum before 138 B.C.

The subsequent history of the site and the rise of the modern city of Alaşehir have left little visible evidence of its Hellenistic and Roman past.

The glory of Philadelphia as a stronghold of Christianity was, however, renewed in the days of the Seljuk and Ottoman attacks on the Byzantine Empire. Philadelphia maintained itself as an isolated Christian city in conquered territory and withstood two sieges with heroism. When it fell in 1391, it surrendered to the combined forces of Beyazit I and his Greek supporters under Manuel II.

PHILARCHES fĭ lär'kēz. KJV transliteration of φυλάρχης (RSV COMMANDER) in II Macc. 8:32.

***PHILEMON, LETTER TO** fĭ lē'mən, fī— [Φιλήμων]. A letter written by Paul; now the eighteenth book of the NT canon. As the letter has usually been interpreted, it carries a request that the slave ONESIMUS be restored to the household of his owner, Philemon. Another interpretation of the request, which has been persuasively defended by John Knox, is that the slave be freed for evangelistic work in the Christian community.

1. Authorship
2. Destination

3. Content and purpose
4. Place and time of writing
Bibliography

1. Authorship. Although some few scholars have questioned the authenticity of Philemon, most accept it as genuine. The major ground for question is the close connection of this letter with Colossians, and the fact that the Colossian letter in both content and vocabulary has major differences from the rest of Paul's letters. Such differences can, however, be accounted for by the circumstances under which the letter was written and the purpose it was intended to serve. Once the Colossian letter is mentioned in this connection, the problem created by its close similarity to Ephesians must be considered; and many scholars hold that Ephesians is not from the hand of Paul, but is rather a covering letter written by a to-us-unknown Christian when the corpus of Paul's letters was made up. Even if this view of Ephesians is accepted, however, there is no valid reason for doubting the Pauline authorship of Colossians and Philemon, although some hold that additions were made to Paul's Letter to the Colossians by the author of the Ephesian letter (*see* COLOSSIANS; EPHESIANS). The earliest quotation of the Letter to Philemon is by Origen, who ascribes it to Paul. Marcion and the Muratorian Fragment both include it in their lists of Paul's letters, and all evidence points to its having belonged to the earliest Pauline collections.

2. Destination. The destination of the letter is not so easily settled. Both Goodspeed and Knox believe that the letter now entitled "Philemon" is the original "letter from Laodicea" mentioned by Paul in Col. 4:16: "When this letter has been read among you, have it read also in the church of the Laodiceans; and see that you read also the letter from Laodicea." The grounds for this view are, briefly, the fact that a letter so commended by Paul is not likely to have been lost; the improbability that the letter referred to as being written at the same time as Colossians to the same or a neighboring church is not identical with the letter (i.e., our Philemon) which on other grounds we know was sent at this same time; and most cogently, the fact that the content of the letter and the salutation make it clear that it is actually a church letter, not a personal one, and therefore appropriate for reading in the congregation. Whether Archippus or Philemon was the owner of the slave Onesimus, and whether Archippus lived at Colossae (as Knox believes) or at Laodicea (according to Goodspeed), the burden of the request is the same: that the slave Onesimus be freed.

3. Content and purpose. The purpose and content of the letter are in most major respects free from question. This is an eloquent and graceful appeal for the freedom of a slave, an appeal which gains the reader's appreciation for its tact and skill when the conditions of slave life in the Roman Empire in the first century A.D. are brought to mind. Punishments were severe for runaways, and this slave had not only run away, but had also robbed his master (Philem. 18-19). One of Juvenal's Satires (VI) describes brutal treatment administered as punishment to slaves, and a legal provision of this period prohibits the giving over of slaves to wild beasts without the approval of constituted authorities. Under ordinary circumstances, Onesimus might have been in danger for his life in going back to his master.

But something momentous has happened to him since he ran away. He has come to know that master of souls, Paul, and has become his "child" (Philem. 10) and a helper to him in his imprisonment (vs. 11). Here the pun on the slave's name, Onesimus, which in Greek means "useful," introduces delicately the fact that Paul might have been minded to keep the young man with him in prison instead of sending him back to his master. How skilfully the request for the slave's freedom is put! Paul might have kept him for his own comfort and help in prison. He does not even command the owner to free the culprit, though he might have done so by reason of the authority of his leadership. He makes the request diplomatically, indicating his preference for the consent of the owner, so that the slave's freedom would be a gift of the spirit, and not an act compelled by any outward authority. Then the note of Christian brotherhood is struck. Whether the young man remained with Paul or was freed by his master and taken back into the household, or was freed for evangelistic work, they would all be partners, brothers beloved in the circle of Christian friendship (vss. 15-17). Paul himself, like the good Samaritan in the story, will repay what has been lost to the slave's master. The final touch of tactfulness and skill is the expression of faith in the master on Paul's part that even more will be done for the runaway than is explicitly asked in the letter. The impact of this letter on the reader even twenty centuries later is such as to evoke the question: How could anyone resist such an appeal?

The point of greatest question with respect to the content of the letter is as to whether Paul's request is for the slave's reinstatement in the household of the owner, or for his freedom for evangelistic work. The preposition περὶ in Philem. 10 and the noun διωκονία in Col. 4:17 bear the weight of this question. Does the preposition, translated "for" in the RSV: "I appeal to you *for* my child, Onesimus," really mean "in behalf of"? Is the "ministry" that Archippus is called to fulfil a service to the Christian community, a service which we know about through the Letter to Philemon, or does it have to do with his general responsibility, and not specifically with the request in the Letter to Philemon? The evidence, though not conclusive, is strong enough to support the conclusion drawn by Knox that we do know the nature of the service to which Archippus is called and that that service is the freeing of the slave, not just for reinstatement in the owner's household, but for the work of the Christian church. This position gains support from the mention of one Onesimus in the letter of Ignatius of Antioch in the early second century to the Ephesians as the bishop of the church at Ephesus. The same pun on the name Onesimus occurs in the Ignatian letter as occurs in Philemon. If Onesimus was a young man at the time of the writing of Philemon, he would not be too old to be the bishop of Ephesus at the time of Ignatius' writing. There is at least nothing to deny the identification in the available evidence.

Superlatives abound in the discussion of the Letter to Philemon. Knox calls it "one of the most skillful

letters ever written"; P. N. Harrison, "a gem unique." Lightfoot speaks of it as "infinitely precious." Even the casual reader experiences a glowing sense of the partnership of the early Christians at opposite ends of the social scale as he reads the restrained eloquence of Paul's appeal to a slaveowner on behalf of a slave. After twenty centuries, the appeal of the letter is not diminished. Reading it today, one knows that this appeal is for the ultimate, the unchanging, the universal and immortal way, the way of gentleness and brotherhood—not for the assertion of authority, but for eliciting the best in the one addressed. It calls to a man and a community for the exercise of Christian love in a situation in which authority would have been the natural way, and in which according to accepted standards of the time cruelty would not have been criticized.

In this connection a word should be said about Paul's attitude toward the institution of slavery. Nowhere in Paul's letters is there a discussion of the institution of slavery. Like the letter of Pliny the Younger to Sabinianus on a similar subject, the Letter to Philemon does not raise the question of the institution of slavery. Nor does the Colossian letter discuss it, where the institution is taken for granted and slaves are enjoined to "obey in everything those who are your earthly masters, not with eyeservice, as men-pleasers but in singleness of heart, fearing the Lord. Whatever your task, work heartily, as serving the Lord and not men" (Col. 3:22-23). This passage suggests that even slavery can be lifted up into the service of God and be dedicated as Christian service. In its very nature, however, slavery is antithetical to the heart of the Christian gospel; but so are political revolution and bloody warfare. Only a bloody revolution could at that time have changed the institution, and Paul chose the method of working for brotherhood within the prevailing social pattern. As many have pointed out, he was sowing the seeds of a more spiritual type of revolution—that of the transformation of relationships.

4. Place and time of writing. Paul was in prison (Philem. 1, 9-10, 13, 23), and the same persons send greetings with his as send them in the Colossian letter. Onesimus is mentioned in the Colossian letter along with Tychicus (Col. 4:9) as the bearer of the letter. The customary assumption has been that these two letters went together from Paul's imprisonment in Rome. Only one other imprisonment is mentioned in the book of Acts—namely, that in Caesarea—and most scholars have seen Rome as the more probable situation of these two alternatives. But recent scholarship has turned to another possibility: Ephesus, a city far more accessible to the runaway slave from Colossae or Laodicea, and quite possibly one of the "far more imprisonments" mentioned by Paul in II Cor. 11:23. Ephesus also provides an acceptable answer to the question as to how Paul could be expecting to visit the churches in the Lycus Valley if he were at a far-distant point, such as either Rome or Caesarea. If he is in Ephesus, the request for a guest room to be prepared for his visit has a more plausible background (Philem. 22). The greatest deterrent to this placing of the letter is that of its necessary connection with Colossians, and the difficulty of giving Colossians a date earlier than the very end of Paul's life. The language and style of Colossians, as well as its theology, differ radically from Paul's earlier letters, and thus the latest possible date is welcomed for it. As has been indicated above, P. N. Harrison solves this difficulty by positing additions to the original Colossian letter by the author of the Letter to the Ephesians. If the Ephesian imprisonment is accepted as the place of the writing, then the date of the Letter to Philemon would be *ca.* A.D. 56. If Rome is held to be the place of writing, then the date would be half a decade later.

PHILETUS fĭ lē'təs, fī— [Φίλητος, beloved] (II Tim. 2:17). A Christian who used "profane jargon" (Moffatt)—no doubt, of a Gnostic variety—and thereby could destroy the faith of some believers. Timothy is instructed to avoid such teaching, which included, among other things, a denial of the resurrection of the body.

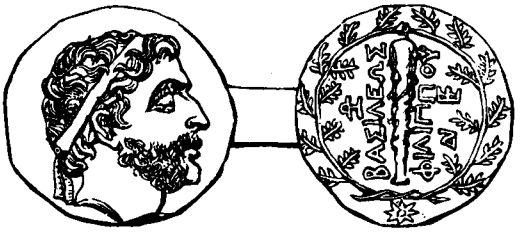
PHILIP fĭl'ĭp [Φίλιππος]. **1.** Philip II, king of Macedonia 359-336 B.C.; father of Alexander the Great (I Macc. 1:1). Under his rule Macedonia rose from an obscure, beleaguered state to become the dominant power in Greek affairs. Following the Battle of Chaeronea (338 B.C.), Philip forced all the Greek states except Sparta to form a Hellenic League and began to marshal their combined strength against Persia. He was assassinated in 336 B.C. shortly before he was ready to send his armies into Asia Minor. His son Alexander, who was then twenty years old, was able to restore order and to hold his father's position. Two years later, in 334 B.C., Alexander began the campaign which overthrew the Persian Empire and extended the power of the Greeks to the "ends of the earth" (I Macc. 1:3; cf. Dan. 8:5-7).

2. Philip V, king of Macedonia 220-179 B.C. He was humiliated by the Romans in 197 B.C. (I Macc. 8:5; cf. Livy 33.7). During the Carthaginian wars, Philip entered into an ineffectual alliance with Hannibal (215 B.C.). In 200, Roman armies invaded his



45. A coin showing Philip V of Macedon

kingdom, and after the Battle of Cynocephalae in Thessaly (197), forced him to accept humiliating terms of peace. Macedonia did not become a Roman province until 168 B.C., when Perseus, his eldest son and successor, was defeated and taken prisoner by Aemilius Paulus at the Battle of Pydna. Fig. PHI 45.

3. A Phrygian, appointed governor of Jerusalem and Judea by Antiochus Epiphanes (II Macc. 5:22). He is mentioned only in II Maccabees, where it is said that he was "more barbarous in character" than Antiochus. The appointment was made shortly after Antiochus plundered the Jewish temple, probably in the late summer or fall of 169 B.C. (I Macc. 1:20-24; cf. Dan. 11:25-28), although the reference in II Maccabees places this event one year later. He was active during the period when Antiochus proscribed Judaism and attempted to force Hellenization on the Jewish people (II Macc. 6:11; 8:8).

4. The foster brother and trusted courtier (friend) of Antiochus Epiphanes (I Macc. 6:14-18; II Macc. 9:29; cf. Jos. Antiq. XII.ix.2). Following the death of Antiochus, both he and LYSIAS sought control of the Seleucid state. Philip, who was with Antiochus in Persia at the time of his death, was appointed to serve as regent during the minority of Antiochus V. Lysias, however, seized the regency for himself (I Macc. 6:17) and either executed Philip (Jos. Antiq. XII.ix.7) or forced him to withdraw to Egypt (II Macc. 9:29; cf. I Macc. 6:62-63). The fact that Philip returned from Persia and took temporary possession of the capital city of Antioch may have aided the cause of the Jewish patriots. Lysias was besieging Jerusalem and was about to force its capitulation when word of Philip's presence in Antioch reached him (I Macc. 6:55-56; cf. II Macc. 13:23). Lysias immediately lifted the siege, made a favorable treaty of peace with the Jews, and hastened to Antioch to deal with Philip (I Macc. 6:57-63).

5. Philip the tetrarch, son of Herod the Great and Cleopatra of Jerusalem. From 4 B.C. to 34 A.D., Philip was tetrarch of the sparsely populated area stretching N and E from the Sea of Galilee toward Damascus. The appointment was made by the Emperor Augustus in accordance with the latest will of Herod the Great. The remaining portions of Herod's kingdom fell to Philip's half brothers ARCHELAUS and Herod Antipas (*see* HEROD [FAMILY] § E). According to Josephus (Antiq. XVII.viii.1; xi.4), Philip's tetrarchy included Batanea, TRACHONITIS, Auranitis, Gaulanitis, and Panias. Luke 3:1 indicates that ITURAEA was also included. Effective control of these regions was essential to the Roman state, because they formed a first line of defense against the Nabateans and the Parthians and because strategic lanes of commerce and communication were located here. The population of the area was largely non-Jewish. In this difficult situation Philip not only fulfilled his responsibilities to Rome but ruled with such justice and benevolence that he gained the respect and affection of his subjects (Jos. Antiq. XVIII.iv.6). His capital was located at BETH-SAIDA, on the E shore of the Sea of Galilee. He transformed the village into a city and renamed it Julias in honor of the daughter of Augustus. He also built the pagan city CAESAREA PHILIPPI. After his death (A.D. 34) his tetrarchy became part of the Roman province Syria. Later it was included in the kingdom of Herod Agrippa I (37-44).

Philip the tetrarch should not be confused with the "Philip" who is named as the first husband of HERODIAS in Mark 6:17 (=Matt. 14:3; cf. Luke 3:19). Philip the tetrarch married Herodias' daughter SALOME. The person referred to here is Philip's half brother Herod, the father of Salome and the son of Herod the Great and Mariamne II. It is possible that he also had the name of Philip, but there is no other record of it (cf. Jos. Antiq. XVIII.v.4).

6. Philip the apostle. In the Synoptic gospels Philip is mentioned only in the lists of the apostles (Mark 3:18=Matt. 10:3=Luke 6:14; cf. Acts 1;13). In the Gospel of John he has a larger role. Here he is one of the first to be called (1:43); is instrumental in bringing Nathanael to Jesus (vss. 45-49); and is mentioned personally in connection with the feeding of the five thousand (6:5-7), and in one of Jesus' major discourses (14:8-9). It is particularly noteworthy that he came from BETH-SAIDA (1:44) and that he was singled out as an intermediary by "certain Greeks" who sought contact with Jesus (12:20-23). References to Philip in the second century reflect a tendency to confuse the apostle with Philip the evangelist (*see* 7 *below*). An explicit identification was made by Polycrates, bishop of Antioch (Euseb. Hist. III.31.3), and Clement of Alexandria (Strom. III.6.16). The confusion may have occurred as early as Papias (*ca.* A.D. 140; see Euseb. Hist. III.39.9). Some scholars suspect that the tradition recorded in John reflects a similar confusion. A Gnostic work, the Gospel of Philip, is mentioned by Epiphanius (*Heresies* XXVI.13). Philip also has a prominent place in the Pistis Sophia, a remarkable Gnostic work of the third century.

7. Philip the evangelist (Acts 21:8). This Philip should not be confused with Philip the apostle (6 *above*). He appears first as one of the Greek-speaking Christians set apart to perform certain administrative tasks in the Jerusalem community (Acts 6:5). According to Acts 8:4-5 he was among those who were forced to leave Jerusalem following the martyrdom of Stephen. He fled to Samaria, where he was successful as a missionary (vss. 5-13). SIMON MAGUS is said to have been one of his converts (vs. 13; cf. vss. 20-21). He instructed and baptized a non-Jew (vss. 26-39) and preached in every city from Ashdod to Caesarea on the sea (vs. 40). According to 21:8-9, he and four daughters, who were known as virgin prophetesses, established a residence there. Both Philip and his daughters are remembered in later tradition, particularly by the Montanists (Euseb. Hist. III.31.3-4; V.24). Philip is said to have been bishop of Tralles (Basil *Menol.* I.cxi, in Migne, CXVII, 103).

H. H. PLATZ

PHILIP, ACTS OF. One of several romances, not earlier than the fourth or fifth century, purporting to chronicle the destinies of those apostles who had not been treated in the earlier corpus of apocryphal Acts assembled by the Manicheans. In this later romance, spun out of legend and folklore, but not without interest, attention is paid to the adventures and miracles of Philip and his martyrdom by crucifixion head downward at Hierapolis. In Greek the account is divided into fifteen acts, of which we have the first

nine and the martyrdom, which latter, as was true of all this type of writing, circulated separately in several recensions. *See* ACTS, APOCRYPHAL; APOCRYPHA, NT.

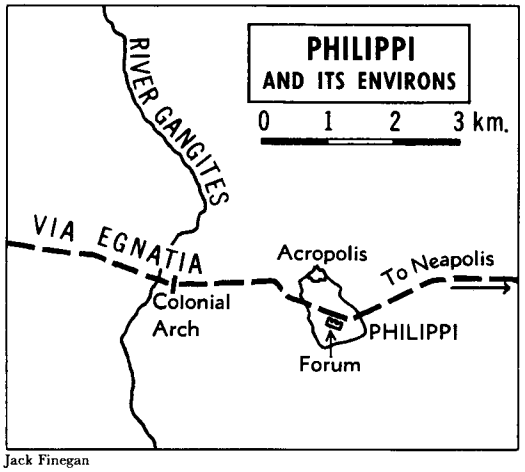
Bibliography. The best critical edition of the reconstructed text is still that found in Lipsius-Bonnet, *Acta Apostolorum Apocrypha* (1898), II, 1. A résumé and translation of selected sections is provided by M. R. James, *The Apocryphal NT* (1924), pp. 439-53. See also J. Flamion, *Les trois recensions greques du martyre de l'apôtre Philippe* (1914). M. S. ENSLIN

***PHILIP, GOSPEL OF.** A gospel forged "in the name of Philip the holy disciple" and used by the Egyptian Gnostics, according to Epiphanius (*Heresies* XXVI.13). He quotes a few sentences from it, beginning with the words: "The Lord revealed unto me what the soul must say as it goes up into heaven, and how it must answer each of the powers above." Then follows the "answer," including the words: "I have begotten no children unto the ruler"—apparently a password. It evidences a strong asceticism, as well as the popular Gnostic notion that the sparks of the divine, disposed in the world of matter, must be collected and freed from such defiling contact.

In the PISTIS SOPHIA this gospel may be indicated in the statement that it was Philip who wrote down the revelation given by Jesus to his disciples during the years following his resurrection. Clement of Alexandria states that the Marcionites considered Philip an enemy of marriage. These references suggest that the writing was current in the third century, perhaps during the late years of the second. In a MS found in 1946 among other heretical (Gnostic) Coptic books at Chenoboskion in Upper Egypt, it is reported that there is a treatise bearing this title, which may prove to be the work referred to by Epiphanius. *See* APOCRYPHA, NT. M. S. ENSLIN

***PHILIPPI** fĭl'ə pī [οἱ Φίλιπποι] (Acts 16:12; 20:6; Phil. 1:1; I Thess. 2:2). A city of MACEDONIA.

Philippi was in E Macedonia in the region bounded by the Strymon River on the W and the Nestos River on the E. The site was *ca.* ten miles inland from the Aegean Sea on a plain enclosed by mountains, the coast range of Symbolon on the S, the advance ranges of the Balkan Highlands on the N, Pangaion on the W, and Orbelos on the E. The acropolis of Philippi was on a spur of the Orbelos massif, and the city lay at its foot. Through the plain and directly through the city ran the chief overland route from Asia to the West, the ancient military and commercial way known in Roman times as the Via Egnatia.



Jack Finegan

According to Diodorus (XVI.iii.7), the site was occupied originally by settlers who came from the offshore island of Thasos, and there is reason for believing that the orator Callistratus, who fled from Athens in 361 B.C., was active in making this settlement. At this time the name of the place was Krenides (αἱ Κρηνίδες), probably with reference to the springs and waters in the vicinity (from κρήνη, "well, spring," plural "water"). In 356 B.C., according to information also provided by Diodorus (XVI. viii.6), Philip II, king of Macedonia (359-336 B.C.), went to Krenides, increased its size with a large number of inhabitants, and changed its name to Philippi, giving it his own name. It was probably also Philip II who built the wall which can still be traced around the city and up over the acropolis, and who constructed the Greek theater, the ruins of which are at the foot of the hill. In 335 B.C., when Alexander the Great marched from Amphipolis toward Thrace, he passed Philippi and Mount Orbelos on his left, as Arrian relates (*Anabasis of Alexander* I.i.5).

In 167 B.C., when Macedonia was divided into four districts (μερίδες) by the Roman consul L. Aemilius Paullus, Philippi fell in the first district, which comprised mainly the area between the Nestos and Strymon rivers; but the honor of being the capital of this district went to Amphipolis.

In 42 B.C., Antony and Octavian defeated Brutus and Cassius in the famous Battle of Philippi, which was fought W of the city near the River Ganga or Gangites. Strabo (VII, fragment 41) says that up to this time Philippi had remained only a small settlement, but was now made larger. By order of Antony some Roman soldiers were settled here, and his legate Q. Paquius Rufus marked out the territory of Philippi as a Roman colony. The title of the colony celebrated the victory just won: Colonia Victrix Philippensium. A dozen years later, in 30 B.C., Octavian dispossessed from their homes in Italy many persons who had sided with Antony, in order to settle his veterans in their communities, and these dispossessed persons were in turn allowed to establish themselves in Philippi and elsewhere (Dio LI.iv. 6). The colony was now refounded with the title Colonia Julia Philippensis; and when in 27 B.C. Octavian received from the Senate the designation Augustus, it was called Colonia Augusta Julia Philippensis.

Excavations were conducted at Philippi by the École Française d'Athènes from 1914 to 1938. The forum of the city lay directly beside the Via Egnatia and was a rectangular area over 300 feet long and 150 feet wide. In the center of the N side was a rectangular podium which must have served as a place for speakers. At the NE and NW corners of the forum rose the symmetrical façades of two large temples. Elsewhere around the forum were other public buildings, including a library, and in addition there were colonnades, porticoes, fountains, and monu-

47. The theater at Philippi

ments.* The symmetrical arrangement of the forum as uncovered suggests that its major buildings were planned and erected at the same time; and since a temple inscription mentions *divus Antoninus* (died A.D. 161), it is judged that this construction work was not earlier than his successor, Marcus Aurelius (161-80). A few remains were found, however, from the first century A.D., and it is probable that the forum of the Antonine period was built on the place and to some extent after the plan of the more ancient forum, which may have come into existence any time after the founding of the colony. The theater, already mentioned, was rebuilt in Roman style, probably at the same time in the late second century that the main forum buildings were erected.* Fine Roman baths were also constructed, with mosaic pavements dating probably in the middle of the third century A.D. Figs. PHI 46-47.

As revealed in the inscriptions found there and as known from the history of the city, the population of Philippi included Thracians indigenous to the region, Greeks descended from the settlers brought by Callistratus and Philip II, and Romans introduced as colonists by Antony and Octavian. Likewise the religion was composite and included the Thracian god Liber Pater and goddess Bendis; the Greek Athena; the Roman Jupiter, Mars, and the emperor cult; the Anatolian Cybele; and the Egyptian Isis, Serapis, and Harpocrates.

In the text of Acts 16:12 given by Codex Sinaiticus, Codex Alexandrinus, and Codex Ephraemi rescriptus, Philippi is described as the "leading city of the district of Macedonia, and a colony" (πρώτη τῆς μερίδος Μακεδονίας πόλις κολωνία). This is scarcely correct, since, as we have seen, Amphipolis was chosen as capital of the first district, and Thessalonica was the capital of the entire province. Textual variants in Codex Vaticanus and Codex Bezae show that the sentence was not well understood, and it may be conjectured that in its original form it read: πρώτης μερίδος Μακεδονίας πόλις κολωνία. This would then describe Philippi as a "city of the first district of Macedonia, and a colony," which is in precise accordance with its actual status as revealed in the preceding historical sketch.

In Acts 16:13 Paul and his party are described as going "outside the gate to the riverside" (ἔξω τῆς πύλης παρὰ ποταμόν) to find the "place of prayer" (προσευχή) where the Jewish women were assembled to whom the apostle preached. While the gate may have been in the city wall and the place of prayer beside some small stream just outside it, another identification is possible. Over the Via Egnatia, a little more than one mile W of Philippi, was a Roman arch, now ruined; and just beyond this was the river which Appian (*Civil Wars* IV.106) says was called by some Ganga and by others Gangites. The erection of an arch of this sort often accompanied the founding of a colony and was intended to symbolize the dignity and privileges of the city. It could also mark the pomerium, a line enclosing an empty space outside the city wall within which building and burial were prohibited and strange cults were not to be introduced. The Jews may have been required, therefore, to hold their meeting at this distance, and the arch, the simple lines of which indicate a date not later than the first century, may have been the very one beneath which Paul passed.

In connection with Lydia, a "seller of purple goods" (πορφυρόπωλις), a Latin inscription at Philippi is of interest which, with the word [PV]RPVRARI, gives independent testimony to the existence of commerce in purple. Later evidences of Christianity at Philippi include two Latin crosses which may belong from the second to the fourth century; Christian epitaphs, one perhaps as early as the third century; and two large basilicas of the fifth and sixth centuries.

***PHILIPPIANS, LETTER TO THE** fĭ lĭp'ĭ ənz [Φιλιππήσιοι, *see* PHILIPPI]. A letter written by Paul to the church founded by him in the Macedonian city of Philippi (Acts 16:11-40), his first Christian congregation in Europe; the eleventh book of the NT canon.

Paul is apparently in prison, facing a crisis which may yet issue in death, though as a Christian he dares to hope that he will soon be free to resume his missionary activity and to visit Philippi. Church tradition associates the letter with Rome; but we shall have to consider whether it may not rather have

been written from the apostle's imprisonment at Caesarea (Acts 23–26) or from a still earlier imprisonment (not recorded in Acts 19) during his ministry in and around Ephesus.

Of all Paul's letters to churches, Philippians is the most intimately personal. It glows with courage and affectionate concern for his converts. Facing misrepresentation, persecution, and possible martyrdom, he repeatedly proclaims his Christian confidence, and sounds the call to "rejoice."

A. ***AUTHORSHIP, CANONICITY, AND TEXT.*** This letter was unquestionably written by Paul; in thought and language it bears throughout the impress of his personality. With regard to canonicity (*see* CANON OF THE NT; GALATIANS § 6), one may note: Clement of Rome and Ignatius almost certainly show acquaintance with it; it is included in the second-century canons; Irenaeus, Tertullian, and Clement of Alexandria all quote it as Pauline. The textual evidence raises no serious problems.

B. ***PAUL'S RELATIONS WITH PHILIPPI.*** Acts tells nothing of a Jewish synagogue at Philippi, or of the reactions of Philippian Jews to Paul's preaching. The congregation may have been predominantly Gentile. Acts 16:14-15 (*see* LYDIA 1) and Phil. 4:2-3 tell of the active part played by women in its early history; and we know from other sources of the prominent place accorded to women in the social life of Macedonia. The progress to which the letter witnesses had no doubt been furthered by the presence of Luke (indicated by the "we narrative" in Acts 16: 10-17, resumed in 20:5) and by a visit subsequently paid by Silas and Timothy (Acts 18:5). The devotion of the Philippians to the Apostle found practical expression in the repeated contributions sent to help him in his missionary work (Phil. 4:10-18). According to Acts, Paul paid them a second and a third visit, both previous to the imprisonments at Caesarea and Rome. Of these the second came when, on the conclusion of his ministry in the province of Asia, he passed through Macedonia on his way to Greece (Acts 20:1-2); and if the letter was written from Ephesus, this would be the visit anticipated in Phil. 2:24. The third visit was an unexpected one in the following spring (Acts 20:6).

C. ***CONTENTS AND PURPOSE.*** The contents of Philippians show an ordered sequence of thought rather than a systematic arrangement of topics. It has in a special degree the marks of an ordinary "letter": it imparts information; conveys thanks; and expresses good wishes, encouragement, and counsel. But it has also a deeper purpose. In the crisis which has confronted him the Apostle has read a soul-searching lesson which he wishes his beloved Philippians to share with him. It is that the Christian goal can be reached only through humility, self-abnegation, and suffering that does not stop short even of death.

1. Salutation and introduction (1:1-11). The salutation comes from Paul and Timothy—Timothy, with Silas and presumably Luke, had been with the Apostle when the church was founded; and he is with him now, as Silas and Luke are not. But Paul alone is responsible for the letter; he never uses here, as he does in some letters, the first person plural, and he refers objectively to Timothy in 2:19-23. He does not stress his apostolic authority: he and Timothy are "servants of Christ Jesus." Grouped with "the saints" as recipients are bishops and deacons (*see* BISHOP; DEACON), presumably in recognition of their assistance in sending help to the Apostle. It is probable that the ministry at Philippi is still at a rudimentary stage, and that the terms used, though on the way to acquiring their later technical use, are still in a measure descriptive of function. The bishops (ἐπίσκοποι; lit., "overseers"), of whom there are several in this one congregation, are no doubt equivalent to presbyters (*see* ELDER). The deacons (διάκονοι; lit., "men who serve") would have specific duties of a subordinate kind, including perhaps the charge of finance.

The introduction, longer and more detailed than is usual in Paul's letters, strikes the keynote of "fellowship in service"; and the frequent repetition of the word "all" suggests the Apostle's deep concern for unity. The active partnership of the Philippians "from the first day until now" leads the Apostle to anticipate with confidence their continued progress, and it is significant that he twice points forward to the "day of Christ." *See* § E *below*.

2. Reactions to his imprisonment (1:12-26). Paul proceeds at once to assure the Philippians that his recent experiences (of which they had probably heard with some anxiety) have advanced, rather than hindered, the cause of the gospel. It was now recognized in government circles (*see* § D3 *below*) that his imprisonment arose simply from his loyalty to Christ (apparently his accusers had misrepresented him to the authorities), and many of the local Christians had acquired a new boldness in preaching. Others of them were, unfortunately, dissociating themselves from the Apostle, apparently out of a desire to avoid persecution; but Paul's only reaction (in striking contrast to Gal. 1:7-9, where the truth of the gospel is in question) is to rejoice that Christ is being proclaimed. His joy and confidence in the progress of the gospel will, he asserts, be unaffected by what may happen to him; and in vss. 21-24 he balances the relative advantage of life and death, expressing in the end his firm conviction that he will live, to be of further service to the Philippians and to visit them.

3. Appeal for Christian standards and behavior (1:27–2:18). The Philippians have something to learn from all this. They, too, must contend unitedly for the faith and be ready to suffer for it, as they have seen Paul do at Philippi (Acts 16:19-40) and as they have heard that he is now doing. An appeal for Christian humility in their corporate relationships (in vs. 5 contrast RSV with KJV) is reinforced in a sublime christological passage (2:5-11; *see* § E *below*) depicting the utter self-abnegation of Jesus (even "unto death") and his consequent exaltation. Emphasis is here laid on obedience (i.e., to the divine will); in Christian obedience the Philippians must continue, even in the apostle's absence, to carry on under God the work of salvation, advancing by their lives the cause of the gospel in a heathen environment and keeping in mind the coming of the "day of Christ." As a climax the apostle adds that, if he should be called to consummate by his death the sacrifice which they by their faith are offering in life, he and they will have good cause to congratulate one another.

4. A statement of plans (2:19-30). From this glance at death's lurking shadow Paul turns to write calmly about future plans. In Christian hope and confidence ("in the Lord"; vss. 19, 24) he looks forward to sending Timothy "soon" to Philippi, also to coming "soon" himself. Epaphroditus (whom the Philippians had sent to bring their latest gift to Paul and probably to remain as their missionary-representative on his staff) has been so very ill that he must now return to Philippi—is he perhaps to take the letter with him?

5. Warnings against possible dangers (ch. 3). After a further call to "rejoice" in 3:1, there is an abrupt transition (*see* § F *below*). Paul suddenly launches out into an impassioned tirade against Jewish (possibly Jewish Christian) propagandists. They had perhaps not yet reached Philippi; but the violence of his language is a measure of his sense of the danger as he had experienced it elsewhere (*see* § D4 *below*). Stirred to the depths, he turns from denunciation to recall what Christian faith has meant to him, as true a son of Israel as any of his opponents —he tells of his utter discarding of Jewish privileges, his turning from legalism to faith in Christ, his dying with Christ, his hope of sharing Christ's resurrection. This in turn leads him to issue stern warnings against two retrograde tendencies in the Philippian church. One is a false "perfectionism" (*see* PERFECTION); against this Paul emphasizes, as elsewhere in this letter, the need for progress in the Christian life (vss. 10-15; cf. 1:9-11, 25; 2:12-13). The other tendency is a libertinism which panders to the body, forgetful that the Christian belongs to a heavenly commonwealth and that, after Christ has come from heaven to deliver the body (cf. Eph. 5:23) from the conditions of earth, he is to have like Christ a glorified body (vss. 17-21).

6. Closing exhortations (4:1-9). These warnings completed, the apostle again exhorts his converts to steadfastness, to concord (here he mentions by name two women, and asks his "true yokefellow," who may perhaps be Epaphroditus, to help them), to prayerfulness, and to other virtues, including (4:8) the pursuit of certain ideals that are honored in the pagan ethic.

7. Expression of thanks and conclusion (4:10-23). Paul has purposely kept to the end what he has now to say—does he perhaps write this in his own hand? He thanks the Philippians for their latest gift, received some little time ago with the coming of Epaphroditus (*see* § D3 *below*). He does so with cordiality, but also (for his acceptance of financial help was liable to be misrepresented by his enemies; cf. II Cor. 11:7-12) with a manly independence. Here he introduces two terms (αὐτάρκης [vs. 11] and μεμύημαι [vs. 12]) which, though they had a wider currency, recall Stoic teaching and the language of the mystery religions; and some of his other expressions have parallels in the parable of the lost son (Luke 15:14, 16-17)—had Paul perhaps read Luke's narrative at this point (cf. also 2:18 with Luke 15:6, 9)? The letter then closes with greetings and the benediction.

D. *PLACE AND DATE OF WRITING.* Three possibilities fall to be considered: Rome, Caesarea, and Ephesus.

1. Rome. Church tradition since Chrysostom has maintained that Paul's imprisonment letters (Philippians, Ephesians, Colossians, Philemon) were written from Rome. Critical scholarship has on the whole, until recently, endorsed this position, and has gone on to discuss the place of Philippians within the group—the prevailing opinion being that Philippians, with its threat of death, comes last (Paul's "swan song"), though its literary affinities with Romans have led some scholars to put it first. There are loopholes, however, in the pre-Chrysostom tradition. Origen thought that Philippians, because of its teaching on Christian "perfection," might have come between I and II Corinthians; and the Marcionite Prologues, while dating Philippians and Philemon from Rome, connect Colossians with Ephesus. Chrysostom and his successors in the school of Antioch seem to have had no other authority for connecting Philippians with Rome beyond what seemed to be the evidence of the letter itself (notably 1:13; 4:22), supplemented by their knowledge of the Apostle's trial and death at Rome. This being so, the Roman origin of the letter is essentially a hypothesis, to be weighed in the balance with other hypotheses. Among other arguments against it, we may note that Acts 28 gives a very different picture (admittedly not a complete one) of Paul's position as a prisoner and of the attitude of the local Christians, and that his expectation of proceeding on his release to Philippi (2:24), as also to Colossae (Philem. 22), would imply an abandonment of his hope of advancing from Rome to Spain (Rom. 15:28).

2. Caesarea. First propounded in 1799, the hypothesis that Philippians dates from the Caesarean imprisonment has continued to have a few powerful advocates. But is it likely that at Caesarea death loomed for Paul so threateningly on the near horizon? And why should Paul at Caesarea plan to go soon to Philippi (which he had visited twice recently; Acts 20:1, 3-6) instead of proceeding as soon as possible to Rome?

3. Ephesus. The case for Ephesus (put forward, in a form no longer acceptable, by H. Lisco in 1900) calls for more detailed examination.

The fierce hostility which Paul experienced in

Asia (Acts 20:18-19; I Cor. 15:32; cf. II Cor. 1:8-10) very probably issued in one or more imprisonments (II Cor. 11:23). *See* EPHESUS.

If Paul writes from Ephesus, the visits of Timothy and him to Philippi (2:19-24) have an exact parallel in the Ephesus narrative of Acts 19:21-22, and also (as they expected to go on from Macedonia to Corinth) in I Corinthians (4:17-19; 16:5-11), which was written from Ephesus.

We learn from 2:25-26 that the Philippians, having sent Epaphroditus, had heard with sorrow of his illness, and he in turn had heard of their distress. This indicates three journeys already made; and two journeys are to follow, when Timothy goes to Philippi and returns to report, and thereafter Paul himself hopes to go "soon" (2:19-24). Allowance must, of course, be made for the length of Paul's imprisonment in Rome and for reasonably easy communications between Philippi and the capital city; nevertheless, these frequent comings and goings are much more easily understood if Paul is in Ephesus, which (as we see from Acts 20:6-16) could be reached from Philippi within ten days.

The interval during which the generous Philippians "had no opportunity" to help the apostle (4:10-18) was, if he is writing from Rome, perhaps as much as ten years, and during this time he had visited Philippi twice. The situation becomes much more probable, and Paul's language is redeemed from any suggestion of cynical rebuke, if after assisting the Apostle at Thessalonica and at Corinth the Philippians had now come to his help at his next center, Ephesus, after a comparatively short interval of which part had been spent in revisiting Jerusalem(?), Antioch, and Galatia (Acts 18:21-23).

The terms in 1:13; 4:22, PRAETORIUM and CAESAR'S HOUSEHOLD, have no necessary reference to Rome. Members of Caesar's administrative staff (*domus Caesaris*) were, as we know from inscriptions, to be found at Ephesus, as elsewhere throughout the Empire. The precise meaning of the phrase in 1:13 has been much disputed. In Rome it would refer to the PRAETORIAN GUARD—not "the palace" (KJV). But in the provinces *praetorium* was the name for the governor's headquarters; and here, where the reference is obviously personal, Paul is probably thinking primarily of the judicial authorities, though a more general reference, to include other officials and soldiers of the guard, need not be wholly excluded.

4. Concluding survey. Paul's ministry in Asia was one of the most challenging periods in his missionary career; for by this time certain parties in Judaism were fully determined both to accomplish (if need be) his death and to win back his Gentile churches into the all-embracing fold of the ancient Jewish religion. This, rather than the Roman period, would seem to provide the background for the crisis of Phil. 1:12-26 and the denunciatory outburst of 3:2.

Partly to counter this Judaizing movement, and as a demonstration of the reality of Gentile Christianity, Paul began toward the end of his Ephesian ministry to organize an OFFERING for the needy "saints" in Jerusalem, soliciting contributions from the churches of Galatia, Achaia (Corinth), and Macedonia. The absence of any reference in Philippians to the collection has been urged as an argument against dating Philippians from Ephesus. But an entirely adequate explanation is that Paul, who was indebted to the Philippians for their other gift, preferred to wait till he or one of his deputies could arrive to lay the scheme personally before them. It would appear from I Cor. 16:1 (which does not mention Macedonia) and II Cor. 8:1-5 that the initiation of the collection in Philippi came between I and II Corinthians.

The case for Ephesus is strong; yet doubt may remain till clearer light is seen on certain problems.

a. The silence of Acts. The crisis behind Philippians was obviously serious and prolonged. But the objection that Acts 19 says nothing of it must not be exaggerated, in view of the general purpose and character of the book (*see* ACTS OF THE APOSTLES, *especially* § 5) and the many known gaps in the narrative at this point. The attempt to overcome this objection by supposing that, though written from Ephesus, Philippians refers to an imprisonment at Corinth (Acts 18:12), is gratuitous and unconvincing.

b. The prospect of martyrdom. It is urged that Paul could never have been in danger of a death sentence at Ephesus because as a Roman citizen he could have appealed to Caesar. But as a Christian he might have preferred to accept death, as he accepted flogging (Acts 16:37; II Cor. 11:24). By this time he had come to see clearly that as an apostle he must, like his Lord, be prepared for both persecution and martyrdom (I Cor. 4:9; cf. II Cor. 4:8-12); and he courageously recognizes in Phil. 1:20 that he may honor Christ by death as by life.

Philippians, if written from Ephesus, may be dated in the winter of 54-55. In October, 54, the proconsul of Asia had been murdered (Tac. Ann. XIII.1); and if at such a time Paul's enemies had attempted to secure his condemnation, very little may have stood between him and death. Soon afterward (on his release) he dispatched I Corinthians (Timothy had now left on his mission); and the words in I Cor. 15:32 about "fighting with beasts at Ephesus" may well recall the crisis behind Philippians. Philemon and Colossians perhaps belong to a period of *libera custodia* in or near Ephesus, after Timothy had returned from Macedonia.

E. *DOCTRINE.* Doctrinal issues affect the question of date. In Philippians doctrine is expressed, as it were, incidentally, in relation to the hard facts of life and of death.

The theological high light is the christological passage in 2:6-11, telling how the humiliation and self-sacrifice of Jesus (the personal name is used) was a prelude under God to exaltation and universal acclamation. Regarded at one time as a sublime piece of theological argument, this passage was used as a basis for the "kenotic" theory of the Atonement, and taken as marking a late stage in Paul's doctrinal development. Against this we must note: (*a*) its setting and purpose are essentially hortatory (cf. II Cor. 8:9); (*b*) the impressive climax in vss. 9-11 interrupts the logical sequence of the appeal in vss. 4-5, 12-13; and these facts, together with (*c*) its poetical structure, its Semitisms, and certain un-Pauline expressions, suggest that (stripped of a few amplifying phrases) it represents an early Christian hymn (it may be pre-Pauline) expressing Christian doctrine in terms of Christian worship. As commonly inter-

preted, the hymn would be the earliest known instance of the threefold division of Christ's life into pre-existence, life on earth, and exaltation to heaven. But there is justification (e.g., in the Peshitta rendering) for taking vs. 6 to mean: "He was in the image of God" (i.e., truly man; Gen. 1:26); and the passage may then be read as contrasting the way chosen by Jesus with that followed by Adam (or it may be the fallen angels), whose pursuit of self-glorification had led to downfall. The occurrence in I Corinthians and Romans of this contrast between the first and the second Adam is in line with an Ephesian date for Philippians.

Jesus is depicted in the hymn as the "servant" of Isa. 52:13–53:12; his self-emptying (vs. 7) is not the Incarnation, but the sacrificial outpouring of his life (Isa. 53:12, Hebrew text, not LXX); his obedience (vs. 8; cf. vs. 12) is carried to the extreme length of accepting death; and this unqualified obedience has its fulfilment in his exaltation (cf. Isa. 45:23; 52:13), when he is acclaimed Lord, not of the church merely, but of the universe. The general picture is not the familiar Pauline one of the Messiah, crucified and risen, but that other picture (which has parallels in Hebrews; e.g., 2:9; 12:2) of the Son of Man who was God's "servant" and is now enthroned as Lord. Echoes of the hymn resound in later parts of the letter: life for Paul involves self-abnegation and self-emptying (2:17, 30; 3:7 catch up 2:6-7), and by sharing Christ's sufferings and conforming to his death he trusts he may share Christ's resurrection and glorification (3:10-11, 20-21).

Philippians has many links in its eschatological outlook and teaching with I Corinthians, a letter written near the end of Paul's time in Ephesus. In both he writes (influenced perhaps by the pressure of events) as if the Parousia might not be far off (with Phil. 4:5 cf. *Maranatha* [I Cor. 16:22]; and there are three references in Philippians to the "day of Christ" [1:6, 10; 2:16]). Both letters show that he himself has looked death in the face, and has been thinking deeply about a heavenly or glorified body, the earthly body being "changed" (I Cor. 15:51; Phil. 3:21) to conform to the body of Christ. In line with this teaching is his deep sorrow for those who make their belly their god (3:19); and his brief reference to circumcision in 3:3 probably implies (as in Col. 2:11) that for Christians circumcision involves complete divestment of the "body of flesh."

F. ***IS THE LETTER A UNITY?*** The abrupt transition to fierce invective at the beginning of ch. 3 has led to the hypothesis that here we have part of a separate letter; and we may note how the call to "rejoice in the Lord" (3:1) is taken up again in 4:4. But the hypothesis is unnecessary and improbable. Where are we to say that this second letter ends? Nothing in the separated parts points to their having originated in different situations (e.g., 3:7-14 has unmistakable links with 2:5-11). It is sufficient to believe that, before turning to those other matters with which he wished to close the letter, Paul recalled that he ought to warn the Philippians of the Judaizing danger. Some critics even postulate a combination of three letters, but without sufficient cause.

It is altogether probable, however, that just as the Philippians communicated from time to time with the Apostle, so also other letters (now lost) passed from him to them, to say nothing of communications made through his deputies. This may have some bearing on the words in 3:1 ("to write the same things"); 3:18 ("of whom I have often told you"), if Paul, writing from Ephesus, had not revisited the church at Philippi since its inception.

Bibliography

1. Name and origin. The name Philistine is first found in the Egyptian form *prst* as the name of one of the "People of the Sea," who invaded Egypt in the eighth year of Ramses III (*ca.* 1188 B.C.). The Hebrew פלשתי (*pᵉlishtî*) is an ethnic adjective based on the territorial designation פלשת (*pᵉlesheth*). The name occurs in Assyrian sources as both *Pilisti* and *Palastu.* The LXX, when not translating it as "strangers" (Ἀλλόφυλοι), usually renders it as Φυλιςτιιμ (i.e., Genesis–Joshua). There is no acceptable Semitic etymology for this name, and it is quite probably of Indo-European origin.

According to biblical tradition, the Philistines came originally from CAPHTOR, the Hebrew name for Crete (Jer. 47:4; Amos 9:7; cf. Deut. 2:23). This tradition was accepted by the biblical writers, and it is buttressed by the fact that part of the Philistine coast

was called נגב הכרתי, "the Cretan Negeb" (RSV "Negeb of the Cherethites"; I Sam. 30:14), and by the occurrence of Cretans in parallelism with Philistines (Ezek. 25:16; Zeph. 2:5). There is, however, no archaeological indication of the Philistine occupation of Crete. Rather, the Philistines were part of the second wave of the elusive "People of the Sea," who, according to the Egyptian records, attacked Egypt during the reigns of Mer-ne-ptah and Ramses III after having ravaged the Hittite country, the Cilician and N Syrian coast, Carchemish, and Cyprus. Excavations in Anatolia and Syria have shown that many cities—e.g., Ugarit and Khattushash—were destroyed at the end of the Late Bronze Age (*ca.* 1200). Of the "People of the Sea" only the Philistines, who settled along the Palestinian coast, and the Tjeker, who occupied DOR according to the Wen Amon story (*ca.* 1050), can be positively identified. The others, Shekelesh (Siculi?), Denyen (Danaoi; Akkadian *Danuna,* Phoenician *DNNYM?*), Sherden (Sardinian?), and Weshwesh, have only been conjecturally identified. These peoples were displaced from their original homelands as part of the extensive population movements of the latter half of the second millennium B.C. in the E Mediterranean and SE European area. During the fourteenth and thirteenth centuries B.C. they both assimilated the Minoan-Mycenean culture patterns of the Aegean world and seriously disturbed its E part and Asia Minor and Syria.

2. Territorial definition. "Philistia" (in the poetic portions of the OT: Pss. 60:8; 87:4; Isa. 14:29) or the "land of the Philistines" (*passim*) is the name given to that part of the coastal plain of Palestine which lies between Joppa and the Wadi Ghazzeh, *ca.* 6.2 miles S of Gaza (*see* PALESTINE, GEOGRAPHY OF). The Philistine pentapolis consisted of GAZA, ASHKELON, and ASHDOD on the coast; GATH in the W Shephelah; and EKRON *ca.* six miles inland on the same latitude as Jerusalem. The area is very fertile, but there is constant danger of the encroaching sand dunes in the S part of the coast. In Gen. 21:32, 34; Exod. 13:17; 15:14; 23:31 the references to Philistia, the land of the Philistines, and the sea of the Philistines are anachronistic. The Greeks, familiar at first with the coastal area, gradually applied the name Palestine to the whole of the country.

3. Culture and religion. ***a. Language.*** There are no documents in the Philistine language. Various Hebrew words have been given Philistine provenience. But *seren* (only the plural *sᵉrānîm,* "lords," occurs), used of the leaders of the Philistine confederacy, may be equated with a non-Semitic vocable: *seren*=*turannos* of pre-Hellenic or Asianic origin. Only two Philistine names have possible Asianic connections—Goliath having been compared with Alyattas and Achish with Anchises. The other names are usually Canaanite (e.g., Ahimelek, Sidqa, Mitinti, Hanun). The Philistines, it may be surmised, lost their language soon after coming to Palestine and spoke a Canaanite dialect which gradually gave way to Aramaic. The "language of Ashdod" of Neh. 13:24 referred to such a local dialect.

b. Traits. Beyond the fact that the Philistines were uncircumcised and were, therefore, despised by the Israelites (Judg. 14:3; 15:18; I Sam. 17:26; 18:25),

From H. Gressmann, *Altorientalische Texte und Bilder zum Alten Testament* (Berlin: Walter de Gruyter & Co.)

48. Aristocratic Philistine in festive dress; faïence tile from the palace at Medinet Habu, time of Ramses III (1198-1167 B.C.)

we know of no other culture trait that can be attributed to them. We are almost equally uninformed as to Philistine religion. All their gods known to us have Semitic names. They had temples to Dagon in Gaza and Ashdod (Judg. 16:23; I Sam. 5:1-7), one to Ashtoreth in Ashkelon (Herodotus I.105) and one to Baalzebub in Ekron (II Kings 1:1-16). Some of these temples lasted into the Hellenistic period (cf. I Macc. 10:83; Diodorus Siculus II.4). The Philistines also achieved a reputation as soothsayers (Isa. 2:6).

Fig. PHI 48.

c. Political and military organization. Until their defeat by David, the Philistines lived chiefly in five independent cities ruled by *sᵉrānîm,* "lords." The *sᵉrānîm* acted in council for the common good of the nation and were able to overrule the decision of any individual *seren* (I Sam. 29:1-7). After their defeat, the title *sᵉrānîm* is no longer used, and it is replaced by "king" (Jer. 25:20; Zech. 9:5). In their period of expansion the Philistines were able to muster large, well-armed troops of foot soldiers, archers, and charioteers (I Sam. 13:5; 29:2; 31:3). Elements of the autochthonous population and mercenaries were among their forces (David in I Sam. 27–29; the Rephaim in II Sam. 21:18-22). Both individual combat (Goliath; I Sam. 17:4-10) and shock troops (the "raiders"; I Sam. 13:17-18; 14:15) were used by the Philistines.

d. Material culture. No real excavation has taken place in Philistine territory proper, with only trial excavations at Ashkelon. The excavations at adjacent sites (Tell Jemmeh, Tell Qasileh, 'Ain Shems [Beth-shemesh], Tell Jezer [Gezer], Tell Far'a) have provided some information, but our sources for Philistine material culture are limited. From the scenes depicted at Medinet Habu in Egypt, the wagon, chariot, and ship used by the Philistines are known to us. The Philistine ship is unique, with its curved keel, high stem and bow, and straight mast rising from the middle of the boat. The Philistine warrior is drawn wearing a variety of the Aegean kilt. His helmet is a plumed headdress, with chin straps.* Affinities to this headdress have been noted by many scholars, the most outstanding being the plumed head of the Phaestos Disk. From the OT we learn that Goliath, who engaged in single combat like a Homeric hero, was also armed to the teeth like one (I Sam. 17:5-7). The weapons used by Goliath were undoubtedly made by a Philistine ironsmith. The Philistines had a monopoly on this profession (I Sam. 13:19-22), and smelting furnaces for iron have been found at Tell Qasileh, Tell Jemmeh, and 'Ain Shems. The clearest sign of Philistine presence remains the so-called "Philistine pottery," which is found in abundance from the first decades of the twelfth century B.C. to the late eleventh century B.C. in the plains of Philistia itself, and in adjacent sites of the Negeb (e.g., Tell Far'a) and the Shephelah ('Ain Shems) and in cities occupied by the Philistines

By permission of the Palestine Exploration Fund

50. Philistine decorated pottery, from Gezer

during their period of expansion (Dor, Beth-zur, Tell Beit Mirsim, Megiddo, Tell Qasileh, Bethel, Tell en-Nasbeh). It is not a continuation of Mycenean and Cypriote wares found in Late Bronze Age levels in Palestine. It is, rather, a composite imitation in local clay and with local techniques of thirteenth-century Mycenean styles, notably the panel style, and shows strong points of contact with the Mycenean IIIc wares discovered at Enkomi and Sinda on Cyprus and the other sub-Mycenean wares of Cyprus and Rhodes. The chief types are buff-colored craters, beer jugs with spouted strainers, cups and stirrup vases with a white wash or slip on which are painted reddish-purple or black geometrical designs or metope-like panels with stylized swans preening themselves. At some sites anthropoid clay coffins occur in conjunction with "Philistine" pottery. Figs. MAN 6; PHI 49; ART 75; PHI 50; BET 38.

4. History. ***a. From period of expansion to defeat by David*** **(ca. *1180-965*).** Although the references in Gen. 21; 26 may ultimately be based on the presence of an Aegean colony in the Gerar area (*see* CAPHTOR), the use of the term "Philistines" is anachronistic. The Philistines first settled the coast of Palestine after being repulsed from Egypt by Rameses III, together with the other "People of the Sea." Ashkelon, Ashdod, Gath, and Gaza are known from older sources and must have been captured by the Philistines from their Canaanite inhabitants, perhaps with the tacit permission of the Egyptians, who then controlled the area. Ekron may have been a newly founded Philistine city. The excavations at the Philistine-founded Tell Qasileh attest to their building activity during this period. Although they were primarily a warrior overlord class, they came with their families (cf. Medinat Habu reliefs) and imposed themselves upon the autochthonous inhabitants. The tradition concerning Shamgar ben Anath's killing six hundred Philistines may stem from this time (Judg. 3:31). There are no further reports in the OT of any opposition to, or revolts against, the Philistines on the part of the inhabitants of the coastal cities. For the early period of Philistine colonization we must rely on archaeological information, for it is only when they come into conflict with the Israelites that there are literary records concerning them. The expansion of the Philistines into adjacent areas, and their control over them, is demonstrated by the abundance of their pottery found in sites in the Shephelah and the Negeb from *ca.* 1150 on. The ensuing pressure upon the Danites and Judeans is reflected in the Samson saga (Judg. 13-15). The military organization of the Philistines and their superior armaments enabled them, toward the middle of the eleventh century, to encroach upon the Judean hill country. The unsuccessful resistance of the Israelites at Ebenezer (I Sam. 4:1-10) ended in the Philistine destruction of SHILOH and the capture of the ark. Archaeological evidence at Beth-zur, Tell Beit Mirsim, and elsewhere indicates that they also devastated part of W Palestine. They also were able to occupy Gibeah in Benjamin, Beth-shan, and Megiddo. Under the leadership of Samuel, some respite was won from the Philistines (I Sam. 7:7-14). Saul, at the beginning of his reign (*ca.* 1020), was able to remove the Philistine yoke from his people. The resurgence of Philis-

tine power is shown by the Goliath pericope (I Sam. 17) and the account of David's victories over them. However, the acceptance of David and his band as auxiliaries by Achish of Gath and his lack of control over David's movements (I Sam. 27) point up Philistine weakness. They were first able to make deep inroads into Israelite territory after the defeat of Saul at Gilboa* and to re-establish their control over the land and once again control a city as far N as Beth-shan. After David was anointed king over all Israel, they reacted and attacked him in the Valley of Rephaim near Jerusalem, but were defeated by David at Baal-perazim and beaten back to Gezer (II Sam. 5:17-25). For this victory, David was able to use his own well-trained troops and his familiarity with Philistine strategy. The Philistines were reduced to a secondary role. Their hold over the shores of Palestine and Phoenicia was broken, and Phoenician maritime expansion became possible. Fig. GIL 33.

Scraps of various tales current among the Israelites which celebrated these victories and the exploits of various warriors have been preserved (II Sam. 21:15-22; 23:8-19; I Chr. 11:11-21; etc.). David subdued the city of Gath (I Chr. 18:1) and imposed vassalage upon it; Gath supplied him with faithful warriors like Ittai the Gittite (II Sam. 15:18-22; 18:2). From the other independent Philistine cities, mercenary troops joined the ranks of David's personal army, as the CHERETHITES and PELETHITES under the command of Benaiah son of Jehoiada.

After their defeat by well-organized forces, the Philistine drive for expansion ceased. Philistine history was now that of individual cities, rather than that of a people acting in concert. It is quite possible that in the course of their battles with Saul and David, the ruling Philistine military class had been wiped out and strong assimilation with the native Canaanite population had already taken place. Except for Achish of Gath, mentioned in I Kings 2:39-40, who is most probably the same person as the ruler of Gath under whom David served, and Ikausu of Ekron, a contemporary of Ashurbanipal of Assyria, all the following Philistine rulers known to us have Semitic names. The title *sᵉrānîm* was also no longer used for the Philistine rulers. The typically Philistine pottery of Early Iron Age II sites dominated by the Philistines disappears, and the pottery and other artifacts found in Early Iron Age III levels is the same as that found elsewhere in Palestine (e.g., Tell Qasileh, Gezer, Khirbet el-Muqanna' [Ekron?]).* The Philistines were, on the whole, limited now to their pentapolis and the immediate coastal area. Fig. PHI 50.

***b. From the time of Solomon to the reign of Ahaz* (ca. *960-735*).** At the beginning of the reign of Solomon the vassal status of Gath remained unchanged, as the ease of movement of Shimei son of Gera into and out of the city, as well as his retrieval of two slaves from there, attests (I Kings 2:39-40). Egyptian influence in Philistia during the end of the United Monarchy and the early part of the Divided Monarchy may be surmised from the campaign of an unnamed Pharaoh of the Twenty-first Dynasty at Gezer (I Kings 9:16-17) and the use of Sheshonk I (OT Shishak) of Gaza as the starting point of his campaign in Palestine (*ca.* 917), as reported in his itinerary. Among the cities that Sheshonk captured in this campaign were those near the Philistine border that Rehoboam had fortified (II Chr. 11:5-10; 12:2-4). During the next fifty years there were border battles involving troops of relatively large numbers between the Philistines and Israel at Gibbethon (Tell Malat?) near Gezer, which was held by the Israelites (I Kings 15:27; 16:15-17). During the reign of Jehoshaphat, the Philistines paid tribute to Judah (II Chr. 17:11). During the reign of Jehoram they were able to make incursions into Judahite territory and raid the king's household, carrying off his wives, children, and possessions (II Chr. 21:16-17). From these scant references to the Philistines, it is also clear that Arabian tribes now occupied the territory to the S of Philistia. In a period of Israelite and Judean weakness the city of Gath had been captured by Hazael of Aram during his raid into Judah *ca.* 815 (II Kings 12; 18). The first sure reference to Philistia in Assyrian sources dates from the reign of Adad-Nirari III (810-783), who boasts of having collected tribute from Philistia (Palastu) in his fifth year. Uzziah successfully raided Philistine territory. According to biblical report, he tore down the walls of some cities and set up garrisons of his own (II Chr. 26:6-7). Even though no destruction of the city is reported, except in the enigmatic reference in Amos 6:2, Gath lost its former importance. In the various prophetic condemnations of the Philistines, Gath is not listed (Jer. 25:20; Amos 1:6-8; Zeph. 2:4; Zech. 9:6-7), and in all likelihood Gath came under the rule of Ashdod.

***c. Under Assyrian and Babylonian domination* (ca. *735-586*).** During the reign of Ahaz, the Philistines once again raided Judah and occupied cities in the Shephelah and the Negeb (II Chr. 28:18; cf. Isa. 9:11; 14:28-32). This occupation was short-lived, since both Ashkelon and Gaza were attacked for disloyalty in 734 by Tiglath-pileser III. Mitinti of Ashkelon was replaced. Hanun of Gaza escaped to Egypt, but was finally captured and exiled to Assyria by Sargon II, who stormed Gaza in 720 after Hanun participated in an anti-Assyrian coalition. In 713 Sargon replaced Azuri of Ashdod with his brother, Ahimiti, because of Azuri's failure to pay tribute regularly. The Ashdodeans placed a local usurper, Iamani, on the throne. By forming an alliance including Philistia, Judah, Edom, and Moab, he precipitated an attack in 712 by Sargon, who converted Ashdod temporarily into an Assyrian province (Isa. 20:1). In this campaign Gath, Gibbethon, and Ekron were also raided. Hezekiah invaded Philistia and attacked Gaza (II Kings 18:8) in alliance with Sidqa of Ashkelon and the people of Ekron, who handed over their king, Padi, to him. In 701 Sennacherib invaded S Palestine and captured the cities of Beth-dagon, Joppa, Banai-Barqa, and Azuru and their capital, Ashkelon; deported Sidqa and his family and imposed a new king; punished the patricians of Ekron and restored Padi to his throne and rewarded the faithful kings of Ashdod, Ekron, and Gezer with a strip of Judean territory in the Shephelah. The traditional dislike of the Philistines, reflected in both the Prophets and the Psalms, was intensified by their participating during this period in the Phoenician slave trade (Joel 3:1-8—H 4:1-8). During the reigns

of Esarhaddon and Ashurbanipal the kings of Gaza, Ashkelon, Ekron, and Ashdod are listed as loyal vassals of Assyria and supplied troops to the Assyrian army. The constant passage of Assyrian troops through Philistia in the campaigns against Egypt ensured the peace of the area. After the breakdown of Assyrian might, the Philistine cities, particularly Ashdod, were under strong Egyptian pressure (Herodotus II.157); were overrun by the Scythians, who destroyed the temple of Astarte in Ashkelon (Herodotus I.105); and were overrun by the Egyptians under Neco, who conquered Gaza *ca.* 609-608 (Herodotus II.159; cf. Jer. 47:1). The Philistines were allied with Egypt against Nebuchadnezzar of Babylon, as is now clear from the Aramaic letter found at Saqqarah from Adon (of Ashkelon?) to Pharaoh pleading for help and the attack upon Ashkelon in 604 by Nebuchadnezzar. Nebuchadnezzar put out any remaining sparks of Philistine independence. He deported both rulers and people, as the mention of the kings of Gaza and Ashdod and the princes of Ashkelon in the lists published by Unger and Weidner has shown (cf. Jer. 25:20; 47:2-7; Zeph. 2:4-7; Zech. 9:5-6). The later history of the cities Ashdod (Azotus), Ashkelon (Ascalon), and Gaza is that of Phoenician, and then Hellenistic, cities with highly mixed population. Only the territorial name Palestine connected them with their Philistine past.

J. C. GREENFIELD

PHILO, BIBLICAL ANTIQUITIES OF. The title of a book by an unknown author which was found in a Latin medieval MS bearing the heading *Libri Philonis Judaei de initio mundi* and was first published together with some genuine treatises of Philo of Alexandria. The author is now generally referred to as Pseudo-Philo. His work contains an abstract of the biblical story from Adam to the death of Saul. Some incidents of the biblical narratives are abridged or completely omitted, while others are considerably elaborated. Occasionally the author furnished quite novel additions to the biblical story. In particular, the period of the judges is treated comparatively more fully than other parts. As the Chronicler, in rewriting Israel's history, besides contributing his own theological scheme, apparently drew on narratives of which no trace has been preserved in other historical books of the OT, so the author of the Biblical Antiquities evidently made use of folklore concerning Israel's past. E.g., he names KENAZ, the father of OTHNIEL (Judg. 3:9), as the first judge in Israel, and reports on many of his activities. He is fond of inserting lengthy speeches, or songs, into his narratives, and though most of these appear to be of his own creation, it is possible that here and there lyrics of older provenance have been preserved by him. In essence, Pseudo-Philo renders the OT story in a midrashic form which it had assumed through repeated retelling for popular edification and instruction, and he reinterprets this story in the light of his own religious experience and theological notions.

The book is important, not only because it preserves old Jewish legends and sheds light on the technique of Hebrew writing from a time before the composition of the Mishna, but also because its production falls approximately in the same period as that of the Synoptic gospels. There are close parallels in thought, expression, and image with various parts of the NT. Though not preserved by Jews, but handed on only by Christian copyists, the work has apparently remained free from interpolations, and is thus a valuable source of information regarding the Jewish world of ideas in the first century.

It is widely assumed that Pseudo-Philo wrote sometime after A.D. 70. This assumption is based on the scarcity of references to temple worship (the contents of Leviticus are, e.g., completely omitted). If the author lived after the destruction of the Second Temple, he found himself in a situation that put special demands on a writer of Israel's history, and he did his best to meet them. One of his oft-repeated affirmations is the indestructibility of Israel. Israel's duty is to trust in God. The world will be destroyed sooner than Israel, for God has not made his covenant and given his instruction in vain. Only by sinning and abandoning God can Israel be defeated; if faithful, they are invincible. On occasion, the writer speaks of Israel almost in terms of pre-existence (IX.3.4). The chosen people's role in God's plan for the world has been ordained before creation: when Israel was not yet, God spoke of her. This privileged status of the nation does not, however, offer any guarantee for salvation to individual Israelites. "Hope not in your fathers, for they will not profit you unless you are found like unto them" (XXXIII.5).

The belief in resurrection (III.10; XI.6) is affirmed. When required of God, the nether world will restore its booty. Angelology is fairly developed; the Biblical Antiquities gives the names of many angels not known from any other source.

There appears to be no messianology of the type known from the NT. The term "messiah" occurs in the book, but invariably in a concrete, historical context. Striking is the expression "the Holy Anointed One of the LORD" (*sanctus christus domini;* LIX.2; the passage refers to David); it has a parallel in the DEAD SEA SCROLLS, but no connection between these and the Antiquities has as yet been established.

Pseudo-Philo's work possibly covered a wider period than the extant work, which ends with the dying Saul's message to David "not to remember that I hated him nor that I dealt unjustly." In many respects the book may serve as a corrective of misconceptions about Judaism. It reports, e.g., that Job was married to DINAH, Jacob's daughter (also mentioned in the Talmud); this is a significant view, as it implies that Job, a man "blameless and upright, one who feared God, and turned away from evil" (Job 1:1), was not even a Hebrew. This, as well as other passages, shows that the author's elated concept of Israel's election by God stems from a sense of duty, not from presumption or self-assertiveness.

The book is extant only in Latin; we know that all codices go back to the same parent MS, because they contain gaps (ch. XXXVII) in the same places. The Latin translation was made from the Greek, and this in turn was made from Hebrew. In spite of the fact that what we have of the book is only a translation of a translation, the Hebrew rhythm still vibrates through some of the songs and prayers that are recorded. The medieval Hebrew *Chronicle of Yerahmeel,* which contains part of the Pseudo-Philonic story, is a retranslation from Latin into Hebrew.

P. WINTER

PHILO JUDEUS fī′lō jo͞o dē′əs. A Jew of Alexandria contemporary with Jesus. In the history of philosophy his writings are the first after Aristotle to be more than mere fragments. In the history of Judaism he is the one Jew of his time from outside Palestine whose writings survive *in extenso;* accordingly he stands unique as a source for estimating the impact of Hellenism upon Judaism, though opinion has always been divided as to how far he can be taken to represent the general thinking of Jews in Hellenized centers. Similarly scholars by no means agree upon how much Philo's writings can be used in explaining the rapid Hellenization of Christianity.

1. Life. Little is known of Philo's life except one incident that happened in A.D. 39, at which time he called himself an "old man"; accordingly it is usually supposed that he was born *ca.* 20 B.C. The incident was a great pogrom in Alexandria. The Jews of the city resisted an attempt of Flaccus, the prefect, to force upon them cult images of the mad emperor Gaius (*see* CALIGULA), and the prefect encouraged the Gentile mob to loot and slaughter. To get protection from Gaius himself, a Jewish embassy headed by Philo was sent to Rome. Philo handled the matter so adroitly that at least he did not provoke the emperor to fresh violence, though the solution of the problem was not actually reached until a few months later, when Gaius was murdered and Claudius succeeded him. The story of the pogrom and of Philo's going to Rome is told by him in two treatises, *Against Flaccus* and *Embassy to Gaius.*

To have had such a responsible mission Philo must have been one of the leading Jews of the city, and we learn from Josephus that this was so. His brother, Alexander the Alabarch, had one of the largest fortunes in the Roman world. Many believe that Philo himself spent a considerable part of his life in public administration for Jews. He certainly had a thorough Alexandrian education and wrote a florid but fluent Greek; he moves in Greek history and philosophy with ease. At the same time he felt deeply loyal to Judaism; but as to his Jewish education, while he often agrees with rabbinic interpretations of the law, he often disagrees with them. Agreement cannot automatically be taken to indicate rabbinic influence on his thinking, since interpretations made in Alexandria must often have been regarded with approval by the rabbis. Certainly Philo gives no such evidence of having been acquainted with rabbinic tradition as he does with Hellenism. Even of the Hebrew language he shows no knowledge beyond the interpretation of a few proper names and perhaps a scattering of Hebrew tags. His Bible was the LXX, which he considered verbally inspired, and he never betrays the least sense of its having less authenticity than the Hebrew. He therefore must be considered a loyal Jew—loyal to his people and to their law as written, and as practiced in Alexandria—but one whose formal education was that of a thoughtful Greek.

2. Writings. The extant writings of Philo, when completely published, will occupy at least twelve volumes of the Loeb Edition, but a great many of his treatises we know only by name, and many of those surviving have large gaps in the text. For discussion of Philo's treatises, *see bibliography.*

The first group of writings is made up of apologetic works addressed to Gentiles. The two treatises just mentioned are of this type, as is a larger work, the *Apology for the Jews,* of which a few fragments are preserved in Eusebius. The short treatise *On the Contemplative Life* is thought to have been a part of this *Apology.* The *Contemplative Life* describes the customs of a fascinating group of Jewish ascetics in Egypt which corresponded to the Essenes in Palestine; Philo may well have belonged to the group as a young man. Philo's discussion of the Essenes, a fragment preserved in Eusebius and now much read in connection with the Dead Sea Scrolls, may well have been in the same *Apology.* Another document, apparently intended to introduce the Gentile into the substance of Jewish faith, exists in Philo's *Life of Moses.* In this extended work (in two books) all biblical narratives are told as for people who had never heard them. Philo says that Moses was the ideal hero in four guises: he was the king as the Gentiles themselves described the ideal king, the true priest and prophet, and hence the perfect lawgiver. In such a presentation Gentile and Jewish conceptions obviously blend. The story is faithful to the Bible, but each of the roles is described in terms of Gentile

thought. The highest law of the Jews appears to be, not the injunctions written by Moses, but an unwritten law behind the Torah, one basically revealed in the very person of the hero-king himself. Such a conception of the unwritten law presented in a unique person is a Gentile notion that continued on in all theories of absolute kings who were "above all law"—i.e., who were above the law their subjects had to obey; they were themselves the source of law, the vehicle through whom law came to men from God or nature. The biblical presentation of Moses as leading the people out of Egypt, and as going to God and bringing the law to men, was easily explained in this way.

A second division of Philo's works, the *Exposition of the Law,* is made up of a series of related treatises, originally at least nine in number: *On the Creation of the World, On Abraham, On Isaac* (now lost), *On Jacob* (now lost), *On Joseph, On the Decalogue, On the Special Laws* (in four books), *On Virtues, On Rewards and Punishments.* This series again seems addressed to Gentiles, or to Jews so Hellenized that they had a basically Hellenistic point of view. Its purpose is to make a much more systematic alignment of Jewish biblical tradition with Greek thought-ways than did the *Life of Moses.* The *Creation of the World* presents God making a world through the Logos, and is thoroughly aligned with the *Timaeus* of Plato. The Logos was not only the creative agent, but it abides in the world as the law of nature. God made it even more startlingly available, however, in living, personal form, in the great heroes of the Bible—Enos, Enoch, and Noah; Abraham, Isaac, and Jacob—and, as those will understand who have read the *Life of Moses,* in Moses as the greatest of all. These men knew and lived by the law before it had been revealed on Sinai or codified by Moses. We see in such men the true way of life, and they in turn are what Philo called "mystagogues," people who can take a man who attaches himself to them and lead him into an immediate comprehension and apprehension of the law of God in its pure form. This personal manifestation of God's law is explained by Philo in *On Abraham,* and presumably he went to even greater heights in the lost lives of Isaac and Jacob.

The *Decalogue,* however, begins by saying that God also revealed his law to the Jews in verbal form. The highest expression of this is the Decalogue. From these ten laws are derived all other laws, since they are the ten basic principles of all codes of law. So in the four books of the *Special Laws* that follow, Philo goes on to discuss the detailed legislation under these ten heads. *On Virtues,* the next treatise, gives a general summary of Jewish legal principles under the categories of the Greek cardinal virtues. Here again the patriarchs emerge as showing Judaism in its full realization. *On Rewards and Punishments* is a quite prophetic Deuteronomic sermon to show the values of obedience to the code and the disaster of ignoring it.

A third group of Philo's writings also forms a consecutive series of treatises. This series is usually called the *Allegory of the Jewish Law,* in contrast to the *Exposition* series. The *Allegory* consists now of eighteen titles, twenty-one books, but was originally much longer. At least nine treatises are definitely known to be lost, and many of those we have are incomplete. Individually and as a series, they have almost no form at all. In them it is assumed that the basic point of view of the *Exposition* was familiar and accepted, so that while the treatises discuss in general consecutive incidents and passages of Genesis, they begin without explanation with the second chapter of Genesis and stop suddenly with the dreams of Jacob, Joseph, the butler and baker, and Pharaoh.

Scholars have suggested an over-all plan for the *Allegory,* but if Philo ever had a plan at all, it is so repeatedly abandoned for indefinite digression as to be of little help to the reader. Yet this is Philo's major work, and here he presents his thoughts at their richest. The audience now appears to be a group of people with esoteric understanding of the Bible. The patriarchs and the mystic value of the law have been fully accepted, and Philo is only writing for the inspiration of what he calls the "initiates." In this sort of writing, as in Thomas à Kempis' *Imitation of Christ,* plan has little importance. A devotional study, the *Allegory* can usually be read wherever the book opens. One must read it, however, in the spirit of the day in which it was written. The *Allegory* has quite as much arrangement and order as the *Enneads* of Plotinus, or most of the essays of Plutarch. In discussing the *Allegory,* accordingly, as in the writings of Plotinus, we discuss the ideas in it rather than their successive presentation.

Still another series of treatises by Philo is the *Questions and Answers in Genesis and Exodus.* This great work is preserved less satisfactorily than any other series of Philo's writings. We have only a few scattered fragments of it in Greek, and large sections, but only sections, in Armenian. The *Questions* is again commentary, but here in the more midrashic form of verse-by-verse commentary. For almost every verse two interpretations are given, one the "literal," where the words of the text have their story or law explained directly as though for what we should now call "orthodox" Jews, and the other an allegorical or mystical interpretation. The latter is quite in the spirit of the *Allegory.* The *Questions,* in offering both sorts of interpretations, shows how Philo never forgot or abandoned the literal type of Judaism, though he felt that the heights of Judaism rose far beyond that level. In one passage Philo mentions Jews whom the mystic meaning of their religion had led to abandon the literal. He would have nothing to do with them, just as it seems quite likely that he would have joined in stoning Paul for suggesting that the law of the spirit had freed him from the law of the letter. The *Questions* is a monument to Philo's refusal to choose between these two.

Several miscellaneous treatises are preserved. Their titles are *On the Indestructibility of the World* (opening fragment of a larger work), *That Every Virtuous Man Is Free* (with another allusion to the Essenes), *On Providence,* and *Alexander or On the Question Whether Dumb Animals Have the Power of Reason.* It need only be said that they are directly concerned with problems of philosophy, in contrast to the greater series of Philonic writings.

3. Teachings. One can approach the teachings of Philo by trying to understand the central interest or thesis of his writings, or by trying to reconstruct

Philo according to preconceived categories of Judaism or philosophy. From each way of reading him a different Philo will emerge. In beginning with his writings we are here taking the former approach. The alternative approach (*see bibliography*) puts Philo into his proper place in the history of philosophy, where he may be seen as the first writer of the medieval tradition in which the problem was to reconcile reason—that is, Greek logic and traditional science—with the teachings of the Bible. Philo, of course, worked on this problem, but he had other interests than creating a philosophical system. Indeed, to seek a consistency in Philo's thinking seems inappropriate to Philo's own frequent indifference to consistency.

From Philo's short philosophical writings just mentioned, a treatise on his philosophy could well be written. From these, however, a rather eclectic and superficial thinker would emerge. In cosmology he follows Plato and Aristotle against the Stoics, but in discussing "Providence," or the divine control of the universe, he follows Stoic ideas as over against the atomistic tradition of chance. His ethics are predominantly Stoic. In interpreting the Bible, on the contrary, he is concerned to make it a document of mysticism: repeatedly he identifies philosophy with mystical metaphysics, and this much more in the sense of mystic union than mystic theory.

Since by far the greatest part of Philo's writings is devoted to developing this point, it is reasonable to suppose that in him we have a man educated in the philosophic schools to some extent, but one who found his chief satisfaction in the mystical possibilities of incipient Neoplatonism, wherein his own Judaism seemed to find its highest value. In later Platonism the utter contrast between matter and the immaterial had driven men to describe ultimate reality in almost Parmenidean abstraction. To Neoplatonic philosophers the Good of Plato became Being, the One; it represented the center of all existence, the goal of all endeavor. To theists, of course, this would be God—i.e., to theistic pagans, and later to Christians. It was both the abstract and the personal to Philo the Jew. In philosophical formulation Being would be related to the world of experience still in terms of abstraction. In the religious thinking of most men Being as God would relate himself to matter and men in a much more personal way. The Gnostics were soon to describe this relationship in terms of descending pairs of divinities. Philo described the link as a stream or radiation from the One, by which, while not ceasing to be the Absolute, God gave out his nature, his reality. Philo called this stream by various names, most commonly the Logos. It could be thought of as divided into a series of descending abstract manifestations of existence, or as a single abstraction. But when Philo the man of religion spoke, as he more commonly did, he described the stream as manifesting itself in the personal attributes of grace, justice, and mercy. The Logos gave to the world its form, and to men their image of God, their minds; and it led men back to God. Pagans were trying to make the stories of Homer, the myths of Dionysus, Osiris, Adonis, and Mithras, mean such a concern of God for man. To them Philo proudly told the stories of his own God's relations with the patriarchs and the people, and understandably boasted that what the others were looking for, the Jews already had.

Philo had many names for the effluence from God which brought the Unrelated into relations with matter and man, and he used any of these names according as the mood, the text he was expounding, the sex of the person he was praising, made convenient. The stream first manifested itself in the order of the universe, so that it was the natural law of the universe. Like Paul in the first chapter of Romans, Philo said that this order of nature should be a sufficient revelation of divinity for man to grasp it. But actually the manifestation in nature is not enough, and so, we have already seen, it represented itself as Logos in the great patriarchs, as Sophia or Virtue (both feminine words) in their wives. The manifestation in coded law, even the Mosaic code, we saw, was inferior to the revelation in persons. When Paul went on in Romans to explain that the Jewish law is quite inferior to the law of the Spirit manifest in Jesus Christ, he drew inferences that Philo would not have allowed, but he only carried Philo's way of thinking to its natural conclusion in applying it to Christ. Indeed, Paul shows in the fourth chapter of Romans that he was quite aware that the miracle had already been worked in Abraham. The heart of Philo's message is exactly expressed in Rom. 4:13: "The promise to Abraham and his descendants, that they should inherit the world, did not come through the [written] law but through the righteousness of faith." Philo spoke now about Abraham, now Sarah, now Isaac, or others, as the exemplars, but so supremely did Moses represent the law that Philo said he was himself initiated into Moses.

How far we are to suppose Philo meant literally his frequent statements that the true Judaism is the true mystery religion, has caused much recent controversy. If we are to understand Greek words in their ancient usage rather than in modern categories, and if we believe Philo meant what he said, then we may conclude that he found in Judaism an authority for taking to himself, not the persons or rites of pagan mysteries, but their values. Whether or not one follows Philo in using the terms of mystery religions to describe his evaluation of Judaism, it is patent that to him the Jewish Bible revealed the path from matter to the immaterial, the path men of his time were everywhere seeking in mystic rite and philosophy.

The early Christian exegetes—from Clement of Alexandria to Ambrose—found Philo's exposition of the Bible so congenial that they used his works as a basis for much of their exegesis, while the allegories of Justin Martyr are plainly Christian versions of allegories much like those of Philo. It does not appear that the books of Philo himself were used and quoted by any writer of the New Testament; similarly there is no evidence that Philo was himself widely read by the Jews of the Dispersion who put on their graves and synagogues the amazing decorations of the next four centuries. But Philo clearly speaks for a group of Jews whose thinking took much the line of Hellenized Christianity and later Jewish mysticism.

Bibliography. Editions and secondary works are listed in H. L. Goodhart and E. R. Goodenough, "General Bibliography of Philo," in E. R. Goodenough, *The Politics of Philo Judaeus* (1938), pp. 125-321. The treatises are outlined in detail in E. R. Goodenough, *Introduction to Philo Judaeus* (1940); H. Leisegang, "Philon," in Pauly-Wissowa, *Real-Enzyklopädie der klassischen Altertumswissenschaft,* vol. XX, pt. i (1949), pp. 1-50. H. Wolfson, *Philo* (1947), is designed to treat Philo within the context of the history of philosophy. To the editions should be added R. Marcus' translation of the *Questions and Answers to Genesis and Exodus* in two supplementary volumes of the Loeb Edition of Philo (1953).

E. R. GOODENOUGH

PHILOLOGUS fĭ lŏl′ə gəs [Φιλόλογος, talkative, *or* loving learning] (Rom. 16:15). A Christian man greeted by Paul. From the order of names it seems likely that Philologus was the head of a family, Julia being his wife and the others named in the verse their children.

F. W. GINGRICH

PHILOMETOR fĭl′ə mē′tôr [Φιλομήτωρ]. The PTOLEMY whose enthronement is mentioned in II Macc. 4:21.

PHILOSOPHY [φιλοσοφία]. Etymologically, "love of wisdom"; but this word took on the narrower meaning of the systematic treatment of a given subject, or speculation with regard to truth and reality. In the NT both "philosophy" (Col. 2:8) and "philosopher" (Acts 17:18) are used in an unfavorable sense.

In Col. 2:8 the author warns his readers to beware of those who would "kidnap" them by philosophy, to which he links "empty deceit"; for these are "according to human tradition, according to the elemental spirits of the universe, and not according to Christ." The author understands philosophy as contrary to what has been revealed in Christ, and tells the Christians at Colossae to shun it. The author, however, is not referring to all philosophy, but has a specific philosophy in mind, against which he argues at considerable length in this letter. It may have been a form of Gnosticism; but it is characterized by the term "empty deceit" and appears to have represented a christological position which denied the full divinity of Christ. *See* COLOSSIANS.

In Acts, Paul is said to have conversed with some "Epicurean and Stoic philosophers" in Athens. They apparently did not think very highly of Paul's preaching, but they were sufficiently interested in it to take him to the AREOPAGUS and ask him for a fuller statement, which Paul gave (Acts 17:22-31).

A number of philosophies were influential in the speech and thinking of the man in the street in the Hellenistic age—especially Cynicism and Stoicism. But Epicureanism, Platonism, and Neo-Pythagoreanism were other options. *See* GNOSTICISM; EPICUREANS; STOICS.

PHINEES. KJV Apoc. form of PASEAH 2; PHINEHAS.

PHINEHAS fĭn′ĭ əs [פִּינְחָס, פנחס, the Negro; Egyp. *pꜣ nḥśj;* Apoc. φινεές]; KJV Apoc. PHINEES fĭn′ĭ əs. **1.** In ancient memory a N Israelite of such importance that a site in the hill country of Ephraim (exact location now unknown) was called "Gibeah of Phinehas" (Josh. 24:33 [secondary E]). In this notice the identification of Phinehas as a descendant of AARON and the implication that Phinehas was a N priest (cf. LXX) may be correct. An Aaronite, priestly family called the "sons of Phinehas" was prominent in Babylonia in the time of Zerubbabel and Ezra; members of this family returned from the Exile (Ezra 8:2; I Esd. 5:5; 8:29). Late postexilic tradition identified Phinehas as the third figure in the Aaronite descent of the priesthood. From Aaron, his son Eleazar, his son Phinehas (Exod. 6:25; *see* the work of C. Simpson in the *bibliography* for the view that a P redactor has worked over Josh. 24:33), the Aaronite line was traced through Zadok to Jehozadak and Ezra (I Chr. 6:3-15, 50-53; Ezra 7:1-5). Postexilic narration of four stories (perhaps in each case midrashic expansion) set forth the significance of Phinehas in late tradition concerning the priesthood (*see* PRIESTS AND LEVITES):

a) In the time of Moses when a plague was raging and the people were weeping before the trysting tent, an Israelite came into camp bringing a Midianite woman to his family. Phinehas "the son of Eleazar, son of Aaron the priest," saw this as an intolerable instance of current defection from Yahweh, left the weeping assembly to go after the Israelite into his inner room, and pierced both of them with a spear. Appeased by this act of conviction, Yahweh stopped the plague sent as judgment against syncretism with the Midianites and the religion associated with Peor. For his zealous devotion to Yahweh's honor, Yahweh gave the priesthood to Phinehas and to his descendants: "I give to him my covenant of peace; and it shall be to him, and to his descendants after him, the covenant of a perpetual priesthood, because he was jealous for his God, and made atonement for the people of Israel" (Num. 25:6-18; cf. Ps. 106:30-31; Ecclus. 45:23-24; I Macc. 2:26, 54).

b) When Moses sent an expeditionary force to exterminate the Midianites, he sent Phinehas along either as leader or as priest. Phinehas took with him "the vessels of the sanctuary and the trumpets for the alarm" (Num. 31:6; cf. 10:1-10; II Chr. 13:12).

c) Phinehas was the leader and spokesman of a commission of the ten chiefs of the tribes W of the Jordan which went to the tribes E of the Jordan to charge them with treachery against Yahweh in the building of an altar. The E tribes defended their action as the erection of a witness to both sides of the Jordan and to all generations that they also, the E tribes, served Yahweh and had a "portion in Yahweh" and in Israel. Phinehas expressed the satisfaction of the commission that no part of Israel had acted to bring the wrath of Yahweh upon all Israel. The commission returned to Shiloh, where its report peaceably dispersed the W Israelites who had assembled to fight if necessary (Josh. 22:9-34).

d) When the Israelites inquired of Yahweh whether to fight against their brethren the Benjaminites for condoning the sin of the inhabitants of Gibeah, Phinehas, who ministered before the ark at Bethel, officiated at the inquiry and delivered the favorable oracle (Judg. 20:27-28). A further notice in Chronicles states that at one time Phinehas was superintendent of the gatekeepers (I Chr. 9:20, which established connection between the gatekeepers and

one who then or later held the office of chief priest).

PHLEGON flĕg′ŏn [Φλέγων, burning] (Rom. 16:14). A Christian man greeted by Paul, along with three other men and the Christians associated with them.

F. W. GINGRICH

PHOEBE fē′bĭ [Φοίβη, radiant]. A Christian woman, DEACONESS of the church at Cenchreae, the E seaport of Corinth. Rom. 16 begins with a recommendation for her (vs. 1); many now think that this chapter was not originally part of Romans but was addressed to Ephesus (*see* ROMANS, LETTER TO THE). Phoebe had distinguished herself by the services she had rendered to her church and to Paul himself; the word προστάτις used for her in vs. 2 may be rendered "patroness" as well as "helper." Her freedom to travel may indicate that she was a widow.

There is a growing tendency (but not RSV, Moffatt, et al.) to translate διάκονος "helper," etc., rather than "deaconess," with reference to Phoebe; thus, Paul surely does not mean to call himself a "deacon" in such passages as II Cor. 11:23; Col. 1: 23, 25. Nevertheless, informal service of the kind rendered by Phoebe soon became the inspiration for a regular order of deaconesses.

Bibliography

1. Name. The term "Phoenicia" was first used by the Greeks to refer to the country of the Canaanites, with whom they traded. This contact in trade started early, and already *ca.* 1200 B.C. the terms "Canaanites" and "Phoenicians" were synonymous. This early use of the term has made scholars seek for an Egyptian, or a wider Semitic, background. There is, however, little doubt that we have here a direct translation of the word "Canaan" (כנען), which means "land of purple." The term "Canaan" was first used of whole Syria-Palestine. It may be of Hurrian (Horite) origin, from the word *knaǧǧi*, which meant "purple dye." The purple industry was of great importance already in the eighteenth and seventeenth centuries B.C. when the Hurrians entered the country. The Greek word φοίνιξ means "red purple" (wool), and the name φοινίκη is thus a translation of the name Canaan. In course of time, however, the two terms were used for different countries. *See* CANAAN.

2. Geography. Phoenicia was a long and narrow country along the seacoast, actually only 120-30 miles long. The mountains of Lebanon formed a natural border to the E. The N border was along the River Eleutherus, now Nahr el-Kebir, and the S border was Mount Carmel, where Phoenicia had Israel as its neighbor. Especially along the mountains the coastal plain is very narrow, *ca.* five miles, and the foothills rise rather abruptly. At Juniyeh, N of Beirut, the plain is only a mile broad, and the hills rise up to 2,500 feet close to the coast. A little farther S, *ca.* three miles, the foothills reach the sea, and around the narrow passage here the Phoenicians used to concentrate their defense forces when they were attacked by mighty and powerful armies. Also at the S border, where Carmel slopes steeply to the sea, the passage is a very narrow one.

The land strip between the sea and the mountains is fertile and was already well cultivated in antiquity. The vegetation here was the usual one in the Mediterranean countries, with many evergreen shrubs and plants, flowering quickly in the spring. Wheat and barley were early used, so also onions, garlic, and other vegetables. Trees of many kinds were

found, yielding figs, dates, and olives, and the vines produced grapes. The climate is very well suited for the growing of fruit. There is no rain in the summertime, and the sun ripens the fruit perfectly. There were also other trees: pine, oak, mulberry, and beech. On the whole, a large part of the country was forested, as it is not today. Also, the mountain ranges were densely forested. The winter temperature is lower along the mountain slopes, so subtropical palms and shrubs cannot survive there. Instead, hardier kinds of trees were found, first and foremost cedars, pines, and firs. Big forests furnished the famous cedars and other wood valuable for timber. Today only two small, aging forests of cedar are left, consisting of a few hundred trees. Export of cedars was going on in ancient times, as far back as our documents reach. For ancient Egypt the cedars and pines of Lebanon were the only source of wood, and other neighboring countries imported them frequently. It is no wonder, then, that denudation was the final result.

The mountain range of Lebanon is *ca.* 105 miles long, extending from the Nahr el-Kebir in the N to Nahr el-Qasimiyeh, near Tyre, in the S. The highest peaks are snow-capped half the year. The highest one, el-Qurnat el-Sawda', is 11,024 feet above the sea, and also a few others are more than 10,000 feet high. The mountains are almost entirely of limestone, with its distinctive grayish color.

The strip of land along the mountains is so narrow that the people living there had to turn to the sea in order to find a living. The Phoenicians became able seamen, and they were famous in the ancient world for their capacity as sailors and pilots. They took up sea trade and developed it to a degree which was unknown till then. The long, straight coast along the E Mediterranean had few good harbors, among which were Byblos,* Sidon,* Tyre,* and Berytos (Beirut). Here were important industrial and trading centers. The chief product for which Phoenicia was famous was purple dye. As mentioned above, it also gave the country its name. The purple was produced by the large sea snail murex, which is found in the Mediterranean. Two species were used, and there are still large shell mounds in Saida (ancient Sidon) and Sur (ancient Tyre). The shells are waste from the purple industry, which brought enormous incomes to the Phoenician cities, but also made them rather unpleasant to live in, as there was a strong smell from the dye and the factories. Purple dye was produced in different shades of color, in a range which went far beyond what we would call purple today. The dyers knew different techniques which helped them to produce the varying shades. Figs. PHO 53; SID 57; TYR 81.

53. Gebal (Byblos); ancient site, seen from the Crusader's Castle

Also other products came from Phoenicia. Weapons were made, and wine. The sand near Sidon and Tyre was well suited for making glass, and Phoenician glassware was famous.

3. History. The history of Phoenicia goes very far back. Documentary evidence, however, is scarce. The history of Phoenicia is the history of its cities. These were rebuilt on the same sites when they were destroyed, and also today there are towns on the ancient sites. This fact makes excavations difficult or even impossible, so they have not been carried out to the extent which could be desirable.

Excavations at Gebal (Byblos) have shown that in late Neolithic times a Mediterranean race was living there.* The people used circular huts and buried their dead in big earthen pots. They represent an archaic civilization which had affinities at Uruk in Sumer and also in Egypt. Of whatever origin this civilization was, it vanished suddenly in the latter half of the fourth millennium B.C. Its place was taken by a new civilization of a characteristically urban type. Walled cities with temples and rectangular houses were built, and new technical inventions were made. New weapons were used, made of a new metal, bronze. These weapons came from the N, and they were introduced by peoples who invaded the country from the mountainous countries in Asia Minor and along the coast. From the E came other invaders. They were Semites, and they also mixed with the former population. It was actually such a blend of different elements which constituted the Phoenician people. Fig. GEB 13.

Already in the fourth millennium Semites invaded Mesopotamia, probably from Arabia. Waves of Semites reached Phoenicia early. In the middle of the third millennium they held a dominating position in N Mesopotamia, Syria, and Lebanon. They were driven back by Sargon I, himself a Semite, but they kept their hold on Syria and Lebanon. Names such as "Lebanon" and "Sidon" are supposed to be of Amorite origin. Up to the nineteenth century B.C. many of the most important cities of Syria and Lebanon were dominated by Amorite princes. The leading classes were also often Amorites. *Ca.* 1700 King Hammurabi of Babylonia, who was himself of Amorite origin, crushed the Amorite kingdom and its capital, Mari.

The following centuries were troubled times in Phoenicia, as they were in most of the Near East. The Hyksos swept through the countries from N to S, finally invading Egypt, ravaging and burning on their way. The main components of the Hyksos hordes were probably Mitannians and Hurrites (Horites), who also for some periods held their sway over Phoenicia at this time.

Egypt had been interested in Phoenicia from a

time which goes very far back in history. Egyptian objects have been found, especially in Byblos, which date back to *ca.* 3000 B.C. Pharaoh Snefru of the Fourth Dynasty, who ruled in the twenty-sixth century, tells in his annals about "bringing 40 ships filled with cedar logs" from Phoenicia. This is a very early indication that trade was going on between Egypt and Phoenicia. The Egyptians needed first and foremost cedars and pines, but also oil, wine, spices, leather, and other products. They tried to get a firm grip on Phoenicia again when the Hyksos had been driven out. Pharaoh Thut-mose III (1490-1435), who was a great warrior, marched toward the N with his army. The Phoenician and Syrian city-states, which did not usually work too well together, forgot their enmity for once and allied against the advancing enemy. Their armies were crushed by Thut-mose at Megiddo in 1479. It was a decisive victory which gave Thut-mose a firm hold on Phoenicia for the rest of his lifetime. But after his death this situation did not last very long. His successors, Amen-hotep III and IV, were weak and unable to hold Phoenicia under control. We can see clearly how it was from the TELL EL-AMARNA correspondence from the fourteenth century. The princes of the Phoenician city-states, with the exception of the kings of Byblos and Tyre, showed no loyalty toward the Egyptian Pharaoh, except in their letters. The letters also reveal that they were not loyal toward one another, all of them trying to get help, equipment, and soldiers for themselves. Much of the trouble was caused by the Amorite prince 'Abdu-Ashirta, whose kingdom was found along the upper Orontes. In the N he had the mighty Hittites as his neighbors, and though he was an Egyptian vassal, like other kings in these regions, his only possibility of expansion was toward the W and the S. He marched into Arka, NE of Tripolis, and further tried to conquer other Phoenician cities. He still feigned loyalty toward Egypt and wrote a letter to Pharaoh Amen-hotep III, beginning thus: "To the King, the Sun, my Lord, thus says 'Abdu-Ashirta, thy slave, the dust of thy feet. At the feet of the King, my Lord, seven times and seven I fall down." This was the usual introduction in letters written by the loyal vassals of Pharaoh, but other letters, especially fifty of them written by King Rib-Addi of Byblos, reveal that 'Abdu-Ashirta was the very leader of the opposition against the Egyptians. Rib-Addi had to leave Byblos because of the threatening danger. He reproached Pharaoh Amen-hotep IV (AKH-EN-ATON): "I have written repeatedly for garrison troops, but they were not given, and the king did not listen to the words of his servant." His pleas did not help him; he had to flee because of 'Abdu-Ashirta's son 'Aziru. 'Aziru also professed loyalty to Egypt and even visited the country, but he was actually in allegiance with the Hittite conqueror of N Syria, King Suppiluliumas. The king of Tyre, Abimilki, remained loyal to Egypt, but in a letter to Amen-hotep IV he indicated that the king of Sidon was constantly writing "to the criminal 'Aziru, the son of 'Abdu-Ashirta, concerning everything that he heard from Egypt."

Phoenicia was pressed from several sides by different peoples in the middle of the second millennium. Rib-Addi, who tried to stem the Amorite pressure, also reported to Amen-hotep IV: "Since thy father returned from Sidon, since that time, the lands have fallen into the hands of the GAZ." Who the SA-GAZ were, is not quite sure, but they seem to have been mercenaries in some of the great armies operating at this time. They were also ravaging on their own. They have been identified with the HABIRU, who were also active in these centuries. The Habiru were groups of warriors, nomads and brigands, who served in several armies—e.g., in the Hittite army under Mursilis I (*ca.* 1600)—and they also raided Phoenicia. They seem to have taken part in an Aramaic wave of invaders who seized Syria in the fourteenth and thirteenth centuries. In the following centuries they mixed also with the Phoenicians.

Egypt had a revival under Ramses II (1290-1224), who invaded Syria and Phoenicia in order to renew his claim on these territories. He met the Hittite army at Kadesh on the Orontes River *ca.* 1287. Ramses claimed a victory, but the Hittites were not beaten. In 1272 Ramses had to sign a non-aggression pact with them, leaving N Syria with the Hittites, while S Syria was to be under the sovereignty of the Pharaoh. Both sovereignties soon became only nominal. Semitic invaders pressed on from the E, and from the W came the Aegeans with rising power and broke into the Hittite Empire. The story of Wen-Amon from *ca.* 1100 is significant. He arrived in Phoenicia as the representative of the Egyptian Pharaoh commissioned to procure timber for a ceremonial barge from the vassal kings. He was met with scorn and contempt.

A new threat had begun to rise in the E. *Ca.* 1100, King Tiglath-pileser I of Assyria reached the Mediterranean coast with his army. He conquered Arvad, but his conquest was only temporary. The Phoenician cities had attained an independent position at this time, with first Sidon and then Tyre dominating. In the following centuries Phoenicia had its golden age. It was then that King Hiram, or AHIRAM (981-947), ruled in Tyre and was the leading sovereign in Phoenicia.* He delivered timber of cedars and cypresses to King Solomon and furnished him with able seamen and pilots. Important were his building of a long breakwater in Tyre and his development of the trade with Cyprus and Spain. Fig. GEB 15.

This development of trade and shipping just at this time most probably had its special background. The Phoenicians were used to the sea, but now they had to build their whole future on sea trade. They were circled in by strong powers which made expansion on land practically impossible—i.e., Arameans, Israelites, Philistines. If some of these peoples were not so great, they were warlike, and the Phoenicians were never that. They fought, even desperately, when it was necessary, but they did not seek war. Instead, their expansion took place along the sea routes which they had explored themselves to a great extent. Trade between Byblos and Egypt was going on already in the third millennium B.C. It may have started overland, with caravans along the coast, but the sea route was soon preferred. Another route went to Cyprus, and farther to Crete and Sicily. A third route went to North Africa and a fourth one to Spain.

The Phoenicians had learned navigation through experience and hard study. They were able to sail by night by using the polestar, and it is supposed that they were the first sailors to do this. They sailed broad ships, with high stern and bow, driven both by sails and by oars. Often there were two or more lines of rowers above one another. With such ships they made nearly incredible trips. Already in the eleventh century B.C. they had settled in the great Mediterranean islands, and in the end of this century they had founded colonies in Cadiz in Spain, then called Gades, and in Utica in North Africa, now Tunis. *Ca.* 850 B.C., settlers from Tyre founded Carthage, a colony which grew to an important city-state. Before this famous colony was founded, the Phoenicians had built Hippo, which also came to play a role in history. Phoenicians sailed the Atlantic and are supposed to have reached Cornwall in England.

The Phoenician colonies in Spain were important for centuries and were used as bases for trade in the W Mediterranean. Malta and Crete were other centers. From the gold mines of Thrace, N of Greece, the Phoenicians drew gold for their goldsmiths. The colony which prospered most was Carthage. While Phoenicia itself was pressed by the Assyrians, Carthage was free to expand and to promote trade along the coast of the Mediterranean and with the islands. This made Carthage one of the strongest powers in these regions, and ultimately it led to conflict with the Roman Empire and the total destruction of the city.

After the raid of Tiglath-pileser, Aramean invaders had entered Phoenicia. They were slowly mixed with the population already found there. The Assyrians, however, did not intend to give up Phoenicia. King Ashurnasirpal II (884-859) marched with his army to the coast of the Mediterranean, and the Phoenician cities did not hesitate to submit. The son of Ashurnasirpal, Shalmaneser III (859-824), had, however, to redo his father's work. He met the army of the Syrian-Phoenician alliance at Qarqar and defeated it in 853 B.C. In spite of the effective military organization built up by these kings, the domination of Assyria over Phoenicia was not too heavy. Some Phoenicians, however, preferred to build their hopes on the new colony at Carthage. The expansion of trade and shipping was not seriously hampered in this century.

The decline began in the eighth century. Tiglath-pileser III (745-727) started to reconquer Syria, and his son Shalmaneser V (727-722) marched into Phoenicia, where only Tyre caused him some trouble. But Phoenicia was too far away from Assyria to be fully controlled, and King Elu-eli of Tyre tried to seize the reins over all Phoenicia and even Cyprus. This was too much to be tolerated, and the Assyrian king Sennacherib (705-681) made a forced march to Lebanon, destroyed the palace of the king, who had fled, and established a new king, Ethba'al of Sidon. His submission was of the kind that was usual in Phoenicia, and in 677 the king of Sidon led a revolt against King Esarhaddon (681-669). This time the patience of the Assyrian king was out, and he destroyed Sidon. The other leading city, Tyre, held its position for a further hundred years. The Assyrian Empire, which reached its peak in the seventh century, was annihilated with the fall of Nineveh in 612. The Babylonians inherited their trouble with Phoenicia. In 587 Nebuchadnezzar marched into Syria with his army, and after a siege of thirteen years his soldiers defeated Tyre in 572. That was a final blow for Phoenicia. It never revived as a nation. The Phoenicians were often heard of after this time, but their expanding power was gone, and their shipping and colonial activity was gradually taken over by other nations.

A change in the status of Phoenicia came when the Persian king CYRUS had conquered Babylon in 539. It was now part of a new empire, and the Persian rulers deliberately gave the Phoenician cities a tolerably independent position. A Persian governor, the satrap, ruled also over these provinces, but they paid no heavy taxes. The Persians needed the Phoenician fleet and used it on several occasions. When Cambyses (530-522) attacked Egypt, he was supported by a Phoenician fleet. This was the case also when Xerxes attacked Greece in the following century. The usefulness of the fleet may have been the reason why the Persians gave the Phoenician cities the right to have local autonomy. For once the city-states were able to forget their rivalry, and in the fourth century they united in a new federation. Originally, Sidon, Tyre, and Arvad took part, and they instituted a meeting place in the N of the country. This place grew into a new city, called Tripolis by the Greeks. The city was functioning as a capital for Phoenicia. Here the delegates from the united cities gathered at annual meetings. About three hundred representatives used to meet. The meetings were headed by the official Persian governor and his officers. The arrogance of the Persians at these meetings was strongly resented by the Phoenicians, especially as they probably had a definite feeling that the power of the Persian Empire was vanishing.

The next step was obvious. A rebellion was started against Artaxerxes III Ochus (358-338), but it came too early. The result was the tragic destruction of SIDON in 351. The Persian Empire broke to pieces under the attacks of Alexander, starting at Issos in 333. Then came the turn of TYRE, which was annihilated. With the two chief Phoenician cities in ruins, the saga of Phoenicia was practically finished. It is true that the cities were rebuilt and populated again, and that they got a new chance to develop under Roman aegis, but as a nation Phoenicia had lost its distinctive stamp. Hellenistic culture became deeply rooted under the Seleucid kings, and Sidon and Tyre were centers of Greek philosophy and literature in the last centuries B.C. Zeno from Citium on Cyprus (333-261) grew up in a Phoenician colony and had as his teacher another Zeno, from Sidon. As founder of the Stoic school of philosophy, Zeno from Citium made a lasting contribution to Hellenistic culture. Some of the poets who described the life of the time were of Phoenician origin, as Antipater of Sidon and Meleager of Gadara.

Pompey conquered Syria and Phoenicia in 64 B.C. The Seleucid rule was in a state of anarchy at that time, but then the Roman proconsuls took over. They were, however, unable to keep Syria and Phoenicia undisturbed in the first decades. The Parthians, who

had their capital in Ctesiphon in Mesopotamia, launched several attacks on the new Roman provinces. Octavian put an end to this, after his victory over Antony and Cleopatra at Actium in 31 B.C. That started the long period of Pax Romana, which is so closely connected with the Emperor Augustus—the new title and name which the senate bestowed upon Octavian in 27 B.C. Also Phoenicia prospered under the new conditions. The tributes which were exacted were usually not too high. Roman settlements of well-trained troops were found in Beirut and in Baalbek. New roads were built and postal service instituted. The connections between the different parts of the Empire were good, and this gave the Phoenicians a new chance for their trade and industry. They produced fine glass, and pottery which was often an imitation of Greek ware. Their dye production was still at its height, and so were also their metalwork and their wine. Dates and wheat flour were other export articles. Syria and Phoenicia were densely populated in this time, and because of the extensive trade many were able to live in luxury.

When the first expansion of Christianity began, it spread also to Phoenicia; see Acts 11:19; 15:3; 21:2. In these passages from the NT the term "Phoenicia" is used, but in Acts 21:3 "Syria" is used as a synonym. This indicates that at this time the term "Phoenicia" was used purely geographically, not about a living nation. This was true also in the fourth century A.D., when "Phoenicia" was used as the name of two administrative districts: Phoenicia Prima, comprised mostly of the historical Phoenicia, and Phoenicia Secunda, which had Damascus as capital.

4. Religion. Spiritual culture had early beginnings in Phoenicia. WRITING was introduced here, probably inspired by Egyptian pattern, in the form of pseudo hieroglyphics, as they have been found in Byblos. The ALPHABET came from this part of the world. Phoenician religion has also influenced the religions of the neighboring countries, and features from Phoenician worship have continued to live in other religions. It has been very hard to get knowledge of Phoenician religion, as few documents were handed down to posterity. Some information is found in the OT, and the church historian Eusebius cites an ancient author, Philo of Byblos, who lived at the time of Jesus. This Philo was supposed to have had his information from a rather legendary Phoenician author, called Sanchuniathon, who according to Philo was a priest from Beirut born in the eleventh century B.C. The work of Sanchuniathon was lost, but Philo had translated it into Greek, and his translation was used by Eusebius. Also the work of Philo is lost.

Apart from this source, information is found in the TELL EL-AMARNA letters, on the sarcophagi from Byblos (*see* GEBAL), and especially in the Ras Shamra Texts (*see* UGARIT). Archaeological work in Phoenicia, which has not been too extensive, has given some new material. The Ras Shamra Texts to a certain extent confirm the picture given by Eusebius and Philo. They show that the Phoenician religion, so far as we can speak of it as an entity, was closely connected with what is otherwise known of W Semitic religion. It was a religion which combined the fears and joys of daily life with cultic performances in the many temples. The leading god of the pantheon was El, also called Bull El, a name which very effectively gives the character of this religion. His consort was Asherah (or Athirat), mother-goddess and queen of heavens. The young god who played a great role in Phoenician religion was Baal, who was very popular in Phoenicia, under slightly changing names. Baal was also called the Bull and was an outspoken fertility figure. He was god of rain and thunder, and in the Ras Shamra Texts he is identified with Hadad. On his side was found the warlike fertility goddess Anath. *See* CANAANITES § 6.

Philo of Byblos has complicated narratives about the creation of the world, the gods, and man. It is hard to find out what is originally Phoenician here and what is of Greek (or other) origin. One is therefore on safer ground in adhering to facts coming from more reliable sources.

Worship of Baal was found in most Phoenician cities. Baal was found in many aspects, as Baal-saphon (Lord of the North), Baal-shamim (Lord of Heaven), Baal-lebanon (Lord of Lebanon) and in other variants. Most famous was the Baal of Tyre, Melqart, for whom King Hiram built a temple in the tenth century. In the course of time Melqart also attained a character of maritime deity. Dagan ("Dagon" in I Sam. 5:1-7) had a similar fate, while Resheph was assimilated with Apollo. In Sidon royal names (cf. Eshmun-azar) bear witness to the importance of the god Eshmun (in the fourth century). The ruins of his temple, which have been dug up, do not indicate anything about his cult, but he was in Greek times identified with Asclepius. Eshmun was not alone to dominate the worship of the Sidonians. The goddess Ashtart (Astarte, OT ASHTORETH), with her cult prostitution, was well known also in other countries (I Kings 11:5, 33; II Kings 23:13). It was not only King Solomon who built temples for Ashtart; Eshmunazar also boasts that he built a temple for her in Sidon. His father, King Tabnit, called himself priest of Ashtart. In Gebal (Byblos) it was also Ashtart who was the chief deity, and in Beirut it was Baalat Beirut.

Ashtart was seldom worshiped alone. On her side was often a male deity, in Phoenicia usually known as ADONIS, meaning "Lord." Adonis was a young god who was killed by a wild boar when he was out hunting. Ashtart, who loved him, descended to the nether world to wrest him out of the hands of death. The usual name of this god in the Semitic world was TAMMUZ. Adonis was a vegetation and fertility god who was supposed to die when the summer heat began. He was the chief figure in a comprehensive fertility cult which reached its peak in a great festival. Worship of Adonis took place also at the Adonis River (Nahr Ibrahim), called so because ferruginous earth colored it red a few times in the year. To the believers this was the blood of the god, and a sanctuary was built at the source of the river, at Afqa. People from Byblos and other parts of Phoenicia came there in the summer to the great festival. Lamentations over the dead god took place, and processions were arranged to places connected with his hunt.

Offerings and sacrifices of the Phoenicians were mainly the usual Semitic ones. Human sacrifices played a certain role, especially in ancient times, and they have given the Phoenicians a reputation of cruelty. Philo tells that human sacrifice was instituted by the gods. It was used for Melqart in Tyre and for Baal Ammon in Carthage, and it continued to be in use for centuries (*see* MOLECH). Apart from that, very little is known about the Phoenician cult. The constantly burning fire in the sanctuaries was seen by foreigners as a symbol of the insatiable greed of the Phoenician gods for human sacrifices. Worship also occurred at "high places," where a holy stone, baetulus, was erected. Sometimes a wooden pillar, ASHERAH, was also set up. These witness a popular cult which had close parallels in Syria and Canaan.

PHOENIX fē'nĭks [Φοῖνιξ]. A harbor of Crete (Acts 27:12), located on the S side of the island and W of Fair Havens (vs. 8). Strabo (*Geography* X.4.3) locates the town of Phoenix on the S side of the isthmus or narrower part of Crete, W of the broader middle part of the island. The exact location of the harbor is much discussed, and depends on the meaning of Luke's narrative in Acts 27:8-15. Fair Havens, not a real harbor but an open roadstead or anchorage, three or four miles E of Cape Matala, was not a safe place for a large grain ship with 276 passengers to winter (even if the alternate reading in vs. 37: "seventy-six persons," is original, this was a fairly large ship). The centurion, who had the final decision, disregarded Paul's advice and agreed with the captain and the owner of the ship and decided to try to reach the harbor of Phoenix and winter there. This implies that Phoenix lay farther W and was a safe harbor for a large ship. When a gentle S wind was blowing, the attempt was made. All went well until the ship had passed close to Cape Matala and was crossing the Gulf of Messara. There a "tempestuous wind, called the northeaster, struck down from the land," from the direction of Mount Ida, and drove the ship W-SW in the direction of the island of Cauda and then on W toward Malta.

The safe harbor at modern Loutro fits almost all of the references to ancient Phoenix. It is on the S shore of the isthmus Strabo mentions. It has about the longitude which Ptolemy gives for Phoenix. A peninsula runs out southward, and an arm of it extends E to give a harbor fully protected on the N, W, and S sides. Only one difficulty stands in the way of identifying this harbor of Loutro with the ancient harbor of Phoenix. This is the description of the harbor in Acts 27:12 as βλέποντα κατὰ λίβα καὶ κατὰ χῶρον. λίψ in the LXX means "south," but in the papyri it means "west" and in the Aristotelian system "west-southwest." Χῶρος, according to Pliny, means "west-northwest." The natural meaning of Acts 27:12 would be: "looking toward the southwest and northwest." This suggests that the harbor opened to the W. Three possibilities have been suggested:

a) The harbor now called Phineka, on the W side of the peninsula whose E side has the harbor of Loutro, was actually the objective of the ship's officers. This gives the Greek its natural sense, but Phineka was a poorer harbor and less easy to reach from Fair Havens.

b) Luke, who had never been at Phoenix, mistakenly thought that the good harbor Loutro opened to the W, when it really opened eastward.

c) The Greek, contrary to the usual meaning the words convey, may be translated from the viewpoint of sailors entering the harbor Loutro as "looking toward the southwest and northwest," thus "looking toward" the direction from which the wind comes, rather than the direction in which it blows. Although this interpretation, which would identify the harbor in mind in Acts 27:12 as Loutro, would give a safe and adequate harbor for such a ship, its interpretation of κατά is so unusual that it must be called at best a possible, but by no means certain, solution.

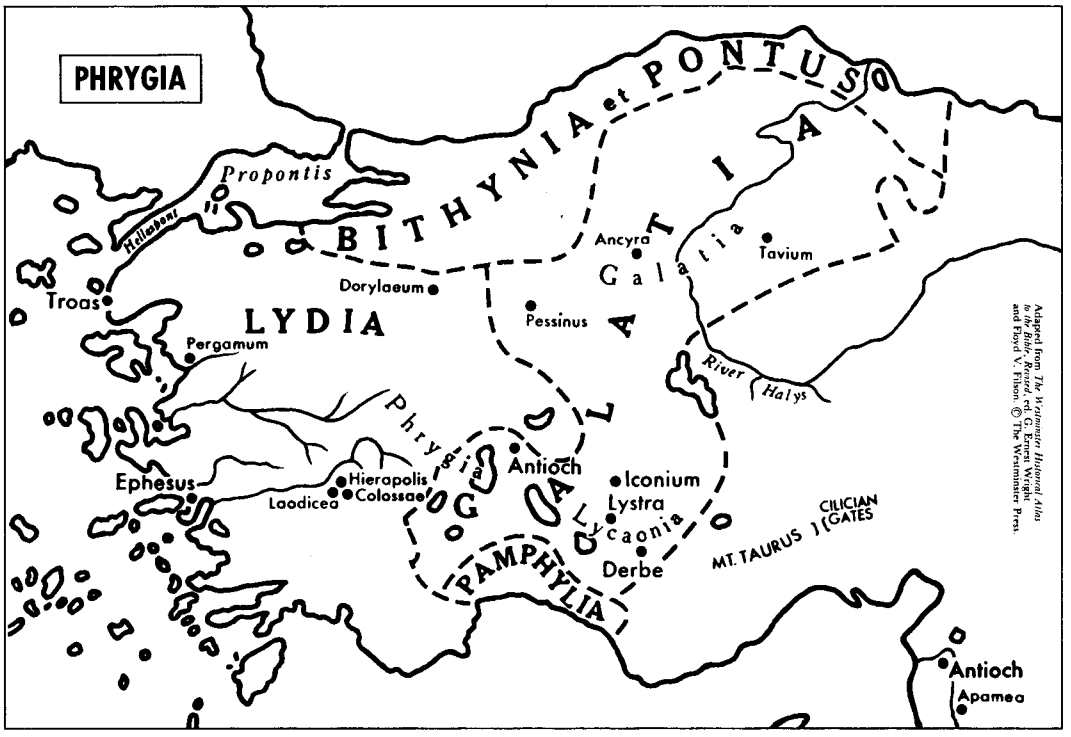
PHOROS. KJV Apoc. form of PAROSH.

***PHRYGIA** frĭj'ĭ ə [Φρυγία]. In the period of written ancient history, the name given to a large area of Asia Minor. The origin of the Phrygians has sometimes been sought in Armenia, but it is more generally thought that they came into Asia Minor from Thrace. There are evidences of the early presence of the Phrygians not only in Thrace but also in Macedonia and beyond. At an early date they or related tribes were found in most of Asia Minor, from the Aegean Sea to the Halys River and from Bithynia to the Taurus Mountains; and they appear in Homer's *Iliad* in association with the Trojans, to whom they are related. The Phrygians of the epic period are mentioned as a vigorous, heroic people, but from the time of their subjection by the Persians they were politically submissive and unimportant, and in later ancient times Phrygian names were considered appropriate for slaves.

1. Geographical limits. The limits of Phrygia varied continually, and it is difficult to define its exact limits at any given time. In NW Asia Minor was Hellespontine, or Lesser, Phrygia, lying S of the Hellespont and Propontis and including the Troad. This recalls the Thracian origin of the Phrygians, and their twenty-five years of sea supremacy, of which Diodorus tells (VII.11). Later invaders from Thrace cut off Lesser Phrygia from Greater Phrygia, which occupied W central Asia Minor, and Lesser Phrygia soon ceased to be Phrygian in life and character. Greater Phrygia had several divisions or recognized areas. The NE portion was taken over by the invading GAULS in the third century B.C. Shortly thereafter, in the NW, a section apparently obtained from Bithynia by Attalus I of Pergamum received the name Phrygia Epictetus ("Acquired Phrygia"); its cities include Cotiaion and Doryleum. This region is wrongly identified with Hellespontine Phrygia by



Strabo (*Geography* XII.4.3); in reality it lay S and a little E of Hellespontine Phrygia. Phrygia Paroreia ("along the mountains") was in the SE part of Phrygia; and at the extreme SE part was Phrygia Towards Pisidia (Strabo XII.8.13), in which Antioch Towards Pisidia was located. Iconium also was often called Phrygian by ancient writers, but at times it was regarded as lying in Lycaonia. In Roman times Phrygia included on the SW the region around Cibyra and the Lycus Valley, with the cities Colossae, Hierapolis, and Laodicea.

The Roman provincial administration of Asia Minor divided Greater Phrygia into two parts. The smaller became a portion of the province of GALATIA; it included Antioch Towards Pisidia and (often) Iconium. The much larger part formed part of the province called ASIA.

Another, unofficial division, rarely used, refers to the high tableland of Phrygia as Upper Phrygia and the low portions as Lower Phrygia. At the very end of the third century or early in the fourth century A.D., when the province of Asia was broken up into seven parts, two new provinces were Phrygia Prima (or Pacatiana) on the W and Phrygia Secunda (or Salutaris) to the E.

2. People and culture. The Phrygians as a people were long subject to alien rulers, and their characteristics must have been affected by their continual mingling with other tribes. So it is difficult to say anything trustworthy and definite concerning their life and character. The references to Phrygians in Homer's *Iliad* would suggest vitality in this tribe, but the Phrygians themselves do not seem to have appealed to an earlier golden age of courage and greatness. They were peaceable, submissive, civilized, and responsive to neighboring influences. They were capable in agriculture, in cultivation of the vine, and in commerce. The great trade routes, which started from the Aegean Sea and the Hellespont and ran eastward through central Asia Minor, crossed Phrygian territory and fostered commercial and cultural interchange there. During the Hellenistic and Roman periods the use of the Greek language naturally spread in this region.

The Phrygian religion, while open to outside influence and so to syncretism, showed a marked tendency to emotional and even orgiastic forms of expression, in which exciting music and frenzied dancing played a part. Prominent Phrygian deities were Rhea Cybele, the mother-goddess, and Sabazius, who was connected with the vital and renewing powers of nature and identified with Dionysus. Thus the sensuous fertility cult and intoxicating revels formed part of Phrygian religious life.

The cosmopolitan population of Phrygia included large numbers of Jews. There is definite evidence that their presence was encouraged by the Seleucid rulers. Seleucus Nicator (312-280 B.C.) granted the Jews "citizenship in the cities which he founded in Asia and Lower Syria"; and Antiochus III (223-187 B.C.), to stabilize conditions among the rebellious Lydians and Phrygians, determined to transport "two thousand Jewish families with their effects from Mesopotamia and Babylonia to the fortresses and most important places" in Lydia and Phrygia (Jos. Antiq. XII.iii.1, 4). Josephus cites other incidents which show that Jews continued numerous in Asia Minor under the Romans and had their privileges confirmed (cf. Jos. Antiq. XIV.x-xii; XVI.vi). Cicero, in his Defense of Flaccus (ch. 28), tells that Flaccus took over from Jews in the province of Asia one hundred pounds of gold at Apamea and twenty at

Laodicea—both cities of Phrygia. These sums represented gifts intended for Jerusalem and have been estimated to represent the annual gift (cf. Matt. 17:24) of fifty thousand Jews.

The Jews of this region were known for their laxity in observing their law. The syncretistic tendency so characteristic of Asia Minor had influenced them also. The Talmud contains a saying that the baths and wines of Phrygia had separated the ten tribes from their brethren. The NT evidence agrees with this report. Paul's Letter to the Colossians opposes a false teaching which mingled Jewish and pagan ideas and reflected a Jewish background which had been freely combined with ascetic and speculative features. The readiness with which many Phrygian and Lycaonian Jews of S Galatia accepted Paul's message shows an openness to a new teaching, and their readiness to live in the church with Gentiles and without strictly observing the Mosaic law suggests a background of laxity in ceremonial practice. The fierceness with which the Jewish leaders in this region opposed Paul suggests that they were conscious of a tendency among Jews to drop features of orthodox Jewish observance; in their eyes Paul was one more promoter of a laxity to which Jews in their region were thought to be all too prone (Acts 13:45, 50; 14:2, 19).

3. Christianity in Phrygia. The spread of Christianity in Phrygia in the apostolic age may be discussed in three parts:

a) It is a question what bearing Acts 2:10 has on the subject. Jews from Phrygia, this verse states, were present in Jerusalem at the first Pentecost, and heard Peter preach. Possibly, therefore, Phrygian Jews were among his three thousand converts (vs. 41) and carried the gospel back to Phrygia. But this can never be proved.

b) The travels of Paul in Phrygian Galatia raise difficult problems, and the conclusions reached determine the destination of Paul's Letter to the Galatians (*see* GALATIANS, LETTER TO THE). Paul's route on his first visit is clear. Coming from Pamphylia, he visited two Phrygian cities, Antioch Towards Pisidia and Iconium, and two Lycaonian cities, Lystra and Derbe; then he retraced this route (Acts 13:14–14:24). On his next visit Paul left Syrian Antioch, passed through the Cilician Gates, and reached Derbe and Lystra (15:41–16:1). Then, with Silas and Timothy, he passed through τήν Φρυγίαν καὶ Γαλατικὴν χώραν (16:6), which means either "Phrygia and the Galatian region" or "the Phrygian and Galatian region." In the former translation "Phrygia" is a noun and refers to the region which contained Iconium and Antioch Towards Pisidia; "the Galatian region" was a separate region, that part of the province of Galatia located N of Phrygia and inhabited by the Gauls. According to this view, Paul went into at least part of the region where Pessinus, Ancyra (modern Ankara), and Tavium lay. The latter translation, however, says only that Paul passed through one region, which in traditional usage was part of Phrygia but in Roman provincial organization was in the S part of Galatia. This means the area of Iconium and Antioch Towards Pisidia, and makes no mention of any visit to the Gauls in N Galatia. On his third visit to the Phrygian region Paul apparently again came from Syrian Antioch, reached upland Asia Minor through the Cilician Gates, and passed through in order τὴν Γαλατικὴν χώραν καὶ Φρυγίαν (Acts 18:23). This means either "the Galatian region and Phrygia" or "the region which is both Galatian and Phrygian." The former translation means that Paul first swung N through N Galatia, the home of the Gauls, and then turned SW to go through Phrygia and on to Ephesus (19:1). The latter translation means that Paul, coming from the Cilician Gates, went through S Galatia—i.e., through the region still called Phrygia in popular usage. He thus passed through Iconium and Antioch Towards Pisidia before going on westward to Ephesus. This latter interpretation says nothing of any visit to the Gauls of N Galatia. While a decisive conclusion is not possible, the interpretation of Acts 16:6; 18:23 which finds mention only of visits to the churches of S Galatia is perhaps preferable. In any case, the frequency with which Paul visited the Phrygian region of S Galatia is noteworthy.

c) The history of the churches of the Lycus Valley is a part of the story of Christianity in Phrygia. It must be recalled that in the apostolic age most of Phrygia lay in the province of Asia (Phrygia Asiana). Paul did not himself preach in the Lycus Valley, where Colossae, Hierapolis, and Laodicea lay (Col. 2:1; 4:13). When he came westward from central Asia Minor to Ephesus (Acts 19:1), he either did not come by way of the Lycus Valley or, if he did, he did not stop to preach in these cities. If, as seems probable, the original reading in Col. 1:7 is ὑπὲρ ἡμῶν, "on *our* behalf," it was Epaphras who represented Paul in evangelizing the Lycus Valley and ministering to the churches there (cf. Col. 4:13). Archippus also was a minister at Colossae (vs. 17). Later tradition says that John the Apostle and Philip worked in this area in the decades after Paul's death. The mention of both Asia and Galatia in I Pet. 1:1, written to churches in a time of hardship and threatened wholesale persecution, makes it clear that in the latter part of the first century the churches of Phrygia had to withstand active opposition. The inclusion of Laodicea in the seven churches singled out for special messages in the book of Revelation (3:14) also throws light on conditions in Asian Phrygia toward the end of the first century A.D. The church at Laodicea is described as well-to-do, complacent, spiritually poor, and facing a persecution that could never be withstood by a lukewarm faith.

The second century shows Christianity strong in Phrygia but marked by dissension. Great leaders, such as the bishops Papias and Apollinaris of Hierapolis, arose in this region. Martyrs proved the courage and dedication of the church. But the native Phrygian bent for highly emotional religious life comes to mind when the Montanist movement, with its appeal to visions and the new era of the Spirit, becomes prominent in Phrygia. The third century saw the churches of the region numerically dominant, and the entire population of one city (Eumenea?) was said by Eusebius (Hist. VIII.11.1) to have been Christian. Martyrdoms continued in this century, and under Diocletian (A.D. 301-12) this city was completely destroyed and persecution was strong in the region. With the coming of more peaceful times the church leadership of Phrygia became more in harmony with that of the wider church.

PHYGELUS fĭ'jə ləs [Φύγελος, a fugitive(?)] (II Tim. 1:15). Someone who, with HERMOGENES and "all who are in Asia," deserted Paul (Asia is here the Roman province occupying the W tip of Asia Minor). The desertion was probably the result of theological differences or of a fear of sharing in Paul's fate in Rome.

B. H. THROCKMORTON, JR.

PHYLACTERIES fĭ lăk'tə rĭz [φυλακτηρία; Aram. תפלין] (Matt. 23:5). Small receptacles, containing some verses of scripture, which were bound on the forehead and arm during prayer. The Greek word meant, before and during NT times, "safeguard," "means of protection," "amulet." It passed to the Vulg. and entered English Bibles through the Genevan Bible of 1557. Jesus is said to accuse the scribes and Pharisees that "they do all their deeds to be seen by men; for they make their phylacteries broad and their fringes long." Jesus thus says that ostentatiousness leads Jewish leaders to wear phylacteries broader and fringes longer than is necessary. He does not condemn the custom of wearing phylacteries, but the spirit that corrupts a custom.

By "phylacteries" Matthew meant the Aramaic plural of the Hebrew word תפלה, "prayer"—the small leather prayer cases. The Mishna (Shebu. 111. 8, 11, etc.) required male Israelites above thirteen years of age to "lay the tephillin" at daily morning prayer. These two cubical leather boxes were worn on the head and on the left arm.

The head phylactery had four small compartments in which the following four passages of scripture were concealed: Exod. 13:1-10, 11-16; Deut. 6:4-9; 11:13-21; though there is some doubt as to the exact order. In these four passages Jews discovered the warrants for the wearing of the phylacteries. The head phylactery also bore two imprints of the Hebrew letter ש—one on the left of the wearer, with the usual three prongs of the Hebrew letter; and the other on the right, with, exceptionally, four prongs, presumably as a reminder concerning the four passages of scripture. The head phylactery was firmly sewn by twelve stitches, one for each of the twelve tribes of Israel, to a firm base of thick leather.

The hand phylactery had but one compartment containing the few scriptures on one parchment.

The phylacteries were held firm by means of long leather straps which passed through flaps. The strap of the head phylactery was tied at the back of the head in a knot shaped like a Hebrew letter ד. Another knot at the end of the strap was formed in the shape of a Hebrew letter י. Thus the three Hebrew letters involved formed the Hebrew word שׁ ד י, which is "Shaddai"—"Almighty"—one of the names for God in the OT. There are, of course, many other features relating to these phylacteries which cannot be related here. The phylacteries must be placed on the body in a certain order (hand first), in certain exact positions, to the accompaniment of certain prayers and benedictions and of Hos. 2:19. After prayers the phylacteries are removed in the reverse order.

The scriptural basis for the custom is found in the four passages of scripture involved in the custom: Exod. 13:9, 16; Deut. 6:8; 11:18. Exod. 13:1-16 sets forth the ritual for the Feast of Unleavened Bread (vss. 3-10), and for the first-born. Both institutions are to be as a mark on the hand, or a memorial (vs. 10) or a frontlet (vs. 16) between your eyes, memorials of the deliverance from Egypt. The other pair of passages in Deuteronomy prescribes the same procedure as part of a larger praxis. In Deut. 6:8—"as a sign upon your hand, . . . as frontlets between your eyes"—the ordinance refers to the words of the Shema in vss. 4-5. That is the natural interpretation of the phrase "these words" in vs. 6; some commentators suggest that the phrase should mean the Deuteronomic law in general, as elsewhere in chs. 5–11, but the reference to the immediate context is more natural. A more general reference is inevitable in 11:18, where the same command appears but with some verbal changes. The two passages prescribe the perpetual remembrance of these words. It should be

From Milik, *Ten Years of Discovery in the Wilderness of Judaea* (London: SCM Press, 1959; U.S.A.: Alec R. Allenson Inc.)

54. A threefold enlargement of part of a phylactery containing the Shema (Deut. 6:4-9); from Wadi Murabba'at

noted that for the memorial (זכרון) of Exod. 13:9 the other three passages have "frontlets" (מוטפות). The etymology is uncertain, but it is this word which is rendered by "tephillin" in the Targums, which lies behind the "phylacteries" of Matt. 23:5. Perhaps the word מוטפות should be read as a singular noun, טטפת, meaning a "round jewel" (cf. Judg. 8:26; Isa. 3:19; M. Shabb. VI.1.5). So the four basic scriptures above speak of signs, frontlets, memorial, jewels, as figures of the rites and words of scripture. Fig. PHY 54.

The question thus arises whether in fact these signs or frontlets are to be interpreted in a figurative sense. Some interpreters have taken the Exodus passages literally, and the Deuteronomic passages figuratively. In Deut. 11:18 "these words," it is claimed, must embrace at least Deut. 5–11, and so a literal fulfilment of the injunction is impossible. Deut. 11:18 may be a reiteration of Deut. 6 and thus a preacher's application of a precise custom in a larger context. Cf., e.g., sermons on the "sacrament of success," the "sacrament of failure," etc. These are figurative, but a sacrament itself is an actual ritual. Apart from 11:18, the other three passages must be taken together either figuratively or literally. Some of the expressions in 6:1-9 are possibly figurative, but others are literal. Exod. 13 is mainly composed of ritual injunctions whose literal enactment was intended. It can be argued verse by verse that the weight of both contexts is for a literal interpretation. Apart from the exegesis of the passages, further considerations support the possibility of a literal interpretation:

a) In Exod. 13:9 the word for "memorial" almost always, if not invariably, has a literal reference. Perhaps its appearance in Exod. 13:9 as a synonym for "frontlet" marks the point at which the literal observation of frontlets began.

b) The increasing tendency to ascribe a real cultic objectivity to many of the words and practices of the Psalms, and the increasing readiness to think of so many psalms as pre-exilic, predisposes a more favorable attitude to the literal interpretation of the frontlet injunctions. Of course, this does not mean that the injunction is necessarily Mosaic, but it is possible to think of the literal fulfilment as something previous to the date of the "documents" (JE) of Exod. 13.

c) Then it must be asked, What is the meaning of a "frontlet between the eyes"? This is essentially a meaningless position so far as the wearer himself is concerned. He is called upon to imagine an object in a position in which he cannot see it except in a mirror. The very idea could have arisen only as an adaptation of similar marks on the forehead. The forehead is a favorite place for ritual signs. The mark or sign (*'ôth*) of Cain placed him under special divine protection (Gen. 4:15). Similarly Ezekiel's cross (Ezek. 9:4, 6; cf. Rev. 7:3; 14:1) and other signs (Pss. Sol. 15:10; Rev. 13:16; 14:9) and marks made by cutting the flesh, tattooing, and mourning customs testify to the widespread nature of the custom. If the frontlets are figurative, then they are figurative applications of literal practices, which themselves later were transformed into actual customs. But it is then clear that to wear these frontlets or phylacteries is a memorial duty laid upon the worshiper, but the actual meaning of them served not only to remind other worshipers of these commands, and of God's law in general, but also perhaps to remind God himself of the obedience and presence of the worshiper. The "memorial" aspect could thus be as ancient an aspect of the "blood on the doorposts," the "sign on the hand," and the "frontlets between the eyes" as the magical, superstitious, and apotropaic interpretation of these things.

It is such considerations as the foregoing which must to some extent correct the views inferred from the fact that the Samaritans apparently did not use them. Similarly the Aramaic תפלין suggests a late date, but it does not follow that the admittedly figurative expressions of Prov. 1:9; 3:3; 6:21; 7:3; etc., mean that "frontlets" were still figurative. The frontlets are expressly mentioned in the Letter of Aristeas (vs. 159) as something very old. It has been claimed that they were in use as early as the fourth century B.C. There must have been centuries of growth in the custom, and in all the complex regulations relating to the custom—possibly, too, the democratization of a custom originally limited to cultic officials, for scribes and Pharisees are condemned by Jesus in Matt. 25:3.

It is doubtful if the commands of Exodus and Deuteronomy were intended literally in the first instance, but it is equally doubtful if the literal fulfilment is to be dated as late as the postexilic period. The cultic reappraisal of religion in Israel predisposes an earlier date for the transformation of the command into a custom.

G. HENTON DAVIES

PHYLARCH fī'lärk. KJV translation of φυλάρχης, referring to a chief officer of a cavalry regiment or military contingent. In II Macc. 8:32 it probably refers to a "commander" (so RSV) in the army of Timothy, who was slain by Judas, although some interpreters (Moffatt, Grimm, Bévenot) follow the KJV and the Vulg. in reading *phylarches* here as a proper name with the Callisthenes of vs. 33, who met a similar fate. However, the form *phylarches* is never found as a proper name. Abel (*see bibliography*) conjectures that the writer may be citing two representative Jewish enemies who had led in the massacres of the Jews in Gilead (I Macc. 5:13, 39 ff). In Deut. 31:28 LXX; I Esd. 7:8 the word signifies a "tribal leader" of Israel.

E. W. SAUNDERS

PHYSICIAN [רפא; NT ἰατρός]. Originally, one who tended and repaired wounds; hence a bandager or healer. *See* MEDICINE.

PI-BESETH pī bē'zĭth [פי־בסת; LXX βουβαστος] (Ezek. 30:17). A city in the Nile Delta; capital of the eighteenth Lower Egyptian nome.

Pi-beseth occurs only once in the Bible, in Ezekiel's prophecy against Egypt, where it is coupled with On (*see* HELIOPOLIS). This city, known in Egyptian as *Pr-B³st.t*, from which come Hebrew *Pî-bheseth* and Greek Βουβαστις, was situated on the right shore of the old Tanite branch of the Nile, SE of present-day Zagazig; the site is presently known as Tell Basta. The ancient name means "house of Bastet" (an Egyptian goddess represented in the late period by the cat). The most complete description of Bubastis which has survived from ancient times is that of Herodotus (II.60.137); information must otherwise be gleaned from its mention in Egyptian texts and from the various monumental remains discovered at the site.

Bubastis is a very ancient city with remains dating well into the Old Kingdom. It was not until very late in its history, however, that it achieved political importance as the capital and chief residence of the Twenty-second, or Libyan (*see* LIBYA), and Twenty-third dynasties, *ca.* 950-750 B.C.

T. O. LAMBDIN

PICK [חרוץ, *from* חרץ, to cut in] (II Sam. 12:31=I Chr. 20:3); KJV HARROW. A sharp instrument made of iron. According to the RSV rendering, David set the defeated Ammonites to work with saws, iron picks, and iron axes, and made them toil at the brickkilns. It is an old controversy whether the Ammonites were tortured or set to various kinds of hard labor (cf. KJV and RSV). H. F. BECK

PICTURE. The translation of:

a) משכית (Ezek. 8:12; KJV Num. 33:52; Prov. 25:11), probably a carving. *See* FIGURED STONE.

b) דמות (Ezek. 23:15), lit. "likeness," as in Gen. 1:26.

c) שכיה (Isa. 2:16 KJV), more likely, from Egyptian *šk.ty*, a kind of ship (RSV "craft").

H. F. BECK

PIECE (OF MONEY). **1.** קשיטה, *qᵉšîṭâ* (Gen. 33:19; Job 42:11; RSV mg. QESITAH), a weight of unknown origin and size.

2. KJV translation of στατήρ (lit., "stater"; Matt. 17:27; RSV SHEKEL). At the time of Augustus the tetradrachma of Athens was called a stater, a name which was also applied to all other silver coins of the same value. Only two of these issues circulated in Palestine at the period of the NT: the tetradrachma of Antiochia and the shekel of Tyre. Jesus offered such a coin as tribute for himself and Peter. Since ancient times it was the duty of each Jew to pay annually a sacred tribute of half a shekel to the temple in Jerusalem. When half-shekels were no longer current, didrachmas took their place, so that the tax was finally simply called "didrachma." But didrachmas, too, were not circulating any more in NT times, so that there remained the alternatives either to substitute two Roman denars or to pay one tetradrachma or one Tyrian shekel for two people. The reference in Matt. 17:27 gives, therefore, a correct statement of the numismatic situation in that period.

PIGEON [גוזל, young bird; יונה, moaning one (*alternately* DOVE), *cf.* אנה, to mourn; περιστερά (*alternately* DOVE)]. Any of a widely distributed subfamily of birds (*Columbinae*) comprising numerous genera. The term "dove" is rather loosely applied to many of the smaller species (*see* DOVE; TURTLEDOVE). Tristram, who found the pigeon tribe very numerous in Palestine, noted that two kinds of rock pigeon lived there throughout the year (cf. Jer. 48:28); a wood pigeon (*Columba palumbus palumbus*), however, was only a winter visitor, and the stock dove (*Columba oenas oenas*) a summer visitor.

The term "pigeon" is usually employed when one of these birds is in a cultic or sacrificial role (cf. "young pigeon" for גוזל in Gen. 15:9). In Leviticus bird offerings of pigeons and turtledoves are recognized as the least costly of all the animal offerings, and we may surmise that they were the commonest. They serve as burnt offerings and as sin offerings (Lev. 1:14; 5:7, 11), and they have a part in the rituals for purifying a woman after childbirth (12:6, 8), for cleansing a healed leper (14:22, 30) and a person cured of a sexual irregularity (15:14, 29). In Num. 6:10 either pigeons or turtledoves are used to purify a Nazirite who has incurred uncleanness. It was in conformity with the Levitical law that Mary made the traditional bird offerings after the birth of Jesus (Luke 2:24). In Jesus' time merchants were permitted to sell pigeons in the temple area for these various purposes (Matt. 21:12; Mark 11:15; John 2:14, 16). The traditional procedures about bird offerings, which were supervised by a special temple official (M. Shek. 5.1), became very complicated in the course of time (see M. Kinnim, where some of the troublesome points are elucidated). The opinion of Rabbi Hisma, quoted in M. Ab. 3.19, was: "The rules about bird offerings and the onset of menstruation—these are the essentials of the *Halakoth.*"

W. S. MCCULLOUGH

PI-HAHIROTH pī'hə hī'rŏth [פי־החירת]. Alternately: HAHIROTH (Num. 33:8). A town in the E Delta near which the Israelites encamped during the initial stages of the Exodus.

In its present form Pi-hahiroth cannot be identified with any known town or city in the E Delta. The only information supplied by the biblical narrative is that Pi-hahiroth lay near BAAL-ZEPHON and Migdol; Num. 33:7 qualifies Pi-hahiroth with the phrase "which is east of Baal-zephon."

The LXX treats this name very strangely: (*a*) in Exod. 14:2, 9, the Hebrew phrases לפני פי החירת and על פי החירת are translated ἀπέναντι τῆς επαύλεως, "opposite the encampment (or unwalled city)," as though the MT had החצרות or the like; (*b*) in Num. 33:7, על פי החירת is rendered by ἐπὶ στόμα Ειρωθ, where פי is not taken as part of the name, but as the Hebrew word פי, "mouth"; (*c*) in Num. 33:8, the MT omits the פי of the name, and the LXX does likewise with ἀπέναντι Ειρωθ, "opposite Eiroth."

The most reasonable of the suggested identifica-

tions is that of A. H. Gardiner, who sees in the Hebrew an altered form of Egyptian *Pr-Ḥthr*, "the house of Hathor." A *Pr-Ḥthr* is mentioned in Pap. Anastasi III.3.3, a report on the Delta residence Pi-Rameses-Miamun, and again in an adoption stela of Nitokris between the cities of Tanis and Bubastis. Both of these references make it clear that this is not the better-known *Pr-Ḥthr* of the W Delta. A recently discovered stela of Kamose also names a *Pr-Ḥthr* in the N, but the exact location is not clear from the text.

Bibliography

1. Sources. ***a. Greco-Roman.*** Pilate receives but one mention in Roman sources, and in connection with Jesus. Tacitus (Ann. XV.44) speaks of the execution of Jesus by Pontius Pilate in the reign of Tiberius. Since Tacitus wrote *ca.* 115, and Christian tradition could have supplied this scanty bit of information, we are in effect bereft of sources which are neither Jewish nor Christian.

b. Jewish. Philo, in *Legation to Caius* 38, relates an incident about Pilate and then characterizes him. The incident was the hanging in the palace in Jerusalem of gilded votive shields inscribed with the emperor's name. Pilate was ordered by the emperor to remove the shields. Philo ascribes to Pilate rape, insult, murder, and inhumanity.

Josephus (Antiq. XVIII.iii.1; War II.ix.2) tells of an occasion when Jewish scruples were offended by troops who entered Jerusalem bearing standards with the image of the emperor on them. A crowd gathered outside Pilate's residence in Caesarea in protest; after five days Pilate had them surrounded in the race course by Roman troops, but determined to accede to their wishes rather than run the risk involved in opposing them. On another occasion, Pilate's intention to use funds from the temple treasury for constructing an aqueduct aroused a protest which was silenced by troops with bludgeons (Antiq. XVIII. iii.2; War II.ix.4). A third incident involved the Samaritans. These, led by an impostor, promised to reveal the place of concealment on Mount Gerizim of sacred vessels supposedly stored there since the time of Moses. When the Samaritans armed and gathered at the mountain, troops dispersed them, and thereafter the leading and notable Samaritans were executed. Complaint was made to the Roman legate to Syria, Vitellius, with the result that Pilate was displaced and sent to Rome (Antiq. XVIII.iv.2).

c. NT. In the NT, Jesus is delivered to Pilate after being examined, or tried, before the Sanhedrin. In § 3 *below*, the various accounts are examined in detail. Luke 13:1-5 alludes to Pilate's massacre of Galileans; the account is peculiar to Luke, and is not mentioned in Josephus. Three times in Acts (3:13; 4:27; 13:28) allusion is made to Pilate. No mention is made in the genuine letters of Paul (perhaps mention might have been expected in I Cor. 15:3); a mention is found in I Tim. 6:13.

2. His character. Philo and Josephus unite in attributing dire and evil practices to Pilate, so that a dark character is ascribed to him. Early Christian literature in general accords with this view, but later literature progressively assesses him more favorably. Too little is known of Pilate for any secure characterization of him to be attempted. The circumstance that this procuratorship lasted for ten years is used by some historians as a basis to doubt the Jewish and early Christian disparagement of him, and to see him rather as a skilful and successful administrator.

3. The trial of Jesus. ***a. Mark.*** Mark 15:1-15 relates that after the night trial the chief priests, elders, and scribes held a morning consultation. They bound Jesus and led him to Pilate. "Pilate asked him, 'Are you the King of the Jews?' And he answered him, 'You have said so.' " After the chief priests accused Jesus of many things, and Jesus made no further answer, "Pilate wondered." In accordance with the custom of releasing a prisoner at the feast, Pilate asked the crowd if he should release the "King of the Jews." The crowd, however, asked him to release an insurrectionist, Barabbas. Pilate asked what he should do with Jesus; the crowd cried out, "Crucify him." When Pilate asked what evil Jesus had done, "they shouted all the more, 'Crucify him.' " Thereupon Pilate, "wishing to satisfy the crowd, released for them Barabbas; and having scourged Jesus, he delivered him to be crucified."

Pilate in Mark appears as a more or less impartial judge, without special interest in or knowledge of Jesus. While the blame for the Crucifixion is put on the Jews, Pilate is not exonerated for his part in the affair. Some commentators have seen in Pilate a submissive weakness; this, however, goes beyond the direct evidence. It is indifference, rather than weakness, which Mark portrays.

b. Matthew. Matt. 27:1-26 recasts Mark's account in a number of minor insignificant details. A somewhat notable addition peculiar to Matthew (27:19) relates that Pilate's wife sent word to him while he was sitting in the judgment seat, saying, "Have nothing to do with that righteous man, for I have suffered

much over him today in a dream." A second addition (vss. 24-25) depicts Pilate as washing his hands before the crowd and proclaiming his innocence in Jesus' death. The people answered, "His blood be on us and on our children!"

By these additions Matthew had set under way a process which was to grow: the progressive exoneration of Pilate and the placing of full blame on the Jews.

c. Luke-Acts. Luke 23 is a drastic reworking of Mark; some suppose that Luke uses some source in addition to Mark, but it is more likely that Luke is engaging in free composition than in the use of many sources (*see* LUKE § 5*a*). As Luke relates matters, Jesus is brought before Pilate, and after one question Pilate states that he finds no crime in Jesus. At the charge by the crowd that Jesus was stirring up people from Galilee to Jerusalem, Pilate took advantage of the presence in Jerusalem of Herod Antipas, the tetrarch of Galilee, to send Jesus over to him. Antipas questioned Jesus; his soldiers treated him with contempt and mocked him; he arrayed Jesus in gorgeous apparel and sent him back to Pilate. Luke adds that Antipas and Pilate became friends that day.

Pilate states a second time that he has found no crime in Jesus, nor has Herod Antipas. Again, on the question of releasing Jesus or Barabbas, Pilate states for a third time that he has found no crime in Jesus. Yet on the insistence of the crowd he turns Jesus over to them.

In Matt. 27:28-31; Mark 15:17-19, the indignities heaped on Jesus come from Roman soldiers; Luke has transferred these and attributes them to the soldiers of Herod. This, together with Pilate's triple assertion of Jesus' innocence, and his citation of Antipas' declaration of that innocence, are consistent with recurring motifs in Luke: that Jesus was innocent of any violation of Jewish law or practice; that Jesus, and in Acts, Peter and Paul, were undeviatingly loyal Jews; that Christianity was no threat to Rome, for no difficulties ever arose except through the malevolent interference of Jews, and the like. Therefore, the Crucifixion in Luke did not result from condemnation by any Jewish body (Luke's accounts of the "trial before the Sanhedrin" [22:54-71] omits the charge of blasphemy of Mark 14:64; Matt. 26:65, and the conclusion in the same verses that Jesus deserved death). So dominating are these themes in Luke's account that it is questionable whether the Pilate represented in his account is truly the historical figure, or only a marionette necessary to Luke's tendentiousness.

It is obvious, as many scholars have noted, that the Synoptic gospels take a positive step toward the tendency of the later apocryphal writings to coat a historical kernel with a thick layer of legend.

The reference in Luke 13:1-5 to the slaughter of the Galileans, unknown in Josephus, is occasionally thought to be a confusion on the part of Luke with Josephus' account (*see* § 1*b above*) of the slaughter of Samaritans; but this latter took place after the time of the Crucifixion. It is wiser to admit that Luke's allusion is unknown than to strain to make it conform with the Samaritan item in Josephus.

Luke 3:1 is only a bare mention of Pilate, this in a context in which Luke is fixing his chronology. The three passages in Acts need listing but no special comment.

d. John. John 18:28–19:16 presents significant differences when comparison is made with the Synoptic accounts. Jesus is brought outside the PRAETORIUM (1), and Pilate comes out to them, to decline to receive Jesus and to suggest that the Jews themselves should execute Jesus. They reply that it is illegal for them to put a man to death. Pilate brings Jesus into the Praetorium; there a discussion on kingship takes place, and Pilate asks the question: "What is truth?" Pilates goes out to the people to declare Jesus' innocence. On their persisting in demanding the death of Jesus, Pilate has Jesus scourged, and his soldiers mockingly dress Jesus in royal garb, though with a crown of thorns. Pilate goes out a second time to declare Jesus' innocence, but in vain. Jesus then tells Pilate: "You would have no power over me unless it had been given you from above; therefore he who delivered me to you has the greater sin." Then a third time Pilate sought to release Jesus, but finally turned him over to be crucified. A titulus was written over the cross: "Jesus of Nazareth, the King of the Jews."

This account in John has two important purposes. It goes beyond the Synoptic gospels in exculpating the Romans and blaming the Jews. It also accounts for the circumstance that the divine Christ permitted himself to undergo this fate of crucifixion by asserting that Pilate was only a minor and passive character in the working out of an elaborately worked-out divine scheme. John reflects theology and Jewish-Christian controversy rather than history.

e. I Tim. 6:13. This verse says that Jesus, when he was before Pilate, "made the good confession." It is a bare mention of Pilate.

4. History and legend. *a. NT.* Modern scholarly judgment holds Pilate's role as depicted in the NT to be largely legendary. The character studies of him found in earlier scholarly literature are therefore to be dismissed as gratuitous, and are not to be embraced as historically sound. Neither the Christian nor the Jewish depiction of Pilate is historical, but each is a product of varied and varying biases.

"Legendary" implies that a historical kernel has undergone growth and development. The bare fact that Pilate was procurator in Jesus' time, though it lacks direct corroboration, need not be doubted. The active participation of Romans in the Crucifixion is also sound history, for unless it were unmistakably a part of early tradition—and thereby embarrassing to the church, which was eager to attract Romans—it surely would not have been created out of the whole cloth.

There is as much justice in translating I Cor. 11:23: "the Lord Jesus on the night when he was *handed over*," as in translating: ". . . when he was *betrayed*." In either case, however, a reminiscence of such a Roman official as Pilate is unquestionably contained in the passage.

Hence, one can conclude that, however legendary are the gospel accounts, the bare fact of Pilate's having a part in the death of Jesus is historical.

b. Apocryphal writings. Certain apocryphal writings increase the legendary both in extent and in tone; more details come to be presented, and also Pilate changes from being regarded neutrally or with some slight hostility and emerges rather as a hero, and even as a Christian. E.g., Eusebius (Hist. II.7) cites unnamed earlier writers to the effect that Pilate committed suicide in the reign of Caligula. The Gospel of Peter suggests that Pilate had withdrawn entirely from the trial proceedings against Jesus, whose condemnation came exclusively from Herod Antipas and Jews. Tertullian (Apol. 21), in depicting Pilate as a Christian at heart (*pro sua conscientia Christianus*), only makes explicit what the Gospel of Peter implies.

A certain work about Pilate is known by various names: the Gospel of Nicodemus, *Gesta Pilati*, and *Acta Pilati*. Justin Martyr (Apol. I.35, 48) speaks of an "Acts under Pontius Pilate." Most scholars see in the Gospel of Nicodemus a work of the fourth or fifth century, and hence Justin, who flourished *ca.* 150, is alluding probably to some work other than Nicodemus.

Tertullian (Apol. 21) speaks of a report from Pilate to the emperor (*see bibliography*). A similar letter exists, the Letter of Pilate to Herod (and also the Letter of Herod to Pilate; these are appended to the Gospel of Nicodemus). It is usually supposed that what Tertullian saw or heard about was an earlier version than these which have survived.

c. Alleged conversion to Christianity. Pilate's wife is unnamed in the NT; in extracanonical literature she acquires the name of Procula or sometimes Procla. The Eastern church beatified her; her date is October 27. The Coptic church honors Pilate and Procla on June 25, making him both a saint and a martyr.

Out of the apocryphal tradition that Pilate's corpse was carried to France, a hill near Vienne bears his name. Seventeenth- and eighteenth-century German writers embellished the apocryphal accounts even further.

Bibliography. A. Stülchen, "Pilatusakten," in E. Hennecke, ed., *Handbuch zu den Neutestamentlichen Apokryphen* (1914), pp. 143-52. Commentaries are ample—e.g., Klostermann on Matthew, Mark, and Luke; Bultmann on John.

Special studies: Two works which deal only passingly with Pilate, but which may be found helpful, are: A. F. Findlay, *Byways in Early Christian Literature* (1923), pp. 105-7; K. L. Schmidt, *Kanonische und apokryphische Evangelien und Apostelgeschichten* (1944), pp. 51-65. A translation of Tert. Apol. 21 (on a report from Pilate to the emperor) is in M. R. James, *The Apocryphal NT* (1924), p. 146. F. Morison, *And Pilate Said* (1924), though pleasant to read, has limited scientific value.

S. SANDMEL

PILATE, ACTS OF. A passion gospel, not earlier than the middle of the fourth century, which in its present form consists of two sections: (*a*) Part I, an account of the trial of Jesus before Pilate and of his crucifixion (chs. 1–11), and the subsequent acts of the Jewish Sanhedrin, which led to positive proofs of his resurrection and ascension (chs. 12–16); (*b*) Part II, an account by two eyewitnesses, who had themselves returned from the land of the dead, of Christ's descent to hell and rescue of those there held captive (chs. 17–29).

Part I is an imaginative amplification of the accounts of the trial, passion, and resurrection of Jesus, heavily dependent upon the four canonical gospels and the early Christian confidence that Pilate must have made an official report. The present account simply heightens the apologetic note, already present in the canonical gospels, that Pilate's act was forced upon him, against his better judgment, by the hostility of the Jews. Many fanciful details are added, at times far from unskilfully. At the trial testimony is given by many witnesses, among whom are twelve men who assert that Joseph and Mary were married and consequently Jesus was not born in fornication. Joseph of Arimathea and Veronica (identified as the woman with the issue of blood) also bear witness. When Jesus enters the Praetorium, not only do Pilate's attendants show him the most elaborate respect, but the imperial standards miraculously bow before him. At the centurion's report of Jesus' death, Pilate shows the deepest contrition. The proof of the Resurrection and the Ascension is guaranteed by three men—a priest, a rabbi, and a Levite—who report that they themselves witnessed his ascent on the mountaintop. A search for the body was undertaken at the insistence of Nicodemus, in keeping with Elisha's demand following the similar departure of Elijah. Of course, no body was found, but the searchers discovered Joseph of Arimathea, who had been imprisoned by the Jews in their rage at his earlier favorable testimony, but who had surprisingly vanished from the locked prison cell, released, as he now assures his audience, supernaturally through the direct action of Jesus himself.

Attempts to date this writing in the second century, on the assumption that it is to it that Justin Martyr refers in his mention of Pilate's report to the emperor, have occasionally been made, but are quite unconvincing. Justin's word (Apol. I.35.9) simply attests the early confidence that Pilate must have made a report of so significant an event. The earliest apparent reference to the book is by Epiphanius (*Heresies* I.1) toward the end of the fourth century. Eusebius does not know it, as his references to a malicious pagan forgery, which he styles "Memoirs of Pilate" and which he describes as "full of every kind of blasphemy against Christ" (Hist. IX.5.1; cf. I.9.3; I.11.9), make clear. Thus A.D. 350 would appear a not unlikely date for its composition. That it was written to provide a Christian counterblast to this pagan forgery, which Eusebius says had been recently produced and introduced into the schools by order of the Emperor Maximin, is a possible, but far from certain, conjecture.

Part II, the *descensus ad inferos*, is the lively and romantic filling out of the early belief: "He went and preached to the spirits in prison" (I Pet. 3:19), which theme, in variously amplified forms, is so common a note in the writings of the early fathers. Here it is worked out with garish detail and elaborate rhetoric. At the insistence of Joseph of Arimathea—the prominence of Joseph in both accounts may well have caused their subsequent union—two sons of Simeon, now living in Arimathea, write out their amazing experience. They had died but now are alive once more and in a position to record their visit to the underworld and what had happened there: the

dazzling light which had suddenly blazed out to the delight of the waiting saints; the arrival of Satan in glee to report to Hades his new, august victim; Hades' fear that once again she was to be worsted (as in the case of Lazarus); the arrival of the Lord; his handing of Satan over to the now wrathful Hades; the setting up of the cross and the ascension of Christ and the saints; a quick view of paradise, in which were Enoch, Elijah, and the recently arrived penitent thief. Since the written accounts of both men agreed exactly, the Jews were much disturbed. Nicodemus and Joseph pass on the word to Pilate, and he includes it in the public book of his judgment hall.

Opinions differ as to the relative age of parts I and II, although most would agree that they were not joined until the fifth century. A prologue to the joint work, appearing in many of the MSS, claims that the translator (variously styled Ananias, Aeneas, and Emaus) had discovered the work in Hebrew, as Nicodemus had written it, and had translated it into Greek in the year 425.

This, together with the conspicuous prominence of Nicodemus in the narrative, may account for the title "Gospel of Nicodemus," which the writing regularly has in the Latin tradition after the fourteenth century. Epiphanius had styled it "Acts of Pilate." Many older MSS bear the title "Memorials of Our Lord Jesus Christ Done in the Days of Pontius Pilate." To Pilate is never ascribed the composition of the book, but solely its preservation.

Part I is extant in many Greek MSS, the oldest of which are commonly dated in the twelfth century. A much inferior Greek text containing both Part I and Part II is found in many much later MSS (fifteenth-seventeenth centuries), and is replete with many garish additions. Part I is also extant in Coptic, Syriac, and Armenian. The whole composite work is found in two Latin versions. The older of these is commonly ascribed to the fifth century, and is the form in which it made its widest contacts in the West. It exerted a very wide influence, being regarded in many circles as a fifth witness to the Passion and the Resurrection, and, as such, virtually canonical. It was taken over nearly complete in the *Speculum Historiale*, greatly influenced the passion plays of the fifteenth century, and has left many other impressions both in literature and in art.

In the course of time many appendixes came to be joined. One of them, standing at the end of the Latin version, and inserted in Greek translation into the Acts of Peter and Paul (*see* PETER AND PAUL, ACTS OF) and the (Pseudo-Marcellus) Passion of Peter and Paul (*see* PETER AND PAUL, PASSION OF), is a letter purporting to be from Pilate to Claudius, telling of the trial and reported "lest some other should lie unto thee and thou should'st deem right to believe the false tales of the Jews." *See also* APOCRYPHA, NT.

Bibliography. The appendixes, including various letters purportedly exchanged between Pilate, Tiberius, and Herod; a Latin tradition of Pilate's death, and the sensational story (Greek) of Joseph of Arimathea (totally distinct from the Latin Narrative by Joseph of Arimathea [*see* JOSEPH OF ARIMATHEA, NARRATIVE BY]), in which the thieves play a lively part, may be found, together with the translation of the book itself, in M. R. James, *The Apocryphal NT* (1924), pp. 94-165. A well-selected bibliography of editions and studies is given by J. Quasten, *Patrology* (1950), I, 118.

M. S. ENSLIN

PILDASH pĭl'dăsh [פלדש] (Gen. 22:22). The sixth son of Nahor and Milcah. If a tribal name, the location is unknown but probably to be sought in N Arabia with other Nahorites.

PILGRIMAGE. The KJV translation of מגור (RSV "sojourning"; *see* SOJOURNER) in Gen. 47:9; Exod. 6:4 (cf. "pilgrims" in Heb. 11:13; I Pet. 2:11); also of the RSV in Ps. 119:54.

The purpose of a religious pilgrimage is to visit and worship at the place where a unique manifestation of divine activity has occurred, and may be expected to occur again, or where some particularly sacred memory is preserved. Thus the ancient centers of pilgrimage in Israel were repositories of traditions about their founding (cf. Bethel [Gen. 12:8; 28:10 ff; 31:13; 35:15]), as well as related historical memories (*see* HIGH PLACE). Although pilgrimage as part of Israel's life and worship (*see* WORSHIP IN THE OT) is never described directly in the OT, various allusions indicate the part pilgrimages must have played.

The basis of Israel's early life as a federation of tribes in Canaan appears to have been those times of assembly, either for the cultic renewal of the COVENANT with Yahweh which bound them together, or for mutual defense in a holy war (*see* WAR, IDEAS OF) under Yahweh's leadership. The covenant festival then became the occasion of a regular pilgrimage, perhaps yearly, to the central sanctuary of the tribal federation where the ark of Yahweh reposed (*see* ARK OF THE COVENANT)—e.g., Shiloh in I Sam. 1:3 ff (cf. 3:3; 4:4; cf. also Judg. 20:26-27, where "before Yahweh" apparently means "in the presence of the ark of the covenant).

M. Noth finds evidence of an ancient regular pilgrimage to Mount Sinai (cf. I Kings 19:8 ff; the basis of his study was a careful analysis of Num. 33:1-49), while A. Alt has suggested the possibility that Gen. 35:1-7 preserves the tradition of a cultic pilgrimage from Shechem to Bethel. *See* BIBLIOGRAPHY.

During the period of settlement in Canaan, Israel took over many Canaanite elements of worship, including agricultural festivals (*see* FEASTS AND FASTS) and places of worship. The pilgrimage to the local sanctuary for the three major feasts of the seasonal cycle became a fixed element of the calendar (cf. Exod. 23:17; 34:23).

The ancient centers of pilgrimage were undoubtedly the scenes of markets and fairs which accompanied the festivals, as well as meeting places for the hearing of legal processes (cf. I Sam. 7:16; 8:1-3; Bethel, Gilgal, and Beer-sheba were among the most renowned cultic centers). The liturgies contained in Pss. 15; 24:3-6; Isa. 33:14-16 are patterned after very ancient rites for the pilgrim's entry into the holy precincts. Expressions of the joys of pilgrimage occur in Pss. 27:1-6; 42-43; 84; 122.

The early prophetic voices denounced pilgrimage to the famous shrines and the attendant rites, which had virtually obliterated worship of Yahweh in the old way (Isa. 1:12-13; Jer. 7:2 ff; Amos 4:4-5; 5:5-6,

21 ff). The Deuteronomic reform (*see* DEUTERONOMY) attempted to abolish worship at the pilgrimage centers, making Jerusalem the only legitimate place of worship (II Kings 23:1-25). After the EXILE pilgrimage to Jerusalem became a sacred dream and obligation of faithful Jews in the DISPERSION. The "Songs of Ascent" or "Pilgrim Songs" of Pss. 120–34 may have been used by postexilic pilgrims en route to Jerusalem. The NT records such an annual pilgrimage to Jerusalem for the Passover (*see* PASSOVER AND FEAST OF UNLEAVENED BREAD) in Luke 2:41.

***PILLAR** [מצבה, *once* מצב (Judg. 9:6), *from* מצב, to raise, to erect; *also* עמוד, column]. Specifically, the translation of מצבה, borrowed by modern archaeologists and biblical scholars and spelled "massebah" (plural "masseboth"), as a technical expression for a stone monument set up as a memorial or as an object of worship. Unspecifically, however, the word "pillar" is used in the English versions of the Bible to render עמוד, "column," as an element of architecture, or as it may be used in metaphor.

1. As memorial
2. As sacred object
3. In the sense of "column"
4. Archaeological material

Bibliography

1. As memorial. This meaning is clearly attested in the Bible, however infrequently. Jacob set up a pillar ("massebah") upon Rachel's tomb (Gen. 35:20). The monument which Absalom set up for himself in his lifetime is also described as a massebah (II Sam. 18:18). It was erroneously identified with a monument in the Kidron Valley, the so-called Tomb of Absalom, which, however, is certainly not older than the first century B.C. Fig. KID 6.

2. As sacred object. The sacred pillars of Canaanite places of worship (*see* TEMPLES § 2), or of Hebrew shrines influenced by Canaanite practices, and considered as unorthodox from the standpoint of Yahwism, are frequently mentioned in the Bible, in parallelism with the Asherim (singular ASHERAH), or together with miscellaneous cult objects such as graven images, idols, altars, etc. (Exod. 23:24; 34:13; Lev. 26:1; Deut. 7:5; 12:3; 16:22; I Kings 14:23; II Kings 3:2; 10:26-27; 17:10; 18:4; 23:14; II Chr. 14:3; 31:1; Hos. 3:4; 10:1-2; Mic. 5:13). In these passages the KJV translates "images," or "standing images," the latter in contradistinction to "graven images" (*see* IMAGE). For the interpretation of these monuments from the standpoint of the history of Semitic religions, *see* § 4 *below.*

The word מצבה is explained in Gen. 35:14 as מצבת אבן, "pillar of stone" (lit., "erection of stone"). The meaning of the symbol is quite clear: God's presence was revealed to Jacob during his sleep. Now Jacob set up the stone on which he had rested his head as a testimony to God's indwelling in this particular place, the name of which was accordingly called Bethel—i.e., "House of God" (*see* BETHEL; TEMPLES § 3*a*). The pillar (מצב) of the oak by Shechem (Judg. 9:6) may have been originally connected with the cycle of Jacob.

A messianic passage of Isaiah refers to a massebah which shall be erected on the border of Egypt (Isa. 19:19). It is required, for the significance of the prophecy, that this ideal monument signify the lordship of God over foreign nations. In contrast with this passage, Jeremiah announces that the pillars of the sun-god in the land of Egypt, correctly paraphrased by the RSV as the "obelisks of Heliopolis," shall be destroyed (Jer. 43:13). The above references affirm or assume that the massebah is a monument of God's actual presence, and as such a sacred object, or even an object of worship.

The meaning of the twelve pillars set up by Moses, together with an altar (Exod. 24:4), is rather different. The text states explicitly that they stood for the twelve tribes of Israel united in the common worship of Yahweh. The memorial significance of the twelve stones of Gilgal in connection with the politico-religious event of the crossing of the Jordan by the tribes, is emphasized still more strongly (Josh. 4:19-24).

3. In the sense of "column." The Hebrew word עמוד is rendered often, but not consistently, by "pillar" in the sense of "column"—viz., a structural element to support the beams of a roof, terrace, or gallery. Thus, one of the halls of Solomon's palace is called the Hall of Pillars (I Kings 7:6; *see* HALL 2), and the upper rooms of the building known as the HOUSE OF THE FOREST OF LEBANON, rested on rows of pillars dividing the aisles on the ground floor (I Kings 7:3).

In the same manner, the descriptions of the tabernacle of Exodus mention the four pillars of acacia wood, from which hung the veil dividing the holy from the holy of holies, and five similar pillars for the screen at the entrance of the tabernacle (Exod. 26:32, 37). In all these passages the pillars are strictly functional.

The case of the twin pillars of bronze in, or rather at the entrance of, the vestibule of Solomon's temple is rather different (I Kings 7:15-22, 41-42; II Chr. 3:15-17; 4:12-13). The (untechnical) description of these pillars might well apply to structural columns supporting the architrave of the vestibule. It is quite possible that such was the understanding of the Hebrew scribe. Later traditions have adopted this interpretation, as one may surmise from some pillars of Byzantine monuments, especially in the church of the Holy Sepulchre, the sculptured capitals of which were obviously meant as a replica of the capitals of the bronze pillars of the temple on the basis of the biblical description. A few modern archaeologists and biblical scholars still favor the interpretation of the twin pillars as functional elements of the architecture of the temple. Archaeological analogies, however, support better the theory of the twin pillars of bronze having no structural function, but being reli-

gious symbols; this is inferred from their names JACHIN AND BOAZ, which were presumably called upon to avert evil influences from the threshold of God. They are certainly not to be interpreted as astral emblems, nor obelisks, nor a substitute for the masseboth of the Canaanite temples, nor phallic symbols. That they may have been used as supports for lamps is possible, but far from conclusively proved. Fig. JAC 3.

The word "pillar," as a translation of the Hebrew עמוד, is freely used by English translators to render miscellaneous biblical metaphors and poetic imagery. An interesting example is that of the PILLAR OF CLOUD AND FIRE, repeatedly mentioned in the narratives of Exodus and Numbers. Although one text gives a utilitarian interpretation of the phenomenon —viz., to guide the Israelites by day and by night (Exod. 13:21-22)—the other passages are formal in explaining that the pillar of cloud and fire is a visible sign of the presence of God in the midst of his people (Exod. 33:9-10; Num. 12:5; Deut. 31:15). From this standpoint the miraculous pillar plays, on a supernatural level, a function similar to that of Jacob's massebah as a testimony to God's invisible presence. The biblical author, however, avoided the term "massebah," either because he thought that it should be reserved for man-made monuments, or because he shunned bad connotations suggested by the use of masseboth in Canaanite and dissident sanctuaries.

4. Archaeological material. Stone pillars were found in large numbers in the course of excavations, often in their original position. Most of them are functional structures, as, e.g., the rough monoliths dividing the aisles of the stables of MEGIDDO;* these are too short for the purpose of supporting the roof, and one may suppose that the upper part of the pillars was originally made of brickwork or of wood.

These crude structures contrast with the pilasters built of well-hewn stones, the capitals of which were adorned with volutes akin to the decorative patterns of Canaanite sculpture. Capitals of this type were found in the ruins of public monuments of the period of the monarchies, especially at Megiddo and Samaria. Fig. STA 78.

It is evident that some stone pillars, standing alone* or in rows, could not have any structural purpose; their irregular or rounded tops, and eventually their unequal length, rule out the possibility of their being used as supports of any kind. On the other hand, their association with ruins and archaeological material obviously of a religious nature invites us to regard them as sacred pillars or masseboth. It is not easy, however, to define exactly what their significance was. Some of them are best interpreted as signs of the presence of an invisible deity, as if the virtue of the god dwelt in the stone, which became an object of worship and was eventually anointed with oil or the blood of victims. A short pillar of basalt, erected on an adobe platform in the temple of Mekal at BETH-SHAN, is most probably one of these,* as also is one of the pillars of the "high place" of GEZER,* of mediocre size, but the surface of which had been smoothed as if by the repeated contact of pious hands. Thus understood, the massebah is the counterpart of the ASHERAH, a pillar of wood symbolizing the female principle of fertility. The parallelism,

56. Statue and standing stones in Canaanite temple at Hazor (thirteenth century B.C.)

however, ought not to be carried as far as to interpret the massebah as a phallic symbol; this may be true in some, but certainly not in all, instances. Figs. PIL 55; BET 35; TEM 43.

In the case of multiple pillars, such as those of GEZER, it does not seem that all of them were endowed with the same divine character. The hypothesis according to which the so-called high place may have been a mortuary shrine leaves open the question of exactly what the raised stones meant. A likely interpretation is that they stand for living persons or clans united in the worship of the deity embodied in the sacred pillar mentioned above. This may be tentatively illustrated by the discovery, in a Canaanite temple of HAZOR (1), of a row of stelae of basalt with rounded tops, and of a statue of the same material representing a male (deity?). One of the stelae bears the engraved design of two hands stretched in a gesture of adoration, beneath the emblem of the sun-god (Fig. PIL 56). The obelisk-shaped stelae in a Middle Bronze Age temple of Byblos may also be

regarded as the symbols of clans or cities worshiping in the temple. *See* HIGH PLACE.

PILLAR, OAK (PLAIN) OF. *See* OAK OF THE PILLAR.

PILLAR OF FIRE AND OF CLOUD. This composite phrase appears in Exod. 14:24 (J), and there are a number of occurrences of the separate phrases, "pillar of cloud" (Exod. 13:21-22 and six times in JE; cf. Neh. 9:12, 19; Ps. 99:7) and "pillar of fire" (Exod. 13:21-22 [J]; Num. 14:14 [JE]; Neh. 9:12, 19). The pillar thus meets Israel at the edge of the wilderness and continues thereafter with Israel in the desert. The priestly writer, P, also speaks of the theophany of cloud and glory, but never uses the word "pillar" (*see* CLOUD; FIRE; PRESENCE; THEOPHANY). The word עמוד, "pillar," is the term that distinguishes the JE symbol of the divine presence in the wilderness stories. A study of the above passages shows that J represents the pillar as guiding and protecting. The cloud by day and the fire by night advance in front of the Israelites, and so show them their way, giving them a continuous and perpetual guidance (Exod. 13:21-22). In Exod. 14:19*b*, 20*b*, the pillar of cloud moves from before to the rear of Israel, separating the Egyptians from the Israelites, thus protecting and saving the latter. The cloud, but not the pillar, appears again in Exod. 34:5, where it serves to locate, but also to conceal, Yahweh's presence.

In E the representation is thus of a cloud which, without fire, occasionally descends to "stand" at the door of the tent of meeting outside the camp. When this took place, there was converse between Yahweh and Moses. E then depicts the pillar of cloud as a place of revelation. In P there is the further idea of protection. JE and P thus describe in different ways the tabernacling Presence in his varying functions.

It is clear that the word "pillar" calls for explanation as occurring in JE and possibly mainly in J and not in P. The word is used of ordinary smoke (Judg. 20:40), of a silver pillar to a litter (Song of S. 3:10), or of palace pillars (e.g., Judg. 16:25-26, 29; I Kings 7:2-3, 6), and in various figurative expressions (cf. of Jeremiah: Jer. 1:18; of pillars of earth: Job 9:6; Ps. 75:3—H 75:4; of heaven: Job 26:11; and of wisdom's house: Prov. 9:1). Otherwise the word denotes a cultic platform (II Kings 11:14=II Chr. 23:13; II Kings 23:3; *see* PULPIT), or tabernacle or temple pillars (Exod. 27:10-11, 17; Ezek. 42:6), including especially the two bronze pillars in front of the temple (I Kings 7:15). These pillars, Boaz and Jachin, are now known to be fiery cressets, and at time of festival, no doubt, emitted clouds of smoke and flame by day and night. It is probable, then, that the word "pillar" in the JE accounts of the pillar of fire and cloud derives from the cressets of Solomon's temple. If this be the case, the tradition spoke originally of fire and of cloud. Perhaps the whole image is derived from the pillars of Solomon's temple, or from the smoke that rose from the altar of burnt offering, and was borrowed to portray the fact of the Presence in the exodus stories. Yet it may fairly be claimed that there must have been some feature in the traditions to attract the pillar imagery. Thus it has been suggested that there was a brazier burning wood which marked the route, and this custom is well attested in both military and commercial usage. Otherwise some natural phenomena like a cloud or even the cloudy spine of an active volcano must be the explanation. In any case, cloud and fire variously depict the mystery in the life of desert Israel.

PILLOW [כביר (I Sam. 19:13, 16), *see below;* כסתות (Ezek. 13:18, 20, KJV), *probably* bands used for magic (*cf.* RSV); מראשות (Gen. 28:11, 18, KJV), the place of the head while sleeping; προσκεφαλαίον (Mark 4:38 KJV; RSV "cushion")]. A word used to refer to various supports for the head.

The Hebrew word used in I Sam. 19:13, 16, כביר, is derived from כבר, probably "to intertwine," and suggests a netted object, in this case woven from goats' hair. On the other hand, כביר may mean a pillow stuffed with goats' hair.

The stone which Jacob used as a pillow (Gen. 28:11) must have been large enough to serve as a cairn (vs. 18).

The KJV translation of Ezek. 13:18, 20, is probably derived from postbiblical Hebrew, where כסת meant "pillow" (cf. Giṭ. 56*a;* Tosef. Bereshith 6.3), and from the LXX, which translated כסת by προσκεφαλαίον (cf. Mark 4:38).

The pillow (RSV "cushion") on which Jesus slept (Mark 4:38) was probably a pad or mat spread in the stern of the boat.

E. M. GOOD

PILOT [חבל, *probably a denominative from* חבל, cord, rope, band—*i.e.*, a rope puller, a sailor (*cf.* רב החבל, chief pilot, *in* Jonah 1:6; RSV CAPTAIN; KJV SHIP MASTER); εὐθύνω (KJV GOVERNOR)]. The pilots referred to in Ezek. 27:8, 27-29, were Phoenicians associated with the maritime trade of Tyre. In Jas. 3:4 the tongue as a member of the body is compared to the small rudder of the great ships directed by the will of the pilot. *See* SHIPS AND SAILING.

PINE, PINE TREE [ברוש, *berôš*, Aram. ברות, *berôth* (Song of S. 1:7), *elsewhere* CYPRESS, FIR (KJV *always* "fir"); תדהר, *tidhār* (Isa. 41:19; 60:13; RSV "plane"; *see* FIR); KJV עץ שמן, *'ēṣ šémĕn* (Neh. 8:15; RSV WILD OLIVE); תאשור, *te'aššûr* (Isa. 41:19; 60:13; KJV "box tree"; *cf.* Ezek. 27:6; *see* CYPRESS)]. A tree and its wood, extensively used in building; usually mentioned with the CEDAR.

The identification of the conifers mentioned in the Bible, except for the cedar of Lebanon, is extremely complex, and there is little agreement among Bible scholars and botanists. It is quite possible that the confusion existed also in Bible times, because of the similarity of many of the trees concerned and the lack of botanical interest or knowledge. Thus it seems best to use the broader term "pine" (this would include several species of pines, *Pinus;* firs, *Abies;* and even the cedars, *Cedrus*) for the Hebrew *berôš*. It seems possible, however, that the *Pinus halepensis* Mill., the common and abundant Aleppo Pine, is often intended. Zohary (*cf.* FLORA § A9*h*) and Löw favor the junipers (*Juniperus excelsa,* Bilb.) because they are more confined to the Lebanons, like the cedar. "Pine" seems the best translation of *'ōren* in Isa. 44:14 (KJV "ash"; RSV emended "cedar") if a tree is meant, though Löw and Zohary (*see* FLORA § A9*i*) identify it with the laurel (*Laurus nobilis* L.; *see* BAY TREE).

The *berôš* provided the lumber for the floor and the doors of Solomon's temple (I Kings 5:8, 10—H 5:22, 24; 6:15, 34; 9:11; II Chr. 2:8—H 2:7; 3:5). It was used (with cedar) in poetic taunt songs over Assyria and Babylon (II Kings 19:23 [Isa. 37:24]; Isa. 14:8) and over Tyre and Egypt (Ezek. 27:6; 31:8), and in several poetic expressions: of hope (Isa. 41:19; 55:13; 60:13; Hos. 14:8—H 14:9), destruction (Zech. 11:2), and wealth (Song of S. 1:17). The occurrence of *berôš* in II Sam. 6:5 (cf. KJV and RSV) is obviously a textual error made clear by I Chr. 13:8 and the LXX. In Ps. 104:17, ברושים, *berôšîm,* should probably read בראשם, *berō'šām,* "in the tops of them." In Nah. 2:3—H 2:4 the vague הברשים (KJV "fir trees") is taken by most scholars as an error for הפרשים, *happārāšîm,* "chargers" (so RSV).

The occurrence of *berôšîm* in II Sam. 6:5 (cf. KJV and RSV) is obviously a textual error, made clear by I Chr. 13:8 and the LXX. In Ps. 104:17 ברושים should probably read בראשם, "in the tops of them." In Nah. 2:3—H 2:4 the vague הברשים (KJV "fir trees") is taken by most scholars as an error for הפרשים, "chargers" (so RSV).

PIRATHON pĭr'ə thŏn [פרעתון]; PIRATHONITE —thə nīt [פרעתוני]. Alternately: PHARATHON făr'ə thŏn [Φαραθών] (I Macc. 9:50); KJV PHARATHONI —thō'nī. A town "in the land of Ephraim, in the hill country of the Amalekites" (Judg. 12:15). A minor judge was buried there. Both Abdon and Benaiah, two of David's heroes, are called Pirathonites (Judg. 12:13, 15; II Sam. 23:30; cf. I Chr. 11:31; 27:14)—i.e., "inhabitants of Pirathon." Judg. 5:14 indicates a connection between the area in which Pirathon was located and the Amalekites, although the Amalekites are usually represented as dwelling in S Canaan.

Pirathon is usually tentatively located at Far'ata, *ca.* five miles SW of Shechem. Some commentators have sought it in the territory of Benjamin rather than Ephraim, on the suppositions that Abdon was from the tribe of Benjamin (I Chr. 8:23, 30; 9:36), and that the city referred to in I Macc. 9:50 and Josephus (Antiq. XIII.i.3; the name here is Pharatho) was located in the territory of Benjamin. In view of the fact that geographical considerations are obscure in the Chronicler's list in chs. 8–9, and the probability that Bacchides fortified cities N as well as S of Jerusalem, the location of Pirathon near Shechem is more probable.

W. L. REED

PISGAH, MOUNT pĭz'gə [הפסגה]. A location in the Abarim Mountains, opposite Jericho.

Four times Pisgah occurs in the phrase "the top [lit., 'head'] of Pisgah" (ראש הפסגה). The Israelite stopping place following Bamoth is the "valley lying in the region of Moab by the top of Pisgah which looks down upon the desert" (Num. 21:20). One of the places to which Balak took Balaam was "to the field of Zophim, to the top of Pisgah" (23:14). Moses was told to "go up to the top of Pisgah" to view the land (Deut. 3:27), and later he "went up from the plains of Moab to Mount Nebo, to the top of Pisgah, which is opposite Jericho" (34:1).

Also four times Pisgah occurs in the phrase "the slopes of Pisgah" (אשדת הפסגה). In territorial descriptions, mention is made of the "sea of the Arabah, the Salt Sea, under the slopes of Pisgah on the east" (Deut. 3:17); of the "Sea of the Arabah, under the slopes of Pisgah" (4:49); of Sihon ruling "to the sea of the Arabah, the Salt Sea, southward to the foot of the slopes of Pisgah" (Josh. 12:3); and of the Reubenite territory including the "slopes of Pisgah" (13:20). The KJV translates the "springs of Pisgah" in Deut. 4:49 and "Ashdoth-pisgah" in the other references.

Some understand Pisgah to be a section of the Abarim Range, of which Mount Nebo is the summit. More attractive, however, is the idea that the "top of Pisgah" refers to a promontory of a particular mountain. A headland, the Ras es-Siyaghah, is slightly lower than the summit of Mount Nebo, and separated from it by a saddle. It would be the ideal location for Moses' viewing the land. If the top of Pisgah is the Ras es-Siyaghah, the valley of Num. 21:20 may be that of the 'Ayun Musa.

For a discussion of the mountain and the surrounding area, *see* NEBO, MOUNT.

E. D. GROHMAN

PISHON pī'shŏn [פישון]; KJV PHISON fī'—, PISON pī'sŏn. *See* EDEN, GARDEN OF.

PISIDIA pĭ sĭd'ĭ ə [Πισιδία]. A mountainous region in the S central part of Asia Minor. It was bounded on the S by Pamphylia, on the W by Lycia and Caria or Phrygia, on the N by Phrygia, and on the E by Isauria. It extended from E to W *ca.* 120 miles and *ca.* 50 miles from N to S. It lay in the Taurus Mountain Range; the rugged terrain and mountain strongholds made it difficult for invaders to conquer, and its wild and warlike people were slow to yield to the influence of Hellenistic and Roman civilization. However, the mountainous region enclosed fertile valleys and large lakes; and it was known for its forests, for the cultivation of the olive tree and the vine, and for its excellent pasture land. It thus was able to support a considerable population.

In pre-Roman times Pisidia was never really subjugated by other peoples. When the Galatian king Amyntas lost his life in 25 B.C. before carrying out the conquest of Pisidia, the Romans took up the task. The Roman emperor Augustus, to pacify and stabilize the region, made Antioch, located just NE of ancient Pisidia, a Roman colony, and connected it with Roman roads to other garrisoned colonies in the Pisidian area. At the beginning of Roman control of Pisidia, Antioch was considered to be outside Pisidia. Strabo (*Geography* XII.6.4; 8.14) refers to it as "Antioch Towards Pisidia" ('Αντιόχεια ἡ πρὸς τῇ Πισιδίᾳ or ἡ πρὸς Πισιδίᾳ καλουμένη). Later this Antioch was considered to lie within Pisidia, and so the secondary

Western text of Acts 13:14 calls it "Antioch of Pisidia" (τῆς Πισιδίας). The original text of Acts 13:14 refers to it as "Pisidian Antioch" ('Αντιόχειαν τὴν Πισιδίαν), which need not mean it lay in Pisidia but can mean that of the many Antiochs it was the one in the region where Pisidia was located.

When the Roman province of GALATIA was formed in 25 B.C., it included not only Galatia proper, but also Pisidia, Lycaonia, and Isauria, and parts of Phrygia and Paphlagonia. Thus when Paul went N from Perga in Pamphylia to Pisidian Antioch (Acts 13:14), and so passed through Pisidia, the latter region was part of the province of Galatia. There is no indication that on this journey or on the return journey (14:24) Paul stopped to preach at any point in Pisidia. The people had resisted Hellenistic culture; there were few Jews in the region to furnish a point of contact with the local population; and Paul, who aimed for prominent centers as bases for his missionary work, probably left Perga with Antioch in mind as his next preaching center. Back of Paul's reference in II Cor. 11:26-27 to "dangers from robbers" and the hardships of travel may lie in part the memory of his two journeys through this mountainous and dangerous Pisidian region. What route he took through Pisidia cannot be determined. Perhaps he went N from Perga and passed along the SE shore of the twin lakes called the Limnai in ancient times; perhaps his route lay a little farther E and passed through Adada, whose ruins are now called Kara Bavlo, which reflects a (late?) tradition that Paul had been there.

In A.D. 74 Vespasian attached the S part of Pisidia to the Roman province Lycia-Pamphylia. The N part of Pisidia remained part of the province of Galatia. Later (under Diocletian?) this Pisidian region of the province of Galatia was separated, somewhat further enlarged, and made the province of Pisidia.

PISTIS SOPHIA pĭs'tĭs sō fī'ə [πίστις σοφία, faith-wisdom]. A Gnostic treatise recounting the instructions given by Jesus, in the twelfth year after his resurrection, to his disciples concerning sin and salvation, principally in answer to questions propounded by Mary Magdalene and written down by Philip. The work, originally written in Greek, is extant in a fourth-century Coptic MS (Codex Askewanus) now in the British Museum. In its present form it consists of four books, but Book IV (in which there is no mention of Pistis Sophia) is commonly regarded a quite separate work, a few decades earlier than Books I-III, and dealing with matters recounted by Jesus directly after his resurrection. In Books I-III, to be dated in the late third century, Jesus gives instruction about the fate, fall, and eventual redemption of Pistis Sophia, a spiritual being of the world of aeons, who suffers the same fate as that of mankind in general. (For a likely indication of the nature of this aeon, *see* EUGNOSTOS, LETTER OF.) The author of this writing was apparently a Valentinian or Barbelo Gnostic of the Sethian type, of the sort evidenced by the MSS discovered in 1946 at Chenoboskion in Upper Egypt (*see* APOCRYPHA, NT). The writing is one of the comparatively few documents to be preserved which were written by Gnostics themselves, and is thus invaluable as a control for the traditional picture of Gnosticism painted by orthodox fathers bitterly antagonistic and frequently grossly unfair.

The writing contains five of the Odes of Solomon and many references to the two books of Jeu, which latter has been identified by Carl Schmidt with the Mystery of the Great Logos (λόγος κατὰ μυστήριον), now included in the fifth-century Oxford Codex Brucianus.

Bibliography. An English translation, with introduction, notes, and bibliography, is provided by H. R. S. Mead, *Pistis Sophia* (1947). For further bibliography, see J. Quasten, *Patrology* (1950), I, 276. M. S. ENSLIN

PIT [בור]. One of the many designations employed in the OT for the abode of the dead. *See* DEAD, ABODE OF THE.

PITCH. An inflammable viscous mineral substance, a more or less liquid mixture of hydrocarbon. The word is used to translate the following:

a) כפר (cf. Akkadian *kupru*, "pitch, asphalt"), used with a denominative verb in Gen. 6:14: "pitch it with pitch" (RSV "cover it . . . with pitch"). In the Babylonian flood tale Ut-napishtim uses *kupru* and *ittu* (asphalt and pitch) in calking his ark.

b) זפת (cf. Arabic *zift*, "pitch"). In Exod. 2:3 pitch and bitumen are used to calk the basket of bulrushes. In the visitation of Edom, the streams shall be turned into pitch and the land into burning pitch (Isa. 34:9).

See also BITUMEN; SLIME. W. E. STAPLES

PITCHER. The translation of several words in the Bible:

a) גלגל (lit., "wheel"), used in Eccl. 12:6 in a reference to something broken at the spring or fountain. Perhaps the reference is to a water wheel.

b) גביע (KJV "pot"). This word is properly translated "cup." In Jer. 35:5 it is a larger vessel from which wine could be drunk in cups. *See* POTTERY § 3*a*.

c) כד (Gen. 24:14 KJV; Judg. 7:16, 19-20, KJV; RSV properly "jar"). *See* POTTERY § 3*b*.

d) נבלי חרש ("earthen pitcher" in Lam. 4:2 KJV; RSV "earthen pot"). The reference is to a water jar. *See* POTTERY § 3.

e) Κεράμιον (Mark 14:13 KJV; Luke 22:10 KJV; RSV "jar"). This was a water jar. *See* POTTERY § 3*b*.

PITFALL [שבכה (Job. 18:8; KJV SNARE); פחת (Lam. 3:47; KJV "snare"), *lit.*, pit; שיחה (Ps. 119:

85; KJV PIT); σκάνδαλον (Rom. 11:9; KJV STUMBLINGBLOCK)]. A figurative term referring to a hidden or unrecognized danger or error or to an unavoidable hardship into which persons fall.

PITHOM pī'thəm [פתם; LXX Π(ε)ιθω]. A city in Egypt which, together with Rameses (*see* RAMESES 4), was built by the Hebrews for the pharaoh of the oppression.

Because the biblical narrative itself does not localize Pithom specifically, all modern attempts to identify the site of this ancient store city of the Egyptian pharaoh must be based on archaeological discoveries, on extrabiblical sources, or on a combination of both. At present only two cities are felt to be serious candidates for this position—namely, Tell el-Ratabah and Tell el-Maskhutah in the Wadi Tumeilat in the E Delta of Egypt. Because the problem of identification is a difficult one and the evidence is not entirely conclusive, let us examine in order such details as are necessary for a correct evaluation of the situation.

Tell el-Maskhutah was excavated in 1883 by Edouard Naville. A survey of the inscriptions found there and of the architectural remains convinced him that this site was definitely that of ancient Pithom. He supported this contention with the following particulars: (*a*) all the toponyms found on the monuments correspond to otherwise attested place names in the eighth Lower Egyptian nome, notably *Ṯkw(t)*, the civil name of its capital, and *Pr-Tm*, its religious name; (*b*) a Latin inscription found at Tell el-Maskhutah mentions Ero, which is to be equated with Heroonpolis, the Greek name of Pithom; (*c*) the architectural remains are to be interpreted in part as those of a fortress and of store chambers. The preceding points have been stripped of many philological details, whose validity has become questionable with the knowledge gained since their presentation.

There can be little doubt that Hebrew "Pithom" is a transcription of Egyptian *Pr-Tm*, "house [or temple] of the god Tem," which was, indeed, the sacred name of the capital civilly known as *Ṯkw(t)*. There is, furthermore, sufficient but not abundant evidence which links Tem with an obscure deity Ero or Hero; it is thus most probable, as Naville contends, that Greek ἡρωωνπολις is a rough translation of *Pr-Tm*. Confirmation for this comes from the fact that where the LXX has ἡρωωνπολιν in Gen. 46:28 (*see* GOSHEN), the Bohairic Coptic version reads *Pethōm*. On the basis of these arguments the identity of Pithom, Heroonpolis, and the Latin name Hero is generally conceded as correct.

Sir Alan Gardiner has been the principal opponent of Naville's more crucial stand, that Pithom-Heroonpolis is to be located at Tell el-Maskhutah. His opposition rests on two major points: (*a*) The testimony of hieroglyphic inscriptions from Tell el-Maskhutah shows clearly that the more common name was *Ṯkw(t)* and that *Pr-Tm* and *Ṯkw(t)* are quite distinct. This point is considerably weakened by the admission that *Ṯkw(t)* seems to be a wider term in certain cases. Thus we cannot conclude that *Pr-Tm* was not in *Ṯkw(t)*, the former designating the town, the latter the region. An alternative is to localize *Ṯkw(t)* in Tell el-Maskhutah and to seek *Pr-Tm*, Pithom, elsewhere. More convincing, however, is (*b*) Gardiner's reading of the Latin milestone as stating that Tell el-Maskhutah is nine miles on the way from Ero (Hero) to Clysma (Suez). His positiveness on the latter point forces him to reject Naville's identification of Pithom and Tell el-Maskhutah and to propose the site Tell el-Ratabah, between nine and ten miles to the W, as the correct site.

Naville's very sketchy publication of the results of his excavation at Tell el-Maskhutah actually supply very little information on the ancient city beyond the fact that the oldest monuments found are those of Ramses II. The discovery most often mentioned in connection with Maskhutah is that of the so-called store chambers, a network of rectangular chambers in the foundation of a building. The British Egyptologist T. Eric Peet maintains that these are nothing but samples of a normal foundation architecture attested elsewhere in Egypt at Tanis and Naukratis and cannot be adduced as store chambers in support of the Pithom identification.

Little more is known of Tell el-Ratabah, which Gardiner favors as the site of Pithom. In 1906 Sir Flinders Petrie published the results of his explorations and excavations at Tell el-Ratabah. He found sufficient proof that the site had been occupied as early as the Middle Kingdom, as well as evidence of building operations there on the part of Ramses II and Ramses III, with no mention of material from a later time. It is interesting to note that Petrie identified this site as biblical Rameses, pointing out the appropriate proximity it had to Pithom (Tell el-Maskhutah!) just eight miles away.

The preceding discussion shows clearly that no positive identification of Pithom-Heroonpolis-Hero can be made until a more careful examination of the sites in question is made. Indeed, the placing of Pithom and SUCCOTH in the area of the Wadi Tumeilat rests on certain assumptions concerning the route of the Exodus. *See* EXODUS, ROUTE OF.

T. O. LAMBDIN

PITHON pī'thŏn [פיתון, פיתן] (I Chr. 8:35; 9:41). A Benjaminite descendant of Saul, and son of Micah.

PITY. *See* MERCY.

PLAGUE [מגפה, מכה, נגף, נגע]. Although plague and pestilence are frequently associated as descriptions of a severe epidemic disease, there appear to be good reasons for distinguishing between them. The Hebrew terms מגפה (Num. 14:37; 16:47; etc.), מכה (Lev. 26:21; Num. 11:33; Deut. 28:59), נגף (Num. 16:46; Josh. 22:17), and נגע (Exod. 11:1; I Sam. 6:4) seem in general to be different designations of one central epidemic concept (*see* PESTILENCE). The disease in question might arise under a variety of conditions, but when it did, it was invariably to be

interpreted as a divine judgment on sinful and disobedient people. If the above Hebrew terms are synonymous, as seems most probable, the description of the "plague" of I Sam. 5–6 is sufficient to establish a proper diagnosis.

In these narratives the Philistine defeat of Israel and the capture of the ark was followed by a plague of heavy mortality. The sufferers were afflicted with inguinal tumors (I Sam. 5:12); the disease spread rapidly along the lines of human communication, and during the epidemic there were many rodents in evidence (I Sam. 6:5). This description is characteristic of bubonic plague, the dreaded scourge of antiquity, which is conveyed to man by the rat flea and disseminated by droplet infection. It is marked clinically by high fever, glandular swellings (*see* EMERODS), toxemia, and extreme prostration, with a rapid termination. The inguinal lymph buboes have given the disease its standard designation. It is interesting that the Philistine diviners associated the incidence of the outbreak with the presence of rodents. Despite the licentious nature of Moabite worship, the plague of Num. 25:9 was most probably bubonic rather than venereal in nature.

The dramatic destruction of Sennacherib's forces (II Kings 19:35) was attributed by Herodotus (II. 141) to rodents' gnawing the Assyrian bowstrings. The presence of rodents would indicate the possibility of bubonic plague as the material destructive agency. Pneumonic plague, generally found in colder climates; septicemic plague; or cholera would also be equally fatal. Plague was not endemic in ancient Palestine. *See also* MURRAIN. R. K. HARRISON

PLAGUES IN EXODUS. A series of natural disasters which fell upon Egypt and the Egyptians prior to the release of the Israelites from Egyptian bondage (Exod. 7–12). The scourges are understood as mighty works of God in judgment upon Egypt whereby Israel was set free and the power and sole sovereignty of God made manifest. As such they are variously called "plagues" (מגפות; 9:14), "signs" (אותות; 7:3; 8:23—H 8:19; 10:1-2), "wonders" (מופתים; 7:3; 11:9), and "stroke" or "plague" (נגע; 11:1). They are later repeatedly referred to in the liturgical celebration of the Exodus as the marvelous works, the signs and wonders, of Yahweh, who by them set his people free (e.g., Pss. 78:43; 105:27; 135:9; cf. Deut. 4:34; 7:19; 11:3; Jer. 32:21).

1. Historicity. The concentration of miracles in the period of the Exodus, in the work of Elijah and Elisha, and in the ministry of Jesus is the biblical testimony to God's special and powerful activity acknowledged to have occurred during these events. Time and space, however, together with cultural and mental outlook, so separate us from biblical man that it is impossible to re-create completely the actual situations he faced and interpreted. We are left, in the case of MIRACLES, very largely to his understanding that mighty deeds were indeed wrought by God, of which unusual occurrences in nature were signs. With regard to the Exodus "signs," however, it can be stated that they are peculiarly Egyptian in type and that the traditions about them must be assumed to have arisen ultimately among a people which had had unusual experiences in that country.

The first nine plagues have been explained as natural scourges known in historical times to have been troublesome in Egypt, perhaps, indeed, occurring with particular severity at the time of the Exodus between late summer and the following spring (cf. Exod. 9:31, which suggests an early spring date in the tradition of the seventh plague). After the Nile reaches the height of its inundation by August, it is said that the water often becomes a dull red from the presence of minute organisms, and at certain times the water can be worse than at others. This would appear to be the setting, at least, of the first plague (water turned to blood; 7:14 ff). A plague of frogs, generally in September, has a number of historical witnesses, and quantities of dead frogs would easily give rise to the insect pests (gnats and flies), and probably disease for cattle and human beings (third to sixth plagues). Hail, locusts, and severe sandstorms are also known in plague proportions, the last mentioned being the "thick darkness" which is said to have lasted for three days (10:22). The evidence is such, indeed, that a natural basis for the traditions of the plagues must be assumed; the severity of the scourges was interpreted as the "sign" of God's power.

Yet it would be a mistake to assume that the present form of the Exodus plague traditions can be easily or entirely rationalized in the light of the above-mentioned evidence. They were so long transmitted by a worshiping people and so commonly employed in cultic liturgy that they are not related as history for history's sake, but rather as a celebration of God's great victory whereby he is glorified and acknowledged as sole sovereign and savior. Liturgical usage has given form and heightened theological content to the traditions, though in saying this one must beware of the temptation to assume that the cultus invented the traditions that it celebrated and interpreted.

2. Literary history. Literary criticism in its analysis of Exod. 7–12 has separated, probably successfully, at least two plague traditions, one containing seven scourges and the other ten. The first is contained in the older J stratum of the narrative; the second is the completed tradition as it was given its present form by the Jerusalem priesthood (P). Ps. 78 in its review of the exodus events appears to preserve the J list of seven, while Ps. 105 seems to be based on the completed P narrative (*see* Table 1). In the analysis of the sources there has been fairly general agreement in the separation of those sections belonging to P. His contribution to the JE account of the first plague is held to be 7:19-20*a*, 21*b*-22; and to the J narrative of the second plague: 8:5-7, 15*b*—H 8:1-3, 11*b*. The third and sixth plagues belong solely to P: 8:16-19—H 8:12-15; 9:8-12. Finally, his contribution to the tenth and last plague is 11:9-10. It should be noted in this analysis that P provides no independent account of every plague; his work is that of an editor and supplementer of JE. *See* EXODUS, BOOK OF, § 3.

In separating the P source certain characteristics are observed: Whereas in JE, Moses is the chief actor in God's behalf, while Aaron, if he appears at all, is only the silent partner (8:8-9, 12—H 8:4-5, 8; 8:25-26—H 8:21-22; 9:27-29; 10:8-9); in P, on the other

10. Death of the first-born	J (11:4-8; 12:21-27, 29 ff) E (11:1-3) P (11:9-10; 12:1-20, 28)	Vs. 51 (7)	Vs. 36 (8)			

Note: Literary sources are according to S. R. Driver, *Introduction to the Literature of the OT* (rev. ed., 1913), pp. 24-29. For slight variations in the analysis of E, *see* EXODUS, BOOK OF, § 3.

hand, Aaron is the chief actor. P's typical literary formula is: "Then Yahweh said to Moses, 'Say to Aaron, Stretch out your rod . . . .' Aaron stretched out his hand . . . . The magicians tried by their secret arts . . . . But the Pharaoh's heart was hardened [חזק], and he would not listen to them; as Yahweh said" (an exception is 8:5, though the conclusion in vss. 11-12 remains within the P context; cf. also 11:9-10). For P the events are specifically "signs and wonders," rather than simply plagues, which prove that Moses and Aaron are the legitimate representatives of Yahweh, and which furthermore take the form of a contest between Moses and Aaron, on the one side, and the Egyptian magicians, on the other. The latter are able to duplicate the feats of Moses and Aaron in the first two wonders but later fail and are forced to admit to Pharaoh: "This is the finger of God" (8:19; cf. 9:11). In the P formula no demand for Israel's release is made; the signs are for the glorification of Yahweh. Finally, the hardening of Pharaoh's heart is expressed by the verb "to be strong" (חזק).

In the older JE narrative, on the other hand, there are clear differences in conception and presentation. The basic stratum (J) appears to employ a literary formula somewhat as follows: "Then Yahweh said to Moses, 'Go to Pharaoh and say to him, Thus says Yahweh, Let my people go, that they may serve me. But if you refuse to let them go, behold, I will . . . .' And Yahweh did so . . . . Then Pharaoh called Moses and said, 'Entreat Yahweh to remove . . .' [here usually follow negotiations of varying length]. Then Moses went out from Pharaoh and prayed to Yahweh. And Yahweh did according to the word of Moses and . . . . But Pharaoh hardened [כבד] his heart, and did not let the people go." For the elements of this formula note especially 8:1-4, 8-15*a*—H 7:26-29; 8:4-11*a;* 8:20-32—H 8:16-28; 9:1-7, 13-

35 (some E admixture); 10:1-20 (some E admixture). In addition, the following passages are also considered to belong to J: 7:14-18, 20*c*-21*a*, 23-24 (with E admixture); 10:24-26, 28-29 (originally a part of the eighth or locust plague?); 11:4-8 (a continuation of 10:29; in the original J list the death of the firstborn appears to have followed immediately after the locust plague; cf. Ps. 78:46-51, where, however, the locust and hail plagues are reversed); 12:29-32.

In this literary stratum Moses is the central actor; Yahweh sends the plague after Moses announces it, without mention of Aaron or his rod, that "you may know that I am Yahweh" (7:12*a;* 8:22—H 8:18; 10:2) or "that you know that there is no one like Yahweh" (8:10—H 8:6; cf. 9:14); the plague is regularly connected with the stated purpose: "Let my people go, that they may serve me" (7:16; 8:1, 20—H 7:26; 8:16; 9:1, 13; 10:3; cf. 4:23); the plague is removed without human action other than the prayer of Moses, which Pharaoh has requested him to make; and the hardening of Pharaoh's heart is expressed by the verb "to make heavy" (הכבד).

There still remain certain passages, however, which do not fit easily into either the P or the J sections, and these are attributed to E. They appear in a prevailing J context within the accounts of the first, seventh, eighth, and tenth plagues, and provide the sole record of the ninth scourge of darkness (*see* Table 1). In them the most distinctive feature is the use of the rod in bringing on the plague, but it is stretched out by Moses, rather than by Aaron as in P; whereas in J, Moses does not use a rod, and the plague is simply brought on by Yahweh after Moses has announced it. For this feature of the narratives see 7:15*b*, 17*b*, 20*b;* 9:23*a;* 10:13*a* (cf. 4:17, 20*b;* 14:16; 17:5, 9). Only in the case of darkness does Moses stretch forth his hand (without mention of the rod). Furthermore, with regard to the hardening of Pharaoh's heart, the same word is used as in the P formulas (חזק, "to be or make strong" [9:35]; cf. J's use of the word in vs. 34*b*). In two passages, 10:20, 27, it is Yahweh who hardens the heart of Pharaoh (*Piel* of חזק instead of the *Qal*), while P uses the same wording in 9:12; 11:10; 14:8. Finally, it is felt that the E passages describe the Israelites as neighbors of the Egyptians (11:2; 12:35-36), whereas J seems to consider them as living apart in Goshen (8:22—H 8:18; 9:26; cf. Gen. 46:28-34).

It must be admitted, however, that in themselves the passages in question are too fragmentary, and the criteria for distinguishing them too imprecise, to make it entirely certain that a third document (E) is definitely to be distinguished in the plague narratives. It is only when E has been more clearly delineated elsewhere, that one ventures to ascribe to it the passages here that do not fit easily into either J or P. This explains why scholars have differed on what precisely belongs to E in Exod. 7–12, and also why W. Rudolph in his book *Der "Elohist" von Exodus bis Josua* (1938), after minor adjustment of individual passages, can claim that what is left over cannot be from an assumed "E document," but is simply a series of expansions from an unknown source or sources, together with a series of scribal glosses.

Johannes Pedersen appears to deny the whole validity of the documentary hypothesis as a way of solving the differences in language and conception within the plague narratives. To him Exod. 1–15 is the "cult legend of the Passover reflecting the annual re-living of historical events, as it took shape down through the ages" (*Israel,* III-IV [1940], 726; see pp. 728-30).

Pedersen's rejection of the literary-critical method of handling the traditions, however, is more a denial of the presuppositions behind the former use of the method than of the problems with which it attempted to deal. He feels that the evidence is clear in the plague narrative that an assumption of three distinct, independent, parallel documents cannot explain the phenomena. The internal differences and irregularities of the text remain, but they are best explained as additions and alterations made at various times as the material was used in the yearly Passover festival, rather than as a mosaic of fragments cut from parallel tales.

While most scholars accept the main outlines of the documentary hypothesis, this viewpoint, given expression by Pedersen and others, has brought about a new understanding of the so-called "documents." They are not completely independent literary creations, but collections of traditions which long circulated in oral form before reaching literary fixation. While J and E may have been independent before the fall of Israel in 721 B.C., they are so close together in basic respects that they must be presumed to have been derived from a common source—whether oral or written is not known—composed for the common worship of the twelve-tribe league of the period of the judges. Neither E nor P, however, is now known as an independent source; they are both simply supplementations and expansions of J. Such a view would explain the data regarding the plague stories summarized above, enabling one to see how the J list of seven plagues was expanded to ten from other traditions. Without further, external data (which is not now available), however, we have no way of determining historically which list is the original one employed in the Passover celebrations of the premonarchic period.

PLAIN [בקעה, ככר, מישור, ערבה, עמק (Josh. 17:16; Judg. 1:19; KJV "valley"), אבל (Judg. 11:33 KJV; *see below*), אלון (KJV; *see below*), שפלה (RSV "Shephelah"); τόπου πεδινοῦ (Luke 6:17 KJV; RSV "level place")]. A word used in English translations to designate several slightly differing types of level terrain. *See also* Arabah; Shephelah; Valley; Palestine, Geography of.

The four words which both the KJV and the RSV usually render as "plain" are: בקעה, ככר, מישוש, and ערבה. The first refers to a portion of the plain in Babylonia between the Tigris and Euphrates rivers

(Gen. 11:2; Ezek. 3:22-23; 8:4; Dan. 3:1), but also to the plain of ONO, probably the Sharon Plain (cf. Neh. 6:2), and to a plain as contrasted with a rough place (Isa. 40:4). The RSV renders the same word in Amos 1:5 as "Valley" of Aven, and in II Chr. 35:22; Zech. 12:11 "plain" of Megiddo where the KJV has "valley." ככר is used to refer to the level terrain near Jericho (Deut. 34:3), to the area on both sides of the Jordan River (I Kings 7:46; II Chr. 4:17), and possibly to plateaus in the vicinity of Jerusalem (II Sam. 18:23; Neh. 3:22; cf. Neh. 12:28 [RSV "circuit"; KJV "plain country"]). The RSV renders the same word as "valley" of the Jordan (Gen. 13:10; 19:17; etc.) where the KJV has "plain." מישור is frequently used to designate plains, without indicating their specific locations (I Kings 20:23, 25; II Chr. 26:10; Jer. 21:13). The same word is rendered by the RSV as "tableland," which is more descriptive than the "plain" of the KJV, in the phrase: "all the tableland of Medeba as far as Dibon" (Josh. 13:9). ערבה is rendered "plain" when it designates the territory of Moab (Num. 22:1; 26:3; Deut. 34:1; etc.). When the same word refers to the level area near the Dead Sea, the RSV renders it "Arabah" (Deut. 1:1, 7; 2:8; Josh. 3:16; II Kings 14:25; etc.).

The Hebrew words which the KJV renders as "plain" but the RSV in different ways, call for some comment. The word אבל in Judg. 11:33 is understood in the RSV as part of the proper name Abelkeramim. The term אלון is rendered as "oak" or "oaks" when used in connection with such places as Moreh and Mamre (Gen. 12:6; 13:18; 14:13; 18:1; etc.). שפלה, which the KJV renders as "plain" or "low plain," is transliterated in the RSV as "Shephelah" (I Chr. 27:28; II Chr. 9:27; Jer. 17:26; etc.). It will be seen that the RSV uses a variety of descriptive words to render the original terms, and also shows an acquaintance with the geographical features of the terrain involved. W. L. REED

PLANE [מקצעה, *from* קצע, to scrape off, a wood scraper(?)] (Isa. 44:13). A carpenter's instrument; used in connection with the manufacture of a wooden idol.

PLANE TREE [ערמון, *'armôn* (KJV CHESNUT); תדהר, *tidhār* (KJV PINE); πλάτανος]. A tree distinguished by its large leaves, shedding bark, and spreading branches. Jacob used branches of this tree as part of his scheme to trick Laban in Haran (Gen. 30:37 J). Ezekiel likens Pharaoh to this tree (and others) in the garden of God (Ezek. 31:8). Wisdom "grew tall . . . like a plane tree" (Ecclus. 24:14).

Identification of this tree with the plane tree (*Plantanus orientalis* L.) is generally accepted on the basis of the LXX and the implications of its use in Gen. 30:37. The KJV use of "chesnut" does not fit the contexts at all. The תדהר (Isa. 41:19; 60:13; KJV PINE) appears in contexts that seem to require a conifer (*see* FIR). One might assume that a conifer was intended for ערמון in Ezek. 31:8 (cf. LXX ἐλάται, "silver fir"), but not necessarily.

See also FLORA § A9*o*.

Bibliography. I. Löw, *Die Flora der Juden,* III (1924), 65-67; H. L. and A. N. Moldenke, *Plants of the Bible* (1952), pp. 180-81. J. C. TREVER

PLANK [לוח, *cf.* Akkad. *lê'u,* tablet; צלע, *cf.* Akkad. *ṣêlu,* rib, side; קרש; שדר; σανίς].

1. **Ship's planks.** לוח is the term used for the planking (KJV BOARDS) of a Tyrian ship (Ezek. 27:5). In Acts 27:44 σανίς refers to the planks of Paul's vessel. Such ships were doubtless carvel-built, necessitating much calking of the seams. *See* SHIPS AND SAILING.

2. **Building planks and boards.** Acacia wood supplies the numerous "frames" (KJV "boards"; plural of קרש) used in the tabernacle (Exod. 26:15 ff). Acacia "boards" (plural of לוח) are required for the altar of the tabernacle (Exod. 27:8; 38:7). Cedar and cypress (or juniper) "boards" (plural of צלע) supply paneling and flooring for Solomon's temple (I Kings 6:15 [KJV "plank" in 15*b*], 16). Planks (plural of שדר, KJV "boards") of cedar in the temple ceiling appear in I Kings 6:9, but the meaning of the word is uncertain. The meaning of the phrase "boards of cedar" (plural of לוח) in Song of S. 8:9 in its context is obscure. W. S. MCCULLOUGH

PLANTATION [מטע, *from* נטע, to plant] (Ezek. 17:7 KJV [RSV BED WHERE IT WAS PLANTED]; Ezek. 34:29 [KJV PLANT]). The place of planting, or the plants themselves (cf. Isa. 5:7; 61:3; Mic. 1:6); not used in the common technical sense of the English term. J. A. WHARTON

PLASTER [שיד, *śîdh;* טוח; גיר; עפר (KJV DUST); *verb* טוח]. From prehistoric times plaster was used in floors and walls, as is shown in JERICHO § 2. After the Israelite invasion, or the beginning of the Iron Age, thick, waterproof plaster was developed for cisterns, basins, and walls. שיד (Arabic *shîd*) means "lime" or "plaster," and the corresponding verb means "boil up," referring to the making of plaster from the lime. In Dan. 5:5 the Aramaic גיר refers to the plaster on the wall, where the mysterious writing appeared (*see* HALL § 5). The Israelites were told upon entering the land to set up stones and plaster them with plaster, שיד (Deut. 27:2, 4).

See also ARCHITECTURE; HOUSE. O. R. SELLERS

PLATE. In the original languages the words for "plate" and "bowl" tend to be the same. One tells by the context which term is the better English equivalent.

The term "plate" is also used in the sense of a "metal sheet." There was an engraved plate of gold on the miter or turban of the high priest (Exod. 28:36; *see* PRIESTS AND LEVITES). The censers of the rebels (Num. 16:38) were beaten into sheet metal, or "plates," to serve as a covering for the altar.

J. L. KELSO

PLATTER [παροψίς; πίναξ (KJV CHARGER *in* Matt. 14:8, 11)]. The platter that carried the head of John the Baptist (πίναξ; Matt. 14:8, 11) was doubtless made of gold or silver. Those referred to in Matt. 23:25-26 (παροψίς); Luke 11:39 (πίναξ) would more likely have been ceramic than metal. J. L. KELSO

PLEASANT PLANTS [נטעי נעמנים, plantings of the pleasant one(s)]. There is virtual unanimity for the view that this phrase, found in Isa. 17:10, alludes

to a sacred garden of ADONIS (cf. Isa. 1:29). It occurs in a context where Israel is addressed in the feminine, as the errant spouse of the Lord (cf. Jer. 2; Hos. 2). The term נעמן (*see* NAAMAN), meaning "pleasant" or "charming," corresponds to the proper name of an Arabic deity; but it is more probable that it is here used as the descriptive title of the annually dying and rising god of the fertility cult, the אדון ("lord") of Phoenicia, known as Ἄδωνις in Greece. The word is in the plural either because it occurs in construct relation with "plantings" or, more probably, because the young god of the fertility cult had many manifestations, each individualized and personified.

J. C. RYLAARSDAM

PLEDGE [חבל, עבטיט, ערבון]. A piece of personal property, such as a garment, a ring, or other valuables, which a borrower surrenders to his creditor as a token guaranty for the future repayment of the loan. *See also* DEBT; SURETY.

PLEIADES plē′ə dēz [LXX *rendering of* כימה, group of stars, *from* כום, to accumulate, heap up; *cf.* Arab. *kama* (heaped up), *kumu,* herd, *kumatu* (head); Assyrian *kumtu,* family] (Job 9:9; 38:31; Amos 5:8); KJV SEVEN STARS in Amos 5:8. A cluster or large grouping; several separate members bound together. The Greek "Pleiades," which the LXX renders Πλειάδος (singular in Job 38:31), is of uncertain derivation. It may be from πλέος, "full," in which case it is a correct rendering of the MT; it may be from πλέω, "to sail," thus a star or constellation important for navigation.

The LXX first clearly designated the term as astral, though the LXX was not always certain. While rendering Job 9:9; 38:32 as "Pleiad," it paraphrased in Amos 5:8: ποιῶν πάντα καὶ μετασκευάζων —i.e., "making and transforming all things." The Syr. reads כימה, which is elsewhere attested in that literature with the same identification. The Vulg. is certain only that the usage is astral, offering a different rendering for the three references, "Hyades," "Pleiades," "Arcturus."

Identity of the "cluster" is generally agreed as being the Pleiades; various peoples in their literature have likewise noted this brilliant group, which suggests that it is the most likely to be especially recognized. The KJV hesitates in Amos 5:8, as did the LXX, reading more vaguely "the seven stars." This is, however, in accord with this constellation, which has seven stars. Thus the identification, while not certain, is generally accepted.

If the dubious equation of עיש (in the same verses) with "Pleaides" is accepted (*see* ARCTURUS), the most likely alternative for כימה is that of Canis Major, with its bright star, Sirius. This possibility is unlikely.

W. BRUEGGEMANN

PLEROMA plī rō′mə [πλήρωμα]. A Greek word of considerable importance in a number of biblical passages, meaning generally "fulness." More precise definition involves a number of serious problems.

1. Terminology. Attempts have sometimes been made to argue from a supposed rule about nouns in -μα to the meaning of "pleroma." But it is evident, in fact, that the relation of such nouns to the verbs whose stems they share varies from instance to instance. Κλάσμα, "a fragment," has a relation to κλάω very different from that of ἄντλημα, "a bucket," to ἀντλάω "to draw"; and different from both of these, again, is the abstract noun ἀνταπόδομα, "requital," in its relation to ἀνταποδίδωμι. Moreover, a study of δικαίωμα and δικαίωσις in Rom. 5:16, 18, etc., and indeed a comparison between πλήρωμα itself and πλήρωσις (see Ezek. 32:15; Dan. 10:3θ) inspires no confidence in the rigidity of meaning attaching to particular noun formations. Accordingly, the only reliable means of determining the sense of "pleroma" is by observing its context.

2. Broad distinctions. ***a. Nonspecialized meanings.*** There are clear instances of the use of "pleroma" for "that which fills." The commonest biblical instance of this is the repeated phrase "the earth and its pleroma" (Ps. 24:1—G 23:1; I Cor. 10:26; etc.), which clearly means "the earth and all that fills it." So too it is used, evidently in Mark 2:21, of a "patch" of cloth on a garment to fill up a hole. (The parallel in Matt. 9:16 has been otherwise explained, from as early as the Vulg. *tollit enim plenitudinem eius a vestimento,* but in all probability means the same as the Markan phrase. In the parallel Luke 5:36 the word is not used at all.) Exactly so, again, in Mark 6:43 (cf. 8:20): δώδεκα κοφίνων πληρώματα means "broken pieces *enough to fill* twelve baskets."

There are other places where a meaning such as "sum total" or "completeness" seems best. In Rom. 11:25, τὸ πλήρωμα τῶν ἐθνῶν seems to mean "the full number of the Gentiles" (so RSV); just as in Gal. 4:4 (cf. Eph. 1:10) we have "when the time had fully come," ὅτε δὲ ἦλθεν τὸ πλήρωμα τοῦ χρόνου (cf. Acts 21:26: τὴν ἐκπλήρωσιν τῶν ἡμερῶν). Probably Rom. 15:29: ἐν πληρώματι εὐλογίας χριστοῦ means "with the fullest possible blessing . . . ." Possibly in Rom. 13:10 πλήρωμα νόμου means "the law in summary form," an epitome of the law.

But the phrase in Rom. 13:10 more probably means (so RSV) that "love is the fulfilling of the law"—i.e., to love is to keep the law fully. Similarly, in 11:12 τὸ πλήρωμα αὐτῶν (their—i.e., the Jews'—pleroma) is contrasted with their ἥττημα (i.e., "reduction"), and thus, despite the seeming parallel in vs. 25 (*see above*), is translated "full inclusion" (in contrast to "their failure"). In these instances "pleroma" seems to mean "completion," "fulfilling."

See, for the theological significance of the second and third connotations given above, FULFIL.

b. Special meanings. There are parallels in nonbiblical Greek for all the above meanings of "pleroma." But, in addition, it is claimed that the sense "that which is filled" may also be detected; and it will be well to examine this now, since it is of importance in connection with the special meanings shortly to be examined.

There is no denying that ships are sometimes spoken of as πληρώματα, and it might be argued that this proves that "pleroma" can mean "a vessel," "that which is filled." The passages commonly quoted are Polybius I.49.4 (ἀγνοούντων μὲν τὴν παρουσίαν τῶν πληρωμάτων, "unaware of the arrival of the ships"); Lucian *Ver. Hist.* II.37-38 (several instances—e.g., ἀπὸ δύο πληρωμάτων ἐμάχοντο); and Philo *Quod omn. prob.* 142 (of the Argonauts' ship) and *Life of Moses* II.62 (of Noah's ark). But, whereas this proves beyond all doubt that the word can mean "ship," it does not follow that it means "ship" *because it means* "that which is filled"; it may still mean (primarily) a ship's filling: its cargo (as it certainly sometimes does)—i.e., that which fills the ship; or its full crew (its full "strength" or "complement" of men), exactly as in racing on the river one speaks of the boat itself as "an eight," by transference from its contents of eight oarsmen. Thus "pleroma" is still not proved to mean strictly "that which is filled"; and certain instances from the *Corpus Hermeticum,* which at first sight might seem to come to the rescue, are in fact patient of interpretation along the lines of the meanings previously defined (VI.4: God is πλ τοῦ ἀγαθοῦ—i.e., not filled with good but the totality of good; IX.7; XII.15; XVI.3: all="totality"). The same would seem to be true of some further passages from Philo sometimes cited for the sense "that which is filled"—viz., *On Rewards and Punishments* 65, 109; *On the Special Laws* I.272; *Every Good Man Is Free* 41, 128. Of these, the first is the most plausible, for the phrase γενομένη πλήρωμα ἀρετῶν ἥδε ἡ ψυχή ("this soul, becoming a pleroma of virtues") is supplemented by οὐδὲν ἐν ἑαυτῇ καταλιποῦσα κενόν ("leaving nothing in herself empty," or "leaving no space in herself"). But at most, this is only one instance.

This result, as will be seen, is important when we come to examine the special uses in the NT. These —the really problematic passages, and doctrinally by far the most interesting—are in Colossians and Ephesians and perhaps also John. Before turning to them, it will be well to note two important technical connections of the word outside the NT.

a) After the NT period, "pleroma" is known to have been a technical term in the system of Valentinus (*ca.* 90-160). This was already known in regard to Valentinus' followers, on the evidence of Epiphanius *Heresies* XXXI.10.13; 13.6; Hippolytus *Ref.* VI. 29.5; Iren. Her. I.1.1. More recently, a precious Coptic document (the "Jung codex") has been found containing what may be Valentinus' own utterances, and in it too the word appears. It seems to mean "the upper world," the world which is eternity, stability, completeness, as contrasted with ὑστέρημα, the world of becoming, the world below, the place of incompleteness and emptiness (κένωμα).

b) There is a strain of thought, very much at home in Stoic pantheism, in which the divine is represented as filling, or permeating, the world. An echo of this thought, though without the word "to fill," is caught in Wisd. Sol. 8:1, where wisdom "reaches mightily from one end of the earth to the other," and "orders all things well" (cf. 1:7; Jer. 23:24 [of God's filling heaven and earth]; Eph. 4:10 [of Christ's]). *See also* FULFIL.

With this in mind, we may turn to the passages in Colossians, Ephesians, and John:

a) Col. 1:19: "In him all the fulness of God was pleased to dwell."

b) Col. 2:9: "In him the whole fulness of deity dwells bodily."

c) Eph. 1:22-23: "He has put all things under his feet and has made him the head over all things for the church, which is his body, the fulness of him who fills all in all."

d) Eph. 3:19: ". . . that you may be filled with all the fulness of God."

e) Eph. 4:13: ". . . until we all attain to the unity of the faith and of the knowledge of the Son of God, to mature manhood, to the measure of the stature of the fulness of Christ."

In the Colossians passages, it is reasonable to assume that (*a*) and (*b*) mean the same thing, and that if Paul is indeed borrowing "pleroma" as a technical term from the errors he is attacking, he uses it in the deepest and most spiritual way—"the whole fulness of deity"—comparable in some degree to the use of the early Valentinian document mentioned above. It seems to mean that Christ is, in a unique and complete sense, the incarnation of God himself. Thus it is (Eph. 4:10) that he fills all things. One could hardly have a "higher" Christology. In (*c*) (Eph. 1: 22-23), a variety of interpretations is offered, turning in part on whether the participle πληρουμένου is taken as passive or as middle with an active sense (so RSV "fills"). The following exegeses cover most of the alternatives: (*a*) ". . . the fulfilment of him who all in all is being fulfilled"—i.e., the church is to be the completion of the Christ, who is thus finding fulfilment through it; (*b*) "the fulness of him who all in all is being filled"—i.e., the church is filled (the fulness in this passive sense—but *see above* for the unlikelihood of this) by Christ who, in his turn, is filled by God; (*c*) ". . . the fulness of him who fills all in all"—i.e., the church is either the completion of (as in *a*) or that which is filled by (as in *b*) Christ, who fills everything (cf. Eph. 4:10). (*d*) Construing "the fulness" as in apposition to "the head," we get the sense that God has appointed Christ both to be head of the church and to be God's own full representative (cf. Col. 1:19; 2:9 above). (*e*) Construing as in *d,* but taking τοῦ πληρουμένου as a periphrasis for the universe or for the church: Christ is himself the totality or filling of that which is to be completed or filled (see the Commentaries).

Eph. 3:19 would be better rendered ". . . filled up to all the fulness of God," and should be compared with Col. 2:10: "You have come to fulness of life in him" (ἐστὲ ἐν αὐτῷ πεπληρωμένοι). The thought appears to be that there is a completeness, a maturity of character, ordained by God ("the fulness of God" in this sense) both for each Christian individually and for the church corporately; and this is the goal toward which we press, and for which we pray. On the other hand, there is a sense in which, being already incorporate in Christ, we already have his completeness (Col. 2:10). It is the usual tension between being and becoming: "Become what in fact you are!"

So in Eph. 4:13, "the fulness of Christ" seems most probably to mean that completeness, that maturity

of character, which is already realized in Christ both as an individual and as the Body of which Christians are limbs. It is the full stature of that maturity that, by the grace of God, all of us are together to attain. This interpretation of *d* and *e* is not, however, accepted by all. Those who take *c* in the first sense noted above—of the church as that in which Christ is fulfilled—will be disposed to find the same theme here: in *d* the sense will be that the completion of the church will mean that completeness ("pleroma") designed by God to be ultimately attained by Christ; and *e* will, similarly, mean that Christ will find his completeness when all Christians together have reached maturity—i.e., when the church is one and whole.

f) Finally, we must inquire as to the meaning of John 1:16: "And from his fulness have we all received, grace upon grace." If it is right to relate to this John 3:34: "It is not by measure that he gives the Spirit," we may take the meaning to be that Jesus is uniquely filled with God's Spirit (cf. John 1: 14: "full of grace and truth"), and that it is from this fulness that the Christian receives God's gifts. There is no necessity to see an echo of a Gnostic technical term, although, as with Colossians, it is, of course, possible that some such allusion is intended.

3. Conclusions. Thus the evidence as a whole points to the meanings "that which fills" ("the contents"), "sum total," "fulfilment," "completion"; with "sum total" or "completeness" as the best sense in Colossians and Ephesians, with or without the technical overtones of "Gnostic" thought.

PLOW [חרש]. To break up the ground with a plowshare. The unquestionably poor quality of plowshares in biblical times, as today in some parts of the Near East, undoubtedly precluded turning a furrow and permitted little more than scratching the surface to a depth of four or five inches. Hoeing may have taken the place of plowing after a heavy rain and on steep or very stony ground.

60. Relief from tomb of Pa-heri at el-Kab (Eighteenth Dynasty, *ca.* 1550-1350 B.C.), showing Egyptian plow drawn by slaves and guided by a bearded man

The Deuteronomic Code prohibited using an ox and an ass together in plowing (Deut. 22:10). As today, probably various animals were employed to pull the plow: oxen, cows, asses. *See* COULTER.

Figs. PLO 59-60. H. N. RICHARDSON

PLUMB LINE [אנך, *from* Akkad. *anâku*, lead]; PLUMMET [משקלת (II Kings 21:13; Isa. 28:17), *from* שקל, weigh; אבן (Isa. 34:11; KJV STONES), stone; האבן הבדיל (Zech. 4:10), the stone, the tin]. The plumb line was a cord to which was attached a weight of metal, stone, or clay, called a plummet. This device was used in the building of a wall to ensure verticality.

From the Akkadian etymology it would seem that אנך could mean "plummet" as well as "plumb line." The biblical occurrence of the word is in Amos 7:7-8, where the Lord is pictured standing by a wall with a plumb line in his hand. The wall, representing Israel, had been built correctly, but now it was out of line and would be destroyed.

"Line" and "plummet" are used in connection with destruction (II Kings 21:13; Isa. 34:11); "plummet" is used also in happy circumstances (Isa. 28:17).

POCHERETH-HAZZEBAIM pŏk'ə rĕth hăz'ə-bā'əm [פכרת הצבים, binder of gazelles, gazelle-hunter; Apoc. Φακάρεθ-σαβειή] (Ezra 2:57; Neh. 7:59; I Esd. 5:34); KJV POCHERETH OF ZEBAIM zĭ-bā'əm; KJV Apoc. PHACARETH făk'ə rĕth. Head of a postexilic family among the "sons of Solomon's servants." *See* NETHINIM. J. M. WARD

POD [κεράτιον] (Luke 15:16); KJV HUSK. Probably the seed vessel of the carob tree (*Caratonia siliqua*), popularly referred to as the locust or acacia. The reference is in the parable of the prodigal son. These sweet pods, often a foot long, were fed to cattle and swine and were eaten by the poor.

H. F. BECK

POET. The translation of ποιητής in Acts 17:28. The literal meaning of the Greek word, "doer," is used elsewhere (Rom. 2:13; Jas. 1:22-23, 25; 4:11).

In Acts 17:28, Paul quotes "some of your poets"—i.e., Greek poets. The Greek text does not indicate

whether the words "as even some of your poets have said" refer (*a*) backward to the line "In him we live and move and have our being"; (*b*) forward to the line "For we are indeed his offspring"; or (*c*) to both lines. The RSV chooses the second alternative, as is indicated by the semicolon after the first quotation. But this decision is editorial, and is not necessarily correct.

The RSV does recognize, however, that the line "In him we live and move and have our being" is a quotation. If this is a quotation from the Cretan Epimenides (as the RSV indicates in a footnote, but there are arguments against it), then it is pre-Stoic and does not mean that men live "in" Zeus, but "by the power of" Zeus. (*See* STOICS.) The argument would therefore be that Zeus is not dead, as Cretans who show his tomb believe, but is living because it is by him that we ourselves live. In any case, the line is as easily interpreted Jewishly as it is Stoically.

The second line quoted is from the *Phaenomena* of Aratus, who was born in Cilicia *ca.* 310 B.C. He was a friend of the Stoic Zeno and was influenced by Stoic philosophy. The quotation is taken from the beginning of the *Phaenomena,* the "his" referring to Zeus. It is possible that Aratus used a line written earlier by the poet Cleanthes in his "Hymn to Zeus." There we read: "For we are thy offspring."

It may be that vs. 27*b:* "Yet he is not far from each one of us," is also an allusion to a poem. In any case, it is interesting to note that in this speech Greek poetry is used in preaching to the Greeks in much the same way in which the OT was usually used in the early church's preaching. *See* AREOPAGUS.

B. H. THROCKMORTON, JR.

***POETRY, HEBREW.** Poetry comprises one third of the Hebrew Bible—this fact was fully appreciated only within the past two hundred years. The poetry of the OT is unlike classical, European, and even later Jewish poetry. Rhyme is virtually non-existent, and rhythm is flexible, being marked, not by syllabic feet, but by an elusive tonal system supplied by medieval scholars. The fundamental formal feature of canonical poetry is the correspondence of thought in successive half lines, known as parallelism of members. The thought may be repeated, contrasted, or advanced; it may be figurative, stairlike, or inverted. The parallelism may be both within lines and between lines. Meter, insofar as it exists, is a by-product of the paralleled lines. Hebrew is an explosive, staccato, sound-conscious language, and the devices of alliteration, assonance, paronomasia, and onomatopoeia are used to great aesthetic advantage. Division of poems into strophes or stanzas is demonstrable only in a fraction of OT compositions.

Canonical poetry ranges from brief extracts in the Pentateuch and historical books, derived from pre-exilic anthologies, to the spacious poetic tapestries of Isa. 40–66 and Job. Communal mores and practice gave rise to variant poetic genres. Among the distinctive religious types were hymns, laments and confessions, thanksgiving and trust songs, and royal psalms. As poetic expression became disengaged from cultic activity, the forms were employed with greater freedom by prophets, psalmists, and sages. The line between poetry communally shaped and free compositions is one not easily drawn, for the cult was active and important throughout biblical times.

Bibliography

A. ***EXTENT.*** Fully one third of the OT text is poetic in form. Psalms, Proverbs, Song of Songs, Lamentations, Obadiah, Micah, Nahum, Habakkuk, and Zephaniah are poetic in their entirety (with the exception of superscriptions). The greater parts of Job, Isaiah, Hosea, Joel, and Amos are poetic, and Jeremiah is about one half poetry. Several books have substantial poetic portions in otherwise prose material: Genesis, Exodus, Numbers, Deuteronomy, Judges, I and II Samuel, Ecclesiastes, Ezekiel, Daniel, and Zechariah. Only seven OT books appear to contain no poetic lines: Leviticus, Ruth, Ezra, Nehemiah, Esther, Haggai, and Malachi. The three segments of the Hebrew canon (Law, Prophets, Writings) contain poetry in successively greater amounts. Poetry, formally analogous to the canonical compositions, appears in the APOCRYPHA; the PSEUDEPIGRAPHA; and the DEAD SEA SCROLLS. Poems Hebraic in style appear in Luke (*see* BENEDICTUS; MAGNIFICAT; NUNC DIMITTIS) and the book of Revelation (e.g., 4:11; 5:9-10; 7:15-17; 11:17-18; 15:3-4; 18; 19:1-8). Much of Jesus' epigrammatic teaching was expressed in the parallelistic structure of Hebrew poetry. On the whole, however, poetry plays a minor role in the NT.

B. ***HISTORY OF INTERPRETATION.*** Only recently have consistent efforts been made to represent OT poetry by a stichometric format, either in Hebrew or in the versions, English included. It is noteworthy that Qumran fragments of the Song of Moses (Deut. 32) and certain of the Psalms were copied with attention to poetic line. Even at Qumran, however, this practice was an exception. Some of the

Masoretic MSS arranged the text by poetic units, but only in the case of Psalms, Proverbs, and Job. The more intricate system of punctuation used by the Masoretes for these three books also argues for an awareness of poetic form. However, Pentateuchal and prophetic poetry was ignored. While the Masoretic system of marking punctuation has frequently included several poetic lines in one verse, the form was sufficiently sensed that an actual poetic unit was seldom broken up.

The avoidance of serious mishandling of the poetic text is not the same, however, as true understanding of its formal principles. The Greek and Latin versions paid no attention to poetic form, in spite of the vigorous tradition of classical poetry. The Syriac and Aramaic were likewise insensitive to poetic structure. The authorized English versions have only slowly responded to the discovery of poetry in all parts of the Bible. The ERV and ASV printed the poetic books stichometrically, but it remained for the RSV to do the same throughout the Bible. This has been a particularly significant contribution to an understanding of the Prophets.

Comment on Hebrew poetry has appeared sporadically since biblical times. It has been a mixture of false analogy with dissimilar poetry and of occasional though unsustained insight. Philo reported that the Egyptians taught Moses the "lore of metre, rhythm and harmony" (*Life of Moses* I.5). With reference to Exod. 15, Josephus spoke of "Moses himself composing in hexameter verse a song to God" (Antiq. II. xvi.4), of Deut. 32 that "he recited to them [the Israelites] a poem in hexameter verse" (Antiq. IV.viii.44), and of David that "he composed songs and hymns to God in varied meters—some he made in trimeters, and others in pentameters" (Antiq. VII.xii.3). Josephus was the first—though unhappily not the last—to try to construe the poetry of the Hebrew Bible by classical meters. Thus began the long and unfruitful diversion from the path of true advance in Hebrew prosody.

Origen, in a scholion to Ps. 118:1 (LXX), agreed with Josephus that Deut. 32 is a hexameter. He also noted trimetric psalms, as well as tetrametric. Origen insisted, however, that Hebrew verses are different from Greek. His comment is cryptic, but it is possible that he recognized two stichs (or half lines) as the basic poetic unit (*see* § 3 *below*). Eusebius and Jerome continued to employ Greek and Latin metric terms but always with uneasiness, and they made no attempt to define a metric foot in Hebrew verse. Had a living tradition of Hebrew poetry still survived in Palestine in the fourth century, Jerome would have known it; but he gives us no hint of it.

In fact, Jewish tradition is curiously silent about the formal character of biblical verse. There is no recognition of the essential features of poetry by the men of Jamnia (*see* CANON OF THE OT) or the compilers of the Talmud. Yet the presence of the balanced members in successive lines in such intertestamental writings as the Apocalypse of Baruch and IV Ezra shows that poetry "biblical" in style was written as late as the closing of the canon. The *Hodayoth* (Thanksgiving Psalms or Praises) found among the first cache of DEAD SEA SCROLLS, dating from the first or second century B.C., not only imitate biblical phraseology but also have the formal features of canonical poetry.

Some of the medieval commentators (Ibn Ezra, Kimchi, Levi ben Gershom) recognized the reduplication of thought in biblical poetry, and in a few instances they made their interpretations depend upon the form. Yet it was common for Jewish and Christian exegetes to ignore the synonymity of thought in the two halves of a verse by insisting on separate meanings. It is astonishing that the formal structure of ancient Hebrew poetry was transmitted through the centuries generally intact in spite of the lack of poetic format, even though the older forms were no longer employed in contemporary poetry and were, in fact, largely disregarded in biblical exegesis.

In 1753, Bishop Robert Lowth of Oxford published his noted *Lectures on the Sacred Poetry of the Hebrews* (in Latin; English translation, 1815). A second edition in 1763 incorporated the notes of J. D. Michaelis, who had guided the work into a German edition. His *Isaiah: A New Translation with Preliminary Dissertation* (1787) offered a fuller exposition of Hebrew poetic types. It is a tribute to Lowth's work that, in spite of archaisms and florid style, it retains aesthetic freshness and scholarly relevance.

Lowth's insights were manifold. He saw that Hebrew poetry was mainly a matter of sense, to which sound and form were linked rather loosely. Balancing ideas and phrases had priority over strict meter. In fact, he believed that the original meter had been wholly lost, so that he turned sharply away from trying to understand Hebrew verse through classical formulas. Central to his analysis was the recognition of the counterbalancing of verse members, to which he applied the technical term *parallelismus membrorum* ("parallelism of members"). This phenomenon was no mere ornamentation but of the essence of Hebrew poetry, its fundamental formal feature. He attempted to classify the types of parallelism, and with considerable success. Also of great importance was his acknowledgment of poetry throughout the Hebrew Bible; e.g., he devoted five lectures alone to prophetic poetry, and his work on Isaiah gave careful analysis of the verse forms in the book. Our present understanding is an elaboration and enrichment of Lowth's viewpoint.

C. *PARALLELISM OF MEMBERS.* The habit of the Hebrew poet of balancing thought against thought, phrase against phrase, word against word, is the persisting feature of his method of working. It is so pervasive as to be virtually a mode of thought, taken over from ancient Near Eastern literary culture but elaborated with consummate artistry. Non-Semitic examples of parallelism are generally brief excerpts from nursery rhymes, lyrics, ballads. The more sustained instances have significant departures from the Hebrew pattern. The Finnish epic *Kalevala* tends to parallel several lines instead of the normal two-line parallels of the OT. Anglo-Saxon poetry, and especially *Piers Plowman,* employs alliteration and has a fixed number of stresses, whereas alliteration is only a sporadic device in Hebrew poetry and meter is still an indeterminate factor.

1. Internal. A typical Hebrew poem consists of a series of terms that fall into pairs, each set of terms

marked off from preceding and following poetic elements by major stops or caesuras (indicated by double diagonals in the examples cited below). Within each of the pairs, the parts are distinguished by a lesser stop (indicated by single diagonals).

> The earth is the LORD's and the fulness thereof, /
> the world and those who dwell therein; //
> for he has founded it upon the seas, /
> and established it upon the rivers. //
> Who shall ascend the hill of the LORD? /
> And who shall stand in his holy place? //
> (Ps. 24:1-3.)

It is apparent that lines 2, 4, and 6 introduce no new thought but rather repeat or echo the immediately preceding lines. In their common assertion of God's ownership of the world and its people, lines 1 and 2 are said to be "parallel" or "in parallelism." The parallelism of lines 3 and 4 extends the divine sovereignty over the waters, and that of lines 5 and 6 poses the question of terms of entrance to the temple of God. The greater stops between the basic terms (the world, the waters, temple entry) are clear; as are also the rests within each of the paired terms when the thought repeats, echoes, or doubles back upon itself in parallel development. Thus the primary elements in Hebrew prosody are the half lines that fall into parallel and that, taken together in pairs (or sometimes in threes), create a single thought or image.

One of the perplexities of Hebrew poetry is that the nomenclature for parallelism is poorly developed. Lowth did not employ a scientific terminology to accompany his sharp insight, and the terms since applied have been unsystematized. Critics have created and borrowed phraseology at random, moved mainly by personal preference. Without some recognition of this diverse terminology, it is impossible to understand the most elementary analysis of poetic forms.

The basic unit of poetic composition is the line, which constitutes normally one half (sometimes one third) of the parallelism. It expresses a complete thought and has grammatical and syntactic unity. This unit (represented by each of the lines in Ps. 24:1-3 as printed above) is variously known as the line, stich or stichos (στίχος, "row, line"), hemistich (ἡμιστίχος, "half line"), colon (κῶλον, "part, member"), or verse member. Two (or three) of these elements together form the larger thought-units by which the poem is articulated. The larger unit (represented by each two lines of Ps. 24:1-3) is known as the distich or tristich (two or three stichs), stich (when the half-line components are called hemistichs), bicola or tricola (two or three colons), and verse (Latin *versus*, "line, row"; composed of two or more verse members).

Herein the basic unit will be called "stich" and the larger verse groupings "distich" and "tristich." Of the Greek terms, "stich" has been more often used in prosody than "colon," and it avoids any confusion with the English punctuation mark called "colon." Lowth's verse and verse member have the weakness of possible confusion with the Masoretic verse punctuation and the later verse divisions introduced into Christian Bibles (*see* TEXT, OT). Often the original poetic, the Masoretic, and the English versional versification are identical, but in many instances they are not.

a. Synonymous. Synonymous parallelism states the same thought in successive stichs. This is the simplest and most easily recognized type of parallelism. The three distichs cited from Ps. 24 are all synonymous. The second stich repeats the idea without significant addition or subtraction. The practical consequences for the biblical exegete are considerable. In the first parallelism of Ps. 24, e.g., "earth" and "world" are not two aspects of creation, but two ways of designating the totality of creation. The repetition is entirely aesthetic, sustaining and prolonging the effect by recasting the notion in other words. Likewise, "rivers" and "seas" refer to the same subterranean watery deep on which the Hebrew conceived the dry land to be established, and the "hill of the LORD" is "his holy place," the temple at Zion.

This feature is readily enough grasped, but it is all too quickly lost sight of, especially in passages where the thought or poetic structure is obscure. The citation of Zech. 9:9 in Matt. 21:5 is a well-known example of the strange interpretation that may result from missing the parallel form:

> Tell the daughter of Zion,
> Behold, your king is coming to you,
> humble, and mounted on an ass,
> and on a colt, the foal of an ass.

The gospel writer assumes that Jesus called for two asses to carry him into the city, whereas the other three evangelists rightly treat the statement as synonymous parallelism and report only one beast of burden.

Sometimes the synonymous parallelism is complete —i.e., each term in the first stich is matched by a term in the second. To assess properly the completeness of a parallel, the original language must be taken into account, since the English translation must often use more than one word for a Hebrew term. In the following analyses, all English words representing a single Hebrew term are linked by hyphens.

> The-forgiver of-all-our-iniquities /
> The-healer of-all-our-diseases //
> Not-forever does-he-contend /
> And-not-perpetually is-he-angry //
> Not according-to-our-sins does-he-deal with-us /
> And-not according-to-our-iniquities does-
> he-reward us. //
> (Ps. 103:3, 9-10 orig. tr.)

The pattern of complete synonymous parallelism in the first two distichs is:

a . b
a′ . b′

and of the third distich:

a . b . c . d
a′ . b′ . c′ . d′

A majority of synonymous parallelisms, however, are not strictly complete. This is mainly due to a preference for variation, a delight in the manifold possibilities of inverted word order, of contraction or expansion of parallel terms. In some cases poor textual preservation has disrupted originally complete

parallelisms, but the instances that can be verified are not numerous, compared with the deliberately contrived variants. Though difficult to classify, the incomplete parallelism supplies Hebrew poetry with a fluency and attractiveness unrivaled by the generally stereotyped repetitions of ancient Near Eastern poetry.

When parallelism is incomplete, it may be either with or without compensation. The latter is illustrated first (bracketed words are supplied for fluency):

> Wicked [is] the-heart above-all /
> And-corrupt [is] it //
> I the-LORD try the-heart /
> test the-reins //
> (Jer. 17:9-10*a*).

These two prophetic distichs may be conceived schematically as:

```
a . b . c
a′ . b′

a . b . c . d
      c′ . d′
```

The second stich balances only two terms in the first ("and corrupt" parallels "wicked"; "it" parallels "the heart"), but there is no counterpart to "above all," so that the parallel is synonymous (saying the same thing) but incomplete (not all terms paralleled) and without compensation (lacking any expansion of the terms that are paralleled).

The next line in the Jeremiah passage illustrates incomplete parallelism with compensation:

> And-to-give to-a-man according-to-his-way /
> according-to-the-fruit of-his-deed //
> (Jer. 17:10*b*)

which we may represent as:

```
a . b . c
      c′2
```

The parallel is incomplete, since "and to give" and "to a man" have no equivalent in the second stich. Compensation is provided, however, by paralleling the one term "according to his way" with two terms in the second stich. The paralleled term is expanded into two terms, prolonging and emphasizing a single idea from the first stich, although the other elements are implicitly carried over into the thought of the corresponding stich.

Often the compensation fills out the second stich so that it has exactly the same number of terms as the first stich.

> He-made-known his-ways to-Moses /
> to-the-sons of-Israel his-deeds //
> (Ps. 103:7)

is understandable as:

```
a . b . c
      c′2 . b′
```

> Compassionate and-gracious is-Yahweh /
> Slow to-anger and-abundant-in-mercy //
> (vs. 8)

may be sketched as:

```
a . b . c
a′2 . b′
```

b. Antithetic. Antithetic parallelism balances the stichs through opposition or contrast of thought. This may simply mean that the second stich recapitulates the thought of the first in negative form:

> In a multitude of people is the glory of a king, /
> but without people a prince is ruined //
> (Prov. 14:28).

More often, however, the antithetic parallel presents a thought in stark and total opposition to that of the opening stich:

> For the LORD knows the way of the righteous, /
> but the way of the wicked will perish //
> (Ps. 1:6).

Wisdom literature, with its stress on the two courses of action open to men, offers many instances of antithetic parallelism:

> The poor is disliked even by his neighbor, /
> but the rich has many friends //
> (Prov. 14:20).

> The glory of young men is their strength, /
> but the beauty of old men is their gray hair //
> (Prov. 20:29).

Like synonymous parallelism, antithetic may be complete or incomplete, with or without compensation.

c. Synthetic or formal. Synthetic parallelism balances stichs in which the second element advances the thought of the first. It has been objected that this can hardly be called parallelism, since the two stichs are parallel only in the sense that a continuous straight line is parallel with its beginning. The justification for regarding this type as a true parallelism is the fact that the two stichs tend to be quantitatively balanced and marked off by sharp breaks in thought and syntax from the distichs before and after. Even where a whole series of synthetic parallelisms occur, the distich pattern is clearly traceable. Although the poet ceases to repeat or contrast his thoughts and, instead, extends or enlarges them, he operates with a pattern of greater and lesser caesuras at recurrent intervals. Parallelism of form exists even though parallelism of thought is not strictly found between stichs. Some scholars have preferred to call this type of parallelism formal or numerical. As long as it is not confused with a fixed metric scheme, it might also be called rhythmical parallelism, since it arranges its periods in rhythm with the stricter synonymous and antithetic parallelisms.

Ps. 14 illustrates the intermixing of synthetic and synonymous parallelisms:

> The fool says in his heart, /
> "There is no God." //
> They are corrupt, they do abominable deeds, /
> there is none that does good. //
> The LORD looks down from heaven /
> upon the children of men, //
> to see if there are any that act wisely, /
> that seek after God // (vss. 1-2).

The first and third distichs neither repeat nor contrast thought in their component stichs. Instead, the second stich extends or completes the thought in a fashion that could not be guessed from the initial half line. We do not know from the first stich, e.g.,

what it is that the fool says inwardly, and so the synthetic parallel gives us the content of his musing: "There is no God." Again, Yahweh looks down from his abode, but we do not know the object of his scrutiny until the synthetic parallel advises us that it is mankind. By contrast, the second and fourth distichs fall into the category of synonymous parallelism, since in each case the second stich only embroiders the basic thought, already complete in the first stich.

By placing synthetic parallelisms at strategic points the poet is able to achieve striking effects, as in the coronation psalm of the Israelite king:

Why do the nations conspire, /
and the peoples plot in vain? //
The kings of the earth set themselves, /
and the rulers take counsel together, /
against the LORD and his anointed, saying, //
"Let us burst their bonds asunder, /
and cast their cords from us." //
He who sits in the heavens laughs; /
the LORD has them in derision. //
Then he will speak to them in his wrath, /
and terrify them in his fury, saying, //
"I have set my king /
on Zion, my holy hill" // (Ps. 2:1-6).

The psalm makes two points: the intense heathen opposition to the king and his firm establishment by Yahweh's decree. Each of these is underscored by a synthetic parallelism that retards the balanced flow of the poem while it adheres to the formal requirement of parallelism. The second parallelism of the poem (which is also a tristich), synthetic in form, stresses the hostility of the nations "against Yahweh and against his anointed." The last parallelism in the quoted excerpt counters the threats of the enemies with the coronation proclamation of Yahweh, also cast in synthetic form:

I have set my king /
on Zion, my holy hill.

No small part of the effect of the poem results from the momentary imbalance in shifting from simple reduplication of thought to its extension.

d. Miscellaneous. Additional types of parallelism have been classified. They do not rank with the fundamental patterns of synonymous, antithetic, and synthetic; they are more nearly variants or combinations of the basic types.

Emblematic parallelism employs simile or metaphor:

For as the heavens are high above the earth, /
so great is his steadfast love toward
those who fear him; //
as far as the east is from the west, /
so far does he remove our transgressions
from us. //
As a father pities his children, /
so the LORD pities those who fear him //
(Ps. 103:11-13).

Like the partridge that gathers a brood which
she did not hatch, /
so is he who gets riches but not by right //
(Jer. 17:11*a*).

Stairlike parallelism is the repetition and advance of thought in successive stichs, often involving three or more stichs. It is a combination of synonymous and synthetic parallelism, in which the thought appears to climb or ascend by recapitulation and extension. Each stich starts from the same point but moves beyond the preceding:

Ascribe to the LORD, O heavenly beings, /
ascribe to the LORD glory and strength. //
Ascribe to the LORD the glory of his name; /
worship the LORD in holy array //
(Ps. 29:1-2).

O LORD, how many are my foes! /
Many are rising against me; //
many are saying of me, /
there is no help for him in God //
(Ps. 3:1-2).

Inverted or chiastic parallelism involves the inversion of words or terms in successive stichs:

Ephraim shall not be jealous of Judah, /
and Judah shall not harass Ephraim //
(Isa. 11:13*b*).

The way of peace they know not, /
and there is no justice in their paths //
(Isa. 59:8*a*).

It is evident that this form is actually synonymous parallelism, and generally complete.

2. External. The possibilities of parallelism are greatly multiplied by correspondence between distichs (external parallelism), which supplements the correspondence between stichs (internal parallelism). In the following, two internal synthetic parallelisms also form an external synonymous parallelism:

Hear the word of the LORD, /
you rulers of Sodom! //
Give ear to the teaching of our God, /
you people of Gomorrah! //
(Isa. 1:10).

Two internal synonymous parallelisms may form an external antithetic parallelism:

The ox knows its owner, /
and the ass its master's crib; //
but Israel does not know, /
my people does not understand //
(Isa. 1:3).

Two internal synonymous parallelisms may produce an external inverted parallelism. In fact, there are more cases of external inversion than of internal.

Make the *heart* of this people fat, /
and their *ears* heavy, /
and shut their *eyes;* //
lest they see with their *eyes,* /
and hear with their *ears,* /
and understand with their *hearts,* //
and turn and be healed
(Isa. 6:10).

The concluding stich is illustrative of an occasional independent stich (called a monostich by some), which is outside the poetic pattern in emphatic anacrusis.

As employed by the poets of ancient Israel, the possibilities of parallelism are virtually unlimited. It offers an elasticity that evokes endless aesthetic delight, while it avoids complexity and diffuseness

through adherence to the principle of balanced stichs. We can be sure that no enjambment or "run-on" lines, typical of Western poetry, will occur in Hebrew poetry. But within the structure of self-sufficient stichs, coupled or tripled, the combinations and varieties are numerous. Few readers of Hebrew poetry will wish or need to analyze the parallelisms of every poem encountered. But the ability to pause occasionally and spell out the precise parallelistic pattern, and to test the theories against complex passages, serves to heighten the sense of enjoyment of form and content. Faithful study of even a limited number of parallelisms will vastly enhance that sixth sense by which the compression and amplification of poetic thought is grasped almost intuitively.

D. *METER.* While parallelism is a genuine and compelling feature of Hebrew poetry, meter is detectable mainly by analogy with other poetry and by implication from the balanced lines. As a result, certain stress patterns can be formulated on the assumption that a stress should be granted to each of the major words in a distich (or tristich). But the metric hypotheses rest upon a combination of inference from parallelism and application of the Masoretic accents, rather than on any intrinsic evidence from biblical Hebrew.

In the Masoretic accentual system, each word, no matter what its length, receives one stress (except for proclitics joined to following words by the "binder" or *maqqēph*). Since, in the average Hebrew word, the accent is on the last syllable, the "meter" tends to be a rising one. Ordinarily a word possesses two or three syllables, and this produces a pattern analogous to the classical iambic foot (a short unstressed and a long stressed syllable) and the anapaestic foot (two shorts unstressed and a long stressed syllable).

The classical analogies are entirely misleading, however, because in Hebrew the number of unstressed syllables allowable between stresses is variable. It appears that between two stressed syllables an unstressed syllable is not absolutely necessary (e.g., in successively accented monosyllables) and that there can be as many as four or five unstressed syllables (about the maximum length of a Hebrew word). It is a matter of debate whether longer words require or permit a second stress. It is also problematic whether on occasion two short terms may receive a single stress, while terms joined by the "binder" may be permitted separate stresses. Where such accentual flexibility existed—or is suspect of existing—the application of rigid classical meters only obscures the true poetry with an imposed and artificial orderliness.

The most common pattern is a six-stress distich which, taking into account the caesura between stichs, is represented as a 3+3 meter. It is the predominant meter in Deutero-Isaiah, Job, and Proverbs. Its parallelisms are largely synonymous and antithetic, with many complete parallelisms. Occasionally the sense requires that a six-stress line be read as a tristich, and thus a 2+2+2 pattern emerges. Less frequent, but not always to be emended as errors, are instances of 4+4 and 2+2, which appear usually as variants of 3 + 3 and 3 + 2 patterns.

Of the unequal or balancing meters, 3+2 is most widespread. It has been dubbed the Qinah or lament meter because it is dominant in Lamentations (*see* LAMENTATIONS, BOOK OF) and in many of the laments appearing in the Psalms and the Prophets. It is doubtless a product of intense emotion, with the second stich breaking short, like a catch in the throat. Yet it cannot be insisted that the emotion was always grief, since the 3+2 rhythm is dominant in some compositions expressing praise and joy (e.g., Ps. 65). A common variant of 3+2 is 2+2, and there are some lines that can be scanned only as 2+3.

While there are poems and strophes within poems where the fundamental meter of 3+3 or 3+2 is undisturbed, a majority of Hebrew poems have lines of mixed metric length. In many cases the meters are so hybrid that it is impossible to locate the fundamental pattern. With the help of the versions some lines may be restored to a more consistent metric pattern. In other cases we can be fairly certain of disorder but cannot restore the original with any sense of confidence. But a large number of these metrically hybrid poems must be accepted as normal Hebrew poetic practice.

All that we know of ancient Near Eastern poetry supports the principle of metrical fluidity. Babylonian poetry has a prevailing 2+2 meter, but is interspersed with lines that can be read only as threes, often to be scanned as 2+2+3. Sometimes a six-stress line seems to require 2+2+2. The ancient Canaanite literature from UGARIT reveals a frequent 3+3 pattern, but there are innumerable variations. Especially noticeable is the tristich, in 3+3+3 or 2+2+2 schemes. In view of its frequency at Ugarit, it cannot be denied that Hebrew poets purposely used tristichs (*see* § C1 *above*). These Canaanite discoveries in particular, dating from the fourteenth century B.C. and in a tongue dialectically related to biblical Hebrew, argue strongly the futility of seeking metrical exactness in the poetry of the OT. Emendation of the text for metrical reasons and without syntactic or versional support, is a dubious practice. Yet there is consistency in Hebrew poetry to the extent that parallel stichs seldom range beyond a variation of one stress in length; thus, e.g., 4+2 or 2+4 rhythms are distinct rarities.

Meter, insofar as it exists in Hebrew poetry, is actually the rhythmical counterpart of parallelism of thought. Rhythm is not due to syllabic quantities but to the less definable instinct of balancing parts whose exact accentual values are not measurable and probably never were. Ordinarily the conceptual or semantic parallelism is matched by numerical or structural parallelism. The stichs tend to be nearly the same length, but this similar fulness of line is not a metric phenomenon any more than balanced masses in painting are metrical. Both parallelism and meter obey an impulse to regular repetition, but in Hebrew poetry regularity of stress is subordinated to regularity of balanced ideas. Thus the tendency to fill out lines with incomplete parallelisms by means of compensation (*see* § C1*a above*) is not metrical (i.e., the necessity of having two three-stress stichs) but rather is due to the desire to oppose word-masses of about the same weight while varying and emphasizing the thought. The concept is closer to a spatial concern with "mass" than to a temporal concern with "stress."

Nevertheless, however Hebrew verse is analyzed, it is impossible to dismiss the persistence of the caesura or stop, both in its sharper form at the end of lines and in its feebler form within lines. The groupings that result from these breaks are essentially thought-units and the word-masses balance, not because of prior metric convictions, but because the poetic thought pulsates in a series of advancing, recapitulating, and contrasting movements. Meter may be reduced to nothing more than a tallying of accents provided by the Masoretes. Parallelism of thought, and corresponding word-mass, is the substance and mode of Hebrew poetic expression.

E. *TECHNIQUES.* Only occasionally does rhyme or near-rhyme appear in Hebrew—e.g., where the same pronominal suffix sound appears at the end of two or more stichs, as in Isa. 41:11-13. Yet the Hebrew tongue has such forcefulness of sound and image that the absence of rhyme is not felt as a loss (*see* HEBREW LANGUAGE). The Hebrew poet had a keen ear for the texture of words and knew how to marshal them to brilliant effect. As a result, the pleasantries and marvels that he contrives with words appear with greater profusion and surprise than if they were confined to the regularity of rhyme.

1. Alliteration. Alliteration is the consonance of sounds at the beginning of words or syllables. The English rendering:

> Pray for the peace of Jerusalem!
> "May they prosper who love you!"

is totally inadequate to express the ringing cadence of the fourfold occurrence of the *sh* and *l* sounds in Ps. 122:6: *shaʾălû shĕlôm yĕrûshālāyim yishlāyû*. Nor does the English of Isa. 1:18-20 do justice to the sixfold *k* (once *ḥ*) and the threefold sibilants in vs. 18, as well as the fivefold *t* (once *ṯ*) in vss. 19-20:

> *ʾim-yihyû ḥaṭāʾêkhem kashshānîm kashshélegh yalbînû*
> *ʾim-yaʾdhîmû khathôlāʿ kaṣṣémer yihyû*
> *ʾim-tōʾbhû ûshĕmaʿtem ṯûbh hāʾāreṣ tōʾkhĕlû*
> *wĕʾim-tĕmāʾ ʾanû ûmĕrîthem.*

2. Assonance. Assonance, the correspondence of sounds in the accented vowels, is especially prominent where pronominal suffixes and verbs recur. In the Isaiah passage (*see* § E1 *above*), the accented *î* (ē) and *e* (ĕ) in vs. 18 (each three times) and *û* (ū) in vss. 19-20 (also three times) reinforce the alliteration. The climactic Servant Song of Isa. 52:13–53:12 draws an impressive contrast between the innocent sufferer and the guilty confessors, a contrast strengthened by the "ōō" sound in the pronominal forms *hûʾ* for "he" and *nû* for "we." In 53:4-7 the "ōō" sound, with its emission of grief and awe, occurs fifteen times. In the mocking song over the fall of Tyre, Ezekiel describes the fate of the mercantile city as that of a gaily embarked trading vessel that sinks in the deep. The twelvefold repetition of the long *ê* sound (ā) in the accented syllable exhibits disdain and menace (Ezek. 27:27).

3. Paronomasia. Hebrew poets had a penchant for wordplay. The prophets were especially gifted at concentrating a whole message in a single memorable association of terms. Amos beheld a *qāyiṣ* (basket of summer fruit) and was at once reminded that "the *qēṣ* (end) has come upon [the] people Israel" (8:2). Isaiah crowned his Song of the Lord's Vineyard with this mighty summation:

> For the vineyard of the LORD of hosts
> is the house of Israel,
> and the men of Judah
> are his pleasant planting;
> and he looked for justice [*mishpāṭ*],
> but behold, bloodshed [*mishpāḥ*];
> for righteousness [*ṣĕdhāqâ*],
> but behold, a cry [*ṣĕʿāqâ*]!
> (Isa. 5:7).

4. Onomatopoeia. Hebrew is rich in words that sound like what they describe, inasmuch as the language is directly denotative of objects and actions. The Hebrews did not mime reality in drama or in art; but they mimed it exquisitely and movingly with lyric poetry. In Ps. 93:4 we can hear in the alliteration of the *m* sound the swelling fullness of the sea, and in the repeated *r* sound the raging of its waves. In *middahʿrôth dahʿrôth* we hear the "galloping, galloping" of Sisera's battle horses beside the River Kishon (Judg. 5:22). In the guttural and *ṗ* sounds of Isa. 42:14 we catch the gasping and sighing of a woman in birth pangs. Thus a rich plasticity of sound joins with the flexibility of parallelism to assault the reader's eye and ear with sharp impressions and unexpected sensations. The language is wholly alive, so that an abstract-appearing poem is in actuality vibrating with delectability of sound and impact of image.

F. *STROPHE.* The grouping of distichs (or tristichs) into larger units is not demonstrable in most Hebrew poetry. ACROSTIC poetry shows that such arrangement is possible (e.g., Lam. 1; 2; 4 are composed of two-distich strophes or tetrastichs; ch. 3 of three-distich strophes or hexastichs; and Ps. 119 of eight-distich strophes). Yet in most acrostics the true sequence of thought ignores the formal strophic divisions.

Sometimes a refrain appears at reasonably regular intervals. Pss. 42–43 actually form a single composition. The refrain:

> Why are you cast down, O my soul,
> and why are you disquieted within me?
> Hope in God; for I shall again praise him,
> my help and my God,

is employed three times (42:5, 11; 43:5), twice preceded by nine distichs (except for a tristich in 42:8) and once by eight distichs. In Ps. 46 the refrain:

> The LORD of hosts is with us;
> the God of Jacob is our refuge,

appears twice with the cryptic "Selah" (vss. 7, 11). Although "Selah" has sometimes been explained as a strophe divider, its distribution in the Psalms and Hab. 3 will hardly bear this interpretation in more than a small percentage of cases (*see* PSALMS, BOOK OF). The same refrain seems to have dropped out after Ps. 46:3, although "Selah" has remained. The result would be three strophes of about equal length.

A more elaborate refrain appears in Ps. 107:1-32:

> Then they cried to the LORD in their trouble,
> and he delivered them from their distress;
> . . . . . .
> Let them thank the LORD for his steadfast love,
> for his wonderful works to the sons of men!

into which is inserted a variable description of the nature of his deliverance (from desert wandering, vs. 7; from prison, vs. 14; from sickness, vs. 20; from storm at sea, vss. 29-30). In spite of the intricacy of the refrain, the resulting strophes are exceedingly uneven in length.

In the absence of acrostic or refrain, the symmetrical articulation of the thought sometimes argues strongly for strophic division. Isaiah's Song of the Vineyard (ch. 5) falls naturally into four subdivisions: the beloved's care of his vineyard (vss. 1-2), the rhetorical appeal for judgment between the owner and his vineyard (vss. 3-4), the announcement of the vineyard's destruction (vss. 5-6), and the clinching of the parable through its application to Israel (vss. 7-8). Each subdivision is four distichs in extent, except for the third, which has four distichs and one tristich.

It is often tempting to assume that glosses or dislocations have disturbed a regular strophic order. In Job's final protest to God, the recurrent oath of clearance ("If . . ." in Job 31) supplies a clue to strophic reconstruction, but no regularity is attainable without drastic rearrangement. The attempts of scholars to delete, introduce, and rearrange lines and strophes in the interests of regularity must be judged individually, but wholesale emendation and reshuffling of the text not only have little evidence to go on but also are contradicted by the Ugaritic poetry, with its analogous freedom of form.

G. *GENRE AND SITUATION IN LIFE.* 1. Poetic fragments. Poetry found early expression in ancient Israel. Embedded in the Pentateuch are poetic vignettes that derive from life before the Conquest. The Song of Lamech bespeaks the nomadic vendetta, uncontrolled by the law of equal retaliation:

> Adah and Zillah, hear my cry!
> Wives of Lamech, give ear to my saying.
> For I kill a man because of my wound,
> And a boy because of my injury.
> For Cain has avenged himself sevenfold,
> but Lamech seventy times seven
> (Gen. 4:23-24 orig. tr.).

The Song of Miriam is widely accepted as the authentic response of those who participated in the Exodus:

> Sing to Yahweh, for he is greatly uplifted;
> the horse and its rider he has thrown into the sea
> (Exod. 15:20-21 orig. tr.).

The Song of the Ark consists of two shouts, one to accompany the setting forth of the ark in battle:

> Arise, O Yahweh,
> and may thy enemies be scattered
> and may thy despisers flee before thee!
> (Num. 10:35 orig. tr.).

The other is recited at the ark's return to the camp:

> Return, O Yahweh,
> to the innumerable families of Israel!
> (Num. 10:36 orig. tr.).

The Song of the Well is a ritual accompaniment to the opening of a well, although it may subsequently have been used by drawers of water:

> Spring forth, O well! Sing to it!
> the well dug by princes,
> opened up by the nobility of the people
> with a rod and with staves
> (Num. 21:17-18 orig. tr.).

The curse on Amalek may reflect bitter struggle between two wandering tribes; however, its structure is not unambiguously poetic (Exod. 17:16). Other poetic snatches in the Pentateuch—e.g., Melchizedek's blessing on Abraham (Gen. 14:19-20) and the blessing of Rebekah's brothers (Gen. 24:60)—are doubtless premonarchic. Only the Aaronic benediction (Num. 6:24-26) is probably later than the Monarchy.

2. Anthologies. Two books are referred to by name as the source of certain of the early poems: the Book of the Wars of Yahweh (Num. 21:14; *see* WARS OF THE LORD, BOOK OF) and the Book of Jashar (Josh. 10:13; II Sam. 1:17-27; *see* JASHAR, BOOK OF). Neither collection is now extant, but, since the Book of Jashar included Joshua's charge to the sun and moon (Josh. 10:13) and David's lament over Saul and Jonathan (II Sam. 1:18), it was compiled no earlier than the United Monarchy. It is likely that others of the poems of the Pentateuch and historical books were inserted from the same or similar anthologies. If, as the title implies, the Book of the Wars of Yahweh recited the victories of Israel's God, then the curse of Heshbon (Num. 21:27-30) and the Song of Deborah (Judg. 5) would be natural entries, possibly also the blessing of Jacob (Gen. 49), the oracles of Balaam (Num. 22-24), and the blessing of Moses (Deut. 33). At any rate, there is often a variance between these short poems and their narrative settings. Sometimes the line of poetry seems no more than a fragment, torn out of one context and adapted to another.

3. Recurring and nonrecurring types. Our impression of this early poetry is that it was not the free composition of individuals, a type of belles-lettres, but rather a communal creation. It grew out of the mores and social functions of a community moved to celebration. Back of the anthologies and their components lay the habit of public recital in memory of great events and in observance of recurrent communal experiences. In birth, marriage, and death; in work and merriment; in war and worship; certain forms (*Gattungen*) of poetic expression developed as accompaniments of social activity. The forms seem to have been shaped in settings that would constantly recur. The introduction of specific names and places (e.g., Adah, Zillah, Cain, and Lamech in Gen. 4:23-24) would follow long after the poetic types were in general use (in the case of Lamech's cry, the basic form is a call for blood revenge). The patriarchal and priestly blessings, rich with the Hebraic sense of family continuity and the power of the divine word, were probably liturgical utterances employed far beyond the setting in which they are placed in the OT (Gen. 14:19-20; 27:27-29; 48:15-16; Num. 6:24-26). *See* BLESSINGS AND CURSINGS.

Other compositions are patently connected with singular and unforgettable events. The victory ode of Deborah and Barak over the Canaanites (Judg. 5) and the lament of David over Saul and Jonathan (II Sam. 1:19-27) could not easily be used to celebrate other victories or lament other deaths. The Song of

Deborah nevertheless owes much of its form to ancient Near Eastern victory odes (*see* NAHUM), and David's lament is inextricably bound up with the form of the funeral dirge.

In general the poetry of the OT may be divided into compositions related to continuous communal functions and those shaped for special artistic or historical purposes. The former are virtually undatable, except as they betray conditions of the desert, conquest, monarchy, exile, or restoration. Most of the psalms belong to the former group. The compositions with special purposes offer greater hope of dating, but in many instances, as in the magnificent poetry of Job, the intention was artistic and religious rather than historical, so that no clear dating criteria survive.

The distinction in principle between the general and the concrete, the communal and the individually creative, is not easily applied in practice. But to recognize the strong impress of religio-social patterns upon Hebrew poetry is to have made long strides toward appreciating its concrete power, its adherence to types, and its frequent lack of historical allusion. FORM CRITICISM attempts to classify the types of Hebrew poetry and to describe the settings or life situations in which they developed. We need always to remember that the inherited types, sprung from a deeply rooted communal tradition, controlled even the greatest poets of Israel far more than in classical or European literature.

4. Secular types. The forms of OT poetry are by and large "sacred"—i.e., they are related to religious celebration and involve the God of Israel. But often they have to do with common functions not restricted to formal religious worship, such as war (Josh. 10: 12-13; Judg. 5), blood revenge (Gen. 4:23-24), mocking of an enemy (Num. 21:27-30), work (Num. 21: 17-18), marriage (Gen. 24:60), and death (II Sam. 1:17-27). In most cases these songs were not repeated in temple worship, and the name of Yahweh is not often included (the chief exception is the Song of Deborah, Judg. 5), but this fact does not remove them totally from the religious sphere. That the interpenetration of secular and sacred was always typical of Israel may be seen in the way prophetic poetry is cast in forms of secular origin: harvest song (Isa. 5:1-7), mocking or taunt song (Isa. 14:1-27; 47), funeral lament (Jer. 9:17-22; Amos 5:2), victory ode (Isa. 63:1-6; Nahum), and litigation (Isa. 45:20-21; Mic. 1:1-7).

5. Sacred types. The poems reserved for formal worship are mainly of the recurring type (*see* § G3 *above*). They are studiously free of proper names, and were preserved in the Psalter because they could be used repeatedly. They should not be understood, however, simply as a collection of hymns for temple singing. There is no evidence that bodies of worshipers sang together. There were choirs and soloists who chanted or sang. Thus many of the psalms are best understood as incidental music, accompanying some act, such as the coronation of the king or sacrifice. Still other psalms seem detached from any cultic act, and are merely imitative of the fixed forms. It is difficult to trace a clear history of the evolution of forms, since psalms composed for the cult passed into general devotional usage and vice versa. Nevertheless, significant strides have been made in isolating some of the primary forms and their communal setting. For fuller exposition of the categories and examples, *see* PSALMS, BOOK OF.

a. Hymn. The hymn is cast in direct address to deity and extols his attributes and works (*see* HYMNS). Generally the hymn seeks no end other than praise and adoration. The hymn form was probably an outgrowth of public FEASTS such as PASSOVER; WEEKS; and TABERNACLES. A special subdivision is the Song of Zion, extolling the beauty and joy of temple worship and probably used as a pilgrim song.

b. Lament and confession. The lament is occasioned by a threat to the worshiper (individual) or the community (collective). For the individual, sickness and unjust accusation, even ostracism, are frequent complaints, and for the community, famine, military defeat, and exile. The plight of the lamenter is catalogued, often in gruesome detail, and God is entreated to speedy action. Frequently the lament closes with an affirmation of confidence that God will hear, and the delivery from crisis is sometimes described in advance. In general these compositions would be used without reference to the religious calendar, whenever catastrophe struck. Certain festivals, however, such as the celebration of the fall of Jerusalem in 586 B.C., encouraged periodic recitation of communal laments. Some laments decry the sin of the suppliant and are virtually confessions or penitential psalms asking only for forgiveness and new life before God (e.g., Pss. 51; 130; *see* CONFESSION).

c. Thanksgiving and trust song. The THANKSGIVING song stands beyond the disaster which provoked the lament. It presupposes salvation from the threat of individual or social annihilation. It is frequently close to the hymn type, but is more precise in its praise, usually naming the original threat and always focusing upon the memory of specific deliverance. The trust song is not related to immediate crisis. It expresses rather the deep confidence of the psalmist in the presence and power of God. The trust song has the same meditative and spiritual quality as the confession.

d. Royal psalm. The royal psalm is more problematic than the other types. It presumably has for its function a ceremony in which the king was participant. Preparation for war (Ps. 20), celebration after victory (Ps. 21), marriage (Ps. 45), and coronation (Pss. 2; 110) are among the occasions presupposed. It is a matter of debate how widely and in what sense this category should be conceived. Was the installation of the Israelite king anything more than a "secular" appointment? Particularly, are the many psalms in which Yahweh is regarded as king to be assigned as royal psalms? Was there a pre-exilic ceremony in which the Israelite king represented Yahweh, either at his coronation or in an annual New Year's festival? (*See* KING; TABERNACLES, FEAST OF.) Interpreters divide sharply. Some regard Yahweh's kingship as a part of the pre-exilic monarchic pattern which was sacrally supported. Others insist that Yahweh's kingship is a postexilic metaphorical usage, developed to express divine sovereignty over the nations after the kingship ceased. It is hardly to be denied, however, that there are some psalms in which the pre-exilic king was protagonist.

The older view that they were used by Maccabean priest-kings (*see* MACCABEES) need not be ruled out, for pre-exilic royal psalms would have been readily revived by the Maccabees, who certainly regarded themselves as the heirs of the old political order of Israel.

6. Prophetic poetry. The prophetic poetry had its roots in the forms of oracular utterance delivered at shrines. In their roles as interpreters of the divine will, priest and prophet were essentially identical in origin (*see* PRIESTS AND LEVITES; PROPHET). Their utterances were brief and simple, in the form of blessings upon the faithful and curses upon the faithless, or in oracular declarations on some specific request. The overriding force of the utterance is its divine sanction. Although the great prophets renounced mechanistic utterance and the severance of word and life, the modes of their speech continued under the formative priestly influence. Both adhered to the binding power of the divine word. The single sanctuary ministry proliferated into the separate work of priest as custodian of a body of law and ritual, and of prophet as the roving conscience of Israel and mouthpiece of God. A third authority appeared in the sage, who was tribal elder or counselor of kings, later scribe and schoolmaster.

What distinguishes the prophetic poetry from priestly and wisdom poetry is its formulation toward specific situations. The prophetic "life situation" was the moment of social, political, and religious crisis when men must decide the destinies of people and nations. Thus the old sanctuary forms take on the character of reproach and admonition. They are charged with fresh urgency and ultimacy. Moreover, the secular forms (*see* § G4 *above*) are appropriated and merged with older priestly modes of speech. The specific situations to which the prophetic poetry speaks are as manifold as the circumstances in which men must choose or reject God's will. Thus, in basic form and technique, prophetic poetry is not markedly distinguishable from other biblical poetry, just as prophetic faith shares with priest and wise man the common belief in the will and purpose of Israel's God as a binding reality by which all of life was to be shaped.

7. Emancipation from types. A later tendency in Israel was the composition of extended poetic works, of which the prophecy of Isa. 40–55 and the book of Job represent the pinnacle of attainment. Characteristic of both poets is the free use of many previously separate forms, secular and sacred. The forms tend to break down and merge in a larger continuity. Isa. 40–55 celebrates the new act of redemption from exile and the salvation of the nations. Job sounds the depths of divine and human righteousness, their harmony and disproportion. Largeness of theme demanded corresponding vastness of literary conception. Deutero-Isaiah makes particular use of the hymn, lament, taunt song, and litigation. The poet of Job is a master with lament, as also of the hymn style, which he expands gloriously in the rhetorical flood of the whirlwind speeches (Job 38–41).

A general thesis about the types of Hebrew poetry can now be formulated: the earliest types were simple (directed to one situation or event) and brief. The mixing of types and a tendency toward greater length began during the Conquest, accelerated under the Monarchy, but reached its climax during and after the Exile. The profoundly stirring events of the nation's fall seem to have spurred poets to a freer and more spacious use of forms, resulting in a style which in Job and Isa. 40–55 approaches epic grandeur. There was a tendency to break down and fuse secular and sacred forms, since all the orders of life came under Yahweh's aegis. In Israel there persisted, nevertheless, a tension between poetry as the instrument of communal feeling and as a contrivance for specific proclamation. Yet it remains problematic, especially in the Psalms, whether specific poems were written by temple personnel for recurrent recital or whether they came out of more private experience that imitated the existing forms and were in turn sometimes used in the cult.

It is clear that the forms were so settled in usage that they largely determined Hebrew poetry in its style. The Hebrews never won the literary independence from Canaan that would have paralleled their astounding religious independence. While the prophets passed far beyond the mass religious response of the Israelite people and summoned them to new heights as the people of Yahweh, they were satisfied to employ the popular and cultic modes of expression. It is the content and not the form that gives prophetic and psalm poetry its power to transcend the historical setting of ancient Israel.

N. K. GOTTWALD

POISON. The translation of several terms in the Bible. One general term is found in the OT to refer to poisonous plants: ראש or רוש. The word is most commonly used metaphorically to refer to the sin and corruption of Israel (Deut. 29:18—H 29:17; 32:32; Ps. 69:21—H 69:22; Lam. 3:5, 19 [RSV "bitterness"]; Hos. 10:4; Amos 6:12). Jeremiah (8:14; 9:15

—H 9:14; 23:15) speaks of poisonous water which Yahweh will give the people to drink; this may also be a metaphorical expression, or it may refer to the effects of a severe drought in the land (see Jer. 8:14; ch. 14). The term is also found once in reference to the poison of asps (פתנים [Job 20:16]; *see* ASP).

No other poisonous plant is referred to directly in the OT. The gourds (פקעת) of the son of the prophets which made the prophets ill (II Kings 4:38-41) were probably not poisonous but a strong purgative. *See* GOURDS, WILD.

Poisonous reptiles are more frequently mentioned. The venom of various reptiles is designated by the term חמה, a word which also means "heat," "rage," "wrath." The word occurs with the meaning "poison" in Deut. 32:24, 33; Pss. 58:4—H 58:5 (RSV "venom"); 140:3—H 140:4. The poison of arrows is also referred to by the use of this word (Job 6:4; in a metaphorical sense, the arrows of God). In the LXX this word and ראש are commonly translated by θυμός.

Reptiles considered to be poisonous in the OT include the אפעה, VIPER (Job 20:16; Isa. 30:6; 59:5); the נחש, snake or SERPENT (a term also used to refer to the mythological dragon of the ancient world and perhaps to the crocodile; cf. Gen. 3:1-4; Num. 21:9; Deut. 8:15; Amos 5:19; 9:3; etc.); the עקרב, scorpion (Deut. 8:15; Ezek. 2:6); the עכשוב, horned viper (Ps. 140:3—H 140:4); the פתן, horned snake or asp (Deut. 32:33; Job 20:14, 16; Pss. 58:4—H 58:5; 91:13; Isa. 11:8; Ecclus. 39:30); the צפע, צפעוני, viper or adder (Prov. 23:32; Isa. 11:8; 14:29; 59:5; Jer. 8:17); the שפיפן, horned snake or possibly adder (Gen. 49:17); and the תנין, the sea dragon and also a serpent (Exod. 7:9; Deut. 32:33; Ps. 91:13).

In the NT, the term ἰός appears in Rom. 3:13 (a quotation from Ps. 140:3—H 140:4); Jas. 3:8, in each case translated "poison" (RSV "venom" in Rom. 3:13). The Greek term behind the RSV translation "poisoned their minds" in Acts 14:2 is ἐκάκωσαν (lit., "made their minds evil").

By far the majority of occurrences of "poison" in the Bible are metaphorical, referring to God's judgment of his sinful people, or of rebellious nations, or to the poisonous effects of sin and rebellion against God. The terror of poisonous reptiles, however, was widespread in the ancient world. In characteristic fashion the OT writers relate the existence and effects of poisonous substances to the action of Yahweh in their midst.

POLICE [ῥαβδοῦχος] (Acts 16:35, 38); KJV SERGEANTS. Literally, "one who carries a rod—i.e., the *fasces*—as sign of office and authority." The word is translated "policemen" in Goodspeed; "lictors" in Moffatt and generally in modern English, French, and German translations.

The police or lictors were called ῥαβδοῦχοι because they carried *fasces*, a bundle of (birch) rods tied together with a red thong, and from which protruded an axe. The rods might be used for scourging (with such rods we may suppose Paul was scourged in II Cor. 11:25), and the axe (in earlier times) for carrying out the death sentence. When not so used, the *fasces* was the constant symbol of authority. Since city magistrates were not in possession of the right of life and death over citizens, the *fasces* carried by the lictors in Philippi would not contain axes.

All principal Roman magistrates were publicly attended by lictors who carried the *fasces* before them as emblem of their criminal jurisdiction. It was the function of the lictors to execute the sentences pronounced by the magistrates. Accompanying the magistrates, the lictors were similarly garbed: while in the city, a toga; out of it or in triumphal procession, a red coat; at funerals, black dress. Preceding the magistrate, they announced his approach and secured homage.

The number of lictors in any case was determined by the rank of the official. E.g., each consul had six until *ca.* 300 B.C., and thereafter twelve. A dictator had twelve originally, and then twenty-four. Emperors had twelve until Domitian doubled the number. The city magistrate, such as at Philippi, had two. How many lictors were present in Philippi would depend on how many magistrates were there. *See* MAGISTRATE. F. D. GEALY

POLLUTION. *See* CLEAN AND UNCLEAN.

POLLUX pŏl'əks. *See* TWIN BROTHERS.

***POLYCARP, EPISTLE OF** pŏl'ĭ kärp. A letter addressed to the church in Philippi by Bishop Polycarp and his presbyters of the church in Smyrna, probably dating not later than the end of Trajan's reign (A.D. 117); one of the documents of the APOSTOLIC FATHERS. The letter is first attested by Irenaeus (III. 3.4), who as a young lad had been brought up in Smyrna under Polycarp's ministry.

The original Greek text of the letter is only partially preserved—chs. 1-9 in late Byzantine MSS and ch. 13 in a quotation in Euseb. Hist. III.36.13-15. The rest of the letter (chs. 10-12, part of 13, and 14) is known from an old Latin version that appears to be a trustworthy, literal translation.

The letter had two purposes. One concerned Ignatius, who had passed through Philippi on his way to martyrdom at Rome. Polycarp requested information about his fate, copies of any letters of Ignatius that the Philippian church may have had, to add to those Polycarp had already collected and appended to his letter; and he was also making arrangements, at Ignatius' request, for delegations from the churches of Asia Minor and Macedonia to visit the distraught church of Ignatius in Syria. *See* IGNATIUS, EPISTLES OF.

The other matter had to do with Polycarp's pastoral advice, requested by the Philippians, about one of the Philippian presbyters, named Valens, and his wife, who had been excommunicated for some dishonesty in financial dealings. Polycarp took the occasion also to offer sharp warnings about the Docetic heresy that denied the reality of Christ's humanity, and to give a number of moralistic and pastoral admonitions customary in such interchurch communications.

The prevalent inference from this letter has been that Polycarp penned it not long after Ignatius left

the Middle East and before his final fate as a martyr was sealed. According to Eusebius, Ignatius was martyred in the reign of Trajan. But an exhaustive study of Polycarp's letter by P. N. Harrison in 1936 attempted to demonstrate that only chs. 13–14 were written at so early a time. Chs. 1–12 form a later epistle, written *ca.* 135, and combat specifically the heresy of Marcion. Harrison's thesis has won a wide but by no means universal acceptance.

Apart from its inherent historical value, the Epistle of Polycarp is of particular importance for the wide range of Christian writings quoted or reflected in it. It is utterly without distinction of style, and exhibits no trace of education in Hellenistic culture. It also reveals little use of the OT—Polycarp himself modestly disclaimed any competence in the "Scriptures" (12:1). But it does show a man of constant study and meditation in Christian works; the letter is a veritable mosaic of quotation and allusion. He knew the Synoptic gospels and Acts—though the sayings of Jesus are rather freely cited, probably from memory. His acquaintance with the Pauline letters was intimate; but I Peter was his favorite, for he quotes it no fewer than fourteen times. He also shows knowledge of Hebrews, James, and I and II John; uses I Clement extensively; and even reflects from his short acquaintance with them the letters of Ignatius. Contacts with the Pastoral letters are frequent, but it is impossible to say whether Polycarp quoted them or the Pastorals used Polycarp. (H. F. von Campenhausen has posited the hypothesis that Polycarp himself composed the Pastorals.)

There is no trace of Revelation in his letter and only one possible contact with the Fourth Gospel (cf. 5:2 with John 5:21; 6:39, 44). This circumstance has been a puzzle to modern critics. For Irenaeus repeatedly affirmed, from his boyhood recollections, that Polycarp was personally associated with John, the "disciple of the Lord," and that "apostles in Asia" had appointed him bishop of Smyrna. For Irenaeus, of course, John son of Zebedee, apostle, evangelist, and seer, were all one and the same person. If Polycarp had been a personal disciple of "John" the evangelist or of "John" the seer of Patmos, his single surviving letter exhibits very scant theological influence from either "John" and no knowledge of their principal writings.

Polycarp was burned at the stake in Smyrna in February, 155 (or 156). Eusebius (Hist. IV.15), followed by a few modern critics, dated it to 167, in the reign of Marcus Aurelius. An authentic—and deeply moving—eyewitness account of his martyrdom is extant, in the form of a letter sent by the church in Smyrna to the church in Philomelium. This document is also generally included in editions of the Apostolic Fathers. At the time of his ordeal, Polycarp confessed that he had been a Christian for eighty-six years. The pre-eminent integrity of his character was admitted even by the pagans who condemned him. To his own flock, Polycarp was a saint without peer; and the anniversary of his martyrdom was annually observed as a festival, not only in Smyrna, but also in many other churches. Irenaeus has left record of the effective witness of Polycarp, during his long episcopate, to the orthodox, apostolic faith against the Marcionite and Gnostic heresies—not only in Asia, but also in Rome upon occasion of a visit there in his late years. The perspective of history has not dimmed the glow of Irenaeus' hero-worship, in accounting Polycarp the outstanding single Christian leader of his generation.

Bibliography. Fundamental is J. B. Lightfoot, *The Apostolic Fathers,* pt. II: *S. Ignatius, S. Polycarp,* vol. III (2nd ed., 1889). For other texts, translations, and commentaries, *see* bibliography under APOSTOLIC FATHERS; to which should be added T. Camelot, *Ignace d'Antioche, Lettres* (1951), for this includes the letter and martyrdom. Extensive bibliography may be found in the important work of P. N. Harrison, *Polycarp's Two Epistles to the Philippians* (1936); C. C. Richardson, ed., *Early Christian Fathers* (Library of Christian Classics, I; 1953), pp. 121-58. Cf. H. F. von Campenhausen, *Polykarp von Smyrna und die Pastoralbriefe* (Sitzungsberichte d. Heidelberger Akad. d. Wiss., 1951). M. H. SHEPHERD, JR.

***POLYCARP, MARTYRDOM OF** [Μαρτύριον τοῦ ἁγίου Πολυκάρπου Ἐπισκόπου Σμύρνης]. A letter from the church at Smyrna to the church at Philomelium, containing what appears to be, and probably is, a contemporary description of the martyrdom of Polycarp, the bishop of Smyrna in the first half of the second century. The date of the martyrdom itself is usually set in A.D. 155. This document is included in the collection of the APOSTOLIC FATHERS.

See also POLYCARP, EPISTLE OF.

Bibliography. The authenticity of the work is generally acknowledged, but significant questions about large portions of it are raised by H. F. von Campenhausen, *Bearbeitungen und Interpolationen des Polycarpmartyriums* (1957). J. KNOX

POLYGAMY. *See* MARRIAGE § 1*c*.

POLYTHEISM. Worship of a plurality of gods. *See* GOD.

POMEGRANATE [רמון, *rimmôn;* Aram. רומנא, ריומונא; Akkad. *armannu;* Arab. *rummân;* ῥοΐσκος]. A small, shrublike tree and its fruit, *Punica granatum* L. The prominence of the pomegranate fruit in early Bible times is indicated by its use in the decorations on the "robe of the EPHOD," on which it is alternated with golden bells (Exod. 28:33-34; 39:24-26; cf. Ecclus. 45:9), and on the capitals of the temple pillars of JACHIN AND BOAZ (I Kings 7:18, 20, 42=II Chr. 3:16; 4:13; cf. II Kings 25:17; Jer. 52:22-23). As a token of the fruitfulness of S Palestine, the spies took pomegranates, figs, and grapes back to Joshua (Num. 13:23), and Moses mentioned them in describing the Promised Land (Deut. 8:8; cf. Num. 20:5). Saul encamped at Gibeah (probably Geba) near a place identified by its pomegranate tree (I Sam. 14:2). Pomegranates are mentioned in describing and praising the bride in Song of S. 4:3, 13; 6:7; and the flower, as a symbol of spring (6:11; 7:12—H 7:13). Wine was made from the juice of the fruit (8:2). Joel (1:12) includes this tree in his picture of devastation from locusts; and Haggai (2:19) includes it with grapes, figs, and olives as an indication of restoration to God's favor. In city names it appears in Num. 33:19-20 (RIMMON-PEREZ); Josh. 15:32 (RIMMON 1; cf. Isa. 10:27); 21:25 (GATH-RIMMON); Neh. 11:29 (EN-RIMMON). The fruit played a prominent part in ancient art and mythology as a symbol of fertility; the tree was even depicted as the TREE OF LIFE.

POMMELS. KJV translation of גלות (RSV BOWLS) in II Chr. 4:12-13; the bowl-shaped portions of the capitals of the temple pillars. The KJV has "bowls" in the parallel passages in I Kings 7:41-42. *See also* CAPITAL; JACHIN AND BOAZ.

D. M. C. ENGLERT

POND. The translation of אגם in Exod. 7:19 and in Exod. 8:5—H 8:1 KJV (RSV POOL), referring to the pools or marshes with (papyrus) reeds in the delta of Egypt. The word is usually rendered "pool." In Isa. 19:10, אגמי נפש (KJV "ponds for fish") has a variant derivation and is to be taken adjectively (RSV "grieved").

PONTIUS PILATE. *See* PILATE.

PONTUS pŏn'təs [Πόντος, sea]. A term used particularly of the Euxine (Black) Sea. It came to be used as the name of the E portion of the strip of country in N Asia Minor which borders on the Euxine Sea. The area extended from the mouth of the Halys River to the SE limits of this sea. To the W of the mouth of the Halys River lay Paphlagonia and then Bithynia. Later most of Paphlagonia was considered part of Pontus.

1. Geography and history. The shore line of Pontus includes fertile plains, which, however, are not deep and are interrupted by northward thrusts of the mountain ranges of the hinterland. These interruptions prevented the construction of continuous roads along the coast, and forced E-W traffic to move either by sea or along inland roads. Two such inland roads through Bithynia and Pontus were developed and were used, especially in Roman times, for troop movements.

The shore country was dotted with Greek colonies and outposts from the seventh century B.C. Sinope and Amisus were outstanding ports. Such ports were strongly Greek in culture and were in continual communication not only with other ports on the Euxine Sea but also with Greece, W Asia Minor, and even more distant regions.

The inland portions of Pontus had a quite different history. These mountainous areas, through which numerous streams cut gorges to make their way down to the Sea, were largely isolated from the Greek ports and had many ties with Armenia and Cappadocia. Prominent among the rivers were the Thermodon, whose region was the traditional home of the Amazons, and the Lycus and Iris, which together formed the largest river in Pontus. Amasia, ancient capital city of Pontus and birthplace of the famous geographer Strabo, lay well inland on the Iris River. The Halys River rises in SE Pontus, flowing SW into Cappadocia, and after turning northward through Galatia, flows NE on the W border of the original limits of Pontus; it is the longest river in Asia Minor. For the most part the inland mountainous areas of Pontus resisted Greek influence.

Pontus had been under famous empires, notably the Hittite and the Persian, before it became an important independent power. *Ca.* 302 B.C., Mithridates founded the kingdom of Pontus, and the dynasty he established ruled this kingdom until 63 B.C. The kingdom attained its widest extent and influence under Mithridates VI Eupator (111-63 B.C.), who ruled the region S of the Euxine Sea from Heraclea in Bithynia on the W to the regions of Colchis and Lesser Armenia on the E. He boldly challenged the advance of Rome in Asia Minor, and only after repeated campaigns, extending through more than two decades, was he finally defeated by Pompey and his rule ended.

The Romans then divided Pontus. The W part of Mithridates' empire, from Heraclea to the Halys River, was joined to the recently formed province of Bithynia; the new province was called Bithynia et Pontus. It later extended E of the Halys and included the important seaport of Amisus. The other parts of Pontus were added to Galatia (Pontus Galaticus) or entrusted to local rulers under Roman control. But conditions in this region changed repeatedly. Pharnaces, son of Mithridates VI, attempted to win back his father's kingdom, but was defeated by Julius Caesar in 47 B.C. In 37 B.C. much of the E coastal region of ancient Pontus was given to Polemon to rule under Roman control, and the dynasty which this puppet king founded continued to rule this region until A.D. 64, when the Romans took over direct rule and included part of it in Galatia (Pontus Polemoniacus) and part in Cappadocia (Pontus Cappadocicus). Under Vespasian, Galatia and Cappadocia were united in one province, which thus included all of Pontus not in the province Bithynia et Pontus. Later, under Trajan, Galatia and Cappadocia were again made separate provinces, and the three parts of Pontus which the united province had included—Pontus Galaticus, Pontus Polemoniacus, and Pontus Cappadocicus—all became parts of the province of Cappadocia. Roads from the Euphrates River region and from E Cilicia ran N through Cappadocia to ports on the Euxine Sea.

Thus in the days of the apostolic church a reference to Pontus might refer to the entire area; or to the W portion, which formed part of the Roman province Bithynia et Pontus; or to the E portion, which was in the kingdom of Polemon. But it would usually mean to people of the Roman Empire that part of Pontus included in the Roman province.

The presence of Jews in Pontus is attested by Philo of Alexandria, who in his *Embassy to Gaius* 36 says that they had spread into every part of Pontus. Among the Jews present in Jerusalem at Pentecost are mentioned those from Pontus (Acts 2:9). While they may have traveled overland from Pontus to Palestine, it is more likely that they took ship from some such Pontic port as Sinope or Amisus, sailed around the W side of Asia Minor, and so reached Palestine. Such contact by sea between Pontus and the Aegean and Mediterranean seas is illustrated by the movements of Aquila, a "native of Pontus," who had migrated to Rome and then with the other Jews there had been expelled by Claudius. He went to Corinth, where Paul met him (Acts 18:2), and later went with Paul to Ephesus and settled there (Acts

18:18-19). If Rom. 16:3 is a portion of a letter to Rome, Aquila was back in Rome when it was written. The movements of Aquila illustrate the mobility of first-century Jews and the seagoing habits of a Jew of Pontus, for it is safe to assume that Aquila traveled by sea.

2. Christianity in Pontus. In I Pet. 1:1 it is clear that there are Christians in Pontus, for, as vs. 2 shows, the "exiles of the dispersion" here addressed are the Christians scattered through the regions of central and N Asia Minor. We cannot say when Christian preachers first brought the gospel to Pontus. It would be bold to conclude that Jews converted at Pentecost at once brought the gospel to the Pontic region (Acts 2:9). When Paul was turned aside from his tentative plan to preach in Bithynia (Acts 16:7), a plan that could easily have included Pontus, he may have learned that there were already Christian preachers at work there. There is no clear evidence, however, that Peter ever preached in Pontus. But when I Peter was written, there had been churches in that region for years. The churches had elders as leaders (I Pet. 5:1), and seem to have been mainly of Gentile membership. They were under criticism and hostile pressure from their fellow countrymen, and faced the threat of an active and thoroughgoing persecution.

Attempts to date this situation yield no decisive conclusion. There is no real evidence that the persecution of Christians by Nero in Rome in 64 led to similar persecution in Asia Minor. The book of Revelation foresees wholesale persecution for the churches of the province of Asia, and this seems to reflect the situation near the end of the reign of Domitian (81-96), but there is no clear link with the situation in Pontus. When Pliny the Younger was sent by Trajan in 113-15 to set in order the deteriorated economic, social, and political conditions of the province of Bithynia (which included the W part of the ancient region of Pontus), he found that Christianity had been established there for at least more than two decades, had achieved an astonishing growth, and had led the pagan population and leaders to active persecution. Pliny, supported by Trajan, barred penalties against former Christians who had given up that faith, but continued the severe measures already in effect against those who refused to renounce their Christian confession. Back of this situation lies a period of intensive and highly fruitful missionary and evangelistic effort throughout the province of Bithynia et Pontus. Such a period of Christian growth means that Christianity must have come to that region several decades before Pliny visited there, and possibly as early as the days of Paul's active ministry.

Numerous facts attest the importance of Pontus in the religious world of the second century A.D. E.g., Aquila of Pontus, a Jew of the time of Hadrian, translated the OT into Greek. The amazing story which Lycian tells of how the impostor Alexander of Abonuteichos (a city of Pontus) founded a new religious cult gives a picture of one aspect of pagan religious life. Marcion, who went to Rome and headed a powerful heretical sect of the church, came from Sinope in Pontus, where his father is reported to have been a bishop.

F. V. Filson

POOL. The translation of several terms designating natural or artificial reservoirs supplied by rain and overflow from springs and rivers. These were important sources of water supply for biblical villages, and many can still be seen. *See also* Reservoir; Water Works § 4*b*.

The most common term for "pool" is ברכה (II Sam. 2:13; I Kings 22:38; etc.; so also the Siloam Inscription). It is often mentioned in connection with biblical cities (*see below*). Another term, אגם, refers to a pool full of reeds, probably a swamp area (Exod. 7:19; 8:5—H 8:1; Isa. 14:23; *see* Pond). The term is rendered variously as "pool" and "pond" in the KJV (Isa. 19:10; 35:7), but always "pool" in the RSV except in Exod. 7:19 ("pond"); Jer. 51:32: "The bulwarks [האגמים; KJV 'reeds'] are burned with fire." There is no indication that אגם was an artificial pool or that it was associated with particular villages or cities. In one passage another term, מקוה, "a gathering," is rendered "pool" (Exod. 7:19). The LXX uses several different words to render the Hebrew terms, but κολυμβήθρα is generally used for ברכה and is also the NT word (John 5:2-7; 9:7).

Among the pools identified with a particular name or place are the ones at Gibeon (II Sam. 2:13), Hebron (II Sam. 4:12), Samaria (I Kings 22:38), Heshbon (Song of S. 7:4—H 7:5; KJV "fishpools"), Jerusalem (II Kings 18:17; Isa. 7:3; 36:2), and also at Jerusalem the King's Pool (Neh. 2:14), the Pool of Shelah (Neh. 3:15; KJV "Siloah"), the pool called Beth-zatha (John 5:2; mg. "Bethesda, Bethsaida"), and the Pool of Siloam (John 9:7).

Most of the pools in the vicinity of cities were rock-cut reservoirs ("artificial pools"; Neh. 3:16; cf. Eccl. 2:6), into which rain water drained by means of channels cut in the rock. Pools are mentioned as places of meeting where important events took place (II Sam. 2:13, a battle between the forces of Abner and David; I Kings 22:38, Ahab's chariot washed). The repair and construction of pools was an important measure in preparing a city against siege (II Kings 20:20). According to John 5:2-3, the pool of Beth-zatha in Jerusalem was constructed with five porticoes to which people came with the hope of being healed. A similar tradition of healing is associated with the Pool of Siloam (John 9:7).

Pools are mentioned in a figurative sense to indicate God's power to transform the wilderness (Isa. 41:18), and to suggest the devastation of Nineveh (Nah. 2:8) and the beauty of a maiden's eyes (Song of S. 7:4—H 7:5).

Among the most famous pools still to be seen are those in Hebron, Gibeon, Jerusalem, and the so-called "Pools of Solomon" in the Valley of Urtas near Bethlehem (Fig. WAT 6). Three in number, they are *ca.* two hundred feet in width, and the largest is almost six hundred feet long and fifty feet deep. At least as early as Roman times the pools supplied

water to Jerusalem, as attested by sections of aqueducts which remain; and they are still used by people in their vicinity.

See also GIBEON § 1*b;* JERUSALEM §§ 5*b,* 6*c,* 7*b,* 11; SILOAM; SHELAH (POOL OF); BETH-ZATHA.

W. L. REED

***POOR.** One who is destitute of wealth and of material goods, lacking in even the necessities of life. Also, metaphorically, the humble and the meek. In Hebrew many words are used for the poor man and his condition. *See* POVERTY.

אביון occurs more than sixty times in the OT. It is almost always used of the poor in a material sense. These are the needy (Deut. 15:7; 24:14; Ps. 109:16). In Psalms and Proverbs, אביון is often paralleled with עני (Ps. 109:16; cf. Pss. 35:10; 72:12; 109:22; etc.) and דל (Pss. 72:13; 82:4; 113:7; Prov. 14:31; 31:9). Anyone who needs deliverance from material exigencies, evil, or sin is poor and needy in respect to God. God will deliver him from trouble (Pss. 9:18-19; 12:5; 69:33; 86:1; Isa. 25:4; 29:19; 41:17; etc.).

דל and דלה are from the root דלל, "be low, languish," which is related to the Akkadian *dalûlu,* "be weak." The term appears most frequently in the Writings. They are those whose prosperity and social status have been reduced. In this respect they are the opposite of the rich (Exod. 23:3; 30:15; Lev. 14:21; Prov. 22:16; etc.). In physical strength, in psychological ability, they are also impaired and so become helpless (Job 34:28; Ps. 82:3; Jer. 40:7; 52:16; etc.).

חלכה is the "unfortunate one." It appears only in Ps. 10:8, 10, 14. The RSV translates "hapless." The LXX uses both πενήτα and πτωχός here.

חסר and מחסור are also those who are in need and want (Prov. 6:11; 28:22; etc.). These even lack bread enough for food (II Sam. 3:29; Job 30:3), and so are the poverty-stricken (Deut. 28:48; Prov. 21:17; etc.).

מסכן occurs only in Ecclesiastes and seems related to the Akkadian *muškênu,* "beggar." In Eccl. 9:15-16 he is a wise man as well as a beggar. Perhaps, like many teachers, he did not have a trade and was voluntarily poor (*see below*). He is not necessarily from the lowest economic class, because of the contrast to the great king in these passages and in 4:13.

עני and ענו and related terms are basically the "afflicted," the "bowed down." They are oppressed by the rich (Isa. 3:14; Ezek. 18:16-18; Amos 2:7; etc.). They may be the pious who have been afflicted by the wicked (Ps. 10:2; Isa. 14:32; etc.). The words are sometimes used for the "humble" (Num. 12:3; Zech. 9:9).

רוש, ריש, ראש, may be related to the "dispossessed," and so would be derivatives of ירש, "possess." The concept of hunger is involved—e.g., the hungry lions of Ps. 34:10. The second noun appears only in Proverbs (6:11; 10:15; 13:18; etc.).

The Greek πτωχός refers to those who are destitute of material possessions, as opposed to the rich, who have all things in abundance (II Cor. 8:9; Rev. 2:9). Christ dispossessed himself (πτωχεύω) and became a beggar on behalf of man. This verb appears in the LXX for דלל and רוש. Poor men (πτωχός) may be beggars (Matt. 19:21; Luke 14:13), but they still have the gospel preached to them (Matt. 11:5). Figuratively these are people who are destitute of morals or of the Christian ethic (I Cor. 1:26; Gal. 4:9; Rev. 3:17). The poor in spirit, the true humble followers of the Way, are blessed (Matt. 5:3; Luke 6:20).

Πένης is the humble workman from the lowest economic class. He is not a beggar, and πένης should be distinguished from the first Greek word. Πένης is used only in II Cor. 9:9, a quotation from Ps. 112:9. It is used in the LXX for almost all the Hebrew words.

Πενιχρός is closely related to πένης but is used only for the poor widow in Luke 21:2. In the LXX it appears for עני and דל. These words seem to be related to the English word "penury."

In the OT the poor were a special charge of God. He would not forget them (Pss. 9:12; 10:12; etc.). He pities and comforts them (Ps. 34:6; Isa. 49:13; etc.). He cares for them (Job 5:15; Pss. 107:41; 132:15; Jer. 20:13; etc.). God through the Mosaic legislation and the prophetic exhortation seeks social justice for the poor (Deut. 10:17-18; II Sam. 22:28; Isa. 25:4; Amos 2:6; 4:1; etc.). There are many warnings against the oppression of the poor in both the Law and the Prophets (Exod. 23:3; Lev. 19:15; Isa. 1:23; Ezek. 22:7; Mic. 2:2; Mal. 3:5; etc.). The *ger,* or SOJOURNER, was to be likewise protected. Many of the laws concerning the poor are to be found in Lev. 19; 23; Deut. 14–15; 25.

The Hebrew judges were to give to the poor full protection (Exod. 23:3; Deut. 16:19; Ps. 82:3; etc.). Interest was not to be exacted from the poor (Exod. 22:25; Lev. 25:36; Deut. 23:20). The poor were to be allowed to glean in the fields and vineyards (Lev. 19:9-10; 23:22; Deut. 24:19; cf. Ruth). They had first rights to the sabbatical fruits (Exod. 23:11; Lev. 25:6). The TITHE of the third year was for the benefit of the poor and needy (Deut. 14:28-29; 26:14). Poverty should not exclude anyone from the joy of the festival (Deut. 16:11-12; cf. Esth. 9:22). The poor could pluck from the vineyard or grainfield enough to eat (Deut. 23:25; cf. Luke 6:1). They were allowed to present less expensive offerings at the temple (Lev. 12:8; 14:21; 27:8; cf. Luke 2:24). In the Israelite assembly, the poor were not to be ignored.

The poor were expected to remain faithful to the statutes and covenant of God. In humility, they should accept their condition, not because it was foreordained (but cf. I Sam. 2:7), but because God could bring it to good (Prov. 30:8; Ecclus. 11:27). Job is brought low by the permission of God (Job 1:21). Prov. 22:2 does not proclaim God's ordination of a man's economic status but the doctrine of creation: "rich" and "poor" are here used to mean all mankind. God-fearing men will be blessed despite poverty.

The OT king and Messiah were to be solicitous of the poor (Pss. 22:26; 72:4; Prov. 29:14). Jesus had the prophetic concern for the poor (Matt. 19:21; John 13:29; etc.). Mercy was to be shown even to debtors (Luke 7:41). He praised ALMS giving (Mark 12:42-44). A beggar could be saved (Luke 16:22), but Jesus did not come merely to eliminate poverty (Mark 14:7). The gospel was to be preached to the poor (Matt. 11:5; Luke 14:21). Following his exam-

ple, the early church cared for its poor (Acts 2:45; 4:34; 11:29; Gal. 2:10; I Thess. 3:6; etc.). They were accepted as members of the church (Jas. 2:2).

To pity the poor was meritorious. It brought blessings, for one honors God by honoring the poor (Ps. 41:1; Prov. 14:21, 31; 29:7; etc.). Charity was considered a virtue throughout all biblical history. The demand for charity was based on a remembrance of Israel's bondage (Deut. 15:11; 16:12). It was the duty of the rich to help the poor, of the strong to protect the weak. To Job this is not a duty but a privilege (Job 31:16 ff). Justice and mercy are to be shown to the poor (Ecclus. 7:10).

The terms "meek" and "poor" in some of the Psalms seem to designate a particular religious affiliation in ancient Israel, which began even in preexilic times. These apparently are the faithful, Godfearing sons of the Covenant, who formed an inner remnant loyal to the prophetic message. The Psalms of Lament seem especially to allude to this group of oppressed pious Israelites. The Qumran community (*see* DEAD SEA SCROLLS) also seems to have used the term "poor" as a designation for their own group, perhaps reflecting their origin. The term may be a proper name for the early Christians (Rom. 15:26; Gal. 2:10). The Ebionites (*see* EBIONITES, GOSPEL OF) may be the remnants of such a pious Judaic-Christian group.

C. U. WOLF

POPLAR [לבנה, *líbhnē, from* לבן, white]. A tree whose branches were used by Jacob in Haran, with those from almond and plane trees, in his scheme to increase his flocks more than Laban's (Gen. 30:37). It grew with oaks and terebinths on the hills of Palestine (Hos. 4:13). It was apparently referred to poetically for its firm and easy rootage (Hos. 14:5—H 14:6, with slight emendation).

Identification of the tree has been narrowed to the white poplar, *Populus alba* L., and the storax tree, *Styrax officinalis* L. (cf. Gen. 30:37 ASV mg.; Ecclus. 24:15 KJV [*see* STACTE]), both of which fit the meaning "white" implied in the Hebrew word. The leaves of both are whitish on the under side. The flowers of the latter are also white. Zohary and some other botanists argue strongly for the storax (*see* FLORA § A9*p*), while some biblical scholars and other botanists prefer the poplar. The LXX has "storax" for the Gen. 30:37 passage and "poplar" for Hos. 4:13. The Arabic word *lubna* is used for the storax tree.

PORATHA pō rā'thə [פורתא] (Esth. 9:8). One of the ten sons of Haman.

Bibliography. On the relevant textual and etymological problems, see L. B. Paton, *Esther,* ICC (1908), pp. 70, 284.

PORCH. **1.** אולם ("that which is in front"), the entry room of a building (I Kings 7:6; Ezek. 8:16); usually translated "VESTIBULE." *See also* HALL 2.

2. Πυλών ("gateway"), the entrance to a courtyard (Matt. 26:71).

3. KJV translation of מסדרון (Judg. 3:23; RSV "roof chamber"), perhaps a pillared hall, balustrade.

4. KJV translation of προαύλιον (lit., "forecourt"; Mark 14:68; RSV "gateway").

5. KJV translation of στοα (in John 5:2, porticoes of the pool of BETH-ZATHA; in Acts 3:11, RSV SOLOMON'S PORTICO), a roofed colonnade. E. M. GOOD

PORCIUS FESTUS. *See* FESTUS, PORCIUS.

PORCUPINE. *See* HEDGEHOG.

PORPHYRY pôr'fə rĭ [בהט; LXX σμάραγδίτης, Vulg. *smaragdinus, relate to* emerald] (Esth. 1:6); KJV RED . . . MARBLE. A rock of feldspar crystals embedded in a compact dark red or purple groundmass. It is an ingredient in the mosaic pavement in the king's court in Susa (Esth. 1:6).

W. E. STAPLES

PORTENT. *See* SIGN, especially 1, 7.

PORTER. KJV translation of שוער (RSV "gatekeeper"; "watchman"); שער (RSV "gatekeeper"); תרע (RSV "doorkeeper"); θυρωρός (RSV "doorkeeper" in Mark 13:34; "gatekeeper" in John 10:3). *See* DOORKEEPER; WATCHMAN. For Levitical porters, *see* PRIESTS AND LEVITES § C3.

PORTICO OF SOLOMON. *See* SOLOMON'S PORTICO.

POSIDONIUS pŏs'ĭ dō'nĭ əs [Ποσιδώνιος] (II Macc. 14:19). One of the three men sent by Nicanor with authority to propose and accept a truce from Judas Maccabeus, after Nicanor saw that he could not be victorious because of the course of Judas' troops.

POSSESSION, DEMONIACAL. *See* DEMONIAC.

POST (COURIER). KJV translation of רץ ("runner"). *See* COURIER; *cf.* GUARD; MESSENGER.

POST, DOORPOST [איל (*plural* JAMBS), סף, אמה, מזוזה]. The word איל apparently refers to something strong and means "ram" (*passim*) or "a sturdy tree," "oak" (Isa. 1:29; 57:5). Its only architectural use is with Ezekiel's temple (Ezek. 40:9-41:3). There in 40:14 the reading is doubtful. The KJV, with the Hebrew, reads: "He made also posts of threescore cubits"; if the posts are jambs, the threescore cubits are too many. So the RSV, with the LXX, reads: "He measured also the vestibule, twenty cubits." This involves changing אילים to אולם and ששים to עשרים. The width of these "jambs," measuring from two to six cubits, would indicate that they were not single posts, but composite.

In Isa. 6:4 the plural of אמה (*'ammâ*) may mean "posts" and so is taken by the KJV; in the RSV it is "foundations." The LXX has ὑπέρθυρον, "lintel."

A more common word is מזוזה (*mᵉzûzâ*), the plural of which is translated "side posts," "door posts," or simply "posts" in the KJV and generally "doorposts" in the RSV. The doorposts played an important part in Jewish religious thought. On the Passover eve they and the lintel were sprinkled with blood (Exod. 12: 7, 22-23). At the *mᵉzûzâ* the slave who desired to stay with his master would have his ear pierced (Exod. 21:6). The words of the Shema are to be written on the *mᵉzûzôth* of the house (Deut. 6:9; 11:20). Among orthodox Jews the *mᵉzûzâ* is a scroll containing the sacred words, placed in a cylinder and attached to the doorpost. Following the LXX, in I Kings 7:5 the RSV reads מחזות, "windows," instead of מזוזה.

The plural of סף in the KJV is translated "posts" (II Chr. 3:7; Amos 9:1) and "doorposts" (Ezek. 41: 16); but a better translation is "threshold," as elsewhere in the KJV (Judg. 19:27; Ezek. 40:6) and regularly in the RSV.

POT. A term used to translate a wide variety of Hebrew and Greek words. For details, *see* POTTERY. Most ceramic pots of biblical times had metal counterparts. *See* VESSELS.

POTIPHAR pŏt'ə fər [פוטיפר; *more correctly* פוטיפרע, POTIPHERA; *transliteration of* Egyp. *pʾ-dʾ-pʾ-Rʿ*, he whom Re has given]. The Egyptian officer who purchased Joseph from the Ishmaelites (or Midianites) when he was first brought to Egypt as a slave. Potiphar is credited with recognizing the natural abilities of his slave and putting him "in charge of all that he had." It was the unnamed wife of Potiphar who attempted to seduce the "handsome and good-looking" slave. The general outline of Gen. 39, which deals with the Potiphar-Joseph relationship, is surprisingly similar to the famous Tale of Two Brothers (*see* JOSEPH). In the Egyptian tale the character Anubis can be compared to the biblical Potiphar.

The form of the name Potiphar offers us some additional information and also some difficulty. The theophorous element in the name is that of the god Re, who was the Egyptian sun-god. It is exactly the same name as that of Joseph's father-in-law, the priest of On, POTIPHERA. The names appear in different forms in both Hebrew and English because of an improper omission of the final *ʿáyin* from the longer form. It is difficult to explain this loss, because the *ʿáyin* was normally preserved in the Hebrew of the OT in every position. It may be that the shorter form, which developed as a mistake or faulty transcription, was intentionally preserved as Potiphar to distinguish the captain of the guard from the priest who bore a similar name.

The provenience of the name is likewise puzzling. It has been suggested that the Egyptian names in the Joseph story have fallen victim to the natural practice of substituting more familiar and hence more recent names for stranger, archaic ones. In any case it is to be noted that names of this type do not appear in Egypt until the tenth century.

The office which was held by Potiphar also calls for discussion. It is described by the Hebrew words *sārîs* and *śar haṭṭabbāḥîm*. The word *sārîs* normally means "eunuch." The fact that Potiphar was married does not make this interpretation impossible, since the term *sārîs* was extended to cover officials whose duties were similar to those of eunuchs, and finally to any courtier. The translation "officer" is correct, but it is possible to be a little more specific by pointing out that it is applied only to those who are directly related to the king and court—in the case of Isa. 56:3-4 the eunuch is related to the temple.

The title *śar haṭṭabbāḥîm*, which is translated "captain of the guard," is a title also applied to the Babylonian Nebuzaradan, who appears to have held a military post (Jer. 52:14). On the other hand, the position which Potiphar held was connected with the royal prison. It would be difficult to determine the precise nature of this office from such diverse material. As far as is known, there is no exact equivalent in Egyptian sources. O. S. WINTERMUTE

POTIPHERA pə tĭf'ə rə [פוטיפרע; *also written* פוטיפר, POTIPHAR; *transliteration of* Egyp. *pʾ-dʾ-pʾ-Rʿ*, he whom Re has given] (Gen. 41:45). Joseph's father-in-law. He is described as a priest of On (Heliopolis), which was the center of the cult of the sun-god. A name containing the divine element "Re" would be very appropriate for such a person. Names of this form do not, however, appear in Egypt until *ca.* the tenth century B.C. O. S. WINTERMUTE

POTSHERD pŏt'shûrd [חרש]. Alternately: EARTHEN VESSEL (Prov. 26:23; Isa. 45:9; KJV POTSHERD); KJV STONE (Job 41:30). A piece of broken pottery. Potsherds serve as a symbol of dryness (Ps. 22:15) and as a symbol of utter worthlessness (Isa. 45:9 KJV).

The judgment on Israel is compared to the breaking of a potter's vessel smashed so ruthlessly that from among its fragments no usable sherd can be found (Isa. 30:14).

There was a city gate in the Hinnom Valley called the POTSHERD GATE (Jer. 19:2). This was the place where the potters could throw away their discards outside the city wall. *See* POTTERY.

Job used a potsherd with which to scrape himself as he sat on an ash heap (Job 2:8).

Ezek. 23:34 KJV refers to the sherds of Samaria's cup, which is to be drunk by Jerusalem, but the text is obscure (see RSV).

The armored underparts of the mythological dragon, the Leviathan, are described in Job 41:30 as like sharp potsherds. J. L. KELSO

POTSHERD GATE [שער החרסות, *to be read* שער החרסית, gate of the potsherds] (Jer. 19:2); KJV EAST GATE; ASV GATE HARSITH här'sĭth. A city gate in the SE section of Jerusalem, leading to the Valley of Hinnom and to the Potter's Field (*see* AKELDAMA). Some scholars identify it with the DUNG GATE.

See map under NEHEMIAH. *See also* JERUSALEM § 6*e*. G. A. BARROIS

POTTAGE [נזיד, boiled thing; ἔψημα]. A thick vegetable soup, usually made with LENTILS but also with herbs in general (Gen. 25:34; II Kings 4:39). Occasionally meat was added, and the whole was boiled

(II Kings 4:38); apparently it was red in color (Gen. 25:30). Pottage is mentioned in connection with Jacob's deception of Esau (Gen. 25:29-34), as a dish prepared by Elisha's disciples (II Kings 4:38-41), as a common food (Hag. 2:12), and as a food for reapers (Bel 33).

See also COOKING; VEGETABLES. J. F. Ross

POTTER'S FIELD. *See* AKELDAMA.

POTTER'S WHEEL [אבנים, *a dual form, perhaps from* אבן, stone]. A circular disc, fitted on a vertical axis, on which it rotates, thus enabling the potter to fashion clay vessels.

Although ubiquitous, the potter's wheel is not mentioned in the NT and only once in the OT (Jer. 18:3). The potter, who fashions vessels at will out of the formless clay, is there compared to the Lord, who directs the destinies of his people (cf. also Isa. 29:1; 45:9; 64:8; Jer. 18:6; Rom. 9:21-22). It is significant that in OT Hebrew the terms for "Creator" and "potter" are expressed by the same word, יוצר. A similar trend of thought may be seen in an Egyptian relief where the god Khnum is shown fashioning man on a potter's wheel.

61. Middle figure is a potter turning the wheel; figure at left is tending the kiln; figure to the right is probably sawing a board. From a tomb at Saqqarah.

Courtesy of the Oriental Institute, the University of Chicago

62. An Egyptian limestone figure of a potter, laboring at his wheel, from the Old Kingdom

Archaeological evidence shows that the potter's wheel came into use in Palestine in the third millennium B.C. first in the form of a *tournette*—i.e., consisting of one disc only. Such a *tournette* is represented on an Egyptian relief of 2000 B.C. in a tomb at Benihasan. During the Middle Bronze Age a second disc, or "fly wheel," seems to have been added, as is also implied by the dual form of the Hebrew word. This second wheel, which speeded the turning, was set in motion by the foot. The earliest literary mention of such a wheel is in Ecclus. 38:29:

> So too is the potter sitting at his work
> and turning the wheel [τροχός] with his feet.

Potters' wheels of stone were found in Megiddo, Tell el-'Ajjul, Lachish, and Hazor. But on the whole, they are seldom found in excavations, perhaps because they were often made of perishable material such as wood or clay, although, on the other hand, the Hebrew term points to stone as a material.

***POTTERY.** A synthetic stone produced by firing clay to a sufficiently high temperature to change its physical characteristics and its chemical composition. Pottery was man's first synthetic creation, and today ceramics is still a major industry even in the most highly civilized countries. Pottery is now commonly thought of as earthenware dishes and other larger vessels, but the term had a much wider usage in antiquity, more akin to our modern word "ceramics."

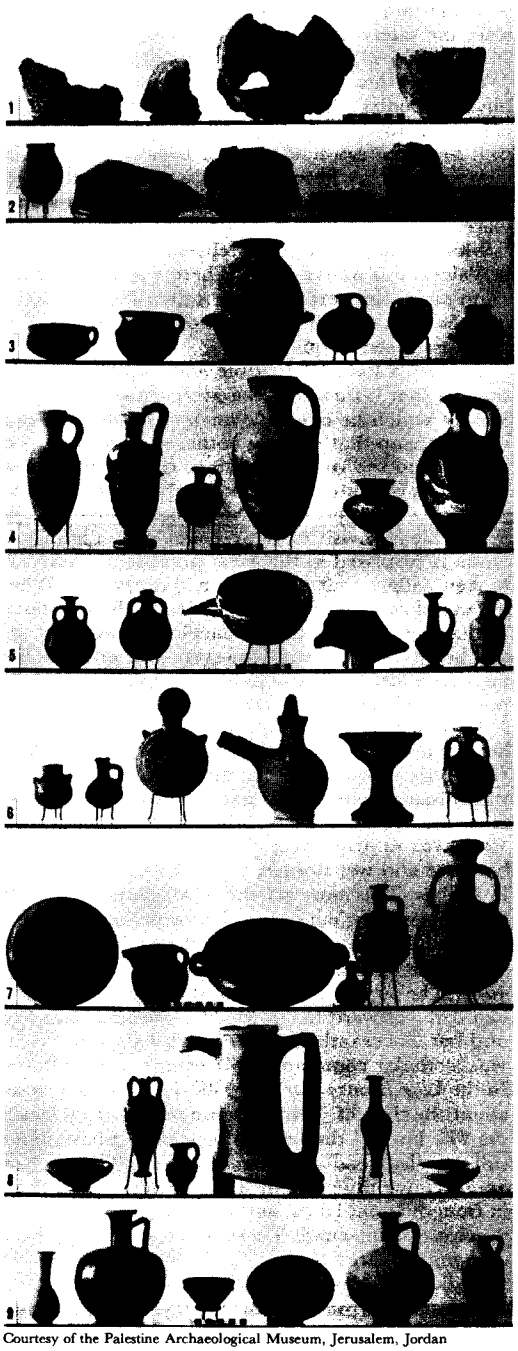
1. The making of pottery in Bible times. In the Palestine of Bible days pottery was usually made



Courtesy of the Palestine Archaeological Museum, Jerusalem, Jordan

63. Representative pottery in the Palestine Archaeological Museum, Jerusalem, Jordan: (1) Neolithic II (*ca.* 5000-4000 B.C.); fragments of large vessels with crude design and coarse texture. (2) Chalcolithic (*ca.* 4000-3000 B.C.); a small jar, fragment of a large jar with ledge handles, two incomplete jars of medium size, and two small bowls; the jar second to right shows two small lug handles. (3) Early Bronze (*ca.* 3000-2100 B.C.); a cup, a pitcher, two button base juglets, and two flat-bottom jars with ledge handles; texture had improved, and the potter's wheel had come into use. (4) Middle Bronze (*ca.* 2100-1550 B.C.); four pitchers, a juglet, and a small carinated bowl with trumpet foot base; the pottery of this age, when the Hyksos influence was predominant, was the best of any period in ancient Palestine. (5) Late Bronze (*ca.* 1550-1200 B.C.); an imported pilgrim flask, a local imitation, an imported "milk bowl" with wishbone handle, a fragment decorated by the "Tell el-'Ajjul painter," a "bilbil," and a small pitcher with round base; in this period the best ware was imported. (6) Iron I (*ca.* 1200-900 B.C.); two juglets, one with lug handles, two types of pilgrim flask, a pitcher with a large spout inside of which is a strainer, and a chalice. (7) Iron II (*ca.* 900-600 B.C.); a hole-mouth jar, a small jar with three handles and a spout, a bowl with ring burnishing, a juglet, a water decanter, and a pilgrim flask. (8) Iron III–Hellenistic (*ca.* 600-300 and 300-63 B.C.); two small bowls (very common in this period), a small amphora, a small pitcher, top of a Rhodian jar, and a spindle bottle. (9) Roman (63 B.C.–A.D. 323); a bottle, two jugs, a pitcher, and two bowls; the left jug and the two bowls are red painted ware; the right jug and the pitcher show ribbing, which developed in this period.

from a good grade of red clay, the commonest of all clays. It was weathered and washed in the potter's yard or near where it was dug. Settling basins, terraced on a hillside, enabled the potter to select various grades of clay. The final step in the preparation of the clay was to mix the proper amount of water with the washed clay by treading until the water had been evenly distributed and until all the air was removed. This treading of the potter's clay required skill (Isa. 41:25), although the treading of clay for sun-dried bricks could be done by anyone (Nah. 3:14).

The true POTTER'S WHEEL was in use during almost all of the Bible period. The potter took a ball of clay and placed it at the center of the wheel, which was then turned rapidly—sometimes by an assistant—while the potter's hands fashioned the clay into the desired vessel. Later, when leather hard, the vessel could be put back on the wheel and turned into more delicate forms, just as we turn wood on a lathe today. The Hebrew term for the potter's wheel, אבנים (Jer. 18:3), was a dual, suggesting that the wheel consisted of two parts—a smaller disk above, on which the vessel was fashioned; and a larger one below, which furnished the necessary momentum. Ecclus. 38:29-30 contains the first reference to the improved potter's wheel. Here the power wheel, which was turned by the foot of the seated potter, was on the same shaft as the thrower's wheel, which was at hand level. If the clay had been well prepared and was of the right plasticity and porosity, it would hold its form well while being thrown on the wheel and afterward while drying, and finally when fired in the kiln. Figs. POT 61-62.

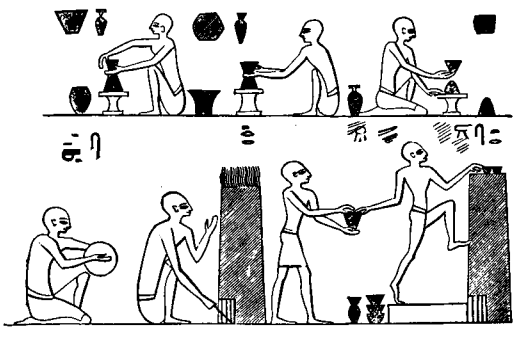
A second method of fashioning clay was to use a press mold (חותם, "seal" [Job 38:14]). The prepared clay was pressed down firmly into an open mold so that all the details of the mold were reproduced in the clay. Astarte plaques of the Canaanite period were made in these press molds, as were most of the lamps of NT times. A third method of fashioning clay was freehand modeling, but this was not much

used in Israel except for toys and figurines. Ovens and a few odd vessels were handmade.

The firing of the kiln was a professional's task, for different clays had to be handled differently and various wares had to be fired so as to bring out their required qualities. The firing of the kiln was the ultimate test of the potter's art. The Bible gives us no reference to the potter's firing techniques, for these were trade secrets in antiquity just as they were even in the medieval guilds. In spite of careful firing, however, there was a certain percentage of spoilage. Some of the spoiled vessels were sold, but the rest had to be discarded.

In the field of decoration the Israelites did not use glaze but simply modified the thrown form with slip, painting, burnishing, etc. The best decorated Israelite ware was in the days of the Divided Kingdom. The spiral wheel burnishings used at that time produced narrow bands which alternately absorbed and reflected light, giving a highly decorative pattern (Fig. POT 63, No. 7*c*). In the days of the judges there was some painting, but it was the Canaanite period which preceded it that saw the widest use of painting (Figs. ART 72-73; Pl. XX). The Philistines also used painted decoration, specializing on the swan, the Maltese cross, and the Ionic spiral. Figs. PHI 50; ART 75.

2. The history of pottery. The earliest of all pottery came from Neolithic Jericho, where the evolution of that art can be traced in good detail, and where phenomenal progress was made with that craft (Fig. POT 63, Nos. 1*a-d*). In the early days pottery was hand molded, but at least by Joseph's time—the Hyksos period—throwing on the wheel had replaced it in most communities and for most ceramic products. Fig. POT 64.



64. Making of pottery in ancient Egypt

In antiquity pottery found many and varied uses. It was the major method of storage, for in those days metal, wood, and sack containers were too expensive. Only baskets were competitors. Pottery revolutionized cooking and improved the general health level. It entered into such unlikely fields as writing materials. Man's earliest tablet was made of wet clay into which a script was imprinted with a stylus (*see* WRITING AND WRITING MATERIALS). A man's signature was made by rolling his signet seal (*see* SEALS AND SCARABS § B2*a*)* into this clay tablet (Gen. 38: 18). In later years large pieces of broken jars often served as an economical form of stationery. At LACHISH they were used for military messages, and at SAMARIA they were used for tax receipts. Pottery jars were the safety deposit vaults of antiquity (Jer. 32: 14; Matt. 13:44). This is the meaning of II Cor. 4:7: "We have this treasure in earthen vessels"—i.e., physical bodies. Pottery was used for the making of children's toys, and in Babylonia the farmer used well-fired pottery sickle edges. Besides creating its own natural clay forms, pottery was also used to reproduce cheap imitations of metalware and stoneware. Fig. SEA 35.

Most of the pottery the archaeologists have found in Palestine is native ware. There was only a minimum of foreign ceramic importation (Fig. POT 63, Nos. 5*c*, *e*), although imitations of foreign ware were often produced in quantity.

Pottery is so indestructible and its styling so distinctive that it furnishes the archaeologist the chief tool by which he can date ancient history. Also, it was so cheap that nobody bothered to remove potsherds, and the ruins of ancient cities contain vast quantities of pottery, which supply plenty of reference data for checking chronology. Anyone who makes his first visit to an archaeologist's dig in Palestine is surprised at the great number of baskets of broken pottery that are unearthed every day. When the use of coins became world wide in the intertestamental period, then the archaeologist had a second and better dating agent. However, even on some late digs, coins are rare, and pottery is therefore still important. *See* ARCHAEOLOGY.

Most of Palestine's pottery was strictly utilitarian, but the term "utilitarian" must not be interpreted as "unartistic," for some of the most common household wares had excellent lines and are worthy of a place in a modern ceramic exhibit. Furthermore, some ware was so artistically designed as to be used for both dry and wet storage, yet without any confusion in design. The most artistic of all pottery forms in Bible times came out of the Hyksos period—the Middle Bronze Age (*ca.* 2000-1500)—which is usually approximated to the time of Joseph (Fig. POT 63, Nos. 4*a-f*). The superior culture of the Euphrates Valley had fled westward to the Mediterranean at that time and left its ceramic impression on Palestine. There was a similar contemporary upsurge in metallurgy. In the Late Bronze Age (*ca.* 1500-1200), which closed about the time of Joshua's conquest, pottery lacked the fine lines of the preceding Hyksos phase, but it still revealed good craftsmanship (Fig. POT 63, Nos. 5*a-b*). New influences in style, however, had come in from different lands, and both new forms and new decorations appeared. There was a special emphasis on painted ware.

Joshua's conquest marked the transition from the Bronze to the Iron Age. In the days of the judges—technically called Iron I—there came a marked deterioration in pottery, not only poorer workmanship but also a considerable diminution in the number of forms made (Fig. POT 63, Nos. 6*a-b*). By David's time, however, there was a quick upspring in craftsmanship, and new forms appeared, along with a heavy emphasis on hand burnishing—a finish which looks something like a light glaze—as decoration. Just as in the Hyksos renascence there had been an upsurge in both ceramics and metallurgy, so in David's day iron came into its own along with improved ceramics. The Divided Kingdom—Iron II—saw a continuation

in better wares and more forms as well as the introduction of wheel burnishing (Fig. POT 63, Nos. 7*a-f*). Toward the end of that period, however, something entirely new appeared in ceramics. The modern factory techniques, which we use, were created at that time, and mass production appeared. The potter was using assembly-line techniques, standardizing his wares, staggering his sizes, and at times even using trade-marks. The new techniques permitted the use of cheaper clays, cheaper labor, greater volume production, etc.; and yet the quality of the work continued high. The days of Isaiah and Jeremiah witnessed an industrial revolution in various fields, but ceramics seemed to be the most progressive of all. Fig. POT 63, Nos. 7*a-f*.

Iron III, *ca.* 550-330 B.C., was roughly contemporaneous with the Persian period. In ceramics there was some modification of the old forms and the introduction of new ones, but nothing so striking as in the preceding period. By the time of Alexander the Great, the international commerce of the Eastern world brought another period of change in native ware and much larger importations of Greek pottery (Fig. POT 63, Nos. 8*a-f*). This was the Hellenistic period. By approximately 50 B.C., however, pottery styles had again made sufficient changes to introduce a new ceramic period which we know as Roman (Fig. POT 63, Nos. 9*a-d*). This is the pottery of NT times. Fig. POT 63, Nos. 9*a-f*.

It is these constant changes in clays, forms, decorations, techniques of manufacture, etc., which enable the archaeologist to date the pottery he finds and thereby to date the cities he excavates. For reference to a popular but scholarly presentation of the various pottery forms as the archaeologist uses them to interpret history, see W. F. Albright, *The Archaeology of Palestine* (1954). For detailed studies and photographs, *see bibliography*.

3. The ceramic vocabulary used in pottery manufacture. The OT makes such wide and exact use of much of the potter's technical vocabulary that an expert ceramist can now re-create a good picture of the OT potter and his wares. The NT, however, presents only a small ceramic vocabulary, and furthermore, only a limited amount of pottery of NT times has been excavated in Palestine.

Clay is hydrated silicate of alumina ($Al_2O_3.2\ SiO_2.2\ H_2O$), mixed with various impurities which may at times constitute half the volume. There is no specific Hebrew term in the OT for a dry clay, so the following common words are pressed into use: עפר, "dust" (Job 10:9); אדמה, "ground" (Gen. 2:19); and ארץ, "ground" (Ps. 12:6—H 12:7; KJV "earth"). טיט is the technical term for a native wet clay which has not yet been reworked by either the potter or the brickmaker. Such a water-borne clay is referred to in Isa. 41:25; Nah. 3:14. חמר (Job 33:6; Isa. 29:16; 41:25; 45:9; 64:7; etc.) is a versatile ceramic term referring to any kind of worked clay. It can be the finest of the clays that are ready for use on the potter's wheel (Jer. 18:3-4), or a poorer grade used to seal wine jars (Job 38:14). The owner's name was imprinted in this clay with a seal (חותם; *see* SEALS AND SCARABS). The poorest grade was made into mud bricks (Nah. 3:14; cf. Gen. 11:3; Exod. 1:14).

After the fired pottery had been removed from the kiln, it was most commonly called כלי חרש, a pottery (RSV "earthen") vessel (Lev. 6:28—H 6:21; 11:33; 14:5, 50; 15:12; Num. 5:17; Jer. 32:14); or כלי יוצר, a potter's vessel (II Sam. 17:28; Ps. 2:9; Jer. 19:11). חרש is the technical term for any kind of fired ware (Prov. 26:23), although in actual usage elsewhere it refers only to potsherds (*see* POTSHERD). The NT uses the noun κεράμιον for "pottery" (Mark 14:13) and the adjectives κεραμικὸς (Rev. 2:27) and ὀστράκινος (II Tim. 2:20). The NT term σκεῦος has something of the all-inclusive meaning of the OT כלי. The Hebrew term יוצר is actually the generic word for any kind of craftsman and can be used of any skilled worker in clay, wood, metal, etc. In practice, however, the OT uses it predominantly for the potter. The corresponding NT term κεραμεὺς (Rom. 9:21), however, is more specific, being reserved exclusively for the craftsman in clay.

The potter worked either alone or with assistants, who were usually apprentices, often his own sons. By the time of the written prophets, however, manufacturing techniques demanded larger potteries for mass production. There was a royal guild (I Chr. 4:23), whose men doubtless made the official government storage jars which bear the inscription "for the king" followed by the name of the county-seat town, such as Hebron (Fig. SEA 35, Nos. 27-29). The king's private estates also had special jars whose handles had the name of the king and his treasurer stamped upon them. Fig. JEH 9.

The potter's house—i.e., his workshop or factory—was not only the building where he fashioned his wares on the wheel and set them aside to dry under proper conditions of evaporation, but where there would also be one or more kilns in his yard and plenty of room to weather the raw clay and purify it. Broken pottery and discards from the kiln were also piled up in the yard. Nearby water was a necessity, and in the city it was often furnished by a cistern on the premises. The Hinnom Valley, S of Jerusalem, was an ideal place for the potters of that city. Jer. 19:2 mentions a Potsherd Gate there. In the winter, water ran in the valley just outside this gate; and in the summer the pool of Siloam was only a short distance away. In the OT the kiln is called תנור (see Neh. 3:11; 12:38, where the Tower of the Ovens seems to refer to pottery kilns; *see* OVENS, TOWER OF THE), although this term is more commonly used to designate the household oven for the baking of bread (Lev. 2:4; 7:9; Hos. 7:4; etc.).

a. Bowls, cups, cooking pots, and lamps. The exact identification of the thirty-four Hebrew and Aramaic terms applied to the pottery vessels of the OT is a difficult task, but the general picture of the most important ware is about as follows: The most common ceramic form found by the archaeologist has been the bowl, and it ran in a great variety of patterns and sizes. The largest of these was the great banquet bowl, which had four handles and was beautifully wheel-burnished. In the Divided Kingdom the average size would be something like sixteen inches for the inside diameter at the rim and about half of that in height. The earlier banquet bowl of Iron I was much taller in proportion to its width and had only two handles. The best of these bowls were hand-burnished. This banquet bowl was also used as a

65. Drawings of typical pottery forms of Israelite times, from Tell Beit Mirsim

crater for mixing wine (Song of S. 7:2—H 7:3). These were termed אגן (Exod. 24:6; Isa. 22:24; Fig. POT 63, No. 2) and ספל (Judg. 5:25; 6:38; Fig. POT 63, No. 1). Jael served Sisera out of the latter (Judg. 5:25). מזרק (Fig. POT 63, No. 2) may have been used for ceramicware (Amos 6:6?), but was certainly more often used of metal bowls (*see* VESSELS § 2). A medium-sized bowl of similar ware and general form, but without handles, was the צלחת (II Kings 21:13; II Chr. 35:13; Prov. 19:24; 26:15; Fig. POT 65, No. 14). The main dish of the meal was eaten from such a bowl. The laziest man alive, the sluggard of Prov. 19:24, was too lazy even to lift his hand out of this dish to feed himself. In the NT, the large dish out of which the meal was eaten was called τρύβλιον and is referred to when Jesus dipped his hand into the dish with Judas (Matt. 26:23). It was a foot or so in diameter and somewhat less than that in height. Παροψίς, ἡ, of Matt. 23:25 was a smaller side dish for serving dainties. For the basin in which Jesus washed the disciples' feet (John 13:5), *see* BASIN.

A cheaper and smaller unburnished bowl, משארת (Exod. 8:3—H 7:28; 12:34; Deut. 28:5, 17; Fig. POT 65, No. 13), was used in OT times as a bread bowl in which leaven was mixed with flour and the dough allowed to rise (Exod. 12:34). A common size for this bowl was about ten inches wide and three inches deep; larger bowls were needed for larger families. The כיור of Zech. 12:6 was a still smaller bowl (Fig. POT 65, No. 11), which in this instance was used for holding coals. This same term in metalware (see Exod. 30:18; I Sam. 2:14; I Kings 7:38; etc.), however, implied other usages and also larger sizes, and the same was probably true in ceramics. In II Kings 2:20 the צלחית was a smaller bowl for holding salt. *See also* BASIN; BOWL.

Closely related to the last, but of much finer ware, were the סף (Exod. 12:22; Zech. 12:2; etc.; also used for metalware; Fig. POT 65, Nos. 11-12), and the קבעת (Isa. 51:17, 22). They were about the size of our mush bowls and soup plates and were used as serving dishes and wine cups. The סף of Zech. 12:2 was one of the larger wine cups. In Exod. 12:22 it held the blood of the Passover lamb.

The cup shape of today was fairly rare in OT times, except in the days of the Divided Kingdom. The cup with a handle was most commonly used as a dipper. The cup without a handle was more common and, whether it had a wide mouth or a narrow one, was often form-fitted to the hand. The term כוס could be used of both bowls and cups (Fig. POT 65, Nos. 11-12). The cup of the NT was ποτήριον, τὸ (Luke 11:39; Fig. POT 63, Nos. 8*a*,*f*, 9*c*). It ran from about the size of a small ash tray to that of a large mush dish. The smallest were shallow; the largest ran both deep and shallow. The ware could be native Palestinian or imported Greek or Roman. *See* CUP.

The household oven, תנור (Exod. 8:3; Lev. 2:4), is really an inverted bowl with a missing bottom. It was not thrown on the wheel but was handmade, usually of coiled clay molded into shape. It became pottery only after being used for some time as the oven for baking the family bread. Potsherds were at times inserted into the clay on the outside of the oven, thus giving a higher temperature within the oven. The NT uses κλίβανος for this oven (Luke 12:28). The same shaped oven that was used in Bible times is often used today. *See* OVEN. Fig. OVE 17.

Other modifications of the bowl form were cooking pots. The wide-mouth variety was of shallow depth. In the Divided Kingdom it had two handles, but before that it was handleless. It was called סיר (Fig. POT 65, No. 16). II Kings 4:38 (translated "pot") shows that it came in very large sizes, and such cooking pots have been found by archaeologists. The average one, however, was about a foot in diameter. This form could be used for other purposes, and Ps. 60:8—H 6:10 shows its use as a WASHBASIN. The other major cooking pot, דוד (Job 41:20—H 41:12; Fig. POT 65, No. 17), was a spherical form with only a narrow mouth. It had two small handles. It came in staggered sizes, just like modern pottery, and ran from approximately four to fourteen inches in diameter. It was much more common in the Divided Kingdom than earlier (*see also* BASKET). Closely related to the above in form, but less common in use, was a one-handled cooking pot, פרור (Num. 11:8; Judg. 16:19; Fig. POT 65, No. 19). Manna was cooked in it (Num. 11:8), and Gideon carried broth in it (Judg. 6:19). Mic. 3:3 proves that the קלחת, "caldron," is definitely a cooking pot, but we cannot identify it any more closely unless on the analogy of the similar metal term (I Sam. 2:14), where the reference is to a large-sized cooking pot.

The cooking pot was constantly subject to accident and to the expansion shock of heat and cold. It therefore demanded special skill in manufacture; and in the days of the Divided Kingdom potters often stamped their trade-marks on the handles of the wide-mouth variety. When cooking pots were used for deep-fat frying, they were termed מרחשת (Lev. 2:4-7; "pan"; KJV "frying pan"; see also Lev. 7:9) or משרת (II Sam. 13:9; "pan"; Fig. POT 65, No. 16). When ceramic cooking pots were given a general class name, the term סיר was used (Zech. 14:21; "pot"). NT cooking pots followed something of the OT form but were smaller and of much more delicate ware. The wide-mouth variety now often had a sharp shoulder and the spherical variety a larger mouth. Both used thin, straplike handles. There was

also a third form, similar to our casserole. *See* COOKING AND COOKING UTENSILS.

The thin PLATE such as we use today was a difficult ceramic form to manufacture, and it was little used until NT times, when it was made by a new technique. A thick, heavy ceramic plate, however, was used as a griddle (מחבת; Lev. 2:5; 7:9; etc.; cf. the iron griddle of Ezek. 4:3).

The LAMP (נר) of the OT was a member of the bowl family, and the potter threw it as any bowl. While it was still soft, however, he pinched in the rim at one point to make a place for the wick. In early Israelite times it was five to six inches wide and *ca.* two inches or so deep. In the Divided Kingdom, it was much smaller and quite shallow, with a roll-over rim. In the intertestamental period the lamp was quite small. The sides of the newly thrown bowl were lapped over one another in such a way that at one end of the lamp there was a large hole into which the oil was poured, and at the other end was a small hole for the wick. Before NT times, however, the lamp had taken on a second form. It was then made in two pieces which were stuck together when they were leather hard. The lower section was an egg-shaped shallow bowl. The upper section covered the lower one except at the center, where a hole was left for filling the lamp. A spout was shaped and added to the bowl. It held the wick. The spout section was handmade; the other pieces were made in a press mold. These lamps were small, often *ca.* three inches in length. None of these lamps gave much light, and if more light was needed, numerous lamps were lighted. In antiquity little work was done at night. The NT "lamp" is λαμπὰς (Matt. 25:1) and λύχνος (Mark 4:21).

b. Jars, pitchers, and juglets. The second basic form in ceramicware was the jar. In this ceramic family height was the major dimension, and the side walls might vary considerably in their pattern, depending upon the material stored in them. The largest storage jar was the נבל (Fig. POT 65, No. 5). It was often used for the storage of wine and derived its name from the earlier wineskin (Jer. 48:11-12). It was a pear-shaped vessel, and during the days of the Divided Kingdom a common size held two baths (*see* BATH) and was *ca.* twenty-five inches in height and sixteen inches in diameter. It had four handles. These are the jars which at times bore the official stamp of the government or even of the king himself, as described in § 3. This jar also came in smaller, two-handle sizes.

In the earliest Israelite history there was a water jar somewhat similar in form to the above but called a כד (Gen. 24:14 ff). In the days of the Divided Kingdom, however, this term was used to describe a distinctly new form of water jar (Fig. POT 63, No. 7*a*). This was a tall, cylindrical form something like an old-fashioned crock but with thinner walls and rounded bottom. A common size approximated thirteen inches in height and seven and a half inches in diameter. It had a fine anti-splash rim (Fig. POT 65, No. 4). This was a multiple-purpose jar, as it also served for the storage of flour (I Kings 17:12) and other dry products. Its mouth was sufficiently wide so that one could take out handfuls of flour, and yet it was small enough to be covered by a lid. Lids, however, are rarely found in the excavations of OT cities. A small bowl, a large potsherd, or a stopper of clay or stone was more likely to be used than a special lid. By NT times, however, the lid had become more common.

The NT term ἄντλημα of John 4:11 (interpreted as something to draw water with) might refer to a PITCHER, a water jar, or a leather BUCKET. However, in the twenty-eighth verse of that chapter ὑδρία ("water jar"; KJV "waterpot") is definitely the jar in which water was carried from the well to the house. Another related term is κεράμιον ὕδατος (Mark 14:13; "jar of water"; KJV "pitcher of water"). The NT water jar ran in various forms and sizes but was usually about twice as high as wide.

Large storage jars were round-bottomed, and therefore, if used in a room with flagstone pavement, they were set in special ring bases, כירים (Lev. 11:35; "stoves"; KJV "ranges for pots"). These bases looked like an old-fashioned spittoon with the bottom missing (Fig. POT 65, No. 15). They also served to hold cooking pots in place over the fire and to concentrate the heat. *See* COOKING AND COOKING UTENSILS.

אסוך ("jar"; KJV "pot"; Fig. POT 65, No. 3) was a special variety of storage jar used exclusively for oil. It was common in the days of the Divided Kingdom and is mentioned in the episode where Elisha replenished the poor widow's supply of oil (II Kings 4:2). This jar had something of an egg shape and stood a little over a foot high. It had three handles and a specially designed spout. The latter was wide-flaring and shallow. It was pierced by only a small hole, thus making it easy to fill small juglets as well as open lamps. Fig. POT 63, No. 7*b*, shows a small jar of this type.

Water pitchers ran in several varieties. The גביע (Fig. POT 65, No. 18) was similar in shape to the common water pitcher of today and averaged about eight to ten inches in height. It could also be used for wine and is mentioned along with wine cups in Jer. 35:5 ("pitchers"; KJV "pots"). The most expensive water decanter was the בקבק (Jer. 19:1, 10; "flask"; KJV "bottle"; Fig. POT 65, No. 20; Fig. POT 63, No. 7*e*). It had a heavy body and a narrow neck with a handle attached to neck and rim. This narrow neck was of utilitarian value, for it aerated the water as it was poured out. The gurgling sound produced by the narrow neck gave the vessel its peculiar name. The water decanter ran in staggered sizes from four to ten inches in height. I Kings 14:3 ("jar"; KJV "cruse") mentions that this jar was also used for carrying strained honey.

The small oil juglets which ran from *ca.* three to six inches in height are very common in all excavations. The exact name is uncertain, but I Kings 17:12 seems to identify them with the צפחת ("cruse"). The corresponding term for this kind of juglet in the parable of the wise and foolish virgins is ἀγγεῖον (Matt. 25:1-13). These NT juglets, unlike the OT ones, tend to be spherical or egg-shaped. The smallest of all juglets, פך (Fig. POT 65, Nos. 8, 9), was the one used for perfume (Fig. POT 63, Nos. 6*b*; 7*d*). Oil, rather than alcohol, was the perfume base in ancient times. I Sam. 10:1 specified this juglet (translated "vial") as the one used by Samuel when anointing Saul. The one used in the anointing of Jehu (II Kings

9:3; "flask"; KJV "box") may possibly have been a Cypro-Phoenician importation, as these were common at that time. The most expensive perfumes throughout all of Bible times came in alabaster jars. This container was still being used in NT times (Matt. 26:7), although glass was fast becoming a competitor.

c. Miscellaneous ware. The צפחת apparently designated two totally unrelated ceramic products, for this term is used not only of small oil juglets but also of the large pilgrim bottle or army canteen (Fig. POT 65, No. 7). It was a two-handled lentoid flask which came into use in Canaanite days and continued on into the early days of the Divided Kingdom (Fig. POT 63, Nos. 5*a-b;* 6*c, f;* 7*f*). The canteen was lightly baked so that there was a little seepage, which tended to cool the water in the canteen. David took Saul's canteen away from the King's head while he slept (I Sam. 26:11-12 "jar"; KJV "cruse"). Those of NT times were very much smaller and were characterized by twisted handles. The מבשלת of "boiling places" of Ezek. 46:23 (RSV "hearths") seems to refer to brick stoves similar to those found in Babylonian temples.

In spite of the low cost of pottery, some of the better pieces were mended. The archaeologist finds where cracked or broken ware had been held in place by rivets or wires which ran through small holes drilled in the pottery. The jar chosen by Jeremiah for his illustrated sermon (Jer. 19) had such a narrow neck that the vessel could never be mended. Even when pottery was broken, it still had a little utilitarian value; the larger sherds from storage jars could be used for jar lids or writing material (*see* § 2 *above*). Also, they were used to carry coals from house to house for starting fire and for dipping up water out of a pool (Isa. 30:14). Job used a potsherd as a strigil (Job 2:8). Finally, potsherds could be ground fine and used in the waterproof plaster of cisterns. Most sherds, however, became a part of the general debris of the house where the pottery had been used. Their finest utilitarian value is to the archaeologist of today. *See* POTSHERD.

4. Ceramics in industry. The most important field for ceramics in industry was metallurgy. The high temperature required for smelting and refining metals made the ceramic crucible a necessity, whether it was large-scale smelting, as at Solomon's refineries at EZION-GEBER, or small-scale refining, as done by the jeweler. Three terms were used for the crucible in the jeweler's art: עליל (Ps. 12:6—H 12:7); כור; and מצרף (Prov. 17:3). כור, however, is the broadest term, for it also refers to the smelter's furnace (Deut. 4:20; Ezek. 22:18-22; the latter passage, however, may refer to the refining of scrap metal or jeweler's sweepings to recover the silver). כבשן by etymology seems to mean a smelting furnace, but the context in the passages in which it appears (Gen. 19:28 ["furnace"]; Exod. 9:8, 10; 19:18 ["kiln"; KJV "furnace"]) suggests a pottery kiln or a charcoal kiln. Perhaps the word had all three usages. Where limestone crucibles were used, these had to be lined with clay. Smelted copper was poured into clay molds. One authority, in commenting on Zech. 11:13, thinks that the Persians used standard-sized clay jars into which they poured molten gold to form bullion.

In the cloth industry cheap spindle whorls, פלך (II Sam. 3:29 ["spindle"; KJV "staff"]; Prov. 31:19 ["spindle"; KJV "distaff"]), were sometimes made of pottery. The loom weights which were used in the weaving of cloth, when this industry was at its peak late in the Divided Kingdom, were almost always made of pottery.

In the toy industry, feeding bottles were made for babies. These bottles were imitations of both animals and birds. The milk was poured into a hole in the back of the animal and then came out a small hole in the animal's mouth. For girls there were small clay dolls and miniature dishes and lamps. For boys there were clay horses and cavalrymen, camels and other animals.

In the building trades of Palestine sun-dried brick was very common, but it is not pottery. If placed in water, it would turn to mud. Fired brick was rare in Palestine but common in Babylonia, where it had to be used in foundations under water. Dan. 3:6 may possibly be a reference to a brick kiln. Glazed tile is referred to in Exod. 24:10, where the translation is literally a "brickwork of sapphire." The palace of Ramses the Great, at Qantir, had featured glazed tile, and he may have been the Pharaoh of the Exodus. Blue was a common color in Egyptian glaze.

5. Ceramics in Canaanite cult objects. The Canaanite cultus was a user of ceramic material. The TERAPHIM or clay figures of Astarte, the Canaanite fertility goddess, were common before Joshua's conquest. They constitute the crux in the episode of the separation of Jacob and Laban, for at that time they had not only religious, but also high legal, significance (Gen. 31:19-55). Baal images were almost exclusively made of metal. The Astartes of the Canaanites were plaques made in a press mold. They were usually thin and smaller than the palm of the hand. The goddess wore the heavy Egyptian wig or the feathered headdress that came down from the N. She often held lotus blossoms in her hands (*see* ASHTORETH). The Astartes of Jezebel's time and later are quite different and look like tiny "snow men" *ca.* four to six inches in height. The body of the goddess was hand-modeled, and her skirts flared out so as to form a solid pedestal. The head was made in a press mold, and the features were often brought out in fine detail. The two units were put together when leather hard. The face was painted red to imitate rouge. There was also a stylized tree holding a lamp in its branches which was used in the household worship of this idol. Pottery rattles, doves, bulls, etc., were also employed in the ritual. Vessels used in the older Canaanite ritual were at times decorated with snakes, another symbol of the goddess. By Jeremiah's time there was a special pottery altar of incense, חמן, used in this and other heathen cults (Jer. 19:13; *see* INCENSE ALTAR). Isa. 65:3 speaks of burning incense upon brick, doubtless brick altars.

6. Glass and glaze. The most difficult field in ancient ceramics was glass and glaze, and both were rare in OT Palestine but not in NT days. In the OT, "glass," זכוכית, is mentioned only once—i.e., in Job 28:17 (KJV "crystal"), where it is as valuable as gold. Egypt was Palestine's major source of glass. In that country glass was a soda-lime silicate, although the properties in its composition differed from

those of modern glass. Their formulas produced an opaque glass at low temperature, which made it easy to work the glass into the desired shape. By NT times new techniques were putting glass on the market in ever-increasing quantities. The phrase, rendered literally, "a glassy ὑάλινος sea like crystal" in Rev. 4:6 is an interesting one, for the ideal of the ancient glassmaker was to get the clarity of crystal (see also Rev. 21:21).

Glaze, ספסגים (Ugaritic *spsg*), which is a glass coating on pottery, has already been mentioned. The word "glaze" occurred originally in Prov. 26:23 (so RSV), although the phrase "like glaze" has become corrupted to "silver dross" (KJV) through redivision of the consonants. Glazed brick has already been referred to in § 4 *above*. The Greeks were experts on glaze, and by intertestamental times their wares were becoming common among the rich in Palestine. By NT times Roman ware was also imported.

7. Pottery in the ceremonial law. Most vessels used in the ceremonial law were metal, but occasionally a pottery one was specified, as in the law of the cleansing of a leper (Lev. 14:5) and the law concerning jealousy (Num. 5:17). Pottery made ceremonially unclean by dead creeping things was broken (Lev. 11:32-35). More expensive ware was washed rather than destroyed. At the other extreme in the ceremonial law is the great prediction of Zech. 14:20-21. Here the pottery vessels in the temple shall be like the most holy metal ones; and furthermore, even the common household pottery of the inhabitants of Jerusalem and Judah shall be holy unto the Lord.

8. Figurative language derived from ceramics. The most striking of all figurative language that comes from the potter is that of God's molding human personality. The creation story of Gen. 2:7 portrays God as a ceramic sculptor fashioning man just as the toymaker made little children or as the idolmaker fashioned his little statuettes! This figurative language is indeed striking, for it seems to skate on the thinnest of theological ice. There was, of course, one outstanding difference—God breathed into man the breath of life.

The more common figure of God as a ceramist, however, is that of the Master Potter at his wheel fashioning men and nations as the potter fashions his wares. Jer. 18:1-6 is the classic passage. The same theme appears often. There are examples both early and late in Isaiah (29:16; 64:8). Paul picks up the figure in Rom. 9:20-24. The figure of man's frailty is the earthen jar (Lam. 4:2), and the folly of fighting against God is the folly of the potsherd (KJV; RSV "earthen vessel") fighting the potter (Isa. 45:9). At God's command Jeremiah smashed the finest of the water decanters to illustrate the nation's doom (ch. 19). Another ceramic figure for tragedy appears in Lev. 26:26, where ten women must bake bread in only a single oven.

Among the specific pottery vessels most strikingly and commonly used for figurative language are the lamp and the cup. Job speaks of God's lamp shining upon him (Job 29:3). God promised David a lamp forever (II Chr. 21:7). The lamp of the New Jerusalem is the Lamb (Rev. 21:23). Emphasizing the exact extreme of these passages, Prov. 20:20 says that everyone who curses father and mother shall have his lamp put out in blackest darkness. The psalmist speaks of God's Word as a lamp to his feet (Ps. 119:105). For the figurative use of the cup, *see* CUP.

J. L. KELSO

POUND [μνᾶ (John 12:3; 19:38), λίτρα (Luke 19:33 ff); KJV מנה (I Kings 10:17; Ezra 2:69; Neh. 7:71-72; RSV MINA)]. The λίτρα (the same as Latin *libra*) contained twelve ounces and was used both as a weight and as a measure of capacity. In the Lukan version of the "parable of the talents" (Luke 19:11-27) the term "pound" evidently refers to money, as it does in some countries today.

O. R. SELLERS

***POVERTY.** The condition of having little or no wealth or material possessions. This is a relative condition. Poverty is not the greatest evil in the world, any more than wealth is the greatest good, even though some Talmudic rabbis felt poverty to be almost a curse. There are some expressions in the OT suggesting that life is hardly worth living because of the wretchedness of the poor (Job 24:4-12; Eccl. 4:1-3). To wish someone to become poor is the worst curse (II Sam. 3:29; Ps. 109:9-10). Yet poverty is to be preferred to ill-gotten wealth (Prov. 28:6; Eccl. 4:13-14; etc.). The biblical terms for "poverty" are considered under POOR.

Poverty has many causes. In most instances it is not truly foreordained by God (cf. I Sam. 2:7; Job 1:21). It may be the result of sloth and laziness (Prov. 6:10; 19:15; 24:30; etc.); of drunkenness (Ecclus. 19:1); of sumptuous living (Prov. 21:17; Ecclus. 18:32); of folly and stubbornness (Prov. 13:18; 28:19; etc.); of oppression and greed (Exod. 1:13; II Sam. 12:1-2; Jer. 22:13; etc.); of calamity, plague, war, disease, fraud, usury, over which the victim has no control (Exod. 10:4-5; Num. 11:4-5; Judg. 10:8; Ps. 105:34; etc.).

Some were poor voluntarily. The Levites may have been voluntarily poor, and in the days of the monarchy they were without land. This may perhaps reflect the religious ideal of NOMADISM. Many prophets and rabbis had no regular income. Jesus became poor for the sake of mankind (II Cor. 8:9; Phil. 2:5-6). The rich young ruler was advised to sell everything (Matt. 19:21 ff). This may not mean that Jesus enjoined voluntary poverty on all his followers, but rather that idolatry of his possessions had to be rooted out of the rich young man. The early church held all things in common (Acts 2:44; 4:32). Similarly, the sectarians of Qumran (*see* DEAD SEA SCROLLS) seem to have practiced voluntary poverty. In Qumran all who entered the sect accepted the state of poverty, but in Christianity it

is clearly voluntary and free. So Ananias and Sapphira did not have to give up all (Acts 5:1 ff), but were punished for their deceit.

SLAVERY was preferred by many to poverty. The poor could sell themselves to others (Lev. 25:39 ff). He could sell his minor children (Exod. 21:7 ff; Neh. 5:5). In the Tell el-Amarna Letters, children were sold to provide food for the parents. It is probable that the minor children were sold first before a man sold himself into slavery. This procedure provided the necessities of life and a certain kind of security. In the Jubilee year such voluntary slaves were to be released. It is obvious that security was preferred by some to freedom (Deut. 15:16 ff). Creditors also seized the children of debtors (II Kings 4:1; Amos 2:6). In spite of all this there is evidence throughout the history of the OT and in modern Judaism that children felt an obligation to care for aged and indigent parents.

In the early history of civilization all men lived under conditions we would consider poverty. In the nomadic state there were slaves, but there were few freeborn poor, unless we consider all to have been poor. The bonds of brotherhood and family interdependence averted extremes of poverty unless the whole tribe became destitute. A few, like Abraham, were wealthy (Gen. 12:16). In urban civilization the contrast between economic classes became most noticeable. At the beginning of the Conquest the majority of families were landowners, but it was not long before some became landed barons while others were practically serfs. Some who owned land lost it through calamity, war, or fraud. Craftsmen were seldom wealthy. In the Babylonian captivity all lost their wealth. The farmers who were left behind in Judah lived on the ravished land at a subsistence level. In Babylon a few Israelites became wealthy merchants. The nobles and the priests may have profited by the misfortunes of others. It is possible that "poor" as a sectarian designation may have arisen during this time of crisis. In the return only those who had not profited by their stay in Babylon returned to Palestine. In Hellenistic and Roman times, there were all classes of people in Palestine. In Rome itself most of the Jews were of the poorer class and lived on the wrong side of the Tiber. The early Christian converts apparently came from this group also.

It is possible that at any time in history those who lost their land for any reason would migrate in the hope of meeting better fortune. Some think this is the explanation for the gerim or sojourners (*see* SOJOURNER), rather than that they are citizens of other countries or dispossessed Canaanites. Under such calamity, many preferred to abandon the tribal territory or their native locality and to go elsewhere seeking new opportunity. Hospitality was to be shown to these sojourners at all times. In the third century A.D. a synagogue in Jerusalem had a hospice for housing needy strangers, and the early Christians were always giving shelter to their fellows.

See bibliography under POOR. C. U. WOLF

POWDERS OF THE MERCHANT [אבקת רוכל] (Song of S. 3:6). The litter of Solomon was perfumed with spices and the fragrant "powders of the merchant," perhaps spices pulverized to release their fragrance and peddled by itinerant merchants (cf. Gen. 37:25). J. M. MYERS

POWER. The translation of חיל; כח; עז; גבורה; δύναμις; and ἐξουσία. By its very nature the Hebrew language is concrete and colorful. It made little progress in developing abstract concepts. It expresses ideas of power in a variety of picturesque ways. Greek is far more abstract, tending to consolidate its thought into well-defined ideas; but its words possess great flexibility. Δύναμις, e.g., was used by the LXX translators of the OT into Greek to express no fewer than twenty-six separate Hebrew words and phrases. In the NT it commonly refers to angels or demons (Eph. 1:21; 3:10; 6:12; Col. 1:16; 2:10, 15; I Pet. 3:22; cf. Ign. Eph. 13:1; *Martyrdom of Polycarp* 14:1). In the gospels by metonymy it often means MIRACLE (Matt. 7:22; Luke 10:13), and in Mark 14:62 it even stands as a metonym for God.

1. Powers of nature

3. The human will
4. Political and military power
5. Spiritual power
   a. God
   b. Good and evil spirits
   c. Dragons
   d. Satan

Bibliography

1. Powers of nature. In a scientific and philosophical sense, biblical people did not attain a concept of nature. They had practically no understanding of the natural world. One can read through the Bible without encountering such concepts as forces of gravitation, magnetism, electricity, and atomic energy. There is little understanding of physiology; none whatever of bacteria, infection, etc. Laws of heredity were unknown, although there appears to be some anticipation of these in the idea that sins of the fathers are visited on the children, or, conversely, that children are blessed because of the good character of the parents (Exod. 20:5-6). People of the Bible lived in a prescientific world.

2. Labor and industry. It follows that man had little in the way of implements and machines to aid him in his work, whether for the chores of nomadic life, of agriculture, or of building enterprises. Power had to be supplied by the strength of men and animals. Large projects like Solomon's construction, mining, shipping, etc., of the tenth century B.C. were possible only by the labor of slaves and drafted free men (I Kings 5:13-18; 9:15-22). The most common beasts of burden were the ass and the ox. Camels were used especially for caravans. The horse was not introduced until the time of David and Solomon. The power of wind was exploited by sailing vessels. Fire was used for refining metals and cooking.

3. The human will. Throughout the Bible it is assumed that the will is free. This is expressed in Gen. 1:26 by the idea that man is created in the image of God. This means, not that he is formed in the physical image of God, but that he is like God in a spiritual sense. His intelligence enables him to discern good and evil, and free will makes it possi-

ble to choose between right and wrong. So man is responsible for his conduct. His moral character results from his own choice. This is not to say that man possesses unlimited freedom, that he can defy God and defeat his will; but that within his own sphere man is a free and responsible being.

4. Political and military power. Whether in family, tribe, nation, or the world, biblical writers are familiar with the concept of political power, recognizing its importance and validity. It has a religious nature and basis, and is necessary for the life of man. The OT regards the Hebrew nation as a theocracy. Father, chieftain, priest, prophet, or king derives his power from God, and is responsible to him for the way he uses it. The idea of secular political power is unknown to biblical writers.

5. Spiritual power. ***a. God.*** Numerous vestiges of ancient animism and polytheism survive in the Bible, but the faith of those who edited the writings in the form in which they have come down to us was monotheism. God manifests his power, not only by creation, but also by providential control of the world. All power of every kind is derived from God. While he grants autonomy to man and other beings in their respective realms, his own prerogative remains uncompromised.

b. Good and evil spirits. In earlier strata of the biblical documents, the numerous spirits remain anonymous, but they are thought of as servants of God, who, e.g., sends an evil spirit to torment King Saul (I Sam. 16:14). By the end of the OT, in the intertestamental writings, and especially in the NT, evil spirits or demons are called Satan's subjects.

c. Dragons. Several dragons are mentioned in the Bible: the multiple-headed sea serpent Leviathan (Job 3:8; Ps. 74:13-14; Isa. 27:1); Rahab (Job 9:13; 26:12; Ps. 89:10; Isa. 30:7; 51:9), which causes storms at sea; another sea monster and Behemoth, a desert dragon (I Enoch 60:7; II Esd. 6:49); Belial or Beliar (apparently an alternate name for Satan), who is frequent in the Dead Sea Scrolls (CD VI, VIII; 1QS I) and is mentioned in I Cor. 6:15.

d. Satan. But in the NT, on the whole, Satan has become supreme as ruler of evil spirits and evil men and beasts in opposition to God. He was unknown in the earlier strata of the OT. He appears first in I Chr. 21:1 ff; Job 1:6 ff; Zech. 3:1-2. II Sam. 24:1 says it was the Lord who incited David to take a military registration of the people, which was a sin, but the Chronicler says it was Satan. The apparent contradiction results from the more adequate concept of God which was attained in the later period. Late biblical writers held that God and angels, on the one hand, were opposed by Satan and demons on the other—a dualism reminiscent of Zoroastrian theology. But it is not an absolute dualism. Biblical belief holds that God gains the ultimate victory, that good is more powerful than evil.

POWER OF KEYS. The power entrusted to Peter by Jesus, saying: "I will give you the keys of the kingdom of heaven, and whatever you bind on earth shall be bound in heaven, and whatever you loose on earth shall be loosed in heaven" (Matt. 16:19). The keys are the symbol of rule and authority entrusted by the real holder, Jesus the Messiah (cf. Rev. 3:7). The power of the keys is thus the power over the whole house of the Lord, and primarily the power to admit into it, which involves also the power to exclude from it. Now, when Jesus himself preaches the gospel and forgives sins (cf. Mark 2:10), he opens to men the doors of the kingdom, while the Pharisees "shut the kingdom of heaven against men" (Matt. 23:13). Jesus does not give his divine power to these "blind guides" but to Peter. It is the power to act as Jesus did—i.e., the power to preach the gospel of grace and judgment, to forgive sins, and thus to gather the new people of God, the church (Matt. 16:18). In fact, the power of the keys does not essentially differ from the power to bind and to loose entrusted to all the apostles (*see* Binding and Loosing). Yet the power of the keys is given to Peter alone, as the church is built on him. Both sayings express his primacy among the Twelve.

PRAETORIAN GUARD prĭ tôr'ĭ ən. The translation of πραιτώριον (KJV PALACE) in Phil. 1:13. This word here almost certainly refers to persons, although in the gospels and Acts it is always a place (*see* Praetorium 1): the official residence or palace of the governor, or the courtyard in which trials were conducted, or the adjoining barracks where the military were housed. In Phil. 1:13 the reference to persons is obvious from the words: "It has become known throughout the whole πραιτώριον and to all the rest." But the question remains: Does the whole "πραιτώριον" refer to the praetorian guard or to the imperial high court? The answer to this question may depend on whether Philippians was written in Rome or in a provincial city such as Caesarea or Ephesus. If in Rome, then the meaning is probably, though not necessarily, the praetorian or imperial (body)guard. "All the rest" is sufficiently vague and inclusive to take in both the menials attached to the barracks and "those of Caesar's household" (Phil. 4:22), even though there is no instance in which "praetorium" is used to mean the emperor's palace in Rome.

If Philippians was written from an imprisonment in a provincial city, 1:13 could refer either (*a*) to the military and "all the rest" of the people attached to the governor's place; or (*b*) more generally, as the KJV translates, to "all the palace," meaning all those who were in any way related to it, whether officials or servants, but without intending to identify them; or (*c*) to the imperial high court, the highest judicial authority. Lohmeyer (*see bibliography*) urges that since it belongs to the martyrology pattern that the martyr present his "witness" in open court before the highest authorities of the heathen world, "praetorium" here must mean the imperial high court. Then "all the rest" would mean those who had no official responsibility for the trial, but made up the audience, such as soldiers, bystanders, or observers of any sort.

PRAETORIUM prē tōr'ĭ əm [πραιτώριον, *loan word from* Lat. *praetorium*] (Matt. 27:27 [=Mark 15:16]; John 18:28, 33; 19:9; Acts 23:35); KJV COMMON HALL (Matt. 27:27); HALL OF JUDGMENT (John 18:28); JUDGMENT HALL (John 18:33; 19:9; Acts 23:35). Alternately: PRAETORIAN GUARD. **1.** Originally, the tent or headquarters of the praetor or general in a Roman camp; then, by extension of meaning, the residence or palace of a provincial governor, whether his title was praetor, proconsul, procurator (John 18:28), or prince (Acts 23:35); and finally, any large country house or villa. In the gospels and in Acts the term always has to do with the governor's official residence, or part of it. In all these six instances the RSV translates "praetorium" (so Moffatt). As transliteration, "praetorium" may be preferred, yet it leaves the word undefined. Does it refer to the governor's residence (Mark 15:16 Goodspeed) or governor's house (John 18:28, 33; 19:9 Amer. Trans.), or Herod's palace (Acts 23:35)? Or should it be taken to mean "barracks" (Matt. 27:27 Amer. Trans.)?

As for Mark 15:16, whether "that is, the praetorium," is a marginal gloss (as some have proposed) or not, and whether αὐλή is to be translated "palace" (RSV) or "courtyard" (Goodspeed, Moffatt), it is not wholly clear whether the text means that the praetorium is the palace or is part of the palace—namely, the barracks. The immediate context in both Matt. 27:27; Mark 15:16, with the presence of "the whole battalion" of soldiers, suggests "barracks" as the chief meaning of "praetorium" here. Since the governor's palace, the open court (atrium) within or before the palace where the judgment seat or bema was set on a mosaic floor or "pavement" (John 19:13) made for the purpose of public hearings, and the barracks were part of the same establishment, "praetorium" seems to have been a term designating either the whole or any part.

In John, in all the references (18:28, 33; 19:9) one "enters into" or "goes out" from the praetorium: Pilate enters the praetorium and brings Jesus out. The inference from 19:1-3 is that the mockery took place within the praetorium. Thus in John, too, "praetorium" seems to cover the governor's residence, barracks, and place of judgment.

"Herod's praetorium" (Acts 23:35) was the palace built by Herod the Great in Caesarea and used as headquarters in Palestine by the Roman procurators. Since there were five cohorts of soldiers stationed in Caesarea, the government premises would be extensive. In stating that Paul was presented personally to the governor, Luke probably suggests that Paul was treated by Felix as a gentleman-prisoner and was regarded as a special "guest" in the "palace," though Paul would probably be put in the appropriate military lockup.

Opinion remains divided whether the praetorium in the gospels is to be located at Herod's palace at the NW corner of the Upper City or in the Tower of Antonia at the NW corner of the outer court of the temple. The normal garrison at Jerusalem consisted of one COHORT, commanded by a tribune (Acts 21:31), and located in the Fortress of Antonia (vss. 31-40). If these were the soldiers involved in the trial and mockery, then the Tower of Antonia would be the temporary residence of Pilate. Also, if Herod was present in Jerusalem at the time, he would be occupying his own palace. As against Antonia, it is urged that Pilate would not have come to Jerusalem without an escort, perhaps another cohort—one of the five in Caesarea—or, if not a cohort, at least a maniple (120 or 60 men). These all could easily have been accommodated in Herod's palace.

2. The military attached to the praetorium; the praetorians, or PRAETORIAN GUARD. In this usage the word could refer to (*a*) the military council in the praetor's tent; (*b*) the imperial high court; or (*c*) the imperial bodyguard.

The imperial high court or supreme court was composed of the emperor or his delegate, the prefect of the praetorian guard, and twenty assessors selected from the Senators. The court functioned both as a council of war and as a council of judgment.

During the last two centuries of the Republic, generals normally had a bodyguard or *cohors praetoria*. When Augustus came to the throne, in 27 B.C., he established his general headquarters, his praetorium, in Italy, and out of the veterans available organized a permanent corps or guard of nine cohorts of a thousand men each. To avoid suspicion of military despotism, only some of the troops were billeted in Rome, the others being stationed either outside the city or in various Italian towns. Because of their attendance on the emperor, the praetorians rated as the *corps d'élite*. They served for sixteen years, received three times the pay of legionaries and, in addition, frequent and large donations. Originally recruited from Italians, shortage of men made it eventually necessary to admit provincials, until under Septimus Severus (146-211) the provincials came to exclude the Italians.

The political importance of the praetorian guard dates from the time of Sejanus, who, appointed sole prefect in A.D. 23, concentrated the cohorts in a single camp just outside the walls of Rome. They now became a permanent threat. On the death of Caligula in 41 they were able promptly to put down the Senate's endeavor to restore the Republic and to proclaim Claudius emperor. Under Trajan (98-117) the whole corps was brought into Rome itself, in the Praetorian Camp on the Viminal. Although the number and the make-up of the cohort shifted during the years, they remained a menace until finally abolished by Constantine.

Bibliography. In addition to the references given in the bibliography under PRAETORIAN GUARD, see the valuable article "Pretoire" by A. Legendre in F. Vigouroux, *Dictionnaire de la Bible*, V (1922), 621-40. F. D. GEALY

PRAISE. A prominent part of man's many-sided response and approach to God through worship. God is essentially the object of man's praise (Deut. 10:21), and thereby the superiority and uniqueness of God in his divine person and activity are set forth. Praise attempts a description of God, but it cannot exhaust God.

Since praise is man's preoccupation with God, it

is inevitable that the Hebrew Bible contains several terms to describe this activity:

a) הלל in the *Pi'el*—i.e., intensive form of the verb. This word is specially familiar in the prime expression of all praise: HALLELUJAH, which means "Praise ye Yah"—i.e., "Praise the LORD." The noun of this root, תהלה, has a wide usage in the OT. It is the title of Ps. 145 and, in the plural, the Hebrew title of the book of Psalms. For some illuminating examples, see Isa. 16:14 ("glory"); Jer. 48:2 ("renown"); 51:41; Hab. 3:3.

b) ידה in the *Hiph'il*, "give thanks, praise." The original connection of the verb with worship is lost (perhaps the gesture of the hand יד); but since the word embodies, in both its verbal and nominal forms, an element of thanksgiving, it is not so purely a word of praise as the first mentioned. The noun תודה means a "thanksgiving hymn," a "thank offering."

c) זמר, probably at first of pruning songs, and then generally of songs of praise. Apart from Judg. 5:3; Isa. 12:5, the verb appears in the Psalms only. The word appears in nominal form as מזמור (LXX ψαλμός). This word occurs in fifty-seven psalm titles in various combinations: of instrumental music and of singing; and זמיר song. *See* MUSIC.

d) שבח (*Pi'el* and *Hithpa'el* only) occurs four times in Psalms and in Ecclesiastes, and its Aramaic form is found in Daniel.

See also such words as ברך, "to bless"; ענה, "to sing antiphonally"; רנן, "shout"; שיר, "sing"; גיל, "rejoice"; etc.

The ideas connected with the activity of praise are perhaps best illustrated by the opening verses of Ps. 113. Here, with one exception, are set forth all the principal aspects or topics of the activity of praise in the OT. "Praise the LORD" sets the theme of the Psalms; but later in vs. 1, and again in vss. 2-3, the object of praise is further defined as the name of the Lord. It is thus clear that the object of praise may be described simply as the Lord, or some attribute such as his name, or some epithet such as "my Strength," "my Redeemer," some metaphorical description such as "rock of our salvation" (95:1; cf. 18:1-3), etc. In 113:1—H 113:2 the second topic is given—"O servants of the LORD"—i.e., those who are to render praise. It may simply be "I," whether this is collectively or personally intended, or "my soul" (103:1; 104:1), "thy saints" (145:10) or "we" or "us," priests (135:19-20), other worshipers in the temple (149:2), the righteous (140:13), the redeemed of the Lord (cf. 107), or the nations (100), all that hath breath (150:6), and all the works of nature (cf. e.g., 19; 89:5; 96:11; 97:1; 98:4, 7-8; etc.), etc. Ps. 113:2*b* gives the third topic of praise, its occasion—when it is to be offered. This verse shows that praise is continuous, for morning, night, New Year's Day, day of victory and even of distress, etc., are all the occasions of praise. Vs. 3*a* likewise gives the place of praise—the fourth topic. Praise must be offered everywhere—from east to west. Praise is thus to be offered in Zion, in Jerusalem, at his holy hill, before the Lord in the sanctuary, upon their beds (63:5-6; 149:5), etc. Ps. 113:4 gives the ground or reason for praise: the Lord is high above all nations. This topic of praise is best pursued by the study of the word "for." The Hebrew word כי, "for," is the clue to the reasons why man must praise God. There is a theology hidden in the כי clauses of the Psalter and of the OT. Sometimes, as in 113:4, the "for" is not expressed, but it is implied, and in 100:3 "know that" is a variant of "because." Altogether "because" is a rewarding study in the OT concept of praise. The one topic of the activity of praise not mentioned in Ps. 113 is the mode of praise. The "how" topic involves sacrifices and offerings, physical activities, instruments, utterance, fasting, meditation, silence, etc. All these six separate topics connected with praise deserve separate studies which would show how natural, spontaneous, and widespread is the Israelite activity of praise. The importance of the Hebrew participial hymns of praise, represented by relative sentences in the English versions—e.g., the relative sentences in 103:3-5; 104:2-4; 113:5-9—and of the doxologies—e.g., 41:13; 72:18-19; 89:52; 106:48; 150; etc.—should not be forgotten.

PRAYER. In the Bible prayer moves from the level of magic to the heights of spiritual communion and identification of will and activity with God. No definition which would cover all the references is possible except in general terms. Prayer is attempted intercourse with God, with or without the mediation of priests or heavenly beings; it is usually, but not necessarily, vocal. It is designed by means of the creation of personal contact to affect the nature and course of the relationship. Its means and ends always depend upon how the nature of God is conceived.

A. ***TERMINOLOGY.*** Since prayer can cover petition, entreaty, expostulation, confession, thanksgiving, recollection, praise, adoration, meditation, and intercession (*see* COMMUNION; CONFESSION; PRAISE; REPENT; THANKSGIVING; WORSHIP), the words used are not subject to exactness of use or distribution. This article will deal primarily with petition, intercession, and meditation, and with such other features only as are related to these.

1. In the OT. The most generally used term is the verb פלל, which in the *piel* can mean "to interpose or judge" and in the *hithpael* "to intercede or pray." Its root anciently was connected with slashing oneself as an act of worship (cf. I Kings 18:28; Hos. 7:14). The noun is תפלה, used notably in the titles of psalms. קרא is used of calling on God in praise or invocation of God's name. שאל may be "to request or make a petition" (e.g., Pss. 27:4; 122:6) or "to inquire for an oracle" (e.g., Num. 27:21; Josh. 9:14). The encounter which is a request or an intercession is described by פגע (Jer. 7:16; cf. Isa. 53:12; 59:16). By making the face of another pleasant, one may appease (e.g., Exod. 32:11) or seek a favor (e.g., Ps. 119:58), and here the word is חלה. Men cry out in need, and the verb זעק, "to cry," is used especially in Judges (3:9, etc.; cf. Ps. 22:5); another word for "cry" is רנן (noun רנה), a ringing cry used of both joy and distress (cf. Ps. 17:1; Jer. 31:12; Lam. 2:19). The *hithpael* of חנן, "to incline toward," is used of imploring favor of God, particularly in Solomon's prayer (I Kings 8:33, 47, 59; cf. Ps. 30:8). Less used words are שוע, "to cry for help," and שחר, "to seek."

2. In the NT. The most generally used word (and the most frequent but not uniform LXX translation) is the noun προσευχή, with the middle deponent verb προσεύχομαι, found most often in Luke-Acts (see the Hebrew idiom in Jas. 5:17). It applies particularly to asking of God and is a more religious term than δέησις and δέομαι, which are also found often in Luke-Acts and the LXX, and which mean "a request" and "to ask," but not necessarily of God. (On the absence of these terms from the Fourth Gospel, *see* § C4 *below.*) For "prayer" the Fourth Gospel uses principally the verb αἰτέω, which may be used of asking man or God. It is used with προσεύχομαι in Mark 11:24, and the two are in apposition in Col. 1:9. Ἐντυγχάνω in the sense of "intercede" (cf. פגע) is used of prayer in Rom. 8:27, 34; Heb. 7:25 only, but of a legal petition in Acts 25:24.

B. ***PRAYER IN THE OT.*** The nature of biblical prayer is best understood in its development through the major sources. The God of the Bible is the God who can be addressed as "thou who hearest prayer" (Ps. 65:2).

1. The sources JE—God and man converse. The oral traditions which reflect the animism and anthropomorphism of primitive Semitic religion, in which God is met with at sacred sites and through the medium of natural objects (*see* ASHERAH; MAGIC; PILLAR; TEREBINTH), are overlaid with the editorial work of the J and E writers, who trace the incipient grace of God manifested in the promise to the patriarchs and the covenant with Israel.

The fundamentals of prayer are found in the meetings with God, often depicted as conversations (in J, Gen. 3:8-19; 4:9-15; 15:1-16; 18:2-5; Exod. 3:1-12; etc.; in E, Gen. 20:3, 6; 28:12-16, etc.; for the meaning of such symbols as J, E, *see* PENTATEUCH). Man may respond to the meeting by erecting a shrine (Gen. 12:7; 13:18), by obedience (12:1-4*a;* 13:14-18), by faith (15:1-16), or verbally by a question or a request (15:2, 8; 18:23; etc.). God shares his intentions with Abraham (Gen. 18:17) and with Moses (Exod. 3, etc.). Moses is very vocal and expostulates with God and frequently asks guidance (Exod. 5:22-23; 32:11-13; Num. 11:1-15, etc.), while Abraham reasons (Gen. 18:22-33) and Jacob bargains (28:20-22 E).

The theophanies may involve an unrecognized visitor (Gen. 18:2, etc.; cf. Judg. 13:6; Heb. 13:2) or, particularly in E, a dream (Gen. 20:3, 6; 28:12-16). From the first, personality is ascribed to God, making the converse possible, though man may not look directly upon him (Exod. 33:18-23 E). Elohim is a god who is moved by prayer, whether verbal or not; in E, God responds to the weeping of a child as though it were a prayer (Gen. 21:16-17) and to the attempted sacrifice of Isaac (22:11-12). The nature of God is indicated by the names ascribed to him—e.g., "Shield" (Gen. 15:1); "Judge of all the earth" (18:25); the "Fear of Isaac" (31:42); the "Mighty One of Jacob, . . . the Shepherd, the Rock of Israel" (49:24, added to J). In Gen. 18:16-33, Abraham appeals to God as Judge, and God responds in character, thereby establishing the true basis of prayer in the first account of intercession.

Recollection of past acts of mercy as a basis for prayer already appears in JE (Gen. 32:9-12; Exod. 32:13); this element was notably to be developed by the D school. The rudimentary seeking of an oracle (e.g., Gen. 25:22) develops nobly into the prayer for guidance (24:12-14). Here prayer is described as "speaking in my heart," indicating that it need not be audible. In the words "Blessed be . . ." (vss. 26-27) Eleazar provides the earliest understanding that to give thanks is to bless God (*see* BLESSINGS AND CURSINGS; THANKSGIVING). By working over a primitive river-night-demon myth in Gen. 32:24-29, 31, the J editors have suggested that prayer is a struggle which may change a man's character and mark him for life. The editors have retained an early description of a tent as a fixed place of prayer where God speaks to Moses "face to face, as a man speaks to his friend" (Exod. 33:7-11). The problem of

prayer in the Bible becomes the recovery of this natural and two-way intercourse described by JE when God has later become dreadful, remote, and high exalted.

2. The monarchic sources—prayer and providence. The predominant religious theme is the providence of God, but prayer, as such, plays little part in the earlier strands. God is a God of dread and therefore dangerous (I Sam. 6:19-20; 11:7; II Sam. 6:6-9; *see* FEAR). He hears the cry of his people and acts to save them (I Sam. 9:15-16); but he fails to respond when a taboo is broken (14:36-42; *see* BAN 1). Here prayer relates to determination by lot, a general means of inquiring of God in these sources (e.g., 23:2, 4, 10-12; cf. Acts 1:26; *see* LOTS).

Intercession is illustrated (II Sam. 12:16-18; 24:10, 25), though the later source questions whether intercession is possible (I Sam. 2:25). As intercessor Samuel calls on God to vindicate his judgments (7:5-6, 8-9; 12:16-17, 23; 15:11; on intercession, *see* § E *below*). The result of his concern for Saul is an early reflection of the prophetic emphasis that prayer must result in obedience (15:22-23).

In this source the granting of the people's request for a king brings trouble (8:19-22), so that answered prayer can also be a problem (on unanswered prayer, *see* § F *below*). Hannah's prayer for a son, on the other hand, results in a vow which is confirmed by the dedication of Samuel to the service of the shrine (I Sam. 1:9-28; cf. Jacob's bargain; the nationalistic hymn of ch. 2, a prototype of the Magnificat, has been adapted to this place; prayer and praise are considered one [vs. 1]).

3. The eighth-century prophets—the moral requirements of prayer. The great contribution of the prophets was their clarification of the nature of Yahweh and his demands, necessarily affecting prayer. Amos' God controls nature and history, is righteous, and does not play favorites. Since God is not for Israel apart from Israel's response, and election implies obligation, prayer must consist of something more than ritual and ceremonial (Amos 4:4-5; 5:21-25; cf. Isa. 1:1-11; Hos. 6:6; 8:11-13; 9:4; Mic. 6:6-8; etc.). Calamities are a call to "return to me" (Amos 4:6-11; cf. Isa. 30:15; Hos. 5:15–6:5); and since men must, in any case, meet God (Amos 4:12), they can live only by seeking him (5:4; cf. Deut. 4:29; 6:5-9). But this is synonymous with seeking good (Amos 5:14).

For Hosea the intended intimacy of God and people has been broken by the unfaithfulness of Israel (Hos. 1–3, etc.). Prayer must be a matter of the heart (7:14), and the basis of God's appeal is his past acts (11:1-8; cf. 13:4; Isa. 29:14; Mic. 6:4-5; etc.). The true basis of prayer is recollection (*see* § B4 *below*); and the later passage, Hos. 14:1-2, makes the deduction that to acknowledge God's favor and repent of its abuse is the proper sacrifice; words can express more than sacrifice if they arise from "knowledge" (cf. Deut. 23:21-23; Isa. 29:13-14). Without this, man stands before God as defendant (Isa. 1:18; Mic. 6:1-2).

Isa. 6 is the first clear testimony to individual experience in prayer. Familiar worship is transformed into an ecstatic theophany in which confession leads to cleansing, cleansing to commitment, and commitment to commission. Isaiah's normal worship is transformed into this climax, which foretells the true end of prayer as developed in the NT. The creature before the holy God realizes the wonder of this God's call to service. (The seraph's "Holy, holy, holy," has become the unfailing act of praise in the liturgies of Christendom.) Even when the Lord's face is hidden, such prayer leads to confident waiting (8:17).

4. The Deuteronomic school—prayer as recollection. The basic interest of D is the central sanctuary (Deut. 12:1-14, etc.; *see* JERUSALEM); religious attitude and policy are more important than historical chronicle (see the formula, I Kings 15:3, 11, 26, 31, and throughout). The D legislation does not deal with prayer (true of the law in general except for the prescribed festivals; *see* FEASTS AND FASTS). God is near (Deut. 4:7; cf. 30:11-14), and the very formlessness of God makes prayer more important than ceremony, material aids, or natural phenomena (4:12, 15-19, etc.).

D pre-eminently emphasizes the necessity of recollecting God's mighty acts; the memory is to be stored in the heart to prompt proper prayer (Deut. 4:9, 32-39; 7:18-19; 8:2; etc.; cf. I Kings 8:23-27). Moses' own prayers start with a recollection, or anamnesis, claiming God's previous mercies (e.g., Deut. 9:25-29). The act of thanksgiving in offering first fruits is to be so accompanied (26:5-11).

Prayer is always within the covenant between God and people (4:23, etc.). A God who is terrible and demanding, who has acted mightily and yet is God of covenant and near, will not only brook no competition but also must not be put to the test (6:16; cf. Matt. 4:7). This, however, is not a rubric against seeking a sign as Gideon does (Judg. 6:17-22, 36-40). Israel is to be a holy people (Deut. 7:6; cf. I Pet. 2:9). Biblical prayer cannot be discussed apart from this covenanted relationship.

The D thesis in Judges is that God exposed Israel to their enemies and sent them deliverers when they cried to him (3:7-9; 10:10-16; etc.). This formula of prayer in adversity stands in contrast to the ancient song of praise by Deborah (ch. 5). Solomon's humble prayer at Gibeon is rewarded with more than he asked. His petition comes at the end of a preamble which is a recollection of God's grace (*ḥesedh*), thus supplying a ground for the petition (I Kings 3:3-14). The prayers of Paul and of the Christian liturgies follow just this plan. The "blessing" of Solomon (expanded) and his prayer at the temple dedication begin with a recital of the occasion and provide a prayer phrased in part for the benefit of the congregation (I Kings 8:15-40; cf. Neh. 9).

In spite of God's awesome omnipresence, he can be called on to hear the prayers made in or toward the shrine, always provided that the need for forgiveness is recognized (I Kings 8:30, 39). The response expected (cf. vs. 32) embodies the typical D doctrine of reward and punishment, but there is recognition that the state of the heart is of interest to God (vs. 39). The pre-exilic petitions cover oaths (cf. Matt. 5:33-37), defeat, drought, famine, and plague (vss. 31, 33, 35, 37). God's power to restore physically and spiritually is assumed. The associa-

tion of prayer and penitence is a permanent insight.

Elijah cries out against the act of an arbitrary God, but when the Lord responds, prayer has become a matter of life and death (I Kings 17:20-22; cf. II Kings 4:32-35). Elijah retires to the mountain to consult God (I Kings 19), and his prayer of commemoration of the God of the fathers prevails over the pagan demonstrations of his opponents (18:26-29, 36-39; *see* § D *below* on modes of prayer). King Hezekiah's prayer to God as creator and god of all the nations, superior to idols, begins with a long exordium followed by a brief petition in which the reason is adapted to the mode of address (II Kings 19:14-19). The proportion of approach to petition and the grounding of prayer in a recollection of God's nature is essentially biblical and contains the seed of the NT teaching and of liturgical practice.

5. Jeremiah—prayer as personal meditation. The D viewpoint is evident in our edition of Jeremiah, but the prophet emerges as the first historical person whose life of personal prayer can be known. God can determine Jeremiah's life in spite of his own reluctance. This introspective knowledge produces what might best be known as his "meditations." They are a form of prayer not strictly praise, confession, or petition, but an intercourse with God in which all these blend. It is the reaction of the sensitive human soul to a God who is both above and near. The first (Jer. 10:23-24) sums up man's situation. He cannot provide from within himself resources for self-direction, yet the felt need for God's guidance is an awesome thing. Prayer seeks the mitigation of God's destroying anger and the tempering of his control (cf. Pss. 103; 139; etc.). Prayer is related to the immediate problems of life (Jer. 11:18-20; 12:1-5). Because Jeremiah is convinced God is righteous, he can debate the problem of the success of the wicked and move beyond the oversimplifications of D, even though he may be challenged to face greater evils (12:5). The hand of God upon him has produced his isolation, yet he must intercede, and God must help him (15:10, 15-18). God assures him that his situation is God's intent (vss. 19-20). Only God can fathom the human mind (heart) and can vindicate the prophet's message by destroying the enemies (17:9-10, 14-18; cf. 18:18-23). Jeremiah's prayer of surrender produces an agonized sense of compulsion (cf. 1:4-8; 20:7-12, 14-18). The way in which God is known is influenced by the situation and also determines the prayer. The D sense of covenant is at war with a growing sense of God's righteous mercy. Prayer is an agonized striving because Jeremiah has no alternative but to commit himself to the Lord. His meditations go far beyond simple petition. From Jeremiah's agonies emerges a sense of the necessity of prayer, though the problems involved call for a deeper exposition and a more radical solution. Only so can the way be opened for a covenant no longer external but graven on the heart (31:31).

6. The Exile and after—prayer in Judaism. With the loss of the temple, gatherings for prayer and reading the Scriptures prepared for the development of the SYNAGOGUE. The poems in Lamentations depict a sorrowful corporate waiting upon God —ch. 5 pleads for remembrance in the hope that the people may be restored. Ezekiel envisions this restoration, and the vision, like Isaiah's, leads to a commission. The prophet's mortal nature is emphasized ("son of man" [Ezek. 2:1, 3, 8; 3:1; etc.]), and the spirit of God begins to play a larger part (3:12, 14; 11:1; etc.; cf. 37:1) but is not as yet directly connected with prayer. Ezekiel prophesies rather than petitions. The vision of a new temple in chs. 40–48 indicates that worship is thought of as essentially corporate, organized under a priesthood. The personal prayers which emerge in other books are therefore the more striking. Festivals and new moons are important, and the new temple is for the circumcised only (44:9). The hope of a new heart and new spirit (11:19; 18:31; etc.) is probably editorial.

Development in prayer awaits a new concept of God, and this new spirit is felt in the second and third portions of Isaiah. God is God alone, incomparable (ch. 40, etc.). Men and nations are insignificant and therefore may receive from such a God strength and endurance (40:30-31). God confronts the nations as Judge, and Israel is revealed as Yahweh's Servant (41:1, 8-10, etc.; *see* SERVANT OF THE LORD). An impassioned cry that God will act is based on God's mighty acts of old (51:9-11). Songs of praise take the form of apostrophes for salvation and the return of the Lord (52:7-10). Abundant pardon is offered to those who will seek the Lord, call on him, forsaking their wicked ways and unrighteous thoughts because God's thoughts are transcendent and his ways incontestable (ch. 55).

The Third Isaiah's "house of prayer for all peoples" (56:7) justifies the postexilic additions to Solomon's prayer (I Kings 8:41-53). A God whose very name is Holy and who dwells high in eternity can also be with the contrite (Isa. 57:15; 66:2; cf. Deut. 4:7). Daily prayer and periodic fasts do not avail unless there are also abstinence from tyranny and the performance of acts of mercy (Isa. 58:2-9). It is possible for Israel to address God as "our Father" after recounting God's suffering with them (63:7–64:1). There is no God like the God "who works for those who wait for him" and comes to meet those who remember him (64:4-5). Though God seems to be absent, he is available, even when not called upon (65:1-5*a*). In the new heaven and earth all flesh shall worship the Lord continually (66:22-23).

There is little attention to prayer in the minor prophets of the period. Jonah in his colloquy with God learns of God's interest even in Israel's enemies (ch. 4). Joel calls for a solemn fast and assembly led by the priests (1:13-14; 2:12-16; cf. Neh. 9:1). Malachi consists chiefly of questions and answers in which prayer has become a sort of formal catechism (1:6-11, etc.). Hab. 1:2-4, 12-13; 2:1-4 in C. L. Taylor's rearrangement (*IB*, VI, 973) is a prayer in which patience is achieved after facing the problem of evil before a holy, immortal God. Zech. 1–8 finds God to be remote and resorts to the mediation of angels.

a. The P school—development of liturgical prayer. In spite of the insistence on the cultus, personal prayer is not ignored by the P editors. Nehemiah is prompted to mourn, fast, and pray for days on end (1:4). His prayer of individual and corporate penitence, reminding God of his promises, is probably a

liturgical expansion of a prayer for personal guidance (1:5-11) reinforced by an example of "ejaculatory prayer" when confronted with the need to answer the king (2:4). In the prayers of this period scriptural language is prominent (often Deuteronomic) as interest in liturgical propriety grows. The use of the response AMEN begins to appear (5:13; 8:6; cf. Num. 5:22; I Chr. 16:36; Pss. 41:13; 72:19; 89:52; 106:48). The practice of praying before reading the Law begins (Neh. 8:6). The Levites lead a doxology (9:5; cf. vs. 32) similar to those found in the synagogue service and in the Christian liturgies. The psalm in 9:6-38 is a typical review of God's dealings with Israel leading to confession and a pledge (cf. Lev. 5:5; 16:21; 26:40). Antiphonal singing is used (Ezra 3:11; cf. Pss. 106; 136).

The Chronicler's historical midrash is concerned about the function of the priests with emphasis on liturgical music (cf. I Chr. 16:7-36). He has added a liturgical ending to Solomon's prayer (II Chr. 6:40-42). The repetition of formal phrases in P, which might be criticized in literary works, is appropriate in a liturgical setting and is a mark of the best liturgical prayer at all times.

In the P redaction of the Pentateuch, holiness and separation are emphasized. The absolute God must be approached with scrupulosity, unlike the Yahweh of J or the Elohim of E. Only God's voice is heard. There is concern to tie up religious observances with historic events (e.g., Exod. 12). Emphasis is upon offerings and sacrifice (*see* LEVITICUS), which in themselves become a dramatic form of prayer, and according to the Holiness Code, offerings must be perfect (Lev. 22:17-25). Prayer falls within the setting of observance of the Sabbath as the climax of creation (Gen. 1:1–2:4*a*) and reverence for the sanctuary. A disciplined framework of life, which will assure that God will be with them, gives the people freedom and dignity (Lev. 22:31-33).

b. The Psalms and the practice of prayer. The height of this development is found in the Psalms, which have a liturgical origin and reflect only slightly the emergence of individual piety from corporate devotion. But, although adapted to the corporate "I," many of them are capable of personal use as meditations of prayer and praise. Five bear the title of prayers (*tephillah;* Pss. 17; 86; 90; 102; 142; cf. 72:20), but they are generally mixed expressions of religious relationship with God, moving between praise and confession, trust and petition, imprecation and intercession. Man at prayer can scarcely narrow his expressions of piety to a defined category. (The cry "Hosanna" is, e.g., both an act of homage and a request; Ps. 118:25-26; cf. Mark 11:9; Suk. IV.v). The joy in them testifies to the feelings and personal participation of temple worshipers just as Ps. 119 does to the Torah as a delight and not a burden. Confession of sin is found (e.g., Pss. 32; 51; etc.) but more often confession of trouble (22; 31; 38; etc.). Trust is abundantly documented (23; 46; 62; 84; 90; 91; 103; 121; etc.) and confidence in answer to prayer (e.g., 3:4; 4:1; 6:9; 17:6; 65:2; 138:3), though God sometimes seems afar off or silent (10:1; 13:1-2; 77:5-9; 83:1; 89:46; 109:1; etc.). Prayer, praise, and thanksgiving must arise from a whole and ready heart (108:1; 111:1). The rehearsal of God's acts in history are an integral part of the Psalms as of all biblical prayer after D (e.g., 9:1; 44:1-8; 65:5; 66:5-12; 68:7-18; 77:11-20; 78; 105; 106; 114). Prayer can be equated with incense (141:2), and there are prayers that God will answer prayer (e.g., 20:5; 54:2; 55:1; 61:1; 71:2; 86:6; 130:2; 143:1). Many of the blessings asked are material, but throughout, the important thing is the relationship which can express itself in these bursts of praise and prayerful meditations (63:1-8), many of which seem drawn forth rather than composed.

7. The Greek period. ***a. Prayer in a troubled world.*** The problem for prayer of the distance between God and man is responsible for the book of Job, for the apocalyptic developments (*see* APOCALYPTICISM), and for the idea of Wisdom. In the Prologue to Job the attempt to penetrate the counsels of God finds an Adversary with a limited power to torment men (1:6-12; 2:1-6; cf. Zech. 3:1-2). In the poem a tortured Job seeks to reach God in order to vindicate himself and represents the distress of Israel in this period. On a lower level this is a variety of prayer. He turns to God "in the anguish of my spirit" (7:11) but finds a God who will not let him alone and cannot be answered (7:17-20; 9:14, 32). There is no intermediary (vs. 33; *see* § E *below*), though he proposes a bitter prayer (ch. 10) and suggests a more equal encounter (13:20-27), even if it be after death (14:13-22). The poem passes constantly from debate to appeal to God (e.g., 17:3-5; 30:20-23), but there is no answer (19:7-8). The only advice about prayer is conventional (22:21-30), and Job's problem is that he cannot get at God (23:3-17). In the end awe is substituted for argument and confrontation for complaint, so that Job can only surrender to God (42:5-6). Job learns the wisdom of Eccl. 5:2: "Be not rash with your mouth, nor let your heart be hasty to utter a word before God, for God is in heaven, and you upon earth; therefore let your words be few" (cf. Matt. 6:7-8). This is the basis of all prayer truly aware of the presence of God.

The piety of the period is summed up in Daniel, written for the Maccabean time of trials. Adherence to a life of prayer at all costs is the mark of the true Jew (ch. 3; 6:5, 10), and Daniel is a "man greatly beloved" (10:19). He seeks illumination (2:17-23), by fasting, confession, and prayer (9:3-19; cf. the prayers of Ezra and Nehemiah); and the answer was prepared as soon as he had begun to speak (9:23).

Tobit and his associates are also typical (1:12; cf. 3:1-15; 4:19; 8:5-8, 15-17; 11:14-15). Their didactic prayers are dominated by the act of blessing (thanking) God (cf. 12:6). In addition to the magical substratum, a new feature appears in Raphael, the angel who presents the prayers of the saints (12:15). The prayers of Judith are rationalistic (as are those of Maccabees), with acts of recollection, humiliation, and submission (Jth. 4:9-15; 9:2-14; 16:2-17), and twice Judith prays in the midst of a critical situation (13:4-5, 7). Prayers are provided for Mordecai and Esther (Add. Esth. 13:8-17; 14:3-19) and for King Manasses—a fine example of an act of penitence whose repetitions make the acknowledgment of guilt moving. The Wisdom of Solomon passes back and forth from discourse to prayer and constitutes a rehearsal of God's wisdom in dealing with his people

and prays for a share in the same (e.g., 9:13; 15:1-3; 16:15; 19:22). Prayer and sacrifice for the dead are not found in the OT but appear in II Macc. 12:44-45 (though probably not in the prayer of the captives in Bar. 3:1-8). The Song of the Three Children rehearses God's just treatment and turns into a catalogue of praise familiar to liturgical worship as the *Benedictus es domine* and the *Benedicite omnia opera.*

b. Prayer in synagogue and sect. The exact origin of the SYNAGOGUE is unknown, but its relation to the temple service is probably to be traced to the institution known as *Ma'amad,* an association of Israelites attached to each of the twenty-four weekly courses of priests on duty in the temple. Some of the laymen in each course attended the sacrifices; the rest gathered in their own villages at the hours of the temple rites and offered appropriate prayers and read the relevant sections of Torah. There thus came to be elements of the temple ritual in the synagogue services, and after A.D. 70 the rabbis came to hold that prayer was better than sacrifice.

The predominant note of the synagogue services in biblical times was thanksgiving. The basic elements in the service were the Shema framed in benedictions; the reading of Torah with appropriate praises and prayers for enlightenment; the doxologies of the Kaddish, honoring God's name and expecting his kingdom (*see* LORD'S PRAYER); and, centrally, the Tephillah or Amidah, the standing prayers. These consist, on the Sabbath, of six "benedictions," the first three praises and the last three thanksgivings, based on the temple ritual, and between them a benediction-prayer for the Sabbath or festival. On weekdays petition was included between the first and last three benedictions. At first this petition was free or extempore, but it later became fixed, until there developed twelve intervening sections forming the Shemoneh Esreh or "Eighteen Benedictions" (in Babylon, nineteen) which now constitute the Amidah.

The first petitions are personal, asking knowledge, repentance, forgiveness, redemption, healing, and the produce of the earth (years); the last concern the community, for gathering the exiles, for just judgment, for victory over enemies (against the *minnim*), for restoration of Jerusalem and the house of David. These were gradually developed, and some are postbiblical, at least in form. Every petition is, however, an act of praise and ends with a blessing of God. The biblical element of recollection is strong throughout the service. The Psalter and other scriptures are freely drawn on for material, and in this usage the personal pronoun is changed to the plural. Substantial elements of the liturgy, especially the Amidah, can be traced in Ecclus. 36:1-17 and in the Hebrew version of 51:12 (1-16).

The sectarians have left no description of their regular services, but we can see from the Qumran literature (*see* DEAD SEA SCROLLS) that the synagogue combination of praise and edification is characteristic of the Covenanters. The chief emphasis is put on study of Torah (Manual of Discipline and Damascus Document), on purification, and on obedient service. Benedictions are frequent (1QSb) with Amens (e.g., 1QS 1.19; 2.2-4, 10, 18, etc.) and confessions (1.24–2.1; cf. CDC 20.28-29 B). Worship was thought to involve the whole person and his possessions (1QS 1.11, etc.), and the prayer took the place of sacrifice as in the synagogue ("An offering of the lips is accounted as a fragrant offering of righteousness and perfection of way as an acceptable freewill offering" [9.5]; cf. 9.26; 10.6, 8, 14; Hos. 14:2). It was offered at set times (1QS 1.9, 14; 10.5, 10; etc.; CDC 6.18-19). In their worship, rehearsal also had a large place (1QS 1.21-22; CD 13.7-9; 1QM 10.3-10). The spirit and aim of their prayers (the word *tephillah* is used; e.g., 1QH 12.1-4; 16.6; etc.) is reflected in the Manual of Discipline (e.g., 1QS 3.7-9; 4.2-6; 11.12-20) but is more largely documented in the collection of *Hodayôth* or Psalms of Thanksgiving (1QH), where, in spite of much invective against the "sons of Belial" and gloom over the apocalyptic nature of the situation, the note of praise is unmistakable, as is a singular sense of wonder that man can be redeemed to share with the spirits and angelic beings the high calling of God (e.g., 1QH 1.21-26; 3.19-23; 11.3-14 and *passim*).

c. Approach to the NT. Ben Sirach approaches nearer to the attitudes of the NT. He affirms that men may humble themselves before God, because his mercy is equivalent to his majesty (Ecclus. 2:17-18), and men are not, like Job, to seek to justify themselves (7:5). As in Tob. 4:8-11, prayer and alms are associated (e.g., Ecclus. 3:14; 4:10; 12:1-2). Prayer must not be "fainthearted" (7:10) or repetitious (7:14; cf. Eccl. 5:2; Matt. 6:7), and is recommended both for patients and for physicians (38:9, 14; cf. Jas. 5:13-16). Forgiveness in prayer depends upon a forgiving spirit (28:2; cf. Mark 11:25). Craftsmen who cannot become learned may offer their work as their prayer (38:34). God will hear the prayers of the wronged and helpless (35:12-17; cf. Luke 18:1-5). The prayers include petitions for protection from sin and temptation (23:1-6), a national prayer (36:1-17), and a thanksgiving (50:22-24), the last two verses of which are reminiscent of the Kaddish in the synagogue service.

C. *PRAYER IN THE NT.* 1. The Synoptic gospels. The crux of all prayer in the Bible is the prayer of Jesus in Gethsemane, where surrender is yet addressed to God as Father (Mark 14:36).

a. Jesus at prayer. Mark records (editorially) only that Jesus prayed at critical moments. It may be assumed that he joined in synagogue prayer (1:21; 6:2; etc.) and in the customary prayers at home celebrations like the Passover (14:17-26). Mark does not tell us that Jesus prayed at his baptism (1:9-11), though the heavens were opened to him and he heard the voice, nor in the wilderness (1:12), nor at the Transfiguration (9:2). His disciples are criticized for not keeping a fast (2:18; cf. Luke 5:33: "and offer prayers"). Jesus does not call on God for help to heal or to exorcise demons or to raise the dead (e.g., Mark 1:25, 31; 5:41).

Mark tells us that Jesus retired from Capernaum to pray before announcing his preaching tour (1:35-38), that he went alone into the hills to pray after feeding the multitude (6:46; but not 8:10), that he prayed in Gethsemane before his arrest (14:36, 39), and that he prayed on the cross (15:34, in the words of Ps. 22:1). From this we may deduce a custom of prayer in emergencies, before great decisions, and in retirement. We may assume that retreat, especially

to the hills, also indicates prayer, as at 3:13 before the appointment of the Twelve, at 6:32 after their mission, and at 9:2 before the Transfiguration.

Mark gives no prayers of Jesus except in Gethsemane (14:36) and from the cross (15:34), though his table blessings are mentioned at 6:41 (cf. 8:6); 14:22-23. Prayer is assumed at 7:34. Mark's emphasis is upon prayer in the critical moments.

Luke is interested in prayer and has edited Mark to supply the impression usually attached to the gospels. He expands Mark 1:10 by "and was praying" (Luke 3:21) and makes the same addition to Mark 3:13 (6:12) and 9:2 (9:28), but not to 6:31 (cf. Luke 9:10), and has no parallel to 6:46. Both Luke and Matthew add that Jesus fasted in the wilderness (Luke 4:2; Matt. 4:2). Luke tells us it was Jesus' *custom* to go to the synagogue on the Sabbath (4:16). He omits from Mark 1:35 that Jesus prayed, perhaps assuming that the lonely place indicates this (4:42), and makes up this deficiency at 6:12 before his version of the Sermon, thus also relating prayer to Jesus' preaching mission. As Mark makes no reference to prayer for power to heal, Luke explains that the power of the Lord was with Jesus (5:17). Luke also adds that Jesus was praying privately at Caesarea Philippi (9:18) but omits the reference to prayer and exorcism in Mark 9:29 and refers instead to the majesty of God (9:43). Unlike Matthew, Luke 11:1 tells us that it was the example of Jesus' own prayers that prompted the LORD'S PRAYER. Luke 22:32 is the only intercession of Jesus except for the Lukan insertion of the prayer from the cross in some readings of 23:34 (omitted by B.D.W.F., sy^s, sa, bo). In place of the prayer from Ps. 22, Luke alone has: "Father, into thy hands I commit my spirit" (23:46).

In the chapters added to the beginning of Luke's Gospel the same interest in prayer is evident (1:13, 46, 67-79; 2:29-32; 2:14—the *Gloria in excelsis* of the liturgies). In Luke's post-Resurrection stories the appearances are associated with eating (24:30, 35, 41-43), indicating an early connection with services of breaking of bread. *See* EUCHARIST.

b. Jesus' teaching on prayer. In Mark there is little teaching on prayer. Certain exorcisms can be performed only by prayer (9:29; some MSS add: "and fasting"); Jesus quotes Isa. 56:7 regarding the temple (Mark 11:17); and 11:25 is virtually parallel to Ecclus. 28:2 in requiring forgiveness before prayer. The assurance that faith will produce an answer (11:24) is connected with removal of the mountain; this passage has connections with the tabernacles eschatology (cf. Zech. 14 in the synagogue). The apocalypse in ch. 13 bids prayer that the crisis come not in winter (vs. 18; cf., for strength to escape, Luke 21:36). Long prayers made as a pretense are condemned (12:40; cf. Luke 20:47). The disciples in Gethsemane are urged to pray against testing (14:38; *see* LORD'S PRAYER).

The teaching comes largely from the discourses common to Matthew and Luke (Q), with major additions from Luke's peculiar material. The pious duties of almsgiving, fasting, and prayer are assumed (Matt. 6:1-18), but none of them must be done for show (vss. 2-6, 16, 18). Prayer is best made in seclusion, without piling up empty phrases, because God knows what we need before he is asked (vss. 5-8). Anxiety is a hindrance to prayer, which should be the expression of the whole person (vss. 22-25) in the service of one Master (vs. 24). Prayer is part of the superrighteousness required of Israel (vs. 32; cf. 5:20, 47) and of the controlling desire for the kingdom, with the gift of which all lesser things are supplied (6:33-34). Yet men are to ask, seek, and knock (7:7-8), for a holy God is more likely to give than even an earthly father (vss. 9-11; "good things"; Luke 11:13: "the Holy Spirit"). Verbal expressions of allegiance do not assure entrance to the kingdom, but only a conforming will (Matt. 7:21; cf. Luke 6:46; 13:25). Yet God is not compelled (cf. Jth. 8:16) but gives only out of unconditioned grace (Matt. 20:1-16). Communion rather than the distraction of business is desired (Luke 10:40-42), and trust rather than seeking for signs (Matt. 16:1-4, etc.).

The LORD'S PRAYER is given a different setting by Matthew and Luke, and the two forms suggest divergent liturgical traditions. In this Jesus supplies a guide for prayer and convenient summary of the prayers required both by Jewish piety and by his own teaching. Corporate in scope, it agrees with the priorities Jesus established and bids prayer for the one object Jesus elsewhere asks men to pray for (Matt. 9:38; Luke 10:2; cf. John 4:35). The only other prayer ascribed to Jesus in Q is the thanksgiving to the Father for the revelation in himself (Matt. 11:25-26; Luke 10:21 adds that Jesus prayed "in the Holy Spirit").

To this teaching Luke has added particular points. The story of the rich farmer seems to warn against self-communion, for the man's soliloquy is interrupted by God (12:13-20). The duty of thanksgiving is sharply illustrated (17:11-19) and exemplified by the Pharisee at prayer in the parable (18:9-14). He represents the best Jewish piety, yet in seeking self-justification (vs. 14*a*) his prayer falls below that of the publican, who makes no claim but throws himself as a sinner on God's mercy (vs. 13; vs. 14*b* is a moralistic addition).

Luke's two parables usually thought to teach importunity may not originally have been so designed. In accord with Jesus' method, Luke 11:5-7 is a question. It would properly expect the answer "No"—i.e., the friend would not answer with a refusal. All the more, will not God respond to urgent need, as the teaching of Jesus above indicates? Vs. 8 is an application (by Luke? "I tell you" often introduces the evangelist's interpretation). The parable teaches that the needy may always resort without hesitation to God.

In Luke 18:1-8 the problem is complicated by the introduction and the appended eschatological application (vss. 1, 7-8). Vs. 1 does not necessarily indicate persistence in the same request apart from the parable (of which it is not a part). Ch. 17 is eschatological, and 18:7-8 deals with the disappointed hope of the persecuted (cf. Zech. 1:12; Rev. 6:9-11). The original function of the parable was to conclude the preceding discourse (17:20-37). Taken alone, the parable also deals with vindication. If vs. 6 is original, the emphasis on the unrighteous character of the judge suggests again an a fortiori interpretation—viz., if a man like this will eventually do justice, how much more, and at the proper time, will

God respond to the situation of the afflicted and persecuted? (Cf. Ecclus. 35:12-17; Rom. 12:19.)

The teaching of Jesus is that God will respond to need expressed in the prayer of faith, particularly when the petitioner seeks primarily the kingdom of God. All that is needful will be added; but, as children ask their father and are not rebuffed for asking, so in close relationship with God to ask as children is expected (cf. Mark 10:15, etc.). The gospels reflect the life of the early church and the basis for its practice of prayer, but this becomes more explicit in the letters.

2. Prayer in the early church. ***a. Paul.*** In Paul we see a Christian at prayer and the Christian practice of prayer in its fulness. In the letters his concern for his people and their problems is lifted up to God. Almost every letter begins and ends with the "grace" (I Thess. 1:1; 5:28; etc.), and all except Galatians and II Corinthians begin with an expression of thanksgiving for his readers and an assurance of constant prayer on their behalf (Rom. 1:8-9; I Cor. 1:4; Phil. 1:3-4; Col. 1:3-5, 9; I Thess. 1:2; 3:9; II Thess. 1:3; 2:13; Philem. 4-6).

Paul not only petitions but also gives thanks, states the ground of a particular request and its aim. His principal prayers are in Rom. 15:5-6, 13; Phil. 1:9-11; Col. 1:9-12; I Thess. 3:11-13; 5:23; II Thess. 1:11-12; 2:16-17; 3:16. The ground of prayer is the new revelation of God in Christ, in whom all the promises of God find their "yes." Hence we can say "Amen" (II Cor. 1:20; *see* AMEN). Prayer is based on the faithfulness of God and of Christ (Rom. 15:5; I Cor. 1:9; I Thess. 5:24; II Thess. 3:3), on Christ's power (Col. 1:11; II Thess. 1:11), and, above all, on the superabundance of God's provision in him (Rom. 10:12; II Cor. 9:8-9; Phil. 4:19). Notably in Paul the Holy Spirit is the motivating power of prayer. The Spirit bears witness with the spirit of man (Rom. 8:16, 27) and causes him to set his mind on the things of the Spirit (vs. 5). Since the Spirit alone knows the mind of God (I Cor. 2:10-12; cf. Rom. 8:27), he can intercede for men, and he actually teaches them to pray (Rom. 8:26-27), interpreting to God their inarticulate sighs according to God's will. Only the Spirit can teach man to say "Lord" (I Cor. 12:3), and it is he who cries in us: "Abba" (Gal. 4:6).

To the God of comfort we pray for comfort (II Cor. 1:3-4), to the God of hope for joy and peace (Rom. 15:13), to the God of peace for peace (II Thess. 3:16). In the nature of God is found the cause of thanksgiving and praise for God's grace and comfort (I Cor. 1:4); for his revelation (Rom. 16:25-27); his inexpressible gift (II Cor. 9:15); and for the fact that in Christ he leads us in triumph (II Cor. 2:14) to the hope of heaven and the inheritance of the saints (Col. 1:5, 12). Paul also gives thanks for his people, for their faith and growth in love and their share in the work of the gospel (Rom. 1:8; I Cor. 1:5, 7; Phil. 1:5; Col. 1:4; I Thess. 1:2; 2:13; II Thess. 1:3-4; Philem. 5).

The objects of Paul's prayers are determined in the same ways. He prays for growth in grace or sanctification of his people (Rom. 15:13; Phil. 1:9-11; Col. 1:9-11; I Thess. 3:12-13; 5:23; II Thess. 1:11; 2:17; 3:5, 16). He both prays and asks prayer for his mission (Rom. 10:1; I Thess. 3:10-11; II Thess. 3:1-2). He prays that Christians may live in harmony (Rom. 15:5) and that the knowledge of the good news may be promoted by Christian witness (Philem. 4). In words probably derived from an early liturgy (in Aramaic) he prays for the Parousia (I Cor. 16:22*b* in Greek; cf. Rev. 22:20*b*).

Paul's prayers, grounded in the faith, have a purpose. He seeks the glory of God and of Christ (Rom. 15:6; Phil. 1:11; II Thess. 1:12); the comfort, hope, and perseverance of his people (Rom. 15:13; I Cor. 1:8; II Cor. 1:4; Col. 1:11; cf. Phil. 1:10). To this end he prays for discernment (Phil. 1:9; Col. 1:9; cf. Eph. 3:18; Jas. 1:5). His aim is a life worthy of Christ (Col. 1:10), in which anxiety will, through prayer, give place to peace (Phil. 4:6-7; cf. I Pet. 5:7) and many will give thanks for the demonstrated effectiveness of prayer (II Cor. 1:11).

By way of method, Paul urges constant prayer and thanksgiving (Col. 4:2; I Thess. 5:17; etc.), for all things (Phil. 4:6), in all circumstances (I Thess. 5:18; cf. Phil. 4:12). He inculcates a joyous spirit (Col. 3:15*b*-17) arising from a mind set on the ascended Lord (Col. 3:1-3). He deals with the use of prayer in worship in I Cor. 11-14 generally. He exhorts the congregation to "maintain the traditions" (11:2), but *agape* is to rule all (ch. 13), and the mind is to share with the spirit (14:15). As in Matt. 6:2-6, the duty of almsgiving is associated with worship (I Cor. 16:1-2; cf. II Cor. 8:1-15, etc.). No clear reference is made to fasting in connection with prayer. (The word is added in a few MSS to I Cor. 7:5; the references in II Cor. 6:5; 11:27 are to enforced hunger.) Paul refers to the liturgical use of "Amen" (I Cor. 14:16; II Cor. 1:20) and probably of the Lord's Prayer (Rom. 8:15; Gal. 4:6). Except for his intercessions, he says little of his own prayers, only to hint at mystical experiences of which he dare not boast (II Cor. 12:1-4) and to invite his people to "strive together" with him in prayer on his behalf (Rom. 15:30).

b. Other NT writers. Ephesians serves as a summation of Paul's teaching, especially in 1:17-23, but with a tendency to merge prayer into exposition (cf. 1:3-10, 15-16; 2:18; 5:4, 19-20; 6:8-19, 24). Eph. 3:14-20 embodies the practice of Paul.

The post-Pauline "Pastorals" mention the varieties of prayer known in the post-apostolic church: supplications, prayers, intercessions, thanksgivings (I Tim. 2:1; cf. 4:4-5), and the duty of prayer for rulers (2:2). Prayer is used by the early church in the practice of unction of the sick (Jas. 5:13-16), including confession (vs. 16; cf. I John 1:8-9). Faith is necessary in prayer (Jas. 1:6), and James also warns that the same tongue cannot properly curse and bless (3:9). Unanswered prayer arises from wrong requests which seek selfish ends (4:3).

The author of Acts has reconstructed the practice of the primitive church and Paul's experience and gives us pictures of the first disciples at prayer in the temple (2:46; 3:1; cf. 22:17), in the Upper Room (1:12-14, 23-26; cf. 2:42; 4:23-31; 12:5), and at home in the "breaking of bread" (2:42, 46). The Holy Spirit comes to a praying church (2:1-4; cf. 4:31). By prayer with the laying on of hands it chooses (1:23-26) and appoints its ministers (6:6; 13:2-3; 14:23)

and brings strangers into communion (8:14-17). Prayer is offered for healing the sick and raising the dead (9:40; 28:8). Stephen prays at his martyrdom (7:55, 59-60), Paul and Silas in prison (16:25). The early church's all-night vigil culminating in the breaking of bread is described in 20:7-11. Further glimpses of the importance of prayer are given in 13:2 (with fasting), where it results in the guidance of the Holy Spirit, and in 20:32, 36. Frequently in Acts visions are the means by which God communicates with man (Paul: 9:3-8; 16:9; 22:17; 23:11; 27:23; Ananias: 9:10-16; Cornelius: 10:1-6; cf. vs. 30; Peter: 10:9-20).

The liturgy of the early-second-century church is reflected in Revelation and its mode of worship idealized in heaven (chs. 4–5, possibly owing something also to the Greek theater). It is marked by doxologies and hymns (4:8, 11; 5:9, 12, 13*b;* cf. 11: 15-18; 12:10-12; 15:3-4; 19:1-3). The salutation which begins the book becomes an ascription of praise ending with the Amen (1:4-7; cf. 5:14; 7:12; etc.). In 3:14 Jesus himself is the Amen. "Hallelujah" becomes a liturgical cry (19:4-6). The seer is told to worship God alone, not the angel (19:10; 22:8-9). In the new heaven and earth is no temple (21:22). The prayer *Maranatha* occurs in the Greek, ἔρχου κύριε (22:20; cf. I Cor. 16:22).

3. Hebrews—prayer through Christ's mediation. The prominent development of the basis for prayer occurs when the Letter to the Hebrews (*see* HEBREWS, LETTER TO THE) grounds it firmly in Jesus' experience. Because in obedience he was tried as men are tried, he can mediate our needs; this makes him a unique and definitive high priest (2:18; 4:14-16; 5:7-10; 7:23-28; 10:19-22). The key word is προσέρχομαι, "draw near." Prayer is approaching God in and through Christ (4:16; 7:25; 10:1, 22; 11:6; 12:18, 22). We draw near with confidence, by a new and living way, with a true heart. We draw near, not to the terrifying mount of Moses, but to the heavenly scene dominated by Jesus the mediator of a new covenant, in company with saints and angels (12:18-24). Faith is essential, for to draw near means to believe God exists and that he rewards those who seek him (11:6). The vital thing is to look to Christ, who, as Pioneer and Perfecter of faith, is seated at God's right hand (12:2). No sacrifice is necessary except the sacrifice of praise (13:15; cf. Hos. 14:2), since Christ has offered the one all-sufficient sacrifice (7:27; 9:27-28; 10:10-14).

4. The Fourth Gospel—prayer as communion. The heavenly intercession of Christ as the living core of Christian prayer is made again explicit in the work of the Fourth Evangelist. For John it is essential that the Christian abide in Christ (6:56) by sharing his body and blood, thus experiencing a living union akin to that of vine and branches (15:1-8), within which it is possible to ask what we will and it will be done (vs. 7). This organic union implies unity of will and purpose, with Christ as the basis for prayer (as the branch asks only what it is in the nature of the parent stock to supply). This is otherwise expressed as prayer in Christ's name (14:13-14; 16:23), which is to begin with his ascension (16:23-24). It is not that Christ needs to pray for us but that the Father loves us because of our love for Christ and faith in him (vss. 26-27). The coming of the Paraclete is an answer to Christ's prayer.

In the Fourth Gospel, Jesus has no emergencies in which he prays (cf. § C1*a above* on Mark) but gives thanks over the loaves and fishes (6:11) and lifts his eyes in thanks before raising Lazarus (11: 41). There is no Gethsemane prayer (18:1; cf. 12:27-28) or prayer from the cross, because Jesus' whole ministry has been an act of conformity to God's will (cf. 5:19, 30; 8:29; 18:11; etc.). Neither προσεύχομαι nor δέομαι (or their nouns) is used. The subordination implied is not in keeping with the Johannine picture of Christ who is at one with God and aware of his will, informed with his power. For prayer John uses chiefly the verb αἰτέω, which may be used for asking of anyone and suggests intimacy with God (11:22; 14:13-14; 15:7, 16; 16:23-24, 26; I John 3:22; 5:14-16; cf. Matt. 7:7-11).

Jesus' own life of prayer and concern for his disciples is summed up in one chapter of John (17). The essence of Jesus' prayer is that the oneness between himself and God may be shared by the disciples with him and with one another (vss. 11*b*, 21). In this prayer, rooted in communion, seeking communion, biblical prayer reaches its climax. It is summed up in I John 5:13-15 in the belief, knowledge, and confidence the believer has in Christ, assuring him that in whatever he asks according to the will of the Son of God he is heard and answered.

D. ***THE MECHANICS OF PRAYER.*** Except for public worship the Bible knows no regulation of time or place and does not prescribe the attitude to be adopted. Jeroboam realized that the time and place of prayer would affect a people's allegiance (I Kings 12:26-33), and set up new altars accordingly. Amos and the D school made such innovations the target of their denunciation.

1. Place. Prayer may be offered in any place, even in prison (Acts 16:25) or on a storm-tossed ship (27:23, 35). D insisted on the Jerusalem sanctuary as the central place of prayer, and Jesus applied to its successor the words of Isa. 56:7: "a house of prayer for all peoples." When men pray apart from Jerusalem, they orient themselves toward it (Dan. 6:10; cf. Ps. 5:7, a prayer used in the Jewish Prayer Book on entering the synagogue). Prayers were proper in the home, particularly at the great Seder of the Passover, for which a place had to be provided even for strangers (κατάλυμα, "guest chamber," or ἀνάγαιον, "upper room" [Mark 14:14-15, etc.; cf. Dan. 6:10; Acts 1:13]). The housetop was a suitable place, probably because one could there withdraw from the household (Acts 10:9; cf. Jth. 8:5, etc.). The solitary place Jesus commended (Matt. 6:6) was hard to find, and he himself sought solitude out of doors in the hills or a secluded grove (Mark 1:35, etc.; Luke 9:28; cf. John 1:48; II Sam. 15:32; I Kings 18:42). In the OT, however, "high places" and groves were associated with the worship of Baalim (e.g., Deut. 12:2; Jer. 17:2; Ezek. 6:13). Formal Jewish prayer required the presence of water for washing (Acts 16:13, 16; cf. Jth. 12:6-8). Withdrawal was essential in critical moments for Moses (Exod. 24:18; Deut. 9:25), Elijah (I Kings 19), John the Baptist (Luke 1:80; etc.), and Paul (Gal. 1:15-17), as well as for Jesus. Elijah was, however, discour-

aged from seeking God in the manifestations of the past, heard God in his own mind, and was sent back to find answers in the midst of problems. Likewise the Baptist returned to preach at the crossings of Jordan. The Qumran community is an example of mass withdrawal.

2. Time. While the needs of people dictate the time (e.g., Neh. 2:4; cf. Ecclus. 38:34), the preferred occasions coincided with the sacrifices in the temple (Exod. 29:39, etc.; I Chr. 23:30), so that the morning oblation (Pss. 5:3; 59:16; 88:13; Wisd. Sol. 16:28) and that of evening (I Kings 18:36; Ezra 9:5; Ps. 141:2; Dan. 9:21; Jth. 9:1) are the usual times. Three times a day is recognized as appropriate (Ps. 55:17; Dan. 6:10), with the sixth hour (Acts 10:9) and ninth hour (Acts 3:1; 10:3, 30) especially noted. The monastic rule of seven daily offices was often reinforced by Ps. 119:164. Prayer could be offered day and night (Ps. 88:1), all day (Ps. 86:3; cf. Josh. 7:6), or in the night (I Sam. 15:11; Pss. 4:4; 63:6; 119:62; Lam. 2:19)—the night was a favorite time with Jesus (Mark 1:35; cf. 6:46, 48). The prayer in Gethsemane occurred late in the evening (Mark 14:17, 26, 32). Moses and Jesus fasted and prayed for forty days and nights, and David for a week (Exod. 34:28; II Sam. 12:16-23; Luke 4:1-2).

3. Posture. Standing is the normal attitude assumed (Matt. 6:5; Mark 11:25; Luke 18:11; cf. I Sam. 1:26; I Kings 8:22) and is required in the synagogue for the Amidah (Singer, *Daily Prayer Book*, p. 44, based by the Talmud on Ps. 106:30). Kneeling is also described (Ezra 9:5; Ps. 95:6; Dan. 6:10; Luke 22:41; Acts 7:60; added by the Chronicler in I Kings 8:54). Special intensity seems to be characterized by prostration (Num. 16:45; Josh. 7:6; II Sam. 12:16; I Kings 18:42; Ezra 10:1; Jth. 9:1; Mark 14:35). The head may be bowed between the knees or toward the ground in humble thanksgiving (Gen. 24:26; Neh. 8:6) or petition (Exod. 34:8; I Kings 18:42). The tractate Berakoth recommends bending the spine or at least bowing the head to say the Tephillah (IV.iii). Hands were characteristically spread abroad toward heaven (I Kings 8:22; Ezra 9:5; Isa. 1:15; II Macc. 3:20) and lifted up (Pss. 28:2; 63:4; 134:2; 141:2; Lam. 2:19; 3:41; I Tim. 2:8). In penitence or sorrow the eyes may be downcast and the hands used to smite the breast (Luke 18:13; cf. 23:48). Prayer need not be said aloud (Gen. 24:45; I Sam. 1:13; Luke 18:11). It is on occasion accompanied by tears (I Sam. 1:10) or sweat (Luke 22:44) or by tearing both hair and garments (Ezra 9:3, 5). The biblical attitude tends to move away from such frenzy as is described in I Kings 18:26-29.

E. ***INTERCESSION*** (ἔντευξις). Christ as the ultimate intercessor is the climax of a growing interest in the function of those who pray as mediators. J and E supply the examples of Abraham and Moses (e.g., Gen. 18:22-32; Exod. 5:22-23; 8:8; 32:11-14; etc.), standing between God and man, but as "prophets" rather than as priests (cf. Gen. 20:7). Whether Moses is on the mountain or at the tent of meeting, he stands between people and God as a vital means of communication (Exod. 33:7-10).

David also intercedes (II Sam. 12:16-18; 24:10, 25). The later source at I Sam. 2:25 questions whether there can be intercession for sins against God, although he himself will mediate between men. As offenders men stand alone when they pray and must turn from idols and direct their own hearts to God (7:3). Samuel intercedes for his people because sin is a corporate matter (I Sam. 7:5-6, 8-9). Though he calls on God to vindicate his judgments, he continues his intercessions (12:16-17, 23; cf. 15:11).

It is part of the prophetic function of Amos also to plead for his wayward people in emergencies (Amos 7:1-6). According to D, Moses stood between a disobedient people and an awesome God (Deut. 5:5, 24-27; 9:18; etc.) and persisted through forty days of lying prostrate (9:25-29). Solomon's prayer for himself at Gibeon is as intermediary between God and people (I Kings 3:3-14), and he stands in this position as he dedicates the temple (8:22), as does Hezekiah in presenting the letter before God (II Kings 19:14-19; cf. Isa. 37:14-20). Elijah (I Kings 17:20) and Elisha (II Kings 4:32-33) intercede for a dead child. Jeremiah pleads for a people who rely too much on the covenant before a God who seems to be indifferent (Jer. 14:7-9).

Though Ezekiel as a son of man is called to stand before God, he recognizes that even great intercessors like Moses and Samuel, Noah, Daniel, and Job cannot atone for the failures of a faithless people but only for themselves (Ezek. 14:12-14; cf. Jer. 15:1). Intercession can be full of pangs wrung from the pit of despair (Lam. 3:42-66) yet would not be made without at least an overtone of confidence that God will avenge (vss. 56-58). In Judaism the priests take over the function of the prophet as intercessors (cf. Joel 2:17). Only the high priest can represent the people in the holy of holies (Lev. 16), and the temple is to be the point of intercession for all nations (Isa. 56:7). In the midst of this development Second Isaiah visualizes a new possibility. Israel as the Servant of Yahweh, even if reduced to one obscure soul, might by his vicarious suffering become in himself an act of intercession for his fellows (Isa. 53:12). The danger arises that an hypostatized Wisdom will come to stand between God and man (cf. Prov. 1-3, etc.; Job 28; Ecclus. 24), but this is offset by Job's constant demand for a mediator, a redeemer (*goèl*) even after death to stand between him and a God who will not let him alone (Job 9:33; 19:23-27; cf. 14:13-22; 23:3-17). In Tobit an angel presents the prayers of the saints.

Paul practiced constantly the function of intercession (*see* § C2*a above*), and the Christian church understood it as an obligation (I Tim. 2:1), especially for the sick (Jas. 5:14). According to Luke, Jesus interceded for Peter (22:32) and for his enemies 23:34 in some MSS). Jesus as intercessor, by virtue of his service on earth; his self-offering, and his place in heaven, is primarily set forth by Hebrews (*see* § C3 *above*) as the incarnation of Isaiah's Suffering Servant. Jesus' intercession for his own is presented in the Fourth Gospel (ch. 17) as his last act before his arrest. In this NT understanding of the function of Christ all Christian prayer, of whatever form, becomes intercession as it is presented through him and by him to God. On earth the Holy Spirit is "Paraclete"—i.e., counselor and advocate in prayer.

F. ***UNANSWERED PRAYER.*** The problem of unanswered prayer receives no formal treatment but is not unknown with the great biblical men of prayer. Moses' petition to see Canaan, based on God's mighty acts, was refused because of God's displeasure with the people for whom Moses was responsible (Deut. 3:23-27). This reflects the D sense of corporate involvement. Saul twice failed to receive an answer, once because a ban had been broken (I Sam. 14:37) and once when in his fear the lack of response drove him to seek a medium (28:5-7). David failed in his prayer for the child of his sin (II Sam. 12:22). (*See* § B6*b above* on unanswered prayer in Pss. 10:1; 13:1; etc.) Failure to recall God's past acts, according to Jer. 2:5-13, prevents a favorable response, and Jeremiah himself receives a question rather than an answer (12:5). Though he believes God to be in the midst of the people who bear his name, the Lord seems to have turned away (14:8-9). Job's failure to reach God might be compared with the figure of the cloud-wrapped God in Lam. 3:43-44, though in Job there is an adversary at work (Job 1:6-12, etc.). For Third Isaiah it is iniquity which has come between man and God (59:1-3; cf. 64:7)—and God in reality works for those who wait for him (64:4) and is ready even for those who do not seek him (65:1). God is not man, to be threatened or wheedled (Jth. 8:16). (On importunity, *see* § C1*b above* on Luke.) The NT answer to the problem is that prayer must be in accord with the will of God (cf. Jas. 4:3), particularly as expressed in Christ. His prayer in Gethsemane was not answered except by the acceptance of his own surrender to God. In the end prayer must be offered only "in his name."

G. ***GOD'S INITIATIVE IN PRAYER.*** Prayer is not initiated entirely by man but depends ultimately on a prior activity of God. In the JE narratives God takes the initiative in seeking man (e.g., Gen. 3:9, etc.), as does the God envisaged in Jesus' parables (e.g., Luke 15). The Lord hears even the weeping of a child (Gen. 21:16-17) and responds to the condition of the slaves in Egypt (Exod. 3:7-8; not P [cf. 2:23-24]), as later he treats the condition of the poor and the trials of Israel as themselves a prayer (Isa. 41:17; 43:1-7; cf. Ps. 79:10-11). It is the Lord who restores man to himself (Lam. 5:21; Hos. 2:14-15) and seeks out prophets like Amos, Isaiah, Jeremiah and Ezekiel (Amos 7:15; Isa. 6:8; Jer. 1:5; Ezek. 2:1-2). God's offer of refreshment is free and his word effective (Isa. 55:1, 11). Daniel can be answered before his prayer is phrased (Dan. 9:23). In the NT, apart from the interpretation of Christ as God's personal act of initiative (e.g., Rom. 5:8; Eph. 2:1), it is the Spirit of God himself who prompts and gives meaning to prayer (Rom. 8:15*b*-16, 26-27). The Spirit interprets the mind of the God who knows what we need before we ask (Matt. 6:8), and therefore prayer is in itself the discovering of what we really need (cf. Phil. 4:6-7).

H. ***BIBLICAL DOCTRINE OF PRAYER.*** Prayer in the Bible begins when it is clearly detached and distinguishable from magic, and it ends as a phase of complete communion with God in freely rendered obedience. From a predominant interest in material and worldly things, noticeable even in the Psalms, it rises to heights of self-offering, without ignoring the mundane and practical aspects of life. It becomes a matter of priority, as in the Lord's Prayer.

Biblical prayer has its elements of complaint and expostulation, for it is always one aspect of a close and natural relationship with God amid the stresses and strains of life, but its true basis is in God's acts of revelation—whether of judgment or of mercy. This is the great contribution of the Deuteronomic school. Prayer begins with recollection (anamnesis), proceeds to establish the ground for a request before making it, and states the end for which it is sought. Address and conclusion normally ascribe praise.

The life of Jesus, particularly in the dynamic Christology of the Fourth Gospel, is itself a prayer. He does what he sees the Father do and speaks what he hears the Father say. He knows because his will is to do the Father's will, and this is the way of religious certitude for the believer. Hence Paul prays for love in terms of growth in discernment. A lifelong and whole-person response to the divine reality, a posture of the will oriented toward the divine majesty, is the essence of prayer. Hence prayer in the Bible tends to move more and more toward thanksgiving and praise and consists increasingly in adoration rather than petition, more in contemplation than confession, yet more in the responsive activity of fellowship and not at all in mystical absorption. Jeremiah and the Psalms, Jesus' summary prayer and the hymns of the NT, all testify that prayer is one. The elements usually distinguished are likely to be distorted if held in isolation. For the Christian, Jesus himself is the final act of prayer, and prayer is perfected when the individual and the church are "in Christ."

This over-all understanding gained from the biblical development is of more importance than the piecemeal application of isolated passages, all of which have to be seen in the temporal context and as part of a movement. Matters of time, place, posture, and tone of voice are so various as to supply no rules. Indeed, the biblical teaching implies that the heart oriented toward God will cause the body to act appropriately. The biblical word "draw near," when seen in connection with the fully revealed God, suggests that those who understand what it is to draw near to majestic holiness which is at the same time redeeming mercy will acquit themselves accordingly. If they have nothing to say, they may still be truly at prayer, for in the end it is God who must inform our prayers. This Paul understood when he spoke of the work of the Holy Spirit. It is God who says: "Son of man, stand upon your feet."

Bibliography. Books on biblical prayer are notoriously lacking, especially in English. E. F. von der Goltz, *Das Gebet in der Ältesten Christenheit* (1901); J. E. McFadyen, *The Prayers of the Bible* (1906); J. Doller, *Das Gebet im AT* (1914); Tractate Berakōt (trans. A. Cohen; 1921); I. Rohr, *Das Gebet im NT* (1924); A. Z. Idelsohn, *Jewish Liturgy* (1932); F. Heiler, *Prayer* (1937); N. B. Johnson, *Prayer in the Apoc. and Pseudep.* (*JBL* Monograph II; 1948); E. J. Jay, Origen's *Treatise on Prayer* (1954).

C. W. F. SMITH

PRAYER, LORD'S. *See* LORD'S PRAYER.

PRAYER, PLACE OF [προσευχή, prayer] (Acts 16:13). The Greek word for "prayer" was often used

by Hellenistic Jews to denote a synagogue, or a regular place of worship (cf. Jos. Life LIV; Philo *Against Flaccus* 14). This is commonly taken to be the meaning of the word in Acts 16:13, and possibly also in 1:14. But it does not mean necessarily either the existence of a building, or conformity to the Jewish requirement that places of worship be located near streams of water.

PREACHER, THE. The customary but doubtful translation of קהלת in Eccl. 1:1.

PREACHING. In NT terms, a public proclamation of this good news: God has accomplished a work of salvation in Jesus Christ and offers a new life to those who believe.

1. Terminology
2. The contents of the preaching
   a. The preaching of Jesus
   b. The apostolic preaching
   c. The preaching of Paul
3. Preaching and teaching
Bibliography

1. Terminology. The most common Greek term for "to preach" is the verb κηρύσσειν (about sixty times in the NT; e.g., Mark 1:14; Acts 10:42; I Cor. 1:23). The chief synonyms are εὐαγγελίζεσθαι ("to evangelize" [RSV "to preach"]; Acts 5:42); ἀναγγέλλειν ("to declare"; Acts 20:27); ἀπαγγέλλειν ("to announce" [RSV "to command"]; Acts 17:30); διαγγέλλειν ("to proclaim"; Luke 9:60); ἐξαγγέλλειν ("to make known" [RSV "to declare"]; I Pet. 2:9); καταγγέλλειν ("to proclaim"; Acts 17:23).

"To preach" means "to make proclamation as a herald." A "herald" (κῆρυξ [RSV "preacher"]; I Tim. 2:7) is a public messenger who lifts up his voice and claims public attention to some definite news he has to announce. Then the Christian preaching (κήρυγμα; I Cor. 1:21) is the public proclamation of the "good news"—i.e., of the gospel—to the non-Christian world. Yet there is a difference between the proclamation of a town crier and the preaching of the gospel. A herald may be more or less indifferent to the news he proclaims. The Christian preacher, on the contrary, is a man who himself has been "laid hold on by Christ Jesus" (Phil. 3:12 ASV) and who personally believes in the good news he announces to others.

The NT writers draw a clear distinction between "to preach" and "preaching" on the one hand and "to teach" (διδάσκειν) and "teaching" (διδαχή) on the other. Preaching is the proclamation of the gospel to men who have not yet heard of it. Teaching is an instruction or exhortation on various aspects of Christian life and thought addressed to a community already established in the faith. The difference between preaching and teaching explains the fact, at first sight astonishing, that the OT writers scarcely use the term "preaching" to describe the mission of the prophets. In fact, their commission was to exhort the elect people to remain faithful to their God. It may well be compared with the charge of the Christian preacher nowadays. These prophets were not bringing news; they asked for a better and stricter obedience to the given law. In two cases only, the terms "preaching" and "to preach" have in the Prophets their early Christian meaning. First, in the book of Jonah (cf. 3:2) the prophet must "preach the preaching" (RSV "proclaim the message") of God to non-Jews—i.e., fulfil a missionary duty. Second, the terms "to evangelize" and "to preach" are used by Isaiah (cf. 61:1-2; Luke 4:18-21) to announce the good news of the eschatological salvation.

2. The contents of the preaching. In the Synoptic gospels we see Jesus "preaching the gospel of God" (Mark 1:14). In the Pauline letters we commonly read of "preaching Christ." In the book of Acts both forms of expression are used. The apostles preach "Jesus" (Acts 17:18) or "Christ" (Acts 8:5), or they preach the "kingdom of God" (Acts 28:31). These variant expressions are by no means opposed to one another. They only mark the development of the message in line with the development of the history of salvation from the days of Jesus to the apostolic age.

a. The preaching of Jesus. By his proclamation that "the time is fulfilled, and the kingdom of God is at hand; repent, and believe in the gospel" (Mark 1:15), Jesus did not simply continue the ministry of John the Baptist. He rather accomplished it, and appeared as that "greater one" the Baptist had announced. The belief in the gospel which Jesus requires is loyalty to him as to the representative of the kingdom, as the King and Messiah. Since the days of Jesus' ministry and later, since Jesus' death and resurrection, the kingdom begins to be realized in Jesus, although it is true that the kingdom itself is still to come. Thus after Jesus' days the kingdom of God is still to be announced. Yet the preaching of the kingdom necessarily becomes likewise the preaching of Jesus or Christ, who has brought the kingdom nearer by his words and mighty works of salvation. *See* KINGDOM OF GOD; GOSPEL.

b. The apostolic preaching. The preaching of the apostles is known by the discourses attributed to Peter in the ACTS OF THE APOSTLES. These are the preaching on the day of Pentecost (Acts 2:14-40), other preachings in Jerusalem (Acts 3:12-26; 5:29-32), and the preaching before Cornelius at Caesarea (Acts 10:34-43). It is now generally admitted that these speeches represent the preaching of the first apostles at an early date. This preaching may be briefly summarized as follows:

God has realized the promises of the OT and brought salvation to his people (Acts 2:16-21, 23; 3:18, 24; 10:43). This has taken place through the ministry, death, and resurrection of Jesus (2:22-24; 3:13-15; 10:37-39). Jesus has been exalted as "Lord and Christ" (2:36). The Holy Spirit in the church is the sign of Christ's present power and glory (2:33; 5:32). Salvation will reach its consummation in the return of Christ to judge the living and the dead (3:21; 10:42). The apostles have been chosen by God as witnesses of the ministry of Jesus and above all of his resurrection (2:32; 3:15; 10:40-41). They

address to their hearers an appeal for repentance and offer to the believers forgiveness of sins and the gift of the Holy Spirit (2:38-39; 3:25-26; 5:31; 10:43). In short, the primitive preaching of the apostles is a proclamation of the work of salvation made by God in Christ and a call to believe and be saved.

c. The preaching of Paul. Paul's preaching does not essentially differ from the common preaching, as he himself testifies (I Cor. 15:11). In fact, his speeches reported in the book of Acts (cf. 13:16-41; 14:15-17; 17:22-31) and the references to his missionary preaching given in the letters reveal, besides some minor differences, an important new element. As the apostle to the Gentiles addressing pagan audiences, Paul adds to the preaching of Christ an appeal for faith in the living God who made the heaven and the earth (Acts 14:15; 17:24; I Thess. 1:9).

3. Preaching and teaching. Jesus preached the gospel openly to the crowds, but he reserved his teaching to his disciples, thus revealing to them his most profound thoughts and particularly the mystery of his own person (Mark 8:31-32). Likewise the apostles gave a teaching to those who had accepted the preaching (Acts 2:42; Col. 1:28). The largest part of the NT letters is not preaching but teaching. The teaching develops the fulness of the gospel message in order that the believers may become mature in Christ. E.g., Paul doubtless reports his former oral preaching when he writes: "Do you not know that the unrighteous will not inherit the kingdom of God?" (I Cor. 6:2), but he teaches his converts when he explains what a right Christian life is like (I Cor. 5–6).

PRECIOUS STONES. *See* JEWELS AND PRECIOUS STONES.

PREDESTINATION [προορίζειν, to mark out beforehand]. A view of historical events which attributes their cause to a previously established plan or decision of God. Ancient pagan MYTH may be regarded as determinism in that events in the mythical TIME and space are the ground for events and institutions in history. Biblical predestination differs radically from determinism in assigning ultimate religious value to historical events themselves, in assigning their cause to a decision or act of one personal deity rather than to a conflict of opposing wills in the supernatural world, and in assigning ethical and teleological purpose (*see* GRACE) to that decision.

Ancient paganism had long before the time of Moses reached concepts of divinely established patterns of institutions and actions which were, so to speak, predestined to become historical. The OT also very strongly emphasizes divine control over nature and history from creation on, but by specific divine command based upon ethical characteristics of God himself. Though the order of the natural world may thus be regarded as "predestined" (e.g., Gen. 8:20-22; 9:12-16), it is based upon a self-limitation of God himself by COVENANT.

The same is true of one aspect of determinism in the human order. God predetermines, by a deliberate self-limitation in a covenant, certain groups for a specific relationship to him, the seed of Abraham (Gen. 15:12-21; 17:9-14; Deut. 7:6-11), the Davidic Dynasty (II Sam. 23:5), the priestly line (Num. 25:12-13), so that anyone born into this "chosen" lineage is a recipient of this covenant relationship. This predestination of persons appears in another light in prophecy, for Jeremiah (1:5) and Deutero-Isaiah (Isa. 49:1, 5) are formed and set apart for a specific purpose before birth, as a direct act of God entirely apart from lineal descent and covenant traditions.

Predestination of events is also important. Amos proclaims (3:7) that God does nothing without revealing his secret to his servants the prophets, but particularly in Second Isaiah this public proclamation of future events is extremely important. It is the means by which man knows the cause of specific events (Isa. 41:26; 48:3-8; contrast 41:21-24), and consequently must admit the righteousness of God (41:26).

The NT entirely rejected biological lineage as a basis for the relationship to God. The OT predetermination of both persons and events is taken up in the interpretation of Christ as the heir of the OT promises (Gal. 3:16; I Pet. 1:20), destined to suffer (in accordance with the previously proclaimed will of God; Acts 2:23). The NT community also is then predestined to be "conformed to the image of Christ" (Rom. 8:29-30), but no longer in the framework of a biological lineage of elect families; instead, it is a free act of God (as in the case of the prophets), based upon his FOREKNOWLEDGE and love (Eph. 1:5).

G. E. MENDENHALL

PRE-EXISTENCE OF SOULS. The doctrine that souls have an existence prior to and apart from the material body to which they are joined at conception or birth. In John 9:2 the disciples of Jesus ask him: "Rabbi, who sinned, this man or his parents, that he was born blind?" This question presupposes the possibility that the man might have sinned before he was born. Since belief in the pre-existence of souls was widely held in the ancient world, having found its classic expression in the writings of Plato, it has been argued that this passage indicates that the disciples of Jesus shared this belief. The passage more readily supports the view that the evangelist and the readers for whom he wrote his gospel believed the doctrine, although the possibility that the disciples of Jesus also believed it cannot be denied.

Josephus writes that the Essenes believed that the souls of men are immortal, and dwell in the most subtle ether, becoming entangled, as it were, in the prison house of the body, to which they are drawn by a certain natural enticement (Jos. War II.viii.11). We may well think that in this account Josephus has

pictured Essene belief much more in terms of Greek thought than the truth would warrant. Nonetheless, the doctrine is clearly taught in the Wisdom of Solomon:

> As a child I was by nature well-endowed,
> and a good soul fell to my lot;
> or rather, being good, I entered an undefiled body
> (8:19-20).

Philo, as well as later rabbinic writers, held to the doctrine of the pre-existence of souls. Origen derived the doctrine from the nature of the soul, and regarded it as the correlative of immortality.

In the OT, man is regarded as a "psychosomatic" whole. The idea of a disembodied spirit, or a soul separated from its body, was not congenial to Jewish thought. And it was not until the Persian and Hellenistic periods that Jewish writers were able to entertain a doctrine of pre-existence of the soul. Even then Jewish speculation on pre-existence was very much conditioned by the limitations of historical existence. Thus Elijah was regarded as Phineas Redivivus, so that when he was taken up into heaven, he was only returning to an existence he had presumably enjoyed prior to being born as Elijah. So also, John the Baptist was regarded as Elijah come again, and Jesus as John Redivivus. This mode of thinking entails the pre-existence of men, but not of disembodied souls. This kind of nondualistic "reincarnationism"-like belief in the resurrection of the body, like Paul's doctrine of "spiritual bodies" (I Cor. 15:42-47), represents an attempt on the part of Judaism within the thought-forms of OT psychology and anthropology to accommodate itself to an Iranian world view of profound ethical dualism to which it was strongly attracted, without capitulating to Greek metaphysical dualism and thus giving up its basic beliefs about the wholeness of man and the goodness of the created world.

Harnack attempted to distinguish between Jewish and Greek conceptions of pre-existence. The first had a religious origin, the second a cosmological and psychological; the first glorifies God, the second the created spirit. For the pre-existence of Christ, *see* CHRIST.

1. Stone Ages. Paleolithic chipped stone implements have been found in various parts of the area, notably Palestine, Anatolia, and the mountainous N and E borders of Iraq. Although the various industries had a basic similarity, differentiated regional cultures already existed. The most important Paleolithic discovery in the Near East was the skeletal material from the Mount Carmel region of a type of early man unknown in Europe and now called *Homo palestinensis.*

The duration of the Paleolithic is a subject of considerable controversy, and absolute dates are best avoided. It was succeeded by a cultural stage often called Neolithic, although the new ground stone implements are less significant culture traits than the domestication of plants and animals, which permitted settled communities; more accurate terms for this age are "Early Food-producing" or "Early Village." Small villages are known in N Iraq,* the Cilician region of Anatolia, Syria, Palestine, and Egypt; some early materials from Iran may also belong to this age. Handmade pottery, which was apparently independently invented in various regions sometime after village settlement began, forms the bulk of the finds. It is usually coarse in fabric but often ornamented with simple linear patterns in incision or paint; a dark ware with burnished surface is especially common in Syria and Cilicia. Chipped flint implements are still very numerous in addition to the newer ground stone types. Toothed flint sickle blades in most sites testify to agricultural activities, and grain itself is occasionally found. A few stamp seals with incised designs suggest an attempt to mark and safeguard private property. Clay figurines, usually crudely modeled, represent animals or human beings; a type of female figurine with strongly emphasized sexual attributes suggests the existence of fertility cults. Much more striking material comes from Jericho—a group of seven human skulls upon which facial contours are modeled in clay and embellished with painted designs and shell-inlaid eyes. The significance of these bizarre objects

is unknown, but some faces show a striking, oddly sophisticated modeling unparalleled in the art of later times. Fig. PRE 66.

Architecture in most areas was confined to simple hut structures of mud or rough stone. Jericho, however, shows an astonishing architectural development even before the invention of pottery, with round or

rectangular brick houses, one somewhat resembling the later Greek megaron. Several successive city walls of heavy stone, one provided with round towers and an elaborate subterranean passage, bear witness to a high degree of civic organization and to a need for protection against large-scale warfare. The other excavated sites in all countries show societies on a simple level of existence, with no indication of complex social, economic, or political organization.

There is little evidence for religious beliefs and practices, but the careful burial of the dead with objects of use or adornment suggests the concept of an afterlife. The anomaly of highly developed Neolithic Jericho* has not been explained, and later phases of that city are in no way more advanced than the rest of the Near East. There are few indications of specific contact between the various regions, but N Syria and Cilicia share a tradition of dark burnished pottery, and similar types of incised and painted decoration on pottery connect N Iraq with Syria. The Fayum A culture of Egypt shows few Near Eastern affinities and is more closely related to African cultures. Figs. JER 14-15.

2. Chalcolithic Age. The succeeding age is generally known as Chalcolithic, a name marking one of its most significant features: the introduction of copper. It supplemented, rather than replaced, stone as material for tools and weapons; even in historic times stone continued to be used. Copper appeared first in very small quantities and not everywhere at the same time, but increased steadily in amount during the course of the period, and metallurgical techniques improved concomitantly. Precious metals were occasionally used for ornaments.

The number of excavated sites is quite large; hence our knowledge of the Chalcolithic cultures is based on a considerable body of evidence. Regional specialization was highly developed, but there was an increasing amount of contact between regions, particularly demonstrable in the spread of pottery styles over wide areas. Whether this contact took the form of commerce, warfare, or migration cannot be stated with certainty; all three may have played a part, but probably commerce, regular or sporadic, was the most important. The necessity of importing copper, stone, and timber into such regions as S Iraq, which lacked all three vital materials, would early stimulate commercial activities, and such raw materials could be paid for in manufactured goods.

Settlements sufficiently large to be called cities are known before the end of the period, especially in S Iraq. Urban life presupposes some form of government beyond family or clan; it may be permissible to extrapolate from later documents and consider the city-state the unit of organization, although the details of administration must escape us. Cults multiplied, numerous and sometimes elaborate temples appeared, and the number and value of burial gifts increased. The general wealth of the communities rose, as witnessed by the many varieties of hand-

somely decorated pottery, finely carved stone bowls, and elaborate personal ornaments, and by the increasing use of precious and other metals. The growing number and complexity of finds indicates a corresponding growth in specialization of function among the population.

Because of the diversity of the cultures it is advisable to describe the specific developments of the Chalcolithic period in each region separately.

a. Iran. The easternmost region of the Near East is the least known. The relatively few excavated sites are scattered over a wide area: Tepe Siyalk and Tepe Giyan in the central plateau, Susa in the Elamite plain to the SW, and Tal-i-Bakun in the S near the Achaemenid capital Persepolis. None is large enough to be called a city, and architectural remains are confined to simple brick houses.

Elaborately painted pottery was characteristic through most of the Chalcolithic period.* The styles found in Bakun A and Susa I are especially handsome; the Bakun painting shows vigorous, dynamic patterns in bold lines, and the Susa painting is composed with remarkable tectonic skill. Some of these pottery-painting styles traveled westward and

67. Prehistoric vases, from Susa

strongly influenced the pottery of Iraq; and a type of stamp seal with linear design, shared by the two areas, probably also had an Iranian origin. In the time of Siyalk III the Iranian metallurgists had already learned to cast copper (a technical advance of great importance, unknown in contemporaneous sites elsewhere) and were producing copper vessels, as well as small tools and ornaments. Fig. PRE 67.

b. Iraq (Mesopotamia). Through the entire Chalcolithic Age there was a distinct difference between the cultures of N Iraq (Assyria) and S Iraq (Babylonia). Settlement began earlier in the N, probably because alluvial Babylonia was too marshy for habitation. The Halaf culture, an indigenous development out of the Neolithic Hassuna stage but technically much advanced, was confined to Assyria.

The potters now produced lustrous painted pottery, with some very fine pieces in brilliant polychromy, notably plates with balanced, tectonic, static geometric designs. This pottery style was spread over a considerable area, from Lake Van in the Armenian mountains S almost to Baghdad and from the Tigris W to the Mediterranean coast. Stamp seals, often similar in shape and design to the Iranian ones, indicate some concept of private property. A number of stone bowls with angular profiles show considerable proficiency on the part of the stonecutters, which is corroborated by beads and amulets well worked in brittle obsidian. Clay figurines continue types known from Neolithic times, but new to the Halaf period is a squatting woman portrayed in the act of childbirth.

Fragments of mud brick houses are known throughout the area. Less common but of greater architectural interest are circular brick or stone buildings called tholoi, often with rectangular dromoi attached; one tholos retained part of the springing of a dome, the earliest instance known. The use of the tholoi is unknown, save that they were not tombs, but they were built with care and were probably public buildings of some sort, possibly shrines.

Before the end of the Halaf culture in the N the earliest Ubaid culture began in Babylonia, and later a variant succeeded Halaf in the N. In both areas painted pottery was characteristic, in a style differing markedly from Halaf and almost certainly originating under influence from Iran. The linear designs and shapes were, on the whole, simpler than those of Halaf pottery; polychromy and lustrous paint were lacking. Figurines, stone vessels, and seals continued; the S had a peculiar type of figurine with human body and monstrous reptilian head (possibly representing a deity), and the N now began a considerable development of seal design, utilizing animal and human figures for the first time. Little metal has been found in Halaf and Ubaid levels, certainly in part because of the inclement climate, which makes preservation difficult.

The most important feature of the Ubaid culture is the appearance of monumental architecture, chiefly temples built of mud brick in a tripartite plan with a long central cella and a row of smaller rooms on either side. Indicative of cultic development and complexity, these temples are the earliest instances of the plan which became standard for Mesopotamian temples for centuries. A temenos with three such temples grouped around a court is the most ambitious piece of city planning known from this age.

In the Late Prehistoric Age the N and the S diverged almost completely, and there was little contact between them, the S now becoming the cultural leader in all respects. Irrigation methods begun in Babylonia at this time permitted agriculture well away from the vicinity of the rivers. In consequence the population increased; many new settlements were founded in this age and older ones grew markedly, some becoming real cities. Relations between these towns must have attained some organized form, since co-operative effort was necessary to build and maintain the irrigation canals. Such regularization also fostered commerce, and Mesopotamian products are dispersed all across Western Asia to the Syrian coast and even to Egypt. This suggests extensive foreign relations, but, inexplicably, there is no evidence of reciprocal trade.

Temple architecture became very impressive, and the buildings increased in size and ornamentation. Some were placed on terraces, and the flat terrace was probably the precursor of the step tower or *ziggurat,* which characterized Mesopotamian architecture in later times. Secular architecture is less well known, and no monumental public buildings other than temples have been found; fortifications of any

kind are unknown. Metal became increasingly common, and metallurgical technique—especially in casting—was highly developed. Stonecutting made equal progress, and the high development of glyptic is especially noteworthy; a new form of seal was the cylinder with design on the circumference, and this is the form used throughout historic times. Monumental sculpture both in relief and in the round made its appearance just at the end of the prehistoric era. Through most of this period the pottery was unpainted and had clearly ceased to be regarded as a medium of art, but technically it was of excellent quality, and the use of the foot-turned potter's wheel allowed considerable expansion in the repertoire of shapes. Certainly the great achievement of this age was the invention of writing. Clay tablets impressed with a cut reed in semipictographic script contain temple records, the beginning of the long, well-documented course of Mesopotamian history.

c. Anatolia. Chalcolithic sites are rare, but a few are known in the high central plateau and others in the Cilician plain. Anatolia did not reach a level of culture at all comparable to that of Mesopotamia; it lacked writing, monumental sculpture, highly developed metallurgy, fine glyptic, and elaborate temple complexes. But here too there is some evidence of more advanced organization of towns. The hitherto undefended Cilician site of Mersin became a military fortress with a city wall of mud brick on a high stone foundation, a series of barracks for soldiers, and a large house thought to be the commander's residence. Dark burnished pottery resembling the Neolithic fabrics has been found in several sites, but light ware with simple painted linear designs is also known. Copper is restricted to such small objects as pins.

d. Syria. Chalcolithic remains are best represented in the Amuq (the plain of Antioch), and the sequence there can be used as a standard for the country. Phase C contains Halaf-style pottery imported from Iraq and then imitated locally, Phase D develops a local polychrome style, and Phase E imports Ubaid-type painted ware from Iraq. Copper occurs rarely and only in small objects. Phases F and G do not show as high a cultural level as the approximately contemporaneous Mesopotamian Late Prehistoric Age, but technical advances include the potter's wheel and improved metallurgy. As far as is known, there were no large cities or elaborate fortifications.

e. Palestine. The Chalcolithic towns were less spectacular than Neolithic Jericho. Numerous private houses, well built of mud brick on stone foundations, are known; at Ghassul some bear mural paintings, too fragmentary for adequate interpretation but often complex and well designed. In the phase called "Early Bronze I" (better considered as terminal Chalcolithic) Jericho again had a city wall, this time of mud brick and less impressive than the Neolithic wall. A very large triple circumvallation surrounds the site of Ai near Jerusalem. Temples or shrines appear in this late phase but are simple one-roomed structures not at all comparable with the striking religious architecture of contemporary Mesopotamia.

Pottery might bear simple painted geometric patterns, but there were no elaborate styles; in the Late Chalcolithic phase a fine gray burnished ware with characteristic shapes appeared. Copper became steadily more common through the period, especially for weapons; but stone was still in common use, and different styles of flintworking form one of the criteria for distinguishing phases.

f. Egypt. Egypt remained outside the sphere of Western Asia, on the whole, and developed its own very distinctive culture. Our information comes almost exclusively from graves—fortunately, well furnished—so we lack knowledge of architecture. The various phases named for type sites are distinct but form a clear developmental sequence leading into the historic Egyptian culture.

The earlier pottery was dark, often of a fine thin fabric with a rippled surface; forms were chiefly rounded and baggy. Light ware began in the Gerzean phase, as did painted design; since both features appeared contemporaneously with a type of wavy handle known to be of Palestinian origin, it is probable that the new style in general came from Palestine. The Egyptian painted decoration, however, was unlike any Asiatic style, with very free and untectonic organization and a fondness for representational design. Ivory was in common use and stonecutting an important industry, judging from the numerous very fine stone vessels. Human figurines were predominantly female, often with the exaggerated sexual characteristics which suggest a fertility aspect. Copper was used in steadily increasing amounts, but metallurgy was not so highly developed as in Mesopotamia. Relief sculpture began near the end of the period, adorning utilitarian objects, in several instances with subjects which may have a commemorative, historical significance.

Religion is known only from the burial customs, where the careful disposition of the dead with a plenitude of objects implies a mortuary cult beyond anything known in Asia. To the end of the prehistoric period there is no trace of the pre-eminence of a single leader, so it seems clear that the characteristic Egyptian concept of the divine king had not yet been developed.

3. Conclusion. Thus the stage was set for the beginning of the historic age. It is clear that the brilliant crystallization of Mesopotamian culture at the end of the prehistoric age was unmatched elsewhere in the Near East; but an equally brilliant phase occurred in Egypt at the very beginning of the dynastic period, again bringing with it writing, monumental art, and complex social organization. These two countries were and remained the great focuses of civilization until the Greek Classical Age shifted the focus to Europe.

PREPARATION DAY [(ἡ)Παρασκευή, preparation, provisioning] (cf. Matt. 27:62; Mark 15:42; Luke 23:54; John 19:14, 31). The day preceding the sabbath.

The strict sabbath observance in Judaism demanded great foresight. Food was prepared, business affairs were suspended, and people retired. To avoid all risk of infraction, observance began well before the sunset with which sabbath actually commenced (Jos. Antiq. XVI.vi.2; Jth. 8:6). All of Friday gradually became a Day of Preparation. Through Jewish and Christian influences, Παρασκευή became, and has remained, the proper name for this day in Greek.

In the gospels the Crucifixion occurs on a Day of Preparation. The Synoptists describe it as the day before the sabbath (Mark 15:42; cf. Luke 23:54). They equate the Last Supper with the Jewish Passover meal of the night before (Matt. 26:17; Mark 14:12; Luke 22:7 ff), which would make it fall on the first full day of the Feast of Unleavened Bread. The Fourth Gospel, however, does not identify the Last Supper as the Passover (13:1 ff). And John 19:14 describes the Crucifixion as on the "day of Preparation for the Passover." The day preceding Passover, known as Passover Eve, was, indeed, a day of intense preparation (cf. M. Pes. 1-4). Moreover, the curious reference to "that sabbath" (John 19:31) could refer to the first day of the Feast of Unleavened Bread. Except for the Sadducees, first-century Jews identified that day of holy convocation (Lev. 23:7) as "the sabbath" (vs. 11), on the basis of which the date for the Feast of Weeks (*see* WEEKS, FEAST OF) was computed. Therefore, if the connection of the Last Supper with the Passover can be treated as a secondary development, the references to Preparation are quite reconcilable. J. C. RYLAARSDAM

PRESBYTER prĕs'bĭ tər [πρεσβύτερος, older man]; PRESBYTERY prĕs'bĭ tĕr'ĭ [πρεσβυτέριον]. Literally, "older man," in contrast to "younger man" (cf. Luke 15:25; Acts 2:17 [quoting Joel 2:28—H 3:1]; I Pet. 5:5); also, a notable man of a past generation (Matt. 15:2; Mark 7:3, 5; Heb. 11:2); but usually, in a technical sense, either a member of the Jewish SANHEDRIN or a leader in a Christian church (*see* ELDER IN THE NT; MINISTRY). The word πρεσβυτέριον for a council or assembly of elders ("presbytery") is used of the Jewish Sanhedrin (Luke 22:66; Acts 22:5), and once of Christian elders (I Tim. 4:14). M. H. SHEPHERD, JR.

PRESENCE, BREAD OF THE. *See* BREAD OF THE PRESENCE.

***PRESENCE OF GOD.** It is strange that until recently the modern movement in biblical study has largely neglected the image and genuinely Israelite mythology of the presence of God in the Bible. The importance of the idea is being increasingly recognized. The terminology centers in both testaments in such concepts as face, glory, name, tabernacle, etc., and in the prepositions "before" (lit., "to or in the face of"), "in the midst of," "with." The verb שכן, "to dwell," and its derivatives are also central. The material relating to the conception may be resolved into various divisions.

There are formulas of good will and blessing. Such sentences as "God is with you in all that you do" (Gen. 21:22), and the frequent "The LORD was with him" (e.g., 39:3), are simply the recognition of good fortune interpreted as the evidence of divine blessing. In the future tense such sentences are the promise of this same good fortune (e.g., Exod. 3:12; Josh. 1:5, 9).

There are also a number of visitation and theophany passages, in which through a variety of manifestations, dreams, visions, oracles of visitation, etc. —i.e., visions and auditions—the God of Israel visits individuals, his people and the nations around Israel. None of this temporary visitation or theophanic material properly belongs to the present theme.

Likewise the biblical material relating to the omnipresence of God does not rightly belong here (e.g., Ps. 139; Jer. 23:23-24; Amos 9:2-5; John 4:19-24), for this is the doctrine of the universal presence of God always and everywhere present to the believer.

The separation of the material belonging to the divisions noted above, then, discloses various passages and ideas relevant to the presence theme which are further distinguished by the idea of "dwelling among." It is this characteristic of "abiding" or "dwelling" in the activity or place of the God of Israel that has given rise to the term "tabernacling presence," and it is this conception of the tabernacling presence which constitutes the heart of the biblical portrayal of the theme. (It is to Phythian-Adams that we owe this phrase and the rekindling of interest in this theme.)

Exodus is one of the books of this presence idea. In the first place it shares with the rest of the Pentateuch three conceptions of the presence as manifested in the cloud. The presence in the cloud in J precedes and guides Israel (Exod. 13:21-22; 14:19*b;* Num. 14:14*b;* Deut. 1:33; etc.), but in E the cloud of the presence occasionally descends to stand by the door to the tent of meeting for purposes of revelation (Exod. 33:9; Num. 11:25; etc.), and in P the cloud covers and protects the stationary tent of meeting. It is the P account of the cloud which most closely resembles the tabernacling presence.

But the cloud is only one of the images of the presence in Exodus. Yahweh dwells in the heavens but manifests himself on earth in many places; yet there is one place where he lodges. In Exodus this place is Sinai-Horeb. Thither the people come as to Yahweh himself (19:4; 24:1-2, 9-11), and to leave the mount without Yahweh requires that they strip themselves of their festive ornaments (33:6). Since Yahweh will not go with Israel from Sinai, the tent of meeting and presumably the ark (so Deuteronomy) are provided, and these constitute an ersatz shrine, a traveling sanctuary of the presence, a substitute presence. This substitute presence is also linked with an angel, "for my name is in him" (23:20-21; 33:14), and the angel's name-bearing, guiding, and possibly military qualities point to the ark (cf. Num. 10:35-36; I Sam. 4; II Sam. 6:2), though some have claimed a reference to Moses' father-in-law. The holy of holies of Exodus is certainly the vision of the elders in Exod. 24:9-11, and especially Moses' vision of Yahweh as he passed by (33:17-23; 34:6-7). The claim that Moses alone spoke face to face with God (Num. 12:8; Deut. 34:10) is here qualified that Moses saw only God's back. The laws of Exodus are likewise controlled by the presence theme, whether the

"name" presence of Exod. 20:24, or the dwelling, "glory" presence of 25:8; 29:42-46; 40:34-38.

Even if the images of the presence in Exodus reveal traits and ideas current later in N Israel and in Jerusalem, there is a basis of fact and faith in the tradition which would suggest that the idea of the presence is original to the desert period of Israel's religion, and, therefore, presumably, is part, and the central part, of Moses' ministry to the Israel of the desert. Certainly his associates challenged Moses on this very point at Massah (Exod. 17:7; cf. Deut. 6:16; 9:22; 33:8; Ps. 95:8; cf. Ps. 81:7), and whether the incident is pre-Sinai or post- (Num. 20) does not affect the argument. It is possible to explain the presence material in Exodus in many ways, but the core is certainly Mosaic and represents the uniqueness and originality of Israel (Exod. 33:16).

Certainly in and after Exodus the presence is bound with the sanctuary. First with the ark as a traveling sanctuary, and with the accompanying tent of meeting, and then with the several shrines which served as the home of the ark and the tent, as Shechem, Shiloh, and eventually Jerusalem (I Kings 8:12-13). It has been shown that this sanctuary-presence is represented by the Deuteronomic theologoumenon of the tabernacling name, and by the glory image of the Levitical and Jerusalem priesthood; and the rise of two different portrayals of the presence—i.e., name and glory—suggests a basic root idea, prior to both and from which both had developed.

The same is true of the ideas of the ark and of the tent of meeting, for if at times they appear together, there are other occasions when they appear apart and are separately mentioned. But together or apart they witness to the master theme. The material of the presence theme is so complex, and the media of manifestation so varied, that attempts to trace various stages in the development of the doctrine have not been successful. Rather than assume and portray a unilinear sequence, it is preferable to suppose a variegated pattern of presence imagery in ancient Israel. In the same way no single explanation of the tabernacling-presence theme adequately expounds all the media of portrayal, for the presence may be described in reference to Yahweh in terms of synecdoche—i.e., *pars pro toto;* identity; extension of the personality; and the value of Yahweh without his identity, a curious kind of presence-in-absence (Exod. 32:33; Ezek. 10–11; 43), etc.

The prophets undoubtedly, if indirectly, witness to the tabernacling presence, in such references as: Isa. 6:1-5; 8:18; 30:27-29; 31:9; Jer. 7:12-15; 8:19; 14:9; 23:23, 39; Ezek. 8:6; Hos. 5:15; 11:9, 11; Amos 1:2; 5:14; Mic. 1:2-3; 3:11; 6:6; etc. Their testimony to the place of the presence is corroborated by their portrayal of the renewal of the presence in the new Israel that is to be. This eschatological presence may be studied in such passages as: Isa. 12:6; Ezek. 11:16; 37:26-28; 43:1-7; 44:1-2; 48:35; Joel 3:17, 21; Mic. 4:7; Zeph. 3:15, 17; Zech. 2:10-11; 8:3, 23; Mal. 3:1. Alike then in history, cult, and eschatological promise, the presence is clearly central to the faith and hope of Israel.

Yet the promise of the eschatological presence contrasts with that aspect of the Jewish portrayal of the presence—i.e., the Shekinah—according to which the tabernacling presence, the Shekinah, was absent from the second temple. The classical literature of the Jews shows that they still wait for the return of the Shekinah, or of the word, *memra,* or of the spirit.

In the NT it is, of course, Jesus Christ who is the spiritual, personal, incarnate, and beheld heir and fulfilment of the tabernacling presence and of the Shekinah. The Incarnation is thus a new and final dimension of the theme. In his birth and baptism, his ministry and miracle, his teaching and transfiguration, and in his passion and resurrection, they beheld the glory of the divine presence. Phythian-Adams (*see bibliography*) coins the word "naomorphism," under which he treats of atonement, sanctification, incorporation, etc., in the NT, and relates the tabernacling presence to Christ, the believer, and the church. Unfortunately his stimulating discussion is marred by several errors, such as the false distinction concerning the mode of the presence, which, he claims, was only "among" men in Israel, but "in" Christians in the NT. The incarnate presence is, of course, the center of all the NT and governs all the aspects of life, thought, and institution which spring from it—aspects which must be studied under the main branches of NT theology.

It must suffice here to mention various problems which arise in the NT concerning the presence. The problem of the presence is most acute in the cry of dereliction on the cross (Matt. 27:46; Mark 15:34), and may only be understood, let alone solved, in the light of the OT categories of the presence. Then there is also the presence-absence theme, where Christ speaks of the necessity and desirability of his departure from the disciples (e.g., John 13:1, 33; 14:1-7; 16:7, 28) but promises also his abiding presence (e.g., Matt. 28:20); this paradox is also seen in the vision of Christ at the right hand of the majesty on high and in the experience of Christ in the heart and life of the Christian believer, a paradox which is doubtless resolved in the theology of the church in the advent of the Holy Spirit, but which also receives its final illumination in Rev. 21:22-24.

G. HENTON DAVIES

PRESIDENT [Aram. סרך, *possibly a loan word from a Persian title*]. An appointed governor or chief in the Persian kingdom. Daniel was one of three presidents who were appointed by Darius over the 120 satraps. The envy of the satraps and the other presidents led to the decree which put Daniel in the lions' den (Dan. 6:2 ff).

C. U. WOLF

PRESUMPTION. *See* PRIDE.

PRIDE. At least six Hebrew roots contain the idea of pride, and almost all of them share the meaning "to lift up," "to be high" (e.g., גאה, גבה, רום). The English translations express the idea in various contexts by such words as "arrogance," "loftiness," "presumption," "boasting" (cf. also "proud," "proudly," and similar forms). The NT has a similar range of equivalents including ἀλαζονεία, δόξα, καυχάομαι and related words, and ὑπερηφανία.

Although there are occasional passages in the OT and NT which seem to accept various forms of natural pride (cf. Job 28:8; Prov. 16:31; I Cor. 11:15; *see* GLORY), the distinctive biblical thrust is overwhelmingly against human presumption and self-glorification—on the level of warnings against boasting of more than one can accomplish (I Kings 20:11; Prov. 25:14), or that of condemnation of the proud and commendation of the humble (Pss. 18:27; 101:5-6; Prov. 15:25), or of advice against pride on the basis of the logic of practical WISDOM (Prov. 11:2; 16:18-19; Eccl. 7:8).

More importantly, certain OT passages point toward pride as the virtual ground of sin: classically in Isa. 2:6-22 and echoed in Zeph. 3:11-13 (cf. also Ezek. 16:49 ff; Amos 6:8; cf. I John 2:16). The imagery of Ezek. 28 reflects a mythological tradition of a kind of FALL, apparently based upon pride and jealousy (cf. Gen. 3, where pride as such does not emerge as the origin of sin; cf. also Gen. 11; Ezek. 31). Yahweh in his wrath destroys the proud nations (Isa. 10:12-19; Jer. 50:29-32; Obad. 2-4; Zeph. 2:8–3:20; Zech. 9:6), as well as the arrogant man (II Chr. 26:16; 32:25; Isa. 10:12; Dan. 5:20; cf. Job 22:29; Pss. 22:29; 94:2-7; Prov. 15:25). Thus pride and boastfulness characterize the "wicked" in the Psalms and wisdom literature (Pss. 5:5; 12:3; 49:6; 75:4; Prov. 8:13; 15:25; 21:4; cf. Job 35:12).

Yahweh alone is glorious and exalted (Isa. 2:11-17), and he achieves, by his ultimate victory over the proud, the establishment of the POOR and of a humble REMNANT (Isa. 3:14-15; Zeph. 3:12). Thus the tangible landmarks of pride in the land (including the temple itself) must be destroyed (Lam. 2:4, 7; Ezek. 24:21), in order that Israel's new age of humble obedience may come, bringing with it a proper pride in the fruits of Yahweh's redemptive acts (Isa. 4:2). This abasement of the proud and exaltation of the humble is most clearly expressed in the relatively late hymn (I Sam. 2:1-10) which is the pattern for the MAGNIFICAT (Luke 1:46-55; cf. Phil. 2:8-11). Thus Israel's only proper boast is in the righteous deeds of Yahweh (Pss. 20:7; 34:2; Jer. 9:23-24; 13:15-16; cf. Deut. 10:21; Zech. 10:12). *See* PRAISE.

While false pride is equally condemned in the NT (Mark 7:22; Rom. 1:30; Jas. 3:5, 14; 4:16), the distinctive forms are spiritual pride (Luke 18:9; Rom. 2:23; 11:20; Eph. 2:9) and its opposite, boasting in the redemptive work of God in Jesus Christ (I Cor. 1:29-31; Gal. 6:14; Phil. 3:3; cf. Heb. 3:6). Paul rejects self-commendation (II Cor. 3:1; 5:12; 10:8) because every human boast has been destroyed in Jesus Christ (I Cor. 1:25-30; cf. Jer. 9:23-24), but he is able to boast of his ministry (II Cor. 4:1-6; 6:3-10), his suffering and weakness (II Cor. 11:23-30; 12:9), and his congregations (II Cor. 7:14; 8:24; 9:2-3), because, in different ways, "Jesus Christ as Lord" (II Cor. 4:5) is the content of them all, and God himself is at work in them (I Cor. 15:10; cf. 3:5 ff, 21-23).

***PRIESTS AND LEVITES.** The priesthood in biblical thought represents Israel's union with God. Under the Mosaic covenant the whole nation is to be a "kingdom of priests" and hence a holy people (Exod. 19:6; Lev. 11:44 ff; Num. 15:40). The sanctity required of the people for the service of God is symbolized in the priesthood, which therefore becomes the mediator of the covenant.

In the second temple there is a threefold hierarchy of cultic officials—high priest, priest, and Levite. These are three distinct orders, each having its own distinctive functions and privileges. Their origin and development, together with the relationship of priests and Levites, constitute one of the major problems of OT scholarship. The traditional view regards this hierarchy as having been instituted by Moses during the wilderness wanderings and as persisting virtually unchanged throughout the history of Israel. The Graf-Kuenen-Wellhausen school of criticism, however, sees it as a distinctively postexilic institution whose origin is obscure but whose development can be clearly traced through several well-marked stages. This view, which has been widely held, is now seen to be an oversimplification of the problem. It is therefore being attacked at many points, but there is as yet no alternative view generally acceptable.

Bibliography

A. *TERMINOLOGY.* The word "priest," either alone or qualified by "chief" or "high," occurs over seven hundred times in the OT and over eighty times in the NT. The term "Levite" is less frequent; it occurs some eighty times in the OT and only three times in the NT.

1. In biblical Hebrew. The usual Hebrew term for "priest" is כהן (*kôhēn*), which is found also, with the same meaning, in Phoenician inscriptions. It appears in an Aramaized form (*kāhēn*) eight times in Ezra. The regular Aramaic term כמר occurs (probably as a loan word) three or perhaps four times in biblical Hebrew, but its use is restricted to idolatrous priests (II Kings 23:5; Hos. 10:5; Zeph. 1:4; and possibly Hos. 4:4, emending כמרין or ככמר). The use of כהן, however, is not limited to the priests of Yahweh. It is used also of Egyptian priests (Gen. 41:45, 50; 46:20; 47:26), Philistine priests (I Sam. 6:2), priests of Dagon (I Sam. 5:5), priests of Baal (II Kings 10:19), priests of Chemosh (Jer. 48:7), and priests of the Baalim and Asherim (II Chr. 34:5).

The corresponding Arabic word is *kâhin,* meaning a seer or soothsayer, and it has been suggested that this was the original sense of the Hebrew term. There is evidence, however, that כהן is a specifically Canaanite term and *kâhin* a loan word which has acquired a divergent sense. The Hebrew noun כהן is derived from the verb *kāhan,* which appears to have the same meaning as *kûn* (כון), "to stand." The priest is therefore one who stands before God as his servant or minister.

The Hebrew term for "Levite" is לוי, denoting a descendant of Levi (*see* LEVI 1), the third son of Jacob by Leah, from which name the word may be a gentilic. In Num. 18:2, 4, however, there is a play upon words between לוי and the verb לוה, meaning "to attach" or "to be joined": the tribe of Levi is to be joined to Aaron. Some have maintained that this wordplay is an indication of the true etymology of the term. The word "Levite," it is said, is not an indication of genealogy but signifies "one who attaches himself." The Levites are therefore regarded, on this view, as being originally either foreigners who joined the Israelites in the exodus period or Hebrew cultic attendants who acted as an escort to the ark or were attached to some local sanctuary. Others have linked the etymology of "Levite" with that of the South Arabian cultic officials who are called by the term *lawi'a* (feminine *lawi'at*) in the Minean inscriptions, which have been variously dated between 1500 B.C. and 700 B.C. On the earlier dating it may be argued that "Levite" was originally a cultic term borrowed by the Israelites from the Mineans. On the other hand, a late date would involve the possibility of the Minean term *lawi'a* being borrowed from an Israelite tribal name which was associated with cultic functions. In each case it would be necessary to establish, or assume, the etymological identity of the terms.

Any theory that the Levites were an "artificial tribe" of professional cultic officials must reckon with the early biblical testimony that Levi was one of the original tribes of Israel which had engaged in warrior activities before being set apart for cultic functions (Gen. 34:25-30; 49:5). There is no good reason for doubting that this tradition is sound, and the reference to Levi in the Blessing of Moses (Deut. 33: 8 ff) would seem to imply that the official term had its origin in a tribal name.

2. In LXX and NT Greek. The Hebrew word כהן is rendered in the LXX by the Greek ἱερεύς, which is the common Greek term for "priest." The same term is used exclusively throughout the NT.

In both the LXX and the NT the Hebrew לוי appears in its Greek form, Λευίτης or Λευείτης.

B. *THEOLOGICAL SIGNIFICANCE OF THE LEVITICAL PRIESTHOOD.* Priesthood and COVENANT are closely related in biblical thought. As the covenant people of God, Israel is to be a kingdom of priests and a holy nation (Exod. 19:5-6; cf. Isa. 61:6). Keeping the covenant, therefore, implies the consecration of the nation. Because God is holy, the people that is to be his own possession must also be holy (Lev. 11:44 ff; Num. 15:40). Since, moreover, the covenant is made with the whole nation, the existence of an official priesthood does not exclude the rest of the people from their special relationship with God.

1. Representative character. The Levitical priesthood has therefore a representative character: it embodies the duty, as well as the honor and privileges, of the whole nation as the covenant people of God. Corporate responsibility must of necessity be delegated to representative persons, who discharge it on behalf of the community as a whole. Hence in public and national worship the priests act as the representatives of the people.

But the priesthood was necessary not only for practical reasons; underlying it is a great moral and spiritual principle. Likeness to God in character and purpose is essential for those who would serve him. But this likeness was lacking in the people as a whole: the "holy nation" possessed only a very imperfect holiness. The state of sanctity and purity, however, which is necessary for the service of God was symbolized, if not always realized, in the Levitical priesthood. The result was twofold: first, the true requirements of serving God were continually kept before the eyes of his covenant people; and second, the covenant relationship with God was vicariously maintained by the priesthood on behalf of the nation as a whole.

2. The threefold hierarchy. The representative sanctity of the priesthood is expressed in the threefold hierarchy. The lowest grade consists of the Levites, who are set apart for the service of the sanctuary. They represent the people of Israel as substitutes for the first-born sons, who belong by right to God (Num. 3:12-13, 41, 45; 8:14-17; cf. Exod. 13:2, 12-13; 22:29; 34:19-20; Lev. 27:26; Num. 18:15; Deut. 15:19). Above them are the sons of Aaron, who are consecrated for the specific office of priest. They alone may represent the nation in the sacrificial ministrations of the altar. And the hierarchy culminates in the high priest, in whom the vicarious sanctity of the priesthood is gathered up. By bearing the names of the twelve tribes of Israel on his breastplate when he goes into the sanctuary, he represents the people as a whole (Exod. 28:29). He alone can enter the holy of holies—and that only once a year—to make ATONEMENT for the nation's sin. In Zechariah's vision the phrase "The LORD . . . has chosen Jerusalem" (Zech. 3:2) implies that Joshua as high priest is the representative of Jerusalem and hence of the whole Jewish community.

3. Function. The essential function of the Levitical priesthood is therefore to assure, maintain, and constantly re-establish the holiness of the elect people

of God (cf. Exod. 28:38; Lev. 10:17; Num. 18:1). Through the covenant with Levi, the priesthood becomes the mediator of the covenant with Israel (Mal. 2:4 ff; cf. Num. 18:19; Jer. 33:20-26). Hence it is through the priesthood that a purified and sanctified Israel is able to serve God and receives his blessing (cf. Zech. 3:1-5).

The Levitical priesthood, along with the sacrificial system which it maintains, finds its culmination and fulfilment in Christ. He is the great High Priest, one with the Father through his eternal sonship (Heb. 1), yet by his Incarnation identified with men (Heb. 2:14-18; 4:15; 5:1-2, 8-10). Hence he is the perfect Mediator of the New Covenant (Heb. 7:23-28; 8:6-13; 9:15), who has once for all made atonement for sin (Heb. 9:11-28; 10:11-18) and opened for men a new and living way into the presence of God (Heb. 10:19-25).

C. ***THE POSTEXILIC CULTUS.*** The postexilic literature of the OT gives a clear picture of the organization of the priesthood in the second temple. Here alone have we explicit and unequivocal evidence of the existence of a threefold hierarchy of cultic officials. Each order is separate and distinct, with clearly defined duties and privileges.

1. The high priest. At the head of the hierarchy is the high priest, who occupies a position of increasing splendor and power. The restored community of Judah was more a church than a state. No longer a monarchy, it became a hierocracy. The high priest, therefore, acquired much of the dignity that had formerly belonged to the king. In 520 B.C. we find the high priest Joshua and the Davidic governor Zerubbabel placed side by side as equals (Hag. 1:1, 12, 14; 2:2, 4). Together they begin the rebuilding of the temple (Ezra 3:1 ff; Hag. 1–2), and they are to share the rule of the community as the "two anointed" (Zech. 4:14; 6:9-15); but in the temple the high priest is to reign (Zech. 3:6-7). When this double rule comes to an end with the disappearance of the house of David, the high priest becomes the undisputed head of the Jewish state, supreme in the civil as in the ecclesiastical realm. The most outstanding of these high-priest princes is Simon the Just, "the leader of his brethren and the pride of his people" (Ecclus. 50:1-21). In the second century B.C. the high priest presides over a γερουσία or "senate" composed of priests, scribes, and the heads of families (I Macc. 12:6; II Macc. 4:44; 11:27)—the early form of the SANHEDRIN.

The power and influence of the high priesthood is such that during the Greek period it became a prize sought after by unscrupulous men. In 174 B.C., Jason ousted his brother Onias and bought the office for himself by a substantial increase in the tribute (II Macc. 4:7-10; cf. vss. 18-20). Three years later he was outbidden, and therefore displaced, by Menelaus (vss. 23-26), who endeavored to secure his position by the murder of Onias after the latter had publicly exposed him (vss. 33-35). In the time of the Maccabees, however, the high priesthood regained its former honor and glory, which reached its climax when Judea enjoyed a short-lived independence under the rule of the Hasmoneans. *See* HASMONEAN.

The high priest traced his descent from Eleazar the son of Aaron; the office was normally hereditary and conferred for life (Num. 3:32; 25:11 ff; 35:25, 28; Neh. 12:10-11). He was consecrated with an elaborate ceremonial consisting of lustration, vesting in his robes of office, anointing with oil, and sacrificial rites in which the blood of the ram of ordination was applied to the tip of the high priest's right ear, the thumb of his right hand, and the great toe of his right foot. These installation ceremonies lasted for seven days (Exod. 29:1-37; Lev. 8:5-35).

The distinctive high-priestly VESTMENTS consisted of a blue woven robe on the hem of which hung golden bells alternating with blue, purple, and scarlet pomegranates; an EPHOD of blue, purple, and scarlet material and fine linen interwoven with threads of gold, with each of its two shoulder clasps carrying a precious stone engraved with the names of six of the twelve tribes of Israel; a square breastplate or BREASTPIECE of the same materials as the ephod, to which it was attached, but having four rows of three precious stones each, on which were inscribed the names of the twelve tribes and formed like a pouch so as to contain the ancient sacred lots URIM AND THUMMIM; and finally a linen turban, to which was attached a golden crown, or plate, inscribed "Holy to Yahweh" (Exod. 28:4-39; 39:1-31; Lev. 8:7-9). These vestments symbolize the mediatory office of the high priest, the colored materials, gold, and precious stones representing the glory of God and the breastplate, or breastpiece, inscribed with the names of the twelve tribes representing Israel as a whole. When, however, the high priest enters the holy of holies on the Day of Atonement (*see* ATONEMENT, DAY OF), he lays aside his ceremonial robes and wears only linen garments—coat or tunic, breeches, girdle, and turban (Lev. 16:4, 23, 32).

The ceremonies of the annual Day of Atonement are the most important of the high priest's duties. Only he may enter the holy of holies and sprinkle the MERCY SEAT with the blood of the sin offerings for himself and his house and for the people (Lev. 16:1-25). He must also make atonement both for himself and for the people as a whole by sprinkling the blood of other sin offerings before the sanctuary veil and applying it to the horns of the altar (Lev. 4:3-21; cf. 9:8 ff). It would seem that the high priest is expected to share in the general duties of the priesthood (Exod. 27:21) and to offer a daily meal offering (Lev. 6:19-22, where "on the day when he is anointed" is generally regarded as a later interpolation).

Because he is the spiritual head of Israel, a greater degree of ceremonial purity is required of the high priest than of ordinary priests. According to the HOLINESS CODE, he shall not defile himself by contact with any dead body, even that of his father or mother; neither shall he let his hair grow long or rend his clothes as a sign of mourning. He may not marry a widow, as may other priests, but only a virgin of his own people (Lev. 21:10-15). For the same reason special gravity attaches to any sin committed by the high priest. It brings guilt on the people and must be expiated by a specially prescribed sin offering (Lev. 4:3-12). The supreme importance of the high priest in the life of the community is seen in the fact that his death marks an epoch: the manslayer is then released from the city of refuge (Num. 35:25, 28, 32).

2. Priests. Associated with the high priest are the ordinary priests, who are the cultic specialists. They are restricted to the Levitical house of Aaron (Exod. 28:1, 41; 29:9; Lev. 1:5, 7-8, 11; Num. 3:10; 18:7) and must be free from physical defects (Lev. 21:16-23). In its final organization the priesthood was divided into twenty-four priestly families, which attended the temple in turn. Each of these divisions, or "courses," was on duty for a week, beginning with the sabbath, except at the great annual festivals when they all officiated together. Sixteen families traced their descent through Zadok to Eleazar, and eight to Aaron's other son, Ithamar (I Chr. 24:1-19). Priests were consecrated by ceremonies similar to those used for the consecration of the high priest, although less elaborate (Exod. 29:1-37; Lev. 8:5-35); and only the high priest was anointed (Lev. 21:10). The priestly vestments were a tunic, breeches, and turban, all of white linen (שש), with a white linen girdle embroidered with blue, purple, and scarlet (Exod. 28:40, 42; 29:8-9; 39:27-29; Lev. 8:13).

The chief functions of the postexilic priesthood are the care of the vessels of the sanctuary and the sacrificial duties of the altar: only the priest may sacrifice (Num. 18:5, 7). But the priesthood also retains its ancient prerogative of giving תורה—i.e., instruction in the ways and requirements of God (Mal. 2:6-7; cf. Jer. 18:18). As the custodian of sacred tradition, the priest had always been the authority par excellence in all matters relating to the law. He, no less than the prophet, was a medium of revelation. But whereas the revelatory experience of the prophet was personal and direct, that of the priest was collective and mediated, either through divination or through his training in the accumulated knowledge of the past. When, however, in postexilic times the written word supersedes oral tradition and the Jews become the people of a book, ethical teaching passes increasingly into the hands of a new class of teachers, the scribes (*see* SCRIBE), and the emphasis of priestly instruction comes to be in the cultic sphere (Lev. 10:10-11; cf. Hag. 2:10-13).

Again, the priests are the custodians of medical lore and so play an important part in safeguarding the health of the community (Lev. 13–15). They retain their traditional role of administrators of justice (Deut. 17:8-9; 21:5; II Chr. 19:8-11; Ezek. 44:24), carrying out trial by ordeal of a woman accused of adultery (Num. 5:11-31), reconsecrating a Nazirite who has been defiled (Num. 6:1-21), and determining valuation in connection with vows (Lev. 27:8-25). A seal impression from Jericho which has been dated in the fifth century B.C. (for particulars *see bibliography*) provides fresh evidence that the fiscal administration of Judah after the Exile was concentrated in the hands of the temple authorities (Ezra 8:33-34). Finally, it is the priests who are responsible for blowing the trumpets which summon the people for war or for the keeping of a feast (Num. 10:1-10; cf. 31:6), and they alone may bless in the name of God (Num. 6:22-27).

Since the tribe of Levi had no particular territory assigned to it, the priests are entitled to live on certain specified parts of the offerings which the people bring to God (Num. 18:20; Deut. 10:9; 18:1-2). As in earlier times (cf. I Kings 2:26; Jer. 32:6 ff; Amos 7:17), individuals may possess landed property; indeed, some provision of houses and land is made for the priests in Jerusalem and the surrounding district (Neh. 11:3, 21; cf. I Chr. 9:2), and thirteen of the forty-eight LEVITICAL CITIES are assigned to them (Josh. 21:4, 13-19). But they depend chiefly upon the offerings of the people for their support. This revenue is derived from three main sources. First, a substantial part of it consists of the first fruits of the field and the first-born of animals, together with the redemption money which had to be paid for first-born sons and for the firstlings of unclean beasts (Exod. 13:12-13; Num. 18:12-19). Secondly, they receive specified sacrificial dues: the bread of the Presence (Lev. 24:5-9); almost all of the cereal offerings (Lev. 2:3, 10; 6:16; 10:12-13; Num. 18:9) and of the sin offerings (Lev. 5:13; 6:26; Num. 18:9); the breast and thigh—the choicest portions—of the peace offerings (Exod. 29:26-28; Lev. 7:30-34; 10:14-15; Num. 18:11); and the skin of the burnt offerings (Lev. 7:8). Thirdly, from the Levites they receive a tenth of the people's tithe (Num. 18:26-28).

The symbolical sanctity of the priesthood finds expression in the requirement that the priest shall be free from physical defects (Lev. 21:24 ff), in the purificatory rites of his consecration (Exod. 29:1 ff; Lev. 8:5 ff), his lustrations before officiating in the sanctuary or at the altar (Exod. 30:19 ff; 40:31 ff), and his robes of white linen (Exod. 39:27-29). He must conform to regulations for ceremonial purity similar to, although less stringent than, those applicable to the high priest. Thus, he may not defile himself by contact with a dead body, except that of a near blood relation; he may not as a sign of mourning shave his head or the edges of his beard, or cut his flesh; he may not marry an impure or divorced woman. The daughter of a priest who profanes his sacred office by prostitution is to be burned (Lev. 21:1-9). Any violation of this priestly sanctity must be expiated by the high priest and the whole priesthood together (Num. 18:1).

3. Levites. The third order of the hierarchy is that of the Levites. They are subordinate cultic officials, the *clerici minores,* who have charge of the lower duties of the sanctuary (Num. 1:50; 3:28, 32; 8:15; 31:30, 47; I Chr. 23:25-32). Levites are installed by a ceremony consisting of lustration, shaving the body, sacrifice, the laying on of hands, and solemn presentation to God (Num. 8:5-13). Their function is to assist the priests and serve the congregation (Num. 1:50; 3:6, 8; 16:9; 18:2; I Chr. 23:28, 32; Ezra 3:8-9). They are responsible for the care of the courts and chambers of the sanctuary, the cleansing of the sacred vessels, the preparation of the cereal offerings, and the service of praise (I Chr. 23:28-32). Some are mentioned particularly as being porters or gatekeepers (I Chr. 9:19; 26:1, 19; II Chr. 8:14), some as treasurers (I Chr. 26:20), and some as choristers and musicians (Ezra 3:10; Neh. 12:27; cf. I Chr. 6:31-32; 16:4-5, 7; 25:1-8; II Chr. 8:14); although on other occasions singers and porters are listed separately as distinct from the Levites (Ezra 2:40-42; 10:23; Neh. 7:43-45, 73; 12:47). The Levites have also a teaching function as interpreters of the law (Neh. 8:7, 9; cf. II Chr. 17:7-9; 35:3), but this eventually passes into the hands of the scribes (*see*

SCRIBE). Levites assist the priests in the administration of justice (I Chr. 23:4; 26:29; II Chr. 19:8-11) and in the charge of the treasury (Ezra 8:33-34; cf. I Chr. 26:20 ff).

Numerically the Levites appear to have been a much smaller body in the second temple than were the priests. The lists of returned exiles mention 4,289 priests but only 74 Levites (Ezra 2:36-40; Neh. 7:39-43). Even if the 148 singers and 138 porters (Neh. 7:43-45; cf. Ezra 2:41-42 [128 singers and 139 porters]) are to be included in the Levitical order, this would bring their numbers to only 360. There are, however, a further 392 "temple servants" and "sons of Solomon's servants" (Ezra 2:58; Neh. 7:60). Originally these were foreigners who were responsible for the menial work of the temple. As the name of the "temple servants" (NETHINIM) indicates, they were "given" as assistants to the Levites (Ezra 8:20), just as the latter were "given" (נתונים) to assist the priests (Num. 3:9; 8:19). But they seem later to have been included, along with the temple singers and porters, in the Levitical order. *See* § D2*e below*.

The period of service of the Levites seems to have varied. In Num. 4 it is from thirty to fifty years old. Num. 8:23-26 says from twenty-five years old and upward, but stipulates that from the age of fifty years they shall withdraw from their service and only assist their fellow Levites. The initial age is lowered still further in I Chr. 23:24, where they are said to serve from twenty years old and upward, with no set retirement age.

Provision for their subsistence is made by the people's tithe, to which they are entitled (Lev. 27:32-33; Num. 18:21, 24 ff), but a tenth of this must be given to the priests (Num. 18:26-28). As the tribe of Levi possessed no territory of its own, forty-eight cities, with surrounding pasture lands, are given, according to the priestly writer, to the Levites (Num. 35:1-8; cf. Lev. 25:32-34; Josh. 21:1-41). Thirteen of these, however, are assigned to the Aaronic priests (Josh. 21:4, 13-19). There is no convincing reason for regarding these references to the LEVITICAL CITIES as essentially utopian in character, as did critics of the Wellhausen school. It is noteworthy that the Levitical cities are not confined to the ideal borders of the land of Israel (Num. 34:1-12), as is the territory of the Levites according to the ideal program of Ezekiel (Ezek. 47:13-20), but are scattered on both sides of the Jordan and over all the areas where the children of Israel actually settled. On the other hand, they cannot have been inhabited exclusively by Levites in the early restoration period but seem rather to have been cities which contained some Levitical families.

Like the priests, the Levites of the second temple served in courses and only came to the sanctuary at their appointed times (I Chr. 24:31; 28:13, 21; II Chr. 8:14; Neh. 13:30). Their symbolic sanctity is expressed in the purificatory rites by which they are dedicated (Num. 8:5-13). Although there is no biblical reference to any particular robes of office for the Levites, Josephus says that the Levitical singers gained from Agrippa II the privilege of wearing priestly linen robes (Antiq. XX.ix.6). Levites, like priests, must make expiation for any violation of their sanctity (Num. 18:23).

D. ***ORIGIN AND DEVELOPMENT.*** In no other field of OT scholarship do the conclusions of modern critical study stand in such marked contrast to the traditional view. The line of approach pioneered by Graf, Kuenen, and Wellhausen led to a thoroughgoing reconstruction of the history of the Hebrew priesthood and a revolutionary change of view in regard to the relationship of priests and Levites. But the problem of their origin and development is far from being solved, as differences of view among critical scholars clearly indicate. Indeed, the weaknesses of the Graf-Wellhausen theory, which are becoming increasingly apparent, call for far-reaching modifications of the generally accepted critical reconstruction.

1. The traditional view. Before the rise of historical criticism it was assumed that the account of the priestly writer, which forms the narrative framework of the Pentateuch, was to be taken at its face value as an accurate historical record of the institution of the Levitical priesthood in the wilderness and its subsequent place and function in the life of Israel. According to this account, the Hebrew priesthood originates with Moses, who is assigned by the unanimous voice of tradition to the tribe of Levi. Acting on divine instructions (Exod. 28:1), Moses consecrates his brother Aaron and Aaron's sons as priests. In the ceremonies of consecration, which last for a week, Moses himself temporarily discharges the functions of a priest (Exod. 29:35-36; Lev. 8:15-29, 35; cf. Lev. 1:3 ff; 4:4 ff). But on the eighth day, when the installation is complete, Aaron and his sons undertake the sacrificial duties, thus becoming the first accredited Israelite priests (Lev. 9). The priesthood is invested exclusively in them and in their descendants; all others are barred from the service of the altar on pain of death (Exod. 28:1, 43; Num. 3:10; cf. Num. 16:40; 18:1, 7).

A distinction is made, however, between Aaron and his sons. He occupies a unique position as the only fully accredited priest. He is the anointed priest (Exod. 29:7; Lev. 8:12; cf. Lev. 4:3, 5, 16; 6:22—H 6:15; Num. 35:25), distinguished by special robes of office (Exod. 28:4, 6-39; Lev. 8:7-9). At his death these, along with the office which they symbolize, are transferred to Eleazar his son (Num. 20:25-28). There is thus from the very beginning a "priest who is chief among his brethren" (Lev. 21:10), the "high priest," whose death marks an epoch (Num. 35:28).

Aaron was by descent a Levite. Hence the Israelite priesthood which was invested in him and in his descendants was exclusively Levitical: all legitimate priests were Levites. But, according to the priestly writer, it was only after the consecration of Aaron and his sons to the priesthood that the remainder of the tribe of Levi was separated, as substitutes for the first-born, to assist them in the duties of the sanctuary (Num. 3:5 ff; cf. 8:5-22; 18:2-6). The Levites are divided into three groups according to their descent from the three sons of Levi—Gershon, Kohath, and Merari; special duties are assigned to each group (Num. 3:14-38).

After the rebellion of Korah (Num. 16), in which a group of Levites attempt to gain admittance to the priesthood (vss. 8-10), the divine choice of Aaron and his family is vindicated in the destruction of the

rebels (vss. 25-35) and the acceptance of Aaron's expiation (vss. 46-50). It is then confirmed by the sign of the sprouting rod (17:1-10), and the respective positions of priests and Levites are once again defined (18:1-7).

The traditional view of the history of the Levitical priesthood is thus quite simple. According to it the threefold hierarchy of high priest, priests, and Levites goes back to the institution of the priesthood by Moses in the wilderness. All the essential elements of the postexilic cultus are there from the beginning. And these three clearly defined orders of cultic officials persist, with only small modifications, throughout the entire history of Israel.

2. The critical reconstruction. A closer examination of the relevant literature has led OT scholars to conclude that the history of the priesthood, far from being simple, as the traditional view holds, is in fact highly complex. While Hebrew tradition is unanimous in affirming the Mosaic and Aaronic origin of the Levitical priesthood, there is evidence in the older literature that the priesthood was not limited to Levites in the early period. It was, however, narrowed down to Levites by the end of the seventh century B.C. (*see* DEUTERONOMY) and during the next two centuries further restricted to a group within the body of Levites. But the Priestly Code (*see* PENTATEUCH) maintains a distinction between priests and Levites from the first.

a. The early period. The tradition that the Hebrew priesthood originated with Moses and Aaron finds support in the fact that only foreign priests are mentioned in the book of Genesis and the early chapters of Exodus—viz., Melchizedek (Gen. 14:18), Egyptian priests (Gen. 41:45; 46:20; 47:22, 26), and the Midianite priest Jethro (Exod. 2:16; 3:1; 18:1). The only mention of Hebrew priests before the giving of the law at Sinai is in two allusions in the J account of Exod. 19: "Let the priests who come near to Yahweh consecrate themselves" (vs. 22), and: "Do not let the priests and the people break through to come up to Yahweh" (vs. 24). This would appear to imply that the J tradition recognized the existence of a Hebrew priesthood prior to Moses. On the other hand, the J (or possibly JE) narrative of Exod. 32:25-29 has been taken to imply that the Levites were given the regular priesthood as a reward for their faithfulness and zeal in executing the wrath of Yahweh after the apostasy in the matter of the golden calf (vs. 29).

In the early period the priest was not just concerned with sacrifice; he was an organ of revelation and as such gave direction and guidance in the ordinary affairs of life. Indeed, the teaching function of the priesthood seems to have taken precedence over the sacrificial. In the Blessing of Moses (Deut. 33), which belongs in its present form either to the late tenth or early eighth century B.C., both are mentioned (vss. 8-10), but teaching comes first:

> They shall teach Jacob thy ordinances [משפטים]
> and Israel thy law [תורה] (vs. 10).

As the successor of Moses, the priest gave oracular direction. This was given in two ways—through the sacred lot, URIM AND THUMMIM (vs. 8), and by reference to a legal code embodying both the revealed will of Yahweh and the accumulated experience of the past. Through his knowledge of this code the priest could lay down משפטים, rules of action, and give תורה, instruction in the revealed will of God (Lev. 10:10-11; Deut. 33:10; cf. II Kings 17:27-28; II Chr. 15:3; 17:7-9; Jer. 18:18; Ezek. 7:26; Mic. 3:11). The priesthood was thus the custodian of past revelation and legal precedent before any written word was available for the guidance of the people of God. Hence the priest was both the teacher and the administrator of justice (cf. Deut. 17:8-9; 21:5). He was the spokesman of God before the people, as well as the representative of the people before God.

Sacrifice was not the exclusive prerogative of the priest in early times. In the ancient patriarchal tradition it was associated with Cain and Abel (Gen. 4:4), Noah (Gen. 8:20), Abraham (Gen. 12:7-8; 13:4, 18; 15:9), Isaac (Gen. 26:25), and Jacob (Gen. 35:3, 7). Similarly, until the building of the temple, and even after, we find priestly functions discharged by the head of a household (Judg. 13:19; cf. Job 1:5; the killing of the pascal lamb by the father is a relic of his ancient priestly prerogative), a judge (Judg. 6:19 ff, 25-26, 28; I Sam. 7:9; cf. I Sam. 9:12-13; 16:5), a prophet (I Kings 18:30 ff; cf. 19:10), a king (II Sam. 6:17; I Kings 8:22, 54 ff). The priests, it seems, were associated with particular shrines where they gave oracles and officiated at public sacrifices at which a definite ritual was required (Judg. 20:18, 27; I Sam. 1:3 ff; cf. 21:1 ff; 22:9-11, 19).

The priesthood in this early period was not in practice exclusively Levitical; but the priest who was a Levite was preferred to a non-Levitical priest. Thus, in the time of the judges, Micah first appointed one of his own sons as the priest of his private shrine (Judg. 17:5). But he replaced him by a Levite when the opportunity arose (Judg. 17:7-13). In the early monarchy also we find references to non-Levitical priests existing side by side with the accredited Levitical order (*see* § D2*b below*). There are, however, in the judges period two official Levitical priestly families—the priesthood of Dan, established by Micah's Levite, Jonathan, the grandson of Moses (Judg. 18:1-4, 14-20, 30; cf. I Chr. 23:14-15); and the priesthood of Shiloh, held by Eli and his family, who belonged to the house of Ithamar, the fourth son of Aaron (I Sam. 1-4; cf. I Sam. 22:20; II Sam. 8:17 [emend "Abiathar, son of Ahimelech"]; I Kings 2:27; I Chr. 24:3). It is possible that persons, and perhaps families, who were not Levitical by descent were incorporated into the priestly tribe of Levi (cf. Deut. 33:8-9). This seems to have happened in the case of Samuel. Although an Ephraimite by descent (I Sam. 1:1 ff), he ministers in the sanctuary and wears the priestly ephod (I Sam. 1:27-28; 2:11, 18; 3:1); and the Chronicler regards him as a Levite (I Chr. 6:16-28).

b. The monarchy. In the monarchy the priesthood settles increasingly into families. The Mosaic priesthood of Dan continued until the end of the N kingdom in 721 B.C. After the victory of the Philistines and the capture of the ark (I Sam. 4:10-11), the house of Eli apparently moved from Shiloh to Nob, where they were massacred by Saul (21:1-9; 22:9-19). Only Abiathar escaped (22:20). During the reign of David he officiated at Jerusalem in association with Zadok (II Sam. 8:17; 15:24-29, 35; 19:11),

but because of his support of Adonijah (I Kings 1:5-8) he was deposed by Solomon (2:26-27), who put Zadok in his place (2:35). Thus the house of Zadok replaced the house of Eli as the most prominent priestly family, and the Zadokite priesthood continued in Jerusalem until the destruction of the temple in 586 B.C. (II Chr. 6:8—H 5:34). Zadok's descent is not mentioned in the early literature. It has been suggested that he may have been the former Jebusite king of Jerusalem, or a member of the Jebusite royal priesthood, who was incorporated into the Levitical order after David's conquest of the city. But it is extremely unlikely that a priest of the Jebusite cultus would have been admitted to the priesthood of Yahweh in David's reign. II Sam. 15:24 seems to imply that Zadok was the head of a company of Levites, and the Chronicler traces his descent to Eleazar the third son of Aaron (I Chr. 6:3-12, 50-53; 24:3).

The outstanding example of a non-Levitical priesthood during the monarchy is that instituted by Jeroboam in the N kingdom. The writer of I Kings states explicitly—and not without disapproval—that Jeroboam not only "appointed priests from among all the people, who were not of the Levites" (I Kings 12:31), but "any who would, he consecrated to be priests of the high places" (13:33).

There are three other references to priests outside the Levitical order. First, the list of David's chief officers, which includes the priests Zadok and Abiathar (II Sam. 8:17; read "Abiathar the son of Ahimelech"), ends with the statement: "and David's sons were priests" (vs. 18). Second, we read of Ira the Jairite's being priest to David (II Sam. 20:26). And third, in the list of Solomon's high officials it is said that Zabud the son of Nathan was priest and king's friend (I Kings 4:5). These three references, however, present a difficulty, since the names of regular accredited priests, Zadok and Abiathar, also appear among the court officials of both David and Solomon. In the case of Ira, if "Jairite" be emended, as has been suggested, to "Jattirite" (i.e., "belonging to the priestly city of JATTIR"), it is possible that he may have been a Levite. With regard to David's sons and Zabud, the word כהן, "priest," may denote a "domestic chaplain," or it may have been used as a mere court title as is "king's friend," although elsewhere in early documents it is used exclusively of priests. Some would emend כהן in each of these references to סכן, "steward" or "administrator" (cf. Isa. 22:15). It is noteworthy that the Chronicler alters the reference to David's sons from כהן to הראשנים ליד המלך, the "chief officials in the service of the king"; and the LXX, while rendering כהן by ἱερεύς in II Sam. 20:25, substitutes αὐλάρχαι, "princes," in II Sam. 8:18 and omits "priest" in I Kings 4:5.

The king himself appears to have exercised priestly functions at great national religious festivals, at least during the early years of the monarchy. Saul, in the absence of Samuel, offers the burnt offering and peace offerings at Gilgal, but is reproved by Samuel for doing so (I Sam. 13:8-13). David, however, not only supervises the removal of the ark from the house of Obed-edom to Jerusalem (II Sam. 6:12-19) but also wears the priestly ephod (vs. 14), offers sacrifices (vss. 13, 17), and blesses the people in the name of God (vs. 18). Similarly, at the dedication of the temple it is Solomon who appears as the leader of the cultus, standing before the altar to offer the prayer of dedication (I Kings 8:22-53), sacrificing sheep and oxen (vss. 5, 62-63), offering the burnt offering and the cereal offering (vs. 64), and blessing the assembly of Israel (vss. 14 ff, 54 ff), while the priests and Levites merely bring up the ark and the sacred vessels into the holy place (vss. 4, 6 ff). Afterward Solomon offers burnt offerings, peace offerings, and incense three times a year (I Kings 9:25). Jeroboam also, after instituting an official non-Levitical priesthood in the N kingdom, himself offers sacrifices and burns incense (12:32-33). Even as late as the eighth century B.C. the king can exercise the prerogatives of the priesthood. Ahaz instructs the priest Urijah to build at Jerusalem a replica of the altar at Damascus, but he himself offers sacrifice upon it and manipulates the blood of the offering (II Kings 16:10:13).

Hebrew kingship is therefore sacral: the king is a priest-king, the mediator between God and his people. If, as some maintain, Ps. 110 is an oracle for the installation of the king, it would seem that his priestly prerogative is associated with a claim to be regarded as the successor of MELCHIZEDEK, the ancient priest-king of Jerusalem (Ps. 110:4; cf. Gen. 14:18). The Chronicler, however, regards an attempt by Uzziah to burn incense in the temple as a flagrant encroachment on the rights of the priesthood, for which the king was punished by being stricken with leprosy (II Chr. 26:16-20).

c. Deuteronomy and Josiah's reform. The reform of JOSIAH in 621 B.C., putting an end to the high places and centralizing worship at Jerusalem, is a turning point in Hebrew history and religion (see II Kings 23:1-24). The Book of the Law upon which it is based (22:8-13; 23:1-3) is generally regarded as an early edition of DEUTERONOMY. Sacrifice is now the prerogative of the priesthood, since it may only be offered at the Jerusalem sanctuary (Deut. 12:5-7, 11, 13-14), and the priests are all "sons of Levi" (10:8; 18:1; 21:5; 33:8). This does not necessarily imply that every priest is an actual lineal descendant of the ancient house of Levi. It may well be that the Levitical priesthood, like other hereditary guilds, was able to exercise the right of adoption and incorporate persons who were not Levitical by descent (*see* § D2*a above*). It is generally maintained that in the Deuteronomic Code "priest" and "Levite" are synonymous terms: not only are all priests Levites, but also all Levites are priests, no distinction being made (see Deut. 10:8; 18:1; 21:5; 33:8 ff). This, however, is by no means certain; the passages cited do not necessarily bear this meaning. *See* § E2 *below*.

Prior to Josiah's reform, the priesthood, although not numerous, was widely distributed. We do, indeed, find over eighty priests at Nob—called the city of the priests—in the early monarchy (I Sam. 22:18-19) and another priestly community in Josiah's time at Anathoth (Jer. 1:1; cf. I Kings 2:26). But in general every town appears to have had its local sanctuary, or high place, with at least one Levitical priest in attendance (cf. Deut. 18:6). This official Levitical priesthood had no territorial possessions (Deut. 18:1), and Deuteronomy does not mention a Levitical tithe

but commends the Levite, along with the sojourner, the fatherless, and the widow, to the charity of the community in which he dwells (Deut. 14:27-29; 16:11, 14; 26:12; cf. Judg. 17:7-8; I Sam. 2:36). The abolition of the local sanctuaries meant, therefore, the loss of their revenues for these "country clergy," who would henceforth be unemployed. Josiah brought them all to Jerusalem, and he seems to have intended that they should share in the full duties of the Jerusalem priesthood at the temple, in accordance with the provisions (if they be so interpreted) of the Deuteronomic Code (II Kings 23:8; cf. Deut. 18:6-8, but this assumes that "Levite" = "priest"). In fact, however, the priests of the high places did not officiate at the Jerusalem altar—no doubt, because of the opposition of the Jerusalem priests—although they received their share of the perquisites (II Kings 23:9).

It is possible that "all the priests . . . of the cities of Judah" (II Kings 23:8) included others besides the "idolatrous priests" of the high places (vs. 5). If so, the account may be taken to imply that Josiah separated the priests of the high places from other provincial priests, who had not taken part in idolatrous practices at the local sanctuaries, and that only the former were deposed (vs. 5), and therefore prohibited from ministering at the altar in Jerusalem (vs. 9), while the latter were admitted to the full privileges of the Jerusalem priesthood. In that case, Ezekiel's reference to the Levites who went astray after their idols (Ezek. 44:10) may refer only to the idolatrous priests of the high places, whom Josiah deposed, and not, as is generally held, to the provincial priests as a whole. *See* § D2*d below*.

d. Ezekiel. The EXILE is the great watershed of Hebrew religion: it marks the boundary between two periods. Whether or not all Levites were priests in pre-exilic days, as is generally maintained, the priesthood was certainly narrowed down to Levites by the latter part of the seventh century B.C. By then, at least, all priests were Levites. In postexilic times, however, we find the priesthood definitely restricted to a particular section of the Levites—those who are of Aaronic descent. Between these two periods, the pre-exilic and postexilic, stands EZEKIEL. He is transitional, supplying, it is generally believed, the link between the cultic organization of the seventh century B.C. and that of the second temple.

Ezekiel's vision of a new temple (Ezek. 40–44) is a symbolic representation of Yahweh dwelling in holiness in the midst of his people, which is the fundamental idea in the prophet's conception of the future theocracy. His basic principle is holiness through separation. This finds expression both in his plan of the new temple and in his scheme for a drastic reorganization of the priesthood (44:5-16). Indeed, the latter is a corollary of the former. Since the place of Yahweh's presence is protected from ceremonial defilement by being surrounded with areas of graded sanctity, it follows that different degrees of ceremonial purity must be demanded of those who minister in different parts of the temple, access to the most sacred places being restricted to those possessing a greater degree of holiness.

Ezekiel's scheme first of all demands the complete exclusion from the service of the temple of uncircumcised foreigners (Ezek. 44:6-9). There are the NETHINIM and "sons of Solomon's servants," who performed the menial tasks of the temple. They appear to have been originally captives taken in war who were given to the Levites as temple slaves (Num. 31:28-30, 40-41, 47; Josh. 9:23, 27; cf. Ezra 8:20). Their place is to be taken by the Levites who had gone astray after their idols (Ezek. 44:9-14). Because of their apostasy these Levites are to be degraded from the priesthood and no longer allowed to minister at the altar (vss. 12-13). The most they are permitted to do is to slay the burnt offering and the sacrifice for the people (vs. 11). The actual service of the altar is to be restricted to the Zadokite priests of Jerusalem who had remained faithful when Israel went astray (vss. 15-16).

Ezekiel thus makes a clear distinction between two orders of cultic officials—the Zadokite priests and the non-Zadokite Levites. But it is not clear who exactly the latter were, beyond the fact that they had previously been priests who engaged in idolatrous practices, for which they were to be deposed from the priesthood and assigned only menial tasks. It has been widely held that these non-Zadokite Levites are to be identified as the priests of the high places which Josiah had abolished. Although admitted to the temple staff, the provincial priests had been debarred by the Jerusalem priesthood from approaching the altar. This anomalous practice, it is said, now becomes a matter of principle and receives legal sanction in Ezekiel's scheme. As we have seen, however (*see* § D2*c above*), it may well be that Josiah did not depose all the provincial priests but only those who had been involved in idolatry at the high places, and it is to such—and not necessarily to the entire provincial priesthood—that Ezekiel refers. He does not say that the whole body of Levites is to be degraded but speaks only of Levites who had gone astray after idols.

This identification of Ezekiel's idolatrous Levites with priests of the Judean local sanctuaries is not, however, so convincing as it at first appears. Indeed, it is difficult to reconcile it with the prophet's general picture of Judah. Ezekiel demands the degradation of these Levites because they have been involved in some national apostasy (Ezek. 44:10), and he restricts the service of the altar to the Zadokite priests because in this national apostasy they alone have remained faithful to Yahweh (vss. 15 ff). But it cannot be the apostasy of Judah to which Ezekiel refers, for in this the Zadokite priesthood was most certainly involved, as his earlier references to idolatrous practices in the temple imply (5:11; 8:6-17). If idolatry excluded the priests of the Judean high places from the Jerusalem altar, it must also exclude the Zadokite priesthood of the temple who were equally guilty of it.

There was, however, an act of national apostasy in which the Zadokite priests of Jerusalem were not involved—namely, the calf-worship which Jeroboam I had instituted in the N kingdom (I Kings 12:28-32). It may well be, therefore, that Ezekiel's polemic is directed, not against the dispossessed priests of the Judean high places, but against the priests who had taken part in this idolatrous worship in N Israel.

e. The restoration. The decree of Cyrus in 538 B.C. (Ezra 1:1-4) marks the end of the Babylonian

exile and the beginning of the restored Jewish community. Those who returned to Jerusalem set about establishing once more the traditional cultus (3:1-6). The restoration of the cultus meant the restoration of the priesthood, and this involved the acceptance of some principle of unification. Ezekiel's scheme for restricting the priesthood to the Zadokites, however, was not carried out in the organization of the second temple. The priesthood was indeed restricted to one section of the Levites, but the restriction was on a wider basis than mere Zadokite descent.

A clear distinction between priests and Levites is made in the lists of the first returning exiles (Ezra 2:36-42; Neh. 7:39-43; 12:1 ff; cf. Ezra 3:10) and of those who were associated with Nehemiah (Neh. 10: 28; 11:3, 10-18) and Ezra (Ezra 7:7, 13; 8:15 ff, 30; 9:1). But representatives of two priestly families accompanied Ezra (Ezra 8:2)—the family of Gershom, descended through Phinehas from Zadok, and the family of Daniel, belonging to the house of Ithamar. Both traced their descent to Aaron, and Aaronic—not Zadokite—descent was in fact the criterion of the priesthood in the restored Jewish community. It is noteworthy that in the postexilic literature the priests are consistently referred to as the house of Aaron or the sons of Aaron (I Chr. 15:4; 23:28, 32; Pss. 115: 10, 12; 118:3; 135:19; Tob. 1:6; Ecclus. 45:6-24; 50: 13, 16; I Macc. 7:14; cf. Heb. 5:4; 7:11).

This is in accordance with the priestly document which gives the fullest information that we have about the priesthood (*see* § C *above*). The priestly writer is generally assigned to the sixth or fifth century B.C. in the critical scheme. For him the distinction between priests and Levites is absolute (Num. 18:2-7; cf. Lev. 8). He regards the priesthood as vested by divine institution in the house of Aaron (Exod. 28:1, 43; Num. 3:10; 8:1, 7) and recounts the story of the rebellion of Korah in the wilderness as a warning to the non-Aaronic Levites not to attempt to usurp the prerogatives of the Aaronic priests (Num. 16:8-10, 40). It is the Priestly Code, therefore, and not the scheme of Ezekiel, which provides the pattern for the restored Jerusalem priesthood. All who claimed to belong to the priesthood were required to prove their descent, and only those who could show their (presumably Aaronic) succession were admitted (Ezra 2:61-63; Neh. 7:63-65).

The reasons for the rejection of Ezekiel's scheme and the restriction of the postexilic priesthood to those of Aaronic rather than merely Zadokite descent are obscure. If, as is generally held, the priestly document is later than Ezekiel, it would seem to represent an accommodation of Ezekiel's ideal to the actual situation with which the priestly writer was faced. As to what this situation really was, we have no precise information; it must be reconstructed on the basis of the slender evidence that we possess.

There are several possibilities. It has been suggested that there was, in fact, no substantial difference between Ezekiel's scheme and that of the priestly writer which was put into operation. The only difference, it is claimed, was one of nomenclature, the Zadokites of Ezekiel and the Aaronites of the Priestly Code being one and the same Levitical group. This view implies either that Ezekiel uses "sons of Zadok" as a general term which includes other priestly families, such as the priests of Anathoth, who had at some time ministered at Jerusalem, or that the title "sons of Aaron" was used by the Zadokite priesthood after the Exile to enhance their prestige. This, however, is highly improbable, since the Aaronic houses of both Zadok and Ithamar are mentioned separately in Ezra (8:2) and later by the Chronicler (I Chr. 24: 3-4; cf. 6:8).

Another view is that after the Zadokite priests of Jerusalem had gone into exile, the people who remained in the city appealed to the Aaronite priesthood at Bethel, only eleven miles distant, to maintain the cultus at Jerusalem. As a result Aaronite priests migrated from Bethel, and possibly also from other N shrines, to Jerusalem. When, therefore, the Zadokites returned from Babylon, they were unable to regain their ancient monopoly and hence had to come to terms with the Aaronites already in possession. The Zadokites, however, were eventually able to assert their supremacy at Jerusalem, with the result that the leading Aaronites returned to the N, where they instigated the Samaritan Schism (*see* SAMARITANS). Thus the Zadokites—later known as SADDUCEES—regained possession of the Jerusalem priesthood but retained the honorable Aaronic name. Joshua, who was high priest in the time of Zerubbabel (Ezra 3:2 ff), is said to have been the first of the Aaronic priests from the N to minister at Jerusalem during the Exile; Zech. 3 is the account of an abortive attempt on the part of the returned Zadokites to oust him. The tracing of Joshua's descent to the pre-exilic Zadokite priests (I Chr. 6:12-15—H 5:38-41; cf. Hag. 1:1) is regarded as a late genealogical fiction.

This theory is based upon mere supposition and not only lacks evidential support but also does violence to the only existing evidence. It may well be, as others have argued, that the place of the exiled Zadokite priesthood of Jerusalem was taken by Aaronite priests who had once been associated with the provincial shrines, not of the N, but of Judah. We have no reason to doubt that Joshua was one of the priests who returned with Zerubbabel (Ezra 2:2, 36) and that he was of Zadokite descent. In that case we may see in Zech. 3 the vindication of Joshua and his fellow Zadokites against the charge of the Aaronites at Jerusalem that the exiled priests were unclean by reason of their contact with heathenism and hence disqualified from officiating at the altar.

Any reconstruction of the situation can only be tentative. The only definite facts are these: (*a*) There were priests officiating at the ruined temple in Jerusalem during the Exile. Their presence is implied by the account of eighty men from Shechem, Shiloh, and Samaria bringing offerings to the temple (Jer. 41:4 ff), and priests are mentioned in Lam. 1, which appears to have been written in Jerusalem in the early exilic period (see vs. 4). (*b*) Aaronic priests of the house of Abiathar, who was deposed from his office at the temple by Solomon, lived at Anathoth, only 2¼ miles N of Jerusalem, and at least one of these—namely, Jeremiah—was allowed to remain in Judah (Jer. 39:11-14; 40:2-6). (*c*) Aaronic priests of the line of Ithamar, from whom Abiathar was descended, are mentioned along with the Zadokites in the lists of returning exiles (Ezra 8:2). (*d*) As we have seen, in

the postexilic literature the priests are referred to as the house, or the sons, of Aaron.

It seems highly probable, therefore, that the postexilic extension of the priesthood to the Aaronites as a whole resulted from two related factors. First, as we have seen, there was the established practice in Palestine, such evidence as we have pointing to the maintenance of the cultus at Jerusalem during the Exile by non-Zadokite priests. But secondly, there is evidence that conditions at Jerusalem were not unknown to the exiles in Babylon, and the mention in Ezra 8:2 of non-Zadokite as well as Zadokite priests would seem to indicate some agreement reached among the exiles before the actual return. This is supported by the number of priests said to have returned under the decree of Cyrus in 538 B.C. It seems unlikely that the 4,289 priests who came back with Zerubbabel (Ezra 2:36-39; Neh. 7:39-42) were all descended from the captive Zadokites. And the small number of Levites who returned—only 74 (Ezra 2:40; Neh. 7:43)—may indicate that those of Aaronite descent had been admitted to the priesthood. Many of the rest seem to have been reluctant to leave Babylon (cf. Ezra 8:15-20).

Four other groups of temple personnel, besides priests and Levites, are mentioned in the lists of returning exiles—viz., singers, gatekeepers or porters, temple servants (NETHINIM), and sons of Solomon's servants (Ezra 2:41-58; cf. 7:24; Neh. 7:44-60). The singers and gatekeepers either were of Levitical descent or later became incorporated into the Levitical order, since they are referred to as Levites by the Chronicler (I Chr. 6:16-48; 9:26, 33; 16:4-7; II Chr. 8:14). The temple servants and sons of Solomon's servants, however, were of foreign origin, being descended from captives of war who had been given as assistants to the Levites (Ezra 8:20). It was to the presence of such *uncircumcised* foreigners in the temple that Ezekiel objected (Ezek. 44:6-9). But in the time of Nehemiah the temple servants, along with the priests, the Levites, the gatekeepers, and the singers, enter into a covenant "to walk in God's law" and pledge themselves not to intermarry with foreigners (Neh. 10:28-30—H 10:29-31); and Ezra includes them with the Levites as "ministers for the house of our God" (Ezra 8:15-20). This would seem to imply that Ezekiel's uncircumcised foreigners, or their descendants, had during the Exile become proselytes by submitting to the rite of circumcision and were thus accepted as full members of the Jewish community at the return. Although the number of temple servants who returned from Babylon was far greater than the number of Levites (Ezra 2:40-58; 8:18-20), by the time of the Chronicler (*ca.* 300 B.C.) the temple servants as a separate group seem to have disappeared, since the only time they are mentioned is in connection with the early restored community (I Chr. 9:2). It appears, therefore, either that their functions were taken over by the Levites, or, more probably, that they were eventually incorporated into the Levitical order.

There is a noticeable change of emphasis in the functions of the priesthood in the restored Jewish community. Moral teaching is no longer regarded as one of the chief duties of the priest; he is now associated almost exclusively with the cultus. It is, indeed, laid down in the priestly document that the priest shall give instruction in both ceremonial and moral matters (Lev. 10:10-11), but the former is given priority of place, and the only priestly teaching mentioned in the postexilic literature is concerned with ceremonial uncleanness (Hag. 2:10-13). It is part of Malachi's complaint against the priests of his time that they have failed to give the moral instruction for which they are responsible (Mal. 2:7-8). Significantly enough, the priesthood no longer possesses the sacred lots URIM AND THUMMIM, although their restoration is anticipated (Ezra 2:63). At Ezra's promulgation of the law, it is the Levites who instruct the people (Neh. 8:7), and in general the ancient teaching function of the priesthood seems to have been exercised more by the Levites than by the priests in the second temple.

The high priest has been generally regarded by critics of the Wellhausen school as a purely postexilic figure. Since there is no mention of a high priest in Ezekiel's scheme, it has been argued that his office was unknown to Ezekiel and was not therefore in existence before the Exile. Hence Hag. 1:1 is commonly regarded as the first mention of a high priest and Joshua as the first holder of the office; references to the office in the earlier literature are viewed as later interpolations. The description of the high-priestly functions of Aaron, his installation, and his robes of office given in the priestly document is said to be a reading back by the priestly writer of the high priesthood as he knew it in postexilic times. The extent, however, to which the actual high priest of the second temple corresponded to the priestly writer's description has been a matter of debate.

This view now appears to be an oversimplification which does not do justice to the biblical data, and there is need for a reconsideration of the available evidence (*see further* § E *below*). But one thing is clear. Whether or not the name or the office of high priest was known in earlier times, the postexilic high priest occupied a unique position—a position different in degree, if not in kind, from that of any priest in pre-exilic days.

f. The Chronicler. Chronicles has been called both a sequel and a supplement to the Priestly Code. Not only does it continue the history, begun by the priestly writer, to the time of Nehemiah; it enables us to see something of the development of the institutions of Judaism two centuries after the return from Babylon. The preceding period (*ca.* 550-300 B.C.) is transitional. From *ca.* 300 B.C. the practice of the postexilic community fulfils the requirements of Ezekiel and the Priestly Code—the temple personnel consists entirely of priests and Levites. This is the situation portrayed by the Chronicler. The separate groups of singers, gatekeepers, temple servants, and sons of Solomon's servants have disappeared. The first two classes are now given Levitical status (I Chr. 6:16-48; 9:26, 33; 16:4-7; 23:5; II Chr. 8:14), and we may infer that the two groups of temple servants, whose ancestors had become proselyte members of the Jewish community, were finally incorporated into the Levitical order.

The Chronicler gives special prominence to the Levites and emphasizes their high status and the importance of their functions, particularly in con-

nection with the ARK OF THE COVENANT. No one but the Levites may carry the ark (I Chr. 15:2). It was because this requirement was neglected that David's first attempt to bring the sacred symbol to Jerusalem ended in tragedy (I Chr. 15:13). Special care was taken, therefore, to assign this duty to the Levites when the ark was finally brought to Jerusalem (I Chr. 15:11-15), and certain of them were appointed to minister before it (I Chr. 16:4 ff, 37). It was the Levites who carried the ark into Solomon's temple (II Chr. 5:4) and bore it back there at Josiah's reform (II Chr. 35:3). Their function of offering praise to God is stressed (I Chr. 6:31-32; 9: 33; 16:4-37; 23:30; II Chr. 8:14; 29:30), as is also their teaching function (II Chr. 17:7-9; 35:3). They assist in the administration of justice (I Chr. 23:4; 26:29; II Chr. 19:8-11). The sanctuary and its holy vessels are in their care (I Chr. 23:28), and the Chronicler points out that at Hezekiah's cleansing of the temple the priests who had sanctified themselves were too few to cope with the number of sacrifices, so the Levites assisted them in flaying the burnt offerings, "for the Levites were more upright in heart than the priests in sanctifying themselves" (II Chr. 29:34).

Although, however, the Chronicler emphasizes the prestige of the Levites, he does not, as some have maintained, do this at the expense of the specific rights of the priesthood. Only the Aaronic priest may burn incense, and not even the king may usurp the priestly prerogative (II Chr. 26:16-20; cf. Exod. 30:1-10; Num. 16:40; 18:7). The organization of the priesthood had now reached its final form. This consisted of twenty-four courses, each of which came up to the temple in turn for its appointed period of duty. The families of sixteen courses traced their descent to Eleazar, and those of the remaining eight to Ithamar (I Chr. 24:1-4, 19).

It seems that in the time of the Chronicler the temporal as well as the spiritual authority of the high priest was firmly established in the Jewish community. He is called, not only כהן הראש, the "head, or chief, priest" (II Chr. 19:11), and הכהן הגדול, "the great priest" (II Chr. 34:9), but also נגיד בית האלהים, "prince of the house of God" (I Chr. 9:11). The Chronicler draws attention to the authority exercised by former high priests. Azariah drove King Uzziah out of the temple for attempting to usurp the functions of the priesthood (II Chr. 26:16-20). Jehoiada put an end to the reign of Queen Athaliah, crowned Joash, and remained to the end of his life the power behind the throne (II Chr. 23-24). In the judicial tribunal set up at Jerusalem by Jehoshaphat, the presidency was shared by the high priest and the governor of the house of Judah (II Chr. 19:8-11). It has been suggested that we may see in this latter reference a reflection of the high priest's presiding over an early form of the Sanhedrin in the Chronicler's time.

E. *RECONSIDERATIONS.* The critical reconstruction of the history of the Levitical priesthood is closely linked with the Graf-Wellhausen literary analysis of the PENTATEUCH into four chronologically successive documentary sources—J, E, D (Deuteronomy), and P (the priestly document). This documentary hypothesis, almost universally accepted in the first two decades of the twentieth century, has been repeatedly challenged, especially by Scandinavian scholars. While, therefore, it is still generally held in some form, it is undergoing considerable modification; and this is true also of the historical reconstruction with which it is allied. The evolutionary presuppositions of the Wellhausen school resulted in an oversimplification of the religious development in Israel. It was assumed that primitive ideas must be early and more advanced conceptions late. Hence the attempt was made to fit the biblical data into an evolutionary mold.

The fallacy of this attempt is now widely recognized, but there is need for a more searching examination of the underlying assumptions of the critical reconstruction than has yet been made. All that is attempted here is to indicate some of the lines along which such an examination should proceed.

1. The high priest. On closer examination, the theory of the Wellhausen school that the high priesthood was nonexistent before the Exile proves to be untenable. It is, indeed, no more than a conjecture which does violence to the biblical evidence in the interests of a theory of development.

In the early postexilic books of Haggai and Zechariah, Joshua the high priest occupies a position of equal authority to that of the Davidic governor Zerubbabel, with whom he shares the rule of the restored Jewish community (Hag. 1:1, 12, 14; 2:2, 4; cf. Ezra 3:2). They are the two anointed ones (Zech. 4:14), the joint heads of state between whom there is to be peaceful understanding (Zech. 6:9-13; cf. 3:7). Now it is quite inconceivable that such an office as that held by Joshua was created *de novo* in the half century between Ezekiel (572 B.C.) and the second return (520 B.C.). There is no indication whatever that it was regarded as a new office; rather, the allusions to it imply a well-established institution.

Much has been made of the fact that the high priesthood is not mentioned by Ezekiel and appears to have had no place in his vision of a new temple and his scheme for reorganizing the priesthood (Ezek. 40-44). But an argument from silence can never be conclusive and must, indeed, always be used with great caution. The fact that an institution is not mentioned does not necessarily mean that it is unknown; it may equally well imply that it is so well established that it can be taken for granted. It cannot be argued from Ezekiel's silence regarding the king that kingship was nonexistent in Israel up to his time. The postexilic dating of the Priestly Code, in which the high priest has a clearly defined place, rests to a large extent upon the Wellhausen hypothesis that the legislation of Leviticus is based upon Ezek. 40-48. That there is a close relationship between the two cannot be denied, but there is no little evidence which points to the opposite conclusion—viz., that Ezekiel himself was familiar with the legislation of the Priestly Code, which must in that case have been already in existence in his time. There is, indeed, little to support the conjecture that Ezekiel's scheme provides the pattern for the priestly legislation; it seems much more likely that his vision is to be understood as an ideal picture of a theocracy in which ancient institutions are freely modified.

There is one particular section of the Priestly

Code with which Ezekiel was unquestionably acquainted, and this is the Law of Holiness (*see* HOLINESS CODE), contained in Lev. 17–26. Not only is this prior to Ezekiel, but it also is generally regarded as being a codification based on pre-exilic practice. And it is here that we find regulations concerning the ceremonial purity of the high priest—the "priest who is chief among his brethren, upon whose head the anointing oil is poured, and who has been consecrated to wear the garments" (Lev. 21:10-15).

In the Priestly Code generally the references to the high priest are not of such a nature as to suggest that the office was new. On the contrary, they imply that the high priest is a familiar figure. It is noteworthy that he is usually referred to simply as "the priest"; the title "high priest" (הכהן הגדול) occurs only three times (Lev. 21:10; Num. 35:25, 28). This is scarcely what we should expect if the high priesthood were an innovation. It is, however, entirely in line with pre-exilic usage.

There are many indications of gradations of rank in the priesthood during the monarchy and even earlier. Eli takes precedence over his sons at Shiloh (I Sam. 1–3); Ahimelech is the head of a priestly community at Nob (I Sam. 22:11-20); Zephaniah is called the "second priest" (II Kings 25:18; Jer. 52:24); and "senior priests" are mentioned in the days of Hezekiah (II Kings 19:2; Isa. 37:2) and Jeremiah (Jer. 19:1). In Solomon's temple there appears to have been a college of priests, at the head of which was one who is generally referred to as "the priest"—e.g., Zadok (I Kings 2:35), Jehoiada (II Kings 11:9; 12:7, 9; cf. Jer. 29:25 ff), Uriah (II Kings 16:10-11, 15-16; cf. Isa. 8:2), Hilkiah (II Kings 22:10, 12, 14). But Jehoiada (II Kings 12:10—H 12:11) and Hilkiah (II Kings 22:4, 8; 23:4; cf. II Chr. 34:9) are also given the title "high priest" (הכהן הגדול), and Seraiah (II Kings 25:18) is called "head" or "chief priest" (כהן הראש; cf. Ezra 7:5).

This is precisely the same phraseology and usage we find in the Priestly Code, and the logical implication is that it is the same office referred to in each case. It is noteworthy that the title "high priest" (הכהן הגדול) occurs four times in the book of Kings, as against only three times in the Priestly Code (Lev. 21:10; Num. 35:25, 28). The references in Kings are supported by the parallel passages in the book of Chronicles and by the LXX; and there is no valid reason for dismissing them as interpolations of a postexilic editor. The book of Kings, together with the Law of Holiness, thus provides strong evidence for the antiquity of the high priesthood, and this finds support in the usage of the Priestly Code. With the disappearance of the Davidic line, it was inevitable that the postexilic high priest should acquire much of the power and prestige which formerly belonged to the king. But what we see in the restored Jewish community is the development of an ancient institution and not the emergence of something entirely new.

2. Priests and Levites. One of the cardinal doctrines of the Wellhausen school is that the distinction between priests and Levites, which is prominent in the Priestly Code, was unknown before the Exile. In the seventh and sixth centuries B.C., it is maintained, not only were all priests Levites, but all Levites were priests. It has, indeed, become an axiom of OT criticism that Deuteronomy does not distinguish between them. The distinction, it is said, begins with Ezekiel's degradation of the idolatrous priests to the rank of temple servants (Ezek. 44:4 ff). This theory is basic in the modern critical reconstruction of the origin and development of the priesthood, but it is extremely vulnerable. It rests ultimately upon certain assumptions which need to be re-examined.

In the first place, it assumes that Ezekiel knows of no other temple servants apart from the foreigners, whose presence he condemns, and the degraded priests, who take their place in his scheme. While, however, he is concerned particularly with these, his reorganization does not preclude the existence of a Levitical order whose proper function was the subordinate service of the temple, from which they appear to have been almost ousted by the foreigners. Indeed, his condemnation of this practice as a violation of God's covenant (Ezek. 44:6-8) would seem to imply the existence of lawful keepers of the charge of the sanctuary (cf. Num. 18:3-4). Ezekiel himself, in fact, appears to be already familiar with two recognized grades of Levitical cultic officials—the keepers of the charge of the house and the keepers of the charge of the altar (Ezek. 40:45-46; cf. 48:13). All that his scheme proposes is that the idolatrous priests should be degraded to the lower rank of service (44:10-11, 14) while the faithful Zadokites approach the table of Yahweh (vs. 16)—i.e., have charge of the altar (40:46). Ezekiel's silence regarding Levites other than the degraded priests in his scheme no more proves that such were nonexistent than does the silence of Haggai and Zechariah half a century later. Neither of these prophets of the restoration mentions the Levites at all, but we know from Ezra and Nehemiah that they were present along with the priests. Here, indeed, the distinction between the two groups appears as something of long standing, and it is incredible that it should have originated only fifty years earlier.

Another assumption of this theory is that in Deuteronomy "priest" and "Levite" are synonymous terms—all priests are Levites and all Levites are priests, or potential priests. Closer examination, however, shows that this assumption also is unwarranted. There is not in Deuteronomy, it must be admitted, anything like the clear-cut distinction between priests and Levites that we find in the Priestly Code. But the distinction is there, and indications are not lacking that it is presupposed throughout the book.

In discussing the phraseology of Deuteronomy it must be remembered that its emphasis is upon the tribe of Levi as the tribe which had been set apart for the ministry of the sanctuary and to which the priesthood was restricted. Hence the characteristic Deuteronomic phrase "the Levitical priests." Priests, however, are in fact distinguished from Levites. Five times they are called "the Levitical priests" (Deut. 17:9, 18; 18:1; 24:8; 27:9), twice "the priests the sons of Levi" (Deut. 21:5; 31:9); and on seven occasions they are simply referred to as "the priests" (Deut. 17:12; 18:3 [twice]; 19:17; 20:2; 26:3-4). Levites (including references to the tribe of Levi) are mentioned some fourteen times. That this is a real distinction is clear from the legislation of Deut. 18,

which distinguishes between the provision made for the priest ministering at the sanctuary (vss. 3-5) and that available for the unattached Levite in company with the serving Levites (vss. 6-8). There is nothing to warrant the assumption that the provincial Levite who comes to Jerusalem may exercise priestly functions in the sanctuary.

The first verse of Deut. 18 is an introduction to these two provisions. It does not, as is claimed, equate "the Levitical priests" with "all the tribe of Levi." It is rather an example of a mode of expression characteristic of Deuteronomy—the expansion of a statement by the addition of a phrase which enlarges its meaning (cf. Deut. 12:7, 12, 18; 15:11) —and has therefore the sense "the Levitical priests, indeed all the tribe of Levi." Against this it has been maintained that the terms used in vs. 7 to describe the service of the Levite—viz., to "minister in the name of Yahweh," to "stand . . . before Yahweh"—are those used of the duties of the priest. The verb "minister" (שרת), however, is used for the service of the Levite as well as for that of the priest (e.g., Num. 1:50; 8:26; I Chr. 15:2; 16:4, 37). And so is the phrase "to stand before Yahweh" (e.g., I Chr. 23:30; II Chr. 29:11; cf. 35:5), which is also used of Israel (e.g., Lev. 9:5; Deut. 4:10; 19:17).

A further indication of the implicit distinction between priests and Levites in Deuteronomy is to be found in the reference to the setting apart of Eleazar the son of Aaron to the priesthood and the subsequent separation of the whole tribe of Levi (Deut. 10:6-8), as recorded in the priestly document (cf. Num. 3:1-10).

In actual fact the term "Levite" is not used anywhere in the OT as the exact equivalent of "priest." Even in the period of the judges the Levite who settles with Micah is not at first regarded as a priest. He becomes Micah's priest, not merely because he is a Levite, but by virtue of the ceremony of "filling the hand" by which he is installed in the priest's office as Micah's son had previously been installed (Judg. 17:5-13).

3. The date and historical value of P. As Wellhausen himself admitted, the position of the Levites is the Achilles heel of the Priestly Code. If it be conceded that the distinction between priests and Levites did not originate with Ezekiel but goes back to pre-exilic times, one of the main arguments for the late date of the Priestly Code becomes invalid. And if, in addition, there should be evidence which points to a pre-exilic date for the Priestly Code, the question of its historical value would call for re-examination.

It has long been recognized that the Priestly Code preserves much early material and usage, as many of its ritual laws are of ancient origin. There has been an increasing recognition of this fact during recent years, and it is now considered legitimate to use data from that source, with due precautions, as evidence for the ritual practices of the early monarchy. It is generally conceded, e.g., that the ritual of the Day of Atonement was of very ancient origin. Indeed, some of the regulations of the Priestly Code appear to have been observed more rigidly in the early period than in later times—e.g., the rule of Lev. 21:12 forbidding the high priest to leave the precincts of the sanctuary is kept by Eli, who lives in the temple at Shiloh and awaits the news of the ark, not in the city where it is first told, but at the sanctuary gate to which the messenger subsequently comes (I Sam. 4:12-14). But in the seventh century B.C., Hilkiah leaves the temple to consult the prophetess Huldah, who lives in the city (II Kings 22:14).

There are, however, indications that the Priestly Code itself was in existence before the Exile. Its affinities with Ezekiel, when examined in relation to the differences between the two, suggest an acquaintance on the part of Ezekiel with the Priestly Code rather than, as is usually maintained, a dependence of the priestly writer upon Ezekiel. Ezekiel's law is more systematic than that of the Priestly Code, and his arrangements for housing the temple personnel close to the sanctuary, rather than in distant Levitical cities, more applicable in the restored community. The widely distributed Levitical cities of the priestly document, some of which were ancient sanctuaries, recall the conditions of pre-exilic times. Again, the sacrificial law of the Priestly Code, according to which the lay offerer kills, flays, and cuts up the sacrificial animal (Lev. 1:5-6, 11-12; cf. Exod. 12:6), represents the early custom, whereas in the legislation of Ezekiel it is the Levites who kill the animal (Ezek. 44:11)—a practice evidently familiar to the Chronicler (II Chr. 35:6, 10-11; cf. 30:16 ff).

If the existence of a separate order of Levites in pre-exilic times be admitted, it becomes apparent that the cultic personnel of the Priestly Code is that of the old temple rather than that of the return from Babylon. The priestly writer appears to know of only priests and Levites and makes no mention of the other classes which appear in the lists of Ezra and Nehemiah—singers, gatekeepers, temple servants (Nethinim), and sons of Solomon's servants (Ezra 2:41-58; cf. 7:24; Neh. 7:44-60). This is admittedly an argument from silence and must therefore be used with caution; but we should expect some regard to be shown to the special conditions of the early restoration period if, as is maintained by the Wellhausen school, it is with the ritual of the second temple that the priestly writer is concerned. On the other hand, the Priestly Code is acquainted with another class, which was nonexistent in postexilic times—the "ministering women" (Exod. 38:8) mentioned in connection with the Shiloh temple (I Sam. 2:22) and who may have later degenerated into the cult prostitutes ejected from the Jerusalem temple by Josiah (II Kings 23:7).

We can now carry the argument a stage further. Not only are there clear indications that the Priestly Code is pre-exilic; there is also evidence that it is pre-Deuteronomic. Once the implicit distinction between priests and Levites in Deuteronomy is recognized, the significance of the affinities between Deuteronomy and the priestly legislation becomes apparent. The most obvious and striking instance of a relationship between the two codes is seen in the regulations concerning clean and unclean animals in Deut. 14:3-20, which are to a large extent verbally identical with those of Lev. 11:2-23. Peculiarities of style link this passage with the Priestly Code rather than with Deuteronomy, thus indicating the priority of the former. Similarly, we find in Deut. 24:8-9 a

reference to the priestly law concerning leprosy in Lev. 13–14 and an allusion to the account of Miriam's leprosy in Num. 12:1-10. The priestly legislation is frequently presupposed when it is not explicitly referred to—e.g., the permission given to kill and eat flesh at home in Deut. 12:15-16, 20-24, presupposes the more stringent law of Lev. 17:1-6, which it modifies; the law of release in Deut. 15:1 ff has in mind the sabbatical year of Lev. 25:2 ff; the regulations for the centralized celebration of the Passover in Deut. 16:1-8 presuppose and modify the domestic Passover law of Exod. 12:1-20.

A significant feature of these references of Deuteronomy, explicit and implicit, to the Priestly Code is that, taken as a whole, they cover a considerable extent of the priestly legislation (e.g., Exod. 12; Lev. 11; 13–15; 17–19; Num. 18). And while there are indications of the dependence of Deuteronomy upon the Priestly Code, there is no evidence of any acquaintance of the priestly writer with Deuteronomy. Hence the priority of the Priestly Code is clearly implied.

Such a conclusion, if it be maintained, has far-reaching consequences for the study of the Levitical priesthood. If an early date for the Priestly Code be accepted, it must necessitate a complete re-evaluation of its evidence. At least it could no longer be maintained that the priestly writer has read back the organization of the second temple into early times. Indeed, it may well be that the priestly source will prove to be of far greater historical value than many have been disposed to admit.

PRIESTS IN THE NT. The Greek words for "priest" and its cognate, "high priest" (ἱερεύς, ἀρχιερεύς), are used in the gospels and Acts, with but one exception, always with reference to Jewish priests (*see* PRIESTS AND LEVITES). The single exception occurs in Acts 14:13, where the term "priest" refers to a pagan functionary of the cult of Zeus at Lystra in Asia Minor. (The claim of a certain Sceva [Acts 19:14] to be a Jewish high priest was undoubtedly fraudulent.)

In Judaism, priesthood was hereditary in the tribe of Levi. A Jewish priest was born, not made. Among the pagan cults of the Mediterranean world, some priesthoods were hereditary; others were voluntary vocations, or associated, in respect to some of their duties, with the civil magistracy. A persistent tradition invested kings and monarchs with priestly prerogatives. The dignity, emoluments, and responsibilities of pagan priests were extremely varied, depending upon whether the cult they served was official and state-supported, or was a voluntary religious association, and whether the shrine or oracle where they ministered was famous or insignificant.

The essential concept underlying priesthood in the ancient world, among both Jews and Gentiles, was that of mediatorship between the divine and human, by virtue of the priest's superior knowledge of, or power of communication with, the supernatural. The priest was the director, if not the actual performer, of sacrifices offered to deity; the dispenser and interpreter of oracular messages and auguries from the divine realm; and thereby a channel of weal or woe according to the divine pleasure.

The antagonism of Christians to all pagan priesthoods was, of course, a legacy from the Jewish contempt for everything associated with idolatry. But the bitterness between the early Christians and the Jewish priesthood itself is also marked in the gospels and Acts. It reflects not only the opposition of the Jewish priests in general to the person and mission of Jesus, especially the priestly party of SADDUCEES, but, more than that, the actual persecution of Jesus and his followers by the high priests and their associates. The rejection by the Sadducean priesthood of any doctrine of resurrection served to exacerbate its antagonism to the preaching of the early apostles and evangelists. Yet in one place the book of Acts (6:7)

testifies to the conversion of a number of Jewish priests to the Christian faith.

It is likely that many of the humbler priests of Judaism were not in sympathy with the policies or personages of the "chief priests" of the hierarchy. Among such must be counted no less a figure than John the Baptist, himself of priestly lineage, who roundly denounced the Sadducees, with others, who came to hear his preaching (cf. Matt. 3:7). The documents of the Essene sect of Khirbet Qumran confirm the statements of Philo and Josephus that the Essenes rejected all animal sacrifices in the temple, and they reveal a deep-seated antagonism to the official priesthood that controlled the temple. Yet in their own corporate life priests were highly esteemed and given a leading role in their sectarian fellowships.

Neither Jesus nor his orthodox Jewish disciples were so radical as to repudiate either the priesthood or the sacrificial system of the temple, for they accepted these institutions as God-given in the law. Whatever Jesus may have thought about the character of individual members of the priesthood, he was loyal to the system. His attitude is indicated in the healing of the lepers (Mark 1:44 and parallels; Luke 17:14), where he directed them to show themselves to the priests for the customary offerings and ceremonies of purification.

The process of separation of the church from all association with the priestly and sacrificial institutions of Judaism began at a very early time, however —even before the decision of the apostolic council to relieve Gentile converts of any obligation to observe the law (Acts 15:28-29; Gal. 2:1-9). It is already indicated in the attitudes taken by Stephen (Acts 6:11 ff; 7:37 ff). After the destruction of the temple in A.D. 70, the Jewish Christians themselves developed a sharp polemic against sacrifices, and exalted the prophetic as against the priestly traditions of the OT (cf. Matt. 9:13; 12:7; Pseudo-Clementine *Homilies* III.45; *Recognitions* I.36, 39).

Christianity made a positive and creative development of the concept of priesthood, however, in its transferal to Christ himself of the role of perfect and great High Priest. The doctrine is elaborated in greatest detail in the Letter to the Hebrews (*see* HEBREWS, LETTER TO THE). In this work, the person of Christ, presented as unblemished, sacrificial Victim and sinless High Priest, is exalted as the consummation of the OT cultus, bringing it to a definitive end in history, and establishing a once-for-all, eternal mediatorship between God and man. The authority, honor, and effect of Christ's priesthood make it disannul and supplant forever the Aaronic priesthood of the Old Covenant, and it finds its type and pattern in the legendary figure of Melchizedek (Gen. 15:18; Ps. 110:4), who "is without father or mother or genealogy, and has neither beginning of days nor end of life" (Heb. 7:3).

This full-rounded theology of Christ's priesthood was not an original creation of the mind of the author of Hebrews, nor peculiar to his outlook, though he alone among NT writers actually applied the title of priest to Christ. The conception is rooted in Christ's own interpretation of his atoning mission as a "ransom for many" (Mark 10:45 and parallels), and more especially in his words of a new covenant sacrifice associated with the bread and the cup of the LAST SUPPER. In Paul's letters the sacrificial character of Christ's death is clearly marked—whether related to the Passover (I Cor. 5:8), the expiation of the Day of Atonement (Rom. 3:25), or the sin offering (Rom. 8:3). Likewise in Paul one finds the doctrine of Christ's mediatorship (Gal. 3:20), and his reconciliation of God and man (II Cor. 5:19; Col. 1:20-21; cf. Eph. 2:16). Similar ideas are found in I Pet. 1:2, 18-19; 2:24; 3:18; and the theme of Christ's ransom and expiation for sin is one of the threads that link together all the Johannine writings: John 1:29; I John 1:7; 2:2; 4:10; Rev. 1:5; 5:9; 7:14; 12:11.

A corollary of the doctrine of the priesthood of Christ is the NT application of "priesthood" to the whole company of the faithful in the church. As the church is made one with its Lord, by the indwelling presence in its members of his Spirit, and by sacramental union and communion with him in baptism and Eucharist, so the church shares in the dignity and prerogatives of its Lord. I Pet. 2:5, 9, speaks of the church: "Like living stones be yourselves built into a spiritual house, to be a holy priesthood, to offer spiritual sacrifices acceptable to God through Jesus Christ," and: "You are a chosen race, a royal priesthood, a holy nation, God's own people." The theme is accented also in several passages of Revelation: Christ has "made us a kingdom, priests to his God and Father" (1:6); the Lamb in heaven has made the redeemed a "kingdom and priests to our God" (5:10); they who share in the resurrection "shall be priests of God and of Christ" (20:6). Such expressions as these were a natural outcome of the typological application to the church of the promises made to the people of the Old Covenant: "You shall be to me a kingdom of priests and a holy nation" (Exod. 19:6).

> You shall be called the priests of the LORD,
> men shall speak of you as the ministers of our God
> (Isa. 61:6).

The same thought is suggested in Ps. 132:9, 16, a royal and messianic psalm of David and his posterity.

In no instance, however, does any NT writer ascribe the title of priest to any individual member or order of ministry in the church (*see* MINISTRY, CHRISTIAN). Yet the development of this usage was probably inevitable. I Clem. 40–44, written A.D. 95-96, employs the threefold hierarchy of high priest, priests, and Levites, as an analogous type of the Christian ministry, and uses sacrificial terms to describe the "liturgy" of Christian bishops and elders.

The Didache orders its Christian communities to give first fruits of their produce to the prophets who ministered to them, "for they are your high priests" (13.3). The Didachist also speaks of the Eucharist as a "sacrifice" and applies to the sacrament the prophecy of Mal. 1:11 concerning the pure offering among the nations. This exegesis of Malachi became a commonplace in Christian apologetic of the second century.

These trends were perhaps but one step beyond the metaphor Paul uses to denote his own work of

evangelization as a "priestly service" in order that the sacrificial offering of the Gentiles might be acceptable (Rom. 15:16).

Heb. 13:15-16; I Pet. 2:5 speak of Christian worship and service in sacrificial terms (cf. also Rom. 12:1; Phil. 4:18). Even so, the primitive prejudice against sacerdotal terms as specifically applicable to the ministry of the church lingered throughout the second century. The first Christian writers to use the words "priest" and "high priest" of the church's ministers were Tertullian (*On Baptism* 17) and Hippolytus (Preface to *Refutation of All Heresies*).

M. H. SHEPHERD, JR.

PRINCE. The translation or possible translation of a number of words designating a ruler; one who has high authority or is pre-eminent in a class or sphere of influence. The Bible does not use the word in the limited sense of the direct male heir of a monarch, as in Western practice. In fact, "sons of the king" are quite distinct from the "princes" in Israel (Zeph. 1:8), except when a king's son has become pre-eminent by some other cause than his heredity. An exception seems to be Abijah, who was made "chief prince" (נגיד) by his father (II Chr. 11:22). The wives of Solomon are called "princesses" (I Kings 11:3; cf. Lam. 1:1).

A נגיד ("prince," "ruler," "commander") is a "leader" who is pre-eminent. This term is used for kings (I Sam. 13:14; I Kings 1:35; II Kings 20:5; etc.), and military officers or captains and generals are so designated (I Chr. 12:27; 13:1; II Chr. 32:31; etc.). Such a leader may also be the "chief" of the tribe (II Chr. 19:11) or temple (cf. II Chr. 31:13; Jer. 20:1). *See* GOVERNOR.

The word נדיב designates a man of noble birth or breeding, a chief, one who is worthy of honor. It is translated "prince" in most passages (I Sam. 2:8; Job 12:21; Ps. 107:40; etc.), but cf. Prov. 17:26; 19:6; Isa. 32:8. The root suggests willingness and freedom of choice (cf. Ps. 51:12) and is characteristic of the poetic books. *See* NOBLE.

A נשיא is one who is lifted up. The leaders in Shechem (Gen. 34:2) and in Midian (Num. 25:18) are called this. Abraham is called נשיא by the Hittites (Gen. 23:6 [LXX "king"]). Tribal leaders or chiefs in Israel (Exod. 16:22 ["leader"]; Lev. 4:22 ["ruler"]; etc.) and of Ishmael (Gen. 17:20) are also so designated. This word suggests a parallel to the modern "sheik." Ezekiel has a preference for the term נשיא, since in his day the kings of Israel and Judah were insignificant. Simon Maccabee reestablished this title in Israel. The LXX usually uses ἄρχων.

The term שר (cf. Akkadian *šarru,* "king") is the most popular word for "ruler" or "leader" in any capacity. It is often translated "prince." When it refers to an army officer, however, "commander" or "captain" is used (I Kings 16:9; I Chr. 13:1; II Chr. 18:30; etc.). The angels are the "princes" of God's host (Dan. 12:1; cf. Josh. 5:15). The prefect of a city or province is designated with this familiar title (I Kings 20:15 ["governor"]; Jer. 34:19; etc.). *See* SATRAP.

Many other Hebrew words, variously translated, are used infrequently in the OT for the concept "prince": רב (Jer. 39:13; 41:1); שליש (Ezek. 23:15); סגנים (Isa. 41:25; *see* DEPUTY); נסיך (Josh. 13:3; *see* DUKE); אחשדופנים (Dan. 3:2-3; 6:1-2; "satrap" is a Persian loan word); קצין (Prov. 25:15; Mic. 3:1); רזון (Prov. 14:28; 31:4; Isa. 40:23). In Job 12:19 the KJV translates כהן "prince," but the correct meaning is "priest."

The king himself is considered a prince in the OT (Saul [נגיד; I Sam. 9:16; etc.]; Solomon [נשיא; I Kings 11:34; "ruler"]; Jeroboam [נגיד; I Kings 14:7; "leader"]; the leaders of the world [נדיב; Ps. 47:9]; Zedekiah [נשיא; Ezek. 7:27, etc.]).

In the NT, ἀρχηγός may be translated "prince." In two passages it is used to designate the leader who goes before and blazes a trail like a pioneer (Acts 5:31; "leader"; KJV "prince"); he sets an example or starts a precedent (Heb. 12:2; "pioneer"; KJV "author"). In the NT this term is reserved for Christ.

The ἄρχων is a commander or ruler in any nation ("prince" in Mark 3:22; cf. Matt. 20:25 ["ruler"; KJV "prince"]; Acts 7:35; etc.). This word is also used for the members of the SANHEDRIN (Luke 23:13). The ruler of the SYNAGOGUE who has charge of the reading is so designated (Luke 8:41).

For ἡγεμών, which refers to the Roman legate, procurator, or proconsul, the governor, the KJV translates "prince" in Matt. 2:6. In this quotation from Mic. 5:2, the KJV confuses "clan" with "prince," perhaps because of the influence of the latter half of the verse.

The MESSIAH is Prince of Peace (Isa. 9:6), Prince of princes (Dan. 8:25; cf. 9:25 [the high priest or the Messiah]), prince (RSV "ruler") of kings (Rev. 1:5), prince (RSV "author") of life (Acts 3:15), and prince (RSV "pioneer") of salvation (Heb. 2:10).

BEELZEBUB is the prince of demons (Mark 3:22; Luke 11:15), and the leader of the unbelievers and rebellious people of the world (John 12:31; 16:11; etc.).

C. U. WOLF

PRINCIPALITY. A term used in the plural form (αἱ ἀρχαί), referring to the organized cosmological powers of angels, in Rom. 8:38 (*see* ANGEL). As the connection with the specifically named "angels" shows, a "principality" is thought of as an extra group of spirits which may interfere and hinder the salvation in Christ. The underlying pattern is mythological and not entirely clear. For similar lists see Eph. 1:21; Col. 1:16. Paul's idea is obvious: No power in the world can destroy God's love; it is greater than and superior to all demonic forces.

PRISCA, PRISCILLA. *See* AQUILA.

PRISON. As a legal punishment imprisonment is not found in ancient law, and does not appear in the Bible until the Persian period (Ezra 7:26; אסורין, lit., "bonds"). משמר, "place of custody" (Lev. 24:12;

Num. 15:34), refers to a temporary confinement under guard pending clarification of a case. Under the monarchy persons regarded as dangerous to public order or hostile to the state were put into a בית כלא, "prison" (I Kings 22:27; synonyms: בית אסור [Jer. 37:15]; בית מהפכת [II Chr. 16:10; *see* STOCKS]), for which a private house might serve (Jer. 37:15). Confinement might be aggravated by detention in a בית הבור—a pitlike underground dungeon (Jer. 37:16; cf. Isa. 24:22)—and meager rations (I Kings 22:27). Less severe was detention in a palace area called the "court of the guard," which did not cut off the prisoner from contact with the outside (Jer. 32:2; 33:1). Casting Jeremiah into a cistern in this court (38:6) seems to have been a device to kill him without bloodshed. With מסגר, "prison" (Ps. 142:7—H 142: 8; Isa. 24:22; 42:7), cf. Aramaic מסגרת (plural), "royal prisons" (Panammu Inscription, lines 4, 8).

The following non-Israelite prisons are also mentioned: an Egyptian בית הסהר for royal prisoners, located in the house of the captain of the guard (Gen. 39:20; 40:3; also called משמר [40:4] and בור [40: 15; 41:14]); an Assyrian בית כלא in which the rebellious king Hoshea was confined (II Kings 17:4); a Babylonian one in which Jehoiachin was held, clothed in "prison garments" (II Kings 25:27, 29); and a Babylonian בית הפקדת, "guard house," where Zedekiah was kept in fetters till his death (Jer. 52: 11). Also kept in chains in a Philistine prison (בית אסירים) was the captive Samson, who was made to labor grinding at a mill (Judg. 16:21).

Confinement to a specific city is found twice: Solomon confines Shimei ben Gera to Jerusalem on pain of death if he leaves (I Kings 2:36-37); the accidental homicide is confined to the CITY OF REFUGE until the death of the high priest (Num. 35:25-28), and his life is forfeit to the avenger if he leaves. Both cases involve persons who, although they have committed a guilty act (for the accidental homicide, *see* BLOOD-GUILT), are saved from the death penalty, the one by royal, the other by divine, grace. The city of their confinement has at once the attributes of a prison and of an asylum.

Jewish prisons mentioned in the NT serve for the detention under custody of persons awaiting trial or execution (δεσμωτήριον [Acts 5:21, 23]; τήρησις [4:3; 5:18]; φυλακή [Matt. 5:25]). Imprisonment as a punishment was also known (Acts 22:19; cf. Jos. Antiq. XIII.x.6; M. Sanh. 9.3, 5). Roman authorities were empowered to imprison as a coercive measure (φυλακή; Matt. 18:30; cf. 5:25) and as punishment for minor disorders (δεσμωτήριον [Matt. 11:2; Acts 16:26]; φυλακή [Matt. 14:10]). The *carcer* was made up of several cells (οἴκημα; Acts 12:7), of which the interior (εσωτέρα φυλακή; 16:24), being without light, were the worst. Incarceration was so often accompanied by chaining (cf. 16:26) that *publica vincula* was a synonym for *carcer*. M. GREENBERG

PRISON GATE. *See* GUARD, GATE OF THE.

PRIZE [βραβεῖον]. One detail of the foot-race imagery which Paul borrows from the stadium or the arena to illustrate the Christian life (I Cor. 9:24; Phil. 3:14; cf. Gal. 2:2). The word is directly related to the verb "rule" (βραβεύω) in Col. 3:15, the verb "rule out, disqualify" (καταβραβεύω), in Col. 2:18, and the noun "umpire" (βραβεύς, βραβεύτης).

In I Cor. 9:24, "prize" (βραβεῖον) is used literally in the full picture of the foot race. Its figurative use in Phil. 3:14 has to be inferred. Paul says: "I press on toward the goal for the prize." The "goal" (σκοπόν) is not the prize, but as the end of the race it is assumed in the prize. Some commentators consider the "upward calling" (τῆς ἄνω κλήσεως) as a genitive of apposition with "prize" and therefore the content of the prize—namely, the heavenly destination. More probably the genitive is subjective, and the "divine call" means that God has called Paul to this destination and prize (I Thess. 2:12). The phrase thus fits in with the idea of appropriation in Phil. 3:12*b* (cf. Eph. 1:18: "the hope to which he has called you"; 4:4).

In the context (Phil. 3:8-11) Paul has rejected all pride in birth, religious standing, and attainment, and he concentrates on his true goals: to gain Christ, to be found in him, to have standing with God on the basis of faith, to know him, to have the power of his resurrection, to share his sufferings, to attain the resurrection from the dead. It is for all this that Paul has been "laid hold on, appropriated," and this is the hope of his calling; this is the prize in the race to which God has called him.

The figure of the foot race should not be pressed as though Paul meant to say that his effort and his success in surpassing other men will bring the possession of the prize. Yet there is implicit here a strenuous concentration.

PROCHORUS prŏk'ə rəs [Πρόχορος] (Acts 6:5). One of the seven "Hellenists" chosen to perform certain administrative tasks in the Jerusalem community. Nothing further is heard of him in the NT, but tradition associates him with the apostle John. Prochorus appears in Byzantine art as the amanuensis to whom John dictated the Fourth Gospel, and in the latter half of the fifth century a Life of John was written under his name.

See also SEVEN, THE. H. H. PLATZ

PROCHORUS, ACTS OF JOHN BY. *See* JOHN, ACTS OF, BY PROCHORUS.

PROCONSUL. In the Roman Empire the civil and military administration of the provinces was carried on by senators *pro consule*, "for the consul" or chief magistrate. The proconsul was himself an ex-consul and usually held office for one year, *ca.* seventeen years after his consulship. His actions were subject to review by the Senate. In the NT we read of two proconsuls: GALLIO, proconsul of Achaea; Sergius Paulus (*see* PAULUS), proconsul of Cyprus.

R. M. GRANT

PROCURATOR prŏk'yə rā'tər. Financial and, later, military official responsible to the Roman emperor and representing him, sometimes at Rome, sometimes in the provinces. Under Augustus a larger share in the civil service was given to members of the equestrian order, and they were entrusted with such offices as the prefectures of Egypt, of the police, of the Roman grain supply, and of the praetorian guard. There were also civil servants called procurators; in the reigns of Augustus and Tiberius these were occupied chiefly with government revenues. At a later date the emperor's representatives in military affairs were also called procurators. It is a question whether Pontius Pilate and other early Roman military governors should be called procurators; Tacitus (Ann. XV.44) may be using later terminology when he gives Pilate this title.

Whatever the title may have been, three such administrators in Palestine are mentioned in the NT; Pontius Pilate, Antonius Felix, and Porcius Festus (*see* PILATE; FELIX; FESTUS). In the period before 66 we know the names of the following "procurators": Coponius (*ca.* 6-9), M. Ambibulus (*ca.* 9-12), Annius Rufus (*ca.* 12-15), Valerius Gratus (15-26), Pontius Pilatus (26-36), Marcellus (36-37), Marullus (37?), C. Cuspius Fadus (*ca.* 44-46), Tiberius Julius Alexander (*ca.* 46-48), Ventidius Cumanus (48-52), Antonius Felix (*ca.* 52-58), Porcius Festus (*ca.* 58-62), Albinus (62-64), and Gessius Florus (64-66). Most of them issued local coinage, of which a good many examples survive. It was their duty to keep the area quiet, and Josephus tells us that Coponius could inflict the death penalty; it is not clear whether or not this statement means that the right of inflicting it was withdrawn from Jewish authorities. In pacifying Palestine the procurators avoided placing human or animal figures on their coins, but the Roman religious symbols used by Pilate can hardly have been regarded as conciliatory.

R. M. GRANT

PRODIGAL SON. A narrative PARABLE of Jesus (Luke 15:11-32) vividly and dramatically describing repentance. Sincere confession of sins (vs. 18) and return to the Father are essential and concrete expressions of the son's desire for renewal of life and love.

L. MOWRY

PROFANE [חלל, unloose, set free; חנף, be polluted (Mic. 4:11); *Pi'el of* נכר, treat as foreign (Jer. 19:4); חפש, seize (Prov. 30:9); LXX *and* NT βεβηλόω]. To treat a holy person, place, or institution as if it were not holy (Lev. 19:8; Ezek. 36:20-23; I Tim. 1:9)—i.e., as if it were COMMON.

Any sacred institution of Israel—the sanctuary (Lev. 21:12; Acts 24:6), the altar (Exod. 20:25), the sacrifices (Lev. 22:15), the priests and their families (Lev. 21:4), the sabbath (Isa. 56:6), the covenant (Mal. 2:10), the kingship (Ps. 89:39—H 89:40; "defiled")—could be profaned by disregard of the divinely given laws governing the institution. The most drastic profanation was to bring a holy thing into contact with uncleanness (*see* CLEAN AND UNCLEAN). Hence, "profane" shades over into "defile," "pollute," and the KJV often translates חלל in this way. Since the holy God commands his people to be holy, profanation in Israel is really an assault on the holiness of God, a profanation of his holy name (Lev. 21:6; Ezek. 22:26; Amos 2:7). Idolatry (Ezek. 20:39), child sacrifice (Lev. 18:21), and social immorality (Lev. 19:11-12) were particularly offensive, and profanation "of the name" was punished by loss of holiness (Ezek. 24:21), by foreign conquest (Ezek. 7:24), and ultimately by death (Num. 18:32).

L. E. TOOMBS

PROFANITY. *See* OATH.

***PROMISE. 1. In the OT.** The concept of promise is prominent in the OT, since God's word to Israel is considered the very source, support, and destiny of this people. In spite of its importance, however, there is in the OT no single, distinctive term used to convey the basic concept, comparable to ἐπαγγέλεσθαι in the NT. To be sure, the LXX uses the noun ἐπαγγελία half a dozen times to indicate the assurance given by one man to another. The verb ἐπαγγέλεσθαι occurs more frequently, but in only two cases does it refer to God's covenant promise (II Macc. 2:18; III Macc. 2:10). The OT employs quite ordinary words to refer to the pivotal promises of God. Of these the most important are דבר (LXX λαλεῖν; "to speak"); אמר (LXX λέγειν; "to say"); and שבע (LXX ὀμνύειν; "to swear"). When God is the subject of these verbs, and when his chosen people or their leaders are the recipients of his message, then the translator rightly gives to them the sense of a binding promise or oath, for it was axiomatic to OT writers that God is absolutely faithful to every word he speaks.

Pre-eminent among OT promises is that which God gave to Abraham. He swore to this patriarch that he would give to him a son and would make of him a mighty nation, so that all the nations of the earth should bless themselves by him (Gen. 18:19; 21:1; 22:15-18; 26:1-5; Deut. 1:11; I Chr. 16:16). This promise is directly linked to God's later call of Moses to lead his people from Egypt toward the Promised Land (Gen. 50:22-25; Exod. 3:17; 12:25; 32:13; Num. 10:29; 14:16-17; Deut. 6:3-23; 9:3-5, 28; 15:6; 19:8; 26:3-18; 29:13). Declared to all the people at Horeb, and affirmed by them as their charter, this promise guided them throughout their weary pilgrimage, providing the source of their endurance and the object of their rebellions. As celebrated in song and saga, this promise to Abraham and Moses was proof of God's steadfast love, his readiness to forgive, and his determination to bring them to a good end (Num. 14:13-25). After they were settled in the Land of Promise, their history received its continuity through this same promise.

The assurances given to David were both a fulfilment of earlier pledges and steps toward their fulfilment (II Sam. 3:18; 7:18-29). God's one word continued to cover his dealings with "a thousand generations" (Ps. 105:7-11). To each of David's successors, God gave specific pledges covering the duty

and destiny of each, but each pledge was oriented toward the initial vow to the patriarchs and toward all the generations yet to come (e.g., the promises given to Solomon: I Kings 2:24; 5:12; 8:15-25; 9:5; II Chr. 1:9; 6:4-20).

Discontent with God's promise was the root sin of Israel (Ps. 106:24); confidence in it was the essence of HOPE (Pss. 18:30; 119:38, 41, 50, 76, 82, 116). Reliance on the promise sustained the individual in his daily obedience to the law. *See* LAW (IN THE OT).

The promise had implications for contemporary decisions by national leaders, and it was part of the prophets' task to make these implications clear. The "word of the Lord" which they declared was a living expression of God's promises (Isa. 14:24; 38:7; 45:20-23; 62:8; Jer. 11:1-8; 22:5-9; 29:10-14). Confidence in God's mercy and power meant for them the expectation of coming salvation in the midst of disaster or of imminent doom in the midst of prosperity, for destiny was determined, not by external probabilities, but by God's covenant pledge (Jer. 32:36-44; 33:14-26; 44:26-30; Ezek. 16:6-22; Amos 4:1-3; 6:4-8; 8:7-8; Mic. 7:18-20; Hag. 2:1-9). The prophets recognized in man a creature who makes and breaks promises; but in the God of Israel they recognized One who guides the whole of human history in accordance with a promise which he has made and will not break.

2. In the NT. The words used for "promise" in the NT are: ἐπαγγέλομαι, ἐπαγγελία, and ἐπάγγελμα. With few exceptions (e.g., Acts 23:21) "promise" in the NT refers to God's pledge given freely to his people (*see* CHURCH, IDEA OF) as the basis of their covenant relationship, as its initiation and consummation. It represents a complex of ideas in which the following may be distinguished: (*a*) the purpose and power of the promise-maker; (*b*) the response of the recipients; (*c*) the act of giving the promise; (*d*) the conditions characterizing gift and reception; (*e*) the effects in the life of the covenant people; (*f*) the mediator who is instrumental in enacting the covenant; and (*g*) the shape of the consummation assured. The conception of these factors varies in idiom and accent, and this variation may be noted in four sets of writings: Paul's letters, Hebrews, Luke-Acts, and the Catholic letters.

a. In Paul's letters. Although Paul is aware of multiple promises which belong to Israel (Rom. 9:4), he thinks of the promise to ABRAHAM as the decisive one which includes all others. God is absolutely faithful to this promise and has full power to accomplish it. In rejecting it, the people of the COVENANT do not destroy the promise but underscore its validity and God's eternal vigilance to maintain it. In fact, the word of promise begets those who are "children of the promise" (Rom. 9:8-9). By his promise God brings into being what has not been, creating a people who have been nothing (Rom. 4:17). In blessing Abraham, God included in that blessing all his descendants and heirs, whether Jew or Gentile. In a singular sense, Jesus Christ is Abraham's seed (Gal. 3:16), but in him are incorporated all Abraham's sons (Gal. 3:29). All who live by faith in the promise are the sons to whom the promise is given, because it is the promise by which they are begotten and sustained. For them, the fulness of time is measured by God's activity in fulfilling his promise (Gal. 4:4).

God's act in giving the promise is a supreme example of unmerited mercy. The gratitude with which his people receive the promise, therefore, becomes a matter of prime importance. God's grace is intended to produce faith (Gal. 3:14), and this faith can and must rely solely upon the promise itself (Rom. 4:20-21). If men assume that the promise depends upon the law, they nullify grace and empty faith of its significance (Rom. 4:13-14). If they limit the range of the promise to those who merit it, to a circle narrower than God's intention, they no longer live by the promise (Rom. 4:16). Where the covenant promise produces FAITH, there too it communicates God's righteousness (*see* RIGHTEOUSNESS IN THE NT), the marks of which include "hope against hope," total trust, unswerving patience, steady endurance. The character of the promise is indicated by these correlative terms: "faith," "grace," "righteousness," "hope," "life," "patience," "sonship."

Paul's understanding of the promise centers in the figure of Jesus Christ. It is in him that all God's promises are affirmed as true (II Cor. 1:20). It is in him that all who believe become sons of Abraham and heirs of God. Through him as a servant of Israel, God confirms his promises to the patriarchs by bringing Gentiles within the covenant (Rom. 15:8). Those who have been "strangers to the covenants of promise" now become its heirs in Christ (Eph. 2:12; 3:6). The guarantor of this transition is the Holy Spirit (Gal. 3:14). The Spirit of promise (Eph. 1:13) begets new sons, and fulfils in them the promise of the SPIRIT. Born of the Spirit, men become free citizens of the heavenly Jerusalem. God's promise thus stands at the beginning of their existence as heirs; it also points to the end of their existence in the inheritance. The Spirit guarantees this inheritance "until we acquire possession of it" (Eph. 1:14).

Paul does not try to describe in detail the full substance of this future "possession." It will include the "inheritance of the world" (Rom. 4:13), "life from the dead," the inclusion of all Israel and of many nations within the family of faith. But Paul sees these promises as realities being fulfilled among the covenant community, where God lives and moves, and where he makes himself known as their father and makes them known as his sons (II Cor. 6:16–7:1).

In the deutero-Pauline letters, thought regarding the promise becomes more stereotyped and formalistic. Here the promise is pretemporal in origin; it is manifested at the times which God orders; it is communicated by preaching; it is consummated in the coming Day. Here its essence is defined simply as eternal life (I Tim. 4:8; II Tim. 1:1; Tit. 1:2).

b. In the Letter to the Hebrews. The book of Hebrews speaks throughout, as does Paul, of God's promise as the ground of the unique covenant relationship (6:17). As in Paul's letters, the understanding of the promise centers in the work of Christ (9:15). For both writers this category covers the whole of God's redemptive work, the whole course of his people's history from beginning to end (11:33, 39). The promise discloses the steady, inexorable inten-

tion of God and thereby releases the faithful patience and the enduring hope of his Son and sons.

A different accent appears in the distinction between the new and the old covenants, which rests upon a distinction between the new and the old promise (8:6; 9:15). God's gift of the new promise in Christ is related typologically to his gift of the promise to Abraham and Moses. These events are related to each other through God's purpose. The two events are comparable and contrasting. The new continues and completes the old, and is superior to it. The promise in Christ is comprehended within the promise to Abraham, but only in Christ is the promise to Abraham accomplished (11:39-40).

Hebrews notes the difference between receiving the promise and receiving what is promised. In receiving the promise, recipients are declared heirs; in receiving what was promised, they obtain their inheritance. In between lies their life as pilgrims (11:1–12:4). The gift and receipt of the promise marks a decisive change. It creates the "now," the "today," which gives to every decision its immediate and ultimate significance. "Today" is seen as the strategic time of opportunity and demand created by God's promise.

Jesus as the mediator of new promises gives to this "now" an awesome decisiveness. His sacrificial obedience, his mediatorial blood (9:15), makes accessible the eternal REST, the heavenly city, the kingdom which cannot be shaken (*see* KINGDOM OF GOD). The promise is as near and as distant as its mediator. To receive his promise is to inherit life today. By faithful pilgrimage the reality of what is promised becomes visible in its final mystery. The promised inheritance thus becomes at once a future certainty, an immediate access to God's throne, and an active participation in a kingdom which cannot be shaken. The promise is at once the initiation and the consummation of God's work among his people, in whom are included all who respond in faith and endurance. In Hebrews, as in Paul, we have a complex configuration of categories: promise, rest, covenant, HOPE, faith, kingdom, endurance, indestructible life.

c. In Luke-Acts. Of the ten occurrences of "promise" in Luke-Acts, only one is without special significance (Acts 23:21). All others are in direct discourse, in which the speaker is either Jesus Christ or one of his apostles. In all of these the Maker and the Keeper of the promise is God. All appear in the context of the family—i.e., the stress falls either upon God's gift as father to his sons, or upon the fulfilment among the sons of God's promise to the fathers. Promise thus receives a familial tone and binds together many generations.

Interest in the promise centers in the work of the risen Lord (Luke 24:49; Acts 1:4; 2:33). It is he who sends the "father's promise" upon the apostles. They are not to serve as apostolic witnesses until this promise descends (Luke 24:49). The coming of the promise is inseparable from their being clothed with heavenly power with which to serve as witnesses, just as Jesus began his power-laden work at the descent of the dove. The coming of the promise on them—as on him—is directly co-ordinated with (*a*) their response to the preaching of repentance and (*b*) their empowerment for preaching repentance to all nations (Gentiles). By conveying the power for preaching, the promise produces repentance and forgiveness, and this power covers the spread of the gospel from Jerusalem "to all the Gentiles." Apostolic preaching differs from that of John the Baptist in that apostles are baptized, and baptize, with the Holy Spirit (Acts 1:5). At PENTECOST "what is seen and heard" is due to the actualized power of the promise, which comes simultaneously from the exalted Lord and from the Father. The Holy Spirit is not only what has been promised; he is the promise itself (Acts 2:33). Luke explicitly distinguishes the coming of the promise from the restoration of the kingdom to Israel (Acts 1:7-8).

The apostles call men to repentance with the assurance that those who respond will receive the Holy Spirit as a gift. This is the promise "to you and to your children and to all that are far off, every one whom the Lord our God calls" (2:39). To receive the promise is to be saved from this crooked generation (2:41). Stephen (7:5, 17) makes it clear that the promise realized in Christ is linked to God's promise to Abraham and to his seed, a promise made before the birth of Isaac and before the Egyptian slavery. The fulfilment of the promise to Abraham through Moses is a type of fulfilment of the promise to Moses through Jesus. Christ is also a fulfilment of the promise to David. The resurrection of Christ with the gift of the Holy Spirit brings to men salvation in forgiveness (13:22, 32). The Scriptures had pointed toward justification. Now the justification (accomplished in the Resurrection) has been granted (26:6). Luke stresses two things: (*a*) the promise made to the fathers is now fulfilled for their sons; (*b*) Israel's rejection of the promise, analogous to many earlier rejections, does not nullify the promise itself. It remains the substance of Israel's hope and the ground of existence for God's people. The character of Luke's conception of promise is indicated by the following terms: "resurrection," "Holy Spirit," "power," "the name," "preaching," "witnesses," "repentance," "BAPTISM," "forgiveness," "fathers," and "sons."

d. In the Catholic letters. In II Peter the word "promise" is more closely identical with the expected return of Christ. Antagonists scoff at the promise of his coming, but the faithful wait patiently for it, knowing that God's delay is for good reason. The desire for evident signs is an index of men's bondage to corruption. The substance of God's promise is the return of Christ, the great Day of Judgment, the new heaven and earth wherein righteousness dwells. But this expectation is directly related to the present participation in the divine nature (1:4).

In James the substance of promise is the crown of life which awaits the endurance and love of believers (1:12). Blessedness is identified with the inheritance of God's kingdom (2:5).

In I John, what God has promised is eternal life, and this life is described as mutual indwelling. As the word of life abides in men, they "abide in the Son and in the Father" (2:24). The promise is the life which "was made manifest," which is proclaimed, and which constitutes fellowship in and with God (1:1-4).

***PROPHET, PROPHETISM.** With some justification the person of the prophet and his function in the history of Israel have been accorded a role of unparalleled significance in the literature and tradition both of Judaism and of Christianity. Broadly but legitimately defined, prophetism begins with the historical Moses and continues without critical interruption to appear in the persons of a distinguished succession through both testaments of the Bible. For prophetism may legitimately be defined as that understanding of history which accepts meaning only in terms of divine concern, divine purpose, divine participation. Indeed, by this definition, the vast bulk of biblical record is produced by prophets or at least reflects an unmistakably prophetic understanding of history.

More narrowly defined, and also quite legitimately, prophetism is peculiarly the function of a concentrated succession of men—notably Amos, Hosea, Isaiah, Micah, Jeremiah, Ezekiel, Second Isaiah—appearing in a brief span of about two centuries, preceded by a hundred years or more and even anticipated by the marvelously vigorous prophet Elijah, and followed and at once recalled by a fading succession of lesser lights. To assess the influence on biblical record of this epoch of concentrated prophetism is, of course, impossible, but one may well wonder whether any significant block of biblical tradition has passed through the hands of editors standing in and after that prophetic epoch totally unmodified or in interpretation unaltered.

The broader definition is presupposed in the arrangement of the Hebrew canon of scripture (*see* CANON OF THE OT), where, between the first division of the Law and the third division of the Writings, the central category of the Prophets is placed. In the appearance of Joshua, Judges, and the books of Samuel and Kings under the heading "Former Prophets" and, as "Latter Prophets," Isaiah, Jeremiah, Ezekiel, and the twelve prophets from Hosea to Malachi (the last twelve writings of the OT canon in the Protestant tradition), recognition is apparently given to the marked influence of the prophetic mind and faith upon the historical writings of Joshua–II Kings. *See bibliography.*

A. *TERMINOLOGY.* The Hebrew word for "prophet" is a common noun appearing more than three hundred times in the OT. It is applied to a remarkable range of characters appearing from Genesis (20:7) to Malachi (4:5), and to surprisingly disparate personalities from an Aaron (Exod. 7:1) to an Elijah (I Kings 17–19; 21), from the "true" to the "false" (e.g., I Kings 22), from the relatively primitive (e.g., I Sam. 10) to the relatively sophisticated (the Isaiahs, e.g.), from the highly visionary (see Ezek. 1–2) to the concretely ethical (Amos; or Nathan in II Sam. 12; or Elijah in I Kings 21), from the seemingly objective perspective (of an Amos, e.g.) to the intensely participating attitude (of a Jeremiah). And this is only to suggest the breadth of range of application of the term in the OT.

In the NT the term appears commonly in references to the prophets of the OT, and predominantly in Matthew and Luke-Acts. Both Jesus (Matt. 21:11; cf. Matt. 13:57; Mark 6:4; Luke 4:24) and John the Baptist (Matt. 11:7 ff and parallels) are regarded as prophets; Paul understands the continuation of the essential function in the life of the church (I Cor. 12; 14); Judas and Silas, e.g., are subsequently interpreted in this role (Acts 15:32); while the early Christian community at Antioch knows the presence of "prophets and teachers" (Acts 13:1). The NT prophet is in essential function like that of the OT: he conveys to them who will believe the divinely imparted meaning of history (cf. Acts 21:10). But signs of degeneration are suggested in Paul's implicit condemnation of extreme manifestations of prophecy (I Cor. 13); and it would appear that the role of prophet in the NT was in some expressions precisely what it was in its extreme ecstatic form in the OT.

1. In biblical Hebrew. The Hebrew term for "prophet," the only term appropriately so translated, is נביא. I Sam. 9:9 (itself of disputed date) recalls the fact that "he who is now called a prophet [נביא] was formerly called a seer [ראה]." The LXX, apparently presupposing a slightly different text, conveys the sense that the term "seer" was in the past simply a common, popular name for "prophet." The fact remains that one term is normative in the OT, and only one; and further, unfortunately, that all arguments of meaning etymologically derived are inconclusive. We simply do not know and cannot now determine the original meaning of the root. Two verb

forms frequently appear (*pi'el* and *hithpa'el*), unquestionably derived from the noun, however; and both convey the meaning "to play the נביא role"—i.e., "to act the נביא part." It is a good, and now widely held, hypothesis that the lost Hebrew root is related to cognate Akkadian and Arabic words meaning "to call" or "to announce." Shall we then take the etymology, itself hypothetical, however plausible, in an active sense and understand the underlying meaning of the noun as "an announcer," or "the one who announces" the purpose and activity of God? Or is the passive sense primary? Is the prophet the recipient of the announcement of God? Is he then one who is called?

And even if we were certain of the original meaning of the root underlying the Hebrew noun as commonly used in the OT, could we take this as conclusive evidence of the basic understanding of the prophet in the middle centuries of the first millennium B.C.? Common words in long usage characteristically are etymologically difficult; and they carry with them a significant history which is at least as important as the etymology, even when the etymology can be reconstructed. The history of the word "prophet" is of the essence here. It is necessary that we see the prophet as he appeared and functioned in the community of ancient Israel.

2. In Greek. *See* PROPHET IN THE NT.

B. *MAJOR AND OFTEN CONTROVERTED RELATIONSHIPS OF THE PROPHET.* Apart from etymological considerations, which, as we have seen, are ultimately inconclusive, what is to be said of the OT prophet as he appears as person, even professional person, in the life and times of ancient Israel? What are his significant connections, associations, relationships, within the institutional complexes of Israelite society? What are for us the most instructive, if debated, areas in the prophets' relationships?

1. To the seer. The Hebrew terms חזה and ראה are both properly translated "seer," and both appear in contexts suggesting some parallel in function with the prophet. Outside Chronicles, which is relatively late and where, in any case, no significant occurrence of the terms appears, the first term for "seer" appears six times; the second, seven. In II Sam. 24:11 (of uncertain date, but not conventionally assigned to the A or early source in Samuel) "the prophet Gad" is "David's seer." In II Kings 17:13 it is the role of prophet and seer alike to warn Israel and Judah. In Isa. 29:10 the role is not identical, but the characteristic poetic parallelism of members puts prophet and seer again in the same essential function:

> The LORD has poured out upon you
> a spirit of deep sleep,
> and has closed your eyes, the prophets,
> and covered your heads, the seers.

In the same way, Mic. 3:7 couples seers and diviners (קסמים):

> The seers shall be disgraced,
> and the diviners put to shame.

The fifth occurrence of חזה, "seer," is in Amos 7:12, in the context of the narrative of the prophet's encounter with Amaziah, the priest of Bethel. Here, too, the effect is a near-equating of seer and prophet, since we read: "Amaziah said to Amos, 'O seer, go, flee away to the land of Judah, and eat bread there, and prophesy there." The verb תנבא is the common denominative form (probably) from נביא; and it is the clear inference of the verse that it is the appropriate function of the seer to act the part of the prophet. Whatever else is involved in Amos' response in vs. 14, it is clear that he means to repudiate Amaziah's implicit charge of professionalism, the strong insinuation that Amos has mouthed merely the "party line" of the seers and prophets.

In all these occurrences of חזה, with the single exception of Mic. 3:7, "seer" and "prophet" are, while not quite synonymous terms, descriptive of very similar functions.

The second term for "seer" (ראה) appears in Isa. 30:9-10 in parallelism with the first (חזה):

> They are a rebellious people,
> . . . . . .
> who say to the seers [ראים],
> "See not!"
> and to the seers [חזים],
> "*See* not for us [לא תחזו־לנו]
> that which is right;
> *speak* [דברו־לנו] to us smooth things,
> see [חזו] illusions!"

If there existed any significant distinction between the two terms for "seer," it is nowhere apparent in the OT; and this one passage in which both terms appear clearly equates the two designations of the seer.

If, now, we recall the statement of I Sam. 9:9 (*see* § A1 *above*) that "he who is now called a prophet [נביא] was formerly called a seer [ראה]," we are justified, in view of evidence thus far considered, in concluding that prophet and seer, by either designation, were understood as exercising in common the function of "seeing"—i.e., apprehending that which is not normally accessible, and "speaking forth," proclaiming, that which is thus seen and apprehended. The RSV renders Isa. 30:10, not in the language of rigid translation, which is obviously impossible, but in sympathetic and accurate interpretation:

> They are a rebellious people,
> . . . . . .
> who say to the seers, "See not";
> and to the prophets, "Prophesy not to us what is right;
> speak to us smooth things,
> prophesy illusions."

The seer-prophet apprehends, not necessarily that which is smooth, but emphatically that which is right. His function, prophetism, is never reception alone, but reception-articulation: to see is to prophesy!

It may be that the "office" of seer was chronologically prior to that of prophet as an indigenous institution in Israel. The designation of Samuel as "seer" (ראה) in the presumably relatively old narrative of I Sam. 9 (in the stream of literary criticism virtually unanimously ascribed to the "A" or early source in Samuel) would suggest this. The institution of Israelite prophetism, qua institution, was an appropriation —ultimately phenomenally modified, to be sure, but still an appropriation—transacted on the ground of Canaan; and it did not clearly emerge—again qua

institution—until the tenth century at the earliest. As we shall see, that which responsibly wrought the vast modification of the institution of prophetism, as in time it passed from Canaanite to Israelite form, was present from the beginnings of Israel's existence; this is simply to say that something significant of the essence of established Israelite prophetism was present, clearly, from the Mosaic era and not impossibly also from the time of the patriarchs, although the latter cannot be determined.

But granting the possibility or even probability of the prior establishment of the seer in Israel, our biblical references strongly suggest more than a relationship of parent-child—and at once less. More, because the evidence we have just surveyed points to a continuing coexistence of seer and prophet, and constitutes contemporaneous estimates easily and naturally equating the two. Less, because Israelite prophetism, if "biologically" indebted to the institution of seer, is also in unmistakable descent from a prophetism, whatever its origin and distribution, already present in the Canaan occupied by the Israelites.

2. To contagious (ecstatic) prophetism. Prophetism in its Canaanite expression first appears in the OT in that relatively old narrative of I Sam. 9:1–10:16. In the hope of locating his father's lost asses, Saul and his servant have consulted the seer Samuel, who has not only reassured them on the score of the animals but has also anointed Saul "to be prince over his people Israel" (10:1). As sign and token of the validity of the performance, Saul is informed in advance of what is to take place; and precisely in fulfilment, "When they came to Gibeah, behold, a band of prophets met him; and the spirit of God [רוח אלהים] came mightily upon him, and he prophesied among them. And when all who knew him before saw how he prophesied with the prophets, the people said to one another, 'What has come over the son of Kish? Is Saul also among the prophets?' . . . Therefore it became a proverb, 'Is Saul also among the prophets?' " (10:10-12).

I Sam. 19:18-24 repeats the proverb in a more dramatic setting, with marked emphasis upon the highly contagious nature of the seizure and with an elaboration of its manifestation. Saul, in pursuit of the now outlawed David, who has found refuge with Samuel, sends a company to take David. "And when they saw the company of the prophets prophesying, and Samuel standing as head over them, the Spirit of God [רוח אלהים again] came upon the messengers of Saul, and they also prophesied" (vs. 20). Two subsequent companies are dispatched, and both remain, seized by the same contagion. Now Saul comes, "and the Spirit of God [the same Hebrew phrase] came upon him also, and as he went he prophesied [ויתנבא], until he came to Naioth in Ramah. And he too stripped off his clothes, and he too prophesied before Samuel, and lay naked all that day and all that night. Hence it is said, 'Is Saul also among the prophets?' " (vss. 23-24).

The relationship between these two narratives in I Sam. 10; 19 is uncertain. Critical-literary orthodoxy sees the second as a duplicate, later, and therefore unauthentic explanation of the proverb. For our purposes, this question is irrelevant. Both passages may be taken, regardless of relationship and date, as valid commentary on the phenomenon of Canaanite prophetism. This is patently a radically different office from that of the seer. Not now, certainly not yet, could one equate seer and prophet in Israel. If, as an actual item of pragmatic history, Samuel functioned both as seer (I Sam. 9–10) and as ecstatic prophet (I Sam. 19), the roles remained dual—they were in no sense interdependent. They are yet of very different stuff: the seer appears as an office in Israel long familiar and thoroughly at home, quite conceivably dating from pre-Canaan times; but this earliest reference to contagious prophecy conveys the atmosphere of the alien. Israel is not at home with it, and a solidly identified, unmistakable Israelite, this son of Kish, graces it strangely indeed: "Is Saul also among the prophets?" This institution is not yet appropriated, or, if in process of appropriation, not yet domiciled and certainly not yet integrated and adapted into the pattern of familiar Israelite existence.

What, here, is the content of the noun "prophet" and the verb "prophesy"? The phenomenon is induced. Samuel says to Saul: "You will meet a band of prophets coming down from the high place with harp, tambourine, flute, and lyre before them, prophesying" (I Sam. 10:5). It produces apparently a total transformation in personality: "You shall prophesy with them and be turned into another man" (vs. 6). It is created and sustained as a group phenomenon capable of being spread by contagion. And it is popularly interpreted as indicative of seizure by the Deity, in which regard the prevailing but not exclusive (10:6 reads "Spirit of Yahweh") divine name employed is the weak and colorless *Elohim*. This is, in any case, a different kind of seizure from the charisma, the more or less permanent endowment of a chosen person by the Spirit of Yahweh (e.g., I Sam. 16:13-14), a phenomenon which again belongs centrally to Israel and Yahwism.

The brilliant description of the frantic performance of the prophets of Baal on Carmel gives further definition to the phenomenon of prophesying. The contest between the prophets of Baal and the prophet of Yahweh (Elijah) is under way, and Baal's prophets have induced the seizure and are sustaining it in an effort to evoke a tangible response from their deity. Crying: "O Baal, answer us!" they perform a kind of limping dance, apparently; and as Elijah taunts them, their wild performance reaches its emotionally uncontrolled peak, when they "cut themselves *after their custom* with swords and lances, until the blood gushed out upon them" (I Kings 18:28). Noon, Baal's best and strongest hour, passes; but the prophets of Baal (note the language of the text) "continue to prophesy" (vs. 29). The RSV again gives, properly, a translation-interpretation: "They raved on." The verb must be paraphrased in any language which defines prophetism as one of the higher levels of revelation. But precisely so we are eloquently informed on the content of this original, alien, Canaanite phenomenon of prophet and prophetism. This is the prophet. This is his prophecy. This is to prophesy!

Now, if this is a far remove from the content of "seer" and "seeing" as briefly surveyed above, it is at least an equally far remove from the prophet and the prophetism exemplified even in an Ezekiel, to say nothing of an Isaiah! Whatever may be the ultimate

judgment (if, indeed, such judgment is ever attained) with respect to the factor of "ecstasy" in the great prophets of Israel, it cannot legitimately be argued that their prophetism is in continuum with and perpetuates the phenomenon of Canaanite prophetism. Where is any significant biblical evidence that OT prophetism was predominantly manifested in a temporary and artificially induced state; that it was productive of a totally transformed personality; that it was a group-created and -sustained, and, as such, highly contagious condition induced by violent seizure by the Deity and involving the absolute suspension of rationality?

Early and late it has, of course, been so argued. The interpretation of OT prophetism as an essentially ecstatic phenomenon, differing not at all in this respect from the ecstatic prophetism characteristic of the ancient Near and Middle East, continues to be advocated especially by those who are persuaded of prevailing ancient Eastern institutional uniformity.

It is impossible to cover even superficially the broad scope and variation in interpretation of the relationship between the great OT prophets and the phenomenon of contagious prophecy. No evidence appears to justify the essential identity advocated by some. If the very term "ecstasy" is applied at all to the giant figures in the succession from Amos to Second Isaiah, we would want to insist on a distinction between ecstasy of the absorption type and that of the concentration type, and a very clear further distinction between the circumspective religion of the prophets and the more common ancient Eastern type of introspective, mystical piety. *Unio mystica* is quite alien to Israel. Let us admit of the ecstatic element in the OT prophet only and specifically in the sense of a profound concentration resulting in the suspension of normal consciousness and the total, if brief, interruption of normal sense perception.

Form-critical studies in the Prophets further enlighten the question of the nature and extent of the ecstatic factor in prophetism. The identification and analysis of a characteristic prophetic form of utterance (German *Gattung*) defines at once the content of that which is the product of "ecstatic" concentration and the nature, the extent, and the significance of the unmistakably nonecstatic, the role of the prophet's normally functioning senses. FORM CRITICISM points out a characteristic prophetic utterance in two intimately related parts: (*a*) the speech of invective (German *Scheltrede*), often extended and eloquent, commonly passionate and bitter, and always portraying, although in different ways, the mind and disposition and personality of the prophet, the *man* the prophet; (*b*) the second part, immediately following, consisting of the word of judgment (German *Drohwort;* "threat" is not quite adequate; perhaps "contingent judgment"), brief, pointed, powerful, devastating, sometimes terrifyingly impersonal, and characteristically devoid of personal-human animus. These repeatedly conjoined parts—the prophet's free invective as extended prelude to the fearfully compact pronouncement of divine judgment—constitute a basic pattern of prophetic speech.

This pattern can be abundantly illustrated, but perhaps nowhere more clearly than in Isaiah. Consider, e.g., the familiar prophetic outburst that begins: "Ah, Assyria, the rod of my wrath!" (10:5). The invective is here remarkably extended and continues with eloquent vigor through vs. 15. All this is the prophet's own utterance, and it would be absurd to contend that this (vss. 5-15) is the product of a supranormal psychological experience, the articulation of ecstatic reception. Here one witnesses a deftly balanced interplay of intellect and emotion and both not merely controlled but highly disciplined, responsive, obedient. The range in verbal mode testifies both to the vast breadth of prophetic sensitivities and to the high order of prophetic intelligence. Here one is confronted by responses at once brilliant and intuitive from the following successive perspectives: Yahweh, initiating Covenanter with David-Zion-Judah (vss. 5-6); an astute political observer who does not question the Lordship of Yahweh in history (vs. 7); a personified Assyria, with artful dramatic identification (vss. 8-11); the same faith-political position again, in central castigation of pride (vs. 12; this is a central theme of Isaiah); Assyria again, characterized in her own words and prophetically condemned in highly deft verbal form:

> My hand has found like a nest
> the wealth of the peoples;
> . . . . . .
> and there was none that moved a wing
> or opened the mouth, or chirped
> (vss. 13-14).

So to a conclusion in the full power of the prophet's own devastating sarcasm:

> Shall the ax vaunt itself over him who hews with it,
> or the saw magnify itself against him who wields it?
> (vs. 15).

By what possible definition of ecstasy can the skilfully combined elements of articulation in this speech be claimed?

But this is not to say that ecstasy in the sense of supranormal concentration plays no role. All this, in now conventional form-critical analysis, is a part of, a prelude to, and called forth by, the word of judgment, the *Drohwort* (vs. 16), which may very well have come to the prophet in ecstasy. The prophet's own speech of invective represents his considered application, timing, and interpretation of the Word of Yahweh (דבר יהוה), which he hears, or sees, or, involving all the senses directed totally inward, perceives. And psychologically, of course, this is the most important part of the prophetic utterance.

In the relationship between these two primary and inseparable parts of prophetic preaching the controversy over the role and nature of ecstasy is resolved. The prophet receives, possibly and even probably in ecstatic concentration, the actual *dābhār*, the real Word of Yahweh; and here we are confronted by a significant aspect of the phenomenon of revelation. But the Word thus received is not always precisely intelligible in a process of recall which requires its appropriation and integration in the rational mode; and the prophet, in consequence, feels himself called upon by means of the speech of invective to interpret and direct, to point and apply, the word of judgment, the revealed Word of Yahweh. And this he does, in most glaring contrast to the probable ecstatic state of the Word's reception, in a process of

deliberation. The compact and certainly, on occasion, enigmatic divine Word is mulled over, reflected upon, wrestled with; and this process, involving the full range of the prophet's best rational powers, becomes his prophetic work, his ministerial task, his professional exercise. It is his own obligation to determine how, in what context, when and to whom, and in what way most effectively, this word of judgment is to be delivered. To this end he composes the speech of invective and places it immediately before the received word, characteristically marking the transition with some such particle as לכן, as in Isa. 10:16:

> Therefore the Lord, Yahweh of hosts,
> will send wasting sickness among his stout warriors,
> and under his glory a burning will be kindled,
> like the burning of fire.

The conventional literary-critical judgment may well be correct in assigning vss. 17-19 to secondary status; but its standard conclusions on vs. 16—that it is fragmentary, a corrupt text, distorted in transmission, etc.—are in fundamental error, resulting from failure to recognize what is suggested in the form-critical analysis of the prophetic utterance as *Scheltrede* and *Drohwort*, the deliberated and composed invective called forth by the received Word, the divine threat or judgment.

This smaller unit, vs. 16, toward which the whole passage is pointed (see *IB*, V, 240), is the reproduction—insofar as such is capable of reproduction—of the word received in prophetic concentration/ecstasy. It differs radically in verbal temperament from the speech of invective. What is perceived—is it heard, or seen, or must we say simply that it is sensed?—is a wasting sickness among warriors and a burning fire beneath a prideful magnificence. Whose warriors? Whose pride? Why is this so? How and when, and to what purpose, shall it be proclaimed? If the wasting and the burning, the sickness and the fire, are undefined certainties out of ecstasy, it is the prophet's hard task by sweat and tears to define the symbols of vision/audition and to determine and declare their meaning. This is not to exclude inspiration and revelation from the task, but this part of the prophetic function, the speech of invective, certainly does not have its origin in any kind of ecstasy.

The OT prophet no doubt underwent what not only we, but also his own generation, would see as outside the limits of normal experience. Perhaps in none of the great prophets was there a total absence of the supranormal psychological manifestation. But both form and content of OT prophetism stand in restraint of persistent tendencies to overstress the ecstatic element in the prophet.

3. To the cult prophet. The question persistently under debate is not whether there existed in ancient Israel associations of prophets. Groups or guilds of prophets are positively attested over the whole range of the history of the kingdoms from the time of Saul in the eleventh century B.C. until the fall of Jerusalem in the early sixth century B.C. (*see* PROPHETS, SONS OF). Nor is the question whether these associated professional prophets were related to the cultus and/or the court, and regularly discharged certain cultic professional functions. There is no reason to doubt that functionaries known as prophets were cultically institutionalized precisely as were the priests and other sanctuary personnel; nor is there any sufficient ground for rejecting the view that such prophets were attached to the temple in Jerusalem and that sometime before the time of the Chronicler (fourth or third century B.C.) the temple prophets became temple singers and merged with the other Levitical orders.

The function of OT prophetism in association with the cultus as institutionalized at sanctuary or court is not in question. The real question has to do with the extent of this association and the possibility that we actually have traces in the canonical OT of the work of such cultic נביאים. Despite excessive claims from some quarters, this possibility has been firmly established in the essentially form-critical studies of a number of scholars. *See bibliography.*

The real question has further to do with the possibility that the great prophets of the OT lived out their careers in such associations and were, in fact, themselves such associated cult functionaries. This aspect of the question of the relationship of the great OT prophets to cult prophetism remains complex, difficult of definition, and thoroughly vexed. We must reject extreme positions which seek to clarify all possible uncertainties in OT prophetism by analogy with associations of cultic personnel in ancient Mesopotamia, the broader West Semitic area, and Arabia. This basic assumption of a uniform religious phenomenology over the ancient East leads ultimately to the conclusion that the great prophets, without exception, are to be interpreted essentially and dominantly in terms of the common category of cult personnel. Not only Jeremiah and Ezekiel (whose possible official relationship to the temple has long been recognized in the fact that both were priests before they were prophets), but also Amos and Isaiah, are in this extreme position alleged to show complete identity with earlier cult prophets.

It is in order now to refer again to Amos 7:14 and to repeat in the present connection a comment already made with reference to contagious prophecy. In denying that he is (or "was") a prophet, Amos could also be rejecting any identification with cult prophetism as it may have been known, as it may have existed, at the Bethel sanctuary over which Amaziah presided.

In any case the interpretation of the great prophets as in no significant way different from the type of cult functionary widely present among the ancient Semites has been considerably stimulated by studies of cult festivals over the ancient Near East and, more than this, efforts to reconstruct from environmental analogy and form-critical analysis of OT texts, especially in the Psalms, Israel's celebration of the New Year and the Enthronement Day of the sacral king—the king in the role of Yahweh. The call of the prophet Isaiah (Isa. 6) has been analyzed in such a way as to make of the prophet a cult functionary whose call experience can be understood only in the terms and images of the annual festival of the enthronement of the sacral king, centering in the Jerusalem temple. In this view a basic cultic mode of thought is seen, common to the ancient Near Eastern culture, and Isaiah becomes one with the cult

prophet, his words reflecting living cultic conditions, the core of which is the institution of sacral kingship.

The mass of alleged evidence in support of such identity is impressive, but its structure, upon examination, appears certainly at points to be rather insubstantial. Simpler interpretations of Isaiah's call are more natural. Further reservations appear when we look closely at another item of support for the thesis that the great prophets were merely cult prophets. It is adduced from the statement in Jer. 29:26 that the associations of כהנים ("priests") and נביאים ("prophets") were organized under a common leader entitled כהן, and the conclusion is regarded as axiomatic that the classical נביא too was a cult functionary. It is also presumably inferentially axiomatic that Jeremiah is to be professionally identified simply as one of the associated cult prophets.

The passage in question follows hard upon what is represented as an extended letter from Jeremiah (29:1-23) to persons exiled from Jerusalem in 597 B.C., a decade before the fall of the city. It purports to be the words of one Shemaiah, prominent among the exiles in Babylonia, addressed chiefly to Zephaniah, who is the senior priest, apparently, in charge of the temple priests in Jerusalem: " 'Yahweh has made you priest . . . , to have charge in the house of Yahweh over every madman who prophesies, to put him in the stocks and collar. Now why have you not rebuked Jeremiah of Anathoth who is prophesying to you? For he has sent to us in Babylon, saying, "Your exile will be long; build houses and live in them, and plant gardens and eat their produce." ' Zephaniah the priest read this letter in the hearing of Jeremiah the prophet. Then the word of Yahweh came to Jeremiah" (29:26-30). This has been seriously submitted as one of the weightiest pieces of evidence of identity of Jeremiah and the prophesying attendants on the cultus. But the passage does not even establish the cultic institution of prophetism (which may well have existed, to be sure, but which is certainly not necessarily referred to here), to say nothing of Jeremiah's integral relationship thereto! On the contrary, this passage would much rather appear to be designed as precisely a repudiation of identity between Jeremiah and any prophesying madmen, whether occasional ecstatic orators in the temple area or attached personnel—a possible distinction in no wise indicated in the passage. The powerful thrust of the passage, executed in devastating rebuke and at the expense of Shemaiah, is precisely the polarity between "prophesying" prophets and *the* prophet, between madness and "the Word of Yahweh."

We must reject, then, the view equating and identifying Yahwistic prophetism exemplified in the great OT prophets and that widespread prophetism of the cultic association. A line of crucial and emphatic distinction between the two appears in a study of late-eighteenth-century B.C. texts from Mari on the Upper Euphrates in which prophetlike persons appear a thousand years before the canonical OT prophets, persons much more closely resembling the continuing phenomenon of cult prophetism than Yahwistic prophetism. But even if we assume a historical connection between the messenger of God in the Mari Texts and the prophet of the OT, there is a clear difference in the content of the divine message. At Mari, it deals with cult and political matters of very limited importance. The biblical prophetic literature deals with the great contemporary events in the world as part of a process willed, and in its outcome determined, by God. In sharpest contrast to the prophetic phenomenon at Mari, the great prophets of the OT always speak in the name of Yahweh, whose will all powers of history serve.

And this appears to be an appropriate description of the contemporary contrast between the great prophet and the cult prophet—a striking and profound contrast in the content of prophetism. This does not preclude the possibility even of affiliation of some of the great prophets with cultic associations of prophets, much less the existence of such associations; but if such affiliation existed, it would nevertheless be wrong to assess and evaluate any of the "name" Yahweh prophets of the OT in terms of simple identity with the conventional cult prophet.

4. To the cultus. We cannot, on the other hand, go back to the opposite extreme, to the old view of the great prophets as grandly isolated figures having absolutely nothing to do either with a now divinely repudiated cultus or with any of the fundamentally apostate professional personnel of religion.

Scholarship of a preceding generation commonly characterized classical OT prophetism as strongly and predominantly anticultic; and in support of this interpretation, passages from Amos 5; Isa. 1 were frequently cited.

I hate, I repudiate [RSV "depise"] your feasts,
and I take no delight in your solemn assemblies.
Even though you offer me your burnt offerings and cereal offerings,
I will not accept them;
and the peace offerings of your fatted beasts
will I ignore [RSV "I will not look upon"].
Take away from me the noise of your songs;
to the melody of your harps I will not listen.
But let justice roll along [from גלל; RSV "roll down"] like waters,
and righteousness like an everflowing stream.
(Amos 5:21-24.)

What to me is the multitude of your sacrifices?
says Yahweh;
I have had enough of burnt offerings of rams
and the fat of fed beasts;
I do not delight in the blood of bulls,
or of lambs, or of he-goats.
When you come to appear before me,
who requires of you
this trampling of my courts? (Isa. 1:11-12.)

Your new moons and your appointed feasts
my soul hates.
. . . . . .
When you spread forth your hands,
I will hide my eyes from you.
. . . . . .
Wash yourselves; make yourselves clean;
remove the evil of your doings
from before my eyes;
Cease to do evil,
learn to do good. (Isa. 1:14-17.)

These lines have been repeatedly seized upon, with, by and large, the support of critical scholarship, as signifying the unqualified and categorical

prophetic repudiation of the institutionalized expression of the religion of ancient Israel; as indicating the positive concern of Amos and Isaiah, imputed also to all the other great prophets, to cut out as a vile malignancy the totality of Israel's cultus. For many interpreters the prophets became the giant protagonists of the Ethical and the brilliant antagonists of any and all institutional religion. In this unfortunate and misconceived enthusiasm, the prophets were not only de-institutionalized, but de-theologized as well—Yahweh was reduced to the Ethical Incentive and the prophets themselves to social strategists—of course, endowed with genius power.

In more recent years scholarly convention has changed, although it is sadly apparent that the ethical culturalists, the anti-institutionalists, and all the other pro-neighbor-anti-God, pro-religion-anti-cult sentimentalists are either unaware of this or indifferent. The now prevailing and almost orthodox critical convention looks in broader and more realistic perspective at the whole structure of Israel's life and history. Expressions of prophetic impatience with or even intolerance of the cultus are seen now as castigation, not of cult qua cult, not of cultic practice per se, but of the cultus in its present guise—the even enthusiastic performance and perpetuation of formalized, regularized, prescribed outward acts of piety unsupported by the qualities of justice and righteousness revealed as at once the character and demand of the very Yahweh upon whom the whole cultus centers. The key to such an interpretation is seen in Isa. 1:13, deliberately omitted in the longer quotation from Isa. 1 above:

> Bring no more vain offerings;
> incense is an abomination to me.
> New moon and sabbath and the calling of assemblies—
> I cannot endure iniquity *and* solemn assembly.

The fault does not lie in the form itself; but the form becomes heinous when it is perpetuated in an existence whose total structure flatly contradicts that which is symbolized in the form!

In the broad perspective of the history of Israel and the role of prophetism, it becomes exceedingly difficult, if not impossible, to maintain an anti-cult and therefore anti-institutional prophetism in Israel. For the cult was from the beginning the tangible expression of the faith of Israel. From the beginning Israel could be Israel only cultically. Israel's understanding of her own divine creation in the exodus event was very early culticized in the Passover. She interpreted her prehistory, as seen in the persons of the patriarchs, in cultic form and continued to appropriate that prehistory cultically in the institution of circumcision. And in Israel's (or a crucial segment of Israel's) understanding of the David-Zion covenant, it was essential to celebrate and renew the meaning of this covenant in the great autumnal festival of New Year and Enthronement in the temple in Jerusalem. The cultus embodied the faith of Israel: it was the rehearsal of God's mighty deeds—and therefore his self-disclosures—of the past; it was, as appropriation of the past, also the dramatic conveyance of meaning in the present; and bringing past and present into the immediate continuum of identity, it appropriated in anticipation the future of the people of God and the history of God.

The cult of the contemporary Christian church is, no doubt, as justifiably castigated as that of ancient Israel. As Christmas and Easter are commonly celebrated by perhaps the majority of celebrants, any latter-day "prophet" might be constrained to cry out: "Thus says the Lord, 'I hate, I repudiate your feasts.' " But it is perfectly clear that the articulation and, indeed, the very preservation of Christian faith requires the cultic enactment of birth and death and resurrection—this appropriation of the past for the present and the consequent faithful union of time in hope and confidence in the future.

Yahwistic prophetism almost certainly remained in close rapport with the cultus. The relationship, indeed, was one of mutual indebtedness. It is obvious that the prophets were familiar with the ritual and meaning of the cultus; that they sometimes spoke in language borrowed from it; that they even quoted directly from its rituals, prayers, and liturgies; and that the role and meaning of the cultus was itself in turn influenced by prophetic interpretation. But it does not at all necessarily follow that the great OT prophet was a "cult" or "guild" prophet, a member of an "association" of cult prophets officially and professionally related to the cultic institution in manner and degree comparable to the priest.

And here it is to be observed that prophet and priest were not so positively, consistently, and inimically opposed as has sometimes been assumed. It is significant that the two figures most highly ranked in the traditions of Judaism, Moses and Elijah, are both remembered and recorded in the dual role of prophet-priest (Moses was a Levite [Exod. 2:1]; Elijah conducted sacrifice [I Kings 18:32 ff]). And at the lower end of the chronological scale, to mention only the most prominent possibilities in the classification of dual functionaries, one thinks of Jeremiah and Ezekiel, both of whom came out of priestly background (Jer. 1:1; Ezek. 1:3) and exhibit a prophetism patently extending, in some significant regards, the ancient dual form. There can be little doubt, in any case, that as a rule the representatives of Yahwistic prophetism saw themselves as essentially allied to the priesthood, as colleagues in a fundamentally common task—whether or not the priests would always accept the prophetic definition of alliance. And this recognition further defines and underscores the relationship of concern of the prophet to the cultus.

Form-critical studies have further confirmed the prophets' cultic orientation. Several shorter prophetic writings (among them Habakkuk, Nahum, and Joel; *see bibliography*) have been interpreted as virtually totally or in significant part produced out of cultic influence, in the liturgical style of the cult ritual. Elsewhere throughout the recorded prophetic utterances, there appear strong suggestions of conscious or unconscious adaptation of cultic ritual.

To entertain reservations as to the great prophets' membership in the guilds of professional cult prophets is in no sense at all, then, to cut the prophet off from influential and productive interrelationship in the cult. So far from repudiating the cultus, the prophet as exemplified in Second Isaiah can and does appro-

priate the liturgy known and in common use in the daily round of cultic exercise and, again in the case of Second Isaiah, make frequent appeal to familiar lines in the common ritual in the repeated words: "Have you not known? Have you not heard?" (Isa. 40:21, 28). The prophet must not be removed from his own original environment, his own broadly contemporaneous setting.

5. To the book. The interpretation prevailing in a past generation of the great OT prophet, the "name" prophet, as a grandly isolated figure has been attacked and largely routed from yet another quarter. Well into the twentieth century the most common designation, perhaps, of the great prophets was the term "writing prophets," used to distinguish OT prophets with "book" from those without. Elijah was a prophet. Amos was a writing prophet. It was taken for granted that writings bearing prophetic names contained for the most part the actual, written words of the prophet. Or, to say the same thing and make the same distinction, the "writing" prophets were "literary" prophets—they habitually addressed themselves, pen in hand, as it were, to the blank scroll; following an address—e.g., Amos' speech at Bethel—they carefully cast the utterance into written form themselves, being "literary" men; or, years later, they looked back on an event or experience or speech—e.g., Isaiah upon his call (ch. 6)—and "put it down on paper," so to speak, themselves "reducing" the remembered episode to writing. This firm assumption that the books of the prophets were, by and large, hand written by the great prophets themselves from the eighth to the sixth centuries (Amos–Second Isaiah) may be seen in interpretations of the prophets otherwise representing remarkably different perspectives.

As OT scholarship turned into the second half of the twentieth century, the earlier easy assumption of the literary activity of the "book" prophets gave way before an increasing emphasis—certainly exaggerated from some quarters—on the role of oral composition and transmission and the relationship of at least some of these prophets to circles of disciples. In a pattern demonstrated in vast variety over the whole of the ancient Near East, the great prophet played the role of master among a number of more or less formally organized disciples; and responsibility for the original, basic (oral) form of the present prophetic writings came to be fixed upon these disciples, who cherished, preserved, and "edited" the utterances of the master orally, not only during the prophet's lifetime but also for an extended period after his death. The present, written form of prophetic speech may be analyzed, assessed, and interpreted only in consideration of its significant history as oral formalization and entity.

Form criticism has contributed to this emphasis upon the role of oral tradition simply by demonstrating that much of profoundest meaning in the OT is related directly or indirectly to a continuing cultic activity which was largely sustained by the mouth and memory of successive generations of participants. Form criticism shatters the common assumption in the "literate" West that books and documents are created only by writers: the OT, form-critically regarded, is much more the creation of speaking worshipers and remembering worshipers, where the past is orally appropriated in the present and where the community, past, present, and future, is centrally oriented in a common cultus. In highlighting the real context in Israel's actual historical existence giving rise originally to the type of passage, or the passage itself, form criticism confronts us repeatedly with the fact that in the ancient East the role of written transmission, while significantly existent, remained sometimes and for long periods of time subordinate to that of oral transmission.

Studies in comparative culture in the ancient Near East, especially among Scandinavian scholars, have given further emphasis, sometimes in exaggerated form, to the place of oral tradition. One is hardly justified in saying that the written OT is a creation of the postexilic Jewish community and that of what existed earlier only a small part was in fixed written form. This is certainly to go too far. For a number of reasons which we cannot explore here, we should have to see the writing of tradition in Israel in impressive proportion from the tenth century B.C.; but we should at the same time insist on the continuing interrelationship between parallel written and oral formulation and transmission of material; and in the case of certain types—including the utterances of the great prophets—the dominant but not exclusive oral organization and preservation of the material down to the Exile.

Apparently there exists no real question that at least some of the "book" prophets lived and taught and proclaimed a message in the company of disciples. Nor can the function of oral transmission among and by these disciples be eliminated in the history of the organization and preservation of prophetic utterance in the OT. The question has simply to do with the evaluation of that which is received. To what extent may we claim to find, e.g., Isaiah in what is now recorded in the book of Isaiah; to what extent is the content of the prophetic book the product of the machinery of transmission? And this is in fundamental fact to ask the question, What is the relationship between the "book" prophet and the book; between the prophet and his disciples; between the disciples and the book? Have we been wrong for well over two thousand years, now, in assuming that the book of Amos or Jeremiah reflects the mind, personality, and utterance of a prophet Amos, a prophet Jeremiah? Shall we say with certain scholars that OT scholarship can never regain the *ipsissima verba* of OT personalities; or that any hard and fast distinction between what comes from the prophet himself and what had its origin in subsequent tradition is no longer possible?

Surely wrong is that picture of the great prophet as an absolutely solitary figure who is, himself alone, his own community and his own, only scribe. Probably wrong too is the assumption that the form in which we now receive the words of the prophets is with any consistency precisely the form in which it was initially cast by the prophet's own hand. But on the other hand, the evidence hardly justifies the conclusion that no prophet ever wrote anything himself; that we cannot make contact with and define an individual prophet because what is represented as his is in its indistinguishable entirety a traditio-historical

creation, the product of decades and even centuries of a fluid, oral process.

In the case of the prophet Isaiah there is the strongest evidence both that the prophet himself wrote, and that on occasion he committed his message for subsequent delivery in oral form to a circle of disciples. In Isa. 8:1 we read: "Yahweh said to me, 'Take a large tablet and write upon it in common characters, "Belonging to Maher-shalal-hash-baz" ' " And in Isa. 30:8:

> And now, go, write it before them on a tablet,
> and inscribe it in a book,
> that it may be for the time to come
> as a witness for ever.

Further support is inferential: it is most improbable —it is, in fact, inconceivable—that Isaiah was illiterate, whether or not, as has often been surmised, he was a member of the royalty of Jerusalem.

That there was also oral communication, transmission, and preservation of the words of Isaiah through a circle of disciples is made explicit in the text and almost certainly confirmed in Second Isaiah. Isa. 8:16-17 reads: "Bind up the testimony, seal the teaching among my disciples [בלמדי]. I will wait for Yahweh, who is hiding his face from the house of Jacob, and I will hope in him." The message thus sealed among Isaiah's disciples—the message, probably, of ultimate redemption—may well be intentionally identified as such and brought forth publicly some two centuries later by Second Isaiah, who probably means also to identify himself as a participant and member in that (continuing) discipleship to Isaiah of Jerusalem.

> The Lord Yahweh has given me
> the tongue of those who are taught [disciples; למודים],
> that I may know how to sustain with a word
> him that is weary.
> Morning by morning he wakens,
> he wakens my ear
> to hear as those who are taught [למודים].
> (Isa. 50:4.)

We need have no hesitation in endorsing the interpretation of these words of Second Isaiah as the prophet's wish to make it clear that he, a child of a later age, numbered himself with the disciples of Isaiah and wished to be numbered with them.

Indirect support for a circle of discipleship to Isaiah is given by the very nature of the book of Isaiah, the remarkable unity pervading its various major sections (including not only chs. 40–55, but also 56–66; 24–27) and, within chs. 1–39, the continuing debate as to the "authenticity" of numbers of passages, chapters, and sections. In view of the patent representation of a span of centuries within the present writing of the book of Isaiah, one wonders if the book in its present form does not constitute an effective testimony to a long-continuing discipleship to the prophet.

Isaiah's influence is, of course, widely felt in the OT outside the book of Isaiah. Subsequent prophets commonly betray Isaianic influence, resulting from a knowledge of Isaiah or "the Isaianic" as recorded in writing or in the living discipleship or both. The little book of Micah is especially interesting testimony. If chs. 1–3 (with the possible exception of 2:12-13) may with some confidence be assigned to the prophet Micah (either himself writing or as recorded by his own disciples), we sense in the two sections that follow, chs. 4–5; 6–7, a strong affinity with Isaiah and the circle of his disciples:

> But you, O Bethlehem Ephrathah,
> who are little to be among the clans of Judah [the reference is to the David-Zion covenant, characteristic of Isaiah],
> from you shall come forth for me
> one who is to be ruler in Israel,
> whose origin is from of old,
> from ancient days.
> Therefore he [Yahweh] shall give them [Judah] up until the time
> when she who is in travail has brought forth.
> . . . . . .
> And he shall stand and feed his flock in the strength of Yahweh,
> in the majesty of the name of Yahweh his God
> (Mic. 5:2-4; cf. Isa. 9; 11; 40:11).

> But as for me [Micah? Or a prophet from the Isaiah circle?],
> I will look to Yahweh,
> I will wait for the God of my salvation
> (Mic. 7:7; cf. Isa. 8:17).

We note also the eloquent anti-Assyrianism so strongly reminiscent even in expression (see Mic. 5:10 ff) of the Isaianic circle. If some of this material is from Micah, or if it fairly represents what was in fact the prophetic mind of Micah, we should have to deduce a relationship, direct or indirect, between Isaiah and Micah; and we should be justified in speculating that Micah was at least known to that circle and that he, too, held in faith the prophetic expectation of redemption beyond judgment.

The affinity between the book of Micah and the Isaiah circle is further marked by the presence of an oracle, the so-called "floating oracle," common to both books. In the context of the present discussion one would hazard the guess that it is not from Micah; that it may originate with Isaiah; that in testimony to its living oracular form, it appears in Mic. 4:1-3 in a form longer than that in Isa. 2:2-4; and that it is one more item in support and clarification of the phenomenon of prophetic discipleship and the joint role, in transmission of the content of prophetism, of the oracular and the written.

To the question of the relationship of the great prophet to the formation, transmission, and preservation of the content of his prophetic utterances, we repudiate any "either-or" answer. It may be that in this regard a distinction is to be maintained between two types of canonical prophetism, the liturgical and the so-called *diwan* type: the former, strongly influenced by established and probably recorded liturgy, represented in such books as Nahum, Habakkuk, Joel, and Second Isaiah, produced by writers and experiencing a predominantly written tradition from the very beginning; the latter, seen in prophets like Amos and Isaiah of Jerusalem, coming down out of a process of transmission largely oral.

Or, possibly, the important distinction is not so much typological as simply chronological; i.e., the role of oral transmission may well have been more prominent in the case of an Amos or an Isaiah because they were farther removed from the cataclysmic events of the sixth century. Whatever the actual

circumstances of transmission of the various components of OT prophetism, it is essential to recognize the parallel role—at least as important; not necessarily less accurate, less authentic; and certainly, down to the sixth century, the more widely communicative—of oral formulation and transmission of the prophetic utterance. Even that which the prophet himself recorded with his own hand or directly through a disciple continued orally alive and was far more frequently communicated from tongue to ear than from scroll to eye; and certainly much (proportions here are and will remain absolutely indeterminable) of the great prophet's preaching and teaching achieved written form only after sustained oral life among the disciples of the prophets.

C. ***PRE-AMOS PROPHETISM.*** In distinguishing an essential prophetism present in ancient Israel long before the rise and development of the classical prophetic movement of the eighth and following centuries, we assume a core tradition of Yahwism maintained in an unbroken but fluid continuum from Moses to Malachi, and the expression of the centrally and characteristically prophetic bent of mind long in advance of and in necessary preparation for the emergence of classical prophetism. By this is meant precisely that the classical prophet, albeit proclaiming the new, was debtor, and certainly conscious debtor, to a core tradition already long established; also, that we shall of necessity, and with all propriety, define the essentially prophetic quality in pre-Amos Israel by the standards of classical prophetism. Further, no history, and perhaps least of all biblical history, may be appropriated in sterile chronological fashion: the past of a people, or any aspect of that people's past, must be interpreted in the light of what that past becomes. Not that we have or will necessarily ever have full knowledge of and total familiarity with the phenomenon of classical OT prophetism; but that the emergence of the form of prophetism may be addressed, apprehended, and assessed only against what we may know rationally and intuitively, of the matured phenomenon.

1. The essence of prophetism: Address to history. OT prophetism may always be—certainly it has been and is now—a subject of vigorous debate in interpretation, but on one point there is no possibility of dispute. The prophetic (be it invective or judgment, assurance or promise, cry of anguish or confession, symbolic act or relationship, or whatever), the characteristically prophetic phenomenon, always presupposes (consciously or unconsciously, made explicit or taken for granted, immediately relevant or only of indirect ultimate pertinence) the decisive impingement of Yahweh upon history. Where this sense of effective relationship of Yahweh to history is absent, prophetism is also absent. Where this is not only present but fundamentally present, where without this sense of the interrelatedness of history and deity the utterance or the situation or the personality or the relationship or whatever would be radically altered—there is prophetism.

2. Premonarchic "prophets." Down to the eighth century, the term "prophet" appears linked to the names of a considerable number of persons. Five prominent names from premonarchic times are associated by tradition with the title: Abraham (Gen. 20:7), Aaron (Exod. 7:1), Miriam and Deborah (both נביאה; Exod. 15:20; Judg. 4:4), and Moses (Deut. 18:18; 34:10; cf. Num. 11:26-29; 12:5-8). The term was hardly then in use—the opinion has already been hazarded above that it came to be applied to an individual prophet, in the classical sense of the term, sometime after Elijah's day; and it is strongly probable that these references reflect a time not earlier than the latter part of the ninth century. It is nevertheless interesting and instructive that these five are awarded the title. The patriarchal saga tends noticeably to impute to Abraham a sense of divinely ordained history, which in Israel could only be post-Exodus. A man who, as remembered in tradition, can in faith (Gen. 15:6) accept the divine promises detailed in Gen. 12:1-3, 7; a man who, in that same tradition, not only stands in awareness of Yahweh's radically purposive impingement on history but also understands himself in an absolutely central role therein—such a man profoundly deserves the ascription "prophet."

Aaron's case is less significant but also instructive: "And Yahweh said to Moses, 'See, I make you as God to Pharaoh; and Aaron your brother shall be your prophet' " (Exod. 7:1 [P]). Again the linking by later tradition of the name with the title presupposes the understanding of prophetism in fundamental terms of Yahweh's effective, effectual relationship to history; and it further conveys the definition of "prophet" as one who articulates the nature and meaning of the divine impingement from a remarkably intimate and knowledgeable position. This interpretation is confirmed and elaborated in Exod. 4:14 ff (E) when Yahweh responds with some heat to Moses' protest, only one of a series, that he is no speaker: "Is there not Aaron . . . ? I know that he can speak well . . . . And you shall speak to him and put the words in his mouth . . . . He shall speak for you to the people; and he shall be a mouth for you, and you shall be to him as God."

To Miriam tradition ascribes, correctly or incorrectly, the composition of the two lines which with brilliant economy convey the whole prophetic theology of the Exodus:

> Sing to Yahweh, for he has triumphed gloriously;
> The horse and his rider he has thrown into the sea.

Comparably and equally appropriately, tradition names Deborah a prophetess. If the song of Judg. 5 is hers, or if it conveys Deborah's essential interpretation of that victory, which is by no means impossible, then this is a case in which pragmatic history would confirm the relatively late bestowal of the title. Miriam and Deborah both are represented in celebration of what Yahweh is doing in concrete relationship to the historical existence of Israel.

In the case of Moses, it is significant that J does not anywhere apply the term "prophet" to him; and in this connection it is necessary to affirm the integrity of J as a documentary entity, the work—almost certainly written—of an individual, and dating probably from the tenth century. Adequate grounds never have existed for the repudiation of D and P as sources; and E continues to require symbolization, whether or not it ever existed originally as a separate and roughly parallel narrative source to J, or simply

that Hexateuchal material later than J and earlier than D or P.

The term "prophet" is not applied by J to Moses because it was not so employed in the Yahwist's day. But it is another matter in E, which reflects that century between 850 and 750 B.C. It is of the highest probability that the entire E source stems from early prophetic circles. And here all the E material about Moses bears the marks of E's fundamental conviction about him, stated in Deut. 34:10-12: "There has not arisen a prophet since in Israel like Moses, whom Yahweh knew face to face, none like him for all the signs and the wonders which Yahweh sent him to do in the land of Egypt . . . , and for all the mighty power and all the great and terrible deeds which Moses wrought in the sight of all Israel." The prophetism which Moses represents is of a special sort; he is the performing prophet, actively intervening in events. In this Moses towers above all other prophets (Num. 12:7-8). If mediation and the intercessory are here (Exod. 18:19; 32:11-13; Num. 12:11), these qualities are heightened, augmented, in the extreme: in order to save Israel, Moses is prepared to become anathema for the people (Exod. 32:32; cf. Rom. 9:3).

In the Deuteronomic perspective Moses is the model, the ideal, prophet. In Deut. 18:18, he reports what Yahweh has told him: "I will raise up for them a prophet like you from among their brethren; and I will put my words in his mouth, and he shall speak to them all that I command him." A change has occurred in the century or two separating E and D: in the seventh century, emphasis has passed from the prophet's deed to the prophet's word. But while the role of the prophet as reflected in the ascription of the title to Moses is altered, the central character of prophetism is the same—concern with, and the demonstration of, the critical impingement of divine life upon human history.

All this is retrojection. In identifying Moses as a prophet, E and D inform us not so much about Moses as about the best expectations for the prophet in, respectively, the early eighth, perhaps, and the middle seventh centuries. We may surmise if we will —indeed, it was on this note that the discussion began—that the historical Moses appropriately heads the list of OT prophets, as we have here essentially and broadly defined the function; and that E and D were not wrong in making the identification. But for our purposes the great question of the "historical Moses" must be considered of secondary importance. The real issue is to comprehend the true nature and function of prophetism in ancient Israel. The impression of Moses which is ours from the biblical narrative is already prophetically interpreted (even in the Yahwist; since we shall presently see the Yahwist himself as an early historical figure in the total movement of prophetism); this is a Moses who lived in prophetic experience in Israel, not as a figure of the past, but as the first of a line of prophets who in the present are continuing to bring Israel up from Egypt into existence under God.

The primary effort to recover an exclusively pragmatic historical past in ancient Israel is always doomed; and more than that, it is, as effort, in error. The time span between the given "present" and the appropriated past varies widely, from the relatively narrow gap between David and the account of II Sam. 9–20 plus I Kings 1–2 to the re-creation of Moses in the Deuteronomic corpus, and, still later, the Priestly writing. But we have in the OT no past which has not already been appropriated in the present, and so appropriated as to *be* in the present, to *live* in the present. If the "historical Moses" is irrecoverable for this reason, so is the "historical Exodus" —it *was* past, but it now *is*. The event lives in faith. It has been culticized. As such, it is, psychologically speaking, not so much (if at all) merely memorialized as re-experienced—created and lived again. Moses and the Exodus and all the orally recorded past in the OT are received by us in a form of utterly penetrating and consistent "isness"; and there exists, therefore, no way under heaven to apprehend the now totally silent and absent "wasness." Prophetism is to confront man with God-in-history—it is timelessly the bringing of Israel, always now, up from Egypt into existence under God! So *is* Moses a prophet.

3. The Yahwist as prophet. This is something else. As an entity so termed we predicate a man, an individual. We presume further to place him within rather narrow limits of time, considering the relative antiquity of his epoch—i.e., before the death of Solomon and, at the earliest, the final years of David's reign. We predicate, in addition, a historian; no mere chronicler of the past, but one who addresses and is overwhelmingly addressed by the present; who is impressed with what is for him the indelible meaning of the present; who comprehends this meaning as form, the existent form of Israel; and who, in order to articulate this form, spontaneously expands its meaning into a past already present and, in rare, involuntary bursts, into a future equally present but relatively imperceptible.

The Yahwist is known to us, not as one who like Moses is appropriated from the past, but as himself an appropriator of the past. His work, which constitutes the basic structure of the Hexateuch, is all we know of him; and it is a creative production whose creativity inheres, not in verbal, but in structural composition: by and large he reproduces what has already earlier been produced, and achieves by inspired selection, juxtaposition, and broadly conceived arrangement of varied existent stuff an artistically and theologically unified "history"—an astonishingly coherent and brilliant definition of the essential form of Israel apprehended in a continuum of meaning from the present to the past and back again. If the irrecoverable and undefinable but certainly historical thirteenth-century Moses was among the prophets, as his easy appropriation thereto would lead us to suspect, he is followed (and who is to say how many of these may in fact have come between?) by this nameless, unappropriated appropriator known to us, significantly, by the divine name ("the Yahwist," from "Yahweh"), this tenth-century proclaimer of Yahweh's critical impingement upon history, this prophetic delineator of Israel's form and meaning in terms of emergence from Egypt into existence under God.

Regarded for the prophetic quality, the Yahwist and, to hazard again the unhazardable, Moses the artifact are both confronted by an impingement of

the divine life upon history which ruthlessly frustrates any exclusive concentration upon the life of Israel. It is surely wrong to argue, as some do, that Hellenism created the idea of ecumenical history. The Greek language and Hellenistic culture provided the term and a specialized and formalized content; but ecumenicity inheres, if in quietness and subtlety, in the Decalogue and later receives its first emphatic description of meaning—long before the origin of the mere term—in the Yahwist's work, which proclaims in range from whisper to shout the central thesis of Yahweh's impingement on Israel, to be sure, but also —such is the historical form of Israel and its dependent meaning—upon the world, the whole household of God. The primeval history (the Yahwist's material in Gen. 2–11) and its structural relationship to the story of Abraham and all that follows proclaims the Yahwist's astonishingly sweeping ecumenical perspective.

His place in that tradition of a broadly defined Israelite prophetism, then, is sure and even essential; for acknowledgment of the Yahwist renders fully credible and the more comprehensible the roles in prophetism of Samuel, Nathan, and Elijah, as well as those of the classical prophets from Amos to Second Isaiah.

4. Prophets to kings. Six particularly important prophetic figures appear from the eleventh to the ninth centuries—Samuel, Nathan, Ahijah in the tenth century; Elijah, Micaiah, and Elisha in the ninth. To all of them the term "prophet" is applied.

a. Their relationship to contemporary institutional prophetism and to subsequent classical prophetism. The institution of prophetism as a group phenomenon in Israel apparently has its origin immediately before and during the creation of monarchy; and the first application of the term נביא, "prophet," was no doubt to members of such groups (I Sam. 10). If I Sam. 19:18-24 is authentic in suggesting Samuel's integral relationship to such a group, Samuel may have been contemporaneously known as a prophet. But this is uncertain. With rare exception he is represented as a singular figure, functioning in the fashion of a judge or priest or seer; and when a narrator tells us in I Sam. 9:9 that although Samuel was known as a seer then, we should now (in the narrator's somewhat later time) call him a prophet, we assume that Samuel was never primarily identified with the early Israelite institution of group prophecy and was not commonly, if at all, so termed by his contemporaries. This interpretation runs counter to the oftentimes prevailing view of a Samuel who is what he is predominantly as a result of his membership in the associated prophetism of the day. There can be no doubt, of course, that Samuel was in accord with the radical political implications of their fierce loyalty to Yahweh; that he was allied with them in setting up the monarchy; and that there was mutual influence between Samuel and the emerging prophetic institution. But the whole Samuel cannot thus be explained and/or dismissed.

David brought the institution into the court, on how large a scale we do not know. If Nathan also consistently appears in a purely singular role, his official status and title, prophet, is derived from a prophetism thus institutionalized and perhaps in the court initially only in the person of Nathan. The regularity and varying contexts of the designation "Nathan the prophet" suggest an official title, as does the repeated coupling of the phrase with other officially titled persons in I Kings 1.

Ahijah (called a prophet in I Kings 11:29; 14:2, 18) was commonly known as Ahijah the Shilonite (I Kings 11:29; 12:15; II Chr. 9:29; 10:15; cf. also I Kings 14:4). We do not question the appropriateness of the term as applied to him, but, on the example of Samuel and Nathan, we suspect that if he was called a prophet by his contemporaries, it was, again, because of regularized status as a professional, in this case presumably membership in an association of prophets at or near Shiloh.

In the comparable case of Elijah, the evidence is strongly against his having been in his own day commonly termed a prophet, and we suspect the same of Ahijah. Neither prophet, it seems, was identified with any form of professional prophetic organization, and neither was consequently so termed. In the Elijah texts (I Kings 17–19; 21; II Kings 1–2) the name Elijah occurs alone except in I Kings 17:1; 21:17 (vs. 28 is certainly secondary); II Kings 1:3, 8 (which is also from later narrators than the original, basic story of I Kings 17–19; 21). In all these it is "Elijah the Tishbite," as in the preceding century it was "Ahijah the Shilonite." In I Kings 18:36 only, "Elijah the prophet" occurs, and with most commentators "the prophet" should be omitted. In I Kings 18:22: "Elijah said to the people, 'I, even I only, am left a prophet of Yahweh; but Baal's prophets are four hundred and fifty men.' " In I Kings 19:14 (also vs. 10, but by error from vs. 14) Elijah bitterly protests that "the people of Israel have . . . slain thy prophets with the sword; and I, even I only, am left; and they seek my life, to take it away." The narrator understands that Elijah assumes professional status when so precisely cast in opposition to the group-functioning prophets of Baal; and that sympathetic identification is appropriate when the banded Yahweh prophets are under harassment from the vigorous proponents of Baal. The statement in the commission to Elijah that "Elisha . . . you shall anoint to be prophet in your place" (I Kings 19:16) is itself, and in full context, saturated with problems and certainly late.

The epoch which Elijah shared with Ahab and Jezebel, the second quarter of the ninth century, had its prophets, so designated, in profusion, adherents both of Baal and of Yahweh (I Kings 18; 20; 22), and in professional group association both with sanctuary and with court. The term "prophet" probably referred to these in its common and primary connotation and was therefore only later applied to Elijah in an age when the definition of the word had been modified and broadened to include the singular, classical prophet.

In the case of two other ninth-century prophets, Micaiah (I Kings 22) and Elisha (II Kings 2–9; 13), there is no reason to doubt that they were so designated by their contemporaries, since both appear—if in exceptional roles—in association with group prophetism: Micaiah with Ahab's official court prophets, and Elisha with the probably cult-related "sons of the prophets" at Bethel (II Kings 2:3),

Jericho (II Kings 2:5), and Gilgal (II Kings 4:38; cf. 6:1). These "sons of the prophets" (first appearing in Elijah's day in I Kings 20:35) are in direct descent from the phenomenon of the "band of prophets" encountered more than a century earlier in the Saul narratives (I Sam. 10:5, 10) and are no doubt closely related to varied forms of the practice of group prophetism occurring without interruption between.

Samuel was Samuel, or the Seer; Ahijah was probably simply Ahijah, or the Shilonite; and Elijah was Elijah, or the Tishbite—prophets in truth they were, as subsequently seen from the vantage point of the matured form of classical prophetism, but hardly so conventionally identified in their own day. Nathan, Micaiah, and Elisha on the other hand—certainly also prophets in the later sense—were contemporaneously known as prophets, since to be a prophet was to exist in professional association and relationship.

It is only so that the categorical protest of an Amos can be understood. Amos in the middle of the eighth century reflects the common definition of "prophet" as denoting professional association, down to this time deemed necessarily neither bad nor good. Group prophetism has thus far been both of Yahweh and of Baal; and as of Yahweh, neutral as associated with Saul, "good" as associated with Obadiah (I Kings 18:13; cf. 19:14) and Elisha, and on the whole "bad" as contrasted with one of their own number, Micaiah, in relationship to Ahab's court (I Kings 22). "Amaziah said to Amos, 'O seer, go, flee away to the land of Judah, and eat bread there, and prophesy there; but never again prophesy at Bethel. . . .' Then Amos answered Amaziah, לא־נביא אנכי ולא בן־נביא אנכי [i.e., 'I am not a prophet, and I am not a son-of-a-prophet']." It is, of course, possible to translate "was" rather than "am." Grammatically it may even be equally possible, as some have insisted. But contextually, it does not appear to be at all natural, despite valiant efforts to make it appear so. Amos denies, not necessarily in heat, and certainly not in necessary repudiation of the institution of prophetism, that he himself represents what Amaziah has just imputed to him. He has had no contact with the professional, associated prophets: "Yahweh took me from following the flock, and Yahweh said to me, 'Go, prophesy to my people Israel' " (Amos 7:15). His action here at Bethel is inspired out of this personal confrontation with Yahweh, not in any group apprehension. Not that institutional prophetism may not and does not have this valid, authentic apprehension; nor that Amos is unwilling to be cast in a prophetic role (Amos 3:3-8 indicates the contrary!); but simply and exclusively that the group phenomenon happens not to be his origin, as charged by Amaziah.

Evidently a change in the content of the term "prophet" occurs with Amos, and men of prophetic temperament and function but without professional affiliation who preceded him came only after him to be called by this term. With Amos, and no doubt in retrospective regard of earlier prophets similarly confronted by the "word of Yahweh" (especially Samuel, Nathan, Elijah, and Micaiah), the term and office of "prophet" was expanded to include him who without benefit of group stimulation heard the Word of Yahweh and who, knowing that the Lord Yahweh had spoken, could but prophesy (see again Amos 3:8).

b. Their relationship to king and Word. If these remarkable prophetic figures from the tenth and ninth centuries instruct us in the historical delimitation of the term "prophet," they inform us in other significant ways of the emergent form of classical prophetism. Although they differ radically from one another and appear in widely varied contexts, in two regards these early prophets bear the sure evidence of a prophetic continuum from premonarchic times and possibly even from the age of Moses to the decay and collapse of monarchy in Israel and on into the days of Jewish reconstruction. These prophets from Samuel to Elisha brilliantly testify to their place in the roster of prophets in their address to history, their passionate conviction that Yahweh's existence impinges with radical effect upon the political institution. Samuel, Nathan, Ahijah, Elijah, Micaiah, and Elisha—all, without exception—are intimately related to the life of the state, are crucially involved in the most decisive crises of history, and are in psychologically naked contact with the king—that symbol in Israel embracing the absolute totality of the being of a people.

This is the first regard. The second consistently prophetic quality appearing in this pre-Amos succession of prophets and setting them decisively apart from the prevailing institutionalized forms of prophetism is their relationship and responsibility to the דבר יהוה, the Word of Yahweh, their response to it and proclamation of it. In all these (it is weakest, to be sure, in Elisha) the address to history takes its content from the Word, and the divine impingement upon history is made articulate and interpreted by the same Word. The Word may not yet be as clearly and intentionally defined as the entity, the effective, effecting, efficacious singularity which it is articulately apprehended to be by the sixth century:

> For as the rain and the snow come down from heaven,
> and return not thither but water the earth,
> making it bring forth and sprout,
> giving seed to the sower and bread to the eater,
> so shall my word be that goes forth from my mouth;
> it shall not return to me empty,
> but it shall accomplish that which I purpose,
> and prosper in the thing for which I sent it
> (Isa. 55:10-11).

But at the same time one must insist that this definition of the concept of the Word is possible only as the result of an extended period during which it was essentially, if increasingly, so understood. The first OT use of the דבר יהוה, the "Word of Yahweh," as an effecting instrumental entity appears in Gen. 15:1, 4, where, in all probability, the E material is first employed. More pointedly, this concept of the דבר יהוה is expressed in terms strikingly anticipatory of Second Isaiah, and in present form also from the E material, in the Balaam oracle of Num. 23:19:

> God is not man, that he should lie,
> or a son of man, that he should repent.
> Has he said, and will he not do it?
> Or has he spoken, and will he not fulfil it?

The sense of the divine word as accomplishing its own content is further emphasized in the next verse (unless one takes the LXX reading in part *b*, which has "Balaam," not "Yahweh," as subject; see *IB*, II, 257):

Behold, I received a command to bless:
he has blessed, and I cannot revoke it.

Both these passages seem to reflect Israelite prophetism no later than the ninth century; and it is not at all impossible that the Balaam oracle rests upon a substantial original form even several centuries earlier. In any case, there is no justifiable reason for questioning the central function of the Word in the succession of prophets beginning with Samuel and Nathan.

Samuel appears in the narratives which bridge the epoch of the judges and the time of the established monarchy. The present narrative structure in the books of Samuel appears to be the result of combining multiple and, at points, radically differing strata of tradition (see *IB,* II, 855-75); but despite striking ambiguities in the portrayal of Samuel, the stories about him present in two crucial regards a unified impression: he played the most instrumental single role in the ascendancy and demise of Saul as first king in Israel; and, more than any other man, Samuel bears responsibility for the inauguration of David and the Davidic dynasty. When Moses is interpreted as a performing prophet—as a prophet whose primary medium is not utterance, but action—we wonder if the typological characterization is not, at least in part, dependent upon the figure of Samuel. In any case, even when allowances are made for heightening and expansion inherent in the nature of the tradition, even with the admission of an ultimately irrecoverable "photographic" image, Samuel and Moses are in a unique class as performers on behalf of Yahweh. One stands in awe when regarding what must have been their extreme output of energy; the one is instrumental in the creation of a people, a nation; the other in the establishment of a political state.

Like Moses, Samuel is an appropriated figure. His revolutionary historical performance is also recorded for its "isness," the living effects of Samuel's existence in the continuing present. No doubt at all that earlier and later strata of tradition are now combined in the single account and that one traditional opinion assesses present monarchy as in divine intent beneficent, another as negative divine judgment already taking effect: it is unmistakable that this conflict in interpretation has been imposed upon the traditional portrayal of Samuel. Equally clearly—it could not have been otherwise—the image of a prophetic form emergent in the century or two following Samuel has inevitably been retrojected upon Samuel in the course of a continuingly fluid process of transmission (especially conspicuous in I Sam. 1-3; 7). It should nevertheless be maintained (and for Moses as well) that while the image is in no sense photographic, while any actual and precise "vital statistics" are irredeemable, a portrait remains. The artist, tradition, has quite properly been involved in the creation of image, exercising an appropriate interpretive function—but tradition has produced the portrait working originally from a life model, from a living presence.

It is tradition, no doubt, that ascribes to the person of Samuel a relationship to "the Word of Yahweh" as that Word was only subsequently emergent (e.g., I Sam. 1:23; 3:1, 7, 21). But this is to use a more refined and deeply connotative language to describe a phenomenon pragmatically existent in Samuel and, in tradition's nature and course, indescribable in any other terms. There can be no doubt that Samuel was Samuel because of the Word of Yahweh and that the interpretive artistry of tradition has at areas in the portrait coincided with what would be the photograph, as, e.g., when Samuel says to Saul: "Tell the servant to pass on before us, and when he has passed on stop here yourself for a while, that I may make known to you the word of God [דבר אלהים]" (I Sam. 9:27). We further take tradition's interpretation to be absolutely sound—i.e., we take the portrait as essentially true—when it ascribes to Samuel that which in essence if not in form, in content if not in vocabulary (but see I Sam. 15:10), could have been revealed to the prophet only through the medium of the Word:

Has Yahweh as great delight in burnt offerings . . .
as in obeying the voice of Yahweh?
Behold, to obey is better than sacrifice,
and to hearken than the fat of rams
(I Sam. 15:22).

These words are thrown at Israel's first king, Saul, who becomes King Saul at the instigation of the same Word through the same prophet. The prophet continues, prophet to king, defining another decisive turning point of history, again in content if not in vocabulary revealed in the Word-to-the-prophet:

Because you have rejected the word of Yahweh,
he has also rejected you from being king
(I Sam. 15:23).

If we have doubts, then, of the precise vocabulary, or if we question the use of this stylized phrase "the Word of Yahweh" with this specific implicit content before, at the earliest, the time of Elijah (in connection with whom, we suspect, the heretofore relatively informal phrase became formalized), we do not question the functioning of the Word in the life and time of Samuel, and his essential awareness of its entity and nature. In Samuel the effective juxtaposition of the life of Yahweh upon the course of history begins to come to human consciousness and articulation in the form of the Word of Yahweh to the prophet.

Nathan appears in Samuel and Kings in only three scenes, but each time in immediate relationship to King David. In II Sam. 7 he responds to the King's expressed desire to build an appropriate "house" for the ark of God (cf. I Chr. 17, the only one of the three scenes reproduced by the Chronicler; see also the Chronicler's reference to the "book of Nathan" in I Chr. 29:29; II Chr. 9:29). In II Sam. 12 he confronts David with the King's heinous performance in the Bathsheba affair, and pronounces Yahweh's judgment on king and kingdom. Finally, Nathan appears in that crowded scene of David's last recorded official day, I Kings 1, to play a decisive role in Solomon's (as opposed to Adonijah's) accession.

In the present form of the narrative the Word of Yahweh is prominently featured in the first two scenes, no doubt bearing, as in the case of the Samuel stories, the sense of a definition only later fully crystallized. The Word is equally crucial in the third scene by its very absence. In the first scene, the Word countermands the first affirmative response of Nathan to David (II Sam. 7:4 ff). It is entirely at

the inspiration and direction of the Word that the prophet lays devastatingly bare David's double violation of the Decalogue; and it is the content of the Word which he then pronounces in judgment ("Thus says Yahweh!" II Sam. 12:7, 11). Where the Word is so indispensably cast in the first two scenes, it can be no accident of the text that there is not even a suggestion of Nathan's acting as the instrument of the Word in the third scene: as in the opening of scene 1 (II Sam. 7:1-3), the recorders of the drama, at least, understand here a Nathan again acting on his own. In I Kings 1–2 (a continuation of that incomparable narrative of II Sam. 9–20) the failure to affirm Solomon's accession by the Word must constitute at least an editorial indictment of Solomon and the conspiracy which made him king. The intentional silence with reference to the Word testifies further to the sharpening entity of the Word in the tenth century (II Sam. 9–20; I Kings 1–2 can hardly be later).

Still in the tenth century, it is king and Word brought into radically effective concord through the prophetic function of Ahijah the Shilonite (I Kings 11:29 ff; 12:15). Another of OT history's most decisive and consequential events, the secession of the N tribes and the establishment of two political states in the place of one, is instigated by the Word through the prophet Ahijah to the king-to-be, Jeroboam I. *Ca.* a century later, another king-to-be, this time Jehu, is confronted by the Word (II Kings 9:6). Elisha and his "young man, the prophet," act upon and pronounce what is represented as the Word with, again, radically effective results. In view of Jehu's subsequent reprehensible behavior and classical prophetism's ultimate repudiation of any true relationship between Jehu and the Word (Hos. 1:4), one would judge either that this word was not the Word or that Jehu viciously appropriated the divine Word in Elisha to his own brutal ambitions. The first alternative is perhaps editorially entertained: Elisha is, like Nathan in II Sam. 7:1-3, represented as acting on his own in dispatching one of the prophets to Jehu (II Kings 9:1).

The imposition of Word upon king is sharply attested again in that brilliant scene immediately preceding the death of Ahab in the middle of the ninth century (I Kings 22). The Word through Micaiah works its radical historical effects, and another prophet is instrumental in the efficacious juxtaposition of divine life and will upon human events.

King and Word are brought into most moving conflict in the collision of Ahab and Elijah earlier in the second quarter of the ninth century. The Word to David through Nathan involved the dual indictment for adultery and murder; to Ahab through Elijah, it is murder and theft: "Have you killed, and also taken possession?" But in Elijah the Word becomes more consciously an instrumental entity; and for the first time (in the narratives of I Kings 17–19; 21) we suspect a contemporaneous apprehension of the Word by a prophet that is in substance the Word of classical prophetism.

Note first the relative frequency and consistency of the term "the Word" (of Yahweh) in the Elijah narratives: I Kings 17:2, 5, 8, 16, 24; 18:1 (31, 36, secondary?); 19:9 (the notice is, of course, premature, copied from 19:14, where, however, we should certainly read, not: "He said," but, as in 19:9: "The Word of Yahweh came"); 21:17 (28 secondary?). Note also that, as in the records of later classical prophetism, the Word here conveys the sense of a formula, a known formula, the content and nature and potency of which are widely familiar now. Note further that the Word is associated not only with the king but with the people as well. It creates (I Kings 17) and terminates (ch. 18) the drought, a judgment upon people as well as king. It is surely instrumental in the prophet's indictment of the Carmel assembly (I Kings 18:20-21): "How long will you go limping with two different opinions?" (cf. Elijah's lament in 19:14 that the people of Israel have forsaken Yahweh). And it is, of course, the Word which sends the prophet back from Horeb (I Kings 19:15 ff), not in the role of palace prophet to the king and queen, but to minister again to the nation, in the good company of multitudes still faithful to Yahweh.

In the manner of the Word to Samuel (I Sam. 15) and Nathan (II Sam. 12), the instrumental Word is applied through Elijah in judgment of the king (I Kings 19:17 ff). Elijah belongs to the company of preclassical prophets from Samuel to Elisha. But at the same time and more than any other in the company, he anticipates in two regards that succession of prophets beginning with Amos to which he is in a peculiar way the forerunner. Elijah alone of all prophets properly belongs to both groups. In Elijah the Word has attained substantially full prophetic definition and form. Through him the Word finds its mature prophetic expression and application, not merely or even principally to the king, but to the nation, the whole people of the covenant. Yahweh's Word impinges now decisively upon the history of Israel with such force as implicitly to involve all history, or upon the royal house with such intensity as to judge all men. Jesus condenses the OT prophetic ethic (quoting from Deuteronomy and Leviticus) when he declares that "all the law and the prophets" depend upon love of God and love of neighbor (Matt. 22:35-40; cf. Mark 12:28-31). But in reality he reaches ultimately back to Elijah, in whom for the first time in biblical record these two propositions find impassioned, if implicit, expression in a single life. The divine life confronts, is involved in, decisively qualifies, the life of history. To repudiate it ("The people of Israel have forsaken thy covenant"), to delimit it or run in the face of it ("Have you killed, and also taken possession?"), to attempt to compromise with it ("How long will you go limping with two different opinions?"), is not mere folly, but unqualified disaster, the loss of meaning and fulfilment, the imposition of chaos and death. In the passionate intensity of Elijah all men and all history are implicitly embraced. It remains the task and function of classical prophetism to make concrete the decisive involvement of Yahweh in existence.

D. ***THE CONTENT OF FAITH OF CLASSICAL PROPHETISM.*** In that succession of prophets beginning about a century after Elijah there is that which is distinctly new. There is the new that is external, the emergence out of pragmatic history, out of the actual course of real events, of that which earlier was not, and could not have been anticipated. This is the new of the new page in history, the new

of the new epoch—created out of the old, surely, but materializing as one of an inconceivably broad range of inconceivable possibilities. In Israel in the eighth century it was anew charged with tragedy.

There is, of course, also the internal new, but inseparable from the external. For the classical prophets, Israel's historical existence, first brought into being out of Egypt, is seen now to be turning back again into that same essential abyss, that same chaos, that same unendurable meaninglessness. For those of the prophetic disposition from Moses to Elijah and Elisha, Egypt lay only behind. Now, for that same prophetic intuition, it was both before and behind. Out of an Egyptian existence formless and void Yahweh had created for Israel a life relatively formed and ordered; and, at least in the popular mind, this definition of an existence in reality sometimes highly tenuous was nevertheless justification enough, meaning enough, for historical consciousness. In Israel's core of Yahweh loyalists the meaning of the present was, of course, never so superficially determined, but was rather appraised in terms of Yahweh's participation in Israel's past, his impingement upon the present, and his ultimate purpose in the future. But until the eighth century the future, while uncertain and often highly insecure, could be seen as in continuum with the present, as holding in prospect essentially more of the same. In such a state of suspended existence, as it were, the question of meaning out of the past and purpose in the future was no doubt kept alive in the preclassical circles of prophetism; but that same question was impossible of meaningful imposition upon the popular mind, and even in prophetic thought it was apparently easily capable of containment. Of the three promises to Abraham—nation, land, and universal blessing (Gen. 12:1-3, 7)—the third clearly proved to be the most difficult to sustain in faith.

The new, both of the external history and of the related internal prophetic mind of classical prophetism, was initially produced, beginning in the middle of the eighth century, simply by the aggressive ambition of Assyria, backed, for the first time in several centuries, with leadership and power to implement it. Tiglath-pileser III assumed the throne of Assyria in 745 B.C., as the first of an uninterrupted series of great soldiers on the throne of Assyria. He and his immediate successors quickly brought the Neo-Assyrian Empire to the peak of its power and created a political-military institution which for the first time united almost the whole of the ancient Orient under Assyrian rule. Indeed, within a single decade of the accession of Tiglath-pileser all the oriental world that he wanted was clearly his, either in fact or in potential. By 721, when the N kingdom of Israel fell to Assyria, any hopes of political existence independent of Assyria were simply fatuous. From Tiglath-pileser's days (745-727), through the successive reigns of Shalmaneser V (727-722), Sargon II (to 705), Sennacherib (to 691), and Esarhaddon (to 669), Assyria's position of world domination was beyond serious challenge.

If the succeeding reign of Ashurbanipal (669-632)—unlike his predecessors a patron, not of the art of war, but of literature—was the beginning of the undoing of Assyrian world rule; if Assyria succumbed to the vicious powers of the Chaldeans out of Babylon, the Medes out of the mountains of Iran, and the bands of Umman-manda (apparently Scythians) from the steppes of Russia; if the long death agony of Assyria was finally ended in decisive battles of 612 and 610 B.C.—this provided at best only a brief respite, not any fundamental departure, from surviving Israel's (Judah's) untenable position. For now Assyria's position in the world was simply appropriated by Neo-Babylonian power. The political center of the ancient Near East was moved from Nineveh to Babylon. The sentence of political death—that persistent, profoundly unpopular theme in the proclamation of the classical prophets, with its concomitant anguished promise of destruction and exile, of the chaos of the formless and the meaningless, of symbolic descent again into Egypt—was now imposed in the first two decades of the sixth century by Nebuchadnezzar. The cycle was complete. Israel once more became without form and void. She was once more swallowed up in the chaos of captivity. Having gone from uncreation to creation, she was now relegated again to the uncreated.

Classical prophetism rises, then, first in the consciousness that Israel now stands between Egypts, that what she was she will be again. Heretofore in Israelite Yahwism the meaning of the present was taken primarily from the understanding and interpretation of the past, as, e.g., in the ancient cultic confession of faith recorded in Deuteronomy 6:20 ff, and employed (as the here somewhat free translation of the RSV properly renders: "What is the *meaning* of the testimonies . . . ?" [vs. 20]) precisely to answer the question of the meaning of the present: "We were Pharaoh's slaves in Egypt; and the LORD brought us out of Egypt with a mighty hand . . . , that he might bring us in and give us the land which he swore to give to our fathers." The present relatively ordered existence is the creation of God out of former disorder and is to be understood and accepted as his creative gift in fulfilment of his free promise to the patriarchs. The confession addresses the future, if at all, only implicitly: in quality the future is of a piece with the present; "now" embraces tomorrow and tomorrow—in all of which appropriate response to the confessional knowledge of meaning in history is faithful participation in the Yahweh cultus. Such is the sense of Deut. 6:24 (cf. 26:10, the similarly interpretive conclusion of a closely comparable cultic confession in 26:5-9): "The Lord commanded us to do all these statutes, to fear the LORD our God, for our good always, that he might preserve us alive, as at this day."

The preclassical prophet understands the past and present chiefly in terms of Yahweh's positive action on behalf of Israel. He addresses the future, if at all, in the confident expectation that it will be in predictable conformity with the past. The prophets from Amos on are forced to reinterpret the meaning of the present in terms of an immediate future to be charged with tragedy—but a tragedy no less the result of divine action than the great formative event of redemption from Egypt. For the classical prophet the two-member scheme, Out of Egypt–Into This Land, has now become a three-member scheme, Out of Egypt–Into This Land–Into Egypt Again.

Yahweh, who redeemed the nation for his own purposes, will now for the same essential purposes commit the nation to its preredeemed status of chaos and meaninglessness. Why? What lies beyond the second Egypt? Is there a fourth and final member to be added to the three-member scheme? What does this mean? How does this qualify the nature of existence under God in the very present time? These were questions consciously and unconsciously addressed by the classical prophets, questions the answers to which are conditioned and shaped by the great prophets' understanding of a number of concepts, notably: (*a*) Word and symbol, (*b*) election and covenant, (*c*) rebellion and (*d*) judgment, (*e*) compassion and (*f*) redemption, and finally, (*g*) consummation. Five of these appear in remarkably eloquent and integrated form in the eleventh chapter of Hosea (which, whether from the prophet Hosea or not, is a fully characteristic expression of the mind and faith of classical prophetism). The first, Word and symbol, is everywhere prominent in the prophetic canon. The seventh and last appears most prominently in the collection of prophetic utterances now under the name of Isaiah, and especially in the block of chapters conventionally assigned to the so-called Second Isaiah, chs. 40–55.

1. "Thus says Yahweh": Word and symbol. For the nature and significance of the Word of Yahweh in its role in pre-Amos prophetism, *see* § C4*b above*. The concept obviously underlying the use of the Word in the Elijah narratives suggests that by the eighth century the prophetic understanding of the Word was matured and substantially established. As we have seen, it was regarded as an entity containing and releasing divine power to accomplish itself—i.e., to perform or bring to pass its content. The Word of Yahweh was, emphatically, dynamic.

In the classical prophets it appears in a new relationship with the prophet himself, and the prophet's call, his sense of vocational commitment. To a greater or lesser degree in all the great classical prophets one observes the phenomenon of the psychology of captivity, a self-consciousness in vocation characterized by feelings of having been overpowered by the Word of Yahweh. Amos 3:8 has been cited:

> The lion has roared;
> who will not fear?
> The Lord GOD [אדני יהוה] has spoken;
> who can but prophesy?

It is the same instrumental Word, exercising the power of seizure over the same prophet, in 7:15: "The LORD took me from following the flock, and the LORD said to me, 'Go, prophesy to my people Israel.' "

The role of the Word of Yahweh is essentially the same in the remarkable call narratives of Isaiah (ch. 6), Jeremiah (ch. 1), and Ezekiel (chs. 1–2); but the sense of professional bondage to the Word is everywhere apparent in the prophetic canon and appears most eloquently and movingly in the so-called Confessions of Jeremiah—not always explicitly, to be sure, but quite unmistakably. In one of the most intense of these outbursts, the sharp entity of the Word of Yahweh and its commanding power over the prophet is thus expressed:

> The word of Yahweh has become for me
> a reproach and derision all day long.
> If I say, "I will not mention him,
> or speak any more in his name,"
> there is in my heart as it were a burning fire
> shut up in my bones,
> and I am weary with holding it in,
> and I cannot (Jer. 20:8*b*-9).

The prophetic sense of the entity and power of the Word explains in great part the concentrated emotional character of the prophets and their sometimes deep anguish in proclaiming the negative message, the pronouncement of doom upon the life of the political state. If the prophets suffer in their role, it is not merely the result of a natural distaste for uttering what is unpleasant to their hearers. Rather, the prophetic anguish is the product of the prophets' inevitable sense of participation in and consequently responsibility for the negative Word. To speak in the name of Yahweh and under the formula "Thus says Yahweh!" of the approaching catastrophe is, in the prophetic psychology, to take a positive hand in the destructive event—to release, in the very proclamation of doom, the power to produce the debacle. If this negative Word uttered by the prophet always carries within itself a certain aspect of contingency—destruction is predicated on the present faithless and rebellious structure of the total life of the covenant people—so much more intense, desperate, anguished, is the prophetic call to repentance.

What is true of the Word is true also of the symbolic act of the prophet. Indeed, the devices of symbolism employed by the prophet—e.g., Hosea's and Isaiah's symbolic naming of children (Hos. 1; Isa. 7–8), and the singular and even sometimes weird dramatizations of Jeremiah and even more Ezekiel—are simply graphic, pictorial extensions of the Word, possessing both for the prophet and for his observer-hearer a quality of realism probably unfathomable psychologically to the Western mind. We have said that when the prophet speaks that which he represents to be the Word of God, it is to him emphatically the Word of God and absolutely no kind of courteous condescension to conventional piety, no variety of innocent lie thoroughly stylized to mean in fact the word of man. In the prophetic psyche this Word is initiated by God. It is impellingly dynamic. It breaks through human life, human time, and into human history. And in doing so, it possesses and releases its own power, with or without the consent and/or approval of the human instrument through whom the Word is proclaimed. Observe in the OT that even the word of a man, solemnly spoken under certain more or less formalized circumstances—e.g., in curse or blessing (cf. the Balaam episodes [Num. 22–25]; the Blessing of Isaac [Gen. 27])—cannot be retracted or set aside: once spoken, the power inhering even in the human word is released beyond recall. How much more so with the Word of Yahweh in the mouth of the prophet!

The symbolic act or performance of the prophet was regarded in ancient Israel and especially in the prophets' own understanding as, then, an even more intense and efficacious phenomenon than the spoken Word. These sometimes strange and always dramatic actions of the prophets, charged with dire symbolic

meaning, are never merely symbols. The dramatized Word, even more than the uttered Word, is deemed to be charged with the power of performance.

Now if, in addition to all this, we recall another (from our point of view) psychological phenomenon in ancient Israel, the normative sense of corporate personality among the people of Israel (and the East in general, as over against the West), we are in a position to understand as fully as is possible the personality of a Jeremiah or an Ezekiel. In Word and symbol they become in a sense executioners acting at the command, with the authority, and under the power of Yahweh. But in their sense of corporate personality, their understanding of community life in terms of the one identified with the many and the many caught up and embodied in the one, these prophets become in effect their own executioners: In the destructive Word and symbol directed at the people they are themselves, in profoundly realistic psychological meaning, destroyed!

From this sense, none of the great classical prophets is totally free. We shall look presently in another connection at Amos, sometimes misinterpreted as one who objectifies the nation, psychologically extricating himself therefrom. Ezekiel, too, has been not uncommonly charged with the successful suppression of any instincts of a participating, identifying compassion. That Ezekiel appears in pronounced contrast with Jeremiah in this respect is certain; but it may well be that we understand Ezekiel only when we recognize that the intensity and frequency of his destructive symbolisms must have made a self-induced and deliberate callousness imperative. Not that Ezekiel succeeded in this endeavor with consistency, as witness, e.g., 9:8; 11:13; 36:25-32.

The prophetic understanding of the efficacious, dynamic Word and symbol may be and probably is an item of survival out of primitive magic. Much in the OT is derived out of the pagan, the crude, the superstitious, and refined and re-created in the Yahweh faith of Israel. If the prophetic use of symbol represents a survival of sympathetic—i.e., mimetic—magic, the transformation is striking. Magic is coercive of the unseen powers. But the prophet is overwhelmed by the sense of Yahweh's coerciveness; and the prophetic symbol, so far from aiming at control of the deity, is inspired, performed, and interpreted at the behest of the Word of Yahweh and to bring to pass the judgment and will of Yahweh in Israel and the world.

2. "Out of Egypt I called my son": Election and covenant. The notion of Israel as a chosen people elected by Yahweh for special reasons and for a particular purpose is by no means peculiar to the classical prophets. ELECTION is primarily expressed in the OT by the verb בחר, "to choose"—such is the sense of the term—one object freely from among multiple possibilities; but the idea of election is positively conveyed in varying qualities in terms of the call (קרא), of belonging (קנה), of separation (הבדיל), of setting apart (הקדיש), and of knowing (ידע).

The actual term for COVENANT, ברית, appears rarely if at all in the classical, pre-exilic prophets (since the few occurrences of the term have all been regarded as unauthentic). The proposal that the term itself is essentially of postexilic origin in Israel is hardly tenable. It may be that the word "covenant" was deliberately avoided by the great prophets because of its widespread popular misunderstanding—that interpretation which made of the concept of covenant the food of a narrow, prideful, exclusive nationalism. But if the term is rare or even nonexistent in the great classical prophets, the notion of covenant is unmistakably and persistently present: covenant as the working extension and implementation of election, the formal and continual application of what is implicit in election—namely, the concrete responsibilities assumed by the Elector and the obligations of the electee freely undertaken in response. Election with reference to Israel is perpetuated and realized in covenant. Covenant is in the OT the working contract between unequal parties, instigated, initiated, by the senior partner in the act of election. We are justified, then, in speaking of election and covenant in the manner "election/covenant."

This condition of having been chosen and of continuing to exist in a state of chosenness is, of course, given expression in the Prophets in a variety of analogies. The relationship of Yahweh to Israel is expressed in the image of father/son (e.g., in addition to Hos. 11; Isa. 1:2), owner/vineyard (Isa. 5; 27), shepherd/flock (especially Isa. 40:11), potter/clay (so Jer. 18; see also Isa. 29:16; 64:8—H 64:7), and of course predominantly, husband/wife (Isa. 50:1; 54:5; 62:4-5; Jer. 2:1-7; 3:11-22; Ezek. 16; 23; Hosea, as the fundamental thesis).

In classical prophetism the interpretation of Israel's existence is everywhere dependent upon the concept of election/covenant. The meaning of Israel's historical life, past, present, and future, is prophetically apprehended and proclaimed upon what is deemed to be this absolutely fundamental reality. If the prophets speak, as they do, with fierce eloquence on behalf of justice and righteousness in the social and economic life of their people, it represents no general, abstract morality, no goodness-for-goodness'-sake ideology, but specifically and pointedly an election/covenant ethic. The sense of the prophetic ethic and morality is always something like this: You shall refrain from this practice, or you shall do thus-and-so, because I am Yahweh who brought you up out of Egypt (election), and you are a people voluntarily committed in return to the performance of my just and righteous will (covenant). The motivation of the prophetic ethic is election. The nature of that ethic is determined by the covenant.

So it is, emphatically, in what now follows under the headings rebellion, judgment, compassion, redemption, consummation. As the prophet addresses himself with intense concentration to his own generation in his own land, he indicts on behalf of the Deity; proclaims God's negative response; identifies his own and God's anguish, and effects its resolution with the declaration of the love of God for Israel; moves to the proclamation of the nation's fulfilment and finally beyond to her completion of universal mission—in the immutable election/covenant context.

3. "They went from me": Rebellion. It is important to observe that the prophetic castigation embraces, if apparently sometimes incidentally, not simply Israelite man, but man. One thinks in this connection, not only of direct indictment in prophetic

discourse (e.g., Isa. 10:5 ff; Amos 1–2), but also of the collection and arrangement of oracles against foreign nations going on in prophetic circles and resulting in such blocks of material in the prophetic canon as Isa. 13–23; Jer. 46–51; Ezek. 25–32. In the prophetic faith, if not always in specific articulation, all men and all nations are in rebellion against God, denying in multiple ways the appropriate terms of human existence under the rule of the actively righteous Yahweh.

But for the prophet, Israel stands immovable, inextricable, as the very hub of human existence and as the precise nucleus of the vast area of God's concern. She is the electee of God, the covenanter with him. She, and in a profound sense she only, is the wife; or the clay; or the flock; or the vineyard; or the son of God the husband, potter, shepherd, landowner, or father. Prophetism as a whole cannot mean to exclude non-Israelites from the same essential relationships:

"Are you not like the Ethiopians to me,
O people of Israel?" says the LORD.
"Did I not bring up Israel from the land of Egypt,
and the Philistines from Caphtor and the Syrians from Kir?"
(Amos 9:7.)

"In that day Israel will be the third with Egypt and Assyria, a blessing in the midst of the earth, whom the LORD of hosts has blessed, saying, 'Blessed be Egypt my people, and Assyria the work of my hands, and Israel my heritage.'" (Isa. 19:24—perhaps, and probably, not from Isaiah of Jerusalem; perhaps and probably relatively late; but in any case, of the very essence of the prophetic.)

But the prophet does assume a different quality in the God-Israel relationship from the God-nations relationship. There is an intensity and intimacy (and ultimately a purpose and mission) uniquely present here which leads an Amos (and in effect all exponents of classical prophetism) to cry in Yahweh's name:

You only have I known
of all the families of the earth;
therefore I will punish you
for all your iniquities (3:2).

Israel's rebellion against God is shared by that of all peoples, to be sure; but hers is uniquely and totally conditioned by the quality of her relationship to God and is in consequence the more heinous.

Her rebellion against Yahweh is grossly, flagrantly displayed in the totality of her life. The whole head is sick and the whole heart faint. The alienation is wilful and complete. Israel is utterly estranged (Isa. 1:4-5). The extended and most bitter indictments in the three largest prophetic collections (see especially Isa. 1:2-18; 2:6-17; 9:8-11; 29:13-16; 30:8-17; Jer. 2:4-13; 5:20-31; 7:8-11; Ezek. 16), as well as the sweepingly eloquent, often ferocious, denunciations in Amos, Hosea, and Micah and (at the lower end of the chronological scale of classical prophetism) the later Isaiahs (see, e.g., Isa. 59:1-15), make it clear that (to use our categories, not theirs) no distinction existed for the prophet between the rebelliousness expressed in social-economic-political malpractice on the one hand and cultic-religious-theological deviation on the other. And (again to use our rubrics, which inevitably impose a kind and degree of organization quite foreign to prophetism itself) the totality of Israel's rebelliousness is, in the prophetic understanding, the shocking betrayal of Israel's pride and arrogance—seen all the more reprehensibly against such relationships as father/son, owner/vineyard, and husband/wife:

Sons have I reared and brought up,
but they have rebelled against me
(Isa. 1:2).

What more was there to do for my vineyard,
that I have not done in it?
When I looked for it to yield grapes,
why did it yield vile-smelling [RSV "wild"] grapes?
(Isa. 5:4).

I remember the devotion [חסד] of your youth,
your love as a bride.
. . . . . .
And I brought you into a plentiful land
to enjoy its fruits and its good things.
But when you came in you defiled my land,
and made my heritage an abomination
(Jer. 2:2, 7).

"I plighted my troth to you . . . . But you trusted in your beauty, and played the harlot" (Ezek. 16:8, 15).

Israel's rebelliousness is infidelity; her infidelity, pride. And the rebellion against God that is human pride is ultimately in prophetism castigated in all men; for Israelite prophetism knows, if Israel forgets, that Israel's rotten, unholy pride, productive only of a sickness unto death, is fully shared, by all men!

4. "They shall return to Egypt": Judgment. In Hebrew "to judge" (שפט) and its derivatives convey considerably more than corresponding English terms. The act of judging is one in which wrong is righted either by punishment of the aggressor or by restitution to the victim, or by both. In the OT the underprivileged are to be "judged" (e.g., Isa. 1:17:

Defend the fatherless,
plead for the widow)

as well as wilful offenders. Judgment, then, is the realization of justice.

In the introduction to this section (§ D) we marked the sense of impending negative judgment upon Israel as a formative characteristic of classical prophetism. The prophets of the eighth–sixth centuries are all predominantly oriented in catastrophe—either the fall of the N kingdom in 722 or the end of the surviving S state in 587—whether they stand before or after the envisaged tragedy. And unequivocally for them this temporal-historical-political event is divine judgment, the creation and establishment of justice, the rebalancing of the scales between Yahweh and Israel. The judge, the performer of the act of judgment, is Yahweh himself. The object of the judgment is Israel. The act of judgment—political death, a figurative return to Egypt. If this is an experience of unqualified catastrophe for Israel; if it is, as has been said, a return to an existence formless and meaningless; it nevertheless has its own kind of order and meaning. It rights the wrong; and more, much more, it provides the now rectified context for a resumption of the relationship between Yahweh and Israel which obtained after the first Egypt and before the conditions responsible for the threat and execution of the second.

Judgment is right. It is of Yahweh. And he still rules.

The prophets, from Amos and Isaiah before the events to the subsequent Isaiahs and other prophets after the final catastrophe, proclaim the judgment with staggering power and in stunning language. If they entertain personal hopes that it may be averted (as they do) or that it will work for good in an Israel that loves God (as emphatically they do), this affects not at all the uncompromised character of the negative proclamation.

> Thus says the Holy One of Israel,
> "Because you despise this word,
> and trust [sic] in oppression and perverseness,
> and rely on them;
> therefore this iniquity shall be to you
> like a break in a high wall . . . ,
> . . . . . .
> which is smashed so ruthlessly
> that among its fragments not a sherd is found
> with which to take fire from the hearth,
> or to dip up water out of the cistern"
> (Isa. 30:12-14);

but see the full chapter; and cf. the equally unequivocal statement of judgment in 22:14.

The character of the judgment is conditioned by the character of Israel's rebellion. The totality of the judgment is the appropriate and necessary rectifying of the nation's totally wilful, arrogant rejection of Yahweh.

> Thou hast smitten them,
> but they felt no anguish;
> thou hast consumed them,
> but they refused to take correction.
> They have made their faces harder than rock;
> they have refused to repent.
> . . . . . .
> They have spoken falsely of Yahweh,
> and have said, "He will do nothing" [לא־הוא].
> . . . . . .
> Therefore thus says Yahweh, the God of hosts:
> "Because they have spoken this word,
> behold, I am making my words in your mouth a fire,
> and this people wood, and the fire shall devour them."
> (Jer. 5:3, 12, 14, but see the full section, vss.1-17.)

For all their own invective, the prophets are misunderstood if their proclamation of judgment against Israel is interpreted as an arbitrary or vindictive action of Yahweh. They want to make it plain (they are demonstrably often hard put to it to do so, because of the intensity of their own feelings and emotions) that it is judgment in the full sense—justice, the setting right of the woefully wrong; and they do make this plain in their not uncommon joining of the issue between Yahweh and Israel in terms unmistakably drawn from current Israelite judicial practice (cf. Isa. 1:2, 18 ff; 3:13; Hos. 4:1; Amos 3:1; Mic. 6:1 ff). God accuses, he renders the verdict, and he is himself responsible for the execution of judgment against Israel.

In other passages (cf. Jer. 1:15 ff; Joel 3:2 ff—H 4:2 ff; Amos 1:3 ff; Mic. 1:2-4; Zeph. 3:8) the judicial setting is convoked, not against Israel, but against the nations. *See* § D7 *below*.

5. "How can I give you up?" Compassion. One may strongly doubt that any of the classical prophets pronounced a divine verdict of unconditioned doom. Amos has often been so understood; and others of the prophets have been made out to be proclaimers exclusively of the negative aspects of divine judgment by resort to a literary criticism which neatly attributes to other sources the prophetic word of God's compassion. Now, obviously, much more originated with an Amos than what is brought down to us as prophetic utterance under his name in the canon; and even in what we have, there is reflected the unmistakable attribution to Yahweh of the prophet's own sense of compassion—the thought expressed repeatedly in the phrase "Yet you did not return to me," that the very catastrophe which Yahweh visits upon his people is itself an expression of his love and faithfulness, since in the negative action he seeks to bring about a reconciliation with prideful, rebellious Israel (Amos 4:6-11).

The mood and language, the faith, hope, and love of the classical prophets as a whole, testify in eloquent passion that rebellion and judgment in the context of election/covenant at once call forth compassion and redemption. The Hebrew terms—noun, verb, and adjective—denoting "compassion" (from a root רחם, of dubious original meaning) appear not uncommonly through the prophetic books and sometimes in conjunction with the root denoting "love" [אהב]; but the unique quality of Yahweh's compassion is best expressed by the prophetic language in the term *ḥésedh* (חסד).

Ḥésedh is necessarily subject to several different English renderings, according to context: "mercy" (a relatively infrequent sense, although so commonly rendered in the LXX), "kindness," "devotion," "faithfulness," "grace." It is, of course, a term descriptively qualifying relationship—man/man or God/man. Its fundamental root sense conveys the quality of sustaining strength, strength in duration, and it is commonly in the OT an attribute of covenant, either God/Israel or such family "covenantal" relationships as husband/wife or father/son. *Ḥésedh* is the strength of faithfulness which constitutes the very life of the relationship, a central quality of the word perhaps best illustrated in the marriage covenant as this figure is used by Hosea, where the ghastly double rupture, of marriage and of covenant, is in prophetic consciousness a *fait accompli*, and the analogy is applied from the personal to the national as the prophet speaks for Yahweh: "In that day, says Yahweh, . . . I will betroth you to me for ever; I will betroth you to me in righteousness [צדק] and in justice [משפט], in steadfast love [חסד], and in compassion [רחמים; RSV 'mercy'] . . . , in faithfulness [אמונה]; and you shall know [וידעת] Yahweh" (Hos. 2:16-20—H 2:18-22).

In the prophetic use of the term (notably in Hosea, Jeremiah, and Second Isaiah), if not indeed elsewhere in the OT, *ḥésedh* quite escapes the confines of covenant; or perhaps it would be better to say that as a quality of covenant it is chiefly responsible for a transformation in the concept of covenant. That covenant of which *ḥésedh* is a part becomes in the exercise of *ḥésedh* something vastly more than that pedestrian covenant which it was in its inception. Look again at the passage just quoted, and its context. The covenant here, both the man/woman and the God/people covenant, is ended, terminated. As

covenants go, this one is finished with a rupture of incredible violence and proportion. But *ḥésedh* becomes operative in this covenant to such a transforming degree that what was covenant-with-*ḥésedh* now becomes *ḥésedh*-with-covenant. Covenant it still is, but utterly transformed by compassion that is *ḥésedh*.

The same essential expansion of *ḥésedh* beyond the limits of covenant is to be seen also in Jeremiah and Second Isaiah.

> Return, faithless Israel,
> says the LORD.
> I will not look on you in anger,
> for I am *ḥāsîdh* [adjectival form of *ḥésedh;* RSV 'merciful'],
> says the LORD;
> I will not be angry for ever.
> (Jer. 3:12.)

In Hosea (11:8 ff) the divine compassion which converts the judgment and reconstitutes the covenant is expressed in the Deity's cry:

> How can I give you up, O Ephraim!
> How can I hand you over, O Israel!
> . . . . . .
> For I am God and not man,
> the Holy One in your midst.

In Jeremiah it is: "For I am *ḥāsîdh!*"—this is the quality of my judgment and my covenant! And in Second Isaiah the transforming development is completed:

> For a brief moment I forsook you,
> but with great compassion [from רחם] I will gather you.
> In overflowing wrath for a moment
> I hid my face from you,
> but with everlasting *ḥésedh* [חסד עולם] I will
> have compasion on you [again, from רחם]
> (Isa. 54:7-8).

As the poetic parallelism makes clear, the character of Yahweh's compassion is the *ḥésedh* character—the steady, enduring strength of fidelity, devotion, and commitment which partakes of the quality of grace precisely because it is more than the convention of covenant can appropriately command, because it is greater than the relationship which first produced it, and because it is able, in breaking out of the relationship, to re-create the very relationship in transformed dimensions. If *ḥésedh* begins in the structure of covenant, it ends with covenant as its own renewed creation.

> For the mountains may depart
> and the hills be removed,
> but my *ḥésedh* shall not depart from you,
> and my covenant of peace shall not be removed,
> says the LORD, who has compassion on you.
> (Isa. 54:10.)

It is unnecessary to add that compassion of this sort is inseparably related to love, that *ḥésedh* compounded of grace is itself rooted and sustained in the love of God, as it is so precisely put in Jeremiah 31:3:

> I have loved you with an everlasting love;
> therefore I have continued my *ḥésedh* to you.

6. "I will return them to their homes": Redemption. We are speaking of prophetism, the achievement not of any one prophet but of that unique movement of prophetism spectacularly witnessed in concentrated power in the eighth–sixth centuries but developing from the time of Israel's birth as a people out of Egypt and continuing to find essential, if sometimes dependent, expression in the final six or seven centuries of biblical time. This prophetism, which found its very being in the efficacious Word of Yahweh and could comprehend Israel's (and all men's!) appallingly arrogant and tragically groundless posturing, and in particular consequence in Israel's case persuaded of cataclysmic but rectifying historical judgment; this prophetism equally unshakable in faith in the efficacious quality of divine compassion and *ḥésedh* and in certainty of the unimpedible fulfilment of divine purpose behind Word, election, and covenant—such a prophetism comes inevitably to the affirmation of Israel's historical redemption, even before the historical imposition of judgment.

In doing so, prophetism reveals the magnificent, full body of its faith; but it also betrays, perhaps, the always attendant measure of its unfaith, since by and large the prophets are quite unable to envisage any ultimate establishment of divine sovereignty apart from the re-created and resubstantiated historical Israel. The prophets do not, of course, allow this as a point of pride. That Israel remains a part of Yahweh's redemptive purpose, not out of any divine necessity, but purely because Yahweh so wills it, is emphatically expressed both in Ezekiel (36:22-25, 32) and in Second Isaiah (Isa. 48:11) in the insistent explanation of Israel's redemption in the divine phrase: "For my own sake I do it!" Furthermore, if prophetism is regarded in consistent fact as movement, then we should have to say that faith is the victor over unfaith even in this regard, since it is through and still within the prophetic movement that Israel herself is seen to be ultimately expendable on behalf of the cause of the knowledge and reign of God.

Prophetism, which fairly exploded into full, vocal, self-conscious maturity in the historical era of Israel's existence "between Egypts," had added a third member to the older two-member scheme: Out-of-Egypt, Into-This-Land, and now, in the consciousness of impending divine judgment, Back-to-Egypt. But this was, of course, not the end. In the mind and faith of prophetism this would have been impossible. And so a fourth member in the meaningful scheme of Israel's history was added—a second act of divine redemption from chaos, redemption by return again to the land, redemption by the reconstitution of the people Israel.

It is difficult to deny the addition, not only of the third negative member, but also of the fourth positive element to the scheme as the work of prophetism in the eighth century. It is difficult and probably impossible to separate them. If the first Isaiah was convinced, as in faith he was, of the destruction of his people, he was also and at once persuaded of God's compassionate purpose in judgment-justice, of a judgment-justice never centrally punitive in intention and quality but always itself redemptive in divine conception and function. If judgment is wrath, it is purposive wrath, not vindictive wrath. Judgment is never an end in itself, but that dire necessity which makes redemption possible.

I will turn my hand against you
and will smelt away your dross as with lye
and remove all your alloy. (Isa. 1:25.)

And precisely so we correctly understand that the prophetic declaration of a surviving REMNANT beyond the coming catastrophe (as most notably in Isaiah's symbolic naming of a son "A Remnant Shall Return" [שאר ישוב; Isa. 7:1 ff]) is, if pointed to Yahweh's negative action against Israel, also positive in its import; and it is all the more positive when we recall Israel's habitual identification of one and many, her sense of total participation as people in that which was in reality experienced by others of her number (e.g., "We were Pharaoh's slaves in Egypt," that ancient cultic phrase of Deut. 6:21), whether the others were one, a few, or many, and whether in the past, present, or future. In the faith of Israel the glorious survival and reconstruction of a remnant is Israel's glory and Israel's re-establishment.

The understanding of historical judgment as positive in divine purpose had, perhaps earlier, appeared in Amos (4:6-11, already cited in another connection); but, still in the eighth century, it is most warmly expounded in Hosea (especially 2:14-23; 5:15; 7:13, 15; 11:11). It is a pervasive, if often only implicit, element in the utterances of Jeremiah and makes possible that stunning articulation of a new and/or renewed covenant with Israel "after those days" of judgment: "I will put my law within them, and I will write it upon their hearts; and I will be their God, and they shall be my people. And no longer shall each man teach his neighbor and each his brother, saying, 'Know the LORD' [דעו את־יהוה], for they shall all know me, from the least of them to the greatest, says Yahweh; for I will forgive their iniquity, and I will remember their sin no more" (Jer. 31:33-34).

In Ezekiel that redemption purposed in the very judgment—the reconstitution, rebirth, re-creation, of Israel inherent in the prophetic understanding of Israel's anguished demise—is given singularly vivid expression in the description of the prophet's vision of the valley of death, Israel's vast open grave exposing the bare skeletons of the house of Israel. In this scene of dry death Yahweh commands the prophet: "Prophesy [i.e., speak as prophet, speak prophetically; הנבא] . . . and say . . . , O dry bones, hear the word of Yahweh" (37:4). "So I prophesied as he commanded me, . . . and they lived . . . . Then he said to me, 'Son of man, these bones are the whole house of Israel. Behold, they say, "Our bones are dried up, and our hope is lost; we are clean cut off." Therefore prophesy [as above], and say to them, Thus says the Lord Yahweh: Behold, I will open your graves, and raise you from your graves, O my people; and I will bring you home into the land of Israel. . . . And I will put my Spirit within you, and you shall live, and I will place you in your own land; then you shall know that I, Yahweh, have spoken, and I have done it, says Yahweh." (Vss. 10-14.)

We need not wonder that the form of prophetic utterance as finally solidified and handed down to us seldom, if ever, presents the single, unmitigated word of doom. The very positive ending of Amos, e.g. (9:8*b* ff, following immediately upon the statement of unqualified doom), may or may not be true to that particular context of that particular prophet; but the ending of Amos is certainly and profoundly true to the structure of prophetism.

So it is, finally, on the very eve of the actual episode of Israel's second historical redemption, fraught with such incredibly high prophetic hopes yet doomed in prophetism to such abysmal frustration and disappointment, that the so-called Second Isaiah, now believing this second exodus (as earlier had been believed in high hopes about the first) to signal the fulfilment, the realization of the Word of Yahweh to the elect, covenanted Israel, speaks words moving and profound in consolation, but words, literally taken, only very briefly and highly approximately validated in the actual history of Israel's second redemption (see, e.g., Isa. 40; 44:21 ff; 49:8-13). In a lyrical, soaring projection of faith which summons the act of creation and the dramatic first exodus into the single moment of time occupied by the second exodus, the prophet cries:

Awake, awake, put on strength,
O arm of Yahweh;
awake as in the days of old,
the generations of long ago.
Was it not thou that didst cut Rahab in pieces,
that didst pierce the dragon? (51:9).

This refers to the old mythological language of creation and recalls the creation of order and meaning by the destruction of Chaos (Rahab, the dragon), concepts still latent in the verbal form though hardly in the interpreted content of Gen. 1.

Was it not thou that didst dry up the sea,
the waters of the great deep;
that didst make the depths of the sea a way
for the redeemed to pass over? (vs. 10.)

In the same breath, as it were, and with the same overwhelming sense of contemporaneity, the prophet brings into the present moment of time the past event of the Exodus from Egypt. With absolutely no encumbering sense of disparity in time, he introduces with an equal sense of immediacy that which is about to be Israel's second redemption:

The ransomed of the LORD shall return,
and come with singing to Zion;
everlasting joy shall be upon their heads;
they shall obtain joy and gladness,
and sorrow and sighing shall flee away
(vs. 11).

Faith in such a measure of passion and proclaimed in such rapture cannot, of course, finally be contained in any concept merely of Israel's historical redemption. Prophetism produces a theology out of a process of meditation on history and the meaning of history; and if prophetism is capable, as here, of a theology that takes wings to soar out of the plane of pedestrian history when its meditation is focused on what Yahweh has done in the Creation and the Exodus, it is always brought back again sharply to the realities of a flatly frustrating historical existence. It is the tension between the alternating experiences of flight and the grim march which produces inevitably a prophetic eschatology.

7. A light to the nations: Consummation. From any point of view other than that of faith—and faith,

indeed, in its ultimate projection—prophetic affirmations pointing, if not beyond history, at least to a history radically transformed, are unthinkable. But if Israelite prophetism is, from our perspectives, singularly nonlogical, it is not nonreasonable: it adheres to its own reasonableness. If the face of existence appears to be, with only intermittent relief, as hard and as featureless as the rock, it remains an existence Yahweh-given and (surely as we know who were once Pharaoh's slaves in Egypt, to whom it was given, with David, to build Zion) Yahweh-ruled. What it appears to be, then, it only appears to be; or what it appears to be, it will be only in limited duration. The totality of existence is Yahweh's, and his countenance is neither featureless nor hard (we know him to be in the very midst of this grim history "gracious and merciful, slow to anger, and abounding in *ḥésedh*" [Joel 2:13; cf. Jonah 4:2]). Moreover, Yahweh has spoken the word that in Abraham/Israel all the nations of the earth shall be blessed (Gen. 12:3); and his Word cannot but accomplish that purpose to which he sends it (Isa. 55:11).

And so, again and emphatically, we observe that the concept of Israel's historical redemption could not ultimately contain the prophetic faith or answer the questions of prophetism about the meaning of Israel's existence. Prophetism as movement was compelled to abandon any and all notions—even its own—of divine purpose fulfilled in terms limited to Israel. It may even be that where the terms are of Israel's redemption, the intent expressed in intensity of feeling, conviction, and emotion, is universal. This is true of Isa. 51:9-11, just quoted. It is equally true of such passages—in form of Israel, in disposition and intention of all men—as Hos. 2:18-23; Jer. 23:5-6 (and to a lesser degree, perhaps, Jer. 29:10-14; 31:4-5); and emphatically, Isa. 9:2-7—H 9:1-6. The idea of a coming DAY OF THE LORD as somehow Israel's day of justification, fulfilment, and aggrandizement was violently exploded. Some prophets appear to identify the Day as the actual, historical judgment/catastrophe of 722 or 587 (e.g., Amos 5:18-20), while others make it the symbol of the final, universal judgment (e.g., Joel 2:30-31; Zech. 1:14-16); and within the movement of prophetism it becomes that Day when Yahweh "will become king over all the earth," when "Yahweh will be one and his name one" (Zech. 14:5-9).

This is not to deny that even here prophetism has its continuing ambiguities. The structure of faith as apprehended even by the prophets themselves was hardly without its "logical contradictions." But the projection in faith of a final consummation of all that is implicit in prophetism's high affirmations is variously and eloquently articulated; and such raptured extensions of prophetic faith lay every just claim to represent the ultimate words of prophetism.

It seems appropriate, then, to let prophetism now speak, through the remarkable tradition of the Isaiahs, its own concluding lines. One does not need to be able to delineate between terms of realism and terms of symbol, since the distinction is uncritical in prophetism's faith in consummation. Furthermore, we are not concerned with the "source" of these declarations, since all come unmistakably out of Israelite prophetism.

See and hear first the prophetic expectation, the vision of consummation, to be effected through the SERVANT OF THE LORD, even though we probably cannot know the precise identity of the Servant in prophetic understanding—Israel personified; or the remnant of Israel; or one, someone, out of Israel; or, in differing contexts, differing identities.

> And now Yahweh says,
> who formed me from the womb to be his servant,
> . . . . . .
> "It is too light a thing that you should be my servant
> to raise up the tribes of Jacob
> and to restore the preserved of Israel;
> I will give you as a light to the nations,
> that my salvation may reach to the end of the earth."
> (Isa. 49:5-6.)

Whatever the form of the next passage, and the identity of both the servant and the speaker, the intention of consummation is unambiguous, and all the more so if it is the nations who speak:

> Surely he [the servant] has borne our griefs
> and carried our sorrows;
> yet we esteemed him stricken,
> smitten by God, and afflicted.
> But he was wounded for our transgressions,
> he was bruised for our iniquities;
> upon him was the chastisement that made us whole,
> and with his stripes we are healed (Isa. 53:4-5).

Especially in the light of the next verse, there can be no wonder that in Christian perspective, prophetism here attains the absolutely ultimate projection of its faith:

> All we like sheep have gone astray;
> we have turned every one to his own way;
> and Yahweh has laid on him
> the iniquity of us all.

In Isa. 11:1 ff, "a shoot from the stump of Jesse" will be totally endowed with the Spirit of Yahweh:

> He shall not judge by what his eyes see,
> or decide by what his ears hear;
> but with righteousness he shall judge the poor,
> and decide with equity for the meek of the earth.

And the vision moves with tender perceptiveness to lower orders of creation, among whom the peace of righteous rule is also attested (11:6 ff), with these lines in climactic description of the consummation:

> They shall not hurt or destroy
> in all my holy mountain;
> for the earth shall be full of the knowledge of Yahweh
> as the waters cover the sea.

Read and hear, finally, those incomparable lines referred to as the Floating Oracle because they appear in both Isaiah (2:2-4) and Micah (4:1-3):

> It shall come to pass in the latter days
> that the mountain of the house of Yahweh
> shall be established as the highest of the mountains,
> and shall be raised above the hills;
> and all the nations shall flow to it,
> and many peoples shall come, and say:
> "Come, let us go up to the mountain of Yahweh,
> to the house of the God of Jacob;
> that he may teach us his ways
> and that we may walk in his paths."
> For out of Zion shall go forth the law,
> and the word of Yahweh from Jerusalem.

He shall judge between the nations,
and shall decide for many peoples;
and they shall beat their swords into plowshares,
and their spears into pruning hooks;
nation shall not lift up sword against nation,
neither shall they learn war any more
(Isa. 2:2-4).

The book of Micah, quite possibly out of the same Isaianic circle of prophetism, adds these last lines, words suggesting again the power, the faith, and the ultimate expectation of Israelite prophetism:

They shall sit every man under his vine and under his fig tree,
and none shall make them afraid;
for the mouth of Yahweh of hosts has spoken (Mic. 4:4).

B. D. NAPIER

***PROPHET IN THE NT.** Long before the time of Jesus prophecy had ceased to appear in Israel (Ps. 74:9; I Macc. 4:46; 9:27; 14:41), although a special form of it continued to flourish in the writing of apocalyptic visions. The Jews, however, fully expected its revival in the coming age of the Messiah (cf. Joel 2:28-29; Zech. 13:4-6; Mal. 4:5-6; Test. Levi 8:14; Test. Benj. 9:2). It is in the light of this expectation that one must understand the claim, recorded by Josephus (War I.ii.8), that John Hyrcanus had the "gift of prophecy." Josephus also states that such messianic pretenders as Theudas (Antiq. XX. v.1; cf. Acts 5:36) and "the Egyptian" (Antiq. XX. viii.6; War II.xiii.5; cf. Acts 21:38) claimed that they were prophets.

Among the pious Jews who, eagerly looking to the redemption of God's people, nurtured these hopes of prophetic renewal, are to be included the ESSENES (*see also* DEAD SEA SCROLLS). It is doubtless in this context that the references to prophecy in the infancy narratives of Luke 1–2 must be interpreted: Zechariah "prophesied" (1:67); Simeon was subject to revelation by the Holy Spirit (2:25-27); and Anna was a "prophetess" (2:36).

It was the preaching of John the Baptist, however —the "prophet of the Most High" (Luke 1:76)— that excited the Jews with an awareness of the return of authentic prophecy. Not only was he widely held by the people to be a prophet, even to be Elijah returned to earth (Matt. 14:5; 21:26; Mark 6:15; 11:32; Luke 9:8; 20:6); but Jesus himself paid tribute to John as a prophet (Matt. 11:9-15; Luke 7:24-28), and on one occasion exploited the Baptist's popularity as a prophet to silence his enemies (Matt. 21:25-27; Mark 11:29-33; Luke 20:3-8).

Similarly, Jesus was acclaimed as a prophet, both by the nature of his preaching and teaching and by the miracles that he performed (Matt. 16:14; 21:11, 46; Mark 8:28; Luke 7:16, 39; 9:19; 24:19; John 4:19; 9:17). Occasionally he referred to himself in the same way, as in his sermon at Nazareth (Matt. 13:57; Mark 6:4; Luke 4:24; cf. John 4:44) and his lament over Jerusalem (Matt. 23:37; Luke 13:33-34). The Fourth Gospel employs the title of Jesus as "the prophet" virtually as a synonym for "Messiah" (cf. 1:21, 25; 6:14; 7:40). And the book of Acts refers to him, with much the same meaning, in the foretelling of Deut. 18:15, 18, of the coming of a Prophet like unto Moses (Acts 3:22-26; cf. 7:37). This messianic interpretation of the Deuteronomic passage seems to have been original to the church; it is not known in contemporary rabbinic exegesis.

From its inception, prophesying was a characteristic mark of primitive Christianity—interpreted, as in Acts 2:14 ff, as an evident fulfilment of the promises of the OT that it would revive in the last days. The gift of prophecy was not, however, a possession of all Christians, but a peculiar spiritual endowment ("charism") of a select number, whether of men or of women. The author of Acts preserves the names of a few—Agabus (11:27; 21:10) and Judas and Silas (15:32), who originally belonged to the Jerusalem church; and the four daughters of Philip, one of the Seven (21:9). He also speaks of prophets among the earliest leaders of the church in Antioch (13:1), and, in a peculiar reference, he tells of twelve disciples at Ephesus who prophesied immediately after their baptism by Paul (19:6). The author of Acts appears to have been mainly interested in the predictive features of the prophets' activities, and the outward manifestations of their behavior. It is not altogether clear that he distinguished, as did Paul, the gift of "speaking in tongues" from the prophetic charism.

For Paul, prophecy was one of God's greatest gifts to his church for edification (see especially the whole discussion in I Cor. 14), and he ranked the prophet second only to an apostle in honor and importance (I Cor. 12:28-29). By "prophecy," Paul understands intelligible preaching that builds up the church in faith (cf. Rom. 12:6), explains mysteries, and imparts knowledge ("gnosis"; cf. I Cor. 13:2). In I Pet. 1:10, the prophet's concern is the searching of the Scriptures for the testimonia of Christ. So in Rev. 19:10, witness to Jesus is the "spirit of prophecy." The entire book of Revelation is a classic example of Christian prophecy (cf. 1:3; 22:7, 10, 18-19). Though cast in an apocalyptic form, it is the procla-

mation of a man "in the Spirit" who expounds from the imagery of the OT the new revelation of God's victory in Christ and in those who belong to Christ.

Prophecy continued to exert a potent influence in the church throughout the postapostolic period. Not only does the issuance of the Revelation to John testify to this. Also, at Rome, a prophet named Hermas imparted persuasively his visions that taught a second repentance after baptism. Though his utterances were subject to the controlling oversight of the hierarchy, his book of prophecies, the Shepherd, was received in many churches with a quasi-canonical authority (*see* HERMAS, SHEPHERD OF). Ignatius has left us an example of his own Spirit-inspired utterance about the ministry in his Letter to the Philadelphians (ch. 7); and the church of Smyrna described their martyred leader, Polycarp, as an "apostolic and prophetic teacher and bishop of the Catholic Church" (Martyrdom of Polycarp 16.2). The Pastoral letters relate the leadership of "Timothy" in the church to gifts given him by prophecy (I Tim. 1:18; 4:14).

Nevertheless, the ministry of prophets exhibited a noticeable decline in effectiveness in the post-apostolic age. Already, in the deutero-Pauline Letter to the Ephesians, there is evident a tendency to look back upon the prophets, as upon the apostles, as belonging to a past generation of founders of the church (cf. 2:20; 3:5; 4:11). Warnings against false prophets—signs of the coming of Antichrist—occur in the Synoptic traditions of Jesus' teaching (Matt. 7:15; 24:11, 24; Mark 13:22), and in the Johannine writings (I John 4:1; Rev. 16:13; 19:20; 20:10). The seer of Patmos singled out one such personage, in the church at Thyatira, a prophetess to whom he gave the distasteful appellation of "Jezebel" (Rev. 2:20).

The DIDACHE, a document of the early years of the second century, discusses at some length the problem of false prophets (11-13), and provides simple tests for sifting true prophets who visit Christian communities from those who are spurious. But the Didachist has in mind, not so much unorthodox prophets, as charlatans of the profession, who impose upon the hospitality of unwary churches. The "new prophecy" of the Montanist movement of the latter half of the century did much to discredit the ministry of prophets in the eyes of the orthodox church leaders, not only because of the exaggerated claims of its proponents, but in large measure because it was not amenable to the discipline of the church's ordained hierarchy.

M. H. SHEPHERD, JR.

PROPHETESS [נביאה, *from masculine* נביא, PROPHET; προφῆτις, *from masculine* προφῆτης, *from* πρόφημι, to speak before, openly]. A female interpreter speaking for the deity; or the wife of a prophet (cf. "duke" and "duchess").

In the OT the term is applied to Miriam, the sister of Moses (Exod. 15:20); Deborah (Judg. 4:4)—in both instances seen by many scholars as a relatively late ascription; to Huldah, a contemporary of Jeremiah and a functioning woman prophet (II Kings 22:14); to Noadiah, an adversary of Nehemiah and presumably also a professional (Neh. 6:14); and by Isaiah to his wife (Isa. 8:3).

In the NT the term is used of Anna (Luke 2:36) and of one Jezebel (Rev. 2:20).

   b. In LXX Greek
   c. In NT Greek
2. In the OT
   a. In human relationships
   b. Propitiation and sacrifice
3. In the NT
Bibliography

1. Terminology. The word "propitiation" is the KJV form of "EXPIATION" in Rom. 3:25 (ἱλαστήριον); I John 2:2; 4:10 (ἱλασμός). The sense of the word, however, is found in several other passages. *See below.*

a. In biblical Hebrew. Although the word "propitiation" does not occur in any of the English versions of the OT, the idea is expressed three times by the Hebrew verb חלה, a *Piel* form followed by פנים, "face." Its literal meaning is "to make the face (of someone) sweet or pleasant," hence "to appease"; its more general sense, however, is "to entreat the favor (of someone)." Also, the verb כפר, besides its regular sense of "EXPIATION," twice has the meaning "propitiation" in reference to a human object.

b. In LXX Greek. On the three occasions when חלה means "propitiation," it is rendered in the LXX by the Greek verb ἐξιλάσκεσθαι, which also regularly translates כפר. In classical and Hellenistic Greek ἱλάσκεσθαι and its intensive compound ἐξιλάσκεσθαι mean "to propitiate," but ἐξιλάσκεσθαι has also a rare secondary meaning of "to expiate" (see Plato *Laws* 862*c;* Ditt. *Syll.*[3] 1042). In the LXX, however, words of the ἱλάσκεσθαι class acquire as their primary meaning the sense of "expiation" through their regular use in translating כפר and its derivatives. The use of ἐξιλάσκεσθαι in the LXX to express "propitiation" is therefore rare and exceptional.

c. In NT Greek. The Greek terms which are translated "propitiation" in the KJV are ἱλασμός and ἱλαστήριον. Their meaning in the NT, however, is derived from their use in the LXX, where they have the general sense of "expiation" and do not as religious terms bear the meaning of "propitiating God."

2. In the OT. The idea of propitiation is not prominent in the OT. The word as a religious term expresses pagan conceptions of appeasing the Deity and is inappropriate to the religion of Israel.

a. In human relationships. The Hebrew verb כפר has the meaning of "to propitiate" only when man is the subject and it is used with reference to

a human object—e.g., Jacob propitiates ("appeases") Esau with a present (lit., "covers his face" or "wipes clean his face" blackened by displeasure; Gen. 32:20); a wise man will propitiate (RSV "appease"; KJV "pacify") a king's wrath (Prov. 16:14). The verb חלה, when used of human relationships, has the sense of entreating a favor rather than appeasing anger (Job 11:19; Ps. 45:12—H 45:13; Prov. 19:6).

b. Propitiation and sacrifice. Some have regarded Hebrew SACRIFICE as essentially a piacular gift by which the wrath of God is appeased. This view has claimed support from, e.g., David's reaction to the idea that God might have prompted Saul to harass him: "May he [God] accept an offering" (lit., "Let him smell an offering"; I Sam. 26:19; cf. Gen. 8:21; Exod. 29:25). But the only clear instance of such a propitiatory conception of sacrifice is Mesha's offering of his son to Chemosh (II Kings 3:27); and this was the act of a pagan king. In Israel the burnt offering is not necessarily a propitiatory gift, as has been maintained; it is more probably an expression of devotion to God. And David's words may well refer to the normal expiation through sacrifice of some inadvertent sin.

In general, at least, OT sacrifices are not propitiatory but expiatory. God is frequently the subject, but never the object, of the key cultic term כפר: it is used of God's expiating (i.e., "covering" or "erasing") man's sin, but never in the sense of man's propitiating God. This is in line with the prophetic teaching that God's favor cannot be bought. The three occasions when the verb חלה in the sense of "propitiate" is used with reference to God (Zech. 7:2; 8:22; Mal. 1:9) are exceptional and apparently deliberate. Its use in Zech. 7:2; Mal. 1:9 is distinctly contemptuous —i.e., Yahweh is not to be "propitiated." And in Zech. 8:22 it is pagan peoples who come to "propitiate" him.

3. In the NT. Nowhere in the NT does the idea of propitiation occur. When the term appears in the KJV, it renders one of the derivatives of ἱλάσκεσθαι. The LXX translators, however, generally use the words of the ἱλάσκεσθαι class to express the divine removal of guilt or defilement and clearly regard their pagan meaning of propitiating the Deity as inappropiate to the religion of Israel. Since, therefore, this LXX usage is determinative for the NT writers, the use of the word "propitiation" in the KJV is erroneous and misleading. In each case "propitiation" should be substituted, as in the RSV, by "EXPIATION." There is no idea in the NT of the wrath of God being propitiated by the sacrifice of Christ. It is God in Christ who reconciles the world to himself (II Cor. 5:19).

R. ABBA

PROSELYTE [προσήλυτος, newcomer, visitor]. The usual LXX rendering of the Hebrew term גר, *gēr*, which designated a person associated with a community not his own. The גר in the OT is one who through some misfortune, such as war (II Sam. 4:3; Isa. 16:4), famine (Ruth 1:1), plague, or bloodguilt, has had to leave his home and kindred and take refuge with a foreign people. The term גר is usually rendered "stranger," but also "alien" and "SOJOURNER." In the Mishna, however, גר designates a convert to Judaism, and in the NT προσήλυτος has the same meaning. The OT meaning of the terms is thus sharply distinguished from the NT and rabbinic usage. The change in the meaning of the term גר from "immigrant" to "convert" is connected with one of the most significant developments in the history of Judaism and the prehistory of Christianity.

Bibliography

1. The original sense of the term גר. The term גר in the OT designates an alien or immigrant in the process of becoming assimilated. In primitive Semitic society all rights were based on blood relation, but a relationship like consanguinity could be artificially contrived. A displaced person without kin to defend him might gain protection by attaching himself as a client to a chieftain or a clan. The practice harks back to nomadic life of the desert, where lawlessness was tempered by the code of hospitality. A guest or fugitive having entered the tent, or touched the tent rope of his host, was inviolable. The honor of the chieftain and the clan was the only sanction to this obligation, since the stranger had no other appeal. Violation of the duty of hospitality was a heinous crime. Ordinarily the bond between host and guest was only temporary, but more permanent sanctuary might be had, and when granted by one member of the clan, it obligated the entire clan.

Such an agreement might be confirmed by a covenant oath at the shrine of a god. Abraham and Isaac became sojourners in the region of Gerar by covenant oaths with Abimelech at Beer-sheba (Gen. 21:32; 26:28). The god in whose name the oath was taken became the patron and protector of the client who, although he might not relinquish his old religion, still had to acknowledge some degree of allegiance to the protecting deity. Foreigners who lived among the Israelites were anxious to learn the law of the god

of the land and to serve him for their own security (II Kings 17:26-28). The Egyptianess Hagar (Gen. 16:7-13), Abraham's Damascene steward (Gen. 24:2), the Canaanitess Rahab (Josh. 2:11), the Gibeonites (Josh. 9), the Gittites Obed-edom and Ittai (II Sam. 6:10-11; 15:19-22), Uriah the Hittite (II Sam. 11:11), the widow of Zarephath (I Kings 17:12), are represented as worshiping Yahweh.

Since political and religious rights were inseparable, the client could not be admitted to full rights in the host's tribe apart from participation in the cult. Thus the immigrant would tend to become an adherent of his patron's cult. Often the client was a refugee, cut off from the worship of the god or gods of his native land, as David among the Philistines was driven to serve other gods (I Sam. 26:19).

A fugitive who found asylum at a shrine would naturally take the god of the sanctuary as his patron deity and, to ensure security, might attach himself to the cult site as permanent personnel. The Gibeonites were allowed to live among the Israelites as menials in the cult service, "hewers of wood and drawers of water for the congregation and for the altar of the LORD" (Josh. 9:27). The Levites who assisted in the temple service (Num. 3:5 ff) but were not allowed to enter the sanctuary and look upon the holy things (4:20) were a displaced group who managed to achieve and retain status and security as menials in the cult service. In Ezek. 44:7-9 there is a bitter protest against the admission of foreigners, uncircumcised in heart and flesh, into the sanctuary, and especially against their employment in the care of some of the sacred cult objects. A Phoenician inscription (CIS no. 86) indicates that גרים comprised a distinct class of temple personnel and received a stipend.

Besides the relatively small number of immigrants who found a lowly place in the service of the cult, there were numerous other non-Israelites in the land. From the earliest times diverse elements had joined themselves to the Israelites (Exod. 12:38). In the preexilic period considerable numbers of foreigners were found among the Israelites. According to the Chronicler, Solomon took a census of all the aliens (גרים) who were in the land, following the census which his father, David, had taken—which, apparently, had not listed aliens separately—and he found their numbers to be 153,600 (II Chr. 2:17). More than half this group he assigned to the *corvée*. The bulk of these aliens probably consisted of descendants of the Canaanites, and their status was analogous to that of the περίοικοι of the Peloponnesus, who were granted freedom and property rights but had not the full rights of patricians. This sizable body of second-class citizens occupied a position between that of the free-born Israelite and the slave.

The גר is often mentioned along with the poor, widows, and orphans (Lev. 19:10; 23:22; Deut. 24:19), with whom he shared the triennial tithe (Deut. 14:29). He might become wealthy (Lev. 25:47), but this was rare (Deut. 28:43-44). His usual livelihood was as a worker for wages (Lev. 22:10; 25:6, 40). The Israelite is forbidden to oppress him or withhold his wages (Deut. 24:14; 27:19; Ezek. 22:29).

Israel is enjoined to remember that they were once sojourners in Egypt (Exod. 22:21; 23:9) and ought, therefore, to treat the sojourner in their midst as an equal and love him as themselves (Lev. 19:34; Deut. 10:18-19). Such expressions of concern for the גר in writings otherwise so hostile to the foreigner (cf. Exod. 17:16; Deut. 23:4-7; 25:19) indicate that the גר was so closely assimilated to the Israelite that differences had virtually disappeared. The FOREIGNER was apparently regarded as a transient, while the גר was accepted as a semipermanent or permanent resident, partly or wholly accepted in the community of Israel. From this situation it is easy to see how the word גר came to denote a religious convert.

2. The LXX renderings of the term. The word προσήλυτος is used some seventy-eight times in the LXX as the translation of the Hebrew גר and is not used to translate any other word. The term προσήλυτος is not used by classical writers and was evidently borrowed from colloquial speech by the translators of the LXX. The classical Greek equivalent of Hebrew גר in the sense of "newcomer," "visitor," ἔπηλυς or ἐπηλύτης (*advena*), is not used as a translation of גר in the LXX; the form ἐπήλυτος occurs in Job 20:26, as a mistaken rendering of שריד, "escapee," and the passage has nothing to do with immigrants or converts. The classical term for "resident alien," μέτοικος (*incola*), occurs in Jer. 20:3, but here the Hebrew was thoroughly misapprehended—מגור, "terror," was mistaken for גר. Instead of the regular rendering προσήλυτος, the LXX sometimes uses ξένος, "stranger," but more often πάροικος, which is virtually a synonym of the classical μέτοικος. The use of πάροικος is found in passages where the term προσήλυτος in a sense approaching the meaning "religious convert" would be particularly inappropriate, as when the Israelites are spoken of as גרים in a foreign land (Gen. 15:13; 23:4; Exod. 2:22; 18:3), the pious man as a גר on earth (I Chr. 29:15; Pss. 39:12; 119:19), or the Lord as a stranger and wayfarer in the land of Israel (Jer. 14:8). In Deut. 14:21, where the law discriminates against the גר, the LXX renders πάροικος. The ill-fated Amalekite who claimed to have dispatched the wounded Saul (II Sam. 1:13) is also designated a πάροικος. Elsewhere, however, in similar contexts, when the Israelites are called גרים in a foreign land, in Egypt (Exod. 22:21; 23:9; Lev. 19:34; Deut. 10:19), or in the Promised Land (Lev. 25:23), the rendering is προσήλυτοι. In Exod. 12:19; Isa. 14:1; and in Aquila's version of Lev. 19:34, the Aramaic form of גר, גיורא, is retained in Greek transcription, γειώρας. The reason for this is not altogether clear, though it may be an indication that the translator understood the word to have special significance in these passages, perhaps approaching the sense of "religious convert."

It has been noted that the LXX renderings of גר differ somewhat in the three main strata of the Hexateuch. In JE the rendering is always πάροικος in the sense of "immigrant," while in D the rendering προσήλυτος has the sense of "resident alien" and in HP sometimes approaches the sense of "religious convert." While this is, of course, no evidence that the translators were aware of the different literary strata, it may be a slight indication that they knew the word גר had a history and that its meaning had changed or was in the process of changing. Apart from this bit of evidence, which could scarcely be

termed unequivocal, there is no clear difference in the meaning of the term προσήλυτος in earlier or later parts of the LXX. The word occurs in the Apoc. only in Codex Sinaiticus of Tob. 1:18, with reference to Deut. 14:29; 26:12.

3. Background of the term's evolution. The change of meaning which the terms גר and προσήλυτος underwent reflects the missionary spirit which developed in Judaism in the postexilic period, increased in intensity in the Hellenistic and Roman periods, and died out after the rise of Christianity.

From the latter part of the eighth century B.C. onward, increasing numbers of Israelites came to live outside the borders of Palestine. The Assyrian conqueror scattered a large part of the N tribes in various countries of the Empire (II Kings 17:6), and the Babylonian deportations carried many Judeans away. The Dispersion was effected, not only by exile and deportation, but also by the trade and commerce which Solomon initiated (I Kings 9:26; 10:28). In the fifth century there was a colony of Jewish military mercenaries at Elephantine in Egypt with their own temple of Yahweh, and Jews were scattered throughout the rest of the provinces of the Persian Empire (Esth. 3:8). The exilic and postexilic writers speak often of gathering the dispersed of Israel and Judah from the four corners of the earth, from Egypt, Assyria, Ethiopia, Libya, and the Mediterranean islands (I Chr. 16:35; Ps. 106:47; Isa. 11:12; 43:5-6; 54:7; 56:8; Jer. 23:3; 29:14; 31:8, 10; 32:37; Ezek. 11:17; 20:34, 41; 28:25; 34:13; 36:24; Zeph. 3:10; Zech. 10:10).

a. Monotheism and universalism. The Jews carried with them into the foreign lands their monotheistic faith. The triumph of monotheism tended to transform Judaism from a nationalistic to a universalistic religion, for the inevitable corollary of ethical monotheism is the doctrine of the universal brotherhood of man. The Second Isaiah stressed the idea that Israel's mission was to bring other peoples to the worship of the true God. In many passages of the postexilic portions of the OT, the hope and assurance is expressed that the heathen will sooner or later see the error of their way and turn from their idolatry to the worship of the God of Israel (Isa. 2:2-4; 19:18-25; 44:5; 45:23; 65:16; Jer. 3:17; 4:2; 12:16; Zeph. 3:9; Zech. 8:20-23; 9:7; 14:16-19). The bold aspiration of these passages is tempered with eschatological and apocalyptic elements, and there is no indication that Israel by her own efforts will effect the mass conversions; still it is envisaged that, pending the ultimate conversion of the heathen, individuals and groups may be attracted and won over to the religion of Israel. Solomon in his prayer of dedication of the temple is represented as beseeching the Lord to hear the prayer of the foreigner who comes to pray in his temple, so that all the peoples of the earth may come to know and worship the Lord as does Israel (I Kings 8:41-43). It is difficult to determine the date of this passage, but it breathes the universalist and missionary spirit of the Second Isaiah and stands in sharp contrast to the attitude of Ezek. 44:7-9.

The story of Naaman the Syrian presents an instance of partial conversion of a nonresident foreigner to the worship of the God of Israel. The difficulties which Naaman faced in the attempt to worship the God of Israel in a foreign land in the temple of a heathen god are vividly pointed up (II Kings 5:15-19), and in the nature of the case his devotion to Yahweh could hardly be expected to endure. Israel's God was still too much bound to the soil of the tiny land. Still, Naaman's experience was a step toward the achievement of the condition affirmed in the last book of the prophetic canon: "From the rising of the sun to its setting my name is great among the nations, and in every place incense is offered to my name, and a pure offering; for my name is great among the nations, says the LORD of hosts" (Mal. 1:11).

There is considerable evidence that in the postexilic period many foreigners were attracted to the religion of the Jews and were assimilated to it in varying degrees. Intermarriage, then as ever, was the most effective mode of blending ideas as well as genes. Among those who returned from the Babylonian exile, marriage with foreigners had proceeded at such a rate as to alarm the leaders of the restored community and move them to launch a vigorous and drastic campaign to combat and undo (Ezra 9–10; Neh. 13) what they considered a great evil and treason to their God.

Elements of nationalism and pseudoracism were inextricably mixed with religious concerns in the minds of the reformers, who feared contamination and assimilation in both areas. It is patent, in the nature of the case, that not everyone agreed with the ideology and policies of the reformers. The book of Ruth is generally regarded as a protest against the militant particularism of Ezra, Nehemiah, and their cohorts. The poignant story of a destitute foreign-born widow, who became the grandmother of Israel's greatest king, carries with it an implicit defense of intermarriage and a plea for tolerance more eloquent than argumentation. A Moabite woman's assumption of full religious obligations in Israel mocks the discrimination that would exclude her kind to the tenth generation (Deut. 23:3) or forever (Neh. 13:1). National and religious elements are here combined: "Your people shall be my people, and your God my God" (Ruth 1:16). Here we encounter for the first time a form of the expression "to take refuge under the wings of the Lord," which later became almost a technical term for conversion to Judaism. The parable of Jonah also is a caricature of particularism and a sort of manifesto of the foreign mission of Judaism.

In Isa. 56:1-8, we have a passage of considerable interest and import for the history of Jewish attitudes toward the foreigner and his acceptance as a convert. Here the foreigner "who has joined himself to the LORD" is assured that the Lord will not separate him from his (the Lord's) people. Apparently there were a considerable number of foreign adherents to the religion of Israel who were nevertheless victims of discrimination, on the ground of their foreign origin. Their partial conversion is implied by their characterization as those

> who join themselves to the LORD,
> to minister to him, to love the name of the LORD,
> and to be his servants.

Theirs is the assurance that all those who keep the sabbath and hold fast to the Lord's covenant will

have a place in his worship on his holy mountain, and their sacrifices will be acceptable on the altar of him whose house is to be a house of prayer for all peoples. The eunuch, too, who by the law was to be excluded from the Lord's community (Deut. 23:1), is promised a memorial better than progeny as a reward for his fidelity to the Lord. The date of this passage, one of the noblest expressions of universalism in the OT, is also difficult to determine. The emphasis on the sabbath agrees with part of the concerns of Nehemiah (Neh. 13:15-22; cf. Jer. 17:19-27), and the defense of the foreign worshiper seems likely to have been called forth by attacks on him such as may have occurred under the influence of Ezra and Nehemiah, but there is otherwise nothing specific by which to date the passage.

While nothing is said here of circumcision, the indirect characterization of these foreigners as those who hold fast the covenant may be taken to mean either that they had been circumcised, or that the author of this passage did not consider the rite requisite. The foreigners whose presence in the temple and participation in the service are denounced as sacrilege in Ezek. 44:7-8 are specifically alleged to be uncircumcised both in heart and in flesh. The juxtaposition of these passages, Isa. 56:1-8; Ezek. 44:7-8, reflects the conflicting attitudes toward the foreigner and possibly the issue of circumcision that we meet in the NT and in rabbinic literature.

b. The effects of exile and dispersion. Since the sixth century B.C. there has been no period when the greater part of the Jewish people was concentrated in Palestine. As one political disaster followed another, the Dispersion increased both numerically and spatially. After the murder of Gedaliah, the governor whom Nebuchadnezzar had appointed over Judah, Johanan the son of Kareah took "the remnant of Judah who had returned to live in the land of Judah from all the nations to which they had been driven" and, with the unwilling prophet Jeremiah, fled to Tahpanhes, or Daphnae, in the Delta of Egypt. Here was one of two large camps of Greek mercenaries, and here must have begun the exchange of ideas between Jews and Greeks which led to such interesting developments later in Alexandria. The impact of the Jewish refugees at Daphnae is attested to this day by the ruins of one of the camp buildings which is called *qaṣr bint el-yehudi*, the "castle of the Jew's daughter." The citizens of Jericho who objected to the depredations of Artaxerxes III were deported to distant Hyrcania on the Caspian Sea.

The natural process of cultural syncretism, of course, had its effects on the uprooted Jew. Josephus (Apion I.xxii) quotes Clearchus the pupil of Aristotle to the effect that the philosopher encountered in Asia Minor a Jew who had become a Greek both in language and in soul and was able to converse with the philosophers and impart more information than he received, yet observed a remarkable rigor in his diet and a continent way of life. Alexander the Great established a Jewish colony in Alexandria in Egypt.

The protracted conflict of the Ptolemies and the Seleucids, which swept back and forth across Palestine, caused more Jews to seek asylum in less turbulent environs. Josephus relates that Onias (III or IV), the son of Simon, one of the Jewish high priests, fled from Antiochus the king of Syria, when he made war with the Jews, and took refuge with Ptolemy in Egypt and there built a temple in the district of Heliopolis in the city of Leontopolis (Tell al-Yahudiah). Many Jews settled in the vicinity of this temple, and the district was called Onion (Wars VII.x.2). This event is related to the prophecy in Isa. 19:18-21, which may be *ex eventu,* or, as Josephus says (Antiq. XIII. iii.1), was invoked in support of the project. This Jewish temple, the House of Onias, is mentioned in the Mishna (Men. XIII.10) and in the Babylonian Talmud (Men. 109*b*, Meg. 10*a*). Like the older colony at Elephantine, this Jewish community influenced the Egyptians and in turn was influenced by them.

The impact of Hellenism on the Jew, both in Palestine and in the Diaspora, was much greater than Judaism's impact on the Greek, and particularly so in the Diaspora. There is no way of knowing how many Jews were drawn into the main stream of Hellenistic paganism and let their ancestral religion lapse, or remained only nominally Jews, but the number must have been considerable. There are numerous examples of syncretism and apostasy, but a couple of cases will serve to point out the dire effects of this tendency. Tiberius Alexander, a nephew of Philo, forsook his ancestral religion and rose to be procurator of Judea for two years, A.D. 46-48, during which time he slaughtered fifty thousand Jews (Jos. Wars. II.xviii.7-8). He later took part in the destruction of Judea and Jerusalem as a general of the Roman army (War V.i.6). Antiochus the Apostate, son of the leader of the Jewish congregation of Antioch in Syria, charged the Jewish community with plotting to burn the city, and when a great fire did occur, he blamed the Jews. He sacrificed to idols, tried to force others to do the same, and stirred up bloody riots against his own people (Jos. War VII.ii. 3). These cases are extreme, but they indicate how far assimilation and apostasy could and did go among some of the Diaspora Jews. The researches of Goodenough in the pagan symbolism adopted by Jews in the Hellenistic and Roman periods show that the degree of syncretism was much greater than previously thought.

c. The Maccabean and Hasmonean periods. In Palestine itself the military and political successes of the Maccabees revived Jewish nationalist pride and may have enhanced somewhat Jewish prestige in the Diaspora. John Hyrcanus and his successors attempted to create a new Jewish empire. John conquered the Edomites and forced Judaism on them (Jos. Antiq. XIII.ix.1), and his son Aristobulus similarly dealt with Galilee, whose population consisted of remnants of the Canaanites and Israelites, Arameans, Itureans (from the Lebanons), and Greeks (Jos. Antiq. XIII.xi.3). Because of its mixed population, Galilee was long known as "Galilee of the nations" (Isa. 9:1), and the Judeans held Galileans in contempt as a mongrel lot (John 1:46; 7:52). Alexander Janneus massacred the Moabites of Pella who refused to convert to Judaism (Jos. Antiq. XIII.xv.4). This policy of enforced conversion was motivated more by political considerations than by religious or missionary zeal. The concern was for cultural uniformity in the interest of political conformity, very

much like the policy of Antiochus Epiphanes. During the war with Rome, Metilius, the Roman commander of a garrison in Jerusalem, saved his life by offering to turn Jew and be circumcised (Jos. War II.xvii.10). The people of Sepphoris would have forced two noble refugees from Trachonitis to be circumcised, if Josephus had not intervened (Jos. Life XXIII). Both these cases, however, occurred in the hysteria of war and cannot be regarded as normal. The rabbis never approved of forced conversions, and in Pharisaic law (Yeb. 48*b*) even a slave could not be forcibly converted.

The success of Jewish proselytism in the Hellenistic period is attested by many sources. The book of Tobit, which is perhaps pre-Maccabean, says that Tobit, whenever he visited Jerusalem, used to contribute to the support of orphans, widows, and proselytes (Tob. 1:8 Codex Sinaiticus). In the book of Judith, probably to be dated in the Maccabean period, the friendly Ammonite Achior was circumcised and converted when the Jews were victorious (Jth. 14:10).

In the book of Esther, which probably dates from the Maccabean period, we meet for the first time a specific term for conversion, or, perhaps, feigned conversion, to Judaism. After Mordecai had eliminated Haman and obtained a royal decree allowing the Jews to avenge themselves on their enemies, it is said (8:17) that many of the peoples of the land "became Jews" (KJV; Amer. Trans.), or "declared themselves Jews" (RSV). The verbal form here used may indicate either a genuine or a pretended conversion, and in view of the element of fear in the situation, it seems likely that the conversion was more feigned than real. The rabbis understood the "Esther proselyte" and the "lion proselyte" (II Kings 17:25) as false converts. The term מתיהדים is unique in the OT and rarely used in later Hebrew. The use of a special term for real or pretended conversion to Judaism, in spite of the unhistorical character of the story of Esther, is an indication that the practice was common enough to need a term to describe it. The mere profession of Judaism would not be considered conversion, and the LXX makes the matter decisive by adding that they underwent circumcision. Esth. 9:27 indicates that new adherents, present and future, are expected to observe the festival of Purim. The term used to designate the new adherents is the same applied to the foreigners who join themselves to the Lord (Isa. 56:3, 6), except that in Esther it is the Jewish people to whom they adhere, rather than the God of Israel, who finds no mention in the book.

The upsurge of nationalist zeal under the Hasmonean rulers did not check the development of the ideal of universalism implicit in the ethical monotheism of Judaism, which ideal was already well established and widely disseminated. The political ambitions of the Hasmoneans did not have the full support of the devoutly religious Jews (*see* HASIDIM; HASIDEANS) who had borne the brunt of the Syrian persecution and the war of liberation. Their concern was solely for loyalty to God, and they were indifferent or even hostile to the princely ambitions for national aggrandizement. Moreover, the Jews of the Diaspora were not directly involved in the Maccabean conflict, and the petty triumphs of the Hasmonean princes did not change the fact that Jews in the Gentile world had to make their way and win friends and adherents by peaceful means.

The family and descendants of Herod, himself an Edomite convert, insisted on conversion for those with whom they intermarried. The politically advantageous marriage of Herod's sister Salome with Sylleus of Arabia was prevented by Sylleus' unwillingness to convert to Judaism (Jos. Antiq. XVI.vii.6). Similarly, Epiphanius, son of Antiochus, refused to come over to Judaism in order to marry Drusilla, the sister of Agrippa II. Drusilla married Azizus of Emesa on his consent to be circumcised, and her more notorious sister, Bernice, married Polemo the king of Cilicia on the same condition. Polemo forsook the Jewish religion when Berenice left him (Jos. Antiq. XX.vii.3). This insistence on conversion was a tradition of the dynasty probably based more on political considerations than on religious fervor.

4. Proselytism in the Roman period. As early as the second century B.C., there were Jewish residents in Rome, possibly those who came in the train of the embassy which Simon the Maccabee sent to Rome. From the first the Jews in Rome exhibited such an aggressive spirit of proselytism that they were charged with seeking to infect the Romans with their cult, and the government expelled the chief propagandists from the city in 139 B.C. In the early decades of the first century B.C., considerable numbers of Jews were in Rome and other cities of Italy, as well as in the farthest reaches of the Empire. Josephus (Antiq. XIV.vii.2) quotes Strabo, *ca.* 85 B.C., to the effect that Jews were settled in all cities and that it was hard to find a place in the habitable world where there was not a Jewish community. In Egypt and Cyrene they were especially numerous and prosperous, and a large part of the non-Jewish population imitated the Jewish way of life. There were Jewish quarters in the various cities; the major part of Alexandria was allotted to them, and they were allowed a measure of self-rule and had their own courts for disputes among themselves. In 63 B.C., Pompey carried numerous Jewish captives to Rome for his victory procession. These were sold into slavery, and many later gained their freedom and as FREEDMEN or libertines became Roman citizens.

a. Propaganda and apologetic. The dispersion of Jews throughout the Mediterranean world put them everywhere in the position of a defensive minority and stimulated their self-consciousness as Jews. The Greek curiosity was naturally piqued by the strange customs of the Jews. The Diaspora Jews kept the sabbath, observed the festivals, practiced circumcision, and observed the dietary laws, especially the swine taboo. Juvenal (*Satires* VI.160; XIV.98) says they saw no difference between eating swine and eating human flesh. They preserved a strong attachment to Jerusalem and to the temple. All over the world Jews paid a half shekel a year to the temple (Philo *The Special Laws* I.78) and made pilgrimages to Jerusalem. Some of the Jewish rites and customs seemed bizarre and morose, and yet wide circles of pagan society were fascinated by them. But the great appeal was made by Jewish morals based on ethical monotheism. Many a questing Greek, who no longer believed in the gods or in the doctrines of the phi-

losophers, could find satisfaction and inner peace in Judaism's doctrine of one omnipotent God, creator of heaven and earth, invisible and transcendent, who cannot be represented by any image man may make, whose providence extends to all, who demands a life of virtue and rewards and punishes beyond this life. No other religion had such exalted doctrine. There were still other attractive features; for those inclined to asceticism, there were rigorous rules for fasting, and for those who yearned for release from sin there were taboos and rites for ceremonial cleanliness. The theology and the ethics of Judaism stimulated the Greek interest in ideas. The cosmopolitan spirit and tolerant attitude of the Greeks encouraged the Jews to emphasize the universalistic aspects of their religion and to disregard or explain away such features of their law and customs as seemed difficult or absurd to the Greek mind. In theory, no part of the law was invalid, but in practice much of it was ignored. Many of the injunctions could not well apply in the Diaspora.

The Diaspora Jew was keenly aware of his religious superiority. He fancied himself "a guide to the blind, a light to those who are in darkness, a corrector of the foolish, a teacher of children, having in the law the embodiment of knowledge and truth" (Rom. 2:19-20). An extensive and vigorous propaganda for Judaism was developed in the cities where there were large Jewish minorities, especially in Alexandria. The translation of the Hebrew scriptures into Greek for the benefit of Jews who no longer understood Hebrew became also a vehicle for spreading knowledge of Judaism among the Gentiles. From the early stages of the Diaspora, the synagogues were open to all, and the Gentiles heard the readings and discourses in Greek. "For from early generations Moses has had in every city those who preach him, for he is read every sabbath in the synagogues" (Acts 15:21). Zealous Jews created a whole literature in Greek. They reworked biblical materials and published books under pagan pseudonyms for propaganda purposes. Remnants of what must have been an extensive literature of this sort have been preserved. Most important is the so-called Sibylline Oracles, which in its present form has been reworked by Christians, but which contains original Jewish sections in which idolatry is denounced and monotheism advocated. The Letter of Aristeas and the poem of pseudo-Phocylides are other works intended to promote Judaism. The Wisdom of Solomon, a composite work produced between the second century B.C. and the first half of the first Christian century, is an unexcelled document of religious propaganda, a compound of Judaism and Hellenism, directed at the devout Greeks whose souls found no rest in paganism. The interpolated "treatise against idolatry," chs. 13–15, expresses the conviction that idolatry is a late aberration which must soon pass away (14:12-14). Through the Jews the "imperishable light of the law" is to be given to the world (18:4). Aristobulus the Jewish philosopher, in the middle of the second century B.C., wrote with the aim of reconciling Greek philosophy and Jewish religion. A great part of the writings of Philo of Alexandria are expressly intended to recommend Judaism to the respect and even the acceptance of the Greeks. Like Aristobulus the philosopher, Philo tried to show that the Greek philosophers drew from Moses and that everything good in Greek philosophy had already been better taught by Moses. Josephus in Roman exile during the latter part of his life devoted his energies to apologetic writing on behalf of Judaism.

The convert, of course, stood in need of instruction both before and after his admission to the new religion. Some passages of the OT, notably Pss. 15; 24:3 ff; 34:13-15; Isa. 33:14-16, seem well suited for catechetical instruction, and may have been so used. That there were manuals for the instruction of converts is highly probable. Harnack suggested that we have such a manual in parts of the Didache, or Teachings of the Twelve Apostles (1.1-3*a;* 2.2–5.2; and fragments of chs. 8; 13). These sections, largely ethical in content, are called the "Two Ways" and constitute the basis of the larger Christian work. Jewish features and rabbinic parallels, however, appear in the admittedly Christian sections of the work, as well as in the sections that have been thought to be of Jewish origin. Even if the Two Ways is not the remnant of a Jewish manual for converts, it is altogether likely that such manuals were in use.

b. Anti-Jewish reaction. The Jews were not accorded wholehearted acceptance and approval everywhere. Already in the fifth century B.C., the colony at Elephantine had its temple destroyed. The attempt to resist assimilation by self-isolation aroused suspicion and animosity. The social isolation of the Jews was by no means complete. Ovid (*Art of Love* I.75) mentions that Roman gentlemen often went to the synagogues in quest of amorous adventures, which they presumably found on occasion. Tacitus complained that the Jews "keep themselves and show mercy to their kinsmen, but toward every one else they bear a malignant hatred" (*History* V.5) and similarly Juvenal (*Satires* XIV.103-4) charged that "they show the way only to their fellow believers, and only the circumcised do they lead to the desired fountain." Their refusal to participate in the worship of the pagan gods was interpreted as a lack of community spirit and proper piety. The religion of the Jews did not win the respect of the literati in particular. Horace (*Satires* I.5) thought the God of the Jews a "melancholic" one, while to Cicero the Jews' religion was "barbaric superstition" (*Against Flaccus* 28). Tacitus was baffled by the absence of representations of the gods in their synagogues (*History* V.5). Juvenal thought they worshiped the clouds and sky (*Satires* XIV.97). Deliberate defamation of the Jews, begun by the Egyptian priest Manetho in the third century B.C., was carried on by Lysimachus, Chaeremon, and Apion, by Tacitus and the Roman satirists. Tacitus claimed that the Jews worshiped an ass's head in the temple at Jerusalem; that they abstained from flesh of the swine because this animal often suffers from the scab, which disease the Jews had in Egypt and for which they were expelled (*History* V.3-4). Juvenal ridiculed the swine taboo (*Satires* VI.160; XIV.98) and regarded the sabbath as simply an excuse for laziness (*Satires* XIV.105-6). Apion circulated the tale that the Jews annually captured a Greek, fattened him, and then sacrificed him and ate his guts, swearing always to hate Greeks (Apion II.8). Against such calumnies the Jews wrote apol-

ogies, such as Josephus' work *Against Apion*. The charge that the Jews were a late, upstart people was answered by quoting the ancient writers who mentioned them. The charge that Jews had contributed nothing to civilization brought forth the counterclaim that almost everything of value in civilization derived from Moses. The Greek poets and philosophers were quoted to show that they too share something of the exalted concept of God with the Jews. The accusation that the Jews were hostile to strangers was answered by pointing out the humane features of the Mosaic law in respect to foreigners. This latter point was stressed particularly by Philo.

Despite the efforts of apologists and propagandists, anti-Jewish sentiments sometimes erupted into violence. Ptolemy VII tried to punish the Jews of Alexandria for their support of Cleopatra by herding them together to be trampled by inebriated elephants, but the attempt was abortive (Jos. Apion II.v). In A.D. 38 there was a government-sponsored persecution of Jews in Alexandria; synagogues were attacked and pictures of Caligula set up in them (Philo *Against Flaccus; Legation to Caius*). Anti-Jewish violence broke out in Syria during the Jewish Revolt, and ten thousand Jews' throats were cut in Damascus in the space of one hour (Jos. War II.xx.2; VII.viii.7).

c. Philo and Josephus on proselytes. Philo Judeus was himself a thorough blend of both Jew and Greek. To him Greek was "our language," and the non-Greek-speaking Jews were "barbarians." His own knowledge of Hebrew, if any, was very meager, though he was apparently acquainted with the terminology and interpretation of the oral law. Plato to him was almost on the same level with Moses. Like a pagan he even referred to the stars as "visible gods." Still his loyalty and zeal for Judaism were all-consuming. For the disloyal and apostate Jew he had no sympathy, and he fought against these "sons of Cain," who forsook Jewish ways and regarded them only as figurative acts which were not binding on those who understood their hidden meaning (*On the Posterity of Cain* 35-40; *On Penitence* 180-86; *The Life of Moses* I.6; *On Abraham* 80-94). Philo's purpose, however, was not only to edify his fellow Jews, but also to win friends and adherents among the Gentiles. Since Israel was no longer a political entity, but a religious community whose special relationship to God depended, not on blood and soil, but on fidelity to his will, it was deemed necessary to interpret Jewish life in religious rather than national terms. There was an inescapable responsibility to bring others to the worship of the true God within the Mosaic polity. Accordingly, Philo stressed the universal aspect of Judaism and its moral and humane character. The Mosaic teachings and the purity of Jewish family life were contrasted with the views of the Greek poets and the pagan immorality of Alexandria. The superiority of the Jewish religion commanded the respect of the heathen, and many of them observed the Jewish sabbath and the Day of Atonement (*Life of Moses* II.4). Conversions to Judaism were apparently not infrequent in Alexandria, for Philo refers often to converts and praises them for their courage and zeal and for the radical transformation of their lives.

It was no easy thing for the pagan to forsake polytheism and adopt an entirely new way of life, for the pagan became a Jew only by a violent and complete break with his past. According to Tacitus (Hist. V.5), proselytes learned to despise the gods, cast off the fatherland, and hold parents, brothers, and children in contempt. In Philo's view, however, such alienation from polytheism was a change to a better order, a beautiful migration. These fugitives to God, suppliants who changed to the polity of the Jews, who spurned idle fables and embraced truth in its purity, are praised for their wisdom and virtue. There should be no discrimination against them in Jewish society, but they are to be accepted into the Mosaic polity on equal terms with born Jews. More than that, they are to be shown special consideration, friendship, and love, on the basis of Lev. 19:34. The convert is thus equal, or even superior, to the born Jew, for true nobility is a matter of the heart, rather than of birth. The born Jew does not obtain the approval of God by his birth, but by his loyalty to his God-loving heritage. The convert gains God's approval because he makes the passage to piety (*The Special Laws* I.9.51-52).

Apart from full membership in the Mosaic polity, Philo gave recognition to intermediate classes who are neither born Jews nor full converts. The "alien," ἀλλογενής or ἀλλότριος (the LXX terms for בן־נכר or נכרי), had little part in the scheme of things. For the LXX term πάροικος, which usually renders the Hebrew תושב, Philo uses the Athenian term μέτοικος. By this term he apparently designates the half heathen, who were allowed to live with limited rights among the Jews in Palestine (Lev. 22:10; 25:47; Ps. 39:12—H 39:13). In Tannaitic law the equivalent of the LXX πάροικος is גר תושב, who, though uncircumcised, is not a complete heathen but one who has abandoned idolatry and observes the minimum ethic of the Noachian laws ('A.Z. 64*b*), which are: (*a*) to establish courts of justice; (*b*) not to worship idols; (*c*) not to blaspheme; (*d*) not to commit adultery; (*e*) not to murder; (*f*) not to steal; (*g*) not to eat flesh from a living animal (Tosef. 'A.Z. VIII[IX].4-6). The LXX term προσήλυτος Philo understood in the sense of "convert," although there is no warrant in the LXX usage for this understanding. He must have had in mind the Tannaitic use of the term גר in the sense of "convert." Philo, however, for his part, used the term ἐπήλυτης rather than προσήλυτος to designate the convert. The rabbis distinguished the full convert, גר צדק, and the partial adherent, גר תושב, or "resident alien," who accepted monotheism and the Jewish ethic but not the ritual. His ritualistic behavior was uncontrolled, and he had no formal relation to the congregation. The true convert, גר צדק, or גר ברית, "covenant convert," assumed full ritual duties, including circumcision, and was received into full membership in the community and his descendants became fully qualified Jews in the third generation. It seems that Philo at times fluctuates in his notion of the proselyte as the circumcised, full convert and as the uncircumcised, partial adherent—i.e., between what the rabbis called the גר צדק and the גר תושב. In commenting on Lev. 19:34: "You were strangers [גרים/προσήλυτοι] in the land of Egypt," he says in effect that "proselyte" may mean "foreigner" in both the literal and the religious sense and that the Jews were proselytes in Egypt in

both senses, because they lived in a strange land and they were uncircumcised. By the same token the pagan who has rejected polytheism but remains uncircumcised is a proselyte in the same sense as were the Israelites in Egypt. This may suggest that circumcision was not required of the proselyte and that the term could designate the uncircumcised half-convert. But the opposite implication is perhaps the more likely, that the concern over noncircumcision indicates that only the circumcised were recognized as proselytes, or true converts, as with the rabbis.

Josephus, for his part, does not use the term προσήλυτος, but he variously describes converts as those who change their course of life and embrace the Jewish customs, who are taught to worship God according to the Jewish religion (Antiq. XX.ii.1, 3), whom the Jews had made a part of themselves (War VII.iii.3). Similar terms are used of the forced conversions of the Idumeans who submitted to the use of circumcision and the rest of the Jewish ways of living and thereafter became no other than Jews (Antiq. XIII.ix.1). Judaism to Josephus was thus not merely a matter of race, but admitted all who had a mind to observe the Mosaic laws and live as Jews (Apion II.xxix).

5. Successes of Jewish propaganda. The vigor and success of Jewish missionary efforts is attested in many sources. The Sibylline Oracles III.195 (*ca.* 140 B.C.) affirm that "the Jews were for all mortal men the guides to [the way of] life," and say of Judea (III.271): "Every land shall be full of thee and every sea." Roman poets and historians refer, usually with animus, to the ubiquity of the Jews and their sympathizers and adherents. Horace (*Satires* I.4.142) threatens the hater of poetry that "like the Jews, we will force you to come over to our numerous party." Horace himself had a friend who observed Jewish customs (*Satires* I.9, 68-72). Seneca (cited by Augustine *The City of God* IV.11) and Dio Cassius (XXXVII.7) also bear witness to the increase of adherents to Judaism. Juvenal (*Satires* XIV.96-104) lashes out at those who learn to practice and revere the Jewish law. The father would begin by observing the sabbath and the food taboos and worshiping the God of heaven, and the son would go all the way and be circumcised.

Before the rise of Christianity, Judaism had won numerous sympathizers, adherents, and even full converts in all parts of the Roman world. Agrippa I in his letter to Gaius Caligula (Philo *The Embassy to Gaius* XXXVI.281-82) mentions Jewish colonies in Egypt, Syria, Phoenicia, Asia Minor, and the Greek islands and asserts that not only are the continents full of Jewish colonies, but also the best-known islands, to say nothing of the countries beyond the Euphrates. Jews, he says, have settled wherever there is any advantage of soil or climate. Josephus speaks with pride of the large number of foreigners who were in some measure converted to Judaism (Antiq. XIC.vii.2; Apion II.xxix). Many Greeks, he says (War VII.ii.3), were made converts in Antioch, and many of the women of Damascus were inclined to Judaism (War II.xx.2). There was, he claimed (Apion II.xl), no city where the sabbath rest and other Jewish usages were not widely observed and Jewish virtues emulated.

a. The preponderance of women converts. Women appear to have predominated among the converts and near converts. The Roman noblewoman Fulvia, wife of the senator Saturninus, embraced the Jewish religion, but when she was defrauded by four unscrupulous Jews who solicited gifts from her on the pretext that the money would be sent to the temple in Jerusalem, Tiberius, at the instigation of his counselor Sejanus, banished the Jews from Rome, A.D. 19 (Jos. Antiq. XVIII.iii.5). This episode is corroborated by Tacitus (Ann. II.85). The size of the Roman Jewish community at that time may be judged by the fact that four thousand Jews capable of bearing arms were deported to Sardinia. In A.D. 31, Sejanus was removed from office, and the Jews returned to Rome. The Emperor Claudius began his reign (A.D. 41) with an edict of toleration for the Jews. Josephus mentions also Poppea Sabina, Nero's mistress and second wife, as a religious woman who acted favorably toward Jews (Life III; Antiq. XX. viii.11), but it is doubtful that she was actually a convert. Titus Flavius Clemens and his wife, Flavia Domitilla, cousins of the emperors Titus and Domitian, embraced Judaism, as a result of a visit to Rome of a deputation of distinguished rabbis, headed by Gamaliel II.

The special susceptibility of women to Jewish proselytizing, apart from the general feminine tendency to religiosity, was doubtless due in large part to the fact that circumcision, which has always been the chief impediment for the male prospective convert, was not required of women. The conversion of the royal family of Adiabene through the queen mother, Helena, was one of the signal successes of Jewish missionary endeavor and shows the vitality of Babylonian Judaism. Josephus gives us a rather full account of the affair (Antiq. XX.ii). The king, Izates, had great difficulty deciding whether to be circumcised. His Jewish mentors gave contradictory advice. Hananiah opined that it was possible to worship God without being circumcised and that the worship of God was of a superior nature to circumcision. Eleazar from Galilee insisted on circumcision. Even though the queen mother was opposed, Izates took the advice of Eleazar and submitted himself to the rite. The Adiabenians remained loyal to Judaism even in the days of the Jewish Revolt, when descendants of the royal house fought with the Jews against the Romans (Jos. War II.xix.2).

b. The God-fearers. For every pagan who became a true convert to Judaism by accepting the full ritual requirements, there were many more who accepted the theological and ethical teachings of Judaism, attended the synagogue, and observed many of the Jewish ceremonies, but could not admit the validity or necessity of the strange and painful surgical rite. Though there were Jews who were inclined to waive this onerous requirement, the majority position remained firm on this point. Thus many remained on the outside as only partial converts. These quasi-converts are referred to in the literature of the first Christian century as "those who fear/worship God" (οἱ φοβούμενοι/σεβόμενοι τὸν Θεόν). The origin of this expression is doubtless to be found in the Hebrew term יראי יהוה, which occurs frequently in the OT, particularly in the Psalter. Some have taken the

expression in certain passages of the Psalms to refer to converts or near converts, as does its Greek equivalent in the NT. This has been suggested particularly for Pss. 115:11, 13; 118:4; 135:20, where the expression stands in parallelism with "(the house of) Israel," "the house of Aaron," and "the house of Levi." The problem, however, is whether the parallelism is synonymous or antithetical, whether "those that fear the LORD" are a separate category from the priests, Levites, and lay Israelites, or whether the term is simply a collective designation for pious Israelites in general. In keeping with the legal injunctions to fear the Lord (Lev. 19:14, 32; 25:17; Deut. 6:2, 13, 24; 10:12, 20), the expression became a standard designation for pious Israelites, as in Pss. 15:4; 22:23, 25; 25:12, 14; 31:19; 60:4; Mal. 3:16; 4:2; Ecclus. 2:7-17; 6:16-17; 34:13-15; Pss. Sol. 2:37; 3:16; 4:26, and there is nothing to indicate that this is not also the case in Pss. 115:11, 13; 118:4; 135:20.

Some scholars have understood the terms "God-fearer" and "proselyte" as synonymous, largely on the basis of Acts 13:16, 26, 43. Paul addresses his hearers in the synagogue of Antioch in Pisidia as "men of Israel, and you that fear God" (vs. 16), and again as "brethren, sons of the family of Abraham, and those among you that fear God" (vs. 26), while in vs. 43 the same hearers are called "Jews and devout converts" (KJV "proselytes"). This might appear a neat case for the synonymy of "God-fearer" and "proselyte," but it may be simply a textual error or a loose use of the term "proselyte." That the term φοβούμενος/σεβόμενος τὸν Θεόν does not designate a proselyte in the sense of a true convert is made clear by the fact that Paul at Corinth carried out his threat to leave the Jews and go to the Gentiles by going to the house of Titius Justus, who is called a "worshiper [σεβόμενος] of God" (Acts 18:7), although he was obviously a Gentile and uncircumcised. The uncircumcised God-fearers were brothers to Paul, who set aside all ritual impediments, but they were not regarded as full Jews, or in any sense sons of Abraham, by Jewish religious authorities. According to the strict view, one who rejected a single word of the law was not to be admitted as a proselyte (Mekhilta de Rabbi Simeon ben Yohai on Exod. 12:49; Siphra, Qedoshim VIII). One could not accept the whole law apart from circumcision, and this final rite obligated him to keep it all (Gal. 5:3). The distinction between God-fearers and true proselytes is shown in a Tannaitic comment on Isa. 44:5 which identifies the one who calls himself by the name of Jacob as the true proselyte, and the one who surnames himself by the name of Israel as the fearer of heaven—i.e., of God (Mekhilta, Mishpatim, Tractate Neziqin XVIII, Midrash Numbers Rabbah VIII.2). There is a story of a Roman senator, a God-fearing man, who committed suicide in order to nullify an anti-Jewish decree. He was circumcised shortly before his death; thus he was clearly a God-fearer before he was circumcised (Midrash Deuteronomy Rabbah II.24). Cornelius the centurion of the Italian cohort was clearly an uncircumcised foreigner, with whom proper Jews could not associate (Acts 10:28; 11:3), but the phrase φοβούμενος τὸν Θεόν is applied to him (Acts 10:2, 22). The centurion of Capernaum who loved the Jewish nation and built the local synagogue is not termed a God-fearer, though he certainly must have been in this category (Luke 7:2-10). This centurion's protestation of his own unworthiness expressed the deference of the non-Jew to the Jew in religious matters. Jesus' statement that he had not found so great a faith even in Israel shows that the centurion was not a true proselyte, for the full convert was a part of Israel. In Acts 2:10 the expression "both Jews and proselytes" does not necessarily imply that the proselytes were not also Jews; the probable meaning is that the mixed multitude from all over the world included both born Jews and converts to Judaism. It almost certainly also included numerous devout persons who were not full converts. The many devout Greeks whom Paul persuaded in the synagogue at Thessalonica (Acts 17:4) and the devout persons with whom he argued in the synagogue at Athens (vs. 17) were the same sort of people as those who are elsewhere called "those that fear/worship God" and who in Acts 14:1 are called simply Greeks. They were Gentiles, Greeks, Romans, Syrians, etc., who embraced or were inclined to the monotheistic faith and ethic of Judaism, who admired and even observed some of the Jewish customs such as the sabbath rest, the kindling of lights before the sabbath (in keeping with Exod. 35:3), and some of the food taboos, and who made contributions to charity (Philo *Life of Moses* II.2; Jos. Antiq. XIV. vii.2; Apion II.xl). They visited the synagogues, and read and listened to the reading and expounding of the Scriptures in Greek. They were drawing near to Judaism, but they were not full Jews. Some of them doubtless went on to become full Jews, or their descendants may have, but most continued in an intermediate state between pagans and Jews, chiefly because of the requirement of circumcision. As for the devout women of Antioch (Acts 13:50) and Lydia of Thyatira, "who was a worshiper of God" (Acts 16:14), it is difficult to assay the degree of their attachment to Judaism, but, since the issue of circumcision did not affect them directly, the difference in their religious life and that of their Jewish neighbors was perhaps negligible.

c. Paul and the uncircumcised. The Christian congregation at Jerusalem, under the influence of the circumcision party, inclined to the traditional treatment of the uncircumcised. They formulated a minimum ethic for Gentile adherents and conveyed it to the community in Antioch (Acts 15:20-29; 21:25). Some of the pagan practices most offensive to Jews were prohibited—unchastity, use of food sacrificed to idols, the eating of blood or anything strangled (cf. Lev. 17:10–18:30; Zech. 9:7). These prohibitions were similar to those imposed on the resident alien (גר תושב) in the Talmud as a sort of *modus vivendi* between Jews and Gentiles, but neither satisfied the demands of strict Judaism. The proper Jew could not associate with even the best of God-fearing Gentiles, as shown by the story of Cornelius. The issue of circumcision remained a live one for some time. A division of the mission field between Peter and Paul, the one to the circumcised, the other to the uncircumcised, failed to solve the problem (Gal. 2:3-10). The Holy Spirit poured out on the Gentiles convinced the circumcised with Peter at Caesarea that there was no ground for denying baptism and equality to

Gentiles so possessed (Acts 10:44-48). Peter, under the influence of the circumcision party, later reversed his stand and was taken to task by Paul at Antioch (Gal. 2:11-21). Peter apparently again acceded to Paul's view after the death of James. Paul refused to circumcise Titus, even though his presence at the council in Jerusalem offended the Judaizers (Gal. 2: 3-5), but Timothy, whose mother was Jewish and his father Greek, he circumcised so as to make him acceptable to the Jews in Asia Minor (Acts 16:1-4). When the report was spread in Jerusalem that Paul had been preaching to Jews that they need not circumcise their children or observe the ceremonial law, James and the elders advised him to go to the temple and show that he himself was an observing Jew (Acts 21:21-24). The false rumor that Paul had taken the uncircumcised Trophimus into the temple provoked the mob attack which led to his arrest (Acts 21:29-36). Paul was vexed with the issue of circumcision throughout his ministry, but his clearest and best answer is given in Gal. 5:6, that "in Christ Jesus neither circumcision nor uncircumcision is of any avail, but [only] faith working through love."

6. Rabbinic attitudes toward proselytes. Among the rabbis there were conflicting attitudes toward proselytes and proselytism, as on virtually every other question. There were those who considered it meritorious and God-pleasing to bring a proselyte under the wings of the divine Presence. "Every one who brings a proselyte near, it is as though he had created him" (Midrash Genesis Rabbah LXXXIV.4). It was ideal for one to make a proselyte a year (Midrash Genesis Rabbah XXVIII). There is a parable (Midrash Numbers Rabbah VIII.1-2), similar in spirit to the NT parable of the lost sheep, which shows how God loves the proselyte and admonishes Israel also to love (Deut. 10:19) and not oppress him (Lev. 19: 33-34). Hillel, the outstanding liberal of his day, was especially eager to receive proselytes (Shab. 31*a*) and accordingly inclined to make the requirements easy for them, while his stricter colleague, Shammai, insisted that the prospective proselyte's motives be vigorously tested. After instruction by a scribe, the candidate was subjected to a triple induction; he was circumcised, and when the wound was healed, he was immersed, in accordance with the law which required a ritual bath in all cases of impurity (Lev. 11–15; Num. 19); and then, when the temple stood, there was a sacrifice.

a. Proselyte baptism. It has been argued that there was no proselyte baptism before the destruction of the temple, and it is true that there is no early mention of the rite, but there is general agreement among scholars that it was a part of the reception of proselytes from the beginning. Some such rite would be especially needed for the reception of female proselytes, since it is not likely that they were admitted simply by affirmation. The importance of the ritual bath is indicated by the view that it alone may suffice, apart from circumcision (Yeb. 46). The baptismal rite was singularly appropriate, for it symbolized a radical change of status, an entry into a wholly new life. In token of his conversion, the convert assumed a new name. If the convert's spouse was not also converted, the marriage was considered invalid. Children born before the conversion were not heirs, and, if there were no children after conversion, the community inherited. Many of the proselytes displayed the typical zeal of the convert and even outdid their mentors. Jesus' stricture against the Pharisees, that they traversed sea and land to make a single proselyte, and then made him twice as much a child of Gehenna as themselves (Matt. 23:15), has reference to the Pharisaic obsession with ritual purity, which they impressed with double force on the proselyte. The Pharisaic zeal for proselytizing was accompanied by a rigid segregation of the ritually impure. Proselytes zealous in their observance of the ceremonial laws were a special joy to the rabbis. Some of Israel's eminent scholars were said to be proselytes, or descendants of proselytes. Shemaiah and Abtalion, predecessors of Hillel and Shammai, were reputed to be descended from Assyrian proselytes. Both Akiba and his disciple Meir were thought to be descended from proselytes. The translators Aquila and Theodotion were proselytes.

b. Circumcision. On the issue of circumcision for the convert, the rabbinic authorities were not of one mind. Rabbi Eliezer ben Hyrcanus considered circumcision the main act of conversion, but Rabbi Joshua declared baptism sufficient (Yeb. 46*a*). There are many sayings which reflect a liberal view in this regard. "The righteous among the Gentiles will have a portion in the world to come" (Tosef. Sanh. 13.2). "He who rejects idolatry acknowledges the whole Law" (Ḳid. 40*a*). Rabbi Yohanan (second-third century A.D.), the founder of the Academy of Tiberias, said: "Anyone who repudiates idolatry is called a Jew" (Meg. 13*a*). In general, however, the rabbis of the second-third century had a rather unsympathetic attitude toward the half convert. Rabbi Simeon ben Eleazar in the latter part of the second century averred that half converts were accepted only when the Jubilee was in existence ('Arak. 29*a*). This attitude doubtless reflects a reaction against Christianity's waiver of all prerequisites. It is likely that half converts were wholeheartedly accepted in the pre-Christian period.

c. Status of the convert. The convert, then as now, was often in an awkward position, subject to ambivalent and contradictory attitudes. Though in theory he was now an equal with born Jews, in fact he was not always so treated. The Palestinian scribes tended to be stricter than the written law, which gave the גֵּר, after circumcision, equal rights with the native Israelite (Exod. 12:48; Num. 9:14). While the old ties were severed, the new were not yet firm. Many Jews, both in Palestine and in the Diaspora, were not willing to place their claim to superiority entirely on religious grounds, apart from descent from Abraham. They expected the convert to embrace their religion and bolster them as a national, or religio-political, entity, not only to propagate the true faith, but also to promote the cause of Jewish nationalism. True religion was inextricably bound up with the ideal of the chosen people (cf. Matt. 3:9). The proselyte could not properly claim Abraham as father. It was not permitted him to refer to the Deity as "God of our fathers," the proper formula for him being "God of the fathers of Israel" (Bik. I.4). This restriction, however, was later abrogated, and it was forbidden to remind the proselyte of his origin. Some

limitations were placed on the rights of proselytes in regard to marriage. A priest could not marry a proselyte, but he could marry the daughter of a proselyte, provided one of her parents was born a Jew. The prohibition of intermarriage with an Ammonite or Moabite (Deut. 23:3), to the tenth generation, was in time relaxed. Rabbi Yohanan declared the daughter of an Ammonite proselyte eligible to marry a priest (Yeb. 77*a*). The children of proselytes became full Jews by marriage with a Jew.

7. The decline of Jewish proselytizing. Opposition to proselytes and to proselytizing, which finds expression in the Talmud, is probably to be attributed to the intensified antiforeign feelings generated during the rebellions against Rome, the destruction of Jerusalem, and the rise of Christianity. The sayings of the Tannaim and Amoraim date from the second-fourth centuries, but they reflect conditions and attitudes that obtained already in the first century. Even in ordinary times, there must have been a fairly high rate of defection among converts and near converts. In times of stress the new recruit could be expected to falter ('A.Z. 3*b*). The Talmud mentions proselytes who reverted to their previous error ('A.Z. 41*a;* Giṭ. 45*b*), and there was always the fear that such might happen (Mishna and Tosef. Dem. VI.10; Ḳid. 17*b;* 'A.Z. 64*a*). It was a cause of complaint that proselytes were often improperly schooled in the intricacies of the ceremonial laws (M. Nid. VII.3). There was peril to the religion in the marriage of an Israelite girl and a proselyte (Yeb. 47*b*). The proselyte allegedly had a strong inclination to evil, and the Torah, according to Rabbi Eleazer the Great, gave warnings against him in some thirty-six or forty-six places (B.M. 59*b*). It was charged that "evil comes on those who receive proselytes" (Yeb. 109*b*), even that proselytes because of sexual improprieties were to blame for delaying the (advent of the) Messiah. Proselytes came to be regarded as a disease, a scab on the body politic (Yeb. 47*b*, 109*b;* Ḳid. 70*b;* Nid. 13*b*), with an ironic wordplay on Isa. 14:1: "[They] will cleave to the house of Jacob."

After the second ill-starred revolt, when many proselytes became turncoats, Judaism's missionary ardor was considerably weakened and even converted to fear and hostility toward the proselyte. The Roman emperors intervened, because circumcision, viewed as equivalent to castration, disqualified one for office, and could not be tolerated. An absolute ban on circumcision was relaxed for Jews, but conversion to Judaism was forbidden under Domitian, Hadrian, Antonius Pius, and Septimus Severus. The rabbis sometimes denounced the would-be convert to authorities.

Though the Jew was doubly disqualified, by circumcision and inability to participate in the state-cult, Judaism was recognized as a legal cult, and Jews exploited this advantage over Christians, who were not exempt from emperor-worship. Christians blamed Jews as instigators of the Roman persecutions, and the mounting tension and animosity is reflected in the anti-Jewish bias of early Christian writers. The conflict with Rome and competition with its offspring Christianity proved too much for Judaism. Jewish missionary zeal diminished, and Jews increasingly withdrew into self-segregating communities. Jewish proselytizing, however, did not cease entirely, even in the Roman Empire, in spite of the restrictions: the laws remained on the books, but were often ignored.

Beyond the reaches of the Roman Empire, Jewish proselytism retained some of its vigor and succeeded in the conversion of some Arab tribes in the region of Medina, the Himyaritic princes, and the Chazars in the Crimea.

8. Christianity's debt to Jewish proselytizing. Judaism's propaganda assault on polytheism and idolatry and its proselytizing activities prepared the way for the phenomenal successes of Christianity. Judaism attained only limited success, because of its insistence on circumcision and full acceptance of the law. When Paul nullified the ritual laws and made baptism sufficient, without circumcision, the God-seekers and God-fearers welcomed the new faith. Christianity, in proclaiming a universal faith not restricted to any people or nation or set of rules, fulfilled the purpose for which God had scattered Israel among the nations.

PROSTITUTION. A term connoting the practices and activities which involve intercourse with harlots or prostitutes. Several words identify persons who act in this capacity. The context in which these words appear in the sources indicates whether such a person is a common harlot or a sacred prostitute, male or female, attached to and functioning on behalf of a shrine.

2. The common harlot
   a. Her status in the community
   b. The hire of a harlot

c. The distinguishing marks of a harlot
d. Her practice of her trade
e. The control of harlotry (prostitution)
3. The cult prostitute
a. The role of the sacred prostitute in the fertility cult
b. The male prostitute
c. The female prostitute
4. The biblical attack upon cult prostitution
Bibliography

1. Definition and terminology. "Prostitution" is a term signifying sexual intercourse from which ensues no binding or enduring relationship. It is usually indiscriminate in nature. The purpose of the practice of prostitution, as far as the prostitute is concerned, is not primarily sexual passion or the desire for children. It may be either mercenary or religious (*see* § 2*b below*). The most common term in the OT is זונה, translated "one who is a harlot" or "one who commits fornication." It applies to both kinds of prostitution, the secular and the cultic, and appears often in figurative form. Another word, קדשה, whose root meaning is "apart," "holy" (Babylonian *qadishtu*), is used of the religious prostitute. Related to this feminine form is the masculine word, קדש, which also is translated "cult prostitute." Another term, נתינים, perhaps "dedicated ones," is associated with cult prostitution by some scholars. The NT term πόρνη is used in Matt. 21:31; Luke 15:30; I Cor. 6:13.

2. The common harlot. The common harlot—i.e., the woman who offers her body to men for hire—appeared at an early period in Israel's life and continued to practice her trade throughout biblical history. She was less conspicuous, however, than her sister, the cult prostitute, although her social function was well established and generally recognized.

a. Her status in the community. In a number of biblical allusions to the secular harlot or prostitute, she is evidently accepted as a part of the community, without objection or condemnation. Tamar temporarily served as a harlot to achieve her ends (Gen. 38:14-15) and thus became pregnant by having intercourse with Judah. The subsequent anger of Judah, her father-in-law, was not provoked because of her playing the harlot so much as because she was his daughter-in-law and had caused him to commit incest unknowingly (Lev. 18:15). Rahab the harlot had her special place in the traditions of Israel because she had befriended the Hebrew spies when they came to Jericho (Josh. 2:4-16; cf. Heb. 11:31).

Other passages, however, suggest a different attitude toward harlotry. E.g., the sons of Jacob killed Hamor and his son Shechem, justifying their act by saying: "Should he treat our sister as a harlot?" (Gen. 34:31). As punishment for his treatment of the prophet Amos, Amaziah's wife was to become a harlot (Amos 7:17). Harlots were classed with tax collectors in the first century, when the latter were anathema to the Jews (Matt. 21:32). According to the doctrine of Paul, the body of a Christian belongs to Christ, and it should not be joined to that of a prostitute (I Cor. 6:15-16). *See* § 1*e below*.

b. The hire of a harlot. The wages of harlotry may not be used to pay vows in the temple (Deut. 23:18). The precise nature of these wages is not indicated. The term "hire" is doubtless drawn from the practice of paying a prostitute for her services, although it is applied here primarily to sacred prostitution. Both grain and wine are offered in payment (Hos. 9:2).

c. The distinguishing marks of a harlot. When Tamar wished to enact the role of a harlot, she put on a veil, "wrapping herself up," and sat in a public place (Gen. 38:14). However, in the ancient world the veil signified that a woman belonged to a man as wife or daughter. The Assyrian Code of laws required the secular prostitute to be unveiled, as a matter of fact. The sacred prostitute was commonly veiled, on the other hand. Jeremiah declared that Israel has a harlot's brow (3:3). This is vague, but it opens the possibility that the harlot was distinguished by a special mark on her brow or a special arrangement of her hair or head ornaments.

d. Her practice of her trade. She attracted customers by waiting in a public place (Gen. 38:14). The common harlot might function as an innkeeper, to whom travelers came for food, lodging, and sexual satisfaction. She exploited her beauty by putting on gay garments and fine ornaments (Ezek. 16:10 ff). She might use persuasive language, describing her couch, its coverings, and sensuous perfume, persuading her prospect with "her smooth talk" (Prov. 7:16 ff). Her skill may have included the singing of songs. At any rate, men were advised not to associate with women singers (Ecclus. 9:4). Isaiah may have had in mind harlots of Jerusalem when he wrote of women who

> walk with outstretched necks,
> glancing wantonly with their eyes,
> mincing along as they go,
> tinkling with their feet (3:16).

Perhaps the common prostitute originally served as a votary of some sanctuary and gave her earnings for the promotion of its program. This might be a temporary relationship, abandoned for the sake of public prostitution (see Gen. 38:21).

e. The control of harlotry (prostitution). While harlotry of the secular type was at times unrebuked, at other times it came under severe condemnation or strict control by law. The priestly law of Lev. 21:9 provides that a priest's daughter who acts as a harlot is to be burned to death. A priest must not marry a harlot (vs. 7); and Israelites are prohibited from allowing their daughters to become harlots (19:29). If a girl has been found to be guilty of harlotry, she is to be stoned to death (Deut. 22:21). While these miscellaneous laws do not reflect consistent practice, they indicate a tendency to restrict or to eliminate the practice as far as Israelite girls were concerned.

3. The cult prostitute. The practice of cult prostitution was far more serious in the view of biblical writers than common harlotry. It symbolized to them an abominable form of idolatry which could not be tolerated.

a. The role of the sacred prostitute in the fertility cult. The prostitute who was an official of the cult in ancient Palestine and nearby lands of biblical times exercised an important function. This religion was predicated upon the belief that the processes of

nature were controlled by the relations between gods and goddesses. Projecting their understanding of their own sexual activities, the worshipers of these deities, through the use of imitative magic, engaged in sexual intercourse with devotees of the shrine, in the belief that this would encourage the gods and goddesses to do likewise. Only by sexual relations among the deities could man's desire for increase in herds and fields, as well as in his own family, be realized. In Palestine the gods Baal and Asherah were especially prominent (*see* BAAL; ASHERAH; FERTILITY CULTS). These competed with Yahweh the God of Israel and, in some cases, may have produced hybrid Yahweh-Baal cults. Attached to the shrines of these cults were priests as well as prostitutes, both male and female. Their chief service was sexual in nature—the offering of their bodies for ritual purposes. It has been conjectured that cult children were the "orphans" for whom special concern is manifested in the Bible (*see* FATHERLESS). The frequent occurrence of allusions to this cult and to its ritual demonstrates its importance (I Sam. 2:22; II Kings 23:7, 14; II Chr. 15:16; Ezek. 8:14; Hos. 4:13). The Israelites have engaged in sexual intercourse with cult prostitutes so extensively that one prophet inquires:

> Lift up your eyes to the bare heights, and see!
> Where have you not been lain with?
> (Jer. 3:2).

So flourishing was this cult that another prophet (*see* HOSEA) took a drastic step to oppose it—actual marriage with one of its prostitutes. *See* § 4 *below*.

b. The male prostitute. The word for "male prostitute," קדש, based on the root "holy," "separate," appears in a passage that describes the building of high places, pillars, and Asherim "on every high hill and under every green tree; and there were also male cult prostitutes in the land" (I Kings 14:23-24). However, in the next chapter there is a statement to the effect that King Asa "put away the male cult prostitutes out of the land" (15:12). Another king exterminated the "remnant of the male cult prostitutes" (22:46). Apart from the bare allusion to these, always in connection with actual or implied condemnation, the Bible tells us nothing about their function. This must be inferred from the word that identifies them and from usage in ancient nonbiblical lands.

It is clear that they served the needs of the sanctuary. They were associated with the goddess Asherah (Ishtar) and doubtless her counterpart Tammuz or Baal. The word מאהב, "lover" (Jer. 22: 20, 22; 30:14; Ezek. 16:37 ff; 23:9; Hos. 2:7 ff; Zech. 13:6), has likewise been held to have a connection with the male prostitute attached to the cult. Another term, sometimes taken to identify male prostitutes, is נתינים, "temple servants." It appears only in the composite work Chronicles-Ezra-Nehemiah (see I Chr. 9:2; Ezra 7:24).

See also SODOMITE.

c. The female prostitute. The law of Deuteronomy prohibits the practice of cult prostitution by the daughters of Israel and likewise by the sons (Deut. 23:17). This law may reveal the non-Israelite origin of this institution, associated as it was with the Canaanite and Babylonian fertility cult.

The word זונה is also used for "sacred prostitute," although it appears with the meaning "(common) harlot," as already shown. The root is frequently used as a verb meaning "to have relations with foreign gods." This leads to the conclusion that the זונה may have been connected with the Canaanite cult in Palestine, even though the word refers also to the common harlot. The זונה as a prostitute common to baalism may be distinguished from קדשה, which possibly derives from non-Palestinian cults, in the view of some scholars. Conversely, others suggest that the institution symbolized by קדשה was indigenous and that represented by the word זונה was foreign.

4. The biblical attack upon cult prostitution. The meagerness of the data regarding the practice of cult prostitution is in contrast to the considerable amount of material of a denunciatory nature. Israel's memory of her peculiar covenant relation to her God was kept alive by the pleas of the prophets and the teachings of her priests. This sense of election and a tradition of seminomadic desert existence caused a revulsion against the agricultural-pastoral nature cults encountered in Palestine.

The radical reform described in II Kings 23 is an example of the strong reaction against cult prostitution. The temple was purged of the "vessels made for Baal, for Asherah, and for all the host of heaven" (vs. 4); the Asherah (image of the fertility goddess) was taken to the brook Kidron and burned (vs. 6). The houses of the cult prostitutes were broken down (vs. 7). With anger and contempt the prophets describe the harlotrous behavior of the people. In going after the Baals, Israel is like a "restive young camel" in heat or like a "wild ass . . . sniffing the wind! Who can restrain her lust?" says the Lord God (Jer. 2:23-24). Israel's hideous idolatry involves gross sexual indecencies and human sacrifice (Ezek. 23:37); harlotrous Israel acts like the sacred prostitute who bathes herself, paints her eyes, and sits on a couch near an altar, holding oil and incense—and waiting for worshipers to come to her (vss. 40-41). For this she shall drink a "cup of horror and desolation" (vs. 33).

The love of fickle Israel is like a morning cloud; therefore, she will be destroyed and the calf of Samaria (bull-worship) broken to pieces (Hos. 6:4; 8: 6*b*). The reference here is to the use in Samaria of the sacred bull ("Ephraim" comes from a root meaning "bull" in the dual form and may suggest the bull and the heifer). The prophet condemns them for cultic wailing upon their beds and for self-mutilation, which the cult requires (7:14). So they shall be destroyed.

The Bible's attack which uses the language of harlotry is strongly directed toward that inner harlotry of the spirit of Israel which amounts to a rejection of her Redeemer and the Lord. "Playing the harlot" is the favorite term for this kind of faithlessness (Num. 25:1-2; Judg. 2:13, 17; 8:27, 33; Jer. 3:6). The wanton, harlotrous heart of Israel is described (Ezek. 6:9) as the reason for the judgment that is coming; the people are possessed by the spirit of harlotry (Hos. 4:12). Under the control of this spirit the land is filled with evildoers, robbers, and murderers (6:8-10). The Bible's graphic characteriza-

tion of Israel as harlotrous, and of neighboring nations and communities as well, involves the use of the figure of personification (Isa. 23:16; Ezek. 16; 23; Nah. 3:4). Babylon is called the mother of harlots, who will be made naked and desolate, and then burned with fire (Rev. 17:5, 16). Here the biblical figure is made to represent the total wickedness of a great city, where by "Babylon" the city of Rome is probably meant.

1. Terminology. The Hebrew noun is משל, *māshāl,* from a verb which means "to be like or to compare." With few exceptions, in the LXX the Greek term for proverb is παραβολή. Although παροιμία occurs in the LXX to the canonical books only in Prov. 1:1, it has, because of its occurrence there (in the plural form παροιμίαι) become the Greek name of the book of Proverbs. It appears also in Ecclus. 6:35; 47:17. Also in the NT the common Greek term is παραβολή (Matt. 15:15; Luke 4:23; cf. Matt. 13:13; Mark 4:11; Luke 8:10), but παροιμία occurs in John 10:6; 16:25, 29; II Pet. 2:22. The Hebrew noun and the Greek terms designate longer compositions, as well as pithy sayings, and sometimes mean "byword" or "taunt song."

2. Form of proverb. The biblical data present the proverb in a simpler form and in more complex forms. The simpler, though more primitive, is not necessarily the oldest. The art forms had probably developed already in prebiblical times along with the simple form, which is primitive in the sense of popular, nonliterary.

a. The primitive form. There are several biblical examples of popular proverbs—which no one composed but everyone repeated—perhaps more examples than are readily recognized. "Like mother, like daughter," in Ezek. 16:44 is called a proverb. So, too, is the observation: "The fathers have eaten sour grapes, and the children's teeth are set on edge" (Ezek. 18:2; found also in Jer. 31:29). It is not characteristic of a proverb that it should be topical, but it is, of course, ready at hand for quotation when circumstances warrant. So Ezekiel could with some right (because "the shoe fit") consider his own prophetic word the butt of the proverb current in his time: "The days grow long, and every vision comes to naught" (Ezek. 12:22). Jesus behaved similarly when he said: "Doubtless you will quote to me this proverb, 'Physician, heal yourself' " (Luke 4:23). Anonymous ancient proverbialists observed: "Out of the wicked comes forth wickedness," and left their truism for David to use in his denial of evil intent against Saul (I Sam. 24:13—H 24:14; Isa. 32:6 begins with a comparable proverb, and cf. Judg. 8:21).

The circumstances surrounding the origin of a proverb are characteristically hazy, and certain biblical narratives may, in fact, owe their existence to someone's guess at the source of a current proverb. Two divergent tales now record the origin of the proverbial exclamation: "Is Saul also among the prophets?" (I Sam. 10:11-12; 19:24)—which duplication merely shows that no one really knew its source. Indeed, the question may quite as well have been prompted by Saul's chronic madness (I Sam. 18:10), which was not unlike the prophet's trance. The response in I Sam. 10:12: "And who is their father?" may well mean: Saul is, indeed, the maddest of them all—a proverb which answered to a proverb.

The first time it is asked: "Is Saul also among the prophets?" the question is expressly called a proverb; the second time it is introduced by the words: "Hence it is said." How many undesignated proverbs are quoted in biblical literature is anyone's guess. "Therefore it is said" (Gen. 10:9) similarly introduces a proverb without so naming it: "Like Nimrod a mighty hunter before the LORD." Doubtless many sayings were adopted for their present context out of a fund of folk wisdom and seemed the more effective by very reason of their familiarity—clichés have not always been disreputable. Such adopted proverbs may include I Kings 20:11: "Let

not him that girds on his armor boast himself as he that puts it off"; Jer. 23:28: "What has straw in common with wheat?" and Isa. 22:13:

> Let us eat and drink,
> for tomorrow we die.

That the last of these sayings is not in its original context is clear; the jubilant lords of Jerusalem were thinking of nothing like death on the morrow. (The same proverb is quoted in I Cor. 15:32 and modified in Eccl. 8:15.)

In form these "primitive" proverbs are characterized by an economy of words, more readily noted in Hebrew than in translation. They are prose with no evidence of conscious artistry but with fresh simplicity and directness.

b. The art form. Preponderantly, biblical proverbs are poetic in form. Commonly in the wisdom literature the proverb is a single balanced line made up of two parallel cola, which may be synonymous:

> A hoary head is a crown of glory;
> it is gained in a righteous life
> (Prov. 16:31),

or antithetic:

> The wicked flee when no one pursues,
> but the righteous are bold as a lion
> (Prov. 28:1),

or synthetic:

> Like a dog that returns to his vomit
> is a fool that repeats his folly
> (Prov. 26:11).

One such poetic proverb in the NT resembles this last example but has the form of synonymous parallelism:

> The dog turns back to his own vomit,
> and the sow is washed only to wallow in
> the mire (II Pet. 2:22).

In this final pair of proverbs (Prov. 26:11; II Pet. 2:22) the one saying of the simpler type is expanded, now one way and now another, to produce the two proverbs in poetic form. Examples of this phenomenon are numerous; cf. Prov. 10:2 with 11:4 or Prov. 10:6 with 10:11; or with Prov. 26:27 cf. both Eccl. 10:8 and Ecclus. 27:26. Evidence of this procedure suggests that the production of proverbs of this more artistic form was a conscious literary activity of the sages in wisdom circles (cf. Prov. 1:5-6, where the proverb is listed along with the "words of the wise," and Ecclus. 18:28-29).

As an art form the proverb shows considerable variety. The balanced line sometimes involves an a fortiori argument:

> All a poor man's brothers hate him;
> how much more do his friends go far from
> him! (Prov. 19:7).

Frequently it is built upon a comparison:

> Like a lame man's legs, which hang useless,
> is a proverb in the mouth of fools
> (Prov. 26:7; see also vs. 11).

But proverbs are not limited to the single balanced line; longer compositions occur as well. A series of single-line proverbs dealing with one theme (e.g., the series on fools in Prov. 26:1-12) is not a new form; it is merely a collection. But there are others. A popular, more extended art form is the "numbers" proverb:

> Three things are stately in their tread;
> four are stately in their stride:
> the lion, . . .
> the strutting cock, the he-goat,
> and a king striding before his
> people (Prov. 30:29-31).

c. The discourse. Another form, the discourse or exposition, includes such more extensive literary products as the warning against the "loose woman" in the seventh chapter of Proverbs, Wisdom's invitation in the eighth, and the acrostic poem in praise of the "good wife" in 31:10-31. To call any of these compositions a proverb may seem somewhat to stretch the meaning of the word, and yet the Hebrew term *māshāl* not infrequently designates just such a longer utterance. Ezekiel complains that people chide him as one given to preachments (a "maker of allegories," *memashshēl meshālîm;* Ezek. 20:49—H 21:5). Also, elsewhere prophetic discourses are called *meshālîm,* as in: "And Balaam took up his discourse" (*māshāl*—seven times in Num. 23–24; cf. Isa. 14:4; Ecclus. 44:5; Enoch 1:2-3; 37:5, for which *see* PARABLE § 3). But more nearly related in content to the discourses in Proverbs are those so termed in Job 27:1; 29:1, and such didactic psalms as Pss. 49; 78 (cf. 49:4—H 49:5; 78:2, where the psalmist uses the term *māshāl*).

Ezekiel's critics may have had a special reason for choosing the word *māshāl* to describe his discourses. The related Hebrew verb in the causative stem means "to compare" (Isa. 46:5), in the *niph'al* "to be like" (Isa. 14:10), and the noun may quite properly describe any of the various poetic figures. Ezekiel's *meshālîm* in 17:2; 20:49—H 21:5; 24:3 are allegories; the balanced-line proverb is often a simile or comparison (as *above*); the *māshāl* in Ps. 49:4—H 49:5; 78:2; Prov. 1:6, is mentioned along with the "riddle," in the last of these passages also along with the "figure." Among Solomon's accomplishments were his making of proverbs and "songs" and his speaking "of trees" and "of beasts" (I Kings 4:33—H 5:13), which last accomplishment may be not the teaching of natural science but the art of composing the FABLE. Yet, though the *māshāl* is often, and probably according to its root meaning, a comparison, it is also more broadly a brief or extended poetic composition, like Balaam's utterances, the discourses in Proverbs and Job, and the didactic psalms.

d. The taunt. The term *māshāl* has another special meaning as the equivalent of the English "byword," and it further designates a mocking taunt song directed against a foe. So, in Deut. 28:37: "You shall become a horror, a proverb [*māshāl*], and a byword, among all the peoples," or in Jer. 24:9: "I will make them a horror to all the kingdoms of the earth, to be a reproach, a byword [*māshāl*], a taunt, and a curse in all the places where I shall drive them." This combination of terms occurs frequently in the Bible and the Apoc. (cf. Tob. 3:4, also Wisd. Sol. 5:3: "a byword of reproach"). The word "curse" in the Jeremiah passage is the key to the understanding of this usage. Just as persons may become "proverbial"

as eminently blessed, so that future generations will make reference to them in blessing and say, e.g.: "God make you as Ephraim and as Manasseh" (Gen. 48:20; cf. 12:3), even so calamity can make such a horrible example of persons that to be likened to them is to be called accursed indeed (Isa. 65:15). To be a *māshāl* of this sort is to be the proverbial object of scorn or derision. Also in this use of the term the root meaning "compare" may be involved.

Related is its use to designate a song of derision. So in Isa. 14:4: "You will take up this taunt [*māshāl*] against the king of Babylon," or Mic. 2:4: "In that day they shall take up a taunt song against you" (see also Hab. 2:6). The biblical examples are almost all of anticipatory derision; the events which will warrant the taunts have not yet occurred. But so lively in biblical society was the belief in the effective power of the word that the taunt song was alone itself a weapon. "Ballad singers" is probably not the best translation of *môshelîm* in Num. 21:27, for what follows is, at least in part, a gloating over a defeated Amorite or Moabite kingdom, or both. Though it hardly agrees with the narrower meaning of the English word "proverb," this type of literature too—the taunt song—comes within the compass of the corresponding biblical term. *See also* IRONY AND SATIRE.

3. Significance. The proverb, then, is not one form but several. Nevertheless, what is commonly meant is a single short saying of type *a* or *b* (*above*), the "primitive form" or the "art form." The significance of this kind of proverb is twofold: it is capsulated wisdom or a slogan.

a. Capsulated wisdom. With the passing of the generations the race accumulates a certain amount of experience, some of which it wraps up in the small packages known as proverbs. These formulated observations, often pungent, salty, sometimes ironic, are a currency useful in the exchange of ideas and particularly effective for indoctrinating the young with tested truths (I Sam. 24:13—H 24:14; II Sam. 20:18 suggest the antiquity of some proverbs). Apparently intelligence was requisite, not for the coining of proverbs only, as is obvious, but for understanding them as well. They had, indeed, a riddle-like quality, and contained comparisons, figures, and allusions. But if they were currency, they were generally known, and this implies that they were cultivated and propagated, in wisdom circles, in schools for the youth. *See* PROVERBS, BOOK OF, § 10.

b. The slogan. Occasionally as a compliment (Nimrod; or the village Abel [II Sam. 20:18]), but more usually in name-calling (Saul among the prophets; the city Heshbon [Num. 21:27]), reference is made to a proverbial figure out of the past or to a timeless phenomenon of common experience ("The fool speaks folly" [Isa. 32:6]; "Out of the wicked comes forth wickedness" [I Sam. 24:13—H 24:14]). Then as now, but then with more presumed effect and greater expectation, one could reward or damn with a slogan.

***PROVERBS, BOOK OF.** The twentieth book in the OT canon according to the order adopted by the RSV. It is one of the books in the category of wisdom literature. Attributed (as a courtesy) to King Solomon, it was compiled and for the most part probably also composed during the fifth and fourth pre-Christian centuries by the masters who taught in academies for young men of the "better" families. Although the book was written wholly under the influence of the dogma of divine retribution, it contains much of worldly wisdom. Proverbs is a store of human experience condensed into adages and ancient wisdom attractively garbed. Its purpose was to guide men into ways of profitable living. Although it does not reach peaks of inspiration, Proverbs is a good book.

Bibliography

1. Name. Like a modern book the book of Proverbs has a title page complete with title and author's name and "degrees": "The proverbs of Solomon, son of David, king of Israel"; and it has a somewhat longer than usual subtitle, which begins: "That men may know wisdom" (1:1-6). Accordingly the book is known as "Proverbs"—in Hebrew משלי שלמה, *mishlê shelōmôh,* "proverbs of Solomon"; in the LXX παροιμίαι, "proverbs." The five-line subtitle is both statement of purpose and advertisement. The title page correctly describes the book as maxims offered for the propagation of wisdom. Only the propriety of ascribing the work to Solomon is questionable, as a more detailed analysis of the contents reveals.

2. Position. The book of Proverbs is included among the Kethubhim, "Writings" or Hagiographa. In rabbinic tradition it follows Psalms and Job (*B.B.* 14*b*) or possibly comes between them (implied in *Ber.* 57*b*)—so in the English version of the Jewish Publication Society. The KJV-RSV order (Job, Psalms, Proverbs) may be a presumed chronological arrangement deriving ultimately from rabbinic traditions which assign the three books to Moses, David, and Hezekiah respectively (*B.B.* 14*b*-15*a*). The order in the LXX (Psalms, Proverbs, Ecclesiastes, the Song of Songs, Job) groups together the three books attributed to Solomon—Proverbs, Ecclesiastes, and the Song of Songs.

3. Nature. The book of Proverbs belongs to the general class of WISDOM literature. It shares this class with the biblical books of JOB and ECCLESIASTES, certain PSALMS (e.g., Pss. 1; 34; 49; 73; 92;

127; 128) and the apocryphal books ECCLESIASTICUS and WISDOM OF SOLOMON. The wisdom literature is a type apart—unlike the prophetic, legal, or devotional literature or historical writings in the Bible. It was cultivated by the חכם ("sage"), and served an educational purpose. The book of Proverbs is the prime example of such a repository of wisdom and source book for rules of good and profitable behavior.

4. Language, text, and Greek translation. Classical Hebrew is the original language of Proverbs, and the text for the most part is clear. Occasionally obscurity or a false note suggests that the wording has suffered a change. The Greek version differs considerably, with omissions, additions, variants, and a different order among the parts. The parts of the Hebrew chs. 30:1–31:9, e.g., are distributed in the LXX, with 31:1-10 after H 24:22, and 30:11–31:9 after H 24:34. The differences not only testify to mistakes or misunderstandings on the part of the scribes and translators, but more significantly they also give evidence that the text of Proverbs was still somewhat fluid when this translation was made. Neither the editorial activity nor the creative process was complete; whole sections could yet be shifted about, and new proverbs could still be phrased and added to the translation and to the Hebrew original.

5. Canon. According to the Mishna (Yadayim III.5) the holiness—i.e., canonicity—of Ecclesiastes and the Song of Songs was still a subject of controversy at the end of the first Christian century. Shab. 30*b* associates Proverbs, the third of the "Solomonic" books, with this late controversy. In the Talmudic passage in connection with the discussion on the propriety of Ecclesiastes an authority cites the observation that Proverbs, as well, contains contradictory verses (e.g., Prov. 26:4, 5). According to the first chapter of Aboth d'Rabbi Nathan near the beginning, Proverbs is listed along with Ecclesiastes and the Song of Songs as books in which mere sayings occur, not derived from scripture. Though the "Solomonic" books were suspect (probably because they were not really considered old), it may well have been their attribution to Solomon that helped them eventually to a place in the canon. *See* CANON OF THE OT.

6. Contents and parts. Even a cursory reading suggests that the book is composite—not the product of a single author, of Solomon or of any other one sage. Several of the different parts, in fact, have their own titles. Such titles occur at the beginning of the tenth chapter: "The proverbs of Solomon," and the twenty-fifth chapter: "These also are proverbs of Solomon which the men of Hezekiah king of Judah copied." Chs. 30 and 31 begin respectively with the titles: "The words of Agur son of Jakeh of Massa," and "The words of Lemuel, king of Massa, which his mother taught him." The statement "These also are sayings of the wise" occurs in 24:23, and the word "also" here suggests that the title "sayings of the wise" has appeared in the book before. It is probably to be found in 22:17, where it is concealed now by a change in the original order of the words.

Other, internal evidence supports the evidence of the headings. The poem on the "good wife," 31:10-31, is a self-limiting unit, being an alphabetic acrostic. The sayings of the wise which have their beginning in 22:17 cannot go on indefinitely, since their author specifies: "Have I not written for you thirty sayings . . . ?" (22:20; for this translation *see* § 8 *below*). Just how the "thirty" are to be counted is not certain, but with 23:15 the style changes, and the relationship with the thirty sayings of Amen-em-opet also ceases at this point, so that 23:15–24:22 is to be regarded as an independent composition.

The presence of a variety of literary forms (discourses, balanced lines, couplets, similes, numbers proverbs, an acrostic; *see* § 7 *below*) adds to the impression that the book is composite. Against the supposition of single authorship stands also the fact that sayings are repeated both within the single parts and from part to part. Cf., among others, 18:8; 19:24; 20:16; 21:9; 22:3 in the first collection of "proverbs of Solomon" with 26:22; 26:15; 27:13; 25:24; 27:12 in the second. Unless he worked without method, a single writer or collector is not likely to have included so many duplicates.

The evidence permits the conclusion that the book of Proverbs is a symposium, a compilation of originally independent, though kindred, collections of maxims, observations, and discourses. The following larger literary units may be distinguished:

I. Title page with advertisement and motto 1:1-7
II. Discourses and cautions, 1:8–9:18
III. "Proverbs of Solomon," first collection, 10:1–22:16
IV. "Sayings of the wise," first collection, 22:17–23:14
V. More discourses and cautions, 23:15–24:22
VI. "Sayings of the wise," second collection, 24:23-34
VII. "Proverbs of Solomon," second collection ("which the men of Hezekiah . . . copied"), 25:1–29:27
VIII. "The words of Agur," ch. 30
IX. "The words of Lemuel," 31:1-9
X. The good wife, 31:10-31

7. Literary forms. The several collections that make up the book contain examples of different literary forms. In sections III and VII, the two collections called "proverbs of Solomon," with rare exceptions the proverb is a single balanced line, each proverb a unit in itself and, except for the general uniformity of matter, wholly independent of its neighbors. Some proverbs clustered in 12:17-23 concern speech, and others in 16:10-15 concern kings, but such groupings are rare, and the single, detached proverb is the rule.

The one-line proverb exhibits parallelism—its halves are balanced in antithesis or synonymity, varied occasionally with a line in synthetic parallelism. In chs. 10–15; 28–29, the antithetic form heavily predominates; but beginning with the sixteenth chapter, the synonymous form is strongly favored. Approximately half the proverbs in chs. 25–26 are graphic similes, one of the more popular forms of synthetic parallelism. The comparison in 26:17 may serve as an example:

> He who meddles in a quarrel not his own
> is like one who takes a passing dog by the ears.

Other common variants of this type of parallelism are the "better . . . than" form—e.g., 25:24:

> It is better to live in a corner of the housetop
> than in a house shared with a contentious woman
> (cf. 15:16, 17; 19:1);

and the "how much more" or "how much less" comparison—e.g., 21:27:

> The sacrifice of the wicked is an abomination;
> how much more when he brings it with evil intent
> (cf. 11:31; 17:7).

The impression that all these one-line proverbs make is not that of primitive folk sayings but of maxims phrased with conscious art, some possibly expansions in poetic form of originally simpler popular proverbs. *See* PROVERB § 2*b*.

Slightly longer are the units which make up IV, V, and VI (22:17–24:34). These are often couplets, units of two balanced lines—e.g., 24:19-20:

> Fret not yourself because of evildoers,
> and be not envious of the wicked;
> for the evil man has no future;
> the lamp of the wicked will be put out.

The bulk of these parts, IV, V, and VI, is made up of couplets and somewhat longer units, such extended proverbs as the three-line caution to eat lightly as the guest of a stingy man (23:6-8) or the yet longer cautionary accounts of the fate of the sluggard and the woes of the heavy drinker (24:30-34; 23:29-35). These extended proverbs are wholly missing in III and very rare in VII; the small discourse promoting the cattle business (27:23-27) is distinctly exceptional there. But in I and II (chs. 1-9) the discourse is the rule, each discourse a connected composition phrased in balanced lines. Notable among the discourses in Proverbs are wisdom's two appeals (1:20-33; ch. 8). The warning against the "loose woman" in II (ch. 5) is matched at the end of the book by X (31:10-31), a poem celebrating the "good wife."

The numbers proverb, possibly related to the RIDDLE, occurs in 6:16-19 and as a regular feature in VIII—e.g., 30:15*b*-16:

> Three things are never satisfied;
> four never say, "Enough":
> Sheol, the barren womb,
> the earth ever thirsty for water,
> and the fire which never says, "Enough."

The presence of this variety of literary forms suggests diversity of origin and strongly supports the view that the book of Proverbs is composite.

8. Foreign literary influences. The evidence of foreign literary influence on parts of Proverbs lends further support to this view. There is hardly any doubt that IV (22:17–23:14) depends upon the "thirty chapters" of the Egyptian Amen-em-opet. The parallels are striking, and reading them, one experiences a growing certainty that the two sets of instructions for prudent living did not arise independently in their separate cultures. There is no topical arrangement in either composition, and the different order in which the maxims appear in the two sets does not conceal the relationship between them. The contacts are too close and too many for coincidence to explain away, even if combined with similarity of purpose. A variation such as that in 23:4-5 only strengthens the impression of borrowing. The Proverbs text urges:

> Do not toil to acquire wealth;
> be wise enough to desist.
> When your eyes light upon it, it is gone;
> for suddenly it takes to itself wings,
> flying like an eagle toward heaven.

The "eagle" in the Bible text is only a most natural substitute for the bird indigenous to the Egyptian model, according to which the riches take flight to the heavens, having got themselves wings like "geese" (in Amen-em-opet's seventh chapter). The Egyptian "goose" naturally became a Palestinian "eagle." Without the Egyptian parallel, Prov. 22:20 would not be understood. The KJV: "Have not I written to thee *excellent things* . . . ?" is one of many wrong guesses at the meaning of the Hebrew word שלשים, margin שלישים, made before the Egyptian kinship was noted. Once it was observed that Amen-em-opet set forth his paternal instructions in "thirty chapters" (see his thirtieth chapter), it became apparent that the proper pronunciation of the Hebrew word is שלושים, "thirty"; thus the RSV: "Have I not written for you thirty sayings . . . ?" So the Egyptian is a key for the Hebrew. The author of Prov. 22:17–23:14 did not undertake to furnish a Hebrew translation of the Egyptian model; he used it freely or in some derivative form, but in one form or another he surely used it.

Somewhat less obvious are other presumed external influences upon Proverbs. The contacts with the late Syriac and the older but fragmentary Aramaic texts of the Proverbs of Ahikar are far less concentrated and somewhat less convincingly alike. Traces also are not lacking of early Canaanite thought and vocabulary.

In other words, Israel was no cultural island, and the book of Proverbs did not grow in a vacuum.

9. Authorship. It is not necessary to take seriously the attribution of Proverbs to Solomon in 1:1; 10:1; 25:1. The attribution is the result of a convention by which famous men were honored in Israel. The ascription of a book to a great man of the past was both a tribute to him and a claim upon the prestige which his name might lend to the book. New laws were written and Moses was given the credit; new songs were sung and David was hailed as their source. This convention was observed particularly in the late pre-Christian centuries, the time of such pseudonymous writings as Daniel, Baruch, Enoch, and the Testaments of the Twelve Patriarchs. The canonical Proverbs of Solomon need have no more claim to genuine Solomonic authorship than the apocryphal Wisdom of Solomon.

Accordingly, the question of the Solomonic authorship of Proverbs may be considered without prejudgment. The biblical traditions of Solomon's wisdom in I Kings 3-4; 10 might seem to favor the attribution. Some statements there appear particularly weighty: "Solomon's wisdom surpassed the wisdom of all the people of the east, and all the wisdom of Egypt. . . . His fame was in all the nations round about. He also uttered three thousand proverbs. . . . He spoke of trees; . . . also of beasts, and of birds, and of reptiles, and of fish" (4:30-34—H 5:10-14). The only trouble is that these statements in

the book of Kings and the other traditions concerning the wisdom of Solomon are probably of one piece with the ascription to him of Proverbs, Ecclesiastes, the Song of Songs, and the Wisdom of Solomon—all expressions of the one tendency to build up the glory that was Solomon. Was there ever such splendor as his new-built Jerusalem, and was the capital under his patronage not also a center of cosmopolitan culture beyond compare?

"Where there is smoke," according to a nonscriptural proverb, "there is fire"; and so, after all, Solomon may have been the author of some of the proverbs. The possibility cannot be denied, and recent scholarly opinion inclines to the view that Solomon at least cultivated the proverbial art and was responsible for the kernel of the book ascribed to him. Admitting the possibility, one yet observes that teachers in schools for young gentlemen would doubtless produce just such literature as Proverbs, composing, collecting, and editing wise sayings and admonitory discourses; and that professional "wise men" of this description are a much more likely source for such a book than any busy monarch. Possible though it is that unidentifiable proverbs within the book go back to Solomon's time, the probability is greater that the wisdom teachers themselves composed most of the "Solomonic" proverbs. The purpose the book was designed to serve reveals, not indeed the names, but the nature of its authors.

10. Purpose of the book. Along with other wisdom literature, Proverbs was designed as a school book for the instruction of young men. It is instruction intended for young men and not for children, as the caution against the loose woman must indicate. Incidentally, too, it is young men and not young women who here receive instruction; though women are mentioned, it is usually not for praise (one's mother, of course, and the "good wife" in ch. 31 are exceptions), and the teachings are not for the edification of women. Furthermore, Proverbs addresses itself to only a segment of the young male population. It has concern for youths in the upper-class families. Only the sons of gentry could afford most of the follies which Proverbs deprecates, or find the opportunity to display many of the virtues which it commends, or find the leisure to attend the schools where wisdom was cultivated. Only the well-to-do are likely to hold that, as Proverbs assumes, success is a well-deserved reward. The social background and philosophy of the book are decidedly upper-class. *See bibliography.*

To the young men, then, of the "better" families, Proverbs offers instruction. Much of the first nine chapters (I and II) is an invitation to learning. "Son" in Proverbs is probably both literal and a conventional term; the father (4:3-4) and occasionally the mother (cf. 31:1) seem to offer parental counsel, but "sons" in the plural (as in 7:24) and the "sons" whom "Dame Wisdom" addresses in ch. 8 (cf. vs. 32) are sons in name only, and normally it is the schoolmaster who serves as "father." Wisdom, indeed, offers her wares in public "on the heights . . . , in the paths . . . , beside the gates . . . , at the entrance of the portals" (8:2-3), but wisdom also has a house (9:1), and she invites the unlearned to enter. And so, although Proverbs has no more specific word for "schoolhouse" (no such term as the *bêth midhrash* or "house of instruction" of Ecclus. 51:23), it is not hazardous to assume, for the time when the book of Proverbs was taking form, the existence of academies where the sons of patricians studied the ways of success. The book of Proverbs could have served as text in such an academy. Now, if this was its social role, the masters in the schools, the wise men of the academies, who used it as an aid to instruction, themselves probably shaped it and formed it for their purpose.

11. Date. The question of the date of Proverbs is complicated. Both because of the variety of literary forms which it presents and because of the diverse sources upon which its several parts have drawn (*see* §§ 7-8 *above*), it has appeared probable that the book is composite. If so, the question of date becomes a threefold question: (*a*) How old are the oldest materials which the schoolmen used who wrote its several parts? (*b*) What was the period of the schoolmen's activity? (*c*) When did someone finally put the parts together and provide them with a title page?

First, as to the oldest sources: The Canaanite material, possibly scattered here and there, and the "thirty chapters" of the Egyptian Amen-em-opet clearly concentrated in IV, may go back to the second millennium B.C. If the authors or compilers of the "Solomonic" parts of Proverbs (III and VII) really had at their disposal any matter recorded in Solomon's time (which is highly doubtful), this unidentifiable source material comes from the tenth pre-Christian century. Though it is doubtful that any of the proverbs goes back to Solomon's time, the editorial note in 25:1 to the effect that "the men of Hezekiah . . . copied" the following collection of proverbs of Solomon is fairly good evidence that some parts of this latter collection (VII) are preexilic. At any rate, the editor here reveals his belief that he has some matter before him with a long tradition. Agur and Lemuel, at the beginning of VIII and IX, being names of unknown personages, are of no help at all. If the supposition is correct (*see* § 7 *above*) that proverbs in art form are sometimes expanded primitive folk sayings, there is no telling how ancient these sayings may be.

As to when the process of collecting, copying, adapting, expanding, the earlier material began, the headings of IV and VI may offer a clue. The editor identified certain collections with Solomon directly or with Solomon by way of Hezekiah; others he knew to be foreign, and he associated them with Agur and Lemuel; but he referred to IV and VI as "sayings of the wise." Speaking so, he may have thought of persons like himself—wise men, teachers, older contemporaries, but recently engaged in collecting, copying, adapting, expanding, even in creating, literature of wisdom.

One may suspect further that the last stage in the growth of the book created the "title page" (I) and the discourses and cautions (II), which seem to know of a body of wisdom (the remainder of the book) and to commend it to the attention of youth.

The date of the later stages, when in fact the book was taking shape, will then be the time when the wise men taught in Israel. Although wise men (and

women) were known in Israel since the days of the judges, it appears to be only in the postexilic period that they functioned as teachers in academies for youth. *See* WISDOM § 1; EDUCATION.

Proverbs was certainly complete with title page before the time of Ben Sirach (*ca.* 190 B.C.), who alludes in 47:17 to Prov. 1:6, and who develops further certain thoughts and trends evident in Proverbs.

The place of wisdom in the development of biblical thought, particularly as concerns attention to the individual man and the orthodoxy of retribution, the place also of Proverbs within the wisdom literature, would suggest the fifth or fourth century as the time when the book was taking shape. *See* ECCLESIASTES § 5.

12. Values. The book of Proverbs is not the highest height to which in the Bible the human spirit soars. It is neither profound nor dramatic. It is a manual of prudence, a guide to right living.

Some themes are notably absent. Unlike the Law, Proverbs says next to nothing about worship, sacrificial or otherwise—except for the few neutral (7:14; 17:1) or mildly negative (15:8*a;* 21:3, 27) allusions to sacrifice there are only 15:8*b*, 29; 28:9, which express divine approval of the prayers of good men, and 3:9, which commends the payment of dues to the temple. Unlike the narrative sources and historical writings, Proverbs alludes not at all to Israel's past or its popular heroes (other than Solomon and Hezekiah in the subtitles); it speaks not of folkways but of human nature. Unlike the books of the prophets, Proverbs has nothing to say of the nation's fate, of catastrophe, or of destined glory. Unlike apocalypse, it knows nothing of personal immortality or resurrection; it is wholly this-worldly. And there is nothing devotional about proverbial literature; only in 30:7-9 and possibly 30:1*b* is God addressed as he is in the Psalms. All these themes lie without the province of this book and, for that matter, mostly outside the province of wisdom literature in general (some of the "wisdom psalms" form an exception).

Prudent and moral behavior is the concern of Proverbs; it is a "how-to" book. The skill it teaches is how to please God and live sensibly and well. Virtue is not commended for its own sake; it is related to the will of God, and it leads to success.

The book of Proverbs is a moral book and a fund of wisdom, neither priestly nor prophetic, but human wisdom, the fruit of human experience—its distinction: that it relates sensible living inextricably with walking humbly. The fear of the Lord is the beginning of wisdom. *See* WISDOM § 3.

S. H. BLANK

PROVIDENCE. A translation of πρόνοια in Wisd. Sol. 14:3; 17:2; Acts 24:2 (RSV "provision"). Cf. the verb προνοέω, which occurs in the Greek OT eleven times and in the NT twice. Of these thirteen occurrences of the verb, however, all relate (as does the noun in the NT) to human vision or provision except Wisd. Sol. 6:7, where God, the sovereign Lord of all, is spoken of as "taking thought" for all alike, both small and great. The Latin word *providentia* (lit., "foresight") corresponds exactly to a Greek noun from προβλέπω or προοράω. But no such noun occurs in the Greek Bible, although the verbs are used.

For the purposes of this discussion, the verb προνοέω and the noun πρόνοια in their human application, meaning "provide," "provision," are unimportant (cf. II Macc. 4:6 [RSV "attention"]; Acts 24:2; Rom. 13:14). But in the Greek OT, πρόνοια is also used, in a manner familiar in Hellenistic writers of the time, in connection with, and almost as a synonym for, God, exactly as "Providence" may be used in English. In Wisd. Sol. 14:3 it is attributed to God, in an address to him as Father. In Wisd. Sol. 17:2 "eternal providence" is used virtually as a synonym for "God"; and in IV Macc. 13:19; 17:22 "the divine providence" is similarly used, while in IV Macc. 9:24 "our just ancestral providence" (ἡ δικαία καὶ πάτριος ἡμῶν πρόνοια) is a variant of the same. In III Macc. 4:21; 5:30, it is used with a genitive following, as an attribute of God.

"The divine providence" was a common enough periphrasis for "God" in Greek writers; and Philo wrote a whole treatise περὶ προνοίας, according to Euseb. Hist. II.18.6; *Preparation for the Gospel* VII. 20.9; VIII.13.7. But whereas in the non-Jewish writers it tended to be cosmic and impersonal (see Seneca *On Kindness* VI.23.5: "Nature conceived us in thought before she made us"; Cicero *On the Nature of the Gods* II, especially §§ 58, 73, where the Greek word πρόνοια itself is cited), for the Hebrew thinker it needed to be closely associated with the plan and election of a personal God. Indeed, the appropriation of it by pagan philosophers and moralists may be part of the explanation of the rarity of its biblical occurrences, and of the preference in the Bible for other terms discussed in the relevant articles alluded to *below.* The Greek words which are closely related to the idea of a fixed, impersonal destiny, εἱμαρμένη and μοῖρα, are naturally absent from the Greek Bible; and τύχη, "fortune," occurs only at Gen. 30:11 (play on the name "Gad"); Isa. 65:11 (castigation of a pagan cult); II Macc. 7:37 (variant ψυχή).

C. F. D. MOULE

***PROVINCE.** An administrative term originally designating a sphere of action or duty exercised by

an appointed magistrate over a conquered territory; later used of the geographical district itself.

1. In the OT. The word מדינה, translated "district" (RSV) or "province" (KJV), denoted the divisions of Israel under governors during the time of Ahab (I Kings 20:14 ff); and later, Babylonian and Persian administrative districts (cf. Esther, *passim;* Lam. 1:1; Ezek. 19:8; Dan. 8:2). Once in the LXX (Esth. 4:11) it is translated ἐπαρχεία (*see* § 2 *below*); elsewhere χώρα is used (e.g., regularly in I Maccabees).

2. In the NT. Administrative divisions of the Roman Empire were termed ἐπαρχεῖαι. So in Acts 23:34 the procurator Felix asked Paul to what province (ἐπαρχεία) he belonged. In Acts 25:1, ἐπαρχεία may signify the office into which the new procurator Festus entered, as the variant reading ἡ ἐπάρχειος suggests. In the Republic the overseas provinces were assigned by lot to magistrates who were amenable to the Senate for their administration of military and civil affairs under the terms of the local *lex provinciae,* which had been drawn up for each at the time of its annexation to the Roman state. The Senate determined annually the provinces to be governed by those of consular status and those of praetorian rank.

In 27 B.C., Augustus assigned certain provinces, which he had previously administered directly through his legates, to the Senate, and reserved for direct imperial control others which were more difficult to manage, chiefly those on the frontiers. In the senatorial provinces ex-consuls or ex-praetors, serving under the common title of PROCONSUL, held office normally for only a year. Acts 13:7 is technically correct in designating Sergius Paulus a proconsul, since Cyprus had been a senatorial province since 22 B.C. These governors had small garrisons of auxiliaries for maintaining and preserving order; legions were stationed only in the imperial provinces, with the exception of Africa, which had a legionary force and a prefectus governor. They held supreme authority in military and judicial administration. In both types of province, financial administration was delegated to equestrian procurators (*see* PROCURATOR), who usually worked through local authorities in raising levies for the state. In senatorial provinces the procurator was an assistant to the questor.

In provinces like Syria, which were directly supervised by the emperor, governors were chosen from among those who had formerly held consular or praetorian office, and bore the title *legatus Augusti propraetore.* They differed from the proconsuls of the senatorial provinces in the extensive military authority they exercised and in the indefinite term of office they enjoyed, subject to the emperor's pleasure. A special form of provincial administration was demanded by those districts of rugged terrain or of a rude and undeveloped culture. Judea and later Palestine, Mauretania, Thrace, and Egypt furnish examples of this third type of imperial province, governed by an imperial procurator (ἐπίτροπος) of equestrian rank and responsible in part to the neighboring *legatus.* Thus under a special commission the Syrian legate Vitellius intervened in Judea to depose Pontius Pilate in A.D. 36 (Jos. Antiq. XVIII. iv.2). After the death of Herod Agrippa II, *ca.* 100, Palestine was fully incorporated into Syria.

In the first century the administration of the provinces was orderly and just. The system of taxation was standardized and considerable local autonomy was permitted, before an increasingly bureaucratic government sharply curtailed municipal government.

3. Principal Roman provinces. The following provinces are of special interest to students of the NT. They are listed in the order of their admission to the Empire:

a) Senatorial provinces: Macedonia (146 B.C.); Achaea (146 B.C.); Asia (133 B.C.); Crete and Cyrenaica (74 B.C.); Bithynia (74 B.C., with Pontus added in 64 B.C.); Cyprus (22 B.C., but annexed in 55 B.C.).

b) Imperial provinces: Pamphylia (101 B.C., added to Lycia in A.D. 43); Cilicia (67 B.C., joined to Syria in 22 B.C.–A.D. 74); Syria (64 B.C.); Egypt (31 B.C.); Illyricum (27 B.C., imperial after 11 B.C.); Galatia (25 B.C.); Judea (A.D. 6); Cappadocia (A.D. 17); Lycia and Pamphylia (A.D. 43).

PRUDENCE. *See* DISCRETION.

PRUNING HOOK [מזמרה, *from* זמר, to prune]. A blade attached to a handle, used for removing superfluous twigs. Usually vines in Bible lands grow along the ground; and after the clusters of grapes have formed, the vines are propped up on sticks or piles of stones. For pruning, only a sharp knife would be required (Isa. 18:5; cf. Song of S. 2:15). In Mic. 4:4 "under his vine" may imply a trellis. The familiar references to beating spears into pruning hooks (Isa. 2:4; Mic. 4:3; cf. Joel 3:10) might indicate a long handle and so suggest trellising.

An iron head made like a heavy sickle and to be attached to a handle was found at Tell Jemmeh and dated by the excavator *ca.* 800 B.C. To reforge a spear point into a pruning knife, as to make of a sword a point for a PLOW, is plausible and technologically possible. Fig. PRU 68.

PSALMODY. *See* MUSIC.

***PSALMS, BOOK OF** sämz [תהלים]. The first book of the third group of books, the "Writings," in the MT. It is believed to be the most important book among the Writings, and according to Luke (24:44) was quoted as such by Jesus himself. Luke also believes that words contained in the book of Psalms are fulfilled in the life of Jesus, and his disciples had to obey orders given in it (Luke 20:41-44; Acts 1:20; 13:33).

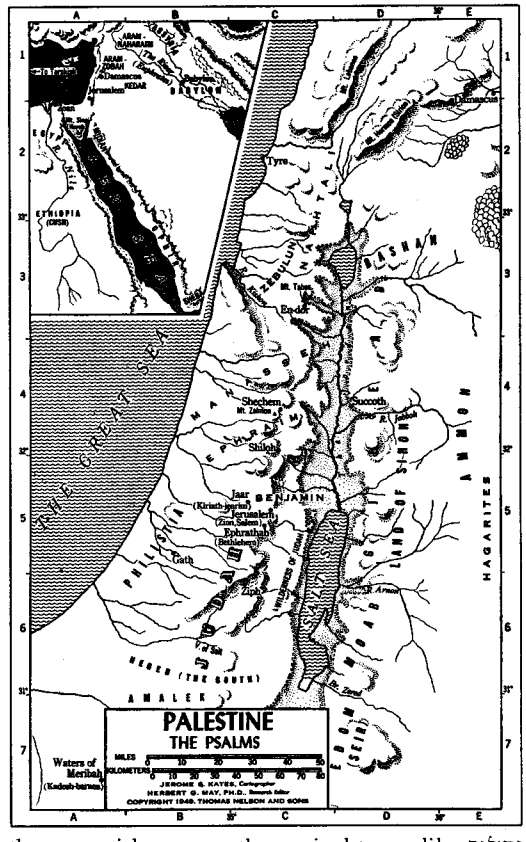
A. ***ORIGIN AND DIVISIONS.*** Probably the first Christian congregations, even in Greece and Asia Minor, sang hymns from the Psalter in their public services—of course, in Greek translation (I Cor. 14: 15; Eph. 5:19; Col. 3:16). Psalms were sung also for private religious edification (Jas. 5:13). This practice follows the example given by the services in the Jerusalem temple, where the Levites sang every week Pss. 24; 48; 82; 94; 81; 93; 92, and where Pss. 113–18 (*see* HALLEL) formed a part of the liturgy of the great annual FEASTS. The use of at least some psalms in the temple service already in the fourth century B.C. is attested by I Chr. 16:8 ff (*see* DOXOLOGY), which refers to David's receiving the ark in the tabernacle erected by him; some scholars today try to combine Pss. 24:7 ff; 76 with this event. The tradition of the temple was probably followed by the synagogues, where the Psalter was used for singing and praying but never for the "lessons," which were strictly confined to the Law and sections taken from the books of the Prophets.

1. Superscriptions. The superscriptions of seventy-three psalms contain David's name in the form לדוד. Its exact meaning ("from David," "concerning David" [like *lb'l*, "concerning Ba'al," in Ras Shamra]) still remains to be determined exactly, as is



the case with apparently musical terms like נחילות ("flutes"?) in Ps. 5; גתית in Pss. 8; 81; 84; or the "hind of the dawn" in Ps. 22. The main difficulty consists in the fact that even the Greek translators of the second century B.C. (the LXX) did not understand them, as shown by their rendering εἰς τὸ τέλος for למנצח, probably "To the choirmaster." They tried to combine words unknown to them with other terms—e.g., גת with גתית, "wine press" (e.g., Judg. 6:11; Lam. 1:15); or נחילות with נחלה, "inherited property" (Ps. 8: ὑπὲρ τῶν ληνῶν; Ps. 5: ὑπὲρ τῆς κληρονομούσης; *see* MUSIC.

Much clearer are some allusions to certain events in David's life—e.g., to Absalom's rebellion (Ps. 3), the end of the persecution by Saul (18), or the visit by Nathan (51). Some of them follow a tradition which is not preserved in the OT as we have it or another form than that of Samuel. The Philistine king before whom David feigned madness bears the name of Achish in I Sam. 21:10 ff; of Abimelech in Ps. 34; and in the same story in I Samuel, David came to Gath on his own initiative and was not captured by the Philistines as in Ps. 56.

The superscriptions referring to Asaph (Pss. 50; 75–83; cf. I Chr. 6:39; 15:17) and to Heman and Ethan the Ezrahites (Pss. 88–89), who are not mentioned in the books of Samuel, reflect the intention to connect the Levitical guilds whose heads they should have been with the time of David (cf. I Chr. 6:33, 44). Pss. 72; 127 are associated with Solomon, and in the same manner Pss. 39; 62; 77 connect the name of Jeduthun with a choir of his time (cf. II

Chr. 5:12). The superscription of Ps. 90 refers even to Moses, and those of Pss. 42; 44–49; 84–85; 87–88 to a choir instituted by Levi's legendary grandson Korah (cf. II Chr. 20:19). The historical value of these superscriptions is contested by the majority of modern scholars, who believe that they reflect musical life in the fourth century B.C. Dual superscriptions are found in Pss. 39; 62 (David; Jeduthun); and in Ps. 77 (Asaph; Jeduthun), and this fact casts a doubt over their validity. But there is a trend toward a more conservative outlook, revealed especially in some articles by Eissfeldt. *See bibliography.*

2. Former collections. The book of Psalms as we have it contains 150 units. This figure was fixed before the origin of the LXX, whose 151th psalm is counted "outside the number" (ἔξωθεν ἀριθμοῦ). But there is no uniformity in the division of the single canticles. Pss. 9–10 are wrongly counted as two in the MT, rightly as one unit in the LXX. The following equations may be made:

MT	LXX
114–15	= 113
116:1-9	= 114
116:10-19	= 115
117–46	= 116–45
147:1-11	= 146
147:12-20	= 147
148–50	= 148–50

The Vulg. follows the LXX, its Psalter being, not Jerome's *Psalterium juxta Hebraeos,* but an older translation made by him from the LXX, also using perhaps Origen's Hexapla. Neither the MT nor the LXX recognized that Pss. 42–43 were originally one prayer, as clearly shown by the refrain 42:6, 11; 43:5.

These 150 psalms are divided into five books by doxologies (perhaps after the analogous partition of the Pentateuch): 1–41; 42–72; 73–89; 90–106; 107–50. Their limits fall sometimes together with the end of ancient smaller collections. So Pss. 3–41 are bound together by the לדוד and by the use of "Yahweh" as the name by which God is invoked.

The second collection prefers the designation "Elohim" for God (cf. the doublet Ps. 14 = Ps. 53). It contains six psalms connected with the "sons of Korah" (44–49), twenty again with David (51–70), and an appendix to this Elohistic David psalter: Ps. 72, introduced by לשלמה, "from[?] Solomon." Ps. 50, now an Asaph psalm, may have been originally a Korah psalm. Pss. 42–43; 71, songs of a man persecuted (in his old age) by his enemies, are without superscription. They may belong together and have their origin in the Diaspora outside the city of the sanctuary (42:5, 7; 43:3-4). For this reason they did not belong to any Jerusalem collection, and they became the framework of 42–70 before Ps. 72 was appended.

The third book is in its main part Elohistic too. It contains the Asaph collection (73–83), four Korah psalms (84–85; 87–88) and one David psalm (86) left aside by the former collections, and a hymn of Ethan (89). Pss. 84–89, which are Yahwistic, were appended to the Asaph collection after its Elohistic redaction.

The division between the fourth and the fifth books is purely artificial, as may be seen by a comparison of Ps. 106 with Ps. 107. The fourth book starts with the prayer of Moses, the man of God (Ps. 90), and embraces: (*a*) canticles with various titles, mostly of hymnal character and celebrating Yahweh's kingship (93 [95–96]; 97 [98]; 99); (*b*) Davidic psalms (101; 103; 108–10; 138–45); (*c*) Hallelujah psalms (104–6; 111–12; 146–50); (*d*) Hallel (113–18; *see* HALLEL); (*e*) songs of ascent (120–34, from which 122; 124; 131; 133 are again Davidic; *see* ASCENT, SONG OF).

The other psalms show no certain principles of ordering. Even from this rapid survey it may be seen that books IV-V are not the work of a single redactor but result from a slow growing together of smaller collections with single songs. It may be that an older book of Psalms contained Pss. 3–110, with Ps. 2 as an introductory counterpart to 110, as Ps. 1 forms the later Introit to the whole collection.

3. Date. The fixing of the age of these smaller collections and of the Psalter itself depends on their interpretation, especially of the songs mentioning the king. Are they testimonials of the pre-exilic monarchies of Judah and Israel or of the Maccabean kingship after 105 B.C.? Do the songs celebrating Yahweh's ascension to his heavenly throne contain the liturgy of a pre-exilic feast, or are they dependent on Deutero-Isaiah? The stylistic difference between the canonical psalms and the hymns discovered in Qumran leaves no doubt that there are surely no Maccabean songs in our Psalter. The quotation of Ps. 79:2-3 as an older song in I Macc. 7:17 seems fully attested. *Ca.* 100 B.C. the book of Psalms belonged to the Scriptures and was no longer open for insertions. The fact that the LXX has the same order and number of psalms with their superscriptions and doxologies (in spite of the differences in 9–10; 114–16; 147) shows clearly that the actual collection was finished between the division of the Pentateuch into five books (which took place before the Samaritan schism) and the Greek translation—i.e., in no case later than the end of the third century B.C. To these external and internal reasons should be added the most pertinent one: the lack of Greek influence upon the theology of the psalms which is to be found in Ecclesiastes and Ecclesiasticus.

This dating of the collection means, of course, nothing against a much earlier dating of its smaller units and of the single psalms. They may reflect much earlier stages of Israelite religious and cultic poetry. This is true even if there are in some of them late (Aramaic) expressions belonging to the time when Aramaic was the official language in the Persian Empire and used by the Jews, not only in Elephantine but also in Palestine, as the Aramaic portions in Ezra and Daniel attest. In liturgical texts (also in our Christian prayer books) there is a double tendency: on the one side to preserve or even to reuse archaic ("sacred") expressions, and on the other side to modernize the language of the holy text—e.g., for pedagogical aims.

The artificial uniformity of orthography and morphology which exists throughout the whole OT and no less in the Qumran texts—e.g., 1QIs^{a} or (for the psalms) 1Q 10–12; 16, and by this way attested already in the first or even the second century B.C.—makes it impossible to discern by their language,

their grammatical forms, ancient songs like that of Deborah (Judg. 5; twelfth century) from the latest texts—e.g., the Hebrew parts of Daniel (second century). The differences between the Qumran fragments and the best recensions of the MT as printed by Kittel or Snaith are not greater than those between this text and variants collected by Kennicott and De Rossi—e.g., the *scriptio plena* or *defectiva* of עותני or עותוני and בפקודיך or בפקודיך in Ps. 119:78, the former spellings being those of 1Q 11.

This uniformity is also a very serious obstacle to all metrical researches. The history of the psalm poetry in Israel has to be written by interior criteria and by comparison with the religious poetry in the surrounding countries, including the texts from Ras Shamra, and not on the basis of linguistic arguments. Beside these foreign texts it will be useful to compare the poetical intercalations in the prose books of the OT, the Deborah song, or the dirges of David over Saul and Jonathan or Abner (II Sam. 1:19 ff; 3: 33 ff), and to look at the liturgical pieces in the books of the Prophets—e.g., Amos 5:2 or Hos. 6:1-8; 14:2-9; Jer. 14:1–15:4. The book of Lamentations, the *Hôdhayôth* from Qumran, the canticles in Luke 1, and the five psalms transmitted only in Syr. are other examples which should not be neglected. They show without doubt that the main types of psalms in the Psalter are pre-exilic and that even the younger poems contained in it are much older than the Hymns from Qumran, which use the phraseology, the imagery, and the leading ideas of the book of Psalms freely or in the form of quotations. Theodor H. Gaster, in *The Dead Sea Scriptures in English Translation*, counts fifty-seven such cases, of which one example is the following (1QH 8.28 ff):

Grievous was my pain [cf. Isa. 17:11], and could not be stayed.
[My soul was overw]helmed [Ps. 42:7; 13:5],
like them that go down to Sheol,
and my spirit was sunken low amid the dead [Ps. 77:7 combined with 88:6].
My life had reached the Pit [Ps. 88:4],
and my soul waxed faint [Ps. 107:5; Jonah 2:8] day and night without rest.[1]

4. Text. The Hebrew text of the Psalms is generally not so faulty as was once believed. Of course, there are many corruptions and alterations, as shown by the irregularities in the acrostic arrangement in Pss. 9–10 or by the differences between texts which are twice delivered (Pss. 14/53; Ps. 18/II Sam. 22). Such alterations may have theological reasons. So the desire of the pious to "see God" was changed into "to be seen [to appear] before God" (e.g., Ps. 42:2). They may be even older than the forming of the Psalter: see, e.g., the invocation of God as "Elohim" instead of "Yahweh" in the second, major part of the third book. In Pss. 42–43 the refrain should be:

Hope in Yahweh; for I shall again praise him,
my help and my God;

and 43:4 should read:

Then I will go to the altar of Yahweh,
to the God of my exceeding joy;
and I will praise thee with the lyre,
O Yahweh, my God.

The name of Yahweh is indispensable in such admonitions and vows which are addressed to this special God, with whom the pious is connected by the deeds in the history of his people. So, too, 44:1 should read:

We have heard with our ears, O Yahweh,
our fathers have told us,
what deeds thou didst perform in their days,
in the days of old.

Besides these older alterations there is perhaps at least one very late one, representing anti-Christian polemics. In 22:16, "like a lion" (accusative?), כארי, is possibly a change for an ancient "they have pierced," כארו. The scribes wanted possibly to prevent the use of the verse in the messianic interpretation of the church (cf. John 20:25, 27). "They have pierced" is the better reading. Like Luther, the KJV, the RSV, and the Spanish Sagrada Biblia (1953), the Latin version introduced in 1945 by Pope Pius XII into the daily prayer of the Roman Catholic clergy accepts the *foderunt* of ancient versions including Jerome. But the possibility remains that we have before us, not a voluntary change, but an involuntary scribal error, the letters ו and י being very similar, as seen, e.g., from 1QIs[a].

But in spite of such indisputable alterations, and the possibility of errors on occasion of the transcription from the older into the so-called square script and of modernizations of orthography, the commentaries now—not only the Roman Catholic ones!—are more conservative in the treatment of the text than those *ca.* 1900-25. And a comparison of the MT with the text of the LXX and the secondary translations depending on it, especially Jerome's *Psalterium Gallicanum* (and *Romanum*), or with the Syr. text, shows that uncertainties affecting the religious sense or value are rare. There must have been in the temple and later in the synagogue a strong tradition of liturgy and prayer, preserving the text from greater mistakes, and this living tradition was never interrupted for Judaism in its totality.

B. *POETIC FORMS.* 1. Verses and strophes. *a. The smallest units and parallelism.* The smallest unit of Hebrew poetry and psalmody is the line ("verse"), divided into two half lines ("half verses") offering the same or nearly the same content, the so-called *parallelismus membrorum*, so well known since Lowth's epoch-making work of 1753. This construction is used in the quotations of earlier proverbs or poems in the historical books. We read in Gen. 4:23:

Adah and Zillah, hear my voice;
you wives of Lamech, hearken to what I say:
I have slain a man for wounding me,
a young man for striking me.

Here "Adah and Zillah" is parallel to "you wives of Lamech"; "hear" to "hearken"; "my voice" to "to what I say"; "I have slain" has no parallel; "a man" is parallel to "a young man"; "for wounding" to "for striking"; and "me" to "me." The pattern is: a+b+c//a′+b′+c′; and a+b+c+d//b′+c′+d. As may be seen by this example, the parallel members of the line may be either identical ("me") or at

[1] From the book *The Dead Sea Scriptures* by T. H. Gaster; copyright © 1956 by Theodor H. Gaster, reprinted by permission of Doubleday & Company, Inc., and Martin Secker & Warburg Ltd., London.

least synonymous (all other examples); but the continuation of the same text shows a third form—antithesis:

> If Cain is avenged sevenfold,
> truly Lamech seventy-sevenfold.

"Cain" here is opposite to "Lamech," and "sevenfold" to "seventy-sevenfold."

The following ancient example shows another variation:

> Spring up, O well!—Sing to it!—
> The well which the princes dug,
> which the nobles of the people delved,
> with the scepter and with their staves
> (Num. 21:17-18).

Here "which the princes" is parallel to "which the nobles of the people"; "dug" to "delved"; "scepter" to "staves"; but the theme, "Spring up, O well!—Sing to it!" remains outside the parallelism (so-called "synthetic" or "incomplete" parallelism; a+b+c+d//b′+c′+d′).

The same form is to be found in Num. 21:27:

> Come to Heshbon, let it be built,
> let the city of Sihon be established.
> For fire went forth from Heshbon,
> flame from the city of Sihon.

Here too, as in 21:17 ("Spring up, O well!—Sing to it!"), it is an imperative ("Come") which remains outside the parallelism (a+b+c//b′+c′; and d+b//d′+c′). The reason is easily recognized: The poetic form of parallelism belongs more to lyricism than to appeal, to description than to commandment. It allows, and even facilitates, the painting of a situation, but retards the flow of an action. By way of these combinations of three or five half lines from which two or four are parallels and one outside the parallelism, the shortest strophes ("stanzas") are formed.

These simplest forms are frequently used in the psalms. For the identity of members, note Ps. 29:1-2:

> Ascribe to the LORD, O heavenly beings,
> ascribe to the LORD glory and strength (a+b//a+c).
> Ascribe to the LORD the glory of his name;
> worship the LORD in holy array (a+c′+d//a′+e).

For synonymous parallelism, note Ps. 19:1-2:

> The heavens are telling the glory of God
> and the firmament proclaims his handiwork.
> Day to day pours forth speech,
> and night to night declares knowledge
> (a+b+c//a′+b′+c′; and d+e+f//d′+e′+f′).

Antithetic parallelism is to be found, e.g., in one of the royal psalms (20:7-8):

> Some boast of chariots, and some of horses;
> but [Hebrew "and"] we boast of the name of the LORD our God.
> They will collapse and fall;
> but [Hebrew "and"] we shall rise and stand upright
> (a+b+a+c//a′+b′; and d+e//d′+e′).

The same psalm which showed the synonymous provides also an example of incomplete parallelism, the first line of a couplet remaining outside (19:4-5):

> In them he has set a tent for the sun,
> which comes forth like a bridegroom leaving his chamber,
> and like a strong man runs its course with joy
> (a+b+c//b′+c′+d).

Another example is from Ps. 30:1:

> I will extol thee, O LORD, for thou hast drawn me up,
> and hast not let my foes rejoice over me.

The pattern here is a+b+c//b′+c′, the member "a" being, not an imperative as in Num. 21:17, but a self-exhortation. These forms are preserved also in the canticles in Luke 1:

a) Synonymous (vs. 46):

> My soul magnifies the Lord,
> and my spirit rejoices in God my Savior
> (a+b+c//a′+b′+c′+d).

b) Antithetic (vss. 52-53):

> He has put down the mighty from their thrones,
> and exalted those of low degree;
> He has filled the hungry with good things,
> and the rich he has sent empty away
> (a+b+c//a′+b′; and d+e+f//e′+d′+f′).

c) Incomplete (vss. 70-72):

> As he spoke by the mouth of his holy prophets from of old,
> That we should be saved from our enemies,
> and from the hand of all who hate us;
> to perform the mercy promised to our fathers,
> and to remember his holy covenant.

In this third example, the first line, A has no parallelism; lines 2-5 are arranged a+b+c//a′+b′; and d+e+f//e′+f′.

The same forms may be seen in the Qumran hymns (Gaster translation):

a) Synonymous (3.19-20):

> I, that am molded of clay,
> what am I?
> I, that am kneaded with water,
> what is my worth?[1]
> (a+b+c//a′+b′+c′).

b) Antithetic (2.28):

> Yet, while my head was dissolving like water,
> my soul held firm to Thy covenant[1]
> (a+b//a′+b′+c).

c) Incomplete (2.20-21):

> I give thanks unto Thee, O Lord,
> For Thou hast put my soul in the bundle of life
> and hedged me against all the snares of corruption[1]
> (A+[a+b+c]//[a′+b′+c′]).

In the incomplete parallelism another line than the first—e.g., the third—may be without corresponding member. In Luke 1:31, Gabriel's announcement:

> Behold, you will conceive in your womb
> and bear a son,
> And you shall call his name Jesus,

runs after the model of Gen. 16:11:

> Behold, you are with child,
> and shall bear a son;
> You shall call his name Ishmael
> (a+b//a′+b′+A);

and in 1QH 2.22-23 (Gaster translation):

> But they—a league of Falsehood,
> a congregation of Belial—
> They knew not that through Thee I would stand.

[1] From the book *The Dead Sea Scriptures* by T. H. Gaster; copyright © 1956 by Theodor H. Gaster, reprinted by permission of Doubleday & Company, Inc., and Martin Secker & Warburg Ltd., London.

For Thou in Thy mercy dost save my life;
For by Thee are my footsteps guided[1]
([a//a']+[b+c+d//c'+d']+A).

Even these simplest forms have behind them a history in the old oriental literature long before the OT. Some examples taken from the texts from Ras Shamra by Gordon in his *Ugaritic Manual* (1955) are:

He judges the case of the widow
adjudicates the cause of the fatherless.
Eat bread from the tables,
drink wine from the jars[2]
(a+b+c//a'+b'+c').

How can it be said:
Krt is Il's son,
the scion of Ltpn we Qdš;
Or do gods die
nor Ltpn's scion live?[2]
(A+[a+b+c//c'+d']+[d+e//d'+e']).

Like the heart of the cow toward her calf,
like the heart of the ewe toward her lamb,
So is the heart of 'Anat after Ba'l[2]
([a+b+c//a'+b'+c']+A),

and the same form in a Tell el-Amarna letter (Knudz. 264, 15 ff):

If we ascend to the heavens
if we descend to the netherworld,
Our head stays in your hands
([a+b//a'+b']+A).

Another similarity between the OT poetry and the Ras Shamra Texts is seen when the second halves of two lines are parallel and the first halves identical, or vice versa. So it is in Isa. 15:1 MT:

Because in a night is laid down
Ar Moab is undone
Because in a night is laid down
Qir Moab is undone;

or in Ps. 136:1-3:

O give thanks to the LORD, for he is good,
for his steadfast love endures for ever.
O give thanks to the God of gods,
for his steadfast love endures for ever.
O give thanks to the Lord of lords,
for his steadfast love endures for ever;

and in Ras Shamra:

They shake each other like gmr-animals,
Môt is strong, Ba'l is strong;
They gore like buffaloes,
Môt is strong, Ba'l is strong;
They bite like serpents,
Môt is strong, Ba'l is strong;
They kick like Ism-animals,
Môt is down, Ba'l is down![2]

b. Stanzas. These smallest units do not stay unrelated side by side; they start to become combined in a strophic order into stanzas. In some psalms they are visible already by their acrostic arrangement (9-10; 25; 34; 37; 111-12; 119; 145). The stanzas so formed contain from two (Lam. 4) to eight (Ps. 119) lines, all lines within the stanza starting with the same letter or only every first line of the stanza starting with the next letter of the alphabet. For more detailed discussion of this primarily mnemotechnical principle, *see* § B3 *below*.

In other cases some stylistic features or the sense leave no doubt about the stanzas intended by the author—e.g., in two of the best-known psalms: In 121 the beginning of vss. 3, 5, 7, with "He," "The LORD," and "The LORD" shows clearly four stanzas with two lines each, every line being divided into two half lines or three third lines. In Ps. 126 the imperative "restore" (שובה), reiterating the stem of the infinitive, "When . . . restored" (בשוב), divides the poem into two stanzas with four lines each of the same length as those in 121.

In spite of such clear cases—which could be multiplied—one must confess that there is no certain leading strophic principle in the book of Psalms. Certain questions arise, such as: Should Ps. 20 be divided into two stanzas with five lines each (1-5*a*, 6-9), or into two stanzas with four lines (1-4, 6-8) with one closing line outside the stanza (5*a* and 9) as is the case in Ps. 21—twice two stanzas with two lines each (1, 2-3, 4-5, 6; and 8, 9*a*-9*b*, 10-11, 12) and two independent lines (7 and 13)? And what is the matter with 20:6*b* and 21:9, a very corrupt verse? Even where a psalm is clearly divided by a refrain, the stanzas are sometimes not completely regular in the MT. In Pss. 42-43, vs. 42:8 is too long, and the third stanza (Ps. 43) lacks one line. In Ps. 46, in which the refrain has to be repeated after vs. 4, the third stanza is too long; perhaps vs. 9*b* should be deleted? These examples show that we have to be very careful to change the text in order to get regular stanzas. The regularity of the stanzas is not a ruling principle in the text as we have it, and we do not know if it ever was. It may be that in the service of the temple the music done by the instruments (cf., e.g., Ps. 68: 25 or 150:3-5) secured the regularity of the stanzas by interludes, from which the still unexplained "Selah" (*see* MUSIC) may be a rest.

c. Meter. The same care has to be observed in all questions of meter. The half lines in which the verses are, as we have seen, generally divided have in the majority of cases the same number of words susceptible to bear a full tune—e.g., Ps. 24:1-2:

The earth is the LORD's and the fullness thereof (3 Hebrew words),
the world and those who dwell therein (3);
for he has founded it upon the seas (3),
and established it upon the rivers (3).

In other cases the second half line is shorter than the first—e.g., in Ps. 130:2, 4:

Let thy ears be attentive (3 Hebrew words)
to the voice of my supplications (2)!
. . . . . .
But there is forgiveness with thee (3),
that thou mayest be feared (2).

Perhaps in vss. 2-3 *'adhônāy* ("Lord"), repeating the preceding "Yahweh" ("LORD"), should be deleted, so the lines would parallel those given before:

Out of the depths I cry to thee, O LORD (3 Hebrew words)!
. . . hear my voice (2)!
If Thou, O LORD, shouldst mark iniquities (3),
. . . who could stand (2)?

The book of Lamentations is completely composed of these so-called "lamentation"—or better, "dirge"—

[1] From the book *The Dead Sea Scriptures* by T. H. Gaster; copyright © 1956 by Theodor H. Gaster, reprinted by permission of Doubleday & Company, Inc., and Martin Secker & Warburg Ltd., London.

[2] From *Ugaritic Manual* by C. H. Gordon; reprinted by permission of the author and the Pontifical Biblical Institute, Rome.

verses (Hebrew *qînâ*). Besides the division into half lines, the division into third lines—e.g., in Ps. 121: 3-5—has been mentioned:

He will not let your foot be moved (3 Hebrew words),
he who keeps you will not slumber (3).
Behold, he who keeps Israel (2)
will neither slumber (2) nor sleep (2).
The LORD is your keeper (2);
the LORD is your shade (2)
on your right hand (2).

More seldom are verses with 4+4 or 4+3 words.

But there is no unanimity among scholars about the metrical system transforming words into metrical beats. Is the Qinah, as Hölscher and Mowinckel think, to be read with 4+4 beats, or, with Sievers and the scholars following him, with 3+2? And is the verse with 3+3 words really to be read with 3+3 beats or with 4+4? The answer depends on another question: Do we have before us an alternating system of stressed and unstressed syllables (with the possibility of neglecting the unstressed) or a system in which the words have their regular accent and in which only these accents are to be counted? So Lam. 1:2 could be read either:

(4) אֵיכָה יָשְׁבָה בָדָד
(3) הָעִיר רַבָּתִי עָם

or:

(3) אֵיכָה יָשְׁבָה בָדָד
(2) הָעִיר רַבָּתִי עָם

or, taking איכה as an anacrusis outside the verse:

אֵיכָה
(3) יָשְׁבָה בָדָד הָעִיר
(2) רַבָּתִי עָם

If we take the second system (Sievers) for granted, the 3+3 alternating with 2+2+2 would be the most frequent one. But both systems, like all others, suffer from the great difficulty that we know so little about Hebrew grammar and pronunciation in older times. The system of the MT is an artificial one coming from the tenth century A.D.! The rests of the second column of Origen's Hexapla giving the Hebrew text in Greek letters as it was pronounced in his time, some older forms of the pronominal endings preserved in 1QIs[a] and some other Qumran texts and going together with the Samaritan pronunciation (not with the written Samar. text), and the researches of Kahle and his pupils have shown that the grammar of the Hebrew spoken in pre-Christian times is still to be reconstructed. For this reason changes in the Hebrew text on account of the meter are tolerable only in some exceptional cases, when the metrical irregularity is confirmed by reasons of the sense or of parallelism, and only with the greatest caution.

2. Cultic types. These simplest forms and their stanzas are the basis of the highly developed cultic types in the service of Yahweh in the Israelite sanctuaries.

a. N Israelite poems. There are, first, some psalms which probably belong to the N kingdom. No marriage is known between a Judean king and a princess of Tyre (Ps. 45) but between Ahab and Jezebel (I Kings 16:31). Only "Jacob and Joseph" are mentioned in Ps. 77:15; 81:4-5, only N tribes in Ps. 80:1-2, or the mountains in the N of Israel's territory in Ps. 133 (cf. 29:6). So the catastrophe contrasted with Yahweh's powerful epiphany at the Red Sea in the days of old is probably the Assyrian invasion in 734.

N Israelite poetry is also attested by its influence on the book of Hosea, first of all by the great liturgy quoted in 14:2 ff, with its combination of confession of sins, the vow to trust in the future only in Yahweh's help, and Yahweh's favorable answer in the forms of the old Palestinian fertility cult—in contrast with a repulse, as in Hos. 6:1 ff or in the analogous Judean liturgy in Jer. 14:2–15:4.

These N Israelite songs are a very valuable help for the dating of psalms in general, for they let us see forms living in the eighth century B.C. It is a pity there are not more, that the big majority of psalms comes from the S kingdom, from the Jerusalem temple. The reason for this is not only the fact that the kingdom of Judah stayed one century and a half longer than that of Israel, but also that Jerusalem as the sanctuary of the ark was, even before the Deuteronomic centralization of the cult, a kind of common shrine for the tribes united in Yahweh's covenant. So Jerusalem preserved (after the destruction of Silo) in a higher degree than, e.g., Sichem, the traditions from the amphictyonic time and later. By the transfer of the ark into David's capital these amphictyonic traditions, including the manners and the texts of the older poetry, were introduced in this shrine, to the detriment of the northern sanctuaries.

b. Royal psalms. The Jerusalem sanctuary, being the royal shrine from the beginning of its Israelite history, is the place in which the royal psalms (2; 18; 20; 21; 72; 101; 110; 132; 144:1-11 according to Eissfeldt) were sung; in which the king sacrificed his offerings, asked for an oracle and received it, and renewed on regular or exceptional occasions the covenant between Yahweh, himself, and his people (II Kings 11:17 ff; 23:3 ff) on the basis of sacred traditions and precepts preserved orally or in written form among the priests.

These royal psalms are prayers of the king assuring that he observes the ordinances of his God in judgment by punishing the bad members of his people and assembling the pious in his service (Ps. 101). They are prayers for the king asking that Yahweh may hear his voice; look at his perfect offerings (20: 2-6); and let the time of his reign be a period of peace, well-being, and good harvest, but also a period of justice for the poor and of a constant fear of his God (72). They praise Yahweh for what he has done and will do for the king who rejoices in his strength (21:1). He trusts in Yahweh and in the steadfast love of the Most High, the Elyon, the old pre-Israelite God of Jerusalem who was, since David, identified with the national god (110; cf. 91:1). The royal psalms give good oracles to the king (2:6 ff; 20:7 ff; 100:1, 4), declaring that the king is adopted by Yahweh on the day of his enthronement to be his son (2:7 ff). For this reason the great political crisis during which this special psalm is written will be finished soon. The best the kings of the nations incorporated into the Davidic empire may do is to renounce all undertaking of liberation (2:1 ff). These hopes and traits are the root of the later, "messianic" expectations, the desire for him "that cometh," the great king at the end days, the "eschatological" king.

This transformation of the hopes confessed in the royal psalms makes explicable the astonishing fact that they survived the catastrophe of the Judean monarchy in 587. Like other psalms which were not forgotten by the prisoners in Babylonia (Ps. 137), where they deeply influenced the language and the faith of Deutero-Isaiah, they were reintroduced into the temple service after 516.

c. Hymns. What is promised at the end of the royal psalm 20, the praise of God, is the content of the hymns (תהלים) celebrating Yahweh's overwhelming greatness and power he has shown in the creation of the world and in Israel's history. The hymns start with an introduction, for which the cultic shout "HALLELUJAH" seems too simple. This introduction admonishes the priests staying day and night in the temple (Pss. 134–35), the choir of choirs (135:19-20), or the whole congregation to sing his glory, accompanied by the instruments of the temple band:

> Praise the LORD!
> Praise God in his sanctuary;
> praise him in his mighty firmament!
> Praise him for his mighty deeds;
> praise him according to his exceeding greatness!
> Praise him with trumpet sound;
> praise him with lute and harp!
> Praise him with timbrel and dance;
> praise him with strings and pipe!
> Praise him with sounding cymbals;
> praise him with loud clashing cymbals!
> Let everything that breathes praise the LORD!
> Praise the LORD! (Ps. 150; cf. 98:5).

Israelite music was, as we know from Assyrian sources, famous throughout the old oriental world. Besides these temple officials other groups, apparently of laymen including proselytes, were called to the same service (Ps. 107); we do not know when this custom arose. Instead of the exhortation in the imperative, there may be a self-exhortation in the cohortative, either in the plural (e.g., Ps. 95:1) or in the singular (e.g., Ps. 108:2). This single singer may be the leader of the choir or even the choir itself personified. He may be the dancer in the night of the festival (cf. Isa. 30:29) or a dancer like Miriam the prophetess leading her women as she sings her imperative:

> Sing to the LORD, for he has triumphed gloriously;
> the horse and his rider he has thrown into the sea
> (Exod. 15:21).

The age of the hymn as a cultic form is attested by the fact that it is used in a purely literary manner already in the northern psalm 29 (cf. the mentioning of Lebanon and Sirion in vs. 6). The greatness of Yahweh the god of the thunderstorm (cf. Exod. 19: 16; I Kings 19:12) shall be celebrated by the "sons of gods" (Ps. 29:1).

Another literary use of the form of the hymn is to be found when the poet addresses his own soul as the choir praising the mercy and glory of his god (Pss. 103; 146) or as the one who adores (in the second person) his majesty (Ps. 104). Again we do not know when this development of the form took place, but it seems that we have before us a late development. Ps. 103 is a polemic against the doctrine of Yahweh's retribution of all sins, as are the books of Job and Ecclesiastes, but not in the negative attitude of these works. For Ps. 103 the best we can say of God is that

> He does not deal with us according to our sins,
> nor requite us according to our iniquities
> (vs. 10).

The poet is the most heterodox in the OT, and he seems to depend on Deutero-Isaiah (cf. vss. 15-16 with Isa. 40:6-7). Ps. 146 seems to reflect the influence of didactic wisdom (vss. 3 ff), as Ps. 104 does—in spite of the indirect influence of the famous Aton hymn from Tell el-Amarna with the creation story in Gen. 1 (P document).

The introduction of the hymn is generally followed by what Gunkel called the "corpus" of the hymn, saying for what reason Yahweh should be celebrated. It usually begins with "because" (כי), "who" (אשר; e.g., Ps. 16:7), or with the participle preceded by the article (e.g., Ps. 103:3 ff). Sometimes the corpus is distributed between two choirs, one chanting the single deeds of God and the other repeating the general theme: "for his steadfast love endures for ever" (cf. Ps. 118:1 ff), thus using a very ancient form of old oriental poetry. *See* § B1*a above*.

Yahweh is the great god who is king forever (Ps. 29:10) above all other gods (95:3; 96:4), who manifested and manifests his power in the creation of the world and in the wonders of nature and of the history of Israel. The celebration of the overwhelming strength of a god shown by the Creation is a theme frequently used in foreign psalms. In an account of his victory over the chaos monster the gods proclaim Marduk to be their king. The creator is greater than all other gods, and they have to adore him who would be able to destroy what he has made (cf. Ps. 97:7; Heb. 1:6). Opposite this connection between Israelite hymns and foreign poetry, history as the realm of Yahweh's power is a theme which is specifically Israelitic. Yahweh is primarily the God of history, of the history of his people as well in the prophetical faith as of the history of the other nations connected with Israel (e.g., Amos 9:7) and of the world. And history not only attests his power but even more his "justice" and morality, especially his love for his people, the trustworthiness of his oath and of his promises, his forgiveness in the present time and in the future as well in the past. With these ideas he proclaims, the poet of Ps. 103:6 ff is not a heretic!

The end of the hymn returns sometimes to the forms of the introduction (cf. with the imperative, Ps. 136:26; for the poet's appeal to his own soul, Ps. 103:22), occasionally with stylistic variations not affecting the sense—e.g., Ps. 106:1, 48:

> O give thanks to the LORD, for he is good;
> for his steadfast love endures for ever!
> . . . . . .
> Blessed be the LORD, the God of Israel,
> from everlasting to everlasting!
> And let all the people say, "Amen!"
> Praise the LORD!

As seen already by this example, the closing verses are the right occasion to turn the ideas of the singer toward the future, not only the immediate future but also that remote time, the end of the world. When the power of Yahweh in the Creation is celebrated,

then the association with the *eschaton,* in which this deed will be renewed, is quite natural. The so-called eschatological hymns, the "new song" of Ps. 149:1 (cf. Isa. 42:10), may describe in the manner of some prophetic utterances the future event as already done in the prophetic perfect (e.g., Ps. 98:1-3, 9*a* [perfect], 9*b* [imperfect], as in Isa. 9:5-6*a,* 6*b*). This use of tenses is the reason for the difficulty in interpreting a special form of the hymn: the enthronement psalms, which celebrate the kingdom of Yahweh by the words which the RSV translates by "The LORD reigns" (93:1; 97:1; 99:1; cf. 47:9; 96:10; יהוה מלך [perfect]) and which are not to be separated from the shout of the other gods proclaiming Marduk their king (*see above*). But what is their exact sense? Do they mean that in the moment in which they are sung, Yahweh becomes king? So Mowinckel interprets them as a part of the liturgy of the Enthronement Feast, which was, according to him, the New Year's Feast. Every civil new year is virtually the day of the new creation. The god who became king by this deed ascends again to the throne when he enters in the great procession into his sanctuary.

Opposite to this interpretation, more recent research, especially that of Kraus, tries to show that there was in a pre-exilic time in Jerusalem a feast in which the election of David as king and of Zion as the shrine and dwelling place of Yahweh was celebrated, but that the proclamation of Yahweh to be king is younger, that it came up under the influence of Deutero-Isaiah and is to be understood as an eschatological hope whose fulfilment started on the day of the liberation from the Exile. This thesis seems to overestimate the importance of the end of the Exile for the Israelitic faith. There was only a small group of the offspring of the deportees who returned to Palestine, and those who lived there were not glad to see them come back; and the religious enthusiasm was so small that the postexilic prophets have to blame the neglect of Yahweh's cult and ordinances. Neither Ezra nor Nehemiah as a true servitor of the Persian king shows anything like a faith in a kingdom of Yahweh present in their time. It is likely that, indeed, in pre-exilic times Yahweh was greeted on New Year's Day as the king who renewed his dominion by re-creating the world. There is in this proclamation a confession against the great monarchies of the East and their religion. Neither Marduk nor Assur, but Yahweh, became king and is now king and will be king when all other powers vanish. יהוה מלך has to be translated: "Yahweh became king [in the first creation], he becomes king [now in his enthronement on New Year's Day, the day of the world renewed by him], and he will become king [at the day of the eschatological 'second' creation]." Creation and eschatology are not ideas excluding each other but the two sides of the same reality, the kingdom of God!

It may be that after the Babylonian model the creation myth was celebrated in the cult not only by songs but also by dramatic performances, in which a priest (or the king?) in the masque of the god had to overwhelm another in the masque of the dragon. The hymns celebrate the God who is present in the midst of the congregation, and even Jesus ben Sirach shows that the sons of Aaron, the singers, the musicians, and the laymen praised the great god when Simon the high priest, adorned with the holy garments, came down from the altar to bless the congregation (Ecclus. 50:22).

d. Thanksgiving songs. The hymns are such powerful poetry that another form of song celebrating Yahweh's deeds in the midst of his people, the song of thanksgiving by the nation in parallelism with the song of thanksgiving by the individual, was not so highly developed. The overwhelming influence of the hymns upon these thanksgiving songs is to be seen in the imperative in the beginning as well in the כי, the אשר, or the participle leading from the introduction to the corpus.

The corpus itself contains the narrative of a deed of God, not in Creation or in history in general, but in the recent past of Israel or in the private life of the singer. Both types appear side by side in Ps. 66 (vss. 8-9, 16-19):

> Bless our God, O peoples,
> let the sound of his praise be heard,
> who [participle] has kept us among the living,
> and has not let our feet slip.
> . . . . . .
> Come and hear, all you who fear God,
> and I will tell what he has done for me.
> I cried aloud to him,
> and he was extolled with my tongue.
> If I had cherished iniquity in my heart,
> the Lord would not have listened.
> But truly God has listened;
> he has given heed to the voice of my prayer.

The help for the people may not have been complete. Some enemies are still so powerful that the second half of such a psalm must be of an imprecatory type (129:1-2, 5):

> "Sorely have they afflicted me from my youth,"
> let Israel now say—
> "Sorely have they afflicted me from my youth,
> yet they have not prevailed against me."
> . . . . . .
> May all who hate Zion
> be put to shame and turned backward!

Much more developed than these national thanksgivings is the thanksgiving song by the individual. The term "thanksgiving" has been variously interpreted. Westermann (*see bibliography*) would prefer to speak of "praise of God" (*Lob Gottes*), and Mand (*see bibliography*) of "confession" (*Bekenntnis*). These differences show that no modern term in any European language corresponds exactly with an old oriental one—in this case the Hebrew ידה (*Hiph'il* הודה). There is no thanksgiving without praising God for what he did and without confessing in public his greatness or uniqueness. And there is no such confession or such praise without the element of personal experience.

In the Thanksgiving Hymns from Qumran, as in the Psalms of the OT, thanks are given to the God who helped in the days of distress, who forgave (e.g., Ps. 32:5 ff), who sent his word of grace. The distress may have been an illness which brought the pious to the limits of the nether world (Ps. 30:3; cf. 71:20; 116:3), to the depth of the sea (Jonah 2:3), so that he despaired (Isa. 38:11) and left all hope of returning to the temple of his God. The distress may have

consisted in persecution by enemies who were stronger than the poet, whom they hated (e.g., Pss. 18:17; 41:7) even though one of them had been his friend (41:9). While the poet is a true worshiper of Yahweh, representing in some degree his congregation, his enemies are at the same time the foes of his God (92:9), who are to be overwhelmed by him. Who are these foes? There is no unanimous answer to this question. Mowinckel has tried to demonstrate that they were sorcerers producing the illness and misfortune of the poet by all means of ancient magic powers. Birkeland has said they are political adversaries of the king. The decision must be postponed until we have examined the "laments," in which they play a bigger role. But already it may be said that the thanksgiving psalms of the individual were originally not sung by the common members of the congregation but by its representative—i.e., the king. They became every member's canticles by the way of democratization. The mentioning of "all kings of the earth" (Ps. 138:4), the central role which the poet is playing in the cult (118:19 ff), and the richness of his sacrifices (116:15 ff) and the importance of his recovering for the whole world now and in the future (22:28 ff) show indeed clearly that the singer was originally not a private man but a leading personality. When the messengers of Merodach-baladan came to congratulate Hezekiah for his recovering, he should have celebrated in their presence a festivity in honor of his god instead of letting them see his treasure house (II Kings 20:12 ff).

But it is perhaps not unreasonable to think that there is not only one single explanation of the thanksgiving. The evildoers against the king may have been men of a magic power who feared to enter into an open opposition and preferred to kill him secretly and unseen. In contrast to their secret trials, the thanksgiving was a public ceremony, celebrated in the temple, with the pious attending. It was accompanied by sacrifices and other cultic actions such as the elevation of the cup of salvation (Ps. 116:12-13), and it was followed by a big meal to which the poor of the congregation (Ps. 22:26; cf. Deut. 12:12, 18) were invited (Ps. 66:13 ff). When they ate and drank, they too honored the God who by his grace saved the rich, who were feeding them, from illness and distress and death (22:26-29—H 22:27-30).

The main thing in these songs is the proclamation of the name of the God who helped (116:13). Not Baal-zebub, the god of Ekron to whom Ahaziah sent messengers in his illness (II Kings 1:2) in order to get his oracle, nor any other of the healing gods or goddesses in Israel's world, but Yahweh alone is to be recognized as saving lord over life and death. He heard the voice crying to him.

The supplications of the prayer spoken on the day of need are now quoted (Ps. 30:9-10—H 30:10-11) and the vows fulfilled. The speaker remembers the dreadful situation from which he has been saved and describes it with living pictures of oriental fancy, in order to enhance the greatness of his god, who is stronger than all dangers. Yahweh is the god of life, saving from death because he himself is never dying. The contrast between the danger that was and the new life which is now given is the best demonstration of his eternal power.

Similarly, the Qumran *Hôdhayôth* thank and praise their god for having delivered the pious—was he the Teacher of Righteousness himself?—from Belial and his followers who persecuted him. His God has proved himself to be the "Prince of the angels, the king of all that are in glory, the Lord of every spirit and the Ruler of every deed" (X.8). And he did so in spite of all iniquities in the poet's life, in order to be, not only feared (Ps. 130:4), but also glorified for his grace.

e. Laments. One means to reach this aim is to quote (*see above*) in the frame of the thanksgiving psalm the lament, which also has two forms: lament of the people and lament of the private member of the congregation. The two forms have, of course, much in common. For both it is again of the first importance to say exactly who is the god whom they implore. So they start with Yahweh's name (e.g., Pss. 3:1; 5:1; 10:1), and they reinforce this invocation by some attributes showing the reasons why the pious addresses him and no other god: "Shepherd of Israel" (80:1; cf. Jer. 14:8); "God of our salvation" (Ps. 79:9); "Yahweh my [king and my] God" (5:2; 7:1); "Yahweh . . . my rock and my fortress, my stronghold and my deliverer" (144:2); or—leading from the field of power to that of morality—"God of my right" (4:1).

This majestic God is not to be addressed without preparation by fasting (e.g., 69:10), by wearing sackcloth (30:11—H 30:12), and not with empty hands (cf. Exod. 23:15; 34:20). But even when Israel's burnt offerings are continually before Yahweh (Ps. 50:8), who is never hungry and who never eats the flesh of bulls or drinks the blood of goats (vs. 13), because

> every beast of the forest is mine,
> the cattle on a thousand hills
> (vs. 10),

nevertheless they are nothing when his statutes are only recited and not followed, when the covenant is only on the people's lips and not observed in social life between brethren (vss. 16 ff). The right sacrifice to be vowed is Yahweh's thankful glorification and the teaching of sinners and transgressors that they may return to their God (Pss. 50:23; 51:13).

The influence of the prophetic faith is clearly to be seen in this attitude, which seemed too heterodox to an addendum made during the Exile: When the temple was restored, then Yahweh would get again sacrifices and enjoy them (Ps. 51:18-19)! But it is astonishing to see that later psalms of this type which even some very conservative scholars believe to be Maccabean (Pss. 44; 74; 79; 83) do not mention sacrifices. The general arguments against this dating of any psalm are reinforced for this special group by the fact that precisely a verse taken from one of them is the one quoted in I Macc. 7:17. There is no sure influence of the Samaritan schism or of Trito-Isaiah in any of them, and it is likely that the destructions mentioned in them may be associated with the catastrophe of Jerusalem in 485 B.C., which J. Morgenstern reconstructs with verisimilitude (*see bibliography*). Ps. 44:12 seems to be a polemic against Isa. 52:3, and will as such be explained best in a time in which the idea of Yahweh's selling Israel for a small price or for nothing was still living among

the people. If this hypothesis is believed to be too audacious, then the time between Nehemiah and Alexander the Great, about which there is a great lack of knowledge of events, would be the period of these psalms.

But however this special problem may be solved it is to be seen that for these psalms sacrifices are no more the indispensable condition for a lament which Yahweh will listen to, nor is the temple the only place in which they may be prayed. They may be spoken at any time, day or night, at home on the bed or the couch (Ps. 6:6), in the desert, in prison, during a storm on the sea (Ps. 107:4, 10, 23). They are not confined to the man himself who is in trouble, but they may pray for a friend who is ill (35:13-14). Their aim is, of course, liberation from the cruelties of this life, health, strength, freedom from persecution by enemies, grace of his God and return to his sanctuary, but never (except perhaps the two uncertain cases in Pss. 49:15; 73:24) salvation after death. Opposite to such a "Christian" prayer, the poets of the laments know that death means separation from the God of life, that after death there is no more any possibility to praise him (Ps. 6:5; 30:9; 88:11; 115:17), and even this fact is the strongest argument to convince Yahweh of the necessity to help now and quickly. He is the God who wants to be glorified! The honor of his name will not tolerate the blasphemous question: "Where is their [your] God?" (79:10; 42:3; 115:2). It is his pride which is in an intolerable manner violated when heathenish nations destroy his temple and introduce into his holy place their idols (74:3 ff), and which will be restored when the prayer brought before him is answered. For this reason it belongs to the style of the laments not only to describe (as it is done retrospectively in the thanksgiving songs) the actual need as terrible as possible in order to enhance God's pity, but also to commemorate before him the iniquity and the wickedness of the enemies by the strongest expressions: Evildoers speak lies; they are bloodthirsty and deceitful (Ps. 5:6). Like a lion they rend the pious (7:2), and the deepest reason for such an attitude is their lack of faith in Yahweh:

For the wicked boasts of the desires of his heart,
and the man greedy for gain curses and renounces the LORD.
In the pride of his countenance the wicked does not seek him;
all his thoughts are, "There is no God" (10:3-4).

It is Yahweh's own "profit" to help, and perhaps in the last moment in which help is possible (Ps. 30:9-10). Preparing his sacrifice and watching for God's answer (Ps. 5:3), the pious prays that God may let the evildoers bear their guilt:

For there is no truth in their mouth;
their heart is destruction,
their throat is an open sepulchre,
they flatter with their tongue (5:9).

And the pious will be satisfied if only now, in the cultic performance of his sacrifice, Yahweh will give him a favorable oracle. Yahweh fulfils what he promises!

The effect of such an utterance by God is to be seen in the actual change from complaint to a great joy—e.g., in Ps. 22 between vss. 19-21 and 22-24:

But thou, O LORD, be not far off!
O thou my help, hasten to my aid!
Deliver my soul from the sword,
my life from the power of the dog!
Save me from the mouth of the lion,
my afflicted soul from the horns of the wild oxen!

I will tell of thy name to my brethren;
in the midst of the congregation I will praise thee:
You who fear the LORD, praise him!
all you sons of Jacob, glorify him,
and stand in awe of him, all you sons of Israel!
For he has not despised or abhorred
the affliction of the afflicted;
and he has not hid his face from him,
but has heard, when he cried to him.

Some liturgies preserved in the books of the Prophets deliver such answers of God, which may be favorable (Hos. 14:5) or negative. Then the congregation starts again, and again hoping to impress Yahweh by the repetition and the increasing earnestness of the supplication until he sends them out of his temple into death, sword, hunger, and prison (Jer. 14:1 ff).

We find the same construction of the liturgy in one of the royal psalms, Ps. 20. The prayer for the king, spoken by a priest or a prophet, is answered by God with an oracle which is not cited but is clearly to be seen by the change between vss. 6 and 8—H 7 and 9:

Now I know that Yahweh will help his anointed;
he will answer him from his holy heaven
with mighty victories by his right hand.
Some boast of chariots, and some of horses;
but we boast of the name of the LORD our God.
They will collapse and fall;
but we shall rise and stand upright.

In spite of this knowledge, the psalmist returns to the petition:

Give victory to the king, O LORD;
answer us when we call
(vs. 9—H 10).

The fact that in these two psalms the oracle is not quoted has a clear reason: the Psalter as we have it is the hymnbook in the hand of the congregation, and not a liturgical handbook or cultic rule for the hand of the priest. In contrast to our Christian liturgies in which, e.g., the word of forgiveness after the confession of sins is as sure as the "Amen in the church," neither the priest nor the congregation in ancient times knew what would be the answer given by an inspired word or by means of signs taken from the liver or other intestines of the animal sacrificed.

But there is one occasion on which the oracle had its firm liturgical form, the day of the ascension of the new king to the throne of his fathers. The priest says:

I have set my king
on Zion, my holy hill.
. . . . . .
You are my son,
today I have begotten you
(Ps. 2:6-7).

Sit at my right hand,
till I make your enemies your footstool.
. . . . . .
You are a priest for ever
after the order of Melchizedek
(Ps. 110:1, 4).

So, as the king of Mari is informed by a letter about the sayings of one of his gods, the Judean king has to believe in the truth of what is now proclaimed about future victories (Ps. 21:3 ff), of a just dominion of his so long as the sun and the moon endure throughout all generations from sea to sea and from the River to the ends of the earth (Ps. 72:5 ff). The language and the imagery of these psalms, their promises of world dominion and everlasting life, is that of the old oriental kingship ideology, which did not arise in a small land but in the great empires. The king is nearer to God than any one of the singers of the psalms. So they quote the prayers of the king, which are stronger than theirs. They remember the oath Yahweh has sworn to David, on which their confidence in Yahweh's help is founded. It was sworn without any condition to the anointed, who is at the same time his son and his priest (Ps. 110:4; cf. 2:7), or—showing the sorry experiences of a history full of blows—in a conditioned form for the dynasty but without conditions for Zion. Cf.:

> This is my resting place for ever;
> here I will dwell, for I have desired it.
> I will abundantly bless her provisions;
> I will satisfy her poor with bread.
> Her priests I will clothe with salvation,
> and her saints will shout for joy.
> There I will make a horn to sprout for David;
> I have prepared a lamp for my anointed.
> His enemies I will clothe with shame,
> but upon himself his crown will shed its luster
> (132:14-18).

> One of the sons of your [David's] body
> I will set on your throne.
> If your sons keep my covenant
> and my testimonies which I shall teach them,
> their sons also for ever
> shall sit upon your throne (vss. 11-12).

Then the best the enemies can do is to renounce their plan to burst Israel's bonds asunder and to cast their cords from them, that Yahweh may not laugh and terrify them in his wrath (Ps. 2:3-4). So the role played by the oracle and the prophetic voice in these royal laments show without doubt that they are preexilic. They belong to a time in which oracle and prophetism were living in the cult (contrast I Macc. 4:46; 9:27).

Conditions for the laments of the layman to be heard by Yahweh are analogous. The poet may be guilty of having acted against the commandments of his God. There may be wrong in his hands; he may have requited his friend with evil and plundered his enemy without cause (Ps. 7:3-4). There may be hidden transgressions which he does not want to confess (32:3-5). The wrath of his God is then rightful and just. Only the appeal to Yahweh's grace and the humble confession are the means of salvation from a situation in which the "pious" would be groaning all day long. But in other cases he may be accused and persecuted by his enemies without cause. Then Yahweh is obliged by his justice to demonstrate his innocence by helping him. This may be done in an ordeal in which God frees him from all suspicions. These "prayers of the accused" are a part of the ritual, not only in Jerusalem but also in Elephantine (Pap. Sachau 27; *see* ELEPHANTINE PAPYRI), and it is possible that confidence in Yahweh, who leads the pious through the dark valley, prepares a table for him in the presence of his enemies, and allows him to come back to his house as long as he lives (Ps. 23), is to be explained by this custom. Only a man

> who walks blamelessly, and does what is right,
> and speaks truth from his heart;
> who does not slander with his tongue,
> and does no evil to his friend,
> nor takes up a reproach against his neighbor;
> in whose eyes a reprobate is despised,
> but who honors those who fear the LORD;
> who swears to his own hurt and does not change;
> who does not put out his money at interest,
> and does not take a bribe against the innocent
> (15:2-5),

is allowed to sojourn in Yahweh's tent and to dwell on his holy hill. He has to attest his being free from all such guilts before entering the temple's gates (24: 3 ff; cf. Isa. 33:14 ff). When there are serious doubts, some proofs like those of the accused wife in Num. 5 may be imposed upon him. The justice of his God and of his knowledge (cf. Ps. 139) is his hope in such a case.

But what is the matter with this justice in the cases in which the poet feels himself, in all sincerity, to be not guilty? Is God's wrath really against him without reason? The singer knows that he did not sit with the false or consort with dissemblers. He washes his hands in innocence and goes round the altar of his God, whose habitations he loves like the place where his glory dwells (26:4-8). The problem arises which was so crucial for the poet of Ps. 73 and for the book of Job: May God prove him! He will find his integrity! This appeal is the greatest contrast against the confession of sins. Both confessions are forms of the lament: the confession of sins and the confession of innocence; and both feelings are those of their singers: the feeling of being a transgressor and the feeling of being just, perhaps not in the sense of an absolute purity—there may be hidden sins (Ps. 19:12) or sins he committed as a youngster (25:7; cf. Job 13:26) and for which he is not fully responsible. But in comparison with the wickedness of his enemies, which he paints in vivid colors, he is righteous before the righteous God who tries the minds and the hearts (Ps. 7:9). Or are his troubles the result of a lack of power of his God? There is in the laments no mention of other gods who may have more power than Yahweh, but it may be that the enemies possess magic qualities and formulas which cause the unlucky situation of the poet. The best example is to be found in Ps. 58:4-9, where the descriptions of the foes and of God's intervention both contain elements of sorcery:

> They [the wicked] have venom like the venom of a serpent,
> like the deaf adder that stops its ear,
> so that it does not hear the voice of charmers
> or of the cunning enchanter.
> O God, break the teeth in their mouths;
> tear out the fangs of the young lions, O LORD!
> Let them vanish like water that runs away;
> like grass let them be trodden down and wither.
> Let them be like the snail which dissolves into slime,
> like the untimely birth that never sees the sun.
> Sooner than their [Syr.] pots can feel the heat of thorns,
> whether green or ablaze, may he sweep them away!

The curse which the wicked likes may "soak into his body like water, like oil into his bones" (Ps. 109:17 ff).

The question which was not answered definitively in § B2*d above* is now to be cleared. The enemies of the king and of the private member of the congregation were at first—besides their political importance for the king and the nation—men of magic power, but during the history of Israelite psalmody the Israelite faith in Yahweh the mighty God overcame the fear of such formulas and doings, which are recognizable only in some texts attesting an early "religious" feeling. This development had the effect of concentrating the inner difficulties of the pious in need, feeling himself not guilty, in the question of Yahweh's justice and not in the question of his power. Yahweh is able to help, and if he does not liberate the singer from his troubles, then he is not just!

As has been shown, the thanksgiving psalms and the laments have many parallels in their structure. *See* Table 1.

Table 1

Thanksgivings	Laments
a) Invocation of Yahweh's name	Invocation of Yahweh's name
b) Description of former need	Description of present need
c) Quotation of former prayer	Prayer for help and deliverance
d) Assurance that a former vow was fulfilled	Statement of a vow to be fulfilled now
e) Constatation that a former oracle was fulfilled by Yahweh	God's oracle in reply, not cited but obvious in effect
f) Thanksgiving again	Public confession of the help given by Yahweh

3. Pedagogic types. The cultic types among the psalms which try to influence God have, nevertheless, at the same time frequently a pedagogic value or even a pedagogic intention trying to influence men—the layman, and especially the younger generation (78:5-6)—in order that they should not be like their fathers.

The liturgies which list the qualifications of those allowed to enter the sanctuary regulate the daily life of the congregation's members. They hinder them from changing an oath sworn to the pious' hurt, from taking interest or bribe against the innocent (15: 4-5), or from lifting up their souls to what is false (24:4).

In the context or at the end of the lamentations or the thanksgiving songs, the blessings for the faithful and the curses against their enemies depict the man who acts according to Yahweh's will and stimulate the listeners to act as he demands:

> Blessed is the man who makes
> the LORD his trust,
> who does not turn to the proud,
> to those who go astray after false gods!
> (40:4).

The cultic root of such "teachings" is confirmed (91: 1, 14-16) by the combination of the promises given to a man who

> dwells in the shelter of the Most High,
> who abides in the shadow of the Almighty,

that he will be spared from all misfortune and protected in all dangers with an oracle given to him:

> Because he cleaves to me in love, I will deliver him;
> I will protect him, because he knows my name.
> When he calls to me, I will answer him;
> I will be with him in trouble,
> I will rescue him and honor him.
> With long life I will satisfy him,
> and show him my salvation.

Such blessings are given outside these special liturgies in the form of religious admonitions, introduced, not by the cultic ברוך ("blessed"), but by the wisdom expression אשרי (e.g., Ps. 1:1), which should perhaps better be translated by "happy, lucky." They may be combined with the Hallelujah at the beginning of a psalm and with the description of the wicked's misfortune at its end (Ps. 112) or with the wish for whole Israel's peace (Ps. 128). They may derive from the custom of proclaiming Yahweh's ordinances every seventh year at the great assembly of the tribal league (Deut. 31:10 ff). They are influenced by the wisdom literature and its teachings.

To the methods used in those schools of the wise men belongs the alphabetical order of their sayings, and this manner is also to be found in the pedagogic psalms. Every line starts with a consecutive letter of the alphabet in Ps. 112, after the opening Hallelujah:

> *A*greeable to the LORD is the man who fears him,
> *B*eloved is he who greatly delights in his commandments!
> *C*ertainly his descendants will be mighty in the land;
> *D*ignitaries who will be blessed.

Cf. every second double line in Ps. 37:

> *A*gree not to fret yourself because of the wicked,
> be not envious of wrongdoers!
> . . . . . .
> *B*e confident in the LORD, and do good;
> so you will dwell in the land, and enjoy security.
> . . . . . .
> *C*ommit your way to the LORD;
> trust in him, and he will act.
> . . . . . .
> *D*o not worry about the LORD's deeds, but wait patiently for him.

The most complicated form is that of Ps. 119; within the stanzas of eight lines every line starts with the same letter:

> *A*greeable before the LORD are the blameless,
> who walk in the law of the LORD!
> *A*greeable before the LORD are those who keep his testimonies,
> who seek him with the whole heart.
> *A*ll men walking in his ways
> do nothing wrong!
> *A*dmonition came from thee
> to be kept diligently.
> *A*ssist me that all my ways may be steadfast
> in keeping thy statutes!
> *A*lone at all thy commandments will I fix my eyes
> not to become ashamed.
> *A*ccept my thanks from an upright heart,
> when I learn thy righteous ordinances.
> *A*fter thy statutes will I walk observing them.
> O forsake me not utterly!

According to what has been said about the pedagogic intentions within the liturgies, is it not astonishing

to find this mnemotechnic manner also in Pss. 9–10; 34; 111; 145; and in Lam. 1–4?

Again as in the wisdom literature, some humorous formulations are used in the pedagogic psalms to impress the young man that he may keep his way pure (119:9). The wicked is depicted as a ridiculous being at whom the Lord laughs (in spite of the danger he means for the pious and his fate)! He may gnash his teeth at the righteous against whom he plots, but he will gnash them again when the horn of the righteous is exalted in honor and when he himself melts away (37:2; 112:10). The heart of the godless is gross like fat (119:70), and their eyes swell out with fatness (73:7) when

> they set their mouths against the heavens,
> and their tongue struts through the earth
> (vs. 9).

Nevertheless, their sword shall enter their own heart (37:15), and they will disappear like a dream and a phantom when one awakens (73:20). In opposition to this diminutive picture of the wicked, the love of the godly for their God and his word is perhaps a little bit exaggerated when described as better than thousands of gold and silver pieces (119:72), above gold and fine gold (vs. 127), and sweeter than honey to his mouth (vs. 103).

But it must be said that such humorous pictures are much rarer in the Psalms than in the Proverbs within the wisdom literature. The feeling of remaining in the presence of God increases the earnestness of the style, especially because a part of these pedagogic psalms participates in the great crisis of the Hebrew wisdom. Life does not run on one single line, as it is believed by the teaching of Yahweh's just retribution, according to which the man whose delight is in Yahweh's law will prosper in all that he does (Ps. 1:3). It may be that for a moment or even for a longer time the pious has to become like a wineskin in the smoke (119:83). Of course, he may hope that this situation will not endure, that the end of the godly will be peace for himself and his posterity (37:37; 94:15); and so long as this outlook prevails, the crisis does not affect too deeply a faith which does not yet reflect upon the deeper problem of the importance of even a temporary lack of God's justice (*see* § C1*c below*), or which consoles one by the belief in God's pedagogic reasons for leading him through calamities to a better insight into his own sinfulness (32:3 ff). Even when the wicked is rich until his death, there is a consolation that

> When he dies he will carry nothing away;
> his glory will not go down after him.
> . . . . . .
> He will go to the generation of his fathers
> who will never more see the light.
> Man cannot abide in his pomp,
> he is like the beasts that perish
> (49:17, 19).

But do not the wise and the pious share in the same fate?

> Truly no man can ransom himself,
> or give to God the price of his life,
> For the ransom of his life is costly,
> and can never suffice,
> That he should continue to live on for ever,
> and never see the Pit.
> Yea, he shall see that even the wise die,
> the fool and the stupid alike must perish
> and leave their wealth to others
> (49:7-10).

Is there really any hope that only those who have foolish confidence will be

> Like sheep . . . appointed for Sheol;
> Death shall be their shepherd
> (vs. 14),

and that the pious may be sure that

> God will ransom my soul from the power of Sheol,
> for he will receive me (vs. 15)?

The crisis of faith rising from the good luck of the godless is so strong that the pious has to confess:

> When my soul was embittered,
> when I was pricked in heart,
> I was stupid and ignorant,
> I was like a beast toward thee
> (73:21).

Even the hope of being received afterward (to glory), which Ps. 73:24 seems to share with Ps. 49:15, would not be strong enough to overwhelm the crisis if there were not the personal experience of being held here and now by God's hand, of being guided by his counsel, of being allowed to be continually with him, besides whom the pious does not desire anything (*see* § C1*c below*). Such experiences of being lost outside God's presence but saved when he is near are too earnest to be described in humorous terms. They have their own language and style and cannot express themselves in the terms used and taught in the schools.

C. ***THE RELIGION AND PIETY OF THE PSALMS.*** **1. Yahweh's deeds.** Some leading moments of the religion and piety of the Psalms have already been described with their forms and types, the forms being to a great extent governed by the content. Faith in the greatness and the uniqueness of Yahweh found its adequate expression in hymns celebrating his adoration, not only by his people but also by the divine beings. The joyful experience of Yahweh's help in the personal life of the singer is reflected by the style of the thanksgiving songs, especially when it is seen against the dark background of the complaints in the laments and the confessions of sin. It is necessary to deal with some special problems given by the description of Yahweh's deeds in the frame of these forms.

a. Relation to the Pentateuch. Yahweh's deeds are believed, in the first place, to be his actions in the history of Israel, as they are rehearsed in the old narratives as well as in the cultic rememberings—e.g., in Deut. 26:3, 5-9. Yahweh acted in the promises given to Abraham and to the fathers (Ps. 105:8 ff; cf. 47:9), in the liberation from Egypt (105:37 ff=106: 8 ff), in the entrance into Canaan (136:21 ff; cf. 78: 5 ff), and finally in the foundation and preservation of the Davidic kingdom (78:70). These great steps in what is frequently called the "history of salvation" (*Heilsgeschichte*) are celebrated with joy and thanksgiving. They are the fundamentals of faith in Yahweh's fidelity to his word, his people, and the king. The cultic confessions which remember them at the great festivals, and which are repeated whenever the

son asks his father about the reason of some rites (Exod. 12:26; Deut. 6:20 ff), stand at the root of the great narrative sources within the Pentateuch and of the religious lyrics within the Psalter so far as it describes the past.

It is not easy to say whether one of the Pentateuchal sources or the Pentateuch in its totality was used in the Psalms, or if there have been independent traditions and creeds underlying its confessions. The problem arises, e.g., for Ps. 78, by the difference between its sequence of the miracles in Egypt and the wilderness and that told in the Pentateuch, or when it reports the strongest and the picked men to be laid down, whereas Num. 11:33 mentions only a very great plague by which the people was smitten in Kibroth-hattaavah. Unfortunately the text in Ps. 78:9 is so poorly preserved that we cannot say exactly what event is meant.

Another reason for the same problem is the big difference of weight given to single personalities in the Pentateuch and in our Psalms. Abraham is mentioned in only two psalms (47; 105); but Jacob is used as the name of the people in its totality, not only in the "Northern" (*see* § B2*a above*), but also in clearly Judean or at least "neutral," contexts. Under the influence of the *parallelismus membrorum* he appears side by side with "Israel," according to Gen. 32:29 (J), in Pss. 14:7 = 53:6; 22:23; 78:5, 21, 71; 105:23; 135:4. Without this special reason we find "Jacob" in the name of God the "Mighty One of Jacob" (132:2, 5; cf. 59:13), in connection with the salvation of the land (85:2) and even with the election of Zion (87:2; cf. 99:4). As the name of the patriarch, Jacob is quoted, together with Abraham and Isaac, in Ps. 105, the only mention of Isaac at all (vs. 9). Perhaps even more perplexing is the fact that Moses is mentioned in only four psalms (besides the superscription of Ps. 90): as the leader (and the miracle doer) in 77:20; 105:26; as the receiver of the revelation in 103:7; as a priest in 99:6; and as the responsible one in the wilderness in 106:23, 32. Together with him, Aaron is mentioned as the people's leader in 77:20; 105:26; and as a priest in 99:6; and without connection with his brother, as the ancestor of the acting priests in 115:10, 12; 118:3; 135:19. From these facts it is not astonishing that Horeb is quoted only once (106:19; the golden calf) and Sinai also only once (in 68:17 and in the badly preserved 68:8, in which there is perhaps also a reference to the time of the judges besides the only clear one in Ps. 83:9 side by side with the mentioning of the Assyrians in vs. 8).

Among these psalms, the heterodox Ps. 103 and Ps. 105, which speaks of the three patriarchs as "Anointed" and prophets (cf. Abraham in Gen. 20: 7 E) and describes as the aim of Yahweh's deeds the observance of his statutes and laws (vs. 45), are late. Ps. 106 depends on the Deuteronomistic description of the history of the people as the history of Israel's sins. It is related, together with the wisdom Ps. 78 (the end of which is lost), to Neh. 9:5 ff, which combines in the same manner as the P document and as Ps. 136 the creation of the world with the election of Abraham.

The complete absence of Noah, of Joshua, of any of the judges (with the exception of Samuel in 99:6), of Elijah or Elisha, and the mention of Saul and Solomon only in the secondary superscriptions of Pss. 52; 57; 59; 72; 127, seem to indicate that there was an older cultic pattern of the historical tradition which was superseded by the Pentateuch only in exilic times, when the cult and its living traditions were interrupted. It would therefore be preferable to see in Ps. 106:47 an allusion to the dispersion of the sixth, and not of the eighth century. Whether these older cultic traditions were preserved orally or transmitted in written form is not to be shown. What is important is the demonstration of the cultic roots of the description of Yahweh's deeds in Israel's history so far as the Psalms are concerned. These cultic roots are also the reason why in postexilic times the psalms depending on them entered into the liturgy of the second temple, as is to be seen from I Chr. 16.

b. Yahweh the mighty God of Israel. By his deeds in Israel's history Yahweh has demonstrated himself as the mighty God who is worthy to be identified with the Most High (the *'ēl 'elyôn*) and the Almighty (the *'ēl shadday;* Ps. 91:1; *see* § B3 *above;* cf. Ps. 83: 18), to judge the "sons of the Most High" in the divine council in the midst of the gods (82:1). The difference between him and the supreme God, the El, of Ugarit or even of the Mkl Stele from Beisan, is the fact that he does not grow older and weaker but remains "Yahweh," the strong, active, living God. His force is not to be seen in his sexual life, as is the case with El or with Zeus—Yahweh has no female counterpart, nor does he have intercourse with the cow!—but in his overwhelming "political" and "military" power assuring his victory over all enemies. Even the kings and the rulers of the earth are for him not more than laughable adversaries to be terrified when he speaks to them in his fury (2:2 ff), just as the waters were afraid and trembled when they saw him (77:16).

With the increasing power of Israel's enemies, Yahweh's own power had to increase from the modest horizon of the Syrian struggles to the universalistic outlook necessitated by the wars against the world-wide Assyrian Empire and its successors, the Neo-Babylonian and the Persian. But no less than from the arms blessed or destroyed by her God, Israel like all other people depended upon the fertility of her fields and pastures, which are watered by the river of God and so provided with grain (65: 9 ff; 107:33 ff). History and nature are not to be separated; the lord of both has to be the same, Yahweh the One (as Deut. 6:4 formulates this creed). But in spite of all jubilations in the hymns, the songs of Yahweh's ascension to the heavenly throne, and all comforting promises given to the king in the royal psalms, the majority of the texts preserved in the Psalter as we have it show clearly how difficult it was for Israel to gain and to retain such faith. Her history was mainly the history of disasters and great needs. The Philistines and the Midianites, the Syrians of Damascus and the Assyrians, the Babylonians and the Egyptians, from Sishak to Neco, plundered the land, not to forget the intra-Israelitic rivalries among the single tribes and between the two kingdoms after Solomon's death. It seems to be a rule in history, which was proved to be true in Israel too, that wars between brethren are the most

cruel and bloody of all, especially when political hostility and religious hatred are combined.

The lack of prayers against Judah or Ephraim shows that the faith in Yahweh as the God of Israel, with whom as with the federation of the twelve tribes he made his covenant—with Israel as an indissoluble unit created by his will—was stronger and more alive than any particularistic tendency or tribal ideology. There were Judean prophetic utterances against the N kingdom and its holy places (e.g., I Kings 13:11 ff), and surely there must have existed hymns celebrating victories of the one particular state over the other, but they were left beside by the congregation of the second temple when they formed the Psalter. Even the election of Judah against Joseph is a part of Israel's election; and the sin of the sanctuaries of Bethel and Dan, the golden calf, is confessed as a sin of the nation in its totality (Pss. 78: 67 ff; 106:19). So strong was that which Galling called the "great-Israelitic ideology," the faith of the belonging together of Yahweh and his whole people, that the great crisis of Israel's faith did not come from a struggle of Yahweh against Yahweh in the wars of the Divided Kingdom but from outside, from the impious scoffing at Yahweh by the nations and their Israelite followers, from the "heathen" that do not know him or call on his name (74:22; 79:6).

The destruction of the temple and all the other calamities combined with it are in such sharp contrast with the former actions of God's power in his victories over the chaotic monsters (74:14); the miracles in Egypt, at the Red Sea, and in the wilderness; the election of David, that the question, Why? arose and required an answer. Does Yahweh sleep (44:23)? Did he sell his people like a careless merchant for no high price (44:12)? Did he forget the hapless (10:10; cf. 42:10; 74:19), their afflictions and oppressions (44: 24), and the clamor of his foes (74:23)? We know from I Kings 18:27 such mocking questions, which now became a temptation for the pious too! The former proofs of the strength of Yahweh's hand were so great that there should be no doubt: If he was willing to help, he could save his people (Ps. 77:11 ff)!

c. Yahweh's morality. For this reason the question of Why? ceases to be a question of might and becomes a problem of morals. It may be—and surely it is mostly the case!—that Israel had committed sins against Yahweh's statutes and laws. Then the punishment would be all right, and the only question would be if it was wise for God to act so severely, to show his "holiness" by such outstanding plagues. His own honor will be endangered throughout the world when the foes are able to scoff at him, asking: "Where is your God?" (Pss. 42:3, 10; 79:10; 115:2). And this problem has quite another side: God's "justice" is not only a formal one by which he punishes the rascal and gives his blessing to the "good," but it has a wider content. It is the honor of the kings, and no less of the gods, in the old oriental world (*see* ETHICS IN THE OT § B2*a*) to be gracious toward the needy, not to forget the poor forever, not to leave the downtrodden to be put to shame (74:19, 21). So it would be the god's honor to be immutable in steadfast love, not to permit himself to become overwhelmed by anger, not to forget his promises, and not to change his hand (77:8 ff). The tension which appears here between a "holiness" in the sense of strict "justice" or in the sense of "grace," as reflected in the double sense of the Hebrew term צדקה, is aggravated in Israel by the faith in the covenant imposing upon Yahweh duty to be רחום וחנון, "gracious and merciful." The bigger his might, the greater his moral obligations toward his people!

The question, How long? (e.g., 4:2; 6:3; 13:1-2) adumbrates the earnestness of the problem and is at the same time the best proof that the religious thinking of the Psalms is a practical, and not a dogmatic or philosophical, one. A temporary moral weakness is in no lower degree "immoral" than a perpetual one, especially on account of the shortness of man's life (89:47 ff), and because the promises contained the assurance that when the sons of David forsook his law, even then the Davidic covenant would remain valid:

> I will punish their transgression with the rod
> and their iniquity with scourges;
> but I will not remove from him my steadfast love,
> or be false to my faithfulness.
> I will not violate my covenant,
> or alter the word that went forth from my lips
> (89:32-34).

And the greatest doubts arose when the people did not feel its sinfulness but had to complain of injustice to God:

> All this has come upon us,
> though we have not forgotten thee,
> or been false to thy covenant.
> Our heart has not turned back,
> nor have our steps departed from thy way,
> that thou shouldst have broken us in the place of jackals,
> and covered us with deep darkness.
> . . . . . .
> Nay, for thy sake we are slain all the day long,
> and accounted as sheep for the slaughter
> (44:17-19, 22).

But in spite of all these doubts the spiritual miracle happened, that two main points, both vital and fundamental for the piety of the Psalms, remained unshaken: it is *Yahweh* who acts in the calamities of the present time as *he* acted in the great event in the past; and by this faith the hope did not fail that the future deeds of the God of the covenant will return to his first grace and morality. Then the gladness which came forth when he restored the fortunes of Zion (126:1) will rise again when he hearkens to the prayer:

> Restore our fortunes, O LORD,
> like the water-courses in the Negeb!
> May those who sow in tears
> reap with shouts of joy!
> He that goes forth weeping,
> bearing the seed for sowing,
> shall come home with shouts of joy,
> bringing his sheaves with him
> (vss. 4-6).

Or is this psalm to be interpreted as an eschatological song, anticipating the everlasting joy in the reign to come, which will be the greatest of Yahweh's deeds? Only when this faith that Yahweh is acting in calamities is neglected and the enemies themselves in the foreground of the consciousness of the singer, may his hate, springing from all his

anxieties and needs, lead him to provoke the future actions of his God and to give them the "right" direction by cursing his foes, as in the imprecatory second half of Ps. 129 (*see* § B2*d above*) or in Ps. 109 (which no Christian may use in prayer if he understands Luke 23:34).

The same problem arises for individual experiences, especially in the laments (*see* § B2*e above*). As it is Yahweh who made Israel a byword among the nations, a laughingstock among the peoples (44:14), so it is he whose hand was heavy for day and night upon the poet of Ps. 32:4. His liberation from the temptation to become untrue to the generation of Yahweh's children (73:15) may be—as in Ps. 32—caused by a deeper insight into his own sinfulness, but much more important than psychological developments or any "theological" reflection is the personal experience of a deed of Yahweh making an end to the scoffing ones (cf. 91:8), and his even greater deed in the personal life by which he held and holds the pious right hand. *See* § B3 *above*.

2. Yahweh's commandments. ***a. Content.*** Among the deeds of Yahweh one of the most important is his giving statutes and commandments to his people (on Sinai). To understand the religious attitude of the Psalms toward them, we have to free ourselves completely from the Pauline critique of the law. For the psalmists these statutes and commandments are given, not to push men into deeper covetousness, but to be fulfilled in order that the man who is obedient to them may become revived, wise, rejoiced, and enlightened (Ps. 19:7 ff). The faith of Deut. 4:8—according to which the greatness of Israel is based on the fact that they have such righteous laws—is the root of such jubilations and of the reiterated confessions of the poets that they will—wiser than their foes (Ps. 119:98)—learn them, teach them, and fulfil them.

And what is their content? Of course, they are the frame within which the Israelite service in the sanctuaries was performed. There is no old oriental cult in which place, time, and manner of worship are not regulated by divine ordinances. Man's liberty to create a cult as he likes is quite modern and completely foreign to the Eastern mind in ancient times. The god asks for certain animals to be sacrificed and forbids others. He wants to get the firstlings from the flock and orders the first-born son and the first-born of the most important animal to be redeemed (Exod. 13:13). Having this in mind, it is astonishing to us that never in the Psalms are such cultic statutes mentioned, either in the confessions of sin, in the pedagogic sentences, or in the declarations of innocence. In the Qumran Hymns, the songs of a sect which separated itself from the temple service, such silence is quite natural, but not in poems sung and recited at the festivals and sacrifices in the temple! Some of the psalmists, probably under the influence of the pre-exilic prophets (e.g., Pss. 40:6 ff; 50:7 ff), deny that the cultic regulations were given by Yahweh. Such abrogation may be corrected later, as in Ps. 51:15 ff by the exilic addition in 51:18-19. But these polemics underline only the importance of the problem of how the lack of positive utterances about divinely ordered rites is to be explained, and show in any case that the Israelite religion as it is reflected by the Psalms was statutory (legal) but not ritualistic.

The first reason for the absence of cultic regulations may be stylistic. The confessions are of a purely "formal" character in order to be appropriate in all circumstances. So they describe no single misdeeds but use intentionally the widest terms:

> I confess my iniquity,
> I am sorry for my sin
> (38:18).

> O God, thou knowest my folly;
> the wrongs I have done are not hidden from thee
> (69:5).

Where this formalism is left, as in the enumeration of the conditions under which the pilgrim may enter the temple, the special ordinances quoted in Pss. 15; 24 are ethical and not ritualistic (*see* § B2*e above*). The same is true of the formal character of the vows recited in the Psalms, with the sole exception of Ps. 66:13 ff, which tells of the fatlings, rams, goats, and bulls to be sacrificed. And here, too, no divine law is quoted according to which this great gift will be brought, and the impression prevails that we have to do with an exaggeration far beyond any statute. In all other cases it is only said that the vows shall and will be fulfilled, but nothing more is told of their content:

> I will lift up the cup of salvation
> and call on the name of the LORD,
> I will pay my vows to the LORD
> in the presence of all his people
> (116:13-14).

Even the words accompanying the gifts are not given. They may be reconstructed from Deut. 26:3 (*see* § C1*a above*) or from the legendary vow of David, which was out of any possibility of repetition by anyone else:

> I will not enter my house
> or get into my bed;
> I will not give sleep to my eyes
> or slumber to my eyelids,
> Until I find a place for the LORD,
> a dwelling place for the Mighty One of Jacob
> (132:3-5).

The best fulfilment of any vow is in the desire to call upon Yahweh in the day of trouble and to bring thanksgiving as his sacrifices (50:14-15).

A second reason for the lack of cultic regulations in the Psalms may be the historical fact shown by the above-mentioned appendix of Ps. 51:

> Do good to Zion in thy good pleasure;
> rebuild the walls of Jerusalem,
> Then wilt thou delight in right sacrifices,
> in burnt offerings and whole burnt offerings;
> then bulls will be offered on thy altar.

The deepest feeling of sinfulness was living after the fall of Jerusalem in 587, in the time of the Exile, in which sacrifices were not possible and could not be vowed either in Babylonia or in Palestine. Unfortunately the hymns of the Jewish colony of Elephantine, whose temple stood probably in this time, have not been found among the Papyri. It may be that the sacred formula by which the pious is able to protect himself against all earthly and demoniacal dangers by using the holy triple name ("Yahweh, Most High,

Almighty"; *see* § B3*a above;* Ps. 91) belongs to this time (as 'el Shadday is the patriarchal name of a God in the P document), and shall replace the sacrifices and other rites which could not be performed.

But there is a third reason going deeper than these two; the feeling of sinful men is not bound to single misdeeds, but finds its cause in a weakness in the character of Israel (cf. 94:8) and in the essence of man. The root of all single sins of Israel in her long and bad history is the fact that they forgot in their stupidity all the wonders of their God. The root of the sin of the pious is the fact that he has to confess:

> I know my transgressions,
> and my sin is ever before me.
> Against thee, thee only, have I sinned,
> and done that which is evil in thy sight,
> so that thou art justified in thy sentence
> and blameless in thy judgment.
> Behold, I was brought forth in iniquity,
> and in sin did my mother conceive me
> (51:3-5).

Only a deed of Yahweh, washing him and purging him with hyssop, is able to change these conditions, and not any human sacrifice, even if it were ordered by God with the force of atonement:

> Create in me a clean heart, O God,
> and put a new and right spirit within me.
> Cast me not away from thy presence,
> and take not thy holy Spirit from me.
> Restore to me the joy of thy salvation,
> and uphold me with a willing spirit
> (vss. 10-12).

b. Character. The deeds of Yahweh the God of Israel in the personal life of the psalmists do not lead to the dissolution of a congregation which had been tied together by the covenant. They do not include the rise of "humanitarian" religion or piety outside the limits of Israel. The psalmists know of men "fearing the LORD"—i.e., proselytes who join the house of Israel, the house of Aaron, and the Levites in the hymns celebrating Yahweh's greatness (135:19-20) and who share in his blessings with the houses of Israel and Aaron (115:12-13). But both these psalms show that such "fear" is connected with the negation of the gods of the heathen, and in Ps. 135 also with the tradition of Yahweh's victories over the foreign kings and of his giving the land to his people. Indeed, his law is appointed in Israel like the testimony of his works he established in Jacob (78:5). Even where its "social" content corresponds to the ideal picture of the old oriental king and became by democratization the ideal picture of every "just" member of the congregation, its root is not a "natural law" but the revelation of Israel's God.

The same is true of the cultic observances, even where they depend on the regulations of the pre-Israelite Canaanite service. In Israel they have their importance, not by reflection on their practical usefulness—e.g., upon hygienic reasons for the washing of hands or clothes or for circumcision. They are to be fulfilled because they are given by Yahweh, and for this reason they are all of equal weight.

As in the cultic psalms the laws of sacrifices and rites are not explicitly quoted, so no preponderance is given even to the commandments of the Decalogue, including the sabbath (except in the secondary superscription of Ps. 92). To kill the just, the orphans, or the poor—such a killing is the sign of a rascal (37:32; 94:6; 109:16), not a simple violation of the fifth commandment. The laws of Yahweh are an inner unit! A congregation living in the religion of the Psalms, as in a part of their sacred scripture, had to feel that the liberty of Jesus toward the sabbath and ritual purity, his differentiation between more and less important commandments, was a danger for the congregation. But in other parts of their content the Psalms prepared the way for him. Not only by their "messianic" utterances, which the Christian faith saw from the beginning (and sees) fulfilled in Jesus' life, death, and resurrection, but also in the inherence of God's deeds and his comforting, preserving, and saving nearness in the soul of the pious, this inner "epiphany" within man's mind, and no less in the experience of his forgiveness and cleansing grace by his most "godly" deed.

In the light of this faith, it is not hard to understand the importance the Psalms had gained already in earliest Christianity, as shown by the frequency of quotations taken from this book in the NT. This position of importance has continued through the ages, not only in private devotion but also in the official daily prayer of the clergy and in the monasteries as in the services, especially the matins, the vespers, and the complines at night since the beginning of the Middle Ages and even before. In some branches of the Reformed churches only the Psalms are sung, frequently in the forms of national poetry—e.g., in the "translations" by Beza for French Protestantism —with its richness of melodies, and they deeply influenced too the religious poetry in the Lutheran and Anglican countries and churches. In them the only God is revealed in a masterly aesthetic form through the greatness, the earnestness, and the goodness of his majestic acts; and the soul of the pious is at the same time and in the same manner revealed in his faith, his anxieties, his sinfulness, and his thanks for God's presence as his sole but sure salvation. "Here you look into the heart of all saints" (Luther).

PSALMS OF SOLOMON sŏl'ə mən [Ψαλμοὶ Σολομῶντος]. A collection of eighteen extrabiblical psalms extant in Greek and Syriac. (Textual references herein are cited according to the verse numeration of De la Cerda, Ryle and James, and Swete.)

The title may have been chosen to distinguish these poems from the canonical Psalms, which were, for the most part, traditionally ascribed to David. The contents of the Psalms of Solomon are unrelated to King Solomon. For centuries almost forgotten, the work has since the early nineteenth century tended to gain increasing attention, though not unanimous favor. The collection of psalms has been called "a genuine pearl among the trash of apocryphal [=pseudepigraphic] writings," and "feeble imitations, insipid and poetically poor productions."

1. Language and date. Against an earlier view that the psalms were composed in Egypt in Greek, it is now generally held that they were written in Hebrew in Judea, and subsequently—probably before A.D. 70—translated into Greek. Some scholars argue that the Syriac version was made from the Greek translation; others, that it was based on the original Hebrew, possibly with the Greek serving as a subsidiary source. The Hebrew original is lost. Though apparently the work of several authors, the psalms are fairly uniform in style; the differences are chiefly due to differences of content. The authors evidently belonged to a group closely linked by common religious aspirations and political experience.

Modeled on the canonical Psalter, the psalms largely follow conventional themes: mournful and hopeful, didactic and hymnic, decrying men's injustice, imploring God's deliverance, threatening punishment for sinners, and promising reward for the righteous. Technical notes for musical settings (εἰς νῖκος [8:1]; διάψαλμα [17:31; 18:10]), the same as in the biblical Psalter, indicate that these psalms were sung in synagogal services.

They were composed at a time when Israel had suffered internal and external calamities, and the authors were disturbed by increasing impiety in the land and by outward threats to the people's freedom. There is a deep rift within Israel between "men-pleasers," who are reproached for multifarious sins —hypocrisy, graft, sensuality, etc.—and "God-fearers," variously called "the pious," "the righteous," "the poor." The authors voice the feelings and hopes of the pious, who are incensed by the secularization of the regime, the rapaciousness of the priesthood, general disregard for religious and civil law, and the involvement of the Jewish nation in world politics which resulted in foreign invasion. Most scholars (Movers was the first) accept the identification of the invader whose trespasses and punishment are mentioned in 2:2, 6, 30-33; 8:16-24 with Pompey, and accordingly date this work in the years 70-40 B.C. (Eissfeldt prefers 63-30); as to the reference in 17:9, 13-16, to the rising up of a "man that was alien to our race," certain scholars hold that it applies to Herod the Great. It has also been suggested that these passages might be a later interpolation. Earlier dates have also been argued for.

Usually the sentiments in the psalms are taken to express Pharisaic animadversion to Sadducean dominance. Some of the reproaches leveled against the sinners—such as insatiable covetousness or harlotry that does not stop at incestuous relations—were conventional at the time, and any religious party might have accused its opponents of these crimes. Other remonstrations are more definite: the allegation concerning the appropriation of consecrated offerings (1:8; 2:3; 8:12-13, 26) suggests that those against whom the charge is made actually had part in the administration of sacred offices, and thus belonged to the priestly Sadducean aristocracy.

2. Teaching. Indignant at the arrogance of the conqueror who profaned the temple (2:20), the psalmist is harsher on his own compatriots than on the Gentile invader. "Their transgressions went beyond those of the heathen" (1:8; cf. 2:11; 8:14; 17:17). As in the DEAD SEA SCROLLS the Kittim will be the executors of God's judgment upon individual Jews for their misdeeds, so in the Psalms of Solomon the conquest of the Holy City is God's punishment for the nation's impiety. This, however, need not be taken as an indication that the work originated within the same group as the Scrolls and cognate literature. The psalmist's attitude toward the foreign conqueror is actually not different from that of the prophets of the OT to Assyrians and Babylonians who, though evildoers themselves, are the instrument of God's punishment of Israel's transgressions. A decisive difference between the DSS and the Psalms of Solomon lies in the fact that the psalmist expects deliverance through the medium of a king-messiah, whereas in the Scrolls (at least the earlier ones) the paramount role is assigned to a priest-messiah. While the ethical dualism of the Scrolls occasionally comes close to a belief in predetermination (1QS 3.14–4.25, 11.10-14, to name significant instances), the Psalms expound in a more definite manner man's freedom of choice between good and evil. There remains an unresolved conflict within the psalmist's conception of God's ultimate causation and man's personal moral responsibility: man himself can add nothing to the world that is not encompassed in God's sovereign purpose (5:6), yet it is within his power to do what is right or what is wrong (9:7).

When God visits the earth, a day of redemption will dawn for the just, and a day of retribution for the unjust. The just shall rise to eternal life and joy; the wicked will be destroyed unless they have confessed their sins. When men acknowledge their faults, their souls are cleansed and they become new creatures. The fate of unrepentant sinners is in doubt. They will not be remembered when the righteous are visited—

> Sinners shall be taken away into destruction,
> and their memorial shall be found no more
> (13:10; cf. 3:13-14; 9:9).

Though far from consistent or systematic, the tenor of some passages is such as to suggest that sinners will have no part in the world to come (cf. Yehudah ben Bathyra: "They will neither revive nor be judged" [T.B. Sanh. 108*a*]), but there is no explicit declaration to this effect; other passages indicate that sinners, after death, will suffer (14:6; 15:11, 15*b*).

Though Israel's special role in the divine economy is never lost sight of, there is an approach to a universalistic position. Particularistic tendencies run side by side with universalistic ones. God is not exclusively concerned with Israel; his justice extends to every part of the world; he will have mercy upon all who revere him (2:34-37; 5:17; 8:27, 29; 9:14; 18:3). Against this, we have the statement that in the

messianic age πάροικοι and ἀλλογενεῖς will not be allowed to live in the Holy Land (17:31; contrast Exod. 22:21; 23:9; Lev. 19:33; Deut. 10:19; Isa. 14:1; Jer. 7:6; Ezek. 47:22-23; Zech. 7:10; Mal. 3:5; and other injunctions by the prophets). Such exclusiveness needs to be considered in the light of the historical conditions: Palestine was dotted with towns and settlements of non-Jewish inhabitants. When a conflict arose between the Jews and a foreign power, pagan colonists more often than not took sides against the Jews and became—from Antiochus IV to Hadrian—willing tools of foreign intervention. Their presence was therefore resented. It is the liberation of Israel from entanglement in non-Jewish affairs that the psalmist prays for, in the expectation that thereby the Jews will devote their lives to God's service, and his aversion to alien residents in the land of Israel needs to be understood with these circumstances in mind. Be that as it may, the final step toward universalism is not taken; in fact, the psalms remain more stringent in their insistence on Jewish particularism than many of the prophets of the OT.

3. Importance. The Psalms of Solomon are an important source of information concerning Jewish beliefs in NT times. Composed within less than a century from the lifetime of Jesus, they evince tendencies and tensions in thought and life of the Jewish people which illuminate the background of the gospel story. Particularly pertinent in this connection are Pss. Sol. 17–18, the former expressing messianic expectations and describing the Messiah's rule over Jews and Gentiles.

It is instructive to compare the psalmist's ideals with those expressed in I Macc. 14:4-15. There is a marked difference between the presentation of society in the panegyric hymn on Simon the Hasmonean and that in Pss. Sol. 17. In the former case a well-regulated society is described whose members enjoy peace and security and follow their occupations in an orderly fashion. In the psalm the aspirations are more sublime. A community is envisaged that also finds fulfilment "in this world," and yet there is an emphasis on a sanctified life directed exclusively toward God and devoted entirely to his service. Dissatisfaction with existing affairs has become deeper; hopes and aspirations have risen higher.

The psalmist prays for the coming of a messiah who will be David's descendant—a reflection of disillusion with Hasmonean rule—and outlines his conception of the Messiah's government. Jewish eschatology is both older and wider than Jewish messianism. In the OT the term "messiah" implies no more than a legitimately appointed holder of high office (i.e., king or high priest). When, as a result of historical events, the Jews no longer had any representative ruler of their own, the concrete term "messiah," previously applied to historical individuals of the past or present, came to signify the embodiment of political-religious hopes—now transferred to the ruler of Israel in a glorious future. The Messiah in Pss. Sol. 17 is thus the symbol of ideal kingship. The time of the Messiah's appearance is known to God alone; he is God's viceregent on earth, for Israel is God's kingdom (cf. Exod. 19:6). God is King (Pss. Sol. 2:34, 36; 17:1-4, 38, 51), and he is the Messiah's hope. Established by God, the Messiah is no supernatural Being, but is man in all human dignity and perfection. Sinless himself, he will gather together a holy people whom he will lead in righteousness. The Messiah will eject sinful Jews from their inheritance; he will make Jerusalem holy as of old. The children of Israel will return from the Dispersion, and no lawlessness shall be in their midst (17:26-36; cf. Test. Judah 24:1-6; Sibylline Oracles 3:573-85, 652-55, 702-18; 5:260-85). Under the Messiah's rule, men will be sons of God, their riches wisdom and gladness (17:30, 40; 18:7-10).

Apart from messianic expectation there are many expressions in the Psalms of Solomon that have their parallels in the NT. Holy men of God are likened to lambs amid the profane (8:28). God corrects the righteous, the "son of his love," as a "first-born" (13:8; cf. II Sam. 7:14); his chastening discipline is upon Israel as upon his "only begotten son" (18:4; cf. IV Ezra 6:58). Passages like these, with their characteristic terminology, provide examples of the way in which the attributes of Israel as a whole came to be transferred to one person, the one in whom all that Israel is and stands for will find valid realization, the one true representative of the nation—the Messiah.

PSALTER sôl′tər [ψαλτήριον; Lat. *psalterium*]. The book of PSALMS.

PSALTERY (NEBHEL). *See* MUSICAL INSTRUMENTS.

***PSEUDEPIGRAPHA** sōō′də pĭg′rə fə. A large group of Jewish writings outside the OT canon and the APOCRYPHA, which were composed originally in Hebrew, Aramaic, and Greek between 200 B.C. and A.D. 200. They include, in the main, apocalypses, legendary histories, collections of psalms, and wisdom works. Because certain of these works are attributed to Adam, Enoch, Moses, Isaiah, and other great OT characters, the term "pseudepigrapha," which refers to works written under a fictitious name, became applied in Protestant circles to this whole body of literature. The Roman church, in accordance with ancient Christian usage, has generally called these works Apocrypha.

1. Meaning of the term
2. The outside books
3. Use in the early church

4. Character of the outside books
Bibliography

1. Meaning of the term. The term "pseudepigrapha" is clumsy and misleading, and should be discarded as a designation for this literature. Not all these writings are pseudonymous. Many are anonymous. Besides, pseudonymous works are found among the canonical books of scripture (e.g., Daniel, Song of Songs), as well as in the Apoc. (e.g., I and II Esdras, Wisdom of Solomon, Prayer of Manasseh). Then, too, the word "pseudepigrapha," even when correctly applied, unduly emphasizes a feature of the books which is of minor importance.

In his great English edition of the Apoc. and Pseudep., R. H. Charles not only listed the apocryphal work II Esdras among the pseudepigraphical books, but he also added three works to the standard list of the latter group: Pirke Aboth, Story of Aḥiḳar, and Fragments of a Zadokite Work. C. C. Torrey, on the other hand, in *The Apocryphal Literature: A Brief Introduction*, has omitted the three works which were added by Charles, but includes two other documents, Lives of the Prophets and Testament of Job. There is therefore no recognized limit to the number of works included in the Pseudep. Morever, many similar writings have been lost. Some of these are mentioned in patristic literature (*see bibliography*), and some are coming to light for the first time in the MS material from Qumran.

Torrey, already in 1945, abandoned the term "pseudepigrapha" in his Introduction and used the term "apocrypha" to designate all the extracanonical writings. This corresponds to the convenient rabbinical designation of writings not included in the canon: the "outside books." Following Torrey, R. H. Pfeiffer (*see bibliography*) rejects the artificial classification of the extracanonical writings into Apoc. and Pseudep. and discusses them according to their date, original language, subject, and style. Moreover, the intertestamental works discovered at Qumran cannot be classified accurately under the traditional title of "pseudepigraph" in the technical, Protestant sense of the term. Some of these works are not pseudonymous, and many of them are not found in the original lists of Pseudep. made by scholars in the early days of Protestantism. There are, therefore, important reasons why the term "pseudepigrapha" should be discarded and a more adequate and accurate designation used in its place. Either the term "apocrypha" (with Torrey) or "outside books" (Jewish) could be used to designate these works.

2. The outside books. Since there is no recognized order in the arrangement of the outside books, they are classified herein as either Palestinian (originally written in Hebrew or Aramaic) or Alexandrian (originally written in Greek). For a detailed discussion of each book, *see bibliography*.

The newly discovered intertestamental works from Qumran are listed separately. For details of their publication, *see bibliography*.

I. Palestinian outside books
- A. Testaments of the Twelve Patriarchs
- B. Psalms of Solomon
- C. Lives of the Prophets, written originally in Hebrew during the first century A.D.; a biographical catalogue of the Hebrew prophets which includes much legendary material. To the biographies of the canonical prophets are added those of Nathan, Ahijah of Shiloh (I Kings 14:1-18), Joed (Neh. 11:7), Azariah (II Chr. 15:1-15), Zechariah son of Jehoiada (II Chr. 24:20-22), Elijah, and Elisha.
- D. Jubilees
- E. Testament of Job, an Aramaic midrash on the canonical book of Job; written in the first century B.C. The writer embellishes the biblical story with many fanciful tales, injecting teachings here and there which are characteristic of the Hasidim.
- F. Enoch (*see* Enoch, Book of)
- G. Martyrdom of Isaiah. According to Charles and Pfeiffer, this is a legendary Jewish work of the first century B.C. which became incorporated into a larger Christian work, entitled Ascension of Isaiah. It was probably written originally in Aramaic. Torrey believes that the Ascension was entirely a Christian work. In the Martyrdom we learn that Manasseh had Isaiah sawed apart with a wood saw.
- H. Paralipomena of Jeremiah, written originally probably in Aramaic during the first century A.D. This contains the "remaining acts and words" of Jeremiah, which are of a legendary character. The last chapter of this work is apparently of Christian origin.
- I. Life of Adam and Eve, incorrectly called Apocalypse of Moses by the editor of the Greek text. It is a haggadic piece of literature, written originally in Aramaic in the first century A.D., which adds much legendary material to the biblical account of the life of Adam and Eve.
- J. Assumption of Moses
- K. Apocalypse of Baruch

II. Alexandrian outside books
- A. Aristeas
- B. Sibylline Oracles, a group of fifteen books, written in Greek over a period of more than six hundred years by both Jews and Christians in imitation of the famous Sibylline Oracles of the Greco-Roman world. Books III, IV, and V are of Jewish origin. They contain many disconnected oracles about the last days. The rest of the books —IX, X, and XV are lost—are from Christian hands.
- C. III Maccabees, written in Greek sometime toward the end of the first century B.C. This is the story of a Jewish triumph over the forces of a foreign king. It has nothing to do with the Maccabees, but it was so called in church lists because it described conditions similar to those in the days of the Maccabean Revolt.
- D. IV Maccabees, a kind of philosophical treatise written in Greek by an orthodox Jew who was influenced by the Hellenistic culture of his day

E. Slavonic Book of Enoch, or II Enoch, or Book of the Secrets of Enoch, an apocalyptic work written in Greek at Alexandria during the first century A.D. It is known only in a Slavonic version. It describes Enoch's ascension through the seven heavens and the revelations made to him at the command of God.

F. Greek Apocalypse of Baruch, or III Baruch, preserved in a Greek, as well as a Slavonic, MS. Both MSS are condensations of the original work, which was written in Greek in the second century A.D. This Jewish work was later extensively revised by a Christian editor.

III. Outside books discovered at Qumran. These works were found among the MSS discovered at Qumran in 1947 and the years immediately following. A few of them, from Caves I and XI, were still rolled up in scroll form, but the great majority of them are in fragmentary condition, and are slowly being put together in the Palestine Museum in Jerusalem, Jordan. They consist of known, as well as unknown, works, written in Hebrew and Aramaic during the intertestamental period. The following list includes items which have been noted in various publications up to the fall of 1957. *See* DEAD SEA SCROLLS.

A. Known outside books from Qumran

1. Jubilees. Five MSS of this work have been identified, one on papyrus. The language is Hebrew. The chapters, partially preserved, are: 1–2; 21–23; 32–40.
2. Enoch. This work is represented by eight MSS, all in Aramaic, which correspond in general to pts. I, III, IV, and V of the book of Enoch.
3. Damascus Document. Several fragments of this work have turned up in Caves IV and VI. They differ quite extensively from the Cairo Genizah Text, discovered in 1896 and translated by Charles (*see bibliography*).
4. Testament of Levi, represented by several Aramaic fragments from Caves I and IV. This work appears to be the source of the Testament of Levi in the TESTAMENT OF THE TWELVE PATRIARCHS. *See bibliography.*

B. Unknown outside books from Qumran

1. Apocryphon of Genesis, a collection of stories, written in Aramaic, relating to the book of Genesis
2. Pseudo-Jeremianic work, contained in five or six MSS, which are not textually identical with any of the Jeremiah-Baruch literature known to us, although there are points of agreement
3. Apocalyptic works
   a. War Scroll (1QM), the description of a battle, probably apocalyptic, between the Children of Light and the Children of Darkness
   b. Description of the New Jerusalem. Numerous fragments of this Aramaic work have been found in several caves at Qumran.
   c. Liturgy of Three Tongues of Fire. Several fragments of this liturgical-apocalyptic work have been discovered in Caves I and IV at Qumran.
   d. Book of Mysteries, so called because of the frequent occurrence of the word *raz,* "secret, mystery." This work is represented by several fragments from Caves I and IV. It deals with the final consummation, which is believed to be near at hand.
   e. Collections of messianic passages from the OT, some with commentary, some without
4. Hymnic works
   a. Hodayoth (1QH), a group of thanksgiving hymns written in the style of the canonical Psalms
   b. Psalms of Joshua, a pseudepigraphical work
5. Peshers, or commentaries, a type of literature peculiar to the Qumran community. Fragments of commentaries on Isaiah (three different commentaries on this book have been found so far), Hosea, Micah, Nahum, and Psalms have been discovered at Qumran, as well as an entire commentary on Habakkuk from Cave I.

Besides the works here noted from Qumran, there are MSS written in cryptic scripts whose contents are quite similar to the sectarian documents just described. There are also countless fragments of unknown works on liturgical and legal matters, wisdom, the calendar, etc. Caves still to be discovered will doubtless yield more material of this kind.

3. Use in the early church. The large number of Jewish outside books attests to their wide use and great popularity. The author of II Esdras, e.g., tells us that there were seventy "hidden" or secret books which were to be set apart from the twenty-four canonical books of the Hebrew OT (14:46), and other traditions note even greater numbers of these works. These "hidden" books were obviously the apocalypses which contained esoteric teachings about the last things. These works, however, were banned by the rabbis at the Council of Jamnia (A.D. 90), for several reasons. The fall of Jerusalem in 70, e.g., made their apocalyptic messages meaningless and futile. But more important still, the Christians had appropriated many of these works and had recast them in such a way as to fit into their own views about the last things. It became imperative, therefore, for Jewish leaders to warn their people against these heretical writings.

In the early days of the Christian church the outside books were as popular among the Christians as they were among the Jews. The influence of this literature upon the NT writers is a well-known fact. Just to cite the examples and discuss them would

take a whole book in itself. I Enoch, e.g., according to Charles, "has had more influence on the NT than has any other apocryphal or pseudepigraphical work." It is the only book from this entire literature which is directly quoted from by a NT writer. Jude 14-15 cites I Enoch 1:9. The great commandment given by Jesus: "You shall love the Lord your God . . . , and your neighbor as yourself" (Luke 10: 27; cf. Matt. 22:37-39; Mark 12:29-31), is already found in Test. Iss. 5:2; Test. Dan 5:3, though stated less emphatically. And the reference in Jude 9 to the dispute of Michael, the archangel, with the devil about the body of Moses is a direct allusion to the apocalyptic writing Assumption of Moses.

Unlike the more favored outside books, known as the Apoc., the great bulk of these writings, later called the Pseudep., never got into the Greek and Latin MSS of the early church, and so the problem of their canonicity never arose in the main stream of Christianity. Many of these works, however, were preserved in the various branches of the oriental churches, and so they have come down to us in such languages as Syriac, Ethiopic, Coptic, Georgian, Armenian, Slavonic, etc.

4. Character of the outside books. The Jewish outside books were, for the most part, written in conscious imitation of the Hebrew canonical books. The influence of the historical books of the OT upon Judith, Jubilees, Testaments of the Twelve Patriarchs, and others; of Proverbs on Ecclesiasticus and the wisdom works from Qumran; and of the Psalter on Psalms of Solomon and the *Hodayoth* from Qumran is clearly recognizable. The canonical book of Daniel, written *ca.* 170 B.C., served as the model for the large number of apocalyptic works that were composed in the three centuries following the Maccabean Revolt. This new type of literature, born out of the fires of persecution, was one of the main features of Judaism in the intertestamental period.

Although apocalypticism had its roots in the OT —e.g., Ezek. 38-39; Joel; Zech. 9-14—it came to full bloom during the difficult days of the Maccabean Revolt. It was a kind of theodicy which tried to justify the ways of a righteous God to men who were undergoing terrible persecution. It presented a theological view of history which would sustain the Jews in their times of trouble. Since victory over God's enemies could not be achieved on the field of battle, as in the days of the OT, the apocalyptist taught that the battle had to be joined in the spiritual realm. Loyalty and devotion to God and his laws, disciplined lives, and moral purity were the most effective weapons, therefore, against the powers of evil. This world was despaired of by the apocalyptist, and only God's direct intervention in history could save the saints of the Most High. God's eternal purpose would ultimately be realized, in spite of the attempts of wicked men to hinder it. Therefore, ultimate victory belonged to God's saints, no matter how dark the present situation might be. The figure of the Messiah played an ever more important role in this great drama of the last days, and many ideas and images relating to the Judgment Day and the future state of bliss which are familiar to the Christian derive from this literature. One of the most important of these is the doctrine of the resurrection of the body, which was originated with APOCALYPTICISM.

The value of these outside books for both Jew and Christian is immeasurable. Judaism, however, for reasons already noted, has neglected these works for the most part, and Christian scholars, until comparatively recent times, have regarded them as peripheral and unimportant for biblical studies. In the English-speaking world the first real interest in this field was generated by the appearance of Charles's monumental two-volume work in 1913, with its introduction to, and translation of, virtually all of the then known noncanonical Jewish writings. Further impetus was given to scholarly research in this field when the Society for Promoting Christian Knowledge inaugurated in 1917 a series of publications known as the "Translations of Early Documents," edited by G. H. Box and W. O. E. Oesterley. The excellent works of scholars like E. J. Goodspeed, C. C. Torrey, and R. H. Pfeiffer have thrown much new light on the intertestamental period and its literature. It is almost certain that the MS discoveries at Qumran will arouse new interest in this important period of Jewish history.

No one can understand the religious development of later Judaism or the background of the NT without studying the Jewish outside books. They serve as a bridge between the Old and New Testaments, supplementing much that is found in the Hebrew scriptures, and heralding new ideas which appear in the NT records. The great need in this important area of biblical studies is a new edition of the Jewish outside books. Much new material has been discovered in this field since the days of Charles's great work; scholarly research into the textual, linguistic, and historical problems of this literature has produced many new insights and conclusions. Here is an area of common interest where both Jewish and Christian scholars can work together to produce a much-needed critical edition of the books which are such an integral part of both of their religious traditions.

Bibliography. The text and Introductions: R. H. Charles, ed., *The Apoc. and Pseudep. of the OT in English* (2 vols.; 1913); *Religious Development Between the Old and the New Testaments* (1914). C. C. Torrey, *The Apocryphal Literature: A Brief Introduction* (1945). The most recent authoritative work on the history and literature of the intertestamental period is R. H. PSEUDO-MATTHEW, GOSPEL OF sōō'dō măth'ū. A Latin infancy gospel, often styled *Liber de Infantia,* which in its present form is no earlier than the eighth century—it was utilized by Hrosvita, abbess of Gandersheim, for her poems in the tenth century—but most of the material of which is far earlier. The earliest MSS are of the eleventh century.

It is in no sense an original work but is the substantial rescript of the Protevangelium of James and the Gospel of Thomas (*see* JAMES, PROTEVANGELIUM OF; THOMAS, GOSPEL OF), with many omissions, amplifications, and distinct additions. Chs. 1–17 reproduce the Protevangelium, with some alterations. Mary is fourteen at the time of her betrothal; from the days of Solomon there have always been virgins brought up in the temple and married when of age. Abiathar the priest seeks to obtain Mary as the bride for his son. There is no account of the supernatural suspension of all motion at the time of Jesus' birth, as in the Protevangelium, nor any mention of Zechariah or John the Baptist. Chs. 18–24 are concerned with the flight to Egypt and the sojourn there, with tales of the adoring lions and leopards, the bowing palm tree, and the fall of the idols in the temple of the city of Sotinen at the entrance of Mary and the child. The source of this material can only be conjectured. Chs. 25–42 reproduce the Gospel of Thomas, but with some changes. Instead of Joseph's seizing Jesus by the ear and wringing it soundly when the latter has caused a boy to drop dead, as the story is told in the Gospel of Thomas, in this version Jesus lifts the boy by his ear and restores him to life. Several additional stories are given: Jesus at the age of eight goes along the road to Jericho; enters a cave in which there are much-dreaded lions; is fondled by them and accompanied by them across the Jordan, which is miraculously parted; blesses the lions; and is bidden farewell by them. The family eventually moves to Capernaum, and Jesus restores to life a rich man named Joseph. The writing ends with a statement regarding the awe in which all Jesus' relatives regarded him and the statement that whenever he slept, be it night or day, the light of God shone upon him.

This gospel, while in no sense original, attained a great fame in the Middle Ages and was the medium through which the far earlier stories made their substantial contribution to later legend and ecclesiastical art. Most of the extant MSS carry letters, presumably composed by the unknown compiler to ensure its favorable reception, from two bishops, Cromatius and Heliodorus, to Jerome, imploring him to translate this book which they had found, and Jerome's reply, in which he styles it a secret composition by Matthew in Hebrew, never before translated but which he (Jerome) has now translated to combat a book published by the disciples of the Manicheans and condemned by a church synod.

See also APOCRYPHA, NT.

Bibliography. An English translation is printed in the *Ante-Nicene Christian Library* (1867-72), XVI, 16-52. For a full analysis and résumé of contents, see M. R. James, *The Apocryphal NT* (1924), pp. 70-79. M. S. ENSLIN

PSEUDO-MELITO, NARRATIVE OF. *See* MELITO, PSEUDO-, NARRATIVE OF.

PTOLEMAIS tŏl'ə mā'ĭs [Πτολεμαΐς]. A city in N Palestine, identical with ACCO.

PTOLEMY tŏl'ə mĭ [תלמי; Πτολεμαῖος]. Primarily, the title peculiar to a dynasty of Hellenistic kings ruling in Egypt 323-30 B.C. They were regarded as pharaohs by the natives, and were the sole source of law in Egypt.

1. Ptolemy I, called Soter (Saviour). Founder of the Ptolemaic dynasty; son of Lagos. He was satrap of Egypt (323-305) and king (305-283). At the time of his death, he had well organized the country for his heirs.

As one of the Diadochi prominent in Alexander the Great's campaigns, he succeeded him. He is reputed to have written a history of Alexander's campaigns. Ptolemy I took possession of Phoenicia and Palestine three times, but on each occasion had to surrender the land. He entered Jerusalem in 320 on the sabbath, since the Jews showed no resistance. Though he annexed Judea to Egypt, he had to return to his own land when Antigonus, the Seleucid master of Asia, approached. Under his rule many Jews came to Alexandria as prisoners of war (320 B.C.) or as immigrants and were employed as mercenaries (Letter of Aristeas 12 ff).

In 312 Ptolemy, defeating Demetrius, son of Antigonus, again occupied the land but had to evacuate Coele-Syria a year later. A pact was then concluded between them. In 302 Ptolemy invaded Palestine a third time, but in 301 Syria fell to Seleucus. Ptolemy maintained that Judea belonged to him because of the earlier pact. In 301 Ptolemy occupied Palestine for the fourth time, but the question of control of Judea was a standing problem between the Seleucid and Ptolemaic dynasties for generations. After the Battle of Ipsus (301), they acquired Coele-Syria and promoted Hellenism. Jews were of great influence in the Empire. The last queen of the dynasty was the famed Cleopatra, who quarreled with Herod and seized Jericho. Polybius 5.86 points out that the peo-

69. A coin of Ptolemy I

ple of Coele-Syria were always more attached to the Ptolemies than to the Seleucids. The friendly disposition of the Ptolemies to the Jews may be seen in the narrative in Jos. Apion II.iv.5. Tac. Hist. 4.83 relates that Ptolemy brought the statue of Serapis from Pontus to Alexandria, introducing the cult there.

Fig. PTO 69.

Bibliography. S. Zeitlin, *History of the Second Jewish Commonwealth* (1933), Prolegomena, pp. 6 ff; R. H. Pfeiffer, *History of NT Times* (1949), pp. 105, 153; V. A. Tcherikover and A. Fuks, *Corpus Papyrorum Judaicarum*, I (1957), 1-48 (Prolegomena, the Ptolemaic Period, 323-30 B.C.).

2. Ptolemy II, Philadelphus (a surname applied to his sister-wife, Arsinoë, but used to distinguish him). He ruled 283-247 B.C. In his regime the material and literary splendor of the Alexandrian court was enhanced, and he is recognized as a great enthusiast for Hellenistic culture. The Zenon Papyri demonstrate the enormous trade relations and economic conditions of this period.

He was successful in establishing the rule of the Ptolemies over Phoenicia and Judea for a long period. He refounded the city of Philadelphia, after his name, on the site of the biblical "Rabbah of the Ammonites," and brought Hellenization to it. The biblical city of Acre, too, received the name Ptolemaïs in his day, and he founded Philoteria on the Lake of Gennesaret. Under his rule (though some scholars do not recognize this as historical) the Pentateuch was translated into Greek; this version is known as the SEPTUAGINT. The details of this act are narrated in the Letter of ARISTEAS and in the Talmud Meg. 9*a*. The translation may have been called forth by the literary interests of Ptolemy Philadelphus and also by the needs of the Jews in Alexandria who wished to preserve knowledge of their Torah through translation into their spoken language in Egypt.

Ptolemy II is known as a promoter of science; and, according to the Letter of Aristeas, he evinced admiration for the Jewish law. He released many Jewish prisoners of war, and they established themselves

70. A coin of Ptolemy II and his daughter Berenice

in various occupations and set up communities. He gave his daughter Berenice in marriage to the Seleucid king Antiochus II (see Dan. 11:6).

Fig. PTO 70.

Bibliography. M. I. Rostovtsev, *Social and Economic History of the Hellenistic World* (1941), p. 350; R. H. Pfeiffer, *History of NT Times* (1949), p. 224; M. Hadas, *Letter of Aristeas* (1951), Introduction.

3. Ptolemy III, Euergetes (ruled [247] 245-221). Ptolemy, not unlike his forebears, struggled with the Seleucid kingdom. He invaded Coele-Syria to avenge the murder of his sister Berenice; but despite his initial success, Seleucus II defeated him in 242, although Ptolemy retained Judea under a pact made with the victor. (See Dan. 11:7-9 for allusion to these events.) It was at this time that Onias II, the high priest of Judea, refused to pay the tribute to Ptolemy, who thereupon threatened seizure of the country. But Joseph ben Tobias, who became the tax collector, saved the situation for the Ptolemies. *See* ONIAS.

Greek inscriptions from the time of Ptolemy III show evidence of the existence of *proseuchai* (synagogues of Jews) in different settlements, as at Leontopolis, in this regime. Jos. Apion II.v records that he offered sacrifices at Jerusalem.

71. A coin showing Ptolemy III

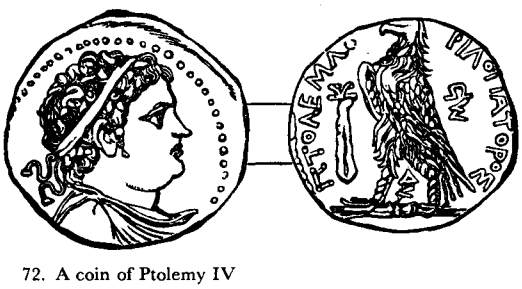
According to Justin 29.1, Ptolemy III was murdered by his son Ptolemy IV, ironically called Philopator, "father-loving."

Fig. PTO 71.

Bibliography. R. H. Pfeiffer, *History of NT Times* (1949), p. 179.

4. Ptolemy IV, Philopator (221-203). The decline of the Ptolemaic kingdom began in his reign. In 220 Antiochus III of Syria invaded Coele-Syria, but in 217 the Egyptians crushed the army of Antiochus III at Raphia. (There is a reference to these events in Dan. 11:11-12.) Ptolemy, after this victory, came to Jerusalem and wished to enter the temple, considering everything as his realm and believing that he could not be denied admission. He had no mercenary motives. He was prevented, however, and, as related in III Maccabees, was smitten by divine agents. Returning to Egypt, he vented his anger upon the Jews, and issued an edict to punish them and reduce them to slavery. III Maccabees speaks of Ptolemy IV as ordering the Jews to be trampled by elephants, but they were miraculously saved. Historically, however, this may refer to Ptolemy VII (Physcon).

Though the stories of Philopator in III Maccabees



72. A coin of Ptolemy IV

and of Heliodorus in II Maccabees concerning the incidents of entry into the temple seem identical, there are distinct differences. Philopator thought that as king he could enter anywhere, whereas Heliodorus came primarily to confiscate the money of the temple.

Fig. PTO 72.

Bibliography. R. H. Pfeiffer, *History of NT Times* (1949), p. 203; M. Hadas, *The Third Book of Maccabees* (1953), pp. 11, 16 (note 26), 30; S. Tedesche and S. Zeitlin, *The Second Book of Maccabees* (1954), pp. 70, 122 (note 12); V. A. Tcherikover and A. Fuks, *Corpus Papyrorum Judaicorum*, I (1957), 68.

5. Ptolemy V, Epiphanes (203-181). In 199 Antiochus III invaded Coele-Syria for the third time (previously it was in 220). He then won a decisive victory over the Egyptian army, and Judea reverted to Syria. A treaty was enacted between Antiochus III and Ptolemy in 192, and Cleopatra, daughter of Antiochus, was married to Ptolemy V. (Dan. 11:13-18 refers to these events.) But this treaty was ineffective, and Cleopatra died in 173. The political situation in Judea was influenced by these internal

73. A coin of Ptolemy V

conflicts in foreign policy. Ptolemy was favored by Hyrcanus the tax collector, whereas the sons of Tobias turned toward Syria.

Fig. PTO 73.

Bibliography. S. Tedesche and S. Zeitlin, *The First Book of Maccabees* (1950), p. 7.

6. Ptolemy VI, Philometor (180-146). As an ambitious ruler, he donned two crowns—that of Egypt and that of Asia—and made an alliance with Rome (I Macc. 2:11). Though he ruled in Egypt, he was able to interfere in Syrian affairs, supporting Alexander Balas against Demetrius in 153 B.C. for king. In 150 Ptolemy VI gave his daughter Cleopatra in marriage to Alexander Balas (Jonathan the high priest was present by invitation of Alexander Balas). Later Ptolemy took Cleopatra back and gave her to Demetrius II, the rival king. Ptolemy attacked Alexander Balas on the Plains of Antioch. The latter fled to Arabia and was killed there. But Ptolemy, too, died of the wounds of the battle (I Macc. 11:18).

Concerning the above records there are conflicting notions:

a) I Macc. 11:1-13 points out that Ptolemy, though he seemed to help his son-in-law Alexander Balas against Demetrius, in reality sought to betray him.

Eventually Ptolemy crowned himself king of Asia in Antioch.

b) Josephus (Antiq. XII.iv.5-7) claims that Ptolemy made an alliance with Demetrius, knowing of Alexander Balas.

Josephus also claims that Ptolemy did not want to offend the Romans and, not being ambitious, did not seek to become king of Asia and Egypt.

Ptolemy and his consort committed the care of the entire kingdom to the hands of the Jews. Two Jewish generals, Onias and Dositheus, had command of the whole army. He released Onias IV (son of Onias III) in the time of Antiochus V Eupator (164-162 B.C.) and placed at his disposal an area in Leontopolis in the province of Heliopolis to build a Jewish sanctuary after the model of the Jerusalem temple. This was known as the Temple of Onias. *See* ONIAS 3.

A work by one Aristobulus, as preserved in fragments by Eusebius, was written for and dedicated to King Philometor. This work is an explanation of

74. A coin of Ptolemy VI

the Mosaic laws and is addressed to heathen readers to show that the Peripatetic philosophy was dependent upon the law of Moses.

Fig. PTO 74.

Bibliography. R. H. Pfeiffer, *History of NT Times* (1949), p. 17. S. Tedesche and S. Zeitlin, *The First Book of Maccabees* (1950), pp. 56-57, 185; *The Second Book of Maccabees* (1954), p. 103. V. A. Tcherikover and A. Fuks, *Corpus Papyrorum Judaicarum*, I (1957), 20 ff.

7. Ptolemy VIII, Euergetes II, called Physcon ("fat paunch") because of his appearance; younger brother of Ptolemy VI. Ptolemy VII shared the throne with his brother, Ptolemy VI Philometor, in the years 170-164, and he reigned alone from 145 to 117. Yet he reckoned the years of his reign from 170.

In the days of John Hyrcanus (135-105) the Syrian Empire was very much weakened. Ptolemy VII set up Alexander Zabinus against Demetrius II and was successful for a number of years. He showed great hostility to the Jews as a result of their political partisanship. Jos. Apion II.v tells that after the death of Ptolemy VI, Ptolemy VII tried to supplant Cleopatra, the widow of Ptolemy VI, and set aside the army, which was under the rule of the Jewish general Onias. Marching against Onias, he had the Alexandrian Jews put in arenas. But the Jews were miraculously saved and consequently celebrated the day as an annual festival. The letter in the first chapter of II Maccabees, stressing that God would not forsake them though they lived outside Judea, was also written in the time of Ptolemy Physcon, who was antagonistic to the Jews.

The Jewish Sybilline Oracles (written *ca.* 140 B.C.) in the reign of Ptolemy VII make reference in vs. 608 to the king.

A change occurred after Ptolemy married his chief enemy, Cleopatra. He began to show favor to the Jews, granting them many rights in Alexandria.

Bibliography. R. H. Pfeiffer, *History of NT Times* (1949), p. 203; M. Hadas, *The Third Book of Maccabees* (1953), p. 11;

S. Tedesche and S. Zeitlin, *The Second Book of Maccabees* (1954), p. 101; V. A. Tcherikover and A. Fuks, *Corpus Papyrorum Judicarum*, I (1957), 23.

8. Ptolemy IX, Lathyrus, coregent with his mother, Cleopatra (116-107). Ptolemy Lathyrus had supplied Egyptian troops to aid Antiochus Cyzacenis of Syria to attack the Jews. But they were unsuccessful, and Samaria fell to Hyrcanus and his sons. This occurred *ca.* 107. Cleopatra was so enraged because Lathyrus had aided Antiochus that she almost drove him from the government (Jos. Antiq. XIII.x.2 ff).

A few years later, when Alexander Janneus besieged Ptolemaïs, the inhabitants sought aid from Lathyrus, who, having been driven from the throne by his mother, was now ruling in Cyprus. But Alexander Janneus called upon Cleopatra when Lathyrus attacked. Lathyrus then tried to gain Egypt but was unsuccessful. His mother retained the Egyptian power. When she sought to annex Judea, her Jewish general Ananios induced her not to do so but rather to make a treaty with Alexander Janneus. Thus, despite reverses, Alexander kept power over his land.

Bibliography. R. H. Pfeiffer, *History of NT Times* (1949), p. 21.

9. Ptolemy XIII, Auletes. He was driven out by popular revolt in 56 B.C. Gabinius was instructed by Pompey to help reinstate him. Suspending his operation against the Parthians, Gabinius was successful, aided by the Jews (Antiq. XIV.vi.2).

In the fourth year of his reign the Greek text of the book of Esther was introduced (*ca.* 78 B.C.) into Egypt.

Bibliography. M. Hadas, *The Third Book of Maccabees* (1953), p. 8; V. A. Tcherikover and A. Fuks, *Corpus Papyrorum Judaicarum*, I (1957), 46 (note 119).

There were other persons, not of the Egyptian dynasty, known as Ptolemy:

10. Ptolemy Mennaeus, king of Chalchis on the Lebanon (85-40). Before the arrival of Pompey the Itureans recognized Ptolemy as their head. He was friendly to the Jews. In 49 Ptolemy took under his personal care the children of the Judean king Aristobulus II, who had been murdered by Pompey. Later, in 42, in the time of Cassius, Antigonus, with the aid of Ptolemy, sought to obtain sovereignty of Palestine but was frustrated by Herod. Ptolemy died during the Roman-Parthian War (40 B.C.; Jos. Antiq. XIV.vii.4; War I.92).

11. A Son of Antony and Cleopatra. He obtained Syria as his realm *ca.* 33 B.C. (Plutarch *Antonius* 54).

12. Son of Abubus; son-in-law of Simon the Hasmonean; military commander of Jerusalem. Having ambitions to rule, he plotted against Simon and murdered him and his sons at a feast at Dok, a stronghold near Jericho. John Hyrcanus, however, escaped and besieged him, revenging the murder of his parents and two brothers (I Macc. 16:11).

13. Macron, son of Dorymenes; governor of Cyprus in the time of Ptolemy VI Philometor. But he abandoned King Ptolemy and went to Antiochus IV Epiphanes. Macron was one of the three generals (together with Nicanor and Gorgias) sent by Lysias against the Judeans. He was responsible for the execution of the embassy, sent by the *gerousia* to the king, charging Menelaus for acts of his brother, Lysimachus. Macron was friendly to the Jews. Lysias considered him a traitor because of his pro-Jewish policy. Being disgraced, he drank poison (I Macc. 3:38-41; II Macc. 10:10-13).

Bibliography. R. H. Pfeiffer, *History of NT Times* (1949), p. 14. S. Tedesche and S. Zeitlin, *The First Book of Maccabees* (1950), p. 95; *The Second Book of Maccabees* (1954), pp. 170, 191.

14. Son of Dositheus; a priest and Levite who brought the Letter of Purim (Add. Esth. 11:1) into Alexandria *ca.* 114-113 B.C. Its purpose may have been to aid Hasmonean propaganda in Egypt. *See*, however, 9 *above*.

Bibliography. V. A. Tcherikover and A. Fuks, *Corpus Papyrorum Judaicarum*, I (1957), 46 (note 119).

15. There were several Ptolemies in Herod's time who are recognized as Hellenic counselors:

a) A brother of Nicolas of Damascus was a trusted friend of Herod.

b) Another Ptolemy was head of the finance department and had Herod's signet ring. After Herod's death, one Ptolemy aided Antipas, and the other, with the power of his signet ring, read Herod's will and supported Archelaus (Antiq. XVII.ix.5).

c) A Ptolemy is recorded as the author of a biography on Herod.

d) Another Ptolemy is often identified as the grammarian Ptolemy of Ascalon. Another writer, mentioned by Clemens, is Ptolemy of Mendesius.

Bibliography. E. Schürer, *The Jewish People in the Time of Jesus Christ* (1891), II-III, 260. V. Tcherikover, *Hellenistic Civilization and the Jews* (1959). S. B. Hoenig

PUA. KJV form of Puvah in Num. 26:23.

PUAH pū'ə [פּוּעָה, *see below*] (Exod. 1:15). **1.** One of the two Hebrew midwives (*see also* Shiphrah) ordered by the king of Egypt to kill all male children (*see* Midwife). The name is most probably to be derived from Ugaritic *pgt*, "girl." Later Jewish legends identify Puah with Miriam.

Bibliography. L. Ginzberg, *Legends of the Jews*, II (1910), 251; W. F. Albright, "Northwest-Semitic Names in a List of Egyptian Slaves," *JAOS*, LXXIV (1954), 229 and note 50.
J. F. Ross

2. Alternate form of Puvah.

PUBLICAN. KJV translation of τελώνης (RSV Tax Collector).

PUBLIUS pŭb'lĭ əs [Πόπλιος; Lat. *Publius*] (Acts 28:7-8). Probably the highest Roman official on the island of Malta on which Paul and his fellow prisoners were shipwrecked on their way to Rome. It is possible, however, that the word designates the island's chief native officer, or even that it refers to any office that was non-Roman in origin.

Publius entertained Paul and his companions in his home for three days. Jerome records a tradition that he was martyred (*On Illustrious Men* XIX).
B. H. Throckmorton, Jr.

PUDENS pū'dĕnz [Πούδης; Lat. *Pudens*] (II Tim. 4:21). A Christian in the church of Rome who is mentioned as sending greetings to Timothy.

Some have identified him as the Pudens who was a friend of the Latin poet Martial (cf. his *Epigrams* I.32; IV.13, 29; V.48; VI.58; VII.11, 97). This

Pudens was a soldier whose wife, CLAUDIA, is described as of British birth. An ancient tradition held that what had been the baths of Pudens' son, Novatus, were dedicated *ca.* the middle of the second century as a Christian church. Pudens is commemorated in the Byzantine church on April 14, and in the Roman on May 19. B. H. THROCKMORTON, JR.

PUHITES. KJV form of PUTHITES.

PUL pōōl [פּוּל]. **1.** The name under which TIGLATH-PILESER III (745-727 B.C.) ruled as king of Babylon 729-727 (II Kings 15:19; I Chr. 5:26). The meaning of this Assyrian name, rarely attested in late Assyrian documents, remains obscure. Tiglath-pileser III's son SHALMANESER V ruled in Babylon under the name Ululai ("born in the month of Elulu"). No document is dated with the name of Pul; only the Babylonian King List A, Jos. Antiq. IX.xiv.2, and the Ptolemaic Canon mention him. A. L. OPPENHEIM

2. KJV translation in Isa. 66:19 (LXX φουδ); probably an error for PUT (so RSV).

PULPIT [מִגְדָּל, *in phrase* מִגְדַּל עֵץ, tower of wood; LXX ἐπὶ βήματος ξυλίνου; Vulg. *super gradum ligneum*] (Neh. 8:4; cf. 9:4). A raised wooden platform reached by steps (cf. that in the Pnyx at Athens for orations). The purpose of the pulpit—i.e., reading of the law and prayer—brings to mind the copper כִּיּוֹר of II Chr. 6:12-13, a portable platform for royal prayers. Cf. also II Kings 23:2-3, where Josiah read the law by, or possibly on (so AJV), the pillar (cf. Deut. 17:18-19; II Kings 11:14). Acts 2:14 might suggest an elevated position, if not a pulpit.

Bibliography. O. E. Ravn, "Der Turm zu Babel," *ZDMG,* XCI (1937), 352-72. G. HENTON DAVIES

PULSE. KJV translation of זרע[נ]ים in Dan. 1:12, 16 (RSV VEGETABLES). Daniel and his companions refuse to defile themselves with the king's rich food and wine; they ask for and receive vegetables and water. The Hebrew word means "things sown," and thus includes more than legumes (cf. II Sam. 17:28 KJV; cf. also Tob. 1:11; Jth. 12:2; I Macc. 1:62-63; II Macc. 5:27 for the refusal of unclean food).

J. F. Ross

PUNISHMENTS. *See* CRIMES AND PUNISHMENTS.

PUNITES pū′nīts [פּוּנִי] (Num. 26:23). The name given to the descendants of Puvah of Issachar. According to MS evidence, however, the text probably should read "Puvanites" or "Puvites."

PUNON pū′nŏn [פּוּנֹן]. An important mining center in Edom, and possibly the home of one of the chiefs of Edom (Gen. 36:41, where one might read Punon for PINON). Punon, modern Feinan, is a large, abundantly watered site on the E side of the Arabah, 5¼ miles S-SE of Khirbet en-Nahas and 4⅓ miles S-SE of Khirbet Nqeib Aseimer, both large copper smelting sites. It is located at the junction of the Wadi el-Gheweir and Wadi esh-Sheqer, with extensive building on both sides of the wadis as well as heaps of copper slag from the large smelting operations using ore from local and more distant sources, such as Umm el-'Amad, two miles SW of Feinan.

The first period of occupation was from *ca.* 2200 to 1800, when copper was presumably first smelted here, with the trade route to Egypt used to transport refined copper ore to market. When Israel camped at Punon in the latter part of the thirteenth century (Num. 33:42-43), the city was just recovering from a half-millennium of no established occupation. *Ca.* 700 or possibly later, Punon was again abandoned. The mining and smelting operations were taken up by the Nabateans and continued through the Roman (probably), Byzantine, and medieval Arabic periods, during which time Punon prospered, especially during the last two periods.

Eusebius reports that Christians were forced to work in the copper mines and smelters at Punon (Φινών, Φαινών), continuing a tradition of forced labor in these occupations from earlier days. A Christian basilica and monastery were built during the Byzantine period. In the monastery ruins an inscription bearing the name of Bishop Theodore (587-88) was found.

PUR. *See* PURIM.

PURAH pyŏŏr′ə [פּוּרָה] (Judg. 7:10-11); KJV PHURAH fyŏŏr′ə. The servant who accompanied Gideon in a nocturnal reconnaissance of the enemy camp of the Midianites.

PURIFICATION [טְהָרָה; KJV חִטָּאת, תְּמֻרוּק; ἁγνισμός, καθαρισμός (KJV *alternately* PURIFYING; PURGE)]; PURIFY [בּוּר (KJV BE CLEAN), חִטֵּא (*alternately* CLEANSE), טָהֵר (KJV *alternately* BE CLEAN); ἁγνίζω, βαπτίζω (KJV WASH; *usually* BAPTIZE), καθαρίζω (KJV *alternately* PURGE)]. The act of ritual cleansing. *See* CLEAN AND UNCLEAN.

L. E. TOOMBS

PURIM pŏŏr′ĭm, pyŏŏr′ĭm [פּוּרִים, lots]; KJV Apoc. PHURIM fyŏŏr′ĭm. Singular: PUR [פּוּר, lot] (Esth. 3:7; 9:24, 26, 28-29, 31-32). A Jewish festival on Adar 14-15, celebrating the Jews' deliverance from Haman by Esther and Mordecai.

Purim is not prescribed in the law. In all probability it developed among the Diaspora in Persia. Its nonreligious character, its name, and the names of the characters in the story of Esther all point to the conclusion that its ultimate origins are non-Jewish. Perhaps under the impact of the Maccabean triumph, Jews historicized the drama.

1. The name. "Pur" is a foreign term. Esth. 3:7; 9:24 interpret it as meaning "lot." This etymology is supported by the Babylonian word *pūrū,* used of the casting of lots to obtain oracles, especially as an aspect of the New Year's Festival. "Purim" is the term with a Hebrew plural ending and refers to the festal days. In the LXX and in Jos. Antiq. XI.vi.13 the terms φρουραι and φρουραια designate "Purim." In Greek they do not mean "lot," to which, indeed, Josephus omits all reference. It is possible to treat them as transliterations of the Aramaic פּוּרְיָא from the root פּרר, "to destroy."

They have also been treated as Greek words meaning "guardians." The Lucianic text has φουρδαια. Finally, II Macc. 15:36 refers to the feast as ἡ Μαρδοχαικὴ ἡμέρα, "the Mordecaian [or Mardukian?] day" (RSV "Mordecai's day").

2. Origin. It is impossible to speak with complete certainty about the early history of Purim in Judaism, let alone its probable pre-Jewish antecedents. There is no evidence for a critical persecution of Jews in the Persian Diaspora. The book of ESTHER is confused about the Persian royal chronology and in error about court customs. This leads some to conclude that Purim began in Palestine, and that its characters are masks for the leaders of the Seleucid-Maccabean struggle. This is improbable. The Maccabean triumph was celebrated on Adar 13, Nicanor Day; and the first evidence for Purim in Palestine comes a full century later.

The names in the Purim drama seem to point to a mythological legend about the triumph of Babylonian deities. The names of the gods shine through —e.g., Mordecai-Marduk, Esther-Ishtar. But the Greek title, the date, and the character of Purim hint at connections with *Farwardigan,* the Persian feast of the dead, celebrated in the early Persian era from Adar 11-15. The Greek term for *Farwardigan,* φουρδιγαν, may bear on the Lucianic text. The feast honored the spirits of the dead as "guardians," and there was a common meal to which rich and poor were invited. In its non-Jewish sources Purim may well be a composite. First celebrated by Diaspora Jews, its assimilation to Jewish history perhaps occurred in Palestine. Eventually it crowded out Nicanor Day.

3. Character. Throughout Purim has been a gay and noisy feast. Mourning is forbidden. A festal meal lasting late into the night of Adar 14 is featured. The Talmud tells celebrants to drink until they can no longer distinguish between "Cursed be Haman" and "Blessed be Mordecai." The dramatization of Purim events has a long history, with the injection of elements of the Italian carnival in later centuries.

Bibliography. O. Eissfeldt, *Einleitung in das AT* (1934), pp. 560-65; H. Schauss, *The Jewish Festivals* (1938), pp. 237-71, describes the role of Purim in Jewish life; J. Lewy, "The Feast of the Fourteenth Day of Adar," *HUCA,* XIV (1939), 27-51, gives complete philological analysis of names and stresses *Farwardigan* connections; M. Haller, *Die fünf Megilloth,* HAT, 18 (1940), 114-17, stresses mythological antecedents.

J. C. RYLAARSDAM

PURPLE [ארגמן, תולע, תכלת; πορφύρα; Sumer. SÌG-ZA-GIN-DIR; Akkad. *argamannu;* Lat. *purpura*]. The most valued of ancient dyes, encompassing various shades within the red-purple range. It was obtained from Mediterranean mollusks of the Gastropoda class and used primarily for coloring woven materials and cloths. The purple industry developed early in the Mediterranean area and reached its greatest heights in the classical period. Legend has associated the discovery of purple with both Crete and Phoenicia, where the color was highly prized in antiquity. The name Canaan ("land of the purple") was derived from the dye; and the name Phoenicia comes from the Greek φοινός, meaning "red purple." Wool dyed "purple" was available in Ugarit *ca.* 1500 B.C. and later was used for the tribute of kings. For a considerable time the Phoenicians monopolized the industry, although the dye was obtainable elsewhere (Ezek. 27:7).

The primary source of the dye was the secretion produced by the hypobranchial gland of the mollusk, and the shade desired was achieved by using different species of mollusks, altering their ratio, adding other ingredients such as Kermes, and varying air- and light-exposure time in the process. The famous Tyrian purple was produced by "double-dyeing." Descriptions of the mollusks and the dyeing process have been given by Pliny and Vitruvius; however, their information is not precise, and the hues they knew have not been satisfactorily identified. In general, a darker color was considered superior to a light shade; according to Pliny, a color like congealed blood was most sought after. Deposits of *Murex brandaris* and *Murex trunculus,* the most important of the mollusks used in the purple industry, have been found in dyeing beds on Mediterranean coasts. The dyeing agent in *Murex brandaris,* 6-6′ dibromoindigo, isolated by Friedländer, was the chief constituent in Tyrian purple, and dyeings with it alone are of a dull red-violet shade. *Murex trunculus* contains the same compound plus a small amount of a blue-violet product.

Doubtless the Hebrews had to import their purple goods (Ezek. 27:16, 27). Purple was used, generally in combination with blue and scarlet and linen, in the tabernacle furnishings (Exod. 26:1, 31; etc.) and the clothing of the priests (Exod. 28:4-6; 39:1, 28-29; cf. 1QM 7.11, where purple is prominent in the battle dress of the Qumran priests). Solomon found it necessary to obtain skilled help from Tyre, center of the Phoenician purple industry, to handle the purple and other materials employed in the building of the temple (II Chr. 2:7, 14; 3:14). He is also said to have built a chariot with a purple seat (Song of S. 3:10). Cords of purple and linen are found in the palace of Ahasuerus (Esth. 1:6), and flowing locks are compared to purple (Song of S. 7:5). Idols were clothed in blue and purple (Jer. 10:9), and Prov. 31:22 says a good wife's dress was purple and fine linen.

Great value was placed on purple by the Hebrews, and purple garments were considered a sign of distinction, royalty, and wealth. Midianite kings wore purple (Judg. 8:26), and Mordecai was rewarded with a mantle of purple (Esth. 8:15). Judas Maccabeus was amazed that the powerful Romans did not wear purple (I Macc. 8:1, 14), and he took purple and blue cloth in booty from Gorgias (4:23). When Alexander appointed Jonathan high priest, he gave him a purple robe (10:20; cf. 11:58), and Andronicus was stripped of his purple robe for slaying Onias (II Macc. 4:38). Part of Daniel's reward was said to be purple apparel (Dan. 5:7, etc.)

תולע is once translated "purple," referring to those "brought up in purple"—i.e., in luxury (Lam. 4:5; KJV "scarlet"); and תכלת is translated "purple" alluding to the dress of Assyrian nobles (Ezek. 23:6; *see* BLUE).

References to purple (πορφύρα) in the NT suggest its economic importance and symbolic character. Lydia was a dealer in purple goods in Thyatira (Acts 16:14). Purple clothing denoted wealth (Luke 16:19);

and Jesus was dressed in purple, mocking his claim to be king of the Jews (Mark 15:17, 20; John 19:2, 5). The purple and scarlet dress of the harlot Babylon (Rev. 17:4) symbolized imperial rank. Rome, represented as having once worn purple before her fall (18:16), was mourned by merchants who could no longer buy her purple (vs. 11).

Many inscriptions and various historical references outside the NT testify to the wide extent of the industry in the Mediterranean and the significance of wearing the purple. *See also* COLORS.

C. L. WICKWIRE

PURPOSE. In the strict sense, a deliberately conceived plan proposed for action or executed in it.

1. In the OT. Three representative Hebrew words are: (*a*) מחשבה ("thought," "plan," or "device"). Often when this word is translated "thought," the translation "plan" or "purpose" would give better sense (e.g., Isa. 55:7; 59:7). Men can plan, but not without God's knowing (Isa. 66:18). This reveals a deep paradoxical difference between God and man, for man can plan purposes contrary to God, and, in the short run, carry them through. This is clearly expressed in Jer. 18:11-12. Yet it is only God's purpose that can triumph in the end (Prov. 16:3; 19:21). God's purposes are certain and sure in a way that man's are not.

b) יעץ. This word is used for all kinds of advice given and taken, considered and acted on, in human life, in peace and war, in public and private. It has particular theological significance when it is used of God's counsel, plan, or purpose. It is used in Ps. 33: 10-11 to repeat the point made in Prov. 19:21. God's counsels or purposes are ineluctable, whether against Egypt (Isa. 19:17) or Assyria (Isa. 14:26). Nor are his plans the products of emergency thinking; they are "formed of old, faithful and sure" (Isa. 25:1; cf. 46:10-11). They dispose of the destinies of nations; but they are also the guiding and ruling principle for the believer throughout his earthly life (Ps. 73:24). God reveals his purposes to his "servants and messengers," and when they proclaim them, he fulfils them (Isa. 44:26). As Isa. 5:19 indicates, to doubt that God has a purpose, and that it is effectual, is tantamount to denying his existence. God's existence cannot be separated from his victorious purpose.

c) סוד. This word denotes an intimate circle of friends where confidences can be safely exchanged, or an assembly where decisions are made. While there is frank recognition that it is wrong to betray secrets by talebearing (Prov. 11:13) or gossip (Prov. 20:19), the prophets use this word for the source of their overwhelming constraint to speak. Amos (3:7) tells of the "secret" which God reveals to his prophets, and, more daringly still, Jeremiah likens prophetic inspiration to standing in the divine council where God's plans are formulated (Jer. 23:18, 22). But such intimacy with God is not the exclusive prerogative of the prophet, for the psalmist claims the "friendship" (סוד) of God for those who fear him (Ps. 25:14), and Prov. 3:32 puts it that "the upright are in [God's] confidence [סוד]."

The OT does not use the words for "purpose" to refer to the divine salvation as such, but it does sometimes link particular "plans" with the "mighty acts" of salvation (Mic. 6:5) or speak of a general purpose of good (Zech. 8:15). But Israel came to see God's saving purpose throughout history, reaching backward in time to creation itself, and outward to the whole world of men.

2. In the NT. Many OT features are repeated, though now centered in Jesus Christ.

a. Purpose as will. The words expressing purpose (such as βουλή, θέλω) often merit no stronger translation than "wish" or "desire," but sometimes a firmer rendering seems called for, as, e.g., in Mark 3:13; I Tim. 2:4; II Pet. 3:9. As in the OT, men are able to have their own purposes (Acts 15:37) and even pursue them, in the short run, against God (Luke 7:30; Acts 5:38). But in the end God's will is irresistible (Rom. 9:19). In Rom. 8:28; Eph. 1:1; 3: 11, God's purpose (πρόθεσις) is his eternal will and plan. The tension between human and divine purposes is reflected even in the life of Jesus Christ, and has its climax in the prayer in Gethsemane: "Remove this cup from me; yet not what I will, but what thou wilt" (Mark 14:36). *See* WILL OF GOD.

b. Purpose as revelation. God's purpose, aforetime a secret or "mystery," is now disclosed in and by the life and work of Jesus Christ, and publicly proclaimed in the preaching of the gospel (Rom. 16:25-26; I Cor. 2:7; Col. 1:26). It appears as a purpose of salvation for all men (I Tim. 2:4; II Pet. 3:9), and is, as it always was, unchangeable (Heb. 6:17), having its origin in God "before the foundation of the world" (Matt. 25:34; John 17:24; Eph. 1:4; II Tim. 1:9), and controlling every part of human history (cf. Acts 13:27). It has absorbed man's iniquities (Acts 4:28), even the greatest iniquity of the Cross (I Pet. 1:20). It will continue through the coming ages (Eph. 2:7) and find its consummation in a universal summing up in Christ (Eph. 1:10).

c. Purpose as grace. God's universal saving purpose is the proper environment and motivation of the Christian man. But though he knows and purposes this, his sinfulness frustrates him. "I do not do what I want, but I do the very thing I hate. . . . I can will what is right, but I cannot do it" (Rom. 7: 14-18). Paul goes on in Rom. 8 to show that it is God's gift of the Spirit that overcomes even this fatal weakness (vs. 26), and the Spirit is but the "guarantee of our inheritance until we acquire possession of it" (Eph. 1:14). Thus our final salvation, like the guarantee given for it now, is not awarded on our merits (II Tim. 1:9; cf. Jas. 1:18), but is the sheer gift of God. Man's ability to will God's purpose, his ability to fulfil it in this life, together with his final possession of full salvation, is the work of God. "God is at work in you, both to will and to work for his good pleasure" (Phil. 2:13). "It is your Father's good pleasure to give you the kingdom" (Luke 12:32).

J. MARSH

PURSE. No materials for purses are given in the Bible, but from later sources it appears that they were woven in some cases with a netlike effect, of cotton or of rushes. Others were made of leather. All types of purses were baglike, drawn together at the neck with leather straps or strong cords of other material. This is why the same word could be used for weight bags.

1. כִּיס. Used to designate a common treasury of those banded together in a common cause (Prov. 1:14); a receptacle for gold (Isa. 46:6); or, in a more general sense, expense (Ecclus. 18:32 and in Palmyrene inscriptions of the third century A.D.). *See also* BAG 2.

2. KJV translation of ζώνη (RSV "belt") in Matt. 10:9. *See* BELT 5.

3. Βαλλάντιον. Used in the sense of "money" (Luke 10:4; 22:35-36) and in the figurative sense of "receptacle for the heavenly treasures" (Luke 12:33; KJV "bag"). J. M. MYERS

PURSLANE pûrs'lĭn [חַלְמוּת, *ḥallāmûth*]. A mucilaginous plant, today identified with *Portulaca oleracea* L. The word appears only in Job 6:6 in a figure implying repulsive FOOD, symbolic of Job's intolerable vexation. The KJV translates *rîr ḥallāmûth* "white of an egg" (following the Targ.); the RSV, "slime of the purslane." Löw, following the Syr., identifies it with *Anchusa officinalis* L. ("bugloss" or "oxtongue").

PUT pŏŏt [פּוּט; LXX φουδ, φουτ]. A geographical designation, probably of a part of Libya; also named as a son of Ham.

In the ethnographical portions of Genesis and I Chronicles, Put is named with Cush, Egypt, and Canaan as a son of Ham (Gen. 10:6; I Chr. 1:8). While both texts proceed to recount the further progeny of Cush (probably not Ethiopia in this context), Egypt, and Canaan, there is no further mention of Put; it is possible that Put has dropped out of the text in these subsequent verses, and that some of the names associated with Egypt may properly belong to it. Among the Prophets, Put is mentioned in various contexts. Jeremiah speaks of the "men of Ethiopia and Put who handle the shield, men of Lud, skilled in handling the bow," in his prophecy concerning the conquest of Egypt by Nebuchadrezzar (Jer. 46:9). Ezekiel names Put in three separate prophecies: (*a*) against Tyre, where Persia, Lud, and Put are numbered among her armies (Ezek. 27:10); (*b*) against Egypt, where Ethiopia, Put, Lud, Arabia, and Cub occur together (30:5); (*c*) against Gog, where Persia, Cush, and Put are named as auxiliaries (38:5). From the passages cited thus far, little positive information about Put can be obtained except that an African location, along with Ethiopia, Egypt, and Lud, is suggested. The LXX renderings of this name vary considerably. In Genesis and I Chronicles the name is merely transliterated, but in all the passages cited above except Ezek. 30:5 Put is translated by "Libyans." A seventh occurrence in Nah. 3:9 offers textual difficulties: the LXX has καὶ οὐκ ἔστιν πέρας τῆς φυγῆς, "and there is no end of the flight," where *PWṬ* is read as a noun meaning "flight," fancifully connected by some commentators with Coptic *pōt,* "to flee," but more likely presupposing some form of the Hebrew root *PLṬ*. Here again, however, it occurs in the close proximity of Ethiopians and Libyans. Finally, in Isa. 66:19, we read of a land *PWL* along with Tarshish and Lud; because the LXX reads *Phoud,* the majority of scholars emend *PWL* to *PWṬ*.

As may be seen from the above summary of occurrences, the only clear identification of Put which emerges is one with Libya or possibly some neighboring area. Support for this identification is found in several Old Persian inscriptions. In inscriptions of Darius at Naqsh-i-Rustam and of Xerxes at Persepolis we find a region *Putāyā* mentioned, once in association with Ethiopia and once with the Carians and the Ethiopians, as a province of the Persian Empire. Because *Putāyā* of the Persian inscriptions is almost universally identified with Libya, which would otherwise be missing from the province lists, and because Put of the MT is often translated in the LXX by "Libyans," it is only reasonable to assume the identity of the two. The Babylonian form of the name, occurring in translations of the above texts and without the terminal gentilic *-yā* of the Persian, is *pu-ú-ṭu* or *pu-ú-ṭa,* whose spelling with the velarized *ṭ* instead of a regular *t* corresponds exactly to the spelling with ט in Hebrew. In a fragmentary inscription of Nebuchadrezzar referring to the Egyptian campaign of his thirty-seventh year there is a clear reference to a city *Pu-ṭu-ya-a-man*—i.e., Puṭu of Yawan (the Ionians)—which favors a more specific identification of Put with Cyrene.

Insufficient evidence precludes certainty, but few cogent objections could be raised against the equation of Put and Libya. The fact that Lubim and Lehabim also probably refer to Libya offers no special difficulty, since we do not know specifically what geographical entities are to be associated with each of these names. See further the geographical names Anamim and Casluhim, also possibly referring to the same general area.

Note that the older identification of Put with the land of Punt, so well known from the ancient Egyptian inscriptions, must now be dropped. Even without the compelling evidence listed above, the old equation with Punt was objectionable on both philological and historico-geographical grounds.

PUTEOLI pū tē'ə lī [οἱ Ποτίολοι] (Acts 28:13). A city on the Bay of Naples where Paul landed on the way to Rome; the modern Pozzuoli.

According to Stephen of Byzantium (Ποτίολοι, in *De Urbibus,* ed. W. Xylander [1568], col. 240), Puteoli was a foundation of the Samians—i.e., colonists from the Greek island of Samos. Strabo (V.245) says that in early times it was only a port town of the Cumaeans, the town of Cumae being the oldest of all the Greek colonies in Italy and Sicily

(V.243). Puteoli may have been founded in the sixth century B.C., and both of the authorities just cited give its earlier name as Dicaearchia. In 215 B.C., when Hannibal was invading Italy, the Romans put a garrison there (Livy XXIV.vii.10), and the name of the place was changed to Puteoli. In this connection Strabo (V.245) reports two possible derivations of the name, either from Latin *putei*, referring to the wells found there, or from *puteo*, referring to the foul and sulphurous smells of the district. Puteoli became a Roman colony in 194 B.C., when three hundred Roman citizens were settled there (Livy XXXIV. xlv.1), and it continued to rank as a colony under Augustus (*Corpus Inscriptionum Latinarum* VIII.7959) and Nero (Tac. Ann. XIV.27).

Puteoli was in a region where sulphur was exported (Pliny XXXV.174), and was known for the work of its artisans in metal, who manufactured iron objects of every description, from military armor to farm implements (Diodorus V.13), and also for the wide influence of its bankers, one of whom—Cluvius—made loans to at least five communities in Asia Minor (Cicero *To His Friends* XIII.56). Furthermore, at least from the time of Augustus on, Puteoli was the most important harbor in Italy, only losing this position after Trajan prepared an adequate harbor at Ostia. Strabo (V.245) explains that with a mortar mixed of lime and volcanic ash (now known from its place of origin as *pozzuolana*) it was possible to construct very strong jetties at Puteoli, and thus to make the wide-open shores curve into bays so that the largest merchant vessels could moor there in safety. Thus the Alexandrian grain ships came to Puteoli, and travelers from the E and S landed there en route to Rome. Seneca (*Epistle* 77) tells how the inhabitants of Puteoli watched eagerly for the Alexandrian ships to approach, ships of the very type Paul was on (Acts 27:6); and Suetonius (*Titus* V.3) records that Titus, just like Paul, having first put in at Rhegium, disembarked at Puteoli when he was hastening to Rome after the destruction of Jerusalem.

Ruins of ancient Puteoli include the market hall (*macellum*), commonly known as the Serapeum, since a statue of Serapis was found there; the temple of Augustus, built according to inscriptions by L. Calpurnius (*Corpus Inscriptionum Latinarum* X.1613-14), and later replaced by the cathedral of San Proculo; the older amphitheater, probably that where Nero gave a gladiatorial exhibition (A.D. 66) for Tiridates, king of Armenia (Dio LXII.iii.1), a structure which could have been seen by Paul; and the later amphitheater, dated by an inscription (*Corpus Inscriptionum Latinarum* X.1789) in the time when Puteoli was a Flavian colony—i.e., not earlier than Vespasian—and still well preserved.

Since Paul stayed seven days with the "brethren" at Puteoli (Acts 28:14), there were already Christians there, but the origin of the Christian community is unknown. The arrival of Peter by ship from Caesarea, after the departure of Paul for Spain, is narrated in the Acts of Peter (*Actus Vercellenses* 6, in M. R. James, *The Apocryphal NT*), but the source is legendary.

Bibliography. C. Dubois, *Pouzzoles antique (histoire et topographie)* (1907); H. Leclercq, "Pouzzoles et Cumes," *Dictionnaire d'archéologie chrétienne et de liturgie*, vol. XIV, pt. ii (1948), cols. 1673-87. J. FINEGAN

PUTHITES pū'thīts [פּוּתי] (I Chr. 2:53); KJV PUHITES —hīts. A family of Judahites from Kiriath-jearim on the N border of Judah.

PUTIEL pū'tĭ əl [פּוּטיאל, he whom God gives] (Exod. 6:25). Father-in-law of Aaron's son Eleazar, and grandfather of Phinehas. Putiel is a name partly of Egyptian derivation, as is the case with other names in the tribe of Levi.

Bibliography. M. Noth, *Die israelitischen Personennamen* (1928), p. 63. R. F. JOHNSON

PUVAH pū'və [פּוּה]; KJV PHUVAH fū'və in Gen. 46:13; PUA pū'ə in Num. 26:23. Alternately: PUAH pū'ə [פּוּעה] (Judg. 10:1; I Chr. 7:1). The second son of Issachar. Puvah went with Jacob into Egypt and became the head of a family there. In Genesis, Numbers, and I Chronicles he is regarded as the brother of Tola; in Judges he is Tola's father.

E. R. ACHTEMEIER

PYGARG pī'gärg. KJV translation of דישׁן (Deut. 14:5; RSV IBEX), from the LXX πύγαργος. The pygarg is a white-rumped antelope (Herodotus IV. 192), a description appropriate to the *Addax nasomaculatus* of North Africa and Arabia. *See* FAUNA § A2*f*. Cf. Tristram, *NHB* 126-27.

W. S. MCCULLOUGH

PYRE [מדורה] (Isa. 30:33); KJV PILE. A circular pile of wood for human sacrifice. In this passage there is obvious reference to MOLOCH-worship at TOPHET in the Valley of Hinnom (cf. Ezek. 24:9).

See also GEHENNA.

PYRRHUS pĭr'əs [Πύρρος, fiery red, *from* πῦρ, fire] (Acts 20:4; cf. KJV). The father of Sopater, a companion of Paul.

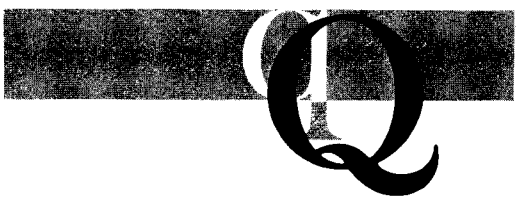
PYTHON [ὁ πύθων, *similar to* אוב]. A divining spirit. "Python" is not used in the Bible, but the Greek word occurs in Acts 16:16: "We were met by a slave girl who had a spirit of divination [πνεῦμα πύθωνα]."

According to Greek belief the Python was first the dragon which guarded the oracle at Delphi. It was slain by Apollo when he took over the oracle. Then the dragon spirit inspired the priestess of the shrine, who delivered revelations. Later the spirit was thought of as a divining or soothsaying spirit which anybody might possess, associated especially with what we would call ventriloquism.

Acts 16:16-26 reports that this spirit bore true testimony to Paul and his companions. Apparently the author attaches importance to this testimony of a pagan spirit to the Christian gospel. After the slave had followed Paul for some days with her testimony, he took pity on her and cast out the spirit.

This is an authentic story of a mental illness understood according to the ancient concept of demon possession, probably the psychosis of hysteria, another example of which is found in Mark 1:23-26.

Bibliography. S. V. McCasland, *By the Finger of God* (1951), pp. 42-44; W. Bauer, *Greek-English Lexicon to the NT* (1957), p. 736, πύθων, cites the literature. S. V. MCCASLAND



*Q [*from* Ger. *Quelle,* source]. A symbol used to designate the hypothetical source of the (largely) discourse material common to Matthew and Luke and not found in Mark. Other names given this source are: "double tradition," "sayings source," Redenquelle, LOGIA. It constitutes the second document in the two-document hypothesis of gospel origins, the other document being Mark. Not all scholars have accepted the existence of Q as a single document; some find it more plausible to account for the common non-Markan material in Matthew and Luke in other ways. *See* SYNOPTIC PROBLEM.

There is widespread agreement among scholars that this source is represented mainly, if not entirely, by the parallel non-Markan material in Matthew and Luke; that it contained little narrative and no passion story; that it was composed largely of detached sayings of Jesus such as in the Sermon on the Mount (*see* L for contrast); and that its order is better preserved by Luke than by Matthew. Opinions differ widely over its exact reconstruction, its original wording, its use by Mark, and the possible strands of material which may have been amalgamated within it. Despite these disagreements, Q is regarded as an extremely valuable witness to the historical Jesus. Originating *ca.* A.D. 50, perhaps in Antioch, it takes us back to within twenty years of Jesus' death.

D. T. ROWLINGSON

***QERE** kə rā′ [קרי, that which is to be read]. The scribes were prohibited to alter the authoritative consonants of the text (*see* KETHIBH); and where their oral tradition or their own interpretation diverged, it was entered in the margin by means of the *Qere.* It is estimated that there are more than 1,300 such marginal notes in the MT, and they have been partially assembled in Masoroth.

See also TEXT, OT, § A3*a*.

B. J. ROBERTS

QESITAH kĭ sē′tə [קשיטה]. An old weight of unknown origin, mentioned in Gen. 33:19; Josh. 24:32; Job 42:11, where both the RSV and the KJV translate "piece of money." The LXX translates ἀμνός or ἀμνάς, "lamb." *See* WEIGHTS AND MEASURES § B4*g*.

O. R. SELLERS

QOHELETH. Alternate spelling of Koheleth, the Hebrew title of the biblical book of ECCLESIASTES.

QUAIL [שלו; *cf.* Arab. *salway,* Syr. *salway,* Jewish Aram. סלוי; ὀρτυγομήτρα (Wisd. Sol. 16:2; 19:12), a bird migrating with quail (Aristotle *History of Animals* VIII.597*b*)]. Any of a genus (*Coturnix*) of various small gallinaceous birds of the subfamily *Phasianinae* (comprising quails, partridges, and pheasants).

שלו is referred to in the OT and in the Wisdom of Solomon only in connection with its provision as food at the time of the Exodus. While various opinions about its identity have been held, it is now generally agreed that the Hebrew word signifies the quail (cf. Ps. 78:27). It is to be noted, however, that the LXX uses ὀρτυγομήτρα, not ὄρτυξ ("quail"). According to the tradition, twice after the departure of the Hebrews from Egypt, large numbers of these birds descended on Israel's camp, thus furnishing the people with additional food (Tristram says that quail "is considered the most delicate eating of all game"). The coming of the quails was interpreted as providential; the birds seemed to be directed to the Hebrew tents by a beneficent God.

Quails in the Mediterranean area winter in Africa and migrate northward in vast flocks in the spring (Tristram *NHB* 229-33). This is an exhausting flight and is done in stages. When the birds alight to refresh themselves, they are easily caught. Presumably it was a cloud of migrating quails that came down on the Hebrew encampment. On quails' flying with the wind (Num. 11:31), see Aristotle *History of Animals* VIII.597*b;* on the spreading out of quails to dry in the sun (Num. 11:32), cf. the Egyptian practice cited by Herodotus (II.77).

W. S. MCCULLOUGH

QUARRY. 1. An excavation from which stone is cut for building purposes. This noun is used to translate מסע in I Kings 6:7 (KJV translates "at the quarry" by "before it was brought thither"), referring to the source of stones in the temple; and מקבת בור in Isa. 51:1 (KJV "hole of the pit"). The KJV uses "quarries" in Judg. 3:19, 26, to translate פסילים, "sculptured stones." Many commentators believe that השברים in Josh. 7:5 should be translated as "quarry" instead of as the place name SHEBARIM.

Many sites in Palestine preserve evidence of quarrying.* Rock was sometimes cut from the surface, as on the N slopes of Lachish. Sometimes other digging, such as of tombs or cisterns, was done with quarrying methods and the stones used for building. But many cuts were made purely for quarried stone, and unfinished blocks still in them are evidence of their use. The so-called "Solomon's Quarries" is an example. N of Jerusalem in biblical times, it now lies under a section of the walled city E of the Damascus gate. Its great size, *ca.* 325 by 650 feet, suggests that it was a state undertaking, though not likely as early as Solomon. Fig. QUA 1.

2. A verb meaning "to cut stone for building purposes"; used to translate the *Hiph'il* of נסע (I Kings

1. Unfinished monolith column in Mahneh Yehudah Quarta, Jerusalem

5:17—H 5:31 [KJV "bring"]; Eccl. 10:9 [KJV "remove"]), and חצב (II Kings 12:12—H 12:13; 22:6; II Chr. 2:2, 18—H 2:1, 17; KJV "hew").

Methods of quarrying are illustrated at Samaria, where unfinished stones were found on a quarry bed dating from the OT period. The stone used was easily worked, soft-quality limestone, which hardens with exposure to the air. The rough blocks were cut loose by cutting deep channels on four sides and then prying, or inserting wooden wedges and swelling them with water, or by splitting along a natural cleavage line with a sharp blow. The channels, just wide enough to let the workman's arm and tool in, were cut with short-handled, narrow-bladed, iron picks, swung apparently with circular, fanlike strokes. The same technique was used for a large shaft—*ca.* twenty-seven feet long and three feet in diameter—found partially cut out in the Jewish quarter of Jerusalem in 1934. Its dimensions suggest that it might have been for the cloisters in Herod's temple.

Such stones, roughly finished in the quarry, were dressed more particularly at the building site, as piles of stone chips by the stairs of the palace at Lachish and around the citadel in Jerusalem would indicate. I Kings 6:7, however, states that stones for the temple were completely finished in the quarry, so that no "tool of iron was heard in the temple."

In the Roman period stones of five to ten tons were not uncommon, and the problem of moving them from quarry to building site almost defies imagination. Presumably rollers or sledges and earth ramps were used. Large stones in the Herodian citadel tower in Jerusalem have square slots cut in them, *ca.* eight inches square, which may have been for ropes or levers for pulling or prying them.

QUART. The translation of χοῖνιξ (a dry measure slightly less than a quart) in Rev. 6:6 (KJV MEASURE). *See* WEIGHTS AND MEASURES § C4*o*.

QUARTER, SECOND. *See* SECOND QUARTER.

QUARTERMASTER [שרמנוחה] (Jer. 51:59); KJV QUIET PRINCE. An officer in charge of rations, supplies, etc., for the troops, and possibly custodian of tribute. The KJV translation is inappropriate for the position of Seraiah. A slight orthographic change or metathesis could make this into "prince of the camp." But only a slight change of vowels, as suggested by the versions, makes this "prince of tribute," and so preferably "quartermaster."

See also PRINCE.

C. U. WOLF

QUARTUS kwôr'təs [Κούαρτος; Lat. *Quartus,* fourth] (Rom. 16:23). A Christian man who sends a greeting through Paul. He is also mentioned in the subscription to I Corinthians in the Textus Receptus.

F. W. GINGRICH

QUATERNION kwə tûr'nĭ ən. KJV translation of τετράδιον (RSV SQUAD).

QUEEN [מלכה (Esth. 1:9), גבירה (I Kings 15:13), שגל (Neh. 2:6); Aram. מלכתא (Dan. 5:10); βασίλισσα]. A feminine ruling sovereign or the consort, widow, or mother of a monarch.

1. Queen regnant. The queens who ruled as sovereigns of a nation were not unknown in the ancient Near East. The Bible reports two non-Israelite queens, the queen of Sheba (*see* SHEBA, QUEEN OF; I Kings 10; II Chr. 9) and the CANDACE of the Ethiopians (Acts 8:27). The Hebrews had no legitimate ruling queen, except ATHALIAH, who seized the throne after the death of her son, Ahaziah (II Kings 11:1). She misused her influence as queen dowager and queen mother to usurp the power of the throne for seven years (vs. 4). The case of Hatshepset of Egypt (*ca.* 1500 B.C.) might serve as an extrabiblical parallel. Both queens attained the supreme power by illegal seizure.

2. Queen consort. It appears that the queen, as the wife of the ruling sovereign, had no unique official status, either in Israel or in Judah. In Persia, the queens Vashti (Esth. 1:9) and Esther were required to show absolute obedience to their husband (1:13-22), in spite of their being crowned (2:17); and, similarly, Bathsheba bowed and did obeisance to David (I Kings 1:16, 31). However, as the exception to the rule, Saul's daughter Michal mocked and defied her royal husband, David, without penalty (II Sam. 6:20-23). The place of the queen was the place of honor at the right of the king (Ps. 45:9—H 45:10). In the N kingdom, at least, Queen Jezebel had influence enough to threaten the life of Elijah (I Kings 19:1-3) and to plot the stoning of Naboth (21:5-16). Marriages such as that of David and Maacah, the daughter of Talmai, king of Geshur (II Sam. 3:3); Solomon and the Pharaoh's daughter (I Kings 3:1); Ahab and Jezebel, the daughter of Ethbaal of Tyre (I Kings 16:31); and Jehoram of Judah and Athaliah of Israel (II Kings 8:25-27) served, certainly, as tokens of peaceful diplomatic relationships and alli-

ances between the powers involved. The personal influence of a queen probably depended, in large measure, on the political weight—or lack of weight—of her kin. Besides the queen, there were also royal consorts of lesser importance who were indiscriminately called queens (Song of S. 6:8-9). These royal wives, or "princesses," had a status slightly higher than that of a concubine (I Kings 11:3; cf. Song of S. 6:8-9).

3. Queen mother. If the role of the queen consort was not too significant, the role played by the queen mother was more important. The influence of the mother of the ruling king was great in Egypt, Mesopotamia, and in the Hittite Empire. The queen mother had an official status in Judah, as is shown by the incident in which Asa of Judah removed Maacah, his mother, as queen mother because of her cultic offenses (I Kings 15:13). The queen mother was greeted by the king with signs of honor. Solomon rose and bowed before Bathsheba, the queen mother, and a throne was placed for her at the right side of the king (I Kings 2:19). The queen mother probably had a crown (Jer. 13:18). She is repeatedly mentioned together with the king (Jer. 13:18; 22:26; 29:2). The importance of the queen mother in Judah might be illustrated also with the fact that the names of most of the Judean queen mothers are preserved in the biblical account (e.g., I Kings 14:21; 15:2, 10; etc.). Athaliah's ability to usurp the Judean throne and to keep it for seven years after the Omri dynasty, her paternal family, was massacred in Israel (II Kings 11:1-3) is additional proof of the considerable power and influence of the queen mother.

The status of the queen mother in the N kingdom was not of less importance than it was in Judah. In the time of Jehu's revolt, the visiting kinsmen of Ahaziah went to visit "the royal princes and the sons of the queen mother" (II Kings 10:13). That the names of only two queen mothers, Zeruah (I Kings 11:26) and Jezebel, were preserved does not mean that the queen mother had no influence in Israel (cf. II Kings 9:22); this fact can be explained by the unfavorable attitude toward the N kingdom of the Deuteronomic editor of the books of Kings.

The NT references to queens do not shed any additional light upon the status or office of the queen (Matt. 12:42; Luke 11:31; etc.).

QUEEN OF HEAVEN. The object of worship, particularly by women, in Judah in the time of Jeremiah; cakes (כונים), possibly shaped as figurines, were offered to her with libations (Jer. 7:18; 44:17-19, 25). Jeremiah censures the Jewish refugees in Egypt after the fall of Jerusalem for burning incense and offering libation to the queen of heaven. From the second reference this cult seems to have been designed to secure material welfare. From these two isolated references, however, it is not possible to determine with certainty the object of worship, the more so because of variant readings. The MT מלכת is an unusual form of מלכה, the normal word for "queen," and certain MSS read מלאכת ("handiwork," "the heavenly handiwork"), meaning presumably the stars; this was understood by the LXX translators in Jer. 7:18, where "the heavenly host" (τῇ στρατιᾷ τοῦ οὐρανου) is read, supported by the Targ., which reads "the star(s) of heaven" (כוכבת שמיא). If "the queen of heaven" is to be read—which seems more probable—the reference might be to Ishtar, the goddess of love and fertility, who was identified with the Venus Star and is actually entitled "Mistress of Heaven" in the Amarna tablets. The difficulty is that the Venus Star was regarded in Palestine as a male deity (*see* DAY STAR), though the cult of the goddess Ishtar may have been introduced from Mesopotamia under Manasseh. It is possible that Astarte, or ASHTORETH, the Canaanite fertility-goddess, whose cult was well established in Palestine, had preserved more traces of her astral character as the female counterpart of Athtar than the evidence of the OT or the Ras Shamra texts indicates. The title "Queen of Heaven" is applied in an Egyptian inscription from the Nineteenth Dynasty at Beth-shan to "Antit," the Canaanite fertility-goddess Anat, who is termed "Queen of Heaven and Mistress of the Gods." This is the most active goddess in the Ras Shamra Texts, but in Palestine her functions seem to have been taken over largely by Ashtoreth.

QUINTUS MEMMIUS. *See* MEMMIUS, QUINTUS.

QUIRINIUS kwĭ rĭn'ĭ əs [Κυρήνιος] (Luke 2:2); KJV CYRENIUS sī rē'nĭ əs. The Roman governor of Syria, a census by whom is given as the date of the Nativity of Jesus. A census taken under Quirinius is known from Josephus, but it clashes both in date and in scope with the meager data provided in Luke, and out of this clash there has emerged an old and oft-debated problem in gospel study.

Bibliography

A. ***CAREER.*** P. Sulpicius Quirinius was elected consul of Rome in 12 B.C. He was sent to lead an expedition against rebel mountaineers (the Homodenses) in Alecia, and for his successes received at Rome the honor of a triumph. In A.D. 2 he accompanied Gaius Caesar eastward as his tutor. Appointed legate of Syria in 6, he held the position for several years. He died in 21 in Rome; the Emperor Tiberius, despite Quirinius' unpopularity, provided a public funeral (Tac. Ann. 3.21, 48).

B. ***THE NARRATIVE IN LUKE 2:1-3.*** **1. The difficulties.** ***a. The date of the census.*** Luke early in his narrative (1:5) has allocated the nativity events to the "days of Herod the King."

The continuing narrative (2:1-2) relates that "in those days a decree went out from Caesar Augustus that all the world should be enrolled. This was the first enrollment when Quirinius was governor of Syria."

Herod died in 4 B.C. His son Archelaus was deposed in A.D. 6, and Judea was governed thereafter by a series of procurators (among them Pontius Pilate, 26-36; see Luke 3:1). Josephus (Antiq. XVII.xiii.5; XVIII.i.1) relates that on the deposition of Archelaus, a census (enrollment) for tax purposes took place in Judea, a procedure understandable as a consequence of the shift in authority. If Luke and Josephus are narrating the same event, then the date according to Luke was 4 B.C.; according to Josephus it was A.D. 6 or 7.

b. The scope of the census. The account in Josephus limits the census to Palestine; Luke has stated that *"all the world* should be enrolled." No information is available anywhere about a world-wide census, and certainly not about this particular one.

Luke 2:3 reads: "And all went to be enrolled, each to his own city." While evidence exists that a return to one's native residence for purpose of tax enrollment was required in a limited area (see Pap. London 904, vol. III, p. 124, cited in Creed, *The Gospel According to Luke,* p. 33), the chaos and confusion which could result if "all the world" returned to their native homes scarcely suggests that such a universal requirement would ever be made, let alone enforced. (Harmonizers take the "all" of 2:3 to be limited to residents of Syria.)

Moreover, if a universal census was decreed in the time of Herod, why is Josephus completely silent on it?

c. The place of Jesus' birth. In Luke's context, the census is used for two purposes: it seeks, passingly, to establish the date; primarily, however, it gives the reason for the birth in Bethlehem of the baby previously conceived in Galilee (see 1:24). I.e., had the census not required Joseph and Mary to journey to Bethlehem, Jesus would have been born in Galilee.

Neither Mark nor John states that Jesus was born in Bethlehem. Mark 6:1 supposes, or at least implies, that Jesus was born in Nazareth; John 7:41-43 similarly seems to fix Nazareth, not Bethlehem, as the birthplace. Many scholars reject the birth in Bethlehem as unhistoric, citing their basis in part as the difficulties arising from the "census of Quirinius."

d. The "first" census. Finally, the words translated "This was the first enrollment when Quirinius was governor of Syria," have been translated differently. One proposal reads: "This census was the first of those which took place under Quirinius"; a second reads: "This was the census which took place before Quirinius was governor." If under Quirinius one and only one census enrollment took place, then Luke and Josephus are irreconcilable. If, though, more than one census took place, then reconciliation becomes possible.

2. Proposed solutions. ***a. The harmonization.*** The diverse translations just cited are efforts to reconcile Luke and Josephus. It has been noted that Acts 5:37 reveals that Luke knew of the A.D. 6 census, and therefore he alludes to an earlier, and first census, in 4 B.C. McKinnon, relying largely on the views of Ramsay (especially *The Bearing of Recent Discovery on the Trustworthiness of the NT,* pp. 238-39), considers neither the problem raised by "all the world" nor the unfeasibility of a general movement to native cities of all residents of the Empire.

b. The vindication of Luke. Ramsay escaped from the difficulty by a series of steps. First, Tertullian (Marcion IV.19) dated the Nativity under Saturninus, the legate from 9-6 B.C.; second, he believed that Quirinius was at that time associated with Saturninus; hence, Ramsay assigned the Nativity to 8 B.C. and took literally the world-wide census for that time suggested by Luke and of which no reflection is found at all in Josephus. Ramsay had ample predecessors (and still has followers) whose bent is to suppose that since Luke must be right, the inherent difficulties are no more than arguments based only on the silence of Josephus. Schürer (*A History of the Jewish People in the Time of Jesus Christ*) speaks of two different courses: either to discover "in Josephus traces of a Roman census in the time of Herod," or to deny "that the silence of Josephus proves anything." His discussion will persuade the persuadable that there are no traces at all of a census under Herod, and that "in this case the argument [from silence] is of some importance. In regard to no other period is Josephus as well informed, in regard to none is his narrative so full, as in regard to the last years of Herod."

c. The rejection of Luke. The solution of the problem, though inevitably unpalatable to many, consists in recognizing with Creed that "Luke's history is not always dependable. There can be little doubt that in his account of Gamaliel's speech in Acts V he has wrongly dated the rising of Theudas . . . . It is not unreasonable to suspect a similar error here."

d. The* Tendenz *in Luke. It is likely, however, that we deal not alone with a minor inaccuracy, for which a tentative explanation was offered, two generations ago—that of a faulty use of Josephus (Krenkel, *Lukas und Josephus*). More probable than faulty use was an indifference to historical exactness which characterized Luke, for whom history was a fine art, not the modern precise science.

Luke assumed, with Matthew, that the Messiah must have been born in Bethlehem. Whereas Matthew seems to take Bethlehem as the home of Jesus, for Luke, Nazareth is the home. The purpose of Luke's narrative is "to bring Joseph of the house of David to the city of David for the birth of the Messiah."

The setting aside of the accuracy of the census of Quirinius necessarily sets aside the birth in Bethlehem.

It is not known precisely where or when Jesus was born. *See* JESUS CHRIST § C.

S. SANDMEL

QUIVER [אַשְׁפָּה, *cf.* Ugar. *utpt,* Akkad. *išpatu;* תְּלִי, *from root* to hang, suspend (Gen. 27:3), LXX φαρέτρα, *cf.* Aram. תלי *attested only once* (A. E. Cowley, *Aramaic Papyri . . .* , no. 30, line 8), *seemingly in general sense of* weapons]. A container for carrying arrows. The quiver was usually made of leather, ornamented with metal or paint, and hung over the shoulder. In the Annals of Ashurbanipal the goddess Ishtar of Arbela appeared in a dream "with quivers hung [*tullāta išpāti*] to the right and the left," but mortals could use but one.

In the Bible "quiver" is usually used metaphorically: in Ps. 127:5, of the family circle; in Isa. 49:2, of the Servant as contained in God's quiver; and in Lam. 3:13, of chastisement. Elsewhere it is simply part of military equipment. Fig. ELA 23.

***QUMRAN, KHIRBET** kĭr'bĕt kōōm'rän. The ruins of an Essene monastery which was the center of the community of the DEAD SEA SCROLLS. Khirbet Qumran is situated at the W coast of the Dead Sea, 8½ miles S of Jericho. *See* SALT, CITY OF.

QUOTATIONS. Explicit direct quotations occur very rarely in the OT but comparatively frequently in the NT.

1. In the OT. The sparse direct quotations are from earlier books that have perished. Twice the Book of Jashar is directly quoted (Josh. 10:12*b*, 13*b;* II Sam. 1:19-27; *see* JASHAR, BOOK OF). The "Book of Song," quoted according to the LXX in I Kings 8:53*a*, may be the same book from which I Kings 8:12-13 was taken. For a geographical detail Num. 21:14-15 directly cites an incomplete sentence from a "Book of the Wars of Yahweh" (*see* WARS OF THE LORD, BOOK OF); possibly the "Song of the Well" (vss. 17-18) came from the same book.

Explicit but indirect quotations abound in I and II Kings from two lost works referred to as the Books of the Chronicles of the Kings—one of Israel and the other of Judah (*see* BOOKS REFERRED TO). The canonical accounts of the several reigns are probably condensations of the appropriate passages of these Chronicles. I and II Chronicles often profess to quote indirectly a book with many different names; perhaps its real name was "Commentary on the Book of the Kings" (II Chr. 24:27), but whether this book was real or a fiction is a moot question.

Tacit quotation is obvious in the case of the long-recognized Memoirs of Nehemiah (*see* EZRA AND NEHEMIAH, BOOKS OF); the "official" documents in Ezra-Nehemiah are less certainly quoted. Tacit quotation from OT book to OT book is clear in the verbatim and quasi-verbatim repetition of large blocks from Samuel and Kings in Chronicles and from earlier codifications of law in later ones. The many poetic passages in a prose setting should probably be regarded, not as quoted, but as simply here recorded (to our eyes, for the first time, but it makes little difference whether someone may also earlier have written them down). Between the OT and the literatures of Mesopotamia and Egypt, of Canaan (Ras Shamra), and even of Greece, there are many points of contact, in subject matter, expression, and outlook. There may even be some literary indebtedness, but this does not seem to involve actual quotation. Law and proverbial wisdom, myths and philosophies, respect neither political nor cultural boundaries.

2. In the NT. The situation here is greatly altered by the existence of scripture, what we know as the OT, which is explicitly quoted some 150 times and tacitly quoted some 1,100 additional times. In general, the purpose of quoting the OT is to secure confirmation of some NT statement by an authority respected by Jews, Christians, and God-fearing Gentiles, but the OT is also occasionally quoted against itself (Mark 10:2-9) or criticized (Matt. 5:38-39) or polemically interpreted contrary to some other interpretation (Mark 9:12; I Cor. 9:9). What is thereby confirmed may be a matter of conduct (Mark 2:25), a general principle (Matt. 15:8-9), or a theological insight (Rom. 3:10-18). Very often in Matthew, a few times in John, and sporadically elsewhere, an event is set forth as divinely willed by appeal to an OT passage which predicts it or can be made to predict it. But there are also many references to the OT involving quotation without argumentative intent—comparisons like Matt. 12:40; I Cor. 10:7—and still more cases where OT allusions are either reflections of the common culture out of which the NT writers come or literary adornments from the normative literature recognized by those to whom the NT writings were addressed (particularly common in Paul, Acts, Revelation).

By and large, the OT is quoted according to the LXX, the language rarely reflecting any knowledge of the Hebrew text. The chief exception to this generalization is the group of forty-three quotations in Matthew which are peculiar to it (not Synoptic). Of this group only eleven agree with some MS of the LXX; the thirty-two others differ from the LXX and all known Greek versions, usually by being closer to the Hebrew text. The compiler of Matthew (or the tradition behind him) must have used either the Hebrew directly or a Greek version lost to us.

The only passage from noncanonical Jewish literature explicitly adduced in the NT, though not verbatim, is I Enoch 1:9 in Jude 14, but there are a score of echoes from and allusions to such books. Pagan writers quoted, though without acknowledgment, are Aratus of Tarsus (Acts 17:28), Menander (I Cor. 15:33), and Epimenides (Tit. 1:12). Gentile literary forms, but not actual quotations, are present in the lists of household duties, the catalogues of virtues and vices in Paul (*see* LISTS, ETHICAL), and in the mannerisms of the Stoic diatribe frequently present in the Pauline letters. Paul occasionally alludes to a letter received by him (I Cor. 7:1, etc.) in such a

way as to allow some inference as to its contents. I Cor. 6:12; 8:1 are regarded by some as direct quotations; II Cor. 10 probably contains some direct quotations, perhaps twisted by Paul's irony.

There is no explicit quoting of one NT book by another, but there is considerable factual "quoting," if one may so designate the more exact of the duplications of Markan pericopes in Matthew and Luke, the use of Jude by II Peter, and the somewhat less apparent use of Colossians in Ephesians. Like the poetic enclaves of the OT, the NT has its hymnic enclaves, which, when recognized, aid the scholar to go a step behind the written document, which may not be literally quoting but only bringing hitherto unwritten hymnody to book. Various scholars see the following passages as belonging to this class: I Cor. 13; Eph. 5:14; Phil. 2:6-11; Col. 1:15-18; I Tim. 3:16; and the various fragments of heavenly liturgy scattered through Revelation. If tradition, though impersonal and unwritten, can rightly be said to be "quoted," this is twice explicitly done by Paul (I Cor. 11:23; 15:3) and implicitly often, especially in his parenetic passages; and it is constantly done in the five narrative books of the NT. K. GROBEL
