The term is commonly read *shellō*, "to whom" or "that which is," a contraction of 'asher lō. The RSV reads: "until he comes to whom it [the 'scepter' or 'ruler's staff'] belongs." Most of the versions read the word similarly, and the rendering is supported by Ezek. 21:27—H 21:32: "until he comes whose right it is." A major difficulty is syntactic, inasmuch as the phrase is left without a subject. The LXX seems to derive the meaning: "until the things reserved for him come."

There is no MS support for the emendation *mōshelō*, "his ruler." The same sense may be derived, however, from Akkadian *shēlu* or *shīlu*, "prince, ruler." Repointed as *shayyālō*, "his ruler," it would admirably solve the semantic problem. Assyrian technical terms for civil and military office are found elsewhere in Hebrew (see, e.g., RAB-SHAKEH; TARTAN), although they occur in literature from the ninth cen-

tury on—i.e., after Assyria came into direct contact with the Hebrews.

Most exegetes agree that a Judean leader is referred to in the verse; but whether he is a tribal head, a Davidic king, or a future messiah is problematic. The view that Gen. 49:10b is a later messianic gloss is presently less favored. The meaning of the Shiloh oracle must be sought, not only in the context of the Blessing of Jacob, but also in the light of the closely related Balaam oracles (Num. 22-24) and the Blessing of Moses (Deut. 33). All three reflect the political expansion of the United Monarchy. The person alluded to in Gen. 49:10 (cf. also the "star" and "scepter" of Num. 24:17-19) is David the conqueror. None of the ethico-religious aspects of the Davidic deliverer (e.g., Isa. 9:2-7; 11:1-9) is mentioned. Centuries later, when a messiah of Judean origin was expected, the passage was interpreted of the righteous offshoot of David (cf., e.g., Ezek. 21:27 and the "Messiah of Righteousness" in a Qumran commentary on Gen. 49:10). Although the NT ignores Gen. 49, Christian interpreters since the sixteenth century have frequently identified Shiloh with the Messiah.

N. K. GOTTWALD

SHILONITE shī'lōnī nīt [שִׁילֹנִי, שִׁילֹנִי]; KJV SHILONI shī'lō'nī in Neh. 11:5. 1. A designation of the prophet AHIJAH as a man from Shiloh (I Kings 11:29).

2. A designation of a member of one of the Judean families returning from exile (I Chr. 9:5; Neh. 11:5). There are numerous differences in the names of the families listed in I Chr. 9:5; Neh. 11:5. If "Shilonites" refers to persons from Shiloh, they traced their ancestry back to a place in the N kingdom. It is more probable that השִׁילֹנִי in both passages should be vocalized "Shelanite" to indicate a descendant of SHELAH (cf. Gen. 38:5; Num. 26:20).

W. L. REED

SHILSHAH shīl'shā [שִׁלְשָׁה, see SHELESH] (I Chr. 7:37). A division of the Zophah clan of the tribe of Asher.

SHIMEA shīm'ā [שמעא, he (God) has heard] (I Chr. 2:13; 3:5; 6:30, 39; 20:7); KJV SHIMMA shīm'ā in I Chr. 2:13. Alternately: SHAMMAH shām'ā [שמחה] (I Sam. 16:9; 17:13); SHAMMUA shā mū'ā [שמוע] (II Sam. 5:14; I Chr. 14:4); SHIMEAH shīm'ā [שמעה] (II Sam. 13:3, 32), שִׁמְעָה (I Chr. 8:32); שִׁמְעִי (II Sam. 21:21 KJV; RSV SHIMEI); SHIMEAM —שמעא, from שמע, to hear] (I Chr. 9:38). 1. The third son of Jesse (I Sam. 16:9; 17:13); a brother of King David (I Chr. 2:13); and the father of Jonadab (II Sam. 13:3, 32) and Jonathan (II Sam. 21:21 KJV; I Chr. 20:7).

2. One of David's sons born in Jerusalem (II Sam. 5:14; I Chr. 3:5; 14:4).

3. A Levite of the family of Merari (I Chr. 6:30).

4. A Levite of the family of Gershom (I Chr. 6:39).

5. A Benjaminite, descendant of Jeiel (I Chr. 8:32; 9:38).

Bibliography. M. Noth, *Die israelitischen Personennamen* (1928), pp. 38, 184-85. T. M. MAUCH

SHIMEATH *shīm'ī āth* [שמע'א] (II Kings 12:21; II Chr. 24:26). The mother (or father?) of one of the conspirators who murdered Joash king of Judah. The name of the murderer was Jozacar according to II Kings 12:21, Zabad or possibly Jehozabad according to II Chr. 24:26.

See also SHIMRITH.

D. HARVEY

SHIMEATHITES *shīm'ī ā thīts* [שמע'איתים]. A subdivision of CALEBITES (I Chr. 2:55; see vs. 18-20, 50b-55), named in a list of three "families . . . of the scribes that dwelt at Jabez" (site unknown; perhaps somewhere in the center of Judah). The text is obscure and identification uncertain. The Vulg. reads *resonantes*; perhaps the name means "traditionists" (cf. שמע, "hear"). The name may be derived from an unknown person or place. According to vs. 55b the Shimeathites may have been one of the groups of KENITES who had participated in the northward movement to occupy S Palestine during the Conquest, or one of the groups of Kenites who were pushed northward by Edomite expansion during the Exile.

Bibliography. E. Curtis and A. Madsen, *Chronicles ICC* (1910), pp. 97-98; W. Rudolf, *Chronikbücher*, HAT (1955), pp. 22-23. T. M. MAUCH

SHIMEI *shīm'ī* [שמעי], Y has heard (*a shortened form*); Apoc. Σομείς, Σεμεί, Σεμείς; SHIMEITES —its (Num. 3:21; Zech. 12:13); KJV SHIMITES *shīm'īts* in Num. 3:21. Alternately: SHEMA *shē'mā* [שמע] (I Chr. 8:13). KJV alternately: SHIMEAH *shīm'ī ā* (*Qere*, II Sam. 21:21); SHIMHI —*hī* (I Chr. 8:21); SHIMI *shīm'ī* (Exod. 6:17); KJV Apoc. SAMIS *sā'mīs* (I Esd. 9:34); SEMEI *sēm'ī* (I Esd. 9:33); SEMIS *sēmīs* (I Esd. 9:23). 1. A grandson of Levi; the second of two sons of Gershon. Thus he was the founder of a subdivision of the families of Levites descended from Gershon (Exod. 6:17; Num. 3:18; I Chr. 6:17; 23:7, 10). This subdivision of the tribe of Levi is read "the family of the Shimeites" in Num. 3:21; Zech. 12:13. In I Chr. 23:9 "Shimei" probably is a mistake for one of the sons in vs. 8. "Shimi" in Exod. 6:17 KJV must be an error.

2. A Benjaminite, descendant of Gera. He belonged to the family of the house of Saul, which had lost the kingship to David. When David was fleeing Jerusalem before the revolt of Absalom, at Bahurim on the way to the Jordan, Shimei cursed David and threw stones at him. Shimei voiced the protest latent in some Benjaminite quarters (see II Sam. 20:1) that David had supplanted the house of Saul, and he charged David with bloodguilt (cf. II Sam. 3:37; 4:11; see 21:1-14; see also I Sam. 28-29). David prevented the killing of Shimei, taking the words of Shimei as sent by Yahweh and hoping that Yahweh would balance the curse with eventual blessing (II

Sam. 16:5-13). After the revolt of Absalom was overcome, Shimei with a thousand Benjaminites rushed to be among the first to meet David as he was about to recross the Jordan on his return to Jerusalem. He begged forgiveness, and David with an oath granted royal clemency on the occasion of Yahweh's grace reestablishing his reign (II Sam. 19:16-23). One of David's deathbed charges to Solomon was that he remove the curse of Shimei which still rested upon David's house and threatened the secure establishment of the dynasty. David's oath of clemency was not binding upon Solomon, and he was to watch for an opportunity to eradicate the curse by killing Shimei (I Kings 2:8-9). Solomon commanded Shimei to remain in Jerusalem, telling him that if he left Jerusalem on any pretext, it would mean his death, and Shimei agreed. Three years later Shimei violated his oath by going to Gath to bring back two runaway slaves. Thus freed from all taboos regarding Shimei, Solomon upon his return executed him (vs. 36-46).

3. A brother of King David (II Sam. 21:21).

4. One of those who did not support the usurpation attempted by Adonijah (I Kings 1:8). He probably was a man who had become prominent during David's reign. Possibly he is to be identified with the son of Ela who was one of Solomon's twelve administrative officers, in charge of the apportionment from the district of Benjamin (4:18).

5. A brother of Zerubbabel (I Chr. 3:19).

6. A family or clan of Simeon outstanding in its size (I Chr. 4:26-27).

7. Eponym of a family of Reuben (I Chr. 5:4).

8. A Levite of the family of Merari (I Chr. 6:29).

9. A Levite of the family of Gershom (I Chr. 6:42).

10. A Benjaminite, head of a father's house (I Chr. 8:13, 21). KJV "Shimhi" must be an error.

11. A postexilic family of Levitical singers of the Jeduthun group (I Chr. 25:3, 17); possibly of Davidic origin. See JEDUTHUN; MUSIC.

12. A Ramathite, one of David's officers over the king's possessions. He was in charge of the vineyards (I Chr. 27:27).

13. A Levite of the family of Heman. He took a leading part in the cleansing of the temple during the reign of Hezekiah (II Chr. 29:14).

14. A Levite, second official in charge of the overseers of the contributions, tithes, and dedicated things, securing their proper management for the support of the temple clergy. The account describes Hezekiah's reform but reflects postexilic times (II Chr. 31:12-13).

15. A Levite among those who put away foreign wives and their children according to Ezra's reform banning foreign marriage (Ezra 10:23; I Esd. 9:23).

16. A son of Hashum among those who put away foreign wives and their children according to Ezra's reform banning foreign marriage (Ezra 10:33; I Esd. 9:33).

17. A son of Binnūi among those who put away foreign wives and their children according to Ezra's reform banning foreign marriage (Ezra 10:38; I Esd. 9:34).

18. A Benjaminite, a descendant of Kish and a remote ancestor of Mordecai (Esth. 2:5).

T. M. MAUCH

SHIMEON shīm'ī ʾən [שמעון, *perhaps diminutive for* (God) has heard (*same as* SIMEON)] (Ezra 10:31). Alternately: SIMON CHOSAMAEUS sī'mən kōs'ə mē'əs Σίμων Χοσάμαεος (A, *see below*) (I Esd. 9:32); KJV SIMON CHOSAMEUS. One of the contemporaries of Ezra who are listed as having married foreign wives. CHOSAMAEUS, which appears as his second name in I Esdras, must not refer to this individual, but perhaps represents a corruption of one or more of the names of Ezra 10:32, omitted in I Esdras, or of Shemaiah (Ezra 10:31), or again of Hashum (vs. 33).

Bibliography. M. Noth, *Die israelitischen Personennamen* (1928), pp. 38, 60n, 185. B. T. DAHLBERG

SHIMHI. KJV form of SHIMEI 10.

SHIMI; SHIMITES. KJV forms of SHIMEI 1; SHIMEITES.

SHIMMA. KJV form of SHIMEA 1.

SHIMON shī'mən [שִׁמְוֹן] (I Chr. 4:20). A family or clan of the tribe of Judah.

SHIMRATH shīm'rāth [שמרת, *from* שמר, watch over, preserve (*a shortened form*)] (I Chr. 8:21). A member of the tribe of Benjamin listed as one of the sons of Shimei.

Bibliography. M. Noth, *Die israelitischen Personennamen* (1928), pp. 38, 177.

SHIMRI shīm'rī [שמרי, *from* שמר, watch over, preserve (*a shortened form*)] (I Chr. 26:10). 1. A Simeonite, an ancestor of Ziza (I Chr. 4:37).

2. The father of Jediael and probably Joha, two of David's Mighty Men (I Chr. 11:45).

3. The chief son of Hosah of the line of Merari, in a division of temple gatekeepers, in a postexilic alignment of Levites ascribed to David (I Chr. 26:10).

4. A Levite of the family of Elizaphan. He is ascribed a leading part in the cleansing of the temple during the reign of Hezekiah (II Chr. 29:13).

T. M. MAUCH

SHIMRITH shīm'rīth [שמרית, *probably* (God) has protected] (II Chr. 24:26). Alternately: SHOMER shō'mər [שמר, keeper, protector] (II Kings 12:21). The Moabite mother of Jehozabab, one of the conspirators who killed Joash, king of Judah.

See also SHIMEATH.

SHIMRON shīm'rōn [שמרון; *cf. place names* שמיר, שמרון, and *personal names* שמרי, שמרת, שמריה]; **SHIMRONITES** —רֹמִי nits; KJV SHIMROM —rōm in I Chr. 7:1. 1. The fourth son of Issachar (Gen. 46:13; Num. 26:24; I Chr. 7:1); ancestral head of the Shimronites (Num. 26:24).

2. A Canaanite royal town (Josh. 11:1), later allotted to Zebulun (19:15). Its king joined Jabin's confederacy against Joshua and was defeated. Tell Semuniya, a site located approximately seven miles W of Nazareth, has been suggested as a possible identification. This is unlikely, since surface explorations have shown that the site was abandoned during

the period of the Israelite conquest and settlement.

G. W. VAN BEEK

SHIMRON-MERON —mīr'ōn [שמרון מרון]. A Canaanite royal town, whose king Joshua defeated (Josh. 12:20). It is probable that "Shimron" and "Meron" should be read separately, with the LXX.

SHIMSHAI shīm'shī [שמשי, sun (-child); Apoc. Σαμέλλιος]; KJV Apoc. SEMELLIUS sī mēl'ī əs. An official in the Persian government service for the province "Beyond the River" (Trans-Euphratia), which included Palestine. With his superior, Rehum, he cosponsored a letter to Artaxerxes opposing the rebuilding of postexilic Jerusalem by the Jews (Ezra 4:8-16; I Esd. 2:16-24). With a supporting reply from the royal court, they with their associates forced this work to a halt (Ezra 4:17-24; I Esd. 2:25-30; *see bibliography*).

Bibliography. M. Noth, *Die israelitischen Personennamen* (1928), p. 223; R. A. Bowman, *Exegesis of Ezra, IB*, III (1954), 600. B. T. DAHLBERG

SHINAB shī'nāb [שנאב; *cf.* Akkad. *Sin-a-bi*, (the god) Sin is my father (*Ur Excavation Texts*, V, 38, 3; 534, 3); *Adad-a-bi*; *Samaš-a-bi*; LXX Σεννααβ] (Gen. 14:2). King of Admah; one of the five S Palestinian rulers who rebelled against Chedorlaomer, provoking his punitive campaign in which Tidal, Amraphel, and Arioch participated.

L. HICKS

SHINAR shī'nār [שִׁנְעָר]. A name for Babylonia. According to biblical tradition Nimrod ruled Babel, Erech, and Accad in the land of Shinar (Gen. 10:10). These three cities can be identified: Erech as ancient Uruk, present-day Warka; Babel as Babylon; and Accad as the ancient Akkade, not yet located on the ground but to be sought for in the region between Babylon and Baghdad. The land of Shinar must accordingly have comprised the territories known anciently as Sumer and Akkad, later as Babylonia, and stretching from slightly N of modern Baghdad to slightly S of Nasiriyeh. Strangely enough, no indigenous term for these territories which could underlie the Hebrew term "Shinar" is known. Comparison with the term "Sumer" has been made, but the differences in form of the terms "Sumer" and "Shinar" have not been convincingly accounted for (*see* SUMER). Other geographical terms which have been adduced lack the proper geographical reference.

According to biblical tradition the tower of Babel was built in Shinar (Gen. 11:2). An as-yet-unidentified king of Shinar, Amraphel, is mentioned as an opponent of Abram in the problematical traditions of Gen. 14:1, 9. In Isa. 11:11 it is prophesied that the Lord will recover a remnant of his exiled people, in part from Shinar; and in Dan. 1:2 it is related that Nebuchadnezzar II of Babylon took temple treasures from the temple in Jerusalem to Shinar when he had captured the city. The "ephah" in Zechariah's vision was to be taken to the land of Shinar (Zech. 5:11).

T. JACOBSEN

SHION shi'ōn [שִׁיּוֹן]; KJV SHIHON shi'hōn. A border town in Issachar (Josh. 19:19). The exact location of the site is unknown. One suggested identification is 'Ayun esh-Sha'in, located ca. three miles E of Nazareth, but this is completely unsatisfactory. Another site, Sirin, located approximately fourteen miles SE of Mount Tabor, has also been proposed, because the writing of this name resembled that of Shion in one period. This identification is as yet archaeologically uncertain.

G. W. VAN BEEK

SHIPHI shi'fi [שִׁפְיָי, abundance, overflow] (I Chr. 4:37). A Simeonite descended from Shemaiah; the father of Ziza.

SHIPMITE shif'mit [הַשְּׁפִיטִי] (I Chr. 27:27). A native of Shepham(?) or Siphmoth(?). See ZABDI 3.

SHIPHRAH shif'ra [שִׁפְרָה, see below] (Exod. 1:15). One of the two Hebrew midwives (see also PUAH) ordered by the king of Egypt to kill all male children (see MIDWIFE). The name appears as *Sp-ra* in a list of Egyptian slaves, and means "fair one." The Aramaic form is שִׁפְרָא, SAPHIRA. Later Jewish legends identify Shiphrah with JOCHEBED.

Bibliography. L. Ginzberg, *Legends of the Jews*, II (1910), 251; W. F. Albright, "Northwest-Semitic Names in a List of Egyptian Slaves," *JAOs*, LXXIV (1954), 229.

J. F. ROSS

SHIPHTAN shif'tān [שִׁפְטָן, (the deity) has judged(?)] (Num. 34:24). The father of the Ephraimite leader Kemuel, who was selected to help superintend the distribution of W Jordanian Canaan among the tribes to occupy that territory.

Bibliography. M. Noth, *Die israelitischen Personennamen* (1928), pp. 38, 187.

R. F. JOHNSON

SHIPMASTER [καπερνήτης] (Rev. 18:17). The steersman or helmsman, the ship's pilot, who was sometimes also the owner of the ship.

In his vision of the mourning over the destruction of Rome, the author of Revelation records the cry which the shipmasters and other seafaring men uttered as they saw smoke rising from Rome while it was burning: "What city was like the great city?"

In Acts 27:11 the same Greek word is translated "CAPTAIN," signifying the one who was responsible for the navigation of the ship.

B. H. THROCKMORTON, JR.

maritime enterprise, and then not from the Mediterranean but from the Gulf of Aqabah. However, throughout her history, Israel did know ships and sailing from contacts with the Phoenicians.

1. Biblical references to ships
 2. Egyptian sources on Phoenician sailing
 3. Assyrian ships and sailing
 4. Pictures from Phoenicia and Palestine
- Bibliography

1. **Biblical references to ships.** In the period of the judges the N tribes of Asher (Judg. 5:17) and Zebulun (Gen. 49:13; Judg. 5:18), as well as Dan on the Philistine coast (Judg. 5:17), appear to have sailed the Mediterranean. Solomon built a fleet of ships at EZION-GEBER at the head of the Gulf of Aqabah (I Kings 9:26-28; II Chr. 8:17-18), with the help of HIRAM, and engaged in trade with OPHIR. Sennacherib in an account of his sixth campaign (*LAR* II, 319) recounts a similar use of Phoenician builders and sailors: "Hittite [Syrian] people, plunder of my bow, I settled in Nineveh. Mighty ships (after) the workmanship of their land, they built dexterously. Tyrian, Sidonian and Cyprian sailors, captives of my hand, I ordered (to descend) the Tigris with them." Another reference in I Kings 10:22 (cf. II Chr. 9:21) is to Solomon's "fleet of ships of TARSHISH at sea with the fleet of Hiram." Once again, in the time of Jehoshaphat, when Edom was weak, an attempt was made to revive the Ophir trade in "ships of Tarshish," but the ships were wrecked at Ezion-geber (I Kings 22:47-48; cf. II Chr. 20:35-37). In Ezek. 27, the lament over Tyre, there is a description of Phoenician ships with specific mention of nautical terms such as מִשֹּׁשׁ (oar), חָבֵל (pilot), מַלְחָה (mariner), מַפְרֵשׁ (sail), מַרְוֵה (mast), etc. Elsewhere in the OT there appear terms such as נָס (sail; Isa. 33:23); חָבֵל (mast[?]; Prov. 23:34).

2. **Egyptian sources on Phoenician sailing.** As early as the Old Kingdom of Egypt timber was shipped by sea from Phoenicia to Egypt. Annals of the reign of Snefru (ca. 2650) mention ships of over 170 feet in length and the bringing of forty ships filled with cedar logs to Egypt. A century later, at the time of Sahu-Re, there are pictured ships, one of which has a rudder of three oars and its mast lashed down, carrying Syrian captives (Fig. SHI 45). Pepi I took troops by sea and "made a landing at the rear of the heights of the mountain range on the north of the land of the Sand-Dwellers" (*ANET* 228), possibly the Carmel Range. Contacts between Egypt and Byblos in Phoenicia continued in the Middle Kingdom. An official of Thut-mose III of the New Kingdom tells of bringing timbers from Lebanon and of sailing on the Great Green Sea with a favorable breeze (*ANET* 243). From a little over a century before the time of Solomon comes the account of the Egyptian Wen-Amon's journey to Phoenicia to procure timber (*ANET* 25-28). In search of woodwork for the august bark of Amon-Re, he sailed from Tanis with a ship's captain and arrived at the harbor of Dor. From there he proceeded to Tyre and then to Byblos. The account speaks of twenty ships at Byblos and of fifty at Sidon.

Pictures of seagoing ships appear as early as the

***SHIPS AND SAILING IN THE OT** [generally מִנִּיָּה, ship; אֲנִי, fleet; סִפִּינָה, ship (only in Jonah 1:5); צִי, ship (Num. 24:24; Isa. 33:21); כְּלֵי גֹמָא, vessels of papyrus (Isa. 18:2)]. Because of the absence of good natural harbors on the Mediterranean S of the Carmel Range and also the domination of the coastal cities for a long period by the Philistines, the sea was a barrier and not a highway for Israel. Only during the period of Solomon did Israel engage in

45. Cast of a relief showing ships carrying Syrian captives with hands raised to the Egyptian king Sahu-Re; Fifth Dynasty (ca. 2500-2350 B.C.)

Old Kingdom in Egyptian paintings and reliefs. In addition to the relief of ships with Syrian captives from the time of Sahu-Re, there is a tomb painting at Thebes, probably from the time of Amen-hotep III (1413-1377), showing two ships approaching an Egyptian port, where seven smaller, but similar, craft are already docked (*ANEP* 111). These sailing vessels have single masts with a crow's-nest at the top, and a large rectangular sail. High prows and sterns end in platforms. On the prow stands the pilot with a long sounding pole. The rudder consists of two oars, one on each side of the stern. A scene on the wall of the temple of Ramses III at Medinet Habu depicts the battle between the Egyptians and the Sea Peoples, the group to which the Philistines belonged. Both Egyptian and enemy craft are shown. The Egyptian ship consists of a crescent-shaped keel, a single mast topped by a crow's-nest, a yard arm with furled sail, a row of oars, and a paddle serving as a rudder. The boat's prow ends in a lioness' head. The ships of the Sea Peoples are similar except for the bird's head on both prow and stern (*ANEP* 341).

3. Assyrian ships and sailing. From the time of Tiglath-pileser I (1114-1076), who recorded a voyage off the coast of the Mediterranean at Arvad, Assyrian kings made expeditions westward to the sea (*ANET* 275). Shalmaneser III's (858-824) record of his conquest of Tyre on the bronze bands from Balawat shows booty being ferried from the island on which Tyre stood (*Ezek.* 27:4) to the mainland. The boats are small, guided by a helmsman with an oar at the stern, and propelled by an oarsman seated toward the bow (*ANEP* 356). The palace of Sargon II (721-705 B.C.) at Khorsabad had a relief depicting the transporting of logs by seagoing vessels (Fig. SHI 46). The ships have high, horse-headed prows and high sterns and are propelled by both oars and a sail which could be attached to a center mast crowned with a crow's-nest. Yet another type of seagoing vessel is pictured on a relief from Sennacherib's (704-681) time (Fig. SHI 47). A three-decked warship with sharply pointed prow is driven forward by oars arranged in two rows. Shields are hung around the upper deck, on which the armed warriors sit. Note the reference in

47. A three-decked Assyrian warship, from Quyunjiq

§ 1 to Sennacherib's account of making use of Phoenician builders and seamen in the construction and sailing of his warships. For a full description of the parts of Babylonian ships and a discussion of the terms used in the texts which describe them, see the work of A. Salonen listed in the *bibliography*.

4. Pictures from Phoenicia and Palestine. From Phoenicia itself representations of ships are few, and those which do exist come from later periods than those found in Assyria and Egypt. Coins of the fourth century found at Byblos show on the obverse a Phoenician war galley with a lion-headed prow (ANEP 225). Three soldiers sit on the deck. The ship is maneuvered by means of an oar which serves as a rudder. The most complete representation of a ship discovered in Phoenicia is found on a sarcophagus found at Sidon (Fig. SHI 48) and belonging to the first century A.D. It has a high, curved stern, to which is attached a flag. Unfurled on the mainmast is a large square sail, and on a foremast is a small square sail. In Palestine itself there has been found but one picture of a ship. This is crudely scratched on a stone found at Tell Sandahannah (Fig. SHI 49) and belongs, according to the excavator, to the period from 200 B.C. to A.D. 200. Like the Phoenician ships it carried a sail and was equipped with oars. The unique feature, however, is that it is anchored by two anchors at the stern (cf. Acts 27:29, where four anchors from the stern are mentioned).

***SHIPS AND SAILING IN THE NT.** This subject is an aspect of TRAVEL AND COMMUNICATION IN THE NT and has its setting in the larger Mediterranean world.

1. Vocabulary
 2. Warships
 3. Merchantmen
 4. Ports
 5. Sea lanes
 6. Voyages
- Bibliography

1. Vocabulary. The Greek *ναῦς*, which generally refers to large vessels, is used in Acts 27:41 of the merchant ship which is carrying Paul to Rome. It occurs nowhere else in the NT.

Πλοῖον is the common NT word for "ship." It means either a large ship or a small one. No fewer than thirteen times in Acts 27:6-44 it is applied to the same merchantman in which Paul is sailing. But the word is equally at home as a designation of fishing boats on the Sea of Galilee (cf. Matt. 14:22; Mark 1:19; Luke 5:2; John 6:19).

Πλοῖάριον is a diminutive of *πλοῖον* and so should mean only "little boat," but it is also frequently used of Galilean fishing boats (Mark 3:9; Luke 5:2; John 6:22-24; 21:8). In the NT there is no longer a sharp distinction between *ναῦς*, *πλοῖον*, and *πλοῖάριον*.

Σκάφη, "small boat or skiff," occurs only in Acts 27:16, 30, 32, where it refers to the ship's boat. When Josephus (War II.xxi.8) was defending Galilee, Tiberias revolted. Whereupon he brought it back into line by threatening an attack with 230 fishing boats which he had rounded up on the Sea of Galilee. He calls the boats *σκάφη*. Thus they could be called *πλοῖον*, *πλοῖάριον*, or *σκάφη*. The words were popular synonyms. The episode from Josephus, as well as frequent references in the gospels, reveals a flourishing fishing industry on the Sea of Galilee. The boats were rowboats (Mark 6:48), but they probably used small sails also.

That the vocabulary of the NT agrees with Hellenistic usage in general is shown by Chariton's *Chaereas and Callirhoe* (ca. A.D. 150), where a small pirate vessel from Syracuse is called *κέλης* (I.vii.6; x.1; III.iii.13, 18; iv.8); *κέλης μικρός* (I.xi.2); *πλοῖον* (I.xiii.4; III.iv.6); *ναῦς* (I.xi.1; xiii.6; xiv.6). The great merchant ship *Isis*, described by Lucian (second century) in *Ship or Wishes*, is usually called *ναῦς*, but in the title and in 7, *πλοῖον*.

2. Warships. A relief found in Praeneste and now in the Vatican is thought to represent one of the ships used by Agrippa in the battle of Actium in 31 B.C.* Warships depended on oars rather than sails, for the sake of maneuverability. The most popular types at the time were biremes and triremes, although even quinqueremes and larger had been known. This one is a bireme. Only part of it is shown in the relief. It

50. Relief found at Praeneste, believed to be one of Agrippa's lighter ships at Actium; now in the Vatican

has been estimated that there were 18 oars on each side. With one man for each lower and two for each upper oar, there would be 108 rowers. The same estimate accounts for 25 mariners and 80 soldiers, thus a crew of 213. This particular ship has an outside gangway, main deck, and raised platforms, permitting three levels of fighting men. Those above could use arrows, darts, spears, etc. The length is estimated at 103 feet, the beam at 17; weight of cargo, ca. 61,770 pounds; and a displacement of 81 tons. Yet this is regarded as a warship of moderate size. Rams were standard equipment, as were grappling hooks to permit boarding and hand-to-hand fighting. Figs. SHI 50; OAR 1.

3. Merchantmen. Paul's famous trip to Rome (Acts 27) was made in three ships, at least two of which were grain ships operating between Alexandria and Rome. One of these was wrecked on Malta. Apparently there were no commercial passenger ships at the time. Passengers had to travel on freighters, whose main business was to carry grain and other cargo. There was a minimum of space left for passengers. Lucian (*Ship or Wishes* 5) mentions stern cabins (αἱ μετὰ τὴν πρύμναν οἰκήσεις) on the *Isis*. But it is not probable that any freighter had many cabins. These would be reserved for wealthy or official personnel. Travelers such as Paul and his companions would have to ride in steerage class. In fair weather they must have spent almost all their time on the main deck. It is difficult to see how they survived in storms. With hatches closed to protect cargo and prevent foundering, ventilation and living conditions in general below deck would have been exceedingly bad, even if passengers could get below. Acts 27:20 implies that the storm was accompanied by rain for many days. There were 276 persons aboard (27:37). Josephus (*Life* 3) tells of a wreck he experienced in the Sea of Adria with 600 aboard, 80 of whom were picked up, after a whole night of swimming, by a ship of Cyrene.

After seventy days of struggling with storms the *Isis* finally, far off course, put in at Piraeus, port of Athens. Lucian (*Ship or Wishes* 5) says that this ship was 180 feet long (εἴκοσι καὶ ἑκατὸν πήχεων) and over a fourth as wide, while its depth was 44 feet. It carried statues of *Isis* on each side of its prow. It had ornamental paintings, a scarlet topsail, and stern

cabins. The statement that it carried enough grain to feed Athens for a year might be hyperbole. Lucian mentions only the main deck and hold, saying nothing about decks in between, although it seems probable that there were such. He indicates (1) that the *Isis* was larger than most grain ships when he calls it a monster ship (ὑπερμεγέθη ναῦν καὶ πέρα τοῦ μέτρου).

The undersea photograph of a first-century B.C. wreck lying on the sea floor near the Phare du Titan off the French Riviera shows that the ship was carrying a great cargo of wine, oil, and other foods exported from South Italy to France. One sees an abundance of the jars (ἀμφορείς, πίθοι) in which such exports were packed. They were the casks, kegs, and barrels of that age. The hull of this ship—and of other wrecks like it—has disintegrated and disappeared. Only the picturesque containers lie there to indicate that the ships were over a hundred feet long. Grain was probably carried in bags. Rostovtzeff's *History of the Ancient World* (II, pl. lviv, 3) shows stevedores carrying grain up a gangplank in small bags and emptying them into a larger bag on deck.* The grain ships sailing from Italy, Greece, or any of the islands, such as Rhodes, would carry wine and similar items in the amphorae and *pitthoi* standing in racks on all decks and in the hold. In Egypt this cargo was replaced by bags of grain for the return trip. Evidence of this commerce is provided by quantities of stamped wine-jar handles from Rhodes which have been found in such places as Asia Minor, North Africa, and Palestine. Fig. SHI 52.

Another good picture of a Roman grain ship is shown by Rostovtzeff (pl. lxiv, 1).* It has arrived in port with sails flying. The mainsail is ornamented with the traditional wolf and her young. Deck castles and many other features are visible. Pl. lxiv, 3, represents a steersman standing on the poop deck operating the rudder with a slender tiller. Rudders were

Alinari Photo

Alinari Photo

52. A small merchant ship

of the quarter type. Each ship had two. In the case of the Isis (*Ship or Wishes* 6) the rudders operated as a unit. Fig. SHI 51.

Each merchantman carried the statue of the deity from whom it got its name. The name of Paul's ship which was wrecked on Malta is not given, but that which carried him on to Puteoli in the spring was the Castor and Pollux. Lucian (9) relates that the Isis was saved from destruction on the Lycian coast by the intervention of the gods, who sent either Castor or Pollux as a bright star to appear at the mast-head and guide the ship to the open sea. This reminds us of Paul's assurance in Acts 27:23-25 that God had sent an angel to inform him that there would be no loss of life of any of those sailing with him.

All the pictures of grain ships show a great square mainsail and a short, raked foremast with a small, square sail, which is the foresail (ἀπρέμων) mentioned in Acts 27:40. As all other tackling had been cast overboard, only this small sail could be hoisted to drive the ship on the beach.

Pliny (*Nat. Hist.* XIX) says that sails were usually made of linen, but apparently those of the Isis were of hides (*Ship or Wishes* 4). Roman grain ships generally carried a triangular topsail. Although something was known about tacking, it is evident that the type of sails used did not permit ships to make much headway in the face of a strong wind.

4. Ports. The only well-known port on the coast of Syria in antiquity was TYRE,* which for many centuries was the greatest center of shipping on the Mediterranean. Ezek. 27 gives a vivid description of this romantic city with its ships and commerce. Tyre continued to prosper and withstand all onslaughts until Alexander conquered it in 332 B.C. After that date it declined, as it was outstripped by Antioch, Ephesus, Corinth, Alexandria, and Rome, the centers of trade during the Hellenistic period. But that Tyre was still an active port in the first century A.D. is shown by the report in Acts 21:1-8 that when Paul was returning from his third missionary journey, he found a ship bound for Phoenicia at Patara on the S coast of Lycia, and sailed directly to Tyre, where passengers were disembarked for seven days, while the cargo was unloaded. Then they boarded ship again, heading S, and put in at Ptolemais for one day but the next day went on to Caesarea, the end of Paul's voyage. Fig. TYR 81.

Caesarea was the rival of Tyre at the time. Paul also landed there from his second missionary journey (Acts 18:22), and finally sailed from there to Rome (Acts 27:2). Caesarea had no natural harbor. Josephus (*Antiq.* XV.ix.6; *War* I.xxi.5-7) tells how Herod at great expense built this port on the old site of Strato's Tower as the show place of Judea. Josephus says Herod did this to protect ships bound from Phoenicia to Egypt from the stormy seas in this area. But Herod was, no doubt, also interested in strengthening his commerce in competition with Tyre, which was outside his kingdom. He constructed a breakwater two hundred feet wide of huge blocks of stone. The port became the seat of Roman administration of Judea (Acts 23:23-24; 25:1, 6).

5. Sea lanes. The best-known sea lanes of the time were those used by Rome to import grain from Egypt. Ships went directly to Alexandria. Its great light-

house was famous in the ancient world. Pliny (*Nat. Hist.* XIX.1) mentions a voyage from Messina to Alexandria in six days, another in seven, and one from Puteoli in nine. He also says the voyage from Gibraltar to Rome required seven days, from Hither Spain four, from Province Norbonne three, and from Africa two. But after reaching Alexandria, grain ships were compelled by unfavorable winds to return by the coasts of Syria and Asia Minor. Another famous sea lane was from Lake Maotis above the Euxine to Alexandria. Diodorus of Sicily (III.34) says that with favorable winds ships reached Rhodes in ten days, then Alexandria in four, and from there up the Nile to Ethiopia in ten. The passage from Athens to Miletus was made in three days (*Chariton Chaereas and Callirhoe* I.xi.8). Paul sailed from Miletus to Rhodes in a day (Acts 21:1). Speed depended on wind and weather. Mediterranean winters were notoriously bad. Philo (*Embassy* 3, 29, 33) testifies to this. He remarks (*Embassy* 33) that warships are better suited to coastal voyages, while merchantmen prefer the open seas.

6. Voyages. Paul's journey to Rome (Acts 27:1-28:16) is the best-known voyage of antiquity, but the voyage of the Isis described by Lucian, as noted above, is worthy of comparison with it. Philo (*Embassy* 33) refers to a voyage of Petronius, a general from Caesarea, to Rome; he avoided Alexandria and followed the coast of Syria, spending each night ashore, as did Paul also (Acts 27:3). Because of inadequate lighthouses, ships avoided sailing at night when possible. Gregory Nazianzen (*Oration* XVIII.31) tells how he almost perished on a ship which dared in winter to go directly to Rhodes from Alexandria. Herod had a similar experience (*Jos. Antiq.* XIV. xiv.3). The Isis got into trouble by trying to sail W of Cyprus and was blown all the way back to Sidon. Then it almost came to grief following the coasts of Syria and Asia Minor. Chariton's romance (III.5.1) tells of a pirate ship which sailed from Syracuse to Miletus, but was caught in a winter storm off Crete and drifted helpless in the Sea of Adria until every member of the crew but one was dead. To encourage commercial shipping, Claudius offered substantial inducements to owners, including compensation for loss in storms (Suetonius *Claudius* XVIII).

SHISHA shī'shā. An alternate form of SHAVSHA.

SHISHAK shī'shāk [קֶרֶה (*Qere*), קֶתִיב (*Kethibh*); Akkad. *Susinku*; Egyp. *Ššnk*; LXX Σουσακ(ε)ίμ; other Greek Σεσώγχις, etc.]. An Egyptian pharaoh (ca. 940-915 B.C.), founder of the Twenty-second Dynasty, invader of Palestine, and plunderer of Jerusalem (I Kings 14:25-26).

When Solomon began to rule in Palestine, the central government in Egypt was weak. In the Faiyum there was a powerful family descended from Libyan chieftains. A prince of this family, Sheshonk, whom the Bible calls Shishak, became strong enough to be received on equal terms by a reigning pharaoh at Thebes. Soon Shishak claimed the rule of all Egypt, with his capital at Bubastis (ΠΥΒΕΣΤΗ) in the Delta. His rule was not easy, because the Delta contained many independent-minded Libyan chieftains, while Middle and Upper Egypt retained a tradition of separatism. However, he established his son as high priest of Amon at Thebes and succeeded in winning useful feudal recognition. Our chief Egyptian source of information on his Asiatic campaign comes from his building at the temple of Amon in Karnak late in his reign.

Solomon married the daughter of a pharaoh (I Kings 3:1), and this pharaoh later raided into Palestine, captured and burned the town of Gezer, and gave the city to his daughter, Solomon's wife (9:16). The pharaoh is unnamed and cannot be identified. He may have been one of the merchant-kings of the Twenty-first Dynasty residing at Tanis (Zoan) in the Delta. It would have been in character for them to secure good relations with the ambitious king at Jerusalem by such a marriage, and it may have been with such a Delta dynast that Solomon carried on his dealings in horses (I Kings 10:28-29). However, the sack of Gezer would be more like the Libyan war chieftain Shishak. Against the identification of Shishak as Solomon's father-in-law it may be argued that Jeroboam plotted against Solomon's life and then had to flee to Egypt, where Shishak gave him asylum (11:26, 40). Even though the institution of political asylum was safeguarded in the ancient Near East, the identity of Solomon's father-in-law must remain doubtful.

Ca. 920 B.C. or shortly thereafter, in the fifth year of Solomon's successor Rehoboam, Shishak made a gesture to restore some of Egypt's old glory. He led an army of Egyptians, Libyan scouts, and Libyan and Ethiopian mercenaries into Palestine for a wide-sweeping campaign. Among the cities which he captured was Jerusalem, where he looted the temple and the palace of the treasures upon which Solomon has laid out such great expenses. Some of Shishak's loot was later dedicated to the god Amon at Thebes.

Evidence for this Shishak raid into Palestine has

54. Inscription from a wall of the Amon temple at Karnak, listing the Palestine and Syrian towns taken by Shishak (Sheshonk I, in Egyptian; 940-915 B.C.)

been found at Megiddo in the fragment of a triumphal stela which he erected there.* On the walls of the temple of Karnak he listed the towns which he "captured." The list does not indicate that he went farther N than the foothills of Galilee. Thus the fragment of his seated statue found at Gebal in Phoenicia, if it was located there during his reign, must have been a gift from him to be dedicated to the local gods. The list of conquered towns runs to more than 150. Ca. two dozen identifications can be firmly made, most of them in the N kingdom. The section which apparently deals with localities in Judah is badly broken, but many of the towns seem to have been of minor importance. It is not known whether Jerusalem was listed in a section now broken. Figs. SHI 53, 54.

The relation between Shishak's raid and the split of the Hebrew kingdom into two realms is not clear. Rehoboam continued to sit upon the throne of Judah. Jeroboam, returned from exile, was on the throne of Israel. Biblical chronology places him there from Solomon's death, and not from the date of the Egyptian raid. Further, even though the city of Shechem has not been found in the list of conquered towns, Shishak specifically took cities in Israel, such as Megiddo. The evidence suggests that Shishak's purpose was not to support Jeroboam against Rehoboam, but to gain political and economic power.

The successors of Shishak did not have his energy or organizing ability. Two centuries were to pass before Egypt would again undertake major political and military activity in Palestine.

SHITRAI שִׁטְרַי שִׁטְרַי (I Chr. 27:29). A Sharonite who was one of the royal stewards, in charge of David's herds that pastured in Sharon. The LXX B and Syr. (A) read the name as "Shirtai" (שִׁרְטַי).

SHITTAAH TREE *shīt'á* [שִׁטָּה]; **SHITTIM WOOD** *shīt'im* [שִׁטִּים]. KJV transliteration; now recognized as a kind of ACACIA tree or wood. See FLORA § A9a.

SHITTIM *shīt'im* [שִׁטִּים, acacia trees]. 1. A place in the Plains of Moab (see MOAB 2), immediately NE of the Dead Sea, where the Israelites encamped before setting out to cross the Jordan. The camp was "by the Jordan from BETH-JESHIMOTH as far as Abel-shittim in the plains of Moab" (Num. 33:49). Abel-shittim seems to be the full name, while Shittim is the commonly used abbreviation.

Many important things happened while the Israelites encamped here. Balak of Moab tried to have Israel cursed by Balaam (Num. 22-24). The Israelites sinned with Moabite and Midianite women at Baal-peor and were punished (ch. 25). A census was taken (ch. 26). Joshua was publicly proclaimed as Moses' successor (27:12-23). Vengeance was taken on Midian (ch. 31). Reuben, Gad, and half-Manasseh settled E of the Jordan (32). Moses delivered his farewell address (see DEUTERONOMY), viewed the land from Mount Nebo, and died. Joshua sent two spies from Shittim to examine Jericho (Josh. 2). The people broke camp and moved from Shittim to the Jordan, preparing to cross over (3:1).

Mic. 6:5 speaks of "what happened from Shittim to Gilgal," probably referring to the Jordan crossing. In Hos. 5:2 the RSV emends an obscure passage to read: "They have made deep the pit of Shittim," perhaps remembering the episode of Baal-peor.

Abel-shittim has frequently been identified with Tell el-Kefrein, ca. seven miles E of the Jordan and ca. six miles N of the Dead Sea. Tell el-Kefrein is located on a completely isolated, cone-shaped hill, standing ca. 105 feet above the plain and commanding a splendid view of the Plains of Moab. It was occupied in OT times, since numerous Iron Age I-II (twelfth century through the beginning of the sixth century B.C.) potsherds were found. The site is small, the top of the hill measuring ca. 50 by 78 feet.

However, Nelson Glueck (see *bibliography*) argues convincingly that Tell el-Kefrein was only a small fortified police post and village on the way to the larger and stronger Abel-shittim, located at Tell el-Hammam, ca. 1½ miles E of Tell el-Kefrein. Tell el-Hammam stands on an imposing hill near the base of the hills rising to the Moabite Plateau. It commands the outlet of the Wadi el-Kefrein as it emerges from the hills, a very strategic position. On the flat top of the hill are remains of a large (ca. 460 by 80 feet), strongly fortified Iron Age I-II fortress. At each end was a massive tower. The fortification wall and other walls seem ca. 4 feet thick. There are traces of a strong glacis at one end, and it may encircle the outer wall. The entire top of the hill, inside the walled area, is covered with the foundation ruins of houses.

Bibliography. F.-M. Abel, *Géographie de la Palestine*, II (1938), 234. N. Glueck, "Some Ancient Towns in the Plains of Moab," *BASOR*, no. 91 (1943), pp. 13-18; *Explorations in Eastern Palestine*, IV, *AASOR*, XXV-XXVIII (1945-48), 221, 371-82.

2. A place name in Joel 3:18, which speaks of a fountain that will "water the valley of Shittim." If a particular valley is meant, it is probably the Wadi

en-Nar, the lower extension of the Kidron Valley. See **KIDRON, BROOK**.

E. D. GROHMAN

SHIZA *shī'zā* [שִׁיזָא] (I Chr. 11:42). The father of Adina, a Reubenite leader who was a member of the company of the Mighty Men of David known as the "Thirty."

SHOA *shō'á* [שׁוֹעַ; LXX Σουε]. An unidentified people mentioned in Ezek. 23:23 after the Babylonians, the Chaldeans, and Pekod, as one of many who would rise against Judah.

SHOBAB *shō'bāb* [שׁוֹבָב]. 1. One of the sons of Caleb by his wife Azubah (I Chr. 2:18).

2. One of the four sons of David by Bathsheba who were born at Jerusalem (II Sam. 5:14; I Chr. 3:5; 14:4).

SHOBACH *shō'bāk* [שׁוֹבַךְ] (II Sam. 10:16, 18). Alternately: **SHOPHACH** —*fāk* [שׁוֹפַךְ] (I Chr. 19:16, 18). The commander of the Aramean forces marshaled by Hadadezer, king of Zobah, in his military campaign against David. After Israel's defeat of the Arameans in the first Syro-Ammonite war; Hadadezer augmented his allies with an additional complement of Aramean troops from beyond the Euphrates and placed Shobach in charge of the renewed military operations against Israel. In the ensuing battle at Helam in Transjordan, David inflicted such a crushing defeat upon the Aramean forces that the Syro-Ammonite axis was forever broken, the Aramean power was effectively curtailed, and the kingdoms lately tributary to Hadadezer became subject to David.

E. R. DALGLISH

SHOBAI *shō'bāi* [שׁוֹבַי, probably a shortened form, perhaps one who leads captive; Apoc. Σαβει]; KJV Apoc. SAMI *sā'mī*. One of the families of gatekeepers who returned from exile in Babylon (Ezra 2:42; Neh. 7:45; I Esd. 5:28).

SHOBAL *shō'bāl* [שׁוֹבָל, perhaps nickname basket; cf. Arab. *sābalun*]. 1. The second son of Seir, and a clan chief (שׁוֹבָל אֱלֹהֵי שׁוֹבָל, perhaps better "clan chief of Shobal") of the native Horite inhabitants of Edom (Gen. 36:20, 23, 29; I Chr. 1:38, 40).

2. Ancestor of a Calebite tribe settled in Kiriath-jearim (I Chr. 2:50, 52), apparently incorporated in Judah (I Chr. 4:1-2).

L. HICKS

SHOBEK *shō'bēk* [שׁוֹבֵק; cf. Arab. *sabiq*, victor] (Neh. 10:24—H 10:25). One of the chiefs of the people signatory to the covenant of Ezra.

Bibliography. M. Noth, *Die israelitischen Personennamen* (1928), p. 231.

SHOBI *shō'bī* [שׁוֹבִי] (II Sam. 17:27). An Ammonite prince, the son of King Nahash; with Machir the son of Ammiel from Lo-debar and Barzillai the Gileadite from Rogelim, he generously supplied David with food and equipment at Mahanaim during the rebellion of Absalom. Shobi was the brother of Hanun, the successor to his father's throne, whose scurrilous treatment of the good-will envoys of David precipitated the disastrous Ammonite wars and ultimately,

with the fall of Rabbah, cost Hanun his throne. Shobi appears to have been, in his brother's stead, the Davidic nominee either as a tributary king or as a prefect (II Sam. 17:27-29; cf. II Sam. 10-12; I Chr. 19-20:3).

E. R. DALGLISH

SHOCHO, SHOCHOH, SHOCO. KJV forms of SOCO.

SHOE. See SANDALS AND SHOES.

SHOHAM shō'hām [שֹׁהַם, a *precious stone*: carnelian(?), beryl(?)] (I Chr. 24:27). A Levite, descendant of Merari; son of Jaaziah.

SHOMER shō'mər [שׁוֹמֵר, keeper, watcher]. Alternately: **SHEMER** shē'— (I Chr. 7:34); **SHIMRITH** shīm'rīth [שִׁמְרִית, probably (God) has protected] (II Chr. 24:26). 1. The mother of Jehozabad, one of the servants who assassinated Joash (Jehoash) king of Judah (II Kings 12:21; II Chr. 24:26).

2. Eponym of a clan of the tribe of Asher (I Chr. 7:32, 34).

T. M. MAUCH

SHOPHACH. Alternate form of SHOBACH.

SHOPHAR shō'fār. See MUSICAL INSTRUMENTS § B2e.

SHOSHANNIM, SHOSHANNIM EDUTH shō-shān'īm ē'dōth. See MUSIC § B1.

SHOULDER. Principally the translation of שֵׁכֶם and כְּתֵף, with nuances as in English—e.g., used in bearing burdens, supporting garments, thrusting; figuratively for the slope of a mountain jutting into the plain (cf. Shechem!), subjugation of peoples, etc.

The KJV "shoulder" of the sacrificial animal (Exod. 29; Lev. 7-10; Num. 6; 18) for שׁוֹק (with the LXX and the Vulg.) is better translated "thigh" (so RSV).

55. Incense shovel (Jewish?) from Palestine; Greco-Roman period

SHOVEL. 1. יַעֲקֹה (from יָעַק, "to collect"), one of the "utensils of the altar," mentioned in descriptions of the tabernacle (Exod. 27:3; 38:3; Num. 4:14) and of Solomon's temple (I Kings 7:40, 45=II Chr. 4:11, 16). The shovels were made of bronze and were used for cleaning the altar and for removing the fat-soaked ashes and placing them into pots (Exod. 27:3). They are listed among the booty carried off by the Chaldeans at the fall of Jerusalem in 586 B.C. (II Kings 25:14=Jer. 52:18).

Fig. SHO 55.

2. רַחַת (Akkadian *rittu*; Ugaritic *rh̄tm*), an implement mentioned with a FORK as used for WINNOWING (Isa. 30:34). It was a broad and shallow scoop with which threshed grain was caught up and thrown against the wind to remove the chaff.

Bibliography. G. E. Wright, *Biblical Archaeology* (1957), pp. 141-42.

J. L. MIHELIC

SHOWBREAD. See BREAD OF THE PRESENCE.

SHRINE. A consecrated structure housing the image of a deity or other cult object (νάος, as distinguished from the temple complex as a whole, ἱερόν).

The main room of the fosse temple at LACHISH contained an excellent example of a pre-Israelite shrine (LB II, the last phase of Canaanite culture, ca. 1400-1200 B.C.). It was a plastered recess in the temple wall with a wide platform to hold the cult objects. Immediately in front of the shrine was a stepped altar and a hearth. More elaborate temples, such as the later structures at Baalbek, devoted a separate building to the shrine, and placed the altars in an outer court. See TEMPLES.

"Shrine" appears in the RSV as an occasional translation for a number of Hebrew and Greek words or phrases. Micah's family shrine (בֵּית אֱלֹהִים; KJV lit., "house of gods"; Judg. 17:5) contained several images and was presided over by a priest. After the Assyrian conquest the semipagan population of Samaria erected shrines for their idols on the high places (בֵּית בָּמוֹת; KJV lit., "houses of the high places"; II Kings 17:29, 32). These were demolished during Josiah's reform (23:19; see HIGH PLACE). Ezek. 16:16 refers to a shrine (בָּמוֹת; KJV lit., "high place") made of gaily colored cloth—probably a tent. Paul's proclamation that the true God does not live in man-made shrines (νάοι) brought him into conflict with the silversmith Demetrius, who made his living by selling models of the shrine of Artemis (Acts 17:24; 19:24).

L. E. TOOMBS

SHROUD. 1. A winding sheet for the dead. "Linen shroud" (KJV "linen cloth," "linen") is the translation of στυδών in Matt. 27:59; Mark 15:46; Luke 23:53. The word is used of a "linen cloth" used as a garment in Mark 14:51-52. See LINEN.

2. An archaism meaning "shelter, covert," used by the KJV to translate חֲרָשׁ in Ezek. 31:3 (RSV FOREST, with Akkadian and Arabic cognates).

H. G. MAY

SHUA shōō'f [שׁוּעָ, שׁוּעָ, help; cf. אֲבוּשׁוּעָ, אֲבוּשׁוּעָ, מַלְכִּי-שׁוּעָ, יְהוּשׁוּעָ; LXX Σαυα, Σωλα]; KJV SHUAH in Gen. 38:2, 12. 1. A Canaanite, the father of Judah's wife (Gen. 38:2, 12; I Chr. 2:3 KJV). In I

Chr. 2:3 the daughter is referred to as בת־שוע הכנענית (KJV "the daughter of Shua the Canaanite"), which the RSV treats as a proper name, BATH-SHUA.

2. Daughter of Heber, an Asherite (I Chr. 7:32).

Bibliography. M. Noth, *Die israelitischen Personennamen* (1928), p. 154. L. HICKS

SHUAH shōō'k [שׁוּחַ; Assyrian *Šūhu* (an Aramean land on the Euphrates); KJV שׁוּחָה (I Chr. 4:11; RSV SHUHAH), שׁוּעַ (Gen. 38:2, 12; RSV SHUA); SHUHITE —hit. A son of Abraham by Keturah (Gen. 25:2; I Chr. 1:32). The name was probably connected with an Arab or Aramean tribe, that of the Shuhites, who later migrated near the land of Uz. Bildad the Shuhite (Job 2:11; 8:1; 18:1; 25:1; 42:9) was almost certainly a member of this tribe. The land of the Shuhites is sometimes identified with the Assyrian *Šūhu* on the right bank of the Euphrates, S of Carchemish, between the mouths of the Balikh and Khabur rivers. An Edomitic location is also frequently suggested.

Bibliography. W. F. Albright, "The Name of Bildad the Shuhite," *AJSL*, XLIV (1927-28), 31-36. H. F. BECK

SHUAL shōō'āl [שׁוּעַל; fox, or jackal(?)]. 1. A region near OPHRAH (1), to which it is said that the first of three companies from the Philistine camp at MICHMASH went (I Sam. 13:17). Since the second company went W toward Beth-horon, and the third went E toward the wilderness, it is probable that the first, in going "toward Ophrah, to the land of Shual," was moving in the region N of Michmash. Some have conjectured that it is the same as the "land of SHAALIM," where Saul sought the lost asses (9:4). Cf. the name of a town in S Judah, Hazar-shual, which has no apparent connection.

2. A division of the clan of Zophah of the tribe of Asher (I Chr. 7:36). W. L. REED

SHUBAEL. Alternate form of SHEBUEL 1-2.

SHUHAH shōō'hə [שׁוּחָה; pit] (I Chr. 4:11); KJV SHUAH —ə. A brother of Chelub in fragmentary genealogical data concerning the tribe of Judah. Instead of "Chelub, the brother of Shuhah" (LXX BA), read: "Caleb the father of Ascha" (see ACHSAH).

SHUHAM shōō'hām [שׁוּחָם] (Num. 26:42); SHUHAMITES —ə mits. Son of Dan, ancestor of the Shuhamites. Only a single Danite clan is named in the Danite genealogy here and in Gen. 46:23, where the name is given as Hushim.

SHUHITE. See SHUAH.

SHULAMMITE, THE shōō'lə mīt [הַשׁוּלַמִּית] (Song of S. 6:13—H 7:1). The name or title of a maiden.

"Shulammit" is widely regarded as the equivalent of "Shunammite"—i.e., a woman from the town of SHUNEM. The interchangeability of liquids is a common linguistic phenomenon. This theory is still the most plausible. Sometimes the woman is identified with ABISHAG, the beautiful Shunammite brought to David in his old age (I Kings 1:1-4, 15; 2:17-22). If so, the usage is figurative of her legendary beauty.

The only other Shunammite specified in the OT is the wealthy woman visited by Elisha (II Kings 4:11, 25-26).

Many scholars conceive "Shulammit" to be the feminine form of "Solomon" or *shelômô* (as "Judith" is feminine of "Judah"). Because of the definite article the term would likely be a title ("the Solomonesse") rather than a proper name. It would designate the bride in her honorary role of "princess," companion to the bridegroom "king" (see SONG OF SONGS § 3d). In the context the Shulammit appears to dance, as the bride customarily did at the wedding ceremony.

Advocates of the cultic theory (see SONG OF SONGS § 3b) understand the Shulammit as consort of the Canaanite god of peace and well-being, Shalem, Shelem, or Shulman (see SOLOMON). She appears in nonbiblical sources as the goddess Shala or Shulmanitu, Ishtar of Uru-Silim-ma (Jerusalem?).

Since the *waw* is lacking in some Hebrew MSS, it is possible to read the original form as *shelômith*—i.e., the proper name SHELOMITH; or in Greek, SALOME.

Bibliography. C. Bruston, *La Sulamite* (1894); T. J. Meek, *AJSL*, XXXIX (1922), 5-7; H. H. Rowley, "The Meaning of 'The Shulammit,'" *AJSL*, LVI (1939), 84-91.

N. K. GOTTFALD

SHUMATHITE shōō'mə thīt [שׁמַתִּית; possibly a shortened form based upon שׁמַע, hear, or שׁמַר, keep, watch over] (I Chr. 2:53). One of the Calebite families in Kiriath-jearim; descended from Shobal, a son of Hur.

SHUNEM shōō'nəm [שׁוּנֵם]; SHUNAMMITE shōō'nə mīt [שׁוּנַמִּית]. A border town in Issachar (Josh. 19:18), associated with the careers of Saul and Elisha. Shunem is identified with Solem, a village located ca. nine miles N of Jenin on the lower SW slope of Nebi Dahi, overlooking the Valley of Jezreel. Surface explorations have shown that the ancient site, which is beneath the modern village, was occupied from the Middle Bronze age through the Islamic period.

The town is first mentioned in the list of Syro-Palestinian towns conquered by Thut-mose III (1490-1435 B.C.), as Shunama. Early in the fourteenth century it was destroyed by Lab'aya, and it was rebuilt soon after by Biridiya, prince of Megiddo, according to the Amarna Letters. Thereafter, Shunem declined in importance, and it was one of the few towns in the plain captured by the Israelites (Josh. 19:18). In the late eleventh century the Philistines encamped at Shunem to do battle with Saul and the Israelites (I Sam. 28:4). It was raided by Shishak of Egypt ca. 918 B.C., according to the Karnak List, in which it is no. 15.

Abishag, the maiden who ministered to David in his old age (I Kings 1:3, 15) and whose hand in marriage was unsuccessfully sought by Adonijah (I Kings 2:17-22), was a Shunammite.

During the ninth century B.C., Elisha frequently stopped at Shunem, staying in the home of a good woman to whom he promised a male heir. It was here that he later revived her dead son (II Kings 4).

Bibliography. C. R. Conder and H. H. Kitchener, *SWP*, II (1882), 87; W. F. Albright, "The Topography of the Tribe

of Issachar," *ZA*, 3 (1926), 226-34; F.-M. Abel, *Géographie de la Palestine*, II (1938), 470-71; J. B. Pritchard, ed., *ANET* (2nd ed., 1955), pp. 243, 485-86. G. W. VAN BEEK

SHUNI shōō'nī [שׁוּנִי] (Gen. 46:16; Num. 26:15); **SHUNITES** —nits. The third son of Gad; ancestral head of the "family of the Shunites."

SHUPHAM. KJV form of SHEPHUPHAM.

SHUPPIM shūp'īm [שׁוּפִים]. 1. A late, contracted form of SHEPHUPHAM.

2. A gatekeeper stationed on the W side of Jerusalem (I Chr. 26:16). The name appears here erroneously as a result of dittography from the last word of the preceding verse, as comparison with I Chr. 26:10 confirms. R. F. JOHNSON

SHUR, WILDERNESS OF shōōr [שׁוּר, see below]. A place or a region on the NE border of Egypt, whither the Israelites went after they crossed the RED SEA (Exod. 15:22). The parallel account in Num. 33:8 has Etham instead of Shur.

Shur is also mentioned in several other passages. The angel of the Lord found Hagar "by a spring of water in the wilderness, the spring on the way to Shur" (Gen. 16:7). Abraham "dwelt between Kadesh and Shur" (20:1), the Ishmaelites "dwelt from Havilah to Shur, which is opposite Egypt in the direction of Assyria" (25:18). Saul "defeated the Amalekites, from Havilah as far as Shur, which is east of Egypt" (I Sam. 15:7), and "David and his men . . . made raids upon the Geshurites, the Girzites, and the Amalekites . . . as far as Shur, to the land of Egypt" (27:8).

These references give us only the general direction of Shur—i.e., its location was somewhere in the proximate vicinity of Egypt and E of it. One can assume that it was a general designation for the Sinai wilderness E of Lake Timsah.

The "Way of Shur" (Gen. 16:7) is probably the ancient caravan route, called Darb el Shur, which went from Hebron by way of Beer-sheba, Khalasa, Ruheibeh, Bir Birein, Muwilleh, and on to the S into Egypt. Some believe that in biblical times "Shur" was a reference to a line of disconnected frontier fortresses which the Egyptians had erected to keep out the invaders from the E. Others claim that "Shur" denoted the long range of white cliffs, parallel to the coast, some twelve to fourteen miles E of the Gulf of Suez, and now called Jebel er-Rahah. These cliffs were given the name Shur ("Wall") because at a distance they have the appearance of a wall. It is claimed that the Arabs still call these cliffs Jebel es-Shur. The objection to this explanation is the fact that Shur means a "wall" only in Aramaic (Ezra 4:12-13, 16). In biblical Hebrew it is used in this sense only in poetry (Gen. 49:22; Ps. 18:29=II Sam. 22:30). Moreover, as a proper noun, referring to topography and having appellative force, it lacks the definite article which is usual with such terms (cf. "the Jordan" [הַיַּרְדֵּן] in Josh. 3:1, 14; 4:1; and "the height" [הַרְמֵה] in Josh. 18:25; Judg. 4:5; etc.).

Bibliography. C. L. Woolley and T. E. Lawrence, *The Wilderness of Zin* (new ed., 1936), pp. 57-62; E. G. Kraeling, *Bible Atlas* (1956), pp. 64, 69. J. L. MIHELIC

SHUSHAN. KJV form of SUSAN.

SHUSHAN EDUTH shōō'shān ē'dāth. See MUSIC § B1.

SHUTHELAH shōō'thə [שׁוּתְלָה]; **SHUTHELAHITES** —hits; KJV SHUTHALHITES —thā hits. 1. The first son of Ephraim, and the father of Eran (Num. 26:35-36; I Chr. 7:20 [here, father of Bered]); ancestor of the "family of the Shuthelahites" (Num. 26:35).

2. A descendant of 1 above (I Chr. 7:21; LXX Σωθελε). However, the Ephraimite genealogy here is quite confused (perhaps containing three recensions of the earlier list in Num. 26:35-37), so that this Shuthelah may be only a repetition of 1 above.

Also, the LXX inserts Shuthelah (Σουταλααμ) and his son Edem into Gen. 46:20b. L. HICKS

SHUTTLE [אַרְגָּ] (Job 7:6; cf. Judg. 16:14). The tool used by a weaver to shoot the thread of the woof from one side to the other through the threads of the warp. In Judg. 16:14 (LOOM; KJV BEAM) the word might perhaps be read with different vowels, "weaver." J. M. MYERS

SIA sī'ā [סִיעָא] (Neh. 7:47). Alternately: SIAHA sī'ā hā [סִיעָהא; Σουα] (Ezra 2:44; I Esd. 5:29); KJV Apoc. SUA sōō's. One of the temple servants, or NETHINIM, who returned from the Exile.

SIBBECAI sīb's'ā kī [סִבְעַי]; KJV SIBBECHAI in II Sam. 21:18; I Chr. 20:4. A Zerahite of the town of Hushah who was included among the Mighty Men of David known as the "Thirty" (I Chr. 11:29; cf. II Sam. 23:27). Sibbecai is credited with the slaying of the Philistine giant Saph (II Sam. 21:18; Sippai in I Chr. 20:4) in a campaign against the Philistines at Gob (Gezer in Chronicles). He was the commander of the Davidic militia which served during the eighth month (I Chr. 27:11).

In II Sam. 23:27 his name is given as MEBUNNAI, but this appears to be an erroneous reading of the not-dissimilar word "Sibbecai." E. R. DALGLISH

SIBBOLETH sīb's'ā līth [סִבְלֵת] (Judg. 12:6). Hebrew spelling of the Ephraimites' mispronunciation of the password SHIBBOLETH.

SIBMAH sīb'mā [שִׁבְמָה]; KJV SHIBMAH shīb'mā in Num. 32:38. Alternately: SEBAM sē'bām [שֶׁבַם] (Num. 32:3); KJV SHEBAM shē'bām. A city of the pastoral tableland in Transjordan, given to the tribe of Reuben after the defeat of Sihon king of the Amorites (Num. 32:3, 38; Josh. 13:19). In the time of the oracles against Moab (Isa. 16:8-9; Jer. 48:32), it was in Moabite possession and was known for its vineyards, which were destroyed by the "lords of the nations." According to Jerome, it was located hardly five hundred paces from Heshbon. However, Sibmah was perhaps too important a place to be so near Heshbon, and some would identify it with Qurn el-Kibsh, between Heshbon and Nebo, overlooking the Wadi Salmah. This site is on a high, flat-topped hill, with an area of ca. 311 by 104 yards having been enclosed by a great wall.

E. D. GROHMAN

SIBRAIM sīb rā'ām [סַבְרַיִם] (Ezek. 47:16). A place in the N borderland of Canaan, between Damascus and Hamath, probably in the neighborhood of Hums. It may be identical with SEPHARVAIM.

SIBYLLINE ORACLES sīb'ā lēn. A collection of prophecies or wise sayings in Greek hexameter verse combining elements pagan, Jewish, and Christian. First mentioned by Heraclitus of Ephesus in 500 B.C., Sibyl (Σίβυλλα) was a prophetess of Cumae. Later, there came to be many "sibyls," and the term was sometimes employed to mean a diviner or seer in general. The collection of oracles attributed to Sibyl grew, under Jewish as well as Christian influences, from early times till the fourth century after Christ and eventually comprised fifteen books, most of which have been recovered. Hermas (see HERMAS, SHEPHERD OF) among Christian writers first mentions the Sibyl; but Justin, Theophilus of Antioch, Clement of Alexander, and other writers cite the oracles with respect.

Bibliography. J. Geffcken, ed., *Die Oracula Sibyllina* (1902); R. H. Charles, *The Apoc. and Pseudep. of the OT*, vol. II (1913). See also J. Moffatt, in *Dictionary of the Apostolic Church* (1915).
J. KNOX

SICHEM. KJV form of SHECHEM.

SICK, SICKNESS. See DISEASE.

SICKLE [גַּלְגַּל; חַרְמֵשׁ; δρέπανον]. An implement for reaping standing grain. In the early periods it consisted of serrated flints inserted into a rounded

From Petrie, *Gerar*; by permission of the Department of Egyptology, University College London

56. Reconstructed arrangement of sickle flints, from Gerar; Eighteenth Dynasty

wooden frame; later it was made of metal with a wooden handle riveted on.

Fig. SIC 56.

SICYON sīsh'ī on [Σικυών, Συκυών, Σικιών, cucumber town]. A city of ancient Greece on the S shore of the Gulf of Corinth, eighteen miles NW of Corinth, and later a center of Roman power. In the Maccabean period it was granted the direction of the Isthmian games. The ancient city was on the shore, and on a terrace behind stood an acropolis. It was a busy place industrially and artistically, but it greatly

declined during the first and second centuries A.D. According to I Macc. 15:23, Sicyon was one among many places to which the Roman consul Lucius wrote on behalf of the Senate, asking them not to fight against the Jews and to return all Jewish fugitives to Simon (139 B.C.). There must have been considerable Jewish populations in these places. Philo supports this latter supposition as far as Corinth is concerned (*Legation to Caius* 36).
N. TURNER

SIDDIM, VALLEY OF sīd'īm [עַמְקַ הַשְּׂדִימִים]; KJV VALE OF SIDDIM. A valley at the S end of the Dead Sea. It served as a battleground in the struggle of the five cities of the area (Sodom, Gomorrah, Admah, Zeboiim, and Zoar) to throw off the yoke of four Mesopotamian kings under the leadership of Chedorlaomer, king of Elam (Gen. 14:3, 8). This valley is specifically equated with the Salt Sea (vs. 3) —i.e., the DEAD SEA. The only suitable understanding of this equation interprets the valley in question to be covered by the shallow waters of the S embayment of the Dead Sea, S of the peninsula (el-Lisan) projecting from the Sea's E shore. Evidence from archaeology, topography, geology, hydrography, and classical tradition is in support of such a conclusion. The area is further described as containing numerous bitumen pits which served as death traps to some of the defeated and fleeing soldiers of Sodom and Gomorrah (Gen. 14:10). Chunks of bituminous material still, on occasion, rise to the surface of this S embayment.

Bibliography. J. P. Harland, "Sodom and Gomorrah: The Location of the Cities of the Plain," *BA*, V (1942), 17-32.
W. H. MORTON

SIDE sī'dī [Σίδη]. A port on a promontory on the coast of Pamphylia; a favorite haunt of Cilician pirates. The site now consists of extensive ruins at Eski Adalia. It had two harbors and was a useful refuge for those who wished to dispose of plunder. It was the scene of a sea battle between the Rhodians and Antiochus III the Great of Syria, wherein ships from Side and Aradus formed the left wing of the fleet of Antiochus. It was colonized originally by Cymeans and remained important as late as under the Roman emperors. This was one of the places to which the Roman consul Lucius is said to have written letters in 139 B.C. requesting kindly treatment for the Jews and the return of all fugitive Jews to Simon Maccabeus (I Macc. 15:23). Antiochus VII Sides was brought up here. Much coinage of Side is extant.

See also ANTIOCHUS 3, 7.

N. TURNER

SIDON sī'don [סִידוֹן; צִידוֹן; Akkad. and Amarna *Sidun(n)u*, *Sa'idunu*; Phoen. *Σιδών*], SIDONIANS sī dō'nī anz; KJV often ZIDON zī'—, ZIDONIANS. A Phoenician city between Tyre and Beirut.

1. **Location.** Sidon, now Saida, is situated on a small hill, projecting into the Mediterranean, ca. twenty-five miles N of Tyre. Behind the city is a fertile plain, which is now used for growing oranges and lemons. The city was protected on the side toward the land by a wall. There was a harbor on the N side, good and well protected, and another one on the S side. Some small islands help to keep heavy waves away. Like people in other Phoenician towns,

From *Atlas of the Bible* (Thomas Nelson & Sons Limited)

57. Air view of Sidon

the inhabitants of Sidon lived on agriculture, fishing, and trade, for which the city is well situated. The fishing fleet still uses the harbor, and a great shell mound by the city walls, consisting of millions of murex shells, tells about the important purple industry of ancient Sidon. See CANAANITES § 1; PURPLE. Fig. SID 57.

2. History. Like Tyre and Byblos, Sidon is a very old city. Little is known, however, about its most ancient times. The Amarna Letters (see TELL EL-AMARNA) from the thirteenth century B.C. reveal that while Tyre remained faithful to Egypt, King Zimreda of Sidon, in spite of his devoted letters to the Pharaoh, was an ally of King 'Aziru, the Amorite. Egypt at that time was losing its hold on Sidon, but it was still trading with it at the time of Wen-Amon (ca. 1100). Hittites and Hapiru, as well as the "Sea Peoples" from the N, tried to dominate Sidon in this time, but the city was able to keep a rather independent position.

The dominating position of Sidon is indicated also in the OT. In the genealogical lists in Gen. 10:15; I Chr. 1:13, Sidon is mentioned as the first-born of Canaan. In Gen. 10:15 it is implied that Sidon was at the N border of the territory of the Canaanites; so also Gen. 49:13 (cf. II Sam. 24:6). It is also called "Great Sidon" (Josh. 11:8; 19:28). It was never Israelite territory, but was close to the border of the tribe of Asher (Judg. 1:31). Sidon and Sidonians are often mentioned in a way which indicates that Phoenicia and the Phoenicians are meant (Deut. 3:9; Judg. 3:3; 10:6, 12; 18:7; I Kings 5:6; 11:1, 5, 33; 16:31; II Kings 23:13). This is especially clear in I Kings 16:31, where Ethba'al, the king of Tyre, is called "king of the Sidonians." The information here shows that at the time of Ahab (ninth century), Sidon was no longer the dominating Phoenician city; its hegemony had passed over to Tyre. But at this time the Assyrians pressed toward the W, and both Sidon and Tyre had to pay tribute again and again—to Ashurnasirpal II in 876; to Shalmaneser III (858-824); Tiglath-pileser III (744-727); and in 725 to Shalmaneser V (727-722), who invaded the Phoenician cities. The Assyrians were, however, interested in supporting Sidon against its rival, Tyre. In spite of this situation, Sidon and Tyre were considered as dangerous and arrogant by their neighbors. Especially the prophets of Israel saw them in this light and predicted their destruction (Isa. 23; Jer. 25:22; 27:3-

6; 47:4; Ezek. 28:20-23; Joel 3:4). In the book of Ezekiel, however, the prophet seems to be aware that Tyre was dominating at this time and that the men of Sidon had to serve as rowers for the Tyrians (27:8).

The destruction of Sidon actually took place in 677. While Tyre had revolted several times against the Assyrians, it was first after the death of Sargon II in 705 that King Luli of Sidon, together with his allies, made an attempt to throw off the yoke. Sennacherib crushed the revolt in 701. Luli had to flee to Cyprus, and Sennacherib appointed Ethba'al as his successor, and inscribed his victory at the side of the inscription of Ramses II on the rock near the mouth of the River Nahr el-Kelb. But the son of Ethba'al, Abdimilkutte, also revolted, and this time the Assyrian king, Esarhaddon, preferred to destroy the city and kill its king.

Esarhaddon also tried to build a new city in the neighborhood, populated with deported people from around the Persian Gulf. But instead, Sidon grew up again. It was dominated by the Egyptians for a short time, 609-593, but was then conquered by King Nebuchadrezzar. The Babylonian sway did not last long, and under Persian domination Sidon regained some of its old importance and also a certain independence. It furnished ships for the navy of King Xerxes I and had them destroyed in the Battle of Salamis in 480. It may have been experiences like these which made the Sidonians revolt against Artaxerxes III Ochus in 351. They were encouraged by Egypt, but received no help when Artaxerxes advanced with a great army. King Tennes became

Imprimerie de l'Institut Français d'Archéologie Orientale, Paris

58. Sarcophagus of Eshmunazar, king of Sidon

frightened and fled, leaving the city to its fate. Its people burned all the ships in the harbor, so that nobody could flee. Then they went to their homes and stayed there when the city was burned. More than forty thousand are said to have lost their lives. It is no wonder, then, that Sidon surrendered to Alexander the Great without battle in 333.

The stone coffins of two of the succeeding Sidonian kings were dug out from the rock tombs near the city in the nineteenth century.* Tabnit and his son Eshmun'azar II reigned ca. 300 B.C. Tabnit called himself "priest of Astarte (Ashtart), king of the Sidonians," and Eshmun'azar II boasts that he and his family built temples for Astarte, Eshmun, and Baal. Fig. SID 58.

In the times of the Seleucids, Sidon again attained a rather independent position. There was a change in this after 64 B.C., when Pompey imposed Roman rule in Phoenicia, but Sidon still remained a prosperous and flourishing city for a long time. Its importance vanished slowly. The Phoenician monopoly in the purple industry was broken in Roman times, but the demand was still enormous for centuries. The cedar trees, which Sidon had used so freely in its trade (cf. I Chr. 22:4; Ezra 3:7), had also started decreasing.

In the NT, Sidon and the Sidonians are mentioned several times—e.g., Matt. 11:21, 22; Luke 4:26; 10:13, 14; Acts 12:20. Jesus himself went to Sidon (Matt. 15:21; Mark 7:24, 31), and he preached to people from that city (Mark 3:8; Luke 6:17). Paul was there on his way to Rome (Acts 27:3).

Today Saida has ca. fifty thousand inhabitants. Its landmark is the big ruin of a Crusader castle.

SIDRACH sîd'râk. Douay Version form of SHADRACH.

SIEGE. See WAR, METHODS OF, § 9.

SIEVE [כברה (Amos 9:9); נפה (Isa. 30:28)]. Isa. 30:28 refers to a day of judgment when the Lord will sift the nations "with the sieve of destruction." In Amos 9:9 a similar sifting of the house of Israel is foreseen. See FAN; WINNOWING.

SIGNAL [מועד (KJV APPOINTED SIGN), משאה (KJV FLAME; SIGN OF FIRE), נס (KJV ENSIGN; BANNER; STANDARD), שרק (verb; KJV HISS)]. Clouds of smoke (Judg. 20:38), whistles (Isa. 5:26), cries and hand waving (13:2), trumpets (18:3), and flagstaffs (30:17) would seem to have been recognized signals in the OT. The terms "sign" and "signal" can be used interchangeably in rendering many of these Hebrew words. The signs of forthcoming events which were interpreted by priest and prophet were often intended as signals for concerted action. Such signs frequently conveyed some indication of the nature of the forthcoming event.

See also SIGNS AND WONDERS.

H. F. BECK

SIGNATURE [תוין] (Job 31:35); KJV DESIRE. This word is taken as the last letter of the Hebrew alphabet with the suffix of the first person singular: "my tau"—i.e., my "mark" or "sign." In biblical times the letter had the form of an "x" (cf. I Sam. 21:13; Ezek. 9:4). Job 31:35 then reflects a written legal process in which the defendant sets his signature upon a declaration of his innocence, and awaits the counter declaration of his accuser.

Driver, *Semitic Writing* (1954), pp. 88-89 (but cf. p. 209, where he defends a different interpretation of Job 31:35). J. A. WHARTON

SIGN IN THE OT [אות] (alternately MARK; TESTIMONY; OMEN; GOOD OMEN; KJV TOKEN); אר (Dan. 4:2-3—Aram. 3:32-33); ציון (Ezek. 39:15), see WAYMARK]; PORTENT [מופת]; KJV alternately WONDER]; SIGNAL [משאה]; KJV SIGN OF FIRE]; WARNING [נס]. A mark, symbol, or portent, serving to convey a particular idea or meaning. The various biblical words for "sign" usually take their meaning from their context, but in some cases their precise sense is uncertain. For "sign" as a miraculous act, see SIGNS AND WONDERS. See also SIGN IN THE NT.

1. A physical sign, something portentous
2. An identifying mark
3. A declaration
4. A warning
5. A proof of assurance
6. A reminder
7. A portent or object lesson
8. An omen
9. A witness or testimony

1. **A physical sign, sometimes portentous.** In Gen. 1:14 the heavenly bodies are to serve as signs—i.e., as directional, calendar, and weather indicators. In Jer. 10:2 the "signs of the heavens" suggest extraordinary celestial phenomena. In Ps. 65:8—H 65:9 "thy signs" seem to mean God's creative acts and his manifestations in nature. In Josh. 4:6; Ezek. 39:15 a sign is a cairn or a small heap of stones. In Ps. 74:4 military ensigns may be meant (cf. "signal," KJV "sign of fire," in Jer. 6:1). In Joel 2:30—H 3:3 "portents in the heavens and on the earth" mark the coming of the day of the Lord.

2. **An identifying mark.** The blood on the Hebrew houses is a sign to identify them (Exod. 12:13).

3. **A declaration.** The rainbow betokens God's covenant with Noah and all the earth (Gen. 9:12-13, 17); circumcision points to the covenant with Abram (Gen. 17:11).

4. **A warning.** The covering of the altar, made from the censers of Korah and his family, is to be a permanent warning to Israel (Num. 16:38), while the death of Korah and his company is to serve a similar purpose (Num. 26:10). Aaron's rod, kept before the ark, is to rebuke all potential troublemakers (Num. 17:10). In Ezek. 4:3 the sketch of the besieged city of Jerusalem on a brick is to warn Israel of what is soon to be a fact. The symbolic acts in Ezek. 12:1-16; 24:15-27 are signs in this sense.

5. **A proof or assurance.** In Josh. 2:12 Rahab asks for a "sure sign" that she and her family will be spared. A sign, meaning something which proves God's word or a prophet's to be true, is referred to in Exod. 3:12; I Sam. 10:7, 9; 14:10; I Kings 13:3, 5; II Kings 19:29 (cf. Isa. 37:30); 20:8-9 (cf. II Chr. 32:24, 31; Isa. 38:7); Isa. 7:11, 14; 38:22; Jer. 44:29. In Ps. 86:17 "sign" means a demonstration of God's favor.

6. **A reminder.** In Exod. 13:9 the Passover is to be like a sign on the hand: it will recall the deliverance from Egypt. Similarly in vs. 16 the sacrifice or redemption of the first-born in Israel has a commemorative purpose. In 31:17 sabbath-observance is to remind Israel of God's creative work and of the Creator's day of rest (cf. Ezek. 20:12, 20). In Deut. 6:8 God's words are to be bound as a sign upon the hand, so that they will never be forgotten. This passage and 11:18-20 were to serve as the scriptural basis for the later Jewish practice of wearing phylacteries.

7. **A portent or object lesson.** In Ps. 71:7 the psalmist claims to have been a portent to his contemporaries. Isaiah makes the same assertion about himself and his children (Isa. 8:18; cf. 20:3). The figure is used of an idolater in Ezek. 14:8.

8. **An omen.** The omens of soothsayers are mentioned in Isa. 44:25. Some take "signs" in Ps. 74:9 as a reference to priestly omens (others take as "ensigns," as in vs. 4). The phrase "men of sign" (Zech. 3:8) is thought to mean "men of good omen" (so RSV).

9. **A witness or testimony.** In Isa. 19:19 an altar in Egypt is to bear witness to the Lord in an alien land. The everlasting sign in Isa. 55:13 presumably means that the blessedness of the future will be a witness to the Lord's word and purpose (cf. 66:19). "Testimony" is used in this sense in Job 21:29.

W. S. McCULLOUGH

***SIGN IN THE NT** [σημεῖον]. A word which occurs scores of times in the NT, and, as in the Bible generally, denotes an outward indication of an inner or hidden purpose, usually that of God himself. A sign is not necessarily supernatural in character, though frequently it is itself a prodigy (cf. the frequent combination *σημεῖα καὶ τέρατα*, "signs and wonders"), since in NT times it was considered reasonable to expect that God would authenticate any disclosure of his intention by means of supernatural occurrences.

1. The expectation of the signs of the Messiah
 2. Jesus as himself the Sign
 3. The miracles of Jesus as signs
 4. The signs of the End
- Bibliography

1. **The expectation of the signs of the Messiah.** In biblical times it would be a natural expectation that a true prophet should authenticate his message by showing signs; it was worthy of remark that John the Baptist had shown no sign (John 10:41). The Messiah, who was "the Prophet" par excellence (John 1:21; 6:14; cf. Deut. 18:15), would be expected to offer signs by which he might be recognized; but since there was considerable vagueness about the

Messiah's appearing, there would also inevitably be uncertainty about the signs he would show. It was wholly in keeping with the outlook of the age that the Pharisees should demand from Jesus a sign from heaven in order that he might authenticate himself, whether as prophet or as Messiah (Matt. 12:38; Mark 8:11; Luke 11:16; John 2:18). Thus, too, Paul speaks as if the Corinthians had every right to expect him to show the "signs of an apostle"—namely, *σημεῖα καὶ τέρατα καὶ δυνάμεις* (II Cor. 12:12). It was, in fact, regarded as axiomatic, at least until the nineteenth century, that a supernatural revelation should be attested by supernatural signs, although the sign itself need not be miraculous in character. The angel at the Nativity offered to the shepherds the *σημεῖον* of the babe in the manger (Luke 2:12), and Simeon spoke of the child Jesus as a "sign that is spoken against" (Luke 2:34). The manner of Jesus' birth is, for those who understand who he is, a sign of the divine initiative in our redemption, as also his resurrection from the dead is the sign of the divine authentication of his words and work (cf. Acts 2:22, 32-36). For the apostolic church the whole story of Jesus from his conception by the Holy Spirit to his ascension into heaven is a "sign" vouchsafed by God to those who will receive it; this attitude is especially characteristic of the Fourth Gospel. See *bibliography*.

2. **Jesus as himself the Sign.** Jesus condemned the attitude of those who demanded a sign in the heavens (Matt. 12:39; Mark 8:12; Luke 11:29; cf. Paul in I Cor. 1:22) and refused to give a sign. His point of view is that of the Bible generally. To demand a sign indicates lack of faith (John 20:24-30); thus the Israelites of old had tempted God in the wilderness by their demand for signs (Num. 11, etc.), and Paul reminds the Corinthians that the story of their fate was written for our admonition: "We must not put the Lord to the test, as some of them did and were destroyed by serpents" (I Cor. 10:9-11). It is highly significant that in the temptation story (Matt. 4:1-11; Luke 4:1-13) Jesus, the new Israel, refuses the suggestions of the devil and will not demand of God a sign; "You shall not tempt the Lord your God" (Matt. 4:7; Luke 4:12; quoted from Deut. 6:16). Forty years the old Israel had hardened its heart, as in the day of Massah (temptation) in the wilderness, and had tempted God (Ps. 95:8-10); but now the new Israel, Christ, being tempted to ask for a sign of God's favor, rejects the tempter in the wilderness during the forty days of testing. Thus, Jesus refused to ask for a sign and likewise to give a sign, since the demand for signs proceeds from unfaith. He would trust in God, and his followers must trust in him, apart entirely from supernatural signs.

Yet as God had given to the old Israel signs of his redemptive activity when he led his people forth from Egypt, across the Red Sea, and through the wilderness, so now God was giving signs that a mightier redemption was at hand. But they were signs of God's own choosing, not of man's. It seems clear that Jesus regarded John the Baptist as well as himself, his own preaching and healing works, as one of those "signs of the times" (Matt. 16:3) which the Pharisees ought to have understood. He himself performs prophetic signs, like those given by the prophets of old; such as, e.g., the great teaching sign

of riding into Jerusalem upon an ass in fulfilment of Zech. 9:9 (Matt. 21:5). Even the pagan Ninevites had repented at the sign of Jonah's preaching, and the Queen of the South had recognized the sign of Solomon (Matt. 12:39-42; Luke 11:29-32); but the signs Jesus was showing, the signs of God's redemptive activity in this age (καιρός), were not the signs for which disobedient Israel was looking. Even heathen Tyre and Sidon would have understood and repented if they had seen the acts of power which had been done in Chorazin and Beth-saida (Matt. 11:20-24; Luke 10:13). But it was not so much his actions as his person which Jesus regarded as being primarily the sign of God's redemptive activity. The Son of man was himself the sign vouchsafed to that generation that the day of redemption was at hand; perhaps this was one of the reasons why Jesus adopted the title "Son of man" as his own personal self-designation. Ezekiel had, like other prophets (e.g., Isa. 8:18), regarded himself as a sign to his generation (Ezek. 12:6; 24:24), sent to speak God's word, whether they would hear or whether they would forbear (3:4, 11, etc.). So the Son of man, Jesus, is sent to proclaim God's word and to be a sign to a disobedient people; cf. Ezekiel's "He that will hear, let him hear" (3:27) with Jesus' "He who has ears to hear, let him hear" (Mark 4:9, etc.).

3. **The miracles of Jesus as signs.** Thus, Jesus refused to work prodigies (τέρατα) as signs in order to convince unbelievers, for he knew that such conviction was worthless (Matt. 4:5-7; Mark 15:32; Luke 16:27-31; John 6:26). Yet he regarded his miracles (δυνάμεις) as signs to those who already had the eyes of faith. His exorcisms were the sign that the kingdom of God was at hand and that Satan's kingdom was at an end (Mark 3:22-27); his preaching and his healing work were the fulfilment of the signs foretold by Isaiah concerning the days of the Messiah (Matt. 11:2-6; Luke 7:18-23; cf. Isa. 35:5-6, etc.). The significance of the miracles of Jesus as "signs" of the divine activity of redemption is understood only by those who believe in him; others are offended at him. "Blessed is he who takes no offense at me" (Luke 7:23). It is especially the Fourth Evangelist who develops the significance of the miracles of Jesus as signs (John 2:11, etc.); indeed, he never uses the word δύναμις but speaks many times of σημεῖα. See also MIRACLE.

4. **The signs of the End.** The person of the Son of man, as also his works (ἔργα), are in the view of the NT writers the signs of the end of the age, or of the dawning of the Day of the Lord. Nevertheless, Jesus had lived and died and risen again, and the Holy Spirit had been poured out in the latter days, but the world went on in very much the same way as before his birth. It was inevitable that there should be much discussion in the early church concerning the signs of the End, which in one sense had come already, but which in another sense was still to come. Tradition reported that Jesus himself had spoken of certain signs by which his followers might know when the End in this second sense was approaching (Mark 13:4-37). There would be wars, earthquakes, famines, and persecutions of the faithful, and with all these things there would be the sign of the preaching of the gospel to all nations, which would have to be

accomplished before the End could come (Matt. 24:14; Mark 13:10). The word of God must "smite the nations" before the End is consummated (Rev. 19:11-16). During the period before the End, the faithful must watch against temptations, closely connected, as we should expect, with false signs (Mark 13:6, 22; II Thess. 2:9; Rev. 13:13). Patient endurance is the quality required for such times; it is contrasted with the credulous looking for false signs by which even the elect may be deceived: "Watch and pray that you may not enter into temptation" (Mark 14:38).

ALAN RICHARDSON

SIGNET [חֶתֶם, חֶתֶם, חֶתֶם (*alternately* SIGNET RING; SEAL); Aram. עֲזָקָא (*only* in Dan. 6:17—H 6:18)]; **SIGNET RING** [טְבִיעָה (KJV RING)]. A ring used for impressing its owner's signature on the seals of documents and the like; often the mark of royalty or nobility. See KING.

An important person made his signature by pressing his ring into a plastic substance, such as wax, affixed to the document or other object being signed (Esth. 8:8; Dan. 6:17—H 6:18). Rings used for this purpose were normally made of gold and set with precious or semiprecious stones into which the name or personal insignia was cut by a skilled engraver, although ordinary stone or faience scarabs set in gold or bronze might be used, and the signet could be carried on a cord around the neck instead of being set in a ring (see RING; SEALS AND SCARABS). The artistic ability of the signet maker set the standard for all delicate work with jewels, so that specific instructions are given that the inscriptions on the high priest's ephod, breastpiece, and crown should be engraved "as a jeweler engraves signets" (Exod. 28:11, 21, 36; 39:6, 14, 30). Since many influential citizens wore signets, they were common enough to be among the gifts of gold for the tabernacle (Exod. 35:22), and to be included in the booty of war (Num. 31:50), but they were rare and costly enough to be named by Isaiah among the signs of luxury and affectation in Israel (Isa. 3:21).

The signets of men of noble or princely rank, whose signatures carried authority, had a special importance (Gen. 38:18; Dan. 6:17); and the king's ring, with which he signed state documents, was particularly significant. The giving of this ring to a trusted counselor, as Pharaoh did to Joseph and the Persian king successively to Haman and Mordecai, was a mark of singular favor, since it conferred extraordinary powers upon the recipient (Gen. 41:42; Esth. 3:10; 8:2). The precious nature of the signet, together with the authority represented by the king's ring, gives rise to the striking metaphor by which a leader of Israel may be called the signet on Yahweh's hand (e.g., Zerubbabel in Hag. 2:23; and, ironically, Coniah in Jer. 22:24). A number of translations, including the RSV, read "signet" in Ezek. 28:12, where the Hebrew is obscure.

For archaeological examples of signet rings and

seals which were used as signets, *see* SEALS AND SCARABS.

L. E. TOOMBS

SIGNS AND WONDERS. A word-combination which appears many times in the Bible and may be called a traditional formula. *See also* MIRACLE.

Of the approximately thirty-five occurrences of the word "wonder" (מוֹפֵת) in the OT, eighteen instances are parallel to, and nine are practically synonymous with, the word "sign" (אוֹת), for the meanings of the words overlap (cf. Deut. 28:45-46; Ezek. 12:6, 11). Israel's confession of faith, as expressed in the ancient cultic credo, included the affirmation that Yahweh brought his people out of Egypt "with signs and wonders" (Deut. 6:20-24; 26:5-10; cf. Josh. 24:17). This formula, which witnesses to Israel's faith in Yahweh as the Lord of history (*see* GOD, OT VIEW OF, § 1), is found again and again—e.g., in the hortatory appeals of Deuteronomy (4:34; 7:19; 11:3; 29:3—H 29:2), in various summaries of *Heilsgeschichte* (Neh. 9:10; Jer. 32:20-21; Acts 7:36), and in psalms which recall Yahweh's marvelous dealings with his people (Pss. 78:43; 105:27; 135:9).

In the NT the word "wonder" (τέρας) never occurs by itself but always as a plural form in conjunction with "signs" (σημεία). Although the NT word-combination σημεῖα καὶ τέρατα (Mark 13:22; John 4:48; Acts 2:43; Rom. 15:19; etc.) has parallels in Greek literary tradition, the major point of contact is with the LXX, where the expression occurs frequently as a translation of אֲתוֹת וּמוֹפְתִים.

1. **The wonderful character of revelation.** Theologically speaking, revelation and miracle are inseparably related. Whenever and wherever God reveals himself in the world, the man of faith is conscious of miracle. For REVELATION is not an event which springs out of natural causes or explainable phenomena; God's holiness is otherworldly—i.e., beyond anything known or conceivable in the ordinary world (*see* GOD, OT VIEW OF, § 4a). Thus the divine mystery is disclosed in happenings which evoke the response of awe, fear, and wonder (cf. Exod. 3:1-6).

The response to God's presence is indicated in the vocabulary of miracles. God performs פֶּלֶא, a wonder or marvel which surpasses understanding (Exod. 15:11; Pss. 77:14—H 77:15; 78:12; 88:10, 12—H 88:11, 13; 89:5—H 89:6; Isa. 25:1); his acts of judgment and redemption are נִפְלְאוֹת, wonderful and extraordinary deeds (Exod. 3:20; 34:10; Josh. 3:5; Judg. 6:13; Job 9:10; Pss. 78:4, 11, 32; 105:5; Jer. 21:2; etc.). Yahweh's marvels, insofar as they evoke fear, may be described as גִּוְרָא, a dreadful, awe-inspiring thing (Exod. 34:10; II Sam. 7:23; cf. Ps. 66:3, 5). Other terms for a miracle are "deed" or "work" (עֲלִיָּה, מעלה, מעשה, Deut. 3:24; Pss. 9:11—H 9:12; 66:5; 77:12—H 77:13; 86:8; Isa. 12:4), "great thing" (גְּדוּלוֹה, II Sam. 7:23; II Kings 8:4; Job 9:10; Pss. 71:19; 136:4 ["great wonder"]), or "mighty deed" (גְּבוּרָה, Deut. 3:24 ["mighty act"]; Pss. 20:6—H 20:7 ["mighty victory"]; 106:2 ["mighty doing"]); the last term is comparable to the NT "mighty work" (δύναμις; plural δυνάμεις; Mark 6:5; Luke 10:13; Acts 2:22). The miracle may also be called בְּרִיאָה, "creation" (Exod. 34:10; Num. 16:30; cf. Isa. 48:7; Jer. 31:22). The deeds of Yahweh disclose the holi-

ness, greatness, and saving power of Israel's God, according to Ps. 77:11-15—H 77:12-16, a passage which employs several words for "miracle."

In the biblical sense, then, a miracle is an unusual, marvelous event which testifies to God's active presence in the world. This does not mean, however, that the miracle is a disruption of the natural order, which, according to modern understanding, is governed by the law of cause and effect. To be sure, the Bible bears witness to the regularity and dependability of the natural order—"seedtime and harvest, cold and heat, summer and winter, day and night" (Gen. 8:22)—but this is the expression of God's covenant faithfulness and steadfastness (Ps. 148:6; Isa. 45:18; Jer. 5:24; 31:36). God is not outside and bound by a system of law, but he is present any time or anywhere (cf. Jer. 23:24) and is free to act as he chooses, using the elements of the natural world to accomplish his purpose. According to repeated statements in the Bible, "all things are possible with God" (Gen. 18:14; I Sam. 14:6; Jer. 32:17; Mark 10:27), although this is not construed to mean that he acts in a capricious manner.

One of the basic tenets of biblical faith is the doctrine of providence, the conviction that the God who is Creator and Lord shapes the events of history and controls the powers of nature according to his sovereign purpose. Living within the sphere of God's action, the man of faith is alert for signs in the everyday world which indicate God's real presence in the midst of his people. Indeed, the event which the faithful Israelite or Christian may regard as wonderful may, from another point of view, seem quite ordinary or may be regarded as an insignificant coincidence. Thus the miracle of the Red Sea may be attributed to a strong wind which drove back the shallow waters of the Sea of Reeds, the manna and the quail were nothing more than phenomena familiar in the S wilderness of Palestine, or the crossing of the Jordan was facilitated by seismic activity which caused the waters to be dammed up temporarily. Similarly, some of Jesus' miracles—e.g., the healing of the paralytic (Mark 2:1-12)—can be made credible on the basis of modern psychological knowledge. Thus the element of wonder may be missed by the observer, whether he belongs to the ancient time or to the modern period. But within the biblical circle of faith the question is not whether the miracle happened according to a particular description but whether God was in the event, thus making it "wonderful." The conviction that God was wonderfully present provided the motive for magnifying the event further in the process of transmission; this is a phenomenon the biblical critic observes in the accretion of the miracle tradition in the OT and the NT. It must be admitted that other factors had a part too, such as the literalistic misunderstanding of Joshua's poetic command to the sun and the moon (Josh. 10:12-13a; cf. vss. 13b-14), the attempt of Elisha's disciples to glorify their master with spectacular miracles, or the influence of Hellenistic wonder tales upon the gospel tradition.

In a general sense, everything is miraculous to the man of faith insofar as it is touched by the hand of God. All of nature glorifies God, whose works are wonderful (Job 38 ff; Ps. 139:14). But in certain

situations God's action coincides with a critical moment in the life of a person or a people, thus making it possible to speak of specific miracles.

In the OT the primary word for "wonder" is *מוֹפֵת*, a word which, as already noted, has its counterpart in the NT *τέρας*. The word conveys the idea of something extraordinary or marvelous (Exod. 4:21; 7:9; 11:9-10; I Chr. 16:12; Ps. 105:5; Joel 2:30—H 3:3; cf. II Chr. 32:24), although the usage does not correspond to the idea of a miracle as a spectacular, abnormal event. Ezekiel's enactment of the fate of an exile was to be a *מוֹפֵת* to the people, as was his tearless response to the death of his wife (Ezek. 12:6, 11; 24:24, 27). The term is close in meaning to *אֵיִת* (cf. NT *σημεῖον*; see below); hence it sometimes alternates with the latter (cf. II Kings 20:8; Isa. 38:7; with II Chr. 32:24), sometimes has an equivalent meaning (I Kings 13:3; Ps. 71:7; Zech. 3:8), and in the majority of cases is linked with *אֵיִת* (Exod. 7:3; Neh. 9:10; Pss. 78:43; 105:27; 135:9; Jer. 32:20-21; and nine times in Deuteronomy). It is noteworthy that Isaiah's act of going naked and barefoot during the siege of Ashdod (Isa. 20:2-4) is described as an *אֵיִת וּמוֹפֵת*, and that the prophet, together with his children, was *לְאִתּוֹת וּלְמוֹפֵתִים* in Israel (8:18). Ordinary and insignificant things may become extraordinary and "sign-ificant" if the light of divine revelation shines upon and transfigures them. God's presence may be detected in a casual remark, an untimely death, a turn of events, or the return of war-scarred land to normal (Gen. 24:10-21; I Sam. 2:27-36; 14:10; Isa. 37:30-32). The miraculous character of the event depends less upon its abnormal character than upon the time (*kairos*) of its occurrence—i.e., its happening at a particular juncture and with a particular meaning in the discerned plan of God. To the Egyptians, the crossing of the Red Sea was probably a freakish border incident; but to the Israelites, faced with a historical emergency and favored with a prophetic interpreter, the event disclosed the active presence of God. Similarly, the event of the Crucifixion and the Resurrection was a scandal to the Jew and foolishness to the Greek, while to the church it was the sign of God's wisdom and power (I Cor. 1:18-25).

In a broad sense, the history of God's action, as witnessed in the Bible, is miraculous from first to last. There were, however, decisive times in God's dealings with his people, and such times, according to the biblical tradition, were marked by an intensification of miracles, although due allowance must be made for the critical problems connected with individual miracle stories. Thus the time of Israel's early *Heilsgeschichte* (the Exodus, wandering in the wilderness, entrance into the Land of Promise) is portrayed as a time of many miracles. Similarly the rise of the prophets, by whom Yahweh spoke anew when Israel was engulfed in world politics, was marked by new miracles, according to the view of the prophetic schools (Elijah and Elisha narratives). And above all, the NT affirms that the inauguration of the New Age was accompanied by signs and wonders, which were performed, not only by Jesus himself (Acts 2:22), but also by his disciples and the church (John 14:12; Acts 4:16, 30; 5:12; 6:8; 14:3; I Cor. 12:10, 28; II Cor. 12:12; Gal. 3:5; Heb. 2:4).

2. Miracles as sign-events. The frequent association of biblical words for "wonder" with "signs" (*אֵיִתוֹת, אֵיִתוֹת, אֵיִתוֹת*) suggests another characteristic of biblical miracles. Not only do they witness to the wonderful character of God's actions, but they also have the effect of confirming the word of God, spoken in threat or promise, disfavor or favor. A sign stands in close, but subordinate, relation to the prophetic word, adding a kind of evidential support in experience. Thus men can not only hear God's word, but can also see it in action.

A sign makes an impact upon the senses, especially the sense of sight. In the OT the word *אֵיִת* is used with a variety of meanings, such as a marker, signal, token, ensign, omen, etc. (see SIGNS IN THE OT). A common denominator among all these meanings is that a sign is characterized by visibility or historical concreteness. When used in connection with "miracle," a sign is a visible indicator which points to the invisible power and activity of God in the world. Frequently signs are given in connection with a divine commission, as evidence of God's promise: "I will be with you." Thus, according to Exod. 3:12, Yahweh says to Moses: "This shall be the sign for you, that I have sent you: when you have brought forth the people out of Egypt, you shall serve God upon this mountain"—i.e., the very existence of Israel as a people, emancipated to serve Yahweh, will be historical confirmation of the commission. Quite apart from the question of the historicity of individual incidents, the intention of the other signs, whether given directly to Moses (Exod. 4:8-9, 17), or performed in the presence of the Israelites (4:28, 30) or the pharaoh (7:3; 8:23; 10:1-2), is to show that Yahweh's word is confirmed by visible signs which accredit Moses as his agent. (Note that in 4:21; 7:8-13 these *אֵיִתוֹת* are called *מוֹפֵתִים*, showing that the two terms may alternate.) The same motif is present in the story of Gideon's commission at the time of Midianite oppression (Judg. 6:11-24). Gideon asks where are all the wonderful deeds (*נִפְלְאוֹת*) which have been recounted from the time of the Exodus. When Yahweh summons him to deliver Israel and promises: "I will be with you," Gideon asks for a sign which will show him that it is actually Yahweh who is speaking (vs. 17), and receives a sign in the form of the fire which consumes his offering. Similarly, in the early tradition of the origin of the monarchy (I Sam. 9-10), Samuel delivers to Saul the "word of God" (9:27)—namely, that Saul has been chosen to deliver Israel from its enemies—and promises that this word will be confirmed by signs (10:1-13). "When these signs meet you," says Samuel, "do whatever your hand finds to do, for God is with you" (10:7).

These passages not only show the close relation between word and sign but also suggest that a sign often has a predictive character. They point to what Yahweh is about to do in confirmation of his word of judgment or mercy spoken in the present. The prophets' primary function was to proclaim the "word of the Lord," which had the power to evoke repentance and faith; but they also pointed to signs, and even acted out signs, which demonstrated the effective power of the divine word in history. An important illustration is the Immanuel sign related

in Isa. 7:10-16. Isaiah delivered to King Ahaz Yahweh's word that the Syro-Israelite alliance would not stand and that the attempt to put a puppet king on the throne of Judah would fail; and he further announced that Yahweh would confirm his word by any sign the king might choose, the assumption being that all things are possible with God. The sign which was predicted, despite the king's refusal to ask under the pretense of piety, is fraught with interpretive problems. Undoubtedly the sign was not associated with the manner of the child's conception, but rather with his imminent birth (probably in the royal line), his symbolic or significant name, and the meaning of the years of his childhood (see *IMMANUEL*). In any case, the wonder-child (cf. Isa. 9:2-7—H 9:1-6) would be concrete, visible evidence, to those who had eyes to see, that Yahweh was active in the historical situation to fulfil his purpose. Also, this demonstration may take the form of the prophet himself, who, together with his sign-children, withdraws into the prophetic community to wait for Yahweh in hope (Isa. 8:16-18), or the return of agricultural fertility (Isa. 37:30-32 = II Kings 19:29-31), or even "acted signs" (Isa. 20:3; Ezek. 4:1-3). Similarly, eschatological promises concerning the New Age are linked with predictions of signs which will take place (Isa. 45:1-8; 55:10-13) when the earth will be marvelously transformed (see *CREATION* § 3*b*). Indeed, the forecasting of wonderful portents in heaven and on earth was a prominent feature of apocalyptic (Dan. 4:2-3—A 3:32-33; 6:27—A 6:28; Joel 2:30—H 3:3). The NT, too, affirms that the end of the present age will be heralded by signs and wonders (Luke 21:11, 25; Rev. 12:1, 3; 15:1; cf. Acts 2:19).

The critical questions which arise out of specific miracle stories in the Synoptic gospels should not obscure the fact that, taken as a whole, they have their setting within the proclamation of the coming of the kingdom of God, the dawning of the messianic age. Jesus not only proclaimed the good news of the kingdom but also in his actions, especially his exorcisms, displayed the evidence that God's promises were being fulfilled. The gospel narrators regard his miracles as messianic acts, "mighty works" (*δυναμεις*), which, viewed from the standpoint of faith, disclosed both God's action for man's salvation and the identity of Jesus as his appointed agent. Thus his preaching was accompanied by signs, enabling men not only to hear God's word but also to see its effectual power in the world (Matt. 11:4-5 = Luke 7:22; cf. Luke 10:23-24). His exorcisms were signs that the dominion of Satan was being broken and that God's kingdom was coming with power (Luke 11:20 = Matt. 12:28; Mark 3:22-30). His healings were signs of the immediacy of God's presence and power, manifest particularly in forgiveness (Mark 2:1-12). His nature miracles, such as the stilling of the storm at sea (Mark 4:35-41), portray the awe of those who sensed the majesty and power of divine sovereignty manifest in his words and works. In the Fourth Gospel, Jesus' miracles are essentially and exclusively signs—i.e., symbolic pictures which disclose, to those who see in faith, Jesus' *δῶξα* and his identity as the Son of God (John 2:11; cf. 9:3; 11:4, 40). See *SIGNS IN THE NT*.

3. The ambiguity of signs and wonders. Implicit in the foregoing discussion is a further characteristic of biblical miracles—namely, their ambiguous character. While a sign is given to confirm the divine word, spoken in threat or promise, it does not in itself have the power to convince beyond a shadow of doubt. A sign supports or reassures faith, but not in such a manner as to take men out of the situation of faith—i.e., it does not provide the conclusive evidence which makes faith unnecessary. It would seem that various signs which Moses is reported to have performed in Egypt should have left no doubt in the mind of either the pharaoh or the Israelites, but tradition testifies that their evidential value was weakened by the ability of Egyptian magicians to perform similar feats, by the hardheartedness of the pharaoh, and by the Israelites' blind incapacity to see the proof of Yahweh's sovereignty in history. Despite all that had happened, the Israelites murmured: "Is Yahweh among us or not?" (Exod. 17:7). Similarly, in the NT, Jesus' signs and wonders did not lead irresistibly to faith (cf. John 12:37); rather, they too often merely aroused the curiosity of the crowds who flocked to him as they would to any wonder-worker. Even Jesus' enemies acknowledged that he performed miracles (Mark 3:22); and, according to the Fourth Gospel, his signs, being misunderstood, aroused the hostility which occasioned his death (John 11:47).

The ambiguous character of miracles is discussed in a Deuteronomic law (Deut. 13:1-5—H 13:2-6). It is said that if a prophet or dreamer gives a sign or wonder (*אִשָּׁר אוֹת אוֹתוֹת*), so that his words seduce Israel into the service of other gods, then he should not be heeded, even though the sign or wonder comes true, for in this way Yahweh tests the loyalty of his people. It is further stated that a sign must be congruous with the word of Yahweh as revealed historically in the event of the Exodus. Thus a sign is not in itself evidence of Yahweh's presence (for impostors or other "gods" may work miracles; cf. II Kings 3:27); it is significant only when seen in the context of Yahweh's saving history as interpreted by his prophets. Indeed, faith may discern visible signs of God's providence in history and nature, but fascination with prodigies does not lead to faith. In fact, the love of the miraculous may be a substitute for faith. In the late period of biblical Judaism, when prophecy was believed to have ceased (Ps. 74:9; I Macc. 4:46; 9:27; 14:41), there was a tendency to dwell upon spectacular wonders (II Chr. 20:20-30; 32:20-31; Bel 31-42; II Macc. 1:19-23; 3:22-40; 10:29-31; etc.).

The reluctance of the NT to stress the spectacular character of miracles is suggested, as noticed previously, by the fact that *τέρατα* is always combined with *σημεία*. Jesus himself constantly had to face the temptation of receiving the acclaim of a wonder-worker. The seeking after a "sign from heaven" could be a substitute for seeking God; hence he rebuked the skeptical Pharisees by saying: "No sign shall be given to this generation" (Mark 8:12; Matt. 12:39; Luke 11:29; cf. Matt. 16:1-4; John 4:48; 6:30). His mighty works, instead of evoking repentance and faith, met with hardness of heart; even pagan Tyre and Sidon, said Jesus, would have repented

long ago had they witnessed such deeds (Matt. 11:21 = Luke 10:13). Moreover, it is acknowledged in the NT that events which others regard as miraculous are not miraculous at all, for they do not disclose God's purpose but only deceive men. In the end time, according to the Little Apocalypse of Mark, "false Christs and false prophets will arise and show signs and wonders, to lead astray, if possible, the elect" (Mark 13:22; cf. II Thess. 2:9). It is said that even Satan and his helpers are able to work miracles (Rev. 13:13-14; 16:14; 19:20).

Nevertheless, although refusing to give his generation an unambiguous sign, Jesus' role involved the performance of the signs and wonders of the kingdom. To onlookers these acts were not different from the feats performed by any other wonder-worker; but to those who saw in faith, they were indications that the kingdom of God was coming. Above all, viewed from the church's standpoint of faith, Jesus himself was the sign of the kingdom. So Simeon declares (Luke 2:34) that the child Jesus is given "for a sign"; and the author of Matthew, relying on the LXX of Isa. 7:14, affirms that he fulfils the prophecy of the Immanuel sign (Matt. 1:22-23). In the faith of the church God's mightiest act, in the light of which all other signs and wonders of Jesus' career are understood, is the RESURRECTION, although the ambiguous character of this central sign is stressed especially by the Fourth Gospel (John 11:1-53; 20).

SIHON sī'hōn [סִיחֹן, סִיחֹן]. Amorite king of Heshbon, a city E of the N end of the Dead Sea.

Num. 21:21-31 provides the primary information about Sihon king of the Amorites, and other OT references to him are principally dependent upon this source. However, Deut. 2:26, 30, preserves an apparently independent tradition which identifies Sihon simply as king of HESHBON. Deuteronomy also associates Sihon with Og king of Bashan, as the two Transjordanian kings whom Israel defeated in order to possess the entire region E of the Jordan (Deut. 1:4; cf. Num. 21:33-35; Ps. 135:11).

Sihon is remembered by Israel because of his opposition to the passage of Israelite tribes, moving out

The extent of Sihon's power was certainly more circumscribed than Deuteronomy implies (Deut. 3:6-8), but the poem's allusion to Sihon's defeat of Moab need not be doubted, since the latter can well have consisted only of a small tribal coalition (Num. 21:29; contrast vs. 26). Sihon is to be thought of, then, as controlling an area surrounding Heshbon, whose origins probably go back to the thirteenth century B.C. The more imposing title "king of the Amorites" would designate him only as one of the pre-Israelite inhabitants of Palestine.

OT references which imply a larger Sihonite domain, extending from the Jabbok to the Arnon but uncertainly bounded on the E (cf. Num. 21:24), most likely reflect the history of subsequent Israelite occupation of the region E of the Dead Sea. Both Reuben and Gad figure in this regional history (Josh. 13:8-28), with the role of Gad the more enduring as indicated by the use of its name for Solomon's administrative district in the area (I Kings 4:19 LXX; cf. II Sam. 24:5). Full occupation of the territory S of Heshbon and Medeba, to include Dibon and Aroer to the banks of the Arnon (Num. 21:30; Josh. 12:2), was hardly achieved before David's defeat of Moab (II Sam. 8:2) and, in turn, had been lost by the following century as indicated by the victory inscription of King Mesha of Moab.

The defeats of Sihon and Og persist, however, in the memory of Israel as monumental evidence of Yahweh's vindication of his people. As such they are recalled alongside the exodus from Egypt (Neh. 9:22; Pss. 135:11; 136:19-20).

SIHOR. KJV alternate form of SHIHOR.

SILAS sī'lās [Σιλᾶς]. Alternately: SILVANUS sīl vā'nās [Σιλουανός]. One of the leading men of the Jerusalem church; also called a prophet. He was associated with both Paul and Peter in apostolic missions.

1. The names
 2. Journeys with Paul
 3. Association with Peter
 4. Character
 5. Literary activity
- Bibliography

1. **The names.** There seems little doubt that Silas and Silvanus are one and the same. The former appears in all the accounts of Acts and the latter in the

ence to Antioch. Paul and Barnabas were returning to Antioch, but it seemed fitting to send Judas and Silas as the special representatives of the church. After "exhorting" the church at Antioch, they returned to Jerusalem, although the Western Text adds: "But it seemed good to Silas to remain." However this may be, Silas was soon back in Antioch (vs. 40) and was chosen by Paul to accompany him on the mission to Asia and Macedonia in place of BARNABAS. Silas not only saw the S Galatian country on this journey, but quite likely the N Galatian as well, and from Troas set sail with Paul to the Macedonian country. He was in prison with Paul at Philippi and probably suffered as a Roman citizen the same as Paul (Acts 16:19 ff). He also went through the riots of Thessalonica and Berea (17:1-15). But Silas did not seem to incur the same opposition as Paul, for he was left at Berea while Paul departed to Athens. We next hear of Silas in Corinth, where he was reunited with Paul and Timothy. When Paul left Corinth after the Gallio incident, Silas remained, and this seems to have been the end of the relations between the two. Paul's mention of Silas in later writings only confirms the association in Corinth and throws no light on further relations.

3. Association with Peter. The First Letter of Peter mentions Silvanus in terms suggesting that he was an amanuensis of the apostle. It is conjectured that after he was replaced in Paul's company—Timothy, Aristarchus, and Tychicus being mentioned as Paul's helpers—he went to the areas of Pontus and Cappadocia, the N country with which I Peter is associated. His contact with this region on the way to Troas with Paul had given him the desire to do more work in it. In earlier days Silas and Peter had been apostles and prophets in the Jerusalem church, and this relationship was probably renewed and continued in the evangelization of the N country which was practically untouched by Paul.

4. Character. The Hellenistic character of Silas may be the reason for his selection as the successor of Barnabas, who had failed to measure up to Paul's expectations in that he had inclined to the Judaistic attitude toward Gentiles. But Silas was once paired with Judas Barsabbas, who was likely of the Judaistic party. The church at Jerusalem probably thought they would make a balanced team to make favorable contact between Jerusalem and Antioch. But if Silas was more liberal than Barnabas—enough so to replace him—his association with Peter presents another problem. It is evident that our knowledge of the temperament of these early personalities of the church is not complete. Silas was a minor character, it seems, whether associated with Paul or with Peter.

5. Literary activity. Paul's letters to the Thessalonians, written from Corinth, where Silas labored with him, contain salutations from "Paul, Silvanus, and Timothy." The use of "we" throughout the letters has been taken to mean that Silas and Timothy actually contributed to the writing. In the postscripts of both letters Paul uses the first person singular: "I adjure you," and "I, Paul, write." Possibly this indicates that Silvanus and Timothy were co-authors of the main sections of the letters. Those who object to Paul's apocalypticism in Thessalonians might want to assign the apocalyptic passages to Silas or

Timothy. The great literary activity of Silas which is usually pointed out is that of a scribe in the writing of the First Letter of Peter, based on the words: "By Silvanus, a faithful brother as I regard him, I have written briefly to you" (I Pet. 5:12). Silvanus was thus either a penman who merely took dictation, or a scribe who assumed much responsibility for the actual arrangement and content of the letter. The latter view is widely accepted by those who hold to Petrine authorship, but it must meet the objection that Peter was probably not capable of writing the kind of Greek found in the letter. It is altogether possible that Silas had the cultural qualifications to compose such a writing.

SILK שׁוּן (Ezek. 16:10, 13); KJV שׁשׁ (Prov. 31:22), *properly* FINE LINEN; σερικόν (Rev. 18:12)]. Silkworm culture originated in China, whence it spread through Korea to Japan. Sanskrit literature points to a silk industry in India in the first millennium B.C. A reference to it comes from Aristotle, who describes the silkworm with some detail (*History of Animals* 5.19). The juice of mulberries is referred to in I Macc. 6:34. In Ezekiel's oracle silk is the clothing of the maiden Jerusalem. Silk was a prized article of trade at Rome in the time of the author of Revelation. J. M. MYERS

SILLA סִיל'וֹ [סִיל'וֹ] (II Kings 12:20). Possibly a quarter or suburb of Jerusalem; mentioned in connection with the house of Millo (*see* MILLO 2), in which Joash king of Judah was murdered. The Hebrew text is uncertain.

SILLO סִיל'וֹ. Douay Version form of SHILOH.

SILLOAM סִיל'וֹאִם [Σιλωάμ]. A pool in Jerusalem, mentioned in connection with the healing by Jesus of a man born blind (John 9:7). The author of the Fourth Gospel interprets Siloam symbolically as "(the One who was) sent." The spellings Σ(ε)λωάμ, Σιλωά, are found in the LXX, the latter being a mere transcription of SHILOAH, which is the proper name of an aqueduct, meaning "the sender" of water (Isa. 8:6). It is rendered in the Latin versions by *Siloë* and in Arabic by *Selwan*, which is the name of the village opposite the SE hill of ancient Jerusalem. The complex relations between the aqueduct and the pool are considered here in their historical development and from the point of view of toponymy. For a detailed analysis of archaeological remains, *see* WATER WORKS. Fig. SIL 59.

1. Early aqueducts. Both the aqueduct and the pool belong to a system of canals and reservoirs in communication with the spring of GIHON, a system which was radically altered in the course of history. During the early phase of the monarchy, at the latest before the reign of Ahaz, the water was collected at the outlet of the spring in a reservoir originally dug out of the rock. This reservoir, scanty remains of which have been discovered beneath the modern steps leading to the spring, most likely represents

G. A. Barrois

59. Water works of Jerusalem in the time of the Judean monarchy

the "Upper Pool" (II Kings 18:17; Isa. 7:3; 36:2), possibly also the "Old Pool" (Isa. 22:11), and the "artificial pool" (Neh. 3:16; KJV "pool that was made"). Some scholars, however, distinguish the Upper Pool from the Old Pool, and tentatively locate the latter, or both, in the Tyropoeon.

Two irrigation channels were fed from the reservoir by the spring. The older one has been followed on a short distance only. Several sections of a more recent aqueduct have been thoroughly explored. It followed the contours of the valley with a minimal slope, to make possible an extensive watering of terrace cultivations between the aqueduct and the bottom of the Kidron (see KIDRON, BROOK), which ran farther E and at a lower level than it does today. Some sections of the aqueduct were covered with slabs; some were underground on account of higher rock levels. The irrigation was effected by means of lateral openings in the E wall of the canal, which may be identified with the original Shiloah of the gently flowing waters (Isa. 8:6). It drained at first into a pool called the Pool of Shelah (see SHELAH, POOL OF), etymologically the Pool of the Aqueduct, in the lower tract of the Tyropoeon, toward the junction of this valley with the Kidron; the Pool of Shelah is presumably the same as the King's Pool (Neh. 2:14). Successive transformations of the lower Tyropoeon from Hezekiah to our day have made it impossible to ascertain the connecting link between the aqueduct and its ancient pool; the location of the latter corresponds roughly to that of the modern Birket el-Hamra.

2. Hezekiah's tunnel. When the armies of Sennacherib marched into Palestine, Hezekiah stopped all the springs (RSV), or fountains (KJV), outside the walls (II Chr. 32:4), by which are meant probably the openings of the Shiloah; there is ample archaeological evidence of a systematic obturation of the reservoir by the spring and of the aqueduct itself. The waters of Gihon were diverted by means of a tunnel to a point W of the City of David, well within the fortified perimeter of the capital (II Kings 20:20; II Chr. 32:30; Eccles. 48:17). Hezekiah's tunnel is the S-shaped underground aqueduct cleared in 1910, and still in use.* Its measured length is 1,749 feet. The devious course of the tunnel has been variously explained, either because of the insufficient surveying methods of the tunnelers, or because of hard rock beds which made changes in orientation necessary, or because it was feared that the tunnelers might break through the tombs of the Davidic kings (see TOMBS OF THE KINGS). The tunneling was started from both ends by two teams of workers, as is evident from the examination of the tunnel itself and from a Hebrew inscription on the tunnel wall, which was removed in 1880 to the Imperial Museum at Istanbul, and is commonly known as the Inscription of Siloam. The translation by J. Simons (*Jerusalem in the OT*)¹ is:

"[This is](?) the boring through. This is the story of the boring through: whilst [the miners lifted] the pick each towards his fellow and whilst three cubits [yet remained] to be bored [through, there was heard] the voice of a man calling his fellow, for there

¹ Used by permission of the publishers, E. J. Brill, Leiden, Netherlands.

was a split in the rock on the right hand and on [the left hand]. And on the day of the boring through the miners struck, each in the direction of his fellow, pick against pick. And the water started flowing from the source to the pool, twelve hundred cubits. A hundred cubits was the height of the rock above the head of the miners." Fig. HEZ 18.

3. The Pool of Siloam.* The Inscription of Siloam refers anonymously to the pool into which the tunnel drained. It is most likely identical with the "reservoir between the two walls" mentioned in connection with some work done to the Lower Pool (Isa. 22:9-11). The "two walls," however, are not identified with certainty as yet. They can scarcely be the parallel walls which once barred the Tyropoeon at its junction with the Kidron, as was assumed by some scholars; the interval between these structures was certainly never meant as a reservoir. All one dare say is that Isaiah's "two walls" were part of Hezekiah's program of fortification in a highly vulnerable part of the city. One may well assume that the name of the former aqueduct, the Shiloah, was transferred to Hezekiah's water system. There is, however, no early textual evidence for such a transfer. Josephus repeatedly refers to Siloam as a fountain, πηγή (War II.xvi.2; V.iv.1-2, 12), meaning, not the spring itself (Gihon), but the mouth of the tunnel. The first specific mention of the Pool of Siloam, ἡ κολυμβήθρα τοῦ Σιλωάμ, is in John 9:7. The construction of a church in the fifth century of the Christian era, to commemorate the miracle performed by Jesus, greatly altered the topography of the area adjacent to the exit of the tunnel. The pool was surrounded by porticoes and integrated in an architectural ensemble of which only scanty remains are visible today. Later on, a mosque was established over the ruins of the church, and a small minaret emerges

Copyright: The Matson Photo Service

now above the portion of the pool which is still extant, and from which the women of neighboring houses draw their water. Fig. SIL 60.

As for the Lower Pool of Isa. 22:9, it is most certainly identical with the Pool of Shelah, at the outlet of the aqueduct put out of commission by Hezekiah, toward what is called today the Birket el-Hamra. It is not unlikely, although this cannot be proved conclusively on the basis of archaeological evidence, that it was remodeled to accommodate the surplus water discharged from the pool of Siloam. The Byzantine and medieval historical texts generally refer to this reservoir as distinct from the Pool of Siloam, and this duality may well go back to the reign of Hezekiah. See JERUSALEM § 5b.

SILVANUS, TEACHINGS OF. A Gnostic apocryphon attributed to the companion of Peter and Paul; discovered in 1946 at Chenoboskion in Upper Egypt. See APOCRYPHA, NT.

SILVER [ἄργυρος, pale, white; ἀργύριον, ἄργυρος, ἀργυροῦς].

1. In antiquity. Silver was known in the Near East as early as gold and copper. It normally surpassed in value all other metals until the Persian period (ca. 500 B.C.), when, with more abundant silver on the market, the silver-gold ratio was reversed. Silver was valued for jewelry, for charm AMULETS (e.g., "crescents"; Judg. 8:26), but mainly as a standard for business transactions; early appearances of the word in the Bible are with this meaning, as Gen. 23:15-16.

Egypt lacked native supplies of silver ore. In the period of her Asiatic conquests (1580-1350 B.C.), she obtained refined silver (cf. Joseph's cup in Gen. 44:2). The silver jewelry of the Egyptians (Exod. 11:2; 12:35) was their most expensive.

The Hittites and their successors in Asia Minor monopolized the world silver market from ca. the time of Abraham until ca. 1000 B.C. Mesopotamian merchants engaged in silver and lead trading were established in Asia Minor ca. 2000, according to the Cappadocian Tablets.

In Palestine the small number of silver objects found in excavations suggests that from ca. 1400 B.C. silver was scarce except for Solomon's times, when it was "as common in Jerusalem as stone" (I Kings 10:27; II Chr. 9:27; Ecclus. 47:18). Silver is regularly given priority over gold in the OT; only in Chronicles and Daniel, as in the NT, is this order reversed. For silver in coins, see MONEY, COINS.

Phoenicia (II Chr. 9:21; Ezek. 27:12) and Arabia (II Sam. 8:10-12; II Chr. 9:14; cf. the N Arabian book of Job and its interest in silver mining) served as Israel's regional distributors for silver—e.g., Tarshish (Jer. 10:9) and Tarshish ships (I Kings 10:22).

61. A silver bowl and a ladle in the form of a female figure, from Sharuhén (Tell el-Far'ah); Persian period

2. In the OT. The numerous OT references reveal the use of silver: (a) generally as a standard of wealth (Gen. 13:2; 24:35; Exod. 25:3; Num. 22:18; Deut. 7:25; Zeph. 1:18; Hag. 2:8; Zech. 6:11), as booty taken (Josh. 6:19; 7:21), as tribute paid (I Kings 15:19; cf. Song of S. 8:9); (b) as payment of obligation in weight of metal—i.e., as money (Gen. 20:16; 23:15-16; 37:28; 45:22; Exod. 21:32; Lev. 27:16; Josh. 24:32; Judg. 17:10; II Sam. 24:24; Neh. 7:72; Job 28:15; Isa. 7:23; 46:6; Amos 2:6; 8:6); (c) as a noble's drinking cup (Gen. 44:2); (d) as a royal crown of gold and silver (Zech. 6:11); (e) as jewelry or personal ornament (Gen. 24:53; Exod. 3:22; 11:2; 12:35; Song of S. 1:11, where "ornaments of gold [are] studded with silver"); (f) in idol making (Exod. 20:23; Deut. 29:17; Judg. 17:4; Pss. 115:4; 135:15; Isa. 2:20; 30:22; 31:7; 40:19; Jer. 10:4; Dan. 2:32-33; 5:2-3; 11:8-9; Hos. 13:2); (g) in connection with the TABERNACLE, for trumpets (Num. 10:2), for bases (Exod. 26:19), for hooks and fillets and chapiters (Exod. 27:10, 17; 36:24, 26), for platters and bowls (Num. 7:13-14); (h) in connection with the Jerusalem Temple (I Kings 7:51; I Chr. 28:15-16; II Chr. 2:7; Ezra 8:26, 28; Neh. 7:71); (i) as unmanufactured raw material (Exod. 31:4; 35:24, 32; I Kings 15:15). Fig. SIL 61.

The OT knows of mining for silver (Job 28:1), of the processes of refining (Zech. 13:9; Mal. 3:3; in Ezek. 22:20-22, the melting of scrap metals or jeweler's sweepings), and of multiple refinings in a crucible or fining pot (Prov. 17:3; 27:21) to produce "choice silver" (Prov. 10:20; cf. I Chr. 29:4; Ps. 12:6). Figuratively, refining silver is used for trying men's hearts (Ps. 66:10; Isa. 48:10), corrosion of silver for deterioration (Isa. 1:22; Jer. 6:30); while silver itself is used for bright color (Ps. 68:13), for the purity of God's word (Ps. 12:6), for great abundance (Job 3:15; 22:25; 27:16; Isa. 60:17; Zech. 9:3), and as of lower value than Wisdom (Job 28:15; Prov. 3:14; 8:19; 10:20; 16:16; 22:1; 25:11).

3. In the NT. In the NT silver is sometimes mentioned derisively (Matt. 10:9; Jas. 5:3; I Pet. 1:18), but also as wealth generally (Acts 20:33; I Cor. 3:12; Rev. 18:12) and as coins (Matt. 22:19; 26:15; 27:3-9; Luke 15:8-10), as required for tax payments (Matt. 17:24-27), and in connection with idol making (Acts 17:29; 19:24; Rev. 9:20). See ANTIOCH, CHALICE OF.

SILVERLING. KJV translation of שֶׁקֶל (RSV "SHEKEL of silver") in Isa. 7:23.

SILVERSMITH [שֶׁרֶט; ἀργυροκόπος] (Judg. 17:4; Acts 19:24); KJV FOUNDER in Judg. 17:4. One who works with silver, both refining the ore and casting or beating the finished product. There were smiths in Asia Minor early in the third millennium B.C. The smith was usually a "founder" who refined the ore and poured the metal into casts (Judg. 17:4). He also beat the silver (Jer. 10:9). The silversmith made musical instruments (Num. 10:2), trim and decorations (Exod. 26:19 ff), ware for the tabernacle and temple (Num. 7:13; II Sam. 8:11), and idols (Exod. 20:23; Acts 19:24). The lone NT passage involves the dispute of the guild of silversmiths with the iconoclastic threat in Paul's preaching. Demetrius was probably the master of the guild for that year.

SIMALCUE. Alternate form of IMALKUE.

SIMEON *sim'ion* [שִׁמְעוֹן] (the deity) has heard; originally the name of a person; a short form with the diminutive ending *-ōn*; Συμεων]. 1. The second son of Jacob by Leah (Gen. 29:33), and the *heros eponymos* of the tribe of Simeon. He is also always enumerated as the second in the lists of the descendants (Gen. 35:23; 46:10; Exod. 1:2; I Chr. 2:1). Joseph took him as a hostage (Gen. 42:24, 36; 43:23). In Gen. 48:5 he is an example of a full son. Gen. 34 makes it clear, above all, that the name Simeon refers to one of the twelve tribes.

Gen. 34:25, 30, changed from family history into tribal history, indicates that the tribe of Simeon, along with the tribe of Levi, which at that time was still secular, once settled in central Palestine but could not hold out against the superior strength of the Canaanites, especially those from Shechem. Gen. 34 provides an explanation for this fate, with which the Simeon-Levi passage in the Blessing of Jacob (49:5-7) agrees in its own way. Simeon belonged to that first wave of Israelites—namely, the Leah group—which had already occupied the entire Palestinian highland. In the S were Judah and, for a while, Reuben and Gad; in the N, Issachar, Zebulun, and Asher; and in the middle, Simeon and Levi. Obviously, many of the tribes were severely decimated in the course of the occupation (*Landnahme*) of the land. This is true, e.g., of the tribe of Reuben, which fell from its first-place position in the amphictyony and whose pitiful remnants finally came to rest E of the Jordan. The same thing is true of Simeon and Levi. Apparently they were not even without blame for the catastrophe which overtook them in central Palestine and caused Yahweh to "scatter them in Israel" (Gen. 49:7). They withdrew in the direction of the base in the S steppe from which they had started out. However, while Levi, in this fashion, got as far as Kadesh, where its last remnant finally met the Israelites, who were coming out of Egypt, and was gradually transformed into the priestly caste, the little band of Simeonites succeeded in establishing them-

selves on the most southerly border of the cultivated land. The city of Zephath, which they renamed Hormah (probably Tell es-Seba'), fell into their power (Judg. 1:17). The territory of an ancient Canaanite city-state was thus sufficient to receive their remnant. They were now a small group like the neighboring Kenites and Kenizzites and waited for the time when, with them, they would merge into Great Judah. From then on, their history is the history of Judah (Judg. 1:3). The Song of Deborah does not mention them, even as it does not mention Judah. In the Blessing of Moses (Deut. 33) a Simeon passage is missing, because the tribe had become too unimportant after the bloodletting and also because of the border situation, as in the case of Asher. What is enumerated in Josh. 19:1-8 as Simeon's property is an excerpt from the list of towns in the kingdom of Judah (cf. 15:26-32), dating from the time of Josiah, which the redactor took to be Simeonite but supplied with the significant postscript, 19:9. Simeon is missing completely from the system of boundary descriptions which originated in the period before the monarchy.

In the later literature Simeon appears almost exclusively in connection with statistics. In the P supplement to the Baal-peor tradition the evildoer who is caught in the act is a Simeonite. In the lists of the Priestly Code, Simeon's place is regularly after Reuben (Exod. 6:15; Num. 1:6, 22-23; 13:5; 26:12-14), even when both must give precedence to Judah (Num. 2:12; 7:36; 10:19). In Num. 34:20 the place immediately after Judah is geographically conditioned. In Deut. 27:12, Simeon leads the group of those who pronounce the blessing on Mount Gerizim. In the chapter on the Levite cities Simeon is associated with Judah (Josh. 21:4, 9; I Chr. 6:55, 65—H 6:40, 50, where in the former passage Judah and Simeon are replaced by "the land of Judah"). In Ezek. 48:24, Simeon is separated from Judah by Benjamin and receives only the second strip of land to the S of the sanctuary. In the list of gates, and as in vss. 24 ff along with Issachar and Zebulun, Simeon is put down still further (vs. 33). In the lists of Chronicles, Simeon always ranks second (I Chr. 12:25; 27:16); likewise in the general structure (chs. 4-7). In the genealogy of Simeon (4:24 ff), which is expanded beyond the regular sources, the Chronicler is reworking an old account which indicates that conditions in Simeon were not settled for a long time still; as late as the time of Hezekiah one group wandered off into the region of Maon (vs. 41). Moreover, the fact that Simeon once occupied the same region in which Manasseh and Ephraim later settled is still echoed by the Chronicler in the strange phrase for N Israel, "Ephraim, Manasseh and Simeon" (II Chr. 15:9; and, similarly, with the addition "and as far as Naphtali" in 34:6). In the NT the tribe of Simeon appears in the seventh place on the list of the sealed (Rev. 7:7).

For the territory of Simeon, see TRIBES, TERRITORIES OF, § D1b. See the bibliography under ASHER.

K. ELLIGER

2. Grandfather of MATTATHIAS 1 (I Macc. 2:1).

3. A "righteous and devout" (δικαιος και εὐλαβής [cf. צדיק וקטיר]) man, living in Jerusalem at the time of the birth of Jesus (Luke 2:25-35). "Looking for

the consolation of Israel"—the fulfilment of Jewish messianic hopes which would bring salvation to Israel (cf. Isa. 40:1; 49:7-10; 51:3; 61:2; 66:13; also Mark 15:43; and see MESSIAH, JEWISH, § 4)—he had been promised that he should not die before he had seen "the Lord's Christ" (God's chosen and anointed One, the Messiah; cf. Luke 9:20). At the time of Jesus' presentation, which Luke apparently combines with the rite of purification after childbirth (see CLEAN AND UNCLEAR § 4), Simeon, inspired by the Holy Spirit, went into the temple (probably into the court of the women), took the child up in his arms, and blessed God, saying:

Lord, now lettest thou thy servant depart in peace,
according to thy word;
for mine eyes have seen thy salvation
which thou hast prepared in the presence of all peoples,
a light for revelation to the Gentiles,
and for glory to thy people Israel.

This blessing, called the NUNC DIMITTIS and used in the daily evening prayers of Western Christendom since the fourth century, expresses Simeon's gratitude for God's gift to him (vss. 29-30) as well as to Israel and all the world (vss. 31-32). The fulness of OT allusions in this brief canticle shows the central position which messianic expectations occupied in Simeon's faith (Isa. 40:3-5 and 52:10 [conflated in Luke 3:4b-6]; Isa. 42:6 and 49:6 [from the "Servant Songs"; see SERVANT OF THE LORD, THE, § 2]; Isa. 46:13; and for "revelation to" [ἀποκάλυψιν; Luke 2:32] meaning "unveiling of," Isa. 25:7; 60:2-3).

Then Simeon blessed the child's parents, saying also to Mary:

Behold, this child is set for the fall and rising of many
in Israel,
and for a sign that is spoken against
(and a sword will pierce through your own soul also),
that thoughts out of many hearts may be revealed
(Luke 2:33-35).

This saying introduces clearly the note of suffering which accompanies the appearance of the Messiah. His coming "for a sign" (σημεῖον; cf. Isa. 7:11, 14; Luke 11:30-32) will also bring judgment to "many hearts" (cf. Isa. 8:14-15; Matt. 21:42-43; John 9:39; 16:8-11; I Cor. 1:23; I Pet. 2:8) and even sorrow to his mother (Luke 2:35a).

4. An ancestor of Jesus, in the Lukan genealogy (Luke 3:30).

5. KJV form of SYMEON I.

6. KJV form of SIMON in Acts 15:14 (RSV SYMEON 2). Peter's original Hebrew name is usually spelled Σίμων in the Greek NT, but here and in II Pet. 1:1 (MSS A and κ) it occurs as Συμεων. See PETER §§ 1, 7. L. HICKS

SIMON *si' mən* [ןימון, a diminutive form of סמון, God has heard; Σίμων, snub-nosed(?)]. 1. Simon II, high priest (died ca. 198 B.C.), son of Onias II and father of Onias III and Jason. His achievements are celebrated in Ecclus. 50:1-21.

2. The father of Judas Iscariot (John 6:71; 13:2, 26), who is called "Simon Iscariot" in the first and third of the Johannine passages cited. On the meaning of "Iscariot," see JUDAS (ISCARIOT).

3. Son of Jonah (Matt. 16:17) or John (John 1:42; 21:15-17), and brother of Andrew (John 1:40). Jesus

named him "Peter" (Πέτρος; Aramaic ܦܬܪܘܿܬܐ, "rock"; Matt. 16:18; John 1:42). See PETER.

4. A brother of Jesus (Mark 6:3; Matt. 13:55), thought by some to be identical with the Simeon son of Clopas, mentioned by Hegesippus (Euseb. Hist. III.11, 32) as successor of James as head of the Jerusalem church.

5. Simon the Zealot (Ζηλωτής, "zealot, enthusiast"; Luke 6:15). Mark 3:18; Matt. 10:4 have "Canaanean" (Καναναῖος, not from "Cana" or "Canaanite" but from Aramaic ܙܢܢܐ, "zealot, enthusiast"). Luke has correctly translated the Aramaic word. Simon was probably thus designated because he formerly had identified himself with fanatical opponents of Roman rule in Palestine, called Zealots. He was selected by Jesus for apostleship. He is not mentioned again in the NT. Some early Christian writers identified him with Simeon son of Clopas, who was said by Hegesippus (Euseb. Hist. III.11, 32) to have become successor of James as head of the Jerusalem church.

6. The Pharisee in whose house Jesus was anointed by a sinful woman (Luke 7:36-50). The location of the house is not indicated, though it seems to have been in Galilee and possibly in Capernaum. Simon, thinking Jesus a prophet (vs. 39), invited him to dinner, apparently in order to converse at length with him. He was friendly to Jesus but somewhat casual, as is indicated by his failure to extend to Jesus courtesies customarily accorded guests (vss. 44-46). He was shocked at Jesus' sympathetic attitude toward and free relationships with sinners. Pharisaic tradition forbade contact with "unclean," law-neglecting people. Jesus rebuked Simon by means of a parable and commended the woman for her loving act.

7. A leper (the Aramaic word ܦܪܘܿܬܐ may mean "jar merchant"), at a dinner in whose home at Bethany Jesus was anointed by Mary (Mark 14:3-9; cf. John 12:1-8). It is possible that he was the husband of Martha or the father of Mary, Martha, and Lazarus. If he once was a leper, he obviously had been cured of his disease, possibly by Jesus. See MARTHA.

8. Simon of Cyrene, who was impressed into carrying Jesus' cross to the place of execution (Mark 15:21; Matt. 27:32; Luke 23:26). It is unlikely that he was a Negro. Many Jews lived in Cyrene, the capital city of the North African district of Cyrenaica. Simon was perhaps residing at this time in a country district of Palestine and was entering Jerusalem for the Passover. He is said in Mark (15:21) to be the father of Alexander and Rufus, persons obviously known to the readers of this gospel (cf. Rom. 16:13).

9. The tanner of Joppa in whose house by the seaside Peter stayed "for many days" (Acts 9:43; 10:6, 17, 32). He probably was a Christian. Tanning was odious to Jews because of the necessity of handling dead bodies (Lev. 11:39-40). Tanners, though avoided by the Pharisees, were accepted readily into the Christian fellowship.

10. See SIMON MAGUS.

E. P. BLAIR

SIMON MACCABEUS. A Hasmonean leader and high priest of Judea (lived ca. 200-136 B.C.). He was the second of Mattathias' five sons; he was nicknamed "Thassi(s)" (I Macc. 2:3), perhaps from תשי, "weaking." Together with his father and two brothers, Judah and Jonathan, he was outstanding in the successful war of independence waged by Judea after 168 B.C. against Seleucid Syria under Antiochus IV Epiphanes. In his alleged testament to his sons (I Macc. 2:49 ff), Mattathias is said to have enjoined his sons (vs. 65): "Now behold, I know that Simeon your brother is wise in counsel; always listen to him; he shall be your father."

From the moment that Jonathan was chosen leader to succeed Judah, Simon became his closest associate and counselor in all political and military matters. Together they avenged the murder of their brother John; eluded the Syrian forces under General Bacchides; and, several years later, after defeating Bacchides' army, concluded a pact with him, to the consternation of the pro-Seleucid, Hellenized Jews in Judea (I Macc. 9).

In 147-146 B.C., during the Judean struggle against Demetrius II Nicator, Simon captured the fortified city of Beth-zur, and later took Joppa by surprise, thus acquiring a vital outlet to the Mediterranean Sea. Subsequently he built Adida (Hadid), NW of Jerusalem, and fortified it as a strategic defense for Jerusalem (I Macc. 12).

When Jonathan was taken captive by Trypho Diodotus, a notorious opportunist, Simon naturally assumed leadership of his faltering and frightened people. "By this speech of Simon's, the multitude was inspired with courage; and as they had before been dispirited through fear, they were now raised to good hopes of better things" (Jos. Antiq. XIII.vi.3-4). Simon rallied his forces and drove Trypho out of Judea; and while Trypho and Demetrius struggled for the throne of Syria, he built fortresses throughout the land.

Simon then proceeded to achieve a brilliant diplomatic victory. He sent a delegation to Demetrius and asked for relief of taxation. This was tantamount to asking for recognition of Judea as a sovereign state, and Demetrius knew it. But, being desperate for allies, Demetrius was forced to grant his request. Documents, coins, contracts, etc., now began with: "In the first year of Simon, the great High Priest and General and Ruler of the Jews." "Now the affection of the multitude toward Simon was so great that in their contracts one with another they wrote, 'in the first year of Simon, the benefactor and ethnarch of the Jews,'" is how Josephus put it (XIII.vi.7). Simon proceeded to capture Gazara, and he settled there. He took also the citadel of Jerusalem (Akra), purified and fortified the temple mount, and appointed his son John general of all his forces (I Macc. 13).

Simon's leadership brought Judea to such status

that both Sparta and Rome renewed their alliance of friendship with this little country. The Jews themselves then (141 B.C.) manifested their appreciation for Simon and their utter trust in him by taking a step unprecedented in their long history since becoming a sovereign people: "In the great assembly of the priests and the people and the rulers of the nation and the elders of the country, the following was proclaimed . . . Simon should be their leader and high priest for ever, until a trustworthy prophet should arise" (I Macc. 14:27-48). This resolution they recorded on bronze tablets and put upon pillars on Mount Zion. Previously, the high priesthood had been hereditary, and it had been handed down in the family of Onias, which traced its lineage to Zadok, appointed by King Solomon for his temple. Simon was thus the first to be elected to this office.

Antiochus VII Sidetes renewed his predecessor's pact with Simon; he was at war with Trypho and needed allies. However, when he emerged victorious, Antiochus demanded from Simon the return of Joppa, Gazara, the citadel of Jerusalem, and some other places. Simon recognized these to be Judean by historical right, and rejected the claim. For the battle that ensued, Simon handed over leadership to his son John, who defeated Antiochus' forces. Simon himself came to an untimely end (136 B.C.) when he was assassinated by his treacherous son-in-law Ptolemy the son of Abubus, whom he had appointed general over the Plain of Jericho. Ptolemy aspired to succeed Simon, but John thwarted Ptolemy and himself succeeded Simon.

A good case has been made for identifying Simon the Just (M. Ab. 1) with Simon Maccabeus. See the work of S. Hoenig in the *bibliography*.

SIMON MAGUS si'mon mā'gās [Σίμων ὁ μάγος]. A Samaritan magician referred to in Acts and known in later legend.

1. The record of Acts 8:9-24
 2. The Magus
 3. The Christian
 4. The heretic
 5. The Antichrist
 6. Interpretations
- Bibliography

1. **The record of Acts 8:9-24.** Among the disciples driven out of Jerusalem by the persecution following the death of Stephen was Philip (not the apostle, but the deacon appointed in Acts 6:5), who went to a village of Samaria. This was probably the region of Samaria, not the capital Sebaste. One suggested site is Gitta, with which Justin (Apol. I.26, 56) associates Simon Magus. There Philip preached

and made many converts. Among these was one Simon, a notable magician, who for some time had been amazing the Samaritans with his magic, saying that he was "somebody great," and his admirers proclaimed that he was the "power of God which is called GREAT." Simon was amazed by the miracles of healing which Philip performed.

When the church in Jerusalem heard about Philip's success, it sent down Peter and John to investigate. They laid their hands on the new converts and imparted to them the Holy Spirit, whom up to then they had not received. This apostolic ability to confer the Holy Spirit by laying on of hands so impressed the avaricious Simon that he offered to buy the power from Peter and John. But Peter bitterly denounced him, and Simon humbly repented.

This narrative has numerous obscurities. Just what had Simon been doing to amaze the Samaritans? What specific claims had he made for himself? What nature had his admirers ascribed to him? Was he an honest convert or a hypocritical deceiver motivated by avarice? What does the monopoly of the apostles on imparting the Holy Spirit by laying on of hands signify? Why is John a completely silent actor in the drama? These features indicate that the story is more complicated than it appears to be on the surface.

2. The Magus. While the word "magus" (ὁ μάγος) does not actually occur in the story, the participle μαγεύων ("practicing as a magus") and the noun τῶν μαγείαις ("works of a magus") indicate clearly enough that Simon was a magus by profession. He ought to be compared with Elymas Bar-Jesus (Acts 13:6-12; see ELYMAS), called both a magus and a false prophet and associated with the Proconsul Sergius Paulus, who came into violent conflict with Paul at Paphos. Another magus of the island of Cyprus, whose name is Atomos and who is associated with Governor Felix, is mentioned by Josephus in *Antiq.* XX.vii.2. While MAGI are mentioned only three times in the NT, the word appears frequently in the Greek translations of the OT for such terms as "enchanter," "diviner," "necromancer."

Originally the Magi were a shaman caste of the Medes. Then they became Zoroastrian priests of Persia. But in the Mediterranean world the term had lost its national connotation and indicated a profession of persons engaged in astrology, necromancy, incantations, exorcism, etc. They were held in respect by such eminent men as Sergius Paulus and Felix; and even Philo in *Special Laws* III.101 speaks of a high type of magus with genuine appreciation, but of a lower kind as charlatans, mendicants, and parasites.

3. The Christian. That later generations of Christians regarded Simon Magus as an impostor who became a Christian only from base motives is obvious, but Acts states simply that Simon believed and was baptized and continued his association with Philip, deeply impressed by the signs which he did. His only mistake was that he thought he could buy ability to impart the Holy Spirit, on which the apostles held a monopoly. For this error Peter administered a merciless denunciation. Although Peter said: "You have neither part nor lot in this matter,

for your heart is not right before God," it appears that even Philip did not possess this power. One motif of the story seems to be that only the apostles could impart the Holy Spirit.

But Simon repented, so he was presumably still a Christian. A hundred years later, although Justin attacks the followers of Simon, Menander and Marcion, with all his power, he nevertheless admits in *Apol.* I.26.6 that their followers are called Christians. So we have to assume, not only that Simon became a Christian, but that he remained one.

4. The heretic. For ca. three centuries Simon Magus gripped the imagination of early Christians. They wove him into a romantic saga which expressed various Gnostic ideas. Eusebius (*Hist.* II.13.1-8) was led to say that Simon was the author of all heresy. This view had its roots in Acts itself, as we have seen, but Justin (*Apol.* I.26) is the one who really got this speculation on its way. First he says that Simon carried about with him a woman named Helena, who had been a prostitute at Tyre; but that Simon, who was worshiped by nearly all Samaritans and some others as the first god, considered Helena his first idea, Ennoia, generated in his mind. Justin also says that the Romans worshiped Simon and had set up a statue to him on the island in the Tiber with the inscription *Simoni Deo Sancto*, a statement which is now thought to be an outright error. In 1574 a fragment of a statue was found on this island bearing the inscription *Simoni Sancto Deo Fidio*, etc., which had been erected to the Sabine divinity Semo Sancus.

As Justin appears to be the source from which most of his successors drew their information about Simon Magus, we need to be on guard as to the accuracy of anything they say. Eusebius, in the passage noted above, says Simon's followers worshiped him and Helena with pictures, images, idols, incense, sacrifices, and libations.

Irenaeus (*Her.* I.23.1-2) adds it was believed that Simon through Helena conceived in his mind the lower angels, archangels, and powers by whom the world was formed. Then Helena was held in captivity by these lower powers from jealousy, was abused, compelled to be reborn again and again as a female, until she became a professional prostitute. She was the lost sheep of the gospels, and Simon came down to redeem her. He had assumed the form of the lower powers in order to disguise himself. He appeared to be a man, while he was not. He was thought to suffer, but did not. This is a touch of Docetism. The OT scriptures were inspired by these low powers, which made the world. So both the world and the flesh, which they created, and the scriptures, which they inspired, are rejected by all who trust in Simon and Helena, who are saved by grace, free, and can do as they please. Hence the licentious practices to which Eusebius alludes. The Simonians, therefore, were like Marcion in rejecting the OT and considering the world evil. But whereas he emphasized celibacy, they turned to license. Irenaeus even ascribes a trinity to the Simonians: Simon appeared to the Jews as the Son; to the Samaritans as the Father; but to others as the Holy Spirit.

5. The Antichrist. In this strange creation of early Christian pseudepigraphy Simon acquires

virtually all the features of the Antichrist. In imagination, at any rate, he is not only set up in a temple to be worshiped, but is also made the protagonist of evil. He is the "man of sin," the incarnation of Satan, who is determined to uproot the true faith. The gallant knight who defends the faith, on the other hand, is Simon Peter, who meets Simon Magus on every battlefield, according to the *Clementina*—first in Samaria, but then in Caesarea, Tyre, Tripolis, Laodicea, and Antioch, but not in Rome (a later addition). Justin said Simon went to Rome in the time of Claudius, but later legends put him there under Nero, and even bring in Paul along with Peter, as a kind of afterthought. But Peter always triumphs. Simon Magus is finally slain or is a suicide. One legend says he had himself buried with the promise of rising on the third day, which he could not do; another, that he tried to fly, and with the aid of demons was succeeding, when Peter's prayers forced the demons to let him fall and perish.

6. Interpretations. There is so much of symbol and allegory and Gnostic speculation in the Simonian legends that some have denied that Simon ever existed. F. C. Baur and his followers of the Tübingen School held that Simon and Helena were mythical; that they were based on the Phoenician sun cult; that Simon was Herakles or Baal, and Helena, the moon, as Selene, or Luna. In different legends she is called Ennoia, Sophia, Sapientia, etc. Baur even argued that Simon was Paul in disguise and that the story shows the struggle between Peter and Paul in the early church. George Salmon (*see bibliography*) recognized that Simon was historical, but held that he is not the same as Simon of Gitta, of whom Justin writes.

That there is a basis in the confusion of the stories for these different views cannot be denied. It is probable, however, that Simon Magus was an actual person. But even in the Acts there are incomprehensible features. No one knows beyond question what he means when he calls himself "Great," or what the people mean by the "power of God which is called Great." These very words, because of their mysterious character, were the fertile seed which germinated and developed into the luxuriant crop of legends of the later centuries. They tell more about the times when they were written than about Simon Magus himself. The *Clementina* and the apocryphal Acts were written for entertainment as well as instruction, and should be read in this light.

The mass of the Simon Magus literature was produced by an age which was interested primarily in signs, wonders, and miraculous displays as demonstrations of the truth of the Christian faith.

SIMON PETER. *See* PETER.

SIMPLICITY [Lat. *simplicitas*]. A quality of being plain, uncompounded, and free from adornment or

duplicity. In a moral sense, *simplicitas* is used in Latin literature to express such qualities as plainness, openness, directness, and naturalness. The most prominent motifs related to simplicity in the Bible are: (a) plain openness which is free from the complications of sophistication or duplicity; (b) moral uprightness and integrity of heart; (c) purity and loyalty in devotion to God, Christ, or one's fellow man; and (d) liberality which springs from simple goodness and willingness to give of the self without reservation.

1. In the OT. In the OT the dominant conceptions related to simplicity are innocence, integrity, uprightness, and simpleness. Several Hebrew terms are used to convey these ideas. The word *תם* is used to describe the simplicity (innocence) of the two hundred men who went with the rebellious Absalom to offer sacrifice at Hebron (II Sam. 15:11). Elsewhere, *תם* is employed to suggest such related ideas as integrity (Gen. 20:5; I Kings 9:4; Job 4:6; Ps. 7:8—H 7:9—G 7:9; Prov. 19:1), and uprightness of way or heart (Prov. 2:7; 10:9; cf. *ישר*, "uprightness," in Deut. 9:5; I Kings 9:4; Job 33:3). In the Psalms the word *תמים*, "simple," is used in a good sense to describe inexperienced or unsophisticated persons (Ps. 19:7—H 19:8—G 18:8). God preserves the simple (Ps. 116:6—G 114:6) and gives understanding to them (119:130—G 118:130). (With these expressions cf. the teaching of Jesus on childlike faith and trust in God [Matt. 19:13-14; Mark 10:13-16; Luke 18:15-17].) It should be noted, however, that the word *פתי* is sometimes used to suggest ignorance and folly (Prov. 1:22; 9:6; 14:15-18).

An instructive passage for the various shades of meaning related to the idea of simplicity is found in Test. Iss. 3:1-8. Here the description of a simple man is that of a responsible, frugal, pious, and generous person who walks in uprightness of heart and is never a busybody or malicious against his neighbor.

2. In the NT. In the NT the primary word for "simplicity" is *ἀπλότης*, which characteristically designates an undivided loyalty, purity in devotion as to Christ; but the term can also mean "wholeness of heart" in the sense of "generosity" or "liberality." Slaves are exhorted to be obedient to their earthly masters "in singleness of heart, as to Christ," and this exhortation is further explained as "doing the will of God from the heart," and "rendering service with a good will as to the Lord" (Eph. 6:5-8; cf. Col. 3:22). In II Cor. 11:3 simplicity is characterized as an attitude of SINCERITY in devotion to Christ.

Perhaps *ἀπλότης* also suggests a quality of wholeheartedness, willingness, to give of the self without reservation. Paul uses the term four times where the context demands the translation "generosity" or "liberality" (Rom. 12:8; II Cor. 8:2; 9:11, 13; cf. Jas. 1:5; Test. Iss. 3:8; Herm. Mand. 2:4).

In the metaphor about the eye in Matt. 6:22 (cf. Luke 11:34), the RSV translation for *ἀπλοῦς*, "sound," is probably better than the KJV "single." The soundness of vision here probably symbolizes clarity and purity of moral perception which is free from duplicity, envy, and the like. The wholeness of vision in this passage is the opposite of an "evil eye"—i.e., inner perception beclouded and made un-

healthy by envy, stinginess, or ulterior motives (cf. Ecclus. 14:9-10; Matt. 20:15).

SIN *sîn*. KJV translation of *יָדָע*, the Hebrew name of PELUSIUM (so RSV).

SIN, SINNERS. The Bible takes sin in dead seriousness. Unlike many modern religionists, who seek to find excuses for sin and to explain away its seriousness, most of the writers of the Bible had a keen awareness of its heinousness, culpability, and tragedy. They looked upon it as no less than a condition of dreadful estrangement from God, the sole source of well-being. They knew that apart from God, man is a lost sinner, unable to save himself or find true happiness.

It is not difficult to find biblical passages referring to sin; as a matter of fact, there are few chapters which do not contain some reference to what sin is or does. It might even be said that in the Bible man has only two theological concerns involving himself: his sin and his salvation. Man finds himself in sin and suffers its painful effects; God graciously offers salvation from it. This is, in essence, what the whole Bible is about.

As might be expected, the biblical literature shows a marked development in its understanding of sin. As far back as the origin of man can be traced, he appears always to have been *homo religiosus*, and an unavoidable aspect of every religion has always been the realization of some kind of estrangement between man and the divine. Among primitive peoples this sin-consciousness and its remedy have been conceived dynamically, and traces of dynamic ideas remain as a primitive element in the OT notion of sin. There is reason, however, to believe that even in early times the Hebrews possessed at least the beginnings of a genuine awareness of the theological meaning of sin. As their understanding of Yahweh's being and personality developed, their recognition of the seriousness of sin increased. The prophets preached the tragic reality of the nation's sin, and the people learned it by experience, particularly in the events leading up to the Exile. The NT put sin in an even darker light as it simultaneously demonstrated God's amazing way of dealing with it in Christ.

Bibliography

1. In the OT. *a. Terminology.* It is no accident that the Bible, with its keen sense of moral and spiritual values, is particularly rich in the vocabulary of sin. This is especially true of the OT. Not being interested in offering a theoretical definition, the Hebrew writers only strove to reflect in their rich and vivid terminology the profundity and the widespread effects of sin as they experienced it. According to their basic orientation, the OT terms may be arranged as follows:

a) Formal words, indicating a deviation from what is good and right. The most common root is *חָטָא*, ("miss, fail, sin"; see its derivatives for "error, fault, sin," "sinful," "sinner"). It is the equivalent, even in etymology, of the NT word ἀμαρτάνω, ἀμαρτία. Unlike the English word "sin," it is one of the least theologically profound words for sin. The verb occurs in its concrete meaning of "miss" in Job 5:24: "You shall inspect your fold and miss nothing"; also in Judg. 20:16: "Every one could sling a stone at a hair, and not miss" (cf. also Prov. 8:36; 19:2). In the vast majority of passages, however, the verb indicates spiritual and moral failure, either toward one's fellow man (e.g., Gen. 20:9) or toward God (e.g., Lam. 5:7). It may also be extended to include the guilt and punishment accompanying sin (e.g., Gen. 43:9). In certain forms it also indicates the act of purifying from sin, particularly by means of prescribed offerings (e.g., Lev. 6:26—H 6:19). The noun *חַטָּאת* is frequently used in cultic contexts as a technical designation for an offering for sin. See SACRIFICES AND OFFERINGS.

Formal and unexpressive is the verb *עָבַר*, when it means to overstep or transgress the word, command, law, or covenant of Yahweh (Num. 14:41, etc.).

Other formal roots are *שָׁגָה* and *שָׁגָה* (also *שָׁגָה*, "sin of inadvertence"), which means to err through IGNORANCE. Similar in meaning is *תָּעָה*, "wander" or "stray" (usually of physical straying, but of moral error in Ps. 58:3—H 58:4; Ezek. 44:10).

b) Theological terms, indicating sin as defiance against God. By far the most important is *פָּשַׁע* ("to revolt, rebel, transgress"; with its cognate noun, "rebellion, transgression"). Although as compared with *חָטָא* this root occurs with relative infrequency, it is by all counts the OT's most profound word for "sin," indicating its theological meaning as "revolt against God." It cannot indicate a mere failure or mistake, like *חָטָא*, since it consists of wilful disobedience. Both the verb and the noun are used of revolt against nations or transgression against men (e.g., I Kings 12:19; Amos 1:3 ff), but generally they indicate transgression against God, and defiance of his rule. They may also indicate the guilt accompanying such sin (e.g., Job 33:9). The active participle designates a rebel (equivalent to "sinner," "wicked") in several passages.

Revolt against God may likewise be expressed by the roots *מָרַד* and *מָרָה* with their respective nouns

(cf. Ezek. 2:5-8). A weaker word is נִבְזָה , indicating refusal to obey Yahweh's commandments in such passages as Exod. 4:23.

Another strongly theological root is הִנְפֵּה ("be godless, profane"; with its derivatives for "profaneness, pollution"; "profane, godless"). It indicates ruthless violation of the holy. The verb means "to be impious or estranged from God," hence "polluted."

Still another root in this group is טָעַל ("act treacherously"; with its noun, "treachery"), indicating sacrilege toward and apostasy from God.

c) Terms describing a sinner's inner state. The root עָוָה ("be or act wrongly, pervertedly") expresses conscious and intentional badness. The verb occurs in a physical sense in Isa. 24:1: "He will twist its surface and scatter its inhabitants" (cf. Lam. 3:9). It may also refer to psychological dismay (Isa. 21:3). Otherwise it means "to act wrongly." The noun עָוֶן ("perversity, iniquity, guilt"), which occurs frequently, may indicate the iniquitous act, the guilt accompanying it, or its punishment. In many cases the three are indistinguishable (e.g., Gen. 4:13; 19:15).

The root רָעָה ("be bad"; with its cognates for "badness" and "bad") is generally used in a qualitative sense (see EVIL). An important meaning, however, is moral and spiritual badness, manifested in various forms of maliciousness and perversity. "Doers of evil" and "evil men" are expressive terms for sinners.

The precise opposite of צָדִיק , "be righteous," is the root רָשָׁע ("be guilty, wicked"; with its cognates for "wicked and guilty act"; "guilty" or "wicked"). Despite its obvious juridical associations, it is not a merely legal word but indicates the corrupt inner nature of the guilty man. Ps. 1:4: "The wicked . . . are like chaff," and Isa. 57:20: "The wicked are like the tossing sea," provide vivid images of the looseness of character which the Hebrew mind associated with this word. The verb, usually in the causative, frequently means "to act guiltily" or "to condemn as guilty." The nouns and adjectives vacillate between the meanings of "guilt" and "wickedness," these being practically synonymous to the Hebrew mind. רָשָׁע is the most important OT (and Jewish) designation for "sinner."

A vivid term is בְּלִיעַל , from which the proper name BELIAL has come. It indicates the worthlessness and unwholeness of a base and godless fellow (e.g., I Kings 21:10).

d) Terms in which the ethical aspect is prominent. Both רָעָה , "be bad," and רָשָׁע , "be wicked," have this meaning. Another word is חָטָם ("treat violently or wrongly"; with its cognate for "violent wrong"). Less descriptive and more juridical is עָלָה ("do wrong, act perversely"; with its cognates for "injustice, wickedness"; "evildoer").

e) Terms indicating the baneful results of sin. עָמַל , "toil, trouble, mischief," is a late word similar in use to רָעָה , "evil." A parallel term is אָוֶן , which often indicates the trouble and sorrow caused by wicked men (e.g., Job 4:8) and hence the whole disposition of sin leading to it (e.g., Isa. 1:13). Often, especially in the Psalms (e.g., 64:2—H 64:3), it is associated with deceit, lying, and malicious slander. It may be that the term bears reminiscences of the evil believed by superstitious minds to have been caused by magical spells (see MAGIC; SORCERY), but it is difficult to

demonstrate that its employment in the OT refers to the active exercise of magical charms.

f) Terms for "guilt." Generally the Hebrews did not distinguish between the sin and its resultant guilt. Thus, as we have seen, all the leading words for "sin" also express "guilt." The OT has, however, a special word for "guilt," זָמָה ("be guilty, condemned"; with its cognates for "offense, guilt, guiltiness," and "guilty"). The primitive associations of this word are clearly apparent in I Sam. 6:3-4, 8, 17, where an זָמָה consists of the golden tumors and mice presented by the Philistines to ward off the baneful influences of the ark. There the word means "guilt offering," as it often does in the priestly legislation and in Ezek. 40 ff (see SACRIFICES AND OFFERINGS). Again, one word does service both for a spiritual condition and for the remedies employed to relieve it. In Lev. 4-5; Num. 5, where the verb refers to becoming guilty primarily in cultic transgression, the dynamistic associations are plainly present (cf. also I Chr. 21:3). As Israel's faith outgrew ideas of taboo, its concept of guilt became more ethical and spiritual. Thus in the majority of cases, particularly in late materials, this root conveys a personalized conception of culpability (cf. Gen. 26:10; II Chr. 24:18; Ezra 9:6; Prov. 30:10; Jer. 51:5; etc.).

This list does not at all exhaust the vocabulary of sin in the OT. Various other terms are employed to show that sin is obstinacy, PRIDE, BACKSLIDING, FOLLY, deceit, uncleanness (see CLEAN AND UNCLEAN), etc. In addition there is a name for every particular sin and crime. It is little wonder that various words for "sin" are often heaped together as synonyms (Exod. 34:7, 9; Lev. 16:16, 21; Ezra 9:6-9; Ps. 32:1 ff; 51:1 ff; Prov. 6:12-14; Isa. 1:4; Dan. 9:5; and elsewhere). When employed in poetic parallelism, the terms for "sin" often tend to lose the sharp edge of their distinctive meanings. In some cases, however, synonyms accentuate the peculiar qualities of one another (e.g., Job 34:36-37).

b. *Nature.* The predominant conception of the nature of sin in the Bible is that of personal alienation from God. Theologians have pointed out that all conceptions of sin appearing in human thought tend to reduce themselves to a basic three: the moralistic, in which sin is construed as deviation from an external norm; the monistic, in which sin is somehow equated with man's creatureliness or physical nature; and the personalistic, which is that of the Bible. To these might be added the dynamistic conception of primitive religions, in which sin is the transgression of a taboo or an offense against mysterious supernatural beings and forces; philosophically considered, this conception is basically a form of monism, as, e.g., an analysis of the dynamistic and Brahmanic elements in Hinduism will reveal.

There really can be no doubt that the intensely personalistic, or, better, theological conception of sin is the most characteristic view of the OT and the exclusive conception of the NT. This is, in fact, one of the most impressive triumphs of biblical religion, alongside the distinctive biblical awareness of the intensely personal character of God and of this God's intimately personal way of dealing with sin.

It is possible, however, to trace the influence of other modes of thought in the OT. These other con-

ceptions rarely appear in pure form in the OT—or outside the Bible, for that matter. In the OT we often find dynamism developing into moralism or into a highly personal conception, or the personal conception degenerating into moralism. It is often very difficult to isolate each of these in a particular passage, yet it is possible to distinguish the basic orientation of these various conceptions and to show which represents the authentic idea of biblical thought.

The nature religions of the ancient Near East were essentially monistic in making man, the world, and the divine part of one identical process. For them the natural world was peopled with supernatural powers. Although sin was, to a degree, interpreted as a violation of the express will of the gods, it was often felt to be any impingement, known or unknown, upon the irrational prerogatives of the supernatural. This notion of sin has more of the quality of the violation of taboo than of the transgression of high moral and spiritual standards.

Survivals of taboo-consciousness are clearly present in certain early elements in the OT. Even though most of the old laws have undergone a Yahwistic reorientation, the taboo idea may still be traced in many passages (e.g., Lev. 19:9, 19). It is difficult to explain the prohibition against the eating of blood as arising from any other source (Lev. 17:3-4; cf. Gen. 9:4), and this is probably the basis also of the distinction between clean and unclean animals (Lev. 11; Deut. 14:3-21). It also lies behind the rules for ritual purification in Lev. 12-15 (see CLEAN AND UNCLEAR). Associated with this is the entire circle of dynamistic concepts which the early Hebrews received from their cultural heritage: the word, spirit, blessing, curse, oath, vow, etc., which were felt to have some kind of independent power; also the concept of immediate retribution (II Sam. 6:7), of communal guilt (Num. 16:32; Josh. 7:24), of culpability even for innocent transgressions of ritual (Lev. 4:3; 5:15), and of the need for the banishment or execution of notorious sinners (Gen. 4:13-14; Lev. 17:4; 20:3; 24:16; Num. 9:13; Deut. 17:7; etc.). Similar is the idea of the "devoted thing" (see DEVOTED), the spoils of a holy war which were claimed exclusively for Yahweh (Josh. 6:17-18, etc.).

It cannot be denied, however, that generally the OT conception of sin appears on a much higher moral and spiritual level. Apart from the cultic rituals, most of the laws contained in the Pentateuch and elsewhere evince a strong awareness of ethical right and wrong (see LAW IN THE OT). This awareness needs to be understood mainly in relation to the rising understanding of Yahweh's own supremely moral being. It was as he came to understand what was wrong in relation to the will of Yahweh that the Israelite understood what was wrong in relation to his neighbors. Sins of all kinds were rightly interpreted as, first of all, sins against God (Gen. 39:9; Ps. 51:4—H 51:6).

It was chiefly the great prophets who led Israel to see that sin is something intensely spiritual, and consequently deeply tragic. They proclaimed that sin in its awful reality involves, not the violation of a taboo or the transgression of an external ordinance, but that it touches upon a man's personal standing with God. "Woe is me!" cried Isaiah as he received his vision of

Yahweh high and lifted up, "for I am lost; for I am a man of unclean lips, and I dwell in the midst of a people of unclean lips" (6:5). Thus the sinner becomes particularly aware of his deep sinfulness in the awesome presence of the holy God (cf. I Kings 17:18; Ps. 51:4—H 51:6; Luke 5:8). Such sin *coram Deo* was rightly understood to be, in its deepest essence, estrangement or alienation from God resulting from man's distrust and disobedience. Sin is, above all, פּוֹשַׁע , "revolt," as the story of Adam's sin (Gen. 3) makes abundantly clear. This realization is often expressed by the prophets in words like these:

Our transgressions are multiplied before thee,
and our sins testify against us;
for our transgressions are with us,
and we know our iniquities:
transgressing, and denying the LORD,
and turning away from following our God,
speaking oppression and revolt,
conceiving and uttering from the heart
lying words (Isa. 59:12-13).

Thus the standard of moral good was Yahweh's revealed will, and sin against this was transgression against the covenant which he had made with his people (cf. especially Hosea for the development of this theme). This is the high theological conception of sin which dominates OT thought and is completely taken over by the NT.

It has been mentioned that there is a third basic conception of sin, the moralistic. Always the danger of descending into moralism was present with Israel. In the wisdom literature and especially in Proverbs a tendency toward an external, moralistic conception of sin appears, but this came to fullest development in later Jewish legalism, which identified every jot and tittle of the Torah, including the old taboos (although many now appeared in reinterpreted form), as the criteria of sin. The whole duty of man was circumscribed by the Torah, and accordingly the entire definition of sin. Thus almost as much as with the old dynamism, the legalist conceived of guilt as being incurred automatically and almost impersonally, but now through transgression of a written code (or, with the Pharisees, of its oral interpretation), with little consideration of the ethical and spiritual significance of the act involved. Of course, legalism could never be entirely divorced from the personalistic conception. The rationale of obeying the little-understood details of the Torah was the assurance that they authentically represented the divine will. To obey it was to obey God. Yet in adhering to the letter of the law Jewish legalism came to lose much of the true prophetic insight into the nature of sin as personal rebellion and estrangement from God.

c. Origin, development, and extent. The OT contains surprisingly little reflection on the origin of sin in the human race. It is true that the story of Adam's fall in Gen. 3 (see FALL) unmistakably intends to explain how sin began, even though the terminology of sin is lacking. It seems strange, however, that the rest of the OT shows such little acquaintance with this tradition; possible references to it appear only in two ambiguous passages: Job 31:33; Hos. 6:7 (Job 15:7-8; Ezek. 28:17 evidently presuppose a different fall tradition; Isa. 43:27 refers to Abraham or possibly Jacob). In Gen. 6:2, 4, an ancient myth of the sons

of God corrupting the human race by marrying women is drawn into the Yahwistic account of the tragic deterioration of mankind after Adam's fall. Here it is not presented as an alternative explanation of the origin of sin, but as evidence for and impetus to the ongoing corruption of humanity resulting from the sin in the Garden. It inspired speculations in intertestamental Judaism, however, that these marriages were the origin of sin (*see below*).

Another explanation for the origin of sin was that of demonic influence. This explanation does not appear until late in the OT literature. With considerable justification, the SERPENT of Gen. 3 has been interpreted, both in Judaism and in Christianity, as representing demonic temptation, but there is no hint of this in the account itself. Demonology plays a very unimportant role in the OT. The "evil spirit from the LORD" which tormented Saul (I Sam. 16:14) is a remnant of dynamic thought and does not represent a personal demon as conceived in later biblical thought. SATAN is mentioned, with the definite article and not as a proper name, but as a wicked supernatural adversary, in Job 1:6-2:7; Zech. 3:1-2. The only passage in which temptation to sin is ascribed to him is I Chr. 21:1, where he is said to have incited David to number Israel (cf. II Sam. 24:1).

The OT writers were more concerned to trace the source of sin "existentially" in human life than to indulge in historical and cosmological speculations. The notion that it arises either from creatureliness as such or from sexual generation does not appear in the OT. Such passages as Job 14:1; 15:14; Ps. 51:5—H 51:7 speak only of the fact that man is sinful from the time of conception and that frail "flesh" is prone to all the evils of life.

According to the Hebrew writers, and particularly Jeremiah, sin comes from the corrupt HEART of man. Here, at the center of his being, the sinner is at odds with his Creator. Yahweh says:

This people draw near with their mouth
and honor me with their lips,
while their hearts are far from me
(Isa. 29:13).

There is a depth of iniquity in the human heart:

The heart is deceitful above all things,
and desperately corrupt;
who can understand it? (Jer. 17:9).

It is from this evil heart that all sin arises: "The LORD saw that . . . every imagination of the thoughts of his heart was only evil continually" (Gen. 6:5; cf. 8:21). There is therefore no hope of man's avoiding sin unless God gives him a new heart (Ezek. 11:19; 18:31; 36:26).

The heart is not so much the seat of the intellect as of the will, and it is man's will that has become corrupt and perverse. God showed man the way; he made a covenant with Israel; but man refuses to obey and continually rebels against God. It is thus basically his will that is at fault: "They say, ' . . . We will follow our own plans, and will every one act according to the stubbornness of his evil heart' " (Jer. 18:12). "They did not obey or incline their ear, but every one walked in the stubbornness of his evil heart" (Jer. 11:8; cf. 7:24; 11:9-10; 16:12; 23:17; Isa. 6:10; 63:10).

Thus sin's essence lies, not in isolated acts of transgression, but in the depth of man's being. As he fell into sin through an inordinate use of his will (Gen. 3), that same will, with its organ, the heart, has become so warped through estrangement from God that it henceforth gives rise to all sorts of evil. Thus sin becomes a fateful and tragic habitus leading at last to complete destruction. Sin begets greater sin; the sin of one individual involves everyone associated with him, through its evil influence; a sin of thought leads to transgressions in word and act. In short, the whole life, the whole being, of man has become sinful and corrupt. It has become his very nature to sin (Jer. 13:23).

Nowhere does the tragic course of sin appear more plainly than in the primeval history of Gen. 2-11. The main purpose of the Yahwistic writer particularly (the priestly interpolations have a less serious view of human sinfulness) is to indicate the spiritual degeneration of mankind resulting from the sin in the Garden. Not only are the immediate consequences of Eve and Adam's disobedience depicted, but the writer also shows how this led irresistibly to enmity and fratricide (4:3-8), then to mass murder and brutality, and to the invention of the instruments of civilization whereby evil could appear in greater refinement (vss. 17-26); further to the corruption of the race through marriage with supernatural beings (6:2, 4), until at last the wickedness of mankind became so great that it had to be destroyed with a flood (vss. 5 ff). This particular tradition does not claim that even Noah was sinless (he was preserved because he "found favor in the eyes of the LORD" [6:8; cf. vs. 9]), as appeared in his drunkenness after the flood had subsided (9:20-21). His descendants returned to the folly of the antediluvians, making use of the developing skills of civilization to erect a tower that was to be the symbol of their prideful defiance of God (11:1 ff). *See* BABEL.

The pre-exilic history of Israel provided another vivid example of the tragic course of sin. As interpreted by the prophets, this sad history demonstrated that neither Yahweh's favor nor his chastisement could turn the people from their sins (Deut. 32:15; Jer. 11:9-10; Hos. 9:10; 11:2; 12:14; etc.). The people actually delighted in wickedness (Jer. 5:31). Thus Israel's perversity is depicted as brazen wantonness and shameless ingratitude (Ezek. 16; 20; 23; cf. Jer. 2-3; Hos. 1:1-2:13). The sinner spoils all good and sins against the grace of God. "God made man upright, but they have sought out many devices" (Eccl. 7:29). Sin is as a dreadful sickness, from which God alone can save (Pss. 6:2—H 6:3; 107:17-18; Hos. 5:13; 6:1; 7:1).

Two of the most notorious examples of hardened sinners were Pharaoh (Exod. 4:21; I Sam. 6:6) and Saul. Even though they temporarily showed outward signs of repentance (cf. I Sam. 15:24 ff), their hearts at last became completely hardened. There were many like them (e.g., Zedekiah [II Chr. 36:13]; cf. Isa. 63:17; Zech. 7:12). But all Israel needed constantly to be warned: "Harden not your hearts!" (Ps. 95:8).

Because sin is rooted in the heart, all of human life is liable to its taint. No area of activity is exempt from it. There are cultic sins; sins in social and

political life; spiritual sins such as pride, hatred, and envy. Sin resides even in the intentions and desires (Exod. 20:17). There are sins of which no one else is aware (Pss. 19:12—H 19:13; 90:8) or of which the sinner himself is unconscious (Lev. 4:2 ff). Various lists of sins are to be found in the OT (Exod. 20:3-17; Deut. 5:7-21; 27:15-25; Job 31; Ps. 15; Prov. 6:16-19; Ezek. 18:5-8; etc.), but none of these exhausts the possibilities of evil.

Is there then no one who is not guilty of sin? Of "fools" and "evildoers," Ps. 14:1, 3 (=53:1, 3), says:

There is none that does good.

They have all gone astray, they are all alike corrupt;
there is none that does good,
no, not one.

Other passages extend this condemnation to all classes of men, even to the righteous: "Surely there is not a righteous man on earth who does good and never sins" (Eccl. 7:20);

Who can say, "I have made my heart clean;
I am pure from my sin"? (Prov. 20:9).

Other references to the universality of human sinfulness are in I Kings 8:46 ("There is no man who does not sin"); II Chr. 6:36; Ps. 143:2; Isa. 9:17; and also in Job 4:17-19; 14:4; 15:14, where it is closely allied with creatureliness but not identified with it. Since the Hebrew mind held to the solidarity of the human race (*see* MAN, NATURE OF), it should not be surprising that it included all of mankind under the condition of sinfulness.

As the Hebrew mind held to the solidarity of the race, it also believed in the essential unity of the life and being of the individual man. Therefore, as has been pointed out, a man's whole being and activity, beginning in his sinful heart and reaching out to all his thoughts, words, and deeds, are affected by sin. This also means that man is a sinner from his conception. It is said that

The wicked go astray from the womb,
they err from their birth, speaking lies
(Ps. 58:3—H 58:4).

Another psalmist applies this to himself:

Behold, I was brought forth in iniquity,
and in sin did my mother conceive me
(Ps. 51:5—H 51:7).

Thus the OT contains the elements of a doctrine of original sin. It does not theorize about the process by which humanity has become corrupt: all it knows—and it knows this for sure, through painful experience—is that all of mankind since Adam has been sinful, that the whole man is sinful, that man's entire life is sinful from its beginning.

d. Responsibility and personal awareness. Inasmuch as man cannot escape involvement in sin, it might seem logical to conclude that he ought not to be held responsible for it. Nothing, however, is further from OT thought. For one thing, since sin is rooted in the rebellious heart, the seat of the will, it is basically an act of perverted freedom, and hence man is always responsible for it, even though its effects overwhelm him and progressively enslave his will itself. For another thing, God offers grace as a remedy for sin

(*see below*) and urges the sinner to repent and forsake his evil ways. Among all the prophetic appeals for repentance, perhaps one that makes this clearer than any other is Ezek. 33:11: "As I live, says the Lord GOD, I have no pleasure in the death of the wicked, but that the wicked turn from his way and live; turn back, turn back from your evil ways; for why will you die, O house of Israel?" The fact that man is often warned against succumbing to sin (e.g., Gen. 4:6-7) and constantly urged to do the good (Deut. 30:11-20; Josh. 24:14; etc.) presupposes his entire responsibility.

God holds all men to account for their wrongdoing, even the Gentiles (Sodom [Gen. 19:13; Ezek. 16:49-50]; the Canaanites [Lev. 18:25]; Israel's neighbors [Amos 1:1-2:3; cf. Jonah, the oracles against the nations]). It stands to reason then that Israelites are answerable to him. Their sin is all the greater because they sin against his covenant and against better knowledge.

An important consideration is the distinction between corporate and individual responsibility for sin. In its early development Israel was very much influenced by a dynamistic concept of corporate guilt, as strikingly appears in the account of Achan's punishment (Josh. 7). Not only was the guilty man put to death, but all his goods, his flocks, and his family also perished with him (vs. 24). The family group was a much more significant entity than the individual person. When the head of such a group transgressed, he transmitted guilt to every member of it (cf. II Sam. 21:6; II Kings 9:8; etc.).

Even in official Yahwism this conception played an important role. In the great COVENANT formulations, however, its scope was somewhat restricted. Thus, according to the Decalogue (Exod. 20:5; Deut. 5:9; cf. Exod. 34:7; Num. 14:18), the iniquity of the fathers is to be visited upon the children, but only "to the third and fourth generation." Moreover, Deut. 24:16 provides a humanitarian rule against the blood purges which the Hebrews occasionally witnessed: "The fathers shall not be put to death for the children, nor shall the children be put to death for the fathers; every man shall be put to death for his own sin." This is a rule which King Amaziah of Judah is remembered as having honored (II Kings 14:6).

The corporate involvement of sin deeply impressed itself upon the people, however. The prophets proclaimed that it was not only a few wicked individuals, but the whole nation, that was laden with sin (Isa. 1:4). Generation after generation treasured up wrath. Thus it was easy for those who were finally forced to bear the painful consequences to protest that all the effects of corporate guilt were being visited upon them. The exiles lamented:

Our fathers sinned, and are no more;
and we bear their iniquities
(Lam. 5:7).

They even had a proverb:

The fathers have eaten sour grapes,
and the children's teeth are set on edge.

Against this both Jeremiah and Ezekiel protested (Jer. 31:29-30; Ezek. 18; 33:10-20). No son was to

be held accountable for his father's crimes. "The soul that sins shall die" (Ezek. 18:4). In saying this, they did not mean to deny corporate involvement in sin: this was beyond dispute. Their purpose was to accentuate individual responsibility, which was in danger of becoming submerged in a consciousness of overpowering national calamity. Even though the nation was now suffering a bitter corporate punishment, there was hope for the individual if he would repent.

It has been mentioned that guilt for sin came to be felt more personally as Israel's theological understanding of the real nature of sin developed. Wherever the concept of sin is associated with dynamic thought and is conceived of, at least in part, as the transgression of an irrational taboo, its primary psychological effect is to produce, not a genuine sense of guilt, but an uncanny feeling of dread. The result is panic instead of godly sorrow. With masterful sureness, the writer of Gen. 4:13-14 depicts the blind terror of Cain, who cries in alarm at the mark of curse placed upon his forehead: "My punishment is greater than I can bear." Cain understood all too little the real seriousness of his sin. He was more afraid of its evil results for himself than sorrowful for the crime itself.

On the other hand, a true spiritual sense of guilt, which includes deep sorrow and shame, follows from the knowledge that sin is a personal affront against a holy and righteous God. Such guilt is felt as a heavy burden which oppresses the soul. It comes to vivid expression in such language as this:

For my iniquities have gone over my head;
they weigh like a burden too heavy for me.

I am utterly bowed down and prostrate;
all the day I go about mourning
(Ps. 38:4, 6—H 38:5, 7).

The sinner knows himself to be under the WRATH OF GOD (cf. Ps. 90:7-8). So long as he keeps his guilt to himself, there is no relief for his soul:

When I declared not my sin, my body wasted away
through my groaning all day long.
For day and night thy hand was heavy upon me;
my strength was dried up as by the heat of summer.
I acknowledged my sin to thee,
and I did not hide my iniquity;
I said, "I will confess my transgressions to the LORD";
then thou didst forgive the guilt of my sin
(Ps. 32:3-5).

It will be noted that this intense inward awareness of guilt is mainly expressed in texts dating from late periods of Israel's religious development, as in the Psalms cited above and in Ezra 9:6-15; Ps. 51; Isa. 59:9-15; 64:5-6; Jer. 14:7; Dan. 9:4-19. Many of these are prayers, in which the most saintly men of Israel—who know their sinfulness the most clearly because they live the most intimately with God—lay their sin before him whom it concerns the most and who has the only remedy for it.

This brings up the question of the sinfulness of those who are called perfect or righteous in the OT (see *RIGHTEOUSNESS IN THE OT*). It is significant that many of the most notable exemplars of piety are said explicitly to have committed sin: Noah (Gen. 9:21), Abraham (Gen. 12:11 ff), Moses (Num. 20:11-12),

David (II Sam. 11; 24), Elijah (I Kings 19:4), Isaiah (Isa. 6:5), Jeremiah (Jer. 15:19), and others. And yet it is said of Noah that he "was a righteous man, blameless in his generation" (Gen. 6:9; cf. 7:1); also that, like Enoch (5:24), he "walked with God" (6:9). The Prologue of the book of Job declares that its hero was "blameless and upright, one who feared God, and turned away from evil" (1:1; cf. vs. 8). In some of the Psalms (e.g., 18:20-24—H 18:21-25; 26; 41:12) the writers claim complete purity and innocence. In the light of the universal sinfulness of humanity, which is the dominant teaching of the OT, how are such expressions to be understood?

It should be made clear that the terms involved in these claims of innocence are generally based on external standards of goodness. The leading words are: צדיק, "righteous"—i.e., not guilty of specific sins—a juridical term; ישר, "upright," as judged by external conduct; and תם, "perfect" as far as personal worth is concerned. (רשע is the precise opposite of רשע, "guilty.") To be described as "righteous," one needs to conform, at least outwardly, to the commonly accepted standard of what is right. It is not so much a question of whether one ever commits sin as of one's basic walk of life and attitude toward the standard of right. In later Judaism this standard came to be, of course, the Torah.

On this basis all truly God-fearing men would qualify as righteous. As a matter of fact, an awareness of the antithesis between the righteous and the wicked in this sense plays a major role in many of the Psalms (e.g., Ps. 1) and in much of the wisdom literature. A wicked man is not just a sinner—i.e., one who from time to time falls into sin. He lives in sin; he adopts it as his way of life; his whole existence is under a dark cloud of guilt. On the other hand, a righteous man may occasionally fall into sins, but because his basic attitude is hatred toward sin, he is not charged as being "guilty" or "wicked."

This distinction probably accounts for such claims of innocence as are found in Ps. 18:20 ff. It is plain that these claims lack the deep inwardness of conscience which some of the other Psalms reveal (32; 38; 51; etc.). They ignore the more important question of whether one can really be right with God even though he may observe the outward norms of pious conduct. In spite of its naïve and artless Prologue, this is the real problem of the book of Job. His inquisitors accuse Job of all kinds of sin, while he stubbornly maintains his "righteousness" (27:6; cf. 11:4; 33:9; etc.), but the question which he himself knows he can never avoid is: "How can a man be just before God?" (9:2). Job abandons the norms of an easy moralism and reaches out into a dark unknown for that forensic righteousness which God imputes in spite of the sinner's personal guilt. Job was looking for a wonder which only the NT would make plain.

e. Penalty. Since Yahweh holds all men accountable to him for their sin, it is also he who brings their penalty upon them. As supreme Ruler over all the world, he announces the penalty of each nation's sin (cf. Amos 1:1-2:3). But his covenant people are not exempt from this judgment. Judah and Israel are also under indictment for their transgressions (Amos 2:4 ff). The peculiar importance of Amos, the earliest of the writing prophets, is that he for the first time

clearly announces Yahweh's judgment upon his own people:

Behold, I am setting a plumb line
in the midst of my people Israel;
I will never again pass by them
(7:8).

Again and again the prophets declare Yahweh's verdict (Isa. 2:10-21; 5:26-30; 7:17-25; 8:5-8; 10:33-34; Jer. 25:8-11; Ezek. 9; Hos. 13:16; Amos 3:10-11; 5:27; 6:14; etc.; cf. Lev. 26:17, 25, 31-39; Deut. 28:25-68). In apocalyptic passages the imagery of Yahweh's judgment is set forth in lurid detail (Isa. 24:21-23; 63:1-6; 66:15-16; Joel 3:11 ff). Yahweh's purpose is to use Israel's enemies as the executors of his judgment (Isa. 10:5-11; Jer. 27:6 ff). But even these are subject to his condemnation (cf. Isa. 10:12-16).

Although forensic language is employed, it is plain that the penalty which results from transgressions has an internal connection with it. I.e., sin's penalty follows immediately and necessarily. For the Hebrew mind sin included, besides the act itself, the guilt attaching to it and its painful results, which might be called its judgment. Thus it is said that God judges a guilty man by bringing his conduct upon his own head (I Kings 8:32). Sin is never an isolated and easily forgotten act; it sets in motion a whole series of consequences; it begets more sin and more guilt and more pain, and then the whole series over again. This is the tragic course of sin which has been described above. Since this necessary involvement of act and consequence belongs to the essential nature of moral creation, it is indeed the judgment of God. Theologically speaking, since the sinner lives (at least to the extent that he sins) in estrangement from God, while God has created him to live in harmony with him and to enjoy all the consequent blessings of peace and well-being, it necessarily follows that his life apart from God will be filled with pain and misery.

He who digs a pit will fall into it,
and a stone will come back upon him who starts it rolling.
A lying tongue hates its victims,
and a flattering mouth works ruin (Prov. 26:27-28).

It is for this reason that the leading terms for "sin" in the OT include its penalty (*see above*). This is particularly true of חַטָּאת and עוֹן. When Cain cries out: "My עוֹן is greater than I can bear" (Gen. 4:13), it is the punishment of his crime that troubles him, not the evil deed in itself. The fire and brimstone which rains down upon Sodom is called the "עוֹן of the city" (Gen. 19:15). Aaron protests to Moses: "Oh, my lord, lay not חַטָּאת upon us [RSV 'do not punish us'] because we have done foolishly and have sinned [חַטָּאתָם]" (Num. 12:11).

Thus suffering comes to be interpreted as the penalty of sin, and great suffering as the penalty of great wickedness. The people see their land destroyed and go into captivity because of their sin (II Kings 17:6 ff). The First Psalm makes a sweeping generalization which ignores all conflicting experience: all that the godly man does shall prosper; the way of the wicked shall perish. Job's antagonists have made a rigid dogma of this. For them *all* suffering is the penalty of sin; hence it is indisputable that Job is guilty, however much he may protest his inno-

cence. Nowhere in the OT are the sorrows of the wicked, which are the penalties of sin, set out more luridly than in the speeches of Job's accusers (15:17-35; 18:5-21). They do not even imagine the possibility that Job's sufferings have been inflicted for some other purpose (1:6-12). Most Hebrew thinkers had sense enough not to make so exact an equation, however. They knew that the righteous did not always enjoy happiness, that the wicked did not always suffer (Job 21:17-26; Ps. 73; Jer. 12:1-4), that the intensity of suffering was not always in proportion to the sin (Hab. 1:13). Here was what was to become one of Israel's most agonizing problems. *See SUFFERING AND EVIL.*

The ultimate penalty for sin is death. This is given profound expression in the Eden prohibition: "In the day that you eat of it you shall die" (Gen. 2:17), and in the judgment imposed for transgressing this prohibition:

You are dust,
and to dust you shall return (3:19).

Here human mortality is made into a punishment for sin. In the Pentateuchal laws the death sentence is required for the most flagrant sins (Exod. 21:15-17; Lev. 20:10-16; 24:10-17; Num. 15:30-31; Deut. 21:18-21; 22:21-22; cf. Josh. 7:25). When the penalty of DEATH is declared upon the unrepentant wicked, this may be understood as a death which is spiritual as well as physical (Ps. 73:27; Ezek. 3:19).

f. Remedy. A discussion of sin, with all its woeful diagnosis, would not be complete without a consideration of the remedy that has been provided for it (*see ATONEMENT; CONVERSION; CRIMES AND PUNISHMENTS; FORGIVENESS; REGENERATION; REPENTANCE; SANCTIFICATION*). At any rate, the OT is not entirely clear about the ultimate cure of sin. For this it depends upon the fuller revelation of the NT. *See § 3 below.*

The Hebrew sinner sought relief in two separate directions. He sought atonement through the cultic rituals, and later, in Jewish legalism, in an attempt to keep the whole Torah and its interpretation. But men of deep spiritual perceptiveness could find no ultimate relief in these devices. They were led to cast themselves simply upon God's mercy in an act of confession and trust. Thus the highest insight of OT faith is that "deliverance belongs to the LORD" (Ps. 3:8—H 3:9).

If thou, O LORD, shouldst mark iniquities,
Lord, who could stand?
But there is forgiveness with thee,
That thou mayest be feared
(Ps. 130:3-4).

2. In the Apoc. and the Pseudep. a. Nature and standard. Sin continued to be a burning problem in the intertestamental period. The literature of this period offers occasional examples of a sin-consciousness reminiscent of the prophets and of the great canonical Psalms. Both individual (Prayer Man. 9, 12) and national (Bar. 1:17-19; 2:12; 3:2, 7-8) guilt are confessed. There was a realization, especially in the early part of this period, that sin is, first of all, wilful defiance of and estrangement from God:

The beginning of man's pride is to depart from the Lord;
his heart has forsaken his Maker.

For the beginning of pride is sin,
and the man who clings to it pours out abominations
(Ecclus. 10:12-13; cf. Wisd. Sol. 1:3).

However, the dominant conception of sin during this entire period was legalistic. The Torah, or Law, became the entire definition of the divine will and completely circumscribed sin. To sin was to break the law; to do righteousness was to keep it. Throughout the Apoc. and the Pseudep., from the earliest writings to the latest, as in all the rabbinical literature following, this was the practical standard of sin (cf. Tob. 3:4-5; 4:5; Wisd. Sol. 2:12; Ecclus. 10:19; 21:11; II Bar. 15:5; 19:3; Asmp. Moses 12:10-11; II Esd. 7:72; 8:56; IV Macc. 5:17-21). The old idea that a person could sin in ignorance was retained (Test. Zeb. 1:4-5; cf. Slavonic Enoch 30:16; 31:7). The most heinous kind of transgression was, of course, that which was committed knowingly and deliberately against the law (II Bar. 15:6; II Esd. 9:36).

With increased sharpness the lines were drawn between the righteous, who were faithful to the law, and the wicked, who transgressed it. The latter were given the exclusive name "sinners." A work which strongly manifests the spirit of Pharisaism, the Psalms of Solomon, takes the view that a righteous man may sin, but this is through weakness and error, and not as the sin of the wicked, who transgresses wilfully and habitually:

The righteous stumbleth and holdeth the Lord righteous.

There lodgeth not in the house of the righteous sin upon sin.
The righteous continually searcheth his house,

To remove utterly (all) iniquity (done) by him in error.
He maketh atonement for (sins of) ignorance by fasting and
afflicting his soul,

And the Lord counteth guiltless every pious man and his
house.

The sinner stumbleth and curseth his life.

He addeth sins to sins

He falleth—verily grievous in his fall—and riseth no more.
The destruction of the sinner is for ever (3:5-13).¹

Thus all of humanity is sharply divided into two classes (Ecclus. 33:12-15; Pss. Sol. 13:4; etc.). According to their attitude toward the law all men are judged and rewarded (Jth. 8:5-8; Ecclus. 40:8-11, 17; Asmp. Moses 12:10-11; Enoch 5:6-9; 22:9-13; 99-101; Pss. Sol. 9:15; 13:4-11; 14:2). The essence of piety is the doing of good works (II Esd. 8:36). This is the true wisdom and fear of God, which no ungodly man possesses (cf. Wisd. Sol. 1:4; Ecclus. 15:7).

b. Origin, development, and extent. The literature of the intertestamental period is rife with speculation concerning the origin of sin and evil. Since this was a time of recurring disillusionment and painful tension for Judaism, it is small wonder that many earnest souls were constantly seeking for answers to the urgent question of how this evil began, and at the same time were increasingly taking refuge in apocalyptic (see APOCALYPTICISM) as an ultimate solution for it.

Speculations concerning the origin of sin took their departure chiefly from the story of Adam's fall in Gen. 3, from the account of the marriage of the "sons

of God" with women in Gen. 6:2, 4; from the concept of an "inclination" or נַפְשׁוֹ that was "evil continually" according to Gen. 6:5; 8:21; and from various OT passages which speak of universal sinfulness and of the corruption of the heart.

Although II Esdras, a somewhat heterodox writing reflecting the anguish of Jewish piety in the years following the destruction of Jerusalem in A.D. 70, approaches very close to blaming God for sin (cf. 4:30), most of the literature of this period is very certain that it is not God (Wisd. Sol. 1:13-16; Ecclus. 15:11-13, 17, 20; cf. 31:13) but man (Enoch 98:4) who is responsible for causing it. In Hellenistic Alexandria the idea that the body is essentially evil apparently had some influence on Jewish thinking (Wisd. Sol. 9:15; cf. 8:20); but generally the orthodox Hebrew view was maintained that man was created good and in God's image (Wisd. Sol. 2:23; 8:19-20; Test. Naph. 2:5; Slavonic Enoch 44:1; 65:2; II Esd. 3:4-6). Sin came into the human race when Eve was seduced by Satan and persuaded Adam to transgress with her (Enoch 32:6; 69:6; Jub. 3:15-35; Slavonic Enoch 31:3-6; IV Macc. 18:8; cf. also the late Book of Adam and Eve and the Apocalypse of Moses). Although Eve was often given the primary blame for this, it came to be realized that Adam's sin was the more representative and destructive (cf. Ecclus. 25:24 with II Esd. 7:118).

In the early literature of the intertestamental period little consequence was drawn from Adam's sin, beyond that which Gen. 3-11 itself affirms (cf. Jub. 4:2-5). Wisd. Sol. 12:10 says only of the Canaanites that "their origin was evil and their wickedness inborn." In three apocalyptic writings of the first century A.D., however, the relation between Adam's sin and the sinfulness of all mankind is forcefully stated. These are the Slavonic Enoch, II Baruch, and II Esdras. The first of these posits a tragic connection without explaining its process: "I saw all forefathers from all time with Adam and Eva, and I sighed and broke into tears and said of the ruin of their dishonour: 'Woe is me for my infirmity and for that of my forefathers'" (41:1). According to the second, Adam plunged "many" into the darkness of sin (II Bar. 18:2; 56:8-9), so that, even with the Law to illumine his descendants, they sinned and transgressed (19:3). Because of Adam's sin death came upon all mankind (23:4; 51:15; 54:15), together with all kinds of suffering and evil (56:6-7). All of mankind are going to destruction because of that first sin:

O Adam, what hast thou done to all those who are born from thee?

And what will be said to the first Eve who hearkened to the serpent?

For all this multitude are going to corruption,
Nor is there any numbering of those whom the fire devours
(48:42-43).¹

Yet individual men are responsible for their own transgression. Adam has somehow given them an evil propensity, but it is they who choose to do wrong:

For though Adam first sinned
And brought untimely death upon all,
Yet of those who were born from him

Each one of them has prepared for his own soul torment to come,

¹ R. H. Charles, ed., *The Apocrypha and Pseudepigrapha of the Old Testament* (Oxford: The Clarendon Press).

And again each one of them has chosen for himself glories to come (54:15; cf. 51:16).

Adam is therefore not the cause, save only of his own soul, But each of us has been the Adam of his own soul (54:19).¹

It is more universal death than universal sin that is attributed to Adam.

II Esdras likewise posits a close relation between Adam's transgression and the corruption of the human race (3:7-8; 7:11-12). This writer apparently believed that this exists as a hereditary connection between Adam's sin and the sin of mankind, similar to the growth of a grain of evil seed: "For a grain of evil seed was sown in Adam's heart from the beginning, and how much ungodliness it has produced until now, will produce until the time of threshing comes!" (4:30; cf. vs. 31-32). It is this that accounts for the death and universal suffering to which Adam's descendants are subject (3:7; 7:48, 120). In anguished tones similar to those of II Bar. 48:42-43 this writer cries out for the tragedy of Adam's fall: "O Adam, what have you done? For though it was you who sinned, the fall was not yours alone, but ours also who are your descendants. For what good is it to us, if an eternal age has been promised to us, but we have done deeds that bring death?" (II Esd. 7:118-119). All the pain and perplexity of a disenchanting Judaism are reflected in these lines. They were written, significantly, at the very period when the NT was coming into being.

From the tradition of the "sons of God" intermarrying with women and producing giants, intertestamental Judaism drew far-reaching speculations which were intimately connected with the developing angelology and demonology of the period (see ANGEL; DEMON). These speculations appear in various writings, but are most prominent in Enoch. The "sons of God" were identified with the fallen angels, or "Watchers," who were originally good (Jub. 4:15) but sinned (Test. Naph. 3:5; Slavonic Enoch 7:3; 29:4-5). It was they who entered into sexual relations with women and produced monsters, who corrupted the earth with their wickedness (Enoch 6:1-2; 7:1; 9:8-9; 10:11; 12:4; 15-16; 19:2; 69:4; 86; Jub. 5:1-4; Slavonic Enoch 18:3-5; II Bar. 56:12). Test. Reuben 5:3, 6, blames the women for seducing the Watchers, but in other passages it is the latter who are at fault. Associated with this tradition is the idea that sin continues to be the result of demonic temptation (Enoch 64:2; Jub. 7:27; 10:1; 11:4; 12:20; Test. Benj. 5:2).

Another tradition closely associated with the theory of demonic seduction was developed in the Testaments of the Twelve Patriarchs and apparently had important influence on the Qumran theology (see §2c below). This is the hypostatization of the "spirits of error," corresponding to the "spirits of truth," mentioned in Test. Reuben 2:2-3:8; Test. Simeon 6:6; Test. Judah 16; Test. Dan 5:5. These become practically equivalent to two opposing cosmic principles in Test. Judah 20:1.

Again a close connection can be drawn between the "spirit of deceit" and the "evil inclination" (יצר), particularly as these appear in the Testaments. The first mention of a controlling יצר occurs in Ecclus. 15:14, where it is not spoken of as necessarily being evil

(cf. 27:6). But in Ecclus. 37:3 its evil power is definitely emphasized:

O evil imagination, why were you formed to cover the land with deceit?

This יצר must be controlled by keeping the law (21:11).

The Testaments develop the theory of the evil inclination as the source of sin (Test. Judah 18:3; Test. Joseph 2:6). But there is a good as well as an evil inclination in man (Test. Asher 1:3-9; 3:1-2). It is the duty of man to follow the good יצר (Test. Benj. 6:1) and to resist the evil. IV Maccabees, a late Alexandrian writing, reveals Greek influence in its claim that reason, aided by the law, can control the evil יצר (2:5-6, 21-23; cf. 7:16). The evil inclination is further mentioned in Jub. 7:24; Slavonic Enoch 53:3; II Esd. 7:92. Its further development in rabbinic Judaism, where it became very prominent, cannot be touched upon here, except to say that it was never construed as something radically and basically wrong at the core of man's being.

This last is forcefully expressed by II Esdras, which speaks of sin's arising from a "grain of evil seed" (4:30) or from the "evil heart" (3:20-22, 26; 4:4) within man: "For an evil heart has grown up in us, which has alienated us from God, and has brought us into corruption and the ways of death, and has shown us the paths of perdition and removed us far from life—and that not just a few of us but almost all who have been created!" (7:48). This reflects the teaching of the old prophets that man sins because his heart is corrupt at its very core. Various passages emphasize the depravity of fallen mankind (Enoch 16:3; Jub. 1:22; 10:8; II Bar. 56:10). Sin in the human heart is spoken of as a deadly poison (Test. Gad 6:3), producing all sorts of evil (Wisd. Sol. 4:12; Ecclus. 27:10). In a passage strikingly similar in expression to Rom. 1:18-32, which it may have influenced, the Wisdom of Solomon describes the blindness of idolatrous men and the spiritual corruption resulting from it (13:1-9; 14:22-31).

It necessarily follows from the hereditary transmission of sinfulness that all of humanity is corrupt, and this is a consequence drawn in a variety of intertestamental writings (Wisd. Sol. 13:1; Ecclus. 8:5; Enoch 84:4; Jub. 21:21; Test. Levi 2:3; II Esd. 7:46; 8:55-56). Again it is II Esdras that expresses this the most forcibly: "For all who have been born are involved in iniquities, and are full of sins and burdened with transgressions" (7:68). To some of the latter's most sweeping statements, however, it allows exceptions (3:36; 7:48, 140). Out of the corrupt mass of humanity there have been a few who have not sinned (Prayer Man. 8; Slavonic Enoch 41:2; II Bar. 9:1; 18:1; cf. Pss. Sol. 17:41).

Judaism never abandoned its belief in the freedom of the will, despite all this (cf. Ecclus. 15:15-17). Even as a sinner man is accountable for his actions (Wisd. Sol. 13:8-9; Enoch 98:4), which God will bring into judgment (Wisd. Sol. 4:20; Slavonic Enoch 65:4; II Esd. 3:34). The sinner's only recourse is to follow the prescribed ritual for atonement (Jub. 5:17-18; Pss. Sol. 3:9), and to cast himself upon God's mercy by repentance and confession (Wisd. Sol. 15:1-2; Ecclus. 5:4-8; 7:8; 17:25-27, 29; 21:1-2; Prayer Man. 13; Jub. 22:14; Pss. Sol. 9:11-15).

c. *Qumran dualism.* The discovery of the library of the ancient Qumran community (see DEAD SEA SCROLLS) has illuminated the concept of sin held by an important segment of Jewish society, and in doing this has indicated the probable origins of several distinctive aspects of NT hamartiology. The influence of this strain of Jewish thought has been almost entirely extinguished in rabbinical theology, but it now appears to have survived in the NT doctrine of opposing cosmic powers, as also in Paul's distinctive use of the term "flesh" as the virtual equivalent of "sin."

It is believed that some of the notions of the Qumran community were widely held during the time of Jesus and in the century preceding, but we now know them almost exclusively as they were built into a rigid system by the ascetic brotherhood living in isolation near the shore of the Dead Sea. This community shared much of the common stock of Jewish beliefs about sin. The law was also for them pre-eminent, and the practical criterion of sin. They spoke of the evil יצר (CDC II.16; 1QH VII.13, 16) and knew of the fall of the Watchers (CDC II.18). They too made a distinction between a deliberate sin and one of ignorance or inadvertence (1QS VIII.24). However, they took sin far more seriously than most of their contemporaries, as appears clearly in their Book of Hymns (*Hodayoth*, 1QH), and particularly in the very severe penalties which they inflicted on delinquent members (see the Manual of Discipline, 1QS). Believing that they were presently living under the "epoch of wickedness," they had separated themselves into a saintly brotherhood governed by rigid rules. They were seeking to overcome wickedness through strict observance of the law, through meditation upon the "secrets" of God, through ritual cleansings, and ultimately through an apocalyptic world-conflict.

To comprehend the entire rationale of this community, and especially its great preoccupation with sin, it is important to take note of the cosmic dualism which lay at the basis of its theology. We have seen that Judaism generally, already in parts of the OT, divided sharply between "the righteous" and "the wicked" as separate and antagonistic classes. The Qumran community made this antithesis absolute. In this they were almost certainly influenced by Iranian dualism, although they ultimately attributed both good and evil to God's creation. These were elemental world-forces under the control of divine determinism. The Qumran theology spoke of good and evil as opposing "spirits" (cf. Test. Judah 20:1): "God created man to rule the world, and appointed for him two spirits after whose direction he was to walk until the final Inquisition. They are the spirits of truth and of perversity. The origin of truth lies in the Fountain of Light, and that of perversity in the Wellspring of Darkness. All who practice righteousness are under the domination of the Prince of Lights, and walk in ways of light; whereas all who practice perversity are under the domination of the Angel of Darkness and walk in ways of darkness. . . . It is in these ways that men needs must walk . . . according as a man inherits something of each. . . . Between the two categories He has set an eternal enmity. . . . The spirits of truth and perversity have been struggling in

the heart of man" (1QS III.17-21; IV.15-17, 23).¹ Although it may be assumed, at least according to the more noble insights of the community, that some of the righteous are out in society, the ideal place for the "children of light" to oppose darkness is in the holy community. Here they are organized as an army against the hosts of evil. The initiate solemnly vows "to keep far from all evil and . . . to walk no more in the stubbornness of a guilty heart and of lustful eyes, doing all manner of evil; . . . to love all the children of light, . . . and to hate all the children of darkness" (1QS I.4, 6-7, 9-10).¹ Henceforth he spends his every moment in fighting wickedness. If he backslides, he is severely censured or even cast out of the community.

It is obvious that this artificial structure contained great dangers for hypocrisy and externalism; on the other hand, there is evidence that for many it promoted a deep spiritual sensitivity to the constant reality of sin. Despite the ideal of belonging entirely to the "spirit of truth," the covenanters experienced the cruel power of temptation. Their greatest dread was to fall into the power of the "Angel of Darkness," who is constantly bent on causing the sons of light to stumble (1QS III.21-24). A recurring theme in the Hymns, expressed in language reminiscent of some of the canonical Psalms, is the anguish of this bitter struggle.

The Qumran believer attributed his inability to fulfil the ideals of moral perfection, not only to temptation, but also to the weakness of his flesh. In his hymns he came to employ the Hebrew word for FLESH (בשר), which in the OT had been no more than a designation of creaturehood and mortality, as being also the occasion—though not necessarily the cause—of his transgression. Because his flesh is weak, the spirit of error often overwhelms him. Strong language is used:

But I—I belong to wicked mankind,
to the communion of sinful flesh.

My transgressions, my iniquities and sins,
and the waywardness of my heart
condemn me to communion with the worm
and with all that walk in darkness

(1QS XI.9-10).¹

The only hope is to cast oneself upon the mercy of God, who will grant forgiveness and provide his spirit (Spirit) to help. There can be little doubt that in this tradition, rather than in the theology of the rabbis, Paul's concept of an antagonism between flesh and Spirit originated (see § 3 below). Such an utterance as this would not have been (so far as it went) offensive to Paul:

How can flesh have reason,
or the earth-bound direct its steps,
except that Thou hadst created spirit
and ordained the working thereof?

(1QH XV.21-22).¹

3. In the NT. The presence and the problem of sin are just as much a part of the NT as of the OT, and yet one who reads it is immediately struck by an astounding difference. All the old terms and concepts are here in the NT, but deepened and strangely

¹From the book *The Dead Sea Scriptures* by T. H. Gaster; copyright © 1956 by Theodor H. Gaster, reprinted by permission of Doubleday & Company, Inc., and Martin Secker & Warburg Ltd., London.

transformed. The one factor which makes this great difference is the work of Jesus Christ. He provides something which the saints of the OT yearned for but could never find: real and certain victory over sin. The doctrine of sin in the NT is dominated by the assurance that Christ has come to conquer it. Thus, whatever is said to emphasize sin's deadliness and seriousness serves to magnify the greatness of the salvation from sin which Christ has obtained.

As we should expect, each of the NT writers has a characteristic way of speaking about sin. Paul is by all counts the most profound. But there is no essential disharmony amid the variety. Above all, they are all dominated by the assurance of Christ's effective answer to sin.

It needs to be emphasized while saying this that Hellenism has made little essential difference. Some have maintained that Paul, e.g., was much under the influence of Greek dualism in his association of sin with the body. We now see clearly, however, that the sources of his teaching are Hebraic, perhaps with traces of Iranian dualism by way of the latter's penetration into late Hebrew theology. Hellenism has, of course, contributed the heritage of its language as the vehicle of NT thought, but it is important to observe that the NT radically transforms the content of many of the Greek words for "sin" in keeping with its essentially different ideology.

a. Terminology. All the NT words for "sin" occur in classical Greek, but many of them were given new associations already in the LXX. They may be grouped as follows, according to their basic semantic orientation:

a) Formal terms, indicating "deviation from the good." By far the most prominent NT word for "sin," the equivalent of חטא in the OT, is ἀμαρτία, "sin, sinfulness" (also ἀμαρτήμα, "sinful act"; ἀμαρτάνω, "miss the mark, sin"; ἀμαρτωλός, "sinner"). In classical usage this term indicated the missing of a target or road, hence also intellectual error and moral fault. In the NT it occasionally refers to wrong done to a fellow man, but generally it is used to express sin (with all its Hebraic connotation) against God. The NT seldom uses ἀμαρτήμα, which is the most common in classical Greek, preferring ἁμαρτία, which in the Synoptics, Acts, Hebrews, the Pastoral and Catholic letters, and Revelation ordinarily indicates a sinful act (which points to the inward condition of sinfulness, however). Paul and John prefer to use the latter word to indicate the sinful quality of life and the state of alienation from God. In Rom. 5-7, ἀμαρτία is personified in poetic imagery to bring out its demonic power (cf. Gen. 4:7; Zech. 5:6-8; Eccles. 27:10).

Ἐνοχος (both as noun and as adjective) is frequently employed in the LXX as the translation of ὀφείλημα, "guilty, wicked." In view of the sharp antithesis that Jewish theology had made between "the righteous" and "the wicked" as opposing classes, it is not surprising that the NT represents the Jews as applying the word ἁμαρτωλός, not to themselves, but to their enemies and to those who were not observing the law. The following meanings may be distinguished: (a) as a sociological-ethical term, it indicates a person of notoriously bad morals, such as a tax collector or harlot (Matt. 9:10-11; 11:19; Luke

7:37; 19:7; I Tim. 1:9; Jas. 4:8; 5:20); (b) in the mouths of the Pharisees it is a word of condemnation for any who do not follow their ritual (John 9:16 ff; cf. 7:49; Matt. 12:1 ff; 15:2; Luke 11:37-38); (c) as occasionally in the LXX, it designates the Gentiles (Matt. 26:45; Mark 14:41; Luke 6:32-34 [cf. Matt. 5:47]; Gal. 2:15); (d) in a more spiritual sense it applies to men outside of Christ under God's condemnation (Mark 8:38; Rom. 5:8; Gal. 2:17; Heb. 7:26; etc.), and is the self-designation of those who are under the conviction of guilt (Luke 5:8; 18:13; I Tim. 1:15).

Another formal word for "sin" is παράπτωμα, "trespass," indicating an individual lapse and not a condition of sinfulness (but cf. "dead through . . . trespasses" [Eph. 2:1]). In Heb. 6:6 the verb ἀποπίπτειν means "to apostatize from God."

Similar is παράβασις, "transgression" (also παράβατης, "transgressor"; παραβαίω, "go beyond, transgress"). Occurring with the object stated or implied, it is a stronger term than παράπτωμα, indicating a deliberate breach of the law or morality.

Similar to the OT idea of חסר אונים are ἀγνοία and ἀγνόημα. See IGNORANCE.

b) Terms with theological orientation. Etymologically related to the above words is ἀνομία, "lawlessness" (also ἄνομος, "lawless"; ἀνόμως, "lawlessly"). It indicates an attitude or condition of contempt for and violation of law—i.e., "iniquity" or "wickedness" (ἄνομος may also indicate one who is ignorant of the law). A similar word is παρανομία, "wickedness" (also παρανομέω, "transgress the law").

Παρακοή, the regular term for "disobedience," is used occasionally in the NT (e.g., Rom. 5:19) to indicate disobedience toward God.

The most profoundly theological word for "sin" is ἀσεβεία, "ungodliness, impiety, sacrilege" (also ἀσεβέω, "act impiously"; ἀσεβής, "impious"). This is the word which the LXX often uses to translate ἔσθλα, and it indicates offense against God in distinction from ἀδικία (see below), which refers to wrongdoing against mankind. It occurs chiefly in Romans, the Pastoral letters, I and II Peter, and Jude.

c) Terms indicating spiritual badness. Κακία (also κακός, "bad") and πονηρία (also πονηρός, "bad") both indicate qualitative and moral evil. They translate the Hebrew רע, רוע, in the LXX, and in the NT they generally refer to moral and spiritual depravity. The neuter adjectives used substantively indicate moral evil. Ὁ πονηρός is pre-eminently the devil (Matt. 13:19, etc.). Κακία sometimes has the special meaning of "malice" or "evil disposition."

d) Ethical and juridical terms. A favorite word in classical usage for indicating wrongdoing toward mankind is ἀδικία, "injustice, unrighteousness." The NT employs it (also ἀδικημα, "misdeed"; ἀδικέω, "do wrong or injustice"; ἀδικός, "unjust" or "sinful"; ἀδίκως, "unjustly") in the sense of crime toward a fellow man or, more theologically, of sin in general. I John equates ἀδικία and ἁμαρτία (3:4; 5:17).

Ἐνοχος, a forensic word meaning "guilty" or "liable" for a particular wrong, occurs a few times in the NT (e.g., Mark 3:29).

In Matt. 6:12 (cf. Luke 11:4) the term ὀφείλημα, "debt," indicates the burden of guilt which the sinner bears in the sight of God.

b. Nature and standard. In some of the NT writings (as Hebrews, James) the concept of morality and the definition of sin are still very similar to those of Judaism—i.e., sin is thought of in relation to the law. However, the NT in general strongly opposes the legalistic and impersonal conception. In the NT every vestige of the taboo concept is eliminated. Jesus refused to observe the scruples of the Pharisees concerning ritual cleanliness (Mark 7:2-5; cf. Matt. 15:1 ff), making the pronouncement: "There is nothing outside a man which by going into him can defile him; but the things which come out of a man are what defile him" (Mark 7:15). This is probably also partially the intent of the story of Peter's vision of clean and unclean animals in Acts 10.

There were lively controversies in the early church over the keeping of the law (Acts 10-11; 15; Gal. 2; etc.), but the view eventually won out, chiefly through the work of Paul, that this was no longer the ultimate standard of morality (see LAW IN THE NT). Jesus kept the law (Matt. 5:17), but he made it clear that legalism, particularly as it was enforced by the Pharisees, had no place in his concept of righteousness. He refused to follow their tradition, condemning them in withering terms as hypocrites and blind leaders of the blind (Matt. 23:13-36). They had made the law an odious thing (vs. 4) and the occasion for all kinds of externalism and pretense. Jesus showed them that some parts of the law could be turned against other parts (Mark 10:2-12); he showed them that such ordinances as the keeping of the sabbath were intended for man's benefit and not as a burden (Matt. 12:1-14; cf. John 9:14, 16); he also reminded them that love was the real fulfilment of the law (Matt. 5:43-48; 22:36-40; cf. Rom. 13:9-10; Gal. 5:14; Jas. 2:8).

It is important to observe that Jesus did not count the righteousness obtained by keeping the law as worthless and meaningless; his claim, rather, was that this righteousness is not sufficient (Matt. 5:20), and, if substituted for true inward piety, becomes a horrible farce. Righteousness measured by such an externalistic standard leads to prideful boasting before God (Luke 18:11-12) while neglecting the duties which God really requires (Matt. 15:3-9; 21:30-31; 23:23-26). Thus the very righteousness of which the spiritual elite boasted was in Jesus' eyes the cause of their condemnation before God. Jesus looked for a consciousness of failure before the searching penetration of God's judgment, even when the law had been outwardly observed (Matt. 19:21). Even "the righteous" needed to understand that they were sinners in the sight of God (cf. Mark 2:17).

Jesus, according to the Synoptic writers, offered no statement on the nature of sin. He was not interested in sin in the abstract but rather in specific sins—or, more accurately, he was interested primarily in sinners. It may be assumed that his idea of the nature of sin was entirely Hebraic. This represented a return to the deep inward conceptions of parts of the OT. In repudiating a narrow legalism, Jesus showed that his understanding of the will of God was far wider, and of the darkness of sin far deeper, than the scribes and Pharisees imagined. In the Sermon on the Mount he showed that all the hidden attitudes and emotions are involved in sin, just as much

as the outward actions by which legalism judged a man (Matt. 5:21-48). It is what lies in the heart that counts the most in God's sight. It is sin in the depths of man's being that defiles him the most (Mark 7:21-23). On the other hand, the true quality of the outward life is determined by and is a manifestation of the spiritual attitude within, whether for good or for ill (Matt. 7:15-27; cf. Jas. 2:14 ff).

James shares the view that the law has to be taken more seriously (i.e., more inwardly) than in rabbinic Judaism (2:8, 10). The apostle Paul, however, goes completely beyond the law as a standard of sin and righteousness. Such a passage as Rom. 5:13: "Sin is not counted where there is no law," shows that he could not entirely escape his rabbinic habits of thinking, but for him the law led to condemnation rather than to self-righteousness. Having been a Pharisee himself, Paul knew by personal experience the hollowness of a righteousness measured by external standards. He had been "as to righteousness under the law blameless," even surpassing others in zeal (Phil. 3:6; cf. Gal. 1:14), but now he understood that this had been his very sin (I Cor. 15:9; Gal. 1:23; Phil. 3:7; I Tim. 1:15). As a converted man Paul could henceforth make no compromise with legalism (Gal. 2:11 ff; Col. 2:16), even though for the scruples of weaker brethren (I Cor. 8) and out of prudence and patriotism he was willing to fulfil the outward conventions of Jewish ritual (Acts 16:3; 21:20 ff). Paul knew that the law was impotent as a means of leading one to reconciliation with God (Rom. 8:3).

The Apostle does not deny that if a person could really keep the law perfectly, in spirit as well as in letter, he would be considered righteous in God's sight. The sad truth is that no one can keep it perfectly. Thus the law points out a man's failures. It shows the depth of his sinfulness. This function of the law is clearly expressed in Rom. 3:20; 5:20; 7:7-24; Gal. 3:19-24, and particularly in these words: "So the law is holy, and the commandment is holy and just and good. Did that which is good, then, bring death to me? By no means! It was sin, working death in me through what is good, in order that sin might be shown to be sin, and through the commandment might become sinful beyond measure" (Rom. 7:12-13).

It is thus in connection with the law that Paul's most characteristic understanding of sin appears. He often speaks of particular sins, but generally he speaks of sin as an evil power working against the law and against the influence of God's Spirit to drag a person into transgression. It is in this aspect that sin appears in the notable section Rom. 5:12-8:10, where it is personified as a cruel enemy of the soul, allied with the flesh (see below) and finding opportunity through the law to bring the soul into bondage and condemnation.

Thus the doctrine of two opposing cosmic principles, which has been observed in the Qumran theology (see §2c above), reappears in Paul. With Paul there is a constant struggle of sin versus Christ, of the flesh versus the Spirit, of darkness versus light. A person is in bondage to the one or to the other (Rom. 6:16). He is either a slave of sin or a slave of Christ, a child of light or a child of darkness (cf. Rom. 13:12; Eph. 5:8; I Thess. 5:4 ff). He does the work of his master,

whichever this may be, and receives the appropriate recompense (Rom. 6:21-23). This whole world is presently in the hands of the powers of darkness, which Christ has come to destroy (Eph. 2:2; 3:10; 6:12; Col. 1:13; 2:15).

The Johannine literature manifests a similar indebtedness to the concept of hostile world-forces (I John 5:19). It speaks of a domain of sin, which is the realm of darkness (John 1:5; 3:19-21; I John 2:11). Those who oppose Christ are enslaved to this evil power (John 8:31-34; cf. Matt. 6:24).

The Jew looked upon Gentiles as slaves of darkness and evil. Paul agrees with this judgment; but in a notable passage (Rom. 1-3), where he explains how the Gentiles have perversely and rebelliously corrupted themselves in spite of the better knowledge that God had given them in his natural revelation, he includes the Jew under the same condemnation, because he sins against even greater light. Here the perversity of all kinds of sin is compellingly described. Although the Gentiles knew God, "they did not honor him as God or give thanks to him, but they became futile in their thinking and their senseless minds were darkened" (1:21). "For this reason God gave them up to dishonorable passions" (vs. 26). They have grown so wicked that they not only do evil things "but approve those who practice them" (vs. 32). Without mentioning him by name at first, Paul then addresses the Jew, who would instinctively resist being put in the same classification with the Gentiles: "Do you suppose, O man, that when you judge those who do such things and yet do them yourself, you will escape the judgment of God?" (2:3). "There will be tribulation and distress for every human being who does evil, the Jew first and also the Greek" (vs. 9). Paul shows that the sin of the Jew is even more heinous than that of the Gentiles, because while teaching others he does not teach himself (vss. 19-21), while preaching to others he forgets to follow his own admonition (vss. 21-22), while boasting in the law he dishonors God by breaking the law (vs. 23). This is the real essence of sin, both for the Gentile and for the Jew: to turn away from God's light in order to walk in the ways of evil.

Sin is therefore rooted in hatred toward God, as Paul (Rom. 8:7) and the Fourth Gospel (15:23-24) agree. The transfer of this hatred to Jesus is the Jews' greatest sin (cf. Matt. 21:33-39). The greatest sin of all is that of rejecting Jesus as the Son of God (John 15:22; cf. I John 2:22). The very serious sin of apostatizing from the gospel is prominently mentioned in the Letter to the Hebrews (2:3; 3:12; 6:4-6; 10:26; cf. I John 5:16). The unforgivable sin (Mark 3:28-30) is to oppose the work of the Holy Spirit with deliberate malice. Lists of various kinds of sins are to be found in Matt. 15:19; Mark 7:21-22; Luke 18:11; Rom. 1:28-31; 13:13; I Cor. 5:9-11; 6:9-10; II Cor. 12:20; Gal. 5:19-21; Eph. 4:25-31; 5:3-5; Col. 3:5, 8; I Tim. 1:9-10; 6:4-5; II Tim. 3:2-4; Tit. 3:3; I Pet. 4:3; Rev. 9:21; 21:8; 22:15.

c. Origin. To a great extent, the NT gives the OT answer to the question of sin's origin. James approaches the Jewish doctrine of an evil inclination (יצר) in his explanation of the psychological process of sinning: "Each person is tempted when he is lured and enticed by his own desire. Then desire when it

has conceived gives birth to sin; and sin when it is full-grown brings forth death" (1:14-15; cf. 4:1-2). Paul, however, while admitting that the "flesh" has passions and desires which entice to evil and hence must be resisted (Rom. 13:14; Gal. 5:16-21), makes the principle of sin which lies within the heart responsible for the unruliness of these desires. Indeed, so perverse is the heart of man that the very prohibitions of the law which are intended to keep the desires in check serve rather to arouse them (Rom. 7:7-8). As Jesus declared, sin lies deep in the corrupt heart of man (Mark 7:21-23). This is the OT view taken seriously once more (cf. Mark 7:6-7).

Very prominent in Paul's hamartiology is the concept of "the flesh," which is the ally and vehicle of sin. His employment of this term as a designation of the realm of evil in man, and as opposed to the realm of the Spirit, almost certainly has affinities with the ideology of the Qumran sect (see § 2c above). In his list of the "fruits" of the flesh, Paul makes it plain that these are not merely sins of the body but of the mind as well (cf. Gal. 5:19-21). For a full discussion of the meaning of this term, see FLESH; BODY. Suffice it here to say that for Paul it evidently meant the realm of creaturely (and hence primarily sensual) life, which, apart from the renewing and governing power of the divine Spirit, leads into all manner of sins.

In Rom. 7:5-8:13 the flesh is brought into close connection with the law and with sin. Here Paul is discussing the problem of how anything so good and holy as the law (7:12) can be the occasion for sin. As stated above, it is because of the sin lurking within, which is aroused by the knowledge of wrong provided by the law and works through the weakness of the flesh to the doing of evil: "For sin, finding opportunity in the commandment, deceived me and by it killed me" (7:11). The sinner rebels against the law because it is spiritual and he is fleshly (7:14), and these two are in deadly opposition to each other (8:7; cf. I Cor. 2:14). Even for a twice-born man like Paul, who had also received the Spirit, there is a constant struggle going on within (Rom. 7:15-24). In an autobiographical style reminiscent of some of the Psalms and of the Qumran Hymns—which is yet intended as typical of every man's experience—the apostle describes the agonies of this struggle. When he wants to do right, evil lies close at hand (vs. 21). His inmost self—changed in principle by the power of the Spirit—delights in God's law, but sin wages war with him and takes him captive (vss. 22-23). Because he is fleshly, he is weak. His will is unable to perform the good that his better nature chooses. "I can will what is right, but I cannot do it" (vs. 18). At last the apostle cries out in his anguish: "Wretched man that I am! Who will deliver me from this body of death?" (vs. 24). The answer is immediately given. It is the Lord Jesus Christ (vs. 25).

The NT inherits from intertestamental Judaism a belief in demonic temptation as a source of sin. This is closely associated with the notion of cosmic evil forces mentioned above. The devil is mentioned in John 8:44 as the originator of murder and deceit, and as the "father" of those who oppose the work of Christ (cf. I John 3:8). He is often mentioned (also as "the evil one," "the tempter," or "Satan") as the

archopponent of God and the seducer of men. He appears as Jesus' tempter in Matt. 4:1-11; Mark 1:12-13; Luke 4:1-13. Christians are warned against him (I Pet. 5:8), are told to resist him (Jas. 4:7), and are admonished to watch and pray that they enter not into temptation, for "the spirit indeed is willing, but the flesh is weak" (Mark 14:38; cf. Matt. 6:13).

When the question of the ultimate origin of sin is raised, it is evident that the NT possesses a definite historical theory. No trace of the fall of the Watchers is to be found in the NT, except perhaps in II Pet. 2:4; Jude 6. It is rather to Adam's sin in Eden that mankind's depravity is traced. II Cor. 11:3; I Tim. 2:14 contain definite recollections of the serpent's seduction of Eve; the latter passage gives Eve, instead of Adam, the specific blame for the fall (cf. Ecclus. 25:24). But in Rom. 5:12-19, Paul blames Adam, setting forth a doctrine of racial involvement in sin similar to that found in Jewish apocalyptic writings of the first century A.D. (Slavonic Enoch 41:1; II Bar. 48:42-43; II Esd. 4:30; etc.). See § 2b above.

Paul's teaching must, of course, be understood in the light of its context. In Rom. 5 he is writing about the representative work of Christ, of the fact that through his death sinners who believe on him are reconciled to God (vss. 6-11). Adam is brought in as a foil to Christ. He was the bringer of death, as Christ is the bringer of life: "If, because of one man's trespass, death reigned through that one man, much more will those who receive the abundance of grace and the free gift of righteousness reign in life through the one man Jesus Christ" (vs. 17). Paul really means to make a comparison here between Adam as the symbolic representative of all his sinful descendants and Christ as the representative of all who receive righteousness from him (vs. 14). In speaking of Adam, however, he cannot avoid making statements which strongly suggest that his first sin was the cause of all other sinning, and hence of death, which is the result of sin: "Sin came into the world through one man and death through sin, and so death spread to all men because all men sinned" (vs. 12). "As by one man's disobedience many were made sinners, so by one man's obedience many will be made righteous" (vs. 19). Whether this was through inheritance or through evil influence or through corporate guilt, Paul does not say, but that there is a necessary historical connection is unquestionably his meaning. There was something specifically ominous about Adam's transgression (vs. 14). The sins of his descendants were not like it, because it was the protosin which engulfed all the rest of mankind in death. Since Paul is more interested in making verbal parallels than in producing strict logic (cf. vs. 19), it is hardly fair to his intent to hold that vs. 18 indicates only the possibility of all men's being involved in Adam's sin, equivalent to the mere possibility of the salvation of all men in Christ. In I Cor. 15:45-47, where Adam and Christ are again contrasted, the important distinction is that between the natural and the spiritual life. See ADAM; FALL.

The primeval sin of unbelief and idolatry, which leads to all kinds of corruption and moral decay when God gives men up to the lusts of their hearts, spoken of in Rom. 1:18 ff (see above), does not necessarily refer to Adam's sin. This is not a historical ac-

count but a description of the progress of depravity in humanity generally.

d. Extent and prevalence. Although Jesus made no sweeping statement of the universality of sin, it is apparent that he looked upon all men as sinful. It stood to reason, of course, that the Gentiles were sinful—Jesus would be the last one to argue against this fact. The significant thing is that he considered the most notable keepers of the law as sinful. He saw the sin deep in their hearts (John 2:25; cf. 8:7) and, like John the Baptist before him (Luke 3:7), denounced them as an evil and corrupt generation (Matt. 12:34-35; 16:4; 23:33; Mark 8:38; 9:19; Luke 9:41; cf. Acts 2:40). Even the ordinary people addressed by him in the Sermon on the Mount were described as being evil (Matt. 7:11; Luke 11:13). Jesus said that the victims of Pilate's brutality and the victims of the fallen Siloam tower were no more notorious sinners than the rest, but that all needed to repent lest they likewise perish (Luke 13:1-5). Several passages in the NT make it plain that the only exception to universal guilt is Christ himself (II Cor. 5:21; Heb. 4:15; 7:26; I Pet. 1:19; 2:22; I John 3:5).

We have observed that Paul includes all men, Jews as well as Gentiles, under the condemnation of sin (Rom. 1-3). He repeatedly asserts this in no uncertain terms: "I have already charged that all men, both Jews and Greeks, are under the power of sin" (Rom. 3:9). "No human being will be justified in his sight by works of the law" (vs. 20). "All have sinned and fall short of the glory of God" (vs. 23). "Now it is evident that no man is justified before God by the law" (Gal. 3:11). "But the scripture consigned all things to sin" (vs. 22; cf. also Rom. 5:12-19). So widespread, indeed, is the corruption of sin that even the natural creation is affected (Rom. 8:19-22).

As all men are sinners, according to Paul's doctrine, so also the whole being of man is infected with its poison. It is in all the organs and members of the body (Rom. 6:19; 7:23), in the intellect (Rom. 1:21; Eph. 4:17-18), and even in the will, since this is held captive by the desires of the flesh (Rom. 7:15-20). One of the results of sin is physical death (Rom. 5:12 ff; 6:23); but to "die in one's sins" (John 8:24) or to be "dead through trespasses and sins" (Eph. 2:1, 5) means something far more dreadful than this. It means to be dead to God, beyond hope of spiritual recovery apart from his grace. Paul understood that this was his natural condition when he learned the real intent of the law: "I was once alive apart from the law, but when the commandment came, sin revived and I died . . . For sin, finding opportunity in the commandment, deceived me and by it killed me" (Rom. 7:9, 11).

Even though all this is true of the sinner, he is never excused of his responsibility, no more than he is considered beyond saving. Paul expressly combats moral determinism in Rom. 3:5-8. Ignorance is considered only a partial mitigation of responsibility (Luke 12:47), and it is excused only by divine grace (I Tim. 1:13-14). Sin is a debt that must be paid unless God mercifully forgives it (Matt. 6:12; cf. 18:27). The fact that the sinner is continually urged to repent is proof that he is responsible and that there is help for him if he sincerely seeks it.

The Hebraic notion that suffering is the result of

sin is put into Jesus' mouth in the Fourth Gospel (5:14); yet this same book combats an automatic connection between sin and suffering (9:3). The most characteristic NT view is that suffering is a means to spiritual improvement under God's fatherly hand (Heb. 12:10; cf. Rom. 5:3-5; 8:17-18).

One of the features of the last age, according to the Pastoral letters, II Peter, Jude, and Revelation, is that the corruption of mankind will increase enormously, until at last God intervenes with his judgment (cf. also Luke 17:26-30; 18:8).

e. Remedy. It appears that the NT takes at least as dark a view of sin's nature and effects as the OT does; indeed, it assumes all that the OT has said about sin, but makes it even more explicit and pointed. It is able to take sin as seriously as it does because it also knows the remedy for sin. The very purpose of its stern teaching is to convince men of their need for this remedy. God's effective answer to sin is Christ: "For God has done what the law, weakened by the flesh, could not do: sending his own Son in the likeness of sinful flesh and for sin, he condemned sin in the flesh, in order that the just requirement of the law might be fulfilled in us, who walk not according to the flesh but according to the Spirit" (Rom. 8:3-4). This is why Christ appeared: "He will save his people from their sins" (Matt. 1:21); he is "the Lamb of God, who takes away the sin of the world" (John 1:29); he "came not to call the righteous, but sinners" (Matt. 9:13); "the Son of man came to seek and to save the lost" (Luke 19:10).

This fully explains Jesus' attitude toward the notorious sinners in Jewish society, with whom he intimately conversed and even sat down at table (Matt. 9:10-11; 11:19; Luke 7:34; 15:1-2; 19:7). He really was a "friend of tax collectors and sinners." The proud and self-righteous Pharisees scorned him for this; it proved his own baseness in their eyes. But Jesus knew that the only way to help a needy sinner was to enter into close fellowship with him, confronting him with his own holy presence. This was not only psychologically sound but also theologically meaningful. It is in the presence of one who is holy, yet gracious, that a sinner will confess and abjure his sin (cf. Luke 5:8; 7:37 ff; 19:8).

Like John the Baptist (Matt. 3:2; Mark 1:4; Luke 3:3; cf. Luke 1:77), Jesus preached repentance and demonstrated God's forgiveness (Matt. 9:2; 18:3; etc.). Henceforth this was to be the urgent appeal of the church as it carried the gospel to many places (Luke 24:47; Acts 2:38; 5:31; 10:43). See REPENTANCE; FORGIVENESS.

In the letters Christ's work, and particularly the reconciliation which he obtained upon the cross, is set forth as the crowning victory over the power of sin (Rom. 3:25; 4:25; 5:21; 7:25; II Cor. 5:21; Gal. 1:4; Col. 1:14; Heb. 2:17; I Pet. 2:24; 3:18; I John 1:7; 2:2; 4:10; Rev. 1:5; etc.). As Paul makes so abundantly clear in Romans and Galatians, a sinner obtains JUSTIFICATION before God through faith in this Christ, apart from the works of the law.

This involves the REGENERATION and transformation of the sinner. The believing sinner is now a new man in Christ (Col. 3:10-11). He is nothing less than a new creature (II Cor. 5:17); it is no longer he who lives but Christ who lives in him (Gal. 2:20); because

of this the old, sinful nature is being put to death and a new, spiritual nature brought to life (Rom. 8:10; II Cor. 5:14-15; I Pet. 2:24; 3:18); it is his duty now to be completely transformed, rather than to continue in conformity to this natural world (Rom. 12:2). The believer has entered a new aeon: he has been transferred from the dominion of darkness into the kingdom of God's beloved Son (Col. 1:13).

All this puts the problem of sin into an entirely different light. The burning question is no longer how to obtain righteousness (this is God's free gift) or how to rid oneself of guilt (Christ has taken this upon himself), but how to live consistently in this new sphere of life. This is the problem of Christian SANCTIFICATION. It is absurd for a believer to go on in sin "that grace may abound" (Rom. 6:1). This grace comes only through being in Christ, and if one is in Christ, he has left the domain of sin and belongs entirely to Christ's domain (this is the theme of Rom. 6). The solemn word is addressed to him: "You are not your own; you were bought with a price. So glorify God in your body" (I Cor. 6:19-20).

But the purest saints are never entirely free from sin and from sins, as Paul himself experienced. I John puts this in its characteristic enigmatic way, stating that on the one hand a believer does not sin (3:6, 9; 5:18) and on the other hand he does sin (1:8, 10; 2:1; 5:16). The real difference lies in the principle of his life. A true Christian can never give himself over to sin; yet he will every day need to pray: "Forgive us our sins" (Luke 11:4). It is for this reason that he can never claim a righteousness obtained by his own efforts. His abiding consciousness is that of his debt to grace.

Bibliography. Of primary importance is the group of articles by G. Quell, G. Bertram, G. Stählin, and W. Grundmann on ἁμαρτία, etc., in G. Kittel, ed., *Theologisches Wörterbuch zum NT* (1933—); see English translation in J. R. Coates, ed., *Bible Key Words*, vol. III (1951), as also articles in this work on other words for "sin."

For both the OT and the NT a brief survey appears in M. Burrows, *An Outline of Biblical Theology* (1946), pp. 165-75 (sin in the OT). Important data appear in the Theologies of the OT by G. Oehler (1874), I, 229-45; A. B. Davidson (1904), pp. 203-35; O. Baab (1949), pp. 84-113; O. Procksch (1950), pp. 632-46; L. Köhler (English trans., 1953), pp. 166-81; W. Eichrodt (5th ed., 1957), I, 251-56; E. Jacob (English trans., 1958), pp. 281-97; G. von Rad (1958), I, 157-64, 262-67; T. C. Vriezen (1958), pp. 201-12; G. A. F. Knight, *A Christian Theology of the OT* (1959), pp. 124-27, 141-43. Also valuable are: J. Köberle, *Sünde und Gnade im religiösen Leben des Volkes Israel* (1905); W. Staerk, *Sünde und Gnade nach der Vorstellung des älteren Judentums* (1905); F. Bennewitz, *Die Sünde im alten Israel* (1907); J. Pedersen, *Israel*, I (1926), 411-37.

S. J. DE VRIES

SIN, WILDERNESS OF [סִינַי מְדִבְרָה]. A wilderness "between Elim and Sinai" (Exod. 16:1; 17:1; Num. 33:11-12). Exod. 17:1 locates Rephidim between the Wilderness of Sin and Sinai, while Num. 33:11-12 records two other stopping places between the Wilderness of Sin and Rephidim—namely, Dophkah and Alush.

The location of the Wilderness of Sin has not been established with certainty. It has been suggested that it may stand for the wilderness in the vicinity of Pelusium (which was called in Hebrew מִסִּינַי; Ezek. 30:15-16; LXX Σάιυ). However, the statement in Exod. 16:1 that it is "between Elim and Sinai," and in Num. 33:11-12 that Rephidim is between the Wilderness of Sin and Sinai, demands that its location be sought in the proximity of Sinai, perhaps at Dophkah, which is probably connected with the ancient Egyptian mining region at Serabit el-Khadim. In this case the Wilderness of Sin would be located at Debbet er-Ramleh, on the W fringe of the Sinai Plateau.

There is a very close similarity between Sin and Sinai, and it is quite possible that the name Sinai (סִינַי) is derived from "Sin" (סִין).

Because of the close similarity between the names Sin and Zin, these wildernesses are easily confused. The Wilderness of Zin is located S of Judah and NE of Sinai. The LXX and the Vulg. make no distinction in the names of the two wildernesses. Both of them spell "Zin" (צִין) as "Sin" (סִין).

SIN OFFERING. See SACRIFICE AND OFFERINGS § A4a.

SINAI, MOUNT *sī'nāi*, *sī'nī* [סִינַי, sometimes with הַה, hill, mountain, or מְדִבְרָה, wilderness; LXX Σ(ε)ϊνα]. The name of the sacred mountain in the Yahwist (J) and Priestly (P) strata of the Pentateuchal narrative, before which Israel encamped when God bound her to himself in COVENANT (Exod. 19-24). Moses as the mediator of the covenant went up into the mountain when he wished to speak with God (19:3, 10; 24:9), came down from it to communicate to the people what God had told him (19:14), and, after the rite which sealed the covenant was celebrated, ascended the mountain and remained there forty days and nights (24:18; cf. ch. 32). When Yahweh revealed his presence to the people from the mountain, he did so with "thunders and lightnings, and a thick cloud . . . , and a very loud trumpet blast. . . . And Mount Sinai was wrapped in smoke, because the LORD descended upon it in fire; and the smoke of it went up like the smoke of a kiln, and the whole mountain quaked greatly" (19:16, 18).

In the Elohist stratum and Deuteronomic literature another name for the sacred mountain appears: HOREB *hōr'ib* [הָרֵב, "desolate region, desert, wilderness"; LXX Χωρηβ]. No geographical distinction between this term and "Sinai" is discoverable in the record, and the two must be reckoned as synonyms (cf. Exod. 3:1; 18:5; Deut. 1; 4:10; 5:2; etc.) A tradition in Deut. 1:2 states that it is "eleven days' journey from Horeb by the way of Mount Seir to Kadesh-barnea" (see SEIR; KADESH). Elijah, discouraged and fearful, made a pilgrimage to Horeb for enlightenment (I Kings 19:4-8), and it is not impossible that the detailed list of stations between the mountain and Kadesh in Num. 33:16-36 (P) was so carefully preserved because pilgrimages like that of Elijah were a frequent occurrence during the early days of the nation's history.

1. Traditional location. Since the fourth century A.D. the sacred mountain of the Exodus traditionally has been located in the high mountains at the apex of the Sinai Peninsula. The legend of Catherine of Alexandria affirms that after martyrdom her body was carried by angels to the top of the mountain that now bears her name (at the beginning of the fourth century). By the fourth century small communities of monks had retired to the region; and a certain Ammonius, a monk of Canopus in Egypt, after visiting the holy places of Palestine, made a pilgrimage to Mount Sinai ca. A.D. 373, reaching it eighteen days after leaving Jerusalem. While he was there, a massacre of the monks took place at the hand of the Saracens. Another monk, named Nilus, who lived at Sinai from ca. 390 on, recounts a second massacre by the same people. In 536 Theonas at the Council of Constantinople is listed as a presbyter and legate of the holy Mount Sinai, the desert Raithou (on the Red Sea coast) and the holy church at Pharan (modern Feiran by Jebel Serbal). The origin of the present Monastery of Saint Catherine on the NW slope of Jebel Musa is traced back to A.D. 527, when Emperor Justinian established it on the site where Helena, mother of Constantine the Great, had erected a small church two centuries earlier.

As one approaches the traditional Mount Sinai from the Egyptian mining center of Serabit el-Khadim to the N (ΔΟΡΗΚΑΗ?), he enters a wide valley or

63. General view of Jebel Musa (Mount Sinai?)

small plain, called er-Raha, ca. two miles long and one third to two thirds of a mile wide. This would be the only natural place for the encampment of Israel before the sacred mount (Exod. 19:1-2; Num. 33:15). Before him rise the steep cliffs of Ras es-Safsaf, with a valley on each side. This is the NW summit of the range, of which Jebel Musa is the higher (ca. 7,500 feet) SE summit, while Jebel Katarin, SW of the latter, is higher still (ca. 8,500 feet). Between the latter mountains is the Monastery of Saint Catherine, from which it is a hard climb of over 1½ hours to the top of Jebel Musa. Whether Ras es-Safsaf or Jebel Musa is the sacred mount, or whether both are involved in the tradition, cannot now be decided, and is relatively unimportant. Christian tradition thinks of the former as Horeb and the latter as Sinai, though the latter is some three miles distant from the plain.

Figs. SIN 62-63.

2. Other theories. During the nineteenth century various attempts were made to locate Mount Sinai at Jebel Serbal, some distance to the W by the Wadi Feiran. Here was the early Christian center Pharan, and the seat of a bishopric. The *Peregrinatio Silviae*, edited from an imperfect MS in Rome in 1887, makes the presuppositions of this view impossible. Silvia's pilgrimage, which this work describes, is dated A.D. 385-88. In depicting the topographical details of Sinai, this pilgrim specifically says that the "mount of God" was thirty-five (Roman) miles from Pharan, the correct distance between the oasis in the Wadi Feiran and the traditional Sinai.

Other scholars during the nineteenth century and in the twentieth prefer to look for Mount Sinai in NW Arabia, near the biblical land of Midian. There are two reasons for this preference. One is the supposition that Exod. 19:16, 18, presupposes a volcanic disturbance, and the nearest likely volcanoes which in historical times have been active are in Arabia S of the Gulf of Aqabah. The other reason is that, after fleeing Egypt, Moses took up his abode with the Midianites and married into one of their families (Exod. 3:1; 18:1). The territory of MIDIAN is in NW Arabia. Against this view are these arguments: the family into which Moses married was a Midianite clan of wandering smiths, the KENITES

(Num. 10:29; Judg. 1:16; 4:11), a group whose presence near the Sinai mines would be scarcely surprising. As for the supposed volcanic features of Exod. 19:16, 18, it may be held that the language of theophany in the OT is so frequently drawn from weather phenomena, fire, and the shaking of the earth that it is difficult to historicize it in Exod. 19, so that one may conclude that a volcano is actually meant. J. Pedersen has aptly remarked: "A search might with equal justice be instituted for the mountains that melted like wax when Yahweh passed over the hills of the earth."

A third location for Mount Sinai, and one for which considerable support can be deduced, is with one of several mountains in the neighborhood of Kadesh-barnea (see KADESH). In two old poems (Deut. 33:2; Judg. 5:4-5), and again in Hab. 3:3, Sinai as the scene of God's revelation of himself and of his leadership in the wilderness is mentioned in association with SEIR, or Edom; PARAN; and even (Habakkuk) with TEMAN, a town in Edom. At the time of the Israelite wandering the term "Seir" was used in the biblical traditions for some part of the wilderness bordering Kadesh, and the king of Edom appears to have claimed territory on both sides of the Arabah (cf. Num. 20:16). To this evidence there may be added (a) the references to the three-day journey into the wilderness which Moses requests Pharaoh to permit Israel to make—a distance more in keeping with the area of Kadesh (though it is farther than three days' travel on foot) than with the traditional location (Exod. 3:18; 5:3; 8:27); and (b) the association of Rephidim with MERIBAH (Exod. 17:1-7), a site otherwise known to exist in the Kadesh area, where water from the rock is more easily obtained than at the traditional Sinai (cf. Num. 20:2-13). Against this view that Mount Sinai was in the Kadesh-Seir area, however, are the following observations: (a) The poetic allusions, above mentioned, to Yahweh's wondrous leading of Israel in the wilderness are more in the nature of summary statements than of precise geographical delineation, and one would hesitate to draw inferences from them as to the location of Sinai. (b) The Mosaic request for Israel to be permitted to go into the wilderness a three-day journey can actually be fitted into none of the proposed locations for Sinai. (c) There is, indeed, a discrepancy in the narrative as to the position of the water-from-the-rock tradition, since it is recounted twice (Exod. 17; Num. 20); in view of this fact it is doubtful whether too much reliance can be placed on the geographical implication of the location from Exod. 17, where the E story of the event appears to be coupled with Rephidim only by an introductory fragment of the itinerary being fitted into JE by the Priestly editor (vs. 1a). (d) None of the stations of the Israelite wandering in the wilderness can be meaningfully understood if their journey went directly either to Kadesh or to Midian. (e) A location of Sinai in either of the latter areas would leave the ancient tradition about Jebel Musa unexplained, for it appears at a time when holy places would be expected to be made easily accessible to pilgrims unless there were strong reasons to prevent this being done. (f) Finally, the tradition in Deut. 1:2 of an eleven-day journey from Kadesh to Horeb

surely is best understood in relation to the S part of the Sinai Peninsula.

SINAITICUS *sin'it'ə kəs*. A fourth-century Greek codex MS of the Bible (symbol \aleph) discovered by Konstantin von Tischendorf in the Monastery of St. Catherine at the foot of Mount Sinai in 1859. It contains the entire NT—being the only early Greek MS so complete—but practically all the OT before Ezra 9:9, as well as certain later portions, has been lost. In addition it includes the Epistle of Barnabas and part of the Shepherd of Hermas. It is one of the primary witnesses to the text of both LXX and NT (see TEXT, NT; VERSIONS, ANCIENT).

The codex consists of 346½ sheets of high-quality vellum, probably made from antelope skins. Each page, 15 by 13½ inches, contains four columns with twelve to fourteen uncial letters to the line, except in the poetical books, which have two columns. Marks in the margins of the gospels showing divisions worked out by Eusebius (A.D. 260?-340?) set the earlier limit of its age. The script, by three hands of varying ability, was dated by Tischendorf about the middle of the fourth century; and comparison with other MSS of this period has confirmed his estimate. Many corrections were made soon after the writing, and a large additional number appear to come from the seventh century.

Tischendorf's story of the discovery of this codex has appealed to the general public and has often been retold to dramatize the need for revised versions. "In visiting the library of the monastery in the month of May, 1844," he relates, "I perceived in the middle of the great hall a large and wide basket full of old parchments; and the librarian, who was a man of information, told me that two heaps of paper like these, mouldered by time, had been already committed to the flames." Among the parchments Tischendorf recognized pages from an ancient Greek Bible. His enthusiasm betrayed to the monks their value; so he was allowed to take with him only forty-three sheets. These are now in the Court Library at Leipzig.

In 1853 Tischendorf was able to arrange a return visit, on which he hoped for at least permission to copy the remaining sheets. But the only trace of the codex he could find was a scrap, containing eleven lines of Genesis, which had been used for scratch paper many years before.

On a third visit in 1859, as he describes it, "after having devoted a few days in turning over the manuscripts of the convent, . . . I told my Bedouins, on the 4th of February, to hold themselves in readiness to set out with their dromedaries for Cairo on the 7th. . . . On the afternoon of this day, I was taking a walk with the steward of the convent in the neighborhood,

and as we returned towards sunset, he begged me to take some refreshment with him in his cell. Scarcely had he entered the room when, resuming our former subject of conversation, he said, 'And I too have read a Septuagint.' . . . So saying, he took down from the corner of the room a bulky kind of volume wrapped in red cloth, and laid it before me. I unrolled the cover, and discovered, to my great surprise, not only those very fragments which, fifteen years before, I had taken out of the basket, but also other parts. . . . Full of joy, which this time I had the self-command to conceal from the steward and the rest of the community, I asked, as if in a careless way, for permission to take the manuscript into my sleeping-chamber, to look over it more at leisure. There by myself I could give way to the transport of joy which I felt. I knew that I held in my hand the most precious Biblical treasure in existence."

After delays of several months Tischendorf was allowed to take the MS to Russia to have it copied,

T. S. KEPLER

SINCERITY [עִמּוּת; εἰλικρίνεια; Vulg. *sinceritas* (Josh. 24:14; I Cor. 5:8; II Cor. 1:12; 2:17)]. A quality of personal character or action which is free from falsification, deceit, or wickedness, and is characterized by purity, genuineness, and the like. The various qualities associated with sincerity in the Bible are purity, genuineness, uprightness, truthfulness, and godliness. See SIMPLICITY.

The etymology of εἰλικρίνεια is uncertain. The idea behind the word, however, may have been that of being found true and pure when openly examined. This is expressed in Paul's claim for sincerity "in the sight of God" (II Cor. 2:17). The adjective εἰλικρινής, "sincere," is employed to express similar ideas in Wisd. Sol. 7:25; Phil. 1:10; II Pet. 3:1. Sincerity is also closely associated with the ideas expressed by γνήσιος, "genuine" (II Cor. 8:8); γνησίως, "genuinely" (Phil. 2:20); ἀγνῶς, "sincerely" (Phil. 1:17 [1:16 KJV]); and εὐθύτης, "straightness" (Josh. 24:14 [עִמּוּת; cf. Judg. 9:16, 19, KJV]). Sincerity is associated with TRUTH in the sense of moral uprightness in I Cor. 5:8, where it is contrasted with wickedness. In Tob. 3:5 the Vulg. gives *sinceriter* for ἐν ἀληθείᾳ, "in truth" (BA), or ἀληθινῶς, "truly" (S).

A distinctive meaning imparted to the idea of sincerity in the Bible is that of godliness or holiness. In II Cor. 1:12 sincerity is mentioned in connection with holiness as being "godly sincerity." In this light, the "sincere mind" of II Pet. 3:1 may be understood in the sense of a devout and godly mind aroused to true piety. Such sincerity is especially important for those who preach the gospel (II Cor. 1:12; 2:17). By contrast, those who proclaim Christ with impure motives do not preach sincerely (οὐχ ἀγνῶς; Phil. 1:17 [1:16 KJV]).

R. L. SCHEEF, JR.

SINEW [דָּג; Akkad. *gidu*]. In Job 10:11; Ezek. 37:6, 8, the reference is clearly to the tendons and other connective tissues forming (together with the bones) the framework which holds together the flesh with its covering of skin. Thus Gen. 32:32: "the sinew of the hip which is upon the hollow of the thigh" retains the anatomical vagueness of the text itself. The Talmudic identification of this "sinew" with the sciatic nerve rests upon ancient cultic practice, possibly influenced by the LXX translation νεῦρον (Vulg. *nervus*), which appears in the technical sense "nerve" (from "sinew," "cord," "fiber") after 300 B.C.

In Isa. 48:4 the neck as an "iron sinew" recalls the term "stiff-necked," figurative of obstinate self-will (e.g., Exod. 32:9). The "sinew of his thigh" (Job 40:17) seems to be a euphemism for the *membrum virile*.

SINGERS, SINGING, SONG. See MUSIC.

SINIM, LAND OF סִינִים. KJV translation of סִינִים (RSV SYENE).

***SINITES** סִינִי' [סִינִי]. A group mentioned as Canaanites in Gen. 10:17; I Chr. 1:15. Strabo knew a town called Sinna, on the slopes of Lebanon, and Hieronymus was of the opinion that the *civitas Sini* could be located in the foothills of Lebanon, possibly near Nahr el-'Arqa. Others have suggested the N Phoenician Sianu, mentioned in Assyrian inscriptions, but nothing can be said for certain.

A. S. KAPELRUD

SINNER. This word, usually a translation of ἄσπι or ἀμαρτωλός, has four principal meanings in the Bible:

a) In the OT it usually means "godless one," or one who lives outside the law (Num. 16:38; Prov. 1:10; and especially Pss. 1; 25-26; 51; 104). In the NT this is often expressed by "workers of iniquity" (ἀνομία)—i.e., workers of lawlessness. It includes harlots, murderers, and the like, but also tax collectors (see TAX COLLECTOR), who, because of their servitude to pagan rulers, placed themselves outside the law (Luke 7:37; Rom. 3:7).

b) A heathen or Gentile. This is a natural extension of the first meaning (Mark 14:41; Luke 6:32 ff; 24:7; Gal. 2:15).

c) One from the "people of the land," or 'AM HA'AREZ, who violated the traditions of the Pharisees or even, because of ignorance, provisions of the Mosaic code itself. Most of the common people were in this class. Jesus was particularly concerned for them, saying they were "like sheep without a shepherd" (Matt. 11:19; Mark 2:15 ff; 6:34; Luke 15).

d) One who is separated from God, whether aware of it or not. Paul, who seldom uses the word at all, gives it this meaning in a majority of cases (Rom. 5:8, 19; 7:13; Gal. 2:17).

See also LAW IN THE OT; LAW IN FIRST-CENTURY JUDAISM; LAW IN THE NT; SIN. PIERSON PARKER

SION. KJV form of SIRION in Deut. 4:48; KJV form of ZION in Ps. 65:1 and the NT.

SIPHMOTH סִיפְמוֹת [סִיפְמוֹת]. A village in S Judah to which David sent some of the booty taken from the Amalekites for kindnesses shown him and his men (I Sam. 30:28; cf. I Chr. 27:27). The site is unknown.

SIPPAI. Alternate form of SAPH.

SIR. The translation of אֲדוֹנָי (*Adonai*) in Judg. 6:13 (usually translated "Lord"); and in the NT the occasional translation of κύριος (also usually translated "Lord"). In Acts 27:10, and in several other Acts passages in the KJV, the plural "Sirs" translates ἄνδρες, meaning simply "men."

The word κύριος was used to designate not only God (in the LXX and the NT) and Christ (in the

NT), but also a master (in contrast to a slave), or an owner (e.g., of a vineyard). It was also used as a term of polite address. In the gospels it is occasionally difficult to know whether the word means "Lord" or "Sir."

For the meaning of "Lord" as applied to God or as a title of Jesus, see GOD, OT VIEW OF; LORD (CHRIST).
B. H. THROCKMORTON, JR.

SIRACH, SON OF *sī'rək* [ὁὶος Σειράχ or Σιράχ, from בן סירא]. Ben Sirach, the author of ECCLESIASTICUS, which is often called the Wisdom of Jesus the Son of Sirach, or simply Sirach. The final *χ* in Greek may be an attempt to represent a guttural sound in the pronunciation of *ס* (cf. Ἀκελδαμάχ in Acts 1:19 for Aramaic דמא חקל), or it may be simply a sign that the word cannot be declined (cf. Ἰωσήφ in Luke 3:26 for יוסף).
T. A. BURKILL

SIRAH, CISTERN OF *sī'ra* [בּוֹר הַסִּרָּה]; KJV SIRAH, WELL OF. A location from which Joab treacherously recalled Abner to murder him (II Sam. 3:26). Josephus (Antiq. VII.i.5) says that Besera (*Bôr-sîrah*, "well of Sirah") was ca. 20 stades (2½ miles) from Hebron. The cistern of Sirah is probably to be identified with 'Ain Sarah, 1½ miles NW of Hebron.
V. R. GOLD

SIRION *sī'rī'on* [שִׁרְיֹון; Akkad. *perhaps Sirara*]; KJV SION *sī'ōn* in Deut. 4:48; THE FIELD in Jer. 18:14. According to Deut. 3:9, the Sidonian name of Mount Hermon. In Ps. 29:6, Sirion is mentioned together with Lebanon:

He makes Lebanon to skip like a calf,
and Sirion like a young wild ox.

Since in this passage Sirion is mentioned together with Lebanon, the suggestion may not be implausible that Sirion is a designation of the Anti-lebanon Range (*pars pro toto*?).

See SISMAI. Cf. now also the Ras Shamra Texts.
A. HALDAR

SISAMAI. KJV form of SISMAI.

SISERA *sīs'ə rə* [סִיסֵּרָא]. Leader of a confederation of Canaanite kings whose army was routed by the flooded River Kishon and the troops of Barak and Deborah, and who was himself slain in the tent of Jael (Judg. 4:1-22; 5:19-31).

The name Sisera is non-Semitic. Although formerly explained as Hittite, Assyrian, Egyptian, or N Arabian, it is now thought to have been Illyrian in origin, as closely related to Illyrian personal and place names with the element *ero*.

Sisera's city, Harosheth, is identified as Haroshetha-goiim, "Harosheth of the (foreign) nations" (Judg. 4:2, 13, 16), apparently to distinguish it from an Israelite community of the same name (cf. "Galilee of the nations" in Isa. 9:1—H 8:23). Its location, uncertain but possibly the site of the excavation at Tell 'Amr some twelve miles NW of Megiddo, was evidently at or near the NW end of the Plain of Esdraelon.

Both Sisera's name and his city seem to corroborate the suggestion that he was leader of W sea peo-

ples, originally from Europe, like the Philistines but to be distinguished from them, who were penetrating eastward just N of the Carmel headland into the desirable plain at the same time that the Israelites were coming down from their mountain highlands to claim the same territory. This may then be the story of the crucial battle when invading sea peoples in league with native Canaanite defenders took their last stand against the Israelites and their God and were ingloriously defeated.

The tradition that Sisera was of foreign origin may lie behind the mention of the "sons of Sisera" in the postexilic list of temple slaves (Ezra 2:53; Neh. 7:55; I Esd. 5:32), for most of these "NETHINIM" were foreign captives of war.

The biblical story of Sisera appears in two forms: the poetic Song of Deborah, probably composed soon after the events described and therefore remarkably authentic (Judg. 5); and a late prose narrative (ch. 4) which seems to combine this account of Sisera with a different story of Jabin, who is given the unhistorical title of "king of Canaan." Therefore, in the latter, Sisera is relegated to the subordinate position of general in Jabin's army. These two men are similarly associated in the late source of Samuel, where their oppression is an example of God's judgment on Israel's apostasy (I Sam. 12:9), and in a psalmist's imprecatory prayer that God will do to his enemies as he did "to Sisera and Jabin at the river Kishon" (Ps. 83:9—H 83:10).

In the Song of Deborah, however, Jabin is not mentioned, while Sisera, evidently a powerful prince, is leader of a confederation of Canaanite kings, and his queen mother and her princesses expect rich booty as their accustomed spoils of war. Sisera's royal city, Harosheth, lay at a strategic spot in the conflict, whereas Jabin's center at Hazor was miles away NE of the scene of the struggle.

The circumstances of the battle are vividly set forth in both accounts. That the scene was "by the waters of Megiddo" (Judg. 5:19), and yet there is no evidence that this stronghold was involved, suggests the date of ca. 1125-1100 B.C., when the site of Megiddo had not yet been reoccupied after the city's destruction perhaps half a century before. According to the prose account, some ten thousand foot soldiers from Zebulun and from Barak's tribe of Naphtali were involved; but according to the more authentic Song, six tribes bordering on the plain put perhaps forty thousand men into the fray. It took a huge number of Israelites on foot to meet Sisera's 900 iron chariots (probably an exaggerated number, but to be compared with Egyptian pharaoh Thut-mose III's claim of capturing 924 chariots in his fifteenth-century-B.C. Megiddo battle).

The course of the battle is not clear, but its outcome is indisputable. Perhaps too great distance is involved for Barak's troops to have charged down from Mount Tabor to meet Sisera's chariots from Harosheth. Deborah's Song speaks only of Taanach, the waters of Megiddo, and the Kishon. There may be poetic license in the details—because of a sudden downpour in late winter the brook Kishon became a raging torrent drowning hundreds of charioteers seeking to squeeze through the narrow valley at the

W end of the plain—although experience in World War I showed that fifteen minutes' heavy rain on clay soil could convert charging cavalry into plunging horses' hoofs. In any case Sisera ran for his life.

Because of some differences between the poetic and the prose accounts of Sisera's fate, especially the manner of his death, some have suggested that the prose narrative confused the authentic Song portrayal, in which Jael struck down Sisera, with a story in which another heroic woman, known only as the "wife of Heber the Kenite," betrayed Jabin into the hands of Barak. In the prose narrative fleeing Sisera sought and received asylum at the tent of one whom he expected to be friendly, and so fell into exhausted sleep, but then was treacherously murdered and his corpse betrayed into the hands of the pursuing and coincidentally arriving Barak. On the other hand, as some interpret, in the Song fugitive Sisera paused at a tent only for the hospitality of a drink of water. Having brought him the typical bedouin drink of curdled sour milk, it was when he unguardedly buried his head in the large bowl that the woman, with skill mastered from driving tent pegs, struck the shattering blow with the mallet. Thus the brave woman, violating the law of hospitality—unless, as some would explain, Sisera had guiltily violated the women's quarters by entering—and not waiting for any soporific effect of the drink, showed her loyalty to Israel by striking her guest down. Then, straddled over him,

she struck Sisera a blow,
she crushed his head,
she shattered and pierced his temple.

This gory picture is rivaled by the irony of the concluding scene, sometimes compared with Hector's mother in Homer's *Iliad*, in which Sisera's queen mother and her attendant princesses console themselves that the delay is only because their victorious men are gathering spoils, including a "wench [lit., 'womb'] or two" for each warrior.

Religiously, Sisera's defeat was the tale of holy war, in which Canaanite and foreign paganism were defeated, not simply by the human troops of Barak and Deborah, but by the judgment of the Lord, for "from their courses (the stars) fought against Sisera." Historically, Sisera's downfall, shortly after the days of Shamgar, was the end of the last full-scale native Canaanite uprising against the Israelites and their winning of the important Plain of Esdraelon.

T. M. MAUCH

SISTRUM. See MUSICAL INSTRUMENTS § B1c.

SITHRI sīth'rī [סיתרי, perhaps concealed (by the deity)] (Exod. 6:22); KJV ZITHRI zith'—. Son of Uzziel, and cousin of Moses, listed in the genealogy of Levi.

Bibliography. M. Noth, *Die israelitischen Personennamen* (1928), p. 158.

SITNAH sīt'nā [שטנה, hostility]. A well dug by the servants of Isaac near Gerar (Gen. 26:21). It was given this name because the herdsmen of Abimelech, king of Gerar, disputed with them about it. It must have been in the vicinity of REHOBOTH, but the exact site is unknown.

S. COHEN

SIVAN sī'vān [סיון]. The third month of the Hebrew CALENDAR, Akkadian *simānu* (May-June).

SIX HUNDRED AND SIXTY-SIX [ἑξάκισιοι ἑξήκοντα ἕξ, or χξς'—i.e., 666; also ἑξάκισιοι δέκα ἕξ, or χις'—i.e., 616] (Rev. 13:18). The "number of the beast." The larger figure (666) is found in MSS \aleph (feminine), A (masculine), P al (neuter), and as the number χξς' in P⁴⁷ 046, 1 pm; the smaller figure (616) appears in MSS C and 11 (feminine), in authorities known to Irenaeus, and as the number χις' in MS 5. (Unfortunately, the minuscule MSS 5 and 11 have been lost.)

The numerous attempts to solve the enigma presented by John's use of this number may be summarized as follows:

a) Theories assuming that the "number of the beast" represents a name to be discovered by the reader's ingenuity (cf. "let him who has understanding reckon" it; vs. 18). Since the day of Irenaeus students have employed the known numerical values of the letters of both Hebrew and Greek alphabets in the endeavor to discover a name whose total numerical value will equal the indicated sum. Such students assume that John has made use of the system known to the rabbis as *Gematria* (Hebrew for geometry), a system adopted by both Jews and Greeks when it appeared desirable that only the initiated should learn the name in question. Such attempts include the following proposals: (i) assuming "666" to be original, the "name" suggested is either "Latin" (λατίνος; λ=30, α=1, τ=300, ε=5, ι=10, ν=50, ο=70, ς=200), and so suggesting a reference to the Roman Empire and its emperor; or Neron Caesar (נרון קסר) נ=50, ר=200, ו=6, ן=50, ק=100, ם=60, ך=200); and (ii) assuming the orig-

inality of "616," the "name" may be either "Caesar is God" (καῖσαρ θεός: κ=20, α=1, ι=10, σ=200, α=1, ρ=100, θ=9, ε=5, ο=70, ζ=200) or Gaius Caesar (γ=3, α=1, ι=10, ο=70, ζ=200, κ=20, α=1, ι=10, σ=200, α=1, ρ=100). Those who employ the Hebrew characters as in Neron Caesar (above) suggest that "616" may be due to a scribe's dropping the final "n" in Neron, as in the Latin. (iii) Some have interpreted John's statement that "the number of the beast . . . is a human number" as a case of isopsephism (i.e., two words whose numerical values are the same, in this case that of a beast and that of a man).

b) Theories asserting the general or indeterminate nature of the number's symbolism; thus, (i) some conclude that "a human number" means one humanly intelligible; (ii) others suggest that "666," by the system known as triangulation (*Dreieckszahl*), equals the sum of all the numbers from 1 to 36, the latter figure in turn being the sum of all those from 1 to 8 (the number of the Antichrist; cf. 17:11); in consequence, both 8 and 666 represent anyone opposed to and less perfect than Jesus, whose name in Greek adds up to "888" (ι=10, η=8, σ=200, ο=70, υ=400, ζ=200).

Of these theories, that suggesting Neron Caesar as possessing the "number of the beast" and the one involving triangulation and the Antichrist appear to have most to commend them.

SKIFF [הַאֲנִיָּה in the phrase אֲנִיָּוֹת אֲנִיָּה, skiffs (boats) of reed (KJV swift ships); cf. Akkad. *apu*] (Job 9:26); KJV SHIP. A kind of boat. Job likened the fleeting days of his life to swiftly passing skiffs of reed. See SHIPS AND SAILING.

SKIN [עוֹר; גֹּלֶד (Job 16:15), cf. Arab. *jild*, skin; δέρμα (Heb. 11:37), δέρις (Mark 1:6), from δέρω, skin, flay]. The outer covering of the body of a man or an animal.

1. **Human.** The skin, bones, sinews, and flesh make up the human body (Job 10:11; 19:20; Lam. 3:4; Ezek. 37:4-6), though skin sometimes designates the whole body (Exod. 22:27—H 22:26; cf. Job 19:26). The color of the Ethiopian's skin gives us Jeremiah's well-known question (Jer. 13:23). The variation in the hairiness of the skin is recognized in the story of Jacob and Esau (Gen. 27). Darkened, hardened, or feverish skin can be the result of hunger or disease (Job 7:5; 30:30; Lam. 4:8; 5:10). In Lev. 13:1-46 the treatment of certain abnormal skin conditions is indicated. In Mic. 3:2-3 the flaying of the skin of the people is a metaphor for their maltreatment by their rulers.

2. **Animal.** Apart from the allusion to Leviathan's skin in Job 41:7—H 40:31, all the biblical references to animal skin are to the hides of dead animals. As the principal domesticated animals of Palestine were

oxen, asses, sheep, and goats, it is probable that they furnished the hides in commonest use. There are allusions to the skins of kids (Gen. 27:16), of rams (Exod. 25:5), of goats (Exod. 25:5, but the meaning of תַּחֲשִׁים is uncertain), and of sheep and goats (Heb. 11:37). The Mishna refers also to the skins of the pig, the camel, the gecko, the chameleon, the lizard, the land crocodile (Hullin 9.2). All such hides were doubtless tanned in some way before being used. See LEATHER; TANNING; GOATSKIN; WATERSKINS; WINE § 2c.

The hides of some sin offerings (those involving the priesthood or the whole community) had, like most of the carcass, to be destroyed (Exod. 29:14; Lev. 4:11, 21; 8:17; 9:11; 16:27; cf. Num. 19:5); the skin of other sin offerings, as well as that of all burnt offerings, became the property of the priests (Lev. 5:13; 7:8), and presumably had some economic value. The flaying of these animals is referred to in Lev. 1:6; II Chr. 29:34.

3. **Proverbial expressions.** a. "Skin for skin!" (Job 2:4). The original significance of this phrase is unknown. The context suggests that the meaning in Job is, "Skin on behalf of skin; an expendable asset will be surrendered for the sake of a less expendable one."

b. "By the skin of my teeth" (Job 19:20). Textual corruption has been suspected, and various emendations have been proposed, though none has gained general acceptance. If the text is sound, we may have a proverb, the meaning of which in Job would appear to be either "with the loss of almost everything" or "by the smallest possible margin."

W. S. McCULLOUGH

SKIRT. 1. כַּנֵּף ("wing"). The loose end, one of the four corners of a garment, usually the כַּנְעִיל. The meaning is clear from I Sam. 15:27; 24:4-5—H 24:5-6, where David is said to have cut off the skirt of Saul's robe. Covering with the skirt of one's garment symbolized the right of marriage (Ruth 3:9). The term is also used symbolically of the corners or ends of the earth (Job 38:13).

2. שוֹל. The part of a garment which hangs down loosely, perhaps the lowest part. In some passages it is apparently the loose outer garment of women, and it is used figuratively in connection with Jerusalem, whose skirts were lifted up in shame because of her illicit relationships (Jer. 13:22, 26; Lam. 1:9; Nah. 3:5). The term is also used to refer to the edge (KJV "hem") of the ephod, which was to be adorned with golden bells and pomegranates alternately (Exod. 28:33-34; 39:24-26), and to the "train" of the Lord in Isaiah's vision (6:1).

3. KJV translation of פֶּה (lit., "mouth") in the expression "mouth [RSV 'collar'] of his robes" (Ps. 133:2). See COLLAR 1. J. M. MYERS

SKULL, PLACE OF A. See GOLGOTHA; HOLY SEPULCHRE.

SKY. See HEAVEN.

SLANDER. In the OT several Hebrew words are used for evil talk intended to damage or destroy a neighbor (cf. II Sam. 16:1-4; 19:24-30; I Kings 21:

8-14 for classical examples, though the word itself does not appear). The close relationship of slander to the Ninth Commandment is seen in Lev. 19:16 (see TEN COMMANDMENTS). Such "character assassination" typically marks the man who has rejected God's law and stands under judgment (Pss. 50:20; 101:5; Jer. 6:28; 9:4; Ezek. 22:9). The tongue is regarded as an especially vicious instrument of evil (Ps. 57:4; Prov. 17:4-11 [cf. Jas. 3:1-12]; Jer. 9:8).

In the NT, καταλέω, "to speak evilly" of one's neighbor (I Pet. 2:1; καταλαλιά in II Cor. 12:20), includes not only untruthfulness, but perhaps primarily lovelessness. It is an identifying characteristic of the heathen world (cf. I Pet. 2:12; 3:16), intolerable within the household of faith (Jas. 4:11-12).

The RSV translates διάβολος (see SATAN) in its original meaning, "slanderer," in I Tim. 3:11; II Tim. 3:3; Tit. 2:3. Similarly, βλασφημία (see BLASPHEMY) is translated "slander" when verbal abuse of men is indicated (cf. the "catalogues of sin" in Matt. 15:19; Mark 7:21-22; Eph. 4:31; Col. 3:8-9; I Tim. 6:4-5).

***SLAVERY IN THE OT.** The ownership of man by man. OT Palestine, embracing a period of more than a thousand years, was economically, and to a large degree also socially, an integral part of the ancient Near Eastern world. Slavery was an economic institution, and in order to evaluate biblical slavery in its proper perspective, we must take into account the slave institutions as they existed in the other

parts of the Fertile Crescent. Frequent and extensive references to the slave systems of the neighboring peoples in a discussion of biblical slavery is also of paramount value for another reason, the availability of source material.

1. Literary sources. The law codes and the vast number of private economic documents relating to slavery from Babylonia, Assyria, and Syria enrich and supplement the legal and extralegal information at our disposal in the OT. It is only by utilizing the inestimable treasures of the extrabiblical evidence that the similarities, as well as the differences, between the biblical attitude toward slavery and that of the neighboring peoples become apparent and meaningful. The most important sources for the study of slavery in the ancient Near East (excluding Pharaonic Egypt, where the available material is extremely scant) are: (a) the Ur-Namu Code (ca. 2050 B.C.), the Laws of Eshnunna (early twentieth century B.C.), the Lipit-Ishtar Law Code (middle of the nineteenth century B.C.), the Code of Hammurabi (ca. 1700 B.C.), and the Middle Assyrian Laws (fourteenth-twelfth centuries B.C.); (b) private and court documents from Babylonia and Assyria embracing the period from the end of the third millennium to the beginning of the Christian era; (c) the Hittite Laws (middle of the fifteenth century B.C.); and (d) the Akkadian documents from Alalakh and Ugarit (N Syria), dating from the eighteenth to the thirteenth century B.C. The biblical slave legislations are recorded in Exod. 21; Lev. 25; Deut. 15. In addition to these, there are references to slavery in many other books of the OT. The only extrabiblical data relating to Jewish slavery in the period under discussion are found in the Aramaic Papyri from the Jewish colony at Elephantine (Egypt), dated in the fifth century B.C.

2. Terminology. The earliest Sumerian terms for male and female slaves are the composite ideograms *nitá + kur* ("male of a foreign country") and *munus + kur* ("female of a foreign country"), indicating that the first human beings to be enslaved in ancient Babylonia were captives of war. In later Sumerian times the slave is referred to simply as *sag* ("head"), thus *sag nitá* ("male head") and *sag geme* ("female head"). In Akkadian the generic term for "slave," often preceded by the determinative *rēšu* ("head"), is *wardum* (feminine *amtum*). The alphabetic texts from Ugarit employ 'bd for "male slave," and *amt* for "female slave." The OT terminology consists of three main terms: עֶבֶד for a male slave, אִמָּה and שִׁפְחוֹת for a female slave; infrequently, the descriptive designation מִקְנֵה כֶּסֶף ("[persons] bought with money"), נֶעַר ("young man"), and נֶפֶשׁ ("person") are also used to indicate slaves. (It should be pointed out that the Akkadian, Ugaritic, and Hebrew terms for "slave" are often employed to designate the inferior status of a freeborn person in relation to the king, or to a deity.) Unlike the Mesopotamian and Ugaritic usage of the term "slave" to denote any unfree person, whether native or foreign, the biblical legislations employ in some cases the adjective "Hebrew"—i.e., "a Hebrew slave" (עֶבֶד עִבְרִי), or

"your brother, a Hebrew man or a Hebrew woman" (אחיד העברי או העבריה) and in other cases the unspecified terms "male slave" and "female slave." This distinction is interpreted in the Talmud to mean that in the former cases the laws apply to Hebrew slaves and in the latter cases to non-Hebrew slaves. This interpretation often leads to irreconcilable discrepancies, which will be pointed out in the discussion of the individual laws.

3. Sources of slavery. a. Captives of war. The Sumerian term for "slave" (see § 2 above) clearly indicates that the earliest source for slave supply was war. That captives of war, and in some cases also large segments of the defeated civil population, were reduced to slavery is amply attested in the war annals of the ancient Near East. The same method of enslaving war prisoners was used by the small city-states in Syria and Palestine during the middle of the second millennium B.C., and by the Israelites some centuries later (cf. Num. 31:7 ff; Deut. 20:10 ff; I Kings 20:39; II Chr. 28:8 ff; etc.). The Code of Hammurabi and biblical law take this universal practice of the enslavement of war captives for granted and seek to ameliorate the lot of some of those unfortunates and their immediate families. Paragraphs 32, 133-35, of the Code of Hammurabi decree: (a) that captive soldiers and state officials, who have no means of their own, shall be ransomed either by their city temple or by the state; and (b) that a woman whose husband has been taken prisoner may remarry in case she has no means to support herself and her children. Equally, the Middle Assyrian Laws (Tablet A, paragraph 45) provide that a wife of a captured soldier who cannot support herself shall become a ward of the palace. Deut. 21:10-14 prescribes that if a soldier sees among the captives a beautiful woman and takes her for a wife, she must be treated as a free person, and he cannot, after he no longer loves her, sell her as an ordinary prisoner of war.

b. Foreign slaves. Traffic in foreign slaves was an integral part of the merchant's activity in the ancient Near East. We have a large body of evidence concerning the import and export of slaves to and from various parts of Mesopotamia, but our information on this subject from biblical Palestine is exceedingly meager. Though foreign slaves, in small numbers, were undoubtedly imported into Palestine (cf. I Chr. 2:34-35), we have only two laws dealing indirectly with the export of Hebrew slaves abroad. Exod. 21:16; Deut. 24:7 prescribe the death penalty for the crime of kidnapping and selling of a freeborn person. The laws do not specifically state that the stolen person was sold into a foreign country, but we may assume that this was the case (cf. Gen. 37:28). Also the Deuteronomic law (23:15-16—H23:16-17) prohibiting the extradition of fugitive slaves most probably has as its subject a Hebrew slave who has fled from a foreign country seeking asylum in his native land. We thus have some evidence for the import and export of slaves to and from Palestine in the biblical period.

c. Sale of minors. "Voluntary" sale of children by their parents, especially in times of economic stress and war, was not an uncommon practice in the

ancient Near East (see *bibliography*). This may have happened, under similar circumstances, also in Israelite Palestine, but we have no proof of it. The law of Exod. 21:7-11 (which is not repeated in the later legislation of Deut. 15) and the cases reported in Neh. 5:1-5 represent no clear evidence of the outright sale of minors by their parents. Exod. 21:7-11 deals with the sale of a young girl by her father with the condition that the girl, after having reached puberty, be married off, either as a wife or as a concubine, to her master himself or to one of his sons. Similar conditional sales of young girls by their parents are known from the Hurrian colony at Nuzi. In some cases the sale contract provided that the girl was to be married off to a free person, and in others, to a slave. In the former situation it was not a sale into slavery, since the girl and her future children remained free; only in the latter case was it a sale into slavery. The law of Exodus clearly provides for the future marriage of the girl to her freeborn master or to one of his sons. It states explicitly that "the master shall have no right to sell her to a stranger" (RSV translates לעם נכרי lit. "to a foreign people"; Targum Onkelos renders it לגבר אחרין "to another man"—i.e., to anyone outside the master's family); hence it was not a sale into slavery. That the law does not consider this transaction an outright sale (although it uses the terms מכר "to sell," and אמה "female slave") is evident from vs. 8, where it is clearly stated that if the master does not take her as his wife, he must let her be redeemed, and from vs. 9-11 that if he does not take her as his concubine or give her in marriage to one of his sons, "she shall go out for nothing, without payment of money"—i.e., the master forfeits the money which he had paid for the girl as a penalty for breach of contract (see *bibliography*). Neither can the reported cases in Neh. 5:1-5 be considered as "voluntary" sales of children by their parents. The economic depression at that time forced some farmers to hand over their land and their children as pledges for loans. When the debts were not paid, the creditors foreclosed the land and sold the pledged children—against the will of their parents.

d. Self-sale. Hunger or debt drove people to sell first their children and then themselves into slavery. Voluntary self-enslavement was a common phenomenon among strangers. This was particularly the case with the Habiru in Nuzi, who, being unable to secure employment, entered "of their own free will," singly or with their families, into the status of servitude (see *bibliography*). Of all the ancient law codes, the OT legislations alone mention the case of self-sale or voluntary slavery (Exod. 21:5-6; Lev. 25:39 ff; Deut. 15:16-17). Exod. 21:5-6 provides that if a Hebrew debtor-slave, to whom his master has given a wife, refuses to go out free after his six-year term of service has expired, he shall serve his master "for life," לעולם. The reasons for the action of the former slave are: (a) economic security ("I love my master"), and (b) the desire to remain united with his wife and the children she has borne him ("I love . . . my wife, and my children"). Deut. 15:16-17 (which is essentially a parallel to the earlier law of Exodus) does not mention the case of the master's

having given his Hebrew debtor-slave a wife, and therefore bases his refusal to go out free on the economic reason only: "because he loves you and your household, since he fares well with you." While the subject of the laws of Exodus and Deuteronomy is the Hebrew debtor-slave, that of Lev. 25:39-55 is the Hebrew who because of poverty voluntarily enters into the status of slavery, either to a fellow Hebrew or to a resident alien: "If your brother becomes poor . . . and sells himself to you . . . [or] to the stranger or sojourner with you . . ." Thus, all three slave legislations contain laws pertaining to self-enslavement of Hebrews, and we must assume, therefore, that such cases, in one form or another, were common in ancient Israel.

e. Insolvency. Although captives of war, foreign slaves, and children born of slave parentage made up a substantial part of the unfree population of the ancient Near East, the basic supply source for slaves was the freeborn native defaulting debtor. Mesopotamian law (cf. the Code of Hammurabi, paragraphs 114-19, and the Middle Assyrian Laws, Tablet A, paragraph 48) recognizes the right of the creditor to seize his defaulting debtor and force him to perform compulsory service.

Insolvency could be the result of many causes, but one of the chief factors was unquestionably the exorbitant interest rate charged on loans. In Babylonia, Assyria, and Syria, the average interest was 20-25 per cent on silver and 33¼ per cent on grain. There is no information in the OT in regard to the interest rate charged on loans in Palestine. That interest was charged is evident, first, from the injunction, repeated in all three codes, against the taking of interest from a fellow Hebrew (Exod. 22:25—H 22:24; Lev. 25:35-37; Deut. 23:19-20—H 23:20-21), and secondly, from the references of the charging of interest in Ps. 15:5; Prov. 28:8; Ezek. 18:8-17; 22:12.

That the Palestinian creditor had the right to seize his defaulting debtor and reduce him to slavery is amply attested in the texts. Among those who joined David in the cave of Adullam were a number of defaulting debtors who had fled from their creditors (1 Sam. 22:2). In II Kings 4:1 the creditor seized the children of his deceased debtor, and the widow appealed to the prophet Elisha for help: "The creditor has come to take my two children to be his slaves." Neh. 5:1-5 shows that pledged children were reduced to slavery if their parents failed to pay the debts. This practice is also reflected in the prophetic literature:

Because they sell the righteous for silver,
and the needy for a pair of shoes
(Amos 2:6);

Which of my creditors is it
to whom I have sold you?

(Isa. 50:1).

That the right of seizure of the defaulting debtor was recognized by the prevailing law is proved by Exod. 22:2. This law provides that the thief be sold into slavery, not as a punishment for stealing, but for his inability to compensate the owner for the loss of property. The subject of the laws of Exod. 21:2-4; Deut. 15:12 is the Hebrew defaulting debtor,

whom the laws are seeking to protect by limiting his term of forced labor to six years. See § 4h below.

4. Legal status. a. Branding. Legally the slave was a chattel. He was a commodity that could be sold, bought, leased, exchanged, or inherited. In sharp contrast to the free man, his father's name was never mentioned; he had no genealogy, being a man without a name. As a piece of property the slave was usually, although not universally, marked with a visible sign, just as an animal was by a tag or a brand. In ancient Egypt captives of war were branded and stamped with the name of the king, and privately owned slaves were marked by having their heads shaved, sometimes with a pigtail left (Bakir, *Slavery in Pharaonic Egypt*, pp. 31, 81, 110). In ancient Babylonia the slaves, particularly those who displayed a tendency to run away, were marked with an *abuttum* (cf. B. Landsberger, *Materialien zum Sumerischen Lexikon*, vol. I, Taf. 7, Kol. III, pp. 23-28; the Laws of Eshnunna, paragraphs 51-52; the Code of Hammurabi, paragraphs 146, 226-27). The precise character of the *abuttum* is not clear. Some scholars maintain that it was a brand on the forehead; some interpret it to have been a special haircut; and still others consider the *abuttum* to have been a small tablet of clay or metal suspended on a chain around the neck, wrist, or ankle of the slave. In the Neo-Babylonian period the prevailing custom was to tattoo the name of the owner on the wrist of the slave. This is described in slave-sale documents as: "A, whose left wrist is inscribed with the name of N," or "A, whose right wrist is inscribed with the name of N." Temple slaves were, as a rule, marked with the symbol of the god or goddess in whose temple they served.

The biblical law prescribes that he who, after his six-year term of service is over, voluntarily submits to perpetual slavery shall have his ear pierced with an awl (Exod. 21:6; Deut. 15:17). It is difficult to see what the purpose of this piercing was, since the hole was necessarily small and invisible. It may be suggested, therefore, that the hole was made in order to push through it a ring, or cord, on which was fastened a tag made of clay or metal. This does not exclude the possibility of the existence also of a tattoo mark. Cain's mark (Gen. 4:15), the writing of Yahweh's name on the hand (Isa. 44:5; 49:16), and the *tau* mark upon the forehead (Ezek. 9:4) clearly show that tattoo marks were used to signify possession. Privately owned slaves in the Jewish colony of Elephantine in the fifth century B.C. were marked on the wrist with the names of their owners (cf. A. E. Cowley, *Aramaic Papyri of the Fifth Century B.C.*, no. 28:4-6; E. G. Kraeling, *The Brooklyn Aramaic Papyri*, no. 5:3).

b. The female slave. The female slave, like the male slave, was treated as a commodity. She was leased for work, given as a pledge, or handed over as a part of a dowry. In addition to her routine duties as a maidservant, she was subject also to burdens peculiar to her sex. Ownership of a female slave meant, not only the right to employ her physical strength, but also, and in many cases primarily, the exploitation of her charms by the male members of her master's household, and the utilization of her

body for the breeding of slave children. The highest position a female slave could achieve was to become a childbearing concubine to her master, and the lowest, to be used as a professional prostitute.

According to the Code of Hammurabi (paragraphs 146-47), a female slave who has borne children to her mistress' husband cannot be sold. Abraham and Sarah apparently acted in the case of Hagar in accordance with this ancient law. Hagar was the property of Sarah, and when, after she had given birth to Ishmael, she became "haughty," all her mistress could do was to embitter her life; she could not sell her (Gen. 16). We are not informed about the behavior of Zilpah and Bilhah, the female slaves of Leah and Rachel, after they had borne sons to Jacob, but we may assume that if they had acted the way Hagar did, the same law would have applied to them.

Female slaves were mated with male slaves for the purpose of giving birth to slave children. Exod. 21:4 provides: "If his master gives him [the slave] a wife and she bears him sons or daughters, the wife and her children shall be her master's and he shall go out alone." That the female slave was used promiscuously in her master's household may also be inferred from the statement in Job 31:10:

Then let my wife grind for another [i.e., be reduced to slavery],
and let others bow down upon her.

c. Marriage between free and slave. Marriages between freeborn women and slaves were common in ancient Babylonia. With the consent of his master, a slave could take a freeborn woman and conclude a legal marriage with her. According to the Code of Hammurabi (paragraph 175), the children born of such a union were free, and their father's master could not lay claim to their service. We have no information about such marriages in Israelite Palestine. The reference in Lev. 19:20 to a female slave שִׁפְחָה, who is betrothed to another man, is not clear, since we do not know precisely the status of the female slave involved in the case, nor who the "other man" was. The case of Sheshan, who had no sons of his own and therefore married off one of his daughters to his slave Jarha (I Chr. 2:34-35), is no evidence for mixed marriages. In accordance with good Babylonian and Syrian usage, Jarha was most probably manumitted and adopted by Sheshan before the marriage was consummated, for otherwise Jarha would not have been listed in the genealogical record of Judah.

d. The house-born slave. Legally, the status of the house-born slave (יָלִיד בַּיִת, "one born in the house," or בֶּן בַּיִת, "a son of the house") differed in no way from that of the purchased slave (מִקְנֵה כֶּסֶף); only socially was the position of the former better than that of the latter. The case of Eliezer, the trusted servant of Abraham, is a good illustration of the treatment accorded a house-born slave. The complaint of Abraham (Gen. 15:2-4) that Eliezer would be his heir, however, is no proof that house-born slaves inherited the property of their childless masters in Palestine (or anywhere else in the ancient Near East). What Abraham meant when he said:

"A slave born in my house will be my heir," was that if no son were born to him, he would have to adopt Eliezer and appoint him as his heir.

e. The fugitive slave. Harboring a fugitive slave was, like receiving and possessing stolen goods, punishable by law. The Laws of Eshnunna (paragraphs 12-13) impose a fine for harboring runaway slaves. The leniency of the early Babylonian legislation in this case stands in marked contrast to the harshness of the Code of Hammurabi. Harboring a fugitive slave is considered a capital offense: he who helps a slave escape from the city gate, or refuses to hand over a fugitive slave to the authorities, "shall be put to death" (paragraphs 15-16). A fugitive slave was as helpless as a stray animal, and anyone who seized him and delivered him to his master was entitled to a reward of two shekels of silver (paragraph 17). The custom of rewarding a person for apprehending a runaway slave was also known in Syria (D. J. Wiseman, *The Alalakh Tablets*, no. 3; see also the Hittite Code, paragraphs 22-23).

The OT slave legislations (Exod. 21; Lev. 25; Deut. 15) do not consider the case of the fugitive slave. This omission is rather remarkable, since the tendency of slaves to run away, for reasons of cruel treatment or a desire for freedom, was no less prevalent in Palestine than it was in the adjacent countries. Hagar ran away from her mistress, Sarah (Gen. 16). When David sent his young men to procure food from the farmer Nabal, the latter defiantly inquired: "Who is David? Who is the son of Jesse? There are many slaves nowadays who are breaking away from their masters" (I Sam. 25:10). Runaway slaves were handed over to their owners (cf. I Sam. 30:15), and fugitive slaves were extradited from foreign countries. When Shimei heard that his two slaves had run away to the Philistine city of Gath, he promptly went there and brought them back (I Kings 2:39-40). On the Deuteronomic ordinance prohibiting the extradition of fugitive slaves, see § 4h below.

f. Treatment. Although theoretically the slave was considered a mere chattel and classed with movable property, both law and society could not disregard the fact that he was human. We thus have the highly contradictory situation in which, on the one hand, the slave was recognized as possessing the qualities of a human being, while, on the other hand, he was considered as being void of these and was treated as a "thing." The slave's status as a chattel, deprived of any rights, is clearly emphasized in his relation to a third party. If he is maimed, killed, or, in the case of a slave girl, violated by a stranger, the master is compensated for his loss; the slave himself is never considered as an injured party (cf. the Laws of Eshnunna, paragraphs 23, 31, 55, 57; the Code of Hammurabi, paragraphs 116, 213-14, 219-20, 231, 252). Biblical legislation considers only two such cases, one in which a slave is killed by a goring ox and the other in which a stranger has carnal intercourse with a betrothed slave girl. In the first instance, the owner of the animal must compensate the slave's master by paying him thirty shekels of silver, the average price of an unfree person (Exod. 21:32). In the second instance, the

offender escapes with the light penalty of bringing a "guilt offering," since "she [the slave girl] was not free" (Lev. 19:20). (For the meaning of נְתִיבָה, "betrothed," cf. T.B. Kid., fol. 6a; B. Landsberger, *Archiv für Keilschriftforschung*, II [1925], 70).

Although both the Mesopotamian and the biblical laws treat the slave in his relation to a third party as a "thing," there is a fundamental difference in the attitude of these two legislations in regard to the status of the slave in relation to his own master. Mesopotamian law does not consider the latter aspect at all—the slave's fate is in fact, if perhaps not in theory, at the mercy of his owner. The biblical legislation, on the contrary, recognizes the humanity of the slave by restricting the master's power over him. A master may maltreat his slave, "for the slave is his money" (Exod. 21:20-21), but if, as a result of the beating, the slave is permanently maimed, freedom must be granted to him as a compensation for loss of limb (Exod. 21:26-27), and if the beating causes the immediate death of the slave, the master is liable to punishment (Exod. 21:20-21). (The MT reads: נִקְטָם יִנְקָם, "It [the deed] shall surely be avenged"; the Samar. reads: מוֹת יוֹמָת, "He [the master] shall surely be put to death.")

It should be stressed that slavery in biblical Palestine was of a domestic character. The slave worked shoulder to shoulder with his master in the field or at home, and hence he was treated as a member, albeit an inferior one, in the large household. The law requires that the non-Hebrew slave participate in the religious observances of his master, including that of the enjoyment of the sabbath rest (cf. Gen. 17:13, 27; Exod. 12:44; 20:10; 23:12; Lev. 22:11; Deut. 5:14; 12:12, 18; 16:11, 14). The prophetic literature, although recognizing the existence of economic servitude, insisted upon the humanity of the slave. Joel (2:29—H 3:2) proclaimed:

Even upon the menservants and maidservants
in those days, I will pour out my spirit;

and Job (31:15) eloquently condemned the whole system of slavery by questioning its moral basis, for:

Did not he who made me in the womb make him
[the slave]?

And did not one fashion us in the womb?

g. Peculium. The privilege of accumulating a peculium was granted to the Babylonian, Assyrian, and Egyptian slave from early times. The Code of Hammurabi takes the existence of the peculium for granted and decrees the manner of its disposal at the death of the slave. According to paragraph 176, the property amassed by a slave jointly with his free-born wife is to be divided after his death in equal shares between the widow and the master. It is evident from this law that the master was the legal owner of the slave's property, and hence, if that property was the result of a joint effort of a free person and a slave, the master could claim his slave's share only. In late Assyria and in Neo-Babylonia slaves played an active part in the economic life of the two countries. Some of them were engaged as craftsmen, agents, and tenant farmers; they owned houses and land, and even possessed their own slaves. For this privilege to accumulate

and enjoy property the slave paid a certain amount of his earnings to his master (called *mandattu*), but after the slave's death the master appropriated the peculium.

The same privilege of accumulating property was also granted to the Palestinian slave. Lev. 25:49 provides that if a Hebrew sold himself to a non-Hebrew, his kinsmen should redeem him, or: "If he grows rich he may redeem himself" (i.e., with his peculium). The slave of Kish (the term used is נְעָר, "young man," which like the Akkadian *ṣuhāru* often signifies a young servant or slave) had in his possession one fourth of a silver shekel (I Sam. 9:8); and Ziba, the slave of Saul, is reported to have had fifteen sons and twenty slaves (II Sam. 9:10). The legal owner of the slave's peculium was his master. This is clearly stated in vs. 12: "All who dwelt in Ziba's house became Mephibosheth's servants."

h. Manumission. The Code of Hammurabi recognizes four legal means by which a slave is entitled to his freedom: (a) a defaulting debtor and his family who have been sold or handed over to service are to be freed after three years of work in the house of their purchaser or obligee (paragraph 117); (b) a slave-concubine and her children are to be freed after the death of the master (paragraph 171); (c) children born of a legitimate marriage between a free woman and a slave are free (paragraph 175); and (d) a Babylonian slave bought by a merchant in a foreign country and brought back to his native land is to be unconditionally released (paragraph 280). The law set forth in paragraph 117 was promulgated by Hammurabi (we have no earlier parallels to this provision) in order to check the tendency of wholesale enslavement of defaulting debtors. Regardless of the amount of debt, three years of service in the house of the purchaser or creditor were deemed sufficient to work off any debt. Whether this law was ever enforced, however, is very doubtful. We have numerous documents from ancient Babylonia and Neo-Babylonia attesting to the selling or handing over of wives and children to creditors, but evidence of their release after a three-year term of service is conspicuous by its absence.

The most common methods of manumission in the ancient Near East (but not mentioned in the Code of Hammurabi) were release by adoption and by purchase. The Sumerian Lipit-Ishtar Law Code provides that if a slave has compensated his master, this slave shall be freed (paragraph 14). The purchase transaction could be carried out in two forms, by payment of the whole sum at once or by an obligation assumed by the slave to support his master for the duration of the latter's life. In the first case, the slave's release was effective immediately and made irrevocably; in the second case, the slave's freedom was conditioned upon the fulfilment of his promise. To make the release doubly safe, the manumitted slave was sometimes dedicated to a god—i.e., he was put under the protection of a deity against any future claim by the children of the manumitter.

According to biblical law there are five means by which a slave is entitled to his freedom. These are: (a) a Hebrew slave (עֶבֶד עִבְרִי) and his wife, or a Hebrew female slave (עֶבְרִיָּה), are to be released after

a six-year term of service (Exod. 21:2-4; Deut. 15:12); (b) a Hebrew (the text has אָחִיךָ, "your brother") who has sold himself voluntarily into slavery, either to a fellow Hebrew or to a stranger, is to be freed in the year of the jubilee (Lev. 25:39-43, 47-55); (c) a Hebrew girl who had been sold by her father on the condition that she be married off to her master or to one of his sons, is to be freed if, after she has reached puberty, her master refuses to abide by the agreement (Exod. 21:7-11); (d) a "slave" (עֶבֶד) permanently maimed by his master is to be freed without compensation (Exod. 21:26-27); and (e) a fugitive "slave" (עֶבֶד) must not be delivered to his master; the right of asylum shall be granted him (Deut. 23:15-16—H 23:16-17).

The subject of the laws of Exod. 21:2-4; Deut. 15:12 is the Hebrew debtor-slave. Like the Code of Hammurabi (paragraph 117), the Hebrew lawgivers sought to check the ruthless power of the creditors by limiting the period of forced labor of the defaulting debtor to six years. (The Deuteronomic legislator, aware that in Babylonia the limit was three years, stressed the fact [15:18] that the Palestinian creditor was amply compensated, since "at half the cost of a hired servant he [the debtor-slave] has served you six years"). In essence the manumission laws of Exodus and Deuteronomy are alike (release after six years), but the latter introduces a new factor reflecting the changed economic conditions in the country: now women also are sold as debtor-slaves, and they are to be released in the same manner as the males. Whether the enforcement of the law of release of the debtor-slave was more successful in Palestine than its counterpart was in Babylonia is, in view of the lack of contemporary private documents and court records, hard to say. Jeremiah (34:8-16) explicitly states that the Hebrew slaves in his time were not released in the seventh year. Nehemiah (5:5 ff) makes no direct reference to the laws of Exodus and Deuteronomy, but from the context of his hortatory speech it would appear that the law of manumission was not observed in his time either.

The subject of the Levitical law 25:39-43, 47-55, which decrees the manumission of the Hebrew slave in the year of the jubilee, is the poor Hebrew who has sold himself voluntarily into slavery. This law does not abrogate the earlier laws of the release of the debtor-slave in the seventh year. It is an extension of, or addition to, those laws, applying to a case which had not been dealt with in the legislations of Exodus and Deuteronomy. Although literally the law of the jubilee applies only to cases of self-sale, it may be assumed from the concluding statement in vs. 42: "They [the Hebrews] are my servants, whom I brought forth out of the land of Egypt; they shall not be sold as slaves," that this law of release was meant to embrace all Hebrew slaves, regardless of the cause of their enslavement. If this interpretation is correct, it would include the debtor-slaves who chose to remain in perpetual slavery after the termination of the six-year period. (Cf. Targum Jonathan, where the term לְעֵלַם, "for life," is interpreted to mean until the year of the jubilee; M. Kid. I.2: "He that has his ear bored through is acquired by the act of boring, and regains his freedom at the

year of the jubilee or at the death of his master"; see also Jos. Antiq. IV.viii.28.) Theoretically, the jubilee law, unparalleled in any other slave legislation of the ancient Near East and Greece (see *bibliography*), abolishes the institution of perpetual slavery for all members of the national community. It denies the right of any man to own a Hebrew forever: "For to me the people of Israel are servants, they are my servants whom I brought forth out of the land of Egypt: I am the LORD your God" (Lev. 25:55).

The law of Exod. 21:26-27 presents considerable difficulty of interpretation. The literal meaning of the law is, of course, quite clear. The loss of limb, caused by beatings administered by the master, is considered sufficient ground for the manumission of the slave. The ambiguity arises when we ask for the identity of the slave. Unlike the law of vs. 2-4 of the same chapter, which employs the adjective "Hebrew" (עֶבֶד עִבְרִי, "a Hebrew slave"), vs. 26-27 use the general term "slave" (עֶבֶד), without specifying as to whether a non-Hebrew slave, a Hebrew slave, or both are meant. On the basis of the distinction in the text between "Hebrew slave" and "slave," Jewish tradition interprets the law of vs. 26-27 as applying to non-Hebrew slaves only. This view is hardly tenable. If this law is applicable to non-Hebrew slaves only, it would mean that when a master deliberately maims his Hebrew slave, the deed goes unpunished, while when he maims a non-Hebrew, the latter is to be granted his freedom as a compensation for his loss of limb. Some scholars, on the other hand, try to overcome this inconsistency by assuming that vs. 26-27 are a continuation of vs. 2-6, and hence this law would apply to Hebrew slaves only (cf. J. Morgenstern, "The Book of the Covenant," *HUCA*, 7 [1930], 51 ff). However, taking into consideration (a) that the same general term "slave" is also used in vs. 20-21, where a severe penalty is prescribed for a master who killed his slave (which could not possibly be interpreted to mean a non-Hebrew slave only), and (b) the humanitarian spirit of biblical legislation, it would seem that the perplexing problem could be solved by assuming that "slave" in vs. 20-21, 26-27, refers to any unfree person, Hebrew and non-Hebrew alike. Thus, the Book of the Covenant restricts the power of the master over his slave regardless of nationality and grants the slave legal protection in cases involving loss of limb or death. (The Levitical pronouncement in 25:44-46 that, in contradistinction to the Hebrew slave, the non-Hebrew slave is to remain a "perpetual possession," merely indicates that the law of the jubilee does not apply to the latter; it does not imply that the Canaanite slave is to be regarded as a piece of property at the mercy of his Hebrew master. The Levitical attitude in regard to the foreign slave, therefore, does not contradict the laws of the Book of the Covenant.)

As already mentioned, the most common practice of release in the ancient Near East was manumission by purchase. The Mesopotamian codes, with the exception of the Lipit-Ishtar Law Code (paragraph 14), do not mention this practice, since release by purchase was a private matter between the master and his slave; if an owner was willing to let his

slave go, the law did not interfere. That a Palestinian slave could buy his freedom if the master agreed to it is self-evident. Only in one case does the law explicitly demand of a master to let his slave be redeemed. Lev. 25:47-54 provides that if a Hebrew slave owned by a non-Hebrew has the means wherewith to buy his freedom, the master must grant his request; no such demand, however, is made of a Hebrew master (vss. 39-41), although he may have been morally obliged to comply.

The Deuteronomic provision 23:15-16—H 23:16-17, prohibiting the extradition of fugitive slaves, has been considered by some scholars as an unrealistic law reflecting the wishful thinking of reformers. This law (couched in the apodictic form in distinction to the casuistic formulation typical in civil legislation) reads: "You shall not give up to his master a slave who has escaped from his master to you. He shall dwell with you, in your midst, in the place which he shall choose within one of your towns, where it pleases him best; you shall not oppress him." If this law literally applied to any slave who had run away from his master, it certainly was unrealistic, for if put to practical use, it would have resulted in the immediate abolition of slavery. This, however, is not the case. Vs. 16 makes it quite clear that the law has in mind, not a local slave who escaped from one household and entered into another, but a fugitive slave from a foreign country seeking asylum in Palestine. If this is the intent of the law, the Code of Hammurabi and the Middle Assyrian Laws provide indirect precedents for the Deuteronomic provision. Paragraphs 280-81 of the Code of Hammurabi decree that if a merchant buys a Babylonian slave in a foreign country and brings him back to Babylonia (for sale) and his former owner recognizes him, then, if the slave is a native Babylonian, he must be freed without compensation, but if he is of foreign origin, his former master may recompense the merchant and take back his slave. The Middle Assyrian Laws (Tablet C, paragraph 3) prohibit the selling abroad of a pledged free man or woman. These two laws are limited to specific cases and, therefore, are not exactly parallel to the Deuteronomic provision, but they do demonstrate the general tendency of Semitic law to prohibit the sale of natives into a foreign country.

No Canaanite code of laws has as yet been recovered, and we do not know whether restrictions on the sale abroad of native-born people were imposed by local legislation. Among the tablets recently discovered at Alalakh are two treaties which were concluded between Syrian city-state kings. Both treaties contain extradition clauses according to which each party pledges to arrest in his country any fugitive slave from the other party's country and deliver him to his master (cf. D. J. Wiseman, *The Alalakh Tablets*, nos. 2-3). Assuming that these clauses represent the general practice in Syria in the middle of the second millennium B.C. and taking into consideration also the few incidents of extradition of foreign fugitive slaves recorded in the OT (see § 4e above), we may conclude that Canaanite law did not prohibit the sale abroad of native slaves; and if such slaves managed to return to their country of origin, they were

extradited. In contrast to this Canaanite practice, Deuteronomy demands that a fugitive slave from a foreign country who is a native of Palestine shall not be delivered to his master. The question now arises whether the unqualified term "slave" (עֶבֶד) in the text applies to any native slave or to Hebrews only. The aforementioned Babylonian and Assyrian laws applied to natives only—i.e., to former members of the respective national community. This is also implicit in the Deuteronomic law. 23:16 requires that the fugitive slave shall be accorded the protection of the community in which he chooses to live. This would suggest that the law has in mind a former member of the community—a debtor-slave or a minor who had been sold abroad—namely, a Hebrew. Thus Deuteronomy, for religious and national reasons, opposes the extradition of a Hebrew fugitive slave from a foreign country and demands that the right of asylum and freedom of movement be granted him. (Postbiblical law prohibited the sale of a Hebrew slave abroad, or to a stranger, for the same reason; cf. M. Git. IV.6: "If one sell his [Hebrew] slave to a non-Jew or to anyone outside the land [of Israel], he goes forth a freeman.")

5. **State slavery.** From time immemorial it was the fate of those who were spared on the battlefield to be reduced to slavery. War captives were the property of the victorious king—i.e., they became state slaves. It was these enslaved war captives who, with the assistance of *corvée* gangs recruited from the ranks of the native population, constructed roads, erected fortresses, built temples, tilled the crown lands, and worked in the royal factories connected with the palace. After the collapse of the Egyptian rule in Palestine and during the subsequent period of the "judges," there was no centralized power in the country, and as a result both the *corvée* and state slavery were nonexistent in Israel. With the emergence, however, of a new centralized power under David and Solomon, the institutions of *corvée* and state slavery were re-established. The main source whence the state slaves were recruited was again, as had been the case before, captives of war. Some of the captives were, in accordance with the usage of the time, presented to the temple as the victorious deity's share of the booty (cf. Num. 31:32-47; Josh. 9:23-27; Ezra 8:20; Ezek. 44:7-9); some were, again in conformity with the practice in the ancient Near East, distributed as gifts to military leaders and state officials in recognition of their services (cf. Deut. 20:10-14; 21:10; Judg. 5:30). The bulk of the captives, however, fell as share to the king—i.e., to the state.

Although the institution of state slavery was introduced after the initial military victories of David, it became an important economic factor only after the conquest of the Arabah. It is a well-established fact that slave labor (excepting household servants) is highly unprofitable unless employed on a large scale in nontechnical production. The natural field for the exploitation of unfree labor is, therefore, on large landed estates and in mining industries. The metallurgical industry in the Arabah presented such an ideal field (cf. N. Glueck, *BASOR*, 79 [1940], 4-5). David, Solomon, and the kings who ruled that region after them, put the state slaves to work in the mines

and thus utilized them to considerable advantage.

That the institution of state slavery existed in Palestine from the days of David down to the period of Ezra and Nehemiah is attested by the two technical terms preserved in the OT designating this branch of slavery: the general term עֶבֶד *‘eved* and the specific term עֶבְדֵי שְׁלֵמָה. The first, meaning "total slavery," is applied in I Kings 9:21 to the native Canaanites whom Solomon reduced to slavery, and since the new class of slaves was officially called into existence by Solomon, they were appropriately named "Solomon's slaves" (cf. I Kings 9:27; II Chr. 8:18; 9:10). Once established, this class of state slaves remained in existence, varying in number and economic importance, until the end of the Judean kingdom. Under the new ecclesiastical order created by Nehemiah and Ezra the עֶבְדֵי שְׁלֵמָה, the "descendants of Solomon's slaves," were merged with the NETHINIM (נְתִינִים), the "temple slaves" (cf. Ezra 2:55-58; Neh. 7:57-60; 11:3). The end of independent statehood marked also the end of state slavery.

6. Temple slavery. Temple slaves were recruited in Mesopotamia from two sources: prisoners of war presented by the kings and dedications made by private individuals. Like the temples in the neighboring countries, the Palestinian sanctuaries also shared in the war booty (שָׁלַל), which included captives. After the successful campaign against the Midianites, Moses is reported to have presented a number of war captives as a gift to the temple (Num. 31:25-47). Joshua is said to have reduced the Gibeonites to "hewers of wood and drawers of water" in the sanctuary (Josh. 9:21-27). On the other hand, there is no evidence of the dedication of slaves to Palestinian sanctuaries by private individuals. The enumeration of monetary values as substitutes for persons or goods vowed to the temple in Lev. 27:2-9 does not mention slaves. The Palestinian temple slaves, the נְתִינִים, are first mentioned in the postexilic period, when they returned from Babylonia with Zerubbabel and Ezra (Ezra 2:43-54; Neh. 7:46-56). Their origin is traced back in Ezra 8:20 to the temple slaves whom "David and his officials had set apart to attend the Levites." (A class of temple servitors by the name of *ytm* is mentioned in the Ugaritic texts; cf. C. H. Gordon, *Ugaritic Manual*, Text 301:1.) That the Nethinim, though probably not exclusively, were the descendants of war captives and hence non-Hebrews, is also attested by Ezekiel, who complained that uncircumcised foreigners served in the temple (44:7-9). The Nethinim, like the Neo-Babylonian temple slaves, the *širqu* (R. P. Dougherty, *The Širkûtu of Babylonian Deities*), were housed in separate quarters and worked under the supervision of overseers (cf. Neh. 3:31; 11:21). They could marry outside their own class, but the children born of such marriages were claimed by the temple (cf. M. Kid. III.12).

7. The economic role of slavery. The evidence available to us from Babylonia, Assyria, Syria, and pre-Israelite Palestine (Tell el-Amarna period) indicates clearly that slave labor played a minor role in the fields of agriculture and industry. Unlike Egypt, where, theoretically, the land belonged to the crown, private ownership in land was the rule in the Semitic countries of the ancient Near East. With the

notable exception of the large holdings of the crown and the temples, the overwhelming part of the arable land was in the possession of small holders. These tilled their patches of ground with the assistance of their large families, and there was no pressing need for outside help, in the form of either hired laborers or slaves. Besides, slaves were expensive, and the average farmer could hardly afford to buy one. To be sure, there were large landowners who worked their estates with hired hands. This help, however, was primarily drawn from the ranks of the expropriated peasantry who remained on their ancestral land as dependent sharecroppers or tenants. Slave labor was not a decisive factor in the agricultural life of the ancient Near East, including Palestine.

The counterpart of the freeborn tenant farmer in agriculture was the freeborn artisan in industry. The evidence from Mesopotamia shows that very few slaves engaged in the skilled professions (cf. Mendelsohn, "Free Artisans and Slaves in Mesopotamia," *BASOR*, 89 [1943], 25-29). Palestinian industries (primarily weaving and dyeing, pottery making, and metallurgy) were located in places where the necessary raw material for the given industry was to be found in abundance. The skilled workers in these manufacturing plants were recruited from the free local population. Biblical data shows that some of those artisans even formed their own trade organizations. For details concerning participation of slaves in skilled work and in trade organizations, see *bibliography*.

To sum up: the economy of biblical Palestine (as well as that of ancient Mesopotamia) was based on free labor. The activities of the slave centered mostly in the household of the rich; he was, in the main, a domestic servant rather than an agricultural or industrial worker.

SLEEVES [שָׁמַיִם; LXX and Aq. ποικίλον, variegated (Gen. 37:3, 23, 32), καρπωτός, reaching to the wrist (II Sam. 13:18-19); Symm. χειριδωτός, sleeved]; KJV COLOURS. The distinctive feature of the robe given to Joseph as a mark of his father's favoritism (Gen. 37:3, etc.) and that worn by Tamar, the daughter of King David (II Sam. 13:18-19). The translation "with sleeves" is supported by the Greek versions and by the consideration that a long garment with sleeves would indicate wealth and prestige as over against the short sleeveless garment of the ordinary person. On the other hand, the explanatory gloss in the latter passage (vs. 18) may imply some more unusual feature of dress during the early monarchy which had become unfamiliar in the glossator's day. J. M. MYERS

SLIME [רִיר (Job 6:6), cf. Akkad. *lêru*, spittle; חָמָס (Ps. 58:8—H 58:9), from מָסַס, to melt]. This word is a simile for what is tasteless (Job 6:6), and it is used to describe the trail left by a snail, in terms of the snail's dissolving into slime. See BITUMEN; PITCH.

SLING [קֶלַע; מַרְגָּמָה; σφενδόνη]; **SLINGSTONES** [אבני קלע, stones of a sling; אבן, stone]; **SLINGERS** [קלעיים]. The sling was carried by shepherds and warriors for hurling small stones or clay pebbles. It consisted of two narrow strips of leather or woven textiles joined by a middle part (כה קלע, "hollow of a sling"; I Sam. 25:29) which was flat and some-

what broader for holding the stone or pebble. One end was tied to the hand or wrist and the other held by the hand so that it could be released after being swung.

The word מַרְגָּמָה (Prov. 26:8) is a *hapax legomenon* rendered in the LXX as σφενδόνη (probably correctly). The clause כַּצֹּרֹר אֵבֶן בַּמַּרְגָּמָה is rendered as ὃς ἀποδεσμένει λίθον ἐν σφενδόνη (i.e., כַּצֹּרֹר was read as כַּצֹּרֹר), "like one who binds the stone in the sling." This was an act of folly, since the stone had to be placed loosely in the sling to permit its release.

Pliny (Nat. Hist. VII.201 [57]) made the unlikely suggestion that the sling was invented by the Syro-phoenicians, whereas it was actually already used in early times by foreign (Libyan?) soldiers according to Egyptian reliefs; it was also well known to the Assyrians. The sling was a primitive weapon. At Tell Hassuna (ca. 4500 B.C.) numerous baked clay pellets were found which probably served as ammunition for slings. Slingstones have been found at Tepe Gawra (ca. 3500 B.C.) and at numerous other sites in the Near East, as well as in Upper Paleolithic sites in Europe. Round stone balls in great numbers, usually identified as slingstones, are found in excavated sites in Palestine and are often two or three inches in diameter. Figs. SLI 68-69.

Among the Hebrews the sling was used by shepherds (I Sam. 17:40) as well as by professional slingers in the Israelite and Judean armies (II Kings 3:25; II Chr. 26:14). Smooth, rounded stones were used as bullets (I Sam. 17:49), being carried in a bag suspended from the shoulder, or as among the

Romans in the folds of the toga. Great accuracy could be achieved by slingers; in fact, the Benjaminites lefthanded "could sling a stone at a hair, and not miss" (Judg. 20:16; cf. I Chr. 12:2; and τοῖς ἀπὸ Συρίας σφενδονήταις of Jos. War III.vii.18). In describing the impervious Leviathan the poet declares that for him slingstones are turned to stubble (Job 41:28—H 41:20). If the RSV reconstruction of a corrupt passage is correct, Zech. 9:15 represents the Israelites overcoming their foes, devouring and treading down the slingers (perhaps reading בני קלע, "sons of a sling," for אבני קלע, "stones of a sling").

The Roman Army had slingers only in the *auxilia*, not in the legion itself.

SLOTHFULNESS, SLUGGARD. The principal Hebrew root underlying these English words is נָשָׂא, "neglect," "be sluggish" (cf. Judg. 18:9, where the RSV is more accurate than the KJV), which in one of its forms is often translated "sluggard" in the RSV where the KJV has "slothful" (man; cf. Prov. 15:19; 19:24; 21:25; 22:13; 24:30-34; 26:13-15). The words "sloth," "slothful," "slothfulness," and "sluggard" are found only in the WISDOM literature of the OT and, with but one exception (Eccl. 10:18), in the book of Proverbs alone. "Slothfulness" describes the stupid indolence of the man who takes the course of idleness even when disaster threatens (cf. Prov. 24:30-34). In the thought of the wisdom movement, such a sluggard represents the opposite of the diligent man, who carefully plans his course according to the prudent wisdom of "enlightened self-interest." These opposites constitute one of the contrasting pairs which are used in the teaching of Proverbs to delineate the two ways of life open to every man: the way of wisdom and the way of folly. In Israel this teaching concerning the two paths (see PATH; WAY) is developed far more fully than in the corresponding wisdom movements of the ancient Near East—no doubt, under the influence of the Deuteronomic doctrine of retribution (see DEUTERONOMY), according to which obedience to divine law ensured prosperity and the good life, while disobedience entailed misfortune in every area of life. Thus in Israel the way of the sluggard and the fool is also the way of the unrighteous, while the way of the diligent and wise is also the way of the upright before God. From this standpoint there are serious theological implications in the sluggard's laziness, even when he is made the butt of raw humor. For this reason there is a somber note, something of the derision of God (cf. Ps. 2:4), in the caricatures of the sluggard: Prov. 10:26; 19:24 (cf. 26:15); 21:25; 22:13 (cf. 26:13); 26:14.

In the NT we find a clear echo of this concept in Matt. 25:26, where the "wicked and slothful servant" appears as the opposite of the ideal "good and faithful servant." In the entire chapter the "two paths" of the wisdom literature are placed in the framework of NT eschatology: the way of foolishness, sloth, and unrighteousness results at the latter day in the bitter laments of the "outer darkness" (vs. 30); while the

way of wisdom, diligence, and righteousness results in the joyful participation in the eschatological feast (vs. 10), in the "joy of the master" (vss. 21, 23), and in the "kingdom prepared . . . from the foundation of the world" (vs. 34).

SMELL. See ODOR.

SMELT [צַרַף (Isa. 1:25), refine; צוּק (Job 28:2), pour out]. The contexts clearly indicate the process of separating a metal from its ore by heat. See METALLURGY.

SMITH. See METALLURGY.

SMOKE [עָשָׁן; קִיטוּר, καπνός]. As a phenomenon accompanying the appearance of God in acts of self-disclosure or in warlike anger, the word appears throughout the OT. The smoke ("like the smoke of a kiln") and FIRE that characterize the THEOPHANY on Mount Sinai, together with the quaking of the mountain, have caused exegetes to think of volcanic phenomena (Exod. 19:18; 20:18; cf. also Gen. 15:17 for an obscure but provocative parallel). In stylized form, the smoke and fire of Sinai becomes a stereotype of the presence of God in his GLORY (Isa. 4:5; 6:4; cf. Rev. 15:8).

In different contexts, smoke derives from the fire of God's anger, breaking forth in WRATH against his enemies (Deut. 29:20; Ps. 18:8; Isa. 30:27; cf. the smoke of cities and lands destroyed by God's judgment in Gen. 19:28; Isa. 34:10; Rev. 18:9, 18; 19:3).

The smoke of SACRIFICES AND OFFERINGS and of INCENSE is referred to in Ps. 66:15; Ezek. 8:11 (contrast Rev. 8:4). As a figure of that which is ephemeral, "smoke" appears in Ps. 37:20; 68:2; 102:3; Isa. 51:6; Hos. 13:3 (cf. other figurative uses in Ps. 119:83; Prov. 10:26; Song of S. 3:6; cf. apocalyptic imagery in Joel 2:30; Acts 2:19; Rev. 9:2-3, 17-18; 14:11).

J. A. WHARTON

SMYRNA *smûr'nâ* [Σμύρνα, Ζμύρνα]. A large and important city on the W coast of Asia Minor; the modern Izmir. It was in NT times, and has remained to this day, one of the largest and busiest commercial centers of the entire region of Asia Minor and the Aegean Sea. The city lay at the E end of a long, narrow gulf. The original city was a colony of Aeolian Greeks, but was soon taken over by Ionian Greeks and became part of the Ionian League. It lay two or three miles NE of the later site. King Alyattes

of Lydia destroyed the old city in the early sixth century B.C., and for several centuries there was only a group of villages at and near the site. At the end of the fourth and beginning of the third century B.C., Antigonus and Lysimachus refounded and fortified the city on its present site. It had a small landlocked harbor, as well as a spacious mooring area in the gulf. Its importance was due not only to its port facilities but also to the fact that the region around it was fertile and productive and that it was the terminal point of a key road that ran eastward up the Hermus Valley and through central Asia Minor. Its prosperity suffered at times, however, from earthquakes.

As early as 195 B.C., Smyrna put itself on the side of the Romans and built a temple for the cult of the city of Rome. Smyrna never wavered from her loyalty to Rome, and Rome protected and rewarded the city (except when one of Julius Caesar's murderers, Trebonius, took refuge there and Dolabella took the city and executed Trebonius). When the province of Asia, in 23 B.C., was given permission to build a temple to the Emperor Tiberius and eleven cities contended for the privilege, the Roman Senate decided in favor of Smyrna in view of its long loyalty and many services to Rome (Tac. Ann. IV.55-56). It vied with Ephesus and Pergamum for the title of first city of Asia. Strabo calls it the "most beautiful of all" the cities, and tells of its excellent city plan, its paved streets, and noteworthy public buildings, including the Homereium, for Smyrna was one of the cities which claimed to be the birthplace of Homer; however, Strabo notes the lack of proper drainage for the city's well-paved streets (*Geography* XIV.1.37).

The religious life of Smyrna included a variety of cults. The city took pride in the imperial cult. There was also the cult of the "mother of Sipylos," a form of Cybele-worship. Reverent honor was paid to Homer; this implied acceptance of the Homeric pantheon. The city was the home of a considerable number of Jews, who showed aggressive hostility toward the Christians.

How or when Christianity first came to Smyrna we cannot say. Our first information comes from the book of Revelation; Smyrna is one of the seven churches addressed (1:11; 2:8-11), and it and Philadelphia are the two churches which receive unqualified praise. The church at Smyrna was not outwardly wealthy; it was undergoing tribulation; a limited period of intense persecution (symbolized by "ten days") lay just ahead, and prison was to be the lot of some of the Christians; the slanders of the Jews, whose hostility to the church deprived them of all right to call themselves true Jews or their assemblies a true synagogue, seem to have been prominently involved in this satanic attack; but all Christians who proved faithful in this severe test would receive the "crown of life" and deliverance in the final judgment. Attempts have been made to connect phrases in this passage of Revelation with aspects of the life of Smyrna: Christ "the first" speaks to the church of the city which eagerly claimed to be "first of all"; Christ "who died and came to life" speaks to the city which was destroyed by Alyattes and refounded

under Antigonus and Lysimachus; the church in the city which had been steadfastly loyal to Rome is warned to "be faithful unto death," if need be, in its loyalty to Christ; the church in the city which was pulsing with life in its trade and civic activity is reminded that the "crown of life," true and eternal life, can come only from Him who died and is "alive for evermore" and has the "keys of Death and Hades" (1:18).

When Ignatius, bishop of Antioch in Syria, was being taken to Rome for martyrdom *ca.* the second decade of the second century A.D., he conferred with Christian leaders on his journey through Asia Minor, and later wrote letters to some of the churches there. Of the seven letters (including one to the church at Rome), four were written during Ignatius' stop at Smyrna; of the other three, written at Troas, two went to Smyrna, one to the whole congregation and one to the bishop Polycarp. They make clear the developed organization of the church at Smyrna; it had a bishop, a body of elders, and a body of deacons (Ign. Smyr. 12:2). They indicate, however, that a docetic tendency was strong in the Smyrnan church, and those of that docetic viewpoint rejected the leadership of the bishop, absented themselves from the Eucharist and common prayer, and were lacking in practical kindness to Christians in need.

Some forty years later, *ca.* A.D. 156, this same Polycarp, then at least eighty-six years old, was burned alive as the "twelfth martyr in Smyrna," after he had confessed being a Christian and refused the proconsul's appeal that he renounce his faith. The Jews again were prominent in the persecution, and although the day was a sabbath, they were active not only in the clamor for condemnation but

also in gathering wood for the fire. The Martyrdom of Polycarp, written soon after the event in the form of a letter from the church of Smyrna to the church of Philomelium, tells this story and is the first detailed account of a Christian martyrdom after that of Stephen (Acts 6:8-8:3).

SNAIL [שבלול, possibly moistener (from slimy trail); cf. Arab. *balla*, to moisten; KJV חמט (Lev. 11:30; RSV SAND LIZARD)]. Any of a group of mollusks of the family Helicidae, with and without external shells.

The meaning of שבלול (*shabbēlūl*) in Ps. 58:8—H 58:9 is obscure. The Jewish tradition has taken it to be "snail, slug" (which receives some support from the Arabic cited above); Jerome takes it as *vermis*, "worm," but the LXX, the Vulg., and the Peshitta interpret it as "wax." See *bibliography*.

See also FAUNA § G1.

Bibliography. On snails in Palestine, see Tristram, *NHB* (1867), pp. 295-97. On the meaning of שבלול, G. R. Driver, *JTS*, 34 (1933), 41-43, argues for an "efflux" (an early miscarriage); this is followed by Koehler, *Lexicon*, p. 942.

W. S. McCULLOUGH

SNAKE CHARMING. Serpents abound in Palestine, and the art of snake charming was known in the country (cf. Eccl. 10:11; Isa. 3:3; Ecclus. 12:13). The technical term employed for this activity was שח, "to whisper, to charm." In two instances "snake charming" is used in biblical literature metaphorically: (a) to depict enemies, who are "serpents, and adders which cannot be charmed" (Jer. 8:17); and (b) to describe sinners, who are

like the deaf adder that stops its ear,
so that it does not hear the voice of charmers [מלחשים]
(Ps. 58:4-5—H 58:5-6).

I. MENDELSON

SNARE. See TRAPS AND SNARES; HUNTING.

SNOW [שלג; שָׁלֵג]; FROST [קרח, alternately ICE; הַנֶּמֶל, alternately HAIL; קִישׁוּר; כַּפּוּר, HOARFROST]. Snow is relatively rare in Palestine, which is on the margin of the subtropical climatic zone. It falls in the hills on an average of three days annually, and sometimes there is a heavy fall (II Sam. 23:20; I Macc. 13:22). The snow cap on Mount Hermon (cf. Jer. 18:14), however, is visible from many parts of the land, and snow in the Bible is proverbial for its whiteness (Exod. 4:6; Num. 12:10; Ps. 51:7—H 51:9; Isa. 1:18; Rev. 1:14), for its cleanness (Job 9:30), for its beauty (Ecclus. 43:18), and, in the heat of harvest, for its refreshing coolness (with food or drink [?]; Prov. 25:13). Job speculates on the storehouses in the sky from which snow comes (Job 38:22; Ps. 147:16). For its use in simile, see Prov. 25:13; etc.

The word קרח means either "frost, extreme cold" (Gen. 31:40; Jer. 36:30), or "ice" (Job 6:16; 37:10; 38:29; Ps. 147:17). In Job 37:10 water is said to harden like cast metal under the cold wind, which is God's breath (cf. Job 38:30; Ecclus. 43:20). The

"morsels" of ice in Ps. 147:17 would be hail. הַנֶּמֶל, "frost" (Ps. 78:47), more probably refers to severe hail or large hailstones (cf. Exod. 9:24-25). On the other hand, "frost" in Ps. 148:8 (קִישׁוּר) resembles smoke and is associated with snow; it may mean "snow squall." "Hoarfrost" (כַּפּוּר) is frozen dew (Exod. 16:14; Ps. 147:16; Ecclus. 43:19); and, like dew, it was believed to fall imperceptibly from the sky (Job 38:29).

Bibliography. D. Ashbel, *Introduction to Meteorology* (in Hebrew; 1940), pp. 246, 268; D. Baly, *The Geography of Palestine* (1957), pp. 50-52. R. B. Y. SCOTT

SNUFFDISHES. KJV translation of מַחֲתָה (RSV "trays") in Exod. 25:38; 37:23; Num. 4:9. See SNUFFERS.

SNUFFERS [מלקחים, מוזמרות]. Implements used in tending the lamps in the tabernacle and the temple. Though more often described as made of gold, they were more likely of bronze, as stated in II Kings 25:14=Jer. 52:18.

The use in I Kings 7:49-50=II Chr. 4:21-22 of both מוזמרות ("snuffers") and מלקחים ("tongs") suggests that the words refer to two different instruments. The derivation of מוזמרות from זמר, "to prune," points to some sort of scissors or similar cutting instrument, used for trimming the wicks of the lamps (II Kings 12:13; 25:14=Jer. 52:18). The derivation of מלקחים from לקח, "to take, grasp, seize," as well as the fact that its form is a dual, implying a thing consisting of two parts, indicates the meaning "tongs." This is borne out by the description in Isa. 6:6, where one of the seraphim uses "tongs" to take a burning coal from the altar. In Exod. 25:38; 37:23; Num. 4:9 "snuffers" (מלקחים; KJV "tongs" in Exod. 25:38; Num. 4:9) and "trays" (KJV "snuffdishes"; elsewhere "firepans" or "censers") are mentioned together as part of the equipment of the golden lampstand of the tabernacle. It may be inferred that they were used to remove and dispose of the burned portions of the wicks.

J. L. MIHELIC

SO sō (סוּא; LXX Σηγαρ, Σωα, Σοβα) (II Kings 17:4). A "king of Egypt" ca. 725 B.C., who persuaded Hoshea of Israel to stop paying tribute to Shalmaneser of Assyria.

No known pharaoh of the time can be fitted to the name. However, the Assyrian annals about this time mention an Egyptian general in Asia by the name of Sib'e, and the Hebrew consonants could be differently pointed and read "Sive." If so, this Sive may have been commander for one of the many small dynasts in the Egyptian Delta, before that region was united by Ethiopian conquest a few years later.

Bibliography. J. B. Pritchard, ed., *ANET* (2nd ed., 1955), p. 285, with note 3. For the traditional view that this was the Ethiopian king Shabako, see M. F. L. Macadam, *The Temples of Kava*, vol. I (1949), p. 124 (note 1), p. 132.

J. A. WILSON

SOAP [ברית; בַּר, purify]; KJV SOPE. Cleansing substance obtained by decomposing oil, probably olive oil, with an alkali gotten by burning certain

saliferous plants (e.g., *Salsala kali*). The two appearances of "soap" suggest that it was used for washing both the body (Jer. 2:22) and clothes (Mal. 3:2).

The infrequent use of terms which can confidently be translated as "soap" or a synonym reflects the fact that the ancients used other means of cleansing. The body was covered with oil and scraped or rubbed. Fabrics were cleaned either through the use of wood ashes or more often, as today in the Near East, by being pounded on stones while wet. Utensils were rubbed with LYE. H. N. RICHARDSON

SOCKET [תַּב (KJV HINGE); KJV אָדָן (RSV BASE)]. Ancient doors and gates generally swung on pivots set in stone sockets, many of which have been

SOCO sō'kō [שׁוֹכּוֹ, thorny place(?)] (I Chr. 4:18; II Chr. 11:7; 28:18); **SOCOH** [שׁוֹכָה, שׁוֹכָה] (Josh. 15:35, 48; I Sam. 17:1; I Kings 4:10); KJV **SOCOH**, **SOCHO**, **SOCHOH** sō'kō, **SHOCHO**, **SHOCHOH**, **SHOCO** shō'kō. 1. A town in the SHEPHELAH between Adullam and Azekah (Josh. 15:35). When the Philistines, with Goliath, were preparing to attack, they took over Soco, and then encamped at Ephesdammm, between Soco and Azekah (I Sam. 17:1). Rehoboam repossessed and fortified Soco (II Chr. 11:7). In the reign of Ahaz it was again taken over by the Philistines (II Chr. 28:18). The name was still known to Eusebius, Jerome, and the writers of the Talmud, and, in fact, has been preserved to modern times in Khirbet Shuweikeh, a site on the Wadi es-Sant (ancient Valley of ELAH). However, though Shuweikeh preserves the ancient name (in the diminutive form), the actual site is probably Khirbet 'Abbad, a short distance to the W, since pottery of biblical times has been found only at the latter site. One of the four royal potteries producing a standard-size jar (two baths) in the later Judean Monarchy was at Soco. See WEIGHTS AND MEASURES § C4e; POTTERY § 3.

2. A town in the S hill country of Judah, near Debir and Eshtemoah (Josh. 15:48). It is to be identi-

fied with another Khirbet Shuweikeh, some ten miles SW of Hebron, a little E of modern Dahariyeh.

3. A place in the third district of Solomon, under the administration of BEN-HESED (I Kings 4:10). This is probably the same as No. 67 in the great topographical list of Thut-mose III (see EGYPT) and No. 38 of SHISHAK. It has been identified with Tell er-Ras, near a third Shuweikeh, some ten miles NW of Samaria, just N of modern Tul-Karem.

4. Soco occurs in I Chr. 4:18 seemingly as a personal name, in a genealogy of the "sons of Judah." However, some of the names in the context are likewise place names in S Judah—e.g., Eshtemoah (Eshtemoa), Gedor, and Zanoah—found also in the context of Josh. 15:48. It is possible, therefore, that the origin of the name in I Chr. 4:18 is from the town in S Judah (see 2 above). W. F. STINESPRING

SODERING. KJV form of **SOLDERING**.

SODI sō'dī [סוּדִי, (one familiar with the) counsel of Y(?)] (Num. 13:10). The father of Gaddiel, who was sent from the tribe of Zebulun to spy out the land of Canaan.

Bibliography. M. Noth, *Die israelitischen Personennamen* (1928), p. 152. R. F. JOHNSON

SODOM sōd'am [סוּדַם; Σόδομα]. One of the "cities of the valley." It is the most often mentioned of the five cities—thirty-six times in all, alone sixteen times. Sodom is the wicked city par excellence, and its destruction, along with that of GOMORRAH, is often held out as a warning of the punishment which the Lord will bring upon those who neglect or sin against God.

The S boundary of the Canaanites ran from Gaza to Sodom, Gomorrah, Admah, and Zeboiim (Gen. 10:19), and this may indicate the topographical order of these cities from S to N. Lot, looking toward the Jordan-Dead Sea Valley, chose this region and moved his tent as far as Sodom (13:10-12).

CHEDORLAOMER, along with the three other eastern kings, made war on Bera king of Sodom and on the kings of the other four cities of the valley (Gen. 14:2). Fourteen years later, the four eastern kings returned and put down the rebellion of the five cities and, after a raid to the S, returned and fought with the same five kings (vs. 8) in the Valley of SIDDIM. Those of the forces of Sodom and Gomorrah who did not fall into the pits of bitumen in this valley were driven into the mountains. It was on this occasion that Lot was captured, to be rescued subsequently by Abram (vss. 12-16).

So great was the sin of Sodom and Gomorrah that the Lord was determined to destroy them, especially after Abram could not find even ten righteous persons in Sodom (Gen. 18:20-33).

The two angels, who had gone from Abraham to Sodom, found Lot sitting in the gate of Sodom (Gen. 19:1). They revealed to him the Lord's intention to destroy the city. The next morning they induced Lot, his wife, and their two daughters to flee from Sodom to the hills. Lot begged that he be allowed to go to ZOAR and there be spared, and his plea was granted (vss. 12-23).

"Then the LORD rained on Sodom and Gomorrah brimstone and fire from the LORD out of heaven; and he overthrew those cities, and all the valley, and all the inhabitants of the cities, and what grew on the ground." (Gen. 19:24-25.) The next morning, from near Hebron, Abraham saw the smoke from the destroyed cities of the valley arising "like the smoke of a furnace" (vs. 28).

1. Location. No traces of the cities of the valley have been found, but the sites may with great probability be located in the area now submerged under the waters of the S part of the Dead Sea. Here, S of the peninsula el-Lisan ("the Tongue"), was doubtless the Valley of Siddim, which originally had been a fertile plain, well watered by the five streams, prolonged westward, which today flow from the E and the SE into this part of the Dead Sea.

It is implied in Gen. 14:3—"the Valley of Siddim (that is, the Salt Sea)"—that this valley came to be submerged under the surface of the Dead Sea. The parenthesis seems to have been added centuries later, after this part of the valley had become inundated.

Other evidence points to the location of Sodom and the other cities under what is now the S part of the Dead Sea. Jebel Usdum, a mountain *ca.* 5 miles long and over 700 feet high, largely a mass of crystalline salt, is situated along the S end of the W side of the Dead Sea. Its Arabic name, meaning "Mount of Sodom," may preserve the name of the ill-famed city, and this in turn may further suggest that Sodom lay near the S end of this valley.

The erosion of this salt mountain over the centuries has caused pinnacles to stand out, which ancient and modern writers have likened to Lot's wife. The myth of Lot's wife's being transformed into a "pillar of salt" (Gen. 19:26) may not only have arisen

Courtesy of the American Schools of Oriental Research

73. Pillar of salt on Jebel Usdum

to explain a natural formation resembling a human figure, but may indicate that Sodom was situated near this mountain of salt (Fig. SOD 73). Perhaps Sodom might be located on the (westward prolongation of the) stream, Seil en-Numeirah.

Further evidence of this location of the cities of the valley is provided by the site of Bab edh-Dhra', which apparently had been a pilgrimage place. It is situated *ca.* 5 miles from, and *ca.* 500 feet above, the shore of the Dead Sea, SE of el-Lisan. Since no traces of habitation have been found elsewhere in this region, we must conclude that the homes of these pilgrims who frequented Bab edh-Dhra' must have come from this area, once the Valley of Siddim. The fertile fields around the mouths of the streams which flow into this SE part of the Dead Sea suggest that the ancient Valley of Siddim had been even more fertile.

There are many reasons for believing that this submerged area had once been an inhabited plain. The maximal depth of the water in this S embayment is *ca.* 18 feet, whereas N of the peninsula of el-Lisan a depth of over 1,200 feet has been ascertained by soundings.

Sometime in our era some natural force, perhaps an earthquake, caused the water of the N part of the Dead Sea to flow over into the plain to the S, the Valley of Siddim. Then, too, evaporation has not kept pace with the inflow of the water of the Jordan. It is estimated that the rise of the water level of the Dead Sea amounts to *ca.* three inches annually.

2. Destruction. The manner of destruction of the cities of the valley is suggested by the accounts of ancient writers, and modern investigations furnish credence to their reports. That fire played a major part in the catastrophe is indicated by the biblical account (Gen. 19:24-28) and by the remarks of Strabo, Diodorus, Josephus, and Tacitus. Brimstone (sulphur) can hardly have played any appreciable part in this catastrophe. Rather, seepages of bitumen (or asphalt), petroleum, and the accompanying gases emanating therefrom may well have caused a great explosion and conflagration. The ancients were unacquainted with the properties of gases, but certainly

the presence of gas must be indicated by the ancient writers in their mention of the soot which tarnishes, the deleterious atmosphere which withers plants, and the ill-smelling odors, all emanating from this Dead Sea region.

Investigations conducted by geologists for oil companies have revealed abundant traces of petroleum (as well as of gas and exudations of bitumen) in the area around Jebel Usdum.

Noteworthy is the statement in Gen. 19:28 that Abraham, looking from near Hebron toward Sodom and Gomorrah, saw that "the smoke of the land went up like the smoke of a furnace." For it to be seen from a distance, a heavy, black smoke seems indicated; and, with the ancient comments in mind, one may well associate the phenomenon with oil.

Thus it seems possible, even probable, that the destruction of Sodom and the other cities of the valley was brought about by a great conflagration caused by the ignition of petroleum seepages and accompanying gas. This may have been started by a stroke of lightning, which might be associated with the phrase "from the LORD out of heaven" (Gen. 19:24).

The approximate date of the catastrophe may be conjectured from the evidence afforded by the pottery found at Bab edh-Dhra'. This festival site seems to have been frequented from ca. 2300 to ca. 1900 B.C. The cessation of visits to this site may coincide with the destruction of Sodom and the other cities of the valley, whence came the "pilgrims" to this site. And the corollary would be that here also we would have evidence that Abraham was living ca. 1900 B.C., or ca. the end of the twentieth century B.C.

According to Stephanos of Byzantion (seventh century A.D.), among the bishops present at the Council of Nicaea in A.D. 325, there was a Severos, Bishop of Sodom. A strange title for a bishop! Could a Sodom have been rebuilt on the W shore of the Dead Sea? The same authority locates Engaddi (En-gedi) near "Sodom of Arabia." By A.D. 381, it is a Bishop of Zoar who appears to represent this region.

The modern state of Israel founded a town named Sodom just N of Jebel Usdum. Near here, in 1953, Israel's first oil well went into operation. So the association of Sodom with oil may be traced back over a period of four thousand years.

SODOM, SEA OF [*Mare Sodomiticum*]; **KJV SODOMITISH SEA** sōd'ə mī'tīsh. The name employed in II Esd. 5:7 for the lake called in the OT the Salt Sea and now commonly known as the DEAD

SEA. The name "Sea of Sodom" is derived from the prominence of the metropolis of Sodom, which was situated near the lake's S shores. W. H. MORTON

SODOM, VINE OF. See VINE OF SODOM.

SODOMITE sōd'ə mīt. An English common noun, derived from the story of SODOM in Gen. 18-19, meaning a male person who engages in sexual relations with another male. The men of Sodom demanded that Lot surrender his two male guests (angels) to them for sexual purposes: "Bring them out to us, that we may know them" (Gen. 19:5; for the meaning of "know," see SEX). The wickedness of Sodom became proverbial (Isa. 3:9; Lam. 4:6; II Pet. 2:7-10; Jude 7). See HOMOSEXUALITY; PROSTITUTION § 3b. O. J. BAAB

SOJOURNER [גַּר, see GER; נֹשֵׁב, from יָשַׁב, dwell; LXX πάροικος, later προσήλυτος]. A person living in mutually responsible association with a community, or in a place, not inherently his own.

The technical term in Hebrew is גַּר, which is translated "sojourner" or "stranger" (Exod. 22:21; 23:9; Lev. 23:22), as in the case where the noun and a verbal form appear ("the stranger [גַּר] who sojourns [גָּר] among you"; Exod. 12:49 P; cf. vs. 48; Lev. 19:33-34; etc.), or "alien" (Exod. 23:12; Deut. 1:16; 14:21; Jer. 22:3; Ezek. 47:21-23; etc.; see STRANGER; ALIEN). The term נֹשֵׁב appears in H and P (I Chr. 29:15; Ps. 39:12), usually along with גַּר (Lev. 25:47, etc.; Num. 35:15; I Chr. 29:15; Ps. 39:12). The LXX usually translates both גַּר and נֹשֵׁב by πάροικος, and in late texts frequently uses προσήλυτος. In the NT, παρόικησεν is translated "he sojourned" (Heb. 11:9); πάροικον, "aliens" (Acts 7:6); ξένοι και πάροικοι, "strangers and sojourners" (Eph. 2:19); παροίκους και παρεπιδήμους, "aliens and exiles" (I Pet. 2:11).

In the basic meaning of the term, a sojourner is a person who occupies a position between that of the native-born and the foreigner. He has come among a people distinct from him and thus lacks the protection and benefits ordinarily provided by kin and birthplace. His status and privileges derive from the bond of hospitality, in which the guest is inviolable. The *ger* is everyone who comes traveling and, settling in a strange place for a shorter or longer period, has claims to protection and full sustenance (cf. Gen. 18:1-8; 24; Judg. 19:16-21; Job 31:32). Placing himself under the protection of a particular clan or chieftain, or a person, the sojourner in turn assumes responsibilities. Abraham sojourned in Egypt (Gen. 12:10 J), and in Gerar in a relationship of loyalty to the chieftain Abimelech (20:1 E; 21:23 JE); as "a stranger and a sojourner" (גַּר-וְתוֹשֵׁב) among the Hittites he had no right to own land but asked for this right so that he might bury Sarah (23:4 P; cf. Heb. 11:9). Lot as a sojourner had no right to stand against the practices of the men of Sodom (Gen. 19:9 J). After going to Abimelech, Isaac became a sojourner there and Abimelech protected Isaac and his wife from maltreatment at the hands of the Philistines (26:1-11 J). Jacob was a sojourner with Laban (32:4 J) and claimed maltreatment (31:3-7 E). Esau and Jacob sojourned in the land of Canaan and so increased in property and flocks that Esau moved to Seir (36:6-8

P). The covenantal promise to Abraham (17:7-8 P), reiterated in Isaac's blessing upon Jacob (28:1-4 P) and in God's disclosure to Moses (Exod. 6:4 P), was that he would give to Abraham's descendants "the land of Canaan, the land in which they dwelt as sojourners" (cf. Ps. 105:6-15 = I Chr. 16:13-22). When the brothers of Joseph told Pharaoh that they had come to sojourn in Egypt, he granted their petition to dwell in the land of Goshen and asked them to supply him with overseers of his cattle (Gen. 47:1-6 J). Israel sojourned in Egypt (Isa. 52:4) and was oppressed (Gen. 15:13 J; Deut. 26:5-11; Ps. 105:23-25; Acts 7:6). According to popular etymology the name of Moses' son is interpreted as though it were Gersham—i.e., "sojourner there" (Exod. 2:22 J). A man from the hill country of Ephraim sojourned in Gibeah (Judg. 19:16). David as a sojourner made the interests of his Philistine patron Achish, king of Gath, his own (I Sam. 27:2-3, 12; 28:1 ff). The man who claimed he had dispatched Saul said: "I am the son of a sojourner, an Amalekite" (II Sam. 1:13). Elijah sojourned with a widow in Zarephath who acted for his welfare and he pleaded with God for hers (I Kings 17:20). The exiles in Babylon who had acquired wealth and position are referred to in Cyrus' decree as sojourners (Ezra 1:4). The worshiper in the temple is God's personal guest who receives divine protection and must do God's will (Ps. 15:1). Some of the reasons for a person or group's becoming sojourners may be cited: to escape famine (Ruth 1:1; II Kings 8:1) or military attack (II Sam. 4:3); to find sanctuary after a land has been destroyed by conquest (Isa. 16:4); to be in Jerusalem for celebration of the Feast of Weeks (II Chr. 15:9); to maintain the nomadic ideal, the Rechabites dwelt as sojourners in Judah (Jer. 35:7); a Levite might settle down as a sojourner wherever he found a place or a person or group where he could perform his function (Judg. 17-18; 19:1; cf. Deut. 12:12; 16:11, 14; etc.). The basic meaning of גַּר, "sojourner," cited in the above passages, underlies Acts 7:6; Eph. 2:19; Heb. 11:9; I Pet. 2:11.

The above instances show that the root meaning of "sojourner" is especially evident in early texts, and that this basic meaning persists in the later stages of biblical history and literature. Two further connotations developed in the Covenant Code and D, and in the postexilic period.

In the Covenant Code (Exod. 20:22-23:33) and preceding decalogue (20:1-17) and D, *ger* ("sojourner," "stranger") designates, not the immigrant Hebrew, but the indigenous population of Palestine conquered by the Hebrews. The popular conception that close connection exists between a land and its tutelary deity, a connection which demands that whoever settles in a land must serve the national deity, had not been followed in the cosmopolitan syncretism prevailing in Israel before the Deuteronomic reformation (cf. I Kings 11:7-8; 16:31-33; 20:34). A check on syncretism, the Deuteronomic reformation renewed the popular conception just cited at the same time that it was primarily an attempt to make Israel's heritage with Yahweh the structure and content of life in Israel.

Three perspectives informed the laws concerning the sojourner: (a) Israel is to remember that once she

was a sojourner in Egypt and that God saw her oppression, delivered her, and established her in a bounteous land (Exod. 22:21; Deut. 5:14-15; 10:17-22; 16:10-12; 23:7; 24:14-22; 26:5-11).

b) The God who saved Israel from bondage is the protector of the poor and weak and disinherited; the purpose of Israel's economy is to supply need, and special attention must be given to the welfare of those who need help. "You shall not oppress a stranger [*ger*]; you know the heart of a stranger, for you were strangers in the land of Egypt" (Exod. 23:9). "For the LORD your God . . . is not partial and takes no bribe. He executes justice for the fatherless and the widow, and loves the sojourner, giving him food and clothing. Love the sojourner therefore; for you were sojourners in the land of Egypt" (Deut. 10:17-19; cf. Exod. 22:21-24; Deut. 14:28-29; 24:14-22; see also Pss. 94:6; 146:9; Jer. 22:3; Zech. 7:10; Mal. 3:5).

c) The covenant between God and Israel depends upon the participation of all members of the community in its requirements and benefits; Israel is a holy people, the land is not to be defiled (Deut. 21:23), and the sojourner must conform as far as possible to the covenant regulations. "You shall rejoice in all the good which the LORD your God has given to you and to your house, you, and the Levite, and the stranger who is among you" (Deut. 26:11; cf. vs. 12-15; 29:10-13; Exod. 22:21-24). The sojourner is subordinate, dependent upon Israel's charity and forbearance; his position of inferiority is indicated: by the personal pronominal suffix "your" (of you) attached to גַּר (Exod. 20:10; Deut. 1:16; 5:14; 29:11), by the fact that he is classed with those occupying a position of dependence like the fatherless and the widow (24:17-22), he can eat the flesh of an animal that has died a natural death, forbidden to the Israelites (14:21), the *gerim* are called wood-gatherers and drawers of water for the Israelites (29:11). At the same time he is almost an Israelite (cf. 23:7-8); he participates in the assembly (29:10-13; Josh. 8:30-35); he is entitled to the benefit of the tithe (Deut. 14:28-29); he is to be judged the same way as an Israelite (1:16); he is entitled to equal justice (24:14); he is expected to keep the law and observe festivals along with the native Israelites, joining in the celebration of the sabbath, the festival of deliverance in the D decalogue (5:14-15), the Feast of Weeks (16:10-12), Tabernacles (16:13-14), the offering of first fruits (26:11).

In the postexilic period the trend in the D perspective (c) cited above is extended. Deutero-Isaiah takes up the promise to Abraham ("By you all the families of the earth will bless themselves"; Gen. 12:3b J) and sets forth the universal scope of Yahweh and Israel:

This one will say, "I am the LORD's,"
another will call himself by the name of Jacob,
and another will write on his hand, "The LORD's,"
and surname himself by the name of Israel
(Isa. 44:5; cf. 42:1-4; 49:6; 55:4-5).

Also accentuating the D perspective (c) were the drastic reforms of Ezra and Nehemiah, which excluded from the community all who would not conform. In postexilic writings, *ger* ("sojourner," "stranger," "alien") designates a naturalized alien, a proselyte (in the Holiness Code and P, the LXX

translates *ger* by προσήλυτος; cf. Aramaic גֵּייר, "prose-lyte"; in the Mishna *ger* denotes one who has become incorporated into the covenant people by circumcision and adoption of Israel's laws, and the verb נתגיר means "to become a convert"). The PROSELYTE is as much a member of the community of Israel as the native-born. Again and again it is reiterated that there is one law for the native-born and the proselyte: "For the assembly [קהל], there shall be one statute for you and for the stranger [גר] who sojourns [הגר] with you, a perpetual statute throughout your generations; as you are, so shall the sojourner [גר] be before the LORD. One law and one ordinance shall be for you and for the stranger who sojourns with you" (Num. 15:15-16; cf. 9:14; Exod. 12:49; Lev. 17:15; 24:16, 22; etc.). For the proselyte equally as for the native-born, Israel was "his people" (Lev. 17:8-9). A sojourner is to show the same fidelity to Yahweh as an Israelite (Lev. 20:2; Ezek. 14:7). He has the same rights (Num. 35:15; Ezek. 47:21-23), and is bound by the same laws, whether civil (Lev. 24:13-22), moral and religious (18:26; 20:2; 24:16), or ceremonial (Exod. 12:19; Lev. 16:29; 17:8-15; 22:18; Num. 15:14, 26, 30; 19:10). Certain distinctions do persist: if he would keep the Passover, he must be circumcised (Exod. 12:48); a Hebrew sold into servitude to a *ger* may be released before the Jubilee year (Lev. 25:47-55); in certain passages where גר (19:10), תושב (22:10), גר, תושב (25:23, 35, 47; Num. 35:15) appear, the sojourner is in an inferior position.

The basic meaning of גר, "sojourner," is employed to express Israel's relation to God's favor. Israel lives by God's invitation, "Come and live over at my place," and by doing the will of the divine host: "The land shall not be sold in perpetuity, for the land is mine; for you are strangers [גרים] and sojourners [ותושבים] with me" (Lev. 25:23);

Hear my prayer, O LORD,
and give ear to my cry;
hold not thy peace at my tears!
For I am thy passing guest [גר],
a sojourner [תושב], like all my fathers
(Ps. 39:12);

I am a sojourner [גר] on earth;
hide not thy commandments from me!
(119:19).

SOLDERING [קבץ, to join, fasten, unite]. Soldering is mentioned in a context of idol making (Isa. 41:7). The broad meaning of the word includes "tacking," "riveting," "hammering," etc. (see ANVII). Archaeology gives no evidence of soldering with alloys of lead,

tin, etc., before Roman times. "Hard" solder (copper and zinc) was used in Egypt (2900-2750 B.C.), and soldering with pure silver was found in the tomb of Tut-ankh-Amon.

SOLDIER. See ARMY; WAR, METHODS OF, §§ 4-7.

SOLEMN ASSEMBLY [עֲצוּרָה, gathered assembly] (Lev. 23:36; Num. 29:35; Deut. 16:8; II Kings 10:20; II Chr. 7:9; Neh. 8:18; Isa. 1:13; Joel 1:14; 2:15; Amos 5:21). Alternately: COMPANY (Jer. 9:2—H 9:1). A term used mainly of the community of Israel gathered and separated for a solemn occasion, whether on a stated day of feasting or fasting, or for an extraordinary reason (cf. II Kings 10:20). Israel is always the "assembly of the LORD" (קהל; cf. Exod. 16:3; Lev. 4:13; Num. 20:4); but it is as a solemn assembly that it is in a state of ritual holiness and accomplishes its sacred functions. The term has virtually the same meaning as "holy convocation" (see CONVOCATION, HOLY) except that it stresses the fact of the assembly as such, while the latter emphasizes the summons to it. The term "solemn assembly" is used in a technical sense of the seventh day of the PASSOVER and of the eighth day of Booths (Lev. 23:36; Num. 29:35; Deut. 16:8; II Chr. 7:9; Neh. 8:18). In Isa. 1:13; Amos 5:21 the prophets use it to refer critically to the spirit in which similar stated observances were held. A solemn assembly can also be a special occasion at an extraordinary time, as a fast (Joel 1:14; 2:15); or, even as in Elijah's "assembly for Baal" (II Kings 10:20), a gathering summoned with malicious intent.

In Jer. 9:2—H 9:1 the term ("company") is used of Israel as gathered for purpose of rebellion against God and his prophet. J. C. RYLAARSDAM

SOLOMON סֹלֹמֹן [שָׁלוֹם]; LXX A and LXX B Σαλωμών; Luc. Σολομών, Σαλομών; NT and Josephus Σολομών; Syr. *Sheleimun*; Arab. *Suleiman*). The throne name of Israel's third king (962-922 B.C.). By revelation through Nathan he was given the name Jedidiah (II Sam. 12:25), "beloved of the Lord." According to the same passage, he was called Solomon by David. The name is probably a caritative from שָׁלוֹם (*shalom*), "peace" or "prosperity." The name of Solomon occurs nearly three hundred times in the OT and a dozen times in the NT.

Solomon was the second son of David and Bathsheba; their first son died soon after birth (II Sam. 12:18). Virtually nothing is known of Solomon's family. He was reputed to be a lover of women and the husband of many wives (I Kings 11:1; cf. Song of S. 6:8), particularly foreigners. His chief wife was apparently a daughter of the pharaoh (I Kings 3:1); for her he built a separate house (7:8b). One other wife is specifically mentioned—Naamah an Ammonitess (14:21, 31), who was the mother of Rehoboam, Solomon's successor. Two daughters are known—Taphath (4:11) and Basemath (4:15), both of them wives of Solomon's district supervisors.

1. **Sources.** The sources are limited to a few passing references in II Samuel, I Kings, and I and II Chronicles, all of the Kings materials being embedded in a Deuteronomic framework and those of Chronicles in priestly writings. The compiler drew on official sources for the most part, the "book of the

acts of Solomon" (I Kings 11:41), temple archives, and likely some prophetic reminiscences (II Chr. 9:29). The first and second chapters of I Kings belong to the history of David.

There is no connected history of Solomon. There are only numerous individual stories and anecdotes, such as those of his securing of the kingdom for himself (I Kings 2:12-46), the organization of his kingdom (4:1-28), the plans for the temple and other building enterprises (chs. 5-8), the visit of the Queen of Sheba (10:1-13), the mercantile activities of Solomon (10:26-29), the prophecy of Ahijah of Shiloh in connection with the rebellion of Jeroboam (11:26-39), and some others often descriptive of the most intimate details of his rule. Perhaps some of the ex-

tended materials dealing with the temple are due to the special interests of the compiler, but this does not explain the broken character of the narratives concerned with other phases of his life and activity. These facts, however, do not mean that we do not have a great many priceless stories, detailed enough to give us an excellent picture of the period and the man.

2. **Solomon's anointing.** Normally Solomon would not have succeeded to the throne. The next in line after Absalom was Adonijah, who, however, acted prematurely in his bid to become king. He had provided himself with the proper accouterments for a crown prince (I Kings 1:5-6) and had won the support of two of the most powerful personalities in his father's kingdom—Joab, the commander of the army, and Abiathar, the priest who had been with the king since his outlaw days. Though Adonijah's attempt to gain the throne miscarried, it did bring the problem of succession to a head (vs. 11).

Thus, while the legitimate heir was in the act of having himself proclaimed king formally, another party was busy with other plans of its own. This party consisted of Zadok, Benaiah, Nathan and Shimei, and Rei (whose position is not given). Whether they had been inspired by Bathsheba or vice versa is not known, but in any case they now combined to put Solomon in the place of his father. There appear to be overtones of palace intrigue here, perhaps inspired by rivalry and suspicion between Abiathar and Zadok, Benaiah and Joab. Nathan the prophet was the prime schemer. He advised Bathsheba to approach the rapidly weakening king and remind him of the oath which he swore to her that Solomon should be king (I Kings 1:17) and to inform him of the movement of Adonijah, carefully pointing out the danger confronting her and her son should it succeed (vs. 21). She did as she had been instructed. When she withdrew from the presence of the king, Nathan, in accordance with a prearrangement, entered posthaste and confirmed her words. The dying king was too weak to resist such formidable pressure, had he even wished to do so. Bathsheba was summoned, and the oath with respect to her son's succession was confirmed. Then Zadok, Nathan, and Benaiah were instructed to carry out the order of the king (vss. 33-35). With as much pomp and ceremony as could be provided, the agents of David took Solomon to the spring of Gihon, where Zadok performed the official act of anointing him king (vs. 39). With them was the famous bodyguard of Cherethites and Pelethites (*see* DAVID), who held the real secret of power: Adonijah either had not taken them into his confidence or had failed to win them. In addition to the anointing, other symbols of royalty were present at the investiture of Solomon—riding on the king's mule and the sounding of the trumpet. As the popular response to their act proves (I Kings 1:40), Solomon's partisans were well organized.

Absent from Solomon's induction were the elders of Judah and Israel. The reason is not far to seek. This was a new way of kingmaking. There was no charismatic experience on the part of Solomon, no popular approval, and no demonstration of the

ability of the anointed one. There was no specific divine act or precept, except possibly the oath sworn by David or the participation of the priest and prophet of God. It was only the word of David which brought the final solution to the problem of succession. Solomon owed his position to the fact that he was the son of the favorite wife of David, not to any marked gifts or military prowess. He was a victim of palace diplomacy and had not the slightest conception of the tremendous price paid by his father for the kingdoms over which he bore rule. Solomon was born with a silver spoon in his mouth, and this fact is apparent in almost every act recorded of his administration of the heritage of David. He had other qualities, however, which he doubtless developed in the atmosphere of his youth and which he would not have acquired had he not had the advantages of a favorite boy in the royal court.

3. Solomon takes over the kingdom. Solomon occupied the position of coregent with his father as long as the latter lived, though to all intents and purposes he was the real ruler; David was on his deathbed when Solomon was anointed. The first decision Solomon had to make as king concerned his brother Adonijah, whose movement to gain the throne collapsed as soon as the followers of Solomon shouted: "Long live King Solomon!" (I Kings 1:39). While Adonijah and his followers were celebrating what they thought was a triumph, they heard the acclaim of the crowd for Solomon (vss. 41-48) and were informed of the true state of affairs by Jonathan the son of Abiathar. The followers of Adonijah dispersed, and he himself laid hold of the horns of the altar, where he was given both assurance and warning by Solomon (vs. 52). He swore allegiance to the king and then was permitted to retire to his own house.

David is reputed to have given Solomon a charge, a kind of last will and testament (I Kings 2:1-9), in which he advised him to keep the commandments of the Lord, to avenge the deeds of Joab and Shimei, and to treat the sons of Barzillai the Gileadite with kindness because of the assistance their father had rendered to him during Absalom's rebellion. However that may be, Solomon was not long in dealing with his possible opponents. The result of Bathsheba's plea on behalf of Adonijah's request for Abishag (vss. 13-21) was a singular reversal for her, although she may have regarded the plea as harmless, since her son was well established in the popular mind as king. Abishag was not, in fact, one of David's concubines (I Kings 1:4), but the populace doubtless regarded her as a member of the harem. The harem was the sole possession of the king; it went with the kingdom. Solomon, recognizing at once that to accede to the request of Adonijah would undermine his own authority, had him executed by Benaiah (2:25). Abiathar, who was David's right-hand man so far as priestly matters were concerned, was unfrocked and banished to Anathoth (vss. 26-27)—the narrator generously regards this act as the fulfilment of the word of the Lord against the house of Eli (I Sam. 2:27-36). Next Solomon dealt with Joab, David's powerful commander of the army (I Kings 2:28-35). Finally, Shimei was kept under house restrictions. When he inadvertently went to Gath to bring back two of his

slaves who had been apprehended there, he was called to account for violating the king's orders. The sentence, of course, was death.

Thus Solomon by virtually a single stroke had removed his opponents and rendered his position secure. It is interesting to observe that Benaiah, Joab's successor, was the chief executioner for the king. The ruthlessness and barbarity by which Solomon crushed the opposition are in marked contrast to the way in which his father handled his opponents. The method employed reflects the change both in the times and in the character of the man. As we shall see later, he made amends for his treatment of Abiathar by catering to the supporting elements of the priesthood. But such a course was not possible in the case of Joab, who was one of the most feared military leaders of his day. The news of Joab's death was in all probability the signal for the revolts of Hadad of Edom (I Kings 11:14-22) and Rezon of Zobah (vss. 23-25).

David's conquest of Edom had been quite thoroughgoing (II Sam. 8:13-14; I Chr. 18:12-13), but not to the extent that "every male in Edom" (I Kings 11:15) was slain, for some of the servants of the king of Edom had escaped to Egypt, taking along with them Hadad, an Edomite prince, who was but a child at the time. When news reached Hadad, now grown to manhood, that both David and Joab were dead (I Kings 11:21), he made preparations to return to his homeland. There is no reference to Solomon's resistance, and Hadad doubtless operated in the region most inaccessible to him. Hadad did not interfere, to our knowledge, with Solomon's vast industries and shipping interests at Ezion-geber, but that he did cut off a slice of the Edomite territory belonging to David's empire is beyond dispute.

Ominous stirrings also appeared at the extreme NE limits of the empire. Rezon, one of the chiefs of Hadadezer, whom David had subdued (II Sam. 10:15-19), broke away from Solomon and became the leader of a group of outlaws. Apparently he took Damascus (I Kings 11:23-25), where he and his men entrenched themselves. The narrator affirms that "he was an adversary of Israel all the days of Solomon, doing mischief as Hadad did" (vs. 25). This can mean only that he kept hammering away at the outlying districts of the Aramean states in the region of Damascus which Solomon could no longer control effectively. In any case Solomon was living on inherited prestige. He never conducted a serious military campaign, though he did a considerable amount of fortification (I Kings 9:15-19) along with his other building projects.

4. Organization and administration. The census of David and the recent uprisings demonstrated the need for some kind of effective organization of the empire. Probably there were other matters, such as preparation for building enterprises, administrative needs, and increasing popular dissatisfaction, which made some kind of closer control necessary. Tradition has it that the census came toward the very end of David's reign, when there was little or no time to carry out the fiscal and administrative policies growing out of the survey of his resources.

Consequently it fell to Solomon's lot to put into

<i>Officials</i>	<i>I Kings 4:2-6</i>	<i>II Sam. 8:16-18</i>	<i>II Sam. 20:23-25</i>
1. Commander	Benaiah	Joab	Joab
2. Chief of bodyguard	—	Benaiah	Benaiah
3. Recorder	Jehoshaphat	Jehoshaphat	Jehoshaphat
4. Scribe(s)	Elihoreph and Ahijah	Seraiah	Sheva
5. Tribute chief	Adoniram	—	Adoram
6. Chief of district governors	Azariah	—	—
7. Steward	Ahishar	—	—
8. Priests	Zadok and Abiathar	Zadok and Ahimelech	Zadok and Abiathar
9. Personal priest	Zabud	Sons of David	Ira
10. Priest	Azariah	—	—

effect the program worked out by David's officials. The Chronicler (II Chr. 2:17-18) says Solomon took a census of the resident aliens in Israel, which may well be so. That Solomon's administrative policy was closely related to that of his father is shown by the fact that some of the officers of David were continued, together with all the offices; two more were added. Table 1 illustrates the situation.

The Solomonic list shows some expansion, as might be expected because of the extension of local controls and the growing requirements of the court for putting into effect its political and religious objectives. In constructing the table, the MT has been followed literally, though there are numerous variants in the Greek (for which see the Commentaries). There is some question also about items 1 and 2 of the first column. But the important fact is that we have two additional officials—i.e., the steward of the palace or royal chamberlain and the chief of the administrative district governors, a kind of governor-general or high commissioner. An interesting sidelight is the prominence of the Zadok and Nathan families, who were perhaps being rewarded for their earlier services to the king. Also to be noted is the merger of the royal bodyguard (Cherethites and Pelethites) with the army. The commander of David's bodyguard, who had taken over Joab's old position, had apparently made the bodyguard a part of the army, for it is not mentioned henceforth in the royal annals. The list clearly underlines the direction of the kingdom away from military operations and toward internal development.

For purposes of administration the nation was divided into twelve districts (I Kings 4:7-19). As it now stands, the list is incomplete, though originally it was not so. A prefect was placed in charge of each of the twelve districts. The list gives the names of the officers and the district for which each was responsible. The districts themselves cut across the old tribal boundaries deliberately, for one of the aims of the promoters of the scheme was to modify local loyalties and thus bind the nation more securely to the central government at Jerusalem. Because of the importance of this new arrangement, it may be well to outline the program presented in I Kings, as given

by W. F. Albright ("The Administrative Divisions of Israel and Judah," *JPOS*, V [1925], 17-54). See Table 2.

Table 2¹

- ... son of Hur, in Mount Ephraim.
- ... son of Deqer, in Maqats, and in Shaalbibim and Beth-shemesh and Ayyalon (and) Bethhanan.
- ... son of Hessed, in Arubboth; he had Socoh and all the lands of Hopher.
- ... son of Abinadab, all of Naphath-Dor (Taphath, daughter of Solomon, was his wife).
- Baana, son of Ahilud, Taanach and Megiddo to beyond Joqneam, and all Beth-shean below Jezreel from Beth-shean to Abel-meholah contiguous to Zarethan.
- ... son of Geber, in Ramoth-gilead; he had the tent villages of Jair (son of Manasseh which is in Gilead); he had the region of Argob which is in Bashan (sixty large cities with walls and bronze bars). Geber, son of Uri, in the land of Gilead (the land of Sihon king of the Amorites and Og king of Bashan).
- Ahinadab, son of Iddo, (in) Mahanaim.
- Ahimaats, in Naphtali [and Issachar?]; he also took Basemath, daughter of Solomon, as a wife.
- Baana, son of Hushi, in Asher [and Zebulun].
- Jehoshaphat, son of Paruh, Bealoth?
- Shimei, son of Ela, in Benjamin.
- One prefect was in the land of Judah.

The list in Table 2 reflects carefully planned divisions which were pretty largely retained subsequently and were of the utmost significance for the purpose for which they were instituted. The whole plan may have followed a general pattern of administration adopted by Egypt or similar methods employed in Mesopotamia. It is to be noted especially that two of the district administrators were directly connected with the royal family by marriage.

Over each district was placed a prefect whose duty was the handling of the business of the district as it concerned the central government at Jerusalem. His

¹ Used by permission of W. F. Albright.

chief responsibility was to see that the stipulated revenue which had to be paid in kind, not in money, was provided to meet the demands of the huge building undertakings of Solomon (*see below*). Each district had to supply one month's needs (I Kings 4:27), comprising rations for the king's tables, provender and grain for his horses, and manual labor for his local building projects. Besides these were the daily offerings, which required no small amount of revenue (II Chr. 8:12 ff).

The *corvée* also required careful organization; even then there were repercussions. As may be seen from Table 3, the numbers of forced laborers in the several accounts tally, though the numbers of officers over them do not. Only I Kings records a levy from Israel; the other forced laborers were aliens.

Table 3

	<i>I Kings</i> 5:13-18	<i>II Chr.</i> 2:17-18	<i>II Chr.</i> 2:2
Burden-bearers	70,000	70,000	70,000
Stonemasons	80,000	80,000	80,000
Levy from Israel	30,000		
Overseers	3,300	3,600	3,600
Total aliens in census		153,600	

According to I Kings 9:20-23; II Chr. 8:7-10, the levy was made from Amorites, Hittites, Perizzites, Hivites, and Jebusites. No Israelites were drafted for work. The Kings passage says Solomon appointed 550 overseers; the Chronicles passage says 250 were appointed.

As the passage from I Kings 9 indicates, Solomon continued the policy of David in converting captives from the surrounding areas into forced laborers. Forced labor, which was widespread in the ancient world, is illustrated by the practice of Mesha king of Moab (830 B.C.), who employed Israelite slaves to cut beans for Qarhoh. In the same manner, foreign groups within Israel were drawn into the *corvée* pool. For normal purposes these groups might have been adequate; but Solomon was not an ordinary king. He was not only extravagant in everything he undertook, but he had such a far-reaching program that normal methods and supplies soon ran out. Hence he was compelled to resort to an Israelite draft—the 30,000 noted in the preceding table (I Kings 5)—which must have been a severe strain on the economy of the country.

A very significant part of the administration of Solomon was the construction of a whole series of fortifications at strategic points in Israel and Judah (I Kings 9:15-19), as well as organization for trade and commerce (9:26-28; 10:22-29). These items will be discussed below and are mentioned here only because they reflect the careful and ambitious plans of the king, together with the enormous requirements of men and material with the consequent weakening of the economy of the empire.

Forced labor was one of the causes for the rebellion of the N tribes under Jeroboam, who was originally one of Solomon's officials (11:28). He is said to have been in charge of the Joseph levy and to have been an efficient servant. His position enabled him to observe the hardships of his people and per-

haps capitalize on them. That his flight had something to do with forced labor or heavy tribute is made evident by the complaints lodged with Rehoboam shortly after the death of Solomon and Jeroboam's return from exile (12:2-4). At any rate, Jeroboam fled to Egypt, where he remained as long as Solomon lived (11:27, 40).

5. Building enterprises. Organization, forced labor, and heavy taxation were demanded by Solomon's extensive building projects, which were so extravagant that they undermined the economic balance of the empire. Solomon inherited the Jerusalem built by David, which consisted of the citadel of Zion with a complex of buildings which surrounded it (II Sam. 5:9). The plans of David called for the building of the house of the Lord (II Sam. 7; hardly altogether midrashic), as hinted at in I Kings 5:3. Since David could not fulfil his desires in this respect, this was the first undertaking of Solomon, though some of the other building projects may have been carried on simultaneously.

Arrangements were made with Hiram of Tyre to supply the requisite lumber for the buildings (I Kings 5). The diplomatic agreements provided that the Tyrian king supply cedar and cypress wood from Lebanon. His men were to supervise the cutting and shipping of the lumber, the servants of Solomon to perform most if not all of the manual labor required (vs. 6). Shipping included transportation from the forests to the sea, the rafting of the logs, their floating to a port along the Mediterranean selected by Solomon, perhaps Joppa (II Chr. 2:16), where they were taken apart and dragged ashore. From thence they were in the hands of Solomon, whose men moved them to Jerusalem (I Kings 5:9). In exchange for services and materials, Solomon agreed to give Hiram "food for my household" (I Kings 5:9). As far as the records go, this agreement (vs. 12) is one of the only two formal treaties which the Israelites ever ratified with a foreign state; the other is the agreement between Asa and Ben-hadad (II Chr. 16:2 ff). After some years the amount of supplies which Solomon sent annually to Hiram, plus the requirements for his own needs, led to his bankruptcy; so that he was compelled to mortgage some of his cities in Galilee (I Kings 9:11). In addition to builders—i.e., the skilled mechanics of Hiram (5:18)—the architect or decorator was a Tyrian (7:13, 40, 45; cf. II Chr. 4:11, 16). There were also the men of Gebal (the Byblos of the Greeks), presumably contracted for on the same basis as the other skilled workmen.

The temple (*see* TEMPLE, JERUSALEM) was begun "in the four hundred and eightieth year after the people of Israel came out of the land of Egypt" (I Kings 6:1), which was also the fourth year of Solomon's reign (I Kings 6:1; II Chr. 3:2).

The temple was built on the old threshing floor of Araunah-Ornan (II Chr. 3:1), where David had erected an altar for sacrifice to the Lord for staying the plague (II Sam. 24:16-25; I Chr. 21:15-25). The location was somewhere in the present area of the Dome of the Rock. Its orientation was toward the E, with the rising sun visible between the pillars of Jachin and Boaz. Its prototype was the Syrian temple—e.g., at Ugarit, Qatna, Tainat, and Megiddo—with certain features such as the capitals and decorations

explained on the basis of Egyptian and Assyrian contacts. This could be expected in view of the fact that Solomon employed a Phoenician architect to draw and execute the plans. Actually the temple was nothing more than a royal chapel, possibly patterned after Assyrian models. Along with the temple came a whole series of ritual innovations, which started the long process of institutionalism which the prophets so roundly condemned when it sublimated the stern religious ideals of the Mosaic cult. The temple and its cults thus were responsible to a large degree for the Canaanization of Israel's religion and for the drive toward a syncretism so apparent in later times when the line between cult symbol and the spiritual content of Yahwism became quite thin and in many instances seemed to vanish altogether.

The completion of the temple in the eleventh year of Solomon (I Kings 6:38) was the signal for a great celebration (ch. 8), greatly expanded by the editor. Solomon's dedication may well have been more elaborate than the ceremonial festivities surrounding the removal of the ark to Jerusalem (II Sam. 6:12-20). In any event, the ark was taken from the city of David and placed in the adytum, the most holy place in the temple (I Kings 8:6). Many sacrifices were offered, as when David brought the ark from the house of Obed-edom to the dwelling place he had made for it in his newly chosen capital. Solomon officiated as a priest both in blessing and in prayer. The poem of I Kings 8:12-13 (II Chr. 6:1-2), though not too clear as it stands, is very old and certainly reflects contemporary thought. Accordingly the temple was regarded as the dwelling place of the Lord, and when the ark, the symbol of his presence, was deposited therein, it signified that he had taken up his residence in the house which Solomon had built. And since the temple was part of the palace complex, the Lord now dwelt in the very house of the king.

The palace formed the second of Solomon's building operations (I Kings 7:1-8). The most celebrated portion of the palace complex was the House of the Forest of Lebanon (7:2-5), so called because of its cedar columns, beams, and paneling. Isa. 22:8 offers a hint as to the purpose of the structure—for the storage of weapons. The Arabic version adds here "a house for his weapons," probably on the basis of the Isaiah passage. The Hall of Pillars (7:6) was probably a portico before the House of the Forest of Lebanon. The Hall of the Throne or the Hall of Judgment (7:7) was completely paneled with cedar and was doubtless the audience room of the palace. The great ivory throne (I Kings 10:18-20) was located there. Solomon's house—i.e., his private residence (I Kings 7:8)—was part of another court, separated in some way from the public halls of the palace ("in the other court back of the hall"). Last of all was the house of Pharaoh's daughter (I Kings 7:8b), to which she was in due time ceremoniously escorted (I Kings 9:24) from David's city (I Kings 3:1; cf. II Chr. 8:11).

Other building operations at JERUSALEM were the Millo (I Kings 9:15, 24; 11:27b) and the "breach of the city of David" (11:27b), both mentioned in connection with the rebellion of Jeroboam. That Solo-

mon constructed sanctuaries for his foreign wives is also a matter of record (I Kings 11:7-8). The narrator hints at the development of a kind of syncretism which is quite understandable in the light of other Solomonic tendencies. It may be that the shrines which he erected for some of his foreign brides were due to political expediency, though we cannot be certain of it.

Outside Jerusalem extensive projects were also carried out.* Solomon fortified a whole series of towns all around his land (I Kings 9:15, 17b-19; II Chr. 8:1-6). The list in I Kings follows geographical lines and indicates an excellent perception for the proper location of such fortifications. HAZOR (1) is in the extreme N, just S of Lake Huleh. MEGIDDO is located near the famous pass between the Carmel range and the highlands of Ephraim. Beth-horon the Lower was to the NW of Jerusalem. Baalath is unknown, but was probably somewhere in the S, possibly somewhere on the route to the Gulf of Aqabah. Tamar was just S of the Dead Sea. Gezer commanded the road between Jerusalem and the N Philistine country; but it is probably a mistake for Gerar, since it is said to have been a marriage dowry presented to Solomon by the pharaoh who had just taken it and since there is no sign of a destruction of Gezer by fire at this time. Fig. WAT 6.

The fortifications and the famous stables at Megiddo* may furnish the best example of the work of Solomon. The older portions of the gate of stratum IV are generally thought to belong to the Solomonic period. (See, however, MEGIDDO § 3d.) From the gate extends an excellent wall which encircled the whole city. There may even have been an outer wall as well. The main wall has been called a "remarkable piece of fortification, . . . an enduring tribute to the might of its constructor." At Megiddo there was also a well-constructed governor's residence. The stables, which are an example of the chariot cities referred to in I Kings 9:19; 10:26, were constructed in buildings stabling about 120 horses, each composed of five units containing twenty-four stalls. The floors were paved with stones. Each stall had its pillar properly holed for purposes of securing the horses, which also served as a support for the roof. Mangers were also provided for each stall. There appears to have been room for something like 300 horses. Similar installations were found at Tell el-Hesi, Gezer, Taanach, and possibly Hazor. In view of the archaeological materials, the numbers of Solomon's chariots and horsemen (I Kings 10:26) as 1,400 and 12,000 respectively, do not appear too extravagant. That he had horses and chariots at Jerusalem can hardly be doubted, but the stables of Solomon under the temple area shown to tourists were used for such purposes only in Crusader times and were certainly not from the Solomonic period. Figs. STA 78-80.

A type of fortification similar to that at Megiddo prevails at Hazor, Beth-shean, Gezer, Tell el-Hesi, Lachish, Ezion-geber, and other places, all of which tend to confirm the biblical tradition of Solomon's activity as a great builder, not only with respect to the palace-temple complex at Jerusalem but also in other centers of his empire. The same may be said with regard to the store-cities (I Kings 9:19).

Finally there is the great refinery at EZION-GEBER,

Solomon's seaport on the Gulf of Aqabah (I Kings 9:26; II Chr. 8:17), which was brought to light by Nelson Glueck in 1938-40. As noted above, the outer wall and gateway were the same type as those of Megiddo and Lachish. But the chief interest in the site is its industrial complex of huge copper and iron smelters where metal was extracted from ores for shipment to other centers of the empire and for export. Some of it was used also for the manufacture of metal articles of all kinds, also for export purposes. Only a king of Solomon's vision, organization, and wealth could develop such a project.

6. Solomon the diplomat and merchant. Such enormous building operations required both labor and materials of vast quantity. Stones for walls, paving, and pillars were abundant in the land. Cedar and cypress timbers were, of course, procured from the Lebanon Mountains under contract with Hiram of Tyre (I Kings 5:8), but as we learn from the elaborate decorations wrought out for his temple and palace, Solomon's predilection for luxury was not satisfied with plain buildings. All kinds of metals were required, some of which came from distant places, others from his own realm. Wide contacts are thus indicated on both the diplomatic and the trade levels.

It will be recalled that Solomon, early in his reign, entered into a marriage alliance with the pharaoh of Egypt in connection with which he received a city (I Kings 3:1; 9:16). Solomon continued the office of recorder (4:3), which had charge of foreign relations. There was the treaty with Hiram (5:1-12; 9:10-14) under which cedar and cypress were supplied for the various building projects of Solomon, for which the latter was compelled in the end to cede certain Galilean towns which proved very disappointing to the Tyrian king. Solomon also had a trade agreement with Hiram (9:26-28; 10:11-12) relative to his Red Sea fleet and possibly also to Mediterranean trade (II Chr. 9:21).

Political arrangements with foreign countries account for many, though not all, of Solomon's wives. His marriage relationships with Moab, Ammon, Edom, and others suggest some plan along the line of holding those states inherited from his father. Just how much is involved is not certain, but such practices were common. The mother of Rehoboam was an Ammonitess. The fact that Solomon built shrines for some of these wives is indicative of their importance for his relations with foreign countries. There are further hints of foreign alliances in I Kings 10:24-25; II Chr. 9:23-24 (though the reference in the latter passage may be to tribute). Nevertheless, they do afford probably a true picture of his worldwide interests and alliances of one kind or another.

Solomon's diplomacy was directed primarily toward commercial ends. As observed above, this was the chief reason for his treaty with Hiram. More significant is the establishment of the great seaport on the Gulf of Aqabah, the home base for his fleet. Hiram and Solomon made a maritime agreement whereby a trade fleet was formed, probably manned by Phoenician sailors and financed by Israel. Once every three years (I Kings 10:22) the fleet made a round trip to Ophir, evidently on the E coast of

Africa somewhere in Somaliland. From Ezion-geber they carried copper and iron and manufactured articles and in exchange brought back gold, silver, ivory, and two breeds of monkeys. In II Chr. 9:21, ships that "went to Tarshish" is generally regarded as an error for "Tarshish ships"—i.e., refinery ships which originally designated Mediterranean fleets, carrying metals from the mining and refinery centers of Sardinia, and possibly farther W, to E ports. It is possible, however, that Solomon had some arrangement with Hiram for mutual assistance by the sailors of their respective fleets on the Red Sea.

Solomon has been called a "copper king" because of his vast shipping and mining interests and his extensive needs for copper for temple utensils. Glueck's explorations in S Palestine have disclosed very extensive copper and iron mining and refining industry all through the great depression between the Dead Sea and the Gulf of Aqabah which is known as the Arabah. Glueck's investigations signally confirm the Deuteronomist's description of it as a "land whose stones are iron, and out of whose hills you can dig copper" (Deut. 8:9). The pottery evidence all points to the conclusion that virtually all the mines and smelters in the region were actively worked in the time of Solomon. David may already have exploited the mines of Edom (II Sam. 8:13-14; I Kings 11:15-16), and if he had done so, Solomon merely continued his father's plans and greatly expanded them. The ceramic remains prove that the operations were manned by Edomite slaves.

Solomon was not completely absorbed in mining, refining, and shipping by sea. According to I Kings 10:28-29, he was engaged in lucrative horse and chariot trade. Albright's translation of these verses makes the situation quite clear: "And Solomon's horses were exported from Cilicia; the merchants of the king procured them from Cilicia at the current price; and a chariot was exported from Egypt at the rate of six hundred shekels of silver and a horse from Cilicia at the rate of a hundred and fifty; and thus (at this rate) they delivered them by their agency to all the kings of the Hittites and the kings of Aram" (*Archaeology and the Religion of Israel*, p. 135). Thus Solomon was a great "horse trader," having actually a monopoly on the horse and chariot trade because he controlled the land trade routes between Syria and Egypt. Moreover, as the archaeological remains of his vast stable projects in many strategic locations in his empire show, he himself was vitally interested in horses and chariots. His military machine was completely modernized and mechanized by comparison with Saul's and David's. He adopted the horse and chariot as his chief weapons, being no longer content with his father's methods.

The visit of the Queen of Sheba (I Kings 10:1-13; II Chr. 9:1-12) was, in all probability, more of a trade mission than anything else, though, of course, diplomatic negotiations were involved. It has been suggested that Solomon's naval expansion stimulated S Arabian trade with the N, though it may actually have been a threat thereto. The queen's appearance at Solomon's court resulted in an exchange of goods from her country for goods which the king was able to provide and which she desired. Her quest of

wisdom was also involved, but the main objective of her long journey was to observe for herself the wealth and power of the famous king who was competing for her trade, and to discover whether the rumors were true (I Kings 10:6). Solomon's commercial expansion was no idle threat; it was real, and he had the power and ingenuity to carry it through. The visit ended in a kind of treaty consummated by the exchange of goods. The sea trade initiated by Solomon vanished, and Jehoshaphat's attempt to revive it was abortive (22:47-48); nevertheless, the numerous references to Sheba indicate that some measure of trade continued over land (e.g., Job 6:19; Isa. 60:6; Ezek. 38:13).

Solomon was not only a trader in his own right, but he also regulated the trade of others by his control of the land routes. The domestication of the camel two centuries earlier made caravan trade much more practicable over long distances. In the N he ruled Zobah and probably, early in his reign, Damascus; in the S he had almost undisputed mastery in Edom, Moab, and Ammon. All trade caravans, therefore, had to cross his territory. He was thus in a position to collect toll and possibly also to determine the type of goods passing through his land. From such caravan traffic Solomon received a sizable amount of revenue (cf. I Kings 10:15), all of which helped to strengthen his economy and raise his prestige. His mercantile agents (vs. 28) too were present everywhere carrying out his trade policies to the same effect.

7. Dreams and visions. Solomon was a many-sided personality. There can be no question that on occasion he was deeply and genuinely religious. So much may be ascertained from his dreams and visions which are recorded in connection with certain specific religious acts or ceremonies, and their character is such that their authenticity cannot be disputed. That some phases have been magnified by the tradition goes without saying, but the absence of any hint of criticism against Solomon's dreams and visions such as Jeremiah (23:25 ff) and the Deuteronomist (13:1-5) leveled against the dreamers of their day is strong argument in favor of their authenticity.

The first dream of Solomon is recorded in I Kings 3:5-15 = II Chr. 1:7-13. It occurred in conjunction with a religious celebration at the old high place at Gibeon, present el-Jib, ca. five miles to the NW of Jerusalem. The Gibeon tradition is somewhat complicated by the older associations with the place itself. Gibeon was one of the cities of the Hivite tetrapolis (Josh. 9:17) respected even by David. The Chronicler places the tent of meeting there (II Chr. 1:3), as well as the brass altar of Bezalel (vs. 5). The ark was already in Jerusalem, but sacrifice there would hardly have been sufficient for Solomon's purpose at the time. The Jerusalem shrine at the threshing floor of Araunah was a local altar to which Israel had not yet become accustomed. Hence Solomon resorted to the sacred altar of burnt offering at Gibeon, outside Jerusalem, which had a much wider appeal and significance, for his sacrifice was for "all Israel."

Sometime during that sacrificial period the Lord appeared to Solomon in a dream with the offer to

grant any request he made. The request of the king has become one of the celebrated passages of the Bible. Because he was young and inexperienced and had to take the place of his famous and respected father, he asked for an "understanding mind to govern thy people, that I may discern between good and evil; for who is able to govern this thy great people?" (I Kings 3:9). The Lord responded favorably to his prayer and promised not only wisdom for judgment (cf. the overtones of the Absalom rebellion [II Sam. 15:1-6]) but also riches and honor and long life if he was as obedient as David his father.

The conclusion of the story is confused; it has Solomon repairing to Jerusalem, where he also offers burnt offerings and peace offerings before the ark. This may, indeed, be a later observation, at least in part indicating the priority of Jerusalem. However, it may equally well be an authentic tradition pointing to the dual system of Jerusalem and Israel set up by David, requiring sacrifice for the city as was done for Israel at Gibeon.

The second vision occurs after the dedication of the temple (I Kings 9:1-9; II Chr. 7:11-22). Commentators are of the opinion that this is a Deuteronomistic expansion of the dream described above. The theme, language, and spirit are comparable to Deuteronomy (e.g., cf. I Kings 9:8-9 with Deut. 29:25-26), and yet there is nothing inherently against the probability of a vision on such an auspicious occasion. In truth, it might be expected at a time when emotional currents were running so strongly and when the sense of achievement was so deeply felt.

Dreams and visions (*see* DREAM; VISION) played a significant role in ancient religion. And Solomon was a typical oriental ruler and thus might be expected to exhibit just such qualities as the Bible attributes to him. Since dreams (by incubation) were the normal method of revelation in his time, he understood and cherished their meaning.

8. Solomon's wisdom. The WISDOM of Solomon is celebrated in Bible and legend. The tradition is stated in I Kings 4:29-34 — H 5:9-14. The story of Solomon's rule, after he had carried out his (or David's) plan of securing the kingdom, begins with his prayer for wisdom (I Kings 3:3-15; II Chr. 1:7-12), which was granted. Immediately after the theophany comes the passage dealing with the king's wisdom in handling the case of the harlots, as if in illustration of the wisdom conferred upon him by the Lord (I Kings 3:16-28). One of the reasons given for the visit of the Queen of Sheba (I Kings 10:1-13; II Chr. 9:1-12) was "to test him with hard questions" (I Kings 10:1b), which Solomon is reputed to have answered with distinction. His wisdom is said to have excelled rumor and her own expectations. The book of Proverbs begins with the following statement: "The proverbs of Solomon, son of David, king of Israel." A large section of the book is entitled: "These also are proverbs of Solomon which the men of Hezekiah king of Judah copied" (Prov. 25:1). The present introductory verse of Ecclesiastes is certainly meant to refer to Solomon. And, of course, he is credited with the Song of Solomon and the apocryphal book Wisdom of Solomon. The narrator of I Kings 4 says he was responsible for 3,000

proverbs and 1,005 songs—typically exaggerated, of course. Even the obituary of Solomon (I Kings 11:41) refers to his wisdom as recorded in the Acts of Solomon, the official record in the royal archives.

To understand the meaning of the wisdom of Solomon, it is essential to investigate the terminology employed in the passages concerned and the general range of capabilities which the tradition assigns to him. In his prayer he asked for an "understanding mind to govern thy people, . . . to discern between good and evil" (I Kings 3:9). The Lord responded by giving him a "wise and discerning mind" (vs. 12). Here wisdom is applied to the judicial process whereby the king governed his people. It is illustrated by the court case which all Israel heard about. From that example all Israel heard about the "judgment which the king had rendered," and "that the wisdom of God was in him, to render justice" (I Kings 3:28). The combination of the terms "to judge," "to discern between good and evil," "judgment," "the wisdom of God," all point to the king's ability to render judicial decision.

The famous (Matt. 12:42; Luke 11:31) Queen of Sheba came "to test him with riddles"; this points in another direction. Wisdom to solve riddles or outwit another person is quite different from that involved in court. It indicates skill along another line entirely. Recall the riddle of Samson (Judg. 14:12 ff), which was propounded by a man who had no judicial qualities at all so far as the records go. The חֵיִלָּה was an enigmatic saying or epigram (cf. Num. 12:8). Thus the Queen of Sheba came to try out Solomon's ability to answer witticisms, to match her wits against his. When she had concluded her series of tests, she not only affirmed the accuracy of the reports which had come to her "of your affairs and of your wisdom" (I Kings 10:6), but said: "Your wisdom and prosperity surpass the report which I heard" (vs. 7). She regarded as exceedingly fortunate those who "hear your wisdom" (vs. 8) and pronounced blessed the Lord who "made you king, that you may execute justice and righteousness" (vs. 9). Here we have a clear turn from riddles to the ability to govern judiciously.

The description of Solomon's wisdom in I Kings 4:29-34—H 5:9-14 is nothing more than a summary of the above-noted observations plus the addition of a few details. According to it, "God gave Solomon wisdom and understanding beyond measure" (4:29—H 5:9), which covers the judicial element. The statement that "Solomon's wisdom surpassed the wisdom of all the people of the east, and all the wisdom of Egypt" (4:30—H 5:10) relates to the realm of proverbs or wise sayings. The fact that "he was wiser than all other men, wiser than Ethan . . ." (4:31—H 5:11), is doubtless based on his supposed lyrical compositions. The "three thousand proverbs" (4:32—H 5:12) connects him directly with the book of Proverbs. The phrase "the wisdom of Solomon, . . . his wisdom" (4:34—H 5:14), which all the peoples and kings of the earth who had heard about it came to witness, is a summary of a summary and includes all the elements noted thus far.

That there is Solomonic material in the collections of the book of PROVERBS can scarcely be doubted,

though there can at present be no certainty as to which one comes from the wise king. He is said to have surpassed in wisdom "all the people of the east, and all the wisdom of Egypt. For he was wiser than all other men, wiser than Ethan the Ezrahite, and Heman, Calcol, and Darda, the sons of Mahol" (I Kings 4:30b-31a—H 5:10-11). This description connects him at once with Mesopotamia, Egypt, and Canaan, whose wisdom must therefore have been known and recognized in Israel, and since in other areas there is definite knowledge of contacts with all these areas, one need not hesitate to believe that Solomon appropriated material in this category also. Tradition may magnify, but it does not originate. The commercial relationships of the period were conducive to all kinds of activities; and travel was extensive. To be sure, what we know of Solomon's administrative policies does not coincide with many of the moral proverbs of the Bible, but there are innumerable wise sayings which could easily have been current in his day.

It is rather significant that, according to the narrator, Solomon "spoke of trees, from the cedar that is in Lebanon to the hyssop that grows out of the wall; he spoke also of beasts, and of birds, and of reptiles, and of fish" (I Kings 4:33—H 5:13). Alt relates this verse to such passages as Job 38-41; Prov. 30:15, 18-20, 24-28, 29-31. Eissfeldt has already referred to some of the latter verses in connection with the statement of the narrator of I Kings just noted. From Egyptian and Mesopotamian sources we know that nature wisdom was as international in scope as the practical wisdom so frequently compared with the book of Proverbs. Since Solomon was concerned almost entirely with cultural interests there can be no doubt that he took great pains to imitate and amplify not only architectural interests but didactic interests as well. In view of the Egyptian and Babylonian-Assyrian lists or catalogues the numbers given in I Kings 4:32—H 5:12 no longer appear so utterly fantastic.

9. Summary. Solomon is said to have maintained his father's kingdom, which extended from the N and E limits of the Aramean state of Zobah to the border of Egypt (II Sam. 8:11-12=I Chr. 18:11-13; I Kings 4:20-25; II Chr. 9:26), though he did have some difficulties with Aramean guerrilla bands around Damascus and with Edomite rebel bands under Hadad (I Kings 11:14-25). How seriously they interfered with his administration is uncertain, but the progress of royal projects seems to indicate that they cannot have been too obstructive. A true assessment of the narrative in the light of archaeology and contemporary history proves that the historians of Israel cannot have exaggerated the splendor of his kingdom too greatly (I Kings 10:14-27; II Chr. 1:15; 9:13-27). His internal organization carried out the program of David, and he added thereto many features of his own design such as his fortifications, chariotry, and vast manufacturing enterprises.

The revolt of JEROBOAM (1) shows that these extensive interests were burdensome, but they had their constructive side. They provided far more security than the nation had known before or was to experience for many years. The nation's population grew;

new cities and towns sprang up everywhere. Religion was accorded a prominent place, though architectural and ritual innovations were not an unmixed blessing. The court records of David and the Gezer Calendar (see ALPHABET § A1b; CALENDAR § 3b), a schoolboy's exercise, demonstrate that cultural interests were advanced. Jesus was certainly right when he spoke of "Solomon in all his glory" (Matt. 6:29).

SOLOMON, PSALMS OF. See PSALMS OF SOLOMON.

SOLOMON, WISDOM OF. See WISDOM OF SOLOMON.

SOLOMON'S PORTICO (John 10:23; Acts 3:11; 5:12). A part of the outer court of Herod's temple. The KJV translates the word στοά as "porch" (not to be confused with the vestibule of Solomon's temple, also called a "porch" in I Kings 6:3 KJV). This portico was the E side of the colonnaded ambulatory that extended all the way around the outer court, as we learn from Josephus (*Antiq.* XX.ix.7). The colonnade on this side rested on a platform supported by a high retaining wall. According to Josephus, who reflects popular tradition, this device was first employed by Solomon (*War* V.v.1; *Antiq.* VIII.iii.9). The temple area of Zerubbabel may also have had a supporting wall and platform at this point, but it seems most likely that the portico and substructure of NT times were entirely the work of Herod's builders (*War* I.xxi.1).

See also TEMPLE, JERUSALEM.

SOLOMON'S SERVANTS. All kings have servants. Who "Solomon's servants" were—his princes and officers—is shown by the lists in I Kings 4:1-19. Presumably "servants" in 3:15 means "ministers." In I Kings 5, Hiram and Solomon have servants (LXX usually δούλοι Σαλωμών); but it is clear from a comparison of vss. 6 and 13 that Solomon's servants and

laborers and, indeed, the *corvée* (כֶּסֶף; vss. 6, 13) reveal the presence of state slaves in Solomon's labor force. The purposes of the *corvée*—temple, palace, and fortifications in Jerusalem and other building elsewhere—are given in 9:15-19. To these must be added the industries of Ezion-geber, also manned by slaves. Vss. 20-22 point out that the *corvée* was raised, not from the Israelites, but from the pre-Israelite inhabitants of the land—Hittites, Perizzites, Hivites, and Jebusites (but cf. Deut. 7:1 for the usual seven). I Kings 9:22 appears to contradict 5:13, but "Israel" in 5:13 could include Israel and these other peoples. The phrase in 9:21: לַמֶּסֶךְ עָבַד (cf. Gen. 49:15; Josh. 16:10) appears to mean total enslavement. "Solomon's servants" (I Kings 9:27; II Chr. 8:18; 9:10) thus included state slaves. Perhaps Solomon even sold the people (freeborn Judeans or *corvée*?) to Egypt in exchange for horses (cf. Deut. 17:16).

For the "sons of Solomon's servants," see NETHINIM; SLAVERY.

Bibliography

1. **OT usage.** The only passage in the OT where this exact phrase is found is Dan. 3:25, where King Nebuchadnezzar sees in the furnace along with Shadrach, Meshach, and Abednego a fourth man whose appearance is that of a "son of the gods," or divine being. In this sense the phrase sometimes occurs in the plural. The SONS OF GOD, or godlike personages, see that the daughters of men are beautiful, and giants are born to their union with these mortal women (Gen. 6:2, 4). "Sons of God" appeared in the presence of the Lord at the time when Job was first put to the test (Job 1:6; 2:1), and at the Creation they all shouted for joy (Job 38:7; cf. Pss. 29:1; 89:6; perhaps 82:1, 6). This usage reflects the older, polytheistic background.

In a different sense, Israel or Ephraim (i.e., the N kingdom) is called God's son or first-born son (e.g., Exod. 4:22-23; Deut. 1:31; 8:5; Ps. 80:16 MT; Jer. 3:19; 31:9, 20; Hos. 11:1; 13:13; Mal. 1:6). The term "son" is also used in reference to David (II Sam. 7:14) and the Davidic king (Ps. 89:26-27). The thought is that God has created and chosen the

nation and its leader, who stand in a relation of filial dependence and obedience to God. In one of the psalms, God addresses his "anointed," a king not otherwise identified, with the words: "You are my son, today I have begotten you" (Ps. 2:7). The idea is also applied to faithful Hebrews in general (e.g., Deut. 14:1; Isa. 43:6; Hos. 1:10). God's loyal people therefore address God as their Father (Deut. 32:6; Isa. 63:16). It is difficult to say whether the words "today I have begotten you," when addressed to a king, originally bore any suggestion that the king so chosen received a nature and character different from that of other men. The only thought may be that at this time God has decided to be a Father to the king, and the king henceforth has the obligations of a son and some of his prerogatives. It cannot be denied, however, that in the later OT books the king has certain supernatural characteristics (see CHRIST § 1).

2. Apoc. and Pseudep. usage. The OT usages are characteristic of the intertestamental literature as well. Here Israel is God's Son (Ecclus. 36:12; Wisd. Sol. 18:13; Jub. 2:20; 19:29; II Esd. 6:58), God is Father (Ecclus. 23:1, 4; 51:10; Wisd. Sol. 2:16; III Macc. 5:7; Jub. 1:28), Jacob is his first-born son (Jub. 19:29), and Jacob's descendants are God's children (Jub. 1:24-25). The Israelites will be God's sons in the future age (e.g., Pss. Sol. 17:28-30); God, like a Father, punishes them for their sins (e.g., Wisd. Sol. 12:19-21); and occasionally the signally righteous are called "sons of God" (Ecclus. 4:10). "Son of God" is not a regular Jewish title for Messiah, although the messianic interpretation of Ps. 2:7, which was much used by Christians, might have suggested the designation of Messiah as Son of God. The occasional instances where the Messiah is addressed by God as "my son" (Enoch 105:2; II Esd. 7:28-29; 13:32, 37, 52; 14:9) may be due to Christian interpolation. There is an exceptional passage in Enoch 106:5 telling of the birth of Noah, who resembles the "sons of the God of heaven"—i.e., the angels. See CHRIST § 2.

3. Jesus as Son of God. Although occasionally the NT refers to Israel as God's Son (e.g., Matt. 2:15, quoting Hos. 11:1), the "sons of God" in the plural are usually the followers of Jesus (but see Luke 20:36, where those who rise from the dead are sons of God). Jesus is the unique Son of God, and the most remarkable fact is that all the gospels, in contrast to Jewish literature, emphasize the point that the Messiah is also Son of God. The phrase, like most of Jesus' christological titles, takes on a number of associations. It is difficult to determine just what was in the minds of the earliest Christians when they used it. Did they think at all of the angels or divine beings of the OT? It can only be said that when the NT mentions the Son in connection with the angels, his superiority to them is generally emphasized (e.g., Heb. 1:4).

a. The Gospel of Mark. The oldest complete gospel preserved to us, that of Mark, uses "Son of God" as its favorite designation of Jesus. The first verse, which may be the gospel's original title, reads: "The beginning of the gospel of Jesus Christ, the Son of God." The phrase "the Son of God" is omitted by

two important MSS, Sinaiticus (8) and Koridethi (Θ), by the church father Origen, and in part of the quotations in Irenaeus; but it is probably genuine, because it is in accordance with the evangelist's style. At the Cross the centurion who is probably a pagan, exclaims: "Truly this man was a son of God!" (Mark 15:39).

In Mark the phrase has several points of reference: (a) God proclaims Jesus as his Son. This occurs at the Baptism, where Jesus sees the heavens opened and the Spirit descending like a dove upon him, whereupon a voice comes from heaven: "Thou art my beloved Son; with thee I am well pleased" (1:11). "The Beloved" may be a designation of Messiah (cf. Eph. 1:6), or it may mean God's "only" or "unique" Son. The phrase translated: "With thee I am well pleased," might also be rendered: "I have decided on you"—i.e., chosen you. If the evangelist speculated about it at all, he may have thought that Jesus became Son of God at this moment. The first part of the voice from heaven seems to be a reminiscence of Ps. 2:7, and the "western" text of Luke—i.e., Codex Bezae (D) and the OL—in the parallel passage Luke 3:22 quotes the psalm directly: "Today have I begotten thee." The second half of Mark's voice from heaven alludes to Isa. 42:1 and refers to the Servant whom God has chosen (see SERVANT OF THE LORD). The story of the Transfiguration is likewise climaxed by the words from heaven: "This is my beloved Son; listen to him" (9:7). Here the background is messianic and eschatological. Jesus is attended by Moses and Elijah, both of whom were regarded as forerunners of the Messiah and were sometimes believed to have ascended into heaven without experiencing death. For a moment the disciples are given a vision of the glory which Jesus will have in heaven and will bear with him when he returns. "Son of God" in these passages suggests not only Messiah but also the Lord of II Cor. 3:7-4:6, in whose face the glory of God shines out, not temporarily, as in the face of Moses, but permanently.

b) To be Son of God is also to be SON OF MAN. The Son of man comes in the glory of his Father with the holy angels (8:38). Indeed, the traits of the transfigured Christ are reminiscent of the glorified Son of man.

c) "Son of God" is used as a title of Messiah. At the hearing before the high priest, Jesus is asked: "Are you the Christ, the Son of the Blessed?" (14:61)—"the Blessed" being used to avoid pronouncing the name of God. Jesus' answer is: "I am." One passage in Mark seems to reject the idea that the Messiah inherits his dignity as a descendant of David: "David himself calls him Lord; so how is he his Son?" (12:35-37).

d) "Son of God" is the title given Jesus by demons and pagans. Demons, presumably because they are spiritual beings, recognize the nature of Jesus before the disciples are able to do so (3:11; cf. 1:24: "the Holy One of God"). The insane man in the country of the Gergesenes or Gerasenes cries out: "What have you to do with me, Jesus, Son of the Most High God?" (5:7). "The Most High God" was a title which might refer to the God of Israel or, when used

by pagans, to the highest god of their pantheon. Mark appears to have written his gospel primarily for former pagans, to whom the phrase "Son of God" would suggest a divine being like Asclepius—i.e., a divinized hero who healed men's diseases and was their savior. The term therefore suggests the whole miraculous side of Jesus' work, as in the story of the walking on the water, when Jesus says: "Take heart, it is I" (or "I am," ἐγώ εἰμι; 6:50; the phrase is used by God himself in Exod. 3:14-15).

e) "Son of God" suggests also the filial relationship of Jesus, who obeys God even to his death. In the parable of the wicked husbandmen (12:1-11) God finally sends his beloved Son, who is killed and cast out of the vineyard. In Gethsemane, Jesus prays: "Abba, Father, all things are possible to thee; remove this cup from me; yet not what I will, but what thou wilt" (14:36). There are some things that neither the angels nor the Son know, but only the Father (13:32). As Son of God in this sense, whoever does the will of God is Jesus' brother and sister and mother (3:35). God is the disciples' Father in heaven (11:25). See CHRIST § 5.

b. Q. In Q, the disciples are taught to love their enemies and thereby to become sons of their Father, who does the same. They must become "perfect" or "merciful" like their Father (Matt. 5:44-48 = Luke 6:35-36). The prayer given them by Jesus begins with "Father" or "Our Father who art in heaven" (Matt. 6:9 = Luke 11:2). If they, evil though they are, know how to give good gifts to their children, how much more will the heavenly Father give good things (or the Holy Spirit) to those who ask him (Matt. 7:11 = Luke 11:13). See Q.

But while in Q those who depend on God and imitate his loving kindness are his sons, Jesus is uniquely the Son of God. The tempter so addresses him twice (Matt. 4:3, 6 = Luke 4:3, 9). As Son of God he might have power to turn stones into bread and to cast himself down from the wing of the temple without hurt. These may be thought of as characteristics of the Messiah, who has miraculous powers, but the term "Messiah" is not used in Q, and the Christology of the Q tradition may center in an angelic Son of God. On the other hand, it is just possible that Mark's story of the Baptism was originally part of Q; or that at any rate the baptism and temptation stories are part of a single tradition in which Jesus is Son of God, chosen and beloved. It should be emphasized that in the temptation story Jesus, as God's true and obedient Son, will not violate his Father's teaching as found in holy scripture.

Q contains another highly significant passage, Matt. 11:25-30. Only part of this (vss. 25-27) is paralleled in Luke 10:21-22. Here Jesus addresses God as "Father, Lord of heaven and earth," and thanks him because the revelation has been hidden from the wise and understanding and revealed to babes. He then declares that all things have been delivered to him by his Father and that no one knows the Son but the Father, nor does anyone know the Father except the Son and anyone to whom the Son chooses to reveal the Father. This is more like the teaching of the Fourth Gospel than that of the Synoptics, for in Jesus' synoptic teaching it is gen-

erally presupposed that God the Father is known to all devout believers, whether they are disciples of Jesus or not. It has therefore been conjectured that the passage originally contained no reference to the hiddenness of the Father. The secret now being revealed would, on this theory, be the identity of the Son. The Messiah, according to Jewish teaching, could not be recognized until Elijah came to anoint him or until he was revealed in some other way (see, e.g., Just. Dial. 8.4). In the case of Jesus, the Son's identity was presumably first made known at the Baptism. Thereafter it is recognized by the "babes."

Matthew's passage concludes with an appeal to those who toil and are burdened to accept Jesus' yoke, which is easy, and to learn from him. The reference may be to the "yoke of the Torah" or the "yoke of the kingdom," phrases known in rabbinical literature. There is a further allusion to the great appeal made by wisdom in the conclusion to Ecclesiasticus (51:13-30). Sometimes, therefore, it is thought that in this passage Jesus embodies the heavenly wisdom of Prov. 8:22-31; Wisd. Sol. 7:22-8:1, through whom the worlds were created. The form of the passage also suggests that of certain divine self-revelations known in pagan literature. The wisdom ideas included here have parallels in the Pauline letters. In I Cor. 1:24, Christ is the power of God and the wisdom of God. This wisdom has been hidden from the rulers of the world (I Cor. 2:6-9) and is a stumbling block to the Jews and foolishness to the Greeks (I Cor. 1:23).

c. Luke. Luke clearly regards "Son of God" as a title of the Davidic Messiah. Gabriel, in his annunciation to Mary, says:

He will be great, and will be called Son of the
Most High;
and the Lord God will give to him the throne of his
father David,
and he will reign over the house of Jacob for ever;
and of his kingdom there will be no end
(1:32-33).

This language is completely biblical and messianic and would seem to come from a very primitive Christian theology. In contrast to Mark and Q, which could be understood as teaching that Jesus became Son of God at his baptism, Luke appears to say that he is Son of God at least from his birth, even though his full investiture with messianic dignity may come later.

The Holy Spirit will come upon you,
and the power of the Most High will overshadow you;
therefore the child to be born will be called holy,
the Son of God (1:35).

This again is theologically undeveloped. Apart from Mary's question in 1:34: "How can this be, since I have no husband?" and the statement in 2:5 that Mary is still Joseph's betrothed, the story is very much like that of the birth of Samuel in I Sam. 1 (see VIRGIN BIRTH). The important point is that the birth of the Son of God is wondrous.

In other places Luke's editorial work shows that he identifies "Son of God" and "Messiah." The demons hail Jesus as Son of God, and he does not permit them to speak because they know that he is

Messiah (4:41). In the transfiguration story God addresses Jesus as his Son, his Chosen ($\delta\ \epsilon\kappa\lambda\epsilon\lambda\epsilon\gamma\mu\epsilon\omicron\varsigma$; 9:35), while in 23:35 the Messiah of God is called the Chosen ($\delta\ \epsilon\kappa\lambda\epsilon\kappa\tau\acute{o}\varsigma$). When, in 22:69-70, Jesus predicts that the Son of man will hereafter be seated at the right hand of God, his questioners say: "Are you the Son of God, then?" and he answers: "You say that I am."

The Son-of-God sayings in Luke, as in Mark and Q, sometimes strike the filial note. Mary reproaches the boy Jesus because she and his father (i.e., Joseph) have sought him sorrowing. Jesus answers: "Did you not know that I must be in my Father's house?" (2:49). Twice on the cross Jesus addresses God as Father (23:34, omitted by some MSS and versions; 23:46).

Luke also refers to Adam as son of God (3:38) and to God as the Father who will give the disciples the kingdom (12:32). In Luke's form of the controversy with the Sadducees, Jesus says that in the future age people will not marry or die, since they are equal to angels "and are sons of God, being sons of the resurrection" (20:35-36). This is very Semitic language, and the "sons of God" are practically identical with angels.

d. Matthew. An analysis of Matthew shows that he frequently adds to his sources, Mark and Q, the phrase "my Father" or "my Father who is in heaven" (e.g., 7:21; 10:32-33; 20:23; 26:29). Whereas Luke 12:8 reads: "Everyone who acknowledges me before men, the Son of man also will acknowledge before the angels of God," the parallel Matt. 10:32 is as follows: "Every one who acknowledges me before men, I also will acknowledge before my Father who is in heaven." Though both forms contain some Semitic traits, Luke's appears to be more primitive. Matthew has clearly replaced "Son of man" with the idea of Son of God. Matthew also adds "your Father who is in heaven" (18:14), but in one instance Mark (11:25) also has the phrase, and the later evangelist has simply taken it over in Matt. 6:14-15. "My Father" occurs frequently in places where Matthew may use a special source or oral tradition (e.g., 15:13; 16:17; 18:10, 19, 35; 25:34; 26:53), and "your Father" and related phrases in 5:16; 6:1, 4, 6, 18; 18:14; 23:9. It appears, therefore, that Matthew develops with equal emphasis the thoughts that God is Jesus' Father and that he is the Father of the disciples.

Into his sources at various points Matthew also inserts the phrase "Son of God." The demons address Jesus in this fashion (8:29; cf. Mark 1:24). Peter hails Jesus as "the Christ, the Son of the living God" (16:16; cf. Mark 8:29). The high priest adjures Jesus to say whether he is "the Christ, the Son of God" (26:63; cf. Mark 14:61), and twice while he is on the cross he is reproached for having said that he was the Son of God (27:40, 43; cf. Mark 15:29-32). Matthew's form of the Great Commission bids the disciples baptize into the name of the Father, the Son, and the Holy Spirit (28:19; *see* TRINITY).

Once in the special material it is implied that the disciples are sons of God (17:26). As sons of the King they are not required to pay the temple tax, but in order to avoid scandal, they should neverthe-

less pay. This doctrine of Christian freedom is similar to that of Paul.

Matthew's story of the Annunciation and the Virgin Birth (1:18-25) curiously does not use the phrase "Son of God." But in the narrative of the flight into Egypt, Matt. 2:15 quotes Hos. 11:1: "Out of Egypt have I called my son," a passage that originally referred to Israel as God's son. It may be that the evangelist thought of Jesus as the true representative of Israel and his return to the homeland as typified by the Exodus. In any case, like Luke, he seems to have regarded Jesus as Son of God from the time of his birth or conception. The Synoptic gospels have no clear, explicit idea of Christ's pre-existence.

To both Matthew and Luke, then, the term "Son of God" is primarily one of Jesus' messianic titles, and it can be used almost interchangeably with "Messiah" and "Son of man." It calls attention, however, to his miraculous birth, to his filial relationship to God, and to his relationship to his disciples, who are also—in a true, though different, sense—sons of God.

e. Jesus' use of the idea. The foregoing provides the basis for consideration of Jesus' own possible use of the concept (*see* JESUS CHRIST). It is characteristic of the Synoptic gospels that they do not quote him as using the phrase "Son of God." The term is used by others, while he himself employs "Son of man." He is not often represented as speaking of "the Son" in an absolute sense, and scholars often question the genuineness of the passages where he is said to do so. Many of the references to God as "my Father" appear to have been introduced by Matthew. The theological tendency which produced the Gospel of John, with its numerous self-revelations, seems already to have been at work.

There is less reason to question the references to God as "your Father," though Matthew has increased the number of them, or the address "Father" or "Abba" in prayer. Jesus apparently had a strong sense of filial relation to God and emphasized God's fatherly relation to mankind (*see*, e.g., the Q passages Matt. 5:44-48; 6:9; 7:11 and parallels). This aspect of Jesus' teaching may be one of the principal factors which led to the development of Christology, and it probably explains why to the evangelists he is the unique Son of God.

f. The Pauline letters. Although Paul's letters are earlier in date than the Synoptic gospels, they usually represent a more advanced theology. This is true as regards Christology as in other respects. Paul uses the term "Son of God," often in connection with God's love and his adoption of believers as his sons, although he employs the titles "Christ," "Christ Jesus," "Jesus Christ," and "Lord" much more frequently.

In his earliest letter, I Thessalonians, Paul uses the term "his [i.e., God's] Son" in connection with the hope of Christ's return from heaven (1:10). This picture of the PAROUSIA is reminiscent of some of the Son-of-man passages in the Synoptics. A slightly later letter, I Corinthians, speaks of the Son as the Messiah. "When all things are subjected to him, then the Son himself will also be subjected to him

who put all things under him, that God may be everything to every one" (I Cor. 15:28). Some church fathers omit the words "the Son," but the usual reading of the text may be genuine. The Son, according to this passage, will have a temporary messianic kingdom. See KINGDOM OF GOD; ESCHATOLOGY OF THE NT.

Another passage, Rom. 1:3-4, may be an example of Paul's missionary preaching. The apostle speaks of the good news of God "concerning his Son, who was descended from David according to the flesh and designated Son of God in power according to the Spirit of holiness by his resurrection from the dead, Jesus Christ our Lord." This is a careful statement. As compared with the speech attributed to Peter in Acts 2:36: "Let all the house of Israel therefore know assuredly that God has made him both Lord and Christ, this Jesus whom you crucified," the Pauline formula avoids the thought that Jesus became Son of God only after the Resurrection. He was marked out or declared as such by the Resurrection. A distinction is further made between what he was externally (κατὰ σάρκα) and what he was spiritually.

Paul probably believed that Christ, as Son of God, was pre-existent. When the full time had come, God sent out his Son, made from a woman, made under the law (Gal. 4:4; cf. Rom. 8:3). There is no suggestion here of the Virgin Birth; it is simply that when he sent his Son into the world, God made him subject to all human conditions, including membership in the Jewish community (cf. Phil. 2:5-11).

In other places Paul speaks of the Son in connection with his fundamental gospel. E.g., his call to be an apostle came when God decided to reveal his son in (or to) Paul (Gal. 1:15-16; cf. 1:1). Christ Jesus was proclaimed as Son of God to the Corinthians (II Cor. 1:19), and they were called into communion with God's Son (I Cor. 1:9).

Paul's principal contribution to the idea is in the working out of the relationship between Christ and other men as sons of God. God sent his Son under the conditions of human creatureliness to redeem those who were under the law and to make it possible for them to receive adoption. Because Christians are now sons, God has sent the Spirit into their hearts, crying: "Abba! Father!" (Gal. 4:4-6; cf. Rom. 8:14-16). Believers have been reconciled by the Son's death and will be saved by his life (Rom. 5:10). God sent his own Son in flesh like sinful flesh, and thus sin was condemned in the flesh (Rom. 8:3). Believers will therefore be freed from sin, and from its consequence, death, for adoption means the redemption of their bodies (Rom. 8:23). Indeed, it has been God's plan that they should be conformed to the image (εἰκὼν) of his Son, so that he should be the first-born among many brothers (Rom. 8:29). Through faith the believers are all sons of God in Christ Jesus (Gal. 3:26). All this was motivated by the love of God and Christ. God did not spare his own Son (Rom. 8:32); Paul says that the life he now lives he is able to live because of faith in the Son of God, who loved him and gave himself for him (Gal. 2:20).

"Son of God" in Paul therefore calls attention to

the relation between God and Christ which existed even before Christ came into the world and which is manifested in Jesus' love and obedience. This and much more is summed up in Col. 1:12-20, where Paul develops his Christology most completely. Here he speaks of the Father, "who has qualified us to share in the inheritance of the saints in light. He has delivered us from the dominion of darkness and transferred us to the kingdom of his beloved Son, in whom we have redemption, the forgiveness of sins. He is the image [εἰκὼν] of the invisible God, the first-born of all creation; for in him all things were created. . . . He is before all things, and in him all things hold together. He is the head of the body, the church; he is the beginning, the first-born from the dead, that in everything he might be pre-eminent. For in him all the fulness of God was pleased to dwell, and through him to reconcile all things, whether on earth or in heaven, making peace by the blood of his cross." See INCARNATION, THE.

g. Hebrews. Toward the end of the first century, the Letter to the Hebrews develops further the idea of Paul that the world was created through the Son of God. The author's method is to start from the messianic texts, II Sam. 7:14; Ps. 2:7, and by making a christological use of numerous other OT passages, to establish his view of the person and work of Christ. In contrast to the former, partial revelation through the prophets, God has now spoken through his Son, who is heir of all things and through whom the aeons (ages or worlds) were made (Heb. 1:1-2). "He reflects the glory of God and bears the very stamp of his nature, upholding the universe by his word of power" (1:3), and is now enthroned at God's right hand, far above the angels (1:4). Here we find a doctrine similar to that of Philo's LOGOS and established by a method of scripture interpretation similar to that of Philo, the difference being that Christ is clearly a person distinct from God the Father. As Son, Christ is ruler over God's house, the Christian community (3:6); he is equated with the anointed king of Ps. 45 (Heb. 1:8-9); and as a great high priest who has passed into the heavens to offer a perfect sacrifice and intercede for his people (4:14), he is typified by Melchizedek (5:6; 7:3, 28). Despite his dignity as Son, or perhaps as a mark of his filial relationship, he learned obedience through suffering and was perfected (5:8-10). It is uncertain whether the author has in mind such parts of the gospel tradition as the Gethsemane story; at any rate, his doctrine of Jesus' sonship has two sides, and Christians are sons of God as in the gospels (2:10; 12:5-8).

h. The Gospel of John. "Son of God" is the title of Jesus most characteristic of the Gospel of John. It is coupled with the titles "king of Israel" (1:49), "Messiah" or "Christ" (11:27; 20:31), and "Son of man" (5:27-29), or rather these are parts of Jesus' divine sonship. Jesus is the unique Son of God and not of human origin (1:12-14, 18; 8:58; 13:1-3). As such he is unknown to the world until revealed (6:42; 8:19; 19:9). He has been sent to save the world, and one must believe in him to be saved (3:16, 18, 35-36). God has given all authority into his hands, so that he is equal with God (3:35-36;

5:18; 10:18, 30, 34-36; 16:32; 17:10; 20:28). Having been given this authority, as creator he bestows life and executes judgment (5:21-24). Another aspect of his sonship is his unfailing loyalty to the Father (2:16); in this world he imitates the Father by doing his work (5:17, 19-30). It is unnecessary for the Son to testify to himself (5:31-32), for the witnesses are John the Baptist, the work of Jesus, the Father, and the Scriptures (5:33, 36-37, 39); instead of seeking his own glory, he is glorified by God (8:50-54; 11:4; 12:27; 14:13, 28; 17:1). Those who believe in his name are given the authority to become children of God (1:12) or sons (8:35-36). They are thus branches of the true vine (15:5, 14-16). Their relation to Christ is analogous to the relation of Christ to the Father (10:14-15; 17:21; 20:17, 21). Thus the idea of the divine sonship is climaxed in the Fourth Gospel. This sonship is sometimes called "metaphysical," but since such categories of thought are foreign to the NT, it would be better to say that in John's mind the sonship of Christ is not moral or adoptive, but that Christ is fully the Son of God as human beings are children of their earthly parents. See CHRIST § 11.

i. The First Letter of John. The closely related First Letter adds very little to the doctrine. Its principal theme is its demand of full faith in Jesus as Son of God (I John 3:23; 4:14-15; 5:5, 20). This faith binds the church in union with the Father and the Son (4:14-15), and the church bears witness to it (1:1-3), as does the Father (5:9-12), while he who denies it is antichrist (2:22-24). As Son of God, Jesus destroys the works of the devil (3:8), cleanses his people with his blood (1:7), expiates their sins, and gives them life (4:9-10; 5:11-12).

j. The Apostolic Fathers. The somewhat confused Christology of the Shepherd of Hermas is based entirely on the idea of Christ as Son of God, the term "Christ" being used but once (Herm. Vis. II. 2.8) and the name Jesus not at all. The most difficult passage is the allegory of the slave in Herm. Sim. V.2-6, which tells how a certain man chose a slave and told him to fence his vineyard, promising him freedom as a reward. Since the slave weeded the vineyard and thus did more than he was commanded, the owner, after consulting his beloved Son, decided that the slave should be joint heir with the Son. In one passage (Herm. Sim. V.5.2) it is explained that the slave is the Son of God, and further that God made the Holy Spirit to dwell in the flesh of the slave, and since the flesh did not defile the Spirit, God chose this flesh as *κοινωνός*, companion of or sharer in the Holy Spirit (Herm. Sim. V.6.5-6). This would seem to teach an adoptionist Christology and one which distinguishes between the eternal Son and the incarnate Son. On the other hand, the Shepherd tells Hermas that the Son of God is not given the appearance or guise of a slave but great power and lordship (Herm. Sim. V.6.1); a distinction is drawn between the Son and the slave in V.6.4, and in V.6.7 Hermas is taught that *all* flesh in which the Holy Spirit has dwelt, and which has been kept spotless, will receive a reward. Thus Hermas has probably confused the idea of the eternal Son of God with the adoption of Christians as sons of God.

In other passages the Son of God is identified with the law of God (Herm. Sim. VIII.3.2-3) and with the Holy Spirit, who speaks to Hermas in the form of the church (Herm. Sim. IX.1.1). The Son in one vision is identified with a rock which is very old, because he is older than all creation and counselor to the Father (Herm. Sim. IX.12.2; cf. IX.14.5, where it is said that the name of the Son of God is great and incomprehensible, and supports the whole world), and with a new gate because he was manifested in the last days of the consummation and one cannot enter into the kingdom of God or approach the Lord except through him (Herm. Sim. IX.12.3-6). Here there are apparent echoes of John 3:5; 14:6.

Other books of the Apostolic Fathers emphasize the idea of Jesus as Son of God but add no new teaching. In the letters of Ignatius, the Virgin Birth is taught (Ign. Eph. 18:2; 19:1; Smyrn. 1:1), as well as the Johannine idea of Christ's intimate union with the Father (Ign. Eph. 3:2; 5:1; Magn. 1:2; 7:1). The Epistle to Diognetus, in an eloquent passage reminiscent of Paul and John, speaks of God's sending Christ in gentleness and meekness and as a king might send his son (Diogn. 7:2-4).

*SON OF MAN [בן אדם, בן אנוש, בן אנוש; ὁ υἱὸς τοῦ ἀνθρώπου; Aram. ܒܪ ܐܢܫܐ]. A term for man; human being; an apocalyptic figure; in the NT, a title for Jesus.

1. In the OT
2. In Enoch
3. In early Christian literature
 - a. The Synoptic gospels
 - b. The Gospel of John
 - c. The heavenly man of the Pauline letters
4. Origin and development of the idea
 - a. Philo
 - b. II Esdras
 - c. Mandaean literature
 - d. Manichean literature
 - e. Early Gnosticism
 - f. Relation to Judaism and Christianity
5. Jesus' use of the term

Bibliography

1. In the OT. The form is used frequently in Ezekiel as God's address to the prophet (e.g., Ezek. 2:1), and here it must mean "O man." Elsewhere in the OT it is in parallelism to אִישׁ, "man" (Num. 23:19; Job 35:8; Ps. 80:17; Jer. 49:18), or אָנוּשׁ, "man" (Job 25:6; Ps. 8:4; Isa. 51:12; 56:2); twice it is found alone (Ps. 146:3; Dan. 8:17, where it is addressed to the prophet). There is one occurrence of בן אָנוּשׁ in parallelism to אָדָם, "man" (Ps. 144:3). The Aramaic ܒܪ ܐܢܫܐ is found in Dan. 7:13, where one "like a son

of man" is apparently contrasted with beasts which symbolize the monarchies of Babylonia, Media, Persia, and Greece (see *ESCHATOLOGY OF THE OT*). Rabbinical Aramaic uses the term בן אדם or בן נשא in the sense of "a certain man" to introduce an unnamed person at the beginning of a narrative (cf. $\text{\textit{\kappa}\textit{\alpha}\textit{\theta}\textit{\rho}\textit{\omega}\textit{\nu}\textit{\omicron}\textit{\varsigma}} \textit{\tau}\textit{\iota}\textit{\varsigma}}$ [Luke 15:11]). This is closely analogous to the usage in Daniel.

2. In Enoch. The Ethiopic version of Enoch, translated from a book written in Aramaic and Hebrew sometime in the first two centuries B.C., uses the phrase many times in that portion which is usually called the Similitudes of Enoch (chs. 37-71; see *ENOCH, BOOK OF*). Although parts of eight MSS of a form of Enoch have been found in the Qumran caves, these do not include the Similitudes. It is likely, nevertheless, that the Similitudes are pre-Christian and were written in Hebrew.

The Similitudes predict the coming of an Elect or Chosen One (see *MESSIAH*), in whose days righteousness shall prevail and in whose presence the righteous and elect will remain forever (Enoch 39:6b). This Elect One will sit on the throne of glory and "try the works" of the righteous (45:3). In him dwells the spirit of wisdom, understanding, and might (49:2-3). At the resurrection of the dead he chooses out the righteous and holy and sits on the throne of God (51:1-3; 61:8).

The Son of man appears in chs. 46-48; 62-71; and, while these chapters may represent a source separate from that in which the figure is called the Elect One, the final author of the Similitudes appears to regard the two as identical. Ch. 46 begins with the description of "one who had a head of days," as in Dan. 7:9, and also of one who had the appearance of a man, his face full of graciousness like one of the holy angels (46:1). The latter figure, the Son of man, is obviously a development of the one in Daniel. He "has righteousness," and he reveals treasure that is hidden, because the Lord of Spirits has chosen him (46:3). He will remove from their seats the kings and mighty who have persecuted God's congregations (46:4-8), and he will be a staff to the righteous and a light to the Gentiles (48:4). The mighty will suffer travail pangs "when they see that Son of man sitting on the throne of his glory" (62:2-5; a close parallel to Matt. 25:31). The Son of man was hidden from the beginning, and the Most High has preserved him and revealed him to the elect (62:7). All judgment is committed to the Son of man (69:27-29; cf. John 5:27). At the conclusion of the Similitudes, Enoch's "name" is raised, within his lifetime, to that of the Son of man, and in the present text of the book he seems actually to be identified with that figure (71:14-17). The book of Enoch appears to constitute the immediate background for some of the NT ideas of the Son of man (see *ESCHATOLOGY OF THE NT*).

3. In early Christian literature. The phrase occurs frequently in the gospels, always in sayings ascribed to Jesus or in indirect discourse reporting his words, and the evangelists always undertake it as a self-designation of Jesus. Elsewhere in the NT it is found only in Acts 7:56, where the dying Stephen exclaims that he sees the heavens opened and the Son of man standing at the right hand of God, and

in Rev. 1:13; 14:14 (without the definite article), where the glorified Christ is portrayed as "like a son of man," there being a clear reminiscence of Dan. 7:13. The plural phrase "sons of men," meaning "human beings," and not referring to Jesus, is found in Mark 3:28; Eph. 3:5.

In the second century the apocalyptic force of the term "Son of man" appears generally to be lost. In Ignatius, Jesus is Son of man because he is of the family of David according to the flesh (Ign. Eph. 20.2), and in Barn. 12.10-11 Jesus' nature as Son of man is contrasted with his nature as Son of God. Hegeppus, quoted in Euseb. Hist. II.23.13, says that James the brother of the Lord, at the time of his martyrdom, cried out, "Why do you ask me about the Son of man, since he sits in heaven at the right hand of the mighty power, and shall come on the clouds of heaven?"

a. The Synoptic gospels. While the first three evangelists all identify Jesus with the Son of man, the associations of the phrase vary in the Synoptic tradition.

In the Gospel of Mark there are two passages where in the older tradition the phrase might possibly mean "a man"—2:10 (= Matt. 9:6 = Luke 5:24): "that you may know that the Son of man has authority on earth to forgive sins"; and 2:28 (= Matt. 12:8 = Luke 6:5): "The Son of man is lord even of the sabbath." At the same time, even when he writes the above passages, the evangelist himself must think of "Son of man" as referring to one who is more than human; he is the exalted Lord who will come in glory (see *PAROUSIA*). Such a figure is portrayed in three other passages. The first of these is 8:38 (= Matt. 16:27 = Luke 9:26): "Whoever is ashamed of me and of my words in this adulterous and sinful generation, of him will the Son of man also be ashamed, when he comes in the glory of his Father with the holy angels." Here Jesus is practically identified with the Son of man, who is in turn SON OF GOD (cf. Mark 13:32). In 13:26 (= Matt. 24:30 = Luke 21:27) the Son of man will be seen coming in the clouds with great power and glory. Finally, when the high priest at the trial asks Jesus whether he is Messiah, the Son of the Blessed (i.e., of God), the answer is given: "I am; and you will see the Son of man sitting at the right hand of Power [i.e., the power of God], and coming with the clouds of heaven" (14:62 = Matt. 26:64 = Luke 22:69).

The other instances of "Son of man" in Mark teach that the Son of man must suffer, be rejected, die, and rise again. All these sayings occur after Peter's confession at Caesarea Philippi, and they include the three "passion predictions" (8:31; 9:31; 10:33-34; and parallels); the striking saying that "the Son of man also came not to be served but to serve, and to give his life as a ransom for many" (10:45 = Matt. 20:28; cf. Luke 22:27); the saying of 14:21 (= Matt. 26:24 = Luke 22:22) that the Son of man goes (to his death) as it is written; and, finally, 14:41 (= Matt. 26:45), from the Gethsemane story: "The Son of man is betrayed into the hands of sinners."

Thus Mark's concept of "Son of man" is highly developed. It is Jesus' own designation for himself and denotes one who is a man but who will also come in angelic glory; who is also Messiah and Son

of God; and who will suffer and give his life for others in accordance with scripture, and rise again. The suffering of the Son of man is apparently connected with the figure of the righteous servant of Yahweh in Isa. 52:13–53:12 (see SERVANT OF THE LORD). This idea that the Son of man suffers is apparently Mark's own contribution to the doctrine, for Matthew and Luke contain it only in passages which they derive from Mark (see CHRIST § 5).

The so-called Q passages in Matthew and Luke (see Q) are of two kinds: (a) In one group "Son of man" is a self-designation of Jesus ("I" or "I, a man"), with no clear implication that the Son of man will come in future glory. This, at least, is the case with Matt. 8:20=Luke 9:58: "Foxes have holes, . . . but the Son of man has nowhere to lay his head"; and with Matt. 11:19=Luke 7:34: "The Son of man came eating and drinking, and they say, 'Behold, a glutton and a drunkard, a friend of tax collectors and sinners!'" In their present setting in the gospels these, of course, have a certain pathos and irony—to the evangelists they mean that the heavenly Son of man is friendless and rejected—but the sayings themselves do not demand this. Matt. 12:32=Luke 12:10 is of a slightly different character: "Whoever says a word against the Son of man will be forgiven; but whoever speaks against the Holy Spirit will not be forgiven." In its context the most natural reference is, "Whoever speaks a word against me," but if the saying is detached, it might conceivably refer to the angelic figure. Luke 11:30 preserves a more original form of a saying which in Matt. 12:40 has been edited to predict the death and burial of Jesus. Here the Son of man is a sign "to this generation" as Jonah was to the men of Nineveh. The "sign of Jonah" is evidently the preaching of repentance, which was more effective in Jonah's story than in the time of Jesus, though "something greater than Jonah is here." The total impression of these four passages is that Jesus, the Son of man, is a preacher and teacher with a decisive message, which is being rejected.

b) Other passages refer to the transcendent Son of man but do not definitely identify him with Jesus. In Matt. 24:27=Luke 17:24, the Son of man (Matthew: "the coming [$\pi\alpha\rho\omicron\upsilon\sigma\iota\alpha$] of the Son of man") will be like the lightning shining from one end of heaven to the other (see PAROUSIA). Luke 17:26=Matt. 24:37 compares the days of the Son of man to the heedless days of Noah before the Flood. Matthew changes "days of the Son of man" to "coming of the Son of man." Luke 17:22 also speaks of the days of the Son of man and 17:30 of the "day when the Son of man is revealed." Though these verses do not appear in Matthew, they may be part of the Q discourse. The phrase "Son of man" apparently stood in this Q passage, therefore, but it may be a substitute for an earlier word, "Messiah," for "days of the Messiah" is a familiar expression in Jewish eschatology. Finally, in Matt. 24:44 (=Luke 12:40, omitted by one group of MSS) it is said that "the Son of man is coming at an hour you do not expect." These passages all teach that the appearance of the Son of man will be sudden and unexpected, and perhaps unmistakable.

There remain three Q passages in which only one

of the evangelists uses the phrase "Son of man." Matt. 19:28 (cf. Luke 22:30) promises thrones for the Twelve when the Son of man sits on the throne of his glory. Since almost the identical phrase is found in Matt. 25:31, the mention of the Son of man is probably the editorial work of the evangelist. Luke 12:8 reads: "Everyone who acknowledges me before men, the Son of man also will acknowledge before the angels of God," while at this point Matt. 10:32 has: "Every one who acknowledges me before men, I also will acknowledge . . ." In the Lukan saying, the Son of man is Jesus and also the eschatological figure; Luke may possibly have added "Son of man." A similar situation exists in Luke 6:22 (=Matt. 5:11), except that "Son of man" here has no clear eschatological reference (see CHRIST § 6).

Matthew uses the phrase several times in sections of the gospel not paralleled by the other evangelists. The most striking occurrence is in 10:23: "You will not have gone through all the towns of Israel, before the Son of man comes." This probably refers to the heavenly judge, and so do 13:41; 24:30; 25:31; and perhaps 13:37. In all of these except possibly 25:31 the phrase is due to the evangelist's editorial work. Twice Matthew adds the words to Markan passages. "Son of man" is used in 26:2, where the reference is to Jesus' coming crucifixion. Matt. 16:28 (cf. Mark 9:1) predicts that some of the disciples will see the Son of man coming in his kingdom.

There remain several passages found only in Luke. In 18:8, at the conclusion of the parable of the unjust judge, the question is asked: "When the Son of man comes, will he find faith on earth?" This may come from the tradition, or be Luke's own comment. Luke 21:36, which is eschatological, appears to be an editorial passage. But in 22:48, Jesus says to Judas: "Judas, would you betray the Son of man with a kiss?" The story of Zacchaeus concludes with the words: "The Son of man came to seek and to save the lost" (19:10). Here it is a self-designation, as in the similar phrase added by some MSS to Luke 9:56; Matt. 18:11. Finally, there is a solitary instance in which the angel in the resurrection story refers to the prediction that the Son of man must die and rise again (Luke 24:7).

It appears, then, that the Q passages divide into two groups, those in which "Son of man" is the transcendent one, as in Enoch, and those in which it is Jesus' self-designation; and the situation is much the same in the special materials of Matthew and Luke, certain of which may, indeed, have come from Q.

b. *The Gospel of John.* In several ways the use of the term in the Fourth Gospel is like that in the other gospels. E.g., John emphasizes the point that he who is Messiah and Son of God is also Son of man; thus in John 1:51, after Nathanael has called Jesus rabbi, Son of God, and king of Israel, Jesus uses the designation "Son of man." Other instances are in 3:13–18; 5:25–27; 12:34. The phrase is used only by Jesus except in 12:34, where his questioners quote his words. Likewise John carries on and develops in his characteristic way Mark's teaching that the Son of man must suffer.

In saying that the Son of man will be glorified by his Passion (12:23; 13:31), the evangelist makes an

apparent reference to the Servant (Isa. 49:3); so also with his exaltation or lifting up (12:32; cf. Isa. 52:13) and his gathering the scattered children of God (11:52; cf. Isa. 49:5-6).

John, however, has independent knowledge of the Son-of-man tradition. More than the other evangelists he preserves the old idea of the Son of man as judge. As Son of God, Jesus calls the dead to rise because the Father has given him to have life within himself—i.e., the Son is, like the Father, a source of life; but as Son of man he is also given authority to execute judgment (5:25-27; cf. Enoch 69:27-29).

The most difficult problem in John's use of the term is raised by 1:51, where Jesus tells Nathanael that he will see the heavens opened and the angels of God ascending and descending upon the Son of man. Although the Fourth Gospel never explicitly mentions the baptism of Jesus, this looks like an allusion to that story. In 6:27 it is said that God the Father has set his seal upon the Son of man, and, of course, the verb σφραγίζω, "to seal," is used in the NT to refer to the gift of the Spirit (e.g., II Cor. 1:22; Eph. 1:13; 4:30) and in later Christian literature in connection with Christian baptism. Finally, in 12:34 the phrase "Son of man" is used after a voice has come from heaven, as at the Baptism and the Transfiguration; and what this voice says can be described as a word of God setting his seal on Jesus. This suggests that John may know a story of the Baptism in which Jesus is called Son of man. Was Jesus "named in the presence of the Lord of spirits" as in Enoch 48:1-2?

There is some slight indication that for John the term "Son of man" carries also a reference to Jesus' humanity. The angels perhaps carry messages between God and the Son of man (1:51); thus the latter is thought of as a prophet. Jesus' believers must eat the *flesh* of the Son of man if they are to have life within them (6:53), and after the question as to the identity of the Son of man, Jesus answers: "The light is with you for a little longer" (12:35).

John's most distinctive contribution is the doctrine that the Son of man, who has come down from heaven, will ascend again. He was pre-existent in heaven (3:13), and he has come down from heaven and given life to the world, being the true bread and the food that endures to everlasting life (6:27, 32, 53). He is the only one who has ascended to heaven (3:13); thus Enoch and others are left out of account. His ASCENSION occurs by his being lifted up (3:14). His disciples will see him ascend (6:62), and his lifting up will show them that he is Son of man (8:28) and will draw all men to him (12:32). The dramatic approach of the Greeks is the sign that the hour has come (12:23), and the withdrawal of Judas from the Last Supper—which ensures the Crucifixion—marks the glorification of the Son of man. Moses' lifting up of the bronze serpent Nehushtan (Num. 21:8-9) is used as the type of the Crucifixion (3:14). Seeing, for the Fourth Evangelist, is believing, and believing results in salvation. Thus John uses the metaphors of seeing and eating to express the relationship of the believer to the crucified and glorified Son of man. A Son-of-man tradition independent of the Synoptic gospels must underlie these Johannine passages, and the evangelist has synthesized this with his own

Christology, which is essentially the Son-of-God idea (see CHRIST § 11).

c. The heavenly man of the Pauline letters. Although Paul does not use the phrase "Son of man," his concept of Christ as the heavenly man may be related to it (see SECOND ADAM). The passages fall into two groups: (a) Adam and Christ are contrasted in Rom. 5:14-19; I Cor. 15:21-23, 45-50. Through Adam came condemnation and death, and in him all men die. He was made a "living soul" but had a natural body and was of the earth, earthy. In contrast, through Jesus came the free gift of grace which brought justification and resurrection. He is—at least in his future form as the Last Adam—not just a "living soul" but a "life-giving spirit"; he has a spiritual body and is the Lord from heaven. The contrast is between the beginning and the end, and between sin and grace. (b) In Phil. 2:5-11, there may be an implicit contrast to Adam, who had been made according to the εἰκὼν and ὁμοίωσις of God; who grasped at the fruit of the tree of life, and, being disobedient, was degraded and became a slave. Christ Jesus, however, who originally existed in the μορφή of God, did not grasp at equality with God. He took upon himself the μορφή of a slave and was made in the ὁμοίωμα of man. As he was obedient, even to death, God has exalted him and given him a name which is above every name. This is reminiscent of the naming of the Son of man in Enoch 48:1-2. Paul's speculation, however, appears to center in the biblical Adam rather than in the Son of man as known in Daniel and Enoch, although it may be influenced by the latter.

4. Origin and development of the idea. Several factors have led scholars to raise the question whether the Son-of-man idea can be explained solely from the OT and the Jewish tradition.

a. Philo. Enoch is not the only Jewish book that knows of a Son of man or a heavenly man. PHILO JUDEUS, the Alexandrian philosopher of the first century A.D., speaks of a heavenly man in his tractates *On the Account of the World's Creation* and *Allegorical Interpretation of Genesis*. He distinguishes between two men created at the beginning of the world—the heavenly man of Gen. 1:27, who is, so to speak, the pattern for all future humanity (*Creation* XXIII.69-71; XLVI.134); and the first earthly man, whose fashioning is related in Gen. 2:7 (XLVI.134 ff). In one passage (*On the Confusion of Tongues* 146) the Logos is called "beginning and name of God, and the man according to [God's] image, and he who sees, Israel." Thus the heavenly man or archetype of mankind is also the first-born Son of God and prototype of Israel.

b. II Esdras. IV Ezra, the II Esdras of the English Apoc., a Jewish apocalyptic work of the first century A.D. (see ESDRAS, BOOKS OF), to which Christian additions were made in later times, contains the figure of a man who rises from the sea and flies with the clouds of heaven (II Esd. 13:3). Enemies converge upon him from the four winds of heaven, but a flood of fire issues from his mouth and consumes them (13:5-11). This man had been kept hidden by God until the time for him to deliver the creation and to order those who are preserved after the great conflict (13:26). The present text identifies him as God's Son

(13:32). This part of the apocalypse cannot have influenced the NT writings, nor can it have been influenced by them; it is an independent piece of Jewish speculation.

c. Mandaean literature. The ideal or heavenly man is also a feature of the Mandaean religion (see Gnosticism). The Mandaeans are a religious community located in two places, in lower Mesopotamia (Iraq) and in Iran. Their oldest literature dates from *ca.* the ninth century A.D. but contains ideas and traditions that are much older. Mandaism is a non-Christian form of Gnosticism that contains Jewish, Christian, ancient Babylonian, and Parsi elements, the Parsi strand being the latest. The Mandaeans' knowledge of Christianity results from hostile contact, at a late date, with Orthodox or Nestorian Christianity. They regard Jesus as a false messiah, and his mother, Ruha d'Qudsha (Holy Spirit), as a demon; John the Baptist, however, is to them a true messiah. But most of the traditions of Jesus, and perhaps of John also, do not belong to the oldest strata of their writings. In the oldest portions the hero is a redeemer, Manda d'Hayye ("knowledge of life"). Through his voice and speech the first vines sprouted up. He created other human beings. He was the champion of light in its primordial conflict with darkness, and also the guardian of the soul in its descent and incorporation into humanity. He redeems man's soul—the divine element imprisoned in the body—and enables it to rise to the heavenly realm which is its true home. As a victorious figure he is probably modeled on the Babylonian god Marduk. The other Mandaean redeemer, Enosh-Uthra ("man-angel"), who figures prominently in the Right Ginza, the principal Mandaean book, duplicates most of these functions, but he is obviously also the Mandaeans' competitor with Jesus. It is said that he healed the blind, dumb, deaf, and lepers, put Jesus to flight, and returned to heaven. Obviously he is based partly on Marcionite ideas of Christ, and he is somehow related to Jewish ideas about Adam and his first descendants, including Enosh (Gen. 5:6).

d. Manichean literature. The Manichean religion, which is earlier than the Mandaean texts and may have influenced them, assigns a very important role to the Primal Man, produced from the Mother of Life, who in turn emanated from the king of the realm of light. This Primal Man is the champion of light against the powers of evil, who wound him and take part of his nature captive. It is from this captured divine element that the "archons," or commanders, of the evil power produce the created world, including humanity. Man, accordingly, is a twofold creature, fashioned partly in the image of the archons and partly in that of the power of light.

e. Early Gnosticism. Mani, the founder of Manichaeism, lived in the third century A.D. In the second century, however, the figure of the Anthropos, or Man, is already an important feature of Gnosticism, both pagan and Christian. The *Poimandres*, the first tractate of the Hermetic Corpus, makes the Anthropos the offspring of Nous, or mind. Valentinus, the first great Christian Gnostic, places Anthropos and his consort Ecclesia ("Church") in the fourth position of the Ogdoad, or divine hierarchy, after the Ineffable, the Pater, and the Logos. The Gospel

of Mary, of the Barbelognostics, makes the First Man the fount of all existence.

f. Relation to Judaism and Christianity. All of the above suggests that speculations about the heavenly man arose independently of Judaism and Christianity. When the Anthropos first emerges as a mythological figure, he is a heavenly being who has some of the characteristics of humanity; he is the progenitor of the human race, and the champion of mankind in combat. He comes to be identified with the Messiah of Jewish expectation only in the book of Enoch and in the NT. The man of II Esdras has traits that are largely derived from the OT, but this does not altogether explain his mythological characteristics. The Son-of-man idea appears in Judaism at a time when Jewish thought is moving toward the strictest monotheism and angels and angelic figures are becoming, in rabbinic thought at least, more definitely subordinate to God. The Son of man is not characteristic of the rabbinic writings and has not been found mentioned in any of the Qumran literature hitherto published. Iranian religion, on the other hand, knows of a figure called Gayomart (*gayamartan*, "mortal life"), who is very similar to the later Anthropos. Gayomart was the first human being to die. From his seed came the first man and woman. He is the first and foremost among the dead, and at the final resurrection his bones will be raised up first, then afterward those of other human beings. Certainly Iranian thought greatly influenced Jewish eschatology, even among the Pharisees and the Essenes, from 200 B.C. on, but to what extent it is difficult to say. See PERSIA, HISTORY AND RELIGION OF.

It is sometimes argued that Gayomart's trait of being champion of humanity was borrowed from the Babylonian god Marduk, and that this combined Anthropos idea furnished the inspiration for the Son of man of Daniel and Enoch. This could be true for Enoch, where the Son of man is pre-existent, concealed by God until the right time, and where it is said that he will reveal all hidden secrets and be the judge of mankind. But Daniel's Son of man does not have any of the characteristic Anthropos traits. He is not the judge; God himself is. He is only a symbol of the "saints of the Most High," the Jewish people, who in the future will have dominion. It seems better to suppose that Daniel's Son of man furnishes the author of Enoch with his basic picture, and that the book of Enoch then changes the Son of man from a symbol to an actual being who has the characteristics of the Primal Man.

The Gnostic tradition, which is a blend of Iranian, Egyptian, and Platonic elements, probably derives its Anthropos idea from Iranian sources. Philo and II Esdras receive it more indirectly, and in them it is synthesized with Jewish ideas about Adam. Jewish literature differs in its theological interpretation of Adam. In the Wisdom of Solomon, Jubilees, Enoch, Ecclesiasticus, and the Sibylline Oracles, Adam is idealized, and the tendency is to explain the origin of all evil as due to Cain, or to the angels or demons. II Esdras and the Apocalypse of Baruch are the only pseudepigraphic writings that ascribe to Adam the beginning of sin and evil.

Paul shows no clear sign of being influenced by the Anthropos speculation, except insofar as he may de-

rive some ideas from Enoch. His comparison of Adam and Christ is independent even of Philo's tradition, for the heavenly man is not the first man but the coming Lord. To be sure, in Phil. 2:5-11 Christ is a pre-existent being, and in Col. 1:15-20 he is also the image of God, the first-born of all creation, through whom all things were created, the first-born from the dead, and the reconciler of all things. But, while some of this is parallel to ideas of the heavenly man, it may be because of his faith that Christ is the power of God and the wisdom of God (I Cor. 1:24); it is thus a wisdom type of Christology.

The Son-of-man idea in the Synoptic gospels seems to have no origin other than the book of Enoch and the familiar Semitic phrase that means "a man." Under the influence of Mark's thought it comes to be assimilated to the ideas of Messiah and the Servant of the Lord. The characteristic features of the Johannine doctrine can all be accounted for by the ideas of Enoch and the Synoptics and their development in the Christian tradition.

5. **Jesus' use of the term.** The double question, whether Jesus described himself as Son of man and what he meant by it, is of great importance. An answer, if it can be given, will help toward an understanding of his own view of his mission and person and also in reconstructing his teaching about the future (see JESUS CHRIST). The most powerful affirmative argument is that in the gospels the term is always found in words attributed to Jesus himself. One gains the impression that he used it without explanation and left it to his hearers to decide what meaning should be attached to it. It is a Semitic phrase that would be familiar to Jewish hearers, however ambiguous it was, but no Hellenistic Christian would be likely to insert it into the tradition.

On the other hand, it can be argued that the phrase is not found in all parts of Jesus' recorded teaching. It is conspicuously lacking in the parables, occurring only in the interpretation of the parable of the tares (Matt. 13:37, 41), at the beginning of the parable of the last judgment (Matt. 25:31), and at the conclusion of the interpretative sayings attached to the parable of the unjust judge (Luke 18:8). Interpretations attached to parables usually show marks of having arisen out of early Christian preaching; this is especially true of the explanation of the sower (Mark 4:14-20), and it probably explains the interpretation of the tares. The saying in Luke 18:8 may be genuine but a floating saying which did not originally belong with the parable. There are reasons for thinking that the great judge of Matt. 25:31-46 was not originally the Son of man but King Messiah. Thus "Son of man" is not integral to any of Jesus' parables, which are perhaps the most characteristic feature of his teaching.

Nor is the Son-of-man idea closely associated with Jesus' teaching about the KINGDOM OF GOD. The interpretation of the parable of the tares speaks of the Son of man's having a kingdom (Matt. 13:41), but the difficulty of this has just been mentioned. According to Matt. 16:28 the Son of man will be seen coming in his kingdom, but this is probably a result of Matthew's editorial work, since the parallel Mark 9:1 says only: "There are some standing here who will not taste death before they see the kingdom of

God come with power." "Son of man" occurs in Luke 9:58, and in the immediate context the kingdom of God is mentioned (Luke 9:60, 62). The phrase "kingdom of God" does not, however, occur in Matt. 8:21-22, which parallels Luke 9:60.

It must, however, be granted that Jesus would not necessarily use the phrase "kingdom of God" every time he spoke about his mission. "Son of man" occurs in Matt. 12:32 in a context that has to do with Jesus' work of casting out demons; in the Lukan parallel (12:10) this is, however, not the case. The saying in Luke 11:30: "As Jonah became a sign to the men of Nineveh, so will the Son of man be to this generation," is part of a section in which Jesus defends his new mission. Preaching and casting out of demons were both signs of the advent of the kingdom of God.

The above evidence may mean that Jesus never used the phrase "Son of man," but that it was added to the tradition by Jewish Christians. But this is not the only possible interpretation. It is noteworthy that in the Gospel of Mark teaching about the kingdom of God is prominent in the story of the Galilean ministry, but the phrase does not appear in the words of Jesus recorded as spoken in Jerusalem. Paul, who has some knowledge of Jesus' life and teaching, not only does not use the phrase "Son of man" but speaks of the kingdom of God only occasionally. "Son of man" and "kingdom of God" might therefore belong to separate cycles of Christian tradition, both of them essentially genuine. Both phrases occur in Mark and Q, the two most important sources of the gospel tradition, and also in the special materials of Matthew and Luke (in Matthew, of course, in the form "kingdom of the heavens"). On this supposition, the two independent traditions at a very early date were brought together in the sources and yet not mingled until the later evangelists wrote their books.

The fact that in Q "Son of man" has two separate references is important in deciding whether Jesus used the phrase. Where it means "I myself" or "a man," its absence from the parables and the kingdom-of-God sayings creates little difficulty. If these were the only genuine Son-of-man sayings, then Jesus regarded himself as primarily the announcer—or even the bringer—of the kingdom. But if the apocalyptic Son-of-man passages are genuine, Jesus described his role in terms reminiscent of Enoch and made for himself the most exalted claim possible.

Two of the sayings where the phrase may mean "I" or "a man" are found in Mark. The first (2:10) occurs in the story of the healing of the paralytic: "That you may know that the Son of man has authority on earth to forgive sins," after which the narrative continues: "he said to the paralytic, 'I say to you, rise, take up your pallet and go home.'" The phrase could mean "man," for in the conclusion of his form of the story, Matthew says: "When the crowds saw it, they were afraid, and they glorified God, who had given such authority to men" (Matt. 9:8). Recent commentators object to this interpretation because the evangelist, with his doctrine of Son of man, would not have understood the saying thus, and because the idea of man's forgiving sins seems to introduce a modern theological note. On the other hand, if these are the words of Jesus, they could mean this: God

has given man the authority to pronounce forgiveness of sins. Was not this part of Jesus' message? Was the prerogative of forgiveness reserved to him alone?

The situation is similar in the controversy over plucking grain on the sabbath. But here there are two sayings: "The sabbath was made for man, not man for the sabbath; so the Son of man is lord even of the sabbath" (Mark 2:27-28). Matthew and Luke omit the first of these verses but include the second. It has been suggested that Mark originally wrote only vs. 27, and that Matthew substituted the second saying for it; in this case the texts of Mark and Luke were later conformed to that of Matthew, for some MSS of Mark omit part or all of vs. 27. It still remains possible that vs. 28, in the sense of "man is master of the sabbath," is an explanation of vs. 27, but only if the verse belongs to an old tradition, since to the evangelists "Son of man" means the coming judge.

The "I" or "man" sayings in Q, and one in Luke's special material, seem less open to objection. Jesus, a man, unlike the animals, has nowhere to lay his head (Matt. 8:20=Luke 9:58). Because he is not an ascetic, he is stigmatized as an eater and drinker and a friend of the disreputable (Matt. 11:19=Luke 7:34). Words spoken against him can be forgiven (Matt. 12:32=Luke 12:10). He is a sign to this generation, but a greater sign than Jonah (Luke 11:30=Matt. 12:40). He has come to seek and save what was lost (Luke 19:10). To these we may add the beatitude in Luke 6:22 addressed to those who are hated and rejected for the sake of the Son of man.

This is a definite strand of tradition, consistent in itself and fitting in with parables and sayings that describe Jesus' mission, e.g.: (a) the three parables of Luke 15, the parable of the great supper (Matt. 22:1-10=Luke 14:16-21), and that of the laborers in the vineyard (Matt. 20:1-15), all of which are on the theme of forgiveness and acceptance; and (b) sayings and parables on the new age (Mark 2:18-22; Matt. 11:2-13=Luke 7:18-28; 16:16). The passages last named include the same theme as Matt. 12:32—Jesus' willingness to bear adverse criticism.

The "Parousia" sayings fall into several groups:

The first group contains reminiscences of Dan. 7:13. The Son of man will be seen seated at the right hand of the power of God and coming with the clouds of heaven (Mark 13:26; 14:62). As in Enoch, Daniel's figure has ceased to be a symbol and is an actual being. These sayings are in a way parallel to the saying in Mark 8:31 about the future suffering of the Son of man, for both there and in 14:62 the Son-of-man statement comes after the suggestion that Jesus is, or claims to be, Messiah. Since it is Mark's basic theology that Jesus is Messiah only as Son of man, and since the tradition was fond of adding OT quotations and allusions, some doubt arises as to whether Jesus himself made the statement.

Closely related are the occurrences of Luke 17, which must be mainly from Q. Here it is said that days are coming when the disciples will desire to see one of the days of the Son of man but will not see it (vs. 22). They are not to go here and there where others say he may be found, for the Son of man will be like the lightning flashing under the sky (vss. 23-24)—sudden and unexpected, perhaps unmistak-

able (cf. vss. 26-30). Matt. 24:44 (=Luke 12:40, omitted by Codex 1 and its allies) also teaches that the Son of man comes at a moment when he is unexpected. Luke 18:8 also appears to belong to this group. Here Jesus does not identify himself with the coming one, and these sayings fit well with his general rejection of special signs (Luke 11:29-32; Mark 8:12; Luke 12:54-56; 16:27-31). There seems no adequate reason to doubt that this is his teaching.

Matt. 10:23: "You will not have gone through all the towns of Israel, before the Son of man comes," gives a definite prediction about the time of his coming, in contradiction to Luke 17:22, and must therefore be considered doubtful. Matt. 24:30 also speaks of a visible sign of the Son of man in heaven. This is a note added to his version of Mark's Little Apocalypse and may be a product of early Christian speculation.

In Matthew's special material, as in Mark 8:38, the Son of man is the Enochic judge, attended by angels and seated on his throne of glory (e.g., Matt. 13:41; 25:31). Matthew has added this touch to Matt. 19:28, while it does not appear in Luke 22:30. Luke also seems to picture the Son of man as judge in his editorial verse 21:28. Influence of Mark and—in Matthew's case—Enoch is sufficient to account for these instances.

Finally, there are the statements that in the future the Son of man will be ashamed of those who are ashamed of Jesus (Mark 8:38) and that he who acknowledges Jesus will be acknowledged by the Son of man (Luke 12:8). The beatitude on those who are hated and rejected for the sake of the Son of man (Luke 6:22) may be related to these, but it reverses the order of Mark; apparently it is the earthly Jesus who is Son of man. This group of sayings emphasizes the close bond between Jesus and his followers, and it is noteworthy that in the parable of the last judgment (Matt. 25:31-46) to do a human service to "one of the least of these my brethren" is to do it to the King or Son of man. One aspect of the concept of the Son of man in the gospels is his deep involvement in suffering or persecuted humanity, but this may be only because the personality of Jesus cannot be separated from the concept.

Although the gospel tradition has developed the Son-of-man concept, particularly by introducing the language of Daniel and Enoch, there can be little doubt that Jesus spoke of himself as the Son of man and also spoke of the future coming of the Son of man. Furthermore, as earthly Son of man, he was charged with a mission that brought new hope to the outcasts, represented the dawning of a new age, and was a sign to his own generation just as Jonah's message of repentance was a sign to Nineveh. Though we have only the evidence of Mark that he connected the humble, earthly Son of man with the one to come, none of his hearers could have failed to draw the conclusion. It is only Mark who states clearly that the Son of man must suffer, but there is good non-Markan evidence that Jesus considered himself rejected, and furthermore that he expected death (Luke 13:33: "It cannot be that a prophet should perish away from Jerusalem").

It has been objected that Jesus, being a Jewish prophet and a man of great humility, could not have

ascribed to himself the glory of the heavenly Son of man. One answer must be that we cannot rule this out as psychologically improbable. If Enoch could be thought of as elevated to such a dignity; if Philo, being a Jew, could think of Moses as transformed into a new and almost divine being; and if it was not presumption—as it surely could not be—for a man to be a prophet or Messiah; then Jesus might have believed that his calling would lead to this heavenly office. His humility and reticence, however, seem to have kept him from making an open claim of this. His hearers evidently found his words enigmatic, and the gospel tradition has preserved the mystery in them (see JESUS CHRIST).

SON OF PERDITION. See PERDITION; ANTICHRIST.

SONG OF DEGREES. See DEGREES, SONG OF.

***SONG OF SONGS** [שִׁיר הַשִּׁירִים]. The OT book normally appearing after Job in the Hebrew Bible and first among the Megilloth (see CANON OF THE OT), and after Ecclesiastes in the LXX. In Protestant and Roman Catholic Bibles it appears after Ecclesiastes. It is called SONG OF SOLOMON in the English versions from the KJV through the RSV, and CANTICLES in Roman Catholic versions (from *Canticum Canticorum*, Latin translation of Hebrew *shîr hashshîrîm*).

The Song of Songs is a collection of lyrics celebrating nuptial and prenuptial love. The tradition of Solomonic authorship does not stand scrutiny, for the work is an anthology of songs and song fragments. Although the book has been treated variously as an allegory of divine love, as a pagan liturgy in which the lover is the dying and rising god and the beloved the mourning goddess, and as a drama recounting the affairs of Solomon with a country maiden, it is best understood as a compilation of pastoral lyrics, some of which were intended for use in Hebrew weddings. In the Song the folk mind of Israel is expressed through simple delight in the beauties of nature and an ardent eroticism. The Song of Songs is not didactic. It does not teach promiscuity or monogamy. Its theological value is that it shows among the ancient Hebrews a fervent and candid pleasure in the psychophysical relations of man and woman.

1. **Origin.** As long as Solomon was considered the poet, the Song was treated as a unity dating from the tenth century B.C. The diverse geographical references to Jerusalem, Transjordan, and N Israel were all thought to cohere in the vast domain of the United Monarchy. But once Solomonic authorship is set aside, the provenance of the book is thrown into relative obscurity.

a. **Authorship.** The sole evidence for Solomonic authorship is found in the editorial introduction: "The Song of Songs, which pertains to Solomon" (the long form of the relative, 'asher, betrays the notation as editorial, since throughout the poems the short form, she, is used without exception). The title was early interpreted to mean "The Song of Songs, by Solomon," but the Hebrew construction is ambiguous and may, quite apart from authorship, denote possession ("belonging to Solomon"), dedication ("in honor of Solomon"), style ("in the fashion of Solomon"), or subject matter ("concerning Solomon"). There is no way of knowing which interpretation the editor intended, and, even if we did know, his judgment could not be taken as infallible. Internal evidence must be examined.

Solomon's name appears six times in the text (1:5; 3:7, 9, 11; 8:11-12). The first and the last two occurrences are figurative allusions to the fabulous wealth of the king—i.e., the beloved describes herself as dark "like the curtains of Solomon," and the lover boasts that he would rather have his "vineyard" (his beloved) all to himself than divide with king and tenants the rich produce from Solomon's vineyard. In the third chapter, Solomon is mentioned three times as principal in a spectacular procession. Here it is possible that the historical Solomon is referred to (see § 1c below). Three references to "the king" (1:4, 12; 7:6) are generally associated with Solomon. But in none of these instances does Solomon speak. He can be made into the lover of the Song only on the assumption that the few offhand references to Solomon and the one poem in which he is prominent (3:6-11) are normative for a series of poems diverse in form and content. One may allow that in one or two of the poems Solomon is the chief figure, without assuming him to be the author. That no other name than Solomon's has been connected with the book is not surprising. The folk psychology of the Song is expressed in the anonymity of the speakers and the poets. The true hero and author is love.

b. **Locale.** The geographical setting for the Song is diverse. Northern locations are frequently named (Damascus, Tirzah, Sharon, Carmel, Lebanon, Amana, Senir, Hermon). Transjordan sites appear (Gilead, Heshbon, Mahanaim?). Judah is repre-

sented (Jerusalem, Engedi). Some of the allusions do not presuppose that the place names form the locale of the poem. They may be literary or idiomatic allusions. "I am a rose of Sharon" (2:1) indicates that the beloved is as unrivaled in her beauty as the exquisite flower from the Plain of Sharon. It does not necessarily mean that the poet is from that region or that the maiden's home was in Sharon. "Daughters of Jerusalem [or Zion]" (2:7; 3:5, 10-11; 5:8, 16) seems to be a stereotyped phrase for the female retinue (in a wedding party?) and does not afford prima-facie evidence of Jerusalemite setting.

The general atmosphere of the Song is such, however, as to support a N Israelite rural origin. Only the poem of 3:6-11, with its lavish *décor*, requires an urban setting, preferably Jerusalem. The others correspond to the agricultural life of the small towns and peasant holdings of the N. The preponderance of northern place names corroborates the mood and imagery of the poems. But there is nothing to preclude the presence of lyrics from the bucolic strata of society in Judah and Transjordan. It may be seriously doubted that the sophisticated Solomon would have composed songs so largely pastoral, and that his jaded and acquisitive tastes for women would have been content with the rather simple-minded sentiments of the majority of the lyrics. Although the Song uses lush imagery, the emotion behind it is naïvely intense, giving no hint of the satiety and power hunger of Solomon. There is nothing in the geographical setting, either in place names or in rural mood, that favors Solomon as poet or as subject (except 3:6-11), and there is much that contravenes the tradition. Those who insist on Solomonic authorship must assume that the king pursued his maiden into the N countryside.

c. Date. There are no historical allusions in the Song that conclusively date any part, but there are one or two clues.

Tirzah, capital of the N in the early ninth century, before Omri built Samaria, is mentioned in parallel with Jerusalem in 6:4. This reference might be dismissed as an attempt at verisimilitude, a deliberate archaizing, possibly to avoid naming the apostate Samaria (see SAMARITANS). Or it could have been employed simply because of the meaning of Tirzah, "charm, pleasure." The context, however, favors Tirzah as the capital of the N kingdom known to the poet, analogous to Jerusalem in the S.

The one poem in which Solomon is central (3:6-11) may be an epithalamium composed for one or more of his famous marriages. The possibility that Solomon is treated symbolically as the prototypical bridegroom and that the Song was composed for the marriage of commoners in later times (see § 3d below) is not to be ruled out. The major objection is that the sumptuous appointments and attendants described seem ill suited to country weddings. The balance of evidence favors both the Solomon and Tirzah poems as tenth- and ninth-century compositions, even though the latter may have been later accommodated to general usage.

A considerable factor in dating the book is the peculiarity of its language. It possesses forty-nine terms peculiar to itself. Many words and stylistic

features are formed in accordance with Aramaic, the language that replaced Hebrew as the common tongue among the Jews sometime after the Exile. On account of the occurrence of foreign terms (Persian *pardēs*, "garden" [4:12—H 4:13]; Greek *'appiryôn*, "palanquin" [3:9]), many scholars date the Song in the Persian or the Greek period. But there are complicating caveats.

ARAMAIC as a language had a checkered history and was present in the ancient Near East from at least 1200 B.C. Aramaisms appear in several early OT compositions, and there is a growing feeling that Aramaic was a strong factor in N Israel (Jacob may have been an Aramean [see ARAMEANS], and the close contact between Israel and Syria encouraged linguistic interchange). In short, the Aramaic flavor of the Song may be more a matter of regional dialect than of date. But if the Song reflects genuine folk poetry which has not been translated, then it would have been written before Aramaic became the common language in late postexilic times.

The peculiar terms of the Song are often due to the novel subject matter. No other OT book is so replete with FLORA; FAUNA; PERFUME; and SPICES. The technical terms for many of these were of foreign vintage. The spice we know as cinnamon derives from the Far East and has simply been transliterated into other languages (κιννάμωμ; קינמון [4:14]). From the days of Solomon, Israel had trade contacts with India, and many of the luxuries in the Song have clear Sanskrit parallels—e.g., NARD (Sanskrit *naladu*; נרד [1:12; 4:13-14]) and purple dyed wool (Sanskrit *ragaman*; ארגמן [3:10; 7:5—H 7:6]). The supposed Grecism *'appiryôn* for "litter," PALANQUIN (3:9), may not have entered Israel in Hellenistic times but rather may have come direct from Sanskrit *pariyanka*. Nevertheless, the technical terminology of the Song most often finds its parallels in literature regarded on other grounds as postexilic: the Priestly source; Prov. 1-9; Chronicles.

The outside chronological limits are the reign of Solomon (961-922 B.C.) and the period when Aramaic became the accepted peasant tongue in Palestine (450-300 B.C.?). At most, but one or two of the poems suit the time of Solomon. Several may have sprung from N Israel before 722. The extant form of the book, doubtless liberally supplied by compositions from intervening centuries, was edited in the fifth century. The argument that the fresh and sensuous spirit of the Song would be inconceivable in the prudish and rigid postexilic age is simply a reflection of the prevailing caricature of that era.

2. Canonical status. Dispute over the propriety of including the Song in the canon flared at Jamnia in A.D. 90, when Rabbi Akiba, in defense of the work, delivered his now famous dictum: "For all the world is not as worthy as the day on which the Song of Songs was given to Israel, for all the writings are holy, but the Song of Songs is the Holy of Holies" (M. Yadayim 3.5). Also well known is the rabbinic rebuke: "He who trills his voice in the chanting of the Song of Songs in the banquet-halls and treats it as a secular song, has no share in the world to come" (Tosef. Sanh. 12.10).

It is widely assumed that only the claim to Solo-

monic authorship and the allegorical interpretation of the Song rescued its canonicity. While there are hints of allegorical treatment in the latter half of the first Christian century (e.g., Josephus calls the work "hymns to God," and in IV [II] Esd. 5:24, 26; 7:26, "lily," "dove," and "bride" are used of Israel), it is not certain that Akiba interpreted the work symbolically. Objection to treating it "as a secular song" may have been aimed at the bawdy and vulgar renditions of those drinking copiously. It is probable that the allegorical interpretation followed canonicity, rather than preceded it. Once the Song was accepted as canonical, the rabbis would be tempted to look for esoteric religious meaning, especially if they had to counteract its frivolous employment. Their motivation was not to repress sex and the plain meaning of the Song, but to ensure a proper atmosphere for its contemplation. But allegory, once started, is hard to control.

Since the allegorical theory was in full sway by the time the Christian church made its canonical pronouncements, the Song was unquestioned. But as the clear meaning of the eroticism became apparent in modern times, there have been those militantly opposed to its inclusion in the canon—e.g., Sebastien Castellion (1544), W. Whiston (1723), J. G. Semler (1771), and Eduard Reuss (1879).

3. Interpretation. Roughly four schools of interpretation, with significant variations in each, have arisen to explain the moral and literary complexities of the Song: the allegorical, cultic, dramatic, and lyrical. While the allegorical and dramatic have sharply declined in popularity and the cultic and lyrical have waxed strong, all views are represented in contemporary scholarship.

a. Allegorical. This type of interpretation was predominant among Jews and Christians through seventeen centuries and is still favored by some Roman Catholic and orthodox Jewish interpreters. In the Jewish version the lover is Yahweh and the beloved is Israel. The details of their relationship are thought to set forth the history of God's people, generally from the Exodus to the coming of the Messiah. The fullest development is in the Targum, but variants may be found in the Midrash Rabbah to the Song of Songs, Saadia Gaon, Rashi, Ibn Ezra, and are followed by some modern Christian interpreters.

In Christian dress the terms of the allegory were shifted so that the bride was the church—a position easily adopted from key NT passages (John 3:29; Eph. 5:22-33; Rev. 18:23; 21:2, 9; 22:17). The earliest exposition was by Hippolytus of Rome, but it was Origen's twelve-volume commentary, probably his most immediately influential work, that displayed the fertile imagination of the adept allegorist. He was followed by Jerome, Athanasius, Augustine, Wesley, and innumerable others. In the main, Christian interpreters did not try to read into the allegory a connected history of the church, although Thomas Brightman followed the Jew Nicholas de Lyra in reading the Song as a historical allegory of Judaism and the church, while the antipapal Cocceius regarded it as a history of the church climaxed in the Reformation.

A common variation in the primary Christian alle-

gory was to see in the Song the relation of God and the individual soul. Origen had suggested this possibility, and it was adopted by Gregory of Nyssa and given its classic expression in the eighty-six sermons of Bernard of Clairvaux, in which he got barely beyond the second chapter! The high level of Bernard's mysticism was not maintained by all who followed him, for interpreters frequently fell into a morbidly pious eroticism. Another common form of Christian allegorizing (preferred by Ambrose, Cornelius a Lapide, and Richard of St. Victor) was to treat the bride as the Virgin Mary. Martin Luther held to the novel view that the bride was Solomon's kingdom personified and that the Song celebrated the loyalty of his subjects. Some have professed to see in the maiden of the Song a personification of wisdom (similar to Prov. 8).

It is typical of those defending the Song as allegory that they are able to see more than one level of meaning in the same symbols. The earlier allegorists, while conceding the presence of the literal, despised and discounted it (Origen: "The only sense of the Canticle intended by God is the spiritual or allegorical sense"). Modern allegorists are less averse to admitting the overt meaning of the text, although they stoutly insist that the Song's primary teaching is symbolic. Some interpreters recognize multiple identities in the bridal figure, she being by turns Israel, the church, the Virgin Mary, and the individual believer.

The objections to allegory center on the complete subjectivity of the method. Where the man-woman relation is used symbolically in the OT (Ezek. 16; 23; Hos. 1-3), the figure is unfailingly indicated, but there is no clue to allegory anywhere in the Song. Allegorists have been totally at variance in the meanings they have found. A few examples follow:

My beloved is to me a bag of myrrh,
that lies between my breasts
(1:13).

This phrase was understood by Rashi and Ibn Ezra as the tabernacling presence of God over the ark between the cherubim; by Cyril of Alexandria as Christ and the two Testaments; by Bernard as the crucifixion of Christ, which strengthens the believer in sorrow and in joy.

Upon my bed by night
I sought him whom my soul loves;
I sought him, but found him not
(3:1).

Rashi applied this to the Israelites' wilderness wanderings; Cyril to the women who sought Christ on resurrection morning; and Joüon to the capture of the ark by the Philistines.

Your navel is a rounded bowl
that never lacks mixed wine.
Your belly is a heap of wheat,
encircled with lilies (7:2).

To Ibn Ezra the navel was the Great Sanhedrin and the mixed wine was the Law. Simon Patrick and the Westminster Assembly biblical annotators recognized the two Christian sacraments, the navel being the baptismal font and the belly the Lord's Supper!

The allegorical parallelisms adduced from Muslim Sufism and the Hindu cult of Krishna, the divine lover, are not true allegories, for, without exception, either the god is named or some clue is given to the mystical meaning. That the affinities of man and woman often serve to mirror the relation between man and God does not mean that every poet who touches the subject intends to use symbolism. The world's treasury of simple love poetry is a standing rebuke to the notion.

b. Cultic. A popular theory springing from the discovery of ancient Near Eastern cult liturgies is the assumption that the Song of Songs was a pagan ritual later secularized or perhaps accommodated to Yahwistic usage. The lover is the dying and rising god; the beloved is his sister or mother, who laments his passing and frantically searches for him. The Near Eastern mythical pairs known to Israel were the Canaanite Baal (see BAAL [DEITY]) and ANATH and the Babylonian TAMMUZ and Ishtar (see ASSYRIA AND BABYLONIA). The pagan liturgy entered Israel in connection with the spring and fall festivals of agriculture (see PASSOVER; BOOTHS, FEAST OF)—i.e., as a part of the observance of the NEW YEAR.

External support for this interpretation is seen in the liturgical reading of the Song at Passover, practiced as early as the eighth Christian century, but lately omitted in public reading outside Eastern Europe. Also, a reference in the Mishnah to the daughters of Jerusalem dancing and singing in the vineyards at the Wood Festival (the Fifteenth of Ab) and after the Day of Atonement is said to attest the early entrance of pagan revelries into the harvest celebrations of Israel and thus to provide a milieu for the Song (M. Ta'an. 4.8). In fact, advocates of the cultic theory insist that the Song's acceptance into the canon was facilitated by its established liturgical use.

Internal evidence is cited in the titles of male and female (e.g., Solomon equated with the god Shelem and Dodh, "beloved" in the RSV, regarded as a form of Hadad [see HADAD 5] or Baal); the intense amours and erotic imagery; the vanishing lover and the searching beloved; the structureless conversations; the elaborate allusions to flora, fauna, spices, and perfumes; the woman dancing naked. All these are shown to be features of extant Tammuz liturgies.

But there are formidable problems. It is undemonstrated that the harvest festivals in Israel ever had dying and rising rituals connected with them. The Passover reading of the Song is paralleled in the reading of Ruth at Pentecost and Ecclesiastes at the Feast of Booths, and neither of these books has the slightest claim to origin in the cult. There are no unequivocally liturgical terms in the Song (e.g., *zāmîr* [2:12] has a clearly nonliturgical meaning in Tosef. Sanh. 12.10; see § 2 above). Exponents of the theory disagree as to whether the pagan ritual was revised for Yahwistic use. If it were, it is strange that the divine name is lacking. If not, the reader would expect more explicit reference to the dying and rising motif. The crowning objection is that, far from ensuring the book a place in the canon, its association with pagan religion would have barred it.

In effect, the cultic interpretation is a more sophisticated version of the allegorical approach, but it is no more successful in unlocking the book. On the other hand, it is possible that liturgical idioms from the northern fertility cult entered the common peasant speech and thus found their way into the Song. Yet the obverse is equally defensible: that the love language of the people found parallel expression in the Song and in the pagan liturgies.

c. Dramatic. When the allegorical view of the Song began to decline ca. 1800, the dramatic theory sprang up to fill the gap. After great favor in the nineteenth century, it has lost ground, and for good reasons.

The dramatic theory assumes that the Song involves plot and characterization, with Solomon and a rustic maiden, named in 6:13 as the SHULAMMITE, as principals. A three-character variation provided for a country lover, the shepherd, to whom the maiden remained faithful against all the king's blandishments. The practical effect of the third character is great, for it changes the whole tone and import of the Song. In its two-character form the book would extol the joys of conjugal love as exemplified in Solomon. In its three-character version it would celebrate premarital fidelity to true love, over against luxury and seduction. In one case Solomon is hero, and in the other, villain.

In accord with the dramatic instinct the conversations in the Song were divided among Solomon, the maiden, the shepherd and chorus (or choruses). It was often taken for granted that the maiden was ABISHAG the Shunammite of I Kings 1:1-4, 15; 2:17-22. The "daughters of Jerusalem" were identified as the Solomonic harem or a chorus of professional singers. Some "dramatic" interpreters do not think of the Song as staged but rather as a dramatic reading; this is an admission of the thinness of evidence for the theory.

The weaknesses in the dramatic theory are fatal. The analysis of the Song into acts or scenes, speeches and accompanying mimes, takes nearly as many turns as there are interpreters. The reconstructions are often ingenious and plausible, but the variant schemes cancel out one another as obvious figments of the imagination. There is no character development or psychological disclosure. Literary units are carved up to supply reasonably coherent repartee among the speakers. Stage directions are manufactured. Solomon is not a prominent figure in the book and the notion of the two-character theory, that he appears as the "shepherd" pursuing his beloved, is dubious. If the three-character hypothesis is thought preferable, then the resulting defamation of the king's character would hardly have been a theme to endear the work to later rabbis. Finally, none of the dramatic theories can trace a convincing development of plot. The lovers taste of full union, praise one another, recoil and are reunited again and again, without the slightest shred of story form. The dramatic theory is a vain attempt to salvage a moral point and structural coherence.

d. Lyrical. When the false leads are eliminated, the true interpretation is the simplest. It was doubtless the plain sense of the Song which the Jews before

Jamnia recognized but which the allegorical tide swamped (see § 2 above). The Song of Songs is a collection of love songs that do not have the least intent of symbolizing divine love, nor have they derived from pagan religious celebration. While loosely connected in tradition with Solomon (one of the poems appears to observe his wedding; see § 1c above), they are not the work of a single poet, much less a dramatist. The Song teaches no lesson and tells no story. It extols human love in courtship and marriage by letting the lovers speak for themselves.

Theodore of Mopsuestia, the literalist exegete of Antioch (360-429), was apparently the first to call the Song secular, and his view was declared heretical. A few Jewish medievalists, mostly anonymous, regarded it as a song written by Solomon for his favorite wife. Sebastien Castellion (1546) had to leave Geneva because, as Calvin said, "He considers that it [the Song] is a lascivious and obscene poem, in which Solomon has described his shameless love affairs." Luis de Leon (1567) fell into the hands of the Inquisition for similar effrontery. Grotius (1732) saw a mystical meaning but stressed the erotic sense. J. G. von Herder, with his fine sense of folk literature, gave a masterful exposition of the "secular" view.

A special form of the lyrical hypothesis was advanced by K. Budde (1893), who based his view on the work of J. G. Wetzstein, who in 1873 described the seven-day Syrian wedding festivals that he had witnessed. Budde saw the Song as a disordered cycle of songs for Jewish weddings in which the groom was "king" and the bride "maiden" for a week (not "queen"!); the girl danced for her lover on the eve of the wedding, and detailed erotic praises of the male and female bodies were offered (called *wafs* in Arabic).

There are many attractive features to the wedding-song theory, but it cannot account for all the poems. It explains the allusions to the "king," but it hardly accounts for Solomon's centrality in 3:6-11. It provides the milieu for the rather unrestrained bodily descriptions, but the entire Song cannot be regarded as toasting marital love. In fact, Budde was forced to assume that the undoubted references to premarital love were sung at the wedding festivities by the young companions who intended to conjure and confirm the love that was only beginning to awaken, since courtship practice kept the bride and groom apart before the ceremony. But the Song gives the clear impression of the social mixing of the sexes.

Another difficulty with the wedding-cycle theory is that certain elements noted by Wetzstein are lacking in the Song—e.g., the war songs in which the groom's prowess is honored. At best, there is hardly enough material for seven days of celebration. It must not be forgotten also that the Syrians are a mixed people with no Jewish connections; like customs have not survived in Palestine. Nevertheless, the criticisms do not seem to invalidate the essence of the theory, but only its rigid application.

The lyrical theory, now widely held, is the only one that avoids the pitfalls of allegorical, cultic, and dramatic overschematizing. It recognizes an anthology of lyrics and lyric fragments, some for use at

weddings, others singing the raptures of premarital love. The precise number of literary units assembled in the Song is much disputed. Those who have employed FORM CRITICISM have generally demarcated from twenty to forty poems.

Now that the allegorical interpretation is in decline among Roman Catholics and virtually extinct among Jews and Protestants, a number of interpreters have attempted a didactic redirection of the Song, emphasizing the purity and propriety of married love and the religious character of marriage (cf. Eph. 5:25-33). Since the Song is in the Christian canon, it is not amiss to see it in total context. But such reinterpretation sometimes rises from an uneasiness about the Song's frankness and is clouded by an overapologetic attitude. It is likely also to dismiss the ancient social setting of the Song in the desire for immediately applicable truth. The prude's discomfort and the censor's fear must not efface the simple delight of the Song in the sexuality of the race. "Love is strong as death" (8:6), and stronger than the reticence and embarrassment of interpreters.

4. Poetics. The Song of Songs shares with other biblical poetry the technical features of parallelism of members and mixed meters (see POETRY, HEBREW, §§ 3-4), as well as boldness of imagery. It is in subject matter that the Song diverges sharply from most extant pre-Christian Jewish literature.

a. Extrabiblical parallels. The most convincing parallels are from Egypt, where the lovers are called "my brother" and "my sister" and are compared with steeds and gazelles. There is the same delight in the beauties of nature and a reveling in the appeal of aromatic spices. Yet the bodily descriptions are lacking in Egypt, and traces of magic and polytheism appear. Modern Arabic poetry gives franker treatment to the body.

Since the Renaissance, comparisons with classical love poetry have been common. Sappho's marriage songs are too psychologically sophisticated to bear resemblance to the Hebrew work. The Idylls of Theocritus, especially the eighteenth and twenty-seventh (where Daphnis and Acrotome converse), are perhaps closest, but the self-consciousness of the lovers and the elegance of form produce a quite different effect. The erotic poets Meleager and Philodemus were still more ribald in their mood. It is interesting, however, that both men spent their youth in Transjordan in the first century B.C., thus affording evidence of a continuing Palestinian poetry of love.

b. Genre. Allegorists have seldom inquired about the genre, since in their view the Song's purport is on a plane entirely other than the literal. The dramatists see dramatic dialogue. The cult theorists locate the Song in a liturgical celebration of the death and rebirth of the god, later recast for Yahwism or else secularized.

Lyricists are inclined to see in the anthology epithalamiums (such as Ps. 45) or pure folk lyrics with no settled "situation in life." Much depends upon how seriously the wedding-cycle hypothesis is taken (see § 3d above). The only explicit epithalamium is 3:6-11, perhaps also 1:1-4. The praise of the bodies of the lovers may be understood also as wedding songs (see § 3d above), with an ultimately con-

juring intent—i.e., to secure the fertility of the woman and the virility of the man. The female chorus and the addresses to the lovers may be the parts spoken by the young companions, who are given a prominent role in oriental weddings (see MARRIAGE). Some profess to see traces of an alluring call associated with the Bedouin custom of the bride's fleeing into the desert, pursued by the groom, who must win her through coaxing.

Many of the poems, however, must be forced if they are to fit into wedding recitation, and the parallels with modern Arabic practice should not be overdrawn (it should be noted that among the Arabs some of the *wayfs* are used in courtship). The situation for certain units seems less in community practice than in the excited psyche of the lover-poet. It does not take any elaborate theory to explain the upsurging emotion of love in the springtime. The dream sequences express poignantly the ambivalent experiences of erotic excitation and fear of separation, the latter hardly explicable as marital anxiety.

The love songs were reckoned as wisdom genre originally because the technical skill of the musician and singer was regarded as *hokmā* (see WISDOM). The professional mourning women were called "wise women" (RSV "skilful women"; Jer. 9:17). With equal validity the hired wedding celebrants who rendered the Song could have been termed "the wise." Solomon was said to have displayed his wisdom in songs (I Kings 4:32), and the wise men Ethan and Heman (I Kings 4:31) were apparently identified as heads of guilds of temple singers (I Chr. 6:33, 44; 15:17, 19). Thus were wisdom and song connected. When the Song was attributed to Solomon, it was doubly confirmed as wisdom literature.

c. Imagery. The rich imagery springs mainly from the Song's constant interweaving of nature and love. The countryside, described in its own right, passes over into symbolic representation of love: the beloved is a spice-filled garden, a fruitful vineyard; the lover, a gazelle or an apple tree. The considerable imagery of perfumes and spices shows that the upper class set the mores of love. The more expensive spices and gums were named as erotic lures even in peasant singing. As water was at a premium in Palestine, ointments and oils were generally used for hygienic purposes. It is quite likely that for weddings even the poorer classes would manage to indulge in a few luxuries.

In estimating the aesthetic impact of the imagery, we should recall that standards of taste in women have changed so radically toward slimness that we easily forget the preference for plumpness in most cultures and eras, as a sign of ability to work and of sexual fecundity. Ungenteel imagery in the Song can often be accounted for by this ancient taste. Likewise, comparison of the beloved to such massive and solid things as towers, walls, and horses is regularly confined to some one feature—e.g., the tower's gracefulness, the wall's impregnability to frontal attack, or the horse's brightly ornamented head gear.

5. Content. a. Nature. The rapport and interaction between the external world and the psychic state of the lovers produces an almost un-Hebraic delight in nature for its own sake, or at least for

love's sake. Elsewhere in the OT, nature is mentioned incidentally as the vehicle or occasion for religious meaning, as when a prophet's call comes through an almond rod in bloom, or the objects of nature are called upon to join in praise of God, or the wonders of creation are cited to overawe a critic of the divine government (see WORLD, NATURE OF THE). But the projection of the love experience into nature and the reflection of nature's moods in the lovers is abundantly present in Near Eastern, classical, medieval, Renaissance, romantic, and modern poetry. It is a constituent element of human nature which did not perish among the Hebrews simply because their religion made no direct use of it.

The poems in which nature plays a prominent role are the summons to the beloved to come into the fields at springtime (2:8-17; 7:11-13). But the collection is permeated with direct and symbolic allusions to flowers (henna, wild rose, lily, fig and grape blossoms), trees (pine, cedar, apple, palm), agricultural produce (raisins, nuts, pomegranates, dates, figs, wheat, wine, honey), and animals (gazelle, stag, turtledove, sheep, horse).

b. Courtship and marriage. The Song supplies virtually no data on the mores or institutions of Hebrew marriage. Monogamy appears to be the ethos of the poems. Polygamy may even be rebuked by implication (6:9), but this does not make the book a social pamphlet.

The more subtle and ineffable attitudes of mind toward sex and marriage find forceful articulation. The poems deal with concrete cases, expressing the sensations and desires of lovers and their youthful friends. The Song ranges over the spectrum of coquetry and flirtation, lovesickness and fear of loss, sensuous longing and fulfilment. The candor about sexual desire and gratification is no proof of low standards of morality (see SEX AND SEXUAL BEHAVIOR). In fact, compared with the classical world, the Hebrews had a high level of sexual morality. The distinguishing feature of the corpus is the complete lack of self-consciousness about the man-woman relation, in sharp contrast to the Greek lyricists (see § 4a above). Although the work has not been censored, it is not lewd or crudely sensate. Man and woman are joined in a psychophysical unity which the poets neither hide nor exploit. Only one of the poems generalizes about its subject (8:6-7), declaring that love is mightier than death, natural catastrophe, or wealth.

SONG OF THE THREE YOUNG MEN; KJV SONG OF THE THREE HOLY CHILDREN.

The first of the apocryphal Additions to the book of Daniel, together with Susanna and Bel and the Dragon. This section, consisting of a hymn, is written between vss. 23 and 24 of the Hebrew text of the third chapter of Daniel. A prayer and confession of Azariah precedes the hymn. Here Azariah, one of the three men, prays for his people and seeks to probe into the sin which brought upon them the calamity of being thrown into the furnace. He seeks pardon and asks:

Let all who do harm to thy servants be put to shame.

Let them know that thou art the Lord, the only God (vss. 20, 22).

The Song, or Hymn, of the Three Young Men is very similar to Pss. 103; 148. It is the praise given by the three to the Almighty because they have been saved from the flames of the fiery furnace. In it there is an acknowledgment of his justice even when calamity is brought to the Jews, a prayer for deliverance because of his name's sake and because of his promise to the patriarchs that he would not destroy Israel follows. It includes also a prayer for the punishment of the enemies of Israel.

The fact that it is a prayer led many to believe that the original Addition was written in Hebrew, for this was the language of prayer.

The time and place of the writing of these Additions is not known. It is surmised that the story of saving from the fiery furnace was written, perhaps, in the time of Antiochus Epiphanes. The purpose of the author was to instill courage and to demonstrate that even as the fathers were saved, so would the present generations be saved.

The absurdity of idolatry is evident in the Song. Hence many have held that the original was not in Hebrew but in Greek, to emphasize the folly of pagan worship and to stress conversion.

Whether the entire story is historic or not is a debatable question.

Bibliography. R. H. Pfeiffer, *History of NT Times with Introduction to Apocrypha* (1949), pp. 444-48; B. M. Metzger, *An Introduction to the Apoc.* (1957), pp. 99-105. S. B. HOENIG

SONS OF GOD [בני אלהים]. An ancient designation of heavenly beings, used vestigially in the OT in (a) a legend related in Gen. 6:1-4; (b) the prose prologue of the book of Job; and (c) three poetic passages (Job 38:7; Pss. 29:1; 89:7). In accordance with regular Hebrew usage, "sons of God" means simply "beings of the god-class"—i.e., members of the pantheon; and the expression actually occurs in this sense in the Ras Shamra Texts (e.g., 2.16, 23-34; 51.2-3; II AB, iii.15) and in a Canaanite magical in-

scription, of the eighth century B.C., from Arslan Tash (cf. *bibliography*). In their anxiety to avoid any suggestion of polytheism in Holy Writ, several ancient and modern translators have rendered the words as "sons of the mighty," "sons of potentates," and the like; but the discovery of the expression in the early extrabiblical texts has now put the true meaning beyond all doubt. In the OT, of course, it is simply a mythological relic, like Cupid or the Muses in English poetry.

In Job 38:7, "sons of God" stands parallel to "morning stars," and a similar parallelism occurs in a mythological text from Ras Shamra (IV AB, i.4-5: *b n i l = [p] h r k k b m*). This suggests that the beings in question may sometimes have been regarded as astral or even identified with heavenly bodies.

According to the reading of the LXX, Symm., OL, and a fragment from Qumran (cf. *bibliography*) at Deut. 32:8, God ('*Elyôn*) originally apportioned territories on earth "according to the number of the sons of God [למספר בני אל]." This has been thought to foreshadow the later Jewish concept that every land and people is under the tutelage of a distinct patron angel (cf. *Ecclus.* 17:17). It has been suggested, however, that "sons of God" is there once more a mere paraphrase for "stars," and hence that the verse means simply that God made nations innumerable (cf. *bibliography*). The MT—perhaps in an attempt to palliate the seemingly pagan tone of the passage—reads incongruously: "according to the number of the children of Israel [למספר בני ישראל]." See also ANGEL.

Bibliography. On the meaning of the phrase in Hebrew usage, see T. H. Gaster, *Orientalia*, XI (1942), 59. On the Qumran fragment of Deut. 32:8, see *Bibl.*, XXXVI (1955), 165. On the phrase as a paraphrase for "stars," see W. F. Albright, *From the Stone Age to Christianity* (2nd ed., 1957), pp. 295-96. T. H. GASTER

SONS OF PROPHETS [בני הנביאים]. This phrase hardly denotes physical descent from a PROPHET, but rather members of a prophetic guild, or order, first appearing in the time of Saul and Samuel in the eleventh century B.C. and employing group ecstasy in the service of Yahweh. They are called a "band" of prophets (הבל הנבי) when first mentioned in I Sam. 10:5, and a "company" (קהלת הנביאים) in 19:20. The sons of the prophets appear again prominently in the ninth century B.C. in association with Elisha (II Kings 2:3; 3:11; 4:1, 38; 6:1-2). These guilds of professional prophets continue to appear variously indicated (I Kings 18:4, 19; 22:6; II Kings 23:2; Jer. 26:7-8, 11) until the fall of Jerusalem in the early sixth century B.C.

SONS OF THUNDER. See BOANERGES.

SOOTHSAYER [עוֹנֵן, מְעוֹנֵן]. A practitioner of divination, who foretells future events by means of omnia derived from nature or artificially produced signs.

Acts 16:16-19 tells about a girl in Philippi who was possessed with a spirit of DIVINATION and practiced soothsaying (μαντεύομαι). Paul rebuked the spirit and drove it out of the girl. I. MENDELSON

SOPATER sō'pə tər [Σώπατρος] (Acts 20:4). Son of Pyrrhus; a man from Beroea who, with others, accompanied Paul from Greece (probably Corinth) on his final trip to Jerusalem when he took his offering for the poor there.

See also SOSPATER. B. H. THROCKMORTON, JR.

SOPE. KJV form of SOAP.

SOPHAR sō'fər. Douay Version form of ZOPHAR.

SOPHERETH sōf'ə rēth [סופרת, scribe] (Neh. 7:57); **HASSOPHERETH** hā— [חספרת] (Ezra 2:55; I Esd. 5:33); **KJV AZAPHION** ə zā'fī ōn [Ἀσσαφιῶθ] (I Esd. 5:33). Head of a family of the "sons of Solomon's servants" (see NETHINIM) who returned from the Exile with Zerubbabel. G. HENTON DAVIES

SOPHONIAS. KJV Apoc. and Douay Version form of ZEPHANIAH.

SORCERY. See MAGIC.

SOREK, VALLEY OF sōr'ək [נהל שרק, a choice vine]. The valley in which Delilah, Samson's mistress, lived (Judg. 16:4). It is the modern Wadi es-Sarar, which begins ca. thirteen miles W-SW of Jerusalem and runs toward the Mediterranean in a northwesterly direction. Khirbet Suriq on the N side of the Wadi, to the N of Beit Jibrin and not far from Sar'ah (Zorah), preserves the ancient name and may be the site of ancient Sorek. Eusebius calls the place Capharsorech.

The valley itself is guarded by BETH-SHEMESH, a fortress city on the frontier between Israel and Philistia. Though it once belonged to the Danites (before the Philistine invasion) and was still occupied by Israelites, Beth-shemesh and the Valley of Sorek, or at least its W section, seem to have been under Philistine control during the period of the judges. Delilah's betrayal of Samson was tantamount to the surrender of the mountain fortress of Zorah to the Philistines. Later Zorah was incorporated into the kingdom of Judah and formed the N boundary for the Shephelah province of Azekah (see Josh. 15:33-36).

SORES [מַבְעֵבֶת; LXX φλυκτίδες ἀναζέουσαι] (Exod. 9:9-10); **KJV BLAINS.** Cutaneous blisters or infections, mentioned only in connection with the sixth Egyptian plague. These vesicles were localized inflamed swellings, such as abscesses or boils. Perhaps the malignant pustule of cutaneous anthrax is meant, since the plague affected animals and men alike. R. K. HARRISON

SORREL. See COLORS.

SORROW. There is no distinctive OT expression for "sorrow" (at least fifteen Hebrew root words are

translated "sorrow"), which suggests that it was never the object of reflective thought. Of greater concern are the events, often of theological significance, which occasion JOY or sorrow. The term itself is only one of a variety of expressions describing human suffering (see SUFFERING AND EVIL), for which a fairly comprehensive word is צַר, צָרָה, "trouble." It is the opposite of שְׁלוֹמִים, "peace," meaning "wholeness," "harmony," "fulfilment of the goals of earthly existence." See PEACE IN THE OT.

Poignant descriptions of purely human sorrow occur in II Sam. 1:19 ff; 18. In early Israel one grieved, not so much over DEATH itself as over the untimely, violent death, or over death without the happy fulfilment of family relationships (cf. Gen. 42:38; 44:29 ff; 46:30). Israelite WISDOM knew that joy and sorrow are intertwined in human life (Prov. 4:13), sorrow often coming as the result of one's own folly (10:1) or that of another (23:29). The late pessimism of Job 7:1-10 (cf. Ps. 90:10); Eccl. 1:18; 7:3 is not characteristic of the OT as a whole, or of the wisdom movement (cf. Wisd. Sol. 20:21 ff; 38:18 ff).

Though trouble and sorrow are part of human existence, they do not belong to God's order, but are connected with human sinfulness (Gen. 3:16-17; Ps. 16:4), coming as the result of God's wrath (Ps. 88:7-9; Lam. 1:1-12; Ezek. 23:33-35), often for the purpose of chastisement (II Sam. 7:14; II Chr. 6:24-31; cf. Hos. 3:3-5; Amos 4:6-12; Heb. 12:3-11). Ultimately, they will also be removed by God (for the faithful: Pss. 13; 31; 107:39-43; in the new age: Isa. 51:11; cf. 25:8; Jer. 31:1-17; Rev. 21:4).

The cultic rites of repentance before Yahweh are patterned upon customs of MOURNING (Josh. 7:6; I Kings 21:27; Neh. 9:1), but such "official" sorrow for sins drew acid criticism from the prophets (Isa. 58:5; Hos. 5:15-6:4; Amos 4:6-12) who demanded genuine repentance (Joel 2:12-13) issuing in genuine obedience (Isa. 58:6-7; Hos. 6:6).

In the NT the characteristic word for sorrow is λύπη, which appears in the sense of general "pain" and "suffering" (Heb. 12:11; I Pet. 2:19), but more often of "inner anguish" (Luke 22:45; John 16:6, 20; Rom. 9:2). As the "man of sorrows" (cf. Matt. 26:37; Mark 14:34; Luke 19:41; 22:44; John 11:35), Jesus recalls the SERVANT OF THE LORD of Isa. 52:13-53:12 (cf. Matt. 8:17; Luke 22:37; I Pet. 2:24-25).

The tension of the Christian community which is "in, but not of," the world (cf. John 15:19) is reflected in II Cor. 7:8-12 and, in a different way, in John 16:1-22. In the former passage, sorrow at the knowledge of one's own disobedience is called "godly grief" (ἡ κατὰ θεὸν λύπη), producing repentance, which leads to salvation; while "worldly grief" (ἡ τοῦ κόσμου λύπη), apparently the anxiety and guilt of unfulfilled human ideals, leads to death. In John 16 the departure of Jesus will cause the "world" to rejoice because of its hatred of him (vs. 20; cf. 15:18), but for the disciples this means "sorrow," not only at his leaving (vs. 6), but also because the hatred and persecution of the world will come upon them as well (15:18-20). However, this "sorrow will turn into joy" (vs. 20) at their reunion with him (vs. 22; cf. Rev. 21:3-4).

J. A. WHARTON

SOSIPATER sō sīp'ə tər [Σωσιπάτρος, saving one's father] (Rom. 16:21). A Christian mentioned by Paul as sending greetings to the recipients of the Letter to the Romans. He is called a "kinsman" of Paul—i.e., a Jew. **SOPATER** is another form of the same name (Acts 20:4), and in all likelihood the two references are to the same man. F. W. GINGRICH

SOSTHENES sōs'thī nēz [Σωσθένης]. 1. The ruler of the **SYNAGOGUE** at Corinth (Acts 18:17); successor of Crispus, who had become a Christian (vs. 8). Sosthenes was the spokesman for the Jews in a legal action brought against Paul in the court of Gallio, proconsul of Achaia. When Gallio ruled that the matter was outside his jurisdiction, a crowd of on-lookers (probably Greeks; so KJV) proceeded to beat Sosthenes, and Gallio did not stop them.

2. Paul's Christian brother who was with him (in Ephesus) when he wrote I Corinthians; he is the only companion of Paul mentioned in I Cor. 1:1, though others are referred to in 16:17-19. He must have been known to the Corinthians, but need not have been one of them unless he was identical with 1 *above*.

The two men named Sosthenes have been considered the same by some scholars from Theodoret to modern times; but opinion is now sharply divided, and the evidence does not permit a definitive answer to the problem. If they are the same, Sosthenes must have undergone a dramatic conversion similar to that of Paul himself, turning from persecution of Christianity to missionary work in its behalf.

F. W. GINGRICH

SOSTRATUS sōs'trə təs [Σώστρατος, Σόστρατος]. Governor of the citadel of Jerusalem in the time of Antiochus IV (II Macc. 4:28), who demanded from Menelaus the sums which the latter had promised to pay the king for his appointment to the priesthood. Antiochus finally called both Menelaus and Sostratus to account when the payments were not made.

S. B. HOENIG

SOTAI sō'tī [שׁוֹטַי] (Ezra 2:55; Neh. 7:57). Head of a family of "sons of Solomon's servants" (see **NETHINIM**) which returned from the Exile with Zerubbabel.

SOUL. The translation of several words in the Bible. In the KJV of the OT (the clue is partly obliterated in modern translations) "soul" represents almost exclusively the Hebrew נַפֶּשׁ. The word "soul" in English, though it has to some extent naturalized the Hebrew idiom, frequently carries with it overtones, ultimately coming from philosophical Greek (Platonism) and from Orphism and Gnosticism, which are absent in נַפֶּשׁ. In the OT it never means the immortal soul, but is essentially the life principle, or the living being, or the self as the subject of appetite and emotion, occasionally of volition. Ψυχή in the NT corresponds to נַפֶּשׁ in the OT but is relatively infrequent. It continues the old Greek usage by which it means "life." Paul sometimes prefers σῶμα and πνεῦμα to express new psychological distinctions. Once or twice he depreciates ψυχή. A heightened meaning of the word appearing occasionally is to be noted (see § 3 *below*).

- Bibliography

1. In the OT. a. *Etymology of נַפֶּשׁ*. The Hebrew word is probably from Akkadian *napāšu*, "expand," giving *napištu*, "throat, neck," with a possible meaning "breath" (cf. Arabic) and then "breath-soul." The meaning "throat, neck," is suggested, not always convincingly, for sundry passages of the OT—e.g., Isa. 5:14; 29:8; Jonah 2:6; the clearest case is possibly Ps. 105:18. The meaning "breath" in the OT is doubtful.

b. *Hebrew idea of "soul."* Hebrew thought could distinguish soul from body as material basis of life, but there was no question of two separate, independent entities, except for a possible trace of the "Greek" idea in Job 4:19: "those who dwell in houses of clay, whose foundation is in the dust [is dust?]." The word נַפֶּשׁ designates the life principle, which always appears in some form or manifestation without which it would not exist. This is not contradicted by passages like Gen. 35:18; I Kings 17:21-22, which speak of the נַפֶּשׁ as departing or returning. The Hebrew could not conceive of a disembodied נַפֶּשׁ, though he could use נַפֶּשׁ with or without the adjective "dead," for "corpse" (e.g., Lev. 19:28; Num. 6:6).

c. *Locus classicus*. In Gen. 2:7 we read that "the LORD God formed man of dust from the ground, and breathed into his nostrils the breath of life [נִשְׁמַת הַחַיִּים]; and man became a living being [נֶפֶשׁ חַיָּה]." This latter expression is used collectively of the animals in Gen. 1. The qualification "living" in Gen. 2:7 emphasizes the contrast with the inert dust. The writer might have written חַיָּה instead of נִשְׁמַת for "breath" (see Gen. 7:15).

d. *Usage of נַפֶּשׁ*. The Hebrew could speak of his flesh as we would say "body," but often he spoke of his נַפֶּשׁ—i.e., himself as a psychophysical organism. He did not *have* a body but *was* an animated body, a unit of life manifesting itself in a fleshly form. The life principle in man was sometimes linked with the blood (e.g., Gen. 9:4; Lev. 17:11, 14; Deut. 12:23). The word נַפֶּשׁ frequently means "life" (e.g., saving life [Josh. 2:13]; taking life [I Kings 19:4]; risking life [Judg. 5:18; II Sam. 23:17]; fear for life [Ezek. 32:10]). Life is always a totality, which may express itself in the body as a whole or concentrate itself in some part, member, or organ of the body (tongue, eye, ear, hand, heart, etc.), which by synecdoche can represent the whole in a certain aspect. To speak of a "diffused personality" is misleading. The use of the personal pronouns implies a sense of the unity of the self. The phrase acquires a profounder meaning in Isa. 53:12 (cf. vs. 11) in view of the value of what is surrendered (cf. II Sam. 23:13-17). The word נַפֶּשׁ often means "self," "person," and with pronominal suffixes can form an emotional substitute for the personal pronouns. It can express the reflexive idea and is used for "persons" in enumerations.

The soul, like the spirit, can increase or decrease in strength. When all the strength ebbs away, death intervenes. To pour out the soul is to stand forth as helpless (e.g., I Sam. 1:15; Ps. 42:5). A strong soul can surpass its apparent limits through persons and things connected with it. This has been called "extension of personality." With other selves it can form a psychic unity (e.g., Gen. 23:8; II Kings 9:15; Ps. 33:20).

e. Relation of נפש to other terms. נפש, as used of the human totality, was generally preferred when the self was thought of as having desire or appetite or emotional experiences (cf. English "soulful"). נפש can represent the totality of feeling (Exod. 23:9). The נפש hungers and thirsts; is greedy; is satisfied; feels joy, sorrow, love, hatred, hope, despair, etc. To express the energy or character of the self, the word SPIRIT could be used, unusual energy or insight or skill being attributed to the invasive spirit of God; while to express volition or the organization of the soul for action the word HEART was available, occasionally coupled with "soul." The three terms are frequently interchanged. God is to provide a new character and new energy (Ezek. 11:19; 18:31; 36:26). The heart also is the chief seat of the intelligence—thinking is practical rather than speculative, and thoughts readily pass into actions.

2. In the Apoc. The evidence yielded by the Apoc. is significant only in the case of the Wisdom of Solomon. In books like I–III Maccabees, Tobit, Judith, and in particular Ecclesiasticus the usage of ψυχή corresponds by and large to that of נפש. Occasionally in Ecclesiasticus ψυχή represents לֵב "heart." In the Wisdom of Solomon there are clear traces of Greek conceptions—e.g., reference to pre-existence of the soul (8:19), immortality of soul (3:1), soul as burdened by the body (9:15), ethical qualities attributed to the soul (1:4; 2:22; 7:27; 10:7; 17:1), the idea that soul goes to Hades (16:14). In II Esd. 7:102-15 there is evidence for belief in reservation of souls after death for judgment.

3. In the NT. The etymology of ψυχή is ψύχω, "to breathe." In the KJV it is translated sometimes by "soul," sometimes by "life."

As compared with נפש in the OT, ψυχή is relatively infrequent in the NT. This is partly due to the fact that so much of the OT is poetry, which encourages the use of synonyms and pathetic periphrases. Especially in Paul, who is introducing new psychological distinctions, the self-transcendent self can be expressed by σῶμα and the fact of consciousness by πνεῦμα. But ψυχή and πνεῦμα are sometimes synonymous.

Like נפש, we find ψυχή meaning "life," which can be cared for (Matt. 6:25), saved or lost (Mark 8:35), sought (Matt. 2:20), laid down (John 10:11), risked (Phil. 2:30), etc. נפש can be used reflexively (II Cor. 1:23; I Thess. 2:8) or as "persons" in enumerations (Acts 7:14) or as the subject of emotion (Mark 14:34; Luke 1:46; John 12:27). It can express unity when qualified with "one" (Acts 4:32; Phil. 1:27; cf. II Kings 9:15).

In general in the NT, ψυχή continues the old Greek usage (characteristic, e.g., of Homer) by which it means "vitality, life." When a contrast is intended, ψυχή is opposed to σῶμα and πνεῦμα to σάρξ. Heb.

4:12 probably does not imply a distinction between soul and spirit. In one place (I Cor. 2:14-15) there is more than a suggestion of depreciation of the ψυχή in Paul's use of ψυχικός to describe the "natural" (KJV) or "unspiritual" (RSV) man with no spiritual perception. The same attitude reappears in I Cor. 15:42-50. This is doubtless due to Paul's emphasis on the Spirit of God. He depreciates the living being of Gen. 2:7 (who on the OT view was God's vis-à-vis and therefore open to divine influence), because for him man is hopelessly in thrall to sin and needs Christ, the last Adam, to communicate to him the Spirit. The passage I Thess. 5:23 does not imply a trichotomy of spirit, soul, and body, but merely expresses the totality of the human personality as needing to be sanctified by God. Cf. Deut. 6:5.

In some passages of the NT, especially in Hebrews and the Pastoral letters, ψυχή seems to receive a heightened meaning (e.g., Heb. 6:19; 10:39; 13:17; Jas. 1:21; I Pet. 1:9, 22; 2:11, 25). This probably finds its explanation in certain passages in the gospels—e.g., Mark 8:35 (cf. Isa. 53:11-12); Luke 12:19-20, 22-23; 20:19—which turn the attention away from this world to life in the world to come.

SOUTH RAMOTH. KJV form of Ramoth of the Negeb. See RAMAH 5.

SOW [זָרָע; cf. Sanskrit śūkara, sūkara, wild boar, pig] (II Pet. 2:22). The mature female of the SWINE.

SOWER, SOWING. See AGRICULTURE.

SPAIN spān [ἡ Σπανία, short form of Ἰσπανία (I Macc. 8:3)]. A country in SW Europe which Paul hoped to visit (Rom. 15:24, 28).

The Spanish peninsula is bounded by the Pyrenees Mountains and the Bay of Biscay on the N, the Atlantic Ocean on the W and SW, and the Mediterranean Sea on the SE and E. The country is mountainous, with the main ranges running from E to W, and on the Mediterranean coast the land descends with relative abruptness toward the sea.

The first inhabitants of Spain lived in the Paleolithic period, and Cro-Magnon man is represented by the notable paintings in the famous cave of Altamira. Sometime within the succeeding Neolithic or Bronze ages a people known as the Iberians came in, probably from North Africa. From them the peninsula was anciently called Iberia (ἡ Ἰβηρία), a name attested as early as the sixth- or fifth-century his-

Jack Finegan

torian Hecataeus (Arrian *Anabasis of Alexander* II. 16.5). Probably by the eleventh century B.C. the Phoenicians were establishing trading posts in Spain, of which the most important was Gadeis, or Gadir (Herodotus IV.8), on the site of present Cadiz (Velleius I.2). Within a few centuries the Greeks also were going to Spain. Herodotus tells of a Samian ship which was blown beyond the Pillars of Heracles to Tartessus, probably at the mouth of the Guadalquivir River (IV.152), and describes the Phocaeans as voyaging to Iberia and Tartessus in fifty-oared vessels (I.163). By the third century B.C. the Carthaginians had taken most of the peninsula and established their capital at Carthago Nova, now Cartagena (Polybius II.13). Here in 209 B.C. Scipio Africanus won an important victory over the forces of Hannibal (Polybius X.10), and within a few years the Carthaginians were driven out. Native forces long continued to fight against the Romans; but with the fall of the stronghold of Numantia to Scipio Aemilianus in 133 B.C., organized resistance finally ceased (Appian *Wars in Spain* 84-98).

By 197 B.C. two Roman provinces were established in Spain, each under a propraetor, one centering in the valley of the Ebro River, the other in that of the Baetis or Guadalquivir. The former, being nearer to Italy, was known as Hispania Citerior; the latter, Hispania Ulterior (Livy XXXII.28.11). Under Augustus, Spain was reorganized into three provinces (Pliny Nat. Hist. III-IV). Hispania Citerior retained its unity and was under a governor (*legatus Augusti pro praetore*). Hispania Ulterior gave way to two provinces. In the less urban W was the province of Lusitania under a governor. In the more thoroughly Romanized S was Baetica, a senatorial rather than an imperial province, under a proconsul. The ready reception of the imperial cult at this time shows the appreciation with which the administration of Augustus was regarded. The Romans also built an

excellent system of roads which encircled and crossed the peninsula, and their bridge at Alcantara and aqueduct at Segovia remain as well-known monuments. How thoroughly Roman Spain became is shown by the work of such persons as the writers Seneca, Martial, and Quintilian, and the emperors Trajan, Hadrian, and Theodosius I, all of whom were from Spain.

The chief evidence which suggests that Paul was able to fulfil his hope of visiting Spain is the statement of Clement, who, writing to the Corinthians (I.5) from Rome ca. A.D. 95, says that before his martyrdom Paul had "come to the extreme limit of the West [τὸ τέμαρ τῆς δύσεως]." This phrase, which presumably could mean nothing less than Spain, correlates with the reference in the Muratorian Fragment a century later to the "departure of Paul from the city [of Rome] on his journey to Spain." The tradition, widely accepted in Spain, that the apostle James was the first to preach the gospel there, appears to be no earlier than a treatise called *De ortu et obitu patrum*, which is attributed to Isidore, bishop of Seville, 600-36. The first witnesses to the existence of Christianity in Spain are Irenaeus (ca. 180), who refers to the "churches . . . in Spain" (Iren. Her. I.10.2); Tertullian (ca. 200), who speaks of "all the limits of Spain" as "subjugated to Christ" (*An Answer to the Jews* 7); and Arnobius (ca. 306), who says that there were "innumerable Christians" in Spain (*Against the Heathen* I.16).

J. FINEGAN

SPAN [זרת]. A measure based on the distance between ends of extended thumb and little finger; half a cubit, eight inches or a little more. In Lam. 2:20 the plural form זרתיים is translated "a span long" in the KJV, taken to be related to זפת, *HANDBREADTH* (see also *WEIGHTS AND MEASURES* § D4c.). The RSV interprets "of their tender care" (lit., "of hands" [?]).

O. R. SELLERS

SPARROW [צפור] (*alternately BIRD*), see *BIRDS*; στρογγύθιον, *diminutive of στρογγύθος, sparrow*. Any bird of various genera of the finch family (*Fringillidae*).

Although צפור has a number of meanings in the OT, it appears to refer to one of the passerines in Pss. 84:3—H 84:4; 102:7—H 102:8; Prov. 26:2 (on the variety of the passerines in Palestine, see Tristram *NHB* 201-4). In these passages it is used along with "swallow," and it may indicate a type of sparrow. The altars mentioned in Ps. 84 mean, presumably, by metonymy, the various structures in the temple area which would be natural haunts for small birds. For efforts to discourage birds from perching on the sanctuary itself, see Jos. War V.vi.224; M. *Middoth* 4.6. In Ps. 102:7—H 102:8 the words "a

lonely bird on the housetop" can hardly apply to any of the commoner sparrows. Tristram supposed that the bird intended was the blue thrush (*Petrocincla cyanea*; cf. G. R. Driver's "blue rockthrush").

Σπουθίον is used in Matt. 10:29; Luke 12:6 to point to an object of very little worth—viz., a sparrow sold as food in the market place. Jesus asserts that, as such an insignificant creature has its place in God's care and economy, so the disciples must not fear opposition, for "you are of more value than many sparrows" (Matt. 10:31; Luke 12:7).

W. S. McCULLOUGH

SPARTA spär'ta [Σπάρτη, perhaps from σπάρτος, Spanish broom, or from σπαρτή, sown or cultivated]; **SPARTANS** —tanz. The principal city in S Greece in ancient times, and capital of the region of LACONIA; settled by a Dorian people also called LACE-DAEMONIANS. After defeating Athens in the Peloponnesian War (431-401 B.C.), the city declined in population and influence until its independence was lost in 192 B.C., when it was compelled to join the Achaean League. Under Roman rule Sparta alone among the Greek cities was granted self-administration similar to the Maccabean state. The evidence of II Macc. 5:9 suggests that there was a colony of Jews there as early as the second century B.C.

Bibliography. R. Marcus, *Josephus*, Loeb Classical Library, vol. VII (1943), Appendix F, contains bibliography; S. Schüller, "Some Problems Connected With the Supposed Common Ancestry of Jews and Spartans," *Journal of Semitic Studies*, I (1956), 257-68.

E. W. SAUNDERS

SPEARS. See WEAPONS AND IMPLEMENTS OF WAR § 3b.

SPECK [κάρφος, from κάρφω, to shrivel, dry up] (Matt. 7:3-5; Luke 6:41-42); **KJV MOTE.** A minute piece of dried material from wood, straw, or wool, contrasted by Jesus with a log (δοκός; KJV "beam").

SPECKLED. See COLORS.

SPECKLED BIRD OF PREY; KJV SPECKLED BIRD. The translation of עֵיט צְבוּיִת (Jer. 12:9). For עֵיט, see BIRD OF PREY. עֵיט צְבוּיִת means "dyed" (from צָבַע, "to dip, dye").

The text of Jer. 12:9a is admittedly difficult. The LXX ("hyena's cave") has led to two suggestions: Koehler (see bibliography) drops עֵיט and takes צְבוּיִת to be "hyena" (cf. Zeboim, "hyenas," in I Sam. 13:18); G. R. Driver (see bibliography) reads "hyena" and interprets עֵיט as "lair" (cf. Arabic *ghāta*, "to enter to hide oneself"; *ghait*, "garden, lowland").

Bibliography. E. Koehler, *Lexicon* (1953), p. 791; G. R. Driver, *PEQ* (May-Oct., 1955), pp. 140-41.

W. S. McCULLOUGH

SPELT [כַּסְמִית, *kussemeth*; כַּסְמִים, *kussmîm*; Ugar. *ksmm*]. A kind of coarse, inferior WHEAT, *Triticum spelta* L. The Hebrew, however, may refer to *Triticum dicoccoides* (Koern.) Schulz (see FLORA § A1b, where it is called *Triticum dicoccum* Schrank), another similarly inferior wheat, called emmer (or amelcorn, a source of starch). Identification is uncertain, though emmer is present in the area today, while spelt is

not. That *kussemeth* was a kind of wheat seems likely from its use with WHEAT in the three biblical passages in which it is found. In a partially broken text in the Ugaritic Keret legend (Tablet 126:III:10), *ksmm* seems to be in poetic parallelism with "wheat." In Exod. 9:32 wheat and spelt (or emmer? KJV RIE) escaped the plague of hail in Egypt. Isa. 28:25 describes the work of the farmer who plants spelt (KJV "rie"; mg. "spelt") as a border around the more valuable wheat and barley. Spelt (KJV FITCHES; mg. "spelt") is included with an odd mixture of grains to make coarse bread in Ezek. 4:9.

More than a dozen species of wild and cultivated wheat are found in Palestine today. The presence of two Hebrew words for this staple GRAIN, therefore, may indicate quality more than species. Thus *kussemeth* may have referred merely to the inferior grades of wheat.

J. C. TREVER

SPICE [בְּשֵׂם, *bōsem*; סַמִּימ, *sammîm*(?); ἄρομα]. Any of certain fragrant vegetable products highly prized in ancient times for cosmetics, sacred oil and incense, perfume, and burial preparations. The term seems not to be associated in the Bible with foods. Considerable difference exists between scholars about the meaning of *bōsem*, which is taken by some to be the generic term for "spice," while by others (see FLORA § A7f) it is considered to refer to the gum of the *Commiphora opobalsamum* (L.) Engl., an aromatic tree common to S Arabia. (*Šōri* more likely refers to the gum of this tree; see BALM.) The majority of the occurrences of *bōsem* would tend to argue for a generic meaning. *Sammîm* is generally an adjective, "fragrant," but in Exod. 30:34 it is twice translated "sweet spices" (cf. II Chr. 2:4—H 2:3; 13:11, where the RSV is inconsistent). Even there, however, it could mean "fragrances" or "perfumes" (cf. Exod. 25:6; 30:7).

Spices formed an important part of the wealth of the ancient world. They were prominent among the gifts presented to Solomon (I Kings 10:25; II Chr. 9:24), and featured in the visit of the Queen of Sheba from S Arabia (I Kings 10:2, 10; II Chr. 9:1, 9). The land of Sheba gained great wealth from its control of the spice trade route across S Arabia. "There were no spices such as those which the queen of Sheba gave to King Solomon" (II Chr. 9:9). Tradition claimed that Solomon had spice gardens near Jericho (cf. Song of S. 4:14; Jos. Antiq. VIII.vi.6; War IV.viii.3), especially noted for their balsam trees (cf. Pliny Nat. Hist. XII.111). Several centuries later Hezekiah proudly showed his stores of spices to the envoys of Merodach-baladan of Babylon (II Kings 20:13 = Isa. 39:2).

Spices were necessary for the temple cultus. Solomon is reported to have said to Hiram of Tyre that he would dedicate the temple to the Lord "for the burning of incense of sweet spices" (lit., "fragrant incense") before him (II Chr. 2:4—H 2:3). Certain Levites and sons of the priests were responsible for the spices and their proper mixing, after the return of the Jews from exile (I Chr. 9:29-30). The priestly writer gave lists of the spices used as the ingredients of the holy anointing oil (Exod. 30:23) and the fragrant incense (vs. 34), the spices being gathered from the people (35:8).

74. Ethiopian princess attended by bearers of spices, from an Eighteenth Dynasty (ca. 1570-1310 B.C.) wall painting of Thebes

The many references to spices in the Song of Solomon indicate specifically and figuratively the personal emphasis upon them. An orchard of fruit and spice trees does not do justice to the beauty of the bride (4:14-16), and the cheeks of the groom are like "beds of spices, yielding fragrance" (5:13; cf. 8:14). Beauty treatment with spices suggests their use in cosmetics (Esth. 2:12).

The use of spices in the preparation of a body for burial is mentioned in connection with the burial of Asa (II Chr. 16:14) and prophetically of Zedekiah (Jer. 34:5), but particularly of the burial of Jesus (Mark 16:1; Luke 23:56; 24:1; John 19:40).

For sources and description of specific spices, see ALOES; BALM; CALAMUS; CANE; CASSIA; CINNAMON; DILL; GALBANUM; GUM; HENNA; MYRRH; NARD; SAFFRON; STACTE; SWEET CANE; TRAGACANTH. See also COSMETICS; FRANKINCENSE; INCENSE; OINTMENT; PERFUME.

Fig. SPI 75.

W. W. FRERICHS

SPIES [מרגלים; תרים; KJV אתרים, see below; ἐγ-κάθετος, κατάσκοπος]. Persons sent into hostile territory to gather information beneficial to the aggressors.

The usual Hebrew word for "spies" is מרגלים, a plural participle from רגל, "foot," hence "those who go about on foot (secretly)"; תרים (only Num. 14:6 in this sense; "those who had spied out") is a participle of תור, which originally probably meant "to turn, go about," hence "those who wander about, or spy out" (cf. Num. 14:6; in I Kings 10:15; II Chr. 9:14 "traders"; KJV "merchantmen"). The odd rendering of אתרים in Num. 21:1 as "spies" by the KJV may be due to confusion with תרים; it is probably simply a proper noun, Atharim (so RSV).

In ancient as in modern warfare, spies were often used to discover weaknesses in a country or town's defenses (Gen. 42:9, 12). Moses sent twelve spies into the Negeb and the hill country who reported on the fortifications as well as on the productivity of the land (Num. 13). In the Jericho campaign Joshua is reported to have sent two spies in advance (Josh. 2:1), though what they actually achieved is not clear from the narrative. Spies were used, however, not only to gain information, but also to spread rumors, as in the instance of Absalom's revolt (II Sam. 15:10).

There are only two NT allusions to spies—i.e., the spies sent by Jesus' enemies the scribes and chief priests (Luke 20:20), and a commendation of Rahab for welcoming the spies (Heb. 11:31; cf. Josh. 2:1-21). J. W. WEVERS

SPIKENARD spīk'nārd, —nārd. KJV translation of נרד, *nērd* (Song of S. 1:12; 4:13-14), and νάρδος πισοειδή (cf. Vulg. *spicatus*, "spikelike") in Mark 14:3; John 12:3 (RSV "pure nard"). See NARD; FLORA § A7k.

SPINDLE (פליך) (II Sam. 3:29; Prov. 31:19). See DISTAFF.

SPINNING. See CLOTH.

***SPIRIT** [רוח; πνεῦμα; Lat. *spiritus*]. A term applied to God, gods, incorporeal beings generally, and to the divine element in human personality.

1. Terminology
 2. God
 3. Incorporeal beings
 4. Manifestations of God
 5. The divine element in man
 6. Spirit versus flesh
 7. Paul's triangle of personality
 8. The spirit of man and the Spirit of God
- Bibliography

1. **Terminology.** The root meaning of both רוח and πνεῦμα is "a movement of air," "breeze," or "wind," and so "breath." By extension it became the life principle. The original idea apparently survives in Gen. 1:2b: "The Spirit of God was moving over

the face of the waters." "Spirit" here is רוח (LXX πνεῦμα). The passage could be translated: "The wind of God was moving over the face of the waters." Indeed, in the Amer. Trans. T. J. Meek has rendered the passage: ". . . a tempestuous wind raging over the surface of the waters."

Something of the nature of wind survived in the concept of spirit as it was developed by biblical writers. Jesus says to Nicodemus in John 3:8: "The wind blows where it wills, and you hear the sound of it, but you do not know whence it comes or whither it goes; so it is with every one who is born of the Spirit." The saying involves a wordplay, for πνεῦμα means both "wind" and "spirit." If the passage were put into Hebrew, the word would be רוח.

As the life principle, רוח, πνεῦμα, "spirit," dwells in living, breathing beings, in the flesh of both men and animals. In this sense it is parallel to *nephesh* (נפש) or *psyche* (ψυχή). In Job 27:3; Isa. 42:5; Zech. 12:1 it is said that God creates man's spirit, and in Job 10:12 that he preserves it. So the spirit belongs to God.

But ninety-four times in the OT רוח occurs in the expression "the Spirit of God," where again the Greek translation is πνεῦμα. The Spirit of God is thought of as inspiring the prophets, especially the ecstatic type (Num. 11:17-29; I Sam. 10:6-10; 19:20-23). It inspires persons to deeds of frenzy and so at times is regarded as an evil spirit (I Sam. 16:15-16, 23; 18:10; 19:9; I Kings 22:21). It impels prophets to utter instruction or warning (Num. 24:2; II Sam. 23:2); or it imparts warlike energy and administrative power to the leaders of ancient Israel (Judg. 3:10; 11:29; I Sam. 11:6; etc.). It rests especially on the messianic king (Isa. 11:2; 42:1). Ps. 139:7 indicates that רוח and πνεῦμα finally came to mean the universal presence of God.

רוח is apparently always used in an individualized sense, as was characteristic especially of early biblical thought, which is concrete rather than abstract. This statement applies almost equally well to πνεῦμα in the NT. But there one comes upon intimations of philosophical developments.

The study of "spirit" in the Bible must not be limited to consideration of particular words, such as those noted above. One needs to keep in mind the concepts of natural and supernatural, which were not characteristic of biblical thought, but are now essential to our thinking. "Spirit" is so intimately connected with the supernatural in our thought that we should look for expressions of this idea, as well as for words which are translated "spirit" in the English Bible.

2. God. When we say that GOD is spirit, a spirit, or spiritual, we usually mean, to say the least, that God has no physical body, that he is immaterial; and we say that he is pure spirit. In this sense, "spirit" indicates substance, the nature of God's being. But this is a philosophical type of thought which was unknown to early Hebrews. Some early biblical stories do not hesitate to attribute a physical body to God. In the creation story of Gen. 2:4-3:24 anthropomorphism is characteristic. According to Gen. 32:24-30, Jacob wrestled with God in the form of a man, and saw him face to face. Exod. 33:11 states

that Moses saw God face to face; and vs. 12-23, that Moses was permitted to see God's back as he walked by.

But this idea that God has a corporeal body was left behind as the prophets acquired a belief that God is universal, eternal, and with no physical likeness whatever. This view is reflected in Isa. 40:18-26. Christianity inherited this prophetic conception, and in the NT it is assumed as a matter of course. True universality and immateriality are implicit in the words of Jesus in John 4:21, 24: "Neither on this mountain nor in Jerusalem will you worship the Father. . . . God is spirit, and those who worship him must worship in spirit and truth." It seems probable that "spirit" in this passage is intended to indicate "substance"—i.e., "immaterial being." The statement is as close as the Bible comes to working out a philosophical conception of God.

3. Incorporeal beings. Various types of these are mentioned in the Bible. Along with a fully developed monotheism, like fossils in rocks, embedded in early strata of the Bible are vestiges of older beliefs. Among these are dragons. There is a sea serpent named LEVIATHAN (Job 3:8; Ps. 74:13-14; Isa. 27:1); Rahab, a dragon which causes storms at sea (Job 9:13; 26:12; Ps. 89:10—H 89:11; Isa. 30:7; 5:19); a desert dragon BEHEMOTH (I Enoch 60:8; II Esd. 6:49). Such Hebrew ideas should be compared with Vritra of the Indian Rig-Veda and Tiamat of Babylonian mythology. Lev. 16:26 ff refers to AZAZEL, a strange creature of the wilderness, to whom a goat was sacrificed on the Day of Atonement. This spirit appears to be similar to the satyrs of Greek mythology.

SATAN does not appear in the earlier part of the Bible. We encounter him first in I Chr. 21:1 ff; Job 1:6 ff; Zech. 3:1-2, all of which are fairly late. But he became firmly embedded in Hebrew faith and was inherited by Christianity. He appears under various names. In the DEAD SEA SCROLLS (CDC VI, VIII; 1QS I), as well as in II Cor. 6:15, he is called Beliel or Beliar. In Mark 3:22-27 the scribes call him Beelzebub. Matt. 4:1-11, which records the temptation of Jesus, refers to him as the devil. Satan's appearance on that occasion is not described, although supernatural power and knowledge are ascribed to him. But in Rev. 12:7; 20:2 he is called both a dragon and a serpent. Dragons are mentioned several times in Revelation, and there is the later story of Saint George and the Dragon, but eventually dragons were to disappear from Christian thought except insofar as they survive in the features of Satan, who is sometimes still portrayed with a barbed tail and a goat-like body.

Angels (see ANGEL) appear frequently in the OT, but they remain anonymous until Daniel (8:16; 10:21; etc.) introduces Gabriel and Michael, who reappear in the NT (cf. Luke 1:19, 26; Jude 1:9; Rev. 12:7). Numerous other angel names are mentioned in such books as Enoch. While evil spirits or demons (see DEMON) are rare in the OT except in the forms of dragons, noted above (cf. I Sam. 16:14), they became prominent in the interbiblical period and are assumed in the NT, where they appear with great frequency.

Another category of spiritual beings is souls of the

dead. Dan. 3:86 LXX; Heb. 12:23 refers to souls of the redeemed as spirits. I Pet. 3:18-20 mentions a descent of Christ into Hades to preach to unregenerate spirits in prison, who had rejected Noah's call to repentance. See also SPIRITS, DISTINGUISHING.

4. Manifestations of God. Important special manifestations of God are the Spirit of the LORD; the Spirit of GOD; the Spirit of the Lord Jesus CHRIST; the HOLY SPIRIT; and the Spirit of TRUTH.

5. The divine element in man. The divine element in man is indicated first by the view that he is created in the image of God (Gen. 1:27), which means that man is by nature like God. This probably indicates that he has intelligence and free will and is a moral being. But the figure of an image is used in a Christian sense to indicate transformation of personality into the likeness of Christ (Rom. 8:29; I Cor. 15:49; II Cor. 3:18). Christ himself is also said to be the image of God (I Cor. 11:7; II Cor. 4:4; Col. 1:15; Heb. 1:3).

The Bible also indicates the spiritual nature of man by saying that he is a son of God. In Luke 3:38; Acts 17:28 this is taken in the ancient Stoic sense, and means that all men are by nature sons of God, a view which is essentially parallel to the idea that man is created in the image of God. But the Bible generally uses "image" rather than "son" to express the idea.

Gen. 6:2; Job 1:6 refer to angels as sons of God. This expresses their supernatural, immaterial nature.

The Hebrew king (II Sam. 7:14) was regarded as God's son; this was a moral, covenant relationship, but it also involved the sacrament of anointing. Hos. 11:1 calls the nation Israel God's son. Yet the prophets commonly spoke of all Hebrews as God's sons (Isa. 43:6; Mal. 2:10). In the NT only believers are considered sons of God; Paul (Rom. 8:15, 23) speaks of them in terms of adoption, while John 3:7 speaks of a new birth.

6. Spirit versus flesh. In Pauline language there is a contrast between the Spirit of God and the spirit of the world (I Cor. 2:12; Eph. 2:2). Paul also likes to distinguish between the flesh and the Spirit (Rom. 8:4; Gal. 5:16-24), while in Rom. 8:10 the contrast is between spirit and body. John 6:63 is familiar with this distinction. In Rom. 2:29; 7:6; II Cor. 3:6, Paul distinguishes between the spirit and the letter; in I Cor. 2:5, between the Spirit and the wisdom of men.

7. Paul's triangle of personality. The spirit enters into Paul's triangle of personality, which is developed in Rom. 7:7-25; Gal. 5:16-24. In the former passage, especially in vs. 25, the three elements of personality turn out to be mind (νοῦς), flesh (σάρξ), and the conscious "I" (ἐγώ). The "I" must choose between the flesh and reason. But in Gal. 5:16 ff the mind (νοῦς) is replaced by spirit (πνεῦμα). We can harmonize the two passages by assuming that the πνεῦμα, or spirit, resides in the νοῦς, or intelligence.

8. The spirit of man and the Spirit of God. Paul's analysis of personality, one element of which is man's spirit, enables him to present his idea of the Christian's fellowship with Holy Spirit. According to Rom. 8:9-17, it is the spiritual nature with which God has endowed every man that makes it possible for the Spirit of God to dwell in man. It provides a

basis for the continuing conversation between man's spirit and the divine Spirit which comes to dwell within him.

SPIRIT, HOLY. See HOLY SPIRIT.

SPIRITS, DISTINGUISHING. Paul places διακρίσεις πνευμάτων, "the ability to distinguish between spirits" (KJV "discerning of spirits"), among the SPIRITUAL GIFTS (I Cor. 12:10). Primitive Christian beliefs provide the background for this usage. There are two kinds of SPIRIT (§ 3), good and evil (I Cor. 12:3-11; II Thess. 2:11; Eph. 6:12). Inspired messages may come from either, genuineness being independent of externalities (I John 4:1). The spirits can be distinguished, and the validity of inspiration established (I Cor. 12:3; 14:32; I John 4:2-3; cf. I Cor. 2:12-15). Spiritual discrimination is essential to the maintenance of Christian truth (I Thess. 5:18-21), separating the "spirit of truth" from the "spirit of error" (I John 4:6). The tests are: (a) theological, affirming the lordship of Jesus and the apostolic witness (I Cor. 12:3; I John 1:1; 2:24; 4:2); and (b) moral and practical, the witness of the fruits (Matt. 7:15; Gal. 5:22-23), of the spirit of Christ (Rom. 8:9; I Cor. 13), and of usefulness to the church (I Cor. 14:14-26).
E. ANDREWS

SPIRITS IN PRISON [πνεύματα ἐν φυλακῇ] (I Pet. 3:19). A phrase which refers to Christ's DESCENT INTO HADES between the Crucifixion and the Resurrection. The spirits can be human beings—i.e., the souls of the departed who died before Christ—or angelic beings—i.e., the fallen angels of Gen. 6:1-7 (cf. I Enoch 15:8 ff; 54:5; Jub. 10). Even the thesis that our phrase embraces both human and angelic beings is not excluded. Behind the mythological setting is the idea that the event of Christ had a universal significance and that Christ as the Redeemer of all mankind opened the door of the prison of death. The myth is at home in ancient oriental and Greek texts and was applied to Jesus.

E. DINKLER

SPIRITUAL BODY [σῶμα πνευματικόν] (I Cor. 15:44-50). The resurrection body. In this life man's soul, the principle of his physical life, animates a body of flesh and blood. The Christian, who has entered upon the new life in Christ, indwelt by the HOLY SPIRIT, is more than "fleshly" or "soulish"; he is "spirit." "Spirit," when used of man, denotes man in his relation to God—i.e., as acted upon by the Holy Spirit. Insofar as the divine Spirit motivates him, he is "spiritual." As man now possesses a body corresponding to his "fleshly" or "soulish" condition, so in the resurrection he will possess a body corresponding to his condition of total redemption, a "spiritual body." This does not mean a body made of a "spirit substance," but a body wholly possessed

by, and wholly an instrument of, the Holy Spirit, fully adapted to the resurrection life in Christ.

G. W. H. LAMPE

***SPIRITUAL GIFTS.** The term used in the NT to designate the special endowments of the members of the church for its service. (For the Greek terms so translated, see below.) The NT picture of the church from its earliest days is that of a community under the direction of the Spirit. Christians, being in the church, are "in the Spirit" and have tasted the "first fruits of the Spirit" (Rom. 8:9, 23). Extraordinary signs of the Spirit's presence and power are everywhere evident. The gospel of salvation first declared by Jesus, then proclaimed by those who had received it, has been confirmed by God himself "by signs and wonders and various miracles and by gifts of the Holy Spirit distributed according to his own will" (Heb. 2:4). Such phenomena are called "spiritual gifts." They vary in character from the strongly emotional outpourings of the ecstatic to the normal, everyday practice of God's will; from talents and activities contributing to worship to those equally necessary for meeting the general needs of the Christian community. All such powers and activities are given by God, and their worth is to be judged by the measure in which they promote the well-being of the church.

1. **Nature and diversity.** Though πνευματικά is sometimes used (I Cor. 12:1; 14:1) for "spiritual gifts," the distinctive and more frequently used term is χαρίσματα, plural of χάρισμα ("free gift"), a word very rare outside the NT. The term "spiritual" (πνευματικόν) is linked with it once only (Rom. 1:11). There are two usages: the general, of some favor (II Cor. 1:11) or capacity (I Cor. 7:7) or truth (Rom. 1:11) or endowment (I Cor. 1:7) shared by an individual through divine grace or providence; and the particular, of specific abilities used or responsibilities assumed for the well-being and growth of the fellowship (Rom. 12:3-8; I Cor. 12-14; Eph. 4:7-13; I Pet. 4:10-11; I Tim. 4:13), all of divine bestowing. NT writers, particularly Paul, hold a very democratic view of such gifts, believing that every Christian possesses some of them, with varying degrees of fullness (Rom. 12:6).

a. **General usage.** Spiritual gifts are "grace gifts." When man merited only condemnation and death, because of his sin, God by his free gift (χάρισμα) gave righteousness and life (Rom. 5:15-17). Death is sin's wages, but eternal life is the "free gift [χάρισμα] of God" (Rom. 6:23). Deliverance from peril is a gift (χάρισμα) calling for thanksgiving (II Cor. 1:11). The power to live a celibate life, thus giving all one's capacities and powers to one's vocation, is a gift

(χάρισμα; I Cor. 7:7). One must not neglect the gift (χάρισμα), the talent, that is in him (I Tim. 4:13-14). He should, indeed, since human nature is capable of improvement, earnestly desire the "higher gifts" (I Cor. 12:31; cf. Matt. 25:14-30). Service to others must be in proportion to the gift (χάρισμα) that each has received (Rom. 12:6; I Pet. 4:10). The blessings and privileges and powers of the church are "spiritual gifts" (χαρίσματα), and are never repealed (Rom. 11:29; I Cor. 1:7). One may impart a gift (χάρισμα) to others, as the apostle wishes to impart the truth of the gospel (Rom. 1:11).

Such uses of the term "grace gift" indicate some favor given by God to the individual or to the church, with only secondary reference to the way in which individuals should exercise their gifts.

b. **Particular usage.** The focus of interest here is the church, the fellowship of those who are "in Christ Jesus," and the primary emphasis is upon its well-being and growth. The use of one's gifts must show no tinge of self-importance, but rather sincere humility as one renders service to the body of Christ, of which each is a member, and in which each is to fulfil his particular function (Rom. 12:3-5; I Cor. 12).

A list of "spiritual gifts" (χαρίσματα) follows this order: wisdom, knowledge, faith, healing, miracles, prophecy, discerning of spirits, tongues, and interpretation of tongues (I Cor. 12:8-10). Lists, though not identical (Rom. 12:6-8; I Cor. 12:28-30; Eph. 4:11), emphasize the same general categories, with some specific reference to the various ministries of the church. Attempts at classifying these gifts as natural or supernatural, miraculous or nonmiraculous, have not been too successful, because the NT draws no such distinction; it assigns all to the operation of the Spirit and co-ordinates the Spirit with the Father and with Christ (I Cor. 12:4-6; Eph. 4:4-6). Some would separate those most useful in worship (prophecy, teaching) from those more practical or ministering gifts (healing, administrations, service; I Pet. 4:10-11). All gifts—that moving to liberality (Rom. 12:8), as that issuing in tongues (I Cor. 14:13-19)—are related to the corporate body, the church, are diverse because its needs are so, and are assessed in the light of their contribution to that body's proper functioning (I Cor. 12:14-26).

The primary gift, source of all others, is the Spirit, whose genuineness is tested by the confession of Jesus as Lord (I Cor. 12:3). The exalted Lord, the Spirit, bestows gifts upon his church (II Cor. 3:17; Eph. 4:9-11; Phil. 2:9-11). He gives apostles, the Twelve and all who like them are sent to witness to the gospel and to lead the church at large (Rom. 16:7; I Cor. 9:5; II Cor. 8:23; Gal. 1:19).

He also gives prophets, men with the gift of utterance who speak the things they have "seen and heard" with boldness, freedom, and intelligibility, revealing insight (wisdom and knowledge) into the nature and practice of God's will (Acts 4:20, 31; I Cor. 1:5; 12:8; 14:29; II Cor. 8:7; Eph. 1:8-9, 17; Col. 1:9-10), as well as comforting, strengthening, and guiding the church in its work and worship (Acts 13:1-3; I Cor. 14:3).

He gives teachers, who instruct converts, and the church generally, in faith and practice, in gospel tradition, and in the Scriptures. They become in-

creasingly important as discrimination between true and false teaching becomes essential. Bishops are expected to possess this gift to a superior degree (cf. Acts 20:28-31; Rom. 12:7; Col. 3:18-4:1; I Tim. 5:17; Heb. 5:12; Jas. 3:1; I Pet. 2:18-3:7). With teaching, the service of pastoral care is sometimes linked (Eph. 4:11), suggesting perhaps the close relationship between them.

He gives evangelists, traveling missionaries, somewhat lower in standing than apostles and prophets, but noted for their special emphasis upon preaching the "good news" wherever opportunity offers (Acts 21:8; II Tim. 4:5). See also MINISTRY.

The gifts thus far defined are all related, though not exclusively, to the very fluid ministry of the early church, a ministry of varied functions inspired by the Spirit for the good of the corporate body. Functions, however, which gain place through effective and habitual exercise come to be recognized more formally (I Cor. 16:15; Eph. 4:7-16; I Thess. 5:12). From the first, the "laying on of hands" sets persons apart for particular work (Acts 6:6; 13:3), but later becomes a more official act, as in the Pastoral letters, where Timothy is given authority to do the work of an evangelist. The act does not bestow the gift (*χάρισμα*) but gives authority and confirmation to the zeal and capacity already evidenced by Timothy and which he is warned to rekindle (I Tim. 4:14; II Tim. 1:6).

There are also gifts which, though shared by the ministry, are not particularly of it. Faith is a gift (I Cor. 12:9; Phil. 1:29), and possibly prayer "in the Spirit," since the Spirit enables the believer to cry "Abba" (Rom. 8:16; I Cor. 14:14; Eph. 6:18-19). Christians believe that "the *dunamis* of God" (Mark 12:24) present in the Christ of the Gospels, and delegated to his apostles (Mark 6:7; Luke 9:1; 10:19), still operates in the church to impart the gifts of miracles and healings (Rom. 15:18; I Cor. 12:28; Gal. 3:5; Heb. 2:4; Jas. 5:13-16). Those performing works of charity or helping generally in the Christian community have the gift of service (I Cor. 12:28; cf. Rom. 12:8), while the leaders or overseers in church affairs, who may well be the forerunners of the later episcopal presbyters (Acts 14:23; 20:17), have the gift of administration. Since Christians are to distinguish truth from error in all things, especially in ecstatic utterances, to some is given the spirit of discernment (I Cor. 12:10; cf. I John 4:1). A gift greatly coveted, but placed by Paul last in value, as indeed in his list (I Cor. 12:28), is the glossolalia (unintelligible ecstatic speech), which, unless the gift of interpretation (some rational explanation) be applied to it, adds nothing, may even be detrimental, to the common good (14:18, 23).

Thus the NT confronts us with a Spirit-created, Spirit-endowed community, depending entirely upon the resources of God's grace in Christ. Quite probably at first, only the extraordinary gifts, glossolalia and kindred phenomena, were attributed to the Spirit. Soon it was believed that the Spirit is active in every aspect of the Christian movement. Believers have gifts to bring, e.g., to worship—"a hymn, a lesson, a revelation, a tongue, or an interpretation" (I Cor. 14:26)—while others exercise their gifts in the practical affairs of the church. As the Christian fellowship grew and understood more clearly its needs,

new capacities were found to meet them, clearly indicating the constant provision of the Spirit. Hence Paul speaks of "varieties of gifts," "varieties of service," "varieties of working," not so much distinguishing the gifts in kind as indicating how the rich and manifold operations of the Spirit find their expression in an equally rich and manifold diversity of effects (I Cor. 12:4-6), all stemming from the same Spirit, the same Lord, the same God, who is the source of "life in Christ Jesus" (I Cor. 1:30; cf. II Cor. 13:14).

2. The eschatological setting. Spiritual gifts in the NT presuppose the messianic community, the new Israel of God, furnished and sustained in every good and necessary function by the Spirit, inheriting the promises made to the old Israel concerning the Spirit's coming, and witnessing to their fulfillment (Acts 2:16-17; 3:25-26; Gal. 6:15-16; I Pet. 2:9-10). Marvelous signs demonstrate the Spirit's presence in power and that men are living "in the last days." The key, therefore, to an understanding of the Spirit's activity is eschatological. The Day of the Lord has dawned; the kingdom of God has come. The primitive kerygma is that through the ministry, death, and resurrection of Christ all that was anticipated in Israel's history is now being realized (Acts 2:17-21; 3:21, 24; 10:43; cf. Mark 1:14-15). As members of Christ's body, the church, Christians are constantly enriched with the blessings of the "new age" while they wait for the future consummation (I Cor. 1:7; 10:11; Heb. 6:5). They live in a fellowship created by the Spirit, filled with the Spirit, over which the Lord the Spirit reigns, and for which he bestows all the gifts and graces essential to its corporate life (Acts 2:33; Rom. 5; 8; I Cor. 1:9; II Cor. 3:17; Gal. 5:22-23). The Spirit is thus the "first fruits" (Rom. 8:23) or the "guarantee" (II Cor. 1:22; 5:5; Eph. 1:14) of the future inheritance which Christians already taste and share (Heb. 6:4; I Pet. 4:14). The reign of God, yet to be fulfilled, is now manifest in "righteousness and peace and joy in the Holy Spirit" (Rom. 14:17).

3. Evaluation and control. All spiritual gifts are valid, but not all are equally good. Their worth to the church determines their value. Paul, with the Corinthian church as background, where ecstatic powers, particularly "tongues," are given undue place and prominence, sees the necessity of guiding spiritual gifts into ethical and rational channels. He introduces the analogy of the body (I Cor. 12:12-26), with its organic unity, diversity of function, interdependence of members, to illustrate how the *χάρισμα* are also diverse in function, interdependent, and designed to give unity, solidarity, and healthy growth to the Christian fellowship. All gifts, therefore, are to be subordinated to, and have value in proportion as they further, this purpose. The ministry is graciously given (Eph. 4:7-8) to bring the church "to mature manhood, to the measure of the stature of the fullness of Christ." Prophecy is given for "upbuilding and encouragement and consolation" (I Cor. 14:3). Every gift is justified in the measure that it contributes to the faith and knowledge, peace and order, of the church, and must be exercised with a deep sense of responsibility to God, who has called Christians to be "good stewards" of his "varied grace" (I Cor. 14:33, 36; I Pet. 4:10-11).

Since all gifts are for the service of the church, how

can they be so used? Paul finds the answer in the "more excellent way" of love (ἀγάπη), the greatest of all "spiritual gifts" (Rom. 5:5; I Cor. 12:31-13:1), the undeserved grace bestowed on man that he might bestow it in complete self-giving upon his fellows. Since gifts fall into a scale of relative significance as the ends of love are promoted, this becomes both the criterion of value and the principle of control. By introducing this regulatory concept of love, his basic moral premise, Paul corrects the confusion and disorder of the Corinthian church and prepares the way for a more ethical apprehension of the Spirit's activity in those "fruits of the Spirit" which are the marks of Christian character (Gal. 5:22; cf. Eph. 5:9).

E. ANDREWS

SPIT. The act of spitting is uniformly a sign of the strongest rejection and contempt in the OT and the NT, apparently as part of quasi-legal formulas in Num. 12:14; Deut. 25:9.

None of the OT occurrences reflects directly the widespread superstition that human spittle contains the mysterious essence of the man himself and is therefore potentially usable in all kinds of magic and subject to strong taboo, with the possible exception of Lev. 15:8.

Jesus follows widespread Jewish practice in the use of spittle to heal in Mark 8:23; John 9:6 (see HEALING). Sabbath law is broken by Jesus in his mixing the clay in John 9:6, and this may constitute the main point of this action. In Mark 7:33 the act of spitting may entail the dispersal of demonic forces rather than an act of healing by means of the spittle. See DEMON; MIRACLE.

SPOIL [שָׁלַל; see also below]. Plunder taken as right of conquest.

The most common word, שָׁלַל, indicates goods, cattle, and captives subject to division among the victors (e.g., Gen. 49:27; Exod. 15:9), as distinguished from בָּיָה and its later cognate בָּזָה, often translated "booty," which mean things taken by each warrior for himself (e.g., Num. 31:53; Jer. 15:13; Ezek. 25:7 [Qere]). Less common is מִשְׁטָּה (II Kings 21:14; Isa. 42:22; Jer. 30:16; also Isa. 42:24 Qere and KJV, where the *Kethibh* בְּשׁוֹטָה, parallel to בְּזוּיִם, "robbers," should rather be interpreted as a participle, "spoiler"). חֲלִיעָה refers to what is stripped from a slain warrior (Judg. 14:19; II Sam. 2:21). בָּצַע (Judg. 5:19) means something obtained by violent means, often illegally, and elsewhere is usually translated "gain." גָּזַל (Isa. 3:14) comes from a word with the root meaning "to rob"; and since the taking of spoil was considered to be a right of the victor, and hence

perfectly moral, the word might better be rendered "pillage." The KJV uses "spoil" for some occurrences of שָׂד, "destruction," and טָרַף, "prey," and also in Isa. 25:11 for the *hapax legomenon* אַרְבִּיבֹת, which comes from the root אָרַב, "to lie in ambush," and more probably means "artifice" or "trickery" (RSV "skill"). In the NT, σκαῦλον (Luke 11:22) refers first of all to armor taken from a slain warrior, and by extension to any spoils taken by force; and ἀκροβόλιον (Heb. 7:4) means the best part, hence the "first fruits," or the choice portion of the plunder, which was given to the deity.

Warfare in the ancient Near East inevitably involved the rights of plunder. The victor automatically assumed his right to possess anything belonging to the vanquished enemy. This usually involved cattle (Deut. 2:35; 3:7; I Sam. 14:32; II Chr. 15:11; Jer. 49:32), clothing (Josh. 7:21; Judg. 5:30; II Chr. 20:25; 28:15), precious metals (Josh. 7:21; Judg. 8:24-25)—in fact, anything that could be carried or driven away (II Chr. 20:25; cf. Gen. 14:11, 16), including women and children (Deut. 20:14), whereas the male populace was often exterminated (Num. 31:7, 17). The taking of spoil was a warrior's greatest pleasure (Ps. 119:162; Isa. 9:3—H 9:2).

The division of spoils followed certain general rules among the Hebrews. As among the later Arabs the leader probably received a special share, though he could also ask his warriors to give up some of theirs for a particular cultic purpose, as in the case of Gideon (Judg. 8:24-25). According to the Priestly account of Num. 31, Israel returned from their victory over the Midianites with "all the spoil and all the booty," and brought them to Moses and Eleazar into the camp for distribution. All male children were to be killed, and of women only virgins were to be kept alive. Thereupon the spoil was divided into two parts, one part to be equally distributed among the warriors and the other to the people at large. Furthermore, a levy for the deity was assessed. The warriors were to give up one person or beast out of every five hundred; the people, one out of every fifty. Beyond this, as a special offering each man brought "the LORD's offering"—namely "articles of gold, armlets and bracelets, signet rings, earrings, and beads." This was "booty" (בָּיָה) taken by each warrior for himself, in distinction from "spoil" (שָׁלַל), which had to be divided. The actual division of the spoil was done by the chieftain, who was probably known as the אָבִי עַד (Isa. 9:6—H 9:5, where "Everlasting Father" may rather mean "Father of spoils").

Choice plunder was often devoted to the deity; it then became part of the treasures of the sanctuary. Goliath's sword was housed at the sanctuary at Nob (I Sam. 21:9), whereas the armor of the defeated Saul was placed by the Philistines in their temple of Ashtaroth (31:9-10). In temple times parts of the spoil won in battle were dedicated "for the maintenance of the house of the LORD" (I Chr. 26:27), where special officers were charged with the care of all such gifts.

In special cases no spoil might be taken. Prior to an assault a city or tribe might be "devoted" to God. Such a vow meant that everything animate was to be destroyed, all precious metals and objects given

to God, and the remainder, including the city with its dwellings and surrounding fields, burned or otherwise made useless. Jericho was placed under the BAN (i.e., devoted to destruction) at the time of the Conquest (Josh. 6:17-19).

See also BOOTY.

J. W. WEVERS

SPONGE [σπόγγος]. The skeleton of a type of marine animal. The usefulness of the sponge is dependent upon its power to absorb liquids without losing its own toughness. The word is used in three NT passages (Matt. 27:48; Mark 15:36; John 19:29) in which Jesus is offered a sponge full of vinegar, or sour wine, to quench his thirst. S. A. CARTLEDGE

SPOON. KJV translation of כַּף, more correctly rendered "dishes for incense" (so RSV). See INCENSE, DISHES FOR.

SPRING. The usual translation of פַּי and מַעַן, but see FOUNTAIN.

SPRING RAIN [שׁוֹקֵט, benefiting שָׂדֵה, late-sown crops]; KJV and twice RSV LATTER RAIN. Showers of April and May which bring the rainy season to an end; linked with EARLY RAIN as a token of divine goodness. See PALESTINE, CLIMATE OF.

SQUAD [τετράδιον; Vulg. *quaternio*] (Acts 12:4); KJV QUATERNION κῶ τῦρ'νι ὄν. A guard usually consisting of four soldiers, one for each of the night watches.

There is some evidence that even where the words *quaternio* or τετράδιον were not used, a guard was customarily made up of four soldiers: see Polybius VI.33, which indicates that when camp is pitched, the maniples "supply two guards [φυλακεία] for [the tribune] (a guard consists of four men) of which one [guard] is stationed in front of the tent and the other behind it next the horses." Cf. also Vegetius *De Re Militari* III.8; Philostratus *Vita Ap.* 7.31; Philo *Against Flaccus* 13; Gospel of Peter 9; John 19:23.

In Acts 12:1-11, Peter was guarded by four squads—i.e., by sixteen soldiers. Although vs. 4 suggests that Herod intended to keep Peter in prison for some time—until "after the Passover"—actually the four squads appear to be named with reference to the four watches of the night, a squad per watch. The narrative really has in mind only this one night. Peter was bound "with two chains"—i.e., to a guard on each side. The other two soldiers would be the "sentries before the door" of vs. 6 or the "first and the second guard" of vs. 10. Of course, Luke is not primarily concerned to show how many guards there were—when the angel "struck" Peter, there would be present only the four whose watch it was—nor to station them precisely in the prison, but to show that no matter how extravagantly Peter might be guarded, he could not be held. F. D. GEALY

SQUARE [חֶרֶב]; KJV usually STREET; BROAD PLACE in Jer. 5:1. A word of uncertain meaning;

perhaps an open space where public gatherings could be held, inside the gate of a typical Israelite city, as found in the excavations (cf. II Chr. 32:6; Neh. 8:1, 3, 16; and perhaps Ezra 10:9; see also Deut. 13:16; Judg. 19:15; Esth. 4:6; 6:9, 11; Job 29:7).

See also CITY § B2e.

C. C. McCOWN

STABLE. KJV translation of נִיחַ (RSV "pasture") in Ezek. 25:5. In modern (and probably in ancient) Palestine separate stables for domestic animals were practically unknown. At night they were sheltered in caves or in the house, rarely in a separate "basement." See STALL.

STACHYS stā'kīs [στάχυς, head of grain] (Rom. 16:9). A Christian man greeted by Paul and designated as "my beloved." F. W. GINGRICH

STACTE stāk'tī [נָזַח, nāzāph, from root to drip; στακτή]. One of the four aromatic ingredients of the holy INCENSE which was burned "before the testimony in the tent of meeting" (Exod. 30:34). The same list of ingredients is found in Eccles. 24:15 (στακτή; KJV "storax") in a poem in praise of Wisdom. The LXX translates שֶׁל, *lot*, in Gen. 37:25

76. Stacte

with στακτή (see MYRRH). The Hebrew root meaning suggests the droplets of gum exuded from a number of shrubs and trees (cf. Job 36:27 for its association with water). The storax tree, *Styrax officinalis* L., and the opobalsamum (ASV mg. of Exod. 30:34), *Commiphora opobalsamum* L., are considered the most likely sources. Zohary (see FLORA § A9p) favors the *Styrax officinalis* L. also for לבנה, *libhnē* (see POPLAR), mentioned in Gen. 30:37; Hos. 4:13.

See also FLORA § A7i.

Bibliography. H. N. and A. L. Moldenke, *Plants of the Bible* (1952), pp. 224-25. J. C. TREVER

STADIA stā'dī ǝ [στάδια]; KJV FURLONGS. See WEIGHTS AND MEASURES § D4e.

STAFF [מִטָּה (alternately ROD; BRANCH; TRIBE); מִקֵּל, שבט, משענת, משענה, מקל (alternately REED, SCEP-

TER, TRIBE; KJV ROD in Lev. 27:32, PEN in Judg. 5:14; KJV occasionally בר (RSV "pole"), זק (RSV "shaft"), מוט (RSV "pole"), מוטטה (RSV "pole"), עץ (RSV "shaft"), פלך (RSV "spindle"); ῥάβδος (KJV "rod" in Rev. 11:1); KJV ξύλον (RSV "club"). In addition to many references to the literal use of a staff—by travelers, warriors, riders, shepherds, etc.—there are a number of figurative references to "staff." From the idea of a staff as support came the figurative use of "staff of bread" (Ezek. 4:16; 5:16; 14:13; etc.). The staff, or ROD, of MOSES and that of AARON (Exod. 7:9 ff; Num. 17:5 ff), like those of the Egyptian magicians, were the instruments of miraculous powers (see MAGIC). The rod of Moses became his scepter in the desert, and in battle—especially when upraised—symbolized the presence of God among his people. Each of the tribes had a rod or staff (מטה) on which its name was written (Num. 17:2—H 17:17). According to II Kings 4:29, 31, the staff of ELISHA possessed healing power. Evidently the staff of the shepherd, on which he leaned, gave a sense of security to his flock (cf. Ps. 23:4). The Lord's staff is regarded often as a symbol of his presence and power (cf. II Sam. 22:19=Ps. 18:18—H 18:19; Isa. 3:1). Both rod and staff are instruments of divine judgment (Isa. 10:15; 30:32); and Assyria is like a staff in the Lord's hand against Israel (Isa. 10:15, 24; cf. Job 9:34; Ps. 2:9; Isa. 9:4; Ezek. 20:37). Old people who sit with staff in hand, unafraid and undisturbed, are a symbol of security (Zech. 8:4).

Jesus sent his disciples forth with the suggestion that they carry neither money nor extra clothes nor a staff (according to Matt. 10:10; Luke 9:3; but Mark 6:8 says he instructed them to take a staff). In Heb. 11:21 mention is made of the detail that Jacob had leaned on his staff while blessing the sons of Joseph (a reflection of the LXX rendering of Gen. 37:31, which translates "upon the head of his staff").

STAG. See HART.

STAIRS [לולים, מדרגה, מעלה, KJV מדרגה (Song of S. 2:14; RSV "cliff"); ἀναβαθμός]. Since the roof of a Palestinian house was the place for many family activities, stairs were a common feature. In the one-story house the stairs normally would be on the outside. They would be made of stone and without balustrade. In a two-story house, in addition to the stairs to the roof, there would be an inside flight to the second story. In city streets, as today, where there were steep hills, there would be stairs from one level to another (Neh. 3:15; 12:37). Stairs have been found leading down into deep wells or cisterns at Gezer, Megiddo, Beth-zur, Gibeon, and Qumran (Figs. STA 77; DEA 16). By NT times Greek and Roman theaters throughout the world had stairs. In I Kings 6:8 לולים, which occurs only here, is taken to mean "winding stairs." The other Hebrew and Greek words for "stairs" have the root meaning of "going up." There are stairs (RSV "steps") in Ezekiel's temple (Ezek. 40:6; 43:17). "Stairs of the Levites" are mentioned in Neh. 9:4. The "ladder" (סלים) in Jacob's dream may be a flight of stairs (Gen. 28:12).

77. Stairs descending to the pool at Gibeon

STAIRS OF THE CITY OF DAVID [מעלות עיר דוד] (Neh. 12:37). Alternately: STAIRS THAT GO DOWN FROM THE CITY OF DAVID [המעלות] (Neh. 3:15). Stairs of rock mentioned in the records of the restoration of Jerusalem under Nehemiah, toward the S end of the City of David (see DAVID, CITY OF), in the vicinity of the TOMBS OF THE KINGS. Excavations have led to the discovery of such a flight of rock-cut steps on the hill wedged between the valleys of the Tyropoeon and the Kidron, and leading to a postern in the E fortifications of the city, possibly the FOUNTAIN GATE. Fig. NEH 13.

Bibliography. J. Simons, *Jerusalem in the OT* (1952), pp. 95-96, 449-50; H. Vincent, *Jérusalem de l'AT*, I (1954), 245, 251-52. G. A. BARROIS

STALL [מרבק, ארות, רפתים]. A place for tying and feeding cattle. In the average home animals were kept in the yard, or in the lower section of the house, or in a cave stable under the house or nearby. For further details, see MANGER.

In Amos 6:4; Mal. 4:2—H 3:20 the phrase "calves from the stall" (עגלי מרבק) means calves specially fattened with fodder in the stable, as contrasted with range animals. This is the meaning also of the ambiguous phrase "stalled ox" (שור אבוט; RSV "fatted ox") of Prov. 15:17.

Both Hezekiah (II Chr. 32:28: "stalls for all kinds of cattle") and Solomon (I Kings 4:26—H 5:6: forty thousand horses; II Chr. 9:25: four thousand horses) had very extensive stalls or stables (ארות). Most scholars consider the forty thousand an exaggeration.

80. Stable at Megiddo in NE area of Stratum IVA, showing the arrangement of stalls

One Greek version (G^B) of I Kings 4:26 has four thousand. However, the very large extent of Solomon's stables has been strikingly substantiated by excavations at Megiddo and elsewhere. At MEGIDDO two separate groups of stable units have been excavated. Their plan was fairly uniform. On either side of passageways paved with hard lime were rows of stalls facing one another across the central aisles. The stalls were paved with cobblestones and rubble. At the head of the stalls, along the passageway, were pillars with mangers between. On the passageway side of the pillars, just above the tops of the mangers, were holes for the tie ropes of the horses. In all, there were about 450 stalls in the Megiddo stables (Figs. STA 78-80; MAN 8; MEG 33). Similar building arrangements have been found at Tell el-Hesi, Gezer, Taanach, and Hazor (though the most recent excavators do not interpret this last as a stable). Some of these may reflect Solomon's building activities. Hazor, Megiddo, and Gezer are mentioned in I Kings 9:15.

S. V. FAWCETT

STANDARD [גָּדָה, נֵמֶן; KJV נֹסֶם (Isa. 59:19; cf. RSV)]. A troop or tribal ensign used as a rallying signal. See BANNER.

STARS. See SCIENCE §§ A2, B2, C2.

STEADFASTNESS [ὑπομονή]. Alternately: ENDURANCE; PATIENCE; PATIENT ENDURANCE; PERSEVERANCE. A term which sometimes connotes reliability, constancy, fidelity, but which primarily means patient or steadfast endurance. In the Bible it is usually related explicitly to adverse circumstances, afflictions, persecutions, and even martyrdom. It has been well defined as denoting "an inward feeling, as well as outward conduct, but directed only against aggression." It connotes, not simply acceptance, or patience, but perseverance under trial. Often it is explicitly oriented to hope and describes a willingness to endure because of hope in what has been promised.

In Rom. 15:3-4 Paul, referring to Christ, quotes Ps. 69:9: "The reproaches of those who reproached thee fell on me," and then writes that this "was written for our instruction, that by steadfastness . . . we might have hope." Paul is telling the Romans that they must patiently endure reproaches as Christ endured them; and that if they do so, they may hope that the promises offered them in Christ will be fulfilled (cf. Rom. 5:3-4). The Christian endures (is steadfast) both because he hopes and in order that he may have hope.

In II Thess. 1:4 Paul writes: "We ourselves boast of you in the churches of God for your steadfastness and faith in all your persecutions and in the afflictions which you are enduring." The Thessalonians are "patiently enduring" (are steadfast in) persecutions and afflictions, and Paul boasts of this endurance (steadfastness) and faith.

Jas. 1:3-4 bids the brethren to rejoice when they meet trials, for the testing of faith "produces steadfastness." Trials are to be understood as testings, and testing leads to the ability to endure.

B. H. THROCKMORTON, JR.

STEALING. See CRIMES AND PUNISHMENTS § C7b.

STEED [אֲבוּרִי (Judg. 5:22; STALLION in Jer. 8:16; 47:3; 50:11), strong, powerful one; אֲבוּרִי (Zech. 6:7; KJV BAY; cf. 6:3), strong one(?); קָל (Isa. 30:16; KJV THE SWIFT), swift one; רַב־שֵׁשׁ (Mic. 1:13; KJV SWIFT BEAST; in I Kings 4:28—H 5:8, SWIFT STEED; KJV DROMEDARY)]. A HORSE which is especially strong, brave, swift, and of generally high mettle, suited particularly for battle.

J. A. SANDERS

STEEL. KJV translation of נְחוּשֶׁה in II Sam. 22:35; Job 20:24; Ps. 18:34; Jer. 15:12 (RSV BRONZE).

STEER. A term used in the translation of בָּרַע, "young steer" (KJV "bullock"), in Isa. 34:7 (elsewhere "bull"; "calf").

STEPHANAS stēf'ə nəs [Στεφανᾶς, crown, either a shortened form of Στεφανήφορος, crown-bearer, or a development of Στέφανος] (I Cor. 1:16; 16:15, 17). A man who, along with his household, is included

among the very few individuals personally baptized by Paul. He and his household are described as the "first-fruits" of Paul's ministry in Achaia. They are here commended for their earnest and devoted service (*δικαιονία*) to the Christian community.

Paul urges the Corinthian Christians, in the light of their divisive tendencies (I Cor. 1:10-17), to follow the leadership of such men, and he rejoices in the pleasure of Stephanas' visit to him in Ephesus (16:17-18) along with Fortunatus and Achaicus. These latter two, since they are mentioned by name, were probably not members of Stephanas' household. Stephanas and his two companions seem to have constituted a delegation from the Corinthian church to consult with Paul. They probably brought the letter written to Paul by the Corinthian church (7:1) and took back with them to Corinth the document known as I Corinthians. It is not clear that Stephanas and his companions had any formal official churchly status, but their actions and the manner in which they are here mentioned represent a first step in the direction of a definite local ministry in the churches.

J. M. NORRIS

STEPHEN *stē'vān* [*Στέφανος*, crown, wreath] (Acts 6:5, 8-9; 7:1 [Codex Bezae], 59; 8:2; 11:19; 22:20). One of seven men "of good repute, full of the Spirit and of wisdom," who at the command of the Twelve were selected by the "body of the disciples" and set before the apostles, who prayed and laid their hands upon them, thereby appointing them to serve tables, or specifically to remedy the neglect of the widows of the HELLENISTS "in the daily distribution" (Acts 6:1-6). Stephen's name heads the list of the SEVEN; and he only is honored with a character qualification: "a man full of faith and of the Holy Spirit." Vs. 8 further describes him as being "full of grace and power" and as therefore doing "great wonders and signs among the people."

The only available information about Stephen is that which is found in Acts. "Crowned" with martyrdom and prominently displayed as the first Christian martyr, Stephen ("crown") is his appropriate name.

Acts gives us no biographical data about Stephen. Was he himself a Hellenist? If so, in what sense? Was he resident in Jerusalem? From whom did he receive his instruction in the faith? Luke does not call him a DEACON; yet, the question remains, does Luke intend here to set forth the origin of the diaconate? Or are the Seven elders, not deacons? *See ELDER.*

Did Stephen really "serve tables"—i.e., supervise the daily dole of the widows? Or, in spite of the fact that this problem was reputed to be the immediate cause of the setting apart (ordination?) of the Seven, was this charitable service only a minor part of their work, and had the Seven already distinguished themselves as preachers? It may also be asked, who had previously been responsible for managing the dole? And was the dole problem of such nature as to call for the selection and setting apart of seven men "full of the Spirit and of wisdom"? In the pre-Lukan form of the tradition, were the Seven "set apart" to be responsible for the dole only; and has Luke, in the

light of the subsequent work of Stephen and Philip, and of his theory of the centralization of the control of the expansion of the church in all its activities in the apostles and the Jerusalem church, anachronistically made of the event a full ordination event?

Since Stephen and Philip (nothing is known about the other five named) are described as doing only the work of evangelists, we may suppose that Luke was concerned with the dole problem primarily because and to the extent that (a) it pointed to the existence within the church of a group moving away from the original Jewish Christian nucleus toward the inclusive church of the Greco-Roman world; (b) it was or was reputed to have been responsible for summoning Stephen to a position of official responsibility; (c) it provided an occasion for setting forth a new stage in the organization and expansion of the church (whether or not the Seven correspond to the Seventy of the gospel, or of Num. 11); and (d) it provided Luke an opportunity to set forth his theory of the primacy of the Twelve and of the church in Jerusalem relative to all subsequent church development, thus showing how the church was one, holy, catholic, and apostolic.

Stephen's disputants (vs. 9) are certainly intended to be Hellenists, meaning Diaspora (*see DISPERSION*) Jews representing the very areas in which the church was to win great victories—indeed, had already done so by Luke's time. Likewise the Hellenists of vs. 1 are most probably meant to be Greek-speaking, Greek-minded, Jewish Christians—not "Greeks," meaning "Gentiles." That Nicolaus is described as a proselyte (vs. 5) suggests that the events of 6:1-6 were intended to be viewed as a conflict, not between Gentile Christians and Jewish Christians, but between two diverging types of Jewish Christians, the one insisting on the necessity of keeping the whole law (is this why "Hebrews" is used?); the other facing toward the full Gentile Christian position, not yet having actualized it (therefore "Hellenists") but foreshadowing it, and so providing a proper introduction for Stephen. Further, the plan of Acts virtually requires that the "Hellenists" be, not "Greeks," but Jewish Christians with "Greek" upbringing.

Although it is probable enough that Luke regarded the conflict alluded to in Acts 6:1-6 as one between the two types of Jewish Christians described above, and that he thought of Stephen as a pro-Greek Jewish Christian, this, after all, is of minor concern in the total picture of Acts 6:1-8:3. For Stephen's real conflict is with the Jews, and, indeed, with Diaspora Jews, even in Jerusalem. Apart from any reasons of sheer historical fact—and Luke has carefully selected his facts—the first martyr's meeting death at the hands of Jews, even Diaspora Jews, is in accord with Luke's designs in Luke-Acts, both here and generally:

a) The resemblances between the accounts of the trial and death of Jesus in the Gospel and of Stephen in Acts are too great to be coincidental. Luke can scarcely have avoided assimilating them to each other, whichever may have been the model for the other. The Jews, he will say, are responsible for both deaths.

b) As described in Acts, Jewish hostility to the

expanding church, generally in the apostolic age and in all the extra-Palestinian centers of Paul's activity, and exclusively in Luke's own time after A.D. 70, was exerted by Diaspora Jews. Therefore, it is appropriate that such should be introduced into the story as early as ch. 6, and on so important an occasion as the death of the first martyr (vs. 9).

Apart from the details of the text, the speech of Stephen presents four problems: (a) How is it related to its literary context? (b) How are we to explain the fact that Stephen does not really speak to the charges brought against him? (c) What is its source? (d) What is its function, here and in Acts?

In Acts 6:1-8:3 there are certainly two, and most probably three, sources. Obviously, as noted above, 6:1-6 and 6:8 ff represent two different Stephen traditions, which are juxtaposed but unrelated, neither explaining or being explained by the other—in fact, each making a problem for the other. Vs. 7 functions as a bridge which both separates and joins them, but which is unrelated to the Stephen event.

Vs. 8 begins a new episode. It may well be that this tradition originally recounted only the trial and martyrdom (6:8-14/15; 7:55-60) but no speech. In this case 7:1-53 would be a third source, or, better, anti-Jewish polemic which Luke fashioned into a speech for his purposes in Acts.

If this is a correct analysis of the three sections of the narrative, then the fact that Stephen does not address himself to the charges preferred is to be explained by Luke's employing the occasion for another purpose. Luke's scheme in Acts appears to be this: first, the gospel is dramatically preached to the Jews (Acts 2: "Let all the house of Israel . . . know . . . For the promise is to you . . ."; then, in ch. 3, the rejection takes place: "You denied the Holy and Righteous One, . . . and killed the Author of life"). Yet, the offer of repentance is again extended (3: 19 ff). But Jewish opposition continues (ch. 4; 5:17-32). And now Luke sees in the event of Stephen's martyrdom the proper occasion for giving the final *coup de grâce* to Jewish resistance in this his longest speech in Acts. He does this by setting forth the history of the people of Israel as a history of continual disobedience to God. First, they rejected Moses; they "refused to obey him" and "thrust him aside." Then they made their own gods. And finally they built a temple, although "the Most High does not dwell in houses made with hands." Then the speech turns from the third person to direct address, as Stephen draws the conclusion: "You stiff-necked people, . . . you always resist the Holy Spirit. As your fathers did, so do you." Luke understands the rejection to be a total one. The "people and the elders and scribes, . . . the council" (6:12), "brethren and fathers" (7:2), and the part of "the witnesses"—all indicate that to Luke the death of Stephen was not "mob" action; it was official. This gives point to Luke's insistence that the Israel that rejects radically is radically rejected. This prompts and justifies the final judgment.

Luke may or may not have composed the whole of the speech. His effective treatment of the material makes it impossible to determine in what form he may have found any of the traditions he used.

The function of the speech in Acts is sufficiently explained above. It may be further stated that by it Luke prepares the way for the ultimate abandonment of temple Judaism; and by hurling the charge of disobedience to the law back into the teeth of the Jews, he will win understanding for the Christian reinterpretation of the law, as being indeed God's law, but not as Jews read it.

Thus Stephen's speech does not account for his death; rather, his death provides Luke with an opportunity to show (a) that the church is a martyr church, (b) that the Christian is summoned to witness to his faith, even unto death, and (c) that the Israel which has rejected Christ has been rejected by God.

Stephen's death becomes an epiphany: "The heavens opened," revealing "the Son of man standing at the right hand of God" (7:56), ready either to receive or to show his approval of Stephen, or to come to establish his kingdom.

With unobtrusive skill and fine reticence Luke introduces into the scene a "young man named Saul," who also "was consenting to his death" (7:58; 8:1), and whose determination to "lay waste" the church only became intensified, until he too saw the heavens opened.

Since Luke was not concerned to enter into Stephen's historical situation in such a way as to make clear to us how Stephen was related to the evolving church in idea and practice, the historical value of the account remains in debate. For contemporary opinions, see *bibliography*.

STEPHEN, REVELATION OF. An apocryphal apocalypse known to us by its condemnation, together with the Apocalypse of Paul and the Apocalypse of Thomas, in the so-called Gelasian Decree, and mentioned by Sixtus Senensis (A.D. 1593) in his *Bibliotheca Sancta*: "The Apocalypse of Stephen, the first martyr, who was one of the seven deacons of the apostles, was prized by the Manichaean heretics, as Serapion witnesses." It has been often surmised, but with little seeming justification, that the writing so referred to was in substance the tale told by Lucian (A.D. 415), a priest in Kaphargamala, a town near Jerusalem, of the discovery of the bodies of Stephen, Nicodemus, Gamaliel, and the latter's

son Abibas, in consequence of a thrice-repeated vision to him of Gamaliel.

A romance, extant only in Slavonic and published by I. Franko in 1906 in *ZNTW*, provides a background for Lucian's narrative in the form of an elaborate and highly fanciful expansion and amplification of the story of Stephen in Acts, in which Saul plays a very prominent part as chief inquisitor. That this romance of uncertain date has a definite connection with Lucian's tale is certain—the detail of the several coffins is sufficient to prove this—but that it was prior to, and thus the real beginning of Lucian's narrative, as Franco argued, is far from sure. Thus the conclusion that any of this material was part of the apocryphal allegedly prized by the Manicheans would seem most hazardous.

See APOCRYHA, NT.

Bibliography. A résumé of the Slavonic romance is given by M. R. James, *The Apocryphal NT* (1924), pp. 564-68, while a convenient summary of Lucian's famous tale is to be found in the article "Stephen" in Smith and Cheetham, *A Dictionary of Christian Antiquities* (1880), II, 1929-33. M. S. ENSLIN

STEPPE. A translation used twice for words more frequently translated "desert" or "wilderness" (מדבר in I Chr. 6:78—H 6:63; ערבה in Job 39:6; KJV "wilderness"; see DESERT). The references are to level, unforested land, receiving eight to sixteen inches of rain, and found in Palestine along the edge of the desert in S Judah and along the edge of the desert E of the Jordan. See PALESTINE, CLIMATE OF; PALESTINE, GEOGRAPHY OF.

L. E. TOOMBS

STEWARD, STEWARDSHIP. An official who controls the affairs of a large household, overseeing the service at the master's table, directing the household servants, and controlling the household expenses on behalf of the master. So Joseph's household affairs are in the care of a steward (Hebrew lit., "man over the house"; Gen. 43:19; 44:4; cf. I Kings 16:9). Eliezer, Abraham's steward, is also his heir (Gen. 15:2). The kings of Israel had such officers over their households, perhaps "treasurer" or "prince" (I Kings 15:18; I Chr. 27:31; 28:1; Isa. 22:15). In Dan. 1:11, 16, the Hebrew מלצר is translated as a proper name in the KJV, but it seems to be properly "guardian" or "steward."

Bishops are stewards of the affairs of God. (Tit. 1:7.) All Christians are to be stewards of God's mysteries (οικονόμος; I Cor. 4:1; Gal. 4:2; I Pet. 4:10). The Christian concept of stewardship before God involves time, talents, possessions, and self (Luke 12:42; Eph. 3:2). In the NT there are other stewards mentioned. They are not always slaves but may even be the treasurer of a city (Rom. 16:23). The parable of the unjust steward tells of their duties (Luke 16:1-8). Obviously a stewardship can be betrayed. The ruler at the wedding feast in Cana is a steward (John 2:8-9). The master of a vineyard is also a steward (ἐπίτροπος; Matt. 20:8; Luke 8:3). C. U. WOLF

STIFF-NECKED. A metaphor for rebellion and unteachableness, taken from the use of domestic animals for various kinds of work (ערע, "neck," plus

השק, "be hard" [in verb and noun forms]; σκληροτάτος), The ox "stiffens his neck" when he refuses direction, or "turns a stubborn shoulder" when offered the yoke (cf. Hos. 4:16; 10:11; Zech. 7:11-12; cf. Neh. 9:29).

The term typically describes Israel's rebelliousness against Yahweh during the wilderness wandering (Exod. 32:9; 33:3, 5; Deut. 9:13), which becomes a stereotype of apostasy (Jer. 7:26). Such rebellion consists in disobedience and idolatry (Exod. 32:9; Deut. 31:27), reversing the course of Yahweh's redemptive history (Neh. 9:16-17; Jer. 7:26). A chief characteristic of the "stiff-necked" is refusal to listen to the word of God delivered through the prophets (II Kings 17:13-14; II Chr. 36:12-13; Jer. 7:25-26; 19:15; cf. Ezek. 3:7; Zech. 7:11-12), which in Acts 7:51-53 is called "resist[ing] the Holy Spirit" (cf. Isa. 63:10). God's grace appears in sharp contrast to Israel's stubbornness in Exod. 34:9; Deut. 9:6; II Chr. 30:8; Neh. 9:16 ff. The opposite of this attitude is the transformation of the external forms of the covenant relationship (see CIRCUMCISION; COVENANT) into a profound inner motive of obedience (Deut. 10:16), in willing submission to Yahweh's will (II Chr. 30:8).

STOCKS [בית המעכב, מהפכת, מופכת; ξύλον]. An instrument of punishment, in which the victim is confined to a given position by having his (hands and) feet locked in a wooden frame.

Of the several Hebrew words that have been rendered "stocks," כס of Job 13:27 (LXX κώλυμα, "impediment"); 33:11 (LXX ξύλον, "stocks") has the best claim to this rendering, on the basis of both context and cognates (see lexicons). מופכת of Jer. 20:2-3; 29:26 (LXX καταρράκτης, "trap door"); the latter passage transposes the order of the Hebrew)—cf. בית המעכב of II Chr. 16:10 (LXX φυλακή, "ward")—is rendered by the Targ. ביתא, "vault," "prison." In view of the similarity of the roots (הפך, הפך; the meaning would appear to be "a cramped room") this rendering is attractive. קנין of Jer. 29:26 (LXX ἀπόκλεισμα, "guardhouse") has been variously rendered "stocks," "shackles," and "collar" (so RSV); cognates suggest some sort of fastening device (see the lexicons).

Roman incarceration was aggravated by chains and stocks (ξύλον; Acts 16:24). Roman stocks were wooden frames with several holes designed to force the legs apart. Eusebius speaks of the torture of imprisoned martyrs whose feet were stretched in stocks separated "to the fifth hole" (Hist. V.i.27).

M. GREENBERG

***STOICS** stō'iks [στωικοί]. Adherents of a school of philosophy founded at Athens by Zeno, a Phoenician from Citium in Cyprus (ca. 332-262 B.C.). The school takes its name from the Painted Porch (ἡ ποικίλη στοά), an open colonnade in the Agora adorned with the frescoes of Polygnotus, in which Zeno began to teach in 302. From Athens, Stoicism spread through all the kingdoms of the Middle East, to become the dominant philosophy of the Hellenistic world and

eventually, after its introduction to Rome in the second century B.C., of the whole Roman Empire. See GREEK RELIGION AND PHILOSOPHY § 8c.

When Zeno turned to philosophy, he became a follower of Crates, who was himself a disciple of Antisthenes, the first of the great Cynics; and from him he learned the Cynic spirit of inward freedom, austerity, and fearless devotion to duty in the scorn of consequences and of conventions. His wider interest in logic and in physical theory was fostered by a teacher of another school, the Megarian Stilpo. In its ethics, always the central interest of its masters, Stoicism was simply a broadened and humanized Cynicism; and Stoic and Cynic were alike in the burning missionary zeal to turn men's hearts to the pursuit of virtue. Zeno himself was the noblest example of his own teaching; the Athenian people honored him in life with the award of a golden crown and in death with a public funeral, a tomb in the Ceramicus, and an epitaph which lauded his fidelity to his own principles of virtue and temperance, and his good influence in leading the youth into the same way of life.

Stoicism had a succession of great teachers, extending over five hundred years from Zeno to the Emperor Marcus Aurelius Antoninus; and it was laid under contribution to a remarkable degree by Christian ethical theory, to some extent by Paul and much more extensively by some of the great Latin writers such as Ambrose of Milan (late fourth century). Zeno's immediate successor was Cleanthes (ca. 303-232 B.C.), author of a *Hymn to Zeus*, which gives expression to the profound religious sentiment that often marks this school. His contemporary Aratus published the philosophical poem *Phainomena*, which had an exceptionally wide circulation and is cited in the Areopagus sermon of Paul (Acts 17:28: "We are indeed his offspring"). Chrysippus of Soli, who succeeded Cleanthes, brought acute logical powers to the support of the system. In the second century the leadership of the school passed to Rhodes under Panaetius (185-109), who went to Rome in 144 B.C. and introduced Stoicism into the powerful aristocratic circle of Scipio Aemilianus. His disciple Posidonius of Apamea in Syria (135-51) succeeded him as head of the Rhodian school, where he was visited by Cicero in 78 B.C. He dominated the intellectual life of the first century, at Rome as well as in the Greek world. Under him, the severely rational Stoicism of Panaetius was popularized and degraded by the acceptance of star-worship and astrology and all forms of divination, and by a new tolerance of the ancient religion and its foulest myths—all the rubbish which Panaetius had sought to banish. At the same time, the interest in practical ethics was less pronounced in him than in any other Stoic teacher. His system was actually eclectic—owing as much to Plato as to Zeno and Chrysippus, and marked by a wide-ranging interest in the sciences which had hardly been equaled since Aristotle.

Unfortunately, all the works of the early Stoics have perished; they are known to us only in fragments, and from the accounts of later writers, such as Diogenes Laertius. For complete works of Stoic philosophers, we have to turn to the later exponents

of the doctrine—chiefly Seneca, the tutor of Nero; the slave Epictetus, a younger contemporary of Paul; and the philosopher-emperor Marcus Aurelius. It is significant that Stoicism could be embraced with equal fervor by slave and emperor, by Phoenician, Syrian, Greek, and Roman; for it was from the beginning concerned with man as man, and with the cosmos as his only state.

The fundamental tenet of the Stoic philosophy is that virtue (ἀρετή) is the only good, and vice the only evil. The wise man will be indifferent to pain and pleasure, to wealth and poverty, to success and misfortune; against all the vicissitudes of external circumstances he has fortified himself with the impenetrable armor of apathy (ἀπάθεια)—insensibility. Like the great apostle, he has learned, in whatever state he is, to be content (αὐτάρκης)—literally, self-sufficient, independent of everything that is not in his own power. He knows how to be abased and how to abound; in any and all circumstances he has learned the secret of facing plenty and hunger, abundance and want (Phil. 4:11-12).

Virtue consists in living conformably to nature (τὸ ὁμολογουμένως τῇ φύσει ζῆν), for virtue is the goal toward which nature leads us. "Wherefore the End is to live in keeping with Nature—that is to say, in accordance with our own nature and the nature of the universe [κατὰ τὴν τῶν ὄλων], doing nothing that is forbidden by the General Law [ὁ νόμος ὁ κοινός], which is the right Reason [ὁ ὀρθὸς λόγος] which pervades all things and is identical with Zeus, director of the government of the things that are. And this very thing is the virtue of the happy man and the smooth flow of life, when all activities promote the agreement of the spirit [δαίμων] in each individual with the will of the governor of the universe" (Diogenes Laertius *Lives of Eminent Philosophers* VII.88).

The course of the universe and of every individual life is determined by destiny (εἰμαρμένη), and man's whole freedom consists in accepting that which is ordained for him, in making his own will one with the will and purpose that governs the universe. But this destiny is no blind and cruel fate—it has decreed all things in wisdom and for the good of all; it is "good and acceptable and perfect" as the will of God (cf. Rom. 12:2). Yet this will and purpose in the universe is not personally conceived. Though the name of Zeus is retained and is often invoked in quasi-personal terms, it is in fact no more than a symbol for the power, itself material, which pervades the universe as ever-living fire, creative fire (πῦρ τεχνικόν), and germinative reason (λόγος σπερματικός), and is present in man as the soul. The essential nature of man is therefore one with the essential nature of the universe; and "to live in accordance with nature" can be interpreted to mean equally in accordance with one's own nature and in accordance with the nature of the universe. For man is related to the universe as microcosm to macrocosm, and the same fiery principle of life, law, and reason pervades both.

The creative fire or germinative reason which is the soul of the world and may be called Zeus and countless other names as well is also known as

providence (Latin *providentia*, Greek *πρόνοια*), for it governs the world and all that is in the world by intelligence and wisdom. As evidence for this, the Stoics point to the order and regularity that reign in nature, especially in the movements of the heavenly bodies; to the adaptation of means to ends in the life of plants and animals; to the laws of cause and effect; and to the manifold beauty of the universe. It would be absurd to suppose that this mighty system, harmonious in all its parts, came into existence by chance or without conscious purpose. Above all, the high endowments of man show that it exists and is governed for his benefit. "The world itself was made for the sake of gods and men, and whatsoever is in it was prepared and contrived for the enjoyment of men. For the world is as it were a home common to gods and men, a city of which both are citizens; for they alone have the use of reason and live by justice and law" (Cicero *De Officiis* II.lxiii).

Counting himself a member of such a commonwealth, a city of gods and men which embraces the whole world, the Stoic is no longer rooted in the life of a particular state or nation. His ideal republic is not, like that of a Plato or an Aristotle, conceived on the model of the Greek city-state, but is an empire of wisdom and justice embracing all mankind; and the wise man is a citizen of the cosmos (*κοσμοπολίτης*; the word is first used by the Cynic Diogenes). For the providence which governs all things is not concerned with man as Athenian or Spartan or Roman, as rich or poor, as slave or free, but with the entire human race and with every individual within it. Some sparks of the divine fire are in every human soul as germinative seeds of reason (*σπερματικοὶ λόγοι*), and therefore all alike are offspring of Zeus and brethren. Stoicism thus prepares the way for the magnificent structure of Roman law, to which the whole Western world is still indebted; and in a still more significant realm, it creates a climate of thought congenial to the individualism and universalism of Christianity, to its conception of brotherhood, and to its catholic church.

STOMACHER *stüm'ak ar*. KJV translation of פתגיל (RSV "rich robe") in Isa. 3:24. "Stomacher" was the name of a decorative covering worn in front of the upper portion of the body. See ROBE 5.

STONECUTTER [חַצֵּב אֶבֶן or חַרֵּשׁ (KJV HEWER OF STONE in II Kings 12:12; WORKER OF STONE in I Chr. 22:15), חַצֵּב (I Chr. 22:2; KJV MASON)]. One who quarries or cuts STONE for building, etc. Solomon had eighty thousand (eighty

companies?) of such quarrymen in the hill country preparing stone for the temple (I Kings 5:15 ff). Styles of cutting, as well as masons' marks, are valuable clues to archaeological age. C. U. WOLF

STONES. Palestine is a stony country, and the bedrock is often not far beneath the surface of the ground or may be exposed on the hillsides (see PALESTINE, GEOLOGY OF). This very common feature of the terrain has had many and varied uses. The stones referred to in scripture are here classified according to the uses to which they were put.

Certain kinds of stones were general utility instruments.* Sharp stones were shaped into knives (Exod. 4:25; Josh. 5:2); some were used as flints to strike fire (II Macc. 10:3) or as weights for scales (Lev. 19:36; Deut. 25:13, 15; II Sam. 14:26; Prov. 11:1; 16:11; 20:10, 23; Mic. 6:11; Zech. 5:8).* Their weight (Prov. 27:3) made them convenient for use as plummet (Isa. 34:11; Amos 7:7-8). All these and millstones, whorls, rubbers and polishers, molds for casting, mortars and pestles,* loom weights, potter's wheels, etc.,* made of stone, can be illustrated in archaeological finds. Vessels for holding water were hewn from stone (Exod. 7:19; John 2:6). See KNIFE; FLINT; WEIGHTS AND MEASURES; VESSELS; MILL; PLUMBLINE. Figs. STO 81, 82; MOR 70; POT 61-62; VES 14.

Certain large stones served as landmarks, such as

82. Copy of one-mina weight of Nebuchadnezzar II (605-562 B.C.). The inscription says it is an exact copy which belonged to Marduk-shar-ilani.

the great stone in Gibeon (II Sam. 20:8), the stone of Bohan (Josh. 15:6; 18:17), the stone of Zoheleth (I Kings 1:9 KJV), and the stone Ezel (I Sam. 20:19 KJV). They also served as waymarks (Jer. 31:21) and to mark boundaries (Deut. 19:14). *See* BOHAN; ZOHELETH; EZEL; WAYMARK; LANDMARK. Fig. LAN 12.

The most important use of stone was for building. It was regarded as superior to brick (Isa. 9:10), which was substituted for it in Babylon (Gen. 11:3) and in areas of Palestine when stone was not readily available. Stone was among the materials collected by David (I Chr. 22:14-15; 29:2). The foundation of the temple consisted of great hewn stones (I Kings 5:17-18; 7:10), and the superstructure was also of stone (I Kings 6:18; 7:9, 11-12). The repairs made by Jehoash (II Kings 12:2) and by Josiah (II Kings 22:6; I Chr. 34:11) included hewn stones. They are also mentioned in connection with the materials used for the second temple (Ezra 5:8; 6:4; Hag. 2:15). The stones of Herod's temple are referred to in Matt. 24:1-2; Mark 13:1-2; Luke 21:5-6. Stones were used for city walls (Neh. 4:3), for dwellings (Lev. 14:45; Amos 5:11), for palaces (I Kings 7:1, 9), for fortresses, for a pavement (Exod. 24:10; John 19:13), and for columns (Esth. 1:6). They were used as dikes about vineyards (Prov. 24:30-31); also to close the mouths of wells and cisterns (Gen. 29:2-3, 8, 10), the mouths of caves (Josh. 10:18, 27), and the entrance of tombs (Matt. 27:60; John 11:38). In the Neolithic period massive stone slabs were used in the construction of burial chambers called DOLMENS. *See* ARCHITECTURE; HOUSE; CITY; TOMBS. Fig. DOL 35.

Stones had military uses. They were convenient missiles for the hand (Exod. 21:18; II Sam. 16:6, 13; Eccles. 22:20; 27:25; II Macc. 1:16; 4:41; Mark 12:4) and for the sling (Judg. 20:16; I Sam. 17:40, 49-50; I Chr. 12:2; II Chr. 26:14; Prov. 26:8; Jth. 6:12; Eccles. 47:4) or catapult (II Chr. 26:15; I Macc. 6:51). *See* INSTRUMENTS AND WEAPONS OF WAR.

Another use of stones was in the making of ornaments. The priests' breastplates were decorated with stones (Exod. 28:17, 21). Beads, a common article of adornment, were also made of many kinds of stones, such as onyx, quartz, agate, amethyst, opal, lapis lazuli, steatite, etc., illustrated from the excavations. *See* BEADS; JEWELS AND PRECIOUS STONES.

Stones were used to commemorate events (Josh. 7:26; 8:29; II Sam. 18:17). In some cases, a PILLAR served as a memorial (Josh. 24:26-27; I Sam. 7:12) or as a monument to the dead (II Kings 23:17; cf. Ezek. 39:15). Single stones were consecrated as memorials to God (Gen. 28:18-22; Isa. 19:19), and a religious name was given to the place (Gen. 35:7). The stones set up by Joshua at Gilgal (Josh. 4) were an example of a circle with memorial significance. A cairn, as well as a pillar, at Mizpah is mentioned in Gen. 31. *See* MEMORIAL.

Inscriptions might be placed on monumental stones (Deut. 27:4, 8), on altars (Josh. 8:32), or on stone tablets such as those on which the Law was written (Exod. 32:15-16, 19; 34:1, 4, 29), or engraved on cliffs, as by the Dog River, N of Beirut, where Ramses II carved the first of the many records

which make this a veritable outdoor museum. The rebellion of Mesha, king of Moab (II Kings 3:4), was recorded by the successful rebel on a memorial stone, and such inscribed steles are found throughout the Near East. Figs. MOA 66; STO 83. *See* INSCRIPTIONS.

The Israelites used unhewn stones for altars (Exod. 20:25; Deut. 27:5-6; Josh. 8:31). They might be natural rock (Judg. 6:20-21; 13:19; I Sam. 6:14; 14:33) or artificially built of stone. Elijah's altar on Mount Carmel (I Kings 18:31) was of this kind. Ezekiel's blueprint for the temple to come included hewn

83. Black stone Sumerian tablet with pictographic signs; from the end of the fourth millennium

stone tables to be used for slaying the sacrifices (Ezek. 40:42). In Maccabean times, the stones of the altar were laid aside as defiled, and a new altar was built (I Macc. 4:46-47). Stones, both in their natural state and graven, served as idols (Lev. 26:1; Deut. 29:17; II Kings 19:18; Jer. 2:27; Hab. 2:19; cf. Isa. 57:6). It is quite possible that the Israelites shared the feeling common among other early Semites that stones, perhaps meteorites, partook of the nature of the divine. E.g., pre-Islamic Arabs engaged in the worship of stones; cf. the use of the Kaaba Stone in the corner of the Mosque at Mecca as an object of worship. Gilgal means "circle," and the stones set up by Joshua there (Josh. 4) may represent an early circle for stone-worshippers, recalling the megalithic remains at Stonehenge in England.

The hardness and strength of stones lent symbolic meaning to their use in metaphorical language (Exod. 15:5, 16; I Sam. 25:37; Neh. 9:11; Job 6:12; 38:30; 41:24; Ezek. 11:19; 36:26). The NT refers to them in object lessons as sterile (Matt. 3:9), dumb (Luke 19:40), or inedible (Matt. 4:3; 7:9). The good seed fell on "rocky ground" (Matt. 13:5, 20; Mark 4:16; Luke 8:4-8)—i.e., shallow soil with stone near the surface. Jeremiah buried stones in a dramatic action oracle (Jer. 43:9-10).

In Zech. 3:9 a stone with seven facets is set before Joshua, the high priest, and an inscription is placed upon it. This has been variously interpreted as meaning the foundation stone of the temple, the "top stone" of Zech. 4:7, a jewel in the high priest's breastplate or in Zerubbabel's crown, or the finished temple. A living stone is a stone that is sound, not broken. The Christians are so called in I Pet. 2:4-8 (cf. Eph. 2:20-22) because they are built into the spiritual temple of which Christ is the chief cornerstone. Jesus had thus applied the reference to the cornerstone in Ps. 118:22 to himself (Matt. 21:42;

Luke 20:17-18). Note also the figurative reference to cornerstone in Isa. 28:16.

In Rev. 2:17 a white stone is mentioned. This is an obscure symbol and has several possible interpretations. The thought intended here may be that of a charm or amulet bearing the victor's name as a secret writing. Only the bearer will know the name written thereon. It is white to symbolize the heavenly character of the victorious believer and marked with the name bestowed as a sure proof of his future triumph. The symbol is derived from familiar beliefs and practices concerning defense against evil and evil ones; through this the believers will have power against every enemy.

STONES, PRECIOUS. See JEWELS AND PRECIOUS STONES.

STONING [לָקַט, מָגַג; λιθάξω, λιθοβολέω]. Biblical law punishes the following offenses with stoning: worship of other gods (Deut. 17:2-7), and incitement thereto (13:6-10—H 13:7-11); child-sacrifice to Molech (Lev. 20:2-5); prophesying in the name of another god (Deut. 13:1-5—H 13:2-6); spirit-division (Lev. 20:27); blasphemy (Lev. 24:15-16); sabbath-breaking (Num. 15:32-36); homicide by an ox (Exod. 21:28-32); adultery (Deut. 22:22-23); filial insubordination (Deut. 21:18-21). According to Josh. 7:25, violation of the *hērem* was also punished with stoning. For the procedure in judicial stoning, see CRIMES AND PUNISHMENTS § D1.

As Palestine is a stony country, pelting with stones (sometimes leading to death) was a common expression of mob anger and hatred (I Sam. 30:6; I Kings 12:18). This appears several times in the NT (Matt. 21:35; 23:37; John 10:31; Acts 14:5). See further CRIMES AND PUNISHMENTS § E2a.

The procedure described by later Jewish law (M. Sanh. 6.1-4) is very deliberate, allowing for the last-minute appearance of new evidence in favor of the condemned, and for a confession before death. The culprit was stripped, and then knocked off a scaffold six cubits high by one witness to his crime. If he survived the fall, the other witness dropped a stone on his chest; if he still lived, all present stoned him. Since the stoning of Stephen (Acts 7:57-58) appears to have been more summary, the possibility that it was a lynching has to be considered. However, vs. 58, telling of the witnesses' disrobing before casting the first stone (a detail not mentioned in the Mishna) suggests something more deliberate than lynching. We have no knowledge of how early (if ever) the mode described in the Mishna was practiced.

STOOL. KJV translation of כִּסֵּא (RSV CHAIR) in II Kings 4:10 and of מִבְּנֵי (RSV BIRTHSTOOL) in Exod. 1:16. See also FOOTSTOOL (lit., "stool of the feet"). Fig. BAN 19.

STORAX stó'rāk̄s. KJV translation of στακτή in Eccus. 24:15. A gumlike substance gathered from a tree. See STACTE; see also FLORA § A9p.

STORE-CITIES [עָרֵי מִסְכְּנֹת]; **STOREHOUSES** [בֵּית הַאוֹצָר]. Sites on which were built warehouses

for the storage of government supplies of various kinds.

Egypt was well known for its store-cities, which have been excavated at Tell Retabah (Pithom) and Tanis (Raamses; Exod. 1:11). In Palestine, David had stores in various villages and cities (I Chr. 27:25). Solomon built storehouses in several areas of the country where the monthly supplies for the court were kept (I Kings 4:7-19; 9:19). Jehoshaphat built storehouses throughout Judah (II Chr. 17:12-13). Hezekiah likewise is well known for the storehouses and store-cities he built (32:27-29).

The storehouse was also a repository for the tithe (Mal. 3:10) and may have been at the temple presided over by Levites (I Chr. 9:26, 29). Large private storehouses also are not unknown.

See also TRADE AND COMMERCE.

H. N. RICHARDSON

STORK [חַסִּידָה, kindly, loyal one; LXX ἐρωδίδος, heron (Lev. 11:19; Ps. 104:17—G 103:17); πελεκάν, pelican (Deut. 14:18); ἀσίδα (from Heb.; Jer. 8:7); ἔπιφο, hoopoe (Zech. 5:9); Vulg. *herodio* (Lev. 11:19; Ps. 104:17); *onocrotalus*, pelican (Deut. 14:18); *milvus*, bird of prey, kite (Jer. 8:7); *milvus* (*milvus*; Zech. 5:9); Targ. (Onq.) חוּרִיתָא, white one]. Any of a family (*Ciconiidae*) of large, long-legged wading birds of the genus *Ciconia*, related to the herons, whose food consists of fish (when available), as well as small mammals, birds, and reptiles. Their faithful tending of their young is proverbial, as is their habit of returning annually to the same nesting place. Tristram saw the white stork (*Ciconia alba*) as well as the black (*Ciconia nigra*) in nineteenth-century Palestine. While most of these birds were migrating northward to Europe, some remained at established nests in the Holy Land.

Although it cannot be conclusively established that חַסִּידָה (an unclean creature; Lev. 11:19; Deut. 14:18) is a stork, it is at least a reasonable supposition. This bird's practice of nesting in a treetop, when a suitable building is not at hand, may be referred to in Ps. 104:17; the allusion in Jer. 8:7 is apparently to its migratory habits. The somewhat similar appearance of the heron and the stork may have confused ancient observers, and it is possible, as G. R. Driver suggests (see *bibliography*), that sometimes חַסִּידָה was used for "heron."

Bibliography. G. R. Driver, *PEQ* (April, 1955), p. 17.

W. S. McCULLOUGH

STORM [זֶרֶם, storm of wind and rain (see RAIN); טוֹפֵה, סֶעַר, windstorm, gale; שׁוּמָה, devastating (storm); ἀίλαψ, windstorm, gale; σεισμός, disturbance, large waves]. See PALESTINE, CLIMATE OF; WHIRLWIND; THUNDER AND LIGHTNING.

R. B. Y. SCOTT

STOVE. See OVEN.

STRAIT OF JUDEA. KJV Apoc. form of RIDGE OF JUDEA.

STRANGER. A term which frequently appears in translations earlier than RSV for the technical term גַּר, for which the more adequate translation is

"SOJOURNER." In the RSV it is used in such phrases as "the stranger [גר] who sojourns [הגיר] among you" (Exod. 12:49 P; cf. Lev. 19:33-34, etc.), and to translate the terms גר and ξένος where the basic meaning is "one who is strange, different, foreign."

T. M. MAUCH

STRANGLING. One of the four methods of capital punishment prescribed in rabbinic law. Unlike stoning, burning, and decapitation, this penalty is not mentioned in the OT. According to the Talmud, it is the most merciful form of execution and is therefore applicable to cases where biblical law does not specify some other method.

In Acts 15:20, James agrees that Gentile converts need not conform to the entire law, so long as they abstain from idolatry, fornication, and the eating of blood or of "what is strangled" (some MSS omit the last item). James here insists that Gentiles conform to the Jewish method of slaughtering, by cutting the throat of the animal and draining all the blood from the carcass. Philo (*On the Special Laws* IV.122) refers to the practice of killing animals by strangling or throttling them; but from other sources it appears that the term "strangling" was sometimes applied loosely to any form of slaughtering not approved by Jewish law. See M. Hullin 1.2. B. J. BAMBERGER

STRAW [תבן (KJV CHAFF in Jer. 23:28), מתבן]. Wheat or barley stalks cut to 1½-2-inch lengths in the process of THRESHING.

Straw seems to have had several uses. Some passages (Gen. 24:25; Judg. 19:19; I Kings 4:28—H 5:8) mention straw along with provender or barley, suggesting its use for the bedding down of animals, but not necessarily for food. It thus served the purpose to which present-day hay is put, but whole stalks were not used in the ancient Near East. It was, however, also used for food (Isa. 11:7), either alone or mixed with grains. From both excavated remains and literary sources (Exod. 5:7-12) we learn that straw was used as a binder in brickmaking.

H. N. RICHARDSON

STREAM OF EGYPT. KJV Apoc. form of EGYPT, BROOK OF.

STREET. See CITY § B2i; BAZAAR; BROAD PLACE; SQUARE.

STRINGED INSTRUMENTS. See MUSICAL INSTRUMENTS § B6a.

STRIPES. See SCOURGING.

STRONG DRINK [שכר; LXX and NT σίκερα]. A term with cognates in almost all the other Semitic languages. While it seems to have meant "barley beer" at one time, it later came to denote any intoxicating beverage prepared from either grain or fruit. As such it was forbidden to priests (Lev. 10:9) and Nazirites (Num. 6:3; cf. Judg. 13:4, 7, 14; Luke 1:15). It is mentioned only once (Num. 28:7) as a constituent of a DRINK OFFERING.

Strong drink often appears in parallel with wine

to refer to intoxicants in general. Thus Isaiah condemns those

who rise early in the morning,
that they may run after strong drink,
who tarry late into the evening
till wine inflames them!

(Isa. 5:11).

Similarly Hannah protested to the priest at Shiloh that she had "drunk neither wine nor strong drink" (I Sam. 1:15). The sage warns: "Wine is a mocker, strong drink a brawler" (Prov. 20:1; cf. 31:4, 6).

See also DRUNKENNESS; WINE.

Bibliography. E. Busse, *Der Wein im Kult des ATs*, Freiburger Theologische Studien, 29 (1922), 12, 20; H. F. Lutz, *Viticulture and Brewing in the Ancient Orient* (1922), pp. 81-86. J. F. ROSS

STRONGHOLD [מבצר, מצוד, מצוד; ἄχυρα]. Alternately: FORTRESS. Like "fortress," "stronghold" is used figuratively to mean God as the refuge of the righteous (Ps. 9:9—H 9:10), a foreign country as a political ally (Ezek. 30:15), or even the temple as the symbol of a deceptive and false security (Ezek. 24:21-25; cf. Amos 6:8).

See also CITADEL; TOWER.

J. A. SANDERS

STUBBLE [קש]. Dry grain stalks considered as refuse or fuel. In Exod. 5:12 the word is distinguished from "STRAW" (תבן), as requiring that the people be "scattered abroad through all the land of Egypt, to gather" it; and this has usually been taken to mean the stumps left in the field, whence the English translation "stubble." However, this meaning is not necessary here, and elsewhere the word seems to be synonymous with "straw" and "CHAFF" in indicating the refuse from THRESHING. All the other occurrences are in figures of speech. Such material is either quickly consumed by fire (Exod. 15:7; Isa. 5:24; 47:14; Joel 2:5; Obad. 18; Nah. 1:10; Mal. 4:1) or is blown away (Isa. 40:24; 41:2; cf. Job 13:25; Jer. 13:24; cf. Ps. 83:13, where קש is translated "chaff").

H. N. RICHARDSON

STUFF. The translation of several words in the OT:

a) An auxiliary used to designate "material" or "cloth" (perhaps "yarn") in passages mentioning blue, purple, or scarlet which was highly prized because of its color (the KJV does not insert the word "stuff" in these passages). Such material was contributed as offerings for the making of cult objects (Exod. 25:4; 35:6, 23, 25) such as curtains for the tabernacle (26:1; 36:8), the veil (26:31; 36:35), the screen (26:36; 27:16; 36:37; 38:18), the ephod (28:5-6; 39:1-3, 5), and decorations of the sacred vestments of the priests (28:33; 39:24, 29). Scarlet material (stuff) was one of the substances prescribed for use in the ritual for cleansing from disease (Lev. 14:4, 6, 49, 51-52; Num. 19:6).

b) גנוזי ברומים, carpets of multicolored material, a valuable article of trade (Ezek. 27:24).

c) כלי, "vessel," "article." In Josh. 7:11 it refers to the articles or possessions of those who appropriated banned objects from Jericho.

d) מלאכה, "work," "thing," "material"; used of offerings received for the sanctuary (Exod. 36:7).

e) צבע, "dyed stuff" (Judg. 5:30), colored material greatly prized.

ף) בגד כלאים שעשו, a garment of two kinds of material (Lev. 19:19); ששעוני, "mingled stuff" (Deut. 22:11), refers to the law forbidding the wearing of a garment made of two kinds of material such as wool and linen.

See also SCARLET; DYEING; COLORS; VESSEL.

J. M. MYERS

STUMBLING BLOCK (חשול, מכשול; πρόσκομμα, σκάνδαλον). That which causes one to stumble or fall; mentioned in both a literal (Lev. 19:14) and a figurative (Jer. 6:21) sense in the OT. A literary characteristic in Ezekiel describes the idols of silver and gold as the "stumbling block of their iniquity" (7:19; 14:3-4, 7; 44:12), yet God himself may be a stumbling block to his faithless people (Isa. 8:14). This last reference, which relates the meaning to a "trap" and a "snare," is of special importance, since in the NT it is applied twice to Christ (Rom. 9:32-33; I Pet. 2:8). The NT has only the metaphorical usage, but the most important Greek noun (σκάνδαλον) and verb (σκανδαλιξιν) have both a messianic and a moral application. Spiritual ruin may result from wrong relation either to Christ (noun: Matt. 16:23; Rom. 9:32-33; 11:9; I Cor. 1:23; Gal. 5:11; I Pet. 2:8; verb: Matt. 11:6=Luke 7:23; Matt. 13:21=Mark 4:17; Matt. 13:57=Mark 6:3; Matt. 15:12; 17:27; 24:10; 26:31=Mark 14:27, 29; John 6:61; 16:1) or to others (noun: Matt. 13:41; 18:7=Luke 17:1; Rom. 14:13; 16:17; I John 2:10; Rev. 2:14; verb: Matt. 5:29-30; 18:8-9=Mark 9:43, 45, 47; Matt. 18:6=Mark 9:42=Luke 17:2; Rom. 14:21; I Cor. 8:13; II Cor. 11:29).

D. MOODY

SUA. KJV Apoc. form of Siaha. See SIA.

SUAH סֹד'וּ [סוּח] (I Chr. 7:36). A division of the clan of Zophah in the tribe of Asher.

SUBA. KJV form of SUBAS.

SUBAI. KJV Apoc. form of Shamlai. See SHALMAI.

SUBAS סֹד'בָּס [Σουβάς] (I Esd. 5:34); KJV SUBA —בָּ. Head of a family of sons of Solomon's servants who returned with Zerubbabel. His name is omitted in the parallels Ezra 2:57; Neh. 7:59.

C. T. FRITSCH

SUBURBS. See PASTURE LANDS.

SUCATHITES סֹד'כָּח תְּחִיט [שוכתיים]; KJV SU-CHATHITES. One of three families of scribes who lived in Jabez of Judah. They traced their descent through Caleb and counted both the Kenites and the Rechabites in their ancestry (I Chr. 2:55).

W. H. MORTON

SUCCOTH סֻכ'וֹת [סוכות, booths]. 1. A city of Gad, identified not far from the Jordan Valley, in E Palestine.

The name of the city is explained as being derived from the booths which Jacob made for his cattle on his way back from Paddan-aram (Gen. 33:17), but it

is more probable that this is an old Canaanite place for the observance of the harvest festival which came to bear the same name. The city was a part of the kingdom of Sihon and was assigned to the Gadites (Josh. 13:27). When Gideon was pursuing the Midianites, he called upon the people of Succoth to supply food for his famishing army and was answered with derision; whereupon, on his victorious return, he caught a young man of the city, made him write down the names of the princes and elders of Succoth, and then inflicted a cruel punishment upon them (Judg. 8:5-9, 14-16). It was also near Succoth that the bronze vessels for the temple of Solomon were cast (I Kings 7:46; II Chr. 4:17). There are two references in Psalms to the Vale of Succoth as a desirable country for apportionment among the righteous (60:6; 108:7).

The site of Succoth has been identified as Tell Deir'alla, located ca. two miles N of the Jabbok (Nahr Zerqa) as it leaves the E hills and takes a winding way to join the Jordan. The tell completely dominates a very fertile region known as the Ghor Abu Obeideh, between the Wadi Rajeb and the Zerqa, which was evidently the Vale of Succoth mentioned in Psalms. There are evidences of settlement from at least Middle Bronze times, including the entire period of the Israelite settlement, and the site was apparently flourishing until the sixth century B.C. The identification is further confirmed by the Palestinian Talmud (Sheb. 9.2, 32a), which states that Succoth is the same as the contemporary Taralah. The nearby Tell el-Ekshas has been suggested because its name also means "booths"; but it is too far from the Jabbok, too small in size, and does not appear to have had the same length of settlement.

S. COHEN

2. An Egyptian city mentioned in Exod. 12:37; 13:20; Num. 33:5-6 as a station on the route of the Exodus.

Succoth is mentioned as the first stop in the flight of the Israelites from Egypt. It has long been supposed that the Hebrew name is an adaptation of Egyptian *Tkw(t)*, the civil name of the capital of the eighth Lower Egyptian nome and generally identified with the modern site of Tell el-Maskhutah in the Wadi Tumeilat. This identification is both philologically and geographically acceptable, but it must be noted that the location is not absolutely certain. Tell el-Maskhutah was excavated in 1883 by Naville, who identified the site as biblical Pithom on the basis of favorable philological evidence and of certain architectural features, taken by him to be store chambers.

The identification of Succoth is intimately connected with that of Pithom and Rameses. For details and bibliography, see PITHOM.

T. O. LAMBDIN

***SUCCOTH-BENOTH** סֻכ'וֹת בְּנֹת [סוכות בנות, lit. tabernacles, booths, of girls; certainly a corruption]. A deity or deities worshiped by colonists from Babylon settled in Samaria by the Assyrians after 722 B.C.

(II Kings 17:30). The association with Babylon has suggested that the deity was Šarpanitu, the consort of MARDUK, the city-god of Babylon. This goddess was popularly termed Zir-banitu ("seed-creating"). The first element of Succoth-Benoth suggests SAK-KUTH as in Amos 5:26, but this deity was Ninib, and the association with Babylon and Šarpanitu suggests that we might have expected Marduk here, and in fact Stade has suggested Marduk-Banit. It is possible that the whole phrase "Succoth-Benoth" is a corruption of "Šarpanitu." It is significant that the Greek versions, by their inclusion of a final vowel, support this view.

J. GRAY

SUCHATHITES. KJV form of SUCATHITES.

SUD sūd [Σουδ; Lat. *Sodi*; Syr. *Sur*]. A river, according to Bar. 1:4, which states that Baruch, after writing his book, read it to King Jeconiah and his sons, mighty men, elders, and people, while they were in exile "in Babylon by the river Sud." There is no other reference to a stream with this name. The Greek word translated "river" (ποταμός) may refer here to a river or to any other flowing stream. Sud probably is not an alternate name for the Euphrates. It may have been the name of a canal or branch channel of the Euphrates; in any case it was located in or near the city of Babylon.

SUFFERING AND EVIL.

1. Evil
 - a. Terminology
 - b. Nature
 - c. Origin
 - d. Power
 2. Suffering
 - a. In the OT
 - b. In the NT
- Bibliography

1. **Evil.** *a. Terminology.* In the OT the two principal terms to express evil are רע or רעה, on the one hand, and צר and צרה, on the other. The former term is the opposite of טוב, which means "valuable" with reference to an end—thus either fit to promote an end, or a thing's being truly what it pretends to be. Accordingly, רע designates a lack of fitness or usefulness for a goal, or indicates opposition to the goal of the object thereby characterized. The LXX renders it usually by κακός, or by πονηρός. While κακός emphasizes unfitness or worthlessness—i.e., devaluates an object in accordance with its own intrinsic standard or goal—πονηρός is "evil" in the sense of "dangerous," "perilous," or "harmful"—i.e., it characterizes an object with reference to the negative significance which it has for something or somebody else. In the Greek Bible, πονηρός designates the evils which created beings cause to one another, whereas κακός and κακία are especially used to designate the evils which God places upon man. The NT, how-

ever, shows a preference for πονηρός in the broad sense of רע. The modern differentiation between natural and moral evils is alien to the Bible, the reason being that רע measures both objects and persons with reference to God's ultimate purpose (cf. the phrase "He did what was evil in the sight of the LORD" [e.g., II Chr. 21:6; 22:4; 29:6]). The results of the divine curse (Gen. 3:14-19) are "natural" evils, but to the Hebrews they were evil primarily because their presence was an indication that man did not enjoy that unbroken fellowship with God for which he was destined.

צר or צרה, another common term for evil in the OT, denotes, like its Greek equivalent, θλίψις, something that hurts, limits, or oppresses people and makes them feel unhappy. It designates the evil condition in which men are, rather than the quality or action of beings. In Ps. 25:17-18—H 24:17-18, we find ἀνάγκη ("inescapable distress"), ταπείνωσις ("humiliation"), and κόπος ("toil") as synonyms. Another synonym is στενοχωρία ("hopeless situation"). Θλίψις is one of the key words of Paul, who uses it twenty-four times out of forty-five in the NT.

b. Nature. The numerous references to evil found in both the OT and the NT indicate that the biblical writers were fully aware of its existence and took it seriously. The lengthy lists of evils (e.g., Ps. 25:17-18; Rom. 8:35; II Cor. 11:23-27; 12:10; Rev. 7:16-17) point to a literary or liturgical tradition. Evils that are particularly frequently mentioned are the inclemency of nature, diseases, want, distress, calamity, toil, hardship, hopeless situations, weakness, corruptibility, futility, insults, defamations, enmity, injustice, oppression, persecution, and sins, but also the state of mind created by these evils—e.g., hunger, thirst, sorrow, fear, anxiety, despair. Major calamities are often described by images of cosmic catastrophes, such as rushing water (e.g., Ps. 18:11, 15-16; Isa. 28:2; 43:2), the sea (e.g., Pss. 46:2; 89:9; Isa. 5:30; 43:16; Rev. 21:1), earthquakes (e.g., Isa. 29:6; Rev. 6:12; 16:18; cf. Pss. 46:2; 144:5; Isa. 34:3), tempest (e.g., Job 9:17; Ps. 55:8; Isa. 29:6; 54:11), fire (Isa. 5:24; 10:16; Jer. 4:4; I Cor. 3:13, 15; Jas. 5:3), darkness (e.g., Pss. 91:6; 97:2; Isa. 5:30; 9:2; Mic. 7:8; Rev. 16:10; see LIGHT), and the extinction of the stars (Ezek. 32:7; Dan. 8:10; Matt. 24:29; Rev. 6:13).

The evil character of the happenings and conditions is not seen, however, in their being obstacles to man's desire for happiness, but rather in their rendering faith difficult. When they occur, God hides his face from man (e.g., Pss. 22:24; 38:9; Isa. 54:8; Jer. 16:17)—i.e., makes it impossible for man to discern God's saving will. They also obscure the GLORY of God in this world (e.g., Pss. 25:3; 79:9; Isa. 42:8; cf. Pss. 6:5; 42:3; Isa. 35:2; 45:5); they create the impression that God is unable to overcome them. This is particularly the case with the evils with which God's chosen people are afflicted. Worse, however, than the evils which man suffers are those which he brings into being himself—e.g., his unrighteousness (see RIGHTEOUSNESS), lack of regard for his neighbor (see LOVE), and his unbelief (see FAITH) or worship of other gods (see IDOLATRY). To them the NT adds the stumbling block (σκάνδαλον)—i.e.,

actions through which the fellow man's faith is endangered (e.g., Matt. 16:23; 18:6; Rom. 14:13; I Cor. 8:9). These things the Lord hates (e.g., Isa. 1:14; 61:8) and pours out his wrath (*see WRATH OF GOD*) upon those that do them (e.g., Gen. 6:7, 13; Pss. 21:9-10; 60:1, 3; Isa. 5:25; Jer. 3:5; Matt. 3:7; Rom. 1:18). Consequently, biblical thought is not primarily preoccupied with escaping suffering or with seeking pleasure, but rather with shunning sin.

c. Origin. In spite of the fact that the Jewish rules governing the clean and the unclean had their historical roots in primitive taboos, the prophets had already interpreted them in a moral sense, and this view was re-emphasized by Jesus (e.g., Matt. 15:11-20; Mark 7:15-23; Luke 11:41). Nothing is evil in itself. The strong contrast between the world (*see WORLD, NATURE OF THE*) and the KINGDOM OF GOD, which characterizes particularly the Johannine literature but is present in the whole NT, cannot be interpreted in Manichean terms. The passage I John 5:19, which in the KJV reads: "The whole world lieth in wickedness," is in the RSV correctly rendered as: "The whole world is in the power of the evil one." Similarly, man cannot be considered as the cause of evil. While the depravity of man is already stated in the OT (e.g., Gen. 6:5, 12; 8:21; Pss. 38:3; 51:5), the fall of man (Gen. 3:1-7) presupposes the existence of evil, and the divine curse (Gen. 3:14-19), though increasing the evils in this life, does not bring them into being. Man has to bear the moral responsibility for his sinfulness and the reign of death over the whole race (Rom. 5:12-14; cf. 8:20-22), but the origin of these evils lies outside himself. Nevertheless, evil—i.e., the operation of factors by which the teleology and harmony of this world is disturbed—would never have changed from potentiality to actuality except for man's sin. Thus sin is considered in the Bible as the root of all evils.

Likewise, the biblical view differs from Iranian dualism. Belief in a personal devil (*see SATAN*) appears at a late stage in the OT, and while it became constitutive for the message of the NT, it did not impair the idea of God's exclusive work in creation. The devil has the power to bring forth evils in this world (e.g., I Pet. 5:8-9; I John 5:19; Rev. 2:9-10), and is their "father" as the "evil one" (e.g., Matt. 13:19, 38; Eph. 6:16; I John 2:13-14; 5:18-19). This view enhances the evilness of all evils, because it discovers behind them a malicious intention (e.g., John 8:44; I Pet. 5:8). But his power has been given to Satan by God, and thus it is not only limited but also lacks creativity (e.g., Matt. 12:26-28 = Luke 11:18-20; John 12:31; Rev. 12:9; 20:1-3). Throughout the Bible, the view prevails that it is God the Creator who made the existence of evils possible in this world, and who not only allows them to develop (e.g., I Sam. 2:6-7), but also uses them to curb one another (e.g., Ps. 39:9-10). However, since the existence of evils is subservient to God's purpose, the biblical outlook maintains the basic difference between good and evil, though in a concrete case it may be difficult for the individual to tell what specific end certain evils serve (e.g., Job 42:2-3). Though it is by the will of the Creator that evils are found in this world, they do not originate, as is held in Stoicism,

out of a necessity inherent in nature. The differentiation of good and evil is therefore in the Bible not a merely subjective one, made with reference to man's desire for happiness, but rather has an objective reason.

d. Power. With God as Creator, evil remains constantly under divine control. In the OT this conviction expresses itself primarily in the many prayers in which God is requested to deliver the individual or his people from all kinds of evil. But only slowly does the idea dawn that God himself will eventually abolish all evils and that the believers shall live in a state of perfect harmony. The "eschatology of blessing" (*see ESCHATOLOGY OF THE OT*) anticipates originally a realm of peace and prosperity in which Israel is to live securely (so probably still in Isa. 11:1-10; 25:8), rather than a universal period of bliss. Only in Daniel do we encounter the idea of a divine kingdom by which all injustice on earth will be destroyed and death will be overcome by resurrection; and only late in the intertestamental period, with the distinction between the present age and the age to come, could a hope for the complete annihilation of all the evils be entertained. In the NT, however, the view is commonly held that God himself will make an end to them (e.g., I Cor. 15:24-26; Rev. 7:17; 21:4), and that Satan will be chained and imprisoned (e.g., Rev. 20:2-3, 10). In its manifestations the power of evil is not free but must follow a divine program (e.g., II Thess. 2:3-11). Moreover, even at the present time, no evil, however mighty it may be, is powerful enough to prevent or thwart the execution of God's saving purpose (e.g., Matt. 11:25; John 5:44; 9:3; 11:4; Rom. 8:37-39; II Cor. 4:7-11; 12:9; Col. 2:15; I Pet. 3:22). Notwithstanding this hopeful outlook, however, the reality of evil is taken seriously. The Bible is pervaded by a sense of awe for the terribleness of the evils of this world, and particularly of sin, which is the root of all of them (*see SIN, SINNERS*). Evils are not interpreted, as in Neoplatonism, as mere lack of goodness, and they exist not "as rejected by God" merely, but rather as willed and sent by him to wherever sin is found. Nowhere does the Bible teach that good will always result from evil. It is in spite of evil that goodness asserts itself.

But evil is inferior in power to goodness, because it presupposes the existence of goodness. Unlike Zoroastrianism, which holds that evil exists of and by itself, the Bible teaches that evil comes into being only in opposition to the goodness of the Creation (Gen. 1:31). Hence, it cannot last forever, and individual evils go on only for "a little while" (e.g., Ps. 37:2; I Pet. 5:10; cf. II Cor. 4:17-18).

2. Suffering. a. In the OT. Evils cause suffering. The OT does not contrast physical and mental suffering, since man is seen in his totality. The same cause may underlie bodily pain and mental anguish. The biblical writers are not particularly interested in the origin of suffering either. Rather, as beings who believe in a final destination, they inquire into the reason and purpose of suffering. In the earliest stage of their faith, and in agreement with other Semitic religions, the Israelites interpreted suffering as a divine punishment for sin. They were firmly convinced that a moral order guided the destinies of

man, and while the wicked might prosper for a long while (e.g., Job 21:28-33), they were sure that God's righteous judgment would eventually reach them (e.g., Pss. 7:15-16; 37:1-3; 52:1, 5; 73:12-20; 92:7). At times, however, they became impatient, when God's thunderbolts did not fall immediately upon the wicked one who prospered (e.g., Eccl. 7:16; Jer. 12:1-4; Hab. 1:2-4; Mal. 3:7-15). In turn, they took their own calamities as indications of God's wrath (e.g., Pss. 38:3; 42:5, 9). In agreement with their belief in collective life, the members of the nation might suffer for the wickedness of their king, or the descendants for the sins of their parents (e.g., I Sam. 22:18; I Kings 21:20, 22, 29; II Kings 21:10-11; cf. Exod. 20:5).

But if there were a moral order governing the universe, why did the righteous man suffer at all? (e.g., Job 3; 6-7; Pss. 22:1-18; 42:9). Various answers were given. Job, e.g., resigns himself to the wisdom of God, which is both undeniable and incomprehensible (Job 42:2-3). The author of Ps. 44 assails God violently for neglecting his people. Others found satisfaction in the idea that God would finally vindicate their cause (e.g., Pss. 22:19-20; 31: 9, 21; 34:6, 17, 19; 37:1-3; 43:1; 46:10; 50:15; 55:22; 77:2; Prov. 10:2-3) and mete out a terrible judgment upon the righteous man's adversaries or oppressors (e.g., Pss. 35:8-10; 37:1-2; 40:13-14; 58:6-7). As eschatological thinking began to prevail, however, they did not hope for immediate help, but looked forward to a more distant Day of Yahweh (*see* DAY OF THE LORD), when all human injustice would be straightened out (e.g., Isa. 3:14-15; Dan. 12:1; Amos 1-2; cf. Hab. 3:16). Intertestamental Judaism found consolation in the recompense of the righteous ones after death (e.g., Wisd. Sol. 3:1-5; 5:16-17).

Another answer to the problem of suffering consisted in accepting it as a divine education, by which people would be led away from their anthropocentric outlook back to God (Pss. 20:6; 39:7; 46:10-11; Isa. 49:26; Jer. 9:24), and from sinfulness, including unconscious sins, to obedience (e.g., II Chr. 20:9-10; Neh. 9:26-27; Job 5:17-18; 33:19-30; Isa. 1:5-9, 25; 26:16; 37:3; 63:9; 65:16; Jer. 6:27-30; 10:18; Hos. 5:15; Mal. 3:3). Yet the question remained, Why does the prophet, the messenger of God, also suffer, and even worse than other people? (e.g., Jer. 8:18-21; 15:15; cf. Ps. 44:23). This leads to a third interpretation of suffering—viz., that in solidarity with his people, the Servant of God has taken vicariously upon himself the punishment of his nation (Isa. 53: 2-12). Fourthly, we notice, parallel with this, in Deutero-Isaiah (40:2; 55:5) and II Maccabees (6:12-17) the idea of atoning suffering (*see* ATONEMENT). By accepting the Lord's punishment, one will be delivered of one's guilt (cf. Pss. Sol. 13:10; 18:4-6).

It is remarkable that, with all their experience of terrible suffering, the Israelites were never moved to take a pessimistic view of life. Since God is Lord, even Ecclesiastes, the gloomiest of the OT writers, counsels his readers to enjoy life (Eccl. 1:2-11; 9:7-10; 11:7-10).

b. In the NT. The primitive church adopted all the OT views of suffering, but modified them in the light of Jesus' passion and cross. Jesus himself had

taught that his suffering was a divine necessity (δεῖ; e.g., Matt. 16:21 = Mark 8:31 = Luke 9:22; cf. Matt. 17:22-23 and parallels; Matt. 20:17-19 and parallels; Luke 17:25; 24:26; John 17:1), which had been laid upon the Son of man. This was a new and original idea. The atoning effect of his suffering (e.g., Rom. 3:25; Heb. 9:15; I John 2:2; 4:10; Rev. 5:6) rested upon his willingness as the sinless one to give his life for sinners (Rom. 5:6-8; I Pet. 2:24; 3:18; cf. Mark 10:45) in perfect obedience to God's judgment (Phil. 2:8; Heb. 5:8; cf. Heb. 2:18). This is the mystery of the Passion—that he, as Son of God, should take upon himself the burden of mankind. Thus, in accepting the necessity of his suffering, Jesus did not act under a compulsion placed upon him, but rather accepted it with the spontaneity of love. The judicial character of Christ's passion precludes the assumption that suffering is good or meaningful by itself.

From this interpretation of the passion of Christ, the primitive church approached its own suffering. The deepened understanding of the sinfulness of all men leads to the recognition that suffering is the rightful fate of all people in this evil age (Rom. 8:18; Gal. 1:4; cf. Eph. 5:16; 6:13). But, as Paul especially will point out, the believers who thus accept suffering not only serve Christ's cause (e.g., Phil. 1:29), but also, being united with the risen Lord, continue his suffering for mankind, because the church is his body (e.g., Rom. 8:31-39; 12:4-21; II Cor. 1:5; 4:10-11; Phil. 3:10; Col. 1:24; I Thess. 2:13-16; I Pet. 4: 12-13). In completing "what is lacking in Christ's afflictions" (Col. 1:24), the believers participate, though in an instrumental way only, in the atoning work of Christ. Thus suffering is the inescapable lot of the Christians (e.g., John 16:33; Acts 14:22; Rom. 8:17; I Cor. 12:26; Phil. 1:29-30; 3:10; I Thess. 2:14; 3:4; II Tim. 3:12; I Pet. 3:14; 4:13; 5:1), and particularly of the apostles (e.g., Acts 9:16; I Cor. 4:8-13; II Cor. 1:4-5; 4:8; 7:4-5; Phil. 3:10; Col. 1:24; I Thess. 3:7). The public confession (ὁμολογία) that Jesus is the Christ will result in tribulation and martyrdom (Mark 13:12-13 and parallels; Rev. 17:6; 20:4). The "great tribulation" (Dan. 12:1; Matt. 24: 21; Mark 13:19; Luke 21:23; Rev. 7:14) that is to come upon mankind has started with the passion of Christ and will continue until his PAROUSIA (e.g., Matt. 26:39; Mark 13 and parallels; II Thess. 1:5). By showing that suffering results, with equal necessity, from the sinfulness of mankind and from the missionary activity of God's people, the NT almost completely dismisses the question of the individual's fault for suffering (e.g., Luke 13:1-5; John 9:2-3; but see I Cor. 11:29-30).

In addition to its atoning function, the believers' suffering serves a twofold purpose. It brings into focus the suffering of the universe (e.g., Rom. 8:19-22), and it purges faith from the dross of self-love and love of the world (e.g., II Tim. 1:8, 12). By the way in which the believer accepts suffering, the transforming power of the gospel and the glory of Christ are brought to light (e.g., II Tim. 1:12; I Pet. 2:21-25). The suffering of the followers of Jesus is unavoidable, because the Savior's work runs counter to the aspirations of the world and its powers. Therefore, these powers hate his disciples even as they

hated the master (e.g., John 15:18; I Cor. 2:8; cf. Matt. 5:10-12; I John 3:11-12).

Seeing suffering in the context of holy history, the NT is not, like Stoicism, interested primarily in man's ability to stand suffering physically and mentally, but rather in the spiritual aspects of suffering. Satan uses the suffering of our "flesh"—i.e., everything that ties us to this world (II Cor. 4:7, 10, 16-17; 7:5-6; Col. 1:24)—to tempt us—i.e., to destroy in us the desire for the new life in Christ (e.g., II Cor. 4:10-12; cf. Matt. 10:28; Rom. 8:36) and our faith (II Cor. 2:11; I Thess. 3:3; Rev. 2:10; cf. Mark 4:17 with Luke 8:13), either by making us shrink from the pain involved (e.g., Matt. 20:22=Mark 10:38; Rom. 8:18-24) or by persuading us to trust in our own superior strength and endurance (e.g., II Cor. 13:5-7; cf. Matt. 10:28). However, if the temptation has been overcome and the tribulation accepted as a divine education meant to reduce our trust in ourselves (e.g., Matt. 23:12; 26:33=Mark 14:29; cf. Matt. 10:16; Luke 10:3; Rom. 8:17; Jas. 4:6; I Pet. 1:6-7; Rev. 3-9), it serves to strengthen our inner life (e.g., Rom. 6:4-8; II Cor. 4:17; 7:10; 12:7; Phil. 3:7-16; I Pet. 4:1; Jas. 1:2; Rev. 2:10; cf. Rom. 8:18-24; Heb. 12:11). Moreover, since the believers realize that their new life in the "flesh" is Christ's, no longer theirs (e.g., II Cor. 4:10-11; Gal. 2:20; Rev. 6:9-10), their suffering serves as evidence of Christ's triumph (Mark 13:9; I Cor. 1:26; II Cor. 4:16; 6:4; 12:9; I Thess. 3:3-4; II Thess. 1:5), as well as an unmasking of the wickedness of evil (Matt. 10:26=Luke 12:2; Mark 4:22=Luke 8:17; I Cor. 4:5; II Thess. 2:3). Suffering "for the name" is, therefore, a privilege (χάρις) and a sign of divine election (e.g., Matt. 5:12=Luke 6:22-23; Acts 5:41; I Cor. 11:32; II Cor. 6:4-5; 11:23-29; Gal. 3:4; Col. 1:29; II Thess. 1:4-8; I Pet. 2:19-21; 4:12-16, 19), whereas self-inflicted suffering is worthless (Col. 2:23).

Christians, therefore, will endure suffering patiently instead of rebelling against the God who sent it (e.g., Rom. 5:3-4; I Thess. 3:3; I Pet. 2:21-23), and without fear or anxiety (e.g., Matt. 6:25-33; 10:26-31; Luke 12:4, 7, 32; I Cor. 7:29-32; Phil. 4:6; I Pet. 3:14; 5:7; Rev. 2:10; cf. Matt. 13:22). No matter how heavily he has to suffer, the believer can be sure of Christ's final triumph over all the powers of evil (e.g., Luke 11:22; John 16:33; I Cor. 15:27; Phil. 2:10-11; Rev. 5:5; 6:2; 17:14; 20:9, 14-15), because he experiences that victory in his own life (e.g., Rom. 8:37; I Cor. 15:57; I John 2:13-14; 4:4; 5:4-5; I Pet. 5:10; Rev. 2:7, 11, 13, 17, 26; 12:11; 21:7). Being sure that the evils of this world will never be able to crush him (e.g., II Cor. 6:9; II Thess. 3:3; II Tim. 4:18; cf. Matt. 6:13) and that the Tempter flees when firmly opposed (e.g., Jas. 4:7), the believer can look at all evils with equanimity and patience (e.g., Matt. 13:21=Mark 4:17; Rom. 5:3-4; 12:12; II Thess. 1:4; Rev. 1:9). In his sufferings he never ceases to entertain HOPE (Rom. 5:2, 4-5; 8:20; 12:12; I Thess. 1:3), not only because all evils are short-lived (I Pet. 1:6; cf. Rom. 8:18), but also because whatever he may lose in this life is like nothing in comparison with what he is to obtain with Christ (e.g., Matt. 16:26 and parallels; Matt. 19:29 and parallels; Rom. 8:17-18; II Cor. 4:17; Phil.

3:8; II Thess. 1:7; cf. Matt. 13:44-46). The follower of Jesus is capable of overcoming his anxious cares and his worries about the uncertainty of the future (e.g., Matt. 6:25-34; Jas. 4:13-15), because God provides whatever we really need (Matt. 6:32; Luke 12:30; II Cor. 7:6). Thus, notwithstanding the fact that evils and suffering are experienced with greater intensity under the New Covenant than under the Old, the faith of Christ attains to a level never reached in the OT—viz., joy over suffering (e.g., Matt. 5:12; John 14:28; 16:20, 22; Acts 13:52; Rom. 5:2; 12:12; Phil. 2:17; I Thess. 1:6; Jas. 1:2). Similarly, while in the OT the believer becomes so preoccupied with his own suffering that he seems to lose sight of the rest of the world, the follower of Christ feels as a result of his suffering a deep compassion for the suffering of others. Their calamity is a divine indication that we are to grow in helpful love (e.g., Luke 10:29-37; I Cor. 12:26; Gal. 6:2; I Pet. 4:1-4). Nor must the believer who has been harmed or wronged retaliate upon his adversary, because by so doing he would serve the ends of the devil, for it is Satan's device through evil to call forth new evils. Rather, a disciple of Jesus is to respond with love (e.g., Matt. 5:38-45; Luke 6:27-30; Rom. 12:14-20; cf. II Cor. 1:23), forgiveness, and reconciliation (e.g., Matt. 5:24; 18:21-22; Luke 17:3-4) to all acts of enmity, for he is called upon to imitate in a constructive manner the example of Christ (e.g., Matt. 20:22; I Cor. 4:16; 11:1; II Cor. 2:7; I Thess. 1:6). By such action the power of evil will definitely be broken in this world.

SUICIDE. The word "suicide" does not appear in the Bible, but there are several instances of the occurrence. In the OT there are the suicides of Saul and his armor-bearer (I Sam. 31:4-5), Ahithophel (II Sam. 17:23), and Zimri (I Kings 16:18). In the NT

the single case is that of Judas (Matt. 27:5; see JUDAS 7).

There are no specific biblical prohibitions of suicide, nor is the act as such condemned. Nevertheless, its rarity reflects not only deterring sociological conditions but also an implicit attitude which can be inferred from religious tenets common to the OT and the NT. God is Creator and Sovereign of all creation who alone has authority to give and take away (Job 1:21). The Sixth Commandment and the regulations regarding shedding human blood (Gen. 9:5-6) undoubtedly influenced the attitude. Later rabbinic literature cites the latter passage in specifically prohibiting suicide (Gen. Rabbah 34.21*b*). Josephus expresses the Jewish attitude when he calls suicide an "impious act against God our Creator" (War III.viii.5), though he tacitly approves the act of a large body of Jews who, surrounded by the Romans at Masada, took their own lives in patriotic and religious devotion (War V.II.viii.6-7).

While early Christians undoubtedly shared in the Jewish attitude, further theological implications may be inferred from such passages as Rom. 14:7-9; I Cor. 6:19; Eph. 5:29. In Acts 16:27-28 Paul prevents a suicide. However, the biblical attitude toward suicide can only be inferred.

1. **Prehistory**. The name Sumer is first found in a Sumerian inscription dating from ca. 2400 B.C., but there is no reason to doubt that it was current as far back as the beginning of the third millennium B.C., and perhaps even earlier.

a. **The earliest inhabitants (ca. 4000-3300 B.C.)**. The Sumerians were not, however, the original inhabitants of Sumer. These were a people known archaeologically as "Ubaidians"—i.e., the people responsible for the cultural remains first unearthed at a tell, or mound, known as Tell al-Ubaid, and then in the very lowest levels of a number of other tells throughout ancient Sumer. They spoke a language now designated by some scholars as "Proto-Euphratean." It was this Ubaidian people which, as early as 4000 B.C. or thereabout, established the village settlements which gradually developed into Sumer's great urban centers: Eridu; UR; Larsa; Isin; Adab; Kullab; Lagash; NIPPUR; Kish. The Ubaidians were responsible for Sumer's earliest cultural advances: they were its first farmers, cattle raisers, fishermen, weavers, leatherworkers, carpenters, smiths, potters, and masons. They did not long remain the sole and dominant group in the land, however. For as the Ubaidian settlements thrived and prospered, Semitic nomads from the Syrian and Arabian desert lands to the W infiltrated them, both as peaceful immigrants and as warlike conquerors.

b. **The coming of the Sumerians (ca. 3300-3000 B.C.)**. The Sumerians, on the other hand, probably did not arrive in Sumer until the very last quarter of the fourth millennium B.C. Anthropologically speaking, the Sumerians belong to the dolichocephalic Mediterranean race. They spoke a language which is agglutinative in character, but which seems to be unrelated to any other known language, living or dead. The location of their original home is quite uncertain, although the region of the Caucasus Mountains is a possibility. For, to judge from a cycle of Sumerian epic tales which has recently become available, some of the early Sumerian rulers seem to have had an unexpectedly close and intimate relationship with a city-state known as Aratta. Although this city-state was probably situated far to the NE of Sumer, to the E of the Armenian Mountains, and perhaps somewhere in the region W of the Caspian Sea, its rulers—at least, according to the Sumerian epic poets—had Sumerian names, and its people worshiped the Sumerian deities and spoke the Su-

Courtesy of *Scientific American*

merian language. But wherever the Sumerians may have come from, and whatever type of culture they may have brought with them, this much is certain: their arrival led to an extraordinarily fruitful fusion—both racial and cultural—with the native population, and brought about a creative spirit fraught with no little significance for the history of civilization. In the course of the centuries that followed, Sumer reached new heights of political power and economic wealth, and witnessed some of its most significant achievements in the arts and crafts, in monumental architecture, in religious and ethical thought, and in oral myth, epic, and hymn. Above all, the Sumerians, whose language gradually became the prevailing speech of the land, devised a system of writing, developed it into an effective tool of communication, and took the first steps toward the introduction of formal education.

2. History. a. The early dynastic period (ca. 3000-2300 B.C.). The first ruler of Sumer whose deeds are recorded—if only in the briefest kind of statement—is a king of Kish by the name of Etana, who prob-

ably ruled at the very beginning of the third millennium B.C. In a document written centuries later, he is described as the “man who stabilized all the lands.” It may thus be inferred that Etana of Kish held sway, not only over Sumer, but also over the lands surrounding it; in short, that he was the first known empire builder. Probably not very long after this, a king by the name of Meskiaggasher founded a dynasty at the city of Erech and extended his rule from the Sea (possibly the Mediterranean) to the Zagros Mountains. Meskiaggasher’s son, Enmerkar, conducted an expedition against the distant city-state of Aratta (see § 1*b* above), whose importance lay in its abundant resources of metals and stone. Fig. SUM 84.

One of Enmerkar’s heroic heralds and companions-in-arms in the struggle against Aratta was a warrior by the name of Lugalbanda, who succeeded him on the throne of Erech. The victories and conquests of both Enmerkar and Lugalbanda sparked the imaginations of the Sumerian poets and minstrels to such an extent that a whole cycle of epic tales grew up

84. Tablet from Nippur with Sumerian epic poem, "Enmerkar and the Lord of Aratta"

about them. Four of these poems have been recovered and restored only quite recently, and at present they are our most important source of historical information about these early days.

By the end of Lugalbanda's reign, however, the power of the city of Erech was seriously threatened by its N neighbor, the city-state of Kish; for the last ruler but one of the "Etana dynasty," Enmebaragesi by name, was not only a successful leader in war but was also the founder of Sumer's holiest shrine. On the military side, he was noted for his defeat of ELAM, the land directly to the E of Sumer. As a religious leader, he was the first to build a temple to the Sumerian air-god Enlil in the city of Nippur.* Since Enlil was the chief Sumerian god, the "father of all the gods," Nippur thereafter became Sumer's most important religious, spiritual, and cultural center. Figs. NIP 20-22.

Enmebaragesi's son, Agga, tried to carry on in his father's footsteps, but by this time the city-state of Ur (the biblical Ur of the Chaldees) was ready to take over the rule of Sumer as a whole. Its first king was Mesannepadda, who is said to have ruled eighty years. Mesannepadda and the dynasty which he founded at Ur* were powerful rulers in firm control of important sources of raw materials located outside Sumer. The tombs of the royal cemetery at Ur,

which probably date approximately from this period, were filled with weapons, tools, vessels, and ornaments, fashioned of gold, silver, copper, and semi-precious stones. Fig. SUM 85.

Ur did not long remain the capital of Sumer. A short time after the death of Mesannepadda, the city-state of Erech once again came to the forefront as the leading city of Sumer, this time under the rule of the great Gilgamesh, whose deeds won him such wide renown that he became the supreme hero of Sumerian story and legend. Poems extolling Gilgamesh and his exploits were written and rewritten throughout the centuries, not only in Sumerian but in all the other more important languages of Western Asia. Gilgamesh became the hero par excellence of the entire ancient world: an adventurous, brave, but tragic figure symbolizing man's constant but hopeless drive for fame, glory, and immortality; so much so that Gilgamesh has sometimes been taken to have been a rather legendary figure who lived long before Mesannepadda of Ur. However, evidence has come to light proving beyond any reasonable doubt that Gilgamesh was, in fact, a younger contemporary of Mesannepadda!

The next great Sumerian ruler concerning whom we have any information is Lugalannemundu, a king of the city of Adab. He is reported to have ruled ninety years, and to have controlled an empire extending from the mountains of Iran to the Mediterranean Sea, and from the ranges of the Taurus to the Persian Gulf. Not long after him, a king of Kish by the name of Mesilim became the dominant figure in Sumer. According to his own surviving inscriptions, he built temples at both Adab and Lagash, far to the S of Kish. In fact, Mesilim, who probably lived sometime near the middle of the third millennium B.C., was responsible for the first case of political arbitration as yet known: a bitter border dispute between the two Sumerian city-states of Lagash and Umma was brought before him as the overlord of the

86. Eannatum leading his soldiers over bodies of the dead enemies (above); troops are led by Eannatum in his chariot (below); from Telloh, middle third millennium

entire land, and he proceeded to arbitrate the controversy by measuring off what seemed to him a just boundary line between the cities; he even had an inscribed stele erected to mark the spot in order to prevent future disputes.

But Sumer's political strength was waning; its cities were exhausting themselves by their incessant struggle for superiority and control, and a Semitic conqueror would soon appear on the scene. In Sumer's final spurt of power, it was the city of Lagash which played the predominant role. One of its rulers, Eannatum, actually succeeded in extending the sway of Lagash over Sumer as a whole, and even over several of the neighboring lands.* His success too proved to be ephemeral, and in a short while Lagash was reduced to its former boundaries. The Lagash dynasty is, in fact, memorable more for its literary achievements than for its military campaigns; for its archivists prepared commemorative inscriptions in a unique narrative style, marking them as man's earliest historians. Figs. SUM 86; NET 15.

The last ruler of this Lagash dynasty was a king by the name of Urukagina, noteworthy as man's first known social reformer. According to one of his inscriptions—one in which the word "freedom" appears for the first time in history—he set limits to the oppressive powers of a greedy bureaucracy; reduced taxes; put a stop to injustice and exploitation; and took special pains to help the poor, the widow, and the orphan. But after less than ten years of rule, Urukagina was overthrown by Lugalzaggesi, the ruler of the neighboring city-state of Umma, who put much of Lagash itself to the torch.

Lugalzaggesi in time became ruler of Erech, and he made such extensive conquests both to the E and to the W of Sumer that, as he claims in his records, fifty princes bowed to his authority.

b. The conquest by Akkadians and Gutí (ca. 2300-2100 B.C.). But now the Semites from the W and the N of Sumer, under one of the more ambitious and capable of their leaders, found it possible to take over the rule of the country and establish a Semitic dynasty. Sargon, its founder, is usually referred to as Sargon the Great (*see also* SARGON I) because of his extraordinary military and administrative achievements. In the course of his reign, which lasted more than half a century, he conquered almost all of Western Asia, and perhaps even parts of Ethiopia, Egypt, and Cyprus. Sargon also founded a new capital city by the name of Agade—whence the name Akkad for N Sumer, and Akkadians for its Semitic population—and made it, at least for a time, the richest and most powerful capital in the world. To Agade, according to the later Sumerian historiographers, came the nomadic Martu (*see* AMORITES) from the W, bringing choice oxen and sheep; to it came the people of Meluhha, the "black land" (probably Ethiopia), with their exotic wares; to it came also the Elamites and Subarians from the E and the N, carrying loads "like load-carrying asses"; to Agade also came all the princes, chieftains, and sheiks of the plains, bringing monthly and yearly gifts.

Upon Sargon's death, two of his sons carried on in his footsteps, and tried, with some success, to hold on to their father's empire. But his grandson, Naram-Sin,* seems to have had his troubles in Sumer; in any

case, for some unknown reason, he destroyed Nippur, the holy city of Sumer, and desecrated and plundered Sumer's most sacred shrine, the "House of Enlil." Not long after this, Naram-Sin met a crushing defeat at the hands of the Gutí, a semibarbaric people which inhabited the mountains of Iran. Sumer was overrun and laid waste, and all communications by land and sea were made impossible. Following the death of Naram-Sin's son, Agade itself was completely destroyed and never restored; according to Sumerian tradition, it became a city forever cursed. Thus, after less than a century, the mighty empire of Sumer, which had held such brilliant promise in the days of its Semitic ruler, Sargon, came to an abrupt and catastrophic end. Fig. ASS 96.

c. The Sumerian revival (ca. 2100-1720 B.C.). It took the Sumerians several generations to recover from the blow. Toward the end of the Gutí terror, the city of Lagash once again came to the fore, particularly under the rule of an extraordinarily pious governor by the name of Gudea.* A score of the inscribed statues of this ruler—originally set up in the temples of Lagash, and unearthed by the French excavators—have made Gudea's the Sumerian face best known to the modern world. Moreover, the Gudea "cylinders," *ca.* twenty-four inches in height and covered from beginning to end with two of the longest Sumerian hymns as yet known, have provided a considerable insight into the range and scope

Courtesy of the Trustees of the British Museum

87. Statue of Gudea, king of Lagash, from Telloh

of Sumerian religious literature. The source and extent of Gudea's political power is as yet unknown, but his inscriptions indicate that he had, at the least, trade contacts in practically the entire world then known: he obtained gold from Anatolia and Egypt, silver from the Taurus, cedars from the Amanus, copper from the Zagros ranges, diorite from Ethiopia, and timber from Dilmun, which many scholars identify with the island of Bahrain, but which may actually turn out to be India. 88. Stele of Ur-Nammu, king of Ur (ca. 2060-1955 B.C.): top register, the king stands before the deity Ningal(?); the second register depicts two similar scenes of the king making libation to a deity; on the third register he is carrying a basket and building tools; the fourth register shows a ladder. All scenes here shown describe a king worshiping the gods at Ur before building a ziggurat.

Not long after Gudea's rule over Lagash, the Sumerians under the leadership of Utuhegal, king of Erech, finally freed themselves altogether from the Guti yoke. Soon afterward, there broke out a struggle for power between the cities of Lagash and Ur for the control of Sumer. Victory went to Ur-Nammu,* the king of Ur, who founded a dynasty—the so-called Third Dynasty of Ur—which ruled most of Mesopotamia for more than a century. Ur-Nammu was not only a successful military man, but a social reformer and lawgiver as well. Only recently part of a law code compiled by his scribes has come to light. It tells us that Ur-Nammu removed the "chiselers" and grafters from the land, established and regulated honest weights and measures, and saw to it "that the orphan did not fall a prey to the wealthy, that the widow did not fall a prey to the powerful, that the man of one shekel [i.e., the poor] did not fall a prey to the man of sixty shekels [i.e., the rich]." Three of the laws found in the Code of Ur-Nammu are of very special importance for the history of man's ethical evolution; they lay down the rule that, in cases where one man has done a bodily injury to another, the guilty party is simply to be punished by the payment of a fine. Figs. LAW 16; SUM 88-89.

Ur-Nammu's son Shulgi was a skilful diplomat as well as a successful soldier. Throughout his reign,

Sumer continued to prosper and to dominate at least some of the lands around it. But time was running out for the Sumerians. Hordes of Semitic nomads by the name of Amurru (the biblical Amorites) kept streaming in from the Arabian Desert to the W, and in the course of time made themselves masters of some of the more important cities, such as Isin, Larsa, and BABYLON. Even in Ur itself, Semitic influence seems to have come into the ascendancy; for at least two of Shulgi's three successors bore Semitic Akkadian names, though they themselves were lineal descendants of the Sumerian founder of the dynasty. In any case, the Elamites to the E took advantage of the growing Semitic strength, and of the political discord and confusion which presumably resulted from it. They finally attacked and captured Ur itself and carried off its last king, Ibbi-Sin, into captivity to Elam.

During the 2½ centuries following the fall of Ur, there was a bitter intercity struggle for dominance and control over Sumer and Akkad, first between the cities of Isin and Larsa, and later between Larsa and Babylon. Finally, in the year 1720 B.C. or thereabout, HMMURABI of Babylon defeated Rim-Sin, the last king of Larsa, and emerged as the sole ruler of a united Sumer and Akkad. This date may be said to mark the end of ancient Sumer. By this time the Sumerian people—i.e., the people which had spoken the Sumerian language—were practically extinct, and the Semites were in complete control. The kings were

all Semites, and the spoken language was the Semitic Akkadian. To be sure, the culture as a whole was still predominantly Sumerian in form and content. Not only that, but the schools and academies of Sumer and Akkad continued to utilize the Sumerian language and the Sumerian literature as the fundamental basis of their entire curriculum. So much so that the vast majority of the Sumerian literary works are known, not from originals going back to the date of their composition, but from copies prepared—presumably by Semites—during the first four centuries of the second millennium B.C.

3. Social and economic institutions. The Sumerian civilization was essentially urban in character, though it rested on an agricultural, rather than an industrial, base.

a. City-state and temple. Sumer, in the third millennium B.C., consisted of a dozen or so city-states, each comprising a large and usually walled city, surrounded by suburban villages and hamlets. The outstanding feature of each city was the main temple situated on a high terrace, which gradually developed into a massive stage-tower or *ziggurat*,* Sumer's most characteristic contribution to religious architecture. The temple usually consisted of a rectangular central shrine, or "cella," surrounded on its long sides by a number of rooms for the use of the priests. In the cella there was a niche for the deity's statue, fronted by an offering table made of mud brick. The temple was constructed largely of mud bricks, and since these are unattractive in texture and color, the Sumerian architects beautified the walls by means of regularly spaced buttresses and recesses. They also introduced the mud-brick column and half-column, and covered these with colored patterns of zigzags, lozenges, and triangles, by inserting thousands of painted clay cones into the thick mud plaster. Sometimes the inner walls of the shrine were painted with frescoes of human and animal figures, as well as with a varied assortment of geometric motifs. The temple was the largest, tallest, and most important building in the city, in accordance with the theory current among the Sumerian religious leaders, that the entire city belonged to its main deity, to whom it had been assigned on the day that the world was created. In practice, however, the temple corporation owned only some of the land, which it rented out to sharecroppers; the remainder was the private property of the individual citizens. Fig. ASS 105.

b. Government. Political power lay originally in the hands of the free citizens and a city governor known as the *ensi*, who was no more than a peer among peers. In cases of decisions vital to the city as a whole, these free citizens met together in a bicameral assembly, consisting of an upper house of "elders" and a lower house of "men." As the struggles between the various Sumerian city-states grew more violent and bitter, and as the pressures from the barbaric peoples to the E and the W of Sumer increased, military leadership became a pressing need, and the "king"—or, as he is known in Sumerian, the *lugal* ("big man")—came to the fore. At first the king was probably selected and appointed by the assembly at critical moments for a specific military task. But gradually kingship, with all its privileges and prerogatives, became a hereditary institution; in time, it even came

to be considered the very hallmark of civilization. The kings established a regular army, with the chariot—the ancient "tank"—as the main offensive weapon, and a heavily armored infantry which attacked in phalanx formation. Sumer's victories and conquests were due largely to its superiority in military weapons, tactics, organization, and leadership. In the course of time, therefore, the palace began to rival the temple both in wealth and in influence.

c. Economic life. But priests, princes, and soldiers constituted, after all, only a small fraction of the cities' population. The great majority of the free citizens were farmers and cattle-breeders, boatmen and fishermen, merchants and scribes, doctors and architects, masons and carpenters, smiths, jewelers, and potters. There were, of course, a number of rich and powerful families who owned large estates; yet even the poor managed to own farms and gardens, houses and cattle, for in many respects the economy was free and uncontrolled. Riches and poverty, success and failure, were—at least to some extent—the results of private enterprise and individual drive. The more industrious of the artisans and craftsmen sold their handmade products in the free town market, receiving payment either in kind or in "money," which was normally a disk or ring of silver of a standard weight. Traveling merchants carried on a thriving trade from city to city, and with surrounding countries, both overland and by sea; and not a few of these merchants were probably private individuals rather than temple or palace representatives.

d. Law and justice. The economic life of Sumer was characterized by the key concepts of law and justice. Significant economic and legal reforms were already introduced by Urukagina (see § 2a above) who lived at the end of the twenty-fourth century B.C., and law codes were compiled at least as early as the time of Ur-Nammu (see § 2c above), who reigned in the middle of the twenty-first century B.C. Moreover, Sumerian legal documents have been excavated in considerable numbers: contracts, deeds, wills, promissory notes, receipts, and actual court decisions, some of which, at least, were actually studied as legal precedents. In theory, it was the king who was responsible for the administration of law and justice; in practice, it was the city governor or *ensi*, or rather his representative, the *mashkim*, who attended to the legal and administrative details. Court cases were usually heard by tribunals consisting of three or four judges. Suits could be brought either by private parties or by the government. Evidence was taken in the form of statements from witnesses and experts, or was obtained from written documents. Oath-taking played a considerable role in the court procedure, particularly the oath by the witnesses. The decisions of the judges were legally binding, unless new evidence came to light.

e. Slavery. While the vast majority of the inhabitants were free citizens, slavery was a recognized institution, and the temples, palaces, and rich estates owned slaves and exploited them for their own benefit. Many slaves were prisoners of war, and these were not necessarily foreigners, but might frequently be Sumerians from a neighboring city defeated in battle. Sumerian slaves were also recruited in other ways: freemen might be reduced to slavery as punish-

ment for certain offenses; parents could sell their children as slaves in time of need; or a man might even turn over his entire family to creditors in payment of a debt, although for no longer than three years. The slave was the property of his master like any other chattel. He could be branded and flogged, and was severely punished if he attempted to escape. On the other hand, it was to his master's advantage that a slave stay strong and healthy, and slaves were therefore usually well treated. They even had certain legal rights: they could engage in business, borrow money, and buy their freedom. Furthermore, if a slave, male or female, married a free person, the children were free. The sale price of a slave varied with the market, as well as with the individual involved; the average price for a grown man was ten shekels, a sum which was at times less than the price of an ass.

f. Family life. The basic unit of Sumerian society was, as with us, the family, whose members were knit closely together by love, respect, and mutual obligations. Marriage was arranged by the parents, and the betrothal was legally recognized as soon as the groom presented a bridal gift to the bride's father; it was often consummated with a contract inscribed on a tablet. While marriage was thus reduced to a practical arrangement, there is some evidence to show that surreptitious premarital lovemaking was not altogether unknown. The woman in Sumer had certain important legal rights: she could hold property, could engage in business, and could qualify as a witness. But the husband could divorce her on relatively light grounds, or—if she had borne him no children—he could marry a second wife. Children were under the absolute authority of their parents, who could disinherit them or even sell them into slavery (see above). But, in the normal course of events, children were dearly loved and cherished, and, at the parents' death, inherited all their property. Adopted children were not uncommon, and these too were treated with the utmost care.

g. The physical appearance of Sumerian cities. There is no way of estimating, with any reasonable degree of exactness, the size of the population of Sumerian cities, since there was no official census; or at least no traces of any have as yet been found. Probably the number of people varied anywhere from ten to fifty thousand. The city streets were narrow, winding, and quite irregular, with high, blank house walls on either side. They were unpaved and undrained, and all traffic was either by foot or by donkey. The average Sumerian house was a small, one-story, mud-brick structure, consisting of several rooms grouped around an open court. The well-to-do Sumerian, on the other hand, probably lived in a two-story house of about a dozen rooms, built of brick and plastered and whitewashed both inside and out. The ground floor consisted of a reception room, kitchen, lavatory, servants' quarters, and sometimes even a private chapel. For furniture there were low tables, high-backed chairs, and beds with wooden frames. Household vessels were made of clay, stone, copper, and bronze; in addition, there were baskets and chests made of reed and wood. Floors and walls were adorned with reed mats, skin rugs, and woolen hangings.

Below the house there was often located the family mausoleum, where the family dead were buried. In early times, however, there were special cemeteries for the dead, located outside the cities. The Sumerians believed that the souls of the dead traveled to the nether world, and that life continued there more or less as on earth; they therefore buried with the dead their pots, tools, weapons, and jewels. In the case of kings, they sometimes even buried with them some of their courtiers, servants, and attendants, as well as their chariots and the animals which had pulled them. It is largely from the rich finds of tombs that the modern archaeologist has learned so much concerning the material culture of the ancient Sumerians.

4. Technological and scientific achievements. On the technological side, some of Sumer's most far-reaching achievements revolved about irrigation and agriculture. The construction of an intricate system of canals, dikes, weirs, and reservoirs demanded considerable engineering knowledge and skill. Surveys and plans were prepared, which involved the use of leveling instruments, measuring rods, drawing, and mapping. For mathematical and arithmetical purposes, a sexagesimal system of numbers was utilized, featuring a most useful device of "place-value" notation not unlike that of our own decimal system. Tables of square roots, of cube roots, and of exponential functions, as well as collections of algebraic problems involving the solution of complicated quadratic equations, were compiled for use in the Sumerian schools. Measures of length, area, capacity, and weight were effectively standardized. Farming, too, had become a complicated and methodical technique requiring foresight, diligence, and skill. A recently translated Sumerian essay—a veritable "farmer's almanac"—records a series of instructions and directions to be followed by the farmer from the first day to the last, from the watering of the fields to the winnowing of the harvested crops. Sumerian craftsmen were skilled in metallurgy; in the processes of fulling, bleaching, and dyeing; and in the preparation of paints, pigments, cosmetics, and perfumes. Pharmacology, too, had made no little progress; for, from a "prescriptions" tablet recently reinterpreted, we learn that the Sumerian physician made use of quite an assortment of botanical, zoological, and mineralogical "simples" for his materia medica, as well as of a number of elaborate chemical operations and procedures.

5. Religion. a. Cosmology and theology. On the intellectual and spiritual level, the Sumerian thinkers and sages evolved a cosmology and theology which became the basic creed and dogma of the entire Near East. They believed that sea and water surrounded the universe on all sides, and therefore concluded that a primeval sea had existed from the beginning of time and was a kind of "first cause" and "prime mover." In this primeval sea was engendered the universe, consisting of a vaulted heaven superimposed over a flat earth and united with it. In between, separating heaven from earth, was the moving and expanding atmosphere. Out of this atmosphere were fashioned the luminous bodies: the moon, the sun, the planets, and the stars. Following the separation of heaven and earth, and the creation of the

light-giving astral bodies, animal and human life came into existence.

This universe, they believed, was under the charge of a pantheon, consisting of a group of living beings, manlike in form but superhuman and immortal, who—though invisible to mortal eyes—guide and control the cosmos in accordance with well-laid plans and duly prescribed laws. There were gods in charge of heaven, earth, air, and water; of the sun, the moon, and the various planets; of wind, storm, and tempest; of the rivers, the mountains, and the plains; of the cities and states, and of fields, farms, and irrigation ditches; of the pickax, the brick mold, and the plow. The leading deities of this pantheon were the four “creating gods” in control of the four major components of the cosmos: heaven, earth, air, and water; their Sumerian names were, respectively, An, Ki, Enlil, and Enki. Their creating technique consisted of the divine word: all the creating deity had to do was to lay his plans, utter the word, and pronounce the name. To keep the cosmic entities and cultural phenomena, once they were created, operating continuously and harmoniously without conflict and confusion, they devised the *me*, a set of universal and unchangeable rules and laws which were obeyed willy-nilly by everybody and everything.

b. The role of man. As for man, the Sumerian thinkers, in line with their world view, had no exaggerated confidence in him and his destiny. They were firmly convinced that mankind had been fashioned from clay and was created for one purpose only: to serve the gods by supplying them with food, drink, and shelter, so that they might have full leisure for their divine activities. Life, the Sumerians believed, is beset with uncertainty and haunted by insecurity, since a man does not know beforehand the destiny decreed for him by the unpredictable gods. When he dies, his emasculated spirit descends to the dark, dreary nether world, where life is but a dismal and wretched reflection of earthly life.

One fundamental moral problem—a favorite with Western philosophers—never troubled the Sumerian thinkers at all; namely, the delicate problem of free will. Convinced beyond all need for argument that man was created by the gods solely for their own benefit and pleasure, the thinkers accepted the divine decision that death is man’s lot, and that only the gods are immortal. To the gods was attributed all credit for the high moral qualities and ethical virtues that the Sumerians had, no doubt, evolved gradually and painfully from their social and cultural experiences. It was the gods who planned; man only followed divine orders.

The Sumerians, according to their own records, cherished goodness and truth, law and order, justice and freedom, righteousness and straightforwardness, mercy and compassion. And they abhorred evil and falsehood, lawlessness and disorder, injustice and oppression, sinfulness and perversity, cruelty and pitilessness. The gods, too, preferred the ethical and moral to the unethical and immoral. Still, in their inscrutable way, they had created sin and evil, suffering and misfortune. The proper course for a Sumerian “Job” to pursue was not to argue and complain, but to plead and wail, to lament and confess

his inevitable sins and failings. And since the great gods were far away in the distant sky, and might have had more important matters to attend to, the Sumerian thinkers evolved the notion that each individual had a special personal god—a “good angel,” as it were—who would hear his prayer, and through whom he would find his salvation.

c. Rituals and cult. While private devotion and personal piety were important religious acts, it was the public rites and rituals which played the more prominent role in Sumerian religion. The center of the cult was, of course, the temple with its priests, priestesses, singers, musicians, eunuchs, and hierodules. Here sacrifices were offered daily, consisting of animal and vegetable fats, and libations of water, beer, and wine. In addition, there were the New Moon Feast and other monthly celebrations. Most important was the prolonged New Year celebration, culminating in the *hieros gamos* ceremony, when the reigning monarch married Inanna, the goddess of love and reproduction, and thus ensured fertility to the soil, and fecundity of the womb. This royal “holy marriage” ceremony was but one of a number of the more mystical Sumerian cult practices revolving about the notion of a “dying god” and his resurrection, which served to explain, at least to some extent, two theological inconsistencies which disturbed the rather tidy and methodical Sumerian mind. First was the bitter and incontrovertible fact that, in spite of the deity in charge, all vegetation died and all animal life languished during the hot, parched summer months. This led to the assumption that the god of vegetation had “died,” or rather, that he had been carried off to the nether world, where he remained during those hot, lifeless months. He did not return to the earth until the autumnal equinox—the time of the New Year—when, as a result of his sexual reunion with his wife, fields and farms, plains and meadows, began to bloom and blossom again. The other difficulty concerned the death of the Sumerian king, who, in the course of time, began to be thought of as a deity, and therefore presumably immortal. This inconsistency was resolved, at least in part, by identifying the king with the vegetation-god, whose annual death, resurrection, and reunion with his wife were taken more or less for granted. Every New Year, therefore, the Sumerians celebrated with pomp and ceremony, with music and rejoicing, the union in marriage between the king (as the risen god) and the goddess who was the latter’s wife. The origins and evolution of this remarkable fusion of myth and ritual, of cult and credo, are quite obscure. There were quite a number of “dying gods” in ancient Sumer, but the best known is Dumuzi, the biblical TAMMUZ, whom the women of Jerusalem were still mourning in the days of the prophet Ezekiel. Originally, the god Dumuzi was probably a mortal Sumerian ruler, whose life and death had, for some unknown reason, made a profound impression on the Sumerian thinkers and mythographers. His wife was Inanna, the ambitious goddess of love and war, who, according to the mythographers, was responsible for Dumuzi’s forced sojourn in the nether world. In historical times, therefore, the *hieros gamos* at the New Year celebrated the

marriage of the Sumerian king (as the god Dumuzi) to the latter's wife, the goddess Inanna.

6. Art. a. Sculpture. In the field of art, the Sumerians were particularly noted for their skill in sculpture. The earliest sculpture was abstract and impressionistic. The temple statues show great emotional and spiritual intensity, but indicate no marked skill in modeling. This came gradually, however, and the later sculptors were technically more superior, although their images lost in inspiration and vigor. The Sumerian sculptors manifested a considerable degree of skill in carving figures on stelae and

90. Group of statues, from the Abu temple at Tell Asmar

plaques, and even on vases and bowls. It is from their sculpture that we learn a good deal about the appearance of the Sumerians and their dress. The men were either clean-shaven, or they had long beards and long hair parted in the middle. The most common form of dress was a kind of flounced woolen skirt, over which long cloaks of felt were sometimes worn. Later, the "chiton," or long shirt, took the place of the flounced skirt; covering this shirt was a big, fringe-edged shawl, carried over the left shoulder and leaving the right arm free. Women, on the other hand, often wore dresses which looked like long, tufted shawls, covering them from head to foot, leaving only the right shoulder bare. Their hair was usually parted in the middle, and braided into a heavy "pigtail," which was then wound around the head; on important occasions, they wore elaborate headdresses consisting of hair ribbons, beads, and pendants.

Fig. SUM 90.

b. Cylinder seals. One of the most original art contributions of the Sumerians was the cylinder seal, a small cylinder of stone engraved with a design, which became clear and meaningful when rolled over a clay tablet, or over the clay sealing of a jar. The cylinder seal became a sort of Mesopotamian trademark, although its use penetrated Anatolia, Egypt, Cyprus, and Greece. The Sumerian artists were highly ingenious in devising suitable designs, especially when the seal was first invented. The earliest cylinder seals are carefully incised gems, depicting such scenes as the king on the battlefield; the shepherd defending his cattle from wild beasts; or rows of animals, or of fairy-tale creatures and monsters. Later the designs became more decorative and

formalized. Finally, one particular design became predominant, almost to the exclusion of all others: the "presentation scene," in which a worshiper is being presented to a god by his "good angel." See § 5b above.

c. Music. Both instrumental and vocal music played a great role in Sumerian life, and some of the musicians were important figures in temple and court. Beautifully constructed harps and lyres have been excavated in the royal tombs at Ur; and percussion instruments, such as the drum and tambourine, were also common, as were pipes of reed and metal. Poetry and song flourished in the Sumerian schools, but practically all the recovered works are hymns to gods and to kings, for use in the temples and palaces. Nevertheless, there is every reason to believe that music, song, and dance were a major source of entertainment in the home as well as in the market place.

7. Invention and development of writing. Probably the most important Sumerian contribution to civilization was the invention and development of the CUNEIFORM, or wedge-shaped, system of writing, which was borrowed, first by the Akkadians and afterward by many of the surrounding peoples, each of whom adapted it to their own language. Without it, the cultural progress of the entire ancient world would undoubtedly have been much slower than it was. The script began as a series of pictographic signs devised by temple administrators and priests for the purpose of keeping track of the temples' resources and activities. At first, therefore, it was used for the simplest administrative notations only. But in the course of the centuries, the Sumerian scribes and teachers so modified and molded the script that it lost its pictographic character, and became a purely phonetic system of writing, in which each sign stood for one or more syllables. Clay tablets, inscribed in cuneiform writing by means of a reed stylus, have been excavated by the tens of thousands in the ancient buried cities of Sumer, and are now found in museums the world over. More than ninety per cent of these tablets are economic, legal, and administrative documents not unlike the commercial and governmental records of our own day. But some five thousand tablets and fragments have been found inscribed with Sumerian literary works, consisting of myths and epic tales, hymns and lamentations, proverbs, fables, and essays. This is man's oldest collection of belles-lettres as yet known, antedating the Greek *Iliad* and *Odyssey* and the Hebrew Bible by close to a millennium. Moreover, there are quite a number of biblical motifs and ideas which have their prototypes and counterparts in the literature of Sumer. See WRITING AND WRITING MATERIALS § 1a. Fig. WRI 29.

8. Education. A direct outgrowth of the invention of the cuneiform system of writing (see § 7 above) was the introduction and development of the Sumerian system of education, a notable milestone in the history of man's intellectual advance. The main goal of the Sumerian school was "professional"; it aimed to train scribes, secretaries, and administrative personnel, much like our modern business schools. But in the course of its growth and development, and par-

ticularly as a result of its ever-widening curriculum, the Sumerian school came to be the center of culture and learning. Within its walls flourished the scholar, the "scientist," and the writer of poetry and prose. Its headmaster was known as the "school father"; his assistant was called the "big brother"; and the pupils were the "school sons." Other members of the faculty were designated the "man in charge of drawing," the "man in charge of Sumerian," and the "man in charge of the whip." Teachers' salaries were low; although the students all came from well-to-do families, the tuition fee was probably quite small. The curriculum, once the first steps in cuneiform writing had been passed, consisted of copying and memorizing "textbooks" containing long lists of words and phrases, including the names of trees, animals, birds, insects, countries, cities, villages, stones, and minerals. The Sumerian schoolmen also prepared a large and diverse assortment of mathematical tables and problems (see also § 4 above), as well as a variety of grammatical texts and Sumero-Akkadian dictionaries. On the literary side, the pupils studied, copied, and imitated the varied assortment of poetic narratives, hymns, proverbs, and essays, which for one reason or another had met with acceptance and approval throughout the land. School discipline was harsh and severe; there was no sparing of the rod. Most of the graduates probably became scribes in the employ of the palace, the temples, and the rich private estates. But there were also those who devoted their lives to teaching and learning, and can therefore be compared to our modern academicians.

9. The Sumerian "national character." To judge from several Sumerian essays recently pieced together, the educational system of Sumer—and, as a result, the Sumerian "national character"—was deeply colored by a psychological drive for superiority and pre-eminence, for prestige and renown. Indeed, the Sumerians, unlike the Hebrews of a later day, considered themselves to be a "chosen people," a rather special and hallowed community in more intimate contact with the gods than the rest of mankind. They nevertheless had a high regard for humanity as a whole; so much so that the Sumerian word for "mankind"—like its English counterpart, "humanity"—came to mean "humaneness"—i.e., conduct worthy of a human being. The Sumerians even had a moving vision of all mankind living in peace and security, united by a universal faith, and perhaps even by a universal language. But, unlike the Hebrew prophets or the modern idealists, they never transformed this vision into a starry Utopia of the future; instead, they projected it back into the distant past, into man's long-gone Golden Age.

SUN. References to the sun occur especially in passages dealing with the beginning or end of the world, but there are also divers allusions to the heathen worship of it and to popular lore associated with it. Occasionally, too, it is introduced as a symbol of permanence.

1. Terminology
2. In cosmogony and eschatology
3. Cult and worship of the sun
4. In biblical folklore
5. In idiomatic expressions

Bibliography

1. **Terminology.** The usual Hebrew term for "sun" is שֶׁמֶשׁ, a word common to all the Semitic languages but of uncertain etymology. It is most often treated as masculine, but sometimes (e.g., Exod. 22:3; Deut. 24:15; II Sam. 2:24; Ps. 104:22; Jonah 4:8; Mic. 3:6; Nah. 3:17) as feminine. This alternation of gender probably reflects variant traditions among the earlier and surrounding pagan Semites concerning the sex of the solar deity. Thus, while in the Mesopotamian pantheon Šamaš is always a god, the Ugaritic Š-p-š and the S Arabian S-m-s-m are goddesses, and in an Amarna letter from Ashkelon (232: 22, Kn.), the deity is likewise treated as female. Similarly, among the Hittites, there was both a male and a female solar deity.

Less common names of the sun are: (a) חַרְסַּ (Job 9:7), of unknown etymology; and (b) חֹמָה, "hot one" (Song of S. 6:10; Isa. 24:23; 30:26). The former appears also in the toponyms, Heres (Judg. 8:13); הַר חֶרֶם, "mount of the sun" (Judg. 1:35); and, according to the Vulg., Targ., and Symm., עֵיר הַחֶרֶם (MT הַחֶרֶם; Judg. 19:18). On the other hand, the name "Timnath-heres" in Judg. 2:9 (MT and versions) is probably to be emended to "Timnath-serah." In Enoch 78:1, the names of the sun are given as Orjares and Tōmas, which represent respectively אֵרִי חֶרֶם and a corruption of חֹמָה.

2. **In cosmogony and eschatology.** The sun was fashioned and placed in the firmament on the fourth day of creation, to light the earth in daytime and to regulate the seasons (Gen. 1:14-19). At the end of

the present era, when all things revert to primordial chaos, it will be darkened (Isa. 13:10; Ezek. 32:7; Joel 2:10; 2:31—H 3:4; 3:15—H 4:15; Zeph. 1:15; Matt. 24:29; Rev. 8:12), or reverse its course (Enoch 80:5). But at the final triumph of Yahweh, when a new order is brought to birth, it will shine sevenfold as bright as now (Isa. 30:26; Enoch 93:16; 1QH 7.24-25; T.B. Sanh. 91b).

A fanciful, astronomical description of the sun is given in Enoch 40:6-9; 72; 78.

3. Cult and worship of the sun. The sun (Shamash; Ugaritic Š-p-š) figures in all the Semitic pantheons. The popularity of the sun cult in early Palestine is attested by such place names as Bethshemesh, "house of the sun" (Josh. 15:10; I Sam. 6:9; I Kings 4:9; etc.), and En-shemesh, "spring of the sun" (Josh. 15:7; 18:17). Sacrifices to the sun-goddess (Š-p-š) are prescribed in ritual tariffs from Ras Shamra-Ugarit (1.12; 3.47), and in one text from that site the worship of the sun on rooftops appears to be mentioned (3.50: *šqrn bgg*; cf. Akkadian *šaqrū*, "be high"), comporting with the denunciation of this "heathen" practice in Jer. 19:13; Zeph. 1:15. The sun-god is associated with the "Lady of Byblos" in a letter from Tell el-Amarna (116:65, Kn.); and on inscriptions of the eighth century B.C. from Zenjirli, in N Syria, he is mentioned beside Hadad, El, Resheph, and a certain Rakkab-el (Hadad, 2; Pannamuwa, 22). Furthermore, a place named Šamaš-Edom occurs in the Syro-Palestinian list of Thut-mose III (no. 51) and in the Karnak stele of Amenophis III (ARE II, 783).

The worship of the sun, as of other heavenly bodies, was forbidden in the religion of Yahweh, as impugning the uniqueness of that deity (Deut. 4:19; 17:3). Nevertheless it was adopted officially by the apostatic king Manasseh of Judah (II Kings 21:3, 5) and was maintained by his immediate successors and by the populace in general (Jer. 8:2). Although formally proscribed in 621 B.C. as part of the religious reformation instituted by Josiah (II Kings 23:5), it seems still to have survived in popular practice in the days of Ezekiel (Ezek. 8:16).

A feature of this apostatic cult was the placing of

91. Praying to the sun; from Tell el-Amarna, period of Akh-en-Aton (ca. 1380-1362 B.C.)

model horses and of chariots (LXX a chariot) of the sun at the entrance to the sanctuary (II Kings 23:11). These doubtless represented the conveyance in which the solar deity was believed to traverse the heavens. In Akkadian hymns to Shamash, he is, indeed, described as "chariot-rider" (*rakib narkābī*), and it is probably to this that the divine name Rakkab-el on the inscriptions from Zenjirli really refers. Pottery models of horses and chariots have been found in pre-Israelitic levels at several Palestinian sites and have been interpreted as evidence of this custom. The underlying concept is paralleled, of course, both in ancient India (e.g., Rig Veda I, 115:3-4; VII, 60:3; IX, 63:8) and in Greece (e.g., Homeric Hymns 2.63; 4.69; 28.44; 31.9; Hesiod, fragment 67 Rzach). Fig. SUN 91.

4. In biblical folklore. Several items of popular lore relating to the sun are mentioned in the Bible:

a) In Josh. 10:12—a quotation from the lost Book of Jashar—the sun is said to have stood still, at the command of Joshua, until the Israelites had defeated their foes at Gibeon. This is a Hebrew version of a familiar *märchen* motif. In the *Iliad* (XVIII.239) Hera similarly advances the setting of the sun to confer an advantage upon the Greeks in battle; while stories of its miraculous retardation are to be found in Celtic mythology and among the New Zealanders and the Lilloet Indians of British Columbia.

It has been suggested also that the well-known incident in the Rig Veda (I, 175:4; IV, 17:14; VI, 56:3) where Indra drags off a wheel of the sun's chariot in his fight against the devas, reflects an attempt to postpone sunset until victory has been won.

b) In II Kings 20:8-11; Isa. 38:7, the shadow of the sun is said to have receded ten degrees on a sundial as a sign that the ailing King Hezekiah would not die, as expected, but would live for a further fifteen years. This is a special application of the equally common motif that, at moments of crisis, the sun reverses its course.

c) In Mal. 4:2—H 3:20 it is said that on the Day of Judgment the "sun of righteousness shall rise, with healing in its wings." This picture is based on the widespread representation of the solar deity as a winged disk—a representation found throughout the ancient Near East (cf. ANEP 477, 486).

d) The midday sun was regarded as a DEMON (Ps. 91:6)—a belief which is virtually ubiquitous.

e) The gospels assert that the sun was darkened at the crucifixion of Jesus (Matt. 27:45-56; Mark 15:33; Luke 23:44-49; John 19:28-30). Here again we have a special application of a belief well attested in other cultures that the day is darkened at the death of an important personage or hero.

5. In idiomatic expressions. Like the moon, the sun was regarded as a symbol of permanence (Pss. 72:5; 89:37)—an idea well attested also in Akkadian literature.

The expression "under the sun" is used in Ecclesiastes (1:3, 9, 14; 2:11) to denote mundane existence. Considering the late date of the book (see ECCLESIASTES), it has been thought that this is an imitation of the Greek *ὕψ' ἡλίω* (e.g., *Iliad* IV.44; Euripides *Alceste* 151, 394). But the expression occurs also in Phoenician inscriptions of the third century B.C.

(Sidon, Tabnith, 7-8; Eshmun'azar, 12) and has been recognized even in Elamitic (*n a ḥ ḥ u n t e i r š a r ā r a*).

T. H. GASTER

SUN, CITY OF THE [עיר החרם or עיר ההרם, see below]; **KJV CITY OF DESTRUCTION**. Seemingly a city in Egypt, referred to in an oracle forecasting the expansion into Egypt of the worship of Yahweh (Isa. 19:18-22).

The difference between the KJV and the RSV reflects a variation in the textual tradition. About fifteen Hebrew MSS (as well as the Dead Sea Isaiah Scroll) and some versions, including the Vulg., read עיר החרם. There is, however, considerable support for the reading הרים ("destruction," from הרים, "throw down"), and less support for חרם ("sun," as in Job 9:7, though the word is rare and its etymology uncertain). Oddly enough, the LXX reads "city of righteousness." The second reading, "city of the sun," makes good sense, for it can be taken as a reference to Heliopolis (cf. בית שמש, "house of the sun," in Jer. 43:13, which the RSV translates "Heliopolis"); this great center of Egyptian religion will become a city of Israel's God. Possibly this reading was the original text, and the replacement of חרם by הרים was due either to accident or to deliberate alteration. In the latter case some see an attempt by Palestinian orthodoxy to discredit the Jewish temple built by Onias in Egypt at Leontopolis (in the Heliopolis district) ca. 160 B.C. (Jos. Antiq. XIII.iii.1). See HELIOPOLIS.

W. S. McCULLOUGH

SUN, HORSES OF THE. See SUN § 3.

SUPERScription ON THE CROSS. See INSCRIPTION ON THE CROSS.

SUPERSTITION [δεισιδαιμονία] (Acts 25:19); **SUPERSTITIOUS** [δεισιδαίμων] (Acts 17:22 KJV; RSV "religious"). An ambiguous word, which may be used (a) in a neutral sense; (b) in a

good sense to indicate proper respect, reverence, or fear of deity; and (c) in an unfavorable sense, indicating exaggerated or unfounded fear of the gods, or religious thought and practice judged to be crude and misinformed—i.e., superstitious. Such a word always has a relative meaning. A religious belief or practice toward which one man might be neutral, which another might approve, and another reject, might by all be called δεισιδαιμων. Since the word carries this variety of meaning, it has, strictly speaking, no English equivalent. Every English translation is an interpretation which presumes to know what the writer meant to say. Only if the context makes this clear is an adequate English translation possible.

Unfortunately, in the two instances in which the noun or its adjective occurs in the NT, the context is indecisive. E.g., in Acts 25:19, the RSV and the KJV prefer the unfavorable sense, "superstition," whereas many other translations use the word "religion," connoting one of the first two senses given above. The translation to be preferred depends less on the answer to the question, What would the pagan Festus say to the Jewish king Agrippa? than on the answer to the question, What does Luke intend that Festus shall say? Since it is Luke who is really speaking, we do not need to introduce into the argument the question whether or not Festus would be concerned to speak courteously of the Jewish religion before Agrippa. Here, Luke is speaking through Festus and past Agrippa to the reader. And since to Luke the Christian faith alone is the true religion, he can use δεισιδαιμονία of the Jewish faith, not in the neutral sense but only as, if not "superstition," then at least "scruples" (R. A. Knox). Thus Luke uses the word here to trivialize the Jewish complaint against Paul.

In Acts 17:22 the interpretation "superstition" appears to survive in translations only in the KJV ("too superstitious"), with its modification in the ERV-ASV ("somewhat superstitious"), and, among interpreters, in Zahn, who urges that Paul does not begin the speech with the usual oratorical flattery, but attacks the Athenians as polytheistic, demon-fearing idolaters. A rather subtle interpretation proposes that Paul chose the word as ambiguous and left it to the Athenians to decide whether it meant "religion" or "superstition." Another interpretation is that Paul suggests but will not express blame in choosing a word which points to a distinction between pagan and Christian piety. Most interpreters, however, whether regarding the speech as Pauline or as Lukan, accept the verse as a true *captatio benevolentiae*, and the words as meaning "religious" (favorable sense). R. A. Knox nicely interprets: "scrupulously religious." C. H. Rieu brings out the neutral sense: "very interested in religion."

If the speech was fashioned by Luke, "religious" is the preferable translation. If the words are Paul's words, the problem is more complicated.

Bibliography. See F. J. Foakes-Jackson and K. Lake, *Beginnings of Christianity*, IV (1933), 214-15, 311; and Commentaries on Acts.

F. D. GEALY

SUPH סֹפ [סֹפ, reeds, rushes]. One of the expressions describing the location of Moses' address to

Israel (Deut. 1:1). The place is "beyond the Jordan in the wilderness, in the Arabah over against Suph," but its precise location is unknown and is not clarified by the other places mentioned in Deut. 1:1. The KJV follows the LXX and the Vulg. and supplies ים , reading "the RED SEA," as ים סוּף is regularly translated. Perhaps Suph, if it is a place name, is identical with SUPHAH.

E. D. GROHMAN

SUPHAH sō'fā [סוּפָה]. An area, apparently in Moab, probably near the Arnon (Num. 21:14), including the place WAHEB. In Num. 21:14 the RSV understands two proper names, "Waheb in Suphah," while the KJV translates: "What he did in the Red Sea," emending *sūphā* to *yam sūph*, "RED SEA."

E. D. GROHMAN

SUPPER. See MEALS § 1a.

SUPPER, THE LORD'S. See LORD'S SUPPER.

SUR sōor [Σουρ] (Jth. 2:28). A coastland city of Syria mentioned as sending envoys of peace to Holofernes. It has been identified with the port city of Dor near Carmel. Perhaps the name is a Greek transliteration of the Hebrew form of TYRE (צוֹר), in which case it would represent an error by the translator or a later copyist, since Tyre has already been mentioned with Sidon in the same passage.

Bibliography. F. Stummer, *Geographie des Buches Judith* (1947), p. 28.

E. W. SAUNDERS

SUR, GATE [שַׁעַר סוּר] (II Kings 11:6); KJV SUR, GATE OF. A gate in Jerusalem, possibly leading from the king's palace to the temple, mentioned in the narrative of the murder of Athaliah. The Hebrew text is probably corrupt. The parallel passage (II Chr. 23:5) reads: שַׁעַר הַיְסוּד, "Gate of the Foundation." The identification of both structures is most probable.

G. A. BARROIS

SURETY [in the translation of the verb עָרַב, to be surety, and of the derivate עֲרִיבָה, surety; ἔγγυος]. A person held as legally responsible for the debt, default, or failure of another, in contradistinction to a material or objective PLEDGE, which stands usually for הַבֵּל but also for עֲרִיבּוֹן (Gen. 38:17-18, 20), the latter being a derivative of עָרַב, "to be surety." The word "surety" is used technically in such texts of the OT as Gen. 43:9; 44:32, where Judah stands surety for his brother Joseph; and Prov. 6:1; 11:15; 17:18; 20:16; 22:26; 27:13. Failure to pay or to appear personally would have resulted in the surety's being compelled to assume the debt, or being deprived of his personal freedom and being reduced to the condition of a slave. Hence the Proverbs advise men against giving themselves a surety for others, especially for strangers, which indeed was most risky. The same legal term is used figuratively: God is said to be surety for the pious in the face of his oppressors (Ps. 119:122), and Jesus Christ shall be surety (ἔγγυος) for men in the New Covenant (Heb. 7:22).

For the legal aspects of the practice of holding a person, or of offering oneself as surety for others, see DEBT. See also SLAVERY.

G. A. BARROIS

SURGERY. See MEDICINE.

SURNAME [כַּנְיָ; ἐπικαλέομαι, ἐπιτίθημι ὄνομα]. To add a name.

In Isa. 44:5 it is said that at the coming time of blessing some (Gentiles) will "surname" themselves Israel, as a sign of their oneness with the chosen people. In Isa. 45:4, God, speaking to Cyrus, says: "I surname you"—i.e., "I give you a title of honor."

In the NT four men are said to have been surnamed. Simon was surnamed by Jesus "Peter" (Mark 3:16)—i.e., Jesus "placed the name" upon him (cf. Matt. 16:18). To James and John, sons of Zebedee, Jesus gave the name of "Boanerges" (Mark 3:17). Mark interprets this surname to mean "sons of thunder," but this interpretation is not certain. The Hebrew for "sons" would be *bene*, but the Greek here is *boane*. Furthermore, we cannot be sure that the Greek *rges* equals the Hebrew *regesh* ("thunder"). It has been conjectured that the Greek transliterates the Hebrew *rgatz* ("wrath"), so that the word would mean "the hot-tempered"; and other conjectures have been made.

In Acts 1:23, Joseph called Barsabbas is surnamed "Justus." And in Acts 4:36 we are told that the apostles surnamed Joseph "Barnabas," by which surname alone he is called in the rest of Acts and in Paul's letters (cf. I Cor. 9:6; Gal. 2:1, 9, 13; Col. 4:10). Acts tells us that the name means "Son of encouragement," but this meaning is difficult to derive.

SUSA sōō'sā [שׁוּשַׁן; cf. Akkad. *šu-ša-an*, *šu-(ú)-ši*; Elam. *šu-šu-un*; Herodotus Σούσα, Aeschylus Σουσίς]; KJV SHUSHAN shōō'shān . The ancient capital of ELAM, in SW Iran; the residence and court, "door," or "gate" (Esth. 2:19; cf. Xenophon *Anabasis* I.9.3: αἱ βασιλέως θύραι, "the king's door"; Old Pers. *dwarayā-maiy*, "at my door"), of the Achaemenian kings. Herodotus (V.49) mentions the presence of a royal treasury at Susa. Neh. 1:1; Esth. 1:2 speak of "Shushan the palace" (RSV "Susa the capital").

In a well-known inscription Darius the Great describes the building of his palace at Susa. Timber was brought from the Lebanon, from Gandhāra and Carmania; gold from Sardis and Bactria; lapis lazuli and carnelian from Sogdiana; turquoise from Chorasmia; silver and ebony from Egypt; ornamentation for the wall from Ionia; ivory from Ethiopia, Sind, and Arachosia; and stone columns from Elam. Among the craftsmen drafted into service were Ionian and Sardinian stonemasons, Median and Egyptian goldsmiths, Sardinian and Egyptian carpenters, Babylonian brickmakers, and Median and Egyptian wall-decorators. Fire wrought havoc to the royal buildings during the reign of Artaxerxes I (465-425); they were rebuilt under Artaxerxes II Mnemon (404-359). Its location made Susa a traffic center on the roads to Sardis, to Ecbatana through the Luristan Mountains, and to Persepolis.

Archaeological investigations conducted at Susa (modern Shūsh) since the middle of the nineteenth century (W. K. Loftus, M. Dieulafoy, J. de Morgan, R. de Mecquenem, R. Ghirshman) centered around four tells: (a) of the *apadāna*, or royal palace; (b) of the acropolis; (c) of the royal city; and (d) the "tell

of the artisans." They have revealed the main features of Susa's history over a period of more than five thousand years, and show that the site was inhabited since the beginning of the fourth millennium (Susa I pottery). Comparison between the Susa pottery and ceramic ware from other sites in Mesopotamia and Iran permits the establishment of a fairly reliable chronology for the early periods. This and the discovery of Mesopotamian objects in Elam and of Elamite objects in Mesopotamia confirm the frequent political, military, commercial, and cultural relations between the two areas. Fig. PRE 67.

Susa's golden period was under Achaemenian rule. It was the scene of the mass marriages between some eighty of Alexander the Great's officers and ten thousand of his troops and Iranian girls in 324. Its importance declined under the Seleucids and the Parthians. The Sassanian king Shapur II (309-79) destroyed the city, allegedly because of a revolt of its large Christian population (Ghirshman), but it was rebuilt later under the name of Ērānshahr-Shāpūr. After it was captured by the Arab armies (ca. 638), a gradual decline set in. Today the site is not much more than a group of ruins.

In the village of Shūsh the alleged tomb of the prophet Daniel is the object of devout veneration on the part of the Shiite Muslims. References to Daniel's tomb as a site of pilgrimage are to be found in the Arabic authors from the ninth to the eighteenth centuries (Ṭabarī I.2566-67; Muqaddasī 407, 417; Ibn Ḥauqal² 255; Yāqūt V.172; Šūstari 18). According to a story reported by Benjamin of Tudela, who traveled in Iran between 1164 and 1173, the Seljuq ruler Sanjar (1117-57) ordered Daniel's coffin encased in glass to be suspended from the center of the

SUSANCHITES sōō'sən kīts. KJV name for natives of SUSA in Ezra 4:9.

SUSANNA sōō zān'ə [Σουσάννα]. An addition to the book of Daniel wherein the prophet displays his wisdom. The story is so well written, with so few characters and such impressive issues, that it is widely regarded as one of literature's great pieces, as the "first detective story."

Susanna was accused of adultery by two elders whose advances she had repulsed. She maintained her innocence, but when put to trial before the community on their testimony, she was about to be found guilty. Daniel shouted for true justice and was permitted to cross-examine the elders. He asked each elder separately under what tree the sin had been committed. The elders named different trees, thus contradicting each other. Susanna was then acquitted, and the elders were executed in accordance with the biblical law: "Then you shall do to him as he had meant to do to his brother" (Deut. 19:18-21).

It is believed that the story may have been written by a supporter of the Pharisees or particularly a follower of Simon Ben Shetah, who opposed the Sadducees. At the time the Sanhedrin flourished according to Pharisaic rule, and the book is believed to display a satire of the Sadducean practice. Yet, were this the case, the book would have been included in the canon.

The story of the trial indicates the value of cross-examination of witnesses. As narrated, the story is in direct contradiction to the Pharisaic practice and law that false witnesses can be put to death only on the basis of an alibi—i.e., other witnesses show that the first pair of witnesses were with them at the time of the committal of the crime; they were not at the scene of the crime and therefore have given false testimony. Thus the book of Susanna depicts only a contradiction of "witnesses in fact" and not in "matter of time." Because of this contradiction to Pharisaic, accepted law, the book was not included in the canon.

Because of the names of the trees and the play on words (paronomasia) many have thought that there was a Greek original of the book. Its general style, however, reveals that it was written first in Hebrew in Judea. Some scholars believe that it was written in Babylon, because that country is mentioned in the first six verses of the text. This is refuted by the fact that the name of the country Babylon is an addition found only in Theod. (second century), which is based on a later revision of the story.

Some believe that it was excluded from the canon because it reflected on the good name of the daughters of Israel and on the probity of the judges. Origen explains the exclusion of the book as a result of the few passages therein containing scandal. This is improbable, because even in the biblical books the ancient writers did not seek to hide scandal. It is felt that the work was penned by a pious Jew and its main motive was to teach that sinners and hypocrites

are punished. One should prefer death to sin, but one will be rewarded if he maintains trust in God.

Among Jews in the Middle Ages the story may have been known vaguely. Nahmanides (Deut. 21:14) mentions *Megillat Shoshan*. In Christian theology allegorical interpretations were given—Susanna prefigured the church. Origen maintained the historicity of the story, though Julius Africanus disagreed. Origen also believed that the names of the false elders were known; they conformed to the mention in Jer. 29:23.

Talmudically there is no basis for the story; it is only a moral fiction showing how a youngster refutes the falseness of elders. In this it is similar to the story in *A Thousand and One Nights* (Ali Chadsa).

The relationship of Daniel to the events in the story is most fitting, once one recalls that the name "El is my Judge" portrays Daniel.

Some scholars have seen in the story echoes of a myth, the virgin-swan or sun-goddess in her bath, or the story of the chaste wife. Another motif may have been that of the clever judge and his unique decision. Pfeiffer (see *bibliography*) believes that the story is pagan in origin, without any didactic purpose. Its religious teaching is like that of Tobit and Judith, illustrating God's vindication of the righteous and punishment of the wicked.

Bibliography. M. Gaster, *Chronicles of Jerahmeel* (1899), pp. 1-9; L. Ginzberg, *Legends of the Jews*, I (1909), 426, 706; R. H. Charles, *The Apoc. and Pseudep. of the OT* (1913), I, 642; C. C. Torrey, *Apocryphal Literature* (1945); R. H. Pfeiffer, *History of NT Times* (1949), pp. 434-36, 448-54; S. Zeitlin, "Jewish Apocryphal Literature," *JQR*, vol. 40, no. 3 (1949-50), p. 236; B. M. Metzger, *Introduction to the Apoc.* (1957), pp. 107-13. S. B. HOENIG

SUSI סוּסִי [סוּסִי, horse] (Num. 13:11). The father of Gaddi, who was sent from the tribe of Manasseh to spy out the land of Canaan.

Bibliography. M. Noth, *Die israelitischen Personennamen* (1928), p. 230.

SWADDLE [חָתַל, to entwine, enwrap; σπαργανώω, to wrap up in swaddling cloths]. Primarily, to wrap a newborn infant in cloths. It is apparent that this custom was followed through the entire biblical period (see *BIRTH*). The Hebrew word refers to binding a broken arm with a bandage in Ezek. 30:21.

Bibliography. For comment on the Greek term, see E. J. Goodspeed, *Problems of NT Translation* (1945). Note also J. H. Moulton and G. Milligan, *The Vocabulary of the Greek NT Illustrated from the Papyri and Other Non-Literary Sources* (1914-30). O. J. BAAB

SWALLOW [דָּרוֹר (Ps. 84:3—H 84:4; Prov. 26:2), cf. Akkad. *durāru*, freedom, Arab. *darīr*, swift (horse); סוּס, סוּסִי (Isa. 38:14; Jer. 8:7; KJV CRANE), see below; KJV עֵגוּר (Isa. 38:14; Jer. 8:7; RSV CRANE)]. Any of a family (*Hirundinidae*) of small, long-winged passerine birds noted for their graceful flight.

We do not know what species of small bird דָּרוֹר designated in OT times, but the allusions to its flying (Prov. 26:2) and to its nesting in the temple area (Ps. 84:3—H 84:4) make the identification with "swallow" not unreasonable. The LXX takes it to be a turtledove in Ps. 84:3 and sparrows in Prov. 26:2.

The meaning of סוּסִי, *sūs* (סוּסִי, *sīs*), is also uncertain; it may be onomatopoeic. The LXX takes it to be "swallow" (χαλιδών). The references to its cry (Isa. 38:14) and to its migratory habits (Jer. 8:7) are frequently supposed to indicate some type of swift (of the family *Apodidae*), but in fact these data are inconclusive. See *bibliography*.

Bibliography. For Tristram's evidence about both swallows and swifts, see *NHB*, pp. 204-8. E. Koehler, *Lexicon* (1953), p. 656; G. R. Driver, *PEQ* (1955), p. 131, suggest the colloquial Arabic *sīs* to support the meaning "swift," but the relevance of such a colloquialism to ancient Hebrew is doubtful. W. S. McCULLOUGH

SWAMP [בְּצִדָּה] (Isa. 35:7, where the MT is corrupt; Ezek. 47:11). Same as MARSH.

SWAN. KJV translation of תְּנִשְׁמַת (Lev. 11:18; Deut. 14:16; RSV WATER HEN). There is no apparent reason for including such a bird as the swan (Genus *Cygnus* of the family *Anatidae*) among Israel's unclean birds. Moreover, while the swan was obtained by Tristram in Palestine, it was described by him as a rare bird. These and other considerations have led to the general abandonment of "swan" as a rendition of the obscure Hebrew word.

W. S. McCULLOUGH

SWARMING CREATURES [שְׂרָץ] (Gen. 7:21, etc.). See *CREEPING THINGS*.

SWARTHY [שְׁחֹרְחֹרֵת] (Song of S. 1:6); KJV BLACK. The sun-browned skin color of the peasant maiden, contrasted with the elaborately guarded complexions of the harem women.

SWEARING. See *OATH*.

SWEAT (NT) [ἵδρωσις]. Luke 22:43-44 mentions the appearance of an angel to Jesus and that in his agony "his sweat became like great drops of blood," but this material is not found in other gospels. The absence of the passage from MSS Vaticanus, Alexandrinus, Freer, and others indicates that this is an apocryphal addition to Luke.

"Like great drops of blood" is ambiguous. It may mean either that the sweat formed in drops resembling large drops or clots (as Moffatt translates it) of blood, or that blood oozed through the skin to form bloody sweat. While some cases of this latter phenomenon are recorded, their authenticity has been strongly disputed. The Greek ὡσεὶ is often used to indicate simple comparison. The author probably meant to say only that the perspiration of Jesus formed in drops like blood. The breaking out of sweat on an individual under intense emotion is a familiar occurrence.

See also *GETHESEMENE*.

Bibliography. W. Bauer, ἑρμῆβος, *Greek-English Lexicon to the NT* (1957), p. 364; A. Macalister, "Bloody Sweat," *HDB*, III (1900), 330, cites literature of alleged instances.

S. V. McCASLAND

SWEET CANE [קַנְהָה, *qāneh*] (Isa. 43:24; Jer. 6:20). Alternately: *AROMATIC CANE* (Exod. 30:23; KJV CALAMUS); *CALAMUS* (Song of S. 4:14;

Ezek. 27:19). A species of REED (or grass) which yielded an aromatic oil used in holy oils and perfumes. The word literally means "reed," but in five OT references it is listed along with spices, implying an imported reed or product.

Sweet cane was used in the holy anointing oil (Exod. 30:23; see ANOINT) and in sacrificial offerings (Isa. 43:24; Jer. 6:20; see SACRIFICE AND OFFERINGS). It is included in a figure of a fragrant garden, to which the bride is likened (Song of S. 4:14). It was an important item of trade, along with CASSIA (Ezek. 27:19). Exod. 30:23 (cf. Jer. 6:20) informs us that it was "sweet-scented" (RSV "aromatic").

Identification with some of the aromatic reed grasses of India, as most botanists now agree (see FLORA § A7e), seems reasonable but is by no means certain. The context of Isa. 43:24 hardly justifies the identification with sugar cane, as some botanists suggest.

SWINE [חזיר, boar; LXX σῦς, boar; ὄς, boar, sow; NT χοίρος, little pig; ὄς, sow]. The references to swine in the Bible show various applications:

a) Lev. 11:7; Deut. 14:8 forbid swine's flesh to Israelites. Both passages read: "The swine, because it parts the hoof . . . but does not chew the cud, is unclean to you," but Leviticus adds after "hoof": "and is cloven-footed" (the LXX and the Samar. of Deut. 14:8 is the same as the MT of Lev. 11:7). From the remains in the late Neolithic stratum at Gezer it would appear that the pre-Semitic inhabitants of Palestine killed and ate the pig freely. The pig was also the most sacrificed animal among the Greeks, and the popular agrarian rites of the swine-god Adonis must be recalled in this connection. By contrast, swine's meat is forbidden to many Semites. Among the Babylonians this meat was sacred to various gods and could be eaten at certain feasts, though it was prohibited at other times. Among the Syrians it was sacred to Tammuz. Among the Egyptians swine's meat was usually taboo, but could be eaten at certain times. Since the swine was thus generally prohibited, its occasional sacrifice must have signified the greatest holiness and potency. In turn, this probably explains such passages as Isa. 65:4; 66:3, 17, which show how apostate Jews indulged in heathen sacrificial rites presumably of great potency. It is, of course, possible that the OT prohibition of swine's flesh was originally a reversion from the known customs of certain of their predecessors in Canaan. Otherwise it is a custom which they share in common with other Semites, perhaps in revulsion from the habits of ancient Near Eastern men. The prophet condemns the eating of swine, dogs, and mice. The view that these animals were totems and originally associated with various Israelite and Jewish tribes or groups has not gained acceptance.

b) The remaining references in the OT show metaphorical usage. In Ps. 80, a community lament, an enemy who has ravaged Israel is likened to a wild boar out of the forest. It is a figure of destructiveness (vs. 13), and the identity of the ravisher is too vague to be significant. Wild boars are known for their

capacity to destroy growing crops. In Prov. 11:22, a beautiful woman without discretion is likened to a golden ring in a swine's snout. II Macc. 6:18 shows how the Hellenizing party sought to compel Jews to eat swine's flesh (cf. I Macc. 1:47).

In the NT there is the same metaphorical usage. In Matt. 7:6, what is holy must not be given to the dogs, and pearls must not be thrown to swine. Religious truth must not be shared with certain kinds of men, heathen and irreligious. Similarly in the parable of the prodigal son, the younger son became a keeper of pigs, which expresses extreme degradation for a Jew, though it was by no means unknown for Jews to take such employment. That this son was compelled to consider eating swine's food is, of course, a figure of his poverty. Similarly in II Pet. 2:22 the inevitable dirtiness of the sow as an unclean animal is emphasized, as a figure of heresy. The association of dog and pig in some of these references accords with OT and certain classical authors.

The demons who as Legion possessed the Gadarene demoniac requested permission of Jesus that they might be transferred from the man to the large herd of swine feeding near at hand on the hillside. This was apparently done, for the swine were then set in motion and, rushing into the sea, were destroyed by drowning. The historical and moral difficulties are great, but the symbolism of the swine is clear. They are symbols of the unclean, whether of the Gadarene country itself and its inhabitants as non-Jewish or of the herdsmen who, if they were Jewish, were acting in unclean ways; or most probably the swine, as unclean, were regarded as fit bearers of the demons.

SWORD.

1. Terminology
 2. Description
 - a. Straight sword
 - b. Sickle sword
 3. Biblical usage
- Bibliography

1. **Terminology.** The common Hebrew word for "sword" is חרב.

The word ברק literally means "a flashing," hence "lightning." In Job 20:25 it is rendered by the KJV as "the glittering sword." Since vs. 24 refers to the bronze arrow striking one through, the RSV is probably right in understanding the word as referring to the "glittering point" of the arrow.

The word מכה in Gen. 49:5 (KJV "habitation") is a *hapax legomenon* of unknown meaning.

The word רצה in Ps. 42:10 is incorrectly rendered by the KJV as "sword"; the root means "to kill, murder," and it probably refers to a fatal disease or wound which, being inflicted by the enemy, is called "murder."

שליח, translated "sword" in Job 33:18; 36:12, means "missile," "WEAPON" (cf. Joel 2:8).

פְּתוּחַ (Ps. 55:21—H 55:22; also probable emendation in Mic. 5:6—H 5:5; KJV “the entrances thereof”) is correctly rendered “drawn swords” (from the root פָּתַח, “to open”).

The NT uses two words for “sword”: μάχαира and ρομφαία. The word ξιφος occurs only in the LXX. The exact difference between the two NT words is not clear, though originally ρομφαία was a large, broad-bladed sword especially used by the Thracians.

2. Description. Near Eastern swords were basically of two types: the straight, thrusting sword, and the bent (or sickle) sword.

a. Straight sword. Such swords have been found in Palestine from as early as the end of the Middle Bronze period at Tell el-'Ajjul. Archaeologists arbitrarily distinguish swords from daggers by length, forty centimeters being the point of division.

Straight swords had a triangular blade of bronze or iron, usually with a tang extending beyond the shoulder, which was inserted into a haft made of wood, bone, or ivory, or was riveted to it (Fig. WEA 11, c). The Egyptian sword was usually under a meter in length, pointed and double edged, and could be used for slashing or thrusting. The haft and blade were molded of one piece, and wood or ivory was inlaid in the haft. The Assyrians had both long and short swords, as the monuments attest.

b. Sickle sword. Sickle swords have been found as early as ca. 1800 B.C. in Palestine-Syria at Byblos, and, though not as common as the straight sword, became widely disseminated throughout the Near East, possibly through the Hyksos. They entered Egypt from Syria by the time of the Eighteenth Dynasty, and became the favorite weapon of the pharaoh. This was the *khopesh* sword (Egyptian *ḫ p š*, “foreleg”), so called because of its curved shape. (The Egyptians later also borrowed the Semitic name *ḥarb* for the straight sword; cf. Egyptian *ḫ r p*, as well as the Greek word ἄρκη). Its usual form consisted of a flat hilt with a rectangular recess for wood or ivory inlay, and a blade which began as a straight sword but eventuated in a sickle form. Fig. WEA 11.

3. Biblical usage. The straight-bladed sword is the only one recognized in the OT, unless the מַרְבֵּרָה of Gen. 49:5 should mean “sickle sword.” The sword could be used for slashing or cutting (I Sam. 17:51; cf. Ezek. 5:1), or for thrusting (I Sam. 31:4-5); hence one could “fall on the sword.” It was double-edged (Judg. 3:16; Ps. 149:6) and consisted of a hilt (נֶגֶב; Judg. 3:22) and a blade (lit., “flame”; לֶהַב in Judg. 3:22; Nah. 3:3; RSV “flashing sword,” KJV “bright sword,” lit., “blade [flame] of a sword”; לֶהַט in Gen. 3:24; “flaming sword,” lit., “blade [flame] of the sword”). It was worn in a leather sheath (רֶעֶר in I Sam. 17:51; II Sam. 20:8; Jer. 47:6 [“scabbard”]; נֶרֶן in I Chr. 21:27), which was tied to the girdle (II Sam. 20:8), on the left side of the body (cf. Judg. 3:15-16, 21).

The חֶרֶב is commonly used in scripture as a symbol for violence and oppression.

Both μάχαира and ρομφαία are used literally as a weapon for warfare (Matt. 26:47, 55; Mark 14:43, 48; Luke 22:52; Rev. 6:4, 8; 13:10; 19:21). It was sheathed (Matt. 26:52; John 18:11), and could be “drawn out” (Matt. 26:51; Mark 14:47; Acts 16:27)

and used to strike (Luke 22:49) and kill (Acts 12:2; Heb. 11:37) or wound (Rev. 13:14). Reference to double-edged swords is also common (Heb. 4:12; Rev. 1:16; 2:12). “Sword” is also commonly used in a figurative sense. It is a symbol for war and dissension (Matt. 10:34), for divine judgment (Rev. 1:16; 19:15), for political authority (Rom. 13:4), or for a mother’s anguish (Luke 2:35). In Eph. 6:17 part of the armor of God worn by the Christian is the “sword of the spirit”; this spiritual sword is further identified as being the Word of God (cf. Heb. 4:12; Rev. 1:16; 2:16; 19:15).

SYCAMINE [συκάμινος]. A tree referred to by Jesus in a statement concerning faith: “If you had faith as a grain of mustard seed, you could say to this sycamine tree, ‘Be rooted up, and be planted in the sea,’ and it would obey you” (Luke 17:6). The Greek word appears only here in the NT, but it is used to translate the Hebrew שִׁקְמָה (*šiqmâ*), “SYCAMORE,” regularly in the LXX. Luke uses συκομορέα, “sycamore,” in 19:4, where it very probably refers to the sycamore-fig tree. Thus it is likely that “sycamine” was meant to refer to the MULBERRY TREE, to which the Greek word more often applied. In I Macc. 6:34, however, μύρον is used for “mulberry tree.” In Greek σῦκη means “fig,” but the FIG belongs to the mulberry family. The black mulberry (*Morus nigra* L.) is abundant in Palestine.

Since the context of Luke 17:6 gives no hint about the nature of the tree, it is possible that Luke did not intend to distinguish the trees of 17:6; 19:4. Thus the sycamore fig may have been meant in both passages.

Bibliography. I. Löw, *Die Flora der Juden*, I (1926), 266-74; H. N. and A. L. Moldenke, *Plants of the Bible* (1952), pp. 140-41. J. C. TREVER

SYCAMORE [שִׁקְמָה, *šiqmâ* (always plural); συκομορέα]; KJV SYCOMORE. A tree and its fruit associated particularly with the SHEPHELAH. The name in English was derived from the Greek σῦκον, “fig,” plus μύρον, “mulberry,” clearly indicating the *Ficus sycomorus* L., a type of fig tree with a leaf looking much like a mulberry leaf and belonging to the same family. The Greek, in turn, was derived from the Northwest Semitic name. The tree has no relation to the American sycamore, which is a plane tree, *Platanus occidentalis* L., or “buttonwood,” *Platanus wrightii* (Arizona sycamore) or *Platanus racemosa* (California sycamore).

The LXX always translates the Hebrew with συκάμινος, which in the NT is thought to be the true MULBERRY, while συκομορέα in Luke 19:4 stands for the sycamore fig. The Arabs call this tree *šimmez* today.

The importance of this tree in Bible times is indicated by David’s appointment of an overseer for these trees in the Shephelah (I Chr. 27:28; Ps. 78:47; cf. Isa. 9:10—H 9:9), while its abundance is sug-

93. Sycamore (*Ficus sycamorus*)

gested in the phrase "plentiful as the sycamore of the Shephelah" (I Kings 10:27; cf. II Chr. 1:15; 9:27). Amos found employment as a "dresser of sycamore trees" (Amos 7:14), which involved puncturing the unripe fruit to make it more edible. The trees grow only in the lowlands and coastal plains, where they escape the frost (Ps. 78:47). Zacchaeus, short of stature, found a sycamore-fig tree in Jericho convenient for climbing to see Jesus (Luke 19:4). Even today this tree provides many a poor family with some food, for the tree bears fruit several times during the year, although it is inferior in quality to the common FIG.

SYCHAR sī'kār [Συχάρ] (John 4:5-6). A city of Samaria where JACOB'S WELL was located, probably the same as SHECHEM.

1. **Biblical evidence.** The gospel account locates Sychar "near the field that Jacob gave to his son Joseph" (John 4:5). Here "the field" must be a reference to Gen. 48:22, where Jacob gave Joseph "one mountain slope" (Hebrew *Shechem*). This appears to be the field at Shechem which Jacob purchased "from the sons of Hamor, Shechem's father" (Gen. 33:18-19; cf. Josh. 24:32). Thus Sychar must have been at or near both Shechem and Jacob's well. The chief problem concerning Sychar and its identification is whether or not Sychar and Shechem refer to the same place.

2. **Sychar as 'Askar.** Until recently most scholars regarded Sychar as a site distinct from Shechem and identified it with the village 'Askar. There is considerable evidence for this view. It is undeniable that the correct reading in John 4:5, as indicated by the best MSS, is "Sychar." The author of the gospel makes no mention of Shechem and would hardly

confuse the two, for he had a good knowledge of the geography of Palestine. Jerome (ca. A.D. 400) quotes without any objection or comment the following statement from Eusebius (ca. 335): "Sychar is before [E of] Neapolis, near the piece of ground which Jacob gave to his son Joseph, where Christ, according to John, held discourse with the Samaritan woman by the fountain. It is shown to this day" (*De Situ et Nom. Hebr.* 279). The Bordeaux Pilgrim (ca. 333), like other travelers, describes Sychar as ca. a mile from Shechem. Epiphanius likewise distinguishes the two places (*Versio Antiqua* 253).

Those who distinguish Shechem and Sychar identify the latter with the Arab village of 'Askar, which is a half mile N of Jacob's well at the SE foot of Mount Ebal. A Samaritan chronicle of the fourteenth century or earlier speaks of a town called 'Ischar as near Shechem and the same as Sychar. It is said that the Samaritans pronounce it 'Askar. The Talmud also mentions an En-Sikhar or Ein-Sokher, which must be the spring of 'Askar (J.T. Shek. V.1 [48d]). So also the mosaic map of Madaba of the sixth century A.D. has at the site of 'Askar this note: "Sychar which is now Sychora."

3. **Sychar as Shechem (Balatah).** Although it is undeniable that Sychar appears in the best MSS, it is undoubtedly a textual error. The Sinaitic Syr. reads "Shechim" for "Sychar." The chief evidence for this textual error is the statement of Jerome that Sicheim and Sichar are the same and that Συχάρ is a copyist's error for Συχέμ (*Quaest. in Gen.* 373). Since Jerome's time the reports of various travelers, beginning with Arculf (ca. 700), have asserted that the two words refer to the same place.

In much of the discussion about Sychar a basic error has been the common assumption that Shechem is to be identified with Neapolis (Nablus), but a careful reading of Eusebius and Jerome shows that they do not identify the two (see above and Jerome *De Situ et Nom. Hebr.* 266; *Epistle CVIII* [XXVII], 13).

The question has been settled by excavations at Tell Balatah which have demonstrated that it is the Shechem of the OT and the city meant in the passage which has "Sychar" as a textual error. Tell Balatah is a mound 1½ miles SE of Nablus at the E edge of the pass between Mount Gerizim and Mount Ebal. At the SE edge of it is Jacob's well, which was at Sychar or Shechem (John 4:5).

SYCHEM. KJV form of SHECHEM.

SYELUS. KJV Apoc. form of JEHIEL.

SYENE sī ē'nī [סנינה; LXX Συήνη]. A village, now called Assuan, situated on the E bank of the Nile just N of the first cataract in Upper (Southern) Egypt. Its name, if we are to follow the generally accepted view, signifies "market" or "trading post," aptly reflecting the importance of this village and its neighbors as points of exchange in the commerce between

inner Africa and Egypt proper. The Egyptian name *Swen* survives in modern Arabic as 'Aswān or 'Aṣwān through the intermediary of Coptic *Swan*, *Swēn*.

Located at the southernmost boundary of ancient Egypt, Syene is only naturally coupled with MIGDOL in the Delta to express the limits of Egypt in Ezekiel (29:10; 30:6): "from Migdol to Syene." The utter remoteness of Syene in terms of ancient geographical knowledge also accounts well for the use of the gentilic form in Isa. 49:12:

Lo, these shall come from afar,
and lo, these from the north and from the west,
and these from the land of Syene.

The reading סנייִם is supported by the Dead Sea Isaiah Scroll and clarifies the hitherto enigmatic סניִים, "Sinim," usually read here. Since the form is properly the plural of a gentilic adjective, it would be best translated "the people of Syene."

Mention of Syene is almost completely absent from Early Egyptian texts; and it is only after Elephantine, the true metropolis of the district, declined that Syene attained any great importance. Elephantine is a long, fertile island in the Nile at Syene and was for most of Egypt's long history the administrative and religious center of the first Upper Egyptian nome. The strategic location of the island, at a place in the Nile Valley where the arable land yields to the rugged cliffs of the river bank and the river itself to the S is hardly navigable, made Elephantine a natural frontier station against Nubia. As an island it afforded far better protection against the sudden attacks of the enemy than its sister settlement Syene on the shore; it is possible that the latter was at first only a supplementary site to the fortress on Elephantine.

Our most immediate early source of information concerning Syene and Elephantine is the corpus of Aramaic papyri originating in that district. These papyri (see ELEPHANTINE PAPYRI) date mainly from the fifth century B.C. and consist of business documents and letters of a Jewish colony established on Elephantine, the members of which manned a garrison in the military service of the Persians. Even in these documents, however, Syene does not seem to have the military importance of Elephantine, which is called יֵב (Yēb) after the Egyptian name of the island. Syene is usually mentioned merely as the residence of such and such a person; and although several individuals are known to have possessed houses both on Elephantine and in Syene, it is the former on which the main settlement of the colony was established and where the chief temples, of both the Egyptian god Khnum and the Jewish God Yahweh, were located.

In addition to the commercial and military significance of Syene and Elephantine, the proximity of extensive granite quarries used from the first dynasty onward and the continuous presence of the personnel necessary for working and hauling contributed much to the growing prosperity of the district. The stone quarried there, chiefly rose granite, bore the name Syenite; modern usage of this term is slightly at variance with the ancient.

Herodotus is the earliest classical writer to mention Syene, but only in an erroneous account concerning the sources of the NILE. That Syene, Ele-

phantine, and the neighboring island of Philae continued to be of strategic importance in the Greco-Roman period is confirmed by Strabo (17.1.53-54), who gives an account of the Ethiopic rebellion staged there in 25 B.C. and informs us that the Romans regularly maintained three cohorts at this place.

Syene (Assuan) today is famous as the site of the dam completed in 1902 for the control of the Nile for irrigation.

SYMBOL, SYMBOLISM. A representation, visual or conceptual, of that which is unseen and invisible. The religious symbol points beyond itself to reality, participates in its power, and makes intelligible its meaning. As such it goes beyond a sign or an image. The value of a symbol is its ability to elucidate; to compress into a simple, meaningful whole, readily grasped and retained; to provide a center for the shaping of conduct and belief.

Symbols are part of the language of faith, the means by which faith expresses itself when it interprets the holy, the eternal, the beyond; when it communicates the divine confrontation, claims, and demands. As such, symbolism is a part of biblical religion from its beginning.

Symbolism is the vehicle of revelation. Born in encounter, given during inspiration, symbols summarize and interpret the experience. They are created, are given, born, grow, and die amid changing circumstances. At times they appear as something new; at times they bring new significance to observances which have lost their meaning or which have been adapted from elsewhere. Taken from the realm of human experience, they relate man to that which is of ultimate concern.

 - e. Symbolism of eschatology

Bibliography

1. **In the OT.** Among the Hebrews there was no clear-cut distinction between the sacred and the secular. The spiritual expressed itself in the physical. Thus nature and history became the spheres of revelation, and everything carried within itself the capacity for symbolic significance. Insofar as words, persons, events, or actions summed up the hopes and expectations, the meaning and significance, the past and future, of Israel's history and faith, they can be termed symbolic.

a. *Symbolic words.* Israel's religion was based on dialogue, a speaking-hearing relation. Her God was

a speaking God. He addressed her with words. A word was more than a means of communication; it was a symbol—a dynamic, living reality—embodying the power, authority, and purpose of the speaker (Isa. 55:11; cf. Deut. 18:22; Jer. 28:9). A word was a thing, event, confrontation, claim, demand. It was this that made the work of prophet, priest, and lawgiver so significant. At climactic moments, Israel understood herself confronted by the divine word, a word promising grace and judgment, a word calling for a response—to hear and to obey. The words spoken were collected, preserved, studied, treasured; they became a lamp to the feet, a light to the path (Ps. 119:105). At the last God presented his ultimate word, the word made flesh, who fulfilled all previous words, and became the one, all-inclusive word of God to man.

The dynamic of a word is seen in BLESSINGS AND CURSINGS, which carry within them the ability to work good (Gen. 27:33-37; Num. 22:6; Ps. 129:8) or to work evil (Gen. 9:25; Num. 23:7-8; Isa. 24:6). Once the word has been spoken, the effect becomes assured.

Again, word symbolism is inherent in a NAME. A name is representative, an extension of the personality, carrying in it the soul, vitality, power, and authority of the person to whom it belongs (Exod. 3:13-15; cf. Gen. 17:5; I Sam. 17:45). To speak in the divine name is to possess the divine Spirit (II Chr. 15:1; Isa. 61:1; Mic. 3:8), to speak with divine authority—"Thus says the Lord." To invoke the divine name is to call forth the divine power (I Kings 8:29, 33; 18:24; II Kings 5:11).

At times symbolic names were given to children, to indicate something had happened or was about to happen (cf. Shear-jashub, "a remnant shall return" [Isa. 7:3]; Immanuel, "God is with us" [Isa. 7:14]; Lo-Ammi, "not my people" [Hos. 1:9]).

Word symbolism further appears in the anthropo-, therio-, or sociomorphic manner of speaking of the deity. God could not be portrayed visually; hence he is described symbolically, so as to make comprehensible his nature and activity. He is represented with features of a man, a beast, of nature itself. His eye denotes his omniscience (Jer. 5:3; Amos 9:8) and favor (Deut. 11:12; Pss. 33:18; 34:15); his arm, his power (Exod. 15:16; Pss. Sol. 13:2); his right hand, victory, vindication (Exod. 15:6; Pss. 17:7; 44:3). He comes in judgment like a roaring lion (Amos 3:8), an E wind (Jer. 18:17), a storm (Jer. 30:23). By all such descriptions God was made intelligible; his will and purposes made plain; and his activity, as a living force in the vicissitudes of life, made known.

b. Symbolic persons. From the beginning of Israel's history there were men who, as representatives of the tribe or nation, typified the hopes, strength, and characteristics of the group. Such were the patriarchs, as Abraham (Gen. 12:2-3; 17:4-8; Isa. 51:1-2; cf. Luke 3:8; Rom. 4:1-5, 9-12); the eponymous tribal ancestors, as Esau (Gen. 25:25; 27:39-40; Obad. 10; Mal. 1:2-5) and the sons of Jacob (Gen. 49; cf. Deut. 33); and in a minor way the charismatic leaders, as Barak, Gideon, Samuel, and Saul.

Again, the king, the anointed of the Lord, seated as regent on the divine throne (Pss. 2:6-7; 45:6), em-

bodied in himself the hopes of the nation, and was responsible for its destiny.

In a later age, despondent over her fate, bereft of faithful rulers, Israel idealized the great figures of her past and longed for their reappearance in an expected deliverer, the Messiah, who would restore her to favor with God, and to prominence among the nations. Such were Moses the lawgiver and prophet par excellence (Deut. 18:15; cf. Hos. 12:13; 1 QS 9:11; John 1:21; 6:14; 7:40); Elijah the fore-runner (Mal. 4:5—H 3:23; cf. Ecclus. 48:4-11; Matt. 16:14); David the king (Ezek. 34:23; 37:24; cf. Isa. 9:1-6; 11:1-5; Pss. Sol. 17:23-51); and Aaron (or Zadok) the priest (cf. Zech. 6:12-13; I Macc. 14:41; Zadokite Fragment 4:1; 1 QS 9.11). The Prophet of the Exile saw the nation itself as emblematic of the coming deliverer (cf. Israel the Suffering Servant, in Isa. 49:1-6; 52:13-53:12; cf. Mark 10:45; Acts 8:32-35). All these individuals were related to Israel's destiny. Each, in his own way, represented God and man. Each was, in himself, a meeting place of the nation and God. Each carried within him all the tradition of the past, the experience of the present, and the hope of the future. And each pointed to that Coming One, who would embody all that for which they stood. The NT sees the culmination of these hopes fulfilled in Jesus. See § 3b below.

c. Symbolic objects. A certain symbolism, by way of association, or representation, was attached to numerous objects—objects of nature, as the pillar of witness, indicative of a covenant (Gen. 31:44-53; Josh. 24:26-27), the pillar of cloud, divine guidance (Exod. 13:21) and glory (Exod. 16:10), fire, the divine presence and glory (Exod. 3:2-6; 24:17; Lev. 16:2), guidance (Exod. 13:21), and wrath (Num. 11:1; Deut. 4:24; cf. Heb. 12:29); cult objects, as the ark, symbolic of the covenant (Exod. 25:10-22) and the presence of God (Num. 3:31; I Sam. 4:3-8), the tables of testimony, the law (Exod. 25:16, 21; 31:18; 40:20), the altar of incense, prayer (Ps. 141:2), the altar of sacrifice, revelation (Gen. 12:7-8; 26:25; 35:1; II Kings 16:15); personal objects, as phylacteries denoting service to God (Exod. 13:16; Deut. 6:8; 11:18), and fringes, the commandments (Num. 15:37-41; Deut. 22:12).

Parts of the body also had certain spiritual significances. The intimate union of the spiritual and the physical in Hebrew psychology resulted in every physical organ having psychical and ethical attributes of its own: the eye, mental perception; the ear, obedience; the hand, strength; the nose, anger (cf. Exod. 15:8; II Sam. 22:9; Ps. 18:8); the heart, intellect (Prov. 14:33) and will (Prov. 16:9); the kidneys, emotions (Prov. 23:16); the bowels, love or sympathy (Song of S. 5:4); the liver, the center of life (Prov. 7:23; Lam. 2:11); blood, the principle of life (Lev. 17:11; Deut. 12:23).

d. Symbolic places. While such places as the Deep (Gen. 1:2; Prov. 8:28; Isa. 51:10; Amos 7:4), Sheol (Job 26:6; Pss. 16:10; 139:8; Amos 9:2), and the Pit (Pss. 30:3; 88:6; Isa. 14:15), as a remnant of mythology, had symbolical meaning, names of geographical sites at times became symbolic: e.g., Sodom, the seat of immorality and wickedness (Isa. 1:10; Ezek. 16:46; Martyrdom of Isa. 3:10; cf. Rev. 11:8); Egypt, the place of bondage and evil (Hos. 11:5[?]; cf. Rev.

11:8); and Jerusalem, the holy city, God's dwelling place (Isa. 24:23; 62; Joel 2:32; Zech. 2:4, 12; 8:3; cf. Rev. 21:2, 10), also termed Zion (Isa. 2:3; 60:14; Jer. 31:6; 50:5; Joel 3:17; II Esd. 10:44). In NT times Babylon became symbolic for Rome, the seat of wickedness (cf. II Bar. 11:1; I Pet. 5:13; Rev. 17:5; 18:10).

e. Prophetic symbolism. The prophets, more than anyone else, were responsible for the symbolism of the OT. The nature of the prophetic task and the prophetic experience, together with the intense and naïve realism of Semitic thought, made symbolism an essential element in the prophetic ministry. Visions, dreams, actions, as well as words, had an objectivity of their own enabling them to actualize the divine purpose and will. The visions of the prophets were the pledge of impending divine activity. An almond rod indicated the certainty of divine action (Jer. 1:11-12); a boiling pot, taint from the N (vss. 13-15); two baskets of figs, good and bad, the exiles and remnant in the land (ch. 24); a basket of summer fruit, the destruction of Israel (Amos 8:1-2); dry bones reclothed with flesh, Israel renewed by the Spirit of God (Ezek. 37:1-14).

Closely akin to vision are dreams which foretell the future (I Sam. 28:15; cf. Gen. 37:5-8; 40:7-13; 41:1-32; Dan. 4:13-27). Of religious significance is the dream of Nebuchadnezzar, in which a great image of gold, silver, bronze, iron, and clay is destroyed by a stone, leaving no trace, symbolizing the founding of the eternal kingdom (Dan. 2:31-45).

Of a similar nature were the prophetic actions which dramatized the divine message. We read of Samuel's tearing his mantle, a symbol that God had torn the kingdom from Saul (I Sam. 15:27-28); Ahijah's rending his garment into twelve pieces, the rending of Solomon's kingdom (I Kings 11:30-32); the striking of arrows by Joash at Elisha's command, Israel's victory over Syria (II Kings 13:15-19); Jeremiah's wearing of the yoke, Judah's bondage to Babylon (Jer. 27:2-7, 10-12); Isaiah's three-year walk in captive's garb, Egypt and Ethiopia's captivity by Assyria (Isa. 20:2); the inscribing of tribal names on wood by Ezekiel, the union of Judah and Israel (Ezek. 37:15-23). These mimetic actions indicated the future and effected its coming.

Again, the prophets made abundant use of symbolic imagery. Apart from numerous metaphors, there were figures which portrayed the meaning of Israel's existence. Such a figure was the VINE (and vineyard). The vine was an essential element in Israel's economy. It required constant care and pruning. It signified prosperity (I Kings 4:25; Mic. 4:4; Zech. 3:10) and fruitfulness (cf. Gen. 49:22; Ps. 128:3). By means of the figure the prophets vivified the many facets of Israel's relation to God, his grace, and her apostasy. Israel was a choice vine brought out of Egypt (Ps. 80:8), the planting of the Lord (Jer. 2:21), designed to bear fruit for God (Isa. 5:1-5). But Israel became degenerate and wild (Jer. 2:21), yielding wild grapes (Isa. 5:4, 7). Because of this she was destroyed by shepherds (Jer. 12:10) and becomes a desolation. This figure was adapted by Jesus to represent the relation between himself and his disciples. See § 3b below.

Another figure, as rich and versatile in depicting Israel's spiritual history, is that of a SHEEP. A sheep is dependent and helpless. It needs constant care, guidance, and protection. It is led by a voice. Without this it strays, becomes lost, a prey to the wild beasts. Israel is God's flock, the sheep of his pasture (Pss. 79:13; 100:3; Ezek. 34:6). God is their true shepherd (Ps. 23; Ezek. 34:12, 16). But he has entrusted them to the care of human shepherds (religious leaders) who have proved unfaithful and greedy (Ezek. 34:1-10). As a consequence the sheep have gone astray, and have been scattered (Ps. 119:176; Isa. 53:6; Jer. 23:1; Ezek. 34:5-6), doing what they desire (Ezek. 34:6), becoming lost (Jer. 50:6; Ezek. 34:11), counted for slaughter (Ps. 44:22). Finally, the Lord determines to search for them (Ezek. 34:11-16), and brings them back, carrying the lambs in his arms (Isa. 40:11).

A third figure, taken from everyday life, especially suited to convey religious truth is that of a WAY. A road, or path, indicates action (walking) and direction (conduct), and thus purpose (cf. Ps. 103:7; Isa. 26:8). The concern in life is to take the right road. For a way may lead to life (Prov. 6:23; 10:17; Jer. 21:8) or to death (Prov. 7:27; 14:12; Jer. 21:8). Israel's religious leaders were especially commissioned to point out the way she should go. Blessing was to be found in taking the right way (Ps. 1:6; Prov. 12:28; Isa. 26:7), the way of holiness (Isa. 35:8) which leads to Zion, the way of the Lord. Israel's whole life was a walk—from Egypt to Canaan, from bondage to freedom, from death to life. When she lost her way, was taken captive, a way had to be prepared again (Isa. 40:3; Mal. 3:1) to enable her to come to the city of God (Isa. 35:8-9). This figure particularly emphasized that conduct had fateful implications for life. It found renewed emphasis among the Jewish sectarians (IQS 4.2; 8.13-14; 9.16-21) and the Christians. See § 3b below.

The lion, with its strength, its terrifying roar, its crouching and sudden leaping upon its prey, was used by the prophets to typify the divine wrath and judgment (Isa. 31:4; Hos. 5:14; 11:10). Yahweh roars from Zion (Jer. 25:30; cf. Joel 3:16[?]; Amos 1:2[?]; 3:8), striking terror in the heart of his enemies. Destruction will be sure and devastating. Only a few fragments will be left (Amos 3:12).

f. Cultic symbolism. The great cultic symbol, pre-empted from everyday life, was that of covenant. Covenant was the basic feature of life on all levels. Life consisted in the making of covenants. Israel's very existence was effected by a great covenant ceremony at Sinai. Here she heard the divine voice. Here she received the law. Here she knew herself to be the people of God, sworn to obedience, dedicated to service, subject to discipline, dependent on mercy. Her station in life depended on keeping covenant. Basic to her cultic and religious life, the bond of union, locus of loyalty, periodically renewed, broken, yet promised anew, the covenant became the vantage point from which the whole of Israel's history was viewed.

Cultic symbolism was often in the form of mimetic action, as the offering of first fruits, sanctifying the harvest (Exod. 23:16; 34:22; Deut. 26:1-11); the first-

born, sanctifying the herds and flocks (Exod. 22:29-30; 34:19-20), bringing blessing and holiness (Deut. 15:19-23); the burnt offerings (Lev. 1:1-13) and sin offerings (4:6), renewing holiness; the Day of Atonement ceremonies (Lev. 16), bringing forgiveness.

At the great festivals, cult dramas were re-enacted which strengthened the foundation of national life. These FEASTS, of ancient agricultural origin, were adapted to Yahweh-worship and given historic and symbolic significance. Passover, thus, celebrated the exodus from Egypt and became prophetic of the new exodus and the dawn of the new day; the New Year Festival, the enthronement of God and the creation of the world, prophetic of the eschatological day of the Lord; the Feast of Weeks, the giving of the law; Tabernacles, life in the wilderness.

Closely related to ritual were the rite of CIRCUMCISION, a sign of the covenant and membership in the family of God; and the SABBATH, celebrating creation (Exod. 20:11), with its attendant rest (Deut. 5:15). Keeping sabbath later became one of the marks of true devotion to God. *See* WORSHIP IN THE OT.

2. **In later Judaism.** Postexilic and later Judaism, enhanced by allegorical exegesis, read much symbolic significance into the OT. Hidden truths were felt to lie behind the literal word (and grammar, at times) of scripture, which could be elicited only by the enlightened interpreter. The TEMPLE, its accessories, sacrifices, institutions, dietary laws, were all given symbolic import. A greater emphasis was placed on the meaning of numbers (e.g., three represents the holy, or divine; four, the earth; seven, heaven and earth, association with God; ten, completeness; *see* NUMBER). Figurative meaning was attributed to metals (e.g., gold, the glory of God; silver, moral innocence; brass, strength) and colors (blue, holiness; purple, royalty; white, purity; black, evil and disaster). The seven-branched candlestick was said to represent the soul; the ram's horn, the messianic; an ear of corn, the resurrection.

With the rise of apocalyptic, a weird and bizarre imagery was brought into being to describe past and future history. Historic kings and kingdoms were represented by weird beasts (Dan. 7:1-8) and horns of animals (7:24; cf. 8:8, 22). The horn of a he-goat signified Alexander the Great (8:5-8); a great ram's horn, Judas Maccabeus (Enoch 90:9); a lion's destruction of an eagle, the overthrow of Rome by the Davidic messiah (II Esd. 11). A further development was an extended angelology and demonology, and a developed eschatology with world holocaust, final judgment, and new world of bliss.

Among Jewish sects we have also a reinterpretation of certain prophetic books in line with the spiritual conditions of the day, symbolic significance being given to oracles to give them contemporary meaning (cf. the commentaries on Nahum, Habakkuk, and Micah of the Qumran sect).

3. **In the NT.** NT symbolism, for the most part, centers around the person of Jesus Christ, his identity, and the significance of his life and ministry. Much of the imagery has been borrowed from the OT and Jewish apocalyptic.

a. **Symbolic titles.** The one, all-inclusive symbol in the NT is Jesus Christ—the Anointed One, the

Messiah—who sums up in himself the nation Israel, together with its expectations, the new covenant, and the new community. In him is fulfilled the function of king (Matt. 21:15; John 18:37), priest (Heb. 4:14-5:10), prophet (John 6:14; 7:40), cult (Heb. 9:1-10:25), and word (John 1:1; Heb. 1:1). By descriptive titles and figurative names, the apostles sought to convey the significance of Jesus to all classes of men, both Jew and Greek.

Most meaningful of these is perhaps that of Son (a term with Hebraic and Hellenistic affinities), by which the intimate relation of Jesus to God is typified. He is the one, unique Son, sent to gather the fruit of God's vineyard. He gives his life to redeem men and enable them to become sons of God. *See* SON OF GOD.

Another symbol which emphasizes Jesus' humility, and the sacrificial significance of his death, is that of the LAMB. He is the true paschal lamb (I Cor. 5:7), the "Lamb of God, who takes away the sin of the world" (John 1:29).

Closely connected with this figure is that of priest, the great contribution of the writer to the Hebrews. Christ is the one true high priest, who offers the one all-sufficient sacrifice providing permanent access to God. In him, thus, the whole of Israel's cultic religion finds its fulfillment.

Again, Jesus is termed the WORD (John 1:1), the agent of creation, revelation, and redemption. In him the power, promise, and claim of the divine word again find expression. He is the final word, to which men are challenged to respond.

Jesus is further termed Lord, a word with many religious and social affiliations. He is God in human form, Lord of the cult, the one true Master of men, claiming their allegiance, devotion, and service.

b. **Symbolism of Jesus.** That Jesus consistently used imagery and symbolism is the testimony of all the gospel writers. He used figures from the most common and elementary spheres of life to illustrate religious truth (*see* IMAGE). His primary symbol was that of the kingdom of God, the rule of God in men's hearts. This was the theme of his preaching (Matt. 4:17), the subject of his parables (ch. 13), the object of his concern. He was eager that men should see it, find the way to it, and enter it. This figure, recalling the covenant and theocracy, fulfilled in Jesus, who had come to gain a kingdom and turn it over to the Father, became the framework for viewing the whole of redemptive history, looking forward to the grand climax when Jesus shall be acclaimed "King of kings and Lord of lords."

Another symbol of Jesus is that of shepherd and sheep. To the meaning this figure had in the OT, Jesus added the significance of his mission, to give his life for those gone astray (John 10:11, 15). In distinction from the religious leaders, who were hirelings (vss. 12-13), and the false messiahs, who were thieves and robbers (vs. 8), he is the true shepherd. It is his voice they follow, he lays down his life for them, and he goes to gather other folds into the one flock of God (vs. 16).

Jesus emphasized the necessity of union with him under the symbol of the vine. His concern was for fruitful living. As branches receive life from the vine,

so the disciple from Christ (John 15:4). The disciple's vitality depends on this relation; without Christ he can do nothing (vs. 5). Moreover, if there is no fruit, the branch is cut off and destroyed (vs. 6).

Again, he used the figure of the way (John 14:6). By this symbol Jesus indicated that he fulfilled the prophetic statements concerning the way (e.g., Isa. 35:8; 40:3; Mal. 3:1), provided the way of access to God, and manifested the type of conduct essential to fellowship with God (cf. Matt. 22:16). Thus Christianity became known as the Way (Acts 9:2; 19:9, 23; 22:4) and Christians, those of the Way.

c. Symbolism of salvation. The chief symbol of salvation is the Cross, in which much of the theology of the NT converges. The message of the Cross is the power of God (I Cor. 1:18), for the Cross is the way of salvation (Gal. 6:14; cf. Col. 2:14), the means of uniting the divided segments of humanity (Eph. 2:16; cf. Col. 1:20), and the way of life for the Christian (cf. Matt. 10:38; 16:24; Mark 8:34; 10:39; Luke 9:23; 14:27). Since the NT era, the Cross has become the one universal symbol of salvation through Christ, emphasizing both his death for the sins of the world and the new life he gives to men.

When describing the reality of salvation, the NT writers use a variety of symbolic terms: "justification," a legal term for a sentence of acquittal (Rom. 4:25; 5:16, 18; cf. 3:24; 8:30; I Cor. 6:11); "adoption," a means of entering a family fellowship as a son (Rom. 8:15; Gal. 4:5); "ransom," manumission of a slave, or redemption of a prisoner (Matt. 20:28; Mark 10:45; cf. Eph. 1:7; Col. 1:14; I Tim. 2:6; Heb. 9:15); "expiation," restoration of fellowship, or removal of guilt, through sacrifice (Rom. 3:25; I Cor. 5:7).

The redeemed community is called the body of Christ, emphasizing: "Where Christ is, there is the church." By this figure is emphasized the church's corporate nature and servile function.

Again, the church is termed the bride of Christ, typifying its intimate union with Christ and its subservient status.

d. Symbolism of worship. The symbolism of worship comes to the fore in the sacraments. Each of the sacraments is a dramatic portrayal of the gospel, embodying mimetic overtones. In BAPTISM water signifies the triumph over the forces of evil (passing through the waters with its threat on life, reminiscent of crossing the Reed Sea; I Cor. 10:1-2; cf. Ps. 74:13; Isa. 51:9-10); the passing from death to life (cf. Rom. 6:4); the removal of defilement (as in the lustrations of the sectarians; cf. Acts 2:38; Tit. 3:5); and the giving of life (Rom. 6:4; Gal. 3:27; cf. John 3:5). Baptism takes the place of circumcision as the act of inauguration into the holy community (cf. I Cor. 12:13). It is a participation in the death and resurrection of Jesus (Rom. 6:3-6; Col. 2:12). One is buried with Christ (Rom. 6:3), raised to newness of life (Rom. 6:4; Col. 2:12), and thus enters the body of Christ (I Cor. 12:13). It thus becomes an enactment of the drama of salvation.

In a similar manner the Eucharist (see LORD'S SUPPER) dramatizes the gospel. It is the mark of the new covenant (Matt. 26:26-29; Mark 14:22-25), recalls the fellowship meals of Jesus with his disciples (as in the love feast [Acts 2:42, 46]), proclaims the

Cross-Resurrection event (I Cor. 10:16-17; 11:23-30), and looks forward to the messianic banquet (cf. Luke 22:15-19; Did. 9-10). Here is dramatized the whole meaning of salvation, with an emphasis on the death of Christ and the new life of fellowship which follows from it.

e. Symbolism of eschatology. In the eschatology of the NT there is recourse again to apocalyptic, with its themes of heavenly worship, plagues, heavenly warfare, resurgence of evil and its destruction, resurrection, judgment scene, and restoration of bliss, under the figure of the New Jerusalem, together with weird animal symbolism and numerology. By this rewriting of history in cosmic terms, using symbolic imagery, the author sought to comfort and strengthen the church in the face of Roman persecution.

In subapostolic times one meets the symbol of a FISH (an acrostic on Ἰησοῦς Χριστός, Θεοῦ Υἱός, Σωτήρ), representing Christ, baptism, the Resurrection, Eucharist, kingdom, and, perhaps, the power of the gospel (John 21:1-13); the SHIP, representing the church, in which the faithful are carried over the sea of life; and an elaboration of symbolic objects depicted in Christian art and architecture.

The word "symbol" has also been used to designate a summary statement of faith, as, e.g., the Roman Symbol, forerunner of the Apostles' Creed.

SYMEON *sīm'ōn* [Συμεών]; KJV SIMEON.

1. With Barnabas and others, a Jewish Christian teacher and prophet in the church at Antioch, having the Gentile surname of NIGER (Acts 13:1). See MINISTRY; PROPHET IN THE NT.

2. The name of Simon Peter as used by James in Acts 15:14. N. TURNER

SYMMACHUS *sīm'ō kās*. A late-second-century Greek translator of the OT. According to Eusebius and Jerome, he was an Ebionite. His translation was used by Origen for the fourth column of his Hexapla.

Symmachus' translation (Symm.) shows acquaintance with and dependence on Aquila and Theodotion but constitutes a completely new, sometimes almost periphrastic, translation. Only fragments of Symm. are extant, though there are sufficient to give one an idea of his elegant, involved style.

See also SEPTUAGINT §§ 3c, 4a. J. W. WEVERS

*SYNAGOGUE [συναγωγή]. The place of assembly used by Jewish communities primarily for public worship and instruction, or the assembly itself. The Greek derivation of the term indicates simply a

gathering, void of any religious connotation. With the exception of the much-debated *סוּעַד־יֵאֵל* (Ps. 74:8 Aq.), there is no mention of the synagogue edifice in the OT.

1. The name.

1. **The name.** In the LXX, *συναγωγή* is used most frequently to render the Hebrew *עדה*, "congregation"; occasionally it appears as the equivalent of *קהל*, "assembly." In the Hebrew ECCLESIASTICUS, *עדה* does not always correspond to *συναγωγή*. Of its ten appearances, only five have *συναγωγή* in the Greek text. It should be noted, however, that the date of the Hebrew Ecclesiasticus is uncertain.

In the Aramaic versions of the Bible, *עדה* is always rendered by *כְּנִישְׁתָּא* (Syr. *כְּנִישְׁתָּא*), which, like *συναγωγή*, means simply a gathering. The Aramaic and the Greek terms evince a close relationship of dependence; some scholars are inclined to consider the former as the model for the Greek translators.

Patterned after the Aramaic is the neo-Hebrew *בְּנִסְתָּא*, which may mean simply a gathering. According to some writers, however, it acquired at a very early date the special meaning of an assemblage for worship and instruction, and this special sense might have been attached to the word when the gathering in Neh. 8-9 was later termed *בְּנִסְתָּא הַגְּדֻלָּה*.

Of particular interest is the unusual form *כְּנִסְיָה* in Ab. 4.11. Some scholars see this form implied in the plural *כְּנִסְתָּא*, which sounds like *כְּנִסְיָה*; others consider the singular *כְּנִסְיָה* a later formation after the plural *כְּנִסְיָה*. There is a consensus as to its meaning—namely, that it denotes association or society of any kind. However, the suggestion of Chajes that *כְּנִסְיָה* was patterned after the Greek (*ekklesia*)—*nun* and *lamed* being interchangeable—and has the same meaning as the Christian *ekklesia*, deserves consideration.

With the first century A.D. the term *συναγωγή* appears in Jewish sources (Philo, Josephus) and especially in the NT more and more in the sense of "place of assembly," "house of worship and instruction." About the same time the place for worship in Tannaitic literature is named *בֵּית הַכְּנִסְתָּא*, "house of assembly." It is generally stated that in several instances the shorter form of *כְּנִסְתָּא* alone is used; but in these places the word means the congregation, not the place of the assembly of the congregation.

It is different with the Aramaic equivalent of

כְּנִישְׁתָּא. Here, in the Palestinian sources the shorter form of *כְּנִישְׁתָּא* alone is predominant. The attempt to explain away the many instances in which *כְּנִישְׁתָּא* alone occurs is rather forced and hardly convincing. It seems that in Palestine, outside the school where *בֵּית הַכְּנִסְתָּא* was used, the influence of the Greek term *συναγωγή* made itself felt and caused the people to drop the *בֵּי* in their own Aramaic tongue.

Another Greek name for the place of Jewish public worship is *προσευχή*, meaning "prayer." It is used metonymically in the sense of "house of prayer," corresponding to the Hebrew *בֵּית תְּפִלָּה* (Isa. 56:7). In synagogue inscriptions from Egypt (third to first century B.C.) *προσευχή* is the only name used. It predominates in the writings of Philo and Josephus and occurs also in the NT. The name was taken over by Latin writers of the first century A.D. under the form of *proseucha* (Juvenal *Satires* III.296).

Various scholarly attempts to construct a wall of separation between *συναγωγή* and *προσευχή*, so as to confine the latter to small chapels outside the city near the river and under open sky, fail to do justice to all the available data. Some sources seem to indicate that *συναγωγή* and *προσευχή* were used interchangeably, although this fact does not exclude the possibility that in certain sources *προσευχή* represents a special type of synagogue.

Probably the two terms originated in different cultural centers. *προσευχή* seems to have been adopted by the Hellenistic Jews of Egypt and spread to Greece, Asia Minor, and Rome. Its use in Palestine, if any, must have been very limited. No parallel term in postbiblical Hebrew or Aramaic was coined. On the other hand, *συναγωγή* reflects the Palestinian scene, where we find a parallel neo-Hebrew as well as an Aramaic term adopted to designate the place of assembly for public worship.

While *προσευχή* is used in the third century B.C., the first mention of *συναγωγή* in the sense of "place of worship" is in the first century A.D. (Philo, NT). This can hardly suffice to determine the beginning of the use of the latter term.

Besides these two Greek names well known from literary and epigraphic sources, there are some names known almost exclusively from epigraphic material. They have Hebrew or Aramaic counterparts which are linked up with some biblical phrase traditionally associated with public worship. These are:

a) *τόπος*, "place"; often *ἅγιος τόπος*, "holy place." Its Aramaic counterpart is *אַתְרָא קֳדִישָׁא*, found on inscriptions at ancient synagogues in Palestine. The name was suggested by certain impressive biblical scenes where *מְקוֹם* (Aramaic *אַתְרָא*) appears almost as key word and is interpreted traditionally as referring to the "place of worship." The scenes are: the sacrifice of Isaac (Gen. 22:3-4, 9, 14); Jacob's dream (28: 11, 16-17, 19); and the burning bush (Exod. 3: 5). That these three scenes occupy a prominent place in the paintings of the Dura synagogue indicates that for Jews they were intimately associated with the synagogue.

b) *τὸ οἶκος*, "the house." This term has been connected with the neo-Hebrew usage of *הַבַּיִת* for the temple of Jerusalem. The Aramaic counterpart is *בֵּיתֵינָא*, which is found in two inscriptions of the Dura-Europos synagogue. The Aramaic *byt'* is re-

tained in some of the Iranian inscriptions, which seems to indicate that *byl'* was a well-established technical term for "synagogue." The name might have been suggested by the scene of Solomon's prayer (I Kings 8:22 ff), where "this house" is repeatedly associated with "prayers and supplications." Also here "house" is alternated with "place," another name for "synagogue."

c) The name *σάββατειον*, mentioned in the edict of Emperor Augustus (Jos. Antiq. XVI.vi), is generally taken to mean "synagogue," and it is assumed that it owed its name to the fact that there were only sabbath services in connection with the reading of the Torah. At the beginning of the Christian era Valerius Maximus appears to have confused the Jews with the worshippers of the Phrygian deity Sabbazius. This confusion would be understandable if the Jewish place of worship in Rome had been known by the name of *Sabbateion*. No Hebrew or Aramaic counterpart of this name is known; only later Syriac has a corresponding name: *בית שביתא* (plural *ביתי שבי*).

Returning to *συναγωγή* and especially to its Hebrew counterpart, we note that *כנסת ישראל* is used to designate the whole body of Israel, the totality of the adherents of the Jewish faith. Similarly *συναγωγή* is used in the writings of the church fathers as meaning the totality of the Jewish world and forming an antithesis to the *ekklesia*, which was the whole body of the Christian world. The idiom *כנסת ישראל*, as well as its concept, is rare in the Tannaitic period but is a familiar feature in the post-Tannaitic haggadic and midrashic literature.

All available data point to the fact that *συναγωγή* obtained its final Jewish stamp during the rise of the Christian community, which assumed the name *ἐκκλησία* (see CHURCH, IDEA OF). By what means could these two neutral, seemingly synonymous, terms have become symbols of two opposite camps? This problem lies at the bottom of the best studies on the subject. Most scholars follow Vittinga's direction: they seek the solution by shifting our attention from the Greek terms to the corresponding Hebrew terms, *עדה* and *קהל*. With only slight variations in detail, they agree that the Christian choice of *קהל* (*ekklesia*) was due to its association with *קהל יהוה* ("the community summoned by Yahweh") and to the reminiscence of *יום הקהל* ("day of assembly"), the unique religious experience on Sinai. *עדה-συναγωγή*, they assert, was more fitting for a legalistic, semisecular Jewish community. But another and, in some ways, more plausible way of explaining the Christian choice, based on the Greek usage of the word, has been proposed by J. Y. Campbell (see bibliography under CHURCH, IDEA OF).

Jewish scholars endeavor to show that *עדה* and *קהל*, as well as their Greek counterparts, were used interchangeably and that the Christian choice of *ἐκκλησία* was due to the need of an external mark of distinction from the Jewish community. Attempts have been made to combine the two views as representing two stages in the development of the early Christian community in Palestine.

All these theories have this in common: they focus attention on the term *ἐκκλησία* adopted by the Christian community and take the use of *συναγωγή* for the Jewish community, or place of Jewish worship, as

matter of course, which needs no further investigation. And yet if we bear in mind how little use Philo and Josephus made of *συναγωγή*, the later universal use of the term, especially in the relations between Christians and Jews, requires some explanation.

The following suggestion may be ventured: About the beginning of the first century A.D., the word *συναγωγή* came into disrepute and was used by Gentiles with an air of contempt, because it was considered as part of the Judeo-Greek lingo. One learns of the disrepute of the Greek language spoken by the Jews from the remarks of Cleomedes (first century B.C.?) that Epicure's vulgar expressions derive in part from the very low Jewish jargon. Cultured Hellenistic Jews shunned the term, as did the Greek-speaking Christians; they preferred the more reputable synonym *ἐκκλησία*. But the Jews clung tenaciously to *συναγωγή*. Undoubtedly there were various emotional motives for this attachment, but one of them was probably the echo, the assonance of Sinai. One should bear in mind that assonance played an important role in the LXX. Through the association of *συναγωγή* with Sinai—the very symbol of the OT—the term lent itself perfectly as a shibboleth to distinguish the Jewish community and its place of worship from the new Christian community, which asserted that the Sinai covenant had been superseded by the new covenant. This surmise would explain satisfactorily the fact that, as reported by Epiphanius, the Ebionites, who were opposed to the rejection of the law or Sinai covenant, insisted on calling their congregations and places of worship "synagogues" and not "ekklesia." They wanted to proclaim their loyalty to Sinai thereby.

2. **Origin.** The beginnings of the synagogue cannot be certainly recovered; rabbinic sources offer no clue whatsoever. Various passages in the TARGUM, especially that of Pseudo-Jonathan, and in the MIDRASH imply the existence of the synagogue from the very inception of the Jewish people. The same idea is ascribed to the apostle James in Acts 15:21. Philo (*Life of Moses* III.17) and Josephus (Apion II.xvii.75) state clearly that the institution goes back to Moses.

None of these writers conceived the synagogue as a man-made institution, owing its existence to certain internal and external factors. It was in the sixteenth century that Carolus Sigonius, an expert in the field of political institutions of the Greeks and Romans, endeavored to treat the institutions of the "republic of the Hebrews" in the same perspective. His terse statement on the synagogue contains some of the salient points of the still dominant view: "The origin of the synagogue is by no means an old one. We find, indeed, no mention of it [in scripture] either in the history of the Judges or in the history of the Kings. If it is at all admissible to venture a conjecture in this kind of antiquity, I would surmise that synagogues were first erected in the Babylonian exile for the purpose that those who have been deprived of the TEMPLE of Jerusalem, where they used to pray and teach, would have a certain place similar to the temple, in which they could assemble and perform the same kind of service. The same, I think, did the other Jews in the DISPERSION, be it in Asia or in Egypt or in Europe. It was for this reason that the

custom of synagogues was first established in the provinces where there was no temple. After the return from Babylon and the restoration of the temple of Jerusalem, the Jews still retained the well-established institution of the synagogue, namely so that while the residents of the city of Jerusalem attended the reading of the Law in the temple, all those coming to the city from the provinces attended the reading of the Law in their respective synagogues."

The Dutch scholar Hugo Grotius strenuously defended the traditional view of the Mosaic origin of the synagogue, and throughout the seventeenth century these two opposing views were kept in balance. Finally, through the work of Vitranga, the scales turned decidedly in favor of the school of Sigonius.

Though endorsing the main thesis of this school, Vitranga, and especially his followers in the nineteenth century, recognized that the Babylonian exile was not the proper place for the establishment of the synagogue as a universally accepted institution; more positive factors and more favorable circumstances were required. It was the Persian period, the period of the activities of Ezra and his successors, the scribes (see SCRIBE), which brought to fruition the work begun in the Babylonian exile. This theory is still the standard view among scholars. It should be noted that Krochmal, Zunz, and Graetz, on the one side, and Wellhausen and Schürer, on the other, have greatly contributed to this standardization. For one reason or another they all set the beginning of the synagogue in the Babylonian exile but its consolidation in Palestine as a result of Ezra's work.

What continued to baffle Vitranga and his followers was the fact that express mention of the synagogue could not be found in Hebrew literature before the last century of the second temple. This led some scholars to seek the origin of the synagogue in a much later period. According to them, the idea of regularly weekly assemblies was conceived first by the Jews living in the Hellenistic world, especially in Alexandria, where they came in touch with Greek religious associations (*thiasae*) and the collegia of the Romans, which held meetings every seventh day. The Jews organized sabbatical meetings in special assembly places after the pattern of the *thiasae*. This institution was transplanted first to Galilee, which had a considerable Hellenistic element, and finally, in the Maccabean period, to Jerusalem, where it underwent a profound transformation. This theory has been rejected generally, but it still deserves consideration.

Another discordant voice, this time in the opposite direction, was that of Leopold Löw. He challenged the very basis of the standard view—i.e., that from the beginning the synagogue was a place of worship, taking the place of the temple, the center of sacrificial worship. The origin, he said, is not to be sought in the sphere of religious ritual but in the secular realm of municipal life. Already in the pre-exilic period there was a special building in Jerusalem where public meetings of the city were held. There the prophets would deliver their orations, giving to the assembly a religious coloring. Gradually the meeting place was transformed into a synagogue. The name of the embryo synagogue was בית עם, "house of the people" (cf. Jer. 39:8).

Löw's suggestion was dismissed in passing by the representatives of the standard view. However, his main thesis of the secular origin of the synagogue has been revived and modified in certain scholarly circles in America.

The new trend in biblical studies toward a more conservative dating of portions of scripture could not fail to exercise an influence on the dating of the synagogue. Ps. 74:8 is almost the only constant in the flux of the arguments of the various theories. For nearly two centuries this psalm was assigned to the Maccabean period. Recently this date was challenged, and some scholars moved it to the fifth century B.C. Obviously, the date of the origin of the synagogue had to shift accordingly. Indeed, following a tip by Wellhausen that the synagogues represent a survival of the *bamoth* (local shrines), these scholars surmised that some of the *bamoth* never ceased to be places of worship but that soon after the reformation of 621 B.C. they underwent a transformation from sacrificial to synagogal worship. The synagogue is made a direct descendant of the reformation.

The tendency to deflate the importance of the Babylonian captivity for the history of Israel and to rehabilitate the people who remained in Palestine after the last deportation of 587 B.C. has affected our subject also. Aside from the extreme view, which would confine the whole Exile in the realm of fiction, there is the moderate school which, admitting that the deportation to Babylon was a substantial one and that the deported formed the backbone of the political and cultural life of the nation, nevertheless insists that Palestine remained the central scene of the history of Israel. There the Deuteronomistic work (see DEUTERONOMY) continued during the Exile, and its most impressive religious document was produced. In rehabilitating Palestine as the center of the Deuteronomistic activity, the representatives of this school of thought seek the origin of the synagogue here also. They aver that the well-marked features of the Deuteronomistic orations have all the appearances of institutional character and represent the prototype of synagogal worship.

In these several theories the temple of Jerusalem, with its sacrificial ritual, appears as a negative force which had to be curbed to make room for the synagogue. We may examine now an attempt to derive the synagogue from the ritual of the temple. According to this hypothesis, the synagogue owes its existence to the institution known by the name of *maamadoth*. It consisted in the division of the lay population into twenty-four groups (posts) whose task it was to send alternately every week representatives to the temple to be present at the daily sacrifices. Since they could not take an active part in the ritual, these lay representatives developed a parallel synagogal worship and gave rise to a synagogue within the precincts of the temple. Through the connection of these lay representatives with their constituents, the institution spread rapidly. The suggestion is hardly tenable, however, because the institution of the *maamadoth* is probably much later than the establishment of the synagogue.

The discoveries of the nineteenth century contributed little, if anything, to the formulation of the above theories. Noteworthy, therefore, is an effort to

find a clue to the origin of the synagogue in the ELEPHANTINE PAPYRI,* discovered at the beginning of the twentieth century. These papyri brought to light two facts: (a) the existence of a Yahweh temple with sacrifices in Egypt during the fifth century B.C.; (b) strong, occasionally violent, opposition on the part of the local religious authorities to animal sacrifices. If one assumes that the Elephantine Yahweh temple was not an isolated relic of "old, popular religion," but rather the normal pattern of worship of the Jews in the Diaspora after the destruction of the first temple of Jerusalem, it seems logical to consider the synagogue as a transformed Yahweh temple. The process of transformation is explained as follows: The Yahweh temples in the Diaspora (see DISPERSION) did not pretend to be places of worship in their own right but merely representatives of the only rightful temple of Jerusalem. As such, the temples were supposed to be realistic copies of the temple with all its ritual. Only under the impact of external obstacles, as in Elephantine, and of internal development did the realism of the representation wane, to be replaced by one more spiritual and symbolical. Fig. ELE 25.

None of these theories tells the whole complex story of the origin of the synagogue, but each one throws some light on the subject and deserves consideration.

3. Expansion. Data concerning ancient synagogues are derived from the NT, Hellenistic writings (Philo and Josephus), earlier rabbinic writings, and archaeological and epigraphical material.

a. In Palestine. At the time of Jesus a synagogue within the precincts of the temple of Jerusalem, in the "hall of the hewn stones," is attested by Tannaic texts (M. Yom. VII.1; Tosef. Suk. IV.5; P.T. Suk. 54a). It seems to have been primarily a place for the "reading of the Law" and adjoined a "house of study," where, it is surmised, Jesus was found "sitting among the teachers, listening to them and asking them questions" (Luke 2:46). The existence of several synagogues outside the temple is substantiated by Acts 6:9; 24:12; Tosef. Meg. III.6.

The Theodotus Inscription* found on the hill Ophel, SW of Jerusalem, points to a synagogue of a foreign group. It reads: "Theodotus, son of Vetenus, priest and archisynagogos, grandson of an archisynagogos, built the synagogue for the reading of the Law and for the teaching of the commandments and the guest house and the rooms and supplies of water as an inn for those who are in need when coming from

abroad, which synagogue his fathers and the elders and Simonides founded." The name Vetenus, as well as the special concern for those coming from abroad, gave rise to the much-debated hypothesis of the identification of the Ophel synagogue with that of the Libertini (or Freedmen). It would suggest also that the synagogue was built primarily for pilgrims coming from Rome. The titular head, Theodotus, might have been the recognized authority of the Jews of Rome and could well be identified with Theudas of Rome. Theudas, according to rabbinic sources, was not only the head of Roman Jewry, but he was also respected in Palestine for his generosity in supporting students and scholars there. Therefore, he was the best-qualified patron of a synagogue with the explicit purpose of "reading the Law and teaching the commandments." Fig. SYN 94.

destruction of the temple there were 480 synagogues in Jerusalem and that each of them had (probably in the sense of "consisted of") a house for reading the Law and a house of study of the Mishna echoes the formula of the Theodotus Inscription and probably refers mainly to synagogues of foreign groups.

In the first century A.D. most cities and bigger villages must have had some kind of synagogue (cf. Matt. 4:23; 9:35). Two of the Galilean synagogues are singled out: (a) The synagogue of Nazareth where Jesus went, "as his custom was, on the sabbath day. And he stood up to read" (Luke 4: 16); (b) The synagogue of Capernaum where "he was teaching them on the sabbath" (vs. 31). When ruins of the synagogue of Tell-Umm (Capernaum)* were discovered in the nineteenth century, few scholars

could resist the temptation of identifying the synagogue with that in which Jesus taught. Only a thorough examination revealed that the structure could not be dated earlier than the end of the second century. But it is possible, and even probable, that the earlier synagogue stood on the same site. Like the synagogues in Jerusalem, those outside appear in the NT mainly as places of "reading" and "teaching." Figs. SYN 95-98.

Two synagogues which played a part in the events of the last Jewish war against Rome are mentioned by Josephus: (a) The synagogue of Caesarea. Its desecration, perpetrated by the Greek population of the city, marked the beginning of the Jewish revolt in A.D. 66 (Jos. War II.xiv.4-5). (b) The great *proseuche* in Tiberias, a "huge building capable of accommodating a large crowd." Here the party hostile to Josephus held political assemblies disguised under the convocation of public fast ceremonies (Jos. Life LIV-LV). Tannaitic sources mention a synagogue in Tiberias as the subject of a heated halakic controversy (M. 'Er. X.10; P.T. Shek. II.8). The number of synagogues in Tiberias increased in the third century, after it became the seat of Judah I, the Prince, and his academy. According to tradition, there were thirteen synagogues there in the fourth century (T.B. Ber. 8a). Some of these belonged to foreign groups.

The second major center in Galilee, Sepphoris, likewise the seat of Judah I for a certain period, presents a similar configuration of synagogues in the third century. There was a "great synagogue," which is mentioned in Tannaitic sources as having imitated

100. Mosaic in the synagogue at Beth Alpha, showing the zodiac and seasons

the temple worship on fast days (Tosef. Ta'an. I.10; Pesik. dRK 136b). Sepphoris had synagogues of foreign groups also.

Archaeological excavations in Palestine have brought to light some odd remains of about fifty synagogues in smaller cities and villages.* Most of them are located in Galilee (Lower and Upper); a number are E of the Sea of Galilee in Transjordan. All indications are that they were erected after the bulk of the Jewish population moved to Galilee, with Tiberias as its center (end of the second century onward). Fig. SYN 99.

Of special interest are Capernaum and Chorazin, because, in addition to their role in the NT, they

its deviations from the classical basilical type and its adoption of certain elements of the Babylonian non-basilical synagogue. Figs. SYN 100-102, 103.

Data about these synagogues, including lists of them, can be found in works by S. Klein, J.-B. Frey, and E. Goodenough, listed in the *bibliography*.

b. In Babylonia. Very few literary records of ancient synagogues have come down to us from Babylonia. In the third century Nahardea, the Jerusalem of Babylonia, had, either in the city or nearby, a synagogue by the name of Shaf-Yetib (T.B. Meg. 29a). One tradition traces its origin to the exiled Judean king Jehoiachin, who allegedly built the synagogue with stones from the temple of Jerusalem. Some historians are inclined to believe that there is a historical kernel in this tradition. This synagogue

had the reputation of the "presence of the Shekinah." Another synagogue with the same reputation was that of Hucal. Mention is made also of a Daniel synagogue where people used to come from distant places to attend sabbath services (T.B. 'Er. 21a). From the fourth and fifth centuries the following synagogues are mentioned: synagogue of Abi-Gubair ('Er. 61b); synagogue of the Jews of Rome in Maḥuza (T.B. Meg. 26b); synagogue of Mata-Mehasya (T.B. Shab. 11a; Meg. 26a; B.B. 3b).

None of these was connected with teaching activity; almost always they appear as places for prayer. Only in Sura the "house of study" of Rab (first half of second century) seems to have been also the "synagogue of the school of Rab" (T.B. Meg. 29a). Rab transplanted many Palestinian customs to Sura.

Until recently no archaeological and epigraphical

material of any Babylonian synagogue was known. In 1934 excavations in Dura-Europos brought to light remains of a synagogue which are termed the "most revealing archaeological monument of the history of ancient synagogues." The preservation of the W orientation wall, with the *aedicula* (Torah receptacle) and the paintings, offers an insight into the making of the ancient synagogue in the East. Figs. SYN 104-107; ART 84.

c. *Greco-Roman*. The NT and abundant epigraphical material are the chief sources for the synagogues in the Greco-Roman world. The following synagogues are mentioned in Acts in connection with Paul's missionary activity: Damascus, Syria (9:2, 20); Salamis, Cyprus (13:5); Antioch of Pisidia (13:14); Iconium, Phrygia (14:1); Philippi, Macedonia (16:13); Thessalonica (17:1); Beroea (17:10-11); Athens (17:17); Corinth (18:4); Ephesus (18:19; 19:8). To these may be added Antioch, Syria. According to Josephus, the votive offerings carried off from the temple of Jerusalem by Antiochus Epiphanes were restored there by his successors and placed in the synagogue of Antioch (War VII.iii.3). The synagogue here took the place of the temple of Jerusalem.

d. *In Egypt*. Here the synagogue developed against the background of the Elephantine temple of Jao in the fifth century B.C. and the Onias temple in Leontopolis (165 B.C.—A.D. 73). Both left only slight marks on the synagogue.

Aside from the well-known "Great Basilica," of which a Tannaic source of the second century (Tosef. Suk. IV.6) gives a vivid, though exaggerated, description and which was conceived as a counterpart of the Herodian temple, there were in the first century several other synagogues in the different quarters of the city of Alexandria (Philo *On the Special Laws* 20). They seem to have been dedicated to the ruling authorities.

Then there is epigraphical evidence of five synagogues in Lower Egypt and four in Middle Egypt. As far as we know, the earliest is the inscription from Schedia: "In honor of King Ptolemy and Queen Berenice . . . the Jews (dedicate) this *proseuche*." The consensus of scholars is that it refers to Ptolemy III (Euergetes I; 246-221 B.C.). Other dedicatory inscriptions of the same pattern are those of Xenephyris and of Nitri. All these commemorative inscriptions reflect clearly the sacral character of the *proseuche*-synagogue of Egypt.

There are a few examples from the Greco-Roman world outside Egypt. From Acmonia, Phrygia, comes this inscription: "This house, erected by Julia Severa, Gaios Tyrronios Klado, archisynagogos for life, and Lucius, son of Lucius, archisynagogos, and Popilios Rufus, archon, have restored, partly out of their own expenses, partly out of offerings [by others]. They repaired the walls and the roof; they consolidated the doors and refashioned the whole ornamentation. Wherefore the congregation [synagogue] honored them with a gilden shield because of their virtuous conduct and also because of their benevolence and zeal toward the congregation." The suggested date of this inscription is the first century. Another comes from Phokaia, Jonia, and is dated 60-80. In both of them the synagogue is called "the house" (τὸ οἶκος) and not *proseuche*. Two later inscriptions from Apa-

maia, Syria, and Sides, Pamphylia, show an interest in mosaic ornamentation.

No structural remains of any ancient synagogue have been discovered in Rome, but the rich epigraphical material from the catacombs yielded the names of thirteen synagogues in the first three centuries A.D. The four earliest are named after ruling persons: Augustus, Agrippa, Herod, and perhaps Voluminus, procurator of Syria and friend of Herod. These synagogues were probably built "in honor" of their patrons in the same way the earlier Egyptian synagogues were built "in honor" of the Ptolemies. A fifth synagogue of this kind, the "synagogue of Severus in Rome," where a special Torah scroll was preserved, is mentioned in rabbinic writings (Gen. Rabbati 45.8). It is assumed that it refers to Alexander Severus (222-35). The synagogue of the "people of Acra of Lebanon" has been also suggested to be identical with the "synagogue of Severus," since Acra was the birthplace of Alexander Severus. Three synagogues are named after various districts of Rome: Subura, Campi (Campo Marte), and Calcarense. Then there are three of foreign groups: the Hebrews, the Tripolitarians, and the people from Acra of Lebanon, mentioned above. According to one scholar, the "synagogue of Elaia" found in the inscriptions refers to those coming from the province of Asia, also another synagogue of a foreign group. Much debated is the "synagogue of the *vernaculi*"; the same scholar claims that it was the synagogue of the natives of Rome, in contradistinction to the many synagogues of foreign origin.

In one respect these inscriptions reveal an affinity between Rome and Alexandria (or Egypt in general). In both places the synagogue in its earlier stage was built under the patronage of the ruling person. This bestowed upon the building a cultic character, a reflection of the temple of Jerusalem. On the other hand, there seems to be a difference between the synagogue in these two places: In Egypt the term *proseuche* is used exclusively, while in Rome the name *synagogue* seems to have been adopted. This latter term is always used, however, in the sense of "congregation" or "assembly" and not in the sense of "place of prayer." The building was called *proseuche* (Juvenal) among the native Jews, and *sinagoge* among the immigrants from Palestine, who belonged to the "synagogue of the Hebrews."

4. **Location, orientation, architecture.** Most of the controversies concerning these matters have to do with the interpretation of certain rabbinic rulings and their harmonization with archaeological finds.

The authoritative rabbinic canon, the Mishna, has no tractate dealing with the synagogue. Legislation regarding the synagogue is confined to a small fraction—the first three paragraphs—of the third chapter of Tractate Megillah, and here there is not a single regulation pertinent to position, orientation, and architecture. It seems to indicate that the central authorities in Palestine in the first century A.D., who laid the foundation of this code, did not consider these subjects a matter of their concern. The few earlier rabbinic rulings come from the Tosefta, a compilation which consists, in the main, of splinters of old, mostly rejected, rulings and customs, combined with later additions to the Mishna. Under no

circumstances should these regulations be considered *eo ipso* authoritative.

One regulation fixes the "highest point of the city" as the site for the synagogue (Tosef. Meg. IV.23). Modern scholars consider it as the sanction of an ancient custom of selecting a place of worship on hills. It stems also from the endeavor to make the synagogue resemble the temple of Jerusalem, which stood upon the crest of a mountain. In accordance with this ruling, most of the ancient Galilean synagogues were built on high, commanding points. Yet the ruling did not find its way into the Mishna and is almost entirely ignored in Palestinian sources.

"Field synagogues," built on free places outside the city in the Amoraic period (third-fifth centuries), are asserted in some sources. Most modern scholars confine the custom to Babylonia and attribute its origin to the alleged destruction of the synagogues in the cities during the beginning of the Sassanian rule. But the existence of this custom is very doubtful; except for subtle Talmudic and midrashic "hints," there is no evidence to sustain it.

On more solid grounds rests the assertion that in the first century A.D. the custom spread of selecting the site of the synagogue in the proximity of water. The adduced rabbinic "hints" are vague and uncertain, but there are sufficient nonrabbinic sources attesting an ancient habit among Jews to recite prayers near rivers or the seashore (Acts 16:13; Philo *Flaccus* 14; Jos. Antiq. XIV.x.23). Since most of the evidence refers to communities in Egypt and Greece, scholars are inclined to confine the custom to Hellenistic Jewry. Generally it is traced back to the ancient belief of the presence of God in water; its attribution to the need of water for ablution is a later rationalization.

According to the general view, the orientation was determined from the very beginning by the principle of the orientation of the worshiper during prayer: "Those standing outside the land of Israel should turn their heart [= 'mind'; P.T. 'face'] towards the land of Israel; those in the land of Israel should turn their heart toward Jerusalem, etc. . . . As a result, those in the North [of Jerusalem] turn their face to the south; those in the south turn their face to the north; those in the east turn their face towards the west, those in the west, towards the east, so that all of Israel pray toward one and the same place" (Tosef. Ber. III.15-16). Thus it was thought that the wall opposite the entrance should face Jerusalem, in order that the worshiper, entering the synagogue, would face Jerusalem. This arrangement, which was dominant through the Middle Ages, still prevails.

Yet a different principle seems to be implied in this ruling: "The doorways of the synagogue should be made in the east side, in accordance with the entrance of the Tent of Meeting which was in the east" (Tosef. Meg. IV.22). Here the W seems to be set as the principle of orientation, irrespective of the position of the synagogue toward Jerusalem. Medieval Jewish authorities, as well as modern scholars, with the exception of Löw, could not conceive that there might have been a segment in the rabbinic world which would not recognize Jerusalem as the principle of orientation, and therefore they surmised that the ruling contemplates only Babylonian syna-

gogues, E of Palestine. It seems more reasonable to admit that the ruling reflects the view of a certain group who considered the similarity of the synagogue with the sanctuary the overruling principle.

It should be noted that the ancient synagogues in Palestine were of two types: the earlier (second and third centuries) with orientation toward the entrance, marked by a monumental façade facing Jerusalem; the later type with orientation toward the side opposite the entrance, which was marked by a receptacle for the Torah shrine facing Jerusalem. The discovery of the synagogue in Dura-Europos showed that in the East orientation of the second type was well established already in the first half of the third century, at a time in which the earlier type of orientation was dominant in Palestine. The second type cannot be considered a "later" development of the first.

The search for a line of development of synagogal architecture which would enable us to assign to each of the discovered types its proper place and date is still at the stage of mere speculation.

It seems clear that any regulations which would promote specific synagogal architecture must have as point of reference the temple of Jerusalem or the Aaronic tabernacle. As long as the temple existed, Palestine had no need to endow its synagogues with features of the temple and to bestow upon them a sacral character. The synagogues were confined to "reading the Law and teaching the commandments." Hence, there is a lack of regulations concerning synagogal architecture in the Mishnaic code.

The Jews of the DISPERSION, deprived of direct contact with the temple, endeavored to establish contact through the synagogue by adopting certain stylistic features of the temple. Two areas came into consideration: the exterior—its architectural forms and ornamentation—and the interior with its sacred symbols.* In the Hellenistic world, especially in Alexandria, where the external splendor of the temple was highly appreciated and admired (ARISTEAS), the imitation of the architectural grandeur of the Herodian temple seemed to be the best link between temple and synagogue. This gave rise, probably at the beginning of the first century A.D., to the basilical style with its monumental façade, as we know it from the earlier Galilean synagogues. Indeed, in the rabbinic tradition the "basilica" of Alexandria, which was used also as a synagogue, appears in juxtaposition to the temple. At times this equation of temple and synagogue seems to have offered the Hellenized leaders an excuse to introduce animal and human figures in the ornamentation of the synagogue—a fact which could not fail to provoke the protest of the more conservative rabbinic teachers. An ultra-conservative circle in Palestine seems to have condemned not only the excesses of equation but also the very idea of similarity, which might cause the temple to be supplanted by the synagogue (cf. Josh. 22:7 ff). From this circle came the much-discussed halachah: "One shall not make a house after the pattern of the temple, nor a porch after the temple porch, nor a courtyard like that of the temple, nor a table like the temple table, nor a menorah like that of the temple" (T.B. Men. 28b). This halachah makes sense when directed against synagogues of the Gali-

lean type, where the basilical "house" (σῆκος="synagogue"), with its porch, courtyard, and Menorah, was made after the pattern of the temple. This radical trend did not prevail, though it lingered on to emerge again in the tenth century among the Karaites. Figs. SYN 108-9; ART 82-83.

At the same time (*ca.* the first century A.D.) another pattern of synagogue was taking shape in Babylonia. Because of geographical, political, and cultural circumstances, the external features of the temple were not an effective medium of contact; so the Babylonians turned to the interior and adopted the holiest symbols, the ark and the Menorah, as the most effective links between temple and synagogue. Accordingly, the interior, where these symbols were placed, became the focal point for the worshiper as well as for the architect, whose artistic creativity concentrated on the aedicula, the repository of the holy ARK OF THE COVENANT and the Menorah (*see* LAMPSTAND). This type of synagogue was also opposed strongly by the ultraconservatives (*cf.* the much debated saying of Rabbi Ishmaelben Eleazar in *Shab.* 32a).

The detached and at times hostile attitude of the Palestinian authorities toward both types of synagogal structure underwent a basic change in the middle of the second century, for after the suppression of the Bar Cocheba Uprising (135), Palestinian Jewry also had to resign itself to organizing its reli-

gious life without temple. Thus the need was felt to transform the simple "houses for reading the Law and teaching the commandments" into "little sanctuaries." Of course, this called for a synagogal architecture similar to the temple, the "great" sanctuary, and Palestine had two types from which to choose: the monumental façade outside (Greco-Roman) and the holy ark inside (Babylonian). As part of the Greco-Roman world, Palestine adopted first, in the main, that pattern. But there were also synagogues of "Babylonians" in Palestine in the third century which were probably built after the Babylonian pattern and could not fail to exercise considerable influence. Thus we find various tentative efforts to combine the two basic elements, façade and ark (Eshtemoa, Nawa, Sheiq el-Abreik, etc.). Usually termed "transitional forms," these specimens are, rather, "hybrid" formations. With the decline of the Palestinian center in the fourth and fifth centuries, the Babylonian influence gained the upper hand. As a result, we have in the Byzantine period a complete fusion of the two elements, façade and ark, in which the former is subdued to the latter (Beth Alpha).

The two opposing and uncompromising views on the synagogue found their clear expression in statements of the earlier Karaites. Anan, of the lineage of the exilarchs, the highest dignitaries of Babylonian Jewry, represents the genuine Babylonian attitude to make the synagogue as similar to the temple as possible. The opposite view was represented by Daniel Al-Kumisi, the champion of the Karaitic settlement in Jerusalem.

5. Separation of sexes. Neither a ruling concerning, nor any clear allusion to, separation of sexes in ancient synagogues in Palestine has yet been found in earlier rabbinic sources. Among later authorities the main basis for such a separation rests on the "great enactment" (תיקון גדול) to erect a gallery in the "women's hall" of the temple of Jerusalem, in order to separate the women from the men during the celebrations of the "water-drawing" (P.T. Suk. V.1; 55b). In Hellenistic centers of the first century separation seems well attested by Philo. In the great basilica-synagogue of Alexandria the women seem to have been referred to as "those on the upper story," as against the men, designated as "those of the lower level" (P.T. *ibid.*, according to Sukenik). A somewhat similar picture is offered by the archaeological data. The remains of the ancient basilical synagogues of Galilee, with a distinctive Hellenistic stamp, show unmistakable indications of the existence of galleries, which probably were the place assigned women. But no traces of a women's gallery have been found in the well-preserved remains of the non-basilical, more oriental synagogue of Dura-Europos. Scholars differ in interpreting these facts. According to one school, the silence of earlier rabbinic sources and the absence of a women's gallery in Dura reflect an earlier, more liberal attitude toward women, allowing them to sit in the main hall, though in a special part, together with the men. The other school suggests that the silence of earlier rabbinic authorities implies that in those circles no provisions were made at all for women in the synagogue, because they were excluded from active participation in public worship. For a few special occasions, in which women might have

had access to the synagogue, a temporary, removable screen might have been sufficient.

Only the latter interpretation seems to fit the evidence that provisions for separation of sexes appear mainly in synagogues with a Hellenistic tinge. In the Hellenistic world women seem to have played an important role in the religious life of the Jews. Acts 16: 12 ff is evidence that in Philippi women frequented the place of prayer during the sabbatical gatherings.

Another consideration should be borne in mind. It is probable that the basilical type of synagogue, which adopted architectural features of the temple, followed the example of the "woman's hall" in separating the sexes—i.e., by erecting galleries. The communities with a nonbasilical type of synagogue might have taken stricter measures of separation, confining the women to a separate, adjoining room, as seems to have been the case in the earlier building of the Dura-Europos synagogue.

6. Educational use. From the first, reading from the Scriptures and exposition of the Law constituted the focal point in the sabbatical gatherings, which gave the synagogue the character of an educational institution. This aspect is conspicuous in the Hellenistic world; to Philo and Josephus the synagogue is primarily a place of instruction, a "school of philosophy."

It is obvious, therefore, that educational institutions should have been closely connected with the synagogue. Reference has been made to the rabbinic tradition of the third century that there were 480 synagogues in Jerusalem, each of them housing a "house of the book" (בית הספר), for reading the Scriptures, and a "house of study" (בית הטרש), for study of the Mishna (P. T. Meg. III. 1). The "house of study," generally conceived as the place of instruction for more advanced youth, is considered in the third century as a parallel institution to the synagogue rather than as a part of it. (Cf. the controversy about the rank relation of the two institutions in the Palestinian Talmud.) That this was the case in the first century A.D. is doubtful, however. Jesus and Paul appear teaching in the synagogue, and no mention is made of the "house of study" in the NT. (The *scholē Thyranou* in Acts 19:9 can hardly be identified with a *Beth Hammidrash* at the side of the synagogue in Ephesus.)

Following certain rabbinic sources, most scholars agree that the synagogue was the place where children received their elementary instruction, perhaps in an adjoining room or in the courtyard. There is, however, some difference between the Palestinian tradition and the Babylonian. In the former the *Beth Ha-Sepher*, the alleged children's school, appears at the same level as the *Beth Hammidrash*; both are connected with the synagogue but locally separated. In the Babylonian tradition the alleged elementary school is often identified locally with the synagogue proper. The Palestinian tradition about "five hundred houses of teachers" in Bethar at the time of Bar Cocheba reads in the Babylonian version: "There were four hundred synagogues and in each of them there were four hundred teachers of children" (T.B. Git. 58a). To understand the relation between school and synagogue in the first century A.D., we should take into consideration only the few earlier Pales-

tinian traditions. First, the term *Beth Sepher* must be clarified, for the usual rendering of "primary, elementary school," is somewhat misleading. The first education of children began, not with the reading of the Torah scroll, but with the reading from tablets, followed by rolls containing small portions from the Scriptures (Shema, etc.; cf. the Nash Papyrus). This instruction was probably imparted in the house of the teacher; children attending elementary schools are usually referred to as "sucklings of the house of their teachers." Only when the children reached the stage to be instructed in the reading of the sabbatical lessons were they introduced into the "house of the book." Unable to furnish the necessary scrolls, the teacher used the Torah scrolls of the synagogue. The children went to the room where these were kept, and there they prepared the sabbatical lessons under the supervision of the *hazzan*, the custodian of the scrolls (Shab. I.3). Thus the *Beth Sepher* seems not to have been a school in the strict sense of the word; nor was it confined to children. Rather, it was a place which afforded facilities for anyone eager to read the Scriptures. See EDUCATION, NT.

The term *Beth Hammidrash* should likewise be modified. It was hardly a "school of higher learning" but rather a place for anyone desiring to be an expert in the exposition of the Law. It might have housed various "secret rolls" of Midrashic or halakik nature and certain "Peshet" scrolls, accessible to a restricted circle.

These two kinds of facilities are probably referred to in Tannaitic literature (T.B. Ber. 4b). The only pertinent archaeological find, the Ophel Inscription, points in the same direction: The synagogue was to offer facilities "to read the Law and to teach the commandments." Whether these facilities were in the synagogue proper or in some adjoining buildings depended probably on the needs and the means of the various communities.

7. Furniture. The one indispensable piece of furniture in the ancient synagogue was the Torah shrine, in which one or more Torah scrolls and probably some prophetic rolls were kept to be used for the sabbatical and festival lessons.

The name of this repository underwent an interesting change ca. the second century A.D. תיבה, generally considered as an abbreviation of ספרים, "chest of books," is used almost exclusively in earlier rabbinic sources. The term is reminiscent of Gen. 6:14 (LXX αἰβωτός); Exod. 2:3, and *passim* (LXX θύβιν). The second Greek rendering is obviously an adoption of the Hebrew term and may indicate that the Hellenistic Jews were familiar with the Hebrew תבה as repository for the law of Moses. This name would then be traced back at least to the second century B.C.

The synonymous ארון, "ark," associated with the "ark of the tent of meeting" (Exod. 25:10, and *passim*; LXX αἰβωτός) appears rarely in rabbinic sources. A cryptical saying from the second century seems to imply that the name ארון הקדש ("the holy ark") was imposed by certain authorities but that it was rejected by the "people of the land" (Shab. 32a; cf. § 4 above). The inference that in the second century this name was a subject of controversy between various groups in Palestine suggests that it was an

innovation introduced at that time. It is unlikely that the animosity of the opponents could have been provoked by the mere introduction of a new name; in all probability, an essential innovation in the role of the Torah shrine was associated with the new name.

Most scholars believe Talmudic sources make it clear that until the end of the fourth century the Torah shrine had no permanent place within the synagogue but that, as a simple portable chest, it was brought into the synagogue from an adjoining room, when required for public worship. Archaeological data seemed to confirm this at first. Later investigations, however, led experts to the reconstruction of a "small architecture," a shrinelike structure within some of the earlier synagogues (second century). This structure is considered as the "sanctuary" for the Torah shrine.

Attempts to adjust the archaeological data to alleged Talmudic tradition by asserting that the "small architecture" was a later addition or by challenging the existence of such an internal structure are not convincing. The discovery of the Dura-Europos synagogue has established definitely the existence of an aedicula for the Torah shrine in the third century (245), and it probably goes back to an earlier model. Scholars label it, as well as similar discoveries, as a transitional form, a fixed place in the synagogue to receive a portable Torah shrine during the reading of the lessons.

These efforts assume that the various forms represent various stages of the same type of synagogue. But it is equally possible that there were different types of synagogues side by side in the same period. There might have been a Hellenistic type beside a rabbinic type, or an exilic Babylonian in juxtaposition to a Palestinian synagogue. There is no need to adjust the archaeological data to assumed rabbinic implications.

It seems reasonable to surmise that the name *tebah* was adequate for a Torah chest placed in some adjoining room. But when a "sanctuary" was erected to house the Torah shrine, the association with the ark of the tabernacle imposed itself and gave origin to the name. The name represented an innovation consisting in the building of a "sanctuary" for the Torah shrine and thus proclaiming the synagogue a substitute for the sanctuary of Jerusalem. Certain conservative circles in Palestine, who took offense at this claim, reacted strongly by labeling the *aron hakkodesh*, the "ark of holiness," as "coffin," which shares the name *aron* or *arona*. All through the second century, as long as the opposition was strong, the name was avoided in Palestine. When the permanent ark repository became dominant and the opposition lessened, *aron* or *arona* became the favorite name for the Torah shrine.

The assumption among scholars that the use of a portable *תיבה* is inconsistent with the existence of a permanent repository for the Torah shrine is far from obvious. There remains the possibility that at the side of the *aron* within the "sanctuary" the portable *תיבה* in the form of a Roman *capsa* existed for practical uses. Cf. P.T. Shek. II.18; VI.1; and parallels.

The fact that there is no reference to the Torah shrine in the NT might suggest that in the first century the shrine played no important role either in Palestinian Nazareth or in Hellenistic Antioch of

Pisidia (cf. Luke 4:16-17; Acts 13:15-16). The earliest mention of the Torah shrine by the church fathers seems to be from the fourth century, where *κιβωτός* is used, probably in the sense of *aron*.

Like the ark of the tabernacle, the Torah shrine, especially the *aron* type, was covered and screened from the sight of the congregation. Rabbinic sources of the third century mention two kinds of screening: (a) *Paroket* or *parokta* (Aramaic), "veil" or "curtain" (P.T. Meg. IV.75b and parallels). It screened up the whole platform or aedicula where the ark was located, so that the *hazzan* was able to roll up the scroll behind the veil. This picture suggests a Babylonian type of synagogue; in fact, the alleged Palestinian source refers expressly to a "synagogue of the Babylonians." (b) *Killah*, a kind of baldachin spread over the ark, is mentioned in the Palestinian Talmud (Meg. III.73d; Shab. 17c). It probably reflects the way of screening the Torah shrine in the Palestinian type of synagogue. Whether the baldachin screen was also used in Babylonia under the name *pirsa* (Meg. 26b) is uncertain. Archaeological data have corroborated the existence of a *paroket* in Dura-Europos, but the attempt to find there traces of the baldachin on the top of the *paroket* is not convincing. The baldachin was spread over the ark proper and not in combination with the *paroket*.

Next to the Torah shrine and closely connected with it was the *bema*, an elevated podium used for the reading of the lessons and the recital of certain benedictions. Its name, as well as its use, is generally traced to the scene of Ezra's reading the Torah "on a wooden pulpit" (Neh. 8:4-5). The next mention appears in a Tannaitic tradition of the first century, where it is reported that a wooden *bema* was erected in the temple hall for Agrippa I to perform the prescribed reading of the Law by the king every seventh year at the Sukkoth Festival (Soṭ. VII.8). In the beginning of the third century we hear of a high *bema* in a synagogue in Simonia (Palestine) on the occasion of the installation of a famous preacher and teacher (P.T. Yeb. XII.13a; Gen. Rabbah 81.2). In all these cases the *bema* is improvised for a special occasion. As a permanent feature of the synagogue, it appears in a statement of Samuel (Babylonian teacher of the third century): "The *bema* and the boards—a kind of lectern—do not possess the sacredness of the ark (*aron*) but only that of the building." The need to rule upon its degree of sacredness would seem to indicate that the *bema* was newly introduced in Babylonia. The suggestion that it was near the *aron* is confirmed also by archaeological data.

There is no mention of the *bema* in the NT, although some scholars are inclined to consider the "Moses' SEAT" (Matt. 23:2) in the nature of a *bema*, serving the same purpose of an elevated chair for the reader.* In a larger sense this may be true; in a stricter sense, however, the *bema* is a raised place from which to speak in a public assembly and is thus an appropriate term for a pulpit from which the reading of the Torah takes place. On the other hand, *kathedra* points to a scholastic sphere, a raised chair for a prominent teacher. Fig. SEA 36.

Most of the excavated ancient synagogues were provided with one or two rows of stone benches running along two or three walls, exceptionally also

along the entrance wall (Dura-Europos). No traces have been found of chairs in the center of the synagogue, though there are literary and archaeological indications that in the third century in Babylonian mats were spread out in the center for the people to sit upon. A Palestinian source (second century?) mentions wooden chairs, reclining chairs, and *kathedra* (P.T. Meg. 73d; Shab. 6a). Whether all these were honorary chairs for dignitaries and scribes in a prominent place (Matt. 23:6 and parallels), reminiscent of the seventy-one chairs for the members of the great council in the basilica of Alexandria, is uncertain. It might well be that in the Hellenistic synagogues the chairs (*subsellia*) took the place of the mats of Babylonia.

Rabbinic sources of the second and third centuries indicate that the Menorah was a favorite gift to be offered to the synagogue, even by non-Jews (Tosef. Meg. III.21; P.T. Meg. 74a; T.B. 'Arak. 6b). Earlier sources refer to lamps in the synagogue as practical objects. Later a symbolic function is attached to them as reminiscent of the lights of the Menorah in the temple of Jerusalem. In the ornamentation of the earlier Palestinian synagogues the Menorah motif, though not entirely absent, remains inconspicuous. But in the Babylonian synagogue of Dura-Europos the Menorah, together with *aron*, is dominant, especially in the ornamentation of the aedicular. Later the Menorah became prominent in the ornamentation of the Palestinian synagogues, perhaps through the increase of Babylonian influence.

8. Officers. a. Archisynagogos. The highest officer is known as "head of the synagogue" (ראש הכנסת); the corresponding Greek title, "archisynagogos" (ἀρχισυναγωγός), is used in the Greco-Roman dispersion, and rarely is "archon of the synagogue" (Luke 8:41) used. The Greek term was also used, though not so often, by non-Jewish religious associations. The NT, early Tannaitic tradition, and epigraphical material bear witness to the spread of this title all through the Greco-Roman world from the first century A.D. to the end of the fourth century.

Originally the archisynagogos was the presiding officer of the assemblies in the strict sense of the word, and probably the Hebrew name should also be rendered "head of the assembly." He was responsible for maintaining order during the meetings and removing disturbances (Luke 4:13); he was authorized to distribute honors, such as reading of the Torah, reading from the Prophets, and preaching (Acts 13:15; M. Sof. VII.7-8). According to some scholars, in the first century the archisynagogos selected the prophetic reading on the sabbath and thus could fix the topic of the sermon. At one time he seems to have monopolized completely the honor of reading the Torah. Against such misuse of authority seems to have been directed the apocryphal halakah which forbids the archisynagogos to read the Torah unless he is asked by the assembly (Tosef. Meg. IV.21). The archisynagogos played an important role in mourning feasts—hence the custom, introduced in the second century A.D., of drinking at this occasion a cup to the health of the "head of the assembly" (P.T. Ber. 6a). Later the leadership of the archisynagogos extended beyond the limits of the meetings; he was probably the head of the synagogue building,

sharing its administration with the head of the council of the community, the γερούσιάρχης (cf. Ophel Inscription).

The office of the archisynagogos seems to have been at first elective for a limited time, probably one year. But the same person could be re-elected; sometimes he was elected "for life." Later we find in certain regions, especially Asia Minor, women and children called archisynagogos, an indication it had become a mere honorable and hereditary title.

Taking the term "head" literally, modern scholars are inclined to limit the office to one in each synagogue, and efforts are made to explain away the plural, *archisynagogoi*, in Acts 13:15. However, the inscription from Apamea names expressly three *archisynagogoi*. Whether the number 3 is something more than accidental and whether the plurality of *archisynagogoi* in Apamea is typical of Syria cannot be ascertained.

b. Ḥazzan. Like its corresponding Greek term ὑπηρέτης, "ḥazzan" has a variety of meanings in connection with the idea of service—hence the renderings "minister," "servant," "officer," etc. (Luke 1:2; Acts 13:5). There has been much discussion about the status of the ḥazzan of the synagogue in relation to the etymology of the term. The traditional derivation from הָיָה, "to see," misled some earlier scholars to elevate the ḥazzan to the rank of the Christian BISHOP, whose name likewise derives from a root meaning "to see" (ἐπίσκοπος). An examination of the rabbinic sources by Christian scholars of the seventeenth century resulted in downgrading the ḥazzan to the rank of the Christian DEACON. This equation is generally accepted, although some would assign to the ḥazzan only the rank of sexton. Also in the seventeenth century a new etymology was suggested—namely, the Arabic *khazin*, "storekeeper." A recent suggestion to trace the term to the Assyrian *hazanu*, "governor" or "overseer," may raise again the position of the ḥazzan.

In earlier rabbinic sources the ḥazzan appears at the most solemn religious ceremonies as an assistant to the archisynagogos. He takes the Torah and hands it over to the archisynagogos, who delivers the scroll to the captain of the high priest or to the king (Sof. VII.7-8). The ḥazzan performed most of the duties of the archisynagogos in the conduct of public worship. He assigned the functions during the worship, handed the Torah and the prophetic scroll to the reader (Luke 4:20; Sof. 14.3), and received them after the reading. At the proper moment he called upon the priests to pronounce the benediction (Sifre Num. 39). As assistant he accompanied the archisynagogos at funeral ceremonies and mourning feasts, probably reciting certain eulogies and benedictions; and also he had a cup drunk in his honor (P.T. Ber. 6a).

Some functions mentioned in the earlier sources seem to be of a different nature. The ḥazzan accompanied the members of the synagogue in their procession when they brought the firstlings to Jerusalem (Tosef. Bik. II.8). This duty is probably connected with the fact that at the Bikkurim ceremony the reading of Deut. 26:3 ff was essential. In the first century A.D. those who brought the firstlings were not supposed to read themselves (M. Bik. III.7). Thus, the ḥazzan went as reader. He appears also as

officer of the law court, executing the sentence of scourging (M. Mak. III.12) and perhaps reading certain passages in Deut. 28:59 ff during the execution of the punishment. The advent of the sabbath and the festivals was announced by the ḥazzan from the roof of the synagogue by blowing the trumpet three times, the signal for the suspension of work (Tosef. Suk. IV.199; P.T. Shab. 16a).

While the early literary sources show the ḥazzan primarily as assistant to the archisynagogos in his role as head of the religious meetings, the scarce and late epigraphical material reveals him as assistant to the archisynagogos in his capacity as administrator (cf. inscriptions from the synagogues of Apamea and of Umm el-Amed). There is no evidence that instruction of children was a duty inherent in the office of ḥazzan, though in small communities and under certain circumstances he did perform this function (P.T. Yeb. 13a).

c. *The "messenger."* Closely connected with the office of the ḥazzan was that of the "messenger of the congregation"—*sheliaḥ zibbur*. The name led older scholars to think of him in connection with the ἄγγελοι τῶν ἐκκλησιῶν in Rev. 1:20. His main assignment consisted in reciting the prayers aloud in order that the congregation could follow his lead. In earlier sources this messenger appears especially in connection with solemn occasions with a complicated order of prayers. From the beginning there seem to have been two opposing views about the role of the "messenger." The official one considered him as representative of the congregation, absolving its members from praying themselves. In offering prayers the messenger assumed the role of priest. The sages did not recognize this priestly role, however; they confined the messenger's task to leading the members of the congregation in prayer (M. R.H. IV.9; Tosef. IV.12). At first the function of reciting aloud the prayers was not assigned to any permanent officer but was performed voluntarily by any qualified member. As a rule, the person was called upon by the archisynagogos or by the ḥazzan. Since these two were in charge of the orderly conduct of public worship, the latter had to act as messenger of the congregation when no other qualified person could be found or when the person called upon declined. In the course of time the reciting of the prayers and the reading from the Scriptures became the main feature of the ḥazzan. The two terms, *ḥazzan* and *sheliaḥ zibbur*, became synonymous.

d. *Herald of the Shema.* The messenger who recited the prayer was preceded by one who recited the Shema with the blessings attached to it. In contradistinction to the private reading of the Shema, usually expressed by the verb *kara*, the recitation at public worship is represented by the verb *paras*. Most modern scholars agree to the Aramaic derivation of this term. They render the phrase *paras eth Shema*, somewhat literally, as the dividing of the verses of the Shema, to be recited antiphonally by the reader and congregation.

A more plausible explanation has been suggested. In connection with the idiom *paras diatagma*, which means to display an imperial edict for public promulgation, it is suggested that *paras* has become synonymous with "promulgate" and that *paras eth Shema* should be rendered "to promulgate the

Shema." One may go farther and suggest that, unlike the private reading of the Shema, which was usually recited by heart (M. Ta'an. 4.3), the recitation in the synagogue originally was made from a scroll. Probably this scroll contained not only the Shema proper but also the Decalogue (M. Tam. IV-V; Nash Papyrus). The reader of the Shema in the synagogue was called upon to unfold the scroll of the Shema and to promulgate the imperial edict, the Decalogue. He played the role of herald in the sense used in I Tim. 2:7; II Tim. 1:11. However, the promulgation of the Shema from a written scroll seems to have come into disuse, in Palestine at least, soon after the Decalogue had been eliminated from public worship.

Reading of scripture constitutes the principal part of public worship in the synagogue. This was especially true at the beginning of the Christian era, as witnessed by the NT, Philo, and Josephus. It is also indicated by the fact that in the Mishnaic code the rules concerning the synagogue are inserted in Tractate Megillah (III.1-3), which deals mainly with the reading from the Scriptures.

The sabbatical reading from the Pentateuch according to the triennial cycle seems to have been fixed in the first century B.C. The Pentateuch was divided into about 155 sections (*Sedarim*), one for each sabbath, so that the Torah was read through once in three years. At that time the reading from the Prophets (the *Haftarah*) shows no fixed scheme; yet it is unlikely that the lesson was left entirely to the free choice of the reader. Probably some control was exercised by the archisynagogos or by the ḥazzan. One of them would also call upon members of the congregation to read from the Scriptures.

In Palestine and Babylonia the reading was accompanied by an Aramaic translation (*Targum*) of the Hebrew text. Anyone who was capable, even a minor, was entitled to give the translation (*Meg. IV.6*). In certain important, learned centers there seems to have been a professional interpreter, called *Torgaman* or *Metorgaman*. As a rule, however, it was the schoolmaster, whose calling made him familiar with the translation of the Scriptures, who furnished orally the Aramaic interpretation.

When a competent person was present, the reading of the Scriptures was followed by an exposition of the lessons. To a certain extent this exposition was only an expansion of the Targ. In most cases it was based on the prophetic lesson (Luke 4:16 ff). It was customary to invite any stranger (teacher) who happened to attend the service to deliver this address (Acts 13:14). On synagogue worship, see further WORSHIP IN NT TIMES.

9. *Secular and semisecular use of the synagogue.* Modern historians tend to exaggerate the role of the synagogue as a communal center, the "house of the people"; but it has long been recognized that the synagogue was not confined to religious worship. It fulfilled some secular and semisecular functions. Already in the first century the synagogue seems to have been used as a law court where justice was administered. In the NT we find the synagogues in juxtaposition to the magistrates (Luke 12:11); rabbinic sources of the third century relate of Rabbi Yohanan and Rabbi Abahu that they have acted as

judges and decided legal cases in the ancient synagogue of Caesarea (P.T. Ber. 6a and parallels; Sanh. I.18a). In particular, the carrying out of the sentence of scourging has been assigned to the ḥazzan of the synagogue (Matt. 10:17; 23:34; Mark 13:9; M. Mak. III.12). The reason for the choice of the synagogue might have been the fact that during the execution of this punishment certain passages from Deuteronomy were recited. The Torah scroll, of which the ḥazzan was custodian, was used also in civil processes such as oath-taking (Lev. Rabbah 6).

For a somewhat similar reason funeral services, especially the delivery of the eulogies, for deceased communal teachers were held in the synagogue (Tosef. Meg. III and parallels). The coffin (*aron*) of the teacher of the law was compared with the ark (*aron*) of the Law. Of course, as a rule the synagogue was also the largest building and could accommodate the crowd who would come to pay homage to the teacher.

The synagogue was used often for political gatherings because of its facilities. In the first century Josephus notes a political assembly in the great synagogue of Tiberias (Life LIV). In the third century rabbinic authorities permitted deliberations about public affairs in the synagogue on the sabbath (T.B. Keth. 5a).

As a meeting place, especially on sabbaths and festivals, the synagogue offered the opportunity to communal officers for various public announcements: lists of lost articles and similar communications (T.B. Yeb. 63b; B.M. 28b; Lev. Rabbah 6.2).

The use of the synagogue as an inn for itinerants is still a subject of discussion among scholars. There are various rabbinic utterances to the effect that travelers, especially teachers and students, were accommodated (P.T. Ber. 5d; Meg. III.74a; T.B. Pes. 101a). These seem to run against an explicit Tannaïtic ruling which forbids eating, drinking, and sleeping in the synagogue (Tosef.; T.B. Meg. 28a-b). Most scholars take the term "synagogue" in this connection in its larger sense of comprising the precinct which contained a special guest room. Epigraphical and archaeological data seem to lend support to this view. The Theodotus Inscription speaks clearly of an inn for strangers beside the synagogue. Also remains of ancient synagogues (e.g., El-Hammeh and Dura-Europos) show a complex building with several adjoining rooms, one or two of which probably served as a guest house. Nevertheless, there seem to be some references which cannot be explained in this way; they indicate the use of the synagogue proper as a hospice. It seems plausible that the Tannaïtic ruling mentioned above, like most of the earlier rulings about the synagogue based on the analogy with the sanctuary of Jerusalem, does not represent an official, binding rule but a kind of statute of a certain circle with Essenic tendencies.

Between the two extremes, the one endowing the synagogue with all the attributes of the sanctuary of Jerusalem and the other denying the synagogue any claim to sacredness, there was in the first three centuries a great variety of attitudes and no definite official position.

***SYNAGOGUE, THE GREAT.** Traditionally, a council having Ezra as its founder and first president. It is not mentioned in the Bible (at I Macc. 14:28, μεγάλη συναγωγή means merely a large gathering).

According to legend, the Great Synagogue consisted of 120 (some say 85) men, who controlled Jewish affairs, particularly in the religious sphere, ca. 450-200 B.C. It is said to have played an important role in fixing the OT canon—an idea first suggested, it seems, in the sixteenth century. Some Talmudic writers add that it composed the books of Ezekiel, Daniel, Esther, and the minor prophets; and that it issued directions on how to read various portions of the OT. None of this is reflected in the OT or the Apoc. or by Philo or Josephus. The Talmudic writers knew little of their people's history after the Exile. The Great Synagogue appears to be wholly legendary, though perhaps based on stories, in Neh. 8-10, of a single great gathering. PIERSON PARKER

***SYNOPTIC PROBLEM** ἡ ἰσὺς τῶν [σύν-οπτικὸς, common view or viewed together]. The problem of accounting for the extensive and complex combination of similarities and differences in the first three gospels.

The first three gospels are designated as "synoptic" in order to indicate the common perspective

in which they view the career and teaching of Jesus as distinguished from that of the Fourth Gospel (*see JOHN, GOSPEL OF*). There is overlapping between the first three and the fourth gospels, especially in the passion story, but only about nine per cent of the material in the Synoptics coincides with material in the Fourth. The coincidence of material as among the Synoptics is much higher. Approximately ninety-one per cent of Mark is paralleled in one of the other two gospels or in both. The same thing can be said of about fifty per cent of Matthew and about forty-one per cent of Luke. The distinction between the perspectives of the Synoptic gospels and the Fourth Gospel concerns, not only the amount of material involved, but also practically every other phase of their relationship: the order of events, style, the content and method of Jesus' teaching, and the theological outlook of the writers.

Despite the common characteristics of the first three gospels, which justify their being grouped as a unit over against the Fourth Gospel, their relationship each to the other creates a problem. When they are arranged in the parallel columns of a synopsis, there is revealed a curious and extremely complex combination of similarities and differences in their interrelationships which demands an explanation. They are very much alike at many points and yet very different at many other points, in both narrative and discourse material. And these characteristics appear consistently and all-pervasively, in the relationships of single sentences as well as of large blocks of material. Why is this so? How are these characteristics to be explained? This is the synoptic problem. A Greek synopsis of the first three gospels is required in order to observe the phenomena in their more minute ramifications, but an English translation will reveal the general nature of the problem.

A. THE NATURE OF THE PROBLEM. The combination of similarities and differences between

the first three gospels may be observed both in their larger relationships and within single units.

1. Larger relationships. These have to do with three sets of data: material common to all three gospels; non-Markan parallels of Matthew and Luke; and material peculiar to each gospel.

a. Material common to all three gospels. A large body of material is common to all three gospels. It is similar in content and wording, and the units are arranged in approximately the same order. It contains some teachings of Jesus, but it is mainly narrative in nature.

With regard to the order of the units, one observes that it is Mark which appears to provide the framework. Matthew or Luke occasionally departs from this order, but they never agree against Mark in such a departure. If one of them differs from Mark, the other agrees with Mark (cf., e.g., Matt. 10:1-4 with Mark 3:13-19 and Luke 6:12-16; Luke 4:16-30 with Mark 6:1-6 and Matt. 13:53-58; Luke 13:18-19 with Mark 4:30-32 and Matt. 13:31-32; Luke 10:25-28 with Mark 12:28-34 and Matt. 22:34-40).

In regard to the contents of this material, the approximately ninety-one per cent of Mark which is paralleled in either Matthew or Luke or in both has the following relationships to the other gospels: about eleven twelfths of Mark parallels fifty-eight per cent of Matthew, and about one half of Mark parallels forty-one per cent of Luke.

This may be broken down still further. About sixty verses (nine per cent) of Mark are found only in this gospel. Twenty-one of these comprise peculiar Markan pericopes—mostly narrative (3:20-21; 7:2-4, 32-36; 8:22-26; 14:51-52), but with one teaching unit (4:26-29). The remaining thirty-nine verses consist of minor narrative touches (e.g., 1:1; 3:9; 11:11) and teachings (e.g., 2:27; 9:29; 10:24; 13:36-37) scattered throughout the gospel.

Of Markan material with an equivalent in either Matthew or Luke, it is the former which provides the greater number of parallels. Luke has only about 14 verses of Mark which are not in Matthew (Mark 1:23-28; 9:38-41; 12:41-44). On the other hand, Luke fails to parallel Mark at many points where Matthew does. There are in the neighborhood of 180 verses of Mark with parallels in Matthew but not in Luke. Seventy-four of these are in Mark 6:45-8:26, and 53 more are found in the passion story. Included in the total are some verses in which a somewhat different version of the Markan material appears in Luke (e.g., Luke 4:16-30). Also, there are some 36 Markan verses, both narrative and discourse, which in Matthew and Luke are expanded (e.g., parallels to Mark 1:7-8, 12:13; 3:28-29).

b. Non-Markan parallels of Matthew and Luke. Between 200-220 verses of Matthew and Luke parallel each other without corresponding parallelism in Mark. This material is mostly discourse, some very similar (117 verses) and some with greater divergencies (50-60 verses) in wording. About 55 verses contain narrative materials (e.g., Luke 7:1-10 = Matt. 8:5-10, 13). The best places to observe this material are in Matthew's Sermon on the Mount (Matt. 5-7 and parallels) and Luke's central section (Luke 9:51-18:14 and parallels).

c. Material peculiar to each gospel. The small percentage of material found only in Mark has already been noted. Matthew contains about 212 and Luke about 214 verses peculiar to each. The infancy stories of each gospel belong in this category; they overlap at few points. In addition, there are stories (17 in Matthew and 24 in Luke), parables (12 in Matthew and 19 in Luke) and teaching material scattered throughout each gospel (136 verses in Matthew and 85 in Luke). Examples of stories are those in Matt. 14:28-31; 27:3-10; 28:11-15; Luke 3:10-15; 4:28-30; 5:1-10; 7:11-17. Examples of parables are Matt. 13:45-46; 25:1-13, 31-46; Luke 10:25-37; 15:11-32; 16:19-31. The material peculiar to Matthew has a strong Judaistic flavor, that in Luke a more humanitarian and universalistic note.

2. Single units. The synoptic problem is more complex than is indicated by the foregoing data. Within each separate unit of the tradition recorded in more than one gospel there are similarities and differences which, generally speaking, correspond to the phenomena observed in the relationships of the larger blocks of material. These cannot be precisely observed in a comparison of English texts, but a few examples can indicate the characteristics which permeate the entire record.

a. Material common to the three gospels. The healing of a leper (Mark 1:40-45; Matt. 8:1-4; Luke 5:12-16) is related by Mark in 98 words, 38 of which are peculiar to him; by Matthew in 62 words, with 19 peculiar to him; and by Luke in 100 words, with 46 peculiar to him. Matthew and Luke have introductory sentences which differ from Mark and from each other. Matthew does not contain the closing verse of Mark (27 words); Luke has it, but only 6 of 27 words parallel Mark. The heart of the narrative (excepting Mark 1:43) finds Mark paralleled almost verbatim by either Matthew or Luke and often by both (cf. vss. 40b-44).

The healing of the palsied man (Mark 2:1-12; Matt. 9:1-8; Luke 5:17-26) illustrates a difference in introductory sentences but not in the conclusion of the incident, and a close similarity throughout despite some variations among the three. Vs. 10 of Mark (20 words) is paralleled in both Matthew and Luke practically verbatim (Luke has three grammatical variations).

In the story of the disciples' plucking corn on the sabbath (Mark 2:23-28; Matt. 12:1-8; Luke 6:1-5) Matthew and Luke both employ 92 words, against 100 in Mark, to relate the core of this incident in a manner very similar to Mark, and often with verbal equivalents. Two major differences exist, however: vs. 27 of Mark is not paralleled in either of the other gospels, and Matthew adds 44 words (vss. 5-7) which are peculiar to himself.

The story of Christ in Gethsemane (Mark 14:32-42; Matt. 26:36-46; Luke 22:40-46) is reported by Mark and Matthew with very close verbal similarity, but Luke's report is abbreviated and contains very few words employed by either of the others.

The sending out of the Twelve (Matt. 9:35-10:16) presents a very confusing combination of similarities and differences, not only in the relationship of the three gospels, but also with regard to materials par-

alleled only in Matthew and Luke or peculiar to Matthew (cf. parallels in Mark 3:13-19; 6:6-11, 34; Luke 6:13-16; 8:1; 9:1-5; 10:1-12).

b. Parallels of Matthew and Luke. Some of this material is almost verbally equivalent (e.g., Matt. 3:7-10 and Luke 3:7-9; Matt. 4:3-10 and Luke 4:3-10). The temptation of Jesus has as its core material in Matt. 4 and Luke 4 which is not in Mark at all, yet the beginning and the ending of the report have a relationship to Mark (cf. Mark 1:12-13; Matt. 4:1-2, 11; Luke 4:1-2, 13).

At other points there are interesting variations along with the similarities. The Beatitudes (Matt. 5:3-12; Luke 6:20-23) illustrate, not only a difference in the number reported by each evangelist (nine in Matthew and four in Luke), but also a difference in wording. Matthew's are in the third person, Luke's in the second person. As consistently elsewhere, Matthew has "the kingdom of Heaven"; Luke, "the kingdom of God." The last Beatitude carries the same thought in each gospel, but it is worded somewhat differently in each.

The Lord's Prayer (Matt. 6:9-13; Luke 11:2-4) is reported in Luke in a shorter form, with some differences in wording, at the same time that certain items are identically worded.

On practically every page of a synopsis this combination of similarities and differences, agreements and variations, is observed. The minute phenomena join with the larger blocks of material to confront the student with the synoptic problem.

B. THE HISTORY OF THE STUDY OF THE PROBLEM. Treatment of the issues on a scientific basis had to wait until the eighteenth century, and it has engaged the exhaustive attention of scholars ever since. Every conceivable combination of theories and guesses has been proposed, yet from the beginning there has been steady progress toward as much of a solution as the data will yield. Generally speaking, the line of progress moved from an oral hypothesis, along with hesitant feelers in the direction of written sources, to a full realization that the problem was a documentary one, the "two-document" hypothesis being the foundation upon which several "multiple-source" hypotheses were later developed.

1. Ancient solutions. The ancients contributed nothing substantial to the solution of the problem. On the assumption that the gospels were written by, or on the basis of material provided by, eyewitnesses, there was a tendency to produce an organization of parallel passages into harmonies such as Tatian's *Diatessaron* (170) and, much later, Osiander's *Harmonia Evangelica* (1537). The patristic tradition (see Augustine especially) considered Matthew to be the original gospel, Mark being a condensed version of it and Luke being dependent upon both Mark and Matthew. This remained the orthodox position until 1863 and provided the foundation for the theory of the Tübingen scholars in the mid-nineteenth century and Zahn in 1897; it is still the official position of Roman Catholic scholars and is espoused by an occasional Protestant scholar (e.g., Jameson, in 1922).

2. The modern period to 1900. a. The initial stage of the modern period (1750-1835). The earliest

attempts to deal scientifically with the synoptic problem produced three main hypotheses apart from the continuation of the patristic tradition. The first was the hypothesis of a primitive oral gospel formulated in Aramaic on the soil of Palestine by the apostles, or by one of them, which became stereotyped through constant repetition. According to this view, the differences among the three gospels were attributable to the variant forms under which the oral gospel reached the several evangelists, as well as to the various tendencies or interests of the early communities (cf. Herder, 1796-97; J. C. L. Giesler, 1818). Although this view persisted to a limited extent (cf. Westcott, D. Smith, A. Wright), scholars as a whole abandoned it in favor of the theory that between the oral stage and the finished gospels there was an intermediate stage in which most of the oral tradition was reduced to writing.

The second hypothesis was that of an original written gospel (*Protevangeli*), in Aramaic or Hebrew, which was not identical with any known gospel and which each evangelist translated or from which he secured the material which he used (Eichhorn, 1804). This view collapsed of its own weight, after it was seen that successive recensions of the original were required to explain the differences among the gospels.

A third hypothesis was Schleiermacher's "fragment hypothesis" (1818), which explained the interrelationships of the gospels as due to the use by the evangelists of similar and dissimilar collections of material. This suggestion of Schleiermacher was destined to be more fully developed in the immediate future and also, much more extensively, by Schmidt, Bultmann, Dibelius, and other form critics after World War I.

b. The two-document hypothesis (1835-1900). The stage was now set for the development of the documentary hypothesis which was to crown the work of the nineteenth century, and which has remained the key to the basic literary relationships of the Synoptics. Swinging sharply away from patristic tradition, scholars concluded that Mark was the earliest gospel and that it had provided both the framework and the bulk of the narrative content of Matthew and Luke (cf. especially Lachmann, 1835; C. H. Weisse and C. G. Wilke, 1838; H. J. Holtzmann, 1863; and B. Weiss, 1886).

The other twin in the two-document hypothesis was concluded to be a collection of sayings of Jesus (LOGIA or Q), consisting of at least two hundred verses paralleled in Matthew and Luke, which each in his own way had combined with Mark, along with other fragmentary traditions, to produce the finished gospels (cf. especially Weisse, 1838; Weizsäcker, 1864; Hawkins and Wernle, 1899).

The two-document hypothesis may be diagrammed as in fig. 1.

3. Since 1900. In certain quarters, notably in Germany, scholars turned away from an exclusive concern with literary problems to investigate the preliterary formation of the gospel tradition in conjunction with the theological import of the gospels (see FORM CRITICISM). The attention thus given to unraveling the immediate sources of Mark is alone

Fig. 1

relevant to this subject. At the same time lively discussion of the problems left unsolved by the two-document hypothesis continued in Europe and America. Largely in an effort to account for the materials peculiar to Matthew and Luke, there developed after World War I a trend in the direction of multiple-source hypotheses (cf. especially Streeter, Grant, Parker). In the several areas of discussion the main developments were as follows:

a. The Markan source. Because of the omission of Markan passages by one evangelist and not the other (Matthew 24-25 verses; Luke, 61 verses), especially Luke's omission of Mark 6:45-8:26, along with minor agreements against Mark, a theory of the use by Matthew and Luke of different editions or versions of Mark came into being early in the period (cf. Wendling, 1905; Bacon; Moffatt) and continued to have some appeal (cf. Goguel, Bussmann, Crum). The trend, however, was toward the view that Matthew and Luke had used Mark in substantially the form in which we now possess it (cf. Hawkins, Burkitt, Streeter, Turner, V. Taylor, Rawlinson, Cadbury, McNeile, Montefiore). This was based upon the uniformity of style in Mark, and the probability of accidental coincidence or the selective creativity of Matthew and Luke, as well as the probability of textual assimilation and emendation.

In the pursuit of the sources of Mark the tendency increased, while allowing Peter some influence upon the composition of the gospel (see PAPIAS), to emphasize the importance of other sources, either written or oral or both (cf. Goguel, T. Manson, Bussmann, Branscomb, Grant, Dodd, Güy). The use of Q by Mark was favored by some, but not by the majority.

There were also two-source theories (E. Meyer, Crum, Parker), a three-source theory (A. T. Cadoux), and multiple-source theories (W. L. Knox and V. Taylor). Roman Catholic scholars continued to assert the priority of Matthew (cf. Voste, Chapman, Vaganay, Levie).

See MARK, GOSPEL OF.

b. Q. The majority of scholars agreed that Q was primarily a discourse source, with little narrative and no passion story, its material being largely, if not exclusively, represented by the parallel materials of Matthew and Luke. A few considered it as a sort of Proto-Matthew (cf. Bacon, Kilpatrick, Parker). Most agreed that its original order was better preserved by Luke, but there was sharp disagreement as to whether Matthew or Luke better represented the

original wording. To account for the differences in its use by Matthew and Luke, the theory of different recensions or parallel collections of sayings was favored by most over theories of oral tradition or different translations of an Aramaic document. A few proposed different sources of Q (cf. Burton, B. W. Robinson, Bussmann), while an occasional scholar renounced the theory of Q in favor of Luke's use of Matthew (cf. Enslin, Butler).

c. Other sources of Luke. The theory that Luke possessed a third cycle of tradition (see L), either written or oral, of a relatively homogeneous character and represented mainly by stories and parables, came to be generally accepted (cf. variant theories of Moffatt, Bussmann, Crum). The proposal by Streeter that Luke had combined Q and L into a Proto-Luke, prior to its conjunction with Mark, appealed to some scholars (cf. V. Taylor, W. Manson, Parker), but different explanations of the large amount of non-Markan material in Luke seemed to others more likely (cf. Perry, Grant, Cadbury, Hunkin, Montefiore, Goguel, Creed). Opposition was especially strong to the idea that Luke had substituted the framework of Proto-Luke for that of Mark. A still different source for the infancy narrative, either as a translated document or as the free composition of the evangelist, was generally taken for granted.

d. Other sources of Matthew. It was proposed that Matthew possessed a third homogeneous cycle of tradition comparable to Q and L, of a Judaistic cast, which he had conflated with Q (cf. Burton, Albertz, Bacon, Streeter, V. Taylor, McNeile, T. Manson, Kilpatrick, Parker, Vaganay), but there was great dispute over various aspects of this proposal. While the Judaistic atmosphere of the material peculiar to Matthew was generally recognized (Crum and Kilpatrick opposed), the literary homogeneity of the material was questioned (cf. Goguel, Scott, Grant, Parker), as was the theory that Matthew alone employed the method of conflating his sources (cf. Bacon, Easton, Kilpatrick). Some continued to think of this material as from Q (cf. Easton, Bacon, Scott) or due to different sources of Q (Bussmann).

Most scholars considered the infancy story to be from a different cycle of tradition than that of Luke, and probably the free composition of the evangelist. The use of a collection of messianic proof texts (*testimonia*), in written or oral form, was generally agreed upon.

e. Other theories. Theories of Aramaic originals persisted in the view that all the gospels were direct translations of Aramaic documents before A.D. 60 (Torrey) or in views which proposed the use by the evangelists of Aramaic sources (cf. McNeile, Vaganay). A general Aramaic background for the gospels was as much as most scholars believed the evidence warranted (cf. Black).

On the basis of the pronouncements of the Pontifical Biblical Commission (1911, 1912), supporting the patristic tradition, Roman Catholic scholars labored at the synoptic problem upon the premise that Matthew was the original gospel (cf. Voste, Chapman, Vaganay, Levie), at times making some concession to the theory of the priority of Mark.

f. Summary. There has emerged from all the laborious work devoted to the solution of the synoptic problem, as its most permanent result, the hypothesis of two major documents (Mark and Q) employed by Matthew and Luke in conjunction with bodies of tradition peculiar to each, a distinct third source for Luke (L) being the most definite of the latter. The continued disagreement over many details indicates that literary criticism has accomplished about as much as it can. The most promising aspect of criticism appears to be the effort to relate the cycles of tradition to distinct geographical localities and to conditions operative in the currents of life and thought of the primitive communities (cf. e.g., Streeter and Parker), and thus to the interests of form criticism and related disciplines designed to lay bare the secrets of the preliminary formation of the gospel tradition. See also MATTHEW, GOSPEL OF; MARK, GOSPEL OF; LUKE, GOSPEL OF.

D. T. ROWLINGSON

SYNTYCHE *sin'ti ki* [Συντύχη, coincidence, success] (Phil. 4:2). A woman in the church at Philippi, advised by Paul to compose her differences with EUODIA.

F. W. GINGRICH

SYRACUSE *sir'ə kūs*, —*kūz* [αἱ Συράκουσαι] (Acts 28:12). A city on the E coast of the island of Sicily.

Thucydides (VI.2) and Diodorus of Sicily (V.6) state that the first inhabitants of Sicily were the Sicani (οἱ Σικανοί). Thucydides and Philistus (died

ca. 365 B.C.), whom Diodorus cites, believed they came from Iberia; but Timaeus (died ca. 250 B.C.), whose opinion Diodorus prefers, thought they were indigenous. From them the island was called Sicania (ἡ Σικανία). After them came the Siceli (οἱ Σικελοί), who were said to have crossed over in a body from Italy, and from whom the island took the name of Sicily (ἡ Σικελία). Archaeologically and anthropologically the Sicani and Siceli seem to be branches of the same people, who probably came to the island from elsewhere at different times, and are represented by numerous finds of the Neolithic and Aeneolithic periods. Later, Phoenicians settled on Sicily, and then came Greek colonists (Thucydides VI.3-5).

The first Greek colony was Naxos; the second, established a year later, probably in 734 B.C., was Syracuse. Many ancient writers, including Clement of Alexandria (*Stromata* I.xxi.131, 8 [398]), name Archias of Corinth as the founder of Syracuse. The story is that he went to the oracle at Delphi and was asked whether he chose wealth or health; when he chose wealth, he was sent to found Syracuse, which became famously rich (Strabo VI.269; Συράκουσαι, in Stephen of Byzantium *De Urbibus*, ed. W. Xyl-ander [1568], col. 267).

The new colony was planted on the island of Ortygia (Pausanias V.7.3), from which Archias expelled the Siceli there resident. Later this island was connected with the shore, and Syracuse included large tracts of mainland. Under the ruler Gelon the city won an important victory in battle with the Carthaginians, according to Herodotus (VII.166) on the very day the Greeks vanquished the Persians at Salamis (480 B.C.). When Syracuse attempted to dominate all Sicily, it was attacked by a large fleet from Athens, but again was victorious (413 B.C.) with the almost complete destruction of the attacking forces (Thucydides VI-VII; Diodorus XIII; Plutarch *Nicias*). With Dionysius the Elder, who obtained power in 405 B.C. (Diodorus XIII.109-14), a series of tyrants arose who ruled Syracuse with varying degrees of severity or mildness until the city was taken by the Romans in 212 B.C. (Livy XXV.23-31; Plutarch *Marcellus* 14-19).

Under the Romans, Syracuse became the residence of the governor of Sicily, and by Augustus in 21 B.C. the city was given the rank of a colony (Dio LIV.7.1). As described by Cicero (*Against Verres* II.4.117-19) in the first century B.C., Syracuse was the largest of the Greek cities and the loveliest of all cities. On the island were temples of Diana and Minerva, the palace of the governors, and the famous spring Arethusa. In the mainland quarter called Achradina were the forum, town hall, senate house, and temple of Olympian Jupiter. In Tycha were crowded habitations, and in Neapolis a great theater.* Long famed for fishing, shipbuilding (Athenaeus V.206-9), textiles, and bronze work (Cicero *Against Verres* II.4.58-60), Syracuse enjoyed great prosperity under the Roman Empire, and was allowed by Nero to conduct gladiatorial shows on a magnificent scale (Tac. Ann. XIII.49). The impressive ruins of ancient Syracuse include the temple of Athena, built probably by Gelon in the fifth century B.C. and transformed into

110. The theater at Syracuse

a Christian cathedral in the seventh century A.D.; the Greek theater, erected probably by Hieron I (478-467 B.C.) and enlarged by Hieron II two hundred years later; the large amphitheater, constructed in the time of Augustus; and the Christian catacombs of the third and fourth centuries. SYRIA sîr'î ʔ; **SYRIANS** —ənz. Terms used in the LXX and in some English translations to render the names ARAM and ARAMEANS.

***SYRIAC VERSIONS** sîr'î äk. The Syriac language, a member of the Semitic family of languages, became the vehicle of several important versions of the OT and the NT. See **VERSIONS, ANCIENT**, § 4.

SYROPHOENICIA sî'rō fî nîsh'ə; **SYROPHOENICIAN** —ən [Συροφονισσα]. According to Mark 7:26, a Greek (or "pagan") woman of Syrophoenician origin heard of Jesus' mission in the boundaries of Tyre and Sidon. The parallel verse (Matt. 15:22) calls her a Canaanite (Χαναανίτις), which is the ancient name by which the Phoenicians called themselves. The name Syrophoenicia refers to the fact that in the time of Jesus, Phoenicia (including Tyre and Sidon) was included in the Roman province of Syria. M. AVI-YONAH

SYRTIS sîr'tas [Σύρτις] (Acts 27:17); **KJV QUICKSANDS**. The Greek name of two shallow gulfs on the N coast of Africa. The larger, Syrtis Major, W of Cyrenaica, is now called the Gulf of Sidra; it is probably the Syrtis intended in this passage. The smaller, Syrtis Minor, is now called the Gulf of Gabes. Sailors feared these shallow waters, with their treacherous hidden rocks and sandbanks.

F. V. FILSON

***TAANACH** tā'ō nāk [תענך] (Josh. 12:21; 17:11; 21:25; Judg. 1:27; 5:19; I Kings 4:12; I Chr. 7:29); KJV once **TANACH** tā'nāk (Josh. 21:25). A Canaanite and later Israelite Levitical town on the S edge of the Plain of Esdraelon.

Taanach is identified with Tell Ta'annak, a site located midway between Megiddo and Jenin overlooking the Plain of Esdraelon. In antiquity it commanded two trade routes, one connecting the hill country with the Plain of Acre, the other linking the Plain of Esdraelon with the Plain of Sharon across the Carmel Range.

Minor excavations at the site were made in 1901-4. The excavators neglected both stratigraphy and pottery chronology, with the result that only a sketch of the history of the site can be given.

The earliest occupation belongs to the end of EB II and the beginning of EB III (ca. twenty-sixth century B.C.). A noteworthy feature of this stratum is a tomb that resembles Egyptian tombs of the time of Djoser (Third Dynasty) in its style of masonry and techniques of construction; such similarity points to Egyptian influence in this period. The site was again occupied during MB IIC (late seventeenth and sixteenth centuries B.C.) and LB I (late sixteenth and early fifteenth centuries). In the latter period Taanach and the route linking it with the Plain of Sharon are mentioned in the account of Thutmose III's campaign against a coalition of Syro-Palestinian princes (ca. 1468).

The most important archaeological finds at the site, consisting of a dozen whole and fragmentary cuneiform tablets, belong to the occupation of the late fifteenth century B.C. These tablets—addressed to Rewashsha prince of Taanach and written by different persons, including Amanhatpa (Amenophis), the Egyptian governor of Gaza—contain a variety of requests and orders. During the Amarna Age (ca. fourteenth century B.C.) the site was inhabited, as shown by the appearance of Taanach (spelled Tah[nu-k]a) in one of the Amarna Letters. See **TELL EL-AMARNA**.

After the Israelite invasion of Palestine in the late thirteenth century B.C., Taanach was allotted to Manasseh (Josh. 17:11; I Chr. 7:29) and was assigned to the children of Kohath as a Levitical city

(Josh. 21:25). Contrary to Josh. 12:21, which suggests that the Israelites captured Taanach, Judg. 1:27 makes it clear that Manasseh was unable to take full possession of the town, because of Canaanite strength. The site was probably occupied in the late twelfth century B.C., judging from the Song of Deborah (Judg. 5:19), which places the battle between Sisera and Barak "at Taanach, by the waters of Megiddo"; since this battle was fought nearer Megiddo, this description suggests that Taanach, not Megiddo, was the nearest inhabited town. Possibly to this occupation belongs a large clay incense altar found in the excavations, which is decorated on two sides with animals in relief stacked one above the other, some with human heads and some with animal heads modeled in the round (Fig. ART 66). Taanach prospered under David (ca. 1000-961) and Solomon (ca. 961-923), and during the latter's reign was governed by Baana, one of the twelve district officers over Israel (I Kings 4:12). This occupation was destroyed by Shishak of Egypt in the course of his Palestinian campaign (ca. 918), as shown by the appearance of Taanach (spelled *t'nk* in Egyptian) among other conquered towns in the Shishak list at Karnak.

Whether the site was inhabited during Iron II is uncertain; it was reoccupied during late classical times and again in the Arab period.

TAANATH-SHILOH tā'ō nāth shī'lō [תענת שילה]. A village between Michmethath and Janoah on the NE boundary of Ephraim (Josh. 16:6). It is usually identified with the modern Khirbet Ta'nah el-Foqa, ca. seven miles SE of Shechem on a mountain where it may have served as a fortress in ancient times. Although uncertain, if Taanath is from אנה, "approach" (cf. Exod. 21:13), it might indicate the approach to Shiloh. W. L. REED

TABBAOTH tāb'ōth [טבעות, *perhaps from טבעת*, signet, ring] (Ezra 2:43; Neh. 7:46; I Esd. 5:29); KJV Apoc. **TABAOTH**. Head of a family of temple servants, or **NETHINIM**, returned from the Exile.

TABBATH tāb'ath [טבת]. A place E of the Jordan where Gideon ended his pursuit of the Midianites after routing them in the valley of Jezreel (Judg. 7:22). It must have been in the vicinity of **KARKOR**, where they rallied their forces (Judg. 8:10), and the ascent of Heres (see **HERES**, **ASCENT OF**), from which Gideon returned after defeating them for the second time (Judg. 8:13). Tabbath must therefore have been in the mountains of E Gilead, and would be a logical place for a defeated army to retire to in an attempt to recover. A probable identification of the site is Ras

Abū Tabat, on the slopes of the Jebel 'Ajlun, NW of Pakoris on the Wadi Kufrinjeh. S. COHEN

TABEEL tāb'ī ʾəl [טַבְּעַל, Aram. God is good; Apoc. Ταβέλλιος]; KJV **TABEAL** (no good) in Isa. 7:6; KJV Apoc. **TABELLIUS** tō bēl'ī ʾəs. 1. Evidently an Aramean, the father of a man whom the allied kings Rezin of Damascus and Pekah of Israel intended to set up in Jerusalem as a puppet king in place of the Davidic king Ahaz (Isa. 7:6). Thus Judah was to be added to the anti-Assyrian alliance. Since the son of Tabeel probably was a Syrian, it may be that Judah was to be included in the domains of Damascus. The MT has vocalized the name "Tabeal," perhaps to express scorn.

2. An Aramean in Samaria who was a party to a letter to Artaxerxes I endeavoring to prevent Jewish reconstruction (Ezra 4:7; I Esd. 2:16).

T. M. MAUGH

TABER. KJV translation of תַּפֵּף, meaning "to beat," as on a timbrel (תַּף), in Nah. 2:7—H 2:8 (RSV "beat"). The archaic English word "taber," or "tabor," means "to beat," as on a tabor, or little drum.

TABERAH tāb'ʿ rə [תַּבְּעָרָה, burning] (Num. 11:3; Deut. 9:22). A stopping place of the Israelites in the wilderness. Here the people, complaining about their misfortune, provoked the Lord to anger. He sent his fire among them, destroying a part of the camp (Num. 11:1-2). The place received its name, Taberah, "because the fire of the LORD burned among them." In Deut. 9:22 it is mentioned with Massah and Kibroth-Hattaavah as the place where the Israelites "provoked the LORD to wrath." It is not listed in the itinerary of Num. 33. The location is unknown. J. L. MIHELIC

TABERNACLE [מִשְׁכַּן, dwelling, from שָׁכַן, to dwell]. A sacred tent, a portable sanctuary, said to have been erected by Moses. It was the place at which the God of Israel revealed himself to and dwelt among his people. It also housed the ark and accompanied Israel during the wilderness period. It is stated that it was located in several places in Canaan after Israel's settlement in that land and finally was replaced by Solomon's temple. It was thus Israel's portable sanctuary from Sinai to Solomon's temple.

1. **Terminology.** The tabernacle is known also by the two principal Hebrew words for "sanctuary"—i.e., מִקְדָּשׁ (LXX ἁγίασμα; ἁγίασθήριον; ἡγίασμενον; τὰ ἅγια; Vulg. *sanctuarium*) and שְׁכֵן—as well as by the following names:

a) "Tent of meeting" (אֹהֶל מוֹעֵד), which occurs about 130 times in P and several times in E (Exod. 33:7; Num. 11:16; 12:4; Deut. 31:14). This is almost always rendered in the Greek by ἡ σκηνὴ τοῦ μαρτυρίου, "the tent of the testimony," and in the Vulg. by *tabernaculum testimonii* but in Numbers far more often by *tabernaculum foederis*. The Hebrew word for "meeting" means "to meet by appointment"—hence "tent of meeting"—i.e., where Yahweh meets with Moses and Israel (Exod. 29:42-43; Num. 17:4). In Exod. 29:42; 33:11; Num. 7:89 the purpose of this meeting is further defined as communication, and so "tent of meeting" really means "tent of revelation," "tent of the oracle," "tent of the testimony" (see below). Similarly Westcott spoke of the three truths represented by the names of the tabernacle: God's presence; God's righteousness; and God's "conversableness."

b) "The tent" (19 times in P); "tent of Yahweh" (I Kings 2:28 ff); "house of the tent" (I Chr. 9:23); and "house of Yahweh" (Exod. 23:19); "tabernacle of the house of God" (I Chr. 6:48). The LXX employs for אֹהֶל ("tent") σκηνή (nearly 140 times) and σκήνωμα (44 times). The Vulg. uses *tabernaculum*, and less frequently *tentorium*. In Wisd. Sol. 9:8; Ecclus. 24:10 the name "sacred tent" (σκηνὴ ἁγία) appears.

c) "Tabernacle," "dwelling," "dwelling place," "habitation," "abode," "encampments." The Hebrew noun, מִשְׁכַּן, is derived from the verb "to dwell." In Exod. 25:9 the word means the shrine as a whole, but in 26:1, etc., it means virtually the holy of holies. The LXX rendering is generally σκηνή (about 106 times), or σκήνωμα (17 times). The Vulg. uses *tabernaculum*.

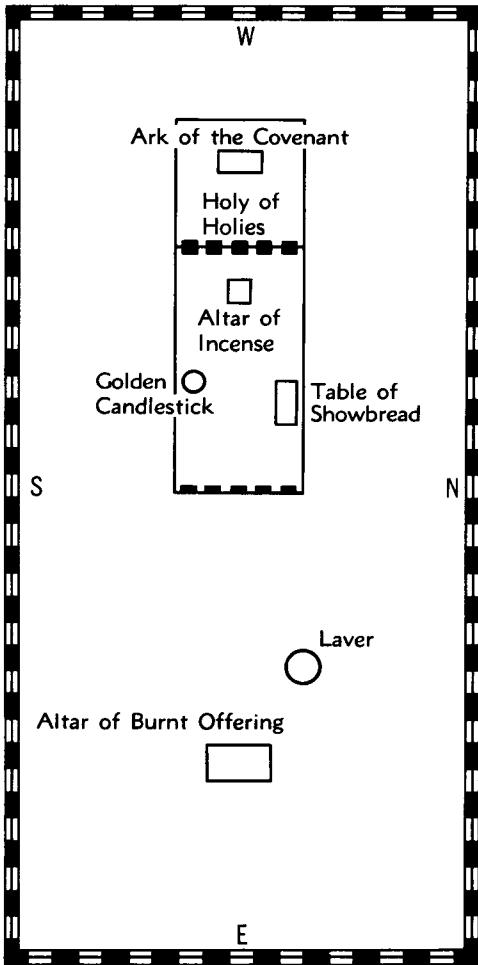

d) The Priestly writer also uses the name מִשְׁכַּן הָעֵדוּת, "tabernacle of the testimony" (Exod. 38:21, etc.), and more rarely אֹהֶל הָעֵדוּת, "tent of the testimony" (Num. 9:15, etc.), expressions paralleled by P's "ark of the testimony" (Exod. 25:22, etc.), and rendered in the LXX again by ἡ σκηνὴ τοῦ μαρτυρίου, where in all cases the reference is probably to the two tables of law. The Vulg. has *tabernaculum testimonii* except in Num. 10:11, where we read *tabernaculum foederis*.

2. **The tabernacle in P.** The biblical account of the tabernacle begins in the Priestly sources with Exod. 25-31, which contains (25:10-27:19) Yahweh's instructions to Moses in the form of a specification of sizes and materials, etc.; and continues with Exod. 35-40, largely a repetition in the past tense of Exod. 25-31, though the order of contents is different.

 2. Plan of the tabernacle and its courts

There are also considerable differences as to order, extent, and translation in the LXX version of chs. 35-40. There are further references to the tabernacle and its furniture in Num. 3:25 ff; 4:4 ff; 7:1 ff. There are also striking parallels to the tabernacle in the account of Solomon's temple (I Kings 6 ff), and in the account of Ezekiel's proposed temple (Ezek. 40 ff). The Letter to the Hebrews offers the first Christian interpretation of the priestly tabernacle.

The writings of Josephus and Philo; the systematic Jewish account of Jewish views in the third century A.D., Baraita; and the numerous and often conflicting views of Jewish and Christian commentators, reveal the difficulties of understanding the plan and specification of the structure, though fortunately main principles are clear. Figs. TAB 1-2.

a. Materials and furniture. God commands that the tabernacle is to be erected out of the voluntary gifts of the people. The materials are specified in Exod. 25:3 ff (cf. 35:4 ff): gold, silver, and bronze; blue and purple and scarlet stuff and fine twined linen; goats' hair, tanned rams' skins, goatskins, acacia wood, oil for the lamps (light), spices for the anointing oil and for the fragrant incense, onyx stones, and stones for set-

ting, for the ephod, and for the breastpiece. The three metals are used in descending value from the inmost sanctuary to the surrounding court. There was both ordinary and refined gold treated in various ways in special, hammered work for the cherubim and candlesticks, e.g. The bronze was an alloy of copper and probably tin. To the three colors (violet, purple, and scarlet) mentioned must be added, of course, the red of the rams' skins. There is no need to seek symbolical meaning in the colors. They simply represent what was available, though violet is prominent. Besides, the red of the goatskins finds a parallel in the pre-Islamic *qubbah*, which has been described as a small tent of red leather with a dome housing an idol which could be carried on a camel's back. Since black was the normal color for tents, the mention of red of the *qubbah* and the red of the goatskins shows that the tent of red leather is one of the oldest and most characteristic features of ancient Semitic religion. There was ordinary linen stuff, and the fine twined linen was a superior fabric from finer flax. Then tanned skins from rams and goats, and the durable wood of the acacia tree. The list of materials is followed by a definition of the purpose. The pattern is divinely revealed so that there can be made a dwelling place for the tabernacling presence of Yahweh (Exod. 25:8; 29:45; cf. Ezek. 37:27). It is this conception which dominates the Priestly account of the tabernacle and which is basic for the theology of the Jerusalem cultus.

The narrative proceeds in Exod. 25:10 with the construction of the ark, P's ark of the testimony, destined for the holy of holies. It had a more elaborate design than the ark of the other traditions, and was an oblong chest of acacia wood overlaid within and without with gold, approximately 3¼ by 2¼ by 2¼ feet, and it contained the testimony—possibly the Decalogue or possibly some other document of covenant requirements (cf., e.g., II Kings 11:12; Ps. 132:12). Before it were to be placed a pot of manna (Exod. 16:33 ff) and Aaron's rod that budded (Num. 17:10). Resting on the ark and on a gold molding around the rim of the ark, in the form of a solid slab of gold, was the mercy seat or propitiatory, כַּפֹּרֶת. At each end of the golden slab and one piece with it were the little figures of refined gold known as the cherubim. With their faces toward the slab and their wings arching overhead, they surrounded the sacred center of the holy of holies. For between the cherubim and above the mercy seat was the dwelling of the God of Israel (Exod. 25:22; 30:6; Num. 7:89). This ark was carried by means of poles which were left permanently in four golden rings on the two short sides (corners) of the ark. This position ensured that Yahweh could always face the way the camp was going. The relation of P's ark to the ark of the earlier traditions will be considered below.

The sacred writer now turns to the furniture of the outer shrine, the holy place, the table of the shewbread (presence) and the lampstand. The table for the N side of the holy place was of acacia wood overlaid with fine gold, as high as the ark but not so wide or long, decorated with a gold molding. It had rings and poles for carrying, the rings being close to a frame or rail which connected the four legs. Accessories to the table were gold plates for carrying and

holding the loaves of the presence, dishes or cups for the frankincense (Lev. 24:7), and large and small gold vessels for wine libations.

On the S side was to stand the seven-branched golden lampstand. The central stem stood on a tripod, and the stem extended to the first arm. The rest of the stem was the shaft, and from this six golden branches bent outward and upward. The almond was the model for the ornamentation, and there were two cups each on the base and the shaft, and three at intervals on each of the six arms, and a capital or knob—a rounded flower decoration—just below the place where each pair of branches joined the shaft. Each branch and the central shaft ended in a lamp, which either gave a perpetual light (Exod. 27:20; Lev. 24:2) or was lit at night only (I Sam. 3:3; cf. Lev. 24:3). The accessories, snuffers, snuff dishes, and oil vessels were also golden. A talent of gold (224.6 grams) was used to make the lampstand according to the divine pattern alluded to in Exod. 25:40.

According to Exod. 30:1-5 (=37:25-28), there was to be placed in front of the veil an altar of incense. There is, however, no mention of this in Exod. 25, where it should have occurred. There is, too, the persistent reference to the altar of burnt offering as "the altar" (100 times and more; e.g., Exod. 27:1); there is the reference in 30:10 to the Day of Atonement (Lev. 16), where no altar of incense is mentioned. There is also the probable absence of the incense altar from I Kings 7; Ezek. 41; and there are variants in the position and contents of Exod. 30:1-10 in the MT, Samar., and LXX versions. Probably, then, the section on the altar of incense is a later addition, for this incense altar is not mentioned in the LXX version of the recapitulation in Exod. 37. The altar was of acacia wood overlaid with pure gold, one cubit long and wide, and two cubits high. There were a golden molding, horns, rings, and poles. Perpetual incense was to be offered by the priests night and morning,* and annually atonement was to be made on its horns. Exod. 30:6 appears to suggest that the altar of incense was within the veil—i.e., in the holy of holies itself (cf. I Kings 6:22; Heb. 9:4). Fig. SHO 55.

b. The dwelling. The main narrative in Exod. 26 (=Exod. 36) turns to the tabernacle itself, and so to the curtains, for the tabernacle was a tent of ten curtains, each twenty-eight by four cubits. These ten curtains of violet, purple, and scarlet fabric with woven cherubim were to be joined in two sets of five, along each long side of which were to be sewed fifty loops of violet thread, and the two curtains were to be connected by fifty gold clasps, "that the tabernacle may be one whole" (26:6). Then over this there was to be a tent, a one-piece covering of goats' hair in turn made of five and six curtains coupled by hooks and clasps (bronze), of a total size of forty by thirty, so as to ensure that the tabernacle was completely covered. Again, the larger size meant that the goats'-hair covering overlapped the linen and allowed an extra fold in front (vs. 9). The two coverings could also be so arranged that the joins in each covering did not coincide. The tent was to have two coverings, one a covering of rams' skins dyed red, and the other a covering of skins of a dugong—unless one covering

of tanned rams' skins and goatskins is really intended (cf. 26:14; 40:19).

The curtains were supported by forty-eight acacia frames. For a long time it was thought that these frames were thick boards or beams, twenty on the N side, twenty on the S, and eight on the rear wall, each fifteen feet high, two feet three inches wide, and one foot six inches thick. These frames consisted of two long, light side arms, connected at top, middle, and foot by cross rungs, with two silver bases for each frame, each base having a mortise into which the extension of the side arms could fit. These silver bases were thus a continuous foundation around the dwelling. The frames were further held together by five bars, passing through golden rings and running along the three sides; the middle bar extending the whole length of the side, and the two members of the top pair and bottom pair alike running halfway along the side. The frames and the bars were plated with gold. The front, of course, had no frames, for it was simply enclosed by curtains. The interpretation of Exod. 26:22-25 is difficult, but the suggestion of a pair of frames fastened together at each corner of the W or rear end of the framework, and sloping upward and inward from their own bases to just under the top bar, is possible. These frames were thus projecting buttresses to strengthen the corners and to take the folds of the curtains. These four frames give the final total of forty-eight frames, and their eight bases, a total of a hundred bases. Fig. FRA 23.

Next came the veil, separating the holy of holies from the holy place, and the screen which served as the door of the holy place. The veil was of the best many-colored material, embroidered with cherubim, hanging from clasps and draped over four pillars of gold-plated acacia wood supported from four silver bases. Of the two parts thus separated by the veil, the outer was twice the size of the inner, just as Solomon's *hekal* was twice the size of the *Debir*—the oracle or inner part. Twenty cubits from the veil was the screen closing the dwelling on the E side. The screen was made of the same material as the screen at the entry of the court (27:16), was embroidered but not with cherubim, and hung from golden hooks on five gold-plated pillars of acacia wood supported by bronze bases, like the bronze bases of the court. The over-all structure of the tabernacle thus reveals three cubes, one for the most holy place, and the other two for the outer holy place. It has been much disputed whether these perfect cube measurements are internal or external measurements, for various indications support each point of view. Fig. TAB 1.

c. The furniture for the court. Having thus dealt with the furniture of the tabernacle and the tabernacle itself, the record now proceeds to the furniture of the court and the court itself. In each case the furniture is first treated as more important, for the dwelling and the court were but enclosures for the furniture. The first and most important item of the contents of the court was the altar (Exod. 27:1), the altar of burnt offering (30:28), the bronze altar (38:30). This altar was a hollow box of bronze-plated acacia wood, five cubits long and broad and three cubits high, with a horn projecting upward at each corner. Halfway down was a ledge (cf. Lev. 9:22), and below this a grating on all sides fitted with

bronze rings and with bronze-plated poles whereby the altar was carried. The origin and purpose of the horns remain obscure, but they were used for asylum (I Kings 1:50-51, etc.), and they were also smeared with blood in the service of the consecration of the priests (Exod. 29:12); in connection with the sin offering (Lev. 4:18-34); and on the annual Day of Atonement (Lev. 16:18). The grating around the four sides of the foot of the altar allowed the sacrificial blood to be dashed against the base of the altar through the network. The altar was thus a hollow box with a thin sheaf of metal, and merely in this form, hardly suitable for the purposes of fire sacrifices and the like. It is probably a description based upon and an imitation of Solomon's massive bronze altar (II Chr. 4:1, but not in I Kings).

The altar was to stand at the center of the court—the court of the tabernacle, a rectangle on an E-W axis, 100 cubits (150 feet) long and 50 cubits wide, two squares of 50-cubit sides. In the western of these two squares was the tabernacle, and in the eastern the altar, the altar being in exactly the same position in its square as the ark was in the holy of holies in its square. The court itself was screened from the Israelite camp, which lay beyond, by five white curtains 5 cubits high but of varying lengths. The long curtains were on the N and S sides and were each 100 cubits long. The W curtain was 50 cubits long, and on the E side there were two curtains each 15 cubits wide, leaving an opening of 20 cubits which could be closed by an embroidered hanging. The six curtains hung from poles which rested on or in bronze bases, the bronze showing the grade of a third sanctity appropriate to the court. The poles were held in place by cords attached to bronze pegs on the ground, and according to Exod. 38:19 they had silver capitals with silver bands (fillets) at the base of the capitals. It was intended that there should be a pillar for every five cubits of hanging, but then this would not agree with the number of pillars which Exodus states as belonging to each side. No solution to preserve both the symmetry and the mathematics has been devised, whether the corner pillars be counted once or twice in the numeration.

In the record there now appears a paragraph dealing with the provision of the oil for the lampstand (Exod. 27:20-21), but it is a passage which presupposes both the erection of the tabernacle (40:1-17) and the consecration of Aaron and his sons (ch. 29). Ch. 28 deals with the garments of Aaron and his son, ch. 29 with their ordination, and in 29:43-46 there is a renewed summary of the purpose of the tabernacle and in vs. 45 of the real secret of Israel's religion in terms of the exodus from Egypt and of the tabernacling presence. The section on the altar of incense (30:1-10) is followed by the census of the people to determine the offerings for atonement and for the service of the sanctuary (vss. 11-16). The following section (vss. 17-21) describes the laver, a bronze bowl on a bronze base, to hold water for the ablutions of the priests during the ceremonial. The separation of the section on the laver from the other is often thought to raise difficulties. Presumably the choice was to put the laver with the altar of burnt offering, or to regard it as the furniture subordinate to the requirements of the priest. But the laver is

dealt with very briefly; it is not mentioned in the directions for the march (Num. 4), and it appears in what is probably a secondary tradition of P (cf. 30:28; 31:9; etc.). There follow two sections concerned with the making and use of the priestly anointing oil (30:22-33) and of the incense (vss. 34-38). The remaining chapter of this first section deals with the appointment and investing of the foreman of the artisans, Bezalel, and his assistant Oholiab, and their able helpers, and with the law concerning sabbaths.

d. Erection of the tabernacle and its consecration. Like the pattern, place, and mode of erection, the time of erection of the dwelling is also revealed. The Lord instructs Moses to erect the tabernacle on the first day of the first month of the second year of the Exodus, nine months after the arrival at the sacred mountain (Exod. 19:1). Moses completes the erection, and then furnishes it with the various items in their appointed places. When all the work is finished, then the dwelling is ready for the divine Inhabitant, whose cloud now covers the tent of meeting and whose glory fills the dwelling. Henceforward Moses cannot enter, and the behavior of the cloud on or above the dwelling is the signal for Israel to advance or to remain encamped. When encamped, the tent of meeting is at the center of the camp with Levites on three sides, and with Moses, Aaron, and his sons on the fourth and E side. Then three tribes of Israel are on each side of the quadrilateral thus formed. One tribe in each of the four sides seems specially to be distinguished, and gives its name to that side of the camp. Judah occupies the center of the E side, the most sacred side. Ephraim is in the center on the W; Reuben in the S has the central position there. The number of Levites who served the tabernacle is no fewer than 8,580 (Num. 4:48).

These arrangements depict a diminishing of holiness from the center outward. At the center of the holy of holies is the mercy seat above the ark; then outside the veil is the less holy place; outside this again the court, then the dwellings of the priests, and then the main camp. In the same way there is a diminishing in the value of the metals used, fine gold at the very center, then ordinary gold, then silver, and lastly bronze. The best gold is used for the ark, for the mercy seat, for the plating of the table of the presence bread and its vessels; for the candlestick and its utensils; for the altar of incense, and for parts of the high priest's dress. Ordinary gold is used for the moldings and rings and staves of the ark, table, and incense altar, for the cherubim, for the hooks of the curtains, for the frames and bars, for the pillars of the veil and the screen, and for the other parts of the high priest's dress. Silver is used for the bases of the frames and of the pillars of the veil, for the hooks and moldings in the court. Bronze is used for the altar of burnt offering, for the bases of the court, and for the laver. The altar utensils, the firepans, the forks, the shovels, and the basins, are all likewise of bronze. The disposition of the altars shows the degrees of holiness and shows also the proper context of the various items. Just as the mercy seat is pure gold—for it is really the footstool of the presence—so the altar is of bronze, for it belongs to the court, to receive the offerings of the people. The same symbolic gradation is probably true of the dimensions and the

figures employed. The chief numbers are 3 (divinity), 4 (humanity), 7 and 10 (completeness), and their fractions and multiples. The holy of holies, like the New Jerusalem, is a perfect cube matching the perfection of the presence. The holy place is two cubes; and various ratios, mainly 2 to 1, of the chief numbers are used—the court is 100 cubits by 50, etc. It is this graduated holiness and perfection which also explain why the people may come as far as the court, the priests alone may enter the holy place, and only the high priest the holy of holies but once a year. Worship for Israel is “to draw near,” and the tabernacle’s organization and specification are a commentary on this activity of drawing near.

A blast from the silver trumpets was the signal to strike camp (Num. 10:1 ff), whereupon the priests entered the tabernacle and, taking down the veil, wrapped it round the ark (4:5 ff), adding two further coverings. In the same way all the furniture of the sanctuary was to be wrapped (4:7-14), and then fully wrapped and protected; the carrying by means of the poles was entrusted to the first guild of the Levites, the sons of Kohath. Likewise the second guild, the Gershonites, transported the curtains of the tabernacle, the tent of meeting with coverings, the sheepskin covering, the screen, and the court hangings and screen and the altar and the equipment, in two covered wagons drawn by four oxen supplied by the heads of the tribes. The third guild, the sons of Merari, removed the frames, bars, pillars, and bases of the dwelling, and the pillars and bases of the court in four wagons drawn by eight oxen. Then on the march the Levites marched in the middle of the line, with six tribes in front and six behind (Num. 2:17; but cf. 10:17 ff).

Such is P’s account of the sacred dwelling of the wilderness period—it was the place of divine revelation; it was the one place for worship and sacrifice. This double character means that it was the focal point of P’s view of the divine order of Israel’s cult, for it was in the center of the camp and the people, as the temple is in Ezekiel. Hence its symbolism.

After Numbers there is very little to learn about P’s dwelling. The ark is the leading feature in the passage of Jordan, but nothing is said of the tent of meeting. Then from Josh. 18:1; 19:51 we learn that the people of Israel set up the tent of meeting at Shiloh, where the arrangements for the division of the land were also made. Thereafter the ark is mentioned apart from the tent, though, of course, the tent may be assumed to be present (cf. I Sam. 2:22b, but this is not in the LXX). After the destruction of Shiloh, the ark eventually was deposited in the house of Abinadab at Kiriath-jearim, and this man consecrated one of his sons to tend it, presumably in the absence of the Levites, who alone were permitted to touch the ark. Following the destruction of Shiloh, the priests of Eli’s house appear to have migrated to Nob. There emerges a priestly community of eighty-five persons, eventually slain by Doeg the Edomite as a punishment for their assistance to David (I Sam. 22:18-19). These priests had helped David by giving to him the bread of the presence and Goliath’s sword, which was kept wrapped in a cloth behind the ephod. This story clearly implies a sanctuary. There is no reference to the tent, but it may be assumed (ch. 21).

3. The tabernacle in the early traditions. JE also speaks of the tent of meeting and of the tent in Exod. 33:7-11; Num. 11:16-17, 24, 26; 12:5, 10; Deut. 31:14-15; but these passages reveal a different picture. In Exodus the tent of meeting is a simple tent pitched outside the camp (Exod. 33:7; Num. 11:26-27; etc.). Moses and other Israelites went out to this tent to seek their God, and it is clearly not Moses’ tent but a divine tent different but parallel to P’s tent. It had but one guardian, Joshua, an Ephraimite, whereas P’s tent was tended by 8,580 Levites. The tent in E then was far simpler in every way than its counterpart in P. Further, it is claimed that the verbs in Exod. 33:7-11; Num. 10:17-21 are frequentative and describe what was customary. Further, if Exod. 33:11 is literally meant, Moses was himself able to pitch the tent, whereas the elaborate, weighty, and fairly large tent of meeting in P must have required the combined efforts of many persons, though P claims in Exod. 40:16-34 that Moses erected the tent of meeting singlehandedly, which, in view of the size of the curtains alone, was a well-nigh impossible task. Substantially the same account of the tent appears in the stories of the seventy elders (Num. 11:16-17, 24-30), of Miriam’s leprosy (ch. 12), and of Joshua’s commission (Deut. 31:14-23).

It is reasonable to assume that the JE tent continued to shelter the ark at least until the days of Shiloh (cf. Ps. 78:60). The temple of Yahweh at Shiloh had a door and doorposts, and this suggests an edifice more like a temple than a mere tent, though Samuel’s duties are reminiscent of those of Joshua (I Sam. 3:15). Thereafter the tent does not seem to have been mentioned with the ark, and it has been supposed that tent and ark had different locations and therefore different histories. But then David pitched a tent for the ark after he had brought the ark to Jerusalem. The narrative appears to imply that David’s tent was not the tent of meeting, but a new tent which he had provided and pitched in readiness for the advent of the ark to his new capital (II Sam. 6:17; 7:2; I Chr. 16:1; 17:1). But testimony is not lacking to the presence of the tent continuously. From Egypt to David’s day Yahweh had been moving about in a tent for his dwelling (II Sam. 7:6). The text should probably read: “from tent to tent and from tabernacle to tabernacle” (cf. I Chr. 17:5). Before David’s tent stood the altar, with the customary right of asylum (I Kings 1:50), and within it there was at least the horn of oil (vs. 39). Following the erection of Solomon’s temple, the tent of meeting and all its vessels accompanied the ark into the temple (8:4), though it has been usual to dismiss this verse as a gloss—a very arbitrary solution. It is possible that II Sam. 7:1-7 implies more than one tent and also correctly suggests that Yahweh was accustomed to dwell in a simple tent. It is therefore very likely that, after the settlement, the tabernacle was set up permanently at Shiloh as the amphictyonic shrine (Josh. 18:1; 19:51); and was later removed from there to Nob in the days of Saul. Then it was eventually removed to Jerusalem to be David’s tent, unless that was a new construction, and thence into Solomon’s temple.

4. The problem of the tent and the tabernacle. It would be natural and reasonable to infer or take

for granted from the Pentateuch that the JE tent and the P tabernacle were really one and the same. But there are grave difficulties in the way of a simple identification. Thus, P's narrative of the structure and erection appears to be a very precise and matter-of-fact account, but a closer examination reveals that there are so many obscurities and omissions that it would not be possible on the basis of P's present instructions to erect such a structure as his tabernacle. No details are given for the making of the cherubim (shape); for the feet (or corners) of the ark and the table; for the thickness of the gold of the mercy seat, of the table, of the frames—and how the great weight of the overhanging curtains was borne without the whole structure falling inward. Then, too, nothing is known of the size of the two outer coverings of the tent, the material of the lamps on the lampstand, the various moldings, and the ledge around the bronze altar. Especially difficult is it to know how the hollow box sheathed in bronze serving as the altar could have withstood the heat necessary for the burning of animal sacrifices. Similarly the sons of Merari have but four wagons assigned to them for the transport of much bulky and heavy materials. There were, e.g., one hundred bases of solid silver which each weighed ninety-six pounds (Exod. 38:27)—a total of more than four tons—not to mention the hundreds of feet of curtain for the court and the three hundred bronze bases. If, therefore, the instructions to Moses are intended as a detailed specification, then the omissions, the obscurities, are a serious difficulty.

Also, the question arises whether the Israelites in the desert were in a position to erect such a sanctuary. There were gifted foremen who are mentioned by name, and with them a list of helpers. But even so, were all the skills of joinery, embroidery, casting, etc., present to the degree required for the erection of the tabernacle? Several centuries later, Solomon for his temple had to have recourse to Phoenician skilled labor for his metal work (I Kings 5:6; 7:13-14, 40, 45). Then, too, the amounts of the materials required are very considerable. Precious stones, linen, dyes, oil for the lamps, not to mention about 1¼ tons of gold, about 4 tons of silver, and about 3 tons of bronze. All this could have been readily forthcoming if the desert population of Israel had been upwards of two millions (Num. 1); but a smaller figure, and certainly at the very outside limit ten thousand people, is nearer the mark, and such a smaller group of people could not have possessed so much precious metal.

The third group of difficulties is seen in the many differences between the tent of E and the tabernacle of P already noted, and in the virtual silence of the traditions concerning the tabernacle from the settlement to Solomon's temple. It has been claimed that such references as occur are due to the Chronicles (I Chr. 16:39; 21:29), psalmists (Ps. 78:60, etc.), and editors of various glosses (e.g., I Kings 8:4).

It is such considerations as these that have led the critical movement to treat P's tabernacle as not historic and to find the explanation of the priestly portrait in ideal rather than in historical situations. As a corollary of the Graf-Wellhausen position and with the acceptance of P as a postexilic author devoted to priestly aims and ideals, P's tabernacle has been seen and explained as an ideal fiction based on Solomon's

temple. Wellhausen claimed that the tabernacle was a copy of Solomon's temple and not its prototype (cf. Wisd. Sol. 9:8). How else can one explain the giving of one direction about a simple earthen altar (Exod. 20:24-25), and then another and totally different instruction a few weeks later about a bronze altar (27:1-8), without supposing that in fact a very long interval of time had passed, and Exodus' bronze altar was really not a sudden correction of text in ch. 24, but one much later and modeled on Solomon's bronze altar (II Chr. 4:1; cf. I Kings 8:22, 64; 9:25; II Kings 16:14-15)? The Graf-Wellhausen reconstruction has thus given a sequence in which E's tent is the shadowy original; then Solomon's temple, and then Ezekiel's ideal reconstruction, and lastly P's own tabernacle follow. After the end of Judah and the destruction of Solomon's temple, both Ezekiel in the Exile and P after it attempt the reconstruction of the relationship between Yahweh and Israel. Both see the problem as one of finding a worthy medium for the dwelling of Yahweh in the midst of his people—in short, the doctrine of the tabernacling presence. Accordingly, following on the extirpation of idolatry, Ezekiel sketches his ideal temple as the future location for the return and manifestation of the divine presence. His ideal is thus future, eschatological, and messianic. On the other hand, P describes his ideal in terms of the desert period of Israel, and his ideal is thus historical, classical, and Mosaic. But both representations are ideal transformations of Solomon's temple, P by diminution of dimension. The followers of the Graf-Wellhausen school then came to regard P's tabernacle as nonhistorical—largely an ideal fiction of the postexilic priestly writers.

It is, however, well known that the Graf-Wellhausen hypothesis is undergoing considerable modification. Its religious and evolutionary aspects are being rejected by an increasing number of scholars, and its literary aspects are being modified in a more conservative tendency. Its documents, J, E, D, and P, are no longer points on a date line, but represent streams of tradition, and in the flow of the stream is material both ancient and new. There is thus a new respect for the tradition of the P documents, as there is also a growing respect for some of the special standpoints of the Chronicler. It follows, therefore, that P's account of his tabernacle must be reassessed in the light of the new approach to and new understanding of Pentateuchal criticism. This may be achieved without abandoning the distinctive entities corresponding to the JE, D, H, P, symbols.

5. Reassessment of P's account of the tabernacle. This reassessment may perhaps be illustrated by the following examples. There is, e.g., the problem of access to the dwelling. As is well known, the priestly and Levitical system provides that the court may be visited by the people, the holy place by the priests, and the holy of holies by the high priest once a year. There is thus a threefold degree of access. This is reminiscent of the picture in the narrative portions of Exodus. The people at Sinai are gathered together near the altar at the foot of the mountain (Exod. 19:17; 20:21; 24:2-8). But Israelite representatives of the priesthood and seventy of the elders of Israel make a nearer approach. They go up to the Lord, they worship afar off, and they

receive a vision of God (vss. 1-2, 9-11). But Moses goes farther—enters the cloud and goes on the mountain and is there for forty days and nights (vss. 12-18, etc.). People, priests and elders, and Moses represent degrees of access to God. It is clear that there is a rough parallel between the threefold narrative access of Exodus and the threefold Levitical access of P. It is accordingly claimed that the traditions of the exodus narrative reflect the stamp of postexilic Judaism, and in particular the degrees of access in the narrative reflect the Levitical degrees of access. But if this is so, how are we to explain the association of the elders with the priests in the second degree of access? We have to suppose that the priestly editors who prohibited the access of laymen to the holy place yet permitted the elders access to the mountain. But then why should they invent such a circumstance, which could constitute such a damaging precedent to their own rules? It is therefore much easier to suppose that, as elsewhere in judicial procedure, the elders were historically associated with the priests in this second degree of access at Sinai. It is easier to suppose that later Levitical degrees of access, which were stricter, were a development out of the exodus traditions of access, than to suppose that the priestly editors invented a picture of degrees of access at Sinai which contradicted their own privileges.

Again in regard to the tabernacle itself, there is the prior, simpler tradition of the tent of E. But it is almost universally supposed that P's tabernacle is based on Solomon's temple. But why should P project his ideal into the past behind Solomon's temple? In view of the fact that there was a tent in the tradition, it is equally feasible that P's tabernacle is an elaboration of E's tent, with, of course, much difference and even contradiction, which itself was the model from which Solomon in part drew the design for his own temple. No doubt, there was much cultic innovation in Solomon's temple and much Phoenician precedent, but there was probably much Israelite inheritance too. In fact, it seems possible to consider the tabernacle, not as a postexilic idealization of Solomon's temple, but as one of the missing links, even if in idealized form, between E's tent and Solomon's temple. To see the cherubim of Solomon's temple as taken from the cherubim of the tabernacle is to see the possibility of a new place and a new interpretation, not to say a new spirit, in the understanding of P's tabernacle. It is probable, therefore, that the hypothesis governing future study of the tabernacle will not be that it is the priestly idealization of an institution that preceded Solomon's temple. If credence can be given to the Chronicler's tradition that the tabernacle was in existence before Solomon's day and that it was in the great high place at Gibeon (I Chr. 16:39; 21:29; II Chr. 1:3; but cf. I Kings 3:4), then a new vantage point for the survey of the problem will have been gained.

This vantage point will have for its working hypothesis, not that E's tent and P's tabernacle are irreconcilable traditions, but that the two traditions are probably capable of closer integration, for if it is true that P's tabernacle ill suits the desert period, it is equally true that E's simple tent ill suits the conditions of the amphictyonic shrine which have been shown to be normative during the period of the

judges. How far is it possible to progress in the reconciling of the divergent traditions? There are two extreme positions which probably cannot be sustained. The first is that P's tabernacle was a pious fiction projected by an exilic or postexilic writer into the Mosaic age. The second is that P's tabernacle was identical in every aspect with E's tent. Unlikely, too, is the view that E's tent was really Moses' tent, with which he made do until P's tabernacle was erected (cf. Exod. 33:7 LXX). E's tent was in existence after the tabernacle was erected. There is no suggestion that E's tent was temporary by intention. Further, Exod. 33:11 implies that Moses' own tent was in the camp.

Real substance remains in the difficulties which suggest desert Israel did not have the craftsmen, the materials, or the wealth to erect the tabernacle. There is not so much substance in the view that the instructions for erection are full of omissions, obscurities, and the like. These omissions may not be due to any ideal point of view, but may actually represent a summary statement of what was actually done, pointing to the fuller knowledge and actual skills which in part were not, and in part could not be, transferred to writing. This would be even more true if some of the written parts were contemporary with the structure itself. The argument that the tabernacle does not figure in Judges and in the early monarchy is at best an argument from silence, and there are pointers to the contrary. It is also probable that some of the arguments based upon the differences between E's tent and P's tabernacle have been overdrawn, particularly in relation to the supposed different location, one outside the camp, and the other central within the camp. It is claimed that Exod. 33:7-11 should be interpreted as Moses' normal practice. The verbs are taken as frequentative. It is also generally agreed that this passage presupposed an earlier passage in which the JE traditions spoke of the making of the tent. That missing passage might have the effect of showing that pitching the tent outside the camp was not Moses' habitual custom, but that it represented a temporary action. One scholar has shown the importance of understanding Exod. 33:7 in terms of the withdrawal of God's presence from Israel as a result of the golden-calf episode. Thus, in the context following Israel's wickedness at Sinai there is first the expulsion order (vs. 1); the denunciation of the people and denial of the "presence" (vs. 3); then the removal of the ornaments because of the bad tidings concerning Yahweh's denial of the presence (vss. 4-6); then presumably an instruction to erect a tent, which is to be a portable shrine and is to serve the people after they have left the mountain, as a substitute shrine for the mountain sanctuary. Then Moses pitched the tent outside the camp, thereby symbolically showing the denial of the presence to the camp. Even if the verbs are frequentative, and it was Moses' custom always to pitch the tent outside the camp, then it is clear that this was limited to his life in the desert. With the passing of the generation condemned to die in the desert and not to enter the land, the symbolism of the tent outside the camp was no longer necessary, and thereafter ark and tent resided and moved in the center of the camp. But it is probable that the pitching of the tent outside the

camp was exceptional, for even this symbolism by inference shows that the proper place of the tent was in the camp. P, in carrying the central position back to the desert period, has simply extended to the desert what was actual after the settlement, because he has ignored the wickedness of Sinai and its consequences. Similarly the reference to the ark as setting out ahead of Israel in Num. 10:33 suggests that this only occurred when a camping ground had to be found. It even appears that in such movements the people were left behind, for it is an exceptional procedure, and, when accomplished, the ark, wrapped in the curtains of the tent, returned to the myriads of Israel. The normal procedure, then, on ordinary journeys, when ark (and tent) and people moved together, is described in Num. 10:17-21. These and other considerations suggest that the different locations of the tent in E and the tabernacle in P are more apparent than real, and that these differences are related to the theological ideas.

Of decisive importance too is the controlling doctrine of the tabernacling presence. Certainly this is central to the thought of Ezekiel and P, but it is also characteristic of Levitical theology at Jerusalem. It has also been shown that this doctrine is substantially older. It is related to ancient conceptions on Israel like the ark, the tent, and the experience of Moses and Israel (Exod. 17:7). If these traditions are reliable, then the tabernacling presence is probably best explained as Moses' greatest contribution to desert Israel's faith, and in that case P's traditions concerning the tabernacling presence are a later edition of an earlier and continuing fact. It is this doctrine of the presence which is the magnet that attracts P's tabernacle into the desert period. P's tabernacle is thus no pious fiction, but an ideal elaboration of an ancient doctrine and its accompanying institutions. After all, it is the Mosaic age which is the creative period of Israel's religious history, and it seems incredible that a doctrine like the tabernacling presence, which is characteristic of many periods and figures in many books in the OT, should not also be found in the desert period. It has been found possible to date early Israelite poetry to the thirteenth and twelfth centuries. Similarly, basic concepts of the prophets and Israelite apodictic laws probably belong to this desert period. Also, Israel's laws of sacrifice in Leviticus show affinity with common Semitic practice. It is not unreasonable to find the basic origin of the "presence" theology in the faith of Moses. Similarly again, efforts to trace a Proto-P show a new respect for the historical traditions of P, which are sometimes even more reliable than those of the older sources.

But when all is said and done, P's tabernacle, as now described in Exodus-Numbers, is hardly the desert structure with which Moses worked. But within P's account there are certain features which connect with the desert life. P's tabernacle is a tent, made of tent curtains: it has a covering of red leather which, like the acacia wood, is a product of the desert. On this basis one scholar has isolated all the typically desert characteristics of the tabernacle; and from these features considered to belong to the early source of P, he seeks to construct the actual Mosaic tabernacle.

In P's use of tabernacle terminology, such as the verbs "to tabernacle" and to "dwell," P's effort to find appropriate terminology for his doctrine of the presence may be detected. Wrestling as he was with the polarity of transcendence and immanence, P rescued and restored a desert vocabulary "genuinely archaic" to express this polarity. But the desert vocabulary itself points to a rudimentary apprehension of the doctrine. The desert nucleus of the tabernacle in P is now becoming apparent, and it centers in a doctrine and its terminology, and an institution of desert materials and construction which expressed this doctrine. One cannot even be certain that the cubelike dimension of the structure necessarily points to Solomon's temple as its original, for Moses and the Levites, as their names show, were assimilated in some degree to Egyptian culture. On the other hand, the frames of the tabernacle are reminiscent of the throne room of El at the source of the rivers, and it has been suggested that the occurrence of the same word in Ras Shamra suggests that El's room was something like a trellis pavilion.

Yet to say that there is a core of desert portrayal in P's tabernacle and that P's account must accordingly and in that sense be used to supplement E's picture of the tent, is not to claim that E's tent and P's tabernacle are identical. They were not and they never were. It has been suggested that the solution is to be found in II Sam. 7:6: "I have been moving about in a tent for my dwelling." The parallel in I Chr. 17:5: "I have gone from tent to tent and from dwelling to dwelling" (but not LXX), has been adopted as the correct text for II Sam. 7:6 also, and this would give a number of tents and dwellings. But though the text in I Chr. 17:5 is too uncertain for use, yet the idea of more than one historic tent may afford a solution.

There was, first, a tent erected by Moses which served as a portable shrine, normally housed at the center of the camp, but occasionally at least in the desert period pitched outside the camp to symbolize the withdrawal of Yahweh's presence. This tent, with its ark, at least, if no other pieces of furniture, was the dwelling of Yahweh and gave visible expression to the new doctrine and faith of Yahweh's tabernacling presence among his people.

There was next the sanctuary at Shiloh, which appears to have been a more permanent structure.* This suggests that the curtains and other fabric portions of Moses' tent had by this time decayed after the hard usage of the wilderness wanderings and the settlement in Canaan. But the ark remained and either old or new furniture, such as a lamp, a table of shewbread, and the like. The Shiloh sanctuary thus replaced the perishable parts of the old Mosaic tent in a shrine more suitable as an amphitryonic center for the Israel of that day. Fig. SHI 44.

The destruction of Shiloh was followed by the separate adventures of the ark: Philistia, Kiriath-jearim, Jerusalem; and of remnants of the tent and its furniture, such as the table of the shewbread, etc.

So far, then, there has been only one tent and its survival in remnants. The second tent is that of David. In bringing the ark to Jerusalem, David was reviving Mosaic tradition. But this ark was set "in its place, inside the tent which David had pitched for it"

(II Sam. 6:17). It is quite reasonable to see in this tent David's revival of the traditions of the tent. David's tent could hardly be Moses' tent after some centuries of use, so it was probably a new tent. If it was a new tent, then it is but a short and reasonable step to concur in the suggestion that P's tabernacle account reflects David's tent. It has been further suggested that "in its place" in II Sam. 6:17 suggests the royal tent had a holy of holies, דְבַיִר. Near to it must have been an altar of burnt offerings, where David, according to the same verse, offered burnt offerings and peace offerings before the Lord. From I Kings 1:50; 2:28-30 has been inferred at least an altar of burnt offering in the court, and possibly a second horned altar within the tent—i.e., either the altar of incense or else a table of presence bread. Perhaps II Sam. 7:18 implies the veil before the ark.

To associate P's tabernacle or something very like it with David's tent is part of an increasing tendency to date various documents and lists in the P document to premonarchic and early monarchy days. Thus the census lists of Num. 1; 26 and the lists of the cities of refuge and the Levitical cities (Josh. 21; I Chr. 6) almost certainly belong to the days of David, while the priestly list of stations of the Exodus (Num. 33:1-48) and the list of spies (13:4-16) also belong to the period of which they speak. In the same way then, and in view of the long history of transmission which Exod. 25-31 reveals, it is quite feasible that the tabernacle records of P could reflect the Davidic tent. Then, if this is true, P's tabernacle will not be an idealized copy of the temple of Solomon, but not less than one of its actual prototypes. On the older view the catastrophe of the Exile was seen to be an appropriate time for the flowering of the idealism of Ezekiel and P. The newer view, in suggesting the days of David, points to an actual revival of covenant theology in the Davidic kingship (II Sam. 7; Pss. 72; 89), and to the revival of Mosaic themes in ark and tabernacle and presence.

5. The tabernacle in the NT. The influence of the terminology is to be seen in such phrases as John 1:14: "The Word . . . dwelt [i.e., 'tabernacled'] among us," and the laver or "washing of regeneration" (Tit. 3:5). Then there are references to the tabernacle in Acts 7:44; Rev. 13:6; 15:5; 21:3. The Letter to the Hebrews sets forth the Christian interpretation of the Mosaic tabernacle. Its titles show the presence of God, his righteousness, and his "conversableness." The furniture of the court symbolizes man's approach to God, just as the furniture of the most holy place represents God's approach to man in holiness, grace, and sovereignty. According to Hebrews, the tabernacle is modeled on a heavenly pattern (8:5); it has its divine prototype (8:2, 5; 9:11), the "greater and more perfect tent"; it has a symbolic meaning for the writer's age (9:9), but the way into the sanctuary is not yet opened as long as the outer tent is still standing. But when Christ appeared, he entered once for all, not into the human sanctuary, but into heaven (9:24). Similarly in Rev. 21:3 the dwelling of God with men is identified with the Holy City, the New Jerusalem, coming down out of heaven, dwelling among men, and removing all tears, sorrow, pain, and death.

But even heaven and the New Jerusalem are not

the real culmination of the tabernacle image. After all, the tabernacle and the New Jerusalem are only places. What is of chief significance is that the tabernacle is the place of the presence. The tabernacle thus properly belongs to the theology of the Incarnation. No doubt, the idea of the presence dwelling in a place had begun to give way even in the OT to the idea of the presence living in a person. But this personifying of the presence image of OT faith took place fully in the person of Jesus Christ, "for in him all the fullness of God was pleased to dwell" (Col. 1:19; cf. 2:9). Thus in the NT the tabernacle finds a double fulfilment: as a place, in heaven and in the New Jerusalem; as a personified image, in the body of Jesus Christ (cf. Rom. 8:9; I John 3:2; Rev. 13:6). The tabernacle of the OT as the place of the presence is the principal bridgehead in the OT to the doctrine of the Incarnation.

TABLE. The translation of many different words in the English Bible (see § 1 below). The word covers a variety of meanings. The tables mentioned in the Bible were used for eating, ritual, money-changing, and writing.

1. Terminology
 2. Tables for eating
 - a. Development
 - b. Tables of kings
 - c. Tables of commoners
 - d. Manners
 - e. NT tables
 3. Tables for ritual
 - a. The table of the bread of the Presence
 - b. Other Hebrew sacrificial tables
 - c. Idolatrous tables
 - d. The table of the Lord
 4. Tables of money-changers
 5. Tables of the law
 6. Figurative references
- Bibliography

1. Terminology. The following words are translated "table":

a) לֶחֶם , meaning: table for eating (Judg. 1:7 and often); table of the bread of the Presence (Exod. 25:23 and often); other temple tables (Ezek. 40:39-43); altar of burnt offerings (Mal. 1:7); heathen ritual table (Isa. 65:11).

b) לֹחַ , meaning: table of the law (Exod. 24:12 and often); TABLET (KJV "table" in Prov. 3:3; 7:3; Isa. 30:8; Jer. 17:1; Hab. 2:2).

c) כּוּסֵה , COUCH (KJV "table" in Song of S. 1:12).

d) τράπεζα , meaning: table for eating (Matt. 15:27); communion table (I Cor. 10:21); pagan ritual feast (I Cor. 10:21); table of the bread of the Presence (Heb. 9:2); by metonymy, FEAST (KJV "table" in Rom. 11:9); table of money-changers (Matt. 21:12).

e) Πλάξ , meaning: TABLET of the law (KJV "table" in II Cor. 3:3; Heb. 9:4); writing "tablet" (KJV "table" in II Cor. 3:3).

f) Πινακίδιον , "tablet" (KJV "table" in Luke 1:63).

g) Some Greek MSS have κλινών (Mark 7:4; KJV "tables"; RSV mg. "beds" is better), not found in some of the best MSS (N B) and so omitted in the RSV text.

h) The RSV introduces the word "table" in translating: פָּנָיו (lit., "his face") in Gen. 43:34; II Kings 25:29; Jer. 52:33; שָׁבַע (lit., "he sat") in I Sam. 20:5; and various Greek words meaning "to recline or sit at table"; ἀνακλίνω (Matt. 8:11); ἀνάκειμαι (John 12:2; 13:28; in both verses the KJV also inserts "table"); κατάκειμαι (Mark 2:15); κατακλίνω (Luke 7:36); συνανάκειμαι (Luke 7:49); ἀναπίπτω (Luke 11:37).

2. Tables for eating.

This is the most common meaning.

a. *Development.* The root meaning of יָחַץ , "skin, hide," indicates that it was originally a piece of leather like the *sufrah* which the Bedouin of today sometimes use as a table. Isa. 21:5 pictures the Medes and Elamites as using a leather or low table, for they sit on rugs. Significantly, tables are never mentioned in the patriarchal narratives. The earliest table for eating in the Bible is that of a Canaanite king at the time of the Israelite conquest (Judg. 1:7). In Egypt representations of tables for eating are rare before the New Kingdom. See the Tables on the Megiddo Ivory, ca. 1200 B.C., Fig. BAN 19.

b. *Tables of kings.* The table of Adoni-bezek (Judg. 1:7) was evidently large and elevated, for many of his conquered enemies ate scraps under it. King Saul's table was also large, for many of his court ate at it (I Sam. 20:29, 34). The Queen of Sheba was amazed at the food of Solomon's table (I Kings 10:5). Various people ate at the table of David (II Sam. 9:7), especially of Solomon (I Kings 2:7; 4:27—H 5:7), of Jezebel (I Kings 18:19), and of Nehemiah (Neh. 5:17). Sometimes this meant eating at the expense of the ruler, not literally at his table.

c. *Tables of commoners.* The prophet of Judah ate with the old prophet of Bethel at a table (I Kings 13:20). The family of Shunem provided a table among the furniture of Elisha's room (II Kings 4:10).

d. *Manners.* Jesus the son of Sirach condemns miserliness at table (Ecclus. 14:10), and he devotes a long section to table etiquette (31:12—32:13).

e. *NT tables.* The Greek words listed in § 1 above (under h), if taken with their root meaning, indicate

that reclining was the usual posture at table in NT times. Following the Greek example, at formal meals the table was U-shaped, to permit servants to enter with food. The guests reclined on couches around the outside of the table, so that the women mentioned in Luke 7:38 would have no difficulty in anointing the feet of the reclining Jesus and at the Last Supper John's head could naturally have been near Jesus' chest (John 13:23). The usual table was evidently quite high, for dogs could eat scraps underneath (Matt. 15:27).

3. *Tables for ritual.* a. *Table of the bread of the Presence.* The structure of this table in the tabernacle is described in Exod. 25:23-30; it was of acacia wood, 2 cubits long, 1 cubit wide, and 1½ cubits high, overlaid with gold, and provided with rings and poles for carrying. It was consecrated by the sacred anointing oil (30:27) and placed on the N side of the holy place, outside the veil of the holy of holies (26:35). On it every sabbath the priest placed the fresh BREAD OF THE PRESENCE (Lev. 24:5-7). The Kohathites were in charge of carrying this table (Num. 3:31), and its arrangement for transportation is described in Num. 4:7-8. Solomon made a new golden table for the bread of the Presence in the temple (I Kings 7:48). After Ahaz defiled the temple with idolatry, its furniture, including this table, was purified by Hezekiah (II Chr. 29:18). It was doubtless taken or burned by the Babylonians in the capture of Jerusalem. The table of the second temple was taken by Antiochus Epiphanes (I Macc. 1:23), and Judas Maccabeus made another one (I Macc. 4:47-51). The table was taken from Herod's temple by the Romans and was represented among the spoils on the Arch of Titus in Rome. The Mishna speaks of a complicated system of golden props and rods above the table to support and separate the loaves (Menahoth XI.6).

b. *Other Hebrew sacrificial tables.* According to I Chr. 28:16, David gave silver to Solomon to make tables for the temple, and II Chr. 4:8 says that Solomon made ten tables for the temple (which some think were for the bread of the Presence). Ezekiel lists twelve temple tables: eight for slaughtering the sacrifices (40:39-41) and four for the instruments of sacrifice and the pieces of flesh (vss. 42-43). Similarly the Mishna (Shek. VI.4) lists thirteen tables in the temple: eight of marble for rinsing the inward parts of the sacrifices, one of marble for parts of the offering, one of silver for the sacrificial instruments, one of marble on which the new bread of the Presence was laid, one of gold for the old bread, and the golden table of the bread of the Presence. It is uncertain what temple tables or altars are intended in Ezek. 41:22; 44:16.

c. *Idolatrous tables.* Isa. 65:11 condemns idolaters who "set a table" (perhaps a sacrificial feast) for Gad, the god of fortune. Bel 13—G 12 refers to a table on which food and drink were placed before the god Bel in Babylon. In I Cor. 10:21 the "table of demons" means a pagan sacrificial meal. E.g., Oxyrhynchus Papyrus 110 gives an invitation to supper "at the table of the Lord Serapis."

d. *The table of the Lord.* In Mal. 1:7, 12, this is the altar of burnt offering. In I Cor. 10:21 the phrase refers to the communion table.

4. **Tables of money-changers.** These were small trays on stands. Jesus overturned these tables in the temple in protest against cheating and commercialization (Matt. 21:12; Mark 11:15; John 2:15). See MONEY-CHANGERS.

5. **Tables of the law.** The two tables of the Ten Commandments are called "tables of stone" (Exod. 24:12), "tables of the testimony" (Exod. 31:18), and "tables of the covenant" (Deut. 9:9). God promised them to Moses (Exod. 24:12), wrote them with his own "finger" (Deut. 9:10), and gave them to Moses on Mount Sinai (Exod. 31:18). Because of the sins of the people, Moses broke these first tables (Exod. 32:15-19; Deut. 9:9-17). Then Moses made new tables and went up the mountain; the Lord wrote on the new tables and gave them to Moses, who placed them in the ark (Exod. 34:1-4, 28-29; Deut. 10:1-5). The tables were still there in Solomon's day, according to II Chr. 5:10 (cf. Heb. 9:4). Perhaps these tables were like small Egyptian stone steles, which were often rounded at the top.

6. **Figurative references.** In Ezek. 39:20, God's table stands for the slain of Gog's army, who are eaten by birds and beasts. In Prov. 9:2, Wisdom's table symbolizes the benefits of godliness. The "tables" (KJV), or "tablets," of the heart in II Cor. 3:3 are a reference to the souls of the Corinthian Christians.

TABLELAND [ארץ המישור, המישור, the level place]; KJV PLAIN. The OT designation for that part of the fertile Transjordanian Plateau between the Arnon and Heshbon (Josh. 13:15-17; see PALESTINE, GEOGRAPHY OF). Although assigned to the tribe of Reuben (Deut. 4:43; Josh. 20:8), it was Moabite territory during the monarchy (Jer. 48:21-25). Among its famous cities (Josh. 13:15-21) Dibon and Medeba are well-known Moabite strongholds. See MOAB; PLAIN.

L. E. TOOMBS

TABLES OF DUTIES. See LISTS, ETHICAL.

TABLET. A translation of several words in the Bible:

a) לוח (Prov. 3:3; 7:3; Isa. 30:8; Jer. 17:1; Hab. 2:2) is usually translated "TABLE" (an archaism, meaning "tablet"). The word is also used to refer to wooden planks (Ezek. 27:5), metal plates (I Kings 7:36), and a writing surface of stone (Exod. 24:12; 31:18; etc.). The NT equivalent of לוח is πλάξ (I Cor. 3:3; KJV "table"; cf. Heb. 9:4).

b) The גליון (Isa. 8:1; KJV "roll") was probably a wooden tablet.

c) The πινακίδιον (Luke 1:63) was likely a wax writing tablet. See WRITING AND WRITING MATERIALS.

In the KJV "tablet" renders כימוז in Exod. 35:22 (ARMLET); Num. 31:50 (BEADS), and בית נפש in Isa. 3:20 ("perfume boxes"; see PERFUME).

R. J. WILLIAMS

TABOR tā'bor [תבור]. A Levitical town in the territory of Zebulun (I Chr. 6:77—H 6:62). It does not appear in the parallel list in Josh. 21:34-35, which may indicate errors in one or both texts. If the Chronicles reading is correct and there was a town named Tabor, it must have been on or near the hill of the same name. See TAVOR, MOUNT.

G. W. VAN BEEK

TABOR, MOUNT [הר תבור]. A hill in the Valley of Jezreel having important associations with the judges of Israel and with Christian tradition. Mount Tabor, known in Arabic as Jebel et-Tor, is an isolated hill situated in the NE corner of the Valley of Jezreel, approximately six miles E-SE of Nazareth and twelve miles W-SW of the S end of the Sea of Galilee. Its sides rise steeply from the Valley of Jezreel and curve gently in at the top to form a dome-shaped summit. The summit surface is roughly rectangular and measures slightly more than a half mile E-W and ca. one quarter mile N-S. Although Tabor reaches a maximum elevation of only 1,843 feet, its isolation and its steep sides combine to give it a majestic appearance which invites comparison with Mount Carmel and Mount Hermon (Ps. 89:12—H 89:13; Jer. 46:18). Its summit commands a magnificent view of the entire valley, and it dominates two important routes: the E-W road connecting the Valley of Jezreel and the Sea of Galilee, and the N-S road between Beth-shan and Damascus.

It is possible that there was an early sanctuary on the summit of Mount Tabor, if Tabor is the mountain to which reference is made in Deut. 33:19. It is first mentioned by name, however, in connection with the division of the land among the tribes after the Conquest, as the meeting place of the territories of Issachar, Naphtali, and Zebulun (Josh. 19:12, 22, 34). It is not surprising, therefore, that Mount Tabor was selected by Barak as the base from which he and the men of Naphtali and Zebulun launched their successful attack against Sisera (Judg. 4:6-14). During the oppression by Midian, it was the place where the two Midianite kings, Zebah and Zalmunna, killed the brothers of Gideon (8:18). In the Hellenistic-Roman period, Antiochus III, the Great, is reported to have fortified Mount Tabor in 218 B.C., and Josephus claims to have erected a wall around its summit.

Mount Tabor's primary fame rests on its traditional identification as the Mount of Transfiguration. But whether it is the actual site of the Transfiguration cannot be determined with certainty, since the mountain is not named in the gospel narratives (Matt. 17:1-8; Mark 9:2-8; Luke 9:28-36). On the strength of this identification, Helena the mother of Constantine built a church on Mount Tabor in A.D. 326, and by the seventh century A.D. there were three shrines on its summit, dedicated to Jesus, Moses, and Elijah. Other churches and monasteries were built during the next four centuries, and all these structures were destroyed in 1187 by Saladin, whose brother in turn erected a fortress on the hill in 1212. By the end of the thirteenth century, this structure had also been destroyed, and the summit was abandoned for six hundred years. In the late nineteenth century a

TABOR, OAK OF [אלון תבור]; KJV TABOR, PLAIN OF. A place near Bethel. It was here that Saul was to meet three men going to the sanctuary at Bethel; this was Samuel's second sign confirming the mission of Saul (I Sam. 10:3). The exact location of this tree is unknown.

G. W. VAN BEEK

TABRET tāb'rīt. See MUSICAL INSTRUMENTS § B3.

TABRIMMON tāb rīm'ōn [טברמון, (the god) Rammān (cf. II Kings 5:18) is good; LXX B ταβερύμας, LXX L ταβερεμμών]. The father of Ben-hadad I, the king of Damascus whose own father was Ḥazyanu (biblical Hezion; cf. I Kings 15:18 and the Aramaic Melqart stele). The Rimmon of his name is the Akkadian god Rammān ("roarer"—i.e., "thunderer"), a manifestation of the god Hadad.

Tabrimmon was possibly the predecessor of Ben-hadad I as king of Damascus, but nothing more is known of him.

Bibliography. E. Kraeling, *Aram and Israel* (1918); W. F. Albright, "A Votive Stele Erected by Ben-Hadad I of Damascus to the god Melcarth," *BASOR*, 87 (1942), 23-29; A. Dupont-Sommer, *Les Araméens* (1949); M. F. Unger, *Israel and the Arameans of Damascus* (1957), pp. 57, 142.

R. A. BOWMAN

TACHE tāch. KJV translation of קרס (RSV "clasp"; "hook"). The word is a KJV archaism.

TACHMONITE. KJV form of TACHEMONITE.

TACKLE [תביל, cord (Isa. 33:23; KJV TACKLINGS); σακυή (Acts 27:19; KJV TACKLING)]. The apparatus on a ship (ropes, pulleys, etc.) used in working the sails and handling cargo. In Isa. 33:23a, which is a nautical fragment entirely out of its context, the "tackle" (ropes) is said to hold the mast (such mast ropes are technically called "shrouds") and the sails. In Acts 27:19 σακυή presumably means all the ship's equipment (this would include the tackle) which could be dispensed with in an emergency. See SHIPS AND SAILING. W. S. McCULLOUGH

TADMOR tād'môr [תדמור, palm tree]. A city in the wilderness to the N of Palestine that was built by Solomon (II Chr. 8:4). In the parallel passage in I Kings 9:18, the Masoretic directions call for a reading "Tadmor," while the text itself has "Tamar" (RSV "Tamar . . . in the land of Judah," inserting "of Judah"). The distinction is not a real one, as both "Tadmor" and "Tamar" have the same meaning. If "Tadmor" is the correct reading in these passages, it is identical with the famous Arab city that was known as Palmyra by the Greeks, which was situated in a fertile oasis in the Syrian desert, 120 miles NE of Damascus. The city is mentioned in Assyrian records beginning with Tiglath-pileser I (1115-1100 B.C.) as *Tadmar ša mât Amurri*, "Tadmor of the western country" (*ANET* 275), and the site still bears the Arabic name Tudmur. The city reached the height of its power under Odenathus (A.D. 255-67) and his wife and successor, Zenobia, and was finally destroyed by the Roman emperor Aurelian in 273. The splendid old ruins from the period of its prosperity still attest to its former glory.

From *Atlas of the Bible* (Thomas Nelson & Sons Limited)

4. General view of Tadmor, called Palmyra by the Romans

Courtesy of the Arab Information Center, New York

5. Monumental arch and colonnade of the court of the temple of Baal at Tadmor

Biblical scholars are divided on the question of the identity of the Tamar or Tadmor mentioned in the Bible with the historical Palmyra. Some would identify the city of Solomon with a place of that name in the SE part of Judah (see TAMAR 5). On the other hand, it is notable that the building of the city is mentioned directly after the statement of Solomon's conquest of Hammath-zobah in Syria, and that the general direction of the cities in this section which Solomon is said to have built runs from N to S (II

Chr. 8:2-6). The prosperity which developed in Solomon's reign was primarily due to his control of the routes of trade between Egypt and Arabia on the one hand, and Asia Minor and Mesopotamia on the other. It would have been sound policy for him to establish such a station as Tadmor, which lay on the direct route from Zobah to Mesopotamia, and to place a garrison of soldiers there to ensure the safety of his caravans. After his death and the division of the kingdom, this outpost must have been abandoned to the Arameans.

Figs. TAD 4-5.

Bibliography. I. Starcky, *Palmyra* (1952). S. COHEN

TAHAN tā'hān [תחן]; **TAHANITES** —א nīts. The third son of Ephraim; ancestor of the family of Tahanites (Num. 26:35). In the Ephraimite genealogy in I Chr. 7:20-29, which shows signs of disturbance, Tahath appears as the third son of Ephraim and Tahan as a descendant in a later generation (vs. 25).

R. F. JOHNSON

TAHAPANES. KJV alternative form of **TAHPANHES**.

TAHASH tā'hāsh [שחח, porpoise] (Gen. 22:24); **KJV THAHASH** thā' —. The third son of Nahor and Reumah; identified with the place name Tahšī in the Tell el-Amarna Letters and in Thutmose III's records; located N(?) of Damascus.

TAHATH tā'hāth [תחת, substitute, or compensation(?)]. 1. A name in a genealogy of the family of Kohath, one of the three sons of Levi (I Chr. 6:24). The name occurs again in a subsequent list which traces both the Levitical descent of Heman and the Levitical line from Kohath (vs. 37).

2. Eponym of an Ephraimite family; son of Bered (I Chr. 7:20).

3. Eponym of another Ephraimite family; son of Eleadah (I Chr. 7:20). T. M. MAUGH

4. A stopping place of the Israelites in the wilderness (Num. 33:26-27). The location is unknown.

TAHCHEMONITE tā kē'mə nīt [תחכמני] (II Sam. 23:8); **KJV TACHMONITE** tāk'mə nīt. A word identifying one of David's Mighty Men. The first consonant probably is an error; very likely a copyist mistook the Hebrew article ה ("the," in "the Hachmonite") for a ת. See **HACHMONITE**. T. M. MAUGH

TAHPANHES tā'pə nēz [תחפנחז, *tahpanhēs*; but in Ezek. 30:18 *tēhaphnēhēs*; LXX Ταφνάς]. Alternately: **TEHAPHNEHES** tī hāf' nə hēz (*tēhaphnēhēs*; Ezek. 30:18); **KJV TAHAPANES** tō hāp'ə nēz (Jer. 2:16); **KJV TAPHNEZ** tāf'nēz (Jth. 1:9). A city on the E frontier of N (Lower) Egypt.

Tahpanhes is almost universally identified with the classical site of Daphnai, modern Tell Defneh. The Hebrew consonantal spelling is an accurate transcription of the Egyptian name *T³-h(t)-(n.t)-p³-nh³sy*, "the Fortress of Penhase." Penhase, which is also the origin of the biblical name Phinehas, means literally "the Nubian," but was the name of a powerful Theban general of the eleventh century B.C. whose success in suppressing rebellion in the Delta area resulted in the perpetuation of his fame in the names of several places. The LXX reading Ταφνάς is perfectly

correct, but through popular etymology the name was later altered by the Greeks to Δαφναί, the latter surviving in the modern Arabic name Tell Defneh.

The site known as Tell Defneh is an unimpressive mound in the desert bordering on Lake Menzaleh in N Egypt. According to the excavation reports of Flinders Petrie, who investigated the site in the latter part of the nineteenth century, there is little evidence of extensive occupation before the time of Psammetichus, founder of the Saïte Dynasty (ca. 663 B.C.). The importance of the city for some centuries after that time is clear, however, from its mention in the OT, as well as from the more specific information given by Herodotus (II.30), who names Daphnai, ELEPHANTINE, and Marea as the three important frontier stations during the reign of Psammetichus and during the Persian occupation.

From the biblical references we learn that Tahpanhes was a refuge city for the Jews who fled from Palestine before the successive Assyrian invasions. It was to Tahpanhes, e.g., that Johanan son of Kareah fled with the remnant of Judah, contrary to the oracle of the Lord as expressed by Jeremiah (42:19). The prophet followed them and delivered in that city a further promise of destruction for Egypt and the Jews who dwelt there.

TAHPENES tā'pə nēz [תחפניס; LXX Θεχεμείνα, Θεκεμείνα] (I Kings 11:19-20). An Egyptian queen of the time of David and Solomon.

In the time of David, young Hadad of Edom fled to Egypt. The reigning pharaoh received him cordially and wedded him to the sister of his queen, Tahpenes. After the death of David and Joab, Hadad returned to Edom and opposed Solomon. The unnamed pharaoh cannot be identified, but he was probably one of the Twenty-first Dynasty rulers at Tanis in the Delta. Although the name Tahpenes looks Egyptian, no such name has been found. Probably the LXX's use of *-m-* instead of *-p-* is correct. Then, as in the use of the title "pharaoh" as a proper name, we may have here the Egyptian title "the wife of the king" (pronounced something like *ta-him-nes*), treated as if a name. See *bibliography*.

Bibliography. The solution noted above seems to have been first offered by B. H. Stricker, *Acta Orientalia*, XV (1937), 11-12. J. A. WILSON

TAHREA. Alternate form of **TAREA**.

TAHTIM-HODSHI tā'tīm hōd'shī [תחתים הודשי]. A place in the N, possibly between Gilead and Dan, visited by the census takers of David (II Sam. 24:6 KJV). The place is not mentioned elsewhere. Wellhausen suggested the reading החדשים קדשה ("Hittites to Kadesh"), according to a Greek MS. This conjecture has been accepted in the RSV: "to Kadesh in the land of the Hittites." As the kingdom of David actually reached as far N as Kadesh, the conjecture is not unlikely. A. S. KAPLRUD

TALENT [תלנת; τάλαντον]. The standard large weight in Mesopotamia, Canaan, and Israel. It

varied in weight, but may in biblical passages be considered as *ca.* seventy-five pounds. In NT times as money the talent was equal to six thousand drachmas. See WEIGHTS AND MEASURES §§ B2-3, 4g, i.

O. R. SELLERS

TALISMAN. An amulet or charm; an object having supposed magical power. See AMULETS.

TALITHA CUMI tāl'ə thə kū'mī [ταλιθά κοῦμι; Aram. ܛܠܝܬܗ ܟܘܡܝ]. The Aramaic words attributed to Jesus in the healing of Jairus' daughter and found only in Mark 5:41, where they are translated in expanded form as τὸ κοράσιον, σοι λέγω, ἔγειρε ("Little girl, I say to you, arise"). The Aramaic consists of the feminine of ܛܠܝܬܗ (*talā*), meaning "lamb" or "youth," and the *piel* imperative feminine singular of ܩܘܡܐ (*qūmā*), "stand," "rise up." The latter may be a correction from the shorter, masculine form, ܩܘܡ (koūm), which is read by the best Greek MSS and in some critical texts. The confusion is doubtless due to the fact that both forms were pronounced alike. The unusual reading of Codex Bezae (D) and the Washington Gospels (W), ραββὶ ταβίθα (D, θαβίθα), may be dialectical (for *rābithā*, "maiden"), or a scribal corruption, involving assimilation to Acts 9:40. *Tabithā* is read by several Greek and by most OL MSS in Mark (cf. Luke 8:54).

The retention of the Aramaic in a healing story would enhance the miraculous aspect of the event for Gentile readers (cf. ΕΡΗΡΗΑΤΗΑ in Mark 7:34). The use of foreign words in such contexts was common in the magical papyri. It was thought that translation might impair their efficacy. In Mark, however, the characteristic preservation of Aramaic sayings in various contexts may also be attributed to an interest in retaining the actual words of Jesus.

McGinley, *Form-Criticism of the Synoptic Healing Narratives* (1944), contains a useful collection of parallels from rabbinic and Hellenistic sources; V. Taylor, *The Gospel According to St. Mark* (1952), pp. 296-97. A. WIKGREN

TALMAI tāl'mī [תלמי]. 1. One of the three sons of Anak, or "giants," residing in Hebron when the Israelite spies reconnoitered the land (Num. 13:22; Josh. 15:14; Judg. 1:10). Named together with Ahiman and Sheshai as a descendant of Anak, Talmai was defeated in Hebron by the invading Israelites.

2. King of Geshur; father of David's wife Maacah, who was the mother of Absalom (II Sam. 3:3; 13:37; I Chr. 3:2). When Absalom was forced to flee his father's court after the murder of Amnon, he took refuge with his grandfather in Geshur, a small Aramaean kingdom NE of the Sea of Galilee.

There are close parallels to the name Talmai in Nabatean nomenclature.

TALMON tāl'mən [תלמון, ܛܠܡܘܢ, *perhaps* brightness; cf. Arab. *zalmun*; Apoc. Τολμῶν]. A Levite, and the eponym of a Levitical family of gatekeepers in the postexilic temple (I Chr. 9:17; cf. Neh. 11:19), listed

among the returned exiles (Ezra 2:42; Neh. 7:45; 12:25; I Esd. 5:28).

TALMUD tāl'müd [תלמוד, from ܛܠܡ, *lāmādh*, to study, to learn]. The written story, in Hebrew and Aramaic dress, of biblical interpretation, of the making of bylaws, of the adding to the store of wise counsel, covering a period of almost one thousand years from the time of Ezra to the middle of the sixth century of the Christian era.

1. **Repository of the oral law.** The Talmud, which was at first mainly oral, grew out of the conviction that besides the written Torah (Law)—the Bible—there had been from the first, from the divine communications to Moses at Sinai onward, an oral Torah, handed down from generation to generation, which lawgiver and prophets strove to engrave on the hearts of the people. As teacher succeeded teacher in synagogue and school, their teachings and often conflicting opinions, all based on the Bible, were treasured. Through long practice the power of memorizing had been greatly strengthened, but the accumulated mass of oral traditions and teachings became so unwieldy that the best memory could not be trusted. Then there came the necessity for a compilation which would summarize all that was most vital and essential in the teachings of preceding generations, and at the same time preserve for future generations the vast treasure house of thought and action, religious aspiration, and worldly wisdom, wherein they would find inspiration and guidance amid the persecutions and temptations they might have to encounter. Thus was the Talmud produced. As repository of the oral law it ranks, in Jewish eyes, second only to the Hebrew scriptures as a national-religious creation and possession, and throughout many generations has exercised an influence on the life of the Jewish people not inferior to that of the Bible itself.

2. **Function and scope of the oral law.** The oral law as embodied in the Talmud fulfils a twofold function. In the first place, it interprets the ordinances of the written law, explaining their contents and defining their scope. As such, the oral law forms an integral and indispensable part of the written law, for without the oral law it would be impossible to observe the written law. How, e.g., could the

biblical sabbath law be observed if there were no oral law to define the term "work"? In the second place, the oral law adapts and modifies the ordinances of the written law to changes in conditions and circumstances—social, domestic, economic. As such the oral law serves to transform the Torah from a mere written document, liable to become obsolete, into a continuous revelation keeping pace with the ages. Included in the oral law, with all the authority it commends, are those numerous measures and enactments introduced by the recognized religious leaders either as a "fence around the law" (e.g., the prohibition of handling a working implement on the Day of Rest) or as an expression of religious devotion and loyalty (e.g., the kindling of lights on Hanukkah. See FEASTS AND FASTS).

3. Talmudic antecedents: Midrash and Mishna.

The earliest method of teaching the oral law was by means of a running commentary, MIDRASH, on the biblical text. When the exposition yielded a legal teaching, the result was Midrash HALACHAH; if a nonlegal, ethical, or devotional teaching, it was Midrash Haggadah (הגדה, "narration"). The Midrash method was employed already by Ezra and his associates in the public reading of the Law which they held on that memorable convocation in the year 444 B.C., at which the Torah was enthroned supreme in the constitution of the new community in Judea. The Midrash method was followed by those generations of teachers who succeeded Ezra, the Soferim (סופרים, "bookmen," or "scribes"), whose activities came to a close ca. 270 B.C. After the Soferim came in succession the five "Pairs" (זוגות, *zûghôth*) of teachers, of whom the last and greatest were Shammai and Hillel (both at the end of the first century B.C.).

With the Zugoth a new method of teaching began to emerge as a rival to that of the Midrash—a method in which the oral law was taught without reference to the Holy Writ. This evidently represented a progressive method of teaching in that it enabled the teachers to put on the order of the day any such subjects as they desired, without being tied to the sequence of biblical texts. It would still have been possible, while retaining the Midrash form, to trace back every oral teaching to its respective biblical source. That this course was not resorted to, it may be assumed, was a result of the attitude of the SADUCEES, who, by employing the very text of the written Torah to attack the validity of the oral law, weakened the biblical warrant claimed in support of oral traditions and teachings. On the other hand, deprived of the aid to memory which the Holy Writ could supply, the oral law could be imparted and retained chiefly by means of repetition. Hence the name Mishna (משנה, lit. "repetition") was given to the new method of teaching; and Tannaim (from Aramaic תנא, *tenâ*, a variant of Hebrew שנה, *shânâ*, "to repeat," "to hand down orally") was the name by which Mishna teachers became known.

The adoption of the Mishna method did not, however, oust altogether the older Midrash form. Not only was it allowed to retain the Haggadic field almost to itself, but even in the realms of Halachah its sway, though disputed, did not entirely cease, with the result that Midrash and Mishna continued to

exist side by side as media for teaching Halachah. Attempts at the compilation of Halachic teachings in Mishna form were made at an early stage of its development. There is strong proof of the existence of a codified body of Mishnaic lore as far back as the days of the schools of Shammai and Hillel (ca. 50), if not earlier. Foremost among the collections of the later period is that of Rabbi Akiba (died a martyr's death in 135 under the Hadrianic persecutions), which was subsequently developed by his disciple, Rabbi Meir (110?-75?). This later codification became the groundwork of the Mishna of Rabbi Judah the Prince (ca. 135-217), designated "rabbi par excellence," which presents a digest of the whole legal system governing Jewish life and action as taught and developed in the schools of Palestine throughout the period of Soferim, Zugoth, and Tannaim up to the beginning of the third century that followed the rise of Christianity. Rabbi Judah's Mishna soon gained wide recognition and became the authoritative canon of the oral law and the main basis of instruction and principal subject of study, investigation, and research for the schools, both in Palestine and in Babylon for several centuries. The Mishna of Rabbi Judah, however, contained only a minor fraction of the legal material current in the Palestine academies. There were many additional and rival collections that issued from contemporary authorities of Rabbi Judah, such as Bar Kappara, Rabbi Hiyya, and Rabbi Hoshai, which preserved teachings which Rabbi Judah had for one reason or another thought fit to exclude and which often went counter to his teaching. These "external" or "additional" teachings, Baraita (Aramaic ברייתא), or Tosefta (Aramaic תוספתא), could not, however, be ignored in the discussions of Rabbi Judah's Mishna; nor could the oral traditions and teachings transmitted in Midrash form. These discussions were carried on in the schools of Palestine and Babylon by scholars designated Amoraim (Aramaic אמוראים, "speakers"), whose activities stretched from the conclusion of the Mishna down to the end of the fifth century of the Christian era. Their endeavor was to interpret the Mishna, explain its obscurities, discuss its contents, trace back its teachings to the Bible, and harmonize contradictions in oral traditions as emanating from different authorities or schools. Theirs was also the task of making final decisions of Halachah as well as formulating new Halachoth (legal judgments) in answer to problems which arose out of changed conditions of life. This intellectual activity of centuries was crystallized in the Gemara (Aramaic גמרא, "completion"), which, together with the Mishna of Rabbi Judah, constitutes the Talmud.

4. **Division of Mishna and Talmud.** The Mishna and Talmud are divided into six Orders (סדרים, *Sedarim*). Each Order is subdivided into tractates (מסכתות, *Massekhtôth*; singular *Massekhtâ*), of which there are sixty-three, and each tractate into chapters (פרקים, *Praqim*). The Orders are as follows:

- a) Zeraim (זרעים, "seeds")—agricultural laws.
- b) Moed (מועד, "appointed seasons")—laws concerning the sabbath, festivals, and fasts.
- c) Nashim (נשים, "woman")—laws of marriage and divorce.

d) *Nezikin* (נזיקין, "damages")—civil and criminal laws.

e) *Kodashim* (קדשים, "consecrated things")—laws appertaining to the sanctuary and the sacrificial rites.

f) *Tohoroth* (טהורות, "cleanliness")—laws of levitical purity.

5. **Halachah and Haggadah.** Side by side with its legal material are the *HALACHAH*, the legal material of the Talmud, and the *Haggadah*, covering the whole field of ethics and religion. Moral reflections, homilies, apologues, maxims of worldly wisdom, metaphysical speculations, tales of Israel's past (both historical and legendary), visions of its future, and obiter dicta, often showing remarkable powers of observation on geometry, medicine, astronomy, physiology, botany, and other scientific subjects, are the constituents of the *Haggadah*. Its aim everywhere is to edify, inspire, elevate, and supply those finer qualities of heart and mind, moving man to that righteousness of action which the *Halachah* prescribes.

6. **The two Talmudic versions.** As a product of two distinct centers of learning, the Talmud appears in two versions: the Palestinian and the Babylonian, much dissimilar in subject matter, method, presentation, and language. The differences in the two versions extend to the very basic text common to both, the *Mishna* of the Rabbi Judah, readings in the one version often varying from those in the other. No satisfactory explanation has so far been found to account for these textual variants, but there is no doubt that in many cases they represent two recensions of the *Mishna* made by Rabbi Judah himself; the existence of these recensions is already indicated in the *Babylonian Gemara*.

a. **Palestinian.** The Palestinian Talmud is often referred to as the *Yerushalmi* (ירושלמי, "Jerusalemite"). The first designation is, however, the more accurate, as this Talmud is the product of the schools of Tiberias, Caesarea, and Sepphoris. It is also known as the "Talmud of the Children of the West."

The Palestinian Talmud was compiled hurriedly, because of the persecutions which the Jews in Palestine suffered throughout the third and fourth centuries at the hands of their Roman rulers. This fact may account for its incompleteness and its lack of unity, coherence, and profundity, as well as for the corrupt state of its text. The Palestinian Talmud has *Gemara* only for the first four Orders, and none for *Kodashim* and *Tohoroth*. The Palestinian Talmud on *Kodashim*, claimed to have been discovered by Solomon Friedländer and published by him in 1907-8, has been proved a forgery. In bulk the Palestinian Talmud is only about a third of its sister version, and its dialect is that of Western Aramaic. Tradition ascribes the redaction of this Talmud to Rabbi Johanan ben Nappaha (died 279). A disciple of Rabbi Judah the Prince, he excelled all his contemporaries by his great intellectual gifts and founded the Academy of Tiberias, which became the principal seat of learning in Palestine and the main "workshop" of the Palestinian Talmud. It is, however, a fact that the Palestinian Talmud contains material of considerable proportions of a much later date than Rabbi Johanan, and it is accordingly safe

to assume that, while Rabbi Johanan laid the foundation of the Palestinian Talmud, it took its present shape in all essentials sometime at the beginning of the fifth century, shortly before the closing of the Tiberias School and the extinction of the Patriarchate (425).

The Palestinian Talmud is generally regarded as subordinate to the Babylonian Talmud, on which all subsequent codifications of the law rest. The Palestinian Talmud is nevertheless indispensable for the study of the *Halachah*, as it represents the *Halachah* in its unbroken line of development in the home of the *Mishna*. It also derives additional importance from the *Haggadic* material it contains. Making up about one sixth of its total subject matter, the *Haggadah* of the Palestinian Talmud is a veritable mine of information on the internal and external relations of the Jews in Palestine; and, on account of its relative antiquity, this *Haggadah* is of great historical importance and value.

b. **Babylonian.** This version, written in Eastern Aramaic, records the discussions on Rabbi Judah's *Mishna* as carried on in the schools of Babylonia. Like its sister version, the Babylonian Talmud abounds in *Haggadah*, constituting about one third of its contents and mirroring the entire knowledge of the secular and religious rabbis of the time.

A constant intellectual intercourse and interflow of ideas, alike in the realms of *Halachah* and *Haggadah*, existed between Babylonia and Palestine, and statements of the Palestine Amoraim enjoy high authority and occupy an important place in *Babylonian Gemara*. The great teacher, who was responsible for the intellectual activity which gave birth to the *Babylonian Talmud*, was Abba Arika, "the Tall" (died 247), so called because of his high stature. He was of Babylonian origin but spent some years in Palestine, where he studied under Rabbi Judah. Returning to his homeland in the year 219, he founded the academy at Sura, on the Euphrates, where he taught his master's *Mishna*, which he had brought back with him. Thousands of disciples flocked to his lectures, and his reputation rose so high that he became known as Rab (Aramaic רב), "teacher par excellence." His famous contemporary and collaborator was Mer Samuel (died 254), who was likewise a disciple of Rabbi Judah and who on his return home to Babylon became the head of the academy at Nehardea. He was considered the leading authority in matters of civil law, in which his judgments were declared by later generations as binding, and he is the author of the well-known dictum: "The law of the land is law," which has proved of tremendous influence on the development of Jewish civil law.

The intensive activities of the Babylonian Amoraim reached their climax under Abbaye (280-338) and his colleague and Halachic opponent Raba (299-352), the respective heads of the academies of Pumbeditha and Mechuza. Both Abbaye and Raba were dialecticians of a high order, and their discussions in which they displayed much acumen occupy much space in the *Babylonian Gemara*. Layer upon layer of Halachic and *Haggadic* material continued to be added during the several generations that followed Abbaye and Raba, each generation

interpreting, arguing, and debating the opinions and judgments of generations preceding. The mass of orally transmitted traditions and teachings accumulated through the centuries assumed such large proportions that the time came for a "redaction" involving the sifting, systematization, and orderly arrangement of the whole. This work of "redaction" was undertaken by Rab Ashi (died 427), who, elected at the early age of twenty-three as head of the Sura Academy, directed its affairs with singular brilliancy and success for fifty-two years. During all this time, he applied himself to the gigantic task of collecting, sifting, and arranging the vast store of Halachah and Haggadah that engaged the minds and hearts of the teachers and disciples in the Babylonian schools. The results of his enormous labors constitute the basic elements of the Babylonian Talmud. Rab Ashi's work of redaction was carried on by his successors, especially by Rabina bar Huna, known as Rabina II (flourished 488-99), who "redacted" the new material that had accumulated since Ashi's death. Rabina II is said to have been the last of the Amoraim to teach Torah on the basis of oral transmission, and with him the Talmud may be regarded as having come to a close. The finishing touches were supplied by the Saboraim (Aramaic סבוראי, from סבר, "reflect"), who flourished from the end of the fifth to the middle of the sixth century. They "reflected" upon the work of the Amoraim as crystallized in the Talmud, sifted it critically, and also made certain additions of an explanatory character.

7. The influence of the Talmud. The Talmud as a written book was closed just as the Dark Ages were beginning; but its greatest influence on the dispersed people of Israel merely began then. It contributed powerfully to the religious and national preservation of the Jew in that Judaism was able to adjust itself to every time and place, to every condition of society and stage of civilization. Furthermore, in times of stress and danger the Talmud offered the Jew a spiritual haven of tranquillity, a kind of "dreamland" into which he could always withdraw, oblivious of the outer world with its hate and its malice, its cruelties and its tortures. Poring over its pages, generations of Jews have found in the Talmud the satisfaction of their deepest religious yearnings, as well as an outlet for their highest intellectual aspirations. Thus did the Talmud accomplish, in the words of Felix Perles, "the historic miracle of injecting into Jewry, dispersed amidst a hostile world, again and again an indestructible vitality, and at the same time stamping it with that uniform character which it has preserved to this day despite all dissolving influences."

And not on Jews and Judaism alone did the Talmud exercise its beneficent influence. Through the intellectual and moral discipline it imparted, Talmudic thought helped to lead the thought of the Middle Ages into new channels and to prepare the way for what was of permanent value in the Renaissance, and through the Renaissance for influencing modern civilization.

8. The burnings of the Talmud. The "persecution" of the Talmud began before it was actually committed to writing. Hadrian (117-38), Antoninus

Pius (138-61), and the Persian kings Yazdegerd II (438-57) and Peroz (459-84) forbade the study of the Law. During the Middle Ages, persecutions and burnings of the Talmud were of not uncommon occurrence. Very often these took place at the direct instigation of Jewish converts to Christianity, who made libelous statements about the Talmud. One of them was Nicholas Donin, a former Talmudist, who formulated charges against the Talmud in a document of thirty-five articles. As a result of his allegations, Pope Gregory II issued an order for the confiscation of the Talmud. Twenty-four cartloads of books were brought together and burned publicly in Paris in June, 1242. These persecutions and burnings of the Talmud continued throughout the following centuries up to the time of Reuchlin (1453-1522) and his fellow humanists, who fought against the destruction of "a book written by Christ's nearest relatives."

The Babylonian Talmud was also subjected, during the Middle Ages, to a censorship by the church, and passages regarded as objectionable to Christians were deleted. Later the Jews themselves, in order not to give offense to the church, exercised a censorship in MSS and in printed editions of the Talmud. These deletions have been preserved and published separately in a number of publications, the most noted of which is the one entitled *Sefer Chesronoth ha-shas* (The Book of the Lacunas of the Talmud).

9. Attacks on the Talmud in modern times. In modern times the Talmud in the hands of anti-Semites was turned into a weapon wherewith to attack the Jews and Judaism. In their endeavor to expose the Jews to obloquy and to provoke Gentile hostility against them, they claimed that the Talmud, which was the guide of Jewish life, condoned and sanctioned crimes of all sorts against non-Jews, such as theft, robbery, murder, and rape, and was to blame for the number of misdeeds of which the Jews were alleged to be guilty. Jewish and non-Jewish scholars have had no difficulty in showing that these attacks were based on falsification and perversion of texts, tendentious selections, and very often ignorance. The translations of the Talmud (*see bibliography*) have also contributed to dispel much of the mystery and absurd notions that seemed to surround it in the eyes of the non-Jewish world.

10. Editions. There is only one MS extant of the whole Babylonian Talmud—i.e., the Munich MS, written in the year 1343 and edited by Hermann L. Strack (1912). The first edition of the Palestinian Talmud, based mainly on a Leiden MS, was published in 1522-23, and that of the Babylonian Talmud in 1520-24, both in Venice by Daniel Bomberg, a non-Jew. Since then there have been numerous editions of both Talmuds. Most famous among these is the Vilna Romm edition of the Babylonian Talmud, first published in 1886 and since then reprinted several times with additional improvements; a new photostat edition of it has recently been produced in America.

11. Commentaries. The Talmud is by no means an easy work to study. Its peculiar style, pregnant in brevity and succinctness, as well as its method of presentation in which clauses, sentences, questions, and answers run into one another without any

sign of demarcation, tends to make the Talmud almost a sealed book, difficult to understand without guide or commentary. The commentaries on the Talmud are legion. The oldest commentary, on practically the whole of the Talmud, is that of Hananel ben Hushiel (died 1050); only parts of it are extant. The most classical and universally adopted guide for Talmudic interpretation is that of Rabbi Solomon Yitschaki of Troyes, Rashi (1040-1105); this guide appears by the side of the Talmudic text in all printed editions.

To a different class of commentary belongs that of the French rabbis of the twelfth and thirteenth centuries, known as *Tosafoth* (Additions). The *Tosafoth*, which also appears by the side of the printed Talmudic text in the form of glosses, is distinguished for its detailed critical research, which has laid the Talmudic studies on a deeper and broader basis.

Nor is there a lack of supercommentaries. Of these may be mentioned the *Marshaa* (1612) by Samuel Edels, noted for its acute analytical method, and the *Maharam* (1619) by Meir ben Gedaliah of Lublin, a commentary popular for its clarity.

The commentaries on the Jerusalem Talmud are the *Korban ha-Edah* (1743) by David Fränkel, and the *Pene Moshéh* (1750) by Moses Margoloth. Modern scholarship has also contributed richly to the elucidation of the Jerusalem Talmud, and outstanding in this connection is the *Commentary on the Palestinian Talmud* in three volumes (1941) by Louis Ginzberg, which has been hailed as a masterpiece of modern Halachic study.

12. The Talmud in Jewish education. The immense influence which the Talmud has exerted over the Jewish people is the result of an educational system in which the Talmud was made to occupy the most important place. With its redaction the Talmud became the principal subject of study in academy and school. Instruction in the Talmud was begun at an early age in the elementary schools, and continued in the *Yeshivah*, where the advanced student was introduced to the analytical method called "pilpul." The important place assigned to the Talmud in the curriculum of Jewish studies was the distinctive feature of Jewish education throughout the Middle Ages. The broadening of Jewish culture in consequence of the emancipation led to the gradual displacement of the Talmud by other subjects; yet the Talmud continued to play a major role in Jewish education. The mind of the child was fed by the stories of the Talmud, and its *Haggadah* instilled in him a high ethic and a loyalty to Jewish traditions and ideals. In our own days the trend is toward the revival of interest in the Talmud, even in quarters where hitherto it has been entirely neglected. More and more do Jewish schools include Talmud as a subject of instruction, and the number of adult groups meeting regularly for the study of the Talmud is steadily on the increase. Noteworthy in this connection is the *Daf Yomi* (Daily Folio), instituted in 1929 at the instance of Rabbi Meir Shapiro of Lublin, and adopted by a large number of orthodox Jews as their daily Talmudic lectionary. The causes for this revival are many and varied. Among them must be included the recognition of

the Talmud as a unique preservative force of Judaism and of its importance as constituting the "humanities" of Hebraism which no Jew with a claim to Jewish culture dare ignore.

13. Significance of the Talmud in our times. Widely though the modern world is separated from the centuries that preceded it, the Talmud still remains, after the Bible, the most fruitful, spiritual, and moral force in Jewish life. Notwithstanding the changed conditions which make many of the laws inapplicable to our times, Jewish life even today is largely founded on Talmudic teachings and principles. The ritual, the liturgy, the festivals, the marriage laws, derive directly from the Talmud; even as it is the Talmud which inspires those virtues for which the Jew is conspicuous: his benevolence, compassion, strong affection for family ties, hatred of violence, and aversion to cruelty—even cruelty to animals.

The restoration of the Hebrew polity, after a submergence of two thousand years, is giving to the Talmud a new significance. Many of its laws rendered obsolete by reason of the fall of the Jewish state, particularly those referring to the *Jus* and to agriculture, are slowly coming once more into their own, and it is to the Talmud that the builders of the new social order in Israel are turning more and more for light and guidance in their manifold and stupendous tasks.

TALSAS tál'səs. KJV Apoc. form of ELASAH 2.

TAMAH. KJV alternate form of TEMAH.

TAMAR tā'mər [תמר; Θαμάρα, date palm]. 1. Daughter-in-law of Judah. The Canaanite wife of Judah's eldest son, Er, she long remained a widow after Er's death, because the second son, Onan, refused to marry her and Judah withheld his third son, Shelah, beyond the promised time (Gen. 38:6-11, 14, 26). Out of impatience Tamar offered herself, disguised as a prostitute, to Judah (vss. 12-23), and bore his twins, Perez and Zerah (vss. 24-30). She is recalled as an ancestress of the tribe of Judah in Ruth 4:12; I Chr. 2:4; Matt. 1:3.

2. Daughter of David (II Sam. 13:1; I Chr. 3:9). Amnon, a half brother, was so infatuated with her beauty that he forcibly seduced her (II Sam. 13:2-14); afterward his lust turned to loathing as he drove her, shamed and weeping, from his house (vss. 15-19). Subsequently Absalom, her full brother, obtained revenge by having Amnon murdered (vss. 20-29).

3. Absalom's only daughter, renowned for her beauty (II Sam. 14:27). The LXX and the OL of this passage add that she became Rehoboam's wife and bore Abiathar. If this is correct, she is the MAACAHA (10) of I Kings 15:2; II Chr. 11:20-22 (but cf. II Chr. 13:2).

S. J. DE VRIES

4. A city built by Solomon, according to the actual text in I Kings 9:18. The parallel passage in II Chr. 8:4, as well as the Masoretic directions in Kings, reads TADMOR. Some scholars would identify this city built by Solomon with 5 *below* (so RSV, which reads "Tamar in the wilderness, in the land of Judah," presuming "of Judah" has dropped from the Hebrew text or interpreting "the land" as the land of Judah; cf. the KJV translation "Tadmor in the wilderness, in the land").

5. A city in the extreme SE part of Judah, near the S end of the Dead Sea. According to Ezek. 47:19; 48:28, it marked the E end of the S border of his ideal land of Israel, which is to run from there to the waters of Meribath-kadesh (see KADESH). The RSV also reads "Tamar" in Ezek. 47:18 instead of the Hebrew "and you shall measure" (תמדין). Tamar was evidently a well-known fortified town on the boundary between Israel and Edom. During the time of Solomon, since the Edomites were subdued, it may have been a supply depot for the mines in the Arabah region, which, like the mines of the Egyptians in the Sinai Peninsula, needed a steady supply of water and provisions in order to be worked regularly; later, after Edom recovered its independence, Tamar may have been a fortress protecting the border.

It may be the same as HAZAZON-TAMAR. According to Ptolemaeus, Tamar was fifty-five miles from Jerusalem; according to the Poitinger map, fifty-three. The site is uncertain; Qasr ej-Jeheiniyah, on the W side of the Arabah, and el-Qeriya, S of the Dead Sea, have been suggested.

S. COHEN

TAMARISK tām'ō rīsk [תְּמָר, 'ēšēl; Aram. תְּמָר, 'ēšlā; Arab. 'athl]. A distinctive tree or shrub with minute scalelike leaves pressed close to feathery branches. More than a dozen species are listed in Post's *Flora*, but there is some confusion among botanists concerning identifications and naming. The most common species is called *Tamarix pentandra* Pall. (also *Tamarix pallasii* Desv.). The *Tamarix mannifera* (Ehrenb.) Bunge, common to the Sinai Desert, exudes an edible resin which is considered one possible identification for the MANNA of the Exodus.

Abraham planted a tamarisk in Beer-sheba (Gen. 21:33; KJV "grove"). Saul sat under one in Gibeah (I Sam. 22:6), and his bones were buried beneath another one in Jabesh-gilead (I Sam. 31:13; KJV "tree"). The latter passage is repeated in I Chr. 10:12, but אֵלֶּה "OAK" (see TEREBINTH), is given as the tree. It is quite probable that a sacred tree or shrine is to be understood in each passage.

J. C. TREVER

TAMBOURINE. See MUSICAL INSTRUMENTS § B3.

TAMMUZ tām'ūz, tā'mōōz [תַּמּוּז; with definite article, תַּמּוּז (Ezek. 8:14)]. Alternately: THAMMUZ thām'ūz, thā'mōōz. The Sumerian deity of spring vegetation; known from the Gilgamesh Epic as the lover of Ishtar, goddess of love, who had betrayed him. The anniversary of her betrayal was the occasion of an annual wailing for the god in the fourth month, which was named for him. Ezekiel attests a local variation of this rite practiced by the women of Jerusalem on the fifth day of the sixth month. The motif of a dying god is suggested by the annual wilting of vegetation in the Near East, and has sundry local variations—e.g., the cult of ADONIS in Syria, of Persephone and Dionysus in Greece, and of Osiris in Egypt.

James, *The Ancient Gods* (1960), pp. 78-80.

J. GRAY

TANACH. KJV form of TAANACH in Josh. 21:25.

TANHUMETH tăn hū'mīth [תַּנְחֻמֶת, consolation] (II Kings 25:23; Jer. 40:8). The Netophathite (see NETOPHAH) whose son Seraiah was a captain who remained with Gedaliah after the Exile. A Lachish stamp contains this name.

TANIS tā'nīs. A city in Egypt. See ZOAN.

TANNER, TANNING. The process of tanning, using lime, the juice of certain plants, or the bark or leaves of certain trees, has been known from ancient times.

In Exod. 25:5; 26:14; 35:7, 23; 36:19; 39:34 "tanned rams' skins" (KJV "rams' skins dyed red") are used as coverings for the tabernacle. The Hebrew word for "tanned" is מַאֲדָם, the *pual* participle of the regular word "to be red." The LXX has ἡρῶθροδανωμένα, from the word "to dye red." The RSV translation "tanned" is due to the probability that the skins were reddened as a result of the tanning process employed.

In Acts 9:43; 10:6, 32, we have "Simon, a tanner" (βυρσεύς). Tanners were not held in good repute among the Jews, as we see often in the Talmud. It was customary for tanners to live outside the cities because of the nature of their work; Simon lived by the seaside. The fact that Peter was willing to stay with Simon was an indication of at least the beginning of a more liberal attitude on the part of Peter toward such ceremonial matters. The tanner's house was an excellent setting for the triple vision of a vessel filled with all kinds of animals.

S. A. CARTLEDGE

TAPESTRY. KJV translation of מַרְבֵּית (Prov. 7:16; 31:22; RSV COVERINGS).

TAPHATH tā'fāth [תַּפַּת] (I Kings 4:11). A daughter of Solomon, and wife of Ben-abinadab, one of Solomon's officials in the district of Naphath-dor.

TAPHNES. KJV form of TAPHANES in Jth. 1:9.

TAPHON. KJV form of TEPHON.

TAPPUAH täp'yooä [תפח, apple(?)]. A Calebite family or person descended from Hebron (I Chr. 2:43); possibly the name of a town in the vicinity of Hebron. See BETH-TAPPUAH.

TAPPUAH (PLACE) [תפוח, quince(?)]. 1. A city in the Shephelah, one of the cities of the second district of Judah (Josh. 15:34). In the same list a BETH-TAPPUAH appears among the cities in the hill country of Judah (vs. 53). The exact location of the Shephelah Tappuah is unknown, although it has often been identified with Beit Nettif, ca. twelve miles W of Bethlehem.

2. A city on the N border of the territory of Ephraim (Josh. 16:8). Associated with EN-TAPPUAH and located on the (S) border of Manasseh, assigned to the Ephraimites; the region around it (the land of Tappuah) is assigned to Manasseh (17:7-8). Sheikh Abu Zarad, ca. eight miles S of Shechem, has been proposed as its location.

The king of Tappuah is mentioned among the Canaanite kings defeated by Joshua (Josh. 12:17). His city is perhaps to be identified with the Ephraimite Tappuah, since it is associated with Bethel, the land of Hopher, etc. A Canaanite king of Tappuah and the men of the city are mentioned in a late tradition about Judah (Test. Judah 3:2; 5:6), but without furnishing information concerning the location.

Tappuah may have been the scene of a ruthless attack by Menahem king of Israel (II Kings 15:16). The Hebrew text has תפסח (KJV TIPHSAH). The RSV reads "Tappuah" on the basis of the Greek (ταφωέ). Since Tirzah is mentioned in the same verse, probably the Ephraimite Tappuah is intended.

W. L. REED

TARAH. KJV form of TERAH.

TARALAH tä'r'älä [תראלה]. A town in the allotment to the tribe of Benjamin (Josh. 18:27). The identifiable sites in the list in which it appears suggest that it was in the hill country NW of Jerusalem (vss. 25-28).

W. H. MORTON

TAREA tä'r'ä [תארע] (I Chr. 8:35). Alternately: **TAHREA** tä'r'— [תחרע] (I Chr. 9:41). A descendant of King Saul through Jonathan.

TARES. KJV NT translation of ζιζάνιον (RSV WEEDS).

TARGET. The translation of מטרה (KJV "mark") in Job 16:12 (elsewhere "mark"). The KJV incorrectly translates as "target" צנה in I Kings 10:16; II Chr. 9:15; 14:8 (see BUCKLER; SHIELD) and כידון in I Sam. 17:6 (see JAVELIN).

W. S. McCULLOUGH

***TARGUM** tä'r'güm [תרגום, translation; Aram. תרגומא, תרגומא; corresponding verb form in Ezra 4:7]; plural **TARGUMS** or **TARGUMIM**—gümz, —gä mím. 1. The Aramaic translation of scriptural books, especially the Pentateuch, as delivered orally in the synagogue during the period of the second temple and later, in accordance with a generally accepted, but by no means rigidly fixed, tradition of interpretation.

2. The written Targums now extant, which are for the most part editions of the old traditional rendering, made in Palestine and Babylonia at various times from the second Christian century and later. See VERSIONS, ANCIENT.

B. J. BAMBERGER

TARPELITES tä'r'pälits. KJV translation of Aramaic טרפליאי (LXX Ταρφαλαί(λ)αῖοι; Vulg. *Terphalaei*) in Ezra 4:9 (RSV "officials"). The word is either a professional name (like Dinaites, judges) or an ethnic name (like Babylonians, Elamites). Besides the RSV and KJV translations, the following meanings have been suggested: *tabellarii*, "couriers" (improbable); "Tibarenes" (*Tubal*); "the men of the Tetrapolis" (Antioch, Seleucia, Apamea, and Laodicea; see Strabo XVI.749-50); Persian *tarapâra*, "beyond the river" (W of the Euphrates; i.e., Syrians).

R. H. PFEIFFER

TARSHISH tä'r'shish [תרשיש, perhaps yellow jasper or other gold-colored stone; in Esth. 1:14 perhaps for Old Pers. *tr̥sus*, the greedy one]; KJV alternately **THARSHISH** thär'shish (I Kings 10:22; 22:48; I Chr. 7:10). 1. A Benjaminite, son of Bilhan (I Chr. 7:10).

Bibliography. M. Noth, *Die israelitischen Personennamen* (1928), p. 223; F. S. Brown, S. R. Driver, and C. A. Briggs, eds., *Hebrew and English Lexicon* (1955), p. 1076.

2. One of the "seven princes of Persia and Media" next in rank to King Ahasuerus (Esth. 1:14). The (Aramaic) Second Targ. of Esther adds "from Egypt" after this name.

Bibliography. L. B. Paton, *Esther*, ICC (1908), pp. 68, 152-53.

B. T. DAHLBERG

3. A far-off, and sometimes idealized, port that cannot be identified with any one location. The identification of the original Tarshish is unsettled, ranging from the Levantine ports (Tarsus is not out of the question) to Tartessus in Spain, which many authorities favor. Tarshish exported finely wrought silver, according to Jer. 10:9; and silver, iron, tin, and lead, according to Ezek. 27:12. When Jonah wishes to evade his mission to Nineveh in the E, he boards a ship at Joppa bound for Tarshish in the W (Jonah 1:3), evidently in the Mediterranean. "Ships of Tarshish" came to designate the larger seagoing vessels, regardless of their origin or ports of call. Yet it may be worth noting the places associated with the ships of Tarshish. Isa. 23:1 connects them with the lands of the KITTIM, pointing to Cyprus and the Aegean, and tying in with Gen. 10:4, where Tarshish is classified as Greek (cf. also Isa. 66:19). Yet I Kings 10:22 tells of Solomon's fleet of Tarshish that fetched gold, silver, ivory, monkeys, and peacocks, pointing to a route along the Red Sea and the Indian Ocean; II Chr. 9:21 has the same fleet going to Tarshish (tying in with Ps. 72:10) to bring back the same cargoes. I Kings 22:49 mentions Jehoshaphat's ships of Tarshish sailing for Ophir from Ezion-geber, which rules out any Mediterranean route; II Chr. 20:36 has the same ships made in Ezion-geber for sailing to Tarshish. It is important to note that Isa. 2:16 parallels Tarshish with "the pleasant place, desire" (RSV "beautiful craft"), suggesting that whatever the original identification

of Tarshish may have been, in literature and popular imagination it became a distant paradise.

C. H. GORDON

TARSUS tär'səs [Ταρσός]. A city in the province of Cilicia on the SE coast of Asia Minor (Acts 9:11, 30; 11:25; 21:39; 22:3).

Tarsus is the historical capital of CILICIA and especially the chief city of the E fertile part of this country, Cilicia Pedias. The city is located on the right bank of the Tarsus River (ancient Cydnus) ca. ten miles from the present coast line. Its location has never changed, from its foundation in prehistoric times to the present day, and as a city with a continuous history of at least six millenniums it should have better claims than Damascus to being the "oldest city of the world."

1. Prehistory and early history
 2. Iron Age, Assyrian, and Persian history
 3. Hellenistic history
 4. Roman history
 5. Topography and archaeology
- Bibliography

1. Prehistory and early history. The earliest settlement at Tarsus is contained in the prehistoric mound on the SW side of the city, called Gozlu Kule. The site was founded at least as early as Neolithic times, and was a fortified town in the third millennium B.C. It became an important center of coastal trade in the phase when Troy had its early flourish, ca. 2300 B.C. In the second millennium B.C., when Cilicia makes its appearance in Hittite records as the country of Kizzuwatna, Tarsus is one of its most important towns, under the name of Tarša. This name is therefore preclassical and probably as ancient as the site. A seal impression of one of the early kings of Kizzuwatna, Ishputahshu, was found at Tarsus. The presence of this and other early documents in hieroglyphic and cuneiform writing suggests that Tarsus may have been the capital of Kizzuwatna.

Excavations have produced evidence of architecture and objects of Hittite Empire type in Tarsus in the period 1400-1200 B.C. After the annexation of Kizzuwatna by the Hittites, the city was under firm control of central Anatolia.

2. Iron Age, Assyrian, and Persian history. Tarsus was overrun and destroyed by the Sea Peoples in their aggression of ca. 1200 B.C. The destruction is archaeologically attested, as is the arrival of Mycenaean Greek refugees, who now settled in Cilicia. Greek legend confirms the diaspora of Mycenaean Greeks after the Trojan War. Late legends refer to this first Greek colonization of Tarsus. It is not precisely remembered and is variously attributed to Perseus, Heracles, or Triptolemus and a group of Argives.

In Assyrian records Tarsus is first mentioned by Shalmaneser III (858-824), who captured the city in his twenty-sixth year (Black Obelisk 132 ff). The most specific Assyrian activity in Tarsus is reported for Sennacherib (704-681). During the Cilician campaign in 698 his army took Tarsus and carried off its spoil (*Annals* IV.66 ff). The same historical event is recorded in Greek sources, which preserve less accurate but interesting memories of the event. Sar-

danapallus (the mythical Assyrian royal name created by the Greeks) is said to have built Tarsus and Anchiale (to the W) in one day, Tarsus in the likeness of Babylon with the river flowing through the city. Whatever rebuilding took place under Assyrian auspices can only have continued the previous topography of Tarsus.

Sennacherib in his Cilician campaign also had to cope with Ionian attacks on the coast, as Greek historians report (Eusebius *Chronicle*). The archaeological evidence of Greek trade would confirm that renewed Greek colonization followed this endeavor, but no specific Greek contingent is attested to have settled in Tarsus in this period. Hellenization by contact and cultural influence increased from the seventh century on.

For the Persian period we lack detailed evidence. Tarsus was the capital of the kingdom of Cilicia and started issuing coins in the fifth century B.C. The city and the palace of King Syennesis are prominently mentioned in the account of the expedition of the younger Cyrus in 401 (Xenophon *Anabasis* I.2.23). The coinage after the defeat of Cyrus consists of Persian satrap issues until the conquest by Alexander. Baal Tars, the god of Tarsus, appears as a Zeus of Greco-Persian type on the obverse of fourth-century silver staters.

3. Hellenistic history. In 333 Alexander saved the city of Tarsus from being burned by the Persians. During his stay in Tarsus the king became severely ill from bathing in the chilly Cydnus River.

The fate of the town under the Seleucids is not known in detail. Its name was changed to "Antioch on the Cydnus" in the third century in honor of one of the early Seleucid kings. Its coins reappear under this name during the rule of Antiochus IV Epiphanes (175-163). A minor insurrection against this ruler, because Tarsus and Mallus were to be presented as a gift to the king's mistress in 171 B.C., is reported in II Macc. 4:30.

4. Roman history. The prominent status of Tarsus continued to be acknowledged in Roman times, when the city was made the capital of the province of Cilicia in 67 B.C. As the governor of Cilicia, Cicero stayed in the city in 50 and was admired for his liberal rule. After Pompey's death, and in order to settle matters in Cilicia, the representatives of the province met Caesar at Tarsus in 47. The city then assumed the title of Iuliopolis, in honor of Caesar. In the struggle after the murder of Caesar, Tarsus was involved in opposition against Cassius and was severely punished by him in 43, when a huge fine was imposed on the city and was ruthlessly collected. Tarsus was rewarded for its resistance to Cassius by Mark Antony in 41, and the city was exempted from taxes. The most spectacular and romantic event during Antony's visit was the arrival of Cleopatra, who sailed up the Cydnus River to Tarsus as a second Aphrodite in full regalia.

Under Augustus, Tarsus had its full rights restored as a free city. Boethus, one of Antony's appointees and a dishonest administrator, had been dismissed and exiled, thanks to the intervention of Athenodorus, a Stoic philosopher. This Athenodorus had been a teacher of Augustus. He was one among many outstanding philosophers to have come from Tarsus,

which by this time had grown into a center of intellectual life. Strabo emphasizes the native interest in learning in Tarsus, where the schools were full of local students rather than strangers, such as was the case at Alexandria (XIV.673-74). Many of the Tarsian philosophers and philologists went to teach in Rome.

The general prosperity of Tarsus was based on the fertility of the Cilician plain. Special industries mentioned for the town are the weaving of linen and the making of tents. The raw materials were the flax of Cilicia and perhaps a goat's-hair fabric called *cilicium* for tents. Linen from Tarsus is often referred to, and the tentmaking industry acquired fame through Paul (Acts 18:3). Paul's pride in his birthplace as "no mean city" (21:39) is understandable on the basis of the political, economic, and intellectual prominence of Tarsus at this time.

How large a contingent of the citizens of Tarsus were Jewish in the days of Paul is unknown. The Greek names of the philosophers are not even a guarantee that their families were more than recently Hellenized. In general, the population must have continued as a mixed Anatolian substratum with Greek, Roman, and Jewish additions.

The later Roman history of Tarsus is peaceful in a general way. For a while the only troubles were local and connected with petty rivalries among the cities of Cilicia. Serious competition did not arise for the metropolis of Tarsus until the third century A.D., when Anazarbus became the counterpart of Tarsus in E Cilicia.

Tarsus was visited by several emperors and adopted a succession of honorary titles in the second and third centuries A.D. Hadrian was singled out for special honors, with the title of Hadriane for the city, the instituting of a festival Hadrianeia, and the erection of statues.

In the Parthian wars of Rome, Tarsus and Cilicia were again of strategic importance. The city was captured by Shapur after his victory over Valerian III in A.D. 260. In 363 the Emperor Julian the Apostate was buried in Tarsus after an unsuccessful campaign in Persia.

The later history of Tarsus is one of continued dispute between East and West. In the eighth century Harun er-Rashid refortified the city and left his mark on its architecture. After many vicissitudes it was incorporated in the Ottoman Empire by Beyazit I.

5. Topography and archaeology. The ancient appearance of Tarsus is hard to reconstruct, in view of the continuous habitation and remodeling. We know from Assyrian and Greek sources (Xenophon *Anabasis*: I.2.23) that the Cydnus flowed through the city. It was navigable and connected Tarsus with its harbor, Rhegma, a coastal lagoon where the arsenals were located (Strabo XIV.672). The change in the course of the river was effected in the sixth century A.D. by the Emperor Justinian, who had the Cydnus led into a channel E of Tarsus, with various minor branches going through the city, as they do today.

The excavated part of Tarsus consists mainly of the preclassical levels on the mound called Gozlu Kule. This tell was a minor outpost of the Hellenistic and Roman city. It served conveniently for the build-

ing of a Roman theater on its N slope. The major civic buildings are buried under the modern town. We have references to agorai, stoai, avenues, bridges, baths, fountains, a gymnasium, a stadium, palaestra; but none of this former architectural glory has been located. The remnants of an aqueduct, baths, and a gateway are Byzantine and Arabic. The present level of habitation has risen far above the original one by filling in of the coastal plain and accumulation of habitation debris. When new construction is undertaken, excavation invariably produces Byzantine architectural remains. In the center of the modern town a large Roman building decorated with mosaics was found under the new courthouse in 1947.

The major remnant of Roman architecture is the colossal foundation of a pseudo-dipteral temple, the marble superstructure of which is entirely lost. Its concrete skeleton is often referred to as the "tomb of Sadanapallus" and is popularly called Donuk Tash (the "fallen stone").

TARTAK tär'ták [תרתק] (II Kings 17:31). A deity worshiped by the Avvites settled in Samaria after 722 B.C. No such deity is known, and the name is presumably a corruption of Atargatis (Hebrew עתריתה or Aramaic עתריתה), a goddess worshiped in Syria and by the Arameans in Mesopotamia. This deity is a composite figure—Athtar (see DAY STAR; SHAHAR; SHALEM; MOLECH), or his female counterpart Athtarat (see ASHTORETH), and Anath, the most active goddess in the Syrian fertility cult—in the Ras Shamra Texts.

Bibliography. J. Garstang, *The Syrian Goddess* (translation and commentary of Lucian, *De Dea Syria*; 1913); J. A. Montgomery, *Commentary on Kings*, ICC (ed. H. S. Gehman; 1951), pp. 474-75. J. GRAY

TARTAN tär'tän [תרתן, from Assyrian *turtānu*, or *tartanu*] (II Kings 18:17). Alternately: COM-MANDER IN CHIEF (Isa. 20:1). The title of an Assyrian general in command of an army group.

The office is first attested under Adad-nirari II (911-891 B.C.) in historical texts. We know of such officials under Shalmaneser III, Tiglath-pileser III, Sargon II (Isa. 20:1), and Sennacherib (II Kings 18:17). There are tartan officials of the right and of the left wing, the Assyrian army being divided into two bodies called "right" and "left," and we also know of a "second *turtānu*." The word, although late, seems to be of foreign origin and cannot be connected etymologically with *terdennu*, "second (in age or position)," in spite of the semantic and phonetic similarity.

TASKMASTER [גנב]. One whose office it is to allot tasks and to enforce their performance by any means. He is the foreman or OVERSEER of labor gangs (Exod. 1:11). In Egyptian reliefs they are equipped with rods for discipline. Their cruelty is

legendary (Exod. 3:7; 5:6-14; Job 3:18). In fact, the Hebrew root means "to oppress." The fact that David and Solomon had such superintendents over their enforced Israelite labor gangs was disruptive of the monarchy (II Sam. 20:24; cf. ADONIRAM [I Kings 4:6]; ADORAM [I Kings 12:18; II Chr. 10:18]). Solomon used many such officers (I Kings 5:16; see OFFICER) in the building of the temple. Any foreign ruler may be considered a taskmaster or oppressor by the prophets (Isa. 3:12; Zech. 10:4). The driver is a taskmaster for his beast (Job 39:7).

C. U. WOLF

TASSEL צִינֹתָ (Num. 15:38-39; KJV FRINGE), cf. Akkad. *šišitu*, projection; גָּדָל (Deut. 22:12; KJV FRINGE), Akkad. *gidlu*, plaited work (torque), bulb or string (of garlic). The Israelites were to make tassels or fringes on the four corners of their garments. See FRINGE; CLOTH.

J. M. MYERS

TATIAN tā'shōn. See VERSIONS, ANCIENT, § 4a.

TATTENAI tā't'ə nī [תַּתַּנִּי] (Ezra 5:3, 6; 6:6, 13); KJV TATNI tā't'nī. The governor of the province "across the river" under Darius Hystaspes.

Bibliography. W. Eilers, *Iranische Beamtennamen in der keilschriftlichen Überlieferung* (1940), pp. 35 ff. For a possible rendering in cuneiform as "Tattanni," see A. T. Olmstead, "Tattenai, Governor of 'Across the river,'" *JNES*, 3 (1944), 46.

A. L. OPPENHEIM

TATTOO [תָּ, תִּ] כְּתֹבֶת קַעֲקַע, *lit.* writing of incision, *in the phrase* make a writing of incision] (Lev. 19:28). A pattern made on the skin by making punctures and inserting pigments. Both the KJV ("print any marks") and the RSV ("tattoo any marks") paraphrase the literal Hebrew, in which the word "tattoo" appears as a noun. Tattooing is mentioned along with self-inflicted lacerations in the rites of mourning for the dead, probably because both practices were associated with the pagan cults.

H. G. MAY

TAU tō (Heb. tou) [ת, t (*Tāw*)]. The twenty-second letter of the Hebrew ALPHABET as it is placed in the KJV at the head of the twenty-second section of the acrostic psalm, Ps. 119, where each verse of this section of the psalm begins with this letter.

TAUNT. See SCOFFER.

TAVERNER'S BIBLE tāv'ər nər. The first complete Bible printed in England (1539). The OT was that of the Matthew Bible; the NT was revised on the basis of the Greek text. The work was done by a layman, a lawyer and student of Greek, Richard Taverner.

See also VERSIONS OF THE BIBLE, ENGLISH, § 4a.

J. R. BRANTON

TAVERNS, THREE. See THREE TAVERNS.

TAWNY [צַהֲרֹה; cf. Sahara] (Judg. 5:10); KJV WHITE. The whitish-brown color of the she-ass.

TAX, TAXES. A compulsory contribution to the support of government, local or federal, civil or ecclesiastical. Terms which designate some form of

Courtesy of the Oriental Institute, the University of Chicago

6. Men flogged for nonpayment of taxes, as scribes record the details; from the tomb of Mereruka, Saqqarah; Sixth Dynasty (ca. 2350-2200 B.C.)

taxation are the following: עֵרֶךְ, "assessment" (II Kings 23:35); מַס, "forced labor" (Deut. 20:11); מְנָה, "tribute" (Ezra 4:13); בָּלִי, "import duty" (Ezra 4:13); הָלָה, "toll" (Ezra 4:13); כְּהֶסֶס, "tax" (Matt. 22:17); פֶּרוֹס, "tribute" (Luke 20:22); תְּלוֹס, "toll" (Matt. 17:25); δίδραχμον, "half-shekel tax" (Matt. 17:24); ἀπογραφῆ, "enrollment (for tax purposes)" (Luke 2:2; see CENSUS).

A heavy tax in kind was exacted of all Egypt during the seven years of plenty. Some twenty per cent of all the produce of the land during the prosperous years was kept aside and stored, particularly grain for making bread. Egypt was thus spared the worst consequences of her own years of leanness and became a source of supply for other countries during the famine (Gen. 41:25-42:5). While accruing to the benefit of all the people, such a tax was possible only in a country like Egypt, where the Pharaohs actually owned the state (Gen. 41:44). See TAX 6.

During the period of the judges there was in Israel no army or royal court to support (I Sam. 8:10-18). David seems to have been able to maintain an army without taxing the people in money or in kind, having men of military age in divisions of 24,000 each ready for active service month by month (I Chr. 27:1). Eventually David's treasury grew to enormous proportions, principally because of booty of war and tribute exacted from those he subdued (II Sam. 8; I Chr. 27:25-31).

Forced labor was required by Israel of the various resident Canaanite peoples who were not driven out of the land (Josh. 16:10; 17:13; Judg. 1:28). Both David and Solomon pressed aliens into *corvée* labor (II Sam. 20:24) on the construction of the temple (I Chr. 22:2; II Chr. 2). On other projects, as well, Solomon forced "all the people who were left of the Amorites, the Hittites, the Perizzites, the Hivites, and the Jebusites" (I Kings 9:20; II Chr. 8:7) into slave labor.

Israelites themselves were compelled to do forced labor in building the temple (I Kings 5:13) under Solomon. In all probability it was Solomon who first introduced state taxes in Israel. During the period of Israel's aggrandizement David's court could live within whatever means the spoils of war and foreign tribute provided. During the subsequent period of stabilization Solomon's court depended partially on its own subjects for support, and Israel was taxed. "Solomon had twelve officers over all Israel, who provided food for the king and his household; each man had to make provisions for one month in the year" (I Kings 4:7). This was in addition to the tribute and gifts incoming from subject peoples and more or less dependent foreign governments, as well as tolls collected from caravans and traders (I Kings 10:14-29; II Chr. 9:13-28).

Recent archaeological discoveries, in particular the Samaria Ostraca dating from the early eighth century B.C., as well as the Lachish Ostraca from Tell ed-Duweir in S Palestine, dating from the early sixth century B.C., offer very scant though concrete data on taxes in kind paid to the Israelite kings. Jar handles from Gibeon and Lachish are stamped in Hebrew characters of the period, לַמֶּלֶךְ, "to the king." These jars probably held a bath, *ca.* ten gallons, and may have been the type used by Solomon to levy payment for Hiram's servants (II Chr. 2:10). *See bibliography.*

The cause of the division of the kingdom is attributed by Jeroboam and his fellow Israelites to the oppressive taxation and *corvée* exacted by Solomon and attempted by Rehoboam (I Kings 12).

The Chronicler reports that Jehoshaphat was able to regain much the same prestige Solomon had enjoyed and received taxes from his own people (II Chr. 17:5) as well as tributes from foreign peoples (II Chr. 17:10 ff). Finally, however, it was Judah which paid tribute to the Assyrians (II Kings 18:13-16), the Egyptians (II Kings 23:33), and the Babylonians (II Kings 24-25). In order for King Jehoiakim to pay the tribute exacted of him by Pharaoh Neco, landholders in Judah were taxed, each according to his assessment (II Kings 23:35). *See* TRIBUTE.

Under the Persians there was begun a system of taxation which reached into the purses of the common people. Differing from what is commonly understood as tribute to a foreign master, wherein indigenous princes were directly liable for regular payment (Esth. 10:1), this system was administered directly in each Persian province by a Persian satrap. By decree of Darius Hystaspis these satraps paid fixed sums into the royal treasury (Herodotus III.89). This royal revenue was exacted of the people in the form of "tribute, custom, or toll" (Ezra 4:13). Artaxerxes (II?) specifically, however, exempted all priests, Levites, singers, doorkeepers, and other temple servants from payment of the tax (Ezra 7:24). Besides the royal revenue there was as well a tax imposed on the people called "bread of the governor," which maintained the local governor's household. It consisted of food and wine taken from the people, besides forty shekels of silver daily (Neh. 5:14-15). Though Nehemiah in his governorship claims not to have exacted the "bread of the governor," the people were forced in hard times to mortgage their fields, vineyards, and houses to survive, as well as raise the money for the royal revenue (Neh. 5:3-4; 9:37). These burdens were in addition to those of supporting the sanctuary and rebuilding the walls of Jerusalem.

Later in Hellenistic times, under the yoke of the Ptolemies and the Seleucids the office of tax collecting was not assigned by the foreign king to his local representatives, as in Persian times, but rather was farmed out to the highest bidder, who had army help in collecting the taxes. Josephus' anecdote about Joseph the Tobiad is corroborated fully by external Egyptian sources insofar as the system of taxation is depicted (Jos. Antiq. XII.iv.1-5). Men of eminent rank from the various Ptolemaic provinces gathered in Alexandria to bid for the right to collect the taxes from their own people.

Though we know very little of the Seleucid system of taxation, it is likely that the same tax-farming practice persisted. From letters purportedly by the Seleucid kings Antiochus III (Jos. Antiq. XII.iii.3) and Demetrius (I Macc. 10:29-31; 11:34-35; 13:37-39) we learn of a poll tax, salt tax, and crown tax. At times the Seleucids exacted as much as a third of all grain produced, half of the fruit grown, and a share of the tithes paid by Jews to support the temple.

When Pompey had captured Jerusalem in 63 B.C., a tax was imposed upon the Jews which soon amounted to more than 10,000 talents (Jos. Antiq. XIV.iv.5). Julius Caesar, however, reduced the amount of taxes in general and decreed that no tax should be farmed or levied in the sabbatical years, nor that more than a fourth of the produce of the year following (?) should be collected. He stipulated that tithes should be paid by the Jews to Hyrcanus as to their own rulers of times past. For the use of the port city of Joppa, Hyrcanus was liable to a tax of 20,675 *modii*. This amount was to be raised as a tax on the land, the harbor, and its exports, and paid to the Roman officials at Sidon annually, except in the sabbatical year (Jos. Antiq. XIV.x.5-6).

Herod the Great laid a tax on produce of the field (Jos. Antiq. XV.ix.1) and a sales tax on all items bought and sold (XVII.viii.4). Under the procurators the financial system of the Empire was introduced. As in Ptolemaic times, tax collecting was farmed out at auction to the highest bidder (*see* TAX COLLECTOR). There were four principal kinds of duties: a land tax payable in kind or in money, a poll tax and a tax on personal property (Matt. 22:17), export and import customs at seaports and city gates, and in Jerusalem a house tax (Jos. Antiq. XIX.vi.3).

Aside from the tribute and taxes due foreign powers, the Jewish people individually were subject to a half-shekel payment annually to the temple, in the NT called the DIDRACHMA (Matt. 17:24). The background of the temple tribute was undoubtedly the half-shekel atonement money required of all males twenty years and over (Exod. 30:11-16). In Nehemiah's time the Jews paid a third of a shekel to the temple (Neh. 10:32-33); this was later changed to a half shekel, collected annually of every Jew twenty years and over throughout the world (Jos. Antiq. XVIII.ix.1). After the fall of Jerusalem in A.D. 70 the Roman emperor Vespasian ordered all Jews, despite the destruction of the temple, to continue the tribute payable annually into the capital (Jos. War VII.vi.6).

In order to collect the half-shekel temple tax levied on all Jews twenty years of age and over (Matt. 17:24), tax collectors went from town to town annually to raise the money, and in the Diaspora tax houses were set up to receive the impost.

An enrollment for purposes of taxation was ordered by the Roman emperor Augustus. This decree brought Joseph and Mary to Bethlehem in Judea, where Jesus was born (Luke 2:1-7; *see* QUIRINIUS). Another enrollment recorded in the NT evoked protests from the Jews, and disturbances ensued (Acts 5:37).

Matthew was one of the customs officials (Matt. 9:9; cf. Mark 2:14). Jesus frequented their company

despite the low regard in which they were held both by the populace and by the Pharisees (Matt. 9:10-13; Mark 2:15-17; Luke 5:29-32). During his ministry the Pharisees asked Jesus if it was lawful to pay taxes to Caesar. Jesus, recognizing that his interrogators were seeking some evidence of sedition against him whereby to cause him trouble with the Romans, answered that laws of state should be obeyed (Matt. 22:17-21; Mark 12:13-17; Luke 20:22-25). This logic is reflected in the advice issued by Paul, who insists that taxes and revenues be paid to the state without fail (Rom. 13:6-7).

J. A. SANDERS

TAX COLLECTOR [τελώνης; Heb. מוֹכֵס; Aram. מוֹכֵס]; KJV PUBLICAN. In NT times the Roman officialdom in Palestine had direct responsibility for collecting regular taxes, such as poll and land taxes. The collection of tolls from those transporting property (including slaves) by land or sea was still, however, farmed out to private contractors. The latter paid a stipulated sum in advance for the right to collect the tolls in a certain locality, and then tried to make a profit on the transaction. The Greek term τελώνης and the corresponding Latin *publicanus* apply in the first instance to such entrepreneurs. These "publicans" were sometimes, but not invariably, Romans. Apparently the Jew Zacchaeus (Luke 19:2-10, where he is called "chief tax collector") had amassed his wealth by farming the tolls in the region of Jericho. See TAXES.

Both the Roman officials and the tax farmers employed Jewish underlings to do the actual collecting. It is to such small fry that the term τελώνης is usually applied in the NT. The rendering "tax collector" in the RSV is therefore more exact than the "publican" used in the older versions.

Tax officers are never popular, even in free lands; but the Palestinian tax collectors were an especially degraded and despised lot. At the beginning of the Christian era, the Jews of Palestine were not reconciled to Roman domination, even though they recognized some of the benefits of the Roman system. They regarded themselves as an oppressed people under military occupation, and they looked forward to liberation in a not very distant future. The harshness of the procurators aggravated their resentment; messianic and revolutionary movements seethed under cover and at times boiled into the open. The extremists bluntly asserted that any act of submission to Caesar—such as paying a tax—was treason to God. The more responsible leaders did not go so far; yet they looked on the taxes and tolls as tribute exacted by a foreign conqueror, not as a legitimate requirement for the maintenance of social order. Besides, the sums wrung from them were often excessive, to fatten the purses of the Roman officers or swell the profits of the tax farmers.

The Jews who for pay participated in these operations were therefore regarded as doubly base and despicable. They had sold their services to the foreign oppressor as against their own people, and they were engaged in literal robbery. For they were helping

their principals to mulct the public, and no doubt part of what they collected stuck to their own fingers.

The rabbinic sources repeatedly bracket tax collectors with robbers. They and their families are disqualified from holding communal office, and even from giving testimony in a Jewish court. Just as one may deceive a highwayman to avoid loss, so one may deceive a tax collector (M. Ned. 3.4). This decision, the details of which are discussed by authorities of the first Christian century, reflects the near-revolutionary mood of that time. Later scholars, who regarded the imperial taxes as morally and legally valid, drastically modified the older rule; the Babylonian Talmud, composed in a more settled society, permits evasion only if an unauthorized or arbitrary tax collector is himself flouting the established laws.

The Synoptic gospels (the only NT writings which mention the matter) hold the same opinion of tax collectors as the early rabbinic sources. As the latter name "robbers and tax collectors" together, the gospels speak repeatedly of "tax collectors and sinners" (Matt. 9:10-11; 11:19; Mark 2:15-16; Luke 5:30); tax collectors are classified with prostitutes (Matt. 21:31) as flagrant offenders against morality. A follower of the disciples who flouts the authority of the church is to be treated "as a Gentile and a tax collector" (Matt. 18:17)—i.e., he is to be completely ostracized.

The willingness of Jesus to eat in the company of tax collectors (see the passages cited above and Luke 19:11 ff) does not mean that he tolerated or condoned their activities. On the contrary, the extent of his compassion is displayed by his association with these depraved creatures, in the hope of winning them for a better life. Just as the prostitutes whom he befriended were expected to respond to his guidance and return to the way of decency, so the tax collectors were summoned to repent and reform. Matthew-Levi gave up his post as collector of tolls in order to become a disciple; the rich Zacchaeus undertook to restore fourfold whatever he had taken by fraud, and to donate half his capital to charity.

The rabbis also considered the possibility that tax collectors might turn over a new leaf; such repentance, they remarked, is difficult because the penitent cannot possibly make restitution to all those he may have mulcted (Talmud B.K. 94a). In later centuries, Jewish scholars drastically modified the requirement of monetary restitution in all cases of robbery, in order to encourage inner repentance.

B. J. BAMBERGER

TAX OFFICE [τελώνιον]. A place mentioned in Matt. 9:9; Mark 2:14; Luke 5:27, in connection with the call to Matthew-Levi. The tax office in question was probably a toll or customs booth, where duties were levied on merchandise in transit. See TAX COLLECTOR; TAXES.

B. J. BAMBERGER

TEACHER [διδάσκαλος, from διδάσκω, teach]; KJV usually MASTER. The term appears often in Greek literature. Frequently it is a title of respect, and is

found coupled with κύριος, "lord," and βασιλεύς, "king."

In the NT the term is sometimes applied to non-Christian leaders such as John the Baptist (Luke 3:12) or Jewish religious authorities (Luke 2:46; John 3:10). For teachers of the Mosaic law, however, the compound νομοδιδάσκαλος is often preferred, especially by Luke. *See* DOCTOR.

Of some sixty instances of διδάσκαλος in the NT, more than thirty are in reference to Jesus, mostly in direct address. Here it is the natural counterpart of DISCIPLE. John 1:38 equates the term with RABBI, and it is likely that διδάσκαλε usually represents "rabbi" in the underlying oral tradition. This implies no official position. Rather, it indicates Jesus' status as leader of a group; and also, perhaps, that the authoritativeness of his teaching was publicly recognized (cf. Matt. 7:29; Mark 1:22; Luke 4:32).

Elsewhere, the title "teacher" is given to leaders of the young church, nearly always with some hint of official position (Acts 13:1; Eph. 4:11; II Tim. 1:11; Jas. 3:1). Of those so designated just after the NT period, undoubtedly the most famous was Polycarp. In the Martyrdom of Polycarp he is called "the teacher of Asia" (12:2), "apostolic and prophetic teacher" (16:2), "glorious teacher" (19:1). Paul ranks teachers next below apostles and prophets, and above miracle-workers, healers, administrators, and speakers with tongues. All these seem to have enjoyed church-wide recognition (Rom. 16:6-8; I Cor. 12:28-30), though, no doubt, several of the lesser functions could be embodied in one individual.

In the evolution of the church's threefold ministry, the exact place of the teacher is not clear (*see* CHURCH, LIFE AND ORGANIZATION OF; MINISTRY). The Didache clearly sets "prophets and teachers" off from "bishops and deacons" (Did. 15:1). Harnack supposed, from this, that the early church had two distinct series of orders: presbyter-bishops and deacons for local work, and apostles, prophets, and teachers for the work of the church universal. This, however, postulates a degree of systematization highly unlikely at so early a period. Far more probably, the situation in the first Christian decades was fluid, with "prophets and teachers" as recognized officials in some local areas but not in all. At Antioch, it seems, the earliest officers were called exclusively "prophets and teachers" (Acts 13:1 ff). Nearby churches may well have followed the same pattern, or at least have used the same terminology.

Unlike the Christian prophet (*see* PROPHET IN THE NT), the teacher had a contemporary model in the Jewish synagogue; and his office certainly inherited, from the synagogue, its position of high honor in the young church. The teacher was a herald of the gospel. His task was to address the church, and to engage in pedagogical instruction and, probably, rudimentary theological discussion. This work usually consumed all his time, so that the local congregation was held responsible for his livelihood.

PIERSON PARKER

TEACHING IN THE EARLY CHURCH. Instruction or exhortation on various aspects of Christian life and thought, addressed to men already won by the missionary preaching in order to strengthen them.

See also PREACHING; CHURCH, LIFE AND ORGANIZATION OF.

***TEACHING OF JESUS.** A body of teaching recorded almost exclusively in the four gospels. The rest of the NT seldom directly quotes sayings of Jesus (there is an example in I Cor. 11:24-25), and of these only one or two are unrecorded in the gospels (e.g., the saying mentioned in Acts 20:35). Sayings attributed to Jesus from other sources add little, even if agreement were possible about their genuineness, to the main outlines of his teaching (*see* AGRAPHA). The NT contains words attributed to the ascended Christ, communicated in prophetic manner to a Spirit-filled person (e.g., Rev. 1:10-3:22), and it is not impossible that the gospels include thoughts first recorded in the inspired gatherings of the early church, as well as the remembered words of Jesus before his death. The evangelists, or the traditions they drew on, were not dispassionate reporters of his sayings, but recorded his teaching, in part at least, to illustrate their own convictions about him and his message.

When the gospels are examined and compared by the methods of literary and historical criticism, certain themes appear which had central importance in the teaching of Jesus and gave coherence to his words and actions—e.g., the imminence of the kingdom of God, the offer of forgiveness to sinners, and the possibility of obedience to the point of suffering and death. Within the exposition of these themes must also be sought the teaching of Jesus about God and his will for us, as well as Jesus' own understanding of his person and work.

It has been the task of later generations to draw out the consequences of the teaching of Jesus, both the themes directly proclaimed by and the themes implicit in his sayings; and there is reason to suppose that the process had begun by the time the Synoptic gospels were being written. With the appearance of the Fourth Gospel the teaching of Jesus received its clearest and most coherent reformulation (or, as some would say, restatement) within the NT period. Whatever view is taken of the relation of the Johannine to the Synoptic record, most scholars would be unwilling to build up an account of the teaching of Jesus on a particular theme by bringing together sayings taken indiscriminately from Synoptic and Johannine sources, without at least first studying them in their separate settings.

1. **Jesus as teacher.** Jesus was regarded as a teacher by his disciples, his opponents (e.g., Mark 12:14), and the people generally. All the evangelists except Luke preserve the Aramaic word RABBI or its variant "Rabboni." He taught publicly in the open air, in synagogues, and in the temple. Privately he taught his disciples (*see* DISCIPLE). Like contemporary Jewish teachers he gathered disciples, though, unlike them, he did not create a school of biblical inter-

pretation but sent his disciples to share his own proclamation (Mark 6:7-13). As a recognized rabbi he was consulted on questions of conduct and doctrine. The gospels record that he was asked about the legality of divorce and gave distinctive teaching in reply (Mark 10:1-12), about a particular accusation of adultery (in the story which appears in many MSS at John 7:53-8:11), about a family quarrel (Luke 12:13-15), and about the legality of Jewish tribute to Caesar (Mark 12:13-17; *see* TRIBUTE). Among theological questions, he was asked to give his opinion about the most important commandment (Mark 12:28-34; cf. Luke 10:25-28; *see* LOVE [NT]), to answer a Sadducean objection to the doctrine of RESURRECTION (Mark 12:18-27), to lay down the conditions of possessing life in the coming age (Mark 10:17-22), to solve the disciples' perplexity about a man blind from birth (John 9:2-3), and to give some assurance about the number destined to be saved (Luke 13:23-24). Jesus himself is represented as initiating a debate on the Davidic origin of the Messiah (*see* MESSIAH [JEWISH]) by reference to a verse of Ps. 110 (Mark 12:35-37). In all these matters Jesus was moving entirely within the interests of contemporary teachers, and, on some points at least, his teaching was closely similar to theirs.

Jesus is also represented as giving teaching explanatory of his actions (e.g., in Mark 11:15-17), or in extended discourses such as the Sermon on the Mount and the apocalyptic address of Mark 13 (*see* APOCALYPTICISM). Study of the discourses suggests that they are, in part, compositions by the evangelists, and that the component sayings were probably uttered in response to questioning and criticism. Much the same is true of the collections of parables such as Mark 4:1-33, or the greatly extended group in Matt. 13. Jesus is represented as announcing the kingdom in parables, and the difficult sayings in Mark 4:10-12 draw a parallel between the task Jesus set himself and the dual responsibility of the prophet to utter public prophecy and to provide private instruction (cf. Isa. 6:9-10; 8:16). The pattern of "public retort and private explanation" is familiar from rabbinic Judaism (*see bibliography*), and examples have been found in the teaching of Jesus (e.g., Mark 7:1-23; 10:2-12); though many scholars regard its appearance in the Markan section on parables as an artificial device of the evangelist to account for the later obscurity of the parables (*see* PARABLE). However this may be, some parables were first spoken in reply to questions, and it is often possible to understand them more satisfactorily by detaching them from their present contexts and considering what questions they answer.

Despite the parallels between Jesus and the rabbis, the gospels preserve sayings severely critical of his contemporaries (e.g., the brief sayings of Mark 12:38-40, which are embedded in a long polemical discourse in Matt. 23:1-36). Their body of teaching is regarded as the "traditions of men" (Mark 7:7; RSV "precepts of men"). Further, Jesus' teaching provoked popular astonishment and sometimes disapproval (Mark 1:22, 27; 6:2; 11:18). In the synagogue at Capernaum, his words and exorcism caused the hearers to exclaim at this new teaching uttered with authority unlike that of the scribes (which probably

means that he taught like an ordained rabbi, with the privilege of introducing novel doctrines, and not like the ordinary elementary teachers; *see bibliography*). It is notable that his work as teacher was closely associated with healing (e.g., Luke 5:17; 6:6; 13:10-11), and that when requested to perform some act of power he was addressed simply as TEACHER (Mark 4:38; 5:35; 9:17, 38; 10:51; the point is made explicit in John 3:2). The title was thus wider than it is in modern usage; hence, no doubt, Luke's occasional substitution of MASTER. (The RSV sometimes translates "teacher" by "master" in Matthew and Mark.) The request of the sons of Zebedee for privileged places in the coming age (Mark 10:35-37) and Peter's bemused remark at the Transfiguration (Mark 9:5) also demonstrate a tendency in the primitive Christian tradition to press the title beyond its normal meaning, which becomes explicit in the Fourth Gospel, where not only is the "Rabbi" identified with Son of God and King of Israel (John 1:49), but also the content of Jesus' teaching is his self-disclosure (John 7:14-31; 8:12-30).

In all the gospels there is one further extension of the significance of this teaching activity. In popular estimation he was a prophet, a successor to John the Baptist or a reviver of the prophetic spirit of earlier times (e.g., Mark 6:15; 8:28). The proverbial saying that "a prophet is not without honor, except in his own country" (Mark 6:4), may imply that Jesus tacitly accepted this estimate; and the saying of Luke 13:33: "It cannot be that a prophet should perish away from Jerusalem," suggests that he identified himself with the prophets who suffered for the divine message. Much of his teaching had close kinship with that of the prophets in form, manner, and content (*see* SERMON ON THE MOUNT § 2). The initial summary of his message in Mark 1:15, by its choice of words, places Jesus at once in the prophetic tradition, as the herald of the fulfilment of prophecy. His undoubted sense of vocation cannot be adequately recognized by the title "teacher." Popular feeling came somewhat closer with "prophet"; he himself apparently chose SON OF MAN to indicate what he was doing.

2. The forms of the teaching. The forms of Jesus' teaching may be studied by the methods of FORM CRITICISM. There is a broad distinction between parables and sayings, though the two overlap. The sayings may be grouped according to their type (such as maxims, exhortations, and blessings), or according to the cultural milieu from which they came (such as the prophetic, apocalyptic, and wisdom traditions; *see* SERMON ON THE MOUNT § 2). Examination of the sayings in this manner gives some insight into the various categories of the recorded tradition of Jesus, and may permit a judgment about the originality of the sayings, and the influences at work upon them in the earliest period of transmission.

The sayings were originally spoken in Aramaic, and scholars have sought to show that there is clear evidence of Aramaic style, language, and idiom behind the Greek text of the gospels. Attention has been drawn to the frequent occurrence of the forms of Hebrew poetry (*see* POETRY [HEBREW]), with its characteristic and varied parallelism. Retranslation of the sayings into Palestinian Aramaic provides in-

stances of deliberate wordplay, a common feature of Semitic poetry. It is said that in Aramaic the sayings give the impression of being carefully premeditated and studied deliverances, prophetic utterances of the style and grandeur of Isaiah. By this use of prophetic form and language, the teacher ensured that his words would not be forgotten.

Not all the teaching of Jesus is conveyed by parables, detached sayings, and discourses. A common unit in the Synoptic gospels is the "pronouncement story" or brief narrative (such as Mark 2:15-17), which sketches a situation in the barest outline, betrays no interest in the persons involved, but simply leads up to the pronouncement of Jesus in answer to a question or in response to an action. It is further to be noted that the teaching of Jesus was not confined to speech, but was partly declared by actions. When the Baptist sent messengers to inquire about the mission of Jesus, his reply pointed to his healing activity (Matt. 11:2-6; Luke 7:18-23). Thus it is relevant to take into account the "miracle stories" (see MIRACLE), which have a well-marked form in the Synoptic gospels; and also a number of "kyrios stories," which lack a common or well-marked form but all demonstrate Jesus as Lord. They include the calling of the disciples, the confession of Jesus as Messiah, the Transfiguration, the entry into Jerusalem, and the cleansing of the temple.

The Fourth Gospel lacks parables and has few aphorisms which, when they occur, are embodied in dramatic dialogues or long discourses. The dramatic dialogue (e.g., with Nicodemus in 3:1-15) appears to be a development of a less common Synoptic form. The long interwoven discourses are not closely allied to the loose Synoptic compositions and have their nearest, though not very close, parallels in the philosophical religious dialogues of the Hellenistic world. Although study of the Dead Sea Scrolls suggests that the "typically Greek" terminology of the Johannine discourses was more familiar in Palestine than has been supposed, yet forms in which the teaching of Jesus appears in the Fourth Gospel still look like a conscious modification or transformation of the simpler Synoptic forms.

3. Modifications in the tradition. Modifications may have taken place at a stage much earlier than the composition of the Fourth Gospel, though scholars are widely divergent in their judgments about the extent to which the sayings (and deeds) of Jesus have been reliably preserved. It is not easy to discover objective criteria by which the original can be separated from the secondary, without first assuming what needs to be proved. In setting out the teaching of Jesus it is necessary to remember that the customs and interests (not too narrowly understood) of the primitive Christian communities caused his words and actions to be remembered. From the beginning a process of selection must have taken place, and it is possible by comparing the written gospels to observe how sayings and themes were modified.

The influence of the changed circumstances of a later time may be detected in many of the parables (see also SERMON ON THE MOUNT, especially § 3). If, e.g., the parable of the marriage feast in Matt. 22:1-14 is compared with its equivalent parable of the great banquet in Luke 14:16-24, it at once appears

that the kernel is a parable about a man who prepared a fine meal for invited guests and threw it open to all and sundry when the invited guests declined to come. The picture was immediately applicable to the Pharisaic opponents of Jesus, who refused to respond to him and criticized his offer of the gospel to sinners. The Lukan form has a repeated invitation to people outside the city (vss. 23-24), and this looks like an allegorical touch to represent the subsequent Gentile mission of the church. In Matt. 22:6-7 there is a more extensive allegorical development, which hints at the martyrdom of Christian missionaries and the destruction of Jerusalem, and so converts the parable into an outline of history from the prophets to the Last Judgment. The notoriously puzzling vss. 11-14 (absent from Luke) appear to have been originally a separate parable, possibly joined to the previous one in order to guard the primitive church against the admission of immoral and unrepentant pagans.

This example illustrates the tendency of the primitive church to use what was spoken to Jesus' contemporaries for their own concerns by adaptation, arrangement, and allegory. They transferred the eschatological challenge to the (near) future, made room for the Gentile mission of the church, and by means of a hortatory twist discovered rules for their own existence.

If now the individual strata of the Synoptic tradition are examined, it appears that certain traits predominate in each. Thus in the material peculiar to Matthew there is a notable concentration of teaching apparently directed to predicting the coming of the Son of man and much emphasis on the permanent importance of the Jewish law. The special Lukan material is particularly interested in the Christian mission to Gentiles and unfortunates. Similarly Mark and the sayings collection Q have their particular interests (see Q; MARK, GOSPEL OF; MATTHEW, GOSPEL OF; LUKE, GOSPEL OF). When, therefore, the sayings of Jesus are assessed, in order to form a picture of his teaching, it is necessary to give some weight to the stratum in which they are found and the influences that may have modified them.

4. Major themes. In the Synoptic gospels the teaching of Jesus is dominated by the kingdom of God. The fundamental content of this phrase is derived, by way of a rabbinic form of expression, from the OT (especially the Psalms and Deutero-Isaiah) where the dual conviction is maintained that God is already King and will finally reign in open triumph. This duality is present in those parables of Jesus which depend on the idea of growth. To the Hebrew mind the incomprehensible processes of nature (cf. Mark 4:27) were a sign of the mysterious sovereignty by which God maintained the daily life of his people. At the same time, the parabolic application of the metaphor indicates an effective working of this sovereignty in the course of history. Such a presentation seems almost a direct response to the eager expectation, in first-century Palestine, of an imminent victory of the divine sovereignty. It is noteworthy that both forms of this hope—i.e., pious quietism and revolutionary zealotism—were combined in the Qumran sectarian literature. Apocalyptic writings were widely popular and fostered such expectations

(see APOCALYPTICISM). That Jesus was not insensitive to their appeal is shown by the influence on his teaching of Dan. 7, from which was probably derived the term SON OF MAN and possibly the necessity of suffering and the gathering of disciples to be the "saints of the Most High." On the other hand, Jesus by no means identified himself with apocalyptic sentiments. The distinctiveness of his teaching may be seen when it is recalled that the apocalyptic expectation of the historical kingdom of God required both the purification and the triumph of Israel, and also the conquest of an opposition. The opposition might be regarded as demonic forces or Gentile enemies, or the two together. Some Jews responded with denunciations of Gentile idolatry and morals, and launched a vigorous movement aimed at their conversion (cf. Matt. 23:15); others, less optimistic, believed that God had handed over the present age to the evil powers, so that nothing could be done until they received the signal for the coming age when God would intervene to make his triumph sure.

Jesus used these themes with a difference. In part he identified the opposition with demonic forces; for this, his exorcisms are clear evidence. He could use the kingdom metaphor of a rival kingdom of evil (Mark 3:24) in order to assert that it was fatally divided and coming to an end (cf. the vision of Satan's fall [Luke 10:18]). The narrative of the TEMPTATION OF JESUS preserves a tradition that he repudiated the doctrine of a present age handed over to the devil (Luke 4:5-8). Moreover, the healing activity of Jesus was wider than exorcism; he restored withered limbs and freed men from the indignity of unclean diseases. For Jesus the primary opposition to God's kingship was a distorted world, inhabited by distorted beings.

Toward Gentiles, especially those with whom Jews came into daily contact, Jesus counseled forbearance, forgiveness, and love (e.g., Luke 6:27-35; see SERMON ON THE MOUNT § 3b). He was notorious for his association with tax collectors and sinners (see SIN; the word "sinners" often means Gentiles, rather than Jews careless of the law). He neither despised Gentiles for their ignorance and wickedness nor approved their ways. (The best comment on the irony of Mark 7:27 is his repudiation of the separatist ritual food laws in Mark 7:15.) Except under pressure (e.g., Matt. 8:5-13), he confined his teaching to his own people and so instructed his disciples (Matt. 10:5-6); but at the same time he urged upon them a new response to Gentiles in their midst and warned them of the catastrophe that would result from a continued policy of hostility (so, in part, is to be explained the "apocalyptic" language of Mark 13).

In the teaching of Jesus it was not Gentiles who hindered the coming of the kingdom, but unrepentant Israelites. His primary announcement was that "the kingdom of God is at hand; repent, and believe in the gospel" (Mark 1:15). The demand for repentance was stock Jewish teaching, and had been already voiced by John the Baptist (cf. Matt. 3:2). With Jesus the distinctive and paradoxical feature was that he found the hard, unrepentant core, not among the "sinners," but among the "righteous" (cf. the irony of Mark 2:17). It was these who resented his offer of the gospel to sinners and heard his reply in such

parables as the prodigal son and the marriage feast (Luke 15:11-32; Matt. 22:1-10); who argued that the omens were wrong for a new divine act and heard themselves rebuked for inability to read the signs of the times (Luke 12:54-56). It was certainly Pharisees who regarded his healings on the sabbath as dishonorable to God, and so provoked the controversy about scribal rulings which produced Jesus' most vigorous rebukes (e.g., Matt. 23:1-36; Luke 11:37-52) for the way they had made the practice of the law external and destroyed its prophetic, personal challenge. See LAW (IN THE NT).

The yoke of Jesus, unlike the scribal yoke of the law, was easy (Matt. 11:29-30), because he did not make acceptance by God conditional on keeping the burdensome law; but, once accepted and made a disciple, it was necessary for one to become as a child (Mark 10:15), to cut off every wrong ambition (Mark 9:43-47), to renounce, if need be, personal possessions (Mark 10:17-27; see WEALTH) and even life itself (Mark 8:34-35; see SELF-DENIAL). No doubt these rigorous demands arose from the critical situation of Jesus' own ministry (cf. the instructions to disciples in Mark 6:7-11); but they had the effect of confronting men with no lesser standard than the holy God in his sovereignty. As the parables of the hidden treasure and the fine pearl show (Matt. 13:44-45), it was the intention of Jesus to bring men to the point of decision; and this, unlike the scribal tradition, was the common purpose of his ethical teaching (see SERMON ON THE MOUNT § 3). He held out to men the responsibility of "entering the kingdom of God," which means, in part, sharing God's sovereign attributes—as, e.g., the divine love and forgiveness (Matt. 18:23-35; for the equivalence of kingdom and life, see Mark 9:43-47; for kingdom and righteousness, Matt. 6:33). Renunciation is therefore not an arbitrary feature of Jesus' teaching; it is an inherent necessity if men are to receive and share the life of God.

The opportunity of decision is not indefinitely open. Jesus warned his contemporaries of the disastrous consequences of not responding to his appeal. The note of judgment was not only prominent in his teaching (often expressed by the metaphor of the reckoning [Matt. 25:14-30]), but also urgent. Israel was like a fruitless fig tree, in danger of being cut down (Luke 13:6-9); and in some sayings (such as Mark 9:1) Jesus appears to have looked for a rapid denouement that would both settle the fate of Israel and inaugurate the new age of the kingdom.

In all this teaching Jesus closely associated a body of disciples with himself. They were to learn his teaching and pass it on; they shared his work of proclamation, healing, and feeding. To receive or reject the disciples was to receive or reject Jesus himself (Matt. 10:40; Luke 10:16). This unity of master and disciples (which some scholars also detect in the corporate meaning of the title "Son of man," is the foundation, in the teaching of Jesus, of the church (see CHURCH, IDEA OF). They are the little flock which is to receive the kingdom (Luke 12:32), to share in the sovereignty and judgment (Luke 22:28-29), and, above all, to suffer with Jesus (Mark 8:34-35). At one point, at least, it seems that Jesus believed that some disciples would share the suffering of the Son of man (Mark 10:35-45), before which the

kingdom would not come. (The connection of thought has been traced in Dan. 7; many scholars believe that Jesus was consciously taking the part of the Suffering Servant of Isa. 53, despite the scarcity of clear references to this passage in his teaching.) His words at the LAST SUPPER, when he gave bread and wine to his disciples, seem to mean that as a condition of sharing his life (his body) they must also share his sacrifice (his blood). In the end, he went to his death alone, convinced that it was God's will to bring about his sovereignty through total defeat, and persuaded that he died, not only for God, but also on behalf of "the many." See DEATH OF CHRIST.

There is little agreement among scholars about Jesus' expectation of what would happen after his death. By direct announcement, by parables, by actions (Luke 11:20), he had proclaimed the nearness of the kingdom, which would mean vindication for himself and his disciples and judgment for the unheeding. That he expected his death to be vindicated in resurrection (even though the disciples did not take his meaning) is firmly established in the tradition; what is not so clear is whether he expected the winding up of God's dealings with men to take place at once or after an interval of time, long or short.

For Jesus' teaching about God, which lies behind his preoccupation with the kingdom of God, see GOD (NT); for his teaching about his own person and work, see CHRIST; and the separate titles by which he was addressed, especially SON OF MAN. On Jesus' teaching generally, see also JESUS CHRIST.

5. Developments. Development of the teaching of Jesus takes place in the Fourth Gospel along three important lines. There is a reevaluation of the Synoptic eschatology; "kingdom of God" is almost entirely replaced by "eternal life," and there is developed teaching about the Holy Spirit; there is explication of the Christology latent in the Synoptic records; and there is conscious reflection on the significance of the continuing community of disciples. For these themes, see JOHN, GOSPEL OF.

K. GRAYSTON

TEBAH tē'ḇāḥ [טבח, perhaps born at the time (or place) of a slaughtering] (Gen. 22:24). The first-son of Nahor and Reumah; same as BETAH and TIBHATH; identified with the place name Tubiḥi of the Tell el-Amarna Letters, and probably with Dbḥ of Thut-mose III's Retenu list. It is located generally between Damascus and Kadesh. L. HICKS

TEBALIAH tēḇ'āli'āḥ [טבליהו, Y has dipped—i.e., purified(?); or good belonging to Y(?)] (I Chr. 26:11). The third son of Hosah in the line of Merari; a temple gatekeeper in a postexilic alignment of Levites ascribed to David.

TEBETH tē'ḇēth [טבת]. The tenth month in the Hebrew CALENDAR (Akkadian *tebtu*; December-January).

TEETH. See TOOTH.

TEHAPHNEHES. Alternate form of TAHAPANHES.

TEHINNAH tī hīn'āḥ [תחנה, supplication] (I Chr. 4:12). A man or family of Judah, probably Calebite; founder of Irnahash.

TEIL TREE tēl. KJV translation of מלה (usually OAK) in Isa. 6:13. "Teil" is an obsolete name for the lime or linden tree, *Tilia europea*. See TEREBINTH.

J. C. TREVER

TEKEL tē'kāl, tēk'āl. See MENE, MENE, TEKEL, AND PARSIN.

TEKOA tī kō'ā [תקוע; Apoc. θεκώε]; KJV alternately TEKOAḤ; KJV Apoc. THECOE thī kō'ē; **TEKOITES** —its, OF TEKOA [תקועי, תקועי, feminine תקעית] (II Sam. 14:4, 9; 23:26; I Chr. 11:28; 27:9; Neh. 3:5, 27). A city in the highlands of Judah (cf. I Chr. 2:24; 4:5), identified with Khirbet Taqu'a, ca. six miles S of Bethlehem, ten miles S of Jerusalem. The ruins of the last occupation lie scattered on top of the hill which forms a small plateau of ca. four or five acres. Its height of ca. 2,800 feet is above that of Bethlehem and the Herodium to the N. It is surrounded by an area under cultivation; there are a couple of springs in the vicinity. Fig. TEK 7.

7. The Judean wilderness as viewed from Tekoa (modern Tequ'), with Herodium (Jebel Fureidis) circled

Eusebius says Thecoa (Tekoa) was twelve (Roman) miles S of Aelia (Jerusalem), near a wilderness of the same name. Here a tomb of Amos the prophet was pointed out, a place of veneration also noted in Byzantine historiography. There was a church (a "Propheteum") of Saint Amos in Tekoa at which the monks of the New Laura worshiped and communed (*see below*). A remnant of this church may be the large baptismal font, three feet and nine inches deep and four feet in diameter at the top, cut out of a single limestone block. Jerome mentions that the people of Tekoa lived on a mountain twelve (Roman) miles from Jerusalem and that as he looked each day from Bethlehem, he could see the village of Tekoa. A medieval Jewish tradition pointed to one of the caves in the area as the grave of Amos.

In the royal administrative reorganization, Tekoa became a part of the highland district of Bethlehem (Josh. 15:59a LXX). One of David's Mighty Men, Ira son of Ikkesh, was a native of Tekoa (II Sam. 23:26). After Absalom's slaying of his half brother Amnon to avenge the latter's rape of Tamar, Absalom's sister, Absalom fled for safety to the home of his maternal grandfather, Talmi king of Geshur (cf. II Sam. 3:3). In order to effect an honorable *rapprochement* between David and Absalom, Joab sent for a woman from Tekoa to point out, through a ruse, the needlessness of carrying out the sentence of death which lay upon Absalom for the murder of Amnon. The stratagem succeeded, and Absalom was restored to favor—only to revolt against his father a short time later (II Sam. 13:37-14:24).

After the division of the monarchy, possibly soon after Shishak's invasion of ca. 918, Rehoboam (ca. 922-915) included Tekoa among the cities whose fortifications were to be strengthened (II Chr. 11:6). Ca. a half-century later, Jehoshaphat (ca. 873-849) met and defeated an army of Moabite, Ammonite, and Meunite invaders in the wilderness between Tekoa and En-gedi (II Chr. 20:20).

The prophet Amos, whose ministry included (roughly) the years 752-738, lived at Tekoa and was called from there to bring God's message to the N kingdom (Amos 1:1). In his oracle warning of the impending invasion from the N, Jeremiah calls for a trumpet blast from the walls of the fortress Tekoa and a fire signal from BETH-HACCHEREM. Though it may be but a play on words, it would appear that Tekoa was still an important post in the Judahite defense system on the edge of the wilderness which stretched eastward to the Dead Sea (Jer. 6:1).

People from Tekoa helped rebuild the walls of Jerusalem after the Exile, even though their leaders took little interest in the reconstruction program (Neh. 3:5, 27).

In 160 B.C., Jonathan and his brother Simon escaped from the Syrian general Bacchides by taking refuge in the wilderness of Tekoa, the name of a large section of the Judean wilderness. The white, hard limestone surface, with veins of flint in it, made it difficult to track anyone in this desolate region. Lookouts posted on the barren hilltops could easily spot any effort at a sneak attack or encirclement; the nature of the terrain itself made this sort of maneuver difficult. The communications with the S Judean rebels could be easily maintained. Thus the wilderness was a good place to go to gain time and reorganize one's forces, much as David did in the wilderness of Ziph and En-gedi at an earlier date. The pool of Asphar (Yellow Pool) was probably one of the reservoirs which Uziah (ca. 783-742) had dug in the wilderness (II Chr. 26:10) to supplement the inadequate water supply. A little less than three miles S of Tekoa is Khirbet Bir ez-Za'faran (Saffron Well or Pool, perhaps suggesting the yellow color of the water, or that of some kind of flower which grew around the place in the spring). At Khirbet Bir ez-Za'faran, not far from Sheikh Ahmed Abu Safar, are remains of ancient wells near some cisterns dug into the rock. It may have been here that Jonathan and his troops pitched camp and from here made their raid against Madeba (I Macc. 9:32 ff; Jos. Antiq. XIII.i.2).

In A.D. 68 Simon, one of the Jewish revolutionaries, camped at Thecoue (Θεκούε, Tekoa) with his raiders. He sent a representative, Eleazar, to the Idumean garrison in the Herodium, ca. three miles to the NE, to demand the surrender of the garrison. The Idumeans killed Eleazar and then sent one James to ascertain Simon's strength. James, after visiting Simon in his camp, treacherously misrepresented the strength of Simon's army to the leaders of the Idumean army concentrated at Alurus (Halhul, four miles N of Hebron, seven miles SW of Tekoa) so greatly that when Simon approached with his forces, the Idumeans fled in panic (Jos. War IV.ix.5-6).

In 454-58 a Monophysite monk named Romanus established a convent near Tekoa, after being expelled from his home convent of Elpidius for his heterodoxy. Ca. thirty years later this community came to an end. In 508 some discontented monks from Mar Saba, a monastery E of Bethlehem, founded a New Laura (convent) in a wadi S of Tekoa, apparently near or in the ruins of the monastery of Romanus. The New Laura is remembered in history as a center of Origenism during the twenty years preceding the Fifth Ecumenical Council (Constantinople II, 553) after which those espousing Origenism were expelled and replaced by orthodox monks. The New Laura is perhaps to be identified with Qasr Umm Leimun, a ruin with a church built on a hill at the beginning of the Wadi el-Menka', from which position there is an excellent view of the watershed and the way to Tekoa, as the descriptions require. Nearby is the ruin of a smaller church called Qasr el-'Abd. The cells were not found, but they

may have been less permanent structures and have disappeared.

During the Crusades (1132) Tekoa became a benefice of the Holy Sepulchre. In 1138 it was sacked by a band of Turks, but the populace found refuge in a large cave in the nearby Wadi Khareitun, which cuts through the hills to the Dead Sea. In the same year King Fulk gave the inhabitants the right to exploit the deposits of bitumen and salt from the Dead Sea.

The village plays no further role in the history of the region and is unoccupied today.

Bibliography. M. Marcoff and D. J. Chitty, "Notes on Monastic Research in the Judaeen Wilderness, 1928-29," *PEQ* (1929), pp. 167-78, especially 171 ff. F.-M. Abel, *Géographie de la Palestine*, vol. II (1938); *Les Livres des Maccabées* (1949), pp. 166-67. V. R. GOLD

TEL-ABIB tēl'ābīb' [תל אביב; Akkad. *Til-abūbi*, mound of the flood]. A town in Babylonia, the home of Ezekiel and other exiles (Ezek. 3:15). It was near the canal CHEBAR, but its exact location cannot be determined. Some of the Jews who were exiled in 597 B.C. had made their home here, and the town took its name from the Akkadian name of the mound on which it was built, which was a designation of mounds containing buried cities believed to have existed before the Flood. H. G. MAY

TELAH tē'lah [תלה, fracture(?)] (I Chr. 7:25). A family of the tribe of Ephraim, in a postexilic list tracing the descent of Joshua.

TELAIM tē'lām [הטלמים] (I Sam. 15:4). Alternately: **TELEM** tē'lēm [טלם] (Josh. 15:24). A city of Judah, near Ziph and not far from the border of the Amalekites. It was here that Saul assembled his forces in his campaign against the city of the Amalekites who apparently were harassing the tribe of Judah, which had appealed for rescue, just as Jabesh-gilead had previously (I Sam. 15:4; cf. I Sam. 11:4-6). In I Sam. 27:8 it is better to read *mittēlem*, "from Telem" (cf. LXX), instead of the MT *mē'ōlām*, "from of old"; the passage would then indicate that the territory of the Amalekites extended from the vicinity of Telaim to the border of Egypt.

The site is uncertain; Abel suggests Khirbet Umm es-Salafah, SW of Kurnub, and Press, Khirbet Abu Tulul, twelve miles SE of Beer-sheba. S. COHEN

***TEL-ASSAR** tēl'ās'ar [תלאשר]; KJV TELASSAR (Isa. 37:12); THELASAR thī lā'sar (II Kings 19:12). An Aramean site in N Mesopotamia, conquered by Sennacherib's predecessors on the throne of Assyria. II Kings 19:12 (=Isa. 37:12; תלאשר) defines it as the abode of the people of Eden (see BETH-EDEN). "Tel" is the Semitic word for "mound," and its use shows that in OT times the site was ancient, with early strata already buried. C. H. GORDON

TELEM tē'lēm [טלם, brightness; cf. Arab. *zalmun*; Apoc. Τολβάνης]; KJV Apoc. TOLBANES tōl'bānēz. 1. A Levite, and one of the contemporaries of Ezra listed as having married foreign wives (Ezra 10:24; cf. I Esd. 9:25).

Bibliography. M. Noth, *Die israelitischen Personennamen* (1928), p. 223. B. T. DAHLBERG

2. Alternate form of TELAIM.

TEL-HARSHA tēl hār'shā [תל חרשא, the ruined city mound of the deaf-mute] (Ezra 2:59; Neh. 7:61); **THELERSAS** thī lūr'sas. A Babylonian place from which men unable to produce genealogies proving their Jewish lineage came to Jerusalem. The place, as yet unidentified, was apparently a Jewish settlement on the site of a ruined city. R. A. BOWMAN

***TELL EL-AMARNA** tēl'ēl'ə mār'ənə. The modern name of the site of Akhetaton, capital of Egypt during the reign of Amen-hotep IV (ca. 1375-1366).

Bibliography

1. **The site.** *a. Location and name.* Tell el-Amarna is the modern designation of the site in Egypt ca. two hundred miles S of Cairo on the E bank of the Nile, occupied in antiquity by the city called Akhetaton, capital and sacred precinct of Amen-hotep IV (Akh-en-Aton),* tenth ruler of the Eighteenth Dynasty. The modern name, originally the result of an error, is now sanctioned by common usage. Actually, el-Amarna is a roughly semicircular area bounded on its six-mile diameter by the Nile and on its periphery by an arc of high cliffs; it derives its name from the tribe of the Beni 'Amran, who settled there in comparatively modern times. The villages found at present in the region are Hawata, el-Amarea, Hag Qandil, Esbi, and et-Till; it is from a chance combination of the name of the last-mentioned village with that of the area in general that the appellation Tell el-Amarna was formed by travelers who visited the site. For the meaning of the ancient name Akhetaton, see § 1b below. Figs. AKH 8-9.

b. Historical context. Amen-hotep IV became pharaoh of Egypt ca. 1375 B.C. after a coregency of not more than twelve years with his father, Amen-hotep III, during whose reign Egypt had already begun to lose her hold on the large Asian and African empire conquered and controlled by his predecessors Thutmose III, Amen-hotep II, and Thutmose IV. Recent study has cast considerable doubt on the period of coregency, which, if shortened or rejected completely, will force a change in the chronology; because a new chronology has not been worked out in detail, the commonly accepted datings are followed herein. The events of the new king's early years, so important for understanding his subsequent actions and policies, are difficult to reconstruct. The one fact which stands out clearly, however, is his indifference to the affairs of the Empire and his devotion to religious matters. He is depicted as physically malformed, with a thin, sensuous face; narrow, sloping shoulders; and un-

8. Painted limestone bust of Queen Nefertiti, from Tell el-Amarna

usually large hips and abdomen. He married his sister Nefert-iti, who bore him six daughters. Figs. EYE 39; TEL 8.

In the sixth year of his reign, for reasons still only conjectured, he broke with the influential priesthood of Amon at Thebes, then the capital, and devoted himself exclusively to the worship of Aton, the sun-god, whose uniqueness and supremacy he proceeded to promulgate throughout Egypt. His disavowal of Amon in particular and of the other gods in general was violent and thorough. The name of Amon was excised from monuments in the entire land, and the king changed his name from Amen-hotep, "Amon is satisfied," to Akh-en-Aton, meaning either "the one who is beneficial to Aton" or "it goes well with Aton." The religious heresy and the political changes which accompanied it are often referred to as the Amarna Revolution.

Because Thebes was so intimately identified with Amon, Akh-en-Aton planned and built three cities, sacred precincts to his own unique deity, Aton, in the three principle regions of the Empire—i.e., in Nubia, in Egypt itself, and presumably in Syria. The Egyptian city, certainly the most remarkable of the three, was situated at el-Amarna and was named Akhetaton, meaning either "the horizon of Aton" or "place of the effective glory of Aton." When the palace and temples of the new city were completed, Akh-en-Aton moved there with his family and court; thus Akhetaton became the new capital of Egypt.

Few details of happenings in the rest of Egypt are available for the major portion of his reign, but in his twelfth year a genuine crisis seems to have been precipitated both by internal dissension created by the abrupt social, political, and religious reforms con-

nected with the revolution and by a growing concern over the rapid dissolution of the Empire which had been in progress during this time. Some attempt was made on the part of the Pharaoh to remedy this situation; his younger brother, Smenkhkhere, whom he had married to Meritaton, his eldest daughter, and had made coregent with him, returned to Thebes in an effort to conciliate with the priesthood of Amon. This desperate reversion to the old order was not successful, and both Akh-en-Aton and his brother Smenkhkhere disappeared from the historical scene. The kingship was assumed by the half brother of Queen Nefert-iti, Tutankhaton, who removed the capital to Thebes and submitted himself to the desires of the still powerful priesthood of Amon, even to the extent of altering his name to Tut-ankh-Amon. In spite of the extraordinarily lavish contents of this king's tomb and the material wealth such furnishings imply, his reign was not a successful one. After a short rule by Eye (Aya), another member of the Akhetaton court, the throne was turned over to the army general Hor-em-heb, and the records of the heretic kings from Amarna were erased from the Egyptian scene as violently and completely as had been those of Amon by the first of the aberrant line.

c. The Amarna Revolution. The central feature of the Amarna Revolution as brought about by Akh-en-Aton was, of course, its religious heresy, an essentially monotheistic cult devoted to the worship of Aton. The existence of Aton as the name of the sun disk in a physical sense is attested well before the Eighteenth Dynasty, but Aton as a god appears only shortly before the time of Akh-en-Aton himself. The evidence, however, is quite sufficient to show that the conception of the sun disk as a life-sustaining principle was not invented by the heretic king but was adopted by him from a previously existing tradition. It is reasonably conjectured that Atonism is an offspring of Heliopolitan theology and that its dominant position during the Amarna period represents a temporary victory of that venerable priesthood over the more recently established one of Amon at Thebes. It is reasonable too to suppose that Akh-en-Aton was reared under the influence of the Heliopolitan priests; otherwise his heresy is even more difficult to understand.

Because the evidence is so limited, some scholars feel that "monotheism" is not a satisfactory designation for the religion of Akh-en-Aton; they prefer "henotheism," suggesting that although other gods are not specifically mentioned in the Amarna texts, recognition of their existence, but on a lower level than that of Aton, may well have persisted. It is certainly true that most of Egypt, to judge from the monumental remains of prior and later dates, was ignorant of or indifferent toward the heresies of Akh-en-Aton and his family at Amarna. The sources and nature of this new religion have been a subject of great interest to OT scholars and to historians of religion in general, especially because of the oft-cited relationship of Atonism to the religion of Moses. There is, however, no real evidence of direct transmission from the Egyptian to the Israelite, and even a cursory examination of the two will show that similarities between them are often superficial, tending to diminish as one probes deeper into the moral, legal, and philosophical aspects of each. The often-

quoted parallels between Ps. 104 and the Aton Hymn of Akh-en-Aton provide a striking example of literary influence; but because the style and phraseology of the Aton Hymn survived Atonism itself, one may regard these literary resemblances as a result of adaptation on the part of early Hebrew poets of figures and types still current in Egypt at a much later date.

The Amarna period is equally remarkable for the changes which took place in art forms and in literary composition. The striking naturalism familiar from most of the Amarna portraiture, tending in some instances to caricature, represents a radical departure from the traditional forms of Egyptian art, although, depending on the status of the coregency mentioned above, it may have had some precursors in the reign of Amen-hotep III. Eccentricity of style is greater at the beginning of Akh-en-Aton's reign than toward the end, illustrating, perhaps, the setting in of reaction paralleling the religious reconciliations spoken of above. Realistic representation is coupled with an equally unusual choice of subject; for the first time in Egyptian history the mystery surrounding the pharaoh was abandoned, and we are confronted with innumerable scenes depicting the private life of the king and his family engaged in various civic and domestic activities at the palace and in the environs of Amarna. These representations show, in addition, a shift in emphasis from concentration on the eternal and the afterlife in the traditional art to an interest in the new for the living, current, and temporary. These changes are paralleled in the literature of the period; we find the colloquial speech invading and replacing the classical written form of the language, mainly a holdover from the late Middle Kingdom and widely separated at this time from the common speech of the people.

Closely associated with the new religion was an extraordinary emphasis on the concept of *maat*, "truth." Historians have often attributed to this concept the changes discussed in the preceding paragraph, but recent studies have shown rather conclusively that *maat* in the Amarna literature should be understood as a unifying force of rightness and order in all things and never as actuality or reality as comprehended by the senses. The *maat* of Akh-en-Aton is distinguished from that of previous times mainly in its intimate association with the pharaoh, to whom, according to the texts, it is sustenance, and in the lack of symbolism and personification of the concept in the Amarna milieu.

d. Description of the site. Extensive British and German excavations (see *bibliography*) during the second, third, and fourth decades of the twentieth century have made available much information concerning the plan of the city and its principal buildings, as well as a wealth of data bearing on the daily life and institutions of its inhabitants. The city extended over five miles from N to S but was hardly more than half a mile wide. This rather unusual shape was conditioned by the natural lay of the land: no part of the city could be inconveniently far from a source of water. On the basis of location or presumed purpose the excavators have given names to the separate quarters of the city; these include, from N to S, the following: (a) Customs House, (b) North City, (c)

North Palace, (d) North Suburb, (e) Central City, (f) Eastern Village, (g) River Temple, and (h) Maru-Aton, or the Precinct of the Southern Pool.

Although excavations have not been completed, it is apparent from what has been discovered that Akhetaton was a beautiful and impressive city. Most of its area, apart from that devoted to official buildings and temples, was occupied by estates, ranging from the sumptuous to the modest, of the nobles and middle-class residents of the city; all the houses show a striking uniformity of plan, with size the principal mark of the owner's importance. Though not haphazard, the city itself does not show careful planning beyond the main N-S streets.

The Central City consisted of the Great Temple and its dependencies, including the Hall of Foreign Tribute and several official residences, the Palace, and the Royal Residence. Associated with the latter were the usual storehouses, a small temple, and priests' quarters. The remainder of Central City consisted of administrative buildings, such as the Records Office, Military and Police Headquarters, and some private homes. Fig. TEL 9.

9. Model of a nobleman's house, Tell el-Amarna

The Precinct of the Southern Pool, which lies in the extreme S and includes a garden, a pool, a small temple, and several other buildings, appears to have been a resort area for the royal family. Eastern City, which is located in a central position back toward the arc of cliffs, was presumably the home of the tomb diggers and grave tenders for the royal city. This is indicated both by the nature of the finds there and by the proximity of the settlement to the famous rock tombs in the nearby cliffs. These tombs, with their rich wall paintings of buildings and activities in Akhetaton and their various inscriptions, have proved an invaluable aid for reconstructing the Amarna scene. The more modest tombs of the middle-class inhabitants were located on a hill slope just E of Eastern City; these are constructed mainly of mud brick, with some little limestone.

The life of this remarkable city, Akhetaton, was extremely short. With the exception of scattered Roman remains, there is no evidence either of prior or of subsequent occupation of the site, which appears to have been abandoned suddenly and completely at the fall of the Amarna court. In fact, the evidence indicates that skilled masons at the command of a later pharaoh carried out an orderly devastation of the city; this pharaoh was presumably Hor-em-heb, whose ascent to the throne marked the end of the Amarna line.

2. The Amarna Letters. a. Discovery, disposition, and general description. The Amarna Tablets consist

almost entirely of diplomatic correspondence between the Egyptian courts of Amen-hotep III and Amen-hotep IV and the rulers of allied or vassal states in or bordering on the Asian section of the Empire. They were discovered by Egyptian peasants in 1887 in the ruins of el-Amarna near the above-mentioned village of et-Till. The tablets found at that time, together with a few which turned up later, are distributed at present among several European museums: the largest collection, of over two hundred, is in the Berlin Museum; over eighty are in the British Museum; and others are in Cairo and the Ashmolean Museum at Oxford.

Because the majority of the letters were sent to Egypt by princes and local rulers in Syria and Palestine and deal with various political, military, and economic problems, the Amarna Tablets* rank first among archaeological finds bearing on the topology and history of the biblical lands in the latter half of the second millennium B.C. Although written by officials whose native languages included a wide variety of Semitic and non-Semitic dialects, the tablets themselves are written mostly in cuneiform Babylonian, the diplomatic language of the entire Near East at this time. Frequent use of glosses, presumably to facilitate the understanding of difficult or ambiguous Babylonian words, as well as substratum influence of a more subtle nature, makes these texts an invaluable source for our knowledge of contemporary Canaanite. Fig. CLA 35.

The correspondents may be divided into three categories: (a) rulers of nations on a comparatively equal footing with Egypt; (b) vassal princes in Syria, Phoenicia, and Palestine directly under Egyptian control; and (c) various minor Egyptian administrative officials in the same areas. The first group includes (a) Kadashman-Enlil I and Burnaburiash II, kings of the Kassite Dynasty in Babylon; (b) Ashurballit I, king of Assyria; (c) Tusratta, king of Mitanni; (d) Suppiluliumas, king of the Hittites; and (e) an unnamed king of Alasya (Cyprus). Ca. forty letters may be assigned to this group with certainty. Most frequently heard from among the vassal princes are Akizzi of Qatna, Abdi-Ashirta of Amurru (land of the Amorites), Rib-Addi of Byblos, Ammunira of Beirut, Zimrida of Sidon, Abimilki of Tyre, Aziru of Amurru, and Abdi-Khepa of Jerusalem, with other letters from Hazor, Akko, Megiddo, Gezer, Ashkelon, and Lachish.

b. Historical significance. At the beginning of the fourteenth century B.C. five principal centers of power must be reckoned with in the Near East. In addition to Egypt itself, these include: (a) the Mitanni kingdom, a basically Hurrian population having a ruling class of Indo-Aryans, with its capital at Wassukkanni in the region of the Upper Khabur; (b) the Hittite kingdom, with its capital at Hattusa (modern Boğazköy) in Anatolia; (c) the Assyrian kingdom; and (d) the Kassite Dynasty in Babylon. A comparison of these dominant areas of control with the first group of correspondents cited above shows that each is represented to some extent in the Amarna correspondence, thus pointing out the extraordinary importance of these tables for reconstructing the historical scene.

Under the powerful leadership of Thut-mose III

(ca. 1482-1450) the borders of the Egyptian Empire had been extended northward to the Euphrates and southward to the Nubian city of Napata, above the Third Cataract of the Nile. During the rule of his successor, Amen-hotep II (ca. 1450-1425), Egypt was forced to withdraw from its northernmost Syrian provinces under the constantly expanding Mitanni kingdom. Toward the end of the reign of Amen-hotep III (ca. 1412-1375) Egypt's hold on its entire N empire had weakened; and the Amarna correspondence gives us a vivid, if not always too clear, account of the gradual loss of this vast area.

The most extensive correspondence from a single source is that of Rib-Addi,* prince of Byblos, from whom over fifty letters to the Egyptian court are extant—a singularly repetitious series of urgent requests for military aid, which, to judge from their number and common content, did not meet an enthusiastic response at Amarna. The main source of trouble was Abdi-Ashirta of Amurru, who, taking advantage of Egyptian weakness and nonsupport, was attempting to gain control over several adjacent principalities. Constant reference is made to the *Sa.Gaz* people, elsewhere mentioned as the Habiru (properly 'Apiru), with whom Abdi-Ashirta was closely allied. The Habiru, who are generally associated, at least in respect to their name, with the Hebrews, first came to the attention of the scholarly world through the Amarna Letters; mention of them was subsequently discovered in texts as early as the twentieth century B.C., and they became a subject of intense investigation. Although many features of the Habiru problem remain obscure, it is clear from numerous references that they consisted mainly of unlanded vagrants who entered into a dependent status as agricultural laborers or soldiers in exchange for maintenance. The true urgency of Rib-Addi's requests is apparent from events mentioned in the texts themselves. In no. 74 he states that all his cities in the mountains and on

10. Tell el-Amarna tablet: a letter from Rib-Addi of Gebal to Amen-hotep III

the sea have fallen to the (*Sa.*)*Gaz* people, with the exception of Byblos and two others, and that even then Abdi-Ashirta was attempting to incite the other cities against Byblos. Later Byblos and only one other city remained his, and finally only Byblos. Eventually Rib-Addi was forced to flee to Beirut, whose prince, Ammunira, was related to him by marriage. Fig. TEL 10.

Mitanni control in the N was finally usurped by the Hittites under the command of Suppiluliumas, who ca. 1370 B.C. proceeded from his sacking of their capital, Wassukkanni, into Syria, where unexpected hostility from the king of Kadesh on the Orontes brought him directly into contact with the vassal states of the Egyptian Empire. Suppiluliumas completed his conquest of Syria in a second campaign ca. 1340 B.C., during which he subjected the powerful fortress of Carchemish.

Little is known of the extent to which Egyptian control survived in Palestine after the reign of Akhen-Aton. Certainly the civil strife indicated in the letters of Abdu-khepa of Jerusalem and of the other princes, if left unopposed, could have resulted only in a completely anarchic situation. It is not until the reigns of Seti I (1318-1299) and Ramses II (1299-1232) that Egypt once more became actively involved with her Asian empire.

TEL-MELAH tēl mē'laḥ [תֵּל מֵלַח], the ruined city mound of the salt (Ezra 2:59; Neh. 7:61); **THERMELETH** thēr mē'lith in I Esd. 5:36. A Babylonian place from which men unable to produce genealogies proving their Jewish lineage came to Jerusalem. The site, as yet unidentified, was probably a Jewish settlement on a ruined city which had been sown with salt (cf. Judg. 9:45). It has been suggested that it may have been the Thelma of Ptolemy (V.20), a place in the low salt tract near the Persian Gulf.

R. A. BOWMAN

TEMA tē'mā [תֵּימָא]. A son of Ishmael, and hence the name of an Arabian locality (Gen. 25:15; I Chr. 1:30). It is the same as the modern Teima, an oasis located ca. 250 miles SE of Aqaba, on the road to the head of the Persian Gulf, and ca. 200 miles N-

NE of Medina, on the road to Damascus. Lying as it does on the junction point of these two great highways, Tema was an important caravansary; the caravans of Tema, mentioned as traveling through long stretches of the desert (Job 6:19), are in reality the caravans that journeyed toward that city. The oracle in Isa. 21:14, which bids the inhabitants of Tema help their fugitive brethren with food and drink, probably refers to the campaign of Tiglath-pileser III of Assyria in 738 B.C.; part of N Arabia was conquered, and Tema escaped destruction by paying tribute. The dire predictions of Jeremiah against the inhabitants of Tema and nearby tribes (Jer. 25:23; cf. 49:28-33) may refer to the campaign of Nebuchadnezzar of Babylon against that region.

Nabonidus, the last king of Babylonia, seems to have set especial store upon Tema. In 552 B.C. he undertook an expedition against it, slaughtered all its inhabitants, and completely rebuilt and repopulated the city; he made it his residence for perhaps ten years, leaving his son Belshazzar as his deputy ruler in Babylon. The Teima Stele in the Louvre (sixth or fifth century B.C.), which deals with legal matters, is remarkable for the cosmopolitan nature of the names cited in its text. The exact reason for the long stay of Nabonidus in Tema is uncertain. His motive may have been a political one—to establish a point of contact with Egypt, Babylonia's sole remaining ally against the rising kingdom of Persia; or it may have been his desire to build up a great religious center in opposition to Babylon, with whose priesthood he was perpetually quarreling. In either case his attempt did not succeed, as ca. 540 Cyrus of Persia (according to Xenophon) conquered all that region of Arabia, and Babylon itself succumbed a year later.

Bibliography. R. P. Dougherty, "Nabonidus in Arabia," *JAOS* (1922), pp. 305-16; S. Smith, *Babylonian Historical Texts* (1924), pp. 98-123; J. A. Montgomery, *Arabia and the Bible* (1934), pp. 58-68. S. COHEN

TEMAH tē'mā [תֵּמָה; Ἀροσ. Θομοῖ]; **KJV TAMAH** tā'mā in Neh. 7:55; **THAMAH** thā'mā in Ezra 2:53; **THOMOI** thōm'oi in I Esd. 5:32. Eponym of a family of Nethinim, or temple servants, among the exiles returned from Babylon (Ezra 2:53; Neh. 7:55; I Esd. 5:32).

TEMAN tē'mān [תֵּימָן; on the right side, southern]; **TEMANITES** —mā nīts; **KJV TEMANI** —nī in Gen. 36:34. A clan descended from Esau (Gen. 36:11, 15) and the place where it lived, identified with Tawilan, NE of Elji, on a shelf of land above Elji and below Jebel Heidan, which rises above it to the NE. Because only the outline of a circumvallation can be traced, the strength of the Edomite fortification cannot be determined, but the unusually large amount of Edomite Early Iron I-II (ca. 1200-600) pottery suggests a site of considerable importance, probably the largest and most important in the central Edomite area (cf. Jer. 49:7). It dominated the fertile, well-watered area, which was thickly settled in the Edomite period and the meeting place of important trade routes. One of the kings who reigned in Edom before there was a king over the Israelites

was "Husham of the land of the Temanites" (Gen. 36:34; I Chr. 1:45).

Like "BOZRAH," "Teman" is used as a parallel expression for the Edomite nation (Jer. 49:20; Ezek. 25:13; Amos 1:12).

TEMANITE tē'mə nīt [תַּמְנִי, תִּמְנִי, *gentilic* of Teman (תִּמְנִי) and Tema (תִּמְנָא)]. 1. An inhabitant of the region occupied by the clan of TEMAN (Gen. 36:34; I Chr. 1:45).

2. The designation of Job's companion ELIPHAZ (Job 2:11; etc.). The term is usually understood as referring to Teman in Edom, but the context strongly suggests TEMA in Arabia (cf. Job. 6:19).

V. R. GOLD

TEMENI tēm'ə nī [תִּמְנִי, on the right hand(?), southern(?)] (I Chr. 4:6). A man or family of Judah; son of Ashhur, a son of Caleb.

TEMPERANCE. See SELF-CONTROL.

***TEMPLE, JERUSALEM.** There were in the biblical period three successive temples in Jerusalem on the same site: Solomon's, Zerubbabel's, and Herod's. The site is identifiable without question; it is that of the presently standing and justly famous Muslim shrine known as Qubbet es-Sakhra, the "Dome of the Rock" (sometimes incorrectly called the Mosque of Omar), completed in A.D. 691 (Figs. TEM 12-15). The religious importance of these temples is shown by their frequent mention in both the OT and the NT.

A. THE TEMPLE OF SOLOMON. This was the "first temple," according to Jewish nomenclature, and has naturally elicited the most interest and dis-

Trans World Airlines Photo

11. The wailing wall at Jerusalem, with typical Herodian masonry

cussion. Prior to its establishment as a symbol of the official state religion, there were smaller, local temples at various places (see TEMPLES). Nevertheless, the recently nomadic Hebrews had had little architectural experience, and as we proceed to examine the biblical record, it is not surprising to learn that help was sought from the nearby Canaanites (Phoenicians; see CANAAN; PHOENICIA), who had a considerable tradition of material culture.

1. **Biblical data.** Although temple references are to be found in some twenty-three OT and eleven NT books, the chief sources of information about Solomon's structure are the descriptions in I Kings, mainly chs. 5-8, with parallels in II Chr. 2-7, and those in Ezek. 40-43, which are a dream of the future yet incorporate genuine reminiscences of the fallen first temple.

a. **I Kings.** The early tradition in II Sam. 24:16-25 relates that David purchased a threshing floor from ARAUNAH the Jebusite upon which to build an altar. According to I Chr. 22:1; II Chr. 3:1 (where Araunah is called Ornan), this was the site of Solomon's temple. Some traditions (probably late) claim that David had hoped to build a temple (II Sam. 7:2; I Kings 5:3), even going so far as to collect a considerable amount of building material, artisans, and money for the project (I Chr. 22:2-16; see *IB* and other Commentaries). At any rate, Solomon took decisive action, calling upon Hiram (Huram, Ahiram) I, king of Tyre (ca. 968-935 B.C.; see HIRAM 1), for workmen and materials. (The tradition that David early in his reign was helped by Hiram in building the royal palace [II Sam. 5:11] presents a chrono-

logical difficulty; the reference is either to Abibaal, father of Hiram, or to events late in the reign of David; cf. I Kings 5:3.)

In addition to the skilled Phoenician workmen (called here SIDONIANS; I Kings 5:6), Solomon used thirty thousand forced laborers from his own country (vs. 13; vs. 15 appears to be a later exaggeration). A special contingent from Gebal (Byblos) is also mentioned (vs. 18). The work began, so it is said, 480 years after the Exodus (6:1). Unfortunately this item does not agree with information from elsewhere about the Exodus (see CHRONOLOGY OF THE OT); but fortunately, other data are added—namely, “in the fourth year of Solomon’s reign . . . in the month

of Ziv, which is the second month.” Taking 961 as the accession date of Solomon, we have 957 as the date for the beginning of the temple. Josephus (Antiq. VIII.iii.1) puts the event in the eleventh year of Hiram; this agrees well with the biblical date. The month of Ziv (April-May; see CALENDAR), after the winter rains were over, was the proper time of year to begin.

In size the building was 60 cubits long, 20 cubits wide, and 30 cubits high (6:2). These are interior measurements. The cubit (see WEIGHTS AND MEASURES), a practical unit of measure taken from the human body (like the foot), is roughly the length of the forearm from the elbow to the finger tips. It is still much used in Bible lands. In ancient times there were three cubits, the ordinary of 17.6 inches, the royal of 20.9 inches, and a rarely used long cubit of 21.6 inches. It is now generally agreed that the royal cubit is the one intended in descriptions of the temple. Thus the rough equivalent of $1\frac{1}{2}$ feet or $\frac{1}{2}$ yard given in English is not quite sufficient. The metric equivalent of $\frac{1}{2}$ meter is more nearly correct, though still a little short.

At the front of the temple was an *'Ulām* (or *'Elām*), variously translated “porch,” “portico,” “vestibule,” or “entrance hall,” 20 cubits wide, on the inside, corresponding to the inside width of the rest of the structure, and 10 cubits deep (6:3). There were windows, the number and size of which are not specified, but apparently belonging to the main part of the

14. The temple area with Jerusalem in the background, from the Mount of Olives

temple (vs. 4). Beyond the vestibule was the *Hēkhāl*, or main room (variously called “holy place,” “temple proper,” “main room,” “nave,” etc.), 40 cubits long (vss. 3, 17). Beyond the *Hēkhāl* was the *Debhīr*, the “holy of holies,” “oracle,” “shrine,” “most holy place,” “inner sanctuary,” or “adytum.” This room was an exact cube, 20 cubits in each dimension (vss. 5, 16, 19-20). Figs. TEM 16-18.

From Parrot, *Le Temple de Jerusalem* (Neuchâtel: Delachaux & Niestlé)

15. The temple area today from the SE

Around all of the outside of the building except the vestibule (vs. 5) there was a structure variously designated as a “side wing,” “galleries,” “side chambers,” “side rooms,” and the like. A few scholars regard this structure as a later addition, or even as a part only of the second temple, that of Zerubbabel (see § B below). Most, however, defend it as Solomonic. This side structure was arranged in three stories, the first 5 cubits broad, the second 6 cubits broad, the third 7 cubits broad, each story being 5 cubits high. Offsets in the main walls were made to accommodate these increasing widths of the stories, in order, so it was said, that supporting beams need not be inserted into the main walls. There is no reliable information as to how, or as to what extent, each story was divided into rooms (vss. 5-6, 10). Another uncertainty is as to how access to this side structure was gained. The entrance was on the “right shoulder” of the building, which could mean either the N or the S side, depending on where the observer was standing (but the S is more probable, since direction was usually indicated by facing E). Ascent was by *lūlim*, translated “winding stairs” in the older versions, “trap-doors” in Moffatt, “a circular trap door” in the Amer. Trans., and simply “stairs” in the RSV (vs. 8). Reconstructions naturally

vary widely in this detail. Many assume two entrances, one on each side, variously located.

Another feature generally included in reconstructions of the ground plan of this temple is the pair of huge bronze pillars, mentioned in a description of the bronze objects in and around the building (7:13-22). The one on the right (or S?) was called Jachin, the other Boaz (see JACHIN AND BOAZ)*—the significance of these names being much debated (see bibliography). Their exact location is not given in the Hebrew of I Kings 7:15, but the Greek adds “for the porch of the temple” (so Amer. Trans.), and II Chr. 3:15 (cf. vs. 17) says they were “in front of the house.” Thus they are usually placed just outside the entrance to the vestibule, in spite of the expression “in the vestibule” in I Kings 7:19 (which could be translated “at the vestibule,” as in vs. 21). Their over-all height, including capitals of five cubits, was 23 cubits (nearly 40 feet), and their circumference is said to have been 12 cubits (ca. 20 feet), a large figure on which some doubt has been cast, but it is supported by Jer. 52: 21. They were perhaps hollow, the metal being four fingers (ca. 3 inches) thick, or they may have had a wooden core. Fig. JAC 3.

On the basis of these data, plus Ezek. 41:5, giving the thickness of the temple walls proper as 6 cubits, and Ezek. 41:9, stating that the walls of the side chambers were 5 cubits thick, excellent reconstructions of the ground plan of Solomon’s temple appeared a half-century ago (Fig. TEM 16). A recently

16. Ground plan of Solomon’s temple, after T. W. Davies (1902), based on Stade (1887)

From Corswant, *Dictionnaire d'Archéologie biblique* (Neuchâtel: Delachaux & Niestlé)

17. Ground plan and reconstruction of Solomon's temple, after Corswant (1956)

published plan is very similar (Fig. TEM 17). From Ezek. 41:8 it would appear that the building stood on a platform 6 cubits high, with ten steps leading up between the pillars to the entrance of the vestibule (40:49). The steps were shown in the older plans (see Fig. 4); a popular and widely copied plan adds the platform, making the steps more logical (Fig. TEM 18). But this plan also extends the side structure to each side of the vestibule and gives it an entrance on each side, in contradiction to I Kings 6:5, 8. Recent attempts at reconstruction reject these features (see § A3 below), probably rightly.

The interior walls were covered with cedar wainscoting; the floor was covered with boards of cypress. Thus no stonework could be seen anywhere on the inside of the building (6:14-18). According to the English translations, much of this woodwork was "overlaid" with gold (vss. 19-22, 30): This seems exaggerated, even in connection with wealthy Solomon; it has been suggested, with good reason, that the proper word is "inlaid." It is unlikely that such splendid woodwork would have been completely covered, even with gold. Ivory INLAY is now well known from Palestinian excavations at Samaria and Megiddo; it is likely that gold was used in the same way. Vss. 20, 22, mention an altar of cedar decorated with gold (also 7:48; II Chr. 4:19). Perhaps it can

From C. Watzinger, *Denkmäler Palästinas* (Leipzig: J. C. Hinrichs Verlag, 1935), vol. II

18. Floor plan of Solomon's temple, according to Watzinger

be inferred from Exod. 40:26 (see TABERNACLE) that this altar was placed in front of the entrance to the holy of holies; this may be the altar mentioned in Isa. 6:6.

The holy of holies contained two huge cherubim (see CHERUB) of gold-trimmed olivewood, each 10 cubits high, with an equal wingspread. They faced the front, so that a wing of each cherub touched the wall, while the other two wings met in the center of the room (6:23-28).* Beneath these wings was placed the ARK OF THE COVENANT (8:6-7). The gold chains of 6:21 are not in the LXX and are difficult to visualize (see IB). Fig. ANG 26.

All the inside wainscoted walls were filled with carved figures of gourds, cherubim, palm trees, and open flowers (6:18, 29). Some have doubted the authenticity of the report on this intricate art work; but in general it is in agreement with the archaeological evidence. Fig. ANG 25.

Leading to the holy of holies there was a double door of olivewood, decorated in the same way as the walls, with lintel and doorposts in some sort of pentagonal or fivefold arrangement, the nature of which is not clear in the present, corrupt state of the text (6:31-32). The nave or temple proper had much larger double doors, each door divided into two folding leaves. These doors were also richly decorated with carving and gold (vss. 33-35). There was no door to the vestibule. In front of the building was the "inner court," fenced about "with three courses of hewn stone and one course of cedar beams" (6:36; cf. 7:12), a type of construction found notably at Megiddo.

Seven years were required to finish the temple (6:38), but Solomon's building was not ended. He continued for thirteen years more erecting a series of palaces and other royal buildings adjoining the temple, which thus became a part of the complex—a royal chapel, as it is sometimes called (7:1-12).

In addition to the vast amount of stone- and woodwork already described, much artistry in bronze was required. For the execution of this, Solomon hired one Hiram of Tyre, bearing the same name as the king, but also known as Hiram-abi (7:13; II Chr. 2:13; 4:16). This man, represented as of great artistic skill, was half Israelite, as his mother was from Naphtali or Dan (I Kings 7:14; II Chr. 2:14). His first task was to cast the great pillars Jachin and Boaz, already mentioned above. The text emphasizes the size of the columns, but even more the artistry of the capitals, decorated with lily-work and hundreds of pomegranates, though the details are confused (I Kings 7:15-22). A number of modern artists have exercised their ingenuity trying to reconstruct them. Since they seem to be represented as hollow bowls in vss. 41-42, a few scholars have interpreted them as cressets, great bowls filled with fire, giving off flames by night and smoke by day. If this feature is correct, it is strange that it is not mentioned somewhere in the biblical accounts.

Another unusual, and even sensational, bronze structure was the "molten sea," a huge tank or basin 10 cubits (ca. 17½ feet) in diameter and 5 cubits deep. It is also said to have been 30 cubits in circumference, a rough estimate using 3.0 instead of the more accurate 3.14159 as the ratio of circumference

to diameter; the more exact ratio would not have been known to the biblical writer. The bowl was decorated with two rows of gourds all the way around. It was a handbreadth thick, and had a cup-like brim resembling the flower of a lily. The capacity was two thousand baths (see WEIGHTS AND MEASURES), or *ca.* ten thousand gallons. This great basin rested upon twelve bronze bulls arranged in groups of three, each group facing a point of the compass; the whole structure was placed in the SE corner of the inner court before the temple (7:23-26, 39, 44). For problems of technique and interpretation, see SEA, MOLTEN. Fig. SEA 34.

Other bronze objects made by Hiram the artisan included ten ornate wagons (KJV "bases" and RSV "stands" are not good translations; Moffatt "trolleys" is better), carrying ten lavers (water basins; see LAVER), each having a capacity of forty baths, or *ca.* two hundred gallons (7:27-39). Again, questions of size and utility arise. It has been estimated that the "sea" would weigh nearly thirty tons, and one of the wagons with its basin of water *ca.* four tons. Granting that such large objects could have been made by Hiram and his men, how could they have been moved from their place of casting in the Jordan Valley (vss. 46-47), and how could they have been used? How could the "sea" have been filled, and how could the laver wagons have been moved about, weighing as much as a modern motor car, and certainly without ball bearings in the wheels? Five of them were placed on one side of the court and five on the other; perhaps they were seldom moved (vs. 39). Fig. LAV 15.

Smaller bronze objects, pots, shovels, and sprinkling bowls (RSV "basins"), are also mentioned (7:40, 45). A concluding statement, probably from a later editor, mentions certain inside furnishings, with heavy emphasis on the word "gold": the altar before the steps to the holy of holies (see above); the nearby table for the BREAD OF THE PRESENCE; ten lampstands, five on each side of the entrance to the holy of holies; artificial flowers, lamps, tongs, cups, snuffers, sprinkling bowls, incense dishes, firepans, all said to be of gold, some of pure gold; finally we are told that the very door sockets (some translate "hinges") were of gold (vss. 48-50). Door sockets in those days were normally of hard stone; a number of such sockets have been found in archaeological excavations. See HINGES; SOCKET. Fig. SOC 72.

b. II Chronicles. We learn here, and here only, that the temple mount was called Moriah (3:1).* But the chief "overlooked" item supplied by the Chronicler (see CHRONICLES, I AND II) is the large "bronze" altar, 20 cubits square and 10 cubits high, mentioned along with the two columns and the "sea" (4:1). The presence of an altar in the inner court is taken for granted in I Kings 8:22, 64; 9:25; II Kings 16:14-15. It probably was intended to supersede the altar built by David at this spot (II Sam. 24:25). The lack of any mention of its construction at the proper place in I Kings 7 (probably between vss. 22 and 23) has been the subject of fruitless speculation by various scholars. Fig. MOR 69.

Some of the Chronicler's contribution consists of exaggeration of the figures in I Kings. E.g., the height of the vestibule is said (II Chr. 3:4) to have

been 120 cubits (some 200 feet), an incredible figure that has caused certain credulous artists to draw the temple with a huge tower (or even two pylons) at the front. Actually, there is no reason to suppose that the front was higher than the rest of the building, which rose 30 cubits, inside measurement (I Kings 6:2).

Another exaggeration concerns the height of the pillars Jachin and Boaz.* According to Kings the columns were 18 cubits, the capitals 5 more, making a total of 23 cubits. The Chronicler (3:15) makes the total 35 plus 5 cubits, *ca.* 75 feet, a good match for the 200-foot tower! The circumference is not given, but this is already so great in Kings (12 cubits, *ca.* 20 feet) that some conservative scholars have suggested reducing it to 5, or even 2, cubits. Fig. JAC 3.

As to the "sea," the Hebrew says (II Chr. 4:3) its bowl was decorated with figures of bulls ("oxen") instead of gourds as in Kings, but the RSV changes the reading to "gourds" to conform to Kings. The capacity of the bowl is given as three thousand baths (fifteen thousand gallons) instead of two thousand (vs. 5). A note is added to the effect that the wagon-borne lavers were for washing the burnt offerings, while the "sea" was for the ablutions of the priests (vs. 6). This function of the "sea" has been doubted by many commentators, who prefer to see in this great tank what one has called a cosmic significance, a symbolizing not only of the cleansing power of water but also of the primeval ocean from which all life and fertility were thought to have been derived. This conception has parallels in Mesopotamian as well as in Canaanite culture. It would also explain the use of the name "sea." Certainly it is difficult to imagine the priests climbing to bathe in this tank, the rim of which probably stood some 15 feet above the pavement of the court.

The Chronicler is even more lavish with gold than is the author of Kings. The 120-foot vestibule was "overlaid [inlaid?] . . . on the inside with pure gold" (3:4). Everything was richly trimmed with gold, especially the holy of holies, wherein were used six hundred talents of fine gold, equivalent in value to *ca.* \$20,000,000. Even the nails were of gold, some weighing as much as fifty shekels, perhaps equal in value to *ca.* \$500 (vss. 8-9). For good measure, precious stones were plentifully sprinkled round about (vs. 6).

The veil mentioned in 3:14 was probably not a feature of Solomon's temple, but belonged to one of its successors (see §§ B-C below). The bronze platform of 6:13, upon which Solomon stood at the dedication of the temple, is also lacking in Kings. Its authenticity is uncertain, though there are archaeological parallels in which a king or votary stands upon a sort of box at a sacred ceremony.

c. Ezekiel. As noted above, the temple in the book of EZEKIEL is a vision of the future, projected by the prophet or by one of the editors of the book. Yet its basic plan seems to have been taken from the recently destroyed structure of Solomon, and some commentators have gone so far as to suppose that the author of the vision personally made measurements of the ruins of the old temple (cf. 40:4-41:15, in which the angelic guide does much measuring).

It is clear that Ezekiel's temple faced the E (8:16; 11:1; 43:1-4; 44:1-3), and there seems little reason to doubt that the Solomonic structure had a similar orientation, facing the sunrise. Solar elements in the religions round about caused many temples to be so oriented, and it has been plausibly claimed that such elements persisted in the religion of Israel, though they could be carried so far as to be productive of great evil (8:16-18). It should be borne in mind that Solomon's Phoenician architects would have followed current practices.

The altar in the inner court, "overlooked" in Kings but mentioned in II Chr. 4:1, is also mentioned here (Ezek. 40:47) and even described in some detail (43:13-17), though the material is not specified, and stone, not bronze, may be implied. There is no exact agreement with Chronicles as to over-all dimensions, and of course no certainty that a Solomonic altar is described. The size of the vestibule is 20 by 11 (Hebrew) or 20 by 12 (Greek) cubits, instead of 20 by 10, as in Kings. Steps leading to the vestibule are mentioned. The two pillars are just barely in evidence, but not by name (40:49).

The size of the nave agrees exactly with Kings, likewise the size of the adytum, though nothing is said about the height of either. The side chambers are more complicated, being divided into ninety rooms, thirty in each story; they also have two entrances instead of one; their manner of attachment to the walls of the temple is similar. The raised platform under the whole structure may be another "overlooked" Solomonic feature (see above). The outside length of the temple is given as 100 cubits, a round figure that would agree fairly well with an estimate based on the inside dimensions from Kings. An over-all roof is mentioned—an item lacking in Kings but surely to be taken for granted. It would have been flat, then as now (cf., e.g., Josh. 2:6; Judg. 16:27; II Sam. 11:2; see ARCHITECTURE). The inside arrangement, decoration, and furnishings are similar to those listed in Kings (Ezek. 41). The various courts and adjacent structures are different from those of Solomon (ch. 42). Conspicuous by its absence is the great "sea"; its place seems to be taken by the stream of living water flowing eastward from the threshold of the temple toward the Dead Sea, fructifying the barren land as it goes (47:1-12).

d. Other biblical data. The temple did not stand alone, but was part of a complex of royal buildings that took altogether twenty years to build (I Kings 7:1-12; 9:1, 10-11). For this reason some refer to the temple as a royal chapel. The king did have a private entrance from his palace, and especially in the early days of the monarchy he had sacerdotal functions; but the temple also had public and national significance, increasingly so as time went on.

According to I Kings 10:11-12 (=II Chr. 9:10-11) Solomon used rare "ALMUG wood" or "algum wood" (sandalwood?) brought by Hiram's fleet from the S to enhance further the richness of the temple. Treasure was kept in the temple, as we see from the account of Shishak's plundering (I Kings 14:25-26). There has been much discussion as to whether this treasure was kept in the main structure or in the side chambers. King Asa of Judah himself drew upon the temple treasury for a political purpose (I Kings 15:

15-19). The young King Joash was hidden somewhere in the temple during the usurpation of Athaliah, under the protection of the priest Jehoiada, who seems to have had control of the army (see JEHOIADA; PRIESTS AND LEVITES IN THE OT). When Joash was crowned, he stood by one of the pillars "according to the custom" in the presence of the people gathered in the inner court. Care was taken that Athaliah not be slain in the sacred precincts (cf. I Kings 2:28-33). The rival temple of Baal was destroyed (II Kings 11:1-20).

After the building had stood for a century, repairs were needed, and provision was made for this purpose by Joash. But Joash also was forced to draw on the temple treasury to pay an indemnity against invasion by Hazael, king of Syria (II Kings 12:4-18). Soon afterward Joash of Israel attacked Jerusalem and plundered the temple (14:11-14). King Jotham of Judah added an "upper gate," probably on the N side of the inner court (II Kings 15:35; cf. Jer. 20:2). Ahaz (ca. 735 B.C., some two centuries after the founding of the temple) took treasure from the sanctuary to pay Assyria for protection against Israel and Syria. He also had a new-style altar, which he saw in Damascus, copied for use in the temple court in Jerusalem; the original altar was pushed aside for minor uses. Finally, probably in order to eke out his tribute to Assyria, he broke up the bronze laver wagons and removed the bulls supporting the "sea," replacing them with a stone base or pedestal (not "pediment," as in the RSV!) and making certain other minor structural changes (II Kings 16:7-18). His son Hezekiah took further treasure from the temple and even stripped off gold trimmings to raise a sum to pay Sennacherib of Assyria as indemnity against attack (18:15-16).

The apostate King Manasseh installed various heathen altars, images, and utensils within the sacred precincts; Josiah in turn removed these and restored the proper worship of Yahweh, after repairing and refurbishing the misused structure (II Kings 21:3-7; 22:3-9; 23:1-4, 6-7, 11-12; note how the king stood by one of the pillars in the solemn act of rededication in 23:3; cf. 11:14). Nebuchadrezzar, following his first attack (598/597 B.C.), took vessels of gold and other treasure from the temple, but apparently did not damage the structure (II Kings 24:13; II Chr. 36:10). It was quite otherwise with the second attack. The temple was completely plundered and then burned, along with most of the rest of the city (587/586). Particular mention is made of the breaking up of the bronze pillars, of such of the laver wagons as were left (cf. II Kings 16:17), and of the "sea," and the transportation of the metal to Babylon (II Kings 25:8-17; Jer. 52:12-23; an editor has added the bronze bulls in Jer. 52:20, overlooking II Kings 16:17; "three cubits" in II Kings 25:17 should, of course, be "five cubits"; cf. I Kings 7:16; Jer. 52:22). Yet, in spite of the destruction, certain sacrifices continued to be offered (Jer. 41:5).

The description of the TABERNACLE in Exod. 25-31; 35-40 is to a certain extent based on reminiscences of Solomon's temple (e.g., the nave and the adytum are each exactly half the size of Solomon's, though there is no vestibule), but no additional information is afforded.

The description of Josephus (Antiq. VIII.ii-iv) may be included under biblical data, since he does not seem to have had additional sources. He inclines to exaggeration and was probably influenced by the Herodian temple, which he knew very well. See § C below.

2. Archaeological data and special problems. The older literature sought parallels and origins from Egypt and Mesopotamia. From these areas there were, no doubt, indirect influences. However, the biblical account makes it clear that Solomon's temple was built by Phoenician architects and artisans, with mainly unskilled help from Israel. Therefore, in the final analysis Phoenician (more properly Canaanite) and, in a larger sense, Syrian models must be sought (see CANAAN; PHOENICIA). It is at this point that recent archaeological research has made some further progress.

a. Ground plan. Essentially this plan consists of a vestibule, a main room, and an inner or back room arranged longitudinally. This simple and appealing arrangement, in which each unit becomes more esoteric as one penetrates the interior, has examples in sacred architecture all the way from ancient Egypt, through Greece and Rome, to modern churches of the very common basilica type, with, of course, many modifications and elaborations of detail. Since Egyptian antiquities have been known so long, it was not difficult for scholars of the later nineteenth century to argue for Egypt as the cultural source of Solomon's sanctuary, and to show good ground plans of, e.g., the temple of Amon-Re at Karnak, built by Ramses III, as proof, though the correspondence turns out to be inexact upon close examination.

With the rise of Assyriology, or, more properly, Anatolian and Mesopotamian studies, much effort was expended during the earlier part of the twentieth century in an attempt to show Mesopotamian or Anatolian parallels and prototypes with respect to the temple of Yahweh in Jerusalem. Two names of important parts of the building lend plausibility to this attempt: the word for "vestibule" in the Hebrew text, *'elām* or *'ulām*, seems to be borrowed from Akkadian *ellamu*, "front"; and *hēkhāl*, "main room," "nave," sometimes used for the whole structure, is clearly borrowed from Akkadian *ēkallu*, "palace," which in turn is derived from Sumerian *e-gal*, "large house." The derivation of *debhār*, "inner sanctum," "adytum," is not clear: it may be related to the common Hebrew verb *dābhar*, "to speak," and thus signify "oracle," "the place where God speaks"; or it may be connected with a Semitic root, found in Arabic, meaning "to be behind," thus signifying merely "rear room"; or it may be a loan word of unknown origin; even Coptic *tabir*, "interior," has been brought into the discussion.

Much of this research has to do with the "long room" or "long house," an oblong rectangle, originally open at one end (the *liwān* type), later with a door in one of the short sides. When such a structure was divided laterally into three parts with the largest part in the middle, a plan similar to that of Solomon's temple was achieved.

Other arrangements are the "broad room" or "broad house," with the entrance in the middle of a long side, and the "around-the-corner" type, with

From K. Möhlenbrink, *Der Tempel Salomos* (Stuttgart: W. Kohlhammer Verlag)
19. Ground plan of Assyrian long room temple, after Andrae.

the entrance near one end of a long side—so called because the one entering must make a turn in order to get a full view of the room.

The long type was hardly known in Lower Mesopotamia, but it appears rather frequently in early Assyria and among the Hittites. Hence it is sometimes spoken of as being "northern" in origin (in reference to S Mesopotamia). Some have even suggested S Russia as the place of ultimate origin. Thus this "northern" long room would be the ancestor of the Greek megaron, as well as of similar types in Anatolia, Mesopotamia (especially Assyria), Syria, Palestine, and even Egypt. Fig. TEM 19.

A practical objection to all this is that simple types of construction like these might arise independently in different localities, though cultural connections and borrowings must not be ruled out altogether. Moreover, oft-mentioned Assyrian parallels, such as the temples of Anu-Adad and Nebo at Asshur, turn out to correspond rather inexactly with the Solomonic plan, as was the case with the Egyptian parallels mentioned above. Nevertheless, certain terms gained from this study are useful: the Solomonic temple as a whole is a "long house," the vestibule is a "broad room," the nave is a "long room," the adytum is the unusual "square room" type.

A "northern" origin may also be indicated by the wainscoting of wood. Neither Mesopotamia nor Egypt had sufficient wood for such lavish use, but this style is well attested for N Syria (Zinjirli), central Anatolia (Boghazköy), and W Anatolia (Troy). The Phoenicians could easily adopt this style because of their possession of the cedar wood of Lebanon.

Canaanite temples antedating the time of Solomon have been excavated in Palestine at Lachish, Bethshan, Megiddo, Shechem, and most recently at Hazor. They range in date from ca. 1500 to 1100 B.C. Only the one at Hazor, destroyed in the latter part of the thirteenth century, seems to resemble closely Solomon's structure in its ground plan, though it is only about half as large. What is needed is a Phoenician temple of the tenth century, but none has been found. We have instead, as our best parallel, almost a missing link, the small temple or chapel found in 1936 at Tell Tainat (or Tayinat),* ancient

Hattina, in N Syria between Aleppo and Antioch, dated in the ninth (or eighth) century, shortly after the time of Solomon. The size is about two thirds that of Solomon's temple, and the plan is remarkably similar, though with differences in detail: e.g., the columns are definitely within the portico, and the raised platform in the adytum does not extend over the whole area of the room (Fig. TEM 20). As with Solomon's temple, so was the Tainat chapel a part of a temple-palace complex. Fig. JAC 4.

 20. Plan of the palace at Tell Tainat, with the small temple at the upper left

b. The bronze pillars. Some controversy exists as to whether these stood free, and hence were symbolical, or served functionally to support the roof or an architrave. It was pointed out above that I Kings 7: 19 may read "in the vestibule" and that the columns of the Tainat chapel are so placed. Nevertheless, an almost overwhelming body of opinion favors the free-standing hypothesis. Not only does the biblical text on the whole favor this, but the number of parallels is impressive, beginning with the New Kingdom in Egypt, where it was customary for the pharaohs on a festival anniversary to erect two obelisks as sun symbols before the temples of Amon-Re. The phenomenon is also attested for Assyria, Phoenicia, and Cyprus. The most striking extrabiblical literary parallel is that of Herodotus (II.44) in his description of his visit to the temple of Heracles in Tyre: "In it there were two pillars, one of refined gold, one of emerald, a great pillar that shone in the night-time." In each case such pillars would probably symbolize some divine or cosmic power relied upon to support the current dynasty or religious establishment (like the Assyrian holy tree or "tree of life"). One can also think of the cosmic significance traditionally attached to the so-called Pillars of Hercules.

The N Syrian *hilani* house, so often mentioned in discussions of the entrance to Solomon's temple, is not entirely relevant if Solomon's pillars were free-standing. The *hilani* pillars were functional, supporting a lintel.

c. The bronze sea. This, too, probably had symbolic significance with cosmic overtones. One thinks immediately of the "sacred lake" by Egyptian temples,

sometimes said to be designed merely for ablutions, sometimes said to be filled with *Nûn*, water from the subterranean Nile or ocean, with great cleansing and fructifying power. Also discussed in this connection is the Mesopotamian *apsû*, a word meaning both the subterranean ocean, the source of life and fertility, and the basin of holy water in a temple (see § A1b above). Another possibility is that the word *yam*, "sea," was applied by the Canaanite Phoenicians, to whom the Mediterranean was the chief source of livelihood. It must also be remembered that the great bowl was supported by bulls, the most popular animal representative of fertility in the ancient Near East, usually associated with the god Baal (or Hadad), by no means unknown to the Israelites. See BAAL; CALF, GOLDEN; SEA, MOLTEN.

d. Miscellaneous items. The elaborate carving on the wood wainscoting, with figures of "cherubim, palm trees, and open flowers," finds its best counterpart in the richly carved ivories of pre-Solomonic and post-Solomonic dates discovered at such places as Nimrud, Khorsabad, Ras Shamra, Arslan-Tash, Samaria, and most recently Megiddo, all thought to reflect Phoenician or Syrian influence. Particularly striking are some of the cherubim from these collections. From the same cultural area come the pomegranates, gourds, netting, and lily-work of the pillars and the "sea"; likewise the "latticed windows" or "windows with recessed frames,"* though it must be recognized that the ultimate origin of the clerestory principle, still so important in modern churches, is to be sought in Egypt. Perhaps it can be said that the basic plan of the temple came from the far N, but that it took on Hittite, Assyrian, Syrian, Egyptian, and Phoenician elements as it traveled about in the movements and mixtures of peoples of the second millennium B.C. It would have been called "Tyrian" or "Sidonian" or "Canaanite" in its time, or, as we would say, "Phoenician"; but Phoenician culture at that time was a mixed culture, made up of the elements indicated above. Figs. TEM 21; WIN 22-23.

Many observers have been impressed with the great rock that is so prominently featured within the Dome of the Rock today, giving the structure its very

 21. Window with recessed frames, on ivory inlay from Khorsabad, showing Astarte at the window

name. Hence it has become the fashion to say that this was a "sacred rock" from time immemorial, even before Solomon, David, or Araunah, and that the rock was responsible for the choosing of this site for a sanctuary. But the biblical record says nothing about the rock; it may not have been regarded as important or significant; it may or may not have been a part of the threshing floor. Therefore, attempts by scholars to determine the relationship of Solomon's temple (or its successors) to the rock are beside the point. The two favorite hypotheses are that the rock lay under the holy of holies or under the great "overlooked" sacrificial altar in the forecourt. The rock is too large to have been restricted to these features. If it lay under the temple at all, and if we consider its size (58 by 44 feet) and its central location, the most plausible hypothesis would seem to be that it lay under the *hekhal*, or main room, or, we may as well say, under the temple as a whole.

e. Building material. While the wood for the temple had to be brought from the Lebanon, the bronze from Solomon's copper mines and smeltery in the ARABAH, the gold and ivory from far away in the S (I Kings 10:22; II Chr. 9:21), the basic building material, the stone, was immediately at hand, in the hills round about Jerusalem (I Kings 5:15), even in the city itself. The great stones were cut and finished in the quarries (I Kings 5:17; 6:7). The famous white limestone, called in Arabic *meleki*, the "royal" stone (or, according to some, *meleqeh*, the "smooth stone"), is familiar to every visitor to Jerusalem, and is still quarried from the great cavern under the Old City now known, perhaps with some justification, as Solomon's Quarries (called by Josephus the "Royal Caverns"). It has been reported that the beautiful white limestone facing on the Iraqi Parliament building was quarried near Hebron, S of Jerusalem, and transported to Baghdad along the desert road. This stone is reduced to lime in a hot fire; note the burning by the Chaldeans (II Kings 25:9).

3. Attempts at reconstruction. These attempts go back at least as far as that of Lamy (Paris, 1720) and Altschul (Amsterdam, 1724). During the nineteenth century a considerable number of major works bearing on Solomon's temple were published, along with numerous periodical articles; many of these works included sketches and plans, some of them fantastically imaginative. A notably accurate student of the subject was Bernhard Stade, whose *History of Israel*, containing a discussion of the temple, began to appear in 1881. Stade's plans and sketches have been copied more than any other in serious scholarly works, at least until very recently (*see bibliography*). On the other hand, the models and reconstructions of Conrad Schick (first published in 1896 after their author, a devout and distinguished architect, had lived in Jerusalem for fifty years) have had a great popular vogue, but are now known to be very inaccurate, especially in their portrayal of Solomon's temple. Indeed, Shick actually confused features of Solomon's temple with those of Herod's.* The famous works of Perrot and Chipiez (1887-89) were better based historically, yet they strike us today as more artistic than accurate. Fig. TEM 22.

As was pointed out above, the ground plan has occasioned little difficulty or difference of opinion,

22. Solomon's temple, front view, after Schick (1896)

and the older sketches, such as that of Stade (Fig. TEM 16), are as good as the most recent. The really serious problems arise when attempts are made to reconstruct the superstructure. As noted above in regard to the ground plan, Assyriological activity in the early part of the twentieth century brought an overemphasis on Assyrian parallels. This was the case with the nevertheless great contributions of Walter Andrae, beginning *ca.* 1908. Möhlenbrink (1932) and Galling (1928, 1931, 1937), two very important contributors, are still under this influence. Probably Carl Watzinger (1933, 1939) shows the best understanding of the need for fitting Solomon's temple into its immediate Phoenician and Syrian background, without neglecting the search for more remote origins, not so much in Assyria, but still farther N. His simple and convincing diagrams are now beginning to be highly praised and widely copied. However, as noted above, he seems to be wrong in bringing the side chambers all the way to the front of the building; nor is it likely that he can be right in assuming that the superstructure was made of mud brick, only the foundations and socles being of stone. His front towers, his stairways, and his side entrances can also be criticized without detracting from the solid value of his research and presentation.

In the American milieu, a new period of study on Solomon's temple began in 1941, when G. E. Wright reprinted a photograph of the Schick model as an example of inaccuracy, along with the diagrams of Watzinger,* as being approximately correct in "bare outline." The Tell Tainat chapel was offered as having the best parallel ground plan, while too much searching among the temples of Egypt and Assyria was declared unfruitful. A number of objects from Palestine, Phoenicia, and Syria were presented as being the kind of thing most likely to throw light on the decoration and equipment of Solomon's temple. In other words, the parallels should come from as

close as possible in time and place; there has been too much ranging far afield. A year later W. F. Albright commended Wright, though he himself was willing to range farther abroad in attempting to explain the significance of such objects as the altar, the "sea," and the pillars. Both writers intimated that a new era for understanding the first temple had arrived. Fig. TEM 18.

Soon thereafter a college teacher, P. L. Garber, and a professional model maker, E. G. Howland, combined forces to meet the challenge suggested by the hopeful words of Albright and Wright. At considerable cost in time and money, these men produced the Howland-Garber model of Solomon's temple, first exhibited in 1950. This model, apart from the question of its accuracy, is something of a masterpiece,

25. Howland-Garber model of Solomon's temple: interior of the temple

the most serious effort of its kind since the days of Conrad Schick (another model was shown at the New York World's Fair in 1939, also one by Gottstein in the New York Jewish Museum in 1950, but published information about these is not readily available). Not only is published information on the Howland-Garber model available, but also filmstrips and photographs. It will probably become widely known, and its high cost will no doubt discourage rival efforts. Figs. TEM 23-26.

Certain features of this model may be pointed out to illustrate the problems of all makers of models and reconstructions. As was mentioned above, the construction of an altar of burnt offering in front of the temple is not mentioned in Kings, though its existence is taken for granted. The only descriptions are in II Chronicles and Ezekiel, and they are not in agreement. The Solomonic altar seems to have been made at least in part of bronze (I Kings 8:64; II Kings 16:14; II Chr. 4:1); there is no indication of its design. Ezek. 43:13-17 describes a three-stage structure, each stage smaller than the one below, like a Babylonian ziggurat or tower-temple; no material is specified, though one would naturally expect it to be stone. Howland and Garber have followed Ezekiel in rough outline in producing their controversial altar. Fig. TEM 27.

27. The altar of burnt offering (cf. Ezek. 43); from model by E. G. Howland

There is little controversy about the general design and size of the "sea"; hence most reconstructions are much the same. The problems are with respect to significance, use, and practicability.

The temple structure itself in this model stands upon a podium or platform 6 cubits high, necessitating a flight of ten steps to reach the vestibule. This feature is from Ezekiel (40:49; 41:8) and hence controversial; some would place the building flat on the court pavement, thus obviating the steps.

The pillars in this model are free-standing, according to a presently strong majority of opinion. The design of the capitals follows that of an incense burner from Megiddo as an aid to clarifying the rather puzzling description of I Kings 7, which has given rise to so many conflicting restorations on paper. But this procedure also to some extent involves acceptance of the debatable cresset theory mentioned above. Fig. TEM 28.

28. Detail of the Jachin and Boaz pillars of the Solomonic temple, by E. G. Howland

The side chambers stop short of the portico on each side, in accord with the biblical text, but contrary to Watzinger. There is no attempt to divide them into small rooms, as in Ezekiel, followed by many reconstructions on paper. They are not given windows, since none is mentioned in the biblical text except in connection with the main walls of the temple. The entrance to these side chambers (and there is only one in the biblical text, though many reconstructors have assumed two) is placed inside the temple, in the nave, on the theory that the side cham-

bers were for the storage of treasure, which could be more easily guarded if the front door of the temple were the only outside entrance. This seems to be the detail of the Howland-Garber model that has occasioned the most criticism.

On the question of a tower, or towers, or pylons above the portico, the solution is simple: no difference in height anywhere is mentioned in Kings; hence no tower or towers are to be assumed, in spite of the almost universal tendency of other reconstructors to add them, a tendency from which even Watzinger was not exempt.

With respect to the adytum, a perfect cube 20 cubits long in each direction on the inside, the chief problem is to explain the differences of 10 cubits in inside height between the adytum and the temple as a whole, which was 30 cubits high. One solution is to assume that the adytum was on the same level as the nave (nothing to the contrary appears in the biblical data), and then to make the roof or ceiling over the adytum 10 cubits lower than the roof over the rest of the temple. But the biblical text says nothing about a difference in height anywhere. Watzinger, following K. Galling, on the basis of archaeological analogies ranging all the way from early Assyrian sanctuaries to Roman temples in Syria, raises the floor of the adytum *ca.* 5 cubits and supplies the flight of steps for entrance thus made necessary. The remaining 5 cubits are incorporated in an unused space between the ceiling of the adytum and the temple roof (Fig. TEM 29). Garber and Howland have followed this well-documented suggestion.

At this point one thinks of the obscure and controversial verse, I Kings 6:31 (see RSV mg.). Something about the entrance to the holy of holies was "pentagonal" or "fivefold" (cf. "square" or "fourfold" in vs. 33). The most common explanation is that the door or at least its frame was gabled, thus producing five sides, in contrast to the square shape of the main door (vs. 33). Another suggestion is that the stairway was recessed, so that the top five steps were inside the back room, cutting into the raised floor, to give a better view of the interior of the adytum on occasion. A third suggestion is that the

From Watzinger, *Denkmäler Palästina* (Leipzig: J. C. Hinrichs Verlag, 1935), vol. II

29. Floor plan of Herod's temple, according to Watzinger

doorposts themselves were pentagonal in cross-section, thus allowing the doors to swing open at a wider angle than ninety degrees, to allow a better view of the interior. The model follows the third of these hypotheses in this very uncertain matter.

The many intricate details of decorations and furnishings cannot be discussed here. One feature of the interior decoration of the model must be noticed, however. This is the use of the so-called proto-Ionic (or proto-Aeolic) volutes in the capitals of the wooden pilasters in the nave. This particular feature is, of course, not specified in the biblical text, but it represents the use of an authentic architectural theme of the time (as found, e.g., at Megiddo and Ramat Gan), which could hardly have been completely lacking in Solomon's very artistic structure. One should also notice the splendidly and authentically realistic cherubim in the adytum. *See* CHERUB.

Finally, a word must be said about the straight-edged cornice on the parapet. Every house was required to have a parapet, according to Deut. 22:8, and it is likely that this temple had one. But a parapet is not necessarily a battlement (though the KJV erroneously so translates in Deut. 22:8). Many of the older reconstructions, following Stade, supplied Solomon's parapet with "crow-step" crenelations. Watzinger would have none of these, and used simple, straight lines. Howland and Garber followed this idea; but, forced to be a little more specific because of the elaborateness of the model, they chose the "Egyptian streamlined cornice" as employed on the Karnak temple, but also attested in Palestine (Megiddo pottery shrines, of Solomon date) and Phoenicia (Amrit). This item must be recalled in the following discussion.

Albright and Wright praised the Howland-Garber model but were not satisfied with some of its details, nor with the copyright restriction that forbade reproduction if any change were made, even the slightest. It was decided to "start afresh." An artist named Stevens was employed, who, after suitable briefing, produced a drawn reconstruction of Solomon's temple, plus a separate drawing of the altar of burnt offering according to the description in Ezek. 43:13-17. These were first published by Wright in 1955 (Figs. TEM 30; ALT 19). The drawing of the temple has already been copied in several books; it may be referred to as the Stevens-Wright reconstruction. Since it is an offshoot from, or reaction to, the Howland-Garber model, a few words of comparison and contrast must be undertaken.

30. Stevens-Wright reconstruction of Solomon's temple (1955)

The Stevens-Wright altar follows Ezekiel as strictly as possible, showing three stages with a large platform at the top reached by a long, steep flight of steps. The Howland-Garber altar, following Ezekiel only impressionistically, tapers more steeply, with no steps but with a ramplike arrangement similar to that of some ziggurats. Both appear to be of stone, whereas the Solomonic altar was said to be bronze, in the biblical account (*see* § A1b above). Both altars have the usual horns (*see* ALTAR). The fact is that good information on this altar is lacking at the present time, so that neither of these attempts can lay strong claim to authenticity.

Stevens and Wright do not offer a "sea"; several other reconstructions of this object have proved satisfactory. Stevens and Wright show nothing of the interior arrangement, decorations, or furniture; they have only a front elevation of the altar and temple exterior drawn on paper. Their pillars are free-standing, the capitals being rendered impressionistically, whereas Howland and Garber used the Megiddo incense burner, an actual archaeological object, though perhaps not the capital of a column. Probably neither is very close to the original, and both accept the Robertson Smith-Albright cresset hypothesis.

The chief differences are in the side chambers and the parapet. Stevens and Wright reject the inside entrance to the side structure proposed by Waterman and adopted by Howland and Garber. They show an outside entrance near the front of the side structure on the right (S) side. There is no way of telling from the drawing whether there is proposed another, similar entrance on the other side, as Watzinger and others would have it; however, Stevens and Wright agree with Howland and Garber against Watzinger in stopping the side structures short of the vestibule or portico on both sides (1 Kings 6:5). They also agree against Watzinger in having no towers at the front of the building. But Stevens and Wright put windows (many of them) into the side chambers, against Watzinger and Howland and Garber. None are mentioned in the biblical text.

The most striking disagreement to the eye is at the parapet. Here Watzinger and Howland and Garber have the straight-edge construction, while Stevens and Wright show a crow-step crenelated battlement very similar to that of Stade from 1881. A considerable controversy has arisen over this point. A battlement, by its very name and nature, belongs to a military fortification. The second temple was fortified in Hellenistic and Hasmonean times. Herod's temple was used as a fortress after Titus had taken the rest of the city. Does this prove anything with regard to Solomon's temple, designed by Phoenician architects? Some Assyrian temples had battlements, not surprisingly, as the Assyrians were such a warlike people. Does this prove anything with regard to Solomon's plan? No doubt, Phoenician architects knew about battlements; but did they put them on temples in general or on Solomon's temple in particular? Architects enjoy adding battlements to their reconstructions as a sort of eye-filling top dressing. On some expeditions this is routinely done, especially in those areas where very little is known about superstructures. But a good thing can be overdone.

From Vincent and Steve, *Jerusalem de l'Ancien Testament* (Paris: J. Gabalda & Cie.), tome II

31. Vincent-Steve reconstructions of Solomon's temple (1956): (1) ground plan; (2) side view; (3) longitudinal cross-section; (4) breadth cross-section; (5) front view

Corswant's *Dictionnaire d'Archéologie Biblique* (1956) has a brief treatment of the temple of Solomon with a simple line drawing of the ground plan and a side elevation (S side; Fig. TEM 17). One notes the following features: there is a tower at the front; the pillars are free-standing; the cornice is straight-edged; the side structure does not come all the way to the front; it has only one entrance, on the S side, in the middle of the side, from which winding stairs go up; this side structure has windows, though not nearly so many as in the Stevens-Wright reconstruction; there are steps up to the vestibule, but none from the nave into the adytum.

In conclusion, there is the very serious work of Père L.-H. Vincent, who has devoted a lifetime to fruitful study of the archaeology of Palestine, and of Jerusalem in particular. He is not in what may be called the modern German tradition of Galling, Möhlenbrink, Watzinger, Albright, Wright, and Garber, but more in the French tradition of De Vogüé and Dieulafoy, adding mathematical calculations, particularly triangulation, to the biblical text and to archaeology as a means of determining some of the details of the building. The Egyptians are known to have used certain triangles (such as the "sacred" and the "Osirian"). Assuming that Solomon's (or rather Hiram's) architects used known principles of Egyptian mathematics, and given certain basic dimensions in the biblical account, unknown details can be calculated. Needless to say, there is in addition no lack in Vincent of attention to archaeology and the biblical text, the main resources of other scholars. But the results are somehow different and distinctive. The text is well supplemented with drawings by Père A.-M. Steve. Fig. TEM 31.

There is no reconstruction of the altar. The "sea" is about the same as the others except that the bowl seems larger, the bulls smaller, and they are lying down (couchant). The pillars are free-standing, but

are not cressets; their capitals are more bulbous, like some of the older restorations. There is no platform, nor are there any steps, either to the vestibule or to the adytum; everything is flat on the ground, so to speak. Behind the pillars are two towers, each 50 cubits high, arrived at by a process of triangulation aided by archaeological parallels, but not by the text of Kings. The roof is not in a straight line, but descends stepwise from the tower to the nave to the adytum to the rear part of the side structure, making four stages in all. Every stage is surmounted by battlements with crow-step crenelations, and the crow-step theme (curiously inverted) is used to decorate the front and sides of the towers. In addition to the clerestories, admitted by all, Vincent (or Steve) is more generous with small windows than Stevens and Wright. There is even a hint of the possibility of the use of glass. The three-story side structure is divided into thirty-odd rooms in each story (following Ezekiel, though not exactly), and each room has a window; there are also windows in the fronts and sides of the towers (see plan). The battlements suggest a fortification, but one wonders how a building with so many windows could be defended.

Finally, examination of Vincent's ground plan shows a different approach to the much-discussed problem of the entrance or entrances to the side structure, a medial position between the unprotected entrance or entrances on the outside found in most plans and the very much protected single entrance from the nave advocated by Waterman and adopted by Howland and Garber. Vincent (with his artist-collaborator, Steve) agrees with Waterman that the side structure housed treasures, and hence that the entrance or entrances should be protected. A side room is added to each end of the vestibule, and from each of these side rooms there is an entrance to the side structure (see plan). Most commentators would feel that there is little justification of this feature from

the biblical text, and too much recourse to speculation on what might be logical, given a certain point of view. It might also be pointed out that such accommodation to the exigencies of the side structure is in sharp contrast to another extreme view, that of Möhlenbrink, who claims that the Solomonic building had no side structure at all, the side structure being a part of the second temple and its presence in the text of Kings being the work of an ill-informed late editor.

Perhaps it can be justly said in summary that it is fortunate that the only outstanding model of the twentieth century so far produced, which is likely to be viewed by large numbers of untrained persons seeking information, is that of Howland and Garber. This model, while inevitably manifesting certain questionable details, is a relatively sane and conservative product, resting solidly on the text of Kings, the only reliable literary source, while utilizing some of the less controversial finds of archaeology. An inexperienced viewer is not likely to get a very wrong impression, such as that created by Schick's Solomonic model, so badly confused with the temple of Herod, to say nothing of its resemblance to a German castle.

On the other hand, there is every reason why scholars should continue to study the subject and produce books and relatively inexpensive plans drawn on paper, even if such books and plans sometimes espouse extremely debatable interpretations and reconstructions. Knowledge is often advanced by those who have the courage to be different.

B. THE TEMPLE OF ZERUBBABEL. In 539 B.C., Cyrus II, the Great, king of Persia (*see* CYRUS), captured Babylon, overthrowing the Chaldean or Neo-Babylonian Empire, and incorporating Mesopotamia, Syria, and Palestine into the new Persian Empire. Reversing the deportation policy of the preceding Assyrian and Chaldean empires, he issued his famous decree of amnesty, whereby the deported peoples were allowed to return to their own lands and to practice their own religious observances, so long as they did not engage in political rebellion against PERSIA. Judah seems to have been incorporated into the Persian province of Syria or Trans-euphratia ("Beyond the River [Euphrates]"; Ezra 4:11-23), but with a considerable degree of local autonomy (6:6-8). As a result of these developments, a number of Jews returned to Judah and Jerusalem under SHESH-BAZZAR and ZERUBBABEL (some consider these two to be the same person). With the help of those who had never left, a temple was started on the old site, and finished probably *ca.* the year 516/15 B.C. This temple is often called after Zerubbabel, who seems to have been in charge of the Jewish community during most of the construction, but not at the end. Jewish writers call this the "second temple," and speak of the entire postexilic period, including the time of Herod and his new (third) temple, as the period of the second temple. Thus is shown how highly this temple was regarded. It is also well to remember that the second temple, in spite of paucity of information about it, stood for nearly five hundred years, more than a century longer than the life of Solomon's structure, and of course far longer than its magnificent successor built by Herod, which lasted less than one century.

1. Biblical references. Our earliest sources are Haggai (*ca.* 520 B.C.) and Zechariah (*ca.* 520-518), but they are very meager. The former complains that the people are now prosperous enough to live in paneled houses, but are procrastinating in building the "house of the LORD" (Hag. 1:1-4). He suggests that their economic difficulties, drought, inflation, and the like, are due to the ruined state of the temple (vss. 8-11). Within a month, this challenge stirs Zerubbabel, the governor, and Joshua (or JESHUA 5), the high priest, to lead the people in the work of construction (vss. 14-15a). Standing in the midst of the ruins and the confusion of reconstruction, the elderly prophet, who apparently had seen the former temple (2:3), encourages the builders and predicts a future for the new temple more splendid than the glory of its predecessor (vss. 4-9). Several months later the enthusiastic prophet predicts the greatest material and spiritual success for Judah under the leadership of Zerubbabel as an outgrowth of the refounding of the temple (vss. 15-23). Thus the temple plays its part in the earliest postexilic messianic prophecy.

Zechariah speaks of the temple very little. In 1:16 its rebuilding is predicted. The coming of the Lord to dwell in the midst of his people is mentioned in 2:10-11; this may refer to the temple. 6:11-14 is the enigmatic passage that prophesies of the coronation of Joshua, the high priest, his rebuilding of the temple, and his assumption of a messianic title and royal prerogatives. The person originally referred to would seem to have been Zerubbabel, whose name was removed after his political failure. 6:15 mentions the help of "those who are far off" in building the temple; this is a reference to the returned exiles or, very improbably, to Gentiles. 7:3 speaks of priests who belong to the "house of the LORD." 8:3 speaks of the sanctity of the temple mount, and 8:9-13 mentions the laying of the foundation of the temple and the blessings that soon will follow. 8:22 portrays Gentiles coming in the near future to seek the Lord in Jerusalem, presumably at the temple.

The Chronicler (*see* CHRONICLES, I AND II), writing perhaps two centuries later, though utilizing earlier sources, seems to be our next witness. I Chr. 23-26, setting forth the organization of the temple staff, the "courses" (KJV) or "divisions" (RSV) and duties of the Levites, the temple musicians, the gatekeepers, the treasurers, and the like—surely this passage reflects to some extent the temple organization of the author's own day, and it is plain that it was fairly elaborate. II Chr. 36:22-23 (end of the book) simply anticipates verbatim a few words at the beginning of the book of Ezra, which follows.

Ezra, usually regarded with Nehemiah as a continuation of the work of the Chronicler (*see* EZRA AND NEHEMIAH, BOOKS OF), yields valuable historical information, in spite of some chronological garbling. Ch. 1 tells of the decree of Cyrus as it related to the Jews and of the return of a small group under Sheshbazzar, with definite intent to rebuild the temple. They were even allowed to bring back the sacred vessels that remained (though one may doubt such figures as 5,400 [1:11; cf. II Kings 24:13; 25:15]). Ezra 2:68-70 speaks of freewill offerings by individual Jews to the temple fund, and of some of the officials who expected to serve in the sanctuary (cf.

vss. 36-54). Ch. 3 tells first of the restoration of the altar of burnt offering and resumption of its sacrifices, a few months after the first return. The leadership is already credited to Zerubbabel and Jeshua, and Shesh-bazzar seems to disappear (vss. 1-6). Next, the foundations of the temple are laid. Again leadership is credited to Zerubbabel and Jeshua (vs. 8), though another verse (5:16) makes it appear that Shesh-bazzar remained in charge at this early period (vss. 7-13).

4:1-5 tells of the offer of the Samaritans to join in the rebuilding of the temple, and its rejection by Zerubbabel and Jeshua, followed by continued attempts by the rejected neighbors to hinder the construction from the time of Cyrus to that of Darius. Ch. 5 brings us to the time of Haggai and Zechariah, who are mentioned by name as spurring Zerubbabel and Jeshua to the work of building (vss. 1-2). Tattenai, governor of Transpotamia (Syria), investigates sharply what is happening, but does not stop the construction. He is told by the Jews that they were given authority to build by Cyrus; he writes Darius to ascertain the correctness of this claim. In ch. 6 Darius replies that the claim is correct and that Tattenai is to appropriate royal funds from the taxes of his province for completion of the building and the maintenance of the sacrifices.

The project was completed in the month of Adar of the sixth year of Darius, presumably the first of that name, hence in the spring of 515 B.C. (6:15, a most valuable datum; a few have proposed Darius II, and hence a date *ca.* a century later). A dedicatory sacrifice followed, very modest in comparison with Solomon's (vs. 17; cf. I Kings 8:5; II Chr. 7:5). Doubtless the temple itself was also more modest, though 5:8; 6:4 speak of "huge stones" or "great stones" (but the translation has been challenged; cf. I Esd. 6:9, 25); and 3:7 claims that Phoenician help was enlisted, as in the days of Solomon. On the other hand, some of the old people who remembered the first temple were disappointed at the appearance of the new foundations (3:12-13; Hag. 2:3; though the latter verse may refer only to the ruined condition before rebuilding began). By and large, it is probable that recent writers have tended to overemphasize the inferiority of the second temple, especially if the reports of substantial financial aid by the Persian government (Ezra 1:4; 3:7; 6:4, 8-9) are correct.

Unfortunately, the only statement of dimensions of this temple given in a biblical passage, "height . . . sixty cubits . . . , breadth sixty cubits" (6:3), is both incomplete and unrealistic, so that nothing can be drawn from it except an impression of rather large size.

The book of Nehemiah mentions the temple only incidentally. 2:8 speaks of the "gates of the fortress of the temple," referring to nearby towers protecting the approach to the sacred precincts. 10:32-39 mentions the temple tax, first fruits, tithes, and other arrangements for financing the worship services. Chambers for the storage of contributions in kind are also mentioned here and in 12:44-47, along with treasurers and other members of the temple staff. In 12:40 the people stand at the "house of God" during the dedication of the new wall. 13:4-14, the story of the nepotism of Eliashib, mentions a "large chamber" in

the "courts of the house of our God," formerly used for storage, in which Tobiah was living, and from which he was expelled.

Certain verses in Daniel (7:25; 8:11-13; 9:24-27; 12:11) contain veiled references to the desecration of the second temple and the stoppage of its services by Antiochus Epiphanes, *ca.* 168 B.C. For information in the Psalms on the history of the second temple, see PSALMS, BOOK OF.

2. References in the Apoc. and the Pseudep. I Esdras is essentially a parallel of the last two chapters of II Chronicles, the canonical book of Ezra, and Neh. 7:73-8:13a. It adds practically nothing to the canonical material except that the temple is finished on the twenty-third day of the month of Adar, in the sixth year of Darius, instead of the third day (7:5, probably the correct reading; cf. Ezra 6:15). In I Esd. 9:38, 41, Ezra reads before the people in the "open square before the east gate of the temple" instead of in the "square before the Water Gate" (Neh. 8:1, 3). These locations may or may not be the same; no further information is available, except that Josephus follows I Esdras.

Ben Sirach (*see* ECCLESIASTICUS), in his praise of famous men, mentions the work of Zerubbabel and Jeshua in building the temple (Ecclus. 49:11-12), very briefly. More extended is the description of the activities of Simon II or Simeon, son of Onias (Hebrew Yohanan), high priest near the beginning of the second century B.C. (50:1-21). Simon seems to have been in full charge of the city. He is credited first with repairing the temple, then fortifying it with great walls. Then he constructed a large reservoir and fortified the whole city. Vss. 5-21 contain a detailed and eloquent description of Simon's splendor in the performance of his duties; how richly dressed he was; how he came from behind the veil (vs. 5 RSV mg.) before the holy of holies (thus we know there was a veil); how he went up to the altar of burnt offering, receiving the portions of the animals from his assistant priests, and making the oblation before all the people assembled in the courtyard. Then he poured a libation at the foot of the altar; a fragrant odor arose; the priests shouted and blew trumpets; the people fell on their faces; the singers began a melodious song; the people remained in prayer. When the service was concluded, the high priest came down from the altar, lifted his hands, and pronounced a benediction upon the whole congregation, who bowed down a second time to receive the blessing. Lacking detailed information about the building itself, we are grateful for this description of one of its typical services.

I Maccabees (*see* MACCABEES, BOOKS OF) provides the most extensive apocryphal references because of its preoccupation with the attack of Antiochus. 1:20-24 gives a list of temple furnishings plundered by Antiochus; there is so much gold and silver that we are reminded of the days of Solomon (cf. vss. 21-23 with I Kings 7:48-50). The veil or curtain (probably lacking in Solomon's temple) is mentioned. Other verses in ch. 1 speak of the pollution of the sanctuary, and especially of the altar of burnt offering in the inner court (vss. 37, 39, 45, 54, 59; cf. 3:51). 4:36-59 tells the inspiring story of the purification and rededication of the temple, after the victories of Judas (*see* DEDICATION, FEAST OF). But the altar of burnt

offering was so polluted by the heathen sacrifices that it had to be dismantled and a new one built in its place, of "unhewn stones," so it is said, "as the law [Exod. 20:25; Deut. 27:6] directs, . . . a new altar like the former one" (I Macc. 4:47). This is interesting, since neither Solomon's altar (I Kings 8:64; II Chr. 4:1) nor that of Ezekiel (43:13-17) seems to manifest regard for the Pentateuchal law. I Macc. 4:51 mentions "curtains"; perhaps there were two, one before the nave, the other before the adytum. Vs. 57 speaks of the front of the temple being decorated with "golden crowns and small shields" (cf. 1:22), but this does not sound plausible. The same verse mentions the repair of the chambers of the priests, though without specifying whether these chambers were within the temple proper, within a side structure, or outside around the inner court. 6:7 mentions the restoration of high walls around the sanctuary, "as before"; these presumably had been first added by the high priest Simon II (Ecclus. 50:1-2; see above). Thus the temple became a stronghold in the battle against the foreign garrison in the nearby citadel (I Macc. 6:18, 26, 51-54, 62). After the death of Judas, the renegade high priest Alcimus attempted to dismantle the fortifications around the temple, but he died before the attempt could be completed (9:54-56). Jonathan repaired the damage, and he himself assumed the high priesthood ca. 153 B.C., in addition to his duties as military and political leader (10:17-21). Simon took over all these duties, strengthened further the fortifications of the temple, and refurbished the sanctuary and its equipment (13:8-9, 52; 14:15).

In spite of the obvious concern of the compiler of II Maccabees with the temple, and especially with its purification and rededication, his book yields very little further factual information about the structure itself, its history, or its services. Notable is the claim that the second temple is the most famous and the most sacred shrine in the whole world (cf. 2:19, 22; 3:12; 5:15-21; 14:31; 15:18; etc.).

The Letter of ARISTEAS contains a glowing description of the temple, presumably resulting from an official visit to the Holy City (vss. 84-104). There is also the story of the incredibly rich furnishings donated by Ptolemy Philadelphus to the high priest Eleazar for use in the sanctuary (vss. 51-82; note the emphasis on the table of the bread of the Presence). Unfortunately, the dating of this document is so debatable (ranging from 200 B.C. to A.D. 33) that it is uncertain whether the writer is describing the structure of Zerubbabel, that of Herod, or simply using his imagination, at least for the most part. Since some of the description surpasses in grandeur what we know even of Herod's magnificent structure, the third alternative would seem to be the safest. The great and beautiful curtain seems to be at the main entrance, not before the adytum (vs. 86); the costume of the high priest is rich beyond belief (vss. 96-98); the ritualistic skill of the assistant priests is uncanny, and they are seven hundred in number (vss. 92-95); but most remarkable of all is the inexhaustible water supply furnished by a copious natural spring within the temple area, supplemented by a vast system of connected reservoirs, so that the huge amounts of sacrificial blood could be washed away almost in-

stantly (vss. 89-91; cf. a similar tradition in Tac. Hist. V.12). The reservoirs or cisterns are credible enough; there are some under the area today; they have been explored archaeologically, and may date back to the time of Herod or before. But no spring, or trace of a spring, has ever been found in this area. We can only conclude that this spring is somewhat like the stream of fresh water flowing from the temple in the vision of Ezekiel (47:1), though Ezekiel's stream had a far grander purpose. On the other hand, we need not doubt that whatever temple Aristeas was describing stood on the highest point of the city, or nearly so (vs. 84), and was oriented toward the E (vs. 88).

3. Josephus references. Josephus (Apion I.xxii) quotes a description of Jerusalem from Hecateus of Abdera, a writer contemporary with Alexander the Great. Hecateus says that the temple enclosure was 5 *plethra* (ca. 500 feet) long and 100 cubits broad, was surrounded by a stone wall, and was entered by a double gate. The altar of burnt offering within this enclosure was constructed of unhewn stones (see § B2 above on I Macc. 4:47), 20 cubits on each side and 10 cubits high (same dimensions as the bronze altar in II Chr. 4:1). The temple itself is not described except as a "large building." Inside were an altar (of incense) and a lampstand, both of heavy gold (two talents!); and upon them was a light that was never extinguished. There is nothing unreasonable here except perhaps the amount of gold (which most ancient writers were prone to exaggerate).

Book XI of Josephus' *Antiquities* in general parallels the postexilic biblical material. In addition, we read of Alexander the Great's sanction of the building of the rival Samaritan temple on Mount Gerizim (Antiq. XI.viii.4), doubtless a historical fact; also the story of Alexander's reverent visit to the temple in Jerusalem and his sacrifice there (XI.viii.5), considered by most historians to be pure legend.

Book XII parallels the Letter of Aristeas and the books of Maccabees down to the death of Judas. According to XII.iii.3-4, Antiochus III, the Great (223-187 B.C.), was very friendly to the Jews and their temple. He subsidized the sacrifices, helped finance repairs and additional construction, including "porticoes," and reaffirmed the legal ban against the presence of foreigners and unclean animals within the sacred precincts.

Book XIII leads beyond the apocryphal material to that point where Josephus becomes almost our sole literary source. XIII.iii.1-3 tells of the building of the temple of Onias at Leontopolis in Egypt (see TEMPLES [THOSE BESIDES JERUSALEM]). It is said to have been similar to the one at Jerusalem, though smaller and less elegant. From this it would seem again that the second temple may have been underrated by some modern writers, as noted above. XIII.xiii.5 contains the well-known story of how Alexander Jannaeus was pelted by citrons by the people as he stood by the altar to offer sacrifice. After massacring six thousand of his subjects, the priest-king caused a wooden barrier to be erected about the altar in the court, so that the people no longer could come near at the time of sacrifice.

Book XIV begins with the civil war between ARISTOBULUS II and HYRCANUS II. The latter, at the

instigation of Antipater, father of Herod the Great, enlisted the support of ARETAS, king of the NABATEANS. Aristobulus took refuge in the temple, which was besieged by Aretas during Passover (XIV.ii.1). The Roman general Scaurus favored Aristobulus, forcing Aretas to raise the siege (XIV.ii.3). Pompey reversed this policy, came in person, and captured Jerusalem *ca.* 63 B.C., restoring Hyrcanus to power. Pompey entered the temple—an act of impiety in the eyes of the Jews—but respected the sanctity of the place so much that he took no plunder (XIV.iii.1–iv.4; cf. War I.vii.6). Later, Crassus plundered the treasure left by Pompey, amounting to thousands of talents of gold, sent by Jews from all over the world (Antiq. XIV.vii.2; War I.viii.8). In the wars leading to the triumph of Herod, it was customary for the defenders of Jerusalem to barricade themselves in the temple as a last resort (Antiq. XIV.xiii.3–4; xvi.2). When Herod and his Roman supporters attacked the city in 37 B.C., some of the porticoes around the temple were burned (XIV.xvi.2); but Herod, after he controlled the city and with an eye to the future, held back all foreigners from entering, defiling, or plundering the sanctuary (XIV.xvi.3; War I.xviii.3).

In XV.xi.1 it is stated that the second temple was 60 cubits lower than that of Solomon. Such a statement is based on the legendary height of 120 cubits for Solomon's temple in II Chr. 3:4. We can only conclude that Josephus regarded the second temple as markedly inferior to the first.

From Jos. War I we learn that the fortress at the NW corner of the temple area, later called Antonia by Herod, was called Baris ("Tower") in Hasmonean times (I.iii.3; v.4). The brief reconciliation between Aristobulus II and Hyrcanus II took place in the temple (I.vi.1). The temple was so strongly fortified as to constitute a second line of defense (I.vii.1). A bridge connecting the temple with the city was cut for this reason by defending Jews during the attack by Pompey (I.vii.2). In the fifteenth year of his reign (*ca.* 20 B.C.), Herod began to dismantle the second temple in order to build a new and greater one (I.xxi.1).

4. Rabbinic references. In the Mishna, Yom. 5.2 tells of a stone remaining after the ark of the covenant disappeared in the destruction of the first temple. This stone was called *Shethiyah*, generally interpreted to mean "foundation stone," and projected a few inches above the floor or ground level. The stone in question may be the "sacred rock" (*see* § A2d above), in which case we have a tradition that at least a part of the rock lay under the adytum in all three temples. The "foundation stone" has also been interpreted as a movable stone brought in to replace the ark in Zerubbabel's temple. Later (or parallel) rabbinic references emphasize the importance of this stone and its position in the heart of the temple (of Herod), without yielding further information about its nature.

T.B. Yom. 21b has sometimes been interpreted as presenting a list of five things in Solomon's temple that were lacking in Zerubbabel's: the ark and its equipment, the sacred fire, the Shekinah, the Holy Spirit, and Urim and Thummim. Actually, the term "second temple" here refers to the Herodian sanctuary, as is usual in rabbinic literature. The whole

point of the passage is the religious inferiority of Herod's temple, despite its physical grandeur, to that of Solomon.

5. Conclusion. Exact and reliable information about the details of Zerubbabel's temple are lacking. The probabilities are that it was similar in plan and size to Solomon's structure, since it was built on the same site and Phoenician workmanship was still the prevailing style. The new temple was somewhat less rich and costly than the old, though this difference has been exaggerated by some writers, both ancient and modern. Definitely lacking were the "sea" and wheeled lavers outside, the ark of the covenant and the cherubim within. Nothing is said of the pillars. The nave contained an altar of incense and a table for the bread of the Presence, but only one lampstand instead of the former ten. Use of curtains instead of doors may have been a new feature. The temple stood alone, not in a palace complex.

From time to time additions and changes were made. Notable was the fortifying of the temple by the high priest Simon II, continued by the Hasmoneans. The Letter of Aristeas (vs. 84) speaks of three encompassing walls, possibly fortifications, or perhaps only partitions separating the inner court from the outer court or courts (note the plural of this word in I Macc. 4:38, 48; cf. 9:54). In Hasmonean times a palace was built on the W hill overlooking the temple (Jos. Antiq. XX.viii.11). Perhaps at this time was constructed the bridge over the Tyropoeon Valley (*see* JERUSALEM), mentioned in connection with the attack by Pompey (Antiq. XIV.iv.2; War I.vii.2). But this Maccabean bridge is not to be connected with extant archaeological remains, such as Robinson's Arch or Wilson's Arch, as some have sought to do. Extant remains in the area belong to the Herodian, not the pre-Herodian period, as practically all archaeologists agree.

It will not be necessary to speak of reconstructions of Zerubbabel's temple; seldom are they attempted, because of scarcity of definite evidence. Most regrettable is the attempt of Möhlenbrink in the frontispiece of his useful monograph, reproduced by Vincent with a proper warning of its lack of value.

C. THE TEMPLE OF HEROD. As was pointed out above, this temple lasted a much shorter time than the other two. Begun *ca.* 20 B.C., the basic structure was completed in about a year and a half, but subsidiary construction was still in process a half-century later (John 2:20), and may not have been entirely finished when the destruction came in A.D. 70. Although on the same site as the two preceding temples, this one involved an almost complete rebuilding according to the new and then prevailing style of architecture, the Hellenistic-Roman, but with retention of the Solomonic arrangement of rooms within the sanctuary itself. It is logically absurd, therefore, to confuse Herod's and Zerubbabel's temples under the name of "second temple." Herod's was definitely the third temple, no matter what tradition may say.

Our chief literary sources are the NT, Josephus (principally Antiq. XV.xii; War V.v), and the Mishna tractate Middoth. The brief description in Philo *Special Laws* I.13 (*De Monarchia* II.2) is too vague and general to be of use. The descriptions of

Josephus and the Mishna are both in considerable detail, but unfortunately not in complete agreement with each other. Thus problems arise when reconstruction is attempted. Archaeology plays a valuable part in the extensive literature, since certain parts of the substructure of Herod's temple are still extant under the large area or court around the Dome of the Rock. This area, which to some degree corresponds to the area around Herod's temple, is now called el-Haram esh-Sharif, usually translated "the Noble Sanctuary," though "the glorious holy place" is perhaps a more exact rendering.

1. **NT references.** Although the NT contains more than a hundred references to Herod's temple, few of these are of such nature as to yield any detailed information about the dimensions or appearance of the structure itself. Most of these references have to do with attitudes on the part of the Jews or the early Christians toward the temple as an institution. A number of gospel passages portray Jesus as frequenting the temple, "teaching" or "walking" there; the same is true of the early Christians in the book of Acts. Clearly, Jesus and his immediate followers still considered the temple as the religious center of their communal life. Only later came the idea that the temple was unnecessary (Rev. 21:22).

Two words are used in the Greek: *ναός*, meaning the sacred building alone, and *ιερόν*, the whole sacred area, including various auxiliary courts, side chambers, and porticoes. Both words are translated "temple," without distinction, but the reader needs to keep the difference in mind, especially since only priests could enter the *ναός*.

E.g., the expression "the pinnacle of the temple" (Matt. 4:5; Luke 4:9) refers, not to the top of the temple proper, but probably to the SE corner of the outer court, high above the Kidron Valley, very much as is the situation today. Likewise, such expressions as "the buildings of the temple" (Matt. 24:1), its "noble stones" (Luke 21:5; cf. Mark 13:1), "walking in the temple" (Mark 11:27), and "teaching" there (Luke 20:1) use the broader term, *ιερόν*. Similarly, the money-changers were not within the building itself, but in one of the courts outside (Matt. 21:12; Mark 11:15; Luke 19:45; John 2:14). By contrast, the curtain (the NT mentions only one, that before the adytum) was within the building (Matt. 27:51; Mark 15:38; Luke 23:45—using the word *ναός*), as was the altar of incense before which Zechariah (KJV Zacharias) was performing his sacerdotal duties, while the people remained outside (Luke 1:8-11; cf. Rev. 11:1-2). In general, this distinction is clearly observed in the NT, likewise in Josephus, though there are certain borderline cases (since language is not an exact science like mathematics).

Only a few details are mentioned. There was a section of the temple precincts called SOLOMON'S PORTICO, where Jesus and the apostles walked (John 10:23; Acts 3:11; 5:12). The "Beautiful Gate" is twice mentioned (Acts 3:2, 10), but nothing is told of its location or design. An official of the temple called CAPTAIN appears several times (Luke 22:4, 52; Acts 4:1; 5:24, 26). Paul was accused of bringing Greeks into the "temple" (*ιερόν*)—i.e., into a court forbidden to Gentiles (Acts 21:28; see § C2 below). We learn that in times of tumult the gates of the tem-

ple area (*ιερόν*) could be quickly closed, but nothing is said about their number or location (vs. 30). Neither Jesus nor Paul, of course, ever entered the *ναός* or temple building proper (cf. 25:8; 26:21; the word in these verses is *ιερόν*).

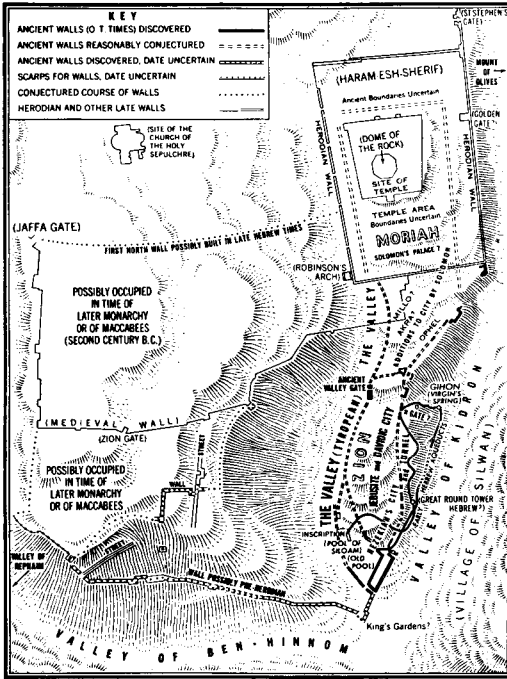

2. **Josephus references.** Antiq. XV.xi, written ca. A.D. 95, probably in Rome, will be considered first, since it gives a more generalized view.

The work of rebuilding was begun in the eighteenth year of Herod's reign (20/19 B.C.). Herod thought, according to Josephus, that Solomon's temple was 120 cubits high (cf. II Chr. 3:4); its successor was only half as high; Herod wished to redress the deficiency and restore the former glory (Antiq. XV.xi.1). Some feared that the old structure would be pulled down and not replaced, or that some profanation would occur. Herod reassured them by very careful preparations, such as providing a thousand wagons, hiring ten thousand workmen, and training a thousand priests to be superior masons and carpenters for work upon the most holy portions of the structure (XV.xi.2).

The old foundations were removed and new ones laid. The new building was 100 cubits long, and the same in height; a structural difficulty prevented attainment of the full height of 120 cubits. The middle of the structure was much higher than on each side. Huge white stones measuring 25 by 8 by 12 cubits were used. The double entrance doors were adorned with embroidered veils or curtains, above which the lintel was decorated with a golden vine bearing huge clusters of grapes. The entire temple was surrounded by a large paved court, which was bounded by extensive porticoes or colonnades, supported in part by great walls where the steepness of the hill made them necessary. The circumference of the area was 4 stadia (stadia or furlongs in English), each side being one stadium (ca. 600 feet) long. (This does not agree with other data, representing the area to be larger; therefore some have assumed the 4 stadia to be a pre-Herodian dimension; see § C3 below.) On top of all was another wall inside the outer edge, which had on the E a double portico (stoa) of the same length as the wall. This portico faced the front gates of the temple proper (XV.xi.3). See SOLOMON'S PORTICO.

The fortress near the NW corner of the temple area, built or rebuilt in Hasmonean times (War I.iii.3; v.4) and called Baris ("Tower"), was strengthened by Herod and renamed Antonia, in honor of Antony (Antiq. XV.xi.4; cf. Neh. 2:8, possibly referring to the original structure at this location; Acts 21:34-40; 22:24; 23:10, where the "bar-racks" [KJV "castle"] probably is Antonia). The sacerdotal vestments were kept in this building.

The outer W side of the temple area had four gates. The first gate (probably in the center) led to the royal palace by a bridge over the Tyropoeon Valley. Two more (probably to the N) led to the suburbs; the last (most southerly) led into the city by a long flight of steps down into the valley and another long flight up again. The S side had gates (probably two), and a great portico, called the Royal Portico, with a triple ambulatory (walkway) as contrasted with a double ambulatory on the other sides (Fig. TEM 32). The valley below this portico was so deep that looking over into it caused giddiness (cf. the "pin-

From *Remapping of the Bible*, published by Thomas Nelson & Sons

32. Jerusalem in OT times, showing the site of the temple

nacle” of Matt. 4:5; Luke 4:9). There were four rows of columns, the fourth being engaged with the S wall. Each column was 27 feet high and so thick that three men with outstretched arms were required to embrace it (an estimated 17 feet; cf. with Solomon’s Jachin and Boaz). The total number of columns was 162, their capitals being of the Corinthian order. The two outer walkways were 30 feet wide, the middle one half again as wide; their length was a stade. The total height of the outside walkways was over 50 feet, but the height of the middle one was much greater, the roof being raised in the center (Antiq. XV.xi.5).

Inside this first enclosure, or outer court (“Court of the Gentiles”), was a smaller enclosure, to be reached by a few ascending steps. This inner enclosure was surrounded by a low stone wall (or balustrade) on which was an inscription (or inscriptions) warning foreigners to go no farther, on pain of death. The enclosure itself had three equidistant gates on the N side and three on the S. On the E there was one large gate where Jews might enter with their wives, since the area within this gate was the Women’s Court. Beyond this was an area into which the women could not go (“Court of Israel”). Still closer to the temple proper, and immediately surrounding it, was the court which only the priests could enter (“Priests’ Court”). Within all was the temple building itself, with an altar of burnt offering in front. These courts and enclosures required eight years to build (XV.xi.6).

The building itself was completed in a year and a half. As in the days of Solomon, a great dedicatory sacrifice was held. This dedication was held on the anniversary day of the king’s inauguration, to make the occasion all the more notable (XV.xi.5).

The king had built for himself an underground passage from Antonia to the E gate of the inner enclosure. Over this gate was a tower. The tunnel was thought to be particularly useful in case there should be a rebellion (XV.xi.7).

In Antiq. XX.ix.7 we read that the construction of the temple precincts (ιερόν) was “finished” during the time of Agrippa II, who, though not king of Judea, had charge of the temple. This was during the procuratorship of Albinus, ca. 63. The cessation of construction is said to have thrown eighteen thousand men out of work—an exaggeration, since the original project employed only ten thousand (see above). The king was urged to rebuild the E portico, which was reputed to have been constructed by Solomon (see SOLOMON’S PORTICO). This portico was 400 cubits long (or high), and because of the deep valley (Kidron) outside was supported by great walls built of huge white stones 20 cubits long and 6 cubits high. Although the temple treasury was well filled, Agrippa felt that this project was too vast to undertake and denied the petition, but allowed much paving to be done throughout the city. Later, Agrippa gathered material to increase the height of the sanctuary building by 20 cubits to bring it to the supposed Solomonic height, but the war intervened before this work could be begun (War V.i.5).

The *Jewish War* was written earlier than the *Antiquities*; in fact, it appeared shortly after the struggle was over (probably ca. 75). It affords us more details about the temple area, and especially about the sanctuary itself. War I.xxi.1 puts the beginning of construction in Herod’s fifteenth year, as opposed to the eighteenth in Antiq. XV.xi.1. New foundations were laid, and the whole area was made double its former size. There were great colonnaded porticoes (stoas) around the whole, and a fortress called Antonia dominated the area on the N. This fortress was not attached directly to the temple area, but was separated by porticoes that could cut communication when destroyed (II.xv.6).

War V.v describes the sacred area just as it was before the attack of the Romans. Solomon had built a great foundation wall on the E side. Now, over a much greater area the top of the hill was leveled off, and foundation walls were built on the other three sides(?). There were upper courts surrounded by a lower enclosure; the foundations of the latter reached down in some places three hundred cubits or more (V.v.1).

Above the foundations and pavement rose all around the double porticoes supported by shining marble columns 25 cubits high. The porticoes were 30 cubits wide, and their total circumference, including the Tower of Antonia, was six stades (ca. 3,600 feet). The lower outer court was paved with varicolored stones. The inner area was surrounded by a stone fence or balustrade 3 cubits high, bearing at intervals inscriptions in Greek and Latin warning foreigners to proceed no farther (Fig. PAR 22). Beyond this, fourteen steps led up to the inner area, which was surrounded by a wall of its own 25 cubits high. A level terrace 10 cubits wide lay between the steps and the wall. From this, other flights of five steps led up to eight gates, four on the N and four on the S. The E part of this inner area was the Women’s

Court. One gate on the N and one on the S led into this court. It also had a gate in front, on the E side, and another opposite, on the W, leading still closer to the sacred edifice; but the women could go no farther than their own court. The W wall of the inner area had no gate. Inside the wall of the inner area were storage chambers and single-columned porticoes, their columns being smaller but otherwise not inferior to those of the outer porticoes in the lower court (V.v.2).

Of the ten gates just mentioned, nine were overlaid with gold and silver, but the one on the E of the Women's Court, the E gate of the inner area (cf. II.vii.3; VI.v.3), was of Corinthian bronze, far exceeding the others in value (probably the "Beautiful Gate" of Acts 3:2, 10). Each gate had two doors 30 by 15 cubits, except that the one leading into the sanctuary from the Women's Court was larger, having doors 40 cubits high, with more massive plates of gold and silver. Fifteen steps, shallower than at the other gates, led up to the more sacred area beyond the Women's Court (V.v.3).

The centrally located sanctuary building was reached by twelve steps. In front it was 100 cubits high and the same in width. Behind the vestibule it was 60 cubits wide, the two side wings of the vestibule being each 20 cubits wide. The entrance to the vestibule was 70 cubits high and 25 wide, had no doors, and was overlaid with much gold. The inside of the vestibule was 90 cubits high, 50 cubits in breadth, and 20 cubits deep. At the back of the vestibule was the main doorway of the temple. It had double doors, each 55 cubits high and 16 wide, overlaid with gold, as was the surrounding wall. Above it were golden vines, with clusters of grapes as tall as a man. Before it hung a full-length curtain of Babylonian tapestry, of various materials and colors, embroidered with a panorama of the heavens, typifying the universe. The building itself was in two stories (V.v.4).

The interior of the sacred building exclusive of the vestibule was 60 cubits high, 60 cubits long, and 20 cubits wide. The main room, corresponding to the Solomonic *Hekhal*, was 40 cubits long, and contained the seven-branched LAMPSTAND, the table for the BREAD OF THE PRESENCE, and the ALTAR of incense. The adytum, screened from the main room by a veil or curtain, was 20 cubits in depth (and the same in width). It was called "holy of holies" and contained no furniture whatever.

There were numerous side chambers in three stories around the lower part of the building, with entrances on either side of the main doorway. The upper 40 cubits of the building had no side chambers. Since the part surrounded by chambers was 60 cubits high, the total height of the central part of the building was 100 cubits (V.v.5).

The outside of the building was covered with so much gold that an onlooker could scarcely look directly at it in bright sunlight. All not overlaid with gold was of pure white stone like the snow on a mountaintop. Golden spikes prevented birds from defiling the roof. Some of the stones were 45 cubits long, 5 cubits high, and 8 broad.

The altar of burnt offering in front of the building was 15 cubits high, 50 cubits square. The top had

horns at the corners, and was approached by a ramp on the S side. No iron was used in its construction. A stone barrier about a cubit high surrounded both building and altar to separate the laity outside from the priests inside (V.v.6).

No ritually unclean person was allowed near the sanctuary. Ordinary priests were clothed in fine linen; the high priest when ministering wore sumptuous vestments trimmed with gold and precious stones. He wore even more sumptuous garments on the Day of Atonement, the only day in the year when he, and he alone, entered the adytum (V.v.7).

The tower (or fortress) of Antonia, at the NW corner of the temple area, was built on a rock 50 cubits high covered with smooth stonework to make it more difficult to climb. Protected by a wall 3 cubits high, the tower itself was 40 cubits high. At each corner of the tower was a turret. Three of these were 50 cubits high, but the one on the SE corner was 70 cubits high, so as to command a view of the whole temple area. Stairways led up from the porticoes of the temple to the tower (cf. Acts 21:40). A Roman cohort was constantly quartered in the commodious interior of the fortress. The temple dominated the city; Antonia dominated the temple. N of Antonia was the hill Bezetha, cut off from the fortress by a deep fosse. This hill formed the only obstruction to the view of the temple from the N (V.v.8; cf. V.iv.2; Antiq. XVIII.iv.3).

3. Middoth references. The name of this tractate of the Mishna (*see* TALMUD) means "measurements"; the subject matter of the tractate is the details of the sanctuary itself rather than its environs. Since some dimensions and other details differ from those of Josephus, there is a considerable difference of opinion as to which source is the more reliable. The view assumed here is that JOSEPHUS is to be given the preference, since, as a citizen of Jerusalem and a priest while the temple was standing, he had firsthand knowledge. By contrast, the author of Middoth, writing *ca.* 150, was, with respect to Herod's temple, in a position similar to that of Ezekiel with respect to Solomon's structure: writing after the destruction of the sanctuary, he was inclined to idealize or even exaggerate with a view to a possible future restoration. In this connection it is to be noted that Josephus, in spite of his well-known tendency to exaggerate, apparently gives a slightly smaller dimension for the entire sacred area than does Middoth.

The tractate opens with a statement of how the priests and Levites kept watch at various points around the holy place. The larger enclosed area is referred to as the Temple Mount; the smaller enclosure immediately surrounding the sacred building is called the Temple Court. The Temple Mount had five gates (Josephus implies seven or eight): the two Huldah gates on the S; the Kiponus gate on the W; the unused Tadi (or Todi or Tari) gate on the N; the Palace of Shushan (or Susa) gate on the E (cf. Neh. 1:1; Esth. 1:2, 5-9; Dan. 8:2). The Temple Court, or inner enclosure, had seven gates (Josephus nine)—three on the N, three on the S, and one on the E called the Nicanor gate (Midd. 1.1-4).

The Temple Mount was 500 cubits square (a circumference of *ca.* 3,400 feet; Josephus' larger figure is 6 stades, or *ca.* 3,600 feet, but he includes Antonia,

and Middoth does not; hence Josephus has a smaller estimate than does Middoth). The largest open space was to the S, the next largest to the E; the N space was next in size, and the W space was the smallest. In other words, the temple was in the NW part of the area (Midd. 2.1).

As one approached the temple proper, there was a latticed partition (*Soregh*) 10 handbreadths high (the fence or balustrade according to Josephus was 3 cubits, or 18 handbreadths, high). Inside this was a rampart or terrace 10 cubits wide (Josephus agrees), reached by twelve steps (Josephus fourteen). All the inner entrances and gates were 20 cubits high and 10 cubits wide and had doors, except the entrance to the vestibule (Josephus 30 by 15 cubits). All the gates were overlaid with gold, except the Nicanor (E) gate, which had bronze (similar to Josephus). The E wall was lower than the others, so that the high priest at the proper time could look directly into the sanctuary from the Mount of Olives (Midd. 2.3-4).

The Women's Court was 135 cubits square (no dimensions in Josephus). Fifteen steps led up from this court to the Court of Israel, which was higher than the Women's Court (agrees with Josephus). The Court of Israel was 135 cubits long and 11 cubits wide. Next was the Court of Priests, of the same size as the Court of Israel. One tradition made the Priests' Court $2\frac{1}{2}$ cubits higher than the Court of Israel. The whole of the Temple Court, exclusive of the Women's Court, was 187 cubits long and 35 cubits wide. Another tradition assigns thirteen gates to the Temple Court, in contrast to the seven of Midd. 1.4 (2.5-6).

In front of the building was the altar of burnt offering, 32 cubits square at its base (Josephus says 50 cubits square and 15 cubits high). It had a stepwise construction, the top level being 24 cubits square. There was a ramp on the S side (ditto Josephus), 32 cubits long and 16 wide. No iron was used in its construction (ditto Josephus). The place of slaughter ("shambles") was just N of the altar. The laver stood SW of the altar, between the ramp and the building (3.1-6).

It was 22 cubits from the altar to the vestibule. The latter was approached by twelve steps (ditto Josephus), arranged in groups with landings between. The entrance to the vestibule was 40 cubits high and 20 wide (Josephus 70 by 25). A golden vine hung over the main entrance of the sanctuary at the back of the vestibule (ditto Josephus). This entrance was 20 cubits high and 10 wide (Josephus 55 by 16). It had two sets of double doors opening inward, the wall being 6 cubits thick. The walls were covered with gold, but not the doors (Josephus says walls and doors were so covered). There were 38 side chambers or cells, arranged in three stories, with an entrance on the right of the main doorway, the left entrance being unused (Josephus mentions the three stories and says these chambers could be entered from either side). Each story was broader than the one below; there were offsets in the main building like those in Solomon's temple. Outside the cells was an ascending passageway around three sides of the building, by which the upper chamber over the main room and the holy of holies could be reached (3.6-4.5).

The greatest outside width, the greatest length,

and the greatest height of the building were each 100 cubits (Josephus agrees). The upper chamber was 40 cubits high. On top was a parapet, surmounted by a scarecrow arrangement (Midd. 4.6; Josephus speaks of "sharp golden spikes").

The front wall of the vestibule was 5 cubits thick, the vestibule was 11 cubits deep, and the wall between the vestibule and the main room 6 cubits thick (Josephus has the vestibule 20 cubits, but says nothing about the thickness of the walls; Solomon's vestibule was only 10 cubits deep). The interior length of the main room was 40 cubits (Josephus agrees; Solomon's *Hekhal* had the same length). Between the main room and the holy of holies was a dividing space of one cubit. The holy of holies was 20 cubits square (ditto Josephus; Solomon's adytum was a cube of 20 cubits).

The outside width of the building behind the vestibule was 70 cubits (Josephus 60). The vestibule therefore had 15-cubit projections on each side (Josephus 20) to make up the 100-cubit width. Thus the building could be described as narrow behind and wide in front, "like a lion" (Midd. 4.7; contrast Solomon's plan, in which the front of the building was actually narrower than the rest).

4. Archaeological data and modern study. It has long been obvious that Josephus and Middoth cannot be made to agree. Neither presents an exact description in the modern sense of the word; both have value for achieving an approximate conception, though Middoth omits such characteristic features as the porticoes. For this reason, archaeological research has been helpful, especially since the Muslim structures now covering the enclosed site (the Haram esh-Sharif) retain some traces and features of the Herodian area, whereas it is hardly conceivable that any vestiges of the Solomonic or Zerubbabel buildings could have survived. This "Herodian thesis" has been widely held since the pioneer work of De Vogüé in 1864 (*see bibliography*). Even earlier, Edward Robinson (1838) had pointed out the now famous traces of "Robinson's Arch," still to be seen projecting from the W Haram wall, near the SW corner, and recognized as part of a Herodian structure (though of uncertain identification). Another American in 1851 pointed out the remains of an old gate ("Barclay's Gate") below the present Gate of the Moors, a short distance N of Robinson's Arch. Now walled up, this aperture probably marks the site of the most southerly of the four gates of Herodian times—the one mentioned above as opening to a long flight of stairs into the Tyropoeon Valley (Jos. Antiq. XV.xi.5).

Immediately to the N (*see plan*) is the Wailing Wall, or Western Wall, as it is called by the Jews. This stretch (*ca.* 50 yards) of the W wall of the Haram area was uncovered at some unknown time during the Turkish period, and has been viewed and commented upon by countless thousands of tourists, as well as by scientific observers (Fig. TEM 11). The lower courses are composed of large blocks of smooth-faced, marginally drafted limestone, usually *ca.* 15 feet long and 3-4 feet high, though one huge block is $16\frac{1}{2}$ feet long. This type of stonework, found here and at other spots in Jerusalem and at Hebron, has become very well known under the name of "Herodian masonry," and the chronological implication is

probably correct. At this spot there are smaller blocks of Roman masonry above the Herodian, and above the Roman rests Arabic and Turkish work. This pattern is more or less characteristic of the whole Haram enclosure, except on the N side, as will appear below. It must be borne in mind, however, that in many places the Herodian blocks are now below ground level, and hence cannot be seen without excavation.

A short distance N of the Wailing Wall is the principal modern entrance to the area, called in Arabic Bab es-Silsileh, or the Gate of the Chain. *Ca.* the middle of the nineteenth century, Titus Tobler had called attention to underground vaults in front of the Gate of the Chain. In 1865 Charles Wilson, working for the Palestine Exploration Fund, discovered, under the modern street and gate, an arch built against the Haram wall and linked up with the vaults. Further investigation was carried on by Charles Warren, but the name "Wilson's Arch" has persisted. The span of this arch is about the same as that of Robinson's, but Wilson's is practically intact. The arch is now several yards below the street level. Though showing evidence of rebuilding from time to time, this structure probably marks the site of Herod's route to the main entrance of the temple, which included a bridge at this point (Jos. Antiq. XV.xi.5; War II.xvi.3; VI.vi.2). Herod's bridge may have replaced a Maccabean bridge at the same location (Antiq. XIV.iv.2; War I.vii.2). See § B5 above.

Ca. 200 feet N of Wilson's Arch were found the remains of "Warren's Gate," just S of the modern gate called Bâb el-Mathara or Bab el-Mutawada. While the area has never been thoroughly studied, it appears likely that it contains traces of the more southerly of the two gates leading to the suburbs of the city (Antiq. XV.xi.5).

Turning to the E Haram wall, now constituting the SE part of the city wall, two features present themselves to the eye: the so-called Golden Gate, now walled up, a little N of center; and the great stones in the "Herodian masonry" at the SE angle (Fig. TEM 33). Although the gate in its present form is of Byzantine origin, it may be the successor of the Palace of Shushan gate of Middoth (Josephus does not mention an E gate). Later Christian traditions connected the Golden Gate with the Beautiful Gate of Acts 3:2 (probably incorrectly) and with Jesus' triumphal entry (more probable).

The great stones of the SE angle of the Haram wall constitute one of the readily accessible show places of Jerusalem, seen by every tourist and studied by every scholar. There are twenty-one courses of stone underground, discovered by excavation, and fourteen more above ground. The fifth row up of those above ground is the master course, with stones the largest and most impressive of all. There can be no doubt that we have here not only the SE corner of the modern city wall, but also the SE corner of the supporting structure of Herod's temple precincts.

In the S wall, the obvious noteworthy features are, from E to W, the great stones of the corner, just described in connection with the E wall, the small Single Gate, the Triple Gate, and the Double Gate. All these gates are now walled up. The Single Gate is of late date and has no relevance to our problem. The Triple Gate and the Double Gate (so named

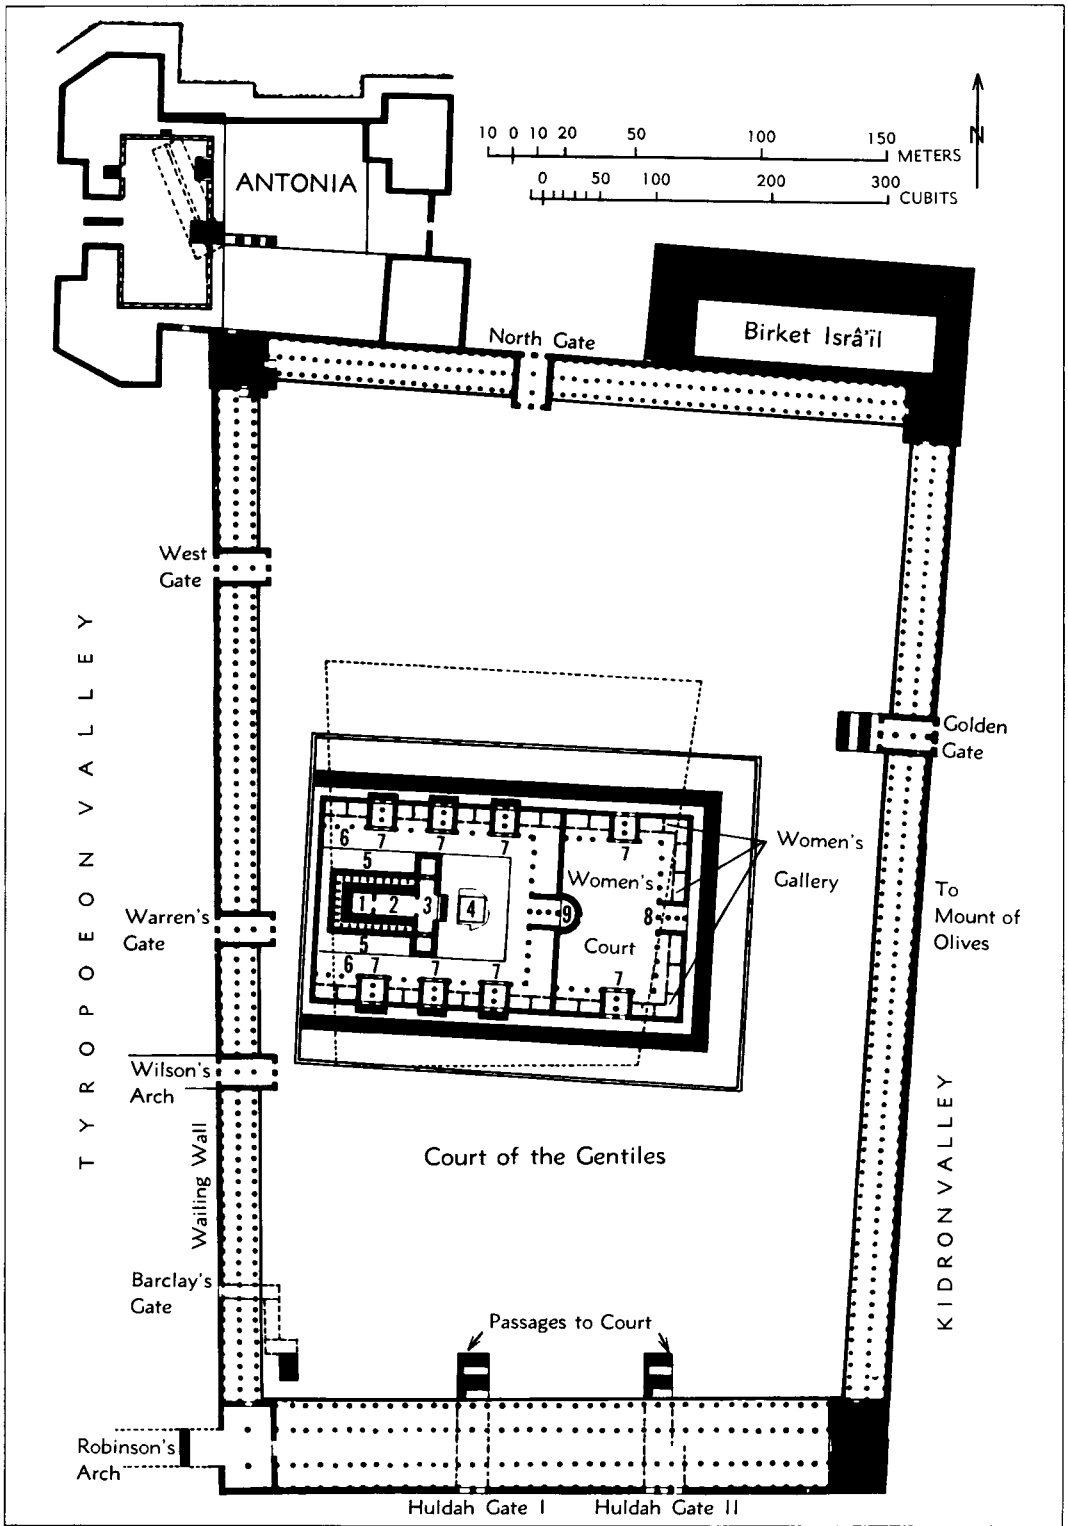

From Simons, *Jerusalem in the Old Testament* (Leiden: E. J. Brill Ltd.)

33. The SE angle of the Haram Wall

from the number of arched entrances) probably mark the sites of the two Huldah gates mentioned in Middoth (and implied in Josephus). The Double Gate is now partially hidden by an unsightly structure built against the wall, but archaeological research has determined its main features.

If it is fairly clear that the E, S, and W sides of the present Haram largely coincide with the corresponding sides of Herod's temple area, the same is not true of the N side. Here there is no wall comparable to the others, nor is there any Herodian masonry. What remains of the rock upon which Antonia was built is now partly included in the sacred area, whereas formerly the rock and fortress were separate from the temple area, though connected by some sort of stairways (see § C2 above). The present circumference is *ca.* 5,000 feet, whereas the largest circumference given by Josephus is *ca.* 3,600 feet. These and other considerations make probable the suggestion first made by Conder, that the present circumference includes a post-Herodian N extension (probably made in the time of Justinian). Herod's N wall probably began a short distance N of the Golden Gate, where there is a slight jog or bend in the present wall, and continued W a short distance N of the present inner platform.

The quadrilateral Haram area is neither a true rectangle nor a parallelogram, and the same can probably be said of Herod's enclosure. Thus the archaeological investigation of the outside walls has been fruitful with regard to recovering the line of Herod's walls, and the traditional idea of the perfect square (as in Middoth) must be abandoned. But the inside of the sacred area is another matter. The cen-

From Vincent and Steve, *Jerusalem de l'Ancien Testament* (Paris: J. Gabalda & Cie.)

34. Ground plan of Herod's temple and courts, based on Vincent-Steve: (1) holy of holies; (2) holy place; (3) porch; (4) altar of burnt offering; (5) court of priests; (6) court of Israel (men's court); (7) sanctuary gates; (8) Nicanor gate(?) or Gate Beautiful; (9) Nicanor gate

tral sanctuary has been completely changed, and what is there cannot be investigated very closely by scholars because of Muslim religious sensibilities. The Dome of the Rock bears no resemblance to Herod's temple. The only point in common is the sacred rock, which is now within the building, and may have been so in the buildings of Solomon, Zerubbabel, and Herod. The present raised platform around the inner sanctuary can only faintly suggest Herod's platform, which was different in size, shape, and orientation. Hence, for reconstruction of the sanctuary proper, recourse must be had to the literary sources and to comparative archaeology.

5. Attempts at reconstruction. Many have offered ground plans of the sacred enclosure; a few have attempted reconstruction of the building itself. Basic is the work of De Vogüé (1864), who presented both a ground plan of the area and a complete restoration of temple and environs in his magnificent folio publication. The restoration was deemed worthy of reproduction by Vincent and Steve in 1956. De Vogüé considered the Herodian area conterminous with the present Haram, Antonia being inserted into the NW corner. The plans of Vincent and Steve and the *Westminster Dictionary of the Bible* (1944) are similar, except that Antonia is outside the N wall, though contiguous to it. By contrast, *HDB* (1902), Hollis (1934), *Westminster Historical Atlas to the Bible* (rev. ed., 1956), *Harper's Bible Dictionary* (1952), and Simons (1952) suppose that Herod's N wall was S of the present N wall of the Haram, and thus that Antonia was some distance away, though connected by stairways; this is the view adopted here.

With regard to the placement of the sanctuary within the area there is a wide divergence of opinion. Here much depends on whether the sacred rock is supposed to have been under the adytum or the altar of sacrifice. One can only say with certainty that the building was near or over the rock, and that the entrance was toward the E.

The ground plan of the inner courts is controversial in details, though not in general conception. There was first the balustrade or fence, beyond which Gentiles could not go. Then a stairway on all sides except the W, then first on the E the large Women's Court, which all Jews could enter. Following that, at a slightly higher level, reached by a semicircular flight of steps, came the Court of Israel (i.e., Jewish men), perhaps surrounding the sanctuary on three sides. Finally, in front of and on both sides of the building was the Court of Priests. In the front part of this court were the altar in the center, the shambles on the right (N), and the laver on the left. Fig. TEM 34.

The ground plan of the sanctuary is little in question, since it was supposed to follow the traditional pattern set by Solomon, and apparently did so rather closely, except for the wider vestibule. There is little difference in reconstruction here all the way from De Vogüé to Watzinger and Vincent (Fig. TEM 29). Not so, however, is the situation with regard to the front face, or façade, of the building. The literary sources disagree as to size, and give no details of structure. De Vogüé shows a tetrastyle effect, with two pilasters at the sides of the entrance and two columns between, surmounted by a straight lintel or

From Parrot, *Le Temple de Jerusalem* (Neuchâtel: Delachaux & Niestlé)

35. A Bar Cocheba coin with a reproduction of the temple

architrave (without pediment) above. This conjecture is in the fashion of the fortress at 'Araq el-Emir (which also has "Herodian" masonry), and is somewhat similar to the much-discussed Bar Cocheba coin (Fig. TEM 35), which, however, may not represent the temple even schematically. Schick's offering (Figs. TEM 36-37) is quite incredible, being thoroughly un-Hellenistic and un-Roman. Watzinger's attempt (Fig. TEM 38), though based on excellent research, seems to go to the opposite extreme from that of Schick. The four columns, the great pediment, the smaller pediment over the door, the straight and simple lines—all are so reminiscent of the ordinary Greco-Roman temple that one wonders if perchance Herod did not take care to have something more distinctive, especially when the glowing quality of Josephus' description is considered. Incidentally, in support of a pedimented tetrastyle is the drawing on a fragment of glass from a Jewish catacomb of the third or fourth century A.D. (Fig. TEM 39). This drawing is usually cited in support of the free-standing feature of the pillars before Solomon's temple. The building represented is more likely that of Herod. Finally, attention may be called to the sketch of Vincent and Steve (Fig. TEM 40), also very simple in conception, but eliminating certain conventional Hellenistic-Roman features, such as pediment and tetrastyle. If Watzinger is too Hellenistic, perhaps Vincent and Steve are not quite enough so, but depend more on Anatolian and Mesopotamian analogies.

37. Reconstruction of Herodian temple area structures and arrangements, according to Schick

From Parrot, *Le Temple de Jerusalem* (Neuchâtel: Delachaux & Niestlé)

38. Reconstruction of the façade of Herod's temple, after Watzinger (1935)

Attention may be called to the golden eagle shown by both Watzinger and Vincent and Steve over the grand entrance to the vestibule. To Herod this was only a familiar feature of Hellenistic art, but to Jewish orthodoxy it was an outrage against the law, which prohibited images of any sort. Near the end of Herod's reign, when a report of his death had spread, a group of zealous students of the law, encouraged by two prominent teachers, invaded the temple area, had themselves lowered from the roof, and chopped down the offending image. The perpetrators and their teachers were executed, but the image was not restored, so far as we know (Jos. Antiq. XVII.vi.2-4; War I.xxxiii.2-4).

6. Summary and conclusion. By way of summary, it seems necessary only to point out again that Solomon and his architects determined the ground

plan of the sacred building itself from the prevailing temple styles of his day, and that this plan was maintained by Zerubbabel and Herod with little change. Herod greatly enlarged the temenos and surrounded it with the impressive system of porticoes or stoas in the Greek manner. Whether he also put a conventional Greek façade on the temple itself, or treated it more in the plain oriental manner, is still a problem for the reconstructionists, as noted above.

In connection with the destruction of the temple in A.D. 70, attention should be called to the Arch of

40. Front view of Herod's temple, after Vincent-Steve (1956)

Titus in Rome, upon which are sculptured some of the sacred objects taken from the temple (Fig. MUS 85): the golden lampstand, the golden table of the bread of the Presence with incense cups, two silver trumpets, and perhaps three tablets of the Law. These objects are depicted as being carried in the triumphal procession in honor of Titus (Jos. War VII.v.5). According to a later (and quite legendary) tradition, mentioned by Gibbon, and with which we may conclude, these objects (or at least the lampstand and the table) were deposited in the Temple of Peace. When Genseric sacked Rome in 455, he took the sacred objects to Carthage. In 533 Belisarius, the general of Justinian, took Carthage and transported the temple objects to Constantinople, where they were again displayed in a triumphal procession (in 534). Thence they were returned to a Christian church in Jerusalem, at or near the very spot from which they had been taken so long before. More realistic is the story that the objects fell or were thrown into the Tiber during the attack by Constantine in the year 312—and were never recovered.

Bibliography. Commentaries: ICC, IB, and HAT on relevant passages in I Kings, II Chronicles, and Ezekiel. M. Hadas, *Aristeas to Philocrates* (1951); Letter of Aristeas, pp. 13-15, 132-41.

The literature is vast. Among older works, see especially: M. De Vogüé, *Le Temple de Jérusalem* (1864): of small value for Solomon, basic for Herod. E. Robinson, *Biblical Researches in Palestine* (3rd ed., 1867), I, 238, 281-306; III, 163, 220-43: the permanent record of the famous visits of 1838 and 1852, including the discovery of "Robinson's Arch." C. W. Wilson and C. Warren, *The Recovery of Jerusalem* (1871): reports on the work of the Palestine Exploration Fund, "Wilson's Arch," etc. C. Warren, *Underground Jerusalem* (1876); shows some of the difficulties of early excavations undertaken by the Palestine Exploration Fund. C. Warren and C. R. Conder, *Jerusalem*, Survey of Western Palestine, vol. V (1884): a summary of the work of the Palestine Exploration Fund. B. Stade, "Der

Text des Berichtes über Salomos Bauten: 1 Kö. 5-7," *ZAW*, III (1883), 129-77; *Geschichte des Volkes Israel*, I (1887, in the series entitled *Allgemeine Geschichte*, ed. by W. Oncken), 311-43: the pioneer work on reconstruction of Solomon's building, with excellent plans, still useful. G. Perrot and C. Chipiez, *Histoire de l'Art dans l'Antiquité*, IV (1887), 159-338; remarkably artistic reconstructions, though somewhat confused historically. C. Schick, *Die Stiftshütte, der Tempel in Jerusalem und der Tempelplatz der Jetztzeit* (1896): based on assiduous and lifelong devotion to the subject, but historically confused, as noted above. I. Benzinger, *Hebräische Archäologie* (1st ed., 1894), pp. 239-49, 383-404: depends heavily on Stade; (3rd ed., 1927), pp. 211-19, 328-37: shows trend away from the use of Egyptian background. G. A. Smith, *Jerusalem*, II (1908), 48-82, 495-555: one of the best among the older popular works in English. C. R. Conder, *The City of Jerusalem* (1909): mostly concerned with history of the city, but the Frontispiece shows an oversimplified reconstruction of Herod's temple. M. Dieulafoy, "Le Rythme Modulaire du Temple de Salomon," in Académie des Inscriptions et Belles-Lettres, *Comptes Rendus* (1913), pp. 332-47: an important study of the use of triangulation in establishing the proportions of the temple. E. T. Richmond, *The Dome of the Rock* (1924), fig. 15: the best photograph of the sacred rock. G. B. Gray, *Sacrifice in the OT* (1925), pp. 133-47: supports the view that the adytum, not the altar, was over the sacred rock.

More recent literature: Among the work of L.-H. Vincent, see: *Underground Jerusalem* (1911); *Jérusalem Antique*, Recherches de Topographie, d'Archéologie et d'Histoire, vol. I (1912); "Jérusalem," in L. Pirot and A. Robert, *Dictionnaire de la Bible*, Supplément, IV (1949), 897-996; L.-H. Vincent and F.-M. Abel, *Jérusalem Nouvelle*, Recherches de Topographie, d'Archéologie et d'Histoire, vol. II (1914-26); L.-H. Vincent and A.-M. Steve, *Jérusalem de l'AT*, I (1954), 193-221, plates XIX, XLI, LIII; II-III (1956), 373-610, plates CI-CXLIX—particularly important. The articles of Vincent in *RB*, beginning ca. 1902 and continuing for more than half a century, should also be consulted to get the full force of this author's contribution. Among the works of K. Galling, whose total contribution to the modern understanding of the subject is great, see: "Tempel," *Religion in Geschichte und Gegenwart*, V (2nd ed., 1931), 1040-46; "Das Allerheiligste in Salomos Tempel," *JPOS*, XII (1932), 43-46; "Tempel in Palästina," *ZDPV*, LV (1932), 245-50; *Biblisches Reallexikon*, HAT, I (1937), 511-19; contribution to *Ezekiel*, HAT, vol. XIII (2nd ed., 1955). See also: W. *TEMPLES. We are concerned here with those temples erected in Palestine, other than the Solomonic temple and the structures which were built in its place (see TEMPLE, JERUSALEM). Our chief sources of information are the Bible, which proceeds often by way of allusions, and the archaeological discoveries.

1. Definition and terminology. The word "temple," sporadically used in the English versions, specifically applies to man-made architectural structures built for the cult of God or the gods, as distinguished from the so-called high places, which normally do not consist of buildings of any sort except for an enclosure around the sacred territory (see *BAMOTH*; *HIGH PLACE*). This distinction, however, is somehow unessential. A temple may be erected in place of, or in connection with, or as a substitute for, an ancient high place. Meanwhile the basic concept remains the same—viz., that of a place where the god is believed to have manifested his presence and abiding virtue, and where men meet him in adoration and worship. Hence the Hebrews had no specific word for what we call "temple," but rather spoke of the "house" (בית, *bēth*) of such or such a deity. Solomon's temple is no exception. Its main hall is called in Hebrew הֵיכָל, *hēkāl*, a material transcription of the Sumerian *E-Gal*, which the Assyrians rendered by *bitu rābu*, meaning "the Great House." The Hebrew expression בְּמִוְתַי בָּמֹתַי, *bātē bāmōth*, groups together the divine "houses" and the "bamoth" or "high places." The versions show a certain vagueness in their rendering; cf. the RSV "houses on high places" (I Kings 12:31), "houses of the high places" (I Kings 13:32), and "shrines of the high places" (II Kings 17:29, 32; 23:19).

2. Canaanite and foreign temples. We are especially concerned in this section with the temples and places of worship of the non-Hebrew population of Palestine, before and after the Conquest, excluding the sanctuaries related to the religion of Yahweh in its various forms. Most of the ancient temples of Canaan were connected with the religion of the Semites, although a few of them did belong to other cults. They are mentioned occasionally in the Bible, but never described in full; see, e.g., the references to the temple of El-berith in Shechem (Judg. 9:46), the temple or temples of Dagon in Ashdod and the Philistine districts (Judg. 16:23-30; I Sam. 5:2; I Chr. 10:10). In contrast with the scanty information from the texts, we are favored with an abundance of archaeological material. The identification of ruined buildings as temples, however, is always a delicate matter. It depends largely on considerations of plan and location, and still more on the examination of the objects found in the ruins. The structures

described in §§ 2a-b below may reasonably be regarded as temples and shrines. They are listed, as far as possible, in chronological order.

a. Pre-Israelite. The identification of a Chalcolithic structure from Megiddo (stratum XIX; ca. 3300-3000 B.C.) as a temple or shrine is possible, though by no means evident. It consists of a narrow hall with a row of stone bases along its longer axis, and a raised platform of adobe, which was subsequently remodeled. Fig. TEM 41.

The foundations of a small building discovered in the ruins of et-Tell, the biblical Ai, may be regarded with great probability as an ancient shrine or temple. It consisted of two rooms built against the inner facing of the city wall. Two steps gave admittance to a first room, rectangular in shape and measuring approximately twenty-five feet in width and eighteen feet in depth. A bench of masonry ran along two of its walls. Two earthenware stands, identifiable probably as incense burners, the ivory handle of a knife, jars and bowls of the Early Bronze Age, were found in this room; bones and ashes had been heaped in a corner. There is no evidence that a piece of charred wood lying in the middle of the room should be identified as part of an *ASHERAH*. It is just as probable that it was a post for supporting the roof. A narrow door opened into a second room of about the same size, but less regular in shape. In a corner of this room was a structure of masonry which has been described as an altar by archaeologists, although this is by no means certain. Fragments of Egyptian alabaster and stone vessels from the second or third

42. Shrine and altar at Ai (third millennium B.C.)

dynasty were found among remains of Early Bronze Age pottery. Miscellaneous refuse had been swept into three pits lined with stones. The building as a whole and its contents may be dated tentatively from the late phase of the Early Bronze Age (second half of the third millennium B.C.). Fig. TEM 42.

At Megiddo the remains of three temples were unearthed from stratum XV (Middle Bronze Age, ca. 1900 B.C.). Two of them stood side by side on the same alignment; the third was close to the first two, but at an angle. Each unit consists of a single room ca. forty to forty-five feet in width and twenty-seven to thirty feet in depth, with stone bases for the posts supporting the roof, and a raised rectangular platform against the back wall, where the image of the god presumably stood, and where offerings were

placed before it. Four lateral steps led to the platform of the third unit. Each unit had a front portico of two columns. Close to the shrines and in obvious relation with them, a low enclosure surrounded a huge circular block of masonry, approximately thirty feet in diameter and more than six feet high, with a flight of steps leading to its top. A large amount of bones and ashes found in the enclosure offers good evidence that the structure thus described was an open-air altar for burnt offerings. Figs. ALT 20; MEG 27.

The ancient sanctuary of Gezer, often described as a "high place," consisted of an irregular row of eight rough pillars of stone unequal in size and in appearance, and ranging from approximately 5 to 10 feet in height. Their relation to the pavement of field stones which covered the area where they stood remains undefined. To the W of the row of pillars, but not toward its center, stood a large block of stone measuring about 6 by 5 feet and 2½ feet in height. The top of the block had been hollowed intentionally. This monument has been described often as an "altar," although it might have been equally well a pedestal for a statue or emblem, or a stand for placing offerings. Close to the pillars, in the layer of virgin soil above the rock and below the filling on which the pavement had been laid, the bodies of young children had been buried in earthenware jars. A natural cave in the rock E of the row of pillars contained another burial, while a circular pit nearby had been filled with miscellaneous potsherds, some

43. The alignment of standing stones of the "high place" at Gezer

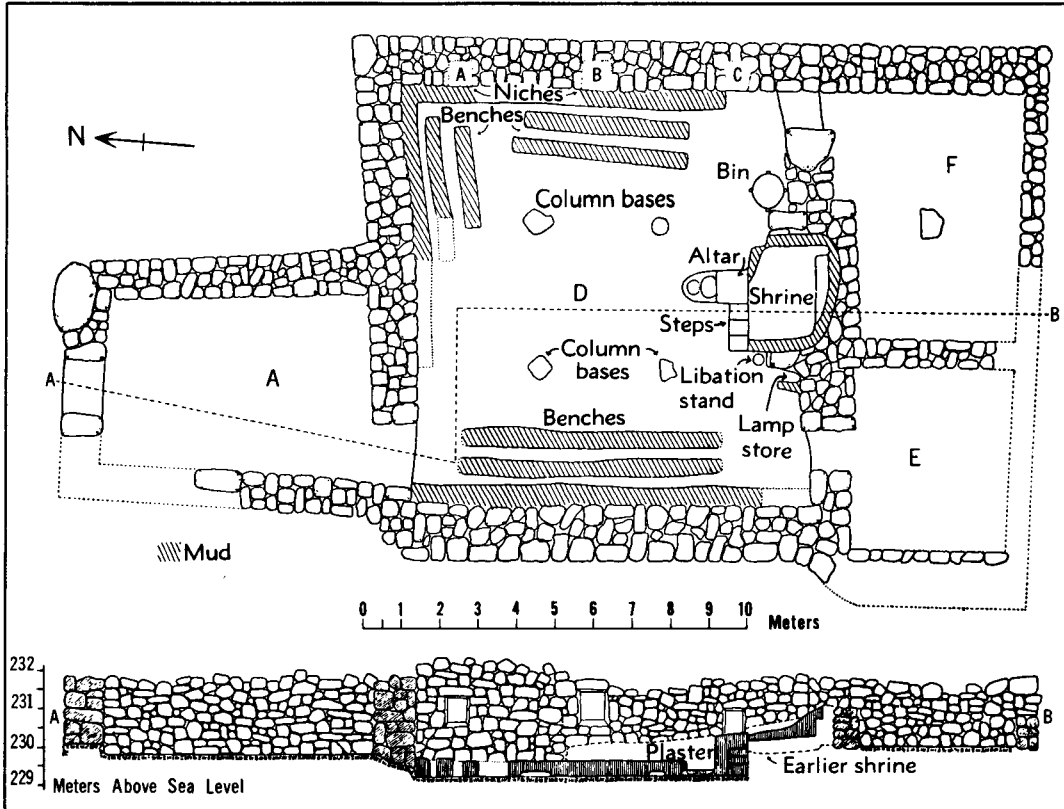

of them dating from the Late Bronze Age (*ca.* 1500 B.C.), and a crude bronze figurine representing a serpent. The organic relationship of all these things to the row of pillars has not been conclusively established. It is about certain, however, that the pillars could not possibly have been meant as functional elements of an architectural structure, such as pillars to support the beams of a roof. They can be regarded most likely as good examples of the raised stones which we know from literary sources to have been characteristic elements of the early Semitic places of worship (*see* PILLAR). Unfortunately, defective tech-

niques used in the excavation of Gezer (in 1902) and the inadequacy of archaeological recordings leave us much in the dark as to the age and detailed interpretation of the so-called "high place." Dates ranging from the end of the Early Bronze Age to the Late Bronze Age have been advanced. (Fig. TEM 43.) A temple of Byblos on the Phoenician coast, dating from the Middle Bronze Age, with a row of raised stones in the rear of a two room shrine, constitutes thus far the closest analogy.

A shrine from the second half of the Middle Bronze Age (from 1800 B.C. onward) was discovered at Nahariya, five miles N of Acre. It consists of a long stone building at the E end of which was a small square room. The vestibule at the W entrance of the main hall seems to have been added at a later date. Several incense burners, miscellaneous pottery, a silver figurine representing a female deity, and clay figurines of doves, usually associated with the worship of Ishtar, were found in disorder among the ruins.

One of the buildings on the acropolis of Shechem has been recognized for a temple, with great probability. Its foundation rests on an artificial platform dating from the latter phase of the Middle Bronze Age (*ca.* 1800 B.C.). The building, which has unusually thick walls, is a rectangular hall of *ca.* thirty-three by forty feet divided into three aisles by columns, the stone bases of which were found in place. A little porch gave admittance to the hall. Great caution must be exercised in the evaluation of the detailed reports by the early explorers of Shechem. A re-examination of the ruins by G. E. Wright in 1956 would suggest a date possibly as low as the Late Bronze Age, and the possible identification of the shrine with the temple of El-berith or Baalberith, referred to in Judg. 9:46.

A temple of Lachish, rebuilt several times, was discovered in a filled-in section of the ancient fosse which surrounded the ramparts of the city in the Middle Bronze Age. The original building had been in use from *ca.* 1475 to 1400 B.C. It consisted of a rectangular shrine, approximately fifteen feet in width and thirty feet in depth, with a square antechamber and a small room on one side. There was a long, narrow bench of adobe along the back wall of the sanctuary, with three small platforms which may have been used as altars or as the bases of stands for placing offerings. Two large jars were buried in the ground in front of the median "altar." The building, which shows no trace of violent destruction, was subsequently enlarged in such a way that the elaborate altarlike structures of shrines No. 2 and 3 were superposed over the bench of the early sanctuary. Shrine No. 2 was in use from *ca.* 1400 to 1325 B.C. In the main room, roughly square (slightly more than thirty feet in each dimension), were the stone foundations of the four pillars which had once supported the roof. A stone bench and a square altar with a hearth were built against the back wall, while long, narrow "tables" of adobe ran parallel to the three other walls. There were similar tables in an annex in the rear of the sanctuary. Numerous earthenware vessels had been buried—intentionally, so it seems—in the layer of earth between the floor of shrine No. 1 and the pavement of shrine No. 2.

44. Plan for the temple at Lachish, Structure III (ca. 1350-1225 or 1200 B.C.)

Shrine No. 3 appears to be a mere remodeling of No. 2. An elaborate altar with three lateral steps stood on a broad adobe platform built against the back wall. There were two hearths in front of the altar, right and left of which respectively stood an earthenware stand and a large four-handled jar. Tables similar to those of shrine No. 2 ran in a double row along three sides of the room. Abundant pottery of the Late Bronze Age, jars, cups, bowls, and Cypriote water bottles, together with objects of ivory and of metal, were found in the sanctuary, its annexes, and the surrounding area. Some objects in this miscellany are of a specifically religious character—viz., a bronze figurine representing the Syrian god Reshef, gold leaves embossed with the figure of a female deity, and fragments from several earthenware stands usually found in the ruins of temples and places of worship. The sanctuary of Lachish was destroyed by fire toward the end of the Late Bronze Age, possibly when Merenptah raided Palestine in 1223 B.C. Fig. TEM 44.

A large building of Megiddo, identified as a temple, adds little to our information. Its thick walls, like those of a fortress, and its extremely simple plan—a single rectangular room, deeper than wide, with an entrance porch flanked by what seems to have been the foundations of two square towers—make it a striking replica of the temple of Shechem described above. The stratum in which it belongs dates from the fourteenth-thirteenth century B.C. Fig. TEM 45.

The excavation of Beth-shan has brought to light the remains of several temples built in succession like those of Lachish. The dates proposed at first, on the assumption of historical synchronisms deduced from Egyptian seals and scarabs discovered in the ruins, had to be lowered by a century or two, when a more accurate knowledge of the stratification of the site could be obtained. It is a fact, however, that Egyptian influences are most conspicuous in the architecture and the archaeological material of the temple, presumably on account of the intermittent occupation of the city by Egyptian armed forces from the Eighteenth to the Twentieth Dynasty. The architecture of the earliest temple, which would be more aptly described as a complex of open-air courtyards divided once by adobe walls, of which only the foundations and lower courses were left, shows little or no organic unity. The sanctuary was dedicated to Mekal, god of Beth-shan, as we learn from a stele of limestone where the god is represented with features borrowed from the iconography of Reshef, god of lightning, otherwise identified with the Egyptian god Seth (see ART § 2b). We have here an interesting instance of religious syncretism, when the Egyptian overlords vowed to the local deity as well as the indigenous population. Various structures and objects found in the sacred area were specifically related to religious worship—namely, a raised basalt stone on a platform of adobe, a stepped altar, and several trays or tables of basalt, together with miscellaneous

45. Phases of Late Bronze Age temple at Megiddo (Strata VIII, VIIB, VIIA, fourteenth-thirteenth centuries B.C.; ca. 1400-1150)

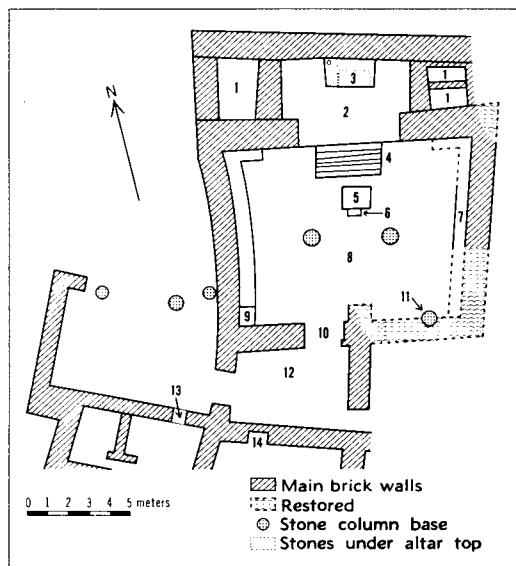

vessels and figurines of a mythological character. A panel of basalt, representing the fight of a lion and a mastiff, was found nearby, but its relation to the sanctuary cannot be proved conclusively. See ART § 2b.

The stratum in which the buildings and objects just described were discovered dates from the fourteenth century B.C. In the course of the following century a small temple was built to replace the ancient sanctuary of Mekal. It consisted of a hall more wide than deep, with benches of adobe along the walls, and an altar. The stone bases of two columns for supporting the beams of the roof were found in their original position. Various objects found in the temple show that it was dedicated to Mekal and his consort.

Temple No. 3, dating from the twelfth century B.C., is very similar to the preceding temple, with, however, more regularity. Both structures show a striking analogy to the Egyptian shrines of the el-Amarna period. Fig. TEM 46.

Toward the eleventh century B.C., twin temples were built, differing from the earlier structures both by their orientation and by their plan.* Like the temples of Lachish, they were disposed in depth and divided by columns into three aisles, the central aisle being presumably higher than the others, for lighting purposes. In each temple, steps led from the central aisle to the altar platform. The N temple was dedicated to a female deity, presumably the Canaanite 'Anath, identified with her Egyptian counterpart, Antit, whose features are seen on a small stela discovered in the temple. The S temple continued to be the "house" of Mekal-Reshef. Earthenware offer-

ing stands and models of temples decorated with naked human figures, snakes, and birds, were found in the whole area. It is possible, and even probable,

that the twin temples of the eleventh century are those mentioned in the Bible as the temple of Ash-taroth (I Sam. 31:10) and the temple of Dagon (I Chr. 10:10), in reference to the exposition of the armor (or head) of Saul after he fell on Mount Gilboa. The substitution of Dagon for Mekal is probably due to the fact that Saul was defeated by the Philistines, and that the cult of Dagon, an old Canaanite deity, was popular in the Philistine districts. Figs. TEM 47-48.

The recent excavation of Hazor has led to the discovery of two Canaanite temples built in succession at the foot of the ancient earth wall of the city. It is best here to quote from the (provisional) report of Yigael Yadin, director of the Rothschild Expedition. The "Holy of Holies" contained "a basalt sculpture of a male (deity?), seated on a throne, holding a cup. A row of several stelae, with rounded tops, was placed just left of the sculpture.* All of these were devoid of reliefs, except for the central one which bears a very effective and simple design: two upstretched hands in prayer fashion, below the emblem of the deity—a crescent and a sun-disk within. The whole row was flanked by a basalt orthostat, bearing the head and forelegs of a lion on its narrow side, and a relief of a crouching lion—its tail coming up

from between its hind legs, on its wide side." On the basis of the many vessels found in place together with the sculptures and the clear stratification of the temple, Yadin predicates a date in the thirteenth century, or possibly the end of the fourteenth century B.C. Figs. TEM 49; ALT 21.

49. Statue and stelae in the Late Bronze Canaanite temple at Hazor

b. After the Hebrew conquest. Canaanite cults continued normally in regions or single localities in which the Israelites were not able to establish themselves. The biblical records even suggest that many local shrines and high places remained open and retained a considerable popularity in districts completely subjugated, because of the complacency and at times the approval of the kings of Israel and Judah.

Several rooms on the acropolis of Megiddo (stratum V a; ca. 1000 B.C.) contained an unusual number of articles usually associated with Canaanite worship, such as small altars of limestone, offering stands, and incense burners. The religious destination of these rooms seems probable, but it is difficult to recognize in them a definite architectural formula. Two raised pillars of stone in a passage may have had a cultic significance, although they may have been mere supports for a lintel.

The texts give practically no information on the Canaanite and foreign temples of Palestine under the monarchy, and archaeological evidence is scarce. The Moabitic shrine at Dhibān (excavated in 1956) was found to be part of a palace-temple compound, and contained several utensils usually associated with Semitic religious worship.

Cults akin to the old Canaanite religion survived long in the cultures of neighboring countries, such as the districts of Transjordan controlled toward the beginning of the Christian era by the NABATEANS. The exploration of their places of worship proved most valuable for a better understanding of West Semitic cults and temples. It appears that open-air "high places" may have been used simultaneously with temple buildings. This is most probably the case at Petra. The high place on the summit of the Zibb 'Atuf is best preserved. It consists of a carefully leveled area accessible from the canyon of the Wadi Musa by means of stairs cut in the sandstone of the cliffs. A square block with free steps has been interpreted as an altar for burnt offerings. The victims were slain and prepared on a rocky platform left of the altar; the water necessary for the service was stored in vats dug out of the rock. Another open-air place of worship had a circular processional area around a rock presumably regarded as sacred. Pot-

tery and coins make it clear that it was still in use in the first century of the Christian era. It is highly probable that the monuments known as el-Khazneh, in the upper canyon, and ed-Deir, at the head of a gully NW of the city, were temples, and not tombs, as it was believed. Their impressive façades had been carved out of the sandstone of the cliff. Unfortunately, they had been thoroughly emptied long before archaeologists discovered them, and the rare objects discovered in the vicinity did not add anything to our knowledge of these monuments.

The Nabatean site of the Djebel Ramm, NE of the Gulf of Aqaba, offers a good example of the duplication of a high place by a temple. The open-air sanctuary was located on a narrow cornice of rock at the foot of a high vertical cliff, and was approached from the valley floor by a steep footpath. The water of a spring was collected in a rock-cut basin, and votive inscriptions to Allat, a lunar deity, and Dusharra, a sun-god invoked here as "lord of the house," had been engraved in a long row along the cliff. The valley temple corresponding to the rock sanctuary was a square-shaped building adorned with columns. Inscriptions of a votive character in Nabatean cursive script had been written with a reed pen on the stuccoed and painted wall panels. The temple dates from the beginning of the second Christian century.

The duality of high place and temple is not equally apparent in the Nabatean sanctuary of Khirbet et-tannur, on the ridge of the Transjordanian plateau, S of the Wadi el-Hesa. The building was remodeled several times, the latest restoration dating from the end of the first century of our era.

It would be futile to venture an over-all theory on the functional difference between a high place and a temple on such insufficient premises. However, the exploration of the Nabatean places of worship makes it plain that the relationship between these two types of sanctuaries is not one of anteriority and posteriority, as if a regular temple would sooner or later supplant an ancient high place, the high place getting out of use as soon as the temple has been built.

In W Palestine, Herod and the tetrarchs built a series of shrines and temples in which the syncretistic tendencies of the art and religion of the Near East in Hellenistic and Roman times are clearly seen, such as the temple of Derketo, a female deity worshiped in Ashkelon, birthplace of Herod; the temple of Augustus on the hilltop of Samaria-Sebaste; and similar politico-religious foundations at Caesarea Philippi and Tiberias. These buildings are scarcely germane to a study of the development of Semitic sanctuaries in biblical Palestine.

3. Hebrew sanctuaries and temples (those besides Jerusalem). It must be kept in mind that a considerable interval of time elapsed between the first appearance of the Hebrew nomads, or seminomads, led by their patriarchs, the conquest of Palestine by Joshua, and the establishment of the monarchy. Thus the foundation of the temple of Jerusalem by Solomon is a relatively recent event in the whole history of the Hebrews, and it is almost inconceivable that their religious cult would not have materialized long before in places of worship and eventually in regional shrines or temples. Archaeological information concerning these is utterly lack-

ing, but biblical references make it possible to outline the history of the places of worship of the Hebrews in Palestine prior to the foundation of the Solomonic temple, as well as to follow some later developments of the Yahweh cult, which resulted in the establishment of sanctuaries adjudged heretical by the official body of priests attached to the temple of Jerusalem.

a. The patriarchal era. The book of Genesis lists the places where the patriarchs worshiped on the soil of Palestine. In each instance God is believed to have manifested himself to the founder or founders of the sanctuary, which consisted, as a rule, of an open-air area akin to the high places of the Canaanites, with the usual combination of sacred tree or trees, raised stones, and eventually an altar and a well or reserve of water. See HIGH PLACE; PILLAR.

The sanctuary at SHECHEM (3), founded by the patriarchs by the oak of Moreh, had a stone altar (Gen. 12:6-7; 33:20). Jacob's well, mentioned in John 4:5-6, was in close relation to the place. The sanctuary of BETHEL, which is at the origin of the national shrine of the N kingdom, goes back to Abraham, who built there an altar (Gen. 12:8). It owes its very name ("house of El") to the stone pillar erected by Jacob as a mark of the divine presence which had revealed itself in this place (Gen. 28:18-22). The erection of such monuments is a distinctive feature of the narratives of the Jacob cycle. The manifestation of God to Abraham by the oaks of MAMRE resulted in the creation of a sanctuary which is not explicitly mentioned in the Bible, although its memory was kept alive in popular traditions to the days of Herod the Great, who built a monumental enclosure around what was believed to be the sacred area. The sanctuary by the wells of BEER-SHEBA marked the S limit of the territory where the patriarchs had dwelt. Abraham had planted there a tree (Gen. 21:33), and Isaac had built an altar (Gen. 26:25).

Although these sanctuaries of the patriarchs are not, strictly speaking, temples, in the sense of temple buildings, the narratives in which their foundations are recorded contain valuable information concerning the Hebrews' idea of the essential requirements for the foundation of a place of worship, from a theological point of view as well as with regard to the liturgical expression given to basic beliefs. Furthermore, some at least of these places of worship founded and visited by the patriarchs were to develop in later times into most popular shrines and sanctuaries.

b. From the Hebrew conquest to the building of Solomon's temple. The books of the Bible covering the history of the Israelites from the conquest of Palestine by Joshua to the establishment of the royal sanctuary in Jerusalem tend to project the state of affairs prevailing in the time of their composition back upon the period immediately following the Conquest, when the tribes settled on Canaanite soil and gradually adjusted themselves to the conditions of sedentary life. Now the exclusive monopoly of the temple of Jerusalem had become for the authors of the historical books a political as well as a religious dogma, which they traced back to the prophetic utterances of Moses. They were, of course, hard put to reconcile their views with historical reality, confronted as they were with the existence, not of one national

place of worship prior to the reign of Solomon, but of several local sanctuaries. Figs. HIG 22-23.

The existence of these places of worship was duly acknowledged by the biblical authors, who were reticent on the tribal origins, or eventually on the Canaanite background, of provincial sanctuaries. The apparent conflict of the historical facts with the theory of the one sanctuary designated or to be designated by God was tentatively solved in three ways: (a) Such religious centers as Shechem and Gilgal (see GILGAL 1) were regarded chiefly as national memorials, respectively of Joshua's crossing of the Jordan (Josh. 4:19-24) and of the solemn liturgy of blessings and curses allegedly prescribed by Moses and conducted by Joshua (Deut. 27; Josh. 8:30-35), the latter occasion being considered as a particular event in the life of the people, and not as an institution to be repeated periodically, although various biblical references might support the second alternative, at least as a likely hypothesis. (b) The early centers of worship of the Israelites in Canaan were regarded as transitional between the period of the desert, when the tribes had the TABERNACLE of Moses at their national shrine, and the establishment of the royal sanctuary. (c) The same provincial sanctuaries were legitimized by the fact or the assumption that the ARK OF THE COVENANT had been housed in them at some time or other, or, if not the ark, at least some pieces from the furnishings of the tabernacle.

Our knowledge of these sanctuaries rests entirely on textual evidence from the Bible, short of archaeological confirmation. The first in date, according to the order of their appearance in the narratives of the books of Samuel, Kings, and Chronicles, is the sanctuary of SHILOH, in the territory of Ephraim. It consisted of a temple building, in which the ark had been placed, prior to its being carried away as war booty by the Philistines. Valuable details on the temple of Shiloh as a center of pilgrimage, on its ritual, and of its college of priests, officially a branch of the Levitic order, may be gathered from I Sam. 1; 3.

NOB (I Sam. 21:1-6), on the E slopes of the Mount of Olives, in the time when Jerusalem was still in the hands of the Jebusites, had also a small temple served by Levitic priests. The text makes reference to a table for bread offerings, believed to be the very table of the showbread of the tabernacle. See BREAD OF THE PRESENCE.

KIRIATH-JEARIM, one of the four cities of the Gibeonites which formed an enclave in Israelite territory (Josh. 9:17), had been an indigenous—i.e., Canaanite—place of worship, as may be inferred from its aliases: Baalah, Baale-Judah, Kiriath-Baal. It housed the ark of the covenant after it was recovered from the Philistines, and turned into a Yahwistic holy place, for some twenty years; the mention of Eleazar's being consecrated to have charge of the ark is probably aimed at removing the objectionability of the place, in the eyes of priests (I Sam. 7:1-2).

GIBEON itself, an ancient Canaanite high place, is mentioned in relation with Solomon's offering of sacrifices prior to the building of the temple (I Kings 3:4-5), and is credited with the custody of the taber-

nacle and its bronze altar (I Chr. 21:29; II Chr. 1:3, 5).

The historical books of the Bible assume, of course, that the official cult ceased in these various sanctuaries as soon as the temple of Jerusalem was open for worship.

c. *From the building of Solomon's temple onward.* It may be surmised from incidental passages of the Bible, chiefly from the prophetic books, that at least some of the provincial sanctuaries of the Israelites continued in competition with the temple, just as Canaanite and foreign cults and places of worship had defied every effort of the Jerusalem priestly circles to uproot them. It is also most likely that the distinction between the surviving centers of worship of the Israelites and the local shrines of the Canaanites became less and less perceptible.

The Bible gives some incomplete, yet valuable, information on two Hebrew sanctuaries regarded as heretical in the religious circles of Jerusalem. The first one is the sanctuary of Laish-Dan, by the spring of the Jordan at Tell el-Qadi. The story of the foundation of the sanctuary (Judg. 18) makes it plain that the cult rendered there was that of an adulterated form of Yahwism, as divine images were being used. Its personnel claimed Levitic origins. The choice of the place, however, suggests an undefined relation to local cults—namely, that of the Baal of Mount Hermon, and of the anonymous deity worshiped in the grotto of Baniyās (Caesarea Philippi), and subsequently identified with the Greek god Pan.

The other dissident sanctuary is that of BETHEL. While its first origin can be traced back to the time of the patriarchs (see § 3a above), it is represented as a recent foundation of Jeroboam (I Kings 12:28-33), and it became in fact the national shrine of the kingdom of Israel, rival of the temple of Jerusalem. The anniversary of its foundation was celebrated on the full moon of the eighth month of the year, to offset the popularity of the Feast of Tabernacles, observed in Jerusalem on the fifteenth of the seventh month. The Levitic origin of the Bethel priesthood is categorically denied by I Kings 12:31. Most objectionable to the Jerusalem priestly circles was the erection in the temple of Bethel of a golden calf (see CALF, GOLDEN). It does not seem, however, that the "golden calves" were really idols, but rather parts of the pedestal or throne of the deity, as is suggested by the religious iconography of West Asia during the first millennium B.C., which shows the gods standing on some animal figures. The "calf" of Bethel was involved in the same reprobation as Aaron's golden calf (Exod. 32:4), in the eyes of the Jerusalem priesthood as well as of the prophets, and became the symbol of heresy. Reference is made to a similar figure set by Jeroboam in the temple of Dan (I Kings 12:29-30), although the cult at Dan is reported to have ceased at the time when Shiloh was ruined in the days of Samuel (Judg. 18:31). The cliché "from Dan to Beer-sheba," meaning all of Palestine from N to S, may be accountable for the tradition of another "calf" being worshiped at Beer-sheba. Amos mentions the cult at Beer-sheba with reprobation (Amos 5:5; 8:14).

Later sanctuaries had some indirect connections with the religion of Yahweh. Such is the temple of

the SAMARITANS, on Mount Gerizim. It was turned by Antiochus Epiphanes into a temple of Zeus Ἐέσιος (167 B.C.), while the temple of Jerusalem was dedicated to Zeus Ὀλύμπιος, possibly at the request of strong local parties desirous to Hellenize every institution, including religion (II Macc. 6:1-2; Jos. Antiq. XIII.v.5). The Samaritan temple was destroyed by Hyrcanus in 108 B.C. (Jos. Antiq. XIII.x.2-3; War I.vii.7), and rebuilt, possibly under Hadrian, in honor of Zeus Ὀψιστος.

Outside Palestine, a Judeo-Aramaic colony which had left the mother country toward the seventh century B.C. had founded a temple at Elephantine in Upper Egypt, where they worshiped Yahweh jointly with other gods. See ELEPHANTINE PAPYRI.

According to Josephus (Antiq. XIII.iii.1-2; x.4; xiii.1-2; XIV.viii.1; War I.ix.4; VII.x.3), a party of Jewish refugees in Egypt was granted by Ptolemy VI Philometor (181-145 B.C.) the use of an ancient temple in Leontopolis in the Delta, where they instituted an unofficial Yahweh cult.

TEMPT [πειράζω, ἐκπειράζω; πειραζω]; **TEMPTATION** [πειρασμός; πειρασμα]. To test, try, put to the proof. "Tempt" and "temptation" are used in the Bible characteristically of the testing of man or of God.

In the OT, a wide variety of things can be tested: a sword (I Sam. 17:39), a reputation (I Kings 10:1; II Chr. 9:1, for wisdom), or convictions (Dan. 1:12, 14). But the most characteristic use is of God's testing man, or man's testing God. God tests individuals (Abraham [Gen. 22:1]; Hezekiah [II Chr. 32:31]) and nations (Israel [Exod. 15:25; Deut. 33:8]). God's purpose in this is clearly stated in Deut. 8:2: "You shall remember all the way which the LORD your God has led you . . . , testing you to know what was in your heart, whether you would keep his commandments, or not." God's testing is always for the good end of exposing loyalty and disloyalty, faith and unbelief, for what they are; it is never an enticement to evil. God's testing could include exposing false prophets for the liars they were (I Kings 22:21-23),

or permitting Satan to afflict Job (Job 1:6-22; 2:1-7). Later writers of sacred history were careful to revise their story to make it clear that Satan, and not God, entices men to evil (cf. I Chr. 21:1 with II Sam. 24:1).

In the NT, God still tests men's faith and understanding (cf. Jesus' testing Philip [John 6:6]). He still permits human (Matt. 16:1; etc.) and superhuman (I Thess. 3:5) agents to test men.

Perhaps the typical "temptation," the inner core of all forms of testing, is the enticement to apostasy found in persecution (I Pet. 4:12). This understanding of temptation underlies the petition in the Lord's Prayer: "Lead us not into temptation" (Matt. 6:13). But, like the OT saint, the Christian knows that it is not God who entices him to evil, but his own desires that produce sin (Jas. 1:12-15); he also knows that God will not let him be tempted beyond his strength (I Cor. 10:13).

Jesus has "in every respect . . . been tempted as we are" (Heb. 4:15), and this enables him to help us in our temptations (2:18). Even when we fall, he acts as our High Priest, and we receive forgiveness in him (Col. 1:12-13; Heb. 4:14-16). His victory over the powers of evil is final and representative (Col. 2:13-15); though "the whole world is in the power of the evil one" (I John 5:19), Christ shares his victory with his people, who have been "delivered . . . from the dominion of darkness and transferred . . . to the kingdom of [God's] beloved Son" (Col. 1:13).

In both OT and NT, men put God to the test—i.e., seek to discover whether his purposes are good and merciful. But while God has cause to test the faith and loyalty of fickle men, man has no ground whatever to test God, whose purposes are ineluctably gracious and loving. Testing God is thus tantamount to an assertion of unbelief, and it is always condemned, both in the OT (cf. Ps. 95, etc.) and in the NT (Ananias and Sapphira [Acts 5:9]; Peter's plea for the Gentiles [Acts 15:10; I Cor. 10:9]). It was the core of the temptation which Jesus resisted in the wilderness (Matt. 4:7).

J. MARSH

TEMPTATION OF JESUS. The forty-day period of testing in the wilderness where Jesus, led by the Spirit, was tempted by the devil (Mark 1:12-13; Matt. 4:1-11; Luke 4:1-13; Heb. 2:18; 4:15; see JESUS CHRIST). The Greek verb πειράζω, "tempt," means "to try" or "to test." This testing may have a good intent, to prove the true nature of a person; or an evil intent, to incite a person to sin.

Jesus, as SON OF GOD and Messiah, was both tried and tempted. According to Jewish thought, a man of God could prove his faith through trials. Empowered by the Spirit, which came upon him at baptism, Jesus faced and defeated his adversary. The writer of the Letter to the Hebrews declares that Jesus is able to help and sympathize with others because he was tempted in every respect but without sin (4:15).

The Gospel of John omits the Temptation, but the other gospels agree on five points: (a) that Jesus faced temptation (b) in the wilderness (c) for forty days; (d) that he was directed by the Spirit and (e) enticed by Satan. Mark's brief and starkly pictorial story alone mentions wild beasts and omits the fast-

ing of Jesus. Matthew and Luke present a dramatic dialogue between Jesus and the devil (see SATAN), in which three plausible proposals by the devil are decisively rejected by Jesus with quotations from Deuteronomy (6:13, 16; 8:3). As Son of God, he refused to use his powers to foster living by bread alone, to test God by a specious miraculous leap, or to surrender his complete loyalty to God.

The narratives of the Temptation are variously understood:

a) The accounts are said to be autobiographical. Only Jesus could have told his experiences to his disciples to illustrate his messianic mission. This is possible, though Jesus seldom is autobiographical in his teaching. Moreover, the literary forms of these stories indicate reflective thought about Jesus rather than reports of Jesus.

50. Monastery of the Temptation, showing the cultivation in the Jordan Valley below with the wilderness in the background

b) The narratives are said to be devout imaginative illustrations intended to show that the Son of God faced decisions about his use of supernatural power before he began his public ministry; that he found in the Scriptures an arsenal and aid; that he rejected a faith founded on sensational appeals to God; that he endured a testing season of solitude and fasting; and that he was victor over the deceptive assaults of Satan.

c) A third theory is that the events, in which Jesus shows victory over the devil and his demonic powers, act as a prologue for Jesus' public ministry.

***TEN COMMANDMENTS.** The summary statement of the covenant requirements between Yahweh and Israel, consisting primarily of prohibitions. The term is derived from Exod. 34:28 (see also Deut. 4:13; 10:4), where Moses is commanded to write the Ten Commandments (lit., "ten words") on two tables of stone. The Ten Commandments, or the Decalogue, have been of inestimable significance for the history and development of contemporary religious and cultural existence. They have been called the Magna Charta of the social order.

- Bibliography

1. **Outline of contents. a. Historical-theological prologue, Exod. 20:1-2.** The Ten Commandments are presented in the form of a direct address of God to his people. Moses is not the intermediary (Exod. 20:19-20; but contrast Exod. 34:28). The prologue is an essential part of the commandments. Yahweh identifies himself and states the premise on the basis of which he addresses his people and calls them to obedience to his law: "I am Yahweh your God, who brought you out of the land of Egypt, out of the house of bondage." The saving action of Yahweh is the prior reality; grace is prior to law.

b. **Man's relation to God, Exod. 20:3-12.** Many attempts have been made to divide the contents of the Commandments into two types of law, suitable for division between the two stone tablets. The Roman Catholic and Lutheran, the Reformed, and the Jewish communities differ in their division of the commandments. While the question of their division is not of basic significance, it is defensible to distinguish between those commandments more directly concerned with man's relation to God and those concerned with relations between man and his neighbor.

The first five commandments (according to the Reformed tradition) may be described in short form as follows: (a) against polytheism; (b) against idolatry; (c) against dishonoring of God's name; (d) on sabbath observance; and (e) on honoring of parents. The last of these, on honoring of parents, belongs, strictly speaking, to the following commandments dealing with relations between men. Yet it is clear that the relation between a man and his parents in the OT is particularly close. The obligations of son

to parents is a deeply religious one and comes to be used to describe the relation between Israel and her God (Jer. 31:20; Hos. 11:1). This commandment thus provides a good "bridge" between the two parts of the Ten Commandments.

c. Man's relation to his neighbor, Exod. 20:13-17. These commandments sum up, in negative but inclusive fashion, the basic social and moral requirements for the Israelite community.

2. Literary examination. Literary analysis of the Ten Commandments has not led to any scholarly consensus. Opinions are divided as to whether or not one ancient form of the Ten Commandments underlies the various versions. Opinions also differ as to the number of such versions. Nor has any consensus been reached concerning the relation of these laws to the major sources or traditions of the Pentateuch.

a. Various versions of the Ten Commandments. The Ten Commandments appear, with variations, in two places within the Pentateuch: Exod. 20:1-17; Deut. 5:6-21. The major variations occur in the sabbath command and in that against covetousness. (An explanation of the variations is suggested in § 4 below.) Exod. 34:11-26 is set forth as though it were intended to comprise the contents of the previous Ten Commandments given to Moses on the mountain, after he had broken the first tablets. Yet this collection can be divided into a set of ten commandments only with difficulty; furthermore, its contents differ basically from the contents of Exod. 20:1-17. This collection is more closely related to the Covenant Code (see LAW IN THE OT) than to the Ten Commandments. It is better understood as a festival calendar than as a variant form of the Ten Commandments.

The catalogue of curses pronounced by the Levites at the tribal gathering between Ebal and Gerizim (Deut. 27:15-26) contains twelve curses, not ten. It also differs widely in content from the Ten Commandments. It may be concluded, then, that only two listings of the Ten Commandments have been preserved in the OT. It is a separable question, however, how the various law collections are to be related to the Ten Commandments, and whether or not different decalogues existed in early Israel, arising out of different religious and historical contexts, and designed to serve varying purposes. Such questions are dealt with briefly in § 4 below. See also LAW IN THE OT.

b. Literary analysis of Exod. 20:1-17. The Ten Commandments in Exod. 20:1-17 are only loosely related to their literary context. Exod. 19:25 depicts Moses as having returned to the people at the foot of the holy mountain, once again to warn them against drawing too near to the revelatory scene about to be enacted. Further, as indicated above, Moses plays no direct role in the giving of the law as here described. Aaron, who was to have accompanied Moses to the mountain (Exod. 19:24), is not mentioned. The verses following the end of the Ten Commandments indicate that God has not yet given the law at all. In short, the Ten Commandments could be removed from their present literary context without damage to the literary connection between Exod. 19:25; 20:18; indeed, the connection between

these verses would be improved by the removal of the Ten Commandments.

The literary form of the Ten Commandments is of considerable importance for their understanding. There is general agreement that the early form of the Ten Commandments is best preserved in the first, sixth, seventh, eighth, and ninth commandments. These commandments are in the form of a strong negative particle, אַל, followed by an active verb in the indicative, plus occasionally an object or an explanatory phrase. The explanations, justifications, and promises connected with the second, fourth, and fifth commandments and the itemization in the tenth commandment of persons or objects which are not to be coveted are considered to be later additions. It is precisely in respect to these additions that the differences between the two forms of the Ten Commandments are found.

It is not certain, however, whether the original form of the commandments was that of single verbs preceded by the negative particle—thus constituting a Decalogue of precisely ten words (Exod. 34:28)—or whether the original form consisted of short, categorical statements of varying length. The latter is the more probable. See LAW IN THE OT.

The early form of the Ten Commandments thus may be presumed to have consisted of short, categorical statements, primarily or perhaps exclusively in negative form, outlining the kinds of action disallowed within the Israelite community.

c. Relation to the major traditions of the Pentateuch. Literary-historical analysis of the Pentateuch during the nineteenth and early twentieth centuries led to the conclusion that the Ten Commandments arose under the influence of the great eighth-century prophets and were most closely related to the N Israelite document designated by the symbol "E" (see PENTATEUCH). More probably, however, the Ten Commandments have no direct literary connection with any one of the major Pentateuchal sources or traditions. See § 4 below.

3. The contents of the Ten Commandments. The first commandment states the unconditional and exclusive claim of Yahweh upon his COVENANT people. The existence of other gods is not called into question, but they are to count for nothing with the people of Yahweh. The expression translated "before me," or "besides me," might better be rendered "in opposition to me." Yahweh will tolerate no rivals to his authority. Implicit in this commandment is the Israelite understanding of the unity of God (Deut. 6:4).

The second commandment prohibits all forms of IDOLATRY. No image of the deity is to be made. The commandment is not merely directed against the religious practices associated with temple worship in Canaan or elsewhere. More fundamental is the conviction on the part of the Israelite community that Yahweh cannot be controlled by man. The making of images is designed to express more than an act of worship and devotion; it arises out of the desire to ensure the blessing and protection of the deity who is represented in the form of wood or clay or stone. Although ancient man no doubt was able to distinguish between the deity and his representation, such a distinction would be difficult to maintain

in practice. The prohibitions against idolatry here and throughout the OT have been of inestimable significance in the preservation of the religious understandings of the Israelite community. Yahweh is not to be coerced into blessing his people or destroying their enemies. He remains free and sovereign even over the forms through which his people seek to worship him.

The third commandment extends the argument expressed in the second. Just as idolatry leads to the notion that the power of the deity can be controlled and put in man's service, so also does the use of the divine NAME. The ancient Near Eastern peoples considered the names of persons and things to be expressive of their nature or character (Gen. 2:19; 32:27-29; etc.). Once one knew the name of a person or thing, one had entered into relationship with and had a certain control over this person or object. In the case of Yahweh, however, this was not true. The name of Israel's God, Yahweh, is nowhere fully explained in the OT (Exod. 3:14 is best considered as the denial of an etymological explanation). Yahweh discloses his nature in his historical deeds.

The commandment is, accordingly, a prohibition of the use of the divine name to invoke curses or blessings or to reinforce one's own false oaths by the invoking of the divine name. God's name is not to be placed, by man, into man's service and control.

The fourth commandment authorizes one day in seven as a day of rest. The background of the Israelite SABBATH is probably to be found in the ancient oriental notion of days of ill omen, days on which it was considered dangerous to undertake important ventures. The Israelite sabbath, however, is a day of reflection and rejoicing, on which man and beast are to gain refreshment from the week's labors (Exod. 34:21; Deut. 5:12-15). In particular it is a day for holy remembrance, for reflection on Yahweh's deliverance of Israel from Egypt (Deut. 5:15). The basis for sabbath observance is more strictly religious in Exod. 20:11 and more socially oriented in Deut. 5:14-15. The two motivations are not, however, sharply distinguished in the OT.

It should be noted that this commandment authorizes both labor and rest from labor. No other commandment in the OT, apart from the first, has had as significant an effect upon the development of contemporary social life and thought. Slave as well as master, animal as well as man, is to be given due time for rest from toil. God himself rested on the seventh day, upon the completion of the works of creation (Gen. 2:2-3; Exod. 20:11). In the Bible the sabbath is never surrounded by strict rules for its proper observance. The fundamental commandment is quite simply that one day in seven is to be a day of holy rest.

The fifth commandment provides for the maintenance of the most fundamental unit of society, the FAMILY. The OT is quite explicit in describing what it means to honor (כבד) parents: they are not to be struck (Exod. 21:15); they are not to be cursed (Exod. 21:17; Lev. 20:9); they are not to be dishonored or despised, but are to be submitted to and obeyed (Deut. 21:18-21; 27:16). Such a commandment aims at the maintenance of family life in general; it is not merely intended as a commandment

for young children. The admonitions to parents to deal properly with their children are proper implications from this commandment (Eph. 6:4; Col. 3:21). The promise contained in the commandment indicates that the maintenance of the family is understood to relate to the promise of God: Israel is to be a holy people, faithful to the covenant, through whom God's purpose for mankind is to find fulfillment. Dishonoring of parents thus implies contempt for God's people and for his purpose through this people.

The remaining five commandments also aim at the preservation of the holy community. The commandment against taking human life is not to be limited to wilful homicide or murder; the Hebrew word (רצח) means either to kill or to murder, without distinction. The fundamental assertion is that life belongs to God; if human life is taken, it is to be taken in full awareness of this fact (Gen. 9:5-6). The commandment may have specifically in view the prohibition of the individual exercise of blood revenge: only the community may take the life of one of its members, under the divine sanctions provided. Such a specific interpretation, however, does not exhaust the meaning of the prohibition. The one who kills is acting as if he were God; all life is God's creation.

ADULTERY is categorically prohibited, since it also represents an act in defiance of God. God made mankind male and female; in marriage the two become one (Gen. 1:27; 2:18, 21-24; I Cor. 6:15-17). The act of adultery constitutes a denial of the unity of the relationship between man and woman, a unity affirmed by Yahweh and not understood to be compromised by occasional polygamous marriages. In the original setting of the commandment the emphasis probably lay upon the necessity to protect the objective character of the marriage relationship.

The commandment against theft rests on no biblical understanding that the right to private ownership of property is inviolable. Rather, the OT conceives of property as a kind of extension of the "self" of its owner (Josh. 7:24). Thus acts of theft are violations of the person. It may be that the commandment has in view the theft of a man (Exod. 21:16—H 21:17) as a slave, rather than theft of property. In any case, the short, categorical prohibition draws the line between person and person, family and family, and forbids any trespass of these bounds.

False witness also destroys the wholeness of the covenant community. The neighbor (רֵעֵךְ) is anyone with whom one has dealings and relationships, of either a more permanent or a more casual sort. Later distinctions between the brother and the stranger do not obtain in this commandment. Falsehood before the judges not only damages the person against whom the evidence is given; it is falsehood before Yahweh, the ultimate lawgiver and judge in the OT.

The commandment against covetousness involves more than a lustful or avaricious desire for the person or the property of someone. The Hebrew verb חָמַד means to desire to take pleasure in someone or something; it also means to set about to secure these for oneself (Exod. 34:24). In this commandment, therefore, both an inward desire for persons and

things not one's own and the objective actions planned or taken to secure them are condemned. The maintenance of the wholeness of the covenant community is once again the object in view.

It should be noted that these commandments, although formulated primarily as prohibitions, carry direct implications for positive action. Furthermore, by their largely negative cast they provide the largest possible area of freedom for the community to give implementation to them in their common life and under changing circumstances. The Ten Commandments give no warrant whatever for a legalistic religious orientation.

4. Date and authorship. As indicated above, the Ten Commandments are only loosely connected with the narrative and legal context in which they are found. It has often been contended that the lofty moral and spiritual teaching contained in them must be a product of a much later time, under the influence of the great prophets of the eighth century B.C. The present form of the Ten Commandments may safely be assigned to the exilic period (587-530 B.C.) or to the century following. No sound reason exists, however, for dating the commandments in their presumed shorter form to such a late period. The prophet Hosea appears to have quoted the beginning of the Ten Commandments (12:9; 13:4). The same prophet summarizes the sins of Israel in terms highly reminiscent of the prohibitions of the second part of the Ten Commandments (4:2). No sound arguments have been offered which support the conclusion that any one of the commandments must be later than the age of Moses.

Positive evidence confirming a date in the period before the conquest of Canaan is, however, not at hand and is not to be anticipated. The most important information concerning date and authorship is provided by studies of early Israelite history and religion which indicate the connection between law of the type found in the Ten Commandments and covenants or treaties in the ancient Near East. The formal characteristics of certain Hittite suzerainty treaties are in a number of respects strikingly similar to those of the covenant ceremonies of the OT. In the Hittite treaties the major elements of comparison with OT covenant forms are: the preamble (containing the name, titles, and attributes of the king), the historical prologue (sketching previous relations between the two parties), the stipulations of the treaty (detailed lists of the requirements of the vassal to the king), and the curses-and-blessings formula. Such points of comparison are the more striking when the ceremony at the ancient city of Shechem is examined in their light (Josh. 24). Here appear preamble (vs. 2a), historical prologue (vss. 2b-13), and covenant stipulations (vss. 14-25). The curse formula, closely related to Josh. 24 and enacted in the region of Shechem, appears in Deut. 27. Further details of comparison between the Hittite treaties and the Israelite covenants are also found in Josh. 24.

Considerable evidence exists to support the conclusion that the covenant between Israel and Yahweh was regularly renewed (perhaps annually; perhaps once every seven years; see Deut. 31:10). The Ten Commandments would have provided an exceptionally fine summary of the covenant stipulations

suitable for these ceremonies of covenant renewal. Other legal materials would also have been useful in this connection; it need not, therefore, be concluded that the Ten Commandments alone were employed to define the covenant requirements. Once the connection between covenant and law has been seen, there appears to be no reason to assign the Ten Commandments to a date later than the early tribal confederacy under Joshua (and perhaps already under Moses).

The Ten Commandments were useful, however, in other connections. They may appear separately in Deuteronomy because of their employment in the "catechetical" instruction of priests and Levites in the Israelite towns and villages throughout the centuries (see DEUTERONOMY; PRIESTS AND LEVITES). The Exodus version of the commandments would then have its present location as a result of its connection with the Sinai covenant and with the regular ceremony of covenant renewal, while the Deuteronomy version would have found its present place because of its use in the teaching of religious leaders in town, village, and rural areas.

As to authorship, nothing positive can be said. No argument against Mosaic authorship is decisive, but none supporting Mosaic authorship can be taken to be more than a plausible possibility. The OT documents in many ways the critical importance of MOSES for Israelite faith and history. No more appropriate author can be suggested. This, however, does not constitute proof that the Ten Commandments came from his hand. If Moses was not their author, he was the one who provided the understanding of the relation between Yahweh and Israel which was to issue in this incomparable compendium of a people's responsibility to its sovereign God.

5. Later history and significance. As Israelite legal materials grew and developed, the Ten Commandments continued to have a decisive place. In a hymn associated with the later ceremony of covenant renewal (Ps. 81) the Ten Commandments are reflected, both as demand and as promise to this later generation. In the NT, the Ten Commandments are referred to by Jesus as simply "the commandments" (Mark 10:19 and parallels). They are and remain the fundamental policy statement in light of which the community of Israel and the Christian church discern their religious obligations. Furthermore, the Ten Commandments are from first to last theocentrically oriented. They give no basis whatever for a religious understanding of law which relates obedience to the divine command to divine favor and blessing. Such categorical, unconditional specifications of the divine will cannot easily be transformed into an instrument used to coerce or compel God's blessing. The Ten Commandments are rooted in the covenant relationship. This relationship is understood to have been initiated by a saving God who has demonstrated his graciousness and his authority in the deliverance of his people from Egyptian slavery. Obedience to this fundamental covenant law is thus an obedience born of gratitude and praise, not servile submission to an arbitrary or capricious deity. Despite the dangers inherent in any legal specifications of religious duties, the Ten Commandments give less warrant to legalism than any other collec-

tion of laws in the OT. It is a free, sovereign, gracious God who addresses his covenant people, defining the character of his relation to them, and of theirs to him, and calling for free and grateful obedience.

W. J. HARRELSON

TENANT. See FARMER.

TENON [תִּדּוֹן, *feminine plural of hand*]. A projection on the end of a piece of wood or other material, intended to fit into a hole or socket in another piece, to form a joint. The wooden frames of the TABERNACLE were held in place by two tenons on each frame (mortised into silver sockets? Exod. 26:17, 19; 36:22, 24).

L. E. TOOMBS

TENT [תֵּן; σκηνή, οἶκος, see TABERNACLE]. A movable habitation used by nomads, shepherds, and soldiers (Gen. 4:20; 25:27; Judg. 8:11 KJV), but distinct from hut or BOOTH.

Originally animal skins, the coarse cloth of present-day Bedouin tents, probably similar to those of the early biblical patriarchs, is hand-woven black goat's hair (Song of S. 1:5). Allowance was made for shrinkage after rain, rendering the cloth taut as it was stretched over the tent poles (Exod. 27:10). Addition of fresh material, which became discolored in the heat of the sun as the tent was being made, probably accounts for the striped appearance of the cloth. Stone spinning whorls and loom weights of clay and stone dating from ca. 3000-2000 B.C. have been recovered through archaeology. New tents added to the enclosure of clan encampments after weddings gave rise to the "bridal canopy" (תֵּן; Ps. 19:5—H 19:6; Joel 2:16), a continuing feature of the Jewish wedding ceremony.

The center pole was often higher than those at the sides of the tent; this afforded the simile of the heavens' being like a tent spread out (Isa. 40:22). Cords, used to hold the covering in place (Exod. 35:18; Job 4:21; Isa. 54:2; Jer. 10:20), were fastened to wooden pegs in the ground (Judg. 4:21). A curtain hanging from the center poles divided the larger tents into two rooms, with the back portion reserved for women (Judg. 15:1; cf. Gen. 43:30). Abraham's tent at Mamre would have had such an arrangement, whereby Sarah was able to overhear the conversation with the three visitors (Gen. 18:10). At other times it would appear that the patriarchs were wealthy enough to afford separate tents for their wives (Gen. 24:67; 31:33). Such wealth in patriarchal times was in dire contrast to the poverty of the exodus and wilderness period, when tents were very few.

The furnishings of such nomadic tents were, and are, very meager. The stove or oven consisted of a few stones placed at the tent entrance, or simply a hole in the ground. Coarse straw mats served as beds, which could be rolled up during the day, and even as chairs. A piece of leather spread on the floor was the table (Ps. 23:5; Isa. 21:5). Bags of goatskins, earthen pots, bowls and water jars, a stone grain mill, simple lamps, and other crude instruments completed the chattels of the ancient tent dweller.

The best single picture of tent life in the Bible is offered in Gen. 18. Camp sites such as that at Mamre were choice indeed where trees offered shade and a water supply was nearby (cf. Isa. 13:20).

After settlement in Canaan the Israelites would return at harvest time to their tents, encamping near the crops. This ancient custom in Israel became associated with the annual celebration of the Exodus and became known as the festival par excellence (חֲמֵן; see BOOTHS, FEAST OF). The Rechabites, however, continued for religious reasons to live in tents the year round (Jer. 35).

Long after the Israelites became a settled people living in more permanent kinds of dwellings, the word "tent" was still used in the common language to mean "home" (I Kings 8:66; 12:16; Isa. 38:12; Jer. 4:20), "household" or "people" (Zech. 12:7; Mal. 2:12), or even "sanctuary" (Ezra 9:8).

Paul, originally from Tarsus of Cilicia, known for its *cilicium*, or goat's-hair cloth, was a tentmaker. While in Corinth, Paul stayed in the home of Aquila and Priscilla, who plied the same trade (Acts 18:1-3).

J. A. SANDERS

TENT OF MEETING [אֹהֶל מוֹעֵד]. A designation of the TABERNACLE from the E and P strata of the Pentateuch.

TENTMAKER [σκηνοποιός]. Paul's trade, according to Acts 18:3. We are told that Paul and Aquila, and probably also Priscilla, Aquila's wife, worked together at this trade in Corinth.

There is a question, however, as to whether "tentmaker" is the best translation of the Greek term. The etymological meaning of the word is, to be sure, "tentmaker"; and if this is the meaning of the word in Acts, then the reference is to tents made out of the felted cloth of goat's hair, still used by the Bedouins for tents. This cloth was a product primarily of Cilicia, and so was called *cilicium* in Latin. Paul, of course, came from Cilicia.

But there is evidence for believing that the term meant "leatherworker." The earliest Latin translation we have reads *lectarius*, which means one who makes beds or bedsteads, and probably also leather cushions. The Peshitta used a word which transliterated the Latin *lorarius*, meaning "harness worker." Chrysostom, Theodoret, and probably Origen called Paul a "leatherworker." So that it is quite possible, and many would say probable, that to the readers of Acts in the early church the word meant "leatherworker."

B. H. THROCKMORTON, JR.

TEPHON tē'fōn [Τεφών] (I Macc. 9:50); KJV TAPHON tā'—. A Judean city fortified by Bacchides. It may perhaps be Τεκοα, because Josephus

names it Tochoa (Antiq. XIII.i.3); but it was more probably TAPPUAH (Josh. 17:7) or perhaps NETOPHAH.

N. TURNER

TERAH tîr'ô [תרה = Akkad. *turahu*, ibex; LXX Θαρα (in 1 below), Τάρρα (in 2 below); NT Θαρα]; KJV TARAH târ'ô in 2 below; KJV NT THARA thâr'ô. 1. A descendant of Shem; the father of Abram (Abraham), Nahor, and Haran. Terah died at 205 (Gen. 11:24-32; I Chr. 1:26; Luke 3:34).

This OT personal name cannot be separated from Akkadian *Til ša turahi* ("the mound of Terah"), a city located on the Balih River in Upper Mesopotamia (see ARAMEANS). Quite probably Terah either took his name from, or gave it to, that region.

According to P, Terah's home was Ur, in S Babylonia. Taking Abram, Lot, and Sarai, Terah left Ur for Canaan; but when he reached Haran, he settled there and died (Gen. 11:31-32). However, the earlier J source points strongly to Aram-naharaim as the original home of the patriarchs (Gen. 24; 27:43; 28:10; 29:1-14; 31:46-49, 51-53a; Deut. 26:5a). See UR; HARAN 4; ABRAHAM § C1.

Josh. 24:2 speaks of Terah as worshiping pagan deities. Since both Ur and Haran were flourishing centers of the moon-god Sin, Terah has often been associated with this particular cult. But this should be viewed in the light of the implications of the Abraham tradition. See PATRIARCHS § 4; NAHOR 2.

L. HICKS

2. A stopping place of the Israelites in the wilderness (Num. 33:27-28). The location is unknown.

TERAPHIM tēr'ô fîm [תריפים]. Though plural in form, this word may designate either one or more idols. In Gen. 31:19, 34-35, the teraphim are small and portable, and easily stolen and concealed. They are the household gods of Laban (31:30). The Nuzi Tablets (see NUZI) make it clear that not Jacob, but only Laban's sons were entitled to inherit Laban's teraphim, thus elucidating Rachel's impulse to steal them. The paternal household gods were eagerly sought after by the heirs for reasons that were basically religious but may have had ramifications of power and property rights as well.

The teraphim in I Sam. 19:13, 16, is an idol of the size, and in the shape, of a man. It was in the house of David and Michal.

Teraphim were used by Israelites cultically in the period of the judges (Judg. 17:5; 18:14, 17, 20). Along with other elements inherited from the pre-Israelite past, the teraphim came to be condemned in the biblical writings (I Sam. 15:23; II Kings 23:24). Hosea (3:4-5) predicts a period when teraphim (along with other cultic trappings) will cease—thus indicating the use of teraphim in the Israel of his time. Ezekiel (21:21) lists teraphim among the Babylonian media of divination. Zechariah (10:2) includes teraphim among the sources of false predictions.

TEREBINTH tēr'ô bînth [אלה, 'ēlâ (alternately OAK); τερέβινθος]. A large, common tree, probably

Courtesy of Denis Baly

51. A terebinth, probably here a sacred tree, growing in the ruins of a Roman temple, at Yajuz in Gilead

Pistacia terebinthus L. or *Pistacia palaestina* Boiss., or perhaps some other species (cf. NUTS; MASTIC). Isaiah said Judah's destruction would be like the burned stump of "a terebinth [KJV TEIL] or an oak ['allôn]" (Isa. 6:13). Hosea condemns the high-place worship "under oak ['allôn], poplar, and terebinth" (Hos. 4:13; KJV ELM). The occurrence of 'allôn and 'ēlâ together in these passages makes clear the original distinction of meaning. Ben Sirach gives a fitting description of the terebinth in his poem in praise of Wisdom:

Like a terebinth I spread out my branches,
and my branches are glorious and graceful

(Ecclus. 24:16; KJV "turpentine"; Syr. "oleander").

The RSV mg. gives "terebinth" (KJV "plain of") for 'ēlôn in Gen. 12:6; and for 'ēlônîm in Gen. 13:18; 14:13; 18:1; Deut. 11:30. Not only do these passages very probably refer to the terebinth, but also the following references in which "oak" is used: 'ēlâ in Gen. 35:4; Judg. 6:11, 19; I Kings 13:14; I Chr. 10:12; Isa. 1:30; Ezek. 6:13; 'allâ in Josh. 24:26; 'ēlôn in Judg. 4:11 (KJV "plain"); and 'ēlîm in Isa. 1:29; 57:5 (KJV "idols"). 'Ēlâ in II Sam. 18:9-10, 14 (the account of Absalom's death), probably refers to some deciduous OAK, common to Gilead, which was mistaken for the terebinth. The Valley of Elah (I Sam. 17:2, 19; 21:9; see ELAH, VALLEY OF) probably refers to a valley noted for its terebinths, though there are none there today.

J. C. TREVER

TERESH tîr'ēsh [תרש, perhaps from Pers. *tarsha*, desire; see *bibliography*]. One of King Ahasuerus' two royal eunuchs, guards at his private chambers, who plotted his assassination. The matter was discovered by Mordecai, who informed Queen Esther and thereby saved the king's life; the two guards were hanged (Esth. 2:21-23). The event was later recalled to Mordecai's advantage with regard to the royal favor (6:2).

TERRESTRIAL BODIES [σώματα ἐπίγεια]. In I Cor. 15:40 Paul contrasts "terrestrial" or "earthly" bodies with "celestial" or "heavenly" bodies. Terrestrial bodies are bodies which exist here on earth, while celestial bodies exist in heaven and are of a different substance. Paul is making the point that there are different kinds of bodies, and that the resurrection body has its own unique character. See CELESTIAL BODIES; RESURRECTION IN THE NT.

B. H. THROCKMORTON, JR.

TERTIUS tûr'shî'as [Τέρτιος; Lat. *Tertius*, third] (Rom. 16:22). The person to whom Paul dictated the Letter to the Romans. It is abundantly clear that Paul often, if not always, dictated his letters to a secretary. This is to be inferred from his statements that he wrote a small part of certain letters with his own hand (I Cor. 16:21; Gal. 6:11; Col. 4:18; II Thess. 3:17). No doubt, many of Paul's friends in various places wrote to his dictation in order to save him time and trouble. The only one whose name we know is Tertius, who interposes a greeting of his own in Rom. 16:22 between the apostle's salutations. It seems unlikely that the style or thought of Paul was significantly altered by those who wrote for him.

F. W. GINGRICH

TERTULLUS tər tül'əs [Τέρτυλλος, *diminutive* from Lat. *Tertius*]. The prosecutor of Paul before the Roman governor of Judea. He began his accusation (Acts 24:2-8) by flattering the governor, Felix. His charge against Paul was that he had been found to be a public nuisance, a disturber of the peace, and a leader of the sect of the Nazarenes. In the eyes of a provincial governor, this was a serious charge.

It is not clear whether Tertullus was a Roman, a Greek, or a Jew. As the authenticity of Acts 24:6b-8a is doubtful (the RSV prints this in the mg.), the major argument for his being a Jew (his reference to "our law" and to Lysias' coming and taking him "out of our hands") loses most, if not all, of its weight. No other words in his brief accusation require us to assume he was a Jew.

He might have been a professional Roman advocate who offered his services at the tribunals of provincial magistrates where the forms of Roman laws, of which non-Romans would know little, were followed.

B. H. THROCKMORTON, JR.

TEST. See TEMPTATION.

TESTAMENT [διαθήκη]. Properly, a written instrument by which a person disposes of his estate, to take effect after his death.

The Hebrew language seems to have no word for "testament," though the law of inheritance seems to have been the subject of customary legal procedures in OT times. The blessing of Isaac (Gen. 27), the request of Elisha for a "double portion" of Elijah's spirit (II Kings 2:9), and the case of Zelophehad's daughters (Num. 36) are all connected with disposal of estates, but give little information. Israelite legal custom may have dictated concerning disposal of an estate, and even the rabbinic writings took over the

word דייתיקי as a term for "testament," in which a testator disposes of his property after death. The same word was used to designate the spiritual legacy of a wise man or philosopher, and the custom of leaving such a document was followed by eminent scholars as late as the Middle Ages in Islam.

The Greek διαθήκη was thus essentially an arrangement, a dispensation in normal colloquial usage of NT times, but one passage in Aristophanes shows that it could have the meaning "covenant," an agreement between two parties in which at least one is bound by oath (see COVENANT). The LXX translated בריית with the word διαθήκη. Consequently this is the normal word for "covenant" in the NT, translated into Latin subsequently as *testamentum*.

The NT follows the OT (LXX) meaning for διαθήκη throughout, as a "covenant," except in Heb. 9, where the usual colloquial Greek meaning "will" is used to support the argument for the abrogation of the OT. As a will becomes effective only at the death of the testator, so the death of Christ established the new covenant, put it into effect, just as the death of sacrificial animals in the OT established the old covenant. In Gal. 3:15-18, Paul makes use of the same analogy. The covenant with Abraham was an arrangement which was binding; subsequent generations could not change it. Therefore the Christ, heir of the testament, receives the promise ("In thee shall all the nations be blessed"), regardless of the subsequent addition of the law.

These two meanings from διαθήκη—the normal Greek usage "testament," and the OT-LXX meaning "covenant," derived from בריית—thus both appear in the NT; but there can be no doubt that the fundamental meaning of "covenant" in the NT is derived from, and is a highly creative reinterpretation of, the OT בריית, a two-party arrangement in which one is bound by oath. The two uses are similar only in that both represent an arrangement binding upon the recipient which he cannot change.

G. E. MENDENHALL

***TESTAMENTS OF THE TWELVE PATRIARCHS, THE** [Διαθήκαι τῶν Πατριαρχῶν]. A pseudographic work which probably reached its present form in the second or third century A.D., though it includes material which seems to have been put into writing as early as the beginning of the second century B.C. The present form consists of twelve sections, each entitled a "testament," purporting to record the deathbed speeches of the twelve sons of Jacob. These sections are all of (roughly) the same structure: The patriarch calls together his sons; tells them of his life; warns them against some particular vice or recommends some particular virtue; prophesies their future sins, punishments, and ultimate salvation; and finally dies and is buried by them in Hebron. The individual speeches develop the biblical form found in Josh. 23-24; I Kings 2; the collection of them is inspired by Gen. 49 (cf. Deut. 33), and is the chief preserved example of a large Judeo-Christian literature of "testaments," attributed usually to OT worthies but also to Orpheus and to Jesus Christ. (These generally differ from the NT by using the word "testament" [διαθήκη] in the sense of "last words," rather than of "covenant" [see TESTAMENT].)

In the Testaments of the Twelve Patriarchs, the individual sections are composed of (a) narrative material closely related to JUBILEES and the rabbinic midrashim (see MIDRASH); (b) eschatological and demonological material related to the Enoch tradition (see ENOCH, BOOK OF) and to the Qumran literature (see DEAD SEA SCROLLS); and (c) homiletic material related to that of the WISDOM literature, the Qumran literature, rabbinic literature, the NT (see SERMON ON THE MOUNT; JAMES, LETTER OF), and a group of early Christian works: the DIDACHE; the Epistle of Barnabas (see BARNABAS, EPISTLE OF); and the Shepherd of Hermas (see HERMAS, SHEPHERD OF). At the same time, many of the sections are examples of the confession of sins, which had come to play a large part in Judaism and is represented by a long series of works (Ezra 9; Neh. 9; Bar. 1-3; Prayer of Manasseh; etc.; see CONFESSION). These various elements enabled the work to appeal to many different groups, and it evidently enjoyed considerable circulation. Though no list of canonical books (see CANON OF THE OT) includes it, several take the trouble to state explicitly that it is *not* canonical. Nevertheless, especially in the Armenian church, it was often included in MSS of the OT and was certainly read in church services during the Middle Ages. For its further history, see § 1 below.

1. History of the text. Much of the material in the present work was originally written in Hebrew or Aramaic, as shown by many evident Semitisms in style and content, and some probable mistranslations. What form this material first had is uncertain. The Qumran sect (see ESSENES) possessed a work so closely related to the preserved Testament of Levi that it must have been either the source or a variant form of the preserved testament. Of this work we have sixty minute fragments of one MS from Qumran Cave 1, and slightly larger fragments of three MSS from Qumran Cave 4, one of them in a hand which allegedly dates from the late second or early first century B.C. Further, we have two fragments—one extending to eight columns—of an eleventh-century Cairo Genizah MS which was probably copied from one found near Qumran. This (proto?) Testament of Levi had been translated into Greek—two extensive fragments of it are interpolated into a tenth-century Greek MS of the preserved Testament of Levi—and probably into Syriac; a fragment of it is found in a ninth-century Syriac miscellany in the British Museum. The Qumran sect also possessed a work closely related to the Testament of Naphtali. Of this a few small fragments have been found in the caves. From later medieval Hebrew midrashic material we have further evidence of the existence of extremely variant forms of the preserved text, or independent developments of its sources: a late Hebrew Testament of Naphtali, which differs widely from that in the Testaments of the Twelve Patriarchs, and several amplified versions of the stories of the wars of the sons of Jacob, which are now found in the Testament of Judah, but evidently circulated independently, as well.

So long as no fragments of any testament save that of Levi had been found in the Qumran material, this fact was taken as evidence that the Qumran sect did not possess the other testaments. Since the Testament

of Naphtali, as noted, certainly circulated apart from the others during the Middle Ages, it is still possible that the sect possessed only the Testament of Levi and the Testament of Naphtali. But this notion is made unlikely by the frequent occurrence in the other testaments of terms and concepts characteristic of the literature of the Qumran sect. These, however, may have come from a source common to it and to the Testaments. Apart from such literary parallelism (and from the Qumran-sect material) the first evidence for the preserved work's existence is generally thought to be a reference by Origen in his fifteenth homily on Joshua (section 6) to a "certain book which is called 'The Testament [sic] of the Twelve Patriarchs,' although it is not accepted in the canon." But the teaching which he attributes to this book—that a different demon acts in each different sinner—is not clearly stated in the preserved text. (The passage usually cited, Test. Reuben 2-3, lists fifteen or sixteen spirits, meaning psychological powers, which supposedly act in all men.) Jerome (*Tractatus sive Homiliae in Psalmos XIV*) refers to the "book of Patriarchs, although it is reckoned among the apocryphal [books]," as containing material now found in Test. Naph. 2:8. There is every probability that the preserved text had by this time reached substantially its present form, since within about a century of Jerome's lifetime it was translated into Armenian from a MS which lacked, at most, only a few of the latest Christian interpolations. However, the fact that variant forms of the work and independent fragments of cognate material were also in circulation, makes it unsafe to take references to such material in patristic authors, Byzantine historians, and rabbinic literature, as proofs of a knowledge of the Greek text we have.

This text was apparently popular in the tenth century, from which come the three earliest preserved Greek MSS of it. These represent two textual families, separated by considerable differences; therefore, it seems likely that the text had been copied often in the interval which separated them from their common original. No doubt, many copies were even less faithful than these. A later Venetian MS, transcribed by James, shows the text reduced to a series of excerpts. Similarly, a translation into Slavonic (of uncertain, but medieval, date) is also represented by two families of MSS, one of which shows large Christian interpolations. Reported translations into Georgian and Serbian have not yet been investigated. The Latin translation—by exception, faithful—was made in the thirteenth century by Grossteste, bishop of Lincoln, with the assistance of a Greek cleric. It has been retranslated since the Renaissance into many modern European languages. For the scholarly editions of the earlier texts, see *bibliography*.

2. History of the criticism. The tenth-century interest in the text may have been connected with the Byzantine renaissance (cf. Photius' interest in early works and apocryphal traditions). Further, the Middle Ages and the Renaissance generally had a weakness for secret books, apocalyptic prophecies, special revelations, and the like. In these periods, therefore, the Latin version enjoyed great popularity both in England and on the Continent, as the many MSS and translations of it show. With the rise of

rationalism this popularity waned. The scholarship of the seventeenth century—primarily concerned with authorities for dogmatic controversy and institutional practice—barely produced an edition of the Greek text (by Grabe, in his *Spicilegium SS. Patrum*, 1698), and the eighteenth century paid this text almost no attention.

With the increasing study of church history in Germany during the early nineteenth century came a series of attempts to treat the book as a product of one or another party of the early church. The discussion thus aroused led to a realization that the text contained apparently contradictory elements, notably about the Gentiles—some passages were extremely hostile to them; others predicted their salvation and praised Paul—and about the Messiah—some passages described him as a man filled with the Spirit, others as God in human form. Hence came various makeshift theories of interpolation and eventually a study of the whole text's integrity: F. Schnapp, *Die Testamente der Zwölf Patriarchen untersucht* (1884). Schnapp concluded that the work had originally been a collection of purely moral disquisitions—a dramatization of material from the wisdom literature (like *AHIKAR*). Later students were to explain it as a collection of synagogue homilies. All the eschatological material, and much of the haggadic (see *HAGGADAH*), was explained as interpolated.

Schnapp's conclusions were generally accepted—though with reservations—on the Continent (Schürer, Baljon, de Faye), but were sharply criticized in England, where the Colenso controversy had left an absurd hostility to theories of interpolation. Deane, e.g., refused to see the obvious incoherences and contradictions in the work, and laid great emphasis on the claim that the MSS then known showed no considerable textual divergences. This emphasis shaped the history of the criticism by giving undue importance of Conybeare's discovery, at the turn of the century, that one version of the Armenian text was considerably shorter than the Greek and in particular lacked a number of the passages or words which had been generally recognized as Christian interpolations. This discovery was taken as confirming the theory of interpolation. On the other hand, as remarked above, even the shorter version of the Armenian text agreed with the Greek in almost all major elements, and in particular contained most of the apocalyptic material which Schnapp had eliminated. When Schnapp, translating the text for Kautzsch's *Apokryphen und Pseudepigraphen des AT* (1900), continued to follow his former theory, he was taken to task by Bousset for neglecting the evidence of the Armenian. Hence came a reconsideration of the problem and, in 1908, Charles's edition of the Greek text.

Charles's work is largely explicable as a vector of two forces: On the one hand, his own examination had convinced him that the Testaments were basically Hebrew in language and Jewish in composition; therefore, whatever elements seemed undoubtedly Christian had to be supposed interpolations. On the other hand, the record of English criticism and the influence of Bousset made him anxious to find MS evidence for the interpolations he had to suppose. Therefore, he usually preferred the shorter texts of both the Greek and the Armenian versions. Thus he

got rid, by textual criticism, of as much apparently Christian material as possible. The rest had to be dealt with by higher criticism. Part of it he interpreted as expression of Jewish messianic hopes, part as expression of Jewish piety. (To account for the similarities of the Testaments to the gospels, he had recourse to a special, Galilean, pietistic, universalistic Judaism, otherwise unknown and not very likely in Galilee on the eve of the Maccabean conquest—which was where he dated the Testaments.) Finally, what he thought the irreducible remainder, he bracketed. Having thus secured a Jewish text, he found that it still contained contradictions. Notably, some passages expected a messiah from Levi; others from Judah; others, apparently, from both Levi and Judah. Also, many passages glorified the descendants of Levi, but others denounced them as destined to lead Israel to sin and ruin. Therefore, Charles concluded that the basic text was a pro-Hasmonean work of the latter years of John Hyrcanus, which had been interpolated, after the fall of the Hasmoneans, by writers opposed to them and concerned to revive the earlier hope for a messiah from Judah. These conclusions were accepted—with some reservations—by Schürer, and have since been generally repeated, with only minor modifications, by the writers of "standard works."

Almost all subsequent study of the Testaments has been based on Charles's collection of material, especially on his account of the MSS. This has never(?) been checked, and we can only hope that his accuracy was better than his judgment, for his "explanations" of readings, by supposed MS corruptions in the Armenian and the Hebrew, are often fantastic. His apparatus (if correct) is invaluable and (whether correct or not) has made all students of the subject his debtors, but his conjectures must be viewed with suspicion. Since the appearance of his work, the major developments of the study have been two:

a) Charles's preference for the shorter versions of the Greek and Armenian texts has been successfully attacked. It has been shown that the longer versions of both texts are superior (Burkitt, Hunkin, De Jonge). Further, it has been shown that neither text of the Armenian version is a reliable guide for the elimination of most of the Christian interpolations (Messel, De Jonge). However, there remain some instances when the longer versions do contain interpolations which the shorter lack. Hunkin, who did the essential work here, contented himself with proving that the longer texts were good copies, the shorter ones slovenly abbreviations; he did not give enough attention to the possibility that the good copies might be good copies of texts in which the process of interpolation had been carried further than it had in the texts from which the slovenly abbreviations were made.

b) Serious attempts have been made to redate some of the material. Parts, at least, of the haggadah have been shown to come from the first quarter of the second century B.C. (Bickerman; cf. E. Meyer). The Qumran documents have provided important parallels to the moral, demonological, and messianic passages, and in particular have made it probable that the juxtaposition of Levi and Judah in messianic passages represents, not interpolation, but an original

expectation of two messiahs (Kuhn, anticipated by Beasley-Murray; cf. Dupont-Sommer and Otzen). At the same time Leivestad has revived Schnapp's theory of interpolation in its most drastic form, and the same theory has been turned inside out by De Jonge, who maintains that our present work was compiled by a second- or third-century Christian from earlier materials, thus making the early passages, as it were, interpolations in a Christian framework.

3. Upshot of the criticism. These attempts at re-dating testify to what was remarked in § 1 *above*, the extreme fluidity of the literary forms which have embodied this tradition. These texts have evidently been excerpted, abbreviated, expanded, interpolated, and, at least in places, practically rewritten. Further, it is quite probable that, whenever they were originally composed, the author(s) worked into them elements from other written sources or relatively fixed oral traditions, and that these elements continued to circulate apart from the Testaments, both independently and in other works, from which they had been taken or into which they had likewise been inserted. Given such a history of the text, it is apparently hopeless to try to unscramble the present omelet. On the other hand, along with this fluidity of literary forms has gone a surprising fixity in the preservation of details: the figures reported apropos of the purchase of Joseph still reflect the units of Seleucid currency; many terms and concepts are exactly paralleled in the Manual of Discipline; the Hebrew Testament of Naphtali, which shows a thorough medieval reworking of one of the original testaments, has yet, in certain places, preserved the wording of the original so faithfully that misreadings and mistranslations in the Greek can be corrected from its text. Because of this fixity it is sometimes possible to date particular elements in the present text, or, at least, to associate them with particular literary traditions. However, we know too little of ancient Judaism and of ancient Christianity to be quite sure about the possible limits of the variations of either religion. Therefore, identification of particular passages as "Jewish" or "Christian" is necessarily somewhat hazardous.

Because of this uncertainty it is tempting to say of the Testaments, as one might say of certain midrashim, that they were never written; they grew. But this would not be correct. The Testaments have an external, narrative, consistent, literary frame, which is almost certainly the work of one editor (or author, or compiler—it is difficult to choose between such terms for such a work) and the result of a single literary operation which, at least theoretically, might be dated. But this frame is so nondescript that it is extremely difficult to date, especially when there is no assurance as to what elements may have been worked into it from older material, or added to it, by glossation, later on. (It is significant that De Jonge has devoted the least of his attention to the dating of the frame, though this would have been most important for his theory.) And even if one could date the frame, any one of the pieces framed might be several centuries older or younger than the framework.

Therefore, the Testaments' historical value is that, not of a landmark, but of a stream bed. They show us the confluence and direction of certain elements

in the religion of Palestine during the two centuries before and the two centuries after the Christian era. It is a remarkable conjunction: Hellenistic culture (Braun has shown that the story of Joseph owes much to the Hellenistic romances); biblical learning; pride in the tradition of Israel and an exclusive attitude toward the Gentiles; faith in the future of Israel and in the ultimate salvation of the Gentiles; concepts of the messiah as both priest and king; conflicting attitudes toward the Maccabees, seen now as the instruments of God's salvation, again as corrupters of the nation, who led it to its ruin; intense awareness of the influence on man of spiritual or psychological forces outside his personality; resolute adherence to the belief in human freedom and moral responsibility; a (bucolic?) idealization of rural simplicity and a wisdom tradition promising to make its students citizens of the world; a morality of asceticism, self-sacrifice, and brotherly love; and the expectation of a kingdom very much of this world, where even God will come down to dwell among men. This list is not intended to be exhaustive and certainly is far from being so; it is merely a sampling of the variety.

Besides distinguishing these elements, we can trace the stream in which they sooner or later converged. It rose in the pre-Maccabean period, from the pious study of the OT and the haggadic development of bare OT narratives into stories filled with Hellenistic detail. In the early Maccabean times it received a great afflux of national feeling, reshaping its folk tales to reflect the achievements of the Maccabean wars and the hopes of final national salvation which those wars both expressed and encouraged. For a brief period this tradition of the pious came very near to the tradition of the people. But when the Maccabean regime led to the inevitable disillusionments of human politics, the original current and direction of the stream of pious tradition reasserted itself; the primitive piety cut for itself ever deeper, but narrower, channels, became more and more the tradition of special groups—Essenes, Pharisees, Christians—and split into various branches, each of which was augmented and diversified by the special interests of the group through which it flowed. In the Testaments of the Twelve Patriarchs we have the Christian branch of the stream, as it was eventually frozen when Christianity lost touch with the haggadic tradition from which it had emerged, and substituted a literature of relatively fixed, written works, for an oral tradition incidentally expressed in written forms. In spite of many parallels of terminology which this Christian material shows to that of the Dead Sea finds, it is by no means certain that the Dead Sea sect either shaped the elements of the book we now have or contributed largely to them. For the present book shows no trace of the communal organization and compulsory discipline characteristic of the Dead Sea sect. Instead, it speaks of personal piety and self-discipline. This difference may be explained by difference of interest and/or editorial elimination of earlier traits, but not until several scholars have reworked the material independently and in detail will it be possible to say with any confidence whether or not such explanations are adequate.

Bibliography. Texts: R. Sinker, *Testamenta XII Patriarcharum* (1869), is a careful transcript of the best MS of the long text. R. H. Charles, *The Greek Versions of the Testaments of the Twelve Patriarchs* (1908), includes, besides the readings of nine Greek MSS, the Genizah fragments, the Hebrew Testament of Naphtali, some of the midrashic parallels, and the variant readings of the Armenian and Slavic versions. The Qumran fragments published to date are in D. Barthélemy and J. Milik, *Discoveries in the Judean Desert* (1955), I, 87 ff; J. Milik, "Le Testament de Lévi en Araméen," *RB*, LXII (1955), 398 ff.

Translation and commentary: R. H. Charles, *The Testaments of the Twelve Patriarchs Translated from the Editor's Greek Text* (1908), with a fuller commentary than that in his *Apoc. and Pseudep. of the OT* (1913), II, 282 ff. Retroversion into Hebrew, with commentary, by I. Ostersetzer, in A. Kahana, *Hassepharim Hahisonim* (2nd ed., 1957), I, 142 ff.

Bibliographies are to be found in R. H. Charles, *The Testaments of the Twelve Patriarchs* . . . (1908), pp. xl-xli; M. de Jonge, *The Testaments of the Twelve Patriarchs* (1953), pp. 170-71; O. Eissfeldt, *Einleitung in das AT* (2nd ed., 1956), pp. 780-81. None of these is exhaustive, even for the periods professedly covered. They do, however, contain references to the critical works referred to in the above text, except: E. Meyer, *Ursprung und Anfänge des Christentums* (1925), II, 12, 44, 167-68, etc.; A. Dupont-Sommer, *Nouveaux aperçus sur les MSS de la Mer Morte* (1953), pp. 63 ff; K. Kuhn, "Die beiden Messias Aarons und Israels," *NTS*, I (1954-55), 168 ff. Discussions of Kuhn's article have usually paid some attention to the Testaments. E. Ehrlich, "Ein Beitrag zur Messiaslehre der Qumransekte," *ZNW*, LXVIII (1956), 234 ff, contains a brief bibliography. Of the works which have appeared since this article went to press, see especially M. Philonenko, *Les interpolations chrétiennes des Testaments des douze Patriarches et les Manuscrits de Qumran* (1960).

For rabbinic parallels to the Testaments, see especially L. Ginzberg, *The Legends of the Jews* (1909-46), vols. II, V. M. SMITH

TESTIMONY. Evidence given by a witness or witnesses, orally or in written form, primarily to the action and requirements of God.

In the OT, two Hebrew nouns are generally translated by the term "testimony." The more common is עֵדוּת, derived from the verb עָד, "to repeat," "to affirm," "to reprove or admonish," and always used in reference to the testimony of God. Its most frequent occurrences are in connection with the ARK or the TABERNACLE. Less frequent is the term עֵדָה, probably derived from the above verb, also in reference to the testimony (testimonies) of God. This word also refers to the law in general; it appears several times (Deut. 4:45; 6:17; etc.) in connection with other terms for the law of God: "statutes" (מִשְׁפָּטִים) and "judgments" (חֻקִּים). The verb עָנָה, "to answer," may also designate the testimony of Yahweh against sinners (II Sam. 1:16; Isa. 59:12; etc.; see also the verb עָרַךְ). In Isa. 8:16, 20 (see also Ruth 4:7), the noun תְּעוּדָה designates, not the Torah, but the particular prophetic testimony of Yahweh given through Isaiah to Judah during the early years of the ministry of Isaiah.

In the NT, the verb μαρτύρειν in its various nominal and verbal forms provides the terms for "testimony" and "WITNESS." The nouns μαρτυρία and μαρτύριον refer to the testimony of eyewitnesses to the revelation of God in Jesus Christ in both word (II Tim. 1:8) and deed—particularly in suffering (Matt. 10:18; Luke 21:13). Christ himself bears testimony to God's work, but his testimony is rejected (John 3:11, 32-33).

In the OT, the term refers particularly to the written words of the law, while in the NT the testimony to God's action is provided in the proclamation of the gospel in word, deed, and suffering. The contrast must not be drawn too sharply, however; in the OT, the testimony to God's action calls for decision and action on the part of his people (see Josh. 24:15, 22: "You are witnesses" [עֵדִים]).

TETA. KJV Apoc. form of HATITA.

TETH tēth (Heb. tāth) [ט, † (*Tēth*)]. The ninth letter of the Hebrew ALPHABET as it is placed in the KJV at the head of the ninth section of the acrostic psalm, Ps. 119, where each verse of this section of the psalm begins with this letter.

TETRARCH tēt'rärk, tē'trärk [τετραρχης, τετραρχης, *from* τετράς, *four*, plus ἀρχή, *rule*]. Originally, the ruler of a fourth part of an area; losing its original sense, the word came to mean a "petty ruler." As a title it is lower than "king," and implies limitations and dependency. Thus, e.g., when Herod the Great died in 4 B.C., his domains, entrusted to him by the Romans, were divided among three of his sons. Of these, Archelaus received the title ETHNARCH, while Herod Antipas and Philip each became a tetrarch. The term is found frequently in the NT and in Josephus, as well as in pagan sources and inscriptions.

Precisely what the privileges and limitations of the tetrarch were is difficult to say; it was a title lower than the infrequent "ethnarch," which in turn was lower than the frequent "king." Herod the Great was first named a tetrarch by Mark Antony (Antiq. XIV. xiii.1; War I.xii.5), but was later named king. In general, the size of the domain and the amount of independence granted and tolerated by the Romans dictated which title was to be bestowed. Of such bestowed titles, ethnarch was presumably the lowest royal one.

Mark 6:14, 26, speak of Antipas as king rather than as tetrarch. Matt. 2:22 speaks of Archelaus as king rather than as ethnarch (so, too, Jos. Antiq. XVIII.iv.3). While some commentators believe that those instances are errors, it is likely, rather, that the titles of tetrarch, ethnarch, and king were somewhat fluid, and not strictly fixed.

The puzzle as to why Luke 3:1 singles out Lysanias of Abilene for mention is frequently accounted for by supposing that since Luke used the title τετραρχης he needed to specify four territories.

Bibliography. E. Schürer, *A History of the Jewish People in the Time of Jesus Christ*, div. 2, vol. II (1891), pp. 7-8, footnote 12 cites examples of the use of the term, as in Euripides and Demosthenes, and others. J. M. Creed, *The Gospel According to St. Luke* (1930), p. 49. S. SANDMEL

TETTER [תֵּתֵר; LXX ἀλόφος] (Lev. 13:39); KJV FRECKLED SPOT. An obsolete term which originally indicated the presence of unspecified dermatological conditions of obscure etiology. It evidently describes acquired leucoderma (vitiligo), a cutaneous condition marked by the rise of depigmented patches without other trophic changes. The skin assumes a

piebald appearance, as opposed to the whiteness of albinism (congenital leucoderma).

***TEXT, OT.** Traditionally, the textual study of the Hebrew OT has been twofold: the history of the transmission of the text and a classification of scribal errors with their emendation; but, although basically the same division still obtains, recent developments have seen a far greater emphasis on the former and a corresponding tendency to regard textual corruption as incidental to, and even conditioned by, the history of the transmission itself. To some degree this change of emphasis is reflected in standard editions of the MT, particularly in Kittel's *Biblia Hebraica* (third edition, 1937, and subsequently).

Likewise, in the study of the versions (see **VERSIONS, ANCIENT**) we find strong contemporary indications of a change of general standpoint as a result of a more adequate application of historical criticism than was formerly practiced. There is a persistent stress on the individuality of each version, especially as an interpretation of the parent text, and the versions are no longer thought of simply as a storehouse of possible "readings," to be used for retranslation into an "original" or at least pre-Masoretic Hebrew text. Consequently, the application of the versions is rendered more complicated than it was in the past, and everywhere—from the direction of the MT and of the versions—caution is called for. Nevertheless, the Dead Sea Scrolls imply that in some cases the LXX followed a different, pre-Masoretic Hebrew text. Used judiciously, the versions can be of greater importance than ever before.

Bibliography

A. THE HEBREW TEXT. 1. **The Dead Sea Scrolls.** Superlatives have become common in evaluating the Scrolls, both as the earliest extant source material for the text of the OT and as the literature of the sect of the Scrolls, and it is well nigh impossible to exaggerate their value.

Our interest, obviously, lies in the former aspect, and in this matter it appears necessary to mention two simple facts which are frequently forgotten. The first is that the scrolls from Qumran are essentially different from those of Murabba'at and other sources; the second is that the biblical scrolls from Qumran themselves are not homogeneous, but contain texts whose divergences are both numerous and very important.

a. **Qumran.** Pride of place goes to the Qumran (Essene?) Scrolls, but their significance will be modified as the number of texts increases, and as the close scrutiny and comparison of each text-form produces a better assessment of individual scrolls and fragments. Not all biblical fragments are as yet available for study, and it must be emphasized that whereas reports and conclusions offered by the scholars who have been able to study the documents are largely drawn upon here, they may well have to be modified when other scholars have been able to examine the actual documents or facsimiles of them.

In general, two introductory observations may be made: (a) There is in all the Qumran Scrolls, biblical and others, a marked absence of any sign of rigid transmission of a uniform or standardized text. It has often been remarked that the text of most, if not all, the larger Qumran biblical MSS suffers from scribal corruption, and this in itself suggests that the scribes and the sect of the Scrolls were not by tradition scrupulous in the transmission of the text. The same conclusion is indicated by the fact that numerous divergent text forms of the same book were transmitted by the same sect. (b) The Qumran Scrolls obviously all belong to one sect, and the possibility of sectarian and deliberate intrusion of textual changes must be borne in mind when we deal with the biblical MSS. Consequently, it might well be wrong, and it is certainly illogical, to conclude that the evidence supplied by Qumran documents is immediately and generally applicable to the whole history of the Hebrew text in pre-Christian times. Nevertheless, the Qumran biblical MSS are about a thousand years earlier than the previously oldest extant Hebrew Bibles, and as such they are actual copies of texts which were current in the period before Christ, and before the period when rabbinic teaching claims the Hebrew text was standardized.

It is impossible in the present context to indicate the significance of each text of the Qumran Scrolls, and premature to indicate any definitive conclusion about the whole collection. Nevertheless, some tentative conclusions should be available for the general reader, and a selection of the more interesting documents is outlined here from this standpoint.

- a) 1QIs^a. The text of this scroll is published in

facsimile, *The Dead Sea Scrolls of St. Mark's Monastery*, vol. I: *The Isaiah MS and the Habakkuk Commentary* (edited by Millar Burrows; published by the American Schools of Oriental Research; 1950 and subsequently), and the original scroll is now in the Hebrew University at Jerusalem, Israel. It contains the whole text of Isaiah and is in a well-written script, which does not, however, belie the large number of textual corruptions contained in it. There are fifty-four columns, with an average of thirty lines per column; and the text is divided into paragraphs of two kinds, open and closed. The principle of paragraph division is also found in Masoretic transmission, but it is significant that the general pattern of paragraph division in 1QIs^a does not coincide with that of the MT.

An interesting feature is the orthography of the text; compared with the MT, it is particularly abundant in *scriptio plena*, in the full form of the second and third person masculine plural suffixes and second masculine singular suffixes, and in some verbal forms. To what extent these orthographic variations can be useful for the reconstruction of the history of Hebrew grammar still remains debatable. On the one hand, they are not unparalleled in other possible sources of comparison, especially the Samar. Pentateuch. On the other hand, the grammatical forms of other scrolls do not all show the divergences, and it is natural to assume that 1QIs^a, together with a few other fragments, belongs to a variant transmission of the text. A comparison of the orthography with that of the Greek transcription of the MT in col. 2 of Origen's Hexapla (as found, particularly, in col. 1 of thirty-five palimpsest sheets of Psalms in Origen's Hexapla discovered in 1894 by Mercati in the Ambrosiana in Milan) will immediately show how marked is the divergence between the Origenic and the sectarian traditions, despite occasional similarities. Likewise, sporadic similarities with later Masoretic vocalizations—e.g., some of the pointing attached to Cairo Genizah MSS with Palestinian vowel marks (see § A4b below), lose in significance when it is remembered that the Masoretic vocalization itself lacks uniformity.

A remarkable feature of 1QIs^a is that it reveals, albeit in a uniform script and probably copied by the same scribe, two quite distinct scribal traditions in the two halves of the scroll—indeed, the division occurs halfway through the scroll (cols. 1-27: Isa. 1-33; and cols. 28-54; Isa. 34-66). The text in the first half is much more nearly free from corruption, and the characteristic orthography mentioned above is more commonly and more consistently found in the second half.

Another important feature is that the scroll shows signs of having been corrected, sometimes by a later scribe, and additions, ranging from single consonants to lengthy passages, have been inserted in the space between lines and even running into the margins. The most important additions are in Plate XVI, line 14 (Isa. 21:1), line 32 (21:15); Plate XVII, line 2 (21:17); Plate XXII, line 20 (28:16, where the divine name *Adonay* is added to the Tetragrammaton); Plate XXIV, line 25 (30:15, an addition to the divine name); Plate XXVIII, lines 18-20 (34:17-35:2), line 26 (35:8); Plate XXIX, line 16 (36:15); Plate XXX,

lines 11-12 and marginal overflow (37:6-8), line 21 (37:14); Plate XXXI, line 10 (37:31); Plate XXXII, line 14 and margin (38:21-22); Plate XXXIII, line 7 and margin (40:7-8), line 13 (40:13), lines 15-16 (40:15-16), line 19 (40:20); Plate XXXIV, line 14 (41:11), line 25 (41:20); Plate XXXVI, line 12 (43:3); Plate XXXVII, line 9 (44:3), line 15 (44:9), line 22 (44:16); Plate XXXVIII, line 2 (44:25), line 3 (44:25), line 17 (45:11, addition to the divine name); Plate XL, line 29 (49:2); Plate XLI, line 14 (49:14, variant to the divine name); Plate XLIII, line 15 (52:1); Plate XLVI, line 26 (56:12); Plate LII, line 17 (65:12), line 18 (65:13, addition to the divine name); Plate LIV, line 10 (66:20). In most of these passages the corrections bring the text, though not the orthography, into agreement with the MT, but significant exceptions are in 43:3; 44:3, the latter indicating a departure from the MT. In 44:9 the scroll is emended to include a word which in the MT is marked as doubtful (*puncta extraordinaria*; see CORRECTIONS OF THE SCRIBES). Special interest attaches to the insertions which deal with the divine name. They are sufficiently numerous to attract attention, and in four out of the five cases the text is expanded. But the whole problem of the divine name in Hebrew MSS needs separate treatment, for a study of Genizah fragments and even of the textual variants in the later MSS and Hebrew printed Bibles will show that here, above all other places, there does not seem to have been a rigid adherence to a traditional form.

An enigma in 1QIs^a is the presence in the margins of a number of signs and crosses.

Scholars have been interested in the character of the textual divergences which occur in this scroll. There are numerous readings which vary from the MT (in the seventh edition of Isaiah in *Biblia Hebraica* they are printed in a third section of the critical apparatus), and it is claimed that in some instances they confirm conjectural emendations, in others they offer improvements on the Textus Receptus, while in yet others they are obviously the result of textual error and corruption. It is interesting to note that the RSV has included as many as thirteen changes mainly based on the readings of this scroll, and five of them without any support from ancient versions. They are: 3:24; 14:4, 30; 15:9; 21:8; 23:2; 33:8; 45:2, 8; 49:24; 51:19; 56:12; 60:19.

b) 1QIs^b. The second scroll of Isaiah—so-called simply because 1QIs^a was the first to be unrolled and published—is in many respects a more interesting scroll than its sister, and the whole study of the biblical scrolls would be in better perspective had it been given the same intensive study. It was one of the more difficult scrolls to unroll, but it has now appeared in *Ozar ha-Megilloth ha-Genuzoth*, the Scrolls in the Hebrew University (published by Sukenik and produced by the Bialik Foundation and the Hebrew University, 1954) with fifteen plates of facsimile. This material is augmented by a plate of seven fragments, presumably from the same scroll, published in *Discoveries in the Judaean Desert*, vol. I: *Qumrân Cave I*, by Barthélemy and Milik (pp. 66-68, Plate xii), with facsimiles and full annotation. Taking both sources together, there are available for study some twenty-two fragments from Isa. 1-30; the main bulk

of the material, however, is from chs. 38-66, with gaps where the leather of the scroll, especially at the bottom of the columns, has rotted.

There are a few readings in the scroll which disagree with the MT; and a scrutiny of them will serve to underline what is probably one important feature of this scroll. In 53:11 the scroll, as does 1QIs^a, supports the reading preserved in the LXX and advocated by many modern scholars (although others disagree), and the phrase should be translated: "After the travail of his soul he shall see light." Again, in the next verse, 53:12, the scroll has, again with 1QIs^a and the LXX, "their transgressions" instead of the MT "the transgressors."

There are nine other textual divergences, but without giving the detailed reasoning in each case, it may be noted here that they are all capable of explanation on other grounds than as variant readings. It is also to be noted that of two lists of variants which have hitherto been published, Sukenik mentions some seven dozen, and S. Loewinger (*see bibliography*) in a most thorough collation—which, however, errs on the side of exaggeration—lists about three hundred. But the very great majority are concerned with *waw* and *yodh*, especially *waw*. Nor is this a matter of a divergent orthography as in 1QIs^a, for it is seldom indeed that the insertion of the consonant *waw* does not coincide with a vowel of the *o* class in the printed MT. The same phenomenon occurs in some Cairo Genizah MSS, and an examination of MSS and editions such as is given in the collations of Kennicott, De Rossi, and C. D. Ginsburg will show precisely the same kind of deviation and in roughly equally abundant proportions.

The only hypothesis which has been based on the textual witness of the two Isaiah scrolls is the one put forward by Kahle, and this, backed by the immense learning and prestige of the author, has been accepted and elaborated by other writers. Kahle argues that the presence of variants in both texts, supported by the pre-Masoretic date of the scrolls, confirms the view that he has always expounded—namely, that in pre-Masoretic times the Hebrew text was transmitted only in popular, unauthorized forms, which he calls *vulgärtex*, and that there was no standardized text (indeed, such a detailed, definitive text cannot be visualized until the Middle Ages).

Obviously the hypothesis is a plausible one, but a possible modification may be mentioned here—namely, that since 1QIs^b is so essentially similar to Masoretic texts in the Cairo Genizah fragments and to later Masoretic MSS, it may be claimed that in the MS we find a text form which points to the existence of a pre-Masoretic "Masoretic" text. It must not be thought that 1QIs^b was an authoritative text among the sectarians; it is unlikely, in view of the multiplicity of text forms among the scrolls, that they had any fixed standardized text. But it is very significant that among the Qumran texts one has turned out to be as similar as is humanly possible to what later became the rabbinic standard, orthodox text. As has been noted, the only notable textual variants between the MT and 1QIs^b are in Isa. 53:12-13, and they have also the support of the LXX, and consequently point to a possible error in the MT transmission itself. The near-identity of orthography, too,

points to a close affinity with the MT. If, then, such a text can be shown to have existed in pre-Masoretic times and in non-Masoretic circles, is it likely that rabbis at a later date chose this particular text to be adopted as their own, or that in the MT they aimed at producing a text similar to it? 1QIs^b suggests that the textual tradition which led to the MT was in existence in orthodox Judaism before the time of the Masoretes, and that the Masoretes perpetuated, rather than created, a standard text form in the days after the fall of Jerusalem in A.D. 70.

c) 4QSam^a and ^b. The present assessment of these scrolls is wholly dependent on information supplied by F. M. Cross in various articles (*see bibliography*). According to his statement there were in Cave IV some MSS of Samuel, in addition to fragments of the historical books Joshua-Kings, which stand in close relationship with one another and which belong to a text form which is reflected by the LXX rather than the MT. One of these MSS, 4QSam^b, Cross estimates to be the most archaic of the Qumran scrolls, going back to *ca.* the end of the third century B.C., and is an earlier exemplar of the textual type discovered in 4QSam^a. The MS 4QSam^a is well preserved and contains a substantial amount of text.

If Cross is correct, the significance of the Samuel texts appears to be twofold: (a) The affinities between 4QSam^a and ^b point, even more clearly than the Isaiah texts, to the existence of "types" of text among the Qumran biblical scrolls. There were minor deviations among scrolls of the same "type," as witness the Samuel scrolls themselves, and, again, 1QIs^a and ^b; but it is now possible to speak in terms of recensions, with affinities with one out of a number of quite different text forms. (b) The second feature is one that is also underlined by Cross himself. It is that the question of the Hebrew parent text of the LXX is still unsettled, and that although recent trends to explain textual divergences on the ground of "inner-Greek" tendencies is legitimate, the fact remains that by means of judicious retranslation the LXX can sometimes suggest a Hebrew text which might be at least a form of the pre-Masoretic text, and in a recension which diverges considerably from the present MT.

d) 4QEx^a. Yet another scroll which relates to previously known text forms is this Exodus Scroll, which has affinities with the SAMARITAN PENTATEUCH and the LXX. The preliminary account by Patrick Skehan (*see bibliography*) states that the extant text in the scroll ranges from Exod. 6:25 to 37:15, and the material and columnar order of 6:25-18:21 and 28:39-32:30, twenty-four columns in all, can be reconstructed in considerable detail. I.e., the amount of text is sufficient to indicate definite conclusions. The script is Paleo-Hebrew, the orthography varies from both the Samar. Pentateuch and the MT, but has affinities with 1QIs^a. The important feature, however, is the degree of textual agreement with the non-Masoretic Pentateuch, including such characteristics as the intrusion in Exod. 32:10 of a part of Deut. 9:20. (There is a lacuna in the facsimile, and only part of the quotation has survived, but it is sufficient to warrant the conclusion.)

e) 1QLev. These fragments of Lev. 19-23 in Paleo-Hebrew script have paleographic interest as well as textual. It was originally thought that the

script indicated an association with the Samar. Pentateuch, but the nature of the text pointed away from it, and the text was regarded as akin to the Masoretic. Thus, in script, both 4QEx^a and the Leviticus fragments are Paleo-Hebrew and not Samar. But it still remains impossible to give a positive answer to the question of the date of this "ancient" hand. Many prominent scholars are convinced that the script is genuine pre-Aramaic, and consequently the age of the fragments is older than any other MSS in the whole collection—even as old as the fourth or third century B.C. The other answer is based on the possibility that the script is archaized. It is well known that the Mishnah (Yadaim 4.5) and Talmud (T.B. Zeb. 62a; Shab. 115b) proscribe the use of Paleo-Hebrew script for Holy Writ, and it is tacitly implied that such a practice was current. There is thus ample evidence, which might well be still further supported by these fragments, for the view that among the Jews the two alphabets existed side by side for centuries, even into the Christian era, though they did not enjoy equal prestige.

The general picture that emerges from the Qumran biblical scrolls is that the sectarians, obviously intent on transcribing biblical texts, had no fixed text form, nor did they regard divergent forms in any sense as disturbing. The only possible exception is that corrections in 1QIs^a seem to postulate as archetype a text form similar to the MT. An examination of the MSS shows, however, that near-prototypes of the LXX, on the one hand, and the Samar. Pentateuch, on the other, were known and transmitted by them, and it would appear pedantic to deny the existence also of an equally near-prototype of the MT, as witness 1QIs^b, and the numerous fragments of the Pentateuch which also diverge from the MT but very rarely. It is a remarkable coincidence that the accidental discovery of divergent text forms in Qumran should agree to a marked extent with recensions previously so well known as the LXX and the Samar. Pentateuch. But it still remains pertinent to ask whether a similar multiplicity of recensional text forms had been transmitted within Judaism itself. It is one thing to think of an element of freedom (i.e., *vulgärtexte*) within a given text form, be it Masoretic, proto-LXX, proto-Samar.; what the scrolls have produced goes beyond this, by demonstrating the existence of distinct recensional text forms.

b. Murabba'at and others. When we turn to the Wadi Murabba'at biblical scrolls, the textual setting is very different. From a couple of letters found in caves in the region and from coins we see that the MSS in general belong to the period of the Bar Cocheba Revolt in A.D. 132-35.

The biblical Hebrew texts consist of fragments of the Pentateuch and of Isaiah, and scholars are united in stressing the uniformity with the MT that characterizes them. Rabbi Akiba's close relations with the revolt are well known, also the part he played in the fixing of the Textus Receptus of the Hebrew Bible. But the fact that these texts were current in Akiba's time points to their existence well before the second century A.D., and serves to underline the suggestion already made that Akiba's text form was not created by him or his successors, but merely more

carefully transmitted, and stripped of traces of the earlier *vulgärtexte*. In any case, it is noteworthy that the Murabba'at Hebrew texts, which belonged to orthodox Judaism, are those which correspond most closely to the MT of all the Dead Sea biblical MSS.

Greater interest attaches to a leather scroll in Greek from a cave in the same area. It contains fragments of the minor prophets, with the books of Jonah, Micah, Nahum, Habakkuk, Zephaniah and Zechariah represented. The best-preserved column, Hab. 1-2, is given in facsimile, with a discussion by Barthélemy, in *RB*, Lx (1953), 18-29; and this article has been further discussed by Kahle, in *TLZ*, no. 2 (1954), cols. 81-94. Barthélemy finds that the MS, from the late first century A.D., consists of a revision of the old LXX, from the pre-Christian era, similar to the basis of the renderings by Aq., Symm., and Theod. in the second century A.D., and is also the text used by Justin Martyr, in the same century, in his Dialogue with Trypho, in which he refutes Christian interference with the LXX. I.e., the Murabba'at Greek text shows that there was in currency, among Jews and Christians in the second century A.D., a common text form, accepted by both parties, which was itself a revision of the earlier LXX.

Kahle, however, insists on a different significance for the text of this scroll. Firstly—and this is important for his argument—he accepts the independent evidence of the paleographer C. H. Roberts, that the scroll belongs to a period between 50 B.C. and A.D. 50—i.e., up to a century earlier than Barthélemy's date. In quality, the text agrees with Aq., Symm., and Theod. only sporadically, and also shows divergences from the MT. It is yet another *vulgärtext*, which, Kahle insists, were abundant in Judaism before the texts of both Hebrew and Greek Bibles were fixed. Similarity with the text of Justin Martyr, which Kahle allows, indicates, however, that Justin's quotations from the minor prophets belong to the Lucianic recension, a text form which is also represented in the Rylands Papyrus 458 from the second century B.C. I.e., there is here still further evidence, even in the fathers, that a variety of text forms of the Greek Bible were current among Jews in the pre-Christian era. Thus, in Kahle's view, the Murabba'at Greek minor prophets belongs to the type of texts which shows an attempt to establish alignment between the Greek and Hebrew Bibles.

2. The question of an early standard Hebrew text. Thus the fundamental problem which is posed anew by the Qumran scrolls is whether or not a standardized text existed among Jewish orthodoxy in pre-Christian times. Alternatively, is it likely that from among a chaos of divergent popular texts current at that time, a text form emerged which in due course became the standard and authoritative text? In the absence of direct evidence, all we can do is to state the arguments for each alternative.

a. Evidence against. There are three witnesses:

a) The witness of the LXX is clear that its parent text frequently diverged from the classical text. From time to time scholars protest vigorously that too much is made of apparent differences, that more notice should be taken of the interpretive element in the version, which, of course, minimizes the extent of

textual divergence between the two. Again, the history of LXX transmission is itself complex, and apparent divergences may be explained on the ground of inner-Greek corruption. But despite all these caveats, it is quite obvious that for many books there are readings which postulate a different *Vorlage*, and in some cases, such as Samuel, Jeremiah, and Job, the divergences are substantial.

b) The witness of the SAMARITAN PENTATEUCH.

c) The witness of the Hebrew text itself. There are a number of duplicated passages which show minor textual variation: II Sam. 22=Ps. 18; II Kings 18:13-20:19=Isa. 36-39; II Kings 24:18-25:30=Jer. 52; Isa. 2:2-4=Mic. 4:1-3; Ps. 14=Ps. 53; Ps. 40:13-17=Ps. 70; Ps. 57:7-11+60:6-12=Ps. 108.

b. *Evidence for.* (a) It appears implicit in such passages as Deut. 17:18-19; Josh. 1:8, that at least the Torah was sacrosanct and inviolable in text form even before the close of the OT.

b) Rabbinic reference in Midrash Rabbah (Num. 11:3) to payment from temple funds for those "who checked the Law Scroll in the Temple court"; i.e., there was an authorized Scroll of the Law which was accepted as archetype for other scrolls. So also T.B. Keth. 106a. T.B. Soṭ. 20a reports that Rabbi Ishmael (first century A.D.) said to a scribe: "My son, be careful, because thy work is the work of Heaven: if thou omittest a single letter or addest a single letter, thou dost as a consequence destroy the whole world." J. Ta'an. 4.2 says that three scrolls of the Torah were kept in the temple after the return from exile, and in case of divergence the correct reading was that which was given in two of them. Other slightly divergent references to the same principle occur in the Talmudic tractate *Sopherim* (eighth century) and *Siphre* (Midrash to Numbers and Deuteronomy) whose authorities go back as far as any rabbinic writing.

c) References outside rabbinic writings which, however, support the theory of a fixed text for the Pentateuch alone (cf. Aristeas 176-79), and the general impression left by the writings of Philo and Josephus.

d) The probable textual implications of the Qumran and Murabba'at MSS, as already indicated.

The whole problem would be simpler if the evidence of the history of the canon were more direct (see CANON OF THE OT). The commonly accepted view has been that though the Torah was fixed, there were still minor controversies among the rabbis about the Prophets (e.g., Ezekiel) and the Writings (e.g., Song of Songs) until well into the Christian era. It follows that the transmission of the text would indicate similar conditions. The evidence points to the likelihood that there was a fixed, standard text for the Torah in pre-Christian times, though it is obvious from the divergences in all extra-Masoretic material, the LXX, Samar., Targums, DSS, that there existed also other text forms. But it is likely that the other portions of the OT, the Prophets and Writings, not only had minor divergent forms, but diverged considerably. The Isaiah scrolls from Qumran are sufficiently near the MT to point to a "Masoretic recension" in contrast to other recensions in the pre-Christian period. But it is natural to assume that canonicity involves at least a degree of standard-

ization of the text, and the rabbinic debates in the Mishnah, as well as other references in Josephus and Philo, do presuppose a tripartite division of the OT by the end of the first century B.C.

3. **The scribes.** From the earliest times, the transmitting of scripture was the work of SCRIBES—*Sopherim*; in the NT, γραμματεὺς ("learned in holy scriptures"). They were professionals, and the title is current from the time of Jeremiah (8:8), where the scribe is assumed to be learned in the law and capable of proclaiming its precepts. The office is associated in a technical way with Ezra and with Simeon the Just (Simon the High Priest; ca. 300 B.C.), but whether this means more than a unique rabbinic office associated with the "Great Synagogue" (see SYNAGOGUE, THE GREAT), is questionable. It is certainly true that the office of scribe, in the sense necessary for our reconstruction, must include a great number of people in each generation and cover a long period, coming down well into the Christian era.

a. *Scribal activity.* In another respect rabbinic information is important. It derives the Hebrew word *sopher* from ספר, "to count," and indeed the scribes did count: they counted the number of letters in the Torah, the number of words, the number of passages, and the number of times certain words or forms of words occurred. This may reflect the inordinate feeling of adoration of the "word" which characterizes much of rabbinic thought and teaching, but it also has a rational justification, for it became a safe means of checking MSS and ensuring a standard transmission. T.B. Kid. 30a states that the "early scholars were called *sopherim* because they used to count all the letters of the Torah. Thus, they said, וְגַחֲזַק לְךָ (Lev. 11:42) marks half the letters of the Torah; דְּרִישׁ דְּרִישׁ (Lev. 10:16) half the words; וְהִתְגַּלָּה (Lev. 13:33) half the verses. The מִיַּעַר (Ps. 80:14) marks half of the Psalms, and Ps. 78:38 marks half the verses in the book." Though Talmudic references generally belong to a later period, the antiquity of this passage justifies its inclusion here in support of the view that the scribal activity was always concerned with the need for a correct transmission. Gradually the technical efficiency of the scribe's art separated him from the scholar, although some theological significance always attached to the office.

Another feature of scribal activity which presumably goes back to an early period is the division of the text into pericopes. A section, *pisqa*, was marked with a letter פ פתוחה, "open" or ס סתומה, "closed" according to whether the next paragraph was begun with a new, indented line, or on the same line after a space, or with a new line without indent where the paragraph ends near a full line. It might appear that this work should be placed in the Talmudic period, but the presence of paragraph division—without the letters—in the Qumran biblical MSS and in early MSS of the LXX draws attention to its probable existence in rabbinic texts at an equally early date. There is considerable divergence between the paragraph division in the scrolls and the MT, and it is likely that it represents sectarian diversity rather than, as was thought at one time, diversity of date.

The scribes, however, did more than simply tran-

scribe texts: by means of various marks and signs they indicated passages in the text concerning which there was traditional doubt. Midrash Rabbah to Num. 3:13 says that in certain words dots are entered over or under consonants which are not to be read, or conversely, over or under consonants which are to be read and the other consonants ignored; and the custom is attributed to the time of Ezra. Other scribal marks, which are to be found even in many printed editions of the MT, include the following:

a) *Puncta extraordinaria* (see CORRECTIONS OF THE SCRIBES), found in ten passages in the Pentateuch (Gen. 16:5; 18:9; 19:33; 33:4; 37:12; Num. 3:39; 9:10; 21:30; 29:15; Deut. 29:28), and five other places (II Sam. 19:20; Ps. 27:13; Isa. 44:9; Ezek. 41:20; 46:22); they are obviously old, and are referred to in Siphre, a rabbinic commentary on Num. 3:39 from the early third century A.D., and in M. Pes. 9.2.

b) *Paseq*, "divider"—a perpendicular stroke between two words. It occurs in about 480 places in the OT, but its antiquity has been doubted, and its function seems to be associated with accentuation.

c) The inverted *Nun*, found nine times (Num. 10:35-36; Pss. 107:21, 26, 40). Its function was argued among the rabbis: Simon ben Gamaliel in the second century A.D. said it signified textual dislocation, but his son, Judah ha-Nasi', would not admit there was dislocation in the sacred text.

d) Scribal emendations, *Tiqqune Soph'erim* (see EMENDATIONS OF THE SCRIBES). These are not indicated by a sign but are listed in Masoretic records, which trace them back to Ezra. The number also varies, but it is usually given as eighteen. They are mostly attempts to avoid anthropomorphisms, and, as a rule, consist of a change of suffix to avoid direct reference to God.

e) Omissions of the scribes, *Itture Soph'erim*. A list is given in T.B. Ned. 37b, and consists of five instances where a word not written is to be read, five instances where a word written is not to be read. The lists of *Tiqqunim* and *Itturim* are far from complete, and there is still doubt about their real significance.

f) *Sebirin*, "unexpected forms." These, too, are given only in Masoretic lists—they may also be found in the marginal Masora of *Biblia Hebraica* (e.g., Gen. 49:3). The readings are not actually corrected, but simply marked as "unexpected."

g) *K'thibh* (see KETHIBH), and *Q'erê* (see QERE). A word in the text in MSS and printed texts is very frequently marked and annotated in the margin with a reference to *Q'erê*. I.e., what is written in the text (*K'thibh*) should be enunciated differently. Instances of this are innumerable, and range over the whole period of scribal and Masoretic activity.

b. *Rabbi Akiba*. The one person who stands out in this period of scribal activity is Rabbi Akiba, born ca. A.D. 50, martyred ca. A.D. 132. In many respects he was responsible for the rehabilitation of the whole religious life of Judaism after the crisis between the collapse of the state of Judea (A.D. 70) and the time of the Bar Cocheba Revolt (132-35). True, there had long been an indirect and unconscious preparation within Pharisaism for the survival of Yahwism independently of worship at the Jerusalem shrine; indeed, such a survival was inherent in the Pharisaic

attitude toward scripture. Consequently, after the collapse of the temple shrine the Bible took over the authority of the shrine, and its prestige increased even beyond that of the Maccabean period, which produced the Pharisaic movement itself. The letter of the Scriptures, particularly of the Torah, was of consequence even in its *yodh* and title, its particles and vocalic consonants. Small wonder, then, that rabbinic teaching, and subsequent Christian interpretation, worked out a theory that in Akiba's time, and under his influence, a standard archetype and authoritative text-form of the Hebrew Bible was created, and that this archetype was carefully and scrupulously transmitted by all scribes, because no other text would be tolerated. Furthermore, it is a development that can be seen as part of a yet greater movement during the emergence of Judaism from the greatest crisis in its whole history. It is natural to think of the final fixing of the canon and the codification of the Mishna as part of the program—and it is not less natural to think of the final fixing of the text in the same way.

4. *The Masoretes. a. The Masoroth*. To Rabbi Akiba the Mishna attributes one of the key words of the whole story of the Masoretic activity. "The tradition is a fence around the Torah" (Pir. Ab. 3.14), and the Hebrew word for tradition is MASORA. From the way it is used, the word was well known by the time of Akiba, and a tradition in the Jerusalem Talmud (Meg. 4.1) associates with it the interpretation of Torah to which Neh. 8:8 refers.

The use of the term "fence" in connection with formal study of the Torah is instructive: it implies that the Masora had a restrictive, as well as an interpretive, application. But in its later, and more common, usage, Masora refers to the massive compilations assembled by rabbinic copyists and text editors, who were called בעלי המסורה, those who controlled and transmitted the Masora, the tradition of the text.

Before we can correctly reconstruct its nature, one other important piece of the history of Judaism must be stressed—namely, Akiba's death and the collapse of the Bar Cocheba Revolt, and the consequent scattering of the Jewish community. Its spread was in two main directions: E and W, Babylonian and Palestinian, technically known as Madinchaë and Ma'arabe. There had probably been a die-hard core of Judaism in Babylon since the Exile, and it is a historical possibility, though not well authenticated, that the Jews there had maintained a strict, exclusive type of Judaism of which, in their time, Nehemiah and Ezra had been worthy representatives. From the pre-Christian period we have the divergent interpretations associated with the schools of HILLEL and SHAMMAI, who were representative of the Babylonian and Palestinian traditions respectively. From a later period we have considerably divergent traditions and interpretations incorporated in the Babylonian and Palestinian Talmud and Targums, again reflecting the different schools. It is quite in keeping with this—indeed, it is necessary—that we find also Babylonian and Palestinian Masoroth.

This distinction—whose establishment was one of the main and early discoveries of Paul Kahle—provides a simple and adequate explanation for a con-

fusing feature in the study of the Masora since the Middle Ages. It was assumed that since Akiba had, apparently, established an authoritative text form, a Masora—i.e., a corpus of traditions relative to its transmission—would have accompanied it. But since the extant copies of Masoroth produced at a later period are known to have shown divergence among themselves and also with the MT itself, it was assumed that the uniform Masora had become corrupted in the course of time. What Kahle has shown is that the disagreements reflect earlier divergent traditions, traceable to different Masoroth—namely, those in Babylon and those in Palestine. The reconstruction is rendered still more plausible by reference to two especially important centers of transmission in Babylon, the one at Nehardea and later at Pumbedita, and the other at Sura. Nehardea, which both rabbinic writings and Josephus describe as a strong center of Judaism in Hellenistic and early Christian times, became a prominent academy in the second and third centuries, and is claimed as the place from which emerged an ancient tradition relating to the number of verses in the Bible, which is, as we have seen, one of the main features of scribal activity. Sura's importance came later and was more concerned with Talmudic study than the actual transmission of the Bible, if, indeed, the two should be separated. The Palestinian center was, of course, at Yabneh (Jamnia), whither Judaism moved its seat of learning after the fall of Jerusalem in A.D. 70. After Bar Cocheba's Revolt, the center there died down, and rabbinic pursuits were taken up at Usha in Galilee, where Rabbi Akiba had lived; but by the late third century Tiberias had gained eminence, and though other centers were prominent from time to time, Tiberias succeeded in retaining its place as successor to the Great Sanhedrin, and it was from there that the Palestinian version of the Talmud was issued.

Various collections of Masoroth are in existence; some recent editions are invalidated by the fact that their composition is artificial and based on the wrong conception of an originally uniform corpus, which the authors have attempted to reconstruct by an artificial eclecticism. Of genuine collections the most important is *Ochlah we Ochlah* (see bibliography). As a result of Kahle's insistence on separating E and W transmissions, however, interest has turned more on the Hebrew MSS themselves, and the Masoretic notes incorporated in their margins.

The annotation is divided into two classes: *Masora magna*, written on the upper and lower margins of a sheet, and *Masora parva*, on the side margins and between the columns. At the end of each book in the printed rabbinic Bibles other notes are collected and arranged lexically. They are known as *Masora finalis*.

The *Masora magna* and *parva* contain much the same kind of information—e.g., they state the number of times a certain form or a certain word is used, and draw attention to abnormal forms of script, *scriptio plena* and *defectiva*. More significant are the annotations concerning scribal interference with the text. Some of them have already been mentioned, but a further classification belongs to this later period of Masoretic activity.

Among the *literae majusculae*, *minusculae*, *suspensae*,

the following illustrate the kind of use to which the Masoretic notes were put: Gen. 1:1 begins with an enlarged \aleph as the initial consonant of the Torah, and other enlarged initial consonants are found in I Chr. 1:1; Prov. 1:1; Eccl. 1:1; Song of S. 1:1; an interesting one, though it is not consistently found, is in Isa. 40:1. The final consonants of Gen. 50:26, and of the Pentateuch (Deut. 34:12), are enlarged. An interesting case is the enlargement of consonants of the Shema (Deut. 6:4), for they are not the first and last letters of the whole formula, which would attract attention to a form $\aleph\omega$ —being the Hebrew word for "demon"—but the letters $\epsilon\gamma$ (γ being the last letter of the first word), which, says the Masoretic note, "calls God to 'witness' that the formula is duly recited." Enlarged letters in the middle of words generally have an enumerative significance: thus, the middle consonant of the Torah, the middle consonant of the middle verse. Not all MSS have these special forms, and it will be noticed that they are frequently omitted from the text of *Biblia Hebraica. Literae minusculae*, rarer than *majusculae*, sometimes suggest variant readings, or, as in Gen. 23:2; 27:46, the insertion of a letter. *Literae suspensae* include \daleth in Judg. 18:30, where it is virtually a futile scribal attempt to change the name of Moses into Manasseh to avoid an unfavorable reference to the former.

Thus the interest of the Masoretes seems to have centered on peculiar and irregular forms, for the guidance of the professional scribe. For our purposes, however, they can have but little significance, and even for the most orthodox of Jewish bibliocists, they can be of no great value except antiquarian. Indeed, this was the case long before the stabilization and mass production of the text by means of the printing press; even comparatively early MSS from the period following the final appearance of vocalized texts show a tendency to disregard the Masoretic notes of the margins and ends of the column. Or rather, the notes were used by the scribe to give expression to his artistic talent and were transformed by him into ornamental figures, with weird and sometimes beautiful designs, particularly when geometrical patterns were used.

b. Vocalization. But we must go back some centuries in the history of the MT in order to see another, and more important, side to their work—namely, the vocalization of the text. The consonantal text had been supplied with *matres lectionis*, as the vowel-bearing consonants \aleph , η , ι , and \daleth are called, throughout the centuries of its transmission, and, apparently, the later the text form, the more abundant the *matres lectionis*. In the course of time, and largely under the influence of outside stimuli, the rabbis invented a scheme whereby a detailed and authoritative system of vocalization and accentuation was attached to the text. This could not have taken place until early in the Middle Ages, for neither Talmud seems to know of any system of vocalization. T.B. B.B. 21b tells of a debate about the correct pronunciation, and consequently the meaning, of \aleph in Deut. 25:19, which can be *zékher* ("remembrance") or *zākhār* ("male"). Tractate Sopherim, attributed to the eighth century A.D., and mainly devoted to scribal activity, seems to mention everything except a scheme of vocalization. Even after vocalization had

been generally adopted, there are indications that there was strong opposition to it even as late as the twelfth century, for in *Maḥzor Vitry*, a prayer book from that period, Rabbi Simha, head of the academy at Sura, said that the Pentateuch should not be supplied with vowel points because they were "not derived from Sinai," but a contrary assertion was also expressed, for another rabbi, of the eleventh century, said that the marks of vocalization were "revelation, given to Moses on Sinai; God had not created the Torah lacking in anything."

The first indications of vowel marks are in Masoretic notes and refer to dots or strokes attached to the conjunction and to inseparable prepositions. They are called *Mil'el* and *Milra'*, according to whether the consonants were to be vocalized with a full vowel (later a *páthah*) or a weak vowel (*shéwá*) respectively. This custom of attaching vowel signs—נקוד, "pointing"—was basic to the whole scheme of vocalization. The subsequent story of pointing texts emerges clearly for the first time as a result of the discovery and elucidation in the nineteenth century of Cairo Genizah fragments. The above-mentioned *Maḥzor Vitry* says that three systems of vocalization had been in use at various times for the Hebrew text: the Tiberian, Babylonian, and that of the "land of Israel." It is now apparent that behind this statement lies the complicated story of rival formations and developments in the Babylonian and Palestinian academies, and the final supremacy of the latter, though not before considerable modification had taken place within it. The Babylonian method consisted of inserting above the text the consonants א (=ā), ו (=a), י (=ī), ו (=o), but in the course of time they were written small and horizontally, so that they look like a newly devised convention. It came to be known as supralineal pointing, and is still used in some editions of Targum, and in Yemenite texts. More important, however, is the way the Babylonian scheme was modified during the few centuries it flourished. At first, probably in the sixth century A.D., the vowel marks were sporadically attached to consonants to indicate the type of vowel sound preserved in the traditional pronunciation. But in the latter part of the eighth century, a Jewish sect appeared (or made a reappearance, for there are some who claim that their history goes back into the pre-Christian period and is connected with the Qumran sect), called *Qaraites*, who laid great emphasis on the transmission and recitation of the text. Under their influence, despite their anti-rabbinic and anti-Talmudic teaching in matters of doctrine, a scheme of pointing was invented which was more refined and more scrupulously arranged; and in due course it replaced the earlier scheme. The two types of Babylonian pointing are indicated in Kahle's textual notes in *Biblia Hebraica* as *Einfach* (*E*), "simple," and *Komplizierte* (*K*), "complex," for there are extant MSS among the Genizah fragments which belong to each type; and in the Prolegomena, a list is given of over twenty MSS of Babylonian provenance, with variants cited in the critical apparatus of the text as *V(ar)*^a. In the list a small "a" indicates the Pentateuch, "b" the Prophets, "c" the Writings.

The development of *W* vocalization can likewise

be traced through two different stages. The earlier, known as the Palestinian, has been recovered from a few biblical fragments, again from the Cairo Genizah, and, to a greater extent, from liturgical texts from the same source. When they were first discovered, in 1894, they were tentatively identified as specimens of primitive Palestinian pointing; Kahle, indeed, was able to subdivide the specimens into three groups which he called P1, P2, and P3. This system, moreover, has basic affinities with that preserved in the Samar. Pentateuch and is discussed by him in *Masoreten des Westens*, vol. II (1930), and is referred to in *Biblia Hebraica* under the siglum *Var^{pal}*.

Like the Babylonian, the Palestinian vocalization is supralineal, and has eight vocalic signs, though two of them appear to be alternatives. *Dāghēsh* and *Rāphē'* are used sporadically, and, again as in the Babylonian vocalization, they were limited to cases where the text was ambiguous. Dots were placed over different parts of words to indicate disjunctive and conjunctive accents.

The influence of the *Qaraite* movement caught up with the Palestinian vocalization, as it did with the Babylonian, and forced the Masoretes to produce a more complicated and refined form of pointing. But in one important respect the result was more far-reaching, at least in appearance, than happened in the Babylonian academies. A completely new scheme was invented, consisting of marks which had nothing to do with the Hebrew alphabet, but was composed of dots and dashes. It is the system with which every student becomes familiar as soon as he has learned the Hebrew alphabet. Because its development was in the control of Masoretic families in Tiberias, it has always been known as the Tiberian pointing, and the main period of its activity was between ca. 780 and 930, the period during which six generations of a family of Masoretes, ben Asher, flourished. Some members of the family are especially renowned, particularly the last, Aaron ben Moshe ben Asher, who produced an edition of the Masoretic text, fully marked with vowels and accents, and, of course, supplied with its appropriate Masora. In addition, he collected a Masoretic grammar, and published the rules under the title דקדוקי השעמים, "grammatical rules of the accents." It is claimed that a copy of Aaron's Bible was kept in the Sphardic Synagogue at Aleppo, but during the fighting in Syria in 1949-50 the synagogue and its MS treasures were destroyed. The scroll, however, had always been carefully guarded, and only very rarely was even a Jewish scholar allowed to consult it, and that only visually, for a few minutes at a time. Consequently, any real use was denied it, and a collation of it with other texts was virtually impossible.

There was a contemporary Masoretic family of considerable renown in Tiberias, that of ben Naphtali, but its tradition and teaching are not nearly so well known. What is known is that the vocalization transmitted by them varied in details from that of ben Asher: there is a tradition that there are 875 such divergences. More significant is the fact that ben Asher and ben Naphtali variations postulate two distinct traditions of text transmission. The

former became the classical and standard form, at least in name. The latter has been preserved in statements and in tabulations handed down in Masoretic collections and references. The most recent is that by C. D. Ginsburg, published in his great work, *The Masorah* vol. I, pp. 571-78 (מ; paragraphs 589-98), and discussed in his *Introduction*, pt. II, ch. X, pp. 241-86. The basis for Ginsburg's list is a British Museum MS, Or 2482-4, "The Mukaddimât or introductions (in Arabic and Hebrew) to the weekly Parashiyoth of the Pentateuch," by Samuel ha-Rofe al Maghribi, written ca. 1380, with a number of other MSS.

Kahle, however (*Masoreten des Westens*, II, 50 ff), discusses the matter further, and demonstrates the importance of getting nearer the time of ben Naphtali himself, as was done by Derenbourg, "Manuel du Lecteur" (*JA*, Series VI, vol. 16 [1870], pp. 309-550), and in a later work by L. Lipschütz, *Ben Asher—Ben Naphtali. Der Bibeltext der tiberinischen Masoreten* (1937). Both these works deal with the list given by a Masorete, Mishael ben Uzziel, who lived in the tenth or eleventh century.

Traditionally, it has always been maintained that the ben Asher-ben Naphtali divergences deal with minutiae, such as the vocalization of *יששכר* and of the verb *אכל* when preceded by a preposition; the quiescing of *ו* with an inseparable preposition; the use of *daghesh lene* after *ויהי*; and one or two points of accentuation. But on the basis of a Cairo Genizah fragment at Hebrew Union College, Cincinnati, S. H. Blank (see *bibliography*) has argued for the existence of a complete recension of the text, which should be attributed to ben Naphtali. The case may be regarded as proved, inasmuch as the details of vocalization seem to have been consistently worked out, but its significance is that it shows that the whole level of the transmission had now reached such a height of refinement that not only the text, but also its pointing, was being finally established among the Masoretes.

5. The Cairo Genizah. Until early in the twentieth century the reconstruction of the history and transmission of the MT was almost wholly dependent on rabbinic statements and traditions, helped by what could be implied from comments by occasional Christian teachers such as Jerome. MSS were limited to late and, as it now appears, confused products of the late Middle Ages; transmitted by scribes who were themselves often ignorant of what had happened to the text before it came to their hands. It was the Cairo Genizah fragments, and their elucidation largely at the hands of Paul Kahle, which first enabled the traditional story to be modified and, obviously, corrected. Kahle's account *The Cairo Geniza* (Schweich Lectures, 1941; published 1947) is the best available treatment in any language of this fascinating and fundamentally important collection of Hebrew MSS.

The synagogue in which the fragments were discovered belongs to A.D. 882, and was rebuilt in 1890, when its MSS first became available in considerable number. Later they were acquired by major libraries throughout the world, but the vast majority are in Britain, in the University of Cambridge, the British Museum, the Bodleian in Oxford, and the John

Rylands Library in Manchester—probably in this order. The last-mentioned has about 11,000 fragments, and it is estimated that there are in all well over 200,000 texts; they relate to all aspects of synagogue life and worship (see GENIZAH); some date from the eighth century, though others belong to an earlier period and still others are later. There is one MS of the fourth or fifth century which is a palimpsest, and contains as nether script a portion of Aq.'s Greek translation (see AQUILA'S VERSION), but this MS is not really relevant to the question of dating the Genizah fragments, as its main use was in the ninth or tenth century for Yannai's Piyuttim. Indeed, J. L. Teicher has argued strongly (see *bibliography*) against dating any Genizah fragments earlier than about the first half of the ninth century.

For the present purpose, it is the biblical fragments that are important. They are mainly from codices; this fact immediately means that they were not official scrolls to be used in synagogue worship but were for the instruction of cantors, worshipers, and probably children. There are some MSS which contain occasional, yet significant, textual variations from the MT: divergences in the form of the divine name—Yahweh, Adonay, Elohim—are fairly common. Again, many MSS are pointed, and it is mainly by means of the various types of pointing that Kahle has reconstructed the history of vocalization outlined above. Targumic renderings accompany the text in many cases, and these again have been of great importance for the history of Aramaic translations (see TARGUM). Finally, the importance of marginal Masoretic notes, which sometimes accompany the text, has already been shown. Without the Genizah fragments it would have been well nigh impossible to prove the local character of the E and W transmissions, and this may be regarded as one of the main results of the Genizah fragments.

6. The ben Asher and ben Naphtali texts. The supremacy of the ben Asher edition of the text over that of ben Naphtali was acclaimed by Maimonides (died ca. 1204), and from that time on, it has enjoyed the prestige of *textus receptus*—at least in theory. It is generally assumed that four extant MSS can claim to be ben Asher texts, and they also are the oldest extant MSS of the MT of any considerable length. They are the Cairo Codex of the Prophets, Former and Latter (A.D. 895); the Aleppo Codex (first half of tenth century), partly damaged by fire in 1949; the Leningrad Codex, B 19a (completed 1008), now used as the text for Kittel's *Biblia Hebraica*. Another MS, British Museum, Or 4445, which contains Gen. 39:20-Deut. 1:33, has the name ben Asher entered on its margins, and consequently is traditionally associated with him. Kahle attributes this MS to the period when ben Asher was alive and when his text "was a great authority for the copyist." On the other hand, the text of Or 4445 does not correspond exactly with the final text form of ben Asher. In a critical analysis of Kahle's assessment by Teicher (see *bibliography*), however, points of detail are raised which suggest that the authenticity of all the supposed ben Asher MSS is not yet completely established.

Nevertheless, the general adoption in 1937 of the Leningrad Codex B19a as the basic text form for a

critical edition of the Masoretic Bible marks an important step forward in the story of Hebrew textual study, for the history of the text from the eleventh century onward clearly shows that no attempt was made to maintain the textual integrity of the ben Asher text and punctuation.

7. **Post-ben Asher texts. a. MSS.** There is no paucity of MSS from the eleventh century and later. C. D. Ginsburg (*Introduction*, pp. 469-778) has given a detailed description of sixty important MSS, but the fullest lists come from the eighteenth-century collations of Kennicott (*Vetus Testamentum Hebraicum cum variis lectionibus*; 2 vols.; 1776, 1780), and De Rossi (*Variae lectiones Veteris Testamenti* . . . ; 4 vols.; 1784-88, with a supplement, 1798).

It is possible to show that the text form transmitted in these MSS contains, not only a departure from the ben Asher text, but even a tendency to include hybrid readings and, particularly, traces of the transmission of ben Naphtali. Thus, in the collection of MSS known as Erfurt 1, 2, 3, from the eleventh-fourteenth centuries, the tradition is that of ben Naphtali, or at least it is closely associated with him; similarly, the Reuchlin Codex of the Prophets (A.D. 1105), now at Karlsruhe. When Ginsburg was engaged in editing his list of ben Naphtali divergences, he employed, in addition to the Mukaddimat, the following Hebrew MSS, among others: B. Mus. Add 21161, CDG 28 (mid-twelfth century); Add 15250, CDG 21 (thirteenth century); a Toledo MS, Or 2201 (dated A.D. 1246); B. Mus. Or 2348, CDG 40; and Or 4227, CDG 50; where not only are the usual list of variants included, but also additional details about their occurrence.

b. Printed editions. The position was in no way improved when printed Hebrew Bibles began to appear. The Psalms were printed in 1477, the Pentateuch in 1482. Ginsburg (pp. 779-976) has described twenty-two of the most important early editions, and special significance attaches to the following: (a) the second rabbinic Bible of Jacob ben Chayim (1524/5), which has largely been used since that time as the text for printed editions, but which was based, as ben Chayim himself declares, on late and unsatisfactory MSS; (b) the Complutensian Polyglot (1514-17; published 1520), whose text was merged with that of ben Chayim in the subsequent Polyglots of Antwerp (1569-72), Paris (1629-45), and London (1657-69); (c) Kennicott (1776-80) and de Rossi (1784-88), whose importance, as has been noted, is the collation of MSS and printed editions; (d) Baer and Delitzsch (1869-92), which was criticized by Ginsburg and by Kahle because of unscientific treatment of the Masora; (e) Ginsburg (1894, 1908, 1926), which Kahle has again criticized as showing faulty assessment of unevenly assembled material; (f) Kittel, *Biblia Hebraica* (editions 1 and 2; 1906, 1912), whose main drawback, according to present standards, is that the basic text is that of ben Chayim, and the emendations included in the footnotes are too frequently conjectural and lack textual support from the versions.

c. Biblia Hebraica. The principle of editing the text was radically changed for the third edition of *Biblia Hebraica* (1937—). The text is based on the ben Asher text of Leningrad, B 19a. Its dual critical

apparatus has the MSS and versional variants separated from textual emendations, and, for the separate edition of Isaiah, the variants from 1QIs^a are entered in a third section. Furthermore, the *Masorah parva* of the Codex has been entered alongside the margins of the text, and although it does not seem to be widely understood by students, it is certainly of some value in that readers of the text are at least introduced to one of the major features of Masoretic activity.

B. THE SAMARITAN RECENSION. The Samaritan Pentateuch, at least in theory, goes back to the time of the Samaritan schism. See § A1b; see also SAMARITAN PENTATEUCH.

C. THE EVIDENCE OF THE VERSIONS. Despite the full treatment of the ancient VERSIONS, an assessment of their witness to, and bearing on, the history of the OT text is in order here.

1. **LXX.** In actual importance, pride of place belongs to the LXX (see VERSIONS, ANCIENT, § 2a). There are numerous points in the consideration of the LXX which have a direct bearing on the Hebrew text. First, there is the question of whether it is even correct to talk of an "original" LXX text for the OT in the pre-Christian period.

a. The question of proto-LXX. The Letter of Aristeas (see ARISTEAS) describes what has traditionally been understood as the origin of the versions, but recently the view has been put forward that Aristeas actually refers to a revision of already existing renderings in order to produce a standard Greek Bible for the use of Jews in the Hellenistic Diaspora. Thus Kahle refers in *The Cairo Genizah* and elsewhere to a "Greek Targum" in the sense of a number of renderings in Greek, which were by no means uniform. In this view he has had a considerable following.

It can further be shown that alongside, and possibly preceding, the Greek translation there was a transliteration, traces of which are still to be found in proper names and in individual words and phrases. In 1937, F. X. Wutz (see bibliography) developed a thesis that the present LXX postulates such a transliteration, and H. M. Orlinsky (see bibliography) has shown that transliterations of the Prophets and some of the Writings, as well, were used for lectionary purposes in the synagogues by Hellenistic Jews who were unable to read Hebrew. Despite the failure of Wutz's theory in detail, the basic assumption to the thesis remains true, for it not only explains the forms of proper names, but also provides the best, if not the only, reason for some of the textual variations between the MT and the LXX. On the other hand, there is in the LXX evidence that it was translated directly from the Hebrew. This is seen in innumerable examples of confusion of Hebrew letters, whose Greek equivalents have no resemblance (e.g., ארם and ארם, Edom and Aram), and it can also be shown that at the time the Pentateuch LXX was produced, the writing was in the process of transition from Paleo-Hebrew to the Aramaic square script, and for the later books it can be shown that the script was Aramaic.

The problem, however, is wider than one of transliteration and relationship between alphabets. The NT, quite obviously, still retains many divergent

readings which testify to the existence of a variety of Greek translations or of Hebrew text types in the first century A.D. E.g., the text behind Acts 7 and sometimes behind the Letter to the Hebrews has affinities, not with the LXX or the MT, but with the Samar. Pentateuch. Again, there are similar indications within the LXX transmission itself—e.g., in two almost contemporary codices, Alexandrinus and Vaticanus, divergent readings in the book of Judges are almost strong and numerous enough to postulate two different recensions, and one of the natural explanations for such variation is that the two codices preserve two forms of an OT Greek Targum.

What Kahle has demonstrated is the possibility of applying to the LXX his general theory of the history of textual transmission. There is, according to his view, an emergence of the Masoretic standard Hebrew text from the numerous pre-Masoretic variant forms; again, there is in the Aramaic Targums (*see* TARGUM) an emergence of the standard texts of Onkelos and Jonathan from earlier paraphrases. Likewise, he maintains, the Christian LXX emerged as a standard text out of a number of free and paraphrastic renderings from an earlier period. The Jews, after the fall of Jerusalem, refused to accept the Christian Greek Bible, and produced Aq.'s translation, and the development of the LXX then became an essentially Christian affair. The logical conclusion of Kahle's view—and he has insisted on it—is that any attempt to reconstruct an "original," pre-Christian LXX is futile, because, at least for the books outside the Torah, it is impossible to show that any such text ever existed.

To some degree Kahle's thesis must be accepted, for it cannot be assumed that the LXX was an authoritative text so far as the NT is concerned. In its quotations from the OT, although the LXX predominates, there was freedom to quote from other renderings, and some of these can be identified (e.g., pre-Theod. in the book of Revelation). Yet Kahle has not been convincing in the whole of his reconstruction, and the most cogent counterargument is the appearance of modern critical editions of the LXX, particularly the Göttingen LXX. It is, admittedly, a critical and eclectic text, and scholars often challenge the judgments on which a particular reading is based, but in principle and in its critical apparatus, a method is followed which shows how, behind the largely identifiable recensions of Origen, Hesychius, and Lucian, and the more amorphous Catena group, there is a text which forms the LXX version. The Chester Beatty and Scheide papyri support this contention for the pre-Origen period. Furthermore, in the NT usage the LXX is predominant over all other Greek versions, and obviously proves the existence of such a version. It appears to be overstating the case to argue that the existence of other Greek versions disproves the existence of the LXX for the time immediately prior to the NT.

b. The character of the LXX. The comparison of the LXX text with the present MT raises yet another problem of basic importance. It is demonstrable that in the Pentateuch, though minor variations are legion and despite displacements in Exod. 30 ff and Numbers, the parent text of the LXX basically coincides

with the present Hebrew. But for the historical books Joshua–Kings, the Qumran Samuel MSS show that the LXX reflects a parent text which diverges so much that the existence of a different Hebrew recension must be assumed. The conclusion was offered as far back as the late nineteenth century, that, compared with the LXX, the book of Joshua in the MT had been expanded in certain sections, and the additional readings were later incorporated in some LXX recensions—e.g., the Lucianic. The view that textual additions in the LXX are to be attributed to inner-Greek tendencies must consequently be modified. There are further complications. The problem of the basic Hebrew text of Chronicles, Ezra–Nehemiah, involves not only the rendering of those books in the LXX but also their relationship to the apocryphal I and II Esdras. The Greek text of Esther again appears in two forms in the Greek Bible, the ordinary LXX and the Lucianic, and both forms have additions which bear no relationship to the Hebrew text. Incidentally, it is significant that whereas in the Greek Bible the additions are interspersed among the chapters of what correspond to the Hebrew Esther, in the Vulg. they are placed at the close of the book. Again, the Greek text of Job is interesting. As they stand, the LXX and the MT are more or less in agreement, but this is because of Origen, who took over about a sixth part of the whole Greek version from the version of Theod. The question, then, is whether it is even approximately correct to use both Greek renderings indiscriminately for the textual reconstruction of the Hebrew Job on the basis of the LXX. Some aspects of the problem have been discussed by D. H. Gard, other aspects by Gerleman; and a general review by Wevers (*see bibliography*) emphasizes that the problem is still an open one. The great difficulty with the Psalter is to establish the LXX text itself, for as the hymnbook of the Hellenistic Diaspora and of the Christian church, the text was inevitably subjected to innumerable changes. In LXX Proverbs there are grounds for thinking that, when compared with the order in the MT, the various collections of Proverbs incorporated in the book had at one time an independent existence. In the book of Ecclesiastes it appears that the version of Aq. had ousted the original LXX at an early period.

For the Prophets the text of Jeremiah stands out as the most difficult to outline. The text of the LXX is shorter than the MT by about an eighth, and it can be shown that the Greek version not only is homogeneous, but also provides a metrical regularity which is lacking in the MT. Textual transpositions, too, reflect a diversity of tradition, and we are left with the obvious conclusion that there were originally two independent Hebrew recensions, the one reflected in the present LXX and the other retained in the MT. For Isaiah, the latest examination of the text, by Seeligmann (*see bibliography*), shows that the version is far from being an adequate translation, and that its author had not intended it to be a literal rendering. Consequently, it has but little to contribute to the textual treatment of the MT. For the remainder of the Prophets, the LXX has comparatively little to offer apart from individual passages. The book of Daniel, of course, constitutes a different

problem, for the LXX has traditionally transmitted the text of Theod., and the genuine LXX was unknown, apart from the eleventh-century Chigi MS, until the discovery in 1930 of the Chester Beatty Papyrus 967 from the third century A.D. See VERSIONS, ANCIENT.

c. *Hermeneutics in the LXX.* Another, probably more profitable, aspect of the study of the LXX text in relation to the Hebrew deals with the presence in the version of hermeneutic principles. Interpretations and elaborations of the text show far-reaching inner-Greek influence. Study of this feature is well organized and can be conveniently observed when applied to the main sections, the Pentateuch, the historical books, Isaiah, the wisdom literature. An important fact which is emerging is that conclusions relating to one section do not necessarily apply to the others. Thus, it is misleading to speak of anti-anthropomorphisms in the LXX generally, because, even within one section, the Pentateuch, it becomes clear by analysis that this trait is strongly represented in Exodus, whereas it is practically nonexistent in Leviticus. By the same token, it is wrong to generalize about the nature and provenance of any particular hermeneutic scheme, and to insist that it is everywhere either Jewish-rabbinic or Hellenistic. It can be either. E.g., Gerleman has shown that in the LXX of Proverbs the translation reflects considerable familiarity with Greek tradition and style, even in matters of meter and assonance, on the one hand, and Stoic philosophy, on the other. In a critical survey, however, Wevers says that most of the instances quoted by Gerleman are capable of easier and more natural explanation as Jewish interpretation. Obviously there is considerable disagreement among scholars on the general approach to the subject. The first to emphasize its importance was Fränkel, but its main growth has taken place more recently, with H. S. Gehman and his school, including Wevers as a prominent member, in the U.S.A., and Georg Bertram, followed to some extent by Gerleman, in Europe; it may also be mentioned that C. H. Dodd in Great Britain gave some interesting pointers in the same direction.

2. *Non-LXX Greek Bibles.* The non-LXX Greek renderings of the first two centuries, Aq., Symm., and Theod., have a direct bearing on the history of the MT. The first, of course, reflects the standardized Masoretic text and the determination of Judaism to reject all nonconformist texts, especially the LXX. The basic affinity between Aq. and the Targum of Onkelos is significant, just as is the similarity in the two names. The exact place and function of Theod. is not clear, nor the extent of its similarity with Targum Jonathan. The likelihood that the Symm. translation is a Christian (Ebionite) product tends to place it outside the present survey. But the whole question arises afresh because of the discovery of the MS containing sections of the minor prophets in Greek in the Wadi Murabba'at caves (see § A1b). Mention must also be made of the Aq. fragments in the Cairo Genizah palimpsests from the fifth-sixth centuries A.D. which contain passages of I-II Kings and Ps. 22.

3. *The Targums.* Next to the Greek Bible and possibly contemporary and parallel to it are the

Aramaic Targums (see TARGUM; VERSIONS, ANCIENT), and once again, from the standpoint of their relevance to the Hebrew text, an important problem is whether or not Kahle is right in his hypothesis that a number of free paraphrastic Aramaic renderings emerged in a standardized and authoritative text form. The material at our disposal consists of two fairly well-defined groups: (a) the literal official translation of the Pentateuch in Targum Onkelos and of the Prophets in Targum Jonathan; and (b) free interpretations, with sometimes lengthy interpolations of a Midrashic character, with a didactic purpose, which are available for Pentateuch, Prophets, and Hagiographa. They consist of Targums for the Pentateuch, Jerusalem I (Pseudo-Jonathan) and II, as well as the other sections of the OT. How far back they go is not known, but there is evidence of their existence in pre-Christian times. An Aramaic Targum of Job was found at Qumran (Cave XI) in 1956. The synagogue officials opposed the use of any Targum in written form; but M. Meg. 4.4 states that the oral translation follows the reading of the Torah verse by verse and the reading of the Prophets after every three verses. From numerous fragments from the Cairo Genizah which contain text and Targum, it would appear that at a later time not only were written Targums permitted in the synagogue, but also Prophets and Writings were rendered verse by verse.

It is assumed that the free paraphrastic Targums are older than the literal renderings; and consequently, of the two types of Targum for the Pentateuch, the former are the more valuable for the treatment of the text and the linguistic study of Aramaic. Particular intrinsic interest attaches to the Targum known as Jerusalem Targum II, or the Fragment Targum published by Ginsburger in 1899 (*Das Fragmententargum, Targum Yerushalmi zum Pentateuch*), and this has been enhanced by an announcement which not only proclaims the discovery of a complete new MS (*Neofiti 1*) of this Targum in the Vatican Library, thus rendering the name Fragment Targum obsolete, but also states that despite its late date—fifteenth century A.D.—it will provide important evidence for the degree of "infiltration" of the Onkelos text into the text of the freer Targums. This feature was already known from the way the text of Onkelos replaced the quotations from the Torah in Targum Jonathan, which explains why this Targum too might be regarded as an official text.

In their present form Onkelos and Jonathan presuppose a long period of revision, and in spite of the names having been identified with Aq. and Theod. and consequently their date pushed back to the second century A.D., it can be shown that the final revision took place in Babylon in the fifth or sixth century. I.e., their emergence as revised, standardized text form is explained as the end of a long process. It is Kahle's hypothesis. What is still a problem, however, is that if Kahle is right, how were the unofficial Targums of Jerusalem I and II and others allowed to survive, indeed to flourish, if the purpose of the official Targums was to replace the free paraphrases? It seems reasonable to assume that both types of Targum, free and official, were current long before that time, and that the final revision of

the latter does not preclude their existence at least as far back as the second century A.D. There is more justification for the production of Aramaic translations at that time than in the sixth century, by which time Judaism was everywhere familiar with the Hebrew of the Mishna and Talmud. Furthermore, the analogy of the Greek Bible is relevant. The post-70 Judaistic enthusiasm produced Aq.'s translation, which was totally independent of the LXX and other Greek versions; likewise Onkelos was independent of Jerusalem I and II and others. But the new translations did not necessarily abolish the already existing renderings, and the paraphrastic Targums were transmitted alongside the other.

It remains likely, however, that it is the paraphrastic Targums which retain pre-Masoretic material, and the new complementary material provided by *Neqfiti* 1 is extremely welcome.

4. **LXX-daughter translations.** Other translations, the Peshitta, the daughter translations of the LXX, Old Latin and Vulg. Arabic, have various incidental contributions to make to the textual study of the MT, but they do not substantially affect the general story of the Hebrew textual transmission.

D. THE CLASSIFICATION OF SCRIBAL ERRORS AND THEIR EMENDATION. 1. **The MT as a recension.** The story of the Masoretic transmission of the text makes it clear that there are sporadic traces of scribal interference with the text, which are in accordance with preconceived theological standpoints or, more important, with liturgical needs. Indeed, the invention of both the Babylonian and the Tiberian vocalizations and accents is part of the Masoretic recensional activity. They form part of the legitimate development of the text and should not be subject to critical treatment solely as instances of scribal errors; their parallel would be the rabbinic and prerabbinic glosses and interpolations within the text itself.

2. **Accidental errors.** The scribes, however, were aware of accidental textual corruption, particularly where at the end of a line part of a word was written, to be repeated at the beginning of the following line. In order to avoid the inevitable dittography, any vacant space at the end of the line was filled with an elongated form of one or other of the five *litterae dilatabiles*, א, ה, ל, ת, מ; and Genizah fragments and later MSS and printed editions show how widespread the custom had become. Sometimes other consonants were also used for this purpose.

Nevertheless, scribal errors do occur within the Masoretic tradition, and lists of types of error and instances are available in a number of books (see *bibliography*). In a recent treatment, *The Text of the OT* (1952; English translation 1957), E. Würthwein has obtained excellent instances of the various classes of errors in the Isaiah scroll 1QIs^a, a text which is admittedly one of the most notorious examples of careless scribal work. The only caveat which might be entered against the use of this scroll is that it is not representative of the Masoretic scribal activity, and an examination of the Genizah fragments will show that the incidence of scribal errors is far less common. The main sources of error include the following:

a) Confusion of similar consonants. It should be

noted that as a result of the Qumran Scrolls discovery, the question of Hebrew writing and paleography has been opened wider than ever before. Until 1947 the Aramaic script as used for the Hebrew Bible in the pre-Christian era was unknown. The Nash Papyrus was generally regarded, until 1937, as representing the script of the late first or early second century A.D.—i.e., a period well after the Aramaic script had become finally established. Albright's discussion of the papyrus in 1937 (see *bibliography*) caused a change in the attitude of most scholars, and a date early in the first century B.C. is now generally accepted. The Qumran Scrolls obviously contribute immensely to our knowledge of Aramaic paleography, and it is an added advantage that the script in the scrolls—in contrast to the text—is careful, highly developed, and apparently professional. But the result of the paleographical studies is to underline the dangers of relying solely on script to claim confusion between similar consonants in the MT. At best this should be used only as secondary support when there are other grounds for assuming scribal error.

There are instances of confusion which are well established. כ and ך in Gen. 9:7; כ and ך in I Kings 22:32; כ and ך in II Kings 22:4; ך and ם in Num. 24:19; ם and ך in II Chr. 22:10; ך and ם in Num. 26:38-39; ך and ך frequently, and can be presupposed for both Paleo-Hebrew and Aramaic square scripts.

b) Corruption due to confusion in word-division. An instance of two words rendered as one occurs in Ps. 45:3; three words as two in Hos. 7:4; three words as one in Ps. 90:11; two words as one in Isa. 2:20 (which is supported by 1QIs^a, with an interesting change of plural ending); two words as three in Jer. 23:33.

c) *Matres lectionis*. The history of the textual transmission, especially since the Qumran discovery, shows that the use of vowel letters varied considerably and was a fruitful source of scribal error, as can be seen in the very frequent divergence between *Qere* and *Kethibh* readings (see F. M. Cross, Jr., and D. N. Freedman, *Early Hebrew Orthography* [1952]).

d) Dittography and haplography. Leaving aside the possibility that a case of dittography is responsible for a grammatical howler in II Kings 15:16, it is clear from MS evidence in II Kings 18:17 that the repetition of the word "Jerusalem" has caused a dittograph of two complete words; in II Kings 11:17 we have a possible dittograph of four words; II Kings 7:13 has, again demonstrated by MSS, a dittography covering a full clause of seven words. Such instances as I Kings 7:42; Isa. 17:12-13 should be regarded as variant marginal readings which have infiltrated into the text, rather than as mere dittographs. An interesting case of haplography causing confusion between two words may be found in Ps. 17:10 (cf. footnote in *Biblia Hebraica*). The omissions of sections of text, such as those in Gen. 4:8; I Kings 10:15 (cf. II Chr. 9:14); Josh. 21:36-37, are surprising because the sense is disturbed. In I Sam. 13:1, however, the omission of the number may be deliberate. In some places—e.g., Judg. 20:13; Ruth 3:5—the vocalization of omitted words has been regularly entered in the text by scribes and printers.

e) Homoeoteleuton. Whereas in the preceding

group dittographs and haplographs occur frequently with identical words or parts of words, this next class is much wider, because all that is involved is an ocular slip between two words whose endings are similar. Acknowledged instances occur in Gen. 1:9; I Sam. 14:41.

f) Errors due to dictation. It was commonly assumed that scribes wrote out their MSS by dictation, which would, consequently, have been a fruitful source of error, especially by confusion between both the gutturals and the sibilants. But there is no rabbinic reference to any custom of dictation, and it seems wise not to include this class of possible *lapsus*, especially since the existence of visual errors is so incompatible with it.

3. The restoration of the text. a. *The MT.* Regarded as a whole, the discipline textual criticism of the Hebrew OT has in principle two quite different purposes, which reflect the objective of the critic, and in this respect the critical apparatus of *Biblia Hebraica* may be regarded as roughly indicative of the method of their implementation. On the one hand the critic may be involved in no more than the establishment of the MT, and producing a list of possible variants. For this purpose extant MSS in the Masoretic tradition should be brought into considerable use; and Ginsburg, Kennicott, and De Rossi resume their legitimate function. In addition, the biblical MSS from the Cairo Genizah should be collated, and due attention paid to quotations in rabbinic sources, Talmudic, Midrash, Mishna—they all have their special contributions. From the DSS, the MSS from Murabba'at belong to the same tradition and should also be collated.

b. *The hypothetical "original Hebrew."* The problem becomes complicated when the other scrolls, the extremely important Qumran documents, are considered. If we are to be guided by other textual criticisms—e.g., the NT and LXX—great care should be taken to keep apart all textual evidence of divergent recensions. If Kahle is right, even the MT itself is hybrid, and was never ideally free of mixed readings or vocalizations except possibly in the strictly ben Asher MSS. But if, for convenience, it is allowed that the Masoretes did transmit a standard text from the time of Akiba, it should follow that all text forms for the pre-Masoretic period are non-Masoretic, and do not provide material for this particular section of the textualist's work.

Nevertheless, the need for the textualist to deal with the hypothetical pre-Masoretic text is manifest. It is he alone who is capable of assessing the text forms supplied by Qumran on the one hand, and the ancient versions on the other. His starting point is in the MT, together with the variants in the above-mentioned first critical apparatus. He proceeds with the greatest caution, and deals with the text piecemeal. Before venturing on emendation, the textualist observes that latterly, great progress has been made in the study of Hebrew lexicography, both in relation to cognate languages and its own semantics, and new meanings have been established for words which in the past were confusing. Even readings well established as accidental textual errors have from time to time been justified, and the production of at least two major Hebrew dictionaries during

the past few years proves that all was not well with the lexicography of the past.

Emendation, however, is still necessary, and the Hebraist draws on the resources of the versions specialist. Here again—indeed, above all other places—he realizes how gingerly he must proceed. It is utterly naïve and anachronistic simply to take a LXX reading, even from Swete or Rahlfs, turn it into Hebrew, and claim that it represents the text of the Hebrew in its pre-Masoretic "original" form. The second critical apparatus of *Biblia Hebraica* has frequently been criticized on this score, and it must be admitted that it does fail to reflect very much of the highly specialized work that has been devoted especially to the LXX.

As a result of all the safeguards to the text and versions, conjectural emendation must needs play a far less prominent role in textual criticism, and it is admittedly at best subjective. But it is still legitimate. The textual critic is an interpreter of the text, and aims to produce a rendering that makes the message of the Scriptures intelligible. If he finds that despite the sources available to him, the passage with which he deals still defies explanation, he must resort to manipulation, and emend according to his understanding. But he does not present his emendation as an authoritative reading, and for this reason he knows that in any printed edition of the MT conjectural emendation cannot be placed anywhere other than in a secondary section of the critical apparatus.

***TEXT, NT.** No other writing which has come to us from the ancient world has had so great an influence upon Western life and culture as has the NT. And yet, the text of no other body of ancient literature exists in so many different forms. This variety is, in the main, the result of the almost embarrassing number of copies of the NT that have been preserved from ancient times and from the Middle Ages. The ultimate task of textual criticism is to recover, with as much precision and assurance as possible, the original text.

A. THE PROBLEM. The NT is now known, in whole or in part, in nearly five thousand Greek MSS alone. Every one of these handwritten copies differs from every other one. In addition to these Greek MSS, the NT has been preserved in more than ten thousand MSS of the early versions (*see* VERSIONS, ANCIENT) and in thousands of quotations of the Church Fathers. These MSS of the versions and quotations of the Church Fathers differ from one another just as widely as do the Greek MSS. Only a fraction of this great mass of material has been fully collated and carefully studied. Until this task is completed, the uncertainty regarding the text of the NT will remain.

It has been estimated that these MSS and quota-

tions differ among themselves between 150,000 and 250,000 times. The actual figure is, perhaps, much higher. A study of 150 Greek MSS of the Gospel of Luke has revealed more than 30,000 different readings. It is true, of course, that the addition of the readings from another 150 MSS of Luke would not add another 30,000 readings to the list. But each MS studied does add substantially to the list of variants. It is safe to say that there is not one sentence in the NT in which the MS tradition is wholly uniform.

Many thousands of these different readings are variants in orthography or grammar or style and have no effect upon the meaning of the text. But there are many thousands which have a definite effect upon the meaning of the text. It is true that not one of these variant readings affects the substance of Christian dogma. It is equally true that many of them do have theological significance and were introduced into the text intentionally. It may not, e.g., affect the substance of Christian dogma to accept the reading "Jacob the father of Joseph, and Joseph (to whom the virgin Mary was betrothed) the father of Jesus who is called 'Christ'" (Matt. 1:16), as does the Sinaitic Syriac (*see* VERSIONS, ANCIENT); but it gives rise to a theological problem.

It has been said that the great majority of the variant readings in the text of the NT arose before the books of the NT were canonized and that after those books were canonized, they were very carefully copied because they were scripture. This, however, is far from being the case.

It is true, of course, that many variants arose in the very earliest period. There is no reason to suppose, e.g., that the first person who ever made a copy of the autograph of the Gospel of Luke did not change his copy to conform to the particular tradition with which he was familiar. But he was under no compulsion to do so. Once the Gospel of Luke had become scripture, however, the picture was changed completely. Then the copyist was under compulsion to change his copy, to correct it. Because it was scripture, it had to be right.

Many thousands of the variants which are found in the MSS of the NT were put there deliberately. They are not merely the result of error or of careless handling of the text. Many were created for theological or dogmatic reasons (even though they may not affect the substance of Christian dogma). It is because the books of the NT are religious books, sacred books, canonical books, that they were changed to conform to what the copyist believed to be the true reading. His interest was not in the "original reading" but in the "true reading." This is precisely the attitude toward the NT which prevailed from the earliest times to the Renaissance, the Reformation, and the invention of printing. The thousands of Greek MSS, MSS of the versions, and quotations of the Church Fathers provide the source for our knowledge of the earliest or original text of the NT and of the history of the transmission of that text before the invention of printing.

B. SOURCES. It does not lie within the scope of this article to discuss in detail all the sources for the study of the text of the NT. Actually, no complete

catalogue of the thousands of MSS of the versions has ever been published, nor, indeed, has one ever been compiled. For information on the Church Fathers, many excellent patrologies and special studies are available.

The official list of Greek NT MSS which is now accepted by all scholars was drawn up by C. R. Gregory and has been kept up to date by Ernst von Dobschütz, Walter Eltester, and Kurt Aland. This official list divides the MSS into six quite arbitrary and sometimes quite meaningless classifications according to the material upon which they are written, the kind of writing used, and the use for which they were intended. These classifications are: ostraca; talismans; papyri; uncials; minuscules; and lectionaries. To these Greek MSS as thus classified must be added the evidence of the versions and of quotations from the fathers.

1. Ostraca and talismans. Twenty-five OSTRACA and nine talismans (*see* AMULETS) containing small portions of NT text are now known. They are of no importance for the recovery of the original text or for the history of the transmission of the text. It will, therefore, suffice here to note that the ostraca are designated by the letter "O" and an index figure (e.g., O¹, O²) and that the talismans are designated by the letter "T" and an index figure (e.g., T¹, T²).

2. Papyri. Less than a century ago, not one fragment of PYPYRUS was known which contained any NT text. Today, sixty-four papyrus NT MSS (all fragmentary) have been catalogued, and several others, which have not yet been given official listing, are known. These papyrus fragments are designated by the letter "P" with an index figure (e.g., P¹, P²). Portions of twenty books, just over forty per cent of the entire NT, are now known on papyrus. The papyri date from the second to the eighth centuries, with more than half of them dating from the third and fourth centuries.

Among the most interesting and the most important of the papyrus NT MSS are:

a) P⁵² (Manchester, John Ryland's Library, P. Ryl. Gk. 457). This small fragment is the oldest known extant MS of any part of the NT and dates from ca. A.D. 140. It measures ca. 3½ by 2½ inches and contains parts of John 18:31-33, 37-38. Because of its very fragmentary nature, it is of no great value in establishing the second-century text of the Fourth Gospel. The MS was published by C. H. Roberts in 1935.

b) P⁴⁶ (Dublin, private library of Chester Beatty, Beatty Biblical Pap. II; and Ann Arbor, University of Michigan, Pap. 222). Forty-six leaves of this MS are in the private library of Chester Beatty in Dublin, and thirty leaves are in the library of the University of Michigan. (Some other fragments are known to be in private hands.) All the leaves are somewhat mutilated, but they originally measured ca. 11 by 6½ inches and contained 25-32 lines of writing per page. The MS was a single quire codex of ca. 104 leaves. It dates from very early in the third century, probably from ca. 200. It contains the Pauline letters (in whole or in part) in a very unusual order: Romans, Hebrews, I and II Corinthians, Ephesians, Galatians, Philippians, Colossians, and I Thessalonians. Orig-

inally, it may have contained II Thessalonians and Philemon. Most certainly it never contained the Pastoral letters. It was published by F. G. Kenyon (1934-37).

c) P⁶⁶ (Cologny, Switzerland, private library of M. Martin Bodmer, Pap. Bodmer II). This MS contains chs. 1-14 of the Gospel of John, with but few lacunae, and fragments of chs. 15-21. It dates from very early in the third century, probably from ca. 200. The MS is made up of several quires containing varying numbers of leaves. It measures ca. 6½ by 5½ inches and originally contained 146 leaves. The script is in a good literary hand, although it contains many errors, which are apparently due to carelessness. In most cases these errors have been corrected by the original scribe. The MS was published by V. Martin (1956-58).

d) P⁴⁵ (Dublin, private library of Chester Beatty, Chester Beatty Biblical Papyri I; and Vienna, Austria, Österreichische Nationalbibliothek, Pap. Graec. Vindob. 31974). Portions of 30 leaves of this MS are preserved in Chester Beatty's private collection in Dublin, and a fragment containing Matt. 25:41-26:39 is preserved in the National Library in Vienna. The Dublin leaves contain parts of Matthew, Mark, Luke, John, and Acts, all very much mutilated. Originally the MS contained ca. 110 leaves measuring ca. 10 by 8 inches and containing ca. 39 lines of writing on each page. It is written in a small, even hand and dates from just after the middle of the third century. The MS was published by F. G. Kenyon (1933-34) and by Hans Gerstinger (1933).

e) P⁴⁷ (Dublin, private library of Chester Beatty, Chester Beatty Biblical Papyri III). It contains portions of Rev. 9:10-17:2 on 10 leaves. Originally the MS was a single quire codex of 32 leaves measuring ca. 9½ by 5½ inches and containing 25-30 lines of writing on each page. It is written in a rough hand and probably dates from the last third of the third century. It was published by F. G. Kenyon (1934-36).

Without exception, the papyrus NT MSS which are extant today were found in Egypt and undoubtedly were written there. Many of them are too small to be of much value textually. Their cumulative evidence, however, is of value. They prove conclusively that in Egypt, particularly in the second, third, and fourth centuries, no one type of NT text was dominant. In those early centuries many types of text flourished side by side.

3. **Uncials.** The MSS that are referred to as UNCIAL are written on parchment in a style that ultimately descended from the capital letters used in Greek inscriptions—large, rounded Greek and Latin characters. The style owes its immediate origin, however, to the hand that was used in the literary papyri. This style of writing was used exclusively in the NT MSS until the ninth century, and it persisted until considerably later in the lectionaries. The official list of MSS now contains 241 uncials. Each is designated by an Arabic numeral preceded by a zero (e.g., 01, 02). It is customary, however, to designate several of these uncial MSS by the Hebrew, Latin, or Greek letters, by which they were earlier, and are still more familiarly, known.

Among the more important uncial MSS are the following:

a) 01 (Σ; London, British Museum, Add. MS 43725), known as SINAITICUS. This is a fourth-century vellum MS of the Bible. The OT contains 199 leaves, and the NT contains 147½ leaves. An additional 43 leaves of the OT from this MS (known as Codex Friderico-Augustanus) are now in the University Library, Leipzig, and there is a small fragment in the Library of the Society of Ancient Literature, Leningrad. This MS contains the Epistle of Barnabas and the Shepherd of Hermas in addition to the canonical NT books. Each page of the MS measures ca. 15 by 13½ inches and, with the exception of those containing the poetical books, has four columns of writing, each containing forty-eight lines. The pages containing the poetical books (Psalms, Proverbs, Ecclesiastes, Song of Songs, Wisdom of Solomon, Ecclesiasticus, and Job) each have two columns of writing. The MS was written by three different scribes; nine correctors made corrections in it between the fourth and the twelfth centuries.

This MS is one of the most important witnesses to the text of the NT. Tischendorf relied heavily upon it for his eighth edition. Mark ends at 16:8; the *pericope de adultera* (John 7:52-8:11) is omitted; the doxology of Romans appears after 16:23.

The dramatic story of Tischendorf's discovery of this MS and of its eventual purchase by the British nation and government has often been told. See SINAITICUS.

b) 02 (Α; London, British Museum, Royal MS I D V-VIII), known as ALEXANDRINUS.* Originally this early-fifth-century codex contained the whole Greek Bible and, in addition, I and II Clement and the Psalms of Solomon. Fig. ALE 15.

The OT has suffered some mutilation, and the NT now lacks Matt. 1:1-25:6; John 6:50-8:52; I Cor. 4:13-12:6. The Psalms of Solomon also have been lost from the MS. The codex contains 773 vellum leaves (630 in the OT, perhaps written by two scribes; 143 in the NT, perhaps written by three scribes), each measuring 12¾ by 10¼ inches. The text is written in two columns to the page with 46-52 lines per column.

c) 03 (Β; Vatican City, Biblioteca Vaticana, Cod. Vat. Gr. 1209), known as VATICANUS. This early-fourth-century Greek uncial codex originally contained the whole Greek Bible with the exception of the Prayer of Manasses and the books of Maccabees.

The codex has suffered considerable mutilation. It now lacks Gen. 1:1-46:28; II Sam. 2:5-7, 10-13; Pss. 106:27-138:6; Heb. 9:14-13:25; the Pastoral letters; and Revelation. It contains 759 leaves (617 in the OT, 142 in the NT) of very fine vellum out of an original total of ca. 820. Each leaf measures 10½ by 10 inches. Each page of the poetical books of the OT contains two columns of text with 40-44 lines to the column. The rest of the codex contains three columns of text to the page with 40-44 lines to the column.

d) 04 (Γ; Paris, Bibliothèque Nationale, Cod. Gr. 9), known as EPHRAEMI-SYRI.* This early-fifth-century palimpsest originally contained the entire Bible. Only parts of Job, Proverbs, Ecclesiastes, Wisdom of

Solomon, Ecclesiasticus, and Song of Songs are now extant from the OT. Portions of every NT book except II Thessalonians and II John are extant. It contains 209 leaves (64 in the OT, 145 in the NT) measuring 12¼ by 9½ inches. There is one column of writing containing 40-46 lines per page. The upper writing contains a twelfth-century Greek translation of some writings of Ephraem Syrus. Fig. EPH 34.

e) 05 (D; Cambridge, University Library, Nn. 2.41), known as BEZAE.* In this fifth- or sixth-century uncial codex MS of the gospels and Acts in Greek and Latin, the gospels are arranged in the Western order: Matthew, John, Luke, Mark. The codex apparently originally also contained the Catholic letters, as the end of III John is preserved before the beginning of Acts. Fig. BEZ 41.

The codex contains 406 vellum leaves (plus 9 leaves that have been added by later hands) measuring 10 by 8 inches. Originally it probably contained 510 leaves or more. The Greek and Latin texts face each other on opposite pages—the Greek text on the left and the Latin text on the right. Each page contains one column of text with 33 lines of varying length (sense lines) per column.

f) 06 (D^p; Paris, Bibliothèque Nationale, Cod. Gr. 107), known as CLAROMONTANUS. This is a sixth-century uncial codex MS of the Pauline letters in Greek and Latin, containing 533 vellum leaves measuring 9½ by 7¾ inches. Leaves 162 and 163 are palimpsest. Their under writing contains fragments of the *Phaethon* of Euripides. The Greek and Latin texts face each other on opposite pages—the Greek text on the left and the Latin text on the right. Each page contains one column of text with 21 lines of varying length (sense lines) per column. The MS contains all the letters traditionally assigned to Paul (Hebrews follows Philemon). It has suffered some slight mutilation.

g) 07 (E; Basel, University Library, Cod. A.N. III.12), known as Codex Basiliensis. This is an eighth-century MS of the gospels containing 318 leaves measuring ca. 9 by 6¼ inches. The text is written in a single column containing 23-25 lines of writing on each page. The MS allegedly was taken to Basel in 1431 and presented to the Dominican convent by John of Ragusa. It became a part of the University Library in 1559.

h) 08 (E^a; Oxford, Bodleian Library, MS Laud. Gr. 35), known as Codex Laudianus. This is a sixth- or seventh-century bilingual MS of Acts containing 227 leaves measuring ca. 10½ by 8¾ inches. The text is written in two columns (the lefthand column is Latin, and the righthand column is Greek) containing 22-26 lines of writing in each column. The MS is known to have been in Sardinia sometime after the destruction of the Vandal kingdom in Africa by Belisarius. Early in the eighth century it was at Jarrow (England), where it probably had been taken by Ceolfrid, Abbot of Wearmouth and Jarrow. It was used by Bede when he wrote his commentary on Acts. Later the MS was taken, probably by the great missionary Boniface, to Germany, where it remained for several centuries. When the monastery at Würzburg was sacked by the Swedes in 1631, the MS was taken as part of the booty of war. Eventually it fell

into the hands of Archbishop Laud, who presented it to the Bodleian Library in 1636.

i) 015 (H^p), known as Codex Coislinianus. This is a sixth-century MS of the Pauline letters containing 43 leaves. The codex has been mutilated, and the 43 extant leaves are divided among several libraries as follows: Paris, Bibliothèque Nationale, Cod. Gr. 202 Coislin, Suppl. Gr. 1074, Suppl. Gr. 1155. III, 24 leaves; Athos, Laura, no library number, 8 leaves; Kiev, Archaeological Museum, 154, 3 leaves; Leningrad, State Public Library, 14, 3 leaves; Moscow, Lenin State Library, 526.1 and Holy Synod Library, 563, 3 leaves; and Turin, National Library B.I.5, 2 leaves. Each leaf measures ca. 10¾ by 7¾ inches. The text is written in a single column with 16 lines of writing on each page. The lines are short sense lines in accordance with the edition which was prepared by Euthalius in the fourth century. A subscription in the MS states that it was compared with a copy which was written by Pamphilus and preserved in his library at Caesarea.

j) 017 (K; Paris, Bibliothèque Nationale, Cod. Gr. 63), known as Codex Cyprius. A ninth- or tenth-century MS of the gospels containing 267 leaves measuring ca. 10 by 7¾ inches. The text is written in a single column containing 16-31 lines of writing on each page. The MS was taken from Cyprus to Paris in 1673 and was placed in Colbert's library.

k) 019 (L; Paris, Bibliothèque Nationale, Cod. Gr. 62), known as Codex Regius. This is an eighth-century MS of the gospels containing 257 leaves measuring ca. 8¾ by 6½ inches. The text is written in two columns with 25 lines of writing on each page. The most notable features of this MS are that it contains both the longer and the shorter endings of Mark and that it does not contain the *pericope de adultera* (John 7:53-8:11), although a space large enough to contain it is left blank.

l) 027 (R; London, British Museum, Add. MS. 17211), known as Codex Nitriensis. This is a sixth-century palimpsest MS of the gospels. It now contains only 53 leaves, on which is preserved a portion of the Gospel of Luke. The upper writing is part of a treatise of Severus of Antioch against John the Grammarian, written in Syriac in the early ninth century. The leaves measure ca. 11¾ by 8¾ inches. The under writing (i.e., the NT text) is written in two columns with 25 lines of writing to the page. The MS once belonged to the Convent of St. Mary Deipara in Nitria, but it was taken to the British Museum ca. 1847.

m) 032 (W; Washington, Freer Gallery of Art, 06.274), known as Codex Washingtonianus. This is a fifth-century MS of the gospels containing 187 leaves measuring ca. 8¾ by 5¾ inches. The gospels are arranged in the Western order: Matthew, John, Luke and Mark. The text is written in a single column with 30 lines of writing to the page. The MS was purchased by Charles L. Freer in Egypt in 1906. Without doubt, this is the most important MS of the NT, with the exception of the University of Michigan leaves of P⁴⁶, that is to be found in any American collection.

n) 037 (Δ; St. Gall, Stiftsbibliothek, Cod. 48), known as Codex Sangallensis. This is a ninth- or

tenth-century MS of the gospels containing 195 leaves measuring *ca.* 8 $\frac{1}{2}$ by 7 $\frac{1}{4}$ inches. The text is written in a single column with 17-29 lines of writing to the page. A Latin translation is written between the lines of Greek text. It was written by an Irish scribe in the monastery of St. Gall.

o) 038 (Θ; Tiflis, Georgian Museum, Cod. Gr. 993), known as Codex Koridethianus. This is an eighth- or ninth-century MS of the gospels containing 249 leaves measuring *ca.* 11 by 9 inches. The text is written in two columns with 19-32 lines of writing to the page. It was evidently written by a scribe who knew very little Greek. The MS once belonged to a monastery at Koridethi near the E end of the Black Sea. It was first discovered in 1853 and was taken to St. Petersburg, only to be returned to the Caucasus *ca.* 1870. The location of the MS was unknown for over thirty years. In 1901, it was rediscovered by Bishop Kirion, who took it to Tiflis.

p) 044 (Ψ; Athos, Laura, Cod. 172 [B'. 52]), known as Codex Laurentis. This is an eighth- or ninth-century MS of the NT (without Revelation) containing 261 leaves measuring *ca.* 8 $\frac{1}{4}$ by 6 inches. It is defective from Matt. 1:1 to Mark 9:5. The text is written in a single column with 30-31 lines of writing to the page. It contains both the shorter and the longer endings of Mark. The *pericope de adultera* (John 7:53-8:11) is omitted. The doxology of Romans comes after 14:23.

The uncial MSS date from the fourth to the tenth or eleventh centuries. Many of them are fragmentary. Because of the antiquity of many of them they were once looked upon as being the most important sources for the study of the text of the NT. Textual scholars today, however, are more prudent, and they do not hesitate to decide against an uncial reading if other evidence so warrants.

4. **Minuscules.** The minuscule MSS are those written in a cursive or running hand. They date from the ninth to the seventeenth or eighteenth centuries. A total of 2,533 minuscules have thus far been catalogued. They are designated simply by Arabic numbers (e.g., 1, 2). No attempt can be made here to describe in any detail even the most important of these hundreds of MSS. Only a few of the best known of the minuscules can be mentioned in the following list:

1. Basel, University Library, A.N. IV.2. A group of closely related MSS, including this one, is called "Family 1."

2. Basel, University Library, A.N. IV.1. This MS was Erasmus' chief source for his gospel text.

13. Paris, Bibliothèque Nationale, Gr. 50. A group of related MSS, including this one, is often called "Family 13" or the "Ferrari group."

28. Paris, Bibliothèque Nationale, Gr. 379, a member of the so-called Caesarean family.

33. Paris, Bibliothèque Nationale, Gr. 14, which contains the so-called Neutral or Alexandrian type of text. This is often called the "Queen of the cursives."

69. Leicester, Municipal Museum, a member of Family 13 (the Ferrari group).

81. London, British Museum, Add. MS. 20003, considered the best minuscule witness to the Acts.

118. Oxford, Bodleian, Misc. Gr. 13, a member of Family 1.

124. Vienna, Österreichischen Nationalbibliothek, Gr. 188, a member of Family 13 (the Ferrari group).

209. Venice, St. Mark, 10, a member of Family 1.

346. Milan, Ambrosiana, S. 23 supra, a member of Family 13 (the Ferrari group).

543. Ann Arbor, University of Michigan, 15, a member of Family 13 (the Ferrari group).

565. Leningrad, State Public Library, Gr. 53, a member of the so-called Caesarean family.

579. Paris, Bibliothèque Nationale, Gr. 97, a witness to the so-called Neutral or Alexandrian type of text.

700. London, British Museum, Egerton 2610, a member of the so-called Caesarean family.

826. Grottaferrata, A.a.3, a member of Family 13 (the Ferrari group).

828. Grottaferrata, A.a.5, a member of Family 13 (the Ferrari group).

892. London, British Museum, Add. MS. 33277, a witness to the so-called Neutral or Alexandrian type.

1071. Athos, Laura, A. 104, an important witness to von Soden's I^o text.

1241. Sinai, 260, a witness to the so-called Neutral or Alexandrian type of text.

1582. Athos, Vatopedi, 747, a member of Family 1.

5. **Lectonaries.** The lectionaries are the service books that contain lessons to be read on every day of the calendar year and of the church year. Lessons are read from the Gospel (Matthew, Mark, Luke, and John) and from the Apostle (the rest of the NT outside the gospels, with the exception of Revelation). The official catalogue of MSS now contains 1,838 lectionaries. Many of them are uncials, although the majority of them are minuscules. They are designated by an italicized, lower-case "l" followed by an Arabic number (e.g., *l* 1, *l* 2). They date from the third or fourth century to the seventeenth century.

The lectionaries have long been considered of no value for the study of the text of the NT, and, for this reason, they never have been adequately represented in any critical apparatus. Recent textual research, however, has shown that the lectionaries are of great value for the study of the history of the transmission of the text of the NT. Unfortunately this research work is only in its initial stages, and not enough is yet known to justify any definite conclusions as to the part the lectionaries have played in the development of the NT text. All that can now be said is that in the future the lectionaries will play an ever-increasing role in the study of the text.

6. **Versions.** The most significant versions for the study of the NT text are those which were made before the year 1000 and which are direct translations from the Greek. The most important of these are: (a) Latin (OL and Vulg.); (b) Syriac (Old Syriac, Peshitta, Philoxenian, and/or Harclean and Palestinian); (c) Coptic (Sahidic, several Middle Egyptian versions, and Bohairic); (d) Armenian; (e) Old Georgian; (f) Old Slavic; (g) Gothic. Of less importance are: (a) Arabic (those translations made directly from the Greek); (b) Ethiopic; (c) Nubian; (d) Sogdian; (e) Frankish; (f) Anglo-Saxon; (g) Persian.

It is often affirmed that the versions are of great importance for the recovery of the original text of the NT because they often represent translations that were made in very early times. It must be remembered, however, that there are no extant MSS of the versions that date earlier than the fourth century. The MSS of the versions were subject to the same changes as they were copied and recopied as were the Greek MSS. A sixth-century Latin MS, e.g., is no better witness to an early-third-century text than is a sixth-century Greek MS. Both have been changed in the process of transmission.

For a complete discussion of the versions, see *VERSIONS, ANCIENT*.

7. Quotations of the Church Fathers. The NT quotations of the Church Fathers are of importance for the study of the NT text primarily because they can be definitely located as to time and place. It is of particular importance for the study of the transmission of the text to know, e.g., that a certain reading was known and used by Origen in Egypt in the first half of the third century. By this means, it has been possible to determine that the text of Family 1 (MSS 1 and 1582), at least in Matthew, was current at that early date.

The quotations of the Church Fathers should be taken only from critical texts of the Fathers. Unfortunately, too few such texts are available. In the absence of critical texts, it must be kept in mind that the Fathers did not always quote accurately. They harmonized their texts, and they misquoted just as often as does the modern writer. They made allusions and references to the NT text, and they often paraphrased.

There is no one source to which the student of the text of the NT can go for the quotations of the Church Fathers. Even the sixteen handwritten volumes of the *Index Patristicus*, compiled by J. W. Burgon and now housed in the British Museum, is incomplete, though it contains 86,489 quotations.

C. WRITTEN TEXT OF THE NT. The original copies of the NT books have, of course, long since disappeared. This fact should not cause surprise. In the first place, they were written on papyrus, a very fragile and perishable material. In the second place, and probably of even more importance, the original copies of the NT books were not looked upon as scripture by those of the early Christian communities. To the early Christians, the books that are now the NT books were only a few among many pieces of occasional writing. A letter of Paul, e.g., would at first have been valued, perhaps only because it came from the founder of some local church. Only after that letter had been read and reread, only after it had been copied and recopied, only after it had proved its worth, would it have been looked upon as scripture. Were it possible to recover or to reconstruct the original texts of the NT books, the resulting texts would be texts that never were looked upon as scripture.

Whenever any document is copied by hand, the copy differs from the exemplar. Many of the changes are accidental. Such changes are usually easy to detect and do not cause the textual student a great deal of trouble. They can be identified as various types of

errors of the eye or ear. But many of the changes are intentional. It has been pointed out above that even after the NT books were canonized, they were often changed intentionally as they were copied. During the MS period, the interest of the copyist was in the "true reading" and not in the "original reading."

As far as is known, during the MS period no rigid control ever was exercised over the copying of MSS, nor was an official revision ever made in any great ecclesiastical center. Perhaps no more can be said about the MS period than that the great mass of evidence that comes from the Greek MSS, the MSS of the versions, and the quotations of the Church Fathers represents the various interpretations, the various doctrines and dogmas, the various theological interests, and the various worship habits of many different Christians in many different times and places. Before the Renaissance and the Reformation and the invention of printing, the NT was a living body of literature which was constantly being enriched as it was interpreted and reinterpreted by each succeeding generation.

D. PRINTED TEXT OF THE NT. The first portions of the Greek NT to be printed were the Magnificat (Luke 1:42-56) and the Benedictus (vss. 68-80). These passages were attached to a Greek Psalter which first appeared in Milan in 1481. The same passages were printed a second time in 1486 in Venice. They appeared again in Venice in 1496 or 1497 in a volume that came from the famous Aldine press. In 1504 the Aldine press printed the first six chapters of the Gospel of John. Sometime later, in 1514, John 6:1-4 appeared in print in Tübingen. Since these beginnings, literally hundreds of editions of the Greek NT have been printed. Only those which have been of major significance for the history of the printed text will be discussed here.

1. The Complutensian Polyglot. The first printed edition of the complete Greek NT contained the Greek and the Latin Vulg. texts arranged in parallel columns. It was vol. 5 of the edition of the Bible that is known as the Complutensian Polyglot, which received its name from Complutum, the Latin designation for Alcalá in Spain, where it was printed. The NT volume was completed on January 10, 1514. The entire edition was completed on July 10, 1517. Permission for its publication, however, was not given by Pope Leo X until March 22, 1520, and it was not put into circulation until 1522.

The editors of this edition did not indicate which MSS they used in its production. In their preface, however, they said: "Ordinary copies were not the archetypes for this impression, but very ancient and correct ones; and of such antiquity, that it would be utterly wrong not to own their authority; which the Supreme Pontiff Leo X, our most Holy Father in Christ and lord, desiring to favor this undertaking sent from the apostolical library to the most reverend lord the Cardinal of Spain [i.e., Francis Cardinal Ximenes], by whose authority and commandment we have had this work printed." Cardinal Ximenes himself, in his dedication of the edition to Leo X, said: "For Greek copies indeed we are indebted to your Holiness, who sent us most kindly from the apostolical library very ancient codices, both of the Old and the

New Testament; which have aided us very much in this undertaking."

Although it cannot now be determined which MSS were used by the editors of the Complutensian Polyglot, it is evident that they used their MSS well. They did, however, "correct" their Greek text to the Latin Vulg. in a few places. E.g., they included I John 5: 7-8 in their Greek text. This passage is unknown in any Greek MS with the exception of Codex Montfortianus (Greg. 61; Dublin, Trinity College, A. 4. 21), which was written early in the sixteenth century, after work on the Complutensian Polyglot had been completed.

The text of the NT in the Complutensian Polyglot is a better text than those of Erasmus, Stephanus, and the Elzevirs (see §§ D2-3 below). Had the Complutensian Polyglot been the first Greek NT published as well as printed, it might well have become the *textus receptus* upon which the KJV was based. Had that been the case, the entire history of the English NT after 1611 would have been vastly different.

2. Erasmus. The first complete Greek NT to be published, although it was the second one to be printed, was that of Erasmus. It contained the Greek text and a revised Latin Vulg. text in parallel columns. This edition was published by Joannes Froben, a German-born printer of Basel, who was evidently a very enterprising businessman. He heard of the work that was being done on the Complutensian Polyglot under the direction of Cardinal Ximenes at Alcalá and conceived the idea of getting an edition of the NT on the market before the Spanish edition could be published. Accordingly, on April 17, 1515, Froben sent a message to Erasmus, who was then in England, asking him to come to Basel for the purpose of editing the Greek NT. Erasmus arrived in Basel sometime during the summer of 1515. But as late as September 11, it was still being debated as to whether the Latin texts should be published in parallel columns to the Greek or in a separate volume. In less than six months, however, in March, 1516, the entire NT had been printed, and it was released immediately for publication. The volume was dedicated to Pope Leo X, and a copy was sent to him. All the evidence points to the fact that the enterprising Froben was given exclusive rights to publish the NT for a period of four years. (This fits well with the fact that Leo X did not give permission for the Complutensian Polyglot to be published until March 22, 1520.)

As we have seen, Erasmus' NT was prepared in great haste. Erasmus himself said later that it was "precipitated rather than edited." He depended largely upon late Greek MSS which he found in the University Library. In fact, a twelfth-century MS of the gospels (Greg. 2; Basel, University Library, A.N. IV.1) was sent to Froben to be used as printer's copy. The MS of Revelation which he used was mutilated at the end, and Erasmus translated the last six verses from Latin into Greek for his edition. In many places where it was not necessary, he "corrected" the Greek text to conform to the Latin (e.g., Acts 8:37; 9:5-6). He did not, however, include I John 5:7-8 in his Greek text. In answer to those who

criticized him for this "omission," Erasmus said if he were ever shown one Greek MS that contained those verses, he would include them in his text. Later, he was shown Codex Montfortianus, which evidently had been written for the purpose, and he included I John 5:7-8 in his third edition (1522). Thus, those verses came, through the Greek texts of Stephanus and the Elzevirs, into the KJV, and there they remained for three centuries. The haste with which Erasmus' NT was prepared was reflected in its printing as well as in its use of MSS. It contained hundreds of typographical errors. Scrivener once said: "In that respect it is the most faulty book I know."

The second edition of Erasmus' NT appeared in March, 1519. The first two editions sold more than 3,300 copies. Other editions appeared in 1522, 1527, and 1535. The third and fourth editions contained the Greek text, the Latin Vulg. text, and Erasmus' own edition of the Latin text in parallel columns. These various editions contained only slight changes from the first, with the exception of the correction of typographical errors.

Erasmus' work met with some criticism, but not on the basis of what he had done to the Greek text. He was criticized for having dared to change the Latin text. In spite of this criticism, Erasmus' NT was immediately accepted. Thus, a text of the Greek NT which had been "edited" on the basis of late MS evidence and which too often had been "corrected" to the Latin text became stereotyped in man's mind. It was assumed for over three centuries to possess some prescriptive right, just as if "an apostle had been the compositor."

3. Other early editions. In 1546 and 1549, Robert Stephanus, a scholar-printer of Paris, published two editions of the NT. They contained a Greek text that was blended from those of the Complutensian Polyglot and Erasmus. In 1550 he published a folio edition (his third edition) which followed the text of Erasmus' fifth edition almost without variation. This edition contained marginal readings that were taken from some fifteen MSS, mostly from the Royal Library in Paris, and from the Complutensian Polyglot. The MSS (which include Greg. 05[D], 019[L], 4, 5, 6, 7, 8, 9, 38, and 120) were collated for him by his son Henry. Often the marginal readings were supported by all the MSS, but the text itself was not changed. Nearly six hundred readings from the Complutensian Polyglot were included in these marginal variants, but often they were cited incorrectly. More than seven hundred other readings in which Stephanus' text differed from the Complutensian Polyglot were not noted. This 1550 edition became the *textus receptus* for Great Britain.

Robert Stephanus left Paris late in the year 1550 and went to Geneva, where the next year (1551) he published his fourth edition of the NT. The text of this edition was exactly the same as that of his third edition. It contained the Greek text, the Latin Vulg. text, and Erasmus' Latin text in parallel columns. In this edition, however, for the first time our modern verse divisions appeared.

The French theologian Theodore Beza edited an

edition of the Latin NT (1556) and ten editions of the Greek NT (1565 [2], 1567, 1580, 1582, 1588, 1591, 1598, 1604, and 1611). All these Greek editions contained the Greek text, the Latin Vulg. text, and Beza's own Latin text arranged in parallel columns. For his Greek text, Beza relied upon the 1550 edition of Stephanus. Upon occasion, he mentioned variant readings in the margin, but only rarely did he ever introduce them into his text. Two ancient MSS, Codex Bezae and Codex Claromontanus, were at that time in Beza's possession; but he evidently made little, if any, use of them. Beza's editions of the NT are of no great value for the history of the printed text, but they are of interest because of the influence they exerted on two English translations, the Geneva Version (1557 and 1560) and the KJV (1611).

The Elzevirs were a famous Dutch family of scholar-printers. Of all the family, the Leyden Elzevirs are probably the best known. In 1624 they published their first edition of the Greek NT. Their basic text was that of Stephanus' third edition. They introduced into the text an occasional reading which they found in one of Beza's editions and which they took to be corrections of Stephanus. In some places, however, their text differs from both Stephanus and Bezae.

In 1633 the Elzevirs published the second edition of their Greek NT. It is in the introduction to this edition that was printed the statement: "You have the text, now received by all: in which we give nothing altered or corrupted." It was this statement which gave rise to the phrase *textus receptus*. The Elzevir text became the *textus receptus* for the Continent, just as the Stephanus text did for Britain. These two editions differ from one another in only 287 places.

In 1657, Brian Walton, later bishop of Chester, published his famous Polyglot. It was an edition of the entire Bible in six volumes. Vol. 5 contained the NT. The Greek text that Walton used was the text of the 1550 Stephanus edition. Beneath the Greek text were given the readings of Alexandrinus, which was designated by the siglum A. This marked the first time that a capital letter had been used to designate an uncial MS. In addition to the Greek text and the Latin Vulg., Walton also printed the Peshitta, the Ethiopic, the Arabic, the Persian (of the gospels), and the later Syr. of the NT books that are not to be found in the Peshitta (II Peter, II and III John, Jude, and Revelation), each accompanied by a Latin translation. In vol. 6, in an appendix, there appeared the collations of sixteen MSS that had been prepared under the direction of Archbishop Usher, the collations that had been collected by Stephanus and several other collations that had been prepared at Walton's request.

John Fell, bishop of Oxford, in 1675 published an edition of the NT which contained the 1550 text of Stephanus and some variant readings from MSS at the bottom of the page. But the importance of Fell's edition lies in the fact that he also published some evidence from the Coptic and the Gothic versions in his notes.

One of the most important of the earlier editions

of the NT appeared in 1707. It was that of John Mill, who had spent more than thirty years in its preparation. The text that Mill used was that of the Stephanus (1550) edition. The notes and appendices contained the variant readings that had appeared in earlier editions, the readings that Mill had collected by collating such MSS as were available to him, readings that were taken from collations that were made for him by his friends, and many readings from the ancient versions and the Church Fathers. Altogether, Mill was able to cite *ca.* thirty thousand variant readings. He was the first to see the real value and the importance of the ancient versions and the Church Fathers for the study of the text of the NT.

Not only did Mill cite more variant readings than had ever been cited before, but he also dared to express his own opinion of the value of many of these variants. His mature judgment on the value of certain readings is to be found in his *Prolegomena*, written after the entire work was completed. Here he often reversed an earlier opinion on the value of the variants which he had collected.

In 1734, at Tübingen, John Albrecht Bengel published his edition of the NT. His text did not precisely follow the *textus receptus*; but, except in Revelation, he did not include a single reading that had not appeared in some earlier printed edition. He did, however, include, at the end of his volume, a critical apparatus in which he listed the MS evidence for his text as well as the evidence for variant readings. In addition to the apparatus at the end of the volume, he placed selected variant readings in the margins and indicated his opinion of them by means of Greek letters: α indicated readings decidedly better than in his text; β indicated readings somewhat more likely than those in his text; γ indicated readings equal to those in his text; δ indicated readings slightly inferior to those in his text; and ϵ indicated readings considerably inferior to those in his text.

John James Wettstein's great two-volume edition of the NT was published in Amsterdam in 1751-52. The text which Wettstein printed was, with very few exceptions, the text of the Elzevir edition of 1624. The value of the edition was in the great mass of new material it made available. On the upper part of the page stood the text itself. Below the text were printed those MS variants of which the editor approved. Next came other variant readings, with the MSS which contained them. Because Wettstein had examined so many MSS, this part of the evidence often filled most of the page. On the lower part of the page was printed a mass of quotations from Greek and Latin classical authors, Talmudic and Rabbinic writings, etc., which in Wettstein's opinion illustrated some passage, elucidated the use of some word, or presented an instance of a similar grammatical construction. Wettstein, for the first time, used capital letters as sigla for the uncial MSS (with the exception of Walton's use of "A" as a symbol for Alexandrinus) and Arabic numerals as sigla for the minuscule MSS.

Johann Jakob Griesbach published a three-volume edition of the NT in 1775-77. He printed the Elzevir text of 1624 with a few changes. Most of his critical

materials were drawn from Wettstein, although he added some evidence from his own collations. Griesbach's second edition was published in 1796-1806.

Christian Frederick Matthaei published a twelve-volume edition of the NT at Riga in 1782-88. Because of his lack of knowledge of the principles of textual criticism, his text, which was "molded on his own views," was of little value. Matthaei's NT was of importance, however, because of the many MSS which it accurately cited. Bishop Middleton once characterized Matthaei as the "most accurate scholar who ever edited the NT." Many of the MSS he cited are known even today only through his publication.

John Martin Augustine Scholz published his two-volume edition of the NT in 1830-36. His text was a critical text—i.e., it was based upon his own critical principles, although it did not depart radically from the *textus receptus*. Scholz's chief claim to fame lay in the fact that he cited more than six hundred MSS—many times more than ever had been cited before. Only twelve of them, however, were cited with anything that approached completeness. In contrast to Matthaei, Scholz was perhaps the most inaccurate scholar who ever edited the NT.

4. Modern critical editions. Charles Lachmann was the first to publish an edition of the NT that ignored completely the *textus receptus*. His aim was to publish the text of the NT as it was known in the fourth century. He relied entirely upon ancient witnesses. His first edition was published in 1831; and his second edition, in two volumes, was published in 1842 and 1850. Lachmann's work stands as a landmark in the history of the printed text of the NT.

The critical text of the NT of Samuel Prideaux Tregelles was published between 1857 and 1872. In the construction of his text, Tregelles relied upon "ancient authorities" alone and refused to allow either the *textus receptus* or the great mass of late MSS to have any voice in determining the true reading. All his ancient Greek MS authorities were uncials, with the exception of the minuscules 1, 33, and 69 of the gospels and 81 of the Acts. Tregelles' critical apparatus, which gives the evidence for his text and for variants from his text, is a model of accuracy.

Lobegott Friedrich Konstantine von Tischendorf published no fewer than twenty-four editions of the Greek NT, if the reissues of his stereotyped *Editio Academica* (1855) are included. For our purposes, however, only his last and greatest edition need be considered. It was his eighth major edition (*Editio Octava Critica Major*), published in eleven parts between 1864 and 1872. Tischendorf's death prevented him from preparing the Prolegomena to his eighth edition. This task was undertaken by C. R. Gregory and Ezra Abbot. After Abbot's death, Gregory completed the Prolegomena volume, and it was published in 1894. Tischendorf's aim was to recover the best text of the NT, even though this might not necessarily be the oldest text. The text of his eighth edition was based upon ancient evidence, especially of the Greek MSS, but without neglecting the evidence of the versions and the Fathers. His text showed signs that he was greatly influenced by the evidence of Codex Sinaiticus, which was his greatest MS dis-

covery. Even yet, Tischendorf's critical apparatus to his eighth edition is without parallel, and it is indispensable to the textual student.

After more than thirty years of labor, in 1881, Brooke Foss Westcott and Fenton John Anthony Hort published their critical text of the NT, *The NT in the Original Greek*. Unfortunately they published no MS evidence except that for a few readings which is to be found in their "Introduction and Appendix," which appeared in 1882. They relied heavily for their text upon Codex Vaticanus. The Westcott and Hort text has become, in effect, a new *textus receptus*; its hold upon textual scholars today is just as strong as was the hold of the Stephanus and Elzevir texts upon textual scholars between 1550 and 1831.

The most recent major edition of the text of the NT was that published by Hermann von Soden between 1902 and 1913. Von Soden adopted a new system of MS notation; he developed a new theory of the history of the text; and, of course, he constructed a new critical text. He has been often criticized for the incompleteness and the inaccuracy of his MS citation. In all fairness, it should be said that in this he was no worse, nor was he any better, than most other editors of the NT. He cites a great amount of minuscule MS evidence that is not available anywhere else. James Moffatt's English translation of the NT was based upon von Soden's text.

Under the auspices of a committee of British scholars, S. C. E. Legg published the Gospel of Mark in 1935 and the Gospel of Matthew in 1940. He used the text of Westcott and Hort and provided it with a critical apparatus. This edition was often referred to as the "new Tischendorf." Legg resigned from the editorship of this new edition in 1948. At that time his committee invited a committee of American scholars to join with them in completing the edition. The American-British undertaking is known as the International Greek NT Project. The "Project" will publish the *textus receptus* (Oxford, 1873) and provide it with a critical apparatus that is based upon new collations of all available MSS and upon new studies of the versions, the lectionaries, and the quotations of the Church Fathers. The two volumes that were published by Legg will be revised on the basis of the *textus receptus*. The new edition is designed as a tool to be used in future critical studies of the NT text.

In addition to the major editions of the Greek NT which have been listed above, many minor editions have been published. Among the more important of these are: J. M. Bover, Greco-Latin (1st ed., 1943); A. Merk, Greco-Latin (1st ed., 1933); E. Nestle (1st ed., 1898); A. Souter (1st ed., 1910); and H. J. Vogels, Greco-Latin (1st ed., 1920). By far the most popular of these minor editions is that of Nestle. It has been published in many editions since 1898. The text of the first two editions was based on the majority reading of Westcott and Hort, Tischendorf, and Weymouth. Beginning with the third edition (1903), Weiss was substituted for Weymouth. The apparatus in the Nestle NT has been revised in each succeeding edition. In 1904 the British and Foreign Bible Society published the Nestle third edition as its first edition. In 1958 the second British and Foreign Bible Society edition was published with a revised

apparatus, although its text was still essentially the Nestle text.

E. THEORY AND METHOD. 1. From Origen to Bentley. Any study of the text of the NT, apart from the preliminary study of MSS, paleography, grammar, etc., should properly begin with Origen, the first great textual critic of the church.

Frank Pack (*see bibliography*) has shown that Origen's textual work should be conceived as a part of his larger conception of scripture. The same thing could be said of any textual critic, ancient or modern. There is no question but that the work of Tregelles, Tischendorf, von Soden, Legg, the Lakes, and others would be better understood if more were known regarding their larger conception of scripture.

Pack showed in his study that Origen's conception of scripture was based upon three major beliefs: (a) the tradition of the church is the framework within which all teaching, belief, and activity must be done; (b) scripture is a unity with light given from God equally in the OT and in the NT; (c) all scripture is inspired, so that whether every part of it looks important to the reader or not, it is important, and is to be interpreted in such a way that God is not dishonored.

Origen attributed the great variety of readings which he found in his MSS of the NT to four causes: (a) carelessness in scribal transmission; (b) conscious alteration made in a rash and daring manner (these are the more serious dogmatic corrections); (c) addition and subtraction made in an "arbitrary" way (these are the more simple, detailed corrections which are made in the interest of clarification of meaning or harmonization of accounts); (d) the corrupting influence of the heretics.

In those places where he called attention to the existence of more than one reading and indicated his preference for one or the other, Origen seems to have based his choice upon (a) dogmatics; (b) geography; (c) harmonization; (d) etymology; (e) the majority of MSS known to him.

Origen's main controls in the handling of variants in the text, then, may be summed up as: (a) contextual meaning and internal probability; (b) harmonization; (c) the tradition of the church. As Pack puts it, Origen's methodology was a process of: (a) correction; (b) the knowledge, use, and conflating of different textual traditions; (c) the handling of the text with the interests of teaching and preaching in mind. Even in those cases where he judged that the text had been corrupted by the heretics, Origen sought, because of his great respect for tradition, to avoid the task of having to change the copies of the NT in actual use.

By and large, this seems to have been the method used in handling the text of the NT until after the Reformation and the printing of the Greek NT. Chrysostom, in his homilies, was no mere follower of a traditional text, but a writer who consciously altered the text in an attempt to make more lucid certain passages of scripture. Bishop Theophylact of Bulgaria, who wrote in the eleventh century, treated his NT text in precisely the same way.

As we have seen, those who edited and published the early editions of the Greek NT (i.e., Cardinal

Ximenes, Erasmus, Stephanus, the Elzevirs, Beza, etc.) depended in the main upon late Greek MSS, which they used uncritically. Most of them did, to be sure, as, e.g., Stephanus, print variant readings. But as someone has said, these marginal notes seem to be more ornamental than anything else. Those readings which were debated were usually those in which the late Greek text differed from the late Latin Vulg. text which was in common use. Not always, but too often, the Greek text suffered by being "corrected" to the Latin.

In spite of the fact that materials were not used critically, however, an accumulation of variant readings was built up by those early editors. They collated MSS and recorded their readings. Usually such variant readings were relegated to prolegomena or appendices, as was the case in the editions of Walton, Fell, Mill, and others. It was, of course, easier to print the text "received by all" and to record variant readings in prolegomena or appendices. At least by using this method the editor did not leave himself open to all manner of charges of heresy. As it was, most of these early editors were subject to vicious attack. If Erasmus, e.g., had been content to publish the Greek text, or if he had printed beside his Greek text only the Latin Vulg., as was then in common use, all might have been well. But his own revised Latin version was regarded as such an innovation that every variant from the text in common use was regarded as presumption or even as heresy.

Stephanus was condemned by the theological faculty at the Sorbonne for publishing an amended Latin text several years before his first Greek text appeared. No wonder, then, that he did not try to publish an amended Greek text. His critics could make nothing of what they found in the margins of his 1550 edition, but they prohibited it because of its "annotations." When Stephanus told them that there were no annotations in the margin, but only variant readings, they demanded to see the MS from which the variants were taken. They were told that there was not one MS but several MSS and that they had been returned to the Royal Library. So severe did the criticism of Stephanus become that he fled to Geneva—some say that flight was necessary for him to escape death at the stake.

The early editors and printers of the Greek NT were motivated by the new interest in humanistic studies and by a desire to set the Greek text over against the Latin text in common use. Perhaps this latter motivation was tied up with the whole complex of the Reformation, the new Protestant movement, the break with Rome, etc. Without doubt, however, in some cases financial motivation entered in as well.

Gradually, as men saw not only that the Greek text of the late MSS differed from the Latin text in common use, but that it differed from the early Greek MSS and from the text of the ancient versions (other than Latin) and from the quotations of the early Church Fathers as well, they began an attempt to make a better Greek text. But still, they hardly dared to publish an amended text. As has been shown, their variant readings were relegated to marginal notes, prolegomena, and appendices. The text they printed was the text "commonly received

by all." In no other way could they escape the censure of their fellow churchmen.

Even the great Mill, who had published practically unchanged the Stephanus text of 1550, was severely criticized. His crime was not that he had changed the text of the NT, but that he had made this text precarious. Not only the clergy, but university professors in England and Germany as well, declared that because he had found thirty thousand variant readings in the NT, his work was a work of evil tendency and inimical to the Christian religion. Fortunately for his peace of mind, Mill did not live to hear these attacks. He died only two weeks after his NT was published.

In the early part of his work Mill placed great value on the number of MSS supporting a reading, but later he became more aware of the value of the testimony of authorities of different kinds.

The principal attack upon Mill was made by Whitby in 1710. He charged Mill with making the text of the NT uncertain and insisted that in every case the text of Stephanus could be defended. Whitby seems to have thought that the evidence of numbers of MSS should outweigh all other considerations except when those numbers of MSS read against the *textus receptus*.

In 1713, Anthony Collins in his "Discourse of Free Thinking" used Whitby's attack on Mill as an argument for rejection of the authority of scripture.

2. The work of Richard Bentley. In answer to Collins' book, Richard Lintley published under the name of Phileleutherus Lipsiensis his "Remarks upon a Late Discourse of Free Thinking." In section 32, part 1, of his "Remarks," Bentley took up the subject of the various readings of the Greek NT. In this section he made some observations that were made a part of the later method of textual study. He said: "'Tis a good Providence and a great Blessing, That so many Manuscripts of the New Testament are still amongst us; some procur'd from *Egypt*, others from *Asia*, others found in the *Western Churches*. For the very Distances of Places, as well as Numbers of the Books, demonstrates that there could be no Collusion, no altering nor interpolating One Copy by another, nor All by one of them." Further, "the lesser matters of Diction, and among several synonymous Expressions the Very Words of the Writers, must be found out by the same Industry and Sagacity that is used in other Books; must not be risk'd upon the credit of any particular MS or Edition, but be sought, acknowledged, and challeng'd, where-ever they are met with."

In 1713, Francis Hare, writing under the name of Philo-Criticus, published a pamphlet entitled "The Clergyman's Thanks to Phileleutherus for His Remarks on the Late Discourse of Free-Thinking." In this pamphlet he urged Bentley to edit an edition of the NT. He said, in part: "The *present* Text is not the Text as left us by the Apostles in their *Autographum*, but as it was settled about two hundred years ago by Robert Stephens, that learned Printer; whence it follows that if the Text should be revis'd now by an *abler* Hand, and by the help of *more and better Manuscripts*, such an Edition of it ought to be prefer'd; but such undoubtedly would that be which

you could give, would you, upon the Materials your Friend *Dr. Mill* has with so much Labour brought together, exercise the Critik, you, and you alone are Master of."

On April 16, 1716, Bentley wrote to Archbishop Wake and unfolded his plan for a new edition of the NT. In this letter he gave an account of some of his studies, and said that he had found a close agreement between the oldest Latin and Greek MSS. By means of this agreement he believed that he would be able to restore the text of the NT to what it had been at the time of the Council of Nicaea. He then spoke of the formation of the common text of the Greek NT.

"After the Complutenses and Erasmus," Bentley said, "who had but very ordinary MSS, it became the property of booksellers. Robert Stephen's edition, set out and regulated by himself alone, is now become the standard. The text stands, as if an apostle was his compositor.

"Pope's Sixtus and Clement, at a vast expense, had an assembly of learned divines to recense and adjust the Latin Vulgate, and then enacted their new edition authentic: but I find, though I have not discovered anything done *dolo malo*, they were quite unequal to the affair. They were mere *theologi*, had no experience in MSS, nor made use of good Greek copies, and followed books of 500 years before those of double age. Nay, I believe, they took these new ones for the older of the two; for it is not everybody knows the age of a manuscript.

"To conclude: in a word, I find that by taking 2000 errors out of the Pope's Vulgate, and as many out of the Protestant Pope Stephen's, I can set out an edition of each in columns, without using any book under 900 years old, that shall so exactly agree word for word, and, what at first amazed me, order for order, that no two tallies, nor two indentures, can agree better."

In 1720, Bentley issued his *Proposals for Printing*. These proposals were accompanied by the last chapter of Revelation as a specimen. They are contained in eight paragraphs as follows:

"(a) The author of this edition, observing that the printed copies of the New Testament, both of the original Greek and ancient vulgar Latin, were taken from manuscripts of no great antiquity, such as the first editors could then procure; and that now by God's providence there are MSS in Europe (accessible, though with great charge) above a thousand years old in both languages; believes he may do good service to common Christianity if he publishes a new edition of the Greek and Latin, not according to the recent and interpolated copies, but as represented in the most ancient and venerable MSS in Greek and Roman capital letters.

"(b) The author, revolving in his mind some passages of St. Jerome; where he declares, that (without making a new version) he adjusted and reformed the whole *Latin Vulgate to the best Greek exemplars*, that is, to those of the famous Origen; and another passage, where he says, that a verbal or literal interpretation out of Greek into Latin is not necessary, *except in the Holy Scripture, ubi ipse verborum ordo mysterium est*, where the very order of the words is mystery; took

thence the hint, that if the oldest copies of the original Greek and Jerome's Latin were examined and compared together, perhaps they would be still found to agree both in words and order of words. And upon making the essay, he has succeeded in his conjecture beyond his expectation or even his hopes.

"(c) The author believes that he has retrieved (except in very few places) the true exemplar of Origen, which was the standard of the most learned of the Fathers, at the time of the Council of Nicaea and two centuries after. And he is sure that the Greek and Latin MSS, by their mutual assistance, do so settle the original text to the smallest nicety, as cannot be performed now in any *classic* author whatever: and that out of a labyrinth of thirty thousand various readings, that crowd the pages of our present best editions, all put upon equal credit, to the offense of many good persons, this clue so leads and extricates us, that there will scarce be two hundred out of so many thousands that can deserve the least consideration.

"(d) To confirm the lections which the author places in the text, he makes use of the old versions, Syriac, Coptic, Gothic, and Aethiopic, and of all the Fathers, Greeks and Latins, within the first five centuries; and he gives in his notes the various readings (now known) within the said five centuries. So that the reader has under one view what the first ages of the church knew of the text; and what has crept into any copies since is of no value or authority.

"(e) The author is very sensible, that in the sacred writings there's no place for conjecture or emendations. Diligence and fidelity, with some judgment and experience, are the characters here requisite. He declares, therefore, that he does not alter one letter in the text without the authorities subjoined in the notes. And to leave the free choice to every reader, he places under each column the smallest variations of this edition, either in words or order, from the received Greek of Stephens, and the Latin of the two popes Sixtus V and Clement VIII. So that this edition exhibits both itself and the common ones.

"(f) If the author has anything to suggest towards a change of the text, not supported by any copies now extant, he will offer it separate in his *Prolegomena*; in which will be a large account of the several MSS here used, and of the other matters which contribute to make this edition useful. In this work he is of no sect or party; his design is to serve the whole Christian name. He draws no consequences in his notes; makes no oblique glances upon any disputed points, old or new. He consecrates this work, as a *κεφάλιον*, a *κῆρυξ ἐσῆαι*, a *charter*, a *magna charta*, to the whole Christian Church; to last when all the ancient MSS here quoted may be lost and extinguished.

"(g) To publish this work, according to its use and importance, a great expense is requisite: it's designed to be printed, not on the paper or with the letter of this *Specimen*, but with the best letter, paper, and ink that Europe affords. It must therefore be done by subscription or contribution. As it will make two tomes in folio, the lowest subscription for smaller paper must be three guineas, one advanced in present; and for the great paper five guineas, two advanced.

"(h) The work will be put to the press as soon as money is contributed to support the charge of the impression; and no more copies will be printed than are subscribed for. The overseer and corrector of the press will be the learned Mr. John Walker, of Trinity College in Cambridge; who, with great accurateness, has collated many MSS at Paris for the present edition. And the issue of it, whether gain or loss, is equally to fall on him and the author."

Although Bentley's proposed edition was never published, it is important for the study of the history of the NT text. He saw that it was necessary to use some discrimination in the choice of Greek MSS and that the ancient MSS are the witnesses to the ancient text. It must be kept in mind that a late MS may also be a witness to an ancient text; but, generally speaking, the older the MS, the older the text to which it witnesses. After the ancient text had been established through the general agreement of the ancient MSS with the ancient versions and the quotations of the Church Fathers, Bentley was ready to discard from consideration the whole mass of late witnesses. In this, of course, he was wrong. The late witnesses are of value for the history of the transmission of the NT text, and they may preserve an ancient reading that has been lost in the earlier MSS.

Bentley formed two other conclusions, in which he was wrong: (a) that Jerome used the Greek MSS of Origen in making his revision—the Vulg.; (b) that there had been *one* known and received Latin version, which was altered and revised to produce the confusion that Jerome found.

Had Bentley's edition been published, it would have shaken the foundations of the *textus receptus*. It was long before scholars again adopted the principle of selecting from among the mass of available materials.

3. Bengel and Wettstein. With the work of John Albrecht Bengel, there was a revival of interest in the study of the text of the NT on the Continent. Bengel was born in Württemberg in 1687. During his student days at Tübingen (1703-7) he became interested in the variant readings in the text of the Greek NT. He had learned to value the NT as the declaration of God's revealed will, and he was anxious to know the precise form in which it had been given.

Bengel's difficulty in regard to the text of the NT was caused by the fact that before Mill's edition there were only partial collations of the variant readings which raised doubt in his mind. After much study, he came to the conclusion that the variant readings were less numerous than might have been expected and that they did not shake any article of evangelic doctrine. He also came to the conclusion that a Greek text was needed which was based upon sound principles of criticism applied to accurate and complete collations.

At first Bengel gathered materials for his own use, but he was encouraged by his friends to complete his work for publication. The collations which were made by Bengel and for him, unfortunately, do not meet the requirements of modern research.

Bengel's chief importance lies in the critical principles which he evolved. The great principle he fol-

lowed was: "The more difficult reading is to be preferred." This is an idea which is to be found in some places in Mill's *Prolegomena*. Bengel attached high value to the Latin versions as witnesses to the original text. Here, too, he followed Mill, as well as Bentley.

Most important of all, it was Bengel who first advanced the theory of textual families or recensions. He hoped to reduce all extant witnesses (Greek MSS, versions, and quotations of the Church Fathers) into "companies, families, tribes, and nations." He tried to divide all extant Greek MSS into two families: (a) the Asiatic, chiefly written in Constantinople and its vicinity; (b) the African, comprising a few MSS of the better type.

The next important step in the study of the text of the NT was taken by John James Wettstein (not Wetstein; see *bibliography*). Wettstein was born in Basel in 1693. By the age of twenty, when he was ordained a pastor, he was interested in biblical studies. At that time he delivered a disputation on the various readings of the NT. His love for this subject became a passion, the "master-passion which consoled and dignified a roving, troubled, unprosperous life."

In 1714, Wettstein's search for MSS of the NT led him to Paris; in 1715 and again in 1720, it led him to England. On his second visit to England, he was employed by Bentley to collate MSS, but he seems to have learned but little from the great British scholar.

Wettstein lived at a time when the textual critic was suspect. Anyone who suggested changes in the *textus receptus* was accused of tampering with the pure Word of God. In spite of the fact that he was subjected to persecution, Wettstein fought constantly for honest and free criticism. It should be noted, however, that Wettstein was constantly being accused of holding unorthodox beliefs and that he was always protesting his orthodoxy. Such constant protestations of orthodoxy are usually open to some suspicion. In insisting upon the fact that textual study should be made free from theological bias and yet in insisting upon his own orthodoxy, Wettstein was, in effect, taking a theological position.

In 1730, while Wettstein in Basel was waging his "fight for freedom," he published anonymously at Amsterdam his famous *Prolegomena*—a quarto volume of 201 pages. Even though it was published anonymously, no one who read it could doubt that it was his.

The first five chapters of the *Prolegomena* dealt with MSS and their authority. The codices which Wettstein had examined personally were marked with a star; the MSS which had been examined and reported to him by his friends were marked with a cross; the others had no mark. He discussed MSS in general, the material on which they were written, the method of writing, the form of the letters, accents, breathings, abbreviations, orthography, and corrections. "The Apostles," he said, "were not literary purists. They spoke and wrote according to the manner of the common people." Wettstein divided the materials for the formation of the text of the NT into four classes: (a) eight MSS written in the oldest

lettering; (b) twelve MSS of a later uncial type; (c) MSS written by Latin copyists, accompanied by a Latin version; (d) 152 minuscule MSS. He passed judgment on many MSS. The place of honor he gave to Alexandrinus, even though he confessed that it had many faults introduced by copyists. He suspected that it was the work of a female scribe. In spite of its faults, Wettstein intended to use it as the base for the text of his proposed edition of the NT.

Chs. 6-7 of the *Prolegomena* dealt with the Church Fathers who have quoted the NT from the earliest times to the invention of printing. He implied that no edition of any Father which had not been edited critically was of value for the textual criticism of the NT.

Ch. 8 dealt with the Latin versions.

In ch. 9, Wettstein expressed his belief that the Bohairic and Syriac versions were of great value. The Syriac was of especial value, he thought, even more trustworthy than the Greek text, as it represented the language in common use in apostolic times.

The next five chapters (10-14) dealt with various editions of the NT.

Ch. 15 pointed out that the Protestant commentators recognized and dealt with the various readings to be found in the text of the NT.

In the last chapter of his *Prolegomena*, Wettstein set down nineteen rules which he proposed to follow in his own edition of the NT: (a) every effort should be made to edit the NT as correctly as possible; (b) all critical aids should be employed for the elucidation of the text; (c) the prescription of the *textus receptus* should have no authority; (d) editors must form their own judgment as to accents, breathings, punctuations, and orthography; (e) conjectural emendations are never to be hastily admitted or rejected; (f) the distinction of readings into those more or less weighty is useless—i.e., all varieties of readings must be impartially considered by the critic; (g) between two readings, the one which is better sounding, or more clear, or better Greek, is not to be at once chosen but more often the contrary; (h) a reading which exhibits an unusual expression, but which is in other respects suitable to the matter in hand, is preferable to another which, though equally suitable, has expressions such as are not peculiar; (i) of two readings, the fuller and more ample is not at once to be accepted, but rather the contrary; (j) if of two readings one is found in the same words elsewhere and the other is not, the former is by no means to be preferred to the latter; (k) a reading altogether conformable to the style of each writer, other things being equal, is to be preferred; (l) of two various readings, that which seems the more orthodox is not to be forthwith preferred; (m) of two various readings in Greek copies, that which accords with the ancient versions is not easily to be considered the worse; (n) the witness of the ancient Church Fathers has great weight in proving the true reading of the NT; (o) the silence of the Fathers as to readings of importance in the controversies of their own times makes such readings suspect; (p) great care should be taken not to adopt as true readings the errata of collectors of readings or of printers; (q) the reading which is proved to be

the more ancient, other things being equal, must be preferred; (r) the readings of the majority of MSS, other things being equal, must be preferred; (s) there is no reason why a reading should not be received into the text, not only if it is suitably attested, but even when it is doubtful which reading is preferable.

The *Prolegomena* formed a landmark in the history of textual criticism. It is to be regretted that Wettstein did not proceed immediately to the editing of the NT along the lines which he laid down. Unfortunately, however, as has been indicated, his NT did not appear until 1751 and 1752.

During the twenty-one years that elapsed between the publication of his *Prolegomena* and the publication of the first volume of his NT, Wettstein became obsessed by his theory of the Latinization of the early Greek MSS. It had long been recognized that the Greek text in the bilingual Greek-Latin MSS showed a remarkable resemblance to the Latin text. The suspicion arose that in such cases the Greek text had been "corrected" to the Latin text. Erasmus had suggested that at the Council of Florence, in 1439, it had been agreed that the Greeks who then united with the Roman church should alter their MSS to make them conform to the Latin Vulg. If any Greek MSS resembled the Latin in their readings, it was thought that this agreement might explain them. Erasmus had, of course, applied this principle to the late MSS. Wettstein, however, applied it to all the early codices and thus vitiated all the earlier principles he had laid down. He lamented the fact that all the most ancient MSS had been interpolated from the Latin and that it should be necessary to descend several centuries from the date of the oldest copies before any could be found which could be used for establishing a pure text.

4. Beginnings of modern criticism. It was with Johann Jakob Griesbach (born 1745) that real critical texts of the NT began. He recognized the value of the ancient MSS and approved, in principle, Bengel's theory of a twofold division of the Greek MSS into families: one African, and one Byzantine. Griesbach, however, divided the African family into two parts so as in fact to maintain that there are three classes of text—two ancient, and one more recent. The names assigned by him to these three classes of MSS were: (a) Western; (b) Alexandrian; (c) Constantinopolitan. The Western class contained the text which had been in circulation in the early periods and which because of the errors of copyists required much correction. The Alexandrian was an attempt to revise the old corrupt text. The Constantinopolitan flowed from the other two. Griesbach believed that the Western and Alexandrian recensions, as he called them, existed as distinct recensions in the latter part of the second century.

In deciding upon the value of a reading, Griesbach relied chiefly upon the evidence furnished by agreement of families. Agreement between the Western and Alexandrian he considered to be of great importance. It should be emphasized that he placed importance on the evidence of families and not upon the evidence of individual authorities, however important.

Griesbach laid down five canons of criticism: (a)

no reading must be considered preferable unless it has the support of at least some ancient witness; (b) all criticism of the text turns on the study of recensions or classes of documents; not single documents but recensions are to be counted in determining readings; (c) the shorter reading is to be preferred to the longer; (d) the more difficult reading is to be preferred to the easier; (e) the reading which at first sight appears to convey a false sense is to be preferred to other readings.

Griesbach has never received the credit due him for his contributions to the study of the NT text. In many ways, he laid the foundations for the work of later scholars. The work of Westcott and Hort and of von Soden, e.g., was based upon precisely the principles which he laid down.

To Charles Lachmann, a classical philologist, must go the credit of being the first editor of the NT to break the sway of the *textus receptus*. His edition of 1831 was the first Greek NT after the invention of printing to be edited wholly on the evidence of ancient authorities, irrespective of later traditions.

Lachmann set out to edit the Greek NT as if the *textus receptus* had never existed. His object was to give the text of the Greek NT in that form in which the most ancient documents are known. His aim was purely historical; it was to recover, not the original text, but the text of the fourth century. He professed implicitly to follow ancient copies so far as then-existing collations made this possible. The oldest Greek MSS, compared with the citations of Origen, were the basis of his text. The readings of the OL, as found in unrevised MSS, and the citations of the Latin Fathers were his secondary sources.

Where the principal authorities agreed in an error (i.e., in a certain unquestionable error) Lachmann included this error in his text. He regarded such errors to have been a part of the textual tradition of the fourth century.

Lachmann recognized only two types of text: oriental and occidental. His witnesses for the gospels were 02 (A), 03 (B), 04 (C), 024 (P), 026 (Q), 029 (T), 035 (Z), and sometimes 05 (D). For Acts, they were 05 (D) and 08 (E^a). For Paul, they were 06 (D^p), 012 (G^p) and 015 (H^p). These witnesses were supplemented with the Greek remains of Irenaeus, the OL MSS *a, b, c*, the citations of Cyprian, Hilary of Poitiers, Lucifer of Cagliari, and Primasius.

Lachmann developed six canons of criticism for determining the readings of his text: (a) nothing is better attested than that in which all authorities agree; (b) the agreement has less weight if part of the authorities are silent or in any way defective; (c) the evidence for a reading, when it is that of witnesses of different regions, is greater than that of the witnesses of some particular place, differing either from negligence or from set purpose; (d) the testimonies are to be regarded as doubtfully balanced when witnesses from widely separated regions stand opposed to others equally wide apart; (e) readings are uncertain which occur habitually in different forms in different regions; (f) readings are of weak authority which are not uniformly attested in the same region.

After Lachmann, the next great opponent of the *textus receptus* was the British scholar Samuel Prideaux Tregelles. He was born into a Quaker family in 1813. At an early age he became a member of the Plymouth Brethren. The last years of his life were spent as a lay member of the Church of England. He at one time assured the bishop of Marlborough that he had become a member of the Church of England as a result of his study of the Greek NT. The only formal education that Tregelles ever had was received at the Falmouth Classical School. In spite of his lack of formal education, at the age of twenty-five he was deeply interested in the critical study of the Greek NT. This interest became the main occupation of his life.

Tregelles traveled extensively on the Continent and examined and collated many MSS of the NT. He developed a method for textual study which he called "comparative criticism." He defined this method by saying: "As a preliminary definition of terms, I state that by 'Comparative Criticism' I mean such an investigation as shows what the character of a document is,—not simply from its age, whether known or supposed,—but from its actual readings being shown to be in accordance or not with certain other documents. By an estimate of Mss. through the application of comparative criticism, is intended merely such an arrangement as may enable it to be said, that certain Mss. do, as a demonstrated fact, present features of classification as agreeing or not agreeing in text with ancient authorities with which they are compared" (*An Account of the Printed Text of the Greek New Testament*, 1854).

In the same book he set forth and explained in detail his canons of criticism. They may be summarized as follows: (a) readings whose antiquity is proved apart from MSS are found in repeated instances in a few of the extant copies; (b) as certain MSS are found, by a process of inductive proof, to contain an ancient text, their character as witnesses must be considered to be so established that, in other places, their testimony deserves peculiar weight; (c) the concurrence of two versions in a definite reading excludes the supposition that the reading is merely an accident of transcription or translation; and that the accordance with them of certain MSS is likewise the result of fortuitous circumstances or of arbitrary alteration; (d) although patristic quotations are often modernized to suit the Greek text to which the copyist was accustomed, yet when the reading is such that it could not be altered without changing the whole texture of their remarks, or when they are so express in their testimony that such a reading is that found in such a place, we need not doubt that it was so in their copies; and so, too, if we find that the reading of early Fathers agrees with other early testimonies in opposition to those which are later; (e) the antiquity of documents is to be preferred to their number as a basis of testimony.

The greatest of the Continental students of the text of the NT was the "fabulous Tischendorf," a contemporary of Tregelles. Tischendorf was born in Saxony in 1815. His greatest contributions to the study of the text of the NT were made as a collector and publisher of MSS and as an editor of the NT.

He discovered and published more Greek uncial MSS than did any other man. His greatest discovery was, of course, Codex Sinaiticus. It has been noted above that he edited no fewer than twenty-four editions of the NT.

Tischendorf made but few, if any, improvements in the methods of textual criticism. He drew up six canons of criticism, but they contained no new suggestions for determining the oldest or the best readings. His canons were: (a) the text is only to be sought from ancient evidence, and especially from Greek MSS, but without neglecting the testimonies of versions and Fathers; (b) a reading altogether peculiar to one or another ancient document is suspect, as also is any, even if supported by a class of documents which seems to show that it has originated in the revision of a learned man; (c) readings, however well supported by evidence, are to be rejected when it appears that they have proceeded from errors of copyists; (d) in parallel passages, whether of the NT or the OT, especially in the Synoptic gospels, those testimonies are to be preferred in which there is no precise accordance of such parallel passages, unless there are important reasons to the contrary; (e) in discrepant readings, that reading should be preferred which may have given occasion to the rest, or which appears to comprise the elements of the others; (f) those readings must be maintained which accord with NT Greek, or with the peculiar style of each individual writer.

5. **Westcott and Hort.** B. F. Westcott and F. J. A. Hort finally dealt the death blow to the *textus receptus*, but in doing so they set up what has come to be a new *textus receptus* and "canonized" a new method for textual studies, the genealogical method.

B. F. Westcott (1825-1901) was one of the most amazing men of the nineteenth century. He was an educator, a churchman, a humanitarian, and a scholar. In 1870 he was elected Regius Professor of Divinity at Cambridge, and in 1883 he became a professorial fellow at King's College. He was appointed by the crown to a canonry at Westminster, and in 1890 he became bishop of Durham. He took a practical interest in the affairs of the British coal miners and of the employees of the shipping and artisan industries. He was a staunch supporter of the British co-operative movement. He was one of the main founders of the Christian Social Union. Among his scholarly publications were *History of the NT Canon*, *Characteristics of the Gospel Miracles*, *Introduction to the Study of the Gospels*, *The Bible in the Church*, *The Gospel of the Resurrection*, *History of the English Bible*, and *The Gospel of Life*. He also published commentaries on the Fourth Gospel, on Hebrews, and on the Johannine letters. He served as a member of the committee that was engaged in the revision of the NT (the Revised Version). During all this time, he and Hort were at work on their edition of the Greek NT.

In his *Bible in the Church* (1864), Westcott made two statements that reveal more about his interest in the text of the NT than any other words that ever came from his pen. In the Preface to that book, he said: "A corrupted Bible is a sign of a corrupted Church, a Bible mutilated or imperfect, a sign of a

Church not yet raised to the complete perception of Truth. It is possible that we might have wished . . . this otherwise: we might have thought that a Bible of which every part should bear a visible and unquestioned authentication of its divine origin, separated by a solemn act from the first from the sum and fate of all other literature, would have best answered our conceptions of what the written records of revelation should be. But it is not thus that God works among us. In the Church and in the Bible alike, He works through men. As we follow the progress of their formation, each step seems to be truly human; and when we contemplate the whole, we joyfully recognize that every part is also divine." In the final paragraph of this same book, he said: "The Bible, no less than the Church, is Holy, Catholic, and Apostolic: Holy, for they who wrote it were moved by the Holy Spirit: Catholic, for it embraces in essence every type of Christian truth which has gained entrance among men: Apostolic, for its limits are not extended beyond that first generation to which was committed the charge of preaching the Gospel in the fulness of its original power."

F. J. A. Hort (1828-92) was a fellow and lecturer in Emmanuel College and, later, Lady Margaret reader in divinity. He, like Westcott, was a member of the committee for the revision of the NT.

In Part II of their *NT in the Original Greek: Introduction and Appendix*, Westcott and Hort pointed out that "every method of textual criticism corresponds to some one class of textual facts," that "the best criticism is that which takes account of every class of textual facts and assigns to each method its proper use and rank," and that "the leading principles of textual criticism are identical for all writings whatever." They then set forth the methods of textual criticism in their "natural order" so that what they considered to be the higher methods came last into view. The following paragraphs represent a condensation, as far as possible in their own words, of Westcott and Hort's longer discussion:

a. Internal evidence of readings. This is the most rudimentary form of criticism. It consists in dealing with each variation independently and adopting at once in each case, out of two or more variants, that which looks most probable. It takes no account of any relative antecedent credibility of the actual witness. Internal evidence of readings is of two kinds, having reference respectively to the author and to copyists:

a) **Intrinsic probability.** The first impulse in dealing with a variation is usually to lean on intrinsic probability—i.e., to consider which of two readings makes the best sense, and to decide between them accordingly. The decision may be made either by an immediate and, as it were, intuitive judgment, or by weighing cautiously various elements which go to make up what is called sense, such as conformity to grammar and congruity to the purport of the sentence and of the larger context; to which may be rightly added congruity to the usual style of the author and to his matter in other passages. These considerations afford reasonable presumptions, presumptions which in some cases may attain such force on the negative side as to demand the rejection or

qualify the acceptance of readings most highly commended by other kinds of evidence.

The assumptions involved in intrinsic probability are not to be implicitly trusted. There is much literature, ancient no less than modern, in which it is needful to remember that authors are not always grammatical, or clear, or consistent, or felicitous; so that not seldom an ordinary reader finds it easy to replace a feeble or half-appropriate word or phrase by an effective substitute; and thus the best words to express an author's meaning need not in all cases be those which he actually employed. It should be noted, however, that in the highest literature, and notably in the Bible, all readers are peculiarly liable to the fallacy of supposing that they understand the author's meaning and purpose because they understand some part or some aspect of it, which they take for the whole; and hence, in judging variations of text, they are led unawares to disparage any word or phrase which owes its selection by the author to those elements of the thought present to his mind which they have failed to perceive or to feel.

b) **Transcriptional probability.** The next step in criticism is the discovery of transcriptional probability, and is suggested on the reflection that what attracts us is not on the average unlikely to have attracted transcribers. If one variant reading appears to us to give much better sense or in some other way to excel another, the same apparent superiority may have led to the introduction of the reading in the first instance. Mere blunders apart, no motive can be thought of which could lead a scribe to introduce consciously a worse reading in place of a better. This does not mean that intrinsic inferiority is evidence of originality.

Transcriptional probability is not directly or properly concerned with the relative excellence of rival readings, but merely with the relative fitness of each for explaining the existence of the others. Every rival reading contributes an element to the problem which has to be solved; for every rival reading is a fact which has to be accounted for, and no acceptance of any one reading as original can be satisfactory which leaves any other variant incapable of being traced to some known cause or causes of variation. If variants are binary, ternary, or more complex, each in its turn must be assumed as a hypothetical original, and an endeavor made to deduce from it all the others, either independently or consecutively; after which the relative facilities of the several experimental deductions must be compared. Hence, the basis on which transcriptional probability rests consists of generalizations as to the causes of corruption incident to the process of transcription. Even at its best, this class of internal evidence, like the other, carries us but a little way toward the recovery of an ancient text, when it is employed alone. The number of variations in which it can be trusted to supply by itself a direct and immediate decision is relatively very small, when unquestionable blunders—i.e., clerical errors—have been set aside.

Readings which are certified by the coincidence of both intrinsic and transcriptional probability are of the utmost value in the application of other methods of criticism.

b. Internal evidence of documents. It is precarious to attempt to judge which of two or more readings is most likely to be right, without considering which of the attesting documents or combinations of documents are the most likely to convey an unadulterated transcript of the original text. In other words, it is precarious, in dealing with matter purely traditional, to ignore the relative antecedent credibility of witnesses, and trust exclusively to one's own inward power of singling out the true readings from among their counterfeits. The comparative trustworthiness of documentary authorities constitutes a fresh class of pertinent facts. The first step toward obtaining a sure foundation is a consistent application of the principle that knowledge of documents should precede final judgment upon readings.

The most prominent fact known about a MS is its date. Relative date affords a valuable presumption as to relative freedom from corruption, when appealed to on a large scale. But the occasional preservation of comparatively ancient texts in comparatively modern MSS forbids confident reliance on priority of date unsustained by other marks of excellence.

The first effectual security against the uncertainties of internal evidence of readings is found in what may be termed internal evidence of documents—i.e., the general characteristics of the texts contained in them as learned directly from them by continuous study of the whole or of considerable parts. This and this alone supplies entirely trustworthy knowledge as to the relative value of different documents. If the readings of two documents in all their variations are compared successively, ample materials for ascertaining the leading merits and defects of each are obtained.

Readings authenticated by the coincidence of strong intrinsic and strong transcriptional probability, or it may be by one alone of these probabilities in exceptional strength and clearness and uncontradicted by the other, are almost always to be found sufficiently numerous to supply a solid basis for inference.

Where one document is found habitually to contain morally certain or at least strongly preferred readings, and another habitually to contain their rejected rivals, there can be no doubt that the text of the first has been transmitted in comparative purity, and that the text of the second has suffered comparatively large corruption; and that the superiority of the first must be as great in the variations in which internal evidence of readings has furnished no decisive criterion as in those which made it possible to form a comparative appreciation of the two texts.

By this cautious advance from the known to the unknown it is possible to deal confidently with a great mass of those remaining variations—open variations, so to speak—the confidence being materially increased when, as usually happens, the document thus found to have the better text is also the older.

The use of internal evidence of documents is really a threefold process: (*a*) on the basis of internal evidence of readings, material is tentatively gathered. The results are not final, as they would be if internal evidence of readings alone were used. On some variations, at this stage, an ultimate conclusion can be predicted; on many more, only various degrees

of probability can be estimated; on many more, any decision must be withheld. (*b*) Documents are investigated on the basis of what has been learned from the investigation of readings. In this step, it is determined which documents contain the best readings. (*c*) The readings are again investigated, but this time a tentative choice of readings is made simply in accordance with documentary evidence. Where the results coincide with those obtained at the first stage, a very high degree of probability is reached, resting on the coincidence of two and often three independent kinds of evidence. Where they differ at first sight, a fresh study of the whole evidence affecting the variation in question is secured.

c. Genealogical evidence. The first great step in rising above the uncertainties of internal evidence of readings was taken by ceasing to treat readings independently of one another, and examining them connectedly in series, each series being furnished by one of the several documents in which they were found. The second great step consists in ceasing to treat documents independently of one another, and examining them connectedly as parts of a single whole in virtue of their historical relationships.

Documents are not so many independent and rival texts of greater or less purity. By the nature of the case they are not independent; they are all fragments, usually casual and scattered fragments, of a genealogical tree of transmission, sometimes of vast extent and intricacy. All trustworthy restoration of corrupted texts is founded on the study of their history—i.e., of the relations of descent or affinity which connect the several documents.

Knowledge of the genealogy of MSS is chiefly gained by study of their texts in comparison with one another. The process depends on the principle that identity of reading implies identity of origin. Mixture, of course, confuses the picture. One source of knowledge concerning mixture is conflate readings.

d. Internal evidence of groups. In one sense, this is an intermediate step between the internal evidence of documents and genealogical evidence, but in order of discovery it naturally comes last.

When the internal evidence of documents was investigated, only single documents were considered; but the method is equally applicable to groups of documents. Just as the characteristics of any given MS can be noted by observing successively what readings it supports and rejects (each reading having previously been the subject of the tentative estimate of internal evidence of readings, intrinsic and transcriptional), and by classifying the results, so can the characteristics of any given group of documents be noted by similar observations on the readings it supports and rejects, giving special attention to those readings in which it stands absolutely or virtually alone.

As a result of their investigations, Westcott and Hort found many passages in the NT in which there are three forms of the text. Two of these forms were short, and the third was long, a combination of the two shorter forms. These longer readings (conflate readings) must be late, they argued, particularly since they are found only in the Church Fathers who wrote after the fourth century. The MSS which contained

these conflate readings were grouped together under the name Syrian and were presumed to represent the recension of the NT which is attributed to Lucian of Antioch at the end of the third or the beginning of the fourth century. This Syrian text is characterized by stylistic changes, conflate readings, the tendency to make obscure words and phrases more lucid and the harmonizing of parallel passages. This type of text Westcott and Hort considered to be the least valuable of all. They then identified three pre-Syrian types of text: (a) the Neutral text, which is the primitive text that has been preserved in relative purity, if not in its original form; (b) the Western text, which was made in the second century by scribes who made interpolations, harmonized parallel passages, and suppressed certain details; and (c) the Alexandrian text, which was the work of "purists" trying to mold the NT text to classical standards.

Westcott and Hort never applied the genealogical method to the MSS of the NT. They used only the idea of applying the method to the NT MSS, and even then it was only a secondary element in their procedure. They actually applied the genealogical method only to individual passages and to individual variants. The genealogical method itself fails the NT textual student on two important counts: (a) it cannot adequately account for mixture which is so prevalent in the NT; and (b) it cannot get beyond a two-branched family tree. For an ultimate decision on the originality of any given reading, the student must rely upon what Westcott and Hort called the internal evidence of readings.

In spite of the fact that Westcott and Hort did not apply the genealogical method to the MSS of the NT, and in spite of the method's shortcomings, it has been the "canonical" method for studying the NT text since their time. Many scholars have made use of the method, and, almost without exception, they have come to a clearer understanding of its limitations and failures. As long ago as 1904, Kirsopp Lake called the method "a failure, though a splendid one."

6. Von Soden and later developments. Perhaps the most outstanding work since Westcott and Hort that has made use of the genealogical method is that of Hermann Von Soden (1852-1914). In Von Soden's opinion, all existing Greek MSS belong to one of the three great recensions which he designated as I, H, and K. The text of each of these recensions, he believed, can be reconstructed with tolerable, though not complete, certainty. He classified the MSS into groups according to: (a) their text; (b) their form of the text of the *pericope de adultera*; (c) their chapter divisions; and (d) their lectionary apparatus. Naturally, the text was the most important, and Von Soden was principally guided by it. The other points, however, were of value to him in distinguishing among groups of MSS which textually are almost identical.

Von Soden held that the I (Jerusalem) recension was made by Origen in the third century and was later published by Eusebius and Pamphilus of Caesarea. The H (Hesychian) recension was made in Egypt by Hesychius in the third century. The K (Koine) recension was made by Lucian of Antioch at the end of the third or the beginning of the fourth century.

The I recension corresponds roughly to Westcott and Hort's Western text. According to von Soden, it represents a recension of the Greek text which was made at a time posterior to the Latin and Syr. versions. These versions, therefore, represent a type of text that is earlier than and different from the I recension. Von Soden found the I recension nowhere in a pure form. He divided his I witnesses for the gospels into the following subgroups: I^a, Iⁿ, I¹, I², I^β, I^ρ, I^r, I^κ, and I^r. He also found many MSS which preserved I readings but which would not fit into any of his subgroups. These MSS he called I^z.

I^a is the best representative of the I recension. All its MSS have suffered some corruption from K¹ but independently of one another. Codex Bezae, the oldest I^a witness, besides being corrupted by K¹, was influenced by parallelization, by omission due to paleographical causes, and by the African Latin and the Old Syr. versions.

Iⁿ is essentially Family 1. It is a relatively pure form of the I recension that has been corrupted but very little by K. Originally, it had a critical note attached to the end of Mark. The *pericope de adultera*, with a critical note attached, originally appeared at the end of the Gospel of John. Since Von Soden's time, it has been demonstrated that this was the type of Matthean text used by Origen in his commentary on Matthew.

I¹ is essentially the Ferrar group or Family 13 and is a very valuable witness to the I recension. It has been corrupted by K (but probably not by K^z) and by the harmonization of parallel passages. It had the *pericope de adultera* after Luke 21:38.

I² has been greatly corrupted by K, but it still preserves the original readings of the I recension in many places where they have disappeared from Iⁿ and I¹. It is, therefore, an important I witness. In its original form, it did not contain the *pericope de adultera*.

I^β is a less important subtype, and it contributes nothing to the knowledge of the I recension that is not known from other sources. It has been greatly contaminated by K¹.

I^ρ is a mixture of K¹ and I. It contains some interesting readings but is of no great importance as a witness to the I recension.

I^r is a mixture of I with K¹ and K^z. It is found in the Purple Codices: 022 (N), 023 (O), 042 (Σ), 043 (Φ), and 080. The Cappadocian Fathers probably used this type of text.

I^κ is a mixture of I and K. It is of no particular value as a witness to the I recension.

I^κ (or K^a) represents a form of the I recension that has been made to conform almost entirely to the K recension. It does, however, preserve enough I readings to show its original form. It is an I text that has been corrected to K¹ on the principle that the text should be followed which showed the greatest number of harmonizations of parallel passages.

I^r is another mixture of K¹ and I. According to Von Soden, it consists of nine parts K¹ and one part I. It probably, however, contains some K^z readings. There is a close agreement between the I^r MSS and the MSS of the A^a type of the Antiochene commentary text. (The Antiochene commentary is the

widely found commentary on the gospels of which the basis in Matthew and John is Chrysostom; in Mark, Victor of Antioch; and in Luke, Titus of Bostra.) Typical MSS of both groups contain a note to the effect that they have been compared with Jerusalem codices.

Von Soden reconstructed the original I recension by comparing all these groups and subgroups. He concluded that it was the type of text that was used by Cyril of Jerusalem and by Eusebius of Caesarea. All these subgroups of the I recension he regarded as a compromise between Constantinople and Antioch.

Von Soden's H recension corresponds to Westcott and Hort's Neutral and Alexandrian texts. It is found in eleven MSS in varying degrees of purity. The most important extant witnesses to this recension are Sinaiticus and Vaticanus. The most important witness, however, is κ -B, the archetype of those two MSS. But even this archetype has been contaminated by the Egyptian versions, by Origen, and by the K and I recensions. Vaticanus more often represents the archetype than does Sinaiticus.

The K recension of Von Soden approximates the Syrian text of Westcott and Hort. In the gospels, Von Soden divided his K witnesses into six subgroups: K¹, K^a, K^x, K^r, K^l, and K^{ik}.

K¹ is the oldest and the most important witness to the K recension. Originally it either omitted the *pericope de adultera* altogether or had it marked with an asterisk to indicate its doubtful origin. K¹ seems to have been the base text used by the A^a MSS of the Antiochene commentary on Matthew, Luke, and John. On the basis of MS evidence, the existence of K¹ cannot be demonstrated before the eighth century.

The remaining K witnesses are of much less importance than is K¹. K^a was discussed above under I^k. K^x is an intermediate type of text lying between K¹ and K^r. Its critical value is but slightly greater than is that of K^r. K^r is a late type of text which probably came into existence in the twelfth century. It probably was made in Constantinople for ecclesiastical use. It is valueless insofar as the reconstruction of an early text is concerned. Both K^l and K^{ik} are a mixture of K¹ and K^x with other recensions. K^l is either K¹ influenced by I^r or, more probably, I^r corrected to a K¹ standard. K^{ik} is a mixture of K^x and I^k. It is fairly common, but it is valueless for critical purposes.

Although Von Soden was not able to produce any direct evidence that the K recension was in existence before the eighth century, he believed that he could find traces of it in 02 (A), 04 (C), the Peshitta, the Gothic, and, as has been pointed out above, in the archetype of Sinaiticus and Vaticanus. If this were true, it would place the K recension at least as early as the fourth century.

After he reconstructed the texts of the three great recensions, I, H, and K, Von Soden proceeded to reconstruct their archetype, which he called I-H-K. This archetype is purely hypothetical; there is no objective proof that it ever existed, as it is not identical with the text of any known MS, version, or quotation of a Church Father. In order to reconstruct I-H-K, Von Soden followed a series of rules which he had

set up: (a) those readings are rejected which are explicable as due to harmonization; (b) if there are two readings, both explicable as due to harmonization, the one with Matthew and the other with another gospel, the non-Matthean reading is to be preferred on the ground that Matthew was the "norm gospel" in early times; and (c) when there is no question of harmonization, that reading is to be preferred which is found in two out of three recensions, unless there is some reason against it, as there often is when the smaller linguistic points are in question. The result of this process was to show that of the three recensions, K is the least true and I is the most true to I-H-K. But H is not far behind I in value as a witness to I-H-K.

The reconstruction of I-H-K took Von Soden back only to the end of the third century. He then had to take into account the evidence of the Latin and Syr. versions. He recognized two OL versions, the African and the Italian. Originally they were two separate versions. The African Latin represents I-H-K with some corruption from Tatian; the Italian Latin represents I-H-K with a much greater amount of Tatianic corruption. The Old Syr. versions represent I-H-K with some corruption from Tatian and some Origenian readings.

Von Soden concluded that the differences between I-H-K and Tatian were not due to the text which Tatian had before him but to his method of handling that text. In the end, I-H-K proved to be the very text to which Tatian himself bears witness.

Since the days of Von Soden, many significant works on the text of the NT have appeared (for the more important ones, see *bibliography*). But none of them has contributed materially to the theory and method of textual criticism. It is now generally agreed that the genealogical method does not meet the needs of the student of the text of the NT.

Among the textual scholars of today, the tendency is to follow an "eclectic" method in order to reconstruct the earliest possible text of the NT. This method can perhaps best be summarized by listing the canons of criticism which are most commonly used: (a) the shorter reading is to be preferred; (b) the more difficult reading is to be preferred; (c) the reading which best suits the author's characteristic tendencies is to be preferred; and (d) the reading which best explains the origin of all other variants in a given passage is to be preferred. In other words, the emphasis today is upon the internal evidence of readings.

F. CONCLUSION. At the beginning of this article, it was pointed out that the text of the NT contains more variants than that of any other body of ancient literature. It is generally considered that the task of deciding among these variants is the task of the textual critic. His task, it is usually said, is to choose that reading which, among all those to be found in the various sources, is most likely to be the original or most primitive form. To be a textual critic in this limited sense, however, is not enough for a NT scholar. If he were working on the text of a Greek or Latin classic, or, indeed, if he were working on the text of a document from any other body of sacred literature, he could function as a technician and

nothing more. The NT textual scholar who is working from within the Christian tradition must be more than a textual critic in the narrow sense of the word. He must be, in a certain sense, not only a textual critic but a church historian, a historian of Christian thought, and a theologian as well. The textual critic who works from within the Christian tradition works, not with documents which are like all other ancient documents, but with documents which are for him scripture, and his attitude toward that scripture is determined by the time and place and religious community from which he comes.

If the textual critic happens to be a Protestant, his task is complicated by the fact that he has to work with MS materials which were produced by those whose attitude toward scripture was vastly different from his own. He may be fully cognizant of the fact that the writers of the NT books were proclaiming the faith of the church as it was their faith; that they were concerned with the present, their present; that they selected from the already growing tradition of the church, both oral and written, those items in that tradition which would enable them to "bear witness to the revelation of God"; that they did not tell us all that had happened, nor did they tell us all that the church had thought and said; or, as someone has said, that "they did not scrape the bottom of the barrel." He may also be fully aware of the process by which the NT books were finally accorded canonical status. But what the Protestant text historian, with his post-Reformation attitude toward scripture, may not be aware of, or at least what he may not give due consideration to, is the fact that tradition and scripture, after the autographs were written and after they were accorded canonical status, continued to stand side by side, each supplementing the other, and each influencing the development of the other.

The task of the textual critic is at least a fourfold one:

a) The textual critic must fully collate, carefully study, and classify all the thousands of Greek MSS, MSS of the versions, and quotations of the Church Fathers. The completion of this task will, of course, require the combined labors of several generations of scholars. The only consolation is that if this work is done accurately and well, it will not have to be done again.

b) The textual critic must reconstruct the text of the NT autographs. If this proves to be impossible, he must strive constantly to approximate the autographs as closely as possible. But to do this, he must develop a new theory and a new method to supplant the largely discredited genealogical method of the past. The autographs must be recovered because the NT books are the documents which bring us closest to the historical events which are the great doctrines of the Christian faith. These historical events—the Incarnation, the Crucifixion, and the Resurrection—may all be subsumed under one, the "Christ event," which is the source and the norm of the life of the church. We are put in direct touch with the primitive church's experience of that event through the documents—the books of the NT—which she produced.

c) The text historian must reconstruct not only the text of the autographs, but many other texts as well.

The type of text represented by Codex Bezae was scripture for some Christians at some time, as was the type of text represented by Sinaiticus and Vaticanus. Even the late medieval MS that was used by Erasmus as printer's copy was scripture for some. As complicated as is the history, e.g., of the so-called Neutral text, the textual critic's task would be a fairly simple one if he had but to recover such easily distinguishable texts as those that are known as Neutral, Western, Caesarean, and Koine. But, to complicate his task, he finds that he has to recover many texts of but portions of his documents. In other words, his documents have been altered piecemeal. One MS, e.g., may show the result of intentional alteration in one pericope under the influence of some particular time and place, and in another pericope under the influence of some entirely different time and place.

d) The textual critic must place some evaluation upon the readings which he finds in his documents. He might well venture to say that a certain reading can be accepted, not as an original reading, but, nevertheless, as a part of the NT, because it comes to him in the stream of tradition. The textual critic is better equipped to pass such value judgments on texts or readings than is anyone else. Supposedly he knows the Greek MSS, the versional MSS, and the quotations of the Church Fathers. Supposedly he is at home in church history, the history of Christian thought and theology. Why then should he not be urged to do more than work on the assumption that the oldest NT is necessarily the best NT? The textual critic should take it upon himself to give to his contemporaries not only an original text but also many readings which have been examined and criticized in the light of the tradition of the church and of the underlying themes of the Bible. These readings and these texts need not be only the oldest possible texts and readings. If they proclaim the faith of the church, they are scripture.

THARA. KJV NT form of **TERAH**.

THARSHISH. KJV form of **TARSHISH**.

THASSI thās'ī [Θασσί, zealot; Vulg. *Thasi*] (I Macc. 2:3). Surname of Simon, one of the five sons of Mattathias (cf. Jos. Antiq. XIII.i.2). Following Jonathan's defeat at Ptolemaïs and his ultimate death, Simon, the last survivor of the "glorious brothers," negotiated a treaty for Judean independence and became the founder of the Hasmonean Dynasty.

THEATER [θέατρον]. Structures taking advantage of natural land formations were designed as early as the fifth century B.C. in Greece for the presentation of dramatic performances which issued from the religious songs and dances in honor of Dionysus. The municipal theater also served as a center for the assembly of citizens (Acts 19:29-41). In its metaphorical use the Greek noun and corresponding verb for "theater," denoting the play itself, are found both in the NT (I Cor. 4:9; Heb. 10:33) and in Stoic teaching (Epictetus *Discourses* II.19, 25; III.22, 59).

1. **History**. Rival dramatic contests, held annually at the chief festival of the god Dionysus in Athens during the time of Peisistratus, involved choric readings and a spoken dialogue between the chorus leader and a person called the ὑποκριτής, or "answerer" (see **HYPOCRISY**). Dramatic action, made possible by the addition of several answerers and the introduction of themes drawn from national history or folklore, flowered into drama or τραγωδία (lit., "goat song"). Comedy, which had its origins in odes called κωμῳδία sung to Dionysus at vintage time, often caricatured political events and personages of the day. In the Hellenistic age both tragedies and comedies were produced in quantity and presented before large audiences; there arose the so-called New Comedy, which did not use the chorus, and which took the form of a comedy of manners. Menander (died 292 B.C.), the best-known comic dramatist of the time, gave bawdy descriptions of private life, which have influenced drama up to the present time. The apostle Paul quotes from Menander's comedy *Thais* in I Cor. 15:33.

2. **Buildings**. Hellenistic theaters were built on natural ground slopes, with tiers of seats cut from rock, stone, wood, or marble slabs, arranged in ascending concentric crescents and separated into two or more sections by gangways. Unlike the amphitheaters, which were enclosed about an elliptical center or arena, the theater auditorium (*cavea*) was semicircular in form, with a circular orchestra or chorus space in the center and a raised wooden stage for the actors. The best-preserved theater of this type

53. Ancient Roman theater at Leptis Magna, ca. eighty miles from Tripoli, with its semicircular colonnade around the top

is that at Epidaurus in the Peloponnesus, dating from the fourth century B.C., which may have accommodated up to fourteen thousand spectators.* Roman theaters were often complete buildings; often the larger theaters had partly roofed auditoriums and semicircular orchestras with roofed stages.* The ruins of three great theaters at Rome date from the first century B.C. The amphitheater as the scene of spectacular professional combats finds first mention ca. 30 B.C. Pl. XXVIIIa; Figs. THE 52-53; NAB 5.

3. **The NT period.** Herod the Great, loyal patron of the imperial cultural program, built theaters in Caesarea (recently discovered by Israeli archaeologists), Damascus, Gadara, Kanatha, Scythopolis, and Philadelphia,* where impressive ruins survive. According to Josephus (Antiq. XV.viii.1), Herod built a theater and an amphitheater in Jerusalem. A theater S of this city was discovered by C. Schick in 1887, but it is not certain that it is Herodian. Quinquennial and quadrennial games in the emperor's honor were celebrated in chief Palestinian towns throughout the Roman period, especially in the third and fourth centuries A.D. Remains of Greek and Roman theaters survive today in the Pauline cities of Philippi,* Athens, Corinth, Miletus,* and Ephesus* (cf. Acts 19:19, 31); the latter is said to have accommodated 24,500 persons. Figs. RAB 2; PHI 47; MIL 47; EPH 31.

THEBES thēbz [Ⲛⲓ; LXX Διὸς πόλις, see below]; KJV NO nō. The chief city of Upper (S) Egypt and capital of Egypt during most of that nation's periods of political unity from the Middle Kingdom (ca. 2000 B.C.) to the Assyrians' invasion under Ashurbanipal (ca. 661 B.C.).

In Egyptian texts Thebes is commonly referred to simply as *niwt*, "the City," but also, more explicitly, as *niwt rsyf*, "the Southern City," and *niwt 'Imn*, "the City of Amon." The simple designation *niwt* is reflected in the Hebrew transcription Ⲛⲓ, while *niwt 'Imn*, referring to the fact that Thebes was the cult center for the worship of Amon, is echoed by Nah. 3:8: *Nō' 'Āmōn*. Extrabiblical attestations of the word *niwt*, both as the name of Thebes and otherwise, include (a) *Ni-i'* in the Late Assyrian annals; (b) Old Coptic *Ne*; (c) and less specific forms such as *-nē*, *-nā*, and *nau-*, elicited from the compound names *Panās*, *Psousennēs*, and the hieroglyphic spelling of *Naukratis*. These various forms have led scholars to believe that the Hebrew vocalization of *Nō'* is incorrect, but recent investigations in Egypto-Coptic phonology indicate that the Hebrew spelling may well be correct and may reflect an earlier Egyptian pronunciation of *Nu'wa(t)* or similarly. The problem is further complicated by uncertainty on the part of Egyptologists re-

guarding the precise consonantal reading of the Egyptian word itself.

The LXX renderings of this place name are not consistent. Twice (Ezek. 30:14, 16) *Nō'* is translated by Διὸς πόλις, "the City of Zeus," the name applied to Thebes by the Greeks after the identification of Zeus with Amon. The three other occurrences of *Nō'* in the MT are not so translated by the LXX: (a) in Ezek. 30:15 LXX, Μέμφις implies *ἡ*, not *α*, in the Hebrew *Vorlage*; (b) in Jer. 46:25—G 26:25, τὸν Ἀμμὼν τὸν υἱὸν αὐτῆς suggests that instead of אֲמוֹן אֲנִי, "Amon from Thebes," there stood in the text אֲמוֹן בְּנֵי אֲמוֹן, "Amon in [or from] Thebes," and that this was misconstrued as בְּנֵי אֲמוֹן, "Amon her son"; (c) in Nah. 3:8 LXX, μερίδα results apparently from a confusion between אֲנִי, from Thebes, and the word מֵתָה, "part, portion."

During the Eleventh Dynasty, Thebes, termed the world's first great monumental city, rose from relative obscurity to become the capital of Egypt. The city lost this prominent position with the coming of the Hyksos at the close of the Middle Kingdom and regained its supremacy at the beginning of the New Kingdom. In both these instances Egypt was reunited from the S following a period of local rule and political confusion. A third but less impressive resurgence took place under the Ethiopian rulers of the Twenty-fifth Dynasty (715-663 B.C.), but the short-

57. The temple of Deir el-Bahri, at Thebes

lived success of these kings before the onslaught of the Assyrian invasion of Ashurbanipal was crowned

with the sack of Thebes by the Assyrian ruler ca. 661 B.C. The prophet Nahum is certainly speaking with reference to this most thorough destruction of Thebes when he announces the coming destruction of Nineveh with the words:

Are you better than Thebes
that sat by the Nile . . . ?
(Nah. 3:8).

Thebes is surrounded by an unrivaled aggregate of sacred precincts and temples, attesting the religious importance of the city. Among the more impressive of these monuments are (a) at Karnak, the temples of Monthu, Khons, Amon, and Mut; (b) at Luxor, the temple of Amon-Min, chiefly the work of Amenophis III and Ramses II; (c) across the Nile (on the W bank), the magnificent Deir el-Bahri temple of Queen Hatshepsut, the Qurneh Temple of Seti I, and the Ramesseum of Ramses II.

THEBEZ *thē'biz* [תִּבְז]. A town which was attacked by Abimelech and where he was fatally wounded by a woman who threw an upper millstone on his head (Judg. 9:50; II Sam. 11:21). Because the attack upon Thebez is described in connection with Abimelech's attack upon the Tower of Shechem, it is probable that Thebez had previously been under his jurisdiction and had joined in the revolt against him instigated by the men of Shechem.

Thebez is usually identified with Tubas, ca. thirteen miles NE of Shechem. Important roads from Shechem and Dothan converge at this point on the way to the Jordan Valley; and Abimelech, in addition to seeking revenge on the people of Thebez, was perhaps also interested in controlling a place of strategic military and commercial value. THEOCRACY *thē ōk'rə sī*. The government of a state by God; also, a state so governed. The word is not biblical in its origin, but the idea was one of the

main tenets of the Hebrew people during their historical existence. The word "theocracy" occurs for the first time in Josephus (Apion II.xvi), who contrasted it with other forms of government such as oligarchy, monarchy, and republic. The concept of theocracy involved the thought of God as the law-giver, judge, and ruler of Israel and, in a wider sense of the word, of the world. God's reign in human history does not appear as unmediated theocracy. But biblical hope envisions God's government of his people also at the consummation of history (see *ESCHATOLOGY OF THE OT*). These eschatological expectations follow two patterns. In the first pattern the eschatological theocracy appears as a direct, unmediated reign of the Lord (cf. Isa. 2:2-4; 24:23; Zeph. 2:8-13; see *KINGDOM OF GOD*). In the other pattern the eschatological monarchy is conceived to be under the theocratic vicegerency of the Messiah (see *MESSIAH [JEWISH]*; cf. Isa. 9:2-7—H 9:1-6; 11:1-9; Amos 9:11). Here only the theocracy within history is considered.

Within Israel's history, three different kinds of theocracy can be distinguished: (a) the charismatic, (b) the monarchic, and (c) the priestly theocracies. These roughly correspond to the three main periods of Israel's history, the premonarchic, the monarchic, and the postexilic. There are some scholars who identify theocracy with the priestly rule and thus recognize its existence only in the postexilic period. Others think that a theocratic outlook presupposes the rule of an earthly monarch, from whence the idea of divine rule could be derived, and they date the origin of the concept of theocracy as coincident with the rise of the Israelite monarchy. Yet it seems that the recognition of the Lord's reign over his people is premonarchic in its origin, for in a kingless society the Lord could easily be conceived as the single ruler of Israel.

1. **Charismatic theocracy.** God was the ruler and the king of Israel from the moment when, in the covenant of Sinai, the people became a "kingdom of priests" and a "holy nation" of the Lord (Exod. 19:6), and promised allegiance to the Lord (vs. 8). At Sinai, Israel entered into the covenant which transformed them into the covenantal people. The people became an amphictyony, a religious confederation united in reverence of and service to Yahweh. The system of the twelve tribes of Israel can be meaningfully interpreted only as a premonarchic amphictyony (cf. Gen. 29:31-30:24; 49:2-27; Num. 26:5-51; Deut. 33:2-29). This religious league was the only organization, as far as is known, transcending the tribal limitations of the premonarchic Israelites. The king of this politically unorganized amphictyony was the Lord (Judg. 8:23; I Sam. 8:7). Accordingly, the central sanctuary of the Israelite amphictyony was nothing other than the ark, which was recognized to be the empty throne of the Lord (Num. 10:35-36; Jer. 3:16-17). The amphictyony did not have a political or military organization controlled by some central, earthly organ of the ruling Lord. Only occasionally, in time of national disaster, did the Spirit of the Lord come upon some elected hero who, through the divine gift of grace (charisma), was able to perform the act of military deliverance (e.g., Judg. 3:10; 6:34). These heroes, generally

called "judges," were charismatic leaders who, under the influence of the Spirit of the Lord, served as his representatives, and, in forming the nation's history, they brought the Lord's theocratic reign to fulfilment. They were the organs of Yahweh's reign, fought his wars (cf. Judg. 4-5), and appeared as deliverers of his chosen people (Judg. 6:14; 8:22). These men, under the influence of the Spirit of the Lord, had an almost prophetic certainty concerning the will of the Lord, as can clearly be perceived by their rallying proclamation: "Follow after me; for the LORD has given your enemies . . . into your hand" (Judg. 3:28; 7:7, 9, 15; 8:7).

Apparently there were, occasionally, amphictyonic wars, during which the whole tribal federation was called upon and acted as one (Judg. 4-5). The Lord and Israel were inseparably connected. The ancient "Song of Deborah" (Judg. 5) witnesses to this prevalent theocratic conviction of the age. Yahweh was not merely the God of Israel, but his triumphs were identical with the triumphs of Israel (Judg. 5:11). The marching army was the people of Yahweh (vs. 13); they marched down for him against the mighty (vs. 13); Meroz was cursed because its inhabitants did not come "to the help of the LORD" (vs. 23).

Besides the "judges," the prophets and the priests who proclaimed the divine will might be regarded as organs of the premonarchic theocracy. In the war against Sisera, the prophetess Deborah appeared beside Barak the judge. She called Barak to be the organ acting for God's deliverance (Judg. 4:4-7). The priests, as proclaimers of the Lord's will, were consulted (Judg. 20:28; I Sam. 14:41). Characteristic of this period is the fact that there was no institutionalized representative of the theocracy.

2. Monarchic theocracy. At the time of the introduction of kingship into Israel, there was opposition to the introduction of the monarchy. The introduction of the earthly kingship appeared to some as an apostasy which attempted to dethrone the Lord and to replace his freedom to elect instruments for his theocratic service with a dynastic sequence of kings (I Sam 8:7; 10:27). This antimonarchic, protheocratic attitude remained vocal enough to be echoed by the eighth-century prophet Hosea (Hos. 9:9). The apostasy of the people in making kings was emphatically denounced by this prophet (Hos. 8:4; 13:10-11). A slightly different protheocratic outlook can be discerned in the antimonarchic source of the books of Samuel. The opposition to the earthly kingship is prevalent, but there is also the conviction that the king was chosen by the Lord (I Sam. 12:12-15). To be sure, it was against the Lord's will, but he had consented, even if with resignation (I Sam. 8:9). Samuel the prophet claimed the right and had the power to reject Saul from being the king in the name of God (I Sam. 13:14; 15:23). The prophetic appointment of the king was recognized in the Northern Kingdom even centuries later, as Jehu's anointment proves (II Kings 9:1-13).

The king was the representative of Yahweh's theocratic rule; therefore he was not called "king" in religious context. His titles were "the LORD's anointed" (Pss. 2:2; 20:6—H 20:7; etc.) and the "prince" (נָגִיד) of the Lord (I Sam. 10:1; II Sam. 5:

2). The king ruled over the Lord's heritage (I Sam. 10:1); the people of Israel were not the king's but Yahweh's people (I Sam. 13:14; II Kings 9:6); the king is Yahweh's shepherd (II Sam. 5:2). Even the royal throne itself was considered the throne of the Lord (I Chr. 29:23). The kingship of the king is derived from the Lord's adoption of the king as his son (II Sam. 7:14; Ps. 2:7). In the case of Judah, the Lord pledged his blessing (in the so-called dynastic oracle) to the house of David (II Sam. 7). Thus, a new concept, the dynastic charisma, appeared beside the divine appointment of a single person for kingship. However, the Lord remained the king who sat high and lifted up (Isa. 6:1); his kingship was accepted as a tenet of faith (Isa. 43:15; 44:6; Zeph. 3:15). In Ezekiel's plans for the restoration of the nation, the king is repeatedly called "prince" (נָשִׂא; Ezek. 34:24; 46:12). The Deuteronomic legislation defines the king's duty as that of a pious student of the commandments of the Lord (Deut. 17:14-20).

3. Priestly theocracy. In the early postexilic period, Zechariah had envisioned equal roles for the king and the priest as the Lord's theocratic representatives (Zech. 4:14; 6:12-13), but the evidently deliberate exchange of the name of Zerubbabel the prince for Joshua the high priest in 6:11 mirrors the history of the subsequent years. The restoration of the religious community in Judah, authorized by Cyrus' decree (Ezra 6:3-5), had enhanced the importance of the priest. The absence of a Jewish monarch during the Persian occupation contributed to the increasing of the priest's authority. The title "high priest" appears for the first time in reference to the postexilic Joshua (Hag. 2:2; Zech. 3:1). During the Persian, Hellenistic, and Roman periods, the Jewish hierocracy maintained its role as arbiter of, and mediator in, spiritual and religious affairs. The theocratic views of the NT community were predominantly eschatological. See KINGDOM OF GOD.

THEODOTION *thē'ō dō'shōn*. According to ecclesiastical tradition, a second-century translator of the OT into Greek. Nothing certain is known of him. Irenaeus identifies him as a proselyte from Ephesus; Epiphanius, as a native of Pontus, who after following Marcion for a period of time became a Jewish proselyte. Jerome (probably through confusion with Symmachus) calls him an Ebionite.

His version (or revision) became exceedingly popular and was used most heavily by Origen for filling in LXX lacunae in his Hexapla. In fact, the text of

Theodotion (Theod.) actually supplanted that of the LXX in the case of Daniel, and large lacunae in other parts of the LXX are filled in with Theod. in the MSS (e.g., that of Job).

The origins of the version are, however, completely obscure. NT writers quoting the Greek OT often quote Theod. rather than LXX (cf. the numerous quotations from Daniel in Revelation). Thus there was obviously a Theodotionic text before the second century. Possibly there existed by NT times two Greek versions of the OT, to one of which the name of a second-century Theodotion later became attached. Another possibility is the suggestion that this pre-Theodotion may have been an oral Targ. which existed for correcting LXX and for filling in lacunae. This would then later have been put into writing by Theodotion.

THEODOTUS *thē öd'ä tös* [Θεόδοτος] (II Macc. 14:19). One of the ambassadors (the others being Posidonius and Mattathias) sent by Nicanor to Judas Maccabeus for the purpose of establishing peace. The Greek phrase (*δοῦναι καὶ λαβεῖν δεξιὰς*), meaning literally "to give and receive right hands," is translated in the KJV as "to make peace," in the RSV as "to give and receive pledges of friendship" (cf. Gal. 2:9). J. C. SWAIM

***THEOPHANY** [Θεοφάνεια, *from* Θεός, God, and φαίνειν, to make shine, to show; Lat. *theophania*]. An appearance or transient manifestation, unsought, of a divine being or of God to man. The interpretation of the biblical material in the light of such a definition suggests that this material may be graded as follows. There is (a) the theophanic material of the temporary manifestation; then (b) the material relating to the so-called "tabernacling presence" through the "name" and "glory" conceptions. This material is not strictly theophanic material, for it suggests a more permanent form of manifestation—almost a dwelling of God among men. There is (c) the most advanced material, which is concerned with the Incarnation, the manifestation of God in an entire human life. This article is concerned only with the first kind of material. For the second kind, see PRESENCE.

Transient appearances are recorded almost without detail in Gen. 3:8, where the voice of Yahweh walks in the garden and asks questions and pronounces judgments; in the Hagar stories at 16:7-14; 21:17, though the voice from heaven in the latter passage and again in 22:11, 15, hardly amounts to theophanies; and in the Balaam story in Num. 22:21-35, where the angel of the Lord is an obstructing presence. Similarly P uses the characteristic word "appear" without further detail (cf. Gen. 17:1; 35:9; Exod. 6:3). The attacks on Jacob (Gen. 32:22-32) and on Moses (Exod. 4:24-26; cf. Gen. 38:7) are really examples of skeuomorphy, whereby, as in the first of these passages, an old story of a defeated demon has been transferred to Yahweh, and whereby as in the latter two passages, illness and death have been interpreted as acts of Yahweh. Likewise dreams (Gen. 20:3; 28:10-17) do not properly rank as

theophany, but it is not always possible to distinguish between vision and theophany.

Thus the theophany in Gen. 15 is described as a vision. There is the characteristic formula: "Fear not," to introduce Yahweh's words. Abraham, deeply asleep after dark, sees a smoking fire pot and a flaming torch pass between the halves of the slain covenant animals. The deep sleep of vs. 12 is often a supernatural sleep (cf. e.g., Gen. 2:21; Job 4:13=33:15), and smoke and FIRE (Gen. 15:17) are characteristic of theophany. Yet the vision of the word of the Lord (15:1), the deep sleep (vs. 12), and the pot and torch symbolism (vs. 17) remove the story from the category of theophany. Similarly Gen. 18 is a story that belongs rather to the class of divine metamorphoses. The polytheistic background of the tradition is clear. Three men appear to Abraham, and the Lord appears to him and speaks. Either a Yahweh-appearing and -speaking story has been superimposed upon a polytheistic story of three gods' appearing as men, or else Yahweh is disguised in one of these three men.

1. Theophanies in nonhuman form
2. Theophanies in human form
3. Literary theophanies
4. Theophanies in the NT

Bibliography

1. **Theophanies in nonhuman form.** Exod. 3 describes how Yahweh's angel appeared to Moses in a flame of fire in a bush. The theophany thus includes a vision of the god and an account of his words (audition). No doubt, in many of these angel-of-the-Lord stories, the angel is a later interpretation and the story was first told of Yahweh himself. Characteristic in this passage is the flame of fire (cf., e.g., Exod. 13:21; 19:18; 24:17; Lev. 10:1-3; Num. 11:1-3; 16:35). The appearance of fire is characteristic of the Elijah stories (I Kings 18-19; II Kings 1; 2:11) and in the "literary" theophanies and in the NT (see §§ 3-4 below). Most of the references to the GLORY of God are not truly theophanic, but the sudden punishing eruptions of the glory (Num. 14:10; 16:19; 20:6) are parallel to the sudden fire noted above. Thus the fire, like the glory, is stationary in the sanctuary, but suddenly erupts to execute Yahweh's anger.

"The cloud" (Exod. 24:15-18; 40:34-38; Num. 9:15-23; etc.), with the article, describes the tabernacling presence rather than the theophanic manifestation (see PILLAR OF CLOUD AND FIRE). Similarly the "name" material is more characteristic of the tabernacling presence, because the "name" dwells rather than appears. Yet in Isa. 30:27-28 Yahweh's name comes from the E, burning and in smoke, to judge.

In the majestic theophany of Exod. 19 Yahweh comes personally to Israel disguised in the cloudiest(?) part of the cloud (vs. 9). To a people ritually prepared (vss. 14-15), at the appointed time (vs. 16), to the accompaniment of thunders, lightnings, thick cloud (no article), and a continuing trumpet, Yahweh came down in fire upon the mountain to speak. The people are not allowed to go up, lest they gaze, but Moses goes up. Natural elements, cultic features, and mythological language combine to set forth the supreme theophany of the OT. From this and other theophanic passages the following characteristic fea-

tures emerge: the divine initiative; various revelatory formulas; the encounter and the relationship between God and the human party; the account of the purpose of the theophany and the reverential awe of the human party.

2. Theophanies in human form. The Sinai theophanies are the real theophanies of the OT. Exod. 24:9-11 records how Moses, Aaron, Nadab, Abihu, and seventy Israelite nobles saw the God of Israel. The implication is that they saw a form, and the reference to feet suggests a human form. The story is noteworthy in that they beheld God and were quite unharmed. This is contrary to the view that to see God or even hear his voice (Deut. 4:33; 5:24) was dangerous, if not fatal (e.g., Exod. 33:20; Judg. 13:22; etc.); though, of course, as these passages also show, men often saw and heard God and lived (Exod. 3:6; 19:21; Num. 12:6-8; Judg. 6:22-23; Isa. 6:5). The story is unique in that it is the only theophany in the OT which is silent—no words of Yahweh are recorded. It is a theophany and not an audition. Perhaps the story is simply intended to set side by side important physical and spiritual activities.

In Exod. 33:17-23 Moses is promised a sight of God's back, but not his face (his glory?); but 33:11, like Gen. 32:30; Num. 12:6-8; Job 4:12-16, tells a different story. In Num. 24:4; Isa. 6; Ezek. 1; Dan. 7, the human form of God is seen in a vision or dream—i.e., only partially theophanic material. There are, besides, many stories which speak of Yahweh's appearing with human attributes as the "angel of Yahweh" or "of God." These are really stories about Yahweh, as the narratives often indicate (cf. Gen. 16:13; Exod. 3:2, 5-7; etc.).

3. Literary theophanies. Judg. 5:4 (cf. Ps. 114:5-8) speaks of the earthquake and the thunderstorms. Natural features are also seen in Pss. 18:7-15; 29; 68:7-9; 77:16; 97:4-6; 144:5. It is difficult to see how these can be explained by cultic practices only. For eschatological theophanies see, e.g., Isa. 30:27; 63:1-6; Zeph. 1:14. See also Deut. 33:2; Hab. 3.

4. Theophanies in the NT. The NT refers in such passages as Acts 7:30; Heb. 12:18, 29, to OT passages. There are also the accompaniments of theophany, as in (a) the fire (Acts 2:3; I Cor. 3:13; II Thess. 1:7); (b) angels (II Thess. 1:7). There are, of course, a number of angelophanies in Acts (5:19; 8:26; 10:3; 12:7; 27:23; cf. Matt. 4:11=Mark 1:13; Luke 22:43); (c) cherubim of glory (Heb. 9:5); (d) glory (Luke 2:9; I Cor. 15:40; II Cor. 3:7). In reality there are no true theophanies in the NT, for their place is taken by the manifestation of God in Christ (John 1:14; Col. 1:15; Heb. 1:1-3). The second advent of Jesus Christ is virtually an impending theophany, and is described in the terminology of theophany (Matt. 16:27; 24:30; 26:64; Mark 8:38; 13:26; Luke 9:26). The resurrection appearances and the Transfiguration are not properly theophanies.

THEOPHILUS $\theta\acute{\epsilon}\phi\lambda\acute{o}\varsigma$ [Θεόφιλος, friend of God]. The person to whom Luke (1:3) and Acts (1:1) are addressed. These books are introduced by primary and secondary prefaces such as are characteristic of extended and well-written Hellenistic writings. Theophilus has the honor of being the only person mentioned in the NT to whom writings have been dedicated.

Who was Theophilus? No answer is available except on the basis of conjecture from the literary conventions of the time and the purposes for which Luke-Acts may be supposed to have been written.

It has been supposed, on the one hand, that Theophilus was not an individual person, but any "friend of God." In this case, Luke-Acts would be written for all devout Christians who were eager for more detailed and accurate information concerning the origin, history, and meaning of their faith. In support of this supposition it may be argued that Luke certainly expected the generality of Christians to be his chief readers, and that, so far as we know, at this time Christians wrote only for Christians.

On the other hand, and more probably, Theophilus is taken to be a real person. The name was a common one used by both Greeks and Jews. Writings were commonly dedicated to real persons, not fictitious or symbolic ones, even though the contents of the book may have been no particular concern of theirs, and the reading of it was certainly not intended to be limited to them. Also, if Theophilus was not a real person, he would hardly have been addressed as "most excellent" or "noble."

But if a real person, who was Theophilus? Sometimes the two possibilities have been combined in the view that, although Theophilus pointed to a real person, it was not his real name. In this case it may be thought of as a cover-up name, a prudential pseudonym intended to conceal the real identity of the individual in order to protect him from the persecution which might readily fall on any pagan or Christian official of high standing who would allow his name to be used in connection with a movement regarded as offensive if not subversive. It has been argued that the person meant was a Roman official such as a governor or procurator (for Luke's use of "most excellent," see Acts 23:26; 24:2; 26:25); or some person (perhaps several) of standing in Rome whose influence was sought for Paul's trial; or even the magistrate who was due to hear Paul's case when it came up for final adjudication. An ingenious proposal, which is usually mentioned but rejected as running too far beyond the evidence, is that The-

ophilus was the secret name by which the Roman church knew the cousin of the Emperor Domitian, T. Flavius Clemens, whose wife Domitilla was an adherent if not a baptized member of the church, and who himself may have had some instruction in, or been attracted to, the Christian faith.

If any of these four theories is accepted as true, Theophilus can hardly have been a Christian. Nevertheless, this point remains in dispute, and there are those who speak of him as a "Christian of prominence." The validity of this description depends on Luke's understanding of the words "most excellent" (κράτιστος; Luke 1:3) and "you have been informed" (κατηχήθη; vs. 4), and also on one's judgment as to why Luke invokes Theophilus. On the one hand, it is urged that a Christian would not have addressed a brother Christian by so honorific a title as "your excellency"—whence a surmise that Theophilus was baptized between Luke's Gospel and Acts. On the other hand, it is urged that κράτιστος is not always used in an official sense; it need not refer to equestrian rank; it occurs in conventionally formal, friendly, or flattering speech; and therefore Christians could have so addressed one another.

Likewise the significance of κατηχέειν, "to instruct," is disputed. Does it mean that Theophilus had been under instruction as a catechumen and was on the way to being, or was now, a Christian? Or is the word much less technically used? Some think this word precludes Theophilus' being a pagan, yet so much weight can hardly be put on it. On the other hand, it has been proposed that here it may well not mean Christian instruction at all but on the contrary imply that Theophilus had received hostile reports of Christianity, which Luke writes to correct.

Finally, it is proposed that the fact that Luke's literary preface could have had slight meaning for the Christian communities of ca. A.D. 90 shows that Luke wrote for two markets: for the Christian community, and for the private reading of people of literary education. Theophilus represents this cultured class. He may or may not have been a Christian. In any case, as a person of high importance, whether of rank or not, he would be obligated to aid in the distribution of the work dedicated to him.

The chief importance of the variety of points of view presented in the above debates over Theophilus lies in the reflections on the early church which they stimulate. Who Theophilus was remains obscure.

THERAS thir'əs. Apoc. alternate name of AHAVA.

THERMELETH. KJV Apoc. form of TEL-MELAH.

***THESSALONIANS, FIRST LETTER TO THE** thēs'ə lō'nī ənz [θεσσαλονίκεις]. A letter written by the apostle Paul and his associates Silvanus and Timothy to the church which they had recently founded at Thessalonica; now placed as the thirteenth book of the NT canon. It is generally regarded as the earliest Pauline letter extant.

The theological content is relatively slight, but it is plain that a rich complex of doctrine lies beneath the surface, assumed to be the common basis of belief. The most striking feature is the dominance of the expectation of the return of the Lord Jesus in heavenly glory, toward which all the thought is oriented. Apart from and also through the medium of the teaching and exhortation, the letter is of exceptional human interest for the attractive light which it throws upon the character and personality of the great apostle and for the singularly vivid picture it gives of the joy, confidence, mutual love, and assured hope of future blessedness which mark the life of the nascent church. The very absence of controversy enables the positive aspects of the new faith to shine forth all the more clearly.

1. **Authorship.** The authenticity of this letter is no longer seriously challenged and scarcely requires to be discussed. It is, in fact, quite impossible to account for it as a pseudonymous work of a later period. The very slightness of the theological exposition, once advanced as ground for denying that Paul could be the author, is, on the contrary, a powerful argument against pseudonymity—surely the composer of a pseudepigraph would have something weightier than this to attribute to the great apostle. There is no sign here of a theological ax to grind! The spontaneous and open warmth of the personal greetings and references is sufficient of itself to convince us that we are reading a genuine letter, not an artificial literary construction. The vividness of the eschatological expectation, undimmed by any trace of disappointment over the delay of the Parousia, speaks unmistakably for a date in the first generation of the Christian mission; and it is inconceivable, above all, that a later writer, composing in Paul's name after his death, should represent him as including himself among those "who are alive, who are left until the coming of the Lord" (4:15). No grounds of objection to the Pauline authorship can be laid in peculiarities of vocabulary or style, and the lack of doctrinal exposition is a problem only if we make the mistake of regarding Paul's letters as theological treatises. External evidence is less abundant than in the case of the major letters, but wholly supports the case for acceptance. First Thessalonians is found (in fragmentary form) in the earliest MS of the letters which

we possess, the Chester Beatty Codex of *ca.* A.D. 200; and it is included in every canonical list that has come down to us, and in the oldest versions; it is cited by name in Irenaeus (*ca.* 180), and by countless writers after him.

A question of minor importance is the part that may be assigned to Silvanus and Timothy as co-authors. The first person plural is used throughout the letter, except for a few passages where the writer slips into the singular (2:18; 3:5; 5:27); in the first of these, he identifies himself as Paul ("We wanted to come to you—I, Paul, again and again—but Satan hindered us"). It is not to be taken for granted that Paul mentions Silvanus and Timothy merely out of courtesy. Both of them were men of weight. Timothy was, indeed, a very young man—years later Paul reminds the Philippians "how as a son with a father he has served with me in the gospel" (Phil. 2:22; cf. Acts 16:1-3); but he was already capable of being entrusted with a delicate and dangerous commission (I Thess. 3:1-6), and Paul does not hesitate to call him "God's fellow-worker in the gospel of Christ" (3:2 [D, and others]); see § 6 below; see also TIMOTHY, TIMOTHEUS). Silvanus, who is almost certainly to be identified with the Silas of Acts (15:22-18:5), had been a tried and trusted leader of the mother church in Jerusalem and was Paul's partner, rather than his assistant, in the conduct of the mission. (See SILAS, SILVANUS.) The use of the plural, then, is to be taken seriously as reflecting Paul's sense that all the responsibilities of the mission and of the teaching that still requires to be given are shared with his colleagues, junior and senior; he writes as a member of a group that is engaged in a common task and works in a true partnership. At the same time, the letter is substantially the work of Paul, and it is his accents that sound through its words. The writing is too spontaneous and spirited to allow us to suppose that its phrases were hammered out in a committee of three.

2. Destination: Thessalonica and its church.

The church of the Thessalonians, to which the letter is addressed, had been founded by Paul and his colleagues only a few months, perhaps only a few weeks, earlier. They had come to Thessalonica from Philippi, the scene of their first mission in Macedonia, where they had established a loyal community of believers before being forced to leave the city by the governing authorities. They had been brutally treated at Philippi—assaulted by the crowd in the streets, beaten with rods at the command of the magistrates, and thrown into prison (Acts 16:22-24; cf. I Thess. 2:2). For all that, they were not discouraged from continuing work in Macedonia. Once released from prison, their only thought was to penetrate more deeply into the province, and they made straight for its capital city, Thessalonica.

The city of THESSALONICA had great strategic importance, which it has retained to our own day; known now as Saloniki, it was a base and supply port for the Allies in the First World War, and again, briefly, in the Second. With a good natural harbor on the Thermaic Gulf, it carried the trade of the valley of the Strymon and of three lesser rivers which flow into the same gulf nearby; and it lay on the Via Egnatia, the great Roman highway which

was the principal artery of communication between Rome and her E provinces. Here the proconsul, the Roman governor of Macedonia, had his headquarters. Its fidelity to the cause of Octavius and Antony in the conflict which followed the assassination of Julius Caesar earned for it the privileges of a free city; it was governed by its own magistrates, known as "politarchs" (Acts 17:6, 8), with its council and popular assembly. Mingled with the old Macedonian population were considerable numbers of Greeks and Romans and many of other nationalities, including a substantial body of Jews.

It was the Jewish community, with its synagogue, which provided the apostles with their initial avenue of approach to the people of Thessalonica. For in the synagogue they encountered not only the Jews of the city, but a certain number of Gentiles—"devout Greeks," as they are termed in the book of Acts—who had been attracted in some measure to Judaism and had some knowledge of the Scriptures. It was chiefly among these Gentile adherents that the gospel message awakened the response of faith. Jewish converts were few, and the very success of the appeal to the Gentiles aroused jealousy among the Jewish community as a whole and caused it to harden in an ever fiercer opposition to the mission. This hostility at last found expression in violence. The vivid narrative of Acts pictures the rabble of the market place rioting under Jewish incitement, attacking the house in which the apostles were living, and when they could not find them, hustling their host and his friends before the politarchs and accusing them of subversive activities. "These men who have turned the world upside down have come here also, and Jason has received them; and they are all acting against the decrees of Caesar, saying that there is another king, Jesus" (Acts 17:6-7). The upshot was that Jason and his friends were obliged to give security against any further disturbance of the peace; and it was necessary for Paul and Silas and Timothy to escape from the city by night.

The story of Acts leaves us with the impression that the apostles were able to remain in Thessalonica for only three weeks, which were devoted chiefly to work in the synagogue and resulted in the conversion of some few Jews, together with "a great many of the devout Greeks and not a few of the leading women" (Acts 17:4). But Paul's own references to the Thessalonian church seem to indicate a mission that lasted for a considerable time and issued in a church composed in the main of converts from outright paganism. The "devout Greeks" of Acts hardly correspond to Paul's description of his converts as people who "turned to God from idols, to serve a living and true God" (I Thess. 1:9). These words point rather to a mission that has gone out from the synagogue into the streets and lanes of the city and has brought in men and women who had never come under the influence of Judaism. Moreover, the pastoral care with which the apostles had followed up their evangelism (see especially 2:9-12) and the strength of the affection which they had developed toward their converts (2:8; 3:6-10) would suggest, if not absolutely require, a period of months rather than weeks. Again, in its references to the persecutions which have come upon the Christians of Thessalonica, the letter gives no

indication that these were instigated by the Jews. The Thessalonians have suffered at the hands of their own countrymen; it is in Judea, not in Macedonia, that the churches of God have been persecuted by the Jews (2:14). In fact, one would never learn from reading the letter that there was a Jewish community in Thessalonica at all, much less that it had been the center of the mission and had provided the apostles with the nucleus of the church.

It seems probable, therefore, that Acts gives us only half the story. That the mission began in the synagogue and that its first converts were drawn mainly from Gentiles attached to the synagogue—this we need not doubt. But following this initial success, there will have been a much longer period of missionary activity in the city streets, making its approach directly to the pagan population and gradually building up a Christian body in which the initial group of converts from the synagogue became an indistinguishable minority: the church would now consist in the main of people who had “turned to God from idols.” It was the lot of such people to suffer persecution at the hands of their unbelieving neighbors (cf. 3:3-4); no Jewish prompting was needed. It may even be suspected that the author of Acts has exaggerated the part played by Jewish hostility in the expulsion of the apostles from the city; there may be an apologetic impulse at work here, seeking to take advantage of anti-Semitic feeling by suggesting that opposition to the church arose only as a result of Jewish misrepresentations of the gospel and its preachers. At all events, there is nothing in the letter itself to suggest that the life of the church in Thessalonica is affected in any degree by the continuing enmity of the synagogue.

3. Occasion and character of the writing. The apostles had left Thessalonica against their will, forced to escape by night in order to avoid further mob violence and danger to their friends. They could not fail to be anxious about the welfare of the fledgling church, exposed to the continuing attacks of hostile neighbors and deprived of strong and experienced leadership. They had made every endeavor to return—Paul affirms that he himself had wanted to come back, to see them face to face, again and again; but hindrances which he could only ascribe to Satan had made this impossible (2:17-18). They had indeed been hard pressed. At Berea, where they first attempted to renew their missionary activity, they had great initial success; but soon the instigators of the rioting at Thessalonica came to renew their incitements of the street crowds in the neighboring town also, and Paul was again forced to flee. For a time, he was separated from his two companions, leaving them in Berea while he was escorted by sea to Athens (Acts 17:10-15). At length, they came together in Athens, but their concern over the situation in Thessalonica had now become so intense that they made the bold decision to send Timothy back to visit the city in person, to exhort and strengthen the church (I Thess. 3:1-5).

The letter was written immediately upon his return, and is primarily a fervent expression of the relief and joy which possessed the apostles on hearing from him that the church of Thessalonica was standing firm in the face of all it had to endure from

pagan hostility. They thank God for the “work of faith and labor of love and steadfastness of hope in our Lord Jesus Christ” which the converts have so conspicuously maintained (1:2-3). They take pleasure in recalling and dwelling upon the memory of their own sustained and devoted efforts to teach the ways of Christ and to exhort and encourage their followers “to lead a life worthy of God, who calls you into his own kingdom and glory” (2:12); the word of God has worked effectually among them, as is shown by the very persecutions which they have endured. They speak of the depth of their affection and of their concern for the Thessalonian believers and of the great joy that has come to them through Timothy’s good report. “Now that Timothy has come to us from you, and has brought us the good news of your faith and love . . . , we have been comforted about you through your faith; for now we live, if you stand fast in the Lord” (3:6-8). And they pray that God the Father and Christ the Lord may direct their way again to Thessalonica; and that the Lord may bring to fuller development the love and holiness of heart which will make the readers ready for his Parousia (vss. 11-13).

These personal recollections and assurances make up the greater part of the letter, occupying the whole of the first three chapters. The remainder is given to moral instruction along lines that Timothy’s visit had shown to be particularly needed, together with a brief paragraph of an apocalyptic character (4:13-18), designed to remove the fear that believers who had passed away in the interval would fail to have part in the joys and glories of the coming Parousia. This second part of the letter (chs. 4-5) follows up the mission of Timothy. It has been suggested by some scholars that it may have been called forth, at least in part, by a letter brought back by Timothy from the leaders of the Thessalonian church, perhaps seeking guidance more authoritative than could be given by the youthful Timothy. There is, however, no hint of such correspondence in the letter itself, and there is really nothing in its words which could not equally well have been called forth by Timothy’s report on the conditions in the church.

The date of the letter can be determined only in relation to the dating of Paul’s first mission in Corinth; for if Timothy was sent to Thessalonica from Athens (I Thess. 3:1), he must have rejoined Paul and Silvanus either in Athens or, more probably, at the beginning of their mission in Corinth (Acts 18:5). During this mission, Paul was hailed before GALLIO, the proconsul of Achaia (Acts 18:12-17), who held office in 51-52; on the basis of the statements of Acts, then, our letter will have been written in 50 or 51. See CHRONOLOGY OF THE NT.

4. Outline of contents. The letter falls into two main divisions, with the salutation at the beginning and a benediction at the close.

- I. The Salutation, 1:1
- II. Personal, chs. 1-3
 - A. Thanksgiving, 1:2-10
 - B. Retrospect on the mission, 2:1-12
 1. Pastoral labors of the apostles, 2:1-12
 2. Response of the believers, 2:13-16
 - C. The mission of Timothy, 2:17-3:10

1. Concern of the apostles, 2:17-20
 2. Motives for sending Timothy, 3:1-5
 3. Timothy's report, 3:6-10
 4. Prayer, 3:11-13
- III. Ethical and doctrinal, chs. 4-5
- A. Moral requirements of the Gospel, 4:1-12
 1. General (previous instruction), 4:1-2
 2. Chastity, 4:3-8
 3. Love of the brethren, 4:9-10
 4. Sobriety and diligence, 4:11-12
 - B. The coming of the Lord, 4:13-18
 - C. The day of the Lord, 5:1-11
 1. Warning, 5:1-3
 2. Encouragement and exhortation, 5:4-11
 - D. Brief precepts and prayers, 5:12-27
- IV. The benediction, 5:28

5. Doctrine. The letter is not in any sense a theological treatise, and it is only incidentally that reference is made to any of the doctrines of the Christian faith. Yet even these incidental references are sufficient to give some indication of the wealth of the apostolic teaching, and of the substance of the instruction given to these early converts.

a. Elements of the common faith. In their conversion, the Thessalonians have "turned to God from idols, to serve a living and true God" (1:9). He is known to them as "the Father" (1:1, 3; 2:11). It is he who has chosen them (1:4); called them into his own kingdom and glory (2:12); destined them, not for wrath, but to obtain salvation through the Lord Jesus Christ (5:9). Now his will is to govern all their life; their aim must be "to lead a life worthy of God" (2:12), just as it is the ambition of the apostles themselves "not to please men, but to please God, who tests our hearts" (2:4). The message which they preach has been entrusted to them by God (2:4); it is the "gospel of God" (2:2) or the "word of God," which works effectively in those who believe (2:13). The believers are "brethren beloved by God" (1:4), and it is God who teaches them to love one another (4:9) and gives them his Holy Spirit (4:8).

The thought of the apostle is clearly theocentric, but it will quickly appear that it is at the same time Christocentric, for the name of Christ is constantly linked with the name of God. The church is "in God the Father and the Lord Jesus Christ" (1:1); if the apostolic message can be called the "gospel of God" and the "word of God," it can likewise be called the "word of the Lord" or the "gospel of Christ" (1:8; 3:2); the men who "have been approved by God to be entrusted with the gospel" are at the same time "apostles of Christ" (2:4, 6); "our God and Father himself and our Lord Jesus" are invoked together in prayer (3:11); the salvation for which God has destined us is to be obtained "through our Lord Jesus Christ" (5:9); it is "in Christ" and "through Jesus" that Christians die and are assured of rising from the dead, that they may always be with their Lord (4:14, 16-18); it is "in Christ" that God makes known his will (5:18); and he is "our Lord Jesus Christ, who died for us so that . . . we might live with him" (5:9-10). Paul speaks of him under many names and titles—"the (our) Lord Jesus Christ," or "Christ Jesus," or "the (our) Lord Jesus"; sometimes as "Christ" or as "Jesus"; most frequently he calls him simply "the Lord" (Kyrios). He is the Son of

God whom he raised from the dead, "Jesus who delivers us from the wrath to come" (1:10); and Christians await his coming from heaven. He commands the absolute allegiance of Christian believers, the commands and instructions of the apostles are given "in the Lord Jesus" (4:1 ff), and he punishes the wrongdoer (4:6). The faith, the hope, and the love of believers are directed toward him in the sight of God (1:3), and the supreme assurance and aspiration is that we should live together with him, that we should be always with the Lord (5:10; 4:17). There is nothing here that resembles a formal christological statement, yet we have unquestionably the reflection of a highly developed and many-sided doctrine of the person and work of Christ. It should be remarked that there is no indication that we have here a peculiarly "Pauline" theology; Paul is not engaging in a work of theological construction, but making use of the common elements of the early Christian teaching.

Further indications of a rich doctrinal content in the teaching which the Thessalonians have received also lie behind the references to the Holy Spirit and to the church (or churches), but these are not sufficient in themselves to give more than a hint of the range of conceptions involved.

b. Eschatology: The Parousia of the Lord Jesus. The most striking feature of the letter is the dominance of eschatological motifs, which certainly reflects the emphasis of the early preaching. The familiar OT theme of the "day of the Lord" is basic, first of all in the menacing sense given to it by Amos (Amos 5:18-20) and developed in all its somberness by later prophets (cf. Zeph. 1:14-15). It is the day of the Last Judgment, of the "wrath to come" (I Thess. 1:10); it comes "like a thief in the night" (5:2; cf. Matt. 24:43-44; Paul is here echoing words of Jesus), and brings "sudden destruction" to those who are assuring themselves of "peace and security" (5:3). Against this background of menace, Jesus is proclaimed as the one hope of deliverance—for it is "Jesus who delivers us from the wrath to come" (1:10). For those who are Christ's, the "day of wrath" is transformed into the day of light and of salvation. "You are all sons of light and sons of the day" (5:5), and "God has not destined us for wrath, but to obtain salvation through our Lord Jesus Christ" (5:9). It is the day of the "coming of our Lord Jesus Christ with all his saints" (3:13).

The primary sense of "parousia" is simply "presence" (παρουσία; cf. πάρεμι, "I am present"); but it is already found in authors of the classical period with the meaning "arrival," especially the arrival of a god or of a king. In Hellenistic times, it has acquired a technical sense in connection with the state visit of a king or emperor, sometimes of a general or of a high official. The parousia of such a dignitary involved much advance preparation, and often a good deal of expense, to provide the paraphernalia of a worthy welcome to the great man and a fitting expression of the people's loyalty. At the actual time of his coming, it was usual for the inhabitants to go out to meet him along the highway, to greet his appearance with shouts of acclamation, and to join his cortège for its entrance into the city, where he would distribute rewards and honors to the deserving citi-

zens. The whole atmosphere of such an occasion was one of splendor and joy. These are the terms in which Paul thinks of the coming of Jesus. Since he has ascended into heaven, his coming must of necessity be conceived as a descent from heaven; and if his faithful subjects are to go out to meet him on the way, they must of necessity "meet the Lord in the air" (4:16-17). The cry of command, the call of the archangel, and the sound of the trumpet of God seem also to belong to the same Hellenistic ceremonial, suggesting the approach of the heavenly hosts which attend the descending King; the imagery of Hebrew apocalyptic is combined in a most unusual way with imagery drawn from a quite different tradition. It is not possible for us to define too precisely the relation of the various symbols to the reality of the future hope; but there is no mistaking the notes of triumph and joy, and the significance of the supreme assurance: "So we shall always be with the Lord" (vs. 17). See also PAROUSIA.

6. Text. The Greek text of the letter is exceptionally well attested, like that of all the Pauline writings. Papyrus evidence is scanty, being limited to three fragments of codices, containing, in all, parts of eighteen verses. It is found in part or in whole in twenty-two uncial MSS and about six hundred cursives, ranging in date from the fourth to the fifteenth centuries; and is represented in all the ancient versions. Citations are found in a good number of the early fathers, though they are naturally less abundant than those from the major letters. With all this wealth of evidence, there are only thirty instances in which the major modern editions (from Tischendorf's eighth edition to the twenty-second of Nestle and the commentary of Rigaux) give the slightest difference of text. Of these, only three are of more than technical interest:

a) In 2:7, Westcott and Hort read $\nu\eta\pi\iota\omicron\iota$, "infants," and are followed by many other editors and commentators; this reading must be regarded as having much the weightier attestation, and can be rejected only on the ground that Paul never speaks of himself as an "infant." The reading $\eta\pi\iota\omicron\iota$, "gentle," has reasonably strong support in the MSS and versions, is read by Nestle and most other modern editors of the text, and is favored, not without hesitation, by most recent editors; the word occurs in only one other passage of the NT (II Tim. 2:24), but is not uncommon in Greek literature.

b) In 3:2, Timothy is described as "our brother and God's fellow worker" ($\sigma\upsilon\nu\epsilon\rho\gamma\omicron\nu\ \tau\omicron\upsilon\ \theta\epsilon\omicron\upsilon$). This reading, adopted by Nestle and by Rigaux, rests upon quite limited evidence (D* 33 d e, and a very few patristic citations); B has $\sigma\upsilon\nu\epsilon\rho\gamma\omicron\nu$ alone; some good witnesses (\approx A P, the Latin Vulg. and the Harkleian Syr.) read $\delta\iota\acute{\alpha}\kappa\omicron\nu\ \tau\omicron\upsilon\ \theta\epsilon\omicron\upsilon$, and this is the reading adopted by nearly all other editors and commentators; the Byzantine text conflates the two— $\delta\iota\acute{\alpha}\kappa\omicron\nu\ \tau\omicron\upsilon\ \theta\epsilon\omicron\upsilon\ \kappa\alpha\iota\ \sigma\upsilon\nu\epsilon\rho\gamma\omicron\nu\ \eta\mu\acute{\omega}\nu$, "minister of God and our fellow labourer" (KJV).

c) In 5:4, instead of $\acute{\omega}\varsigma\ \kappa\lambda\acute{\epsilon}\pi\tau\eta\varsigma$, "as a thief," B and A read $\acute{\omega}\varsigma\ \kappa\lambda\acute{\epsilon}\pi\tau\alpha\varsigma$, "as thieves." Westcott and Hort, alone among editors, adopt this reading, swayed by their predilection for B.

Meyer, *Kritisch-exegetischer Kommentar über das NT* (7th ed., 1909); J. E. Frame, ICC (1912); M. Dibelius, in Lietzmann, *Handbuch zum NT* (3rd ed., 1937); W. Neil, in the Moffatt NT Commentary (1950); surpassing all these, B. Rigaux in *EB* (1956), with exhaustive bibliography. F. W. BEARE

***THESSALONIANS, SECOND LETTER TO THE.** A letter written by, or in the name of, Paul and his associates Silvanus and Timothy to the church of the Thessalonians; now placed as the fourteenth book of the NT canon. Its authenticity is often called in question, but is defended by virtually all recent commentators.

It lacks the warmth of affection and the triumphant assurance of the first letter, tending rather to a certain somberness and formalism. The eschatological outlook is again paramount, but stress is laid more on the menacing judgments that await the ungodly than on the joys and glories which the day of the Lord will bring to the faithful—a complete reversal of the emphasis in the first letter. It is now taught that the parousia of the Lord Jesus, the vivid expectation of which pervades I Thessalonians, will not take place until the powers of evil in the world have come to a head in the parousia of an antichrist equipped with satanic powers of miracle and deceit. This is the theme which gives the letter its main interest and saddles the interpreter with his most difficult problems.

1. Authenticity
 2. Destination
 3. Occasion and purpose
 4. Outline of contents
 5. Main theme: The mystery of lawlessness

- Bibliography

1. **Authenticity.** The authenticity of the letter is in dispute, though it has been defended by all recent commentators. There is no weakness in the external attestation, which is, if anything, better than that of I Thessalonians. It appears to have been laid under contribution in Ephesians and in I Peter; its language is distinctly echoed in Polycarp and somewhat less certainly in Ignatius; it was included in Marcion's collection of the Pauline letters (before the middle of the second century) and is found in all subsequent canonical lists. The difficulties of attributing it to Paul arise chiefly from the comparison with I Thessalonians, both in the similarities and in the differences; indeed, if the first letter were not in existence, it is unlikely that the authenticity of the second would be questioned. The main difficulty is to see how the same writer could dispatch the two letters to the same congregation within the space of a few weeks, which is all the time that can be allowed to have elapsed between the two. Certain earlier lines of objection have been abandoned—as, e.g., the theory of F. H. Kern that the antichrist passage of ch. 2 is an adaptation of the Nero-redivivus myth, and therefore could not be earlier than 68-70. Kern found many followers among scholars of the nineteenth century, but his theory was demolished in the last decade of the century by the studies of apocalyptic literature made by Gunkel, Bousset, and Charles.

The main objections which may still be raised to the authenticity of the letter are the following:

a) It is surprising, if not altogether inconceivable, that at this early date Paul should have to warn his readers against allowing themselves to be led astray by letters circulated in his name without his authority (2:2), and should be obliged to devise means to guarantee the authenticity of his own letters (3:17). In the latter passage, the words "the mark in every letter" are puzzling. How many letters had Paul written at this time? From this period, only the two Thessalonian letters have come down to us; but the phrase "every letter" and the very need to provide signs of authenticity imply an extensive correspondence. Is it possible that Paul was already known as a letter writer in 50 or 51, and that an agitator could hope to win credit for his message by embodying it in a letter put out under the name of the apostle? This is a startling thought; but on the other hand, it must be admitted that it is at least equally hard to imagine a forger's seeking to authenticate his forgery by adding so bold a piece of deception as this.

b) The second objection to be raised is the inconsistency between the eschatological outlook of I Thessalonians, with its stress on the imminence of the Parousia, and the explicit teaching of II Thessalonians that the Parousia will not take place until after "the rebellion," and the revealing of the "man of lawlessness, the son of perdition," after some restraining force or person has been taken away. To this it is replied that such apparent discrepancies are a common feature of apocalyptic writing; premonitory signs of the end are not regarded as incompatible with its sudden and unexpected coming "like a thief in the night." In the gospels themselves, a succession of signs of the coming of the Lord and of the end of the age (Matt. 24 and parallels) are accompanied by warnings to be constantly ready and watchful, "for you do not know on what day your Lord is coming" (vs. 42). Accordingly, no great weight can be attached to this objection.

c) It is the problem of the literary relationships between the two letters that is now put forward as the chief stumbling block. The similarities of language and of general structure are so great as to suggest literary dependence of some kind; and it is more natural to think of another writer's copying Paul than of Paul's copying himself. The relationship is so close that it has even been suggested that Paul kept a copy of the first letter and read it over before writing the second, and drew freely upon its phrases. It is generally admitted that we have here a literary problem of unusual difficulty, which may even be regarded as "insoluble" without more knowledge of the circumstances than we now possess. It may at least be said that Paul does not elsewhere repeat himself and copy the structure of a previous letter in any comparable way. Let us remark that the argument could be turned in reverse; if we were to start by admitting the authenticity of II Thessalonians, we could allege the similarities as evidence casting doubt upon the Pauline authorship of I Thessalonians.

We are left with a measure of uncertainty, but it cannot be claimed that the case for rejection is strong enough to justify us in denying the traditional

attribution of the letter to Paul, especially as no plausible occasion for its publication has yet been indicated. If the letter is pseudonymous, it is an outright forgery, intended to represent Paul as teaching an apocalyptic doctrine which is not his, but the product of the forger's imagination. Where are we to look for the circles, presumably late in the first century, which had become unduly excited over a report or a prophetic utterance to the effect that the day of the Lord had already come? Why would such a letter be addressed to the Thessalonians? And how would it gain acceptance as Paul's? On the whole, the difficulties in the way of accepting the letter are less serious than those which are raised by the attempt to account for it as pseudonymous writing of a later period.

2. Destination. For a discussion of the "church of the Thessalonians," see THESSALONIANS, FIRST LETTER TO THE, § 2. In the attempt to overcome some of the difficulties raised by the literary relationships between the two letters to the Thessalonians, a number of scholars have resorted to the hypothesis that they were written at approximately the same time, but to different groups or to different churches. Harnack proposed to treat the first letter as written to the Gentiles, the second as written to the Jewish Christians of the city. Apart from the impossibility of imagining a Pauline church split on lines of racial origin, it is not easy to see why the apostle should write so much less warmly to the Jewish section than to the Gentile group. Goguel suggested the possibility that II Thessalonians might have been addressed to Berea, where there was a strong and well-disposed Jewish group, eagerly interested in the prophetic scriptures (Acts 17:10-11). Starting from Polycarp's passing reference to "letters" written by Paul to the Philippians, Schweizer offered the conjecture that II Thessalonians was actually written to the Philippian church. All these conjectures are indications of the straits to which excellent scholars feel themselves reduced by the difficulties of the literary problem. In themselves, they are far from convincing. It is best to accept all the difficulties, and to make the attempt to reconstruct the circumstances in which Paul may have sent such a letter to Thessalonica.

3. Occasion and purpose. A great part of our difficulty in dealing with this letter is due to our ignorance of the conditions of communication between Paul and his churches. It is clear that Paul has received further reports on the state of the Thessalonian church, but we have no knowledge of the means by which they were brought to him. We know that I Thessalonians depends upon a report brought by Timothy after a personal visit (I Thess. 3:1-8); but we know nothing of how the letter was transmitted, or by what messenger. It is not to be taken for granted that it had been received in Thessalonica by the time that II Thessalonians came to be written. All that we know is that some brief time after Timothy's visit, word came to Paul by some unknown channel from the Thessalonian church, and it is in response to this second report that he writes his second letter. He hears again of the persecutions which his converts are undergoing; and it may be that they are described in such harrowing terms as to account for the general somberness of the letter

and for its emphasis on the dreadful punishments which will be meted out to the persecutors by the just judgment of God at the Parousia of the Lord. He is told that some have been persuaded that the day of the Lord has come already, and have been "shaken in mind" and unduly "excited" about it (2:1-2); and he seeks to remove this understanding by reminding them of his own previous teaching about the chain of events which are to precede and accompany the Parousia (2:3-12). And the later report leads him to view more seriously the tendency of some to live lazy and disorderly lives, imposing upon the charity of their hard-working brethren while they blissfully await the dawning of the glorious day (3:6-15).

The letter, accordingly, is written in response to a second report on the state of the Thessalonian church, and it has a threefold purpose: (a) to encourage and strengthen the readers to stand steadfast in the faith, unmoved by persecution; (b) to correct the erroneous notion that the day of the Lord has come, by showing that the events which must precede its coming have not yet been accomplished; and (c) to advise the church on the severe yet affectionate discipline that should be used in the case of lazy and disorderly members.

The date of the letter cannot be exactly determined, but it was probably written at no long interval after I Thessalonians—i.e., in 50-51. The general circumstances of the Thessalonian church have not greatly changed; the similarities of language in the two letters, if both are authentic, forbid us to think of them as separated by any long period of time; and the fact that Paul and Silvanus and Timothy are still together points to the early months of the mission in Corinth. After that, Silvanus (Silas) disappears from the narrative of Acts, and he is never again mentioned in the Pauline correspondence.

4. Outline of contents. The letter falls into three main divisions, in keeping with its threefold purpose, with the opening salutation and the closing benedictions and greetings, as follows:

- I. The Salutation, 1:1-2
- II. Thanksgiving, and affirmation of the righteous judgment of God, 1:3-12
 - A. Thanksgiving for the growth of the readers in faith and love, and for their steadfast patience under persecution, vss. 3-4
 - B. The righteous judgment of God (at the Parousia of the Lord Jesus, his afflicted followers will be granted rest, while the persecutors will pay the penalty of eternal destruction), vss. 5-10
 - C. Prayer for the readers, that God may make them worthy of his call, 1:11-12
- III. The parousia of antichrist and his overthrow, 2:1-3:5
 - A. Plea against being excited by pretended revelations that the day of the Lord has come, 2:1-2
 - B. Events that must precede the coming of the day, 2:3-5
 - C. The restraining power, 2:6-7
 - D. The parousia of the antichrist (the "lawless one"); his destruction by the Lord "by the manifestation of his Parousia";

his powers of deception, and the certain condemnation of those whom he deceives, 2:8-12

E. Assurance and encouragement for the readers, 2:13-3:5

IV. Discipline, 3:6-15

A. Warning against tolerating idleness, vs. 6

B. Example of the apostles, vss. 7-9

C. "No work, no food," vs. 10

D. Appeal to the idlers themselves, vss. 11-13

E. Idlers must be treated sternly, yet not as enemies but as brothers, vs. 14-15

V. Conclusion: Benedictions and greetings, vss. 16-18

It may be remarked that the paragraph 3:1-5 has all the marks of a conclusion to the letter, and that the section on the discipline of the idlers is added almost as a postscript.

5. Main theme: The mystery of lawlessness.

The chief interest of the letter lies in the central apocalyptic passage (2:1-12), where Paul gives us some indications, not always entirely clear to us, of the program of events which are to usher in the end of history, according to his prophetic vision. The theme is introduced, as so often happens in his letters, in relation to a practical problem which has arisen in the church to which he is writing, and his treatment presupposes a measure of previous instruction in the matter, as he expressly tells us (vs. 5). For this reason, he feels no compulsion to give a complete account of his apocalyptic doctrine, but only to stress again the aspects of it which his readers seem to have forgotten. The teaching here given is therefore fragmentary, and for us who lack the previous instruction given by him at Thessalonica, it presents some uncertainties of interpretation.

He is here dealing with a strange misunderstanding which has arisen in the Thessalonian church. Some of its members have been led to believe, on the strength of what they take to be a revelation—embodied, it may be, in a letter purporting to be from the apostles—that the day of the Lord has come (*ἔνεστηκεν*, "is present"). How they could entertain such a notion we cannot tell, but its effect has been to shake them out of their senses and leave them in a state of alarm and excitement (vss. 1-2). Perhaps they fear that they have been passed by, deprived of their part in the glory and joy of the day, and left to bear the fearful judgments that are to come upon the earth. Paul warns them against falling into any such error, bidding them remember what he has already taught them—that before that day comes, there must be a great rebellion against God led by a figure of towering arrogance, the "man of lawlessness, the son of perdition," who is the enemy of all religion and "takes his seat in the temple of God, proclaiming himself to be God" (vss. 3-4). This will be the final and total manifestation of the principle of evil which is already at work in hidden ways, the "mystery of lawlessness" (vs. 7). It is as yet held in restraint; Paul speaks in curiously cryptic terms of "that which restrains," as of some power known to the readers; and in the next verse, of "he who restrains," as of a person (vss. 6-7). By this power or person, the forces of evil are kept under until the

time appointed for the revelation of the "lawless one" (vs. 8). Only then will the Lord come, and will "slay him with the breath of his mouth and destroy him by his appearing and his coming" (vs. 8).

The appearance of this master of evil is also called a "parousia," as it were a satanic caricature of the parousia of the Lord; given supernatural powers by Satan, he will work all manner of lying miracles, by which he will deceive those who are perishing "because they refused to love the truth and so be saved" (vss. 9-10). But this is not the state of the Thessalonians: "God chose you from the beginning to be saved, through sanctification by the Spirit and belief in the truth . . . , so that you may obtain the glory of our Lord Jesus Christ" (vss. 13-14). Thus Paul seeks to calm their excited minds with words of assurance.

At least three phrases in this passage are susceptible of more than one interpretation: (a) "the rebellion"; (b) "the man of lawlessness"; and (c) "what [or 'he who'] now restrains" (τὸ κατέχον, ὁ κατέχων). The first two can be set in the light of the standard patterns of Jewish apocalyptic; the third has no parallel to help us; in no case can the meaning be determined with certainty. Paul uses language which his readers will understand without difficulty, because they have received previous instruction from him (vs. 5); we are left uncertain of his meaning, because we have no means of recovering the substance of that previous teaching. "The rebellion" probably takes up the thought of a mustering of the nations against God, based upon such passages as Ps. 2; Ezek. 38-39; but it is not impossible that Paul should be thinking of a vast and violent uprising against the authority of Rome. Ancient interpreters nearly all take him to mean, however, a general defection from faith among the people of God. Jewish apocalyptic writings include widespread apostasy among the signs of the end; and it is remarkable that in the Dead Sea Scrolls the theme of treason to the covenant is linked with the "man of the lie." Many of the early fathers interpret the word to mean a general apostasy of Christians, which they tend to link with the heretical movements of their own time. Against such interpretations, it may be pointed out that Paul does not regard the hardening of Israel as an apostasy—he will "bear them witness that they have a zeal for God, but it is not enlightened" (Rom. 10:2); and it is quite impossible that as early as 50-51 he should have taught that a general apostasy of Christians from the gospel would be a sign of the end.

The "man of lawlessness," or the "lawless one," is depicted in terms which are drawn from Jewish apocalyptic, primarily from the description of Antiochus Epiphanes in Dan. 11:36-37. Though the term "antichrist" is not used (it occurs first in Christian literature in the Johannine letters), it conveys the essential notion of the figure here presented. Here again we encounter a variety of interpretations. Some take it in a collective sense, allowing the interpretation to be determined by the Johannine teaching (especially I John 2:18); "antichrist" or the "man of lawlessness" is not a particular individual but a principle of error or of evil which appears in many embodiments. In the later Middle Ages (Wycliffe) and the Reformation, the term is often

applied to the papacy as an institution, and to individual popes. It is clear, however, that Paul is thinking in terms of an individual who is to appear at the very end of the age; like the Lord, he is to have his own "parousia"—like a king making a splendid entry into his realm. Some interpreters have held that he is conceived by Paul as a supernatural being; but it seems evident that Paul presents him as a human being possessed of supernatural powers "by the activity of Satan." Attempts have been made to identify virtually all conspicuous enemies of the church and the gospel with antichrist, and such identifications continue to this day. See also ANTI-CHRIST; PAROUSIA.

The restraining power has generally been taken to mean the Roman Empire as "that which restrains," and the Roman emperor as "he who restrains"; this interpretation is found as early as Tertullian (*ca.* 200) and is still prevalent. Despite its long acceptance, this is nothing more than a conjecture, and one that will not stand up under scrutiny. If Paul entertained any idea that the coming of the Lord would take place while he himself was still alive, he cannot have held that the power of Rome must first crumble to clear the way for the revelation of antichrist.

A different line of interpretation, going back to the Antiochian theologians of the fourth century, has been revived: that which restrains is the divine decree that the gospel must "be preached throughout the whole world, as a testimony to all nations; and then the end will come" (Matt. 24:14); "he who restrains," in this view, is Paul himself, the apostle to the Gentiles. This hazardous conjecture would also seem to make shipwreck on the observation that if Paul is to be removed from the scene (vs. 7) before antichrist is revealed, then he cannot also include himself among those "who are alive, who are left unto the coming of the Lord." And surely it would be sheer affectation for him to speak of himself in such cryptic terms.

Others have imagined the restraining influence to be some angelic being—Michael and the armies of heaven; or the angel of the bottomless pit (Rev. 20:1-4); or even the Holy Spirit. It should be recognized that the apostle does not provide us with any key for solving his cryptic phrases; and it may be that he is simply saying that something or someone is delaying the final outburst of evil until the time that God has appointed, that the lawless one "may be revealed in his time" (ἐν τῷ ἑαυτοῦ καιρῷ; vs. 6).

6. Text. The Greek text offers no major problems, and there are only three readings of more than technical interest which call for consideration.

a) In 2:3, the witnesses are fairly evenly divided between ἀνομίας, "lawlessness" (RSV), and ἁμαρτίας, "sin" (KJV). Most editors favor the former reading, and suspect that ἁμαρτίας has been introduced as an explanation of ἀνομίας. On the other hand, it is possible that ἀνομίας has replaced an original ἁμαρτίας, to make an assimilation to the ἄνομος of vs. 8.

b) In 2:13, for ἀπ' ἀρχῆς, "from the beginning," many excellent witnesses read ἀπαρχῆν, "as first-fruits" (Vulg. *primitias*). Modern editors are about evenly divided in their choice.

c) In 3:6, for παρελάβετε, "you received," the Byzantine text reads παρελάβον, a typical stylistic correction of παρελάβσαν, "they received," which is found in \aleph , A, D (— $\sigma\alpha\rho$), 33. Most of the patristic evidence supports the Byzantine reading, and thus, indirectly, the παρελάβσαν from which it derives. Accordingly, παρελάβσαν is to be preferred.

Daube, eds., *The Background of the NT and Its Eschatology* (1956).

F. W. BEARE

***THESSALONICA** thēs'ə lə nī'kə [ἡ Θεσσαλονίκη] (Acts 17:1, 11, 13; 27:2; Phil. 4:16; II Tim. 4:10). An important city of Macedonia, known today as Salonika.

The city was located on the Thermaic Gulf, now the Gulf of Salonika, at the W side of the peninsula of Chalcidice, and from the beginning has been the chief seaport of MACEDONIA. According to Strabo (VII.330, fragments 21, 24) this metropolis owed its foundation to Cassander, who named it after his wife, Thessalonica, daughter of Philip and sister of Alexander the Great. This was probably in 316 or 315 B.C. The settlers of the new city were the former inhabitants of some twenty-six villages in the region which Cassander destroyed. Among these towns was Therma, some seven miles to the SE; this doubtless accounts for the loose statement of Strabo that Thessalonica was formerly called Therma.

When Macedonia was divided into four districts in 167 B.C., Thessalonica was made the capital of the second district, that which extended from the River Strymon to the River Axios (Livy XLV.29-30). In 148 B.C., Macedonia was made a Roman province, and Thessalonica became the chief city of the province and the seat of Roman administration. Under the Romans it was declared a free city (Pliny Nat. Hist. IV.36), and in the time of Strabo (VII.323) it was the most populous of all the Macedonian towns. Later under the Emperor Gordian III (A.D. 238-44) Thessalonica was given the title Neokoros which indicated its oversight of a temple of the imperial cult, and under Decius ca. 250 it was made a colony.

Thessalonica was surrounded by a city wall, of which N and E stretches still stand. The extant por-

tions are of Byzantine date, but rest at least in part upon more ancient foundations. The Via Egnatia ran through the city from SE to NW. This way was later called Vardar Street, from the River Vardar (Axius), but now again has its ancient name. Two Roman arches spanned the Via Egnatia, one at the W entrance to the city, known until its demolition in 1876 as the Vardar Gate, and the other near the E wall, the Arch of Galerius, built to celebrate the triumph of that emperor over the Persians in A.D. 297. A round Roman building N of the latter arch, and probably contemporary with it, was later transformed into the Church of St. George. The agora probably lay in the middle of the city, N of the Via Egnatia; the place of the hippodrome was near the SE wall.

An inscription from the Vardar Gate, now in the British Museum, and several other inscriptions found at Thessalonica, mention officials called politarchs. The Vardar Gate inscription probably dates between 30 B.C. and A.D. 143; one of the other inscriptions belongs to the reign of Augustus; and yet another, which was brought to Thessalonica from an outlying village, is dated under Claudius. This is significant because in Acts 17:6 the title "politarch" (ὁ πολιτάρχης) is applied to the city authorities of Thessalonica, and the word was otherwise previously unknown. See *bibliography*.

THEUDAS thōō'dəs [Θευδάς]. 1. Theudas I, a pseudo messiah during the consulate of Cuspius Fadius (ca. A.D. 44). He promised to lead followers across the Jordan by dividing its waters by mere words, and thus to prove his divine powers. Cuspius apprehended him and decapitated him; he sent his head to Jerusalem as a sign of victory (Jos. Antiq. XX.v.1).

An allusion to Theudas is found in Acts 5:36, where Gamaliel makes reference to Theudas long before his appearance. This is, however, explained as referring to an event of A.D. 6 and to another rebel by the name of Theudas.

2. Theudas II, a Roman rabbi who lived ca. 133. He arranged that monies previously given to the temple be used for schools (Yer. Moed Katan 81a). He also introduced the practice of eating roast lamb in remembrance of the paschal feast. This was in opposition to the Palestinian rabbis, who declared: "Were you not Theudas, we would excommunicate you" (Pes. 53a). Theudas preached as *archisynagoge* (ruler of the synagogue) that a Jew should be a martyr rather than abandon his faith (Pes. 53b). The Talmud associates Theudas with Simon ben Shetah, who lived ca. 80, but this association is an anachronism.

THIEF. See CRIMES AND PUNISHMENTS § C7b.

THIGH [יֵרֶךְ, ὑψός]. The flank of the lower part of the trunk of the human body; the upper part of the leg.

The term is used frequently simply for this physical component of man; it is a part of the beautiful body of the maiden (Song of S. 7:1—H 7:2); it is that place where the sword is worn (Judg. 3:16; Ps. 45:3—H 45:4; Song of S. 3:8; cf. Exod. 32:27 ["side"]). Used in this physical sense, the word was transferred by the priestly writers from the human body to physical objects, particularly those of cultic use—e.g., the "side" of the altar (II Kings 16:14) and the "base" of the golden lampstand (Exod. 25:31).

The more characteristically biblical usage is that which views the thigh as a dynamic part of the living organism, man. As such, it is not merely a physical element, but is important to the vitality of man. It is regarded as the seat of procreative powers. Sons are regarded as "offspring of the thigh" (יֵצְאֵי יֵרֶכְךָ; Gen. 46:26; Exod. 1:5: the sons of Jacob; Judg. 8:30: the seventy sons of Gideon). The use of this expression is derived from an unreflective notion that the reproductive organs are by proximity related to the thigh: because this is clearly the place where life originates, this part of the body was important as the seat and source of life. In Num. 5:16-21, the thigh is related to the birth, being involved in the question of illicit sexual intercourse. The implication of the phrase "your thigh fall away" is obscure. The word is to be understood in terms of its parallel, "belly" (בֶּטֶן)—i.e., the punishment is related to the birth or loss of the child. The Mishna comments on this that the sin began with the thigh, therefore the thigh must be punished—an allusion to the thigh as related to sexual organs and therefore the seat of life.

This dynamic view of the thigh as the locus of life power is related to other practices in Israel's life. The slapping of the thigh was understood as an expression of shame, sorrow, and remorse (Jer. 31:19; Ezek. 21:12—H 21:17). The fact that it is the thigh which is employed may give expression to the notion that the most profound sorrow and remorse are bound up with life itself. In Gen. 32:25-32—H 32:26-33 there is mentioned a dietary practice which is here given its etiological explanation. This is the only mention of the practice in the OT, and is the basis for subsequent Jewish discussion. The reference may be more than etiological: the injury of the thigh may refer to the damaging of the vitality of Jacob, signifying some degree of mastery, even though "he did not prevail."

A more important usage is the role of the thigh in the swearing of an oath. The sealing and assuring fidelity to an oath were consummated by putting the hand under the thigh (Gen. 24:2; 47:29). Clearly this is an act relating the oath taker to the seat of life in the other party. Likely this was contact with the genital organs. Two interpretations of the act are plausible. On the one hand, there is recognition of the power and presence of the life-giving deity. God is then invoked as the guarantor of fidelity by the oath taker. On the other hand, this may be a pledge relating to the descendants of the man whose thigh is involved. The seed of the man is to enforce loyalty and to act as avenger if the oath is broken. By the time the narratives were recorded, the original meanings of the act may have been forgotten. But the

practice nonetheless served to emphasize the life-and-death importance of the oath.

Related to "thigh" is a less important term, תֵּנִיט (see LOINS). This part of the body is also the place where man's vitality is most keenly felt, as the locus of strength (Prov. 31:17), and the place where anguish and pain are most sharply felt (Isa. 21:3; Nah. 2:10—H 2:11).

Thus the thigh is a physical part of the body of man which, in terms of dynamic and vitality, is regarded as the seat of life for the whole personality and the source of life for those it produces. As such, the scope of concern involved is that of the whole life of the organism.

THIMNATHAH. KJV form of TIMNAH in Josh. 19:43.

THIRD DAY. Jesus' resurrection "on the third day" was an element in the earliest apostolic faith. There are two postresurrection references to Jesus' resurrection "on the third day"—in a speech by Peter (Acts 10:40) and in Paul's account of the kerygma he had received (I Cor. 15:3-4).

The gospels record Jesus' prediction of his resurrection on the third day (Matt. 16:21; 17:23; 20:19; Luke 9:22; 18:33; cf. Luke 13:32; 24:7). Scholars are divided as to whether these words were spoken in their present form by the historical Jesus, or were later made to conform to the experience of the church.

Mark's expression is always "after three days" (8:31; 9:31; 10:34; with which cf. Matt. 27:63-64). It may be that originally "after three days" and "on the third day" meant the same thing; but the former is surely less precise, and the latter expression displaced it.

John does not use either phrase in connection with the Resurrection; but note John 2:1, 11: "On the third day . . . Jesus . . . manifested his glory." See RESURRECTION IN THE NT.

B. H. THROCKMORTON, JR.

THISBE תִּישְׁבֵּי'בִי [Θισβης] (Tob. 1:2). A place in N Galilee referred to as that from which Tobit was taken captive by the Assyrians (cf. II Kings 15:29; 17:6). The site is unidentified, but it is described in Tobit as lying S of Kedesh Naphtali (probably KEDESH) and above Asher (i.e., HAZOR). The Sinaiticus text adds that it is N of Phogor (unidentified). It is not named in the Hebrew and Aramaic texts. The Vulg. mentions Sephet (cf. medieval Safed?) as in the vicinity (cf. Josh. 19:37-39; 20:7; I Macc. 11:63; Jos. War II.xviii.1; Antiq. V.i.10; XIII.v.6; etc.).

THISTLE, THORN. Types of wild flora characterized by sharp projections on stems, branches, or leaves. Seventeen different Hebrew words have been translated "thistle" or "thorn," "bramble," "brier," or "nettle," with little consistency in any of the ancient or modern versions (cf. FLORA § A12). Confu-

59. Thorn (*Zizyphus spina-christi*)

sion concerning the meaning of the Hebrew words apparently began very early. Arabic usage offers only a little help. The RSV follows the KJV with very few changes. The most common terms meaning

"thistle" are דַרְדָר (*dardār*), תוֹן (*hōṭh*), and τριβόλος; for "thorn," קִיץ (*qōṣ*) and ἄκανθα are the most common.

Dardār appears to be the generic word for "thistle," and *qōṣ* for "thorn" (Gen. 3:18; Hos. 10:8; but cf. Isa. 34:13). Attempts to identify species only lead to confusion. It is doubtful that there was any attempt in Bible times to designate the many kinds of weeds and thorny flora with any degree of consistency.

Biblical references to thistles and thorns are mostly found in metaphors describing punishment for sin (Gen. 3:18; Josh. 23:13; Job 31:40; Isa. 5:6; 32:13; 34:13; Hos. 9:6; 10:8; Mic. 7:4) and those emphasizing anything that is generally worthless (II Sam. 23:6; II Kings 14:9; II Chr. 25:18; Prov. 15:19; Isa. 7:23-25; 55:13; Heb. 6:8; Letter of Jeremiah 6:71 [ῥάμνος]). As a symbol of evil they appear in the familiar saying: "Are grapes gathered from thorns, or figs from thistles?" (Matt. 7:16; cf. Prov. 22:5; Jer. 4:3; 12:13; Ezek. 2:6). Common experience made the thorn a symbol of pain (Prov. 26:9; Ezek. 28:24). Paul's reference to some chronic physical ailment as a "thorn in the flesh" (II Cor. 12:7; σκόλοψ) has defied attempts to define it. Gideon punished the men of Succoth with "thorns of the wilderness" (Judg. 8:7, 16). In the familiar parable of the sower, the seed which fell among thorns was choked out by thorns, which symbolize the preoccupation of man with the "cares of the world and the delight in riches" which "choke the word" (Matt. 13:7, 22; Mark 4:7, 18; Luke 8:7, 14).

It is a common sight in Arab lands to see a donkey piled so high with dried thorn bushes that the animal is barely visible as he trudges the dusty road to the Bedouin encampment. One will see the piles of thorns and briars beside black goat's-hair tents, ready for use as fuel for cooking (Ps. 58:9—H 58:10; Eccl. 7:6; cf. Ps. 118:12; Isa. 27:4). It is easy thus to imagine how the sight of fire rapidly consuming the thorns became a metaphor for wickedness and its destruction (Isa. 9:18; 10:17; 33:12; Nah. 1:10).

Thistles (particularly the *Centaurea* L. and the *Silybum* Adans.) seem to grow everywhere in the Holy Land, but they are particularly profuse in the plains areas. Close study of the dominant pink-lavender flower heads reveals intricate beauty; but where crops are essential, thistles are a troublesome nuisance and a symbol of neglect (cf. Prov. 24:31).

In ancient times various thorny bushes were used as hedges between plots of ground, but today the golden yellow-flowered *Acacia farnesiana* L., introduced from America (and other species from Australia), has become the common HEDGE. It, too, however, is thorny (cf. Isa. 5:5; Hos. 2:6; Mic. 7:4; Mark 12:1).

THOMAS tōm'əs [Θωμάς; Aram. ܛܘܡܐ, twin]. One of the twelve apostles, mentioned about midway in the four NT lists (Matt. 10:2-4; Mark 3:16-19; Luke 6:14-16; Acts 1:13).

His position in the lists may indicate that he was

regarded in the early church as neither the most nor the least important of the Twelve.

In the Fourth Gospel the name Thomas is three times (11:16; 20:24; 21:2) followed by the Greek name DIDYMUS, obviously the name by which he was known by Greek-speaking Christians.

"Thomas" in Aramaic (ܬܫܘܡܐ) and Hebrew (תומא) seems to be an epithet meaning simply "twin," not a personal name. Some Syriac Christians knew him as Judas—Judas Thomas (Judas the twin)—as is clear from the apocryphal Acts of Thomas and the appearance of "Thomas" and "Judas Thomas" for "Judas (not Iscariot)" in John 14:22 in Syr. MSS (sy^s and sy^c). These variants in John 14:22 may suggest that Thomas was early identified with the "Judas of James," of the lists of Luke 6; Acts 1.

It is startling to find that in the Acts of Thomas, Judas Thomas is regarded as the twin of our Lord himself, a suggestion which has been taken seriously by some modern scholars, and held as fact by the Mesopotamian church. If "Thomas" means simply "twin" and the suggestion of the Acts of Thomas is rejected, as it seems it must be, we are quite at a loss to know whose twin the man designated by "Thomas" was, or even his actual name.

This apostle's character is quite clearly delineated in the Fourth Gospel. When Jesus resolves to run the danger of returning to Judea from beyond the Jordan, Thomas' comment reveals both a pessimistic outlook and a spirit of intense loyalty and bravery (11:16). When Jesus assumes that the disciples know the way to the Father's house to which he is going soon, Thomas is humble and candid enough to confess openly his ignorance of Jesus' meaning (14:5). He can be convinced of the reality of the Resurrection only by incontrovertible evidence (20:24-28). When such evidence is produced, he is represented as capable of lofty expressions of faith (vs. 28). His incredulous attitude has won for him the characterization "doubting Thomas." Altogether it may be said that he is portrayed as a deeply devoted, but somewhat dull, disciple whose lack of understanding provides Jesus an opportunity to disclose the truth more fully; but when he understands, he responds with stubborn loyalty.

Traditions concerning Thomas' postresurrection missionary activities are of questionable value. One reported by Eusebius (Hist. III.1) has him working in Parthia. The third- or fourth-century Acts of Thomas claims that he worked and suffered martyrdom in India and that his body was carried to Mesopotamia. The present-day Christians of St. Thomas of India base their claim to descent from this apostle largely on this book or on documents derived from it.

It is inherently likely that Christianity was carried to India by the third century A.D., but how it got there is quite unknown. Contemporary scholars can neither prove nor disprove the claim that Thomas evangelized there.

E. P. BLAIR

THOMAS, ACTS OF. One of a long series of early romances, styled apocryphal Acts (*see* ACTS, APOCRYPHAL), and among the latest of the five principal works of this sort, containing a very lengthy account of the travels, exploits, and miracles of Thomas in India.

The writing is the only one of its sort to have come down in essentially complete form. Its present length is nearly double the 1,600 lines ascribed to it in the Stichometry of Nicephorus. Since it consists of a long series of incidents, for the most part but loosely braided together, it is entirely conceivable that in the early years it circulated in a shorter form, together with the Martyrdom, which, as is true of all these writings, undoubtedly circulated separately.

In addition to versions in Armenian, Ethiopic, and Latin—all of which are palpably secondary—it is extant in both Syriac and Greek. Which of the two latter is to be regarded as the original is disputed. The commonly accepted view that it was composed in Syriac, very possibly in Edessa in the third century, by disciples of Bardesanes (Bardaisan), is in no small part due to the statement by Ephrem Syrus in his commentary on the apocryphal III Corinthians (*see* CORINTHIANS, THIRD EPISTLE TO) that this sect in its apocryphal Acts had turned the apostles of the Lord into preachers of their own impious views. Some of the mystic hymns in this apocryphon, notably the one styled the "Hymn of the Spirit," which are present only in the Syriac version, have actually been ascribed to Bardesanes himself. Occasional voices, notably of Max Bonnet and M. R. James, have been raised in favor of a Greek original, now for the most part lost, early translated into Syriac and subsequently from Syriac back into Greek. The eleventh-century Greek MS V (Vallicelian) is certainly a direct translation from the Syriac and contains—alone among Greek MSS—the Hymn to the Soul. In addition, several Greek MSS show such marked differences in the form of the concluding Martyrdom and the location of Thomas' lengthy prayer as to suggest the possibility that here we have vestiges of the original text. Other scholars, notably Harnack and Goodspeed, have suggested the possibility that the writing was issued in both languages. Occasional attempts, notably by Gutschmidt, to view the book as an early Christian adaptation of a series of Buddhist tales have been made, but have seemed to most investigators quite unsupported by the evidence.

To what extent the common reference to this apocryphon as Gnostic is justified is far from certain. That it is distinctly ascetic is obvious. The description of Thomas' mode of life in an early chapter (20): "He fasteth continually and prayeth, and eateth bread only, with salt, and his drink is water, and he weareth but one garment alike in fair weather and in winter, and receiveth nought of any man, and that he hath he giveth unto others," is reflected throughout the book, but would scarcely have seemed to orthodox Christians of the third century as indications of heresy. Thomas' chief object in his missionary adventures is severely restricted to the highly successful attempt to alienate wives from husbands, sweethearts from lovers. The only husband a bridegroom woman may have is Christ, the heavenly bridegroom. This theme, common in all these apocryphal

Acts, may well have led such groups as those easily dubbed Gnostics, Encratites, Apostolics, and Priscillians, as well as Manicheans, to approve the writing. The writing manifests little interest in doctrine.

Thomas is several times styled (in the Greek but not in the Syriac) the "twin brother of Christ." Christ appears in various forms—once in the likeness of his "twin brother." But this is probably not to be understood as a sign of Docetism. Actually it may be nothing more than the result of toying with Thomas' nickname, "the twin," together with the tradition that Jesus too had been a carpenter. The brief description of the ministry of Jesus, ending with the Lord's Prayer in its severely (unemended) Matthean form (chs. 143-44), shows no departure from the most orthodox appraisal. Unless our extant versions have been very drastically and successfully edited to rid the earlier writing of emphases which orthodoxy regarded as perverse, it is hard to avoid the feeling that the common term "Gnostic" for this compilation is actually unwarranted. Like many of the later Acts, there is far less interest in proclaiming doctrine, orthodox or otherwise, than in braiding together a long string of wonder tales about the ancient hero. Sexual intercourse and covetousness are, as already indicated, always to be combatted. They, not unorthodox doctrines, are the constant concern of the author. It may even be wondered if these themes, so common in pagan romances of the period, were not unnaturally shoved to the fore in stories intended as Christian substitutes for the popular literature. In none of the apocryphal writings is dependence upon the canonical writings more marked. Many of these fantastic tales, with their talking animals (asses and serpents), exorcisms, cures by relics of the long-dead Thomas, are little more than the reworking of familiar biblical stories.

A brief summary of the several episodes of the book may suggest in part the reason it proved so popular to many early readers and continued to be copied, although not infrequently officially condemned. The scene opens in Jerusalem with the apostles assembled to apportion the sections of the world in which each is to labor. India falls to the lot of Thomas. He refuses, but is forced by none other than Christ himself to go, for the latter sells him to a merchant who chances to be in Jerusalem in search of a carpenter to work for his king, Gundaphorus. Forthwith they depart (somewhat surprisingly) by ship (!) for India. En route they stop at Andrapolis, where a wedding is under way. At the feast, to which all must go, Thomas abstains, in a manner not unreminiscent of Daniel, from all the dainties; when approached by a Hebrew flute girl, he averts his eyes and sings a mystic bridal hymn, reminiscent of the Song of Songs, and apparently intended to suggest that the only proper marriage for a Christian is of the soul to Christ. After Thomas has departed from the bridal pair, the wedding is subsequently broken off by Christ, who appears in the form of "his twin brother Thomas."

Having arrived at the court of Gundaphorus, Thomas is directed to build for the king a palace. Instead, he spends the lavish funds on the poor and tells the angered king that a palace has been built

and awaits him in heaven. The king's brother, Gad, enraged at Thomas' effrontery, dies that night, sees the palace in heaven, is so enamored of it that he contrives to be restored to life, and returns to tell his brother. Then follows the episode of the serpent who has slain, out of jealousy, a woman's lover. The serpent is forced to confess this and his other, earlier evil deeds (from the days of Adam and Eve on) and dies. Later Thomas meets the colt of a she ass who, able to talk, identifies herself as of direct descent from Balaam's ass. At her bidding Thomas mounts her and rides to the city gate. As he humbly dismounts, to enter the city on foot, the ass drops dead. A lustful demon, who has long tormented a woman, is exorcised and departs in a cloud of fire and smoke. A young man, impressed by Thomas' preaching, murders his mistress because she will not agree to live in perfect continence. Later, as he eats the Eucharist, his hands wither. Thomas heals him and restores to life the murdered woman. After recounting her experiences while dead—she had been taken on a tour of hell, which she describes in great detail in words drawn from the Apocalypse of Peter—she, with many others, is converted and baptized.

Next a pious captain asks Thomas' help in curing his wife and daughter, long possessed by devils. Thomas sets out with the captain. Their horses fail. Four wild asses are summoned to draw the chariot in their stead. One of them, upon arrival at the captain's house, is endowed with speech and summons the devils, who are speedily banished and flee. Then the scene changes to another part of India, where the final event, replete with many details and ending with Thomas' martyrdom, takes place. It is in essence the same story, so common in all these apocryphal Acts. Mygdonia, the wife of a wealthy courtier, is converted to celibacy, despite the pathetic and moving pleas and finally the threats of her husband, who at last enlists the aid of the king, Misdaeus. But all, of course, to no avail. Not only is Mygdonia obdurate, but others, including the king's wife and son, are similarly converted. Finally, after Thomas has been several times warned and imprisoned, only to leave the prison whenever he desires through self-opening doors (all highly reminiscent of stories in the canonical Acts), the king attempts to torture him with plates of red-hot metal placed at his feet, only to find a flood rising from the plates, a flood which, had it not been for Thomas' gracious intervention, would actually have drowned him.

Finally Thomas is taken onto a mountain, is pierced by four spears, dies, and is nobly buried by his converts. Eventually the king too is converted, after his demon-ridden son has been cured by dust from Thomas' grave.

While extended sermons and other exhortations seem definitely subordinated to the somewhat light, flimsy, and at times clogged and slow-moving story, there are many mystic hymns and prayers replete with honorific titles. The most famous of these is the so-called Hymn of the Soul (chs. 108-13), which has received high praise by many critics through the years, even being styled the "most beautiful piece of literature produced by the early church." Nor is this any new discovery. Nicetas of Thessalonica in the eleventh century wrote an extended and enthusi-

astic paraphrase and commentary on it. The precise meaning of the poem is far from clear. The usual interpretation of it is that it is an allegory of the soul, which, of heavenly origin, is sent to earth to secure the pearl of price. Forgetful of its origin and mission, it is finally awakened by a revelation from on high, secures the pearl, and returns to heaven to don its former glorious heavenly robe, which—being his own strange counterpart—has wondrously grown with the growth of his own stature.

Not infrequently attempts have been made to interpret the hymn as a mystic portrayal of the Incarnation. Some have seen it as derived from the story of Joseph in Egypt and his coat of many colors. Whatever its precise purpose, it is manifestly not the composition of the author of the romance and is actually quite irrelevant in its context. Quite regardless of one's verdict regarding the book as a whole, all agree that the hymn was composed in Syriac and is older than its context. There seems little reason to question that it was inserted by the original author of the Acts, not later by an interpolator, into its present position—not that it was particularly apt, for it is not, but simply as a pretty decoration which had caught his fancy.

The writing, while devoid of historical value for the reconstruction of the life of Thomas, is not without value in its side lights on early Christian practices, especially in its detailed and vivid accounts of the way in which the Christian sacraments were at the time practiced: the anointing with oil before baptism, the subsequent immersion of the candidate, who had stripped naked save for a girdle; the immediately following Eucharist, with its elements, wine mixed with water, and bread signed with the cross. It also exhibits, as already remarked, a very wide, if superficial, knowledge of the content and phraseology of the canonical Testaments, both Old and New, but never suggests that they were employed or even possessed by the zealous missionaries, to say nothing of being used in services of worship.

For further details, including the large critical literature, see APOCRYPHA, NT.

Bibliography. A convenient English translation of the Greek text prepared by Bonnet, with constant attention to the variants in the Syriac version, is to be found in M. R. James, *The Apocryphal NT* (1924), pp. 364-439. M. S. ENSLIN

THOMAS, APOCALYPSE OF. One of the comparatively few apocalypses attributed to persons prominent in the NT. While condemned, along with the Apocalypse of Paul and the Apocalypse of Stephen, in the sixth century in the so-called Gelasian Decree, it remained but a name until the discovery in the early years of the twentieth century of what appears to have been its text, or portions of it, in two MSS—one of the eighth century, the other of the eleventh or twelfth—and a leaf of a fifth-century Vienna palimpsest.

Unlike the apocalypses of Peter and Paul, which are visions of the next world, this apocalypse is a prophecy of the end of this one, as revealed to Thomas by the Lord, who identifies himself as the "Son of God the Father . . . and the father of all spirits." In addition to a description of what actually appear to be contemporary events (in the guise of

prophecy in a style reminiscent of Daniel) is a series of the seven signs which will precede the ending of this world.

The writing was known in England in the ninth century and was apparently the source of the widely circulated "Fifteen Signs of the Last Days," commonly attributed to Jerome. From a clear reference to the deaths of Arcadius and Honorius, who died in A.D. 408 and 423 respectively, the apocalypse is commonly dated in the early fifth century. It was apparently written in Latin, although the possibility exists that a shorter version of it, as represented by the text of the later (eleventh-twelfth century) MS, may have been originally composed in Greek.

Bibliography. A translation of the portions of the text now available is given in M. R. James, *The Apocryphal NT* (1924), pp. 555-62. See also M. R. James, "Revelatio Thomae," *JTS*, 11 (1910), 228 ff; P. Bihlmeyer, "Un texte non interpolé de l'Apocalypse de Thomas," *Revue Benedictine*, 28 (1911), 27-82. M. S. ENSLIN

***THOMAS, GOSPEL OF.** An early apocryphal, probably Gnostic, gospel, frequently referred to adversely by early Christian writers. The well-known infancy gospel of the same name may well be a drastically expurgated recension of this work.

The first to mention this gospel by name is Hippolytus (*Heresies* V.2), who says it was in use among the Naasenes, who found support in it for their view of the "nature of the inward man." He quotes from it: "He who seeks me will find me in children from seven years old; for there will I, who am hidden in the fourteenth aeon, be found." Origen (*Homily on Luke* 1) mentions without comment a gospel by this name as current. Eusebius (*Hist.* III.25.6) names it, along with the Gospel of Peter, as spurious. Cyril of Jerusalem (*Catechetical Instructions* V.36) ascribes it to the Manicheans, saying it was written "by one of those wicked disciples of Mani" and of a nature to corrupt the souls of the simple. According to the *Stichometry* of Nicephorus it contained 1,300 lines.

Irenaeus (*Her.* I.20.1), in his account of the Marcossians, states that they supported their doctrine by an "unspeakably vast number of apocryphal writings, and refers to the story of the Lord, when a child, confounding his teacher by his esoteric knowledge of the nature of the letters of the alphabet. Since the story is found in our copies of the Gospel of Thomas, the apparent source of all subsequent infancy gospels, it has been often assumed that Irenaeus thus bears indirect testimony to its antiquity. All these references may well be to the same work, originally a Gnostic production and subsequently revised by the Manicheans. In what must be assumed to be its original form it has not come down to us. Among the MSS found in 1945 at Chenoboskion (see APOCRYPHA, NT) is one containing, along with other material, three writings: the Gospel According to Thomas, the Gospel According to Philip, and the Book of Thomas. It has been provisionally conjectured that this material may be a copy of the hitherto lost gospel, or at least may eventually throw light on the nature of this Gnostic gospel and on its relation to the collection of legendary stories of the infancy of Jesus long known to us under the same title.

This latter, the infancy gospel, is extant in two

Greek versions, a Latin version and a much-abbreviated Syriac revision from Greek, which carries with it the ascription to Thomas, described as "the Israelite, the philosopher," "the holy apostle," or simply "the Israelite" (variously "Ismaelite"). The Greek MSS are late, as are also the rather more abundant Latin. A Syriac MS is perhaps to be dated in the sixth century. In addition there is a Latin palimpsest, never published or even fully deciphered, of approximately the same age.

While the forms of the two Greek versions and the one Latin version exhibit many variations—one form of the Greek is much shorter than the other; the Latin has prefixed a short account of the flight to Egypt and a few of the miracles wrought there by the wonder child—they are plainly modifications of the same book: a compilation of stories of the superhuman power and wisdom of Jesus as an infant and small boy. Based upon nothing but unbridled imagination, they represent an early attempt to fill in the hidden years, which from the very beginning piqued the curiosity of readers of the canonical gospels, and to extend back into his infancy the superhuman powers which the more restrained canonical gospels ascribe to him as a man.

Jesus molds twelve little mud sparrows on the sabbath day, after gathering together into pools the water of a brook, and by clapping his hands causes them to fly away, to the amazement of Joseph and of a Jew who has chided him for profaning the sabbath. He withers the son of Annas the scribe, who has dispersed the water which Jesus had collected; causes a child who runs against him to drop dead; leaps down from the roof of a house and restores to life another child who has fallen off and whom Jesus has been accused of pushing; heals a workman's foot, cut by an ax; gathers water for Mary into his cloak (upon breaking the water jar); reaps a hundred measures of wheat from one kernel which he has sown; stretches out to the proper length a bed which Joseph has clumsily made too short; confounds his teacher, Zacchaeus, when the latter seeks to teach him the letters of the (Greek!) alphabet from Alpha to Omega (apparently the story to which Irenaeus referred). In the story of the twelve-year-old Jesus in the temple (which the longer Greek version repeats and which subsequent infancy gospels, notably the ARABIC GOSPEL OF THE INFANCY, greatly expand) the original nature of that tale—told with such restraint in Luke 2:41-51—is evident—namely, of the superhuman knowledge of the young child, who "put to silence the elders and teachers of the people." One and all, the stories depict an arrogant little wonder-worker, destitute of all save a high opinion of himself, the miraculous power to wreak vengeance on all who oppose him, and the ability to escape the consequences of his deeds.

This gospel, together with the Protevangelium of James (see JAMES, PROTEVANGELIUM OF), was used again and again by subsequent writers, and the contents of these two basic infancy gospels appear in even more garish form in such writings as the Gospel of Pseudo-Matthew, the Gospel of the Birth of Mary, the History of Joseph the Carpenter (see PSEUDO-MATTHEW, GOSPEL OF; MARY, GOSPEL OF THE BIRTH OF; JOSEPH THE CARPENTER, HISTORY

OF), and many others, both medieval and modern. To what extent this present mélange of wonder tales was a part of the earlier Gnostic Gospel of Thomas, to what extent interpolations and additions have crept in, is impossible to say. Save in the story of Jesus' esoteric knowledge of the nature of the letters, it is manifestly free from distinctive Gnostic speculation, while the longest of our recensions is less than half the length ascribed to its namesake in the traditional stichometry.

Attempts have been made to explain these stories as deliberately produced by orthodox Christians in opposition to the Gnostic heresy that it was not until baptism that the supernatural Christ descended upon Jesus and equipped him with miraculous power. It is not to be denied that these stories would provide a ready answer to such claims. Nevertheless, at our present stage of knowledge such speculation is at best uncertain, and it would seem possible to explain them more naturally as the forthright attempt to make explicit what seemed to be implied by the intriguing word of Luke: "The child grew and became strong, filled with wisdom; and the favor of God was upon him" (2:40; cf. vs. 52).

Bibliography. Texts of the apocryphon are available in C. Tischendorf, *Evangelia apocrypha* (2nd ed., 1876); P. Pecters, *Évangiles apocryphes* (1914), vol. II. An English translation is provided by M. R. James, *The Apocryphal NT* (1924), pp. 49-70. For further bibliography, see APOCRYPHA, NT.

M. S. ENSLIN

THOMOI. KJV Apoc. form of TEMAH.

THONG [אגרות, in the phrase אגרות מוטב, the thongs of the yoke (Isa. 58:6; KJV the heavy burdens); מוטר (KJV BOND); מוטץ (KJV LATCHET *except* in Acts 22:25)]. A narrow strip of leather used as a cord or band for lashing a yoke (Isa. 58:6; Jer. 27:2); for tying prisoners (e.g., Paul in Acts 22:25); and, in early use, especially as the latchet or lace of a shoe (Mark 1:7 = Luke 3:16; John 1:27). Such strips were also used as instruments of flagellation. See WHIP.

H. F. BECK

THORN. See BRAMBLE; BRIER; FLORA § A12; THISTLE, THORN.

THORNS, CROWN OF. See CROWN OF THORNS.

THRACE thrās [Θρακία]. In its early, definite meaning, Thrace was the area S of the River Danube; W of the Black Sea and Bosphorus; N of the Propontis, Hellespont, Aegean Sea, and E Macedonia; and E of the River Strymon or, later, the Nestus. The Romans divided this region into two parts; that N of the Haemus Mountains was called Moesia, and the S area was called Thrace. After Roman control over Thrace had been growing for over two centuries, Claudius made it a province ca. A.D. 46. The Thracians, a fierce and warlike people, served many foreign rulers as mercenary soldiers. II Macc. 12:35 reports that a Thracian horseman helped Gorgias escape danger in a battle with Judas Maccabeus ca. 163 B.C.

F. V. FILON

THRASEAS thrā sē'as. KJV translation of Θρασάσιος, as the name of the father of Apollonius, in II Macc. 3:5. The RSV translates as a place name, TARSUS. J. C. SWAIM

THREAD. See CLOTH.

THREE CHILDREN, SONG OF THE. See SONG OF THE THREE YOUNG MEN.

THREE DAYS. See THIRD DAY.

THREE TAVERNS [αί Τρεῖς Ταβέρναι]. A halting place on the road to Rome, through which Paul passed (Acts 28:15).

Three Taverns was thirty-three miles from Rome (*Corpus Inscriptionum Latinarum*, X.685), ten miles nearer the city than the Forum of Appius. Cicero mentions Three Taverns several times (*To Atticus* I.13; II.10, 13) and indicates (*To Atticus* II.12) that this was the place where the road to Antium intersected the Appian Way.

Bibliography. Philipp, "Tres Tabernae," *Pauly-Wissowa*, Zweite Reihe, IV, ii (1932), col. 1875. J. FINEGAN

THRESHING. The separating of the kernels of grain from the straw. The stalks were laid out on a threshing floor, a flat surface of rock or pounded earth located in an open place exposed to the wind. The floor was usually at the edge or gate (I Kings 22:10) of the village or town and was owned either communally or privately (II Sam. 24:16 ff).

Several different methods of threshing were used. When there was a small quantity, the stalks were beaten with a stick or flail (Judg. 6:11). At other times animals were driven around over the grain, trampling it with their feet (Deut. 25:4).

More commonly, however, some kind of machine was used. One of these (עגלה, "cart") was a frame with rollers into which were fastened sharp stones or pieces of metal (Isa. 28:27-28). Another machine (מורג, "threshing sledge")* was made of planks turned up a little at the front with sharp stones or pieces of metal fixed into holes bored in the bottom (II Sam.

Courtesy of Herbert G. May

60. Palestinian threshing scene

24:22; I Chr. 21:23; Isa. 41:15). These machines were pulled by animals around and around over the grain. The vehicles might be weighted with stones or by the driver to make them more effective. Today in Palestine it is a common sight to see two or three children sitting on a sledge, enjoying the ride. The stalks are constantly turned over and the process

goes on for several hours, depending on the amount to be threshed, until all the kernels can be seen to be separated from the stalks. Figs. SLE 67; THR 60.

The term חרוץ (Job 41:30; Isa. 28:27) also refers to some kind of threshing instrument made with iron (Amos 1:3) and perhaps a sledge in type.

H. N. RICHARDSON

***THRESHOLD** [סף (KJV alternately DOOR, GATE); מפתן]. A word used for several kinds of entrances; usually a sacred place.

There is no doubt that in I Kings 14:17 סף means the door of Jeroboam's house or the entrance to the women's quarters, and in Esth. 2:21; 6:2 it is also used of the royal palace. Similarly in Ezek. 43:8 "their threshold" is mentioned along with "my threshold."

In Judg. 19:27 the threshold of a house is meant (but the slain woman's hands were on the threshold; this was probably an accidental position).

Other references are to the temple. Certain priests were keepers of the threshold (II Kings 12:9; Ps. 84:10—H 84:11), and sometimes three are specially mentioned (II Kings 25:18=Jer. 52:24). Presumably the three principal entrances to the temple are intended. In II Chr. 34:9 these priests are named Levites. The word is found in the plural in a number of passages relating to the temple (I Chr. 9:19, 22; keepers of thresholds; II Chr. 3:7; Isa. 6:4; Amos 9:1: Bethel [?]). It is not always clear whether the thresholds of the gates to the temple court or whether the temple thresholds are intended.

ספתן is used of Dagon's temple at Ashdod (I Sam. 5:4-5); of one of the resting places of Yahweh's glory (Ezek. 9:3; 10:4); of the place where Ezekiel's prince is to render him worship (46:2), and of the temple threshold from which the life-giving waters are to flow to fertilize the Arabah.

Leaping over the threshold is condemned in Zeph. 1:9 as an idolatrous custom, and this same custom is said to have arisen among the Philistines at Ashdod. Dagon's members rested on the threshold, so thereafter his worshipers leapt over the threshold. Cf. "pass over the door" in Exod. 12:23, and the bearing of this on the meaning of the Passover.

"Threshold" in the OT thus most often designates a sacred place, and sacrifices at foundations and doors confirm this.

See also DOOR; FOUNDATION; PASSOVER; TEMPLE, JERUSALEM.

THRONE [כסא, כסא; Aram. כרסא; βῆμα, properly judgment seat; θρόνος]. The ceremonial chair of a king, so closely connected with the royal office that it becomes symbolic of kingship in all its aspects; associated also with God as supreme king and with the Messiah as his vice-regent. See KING.

Fundamentally כסא is a seat of honor for any distinguished person: a governor (Neh. 3:7; lit., "to the seat of the governor," interpreted "under the jurisdiction of the governor"), a priest (I Sam. 4:13, 18, KJV; RSV "seat"), or a favored guest (II Kings 4:

10; "chair"; KJV "stool"). English translations normally do not use the word "throne" in these instances, but reserve it for the ceremonial chair of a king from which, equipped with the other symbols of his office, he discharges his duties. Fig. SEN 41.

The thrones of many foreign kings are mentioned in the OT (e.g., Exod. 11:5; Jer. 43:10; Jonah 3:6), but attention naturally centers on the Hebrew throne, and particularly on the throne of David, which was established by divine covenant. The description of Solomon's throne in I Kings 10:18-20, combined with representations of thrones found on ancient monuments, gives us an idea of the physical appearance of the Hebrew throne. Like Darius' throne, pictured on a relief from Persepolis,* Solomon's throne is a high-backed chair; but, unlike the Persian model, it has wide arm rests, exactly as shown on the sarcophagus of Ahiram, king of Byblos in Phoenicia (ca. 1000 B.C.), and on an ivory from Megiddo (Figs. GEB 15; ART 70). In both cases the lions have wings extended backward in the attitude of flight, and are, therefore, cherubim of a well-known type (see CHERUB). The lions on the Israelite throne were probably of the same kind. On the back of the throne was a carved bull's head, the ancient symbol of strength. Four such heads adorn the corners of a backless throne on a stele from Samal (Zinjirli). Although not mentioned in the description in I Kings, a FOOTSTOOL was an indispensable part of the throne (Isa. 66:1). Ivory inlay carved in animal or human shapes or in intricate geometric designs, and gold leaf into which similar designs were hammered (*repoussé*), increased the splendor of the throne, which was set on a dais reached by a flight of six steps, each with two standing lion figures, resembling the avenues of sphinxes common in ancient art. Fig. DAR 4.

God's throne was early represented by the ARK OF THE COVENANT. The divine throne could be seen in prophetic or apocalyptic visions (Isa. 6:1-3; Ezek. 1:4-28; Dan. 7:9-10; Rev. 4). Ezekiel describes it as made of lapis lazuli and set on a hemisphere of transparent crystal (Ezek. 1:26). The cherubim associated with the royal throne appear around Yahweh's throne as well, either supporting it (Ezek. 1:22) or flying around it (Isa. 6:2). In Daniel's vision (7:9) the divine throne is composed of flames, while in Revelation it stands in heaven, flanked by the twenty-four thrones of the elders, with an emerald rainbow around it, seven torches and a crystal sea in front, and four living creatures on each side. God's throne is spiritualized in a variety of ways in the Bible. Usually it is in heaven, or *is* heaven (Ps. 11:4; Isa. 66:1; Matt. 5:34), but occasionally Jerusalem (Jer. 3:17), the temple (Ezek. 43:7), or the nation (Jer. 14:21) may be called the throne of God.

By metonymy "throne" represents the king's function as judge (Ps. 122:5). Both Yahweh's throne and David's are seats of judgment (Ps. 9:4—H 9:5; Isa. 16:5), and the usage is continued in the NT, where the apostles and the Messiah will sit on thrones to judge the world (Matt. 25:31; Luke 22:30). The everlasting and divine throne of David (II Sam. 7:16; Ps. 45:6—H 45:7) gives rise to the concept of the Messiah's throne, rare in the OT (Isa. 9:7—H 9:6; Jer. 17:25) but frequent in the NT, where Christ is represented

as heir of the line of David (Luke 1:32; Acts 2:30).

THUMMIM. See URIM AND THUMMIM.

THUNDER, SONS OF. See BOANERGES.

THUNDER AND LIGHTNING [רעם (Job 26:14; Ps. 77:18—H 77:19; Isa. 29:6; etc.), βροντή (Mark 3:17; John 12:29; etc.), thunder; קול, noise of thunder (Ps. 104:7), voice (Deut. 4:12); φωνή (Rev. 14:2), sound; ברק (Exod. 19:16; Jer. 10:13; etc.), ἀστραπή (Matt. 24:27; 28:3; etc.), lightning; אור (Job 36:32; 37:3, 11, 15), φῶς (Acts 9:3), light; אש, fire (Exod. 9:23), fire of Yahweh (I Kings 18:38); לפידים, *lit.*, torches (Exod. 20:18), lightnings; אש להבות (Ps. 29:7), flames of fire]. A familiar but awe-inspiring and sometimes dangerous natural phenomenon, often interpreted in the Bible as a visible manifestation of divine power. Electrical storms occur in Palestine and the adjacent deserts, especially in the spring and autumn months, when moist air from the sea is heated and forces its way rapidly upward into the cold upper air.

A cumulo-nimbus or thundercloud is, in effect, an atmospheric explosion in slow motion. Strong electrical charges are built up by friction of raindrops and ice particles, carried by the violent updrafts of warm air and downdrafts of cold air within the cloud. Two thirds of the ensuing discharges of lightning take place within the cloud itself or between clouds. The flashing discharges between the cloud and the ground release tremendous energy. Objects which are struck are shattered or set on fire, unless they are good conductors of electricity. Thunder is the noise of air exploding in the intense heat of the lightning's path.

The glitter and flash of the lightning (Ps. 144:6; Ezek. 21:10—H 21:15), its sudden illumination of the earth (Matt. 24:27), its darting movement (Nah. 2:4—H 2:5), its spectacular fall to earth (Luke 10:18), its striking a target (Job 36:32), and the crash (Ps. 29:8) and reverberation (Isa. 6:4[?]; 29:6) of the thunder—all these are among the vivid impressions of the biblical writers. The lightning is the sword (Deut. 32:41), the spear and the arrows (Hab. 3:11), of Yahweh. Thunder is his voice, both figuratively and literally (Deut. 5:22; Ps. 29:3-9; Ecclus. 45:5; John 12:28-29). The awful majesty and power of the thunderstorm suggest a theophany (Exod. 19:16-20; Ps. 18:7-15—H 18:8-16; Hab. 3:4-15). Hence thunder and lightning become part of the imagery in descriptions of the heavenly throne (Ezek. 1:4-28; Enoch 14:8-22; Rev. 4:5). The storm displays Yahweh's control of natural forces (Job 28:26; Jer. 10:13). It is the instrument of his power (Ps. 104:4), especially in the chastisement of his enemies (Deut. 32:41; Rev. 16:18). In Judg. 5:4-5; Hab. 3:3 it is perhaps not accidental that the thunderstorm comes from the direction of Edom, since such storms do come to Palestine from a southerly direction when low pressure is centered over Abyssinia.

R. B. Y. SCOTT

THUT-MOSE thüt'môs [Egypt. *dhwti-ms*, (the moon-god) Thoth is born]. A name borne by four

pharaohs of the Eighteenth Dynasty, including Thutmose III, founder of Egypt's Asiatic empire. See EGYPT § 2.

THYATIRA θῆ'α τῖ'ρα [Θυάτειρα]. A city in W Asia Minor. It was near the S bank of the Lycus River, and on the road between Pergamum on the NW and Sardis on the S-SE. It lay in the N part of ancient Lydia; at times, however, it was considered to be in the southernmost part of Mysia.

Little is known of the early history of Thyatira. The city grew in importance when, at the beginning of the third century B.C., Seleucus Nicator refounded it and, as it appears, settled a group of Macedonian soldiers there. It was never a great city, but it was the chief city of the Lycus Valley and developed profitable industries and trade. Inscriptions show that there were at Thyatira numerous trade guilds, including coppersmiths, tanners, leatherworkers, dyers, woolworkers, and linenworkers. Such guilds must have played a prominent part in the political, economic, social, and religious life of the city.

Prominent among the deities worshiped at Thyatira were Tyrinnos, who became identified with Apollo the sun-god, and Boreitene, a goddess identified with Artemis. It is possible that the references to the Son of God with "eyes like a flame of fire" and feet "like burnished bronze" are a conscious reference to the claims of the sun-god at Thyatira (Rev. 2:18). Under the Roman Empire the worship of Apollo Tyrinnaïos was joined with the emperor-worship cult. Another religious cult at Thyatira was that of the Sibyl Sambathe or Sambethe, whose shrine was situated "before" rather than in the city. The theory that the woman called Jezebel in Rev. 2:20 was a priestess at this shrine can hardly be true, since Jezebel was evidently tolerated by the church at Thyatira as a member and was accepted by a minority of these Christians as a prophetess.

It is highly probable that there was a Jewish settlement at Thyatira. Acts 16:14 supports this conclusion. When at Philippi, Paul, Silas, and Timothy, seeking on the sabbath the Jewish place of prayer, came "to the riverside" "outside the gate," they found a group of "women who had come together," and among them was "Lydia, from the city of Thyatira." She was there as a "seller of purple goods" made in Thyatira, and she was a "worshiper of God," a Gentile who had been drawn to Judaism, probably through contact with Jews at Thyatira, but

who had not become a proselyte. The "purple" of the cloth or garments she was selling was probably the color known as "Turkey red," made with madder root for use by the guild of dyers at Thyatira.

It is not clear when or by whom the Christian gospel was first preached in that city. One possibility, suggested by Acts 19:10, is that during Paul's ministry at Ephesus one or more of his helpers or converts went to Thyatira and founded the church there; this hypothesis is far from certain. What is clear is that when the book of Revelation was written, ca. A.D. 95, there was a rather strong church in Thyatira (Rev. 2:18-29), with a commendable record of "love and faith and service and patient endurance," and with a history of growth in which the church's "latter works exceed the first." At the time of this report, however, the church was seriously threatened. A part of the church, apparently a minority, were following a woman symbolically described (with a reminder of I Kings 16:31 ff) as Jezebel. She was a member of the church and claimed to be a prophetess, and some of the Christians accepted her claim. She taught and led them "to practice immorality and to eat food sacrificed to idols." Though given time to "repent of her immorality," she had refused to do so, and she continued to lead others to "commit adultery with her." The rest of the church was tolerating her activities.

Three interpretations may be given to these scathing words:

a) The writer may be denouncing a teaching that physical indulgence has no effect on Christian faith (cf. Acts 15:29). On this false view, sexual libertinism and eating food offered to idols do not affect the Christian's faith or standing with God.

b) Since in the OT idolatry and worship of other gods is described as "fornication," and since wild feasting and sexual orgies were part of some pagan cults, the writer may be denouncing a laxity in which physical indulgence occurs during active participation in such pagan religions.

c) The "Jezebel" at Thyatira may have been promoting a sophisticated tolerance toward the many guilds of the city. Every such guild had its patron god, its feasts, its social occasions which could at times become immoral revels. "Jezebel" may have argued that these patron deities need not be taken seriously and these revels need not be condemned, since every workman, to make a living, had to join a guild, and he could take its religious rites lightly

61. A Greek inscription on a sarcophagus on the acropolis containing the name "Thyatira"

and would learn to know the realities of life if he shared in the revels and so by actual experience learned the "deep things of Satan."

The problem was not confined to Thyatira. It was found at Ephesus and Pergamum (Rev. 2:6, 14-15). So it cannot be explained simply by the presence in Thyatira of numerous guilds. Libertinism was a threat to Christian faith encountered by Paul and continually in later decades. The pagan world usually lacked a clear sense of monotheism and of the indissoluble tie between faith and moral living. At times it defended itself by a dualism which excused all physical indulgence as unrelated to spiritual life. It was hard for a small minority movement such as the Thyatira church to be cut off from the friendships and social life that assumed the legitimacy of polytheism and undisciplined physical indulgence. But the Christian faith was at stake in this decision, and the writer of Revelation pointed to the necessity of breaking with polytheistic and immoral practices.

THYINE WOOD thī'n. KJV translation of ξύλον θύϊνον (RSV SCENTED WOOD).

TIAMAT tī ä'mät [Akkad. *ti'amtu*, *Ti-'amat*; *tamtu*, *tamdu*, sea, ocean]. The goddess of the DEEP; consort of Apsu; mother of the gods of the Babylonian pantheon (Enuma Eliš, Tablet I:4 *passim*). A. Heidel (*see bibliography*) claims that *Ti-'amat* and תַּמַּת go back to a common Semitic form. She was a female dragon (ANEP 523, 670, 691; *see bibliography*) or a woman (*see bibliography*). Mummu (Tablet I:4) is an epithet (parallel to Mother Hubur, I:132?) of *Ti-'amat* (ANET 61), or a separate deity, the first-born son of *Ti-'amat* and Apsu. *See bibliography*.

62. Sea of Galilee with town of Tiberias in the background

1. **The site.** This city was built by the tetrarch Herod Antipas ca. A.D. 25 to serve as the capital of his tetrarchy of Galilee and Perea, succeeding Sepphoris, which he also had built for a capital in 4 B.C. Tiberias was more conveniently located for reaching both districts of his rule. It was also at a focal point in the system of roads, both locally and internationally. It was named to honor Tiberius Caesar (A.D. 14-37), and its importance soon extended the name also to the lake (John 6:1; 21:1).

As the site of his city, Antipas chose a natural acropolis overlooking the activity around the Sea of Galilee (*see GALILEE, SEA OF*). This was on the W coast, S of centrally located Magdala (el-Mejdel), where the coastline curves inward, ca. five miles N of the outlet. It had a magnificent panorama. Magdala-Tarichaea was easily observed two miles N, and Capernaum lay less than five miles N across the arc of the lake. Somewhat farther and at different points of the compass a direct line of five or six miles across the lake would reach Bethsaida, Gergesa, and Hippos. The city itself included the palace on the acropolis, the castle at the N, and a narrow, rectangular town between rock and lake. Although open to the sea, on the land side it was walled round.

When the city was under construction, the workmen came upon a necropolis, which had the result of banning all Jews for fear of contamination by a corpse. Josephus relates that the population was heterogeneous, composed of both foreigners and Galileans, high and low, the poor and the newly freed, many of them settled here by force or under the inducement of a house and land (Jos. Antiq. XVIII.ii.3).

It must be remembered that the site is almost seven hundred feet below sea level, and lies inside a great bowl of mountains. Consequently, its climate is semitropical, humid and oppressive. Tiberias especially is blocked off from the W breeze, and affected also by the steaming sulphurous springs about it. These warm baths were really in a suburb to the S, called Ammathus (θερμά) by Josephus (War IV.i.3) and identified with the old fortified city of Hammath in Josh. 19:35. It was this ancient town whose cemetery was disturbed.

2. **History.** Tiberias was governed by a Council of six hundred with an Archon and a "Committee of Ten" (Jos. War II.xxi.3-9). Its population was Gentile, which may be the chief reason Jesus never visited this new city. There is only one reference to the city of Tiberias in the NT, where it is reported

that following the episode of feeding a multitude somewhere on the E coast (the disciples and Jesus having already departed) some small Tiberian boats appeared at this isolated beach, in which the people embarked to follow on to Capernaum (John 6:23). Many of the Gentile residents held Jewish sympathies when revolt broke out here against the Romans in A.D. 65. Josephus destroyed the palace on the acropolis and proceeded to strengthen the defenses of the city. Unfortunately, Tiberias became involved in the feud between John of Gischala and Josephus; and when Vespasian laid siege to the towns of Tarichaea and Tiberias in 67, the latter opened its gates and capitulated. Tiberias had remained under the rule of Antipas and Agrippa I until 44, when the Romans set a procurator over Galilee. But in 59 Nero was disposed to present Agrippa II, now puppet king E of the Jordan, with the Galilean towns of Tiberias and Tarichaea as well as Bethsaida-Julias with fourteen villages. Thus Tiberias remained under Jewish rule until 100, though no longer a capital.

After the fall of Jerusalem in 135, Tiberias became a strong Jewish center and was recognized as one of four sacred cities in Palestine. The Sanhedrin was moved from Sepphoris to Tiberias in ca. 150, and schools of rabbinic study were established. When the Talmud (Ber. 8a, 30b) reports thirteen synagogues in Tiberias, this can apply only to this later flourishing of a Jewish metropolis. The Palestinian Talmud and the Tiberian vowel-pointing were here developed, and it is noteworthy that later Maimonides was entombed here. Once again in the twelfth century Tiberias was involved in the conflict between Saladin and the Crusaders. A few miles to the W, S of the Horns of Hattin, Saladin won his historic victory in 1187. The city and the larger area about it have suffered repeated earthquakes—e.g., in 1759 and 1837. After the First World War, British troops took Tiberias in October, 1918. When the British mandate ended in 1948, modern Tabariyeh was allotted by the United Nations to the new state of Israel.

TIBERIAS, SEA OF. See GALILEE, SEA OF.

TIBERIUS tī bīr'ī əs. Tiberius Claudius Caesar Augustus, the successor of AUGUSTUS as Roman emperor. He was born in 42 B.C. to noble parents, who were soon afterward divorced so that his mother, Livia, could marry Octavian (Augustus). From his twenty-third to his fifty-fourth year Tiberius was occupied with military affairs along the E and N frontiers of the Empire, except for an eight-year interval (6 B.C.—A.D. 2) when, out of favor with Augustus, he lived in Rhodes. In 12, Augustus had forced him to divorce his wife and marry the emperor's daughter Julia, in order to produce an heir to the throne. Julia's scandalous behavior led Augustus to banish her, in 2 B.C., and the subsequent deaths of two of her sons by a previous marriage meant that Tiberius had to be adopted by the emperor as his heir (A.D. 4); the Senate gave him

tribunician power and proconsular authority. When Augustus died, the Senate decided to name Tiberius emperor (September 17, A.D. 14). The Gospel of Luke dates the beginning of Jesus' ministry in the fifteenth year of Tiberius' reign (Luke 3:1).

His reign was conservative rather than innovating; he intended to preserve what Augustus had left, rather than to increase it. By severely limiting expenses he was able to leave an estate of two billion sesterces. Because of his advanced age there was almost constant intrigue concerning the succession; a leading part was played by the praetorian prefect Sejanus, who in 27 persuaded the emperor to live in seclusion on Capri. Sejanus, according to Philo a militant anti-Semite, was presumably responsible for the appointment of Pontius Pilate as procurator of Judea. When he became consul in 31, he apparently planned to have Tiberius deposed, but from Capri the emperor informed the Senate of the conspiracy, and Sejanus was executed.

Throughout Tiberius' reign there were trials for sedition and treason; some cases were genuine, while others seem to have been trumped up. Tiberius refused to accept divine honors in Italy, though even at Rome sacrifices were offered to his Genius, and in the E provinces worship was given him. On the other hand, he encouraged the worship of Augustus as a focal point of loyalty to the state. Like Augustus, he was unenthusiastic about foreign cults. Probably at the beginning of his reign, he forbade the practice of Druidism throughout the Empire. After a scandal at the temple of Isis in 19, involving Romans of high rank, the temple was destroyed, and the priests were crucified. About the same time, after a few Jews had defrauded a Roman matron, Tiberius forbade the observance of the Jewish law in Italy, and many Jews were deported.

Tiberius died, almost insane, on Capri on March 16, 37. His successor, Augustus' great-grandson, was hailed by the people with relief. The question of deifying Tiberius was raised by Caligula, but the Senate withheld approval (see EMPEROR-WORSHIP). Contemporary historians (Velleius Paterculus, Valerius Maximus) are quite favorable toward the emperor, perhaps out of necessity; later senatorial historians (Tacitus, Suetonius, Dio Cassius) are extremely hostile. To paint his character either white or black does injustice to the sources; and it must be remembered that Tacitus is a master of subtle vilification.

In the gospels he is named once (Luke 3:1), and the references to "Caesar" in the gospels allude to him (Matt. 22:17-21; Mark 12:14-17; Luke 20:22-25, 23:2; John 19:12-15). The denarius, or "tribute penny," to which the Synoptic gospels refer probably bore his portrait and the inscription TI.CAESAR. DIVI.AUG.F.AUGUSTUS ("Tiberius Caesar, son of the divine Augustus, Augustus").

R. M. GRANT

TIBHATH tīb'hāth [תִּבְחַת]. A town mentioned in I Chr. 18:8. In II Sam. 8:8 we find the reading בִּטְחָה, which should probably be read בְּחָה. See BETHER.

TIBNI תִּבְנִי [תִּבְנִי, *probably originally* Tabni] (I Kings 16:21-22). One of the three ninth-century commanders who fought for the throne of the kingdom of Israel after the fall of Baasha's short-lived dynasty. A three-year civil war with Omri, following Omri's defeat of Zimri, ended with Tibni's death and Omri's ascent of the throne.

J. M. WARD

TIDAL תִּדְאֵל [תִּדְאֵל; LXX θαργαλ; Genesis Apocryphon תִּדְאֵל; Jubilees Têrgâl; Syr. תִּדְאֵל; Vulg. *Thadal*] (Gen. 14:1, 9). An ally of Chedorlaomer. Neither his name nor his country has been identified with certainty (for the latter, see GOIIM). In respect to form, "Tidal" is usually compared with "Tud'alia" (or "Tudhalias"), a name borne by several Hittite kings. In respect to date, Tudhalias I (ca. 1700-1650 B.C.?) best fits other historical allusions in Gen. 14:1-12 (see ABRAHAM). Nevertheless, the identification remains uncertain.

TIGLATH-PILESER (III) תִּגְלַתְּ פִּלְסֵר, —pī— [תִּגְלַתְּ פִּלְסֵר; Akkad. *Tukulti-apil-Ešarra*, my trust is (in) the son of (the temple) Ešarra] (II Kings 16:7). Alternately: TILGATH-PILNESER תִּלְגַּתְּ פִּלְנֵסֵר (I Chr. 5:6; II Chr. 28:20). King of Assyria and, under the name Pul, king of Babylonia (745-727 B.C.); son of Adad-nirari III; father of Shalmaneser V.

Tiglath-pileser III's accession to the throne of Assyria, either as a descendant of a collateral royal line or as a usurper, ended a period of political and military weakness in Assyrian history which had begun with Adad-nirari III (810-782). By means of systematic large-scale transplantations of subjected peoples and by a change from the policy of keeping up independent tribute-paying rulers at the frontiers of the Empire to one of complete annexation under the rule of an Assyrian official, he succeeded in creating the basis for the Assyrian Empire as it was maintained, defended, and extended by the kings of his family, the so-called Sargonides.

The containment of the kingdom of Urartu, which not only threatened Assyrian domination in the mountain regions but also extended its political influence into Upper Syria by supporting the ever-rebellious kings there, was the main goal of Tiglath-pileser III's military policy. His signal successes against Syria, highlighted by the fall of Damascus (732), were possible only after a series of campaigns (744, against Sarduris; 739, 736, siege of Turushpa) had forced the rulers of Urartu to relinquish their political aspirations beyond the borders of their country. Against Babylonia—i.e., against the unruly large tribes of the Arameans and Chaldeans—Tiglath-pileser was able to secure for himself the allegiance of the great cities. After the death of King Nabunassar of Babylon (734), he had to interfere and eventually to resort to the expedient of making himself king of that city. This he did under the rare Assyrian name of Pūlu (729-728).

Tiglath-pileser's first campaign was into the region to the E of the Tigris, where he built a fortress; then

he turned N against Urartu and dispatched a general to penetrate even farther N, deep into the region of the Medes. The next year he won a battle in Commagene against an alliance of Urarteans under Sarduris and various rulers of Upper Syria. This victory brought Urartean influence in that region to an end, and Tiglath-pileser could use the next years (742-740) to lay siege to and eventually conquer Arpad, in N Syria. The effect of this victory was far-reaching (cf. II Kings 19:13 = Isa. 37:13); and tribute came in from Tyre, Damascus, Cilicia, Carchemish, etc. After having thus demonstrated the military power of Assyria, Tiglath-pileser turned toward the N but was again compelled to move against Syria, fighting and defeating an alliance of its kings. The threat posed against Damascus and Israel was considered rather serious there (II Kings 15:19), and the Assyrian inscriptions mention the tribute of Menahem of Samaria and Rezon of Damascus in a long list of such items, which even includes that of Zabibi queen of the Arabs. The region of Hamath was definitely pacified by the deportation of more than thirty thousand inhabitants to the mountains of Nairi. After a series of attacks against Urartu, which restrained the enemy but failed to achieve any signal victory, Tiglath-pileser had to turn his attention once more toward Syria, where Damascus was becoming increasingly powerful, mainly as a rallying point of all the anti-Assyrian forces of the Levant. Tiglath-pileser acted in his characteristic indirect way; instead of attacking Damascus, he advanced along the coast, accepting the submission of the Phoenician towns; but he had to conquer Gaza, whose king fled to Egypt. Ahaz of Judah turned to Tiglath-pileser for help against Pekah of Israel and his ally Rezon of Damascus. Pekah surrendered quickly, thus saving Samaria from destruction (II Kings 15:29). Consequently Rezon had to meet Tiglath-pileser without an ally. The fall of Damascus in 732 turned the entire region to Tiglath-pileser. When Pekah was murdered, the new king of Israel, Hoshea, paid tribute, and so did the kings of Ashkalon, Tyre, etc.

64. Inhabitants of a conquered city being deported; from a bas relief from the palace of Tiglath-pileser at Calah

Damascus ceased to be a political power, after having withstood Assyria ever since the time of Shalmaneser III.

The death of the king of Babylon, Nabunaser, in 734, caused civil war to break out in Babylonia; and Tiglath-pileser had to fight, without much success (731), with the large Chaldean tribe Bit-Amukkani; while other tribal kings, among them Merodach-baladan, paid homage to the Assyrian king. In 729, Tiglath-pileser made himself king of Babylon and remained so until his death, in spite of an insurrection in that region. In Calah, Tiglath-pileser built himself a palace, the first to be constructed in a new style introduced from Syria. Historically most important was his extension of Assyrian administration into Syria and Palestine, which was bound to cause deep concern to Egypt once that country was able to afford a more aggressive foreign policy. Thus the conflict with Egypt began to shape up as a potential danger, and Esarhaddon and Ashurbanipal had to accept the military consequences and to attack Egypt. In Babylonia, Tiglath-pileser inaugurated the policy of siding with the cities against the unruly tribal kinglets, adhering thus in principle to the attitudes of Shalmaneser III and Adad-nirari III.

TIGRIS tī'grīs [Τίγρις, from Old Pers. *Tigra*, from Assyrian-Babylonian *Idiglat/Idignat*, also the source of חִדְקֵל, **HIDDEKEL** hīd'ə kēl; earliest form Sumer. *Idigna*]. A major river in Western Asia. According to biblical tradition the Tigris was one of the branches into which the river issuing from the Garden of Eden divided: "Hiddekel, which flows east of Assyria" (Gen. 2:14). According to the book of Daniel, that prophet had his major vision on the bank of the Tigris (Dan. 10:4).

The Tigris originates in Armenia in the region NW of Diyarbekir and flows in a southeasterly direction, passing in its course Mosul, Tekrit, Samarra, Baghdad, Kur-el-Amara, and Amara, until, N of Basra, it joins with the Euphrates to form the Shatt-el-Arab, which empties into the Persian Gulf. Major tributaries are the Upper and Lower Zab, the Adheim, and the Diyala, which all join the Tigris from the E at points on the stretch from Mosul to Baghdad. S of Amara it receives the Kerkhah. The Tigris

From *Atlas of the Bible* (Thomas Nelson & Sons Limited)

65. The Tigris River emerging from the mountains near Ibn 'Omar

is navigable up to Mosul, and a considerable body of river traffic moved on it in antiquity. Many important ancient cities were situated on the Tigris. On the E bank opposite Mosul are the ruins of ancient Nineveh, capital of Assyria during the time of the Assyrian Empire. Farther S, on the W bank, lies Qal'at Shergat, site of ancient Asshur, the original capital of Assyria and center of the cult of the national god Asshur. Still farther S, in the region of Baghdad, lay Opis, which became an important commercial center in Neo-Babylonian and later periods. At Sulman Pak on the E bank stood Ctesiphon, capital of the Parthians and Sassanians; and across the river from it, at Tel Umar, are the ruins of Seleucia, capital of the Seleucid rulers of Mesopotamia.

TIKVAH tīk'və [תְּקוּהָה, hope; Apoc. Θεκουέ]; KJV Apoc. **THEOCANUS** thē ōk'ə nəs. Alternately: **TOKHATH** tōk'hāth [תּוֹקְחָת] (II Chr. 34:22). 1. The father-in-law of Huldah the prophetess under King Josiah (II Kings 22:14; II Chr. 34:22).

2. The father of the Jahzeiah who opposed the plan for dealing with those with foreign wives (Ezra 10:15; I Esd. 9:14).

J. M. WARD

TILE [לְבַנָּה; κέραμος]. KJV form of **BRICK** in Ezek. 4:1. Also, Luke 5:19 refers to tiles on a **ROOF**, through which the palsied man was let down. This is the only reference to a tiled roof in the Bible. In the parallel account in Mark 2:4 the roof was broken up.

O. R. SELLERS

TILGATH-PILNESER. Alternate form of **TIGLATH-PILESER**.

TILON tī'lən [תִּילֹן] (I Chr. 4:20). A family or clan of the tribe of Judah.

TIMAEUS tī mē'əs [Τιμαῖος] (Mark 10:46). The father of blind **BARTIMAEUS** the beggar.

TIMBER. See **WOOD**.

TIMBREL. See **MUSICAL INSTRUMENTS**.

TIME. The biblical conceptions of time and their terminology can be adequately understood only if

one takes care not to assume unconsciously our modern Western scientific or philosophical interpretation of time in the Bible or to carry it over into the Bible. This will be made clear at the beginning by two examples:

a) We usually conceive of time as an abstract dimension, as a frame within which events take place. In this we were influenced, in the last analysis, by Greek thought. The OT, and also the NT, does not know this abstract phenomenon "time" as an idea of general validity. "Time" is understood there essentially from the point of view of time content, not as a dimension in itself, which is filled with all kinds of content. Let I Chr. 29:30: "the times [הַעֲתִים] that went over him" (KJV), serve as a graphic example. The text becomes more intelligible if one substitutes for "time" the content of the time, which is included with it in the Hebrew word: "the circumstances that came upon him" (RSV).

b) We like to consider time in contrast to eternity. In this usage the term "eternity" is usually understood, not only quantitatively as endless time, but also qualitatively as timelessness. The OT and the NT are not acquainted with this conception of eternity as timelessness. God, according to Rev. 1:4, is the one "who is and who was and who is to come"; and if in Rom. 16:26 (the only time in the NT) he is called the "eternal [αἰώνιος] God," this does not mean that as a timeless God he would have nothing to do with time, but rather that he is also Lord of the greatest spans of time, which he uses in his revelation (vs. 25).

As these examples show, it is necessary to clarify carefully the linguistic usage of the OT and the NT with regard to time, eternity, and related concepts. On the basis of this investigation it will then, perhaps, be possible to make some statements as to the biblical conception of time as compared with ours and that of the old oriental cultures or Hellenism.

1. Terminology
 - a. In biblical Hebrew
 - b. In LXX Greek
 - c. In NT Greek
2. In the OT
 - a. Concept of time in the OT
 - b. Time and revelation
 - c. God and time (eternity)
 - d. Man and time
3. In the Apoc. and the Pseudep.
4. In the NT

Bibliography

1. **Terminology.** Only the more important and more general concepts of time are to be discussed here, not the times of the day and the seasons of the year, the division of time, the adverbs of time, etc. (for these, see HOUR; DAY; NIGHT; WEEK; YEAR; CALENDAR). The passages cited present, in most cases, only selected examples, without claim to completeness.

a. **In biblical Hebrew.** The Hebrew OT has no general word for "time," and likewise no special term for the categories of time—past, present, future. The Aramaic עָרָן (Dan. 2:8-9, 21; 3:5, 15; 7:12) still comes closest to our general expression "time."

The most widely used word we can translate with

"time" is עַתָּה (about 290 times). It means, not time in its duration—as a dimension—but rather the moment or point of time at which something happens (Exod. 9:18: "Tomorrow about this time I will cause very heavy hail to fall"; II Chr. 25:27). Moreover, whether the event which characterizes this point of time is of longer or of shorter duration remains irrelevant. Thus the point of time can change over into a longer period of time (I Kings 11:4: "when Solomon was old"—lit., "at the time of Solomon's growing old"; Jer. 50:16: "time of harvest"). Our differentiation between point of time and period of time already presupposes, however, time as a measuring tape which can be applied to events. This idea is not yet contained in the Hebrew word; time and time content still remain side by side without logical distinction (Esth. 4:14; Jer. 49:8). In many cases עַתָּה with qualitative coloring designates the right time for something, the suitable, favorable time (II Sam. 11:1: "In the spring of the year, the time when kings go forth to battle"; I Chr. 12:32: "men who had understanding of the times, to know what Israel ought to do"; Ps. 119:126; Eccl. 3:1-8; Hag. 1:2, 4—here עַתָּה approaches the Greek καιρός idea). On the basis of this linguistic usage passages like Ps. 104:27 become intelligible:

These all look to thee,

to give them their food at its time [RSV "in due season"].

In an eschatological context עַתָּה may designate the coming hour of judgment (Isa. 13:22; Jer. 27:7; Ezek. 7:7, 12; 30:3; see DAY OF THE LORD). In the later language the plural seems sometimes to add up the single points of time to make periods of time, without, however, renouncing the basic meaning of the singular (Ezek. 12:27; Dan. 11:14). Here, too, the time content sometimes outweighs the purely temporal meaning; it is better to translate it then with "fate" or "fortunes" (I Chr. 29:30; Ps. 31:15—H 31:16: "My times are in thy hand").

The word מוֹעֵד, derived from the verb יָעַד, "appoint (a time, a place)," means "place of meeting," "meeting," and, used with reference to time, "appointed time," "fixed term" (Exod. 9:5; II Sam. 20:4). In contradistinction to עַתָּה, "point of time," מוֹעֵד emphasizes more strongly conscious designation and arrangement; however, the two expressions can sometimes also be used as parallel synonyms in poetic language (Jer. 8:7; Hos. 2:9—H 2:11; cf. Dan. 8:19 with 8:17). The plural frequently means specifically the time of feasts (Gen. 1:14; Lev. 23:2, 4, 37, 44; Ezek. 46:9, 11). The use of the word in Dan. 12:7 is peculiar: "a time, two times, and half a time."

The word וַיּוֹמַר occurs only three times, in the latest period of biblical Hebrew (Neh. 2:6; Esth. 9:27, 31). It is a loan word from the Aramaic and, like מוֹעֵד, means "the appointed time," "the fixed day."

Frequently the indication of the point of time of an event is by יוֹם, "day" (see DAY). In the process the original meaning of "day" (in contrast to "night" or a twenty-four-hour day) loses much color (Gen. 39:11; Jer. 36:2). "On the day when" is often synonymous with simple "when" (Lev. 14:57; Ps. 102:2—H 102:3). The use of יוֹם as an indication of a point of time forms the basis for the custom of designating decisive events as "the day of" (Isa. 9:4—H 9:3 [day

of Midian]; Ezek. 34:12; Hos. 1:11—H 2:2 [day of Jezreel]; Obad. 12 ff). The decisive eschatological intervention of Yahweh is the “day of Yahweh,” “that day” (see DAY OF THE LORD). Without more precise designation, “his day” in Job 3:1 KJV means “the day of his birth”; otherwise, however, “the day intended for someone,” the day of death or of judgment (I Sam. 26:10; Job 18:20; Ps. 37:13; Ezek. 21:25—H 21:30). Instead of “day” we would probably use “hour” in similar contexts. The Hebrew of the Bible has no word at all for “hour.”

In the cases in which we use “time” to mean a more or less exactly limited space of time, biblical Hebrew usually speaks of ימים, “days” (Gen. 26:1: “in the days of Abraham”; I Sam. 2:31: “the days are coming, when”). This usage is so familiar to us that in the translation of the OT we often prefer the phrase “in the days of” as the more solemn and venerable over our commonplace, everyday “at the time of.” ימים, after an indication of time such as month or year, puts emphasis on the expiration of the full time in question (Gen. 29:14; 41:1: “after two whole years”). “All the days” is a common expression for “always,” “forever” (Deut. 4:40; I Sam. 2:35).

The smallest possible space of time in contrast to a longer duration is designated in Hebrew by רגע, “moment” (Exod. 33:5; Ps. 73:19; Lam. 4:6), which is apt to be used hyperbolically (Job 20:5; Ps. 30:5—H 30:6; Isa. 54:7-8), once even with the quantitative adjective קצין, “brief” (Isa. 54:7).

A few other words which do not fundamentally designate specific spaces of time, but which can under certain conditions be so used, are still to be discussed:

קץ means, first of all, the “end,” derived from the root קצץ, “to cut off.” In its eschatological meaning (since Amos 8:1-2; then again especially Ezek. 7:2-3, 6) the word is the key word for the extreme (final) judgment. In Dan. 8-12 in the combination עת קץ (8:17; 11:35, 40; 12:4, 9), מועד קץ (8:19), קץ הימים (12:13), or alone (8:19; 11:27; 12:6, 13), it has become the term for the point of time at the end, the final time (see ESCHATOLOGY OF THE OT). Furthermore, קץ in the language of the Dead Sea MSS now also becomes the general and not necessarily eschatological designation for “time,” “point of time,” and “period of time” (cf. קצץ, “to cut off”). The word can be put into the plural (1QS I.14, etc.); the “final time” then is called קץ אחרון, “the last time” (1 QS IV.16; 1QpHab VII.7, 12).

Another word for “end,” “close,” is אחרית, “that which comes afterward.” In certain cases one must actually translate it by “future” (Prov. 23:18; 24:14; Jer. 29:11: “to give you a future and a hope”). But here, too, a pure concept of time is not developed. The significance of the phrase באחרית הימים, “in days to come,” “in the latter days,” is disputed. The context usually shows whether this phrase is to be translated simply in analogy to the Akkadian expression *ina ahrāt umē* by “in the future,” henceforth “in the time to come” (thus probably in Gen. 49:1; Num. 24:14; Deut. 4:30; 31:29) or whether it is a prophetic-eschatological term “in the latter days” (Isa. 2:2; Ezek. 38:16; Dan. 10:14; Hos. 3:5; Mic. 4:1).

קדם constitutes an opposite to אחרית, and is likewise used with reference to both time and space: “at

the beginning,” “the East,” and “earlier,” “of old,” “primitive times,” “olden times” (Deut. 33:27: “God from of old” = “the eternal God”; Isa. 19:11: “ancient kings”). For our concept “the past,” the Hebrew otherwise uses הראשונים הימים, “the days that are past” (Deut. 4:32), or similar turns of expression.

For the period of a GENERATION the Hebrew language uses the word דור. This also is not a pure concept of time, since the thought is primarily of the human beings who live in the period of time. With the double expression דור ודור, “generation after generation”; נדור לדור, “from generation to generation”; etc., we approach the expression for unlimited, infinite time.

The OT has not developed a special term for “eternity” which one could contrast with “temporality.” However, it does, to be sure, have several possibilities for expressing the unending, incalculable, unchangeable duration of something, from the most distant past as well as until the most distant future, or also in both directions. Reference has already been made to כל הימים, “all the days,” above. Most frequently עולם is used for this (440 times; in addition, the Aramaic עלם 19 times); the etymology of this word has not yet been explained. The basic meaning is probably “most distant time.” This explains the fact that עולם (except in Eccl. 1:10; 3:11; see below) is never used as an independent substantive, but always in combination with the prepositions מן, “from”; ער and ל, “until”; or in substitution for these prepositional constructions as an adverbial accusative or as the second element of a made-compound. The meaning of past time (Gen. 6:4; Isa. 51:9) is less frequent in the OT, as compared with its use for the incalculable future (Gen. 9:16; I Kings 2:33) and for the total duration of time (Isa. 40:28; Jer. 31:3). As an expression of an extreme limit, עולם can, according to the “horizon” of the speaker with regard to time, refer to a variety of remote times (Deut. 15:17: “your bondman for ever” = lifelong; Isa. 63:16: “our Redeemer from of old”; Amos 9:11: “as in the days of old” = as at the time of David). Only in the connection “from עולם and until עולם” (Ps. 90:2), as well as in the genitive compound, when according to the context both future and past are included, does the meaning “eternity” equal total duration of time. In addition to the temporal meaning, it often also contains a qualitative overtone in the sense of permanence or finality (II Sam. 23:5; Ps. 78:69). The special quality, however, is attached to the object, and is not implied in עולם of itself. The plural עולמים does not designate (except in Eccl. 1:10; see below) a plural of “aeons.” It is, as an intensifying plural, quite similar to the singular in meaning (I Kings 8:13; Isa. 26:4). The late liturgical language, especially, shows the tendency toward intensification, doubling and piling up of the expressions with עולם (Pss. 106:48; 136; Isa. 45:17; Dan. 7:18). The conception of “eternity” is not changed by this. Probably under the influence of the Greek αἰών, new meanings for עולם come in in the latest biblical Hebrew and in Middle Hebrew—namely, “space of time,” “age,” “time” (Eccl. 1:10 and perhaps 3:11), “aeon,” and “world” (see § 1c below). Only here can עולם appear as an independent substantive and as the subject.

In addition to עולם, both ער and נצח occur in

similar use and meaning, but more rarely. $\eta\gamma$ is used with prepositions (Job 20:4 of the past; Isa. 26:4 of the future) or as a prepositional genitive (Hab. 3:6 of the past; Isa. 47:7 of the future); cf. also $\eta\gamma\iota\tau\alpha$, "Everlasting Father" (Isa. 9:6—H 9:5). The situation is similar in the case of the least frequent $\eta\gamma$ (Ps. 74:3 of the past, otherwise of the future or the total duration of time; intensified in Isa. 34:10).

b. In LXX Greek. Greek has a general word for "space of time," "time": $\chi\rho\acute{o}\nu\omicron\varsigma$. The word is clearly used for time as a measurable quantity, as is shown, indeed, by the quantitative adjectives such as $\pi\omicron\lambda\acute{o}\upsilon\varsigma$, "much," or $\mu\iota\kappa\rho\acute{o}\varsigma$, "small," which often accompany it. In the LXX this word is used relatively seldom, usually as a translation of יָמִים/יוֹם , "day(s)." The Hebrew of the Bible has, to be sure, as we have seen, no corresponding word for "time" and says simply "day(s)." In most cases, however, in general designations of time in the LXX (likewise in our translations!) the Greek word for "day," $\eta\mu\acute{\epsilon}\rho\alpha$, has been used for יָמִים/יוֹם "day(s)," although this usage is rather unusual in nonbiblical Greek. The influence of the Hebrew original is clear here.

For the translation of $\eta\gamma$, "point of time," $\kappa\alpha\iota\rho\acute{o}\varsigma$ serves in by far the most cases; less often, $\omega\rho\alpha$, "hour," or $\eta\mu\acute{\epsilon}\rho\alpha$, "day." $\kappa\alpha\iota\rho\acute{o}\varsigma$ is originally "the decisive thing," "the essential point." The word can be interpreted with reference to place, to an object, or to time. In the LXX the temporal meaning prevails almost completely; it is the established, correct, or decisive "point of time." The word serves also for the translation of בְּיָמֵי and בְּיָמֵי and $\eta\gamma$. In some cases, but especially in the plural, $\kappa\alpha\iota\rho\acute{o}\varsigma$ or $\kappa\alpha\iota\rho\acute{o}\iota$ also is used a little less precisely for an interval of time, so that one can add in the genitive how long this interval of time is (a year's time, etc.) The noun $\alpha\iota\omega\acute{\nu}$ or the adjective $\alpha\iota\omega\acute{\nu}\iota\omicron\varsigma$, which belongs to it, almost always occurs in the LXX for עוֹלָם and $\eta\gamma$. The word $\alpha\iota\omega\acute{\nu}$ originally means "vital force," "life," then "age," "lifetime." It is, however, also used generally of a (limited or unlimited) "long space of time." In many cases it should then be translated by "eternity." To be sure, naturally, one cannot assume a philosophical concept of eternity here either. The LXX goes even beyond the foundation laid by the Hebrew OT in doubling and plural formation.

c. In NT Greek. In the NT, too, $\chi\rho\acute{o}\nu\omicron\varsigma$ is comparatively rare. It represents the basically Greek conception of time as measurable duration. Characteristically the word is most frequently used by the proselyte Luke. The singular means "space of time," "period of time," and is very often accompanied by quantitative adjectives (Matt. 25:19: "a long time"; Rev. 20:3: "a little while"). The plural, likewise, designates a (usually longer) space of time (Luke 23:8; II Tim. 1:9). Both singular and plural may be more specifically defined as to content (Acts 17:30: "times of ignorance"; I Pet. 1:17: "time of your exile"). Nowhere is time interpreted abstractly as temporality, not even in Rev. 10:6, where the statement "that there should be time no longer" (KJV) is not announcing a future suspension of time. The word $\chi\rho\acute{o}\nu\omicron\varsigma$ means "delay" here, as in Rev. 2:21. Accordingly, the RSV translates: "that there should be no more delay."

In using $\eta\mu\acute{\epsilon}\rho\alpha$, "day," for "point of time" (Matt.

26:29; Col. 1:6, 9) and the plural $\eta\mu\acute{\epsilon}\rho\alpha$, "days," for "space of time" (Matt. 2:1; 9:15; II Tim. 3:1; Heb. 12:10) the NT also follows Hebrew-Aramaic usage. Of special importance are the passages in which $\eta\mu\acute{\epsilon}\rho\alpha$ (in various combinations, and sometimes also absolute) is used for the eschatological time of judgment and time of salvation (Luke 17:24; Phil. 1:6, 10; I Thess. 5:2, 5; Rev. 6:17). See DAY OF THE LORD; ESCHATOLOGY OF THE NT.

Among the time concepts of the NT the word $\kappa\alpha\iota\rho\acute{o}\varsigma$ is particularly important. In Heb. 11:15 ("they would have had opportunity to return") it means the God-given possibility; otherwise the temporal conception is present everywhere. As in the LXX, $\kappa\alpha\iota\rho\acute{o}\varsigma$ specifies the established, favorable, or decisive point of time: it can, however, also be used to express a shorter (I Cor. 7:5) or a longer (Acts 17:26) length of time, a regular fixed time (Luke 12:42) or a general statement of time (Matt. 11:25: "at that time"). In the specific meaning of the word (favorable, decisive point of time) one can distinguish a secular from a Christian usage, according to whether the choice of the point in times lies within the discretion of men or whether the *kairos* is determined by God. An example of the secular use is the promise of the governor Felix to Paul: "Go away for the present; when I have an opportunity I will summon you" (Acts 24:25). The Christian significance is found in connection with what happens with reference to Christ (Matt. 8:29; 26:18; I Tim. 6:15; I Pet. 1:11). But men also have times of decision fixed by God (Luke 19:44; Rom. 13:11; Col. 4:5). Finally, $\kappa\alpha\iota\rho\acute{o}\varsigma$ also becomes an eschatological *terminus technicus* (Luke 21:8; Rev. 1:3; 22:10).

The use of the word $\alpha\iota\omega\acute{\nu}$ in the NT is determined very much by the OT and the LXX. $\alpha\iota\omega\acute{\nu}$ means "long, distant, uninterrupted time," in the past (Luke 1:70) as well as in the future (John 4:14). The adjective $\alpha\iota\omega\acute{\nu}\iota\omicron\varsigma$, "eternal," especially, serves for the actual statements of eternity (II Cor. 4:18; Heb. 9:12, 15), but nowhere is a clear distinction made between limited and unlimited duration of time. The idea of duration of time is fundamentally inherent in $\alpha\iota\omega\acute{\nu}$, as it is not in עוֹלָם , "most distant time." The intensifying plural occurs frequently in the NT, especially in the doxologies (Rom. 1:25; 9:5; Heb. 13:8), but it adds no new meaning. Here, as also in the doubling (Heb. 1:8 in the singular; Rom. 16:27; Eph. 3:21; Phil. 4:20 in the plural), the pattern of the LXX is likewise evident, only that the tendency toward more complicated forms is still more marked. New, as compared with the עוֹלָם of biblical Hebrew (except for Eccl. 1:10), is $\alpha\iota\omega\acute{\nu}$ in the meaning, which can easily be explained from the basic meaning, "world epoch": $\sigma\upsilon\upsilon\tau\acute{\epsilon}\lambda\epsilon\iota\alpha$ $\tau\omicron\upsilon$ $\alpha\iota\omega\acute{\nu}\omicron\varsigma$, "close of the age" (Matt. 13:39-40, 49), having the same meaning in the plural (I Cor. 10:11; Heb. 9:26). Beyond that, in the Judaism of NT times the new meaning "world" develops, by means of which $\alpha\iota\omega\acute{\nu}$ approaches the idea of $\kappa\acute{o}\sigma\mu\omicron\varsigma$ (Mark 4:19; I Cor. 2:6). This development parallels the appearance, which is to be observed since the first century B.C., of the meaning "world" for עוֹלָם in Hebrew and Aramaic, where, up until then, the missing idea "world" had been paraphrased with the expressions "heaven and earth" or "the universe." Temporal and spatial

meanings cross over into one another in the Jewish apocalyptic doctrine of the two aeons; the existence of this doctrine has been attested ever since the first century B.C. (see *ESCHATOLOGY OF THE APOCRYPHA AND PSEUDEPIGRAPHA*). In addition to II Esdras and the rabbinical literature (הוֹלָם הַזֶּה, "this aeon"; עוֹלָם הַבָּא, "the coming aeon"), the NT also uses these concepts (Matt. 12:32; Eph. 1:21: "not only in this age but also in that which is to come"). See *ESCHATOLOGY OF THE NT*.

2. In the OT. Of special interest, in addition to the secular understanding of time in the OT, is the relationship between time and revelation, which one can investigate further theologically in relation to God and his people or men. See also *ESCHATOLOGY OF THE OT*.

a. *Concept of time in the OT.* The OT is not alone in antiquity in its lack of a general concept for the dimension of time. The Egyptians and the Babylonians also know only expressions for the right, established point of time or for the long, unlimited duration, and use the word "day(s)" for the most varied designations of time. The abstraction "time" belongs among the accomplishments of Greek culture. If, however, time (as a dimension) is not abstracted from the abundance of individual events, then, naturally the events and their time constitute, to a large extent, a unit in OT thinking. It has been observed again and again how closely the Hebrew conception of time is bound up with its content, or even identified with it (Gen. 1:5: "God called the light Day, and the darkness he called Night"; Lam. 5:21: "Renew our days as of old"). Hence the frequency with which יוֹם, "day," and נֹקַד, "point of time," are combined with genitives which indicate the content of the time; hence also the importance which is given to the "right point of time" in OT statements of time generally. In order to underline the precedence of the time content as opposed to the chronological statement of time, it has often been pointed out that the Hebrew verb does not have any real tenses. Actions are determined primarily by the content-aspect of being completed or not being completed, not by the time categories past, present, and future (see *HEBREW LANGUAGE*). However, one must not draw too sweeping conclusions from this fact. Hebrew also has secondary possibilities for expressing the three degrees of time, as, conversely, Greek and our modern languages can also very well take into consideration the manner of action. It is questionable, generally, whether, when we have confirmed the lack of an abstract—let us say an "Aristotelian"—concept of time and the shaping of many OT statements of time from the point of view of content, we should go still further with the assertion that the OT possesses a conception of time which is entirely unlike ours and therefore a completely different understanding of reality. Such attempts (e.g., by Pedersen, Marsh, Boman; see *bibliography*) make chronological order very much a matter of relativity in its significance for the consciousness of the men of the OT. Individual events, it is said, are arranged and differentiated in the OT, not according to their position in chronological sequence, but according to the nature of their content, fixed by God or psychologically perceived.

Matters which are widely separated with reference to time can, if their content coincides, be identified and regarded as simultaneous. The linear scale of time is replaced by the rhythm of time with the incessant return of the same time content. In worship the pious man experiences past acts of salvation as contemporary. A prophet like Amos assumes the synchronism of his hearers with the events of Exodus (Amos 2:9-11). One speaks of "contraction of time" and "fulness of time."

However, in relation to such attempts, it should be observed that the OT in many passages discloses quite ingenuously a naïve conception of chronological time, also in the realm of religion and in prophetic proclamation. In the presentation of the commandments and of the exodus events celebrated in worship the succession of the generations plays an important role (Deut. 6:7; 11:2-7, 18-21). The OT attaches great importance to genealogies and chronologies, although the people of God are frequently, throughout all the ages, interpreted as a "corporate personality" (see *GENEALOGY*). Then, too, the writing of history as highly developed as that of the OT is scarcely imaginable with an absolutely nonchronological feeling for time (see *HISTORY*). The prophets not only count on the coming again of the old times of salvation, but also on new, greater deeds of God (Isa. 43:18-19). On the whole, then, one must probably assume that the OT had an unconsidered chronological, linear conception of time.

b. *Time and revelation.* The OT attests God's action of revelation in history and thus in time (see *REVELATION; HISTORY*). In carrying out his plan by actions of judgment or salvation (Isa. 14:24-27; 46:9 ff) God picks out certain points of time and gives them special significance for salvation. God is not by nature bound up with his people from the very beginning. The selection of Israel for the salvation of mankind (see *ELECTION*) has its beginning with the patriarchs and in the events of Exodus. The people have to adapt themselves to this; at the same time, however, new acts of God are promised, fulfilled, and promised again (Gen. 12:1-3; 13:14-17; 17:6-8; Josh. 21:43-45; Judg. 4:6-7, 14; 13:5; I Sam. 9:16; II Sam. 7; I Kings 14:6 ff; 15:29; Isa. 11:1 ff; 45:18-25; Jer. 23:1-8; Amos 9:11-12). Thus there comes into existence a history of salvation with a beginning and a goal, always through the free appointment of God and, therefore, not to be confused with a legality which might be calculated by men or with a development in the history of religion which leads higher and higher. Nevertheless, the individual acts of God do have a connection with earlier ones and drive the whole work of God closer to the final goal.

This OT interpretation of history as the history of salvation of necessity had an influence on the understanding of time. On the one hand, special emphasis falls on the *kairos*, the "today," on which the decision in favor of obedience is demanded (Deut. 11:2, 26, 32; Ps. 95:7). On the other hand, the course of time acquires its unified alignment toward a *telos* (goal) set by God. This becomes clear in a comparison of the OT understanding of time with that of the old oriental surrounding world. The Egyptian is conscious of the continuity of time, which presents itself in an unending repetition of the same thing. The

course of the world does not lead to a goal or an end; periods of time repeat and renew themselves again and again. The situation is similar in the case of the Babylonians; their sense of time is marked by the constant rhythm or cycle of nature. It is cyclical and advances in speculation, at the most, to a theory of periods, not to one of a world history which is aimed at a goal and is irretrievable, in which each point of time has its unique significance.

This linear, goal-directed line of time is not quite so clear in all portions of the OT. In *ECCLESIASTES* historical revelation withdraws considerably before the emphasis on the omnipotence and the inscrutability of the Creator. Correspondingly the understanding of time is oriented in nature and therefore cyclical and static (Eccl. 1:2-11; 3:1-15). The eternal cycle gives rise to weary resignation:

What has been is what will be,
and what has been done is what will be done;
and there is nothing new under the sun
(1:9).

Elsewhere in the OT, on the other hand, motifs of the cyclical concept of time were taken over, but stripped of their original meaning and fitted into the view of the time of salvation. Thus, e.g., the motif of the return of a primitive paradise was taken over by the prophets in their eschatological proclamation (Isa. 11:6-8; Hos. 2:18—H 2:20). The latter days, however, are not regarded as the beginning of a new age, but as having a final character. The Priestly document divides history into four periods, beginning with the Creation, covenants with Noah, with Abraham, and at Sinai. Presumably there is a connection with an ancient oriental theory of four world periods of a world year, but the concept of time as a cycle and the cosmological speculation have been done away with. The same is true of the visions in Dan. 2; 7. The nonbiblical theory of world epochs or world dominions (cf. Hesiod *Erga* 106 ff), which was probably basic for the historical view of the apocalyptic writers, has been turned around in such a way here that the course of the world periods does not conclude in a new cycle, but in the kingdom of God of the latter days.

c. God and time (eternity). Just as the OT has no abstract term for "time," so also it has no theological dogmas on time and its relation to God. Nevertheless, certain theological principles can be deduced from OT texts. God reveals himself now and then *in* time as the sole Lord and thereby also as Lord *over* time. Only by thinking of the essence of God as the sole Lord (also over time), not on the basis of any kind of philosophical concept of time and eternity, can one understand the OT statements on time and God. God's dominion over time is most clearly revealed by the fact that he created time along with the universe as its creature form of existence (see CREATION). Time has its beginning, from which point the days can be numbered (Gen. 1). Time is something positive, not something which came into the world only with the fall of man. Temporality, the breaking up of time into past, present, and future, distinguishes the creature from his Creator, who is not bound by the limits of time (Ps. 90:4), who gives time and takes it again. Together with the created world, earthly time, determined by the stars (Gen. 1:14),

will also end or be absorbed in God's eternity (Isa. 60:19-20). Passages such as Isa. 65:20 ff; 66:23, which assume a continuation of time, merely point out the difficulty of imagining God's eternity; in any case, it is not the same as timelessness.

The transcendence of God over all time was probably first fully recognized and expressed by Deutero-Isaiah. To be sure, even in Gen. 21:33 the name of God, אֱלֹהִים, "the Everlasting God," appears at the sanctuary at Beer-sheba. The designation, which is surely pre-Israelitic, was transferred to Yahweh by the immigrants. Parallels to it are found in certain Phoenician inscriptions (Karatepe, Arslan-Tash, recently Ugarit) where "eternity" (in the sense of the unchangeable power, of the unbroken continuity of effectiveness) is ascribed, above all, to the sun. In the last analysis, then, the expression stems from the Canaanites' nature religion, with its cyclical idea of time, and has nothing to do with Deutero-Isaiah's thought on eternity, which is marked by faith in revelation and creation. Circumlocutions such as "I am the first and I am the last" (Isa. 44:6) are much more characteristic for this (41:4; 43:10-13; 48:12). For the despondent, disheartened exiles, who no longer consider a new intervention in history by Yahweh for their deliverance possible (40:27), the prophet points out the unique greatness of his Lord (vs. 28):

The LORD is the everlasting God [אלהי עולם],
the Creator of the ends of the earth.
He does not faint or grow weary.

As Yahweh, the Creator, is Lord over the ends of the earth—how much more, therefore, also over the regions in which scattered Israel lives—just so he, as the eternal God, is also Lord over the history of all peoples—how much more so, therefore, also over the fate of Israel. Untiringly he will remain true to his redemptive purpose. A metaphysical timelessness, like that of the Platonic ideas, cannot be found here. Precisely as Lord over time, God injects his promise (40:8), his salvation (45:17), redemption, and righteousness (51:6, 8), his goodness (54:8), and his covenant (55:3) into the transitory creation as eternal values. In the postexilic period, since God's uniqueness was established, "eternity" became more and more a synonym for "godliness," soon a somewhat worn symbol for God's world and his activity (Ps. 90:2; 102:12-13, 25 ff; Isa. 35:10; 60:15, 19 ff; 61:7-8). With the increasing development of eschatological concepts in apocalyptic writings, עולם becomes the permanent attribute of the life to come (Dan. 12:2: "everlasting life," "everlasting contempt").

d. Man and time. Temporality is the God-given form of existence for the creature world (Job 1:21; Ps. 90:3-12; Isa. 40:6-8). Man is not immortal (Gen. 3:22; 6:3), even though a long life is considered ideal (I Kings 3:11-14); and the decline of the span of life in primitive history (Gen. 5; 11:10 ff) expresses the separation of mankind from God, the source of life (Ps. 36:9—H 36:10; see AGE, OLD). Formal phrases such as: "May my lord King David live for ever!" (I Kings 1:31; cf. Neh. 2:3; Pss. 21:4—H 21:5; 61:7; 72:5; Dan. 2:4; 3:9; 5:10; 6:7, 22), stemming from oriental court style, have long since been separated from their source, the old oriental royal ideology, and

are now merely to be considered as hyperbolic expressions (see KING). In the Royal Psalms, partly under the influence of the prophecy of Nathan (II Sam. 7) and the conception of an eternal covenant with David (II Sam. 23:5), they have been associated with the king's name, his throne, or his dynasty (Pss. 18:50—H 18:51; 45:2, 6, 17—H 45:3, 7, 18; 72:17; 89:4, 36-37—H 89:5, 37-38; 110:4; 132:12), and were later given an eschatological-messianic meaning. To be sure, OT man is keenly aware of the transitory nature of human life (especially after the breakdown of the old collective bonds), which he can interpret as the consequence of sin and God's wrath (Gen. 3:19; Ps. 90:7 ff). However, he does not seek refuge in a wishful dream of an endless life, but accepts time from the hands of Yahweh and subjects himself completely to him (Pss. 31:15—H 31:16; 73:23, 26; 139:16; Eccl. 3:2, 14). See LIFE; DEATH.

Into this temporality of man, intended by divine creation and marked by sin, there now comes at certain points of time chosen by God in free sovereignty (I Sam. 3:1; Amos 8:11-12) revelation as an offer of GRACE, to which man must respond with FAITH. Thus God takes seriously the creature with his temporality, in that he himself permits his revelation to enter into time. Time and history are, therefore, in the OT not a matter of indifference, but are of decisive importance, because they must afford the means of salvation. Only in this way does time become meaningful and lose its oppressive enigmatic quality. It is given to man so that he can seize the opportunity and not pass up salvation (Deut. 27:9 ff; Ps. 95:7-9). Because time is not reversible, man cannot have divine revelation at his free disposal; he is constantly called upon to be vigilant and keep himself ready for God's call. Yet he is not handed over to the arbitrary action and caprice of God. The continuous sequence of God's acts, in which God's faithfulness and purposive will with regard to the accomplishment of salvation are recognizable, guides man educationally to an understanding of the coming periods of decision and the coming salvation. The peculiar realization of the exodus events in later generations (Deut. 29:14-15; Josh. 24:17) and the certainty of the prophets who see what is to come as already present, is determined by the conviction that God's salvation is the same wherever he grants communion with himself through his Word and his Spirit. It does not become thereby a timeless, mystic salvation, release from time, but is supratemporal (without the limits of the not-yet and the no-longer), as is God himself.

3. In the Apoc. and the Pseudep. Much of what was said about the conception of time in the OT is likewise true of the late Jewish Apoc. and the Pseudep., although a Hellenistic way of thinking also appears now to some extent. Time and time content can be kept apart, as in II Esd. 13:58. One moves in the categories past, present, and future (II Esd. 5:43). Measuring and comparing periods of time plays a greater role (Ethiopian Enoch 72-82). More than any others, the apocalyptic writings provide material on the concept of time (see APOCALYPTICISM). For their manifold content, especially the idea of the two aeons (II Esd. 7:50) with the whole apocalyptic reckoning of time (II Esd. 14:10-12; II Bar. 20:1; 85:10), see

ESCHATOLOGY OF THE APOCRYPHA AND THE PSEUDEPIGRAPHIA.

Let us examine just a few conceptions of time which lead beyond the limits of the OT. God's dominion over time is expressed in new forms (II Esd. 4:36-37; see PREDESTINATION). The idea of pre-existence is developed (Eccl. 1:4; II Esd. 8:52; see PRE-EXISTENCE OF SOULS). Expressions for "eternity" are manifold (Bar. 3:10, 14, 20 ff; "the Everlasting" = God). One struggles with the difficulties of imagining eternity. Enoch 10:10 naïvely visualizes an eternal life with a life span of five hundred years. Eccl. 18:9-10 compares human life with eternity conceived as endless time. It is not quite clear whether time will still play a role in the new aeon (II Bar. 44:11-12), or whether it will be timeless (Slavonic Enoch 65).

4. In the NT. The NT builds on the OT understanding of time, which is linear and bears the stamp of the story of salvation, and develops it further consistently. All expressions of faith, in particular, have a temporal character, which would have been impossible in Hellenism, with its mythical-cyclical or philosophical-timeless thinking. There one does not expect deliverance through God's action within time, but one strives for release from the cycle of time in a timeless world beyond. Hence in Gnosticism, where the Christian faith appears decidedly Hellenized, decisive presuppositions of NT theology are abandoned: the OT view of history as determined by God's creative action; the redemptive significance of the unique dying of Christ, who was incarnated and thus entered into time (see INCARNATION); and the expectation of the PAROUSIA (see also DAY OF CHRIST) in the future. See GNOSTICISM.

The salvation-historical view is not marked by the same emphasis in all parts of the NT, but it is basic everywhere. The pronouncement of Jesus: "The time is fulfilled, and the kingdom of God is at hand; repent, and believe in the gospel" (Mark 1:15), is naturally more keenly interested in the present, decisive *kairos* than the reflections of Paul on the history of salvation in Rom. 9-11, e.g., or Luke's historic narrative in Acts. It would be a mistake, however, to play the one against the other. Just as one may not lose himself in apocalyptic calculations on the course of the history of salvation and thereby evade decision for the present (Luke 17:20-21; Acts 1:7), so it would be unbiblical to reinterpret the expectation of the kingdom of God which is to come in the sense of a "constantly pending decision" without expectation of a future realization.

It is not necessary here to go into the content-aspect of the story of salvation, with its center in the death and resurrection of Jesus Christ (see JESUS CHRIST; CHRIST), nor into the question of the connection between the OT and the NT and the problems of NT eschatology (see ESCHATOLOGY OF THE NT). On the other hand, a few more formal time categories which play a role in the NT story of salvation and in early Christian faith should still be mentioned. The realization of the story of salvation is bound up with *καιροί* (I Tim. 6:15; Tit. 1:3; I Pet. 1:11), which God has established in his full authority (Acts 1:7) and suddenly causes to set in (I Thess. 5:1-2). Because of this the *vūv*, "now" (Col. 1:26), and the *σήμερον*, "today" (Heb. 3:7, 13, 15), take on tre-

mendous importance for the community; it is a matter of making the most of one's time (Eph. 5:16; Col. 4:5). God alone has command over the καιροί (Mark 13:32-33; Acts 1:7), but to those who believe in Christ he gives insight into the continuity of the divine plan of salvation: "to make all men see what is the plan [οικονομία] of the mystery hidden for ages in God who created all things" (Eph. 3:9). In doing so the mission of Christ in the fullness of time (πλήρωμα τῶν καιρῶν [Eph. 1:10]; πλήρωμα τοῦ χρόνου [Gal. 4:4]) is the center which is decisive for all times (see FULLNESS OF TIME; PLEROMA). Christ's work is unique and occurs once for all (ἅπας, ἐφάπας; Rom. 6:10; Heb. 7:27; 9:12, 28; I Pet. 3:18). The time between Easter and the Parousia acquires its singular suspense between οὐκέτι, "no longer" (Gal. 3:25; Eph. 2:19), and οὐπω, "not yet" (Phil. 3:13; I John 3:2), from this. On the one hand, II Cor. 5:17 applies: "Therefore, if any one is in Christ, he is a new creation; the old has passed away, behold, the new has come," but, on the other hand, also Phil. 3:12: "Not that I have already obtained this or am already perfect; but I press on to make it my own, because Christ Jesus has made me his own."

TIMNA tīm'nə [תַּמְנָה, perhaps originally *Tamna*]; LXX Θαμνά (Ναμνά in I Chr. 1:39); KJV TIMNAH in Gen. 36:40; I Chr. 1:51. Two persons. Cf. the Qatabanian capital Timna', which existed in S Arabia from ca. the ninth to the first century B.C.

1. Sister of the clan chief (of) Lotan (לוֹטָן), one of the native Horite inhabitants of Edom (Gen. 36:22; I Chr. 1:39). She is given as the concubine of Eliphaz son of Esau, and the mother of Amalek, in Gen. 36:12, to indicate a close relationship between Edomites and Horites.

2. A clan chief of Edom (תַּמְנָה אֵלִיפָאֵז; Gen. 36:40; I Chr. 1:51); given in I Chr. 1:36 as a son of Eliphaz (for Korah, cf. Gen. 36:16). This Timna may be either the name of the ancestor of the Edomite clan or the geographical designation of the territorial subdivision occupied by the clan (note "according to . . . their dwelling places" in Gen. 36:40; and cf. Israel's conquest of Edom in II Sam. 8:14).

TIMNAH tīm'nə [תַּמְנָה, allotted portion] (KJV alternately TIMNATH tīm'nāth, THIMNATHAH tīm'nə thə); TIMNATH [Θαμνάθα] (I Macc. 9:50; KJV THAMNATHA thām'nə thə); TIMNITE tīm'nit [תַּמְנִי] (Judg. 15:6). 1. A town on the N border of Judah, near Beth-shemesh (Josh. 15:10). It was assigned to the territory of Dan (19:43). It is identified with Tell el-Batashi, in the Wadi es-Sarar, ca. four miles NW of Beth-shemesh.

During Samson's career Timnah was occupied by the Philistines. Samson married one of the women of Timnah but later lost her to his best man when he left her in a rage after she had betrayed the secret of his riddle (Judg. 14:1 ff).

Uzziah (ca. 783-742) apparently recaptured Timnah from the Philistines (cf. II Chr. 28:17). In 701 it was captured by Sennacherib (ca. 705-681), along with Eltekeh, Ekron, and other cities.

2. A village of Judah in the highland province of Maon (Josh. 15:57). This Timnah is probably the place referred to in the events described in Gen. 38:12-14. It is probably to be identified with Tibnah, which lies on a slope below el-Khader, ca. four miles E of Beit Nettif and just NW of Jeba', which may correspond to the Gibeah mentioned as the neighboring town (Josh. 15:57).

3. A town, Θαμνάθα (KJV Thamnatha), fortified in 160 B.C. by the Seleucid general Bacchides, along with other cities including Emmaus and Bethel (I Macc. 9:50). In 43 B.C. the town Thamna (Θαμνα) became tributary to Cassius, one of the conspirators in the assassination of Julius Caesar (Jos. Antiq. XIV.xi.2). At the outbreak of the First Revolt, John the Essene was assigned as commanding officer of the province of Thamna (which included Emmaus; cf. I Macc. 9:50; Jos. War II.xx.4; III.iii.5). In the spring of A.D. 68, Vespasian captured the province (Jos. War IV.viii.1).

Eusebius says that Thamna was a large city in the territory of Diospolis between the latter and Aelia (Jerusalem). The present location is Khirbet Tibneh, a strategically located site in the rugged hill country of Ephraim, N of Mount Ga'ash, on the road from Lydda and Antipatris to Jerusalem. It is ca. 9 miles NW of Bethel and 7½ miles W-NW of Jufna (Gophna, chief city of a neighboring toparchy).

TIMNATH-HERES, TIMNATH-SERAH tīm'nāth hīr'iz, —sīr'iz [תַּמְנַת הִרְצִי, תַּמְנַת סִרְיָה]. The place of Joshua's inheritance and burial.

1. **Name.** According to Judg. 2:9, Joshua was buried "within the bounds of his inheritance in Timnath-heres, in the hill country of Ephraim, north of the mountain of Gaash" (see GAASH). In Josh. 19:50; 24:30 the place of Joshua's inheritance and burial is Timnath-serah. It is probable that Timnath-heres is the older form of the name, on the supposition that its meaning is "portion of the sun" (חֶרֶם), and that as such it was a place of sun-worship. Rabbinic tradition connects the origin of the name with Joshua's act of causing the sun to stand still (Josh. 10:13, where שָׁמַשׁ is read; see Judg. 14:18; Job 9:7 for חֶרֶם), and claims that Joshua's tomb had a symbol of the sun on it. It has been suggested that the spelling of the name in Josh. 19:50; 24:30 (תִּמְנַת סָרַח) was a scribal error for חֶרֶם תִּמְנַת חֶרֶם. The alternative is that an intentional change was made to remove the stigma of sun-worship which the older name would connote; Timnath-serah would not be inappropriate, since it might refer to the "portion remaining" to Joshua after the division of the land (Josh. 19:49).

2. **Location.** The Samaritan tradition which locates the tomb of Joshua at Kefr Haris, ca. nine miles SW of Shechem, is considered a late tradition and without archaeological substantiation. Most commentators locate the site at Khirbet Tibneh, ca. seventeen miles SW of Shechem. The modern name preserves the first part of the ancient name. Late Bronze Age and Early Iron Age potsherds from the surface of an impressive tell located there indicate a period of occupation at the time of Joshua. Eusebius and Jerome name the place Thamna, stating that the tomb of Joshua existed there in their day. It is probable that Timnath (Θαμναθα) in I Macc. 9:50 is to be identified with Timnath-heres; it was fortified with other Palestinian villages by Bacchides for the purpose of defense against the forces of Jonathan.

W. L. REED

TIMNITE. See TIMNAH.

TIMON תִּימֹן [Τίμων] (Acts 6:5). One of the seven men chosen by the HELLENISTS to look after the Hellenistic widows and also, probably, to engage in missionary work. His name is Greek, and he may have grown up in the Greek diaspora.

B. H. THROCKMORTON, JR.

TIMOTHY תִּימֹתָי [Τιμόθεος, one who honors God]; KJV TIMOTHEUS תִּימֹתָי אֶס. 1. A leader of the Ammonite forces who opposed Judas Maccabeus and his followers ca. 164 B.C. He was defeated by Judas in several encounters (I Macc. 5:6 ff; II Macc. 8:30 ff; 9:3 ff; 10:24 ff; 12:2 ff).

B. M. METZGER

2. A trusted and faithful associate of Paul, with whom he is linked in the address of several of Paul's letters, and who was the purported recipient of two of the NT letters: I and II Timothy.

Among Paul's letters, Timothy first appears as a youthful associate of Paul and Silvanus (see SILAS) at Corinth. All three are linked in the address of the First Letter to the Thessalonians (1:1), and the "we" phrases continue throughout the letter. Not long after they had left Thessalonica and had reached Athens, Paul's concern for the Thessalonian Christians be-

came so great that he sent Timothy back to them, so that he might confirm them in the faith. Paul knew that they had been undergoing a time of persecution, and he was eager to have them encouraged in their period of difficulty. And above all, Paul was anxious to have a direct report about the spiritual welfare of the young converts who made up the church at Thessalonica. Timothy had been sent (3:1-5), and had returned with the good news of their steadfastness in the faith, and of their continued affection for Paul (vss. 6-9).

In writing to the Thessalonians, Paul describes Timothy as a brother (I Thess. 3:2), as God's servant in the gospel of Christ, and by implication even ranks him among the apostles (2:6). II Thessalonians adds nothing to our knowledge of Timothy or of Paul's estimate of him, since in it Timothy is simply linked again with Paul and Silvanus in the address. Timothy's association with Paul at Corinth is probably confirmed by his being mentioned in the series of greetings that Paul wrote from the church at Corinth to the church at Rome in Rom. 16 (vs. 21). Even if one were to assume that Rom. 16 is a fragment from a letter written to Ephesus, the reference there to Timothy serves to underscore his close association with Paul in his missionary work.

The portrait of Timothy, as not only an associate of Paul but also his emissary, finds support in other letters of Paul. In the Corinthian letters we have another record of Timothy's assignment to be Paul's representative, but in this instance there is a suggestion of doubts Paul may have had about Timothy's effectiveness in a leadership capacity. As soon as Paul mentions that Timothy has been sent to the Corinthian church—apparently as the bearer of this letter (cf. I Cor. 16:10)—he hastens to comment on the arrogance of the Corinthian Christians who will complain because Paul himself has not come to them. The inference is that Paul had sent the young and inexperienced Timothy in his place. The apostle tries to offset the lack of confidence in Timothy by referring to him as "my beloved and faithful child in the Lord" (4:17). Timothy was commissioned to remind them of Paul's ways.

But the concluding mention of Timothy betrays that Paul had misgivings about his young colleague (I Cor. 16:10-11). The Corinthians are urged to put him at ease—as though he were bashful, or at least lacking in self-confidence. They are exhorted not to despise him—as though he had met with such a response on previous occasions. They are to send him back in peace—as though he had been involved in conflict in other situations. Paul must underline the fact that Timothy was doing the Lord's work just as much as he (Paul) was.

In the opening address of II Corinthians (1:1), Timothy is once again associated with Paul, presumably back in Ephesus. (Even if II Corinthians be regarded as a composite of several letters of Paul to the Corinthians, one would assume that all were written from Ephesus during Paul's protracted stay there.) Now, however, it is not Timothy who is to be Paul's messenger to the church at Corinth, but TITUS. The inference is clear: Timothy had been at Corinth, had preached there the same message that

Paul and Silvanus had proclaimed (1:19), but the inner difficulties of the church remained unresolved. It is Titus who figures prominently in the correspondence with the church at Corinth from this point on. Specifically, there are more references to Titus in II Corinthians than there are to him in all the rest of the NT. The implication is that Timothy could no longer serve as Paul's deputy in Corinth.

In spite of what appears to be a failure on the part of Timothy, the later letters of Paul continue to picture him as a close associate of Paul, and as one who was sent by Paul to strengthen the Gentile churches. The addresses of Phil. 1; Col. 1; Philem. 1 all link the names of Paul and Timothy. In Phil. 2:19, Timothy is about to be sent to Philippi to bring back to Paul an eyewitness report of the state of the church there. In spite of any ineffectiveness as a leader that we may infer from I and II Corinthians, Timothy remained to the end a faithful companion of Paul and one who was able to enter fully into an understanding of the people who made up the various Gentile churches. Paul describes him as "genuinely anxious for your welfare" (Phil. 2:20), and commends him for his faithful service, which can only be compared to that of a son serving with a father (vs. 22).

Although Paul's letters are the primary source for our knowledge of Timothy, Acts provides interesting detail, which will be credited in direct proportion to one's estimate of the historical reliability of Acts. According to Acts 16:1 ff, Timothy first appeared as a disciple at Lystra. Whether he had been converted by Paul, or was already a believer when Paul arrived, is not clear, although the references in the NT to Timothy as Paul's child in the Lord would suggest the former alternative (I Cor. 4:17; I Tim. 1:2). Timothy's father was a Gentile, and presumably a pagan. His mother was a Jewish Christian, although surprisingly her name is given in II Tim. 1:5 as Eunice, the daughter of a Christian lady named Lois. While it is conceivable that these women were Jewish in spite of their Gentile names, it seems likely that Acts and the Pastorals represent two divergent traditions about Timothy's family. The fact that Timothy had not been circumcised (Acts 16:3) indicates that his mother did not take seriously her religious responsibilities as a Jew; as a matter of fact, if she had, she would not have married a Gentile.

Acts reports that Timothy was circumcised by Paul in order to silence Jewish opposition; and together with Silas, they journeyed westward toward the Aegean Coast of Asia Minor (Acts 16:3). Nothing more is recorded in Acts of Timothy until the evangelists reached Beroea (17:14), when it was agreed that Paul would go on to Athens, leaving Silas and Timothy behind. Paul went to Athens and then on to Corinth, where Silas and Timothy joined him (18:5). The next we hear of Timothy, he was in Ephesus with Paul, and was sent from there to Macedonia, along with Erastus (19:22). The last report of him in Acts is in 20:4, where he appears in a large company of the brethren who were accompanying Paul through Macedonia and down the Ionian coast on the way to Jerusalem.

Even if one were to assume the authenticity of the PASTORAL LETTERS, they provide little in the way of

specific information about Timothy, except that they purport to give the names of his mother and grandmother (II Tim. 1:5). The writer refers to "Timothy's" having been set aside by prophetic utterance for the work to which he was called. He is given instructions about the requirements for bishops, deacons, elders. He is warned against false teachers. But most of the letter consists only of general exhortations to endure suffering, seek righteousness, shun controversies, fulfil his ministry. The words spoken about Timothy in Paul's genuine letters are echoed in phrases that speak of him as "my true child in the faith" (I Tim. 1:2) and tell him not to be discouraged by his youthfulness (4:12). Timothy emerges as a much more real person in the indirect references to him in II Corinthians than he does in this letter which purports to have been addressed to him. Almost certainly the letters to Timothy are pseudonymous writings from the third generation of the church's life (II Tim. 1:5), a period in which the earlier spiritual enthusiasm had waned, and in which there was urgent need for regulation of doctrinal and ecclesiastical authority. The Pastorals are of no help, therefore, in reconstructing the portrait of Paul's youthful associate, Timothy. See PASTORAL LETTERS.

H. C. KEE

TIMOTHY, FIRST AND SECOND LETTERS TO. Two letters found as the fifteenth and sixteenth books in the NT canon, purporting to have been written by the apostle Paul to his associate in work, Timothy.

Both letters are closely related in style, purpose, and content to the Letter to Titus. Together the three letters are called the PASTORAL LETTERS, the name indicating the ecclesiastical purpose of the correspondence: a chief pastor giving advice to pastors of the church. The letters are primarily concerned with church order, and are probably directed to churches in Asia Minor in the beginning of the second century. I and II Timothy give practical advice to a church which is consolidating its position in the world. Two emphases stand out: (a) The clergy must be selected carefully, its authority recognized, and its guidance in forms of worship followed (I Tim. 2-3; 4:12-6:2; II Tim. 1:6-2:13). (b) Heretics must be shunned or excommunicated (I Tim. 1:3-20; 4:1-11; 6:20-21; II Tim. 2:14-4:8).

II Timothy resembles the genuine Pauline letters more closely than does I Timothy or Titus. On this basis many scholars have concluded that the author has incorporated in his letter Pauline fragments.

J. C. BEKER

TIN [בַּיִל, *from Sanskrit pātira*]. As distinguished from other metals, tin appears in late OT passages (Ezek. 22:18, 20; 27:12; but cf. Num. 31:22). It was imported to the Near East by the Phoenicians (Ezek. 27:12) in TARSHISH ships from places not now certainly identifiable—the Balkans, Spain, and Cornwall have been suggested. That tin, probably in ore form, was employed in early BRONZE making has been established. Caucasasia is considered as the earliest source of tin ore (cassiterite; SnO₂); the Midianite caravan merchants (Num. 31:22) were middlemen. בַּיִל apparently could be applied to tin

ore as to refined tin, and was sometimes confused with lead (cf. Zech. 4:10, where "plummet" is literally "the stone the tin"). See also PLUMBLINE.

TINDALE'S VERSION. See TYNDALE'S VERSION.

TIPSAH תִּפְסָח [תַּפְסָח]. A place mentioned twice in the OT; probably two different places. 1. A city in the NE corner of the border of Solomon's kingdom (I Kings 4:24—H 5:4). It was an important city, situated on the W border of the Euphrates, where the river turns its southward course to an eastward course, about seventy-five miles S of Carchemish. It is most probably identical with Thapsacus, a trade center which is mentioned by Xenophon (I.4.11). In Seleucid times it was called Amphipolis, now Dibseh.

2. Tiphseh is mentioned in II Kings 15:16 (so Hebrew text; see KJV-RSV mg.) as a place near Tirzah in Samaria. In a Greek MS the place is called Τῶφσε, and תַּפְסָח here is therefore usually supposed to be a miswriting of תַּפּוּחַ, "Tappuah," a place about thirty miles N of Jerusalem, not so far from Tirzah. The RSV has preferred this conjecture and translates as "Tappuah."
A. S. KAPFLERUD

TIRAS תִּירָס [תִּירִים]. A subdivision of the Japhethites (Gen. 10:2; I Chr. 1:5), which has been compared to the τυρσηοί and the Egyptian *Turusha* of Ramses III's records. The *Turusha* "from the sea" in the records of Ramses III are the same as the τυρσηοί of Greek saga, where they appear as sea raiders in the Aegean.

Bibliography. Cf. especially the Homeric Hymn to Dionysos in E. Meyer, *Geschichte des Altertums* (2nd ed., 1928), vol. II, pt. 1, pp. 555-65, 578-79, 588.
C. H. GORDON

TIRATHITES תִּירָתִים [תִּירָתִים]. A family of scribes of the Kenite tribe, dwelling at Jabez (I Chr. 2:55).

TIRE. KJV obsolete term meaning "headdress," used to translate פֶּאֶר in Ezek. 24:17, 23 (RSV "turban"), and שֹׂהַרְנִים in Isa. 3:18 (RSV "crescents").

TIRHAKAH תִּרְחָקָה [תִּרְחָקָה]; LXX Θαρα, Θαρακά; elsewhere Ταρακός, etc.; Assyrian *Tarkū*; Egyp. *Thrk* (II Kings 19:8-9; Isa. 37:9). A king (689-664 B.C.) of Ethiopia and Egypt in the Twenty-fifth Dynasty; opponent to the Assyrian kings for the domination of Palestine.

Ca. 720 B.C., Egypt was broken up into many small principalities. Then an Ethiopian king, Piankhi, came N from his capital near the Fourth Cataract, and conquered and unified Egypt. His third successor in the rule of Egypt was his son Tirhakah (or Taharka). According to the biblical account, Tirhakah supported Hezekiah of Judah in revolt against Sennacherib of Assyria, which was another example of the futility of local reliance upon Egypt against Assyria or Babylonia.

Recent excavations in the Sudan have increased our knowledge of the reign of Tirhakah. As a pro-

vincial admirer of Egyptian culture, he was scrupulous in maintaining old rituals and repairing old temples. He was born ca. 709 B.C., and at the age of twenty became coregent with his brother Shabataka. At the same time he made his first visit to Egypt from Ethiopia. This means that when, in 700 B.C., Sennacherib defeated the Egyptians and Ethiopians at Eltekeh and then shut up Hezekiah in Jerusalem "like a bird in a cage," Tirhakah could not have been active in the campaign.

Possibly the biblical text has inadvertently substituted the name of Tirhakah for a previous Ethiopian pharaoh. The sudden destruction of the Assyrian army before Pelusium will also have preceded the reign of Tirhakah (II Kings 19:35; Herodotus II.141). However, the biblical account may be correct if Sennacherib undertook two campaigns against the West. In 700 he defeated Egypt and Ethiopia at Eltekeh, and perhaps in 688 moved against Tirhakah and the rebellious Hezekiah, at which time the Assyrian army was smitten with plague before Pelusium. In that event, the solution would be that the Deuteronomic compiler of the account simply telescoped two campaigns into one.

Tirhakah's later career is better known. He attempted to defend Egypt against the Assyrian kings Esarhaddon and Ashurbanipal, but was defeated in the Delta and driven S into Upper Egypt, where he maintained a rule of some dignity at Thebes.

J. A. WILSON

TIRHANAH תִּרְחָנָה [תִּרְחָנָה] (I Chr. 2:48). A son of Caleb by Maacah his concubine; apparently part of a subordinate branch of Calebite families.

TIRIA תִּירִיא [תִּירִיא] (I Chr. 4:16). A family or clan of the tribe of Judah.

TIRSHATHA תִּירְשָׁתָה. KJV translation of תִּירְשָׁתָה (RSV GOVERNOR) in Ezra 2:63; Neh. 7:65, 70; 8:9; 10:1. This title is the equivalent of פַּחַח (from the Akkadian *pihātu*, "governor"; cf. Neh. 12:26), and is generally derived from the Persian passive participle of the verb *tarš* ("to fear"), Avestan *taršta* ("the revered"), less probably from Old Persian *antare-kšathra* ("royal representative").

R. H. PFEIFFER

TIRZAH תִּירְצָה [תִּירְצָה]. One of the five daughters of Zelophehad who asked for and received an inheritance, although their father was dead and they had no brothers (Num. 26:33; 27:1-11; 36:10-12; Josh. 17:3-6).

TIRZAH (PLACE). A Canaanite city whose king was defeated by Joshua (Josh. 12:24); and later, the capital of the N kingdom from the time of JEROBOAM I until OMRI moved the seat of government to SAMARIA (I Kings 16:23-24).

1. **Location.** The precise location of Tirzah cannot be determined from the biblical evidence. On the reasonable supposition that the capital would not be moved any great distance, a location in the general

vicinity of Samaria has been sought. Early explorers of this region, aware that the city must have rivaled Samaria and Shechem in importance, searched for a large tell whose modern name would resemble the ancient name. Tulluza, a modern town on a hill N of Mount Ebal, and Teyasir, a fortress still farther N, have been identified as Tirzah.

Archaeological evidence, however, resulting from surface exploration of the region and from a series of excavations under the auspices of the Dominican École Biblique in Jerusalem since 1946 at Tell el-Far'ah, tends to support the identification of this site with Tirzah. No inscriptions have been found at Tell el-Far'ah, identifying the city, but the geographic location, ca. seven miles NE of Nablus, its strategic position on the road from Shechem to Beth-shan, and its size, ca. 1,968 feet by 984 feet, making it larger than Megiddo and almost twice the size of OT Jericho, make plausible the identification of this site with Tirzah. The chronology of Tell el-Far'ah, as determined by the excavators on the basis of stratification of architectural remains, and a study of the pottery, corresponds exactly with the chronology of Tirzah. Evidence of destruction at Tell el-Far'ah, and a later, incomplete construction of palace and fortifications, is in remarkable agreement with the record of Omri's reign at Tirzah (I Kings 16:17, 23). A comparison of the levels of occupation at Tell el-Far'ah and Samaria tends to suggest that the two sites complement each other in a way which is in accord with the biblical evidence relating to the chronology of Tirzah.

Several scholars have proposed that modern Jemma'in, ca. seven miles S of Shechem, is Tirzah. Such an identification rests in part on an interpretation of II Kings 15:16, which reports Menahem's attack on Samaria and TAPPUAH, a city usually located S of Shechem. However, it is probable that the reference to Tirzah in this case is merely a way of indicating the general region under attack by Menahem, which could have included territory both to the N and to the S of Samaria.

2. History. After the conquest of the Canaanite city, there is no mention of Tirzah until the time of Jeroboam (ca. 920 B.C.), although it is probable that the Israelites occupied the place during the intervening years as their power extended over the territory of Manasseh. The statement that Jeroboam's wife came to Tirzah and his son died there is an indication that the capital was moved, early in the reign, from Shechem to Tirzah (I Kings 14:17). Such a change may have been dictated by political and military factors which operated in Israel's relationships with Syria.

For a period of ca. forty years Tirzah was the capital of the N kingdom, serving as the residence of Baasha (I Kings 15:21, 33), who was buried there (16:6); Elah (vss. 8-9), who was slain in the city while in a drunken stupor; and Zimri, whose reign of seven days came to an end when Tirzah was besieged by Omri, and Zimri died by burning the palace over himself (vss. 17-18). After reigning in Tirzah for six years, Omri moved the capital to Samaria (vss. 23-24), as political and military orientation toward Phoenicia became desirable.

Tirzah then disappears from Israelite history, ex-

cept for a reference to it in the time of Menahem (see above), and a simile which mentions the beauty of Tirzah, as "comely as Jerusalem" (Song of S. 6:4)—probably a saying originating at a time when both cities were capitals (i.e., before 880 B.C.), although preserved in a much later source. Tirzah, if it is Tell el-Far'ah, was occupied by Israelites until the fall of Samaria at the hands of the Assyrians, and later until ca. 600 B.C., when the Babylonians conquered the land.

TISHBE tish'bî [תִּשְׁבִי]; **TISHBITE** —bīt. The supposed name of the native city of Elijah and the descriptive adjective presumably derived from it. The name of Elijah's father and tribe are never given, but he is six times described as *hattishbî* (I Kings 17:1; 21:17, 28; II Kings 1:3, 8; 9:36); in the first of these references the explanation is added that he was *מִתְּשֻׁבֵי גִלְעָד*, *mittōshābhē ghil'ād*, "of the sojourners of Gilead." The LXX translators took the term "Tishbite" to be an adjective descriptive of locality, and so accordingly vocalized the consonants as *mittishbē ghil'ād*, "of Tishbe in Gilead," and the RSV has followed them in its version (KJV "of the inhabitants of Gilead" is entirely wrong). This "Tishbe" has been identified with Listib, situated near the Wadi el-Masquf, one of the branches of the Wadi el-Yabis, far E in the mountains of N Gilead. However, this identification cannot be traced back further than Byzantine times and is based on a mere similarity of names and the nearby Mar Ilyas; it is entirely confuted by the fact that there is no evidence whatsoever of a settlement at Listib during the Israelite period. N. Glueck, therefore, is of the opinion that there was an early corruption of both names, and proposes to read instead in I Kings 17:1: "Elijah the Jabeshite [יְבִישִׁי] of Jabesh-gilead [מִיְבִישׁ גִּלְעָד]." This would be entirely plausible, as much of Elijah's activity took place in the region of the Wadi el-Yabis.

Another possible explanation is to suppose that *hattishbî* is to be vocalized as *hattōshēbhî*, "one of the *tōshāb* class." This type of descriptive adjective is found in an old Mishna (Kid. 4.1) which enumerates ten classes into which the Jews who returned from the Babylonian Exile were divided—e.g., *kōhānî*, "priestly class," and *nethīnî*, "temple-slave class." The word *tōshāb* has a specific meaning in biblical texts; it refers to one who was originally not a native, but who has been granted permanent right of settlement, in contrast to the *gēr*, who is a temporary guest. The most important *tōshāb* group in the time of the judges and the kings was that of the Kenites, a nomadic tribe which served as smiths, cattle dealers, and musicians (cf. the descendants of Cain in Gen. 4:20-22). When Solomon engaged in the importation of horses and chariots (I Kings 10:26-29), these Kenites, with their experience with animals and in smithcraft, would naturally be foremost in this serv-

ice; they would give themselves the new name of Rechabites, meaning those who had to do with chariots and with the horses that drew them. This presumes that the term "Son of Rechab" in II Kings 10:15-17 means "the Rechabite" and that Jonadab's title of "father" in Jer. 35:6-10 means that he was the regenerator and reformer of the Rechabite group. Other Kenites, who may have followed some such occupation as that of scribe (cf. I Chr. 2:55), could have been known as *toshabim*. We know of the Rechabites that they lived in tents like the Kenites (cf. Gen. 4:20; Judg. 5:24), and that they refrained from agriculture and the drinking of wine (Jer. 35); they also aided Elisha, the disciple of Elijah, in his struggle against the Baal-worship that accompanied the Israelites' settling down to agriculture (cf. II Kings 10:15). ELIJAH, the outstanding opponent of the Baal-worship introduced by Ahab, could well have been acting in the tradition of these naturalized nomads, and therefore the passage in I Kings 17:1 can mean as much as "Elijah the Kenite, of the Kenites of Gilcad."

S. COHEN

TISHRI tîsh'ri [תשרי]. The seventh month of the Hebrew CALENDAR; formerly ETHANIM.

TITHE [טעשר, to give or take the tenth of; מעשר, tenth part; δεκατόω, ἀποδεκατόω, to give or take the tenth of; δεκάτη, tenth part]. To give a tenth of property or produce for the support of a priesthood or other religious institution or purpose; also, the tenth given for such a purpose. Tithing was an ancient and widespread practice; reference to it is found in other religions and cultures than those of Israel or the Semitic peoples alone. The references to tithing in the OT apparently reflect differing customs in differing times and places, and make it impossible to reconstruct any clear-cut picture of the practice or history of tithing in Israel.

1. Earlier references to tithing in the OT
 2. Tithing in Deuteronomy
 - a. Deuteronomic provisions for tithing
 - b. The relation of the tithe to the offering of first fruits
 3. Tithing in the Priestly Code
 4. Tithing in later Judaism
- Bibliography

1. **Earlier references to tithing in the OT.** When the various parts of the OT are arranged in their most probable chronological order, the earlier references to tithing are casual ones which seem to connect it, for the most part, with N sanctuaries. The E narrative of Jacob's vision of the heavenly ladder, as well as the prophet Amos, mentions tithes in connection with the sanctuary at Bethel (Gen. 28:22; Amos 4:4). Furthermore, the late source of I Samuel, probably northern in origin, mentions tithes as one of the abuses Israel is to suffer under a king (I Sam. 8:15, 17). Whether or not the latter reference reflects any actual practice is open to question. It has been conjectured that the tithe was originally paid to the

king for the support of the royal sanctuaries, and came later to be paid directly to the officials at the sanctuaries. The strange source, peculiar to Gen. 14, which recounts the payment of tithes to Melchizedek by Abraham does connect tithing with Jerusalem (vs. 20). It is, however, difficult to date this source. Moreover, the tithe here is connected with booty gained in war rather than with the produce of the land as elsewhere (cf. Heb. 7:2, 4). Neither the account in Gen. 28 nor the one in Gen. 14 can be taken necessarily to reflect the practice of the age in which the patriarchal legends are set.

Tithes are not mentioned at all in the Book of the Covenant (*see* COVENANT, BOOK OF), the earliest written collection of laws preserved in the OT; Deuteronomy is the earliest code which provides for them. The most probable explanation of this is that tithes and the offering of the FIRST FRUITS, which is mentioned in the Book of the Covenant, are ultimately of common origin. If this is true, it may be that the need for a stricter definition of what was to be offered caused the appropriation of the tithe, an offering which had originated in N sanctuaries.

2. **Tithing in Deuteronomy.** Provisions for the offering of the tithe are first found in DEUTERONOMY; and, in the light of more recent views of the origin of this book, this fact would serve as further evidence for a N origin of the tithe.

a. **Deuteronomic provisions for tithing.** The tithe is mentioned in two ways in Deuteronomy. On the one hand, the tithe, the tenth of the yield of agricultural products, is to be used, year by year, in an offering culminating in a sacrificial meal in which the household of the farmer is to share (Deut. 14:22-27; cf. 12:6-19). Although the meal is a household affair, it is to be held at the sanctuary, and to it the Levite (*see* PRIESTS AND LEVITES) is to be invited. The offering and the meal are, however, a household affair, and their primary purpose is not the support of the Levite. It has been conjectured that this provision was a reform which was the result of such abuses as those condemned by the prophet Amos (Amos 4:4; cf. 5:11). Whether or not this is so is impossible to say on the basis of the evidence and in view of the uncertainty of the date of origin of the regulations in Deuteronomy.

On the other hand, Deuteronomy speaks of a tithe to be offered for charitable purposes every third year (14:28-29; 26:12-15). This tithe is to be distributed to the Levite, the SOJOURNER, the fatherless, and the widow—those without land to produce crops for themselves. The question of whether or not Deuteronomy is thus contemplating two separate tithes naturally arises, and the answer to the question is probably a negative one. The use of the tithe merely differed in the third year. The confusion that results from a comparison of the passages in Deuteronomy in which the tithe is mentioned is due to the fact that liturgical usage is a constantly developing thing, producing confusion in any code or manual in which it is reduced to written provisions. The tithe in Deuteronomy is, thus, something which may have different purposes. It is an offering which acknowledges God's ownership of the soil and its fruits, a means of support for the Levite, and an offering for the sake of charity.

b. The relation of the tithe to the offering of first fruits. The question of whether or not the tithe and the FIRST FRUITS are the same thing in Deuteronomy is one to which it is not possible to give an entirely satisfactory answer. The fact that Deut. 26:1-15 mentions the two quite closely together can be cited in support of an affirmative answer. The basket of first fruits could be taken to be a symbolic portion of the tithe (vss. 1-4), and the command to "rejoice in all the good which the LORD your God has given to you" could be taken to require a meal such as the one connected with the offering of the tithe elsewhere in Deuteronomy (vs. 11; cf. 14:22-27). Further support for the position that the tithe and the first fruits are the same thing could be found in the fact that a double tribute would not be expected. The term "tithe" could have been introduced at some point to define first fruits more precisely.

The difficulty with the equation of the two lies in the provision of Deuteronomy that the first fruits shall be given to the priests (18:4)—a provision nowhere made in connection with the tithe. The problem is one which cannot logically be solved. Here, as in the case of the question of whether or not Deuteronomy contemplates two tithes (see § 2a above), the confusion is due to the fact that a code such as that of Deuteronomy preserves cultic customs from different ages and places and that actual usage was a living, developing thing. Undoubtedly the origin of both tithe and first fruits was the urge to express the conviction that all man's possessions belonged, ultimately, to God. Such expression used various forms.

3. Tithing in the Priestly Code. Between Deuteronomy and the PRIESTLY CODE no regulations with regard to tithing are found. The word used for "tithe" does occur twice in the legislative section of the book of Ezekiel, but here it is used simply in the nontechnical sense of "a tenth" (Ezek. 45:11, 14). The provisions for tithing in the Priestly Code represent a development that had taken place since Deuteronomy. The later code stipulates that the tithe is to go exclusively to the Levites, who, in turn, are to give a tenth of what they receive to the priests (Num. 18:20-32). In the Priestly Code the tithe is associated with the heave offering (see SACRIFICES).

The Priestly Code, like Deuteronomy, usually considers the tithe as an offering of agricultural produce, not of cattle (Lev. 27:30-31), and that this was the practice is corroborated in references to the tithe in the book of Nehemiah (Neh. 10:37-38; 12:44; 13:5, 12). One passage, however, includes cattle in the tithe (Lev. 27:32-33), and this passage is corroborated in II Chr. 31:5-12. The discrepancy here is due, again, to development in cultic practice, which continued even in postexilic times. How the tithe was taken for granted in later times is illustrated by late, prophetic reference to it (Mal. 3:8, 10).

4. Tithing in later Judaism. In line with the tendency to regard the entire law as binding, two tithes were required in later times. In accord with the Priestly Code, the tithe for the Levites was collected, and was the chief source of their income. The Mishna (see TALMUD) stipulated that everything used for food, that was cultivated and grew from the earth, was subject to the tithe (Ma'as. I.1). How strictly this could be observed is seen in Jesus' condemnation

of the Pharisees for their lack of a sense of proportion with regard to what was important in religious observance (Matt. 23:23; Luke 11:42). In addition to the tithe for the Levites, a second tithe, which was consumed by the offerer in accord with the provisions of Deuteronomy, was required. The cattle tithe was reckoned in this second tithe. The charity tithe, in effect a third tithe, was also levied annually for the relief of the poor.

R. M. GRANT

TITUS, EPISTLE OF. A Latin apocryphon purporting to be a letter of Titus, but in reality a dull declamation about virginity and a denouncement of "spiritual marriages," in which men and women (*virgines subintroductae*; συνεισακτοι) lived together but without sexual contacts. In addition it contains

fragments from the apocryphal Acts of Andrew, of Peter, and of John. Probably written in Greek, it is extant in one eighth-century Latin MS. It is probably a production by Priscillianists, perhaps in Spain.

See APOCRYPHA, NT.

TITUS, LETTER TO. A letter found as the seventeenth book in the NT canon, purporting to have been written by the apostle Paul to his associate in work, Titus.

It is closely related in style, purpose, and content to the First Letter to Timothy, less so to the Second Letter to Timothy. Together the three letters are called the PASTORAL LETTERS, a name indicating the ecclesiastical purpose of the correspondence: a chief pastor giving advice to pastors of the church.

The relative priority of the letters is difficult to determine. Titus is probably the first, since it is difficult to imagine that this letter could have been written after I Timothy which treats the same topics more extensively.

Titus is primarily concerned with church order. Paul addresses Titus, whom he has left in Crete to organize missionary districts into churches. He advises that the clergy must be selected carefully, its authority acknowledged, and its guidance in matters of worship followed (1:5-9; 2:1-3:8). This task is especially urgent in the face of the heretics who threaten to destroy the church and its confession (1:10-16; 3:8-11).

J. C. BEKER

TITUS COMPANION OF PAUL. A Gentile protégé and aide of Paul; the purported recipient of one of the NT letters, which bears his name. Most of our information about Titus comes from two of the letters of Paul, Galatians and II Corinthians. Beyond this, there is brief mention of him in II Timothy and in the Letter to Titus, both of which almost certainly come from later than the time of Paul. Attempts to identify Titus with Titius Justus (Acts 18:7) have proved to be quite inconclusive.

1. In Galatians. On the occasion of Paul's second visit to Jerusalem after his conversion, he was accompanied by his co-worker Barnabas, and by a Gentile Christian named Titus (Gal. 2:1-10). The Jewish Christians of Jerusalem insisted that Titus should be circumcised, but Paul chose to make a test case of Titus, and refused to submit to their urging. Although the MS evidence is divided at this point—some of the MSS and some of the church fathers record that Paul *did* yield on this issue momentarily—the text usually translated is most probably correct, and Titus was accepted as a member of the Christian community without having been circumcised. That this incident established a precedent is evident from the fact that Paul appeals to it as the chief ground for his refutation of those who are insisting that the Galatian Christians must be circumcised.

2. In II Corinthians. Word had come to Paul that the Corinthian Christians had defied his instructions, and were in a hostile mood toward him and his apostolic leadership. He sent his associate Titus ahead of

him to see if the reports were true. The arrangement was that Paul would move slowly westward toward Corinth along a prearranged route, and Titus, returning eastward from Corinth, would meet Paul. Paul was at first disappointed that Titus had not arrived at Troas when Paul himself reached that city (II Cor. 2:13), but he was overjoyed to meet him in Macedonia (7:6), especially since Titus brought the news that the reports from Corinth were not true, or rather that they were no longer true. The Corinthian church was once again reconciled to Paul and willing to acknowledge his apostolic authority (7:9). Titus reported that the Corinthian Christians were as noble and as obedient as Paul had said they were (vss. 13-14).

On the strength of this report, Paul sent Titus back to Corinth to continue the work that he had so effectively begun there (8:6). Paul reminded the Corinthians that Titus had a deep concern for them, and urged them to complete the project of making a contribution to the church at Jerusalem. The way in which they responded to Titus' leadership in supervising the collection would give proof of their love for the saints and of the grounds for Paul's confidence in them, about which he had boasted to Titus (8:23). Titus was accompanied on his journey to Corinth by an unnamed brother who was "famous . . . for his preaching of the gospel" (8:18), together with some brethren from the other churches to assist in the collection. Later in the letter (12:17-18), Paul reminds the Corinthians that Titus has given no evidence of wanting to take advantage of them, just as Paul himself has had only their best interests at heart.

3. In the Pastorals. The impression that we gain of Titus in the letter that purports to have been written to him by Paul is that of a rather different person, who needs to be reminded to exercise his authority in ecclesiastical, doctrinal, and moral matters. The fact that this portrait of Titus varies so markedly from the vigorous, resourceful, strong right arm whom Paul pictures in Galatians and II Corinthians is one of the reasons most scholars now view this and the other Pastorals as pseudonymous. From this standpoint the challenge to "Titus" is recognized as simply a literary device by which to underscore the need of the churches to submit to ecclesiastical authority. See PASTORAL LETTERS.

Titus is addressed as "my true child in a common faith" (Tit. 1:4), which is intended to mean that he was converted to the faith by Paul himself. The word translated "true" often carries the meaning of "legitimate." The implication of this phrase that there was a close, filial relationship between Titus and Paul is borne out by the references to Titus in Galatians and II Corinthians. According to 1:5, Paul had sent Titus to Crete, to supervise the work of the churches there in Paul's name. Paul instructs Titus to meet him at NICOPOLIS, probably the Nicopolis located NW of the mouth of the Gulf of Corinth, where Paul expects to spend the winter. Such a journey does not fit well with what we know of Paul's travels, either from our primary source, Paul's letters, or from Acts, unless we suppose that Paul went N to Nicopolis after the brief visit to Corinth mentioned in II Cor. 2:1.

In the personal notes at the end of II Timothy, Titus is reported to have gone to still another field:

DALMATIA, in what is now Yugoslavia. Even those scholars who deny the authenticity of the Pastors as a whole, acknowledge that the personal remarks at the end of II Timothy and Titus may well include fragments of otherwise unknown correspondence from Paul. One plausible conjecture is that these notes come from the time of his imprisonment in Caesarea, although they may also come from either Rome or Ephesus.

4. In Acts. The attempt has been made to identify Titus of Paul's genuine letters with Titus JUSTUS of Acts 18:7, since Codex Sinaiticus and other important ancient authorities have "Titus" in place of "Titius." But even if the text were certain—which it is not, since some MSS (e.g., A D) omit the first name entirely—there would be no warrant for associating an unknown man of Corinth, bearing a common name like Titus, with Paul's companion of the same name. In fact, it is not at all likely that Paul would have sent a native of Corinth back to the city to report to him on the troubled state of the church there.

H. C. KEE

TIZITE tī'zīt [תיצי] (I Chr. 11:45). A designation of Joha, one of David's Mighty Men; probably derived from a place, now unknown.

TOAH tō'ā [תוח] (I Chr. 6:34). A name in a list which traces both the Levitical descent of Heman and the Levitical line from Kohath. In a preceding list (vs. 26) this name is Nahath.

TOB tōb [טוב, Apoc. Τουβίων]; **KJV TOBIE** tō'bi. Apoc. **TOUBIANI** tōō'bi ā'nī [Τουβιανοί, men of Tob]; **KJV TUBIENI** —ē'nī (II Macc. 12:17). **KJV** once **ISHTOB** ish'tōb (II Sam. 10:6-8; a mistaken rendering for "men of Tob"). A city in S Hauran; also the district surrounding it. It is mentioned in Egyptian sources as *tu-by* (no. 22 in the list of Thut-mose II), and as *Dubu* in the Amarna Letters. Jephthah fled to Tob when he was driven away by his half brothers, and it was from this country that he was recalled to lead the E tribes against the Ammonites (Judg. 11:3-5). The country was regarded as Aramean; and when Hanun, king of Ammon, sought allies in his war against David, Tob sent twelve thousand warriors, who were defeated with the other Arameans by the prowess of Joab (II Sam. 10:6-13).

Another name for Tob seems to have been **TABEEL**, one of the princes of which was chosen by Rezin of Damascus and Pekah of Israel to replace Ahaz on the throne of Judah (Isa. 7:6). In the postexilic period a number of Jews settled in Tob and had to be rescued by Judas Maccabeus when they were attacked by their Greek neighbors (I Macc. 5:13; II Macc. 12:17).

The name and site of the city of Tob are probably preserved in the village of et-Taiyibeh between Bozrah and Edrei, near the sources of the River Yarmuk.

S. COHEN

TOBADONIJA tōb'ād ā nō'jā [טוב אדונייה] (II Chr. 17:8); **KJV TOB-ADONIJA**. According to the MT, one of the Levites sent by Jehoshaphat to teach among the people of Judah. But the name is probably

to be deleted as an error due to dittography and homoeoteuton following the two preceding names in the list, Adonijah and Tobijah.

B. T. DAHLBERG

TOBIAH tō bō'ā [טוביה, Yahu is good; same as טוביהו, Tobijah; Apoc. Bāv (*emended by RSV*)]; **KJV Apoc. BAN** bān. 1. Head of a family or clan of returned exiles that was unable to prove its Israelitish descent (Ezra 2:60; Neh. 7:62; I Esd. 5:37). The family may be related to the Tobiads described below, but clear evidence for such a relationship is presently lacking.

2. One of the chief opponents (along with **SANBALLAT**) of the successful efforts of Nehemiah the Jewish governor to rebuild the walls of postexilic Jerusalem (*ca.* 445-437 B.C.; Neh. 2:10, 19; 4:3, 7; 6:1, 12, 19; etc.). That he was called "the Ammonite" indicates his connection with the territory of Ammon across the Jordan River from Palestine, N of the Dead Sea. Extrabiblical records attest to the prominence of a family of this name in Ammon in the Persian period (*see bibliography*). The reference to him as "the servant" probably signifies his official title in the provincial government under Persian rule; perhaps he was "governor" of Ammon, as Sanballat was of Samaria and Nehemiah of Judah (*cf.* Neh. 2:10, 19).

Whether or not Tobiah was of Israelitish descent has not been established, but he could be a descendant of those Jews who fled to Ammon after the fall of Jerusalem in 586 B.C., who are mentioned in Jer. 41:15. The name Tobiah itself suggests at least a formal attachment of his parents to the Jewish cultus, and he himself appears to have observed Jewish faith and practice to some degree, for he was admitted to residence in a chamber of the Jerusalem temple during Nehemiah's absence from Jerusalem (Neh. 13:4-9). Whatever this episode involved—he was ejected by Nehemiah on the latter's return—it attests to the friendly relations existing between Tobiah and an influential portion of the Jewish nobility, to whom he was related also by marriage, and by whom he was well spoken of (6:17-19). Again, whether or not he was of mixed blood, scholars believe him to have been an ancestor of the house of Tobiah (Tobias) which in the third century B.C. became a rival of the house of Onias for the Jewish high priesthood in Palestine (*cf.* II Macc. 3:11; Jos. Antiq. XII.iv).

Nehemiah's unswerving opposition to Tobiah and Sanballat—and theirs to him—appears to have rested on neither religious nor personal grounds primarily, although these factors doubtlessly aggravated the antagonism between them. But it appears to have been based on Nehemiah's appreciation of what we should only expect to be true in the nature of the case, that Tobiah and Sanballat could be expected to subvert by every practical means available the restoration of Jerusalem to a position of strength that would curtail the influence and authority heretofore enjoyed by them in a relatively unorganized territory.

TOBIAS τὸ βί'ας [Τωβίας, God's goodness, or my good is Yahweh]. 1. A "man of very prominent position," father of Hyrcanus (II Macc. 3:11).

2. Son of Tobit, and one of the principal characters in the book of Tobit. *See* TOBIT, BOOK OF.

J. C. SWAIM

TOBIE. KJV form of TOB.

TOBIJAH τὸ βί'α [תוביהו, Yahu is (my) good; *see also* TOBIAH]. 1. One of King Jehoshaphat's Levites who traveled through the cities of Judah teaching the law of God (II Chr. 17:8).

2. One of the four men, returned from Babylon, whose contributions were to be used to make the crown for the high priest Joshua, according to a vision of the prophet Zechariah (Zech. 6:10, 14). The LXX takes the name as an appellative, "the useful men."

J. M. WARD

TOBIT, BOOK OF τὸ βί'τ [Τωβίτ, *see* § 1 *below*]. A didactic romance concerning a devout Jew of the Dispersion, Tobit, whose faithfulness and good deeds result in a supernatural deliverance from affliction for himself, his son Tobias, and Tobias' wife, Sarah. The book reflects a genuine Jewish piety mixed with elements of folklore from various sources, which the author has effectively woven into an artistic work of high quality and wide appeal. It was an invariable part of the ΑΠΟΚΡΥΦΑ, both as contained in the LXX and as adopted and circulated by the early Christians, and it was among the "deuterocanonical" books recognized officially as canonical by the Council of Trent in 1546.

The exact circumstances of the origin of the writing are in doubt, but there is general agreement on a date of *ca.* 200-170 B.C., and the weight of scholarly opinion probably inclines to composition in Aramaic or Hebrew in Syria or Mesopotamia. The chief alternative view preferred a Greek, Alexandrian original; and while there was much to be said for this, it has been rendered less likely by the discovery of Hebrew and Aramaic fragments of the book among the Qumran scrolls.

The Greek is a simple and fairly idiomatic, colloquial type, but it abounds in Semiticisms, whether these be translation phenomena or the reflection of the author's native idiom. The form of the text itself also presents a problem, for it exists in two chief and often quite different recensions (*see* § 2*b below*). While scholars have been rather evenly divided regarding which of these is prior, opinion now tends to favor the longer Sinaiticus text, supported also by the OL and the Qumran fragments, as the more primitive. The other text, however, read by codices Vaticanus (B) and Alexandrinus (A) generally has been made the basis of published editions and of translations of the Apoc. into English and other modern languages.

Bibliography

1. **Title and contents.** The composition describes itself as the "book of the acts [lit., 'words'] of Tobit." The Hebrew version calls it the "book of Tobi," and the Aramaic the "history [act] of Tobiyah." The name Tobit (Τωβίτ; Τωβ(ε)ίθ) is a Greek form for Hebrew *Tōbî* ("my goodness"), itself doubtless an abbreviation of *Tōbîyâh* ("the goodness of Yahweh") as read in the Aramaic. Cf. Zech. 6:10 (Tobijah). The Latin Vulg. used "Tobias" (a Grecized form of Tobiyah) for both father and son, and thus popularized this usage, although it is somewhat confusing.

The story concerns Tobit, a devout and loyal Jew of THISBE and the tribe of NAPHTALI, who with his wife, HANNAH, and their son Tobias had been taken captive to Nineveh in the reign of Shalmaneser (*see* SHALMANESER 4) in the eighth century B.C. In Nineveh he continued his good deeds, especially in almsgiving and in giving decent burial to those of his own race who were slain by King Sennacherib (*see* SENNACHERIB). When the king learned of this practice, Tobit had to flee Nineveh; but after ESARHADDON succeeded to the throne, he was enabled to return, through the aid of Ahikar, his nephew and the chief minister to the new king. Tobit continued his burial of the dead, and one night, after such an act had made him "unclean," he slept in the courtyard. As he slept, the droppings of sparrows fell into his eyes and blinded him. In this situation, after being blind for four years, he in despair prayed fervently for divine help. *See* ANAEL; DEBORAH 3.

At this very time, in ECBATANA, Sarah (*see* SARAH 2), daughter of RAGUEL and EDNA, also uttered a prayer for deliverance from an unhappy plight in which her seven husbands had been successively slain in the bridal chamber by the evil and jealous demon ASMODAEUS. The prayers of Tobit and Sarah were heard by God, who dispatched the angel RAPHAEL to aid them. *See* ANGEL; DEMON.

Tobit, believing that his time of death was near, planned to send Tobias to RAGES to recover from a kinsman, GABAEI, a sum of money (about \$20,000) which had been deposited with him years before. Raphael, posing as a dependable kinsman who knew the way, was employed to guide Tobias on the journey. In bidding them farewell, Tobit unwittingly prayed that God's angel might attend them. The travelers set out, accompanied by Tobias' dog (S text), and camped at the Tigris River, where a large fish leaped from the water as if to eat Tobias (or bite his foot). At Raphael's suggestion he caught the fish and saved the heart, liver, and gall for later use. The rest of the fish they ate. *See* GABRIAS; JATHAN; SHEMAIAH 17.

Before they arrived at Ecbatana, Raphael told Tobias about the attractive daughter of Raguel, Sarah, and indicated that by reason of kinship Tobias was now the only eligible husband left for her. He also induced him to enter into the marriage,

instructing him to exorcize the demon by burning the heart and liver of the fish on the incense fire in the bridal chamber. After the arrival, exchange of greetings, and consummation of the marriage, Tobias carried out the instructions of the angel, and the smoke from the fire drove Asmodaeus away into Upper Egypt, where Raphael quickly followed and bound him. Meanwhile, Raguel, fearing the worst and unaware of these happenings, had had a grave dug during the night. But the next morning he was elated to find the young man alive, and at his insistence the wedding celebration was carried on for fourteen days. During this time Raphael went on alone and obtained the money from Gabael, and Tobias grew anxious to return home.

Back in Nineveh, Tobit and Hannah were in despair at Tobias' long absence; but at last he returned with his wife and Raphael, and they were overjoyed. Then Tobias, as Raphael had instructed him, placed the gall of the fish upon his father's eyes, and his sight was immediately restored. In gratitude for everything, they offered Raphael half the money; but at this point the angel made his true identity known, bade them thank God for his mercies, and disappeared. Tobit then uttered a long prayer of praise and rejoicing. The book closes with instructions from Tobit to Tobias and his predictions of the future, and with indications that both lived to a good old age and were buried with honor after enjoying many blessings, including, in the case of Tobias, the news of the destruction of Nineveh.

2. Text. a. Extant texts. The oldest complete text of the book is found in Greek. Of this there are two chief recensions, and a third which is derived from them and is definable in roughly chs. 6-13. Of the first two, the one (Rs) is represented mainly in Codex Sinaiticus, the other (Rv) in codices Vaticanus, Alexandrinus (A), one other uncial MS (V or Venetus), and several minuscule MSS. The third (Rc), a mediating type based mainly on Rs, is found in three minuscules and, for ch. 2, in Papyrus Oxyrrhynchus 1076. Important supplementary evidence comes from the ancient versions. The Old Latin (OL) is found in four MSS (α β γ δ in Charles, *Apoc. and Pseudep. of the OT*), and strongly supports the Rs text except that δ is Rc in part. The Vulg. is also basically of this type, although it is possible that a Semitic text was known to Jerome. He tells the story of receiving assistance from someone who was translating an Aramaic text into Hebrew. An Aramaic version of unknown origin exists which supports the Rs text. It was published in 1878 by A. Neubauer from a fifteenth-century Bodleian MS, but appears linguistically to reflect the period A.D. 300-700. Whether this depends upon an earlier Aramaic has been debatable; but the existence of such a version is attested by the Qumran fragments, three in Aramaic and one in Hebrew. These are probably from the first or second century B.C. and are all Rs in character. A free Hebrew version (HM) from the edition by Münster in 1542 appears also to depend upon an older Aramaic form of Rs type. Three other late Hebrew texts exist. That of Fagius (HF), from his edition of 1542, is apparently a free twelfth-century translation from Rv. But the "London" Hebrew (HL), edited by Moses Gaster from a late British

Museum MS in 1896-97, is close to the Vulg.; and the "Gaster" Hebrew (HG), copied by Gaster from a midrash on the Pentateuch, has affinities with Neubauer's Aramaic and the Vulg. Other versions are of less significance. Two fragmentary Syr. MSS of the seventh century A.D. support respectively the Rv to 7:11 and the Rc from there on. Related to Rv are a fragmentary Sahidic version, an abbreviated and faulty Ethiopic, and translations into Armenian and Arabic. *See also bibliography.*

b. The Greek recensions. The question of the relationship between the two principal Greek recensions constitutes a very difficult problem. Extensive identity in vocabulary and word order seems to point to dependence of the one upon the other, but the quantity and quality of disagreement are such as to suggest a common Greek exemplar instead. Even this may involve, in the opinion of some, divergent influences from Semitic documentary sources. Rs is much longer than Rv, ca. 1,700 more words in its total of ca. 7,200. While Rs has been alleged to be a deliberate expansion of Rv which adds nothing of significance to the narrative, Rv on the other hand gives evidence of being a reduction of the longer text (e.g., in 1:7-10; 2:10; 3:10; 5:3; etc.) which makes various improvements (1:4; 3:11; 12:5; 14:3; etc.) but at the same time results in a loss of vivid and appropriate detail and in certain questionable alterations or even violations of the real sense (e.g., in 1:4; 2:12; 3:10; 9:6; 12:6; etc.). The Rv text may be described as more stable than Rs and as showing less fluctuation among the versions which are related to it. However, a simpler and more direct relationship among the witnesses would suffice to explain this. It is true that Rv, in spite of its shorter character, fills in two major gaps in the Rs text (4:7b-18; 13:8-11a) and several minor ones. But these may be explicable as accidental omissions in S or its exemplar. The OL, which is related to Rs, fills in both the longer lacunae, and the Qumran Aramaic fragments attest one of them. Rs appears to reflect an earlier historical, political, and religious situation than Rv. This involves such things as geographical details, Jewish customs, and a more accurate list of Assyrian kings. Rv exhibits a later standpoint in theology and in such religious customs as tithing and fasting. Traces of liturgical and devotional use of the book also appear, including a tendency to assimilate the text to the OT (e.g., 2:6; 13:2). While Rv may show better transmission of some Hebrew names, Rs is in general closer to Hebrew or Aramaic in style, and one may argue with more cogency that it rests upon a Semitic original.

c. Original language. The question of priority of texts involves the problem of the original language of Tobit. This too has been much debated, with past opinion rather evenly divided between Greek and a Semitic form. While there has been a tendency toward favoring a Semitic original as time went on, among those who supported the Greek were such older scholars as Fritsche, Nöldeke, Schürer, Zöckler, and André. The external evidence for this view is scanty and inconclusive. Origen says that he did not know of a Semitic text and that the Jews did not have one among their apocryphal writings (*Epistle to Africanus* XIII). But Jerome in his prefatory remarks to Tobit in the Vulg. implies that he knew and used

a "Chaldee" (i.e., Aramaic) text. This aspect of the problem is at least partly settled by the Qumran fragments. With respect to internal evidence, it has been argued that much of the book's phraseology is purely Greek idiom with no necessary relationship to a Semitic document (e.g., in 1:6 ff; 3:8; 4:6; 7:7; 12:7; etc.), and that the style is not typically that of translation Greek, lacking certain common expressions found in such compositions. The forms of proper names in the first part of the book are the usual Greek equivalents of the Hebrew. Such Semitic expressions as are reflected in the Greek may be explained from the author's native idiom. If the book was composed in Alexandria or some other Diaspora situation, it would probably be in Greek.

Scholars favoring a Semitic original contend that the style and phraseology of the book, especially in the Rs form, have a definitely un-Greek and Semitic character; certain constructions seem to demand an author who not only thought but also wrote in a Semitic language. Various alleged mistranslations are explained on this basis. Parallels in source materials are best so explained. The names of the characters and other particulars of the story fit better into a Semitic context. Those who favor an Aramaic original as against Hebrew—where opinion again has been sharply divided—indicate that this would explain a variability in word order, the absence of certain common Hebraisms (e.g., the καὶ ἐγένετο construction), and the presence of "mistranslations" explicable only from Aramaic. The form of Greek names in 14:4, 15, suggests Aramaic. It is further contended that Tobit's use of Ahikar as a source (see § 4 below) reflects the latter's primitive Aramaic form. From his first examinations of the Qumran fragments, Milik concluded that they suggested Aramaic as the original language. In the period of the book's probable composition (i.e., ca. 200 B.C.) Aramaic was a lingua franca which would naturally be used by a Jewish writer in Mesopotamia or even in Egypt.

Some of the arguments on all sides are subjective in character; but there seems to be a definite disposition to favor Aramaic. While a number of scholars were content to support a Semitic original as against Greek, certain investigators may be mentioned who specified either Hebrew or Aramaic. The former was favored by Bickell, Graetz, Levi, Heller, Joüon, and Müller; the latter by Fuller, Harris, Marshall, Torrey, Pfeiffer, and Zimmerman. Simpson left the matter an open question, and Zimmerman preferred to posit a Hebrew form of text mediating between the Aramaic and Greek.

3. Place and date. The circumstances of the composition of Tobit merit further consideration in view both of the bearing of this matter upon this question of language and of the unsolved problems that here exist. With the exception of a very few scholars, who regarded Palestine as a likely place of origin, there has been general agreement that a Diaspora situation is reflected in the book. Earlier critics, probably influenced mainly by the general contents and the supposition of a Semitic original, looked to Mesopotamia or the East as the place of origin. The demonology and magic, among other things, suggested a "liberal," extra-Palestinian milieu. But opinion

tended more and more to favor an Egyptian provenance as explaining various features of the contents, the sources used (see § 4 below), the earliest extant version—i.e., the Greek text—and the author's ignorance of Eastern history and geography. The existence of Aramaic and Hebrew texts in Palestine in the first or second century B.C. will have some influence on the linguistic argument as it affects place and date. The question of a date in the Persian period has again been raised, but comes up against the matters of internal evidence (see below; see also bibliography).

Bearing on the place and date of the book is the question of its "historicity." Luther was apparently the first to challenge the book as history; and it is clear from the errors to which we have alluded that it could not have come as we have it from the period of the events depicted. Some Roman Catholic scholars have tried to defend a date in the seventh century B.C. and to explain certain of the errors through highly questionable linguistic manipulations. But the author was simply not interested in the accuracy of the "history" which served as a framework for his story. It was Tiglath-pileser III (II Kings 15:29) who took Naphtali and Zebulun in 734 B.C., and not Shalmaneser; Sennacherib was not Shalmaneser's son, but Sargon's; Cyaxares and Nabopolassar, rather than Assuere and Nebuchadnezzar, were responsible for the capture of Nineveh; the Tigris is not between Nineveh and Ecbatana (unless a tributary is in mind), and Rages is not a "two-days" journey from Ecbatana. The last statement (only in Rs) has often been regarded as an interpolation. See AHASUERUS.

There are, of course, other factors which make a later dating necessary, and which make possible a fairly definite indication of the time of composition. The knowledge of events of subsequent centuries (14: 4-5, 15), the references to Rages, to tithing (1:7 in Rs), the use of the Greek drachma (5:14—G 5:15) and of a Greek name (Dystros) for a month (2:12 in Rs), and the use of the OT, especially the quotation of the prophetic books, are some of the other evidences of a later date and probably one not earlier than ca. 200 B.C. The book, however, does not seem to reflect the situation of crisis which developed under Antiochus Epiphanes (see ANTIOCHUS 4), and it is therefore generally dated before this time—i.e., between 200 and 170 B.C. A later date also seems to be questionable, in view of the absence of certain developments in religious doctrines, such as apocalypticism, with its descriptions of the messianic age and beliefs in resurrection and immortality, or such as are reflected in the later rise of Pharasaic and Sadducaic parties. External evidence, specifically the Qumran documents, would give a *terminus ad quem* of whatever date is determined for the fragments. This has ranged from the sixth century B.C. down to the absolute limit of the period just before A.D. 70, but a date in the second or first century B.C. seems most likely, and nothing here precludes the dating of the book suggested above.

4. Sources and unity. The use of various earlier sources also throws light upon the problems of origin, as has been briefly intimated, and is of interest in connection with the composition of the work and its

thought. The OT is, of course, an unmistakable ingredient; the book contains reflections of biblical ideas and events, biblical phraseology, frequent allusions to specific passages, and a few quotations or near quotations. Examples of the last category may be seen in 1:21 (II Kings 19:37); 2:6 (Amos 8:10); 4:14 (Lev. 19:13); 8:6 (Gen. 2:18); 13:2 (I Sam. 2:6; cf. Wisd. Sol. 16:13). Rather definite allusions occur in 1:4 (Wisd. Sol. 9:8); 1:5 (I Kings 12:28-30); 1:6 (Deut. 12:6; 16:16); 1:7 (Deut. 14:25-26); 1:8 (Deut. 14:28-29; 26); 1:10-13 (Dan. 1:8-9); 1:16-17 (Isa. 58:7; Ezek. 18:5-9); 1:17; 4:17 (I Kings 13:28-29; II Esd. 2:23; Ecclus. 7:33; 30:18; 38:16 ff); 1:18 (Isa. 37:36-37; Ecclus. 48:18, 21; I Macc. 7:41; II Macc. 8:19); 3:10; 6:15 (Gen. 42:38; 44:29, 31); 3:11 (Dan. 6:10); 3:17; 6:11; 7:13 (Num. 27:8; 36:6-9); 4:3; 10:12 (Exod. 20:12; Prov. 23:22; Ecclus. 7:27-28); 4:10 (Prov. 10:2; 11:14); 4:7, 16 (Ecclus. 14:8-9); 4:7 ff; 12:8-9; 14:11 (Deut. 15:7-11; Ecclus. 17:22; 29:11-13; 35:2); 7:3-5 (Gen. 29:4-6); 7:11 (Gen. 24:33); 8:6 (Gen. 2:7, 18, 22); 11:15 (Deut. 32:39); 12:10 (Wisd. Sol. 1:12); 13:5 (Deut. 30:3; Jer. 29:14; etc.); 13:11 (Dan. 4:37); 13:12 (Gen. 27:29; Num. 24:9); 13:16-17 (Isa. 54:11-12); 14:4, 8 (Jonah 3:4); 14:4-5 (Ezra 1:1; Jer. 25:11-13; 29:10, 14; Dan. 9:2). But in some of these, as well as in other passages, common tradition rather than literary dependence may suffice to explain the parallelism. The quantity and nature of the data are nonetheless indicative of a date such as is generally proposed for the book. In particular a number of correspondences with ECCLESIASTICUS point to a similar period of origin for these two books.

Among the extrabiblical sources the popular Wisdom of Ahikar (*see* AHIKAR) is evidently used. Our author apparently knew the story in written form and assumed that his readers were acquainted with it. Direct borrowing may be posited in 1:21-22; 2:10; 11:18; 14:10, 15. Its most primitive form was Aramaic, an indication to some, again, of Aramaic as the original language of Tobit; but this earliest attestation is Egyptian (Elephantine Papyri of sixth-fifth centuries B.C.). In the story Ahikar was a prominent official under Sennacherib, king of Assyria. He adopted his nephew, Nadan (cf. Tob. 11:18), and arranged for the young man to succeed him upon his retirement. The nephew, however, lived riotously and plotted his uncle's overthrow by forging a charge of treason against him. Ahikar was condemned to be executed, but the executioner was his friend and kept him safely hidden. When trouble with the king of Egypt later called for wisdom such as only Ahikar had, Sennacherib repented of his act. The executioner then produced Ahikar alive, to the king's great joy. After he had outwitted the Egyptian king, Ahikar returned home in honor, while Nadan was reviled and imprisoned and eventually swelled up, burst open, and died. Ahikar, as Tobit, was vindicated because of his righteousness. In the Tobit story Ahikar is presented as a prominent official and a nephew and benefactor of Tobit. *See* HAMAN; NADAB 5; NASBAS; MANASSES.

Tobit also reflects the knowledge and use of the so-called Fable of the Grateful Dead. This is really a cycle of well-known stories, many variants of which have been collected. In the usual form the corpse of

a debtor is rescued and buried, at great personal risk, by a traveling merchant. A mysterious stranger comes to his aid, who turns out to be the dead man's spirit returned in human form. He delivers the merchant from mortal danger and arranges a bride for him. Another variant makes the bride a princess whose bridegrooms successively have been slain by a dragon or monster, which the hero is empowered to kill. He is sometimes assisted by a dog. The common dragon-slayer theme also becomes involved in these forms. A similar type of story probably known to Tobit, especially if the latter's provenance is Egyptian, is the Tractate of Khôns, attested as early as 500 B.C. This recounts that at "Bchtn" (cf. Ecbatana?) in Egypt there was a princess possessed by a demon and that Khôns, agent of the god of Thebes, was sent to expel the demon and heal the maiden. It has, in fact, been suggested that Tobit was written to counteract this fable. The parallels in these various tales are obvious. Other minor sources of similar kind have been identified with some plausibility; and among these will be found such items as the fish, the magical properties of gall, etc. The name of the demon in Tobit, Asmodaeus, is Persian in origin, the suffix representing the Iranian *daeua* or *daiva* (Old Persian), usually meaning "demon," occasionally "god" (cf. Θεός). The meaning of the prefix has been much debated, but has (questionably) been referred either to Persian *Aesma* ("anger," "fury") or to the Hebrew root *shamad* ("destroy"; cf. Aramaic *shamad*, "apostatize").

The various sources have been so skilfully woven into the story that most scholars regard the book as a unity. A very small minority would see in it a long process of elaboration and accretion. It is true that this element of possible elaboration and interpolation explains certain features, especially in the versions, and that the textual situation leaves the exact form of the original uncertain. But aside from the possible addition, or expansion, of the material in chs. 13-14, there is no conclusive evidence against the general integrity of the composition.

5. Purpose. The author's purpose has been characterized in both general and particular terms. But while his work may be designed specifically to emphasize the obligation of burial of the dead, or almsgiving, or fidelity to the Mosaic code in some particular situation, the contents may indicate the more comprehensive purpose of inculcation of general piety, or of showing the faithfulness of God to those who are faithful to him. Aside from certain extraneous elements noted above, the book reflects the conventional theological doctrines of Judaism. An incipient apocalypticism is present in ch. 13. Honesty, justice, sobriety, purity, and faithfulness to the law are stressed. In the practical sphere emphasis is given to almsgiving and charitable deeds, tithing, fasting, filial and marriage obligations, marriage to kin, observance of the feasts, and conduct toward the dead. The generous spirit of the book is illustrated in its citation of the "golden rule" in negative form in 4:15: "What you hate, do not do to any one." *See* ETHICS IN NONCANONICAL JEWISH WRITINGS; FEASTS AND FASTS; ALMS.

6. History and influence. The character of the book, together with its interesting story, ensured its

preservation and use; and it became, as we have seen, a firm and undisputed part of the Apoc. in the LXX version. This fact doubtless militated against its use in orthodox Jewish circles; but there is evidence that it was highly regarded in both early and late Judaism. It was apparently used by the author of JUBILEES; traces of it are found in other Jewish writings and in the midrashim; and the Qumran fragments attest its use in Palestine at least among the sectaries of this community. It is not quoted in Josephus, Philo, or the NT; but there are possible reminiscences in the last, and among Christians it is commonly known and used as part of the LXX. It is alluded to or quoted in the DIDACHE, POLYCARP, II Clement, Clement of Alexandria (who cites 4:16 as "scripture"), Origen, Hippolytus, Cyprian, Athanasius, Ambrose, Jerome, and others. The Vulg. indicates that "the church reads it, but does not receive it among her canonical scriptures" (doubtless reflecting Jerome's attitude toward the Apoc.); but this opinion was modified by the Council of Trent in the decision favorable to certain of the apocryphal books already noted. It holds a similar position in the Eastern Orthodox and the Anglican communions; the latter continues to read lessons from it in the lectionary. As part of the LXX and the Vulg. it appears in biblical studies, and its influence may also be seen in the liturgy, in the arts, and in literary allusion. Raphael, Rembrandt, Titian, Botticelli, and other masters painted scenes from it. It was part of the early vernacular Bibles, including the English down to the early printing of the KJV. Beginning in 1629, the Apoc. were more and more frequently omitted from printings of the KJV, and the influence of the book of Tobit diminished correspondingly in Protestantism. See also APOCRYPHA.

Bibliography. Text and commentary: A. E. Brooke, N. McLean, and H. St. J. Thackeray, *The OT in Greek*, vol. III, pt. I (1940), gives the Rv text with fullest critical apparatus and prints separately the Rs text and the OL of Sabatier (1751) with critical apparatus. A. Neubauer, *The Book of Tobit, A Chaldee Text . . .* (1878), also gives the rabbinical texts and the OL. J. M. Fuller, in H. Wace, ed., *The Holy Bible with an Explanation and Critical Commentary. Apoc.*, vol. I (1888). D. C. Simpson, in R. H. Charles, ed., *Apoc. and Pseudep. of the OT*, vol. I (1913), is a thorough study of all aspects of the subject, with an annotated English translation of the Rs text. A. Rahlfs, ed., *Septuaginta*, vol. I (3rd ed., 1949), gives both Greek texts with variant readings of the uncial MSS and chief versions. *Biblia Sacra . . . Libri Ezrae, Tobiae, Iudith* (1950), is an edition of the Vulg. with a full critical apparatus. F. Zimmermann, "The Book of Tobit," in S. Zeitlin et al., eds., *Jewish Apocryphal Literature* (1958), is an excellent treatment, which gives the Rs text with an annotated English translation, and the Rv text in an Appendix. For other English translation of Tobit, see APOCRYPHA.

A. WIKGREN

TOCHEN תֹּכֵן [תֹּכֵן]. A village of Simeon in the S of Judah (I Chr. 4:32). The parallel list in Josh. 19:7 has in its place the village of ETHER, and the

list of cities in Josh. 15 omits both names. The site of Tochen is unknown.

S. COHEN

TOGARMAH תֹּגַרְמָה [תֹּגַרְמָה]. Alternately: **BETH-TOGARMAH** בֵּית־תֹּגַרְמָה. A region in Asia Minor associated with such known ethnic groups as Gomer (Cimmerians) and Ashkenaz (Scythians; Gen. 10:3; I Chr. 1:6; Ezek. 38:6) and referred to as supplying horses, horsemen, and mules (Ezek. 27:14). The context fits a city in Asia Minor which the Assyrians call Til-Garimmu, a name derived from Hitite Tegarama and carried into classical times as Gauraena (modern Gürün), some seventy miles W of Malatya. The best-known phase in the history of the city is the late eighth century B.C., when it was involved in Assyrian military campaigns. The Assyrians destroyed the city in 695 B.C.

M. J. MELLINK

TOHU תֹּהוּ [תֹּהוּ]. One of the ancestors of the prophet Samuel (I Sam. 1:1). In the Levitical genealogies he appears as a Kohathite under the name of Nahath (see NAHATH 2; I Chr. 6:26—H 6:11) and Toah (I Chr. 6:34—H 6:19). Tohu, or possibly Toah, appears to be the original name.

E. R. DALGLISH

TOI תֹּי, תֹּי [תֹּי] (II Sam. 8:9-10). Alternately: **TOU** תֹּו, תֹּו [תֹּו] (I Chr. 18:9-10). King of Hamath on the Orontes. The defeat of Hadadezer of Zobah by David removed from Toi the threat which the Aramean king had posed to his territory. For this reason he sent David gifts by his son Hadoram. Perhaps the embassy was also a token of the submission of his kingdom to Israel, since the gifts which he had sent are listed among the spoil of the nations which David subdued (II Sam. 8:11).

R. W. CORNEY

TOKHATH. Alternate form of TIKVAH.

TOLA תֹּלָא [תֹּלָא], crimson worm; Akkad. *tultu*, see below; **TOLAITES** —its. Two individuals or clans of the tribe of Issachar.

The Hebrew word is used in Isa. 1:18 ("crimson"); Lam. 4:5 ("purple"; KJV "scarlet") to refer to the crimson-colored cloth made by the use of a dye from a cochineal. The same or a cognate word is found in Judeo-Aramaic, Christian Palestinian, Mandaeic, Syriac, and Ethiopic. Two derivative words (תֹּלָעָה, תֹּלָעָה) are used to mean either "worm" (Exod. 16:20; Deut. 28:39; Isa. 14:11; 41:14; 66:24; Jonah 4:7) or "scarlet (stuff)" (lit., "worm of scarlet"), mentioned frequently in the tabernacle furnishings (Exod. 25:4; 26:1, 31, 36; etc.). As a proper name the word may be a complimentary personification or may represent a totem animal (or plant in the case of Puvah; see 1 below).

1. According to the Priestly genealogies (Gen. 46:13; Num. 26:23) and the Chronicler's copy (I Chr. 7:1-2; so also in Jub. 44:16), the first of the four sons of Issachar. The others were Puvah, Jashub (Iob in Gen. 46:13), and Shimron. Tola was thus the chief of four clans, as in the census in Numbers (26:23-25), where the sons are designated as fathers respectively

of the Tolaites, Punites, Jashubites, and Shimronites, making a total number of 64,300. It is doubtless not coincidental that Tola's brother was named Puvah, "madder" (technically *Rubia tinctorum*, a plant from which red dye was made). Nothing is known of the six sons of Tola listed by the Chronicler (I Chr. 7:2) in what may be an amplification of David's census (II Sam. 24) as mighty warriors, heads of subclans numbering 22,600.

The striking similarity between the names of Issachar's four sons—Tola, Puvah, Jashub, and Shimron—and the essential facts given concerning the judge Tola—viz., that he was "Tola the son of Puah, . . . [living, *yôshēbh*] at Shamir" (Judg. 10:1)—suggests that possibly these names were a late tradition derived from the statements concerning the judge.

2. A judge, identified as the son rather than the brother of Puah, and the grandson of DODO. "Puah" (פּוּאָה; Judg. 10:1; I Chr. 7:1) is an alternative spelling of "Puvah" (פּוּוּר; Gen. 46:13; Num. 26:23). While the versions render "Dodo" as "his uncle," the word seems clearly to be a proper name, judging by the same or similar words in the Moabite Stone, the Tell el-Amarna Tablets, and elsewhere, and in the Hebrew names David and Jedidiah.

The site of Shamir, scene of Tola's twenty-three-year career as judge and presumably the location of his tomb, is unknown. It may have been Samaria, but as seat of the chief clan of Issachar it was more likely located in the hill country of Ephraim not far S of the Plain of Jezreel.

As no details of the career of this judge are given except his genealogy, location, and length of service, some commentators consider Tola to be an unhistorical invention of a late editor to fill in the chronological space between Abimelech and Jephthah (so also, before Jephthah, Jair, and Ibzan, Elon, and Abdon, between Jephthah and Samson). Others consider that what is given on these minor judges is exact and authentic chronological information, probably based on official records, as to those who occupied the central office in Israelite society before the rise of the monarchy.

TOLAD. Alternate form of ELTOLAD.

TOLBANES. KJV Apoc. form of TELEM.

TOLL, PLACE OF. See TAX OFFICE.

***TOMB.** A natural or artificial cave shaped as a burial place for the deceased. Burial places for the dead are mentioned frequently in biblical and contemporary extrabiblical literature. Thousands of tombs of various types have been excavated in the regions both E and W of the Jordan River, often several hundred at a single site like Jericho (Tell es-Sultan) or Gezer. The study of them is important, not only for what they suggest concerning belief in a future life, but also for what their contents reveal about cultural levels of ancient peoples, since objects

of daily use were customarily interred with the deceased. For further discussion of places of burial, see BURIAL; DOLMENS; MONUMENT; OSSUARIES; PIT; TOMBS OF THE KINGS. For rituals and significance, see BIER; EMBALMING; IMMORTALITY; MOURNING; RESURRECTION; SHEOL. 1. **Terminology. a. In Hebrew.** The two most common Hebrew words for "tomb" are קבר and קבורה, from קבר, "to bury." Because the use of English terms for burial places has not been standardized, both words are rendered by various English words. E.g., the KJV translates קבר as "grave" (Gen. 50:5; Num. 19:16; II Sam. 3:32; etc.) and "sepulchre" (Gen. 23:6; I Kings 13:22; Isa. 22:16; etc.); the RSV renders it as "grave" (I Kings 13:30; II Kings 13:21; Jer. 20:17; Ezek. 32:23; etc.), "tomb" (Judg. 8:32; II Sam. 17:23; Isa. 22:16; etc.), and "sepulchre" (Gen. 23:6; Ps. 5:9; Isa. 14:19; etc.). The same terms are used to translate קבורה (Gen. 35:20; I Sam. 10:2; II Kings 9:28; 23:30; Ezek. 32:24; etc.); it is also rendered as "burial" and "burial place" (Deut. 34:6; II Chr. 26:23; Eccl. 6:3; Isa. 14:20; Jer. 22:19; etc.). The KJV regularly renders שׂוּלוּ as "grave" (Gen. 37:35; I Sam. 2:6; Job 7:9; etc.) where the RSV transliterates as SHEOL (cf. I Kings 2:9, where the RSV translates "grave"). Other Hebrew words which doubtless referred to graves or tombs are: עַי (Job 30:24; "heap of ruins"; KJV "grave"); שְׂחַת (Job 33:22; "Pit"; KJV "grave"); בּוֹר (Isa. 38:18, "pit"); בַּיִת (Isa. 14:18; "tomb"; KJV "house"; cf. Job 30:23 ["house appointed for all living"]; Eccl. 12:5 ["eternal home"], where there may be allusions to tombs).

Mishnaic Hebrew employs the same terms and also the word כּוֹר (plural כּוֹבוֹים; B.B. VI.8; Oh. XVII.2); it has been adopted by archaeologists in the plural form, *kôkhîm*, as a technical term to designate Jewish and Christian tombs which contain loculi or niches opening from a central chamber, each large enough to hold a single body.

b. In Greek. The Greek words for "tomb" or "sepulchre" are μῆμα (Luke 23:53; Acts 2:29; Rev. 11:9), μνημεῖον (Matt. 23:29; Mark 15:46; John 11:17; etc.), and τάφος (Matt. 23:27; 28:1). Like the Hebrew terms, these are translated variously as "grave," "tomb," "sepulchre," "burial place," and "monument." Contexts of the biblical references in which the various terms appear do not make clear whether the tomb involved was a natural cave, an excavated underground chamber, a trench-type grave, or a tower-type structure. It is probable that they might refer to any of these or to others which have been excavated in Palestine in great numbers.

2. **Location.** In biblical, as in modern, times in Palestine, cemeteries were usually located near cities and villages, often in a type of terrain, such as the rocky slopes of valleys, that was not suitable for agriculture, but where natural or artificial caves were available for tombs. Hebrew law did not prescribe the precise location of tombs, but on account of the belief in the defiling effect of contact with the dead (Lev. 21:1; Num. 6:6; 19:13; etc.), one may conclude that cemeteries were usually situated beyond the borders of a city or village. This practice has been illustrated by the discoveries of the excavators at such places as Jerusalem, Gezer, Jericho (Tell es-Sultan), Lachish, Megiddo, and other cities where the tombs were found to be located outside the city walls, at distances varying from city to city but sometimes, as at Jericho, in areas extending from one hundred yards to a half mile or more W and N of the walled city.

However, the discovery of human skeletons and skulls carefully buried beneath the floors of houses and in adjacent courtyards in Neolithic and Chalcolithic levels at such places as Wadi el-Mugharah,* Teleilat el-Ghassul, and Jericho suggests the practice of providing a place for the dead within the community. The cave of MACH-PELAH was the tomb of the PATRIARCHS (Gen. 23:9 ff; 25:9; 49:30; 50:13), but the traditions about it do not report its exact location with reference to ancient Hebron. Because it has not been possible to excavate beneath the floor of the great Hebron mosque where it is now thought to be located, archaeologists have not been able to determine whether its situation was originally within or outside the settled community. It seems probable that in ancient times, as in Palestine today, burials of important people were permitted within the cities, and the tombs became popular shrines. In death, as in life, provision was made for continued association with the family or clan. Jacob's prayer was characteristic: "I am to be gathered to my people; bury me with my fathers in the cave that is in the field of Ephron the Hittite, in the cave that is in the field at Mach-pelah" (Gen. 49:29-30). Figs. MUG 75-76.

After the Hebrews settled in Canaan, they followed the Canaanite practice of using natural or artificial caves, located near cities, for tombs. Gideon was buried in the tomb of his father, Joash, at Ophrah (Judg. 8:32); Samson was buried by his family in the tomb of his father, Manoah, "between Zorah and Eshtaol" (Judg. 16:31); and Asahel was buried in the tomb of his father at Bethlehem (II Sam. 2:32). The report that the Hebrews in the time of Saul concealed themselves from the Philistines by hiding in tombs, as well as in caves, holes, and cisterns, suggests that the tombs were in rural regions and that some of them were doubtless merely open caves (I Sam. 13:6). David was buried "in the city of David" (I Kings 2:10), Ahaziah is said to have been buried "in his tomb with his fathers in the city of David" (II Kings 9:28), and other kings are said to have been buried at Jerusalem (see TOMBS OF THE KINGS). Such tombs were located, as is still the practice, in uninhabited terrain adjacent to the cities.

Tombs were located in gardens (II Kings 21:18, 26; John 19:41), on elevated places (II Kings 23:16; Isa. 22:16), on the slopes of hills (II Chr. 32:33), and

beneath the ground (II Kings 13:21; II Chr. 34:4). Individual graves in cemeteries with family plots, as today in the Kidron Valley E of Jerusalem, were probably not common in biblical times, although such a cemetery has been found at Qumran* (see DEAD SEA SCROLLS) containing more than one thousand graves. A prerequisite for a tomb area was a type of rock formation suitable for caves or carved chambers. E.g., the tombs at Jericho were cut into the soft stone beneath the surface; they were approached by shafts which opened into caverns of various shapes and sizes. At Lachish (Tell ed-Duweir) burial caves, tombs, and single graves were located on the slopes and valleys of the city at the N, W, and S. At Tell en-Nasbeh some Early Bronze tombs were found on the mound, but others from the same period, and many from the Iron Age and later, were located in cemeteries N, NE, and W of the city. At Megiddo a necropolis containing tombs extending in date from the Chalcolithic through the Roman period was excavated on the E slope of the mound. Doubtless in most cases the presence of natural caves suitable for burials was a factor in determining the original location of a necropolis; these were reused and new chambers were hewn in the rock of the same region by succeeding generations. Fig. BUR 57.

3. **Types.** Although modern terminology employed to describe various types of tombs has not been standardized, it is often possible to recognize and classify burial places by the form of their entrances and chambers, as well as by their decoration, and the date of the objects, especially the pottery, that were interred with the dead. In many cases classification by form is impossible because some tombs were reused over many centuries, and others were damaged as a result of earthquake, later building, and the natural disintegration of the rock. However, the main features of tomb construction and the general development of types from simple pits of the Chalcolithic period to the elaborate subterranean chambers containing scores of *kôkhîm* that were characteristic of the Hellenistic, Roman, and Byzantine periods can be traced.

The earliest tombs in Palestine were simply holes into which the bodies were carefully placed, often in a flexed position but sometimes on their backs in an extended position. Examples may be cited from the caves at Wadi el-Mugharah, where such burials were found both within the caverns and beneath the debris, and outside near the entrances. They dated from the Paleolithic and Mesolithic periods, and are paralleled by those at similar cave settlements in Galilee, NW of Jerusalem, and E of Bethlehem.

As early as the Neolithic period, tombs were fashioned by lining and covering a pit with stones in such a way as to form a cist (from Latin, meaning "box") type of structure. Specimens have been found at Teleilat el-Ghassul that are dated in the Chalcolithic period. Similar in formation, but much larger in size, are the DOLMENS* which are scattered through Palestine; a large field of them is at el-'Adeimeh, E of the Jordan River, opposite Jericho. Although there has been some uncertainty as to their date, they are now generally considered to be Neolithic. A dolmen was constructed probably in imitation of a primitive house, by placing large stone slabs on end to form

the sides, and a large stone on the top as a roof. Some of the structures have one side pierced by a rectangular opening large enough to have served as an entrance; there is no way of determining whether these were cut when the tomb was originally constructed or at a later date. The absence of pottery in the tumuli and the presence of flints characteristic of the Neolithic period suggest that they were the tombs of a nomadic people who expended considerable effort in preparing burial places for their dead. The practice of constructing tombs in imitation of houses is paralleled in the Chalcolithic period by the pottery house-urn chests found in a cave burial at Khudheirah. See OSSUARIES. Figs. DOL 35; OSS 13-15.

Beginning in the late Neolithic and Chalcolithic periods and continuing in succeeding periods through the Iron Age at Gezer, Megiddo, and Jericho, subterranean hewn chambers were often approached by a shaft-type entrance.* A typical tomb at Jericho consisted of a vertical shaft in the soft stone, at the bottom of which there was an opening into a cavelike structure. The shafts varied in diameter from three to ten feet; in depth, from three to

67. Middle and Late Bronze Age furnishings in shaft tomb at Megiddo

Courtesy of the Oriental Institute, the University of Chicago

68. Interior of Middle Bronze I shaft tomb at Megiddo, which shows the large size of certain tombs

fifteen feet. The chambers also varied considerably in height and diameter; a typical one was *ca.* fifteen feet across and *ca.* four feet high. The earliest shafts were round in shape, usually containing at the bottom a large stone which sealed the entrance to the tomb. Rectangular shafts have also been found at Jericho, Tell el-'Ajjul, and other cities where Early and Middle Bronze Age tombs have been found. Some of the tombs contained a single burial, others as many as forty or fifty. In some cases there were openings from one chamber leading into two or more similar caverns in a kind of family vault. Figs. TOM 67-68.
